After a victory it was the custom for the troops to greet their commander with a solemn acclamation. In so saluting they employed their every-day title of address, and the cry "Imperator, Imperator," sounded from rank to rank. This ceremony relieved the general so honoured from the obligation of veiling his imperium, and stamped upon him the appellation thus publicly uttered. Henceforth he appends the word Imperator to his name, and the title is used even by civilians who have occasion to address him. In the later Republic the senate sometimes gives emphasis to the honourable distinction by itself inviting or sanctioning the assumption of the title by a victorious general. This assumption is commonly the first step towards claiming a triumph. If it befall a man more than once in his life to achieve successes in the field which thus authorise him to advertise his imperium to the world, he sometimes indicates in adverbial phrase the repetition of his honours, and signs himself "Imperator iterum" or "Imperator ter." Though not every possessor of the imperium is justified in styling himself Imperator, the converse is strictly true; it is impossible for any one to be called Imperator unless he is vested with the imperium. No officer serving under the direct command of another without independent auspices of his own may accept this address (it was refused to the elder Drusus while still only a legate, Dio Cass. liv. 33, 5), and no one who has the title can retain it after he lays down his imperium. This occurs for the proconsul the moment he comes within the city walls, unless his imperium be extended for the day of triumph by decree of the people. [See TRIUMPHUS.] In this case the title lapses with the imperium after that day.

Use of the title by Caesar.—The elder Caesar during the last fourteen years of his life always styled himself Imperator. There is no reason to suppose that in so doing he overstepped any legal restriction. From the day of his victory over the Helvetii in B.C. 58 down to his death he was continuously vested with the imperium, first as Proconsul, then as Consul (B.C. 48), and then as Dictator. As the imperium never lapsed there was no necessity to lay down the title, though his retention of it in the city was "uncivil" doubtless, and arrogant. The title follows Caesar's name in all official documents. [PRINCEPS.]

Praenomen Imperatoris.—With Octavian we come to an entirely new use of the word. In the third year of the triumvirate (B.C. 40) he dropped his praenomen Caius and adopted instead the word Imperator as a praenomen. Side by side with "Marcus Antonius Marci filius" we now find "Imperator Caesar Divi filius." Mommsen (*Staatsr.* ii.² pp. 767–770) has explained this strange transformation in a most ingenious conjecture. He holds that Octavian chose to assume that the title Imperator had so coalesced with the name of Caesar as to have become a sort of honorary cognomen, like Magnus or Africanus. On this assumption he himself would have a hereditary right to his adoptive father's appellation; and once granted that Imperator was a part of the name, it might be transferred at will from the place of cognomen to that of praenomen, just as Nero and Drusus were used as praenomina by several members of the imperial family. Whether we accept this explanation or not, there is no doubt of the fact that Augustus employed the word Imperator as a proper name—*ὥσπερ τι κύριον*, as Dio Cassius (xliii. 44) says of the emperors of his own time. The next three principes did not adopt the *praenomen imperatoris*, but retained each his own ordinary praenomen of Tiberius or Caius. With Nero the practice of Augustus was revived, and succeeding emperors likewise assumed this praenomen, some in conjunction with, some in substitution for, the ordinary one.

Salutation Pro Imperio.—Though not every princeps assumed the word Imperator as part of his name, yet every one of them possessed the proconsulare imperium, and was therefore qualified to be addressed as Imperator either by his troops or by the senate. It was the custom at the beginning of each reign for the senate and soldiers to attest their recognition of this qualification in a solemn greeting which exactly follows the precedent of the greeting after a victory. The study of the imperial coins has led the best authorities (see Mommsen, *Staatsr.* ii.² p. 782) to the conclusion that, notwithstanding the immense difference in the practical significance of the ceremony in the two cases, the salutation *pro imperio* and the salutation after a victory are in law precisely the same thing, and that they are counted as similar units by every emperor who signifies the number of his acclamations among his list of honours. Thus, if we find Imp. IV. attached to a name, we are to understand that the sum is made up by one accession to the throne and three victories.

Whensoever the senate thus salutes a man as Imperator, this is a solemn proclamation that they have either conferred on him (as is their right) the proconsulare imperium, or fully acknowledge him as already invested with it. It is not unnatural that such a salutation by the senate should count as the *dies imperii*, the day from which the Emperor dates the commencement of his reign. In the register of the sacred college of the Arval Brothers we find a feast "ob diem imperii [Vitellii] . . . Germanici quod xiii. Kal. Mai. statutum est," and the date is found to synchronise with the day on which the senate heard of the defeat and death of Otho and voted the customary decrees for his successor (Henzen, *Acta Fratr. Arv.* p. xciv.; Tac. *Hist.* ii. 55; Mommsen, *Staatsr.* ii.² p. 842). In the case of Caligula the *dies imperii* is still more clearly defined. The 18th of March is honoured with a festival, "quod hoc die C. Caesar Augustus Germanicus a senatu Imperator appellatus est" (Henzen, *ib.* p. xliii.).

The case is different when we find the soldiers giving this salutation to a man who does not possess the imperium which is its legitimate foundation. There are republican precedents to show that this need not in every case be construed as an act of mutiny. In the 7th year of the Second Punic War, after the defeat and death of P. and Cn. Scipio in Spain, the remnant of the Roman army placed at their head a knight named Marcius, who extricated them from their danger. When Marcius sent letters to the senate announcing these events (Liv. xxvi. 2), he signed himself *pro praetore*, thus assuming that he had *de facto* acquired the imperium necessary to justify his command of the troops. As he styled himself *pro praetore* his soldiers would doubtless address him as Imperator, indicating thereby their intention to treat him as if he were their lawful commander. The same lesson may be gathered from the story of the first meeting of Sulla and Pompey. Pompey had on his own authority raised an army in Picenum, had baffled the superior forces opposed to him, and effected a junction with Sulla. When the two met, Pompey of course addressed the victorious proconsul as Imperator: Sulla made use of the same title in reply, thus acknowledging Pompey, not as a mere officer of his own, but as invested with an independent command. In both these cases the *de facto* imperium was presumed without any intention of rebellion against legal authority, but in obedience to the supposed necessities of the situation, and with the intention of having the assumption afterwards properly ratified. In somewhat the same way under the Principate, troops whose command was vacant by the death of him whose soldiers they had been, might, irregularly but without any gross breach of constitutional order, offer a provisional allegiance to a new commander. This was done by the praetorians to Claudius after the assassination of Caligula. In the present decay of its practical power no choice was left to the senate but to confirm the initiative of the soldiers. This initiative is all the more justified when the person chosen (as Nero, for instance) already possesses the proconsular imperium as colleague of his predecessor. In this case, as no new imperium begins, the event is not counted in the list of acclamations (Mommsen, *Staatsr.* ii.^{3} 1155). More generally, however, the soldiers in giving this salutation discard a prior allegiance. Here, too, we may find an early parallel in the story told by Livy (vii. 39), of a military insurrection during the Samnite War. The mutineers seized on a retired officer named Quinctius, and offered him the choice of death or *imperium et honorem*. Forced to submit, he was at once saluted "Imperator," and carried to the camp. In like manner when the army of Germany, for instance, greeted its legate Vitellius as Imperator, this acclamation was an act of revolution and civil war. It ascribed the *proconsulare imperium* to one who not only did not already possess it, but who could not possess it without supplanting his legal commander. It further proclaimed the intention of these soldiers to prove their assertion good at the point of the sword.

Vitellius, as we have already seen, dated his reign not from this first salutation, but from the day when his authority was acknowledged by the senate. It was no doubt the more correct and more modest proceeding that the Emperor should thus ignore the irregular inception of his reign, and refer his power to the moment when it was legitimately conferred. But we also find another theory prevalent. From the moment when the pretender has accepted from any voice the salutation of Imperator, he has claimed to be in possession of the magisterial authority which serves as a basis for that title. If these pretensions are afterwards made good, he may without any great breach of propriety look upon them as having received a retrospective sanction, and may refer back to the moment of claim as the moment of acquisition. So we are told (Suet. *Vesp.* 6) that Vespasian kept as his *dies imperii* the day (July 1st) when he was first saluted Imperator by the legions of Egypt, though for months later the senate and the city of Rome were under the control of his rivals.

History of the Title under the Principate.— The supreme importance of the proconsulare imperium and of the functions attached to it added lustre to the derived name of Imperator. It might indeed attach to other persons than the reigning princeps. The Emperor's colleagues might accept the solemn salutation after a victory and assume the title of honour. Tacitus tells us (*Ann.* i. 3) that Augustus "privignos imperatoriis nominibus auxit," and again (ii. 26) of the younger Drusus, that he "nonnisi apud Germanos assequi nomen imperatoris et deportare lauream posse." The title is frequent on their coins, and the word is sometimes used to describe them (Tac. *Ann.* ii. 17, 2; iii. 12, 4). It is also clear that Imperator was the everyday mode of address which the soldiers used towards them no less than towards the princeps. Velleius tells (ii. 104) that when Tiberius was sent by Augustus to take command of the army of Pannonia, his old soldiers crowded round him, exclaiming, "Videmus te, Imperator, salvum recepimus . . . ego tecum, Imperator, in Armenia," &c. The same was probably the case with the senatorial proconsuls of Africa. The soldiers would not have been likely publicly to salute Blaesus Imperator, as they did after his victory over Tacfarinas (Tac. *Ann.* iii. 74), unless they had been used to call him by that name in private. On this occasion Tiberius allowed to Blaesus the assumption of the title, but the precedent was not afterwards followed. By the time of Domitian the word had become so distinctive an emblem of the supreme power that an unfortunate senator was put to death because by a slip of the tongue on the part of the crier he had been proclaimed Imperator instead of Consul. Gradually the proconsular and military associations connected with the words "imperium" and "imperator" fall away. In the jurists of the 2nd century "imperium" and "imperatoria potestas" denote the whole of the powers conferred on the chief of the state (Mommsen, *Staatsr.* ii.^{3} p. 877, n. 1). "Imperator" becomes the title of the chief magistracy, and to a great extent supplants that of "princeps" by which Augustus had chosen to describe himself. [J. L. S. D.]

IMPLUVIUM. [DOMUS.]

IMPU'BES. In the Roman law there were several distinctions of age which were made with reference to the legal position of a person. 1. The first period was from birth to the end of the seventh year, during which time persons were called *infantes*, or *qui fari non possunt*. 2. The second period was from the end of seven years to the age of puberty, which came to be fixed at the end of fourteen or twelve years, according as the person was a male or female (*infantia majores*). 3. The third period was from the age of puberty to the end of the twenty-fifth year, during which period persons were *adolescentes*, *adulti*, *puberes*, *minores* xxv *annis* or *annos* or *annorum*, or simply *minores* [CURATOR]. 4. The fourth period was from the age of twenty-five, during which persons were *majores*.

Thus impuberes were divided into two classes: *infantes* or those under seven years of age, and *infantia majores* or those above seven, who are generally understood by the term *impuberes*. An impubes not in the power of a father, whether above or below infantia, was subject in respect of his property to a guardian called *tutor*, and hence the term *pupillus* or ward is often used as equivalent to impubes. Of the two classes of impuberes:—

1. *Infans*, *infantia*.—Infans properly means *qui fari non potest*. The phrase *qui fari potest* is itself ambiguous; but the Romans in a legal sense did not limit it to the mere capacity of uttering words, which a child of two or three years old generally possesses, but they understood by it a certain degree of intellectual development; and, accordingly, the expression *qui fari potest* expressed not only that degree of intellectual development which is shown by the use of speech, but also the capacity of speaking fluently and grammatically, and so of using legal forms of words. A person while he was an infans could not perform any legal act, nor could he incur any liability on account of a delict. The termination of infantia was fixed from a very early time by a positive rule of law at the end of the seventh year.

2. *Impuberes*, *infantia majores*.—An impubes who had passed the limits of infantia and was not in the power of a father could do any legal act with the sanction (*auctoritas*) of his tutor; without the interposition of his tutor he could only do those acts which were for his benefit, not such as might injure him. Accordingly, such an impubes could be a promisee in a stipulation (*stipulari*, *stipulator*), but he could not be the party making the promise (*promittere*, *promissor*); in other words, as Gaius (iii. 107) expresses it, a pupillus could only be bound with the sanction of his tutor, but he could bind another without such sanction (cf. Inst. i. 21, pr. 1). An impubes who was pupillus could not release a debt without the concurrence of his tutor, though he could enter into a binding contract by himself that he should be released from a debt. He could not pay money without his tutor; nor could he receive money without his tutor in payment of a debt,—at least it was not a valid payment; but since the rule as to the incapacity of an impubes was made only to save him from loss, the praetor would not allow him to recover the debt again, while he retained the benefit of the previous payment. He could enter into a betrothal (*sponsalia*) alone, because the auctoritas of the tutor had reference only to property; and sponsalia did not give rise to any liability to be sued. An impubes could not without the sanction of his tutor be plaintiff or defendant in a suit. He could acquire the ownership of property alone, but he could not alienate it, or manumit a slave unless with the concurrence of his tutor. Such sanction was also necessary to enable a pupillus to transfer possession of a thing; for though possession as such was not founded on legal right, legal advantages were attached to it. As to the acquisition of possession, possession itself being a bare fact, and one of its fundamental conditions being the *animus possidendi*, the pupillus could not properly acquire possession for himself, till he was legally capable of an act of will; but with the co-operation of his tutor he was allowed to acquire possession, while he was an infans, and thus the acquisition of possession by a pupillus was facilitated *utilitatis causa*. There was no formal difficulty in this case, because it was not necessary that words should be used. Subsequently the legal doctrine was established that a tutor could acquire possession for his pupillus (Dig. 41, 2, 1, § 20).

An impubes could acquire a hereditas with the sanction of his tutor, which sanction was necessary, because a heres was personally liable for the debts of the deceased; but in early times such acquisition could not be effected, since the hereditas could only be acquired by means of a very formal act (*actus legitimus*), called *cretio*, in which the tutor was incapable of interposing. This difficulty was got over by the doctrine of *pro herede gestio*: the tutor might permit the pupillus to act as heres, which was allowed the same effect as cretio; and this doctrine would apply even in the case of infantes, as no expression of words was necessary in order to the *pro herede gestio*. In the case of the praetorian succession (*bonorum possessio*), the father could apply for it on behalf of his child, and the tutor on behalf of his pupillus, without any act being done by the impubes. By the imperial legislation, a tutor was allowed to acquire the hereditas for his pupillus, and the father for his son, who was in his power, and therefore the doctrine of *pro herede gerere* was rendered unnecessary in this case. According to Savigny, the rule that an *impubes major infantiâ* could act for his own benefit without the sanction of a tutor was unknown to the early civil law, which did not recognise any act of a pupillus unless it was sanctioned by his tutor. But as the age of puberty was only fixed because it was necessary to fix some limit which might apply to all cases; and as in many cases, when a person bordered on the age of puberty (*pubertati proximus*) and had not yet attained it, he might have sufficient understanding to do many legal acts, a person who was *proximus pubertati* was in course of time considered competent to do certain legal acts without the auctoritas of a tutor, though to secure him against fraud and mistake he could only do such acts as were for his own advantage. This relaxation of the old law was beneficial both to the impubes and to others; but owing to its being confined to such narrow limits of time, it was of little practical use, and accordingly it was extended as a positive rule to a longer period below the age of puberty. It was, however, necessary to fix a limit here also, and accordingly it was determined that such limited capacity to do legal acts should commence with the termination of infantia, which, legally defined, is that period after which a person either alone or with a tutor, is capable of doing legal acts. The principle of the law was that a person could not act for himself, until he had understanding enough to know what he was doing (*qui jam aliquem intellectum habent*); and though a person who was not much above the age of infantia (*infanti proximus*) might not have such understanding, a more liberal interpretation was given to the law (*benignior juris interpretatio*), by virtue of which a pupillus who was *infanti proximus* was placed on the same footing as one who was *pubertati proximus*. (Compare Inst. iii. 19, 10, with Gaius, iii. 108.)

There has been considerable difference of opinion among commentators as to the exact meaning of the terms *pubertati proximus* and *infantiae* or *infanti proximus* (Gaius, iii. 109). (See Gensler, in *Ziv. Arch.* iv. 18; Dirksen, in *Rhein. Mus.* i. 316.) They signify respectively one who is near attaining pubertas and one who has just outgrown infancy; but whether there was an intermediate period during which an impubes was neither *infantiae proximus* nor *pubertati proximus*, is doubtful.

An impubes who was in the power of his father could not bind himself by legal acts even with the sanction of his father; for, in the case of a pupillus, the auctoritas of the tutor was only allowed in respect of the pupillus having property of his own, which a son in the power of his father could not have.

An impubes *major infantia* was liable on account of his delicts, if he understood the nature of his acts, and there was a presumption of such understanding in the case of an impubes *pubertati proximus*. An impubes could not contract a valid marriage.

According to the legislation of Justinian (Inst. i. 22) pubertas in the case of a male was attained with the completion of the fourteenth, and in a female with the completion of the twelfth year; but it seems probable that in early Roman law the age of puberty might differ in individual cases instead of being a fixed period. In the case of females, the rule of twelve years was established much earlier than the corresponding rule in the case of males, and was unquestionably the law according to the writings of the jurists. (As to the ancient practice, see Serv. in *Aen.* vii. 53; Quint. *Ded.* 279.)

There was a dispute among the jurists as to the test for determining the puberty of males. The Sabinians maintained that the age of puberty was to be determined by physical capacity (*habitu corporis*), to ascertain which a personal examination might be necessary; the Proculians fixed the age of fourteen complete, as that which absolutely determined the attainment of puberty (Gaius, i. 196; Ulp. *Frag.* 11, 28); and this latter view was, as we have seen, confirmed by Justinian, fourteen being the ordinary age of puberty in males and twelve in females. The view of the Proculians appears to have been that of the ancient law, which was modified as manners became more refined (Cod. 5, 60, 3).

The attainment of puberty by a man was celebrated by sacrifices and by the assumption of the toga virilis: thus *investis* is opposed to *vesticeps* or *pubes*. In Apuleius (*de Mag.* 98) a tutor is blamed for having given the toga virilis to his pupillus at too early an age (Voigt, *Zwölf Tafeln*, i. § 32). On attaining puberty, a man became capable of exercising public rights, though with some restrictions. Thus a person could not participate in the Comitia Centuriata, and was not liable for military service till he had reached *juventus*, i.e. completed his seventeenth year. (Dionys. iv. 16; Tubero, *Hist. bei Gell.* x. 28, 1: cf. Liv. xxii. 57, 9; xxv. 5, 8; xliv. 44, 3;—Plut. *C. Gracch.* 5, as cited by Voigt; see also Marquardt, 121.) As to the protection given to *minores vigintiquinque annis*, see CURATOR. (Bynkershoek, *Obs.* iii. 24; Cramer, *de Pubert. termino;* Klein, *Schriften herausg. von Ratjen*, 40, &c.; Savigny, *Syst.* § 1091; Rossbach, *Römische Ehe*, 273 f., 275 f., 403 f.; Marquardt, *Privatleben*, i. 121 f.; Becker-Göll, *Gallus*, ii. 108 f.; Voigt, *Zwölf Tafeln*, i. § 32).

There appears to have been no practice among women, similar to that among men, of adopting the toga virilis, as women probably wore the toga praetexta till they were married. (See Rossbach, *Die Röm. Ehe*, 273 and 417; and for a contrary opinion, Voigt, *ubi supra*, i. 32, n. 14, and *Rhein. Mus. f. Phil.*, N. F., 1878, xxxiii. 486.) It is to be noticed that, though the pupillaris tutela ended with females on the completion of their twelfth year, they still remained subject to tutela of a modified kind (*perpetua tutela mulierum*) until the later period of Roman law. [G. L.] [E. A. W.]

INAUGURA'TIO was in general the ceremony through which the augurs obtained, or endeavoured to obtain, the sanction of the gods to something which had been decreed by man. It was of especial importance under the kings, for it was the formal rite whereby the gods declared their acceptance of a certain person as the agent through whom alone they would have dealings with the community, and who therefore had an imperative claim upon the obedience of the citizens. The king himself asked the gods for the sign of their approval: the augur only attended to recite the proper formula of consultation, and to interpret according to the rules of his art the answer given. It is a serious mistake to suppose with Lange that a king was inaugurated under the auspices of an interrex: as soon as an interrex had named a rex, the right of auspices passed to the latter, and he himself asked the gods for their approval of his nomination (Liv. i. 18, 44, 55; Plut. *Num.* 7). Under the republic the inauguratio of the rex sacrificulus and of the flamines was performed by the college of pontiffs in the Comitia Calata (Labeo in Gell. xv. 27). This was due to the fact that while the king had the *spectio*, or right of taking the auspices himself, this was not the case with the rex sacrificulus (Mommsen, *Röm. Staatsr.* ii. 9). The pontifex maximus naturally acted with the assistance of the augurs; and hence he had the right to enforce the inauguratio, if it was refused by the augurs, and if he considered that there was no sufficient ground for refusing it (Liv. xxvii. 8, xl. 42). In the case of the pontiffs, augurs, vestal virgins, Salii, and probably all the other priests, the inauguration took place, not at an assembly, but *pro collegio* (Marquardt, *Röm. Verw.* iii. 223). Livy seems to represent one augur alone as performing the right of inauguratio in the case of Numa Pompilius (Liv. i. 18; compare Cic. *Brut.* 1, 1; Macrob. *Sat.* ii. 9); and it would seem that in some cases a newly-appointed priest might himself not only fix upon the day, but also upon the particular augur by whom he desired to be inaugurated (Cic. *l. c.*; and *Philip.* ii. 43, 110).

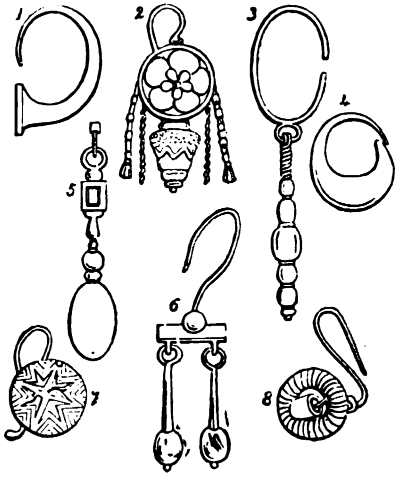
The higher magistrates continued to be inaugurated under the republic (Dionys. ii. 6), and for this purpose they were summoned by the augurs (*condictio*, *denuntiatio*) to appear on the Capitol on the third day after their election (Serv. *ad* Verg. *Aen.* iii. 117). This inauguratio conferred no priestly dignity upon the magistrates, but was merely a method of obtaining the sanction of the gods to their election, and gave them the right to take the auspicia; and on important emergencies it was their duty to make use of this privilege. At the time of Cicero, however, this duty was scarcely ever observed (Cic. *de Divin.* ii. 36, 76). A building was "inaugurated" only when it was to be used for meetings of the senate, or when the rites to be performed there required it should be a *templum.* The *inauguratio* hallowed the site, and the *consecratio* the building. Thus the *Aedes Vestae* was consecrated, but not inaugurated, and meetings of the senate were never held there.

[The word *inauguratio* is post-classical, but the verb *inaugurare* is commonly in use.] Cp. AUSPICIA. [L. S.] [A. S. W.]

INAURIS, an ear-ring; called in Greek *ἐνώτιον*, because it was worn in the ear (*οὖs*), and *ἐλλόβιον*, because it was inserted into the lobe of the ear (*λοβός*), which was bored for the purpose; also *ἕρματα*, from *εἴρω*, "to string together" (cf. *ὅρμος*: Hom. *Il.* xiv. 182, *Hymn.* ii. *in Ven.* 8; Plin. *H. N.* xii. § 2).

Ear-rings were worn by both sexes in Oriental countries (Plin. *H. N.* xi. § 136); especially by the Lydians (Xen. *Anab.* iii. 1, § 31), the Persians (Diod. Sic. v. 45), the Babylonians (Juv. i. 104), and also by the Libyans (Macrob. *Sat.* vii. 3, § 7), and the Carthaginians (Plaut. *Poen.* v. 2, 21). Among the Greeks and Romans they were worn only by females.

This ornament consisted of the ring (*κρίκος*, Diod. Sic. *l. c.*) and of the drops (*stalagmia*, Festus, p. 317; Plaut. *Men.* iii. 3, 18). The ring was generally of gold, although the common people also wore ear-rings of bronze (see Nos. 1, 4, from the Egyptian Collection in the British Museum). Instead of a ring a hook was often used, as shown in Nos. 6, 8. The women of Italy still continue the same practice, passing the hook through the lobe of the ear without any other fastening. The drops were sometimes of gold, very finely wrought (see Nos. 2, 7, 8), and sometimes of pearls (Plin. *ll. cc.*; Sen. *de Ben.* vii. 9, § 4; Ovid. *Met.* x. 265; Claud. *de VI. Cons. Honor.* 528; Sen. *Phaedr.* 400) and precious stones (Nos. 3, 5, 6). The pearls were valued for being exactly spherical (Hor. *Epod.* 8, 13), as well as for their great size and delicate whiteness; but those of an elongated form, called *elenchi*, were also much esteemed, being adapted to terminate the drop, and being sometimes placed two or three together for this purpose (Plin. *H. N.* ix. § 113; Juv. vi. 459). In the Iliad (xiv. 182, 183), Hera, adorning herself in the most captivating manner, puts on ear-rings made with three drops; on the epithets *τρίγληνα μορόεντα*, see Helbig, *d. Hom. Epos*, p. 271 f.; Leaf, *ad loc.*; GEMMA. Pliny observes (xi. § 136) that greater expense was lavished on no part of the dress than on the ear-rings; and according to Seneca the value of two or three estates might be worn in a single ear (*de Ben.* vii. 9, § 4; cf. *de Vita Beata*, 17, § 2). All the ear-rings above engraved belong to the Hamilton Collection in the British Museum; we add another of a more elaborate description, in which animal figures of high artistic beauty take the place of mere ornamental patterns.



Ear-rings. (British Museum.)

Inauris. (British Museum.)

In opulent families the care of the ear-rings was the business of a female slave, who was called *Auriculae Ornatrix* (Gruter, *Inscr.*). The Venus de' Medici, and other female statues, have the ears pierced, and probably once had ear-rings in them. The statue of Achilles at Sigeum, representing him in female attire, likewise had this ornament (Serv. in Verg. *Aen.* i. 30; Tertull. *de Pall.* 4). [J. Y.] [W. W.]

INCENDIUM, the crime of setting any object on fire, by which the property of a man is endangered. It was thus a more general term than the modern *arson*, which is limited to the act of wilfully and maliciously burning the property of another. The crime of incendium was the subject of one of the laws of the Twelve Tables, which inflicted a severe punishment on the person who set fire to property maliciously (*sciens prudens*); but if it were des by accident (*casu, id est negligentia*), the law obliged the offender to repair the injury he had committed (Dig. 47, 9, 9). The punishment, however, of burning alive, which is mentioned in the passage of the Digest referred to, is supposed by modern commentators not to have been contained in the Twelve Tables, but to have been attributed to earlier times in the imperial period. In the Second Punic War a great fire broke out at Rome, which was evidently occasioned *humana fraude*. The offenders were discovered and punished (*animadversum est*), but Livy unfortunately does not state in what manner (Liv. xxvi. 27). The crime of incendium was the subject of various enactments in the last century of the Republic. Sulla in his Lex Cornelia de sicariis punished malicious (*dolo malo*) incendium, but only in the city or within a thousand paces of it, with *aquae et ignis interdictio*, since it was frequently employed as a means for the perpetration of murder, which was especially the subject of this law (Dig. 48, 8, 1). Cn. Pompeius in B.C. 52 made incendium a crime of *vis* by his Lex Pompeia de vi, in consequence of the burning of the Curia and the Porcia Basilica on the burial of Clodius; and the dictator Caesar also included it in his Lex Julia de vi, which enacted that any act of incendium committed by large numbers of men, even if the object of their assembling together was not incendium, should be treated as *vis* and punished with *aquae et ignis interdictio* (Cic. *Phil.* i. 9, 23; cf. *Parad.* 4). The more recent Lex Julia de vi seems to have been less severe, but it is uncertain what punishment it ordained (Paul. 5, 26, 3). The crime of incendium fell equally under *vis publica* and *vis privata* (Dig. 48, 6, 5; Paul. *l. c.*): and besides the two criminal prosecutions given by the Lex Cornelia de sicariis and the Lex Julia de vi publica seu privata, a person could also bring actions to recover compensation for the injury done to his property: (i.) by the actio legis Aquiliae, in case of accidental incendium (Dig. 9, 2, 27, 5; 48, 19, 28, 12); (ii.) in the case of a person who had committed robbery or done injury during an incendium, there was a praetorian action de incendio, which compelled him to restore fourfold the amount (Dig. 47, 9, 1 to 5). In the imperial period various distinctions were made in the crime. First, a distinction was made according to the greater or smaller danger of the incendium to the contiguous objects: thus incendium in the city was punished with more severity than incendium in the country (Dig. 48, 19, 28, 12; 47, 9, 1, 12;—Paul. 5, 20, 1 and 2). Secondly, a distinction was made according as the act had been performed *dolo*, *culpa*, or *casu*. If the incendium was not malicious, but still might have been avoided by ordinary care, and when *casus* therefore approximated to *culpa*, a person had to make compensation, and if he was unable to pay damages he might receive a slight punishment ("levius castigatur," "modice vindicatur," Dig. 47, 9, 9 and 11; 48, 19, 28, 12: cf. Coll. Leg. 12, 6; Paul. 5, 3, 6); but if the incendium was purely accidental (*fortuitum*), no compensation was necessary (Dig. 48, 19, 28, 12).

During the later Republic incendium, as falling under the Lex Cornelia or the Lex Julia, would have formed the subject of an ordinary JUDICIUM PUBLICUM. During the Empire it gave rise to a *cognitio extraordinaria*, held usually by the Praefectus urbi, but in some cases by the Praefectus vigilum. The more serious cases, those that involved *dolus*, or *culpa* of an aggravated character, came before the Praefectus urbi (Dig. 1, 15, 3 and 4), who could exercise his discretion in inflicting any of the severer punishments attached to the crime. The only fixed rule as to the penalty was that malicious incendium in the town was punished *capite* (Dig. 49, 9, 12, 1); the position of the guilty party often determining the mode of punishment. Thus *humiliores* were thrown to wild beasts, and the penalty of being burnt alive was probably reserved for the same classes; those in a better position ("in aliquo gradu") were punished by the sword (Dig. *l. c.*), and for those of a still higher rank ("altiores") *deportatio* was the penalty. Milder cases of incendium, those which were not committed *dolo*, but in which *casus* approximated to *culpa*, were tried summarily by the Praefectus vigilum, in virtue of the jurisdictio he exercised as chief of the fire-brigade at Rome (Mommsen, *Staatsr.* ii.^{3} p. 1058; see VIGILES). He tried those who had carelessly given rise to fires in their own homes ("qui negligentia apud se ignes habuerint," Dig. 1, 15, 4), and thus endangered the property of others; sometimes he dismissed the accused with a caution, but in cases of culpable negligence he might punish *fustibus* or *flagellis* (Dig. 1, 15, 4). He probably had the preliminary cognisance in all cases of incendium, since it was his duty to remit the more aggravated cases to the jurisdiction of the Praefectus urbi (Dig. 1, 15, 3 and 4).

(Rein, *Criminalrecht der Römer*, pp. 765–774.) [W. S.] [A. H. G.]

INCENSUS. [CAPUT; CENSUS.]

INCESTUM. *Incestus*, derived from *in* and *castus*, is applied as an adjective to any act that may be regarded as a breach of morality or religion. Hence the substantive *incestum* in its earliest signification, and before the juristic distinction between incest *jure gentium* and incest *juris civilis* had been developed, was applied to acts which religion, or natural morality which had a religious sanction, distinctly forbade. It was applied therefore to breaches of religious obligation, such as the unchastity of a Vestal, and to sexual relations established between individuals within certain degrees of consanguinity. The latter class of actions was the widest covered by the term *incestum*, and it is within this class that we get the later distinction between incestum jure gentium, which includes nearly though not quite all such actions as morality forbids, and incestum juris civilis, which includes such actions as were forbidden by positive law. It is thus not an exhaustive classification, for there were relations prohibited by morality (*mores*), and which therefore did not belong to the Jus Civile, such as relations between those in the same line of kinship (*ex transverso, ex latere*) which did not fall under the Jus Gentium, since this only forbade connexion between ascendants and descendants (Dig. 23, 2, 68, "jure gentium incestum committit qui ex gradu ascendentium vel descendentium uxorem duxerit;" Dig. 23, 2, 8, "sororem ducere non potest, quia hoc jus moribus non legibus introductum est:" cf. Dig. 45, 1, 35, 1).

The old Roman law did not know of this distinction, and probably took cognisance of incest only as a religious offence. A survival of this view is found in the sacra and piacula which even at a late period followed a condemnation on a charge of incest (Tac. *Ann.* xii. 8): and the case of a distinct breach of religion, such as the unchastity of a Vestal, was always treated in this spirit (Platner, *Quaestiones histor.* p. 25). The Vestal was tried before the pontifices (Liv. viii. 15; Cic. *de Leg.* ii. 9, 22, "incestum pontifices summo supplicio sanciunto"), and, if found guilty, was led through the forum and buried alive in the campus sceleratus near the Colline gate (Dionys. viii. 89, ix. 40; Liv. viii. 15, xxii. 57; Juv. iv. 9; Festus, s. v. *sceleratus campus*), her paramour being scourged to death (Liv. xxii. 57; Festus, s. v. *probrum*). It is probable that the violation by Clodius of the women's festival of the *Bona Dea* was regarded as a case of religious incest. It is never distinctly called *incestum;* but the combined elements of impiety and unchastity in the act would have made it akin to the Vestal's breach of her vow. In this instance, however, after the report of the religious colleges had been made, the case was tried before a special secular tribunal (Cic. *ad Att.* i. 13, 3).

To constitute the incest which arose from marriage within the prohibited degrees of relationship, *dolus* was necessary; and thus ignorance of the fact was always excused. Ignorance of the law was a valid plea in exceptional cases; it was an excuse for the woman when the incest was *juris civilis*, and also for men under age, probably under the same condition (Dig. 48, 5, 38, 2, 4 and 7; Savigny, *System*, iii. p. 391). The prohibited degrees of relationship might exist either between ascendants and descendants, or collaterally (*ex latere*). To the former class belong those who bore to one another the relation of parents to children ("quae parentum liberorumve locum inter se obtinent," Gaius, i. 58; Just. *Inst.* i. 10, 1); that is, the relation of actual parents to children by *cognatio*, the relation of step-parents and children and the relation of parents and children in law by *affinitas*, or the relation of parents and children by *adoptio*. The relations of *affinitas* were apparently no bar to marriage in Cicero's time (Cic. *pro Cluent.* 5, 11); they were perhaps first made such by the Lex Julia (Schulin, *Geschichte des röm. Rechts*, p. 205), and were subsequently interpreted in the most extended sense (Dig. 23, 2, 14, 4). The relationships of ascent and descent created by adoption were considered to continue even after the adoption had been dissolved by manumission (Just. *Inst.* i. 10, 1; Gaius, i. 59: cf. Dig. 23, 2, 14). The other class of prohibited degrees included those who were collaterally related either by nature or by adoption; the connexion, however, between an adoptive brother and sister ended with the dissolution of the adoption; they might therefore marry when emancipated, and a consequence of this was that, if a man wished to adopt his son-in-law, he had first to emancipate his daughter, and if to adopt his daughter-in-law to emancipate his son (Just. *Inst.* i. 10, 2; Gaius, i. 61; Dig. 23, 2, 17, 1). Marriage between brothers and sisters in law was incestum *juris civilis*, but the principle was subject to modification, as in the temporary permission of marriage with a deceased brother's wife (Cod. 5, 5, 9). Marriage relations between uncle and niece, aunt and nephew, were prohibited until the time of Claudius; through his marriage with Agrippina the law was modified (Suet. *Claud.* 26; Tac. *Ann.* xiii. 5 and 7), so that, while marriage with a brother's daughter was permitted, that with a sister's daughter was not: but finally both kinds of marriage were again prohibited by Constantine (Cod. Theod. iii. 12, 1). This did not extend to adoption: "avunculus nemo fit per adoptionem" (Dig. 23, 2, 12, 4), and a man might marry his adoptive sister's daughter (Just. *Inst.* i. 10, 3). Marriage between cousins was allowed originally (Cic. *pro Cluent.* 5, 11; Plut. *Qu. Rom.* 6), but afterwards forbidden (Cod. Theod. iii. 10). A change of status did not affect existing relationships; and as the dissolution of adoption did not dissolve most of the degrees of relationship, so in the case of slaves manumission did not dissolve the connexions, both in the degrees of cognatio and of affinitas, which prohibited marriage (Dig. 23, 2, 14, 2).

In early times at Rome there was no legislation on the subject of incestum; nor even when the later distinctions had originated was there any direct legislation on the subject; the Lex Julia de adulteriis only treated incest in so far as it was also adulterium: but the jurists attached all the imperial edicts and their interpretation to this Lex Julia, and so brought *incestum* under the heads of *adulterium* and *stuprum* (Rein, *Criminalrecht*, p. 873). The ordinances on the subject then attached firstly to incestuous marriage, in which case the marriage was void and the children illegitimate (Just. *Inst.* i. 10, 2; Gaius, i. 64): the man was punished by *relegatio* (Paul. 2, 19, 5), and the punishment was *levius* when the marriage was concluded *palam*, and therefore presumably "bonâ fide" (Dig. 48, 5, 39, 5), *gravius* when it was concluded *clam* (Dig. 23, 2, 68);—secondly to incestuous adultery—that is, adultery with a married woman within the bounds of relationship: the punishment was *deportatio in insulam* for the man, *relegatio* for the woman (Paul. 2, 26, 15, 38);—and thirdly incestuous stuprum, or incest when the related woman was unmarried, which was punished in the case of the man by *deportatio* (Dig. 48, 18, 5).

As there was no separate legislation on the subject of incestum, so there was no separate process for the trial of the crime, except in the case of incest regarded from a purely religious point of view. We find that the ordinary cases were originally made the subject of a *judicium populi* (Plut. *Qu. Rom.* 6), and the old penalty of being thrown from the Tarpeian rock (Quint. viii. 8) reappears under the Empire (Tac. *Ann.* vi. 19). We hear of trials for incest during the Empire taking place before the senate (Tac. *Ann.* vi. 49), and, as connected with the Lex Julia de adulteriis, it would have been made the subject of an ordinary *judicium publicum*. The torture of slaves, for the purpose of eliciting evidence against their masters, was permitted in these cases (Cic. *in Mil.* 22, 59; Dig. 48, 18, 5), and we read of an accused Vestal being required "familiam in potestate habere" (Liv. viii. 15), which means that she was prevented from manumitting her slaves and so escaping the evidence which might be wrung from them by torture.

(Rein, *Criminalrecht der Römer*, pp. 869 ff.; *Privatrecht der Römer*, pp. 404 ff.; Walter, *Geschichte des römischen Rechts*, pp. 830 ff.; Schulin, *Geschichte des römischen Rechts*, pp. 176, 204 ff.; Madvig, *Verfassung und Verwaltung des römischen Staates*, p. 830.) [A. H. G.]

INCITE'GA, a corruption of the Greek *ἀγγοθήκη* or *ἐγγυθήκη*, a term used to denote a piece of domestic furniture, variously shaped, and made of silver, bronze, or wood; sometimes adorned with figures; and employed to hold amphorae, bottles, alabastra, or any other vessels which were round or pointed at the bottom, and therefore required a separate contrivance to keep them erect (Athen. v. p. 209 f—210 c; Festus, s. v. *Incitega*; Bekk. *Anecd.* p. 245; Wilkinson, *Anc. Egyptians*, ed. Birch, vol. ii. pp. 8, 9, 42). Some of those used at Alexandria were triangular (Ath. *l. c.*). We often see them represented in ancient Egyptian paintings. The annexed woodcut shows three *ἀγγοθῆκαι*, which are preserved in the British Museum. Those on the right and left hand are of wood, the one having four feet, the other six; they were found in Egyptian tombs. The third is a broad earthenware ring, which is used to support a Grecian amphora.

Incitegae. (British Museum.)

Of the two Greek forms, *ἐγγυθήκη* is the best attested (Lys. *ap.* Ath. l. c. *fr.* 18 Bekk.=20 Scheibe), *ἀγγοθήκη*, from *ἄγγος*, a vessel, the most intelligible. The frequent employment in ancient times of vessels not made to stand is further illustrated by the cuts under ALABASTROTHECA, ALABASTRUM, AMPHORA, and CHYTROPUS. [J. Y.] [W. W.]

I'NCOLA. [DOMICILIUM.]

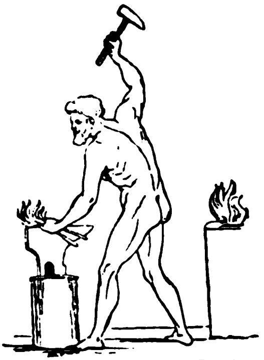
INCORPORA'LES RES. [DOMINIUM.]

INCUNA'BULA or **CUNA'BULA** (*σπάργανα*), swaddling-clothes.

The first thing done after the birth of a child was to wash it; the second to wrap it in swaddling clothes, and the rank of the child was indicated by the splendour and costliness of this its first attire. Sometimes a fine white shawl, tied with a gold band, was used for the purpose ([Hom.] *Hymn. in Apoll. Del.* 121, 122); at other times a small purple scarf, fastened with a brooch (Pind. *Pyth.* iv. 114 (203); *χλαμύδιον*, Longus, i. 2, § 3). The poor used broad fillets of common cloth (*panni*, Luke ii. 7, 12, Ezek. xvi. 4, *Vulg.*: comp. Hom. *Hymn. in Merc.* 151, 306; Apollod. *Bibl.* iii. 10, § 2; Aelian, *V. H.* ii. 7; Eurip. *Ion*, 32; Dion Chrysost. vi. p. 203, ed. Reiske; Plaut. *Amphitr.* v. 1, 55, *Truc.* v. 13). The preceding woodcut, taken from a beautiful bas-relief at Rome, which is supposed to refer to the birth of Telephus, shows the appearance of a child so clothed, and renders in some degree more intelligible the fable of the deception practised by Rhea upon Saturn in saving the life of Jupiter by presenting a stone, enveloped in swaddling-clothes, to be devoured by Saturn instead of his new-born child (Hes. *Theog.* 485). It was one of the peculiarities of the Lacedaemonian education to dispense with the use of *σπάργανα*, and to allow children to enjoy the free use of their limbs (Plut. *Lycurg.* 16). Plato also is in favour of freedom, and ridicules the notion that infants are to be kept for two years in swaddling-clothes (*Legg.* vii. p. 789 E). Aristotle mentions mechanical appliances as used by some nations to prevent children from growing crooked (*Pol.* vii. 17 = p. 1336 a, 11). (Cf. Becker-Göll, *Charikles*, ii. 21; Blümner, *Privatalterth.* p. 289; FASCIA.) [J. Y.] [W. W.]

Incunabula, from a bas-relief.

INCUS (*ἄκμων*), an anvil. The representation of Vulcan and the Cyclopes on various works of art show that the ancient anvil was formed like that of modern times. When the smith wanted to make use of it, he placed it on a large block of wood (*ἀκμόθετον*, Hom. *Il.* xviii. 410, 476, *Od.* viii. 274; *positis incudibus*, Verg. *Aen.* vii. 629, viii. 451); and when he made the link of a chain, or any other object which was round or hollow, he beat it upon a point projecting from one side of the anvil. The annexed woodcut, representing Vulcan forging a thunderbolt for Jupiter, illustrates these circumstances; it is taken



Incus, anvil, from a gem.

from a gem in the Royal Cabinet at Paris. It appears that in the "brazen age" not only the things made upon the anvil, but the anvil itself, with the hammer and the tongs, were made of bronze (Hom. *Od.* iii. 433, 434; Apollon. Rhod. iv. 761, 762). In later times it was made of the finest wrought iron (*nucleus quidam ferri*), specially hardened for the purpose (Plin. *H. N.* xxxiv. § 144). The invention of the anvil and other smith's tools was ascribed to Cinyras of Cyprus (Plin. *H. N.* vii. § 195). Cf. Blümner, *Technol.* ii. 187 ff. [MALLEUS.] [J. Y.] [W. W.]

INDEX. [LIBER.]

INDIGITAMENTA. [PONTIFEX.]

INDU'SIUM. [TUNICA.]

INDU'TUS. [AMICTUS; TUNICA.]

INFA'MIA. The infamia at Rome was a moral censure pronounced by a competent authority in the state on individual members of the community, as a result of certain actions which they had committed, or certain modes of life which they had pursued. This censure involved disqualification for certain rights in public and private law, and the persons so censured and disqualified were called *infames*. A clear conception of the grounds and consequences of infamia can only be gathered from a consideration of the specific modes of its exercise. There is hardly a term in Roman law which admits so little as this of a general description, and this is owing to the impossibility of tracing the development of rules out of a practice which was originally not regulated by any certain rules. That principles were developed which specified with some accuracy the kinds of actions which produced infamia, and perhaps also the kinds of disqualification which followed it, we know from the definite enumeration of such actions in the title of the Digest which treats of the subject (Dig. 3, 2), from the Lex Julia Municipalis of 45 B.C. (*C. I. L.* n. 206), and to a less degree from the Lex Acilia Repetundarum of 123 B.C. (*C. I. L.* n. 198). These enumerate on the whole similar kinds of actions as producing infamia; but the disqualifications are in each case dissimilar, and adapted to the special spheres of action of which the documents severally treat. Of these the title in the Digest, which treats of infamia only so far as it affected procedure in the praetor's court, gives the clearest answer to the question "What constitutes infamia?" but an answer only applicable to an age when the idea had reached its final form. The answer to the question "What were the consequences of infamia?" is only given with reference to the special object considered, which is here the working of the praetor's court. When we look from the praetorian to what was probably its original source, the censorian infamia, we are leaving codification and coming to scattered facts of history. The relation of the censor's to the praetor's infamia is indeed difficult to establish. There are two alternative suppositions possible as to their connexion, either that they were pursued independently of one another, or that the praetorian was based on the censorian. It is not a distinction of much importance in one respect, because in both cases the grounds of infamia would probably have coincided, though the purposes would have differed. But, as the only object of the praetorian infamia was to preserve the dignity of the praetor's court ("dignitatis tuendae et decoris sui causa," Dig. 3, 1, 1), it seems more natural on the whole that it should have been based on the censorian, which had the more important object of excluding from service to the state, from the army, the senate and the comitia, people who were disgraced by unworthy acts or occupations. This will justify us in treating infamia under two aspects, its primary and its secondary. Primarily it is a matter of public law, as shown in the censor's exercise of it, in the Lex Acilia and the Lex Julia Municipalis. Secondarily it is a matter of private law, as shown in the list of those "qui edicto praetoris ut infames notantur" (Dig. 3, 1, 1, § 8). The questions to be considered are the causes of infamy, its primary and its secondary effects.

The original view of infamy being that it was a course pursued in the public interest, the causes of infamy were those acts which it was considered would render a man unworthy of continuing to perform the public duties with which he was invested. The power of pronouncing this moral verdict rested with the censor, and was originally not an extraordinary power added to his other functions, but one arising naturally out of his duty of registering the names of Roman citizens in their several orders on the occasion of a census; although at a later period the censor might summon citizens at other times than when the census was in progress. It was a duty exercised in the interests of the whole state, and was a standing safeguard for the preservation of the πάτρια ἔθη of the community (Dionys. xix. 16), regulated originally not by fixed rules, but by the standard of morality or respectability which it was conceived should be maintained by each of the three orders—the senate, the equites, and the voting and military populace (Cic. *de Leg.* iii. 3, 7, "censores mores populi regunto; probrum in senatu ne relinquunto;" Liv. iv. 8, 2, "in senatu equitumque centuriis decoris dedecorisque discrimen sub dicione ejus magistratus esset:" cf. Liv. xlii. 3, 7; xl. 46, 1). The profession, for instance, which disqualified for office would not have disqualified for the right of voting; while some professions, such as that of an actor, disqualified for every honour. The censor's power in this case closely resembles that of the consul, who can refuse to receive the names of those candidates for office whom he deems unworthy of the position they desire to fill (Vell. ii. 92). There were no fixed rules to bind either magistrate: and much as the censor's decisions resembled a trial at law in outward appearance, in the accusation that was usually, though not always, put forward by a third party (Liv. xxxix. 42, 7), and the defence which was permitted to the accused (Plut. *C. Gracch.* 2), it differed from it in the fact that there were no fixed rules of procedure for conducting the case, and no fixed rules of law for binding the decision arrived at (Cic. *pro Cluent.* 45, 126, "censores nihil se testibus, nihil tabulis, nihil denique causa cognita statuisse dicent"). It was not a *judicium*, says Cicero, but an *animadversio* and an exercise of *auctoritas* (Cic. *pro Cluent.* 42, 117), and it was not followed by strictly penal consequences. Though it might disqualify, it did not punish, and the result of the censor's judgment was only *ignominia* (Cic. *de Repub.* 4, 6, "ut omnis ea judicatio versatur tantum modo in nomine, animadversio illa ignominia dicta est"). The process was spoken of as a *notatio*, from the *nota* which the censor wrote under the name of the person affected (Liv. xxxix. 42, 6, "ut censores motis e senatu adscriberent notas;" Cic. *pro Cluent.* 45, 118, "subscriptiones"), the offence which formed the ground of censure being usually spoken of as a *probrum*. An attempt was made to check the arbitrary employment of this notatio by a plebiscitum passed in 58 B.C. by Publius Clodius. This enjoined that the individual, before being subjected to ignominia, must be condemned by both censors and must be impeached by a third party (Ascon. *in Pison.* p. 9; Dio Cass. xxxviii. 13). This would have taken the initiative from the censor, and in this respect, as well as in the closer investigation which this change necessitated, brought the censorian process nearer to a process of law. But this plebiscitum was soon abrogated, and since the censor's decisions continued to be arbitrary it is little wonder that they did not become permanent. They might be set aside at each new lustrum by the incoming censor; and since the modes of decision were not fixed, the decisions themselves were not respected. Yet we find that, in the case of certain offences that involved ignominy, a permanent character had begun to be given by succeeding censors to a decision once pronounced. This was the case with perjury (Cic. *de Off.* i. 13, 40, "eos omnes censores, quoad quisque eorum vixit, quia pejerassent, in aerarios reliquerunt"), with condemnation in a disgraceful suit (Cic. *pro Cluent.* 42, 119, "turpi judicio damnati in perpetuum omni honore ac dignitate privantur"), and especially in the case of disgraceful professions, such as that of an actor was accounted. The precedent having been established that this disqualified for all civic honours (Augustin. *de Civ. Dei*, ii. 12, "genus id hominum tribu moveri notatione censoria voluerunt;" Tertull. *de Spect.* 22, "scenicos manifeste damnant ignominia et capitis deminutione"), it was natural that it should continue to be respected, and thus we find how the censorian infamia came to assume in time a tralaticiory character that gives us the permanent categories in the Lex Julia Municipalis and in the Digest. Certain standing offences came to be regarded as necessarily involving *notatio*, and as involving a *notatio* that the censors thought fit to make permanent; and we would naturally expect that offences which were thought deserving of a permanent notatio would involve the most serious disqualification, that of exclusion from all civic duties. It is possible, therefore, to say with Savigny, that there were a class of offences involving permanent disqualification, and that of the most severe kind, and we may safely seek such cases in later documents, such as the praetor's edict in the Digest; but that these cases had the exclusive title of infamia, and that this was distinguished from the censoria notatio, can hardly be established from the evidence adduced (Cic. *pro Cluent.* 42, 119; Dig. 48, 7; Cod. 12, 1, 2; Savigny, *System*, ii. §§ 76 *sq.*).

If we turn to the special cases on which the censor laid the mark of ignominy, we shall find that they comprehend breaches of almost all the duties to society, from family to state obligations. In the higher spheres of office the ex-magistrate might be degraded for a misuse of his powers (Plut. *Tib. Gracch.* 2; Liv. xliv. 16, 8), the judex for accepting bribes (Cic. *pro Cluent.* 42, 119), the soldier for shirking service (Liv. xxiv. 18) or showing cowardice or disobedience in battle (Liv. xxvii. 11; Val. Max. ii. 9, 7). As regards the mass of citizens, we find that the misuse of the right of voting called down the infamia, as we find in the case of the censor who disqualified the whole burgess community, "quod et innocentem se condemnassent et condemnatum consulem et censorem fecissent" (Liv. xxix. 37). Further, any disgrace that attached to appearance in a court of law, false witness and false oaths (Cic. *de Off.* iii. 31, 111), criminal condemnation in a judicium populi, theft and some other private delicts ("furtum et captae pecuniae," Cic. *pro Cluent.* 42, 120), and dishonourable conduct in trade (Suet. *Aug.* 39), involved infamy. It was also the result of certain professions, such as that of a mime (Macrob. *Saturn.* ii. 7, 3), and of dishonour attaching to a man in private life, arising from non-performance of the *sacra gentilicia* (Dionys. xx. 13), misuse of the powers of divorce (Val. Max. ii. 9, 2), and even from bad husbandry, neglect of property (Plin. *H. N.* xviii. § 11), and luxurious living (Plut. *Tib. Gracch.* 14). When we turn from these instances to the more definite categories of offences mentioned in the Lex Julia Municipalis and in the praetor's edict (Dig. 3, tit. 2, "De his qui notantur infamia;" Cod. ii. 12, "ex quibus causis infamia irrogatur"), we find that infamia followed condemnation on account of a criminal offence, originally when *calumnia* or *praevaricatio* had been established (Dig. 3, 2, 1), but finally as a result of any condemnation in a *judicium publicum* (Dig. 48, 1, 7; Just. *Inst.* iv. 18, 2), to expulsion of soldiers from the army *ignominiae causa* (cf. Lex Jul. Munic. l. 121), and to perjury of certain kinds; to certain private delicts, theft, robbery, injury, and deceit (*dolus malus*), the infamia extending to cases of compromise ("damnatus pactusve est," Dig. 2, 2, 1) and to usury (Cod. 2, 12, 20); to breaches of other obligatory relations, such as pro Socio, Tutelae, Mandati, Depositi (Dig. *l. c.*: cf. Cic. *pro Rosc. Com.* 6; Lex Jul. Munic. l. 111), and to insolvency in regard to all obligations ("bona possessa, proscripta, vendita," Cic. *pro Quinct.* 15; Lex Jul. Munic. ll. 113–117; Gaius, ii. 154); to certain acts concerning the relations of the sexes: one who has married or given in marriage a woman before the period of mourning has elapsed, or has been the cause of double marriage or double *sponsalia* with a woman, is infamis. Infamia was also attached to the keeping of a house of ill-fame and to certain professions, such as those of actors and gladiators (Dig. *l. c.*; Lex Jul. Munic. ll. 117 and 123). It will be seen from these instances that infamia always follows as the result of a personal act, and depends, as Savigny says, either on a judicial sentence or on an extra-judicial matter of fact.

The primary effect of infamia was always a disqualification for certain public rights. The nature of the disqualification depended partly on the rank of the person disqualified, but was always regulated to some degree by the gravity of the offence. The senator, guilty of an action that disgraced his position, was removed from the list (Val. Max. ii. 9, 2), the knight was forced to give up his position in the equestrian centuries (Liv. xxix. 37, 9), and the commoner was removed from the tribe ("tribu moveri"). This expression of "removal from the tribe" may signify two distinct kinds of disqualification: either the minor one of removal from a higher to a lower tribe (Liv. xlv. 15, "neque enim, si tribu movere possit, quod sit nihil aliud quam mutare jubere tribum, ideo omnibus quinque et triginta tribubus emovere posse, id est civitatem libertatemque eripere:" cf. Cic. *pro Cluent.* 43, 122), or the severest disqualification of relegation from all the thirty-five tribes to the position of an *aerarius* (Liv. xlii. 10, "omnes quos senatu moverunt, quibusque equos ademerunt, aerarios fecerunt et tribu moverunt"), that is, to the position of "civitas sine suffragio," in which, as Livy says, "libertas civitasque," so far as the active manifestations of political life were concerned, were wholly lost. Thus this extreme disqualification is spoken of as a "capitis minutio," and certain actions which were held by the censors necessarily to involve it are spoken of by Cicero as "summae existimationis et paene dicam capitis" (Cic. *pro Rosc. Com.* 6). The fact that certain actions could be spoken of as necessarily involving this extreme infamia shows that disqualification was not wholly regulated by rank. The magistrate who has misused his functions, and the eques who has disgraced himself in war, may not only lose their rank in the senate and the equestrian centuries, but be relegated to the position of aerarii (Liv. xliv. 16, 8; Val. Max. ii. 9, 7). And it is extremely probable, as has been stated, that certain offences, by whomsoever they were committed, came to be considered as necessarily involving this relegation, and in the case of such offences the principle may have been upheld that the relegation should be permanent; that is, that it should be sanctioned in turn by each succeeding censor. In this way a table of actions that involved infamia might be drawn up and applied in various ways. In the Lex Julia Municipalis it is applied for the exclusion of unworthy members from the local senate of "conscripti" or "decuriones": and as early as the Lex Acilia certain acts (such as service as a gladiator) and circumstances (such as condemnation in a *judicium publicum*) were taken as involving perpetual disqualification from the bench of judices which the law created (Lex Acilia, c. 13).

If we turn from the primary or public law to the secondary or private law effects of infamy, we find that these arose from the mode in which the praetor's edict was framed. In the edict three classes of individuals were distinguished as regards their capacity to postulate (Dig. 3, 1, "de postulando"). The first class was composed of those not able to postulate for themselves, the second of those able to postulate only for themselves, and the third of those able to postulate for themselves, and only in exceptional cases for others. In this third class were included "omnes qui edicto praetoris ut infames notantur" (Dig. 3, 1, 1, 8). This limited capacity for postulation, which was a restriction originating solely from the praetor's regard for the dignity of his court, was followed by some important consequences. One of its results was that an infamous person could not, as a rule, act as a *cognitor* nor as a *procurator* (*Fragm. Vatic.* 322–324). The consequence of this was that no action could be assigned to an infamous person, because all such assignments took the form of commissions to a cognitor or procurator. This effect of infamy was, however, counteracted by the form of assignment known as *utiles actiones*. These did not require the nomination of a cognitor or procurator; and as the person to whom the assignment was made in this form prosecuted the claim in his own name ("utiliter eam movere suo nomine conceditur," Cod. 4, 39, 9), an infamous person to whom postulation in his own interest was never forbidden could not be excluded. Another result of the limitation of the power of postulation by an infamous person was that no such person could undertake a *popularis actio*; that is, a case in which a money penalty was enforced on behalf of the state, because the sustainer of such an action was a procurator of the state (Dig. 47, 23, 4). An adversary could not be compelled to contest an action with a procurator who was infamis, or with a procurator appointed by an infamis. He could put forward an *exceptio*, which the praetor was bound to grant. These exceptiones were finally removed by Justinian (*Inst.* iv. 3, 11).

A distinction between the working of infamia in the time of the Republic and of the Empire respectively arose from the relative importance of civic honours in these two periods. During the Republic the civic privileges possessed by the ordinary citizen, especially the right of voting and of serving in the army, were of more importance: and accordingly the public-law effects of infamy played a larger part in this period. In the Empire it is the private-law effects that are brought most prominently before us. Again, as during the Empire the populus had sunk into comparative unimportance, the censorian powers of the "cura morum," so far as they were exercised by the emperors, were concerned, more particularly than in the Republic, in preserving the purity of the two higher orders, the senate and the equites. And lastly it is clear that the censorian infamia of the Republic, since it was concerned wholly with civic honours, could not affect women; yet we find in the Empire that infamia did attach to women, as to those taken in adultery (Dig. 23, 2, 43, 12). The omission of the mention of infamia as attaching to the woman who contracts an unlawful marriage (Dig. 3, 2, 1), while it attaches to the man, is explained by the fact that women were prevented by their sex from postulating for others at all (Dig. 3, 1, 5), and it was not necessary to mention them in the list of infames, which is, in this connexion, a list of those who could postulate only in certain cases for others.

(Mommsen, *Römisches Staatsrecht*, ii. 1, p. 375 ff.; Savigny, *System des römischen Rechts*, ii. § 76 ff., translated under the title of "Jural Relations," by W. H. Rattigan, pp. 125 ff.) [A. H. G.]

INFA'MIS. [INFAMIA.]

INFANS. [IMPUBES.]

INFE'RIAE. [FUNUS, p. 893 *b*.]

I'NFULA, a flock of white and red wool, which was slightly twisted, drawn into the form of a wreath or fillet, and used by the Romans for ornament on festive and solemn occasions. In sacrificing it was tied with a white riband [VITTA] to the head of the victim (Verg. *Georg.* iii. 487; Lucret. i. 88; Sueton. *Calig.* 27), and also of the priest, more especially in the worship of Apollo and Diana, but sometimes of other deities as well. ("Sacerdotes Cereris cum infulis ac verbenis," Cic. *Verr.* iv. 50, § 110; Verg. *Aen.* ii. 430, x. 538; Servius, *in loc.*; Isid. *Orig.* xix. 30; Festus, s. v. *Infulae.*) The "torta infula" was worn also by the Vestal Virgins. (Prud. *c. Symm.* ii. 1085, 1094.) It would seem that the infula was itself knotted at intervals with the vitta (Rich); the loose flocks of wool would require some such fastening, and it is thus represented on a painting found at Herculaneum. At Roman marriages the bride, who carried wool upon a distaff in the procession [FUSUS], fixed it as an infula upon the door-posts of her future husband on entering the house. (Lucan, ii. 355; Plin. *H. N.* xxix. § 30; Servius *ad* Verg. *Aen.* iv. 459. MATRIMONIUM, Vol. II. p. 144.) [J. Y.] [W. W.]

INGENUUS. Ingenuus, like most Roman terms signifying a personal status, has had a history of its own. Its meaning is only distinctly expressed for us in the later developments of Roman law; but we have strong reasons for believing that the meaning there given was not the earliest it bore. If we presume that the term originated when the community of Roman citizens was a purely patrician community, and was applied to members of this community, it would have signified, as Ortolan expresses it, "one who was born in a gens, one who had a genealogy, one who could show a line of descent free to its fountain source from every taint of vassalage" (Ortolan, p. 27, E. T.). This conjecture, it is true, receives no confirmation from the passages (Liv. x. 8; Cincius, *ap.* Fest. p. 241) quoted to support it, which have, as will be shown, a wholly different bearing; but, if the word found a place in the nomenclature of the Roman patrician community, it could have signified no more and no less than *gentilis*, only emphasising that side of gentilitas which insists on a perfectly pure descent as a necessary qualification for the status. Later, however, with the growth of plebeian privileges, ingenuus came to be used as denoting a distinction within the plebeian community. Free men (*liberi*) are divided into *ingenui* and *libertini* (Gaius, i. 10). Such a distinction could only have been of importance within a circle in which the taint of vassalage was found; that is, not in the patrician community, which of necessity excluded this taint, but only within the plebeian. (Liv. vi. 40, "nec ex patricio sanguine ortus, sed unus Quiritium quilibet, qui modo me duobus ingenuis ortum sciam.") *Ingenuus* will now be defined by the definition of *libertinus:* and the stages of meaning which this latter word passed through will necessitate different stages of meaning in the word *ingenuus* in this second period of its history. The term *libertini*, we are told, was originally used to cover, not merely manumitted slaves, but their descendants in the first degree (Suet. *Claud.* 24). It was employed, therefore, to signify one who was born of free, but not of freeborn parents. Ingenuitas denoted the opposite status to that of a libertinus, and ingenuus must therefore at this time have denoted one who was sprung from freeborn parents. The sons of libertini were subsequently placed on an equality with the other Roman burgesses, and were from this time onwards ingenui. During the period, therefore, in which we can with some degree of certainty trace the history of this word, ingenuus first denoted one who had free ancestors in the second degree, and freeborn ancestors in the first degree; later it denoted one who had free ancestors in the first degree. In this later sense, the sense in which it is found defined in the Institutes, it denotes one who is "born in a state of freedom," "qui statim ut nascitur liber est" (Just. *Inst.* i. 4): and this is the sense in which it is said by Livy and by Cincius to be equivalent to the original meaning of patricius. The statements, "patricios eos appellari solitos, qui nunc ingenui vocantur" (Cincius *ap.* Fest. p. 241), and "patricios primo esse factos, qui patrem ciere possent, id est nihil ultra quam ingenuos" (Liv. x. 8, 10), are simply statements of a theory which is probably correct, that the word *patricii* originally denoted the sole free citizens of Rome. It may be remarked that the word *ingenuus*, although it always signified "born in a state of freedom," did not necessarily signify "born in the possession of citizen rights." The citizen who is made a citizen is yet an *ingenuus*, provided he be a freeborn man; throughout its history, as applied to the mixed plebeian community, the word has libertini as its main antithesis. There is only one reason that would make us regard libertinus as not having been always the sole antithesis of ingenuus. For it is probable that, in the early period, one born out of due wedlock was not an ingenuus, a restriction which was removed in the course of the development of Roman law (Gaius, i. 11; Marcianus, "nec interest justis nuptiis conceperit an vulgo"). But there is nothing to show that children born out of wedlock, though perhaps originally not ingenui, were ever called libertini.

At the time of Justinian all that was necessary to constitute *ingenuitas* in the child was that it should be the son of a free mother. It was ingenuus whether it was conceived or born while the mother was in a state of freedom, the status of the father not being taken into consideration, and the condition of marriage not being required (Just. *Inst.* i. 4). Ingenuitas was on the whole a gift of birth, and a libertinus could not by adoption become ingenuus (Gell. v. 19). But under the empire *ingenuitas* or the *Jura ingenuitatis* might be acquired by the favour of the princeps. It could be acquired in two ways, indirectly by the gift of the gold ring (*jus aureorum anulorum*), or directly by the *natalibus restitutio*. The gold ring had long been the mark of equestrian rank, and the conferring of the gold ring on a libertinus carried with it, in the early principate, not merely ingenuitas, but admission to the equestrian order. At the time when this symbol raised a libertinus to the rank of knighthood it was sparingly employed, generally for the purpose of raising the position of the freedmen of the emperor's household (Mommsen, *Staatsr.* iii. p. 519, n. 1); and the gift, when it carried these consequences with it, must have asserted the fullest ingenuitas, involving a dissolution of all the rights of the patronus. From the time of Commodus, however, the gift of the gold ring ceased to denote admission to the equestrian order (Mommsen, *Staatsr.* ii. p. 893), and became merely a means for the conferring of a partial ingenuitas. It merely granted the enjoyment of the rights implied in ingenuitas during the lifetime of its possessor, and did not destroy the patronal rights (Dig. 38, 2, 3, "hic enim vivit quasi ingenuus, moritur quasi libertus"). The other mode of conferring ingenuitas was by the direct method of the *natalibus restitutio;* this was considered by a legal fiction to be a restoration to one of the primitive rights of man, the right of being born in a state of freedom (Dig. 40, 11, 2, "in quibus initio omnes homines fuerunt, non in quibus ipse nascitur, cum servus natus esset"). When such a restitutio was granted to a libertinus, the patronal rights were lost: and consequently the patron was usually consulted, and his consent obtained, before the change was made (Dig. *l. c.*). The possession of ingenuitas was sometimes a matter of dispute, and we find the mention of a *Judicium ingenuitatis* for the decision of this question (Tac. *Ann.* xiii. 27). (Mommsen, *Römisches Staatsrecht*, iii. p. 72 *sq.*, pp. 518, 519; ii. 2, p. 518.) [A. H. G.]

INGRA'TUS. [PATRONUS.]

INJU'RIA. Injuria, in the general sense, signifies a violation of law, what is not *jus* ("Injuriam autem hic accipere nos oportet non quemadmodum circa injuriarum actionem contumeliam quandam, sed quod non jure factum est, hoc est contra jus," Dig. 9, 2, 5, § 1). Similarly a person acting unlawfully is called *injurius* (compare *inlex*), but later *injustus* (Voigt, *Zwölf Tafeln*, i. § 39). Hence the phrase *damnum injuria datum* means unlawful damage to property [DAMNUM, &c.].

Injuria, in a special sense, is the term which denotes a particular kind of wrong or delict, committed against a man's person, as distinct from his property. Injuria, in this sense, is any unlawful act by which an insult (*contumelia*, *ὕβρις*) is conveyed by one person to another. Thus every intentional violation of the right of another is injuria, as implying contumelia, though, if such a wrongful act falls under the category of any other offence, the penalty of the latter is applicable, and not that of injuria (Windscheid, *Pandekten*, § 472, n. 1). It follows from the nature of this delict that it cannot arise without an intention to act unlawfully (*dolus*). The external acts constituting it might be various in kind. Thus it might be done by assaulting a man, as by striking or beating him; by other conduct likely to bring a man into contempt or derision, as by vociferous abuse (*convicium*), scurrilous songs and verses, libellous writings of any kind; by insulting gestures, by spitting at a man (Plaut. *Curc.* iv. 2, 17; Cic. *ad* Quint. *fr.* ii. 3, 2); by going about unkempt and unshorn, or in mourning attire, with the object of falsely suggesting that the person so acting was suffering by the misconduct of another person; by demanding a debt in a way likely to injure a man's character (*clamore, flagitare, poscere*, Plaut. *Pseud.* i. 5, 143; iv. 7, 46; Curc. v. 3, 5); by summoning a debtor to court (*in jus vocatio*) in an illegal manner (Porph. in Hor. Sat. i. 9, 77); by obtaining an execution order against a person as if he were insolvent; by illegally distraining on a man's goods, &c. A man might sustain injuria either in his own person, or in the person of members of his family who were in his power. Injuria to a wife was also injuria to her husband. No injuria could be done to a slave, but certain acts done to a slave were an injuria to his master, when the acts were such as appeared from their nature to be insulting to the master; as, for instance, if a man should flog another man's slave: but for verbal abuse of a slave, or striking him with the fist, Gaius (iii. 222) says, there was no formula provided, nor would an action be readily granted by the praetor.

The Twelve Tables had various provisions on the subject of injuria. The penalty of injuria for a limb broken was retaliation (Gaius, iii. 223, "propter membrum ruptum talio erat;" cf. Festus, *s. v.* Talio); for a bone broken or bruised, three hundred asses if the person injured was a freeman, one hundred and fifty if he was a slave. It seems probable, however, that Gaius made a mistake in classifying these punishments under injuria, the prominent idea in the law of the Twelve Tables respecting them being that of damage to the person rather than that of insult. (Voigt, *Zwölf Tafeln*, ii. § 129.)

The ordinary penalty for injuria in the Twelve Tables was twenty-five asses (Gaius, iii. 223). Gaius adds that such a sum seemed an adequate compensation in those days of excessive poverty. Libellous songs or verses (*occentus:* cf. Hor. *Ep.* ii. 1, 145, "Fescennina per hunc inventa licentia"), by which persons were frequently defamed at public festivities, were followed in addition by a punishment affecting the caput of the offender, which involved scourging as well as loss of liberty (cf. Hor. *Ep.* l. c. 154), or which, according to one interpretation of a passage of Cicero (*Rep.* iv. 10), was death. The penalty of twenty-five asses provided by the Twelve Tables was subsequently found insufficient in many cases, and so an action was established by the praetor (*actio injuriarum aestimatoria*), in which the injured party was allowed to claim such damages as he thought he was entitled to, and the judex might give the full amount or less. This became the ordinary remedy on account of injuria, but a Lex Cornelia gave a special action in cases of *pulsatio*, *verberatio*, and forcible entry into a man's house.

In determining the damages in the *actio aestimatoria* the praetor had to distinguish between an atrocious outrage (*atrox injuria*) and that of a less serious kind. An injuria had the character of *atrox*, either from the act itself, or the place where it was done, as for instance a theatre or forum; or from the condition of the person outraged, as if he were a magistratus, or if he were a senator and the wrong-doer were a person of low condition. Infamia was a sequence of condemnation in an *actio injuriarum* [INFAMIA.]

The *actio injuriarum* was regarded as a vindictive action, in satisfaction of a purely personal injury (*actiones vindictam spirantes*), and so could not be maintained by the heir of the person outraged. It became the rule that every kind of injuria might be made the subject of either criminal or civil proceedings (Inst. iv. 4, 10). The criminal proceedings and punishment were *extra ordinem* [CRIMEN]. Various imperial constitutions affixed the punishment of death to libellous writings [LIBELLI]. (Gaius, iii. 220–225; Paul. *Sent. Rec.* 5, 4; Cod. Theod. ix. 34; Cod. ix. 35, 36; Inst. iv. 4; Dig. 47, 10; Keller, *Inst.* 141, &c.; Huschke, *Gaius*, 118, &c.; Rein, *Criminalrecht*, § 354, &c.; Voigt, *Zwölf Tafeln*, ii. §§ 129, 130.) [G. L.] [E. A. W.]

INJURIARUM ACTIO. [INJURIA.]

INO'A (Ἰνῷα), festivals celebrated in several parts of Greece, in honour of the ancient heroine Ino. At Megara she was honoured with an annual sacrifice, because the Megarians believed that her body had been cast by the waves upon their coast, and that it had been found and buried there by Kleso and Tauropolis (Paus. i. 42, § 8). Another festival of Ino was celebrated at Epidaurus Limera, in Laconia. In the neighbourhood of this town there was a small but very deep lake, called the water of Ino, and at the festival of the heroine the people threw barley-cakes into the water. When the cakes sank it was considered a propitious sign, but when they swam on the surface it was an evil sign. (Paus. iii. 23, § 5.) An annual festival, with contests and sacrifices, in honour of Ino, was also held on the Corinthian Isthmus, and was said to have been instituted by king Sisyphus. (Tzetzes *ad Lycophr.* 107.) [L. S.]

INOFFICIO'SUM TESTAME'NTUM. [TESTAMENTUM.]

INQUILI'NUS. [EXSILIUM, p. 516 *b.*]

INSA'NIA, INSA'NUS. [CURATOR.]

INSIGNE (*σημεῖον, ἐπίσημα, ἐπίσημον, παράσημον*), a badge, an ensign, a mark of distinction. Thus the BULLA worn by a Roman boy was one of the insignia of his rank (Cic. *in Verr.* i. 58, § 152). Five classes of insignia more especially deserve notice :—

1. Those belonging to officers of state or civil functionaries of all descriptions, such as the FASCES carried before the CONSUL at Rome, the latus clavus and shoes worn by senators [CALCEUS; CLAVUS], the carpentum and the sword bestowed by the emperor upon the praefect of the praetorium. (Lydus, *de Mag.* ii. 3, 9.) The Roman EQUITES were distinguished by the "equus publicus," the golden ring, the angustus clavus [CLAVUS], and the seat provided for them in the theatre and the circus (Hor. *Epod.* 4, 15; Mart. v. 8 and 14). The insignia of the kings of Rome—viz. the trabea, the toga praetexta, the crown of gold, the ivory sceptre, the sella curulis, and the twelve lictors with fasces, all of which except the crown and sceptre were transferred to subsequent denominations of magistrates—were copied from the usages of the Etruscans and other nations of early antiquity. (Flor. i. 5; Sallust, *Cat.* 51; Verg. *Aen.* vii. 187, 612, xi. 334; Lydus, *de Mag.* i. 7, 8, 37.)

II. Badges worn by soldiers. The centurions in the Roman army were known by the crests of their helmets [GALEA], and the common men by their shields, each cohort having them painted in a manner peculiar to itself. (Veget. ii. 17; compare Caes. *B. G.* vii. 45.) [CLIPEUS, p. 460 *b.*] Among the Greeks the devices sculptured or painted upon shields (see woodcut, p. 459 *b*), both for the sake of ornament and as badges of distinction, employed the fancy of poets and of artists of every description from the earliest times. Thus the seven heroes who fought against Thebes, all except Amphiaraus, had on their shields expressive figures and mottoes, differently described, however, by different authors. (Aeschyl. *Sept. c. Theb.* 375–652; Eurip. *Phoen.* 1107–1138; Apollodor. *Bibl.* iii. 6, § 1.) Alcibiades, agreeably to his general character, wore a shield richly decorated with ivory and gold, and exhibiting a representation of Cupid brandishing a thunderbolt (Plut. *Alcib.* 16; Ath. xii. p. 534 e). The first use of these emblems on shields is attributed to the Carians (Herod. i. 171); and the fictitious employment of them to deceive and mislead an enemy was among the stratagems of war (Paus. iv. 28, §§ 5–7; Verg. *Aen.* ii. 389–392).

III. Family badges. Among the indignities practised by the Emperor Caligula, it is related that he abolished the ancient insignia of the noblest families, viz. the torquis, the cincinni, and the cognomen "Magnus." (Suet. *Calig.* 35.)

IV. Signs placed on the front of buildings. A figure of Mercury was the common sign of a GYMNASIUM; but Cicero had a statue of Minerva to fulfil the same purpose (*ad Att.* i. 4). Cities had their emblems as well as separate edifices; and the officer of a city sometimes affixed the emblem to public documents as we do the seal of a municipal corporation (Antigonus Caryst. *Hist. Mir.* 15).

V. The figure-heads of ships. The insigne of a ship was an image placed on the prow, and giving its name to the vessel (Tac. *Ann.* vi. 34; Caes. *B. C.* ii. 6). Paul sailed from Melita to Puteoli in the Dioscuri, a vessel which traded between that city and Alexandria (Acts xxviii. 11). Enschedé has drawn out a list of one hundred names of ships, which occur either in classical authors or in ancient inscriptions (*Diss. de Tut. et Insignibus Navium*, reprinted in Ruhnken, *Opusc.* pp. 257–305). The names were those of gods and heroes, together with their attributes, such as the helmet of Minerva, painted on the prow of the ship which conveyed Ovid to Pontus (*a picta casside nomen habet, Trist.* i. 9, 2); of virtues and affections, as Hope, Concord, Victory; of countries, cities, and rivers, as the Po, the Mincius (Verg. *Aen.* x. 206), the Delia, the Syracuse, the Alexandria (Athen. v. p. 208 f); and of men, women, and animals, as the boar's head, which distinguished the vessels of Samos (Herod. iii. 59; Choerilus, p. 155, ed. Naeke; Hesych. *s. v.* *Σαμιακὸς τρόπος*: Eust. *in* Hom. *Od.* xiii. p. 525), the swan, the tiger (Verg. *Aen.* x. 166), the bull (*προτομὴν ταύρου*, Schol. *in* Apoll. Rhod. ii. 168). Plutarch mentions a Lycian vessel with the sign of the lion on its prow, and that of the serpent on its poop, manifestly intended to express the form of the chimaera (*Mul. Virt.* p. 247 F). After an engagement at sea, the insigne of a conquered vessel, as well as its aplustre, was often taken from it and suspended in some temple as an offering to the god (Plut. *Themist.* 15). Figure-heads were probably used from the first origin of navigation. On the war-galleys of the Phoenicians, who called them, as Herodotus says (iii. 37), *παταικοί*, *i.e.* "carved images," they had sometimes a very grotesque appearance. It would appear that the παράσημα of Greek ships were sometimes distinct from their names; the latter were always feminine among the Greeks (Boeckh, *Seeurk.* p. 81 ff.; Becker-Göll, *Charikles*, i. 192), the former not so.

Besides the badge which distinguished each individual ship, and which was either an engraved and painted wooden image forming part of the prow, or a figure often accompanied by a name and painted on both the bows of the vessel, other insignia, which could be elevated or lowered at pleasure, were requisite in naval engagements. These were probably flags or standards, fixed to the aplustre or to the top of the mast, and serving to mark all those vessels which belonged to the same fleet or to the same nation. Such were "the Attic" and "the Persic signals" (τὸ Ἀττικὸν σημεῖον, Polyaen. iii. 11, § 11; viii. 53, § 1). A purple sail indicated the admiral's ship among the Romans, and flags of different colours were used in the fleet of Alexander the Great (Plin. *H. N.* xix. § 22). (Cf. Becker-Göll, *Charikles*, i. 189–192; NAVIS, Vol. II. p. 216 *b*.) [J. Y.] [W. W.]

INSI'LIA, from *insilire*, a part of the loom (only in Lucret. v. 1353). They were supposed to be the treadles, pressed by the weaver's foot; but the epithet *levia*, smooth or polished, does not suit these; and the insilia are more probably the heddles or leash-rods which open the warp. (Schneider, Index to *Scriptores Rei Rusticae*, s. v. *Tela;* Rich, *s. v.*; Munro, *ad loc.*)

As the word is not found elsewhere, its meaning can only be guessed (Munro: so also Blümner, *Technol.* i. 143 n.). [W. W.]

I'NSTITA (περιπόδιον). 1. A flounce; a fillet. The Roman matrons sometimes wore a broad fillet with ample folds, sewed to the bottom of the tunic and reaching to the instep. The use of it indicated propriety and good taste in dress (Hor. *Sat.* i. 2, 29; Ovid, *Ars Amat.* i. 32). It must have resembled a modern flounce. The notion that it was a train rather than a flounce, favoured by Rich (*s. v.*) and Becker, is decisively rejected by Göll (Becker-Göll, *Charikles*, ii. 27, iii. 255).

2. The word instita seems sometimes to have borne much the same sense as FASCIA, *e.g.* the girth of a bed, which might also be used as a bandage (Petron. *Sat.* cc. 20, 97). In a rather obscure line of Statius ("Candida pampineo subnectitur instita filo," *Theb.* vii. 654), it appears to mean a riband or fillet [VITTA] tied round a thyrsus: Rich gives an example of this from a Pompeian painting. [J. Y.] [W. W.]

I'NSTITOR. [INSTITORIA ACTIO.]

INSTITO'RIA ACTIO. According to the Jus Civile, a person could not be sued on a contract which his agent had entered into on his account. But as in course of time, with the growth of commerce, the Romans came to carry on various lucrative occupations by means of slaves (cf. Poste's *Gaius*, iv. 71, comm.), the praetor remedied the inconvenience of the civil law by allowing in the case of the *actio institoria* and certain other cases an additional action against a person by whose authority a contract had been made (*actiones adjecticiae qualitatis*). By the formula *institoria* a principal was made liable for business debts contracted by anyone, whether his son or his slave, or the slave of another or a free person, whom he had made his *institor*—i.e. manager of a trade or business, as banker, innkeeper, &c. ("ideo autem institoria appellatur, quia qui negotiationibus praeponuntur institores vocantur," Inst. iv. 7). Probably at first an action was only given on account of contracts made by filiifamilias or slaves of the owner of the business, but afterwards extended. (Cf. Inst. *l. c.*) The person who contracted with an institor would have two debtors: 1, the institor, the contracting party; and 2, his master or employer. In the formula *institoria* brought against the latter, the name of the institor would appear in the *intentio*, that of the master in the *condemnatio*. [ACTIO.]

The principle of the actio institoria was finally extended to all contracts of agents who were not institores, and so a contract entered into with an agent could always be enforced against his principal ("actio ad exemplum institoriae actionis," called by commentators *actio utilis* or *quasi institoria*). Institores are coupled with *nautae* by Horace (*Ep.* xvii. 20) and with the *magister navis* (*Carm.* iii. 6, 30). [Cf. EXERCITORIA ACTIO.] (Gaius, iv. 71; Inst. iv. 7; Dig. 14, 3.) [G. L.] [E. A. W.]

INSTITUTIONES. A student beginning the study of law was instituted in the subject (*institui*); i.e. he went through an elementary course of legal instruction under the direction of a competent lawyer. (For an account of Roman legal education, see Bremer, *Die Rechtsschulen*, u.s.w.) Such introductory study naturally led to the publication of law books of an educational kind, which were called *Institutiones*. There were various institutional works written by the Roman jurists. Thus Callistratus, who lived under Septimius Severus and Antoninus Caracalla, wrote three books of Institutes. Aelius Marcianus wrote sixteen books of Institutes, under Caracalla, or shortly afterwards. Florentinus, who probably lived in the time of the Antonines, wrote twelve books of Institutes, from which there are forty-two excerpts in the Digest. Paulus also wrote two books of Institutiones. There still remain fragments of the Institutions of Ulpian (see facsimile in Böcking's edition of Ulpian).

But the most important treatise of this kind that we know of was the Institutes of Gaius, in four books or commentaries. They were formerly only known from a few excerpts in the Digest, from the epitome of Gaius contained in the Breviarium of Alaric II. the Visigoth, from the Collatio, and a few quotations in the commentary of Boethius on the *Topica* of Cicero, and in Priscian. The MS. of Gaius was discovered in the library of the chapter of Verona, by Niebuhr in 1816. It was first copied by Goeschen and Bethmann-Hollweg, and an edition was published by Goeschen in 1820. The deciphering of the MS. was a work of great labour, as it is a palimpsest, the writing on which has been washed out, and in some places erased with a knife, in order to adapt the parchment for the purposes of the transcriber. The parchment, after being thus treated, was used by transcribing upon it some works of Jerome, chiefly his Epistles. The old writing was so obscure that it could only be seen by applying to it an infusion of gall-nuts. A fresh examination of the MS. was made by Bluhme, but with little additional profit, owing to the accidental loss of the paper containing the results of his work. A second edition of Gaius was published by Goeschen in 1824, with valuable notes, and an index of the sigla used in the MS. The preface to the first contains a complete demonstration that the MS. of Verona is the genuine *Commentarii* of Gaius, though the MS. itself has no title. An improved edition of Goeschen, by Lachmann, appeared in 1842. In 1866 an apograph or facsimile of the MS. by Boecking was published, which was based on Goeschen's collation, and some notes made by Bluhme. An entirely new and independent facsimile of the MS. was made by the German philologist Studemund in 1866, 1867, 1868, and published in 1874. It contains many amendments of and some not inconsiderable additions to the readings of Goeschen and Bluhme. The editions of Gaius which have appeared since 1874 have made Studemund's apograph the foundation of their text. The most trustworthy of these is that by Krüger and Studemund.

It appears from internal evidence that Gaius wrote his Institutes under Antoninus Pius and Marcus Aurelius. According to Dernburg (*Die Institutionen des Gaius, ein Collegienheft aus dem Jahre* 161 A.D.), the work is made up of lectures, which Gaius had previously delivered. It was the favourite text-book in the law schools till it was superseded by the Institutes of Justinian. Of Gaius himself hardly anything is known. His full name has not come down to us. (Cf. Roby's *Introduction to the Digest*, pt. i. ch. xiii.; Huschke, *Gaius; Étude sur Gaius*, par E. Glasson, §§ 2, 3. For the characteristics of his style, see Kalb, *Archiv für Latein. Lexikographie*, i. 82, &c.) Gaius belonged to the school of the *Sabiniani* [JURISCONSULTI]. The jurists whom he cites in his Institutes are Cassius, Fufidius, Javolenus, Julianus, Labeo, Maximus, G. Mucius, Ofilius, Proculus, Sabinus, Servius, Servius Sulpicius, Sextus, Tubero. Many passages in the Fragments of Ulpian are the same as passages in Gaius, which may be explained by assuming that both these writers copied such parts from the same original. Marcian and Ulpian follow a similar system of arrangement to that of Gaius, but it is more probable that they did not copy it from him.

The treatise of Gaius, unlike the *Edictum perpetuum* and other compilations of Roman law intended for practical purposes, is intended to be arranged on scientific principles, though its order of subjects is frequently confused. Its subject-matter is distributed under the three heads of (1) persons, (2) things, (3) actions—"omne jus quo utimur vel ad personas pertinet, vel ad res, vel ad actiones" (i. 8). The contrast between *personae* and *res* may have been derived from writings on *jus sacrum* (cf. Krüger's *Gesch. des Quellen*, § 24, n. 41, with passages from Augustine there cited). Some writers suppose that this threefold division of law originated with Gaius, but one would rather gather from the way in which he introduces it that it was already well known in the Roman schools. There has been considerable difference of opinion as to the exact nature of the division. It is generally supposed that the first head of it (the first book), which treats of persons, comprehends the status of persons regarded as the subjects of rights; others affirm that it treats of legal capacity, or of the three conditions which correspond to the threefold capitis deminutio. According to Savigny, this part of the work treats only of persons so far as they belong to the familia in the widest Roman acceptation of that term, and so in his opinion the law of persons is equivalent to family law (Savigny, *Syst.* i. 393). The law of persons consists in fact of the divisions of men into free and slaves, free-born and freedmen, and then notices the different kinds of power which one person may exercise over another—the power of the master over the slave (*dominica potestas*), the power of the father over his children (*patria potestas*), the power of a husband over a wife (*manus*), the power exercised over a person *in mancipii causa*. Lastly, it treats of *tutela*, which in its origin was a kind of *potestas*. Thus the object of the law of persons seems to be, not to describe family relations generally, but to distinguish men according as to whether they are independent or subordinate, capable of acting for themselves or under some incapacity in this respect. The second part treats of *res*; that is, of property in the widest meaning of the term, comprehending the law of ownership and the law of obligation, which two divisions occupy the second and third books. The fourth book treats of actions or procedure.

It was the object of Justinian to comprise in his Code and Digest or Pandects a complete body of law. But these works were not adapted to elementary instruction, and the writings of the ancient jurists were no longer allowed to have any authority, except so far as they had been incorporated in the Digest. Moreover, the Commentaries of Gaius, the favourite text-book of the schools, were antiquated. It was therefore necessary to prepare an elementary treatise, for which purpose Justinian appointed a commission consisting of Tribonian, Theophilus, and Dorotheus; the two latter were professors of law, and assisted Tribonian in the compilation of the Digest.

The commission was instructed to compose an institutional work which should contain the elements of the law (*legum cunabula*), and should not be encumbered with useless matter (Prooem., Inst.). Accordingly they produced a treatise, under the title of Institutiones or Elementa (*de juris docendi ratione*), which was chiefly compiled from the Institutes of Gaius and his *res cottidianae* (Const. Imperatoriae, § 6). But though the Institutiones of Justinian were mainly based on those of Gaius, its compilers sometimes followed other works. Thus the first passage in the Institutes is taken from Ulpian, and the passage (ii. 17, § 2, "si quis priori") is from the fourth book of Marcian's Institutes (Dig. 36, 1, 29). Florentinus is also used. In some instances the Institutiones of Justinian are more clear and explicit than those of Gaius. An instance of this occurs in Gaius (iii. 109) and the Institutes of Justinian (iii. 19, 10). (See Gneist's *Institutionum Syntagma*.) The Institutiones consist of four books, which are divided into titles. It is supposed that Tribonian only exercised a general superintendence over the work of compiling them, and that Theophilus and Dorotheus each undertook the task of compiling two books. (Cf. E. Grupe, *De Justiniani Instit. compositione*.)

The arrangement of the Institutes is generally the same as that of the work of Gaius; the difference between them in this respect is chiefly owing to the changes in the Roman law which had been made between the time of Gaius and that of Justinian. The Institutes treat only of Privatum Jus; except that there is a title *de officio judicis*, and a title on Judicia Publica at the end of the fourth book, which are not treated of by Gaius.

The Institutiones were published and given statutable authority on the 21st November, A.D. 533, shortly before the publication of the Digest.

There are numerous editions of the Institutes. The *editio princeps* is that of Peter Schoeffer (Mainz, 1468), which contains the gloss. The best modern editions are those of Schrader (1832), with commentary, Huschke (1868), and Krüger (1867, 1st ed.). There is a Greek paraphrase of the Institutes, which has long been attributed to Theophilus, one of the compilers of the Institutes, though, according to several modern authorities, without sufficient evidence. (See Ferrini, Praef.) It throws considerable light on the text of the Institutes, and contains additional information of an historical kind. The best edition of the paraphrase is that of W. O. Reiz, The Hague, 1751, 2 vols. 4to. A new edition is in progress by E. C. Ferrini (*Institutionum Graeca paraphrasis Theophilo antecessori vulgo tributa*, 1884–5), but only parts of it have as yet appeared. [G. L.] [E. A. W.]

INSTITUTO'RIA ACTIO. [INTERCESSIO.]

INSUBULUM. [TELA.]

INSULA. [DOMUS.]

INTEGRUM RESTITUTIO, IN. [RESTITUTIO.]

INTENTIO. [ACTIO.]

INTERCESSIO. LEGAL. It is intercessio when a person takes upon himself the debt of another. To become intercessor a person must incur liability by entering into a contract or other transaction with some one else's creditor. Thus a payment by one person of another's debt is not intercessio, because no liability is incurred by such payment (Dig. 16, 1, 4, § 1). Nor is it intercessio to promise a debtor to indemnify him for outgoings to his creditor, since no relation is thereby created between the party promising and the creditor. He who intercedes may either (1) take upon himself the debt of another and become debtor in place of that other (privative intercession), or (2) become debtor while the person for whom he intercedes is also debtor (cumulative intercession).

1. To the first head, that of privative intercession, belong (*a*) the case of a man taking upon himself an already existing obligation of another, so as to release the latter from all liability. In this case the old debt is put an end to by a species of novation, called *expromissio*, the creditor accepting the intercessor as his debtor in the place of his previous debtor, and thus discharging the latter; (*b*) the case of a person taking an obligation on himself which does not already exist, but which the person for whom he intercedes would otherwise have contracted for himself. This is called *intervention* (cf. Dig. 16, 1, 18, § 14: "Si quum essem tecum contracturus, mulier intervenerit, ut cum ipsa potius contraham, videtur intercessisse").

2. To the second head, that of cumulative intercession, belong (*a*) the case of a person becoming surety for another; (*b*) the case of a person becoming a party to a correal obligation otherwise than as *fidejussor* (as to *correi*, cf. Inst. iii. 16, "De duobus reis stipulandi et promittendi;" and see art. OBLIGATIO); (*c*) the giving a thing in pledge for the debt of another (Dig. 16, 1, 8 pr., 32, § 1).

It may be convenient to give some account in this place of the law relating to a surety's liability. It was a general rule that a contract of suretyship could only be entered into in a formal way by question and answer. In the case of a sponsor, the *interrogatio* was, "Idem dari spondes?" In the case of a *fidepromissor*, it was, "Idem fidepromittis?" In the case of a *fidejussor*, it was, "Idem fide tua esse jubes?" The object of having a sponsor, fidepromissor, or fidejussor, was greater security to the stipulator. With respect to one another sureties were *consponsores* (Cic. *ad Att.* xii. 17), *confidepromissores*, *confidejussores*. In the Institutes of Gaius, a distinction is made between sponsores and fidepromissores on the one side, and fidejussores on the other. Each sponsor or fidepromissor (the obligation of sponsor and fidepromissor became identical, but only cives could be sponsores) was originally liable for the whole debt for which he was security, and he had no means of action against a co-sponsor. The liability did not pass to his heredes. By the Lex Publilia, sponsores who had been compelled to pay the debt had a special action *in duplum* against the principal debtor, which was called *actio depensi*.

The Lex Furia de sponsione, B.C. 345, made a considerable change in the position of sponsores and fidepromissores, by enacting that a sponsor or fidepromissor should only be liable for his share of the debt with his co-sureties, who were alive at the time when the money became due (*singuli viriles partes*), and that he should cease to be liable after the lapse of two years. A Lex Apuleia, which was passed before the Lex Furia, gave one of several sponsores or fidepromissores who paid more than his share an action against the rest for contribution; but this lex was rendered useless by the Lex Furia, at least in Italy, to which country alone the Lex Furia applied, while the Lex Apuleia extended to places out of Italy.

Fidejussores were of later institution than sponsores and fidepromissores, and, on account of the preference given to them, gradually superseded the older kind of surety. Each fidejussor was liable for the whole debt, as if he were sole debtor, his obligation being that of a correus (*singuli in solidum obligantur*). Fidejussores were never released from their obligation by length of time, and the heres of a fidejussor was bound. A fidejussor who had been compelled to pay the whole amount had no redress against his co-fidejussores, but every surety could recover on a *mandati judicium* from his principal whatever he had been compelled to pay on his account. A creditor might sue either the debtor or his fidejussor, and after he had elected to sue one of them he could not sue the other. Sponsores and fidepromissores could only become parties to a debt which was contracted by stipulation, though in some cases they might be bound when their principal was not, as in the case of a pupillus who promised without the auctoritas of his tutor, or of a man who promised something after his death; but a fidejussor might be accessory to all obligations, whether contracted *re*, *verbis*, *litteris*, or *consensu*, or arising in any other way.

The stringent liability of fidejussores was somewhat lessened by special enactments of the emperors in their favour (*beneficia*). Thus, by a rescript (*epistola*) of Hadrian, a fidejussor who was sued might require (*ope exceptionis*) the creditor also to sue the other solvent fidejussores, each according to his proportion. If any one of them was not solvent, his share became a burden to the rest. According to a change in the law made by Justinian (*Novell.* 4), a fidejussor might compel the creditor to sue his debtor, if solvent, before having recourse to him (*beneficium excussionis*). A fidejussor before paying the debt might insist that the creditor should assign to him all his rights of action against co-fidejussores (*beneficium cedendarum actionum*).

The Lex Cicereia provided that a creditor who obtains the guarantee of sponsors and fidepromissors should previously declare to them the amount of the debt to be guaranteed and the number of sponsors or fidepromissors by whom it was guaranteed. If it was judicially proved that the creditor had not complied with the requisitions of the law, the sureties were released. This rule was subsequently made the practice in the case of fidejussores also (Gaius, iii. 123). A Lex Cornelia limited the amount for which any person could be a security for the same person to the same person within the same year to twenty thousand sesterces, but with some exceptions, one of which was a security *dotis nomine*. No person could be bound in a greater amount than his principal, but he might be bound in less.

In the legislation of Justinian sponsores and fidepromissores are not recognised, they having been entirely supplanted by fidejussores. The subject of the sponsio often occurs in Cicero's letters; and in one case he was called on in respect of a sponsio alleged to have been given by him twenty-five years before (*ad Att.* xii. 17). Cicero uses the expression *appellare* to express calling on a surety to pay (*ad Att.* i. 8). Certain informal kinds of guarantee, called *mandatum qualificatum* and *constitutum debiti alieni*, which are also species of intercession, were established in later Roman law; for an account of these, see MANDATUM and CONSTITUTUM.

Women were incapacitated from doing certain acts on account of the weakness of the sex. In the early part of the reign of Augustus, and in that of Claudius, it was declared by the Edict that women should not *intercedere* for their husbands. Subsequently, in the reign of Claudius, A.D. 46, the Senatusconsultum Velleianum absolutely prohibited women becoming sureties or borrowing money for others, two particular modes of intercession. The law was extended by the jurists to other cases of intercession, which, though not expressly provided for in the SC., were within its principle. A woman who was sued in respect of her intercessio, or her heres, might plead the statute (exceptio SC. Velleiani). Whatever she paid in ignorance of her right so to plead, she might recover. In certain cases a woman was permitted to renounce the benefit of the senatusconsultum; and there was a considerable number of exceptions to the rule that a woman who interceded could plead the senatusconsultum. (For the changes made by Justinian in the law on the subject, see Windscheid, *Pandekten*, ii. § 488.) Hence the term *intercessio* is used in two senses in our sources: (1) for any undertaking by one person of the obligation of another, which is its ordinary sense; (2) in a narrower sense, for any such undertaking, which is contrary to the SC. The Novella 134, c. 8, was specially intended to prevent a wife interceding under any circumstances for her husband.

(Dig. 16, 1, ad SC. Velleianum; Paulus, *S. R.* 2, 11; Cod. 4, 29; Gaius, iii. 115–127; Inst. iii. 20, de fidejussoribus; Dig. 46, 1; Cod. 8, 41, de fidejussoribus et mandatoribus; Girtanner, *Die Bürgschaft nach gemeinen Civilrecht*; Hasenbalg, *Die Bürgschaft des gemeinen Rechts*; Kattenhorn, *Ueber Intercessionen der Frauen*; Vangerow, *Pandekten*, iii. §§ 577, 578, 579, 581; Windscheid, *Pandekten*, iii. § 476, &c., § 485, &c.; Poste's *Gaius*, iii. §§ 110–127, comm.) [G. L.] [E. A. W.]

INTERCESSIO. CONSTITUTIONAL. Intercessio is used to denote the right of veto possessed by Roman magistrates: a right of which, as Mommsen has pointed out, there are two distinct aspects. One of these is the power possessed by the higher magistrates of forbidding the actions of the lower magistrates: the other is the power possessed, not only by higher magistrates, but by magistrates of equal power, of rendering invalid actions already performed by magistrates of lower or equal authority. The former power is distinct from the latter in that it is an attribute solely of *major potestas*, and is not necessarily followed by the invalidity of the act it forbids, if this act is performed in spite of the veto; its fullest exercise is shown in the complete suspension of public business known as the JUSTITIUM, and it is sometimes spoken of as an exercise of the right of *intercessio* (Liv. x. 37). But *intercessio* is more often applied to the employment of the second power, the use of which was far more frequent in the working of the political machinery. It represents the right of a magistrate to render ineffective the completed actions of his inferior or equal. It is an attribute, therefore, not only of *major* but of *par potestas*, and the invariable effect of its exercise is the invalidity of the act against which it is levelled. With the institution of the double magistracy in place of the monarchy, the intercession originated within the limits of *par potestas*; with the creation of the lower magistrates of the people originated the conception of *major potestas* as giving the right of veto: and this idea culminated in the powers that were vested in the subsequently-created tribune, who had *major potestas* over every magistrate of the state except the dictator. The intercessio was thus a supervision, exercised by closely-related magistrates, who were theoretically irresponsible during their year of office over one another's functions, for the prevention of illegal or inequitable actions; and on the part of the tribune a general supervision over all other magistracies in the interests, originally of the plebs, later of the whole community.

The intercession originated with the principle of colleagueship, and, except in the case of the tribune, was mainly confined within the limits of colleagueship. Thus the dictator has it against his inferior colleague the consul, the consul against his inferior colleague the praetor; but the consul can also veto the acts of the aedile or quaestor, who are not his colleagues, if we may accept the application to Roman practice of a principle laid down in the municipal law of Salpensa (c. 27; *C. I. L.* n. 1963), although there is no known instance of the exercise of such a veto at Rome. The tribune, outside the bounds of his own college, can exercise the right of intercession against all the patrician magistrates except the dictator—against the consul, praetor, aedile, and quaestor. In the case of *major potestas* the right of intercession is unshackled; but between certain magistrates of wholly dissimilar character, neither *major* nor *par potestas* existed. No relation of this kind could be established between the aedile and quaestor, or between the consul and censor, and accordingly such magistrates have no power of vetoing one another's actions. Another restriction, and one that was necessary to prevent utter confusion in the working of this power, was that the veto could not be vetoed; the intercession is final, and the act that is declared void cannot be re-established by any further exercise of this power. Another limitation of the intercession is found in its purely *civil* character: intercession only exists where divided authority is found; for the purposes of administration *militiae* such a division of authority was never tolerated; and thus Cicero excludes the intercessio resting on *appellatio*, the only form in which it could have manifested itself outside Rome, from the military sphere altogether (Cic. *de Leg.* iii. 3, 6). A further limitation rests on the theory that the intercession is only valid when directed against the actions of a magistrate. It was not, therefore, permitted against the decisions of juries in civil cases; the magistrate's functions being confined to proceedings *in jure*, all those *in judicio* were outside the sphere of the veto. In the *quaestiones*, in which the distinction between proceedings *in jure* and *in judicio* disappeared [JUDICIUM PUBLICUM], the veto was similarly not permitted against the finding of the magistrate and jury, the reasons being that the quaestiones were a development of civil process, in which the intercession was not permitted, and that the magistrate's acts here, during the process, are not distinguishable from those of the jury. But it appears that against the purely magisterial actions that formed the preliminary of a quaestio, intercession was still possible; in the trial of Vatinius, when the praetor, on application, had named a certain day for the trial, Vatinius appealed to a tribune "ne causam diceret" (Cic. *in Vat.* 14, 33).

The intercession may conveniently be considered from three points of view, according to the sphere of the magistrate's actions against which it was directed: the decree (*edictum*), the *rogatio*, and the *senatusconsultum*.

(i.) Against the magistrate's decree (*edictum*), whether as forming a part of civil jurisdiction of the ordinary judicial magistrates, the praetors, or of criminal jurisdiction conducted by the consul, aedile or quaestor, or of the ordinary administration of the duties imposed on individuals by the state, the intercession was most frequently directed. Intercession in all these cases rests on *appellatio*, the request for help (*auxilium*) put forward by an individual who appeals against the decree by which he feels himself injured. The *appellatio* must be made personally to the magistrate and the intercession exercised personally by him. Thus we find tribunes attaching themselves to consuls, to prevent the execution of their edict on the occasion of an expected levy (Liv. iv. 55, 3), and the praetor Caelius Rufus taking up his position next to the chair of his colleague Trebonius, waiting for appeals from the latter's decisions (Caes. *Bell. Civ.* iii. 20, "tribunal suum juxta C. Treboni praetoris urbani sellam collocavit, et si quis appellavisset fore auxilio pollicebatur"); and in the time of the Empire, when the princeps in virtue of his imperium received such appeals, we find Tiberius taking up a similar position close to the praetor's chair (Tac. *Ann.* i. 75, 1). This necessity for the presence of the assisting magistrate was most marked in the case of the tribune (Gell. xiii. 12, "Tribuni antiquitur creati intercessionibus faciendis quibus praesentes fuissent"), who were prevented for this reason from staying a night without the walls. Certain further limitations and formalities in the appellatio are known to us from the Lex Salpensana (c. 27), such as the rule that an interval of three days was granted to the magistrate to inform himself of the grounds of the appellatio made to him, and the rule that no magistrate could intercede more than once in the same case: regulations which, though applying to the organisation of a municipal town, may with certainty have their origin referred to Roman practice. In civil jurisdiction the intercessio might be employed at any stage of the proceedings *in jure*; the usual appeals were from one home praetor to another, although they might possess different *provinciae*. Thus Verres the praetor urbanus had his decisions vetoed by his colleague Piso, who was probably praetor peregrinus in cases where Verres had decided contrary to his own edict (Cic. *in Verr.* i. 46, 119: cf. Caes. *Bell. Civ.* iii. 20); but the consul, who possesses no *jurisdictio*, can yet veto the decisions of the praetor, as we find him in one case vetoing the decisions of the praetor urbanus in a case of *bonorum possessio* (Val. Max. vii. 7, 6). This, however, was unusual, and the general principle was to confine intercession to magistrates possessing somewhat similar authority, with the exception of the tribune. So powerful and far-reaching was the tribune's veto against the decree of the magistrate, that it has been thought that the tribune's right of intercession sprang from his power of *auxilium*, and that his other powers of veto, against the rogatio and the senatusconsultum, were of later growth. His interferences were for the most part against criminal jurisdiction, which, like civil jurisdiction, might be interfered with at any stage of the proceedings before the magistrate, and against the exercise of administrative power, more particularly against that of the consul (Cic. *de Rep.*

ii. 33, 58, "contra consulare imperium tribuni plebis constituti"). In matters of state-administration, such as the raising of consular levies (Liv. ii. 43) or the quaestorian collection of the taxes (Liv. xxx. iii. 42), it is the execution of the decree resting on the magistrate's right of *coercitio* that is interfered with by the tribune. From an appeal of this sort made to the tribune from the coercitio of a magistrate, a kind of quasi-judicial process results, more especially if the appeal had been made to the whole college, the process being spoken of as a *cognitio* of the tribunes (Liv. xlii. 33, "cognituros se de quo appellati essent"). We have such a process described by Livy (*l. c.*) on the occasion of an appeal from a consular levy. The matter is heard before the college of tribunes ("ad subsellia tribunorum"), before which appear the appellants and the magistrate appealed against, to defend the fact against which the appeal has been lodged. The collegium gives its verdict sometimes with the grounds of their decision (Ascon. *in Milon.* p. 47). It is possible, Mommsen thinks, that the college may in cases like this have found by a majority; although if one tribune persevered in the intercession, he might overrule the adverse decision of his other colleagues (Mommsen, *Staatsr.* i. p. 280).

(ii.) Against the *rogatio* the intercession might be directed as against any other act of the magistrate, and here we find the two aspects of the veto strongly marked; the right to forbid the question being put at all, and the right to intercede against the question after it has been put. The first right belongs to magistrates with *major potestas:* the consul can forbid the praetor to question the people (Liv. xxvii. 5); and it was from this power the consul possessed of forbidding the question, that the constitutional custom arose for the praetor to consult the consul before putting the rogatio (Liv. xlv. 21, "sed et praetor novo maloque exemplo rem ingressus erat, quod non consulibus certioribus factis de sua unius sententia rogationem ferret"). But the intercession against a rogatio that had been already put, though it probably belonged originally to the *par majorve potestas* throughout the circle of the magistracies, soon became the exclusive right of the tribune. It might be pronounced in any of the assemblies, and against any kind of act brought before these assemblies; against elections (Liv. iv. 50, 8; xxv. 2, 6), against *leges*, including formal acts such as the Lex Curiata (Cic. *de Leg. Agr.* ii. 12, 30), and against *plebiscita* (Plut. *Tib. Gracch.* 10). Certain formalities were observed in the intercession against a rogatio; it seems to have been irregular to pronounce the intercessio before the day of voting arrived (Cic. *ad Att.* iv. 16, 6; Ascon. *in Cornel.* p. 58), and indeed before the speeches for and against the law had been made (Liv. xlv. 2 , "quum ita traditum esset, ne quis prius intercedat legi, quam privatis suadendi dissuadendique legem potestas facta esset"). In the case of leges, the correct time for interposing the veto seems to have been when the introductory acts of the magistrate were over, and just before the voting had commenced (Mommsen, *Staatsr.* i. p. 285); in elections we find the tribune interceding after the praerogativa had voted (Liv. xxvii. 6, 5).

(iii.) Against a *senatusconsultum.* The intercession against a senatusconsultum, as against a rogatio, rested originally on the *par majorve potestas.* It was exercised by the tribune against the tribune (Cic. *pro Sest.* 31, 68), consul (*ib.* 34, 74), and praetor (Cic. *ad Fam.* x. 12, 3 and 4), and originally by the consul against the consul (Liv. xxx. 43, 1) and praetor, although it is unlikely that intercession was ever applied in the last-mentioned case, since the praetor did not usually summon the senate while the consul was at Rome. We find no instance of the consul's vetoing a senatusconsultum proposed by the tribune, and it is concluded accordingly that he did not possess this power. The exercise of intercession in the senate was simplified by the magistrate, who intended to veto the resolution, declaring his intention beforehand. This must be the meaning of the declaration often made by magistrates in the senate—by the consul, for instance, against his colleague, that "he would not allow any business to proceed," "non passurum quicquam agi" (Liv. xxvi. 26, 7; xxx. 40, 8: cf. xlii. 10, 10, "Popillius prae se ferens, si quid decerneret, intercessurum, collegam deterruit"). This threat did not necessarily suspend the particular business in the senate; the motion on which the veto was put, was, if passed by a majority, drawn up as a *senatus auctoritas.* Sometimes the senate requested the magistrate to suspend the intercession ("intercessionem remittere," Liv. xxxvi. 40, 10), and sometimes attached to a particular decree a general vote of censure on any magistrate who should veto it (Cic. *ad Fam.* viii. 8, 6, "qui impedierit prohibuerit, eum senatum existimare contra rempublicam fecisse"). The intercessio on certain kinds of senatusconsulta might be forbidden by law; thus the Lex Sempronia in 123 B.C. forbade the intercession on the senatorial assignment of the consular provinces (Cic. *de Prov. Cons.* 8, 17; *de Domo*, 9, 24). The veto on a senatusconsultum did not apparently interrupt the procedure of the senate, since it was usually pronounced after the voting on the measure (Val. Max. ii. 27), or while the voting was in progress (Cic. *ad Fam.* x. 12, 3), but never apparently during the debate. Hence the advantage of the preliminary declaration that the veto would be pronounced.

If we may trust tradition, this right of intercession was not originally confined to magistrates who had the right of summoning or even of sitting in the senate, since it is stated that the tribune possessed the former before he possessed either of the latter powers, sitting on a bench before the doors for the purpose of examining the decrees (Val. Max. ii. 27). In the course of time, as the tribune gained the right of taking part in the debate and of summoning the senate, his intercessio came to outweigh that of the consuls. Consular intercession against a senatusconsultum continued in force long after such intercession against a rogatio had ceased to be recognised: but before the close of the Republic it yielded even in this domain to that of the tribune. The evidence, which is entirely negative, is strongly in favour of Mommsen's view that after the time of Sulla consular intercession against a senatusconsultum is not found, as against that of Willems, who holds that traces of it are found down to the close of the Republic (Mommsen, *Staatsr.* i. p. 282, n. 7; Willems, *Le Sénat de la République Romaine*, ii. p. 200, n. 2). It is not necessary to imagine that the consular right of intercession in these cases was removed by direct legislative enactment, but that it ceased to be usual, and in time came to be regarded as unconstitutional. The tendency of republican development was to make the tribunate the sole forbidding power, and, in so far as the intercession represented a guardianship of the law, to raise the tribunate into the great corrective power in the state. (Mommsen, *Römisches Staatsrecht*, i. p. 67, and pp. 268 *sq.*; ii. pp. 290 *sq.*: and for intercession in the senate cf. Willems, *Le Sénat de la République Romaine*, ii. pp. 199 *sq.*) [A. H. G.]

INTERCISI DIES. [Dies.]

INTERCOLUMNIA. [Templum.]

INTERDICTIO AQUAE ET IGNIS. [Exsilium.]

INTERDICTUM. In certain controversies, chiefly when possession or quasi-possession (possession of a servitude) is in dispute, the praetor or proconsul intervenes in a paramount or sovereign capacity, and commands some performance or forbearance; which commands, formulated in solemn terms, are called "interdicts" or "decrees"—decrees, when he commands that something be performed; for instance, when he orders that something be produced, or something be restored: interdicts, when he forbids some act; as when he forbids the violent disturbance of a possession, unimpeachable on the ground of defects (*sine vitio;* see below), or the desecration of consecrated ground. Interdicts, then, are orders either of restitution (*restitutoria*, obliging a person to make over property to another), or of production (*exhibitoria*), or of abstention (*prohibitoria*). (Gaius, iv. 139, 140, ed. Poste.) This passage contains the essential distinction between an ordinary actio and an interdiction, so far as the praetor or proconsul is concerned. In the case of an actio, the praetor pronounces no decree, but simply issues a formula appointing a judex, whose business it is to investigate the matter in dispute, and to pronounce a sentence consistently with the formula which is his authority for acting. In the case of an actio, therefore, the praetor neither orders nor forbids a thing to be done, but he says simply, "Judicium dabo" (I will grant a trial). In the case of an interdict, the praetor makes an order that something shall be done or shall not be done, and his words are accordingly words of command: "Restituas, exhibeas, vim fieri veto." This direct interposition of the magistrate is appropriately expressed by the word *principaliter*, which does not, as some writers have supposed, refer to the fact of the command being the first formal proceeding in order of time, but to its being a special act of magisterial interference.

It is probable that interdicts were first given by the magistrate in cases where there was no statutory action (*legis actio*), and the interference of the supreme executive authority was required in the interest of law and order. In this way protection was given to public and sacred property, as public roads, rivers, temples, altars; the exercise of family and proprietary rights was made more secure, and new rights of praetorian origin were established. Something of a penal character attached to the interdict procedure, the sponsio or wager, which the parties to it entered into, in order that their rights under the interdict might be determined, being always *poenalis*, i.e. paid as a penalty by the unsuccessful to the successful party, and not a mere matter of form (*praejudicialis*). This kind of penalty may have taken the place of the multa or fine, by which disobedience to the interdict was originally punished.

The interdict procedure, as described by our authorities, was not more summary in its character than the ordinary procedure in an action, but it is probable that it consisted at first of an absolute command, which the magistrate, as guardian of public order, compelled obedience to, after holding an informal inquiry to satisfy himself that the law had been broken. In granting interdict process the magistrate did not exercise jurisdictio, but simply an act of imperium, and he determined at first without the assistance of a judex whether his authority should be interposed. Thus the interdict belonged to *cognitio extraordinaria*, not to *cognitio ordinaria*.

But in course of time the interdict lost its summary character, the praetor finding it more convenient to transmit interdict cases to a judex than to determine them himself. Accordingly, he made his command or prohibition conditional, at the same time directing the parties to the proceeding to stake a wager (*sponsio*) on the question to be decided by a judex whether the interdict had been violated. Thus, if a party to whom an interdict was directed, refused to admit the claim of his opponent, the subsequent proceedings resembled in their main features those of an ordinary action. Even the distinction as to the mode of commencing the proceedings by an authoritative order instead of by giving a judex seems to have been sometimes disregarded. Thus Savigny observes that in one of the most important interdicts, that *de vi*, the formula is, "Judicium dabo" (Dig. 43, 16, pr.). But, as he explains, the old genuine formula was, "Restituas" (Cic. *pro Caecin.* 8, § 23); and the "Judicium dabo" must have been introduced when the formulae of the two old interdicts (*de vi armata* and *de vi quotidiana*) were blended together, and at a time when the distinctions between interdictum and actio had become a matter of indifference.

The mode of proceeding as to the interdict was as follows. The party aggrieved, having summoned the defendant to court, stated his case to the praetor, which was the foundation of his demand for an interdict, and was therefore analogous to the *postulatio actionis*. If the magistrate, after hearing the parties, saw sufficient *primâ facie* reason, he might grant the interdict, which was often nothing more than the words of the edict addressed to the litigant parties, with the addition that the subject-matter of the dispute was designated. Thus the cases in which the praetor would grant an interdict were provided for in his album with appropriate forms. The praetor, before granting an interdict, made no inquiry into the merits of the case, but simply determined the previous questions whether under the alleged circumstances the interdict applied for was applicable;

and if so, how it should be framed. An interdict, like all decrees of a magistrate, was delivered orally, but its terms were registered in the praetor's book (*tabulae*, *codex*), and a copy was perhaps given to the complainant (Bethmann-Hollweg, *Civ. Proc.* § 98): hence *edere interdictum* is equivalent to *reddere interdictum*.

The interdict laid down the conditions which were to determine whether the defendant was liable or not. If he had violated its terms, he was bound to make restitution to the complainant; and if he did so, the dispute was of course at an end, in which case the proceeding would be a summary one. This is not stated by Gaius, but follows of necessity from the nature of the case; and when he says, that when the praetor has ordered anything to be done, or forbidden anything to be done, the matter is not then at an end, but the parties go before a judex or recuperatores, he means that this further proceeding takes place, if the praetor's edict does not settle the matter. If the parties disputed whether the terms of the interdict had been violated or not, it was necessary that further application should be made to the praetor within a year from the time when the interdict had been granted. Thus, when the praetor's order did not terminate the dispute, he directed that an action should be tried, and for this purpose framed a formula by which the judex, recuperatores, or arbiter named in it were instructed as to the case they were to try. The inquiry would be, whether anything had been done contrary to the praetor's edict, or whether that had been done which he had ordered to be done: the former inquiry would be made in the case of a prohibitory interdict; and the latter in the case of an exhibitory or restitutory interdict. The word *interdictum* was, strictly speaking, only applicable to the prohibitory command, *decretum* being the term for a command of a positive nature, but interdictum became the general term for commands of either kind. The subsequent course of the proceedings depended on the question, whether the action was based on a sponsio (as was at first invariably the case), or a *formula arbitraria* was granted. In the case of a prohibitory interdict, there was always a sponsio: that is, the parties were required by the magistratus (*in jure*) to deposit or give security for a sum of money, the loss of which was in the nature of a penalty (*poena*) to the party who failed before the judex.

In the case of an exhibitory or restitutory interdict, the proceeding was sometimes *per sponsionem*, and therefore before a judex or recuperatores, and sometimes without any sponsio, being tried under a *formula arbitraria* [ACTIO] by a judex or arbiter. When the formula of the interdict was framed in the latter way, it ceased to be penal in character. A defendant in an interdict proceeding of an exhibitory or restitutory kind might claim a *formula arbitraria*, if he did so at the first stage of the proceedings, when they were before the magistrate (*in jure*); if he omitted to claim in due time, a sponsio was necessary. A plaintiff might sue, as he pleased, either *per sponsionem* or *per formulam arbitrariam* (Gaius, iv. 162; Ulp. *Fragm.* 7, 8; Cic. *pro Tull.* § 53). In Cicero's time the *formula arbitraria* seems not to have been allowed in the case of *vis armata* (Bethmann-Hollweg, *Civ. Proc.* § 98, n. 107; Keller, *Sem.* ii. p. 340). In the case of Caecina (Cic. *pro Caecin.* 8, 23) a sponsio had been made: Cicero says, addressing the recuperatores, "Sponsio facta est: hac de sponsione vobis judicandum est." When the matter came before a judex or arbiter, the course of proceeding was, generally speaking, similar to the ordinary action [ACTIO].

The chief division of interdicts (*restitutoria*, *exhibitoria*, *prohibitoria*) has been stated. The purposes to which they were applicable were various. Thus, under Jus publicum and sacrum, we find, *interdictum de via publica*, *de flumine publico*, *de locis sacris* (religious); under the law of status and family law, *interdictum de homine libero* (corresponding to our writ of habeas corpus), *de homine liberto*, *liberis exhibendis*. But the greater number of interdicts were given for the protection of private property, and more especially for the protection of possession.

The importance of what are called the possessory interdicts is that the praetor, in granting them, takes no account of title to property, but simply assists the person who is in actual possession of property. Thus he gives a thief or malâ-fide possessor the benefit of such interdicts, as well as an owner or a bonâ-fide possessor. The owner cannot escape liability under them by setting up the plea of title. The question to be determined, when these interdicts are in question, is not one of right, but of fact. [POSSESSIO.]

Interdicts relating to possession are divided into those for the purpose of acquiring possession, retaining possession, or recovering possession (Gaius, iv. 144).

The Interdicta adipiscendae possessionis causa were not strictly possessory interdicts, as Savigny has shown (*Das Recht des Besitzes*, p. 410), since they are not founded on former or actual possession, but on some other title, as on a title of pledge or of bonorum possessio. The Interdictum quorum bonorum, so called from its initial words, belongs to this class of interdict; it was given to the bonorum possessor (BONORUM POSSESSIO; Dig. 43, 2, 1). Its operation was to compel a person who had possession of the property of which the bonorum possessio was granted to another, to give it up to such person, whether the person in possession of such property possessed it under a claim of right or not. The bonorum emptor was entitled to an analogous interdict, which was called Possessorium [BONORUM EMPTIO]. An interdict called Sectorium was granted to a person who bought goods at a public auction in order that he might thereby obtain possession of them; the name *sectores* being applied to persons who bought property in such manner (Gaius, iv. 146; Cic. *pro Rosc. Am.* 36, 103).

The Interdictum Salvianum was granted to a landlord; it enabled him to take possession of the stock of his tenant (*colonus*) who had hypothecated it for his rent (Dig. 43, 3).

The Interdicta retinendae possessionis causa were granted for the protection of a person in actual possession. A person was considered to be in actual possession who had the physical control of a thing, and who intended to deal with the thing as his own. [POSSESSIO.] There were two interdicts by which a person in possession was protected, named respectively Uti possidetis and Utrubi, from the initial words of the Edict. The Interdictum uti possidetis applied to land or houses, and the other to movables. The Uti possidetis protected the person who at the time of obtaining the interdict was in actual possession, provided he had not obtained possession from the other party (*adversarius*) either by violence (*vi*), or by fraud (*clam*), or as his tenant at will (*precario*), which were the three *vitia possessionis* (Festus, *s. v.* Possessio; Gaius, iv. 160). In the case of the Interdictum utrubi, the possession of the movable thing was by the interdict declared to belong to him who had possessed the thing during the greater part of the previous year, "nec vi nec clam nec precario" (Gaius, iv. 151). If a person had acquired possession from another, he might count the time during which the person from whom he acquired was in possession. In the time of Justinian the person who was in actual possession when the proceedings commenced was entitled to this interdict, whether he had been in possession for the greater part of the previous year or not.

An Interdictum recuperandae possessionis might be claimed by him who had been forcibly ejected (*vi dejectus*) from his possession of an immovable thing, and its effect was to compel the wrongdoer to restore the possession or to make good all damage. The initial words of the interdict were, "Unde tu illum vi dejecisti;" and the words of command were "ei restituas" (Cic. *pro Caecin.* 30, 88; *pro Tull.* §§ 29, 44;—Gaius, iv. 154; Dig. 43, 16, 1). There were two cases of *vis:* one of *vis* simply, to which the ordinary interdict applied, which Cicero calls *quotidianum;* the other of *vis armata*, such as was obtained by Caecina against Aebutius. The plaintiff had to prove that he was in possession of the premises, and had been ejected by the defendant or his agents (*familia* or *procurator*, Cic. *pro Tull.* § 29). The defendant might put in an answer (*exceptio*) to the plaintiff's claim for restitution; he might show that the plaintiff's possession commenced either *vi*, *clam*, or *precario* with respect to himself (*pro Caecin.* 32, 92; *pro Tull.* § 34); but this exceptio was not allowed in the case of *vis armata* (*pro Caecin.* 8, 22; 32, 93). The defendant might also plead that a year (*annus utilis*) had elapsed since the violence complained of, but this plea could not avail in a case of *vis armata* (Cic. *ad Fam.* xv. 16).

The Interdictum de precaria possessione or de precario was the remedy by which a thing could be recovered from a person who held it by the lease and licence of another, but not under a contract. It is called *precarium* because the person who received such permission usually obtained it by request (*prece*); but express request was not necessary to constitute a precarium, for it might arise by tacit permission (Paul. *Sent. Rec.* v. 6, 11). The person who was permitted to have detention of the thing obtained at the same time interdict possession of it, unless it was otherwise agreed. In either case the permission could at any time be recalled, restitution being enforced by the Interdictum de precario, as in the case of *vis*. In the later period of Roman law a regular action was given for the recovery of the precarium, as in the case of depositum; nevertheless the precarium was never regarded as a contract in the strict sense. The Interdictum de precario originally applied to land only, but it subsequently extended to movable things. The liability imposed by the Edict was to restore the thing, but not its value, in case it was lost, unless *dolus* or *culpa lata* could be proved against the defendant. But from the time that the demand is made against the defendant, he is *in mora*, and, as in the case of the other interdicts, he is answerable for all *culpa*, and for the fruits or profits of the thing; and generally he is bound to place the plaintiff in the condition in which he would have been if there had been no refusal. No exceptions were allowed in the case of a precarium. The origin of the precarium is referred by Savigny to the relation which subsisted between a patronus and his cliens, to whom the patronus gave the use of a portion of the ager publicus. If the cliens refused to restore the land upon demand, the patronus was entitled to the Interdictum de precario. As the relation between the patronus and the cliens was analogous to that between a parent and his child, it followed that there was no contract between them, and the patron's right to demand the land back was a necessary consequence of the relation between him and his cliens. (Festus, *s. v.* Patres.) The precarium did not fall into disuse when the old ager publicus ceased to exist [AGRARIAE LEGES]. It was in fact extended and applied to other purposes: thus a mortgagor might have possession of a thing under a precarium with the mortgagee.

Gaius (iv. 156) makes a third division of Interdicta into *simplicia* and *duplicia*. Simplicia are those in which one person is the plaintiff (*actor*), and the other is the defendant (*reus*): all Restitutoria and Exhibitoria Interdicta are of this kind. Prohibitoria Interdicta are either *simplicia* or *duplicia*. They are duplicia in the case of the Interdictum uti possidetis and Utrubi, because, as in these interdicts each party claims to be in possession, one of them cannot be regarded as plaintiff or defendant more than the other (Gaius, iv. 160).

Interdicts were used for the purpose of putting one of two parties to an action in interim possession of a thing till the action was decided (Rudorff, *Ueber das Interdict* Quem Fundum, &c.; *Zeitschrift*, vol. ix.). In the Interdicta duplicia, the interim possession of the property in question pending the issue was given to the party who made the highest bid for it: such bidding between the parties for the mesne profits was termed *fructuum licitatio* (Gaius, iv. 166, &c.). In the case of the Interdicta duplicia, it may perhaps have been necessary for the purpose of founding jurisdiction, that the parties should feign an act of violence (*vis ex conventu*, Gaius, iv. 166, Muirhead's ed., which may be equivalent to the *vis moribus facta* of Cicero, *pro Caecin.* 1, § 2; 8, § 22; DEDUCTOR). In the later period of Roman law there was no difference between interdict procedure and that by which other actions were tried (Inst. iv. 15, 8).

(Gaius, iv. 138–170; Ulp. *Inst. fr.* v.-viii.; Paulus, *Sent. Rec.* v. 6; Inst. iv. 15; Dig. 43; Cod. 8, 1, 9; Savigny, *Besitz.* §§ 34-

43; Zimmern, *Rechtsg.* iii. §§ 71–74; Keller, *Civilproc.* §§ 74–76; Bethmann-Hollweg, *Civilproc.* ii. 98; Schmidt, *Das Interdiktenverfahren, &c.*; Huschke, *de causa Siliana;* Machelard, *Théorie des Interdits;* Muirhead, *Historical Introduction to the Private Law of Rome,* § 73.) [G. L.] [E. A. W.]

INTERPRES, an interpreter. This class of persons became very numerous and necessary to the Romans as their empire extended. Embassies from foreign nations to Rome, and from Rome to other states, were generally accompanied by interpreters to explain the objects of the embassy to the respective authorities (Cic. *de Divin.* ii. 64, 131, *de Finib.* v. 29, 89; Plin. *H. N.* xxv. § 6; Gell. xvii. 17, 2; Liv. xxvii. 43). In large mercantile towns the interpreters, who formed a kind of agents through whom business was done, were sometimes very numerous, and Pliny (*H. N.* vi. § 15) states that at Dioscurias in Colchis there were at one time no less than 130 persons who acted as interpreters to the Roman merchants, and through whom all the business was carried on.

All Roman praetors, proconsuls, and quaestors who were entrusted with the administration of a province, had to carry on all their official proceedings in the Latin language (Val. Max. ii. 2, § 2); but as the provincials could not be expected to know this language, they had always among their servants [APPARITORES] one or more interpreters (hired in the province, not brought from Rome), who were generally Romans, but in most cases undoubtedly freedmen (Cic. *pro Balb.* 11, 28). These interpreters had not only to officiate at the conventus [CONVENTUS], but also explained to the Roman governor everything which the provincials might wish to be laid before him (Cic. *in Verr.* iii. 37, 84, *ad Fam.* xiii. 54; Caes. *Bell. Gall.* i. 19; compare Dirksen, *Civil. Abhandl.* i. p. 16, &c.). [L. S.] [A. S. W.]

INTERREX (in Greek historians, μεσοβασιλεύς). The fundamental principle of the Roman constitution was that the people, though sovereign, could only act through their representatives the magistrates; and hence when the regular magistracy was through any reason vacant, the political life of the people ceased. Originally there was but one supreme and responsible magistrate at Rome, the king holding office for life; and it was to supply the vacancy caused by the complete cessation of this magistrate's functions that the *interrex* was instituted. The interregnum had a long history in the Roman state, and was one of the most distinct survivals of the early regal constitution. It dates, tradition tells us, from the earliest transmission of the supreme power, and the last recorded demand for the office was in 43 B.C., on the death of the two consuls for the year (Dio Cass. xlvi. 45). As an institution it finds no parallel in governments outside Italy (Cic. *de Repub.* ii. 12, 23, "prudentes illi principes novam et inauditam ceteris gentibus interregni ineundi rationem excogitaverunt"); but that, like the monarchy, it was not a purely Roman but an essentially Latin institution is shown by its presence, in the constitution of the Italian municipia (*C. I. L.* ix. 1635, x. 6232; Mommsen, *Staatsr.* i. 647, n. 3). Since the interrex was, through the vacancy of the supreme office, the sole representative of the people, he is not a delegate in the sense in which the *praefectus urbi* was, who was merely the king's representative, nor yet in the sense in which the proconsul was during the Republic, when strictly delegated authority was not permitted within the walls. He is not *pro magistratu*, but *magistratus*, and still continued to be a magistrate under the Republic in spite of the fact that he was not elected by the people. For the interrex was a survival, and dates back to a period when popular election was unknown; although, if we exclude popular election from the original regal constitution, the position of the interrex in this period is extremely doubtful. The question raised is, whether the interrex was merely an occasional institution in the regal period, as in the Republic, employed only where the regular transmission of the regal office had been interrupted through exceptional circumstances, or whether, as represented by our authorities, it was a standing part of the procedure in the appointment of a king. The question is, therefore, whether the king of Rome was usually nominated by his predecessor, recourse being had to an interregnum only in exceptional cases, or whether he was nominated in every case by the interrex. The former view would, on the whole, seem most natural, and, if we refuse to attribute popular election to the regal period, is the one most usually held [REX]; but there is one serious objection that has been brought against it,—namely, that nomination of the future king during the lifetime of his predecessor would be a breach of the Roman legal principle that no formal act can be conditioned by time or other circumstances (Mommsen, *Staatsr.* i. 214). The appointment of a successor would certainly belong to those "actus legitimi qui non recipiunt diem vel condicionem," under which fall the *hereditatis aditio* and the *datio tutoris*, and which "in totum vitiantur per temporis vel condicionis adjectionem" (Dig. 50, 17, 77). Mommsen concludes, therefore, that the king was in every case nominated, not through the rex, but through the interrex (*Staatsr.* i. 213, 214), and that the interregnum as a part of the standing procedure of the Roman commonwealth ceased when the election of successors by those in office was permitted in the supreme magistracy, as it was on the institution of the consulate. It then became only an occasional office, necessarily resorted to where there were no supreme magistrates of Rome, and no one duly qualified to hold the election for their successors. In the case of the death of both the consuls, or of a complete vacancy in the office through any impediment to the elections, this state of things was realised. The praetor, though technically a colleague of the consul, could not hold the consular elections (Cic. *ad Att.* ix. 9, 3, "in libris habemus non modo consules a praetore sed ne praetores quidem creari Jus esse"); and consequently, on the vacancy of the consular office, recourse was had to an interregnum.

The conditions of an *interregnum* are fully expressed by Cicero (*de Leg.* iii. 3, 9), in the words "ast quando consulari potestate magistratus magisterve populi (i.e. dictator) nec erunt, *reliqui magistratus ne sunto, auspicia patrum sunto,* ollique ex se produnto qui comitiatu consules rite creare possit." The condition "reliqui magistratus ne sunto" refers to the patrician magistracies, as they were called; that is, to the *magistratus populi*, but not to the *magistratus plebeii*, which represented only a part of the community. This condition is fully explained by the original position of the interrex. He was then appointed by the senate, when the auspices had lapsed to the *patres* through the vacancy of the regular patrician magistracy (*auspicia ad patres redeunt*); and in republican times the auspices could not return to the patres, as long as they were held, whether as *majora* or *minora auspicia* (Messala *ap.* Gell. xiii. 15, 4), by patrician magistrates (Ps.-Cic. *ad Brut.* i. 5, 4, "dum unus erit patricius magistratus, auspicia ad patres redire non possunt"); and consequently the retirement of all the patrician magistrates was a necessary preliminary to the introduction of an interrex (Dionys. viii. 90, *ἀποδείκνυται μεσοβασιλεύς, αἱ δὲ ἄλλαι κατελύθησαν ἀρχαί*). When a sudden occasion arose for the appointment of an interrex, it was the duty of the senate to give notice to the patrician magistrates and request them to retire from office. In the year 43 B.C., when the death of the two consuls Hirtius and Tansa rendered an interregnum necessary, the absence of many of the patrician magistrates from Rome rendered it impossible for this communication to be made in time; the interregnum was thus rendered impossible, and the extraordinary measure was resorted to of appointing two *privati* with *consularis potestas* to hold the election for the consulship (Dio Cass. xlvi. 45). The resignation of plebeian magistrates was not required, and it was apparently not necessary for delegates such as the proconsuls to lay down their commands, since they were not *magistratus* (Mommsen, *Staatsr.* 632, n. 4).

The interregnum is said by tradition to have dated from the first vacancy of the regal officer, after the death of Romulus (Cic. *de Rep.* ii. 12; Liv. i. 17; Dionys. ii. 57; Suidas, s. v. *μεσοβασιλεύς*). With the vacancy in the sole magistracy, the auspices under which the state had been founded and which were the mark of divine acceptance of the kingly rule, returned to the *patres;* that is, in the regal period, to the patrician senate. The first interregnum was an exercise of collective rule by the senate, which however, on the model of the kingly rule, took the form of the creation of a succession of interreges. The accounts of this system given by our two chief authorities, Livy and Dionysius, do not quite correspond; but the general principle was that the senate was divided into decuries (Serv. *in Aen.* vi. 809, "Romulo mortuo cum senatus *regnaret per decurias*"): each decury having fifty days' government allotted to it, within which period each individual of the decury exercised rule for five days. The succession of the decuries was determined by *sortitio* according to Dionysius (ii. 57, *διακληρωσάμενοι*); and both Livy and Dionysius represent the rule as being based on the collegiate principle, the whole decury possessing the imperium (Dionys. *ib.* *τοῖς λαχοῦσι δέκα πρώτοις ἀπέδωκαν ἄρχειν τῆς πόλεως τὴν αὐτοκράτορ' ἀρχήν*), while the one who ruled for five days had the fasces and all the external symbols of the regal power (Dionys. *ib.*; Liv. i. 17, "decem imperitabant, unus cum insignibus imperii et lictoribus erat"). There are many points in this system which were not observed in republican times; the collegiate system disappeared, and no portion of the body qualified to appoint an interrex became his colleague or shared his imperium. Again the *sortitio* had disappeared as a means of appointing the interrex, and *comparatio* which took the form of election had superseded it (Liv. v. 31, 8, "interrex creatus M. Furius Camillus;" App. *Civ. Bell.* i. 98, *τῇ βουλῇ προσέταξεν ἑλέσθαι τὸν καλούμενον μεταξὺ βασιλέα*). The first interrex was elected in republican times, and he nominated his successor, as the consul nominated the dictator, each successive interrex holding office for five days. There was no definite limit for the number of interreges that might be nominated in succession. The number that succeeded one another during a single interregnum varies from the mininum of two (Liv. vi. 1, 8) to the known maximum of fourteen (Liv. viii. 23, 17), and possibly in one case reached a still higher number (Mommsen, *Staatsr.* i. 658, n. 4); the only fixed rule being that there must be at least two interreges, the first interrex being incapable of holding the consular elections, probably because he was regarded as having received the auspices irregularly. The technical expression for the appointment of an interrex is *prodere interregem* (Liv. vi. 41, "sed nos quoque ipsi sine suffragio populi auspicato interregem prodamus"); and this expression refers, in republican times, not only to the appointment of the first interrex by election, but to the nomination of each of the other interreges by his predecessor (Liv. v. 31, 8). The existence of an *interregnum* and the creation of an individual *interrex* are not always identical. The interregnum often lasted some days before a special interrex was appointed, as in the year 52 B.C., in which fully twenty-one days elapsed before an interrex was elected (Mommsen, *Staatsr.* 654, n. 4). But during this period the supreme authority had not lapsed, it was only dormant; the auspices were in the hands of those members of the state who in republican times were qualified to appoint an interrex: and who these members were remains to be considered.

On the one hand, we are told that the interrex could only be chosen by patricians (Cic. *pro Dom.* 14, 38, "a patricio prodi necesse est;" Liv. iii. 40, "patricios coire ad prodendum interregem"); on the other hand, we find that the republican senate, which was not exclusively patrician, was sometimes bidden to appoint an interrex (App. *l. c.*, *τῇ βουλῇ προσέταξεν ἑλέσθαι κ. τ. λ.*). There is no doubt, however, that in strict law the republican senate as such had nothing to do with the appointment of an interrex; in the early Republic their active existence ceased with the interregnum, since, before the tribune gained the right of transacting business with the senate, there was no magistrate who could consult them. They might, however, in the later Republic, suggest that the *patricii* should meet for the appointment of an interrex, the tribune, no doubt, putting the question. This probably became their duty, so that the patricii felt no obligation to meet except on the suggestion of the senate; and it is on a senatusconsultum of this kind that the tribune's veto might be put (Ascon. *in Milon.* p. 32, "dum Pompeius et T. Munatius tribunus plebis referri ad senatum *de patriciis convocandis* qui interregem proderent non essent passi"). Who these *patricii* were that met to appoint the interrex, and how they assembled, has been a matter of much dispute. One view that has been advanced is that they were the members of the Comitia Curiata, but this is rendered untenable through its having been shown that this was not a purely patrician assembly; another is that they were the *patres familiarum patriciarum gentium* assembled in the *concilium populi;* but the most probable view is that of Mommsen, that they were the patrician members of the senate, who met for this purpose (*Staatsr.* i. 654). This is most in accordance with the traditions of the regal period, which limits the interregnum to the patrician senate (Dionys. ii. 57, *τῶν πατρικίων οἱ καταγραφέντες εἰς τὴν βουλήν*). Two necessary qualifications of the interrex were that he should be a patrician (Cic. *pro Dom.* 14, 38) and a senator. The list of the known interreges shows that these were always senators, and in this respect the original idea of the interregnum as an intermediate senatorial rule was upheld. From this list it also appears that out of the thirty-five known interreges, thirty-three are known to have held curule office, while the remaining two probably had. Hence Willems concludes that past curule office was a necessary qualification for an interrex: that they were chosen, therefore, from the *senatores curules patricii*, the *senatores patricii pedarii* being excluded (Willems, *Le Sénat de la République romaine*, ii. pp. 14, 16). It seems further shown from the names we have that for the nomination of the successive interreges neither the *sortitio* nor an appeal to the *ordo senatorius* was employed, and that the interrex was free in nominating his successor, provided the above-mentioned qualifications were observed; although this does not prevent us from supposing that the succession of interreges was arranged beforehand, and that it was not wholly unknown whom the interrex for the time being would nominate as his successor (*ib.* p. 16).

The interrex was, as already stated, a magistrate, and before the institution of the plebeian offices a sole magistrate, the principle of colleagueship being absent from the institution as known to us under the Republic. Originally during his short tenure of office he must have consulted the senate and administered the state; but when the tribunes obtained the *Jus agendi cum patribus*, the necessity for the former duty was dispensed with, and the chief object of the interregnum came to be that the Comitia Centuriata might be consulted as to the appointment of a consul. He need not apparently have taken the oath of office, which was not due till five days after entrance, and the interrex's tenure of office terminated with this period (App. *Bell. Civ.* i. 20; Mommsen, *Staatsr.* i. 660). With the creation of the supreme patrician office—that is, with the election of a single consul—the existence of the interregnum necessarily terminated and the interrex retired. (Mommsen, *Römische Staatsrecht*, i. 647–660; Willems, *Le Sénat de la République romaine*, ii. pp. 7–31.) [A. H. G.]

INTERULA. [Tunica.]

INTESTA'BILIS. In the Twelve Tables it was declared "qui se sierit testarier, libripensve fuerit, ni testimonium fateatur, improbus intestabilisque esto" (Gell. xv. 13, § 11; cf. id. vi. 71, vii. 7, § 4). According to this passage, a person who had been a witness on any solemn occasion, such as the making of a will by mancipium, and afterwards refused to give his testimony, was *intestabilis;* that is, disqualified from being a witness on any other occasion.

Thus, in the Twelve Tables and in subsequent law, a person was said to be *intestabilis*, who was incapable of being a witness to a solemn legal transaction. (Dig. 28, 1, 26: "Quum lege quis intestabilis jubetur esse, eo pertinet, ne ejus testimonium recipiatur." Inst. Just. ii. 10, 6: "Neque mulier, neque impubes . . . nec cui bonis interdictum est, nec is quem leges jubent improbum intestabilemque esse, possunt in numero testium adhiberi:" cf. Hor. *Sat.* ii. 3, 181.)

The word had its meaning extended in the time of the Emperors, being used to express one who could not summon witnesses to attest his will; that is to say, one who was incapable of making a will (Dig. 28, 1, 18, § 1; Theoph. *Par.* ii. 10, 6). The punishment of declaring an offender intestabilis was imposed by various statutes: *e.g.* by the Lex Cornelia injuriarum, the Lex Julia de adulteriis, the SC. Augusti de famosis libellis. (Marezoll, *Von der bürgerl. Ehre*, p. 85 ff.; Burchardi, *de Infamia*, 22; Danz, *Lehrbuch der Geschichte d. R. R.* ii. 15, 107; Voigt, *Die Zwölf Tafeln*, i. § 27, n. 5.) [G. L.] [E. A. W.]

INTESTA'TO, HEREDES AB. [Heres.]

INTESTI'NUM OPUS, joiner's work, is referred to in some passages of Vitruvius as used in the interior of buildings; but there is nothing in his allusions to it that requires explanation (Vitruv. ii. 9; v. 2 and 3). [P. S.]

INTU'SIUM. [Tunica.]

INVENTA'RIUM. [Heres.]

INVESTIS. [Impubes.]

IREN. [Eiren.]

IRPEX, HIRPEX, or **URPEX** (perhaps from ἅρπαξ), a harrow with iron teeth, used to clear the fields of weeds and to level and break down the soil, drawn by oxen (Cato, *R. R.* 10; Varr. *L. L.* v. § 136; P. Diac. p. 105 M.; Servius on Verg. *Georg.* i. 95). It was probably simpler than our harrow, since Varro calls it *regula*, i.e. a straight piece of wood. The word is a rare one, and the bush-harrow seems to have been more in use (Verg. *l. c.*; Crates). [J. Y.] [W. W.]

ISO'DOMUM OPUS. [Murus.]

ISOPOLITEIA. [Civitas.]

ISO'TELEIS. [Civitas.]

ISTHMIA. One of the four great Hellenic festivals. It was celebrated at the Isthmus of Corinth; and though inferior to the splendour of Olympia, it probably surpassed the Nemea in brilliancy (cf. Themist. *Orat.* xv. p. 229, xxviii. p. 413, ed. Dind.; and Aristid. *Ἰσθμ. εἰς ποσειδ.* iii. p. 41, Dind. vol. i.). Indeed, when one considers the natural advantages of Corinth as a centre of commerce, it is rather surprising that the Isthmian games did not attain higher importance than those of Olympia. Pindar describes the scene of the Isthmia by a variety of poetic expressions, *e.g.* *τὰν ἁλιερμέα Ἰσθμοῦ δειράδα* (Pind. *Isth.* i. 9), *Ἴσθμιον νάπος* (*Isth.* vii. 63), *πόντου γέφυρ' ἀκάμαντος* (*Nem.* vi. 40), &c. A sacred enclosure planted with pines, within which was the temple of the Isthmian Poseidon, surrounded the scene of the games (Strab. viii. 380). Pausanias saw here a theatre and a stadium of white marble (λίθου λευκοῦ), but does not speak of the hippodrome, whence it may perhaps be inferred that it had disappeared or gone to ruin before the time of his visit (Paus. ii. 1, 7). A late inscription, belonging probably to Hadrian's reign, refers to the restoration of several edifices here which had fallen into decay. In it are mentioned καταλύσεις, or lodging-places, for the athletes who came to the Isthmian games from all parts of the world (τοῖς ἀπὸ τῆς οἰκουμένης ἐπὶ τὰ Ἴσθμια παραγενομένοις ἀθληταῖς); also, ἐγκριτήριοι οἶκοι, in which it is likely that the admissibility of intending candidates was discussed and determined; and a portico with vaulted chambers attached (στοὰ σὺν κεκαμαρωμένοις οἴκοις), in which probably those who intended to compete made ready and waited during the interval before their turn to engage came on (Boeckh, *C. I.* n. 115, p. 573, vol. i.). The kraneion, a gymnasium standing in an enclosure of the same name planted with cypresses, might have been used by the athletes in training for the games (Paus. ii. 2, 4; Plut. *Alex.* 14; Athen. xiii. 6, 589; Diog. Laert. vi. 77, p. 351).

For information respecting the origin of the games, there remains to us nothing but obscure traces of primitive cults, which kept their seat in the Isthmus even into historic times. The myth which seems to be of greatest antiquity ascribes the institution of the festival to Poseidon and Helios, when Castor won the prize in the stadium, Kalaïs in the δίαυλος, Orpheus in playing on the cithara, Herakles as πάμμαχος (*i.e.* as pancratiast), Polydeukes in boxing, Peleus in wrestling, Telamon in discus-throwing, and Theseus in the armour-race. In horse-racing, Phaëthon was victorious with the riding-horse, and Neleus with the four-horse chariot. On this occasion there was also a ship-race, in which the Argo obtained the prize (Dion. Chrysost. *Orat. Corinth.* xxxvii. t. ii. p. 107). In this myth nearly all the potentates of prehistoric Hellas are observed grouped in one tableau.

Another legend represents the Isthmian games as founded by Poseidon to honour the memory of Melikertes, son of Athamas king of Orchomenos and Ino, who cast herself with Melikertes into the sea, becoming thereupon a Nereid with the name Leukothea, while her son became the sea-deity Palaemon (Schol. *ad* Pind. *Isthm.* p. 514 *seq.* B; Ovid. *Met.* iv. 521 *seqq.*).

According to another tradition, the Nereids appeared to Sisyphos, and commanded him to found the games in honour of Melikertes. A modification of this myth states that the corpse of the son of Ino lay unburied upon the shore of the Isthmus; that the Corinthians were, in consequence, sorely pressed by famine; and that, consulting the oracle as to the means of relief, they were directed to inter the dead youth and establish the games in memory of him.

Yet another myth informs that Theseus founded the Isthmia in grateful commemoration of his victory over the wicked giant Sinis Pityokamptes (Schol. *ad* Pind. *Isthm.* p. 514 B). Now, since both Sinis and Theseus were children of Poseidon, the institution of the festival by the latter might be looked upon as an act of atonement offered by him to his offended father; and this view would help us to understand the statement that the Melikertes festival took rank rather as a mystic rite than as a popular assembly, the cynosure of sightseers (Plut. *Thes.* 25, τελετῆς ἔχων μᾶλλον ἢ θέας καὶ πανηγυρισμοῦ τάξιν). The other legends as to the origin of the Isthmia need not detain us. In almost all we see that, as the mythic history of the Olympic games takes us back to Zeus, so that of the Isthmian refers us ultimately to Poseidon. Plut. (*l. c.*) says that Theseus founded the latter in emulation of Herakles, who had established the former. Later accounts represent Theseus as having confirmed, by the institution of the games, a friendly political relationship between Athens and Corinth. According to Hellanikos, and Andron of Halicarnassus, Theseus made a covenant with the Corinthians by which Athenian theoroi should receive at the Isthmia so much standing-ground (προεδρία) as could be covered by the sail of the theoric vessel (Plut. *l. c.*). The inscription of the Parian marble numbers 995 years backwards from its own time to the institution of the Isthmian games by Theseus.

In the time of the Cypselids at Corinth, the celebration of these games was suspended for seventy years (Solin. 12). Solon offered a reward of a hundred drachmae to every Athenian ἰσθμιονίκης, from which it is evident that in his time the Isthmia had obtained wide celebrity as a periodic festival. It is noteworthy that even the destruction of Corinth by Mummius in 146 B.C. did not break the continuity of the games. They flourished under the Roman empire, and Corinthian coins of the reigns of Hadrian, Verus, M. Aurelius, and Commodus, frequently bear the inscription ISTHMIA. In the reign of Julian these, like the other great Hellenic games, were zealously celebrated, but they ceased to exist probably about Olymp. 293, when Christianity became the established religion of the Roman empire.

Of the four great Pan-Hellenic festivals, two—the Olympia and Pythia—were *pentateric*, i.e. recurring after intervals of four years: while two—the Nemean and Isthmian—were *trieteric*, i.e. recurring after intervals of two years. Hence Pliny (*H. N.* iv. § 5) and Solinus (c. 9) are in error when they represent the Isthmia as quinquennial. Cf. Pindar, *Nem.* vi. 40, where he uses the words: ἐν ἀμφικτιόνων ταυροφόνῳ τριετηρίδι Ποσειδάνιον ἂν τέμενος. Eusebius places the first historic Isthmiad in Olymp. 49, 3 (*Chron.* libr. post. p. 125, interp. Hieron. ed. Scal. ii.). The Isthmia occurred in the first and third years of each Olympiad. As to the season in which they were held, so much alone is certain (cf. Boeckh, *Explic. ad Pind. Olymp.* ix. p. 183) that the Isthmia which fell in the first year of an Olympiad took place in summer (Thucyd. viii. 10; Curt. iv. 5, 11), and that those which fell in the third took place in spring (Xen. *Hell.* iv. 5; Liv. xxxiii. 32, 33). Dodwell argued from Pindar, *Olymp.* ix. 83, with Schol., that the former were celebrated on the 12th of the Attic month Hecatombaeon, which corresponded with the penultimate month of the Corinthian year (Dodw. *de Cycl.* vi. 3,

p. 283 ff.). Corsini held that this summer festival occurred on the 12th of the Corinthian Panemos, which, according to him, coincided with the Attic Hecatombaeon; according to Boeckh, with Metageitnion. But Boeckh (*ad* Pind. *l. c.*) shows the inconclusiveness of their reasoning.

The programme of the Isthmian games included gymnic equestrian and musical contests, the gymnic being probably the oldest. The Isthmian contests no doubt resembled in the main those of the other three great festivals. They were open to boys, men, and youths, well grown but not quite matured to manhood (ἀγένειοι). Mention is on record of *ἰσθμιονῖκαι* who obtained prizes in the stadium (for men and boys), the pancratium (for men and ἀγένειοι), and the pentathlum (Dion Chrysost. Διογ. ἢ ἰσθμ. *Orat.* ix. p. 291, vol. i. Reisk., and Krause, *Pyth. Nem. Isthm.* pp. 209 ff.). In equestrian contests we hear only of victories with the four-horse chariot and the riding-horse, but we cannot, from absence of reference to other equestrian contests, infer that there were none except these.

Pausanias (i. 2, v. 2) mentions a general truce which prevailed during the Isthmian games (ἰσθμικαὶ σπονδαί), and dated from the mythic age. In historic times this truce was regularly proclaimed throughout Hellas by heralds called σπονδοφόροι, whose persons were sacred, but who were not obeyed, however, if the festival was not at the time under legitimate management (cf. Xen. *Hell.* iv. 5, 2; Diod. xiv. 86, p. 709; Paus. iii. 10, 1).

The Eleans alone of the Hellenic states sent no theoroi to these games; nor did any from Elis, except the people of Lepreum, present themselves as candidates for Isthmian honours (Paus. *l. c.* and vi. 16, 2).

We have little or no information as to the special rules which regulated the celebration of the Isthmia, but we may suppose them to have been similar to the rules observed at the Olympia, Nemea, and Pythia (*vid.* Aristid. περὶ ὁμον., *Or.* xlii. p. 781; Themist. *Or.* xv. p. 229; Krause, *Olympia*, § 15, 144–156). We know, however, that the same person might here compete in as many as three contests on one and the same day (Paus. vi. 15, 3). We gather from Plutarch (*Sympos.* v. 2) that women were admitted to poetical competitions. The beginning of the games was announced by a herald, who, advancing into the middle of the scene, proclaimed silence with a trumpet, and then in a set form of words declared the festival to have begun (Liv. xxxiii. 32; Themist. *l. c.*).

The Isthmia were naturally even from prehistoric times under the control of the Corinthians (cf. Paus. v. 2, 1; 22, 3; Plut. *Thes.* 25). In Pindar they alone are referred to as the presidents (cf. *Nem.* ii. 20). But in Olymp. 96 the games were held by the Laconizing Corinthian exiles, under the protection of Agesilaus, who interrupted the celebration of the festival by the Argives and those of the Corinthians who had submitted to them. As soon as he withdrew, the Argives celebrated the games over again. But in Olymp. 98. 2, by the peace of Antalkidas, the Corinthians were freed from the Argive yoke, and recovered control of the Isthmia. When Corinth was destroyed by Mummius (B.C. 146), the management of the festival passed to the Sicyonians, who retained it until the restoration of Corinth by Julius Caesar, when the ἀγωνοθεσία returned to its original possessors (Paus. ii. 2, 2). We have no account of the number of presidents of the games (ἀγωνοθέται), who were chosen apparently for their wealth and nobility. It is supposable that, like the Hellanodikae at Olympia, they wore a distinctive robe of office; and we know from Dion Chrysost. (*Orat.* ix. Διογ. ἢ ἰσθμ. p. 291, vol. i. ed. R.) that their heads were adorned with crowns.

The prize of victors at the Isthmia, like that won at each of the other three great festivals, had during the historic period no intrinsic value, its symbolic worth being thereby immeasurably enhanced. In Homeric times, such prizes always possessed intrinsic worth, and it is a mere anachronism when some myths describe the primitive Isthmia as an ἀγὼν στεφανίτης. The victor's meed in historic times was a wreath of parsley (σέλινον: cf. Pind. *Nem.* iv. 88; *Olymp.* xiii. 31). It has been thought that the Nemean differed from the Isthmian wreath in that the former was made of green or fresh, while the latter was made of dry parsley (Schol. Pind. *Olymp.* xiii. 45); but this view lacks proof. Tradition has it that the original parsley-wreath was succeeded in prehistoric times by a wreath of pine; but in the classical period we hear only of the former being awarded, as it continued to be in the time of Timoleon (cf. Diod. xvi. 679; Plut. *Tim.* 26). Nor was it until probably long after the restoration of Corinth by Julius Caesar that the pine-wreath supplanted it. But under the Empire isthmionikae are regularly represented as crowned with the pine, called simply ἡ πίτυς, like the Olympian garland, ὁ κότινος (*vid.* Plut. *Symp.* v. 3, 1–3; Paus. v. 21, 5, vi. 13; Luc. *Anach.* 9, 16). While parsley was suited to an ἀγὼν ἐπιτάφιος, the pine was characteristic of the worship of Poseidon (cf. Plut. *Symp.* l. c.). A Corinthian coin of the reign of Verus shows the pine-wreath, and from this onward to the abolition of the festival the wreath of the isthmionikae continued to be woven of pine. Here, as in the other great games, the victor received with the crown a palm branch in token of his victory (Plut. *Symp.* viii. 4, 1; Paus. viii. 48, 2). At these games Flamininus (and Nero afterwards) declared the autonomy of Hellas (Liv. xxxiii. 32; Suet. *Ner.* 22, 24). Rhetoricians, poets, and other writers brought their productions under public notice at the Isthmia (Dion Chrysost. Διογ. ἢ περὶ ἀρετῆς, pp. 277, 278, vol. i. R.). According to Dion Chrysost. (Διογ. ἢ ἰσθμ. *Orat.* ix. p. 289, vol. i. R.), visitors came from Italy, Sicily, Libya, Thessaly, the Ionian States, and even the Borysthenes, to be present at the great Isthmian festival.

As the Olympia, Pythia, and Nemea lent their names to minor festivals, so the name Isthmia was applied to other games than those held at the Isthmus of Corinth. The number of inferior Isthmia, however, was not as large as that of the inferior copies of the other great games. Coins and inscriptions remain, which refer to Isthmia held at Ancyra in Galatia. Isthmia at Nicaea in Bithynia are mentioned on a coin of this town, struck in the time of Valerianus. The Isthmia at Syracuse are known to us only from the isolated statement of a schol. to Pind. *Olymp.* xiii. 158, which, however, is credible from the fact that Syracuse was founded by Corinth. Several ancient authors whose writings are lost treated the subject of the Isthmian games. Both Plutarch and Athenaeus refer to a work on this subject written by the epic poet Euphorion (Plut. *Sympos.* v. 3, 2, 3; Athen. iv. 182). For further information, the reader may be referred to Krause (*Pyth.*, *Nem.*, *Isthm.*), whose work has been chiefly followed in the present article. [J. I. B.]

ITA'LIA. [Colonia; Provincia.]

ITER. [Viae.]

ITHOMAEA (*ἰθώμαια*), an annual festival celebrated at Ithome, in honour of Zeus Ithomatas, with which in early times a musical contest was connected. (Paus. iv. 33, § 3; Steph. Byz. *s. v.*). [L. S.]

ITI'NERIS SERVITUS. [Servitutes.]

JUDEX, JUDI'CIUM. A Roman magistratus generally did not investigate the facts in dispute in such matters as were brought before him: he appointed a judex for that purpose, and gave him instructions [Actio; Interdictum]. Accordingly, the whole proceedings in a civil action were expressed by the two phrases *jus* and *judicium*, of which the former comprehended all that took place before the magistratus (*in jure*); and the latter, all that took place before the judex at the actual trial of the issue (*in judicio*). The office of judex (*judicandi munus*) in private causes was either performed by public bodies of persons,—that is, by the decemviral or centumviral colleges,—or, as became the ordinary rule, by private persons selected by the magistratus, with the co-operation of the parties, from such classes of persons as were qualified to serve. The decemviri are probably to be identified with the *decemviri stlitibus judicandis* of the Twelve Tables, and may have been the judges instituted by Servius Tullius for determining private suits, when the principle of limiting magisterial power by the institution of private judges may have been first established. (Dionys. iv. 25: but see Mommsen, *Röm. Gesch.* 566, 1; Lange, *Röm. Alterth.* 601, 903.) The centumviri were a body of one hundred and five members, three being chosen from each tribe (Festus, *Epit.* "centumviralia judicia"). These two plebeian colleges came to be amalgamated for certain purposes, while in certain other cases they acted separately.

Cases concerning rights of freedom and citizenship were submitted to the decemviri (Cic. *pro Caec.* 33, 97; *pro Domo*, 29, 78). The centumviri decided cases relating to property and inheritance (Cic. *de Or.* i. 38, 57; Plin. *Ep.* 5, 1;—Val. Max. vii. 7, 1, 2, 5; viii. 2, 4). The constitution and practice of these judicial bodies were considerably changed by Augustus (Suet. *Aug.* 36; Plin. *Ep.* 5, 21; Dio Cass. liv. 26: cf. Lange, 906); but the whole subject is obscure.

Judex, *arbitri*, and *recuperatores* are the different terms used for private judices selected for the particular occasion. The recuperatores were perhaps an imitation of the courts established by treaty between Rome and neighbouring states for exercising jurisdiction, when a citizen of one state sought a legal remedy in another state (Festus, s. v. *reciperatio*: cf. Dionys. vi. 95). Recuperatores might be peregrini, whereas only a civis could be a judex proper; and so the appointment of recuperatores, which was made under the imperium as distinct from the jurisdictio of the magistratus, was a means of securing an impartial tribunal in cases in which peregrini were concerned.

The distinctive characteristics of the procedure in actions tried by recuperatores cannot be clearly ascertained. It appears that of some actions they had exclusive cognisance, while in certain others they might be used concurrently with other kinds of judices. They were, it seems, more expeditious in their proceedings than other judices (cf. Cic. *pro Tull.* § 10, "ut quam primum de re judicaretur"). A recuperator never acted alone, but was always associated with others, the maximum number in a case not exceeding five. Recuperatores could not try a *judicium legitimum*, but only *unus judex* (Gaius, v. 103–109).

Sometimes the judex was called *arbiter*; thus judex and arbiter are named together in the Twelve Tables (Festus, s. v. *reus*; Gell. xx. 1, 7). Arbiter (ar=*ad* and bitere=*ire*), as opposed to judex, is a judge appointed to try a case according to the principles of *bona fides*, the case being of such a kind as is best left to the free discretion of an impartial person, whereas the province of a judex proper was defined by the magistratus. Either a single arbiter might be appointed or several might be associated together. Arbitri, who acted under a private agreement between the parties to a suit for the purpose of settling it (*arbitri ex compromisso*), are to be distinguished from arbitri appointed by a magistratus. The distinction between judex and arbiter led to a division of actions into *arbitria* and *judicia*, though judicium in a general sense includes arbitrium. The following is the distinction between an arbitrium and judicium according to Cicero (*pro Rosc. Com.* 4, 10):—In a judicium the demand was of a certain sum or definite amount (*pecuniae certae*); in an arbitrium the amount was not determined (*incerta*). In a judicium the plaintiff obtained all that he claimed or nothing, as the words of the formula show: "Si paret H. S. ccc. dari oportere." The corresponding words in the arbitrium were "quantum aequius melius id dari," and their equivalents were "ex fide bona, ut inter bonos bene agier" (*Top.* 17, 66). In a dispute about dos, which Cicero calls "arbitrium rei uxoriae," the words "quod aequius melius" were added. (Cf. Gaius, iv. 61, 62.)

From the arbitria the actions called *bonae fidei* were derived, while the actiones *stricti juris* were judicia in the strict sense [Actio]. The formula arbitraria was a combination of an arbitrium and judicium in one formula (Keller, § 28).

There was an idea of agreement between the plaintiff and defendant in the selection of a judex, though the actual appointment (*judicis datio*) was made by the magistratus. It was the rule for him to appoint the person or persons agreed on between the parties. If they were unable to agree, the plaintiff proposed some one ("judicem ferre adversario," Cic. *pro Rosc. Com.* 14, 42; 15, 45; but the defendant, by swearing that the person proposed was not impartial ("iniquum ejurare," Cic. *de Or.* ii. 70, 285; *in Verr.* iii. 60, 137; *Phil.* xii. 7, 18), could prevent his appointment. If the defendant abused his right of rejection with the object of preventing a trial, he was probably a defendant who made no defence (*indefensus*). The above was the mode of taking a judex or arbiter (*sumere judicem*) in the time of the republic: it was not, however, applicable to recuperatores, the practice of choosing these being for the magistratus to select a number of persons, either by lot (*sortitiones* from the conventus) or by special selection (*decurias scribere*); and for this list, which was larger than was necessary, to be reduced by rejections of the plaintiff and defendant to the number of judges required (Cic. *in Verr.* ii. 13, 15, 16, 17; iii. 11, 59;—*C. I. L.* i. 81). Under the empire the magistratus selected the judex in all cases, the parties having simply a right of challenge on certain grounds. (For an account of the effect of the leges judiciariae on the qualification and modes of appointment of judices, see below.)

Mention is often made of the Judicia Populi in the Latin writers. A judicium was commenced by the accuser, who must be a magistratus, declaring in a contio, that he would on a certain day accuse a certain person, whom he named, of some offence, which he also specified. This was expressed by the phrase *diem dicere* ("Virginius Caesoni capitis diem dicit," Liv. iii. 11). If the offender held any high office, it was necessary to wait till his time of service had expired, before proceedings could be thus commenced against him. The accused was required to give security for his appearance on the day of trial; the security was called *vades* in a causa capitalis, and *praedes* when the penalty for the alleged offence was pecuniary. If such security was not given, the accused was kept in confinement (Liv. iii. 13). If nothing prevented the inquiry from taking place at the time fixed for it, the trial proceeded, and the accuser had to prove his case by evidence. The investigation of the facts was called *anquisitio* with reference to the proposed penalty: accordingly, the phrases *pecunia*, *capite* or *capitis anquirere*, are used (Liv. xxvi. 3). When the investigation was concluded, the magistratus promulgated a rogatio, which comprehended the charge and the punishment or fine. It was a rule of law that a fine should not be imposed together with another punishment in the same rogatio (Cic. *pro Dom.* 17, 45). The rogatio was made public during three nundinae, like any other lex; and proposed at the Comitia for adoption or rejection. The form of the rogatio, the effect of which was to drive Cicero into banishment, is given in the oration *pro Domo* (18, 47). The accused sometimes withdrew into exile before the votes were taken; or he might make his defence, of which we have an instance in the oration of Cicero for Rabirius. Though these were called Judicia Populi, and properly so in the early ages of the state, the leges passed in such judicia in the later period of the republic were often Plebiscita.

The offences which were the chief subjects of Judicia Populi and Publica were Majestas, Adulteria and Stupra, Parricidium, Falsum, Vis Publica and Privata, Peculatus, Repetundae, and Ambitus, which are treated under their several heads.

With the passing of special enactments for the punishment of particular offences, was introduced the practice of forming a body of Judices for the trial of such offences as the enactments were directed against.

The Judicia Populi were originally held in the Comitia Curiata, and subsequently in the Centuriata and Tributa. A lex of P. Valerius Publicola (Liv. ii. 8; Cic. *Rep.* ii. 31) gave an appeal (*provocatio*) to the populus from the magistratus; and a law of C. Sempronius Gracchus (Cic. *pro Rab. Perd.* 4, 12) declared to the same effect: "Ne de capite civium Romanorum injussu populi judicaretur."

The kings presided in the Judicia Populi, and the consuls succeeded to their authority. For an account of later changes, see JUDICIUM PUBLICUM.

As many of those who were tried in the quaestiones perpetuae belonged to the class of the Optimates, it often happened that the judices acquitted those members of their own body who would have been convicted by impartial judices. Accordingly a struggle arose between the popular party and the Optimates, whom the popular party wished to exclude from the office of Judex. The laws which relate to the constitution of the body of Judices are called Judiciariae, whether these laws related only to this matter, or made rules about it and other things also. The first lex which excluded the Senators from the Album judicum selectorum was a Lex Sempronia of C. Gracchus, B.C. 123, in accordance with which the judices were taken only from the Equites (Liv. *Epit.* lx.; Appian, *B. C.* i. 22; Tac. *Ann.* xii. 60; Cic. *Act.* i. *in Verr.* 13, 38; Ps.-Ascon. *ad Div. in Caecil.* p. 103 Or.; Vell. Pat. ii. 6, 32). This arrangement lasted above forty years, and gave satisfaction to the popular party; but it did not work well in all respects, because the magistrates in the provinces favoured the rapacity of the Publicani, in order to keep on good terms with the Equites, to which class the Publicani belonged (Cic. *Verr.* iii. 41, 94). The Lex Acilia repetundarum (formerly known as the Lex Servilia), B.C. 121, seems to have directed that the album for this quaestio should be composed of Equites; that is, of persons registered in the census as having a certain amount of property, other than senators. A Lex Servilia Caepionis, B.C. 106, seems to have associated senators with the Equites as judices. There is a passage in Tacitus (*Ann.* xii. 60) in which he speaks of the Serviliae leges restoring the judicia to the senate; but the Lex Servilia Glauciae, B.C. 104, is said to have given the judicia to the Equites, and consequently it either repealed the Lex of B.C. 106 indirectly, or it may merely have confirmed the Lex Sempronia; for the real nature of the Lex of B.C. 106 is hardly ascertainable. The Lex Servilia of B.C. 104 excluded from the function of Judices every person who had been tribunus plebis, quaestor, triumvir capitalis, tribunus militum in one of the first four legions, triumvir agris dandis assignandis, who was or had been in the senate, who was infamis, every person who was under thirty or above sixty years of age, every person who did not live in Rome or in the immediate neighbourhood, every father, brother, or son of a person who was or had been in the senate, and every person who was beyond seas. The attempts of the tribune M. Livius Drusus the younger, B.C. 91, had no lasting result [LEGES LIVIAE].

A Lex Plautia, B.C. 89, enacted that the Judices should be chosen by the tribes, fifteen from each tribe, without any distinction of class, thereby putting the nomination of judges in the hands of the people. The Optimates triumphed under L. Cornelius Sulla, who by a Lex Cornelia, B.C. 80, enacted that the Judices should be taken from the senate and 300 Equites. But a Lex Aurelia (B.C. 70) enacted that the Judices should be chosen from the three classes—of Senators, Equites, and Tribuni Aerarii (Vell. ii. 32; Liv. *Epit.* xcvii.; Cic. *pro Cluent.* 47, 130). The Tribuni Aerarii were taken from the rest of the citizens, and were, or ought to have been, persons of some property. Thus the three decuriae of Judices were formed; and it was either in consequence of the Lex Aurelia or some other lex that, instead of one urn for all the tablets, the decuriae had severally their balloting urn, so that the votes of the three classes were known. Dio Cassius (xxxviii. 8) ascribes this regulation to a Lex Fufia, and he says that the object was that the votes of the decuriae (ἔθνη, γένη) might be known, though those of individuals could not, owing to the voting being secret. It is not known if the Lex Aurelia determined the number of Judices in any given case. A Lex Pompeia, passed in the second consulate of Pompey (B.C. 55), seems to have made some modifications in the Lex Aurelia as to the qualification of the Judices; but the new provisions of this lex are only known from Asconius, who explains them in terms which are very far from being clear.

A Lex Judiciaria of Julius Caesar (Suet. *Jul.* 41; Cic. *Phil.* i. 8, 19) took away the decuria of the Tribuni Aerarii, and thus reduced the Judices to two classes (*genera*, the γένη of Dio Cassius). A Lex Judiciaria, passed after his death by M. Antonius, restored the decuria of the Tribuni Aerarii, but required no pecuniary qualification from them: the only qualification which this lex required was, that a person should have been a centurion or have served in the legions. It appears that the previous Lex Pompeia, Lex Aurelia, and a Lex of Caesar had given to those who had been centurions (*qui ordines duxerant*) the privilege of being judices (*judicatus*), but still they required a pecuniary qualification (*census*). The Lex of Antonius, besides taking away the pecuniary qualification, opened the judicia to the soldiers (Cic. *Phil.* i. 8, 20; v. 5, 12; Suet. *Jul.* c. 41). It seems probable that the expression *ex centuriis*, which is used by Asconius in speaking of the change introduced by this Lex Pompeia, had reference to the admission of the centurions into the third class of judices.

Augustus, who altered the whole constitution of the body of judices by his leges judiciorum publicorum et privatorum, added to the existing three Decuriae Judicum, a fourth Decuria, called that of the Ducenarii, who had a lower pecuniary qualification, and only decided in smaller matters (*de levioribus summis*, Suet. *Aug.* 32). Caligula (Suet. *Calig.* 16) added a fifth Decuria, in order to diminish the labours of the judices. Augustus had already allowed each Decuria, in its turn, an exemption for one year, and had relieved them from sitting in the months of November and December. The whole number of judices was raised by Augustus to near 4000 (Plin. *H. N.* xxxiii. § 30); and the judices in civil cases were taken out of this body. They were chosen by the praetors out of the persons who had the property qualification, and the duty of serving as a judex thus became one of the burdens to which all citizens with any property were liable.

The judices in a quaestio were selected from an album in which the names of persons qualified to serve were inscribed by the praetor. According to the Lex Acilia repetundarum (l. 12–19), the praetor peregrinus in the first year, and subsequently the praetor to whom the quaestio was allotted, was bound to select 450 judices from the tribes, and to publish an album with their names inscribed on it ("judices de quaque re constituti"), from which he was bound to choose judices for this quaestio. The same practice probably obtained in respect of the other quaestiones. Whether the praetor urbanus or peregrinus were bound to make their choice from such lists is uncertain. According to Mommsen, the praetor urbanus was not, till after the enactment of the Lex Aurelia, and the praetor peregrinus was unrestricted in his choice till a later date. The Lex Aurelia for the first time required the praetor urbanus to make a general list for all trials which were not specially excepted; the judicia quae imperio continentur and recuperatoria—trials held under the jurisdiction of the praetor peregrinus, municipal magistrates, and governors of provinces—being, according to Mommsen, exempted from this limitation as to the choice of judices. The rules as to the selection of judices to form a consilium in a quaestio differed at different times and in different quaestiones.

In early times the notion that the parties to a trial should agree to select the judges who were to try the issue between them had some influence. Thus, according to the Lex Acilia repetundarum, the prosecutor proposed 100 judices out of the 450 in the album of this quaestio; the defendant then proposed a like number, and from the 100 of his opponent each party then chose 50. Under the Leges Judiciariae of Sulla, a decuria of the senate was chosen by the praetor by lot, from which each party might reject three, or, if they were senators, a greater number. The general rule which came to be established was, that the presiding praetor chose the judices for a quaestio by lot from an album, both the accusator and the reus having certain rights of rejecting or challenging (*rejicere*) such judices as they did not like (Cic. *ad Att.* i. 16). The exercise of the right of challenge might make a fresh ballot for judices (*subsortitio*) necessary (Cic. *Verr.* i. 61, 157). The judices appointed according to the provisions of the Lex Licinia de Sodalitiis, B.C. 55, were called *edititii*; in this case the prosecutor designated four tribes, of which the defendant could reject one, the prosecutor then nominating the judges from the remaining three without any challenge being allowed to the defendant.

Edititius or *exlitius judex* is properly a judex which one of the parties has allowed the other to select (cf. Serv. *ad* Verg. *Ecl.* iii. 50: "nec quemquam fugio, id est consentio etiam ad edititium. Edititius autem judex est, quem una pars eligit." Festus, p. 381 M.: "Exlitius judex, quem una pars eligit;" Cic. *pro Planc.* 15–17, §§ 36–43).

In the matter of Clodius and the Bona Dea, the senate attempted to carry a lex by which the praetor who was to preside at the trial should be empowered to select the judices at his discretion, the effect of which would have been to prevent their being challenged by Clodius. After a violent struggle, a lex for the regulation of the trial was proposed by the tribune Fufius and carried: it only differed from the lex recommended by the senate in the mode of determining who should be the judices (*judicum genus*): a difference, however, which was not unimportant, as it secured the acquittal of Clodius. The judices voted by ballot, and a majority determined the acquittal or condemnation of the accused. If the votes were equal, there was an acquittal (Plut. *Marius*, 5). Each judex was provided with three tablets (*tabulae*), on one of which was marked A, Absolvo; on a second C, Condemno; and on a third N. L., Non liquet. The judices voted by placing one of these tablets in the urn (*urna*, Juv. *Sat.* v. 4), which was then examined for the purpose of ascertaining the votes. It was the duty of the magistratus to pronounce the sentence of the judices; in the case of condemnation, to adjudge the legal penalty; of acquittal, to declare him acquitted; and of doubt, to declare that the matter must be further investigated (*amplius cognoscendum*).

The Lex Pompeia de vi and de ambitu (B.C. 52) determined that eighty judices were to be selected by lot, out of whom the accuser and the accused might reject thirty. In the case of Clodius (B.C. 61), in the matter of the Bona Dea, there were fifty-six judices. It is conjectured that the number fixed for a given case by the Lex Aurelia was seventy judices.

It will be noticed that the number of judices composing a consilium varied, and that it was always considerable.

As to the whole number of judices, included at any given time in the Album Judicum, it seems almost impossible to state anything with precision; but it is obvious from what has been said, that the number must have varied with the various changes already mentioned. After the time of Augustus the number was about 4,000, and from this period, at least, there is no doubt that the Album Judicum contained the whole number of persons who were qualified to act as judices, both in Judicia Privata and Judicia Publica, with the exception perhaps of the persons who were to act as judges in the centumviral court. The fourth Decuria of Augustus was limited in its functions to the Judicia Privata in which the matter in dispute was of small value. There is much difference of opinion among modern writers of authority on the question whether the leges judiciariae previous to Augustus affected Judicia Privata; and if so, to what extent. It is probable that the Lex Sempronia and the succeeding enactments were only intended to apply to criminal trials, and that the praetor began to take judices privati from the Equites by his own authority (*ad Att.* vi. 1, 15; *pro Rosc. Com.* 14; cf. Suet. *Aug.* 32), instead of confining his choice to the senate as had been the previous practice. But we may accept Mommsen's view that the Lex Aurelia extended to judicia legitima, so that the unus judex had to be taken from the general album which this law first established. Under the empire the quaestiones were gradually superseded by the judicia extraordinaria, by which change criminal justice was exclusively administered by officials, thus becoming inquisitorial in its character, with a procedure less like that of a private action.

A judex when appointed was bound to discharge the functions of the office, it being a *munus publicum*, unless he had some valid excuse (*excusatio*). A person might also be disqualified from being a judex on various grounds (Keller, § 11). There were certain seasons of the year when legal business was done at Rome ("cum res aguntur," Gaius, ii. 279, and Mr. Poste's comm.), and at these times the services of the judices were required. These legal terms were regulated according to the festivals and seasons, so that there were periods of vacation (Cic. *ad Att.* 1, 1, "cum Romae a judiciis forum refrixerit"); in the provinces the term depended on the conventus. A judex was liable to a fine if he was not in attendance when he was required. In the new organisation of the Italian towns [LEX RUBRIA DE GALLIA CISALPINA; LEX JULIA MUNICIPALIS] the magistrates had a power analogous to jurisdictio, and appointed a judex as the praetor did at Rome. The album decurionum, generally speaking, served as an album judicum, but Augustus allowed the plebs to share in the judicial office.

In the provinces the governors generally appointed judices at the conventus, which they held for the administration of justice (Cic. *in Verr.* ii. 13, 32;—*ad Att.* vi. 1, 15; 2, 4), but in some provinces there were special regulations respecting the mode of making such appointments.

The magistratus could fix the place and the time at which the trial was to take place. In the case of a *judicium quod imperio continetur* (Gaius, iv. 105), judgment had to be given during the year of office of the praetor who granted the formula; a *judicium legitimum*, on the other hand, was not originally limited to any time, but by a Lex Julia it had to be concluded within a year and six months (Gaius, iv. 104).

The magistratus could compel a judex to proceed in a case ("judicium cogere," Lex Rubria, c. 20, l. 23; c. 21, l. 24); he could also put a stop to the proceedings for a time or altogether, but he had no right of interfering with the actual conduct of the proceedings, though he could punish a judex for his misbehaviour. A judex who culpably gave a wrong decision was said to make the cause his own (Inst. iv. 5, pr., "Judex qui litem suam facit;" Theoph. *Paraphr.* *καθ' ἑαυτοῦ δίκην ἤγειρε*), and was liable to an action for the damage which the party injured by his decision had sustained. The judex on entering upon his duty (*officium*) had to take an oath that he would discharge it faithfully (Cic. *de Invent.* i. 39, 70).

When the judex was appointed, the proceedings *in jure* or before the praetor were terminated, which was sometimes expressed by the term *litis contestatio*, the phrases *lis contestata* and *judicium acceptum* being equivalent in the classical jurists [LITIS CONTESTATIO]. The parties appeared in the forum before the judex and presented the formula to him in which he was named (*editis formulis*). The appearance before the judex took place according to Gaius (iv. 15) on the third day (*comperendinum diem, ut ad judicem venirent, denuntiabant*) after his appointment in the early procedure, and this may have continued to be the rule in subsequent times. The judex was generally aided by advisers learned in the law (*jurisconsulti*), who were said *in consilio adesse* (Cic. *pro P. Quintio*, 10, 30; *Top*. 17, 66; *in Verr*. ii. 29, 72;—Suet. *Dom*. 8;—Plin. *Ep*. i. 20; v. 1;—Gell. xii. 13, 2; Val. Max. viii. 2, 2), but the judex alone was empowered to give judgment. The case was first briefly stated to the judex by the parties (*causae conjectio, collectio:* Gaius, iv. 15; cf. XII. Tab., "ante meridiem causam conjiciunto," Gell. v. 10, 9), after which the judex fixed a day for hearing the cause. The proceedings, which were public, commenced with the speeches of the advocati or patroni of each party (*continua oratio, peroratio:* cf. Gell. *l. c.* "cum perorant ambo praesentes"), the parties themselves being present or the persons who carried on the action in their stead (*cognitor, procurator*). It was an injunction of the law of the Twelve Tables that the trial should terminate in a day from sunrise to sunset (Gell. xvii. 2, 10); but owing to the lengthy speeches of the advocates, adjournments (*ampliatio*) became necessary, and in Cicero's time were common. The theory, however, was that on the day of adjournment a new action commenced. Hence the terms *prima, secunda*, and *tertia actio*. Accordingly the speech of an orator had to be continuous (*continua, perpetua oratio*); that is, it could not be interrupted by an adjournment, but another counsel on the same side took up the case when it commenced again. Under the empire an adjournment of a trial from day to day was freely allowed. In order to prevent speeches being prolonged with the object of procuring an adjournment ("dicendo diem eximere;" cf. Cic. *pro Quint*. 10, 22), the duration of speeches in publica judicia was limited to a certain time by the Lex Pompeia A.U.C. 702, and this limit was probably extended to privata judicia by the Lex Julia (Plin. *Ep*. i. 23; vi. 2). The argument of counsel in their speeches was directed to points of law as well as of fact, the judex differing from our jury in not being confined to questions of fact, but having also to decide such questions of law as were indicated in the formula.

The evidence was of various kinds. 1. It might consist of the confession of the defendant in court, the confession *in judicio* differing from the confession *in jure* in that it did not conclude the trial, but was only treated as evidence. 2. Sworn witnesses (*jurati testimonium dicunt*) might be examined and cross-examined (*testium interrogatio*) in open court as to what they had seen and heard (Cic. *pro Rosc. Com*. 15, 44, *pro Flacc*. 10, 22; Quintil. v. 7; Paul. v. 15; Dig. 22, 5; Cod. 4, 21; cf. A. Escher, *Diss. de testium ratione*). The number of witnesses was generally unlimited, but in trials before recuperatores it was limited to ten (Or.-Henz. *Inscr*. 6428; Val. Prob. § 4, 8). In imperial times a judex might restrict the number of witnesses in order to expedite a trial. The giving of evidence in a private action was a voluntary act, except that witnesses to a mancipation, and those who had been ordered by a judex in a judicium publicum to give evidence, were bound to come forward. Testimony of absent witnesses by affidavit or otherwise (*testimonium per tabulas*) was allowed, but its evidentiary value was considered inferior to oral evidence (Quint. v. 7, § 2; Dig. 22, 5). 3. Documents (*scripta, tabulae, instrumenta*), whether public or private, could be put in, such as statutes, edicts, or account books (*tabulae*). (Cic. *de Part. Or*. 37, 130; Quint. v. 5; Gell. xiv. 2, § 7; Dig. 22, 4; Cod. 4, 21.) 4. The parties might produce objects as evidence for the inspection of the court. 5. As to the application of the oath *in judicio*, see JUSJURANDUM.

After the evidence had been given, an argumentative discussion (*altercatio*) took place between the patroni or advocati of the parties (Quint. vi. 4; Plin. *Ep*. iii. 9). The ordinary course of the proceedings was changed if either the plaintiff or defendant failed to appear in the actio (*judicium desertum, eremodicium*). If the defendant when duly summoned was in default, the plaintiff might insist on being heard and on the case being decided. If the plaintiff did not appear, the defendant could demand absolution (Cod. vii. 43). After the case had been fully heard, the judex proceeded to give judgment; if there were several judices, the majority decided. If the judex could not come to a satisfactory conclusion, he might declare this upon oath, and so make the proceedings abortive. This was done by the form of words "juravi mihi non liquere atque ita judicatu illo solutus sum" (Gell. xiv. 2). The sentence had to be pronounced orally in court, and in the presence of the parties. The sentence was either of *absolutio* or *condemnatio* [ACTIO]. The part of the formula which empowered the judex to condemn or acquit was called the condemnatio [ACTIO]. The defendant might satisfy the plaintiff after the judicium had been constituted by *litis contestatio* (*post acceptum judicium*, Gaius, iii. 180; iv. 114), and before judgment was given: in this case it was a disputed question between the Sabinians and Proculians [JURISCONSULTI] whether in case the action was one of strict law (*stricti juris, judicii*) the judex should acquit or whether he should condemn, on the ground that, at the time when the judicium was constituted, the defendant was liable to be condemned, and it was the business of the judex merely to follow his instructions. It was agreed that in case of a formula *bonae fidei*, or formula empowering the judex to decide according to *bona fides*, it was his duty under these circumstances to acquit; but the question was whether he could thus acquit in actions *stricti juris* as well as those *bonae fidei* ("omnia judicia esse absolutoria," Gaius, iv. 114). The question was only of formal importance, as the plaintiff would be prevented by an *in integrum restitutio* from having double satisfaction.

While the *legis actiones* were in force, if a specific thing was vindicated, the judgment could only be for the restitution of the thing, and a subsequent *arbitrium liti aestimandae* would be necessary to determine the damages (Gaius, iv. 48); but under the process of the formula, the judex gave judgment in all cases pursuant to the formula, in a sum of money, even when a res was the object of a vindication (Gaius, *l. c.*). In a formula arbitraria the judex was ordered only to condemn in case the defendant refused to make proper satisfaction ("nisi arbitratu tuo satisfaciat," Inst. iv. 6, 31), and so in this case a preliminary declaration by the judex of the rights of the parties called *pronuntiatio* was necessary; and if it was not obeyed by the defendant, a *condemnatio* followed.

The sum of money was either fixed or not fixed in the formula. If the claim was for a certain sum of money, the amount was inserted in the *condemnatio*, and the judex was bound to give that or nothing to the plaintiff. If the claim was for damages or satisfaction, the amount of which was not fixed in the formula, the *condemnatio* was either limited to a sum named in the formula (*taxatio*), and which the judex could not exceed except at his own peril (*litem suam faciendo*); or the amount of damages might be left to the free discretion of the judex, as in an action for the recovery of property from the possessor, or in an action claiming the production of a particular thing (*actio ad exhibendum*). Generally the term in the formula which expressed the damages which was the object of the demand was "quanti res est." This may mean either the market value of the thing, or the value of the thing to the particular claimant, *id quod interest actoris* or *utilitas actoris* (as to these two different measures of damages, see Poste's Gaius, iii. §§ 210–219, comm.). Res, as thus used in the formula, may mean either a thing in the limited sense of the word, or generally the claim or demand, and the fixing this at a money value was equivalent to *litis aestimatio*. The judex was always bound to condemn in some definite sum, even though the formula did not contain a definite sum (Gaius, iv. 48–52). In some judicia there might be an *adjudicatio* without a *condemnatio* [ADJUDICATIO]. In the division of judicial functions between the magistratus and judex consisted what is called the *ordo judiciorum privatorum*, which existed in the early periods of Rome, and continued till the time of Diocletian. At the same time with the *ordo judiciorum privatorum* existed in exceptional cases the proceedings *extra ordinem* or *extraordinaria cognitio*, in which the magistratus made a decision by a *decretum*, without letting the matter come to a judex. Finally, under Diocletian and his successors the *extraordinaria cognitio* supplanted the old mode of procedure, the function of judex and magistratus being combined in all cases. Thus the magistratus is frequently called judex. In the Theodosian Code the term *judex* is used to designate the governor of a province. [JUDEX PEDANEUS; ACTIO.]

(Cf. Cicero's three speeches in civil actions: *pro P. Quintio, pro Q. Roscio Comoedo, pro A. Caecina*, with Bethmann-Hollweg's description of them, *C. P.* ii. Appendix; Gaius, bk. iv.; Dig. 5. 1; Tigerstrom, *de Judiciis apud Romanos;* Keller, *Der römische Civilprocess;* Bethmann-Hollweg, *Der römische Civilprocess;* E. Hartmann, *Der Ordo Judiciorum und die Judicia extraordinaria;* O. Karlowa, *Der römische Civilprocess;* Zimmern, *Rechtsgeschichte;* Rudorff, *Rechtsgeschichte.*) [E. A. W.]

JUDEX ORDINA'RIUS. [JUDEX PEDANEUS.]

JUDEX PEDA'NEUS. This term first occurs in the writings of the Roman classical jurists, being used by Ulpian, Paulus, and subsequent writers. It appears to have been introduced, not to denote a particular species of judex, but to distinguish a judex privatus from a magistratus, the magistratus being sometimes called judex, as the practice of his deciding cases himself without the intervention of a judex proper became more frequent. The word *pedarii* or *pedanei* was applied to senators or decuriones who had not attained the office of magistratus, and hence the expression *judex pedaneus* may have been derived (Gell. iii. 18; Orell. *Inscr.* 3721 (Album Canusinum, v. 261), "duumviralicii, aedilicii, quaestoricii, pedani, praetextati"). When the formulary procedure came to an end, and with it the institution of judices privati, the Praetor or Praeses, who was sometimes designated as judex ordinarius or judex simply (Cod. Theod. i. 7), generally decided civil actions himself; but in order to prevent him being overburdened with judicial work, a body of paid official judges, probably taken from the matriculated advocati of each court [ADVOCATUS], was appointed to assist him in trying such actions, who were called judices pedanei, "hoc est qui negotia humiliora disceptent" (Cod. 3, 3, 5). Diocletian, A.D. 294, expressly allowed magisterial jurisdiction to be delegated to these judices, but at the same time he enjoined praesides generally to decide cases themselves, and only to make use of judices pedanei when it was absolutely necessary (Cod. 3, 3, 2). Julian, A.D. 362, prohibited praesides from appointing judices pedanei except in unimportant cases (Cod. Just. 3, 3, 5; Cod. Theod. i. 16, 8; Orelli-Henzen, 6431). The proceedings before this new kind of judices pedanei were the same as before the Praetor or Praeses. It would seem that they acted on each occasion when they were employed under a special commission from the magistrate, certain kinds of cases being delegated to them. The more general terms—judex datus a magistratu, judex delegatus, judex specialis—are sometimes used instead of judex pedaneus. These judges are also called *arbitri*, *διαιτηταί*. The Greek term for judex pedaneus is *χαμαιδικαστής* (Theoph. iv. 15, pr.; Lydus, *de Magistr.* iii. 8).

(Cod. Just. 3, 3, *de pedaneis judicibus; Nov.* 82, *περὶ τῶν δικαστῶν*; Bethmann-Hollweg, *Der römische Civilprocess*, ii. § 71, iii. § 140; A. Pernice in *Der Zeitsch. d. Sav. Stift.* 103, &c.; Mommsen, *Röm. Staatsrecht*, ii.^{2} 938.) [E. A. W.]

JUDEX QUAESTIO'NIS. [JUDEX.]

JUDICA'TI A'CTIO. A defendant who was condemned in an action was under an obligation to satisfy the judgment, *i.e.* to pay to the plaintiff the sum of money which the judex had awarded; and the actio judicati was the mode which the successful party had to adopt in order to compel the defendant to fulfil his obligation. The ground of the actio judicati being the judgment debt, the defendant was not allowed to go behind the judgment and dispute the original claim. In the "legis actio per manus injectionem," which was the ancient process for obtaining execution against a judgment debtor, the defendant was not able to defend the action himself, though, if a third person undertook the cause on his behalf as vindex, the action might be defended; but in the actio judicati the defendant was entitled to defend himself on the ground that he had not been condemned or that the condemnation was invalid. He was obliged, however, to give security to the amount of the judgment (*judicatum solvi satisdare*); and if his defence was unsuccessful, he was mulcted in double the amount of the judgment. The object of the actio judicati was to obtain a decree of the magistratus by which execution was ordered against the person (*duci jubere*, Cic. *pro Flacc.* 19, § 45, 20, § 48; Lex Rubr. c. 21, 22) and the property of the defendant (*missio in bona*) [Bonorum Emptio]. Under the Empire the Praetor could enforce a judgment at once by pignoris capio. The actio judicati could not be brought till the time allowed the judgment debtor for paying his debt had elapsed (Gaius, iii. 78; Gell. xx. 1, §§ 42–45).

When the original action had been carried on by a procurator on behalf of another, the actio judicati might be maintained by or against the principal. [Procurator.]

(Dig. 42, tit. 1; Cod. 7, 52; Gaius, iv. 9, 25, 102, 171; Cic. *pro Flacc.* 21, § 49 ff.; Paulus, *Sent. Rec.* 1, 19; Savigny, *System*, &c., vi. 411; Bethmann-Hollweg, *Der römische Civilprocess*, §§ 111, 156.) [G. L.] [E. A. W.]

JU'DICES E'DITI. [Judex.]

JUDI'CIA DUPLI'CIA. [Familiae Erciscundae Actio.]

JUDI'CIA LEGI'TIMA. [Imperium.]

JUDI'CIA QUAE IMPERIO. [Imperium.]

JUDI'CIUM. [Judex.]

JUDI'CIUM PO'PULI. [Judex.]

JUDI'CIUM PRIVA'TUM. [Judex.]

JUDI'CIUM PU'BLICUM. The original distinction between civil and criminal jurisdiction at Rome, though not strongly marked as regards the classes of offences with which they were respectively concerned nor as regards the penalties which followed on conviction in either case, was yet always kept up by differences of procedure. Civil jurisdiction was regularly divided into proceedings *in jure* and *in judicio*,—that is, into proceedings, in the first instance, before the ordinary civil magistrate, the praetor; in the second, before a judex appointed by the praetor. Criminal procedure, on the other hand, was an inquiry (*quaestio*) undertaken by the magistrate, perhaps in some cases independently, but more often under guidance of a consilium; and the decision of the magistrate, when questioned by the employment of the right of *provocatio*, led to a trial before the people, a *judicium populi*. During the last century and a half of the Republic a kind of procedure grew up which was in some sort a fusion of these two processes, and which may be described as an application of civil procedure in some of its most salient points to criminal cases. The judicium publicum bears a resemblance to civil jurisdiction in the facts that the presiding magistrate is usually the civil magistrate, the praetor, and that the case is heard before a bench of judices. But it differs from civil procedure in that the old distinction between jus and judicium disappears, and the magistrate sits with the judices, guides their decisions, and pronounces the verdict. From this close assimilation of the functions of the magistrate and of the judex developed the custom of speaking of the judices as the *consilium* of the magistrate (Cic. *ad Fam.* viii. 8, 3; *pro Cluent.* 30, 83), the number of the judices that formed this consilium being considerably larger than the number which decided an ordinary civil suit, and bearing more resemblance to the old bench of the *recuperatores*. Much of the terminology, however, of the judicium publicum is derived from the old criminal jurisdiction. The magistrate, who is sometimes said in civil terminology *judicium exercere*, is also called, in the terminology of the criminal law, a *quaesitor* (Cic. *pro Cluent.* 20, 55; Serv. *in Aen.* vi. 432) or one *qui de ea re quaesit* (Lex Acil. § 49; *C. I. L.* i. n. 198), while the judicia themselves are usually spoken of as *quaestiones*; and the criminal character of these courts is shown further by the facts that anyone might be the accuser (Just. *Inst.* iv. 18, 1: "Publica autem dicta sunt quod cuivis ex populo exsecutio eorum plerumque datur;" cf. Dig. 23, 2, 43, 10), and that condemnation was followed by strictly penal consequences. But, formally at least, the civil character of the court predominated; in the earliest established, that by the Lex Calpurnia of 149 B.C., the *actio sacramenti* was retained (Lex Acil. § 23); and in every case what the accuser demands is compensation for a delict and in the interest of the injured party. This is most obvious in trials for extortion and peculation, which were always followed by an assessment of damages (*litis aestimatio*, Lex Acil. §§ 58, 59;—Cic. *pro Mur.* 20, 42; *ad Fam.* viii. 8, 3): yet since this compensation was also exacted in the interest of the state, and since the state attached consequences other than mere compensation to conviction in such trials, these courts belong not to private but to public law.

The judicia publica were usually presided over by the praetor, and the guidance of the earliest of these judicia, the *quaestiones repetundarum*, was entrusted to the praetor peregrinus (Lex Acil. § 12); but the growing numbers, not only of the quaestiones, but of the several divisions of each quaestio, rendered it necessary that other judges should preside, and the court was sometimes directed by a foreman chosen from the jury. The *quaesitor* or *quaesitor judicii* (Ascon. *in Milon.* p. 46) is often distinct from the praetor who grants the trial; and the *judex quaestionis*, who presided in the courts *de veneficiis et sicariis*, was a criminal judge of somewhat lower rank than the praetor, holding an office that belonged to the regular circle of the magistracies (Cic. *pro Cluent.* 54, 148; *Brut.* 76, 264; Mommsen, *Staatsr.* ii. p. 586 ff.). The judices who formed the consilia of the several presidents of these courts were selected from the *album judicium*, the register which furnished the juries both for criminal and civil cases [Judex], and the law by which each quaestio was established directed the mode in which the judices should be chosen for that particular quaestio. The presiding magistrate actively assisted in the investigation, directed the finding of the jury (Ascon. *in Milon.* p. 46), and pronounced the sentence which was based on their verdict, the decision being given according to a bare majority, and equality of votes being followed by acquittal (Cic. *ad Fam.* viii. 8, 3; Plut. *Mar.* 5). The magistrate could not qualify the sentence, since this was fixed by law; and there was no appeal from the decision of the judices. The appeal had never been allowed against the decision of a judex in civil cases: nor could the acts of the magistrate be appealed against either by *provocatio* or *appellatio*, since, during the trial, his acts were undistinguishable from those of the jury. The only possible appeal was against an act of the magistrate that formed a preliminary to the trial, and there is an instance in which such an appeal was employed (Cic. *in Vatin.* 14, 33; see INTERCESSIO).

The substitution of the judicia publica for the judicia populi was not effected by a sudden revolution in criminal judicature, but by a gradual extension of the former process. Fresh spheres of law were ever being usurped by the new system, and new standing courts (*quaestiones perpetuae*), modelled on this system, were from time to time constituted by special enactment. Each court might have somewhat different regulations as to procedure, and each depended for its validity on a separate *lex.* Thus the *lex majestatis* is accompanied by a *quaestio de majestate* (Cic. *pro Cluent.* 35, 97); the *legis quaestionesque* on certain crimes are indissolubly connected (Cic. *Phil.* i. 9, 23), and the judge in a special court is one "qui ex hac lege quaeret" (Lex. Acil. § 17). To the last these judicia bore on them the marks of their gradual growth, and there was little attempt at arrangement or logical classification of crimes. Not unfrequently the same offences were grouped under different laws, and an accuser might choose whether he should prosecute a man under *repetundae* or *peculatus*, under *vis* or *majestas*, or whether he should bring the crime of *incendium* under the law *de sicariis* or the law *de vi* (Rein, *Criminalrecht*, p. 63). This lack of arrangement and of connexion between the offences grouped together was increased by the subsequent juristic interpretation, although at the same time attempts were made to determine definitely the character of the crimes covered by a single lex, and to prevent the possibility of an appeal to more than one law in the case of a single crime (Suet. *Tit.* 8, "vetuit inter cetera de eadem re plurimis legibus agi"). So little continuity was there in the character of these courts that at a time when the most essential characteristic that was common to them, that of trial before a jury directed by a magistrate, had disappeared and given place to the *cognitiones extraordinariae* of the Empire, there was found no definition applicable to a judicium publicum, except that it was a court constituted by a special kind of lex (Dig. 48, 1, 1, "non omnia judicia, in quibus crimen vertitur, et publica sunt, sed ea tantum, quae ex legibus judiciorum publicorum veniunt").

The earliest notices of the term *judicium publicum* are found in the Lex Bantina of about 130 B.C. (§ 2, *C. I. L.* i. n. 197) and in the Lex Acilia Repetundarum of 123 B.C. (§ 11, *C. I. L.* i. n. 198); the earliest of these courts was that constituted by the Lex Calpurnia Repetundarum in 149 B.C., and shortly afterwards (in 142 B.C.) a quaestio de sicariis was established (Cic. *de Fin.* ii. 16, 54). The Lex Acilia Repetundarum of 123 B.C., which we possess, is a reconstitution of the court for the trial of extortion, and it is probable that about the same time fresh courts were added by C. Gracchus. The law of Gracchus against judicial corruption "ne quis judicio circumveniretur," was re-enacted by Sulla, who established a quaestio on its basis (Cic. *pro Cluent.* 55, 157, "quam L. Sulla ejus rei quaestionem hac ipsa lege constitueret"), but it is probable that it had formed the ground of a quaestio before the time of Sulla: and in the year 117 a quaestio de ambitu existed, which may be referred to the Gracchan period (Plut. *Mar.* 5). Sulla established several additional quaestiones, and may be said to have given the final form to criminal procedure at Rome. He re-established the court for the trial of extortion by the Lex Cornelia Repetundarum (Cic. *pro Rab. Post.* 4, 9), and instituted courts for the trial of treason by the Lex Cornelia de majestate (Cic. *ad Fam.* iii. 11, 2; *pro Cluent.* 35, 97), for the trial of assassination, poisoning, and incendium by the Lex Cornelia de sicariis et veneficis (Cic. *pro Cluent.* 54, 118; Dig. 48, 1, 1; Just. *Inst.* iv. 18, 5), and for trials in matters of breach of trust, inheritance, and forgery by the Lex Cornelia de falsis (Dig. 48, 1, 1), testamentaria (Just. *Inst.* iv. 18, 7), or nummaria (Cic. *in Verr.* i. 42, 108). To the same period may perhaps be referred a quaestio de vi (established by a Lex Plotia, Sall. *Cat.* 31) and one on peculatus (Cic. *pro Cluent.* 53, 147). In spite of the peculiarities of legislation which may have attached to these several courts, such for instance as the exclusion of the equites and lower orders from the operation of the law "ne quis judicio circumveniretur," a principle which C. Gracchus had established and which Sulla maintained (Cic. *pro Cluent.* 55, 151), there were some ordinances common to all these laws. Such was the rule which gave the accused the choice between having the votes given openly or by ballot, which was afterwards repealed (Cic. *pro Cluent.* 20, § 55; 27, § 75), and that which gave accused of senatorial rank a wider right of challenging than was possessed by others (Cic. *in Verr.* ii. 31, 77). Further changes were introduced by Caesar. Besides his alteration in the constitution of the *album judicum* [JUDEX], he reconstituted several courts by new laws. To him belong a Lex Julia de Repetundis, which introduced no change in the existing law beyond making anyone who shared in the spoils of a provincial governor liable to a charge of repetundae (Cic. *pro Sest.* 64, 135; *pro Rab. Post.* 4, 8: cf. *ad Fam.* viii. 8, 2, for the formula "Quo ea pecunia pervenisset"), and Leges Juliae de vi and de majestate (Cic. *Phil.* i. 9, 23). It is somewhat difficult to determine which of the Leges Juliae that created or re-instituted quaestiones are to be referred to Julius, and which to Augustus. Amongst them we find Leges Juliae de vi publica, de vi privata, peculatus, ambitus, de adulteriis, and de annona. The Lex Pompeia de parricidiis and the Lex Fabia de plagiariis were also laws on which courts of this kind rested (Dig. 48, 1; Just. *Inst.* iv. 18).

Certain penal consequences were from the first attached to condemnation in a judicium publicum, ranging from a fine to exile, which was, as a rule, the severest punishment during the Republic; and these penalties were progressively increased. Thus Caesar added to exile confiscation of half the property of the condemned, and attached to condemnation for parricide confiscation of the whole property (Suet. *Jul.* 42; Dio Cass. xliv. 49), and in the time of the Empire death was not an unfrequent consequence of condemnation in these courts, confiscation of property being usually added. The jurists divide judicia publica into *capitalia* and *non capitalia* (Dig. 48, 1, 2). "Capitalia" are those "ex quibus poena mors aut exsilium est, hoc est aquae et ignis interdictio,"—*relegatio*, a modified exile introduced during the Empire not involving loss of caput. "Non capitalia" are those "ex quibus pecuniaria aut in corpus aliqua coercitio poena est." Condemnation in a judicium publicum also involved disqualification of various degrees. Thus those condemned for *ambitus* were originally disqualified for holding office for ten years, and were at a later period excluded wholly from the senate and the magistracy (Schol. Bob. *in* Cic. *pro Sulla*, 5, 17), and as early as 123 B.C. condemnation in certain kinds of judicia publica excluded from a seat in the senate (Lex. Acil. § 13). *Infamia*, which during the Empire was the severest and most permanent kind of disqualification attached originally to condemnation in those courts where *calumnia* or *praevaricatio* had been proved (Dig. 3, 2, 1), was extended by a senatusconsultum as a consequence of *vis privata* (Dig. 48, 7, 1), and finally made the result of any condemnation in a judicium publicum (Dig. 48, 1, 7; Just. *Inst.* iv. 18, 2; see INFAMIA).

(Mommsen, *Römisches Staatsrecht*, i. pp. 168 and 182 ff., ii. pp. 223 and 569 ff.; Lange, *Römisches Alterthümer*, iii. pp. 165, 455, 505; Rein, *Criminalrecht der Römer*, pp. 63 ff.; O. E. Hartmann, *Ueber die römische Gerichtsverfassung*, § 29, p. 314.) [A. H. G.]

JU'GERUM or **JUGUS** (the latter form, as a neuter noun of the third declension, is common in the oblique cases and in the plural), a Roman measure of surface, 240 feet in length and 120 in breadth, containing therefore 28,800 square feet (Varr. *R. R.* i. 10; *L. L.* v. 35 M.; Colum. *R. R.* v. 1, § 6; Plin. *H. N.* xviii. § 9, cf. § 178; Quintil. i. 10, § 42; Isid. *Orig.* xv. 15). It was the double of the *Actus Quadratus*, and from this circumstance, according to Varro and Columella, it derived its name (as if from *junctus*). The word is really, however, a by-form of *jugum;* and Pliny's etymology is far preferable: "quod uno jugo boum in die exarari posset." The jugerum was not, like the ACTUS, a measure of length as well as of surface; the contrary notion rests only on a single passage of Pliny, who describes the vale of Tempe as *ferme sesquijugeri latitudine* (*H. N.* iv. § 31). He is here, no doubt, translating from a Greek source, and uses *jugerum* loosely as the equivalent of πλέθρον (Hultsch, *Metrol.* p. 64 n.). The uncial division [As] was applied to the jugerum, its smallest part being the scrupulum of 10 feet square = 100 square feet. Thus the jugerum contained 288 *scrupula* (Varr. *R. R.* l. c.). The jugerum was the common measure of land among the Romans. Two jugera formed a *heredium*, a hundred *heredia* a *centuria*, and four *centuriae* a *saltus*. Two jugera were the traditional amount of land given to each citizen in old times as heritable property (Varr. *l. c.*; Niebuhr, *Hist. of Rome*, ii. 156 ff., and Appendix i.). The jugerum was a little over 2 roods 19 perches, or almost ⅝ of an English acre; see the Tables. (Cf. Hultsch, *Metrol.* p. 69; Mommsen, *R. H.* i. 195 = i. 162, tr. Dickson; Rudorff, *Gromat. Inst.* p. 280.) [P. S.] [W. W.]

JUGUM (ζυγόν, rarely ζυγός, Plat. *Tim.* 63 B) signified in general that which joined two things together. It denoted more especially—

1. In architecture any cross beam (Vitruv. x. 8, 19).

2. The transverse beam which united the upright posts of a loom, and to which the warp was attached (Ovid, *Met.* vi. 55). [TELA.]

3. The transverse rail of a trellis (Varr. *R. R.* i. 8;—Col. *R. R.* iv. 17, 20, xii. 15; *Geopon.* v. 29), joining the upright poles (*perticae*, χάρακες) for the support of vines or other trees. [CAPISTRUM.] Hence by an obvious resemblance the ridges uniting the tops of mountains were called *juga montium* (Verg. *Ecl.* v. 76; Hor. *Epod.* 1, 11; and in rhetorical prose like that of Florus).

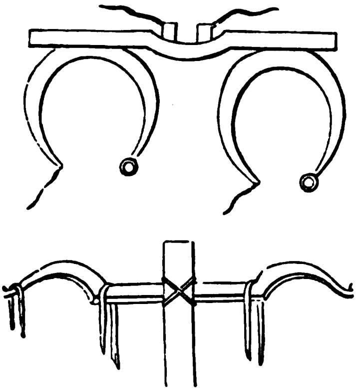
4. The cross-bar of a lyre (Hom. *Il.* ix. 187).

5. A scale-beam, and hence a pair of scales [LIBRA]. The constellation Libra was consequently also called Jugum (Cic. *de Div.* ii. 47, § 98).

6. The thwart or transverse seat of a boat (Aesch. *Agam.* 1618; Soph. *Ajax*, 249; Verg. *Aen.* vi. 411). This gave origin to the term ζυγίτης, as applied to a rower (NAVIS, Vol. II. p. 215 *a*). A vessel with many benches or banks for the rowers was called ναῦς πολύζυγος or ἑκατόζυγος (Hom. *Il.* iii. 293; xx. 247).

7. The yoke by which ploughs and carriages were drawn. The yoke was in many cases a straight wooden plank or pole laid upon the horses' necks; but it was commonly bent towards each extremity, so as to be accommodated to the part of the animal which it touched (*curva juga*, Ovid, *Fast.* iv. 216; *Trist.* iv. 6, 2). The following woodcut shows two examples of the yoke, the upper from a MS. of Hesiod's Works and Days, preserved at Florence, the lower from a MS. of Terence belonging to the Vatican library. These may be compared with the still ruder forms of the yoke as now used in Asia Minor, which are introduced in the article ARATRUM. The practice of having the yoke tied to the horns and pressing upon the foreheads of the oxen (*capite, non cervice junctis*, Plin. *H. N.* viii. § 179), which is now common on the continent of Europe, and especially in France, is strongly condemned by Columella on grounds of economy as well as of humanity (*R. R.* ii. 2). He recommends that their heads should be left free, so that they may raise them aloft, and thus make a much handsomer appearance (Cic. *Nat. Deor.* ii. 63, § 159; Ovid, *Met.* vii. 211). All this was effected by the use either of the two collars (*subjugia*, Vitruv. x. 3, 8; μεσάβα, Hesiod, *Op. et Dies*, 467; Paley, *ad loc.*; ζεῦγλαι, Hom. *Il.* xvii. 440, xix. 406; Aesch. *Prom.* 463; Eurip. *Med.* 479) shown in the upper figure of the woodcut, or of the notches (γλυφαί, γλυφίδες) cut in the yoke, with the bands of leather (*lora;*

vincla, Tib. ii. 1, 7; *ταυροδέτιν βύρσαν ἐπαυχενίην*, Brunck, *Anal.* iii. 44 = *Anth. Pal.* vi. 41; *λέπαδνα*, Hom. *Il.* v. 730, with Schol.), seen in the lower figure.



Yokes. (From ancient MSS.)

This figure also shows the method of tying the yoke to the pole (*temo*, *ῥυμός*) by means of a leathern strap, or more probably a rope (*ζυγόδεσμον*, Hom. *Il.* xxiv. 270), which was lashed from the two opposite sides over the junction of the pole and yoke. These two parts were still more firmly connected by means of a pin (*ἔμβολος*, Schol. *in* Eurip. *Hippol.* 666; *ἕστωρ*, Hom. *l. c.*; Arrian, *Exped. Alex.* ii. 3, § 7; *ἔνδρυον*, i.e. an *oaken* peg, Hesiod, *Op. et D.* 467). But the fastening was sometimes much more complicated, especially in the case of the celebrated Gordian knot, which tied the yoke of a common cart, and consisted only of flexible twig, or bark, but in which the ends were so concealed by being inserted within the knot, that the only way of detaching the yoke was that which Alexander adopted (Arrian, *l. c.*; Q. Curt. iii. 2; Schol. *in* Eurip. *l. c.*). The passage of *Homer* (*Il.* xxiv. 268–274) gives the fullest account of the way in which the yoke was attached to the pole; but, after the acute and learned investigations of Leaf (*Journ. Hell. Soc.* v. 185 ff.) and Helbig (*Hom. Epos*, 147 ff.), some points still remain unexplained. In the last line, the words ἐξείης and γλωχὶς are still obscure. The following summary of the longer discussion is condensed from Mr. Leaf's note *ad loc.*:—"The most probable explanation of the whole arrangement is as follows:—The pole was curved sharply upwards at the end, running up to an almost vertical point (*πέζα*). In the actual bend (*πέζῃ ἐπὶ πρώτῃ*) the yoke was laid across the pole. Attached to the yoke was a ring (*κρίκος*): through this a peg (*ἕστωρ*) was passed and fastened into a hole in the pole. The *ζυγόδεσμον*, a rope nine cubits long, was then used to bind the *πέζα* with three turns to the *ὀμφαλός*, a boss on the yoke itself; the long ends which remained after this being carried back to the car itself, where they were fastened to an upright post which arose from the front of the breast-work. This post and the rope from it to the end of the pole are constantly depicted in archaic vase-paintings, and there can be little doubt as to the identification of the rope with the *ζυγόδεσμον*."

Besides being variegated with precious materials and with carving, the yoke, especially among the Persians, was decorated with elevated plumes and figures. Of this an example is presented in a bas-relief from Persepolis, preserved in the British Museum. The chariot of Dareius was remarkable for the golden statues of Belus and Ninus, about eighteen inches high, which were fixed to the yoke over the necks of the horses, a spread eagle, also wrought in gold, being placed between them (Q. Curt. iii. 3). The passages above cited show that when the carriage was prepared for use, the yoke which had been laid aside was first fastened to the pole, and the horses were then led under it. Either above them, or at the two ends of the yoke, rings were often fixed, through which the reins passed. These frequently appear in works of ancient art representing chariots.

Fig. 2. Yoke and appendages, from the front.

Fig. 3. Means by which the yoke is attached to the pole.

(From Leaf's Iliad, ii. 485.)

Morning and evening are often designated in poetry by the act of putting the yoke on the oxen (Hes. *Op. et Dies*, 581) and taking it off (Verg. *Ecl.* ii. 66; Hor. *Carm.* iii. 6, 42; *Epod.* 2, 63; Ovid, *Fast.* v. 497; *βούλυσις*, *βουλυτός*, Arrian, *l. c.*; Hom. *Il.* xvi. 779, *Od.* ix. 58; Cic. *ad Att.* xv. 27; *βουλύσιος ὥρη*, Arat. *Diosem.* 387).

By metonymy *jugum* meant the quantity of land which a yoke of oxen could plough in a day (Varr. *R. R.* i. 10). It was used for "a pair" of animals, Greek *ζεῦγος*, Latin usually *par*, as in *aquilarum jugum* (Plin. *H. N.* x. § 16). By another figure common to all languages it is the yoke of slavery (Aesch. *Agam.* 953, 1071; Hor. *Sat.* ii. 7, 92; Tac. *Agric.* 31; Florus, ii. 14 = i. 30 Jeep). The yoke under which the Romans made their conquered enemies to pass, and sometimes, as at Caudium, passed under it themselves (Liv. ix. 4, § 3; 6, §§ 1, 3), was composed of a spear supported transversely by two others placed upright (Liv. iii. 28, § 11). JUGUMENTUM. [Janua, p. 987 *a*.]

JUNIO'RES. [Comitia.]

JURA IN RE. [Dominium.]

JURE, A'CTIO IN. [Jurisdictio.]

JURE, CE'SSIO IN, was a mode of transferring rights by means of a fictitious suit, and so far resembled the forms of conveyance by fine and common recovery which, till lately, were in use in England. The proceeding was the following. The person to whom the object of transfer belonged (*dominus qui cedit*), and the person to whom it was to be transferred (*vindicans, cui ceditur*), appeared before the magistratus; in whose presence the intended transferee vindicated the thing as his own. The magistratus then asked the party making the transfer whether he opposed a counter-vindication; and on his declaring that he did not or remaining silent, the magistratus decreed (*addixit*) the object to the vindicant. The admission of the right of the vindicant or transferee by the real owner was the foundation of the magisterial decree, the rule of procedure being "confessus pro judicato est." The proceeding was in form a "legis actio in rem," made to serve the purpose of a conveyance. In jure cessio was probably recognised by the Twelve Tables (cf. Paulus on *Vat. Fragm.* 50, "et mancipationem et in jure cessionem lex XII. Tab. confirmat"), though, at the time of the passing of this law, it may only have been used as a mode of manumission. The uses to which in jure cessio was applied, according to the law as laid down by the classical jurists, were the following:—1, to manumit a slave per vindictam [Manumissio] (cf. Liv. ii. 5); 2, to emancipate a filiusfamilias; 3, for the purpose of adoption; 4, to transfer the tutela legitima mulierum; 5, to transfer the hereditas legitima (Gaius, ii. 34–37); 6, to transfer ownership of res, whether mancipi or nec mancipi, though the alternative form of mancipatio was generally preferred (Gaius, ii. 25); 7, for creating servitudes, rustic servitudes alone being also created by mancipatio (Gaius, ii. 29, 30). In jure cessio being a legis actio, it could not be carried out by means of agents.

In jure cessio is last mentioned in Constitutions of Constantine. It was obsolete in the time of Justinian, and the compilers of his legislation omitted mention of it in excerpts, where it occurred. (Gaius, ii. 24; Ulp. *Fragm.* 19, 9; Schilling, *Inst.* ii. § 154; Leist, *Mancipation*, § 36, &c.; Ihering, *Geist des R. R.* ii. 579 ff.; Aug. Schultze, *Privatrecht und Process in ihrer Wechselbeziehung*, §§ 459 ff., 477 ff.; Sohm, *Institut des röm. Rechts*, 3rd edit., p. 30, &c.; Voigt, *Zwölf Tafeln*, ii. § 75.) [E. A. W.]

JU'RGIUM has been thought to be a contracted form of *juridicium;* it is doubtless derived from *jus*, but the verb *jurgare* suggests *jure agere* as a more probable etymology. In its legal sense, however, the word is pointedly distinguished from *litigare*, and denotes wrangling or complaint without legal proceedings. Nonius, s.v. *Jurgium* (5, § 34 = p. 430), quotes a passage from Cicero (*de Rep.* iv. *fr.* 24) commenting on the words si jurgant in the Twelve Tables: "Si jurgant, inquit. Benevolorum concertatio, non lis, ut inimicorum, sed jurgium dicitur." Et in sequenti: "Jurgare igitur lex putat inter se vicinos, non litigare." Rudorff states that the term *jurgium* was applied to the small disputes between owners of contiguous lands. Hence he explains the words of Cicero (*de Legg.* i. 21, § 55), "Usucapionem xii. Tabulae intra quinque pedes esse noluerunt:" the balks or strips of five feet in width which divided the praedia were not to be encroached upon and then claimed through lapse of time. He refers for a like use of the word to Horace (*Ep.* ii. 1, 38, "Excludat jurgia finis," and ii. 2, 170):

> "Sed vocat usque suum, qua populus adsita certis
> Limitibus vicina refugit jurgia."

(Rudorff, *Zeitschrift für die Rechtsw.* x. 346, *Ueber die Gränzscheidungsklage.*)

Compare also Cicero (*de Legg.* ii. 8, § 19). "Feriis jurgia amovento." It is needless to tell people not to go to law on holidays, when the courts are shut; the meaning is, that private wranglings are to cease in honour of the day. *Rixa* differs from jurgium as implying a quarrel that comes to blows (Tac. *Hist.* i. 64; Juv. xv. 52). (Cf. Donaldson, *Varronianus*,^{2} p. 213; Forcellini. *Lexicon*, s.v. *Jurgium.*) [G. L.] [W. W.]

JURI'DICI. With a view of making the administration of justice more directly dependent on the emperor, Hadrian appointed over Italy four magistrates of consular rank (*consulares*) who had both criminal and civil jurisdiction (Spart. *Hadr.* 22; Capitolin. *Ant. Pi.* 2, *M. Ant. Phil.* 11; Appian, *B. C.* i. 38). This institution of Hadrian did not long survive him, but M. Aurelius imitated it by appointing a number of imperial officials of praetorian rank with the title of juridici, who were to perform certain administrative functions outside Rome—the *urbica dioecesis.* (*M. Ant. Phil.* l. c. "datis juridicis Italiae consuluit ad id exemplum, quo Hadrianus consulares viros reddere jura praeceperat;" *C. I. L.* v. 1874.) These juridici had jurisdiction in respect of *fideicommissa* (Dig. 40, 5, 41, § 5), and in disputes concerning the office of curialis [Curialis]; they also nominated guardians (*Vat. fr.* 205, 232, 241); and they may have been competent to decide some other civil causes; but they do not appear to have had any criminal jurisdiction. They probably exercised other besides judicial functions connected with the administration of justice. The jurisdiction of juridici was not taken from that of the municipal magistrates, but from that of the Roman courts, which continued, however, to decide matters of importance. Each juridicus had a particular district specially assigned to him ("regiones quae sunt sub juridicis": cf. Marquardt, *Staatsverw.* i. 74, &c.). The office of juridicus lasted till about the middle of the third century.

An imperial official who exercised the higher jurisdiction in Egypt was called *juridicus*, whence the title of the Italian *juridici* is derived

(Walter, *Rechtsgesch.* 36, n. 24; Orelli-Henzen, 6488).

(The information contained in this article is principally taken from Mommsen, *Staatsrecht*, ii.^{2} 1038 ff.; cf. Bethmann-Hollweg, *Der römische Civilprocess*, § 66; Becker-Marquardt, *Röm. Alterth.* iii. 1, § 56, &c.) [E. A. W.]

JURI'DICI CONVENTUS. [PROVINCIA.]

JURISCONSULTI or **JURECONSULTI.** For some considerable time after the enactment of the Twelve Tables, the function of interpreting the law, both sacred (*fas*) and profane (*jus*), appears to have been a monopoly of the College of Pontifices, which appointed one of its members every year to superintend the trial of private actions (cf. Pomponius in Dig. *de origine juris*, 1, 2, 2, §§ 6, 7; Liv. ix. 46, "jus civile in penetralibus pontificum repositum"). [PONTIFEX.] The pontifices alone had an exact knowledge of the legal calendar, and were familiar with the intricate forms of action which prevailed in the courts, whence the importance attached to the publication of the calendar and of the forms of legis actio by Cn. Flavius about 312 B.C. [JUS FLAVIANUM.] The opening of the office of pontifex to plebeians, the growth of the praetor's jurisdiction, and the gradual separation of the Jus Civile from the Jus Pontificium, tended to make the profession of the law a more open one (cf. Ihering, *Geist. d. R. R.* ii. 2, § 42). Tiberius Coruncanius, a plebeian, who was consul B.C. 281, and also the first plebeian pontifex maximus, is mentioned as the first who publicly professed (*publice professus est*) to expound the law (Liv. xxx. 1; Dig. *l. c.* § 35). A distinct profession of lawyers certainly existed before the time of Cicero, and the persons belonging to it were called by the various names of *jurisperiti*, *jurisconsulti*, or *consulti* simply. They were also designated by other names, as *jurisprudentes*, *prudentes*, *juris periti*, and *juris auctores*. The words which Plutarch uses are *νομοδείκτης* (*Tib. Gracch.* 9) and *νομικός* (*Sulla*, 36). Cicero (*Top.* 5) enumerates the *jurisperitorum auctoritas* among the component parts of the Jus Civile. The definition of a *jurisconsultus*, as given by Cicero (*de Or.* i. 48), is a person who has such a knowledge of the laws (*leges*) and customs (*consuetudo*) which prevail in a state as to be able to give answers to questions submitted to him (*respondendum*), act (*agendum*), and to secure a person in his dealings (*cavendum*). Sextus Aelius Catus [JUS AELIANUM], M. Manilius, and P. Mucius are examples. In the oration *pro Murena* Cicero uses "scribere" in the place of "agere." The word "scribere" refers to the employment of lawyers in drawing up formal instruments, such as contracts or wills; "cavere," to the advice given in the conduct of a suit or the carrying out any transaction; "agere" to the execution of some legal act on account of a client. At a later period some of these functions were performed by persons who were paid a fee, and thus there arose a body of practitioners distinct from those who gave *responsa*. The jurisconsulti gave their advice gratuitously. Payments or gifts to them were prohibited by the Lex Cincia. They did not, as a rule, argue cases in court; this task being left to the orators or advocates. [ORATOR; ADVOCATUS.] Before the time of Cicero the study of the law had become a distinct branch from the study of oratory, and a man might raise himself to eminence in the state by his reputation as a lawyer, as well as by his oratorical power or skill; the profession of the law being regarded as one of great dignity and independence. It is probable that *responsa* were not in Cicero's time absolutely binding on courts of justice, although the judge would be mainly guided by them.

Jurisconsulti gave their advice or answers either in public places—especially in the forum —or in their own houses (Cic. *de Or.* iii. 33: cf. Hor. *Sat.* i. 10; Sen. *de Via*, iii. 37). We are told of one distinguished jurist that a house near the forum was provided for him at the public expense, in order that he might have easy access to clients. They gave advice not only on matters of law, but on anything else that might be referred to them. The jurisconsulti were not professors of law in the modern sense, but they were attended by students who obtained instruction by listening to *responsa*: hence called *auditores*. Towards the end of the republic we also find the practice in existence of instructing students in the elements of law (cf. Dig. 1, 2, 2, § 43: "[Servius Sulpicius], institutus a Balbo Lucilio, instructus autem maxime a Gallo Aquilio"), and under the empire the systematic teaching of law gradually became a distinct professional function.

The earlier lawyers mentioned by Pomponius differed from those of a later period by their want of scientific method (as to their characteristics, see Ihering, *Geist. d. R. R. l. c.*). Their excessive technicality is frequently ridiculed by Cicero. The first whom Pomponius mentions was Papirius, who is said to have made a collection of leges regiae in the time of Tarquinius Superbus [JUS PAPIRIANUM]. There were many distinguished jurisconsulti in the last two centuries of the republican period, among whom are M. Manilius, consul B.C. 149 (cf. Cic. *de Or.* i. 48, iii. 33; *Brutus*, 21, 22, &c.; Varro, *L. L.* vii. 105); P. Mucius Scaevola, pontifex maximus B.C. 131; Q. Mucius Scaevola, the augur, and Q. Mucius Scaevola, the son of Publius, who was consul B.C. 95, and afterwards pontifex maximus: he was one of the masters of Cicero, who calls him "jurisperitorum eloquentissimus," "eloquentium jurisperitissimus" (Cic. *de Or.* i. 39; *Brutus*, 89). This Scaevola, the pontifex, was considered to have been the first who gave the Jus Civile a systematic form, by a treatise in eighteen books (Dig. 1, 2, 2, § 41). There are four excerpts in the Digest from a work of his in one book on Definitions. C. Aquilius Gallus, praetor B.C. 66, was a most distinguished lawyer; he invented the *actio doli*, the *stipulatio Aquiliana*, and a form for instituting or disinheriting the class of *postumi* called after him Aquiliani.

Servius Sulpicius Rufus, a pupil of Aquilius (Cic. *Brut.* 42) and the friend and contemporary of Cicero, was consul B.C. 51. He was as great an orator as the pontifex Scaevola, and even more distinguished as a jurist. Many persons, both his predecessors and contemporaries, were eminent for their practical knowledge of law, but he was distinguished from them by his scientific mode of handling it; and as he had both numerous *auditores* and was a voluminous writer, we may perhaps view him as the founder of that methodical treatment of the matter of law which characterised the subsequent Roman jurists, and in which they have not been surpassed (Cic. *Brut.* 41; Dig. 1, 2, 2, § 43).

The jurists of the imperial times are distinguished from those of the republican period by two circumstances—the *jus respondendi*, and the rise of two schools of law. We learn from Pomponius (Dig. 1, 2, 2, § 49) that Augustus determined that the jurisconsulti should give their *responsa* under his sanction (*ex auctoritate ejus responderunt*). The *jus respondendi* or right of giving such *responsa* appears to have been granted by Augustus and Tiberius and their successors to eminent jurists selected by them, who were thus placed in a position analogous in some respects to that of the pontifices in earlier times. But the jurists who had not received this mark of imperial favour were not excluded from giving opinions, though their opinions would have little weight in comparison with those of the privileged class. The *responsa* of those who had the *jus respondendi* were given sealed (*signata*), apparently to prevent falsification. They were probably given by each jurist in his individual capacity, but whether on the application of the judge or of a party to a suit is uncertain. The matter proposed for the opinion of the jurisconsulti was sometimes stated in the *responsum*, either fully or briefly; sometimes it contained the grounds of the opinion and sometimes it did not (Brisson, *de Form.* iii. c. 85). The *responsum* of a privileged jurisconsultus in a particular case would be an authority for the decision of a judex, and probably the same authority was extended by custom to the writings of such jurists who by the *jus respondendi* were given the condition of *juris auctores*. The definition of *responsa* by Gaius (i. 7; cf. Inst. i. 2, 8), "responsa prudentium sunt sententiae et opiniones eorum quibus permissum est jura condere," seems to support this view of the authority of the writings of the priests; the words *sententiae et opiniones* being sufficiently wide to include such writings, and the technical expression *responsa* with which the passage begins may, owing to the increased importance of legal literature, have been very well used by Gaius in a wider sense than originally attached to it. The duty of the judge, if the *responsa* were conflicting, was, we are told by Gaius in the same passage, determined by a rescript of the Emperor Hadrian. If the opinions of the privileged jurists agreed, the judge was to be bound by them; but if not, he was to be free to follow the opinion he preferred. (For an account of the different views of modern writers respecting the nature of the *jus respondendi*, see *Étude sur Gaius*, by E. Glasson, § 6.)

Under the early empire there arose two schools (*scholae*) of jurists, the origin of which is attributed to the opposition between Antistius Labeo and Ateius Capito, two eminent jurists who lived in the time of Augustus. (See Pomponius in Dig. 1, 2, 2, § 47: "Hi duo primum veluti diversas sectas fecerunt.") Labeo, a jurist distinguished for his abilities and varied acquirements (Gell. xii. 10; Pomponius in Dig. *l. c.*), appears to have been a great legal reformer ("plurima innovare instituit"), and the most notable jurist of his time. His opinions are frequently cited in the Digest. He was attached to the old republican constitution. Capito, a jurist of much less eminence, held fast to the traditional learning of his profession ("in his quae ei tradita fuerant perseverabat"), and so was in opposition to Labeo.

The followers of Labeo, whom we know with certainty to have been such, were M. Cocceius Nerva, Sempronius Proculus, Nerva the son, Pegasus, Juventius Celsus, Celsus the son, and Neratius Priscus. The followers of Capito were Masurius Sabinus, C. Cassius Longinus, Caelius Sabinus, Priscus Javolenus, Aburnius Valens, Tuscianus, Salvius Julianus, and Gaius. But the schools did not take their names from Labeo and Capito. The followers of Labeo were named Proculiani, from Proculus. The followers of Capito derived their name of Sabiniani from Masurius Sabinus, a most eminent teacher of law, the author of a celebrated work on the Jus Civile, who lived under Tiberius, and as late as the reign of Nero: they were sometimes also called Cassiani, from C. Cassius Longinus. The schools may, like the schools of philosophy in Greece, have consisted of students united together under an eminent teacher and leading a common life; to the office of head of the Proculian and Sabinian schools there seems to have been a regular succession (cf. Pomponius in Dig.: "Ateio Capitoni Masurius Sabinus successit, Labeoni Nerva," &c.). Some recent writers suppose that the schools were not established by Labeo and Capito, but that Sabinus, a disciple of Labeo, first instituted a school, and that Proculus, who taught the doctrines of Labeo, subsequently set up a rival one; but from the account of Pomponius we should rather gather that Labeo and Capito were the founders of the schools.

It is not possible to educe from the various disputes between the Sabinians and Proculians, which are mentioned in our sources, any fundamental differences which characterised the two schools. (For a list of the disputes between the schools, see Roby's *Introduction to the Digest*, cxxxi. &c.) The head of a school would exercise a predominant influence over it; and as one jurist succeeded another to the office of teacher, the character of its teaching might vary. It is sometimes said that one school adhered more closely to what was established and to the letter of what was written, while the other looked more to the internal meaning than to the external form; and thus, while apparently deviating from the letter, they approached nearer to true results: but some writers attribute the latter method to the Sabinians and others to the Proculians. In the period of the classical jurists the division of schools disappears. (Cf. Hommel, *de principali causa dissensionum inter Labeonem et Capitonem*; Dirksen, *Beiträge*, 3; Kuntze, *Excurse über röm. Recht*, 2nd edit., p. 319; Bremer, *Die Rechtslehrer und Rechtsschulen im Kaiserreich*, p. 68, &c.; Pernice, *Antistius Labeo.*)

Of all public callings the profession of the law was the most independent under the early emperors, and consequently it attracted to itself an unusual proportion of men of high ability. Jurisprudence made considerable progress during this period, especially its influence in developing the principles of Jus Gentium as contained in the praetor's edict, and in giving the law a more systematic character.

The great literary age of Roman jurisprudence, that of the classical jurists, is generally understood to begin under Hadrian and to end with Alexander Severus. The great Julian, the compiler of the Edict, may be regarded as the earliest classical jurist; subsequent jurists of the first rank were Marcellus, Cervidius Scaevola, Marcianus, Papinianus (the most distinguished of all Roman lawyers), Ulpianus, Paulus, and Modestinus. (For an account of the lives of the classical jurists, see Roby, *Introd. to the Digest.*)

Towards the end of the classical period jurisprudence showed signs of decay: compilations from the works of previous writers were taking the place of original work; the influence of the jurists was chiefly exercised in the council of the emperor; the *rescripta* were supplanting the *responsa* as a source of law. After the time of Septimius Severus no legal writings of importance were produced; the writings of earlier jurists were the chief authority in the courts, and, when these were in conflict with one another, the law remained unsettled. Thus the "law of citations," A.D. 426, limited legal authority to the writings of Gaius, Paul, Ulpian, and Modestinus, and to the writings of earlier jurists cited by these five (see Muirhead, *Roman Law*, section 78; Roby's *Introd.* p. lxxxiv. &c.). The Digest of Justinian is mainly composed of the writings of the classical jurists [PANDECTAE]. The want of constructive legal science in this period made compilations of law a practical necessity. The writings of the jurisconsulti consisted of *commentarii* on the Twelve Tables, on the Edict, on particular leges, more especially on some of the Juliae leges, and on other matters. The later jurists also commented on the writings of the earlier jurists; *e.g.* the commentaries on the great work of Sabinus. They also wrote elementary treatises (*elementa, commentarii*), such as the *Institutiones* of Gaius, which is the earliest work of the kind that we know to have been written; books called *regulae* and *definitiones*, which were probably collections of maxims and legal principles intended for advanced students; collections of cases and answers, under the various names of *responsa, epistolae, sententiae*, and *opiniones;* systematic treatises on law and various works of a miscellaneous character, with a great variety of names, such as *disputationes, quaestiones, notae, enchiridia, res quotidianae*, and various other titles. The term *Digesta* probably signifies the collected writings of a jurist.

With the exception of the fragments preserved in the Digest, this great mass of literature is nearly lost [PANDECTAE]. The most important writings which have survived are the *Liber singularis Regularum* and the *fragmenta* of Ulpian, the Institutes of Gaius, and the *Sententiae* of Paulus.

The mode of teaching law at Rome in the republican period was of a practical nature, the instruction which was given consisting in the jurisconsulti allowing young men to be present as *auditores* when they delivered their legal opinions, and to see how they conducted their business (Cic. *Brut.* 89; *Laelius*, 1). Previous, however, to attending to this practical instruction, young men were taught the elements of law, which was expressed by the term *institui*, whence probably the term *Institui* was given to elementary treatises like those of Gaius. Accordingly, *institui* and *audire* expressed the two parts of a legal education. The most distinguished jurists freely imparted instruction to young men (Cic. *de Or.* i. 41, 142: "Jus civile docere semper pulchrum fuit hominumque honestissimorum discipulis floruerunt domus"). In the imperial period, probably young men devoted themselves for a still longer period to attendance on those jurists who had the *jus respondendi.* These young men are the *juris studiosi* mentioned by Ulpian and others. Thus Ulpian calls Modestinus "studiosus meus." But, besides this practical training, a more systematic legal education was established under the empire.

Jurists taught law at fixed places—*stationes, jus publice docentium*—which were probably near the law courts (Gell. xiii. 10, 13). The Proculian and Sabinian schools may have been institutions of this kind, as has been already noticed. A class of teachers of law—called *professores, ἐξηγηταί, antecessores*—thus came into existence, who were entitled to a honorarium for their services.

The student went through a curriculum of study, being obliged to read prescribed books in a certain order. The plan of study was newly arranged by Justinian (cf. Rudorff, *Gesch. de R. R.* § 112; Const. Omnem). Law schools were gradually established in the principal cities of the empire, the principal ones in the time of Justinian being those at Constantinople, Rome, Berytus, Alexandria, and Caesarea.

(Pomponius, *de Origine Juris*, 1, 2; Roby, *Introduction to the Digest*, ch. vi.–xvi.; Muirhead, *Roman Law*, 262, 315–327; Paul Jörs, *Römische Rechtswissenschaft zur Zeit der Republik;* Sanio, *Zur Geschichte der röm. Rechtswissenschaft;* Karlowa, *Röm. Rechtsgeschichte*, § 61, &c.; Pernice, *M. Antistius Labeo;* Rudorff, *Röm. Rechtsgesch.* i. §§ 89–91; Filting, *Ueber das Alter d. Schriften der Juristen von Hadrian bis Alexander.*) [G. L.] [E. A. W.]

JURISDI'CTIO is the technical term to denote the power which belonged to a Roman king and magistratus of administering justice in suits between private persons (*inter privatos*); that is, in civil as opposed to criminal causes. This right was part of the imperium or supreme executive power of a Roman magistratus (cf. Dig. 2, 1, 3: "imperium cui jurisdictio in est"); accordingly jurisdictio (*jus dicere*) belonged to the officium of all the higher magistrates, who were invested with imperium, and was confined to these magistrates [IMPERIUM]. Thus the plebeian magistrates and the inferior magistrates of the Roman people, as the quaestor, did not possess it. An exception, however, was made to this principle in the case of the curule aediles, who were given jurisdictio in matters relating to the market [AEDILES]. Moreover municipal magistrates had jurisdictio without imperium (cf. Dig. 50, 1, 26: "quae magis imperii sunt quam jurisdictionis magistratus municipalis facere non potest"), and it was perhaps for the purpose of defining the power of such magistrates that the term *jurisdictio* had a confined as well as a more general sense. The origin of the word *jurisdictio* is to be traced to the *legis actio* procedure of early times, the function of the magistratus in an action under it consisting in (1) *jus dicere*, i.e. defining the issue between the parties, and declaring it in formal words, which was jurisdictio in its earliest sense (Voigt, *Zwölf Taf.* i. § 54); (2) *judicium dare*, or *addicere*, the appointing of a judex for the purpose of inquiring into the facts in dispute between the parties; (3) *rem addicere*. Addictio belongs to that part of jurisdictio by which the magistratus himself makes a decree or judgment, by which he assigns a right to one of the parties to a suit: thus in the case of *in jure cessio* he is said *rem addicere* (Gaius, ii. 24). It is with reference to the three words *do*, *dico*, *addico*, that Varro (*L. L.* vi. 30) remarks that the praetor must use one of these words, "cum lege quid peragitur," *i.e.* when a *legis actio* is being carried on. (As to these *tria verba solemnia*, see E. Hartmann, *Der Ordo Judiciorum*, p. 17; Huschke, *Das alte römische Jahr*, p. 197; Karlowa, *Der röm. Civilprocess*, p. 275, &c., cited by Keller, *Civilpr.* ed. Wach.) Accordingly those days are called *nefasti* in which jurisdiction could not be executed, because the words of legal force could not be used (compare Ovid, *Fast.* i. 47; Macrob. *Saturn.* i. 16). The place of jurisdiction at Rome was the forum.

When the term *jurisdictio* is used in a strict sense, it signifies the *judicis datio*, or right of a magistratus to appoint a judex (cf. Dig. 2, 1, 3: "jurisdictio est etiam judicis dandi licentia"). The appointment of a judex was, however, only an act of jurisdictio in this strict sense, when it was done according to the regular course of procedure, as is illustrated by the division of actions into *judicia legitima* and *judicia quae imperio continentur* (Gaius, iv. 103, Poste's comm.). *Judicia legitima*, which belonged to jurisdictio, were actions prosecuted within Rome or within the first miliarium before a single judge (*unus judex*). Actions tried before recuperatores [JUDICIUM], or even before a single judex, if the judex or one of the parties was an alien, or beyond the first milestone, whether the parties were citizens or aliens, were *judicia quae imperio continentur*. Thus, while imperium when used in a general sense includes jurisdictio, every act of jurisdictio being an act of imperium, that part of the imperium which is not jurisdictio is imperium in the narrower sense in which it is opposed to jurisdictio. This opposition between jurisdictio and imperium relates to the formal character of the acts of a magistratus, and not to the subjects with which he dealt. If he took cognisance of a civil cause acting according to established principles and forms, he exercised his jurisdictio; while, on the other hand, if he interfered in a more arbitrary way simply by virtue of his supreme power of command, it was an act of imperium. When he gave interdicts and other legal remedies by this latter means, he was said to be exercising *imperium mixtum*, which is of the same nature as jurisdictio; when the exercise of imperium had no relation to jurisdictio, it was *imperium merum*. Some acts of the magistratus were not attributed either to his imperium or jurisdictio, but to some special lex, senatusconsultum, or imperial constitution, as the *tutoris datio* (cf. Dig. 26, 1, 6, § 2: "Tutoris datio neque imperii est neque jurisdictionis, sed ei soli competit, cui nominatim hoc dedit, vel lex vel SS.C. vel princeps"). The term *jurisdictio* is, however, very commonly used in a wide sense, so as to signify the power of the magistratus to grant civil remedies of any kind. Ulpian notices that the term is improperly used in the edict in reference to the *cognitio extraordinaria*, whereby the magistratus decided certain cases himself by a decretum (Dig. 42, 1, 5, pr.: "melius scripsisset: cujus de ea re notio est").

The *jus edicendi* was used by the praetor for the purpose of administering his jurisdictio, and by this means he created many new remedies. Hence jurisdictio sometimes signifies the right of the praetor to declare law, and so to establish rights by his edict (cf. Inst. iv. 6, §§ 7, 8: "actiones, quae praetor ex sua jurisdictione introduxit"). *Praetoria jurisdictio*, i.e. edictal law, is found in opposition to *jus legitimum* (Cod. 6, 58, 15, pr.).

Jurisdictio was either *voluntaria* or *contentiosa* (Dig. 1, 6, 2). *Jurisdictio voluntaria* rendered valid certain acts done before the magistratus, such as adoption, emancipation, and manumission which involved a collusive action [CESSIO IN JURE], of the form of early procedure called *legis actio*; hence the phrase *magistratus apud quem legis actio est* for a magistrate with jurisdictio (Gell. v. 19, 3; Dig. 1, 7, 4, 16, 3; Cod. 8, 48, 1). *Jurisdictio contentiosa* had reference to contentious proceedings before a magistratus, which were said to be *in jure* as opposed to proceedings before a judex, which were said to be *in judicio*.

Magistratus appointed especially for military purposes, such as the dictator and magister equitum, could only exercise jurisdictio voluntaria, nor could jurisdictio contentiosa be exercised by a Roman magistratus outside Rome (cf. the phrase *qui Romae jus dicit*, which is equivalent to magistratus: Cic. *ad Fam.* xiii. 14); and thus, as Mommsen remarks, jurisdictio was separated from imperium militiae. The province of exercising jurisdictio in contentious proceedings was assigned to the office of praetor, when this magistrate was instituted; the consuls being prevented by statute from interfering in matters relating to jurisdictio, except in the negative form of intercession [PRAETOR]. Jurisdictio contentiosa could be the subject of delegation (*mandata jurisdictio*); thus the praetor delegated jurisdictio to praefecti. The propraetores and pro-consules exercised an independent jurisdiction in the provinces. (Dig. 2, 1; Bethmann-Hollweg, *Civilprocess*, ii. 70; Mommsen, *Staatsr.* i. 182 ff., ii. 1, 210 ff.) [E. A. W.]

JUS (in early Latin *jous*, from Sanscrit *ju*, to join, and of the same root as *jubere*, in early Latin *joubere*) has the following legal senses: 1, law, or a system of law; 2, the place of declaring the law; 3, power or authority; 4, right to do a thing; 5, what is right or lawful = *justum*; 6, in the plural, rules of law, legal decisions, and so legal authority (Nettleship, *Contributions to Latin Lexicography*, s. v.; cf. Muirhead, *Roman Law*, sect. 7).

Jus, in its general signification, is law, and in this sense it includes all law, whether made by statute or otherwise; but in a narrower sense it is opposed to lex, which is a special written enactment,—strictly, a transaction entered into between the magistratus and the populus (Nettleship, *Contributions*, etc., who thinks that the usages of lex are in favour of deriving it from *ligare*, to bind). Lex is sometimes used for law of any kind. Thus Cicero (*de Off.* iii. 5, § 23) opposes natura to leges, where he explains natura by the term jus gentium, and makes Leges equivalent to Jus Civile (see below). In the Partitiones (c. 37), he divides Jus into natura and lex; lex, in this sense, comprehending leges and all the other parts of the Jus Civile. In its special sense of a written enactment, lex is included in jus; but jus or jura, as distinguished from lex, may mean "the special provisions, lex the whole enactment containing them; or jura are special rules or provisions, lex a comprehensive written enactment; or jura may mean the general rules on which leges are subsequently framed" (Nettleship, *s. v.* Jus). So the provision of the Lex Julia de adulteriis, which forbade the alienation of the fundus dotalis, is thus referred to by Gaius (ii. 62), "quod quidem jus," "which rule of law" or "which law"—it being a law comprehended in another law which contained this provision. Gaius again (i. 47) speaks of the jura or legal provisions contained in the Lex Aelia Sentia. Thus, though lex, in its strict sense of a written enactment, is opposed to jus, and though jus is perhaps never used for a lex, still jus, or rather jura, may be used to express rules of law contained in a lex or a part of a lex. Jura, in the sense of rules of law, is of frequent occurrence, and is combined with the following verbs: describere, dicere, dare, ponere, reddere, petere (Nettleship, *l. c.*). For instance, Gaius speaks of jura as built up or established by the Responsa Prudentium ("responsa prudentium sunt sententiae et opiniones eorum quibus permissum est jura condere," i. 7). Jus is specially used to signify law as contained in the writings of the Jurists. Jus is sometimes opposed to judicium, a thing being said to be done in jure or in judicio, according as it was done before a magistratus or before a judex. [JUDICIUM.] Thus all matters of legal concern were said to be done "aut ad populum, aut in jure, aut ad judicem" (Plaut. *Menaech.* iv. 2, 18). The expression jus dicere is explained under JURISDICTIO. Jus, in the sense of the place "in quo jus redditur" (Dig. 1, 1, 11), is only an application of the name of what is done to the place in which it is done.

Jus was not only the general law of the state, but also the law which a superior, such as the head of a family, was entitled to administer to those subordinate to him. So persons are divided into those who are sui juris,—that is, independent persons; and those who are alieni juris—that is, subject to the law or rule of another. Hence jus signified that which binds, in the sense of power, authority, and from this sense came to mean a right to do a thing. Accordingly, Gaius says (iv. 3): "It is an actio in rem when we claim a corporeal thing as our own, or claim some jus as our own, such as a jus utendi, eundi, agendi." The meaning of a law generally, and of a legal right, are applied to jus by Cicero in the same sentence: "I, a man ignorant of the law (*imperitus juris*), seek to maintain my right (*meum jus*) by the Interdict" (*pro Caecin.* 11, § 32). As the several rules of law, which are often comprised in one lex, or which make up the whole body of Jus (Law), may be called Jura with reference to their object; so the several legal rights which are severally called jus, with reference to some particular subject, may be collectively called jura. Thus we find the phrase jura parentis to express all the rights that flow from the fact of legal paternity. The phrase jura praediorum, which is equivalent to servitutes, is explained under SERVITUS.

Jus sometimes means the entire property of a deceased person ("successio in jus demortui"—"in omne jus"—"heredes juris successores sunt").

Jus is also used to signify the bond or tie of relationship (Dig. 1, 1, 12: "Nonnunquam jus pro necessitudine accipimus, veluti est jus cognationis vel affinitatis").

The adjective justum often occurs in the Latin writers, in the sense of that which is consistent with Jus or Law, or is not contrary to law, and especially of that which is in accordance with jus civile as opposed to jus gentium. Thus it is justae nuptiae, marriage according to jus civile, if there is conubium between the two parties to the marriage. Jus, in its general sense of law, is opposed to fas; jus being law made by human authority, fas (from *fari*) what is declared by divine authority,—the will of the Gods. (Muirhead, *op. cit.* sect. 7.) The knowledge and determination of what was fas or nefas belonged to the pontifices, except that matters concerning international intercourse were regulated by the fetiales. But the distinction between fas and nefas, or between pium and impium, on the one side, and between justum and injustum on the other, was not clearly marked till the office of praetor was instituted; and so, till this time, the pontifices were the chief interpreters of jus as well as of fas. (Danz, *Lehrbuch*, &c., § 36.) Still, even after the separation of jus pontificium or sacrum from jus civile, there was a relation between these two branches of law: for instance, an adrogatio was not valid by the jus civile unless it was valid by the jus pontificium (Cic. *de Or.* iii. 33, 136; *Brut.* 42, 156; ADOPTIO), the pontifices having the supervision of privata as well as publica sacra. Again, as it was for the pontifices to determine whether a res was sacra, sancta, religiosa, or profana, so the law relating to res divini, as opposed to humani juris (Inst. ii. 1), was derived from jus sacrum, and continued to be partly under its sanction (Macrob. *Sat.* iii. 3;—Dig. 39, 3, 17, § 3; 11, 8, 5, § 1).

Those rules of fas which regulated the declaration of war, the conduct of war, and the making of treaties, are comprehended under the term Jus Fetiale. This jus prescribed the formalities which were observed by the Italian nations in their international intercourse (*jure gentium agere*). It derived its name from the fact that it was under the supervision of the fetiales, a class of priests who acted as the envoys of the state (*publici nuntii populi Romani—oratores*) in making a formal demand for satisfaction from other states (*clarigatio de rebus repetendis*), and in declaring war in case of refusal (Danz, § 36). The Romans sometimes used the expression jus gentium in a sense which nearly corresponds to the modern phrase Law of Nations, or, as it is more frequently called, International Law.

(Liv. ii. 14; vi. 1, "quod legatus in Gallos, ad quos missus erat, contra jus gentium pugnasset;" xxxviii. 48; Sall. *Jug.* 22; cf. Tac. *Ann.* i. 42—fas gentium.) The term jus belli (Cic. *de Legg.* ii. 14) is used in a similar sense.

The conduct of a Roman was regulated by boni mores as well as by jus and fas. Loyalty and obedience on the part of the dependent members of a family to their head (*obsequium et reverentia*), moderation in the use of their power on the part of superiors (*clementia*), chastity (*pudicitia*), and the observance of good faith in dealing with others (*bona fides*), were among the duties attributed to this source. As Mr. Muirhead (*Roman Law*, sect. 8) remarks, "The constant reference in the pages of both the lay and professional writers to infamia, ignominia, turpitudo, improbitas, as imposing disqualifications, shows how much store continued to be set, theoretically at least, on integrity of character." (See Voigt, *Zwölf Taf.* i. § 15.) The rules prescribed by boni mores were partly included in the sphere of jus, and partly lay outside it. Mores is also used in the sense of immorality (*mali mores*); that which positive morality disapproves of. Thus, in the matter of the dos, there was a retentio in respect of the mores graviores or majores, *i.e.* in cases of adultery (Ulp. *Fragm.* tit. 6). [Dos.]

The law of Rome was originally a body of customary law; and though it came in course of time to be based on statute, custom was still regarded as one of its original sources. This is the jus which is said to be moribus constitutum—not to be confounded with boni mores. The ultimate foundation of customary law was considered to be the common consciousness of the people of following a custom in obedience to a rule of law: the evidence of this consciousness is usage—repeated and continued use—"longa, inveterata, diuturna, antiquitus probata et servata tenaciter consuetudo" (Dig. 1, 3, 32). Lex, statute, and mos (custom) are sometimes opposed to one another, as component parts of the jus civile, but different in their origin. Horace (*Carm.* iv. 5) speaks of "mos et lex." The actio injuriarum is said by Paulus (v. 4, 6) to have been introduced "aut lege aut more aut mixto jure." The Roman writers indeed frequently refer to a large part of their law as founded on mores, or on the mos majorum, and not on Leges (Quintil. *Inst. Orat.* v. 10). Thus Ulpian (Dig. 1, 6, 8) says that the jus patriae potestatis is moribus receptum.

The Jus Civile or civil law of Rome was divided into publicum and privatum by the Roman jurists (Dig. 1, 1, 1, § 2; Inst. i. 1, 4). Publicum jus is defined to be that which relates to the status rei Romanae, or the Romans as a state; privatum jus is that which relates "ad singulorum utilitatem," that is, to the interests of private individuals. The publicum jus is further said by Ulpian (*l. c.*) "in sacris, in sacerdotibus, in magistratibus consistere." (Cf. Cic. *de Or.* i. 46, 201, "publica quoque jura, quae sunt propria civitatis atque imperii.") According to this view, it comprehends the law of religion and constitutional law, and in fact all the rest of the jus civile which is not jus privatum; the latter comprehending the law of status and family law, the law of property and the law of civil procedure, which is the subject of the Institutes of Gaius and Justinian. The elementary treatise of Gaius does not mention this division. Justinian, in his Institutes, after making this division of jus into publicum and privatum, says, "We must therefore treat of jus privatum," from which it appears that he did not contemplate treating of Jus Publicum, though the last title of the fourth book is "de judiciis publicis," concerning criminal trials, which properly belong to the Jus Publicum.

The law of Rome appears to have been called in early times Jus Quiritium. The expression "populus Romanus, quirites," has given rise to much discussion. Becker (*Handb.* ii. 24) concludes that Romani and quirites are so far opposed that Romani is the historical and political name viewed with respect to foreign states, and quirites the political name as viewed with reference to Rome. According to Mommsen, the distinction between Romani and quirites (literally, lance-bearers) is that "where the locality was meant to be referred to 'quirites' was never used, but always Rome and Romans (urbs Roma, populus, civis, ager Romanus), because the term quiris had as little of a local meaning as civis or miles. For the same reasons these designations could not be combined: they did not say civis quiris, because both denoted, though from different points of view, the same conception in law. On the other hand, the solemn announcement of the funeral of a burgess ran in the words, 'this warrior has been consigned to death' (*ollus quiris leto datus*); and in like manner the party aggrieved employed the word in calling the burgesses to aid him (*quiritare*): the king addressed the assembled community by this name; and when he sat in judgment, he spake according to the law of the warrior freemen (*ex jure quiritium*) quite similar to the later *ex jure civili*. The phrase 'populus Romanus, quirites' thus means the community and the individual burgesses" (Mommsen's *Hist. of Rome*, Dickson's transl., ed. 1867, i. 78). Accordingly jus quiritium was equivalent to jus civium, jus civile. Jus quiritium may also mean the entire rights of a Roman citizen, being equivalent to civitas (Gaius, i. 32 c, 33, 35). Jus quiritium is frequently used in connexion with ownership in the expressions dominus, dominium ex jure quiritium; that is, ownership according to the law of the quirites, or jus civile. A lance was the symbol of such ownership. Quiritary ownership was contrasted with ownership in bonis, which was praetorian ownership. [Dominium.]

"All people," says Gaius (i. 1), "who are governed by leges and mores use partly their own law (jus), partly the law (jus) that is common to all mankind; for the law (jus) which a state establishes for itself is peculiar to such state, and is called jus civile, as the peculiar law (jus) of that state. But the law (jus) which natural reason (naturalis ratio) has established among all mankind is equally observed by all people, and is called jus gentium, as being that law (jus) which all nations follow. The Roman populus therefore follows partly its own peculiar law (suum proprium jus), partly the common law (commune jus) of all mankind."

According to this view, Roman law (jus) is distributed into two parts, jus gentium and jus civile, and the whole body of law peculiar to any state is its jus civile (Cic. *de Orat.* i. 44, § 197). As we see in the Institutes, this was only a division of jus privatum; the Roman private law, therefore, which is peculiar to the Roman state, is its jus civium, or jus civile, that part of Roman law which might also be the law of other communities, was the jus gentium.

The jus gentium is here viewed by Gaius as springing out of the naturalis ratio common to all mankind, which is still more clearly expressed in another passage (i. 189), where he uses the expression "omnium civitatium jus" as equivalent to the jus gentium, and as founded on the naturalis ratio. In other passages he founds modes of acquisition of property, which are not peculiarly Roman in character, on naturalis ratio, and in other places he derives such acquisitions from naturale jus, the naturale jus being the product of naturalis ratio (cf. ii. 65, 66, 69, 73, 79). He founds cognatio, blood relationship, on naturalis ratio, and agnatio on civilis ratio, as being a purely Roman institution (i. 158). In two passages in the Digest (i. 8) he calls the same thing naturale jus in § 2, and jus gentium in § 3, 5 (compare Gaius, iii. 132). The naturale jus and the jus gentium are therefore treated by Gaius as identical (Savigny, *System*, u. s. w. i. 113). Thus Gaius considers jus gentium, as being the law of natural reason, to be older than the jus civile, which is law peculiar to a particular state (Dig. 41, 1, 1, pr.; cf. Inst. ii. 1, 11).

But other Roman jurists distinguished jus naturale, the law taught by nature, and so common to men at all times and in all places, from the jus gentium or gentile law of positive enactment.

There were, in fact, legal institutions, especially the important institution of slavery, which could not be reconciled with the identification of jus naturale and jus gentium (cf. Inst. i. 3, 2: "Servitus autem est constitutio juris gentium, qua quis dominio alieno *contra naturam* subjicitur").

Ulpian makes the threefold division of jus—jus civile, jus gentium, jus naturale; but his conception of jus naturale is one which was apparently peculiar to this jurist, though it is unfortunately adopted by Justinian in his Institutes (Inst. i. 2, pr.). "Jus naturale," according to Ulpian, "est, quod natura omnia animalia docuit. Nam jus istud non humani generis proprium est, sed omnium animalium, quae in caelo, quae in terra, quae in mari nascuntur. Hinc descendit maris atque feminae conjugatio, quam nos matrimonium appellamus, hinc liberorum procreatio et educatio: videmus etenim cetera quoque animalia istius juris peritia censeri." The foundation of this conception seems to have been a theory of the progress of mankind from what is termed a state of nature, first to a state of society and then to a condition of independent states. This definition had, however, no practical application, and must be viewed merely as a curious theory. Absurd as it appears at first sight, it is capable, according to Savigny, of a reasonable explanation, who shows that Ulpian does not mean to say that beasts have law, but only that they have the matter from which law springs; that is, some of those natural relations on which legal relations are founded exist among beasts as well as men. Such natural relations are those by which the species is propagated. (See also Puchta's remarks, *Inst.* i. § 9, note a.) In the Institutes the two divisions are confounded (1, 2, de jure naturali, gentium, et civili); for the explanation of jus naturale is first taken from the threefold division of Ulpian, and then the jus gentium and jus civile are explained according to the twofold division of Gaius already quoted, so that we have in the same section the jus naturale explained in the sense of Ulpian, and the jus gentium explained in the sense of Gaius, as derived from the naturalis ratio. Further, in the second book (tit. 1, 11) the jus naturale is explained to be the same as the jus gentium, and the jus naturale is said to be coeval with the human race.

The origin of the opposition between jus gentium and jus civile was not a speculative notion, nor did it originate with the jurists, though they gave it a theoretical form. The jus gentium appears to have been in its origin a body of rules which the praetor recognised as governing the relations of aliens at Rome with one another and with Roman citizens, the jus civile being only applicable to cives. It is probable that till some time after the enactment of the Twelve Tables, aliens were incapable of entering into any transaction which could be legally enforced, but the growth of commerce and the settlement of foreigners at Rome during the fifth and sixth centuries occasioned the establishment of a special law, distinguished from the jus civium by its informal and equitable character, treating all freemen as on an equality without consideration of political status. This new law, the jus gentium, was perhaps at first confined to transactions in which aliens were interested, but it soon came to be applied also to the relations of cives; and accordingly Roman private law was composed of two parts, the jus civile or law of cives exclusively, and the jus gentium, the general law of free persons. Jus gentium, then, was law in positive force among the Romans, devoid of national peculiarities by reason of its origin, and so having much in common with law elsewhere, though not, as one might suppose from the language of Gaius, the law actually prevailing in all communities.

The jus gentium was chiefly introduced by the Edictum—as the law of peregrini by the Edict of the Praetor peregrinus and the Edicta Provincialia, and as the general law of Rome by the Edictum of the Praetor urbanus, and by means of leges and responsa prudentium. The conception of the jus naturale was a philosophical one derived from Greece. The preference which the jurists showed to the jus gentium over the jus civile was partly due to the fact that they conceived it to be more in harmony with the law taught to man by an indwelling natural reason (naturalis ratio). Thus the tendency of the jus gentium to supersede the jus civile, instead of existing alongside of it as a parallel institution, was partly due to the influence of the prudentes, the effect of this change being to deprive Roman law to a great extent of its distinctively Roman character.

(For the origin and nature of the jus gentium, see Voigt, *Das Jus Naturale*, &c.; Muirhead, *Roman Law*, § 42; Nettleship in *Journ. of Philol.*

xiii. 169 ff.; *Contributions to Latin Lexicography*, s. v.)

Jus Civile is opposed to the jus praetorium or honorarium [EDICTUM]; and the opposition consists in the opposition of the means or form by which the two severally obtained an existence; whereas the opposition of jus civile and jus gentium is founded on the internal character of the two kinds, and the extent of their application.

The terms jus scriptum and non scriptum, as explained in the Institutes (i. 2), comprehended the whole of the private law of Rome (Dig. 1, 1, 6). Jus scriptum signified all law embodied in writing, whatever its source might be, and so in the later history of Roman law comprehended all except customary law (quod usus comprobavit). The sense in which written and unwritten law has been used by English writers is hardly the same as the Roman sense. Hale says (*Hist. of the Common Law*, p. 2): "Those laws that I call leges scriptae are such as are originally reduced into writing before they are enacted." Hale applies his definition only to statutes or acts of Parliament; but it is equally applicable to any rules which are promulgated in writing, and have the force of law or of a law, by virtue of authority delegated to those who make such rules. The division of jus scriptum and jus non scriptum does not appear in Gaius, custom not being mentioned by him as a source of law, but he enumerates the other sources of law which are included by Justinian under the head of jus scriptum.

"Law," says Gaius (i. 2), meaning the Roman private law (jura), "is composed of leges, plebiscita, senatusconsulta, constitutiones principum, the edicta of those who have the jus edicendi, and the responsa prudentium."

This is a division of law merely according to its formal origin. The divisions enumerated by Cicero (*Top.* 5, 28) are "leges (which include plebiscita), senatusconsulta, res judicatae, jurisperitorum auctoritas, edicta magistratuum, mos, aequitas."

The subject-matter of private law is distributed by Gaius, and Justinian in the Institutes, under the heads of the Law of Persons (Jus Personarum); the Law of Things, which is expressed by the phrase "jus quod ad res pertinet;" and the Law of Actions, "quod ad actiones pertinet." In his first book Gaius treats of the Law of Persons in the sense explained in the article INSTITUTIONES; in the fourth he treats of the Law of Actions; and accordingly the second and third contain the Law of Things —that is, the law of property. [INSTITUTIONES.] [G. L.] [E. A. W.]

JUS AEDILI'TIUM. [AEDILES; EDICTUM.]

JUS AELIA'NUM was a compilation by Sextus Aelius Paetus, called Catus "the shrewd" (Gell. iv. 1, § 20), who was aedile B.C. 200, consul 198, censor 193 (Liv. xxxi. 50; xxxii. 7; xxxv. 9), and who is described by his contemporary Ennius as "egregie cordatus homo Catus Aelius Sextus." He is also frequently mentioned with praise by Cicero (*Brut.* 20, 78; *de Rep.* i. 18, 30; *de Or.* i. 45, 198, iii. 33, 133). According to Pomponius (Dig. 1, 2, 2, § 7), the Jus Aelianum was composed not long after the publication of the Jus Flavianum, in order to supply certain kinds of action which were required "quia durant quaedam agendi genera, alias actiones composuit et librum populo dedit, qui appellatur Jus Aelianum." In another paragraph (§ 38) of the same title of the Digest we learn from Pomponius that Sextus Aelius was the author of a work called *Tripertita*, which contained the law of the Twelve Tables, the juristical interpretations of that law (*interpretatio*), and the *legis actiones*. This collection of early law was still in existence when Pomponius wrote.

It is a question whether *Tripertita* and *Jus Aelianum* are only two names for the same book, or whether they signify two distinct compilations. Cicero speaks of some commentarii of Aelius (*de Or.* i. 56, 240; *Top.* 2, 10), which may or may not be identical with the *Tripertita* or *Jus Aelianum* mentioned by Pomponius. (Huschke, *Zeitschr. f. gesch. Rechtsw.* xv. 177; Karlowa, *Rechtsgesch.* i. p. 475; Krüger, *Gesch. d. Quellen* u. s. w.; Roby, *Introduction to the Digest*, ch. vii. p. xciii.) [G. L.] [E. A. W.]

JUS ANULO'RUM. [ANULUS.]

JUS APPLICATIO'NIS. [EXSILIUM.]

JUS CIVI'LE. [JUS.]

JUS CIVI'LE FLAVIA'NUM. Appius Claudius Caecus, who was censor B.C. 312, is said to have drawn up a book of actiones or forms of procedure, with a calendar of days on which actions might or might not be tried: this was made public by his clerk, Cn. Flavius, and was known as the Jus Flavianum (Cic. *de Or.* i. 41, 186). According to one story (Dig. 1, 2, 7), Flavius surreptitiously obtained possession of the book of Appius, and was rewarded by the people for his services by being made tribunus plebis and curule aedile. The effect of this publication was to extend the knowledge and the practice of the law to the plebeians, and to separate to some extent the jus civile from the jus pontificium. This reform was almost contemporaneous with the opening of the pontificate to the plebeians by the Lex Ogulnia. (Liv. ix. 45; Cic. *pro Mur.* 11, 25, *ad Att.* vi. 1, 8; Plin. *H. N.* xxxiii. § 17; Macrob. i. 15, 9; Gellius vii. (vi.) 9; cf. Danz, *Lehrbuch der Gesch. des röm. Rechts*, i. § 49; Karlowa, *Rechtsgesch.* i. p. 475; Krüger, *Geschichte d. Quellen.*) [G. L.] [E. A. W.]

JUS CIVI'LE PAPIRIA'NUM is said by Pomponius to have been a compilation of the Leges Regiae or laws passed in the kingly period of Rome, and to have derived its name from Papirius, its compiler. There is great doubt as to the exact character of this compilation of Papirius, and as to the time when it was made. It seems to have consisted of rules of law prescribed by the pontifices, concerning *fas* and *nefas*. [JUS.] There was a tradition that the Leges Regiae were written on wooden tablets by command of king Ancus, and exposed to public view in the market-place (Liv. i. 32; Dionys. iii. 36). The tablets, as the story goes, were destroyed after the expulsion of the kings, but new ones were subsequently set up by the Pontifex Maximus C. Papirius, which were burnt in the Gallic conflagration. Henceforth the Leges Regiae were kept secret by the pontifices, till they were published as the Jus Papirianum, the title being derived from their original compiler. This improbable account is all the information which we have respecting the authenticity of the Leges Regiae. Even the name of the compiler of the Jus Papirianum is not certain, as he is variously called Caius, Sextus, and Publius. There is no reference to such a compilation in Varro or Cicero. It was, however, commented on by Granius Flaccus in the time of Julius Caesar (Dig. 50, 16, 144), and from this time seems to have been regarded as a source of law respecting religious observances. The compilation was probably made by some private jurist at the end of the republic. (Mommsen, *Staatsr.* ii. 41–44 (ed. 1877); Karlowa, *Rechtsgesch.* i. 106; Voigt, *Die Leges Regiae;* Bruns, *Fontes*, § 1, &c.)

JUSJURANDUM (ὅρκος), an oath. 1. Greek. An oath is an appeal to some superior being, calling on him to bear witness that the swearer speaks the truth, or intends to perform the promise which he makes (μετὰ θείας παραλήψεως, Anaxim. *Ars Rhet.* 17; Clem. Alex. *Strom.* vii. 8). Hence the expression ἴστω Ζεύς, θεὸς ἴστω, and others of the same import, so frequently used in the taking of oaths (Soph. *Trach.* 399; *Ant.* 184; *Oed. Col.* 521;—St. Paul, *Ep. Galat.* i. 20). It is obvious that such an appeal implies a belief not only in the existence of the being so called upon, but also in his power and inclination to punish the false swearer; and the force of an oath is founded on this belief.

1. By whom did the Greeks swear? Sometimes all the gods were invoked: ὀμνύω τοὺς θεοὺς καὶ τὰς θεὰς ἅπαντας καὶ ἁπάσας (Dem. *c. Conon.* p. 1269, § 41), πρὸς θεῶν Ὀλυμπίων (Lys. *c. Agorat.* § 95, *de bon. Aristoph.* §§ 33, 54; Isae. *Philoct.* § 58), μὰ τοὺς θεοὺς ([Lys.] *Accus. adv. Famil.* § 18), πρὸς θεῶν καὶ δαιμόνων (Isae. *Menecl.* § 47), ὦ Ζεῦ καὶ θεοὶ πάντες (Antiph. *Sup. Chor.* § 40; Dem. *F. L.* p. 345, § 16), ὦ γῆ καὶ θεοί (Dem. *c. Boeot.* i. p. 1000, § 21). At other times the occasion suggested a special deity: thus, Iphigeneia the priestess swore by Artemis (Eur. *Iph. Taur.* 728); Menelaus bids Antilochus swear by Poseidon (the equestrian god), the subject being on horses (*Il.* xxiii. 584; cf. Aristoph. *Nub.* 83): cf. νὴ τὸν Δία τὸν Ὀλύμπιον καὶ τὸν Ἀπόλλω (Aeschin. *c. Tim.* § 83; Isae. *Philoct.* § 61), μὰ τὸν Δία τὸν Ὀλύμπιον (Aeschin. *c. Tim.* § 55), μὰ τὸν Δία ([Lys.] *c. Andoc.* §§ 7, 32, 38), μὰ Ἀπόλλωνα (*Il.* i. 86; see Lys. *c. Theomn.* i. § 17), Helios (Eur. *Herc. Fur.* 857), νὴ τὴν Ἥραν (Plat. *Phaedr.* p. 230 B), νὴ τὴν Ἀθηνᾶν (Lyc. *c. Leocr.* § 75), νὴ τὴν Δήμητρα (Dem. *F. L.* p. 425, § 262; *Olynth.* iii. p. 37, § 32), etc. Women too had their favourite oaths: μὰ τὼ θεώ, *i.e.* Demeter and Persephone (Aristoph. *Eccles.* 156), νὴ τὴν Ἀφροδίτην (Aristoph. *Eccles.* 189 ff.: cf. Plat. *Symp.* p. 183 B, ἀφροδίσιον ὅρκον οὔ φασιν εἶναι), etc. The Lacedaemonians swore by Castor and Pollux (ναὶ τὼ σιώ, Xen. *Hell.* iv. 4, 10; Plut. *Mor.* p. 189 F; Aristoph. *Lys.* 148), the Boeotians by Hercules and Iolaus (Aristoph. *Acharn.* 860, 867), the Corinthians by Poseidon (Aristoph. *Eq.* 609, etc.), the Athenians principally by three deities (so Draco ordained, *Schol. Venet. B.* on *Il.* xv. 36; cf. Pollux, viii. 142, τρεῖς θεοὺς ὀμνύναι κελεύει Σόλων), viz. Zeus, Poseidon, and Athena (*Schol. Venet.* l. c.), or Zeus, Poseidon, and Demeter (decree of the deme Aexone in *Mitth. d. a. Inst. Ath.* iv. p. 201; Dem. *c. Timocr.* p. 747, § 151, *jusjurandum*, and *Schol. Venet.* l. c.), or Zeus, Apollo, and Demeter (Dem. *c. Callipp.* p. 1237, § 9; Aristoph. *Eq.* 941; *C. I. A.* i. No. 9, ii. No. 578; Pollux, viii. 122; Schol. Aeschin. *c. Tim.* § 114), or Zeus, Apollo, and Athene (Dem. *c. Mid.* p. 578, § 198); see also Plat. *de Legg.* xi. p. 936 E; Aesch. *Sept.* 42 ff. But the Greeks also swore by whatever was dear and sacred to them: Achilles swears by his sceptre (*Il.* i. 234), Telemachus by the sorrows of his father (μὰ Ζῆν᾽ . . . καὶ ἄλγεα πατρὸς ἐμοῖο, *Od.* xx. 339), Helena to her husband by his head (Eur. *Hel.* 835; cf. *Hippol.* 605), friends to one another by their friendship (Xen. *Cyrop.* vi. 4, 6), warriors by their weapons (Eur. *Phoen.* 1677), Demosthenes by the ancestors who fought at Marathon, etc. (*de Cor.* p. 297, § 208; cf. [Longin.] *de Sublim.* 16), the disciples of Pythagoras by their master (Plut. *Mor.* p. 877 A), etc. The god, however, by whom the most solemn oaths were sworn, was Zeus (ὅρκιος, Soph. *Philoct.* 1324, *Trachin.* 1188; Eur. *Hippol.* 1025, *Med.* 208; Apoll. Rhod. 4, 95; ὃς ὅρκων θνητοῖς ταμίας νενόμισται, Eur. *Med.* 171); by his head (*Hymn. in Mercur.* 274), or by the Styx (the most terrible oath the gods swear, *Il.* xv. 36 ff., *Od.* v. 184 ff.). Zeus punishes the violation of oaths (Aristoph. *Nub.* 397; cf. Paus. v. 24, 2), and Dike is seated by his side (ξύνεδρος Ζηνός, Soph. *Oed. C.* 1381; [Dem.] *c. Aristog.* i. p. 772, § 11). The poets frequently allude to the punishment of perjury after death (*Il.* xix. 260, iii. 279; Pind. *Ol.* 2, 71; cf. Aristoph. *Ran.* 275), and we find many proofs of a persuasion that perjurers would not prosper in this world (Lyc. *c. Leocr.* § 79; Polyb. iv. 33, 3; Hesiod, *Op. et Dies*, 285, etc.). One of the most striking is the story told by Leotychides to the Athenians, of Glaucus the Spartan, who consulted the Pythian oracle whether he should restore a deposit, or deny on oath that he had ever received it; and who, for merely deliberating upon such a question, was cut off with his whole family (Herod. vi. 86; cf. Theogn. 199 ff.; Juv. *Sat.* xiii. 199 ff.).

2. As to the customs observed in taking an oath. Anciently the prince who took an oath stood up (*Il.* xix. 175), raised his sceptre (*Il.*

vii. 412; x. 231, etc.), and lifted up his eyes and hands to heaven, as he would in prayer (*Il.* xix. 257; Pind. *Ol.* 7, 65); for an oath was a species of prayer, and required the same sort of ceremony. Oaths were accompanied with sacrifice and libation; the victims (Plut. *Pyrrh.* 6) on such occasions were not eaten (Paus. v. 24, 2), but either buried in the ground or thrown into the sea (Schol. to *Il.* iii. 310; xix. 268), and the wine used was undiluted (*Il.* iii. 269 and Schol.; *ἄκρητοι σπονδαί*, *Il.* iv. 159 and Schol.: cf. Spengel, *Herm.* 1880, p. 330). Those who swore laid their hands on the victims (*προσλαβοῦ μοι τοῦ κάπρου*, Aristoph. *Lysistr.* 202; *ὀμνύναι καθ' ἱερῶν*, Isae. *Apollod.* § 28; Dem. *c. Eubul.* p. 1306, § 26; [Dem.] *c. Neaer.* p. 1365, § 60, etc.; Suid. *s. v. βοῦς ὁ Μολοττῶν*: Bernhardy, p. 1027), or on the altar (*λαβόμενος τοῦ βωμοῦ*, Andoc. *Myst.* § 126; *πρὸς τὸν λίθον ἄγοντες*, Dem. *c. Conon.* p. 1265, § 26, and Harpocr. *s. v. λίθος*: cf. also Pericles' saying, *μέχρι τοῦ βωμοῦ φίλος εἰμί*, Plut. *Mor.* p. 186 C; Gellius, *N. A.* i. 3, 20), or on the heads of their children (*κατὰ παίδων*, Dem. *c. Conon.* p. 1270, § 40; *c. Aphob.* iii. p. 852, § 26; Lys. *c. Diogit.* § 13), pronouncing a solemn form of imprecation (Lys. *c. Eratosth.* § 10; Dem. *c. Conon.* p. 1270, § 41; Aeschin. *c. Tim.* § 114; Aristoph. *Eq.* 660). The alliance between Hercules and the sons of Neleus is confirmed by oath, *ἐπὶ τομίων κάπρου* (Paus. iv. 15, 4; see iii. 20, 9, *ἐπὶ τοῦ ἵππου τῶν τομίων*: cf. Aristoph. *Lysistr.* 192, and Plut. *Pyrrh.* 6); the Greeks and Ariaeus took an oath to be true allies after sacrificing a bull, a wolf, a boar, and a ram over a shield (Aristoph. *Lysistr.* 188), the Greeks dipping their swords and the barbarians their lances into the blood (Xen. *Anab.* ii. 2, 9; cf. Herod. iv. 70, on the rites of the Scythians). The Phocaeans, before setting out for Cyrnus, invoked the heaviest curses on the man who should draw back from the expedition, and, having dropped a red-hot mass of iron into the sea, swore never to return to Phocaea till that mass reappeared upon the surface (Herod. i. 165; Hor. *Epod.* 16, 17 ff.; and Suid. *s. v. Φωκαέων ἀρά*: cf. Plut. *Arist.* 25). Valckenaer (*Opusc.* i. p. 27 ff.) tries to prove, from *Hymn. in Vener.* 27 and Soph. *Trach.* 1180 ff., that it was customary to touch the head of the person to whom the promise was made: certain it is that the hands were joined in making agreements and contracts (*Il.* iv. 158 ff.; Soph. *Philoct.* 803; Eur. *Iph. Aul.* 57, 471; *Med.* 496;—Xen. *Anab.* vii. 3, 1; ii. 4, 1). To make the taking of an oath more impressive, it was done sometimes in temples or other localities sacred to popular belief. Thus at Athens, in the temple of Athena on the Acropolis (Andoc. *de Myst.* § 42; Isocr. *Trap.* § 20; Dem. *pro Phorm.* p. 949, § 15; cf. Lys. *c. Diogit.* § 13); at Sparta, in the temple of Athena Chalcioecus (Plut. *Mor.* p. 218 D); in Arcadia, near the Styx, not far from Nonacris (Herod. vi. 74); at Haliartus, in the temple of the Praxidicae (Paus. ix. 33, 2); at Syracuse, in the temple of Demeter and Persephone (Plut. *Dion*, 56); at Gortyn, near the Amyclaean temple (*Gort. Code*, iii. l. 8), etc.

3. The occasions when oaths were taken. We find early mention in the Greek writers of oaths being taken on solemn and important occasions, as treaties, alliances, vows, compacts, and agreements, both between nations and individuals. Thus, when the Greeks and Trojans agree to decide the fate of the war by a single combat between Menelaus and Paris, they ratify their agreement by an oath (*Il.* iii. 276). The alliance between Croesus and the Lacedaemonians is confirmed by oath (Herod. i. 69). So in the treaty between the Medes and Lydians, whose rites in swearing (as Herodotus tells us, i. 74) were the same as those of the Greeks, with this addition, that they made an incision in their arms and tasted each other's blood (cf. Tacitus, *Ann.* xii. 47). We may further notice the alliance between Athens, Argos, Mantinea, and Elis, upon which every state was to swear, *τὸν ἐπιχώριον ὅρκον τὸν μέγιστον κατὰ ἱερῶν τελείων* (Thuc. v. 47); such treaties were as a rule cut in *στῆλαι*, together with the imprecations upon perjurers, and such *στῆλαι* were set up in or near temples (*C. I. G.* No. 2554, 2555); a part of the original monument from which Thucydides copied was discovered lately near the Dionysiac theatre (*C. I. A.* iv. No. 46^b, and Hicks, *Manual*, No. 52. See also Thuc. v. 18, 23); the oath of the Amphictyons (Aeschin. *c. Ctes.* § 109); the vow of the Ionian women (Herod. i. 146); of the Acarnanians (Polyb. ix. 40, 4; Liv. xxvi. 25), etc. Every new constitution, every settlement of party feuds, had to be confirmed and ratified by an oath. Thus the senate collectively and the archons individually swore to observe Solon's laws with fidelity for the space of ten years (Plut. *Sol.* 25; see also Herod. i. 29); when, after the overthrow of the Four Hundred, the democracy was restored at the beginning of the archonship of Glaucippus, Demophantus proposed and carried a decree prescribing the form of an oath to be taken by all Athenians to stand by the democratical constitution (Andoc. *de Myst.* § 97 f.; cf. Lyc. *c. Leocr.* § 127, and Dem. *c. Lept.* p. 505, § 159, *τῆς Δημοφάντου στήλης*); see also the additions to the oaths taken by the senate and by the dicasts (Andoc. *de Myst.* § 91). The security which an oath was supposed to confer induced the Greeks, as it has people of modern times, to impose it as an obligation upon persons invested with authority, or entrusted with the discharge of responsible duties. The Athenians, with whom the formalities of legislation were carried to the greatest perfection, were, of all the Greek states, the most punctilious in this respect. The youth after having completed his seventeenth year was not allowed to assume the privileges of a citizen and to be registered in the *ληξιαρχικὸν γραμματεῖον* without taking a solemn oath in the temple of Aglaurus (Dem. *F. L.* p. 438, § 303; Plut. *Alcib.* 15; Pollux, viii. 105: the Schol. to Dem. *l. c.* explains the reason why in the temple of Aglaurus). For the oath itself, cf. Pollux, viii. 105, Stob. *Floril.* 43, 48, and Lyc. *c. Leocr.* § 76 f.; see also the oath sworn by all the Greeks at Plataeae (Lyc. *c. Leocr.* § 80 f., *μιμνησάμενοι τὸν παρ' ὑμῖν εἰθισμένον ὅρκον*: cf. Diod. xi. 29; Isocr. *Panegyr.* § 156). All *ἀρχαί* were required to bind themselves by an oath to perform their respective duties (Lyc. *c. Leocr.* § 79, yet see Hermann, *Staatsalt.* i. § 154, 1; cf. [Xenoph.] *Rep. Lacod.* 15, on the oaths of the kings and ephors in Sparta). The archons first took the oath at the *βασίλειος στοά* (*ἐπὶ τοῦ λίθου ἐφ' οὗ τὰ τόμια συός*,

φυλάξειν τοὺς νόμους καὶ μὴ δωροδοκήσειν ἢ χρυσοῦν ἀνδριάντα ἀποτῖσαι, Pollux, viii. 86, as emended by Bergk, *Rhein. Mus.* 1878, p. 448 ff.: cf. Plat. *Phaedr.* p. 235 D; Heracl. *Polit. quae extant*, ed. Schneidewin, p. 5, 15, and Plut. *Sol.* 25), and repeated it on the Acropolis (Pollux, *l. c.*). Part of the oath of the στρατηγοὶ is quoted by Lys. *pro Mil.* § 15, τοὺς ἀστρατεύτους καταλέξειν: as we learn from Plut. *Per.* 30, on the motion of Charinus a clause was added to the oath in B.C. 431: ὅτι καὶ δὶς ἀνὰ πᾶν ἔτος εἰς τὴν Μεγαρικὴν ἐμβαλοῦσιν, cf. Thuc. iv. 66; they took their oath (Dinarch. *c. Philocl.* § 2) μεταξὺ τοῦ ἕδους (*i.e.* the ἄγαλμα of Athena Polias: Bekk. *Anecd.* p. 246, 3) καὶ τῆς τραπέζης (on which the myrtle branches lay: Pollux, x. 69; Gilbert, *Staatsalt.* i. p. 212, n. 1). The oath of the judges of the games is mentioned in Dem. *c. Mid.* p. 520, § 17; p. 535, § 65; [Andoc.] *c. Alcib.* § 21; Plut. *Cim.* 8; Aristoph. *Eccles.* 1160 (cf. the oath of the athletes in Paus. v. 24, 2, δέκα ἐφεξῆς μηνῶν ἀπηκριβῶσθαί σφισι τὰ πάντα ἐς ἄσκησιν). We know portions of the βουλευτικὸς ὅρκος from various sources: κατὰ τοὺς νόμους βουλεύσειν (Xen. *Mem.* i. 1, 18), τὰ βέλτιστα βουλεύσειν τῷ δήμῳ τῷ Ἀθηναίων ([Dem.] *c. Neaer.* p. 1346, § 4; Lys. *c. Philon.* §§ 1, 31; *c. Nicom.* § 10), not to divulge the discussions at secret sittings (Lys. *c. Philon.* § 31; *c. Agor.* 21;—[Dem.] *c. Aristog.* i. p. 776, § 23; Aristoph. *Eccles.* 442 ff.), ἀποφαίνειν εἴ τίς τινα οἶδε τῶν λαχόντων ἀνεπιτήδειον ὄντα βουλεύειν (Lys. *c. Philon.* § 2), οὐδὲ δήσω Ἀθηναίων οὐδένα, ὃς ἂν ἐγγυητὰς τρεῖς καθιστῇ τὸ αὐτὸ τέλος τελοῦντας πλὴν ἐάν τις ἐπὶ προδοσίᾳ τῆς πόλεως ἢ ἐπὶ καταλύσει τοῦ δήμου συνιὼν ἁλῷ, ἢ τέλος τι πριάμενος ἢ ἐγγυησάμενος ἢ ἐκλέγων μὴ καταβάλλῃ (Dem. *c. Timocr.* p. 745, § 144; p. 746, § 147; p. 747, § 151;—Andoc. *Myst.* § 93: cf. [Andoc.] *c. Alcib.* § 3). In the archonship of Glaucippus in B.C. 410–409 was added, καθεδεῖσθαι ἐν τῷ γράμματι ᾧ ἂν λάχωσι (Philochorus, *fr.* 119 = Schol. Aristoph. *Plut.* 972: cf. Gilbert, *Beitr. z. innern Gesch. Athens*, p. 348 ff.); and in the archonship of Eucleides, οὐ δέξομαι ἔνδειξιν οὐδὲ ἀπαγωγὴν ἕνεκα τῶν πρότερον γεγενημένων πλὴν τῶν φυγόντων (Andoc. *de Myst.* § 91; Taylor, *Lect. Lysiac.* p. 325). Fraenkel (*Hermes*, 1878, p. 452 ff.; see also Westermann, *de iusiur. iudic. Athen. formula*, and *Att. Process*, ed. Lipsius, p. 153) restores the oath of the Heliastic dicasts (Dem. *c. Timocr.* p. 746, § 149) as follows: ψηφιοῦμαι κατὰ τοὺς νόμους καὶ τὰ ψηφίσματα τοῦ δήμου τοῦ Ἀθηναίων καὶ τῆς βουλῆς τῶν πεντακοσίων, περὶ δ' ὧν ἂν νόμοι μὴ ὦσι γνώμῃ τῇ δικαιοτάτῃ, καὶ οὔτε χάριτος ἕνεκ' οὔτ' ἔχθρας. καὶ ψηφιοῦμαι περὶ αὐτῶν ὧν ἂν ἡ δίωξις ᾖ καὶ ἀκροάσομαι τῶν τε κατηγορούντων καὶ τῶν ἀπολογουμένων ὁμοίως ἀμφοῖν. ὄμνυμι ταῦτα νὴ τὸν Δία, νὴ τὸν Ἀπόλλω [or Ποσειδῶ], νὴ τὴν Δήμητρα καὶ εἴη μέν μοι εὐορκοῦντι πολλὰ καὶ ἀγαθά, ἐπιορκοῦντι δ' ἐξώλεια αὐτῷ τε καὶ γένει. This oath very probably also contained (after ἔχθρας) the phrase: οὐδὲ δῶρα δέξομαι τῆς ἡλιάσεως ἕνεκα οὔτ' αὐτὸς ἐγὼ οὔτ' ἄλλος ἐμοὶ οὔτ' ἄλλη εἰδότος ἐμοῦ οὔτε τέχνῃ οὔτε μηχανῇ οὐδεμιᾷ. Westermann (*l. c.* pt. iii. p. 6 f.) took exception to ἐμοὶ οὔτ' ἄλλη ("putida sane haec est utriusque sexus distinctio"), but Hofmann (*de jurandi ap. Athen. formulis*, p. 49) restores the same phrase in *C. I. A.* ii. No. 578, and points to a similar one in *Gk. Inscr. Brit. Mus.* ii. No. 299 a (Calymna).* For a time ("its value being essentially temporary," Grote, *Hist. of Gr.* viii. p. 101 n.) the clause καὶ οὐ μνησικακήσω οὐδὲ ἄλλῳ πείσομαι, ψηφιοῦμαι δὲ κατὰ τοὺς κειμένους νόμους (Andoc. *de Myst.* § 91) was added to the oath.—The demotae took an oath at a διαψήφισις (ψηφιεῖσθαι γνώμῃ τῇ δικαιοτάτῃ καὶ οὔτε χάριτος ἕνεκ' οὔτ' ἔχθρας, Dem. *c. Eubul.* p. 1318, § 63; cf. p. 1301, § 8, p. 1306, § 26; Aeschin. *c. Tim.* § 78); and when the youths were enrolled in the ληξιαρχικὸν γραμματεῖον (Dem. *c. Eubul.* p. 1318, § 61; Isae. *Apollod.* § 28): for the oaths of the euthyni, logistae, and synegori of the demes, cf. *C. I. A.* ii. No. 578, and Aeschin. *c. Tim.* § 107; for that of the demarchus or some other officer in connexion with the *sacra* and the finances of the demes, cf. *C. I. A.* i. No. 9 = *Gk. Inscr. Brit. Mus.* i. No. 1.—The oath to be sworn in the δίκαι φονικαὶ is mentioned by Dem. *c. Aristocr.* p. 642, § 67; Din. *c. Dem.* § 47 (ἐν Ἀρείῳ πάγῳ), [Dem.] *c. Neaer.* p. 1348, § 9 f. (ἐπὶ Παλλαδίῳ); we know something of its contents: ἐν τῷ ὅρκῳ διορίζεται ὅ τι προσήκων ἐστί, [Dem.] *c. Everg. et Mnes.* p. 1161, § 73; μὴ ἄλλα κατηγορήσειν .... ἢ εἰς αὐτὸν τὸν φόνον, etc. (Antiph. *de caed. Herod.* § 11, cf. *de Choreut.* § 9; Lys. *c. Simon.* § 46; Pollux, viii. 117); ὁ μὲν διώκων ὡς ἔκτεινε διόμνυται, ὁ δὲ φεύγων ὡς οὐκ ἔκτεινεν (Lys. *c. Theomn.* i. § 11; *c. Simon.* § 21; Antiph. *de Choreut.* § 16). An oath on the part of the prosecutor after he had gained his suit (ἐπὶ Παλλαδίῳ) is only mentioned by Aeschin. *F. L.* § 87. In other cases both the accuser and the defendant had to swear an oath in the ἀνάκρισις [ANAKRISIS]; on the oath of the witness, see MARTYRIA; on the evidentiary oath (even a woman who was not competent to give testimony could take an oath of this kind: *Att. Process*, ed. Lipsius, p. 898 ff.), see DIAETETAE. The importance, at least apparently, attached to oaths in courts of justice, is proved by various passages in the orators. Demosthenes constantly reminds his judges that they are on their oaths, and Lycurgus (*c. Leocr.* § 79) declares that τὸ συνέχον τὴν δημοκρατίαν ὅρκος ἐστίν: cf. Lys. *de Affect. Tyrann. Apol.* § 28.

According to Gortyn law, the judge (δικαστὰς) was bound in all the cases where this was prescribed by law to follow the evidence of witnesses, and to give credit to a denial on oath (δικάδδεν κατὰ μαιτύρανς ἒ ἀπόμοτον) touching other matters he had to decide himself under oath (ὀμνύντα κρίνεν, xi. ll. 26–31). Several instances of this oath of exculpation are given: it is sworn by a debtor, in default of witnesses (ix. l. 54); by a wife (within twenty days) who was charged with having taken away from the house more than her due on being divorced

---

* ναὶ τὸν Δία καὶ τὸν Ἀπόλλω τὸν Λύκ[ιον καὶ Γᾶν δικασσέω περὶ] ὧν [illegible] ἀντίδικοι ἀντώμοσαν κατὰ γ[νώμαν τὰν δικαιοτάτα]ν .... οὐδὲ δῶρα ἔλαβον τὰς δίκας ταύτας ἕ[νεκεν ο]ὔτε αὐτὸς ἐγὼ οὔτε ἄλ(λος) οὔτε ἄλλα ἐμὶ[ν οὐ μηχανᾷ οὐδ]εμιᾷ· εὐορκεῦντι μέμ μοι εὖ εἶμεν, ἐπιορκεῦντ[ι δὲ τὰ ἐναντία]. Cf. also the oath administered to the dicasts in the inscription from Eresus (Cauer,^{2} No. 430 c, l. 11 ff.): [ἦ] [μ]ὰν δικάσσω τὰν [δίκαν] [ὄ]σσα μὲν ἐν τοῖ[ς νόμο]ις, τὰ δὲ ἄλλα ἐθ[ελ]όντας ὡς ἄριστα [καὶ δ]ικαίτατα, καὶ τιμά[σ]ω, αἴ κε κατάγνω, ὀρθῶ[ς κ]αὶ δικαίως· οὔτω ποήσω ναὶ μὰ Δία καὶ Ἄλιον.

from her husband (iii. l. 7; xi. l. 48 ff.). If a wife bore a child after being divorced, she had to carry it to her husband's house in the presence of three witnesses; if he refused to receive it, it was in her power either to bring it up or to expose it. If she exposed it, however, without having presented it, she made herself liable to a fine of 50 staters; if the husband afterwards claimed such a child or the fine for exposing it, her relatives and witnesses had preference in taking the oath (or had more title to credence) whether they carried the child to the father (*ὁρκιοτέρος δ' ἔμεν τὸς καδεστὰνς καὶ τὸς μαιτύρανς, αἱ ἐπέλευσαν*, iii. l. 44 ff.). A man taken in adultery with a free woman (not in her father's, brother's, or husband's house) was liable to a fine of 50 staters. The captor had to give notice, in the presence of three witnesses, to the kinsmen of the man taken, that they had to redeem him within five days; if he was not redeemed within that time, it was in the power of the captor to do with him as he liked. If the man taken asserted that a plot had been laid for him, the captor himself and four others had to swear, each calling down curses on himself, that no plot was laid (ii. l. 37 ff.). Lastly, a female house-slave debauched by force had a prior claim to swear, or had more title to credence (*ὁρκιοτέρα*, ii. l. 15 ff.).

The experience of all nations has proved the dangerous tendency of making oaths too common. The history of Athens and of Greece in general furnishes no exception to the observation. The practice of swearing in daily life became very common amongst the Greeks, and in vain did lawgivers and philosophers try to check it. Rhadamanthus did not allow swearing by the gods at all, but ordained swearing by beasts (Schol. Aristoph. *Av.* 521); Lampon used to swear by the goose, Socrates by the dog (Plat. *Apol.* p. 21 E: cf. Athen. ix. 9), etc., in order that they might not take the names of the gods in vain (cf. phrases like *μὰ τὸν* with the name of the deity suppressed, Aristoph. *Ran.* 1374; Plat. *Gorg.* p. 466 E, etc.). *Ὅρκῳ μὴ χρῶ* was the maxim of one of the wise men (Stob. *Floril.* 3, 80): cf. Theognis, 399, 1195 ff. "Accept an imposed oath for two reasons only," says Isocrates (*ad Demon.* § 23), "either to free yourself from a shameful charge, or to rescue your friends from great perils; never swear where it is a question of money:" cf. Plat. *Legg.* xii. p. 948, who restricts the oath to those who, as far as men may judge, have nothing to gain by a false oath. The sayings of Solon (*καλοκἀγαθίαν ὅρκου πιστοτέραν ἔχε*, Diog. L. i. 60) and Aeschylus (*οὐκ ἀνδρὸς ὅρκοι πίστις, ἀλλ' ὅρκων ἀνήρ*, *fr.* 290 Dind. = Stob. *Floril.* 27, 2) do not imply depreciation of the oath, but rather enforce the necessity of truthfulness in all the transactions of life. Complaints about perjury are almost as old as the oath itself (Hesiod, *Op. et D.* 190 foll.; Eur. *Iph. T.* 1171; Plat. *Legg.* xii. p. 948, etc.), and the Greeks never enjoyed the reputation of observing their oaths very strictly, although they were probably in this respect no worse than others (Mahaffy takes a more unfavourable view of them: *Social Life in Greece*, pp. 123, 414 ff.). The Spartans especially had a bad name for violating oaths (Isocr. *de Pac.* § 96; Eur. *Androm.* 447 ff., *ψευδῶν ἄνακτες*, etc.; Aristoph. *Acharn.* 308: cf. the story of king Cleomenes and the Argives in Plut. *Moral.* p. 223 B, C, and the saying of Lysander, *ὅπου ἡ λεοντῆ μὴ ἐφικνεῖται, προσαπτέον ἐκεῖ τὴν ἀλωπεκῆν*, etc., Plut. *Lys.* 7). The Cretans were proverbially perjurers (Callim. *Hymn. in Jov.* 8, Κρῆτες ἀεὶ ψεῦσται: St. Paul, *Tit.* i. 12, etc.), and so were the Thessalians (Dem. *Olynth.* i. p. 15, § 22; *c. Aristocr.* p. 657, § 112; *ἀεὶ τὰ Θετταλῶν ἄπιστα, ἡ παροιμία φησίν*, Schol. Aristoph. *Plut.* 521). It was different with the Athenians, and "fides Attica" was proverbially used to denote perfect trustworthiness and good faith (Vell. Paterc. ii. 23, 4); the words which Euripides put in the mouth of Hippolytus (611), *ἡ γλῶσσ' ὀμώμοχ', ἡ δὲ φρὴν ἀνώμοτος*, are said to have provoked cries of indignation amongst the audience. (Lasaulx, *Ueber den Eid bei den Griechen*). [L. S.] [H. H.]

2. Roman. The subject of Roman oaths may be treated under four different heads, viz. (i.) oaths taken by magistrates and other persons who entered the service of the Republic, (ii.) oaths taken in transactions with foreign nations in the name of the Republic, (iii.) oaths or various modes of swearing in common life, (iv.) oaths taken before the praetor or in courts of justice.

(i.) *Oaths taken by magistrates or other persons who entered the service of the Republic.*—In the later periods of Roman history we find evidence of an oath which was taken by candidates immediately on their election and before the *renuntiatio* was made. This oath of fealty to the state was taken by the Emperor Trajan on his election to the consulship (Plin. *Pan.* 64), and the form of the *execratio* is given by Pliny (*l. c.* "explanavit verba quibus caput suum, domum suam, si sciens fefellisset, deorum ille irae consecraret"), the gods appealed to being Jupiter and the Dii Penates, to whom were added later the *genii* of the deified emperors (Lex Malacitana, *C. I. L.* ii. n. 1964, cc. 57, 59). We have every reason to think that this oath extended back to republican times, but Mommsen remarks that it could never have been formally necessary, since it supposed the presence of the candidate, which had not been always a necessary condition of election (*Staatsr.* i. p. 620). Besides this oath, there was another originating from the power the populus possessed of binding either present or future magistrates to respect a *lex*. This became eventually a general oath *in leges*, which was required of all magistrates already elected before entering on their official functions, and which had to be taken five days after entrance on office (Liv. xxxi. 50). If we may argue from the Lex Salpensana (*C. I. L.* ii. n. 196, c. 26), the magistrate could not summon the senate until the oath had been taken; and from the fact that the new magistrate generally summoned the senate upon the day of his entrance on office, it is concluded that the oath must generally have been taken on Jan. 1st (Mommsen, *Staatsr.* i. p. 621). The penalty for not taking the oath within five days was originally loss of office (Liv. *l. c.*); afterwards apparently only a fine (Lex Salpens. c. 26): but persistence in a refusal to take the oath must always have been followed by the severer penalty. Vestal virgins and the flamen Dialis were not allowed to swear on any occasion (Liv. *l. c.*; Fest. s. v. *jurare*; Gell. x. 15; Plut. Qu.

Rom. p. 275); but whether they also entered upon their sacred offices without taking an oath analogous to that of magistrates is unknown. Where a flamen dialis was elected to a magistracy he might petition the people for an especial dispensation (*ut legibus solveretur*), and with their consent depute some one to take the oath for him. During the later period of the Republic we also find that magistrates, when the time of their office had expired, addressed the people and swore that during their office they had undertaken nothing against the Republic, but had done their utmost to promote its welfare (Cic. *ad Fam.* v. 2, § 7; *pro Sulla*, 11; *in Pison.* 3; *pro Dom.* 35). During the Empire we find the Emperor Augustus taking this oath after the holding of the census (Dio Cass. liii. 1), as it had been taken by the censors of the Republic (Liv. xxxix. 37), and the Emperor Trajan taking it when laying down the consulship (Plin. *Pan.* 65). In cases where the people required the observance of a special *lex* to be sworn to, the existing magistrates were sometimes required to take the oath five days after the passing of the law (Lex Bantina, *C. I. L.* i. n. 197, l. 14). Other laws bound candidates for office to swear to their observance, as was the case with Caesar's Campanian law (Cic. *ad Att.* xi. 18, 2, "habet etiam Campana lex execrationem in contione candidatorum"): and in the case of the agrarian law of Saturninus the whole senate was made to promise on oath that they would observe the plebiscitum, and allow it to be carried into effect. The censor Q. Metellus, who refused to swear, was sent into exile (App. *Bell. Civ.* i. 30; Plut. *Mar.* 29). Analogous to the oath *in leges* was that which was required to be taken during the Empire, to observe the *acta* of the emperors. The obligation to swear *in acta Caesaris* began in 45 B.C. (App. *Bell. Civ.* ii. 106), and was renewed during the triumvirate (Dio Cass. xlvii. 18), the formula running *se nihil contra acta Caesaris facturum.* This oath bound both magistrates and senate to observe the ordinances of all past emperors, except those whose reigns and memory had been condemned (Suet. *Tib.* 67; Tac. *Ann.* i. 72, xii. 11; Dio Cass. lvii. 8, lix. 9), and was renewed yearly on Jan. 1st (Dio Cass. lviii. 17).

All Roman soldiers, after they were enlisted for a campaign, had to take the military oath (*sacramentum*). The sacramentum first *gave* the soldier the right of using weapons against enemies, and distinguished true *militia* from mere rapine or *latrocinium* (Liv. viii. 34, "latrocinii modo caeca et fortuita pro solemni et sacrata militia sit"). The oath contained an *execratio*, and he who broke it was *sacer.* Hence he could be put to death without trial by the general (Dionys. xi. 43). In accordance with the collegiate principle the oath was taken to all the colleagues, the soldier being said *jurare in verba consulum*, &c. (Liv. ii. 52). It was a personal obligation and did not descend to successors in command, except these were in the circle of colleagueship. It, therefore, had to be renewed at every change of command (Liv. iii. 20; Mommsen, *Staatsr.* i. p. 623), and ceased to be binding when the general was taken by the enemy (Caes. *Bell. Civ.* ii. 32). The formal sacramentum was administered in the following manner. Each tribunus militum assembled his regiment, and picked out one of the men to whom he put the oath that he would obey the commands of his generals and execute them punctually (*ἦ μὴν πειθαρχήσειν καὶ ποιήσειν τὸ προσταττόμενον ὑπὸ τῶν ἀρχόντων κατὰ δύναμιν*, Polyb. vi. 21, 2). The other men then came forward one after another and expressed their obligation to the oath, which had been sworn "conceptis verbis" by the first, by the words *idem in me* (Fest. s. v. *Praejuratio*, p. 224; Polyb. *l. c.*; Liv. ii. 45; Serv. *in Aen.* vii. 1). Livy (xxii. 38) says that until the year 216 B.C. the military oath was only a sacramentum taken by acclamation, the soldiers swearing voluntarily (*conjurabant*), and promising that they would not desert from the army nor leave the ranks except to fight against the enemy or to save a Roman citizen. But in the year 216 B.C. the soldiers were compelled by the tribunes to take the oath which the tribunes put to them, that they would meet at the command of the consuls and not leave the standards without their orders, so that in this case the military oath became a *jusjurandum.* The *conjuratio*, however, continued to exist side by side with the later sacramentum, and was employed in cases of *tumultus*, in which there was no time for the recruits to swear singly, and the oath was uttered simultaneously by the troops (Serv. *ad Aen.* viii. 1). Lastly, in cases of sudden danger we find the *evocatio* employed, which gave rise to the third kind of military oath. The name was applied to the demand made on soldiers who had served their time to resume service on a sudden emergency; the general addresses these citizens (*cives*, for they are not properly *milites*, Serv. *ad Aen.* ii. 157) with the words "Qui Rempublicam salvam vultis me sequimini" (Donat. *ad* Ter. *Eunuch.* iv. 7, 2): and they answer by an acclamation that has all the force of an oath. The true *sacramentum* only belonged to *legitima militia*, which was distinguished from the conjuratio and evocatio, as a more to a less formal mode of exercising war; but in each case it was the oath which rendered the act of warfare legitimate, by showing that the soldier was acting in the service of the state. Polybius (vi. 33) speaks of another military oath which was taken in camp. This was put to all who served in the army, whether freemen or slaves, as soon as the castrametatio had taken place, by which all promised that they would steal nothing from the camp, and that they would take to the tribunes whatever they might happen to find. A perfect formula of a military oath is preserved in Gellius (xvi. 4).

During the Empire the *sacramentum* acquired a greater extension as the oath of fealty to the emperor. There was no special oath to the princeps as such, but the military oath was taken to him as imperator. As the republican soldier swore *in verba consulis*, so the subjects of the emperor swore *in verba principis* or *in nomen principis* (Tac. *Ann.* i. 7 and 8). The subjects of the emperor, whether citizens or provincials, were in the habit of swearing allegiance, although the oath was only formally necessary for the soldiers, and was a voluntary act on the part of the magistrates, the burgesses and the provincials (Tac. *Ann.* i. 7; Plin. *ad Traj.* 52). It was renewed on every recurrence of the day on which it had been taken (Plin. *l. c.*) and also on every new year's day (Tac. *Ann.* i. 8; *Hist.* i. 55). It was administered both at Rome and in the provinces: at Rome by the chief magistrates, the consuls (Tac. *Ann.* i. 7); in the provinces by the provincial governor (Tac. *Ann.* i. 34; Joseph. *Ant. Jud.* xviii. 5, 3). On the accession of Tiberius we find that the consuls took it first, then administered it to the two chief non-senatorial officers, the praefecti praetorio and annonae, and then to the senate, soldiers, and populus (Tac. *Ann.* i. 7). The form of the oath was probably on the whole the same as that of the sacramentum taken to the republican imperator; but we find that a clause was added in which the soldiers declared that they would consider the safety of the emperor of more importance than anything else in life, and that they held him dearer than themselves and their children (Suet. *Calig.* 15; Dio Cass. lix. 9). (On the magistrate's oath, see Mommsen, *Römisches Staatsrecht*, i. pp. 619–622; Madvig, *Verwaltung und Verfassung des römischen Staats*, i. p. 393, ii. p. 547. On the military oath, see Brissonius, *de Formul.* iv. c. 1–5; Mommsen, *Röm. Staatsr.* i. p. 623, ii. p. 792; Marquardt, *Römische Staatsverwaltung*, ii. p. 372 ff.; Madvig, *Verw. und Verf. d. röm. St.* ii. pp. 479, 546.)

(ii.) *Oaths taken in transactions with foreign nations in the name of the Republic.*—There were two main forms of agreement with a foreign nation: the *sponsio* (the formula of question and answer), which soon lost the religious signification which it possessed, and the *foedus* or sworn treaty. The latter was usually ratified by two or more members of the college of Fetiales, under the authority of the magistrates of the state. The conclusion of the terms of agreement was the act of the magistrate, the king, the consul, or the proconsul in the field; but after he had dictated, or had accepted the terms of agreement, the Fetiales came forward at his bidding (Liv. i. 24, xxx. 43), and swore, on behalf of the state, that they should be observed. The presence of the magistrate at this ceremony was not necessary, and the foedus might contain only the names of the Fetiales as witnesses to its observance (Liv. ix. 5, 4); but it was necessarily understood that the oath which they took was taken by the imperator (Liv. i. 24, 9), and the state was bound by this act of magistrate and priest. It is probable, however, that for the ratification of a sworn foedus the intervention of the Fetiales was not necessary, although their presence gave added sanctity to the treaty; and that, besides the *sponsio*, we must consider that there was a *foedus* capable of being sworn to by an imperator besides that sworn to by the Fetiales. Of the former kind was in all probability the treaty concluded at the Caudine Forks; the absence of the Fetiales made it none the less binding, but rendered its violation less of an open breach of religion than would have been the case, had they been present and sworn its observance (Mommsen, *Staatsr.* i. p. 251, n. 1). The Fetiales did not accompany the general to the field; and in every case of a treaty being sworn to with full solemnity at a distance from Rome, they had to be sent to the seat of war (Liv. xxxviii. 39, 1): thus, after the Second Punic War, we find them travelling to Africa to perform the ancient ceremonies (Liv. xxx. 43). The oath which they took was in the form of an *execratio*, or imprecation pronounced on the state they represented, in the case of its wilful violation of the terms of the treaty ("Si prior defexit publico consilio dolo malo," Liv. i. 24). The most ancient form of oath of this kind is recorded by Livy (i. 24) in a treaty between the Romans and Albans. The *pater patratus* pronounced the oath in the name of his country, and struck the victim with a flint stone, calling on Jupiter to destroy the Roman nation in like manner as he (the pater patratus) destroyed the animal, if the people should violate the oath. The *execratio* was sometimes differently worded, the Fetiales casting away the stone from his hands and saying, "Si sciens fallo, tum me Diespiter salva urbe arceque bonis ejiciat, uti ego hunc lapidem" (Festus, s. v. *Lapidem*, p. 115). Owing to the prominent part which the stone (*lapis silex*) played in this act, Jupiter himself was called Jupiter Lapis (Cic. *Fam.* vii. 12; cf. Polyb. iii. 25); other deities whose names might enter into the *execratio* were Mars and Quirinus (Polyb. *l. c.*). In swearing to a treaty with a foreign nation a victim (a pig or a lamb) was always sacrificed by the Fetiales (whence the expressions *foedus icere*, *ὅρκια τέμνειν*), and the priest, while pronouncing the oath, touched the victim or the altar (Verg. *Aen.* xi. 201; Liv. xxi. 45: cf. FETIALES). The employment of the Fetiales for the purpose of ratifying a foedus continued throughout the Republic (Varro, *L. L.* viii. 86): in the Empire it seems to have sunk into disuse, although the ceremony was revived by Claudius (Suet. *Claud.* 25). At first the Romans were very scrupulous in observing their oaths in contracts or treaties with foreigners, and even with enemies; but attempts were soon made by individuals to interpret an oath sophistically and explain away its binding character (Gell. vii. 18; Liv. iii. 20, xxii. 61; Cic. *de Off.* iii. 27, § 102); and from the Third Punic War to the end of the Republic, perjury was common among the Romans in their dealings with foreigners as well as among themselves. (Mommsen, *Römisches Staatsrecht*, i. p. 249 ff.) [L. S.] [A. H. G.]

(iii.) *Oaths or various modes of swearing in common life.*—The practice of swearing or calling upon some god or gods as witnesses to the truth of assertions made in common life or in ordinary conversations, was as common among the Romans as among the Greeks. The various forms used in swearing may be divided into three classes:—

1. Simple invocations of one or more gods, as *Hercle* or *Mehercle*,—that is, ita me Hercules juvet, amet, or servet (Fest. s. v. *Mecastor*); *Pol*, *Perpol* or *Aedepol*, that is, per Pollucem; *per Jovem Lapidem*, or simply *per Jovem*; *per superos*; *per deos immortales*; *medius fidius*, that is, ita me Dius (Δῖος) filius juvet (Fest. s. v.; Varro, *de Ling. Lat.* v. 66 M.); *ita me deus amet*, or *dii ament*. Sometimes also two or a great number of gods were invoked by their names (Plaut. *Bacchid.* iv. 8, 51; Terent. *Andr.* iii. 2, 25). The genii of men were regarded as divine beings, and persons used to swear by their own genius, or by that of a friend, and during the Empire by that of an emperor (Hor. *Epist.* i. 7, 94; Suet. *Calig.* 27). Women as well as men swore by most of the gods; but some of them were peculiar to one of the sexes.

Thus women never swore by Hercules, and men never by Castor; Varro, moreover, said that in ancient times women only swore by Castor and Pollux, while in the extant writers we find men frequently swearing by Pollux (Gellius, xi. 6). Juno and Venus were mostly invoked by women, but also by lovers and effeminate men in general (Plaut. *Amphitr.* ii. 2, 210; Tibull. iv. 13, 15; Juv. ii. 98; Ovid, *Amor.* ii. 7, 27, ii. 8, 18).

2. Invocations of the gods, together with an execration, in case the swearer was stating a falsehood. Execrations of this kind are, *Dii me perdant* (Plaut. *Mil. Glor.* iii. 2, 20; *Cistell.* ii. 1, 21); *dii me interficiant* (Plaut. *Mostell.* i. 3, 35); *dispeream* (Hor. *Sat.* i. 9, 47); *ne vivam* (Cic. *ad Fam.* vii. 23; Mart. x. 12, 3); *ne salvus sim* (Cic. *ad Att.* xvi. 13), &c.

3. Persons also used to swear by the individuals or things most dear to them. Thus we have instances of a person swearing by his own or another man's head (Dig. 12, 2, 3, 4; Ovid, *Trist.* v. 4, 45; *Heroid.* iii. 107; Juv. vi. 16), by his eyes (Plaut. *Menaech.* v. 9, 1; Ovid, *Amor.* ii. 16, 44), by his own welfare or that of his children (Dig. 12, 2, 5; Plin. *Epist.* ii. 20), by the welfare of an emperor (Cod. 2, 4, 41), &c.

Respecting the various forms of oaths and swearing, see Brissonius, *de Formul.* viii. cc. 1–18. [L. S.]

(iv.) *Oaths of parties to an action.*—A party to an action might be required to take an oath (jusjurandum) either when the proceedings were before the magistratus (in jure) or when the trial was taking place before a judex (in judicio). The jusjurandum in jure is the oath which one party proffered to his adversary (*detulit*) that he should take about the matter in dispute, the effect of taking or refusing it being equivalent to that of judgment. Thus, if the defendant took the oath on its being proffered to him by the plaintiff, he was free of the action, and he had answer to any future action on the same claim in the *exceptio* (plea) *jurisjurandi*, analogous to the *exceptio rei in judicium deductae* and *rei judicatae.* If he simply refused to take it, such refusal was equivalent to confession ("confessionis est nolle nec jurare nec jusjurandum referre"), and so he was in the position of a judgment debtor. A defendant might, however, instead of taking the oath, throw it back on the plaintiff (*jusjurandum referre*), in which case, if the plaintiff accepted the oath, the action was concluded in his favour; and on the other hand, if he refused it, his claim was extinguished. A defendant not challenged to take the oath by the plaintiff might himself propose it (Paul. ii. 1, 1: "alter ex litigatoribus"). A person before accepting the oath might call on the person proposing it to take the *jusjurandum calumniae* (Calumnia; cf. Quintil. *Inst. Or.* v. 6, 5).

In the event of the defendant refusing to swear, or of the plaintiff accepting the oath when it was offered to him, the plaintiff was allowed by the praetor an *actio in factum*, which corresponded to the *actio judicati.* The reason of the jusjurandum having the effect of judgment is explained to be that a party to a cause makes his adversary the judex by proffering the oath to him (*deferendo ei jusjurandum*, Dig. 44, 5, 1: cf. Quintil. *l. c.* § 4, "qui defert, alioqui agere modeste videtur, cum litis adversarium judicem faciat"); the person who proffers the oath voluntarily leaving the matter to the judgment of the Gods and to the conscience of his opponent, instead of having it tried in the ordinary way. Its effect was even greater than that of judgment, since it did not leave an outstanding *obligatio naturalis* (Dig. 12, 2, 2: "Jusjurandum speciem transactionis continet, majoremque habet auctoritatem quam res judicata").

The jusjurandum in jure is called *necessarium*, because he to whom it is proffered cannot simply refuse it, being thus opposed to the jusjurandum voluntarium, which was a proceeding of the same kind as the jusjurandum in jure, except that it took place out of court. The jusjurandum voluntarium, as well as the jusjurandum necessarium, might be a bar to any further claim (Dig. 44, 5, 1; *Ep. Hebr.* vi. 16, *πάσης ἀντιλογίας πέρας ... ὁ ὅρκος*), or it might give rise to an *actio in factum.*

As the proffer of an oath was possibly prejudicial to a person's interests, so only those who were fully capable of acting for themselves could proffer it. A person could not be compelled to take the oath unless he was of sufficient age: thus a pupillus could not be made subject to the oath. Nor could a procurator or defensor, a vestal and a flamen dialis, be compelled to swear (Gell. x. 15).

The jusjurandum in jure may have been first used in the *legis actio per condictionem*, and hence its connexion with the *actio pecuniae creditae* in the Code. In the formulary procedure its lega effects depended on the edict of the praetor. The jusjurandum in judicio (jusjurandum judiciale), which is an oath proffered by one party to the other at the trial of the action, has not the effect of the jusjurandum in jure; it is merely evidence, and the judex can give it such probative force as to him seems just. The employment of it was sometimes prejudicial to the party who proposed it. (See Quintil. *Inst. Or.* v. 6; M. Annaeus Seneca, *Controv.* iii. praef.) The oath was not compulsory, but the refusal of it was regarded as strong evidence against the party refusing, unless he was ignorant of the matter in question, or was excused from swearing in order that he might not lay himself open to the suspicion of perjury.

A judex might require a party to an action to make a declaration on oath respecting a matter in dispute. Such an oath was particularly applicable in cases in which the judex had to determine the value of the matter in dispute. As a general rule the *aestimatio*, or estimation of value or damages, was to be made by the judex conformably to the evidence furnished by the plaintiff; but if the defendant by his dolus or contumacia prevented the plaintiff from recovering the specific thing which was the object of the action, and consequently the plaintiff must have the value of it, the judex could put the plaintiff to his oath as to the value of the thing: but he could also fix a limit (*taxatio*) which the plaintiff must not exceed in the amount which he declared upon oath. This is called "jusjurandum in litem" (Dig. 12, 3). This oath is merely evidence: the judex may still either acquit the defendant or condemn him in a less sum.

As to the jusjurandum calumniae, see Calumnia; and see Judex, Judicium. (Paul. ii. 1, *de rebus creditis et de jurejurando;* Dig.

12, 2, *de jurejurando sive voluntario sive necessario, sive judiciali;* Cod. 4, 1, *de rebus creditis et jurejurando;* Puchta, *Inst.* § 173; Savigny, *System*, §§ 309–313; Keller, *Civilprocess*, § 64; Bethmann-Hollweg, *Civilprocess*, § 107.)

[G. L.] [E. A. W.]

JUSSU, ACTIO QUOD. A paterfamilias or a master of a slave who gave an order (*jussus*) authorising a contract to be entered into with his filiusfamilias or slave was made liable by this action on account of a contract thus entered into, as if he had been himself a party to it. (Dig. 15, 4, 1, pr.: "Merito ex jussu domini in solidum adversus eum judicium datur; nam quodammodo cum eo contrahitur quid jubet.") The order might be given directly to the other contracting party, or it might be implied by the appointment of a son or a slave to conduct a business or to enter into a particular transaction; but, to make the superior liable, the other party must have contracted with the filiusfamilias or slave as a representative. The *actio quod jussu* is a praetorian action, and belongs to the class of *actiones adjecticiae qualitatis.* (Dig. 15, 4; Gaius, iv. 70; Vangerow, *Pandekten*, i. § 240, Anm.; Windscheid, *Pandekten*, ii. § 482.) [EXERCITORIA; INSTITORIA ACTIO.] [E. A. W.]

JUSTA FU'NERA. [FUNUS.]

JUSTINIANE'US CODEX. [CODEX JUSTINIANEUS.]

JUSTI'TIUM. Justitium (derived from "Juris statio") was the name given to the suspension of certain public and private business of the community which was ordered by the higher magistrates at Rome, when occasion seemed to demand it: the name being derived from the suspension of that department of state which was the most obvious and constant sign of political life, the courts of law. The declaration of a justitium rested on the right of intercession in one of its forms—the right, that is, possessed by the higher magistrates, those armed with *major potestas*, of forbidding all action on the part of the inferior magistrates [INTERCESSIO]. It was usually pronounced by the highest magistrate present in Rome who possessed the imperium, by the dictator (Liv. iii. 27, 2; vii. 9, 6), or by the consuls (*Mon. Ancyr.*^{2} 2, p. 54), and was generally called forth by some great public event, such as a war or a calamity affecting the whole state. But such a suspension of business might be declared for the purpo[illegible] of party warfare. It was not unfreque[illegible]y declared with this object by the tribu[illegible] who, in order to break down the opposition [illegible] a measure they advocated, might issue a decree, based on their superior right of veto, announcing a total suspension of business until their object was attained (Plut. *Tib. Gracch.* 10, *διαγράμματι τὰς ἄλλας ἀρχὰς ἁπάσας ἐκώλυσε χρηματίζειν, ἄχρι ἂν ἡ περὶ τοὺς νόμους διενεχθῇ ψῆφος*). Against the tribune, on the other hand, the higher patrician magistrates, the consul and praetor, could employ no such weapon directly. Indirectly, however, they could, on their own authority, check the passing of a plebiscitum by a decree which had the practical effect of a justitium; namely, by the declaring of those "feriae, quas consules vel praetores pro arbitrio potestatis edicunt" (Macrob. *Saturn.* i. 16, 6). In order to secure obedience on the part of the lower magistrates to a prohibition of this sweeping kind pronounced by a superior, some sanction was required, and hence we find that the tribune, in pronouncing the justitium, also declared a penalty in case of disobedience (Plut. *Tib. Gracch.* 10, *τοῖς ἀπειθήσασι τῶν στρατηγῶν ζημίαν ἐπεκήρυξεν, ὥστε πάντας ὑποδείσαντας ἀφεῖναι τὴν ἑκάστῳ προσήκουσαν οἰκονομίαν*). But, as Mommsen points out, the fact that the lower magistrate's actions have been forbidden by the higher, does not create an invalidity in an act the former may choose to perform in spite of the prohibition. The magistrate's right to forbid differs from the magistrate's intercession, in that the latter is levelled at a completed act and renders it invalid; the former, which is a prohibition based on some power which the magistrate has in reserve, is merely "the threat of coercitio in the case of opposition" (Mommsen, *Staatsr.* i. p. 252); and if the coercitio is not effectively put forward, the act that contravenes the command is valid.

Such was the Justitium so far as it rested on the bare theory of the magistrate's power, but as such it was rarely realised. The action of Tiberius Gracchus in declaring a suspension of business on his own authority was no doubt legal, but was also highly unconstitutional, both in regard to the purpose for which it was employed, and in its being employed at all without the previous advice of the senate. As a rule the justitium was proposed on a vote of the senate (Liv. iii. 3, 8; Cic. *Phil.* v. 12, 31) and to meet certain definite contingencies. It might be pronounced on the occasion of a festival (Dio Cass. lix. 7), but the most usual circumstances that called for it were a sudden war or tumultus (Liv. iii. 5, 4, vi. 7, 1; Cic. *Phil.* v. 12, 31), or public mourning, such as that following on a national disaster or the death of a distinguished man. A justitium of the latter kind was declared after the death of the dictator Sulla (Granius Licin. p. 44, Bonn, "Justitium fuit matronaeque eum toto anno luxerunt"), and generally, under the principate, on the death of a member of the ruling house, as on that of Augustus (Tac. *Ann.* i. 16), Germanicus (*ib.* ii. 82), and the younger Drusus (Suet. *Tib.* 52). The justitium on these occasions sometimes closed with the funeral ceremonies (*Monumen. Ancyr.*^{2} p. 115, "Romae justitium indictum est, donec ossa ejus in mausoleum inferrentur"), but were sometimes prolonged beyond it (Suet. *Tib.* 52, "non statim a funere ad negotiorum consuetudinem rediit justitio longiore inhibito"); and it is a probable supposition that, on the occasion of any public funeral, a short justitium was declared for the time during which the funeral retinue remained in the forum (Mommsen, *Staatsr.* i. p. 251, n. 4). The cessation of the justitium ("justitium remittere," Liv. x. 21, 6) was pronounced, when the circumstances that demanded it were past, by a decree of the same magistrate who had enjoined it.

The effect of a justitium was the suspension of almost all the business of the state, including the administration of justice both civil and criminal, and was accompanied by the closing of the Aerarium (Cic. *de har. Resp.* 26, 55, "justitium edici oportere, jurisdictionem intermitti, claudi aerarium, judicia tolli;" Plut. *Tib. Gracch.* 10, *τῷ δὲ τοῦ Κρόνου ναῷ σφραγῖδας ἰδίας ἐπέβαλεν*) and the suspension of the senate's sittings (Cic. *pro Planco*, 14, 33). It even extended to private business, when the exercise of this would have interfered with the purposes for which the justitium was declared (Liv. iii. 27, 2, "dictator justitium edicit, claudi tabernas tota urbe jubet, vetat quemquam privatae rei quicquam agere:" cf. Liv. ix. 8, 7). But it did not necessarily suspend all the business of the state, since for political purposes it was often declared that exclusive attention might be given to some sphere of state administration. If declared on the occasion of a war, the dilectus still went on (Liv. vi. 7, 1); and during the Justitium declared in the time of the Social war, the Varian commission still sat, in spite of the suspension of all other judicial business (Cic. *Brut.* 89, 304, "exercebatur una lege judicium varia, ceteris propter bellum intermissis"). (Mommsen, *Römische Staatsrecht*, i. pp. 263–266.) [A. H. G.]

JUVENA'LIA, or JUVENA'LES LUDI (*Ἰουβενάλια ὥσπερ τινὰ νεανισκεύματα*), were scenic games instituted by Nero in A.D. 59, in commemoration of his shaving his beard for the first time, thus intimating that he had passed from youth to manhood. He was then in the twenty-second year of his age. These games were not celebrated in the circus, but in a private theatre (Plin. *H. N.* xxxvii. § 19) erected in a pleasure-ground (*nemus*), and consisted of every kind of theatrical performance, Greek and Roman plays, mimetic pieces, and the like. The most distinguished persons in the state, old and young, male and female, were expected to take part in them. The emperor set the example by appearing in person on the stage; and Dio Cassius mentions a distinguished Roman matron, upwards of eighty years of age, who danced in the games. It was one of the offences given by Paetus Thrasea that he had not acquitted himself with credit at this festival (Dio Cass. lxi. 19; Tac. *Ann.* xiv. 15, xv. 33, xvi. 21). Suetonius (*Ner.* 12) confounds this festival with the Quinquennalia, which was instituted in the following year, A.D. 60. [QUINQUENNALIA.] The Juvenalia continued to be celebrated by subsequent emperors, but not on the same occasion. The name was given to those games which were exhibited by the emperors on the 1st of January in each year. They no longer consisted of scenic representations, but of chariot-races and combats of wild beasts. (Dio Cass. lxvii. 14, of Domitian; Sidon. Apoll. *Carm.* xx. 315, 433; Capitol. *Gord.* 4: cf. Lipsius, *ad* Tac. *Ann.* xiv. 15.) [W. S.] [A. S. W.]

GREEK AND ROMAN ANTIQUITIES.

L.

LA'BARUM. [SIGNA MILITARIA.]

LABRUM. [BALNEAE, p. 277 *a*.]

LABYRINTHUS (**λαβύρινθος**). This is by some set down as the corruption of an Egyptian word meaning "the building at the entrance of a reservoir" (Brugsch, *Egypt under the Pharaohs*), by others derived from a king Lamaris or Labaris (whose name, however, should perhaps be Maris or Moeris), but it is more probably an older form of the word λαύρα, "a passage." This older form became stereotyped as the proper name for a building with a maze of such passages, while the later form, λαῦραι, is particularly applied to the passages of a mine. Accordingly the labyrinth was a large and complicated subterranean building, with numerous chambers and intricate passages, like those of a mine. Hence the cavern near Nauplia was called a labyrinth (Strabo, viii. p. 369). And all the structures to which the ancients apply the name labyrinth are described as entirely or partially under ground.

Pliny (*H. N.* xxxvi. § 84) notes four. 1. As the earliest, largest, and most famous, that of Egypt, described by Herodotus (ii. 148), near lake Moeris, and 100 stadia, as Strabo states, from Arsinoë (Strabo, xvii. p. 811). The remains have been found 11½ miles from the pyramid of Hawara, in the province of Faioum. Herodotus ascribes its construction to the dodecarchs (about 650 B.C.); and Mela (i. 9) to Psammetichus alone. Other and more correct accounts refer its first construction to a much earlier period (Plin. *l. c.*; Diod. Sic. i. 61, 89). It is very likely, however, that additions were made at various times. The names of more than one king have been found there, the oldest that of Amunmhe III., who is placed in the 12th dynasty, about 1960 B.C. This labyrinth is described as having 3,000 chambers, 1500 under ground and the same number above, and the whole was surrounded by a wall. It was divided into courts, each of which was surrounded by colonnades of white marble. At the time of Diodorus and of Pliny it was still extant; the remains now serve only to show the exact position and size corresponding with the stadium of length given by Strabo. Herodotus, who saw the upper part of the labyrinth and went through it, was not permitted to enter the subterranean part, and he was told that the kings, by whom the labyrinth had been built, and the sacred crocodiles, were buried there. Pliny's theory that it was divided into a number of halls or buildings corresponding to the number of nomes, and the consequent theory that it was a place of assembly for the nomes, do not agree with the account of Herodotus; and the number of nomes too varied greatly at different times: nor is there any better foundation for the idea, alluded to also by Pliny, that the plan had something to do with the solar system. It is unnecessary to imagine more than that it was monumental, and a monument of more than one king of Egypt.

2. Pliny gives as second the Cretan labyrinth (cf. Diod. Sic. *l. c.*), which was said to have been built by Daedalus near Cnosus, after the model of the Egyptian, but very much smaller. (For further legendary accounts, see Verg. *Aen.* vi. 27, v. 588; Ov. *Met.* viii. 159; Apollod. iii. 15; and *Dict. Biog.* under "Daedalus.") Most modern writers treat the Cretan labyrinth as a purely mythical or poetical creation, following Höck, who lays stress on the fact, that no ancient writer describes it as an eye-witness, and that neither the Homeric poems nor Herodotus mention it. That it was designedly built after any Egyptian pattern is improbable, but sufficient groundwork for the legends can be found in the rock-excavations existing in Crete. Admiral Spratt (*Travels and Researches in Crete*, ii. 42) points out that the subterranean passages in limestone rock near Gortyn correspond to the ancient description of the labyrinth—tortuous alleys which occupied two hours to pass through. They were plainly, as might be seen by the marks of tools, ancient quarries, and had been used by the Christians in recent times as places of refuge. We can understand from this why Claudian (*Sext. Cons. Hon.* 634) speaks of Gortyn as the site of the labyrinth. Admiral Spratt found also the entrances of subterranean passages, apparently sepulchral, in the rocks

near Cnosus. These were too much blocked up to explore, but there seems no reason why in ancient times they should not have been as extensive as the caverns at Gortyn, and so have given rise to the myths connected with Cnosus.

3. A third labyrinth, the construction of which belongs to a more historical age, was that in the island of Lemnos. It was begun by Smilis, an Aeginetan architect, and completed by Rhoecus and Theodorus of Samos about the time of the first Olympiad. It was in construction similar to the Egyptian, but had as a special feature one hundred and fifty columns. Remains of it were still extant in the time of Pliny. Some have conjectured that it was intended as a temple of the Cabeiri.

It may be mentioned here that the labyrinth said on the authority of Pliny (*H. N.* xxxiv. § 83) to have been built by the same Theodorus at Samos, has probably been created by a misplaced comma. The passage should be read: "Theodorus, qui labyrinthum fecit, Sami ipse se ex aere fudit."

4. Pliny (*H. N.* xxxvi. § 91) classes as a labyrinth the tomb of Porsena at Clusium, a description of which he quotes from Varro—a monument in masonry, 300 feet square and 50 feet high, beneath which is a labyrinth, "quo si quis introierit sine glomere lini exitum invenire nequeat." It had above it five pyramids of astonishing height. Niebuhr altogether discredits it; but though, with Pliny, we may think the dimensions exaggerated, it may be permitted to ask whether there is not too great a tendency to treat as pure fictions the statements of ancient writers. Dennis in his latest edition (*Cities of Etruria*, ii. p. 349) gives an interesting description of recent explorations in a tumulus at Poggio Gajella, three miles north of Chiusi. These are extensive sepulchral remains; in fact, it is described as like a city of tombs, with a network of small streets and alleys bearing the Egyptian character, which is so suggestive in Etruscan remains; and further a labyrinth of low, narrow passages in the heart of the mound. There seems really no valid reason for asserting the impossibility of some such great sepulchral building as Varro describes having once existed as a superstructure. It is possible that Varro himself found only a part standing, and that the huge size of the pyramids at the corners may be a somewhat exaggerated account given him as a tradition by the people of the district. This is surely a safer view than, with Niebuhr, to accuse so sober a writer as Varro of giving us "tales from the Arabian Nights."

Labyrinthus. (*Museo Borbonico.*)

The garden labyrinth, or maze, is purely modern; but Pliny (*l. c.*) speaks of the word as applied to an intricate pattern drawn on the pavement or scratched on the ground in a boyish game; and to this may be referred the rude drawing, given in the *Museo Borbonico*, which was scratched on a pilaster at Pompeii, and is somewhat similar to the modern idea of a labyrinth. [L. S.] [G. E. M.]

LACERNA (answering in most respects to the Greek χλαμύς) was a woollen cloak worn by the Romans over the toga (Mart. viii. 28), which explains Juvenal's expression "munimentum togae" (Juv. ix. 28). It had a hood (*cucullus*), and sometimes the plural *lacernae* is used to express both together (*e.g.* Mart. xiv. 132, "totae lacernae"); but in Horace, *Sat.* ii. 7, 55, *lacerna* includes the hood. It was worn open and loose, fastened to the shoulder by a fibula, so that in Mart. ii. 29 the white toga is seen below the purple lacerna; and thus it differed from the paenula, which fitted close and was fastened all the way up, and from the birrus, because that form of wrap was stiff (*rigens* opposed to the *fluens* lacerna, Sulp. Sever. i. 21, 4), whereas the lacerna was light and of fashionable make. The Schol. on Pers. i. 51, however, uses them as convertible terms. It seems to have been introduced at Rome by men of fashion as a protection against rain—Pliny (*H. N.* xviii. § 225) says that the price of lacernae goes up in threatening weather—and to wear in theatres, &c. (Mart. ii. 29): thus we are told that the equites used to stand up at the entrance of Claudius and lay aside their lacernae, as a mark of respect (Suet. *Claud.* 6). Its colour depended on taste and circumstances, sometimes "fusci coloris" (Mart. i. 97, 9), and made of the dark wool of the Baetic sheep (Mart. xiv. 133), sometimes of bright colours (Juv. i. 27; Mart. i. 97) and very expensive (Mart. viii. 10). By an order of Domitian, about 88 A.D., white lacernae only were allowed in the theatre (Mart. v. 8; xiv. 137). It would appear from Mart. ii. 29 that there was no such rule before. The material as well as the colour varied, and for the poorer wearers it was unfashionably coarse (Juv. ix. 27). Cicero (*Phil.* ii. 30, 76) speaks of it as an unusual form of dress, but as a military cloak it may have been worn earlier. Cassius wears it at Philippi (Vell. ii. 70, 2; cf. Prop. iv. 12, 7; Ov. *Fast.* ii. 746), and to some extent it displaced the sagum. Under the Empire it became common at Rome, as we learn from Suetonius, who says (*Aug.* 40) that Augustus seeing one day a great number of citizens before the tribunal dressed in the lacerna repeated indignantly the line of Virgil, "Romanos rerum dominos gentemque togatam," and gave orders that the aediles should allow no one to wear that dress in the forum, being anxious "pristinum vestitum reducere." (See also Marquardt, *Privatleben*, 569; Becker-Göll, *Gallus*, iii. 220.) [W. S.] [G. E. M.]

LACI'NIA, the angular extremity of the toga, one end of which was brought round over the left shoulder. It was generally tucked into the girdle, but sometimes was allowed to hang down loose. Plautus (*Merc.* i. 2, 16) indicates that it occasionally served as a pocket-handkerchief: "At tu edepol sume laciniam atque absterge sudorem." Velleius Paterculus (ii. 3) represents Scipio Nasica as wrapping the lacinia of his toga round his left arm for a shield (compare Val. Max. iii. 2, 17) before he rushed upon Tib. Gracchus; while, according to Servius (*ad Verg. Aen.* vii. 612), the Cinctus Gabinus was formed by girding the toga tightly round the body by one of the laciniae or loose ends. These expressions are quite irreconcilable with the opinion that the lacinia was the lower border or skirt of the toga, while all the passages adduced by them admit of easy explanation, according to the above view. The lacinia was undoubtedly permitted by some to sweep the ground, especially by such as wore their garments loosely. Thus Macrobius (*Sat.* ii. 3) remarks upon one of Cicero's witticisms, "Jocatus in Caesarem quia ita praecingebatur, ut trahendo laciniam velut mollis incederet," which corresponds with the well-known caution of Sulla addressed to Pompey, "Cave tibi illum puerum male praecinctum;" and Suetonius tells how the Emperor Caligula, being filled with jealousy on account of the plaudits lavished on a gladiator, hurried out of the theatre with such haste, "ut calcata lacinia togae praeceps per gradus iret." The etymology of the word (λακ, λάκος, *lacero*, and perhaps, as Curtius inclines to think, also *ῥάκος*) points to the same sense, and it is probable that its primary meaning was a jagged edge or pendent corner, and so, as given above, a piece or corner of a dress, not, as Rich thinks, "a weighted drop." If any such drop can be traced in the tunica, which is doubtful, it cannot in the toga, to which the lacinia generally belongs; and all the uses for wiping, wrapping, &c. imply that it is a piece of cloth. Thus in Cic. *Fam.* xvi. 21 we find it used to wrap up pips of fruit taken from the dinner-table: it is the corner of dress seized to stop anyone (Suet. *Claud.* 15; Vulg. Gen. xxxix. 12), whence came the proverbial expression *obtinere lacinia* of a precarious hold (Cic. *de Orat.* iii. 28, § 110; Plaut. *Asin.* iii. 2, 41). The other meanings agree with the above explanation: (1) two jagged excrescences, hanging from the neck of a she-goat; (2) a corner or promontory of land (Plin. v. § 148), "promontorium in quo Megaria oppidum fuit: unde Craspedites sinus vocabatur, quoniam id oppidum velut in *lacinia* erat;" (3) a point or tongue of a leaf (Plin. xv. § 130). The corresponding Greek term, as seen from the passage quoted from Pliny, is *κράσπεδον*, and accordingly Plutarch (*Tib. Gr.* 19) and Appian (*B. C.* i. 16) use that word in narrating the story of Scipio given above. [W. R.] [G. E. M.]

LACO'NICUM. [Balneae, p. 277 *b*, p. 278 *a*.]

LACU'NAR. [Domus, p. 686 *a*.]

LACUS. 1. See Fons. 2. See Torcular.

3. **Lacus** (*βαφή*) was also used for the bath in which the smith (*χαλκεὺς* or *faber ferrarius*) plunged the hot iron to give it the harder qualities of steel. (Verg. *Georg.* iv. 172; Ovid. *Met.* ix. 170, xii. 276; Lucr. vi. 968; Mart. iv. 55, 15; Plin. *H. N.* xxxiv. § 146.) It is maintained by the best modern authorities on Greek and Roman metal working that by this method a kind of steel was manufactured as far back as the Homeric age. (See Blümner, *Technol.* iv. 342 *sqq.*) Though neither Greek nor Latin has a distinct word for steel (except the poetical *χάλυψ*, *chalybs*), yet this process was known, and the words *στομοῦν*, *στόμωσις*, *στόμωμα* all refer to the steeling effect of the *βαφή*, and this corresponds to the Latin significance of *acies* (cf. French *acier*). The earliest precise mention is that of *Od.* ix. 391:

> ὡς δ᾽ ὅτ᾽ ἀνὴρ χαλκεὺς πέλεκυν μέγαν ἠὲ σκέπαρνον
> εἰν ὕδατι ψυχρῷ βάπτῃ μεγάλα ἰάχοντα
> φαρμάσσων, τὸ γὰρ αὖτε σιδηροῦ γε κράτος ἐστίν,

(where Eustathius, *στομοῦται γὰρ σιδηρὸς τοιαύτῃ βαφῇ.*) Conf. Plut. *Def. orac.* 41, p. 433 A; Poll. vii. 107, &c.; and especially Plut. *An. rat. uti*, 16, p. 988 D, *ἀνδρείας οἷον βαφή τις ὁ θυμός ἐστι καὶ στόμωμα*, which expression seems to fix the precise idea of the much-disputed *βαφῇ σιδηρὸς ὣς* in Sophocles *Aj.* 650, *i.e.* "I, who was then steeled and made *ἄνδρειος* as iron is by the bath, am instead made *θῆλυς* by Tecmessa's words" (the stop being at *ὣς*, and the aorist as usual referring to the time of speaking).

It is true that there was also a practice of dipping *smaller* steel implements, such as needles and brooch-pins, in oil, to make them less brittle, as was supposed (Plut. *de prim. frig.* 13, p. 950 C; Plin. xxxiv. § 146); and so this passage has often been explained, but there is no mention at all of any such practice earlier than Plutarch, and then only of small articles, whereas there is in earlier Greek writers a frequent allusion to the *βαφή*, especially in the moral application (Arist. *Pol.* vii. 14, &c.), and invariably (as Latin *lacus*) of hardening or steeling, which is a strong argument for giving the same meaning in the passage cited. This process would not apply to *χαλκός*, and such is perhaps the meaning of *χαλκοῦ βαφαὶ* in Aesch. *Ag.* 589, though Clytemnestra may merely be disclaiming all technical knowledge of weapons. The colouring of copper by *βαφή* as mentioned by Plutarch and Pollux is altogether later. [For a discussion of this treatment of iron, see Blümner (*Technologie*, iv. 342–350), who refers to a larger work of Paehler, *Die Löschung des Stahles bei den Alten.*] [G. E. M.]

LAENA. The same word as the Greek *χλαῖνα*, and perhaps radically connected with *λάχνη* (*lana*), though Curtius is doubtful on that point (*Etym.* 336). It was manufactured, according to Strabo, in later times in Gaul: *ἡ δὲ ἐρέα* (of the Belgians) *τραχεῖα μὲν ἀκρόμαλλος δὲ ἀφ᾽ ἧς τοὺς δασεῖς σάγους ἐξυφαίνουσιν οὓς λαίνας καλοῦσι*: but, as Marquardt points out, it was an old Roman dress, being worn by the Flamines, fastened with a bronze fibula (Cic. *Brut.* 14, 56, of the Flamen Carmentalis): cf. Serv. *ad Aen.* iv. 262, "est autem proprie toga duplex, Graece *χλαῖνα*, amictus auguralis." (See Marquardt, *Staatsverwaltung*, iii. 336.) Festus derives its origin from the Etruscans: Cicero (*l. c.*) connects the surname Laenas of the Popilii with this dress, because Popilius was wearing it, being Flamen Carmentalis as well as Consul, when he quelled a tumult.

1. It signifies then properly a woollen cloak, the cloth of which was twice the ordinary thickness ("duarum togarum instar," Varro, *L. L.* v. 133), and therefore termed *duplex* (Festus, *s. v.*; Serv. *l. c.*), shaggy upon both sides, worn over everything else for the sake of warmth (Mart. xiv. 136). Hence persons carried a laena with them when they went out to supper (Mart. viii. 59); and the rich man in Juvenal, who walks home at night escorted by a train of slaves and lighted by flambeaux, is

wrapped in a scarlet laena (Juv. iii. 283, where see Mayor's note). The courtly bard in Persius (i. 32) is introduced reciting his fashionable lays with a violet-coloured laena over his shoulders; but that it was also worn by the poor appears from Juv. v. 131. (See also Becker-Göll, *Gallus*, iii. 221.)

2. The dress of the Flamines, as mentioned above. The correspondence of the laena with the Greek *χλαῖνα* is seen (i.) by the description (Homer, *Il.* x. 133):

> *ἀμφὶ δ' ἄρα χλαῖναν περόνησαν φοινικόεσσαν*
> *διπλῆν, ἐκταδίην, οὔλη δ' ἐπενήνοθε λάχνη·*

(ii.) its use for warmth (*ἀνεμοσκεπής*, *Il.* xvi. 224); (iii.) from the fact that the *χλαῖνα* is the Homeric dress of heroes, while the Latin poets clothe them in the laena. (Aeneas in Verg. *Aen.* iv. 262; Hasdrubal in Sil. Ital. xv. 424: cf. Plut. *Num.* 7, *ἃς ἐφόρουν οἱ ἱερεῖς λαίνας ὁ Ἰόβας χλαίνας φησὶν εἶναι.* See Marquardt, *Privatleben*, 569.) [W. R.] [G. E. M.]

LAGO'NA or **LAGU'NA** (also *lagoena*, *lagena*, *λάγυνος*). There is considerable difference about the spelling of this word. Professor Mayor (on Juvenal, v. 29) compares, for the Latin *o* beside the Greek *υ*, the words *ancora*, *storax* (*στύραξ*), *nox*, *mola*, *cocles* [*κύκλωψ*]. The last of these connexions both Corssen and Curtius disapprove, but there are abundant instances without it. Corssen shows that the Old Latin form to the end of the Republic in inscriptions is *laguna* and sometimes *lagena* (in MSS. also *lagoena*), in the imperial times *lagona*, as in the annexed engraving. It was an earthenware jug with one handle, a long narrow neck, widened mouth, and swelling body (whence "*ventre* lagonae," Juv. xii. 60). Its narrow neck is shown also by its use in *Phaedrus* for the fable of the stork and the fox, and by the lines in the Anthology *εἰς λάγυνον*:

> *στρογγύλη, εὐτόρνευτε, μονούατε, μακροτράχηλε,*
> *ὑψαύχην, στεινῷ φθεγγομένη στόματι.*

In fact, it was in shape much like the well-known Orvieto wine-flask, but, if so covered with wickerwork, would be called *φλάσκη* or *φλασκίον* (Suid. *s. v.* *πυτίνη*). It was used for holding wine, and was set beside the guests (Hor. *Sat.* ii. 8, 41; Juv. v. 29). They were used also in Gaul for beer, as is shown by an inscription on a lagona in the Musée Carnavalet at Paris, "Ospita reple lagona cervesa." Martial (vii. 61) speaks of a shop with these vessels hung in a string by the handles (*catenatae lagonae*).

Laguna. (Marquardt.)

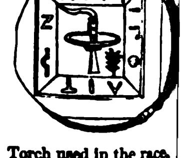
The illustration (from Marquardt) represents a lagona in the Museum at Saintes, the inscription on which is "Martiali soldam lagonam." (See Marquardt, *Privatleben*, 649; Guhl and Koner, *Das Leben Griechen und Röm.*, 160.) [G. E. M.]

LAMPADA'RCHIA. [LAMPADEDROMIA.]

LAMPADEDRO'MIA (*λαμπαδηδρομία*), often also simply *λαμπάς*, *λαμπαδοῦχος ἀγών* o *δρόμος*, *ἑορτὴ λαμπάδος*, and less frequently, a in Herod. viii. 98, *λαμπαδηφορία*, a torch-race celebrated not only at Athens, but also at man places in Greece and Greek colonies: at Corinth in honour of Athena Hellotia (Schol. Pind. *Olymp.* xiii. 56; Athen. xv. 678); at Byzantiu (*λαμπὰς ἀνήβων*, *C. I. G.* 2034); at Ceos (*id* 2360); at Syros, in honour of Demeter; t Artemis, at Amphipolis (Diod. xviii. 4; Liv xliv. 44); and other places (see Boeckh, *Staatshaush.*, ed. Fränkel, i. 550). Alexander celebrate a torch-race at Susa (Arrian. iii. 16). The torch-race was held also at Epitaphia; at the Thesei (*C. I. A.* ii. 444), and in later times at th Germaniceia (*C. I. A.* iii. 1096; Fränkel o Boeckh, ii. 113*; A. Mommsen, *Heortologie*, 170): and possibly at any great funeral games, wher sufficient funds were provided.

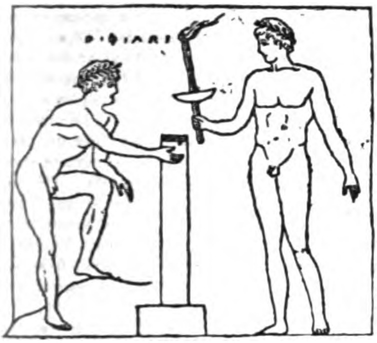
At Athens we know of five celebrations o this game: one to Prometheus at the Promethe (Schol. *ad* Arist. *Ran.* 131; Harpoc. *s. v.*; Paus. i. 30); a second to Athena (Phot. *s. v.* *λαμπάδος*) at the Panathenaea (whether the greater onl is uncertain, but see Boeckh, *l. c.*); a third t Hephaestus on the evening of the day after the Apaturia (cf. Herod. viii. 9); a fourth to Pan (Herod. vi. 105; Phot. *s. v.* *λαμπάς*: cf. Paus. viii. 54, § 6); a fifth to the Thracian Artemis or Bendis (Plat. *Rep.* i. p. 328 A). The three former are of unknown antiquity; the fourth was introduced soon after the battle of Marathon; the last in the time of Socrates.

The race was run, usually on foot, by ephebi, horses being first used in the time of Socrate (Plato, *l. c.*); and at night. The administratio of it was undoubtedly under the gymnasiarch in the time of Xenophon (*de rep. Ath.* 13), and it was a liturgy involving emulation and cost; the tribe being honoured as in the choregia, by a victory of its contingent. Thus an inscriptio runs, *Ἀκαμαντὶς ἐνίκα λαμπάδι Παναθήναια τὰ μεγάλα ἐπ' Ἀρχίου ἄρχοντος· Ξενοκλῆς ἐγυμνασιάρχει* (*C. I. A.* ii. 1229): but we hear late of a *λαμπαδαρχία*, as in Aristotle (*Pol.* v. 8), wh speaks of the *λαμπαδαρχία* as a costly and rathe useless liturgy, which he would like to prohibit and the words *λαμπαδάρχης*, *λαμπαδαρχεῖν* occu in inscriptions (see Krause, *ap.* Pauly, *Real Encycl.* s. v.); but Isaeus, like earlier writers uses the expression *γυμνασιαρχεῖν λαμπάδ* and so in inscriptions (one as late as 166 A.D. Boeckh, i. 554, and Fränkel's note). It is doubt possible that in Aristotle's time a custo had arisen of making a special liturgy call *λαμπαδαρχία* for the festival itself, akin to b separate from the gymnasiarchy; more probabl however, there was not a distinct office, and it was merely usual to speak of the gymnasiarch under this title at the time of the torch-race, which was regarded as the most important branch of his office and its most public manifestation. The gymnasiarch had to provide the *λαμπάς*, which was a candlestick with a kind shield set at the bottom of the socket, as is se

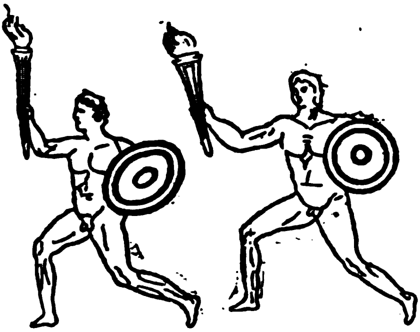


Torch used in the race. (From a coin.)

in the preceding woodcut, taken from a coin in Mionnet (pl. 49, 6). In the two cuts given below the torches are somewhat different: in one they are formed of thin strips of wood, no doubt smeared with resin or pitch, and held together by the disc through which they are passed, and which served as a guard to the hand from the dripping of the pitch (some representations show also a crossed string binding the strips of wood): in the other cut the runners carry shields (as in the *ὁπλιτοδρομία*, but without helmets); while the torches have a flame, apparently from a wick steeped in oil or liquid pitch, in the hollow at the top, somewhat like the modern torch. The gymnasiarch had also to provide for the training of the runners, which was of no slight consequence, for the race was evidently a severe one (compare Aristoph. *Vesp.* 1203; *Ran.* 1087), with other expenses, which on the whole were very heavy, so that Isaeus (*Or.* 6 [*Philoct.*], § 60) classes this office with the *χορηγία* and *τριηραρχία*, and reckons that it had cost him 12 minae. The discharge of this office was called *γυμνασιαρχεῖν λαμπάδι* (Isaeus, *l. c.*), or *ἐν ταῖς λαμπάσι γυμνασιαρχεῖσθαι* (Xen. *de Vectig.* iv. 52). The victorious gymnasiarch presented his *λαμπὰς* as a votive offering (*ἀνάθημα*, Boeckh, *Inscr.* Nos. 243, 250); and we find the victorious runner, when there were *single* competitors, receiving a *ὑδρία* (see A. Mommsen, *Heortologie*, p. 169).



Torch used in the race. (Krause.)



Torch used in the race. (Krause.)

As to the arrangement of the lampadedromia, it seems necessary to understand two different methods, whether we regard them as co-existent or as belonging to different periods. (1) Herodotus (viii. 98) speaks of this game to illustrate the Persian system *ἀγγαρήιον*; Plato (*Legg.* vi. 776 B) of "handing on the torch of life from one generation to another;" and the same metaphor is used by Lucretius, ii. 77; Varro, *de Re Rust.* iii. 16, 9; Pers. vi. 61: so also Aristot. *Phys.* v. 4, 10, *οἷον ἡ λαμπὰς ἐκ διαδοχῆς φορὰ ἐχομένη*, with which compare *διαδοχαῖς πληρούμενοι*, Aesch. *Ag.* 313; and Auct. *ad Herenn.* iv. 46, "qui taedas ardentes accipit celerior est quam ille qui tradit quod defatigatus cursu integro facem tradit." Here we are clearly to understand lines of runners (*λαμπαδισταὶ* or *λαμπαδηφόροι*), posted at intervals, the first in each line who receives the torch, or takes it from the altar, running at his best speed and handing it to the second in his own line, and the second to the third until the last in the line is reached, who runs with it up to the appointed spot. Of course, if any torch went out, the line to which it belonged was out of the race. The victory (*νικᾶν λαμπάδι*) fell to that line of runners whose torch first reached the goal alight. Assuming that all the gymnasiarchs contended on each occasion, there would be ten such lines (or, after B.C. 307, twelve), one for each tribe; but it is possible that each gymnasiarch performed his service only once a year, and that only a certain number were told off for each festival. All the runners in the winning line or chain contributed to the victory, and this may possibly be the explanation of the well-known line of Aeschylus (*Ag.* 314), *νικᾷ δ' ὁ πρῶτος καὶ τελευταῖος δραμών*,—"the last and the first (*i.e.* all alike in the chain) are successful." The beacons are all victorious because all belong to the successful chain of light, as in the torch-race each person in the line shares the victory.

But, if this is the right rendering, there is certainly an obscurity of diction in putting *καὶ τελευταῖος* for *χὠ τελευταῖος*, which the strict idiom would require, and that, too, without any metrical reason, such as exists in the passage (line 324) cited by Mr. Sidgwick. It may therefore be better to explain it with reference to the fact that the *first* or winning torch was handed in (to the archon basileus) by the *last* recipient of it, and therefore, "he who is both first to arrive and last in the chain wins in the race."

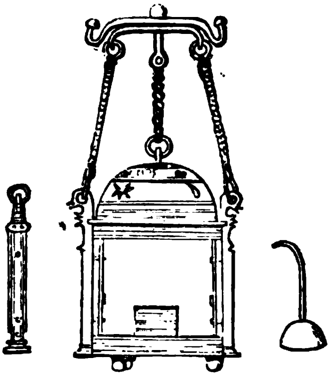
That Pausanias, however, saw a different kind of torch-race, there can be no doubt. He says (i. 30, § 2): *ἐν Ἀκαδημίᾳ δέ ἐστι Προμηθέως βωμός, καὶ θέουσιν ἀπ' αὐτοῦ πρὸς τὴν πόλιν ἔχοντες καιομένας λαμπάδας. τὸ δὲ ἀγώνισμα ὁμοῦ τῷ δρόμῳ φυλάξαι τὴν δᾷδα ἔτι καιομένην ἐστίν· ἀποσβεσθείσης δὲ οὐδὲν ἔτι τῆς νίκης τῷ πρώτῳ, δευτέρῳ δὲ ἀντ' αὐτοῦ μέτεστιν. εἰ δὲ μηδὲ τούτῳ καίοιτο, ὁ τρίτος ἐστὶν ὁ κρατῶν, εἰ δὲ πᾶσιν ἀποσβεσθείη, οὐδεὶς ἐστὶν ὅτῳ καταλείπεται ἡ νίκη.* Here there is evidently no handing of the torch from one to another — several torch-bearers are started, possibly one for each tribe; the first who reaches the goal with his torch alight wins: the competition is individual, not one chain of runners against another. And it is no doubt to such a race that inscriptions which speak of a single victor with a single prize, refer. Whether this was a new method, or one which had existed alongside of the other, it is impossible to say with certainty; but it is probable that the different kinds of torch-race were in vogue at different times; for it is fair to assume from the language of Pausanias, that he had not witnessed the kind of race described by the earlier writers who have been quoted above.

The starting-point at Athens was the altar of Prometheus in the Academy, and the course passed through the Ceramicus to the city (πρὸς τὴν πόλιν), perhaps, as Mommsen (*Heortologie*, p. 312) thinks, to the Prytaneum under the north side of the Acropolis, a distance of a little over a mile. The archon basileus presided (προέστηκε τῶν ἀγώνων τῶν ἐπὶ λαμπάδι, Poll. viii. 90), and gave the prize to the victor. Both starting-point and goal may have varied somewhat at different times, or in different festivals. Plutarch (*Solon*, 1) says that the torches were lighted at the altar of Eros, which was not far from the altar of Prometheus (πρὸ τῆς ἐσόδου τῆς ἐς Ἀκαδημίαν, Paus. i. 30, § 74); the mounted race in honour of Bendis was run in the Peiraeus (Plato, *l. c.*).

As regards the origin of these games, it may safely be said generally that it is to be sought in the worship of Hephaestus, Prometheus, and Athena, who are all connected with fire and light, and with those arts and manufactures in which fire is an agent. But it may further be conjectured that this form was first used in honour of Prometheus, to represent the myth of his giving fire to men. The torch is kindled at his altar and carried, if the theory above mentioned is correct, to the Prytaneum, where the national fire was preserved, as carefully as though it were still, what it had been in primitive times, hard to rekindle if once it died out: then this gift of the πυρφόρος θεός, representing the κοῖλος νάρθηξ (Hesiod. *Theog.* 566), is handed to the king archon, who represents in religious matters the original guardian of the national hearth. The same idea can be traced in a custom which Maury cites (from Philostratus), as existing in the games at Olympia: the runners are placed a stade from the altar where wood is to be lighted; near the altar stands the priest, who awards a crown to the first who touches the altar with his torch. (Maury, *Religion de la Grèce antique*, iii. 491.)

But with the giver of fire were soon associated in this worship the Olympian deities who presided over its use: Hephaestus, who taught men to apply it to melting and moulding of metal; and Athena, who carried it through the whole circle of useful and ornamental arts. On the close connexion of Hephaestus with Prometheus, and of both with Athena, see Preller, *Griech. Mythol.* p. 80 (ed. 1872). Both indeed are connected by myths with the birth of Athena as well as with her presidency over arts and manufactures, under her name Ἐργάνη (Paus. i. 24, § 36). It is suggested by Welcker (*Aeschyl. Tril.* p. 21) that the community of potters instituted the torch-race. It is true that the course was mainly in the outer and inner Ceramicus, and that Athena was the patroness of the κεραμῆς (δεῦρ' ἄγ' Ἀθηναίη καὶ ὑπείρεχε χεῖρα καμίνου is the address in the Κεραμίς); but the original connexion of the torch-race with Prometheus is more natural, and moreover the starting-point is in fact not actually in the outer Ceramicus, but beyond it. In later times the same honour was paid to all gods who were in any way connected with fire, as to Pan, to whom a perpetual fire was kept up in his grotto under the Acropolis (cf. also Pausan. viii. 37, § 677); so also to Artemis, as a moon-goddess, whom Sophocles (*Trach.* 214) calls ἀμφίπυρος (cf. πυρφόροι Ἀρτεμίδος αἴγλαι, *Oed. Tyr.* 207, and ὁ πυρφόρος θεὸς Τιτὰν Προμηθεύς, *Oed. Col.* 56). The mounted race in honour of Bendis, the Thracian Artemis, was no doubt introduced by the numerous Thracian metoeci who lived for trading purposes at the Peiraeus. In the still later extensions of the rites mentioned at the beginning of this article all symbolism was probably lost, and for these it was merely adopted from the older festivals as a striking spectacle. [H. G. L.] [G. E. M.]

LANTERNA (only in late Latin *laterna.* Curt. *Gr. Et.* 266; Corssen, *Lat. Sprach.* i. 250) = the Greek λυχνοῦχος (see below), also ἰπνός (Aristoph. *Pax*, 841), a lantern. Two bronze lanterns, constructed with nicety and skill, have been found in the ruins of Herculaneum and Pompeii. One of them is represented in the woodcut below. Its form is cylindrical. At the bottom is a circular plate of metal, resting on three balls. Within is a bronze lamp attached to the centre of the base and provided with an extinguisher, shown on the right hand of the lantern. The plates of translucent horn (Plin. *H. N.* xi. § 49; Lucret. ii. 388), forming the sides, probably had no aperture; but the hemispherical cover may be raised so as to admit the hand and to serve instead of a door, and it is also perforated with holes through which the smoke might escape. To the two upright pillars supporting the framework, a front view of one of which is shown on the left hand of the lantern, chains are attached for carrying the lantern by means of the handle at the top.



Lantern found at Herculaneum.

We learn from Martial's epigrams (xiv. 61, 62) that bladder was used for lanterns as well as horn; also linen, as the cheapest form of lantern (Cic. *Att.* iv. 3, 5; Plaut. *Bacch.* iii. 3, 42). The *lanterna Punica* (*Aul.* iii. 6, 30) was probably a horn lantern, as the best kind then known. Some centuries later glass was also used (Isid. *Orig.* xx. 10). When the lantern was required for use, the lamp (*lucerna*) was lighted and placed within it. (See Mart. xiv. 61; Veg. *Mil.* iv. 18.) It was carried by a slave called *lanternarius* or *servus praelucens* (Plaut. *Amph.*

Prol. 149, i. 1, 185; Cic. *in Pis.* 9, § 20; Juv. iii. 285; Mart. viii. 75). Suetonius (*Aug.* 29) mentions that the "servus praelucens" was struck by lightning while Augustus was being carried in his litter. We learn from Photius that the name λυχνοῦχος was given to a lamp enclosed in a case of horn or of transparent skin, and that perforated pitchers were used in the same way: for instances, see Rutherford, *New Phrynichus*, p. 131. The φανός was a link or torch of strips of resinous wood tied together, but in late Greek used for λυχνοῦχος, a lantern (Rutherford, *l. c.*). (See also Marquardt, *Privatl.* 712; Becker-Göll, *Gallus*, ii. 404.) [J. Y.] [G. E. M.]

LANX. 1. A general term, including various forms of dishes different in shape and use, but, as far as can be gathered, a large dish. It should have been originally flat, according to Corssen's view that it is connected with *plancus*, *planus*, πλάξ, πλακοῦς: but it was also deep (*cava*, Mart. xi. 31) and, so far, like the *catinus*. The epithet *panda* applied to it in Virgil (*Georg.* ii. 194) probably has the same meaning. In Hor. *Sat.* ii. 4, 40, it is round and large enough to hold a wild boar; but it is square or quadrangular in Ulp. *Dig.* 34, 2, 19. Ovid (*Pont.* iii. 5, 50) describes it as embossed (*caelata*) and holding fruit, but most frequently we find it used for bringing meat or fish to the table (Hor. *l. c.*; Juv. v. 80; Plaut. *Curc.* 323). It is used for incense (Ov. *Pont.* iv. 8, 40; Prop. ii. 13, 23). Its use in sacrifices, both for the exta and for incense, may be seen from Verg. *Georg.* ii. 194, 394; *Aen.* viii. 284, xiii. 215; Ov. *l. c.* All passages which give any indication of its material tend to prove that the lanx was always of metal; for the rich, of silver (Hor. *Sat.* ii. 4, 40; Plin. *H. N.* xxxiii. § 145, where *lances* are mentioned weighing from 100 to 500 pounds, and requiring a special *officina* to make them). In Cicero, *Att.* vi. 1, 13, the lanx embossed in filigree work (*filicata*) is opposed to vasa fictilia; but that it was made, if always of metal, sometimes of cheaper metal than silver, is implied by its rustic use in Verg. *Georg.* l. c. The following lines from Ovid (*Pont.* iv. 8, 39, 40) are instructive both as to size and relative cost:—

"Nec quae de parva dis pauper libat acerra
Tura minus, grandi quam data lance, valent:"

and it is noticeable that Pliny (*l. c.*), speaking of very costly silver plate, uses the word *lanx*, but in xxxv. § 163, when he speaks of pottery made at an extravagant price, he uses the word *patina*. (Marquardt, *Privatl.* 654; CATINUS.)

2. The metal dishes of the balance [LIBRA] were called *lances*, and sometimes the word *lanx* (= *libra bilanx*) was used to express the balance: so Suet. *Vesp.* 25; Verg. *Aen.* xii. 725, &c. (Becker-Göll, *Gallus*, ii. 367.) [J. Y.] [G. E. M.]

LA'PHRIA (Λάφρια), an annual festival, celebrated at Patrae in Achaia, in honour of Artemis, surnamed Laphria. The peculiar manner in which it was solemnised during the time of the Roman empire (for the worship of Artemis Laphria was not introduced at Patrae till the time of Augustus) is described by Pausanias (vii. 18, § 7). On the approach of the festival the Patraeans placed in a circle, around the altar of the goddess, large pieces of green wood, each being sixteen yards in length; within the altar they placed dry wood. They then formed an approach to the altar in the shape of steps, which were slightly covered with earth. On the first day of the festival a most magnificent procession went to the temple of Artemis, and at the end of it there followed a maiden who had to perform the functions of priestess on the occasion, and who rode in a chariot drawn by stags. On the second day the goddess was honoured with numerous sacrifices, offered by the state as well as by private individuals. These sacrifices consisted of eatable birds, boars, stags, goats, sometimes of the cubs of wolves and bears, and sometimes of the old animals themselves. All these animals were thrown upon the altar alive at the moment when the dry wood was set on fire. Pausanias says that he often saw a bear, or some other of the animals, when seized by the flames, leap from the altar and escape across the barricade of green wood. Those persons who had thrown them upon the altar caught the devoted victims again, and threw them back into the flames. The Patraeans did not remember that a person had ever been injured by any of the animals on this occasion. (Comp. Paus. iv. 31, § 6; Schol. *ad* Eurip. *Orest.* 1087.) [L. S.]

LAPICIDI'NAE. [LAUTUMIAE.]

LAPIS MILLIA'RIUS. [MILLIARIUM.]

LAPIS SPECULA'RIS. [DOMUS, p. 686 *b*.]

LA'QUEAR. [DOMUS, p. 686 *a*.]

LAQUEATO'RES. [GLADIATORES.]

LA'QUEUS, properly a rope with a noose in it, whereby anything might be pulled or led (according to Corssen's reference to *lacio*), used to signify the punishment of death by hanging, called *triumvirale supplicium*, Tac. *Ann.* v. 9 (vi. 4). Hence "Fortunae laqueum mandare" (Juv. x. 52) means "to bid Fortune go hang" (see Mayor's note). This mode of punishment was never performed in public, but only in prison, as in the Tullianum. Hence we find *laqueus* joined with *carcer* (Tac. *Ann.* iii. 50), and with *carnifex* (v. 9, xiv. 48). See also the account of the punishment of the Catilinarian conspirators (Sall. *Cat.* 55), where the punishment is inflicted by "vindices rerum capitalium." Mommsen identifies (*Röm. Staatsrecht*, ii. 595) these with the triumviri or tres viri capitales, and thinks that, in the case of important criminals and women, these officials were the actual executioners, for which theory he quotes Sallust (*l. c.*), Val. Max. v. 4, 7. At the same time it is possible, and in the nature of things probable, that these high officials are spoken of as strangling, when they were merely present to see that the carnifex did his duty. The passage in Tac. *Ann.* v. 9 (or vi. 4) at any rate shows that the execution of women was sometimes left to the carnifex, if not always. The punishment was not uncommon under Tiberius (Tac. *Ann.* ll. cc., vi. 39; Suet. *Tib.* 61); but in the ordinary course of law the milder punishment of exile was inflicted for crimes which in old times were capitally punished, and executions were mainly reserved for real or imaginary crimes against the emperor. (Cf. Tac. *Ann.* xiv. 48.) [W. S.] [G. E. M.]

LARA'RIUM was a place set apart in a Roman house for the worship of the *Lar familiaris* or (later) *Lares*. (See Marquardt, *Staats.* iii. 123.) Originally this shrine, with the image or images, was in the *Atrium*, as the place where the hearth stood and the family assembled for meals; but, when the hearth and the kitchen were moved to the back part of the house, the lararia were placed elsewhere, sometimes in the kitchen, sometimes in the dining-room, sometimes in the peristyle, and frequently at the entrance of the house (especially in the later empire). Even in the 5th century Jerome (*in Esaiam*, c. 57) speaks of "idola post fores domorum quos domesticos appellant lares," and of the "Tutelae simulacrum," to which they paid reverence as they went out or in. At these shrines was placed a lighted candle or lamp, and an offering of food was made at the *secunda mensa* (Serv. *ad Aen.* i. 730; Varro, *ap.* Non. p. 544, 1; Ov. *Fast.* ii. 633). Hence (when the Genius of Augustus had, after Actium, been associated with the Lares) we can explain the expression "alteris te mensis adhibet deum" (Hor. *Od.* iv. 5, 31). We learn from Petronius (60) that, if there was no lararium in the dining-room, the statues of the Lares were sometimes brought to the table; but more usually a small table for this offering was placed before the lararium, wherever it might be, with a salt-cellar upon it (see Arnob. ii. 67; Pers. iii. 25; Liv. xxvi. 36), and this is probably the special significance of the *paternum salinum* (Hor. *Od.* ii. 16, 14). It was an old Roman custom for the master of the house with his household also in the morning to make an offering with prayers to the Lar familiaris. Hence we find that the emperor had a lararium in his bed-chamber (Suet. *Aug.* 7, *Domit.* 17). Here also Alexander Severus is said to have placed with the Lares images not only of Orpheus and Alexander the Great, but of Christ (Lamprid. *Al. Sev.* 29; Gibbon, ii. 529). On the occasion of *feriae privatae* on the Kalends, Nones and Ides, at the Saturnalia (Mart. xiv. 70), the birthday of the master of the house (Tibull. i. 7; Hor. iv. 11, &c.), the Lares were crowned and special offerings were made to them, and in the lararium also was hung up the *bulla* of the son who assumed the toga virilis. (For further particulars regarding the worship of the Lares, see Marquardt, *l. c.*; Preller, *Röm. Myth.* p. 497, and *Dict. Myth.* s. v.) [G. E. M.]

LARENTA'LIA, sometimes written LARENTINALIA (Macrob. i. 10; Lactant. *Inst.* i. 20), was a Roman festival in honour of Acca Larentia, the wife of Faustulus and the nurse of Romulus and Remus. It was celebrated on December 23 (Fest. *s. v.*; Macrob. *l. c.*; Ovid. *Fast.* iii. 57). The sacrifice in this festival was performed by the Flamen Quirinalis, as the representative of Romulus (Gell. vii. 7, 7), in the Velabrum, where the Via Nova entered it, not far from the Porta Romanula (Burn's *Rome*, 278; see Varro, *L. L.* v. § 164). At this place Acca was said to have been buried. (See also Preller, *Röm. Myth.* p. 422; Marquardt, *Staatsverwaltung*, iii. 335.) [W. S.] [G. E. M.]

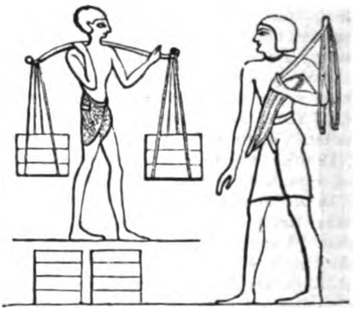
LARGI'TIO. [AMBITUS; FRUMENTARIAE LEGES.]

LARNAX. [ARCA; FUNUS.]

LATER, *dim.* **LATE'RCULUS** (*πλίνθος*, *dim.* *πλινθίς*, *πλινθίον*), a brick. Besides the Greeks and Romans, other ancient nations employed brick for building to a great extent, especially the Babylonians (Herod. 179; Xen. *Anab.* iii. 4, §§ 7, 11; Nahum iii. 14) and Egyptians. In the latter country a painting on the walls of a tomb at Thebes (Wilkinson's *Manners and Customs*, vol. ii. p. 99) exhibits slaves, in one part employed in procuring water, in mixing, tempering, and carrying the clay, or in turning the bricks out of the mould [FORMA], and arranging them in order on the ground to be dried by the sun, and in another part carrying the dried bricks by means of the yoke [ASILLA]. In the annexed woodcut we see a man with three bricks suspended from each end of the yoke, and beside him another who returns from having deposited his load.



Egyptian brick-makers. (From Thebes.)

These figures are selected from the above-mentioned painting, being in fact original portraits of two *Αἰγύπτιοι πλινθοφόροι*, girt with linen round the loins in exact accordance with the description given of them by Aristophanes, who at the same time alludes to all the operations in the process of brick-making (*πλινθοποιΐα*, Schol. *in* Pind. *Ol.* v. 20), which are exhibited in the Theban painting. (*Aves*, 1132-1152; Schol. *ad loc.*)

The clay was carried in shovels (*ἄμαι*) and placed in troughs (*λεκάναι*), to be manipulated there and moistened with water (for which the word *ὀργάζω* is used).

It is necessary to distinguish the sun-dried bricks, which were used in the earliest times, from the baked bricks. The word *later* is strictly a sun-dried or unburnt brick, whereas *testa* is kiln-baked brick; so the word *lateritius* means made of crude or sun-dried bricks, *testaceus* made of burnt bricks, and wherever no qualifying word is used this distinction will usually be observed, but the former are also termed *lateres crudi*, the latter *lateres cocti* or *coctiles*, and similarly *πλίνθοι ὠμαί* and *πλίνθοι ὀπταί*; *πλίνθος* being strictly a sun-dried rectangular brick (whence the word is used for shape independently of material). Babylonian brickwork is partly of sun-dried bricks with a thin layer of reeds between each course; but it appears from the remains that the walls were originally faced with burnt bricks. These bricks are found bearing the name of Nebuchadnezzar. (Layard, p. 406; Rawlinson on Herod. Book iii., Appendix.) Egyptian bricks were generally sun-dried, and many of the burnt bricks found in Egypt are Roman. The dry climate probably made them last better than in damper countries.

Usually the proportion of length to width is 2 to 1; of length to thickness, 3 to 1. In length they vary from about 1 foot to 17 inches. (See Birch, *Ancient Pottery*, vol. i.) The Greeks used only crude or sun-dried bricks down to the time of the Roman conquest, or at any rate till after Alexander (Birch, i. 158). As an instance may be mentioned the temple of Demeter at Lepreon (Pausan. v. 5, § 6). Pausanias (ii. 18, § 150) speaks of baked bricks in a temple at Argos, but that is conjectured to be of Macedonian or Roman date. Marquardt (*Privatleben*, 636) cites the Philippeum at Olympia (Pausan. v. 20, § 10) as the earliest dated building in Greece of baked brick (B.C. 337): but Blümner denies this upon the evidence of the recent German excavators at Olympia, who informed him that in all the remains of the Philippeum there was no trace of baked brick (Blümner, *Technologie*, ii. 16). Walls of Greek cities were generally of stone, but instances of sun-dried brick walls can be found in Pausanias, viii. 8, § 7 (of Mantinea), and the birds in Aristophanes built their wall of this material (Arist. *Aves*, 1136). Their partial use for dwelling-houses, especially of the poorer classes, is mentioned in Xenophon, *Mem.* iii. 1, 7.

Roman bricks were crude till the end of the Republic (Varro, *ap.* Non. s. v. *suffundatum*; Cic. *de Div.* ii. 47, 99): the use of baked brick probably became more common as houses of more stories were built, but they were only used for facing. Vitruvius (ii. 3) seems to speak solely of *lateres crudi*, for he does not mention the triangular bricks found in existing walls at all. The earliest baked bricks are found in the Rostra (B.C. 44), and even in the time of Augustus crude bricks only were used, of which none remain. The baked Roman bricks are of various colours—red, yellow, more rarely brown, some of red pozzolana mixed with clay, as in the Flavian palace on the Palatine (Middleton's *Rome*). Their thickness varies from 1 in. to 1¾ in. The commonest size is 15 inches long and 14 wide. Those in the "palace of Constantine" at Treves are 15 inches square and 1½ thick. Vitruvius (who, as mentioned above, seems to be treating only of crude bricks) states that spring was the best time for brick-making, for those made in summer were apt to dry unequally and crack, and they should be kept two years before being used. He speaks of three shapes: the Lydian, 1½ (Roman) feet long and a foot broad; the pentadoron, five palms square; and the tetradoron, four palms (Vitruv. ii. 3). Pliny (*H. N.* xxxv. § 49) mentions some which were so porous and light that they floated in water. Blümner states that the same kind of brick was made at Nuremberg in the 14th and 15th centuries and was called *Schwammstein*. As regards the baked Roman bricks, we find them stamped at Rome in the 2nd century A.D.: but in other parts of Italy the stamped bricks are found earlier. These stamps have a figure of some god or animal, as a trade-mark, encircled by the name of the brick-maker, sometimes of the consul also, and, in the case of bricks made by soldiers, of the legion to which they belong. As the Roman armies brought their brick-making art with them wherever they went, we can trace in some instances the movements of a legion by the brick-stamps. For the methods of building with bricks, see MURUS and PARIES; and for further information about their manufacture and history, see Birch, *Ancient Pottery*; Blümner, *Technologie*, ii. 16. [J. Y.] [G. E. M.]

LATI'NITAS, LA'TIUM, JUS LA'TII (*τὸ καλούμενον Λάτιον*, Strabo, iv. p. 187; *Λατίου δίκαιον*, Appian, *Bell. Civ.* ii. 26). To understand the meaning of these terms at various periods of Roman history, it is necessary to go back to the conquest of Alba Longa by Rome, which then entered into an *aequum foedus* with the Latini, or peoples of Latium, who at that time were leagued together in a federation of thirty towns (Dionys. v. 61). The attempt of Rome to assert a sort of suzerainty over the Latin league led to a war (Dionys. v. 34), which resulted in the Latins, though nominally remaining *socii* of Rome, being practically reduced to dependence on her (Dionys. iii. 54; Liv. i. 35–38). However, they seized the opportunity of Rome's struggle with Porsena to repudiate the yoke: she surrendered the claim to exercise a protectorate, and in 493 B.C. a new alliance was concluded on terms of absolute equality (*ἰσοπολιτεία*, Dionys. viii. 70), the members of the league and Rome enjoying reciprocal rights of *conubium* (Liv. i. 49; Dionys. vi. 1), *commercium* (Liv. xli. 8), and of settling on one another's territory with at any rate some public rights: we read of Latins voting in the comitia tributa in Dionys. viii. 72; Liv. xxiii. 3, 16; Appian, *Bell. Civ.* i. 23, &c. In 486 B.C. the Hernici were admitted to the confederation, which endured between the three peoples substantially for 140 years. In 340 B.C. occurred the Latin war, which terminated in the dissolution of the league: the interchange of *commercium* and *conubium* between its members ceased (Liv. viii. 14; ix. 43, 2, 4), and each of the towns which had belonged to it was brought into a direct relation of dependence with Rome, though there was great variety in the privileges which they enjoyed with respect to her, some apparently retaining *conubium*, *commercium*, and the right of acquiring *civitas* by settlement. From this time onward the Italian *civitates* or communities are roughly divisible into those which possess the Roman *civitas* in whole or part (*municipia* and *coloniae Romanae*; see COLONIA), and those which retain their independence by treaty, their only obligation towards Rome as a rule being the furnishing of a contingent of troops to the Roman army (*civitates foederatae* and *coloniae Latinae*). It has been pointed out under the head of COLONIA that joint colonies had been founded by the Romans and the Latin league both before and after the accession of the Hernici; these colonists being in all cases called *Latini*. Colonies which were founded after the destruction of the league (340 B.C.) under the name *Latinae* were established solely by Rome, and lay outside the limits of Latium. The colonists were in the main Latins, or members of other kindred or allied communities: but among them there were often some of the poorer Roman citizens, who were tempted to surrender their Roman *civitas*, thus suffering *capitis deminutio media* (Gaius, iii. 56; Cic. *pro Caec.* 33, 98; *pro Domo*, 30, 78), by the offer of an assignment of land. These later Latin colonies at first possessed the same rights with those which had been jointly founded by Rome and the league:

they were in a large measure independent of Rome, not being bound to adopt the Roman law unless they became *fundus* (Gell. xvi. 13; Cic. *pro Balb.* 8, 21), having their own coinage, and their citizens being, in relation to Rome, *peregrini* (Gaius, i. 79; Liv. xliii. 13), though obliged to serve in the Roman army. As possessing the rights of *conubium* and *commercium*, and of acquiring at least a limited *civitas* by settling at Rome, they were described, along with such old Latin colonies and towns of the league as had retained their ancient privileges, as *socii Latini nominis*, *socii* of a privileged order. But these privileges were at last curtailed. After the colonisation of Ariminum (268 B.C.) there is observable a strong tendency to confine the rights of new *coloniae Latinae* strictly to *commercium*. Later writers speak of *Latini coloniarii* having *commercium* (Ulp. *Reg.* 19, 4), but not *conubium* (*ib.* 5, 4). Similarly their general right of settling at Rome, and thereby becoming *cives* if they left a son behind in the colony (Liv. xli. 8, 9), was taken away from them. The Roman dislike of its exercise is attested by the expulsion of Latins from Rome in B.C. 187 and 177 (Liv. xxxix. 3; xli. 9, 9), and eventually *Latini coloniarii* were able to rise to the Roman *civitas* only in two ways: by discharging one of the higher magistracies (*honores*) in their own colony (App. *Bell. Civ.* ii. 26; Strabo, iv. 1, 12), and by bringing a successful prosecution under the Lex Acilia repetundarum, passed B.C. 123 (*C. I. L.* i. 198, ll. 76, 78). The phrase "per Latium venire in civitatem" (Plin. *Paneg.* 37; Gaius, i. 95) denotes in particular the first of these. Under the emperors, attainment of an *honor* in some towns with Latin rights made only the individual himself *civis*: in others the privilege was shared with him by his parents, wife and family, and this seems to be the clue to the meaning of *minus Latium*, *majus Latium* in Gaius, i. 95, and the Lex municip. Salpens. c. 21.

Thus before the Social War there were only two classes of persons, *cives* and *peregrini*, the Latins being included under the latter denomination, along with the *socii* and the provincial subjects of Rome. The leges Julia and Plautia Papiria, passed at the end of that war [CIVITAS], extended Roman citizenship all over Italy, so that Latinitas in the old sense disappeared. But the rights which it connoted—*commercium* without *conubium* or the public rights of citizenship—had become a distinct political conception: and the term was retained to denote a status which the Romans conferred on towns and countries outside Italy by way of favour. The first step in this direction was made by a Lex Pompeia, B.C. 89, which conferred this Latinitas on the Transpadane Gauls (Ascon. *in Pis.* p. 3), and expressly provided that the attainment of a *honor* should be a title to the *civitas*. Cicero says the same status was bestowed on the Sicilians after Caesar's death (*ad Att.* xiv. 12): Hadrian granted it to a large number of cities (Spart. *Had.* 21), and Vespasian to the whole of Spain (Plin. *H. N.* iii. 4) and to some of the Alpine tribes (*ib.* iii. 20); and Richard of Cirencester, in his work *de situ Britanniae*, speaks of ten cities in Britain which were "Latio jure donatae." The number of communities possessed of the same rights was increased by the establishment of Latin colonies in the provinces after the Social War: thus (*e.g.*) Comum was made a *colonia Latina* by Caesar (B.C. 59) under the name of Novum Comum (Appian, *Bell. Civ.* ii. 26), and several towns of this class, especially in Spain, are mentioned by Pliny: see COLONIA. The *Latini coloniarii* mentioned by Ulpian are thus apparently the inhabitants either of *coloniae Latinae* in the provinces, or of towns or districts on which the *jus Latii* had been conferred by a lex or imperial favour, both of which seem to be included under the "oppida Latinorum veterum" which Pliny (iii. § 18) mentions along with the "oppida civium Romanorum," military colonies of Roman citizens.

A new class of Latins originated with the Lex Junia Norbana, the date of which is approximately 19 A.D. Prior to that statute, slaves manumitted otherwise than by *vindicta*, *census*, or *testamentum* [MANUMISSIO], even though fully owned "ex jure Quiritium" by their masters, had not become free in the eye of the law; but they were said "in libertate esse," being protected by the praetor so long as they lived against any attempt on the part of the master to exercise the rights of ownership over them ("olim ex jure Quiritium servi, sed auxilio praetoris in libertatis forma servari soliti," Gaius, iii. 56). The number of such semi-free persons was increased by the Lex Aelia Sentia, A.D. 4, which further curtailed the power of making slaves *cives* by manumission (Gaius, i. 18, 38). A legal status, however, was given them by the Lex Junia Norbana, which provided that, like *Latini coloniarii*, they should have the *commercium* without the *conubium* or the public rights of *civitas*: hence they were called *Latini Juniani* (Gaius, i. 22, iii. 56). Even the ordinary rights of *commercium*, however, were curtailed largely in their case by the statutes depriving them of the power of making a will, of benefiting under the will of another person, and of competence to be appointed guardian under a testament (Gaius, i. 22, 24; Ulp. *Reg.* 20, 8): consequently as they must die intestate, and could have neither *sui heredes* nor agnates, their property went inevitably on their decease to the patron "jure quodammodo peculii" (Gaius, iii. 56; *Inst.* iii. 7, 4). The children of a Latinus Junianus inherited their father's status. But there was a large number of ways in which a Latinus Junianus could rise to the *civitas* either alone, or along with his wife and children: these, which are enumerated by Gaius, i. 28 *sq.*, and more fully by Ulpian, *Reg.* 3, comprise remanumission in one of the statutory modes, serving a certain time in the Roman guards, imperial grant, *jus liberorum*, &c. (See Mr. Poste's *Gaius*, note on i. 35.)

The status of Latinitas disappeared momentarily when Caracalla bestowed Roman citizenship on all the free subjects of the Empire [CIVITAS], but the operation of the Lex Junia must have at once re-created it. Justinian says (*Inst.* i. 5, 3) that in his time Latins were not often met with, and by Cod. vii. 7 he abolished the status of Latinitas altogether.

(Marquardt, *Römische Staatsverwaltung*, i. pp. 23–57; Savigny, *Ueber die Entstehung und Fortbildung der Latinität, vermischte Schriften*, i. pp. 14–18; *Der römische Volkschluss der Tafel von Heraclea*, ib. iii. pp. 293–304; Madvig, *de*

Jure Coloniar., *opusc. acad.*, pp. 271–284; Rudorff, *Römische Rechtsgeschichte*, § 11; Vangerow, *Latini Juniani*, Marburg, 1833; Puchta, *Institutionen*, §§ 62, 63.) [J. B. M.]

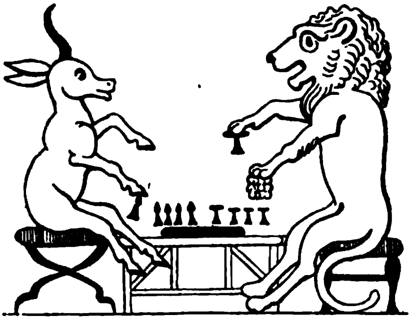
LATRI'NA, Greek [DOMUS, p. 664 *a*]; Roman [DOMUS, p. 672 *a*].

LATROCI'NIUM, LATRO'NES. Armed persons who robbed others abroad on the public roads or elsewhere were called *latrones*, and their crime *latrocinium*. Murder was not an essential part of the crime, though it was a frequent accompaniment (Sen. *de Ben.* v. 14; Dig. 49, 15, 24; 50, 16, 118). Under the Republic *latrones* were apprehended by the public magistrates, such as consuls and praetors, and forthwith executed (Liv. xxxix. 29, 41). By the Lex Cornelia de Sicariis of the dictator Sulla, they were classed with *Sicarii* and punished with death, and this law continued in force in the imperial times (Dig. 48, 19, 28; Sen. *de Clem.* ii. 1, *Epist.* 7: Petron. 91); from the 2nd century onwards the praefectus urbi had summary jurisdiction in such crimes in the city and for a circuit of 100 Roman miles about it (see Marquardt, *Staatsverwaltung*, i. 225; Mommsen, *Staatsrecht*, ii. 1067). The *grassatores* were another kind of robbers, who robbed people in the streets and roads, and besides robbing murdered and kidnapped (Suet. *Aug.* 32; *Tib.* 8; cf. Juv. iii. 305, x. 22, xiii. 145; Friedländer, ii. 29). The name *grassator* seems strictly to belong to the unarmed footpad: if they used arms, they were punished, like the *latrones*, capitally, or in less flagrant cases they were condemned to the mines or exiled. (Cic. *de Fato*, 15; Dig. 48, 19, 28: see also Rein, *Criminalrecht*, p. 424.) [W. S.] [G. E. M.]

LATRU'NCULI (πεσσοί, ψῆφοι, *calculi*), a game of skill resembling draughts, played in a variety of ways by both Greeks and Romans. The invention of it was commonly ascribed to Palamedes, who, according to some, was also the inventor of dice (Soph. *fr.* 380, 381, Dind.; Eurip. *Iph. A.* 196, πεσσῶν ἡδομένους μορφαῖσι πολυπλόκοις, the "combinations" of the game: a curious but perhaps interpolated passage). Homer represents the suitors of Penelope amusing themselves with it (*Od.* i. 107). Plato assigns both πεττεία and κυβεία with other more useful arts to Theuth, the Egyptian Hermes (*Phaedr.* p. 274 D); and it is at least certain that such games were known to the Egyptians. Besides numerous paintings representing the game, draught-men have been discovered in the tombs. Among the recent acquisitions of the British Museum are some beautiful specimens; a set, apparently of one type, carved as lions' heads; others in glass (a favourite material with the Romans; see below) of two sizes, as if for a game in which there were both "officers" and "men."

The annexed cut, from a papyrus in the British Museum, represents a game of draughts between a lion and an antelope; each plays with five men, distinguished, not by colour, but by their shape: the lion has won, and holds in his left paw a purse containing the stakes. In Wright's *Hist. of Caricature* (1865, p. 8), the vanquished animal is described as "a unicorn"; in Becker-Göll, *Charikles* (ii. p. 373), as a hare (!). It is clearly meant for an antelope, though only one horn is seen, owing to the absence of perspective.

Among the Greeks two kinds of πεττεία at least are clearly distinguishable, though there were probably others. We may notice, in passing, the explanation of the Homeric πεσσοί as quoted from Apion by Athenaeus (i. p. 16 f, 17 a). According to a tradition which Apion heard from a native of Ithaca, this was a game not of mental but of bodily dexterity, a sort of bowls or nine-pins in which a mark was aimed at. Too much has been made of this passage by Becq de Fouquières (pp. 405–407); Homer says simply πεσσοί, and all the rest is fancy (cf. Becker-Göll, *Charikles*, ii. 372). Of the two modes of play of which we have distinct accounts, the simpler and doubtless the older was the game of the five lines, πέντε γραμμαί, thus described by Pollux (ix. 97): ἐπειδὴ δὲ ψῆφοι μέν εἰσιν οἱ πεττοί, πέντε δ' ἑκάτερος τῶν παιζόντων εἶχεν ἐπὶ πέντε γραμμῶν, εἰκότως εἴρηται Σοφοκλεῖ καὶ πεσσὰ πεντέγραμμα καὶ κύβων βολαί· τῶν δὲ πέντε τῶν ἑκατέρωθεν γραμμῶν μέση τις ἦν ἱερὰ γραμμή· καὶ ὁ τὸν ἐκεῖθεν κινῶν ἐποίει παροιμίαν· κίνει τὸν ἀφ' ἱερᾶς. The natural inference is that in this game the pieces moved along the lines, not the spaces between them; though a board of 36 squares, *i.e.* divided by five lines each way, has been suggested (L. and S. *s. v.* πεσσοί). Eustathius (on *Il.* vi. p. 633, 58) throws some further light on the proverbial expression κινεῖν τὸν ἀφ' ἱερᾶς, "to try one's last chance:" it is well known through allusions in literature (Alcae. *fr.* 77 Bergk; Theocr. vi. 18; and elsewhere); but why it was dangerous to move this piece, when it became necessary to move it, or what was the effect upon the game, it is impossible to say. The Greek idiom of course implies that the ἱερὰ γραμμή was the original station of this piece; a sufficient answer to the notion of Becq de Fouquières (p. 402) that it was a part of the board which it was dangerous to approach, and from which a player had to remove his man if possible. It is a matter of probable conjecture, but not expressly stated, that in this game, as in the other form of πεττεία, the object was to hem in the enemy's men, or to place one of them between two adversaries, in which case it was taken off the board; and that the game was won, as in modern draughts, either by the capture of all the opposing forces or by their inability to move.



Egyptian Draughts. (From a papyrus in the British Museum.)

The accounts of the other kind of πεττεία are a little more explicit: it was called πόλις or rather *πόλεις*, another name for the *χῶραι* or squares. The leading passage is Pollux, ix. 98: *ἡ δὲ διὰ πολλῶν ψήφων παιδιὰ πλινθίον ἐστὶ χώρας ἐν γραμμαῖς ἔχον διακειμένας· καὶ τὸ μὲν πλινθίον καλεῖται πόλις, τῶν δὲ ψήφων ἑκάστη κύων· διῃρημένων δὲ εἰς δύο τῶν ψήφων κατὰ τὰς χρόας, ἡ τέχνη τῆς παιδιᾶς ἐστι περιλήψει δύο ψήφων ὁμοχρόων τὴν ἑτερόχρουν ἀνελεῖν.* We have here distinct mention of squares instead of lines, of the different colours of the men (here called *κύνες* and not *πεσσοί*), of the rule that a man caught between two adversaries was lost. In the words *καὶ τὸ μὲν πλινθίον καλεῖται πόλις*, there seems to be a confusion between the board (*πλινθίον*) and the squares (*χῶραι*) into which it was divided; other passages, however, clear up this difficulty. Zenob. *Cent.* v. 67: *πόλεις παίζειν· μέμνηται ταύτης Κρατῖνος ἐν Δραπετίσι·* [*fr.* 51 M. *ap.* Poll. *l. c.*] *ἡ δὲ πόλις εἶδος ἐστὶ παιδιᾶς πεττευτικῆς, καὶ δοκεῖ μετενηνέχθαι ἀπὸ τῶν ταῖς ψήφοις παιζόντων, ταῖς λεγομέναις νῦν μὲν χώραις, τότε δὲ πόλεσιν.* Plat. *Rep.* iv. 422 E: *ἑκάστη γὰρ αὐτῶν πόλεις εἰσὶ πάμπολλαι, ἀλλ' οὐ πόλις, τὸ τῶν παιζόντων*: with the Scholia. These passages show that the game was really called *πόλεις παίζειν*: and Becq de Fouquières is not happy in his conjecture that the *πόλις* was a particular part of the board. Compare Plat. *Rep.* vi. 487 B, *ὑπὸ τῶν πεττεύειν δεινῶν οἱ μὴ τελευτῶντες ἀποκλείονται καὶ οὐκ ἔχουσιν ὅ τι φέρωσιν*, where "hemming in" the enemy is of the essence of the game and *φέρειν* is a technical word for "to move," another being *θέσθαι*. Polyb. i. 84, *πολλοὺς ἀποτεμνόμενος καὶ συγκλείων ὥσπερ ἀγαθός πεττευτής*. The giving of odds (*κρεῖσσον*) is alluded to (Eurip. *Suppl.* 409); and taking back a move (*ἀναθέσθαι*, [Plat.] *Hipparch.* 229 E). The number of *ψῆφοι* in the developed form of this game seems to have been thirty on each side: this rests on Phot. *Lex.* p. 439, 1: *πόλεις παίζειν τὰς νῦν χαρὰς* [*χώρας* is an obvious correction] *καλουμένας ἐν ταῖς ζ′*, where Porson corrects *ξ′*. In Pollux (vii. 206), Eustathius (*ad Il.* vi. 169), and Hesychius (*s. v. διαγραμμισμός*), perhaps by a confusion, sixty men are also assigned to games with dice. The Greeks used simple materials: the *πεσσοὶ* were merely round or oval stones (*ψῆφοι*. *calculi*), and, as with us, the same men might be used for draughts and backgammon [DUODECIM SCRIPTA].

In none of the Greek forms of draughts is there any mention of pieces more powerful than the rest, like the crowned kings or *dames* of the modern game. This distinction first appears in the Roman *latrunculi*, which in other respects were very like the *πόλεις* just described. The *calculi*, a name common to this with other games, were here specially called *latrones*, i.e. not robbers, but soldiers; the word comes from *λάτρον*, "pay" (Varro, *L. L.* vii. 52: Fest. *Epit.* p. 118 M.); more commonly the dim. *latrunculi*, or in verse *milites* (Ov. *A. A.* ii. 207–8, iii. 357; *Trist.* ii. 477): for the game may be said to represent a miniature combat between two armies. That they stood on the squares of the board (*tabula latruncularia*, Sen. *Ep.* 117, § 30), not on the lines, is proved by another passage of Varro (*L. L.* x. 22): "Ad hunc quadruplicem fontem ordines diriguntur bini, uni transversi, alteri directi, ut in tabula solet, in qua latrunculis ludunt." Neither t number of squares nor of men is anywh mentioned: the latter are conjectured to ha been thirty a side as in the Greek game. Gl was a common material (Ov. *A. A.* ii. 20 Mart. vii. 72, 8); when "gems" are mention imitation jewels of glass are probably mea (Mart. xii. 40, 3; xiv. 20); sometimes th were made of earthenware, ivory, or t precious metals. The colours are distinguish (Ov. *Trist.* l. c.; *Paneg. Pis.* 182; Mart. x 17); a set of stone *calculi* of a hemispheri shape found in a tomb at Cumae are curious enough of *three* colours,—white, black, and (*Bullett. Nap.* 1852, p. 132).

The distinction between "officers" and "me noticed above in Egyptian draughts, is a proved to have existed in the Roman gam see Isid. *Orig.* xviii. 67: "Calculi partim ordi moventur, partim vage. Ideo alios ordinari alios vagos appellant. At vero, qui mov omnino non possunt, incitos dicunt;" and t passage quoted below from the *Panegyric* Piso. Here *ordine* seems to mean "one squa at a time," *vage* "in any direction so far as t range was unobstructed;" though a leapi movement has also been suggested (Marquard p. 833). The officers probably stood on the fir rank, the men as a "row of pawns" (*Bauer reihe*) in front of them; but we must beware pursuing too far analogies derived from ches The superior pieces were called *latrones*, t inferior very probably *latrunculi*; the doubtf term *mandra* comes in here for discussion. W find it in Mart. vii. 72, "Sic vincas Noviumqu Publiumque, Mandris et vitreo latrone clusos; and in *Paneg. Pis.* 191, "fracta prorumpat agmina mandra." The sense of "sheepfold" "cattlepen" passes easily into that of "a dro of cattle," (Juv. iii. 227) or "a string of mules (Mart. v. 22). As applied to the game latrunculi, *mandra* may mean a square of th board, and so it is usually explained in the li of Martial: in *Paneg. Pis.* it undoubtedly mea the row of pawns, which is broken through order to afford scope to the more powerf pieces; a sense which will equally suit th former passage. But even the high authorit of Becker (*Gallus*, p. 471) and Marquard (*Privatl.* 833) will not convince us that *mandr* could be applied to the single pawn. As in th Greek game, the object was to get one of th adversary's men between two of one's own, an then take it off the board (Ov. *ll. cc.*; Mar xiv. 17); or else reduce him to a dead bloc (*ad incitas redigere*). In this phrase, so ofte used figuratively (Plaut. *Poen.* iv. 2, 85 *Trin.* ii. 4, 136) the word to be supplied *calces*, an older form for *calculos*, not *linea* as sometimes stated. To attack a man is usuall *alligare* (Sen. *Ep.* 117, § 30); but we sha find also *obligare* and the simple *ligare*.

The most important passage on the game o *latrunculi* is in the *Panegyricus ad Pisonem* printed in old editions of Lucan, and subsequentl ascribed to Saleius Bassus, but now regarded a the work of an anonymous young poet of th age of Claudius (Teuffel, *Röm. Lit.* § 296). Th poem will be found in the *Poetae Latini Minore* of Wernsdorf or Bährens, or in the *Corpu Poetarum* of Weber (pp. 1411–1413). W reproduce this passage (*vv.* 180–196) with a few comments: one phrase in it, we think, has never yet been correctly explained.

> "Callidiore modo tabula variatur aperta 180
> Calculus et vitreo peraguntur milite bella,
> Ut niveus nigros, nunc et niger alliget albos.
> Sed tibi quis non terga dedit? quis te duce cessit
> Calculus? aut quis non periturus perdidit hostem?
> Mille modis acies tua dimicat: ille petentem 185
> Dum fugit, ipse rapit: longo venit ille recessu,
> Qui stetit in speculis: hic se committere rixae
> Audet et in praedam venientem decipit hostem.
> Ancipites subit ille moras similisque ligato
> Obligat ipse duos: hic ad majora movetur, 190
> Ut citus et fracta prorumpat in agmina mandra
> Clausaque deiecto populetur moenia vallo.
> Interea sectis quamvis acerrima surgant
> Proelia militibus, plena tamen ipse phalange,
> Aut etiam pauco spoliata milite, vincis, 195
> Et tibi captiva resonat manus utraque turba."

V. 184, *periturus perdidit hostem*: i.e. Piso sacrificed pieces which his opponent could not take without suffering a greater loss; *ἀνταναιρέσεις* in Eustath. p. 1397, 45. *V.* 186, *longo venit*, &c. This is a "discovered check" from one of the superior pieces by moving a pawn. But the officers all move alike in the Roman game, a fundamental difference which must prevent its being confounded with chess. *V.* 189, *Ancipites subit.* One man exposes himself to a double attack or cross-fire, *mora* being a technical word for attack. In the words which follow, *similis ligato* has always been understood as if it were simply *ligatus;* and Becq de Fouquières gives a diagram (p. 449), any number of which might be invented, to show how an attacked piece may move to the other end of the board and attack two enemies. This, however, leaves *ancipites moras* without a meaning; as we explain it, he is not really *en prise* of two pieces, but places himself between them, so that he attacks both, while either could take him if it were not for the other; he is *similis ligato*, but not *ligatus;* the well-known manœuvre called the *lunette* at draughts, and a further point of resemblance with the modern game. *V.* 191. For *et fracta* of the MSS. *effracta* or *ecfracta* is now read; the verse has been explained above. It is clear that if the pawns moved straight forward, they captured diagonally; otherwise the line could not be broken through. *V.* 194 f. The fewer pieces the winner had lost, the more glorious the victory: this is illustrated by a story in Seneca (*de Tranq. An.* 14, § 7), and furnishes an additional proof, as Becker has remarked, that the game was more like draughts than chess, notwithstanding a superficial resemblance to the latter. The winner was called *rex* or *imperator* (Vopisc. *Proc.* 13).

After all, it must be pronounced impossible to form an adequate conception of the game; we must admit, with Becker, that many questions remain unanswered. Becq de Fouquières has been decidedly less successful in explaining this game than in the *Duodecim Scripta.* While treating of games of skill among the ancients, it may be as well to say that, since the history of chess was written by the Englishman Thomas Hyde at the end of the 17th century, no scholar has held that it was known to the Greeks or Romans. Chess cannot be traced in the West before the time of Charlemagne and Harun-al-Rashid (A.D. 800); the Greek words for it, *ζατρίκιον* and *σάντραξ*, are found only in late Byzantine writers; both are derived from the Arabic *shatranj*, and that from the Sanscrit *chatur-anga.*

(The older learning is collected, very copiously but without sufficient discrimination between the different games, in a note of Salmasius on Vopisc. *l. c.*, *Hist. Aug.* ii. 736–761, ed. 1671. Modern authorities: Becq de Fouquières, *Jeux des Anciens*, ed. 2, 1873, chaps. 18, 19; Becker-Göll, *Charikles*, ii. 371 ff.; *Gallus*, iii. 468 ff.; Hermann-Blümner, *Privatalterth.* 508 ff.; Marquardt, *Privatl.* 832 ff.) [W. W.]

LAUTU'MIAE, **LAUTO'MIAE**, **LATO'MIAE**, or **LATU'MIAE** (*λιθοτομίαι* or *λατομίαι*, Lat. *Lapicidinae*), are literally places where stones are cut, or quarries; and in this sense the word *λατομίαι* was used by the Sicilian Greeks (Pseudo-Ascon. *ad* Cic. *in Verr.* ii. 1, p. 161, Orelli; cf. Diod. xi. 25; Plaut. *Capt.* iii. 5, 65; *Poen.* iv. 2, 5; Festus, *s. v.* Latumiae). In particular, however, the name lautumiae was given to the quarries of Syracuse, frequently mentioned by ancient authors (Cic. *Verr.* i. 5, § 14; v. 27, § 68; *ib.* 55, § 143; Aelian, *V. H.* xii. 44), and still called *Latomie* (with the Greek accent). They are situated on a part of the heights called Epipolae, to the north of the city, which at the time of the Athenian siege was outside the walls of Achradina; the elder Dionysius a few years later included the whole of the Epipolae within his fortifications. On account of their security they were used as prisons from an early period; the deepest and most inaccessible, now called the *Latomia de' Cappuccini*, is probably that in which the 7,000 Athenian prisoners were confined (Thucyd. vii. 86, 87; Diod. xiii. 33). They continued to serve for the same purpose, and in the days of Cicero were used as a general prison for criminals from all parts of Sicily. The so-called Ear of Dionysius is in the *Latomia del Paradiso;* but the name is a mere fancy of a scholar of the Renaissance, and Cicero and Aelian are certainly mistaken in the notion that the lautumiae were excavated by that tyrant expressly for a prison, though he may have enlarged them (cf. *Dict. Geogr.* ii. 1066 a). Several of them are now laid out as gardens, and being completely sheltered from all winds, though open to the sky, contain a rich sub-tropical vegetation, which renders them one of the most attractive sights of modern Syracuse.

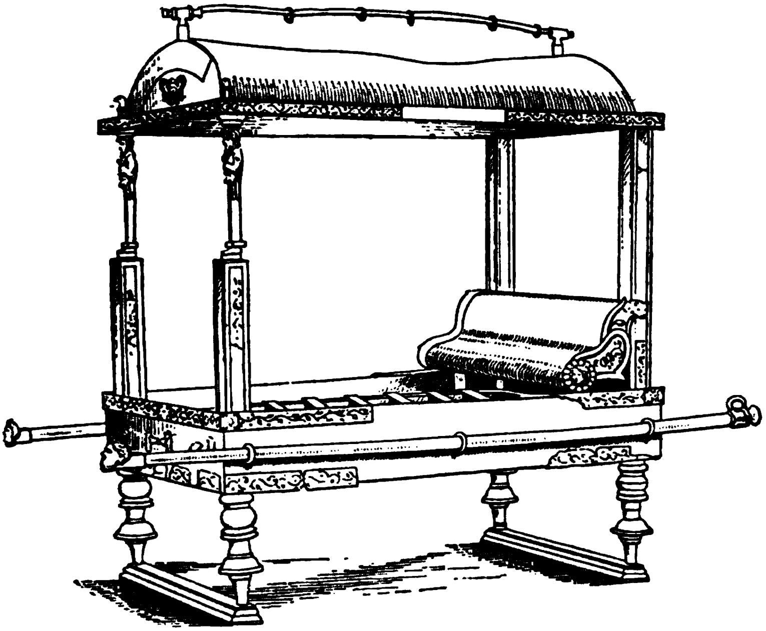
For the prisons called Lautumiae at Rome, see CARCER. [L. S.] [W. W.]

LEBES (*λέβης*), in Greek usage a sort of kettle made of copper or iron, and put over the fire to cook (*Il.* xxi. 362). Buchholz says, "smaller than a tripod" (*Homerische Realien*, ii. § 100), and that is perhaps true of the Homeric times, but that later it was not necessarily small may be seen from Thucydides, iv. 100, where the huge caldron used in the siege of Delium is a *λέβης*. It was also used as the basin for washing the hands of guests at dinner, which were held above the silver *λέβης* while water was poured over them from a jug (*Od.* i. 137), and even of so large a vessel as the bath in which Agamemnon was killed (Aesch. *Ag.* 1129). Pausanias (v. 10, § 4) speaks of *λέβητες* overlaid with gold set on the corners of the temple roof at Olympia: in the Tragedians it occurs as an urn for holding ashes (Aesch. *Ag.* 444, &c.): in Herod. vi. 58, a *λέβης* is beaten like a kettle-drum by Spartan mourners, and in the same way the *λέβητες* at Dodona were sounded, whence Virgil borrows his conventional epithet *Dodonaei lebetes.* The *λέβης*, like the *τρίπους*, was a common prize at Homeric games (*Il.* xxiii. 259), so much so that *αἰτίζων ἀκόλους οὐκ ἄορας οὐδὲ λέβητας* (*Od.* xvii. 222) merely means "a beggar with no ambition beyond it for heroic contests." The general conclusion from all this is, that the size varied, but the material was always metal: in shape it was rounded at the bottom, so that sometimes it was supported or suspended when it was over the fire, but sometimes it had feet and is called *λέβης τρίπους* (Aesch. *Fr.* 1). From this *metal* *λέβης* of common use, the *lebes* shape was adopted for pottery: for examples, see FICTILIA.

The Cretan *λέβης* (in Gortyna Insc.) was a stater stamped with a *lebes* (cf. *βοῦς*, Aesch. *Ag.* 36): examples of this coin of the 5th and 4th cent. are found (Svoronos. *Bull. Corr. Hell.* 1888). The *lebes* in Latin seems to have been merely a poetical word borrowed from Greek poets. [G. E. M.]

LECTI'CA, in Greek *φορεῖον* or *σκιμπόδιον* (Dio Cass. lvii. 4), was a litter or palanquin in which persons were carried in a lying position from one place to another. For sick persons and invalids of both sexes they were no doubt in use in Greece from early times, but probably in the form of the ordinary bed, being usually called *κλίνη*. As an article of luxury the *φορεῖα* were introduced from Asia, where they had been long in use, and were at Athens employed for carrying ladies (see Suidas, *s. v.*, who calls them *γυναικεῖα*); and by men only when they were lame or in ill-health. The lame Artemon, who habitually used a litter, was nicknamed *περιφόρητος*, either because this indulgence even for a lame man was unusual, or because, according to one account, he used a specially luxurious hammock (Plut. *Pericl.* 27; Anacr. *ap.* Athen. xii. 533; Andoc. *de Myst.* § 61; Plut. *Eum.* 14). If a man without any physical necessity made use of a lectica, he drew upon himself the censure of his countrymen as a person of effeminate character (Dinarch. *c. Demosth.* § 36). The *φορεῖα* were light bedsteads with mattress and pillows, and an awning, supported by four posts, with curtains to it (Plut. *Eum.* l. c.). When the Macedonian conquests had made the Greeks better acquainted with Asiatic luxury, *φορεῖα* were not only more generally used, but were also more magnificently adorned: so Antigonus provides one for Nicaea, *βασιλικῶς κεκοσμημένον* (Plut. *Arat.* 17). The bearers were called *φορεαφόροι*, and were usually four in number (Diog. Laert. v. 73; Lucian, *Somn. s. Gall.* 10; cf. Plut. *Pelop.* 30. See also Becker-Göll, *Charikles*, i. 200).

At Rome, as in Greece, no doubt the sick were carried on some sort of couch from the earliest times: *e.g.* Latinus in the year B.C. 489 was carried into the forum on what Livy calls a lectica (Liv. ii. 36); but it probably was merely the sick man's bed (cf. Catull. x. 17). The lectica strictly so called was probably first introduced into Rome from Asia after the victories over Antiochus, and then used chiefly for travelling; rarely in the streets of Rome itself. The earliest mention of it is found in a speech of Gaius Gracchus quoted by Gellius (x. 3). From this passage it is evident that the lectica was an article of luxury lately borrowed from Asia, whence the rustic imagined it to be a bier conveying a dead man, though (unlike an ordinary bier) it was covered. The lectica had an arched roof (cf. *arcus*, Tac. *Ann.* xv. 57), consisting of leather stretched over it upon four posts, much like the Greek *φορεῖον*, and the sides also were covered with curtains (*vela, plagae* or *plagulae*): hence Martial speaks of "lectica tuta pelle veloque" (cf. Suet. *Tit.* 10): such a litter is called by Greek historians *φορεῖον κατάστεγον.* Tiberius sent Agrippina and her children after their condemnation in a litter with the curtains sewn up (*obsuta*, Suet. *Tib.* 64). In the Empire, however, as time went on, curtains were not thought a sufficient protection; and we find that lecticae used by men as well as women were closed at the sides with windows made of talc (*lapis specularis*), whence Juvenal (iv. 20) calls it *antrum clausum latis specularibus* (compare Juv. iii. 239). We sometimes find mention of a *lectica aperta* (Cic. *Phil.* ii. 24, 58), but we have no reason to suppose that in this case it had no roof, for the word *aperta* probably means nothing more than that the curtains were drawn aside: it was considered incorrect for women to go in a litter with the curtains open (Sen. *de Benef.* i. 9, 3; Apul. 76). The whole lectica was of an oblong form, and the occupant lay on a bed, his head being supported on a pillow so that he might read and write in it with ease. To what extent this luxury was carried as early as the time of Cicero, may be seen from one of his orations against Verres (v. 11, 27). Feather beds seem to have been used (Juv. i. 159): the framework, as well as the other furniture, was often of the most costly description, adorned with ivory and silver (Lamprid. *Heliogab.* 4). The lectica, when standing, rested on four feet: it was carried by slaves (*lecticarii*) by means of poles (*asseres*) attached to it, but not fixed, so that they could easily be taken off (Suet. *Calig.* 58; Juv. vii. 122, iii. 245; Mart. ix. 23, 9). These *asseres* generally rested on the shoulders of the lecticarii, being passed through *lora*,—that is, straps fixed on the lectica (Sen. *Ep.* 80, 110; Juv. iii. 240; Mart. ii. 57): sometimes they were carried lower by straps (*struppi*) round the necks of the bearers, like the modern tragsessel (Gell. x. 3; cf. Plut. *Pericl.* 27). The art of taking the lectica upon the shoulders was called *succollare*, and the person who was carried was said *succollari* (Plin. *H. N.* xxxv. § 117; Suet. *Otho*, 6). From this passage we also learn that the name *lecticarii* was sometimes incorrectly applied to those slaves who carried a person in a sella or sedan-chair. The number of lecticarii employed in carrying one lectica varied according to its size, and the display of wealth which a person might wish to make. The ordinary number was probably two (Petron. *Sat.* 56; Juv. ix. 142); but it varied from two to eight, and the lectica is called hexaphoron or octophoron, accordingly as it was carried by six or eight persons (Juv. i. 64; Mart. ii. 81, vi. 77; Cic. *c. Verr.* v. 11, *ad Q. Fr.* ii. 10). Wealthy Romans kept certain slaves solely as their lecticarii (Cic. *ad Fam.* iv. 12); and for this purpose they generally selected the tallest, strongest, and most handsome men, and had them always well dressed. Liburnians seem to have been much used for this in Juvenal's time (iii. 240, iv. 75, vi. 477), so that *Liburnus* was used for the office, like the word *Suisse* in Paris. In the first passage, it is true, some read *Liburna*, and explain it as a sort of litter,—"named from the Liburni," is Professor Mayor's suggestion; but he adopts the reading *Liburno* in his text, and this in view of the two other passages is most probable. In the time of Martial it seems to have been customary for the lecticarii to wear red liveries. The lectica was generally preceded by a slave called *anteambulo*, whose office was to make room for it (Martial, iii. 46; Plin. *Epist.* iii. 14; compare Becker-Göll, *Gallus*, ii. 158). The following cut shows a lectica constructed from fragments found on the Esquiline in 1874.



Lectica. (See Castellani, *Bull. Commun.* 1881, p. 214, tav. 15.)

Shortly after the introduction of these lecticae among the Romans, and during the latter period of the Republic, they appear to have been very common, though they were chiefly used in journeys, and in the city of Rome itself only by ladies and invalids (Dio Cass. lvii. 17). But the love of this as well as of other kinds of luxury increased so rapidly, that Julius Caesar thought it necessary to restrain the use of lecticae, and to confine the privilege of using them to certain persons of a certain age, and to certain days of the year (Sueton. *Caes.* 43).

In the reign of Claudius we find that the privilege of using a lectica in the city was still a great distinction, which was only granted by the emperor to his especial favourites (Suet. *Claud.* 28). It was apparently a senatorial privilege granted by Claudius as a favour to his freedman Harpocras (Friedländer, i. 157). But what until then had been a privilege became gradually a right assumed by all, and every wealthy Roman kept one or more lecticae, with the requisite number of lecticarii. The Emperor Domitian, however, forbade prostitutes the use of lecticae (Suet. *Domit.* 8). There was a company or corpus lecticariorum with officers over them. In the inscriptions we find *praepositus lecticariorum*, *decurio lecticariorum* (*C. I. L.* 8874, 5), and a *castra lecticariorum* in the Regio transtiberina belonging to the lecticarii publici, who stood ready for the service of the magistrates (Preller, *Regionen*, p. 218), but probably also for general hire (Juv. vi. 353). They were of the class of freedmen (cf. Mart. iii. 46).

The lectica above mentioned in which the occupant reclined, must be distinguished from the *sella gestatoria* or sedan-chair in which he sat [see SELLA]; but, if Dio is right in his statement that the sella was never used before the reign of Claudius, we must conclude that Suetonius in *Aug.* 53 uses one inadvertently for the other. Lectica is also used sometimes as the word for a bier, which is more usually called *lectus* or *lectus funebris* [see under LECTUS]. (For further information see Becker-Göll, *Gallus*, iii. 29; Marquardt, *Privatleben*, 736.) [L. S.] [G. E. M.]

LECTICA'RII. [LECTICA.]

LECTISTE'RNIUM (στρῶμναι, Dionys. xii. 9, and expressed in the kindred Greek ceremonies by the words κλίνην στρῶσαι: Theocr. xv. 127, &c.), a sacred feast at which certain of the gods were represented as reclining (*accubantes*) on a lectus, each with the left arm resting on a cushion (*pulvinus*), whence the lectus was called *pulvinar*. It was set in the open street, and before it was placed a table with offerings of food from the people. Livy (v. 13) gives a distinct account of its origin and first celebration: that it was ordained by the Sibylline books in a time of pestilence, B.C. 399; Duumviri sacris faciendis were appointed to hold the feast for eight days (Dionysius, *l. c.*, says seven). There was a general celebration also through the city by the citizens from their private resources, the doors thrown open and hospitality offered to all comers, as though to induce forgetfulness of the public troubles. The deities so approached with prayers and a feast on this, the first, occasion were Apollo and Latona, Diana and Hercules, Mercury and Neptune, placed in pairs on the sacred couches; and at all proper lectisternia the deities were placed in pairs: that is to say, their statues, covered with drapery, which Festus (s. v. *tensa*) calls *exuviae deorum*, or, as Marquardt prefers to think, draped wooden figures with heads of bronze, wax, or marble, like the Greek acroliths, were so arranged: possibly they were borne to the pulvinar upon sacred tensae as on the (totally different) occasion of the Circensian games. The idea that these statues were merely busts is probably wrong, and rests only on the words in Liv. xl. 59, "deorum capita *quae* in lectis erant," but here Madvig reads *qui*. It is an error to confuse this sacred rite with the *epulum Jovis*, which represented the old family offering to Jupiter Dapalis, with whom were associated the other Capitoline deities, Juno and Minerva, as permanent protectors of the state, and Mercurius, who in this respect bore, like Jupiter, the surname Epulo. The *epulum Jovis* was an archaic festival superintended by the pontifices, until the special officers called *epulones* were appointed, and it differed from the lectisternium, as originally instituted, in placing the god on a lectus and the goddesses by Roman custom, conservative in religion, on sellae. In Liv. xxii. 1 it is said that a lectisternium was given to Juno Regina on the Aventine, and in B.C. 217, after the disastrous battle of Trasimene, there was a lectisternium for three days to six pairs of deities (Liv. xxii. 10). Livy numbers the lectisternia which fall in his first decade; the 3rd was "pacis exposcendae causa," the 4th in time of pestilence upon consultation of the Sibylline books, the 5th "placandis diis" at the outbreak of the second Samnite war (Liv. vii. 2 and 27; viii. 25). It should be noticed that all the early lectisternia were in time of trouble to appease the anger of heaven, not as thanksgivings, being no doubt adopted from the Sibylline books when other means failed.

It appears from Liv. xxxvi. 1, xlii. 30, that there was later a constant or perhaps daily lectisternium, "majorem partem anni," to certain deities. This must be held distinct from the extraordinary lectisternium ordered for a special crisis. It was no doubt a regular celebration in the different temples, and its method was borrowed from the lectisternium proper. The *supplicatio*, which was an old Roman rite (Liv. iii. 63), became connected with the lectisternium and to some extent confused with it, since it was celebrated commonly "omnibus diis quorum pulvinaria Romae erant," *i.e.* to those deities in whose honour the lectisternium also was held. In the imperial times, by a sort of reaction to old Roman feeling, a change was made as regards the lectisternium, that *for goddesses* it should be a sellisternium (*i.e.* they should, in old fashion, sit instead of reclining).
This alteration is mentioned by Tacitus in
celebrated chapter (*Ann.* xv. 44) as takin
place when Nero tried various means, and finall
a persecution of Christians, to escape the infami
of the burning of Rome (cf. also Val. Max. i
1, 3).

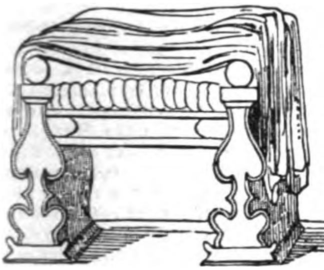
As regards the origin of the lectisterniur
there is some controversy. Preller (*Römisc*
Myth. p. 133) maintains that it belonged to th
national religion of Rome handed down from th
earliest times, and cites in proof a statement
Pliny, *H. N.* xxxii. 2, that "cenae ad pulvinaria
had been ordained by Numa, and from Varr
(quoted by Servius, *ad Aen.* x. 76) that there wa
a lectus spread before Picus and Pilumnus i
behalf of child-birth. It must be recollecte
however, that from the familiarity of writers i
the late Republic and Empire with the terms
the lectisternium, they were likely to app
them to the old Roman offerings, such as thos
of Jupiter Dapalis, the Lares, &c.; and thes
vague notices can hardly weigh against the pr
cise statement of Livy, that the first lectiste
nium was in B.C. 399. It is safer therefore t
adopt Marquardt's view, that it was a Gree
custom introduced into Rome, and afterward
more or less amalgamated with other olde
institutions of native origin. Of this Gree
origin there are several indications: (1) Th
source of the ordinance, the Sibylline books, i
Greek. (2) Three of the deities first so honoure
were unknown to the Romans of the oldes
times—Apollo, Latona, and Artemis (the Delphi
Triad)—and a fourth (Hercules) is worshippe
in new fashion, since according to Servius, *a*
Aen. viii. 176, the lectisternium was prohibite
at the Ara Maxima. (3) The recumbent pos
tion for the gods and goddesses was altogethe
contrary to old Roman custom: in the earlie
times all in the Roman family alike sat, and i
later times the wives and children. It may b
added also that the number, two on each couc
was Greek, not Roman; for at Rome three w
the number on each lectus. We know, to
of this as a Greek rite in early times—*e.*
at Athens to Zeus Soter and Athene Sotei
(*C. I. A.* ii. 305); to Pluto (*C. I. A.* ii. 948)
at Tegea to Athena (Pausan. viii. 47);

Pulvinar at the Theoxenia. (From a Greek vase. *Roy. Soc. Lit.*, N. S., ix. p. 434.)

Heracles, as represented in many ancien
works of art; at Alexandria to Adonis an

Aphrodite (Theoc. xv. 127); and to these may be added the Theoxenia at Delphi, with which A. Mommsen (*Delphika*, 303) compares the lectisternia.

Of the two cuts given, the first, taken from a Greek vase, represents the pulvinar at the Theoxenia of the Dioscuri, and a palm branch upon it, offered by an Olympic victor. The mounted figures supply pictorially the names of the Dioscuri. It must not be supposed that they were actually so shown in the feast. The second cut, representing the pulvinar of a lectisternium, was taken by Mr. Yates from one in the Glyptothek at Munich. (See also on this subject Marquardt, *Röm. Staatsverwaltung*, iii. 45, 187.) [G. E. M.]



Pulvinar of a Lectisternium. (From the Glyptothek at Munich.)

LECTUS (*κλίνη, λέχος, εὐνή*), a bed. In the Homeric poems we find three kinds of beds distinguished: (1) *λέχος*, a heavy compact bedstead,—even a fixture, as the famous bedstead in the palace of Ulysses; (2) *δέμνια*, easily transportable, like a camp-bed; (3) a "shake down" upon the floor, with no framework at all, expressed by the words *χάμαδις στορέσαι*. As the most noticeable instance of the *λέχος*, we have the description (*Od.* xxiii. 190) of the bed made for himself by Ulysses. The actual trunk of an olive-tree, round which he has built and roofed his chamber, forms one solid and immovable post, lopped and smoothed with the axe; upon this is constructed the rest of the wooden framework, with the other three feet; the whole inlaid with gold and silver and ivory, and having a red leather strap across to support the bedding. (Buchholz somewhat strangely interprets the *ἱμὰς* to be a strap hung above the bed, by which the occupant might raise himself up. The only argument for such a view appears to be the use of the singular; but there is no reason why one girth should not be used—*τόνος* would be the word in later Greek—even if we do not take it as a poetical usage of singular for plural.)

For the *δέμνια* as a quickly improvised bed, see *Od.* iv. 296, vii. 335; *Il.* xxiv. 643. From these passages it appears that *δέμνια* means a light framework, such as slaves could bring out into the portico, and over it was spread the bedding (see below). The passage in the Iliad, it is true, seems to use *λέχος* contrary to custom in the sa[illegible]nse. For the third kind, see *Od.* xx. 1, [illegible] e Ulysses, as a poor wanderer, has no beds [illegible] but merely an ox-hide and the bedding pl[illegible] upon it. The *λέχος* was, as has been said, [illegible] or at least a solid framework, and therefore called *πυκινόν* (*Od.* vii. 340, &c.): when *στορέσαι* is joined to it, the arrangement of the bedding is referred to. It is made with rounded posts (*δινωτόν*) and carved. (The word *τρητός*, however, to which Buchholz gives this meaning, may only imply that the framework was pierced for the cords or girths.) The plural *τὰ λέχεα* includes bedstead and bedding, which was arranged as follows. On the *λέχος* or *δέμνια* were placed (1) *ῥήγεα* = mattress and pillows. (Göll argues from their being washed that they were merely woollen rugs; but they are always distinct from *τάπητες*.) (2) Over these were spread *τάπητες*, woollen blankets, not for a covering, but to make the bed softer; both *ῥήγεα* and *τάπητες* were under the sleeper, and over him were (3) *χλαῖναι* as a coverlet (*Od.* iv. 296, vii. 338; *Il.* xxiv. 647). The word *εὐνὴ* in Homer is merely a sleeping-place with or without a bed (comp. *Od.* vii. 347, xi. 188). The poorer classes, as in the passage cited from *Od.* xx., had a hide in place of the *λέχος*, and *κώεα* in place of the *ῥήγεα* and *τάπητες* (cf. *Od.* xiv. 518. For fuller discussion, see Buchholz, *Homerische Realien*, § 60). The complete bed consisted in later times of the following parts: *κλίνη, ἐπίτονοι, τυλεῖον* or *κνέφαλλον, προσκεφάλαιον*, and *στρώματα*.

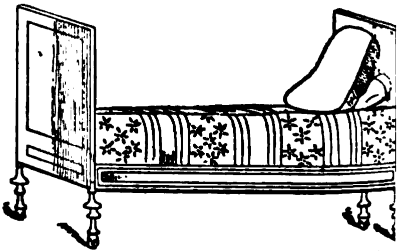
The *κλίνη*, though used generally for the whole (*εὐνὴ* being rare in prose), is, properly speaking, only the bedstead, and seems to have consisted only of posts fitted into one another and resting upon four feet. At the head part alone there was a board (*ἀνάκλιντρον* or *ἐπίκλιντρον*) to support the pillow and prevent its falling out. Sometimes this was wanting, as we see in drawings on ancient vases (see also Poll. x. 34; vi. 9). Sometimes, however, the bottom part of a bedstead was likewise protected by a board, so that in this case a Greek bedstead resembled a modern so-called French bedstead. The *κλίνη* was generally made of wood, which in quality varied according to the means of the persons for whose use it was destined; for in some cases we find that it was made of solid maple or boxwood, or veneered with a coating of these more expensive woods. At a later period bedsteads were not only veneered with ivory or tortoise-shell, but sometimes had silver feet (Pollux, *l. c.*; Aelian, *V. H.* xii. 29; Athen. vi. p. 255). This method of veneering is like that described by Pliny, *H. N.* ix. § 33: "testudinum putamina secare in lamnas, lectosque et repositoria his vestire Carvilius Pollio instituit."

The bedstead was provided with girths (*τόνοι*, from which possibly the metaphor about Cratinus is drawn in Aristoph. *Eq.* 532), *ἐπίτονοι, κείρια* on which rested the bed or mattress (*κνέφαλον, τυλεῖον* or *τύλη*: the last word, however, is an old Ionic domestic term in this sense, in Attic a knot or hump: Rutherford's *New Phrynichus*, p. 256). The cover or ticking of a mattress was made of linen or woollen cloth or leather, and the usual stuffing (*πλήρωμα*) was dried reeds or wool. At the head part of the bed and supported by the *ἐπίκλιντρον* lay a round pillow (*προσκεφάλαιον*) to support the head; and in some ancient pictures two other square pillows are seen, which were intended to support the back. The covers of such pillows are striped in several pictures on ancient vases (see the woodcut under SYMPOSIUM), and were therefore probably of various colours. They were undoubtedly filled with the same materials as the beds and mattresses.

The bed-covers, which may be termed blankets or counterpanes, were called by a variety of names, such as *περιστρώματα*, *ὑποστρώματα*, *ἐπιβλήματα*, *ἐφεστρίδες*, *χλαῖναι*, *ἀμφιεστρίδες*, *ἐπιβόλαια*, *δάπιδες*, *ψιλοδάπιδες*, *ξυστίδες*, *χρυσόπαστοι*, *τάπητες* or *ἀμφιτάπητες*. The common name, however, was *στρώματα*. They were generally made of cloth, which was very thick and woolly either on one or on both sides (Pollux, vi. 9). It is not always easy to distinguish whether the ancients, when speaking of *κλῖναι*, mean beds in our sense of the word, or the couches on which they lay at meal-times. We consequently do not know whether the descriptive epithets of *κλῖναι*, enumerated by Pollux, belong to beds or to couches. But this matters little, as there was scarcely any difference between the beds of the ancients and their couches, with this exception, that the latter being made for appearance as well as for comfort, were, on the whole, undoubtedly more splendid and costly than the former. Considering, however, that bedsteads were often made of the most costly materials, we may reasonably infer that the coverings and other ornaments of beds were little inferior to those of couches. Notwithstanding the splendour and comfort of many Greek beds, the Asiatics, who have at all times excelled the Europeans in these kinds of luxuries, said that the Greeks did not understand how to make a comfortable bed (Athen. ii. p. 48; Plut. *Pelop.* 30). The places most celebrated for the manufacture of splendid bed-covers were Miletus, Corinth, and Carthage (Aristoph. *Ran.* 410, 542, with the Schol.; *Lysistr.* 732; Cic. *c. Verr.* i. 34; Athen. i. pp. 27, 28). It appears that the Greeks, though they wore nightgowns (*χιτὼν εὐνητήρ*, Pollux, x. 123), did not simply cover themselves with the *στρώματα*, but wrapped themselves up in them. Less wealthy persons continued, according to the ancient custom, to use skins of sheep and other animals, especially in winter, as blankets (Pollux, x. 123; Aristoph. *Nub.* 10).

The bedsteads of the poorer classes are designated by the names *σκίμπους*, *ἀσκάντης*: a description of such a bed is given by Aristophanes (*Plut.* 540, &c.; compare *Lysistr.* 916). Socrates sleeps on a *σκίμπους* (Plat. *Protag.* 310 C). For this *κράββατος* is used by New Testament writers and in Scholiasts; it is said by Salmasius to be a Macedonian word, whence its use in Hellenistic Greek (see Rutherford, *New Phrynichus*, p. 138). The words *χαμεύνη* and *χαμεύνιον*, which originally signified a bed of straw or dry herbs made on the ground (Theocrit. xiii. 33; Plut. *Lycurg.* 16), were afterwards applied to a bed which was only near the ground, to distinguish it from the *κλίνη*, which was generally a high bedstead. *Χαμεύνια* were the usual beds for slaves, soldiers in the field, and poor citizens, and the mattresses used in them were mere mats made of rushes or bast. (Pollux, *l. c.*, vi. 11, x. 7; Becker-Göll, *Charikles*, iii. 74–81; Guhl and Koner, 143.)

The beds of the Romans (*lecti cubiculares*) in the earlier periods of the Republic were probably of the same description as those used in Greece; but towards the end of the Republic and durin the Empire, when Asiatic luxuries were im ported into Italy, the richness and magnificenc of the beds of the wealthy Romans surpasse everything we find described in Greece. Th bedstead was generally rather high, so tha persons reached the bed by means of a footstoc (*scamnum*, Varro, *L. L.* v. 35, 46): it wa veneered with costly woods, tortoiseshell an ivory (cf. *supra* on *κλίνη*), or overlaid wit plates (*lamnae*) of gold or silver (Mart. ix. 22 or gold leaf (*bracteae*) which the dishonest slav scrapes off with his nail (Mart. viii. 33, 5). Th *aurei lecti* (Cic. *Tusc.* v. 21, 61; Suet. *Jul.* 4 and *eburni* (Hor. *Sat.* ii. 6, 103) were no doub as Göll says, not solid gold or ivory, but overlai with gold and ivory = *inaurati*, *eburati*: s also *lecti aerati* (Liv. xxxix. 6) were overlai with bronze. We hear, however, of massi silver bedsteads (Petron. 73; Lamprid. *Helio* 29). Often the feet, too (*fulcra*), were of go or silver (Verg. *Aen.* vi. 603; Suet. *Claud.* 32 Prop. iii. 5, 5, iv. 7, 3; Juv. xi. 95). Becke less satisfactorily takes these *fulcra* as equivalen to *scamnum* (supports for the foot in mountin the bed). In Propertius, "Cynthia namque me visa est incumbere fulcro," the foot of the be stands for the bed itself. The *lectus pavonin* of which Martial speaks (xiv. 85) was inlai with variegated woods, *citrus*, &c., of man colours. The bed or mattress (*torus*) with th pillow (*culcita*, *cervical*) rested upon girth (*fasciae*, *institae*, *restes* or *funes*: Cic. *de Div.* i 65, 134; Mart. v. 62; Hor. *Epod.* xii. 12). Th two sides of the bed are distinguished by differen names: the side at which it was entered wa open and called *sponda*; the other side was pro tected by a board and called *pluteus* (Isid. xx. 11 There was always a raised head-board at on end; sometimes (as also occasionally in Gree beds) a raised foot-board too. The two sides ar also distinguished as *torus exterior* and *tor* *interior* or *sponda exterior* and *sponda interio* (Ov. *Amor.* iii. 14, 32; Hor. *Epod.* iii. 22; Suet *Caes.* 49). The ordinary stuffing (*tomentum*) o the mattresses and pillows was wool (Plin *H. N.* viii. § 192), for cheaper bedding straw o dried reeds (Hor. *Sat.* ii. 3, 117; Mart. xiv. 160 which had been the old-fashioned material (Plin *H. N.* viii. § 193) in less luxurious times. Late feathers were commonly used, especially fo pillows; so that *pluma* is used for the pillow itself (*e.g.* Juv. vi. 88; Propert. iv. or iii. 7, 50 Mart. xiv. 149). Becker wrongly used thi passage to show that feather tapestry, like th old Mexican work, was used for casings by th Romans: *pluma versicolor* is merely a pillow



Lectus, in which the usual *pluteus* is wanting. (Fro a Pompeian painting.)

with a striped covering, and the art of the plumarius is not what Becker imagined (see Göll's note on *Gallus*, iii. 339; Blümner, *Techn.* i. 210; and the article PLUMARIUS). As a special luxury, Heliogabalus had pillows made of the soft plumage under the partridge's wing. The blankets or counterpanes (*vestes stragulae*) were in rich houses of costly make, dyed purple, and embroidered in gold. These gold-embroidered coverlets were called *Attalicae vestes*, *Attalica peripetasmata*, being, as Pliny (*H. N.* viii. 196) says, first used by Attalus. Hence in Propert. iii. 5, 5, *Attalicus torus* is used for a bed so covered. The name *stragula* belongs both to the blanket on which the occupant lay as well as that which covered him, but the latter was strictly called *opertorium* (Sen. *Ep.* 87, 2).

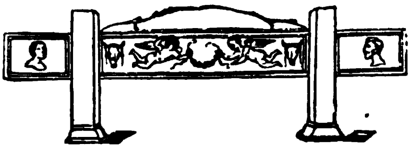
2. The *lectus tricliniaris* (for the use and arrangement of which, see CENA and TRICLINIUM) was in most points like the *lectus cubicularis*. It was, however, lower, as may be gathered from the use of *scandere*, &c. applied to the latter (see also Serv. *ad Aen.* iv. 685). It had also, at least in most cases, a *pluteus*, as may be seen from Suet. *Cal.* 26; Propert. iv. (or v.) 8, 68: and this appears also in drawings. At one end only there was a raised ledge on which a cushion was placed, and on this the left arm rested. Among the Romans it held three persons; among the Greeks, two. Like the bed, it had a mattress (*torus*), over which coverlets of fine stuffs, "Tyriae" vestes, &c., were thrown. The toral was a sort of valance from the torus to the ground (Becker-Göll, ii. 343). Some have thought that the *aulaea* (Hor. *Sat.* ii. 8, 54; *Od.* iii. 29, 14; Verg. *Aen.* i. 697) were a canopy over the lectus, and so Göll maintains; but it is better with Marquardt to take them as wall-hangings, in no way part of the lectus (see AULAEA). For pictures of the *lectus tricliniaris*, see CENA.

3. The *lectus genialis* was the marriage couch to which the newly-married were led by the *pronuba*. It was placed in the atrium opposite the door, and hence was called *lectus adversus* (Prop. v. 11, 85; Laberius, *ap.* Gell. xvi. 9). When a new marriage took place, it was again prepared (*stratus*, Cic. *Clu.* 5, 14: cf. Hor. *Ep.* i. 1, 87; Arnob. ii. 67; Juv. x. 333). Till that time it remained unoccupied in the atrium: by it in old and simple times sat the mistress of the house, spinning and superintending household work. "Lucretia nebat: ante *torum* calathi lanaque mollis erat" (Ov. *Fast.* ii. 739; cf. Ascon. *ad* Cic. *Mil.* 5, 13). The *lectus genialis* was higher than the ordinary bed, and ascended by steps, "gradibus acclivis eburnis," Lucan. ii. 356. ("Qua simplici scansione scandebant in lectum non altum scabellum, in altiorem scamnum: duplicata scansio gradus dicitur," Varro, *L. L.* v. 168.)

4. The *lectus lucubratorius*, often simply *lectus* or *lectulus*, and in Suet. *Aug.* 78 *lectica lucubratoria*, a reading couch smaller and no doubt usually simpler than the bed, but otherwise of much the same construction.

Here the Roman of literary habits spent much of his day, especially in the morning, reading and writing: to this, not to sleep, Horace's "ad quartam jaceo" refers, and the lectulus is his place of meditation (*Sat.* i. 4, 133). Suetonius (*l. c.*) tells us that Augustus was in the habit of going to his reading couch after dinner: see also Pliny the younger's account of Spurinna (*Ep.* iii. 1), and of his uncle's habits (*Ep.* iii. 5) and the description in *Ep.* v. 5, "jacere in lectulo suo compositus in habitum studentis, habere ante se scrinium." The "habitus studentis" was the reclining posture on the left arm, using the right for writing or holding the book: cf. Ov. *Trist.* i. 11, 37; Sen. *Ep.* 72; Pers. i. 52.

5. *Lectus funebris*, also but less frequently *lectica*, and in Corn. Nep. *Att.* 22 *lecticula* (cf. Tac. *Hist.* iii. 67), sometimes in poets *feretrum*, the couch or bier on which the dead were borne. They were sometimes elaborately ornamented. Dio Cassius (lvi. 34) thus describes the bier of Augustus: *κλίνη ἦν ἔκ τε ἐλέφαντος καὶ χρυσοῦ πεποιημένη καὶ στρώμασιν ἁλουργοῖς διαχρύσοις* (*i.e.* Attalicis vestibus) *κεκοσμημένη*. For other particulars, see article FUNUS, and Becker-Göll, *Gallus*, iii. 508. Representations of *lecti funebres* have been found on several sepulchral monuments. The following woodcut represents one taken from a tombstone. [L. S.] [G. E. M.]



Lectus funebris. (From an ancient tombstone.)

LE'CYTHUS (λήκυθος). [AMPULLA.]

LEGA'TUM is defined by Florentinus in Dig. 30, 116, as "delibatio hereditatis qua testator ex eo quod universum heredis foret alicui quid collatum velit:" another less full definition given by Modestinus in Dig. 31, 1, 36, and practically adopted by Justinian in *Inst.* ii. 20, 1, is "donatio testamento relicta." Thus the notion of a legatum implies both that of a testament and that of a universal succession. There might be fideicommissa or trust bequests, but there could be no legata, without a testament: and by a testament the deceased person's *universitas juris* devolves on the heir or person *in loco heredis* [BONORUM POSSESSIO]. The testator first bestows his *hereditas*—the aggregate of his proprietary relations—on his heir or heirs, and any legacies which he may proceed to give are so much deducted from what the heir would otherwise have. And the rule that there can be no legatum without a will was never altered, though, from the time of the classical jurists onwards, it had been so far relaxed as to admit the validity of legacies given in *codicilli* confirmed by the will: "legatum codicillis relictum non aliter valet, quam si a testatore confirmati fuerint, id est nisi in testamento caverit testator, ut quicquid in codicillis scripserit, id ratum sit" (Gaius, ii. 270 a). The fact that the heir suffered by every legacy given explains the phrase *ab herede legare*, to give a legacy away from the heir (Cic. *pro Cluent.* 12; Dig. 30, 16). The Roman term for the legatee is *legatarius*. He did not succeed in any way to the *universum jus* of the deceased (*Inst.* ii. 10, 11), and for that reason he could not in his turn be charged with the payment of a legatum out of what was given him, though he could be saddled with a fideicommissum: "a legatario legari non potest," Gaius, ii. 271.

The word *legatum* contains the same element as *lex*: *legare* is to dispose of a matter (*e.g.* "legatum negotium," Plaut. *Cas.* i. 1, 12), and it is used in this comprehensive sense to denote a man's testamentary dispositions in general in the Twelve Tables: "verbis legis xii. tabularum his, uti legassit suae rei, ita jus esto, latissima potestas tributa videtur et heredes instituendi, et legata et libertates dandi, tutelas quoque constituendi," Dig. 50, 16, 120. Ulpian accordingly explains the word *legatum* by referring to its etymology, and likening a legatum to a *lex* properly so called: "A legatum," he says, "is that which is left by a testament, *legis modo*, that is, *imperative*; for those things which are left *precativo modo* are called fideicommissa" (*Reg.* 24, 1). Being, as contrasted with a fideicommissum, an institution of the *jus civile*, it had always under the older Roman law to be expressed in Latin (Gaius, ii. 281; Ulp. *Reg.* 25, 9), and (as will be seen below) in certain set forms, *civilia verba*. A legacy which was valid or good was legatum *utile*; one which was void was *inutile*; if it was free from all conditions, it was *pure datum*, or, as is said in Dig. 36, 2, 5, legatum *purum*.

Originally there were four forms in which alone legata could be given, and up to the time of Nero (and perhaps far later still), unless they were given in one or other of them, they were void. These forms were called *per vindicationem*, *per damnationem*, *sinendi modo*, and *per praeceptionem*. A legatum *per vindicationem* was expressed thus: "L. Titio hominem Stichum do lego;" or "L. Titius hominem Stichum sumito, capito," or "sibi habeto" (Gaius, ii. 193). Its name was derived from the legatee's remedy, if anyone in possession of the *res legata* refused to give it up: for immediately on the heir's acceptance of the inheritance the ownership of the *res legata* vested in the legatee by operation of law (whence legatum is a mode in which ownership is acquired): it became his *ex jure Quiritium*, and he could maintain a real action (*vindicatio*) for its recovery, though, as had been held by the Proculian school of jurists, whose view was confirmed by Pius Antoninus, an acceptance express or tacit was required on his part before the property became definitely his (Gaius, ii. 195). There was a similar difference of opinion between the Sabinian and the Proculian schools in the case of a legacy *per vindicationem* subject to a condition: the former holding that the thing belonged to the *heres* during the pendency of the condition, while the latter maintained that in the interval it was *res nullius* (Gaius, ii. 200). Nothing, as a rule, could be bequeathed *per vindicationem* which did not belong to the testator *ex jure Quiritium*, at the time both of the execution of the will and of his decease, though it was sufficient if the so-called *res fungibiles* ("res quae pondere, numero vel mensura constant," *e.g.* wine, oil, corn, "pecunia numerata," &c.) were his *ex jure Quiritium* at the latter date only (Gaius, ii. 196; Ulp. *Reg.* 24, 7). If the same thing was given *per vindicationem* to more than one person either jointly (*conjunctim*, e.g. "Titio et Seio hominem Stichum do lego") so as to make them *collegatarii*, or severally (*disjunctim*, e.g. "Titio hominem Stichum do lego: Seio eundem hominem do lego"), each took an equal share: the share of any who failed to take accrued to the rest in equal portions (Gaius, ii. 199).

The form of legacy *per damnationem* was "Heres meus Stichum servum dare damnas esto" or "dato." In this mode a testator could lawfully bequeath property which belonged to anyone (the heir being bound, if it belonged to a third party, to do all he could to buy it, or, if this was impossible, to pay its value to the legatee), and also things which were not in existence at the time when the will was executed —*e.g.* the future offspring of an *ancilla* or female slave. The result of acceptance of the inheritance by the heir was different from that in legacy *per vindicationem*: the *res legata* did not become the property of the legatee by operation of law, but a quasi-contractual obligation was established between him and the heir, by virtue of which he was able to bring an *actio in personam* for its transfer to him by the appropriate mode of conveyance (*mancipatio*, *in jure cessio*, or *traditio*). If the legacy was of an ascertained sum of money and the heir denied his liability, the legatee could, on proving his case, recover twice the original sum ("infitiando lis crescit in duplum," Gaius, ii. 283; *Inst.* iii. 27, 7). There was a difference, too, in the matter of joint legatees. If the same thing was given *per damnationem* to two or more persons *conjunctim*, each took an equal share, though, if any failed, their portion fell by the original law into the *hereditas*, and did not accrue to the co-legatees: but the Lex Papia made it *caducum*, and gave it first to *collegatarii* who had children, then to the *heredes* who had children, and finally to the other legatees who had children; a privilege alluded to by Juvenal (*dulce caducum*, ix. 88). Gaius says (ii. 208) that most authorities held that the rules of the Lex Papia as to *caducitas* applied also to "conjunctive" legacies given *per vindicationem*. In the case of a legacy of the same thing given *per damnationem* to two or more persons *disjunctim*, the heir had to give it to one, and pay its full value to each of the rest (Gaius, ii. 201–208).

The form of legacy *sinendi modo* was "here meus damnas esto sinere L. Titium homine Stichum sumere sibique habere:" by means it a testator could bequeath anything whic belonged either to himself or to his heir at t time of his decease, and, as in the previous ca the legatee had merely an *actio in persona* against the *heres*, though it was doubted wheth the form of bequest imposed any active duty the latter: it being argued that his only oblig tion was to allow the legatee to "take" t object bequeathed to him. This difference opinion led to a similar difficulty where t same thing was given in this form to two more persons *disjunctim*: it being question whether the whole was due to each, or wheth on the principle of "first come first served" t heir's obligation was not altogether satisfi when one of the legatees had got the *res lega* If the same thing was left to two or mo *conjunctim*, they took it in common, but witho any right by accrual to the shares of any w failed to take (Gaius, ii. 209-215).

Legatum *per praeceptionem* was in the fo "L. Titius hominem Stichum praecipito." T

Sabinian school held that *praecipere* here meant "praecipuum sumere," so that a legacy could be left in this way only to one of two or more *coheredes*, and not to anyone else: the legacy meaning no more than that the testator wished one of his heirs to have some specific piece of his property rather than any of the rest. Consistently with this they maintained that the only action by which the legatee could get the *res legata* was that called *familiae erciscundae*, the heir's partition suit, and also that nothing could be left thus which was not the testator's at the time of his decease: and finally they held that a bequest in this form to any person other than an heir was not validated by the Senatusconsultum Neronianum (of which below), because, according to them, that enactment related only to defects of form, and had no bearing on legacies which were void by reason of the incapacity or disqualification of the legatee. The Proculians, on the other hand, were of opinion that a legacy could be given to anyone *per praeceptionem*, its effect being much the same as if the form had been *per vindicationem*, and the legatee's remedy (as in that case) being a real action: and Gaius says (ii. 221) that their view was held to be supported by an enactment of Hadrian. If the same thing was thus left to more than one, either *disjunctim* or *conjunctim*, each had only his share. *Per vindicationem*, *praeceptionem*, and *sinendi modo*, only *res corporales* and *jura in re aliena* could be bequeathed: *per damnationem*, anything whatever could be bequeathed which could be the object of an obligation.

The importance of precisely observing these forms was considerably diminished by a senatusconsult of Nero, A.D. 64: "Sc°. Neroniano cautum est, ut quod minus aptis (ratis?) verbis legatum est, perinde ac si optimo jure legatum esset: optimum autem jus legati per damnationem est," Ulpian, *Reg.* 24, 11. The effect of this seems to have been that a legacy given *per vindicationem*, *sinendi modo*, or *per praeceptionem*, which would hitherto have been void owing to the neglect of some formal rule applicable to the particular form employed, was now to be taken to have been given *per damnationem* (*e.g.* Gaius, ii. 197, 212, 218, 220); though Gaius' words in § 218 suggest that the senatusconsult may have dispensed with the necessity of observing any one of the four established forms at all, while it still required the use of Latin. Some hundreds of years later testators were enabled by enactments of Constantius, A.D. 339, and Theodosius II., A.D. 439, to give legacies in any words they chose, whether Greek or Latin (Cod. 6, 37, 21; 6, 23, 21, 6). Justinian finally assimilated the civil law legatum in every way to fideicommissa, which had always been governed by laxer rules, both as to form and substance. Any superiority in law which either had possessed over the other was in future to be common to both, and the object of a bequest, whether technically a legatum or a fideicommissum, was to be recovered by the beneficiary by the most appropriate remedy, real or personal (*Inst.* ii. 20, 3). The legatee acquired a "real" right to the *res legata* in every case where it belonged to the testator, and in no other, unless indeed the testator himself expressed a contrary intention (Cod. 6, 43, 1): he acquired a personal right against the heir in every case, and this was secured by a statutory hypotheca, first given by Justinian himself, over everything which the person on whom the legacy or fideicommissum was charged had himself received from the inheritance (Cod. 6, 43, 2). In their celebrated phrase "uti legassit," &c., the Twelve Tables were interpreted to have given testators absolute freedom to dispose of their property as they pleased. The result was that they were commonly so lavish in legacies as to leave practically nothing to the instituted *heres*, so that the latter refused the inheritance, and the deceased became intestate (Gaius, ii. 224). The Roman dislike of intestacy accordingly led to a series of statutes restricting the freedom of testamentary disposition conferred by the Twelve Tables. The first of these was the Lex Furia testamentaria, B.C. 183 (Gaius, ii. 225, iv. 23, 24; Ulpian, *Reg.* i. 2; 28, 7; Varro, 3; Cic. *pro Balbo*, 8), which imposed a penalty of four times the excess upon anyone (except the cognates, if any, of the person by whom the testator had been emancipated or manumitted, Ulpian, *l. c.*), who took by way of legacy or *donatio mortis causa* more than 1000 asses from the same person. But this enactment, as Gaius remarks, altogether failed in its object, because it did not prevent a man from giving as many several thousands to as many persons as he pleased, and so exhausting the estate. The Lex Voconia (Cic. *pro Balbo*, l. c.; *in Verr.* 2, 1, 42, 43; *de Senect.* 5; *de Fin.* 2, 17; *de Republ.* 3, 10), fourteen years later in date, enacted (according to Gaius, ii. 226) that no one should take as legatee or donee *mortis causa* more than the heir or any one of two or more coheirs: but in reality it seems to have only been a relaxation of the Lex Furia in favour of wealthy testators; any person ranked in the first class of the census as possessing 100,000 sesterces or upwards (Cic. *in Verr.* l. c.) being allowed to bequeath away as much as he pleased, provided no legacy or gift *mortis causa* exceeded the proportion specified. In any case it was no less a failure than the Lex Furia, because by the testator distributing his property among numerous legatees the *heres* might have so small a portion as not to make it worth his while to assume the burdens and liabilities attached to the *hereditas*. The Lex Falcidia (Dio Cass. xlviii. 33; Plin. *Ep.* 5, 1; Isidor. *Origg.* 5, 15), passed B.C. 40, eventually provided a satisfactory remedy by enacting that, if a testator gave more than three-fourths of his property in legacies, these must abate proportionately, the heir or heirs being in all cases entitled to a clear fourth of the inheritance (see Gaius, ii. 227; *Inst.* ii. 22). After the Lex Julia vicesimaria the state had a direct interest in the upholding of testaments, and so in the Lex Falcidia, so that, if a testator forbade his heir to deduct the "Falcidian fourth," the jurists held the prohibition void: but by Justinian this was allowed (*Nov.* i. 2; cxix. 11). For the extension of the principle of the Lex Falcidia to trust bequests [FIDEICOMMISSUM], see Gaius, ii. 254; *Inst.* ii. 23, 5; Dig. 35, 2, 18: and to *donationes mortis causa*, Dig. 24, 1, 32, 1; 31, 77, 1.

The chief rules as to the necessary form of legacies have already been touched on. Under the older law it had been impossible validly to give a bequest before the institution of the heir, because the latter was "caput et fundamentum totius testamenti" (Gaius, ii. 229), but this restriction was eventually removed by Justinian (*Inst.* ii. 20, 34). The other grounds upon which a legacy might be void are: (1) The character of the legatee; (2) the character of the bequest itself; and (3) the legal character of the *res legata*.

1. A legacy was void if left to a person who had not the *commercium* (in particular *peregrini*), for without the *commercium* he had no *testamentifactio*. Latini Juniani, though possessed of *commercium*, were expressly disabled by the Lex Junia Norbana from taking any benefit under a will either as heirs or legatees (Gaius, i. 23, 24) [LATINITAS]. Until quite late again in the history of Roman law, no legacy could be validly given to *incertae personae* (including *postumi alieni*, children unborn at the making of the will, and who on being born would not be in the testator's potestas): an *incerta persona* being one of whom the testator had no determinate conception ("quam per incertam opinionem animo suo testator subjicit," Gaius, ii. 238). But even in Gaius's time a legacy to an *incerta persona* "sub certa demonstratione" was good (*e.g.* "ex cognatis meis qui nunc sunt, qui primus ad funus meum venerit, ei decem milia heres meus dato," Gaius, *l. c.*); and between the times of Gaius and Justinian the rule about *incertae personae* was gradually so broken down that in the latter's legislation its only remaining trace is that certain corporations cannot validly be either instituted heirs or made legatees without special permission from the emperor. Lastly, the Proculian school, arguing on the so-called "regula Catoniana" (Dig. 34, 7, 1), held that no legacy could validly be given to any person in the power of the instituted heir. The Sabinians, whose view was adopted as law by Justinian (*Inst.* ii. 20, 32), were of opinion that a legacy might well be given to such person *sub conditione*, i.e. provided he was not in the power of the heir when the latter accepted the inheritance; while Servius Sulpicius had thought such a bequest good at the outset, even though unconditionally expressed; though liable to become void by the legatee being in the *institutus'* power at the testator's decease (Gaius, ii. 244). A legacy to the dominus or paterfamilias in whose potestas the instituted heir was was not void (according to Gaius, ii. 245, confirmed by Justinian, ii. 20, 33), though it would be extinguished if the dominus or paterfamilias became heir through the instituted slave or son, because a man could not owe a thing to himself: but if the son was emancipated, or the slave was manumitted or transferred to another, so that the former became heir for himself, or the latter made another person heir, the legacy was due to the father or former master. Ulpian, however, had held such a legacy void *ab initio* (*Reg.* 24, 24).

2. Legacies given to take effect only after the death of the heir (*e.g.* in the forms "cum heres meus mortuus erit" or "pridie quam heres meus morietur") were void under the earlier law, though Gaius says (ii. 232) that in the form "cum heres morietur" or "moriatur" they were good: a distinction which he himself considers was "non pretiosa ratione receptum." Under Justinian, however, all these forms were equally valid (*Inst.* ii. 20, 35). Similarly, up till the time of that emperor, legacies given *poenae nomine*, i.e. for the purpose of inducing the heir to do, or not to do, some particular act (*e.g.* "si heres meus filiam suam Titio in matrimonium collocaverit, decem milia Seio dato," Gaius, ii. 235), were void: but Justinian repealed this rule except where the act or forbearance which the testator wished to secure was either illegal or *contra bonos mores* (*Inst.* ii. 20, 36).

3. A legacy of a *res extra commercium* (e.g. a basilica or a temple) was void (*Inst.* ii. 20, 4); as also was one of property which at the moment of the execution of the will already belonged to the legatee (*ib.* 10).

The objects of a legatum (things which could be bequeathed) comprise tangible objects, whether the testator's own or some other person's (the heir in this case being bound to try and get them for the legatee, otherwise to pay him their value, *Inst.* ii. 20, 4), and whether actually in existence or not, provided they probably will exist at some future time (*ib.* 7; Gaius, ii. 203): release from a debt owed to the testator by the legatee (*ib.* 13), or money owed to the latter by the testator, provided the legacy put him in a better position than he was in before (*ib.* 14): claims of the testator against third persons, the heir being bound to assign the legatee his rights of action against them (*ib.* 21); in fact, any act or forbearance which could lawfully be the object of an obligation in general: and finally servitudes and other *jura in re aliena*. By a senatusconsultum passed about the end of the Republic, it became possible to create by legacy a quasi-usufruct of "res quae usu consumuntur" (*e.g.* wine), which could not be done by agreement *inter vivos* (Cic. *Top.* 3; *Inst.* ii. 4, 2). But the legacy need not be of any single thing, corporeal or incorporeal, nor even of any aggregate of them: the heir might be directed to transfer a half or any other definite quota of the *hereditas* to a legatee ("legatum partitionis," Cic. *de Legg.* ii. 20; *pro Caec.* 4; Ulpian, *Reg.* 24, 25). In such a case the instituted heir not unfrequently refused to accept unless guaranteed *pro rata portione* against creditors' claims and other expenses, so that it became usual for the heir and partiary legatee to enter into a formal contract ("stipulationes partis et pro parte"), by which the latter engaged to indemnify the former against liabilities in proportion to the share of the estate transferred to him, and the former that he would hand over to the legatee his fair proportion of the assets.

A legacy might be transferred from the legatee to another person, or altogether taken away by another will, or *codicilli* confirmed by the original testament (*Inst.* ii. 21): it might also be revoked by erasure of the gift from the will (Dig. 34, 4, 16 and 17), or tacitly by any act from which it could be gathered that the testator no longer wished the legatee to have it—*e.g.* by alienation of the *res legata* in the testator's lifetime (*Inst.* ii. 20, 12; Dig. 34, 4, 15).

The acquisition of *legata* depends on the meaning of two expressions—"dies (legati) cedit," and "dies (legati) venit," which mark two points of time in the history of the legatee's rights. *Dies cedit* means that he acquires a provisional right to the bequest: a right which he can only lose by failure of all instituted heirs to accept under the will, so that if he dies immediately after *dies cedit*, but before *dies venit*, the right passes to his heir. The date of this was the testator's decease (altered by the Lex Papia Poppaea to the opening of the will, but the old rule was restored in Justinian's time), unless the legacy was subject to a condition precedent or a *dies ex quo* (e.g. six months after my decease), in which case *dies cedit* only on the fulfilment of the condition or the arrival of the day. *Dies venit* means that the legatee acquires a right to demand the *res legata* by action: its date is acceptance of the inheritance by the heir, unless *dies cedit* itself occurs later by reason of a condition precedent or a *dies ex quo*. (Gaius, ii. 191–245; *Inst.* ii. 20; Ulpian, *Reg.* 24; Paul. *Sent. rec.* iii. 6; Dig. 30–32; Cod. 6, 37; 6, 43; Rosshirt, *Die Lehre von den Vermächtnissen nach röm. Rechte*, Heidelberg, 1835.) [G. L.] [J. B. M.]

LEGATUS is a person dispatched on an official mission, just as the neuter *legatum* is used of property of which the succession is determined with legal formality by the testator. The precise meaning of legatus changes according to the nature of the mission, but the idea inherent in the word—that of official appointment for a definite purpose—is the same throughout the history of the Roman constitution.

The various uses of the word may be reduced to two, under one or other of which the rest may be conveniently classed: viz. 1. legatus = an envoy dispatched by a magistrate, under advice of the senate, for some object of diplomacy, inquiry, or organisation; 2. legatus = a person formally attached to a general-in-chief or provincial governor, as lieutenant or staff-officer. Though it will be convenient to consider these two usages separately, it must be observed that there is no difference between them in constitutional law. The principle of appointment was the same in both cases; and the form of it also, as will be shown, remained technically the same at all times; all state legati being in the eye of the law the messengers of the magistrate presiding in the senate at the time the appointment was made. Varro (*L. L.* v. 87) defines both kinds of legati in a single sentence, and treats them as essentially the same: "Legati, qui lecti publice, quorum opera consilioque uteretur peregre magistratus (2), quive nuntii senatus aut populi essent (1)." Cicero also (*in Vatin.* 15, 35), when attacking Vatinius in 56 B.C. for obtaining a *legatio* without a decree of the senate, exclaims: "Adeo afflictus senatus, adeo misera et prostrata respublica, ut non *nuntios pacis atque belli*, non *oratores*, non *interpretes*, (1) non *belli consilii auctores*, non *ministros muneris provincialis* (2) senatus more majorum deligere posset?" From these passages it is plain that legati only differed in respect of the duties entrusted to them, and that those duties were in the main of two kinds. We proceed to consider these two in detail.

I. *Legati as State Envoys* (legati *ad aliquem*).—The first appearance of legati of this kind is in the year 456 B.C., when three envoys, whose names are given by Livy (iii. 25), were sent to the Aequi "questum injurias et ex foedere res repetitum." Up to this time it would appear that the duties of diplomacy and treaty-making, which in the earliest times were doubtless simple and straightforward, had been discharged by the college of Fetiales (Liv. i. 24). But from 456 B.C. onwards Livy constantly makes mention of legati sent on missions of various kinds, but chiefly employed in negotiation, while the function of the Fetiales seems to have been restricted to the actual declaration of war. Thus Varro writes (*ap. Nonium*, p. 529), "priusquam indicerent bellum iis a quibus injurias factas sciebant fetiales, legatos res repetitum mittebant quattuor, quos oratores vocabant."

Mode of appointment.—In the earliest instance just referred to, we are not told how the legati were appointed; but from Livy's language in subsequent cases it may be gathered that the usual and natural method was for a magistrate to consult the senate on the advisability of the mission, when a senatusconsultum would authorise him to select the envoys (Liv. v. 35; xxix. 29; xliii. 1. See also the "Senatusconsultum de Thisbanis," in the *Ephemeris Epigraphica*, vol. i. p. 279; Mommsen, *Staatsrecht*, 2nd edit., vol. ii. pt. 1, p. 658). But there can be no doubt that from an early period the part played by the senate in their appointment came to be regarded as the essential one; and thus Cicero could expostulate with Vatinius, in the passage already quoted, for having violated immemorial usage in becoming a legatus without the authority of the senate. "Ne hoc quidem senatui relinquebas," he goes on, "quod nemo unquam ademit, ut legati ex ejus ordinis auctoritate legerentur" (*in Vat.* 15, 35). There is no known instance of the authorisation of legati in this sense by the people in Comitia, though the language of Varro (*ap. Non.* p. 529) must be taken to imply that there was nothing to prevent it. But when Polybius (i. 63) writes of the δῆμος sending ten commissioners to arrange terms of peace after the First Punic War, he may be either writing loosely and without marking the special form of procedure, or these commissioners may have been rather independent quasi-magistrates for making peace, of the same kind as those appointed under agrarian laws for the division of land, and not legati in any strict sense of the word. (Cf. Mommsen, *Staatsrecht*, ii. pt. 1, p. 624, with Willems, *Le Sénat de la République*, ii. 475, note.)

The selection of the individual envoys rested, as we saw, technically with the magistrate; but towards the close of the Republic it would seem that the choice was sometimes made by lot (*sortitio*) from the several ranks of senators (*consulares*, *praetorii*, &c.). An example of this method occurs in Cic. *ad Att.* i. 19, 3; and Tacitus (*Hist.* iv. 6, 8) writes as though it had once been a common practice ("vetera exempla, quae sortem legationibus posuissent"). This must be regarded as a departure, characteristic of the last age of the Republic, from the strict form of procedure, induced no doubt by the profit attaching to commissions of this kind, and by the consequent strenuous competition for them.

Qualification.—It was the general practice to select senators only (Cic. *Att.* xiii. 20, 3), and such senators as were not at the time holding office, which would disqualify them for duties at a distance from Rome; but there seems to have been no definite rule, for we have one or two instances in which, on an emergency, non-senators were chosen (Liv. iv. 52, "consules . . . coacti sunt binos equites adjicere:" cf. Liv. xxxi. 8). In almost all important missions, one legatus at least was a *consularis;* if there were two, the senior consularis was *princeps legationis* (Sall. *Jug.* 16). Even in the large legationes of the late Republic, the practice of employing ex-magistrates for the most part still held good, and exemplifies the importance attached by the Romans to official experience, in this as in other public duties. Thus the legatio of 189 B.C. which settled terms of peace with Antiochus consisted of three consulares, four praetoriani, and three quaestorii (Liv. xxxvii. 55: cf. Cic. *Att.* i. 19; Willems, *Le Sénat*, ii. 506).

Number.—In the earliest legationes, the number of legati was three (Liv. iii. 25, 6; Dionys. Hal. ix. 60, xix. 13, 17). But we have instances of legationes consisting of two, four, and six members, and most embassies after the Second Punic War were of ten (Liv. xxxiii. 24; xxxvii. 55; xlv. 17). Single legati are found from time to time (Liv. xxi. 8, 4, "ad bellum indicendum;" cf. xxxiii. 39 and xxxix. 48). It has been supposed that when a single legatus is thus mentioned, we are to understand that the *princeps legationis* is put for the other members; but it is clear from the practice of granting *liberae legationes* (to be explained directly) to individuals, that there was no definite rule against the appointment of single legati. (For full details as to the number of members of a legatio see Willems, *Le Sénat*, vol. ii. p. 499 foll.).

Authority and Responsibility.—No legatus could hold *imperium*, for imperium could not be delegated; their powers may best be expressed by the word *auctoritas;* i.e. they acted under the sanction of the home government. Being as a rule unable to communicate easily with the authorities in Rome, they would naturally be given much freedom in their dealings with foreign governments, and were in fact plenipotentiaries; but on the subject of their instruction (*mandata*) and responsibility we have hardly any information. It is not till quite at the close of the Republic that we find any trace of a legalised responsibility, beyond the mere declaration in the senate of the results of their mission (*e.g.* Liv. xlv. 13), which might, however, be made the opportunity of an attack on their proceedings, as we see from Liv. xlii. 47, where the impeachment was (no doubt as usual) unsuccessful. We have an example of the successful impeachment of legati by means of a *lex* instituting a *quaestio extraordinaria* to try them, in the year 110 B.C. (Sall. *Jug.* 40); but these legati were not state envoys of the kind now under discussion (*ib.* ch. 28). It was Caesar's law *de repetundis*, of 59 B.C., which first made all kinds of legati liable for misdoing in their office (Dig. 48, 11, 1): but this law apparently touched them only in so far as they had been guilty of pecuniary corruption or extortion.

Emoluments.—All legati travelled at the expense of the state (Zonaras, viii. 6), to which they were entitled by virtue of the ring which they wore (see Zonaras, viii. 6; Mommsen, *Staatsrecht*, i. 301; and article ANULUS). A ship or ships of war were, on important occasions, allotted them for transport (Liv. xxix. 11; xxx. 26). It seems also that in the last age of the Republic one or two lictors were allowed them, at the discretion of the provincial governor in whose province they travelled (Cic. *Fam.* 12, 21; cf. 12, 20). All were personally inviolable, as were the envoys of foreign peoples in Italy (Liv. iv. 17 foll.; Tac. *Hist.* iii. 80; Pomponius in Dig. 50, 18).

Legatio libera.—The advantages and emoluments just mentioned led to a scandalous abuse of the legatio, which came into vogue in the last century of the Republic, when rich senators frequently had private business and interests in the provinces. In order to maintain a state and dignity which would place him at an advantage, and give him practically the status of an ambassador, a senator could obtain from the senate a free mission (*legatio libera*) on stating the province for which he desired it, and perhaps also the nature of his affairs (Cic. *Fam.* 12, 21; *Att.* 4, 2, 6). This practice became such a scandal in Cicero's time, that he made a vigorous attempt in his consulship to abolish it; but the feeling was so strong against him in this effort at reform, that a tribune was found to interpose his veto, and Cicero was forced to be content with a senatusconsultum limiting these legationes to one year (see *ad Att.* xv. 11, 4; *de Leg.* iii. 8, 18, iii. 3, 9). A law of the dictator Caesar confirmed this limitation; but the *legatio libera* was not abolished, and we hear of it under the Empire (Suet. *Tib.* 31; Dig. 50, 7, 15). Cicero gives a very definite opinion of the abuse he tried to remedy: "apertum est nihil esse turpius quam est quempiam legari nisi reipublicae causa" (*de Leg.* iii. 8, 18): but what had once become a senatorial prerogative easily lost the taint of immorality in the minds of the privileged capitalist.

Legati as Envoys under the Empire.—When the Republic came to an end, all negotiations with foreign peoples passed into the hands of the *princeps*, who appointed his own deputies by virtue of his unlimited *proconsulare imperium* (Mommsen, *Staatsrecht*, ii. 892). The right of the senate to send legati remained, however, in theory; and we find them sending deputations to the *princeps* when he happened to be in the provinces (Tac. *Hist.* iv. 6–8; Dio Cass. lix. 23).

Legati in the sense of Envoys from foreign peoples.—The word *legatus* was used by courtesy of an ambassador from another state. All such, if coming from a friendly power, were inviolable (Dig. 50, 18), and treated with high consideration. They were lodged and boarded (*locus et lautia*) at the public expense, and sometimes presented with gifts (Liv. xxviii. 39; xxxv. 23; Senatusconsultum de Asclepiade, line 8 of the Latin version). On arriving they gave in their names to the praetor or quaestor urbanus at the temple of Saturn (Liv. x. 45; Plut. *Quaest. Rom.* 43), and in due time were introduced to the senate, where they stated the object of their mission; this was done in Latin or through an interpreter down to the last half-century of the Republic, when, as all educated Romans spoke Greek, they began to be allowed to use that tongue if they wished. Cicero's rhetorical teacher, Molo, was the first to whom this privilege was granted (Val. Max. ii. 2, 3). When they had made their statement, they were liable to be questioned by individual senators (Liv. xxx. 22), under the usual formalities of senatorial procedure; they then withdrew to a platform outside the Curia called the Graecostasis (Varro, *L. L.* v. 155), where they waited until called back to hear the response of the senate (Liv. xxvi. 32, xxx. 22); or it was communicated to them by a magistrate (Liv. xlv. 20). Occasionally it happened that the senate had too much business on hand to allow them to give audience to all the envoys in Rome; in this case a committee of experienced senators was appointed to hear them (Liv. xxxiv. 57; Polyb. xxiii. 4; Senatusconsultum de Thisbanis, line 11, in *Ephemeris Epigraphica*, vol. i. p. 279). That the business became arduous as the Empire increased may be gathered (1) from the tradition, recorded by Plutarch (*Quaest. Rom.* 43), that the envoys ceased to be given *locus et lautia*, save the most distinguished, owing to their great numbers; (2) from what we know of two laws, the Lex Papia and the Lex Gabinia (both of uncertain date, but the latter either of 67 or 58 B.C.), which ordained that the senatorial sittings of the month of February should be entirely devoted to this kind of business (Cic. *Fam.* i. 4, 1; *Q. Fratr.* ii. 13, 3).

If the envoys were from a nation at war with Rome, they were received with great caution. They were not admitted into the city, but, if an audience were granted them, were lodged in the Campus Martius, and the senate met in the temple of Bellona or in that of Apollo (*extra urbem*, Liv. xxxiv. 43; Festus, s. v. *senacula*, p. 347, ed. Müll.). If no audience was accorded, they were required to quit the city and Italy within a certain time, and in their journey through Italy were escorted by a senator (Liv. xxxvii. 1; Polyb. xxxii. 1; Sall. *Jug.* 28).

The same title of legatus was used of commissioners from the provinces or from communities within them, bearing either congratulations on the conduct of a provincial governor, or complaints against him. A good example of a commission charged to explain provincial grievances will be found in Liv. xliii. 2. Cicero frequently mentions such missions in the Verrine orations; *e.g.* in i. 19 and 4, 31. Under the Empire these legationes were put under stringent regulations, of which an account will be found in Dig. 50, 18.

II. *Legati* as staff-officers; "quorum opera consilioque uteretur peregre magistratus" (Varro, *l. c.*). These were said to be legati *alicui*, as opposed to legati *ad aliquem*.

Origin.—Livy mentions these at the very outset of the Republic (ii. 20; iii. 5), but his evidence is not conclusive, and it is remarkable that so late as the battle of Cannae (B.C. 216) no legati are mentioned in the list of the slain, though we are told of consulares, quaestors, tribuni militares, and senators who were killed there. On the other hand, so deeply rooted was the idea of the *consilium* of the magistrate in the Roman mind, that it is difficult to imagine that the consuls in the field were left wholly without unofficial advisers. Perhaps the practice began as a regular institution with the acquisition of transmarine provinces; but no reason can be shown why even in Italian campaigns of an earlier date the senate should not from time to time have made use of a natural mode of keeping the commanders informed of their wishes. However this may be, from the Second Punic War onwards, every commander and provincial governor had legati with him, and Polybius writes of them as a standing institution in his time (Polyb. vi. 35; cf. Liv. xxxviii. 28, 12).

Mode of Appointment.—As in the case of legati as envoys, a senatusconsultum authorised the magistrate to select the legati out of the members of the senate (Liv. xliii. 1; cf. xliv. 18). As it frequently happened that the presiding magistrate was a consul or praetor who was about to become a provincial governor, he thus became entitled to nominate his own legati (Sall. *Jug.* 28: "Calpurnius [consul] parato exercitu legat sibi homines nobiles," &c.; cf. Plut. *Flam.* 3; Cic. *Att.* ii. 18, 3): and this mode of appointment being a convenient one, it was natural that the provincial governor should desire to establish it as a right. As a rule, however, the consent of the senate was no doubt formally obtained (Schol. Bob. on Cic. *Vat.* 15, 35). In the last century of the Republic we find examples of laws in which the number and qualification of the legati to be chosen by the proconsul was expressly laid down: this was the case in the Lex Gabinia of B.C. 67, under which Pompeius received a command against the pirates (Plut. *Pomp.* 25; Appian, *Mithr.* 94), and probably in the Lex Vatinia which gave Caesar the command of Cisalpine Gaul in B.C. 59. Under the Empire the nomination of legati seems always to have been the right of the holder of the *imperium proconsulare*, whether of the *princeps* himself as having a *majus imperium*, or the proconsuls who continued to govern the senatorial provinces (Dio Cass. liii. 14), but in the latter case the consent of the *princeps* was necessary to the validity of the nomination. (See Willems, *Droit Romain*, p. 510.)

Qualification.—The general rule was that these legati must be senators; no certain instance is recorded of an exception, but it does not follow that there was any definite disqualification of non-senators. (Cf. Mommsen, *Staatsrecht*, ii. 661, note 1, with Willems, vol. 2, p. 608, note 4.) The rule held good under the Empire.

Number.—This was no doubt usually settled by the authorising senatusconsultum in each case. After the Second Punic War, where Livy's information may fairly be relied on, the number in attendance on a praetor is generally two, while a consul has three. Later, again, we find consuls with five and praetors with three. (See Willems, *Le Sénat*, ii. p. 611.) By the Lex Gabinia, Pompeius had twenty-five allowed him, Caesar ten by the Lex Pompeia-Licinia of 55 B.C. Under the Empire there was a fixed rule that in senatorial provinces (where alone legati in the strict sense of the word are found) a pro-praetor should have one, a proconsul three (Dio Cass. liii. 14).

Duties.—As we have seen, no legatus was in any sense a magistrate, and could have no independent authority of his own; all were strictly under the orders of their chief, and were bound to carry out any kind of work he might allot them. (Marquardt, *Staatsverwaltung*, i. 387; Mommsen, *Staatsrecht*, 679.) But as the tenure of provincial commands became extended, legati were frequently employed by their Generals-in-chief as commanders of division (*i.e.* of a legion), and thence gained a standing position in the army beyond that of a mere counsellor. This becomes first apparent in Caesar's Gallic war, but it may have been to some extent the practice before (Caesar, *B. G.* 1, 52; 2, 20; 5, 1; and Rüstow, *Heerwesen Caesar's*, p. 28). It was the natural result of the practice by which commanders selected their own legati; for they took care to choose men on whose skill and fidelity they could rely, and to whom they could entrust the sole conduct of difficult or distant operations. Recommended by its usefulness, it took definite shape under the Empire. From the time of Augustus onwards each legion had its own legatus (legatus legionis, as distinguished from other legati), and the governors of imperial provinces had as many legati as legions (Tac. *Ann.* i. 44; 2, 36; Marquardt, *Staatsverwaltung*, ii. 457), all of whom, however, were selected by the *princeps*.

All military legati had the right of travelling free of cost; and the fact that they were included in the Lex Julia de repetundis, already alluded to, shows that they had opportunities of gain in the provinces where they served. Before the passing of that law, the governor or commander was himself solely responsible for the conduct of his subordinates. (See Liv. xxix. 19 foll., for the famous case of Scipio and his legatus Pleminius. Rein, *Criminalrecht*, pp. 192, 606.) He had, however, the power of dismissing a legatus, and could thus relieve himself of responsibility (Cic. *Verr.* iii. 58).

Legati pro praetore.—The increase in the importance of the legatus towards the close of the Republic is shown not only by his being frequently attached to a particular legion as its commander, but also by the growing practice by which the provincial governor deputed him to act for him in some special locality or department. As early as the earlier half of the 2nd century B.C., we find a consul, at war within the bounds of Italy, having his army in charge of a legatus in order to preside at the consular elections; and a century later it frequently happened that a legatus was placed over a whole province in the absence of the governor. Thus Caesar, who from 59 to 49 B.C. was in command both of Cisalpine and Transalpine Gaul, used to leave the one or the other in the charge of a legatus when he himself was necessarily absent (Caes. *B. G.* i. 10; i. 54). The practice was carried a step farther by Pompeius between 55 and 50 B.C., for he governed his province of Spain by legati while he himself remained in Italy (Velleius, 2, 48). In such cases it became the practice to style the deputy *legatus pro praetore* (Caes. *B. G.* i. 21: cf. Sall. *Jug.* 26 and 38). Such a title could not mean that the legatus actually held the *imperium* of a propraetor, for, as we saw, *imperium* could not be delegated; but that he held a power which was practically equivalent to it, under the *auctoritas* of his chief. But there can be no doubt that as provincial commands grow longer and more important, civic technicalities tended to lose their strength and rigidity; and we have mention in the year 82 B.C. of a *legatus pro praetore* (Pompeius in Sicily and Africa) appointed by the senate, who is also styled by one author *legatus cum imperio* (cf. Liv. *Epit.* 89, with Granius Licinianus, p. 29, Bonn edit.). The practice of governing by deputies with this honorary title led directly to the system by which, under the Empire, the *princeps*, as holder of an unlimited *imperium*, governed all the provinces not under senatorial authority (see PROVINCIA and PROCONSUL) through *legati pro praetore* appointed by and responsible to himself.

This system began with the division of provinces between Augustus and the senate in B.C. 27. From that time down to the complete reconstruction of the provincial system by Diocletian, the imperial provinces were governed by legati, either of consular or praetorian rank, according (as a rule) to the number of legions stationed in the province; but all alike were styled *legati Augusti* (or *Caesaris*) *pro praetore*, the designation *vir consularis*, or *vir praetorius*, being entirely unofficial. (Marquardt, *Staatsverwaltung*, i. 408–10.) They are to be distinguished from the *legati legionis* already mentioned, though it sometimes happened that the two offices were combined, in which case the style was *legatus pro praetore legionis* (Marq. *op. cit.* 309); and also, of course, from the ordinary legati of the proconsuls who continued to govern the senatorial provinces. These *legati pro praetore* were always, down to the reign of Gallienus, of senatorial rank, as is shown by the fact that the one provincial governor who was not a senator, the *praefectus Aegypti*, was never accorded the title of legatus.

Legati juridici.—Lastly, we find under the Empire, in the imperial provinces, certain *legati juridici* (also known simply as *juridici*), who seem to have been persons of senatorial rank appointed by the *princeps* to perform the subordinate judicial duties which in senatorial provinces were administered by the ordinary legati of the proconsul. These date probably from the beginning of the Empire; for as the *legatus pro praetore*, being himself a delegate of the *princeps*, could not delegate his duties to others like a proconsul, the governors of imperial provinces would have had no assistants for their work if the *princeps* had not supplied them. Thus we find even under Augustus (Strabo, iii. 4, 20) a *legatus pro praetore* in Spain, with three *legati* under him, who must have been *legati juridici*; and in later times, especially after Hadrian's reign, the title *legatus juridicus* occurs frequently in inscriptions. (The best account of these will be found in the French translation of Mommsen's *Staatsrecht*, by P. F. Girard, i. pp. 263, 264, and notes, where the additional matter has the sanction of the author of the work.)

After the reconstitution by Diocletian and Constantine of the whole system of government, the word *legatus* rapidly disappears, in the technical senses which have been explained; only surviving in the case of the legati attached to the provinces of Asia, Africa, and Achaia, which continued to be governed by proconsuls, or in an occasional inscription showing that the new nomenclature of *praesides* or *rectores provinciarum* did not at once supersede it in common usage. (Cf. *Notitia Occidentalis*, xviii. p. 162, 2. 3; and Orelli, *Inscr.* 3672; Schiller's *Geschichte der Kaiserzeit*, ii. p. 56.)

[For more detailed information, see the chapter on Legati in Mommsen's *Staatsrecht*, 2nd edit., ii. p. 657 foll.; cf. vol. i. 222 foll., with the additional notes in the French translation: also Marquardt, *Staatsverwaltung*, i. 408 foll.; Willems, *Le Sénat de la République*, ii. 492 foll. and 606 foll.; Buettner-Wobst, *de Legationibus Reipublicae*, Leipzig, 1876.] [W. W. F.]

LEGES. [Lex.]

LE'GIO. [Exercitus.]

LEGIS A'CTIO. [Actio.]

LEITU'RGIA (λειτουργία, or in the older form found in inscriptions up to the 3rd century, ληιτουργία, derived from λέϊτος or λήϊτος, a synonym of δημόσιος, and *ἔργω), the name given to certain public services, consisting partly of money and partly of personal labour, performed by wealthy individuals (called *liturgi* in this relation, Gr. λειτουργοί) for the state, in Athens and other states of Greece. (A list of these other states may be found in Boeckh's *Public Economy of Athens*, book iii. c. 1. The most remarkable are Thebes, of which we read in Plutarch's *Aristides*, c. i., that Epaminondas assisted by Pelopidas provided there a concert of flute-players; and Aegina, as to which see the singular and amusing story, antecedent to the Persian wars, related in Herod. v. 83.) We know, however, but little of these "liturgies" in any other state except Athens. At Athens they were among the most characteristic institutions of the democracy; and though they had their faulty side, there was much in the working of them that was brilliant, and even solidly excellent.

The whole idea of the liturgies was that the rich men of the community should expend their substance and devote their labour for the benefit of all, whether in the way of solid protection or by the encouragement of graceful pursuits and exhilarating contests; the honour and glory of thus administering to the entire nation, and sometimes of winning prizes for pre-eminence in the displays, being the sole and a sufficient reward. Nothing exactly similar has ever been seen in modern times; a faint reflection of it may be found in such an office as that of high sheriff among ourselves, which is at once onerous, obligatory, and conveys with it a certain credit to him who holds it.

Our detailed knowledge of these liturgies is for the most part derived from the orators of the 4th century B.C., in whose various speeches, public and private, they are constantly mentioned. Nevertheless, that century was not the time of their greatest splendour; the Sicilian expedition, and the disastrous close of the Peloponnesian war, had thrown a cloud over the fortunes of individual citizens, as well as over the state at large. They attained their culmination during the few years which succeeded the Peace of Nicias. But on this point, and on their history generally, more will be said in a subsequent part of this article.

There were two main kinds of liturgies at Athens: those relating to the amusements of a population in its peaceable life, which were called "ordinary" (ἐγκύκλιοι); and certain others to which no specific Greek name was assigned (by modern writers they are called "extraordinary"), but which practically related to the defence of the state against foreign foes.

The ordinary liturgies were principally the Choregia, or maintenance and training of a chorus for the theatrical festivals; Gymnasiarchia, or training and maintenance of gymnasts (likewise with a view to public festivals); with this last the Lampadedromia, or preparation of runners for the torch-race, was closely connected; Hestiasis, or the feasting of the tribe to which the "liturgus" belonged; and lastly the Architheoria, or superintendence and furnishing forth of sacred embassies, such as those to Delphi or Delos. It would be very incorrect to conceive of any of these great offices as a mere tax in money upon the holder of them; they were this indeed, but they were more: the choregus, the gymnasiarch, the phylarch, and the architheorus were bound to bestow personal labour in their respective offices. (See the separate articles: Choregus; Gymnasium; Lampadedromia; Hestiasis; Theoria.) Every citizen whose property amounted to three talents or upwards was liable to be called upon to undertake an ordinary liturgy; citizens of less means were, it would appear, not liable. (Compare Dem. *c. Aphob.* p. 833, with the closing sentences of Isaeus, *de Pyrrhi hered.*)

The extraordinary liturgies were the Trierarchia, or the fitting out of a ship of war, and the Proeisphora, or the advance, in time of need, of the Eisphora, or war-tax, due by less wealthy citizens (who, however, could be made to refund afterwards). The Eisphora itself has sometimes been reckoned among the liturgies; but it is distinguished from them by the fact that no man by paying it escaped from the performance of another liturgy (Dem. *c. Leptin.* p. 465; *c. Euerg. et Mnesib.* p. 1155). [Trierarchia; Eisphora; Proeisphora.] The Trierarchia was the most expensive of all the liturgies, sometimes costing as much as a talent, and demanded greater wealth in the holder of it. Hence after the time of the Sicilian expedition it became common to join two persons in the performance of it; and in B.C. 358 the law of Periander made the trierarchy still more like a mere tax, by enacting that it should be contributed by companies (συμμορίαι), like the war-tax. None of the other liturgies suffered this degradation; though for a short time after the Sicilian expedition two persons were permitted to join in the office of choregus (Scholiast, Arist. *Ranae*, 404; and see also Fränkel's note 757 to Boeckh). The trierarch, like the other liturgi, had to give personal service; he commanded his own ship in the old times: how the actual commander was appointed when the συμμορίαι were introduced, is not clear; he appears sometimes to have been an outside person who contracted to take the duty (Dem. *c. Mid.* p. 564).

How were the various liturgi appointed? The answer to this question has some elements of difficulty. Essentially, the tribe was responsible for the appointment; and in the case of an ordinary liturgy, this responsibility centred in the overseers of the tribe (ἐπιμεληταὶ τῆς φυλῆς). Supposing a tribe failed to appoint a liturgus, the archon (*i.e.* the Archon Eponymus or the Archon Basileus, according to the festival concerned) would inquire the reason of such default from the overseers; and lively scenes of recrimination would ensue, as we learn from the speech of Demosthenes against Midias (p. 519), where such a default on the part of the tribe Pandionis is recorded (in this instance Demosthenes himself, though of another tribe, eventually volunteered to take the office). It is not to be inferred, however, that the overseers had an absolute power of appointing the liturgus; had this been the case, the difficulty in the tribe Pandionis could hardly have arisen. The Scholiast to Demosthenes (quoted by Fränkel in note 754 to Boeckh) affirms that the rich men of the tribe took the office by turns. That this should have been the case to some extent, was almost inevitable; but the notices in the orators do not permit us to suppose that such an order was very accurately preserved. If a man was conspicuously wealthy, and especially if he had landed property, he would often be expected to serve, whether it were his turn or not (see Dem. *c. Polycl.* p. 1208: a passage not less pertinent because it refers to the *προεισφορά*, an extraordinary liturgy). And in fact, whatever the power of the overseer in this respect or the validity of the rule of rotation in the selection, it is probable that direct election by the votes of the tribe was not unfrequently resorted to. (Observe especially in Dem. *c. Boeot.* p. 996, the phrase *οἱ φυλέται οἴσουσι...χορηγὸν ἢ γυμνασίαρχον ἢ ἑστιάτορα*, and compare Antiphon, *Choreut.* §§ 11–13, where the speaker is choregus of his tribe by direct appointment, and yet from the way in which Amynias, the overseer of the tribe, is mentioned, it seems unlikely that the appointment lay in his hands.) Voluntary offers to undertake a liturgy no doubt sometimes superseded the necessity of a formal appointment; but this would be the exception: in the passage just referred to (Dem. *c. Boeot.* p. 996) it is assumed that a man would naturally seek to escape the burden of a liturgy. From the next page of the same oration (p. 997) we learn that the two principal archons and the managers of the contests at the Panathenaea (*ἀθλοθέται*) would on occasions appoint a liturgus; and clearly the Architheorus, for instance, who had a function that concerned the whole state, would not be appointed by any particular tribe. The *ἀθλοθέται* were, however, tribal officers.

The method of appointment to the extraordinary liturgies was also connected with the tribes; but here the general (*στρατηγὸς*) was the authority by whom the appointment was made; at any rate this was the case with respect to the trierarchy, and probably with respect to the *προεισφορὰ* as a rule, though in Dem. *c. Polycl.* p. 1208 we find the members of the Council (*βουλευταί*) directed by the people to draw up a list of the rich men in their several demes who should make these advances of the war-tax. The generals, it would appear, sat as a united board for the appointment both of the trierarchical classes and the individual trierarchs (Dem. *c. Lacrit.* p. 940; *c. Boeot.* 997); we may conjecture that each general would mainly arrange for the trierarchs in his own tribe, and the constitution of Cleisthenes provided that each tribe should contribute an equal number of ships to the state, but nothing is said on these points in later times, and it is possible that the connexion with the tribes gradually dropped out of view in respect of the trierarchy.

As to the limitations on the liability of any special man to be called upon to perform any liturgy, two rules are mentioned: one, that no man could be required to perform two liturgies, ordinary or extraordinary, at once (Dem. *c. Lept.* p. 462, § 19); another, that no man could be required to perform a liturgy during two successive years (Dem. *c. Lept.* p. 459, § 8). In spite of these rules, we find in Dem. *c. Polycl.* p. 1209, § 9, the complainant affirming that he had been chosen to perform the *προεισφορὰ* while yet performing the office of trierarch: he implies indeed that he might have refused to do so; but clearly this would have been an unpopular act. So, too, the plaintiff in the speech of Isaeus, *Or.* 7 [*Apollod.*], § 38, says of his grandfather, "Besides having served all the other liturgies, he continued his whole time to do the duty of trierarch; not getting his ship in an association like men of the present day, but at his own cost; not jointly with another, but singly; not every other year, but without intermission; not in a perfunctory way (*ἀφοσιούμενος*), but providing the best possible equipments. For which you not only honoured him in remembrance of his conduct, but prevented his son being deprived of his property," &c. It is implied no doubt in this passage (as in the similar passage, Lys. *pro Polystr.* § 31 ff.) that such liberality on the part of the liturgus was in great measure voluntary; but we cannot mistake the fact of there being great irregularity in the practical carrying out of all rules in regard to these appointments.

The connexion with the tribes, in the ordinary liturgies, existed not only in respect of the appointment of the liturgus, but also in respect of any victory won by his chorus of singers, his gymnasts, &c. On the tripod that he was privileged to put up after such a victory (for which tripods a special street in Athens was set apart), not only his name but the name of his tribe was inscribed.

Various other liturgies of minor importance are mentioned. (See article ARRHEPHORIA; also Boeckh, book iii., c. 21, and the note 755 of Fränkel.) The *μέτοικοι* or resident aliens were capable of performing the choregia at the festival of the Lenaea (Schol. *ad* Arist. *Plut.* 954) and the Hestiasis (Ulpian, *ad* Dem. *Leptin.* § 15); possibly, too, there were some peculiar to the *μέτοικοι*. A liturgy which citizens performed was called λειτουργία πολιτική, in opposition to a *λειτουργία τῶν μετοίκων*.

How far the liturgies were an oppressive burden on the rich Athenians, is a point on which differences of opinion have existed. The threat of Cleon to the Sausage-seller in the Knights (v. 912), "I will make you serve as trierarch, with an old ship and a rotten sail," &c., is evidence enough that such oppression was possible. The orators clearly show, as we should expect, that while some persons sought these offices for the sake of the popularity they conferred, others tried to escape them. On the whole, however, it would appear that the necessary legal burden which they imposed was not ruinous (see Boeckh on the point); and though some persons did ruin themselves by their liturgies, this is generally attributed to their ambitious extension of the duty rather than to its intrinsic character. Yet Antiphanes (in Athenaeus, iii. 62) speaks of the people as bidding a man waste his money on a chorus, till he has to go in rags. (See Aristot. *Polit.* v. 8; Xen. *de Rep. Ath.* i. 13; Dem. *c. Euerg. et Mnesib.* p. 1155, § 54; various parts of Lysias, *de Aristophanis bonis;* and Isocr. *de Big.* 15.)

The archons, also heiresses and orphans until the commencement of the second year after their coming of age, were free from all liturgies. So we must conclude from Dem. *de Symmor.* p. 182, and Lysias, *c. Diogeit.* § 24; though, were it not that these passages especially related to the trierarchy, we might infer from Dem. *c. Leptin.* pp. 462–465, that that office was an exception as far as the heiresses and orphans are concerned: so express is the affirmation in this last oration that no one but the nine archons was by law free from the trierarchy. Even the descendants of Harmodius and Aristogeiton, it is said, who were free from the other liturgies, were obliged to perform the trierarchy. The exemption of the descendants of Harmodius and Aristogeiton was one of those special immunities which afterwards, in the 4th century, were granted much more freely than had been the case previously; and these never included the trierarchy. Leptines (B.C. 356) procured the passing of a law which prohibited these immunities in general; Demosthenes endeavoured, and it is generally thought with success, to get this law rescinded about a year afterwards. (On this, see Kennedy's 1st appendix to his translation of Leptines.)

Of all the customs connected with the liturgies, none was more singular than the right which every citizen who was nominated for one of them had, of proposing to any other citizen equally bound with himself and of greater wealth, either to take the liturgy in his place or to exchange properties. That this right was no dead letter, the speeches of the orators show; though the actual exchange probably was seldom carried out. [ANTIDOSIS.]

It remains to make some observations on the history and development of these liturgies. We cannot rely on the specific ascription of them to Solon as their originator; and yet probably those who weigh the entire probabilities of the case will be of opinion that they commenced not later than his time, and owed, if not their actual beginning, at all events much of their subsequent growth, to that liberal impulse which he imparted to the internal policy of Athens. It is true, as Fränkel (note 752 to Boeckh) remarks, that the liturgies, as we know them, were in close connexion with the ten tribes of which Cleisthenes was the author, and that therefore our knowledge of them, strictly speaking, does not commence earlier than his date. It is true also, that we may refuse to believe even so precise a statement as that of Aeschines (c. *Timarch.* § 7) to the effect that the actual Solonic laws on the subject were visible at Athens in his time, without any imputation of falsehood against Aeschines, or of forgery against anyone else: for the whole series of Athenian laws was revised and remodelled after the expulsion of the Thirty Tyrants, under the archonship of Eucleides; and as the object of the revisers was not antiquarian accuracy, but present expediency, much would be set down under the name of Solon that was really contributed by the revisers, or perhaps by some earlier authority. Still we must not refuse all weight to what Aeschines says; and the second (probably not genuine) book of Aristotle's *Oeconomics* affirms that they were in existence in the age of the sons of Pisistratus. The probabilities of the case also are in favour of an early date for them. The objects for which the liturgies existed were valid before as well as after the time of Cleisthenes; the dithyrambic chorus, for instance, was very ancient, and even the first dramatic exhibition dates from B.C. 535. It is in the abstract conceivable that the state paid the whole expense of this; but the contrary is more probable; for the dithyrambic singers were closely connected with the rhapsodists, and surely these were not state-paid? And if Cleisthenes had made any great change in the manner of defraying such expenditure, should we not have been told of it? Nor can we fail to see the analogy between the naucraros, or chief of the naucrary (which in the Solonian constitution was obliged to contribute a trireme and two horsemen for the state service, Pollux, viii. 108), and the trierarch of a later date. The naucraros would not of course contribute the whole ship from his own resources; but it is natural to suppose that the duty of keeping it in good trim was mainly imposed on him, so that the difference between him and the trierarch would be small. (Cf. in Hermann's *Griech. Staatsalt.* § 98, note 3, the quotation from Bekker's *Anecdota.*) Besides, the whole look of such an institution as the liturgy is of something springing spontaneously out of the popular sentiment, and therefore of gradual growth; the ordinary liturgy was no political, nor even a religious, necessity (see Dem. *c. Leptin.* pp. 494, 495). And the derivation of λειτουργία, the antique character of the first half of the word, implies considerable antiquity in the thing it represents.

We may assume, then, that the liturgies were in process of development during the 6th century B.C. The institution of the ten tribes by Cleisthenes would necessitate their re-arrangement; the immense increase of the Athenian power during the succeeding century would foster them into splendour. In no other century do we find mention of such an incident as that of Cleinias, who, in the battle of Artemisium, fought in a ship built and manned (with 200 men) at his own expense entirely. Plutarch tells us of the magnificence with which Nicias conducted the religious embassy at Delos, and of the still greater display of Alcibiades at the Olympic games. The Sicilian disaster and the defeat of Athens at the close of the Peloponnesian war caused a great fall from this exuberance. Isocrates (*de Antid.* p. 84, §§ 159, 160) forcibly describes the change in public feeling: in his own boyhood, he says, every one sought to make himself appear richer than he was; now (rather before the middle of the 4th century) every one tries to conceal his wealth, for fear of informers. This has been thought to be the grumbling of an old man; but it was no unnatural result, and there is corroborative evidence. Thus Demosthenes (*c. Lept.* p. 492) implies that the state in his time was much poorer than formerly; and he even appears to connect the growth of the exemptions from liturgies from this cause; the state could make more valuable gifts in land and money formerly, he says. It was, however, the trierarchy that suffered most from this comparative poverty; this is clear from the very institution of the "symmories," and it is emphasised by Demosthenes (*Phil.* i. p. 50, § 35): "How is it," he asks, "that your magnificent festivals always take place at the appointed time, while all your armaments are after the time? Because in the former case everything is ordered by law, and each of you knows long beforehand, who is the choregus of his tribe, who the gymnasiarch, when, from whom, and what he is to receive, and what to do. Nothing there is left unascertained or undefined: whereas in the business of war and its preparations all is irregular, unsettled, undefined. Therefore it is only when we have heard some news that we appoint trierarchs; then we dispute about exchanges, and consider about ways and means; ... during these delays the objects of our expedition are lost." It will be seen that this passage implies what we should also gather from the orators, that the offer of exchange of property (ἀντίδοσις) was far more frequent in the case of the trierarchy than in the case of the other liturgies; this is another sign of the comparative unpopularity of the trierarchy in these later times as compared with the other liturgies. The reason is obvious, that there was much less show about it, and therefore less personal aggrandisement of the liturgus. Yet exceptions must in fairness be admitted; as the splendid discharge of this office by the banker Pasion, if we way trust his son Apollodorus (Dem. *c. Steph.* p. 1127); and the more certain fact that volunteers were for the first time found for the trierarchy in the enthusiastic movement, brought about by Timotheus, for the recovery of Euboea, B.C. 358 (Dem. *de Cor.* p. 259; *de Cherson.* 108). It may be observed that Aristotle (*Polit.* v. 8) disapproved of the ordinary liturgies; remarking that "it would be better if the people would prevent the rich men, when they offer to exhibit a number of unnecessary and yet expensive entertainments of plays, torch-races, and the like." He may have been justified in his own time, while yet in earlier ages the liturgies may have been a result of true patriotic impulse, and a binding link between the rich and the poor.

On the subject of the liturgies, see especially Boeckh's *Staatshaushaltung der Athener*; Hermann, *Staatsalterth.* § 161; Wolf, *Prolegom. in Demosth. Leptin.* p. lxxxvi., &c.; Wachsmuth, vol. ii., p. 92, &c.; Kennedy's translation of the *Oration against Leptines*, &c., Appendix ii. p. 242. [J. R. M.]

LEMBUS (λέμβος), according to Fulgentius called also *dromo*, which defines it as a swift and light vessel. It was a small boat used to carry persons from the ship to the shore (Plaut. *Merc.* i. 2, 81; ii. 1, 35). So in Dem. *c. Zenoth.* p. 883, the λέμβος seems to be a small boat towed behind the ship into which Hegestratus tries to jump so as to escape to shore; and in Theocr. xxi. 12, it is a small fishing boat for oars (cf. Verg. *Georg.* i. 201). The name was also given to boats larger than this, but in the same manner light and swift, sent ahead to obtain information of the enemy's movements (Polyb. i. 53), or for plundering excursions (Liv. xxx. 45); also as fast-sailing transports (Polyb. li. 3). [W. S.] [G. E. M.]

LEMNISCUS. [See CORONA.]

LE'MURES. See *Dict. of Greek and Roman Biography and Mythology.*

LEMU'RIA, a festival for the souls of the departed, which was celebrated at Rome every year in the month of May. It was said to have been instituted by Romulus to appease the spirit of Remus whom he had slain (Ovid, *Fast.* v. 473, &c.), and to have been called originally Remuria (clearly a fanciful derivation). It was celebrated at night and in silence, and during three alternate days, that is, on the 9th, 11th, and 13th of May. During this season the temples of the gods were closed, and it was thought unlucky for women to marry at this time and during the whole month of May, and those who ventured to marry were believed to die soon after, whence the proverb *mense Maio malae nubent.* Those who celebrated the Lemuria walked barefooted through the house, washed their hands three times, and threw black beans nine times behind their backs. At the same time the words were used, "I redeem myself and my household with these beans," and the ghosts were bidden to quit the house. It was supposed that they followed behind the thrower and gathered up the beans. The Lemures, as the Larvae, represented the spirits of the wicked and haunted a house for evil: beans were sacred to the infernal powers, for which reason the Flamen Dialis was forbidden to touch or even to name them, just as he was forbidden to approach a grave or a dead body (Gell. x. 15); and *black* beans, like the πάμμελας ὄϊς of Homer, would be particularly appropriate to the Lemures. That the festival was a very ancient one may be conjectured from its fetish-like character, and from the fact that it was celebrated by the father of the family for his own household. (For the date of the Lemuria, see Marquardt, *Staatsverwaltung*, iii. 575: and for details of the ceremony, Ovid, *l. c.*; Preller, *Röm. Myth.* 499.) [L. S.] [G. E. M.]

LENAEA. [DIONYSIA.]

LENO, LENOCI'NIUM. Lenocinium is defined by Ulpian as the keeping of slaves or free women for prostitution and the profits of it: "Lenocinium facit, qui quaestuaria mancipia habet, sed et qui in liberis hunc quaestum exercet in eadem causa est" (Dig. 3, 2, 1; *ib.* 4, 2): cf. Dig. 23, 2, 6–9, "Lenas eas dicimus quae mulieres quaestuarias prostituunt." The brothels of Rome (*lupanaria*) are mentioned by Plautus, Juvenal, and Quinctilian. In the Digest it is said more than once (*e.g.* 23, 2, 43, 1) that the keeping of a tavern was often no more than a cloak for this kind of trade; and Alexander Severus enacted (Cod. 4, 56, 3) that an *ancilla* who was sold under a condition that she should not be prostituted, should not either be sold into service in a public house, as if the two things were almost identical. The trade, however, was not forbidden, though it seems to have been requisite for lenones to be registered with the aedile, and by the praetor's edict they were one of the classes branded with the stigma of *infamia* (Dig. 3, 2, 4, 2): in the time of Caligula, too (Sueton. *Calig.* 40), a tax was imposed on all who kept brothels. Theodosius and Valentinian (Cod. 1, 4, 12) enabled slaves and children whom their masters or fathers forced to prostitution to obtain protection by application to the authorities of the church, and they also forbade the practice of lenocinium under pain of exile, corporal punishment, &c. (*Cod. Theod.* 15, 8, 1, 2; *Nov. Theod.* tit. 18). Justinian (*Nov.* 14) also attempted to suppress the business by banishing lenones from the city, and by making the owners of houses who allowed prostitution to be carried on in them liable to forfeit the houses and pay ten pounds of gold: those who by trickery or force got girls into their possession and gave them up to prostitution were punished with the "extreme penalties," but it is not said what these were.

Most of the passages bearing on this subject in the writings of the jurists relate to the lenocinium which the Lex Julia de adulteriis (Dig. 48, 5, 2, 2; cf. Cod. 9, 9, 2) subjected to the penalties of *adulterium* itself, for which see *Inst.* iv. 18, 4. Among such acts are allowing one's house to be used for adultery or *stuprum*; acquiescing in the adultery of one's wife in order to share the gain she made; to keep or take back a wife whom one has detected in an act of adultery (Sueton. *Dom.* 8; Paul. *Sent. rec.* 2, 26, 8); to let an adulterer detected in the act escape, or not to prosecute him. A husband who winked at his wife's adultery had no right to retain any portion of the *dos* (Dig. 24, 3, 47); but by *Nov.* 117, 9, 3, Justinian allowed a wife a divorce if her husband attempted to make her prostitute herself, and enabled her to recover both *dos* and *donatio propter nuptias*. With respect to other persons than the husband, it was lenocinium by the Lex Julia if a man married a woman convicted of adultery: if, having detected others in adultery, he held his peace for a sum of money, or if he commenced a prosecution for adultery and then discontinued it. (Rein, *Criminalrecht der Römer*, p. 883; Walter, *Geschichte des römischen Rechts*, § 811.) [G. L.] [J. B. M.]

LEONIDEIA (λεωνίδεια) were solemnities celebrated every year at Sparta in honour of Leonidas, who, with his 300 Spartans, had fallen at Thermopylae. Opposite the theatre at Sparta there were two sepulchral monuments, one of Pausanias and another of Leonidas, where a contest was held, in which none but Spartans were allowed to take part. (Paus. iii. 14, § 1.) [L. S.]

LEPESTA (λεπάστη), a wine bowl mentioned by Varro among *vasa vinaria*. He also says, "Ubi erat vinum in mensa positum, aut lepestam aut galeolam aut sinum dicebant; tria enim pro quibus nunc dicimus acratophoron" (Varr. *ap.* Priscian. vi. 714). It was therefore, like the acratophoron, filled with pure wine and placed on the table. He speaks, too (*L. L.* v. 26, 35), of its being used in Sabine sacred rites to hold wine; and says that it was either of pottery or metal (Varr. *ap.* Non. 547, 26. See also Arist. *Pax*, 916, and Athen. 484 f.). In these instances it seems to be used as a drinking cup. Its shape may be guessed from its connexion with the word λέπας, "a limpet," a more probable source than λάπτω, "to swallow." It may be noticed that conversely the Latin word for limpet is *patella*. (Marquardt, *Privatleben*, 654; Becker-Göll, *Gallus*, iii. 410.) [G. E. M.]

LEPTON. [Chalcus; Obolos.]

LERIA. [Limbus.]

LERNAEA (λερναῖα) were mysteries celebrated at Lerna in Argolis in honour of Demeter and also to Dionysus, for both deities had shrines there. Dionysus had descended by the marsh of Lerna to the nether world to seek his mother Semele. Pausanias says that part of these rights might be revealed to the uninitiated, but that which belonged to Dionysus might not. Probably these mysteries reproduced the doctrines of Eleusis about a future life. We are told that there was a doubtful tradition to the effect that Philammon instituted these mysteries. In ancient times the Argives brought firs for them from the temple of Artemis Pyronia on Mount Crathis. (Paus. ii. 36, 37, viii. 15; Maury, *Relig. de la Grèce*, ii. 370.) [L. S.] [G. E. M.]

LESCHE (λέσχη) seems to be connected with λέγω, though the history of the form which it takes is not quite clear (Curtius, *Greek Etym.* 366). It means conversation, and hence a place of conversation or council. The definition in Photius is λέσχας ἔλεγον δημοσίους τινὰς τόπους, ἐν οἷς σχολὴν ἄγοντες ἐκαθέζοντο πολλοί .... ἐξέδρας δὲ ὁμοίας γενέσθαι. In early times they were the places for lounging and gossip, such as could be found in the village smithy, παρ᾽ δ᾽ ἴθι χαλκεῖον θῶκον καὶ ἐπαλέα λέσχην (Hes. *Op.* 491). (Compare the mention of *furnus* as a place for gossip in Horace.) In *Od.* xviii. 329 the λέσχη seems to be mentioned as distinct from the smithy, though both are mentioned as places for gossip. It is probable that even in those early times there were covered places, porticoes or verandahs, open to the sun (ἀλεεινοὶ τόποι, as Hesychius calls them, and this is probably the sense of ἐπαλής), which were used as a sort of village club. We gather from the grammarians that there were commonly in Greek cities such places called λέσχαι, where the idle resorted for conversation, the poor to find warmth and shelter; at Athens it is said that there were several. (Eustath. *ad Od.* l. c.; Proclus *ad* Hes. *l. c.*; Kühn *ad* Ael. *V. H.* ii. 34; *C. I.* 93, 23.)

In the Dorian states especially we find the word used for a sort of club-room and as a place for meeting and consultation. At Sparta every *phyle* had its lesche. Pausanias names two, one called the λέσχη Κροτανῶν, the other (from its decoration) the λέσχη ποικίλη (Paus. iii. 14, § 240; 15, § 245). Plutarch (*Lyc.* xxv. § 55) speaks of them as used for business also, but especially for the relaxation of the citizens (ἥδυσμα τοῦ πόνου), in contrast to their severe bodily exercises and drilling; in fact, "The proper home of the Spartan art of speech, the original source of so many Spartan jokes, current over all Greece, was the Lesche, the place of meeting for men at leisure near the public drilling-grounds, where they met in small bands and exchanged merry talk, as soldiers do by the watch-fire in the camp. Here men learnt the give-and-take of Spartan speech" (Curtius, *Hist. of Greece*, E. T., vol. i. p. 205). No doubt those at least mentioned by Pausanias had some architectural pretensions, and we find others such elsewhere, especially those in connexion with the temples of Apollo (which suggests that, though in vogue among Ionians also, they belonged more particularly to Dorians); and hence Apollo as their guardian is called *λεσχηνόριος*. Most famous of all was the Lesche of the Cnidians at Delphi, a court surrounded by colonnades or cloisters and painted in the colonnades on the right and left by Polygnotus: the Trojan war on the right, with the taking of the city and the loosing of the fleet; the realms of death, into which Ulysses descended, on the left. The paintings are elaborately described by Pausanias (x. 25–31, § 859 *sq.*), who was fortunate enough to have seen them. [P. S.] [G. E. M.]

LEX. This term indicates generally a rule of law binding universally on the citizens of a given state: "Lex est commune praeceptum, virorum prudentium consultum, delictorum coercitio, communis reipublicae sponsio" (Dig. 1, 3, 1); "Legis virtus est haec, imperare, vetare, permittere, punire" (*ib.* 7). In the works of the Roman writers and jurists it is used to denote an enactment of any body (or even individual) constitutionally empowered to legislate, but more properly it is used only of the enactments of the Comitia Centuriata. Definitions of *lex* will be found in Cicero, *de Leg.* i. 6 (cf. ii. 16); in Aulus Gellius, x. 20 (by the jurist Capito); in Gaius, i. 3 (adopted in Justinian's Institutes, i. 2, 4); and in Dig. 1, 3, 1 (by Papinian).

The earliest leges of which we read were those made in the Comitia Curiata (whence they are called Leges Curiatæ), which till the reforms of Servius Tullius was the only legislative body at Rome. Some of these—the so-called *leges regiae*—were said to have been enacted by the Comitia on the motion of Romulus, as well as of the kings who succeeded him (Dig. 1, 2, 2, 2). Dionysius says (iii. 36) that a collection of these leges regiae was made towards the end of the regal period by one Sextus Papirius, a commentary on which, written in the time of Julius Caesar by Granius Flaccus, is quoted in Dig. 50, 16, 144; but it is improbable that they were anything more than formal restatements of customary law already binding, and the fact that Sextus Papirius was (according to Dionysius) a pontifex suggests that they may have been only of sacerdotal import. (Some of their substance has been collected in a fragmentary form by earlier writers, and there is an essay on the subject by H. E. Dirksen: *Versuche zur Kritik und Auslegung*, Leipzig, 1823). It may indeed be doubted whether any large proportion of the enactments of the Comitia Curiata were genuine "laws," though the fifty leges of Servius mentioned by Dionysius (iv. 13) seem to have made some general changes; at any rate it is certain that after the establishment of the Comitia Centuriata by Servius Tullius the assembly of the Curiae, as a legislative body, fell almost entirely into disuse. We read of its conferring the *imperium* on the magistrates, sanctioning testaments and adrogations, and confirming some of the resolutions of the centuries which were held to require a religious sanction, and in all these cases it acted by a resolution or *lex*, but the difference between such a *lex* and a true law is too obvious to need any further exposition. And though even under Augustus a shadow of the old constitution was preserved in the formal bestowal of the *imperium* by a Lex Curiata only, the assembly of the Curiae had ceased even before Cicero's time to consist of the old patricians: they were merely represented by thirty lictors.

In the sense of a genuine enactment, establishing a rule of law, *lex* denotes the legislation of the Comitia Centuriata, in which the law was proposed (*rogabatur*) by a magistrate of senatorial rank, usually by one or both of the consuls for the year (*Inst.* i. 2, 4). Such leges were also called *populiscita* (Festus, *s. v.* Scitum Pop.).

The resolutions of the Comitia Tributa, whose origin was almost contemporaneous with that of the centurial assembly, had not at first the force of law: they seem to have been regarded merely as expressions of plebeian opinion, by which the patricians gauged the temper of the political opposition, and were guided to the line of policy which party exigencies rendered expedient. They were known as *plebeiscita* because the Comitia Tributa was at first attended only by members of the plebs, though every Roman was in fact enrolled in a tribe, and entitled to attend. When the tribunate of the plebs was instituted (*circ.* B.C. 494), a means was provided by which the resolutions of the tribes might become law. The tribunes were permitted to appear at the threshold of the building where the senate deliberated, and lay before it the proposals of the order which they represented: if approved, these proposals could then be referred in the ordinary way to the Comitia Centuriata, and thereby become genuine enactments of the sovereign populus (Val. Max. ii. 2, 7). After the enactment of the Lex Horatia Valeria (B.C. 449) the patricians seem to have begun to take part in the business of the Comitia Tributa, and it was perhaps provided by the same statute that plebiscita which related to matters of purely private law should have binding force without confirmation by the centuries. This exemption was apparently extended to all plebiscita by the first of the Leges Publiliae, B.C. 339 (Liv. viii. 12; Gellius, xv. 27), and finally a Lex Hortensia (B.C. 287) dispensed with the requirement of senatorial sanction to plebiscita. By this last change they were placed on a footing of complete equality with leges passed in the Comitia Centuriata (Dig. 2, 14, 7, 7; Gaius, i. 3; *Inst.* i. 2, 4): as the latter were proposed to the centuries by a senatorial magistrate, so they were submitted to the tribes by a tribune: leges related in the main to administrative and constitutional matters, plebiscita to matters of private law. The result of the equal legislative authority of the two comitia was that plebiscita came not uncommonly to be called leges, *lex* becoming a generic term (Dig. 1, 3, 32, 1), to which was sometimes added the specific designation, as "lex plebeivescitum," "lex sive plebiscitum est" (*e.g.* the Tabula Heracleensis, Savigny, *Zeitschrift*, &c. vol. ix. p. 355). Cicero, in his enumeration of the sources of Roman law (*Top.* 5), does not mention plebiscita, which he undoubtedly included under leges: among the so-called leges which in fact were plebiscita are the Lex Aquilia (Cic. *pro Tullio*, 8, 11; Dig. 9, 2, 1, 1), the Lex Canuleia, Lex Rubria, &c.

The term *rogatio* means any measure proposed (bill, *projet de loi*) to the legislative body, whether on its enactment it would technically be a lex or a plebiscitum: hence the expressions *populum rogare* (Cic. *Phil.* i. 10, 26), *plebem rogare* (*de Leg.* iii. 3, 9), *legem rogare* (*de Republ.* iii. 10, 17; *Phil.* ii. 29, 72; Dig. 9, 2, 1, 1), and, by analogy, *magistratum rogare*, to offer a magistrate for election to the people (Liv. iii. 65, vii. 42; Cic. *ad Att.* ix. 15, 2, &c.; Sallust, *Jug.* 29: cf. Festus, *s. v.* Rogatio). The form of such rogation (in the case of an adrogation effected before the Comitia Curiata) is given by Gellius, v. 19, 5, 9: "Velitis jubeatis, uti L. Valerius L. Titio tam jure legeque filius siet, quamsi ex eo patre matreque familias ejus natus esset, utique ei vitae necisque in eum potestas siet, uti patri endo filio est, haec ita uti dixi, ita vos quirites rogo." Assent to the proposal was expressed in the form "uti rogas" (which explains the term *sponsio* in the definition of *lex* above from Dig. 1, 3, 1); rejection by the verb *antiquo* (Liv. iv. 58, v. 30, 55, &c.; Cic. *de Off.* ii. 21, 73; *ad Att.* i. 13; *de Leg.* iii. 17, 38). The measures submitted were not unfrequently called *rogationes* even after their definite enactment as leges or plebiscita; and in Dig. 35, 2, 1, pr., an enacted statute is termed "lex rogata." "*Promulgare* legem" denotes the publication of its terms for the public information (see **Lex Caecilia Didia** *inf.*), such publication being usually followed by *contiones* or meetings in which the bill was explained and recommended to the people by its proposer or supporters (*suasores*): this promulgation and informal discussion is expressed by the phrase "*ferre* legem" as contrasted with *rogare*, which is confined to the solemn submission of the measure to the Comitia for acceptance or refusal: the general term used for acceptance is "rogationem *accipere*." "Legem *perferre*" is to carry a rogatio, to convert it into a lex (Cic. Cornel. *fragm. ap.* Ascon.; Liv. xxxiii. 46). Other terms familiarly used in connexion with leges are explained by Ulpian (*Reg.* 1, 3): "Lex aut rogatur, id est fertur: aut abrogatur, id est, prior lex tollitur: aut derogatur, id est, pars primae legis tollitur: aut subrogatur, id est, adjicitur aliquid primae legi: aut obrogatur, id est, mutatur aliquid ex prima lege."

By Festus *rogatio* is described as equivalent to what is otherwise called *privilegium*: "a command of the populus relating to one or more persons, but not to all persons, or relating to one or more things, but not to all:" cf. Dig. 50, 17, 196. Privilegia had been forbidden by the Twelve Tables (Cic. *de Leg.* iii. 19, 44; *pro Domo*, 17, 43), but in the sense of statutes in favour of or directed against individuals they are common; *e.g.* the Lex Centuriata by which Cicero was recalled from exile: "Non sunt generalia jussa, ... sed de singulis concepta, quocirca *privilegia* vocari debent, quia veteres priva dixerunt quae nos singula dicimus" (Gellius, x. 20, 4). The term is generally used by Cicero in the unfavourable sense (*pro Domo*, 17, 43; *pro Sestio*, 30, 65; *Brut.* 23, 89), and from the language in *pro Domo*, 11, 28, it may be inferred that privilegia were not considered leges proper: cf. Ulpian in Dig. 1, 3, 8: "Jura non in singulas personas, sed generaliter constituuntur." In the Corpus *juris privilegium* is used generally to denote a *jus singulare* or privilege conferred on classes by law: cf. Dig. 1, 3, 16; 9, 2, 51, 2; 1, 3, 14 and 15: and see Savigny, *System*, i. p. 61.

Of the form and style of Roman legislation we can judge to some extent from the fragments which survive. The Romans seem to have always adhered to the old expressions, and to have used few superfluous words. Great care was taken with such clauses as were intended to alter a previous lex (whence the standing clause "de impunitate si quid contra alias leges, ejus legis ergo, factum sit," Cic. *ad Att.* iii. 23), and to avoid all interference with prior enactments when no change in them was contemplated (whence the common formula "ejus hac lege nihil rogatur," E. H. L. N. R. Lex Tab. Heracl., Lex Rubria, Lex Quinctia de aquaed.: cf. Valerius Probus; Cic. *pro Caec.* 33, 95; *pro Balbo*, 14, 32): though the general principle seems to have been that a subsequent repealed or modified a prior lex with which it was inconsistent. The leges were often divided into chapters (*capita*), *e.g.* the Lex Aquilia (Gaius, iii. 210, 215, 217): cf. also the tablet of the Lex Rubria or de Gall. Cisalp. and Cic. *ad Att.* l. c. In order to preserve a permanent record, the lex was engraved on bronze (*aes*) and deposited in the Aerarium (Sueton. *Jul.* 28; Plut. *Cat. min.* 17): but it also seems to have been usual to cut statutes on tablets of oak (Dionys. iii. 36), which were whitened over and then fixed in a public place for all citizens to read, though whether they were so exposed for any great length of time is uncertain (Cic. *ad Att.* xiv. 12). The title of the lex was generally derived from the gentile name of the magistrate who proposed it, and sometimes from those of both the consuls or praetors (*e.g.* Lex Aelia Sentia, Junia Norbana, Papia Poppaea, &c.): and it was sometimes further described by reference to the topic to which it related (*e.g.* Lex Cincia de donis et muneribus, Lex Furia de sponsu, Lex Furia testamentaria, Lex Julia municipalis, &c.). Leges which related to a common subject were often designated by a collective name, as Leges agrariae, judiciariae, sumptuariae, &c. When a lex comprised very various provisions, relating to matters essentially different, it was called Lex Satura.

The terms in which a statute was expressed were fixed by the proposer, though he would usually be assisted by others who possessed the requisite familiarity with technical language: it was proposed to the Comitia for acceptance or rejection in its entirety, there being no discussion of or alteration in its clauses, which indeed in such an assembly would have been injurious, if not impossible. One important part of the lex was its *sanctio*—i.e. that part of it which provided a penalty for, or declared what should be the effect of, its infraction (*Inst.* ii. 1, 10; Auct. *ad Herenn.* ii. 10; Cic. *de Invent.* ii. 49, 146; Papinian in Dig. 48, 19, 41). If the sanctio declared that the act against which the statute was directed should be void, the lex was said to be *perfecta;* if there was no such provision, it was *imperfecta* (e.g. the Lex Cincia): and if an act was merely penalised, but not declared void, the lex is said by Ulpian (*Reg.* 1, 2) to be called "minus quam perfecta" (*e.g.* the Leges Furiae testamentaria and de sponsu): cf. Savigny, *System*, iv. p. 549 *sq*.

The number of leges was largely increased towards the end of the republican period (Tac. *Ann.* iii. 25–28), and Julius Caesar is said to have contemplated a revision of the whole of them. Augustus, and perhaps his immediate successors, was careful to conduct his legislation under republican forms, though it may be doubted whether any statute was enacted after the fall of the Republic except on the initiative of the emperor, or at any rate without his sanction express or implied. The Comitia assembled and gave the force of law to the proposals submitted to them for some time after the constitution had lost all trace of real freedom (Tac. *Ann.* i. 15 relates to the election of magistrates, not to legislation); and most of the Leges Juliae, a Lex Visellia, an agrarian law of Caligula, and a law of Claudius (Gaius, i. 157, 171) were enacted in the ordinary way. The last statute which we know to have been passed in this manner is a lex agraria of the time of Nerva (A.D. 96–98), mentioned in Dig. 47, 21, 3, 1. Gaius speaks of the Comitia as in theory still a source of law ("lex est, quod populus *jubet atque constituit*, plebiscitum, quod plebs *jubet atque constituit*," i. 3: cf. *Inst.* i. 2, 4, in which the present tense has been turned into the past): but it is improbable that they had been called upon to discharge legislative functions since A.D. 100.

For some reigns after that of Augustus legislation was most ordinarily conducted by resolutions of the senate [SENATUSCONSULTUM], into which the proposed law was introduced by a consul, or very often by an oration of the emperor [CONSTITUTIONES]. Originally senatusconsulta did not acquire the force of law until they had been confirmed by the Comitia, in which case they were leges proper: but during the last half-century of the Republic the senate asserted and established an independent right of legislation. Hence, when genuine statutes ceased to be enacted with any frequency, senatusconsulta came to be actually called *leges*. Justinian says (*Inst.* i. 2, 5), "Cum auctus esset populus Romanus in eum modum ut difficile esset in unum eum convocari legis sanciendae causa, aequum visum est senatum vice populi consuli:" a passage based on similar language of Pomponius in Dig. 1, 2, 2, 9. The name *comitia* came to be commonly given to the sittings of the senate (Tac. *Ann.* i. 15; Capitol. *Max.* 10). Gaius says (i. 4) that a senatusconsultum "*vicem legis* obtinet," and in i. 85 he terms a senatusconsult of Claudius a *lex:* for similar passages cf. Dig. 14, 6, 9, 4; ib. 14; 48, 16, 10. No senatusconsulta occur after the reign of Septimius Severus (A.D. 193–211). The constitutions of the emperors, which succeeded senatusconsulta as the ordinary mode of legislation, were also called *leges* (e.g. Lex Anastasiana, Cod. 4, 35, 22): cf. *Inst.* i. 2, 6, and Dig. 1, 4, 1: "Quodcunque Imperator statuit, *legem* esse constat." [See CONSTITUTIONES.]

A less common and proper signification of lex, quite distinct from that of a general rule of law, is that in which it denotes the conditions under which a thing is to be done, or under which parties contract with one another: *e.g.* "lex commissoria" [COMMISSORIA]; "leges
venditionis" or "emptionis," conditions of sa
Dig. 18, 1, 40 (which explains why Cic
speaks of Marcus Manilius' work on sales
"Manilianas venalium vendendorum leges,"
Orat. i. 58, 246); "legem traditioni dicer
Dig. 8, 4, 17, 3; "lex donationis," Dig. 1,
22. Accordingly we find the expression "le
censoriae" to express the conditions on whi
the censors let the public property or taxes
farm, which were perhaps embodied in cert
standing regulations (*Fragm. de jure fisci*, § 1
Dig. 50, 16, 203). Similarly the term is used
conditions imposed on a testamentary dispo
tion: "legatario legem dicere," Dig. 40,
40, 1; cf. Dig. 32, 22, pr. Not unfrequent
lex denotes merely the statute of the Twel
Tables (*e.g.* Dig. 2, 14, 7, 14; 8, 3, 13; 41,
3, &c.), and in one passage it means nothi
more than the nature or character of a thin
"*lex* danda operi talis, ne quid noceat vicinis
Dig. 39, 2, 15, 10. The extant authorities
Roman leges are inscriptions and the works
the classical writers and jurists. The *Corp*
Inscriptionum Latinarum of Mommsen of cour
comprises all extant records of authentic leg
lation, along with a vast number of oth
inscriptions; smaller collections, relating m
particularly to leges, are those of Göttl
(*Römische Urkunden auf Erz und Stein*, Hall
1845) and Zell (*Delectus inscriptionum*
monumentis legalibus fere omnibus): cf. a
Rudorff, *Römische Rechtsgeschichte*, i. §§ 81–
The best information as to the fragmenta
citations from or references to leges which a
found scattered about in non-juristic Lati
writers is to be obtained from Haubold's *Ins*
tutiones juris Romani litterariae, vol.
pp. 241–44, 297–349 (Leipzig, 1809): of t
imperial legislation (independently of the Co
which have come down to us) there is a ve
full collection by Haenel, *Corpus legum*, &
Fasc. i. (Leipzig, 1857). But perhaps the m
useful modern collection to the classical stude
is that of Orelli (vol. viii. of his edition
Cicero) entitled "*Index legum Romanoru*
quarum apud Ciceronem ejusque Scholiast
item apud Livium, Velleium Paterculum,
Gellium nominatim mentio fit."

The following is a list of the princip
Leges:—

ACI'LIA DE COLONIIS DEDUCENDIS, B.C. 1
(Liv. xxxii. 29).

ACI'LIA REPETUNDARUM, B.C. 102 (Cic.
Verr. i. 17, 51; ii. 1, 9). [REPETUNDAE.]

ACI'LIA CALPURNIA, B.C. 68 (Dio C
xxxvi. 21). [AMBITUS.]

AEBU'TIA, enacted probably about B.C.
(for the various views as to its precise date
Rudorff, *Rechtsgeschichte*, i. § 44, p. 1
Padelletti, *Hist. Roman Law*, ch. 32, note 2)
abolished the legis actio procedure except in
tried before centumviri, in cases of damn
infectum, and for the voluntary jurisdic
employed for adoptions, manumissions, in j
cessio, &c. (Gellius, xvi. 10, 8; Gaius, iv.
[JUDEX; ACTIO.] Another lex of the
name prohibited the proposer of a lex wh
created any office or power (*curatio ac potes*
from having such office or power, and e
excluded his collegae, cognati and affines
de lege agr. [*in Rull.*] ii. 8, 21; *de Domo*,
51).

AE'LIA. This and a Lex Fufia passed towards the end of the sixth century of the city (Cic. *in Pison.* 5, 10) gave every magistrate the right of declaring beforehand his intention of taking the omens on a fixed day, and thereby (on the plea of their being unfavourable) of preventing the assembly of the Comitia (*obnuntiatio*). This right was frequently exercised against the tribunes of the people (Cic. *in Vatin.* 7, 9), for which reason Clodius (B.C. 58) got it temporarily taken away (Dio Cass. xxxviii. 13). The better opinion seems to be that there were two distinct leges (see Walter, *Geschichte des römischen Rechts*, § 152, note 98); they are frequently mentioned by Cicero, especially *in Vatin.*; *pro Sestio*; *in Pison.*; *ad Att.* i. 16, ii. 9, iv. 16, 5. See also Orelli's discussion of them in his *Onomasticon*; *Index Legum*, where the passages in which they are mentioned are collected; and Mommsen, *Römisches Staatsrecht*, i. pp. 80, 107.

AE'LIA DE COLONIIS DEDUCENDIS, B.C. 195 (Liv. xxxiv. 53).

AE'LIA SE'NTIA. This was passed A.D. 4, mainly to prevent the true Roman population from being swamped by a too free exercise of the master's right of making his slaves citizens at Rome by manumission [LIBERTUS]. It contained the following provisions:—

(i.) Slaves who had been put in irons or branded by their masters as a punishment, or put to torture on a criminal charge and convicted, or made to fight in the arena, or thrown into prison or consigned to the gladiatorial school, were not by subsequent manumission to attain any higher status than that of *peregrini dediticii* (Gaius, i. 13; Ulpian, *Reg.* i. 11; Paul. *Sent. rec.* iv. 12, 3–8: see DEDITICII and LIBERTUS). (ii.) Slaves under thirty years of age could not in future be manumitted so as to become cives unless the form of manumission were "per vindictam," and a sufficient reason for it were proved before a consilium, consisting at Rome of five senators and five equites, sitting on fixed days, and in the provinces of twenty recuperatores or judges who were cives, and who sat for this purpose on the last day of the conventus or judicial assize in different towns (Gaius, i. 18, 20; Ulp. *Reg.* i. 12). Among the "sufficient reasons" (*justae causae*) were that the slave was a child or near relation of the manumitter, or his paedagogus; or that he wished to make him his agent, or (being a girl) to marry her (Gaius, i. 19). But even a slave under thirty could be made a civis by his master's will if he were instituted heres necessarius "cum libertate," and the master was insolvent (Gaius, i. 21). Slaves under thirty manumitted otherwise than "vindicta apud consilium" at first remained slaves in the eye the law [LIBERTUS], but by the Lex Junia Norbana, A.D. 19, they acquired the status of Latini. The Lex Aelia Sentia, however, itself provided one way in which they could rise to the condition of civitas; that is to say, if they married a civis Romana, or a Latina coloniaria, or a woman of the same class as themselves, had as evidence of this fact the presence of five Roman citizens of full age, and begot a son who attained the age of one year, they could prove these facts to the praetor at Rome, or the governor in a province; and on the magistrate declaring the case "proven," the man, his wife and child became all Roman citizens. If the man died before he had proved his case to the magistrate, the mother could do it, and the legal effect was the same. There were also other modes in which a Latinus could become civis [LATINITAS; cf. Poste's *Gaius*, note on i. 35]. (iii.) Manumission by a master under twenty was declared void unless made "per vindictam" and on proof of a "justa causa" of the same kind as above before the consilium (Gaius, i. 38). Thus, after this, though he could make a will at fourteen, a master could not manumit his slaves by it unless he was twenty (Gaius, i. 40); but Justinian permitted testamentary manumission at seventeen (*Inst.* i. 6, 7) and (by *Nov.* 119, 2) even at fourteen. Even manumission in one of the informal modes (e.g. *inter amicos*) by a master under twenty, which at the most could only have made him a Latinus, was held void unless a "justa causa" were proved before the consilium (Gaius, i. 41). (iv.) Manumission being an act by which a man diminished his property, manumission in fraud of creditors was by the statute made revocable by the latter (Gaius, i. 37; *Inst.* i. 6, pr.—4), and this provision was extended to peregrini by a senatusconsult under Hadrian (Gaius, i. 47): but it did not apply to the institution of a slave as "necessarius heres," in order to save the testator from the disgrace of posthumous bankruptcy (*Inst.* l. c. 1). Similarly the patron of a freedman who owned slaves was enabled to prevent the libertus from prejudicing his contingent rights of succession by revoking manumissions "in fraudem patroni" (Gaius, i. 37). (v.) The statute also allowed a patron to bring a criminal prosecution against his liberti if guilty of ingratitude (Dig. 40, 9, 30; 50, 16, 70, pr.: cf. Tac. *Ann.* xiii. 26).

Of the above provisions only the third and fourth were in force under the law of Justinian. The supposed reference to a Lex Aelia Sentia in Cicero (*Top.* 2, 10) is shown by Orelli to be a myth.

AEMI'LIA BAE'BIA. [CORNELIA BAEBIA.]

AEMI'LIA DE CENSORIBUS, passed by M. Aemilius when dictator, B.C. 433: it gave the censors, though elected at intervals of five years, only a year and a half instead of a whole lustrum for the discharge of their functions (*e.g.* holding the census and letting out the taxes and public works to farm), so that the state was without censors for intervals of three years and a half (Liv. iv. 24, ix. 33, 34; Mommsen, *Röm. Staatsrecht*, ii. p. 336).

AEMI'LIA DE LIBERTINORUM SUFFRAGIIS, B.C. 116 (Aurel. Vict. *de Vir. illustr.* 72).

AEMI'LIA SUMPTUARIA, passed by Aemilius Lepidus, B.C. 179 (Macrob. *Saturn.* ii. 13, p. 369). Pliny (*H. N.* viii. § 223) seems to be referring to a different sumptuary law of the same name passed by M. Aemilius Scaurus, B.C. 116, though this may have been identical with the Lex Aemilia de libertinorum suffragiis.

AGRA'RIAE. [AGRARIAE LEGES: and LEX APULEIA; CASSIA; CORNELIA; FLAMINIA; FLAVIA; JULIA; LICINIA; MAMILIA; SEMPRONIA; SERVILIA; THORIA.]

A'MBITUS. [AMBITUS.]

A'MPIA, a lex proposed by T. Ampius and

T. Labienus, trib. plebis, B.C. 64, by which Cn. Pompeius was allowed to wear a crown of bay at the Ludi Circenses, and the like (Vell. Paterc. ii. 40; Dio Cass. xxxvii. 21).

ANASTASIA'NA, a constitution of the Emperor Anastasius, A.D. 506 (Cod. 4, 35, 22), providing that no purchaser of a debt or "chose in action" should be able to recover more from the debtor than what he had paid for it himself, with ordinary interest, even though it was alleged that the transaction was in part a gift (Vangerow, *Lehrbuch der Pandekten*, § 576).

ANNA'LES were those statutes which determined at what age a man might be a candidate for the several magistracies: if he was elected to one at the earliest possible age, he was said to become praetor, consul, &c., "anno suo" (Cic. *de Off.* ii. 17, 59; *Philip.* v. 17, 47 *sq.*; Tac. *Ann.* xi. 22). The first of them was a Lex Villia, proposed by L. Villius, a tribune, B.C. 180 (Liv. xxv. 2, xl. 44), by which a man could be elected quaestor at the age of thirty-one, aedile at thirty-seven, praetor at forty, and consul at forty-three. There seems to have been a Lex Pinaria on the same subject carried by one M. Pinarius Rusca, a tribune, *circ.* 134 B.C. (Cic. *de Orat.* ii. 65, 261): see Wex, *Rhein. Museum*, 1845, pp. 276–288; Hofmann, *Röm. Senat.* pp. 172–177.

A'NTIA (Gell. ii. 24, 13; Macrob. *Saturn.* ii. 13). [SUMPTUARIAE LEGES.]

ANTO'NIA DE TERMESSENSIBUS, a plebiscitum enacted *circ.* 72 B.C., by which Termessus in Pisidia was recognised as libera. (See FOEDERATAE CIVITATES; Puchta, *Institutionen*, § 69; and Dirksen, *Bemerkungen über das Plebiscitum de Thermensibus.*)

ANTO'NIAE, the name of various enactments proposed or passed by the influence of M. Antonius after the death of the dictator Julius Caesar (Cic. *Phil.* iii. 4, 9; v. 4, 10; vi. 2, 3; xiii. 3, 5; *ad Fam.* xii. 14, 6). One abolished the dictatorship (*Phil.* i. 1, 3; Dio Cass. xliv. 51); others related to the constitution of the judicia (*Phil.* v. 5, 12; viii. 9, 27), to appeals after conviction for Vis or Majestas (*Phil.* i. 9, 21), to permutatio of the provinces (Dio Cass. xlv. 9, 20; Vell. Pat. ii. 20; Appian, *Bell. Civ.* iii. 27, 30), to honours to be paid to Caesar at the ludi Romani (*Phil.* ii. 43, 110), and to an agrarian division of land (*Phil.* v. 3, 7; Dio Cass. xlv. 9).

APULE'IA, B.C. 102, gave one of two or more sponsors or fidepromissors (sureties), who paid the whole debt which they had guaranteed, the right of bringing an actio pro socio against the rest for the recovery of what he had paid in excess of his fair share (Gaius, iii. 122). [INTERCESSIO.]

APULE'IA AGRARIA, proposed by the tribune L. Apuleius Saturninus, B.C. 101 (Liv. *Epit.* 69; Appian, *Bell. Civ.* i. 29; Cic. *pro Sestio*, 16, 37; 47, 101).

APULE'IA DE COLONIIS DEDUCENDIS, perhaps really a chapter of the preceding lex: at any rate passed by the same tribune in the same year (Aurel. Vict. *de Vir. illust.* 73; Cic. *pro Balbo*, 21, 48).

APULE'IA FRUMENTARIA, of the same date and author (Auct. *ad Herenn.* i. 12, 21). [FRUMENTARIAE LEGES.]

APULE'IA MAJESTATIS, probably passed by the same tribune and about the same time (Cic. *de Orat.* ii. 25, 49, 107, 201). [MAJESTAS.]

AQUI'LIA, *circ.* B.C. 287. [DAMNI INJURIA ACTIO.]

ATE'RNIA TARPEIA, B.C. 454, gave to all magistrates the right, which had hitherto belonged only to the consuls, of fining those who resisted their authority: the maximum of the fine, which had been fixed by a Lex Valeria (B.C. 509) at two sheep and five oxen, was raised to two sheep and thirty oxen: cf. PAPIRIA or JULIA PAPIRIA (Cic. *de Republ.* ii. 35, 60; Dion. Halic. x. 50; Gellius, xi. 1, 2–3; Festus, *s. vv.* Ovibus, Duobus, Peculatus; Paul. Diac. *ex Fest.* s. v. Maximam Multam; Plin. *H. N.* xviii. § 11; Niebuhr, *Röm. Geschichte*, ii. p. 341 *sq.*; Mommsen, *Röm. Staatsrecht*, i. p. 128; Huschke, *Multa*, pp. 31, 46, 88; Puchta, *Institutionen*, § 53 *ad fin.*; Walter, *Geschichte des röm. Rechts*, § 820.)

A'TIA DE SACERDOTIIS, B.C. 63, proposed by the tribune T. Atius Labienus; it restored the regulations of the Lex Domitia on the same subject, which had been repealed by Sulla (Dio Cass. xxxvii. 37; Ascon. *in Div.* 3).

ATI'LIA. [JULIA LEX ET TITIA; TUTOR.]

ATI'LIA MA'RCIA, B.C. 312, related to the election of tribuni militum by the people (Liv. ix. 30).

ATI'NIA, passed perhaps B.C. 198, repeated the rule of the Twelve Tables that stolen property should not be acquirable by usucapio, and added that the *vitium furti* should be removed, and the property admit of usucapio, as soon as the owner recovered possession of it, or was in a position to bring a vindicatio for its recovery (Gell. xvii. 7; *Inst.* ii. 6, 2; Dig. 41, 3, 4, 6; 50, 16, 215: see FURTUM).

ATI'NIA, a plebiscitum of the time of Sulla; apparently enacted that tribuni plebis should be elected solely from senators. The chief authority on its content is Gell. xiv. 8 (cf. Plin. *H. N.* vii. § 143; Cic. *pro Dom.* 47), which may also be interpreted to mean (1) that tribuni plebis should become senators *virtute officii sui* (Becker, ii. 2, 277), or (2) that they might (but not *must*) be chosen from senators (Hofmann, *Röm. Senat.* pp. 144–165). On the different views, see Walter, *Geschichte des röm. Rechts*, § 140, note 128. There is a reference to certain Leges Atiniae in Cic. *Phil.* iii. 6, 16; *Verr.* i. 42, 109, of which nothing further is known.

AUFI'DIA, B.C. 62 (Cic. *ad Att.* i. 16, 13). [AMBITUS.]

AURE'LIA DE AMBITU (Cic. *ad Q. fratrem*, i. 3, 8).

AURE'LIA JUDICIARIA, B.C. 71 (Cornel. *fragm.* 26; Ascon. *in Pis.* p. 16, 19, *in Corn.* p. 67, 78 *sq.*; Liv. *Epit.* xcvii.; Vell. Pat. ii. 32, 3). [JUDEX.]

AURE'LIA TRIBUNICIA (Ascon. *in Corn.* p. 66, 78). [TRIBUNI.]

BAE'BIA, B.C. 192, enacted that four and six praetors should be chosen in alternate years; but the law was not observed, and perhaps repealed (Liv. xl. 44; Festus, *s. v.* Rogat; Meyer, *Orator. Rom. fragm.* p. 90, ed. 2).

BAE'BIA CORNE'LIA. See CORNELIA BAEBIA.

CAECI'LIA DE CENSORIBUS or CENSORIA carried by Metellus Scipio, B.C. 52: it repealed a plebiscitum of Clodius (B.C. 58) which had prescribed a formal procedure for the censors u exercising their functions as inspectors of Mores, by providing that they should not, in selecting the senate, pass over and so cast a slur on any one who had not been explicitly accused before them, and marked with the nota censoria by nota (Ascon. in *Pis.* 4, p. 9 (Orelli); Cic. *pro Sest.* 25, 55, and Schol. Bob. p. 360; Dio Cass. xxxviii. 13, 15, xl. 57).

CAECI'LIA DE CN. POMPEIO, B.C. 63 (Schol. Bob. *pro Sestio*, p. 302; Dio Cass. xxxvii. 43; Plut. *Cato minor*, c. 26 *sq.*).

CAECI'LIA DE P. SULLA ET P. AUTRONIO (Cic. *pro Sulla*, 22 *sq.*; Dio Cass. xxxvii. 25: see Orelli, *Onomasticon*).

CAECI'LIA DE VECTIGALIBUS, B.C. 62, released the harbours of Italy from payment of direct taxes (*portoria*) to the state (Dio Cass. xxxvii. 51; Cic. *ad Att.* ii. 16; *ad Quint. fratr.* 10; Dig. 50, 16, 203), which, however, were re-imposed by Caesar (Suet. *Jul.* 43).

CAECI'LIA DI'DIA, B.C. 98, forbade the proposing of a Lex Satura (*i.e.* of enactments relating to different matters in one rogatio), lest people might be compelled either to vote for something which they did not approve, or reject something which they did. It also contained a provision that leges should be promulgated *trinis nundinis* before they were proposed to the Comitia (Cic. *Phil.* v. 3, 8; *pro Dom.* 16, 41; 20, 53; *pro Sestio*, 64, 135; *ad Att.* ii. 9, 1: see LICINIA JUNIA).

CAE'LIA TABELLA'RIA, B.C. 71. [TABELLARIAE LEGES.]

CALI'DIA, B.C. 99, by which Q. Metellus Numidicus was recalled from exile (Val. Max. v. 2, 7; Aurel. Vict. *de Viris illustr.* c. 62; Cic. *pro Plancio*, 28, 69).

CALI'GULAE LEX AGRA'RIA. [MAMILIA.]

CALPU'RNIA DE AMBITU, B.C. 67 (Dio Cass. xxxvi. 21; Cic. *pro Mur.* 23, 46; 32, 67). [AMBITUS.]

CALPU'RNIA DE CONDICTIONE, B.C. 234. [PER CONDICTIONEM.]

CALPU'RNIA DE REPETUNDIS, B.C. 149 (Cic. *Brut.* 27, 106; *de Off.* ii. 21, 75; *Verr.* iv. 25, [illegible] &c.). [REPETUNDAE.]

CANULE'IA, B.C. 445, legalised *conubium* between patricians and plebeians, which had been erased by one of the two last tables of the decemviral legislation; so that issue of such a marriage would in future be in the patria potestas (Liv. iv. 1, 4, 6; Cic. *de Rep.* ii. 37,

CA'SSIA AGRA'RIA, B.C. 486, one of the early concessions to the plebs (Liv. ii. 41; Dionys. viii. 76).

CA'SSIA, B.C. 104, proposed by the tribune Cassius Longinus: it deprived of their senatorial rank those who had been convicted in a judicium publicum, or whose imperium had been taken from them by the populus (Cornel. Fragm. 24, p. 451; Ascon. in *Cornel.* p. 78, ed. Orelli). Mommsen conjectures that it also disabled such persons from all office (*Staatsrecht*, p. 464).

CA'SSIA (Tac. *Ann.* xi. 25) empowered the dictator Caesar to add to the number of the patricii, in order to prevent their extinction: cf. Sueton. *Jul.* 41. C. Octavius was made a patrician by this lex (Sueton. *Aug.* 2).

CA'SSIA TABELLA'RIA, B.C. 37 (Cic. *Brut.* 25, 97; 27, 106; *de Legg.* iii. 16, 37). [TABELLARIAE LEGES.]

CA'SSIA TERE'NTIA FRUMENTA'RIA, B.C. 73, provided for the distribution of corn among the poorer citizens, and for the means of obtaining it from Sicily (Cic. *Verr.* iii. 70, 163; v. 21, 52).

CICERE'IA enacted that a creditor on taking sponsors or fidepromissors should first state publicly what the debt to be guaranteed was, and also the number of sureties he was going to take: if this were not done, they could, by taking action within thirty days, procure their release (Gaius, iii. 123; Dig. 50, 16, 33; cf. Puchta, *Institutionen*, § 264, note *s*).

CI'NCIA or **MUNERA'LIS**, a plebiscitum carried by the tribune M. Cincius Alimentus, B.C. 204 (Cic. *Cato*, 4; *ad Att.* i. 20; *de Orat.* ii. 71, 286; *de Senect.* 4, 10; Liv. xxxiv. 5), and entitled *de donis et muneribus*. In relation to gifts pure and simple, its enactments seem to have been two: (1) It forbade gifts beyond a certain maximum, the amount of which is unknown (*Fragm. Vat.* 304; Ulp. *Reg.* i. 1; Paul. *Sent. rec.* v. 11, 6; Dig. 39, 5, 21, 1); but it did not avoid gifts in excess of the limit, or even impose a penalty on the donee for taking the excess: it was, in fact, a "lex imperfecta" (Ulp. *Reg.* i. 1, 2; Macrob. *Somn. Scip.* ii. 17). (2) It prescribed a form in which gifts must be made. A gift of a res mancipi was *perfecta* only if the res donata were mancipated and actually delivered (*Fragm. Vat.* 313), that of a res nec mancipi only if it were delivered (*ib.* 293, 313); that of a res mobilis was not perfected until the donee had possessed the thing for the greater part of the preceding year, for not till then was he entitled to the Interdictum Utrubi for his protection (*ib.* 293, 311). Absence of the mancipation form, if requisite, could be compensated for by usucapio (*ib.* 293). Thus the general effect of this provision was that gifts made in any other fashion (*e.g.* release or stipulation) were invalid (*Fragm. Vat.* 283, 310, 311; Dig. 20, 6, 1, 1).

Puchta (*Institutionen*, § 206) is of opinion that a gift was originally revocable in the ways described below if *either* of these provisions was disregarded: but that after some time observation of the statutory requirement as to form of conveyance was allowed to atone for violation of the rule as to amount, so that the latter became tacitly repealed by disuse. If the maximum of the Lex Cincia was no higher than that of the Lex Furia testamentaria, only twenty years later in date, it certainly must in time have come to be regarded as ridiculously small. Certain classes of donees, however, were excepted (Legis Cinciae exceptae personae) from the operation of both of these enactments, on the ground of being connected with the donor by the tie of kinship, affinity, betrothal, patronatus or guardianship (*Fragm. Vat.* 298–309).

But though the lex was *imperfecta*, there were means by which gifts in violation of its provisions could be rescinded, by the donor's having practically a power of revocation. If he were sued by a *persona non excepta* on a promise to give, he could defeat the action by "exceptio legis Cinciae" (*Fragm. Vat.* 310), which was also available if a res mancipi had been mancipated but not yet delivered (*ib.*, and Dig. 44, 4, 5, 2). If it were mancipi, and had been tradita but not yet mancipated, the donor could assert his ownership in it by a vindicatio, and meet the defendant's "exceptio rei donatae" by "replicatio legis Cinciae:" and wherever the donee of a res mobilis had not possessed it for six months, the donor could recover possession by the Interdictum Utrubi. Where the gift was not revocable in any of these ways (*e.g.* if it had been a release of a debtor by acceptilatio, or by novation in favour of a third person, Dig. 39, 5, 21, 1), the donor was allowed an *actio rescissoria*, and he could recover by *condictio* any property of his which had definitely passed to the donee "contra legem Cinciam" (*Fragm. Vat.* 266; Dig. 39, 5, 21, 1; 44, 4, 5, 5). If, however, the donor died without revoking or expressing his intention of revoking a gift against the statute, it could not be upset by his heir: "morte Cincia removetur" (*Fragm. Vat.* 259, 266, 294).

Under the later Empire the rules of the Lex Cincia gradually went into disuse. Insinuatio (registration in the acta) of gifts to *non exceptae personae* was first required by Constantius Chlorus, and this rule was extended to *exceptae personae* by Constantine (*Cod. Theod.* 3, 5, 1). Later still the exemption of gifts to *exceptae personae* from the requirement of appropriate conveyance was done away with, except as between parent and child: and insinuatio was required by Theodosius II. only if the amount exceeded 200 solidi in value (*Cod. Theod.* 3, 5, 8): this maximum was raised to 500 solidi by Justinian, who also abolished the necessity of conveyance in any form, thus making a mere promise to give actionable (*Inst.* ii. 7, 2).

Tacitus (*Ann.* xi. 5) refers to another enactment of this statute, forbidding a person to take anything for his pains in pleading a cause, "ne quis ob causam orandam pecuniam donumve accipiat:" *Ann.* xiii. 42 is explained by the fact that this provision was confirmed by a senatusconsult under Augustus, which imposed on the advocate a penalty of four times the sum received (Dio Cass. liv. 18). Under Claudius, however, advocates might take fees, but not in excess of 10,000 sesterces for each suit; a sum which under Nero was represented by 100 aurei: in this reign, too, further regulations were made on the subject (Suet. *Nero*, 17), especially one subjecting those who took any sum in excess of the specified maximum to a prosecution for repetundae. But from Pliny (*Ep.* v. 21) it seems that in Trajan's time the fee could not be paid until the work had been done. (Savigny, *Die Lex Cincia*, *Zeitschrift*, iv. 1; *Verm. Schriften*, i. 315–385; Rudorff, *de lege Cincia*, 1825; Wenck, Preface to Haubold, *Opusc. acad.* i. p. 37; Hasse, *Rhein. Museum*, i. 185 *sq.*, iii. 174 *sq.*; Puchta, *Institutionen*, § 206; Francke, *Civil. Abhandl.* 1826, p. 1 *sq.*; Klinkhamer, *de Donationibus*, 1826; Bruns, *Quid conferant Vat. fragm. ad Melius cognosc. jus Romanum*, 1838, pp. 112 *sq.*)

CLAU'DIA, passed by the Emperor Claudius: it abolished the *tutela legitima* of agnates over women not in potestas or manus, thus in effect greatly enlarging their control of their property (Gaius, i. 157, 171–2).

CLAU'DIA DE SENATORIBUS, a plebiscitum of 218 B.C.: it enacted that no senator or senator's son should own a ship of larger cubic capacity than 300 amphorae (Liv. xxi. 63): Cicero says that in his time it was "antiqua et mortua" (*in Verr.* v. 18, 45).

CLAU'DIA DE SENATU COOPTANDO HALESINORUM, B.C. 95 (Cic. *in Verr.* ii. 49, 122).

CLAU'DIA DE SOCIIS, B.C. 177 (Liv. xli. 8, 9).

CLO'DIAE, a number of plebiscita carried by Clodius when tribune, B.C. 58, and frequently referred to by Cicero and Dio Cassius: among them are—

CLO'DIA DE AUSPICIIS [see AELIA]: it is also enacted "ut omnibus fastis diebus legem ferri liceret" (Cic. *pro Sestio*, 15, 33; 26, 56; *in Vatin.* 17, 35; *in Pison.* 4, 5; Dio Cass. xxxviii. 13).

CLO'DIA DE CENSORIBUS. [CAECILIA.]

CLO'DIA DE CIVIBUS ROMANIS INTEREMTIS, which led to Cicero's exile: it interdicted from fire and water [EXSILIUM] those who had put a Roman citizen to death uncondemned (Vell. Pat. ii. 45, 1, 2; Dio Cass. xxxviii. 14). Cicero himself considered it a privilegium (*ad Att.* iii. 15, 6; 23, 3; *ad Fam.* xiv. 4, 2; *in Pison.* 13, 30; *pro Sestio*, 24, 53; 32, 69; *pro Domo*, 18, 47, &c.).

CLO'DIA DE COLLEGIIS restored the clubs or guilds (collegia) which had been abolished by a senatusconsult, probably of B.C. 64, and permitted the formation of new ones (Cic. *ad Att.* iii. 15, 4; *pro Sest.* 25, 55; *in Pison.* 4, 8; Dio Cass. xxxviii. 13). Nearly all of them were subsequently swept away by Julius Caesar (Sueton. *Jul.* 42).

CLO'DIA DE LIBERTINORUM SUFFRAGIIS (Cic. *pro Milon.* 12, 33; 33, 89).

CLO'DIA DE PESSINUNTIO MATRIS MAGNAE SACERDOTE (Cic. *pro Sest.* 26, 56).

CLO'DIA DE PROVINCIIS CONSULARIBUS (Cic. *in Pison.* 16, 37).

CLO'DIA DE REGE PTOLEMAEO ET DE EXSULIBUS BYZANTINIS (Vell. Pat. ii. 45; Cic. *pro Domo*, 8, 20; 20, 52; *pro Sestio*, 26, 57; Dio Cass. xxxviii. 30; Plut. *Cat. min.* 34).

CLO'DIA FRUMENTARIA, directing the free distribution of corn to the poorer citizens instead of its sale at a low rate (Dio Cass. xxxviii. 13; Cic. *pro Sest.* 25; Ascon. *in Pison.* 4; *pro Dom.* 10, 26). [FRUMENTARIAE LEGES.]

CO'CTIA, the reading in Cic. *ad Att.* iv. 16, 14: it means the lex judiciaria of L. Aurelius Cotta. [AURELIA JUDICIARIA.]

COLO'NIAE GENETI'VAE, a lex of B.C. 44, regulating the constitution of this colony, established by Julius Caesar on the site of Urso in Baetica: discovered on bronze at Osuna in 1870, 1875 (Bruns, *Fontes juris Rom. antiqui*, 1880, pp. 43–103, 109–127).

COMMISSO'RIA. [COMMISSORIA LEX.]

CORNE'LIAE. These comprise (I.) a large number of leges passed by Sulla in his dictatorship (Liv. *Epit.* lxxxix.); (II.) leges of L. Cornelius Cinna; and (III.) a number of statutes passed by different magistrates bearing this name.

I. **CORNE'LIAE AGRA'RIAE**, "quibus agri perduellium publicati veteranisque assignati sunt" (Orelli): apparently referred to in Cic. *in Rullum*, ii. 28, 78; iii. 2, 6; 2, 8; 3, 12.

CORNE'LIA DE CIVITATE (Liv. *Epit.* lxxxvi.; Cic. *pro Dom.* 30, 79; *pro Caec.* 35, 102: Sallust. *Hist. fragm.* lib. i. orat. Lepidi): it took the full civitas away from Volaterrae and other municipia.

CORNE'LIA DE FALSIS or TESTAMENTARIA (Cic. *in Verr.* i. 42, 108; *Inst.* ii. 12, 5, iv. 18, 7). [See FALSUM.]

CORNE'LIA DE MAGISTRATIBUS, making discharge of inferior magistracies a necessary condition to the attainment of higher ones (Appian, *Bell. Civ.* 100, 101), and re-affirming the provisions of certain old plebiscita (Liv. vii. 42, x. 13). The "lex de viginti quaestoribus" (Tac. *Ann.* xi. 22) was probably merely one of its chapters (see Puchta, *Institutionen*, § 79, note *a*; Mommsen, *Röm. Staatsrecht*, i. pp. 519–524, 548).

CORNE'LIA DE PROSCRIPTIONE (Cic. *in Verr.* i. 47, 123; *pro Sext. Rosc.* 43, 125–128; Vell. Pat. ii. 29; Quintil. *Inst. Or.* xi. 1, 85; Plut. *Sulla*, 31). [PROSCRIPTIO.]

CORNE'LIA DE PROVINCIIS ORDINANDIS limited the costs which might be incurred by provincial towns in sending public deputations to Rome for the purpose of praising their governor before the senate (Cic. *ad Fam.* iii. 8, 10), and enacted (1) that those who had provinces under the Lex Sempronia should retain their imperium till they had re-entered the city on their return (Cic. *ad Fam.* i. 9, 25); and (2) that provincial governors should leave their province not later than thirty days after the arrival of their successors (Cic. *ad Fam.* iii. 6, 3; *ib.* 6).

CORNE'LIA DE REJECTIONE JUDICUM allowed an accused senator the right of challenging a larger number of his judges than persons of lower rank, the latter's challenges being limited to three (Cic. *in Verr.* ii. 31, 77; see Orelli's *Onomasticon*).

CORNE'LIA DE REPETUNDIS (Cic. *pro Rabirio*, 4, 9). It was under this statute that Verres was prosecuted. [REPETUNDAE.]

CORNE'LIA DE SACERDOTIIS (Liv. *Epit.* lxxxix.; Pseudo-Ascon. *in Div.* p. 102, Orelli: see SACERDOTIA).

CORNE'LIA DE SENTENTIA FERENDA enabled the accused to say whether the votes of the judges should be given openly or by ballot: probably only a chapter of the Lex Cornelia Judiciaria (Cic. *pro Cluent.* 20, 55; 27, 75).

CORNE'LIA DE SICARIIS ET VENEFICIS. From Pliny (*H. N.* xviii. § 12) we learn that the Twelve Tables contained some regulations as to homicide, but probably these were little more than a repetition of the law of Numa Pompilius which punished intentional slaying with death (Festus, *s. v.* Parici): unintentional killing was atoned for under the old religious law, and possibly by the Twelve Tables (Cic. *pro Tull.* 51; *Top.* 17; Festus, *s. v.* Subici, Subigere), by the offer of a ram (Serv. *in Eclog.* iv. 43; *Georg.* iii. 387; Dion. Hal. vii. 22: cf. Festus, *s. v.* Sororium). The Twelve Tables also penalised incantations (Plin. *H. N.* xxviii. § 17; Sen. *Nat. Quaest.* iv. 7; Augustin. *de Civ. Dei*, viii. 19) and poisoning, both of which offences appear to have been included under parricidium [POMPEIA DE PARRICIDIIS]: the murderer of a parent was sewed up in a sack (*culleus*) and thrown into a river. It was under the provisions of some old law that the senate by a consultum ordered the consuls P. Scipio and D. Brutus (B.C. 138) to inquire into the murder in the Silva Scantia (Cic. *Brutus*, 22). The Lex Cornelia de sicariis et veneficis, passed *circ.* B.C. 81, inflicted penalties not only for actual killing, but for going about with weapons for the purposes of murder or thieving; for incendiarism; for preparing, having, or selling poisons for the destruction of human life; for inciting a magistrate without cause to bring a capital charge; for the taking of money by a magistrate for such a service, and for bearing false witness in a capital prosecution (*Collatio leg. Mos.* i. 3; Cic. *pro Cluentio*, 54, 55, 57; Dig. 48, 8, *passim*; Paul. *Sent. rec.* v. 23, 1 and 10; *Inst.* iv. 18, 5). By an enactment of Antoninus Pius the killing of slaves without just cause was brought within the statute (Gaius, i. 53), which by senatusconsulta and imperial legislation was also extended to the offence of castration and to human sacrifices. The penalty which it inflicted was *aquae et ignis interdictio* (later *deportatio*: see EXSILIUM), to which Julius Caesar added forfeiture (Dig. 48, 8, 3, 5): in the case of meaner criminals, even death (Dig. *ib.*).

CORNE'LIA DE VADIMONIO. [VADIMONIUM.]

CORNE'LIA DE VI PUBLICA. [VIS PUBLICA.]

CORNE'LIA JUDICIARIA took the judicia away from the equites exclusively, and divided them between equites and senators (Tac. *Ann.* xi. 22; Vell. Pat. ii. 32, 3: see JUDEX).

CORNE'LIA MAJESTATIS (Cic. *in Pison.* 21, 50; Ascon. *in Cornel.* p. 59, Orelli). [MAJESTAS.]

CORNE'LIA NUMMARIA (Cic. *in Verr.* i. 42, 108). [FALSUM.]

CORNE'LIA SUMPTUARIA (Gell. ii. 24, 11; Macrob. *Saturn.* ii. 13; Plut. *Sulla*, c. 35). [SUMPTUARIAE LEGES.]

CORNE'LIA TESTAMENTARIA (Cic. *in Verr.* i. 42, 108; *Inst.* iv. 18, 7). [FALSUM.]

CORNE'LIA TRIBUNICIA took away to a large extent the tribunes' right of intercession, and disabled those who had served this office from attaining a patrician magistracy (Vell. Pat. ii. 30; Appian, *Bell. Civ.* i. 100, ii. 29; Caesar, *Bell. Civ.* i. 5, 1; i. 7, 3; Cic. *in Verr.* i. 60, 155: see POMPEIA TRIBUNICIA).

CORNE'LIA UNCIARIA, perhaps passed about the same time as Sulla's Lex sumptuaria. It seems to have lowered the rate of interest (Festus, *s. v.* Unciaria).

II. **CORNE'LIA** DE NOVORUM CIVIUM ET LIBERTINORUM SUFFRAGIIS, B.C. 87 (Cic. *Phil.* viii. 2, 7; Vell. Pat. ii. 20: cf. Appian, *Bell. Civ.* i. 64 *sq.*).

CORNE'LIA DE RECIPIENDO MARIO (Vell. Pat. ii. 21, 6).

CORNE'LIA DE REVOCANDIS EXSULIBUS (Aurel. Vict. *de Vir. illustr.* c. 69).

III. **CORNE'LIA BAE'BIA** DE AMBITU, B.C. 181, passed by the consuls P. Cornelius Cethegus and M. Baebius Tamphilus (Liv. xl. 19; Schol. Bob. *in* Cic. *pro Sulla*, p. 361, Orelli).

CORNE'LIA CAE'CILIA DE CN. POMPEIO, B.C. 57, gave Cn. Pompeius extraordinary powers for five years for the management of the corn supply of Rome (Cic. *ad Att.* iv. 1, 7; Liv. *Epit.* civ.; Dio Cass. xxxix. 9; Plut. *Pomp.* 49). [FRUMENTARIAE LEGES.]

CORNE'LIA DE EDICTIS, passed by C. Cornelius, tribunus plebis, B.C. 67: it enacted that praetors should not vary the rules proclaimed in their perpetual edicts issued on their entry on office by subsequent *Edicta repentina*, or apply a different law from that which they had proclaimed they would observe (Ascon. *in Corn.*, Orelli, p. 58; Dio Cass. xxxvi. 23: cf. Cic. *in Verr.* iii. 14, 36). [EDICTUM.]

CORNE'LIA DE INJURIIS, B.C. 81, perhaps a statute of Sulla. Its original object was the criminal prosecution of injuriae (assaults and batteries) "quae manu fiant" (Dig. 47, 10, 5, pr.); but by gradual usage a civil action was developed under its provisions, which had the advantage over the ordinary actio injuriarum in not being barred by a year's prescription (Dig. 47, 10, 37, 1; *Inst.* iv. 4, 8). [INJURIA.]

CORNE'LIA DE LUSU allowed betting at gymnastic exercises (Dig. 11, 5, 2, 1 and 3).

CORNE'LIA DE NOVIS TABULIS, passed by P. Cornelius Dolabella, B.C. 47 (Liv. *Epit.* cxiii.; Dio Cass. xlii. 32; Plut. *Antonius*, c. 9).

CORNE'LIA DE RESTITUENDO CICERONE, B.C. 57 (Cic. *in Pison.* 15, 35).

CORNE'LIA DE SPONSORIBUS (B.C. 81), probably enacted by Sulla: it provided that (with a few exceptions) no one should become surety for the same debtor to the same creditor in any one year for a larger sum than 20,000 sesterces (Gaius, iii. 124, 5). See INTERCESSIO.

CORNE'LIA GE'LLIA. [GELLIA CORNELIA.]

CORNE'LIA NE QUIS LEGIBUS SOLVERETUR, passed by C. Cornelius, tribunus plebis, B.C. 67, and directed against the reckless exercise by the senate of its usurped power of granting dispensations from the laws: in future such a dispensation required the presence of 200 members in the senate, and also confirmation by the Comitia Tributa; but no tribune was to be able to veto the proposal (Ascon. *in Corn.* p. 57, 72, Orelli; Dio Cass. xxxvi. 22).

CREPERE'IA, a lex of the Second Punic War, which regulated the coinage by fixing the relation between as, sestertius, and denarius (Plin. *H. N.* xxxiii. § 45; Cod. 8, 54, 37); according to Studemund, it is the lex mentioned in Gaius, iv. 95.

CURIA'TA DE ADOPTIONE (Gell. v. 19; Cic. *ad Att.* ii. 7, 2; *de prov. Consul.* 19, 45; *pro Domo*, 15, 39; *pro Sest.* 7, 16; Tac. *Hist.* i. 15; Sueton. *August.* 65). [ADOPTIO.]

CURIA'TA DE IMPERIO (Cic. *de Rep.* ii. 13, 25, ii. 17, 18, &c.; Tac. *Ann.* xi. 22; Liv. v. 46, ix. 38, &c.). [IMPERIUM.]

DECEMVIRA'LIS. [DUODECIM TABULARUM.]

DE'CIA DE DUUMVIRIS NAVALIBUS, B.C. 312 (Liv. ix. 30).

DECIMA'RIA, a chapter of the Lex Papia Poppaea, limiting the amount which a wife could take under her husband's will, and *vice versâ*, if they had no children, to a tenth of what was actually given (*Fragm. Vat.* 264; Quint. viii. 5; Cod. 8, 58, rubr.).

DI'DIA, B.C. 144 (Macrob. *Saturn.* ii. 13). [SUMPTUARIAE LEGES.]

DOMI'TIA DE SACERDOTIIS, B.C. 105 (Cic. *in Rull.* ii. 7, 18; *Epist. ad Brut.* i. 5; Suet. *Nero*, 2; Vell. Pat. ii. 12, 3). [SACERDOTIA.]

DUI'LIA, a plebiscitum of 449 B.C., imposing severe penalties on the tribune responsible for the choosing of his own and his colleague's successors who omitted to see that they were duly elected, and on those who created new magistrates from whom there was no appeal (Liv. iii. 55: see VALERIAE HORATIAE).

DUI'LIA MAE'NIA DE UNCIARIO FENORE. B.C. 357, establishing or confirming a rate of interest at 8⅓ per cent. (12 unciae to 100 asses) per annum (Liv. vii. 16, 19). The same tribunes Duilius and Maenius carried a measure for the prevention of such unconstitutional proceedings as the enactment of a lex by the soldiers out of Rome on the consul's proposal (Liv. vii. 16: see Mommsen, *Römisches Staatsrecht*, i. p. 69, note 2).

DUO'DECIM TABULA'RUM. The enactment of the Twelve Tables was the outcome of plebeian agitation for an "exaequatio juris" between the two orders in the state. In the year B.C. 462 the tribune of plebs C. Terentilius Arsa had obtained a resolution of the plebs for the appointment of five persons, with the object of enacting laws for the definition of the consular imperium; but this the senate, the stronghold of the patricians, had refused to send on to the Comitia Centuriata (Liv. iii. 9). In the next year he proposed a codification or definite statement of the whole law by a commission of ten; but this, though carried by the plebs, was equally unsuccessful in its later stages (Liv. iii. 10; Dionys. x. 3). In B.C. 454, however (Dionys. x. 52, 54), the senate so far yielded as to assent to a plebiscitum, pursuant to which three commissioners were to be sent to Athens and the Greek cities in order to make themselves acquainted with their laws. On their return, after two years' absence, it was proposed (B.C. 451) that all the ordinary magistracies should be suspended, and the whole authority of the state vested in ten patrician commissioners, including the three who had been to Greece ("decemviri legibus scribundis"), from whom there was to be no *provocatio*, and who were directed to codify the public and private law of Rome (Dionys. x. 54–57; Liv. iii. 32, 33). The plebeians consented to stand out of the commission only under express reservation of their previously established rights and liberties (Liv. iii. 32). This proposal was carried through the Comitia Centuriata and Curiata without opposition (Liv. iii. 34; Dionys. x. 32). The decemviri were appointed by the comitia of the centuries, being presided over by Appius Claudius, Consul designate; but they took the administration of affairs by turn, the insignia of office being used only by him who for the time being represented the executive (Liv. iii. 33). Ten Tables of laws were prepared during the year, and after being approved by the senate were confirmed by the Comitia Centuriata and Curiata: two further tables (which Cicero, *de Rep.* ii. 37, calls "tabulae iniquarum legum") were added in the next year, these having been prepared by decemviri among whom were (according to Dionys. x. 58) three plebeians, though Livy (iv. 3) does not suggest that there had been any change in the constitution of the commission. Cicero's remark may be due to the fact that the prohibition of *conubium* between plebs and patricians was enacted by the eleventh Table (Dirksen, *Uebersicht*, &c., p. 740). In their integrity, the whole

Twelve Tables were first published in B.C. 449, after the downfall of the decemviri (Liv. iii. 54, 57); they are mentioned by the Roman writers under a great variety of names (*e.g.* Leges Decemvirales, Lex Decemviralis, Leges Duodecim, Duodecim Tabularum, or *lex* or *leges* simply); and, being the only attempt at codification of the *jus civile* until Justinian's time, are spoken of by classical writers throughout Roman history as the fundamental element of the system: by Tacitus as "finis aequi juris," by Livy as "corpus omnis Romani juris" and "fons publici privatique juris."

Some doubt has been cast, but without reason, on the story of the embassy to the Greek states, which preceded the enactment of the Twelve Tables. Pomponius (Dig. 1, 2, 2, 3 and 4) also refers to assistance given to the decemviri by an Ephesian named Hermodorus, who was living as an exile in Italy; but the assistance consisted perhaps more in interpreting the laws brought back by the commissioners from Greece than (as Pomponius hints) in the suggestion of new legislation. At any rate, this last tradition was confirmed by the fact of a statue having been erected in the Comitium at Rome in memory of Hermodorus; but it did not exist in the time of Pliny (*H. N.* xxxiv. § 21). The foreign source of some of the laws was acknowledged by the Romans themselves: *e.g.* Cicero attributes to Solon the original of the rules as to burial (*de Leg.* ii. 25, 64). Similarly Gaius, in his Commentary on the Twelve Tables, where he is speaking of Collegia (Dig. 47, 22, 4), says that the members of Collegia may make what terms they please among themselves, if they thereby violate no "publica lex;" and he adds that this rule seems to be taken from the legislation of Solon, to whom also (Dig. 10, 1, 13) he refers for the origin of certain rules as to boundaries and the *actio finium regundorum.* But that the decemviral legislation contained any considerable element of foreign law is in the highest degree improbable. The law as previously established seems to have been handed down in the main, if not entirely, by oral tradition; and whether it be true or not that the patricians were especially cognisant of it, it is certain that the plebeians had suffered largely from having no certain or full knowledge of its intricate rules and formulae. What they desired primarily was a plain and clear statement in writing ("legibus scribundis") of the law as it stood: it was only in the *jus publicum* that they wished for change, and that only so far as was required to place the two orders on a tolerable equality in respect of civil and political rights. The caprice of the magistrate who administers the law is best guarded against by those over whom it is administered having a clear knowledge of its provisions.

The laws were cut on tablets of bronze and set up in a public place (Liv. iii. 57; Diod. xii. 26), though Pomponius, in the passage of the Digest already referred to, says that the material of the Tablets was ivory (see Zimmern, *Geschichte des röm. Privatrechts*, vol. i. p. 101). It is commonly supposed that they were destroyed in the burning of the city by the Gauls some sixty years after their enactment, but the passage of Livy on which this is based (vi. 1) is just as conclusive against as for the supposition. The Romans of the age of Cicero had no doubt of the genuineness of the collection which then existed; and if we may believe Cyprian (*Ep.* 2, 4, *ad* Donat. *de gratia Dei*), the Twelve Tables were exposed in the forum as late as the third century of our era. Cicero speaks of learning the text of them by rote ("ut carmen necessarium") when a boy (*de Leg.* ii. 4, 23), and up to his time the chief juristic work of the lawyer class seems to have been their *interpretatio*—the extension of a rule of the Twelve Tables (or of other early statutes, such as the Lex Aquilia) to cases not strictly within its letter: but shortly before the fall of the Republic, as he tells us (*de Leg.* i. 5, 17), the jurists had abandoned the *jus civile*, and taken to commenting instead on the Praetor's Edict. Of actual commentaries on the Twelve Tables we hear of one by Sextus Aelius Paetus Catus in his *Tripartita*, a work which existed in the time of Pomponius [JUS AELIANUM]. Others were written by another Aelius, by Atilius (Cic. *de Leg.* ii. 23, 59; Dig. 1, 2, 2, 38), by Labeo (Gell. i. 12, vii. 15, xx. 1), and finally by Gaius: this was in six books, from which twenty excerpts are preserved in the Digest. The decemviral legislation, though largely modified (especially in the parts of it relating to public law) by subsequent enactments, was not formally repealed till the time of Justinian, nearly 1000 years after its first establishment. No complete copy of its text has come down to us, but about 100 fragments, partly incomplete, have been collected from citations and references in classical and juristic literature.

It remains to give a short account of the contents of the Twelve Tables, so far as they can be gathered from the extant fragments and the notices of earlier writers.

I. The personal freedom and civil equality of citizens was secured by the exclusion of all capital sentences except those delivered by the Comitia Centuriata (Cic. *de Leg.* iii. 19, 44; *de Republ.* ii. 36, 61; *pro Sest.* 30, 65), by the recognition as provisionally free of a man whose free status was called in question, and by the prohibition of *privilegia*.

II. Freedom of individual action within the domain of private law was secured by the recognition of contracts and testaments.

III. Certain points of private law were more precisely defined which would otherwise have endangered the security of rights of property, or opened the door to harshness and oppression: especially as regards (*a*) usucapion and the restrictions imposed on property in the interest of neighbours; (*b*) the law of debt and the rights of unsatisfied creditors; (*c*) family law (*manus, patria potestas, tutela,* and *conubium* between patricians and plebeians); and (*d*) inheritance, especially on intestacy.

IV. Capital penalties were prescribed for false witness, judicial partiality or corruption, incendiarism, nocturnal theft of crops, and libel; and the right of appeal from condemnation to any of these was given to every citizen (Cic. *de Republ.* ii. 31).

V. Private *poenae* were established for *injuria*, theft, and certain kinds of *damnum*.

VI. The mode of summons and the procedure in actions generally were defined and regulated, especially with a view to preventing capricious exercise of his authority and jurisdiction by the magistrate; and

VII. Certain sanitary and sumptuary rules were laid down as to the interment of dead bodies.

The most celebrated attempt to re-arrange the extant fragments of the Twelve Tables in the order in which they originally stood, or to reconstruct the Tables themselves, is that of Jacobus Gothofredus (Heidelberg, 1616): on this and similar works there is an admirable critique by Dirksen, *Uebersicht der bisherigen Versuche zur Kritik und Herstellung des Textes der Zwölf-Tafel-Fragmente*, 1824; and especially M. Voigt, *Civil und Criminalrecht der Zwölf Tafeln*. Cf. also Schöll, *Leg. XII. Tab. reliquiae*, Leipzig, 1866; Bruns, *Fontes juris Rom. antiqui*, ed. 4 (Tübingen, 1880), pp. 14–37; and Puchta, *Institutionen*, vol. i. §§ 54, 55.

FA'BIA DE PLAGIARIIS (Cic. *Rab. Perd.* 3, 8; Paul. *Sent. rec.* v. 306; *Inst.* iv. 18, 10; Dig. 48, 15; Cod. 9, 20). [PLAGIUM.]

FA'BIA DE NUMERO SECTATORUM (Cic. *pro Murena*, 34, 70, 71).

FABRI'CIA DE REDITU CICERONIS (Cic. *pro Milone*, 14, 38).

FALCI'DIA. [LEGATUM.]

FA'NNIA, B.C. 161 (Gell. ii. 24, 2–6; Macrob. *Saturn.* ii. 9, 13; Plin. *H. N.* x. § 139; Athen. vi. p. 274 c). [SUMPTUARIAE LEGES.]

FA'NNIA. [JUNIA DE PEREGRINIS.]

FLAMI'NIA, an agrarian law for the distribution of lands in Gaul and Picenum, proposed by C. Flaminius, tribunus plebis (Cic. *Brut.* 14, 57; *Acad.* ii. 5, 13; *de Invent.* ii. 17, 52; Val. Max. v. 4, 5; Polyb. ii. 21). According to Polybius, who here seems more reliable than Cicero, the date of the law was B.C. 232.

FLAMI'NIA MINUS SOLVENDI, B.C. 217, reduced debts by more than a third by allowing sixteen asses to be paid by ten (Festus, *s. v.* Sestertii).

FLA'VIA AGRA'RIA, B.C. 60: by this the tribune L. Flavius proposed a distribution of lands among Pompeius' soldiers (Cic. *ad Att.* i. 18, 6, i. 19, 4; Dio Cass. xxxvii. 50; Marquardt, *Röm. Staatsverwaltung*, i. p. 446).

FRUMENTA'RIAE. [FRUMENTARIAE LEGES.]

FU'FIA. [AELIA.]

FU'FIA CANI'NIA, *circ.* A.D. 4, limited the number of slaves who could be manumitted by will (Gaius, i. 42–46; *Inst.* i. 7; Ulpian, *Reg.* i. 24, 25; Paul. *Sent. rec.* iv. 14; Cod. 7, 3; Sueton. *Aug.* 40). It is also sometimes called Furia or Fusia Caninia. [MANUMISSIO.]

FU'FIA DE RELIGIONE, B.C. 61, a plebiscitum of the tribune Q. Fufius Calenus, relating to the mode of selecting the judges who were to try Clodius for his outrage on the rites of the Bona Dea (Cic. *ad Att.* i. 13, 3; *ib.* 16, 2).

FU'FIA JUDICIARIA (B.C. 59?) apparently provided that the senators, knights, and tribuni aerarii should vote separately in the judicia (Dio Cass. xxxviii. 8; Schol. Bob. *pro Flacco*, p. 235, Orelli).

FU'RIA ATI'LIA, a plebiscitum of 137 B.C. enacting the surrender of C. Mancinus to the Numantines (Cic. *de Off.* iii. 30, 109).

FU'RIA DE SPONSU (Gaius, iii. 121, 122). [INTERCESSIO.]

FU'RIA TESTAMENTARIA, B.C. 183 (Gaius, ii. 225, iv. 23; Cic. *pro Balbo*, 8, 21). [LEGATUM.]

GABI'NIA DE SENATU LEGATIS DANDO, a plebiscitum of Aulus Gabinius, tribunus plebis B.C. 67, appropriating the sittings of the senate in the month of February to the reception of embassies (Cic. *ad Quint. fratr.* ii. 13, 3; *ad Fam.* i. 4).

GABI'NIA DE UNO IMPERATORE, &c., passed by the same tribune in the same year, and conferring extraordinary powers on Cn. Pompeius for conducting the war against the pirates (Vell. Pat. ii. 31, 2; Dio Cass. xxxvi. 6–20; Plut. *Pomp.* 25; Cic. *pro lege Manilia*, 17–19).

GABI'NIA DE VERSURA, passed by the same tribune in the same year, and forbidding all loans of money at Rome to legationes from foreign parts, its object being to prevent the senate from being bribed by such embassies (Cic. *ad Att.* v. 21, 12; vi. 2, 7).

GABI'NIA TABELLARIA, B.C. 139 (Cic. *Lael.* 16, 41). [TABELLARIAE LEGES.]

GA'LLIAE CISALPI'NAE. [RUBRIA.]

GE'LLIA CORNE'LIA, B.C. 72, gave to Cn. Pompeius the extraordinary power of conferring the Roman civitas on Spaniards in Spain with the advice of his council (Cic. *pro Balbo*, 8, 14 and 19; 14, 32, 33).

GENU'CIA DE FENORE, B.C. 343, forbade taking interest for the use of money (Liv. vii. 42; Tac. *Ann.* vi. 16). It was persistently evaded (Liv. xxxv. 7), and eventually altogether disregarded (Plut. *Cato Major*, 21; Appian, *Bell. Civ.* i. 54).

GENU'CIA DE CONSULATU, B.C. 343, a proposal by the same tribune Genucius for opening both consulships to plebeians (Liv. vii. 42). In viii. 12 Livy represents the law as having actually been passed; but we do not read of both consuls being plebeians till the 6th century, and he is probably incorrect: see Puchta, *Institutionen*, § 57, note 1; Mommsen, *Röm. Staatsrecht*, ii. p. 76.

GLI'CIA, a statute supposed by Cujacius as the origin of the *querela inofficiosi testamenti*, but apparently without reason (see Vangerow, *Pandekten*, 7th edit. ii. p. 218).

GUNDOBA'DA, a name sometimes given to the Lex Burgundiorum of King Sigismund, otherwise known as "Papian," A.D. 517.

HERE'NNIA, B.C. 60 (Cic. *ad Att.* i. 18, 4; i. 19, 5).

HIERONICA. [DECUMAE, Vol. I. p. 605.]

HI'RTIA DE POMPEIANIS, *circ.* 49 B.C. (Cic. *Phil.* xiii. 16, 32).

HORA'TIA, B.C. 449, made the persons of the tribunes, aediles, and decemviri *sacrosancti* (Liv. iii. 55). [VALERIAE ET HORATIAE.] Another Lex Horatia mentioned by Gellius (vi. 7, 2–4) was a privilegium relating to a vestal virgin named Caia Tarratia.

HORTE'NSIA DE PLEBISCITIS, B.C. 287 (Plin. *H. N.* xvi. § 37; Gell. xv. 27, 4; Gaius, i. 3; *Inst.* i. 2, 4). [PLEBISCITUM; PUBLILIAE LEGES.]

HORTE'NSIA DE NUNDINIS, of about the same date, enacted that the market days, which had hitherto been Feriae, should be *dies fasti.* This was done for the purpose of accommodating the inhabitants of the country (Macrob. *Saturn.* i. 16; Plin. *H. N.* xviii. § 13).

HOSTI'LIA enabled the *actio furti* to be bought by an agent on behalf of any person who (or whose tutor) was in foreign captivity or absent *reipublicae causa* (*Inst.* iv. 10, pr.).

ICI'LIA DE AVENTINO PUBLICANDO, a plebiscitum proposed by L. Icilius, B.C. 456, granting the Aventine, hitherto possessed by the patricians, as a dwelling-place to the plebs, who thereby acquired a right to the buildings which they erected on it (Liv. iii. 31, 32; Dionys. x. 31, 32; cf. Niebuhr, *Rom. Hist.* ii. 301: and see SUPERFICIES).

ICI'LIA DE SECESSIONE, B.C. 449 (Liv. iii. 54).

ICI'LIA TRIBUNICIA, B.C. 469, enacted that any person who interfered with a tribune in the exercise of his constitutional powers should be put to death unless he gave sureties for the payment of the fine to which he rendered himself liable (Dionys. vii. 17; Cic. *pro Sestio*, 39, 84; Becker-Marquardt, ii. 3, 129).

JU'LIAE LEGES, most of which were passed in the time of C. Julius Caesar and Augustus: among them are—

JU'LIA AGRARIA, passed by Julius Caesar in his first consulate, B.C. 59: it provided for an assignment of lands in Campania (whence Lex Campana in Cic. *ad Att.* ii. 18) to the Pompeian veterans and the poorer citizens generally, especially such as had three children (Dio Cass. xxxviii. 1–7; Vell. Pat. ii. 44; Appian, *Bell. Civ.* ii. 10; Sueton. *Jul.* 20; Cic. *ad Att.* ii. 16, *ad Fam.* xiii. 4, *Phil.* ii. 39, 101, v. 19, 53; Plut. *Cato Minor*, 31–33; Dig. 47, 21; Zumpt, *Comment. Epigraph.* i. 277–302; Harless, *Ackergesetzgebung C. Julius Caesar*, Bielefeld, 1841).

JU'LIA CADUCARIA, identical with the Lex Julia et Papia Poppaea.

JU'LIA DE ADULTERIIS. [ADULTERIUM.]

JU'LIA DE AMBITU. [AMBITUS.]

JU'LIA DE ANNONA, directed against attempts to raise in any way the price of corn, and making it a criminal offence (*Inst.* iv. 18, 11: Dig. 47, 11, 6, pr.; 48, 12, 2).

JU'LIA DE BONIS CEDENDIS. Up to nearly the end of the Republic an insolvent debtor was unable to escape from the two severe forms of bankruptcy execution (*manus injectio* and *bonorum emptio* or *venditio*) by a voluntary composition. This statute (whether due to Julius or Augustus Caesar is uncertain) enabled him, at any moment before his creditors took steps to have him adjudged a bankrupt, to make a *cessio bonorum* to them, though the right could not be exercised if his insolvency was due entirely to his own fault (Cod. 7, 71, 8, pr.). He surrendered his property, which was dealt with in much the same way as if the procedure had been by *bonorum emptio*; but he escaped *infamia* and the liability to personal arrest, and was entitled to the *beneficium competentiae*: i.e. his creditors were bound to let him retain so much of his means as was sufficient to provide him with the necessaries of life. The provisions of the statute, originally intended to benefit *cives* only, were extended to the provinces by imperial constitutions, Cod. 7, 71, 4 (Caes. *Bell. Civ.* iii. 1; Sueton. *Jul.* 42; Tac. *Ann.* vi. 16; Dio Cass. xlii. 21; Gaius, iii. 78).

JU'LIA DE CAEDE ET VENEFICIO (Sueton. *Nero*, 33), perhaps the same as the Lex Julia de vi publica.

JU'LIA DE CIVITATE, B.C. 90 (Cic. *pro Balbo*, 8, 21; Gell. iv. 4, 3). [CIVITAS; FOEDERATAE CIVITATES.]

JU'LIA DE CRETA (Cic. *Phil.* ii. 38, 97).

JU'LIA DE EXSULIBUS (Cic. *Phil.* ii. 38, 98: cf. *Phil.* v. 4, 11).

JU'LIA DE FENORE (or DE PECUNIIS MUTUIS or CREDITIS), passed by Julius Caesar when dictator, B.C. 49. It compromised the claims of creditors and debtors by estimating property at the value it had held before the depreciation occasioned by the Civil War, and compelling the creditors to take it at this valuation; and by allowing debts to be discharged without payment of the accumulated interest. It was calculated that the creditors lost about one-fourth of what was their due (Caes. *Bell. Civ.* iii. 1; Sueton. *Jul.* 42; Plut. *Caes.* 37; Appian, *Bell. Civ.* ii. 48).

JU'LIA DE FUNDO DOTALI, a chapter of the Lex Julia de adulteriis: it absolutely prohibited mortgages of Italian land which formed part of a *dos* by the husband, and allowed its alienation only with the wife's consent. It was commented on by Papinian, Ulpian, and Paulus (Gaius, ii. 63; *Inst.* ii. 8, pr.; Paul. *Sent. rec.* ii. 21, 2; Dig. 23, 5). See ADULTERIUM.

JU'LIA DE LIBERIS LEGATIONIBUS (Cic. *ad Att.* xv. 11, 4; *de Legg.* iii. 8). [LEGATUS.]

JU'LIA DE MARITANDIS ORDINIBUS. [JULIA ET PAPIA POPPAEA.]

JU'LIA DE PROVINCIIS, passed by Julius Caesar: it limited the governorship of a praetorian province to one year, that of a consular one to two. Orelli also ascribes to this lex certain regulations of Caesar as to provincial expenses, which Ernesti considers to have been part of the Lex Julia repetundarum (Cic. *Phil.* i. 8; Dio Cass. xliii. 25; Ferrat. *Epist.* iii. 14).

JU'LIA DE PUBLICANIS (Cic. *pro Plancio*, 14, 35; Appian, *Bell. Civ.* ii. 13; Dio Cass. xxxviii. 7; Sueton. *Jul.* 20).

JU'LIA DE REGE DEIOTARO (Cic. *Phil.* ii. 37, 93: cf. *ad Att.* xiv. 12, 1).

JU'LIA DE RESIDUIS, part of the Lex Julia peculatus (*Inst.* iv. 18, 12; Dig. 48, 13). [PECULATUS.]

JU'LIA DE SACERDOTIIS (Cic. *ad Brut.* i. 5; cf. *Phil.* ii. 6, 6).

JU'LIA DE SACRILEGIS. [PECULATUS.]

JU'LIA DE SICULIS (Cic. *ad Att.* xiv. 12, 1).

JU'LIA DE VI PUBLICA ET PRIVATA. [VIS.]

JU'LIAE JUDICIARIAE. One of Julius Caesar deprived the tribuni aerarii of their share in the *judicia publica* (Suet. *Jul.* 41; Cic. *Phil.* i. 8); others, more probably of Augustus than Julius, instituted an "album selectorum judicum" for the bearing of civil causes (Suet. *Octav.* 32; Gell. xiv. 2), and perhaps fixed at twenty years the age under which a person could not be compelled to be a judex (Dig. 4, 8, 41); limited the jurisdiction of the centumviri (Gaius, iv. 30; see Keller, *Civil Process*, § 23); and divided actions in respect of their pendency into *judicia legitima* and *judicia quae imperio continentur* (Gaius, iv. 104). For the whole subject, see JUDEX.

JU'LIA MAJESTA'TIS (Cic. *Phil.* i. 9, 23; *Inst.* iv. 18, 3; Dig. 48, 4). [MAJESTAS.]

JU'LIA MISCELLA, avoiding a condition annexed to the institution of a heir or a legacy to the effect that the person benefited should not marry: probably a clause of the Lex Julia et Papia Poppaea (Dig. 35, 1, 64; *ib.* 72, 4, &c.; Cod. 6, 40).

JU'LIA MUNICIPA'LIS, commonly called the Tabula Heracleensis. It was discovered on bronze in two fragments at Tarentum (Heraclea) in 1732 and 1735, which have been united and kept in the Museo Borbonico at Naples since 1760. The inscription on one side is a Greek psephisma of the town of Heraclea, that on the other is a copy of part of a Roman lex (clearly made for the use of the citizens of the town), which contains police regulations for the city of Rome: rules for the constitution of communities of Roman citizens (*municipia, coloniae, praefecturae, fora, conciliabula civium Romanorum*), and others relating to capacity for the decurionatus and magistracies, to the census in the Italian towns, and to changes in local regulations. It was thus a lex of the class called Satura.

It seems that the lex of the year B.C. 49, which gave the civitas to the Transpadani, enacted that a Roman commissioner should be sent to all the towns for the purpose of framing regulations for their municipal organisation. The Lex Julia empowered the commissioners to continue their labours for one year from its date, and included the whole of Italy within the scope of their authority. The name of the lex (which for a long time was called simply Tabula Heracleensis) was determined by Savigny by means of an inscription discovered at Padua in 1696 (Orelli, *Inscr.* ii. 3676): its date is now regarded by the authorities to be fixed at B.C. 45 by a passage of Cicero (*ad Fam.* vi. 18), so that its determining cause seems to have been the admission of the Transpadani to the civitas, B.C. 49.

(A lithographed copy of the Table is given by Ritschl, *Tab.* xxxiii. xxxiv.: the text may also be found in Orelli's Inscriptions, i. 206, and Spangenberg's *Monumenta legalia*, 1830, No. 16, p. 99 *sq.* The first work on the subject is that of Mazochi, Naples, 1754, 1755: the best is Savigny's Essay (with two appendices) in his *Vermischte Schriften*, vol. iii. pp. 279–413: cf. Puchta, *Institutionen*, § 90.)

JU'LIA ET PA'PIA POPPAEA. The relation of this statute to the Lex Julia de maritandis ordinibus is not perfectly clear. Augustus appears in his sixth consulate (B.C. 28) to have issued an edict (Tac. *Ann.* iii. 28) on the subject of marriage, which he followed up (B.C. 18) by proposing a law to the senate regulating certain marriages, imposing disabilities on unmarried persons (*caelibes*), and establishing rewards for those who had married and reared children (Dio Cass. liv. 16). This he carried with difficulty through the senate, but, apparently owing to the organised resistance of the equites, it was tumultuously rejected at the Comitia (Suet. *Aug.* 34). Towards the end of his reign, however (A.D. 3), he succeeded in carrying it, with its rewards increased and its penalties mitigated: it is referred to in the *Carmen Saeculare* of Horace, which was written B.C. 17, and is mentioned under the name Lex Julia de maritandis ordinibus in Dig. 38, 11; 23, 2. The opposition of the knights was overcome by a provision that it should not come into force for three, a period subsequently extended to six, years; and taking advantage of this, Augustus passed in A.D. 9 another statute (called Papia Poppaea from the *consules suffecti* for the year, M. Papius Mutilus and Q. Poppaeus Secundus: Dio Cass. lvi. 1–10), containing further enactments on the same subject. Some writers are of opinion that there was but one lex (Papia Poppaea), in which the earlier unsuccessful law was incorporated, and it is true that the frequent mention of them together as one lex (Julia et Papia Poppaea) lends some colour to the supposition: but the view here taken seems more in accordance with the information given by historians, and to be confirmed by the provisions of the statutes being sometimes distinguished in close juxtaposition. Sometimes they are cited by reference to their various chapters: *e.g.* Lex Caducaria, Lex Decimaria, Lex Miscella, &c.

Many commentaries were written on these leges by the Roman jurists, of which considerable fragments are preserved in the Digest: Gaius wrote fifteen books, Ulpian twenty, and Paulus at least ten. The joint statute contained at least thirty-five chapters (Dig. 22, 2, 19), but as a rule it is impossible to say to which of the two leges included under the general title of Lex Julia et Papia Poppaea the several provisions as now known to us belong. Attempts have been made both by J. Gothofredus and Heineccius to restore them, on the assumption that their provisions are reducible to the two general heads of a Lex Maritalis and a Lex Caducaria (cf. Puchta, *Institutionen*, § 107).

Among the enactments of these statutes are the following:—

(i.) Prohibition of certain marriages under penalties: viz. of ingenui with infames (*e.g.* actresses and prostitutes); and of senators or their children with freedwomen, freedmen, and actors' daughters (Ulpian, *Reg.* xiii. 1, xvi. 2; Dig. 23, 2, 44, pr. and 1). Marriages between a senator or his issue and libertini were declared void by a senatusconsult passed under M. Aurelius (Dig. 23, 2, 16, pr.), and the rule was subsequently extended to actors and actresses (Dig. *ib.* 42, 1).

(ii.) Avoidance of conditions against marriage annexed to legacies and inheritances. [JULIA MISCELLA.]

(iii.) Provisions to encourage marriage. *Caelibes* were disabled by the Lex Julia from taking either as heirs or as legatees (Gaius, ii. 111, 144, 286) under a will, unless the testator were related to them within the sixth degree (Ulpian, *Reg.* xvi. 1; *Frag. Vat.* 216, 219), or unless they married within 100 days (Ulpian, *Reg.* xvii. 1; xxii. 3). *Spadones* and vestal virgins were exempted from the operation of the statute, as were widows for twelve months, and divorced women for six: these periods were extended by the Lex Papia to two years and eighteen months respectively (Ulp. *Reg.* 14). Again, the penalty of the statute could be evaded by an engagement to marry, if carried out within two years (Sueton. *Octav.* 34; Dio Cass. liv. 16, lvi. 7; Dig. 23, 1, 17). Finally, males were released from its provisions in this respect on attaining sixty, women on attaining fifty years of age; but a Senatusconsultum Persicianum passed under Tiberius enacted that they should be regarded as *caelibes* in perpetuity if they postponed marrying till so late in life. A Senatusconsultum Claudianum so far modified the strictness of the new rule as to give a man who married after sixty the same advantage that he would have had if he had married under sixty, provided he married a woman who was under fifty; but it was enacted by a Senatusconsultum Calvisianum under Nero, that if a woman over fifty married a husband under sixty, even the latter should not escape the disabilities imposed by the statute (Ulpian, *Reg.* xvi. 4). Similarly, by the Lex Papia, *orbi* (persons who had been married, but had no children living) were disabled from taking more than a moiety of what was left them by way of either inheritance or legacy (Gaius, ii. 111, 286; Ulpian, *Reg.* xvi. 1; Sozomenus, 1, 9), unless related to the testator within the sixth degree. Males escaped the penalties of *orbitas* by having a single (even adoptive) child (Juv. xix. 83, 86–89), but by a Senatusconsultum Memmianum adoption was deprived of this effect when resorted to merely in order to evade the statute: but women were not so well off, ingenuae being released only by three, libertinae only by four children (Paul. *Sent. rec.* iv. 9, 1–3). There were exceptions to these rules if the wife was under twenty or over fifty, or the husband under twenty-five or over sixty, and also if the husband was residing away from the wife *reipublicae causa* (Ulpian, *Reg.* xvi. 1). Legacies and inheritances which could not be taken either in whole or part, owing to these provisions of the Lex Julia or Lex Papia Poppaea, became *caduca* [Bona Caduca], the law upon which subject was considerably modified by these statutes.

(iv.) Some other provisions have been noticed elsewhere [Decimaria; Julia Miscella]. To these may be added the rule giving a preference to candidates for office according to the number of their children (Tac. *Ann.* xv. 19; Plin. *Ep.* vii. 16): the release of ingenuae with three and libertinae with four children from tutela (Gaius, i. 144, 145), and of libertini with a certain number of children from *operarum obligationes* (Dig. 38, 1). The exemption of persons from discharging the office of tutor or curator *jure liberorum* (*Inst.* i. 25, pr.; Dig. 27, 1, 18) was based on these statutes, which also introduced changes (besides those already noticed) into the law of succession, both testamentary and intestate, especially in connexion with libertini (Gaius, iii. 42–50, &c.: see Patronus). And the Lex Julia also fixed the date at which wills were opened as that at which the rights of legatees should become indefeasible (*dies cedit*: see Legatum), which previously had been the decease of the testator; but the old rule was restored under Justinian.

After the enactment of the Lex Papia Poppaea, it became not unusual to obtain a grant of a fictitious *jus liberorum* by special favour from the senate, and later from the emperor (Dio Cass. lv. 2; Sueton. *Claud.* 19; Plin. *Ep.* ii. 13, x. 2, 95, 96; Paul. *Sent. rec.* iv. 9, 9), whereby those who had no children, or not enough, were enabled to escape its disabilities and even enjoy most of its benefits (*Fragm. Vat.* 170). This privilege is mentioned in some inscriptions, on which the abbreviation I. L. H. (*jus liberorum habens*) sometimes occurs. The Emperor M. Aurelius enacted that children should be registered by name within thirty days of their birth with the Praefectus Aerarii Saturni (Capitol. *Marc.* 9; cf. Juv. *Sat.* ix. 84).

The penalties of *caelibatus* and *orbitas* were abolished by Constantine and his sons (*Cod. Theod.* 8, 16), as were the disabilities contained in the "Lex Decimaria" by Theodosius II. (*Cod. Theod.* 8, 17, 2, 3), so that little is left of these statutes in the law of Justinian.

JU'LIA PAPI'RIA. [Papiria.]

JU'LIA PECU'LATUS. [Peculatus.]

JU'LIA ET PLAU'TIA, of uncertain date, enacted that *res vi possessae* should stand on the same footing with *res furtivae* [Atinia] and be incapable of acquisition by usucapio. It related solely to land, for robbery of *res mobiles* was theft itself (Gaius, iii. 209), and land could not be stolen (*Inst.* ii. 6, 7). (Gaius, ii. 45, 51; *Inst.* ii. 6, 2; Dig. 41, 3, 4, 22.) It would seem from Theophilus on the passage of the Institutes last referred to that there were really two statutes, Julia and Plautia, perhaps the two of those names "de vi."

JU'LIA REPETUNDA'RUM. [Repetundae.]

JU'LIA SUMPTUA'RIA, passed B.C. 49 by Julius Caesar (Cic. *ad Att.* 13, 7, 1; *ad Fam.* 7, 26, 2; 9, 15, 5). Augustus, too, seems to have re-enacted with additional severities the earlier sumptuary laws (Gell. ii. 24; xliii. 25). [Sumptuariae Leges.]

JU'LIA THEATRA'LIS (Sueton. *Aug.* 40; Plin. xxxiii. § 32) permitted Roman equites, in case they or their parents had ever had a census equestris, to sit in the fourteen rows of the theatre appropriated to them by the Lex Roscia Theatralis, B.C. 67.

JU'LIA ET TI'TIA (supposed to have been passed B.C. 31) assigned to the governors of provinces (*praesides*) the duty of appointing guardians for women and impuberes who were not in patria potestas, or already provided with one. A Lex Atilia, which was in existence in the seventh century of the city, had already given the same power in Rome to the praetor urbanus, acting with a majority of the tribuni plebis (Gaius, i. 185; *Inst.* i. 20, pr.; Ulpian, *Reg.* xi. 18).

JU'LIA VICESIMA'RIA, passed by Augustus, A.D. 6 (Dio Cass. lv. 25, lvi. 28; Plin. *Paneg.* 37–40; Capitol. *Marc.* 11). [Vicesima.]

JU'NIA DE LIBERTINORUM SUFFRAGIIS. [Clodia; Manumissio.]

JU'NIA DE PEREGRINIS, or JUNIA PENNI, a plebiscitum of M. Junius Pennus, B.C. 126, expelling peregrini from the city (Cic. *de Off.* iii. 11, 47; *Brut.* 28, 109). By a Lex Fannia (possibly merely an edict of the Consul Fannius) B.C. 122, Latins and Italians were similarly treated (Appian, *Bell. Civ.* i. 23; Plut. *C. Gracchus*, 12; Cic. *Brut.* 26, 100, *pro Sest.* 13, 31), as were all persons who had not an Italian domicile by a Lex Papia, B.C. 65 (Dio Cass. xxxviii. 9; Cic. *in Rull.* i. 4, 11; *de Off.* loc. cit.; *ad Att.* iv. 16).

JU'NIA LICI'NIA. [Licinia Junia.]

JU'NIA NORBA'NA, probably A.D. 19 (see Puchta, *Institutionen*, § 213, note u), created the status of Latinus Junianus by enacting that slaves manumitted otherwise than by one of the *manumissiones legitimae*, or against the provisions of the Lex Aelia Sentia, should have the rights of Latini (i.e. *commercium* without *co-*

nubium). The statute, however, expressly deprived them of the right of making, or taking under a will, or of being testamentary guardians: see Aelia Sentia Lex; Latinitas; Libertus; Manumissio. (Gaius, i. 16, 17, 22, &c., iii. 56; Ulpian, *Reg.* i., xx. 8, xxii. 3.)

JU'NIA PENNI. [Junia de Peregrinis.]

JU'NIA PETRO'NIA, or PATRO'NIA, enacted that if the judges in a suit relating to personal freedom were evenly divided, the person whose status was in question should be declared free (Dig. 40, 1, 24: cf. Dig. 42, 1, 38, pr.). Whether it is the same statute as the Lex Petronia is doubtful.

JU'NIA REPETUNDA'RUM. [Repetundae.]

JU'NIA VELLE'IA, A.D. 10, made it possible (which hitherto had not been allowed) to either institute or disinherit certain *postumi sui* (i.e. descendants who after the making of a will come into the immediate potestas of the testator). Those to whom this lex related were (*a*) children of the testator born in his lifetime, but after the execution of his will; (*b*) grandchildren of the testator born after their father's death, but in the lifetime of the testator; (*c*) grandchildren born before the execution of the grandfather's will, but who become *sui heredes* by their father's decease after that event (Ulpian, *Reg.* xxii. 19; Dig. 28, 2, 29; Gaius, ii. 134, and Mr. Poste's note on § 130).

LAETO'RIA, the same as **PLAETO'RIA** [Curator]. Sometimes the lex proposed by Volero for electing plebeian magistrates at the Comitia Tributa is cited as a Lex Laetoria (Liv. ii. 56, 57).

LE'NTULI (Cic. *ad Fam.* xiii. 48), really a magisterial decretum relating to the provincial organisation of Cyprus: cf. the "decretum Rupilii" for Sicily (Cic. *in Verr.* ii. 13, 16).

LICI'NIAE. In B.C. 375 C. Licinius Stolo and L. Sextius, two of the tribunes of the plebs, proposed a number of *rogationes*, partly in the political, partly in the economical interests of the plebeians (Liv. vi. 35). The latter were aggrieved by their practical exclusion from the chief magistracies: but they were still more distressed by the burden of their debts. They had suffered heavily through the sacking of the city by the Gauls (Liv. vi. 11, &c.), and in comparison with the patricians were taxed out of all proportion to their real means (Liv. iv. 60, v. 10; Niebuhr, *Röm. Gesch.* i. 645); they were largely indebted to the other order, which was rapidly buying them out of their land (Liv. xxxiv. 4), and cultivating its new acquisitions by slave labour, so that the plebeians were debarred from making their livings even as farmers holding under their own creditors (Appian, *Bell. Civ.* i. 8).

The Licinian rogation which was intended to settle the financial question proposed that all sums which had been paid by way of interest should be struck off the capital debts, and that three annual periods should be allowed for the payment of the residue (Liv. vi. 35, 39). The precise content of the second (*de modo agrorum*, Liv. xxxiv. 4; Gell. xx. 1, 23; Val. Max. viii. 6, 3; Vell. Pat. ii. 6, 3; Appian, *Bell. Civ.* i. 8; Plin. *H. N.* xviii. 3) is less certain. According to one view (Puchta, *Institutionen*, § 57) it proposed that no one should *own* more than 500 *jugera* of land, or pasture on the ager publicus more than 100 cattle and 500 sheep or smaller beasts: others (*e.g.* Niebuhr, and Walter, *Gesch. des röm. Rechts*, § 62) hold that it prescribed the limit of 500 *jugera* merely for the "possessiones" of ager publicus: a third view (advanced by Huschke, *Ueber die Stelle des Varro*, 1835, and Rudorff, *Röm. Feldmesser*, ii. 312, *Röm. Rechtsgeschichte*, i. 38) is that both ownership and possession were comprised in the enactment. The first of these theories at any rate seems to be disproved by Livy, vi. 37 and 39 ("agris occupatis . . . injustis possessoribus"), Plin. *H. N.* xviii. 17, and Appian, *Bell. Civ.* 18 *sq.*: and perhaps that of Niebuhr is best supported by the authorities. It was also proposed, in the interest of those plebeians who were too poor to buy land, that a certain number of free persons should be employed on every estate (Appian, *loc. cit.*). A third *rogatio* was for the abolition of the military tribunate (an office created some years previously in order to relieve the consuls of some of their less important duties, to which the plebeians had been eligible, though Livy says, vi. 37, that in B.C. 369 it had not been occupied by any of them for forty-four years), and for the election of one of the consuls every year from the ranks of the plebeians (Liv. vi. 35, vii. 1, 21, 22, 25, x. 7; Gell. xvii. 21, 26, 27; Schol. Bob. *pro Scauro*, p. 375, Orelli). The patricians prevented the enactment of these rogations by inducing the other tribunes to veto them: Stolo and Sextius, according to Livy, retaliated in the same way, and, being repeatedly re-elected tribunes, persevered for five years in preventing the election of any curule magistrates.

In B.C. 368, encouraged by the support of one of the tribuni militum, M. Fabius, Licinius' father-in-law, and by the decreasing opposition of their colleagues, the two tribunes proposed, and after two years' violent agitation carried (B.C. 366), a new *rogatio* that, instead of the *duumviri* hitherto established, there should be a collegium of *decemviri* for the custody of the Sibylline books, and the performance of the *sacra* therewith connected, and that one-half of these *decemviri* should be plebeians (Liv. vi. 42). This paved the way for the admission of the plebeians to the consulship: and in the next year (B.C. 365) the three original rogations were at last carried together in the form of a Lex Satura (Liv. vii. 39; Dio Cass. *Fragm.* 33), and L. Sextius was elected consul, being the first plebeian who attained that dignity. The patricians were in some degree compensated by retaining the monopoly of the praetorship (*urbana*): but the incorrectness of Livy in representing them also as solely eligible to the curule aedileship, established about this time, has been shown by Niebuhr, iii. 39–49.

The penalty fixed for an infraction of the Lex Licinia *de modo agrorum* was an arbitrary fine sued for before the populus by the plebeian aediles. Curiously enough, Licinius Stolo himself was (B.C. 357) the first person against whom the statute was put in force (Val. Max. viii. 6, 3). Livy (vii. 16) says that together with his son he held a thousand *jugera* of *ager*, and by emancipating his son fraudulently evaded the provisions of his own law: which apparently means that he emancipated the son in order that the latter might get 500 *jugera* nominally for himself, but it would practically be at his father's disposal: at any rate, he was fined 10,000 asses. From this story (which is also told by Columella, and Pliny, *H. N.* xviii. § 17) it is clear that the plebeians had now acquired the right of occupying (*possidere*) the *ager publicus*, probably before the Lex Licinia itself; and it would seem that the estates which the patricians had to surrender as being against the statute came for the most part into the possession of plebeians. Niebuhr (*Röm. Geschichte*, iii. 19) attributes to the law a genuinely agrarian character, and believes that there was a regular distribution of land among them; but the passages on which he relies (especially Varro, *de Re Rust.* i. 2, and Columella, *loc. cit.*) hardly bear out his view, which is directly contradicted by Appian (*Bell. Civ.* i. 8). The history of the later agrarian legislation, however, makes it clear that in some way or other the Lex Licinia *de modo agrorum* (if it related at all to the possessiones of *ager publicus*, which Puchta denies) was persistently evaded.

(Besides the works of Niebuhr, Puchta, Huschke, and Rudorff, already referred to, cf. Göttling, *Geschichte der röm. Staatsverfassung*, [illegible]; the *Classical Museum*, Nos. v. vi. and vii.; and AGRARIAE LEGES).

LICI'NIA, of uncertain date, containing provisions similar to those of the second Lex Aebutia mentioned above, in connexion with which it is mentioned by Cicero (*in Rull.* ii. 8, 21; cf. *pro Plancio*, 20, 51).

LI'CINIA DE CREANDIS TRIUMVIRIS EPULONIBUS, B.C. 197 (Liv. xxxiii. 42; cf. Cic. *de Orat.* iii. 19, 73).

LI'CINIA DE LUDIS APOLLINARIBUS, B.C. 209 (Liv. xxvii. 23).

LI'CINIA DE SACERDOTIIS, B.C. 146 (Cic. *Am.* 25, 96).

LI'CINIA DE SODALITIIS, B.C. 56 (Cic. *pro Planc.* 15, 36; *ad Fam.* 8, 2, 1: see Wunder's Prolegomena, cited in full by Orelli, *Ciceronis Opera*, vol. viii. pp. 200, 201; and AMBITUS).

LI'CINIA JU'NIA, sometimes called **JUNIA LICINIA**, passed B.C. 62 by the consuls L. Licinius Murena and Junius Silanus, perhaps to enforce more strictly the provisions of the Lex Caecilia Didia, in connexion with which it is sometimes mentioned (Cic. *Phil.* v. 3, 8; *ad Att.* ii. 9, 1; iv. 16, 5; *in Vatin.* 14, 23; *pro Sestio*, 64, 135). But it also seems to have enacted that a copy of every proposed statute should be deposited before witnesses in the Aerarium (Schol. Bob. p. 310; Mommsen, *Röm. Staatsrecht*, ii. pp. 532, 533).

LICI'NIA MU'CIA DE CIVIBUS REGUNDIS (probably REDIGUNDIS), passed B.C. 95 by the consuls L. Licinius Crassus the orator, and Q. Mucius Scaevola, Pontifex Maximus; ordained a strict examination into the title to citizenship, as many *non-cives* had contrived to get themselves put on the census, and ordered back to their own *civitates* all who could not make out a good title. This measure partly led to the Marsic war, and is cited by Cicero as an instance how even the wisest men sometimes pass bad laws (Cic. *de Off.* iii. 11, 47; *Brut.* 16, 63; *pro Balbo*, 21, 24; *pro Sestio*, 13, 30: Ascon. *in Cornel.* p. 67).

LICI'NIA SUMPTUA'RIA (Gell. ii. 24, 7–10; Macrob. *Saturn.* ii. 13; Festus, *s. v.* Centenaria). [SUMPTUARIAE LEGES.]

LI'VIAE. Various enactments carried by M. Livius Drusus the younger, when tribunus plebis B.C. 91, for establishing colonies in Italy and Sicily (Appian, *Bell. Civ.* i. 35), distributing corn among the poorer citizens at a low rate (Liv. *Epit.* 71), and admitting the *foederatae civitates* to the Roman citizenship (*ib.* Appian, *loc. cit.*). He was also the author of a *lex judiciaria*, dividing the judicia equally between the senate and the Equites (Vell. Pat. ii. 13; Liv. *Epit.* 70; Cic. *pro Cluentio*, 56, 153), and instituting a penal procedure against judges who allowed themselves to be bribed (Cic. *loc. cit.*; Appian, *Bell. Civ.* i. 35); and he is said by Pliny (*H. N.* xxxiii. § 46) to have proposed a measure for adulterating silver by mixing with it an eighth part of brass. Drusus was assassinated, and the senate declared his laws not binding, either because they had been carried "contra auspicia" (Ascon. *in Cornel.* p. 68), or because they were in violation of the Lex Caecilia Didia (Cic. *pro Domo*, 16, 41). Cf. Cic. *de Leg.* ii. 6, 12; Florus, iii. 17; Plut. *C. Gracchus*, 9 ff.

LUTA'TIA DE VI [VIS]. The supposed existence of such a lex (based on Cicero, *pro Caelio*, 29, 70) is now much discredited; but see Rein, *Criminalrecht*, p. 742.

MAE'NIA, probably passed by Maenius, tribunus plebis, B.C. 287. It is mentioned only by Cicero (*Brut.* 14, 55), who says that "M. Curius Dentatus compelled the Patres *ante auctores fieri*, in the case of the election of a plebeian consul, which was a great thing to accomplish, as the Lex Maenia had not yet been passed." The statute seems to have enacted that the senatorial auctoritas to the Comitia Curiata (by a vote of which the magistrates acquired their imperium) should be given before instead of after the assembly of the centuries in which the magistrates were elected (cf. Liv. i. 17; Cic. *pro Plancio*, 3, 8; Licinius Macer in Sallust. *Frag.* iii. p. 972, ed. Cort; Puchta, *Institutionen*, § 59, notes l and n; Walter, *Geschichte des röm. Rechts*, § 66; and AUCTORITAS).

MAE'NIA DE DOTE, B.C. 186: see Voigt's treatise on the subject, Weimar, 1866, and Puchta, *Institutionen*, § 74, note k, and § 292, note b.

DE MAGISTRIS AQUA'RUM (Haubold, Spangenberg, *Mon. Leg.* p. 177).

MAMI'LIA DE COLONIIS. It was supposed that Rudorff had proved (*Zeitschrift*, ix. 12) that the Lex Mamilia, Roscia, Peducaea, Alliena, Fabia, is the same as the "Lex agraria quam Gaius Caesar tulit" (Dig. 47, 21, 3), and that this Gaius Caesar is the Emperor Caligula. But Mommsen (*Schriften der röm. Feldmesser*, ii. p. 223) believes that the so-called Lex Mamilia related to the appointment of C. *Julius* Caesar's agrarian commission: and this seems to be confirmed by the discovery of the Lex Coloniae Genetivae.

MAMI'LIA DE JUGURTHAE FAUTORIBUS established a special tribunal of three *quaesitores* to investigate cases of bribery among Romans by Jugurtha (Sallust, *Jugurtha*, 40, 65; Cic. *Brut.* 33, 34: cf. Mommsen, *Röm. Staatsrecht*, vol. ii. pp. 646, 647).

MAMI'LIA FINIUM REGUNDORUM (B.C. 110, Ernesti; B.C. 165, Pighius) re-enacted the provision of the Twelve Tables, that a space of 5 ft. along the boundaries of landed estates (extending 2½ ft. into each) should be excluded from usucapio, and ordained a new procedure in cases of dispute (Cic. *de Leg.* i. 21, 55; Rudorff, "Gränzscheidungsklage," *Zeitschrift*, x. pp. 355–363).

MANI'LIA, proposed by the tribune C. Manilius B.C. 66, and conferring on Cn. Pompeius the command in the war against Mithridates. It was supported by Cicero when praetor in his speech *pro lege Manilia* (cf. Vell. Pat. ii. 33, 1; Liv. *Epit.* 100; Dio Cass. xxxvi. 25; Appian, *Bell. Mithrid.* 97).

MANI'LIA DE LIBERTINORUM SUFFRAGIIS (Dio Cass. xxxvi. 25; Ascon. *in Corn.* pp. 64, 65): perhaps the same as the Lex Manilia de suffragiorum confusione (Cic. *pro Mur.* 23, 47), which seems to have enacted that the libertini should vote in all and not only in the four urban tribes.

MANILIA'NAE (Cic. *de Orat.* i. 58, 246). These were not statutes at all, but forms which it was prudent for parties to observe in contracts of sale, whence they are called *actiones* by Varro, *de Re Rust.* ii. 5, 11. They seem to have been invented by a jurist called M'. Manilius, who was consul B.C. 149.

MA'NLIA, a name wrongly given to the Lex Licinia de creandis triumviris epulonibus, because P. Manlius was one of the first triumviri appointed under its provisions (Liv. xxxiii. 42).

MA'NLIA DE LIBERTINORUM SUFFRAGIIS, B.C. 58, probably identical with the Lex Manilia of the same title (Ascon. *in Mil.* p. 46).

MA'NLIA DE VICESIMA MANUMISSORUM, B.C. 357, imposed a tax of one-fifth on the value of all manumitted slaves (Liv. vii. 16; cf. xxvii. 10). [MANUMISSIO.]

MA'RCIA, *circ.* 352 B.C., prescribed the procedure *per manus injectionem* against *feneratores* for recovering from them four times any sum which they had taken by way of illegal interest (Gaius, iv. 23; Liv. vii. 21).

MA'RCIA AGRA'RIA, proposed by L. Marcius Philippus, tribunus plebis, B.C. 104 (Cic. *de Off.* ii. 21, 73).

MA'RCIA DE LIGURIBUS, B.C. 172 (Liv. xlii. 22).

MA'RIA, proposed by C. Marius, when tribune B.C. 119, for narrowing the *pontes* at elections (Cic. *de Legg.* iii. 17, 38; Plut. *Marius*, 4).

ME'MMIA or **RE'MMIA**. [CALUMNIA.]

MENE'NIA seems to have in some way limited the magistrate's power of inflicting arbitrary fines: see ATERNIA TARPEIA.

ME'NSIA or **MINI'CIA** enacted that the children of parents, either of whom was a *peregrinus*, should be *peregrini* themselves: and thus (where a *civis Romana* married a *peregrinus*) introduced an exception to the rule that where there was no *conubium* between man and wife the issue should follow the condition of the mother (Ulpian, *Reg.* v. 8).

ME'SSIA DE CN. POMPEII IMPERIO (Cic. *ad Att.* iv. 1, 7).

ME'SSIA DE REVOCANDO CICERONE (Cic. *post Red. in Sen.* 8, 21).

METI'LIA, B.C. 217 (Liv. xxii. 25 *sq.*; Plut. *Fabius*, 9).

MINI'CIA (Gaius, i. 78, Studemund *ad loc.*): see MENSIA.

MINU'CIA DE TRIUMVIRIS MENSARIIS, B.C. 46 (Liv. xxiii. 21).

MU'CIA, a plebiscitum of 141 B.C.: resulted in the exile of L. Hostilius Tubulo (Cic. *de Fin.* ii. 16, 54).

NERVAE AGRA'RIA, the latest known instance of a lex passed at the Comitia (Dig. 47, 21, 3, 1).

OCTA'VIA, probably B.C. 87 (Cic. *de Off.* ii. 21, 72; *Brut.* 62, 222). [FRUMENTARIAE LEGES.]

OGU'LNIA, proposed by two Ogulnii, who were tribunes B.C. 300: it increased the number of the Pontifices and Augurs from four each to eight and nine respectively, and enacted that four of the former and five of the latter should be taken from the plebs (Liv. x. 6–8).

OP'PIA, B.C. 215 (Liv. xxxiv. 1, 8; Val. Max. ix. 1, 3). It was repealed twenty years after its enactment. [SUMPTUARIAE LEGES.]

O'RCHIA, B.C. 171 (Macrob. *Saturn.* ii. 13). [SUMPTUARIAE LEGES.]

OVI'NIA, enacted probably *circ.* B.C. 312: apparently assigned to the censors the function of selecting the senate, but required them to choose the persons best qualified without distinction between patricians and plebeians (Festus, p. 246). Perhaps the strict meaning of Festus' text is that on coming into office they revised the list of the senate, those whose names were passed over *ipso facto* losing their seats (Hoffmann, *Röm. Senat*, pp. 3–18).

The nature of the Lex Ovinia mentioned by Gaius (iv. 109) is unknown.

PA'PIA DE PEREGRINIS. [JUNIA DE PEREGRINIS.]

PA'PIA DE VESTALIUM LECTIONE (Gell. i. 12).

PA'PIA POPPAEA. [JULIAE.]

PAPI'RIA or **JU'LIA PAPI'RIA** DE MULTARUM AESTIMATIONE, B.C. 430, substituted money fines for those of cattle and sheep fixed by the Lex Aternia Tarpeia, a sheep being valued at ten, a bullock at a hundred asses (Liv. iv. 30; Cic. *de Rep.* ii. 35). Gellius (xi. 1) and Festus are wrong in making this change a part of the Lex Aternia Tarpeia itself.

PAPI'RIA, 89 B.C., fixed the value of the *as* at half an ounce: one of the numerous enactments which tampered with the coinage (Plin. *H. N.* xxxiii. § 46).

PAPI'RIA DE ACERRANORUM CIVITATE, B.C. 332, proposed by L. Papirius when praetor, and giving the *civitas sine suffragio* to the people of Acerrae (Liv. viii. 17; cf. Vell. Pat. i. 14, 4).

PAPI'RIA DE CONSECRATIONE AEDIUM, *circ.* 303 B.C., enacted that no land, temple, or altar should be consecrated without a plebiscitum (Cic. *pro Dom.* 49, 50; Liv. ix. 46).

PAPI'RIA DE SACRAMENTO, a plebiscitum of L. Papirius, providing that the *tres viri capitales* should be elected by the people, and should exact from unsuccessful litigants the stake (*sacramentum*) which they lost in the *legis actio* of that name, and which was forfeited to the aerarium (Festus, *s. v.* Sacramento: cf. Mommsen, *Röm. Staatsrecht*, ii. pp. 580, 585). Puchta (*Institutionen*, § 161, note g) conjectures that the statute also put an end to the actual deposit of the stake *in sacro*, and substituted the giving of security (*praedes*) for its payment.

PAPI'RIA PLAUTIA, B.C. 89, enacted that all *cives* and *incolae* of *foederatae civitates*, who at the date of the statute were domiciled in Italy, should be able to obtain the Roman civitas by giving in their names to the praetor urbanus at Rome within sixty days (Cic. *pro Archia*, 4, 7; *ad Fam.* xiii. 30). [CIVITAS; FOEDERATAE CIVITATES.]

PAPI'RIA POETE'LIA. [POETELIA PAPIRIA.]

PAPI'RIA TABELLA'RIA, B.C. 132. [TABELLARIAE LEGES.]

PE'DIA, B.C. 44, interdicted from fire and water all who had taken part in the murder of Julius Caesar (Vell. Pat. ii. 69, 5).

PEDUCAE'A, a privilegium of B.C. 114, relating to incest committed by certain Vestal Virgins (Cic. *de Nat. Deor.* iii. 30, 74; Ascon. in *Milon.* p. 46).

PESULA'NIA seems to have extended to dogs the rule of the Twelve Tables (*Inst.* iv. 9, pr.; Dirksen, *Uebersicht*, &c. p. 532), that if damage were done by an animal the owner must either surrender it or pay compensation (Paul. *Sent. rec.* i. 15, 1).

PETI'LLIA DE PECUNIA REGIS ANTIOCHI, B.C. 186 (Liv. xxxviii. 54; cf. xxxix. 6).

PETRE'IA. A lex of this name (*de decimatione militum*) applying in cases of mutiny is mentioned in the old editions of Appian (*de Bell. Civ.* ii. 47), but the true reading is *πατρίῳ νόμῳ*.

PETRO'NIA forbade masters to make their slaves fight with wild beasts, unless they had committed some serious offence, and the magistrate had assented to their being so treated (Dig. 48, 8, 11, 2; Gell. v. 14); it was followed by a number of senatusconsulta to the same purpose. Puchta (*Institutionen*, § 107) is of opinion that it provided for the appointment of special magistrates in the towns to deal with the matter; but the inscriptions on which he relies (cited in Marquardt, *Röm. Staatsverwaltung*, i. p. 494) seem to relate to a different Lex Petronia (de praefectis). Whether there were two leges or one, the first mention of legislation by this name occurs in the *fasti* of Venusia, B.C. 32.

PINA'RIA (Gaius, iv. 15). Its effect is merely matter of conjecture. According to Studemund and Walter, a single judge was originally appointed at the close of the formal proceedings before the praetor, to try *sacramenta*: and this was altered by the statute, which prescribed an interval of thirty days between the proceedings before the praetor and the appointment of the judex. Keller supposes that its effect was not to create a necessary interval of thirty or any other number of days at all, but to transfer the hearing of *sacramenta* from the standing collegia of judges (decemviri and centumviri) to a single judex. Bethmann-Hollweg (*Civil Process*, i. p. 65) holds that it required all actions of debt for less sums than 1000 asses to be tried before a single judge.

PINA'RIA ANNALIS. [ANNALES LEGES.]

PINA'RIA DE INTERCALANDO, B.C. 472 (Varro in Macrob. i. 13).

PLAETO'RIA or **LAETO'RIA** (Cic. *de Off.* iii. 15, 61; *de Nat. Deor.* iii. 30, 74). [CURATOR.]

PLAETO'RIA allowed the praetor to fix any time he pleased for the termination of legal proceedings, the Twelve Tables having enacted that they should not close till sunset (Varro, *L. L.* vi. 5; Censorin. *de Die Nat.* 24).

PLAU'TIA or **PLO'TIA AGRA'RIA,** B.C. 98 or 89 (Cic. *ad Att.* i. 18, 6).

PLAU'TIA or **PLO'TIA** DE REDITU LEPIDANORUM (Sueton. *Caesar*, 5; Gell. xiii. 3).

PLAU'TIA or **PLO'TIA** DE VI (Ascon. *in Milon.* 35; Cic. *ad Att.* ii. 24; *de Harusp. Resp.* 8; Sallust. *Cat.* 31: see C. G. Wächter's paper on the subject in the *Neues Archiv des Criminalrechts*, xiii. p. 8 *sq.*, cited at length in Orelli's *Cicero*, vol. viii. pp. 233–243, and VIS).

PLAU'TIA or **PLO'TIA JUDICIA'RIA,** B.C. 89, enacted that fifteen persons should be selected annually from each tribe, without reference to their rank, to act as judges in criminal trials. It was repealed by the Lex Cornelia judiciaria of Sulla (Cic. *pro Cornel.* fragm. 27; Ascon. *in Cornel.* p. 79).

PLAU'TIA PAPI'RIA. [PAPIRIA PLAUTIA.]

POETE'LIA, a plebiscitum of B.C. 358: the first law against *ambitus* (Liv. vii. 15).

POETE'LIA PAPI'RIA, the name usually given to a lex, supposed to have been passed B.C. 326, for the relief of the nexi (Liv. viii. 28; Cic. *de Republ.* ii. 34, 59; Varro, *L. L.* vii. 105). [NEXUM.]

POMPE'IA, B.C. 89, passed by Cn. Pompeius Strabo, father of the great Pompeius, when consul: it conferred Latin rights [LATINITAS] on the Transpadani, and probably the civitas on the Cispadani (Strabo, v. p. 213; Savigny, *Zeitschrift*, ix. 308–326).

POMPE'IA DE AMBITU (Dio Cass. xl. 52; Ascon. *in Mil.* p. 37). [AMBITUS.]

POMPE'IA DE IMPERIO CAESARI PROROGANDO, B.C. 55 (Vell. Pat. ii. 46, 2; Appian, *Bell. Civ.* ii. 18; Cic. *Phil.* ii. 10, 24).

POMPE'IA DE JURE MAGISTRATUUM (Sueton. *Caesar*, 28; Cic. *ad Att.* viii. 3, 3, cf. *Phil.* ii. 10, 24; Dio Cass. xl. 56) forbade candidature for public offices by persons who were not at Rome: but C. Julius Caesar was excepted from its operation. This was doubtless the old law, but it appears to have become obsolete.

POMPE'IA DE PARRICIDIIS, B.C. 52. It is difficult to come to any definite conclusion as to the precise meaning of *parricida* and *parricidium* in early Roman history and literature. From a quotation which Cicero makes from some old source ("sacrum sacrove commendatum qui cleperit rapsitque parricida esto," *de Leg.* ii. 9, 22), the offence seems at one time not to have been confined to killing; and even when it had acquired this narrower signification, it apparently denoted the taking of the life of any free person ("si quis hominem liberum dolo sciens morti duit parricida esto," law of Numa Pompilius in Festus, *s. v.* Parici Quaestores: cf. Rein, *Criminalrecht*, pp. 401, 449). The Romans themselves seem to have had great doubts about the etymology of the word: *συστέλλοντες τὴν πρώτην συλλαβὴν καὶ βραχεῖαν ποιοῦντες, τοὺς γονέας* (părentes), *ἐκτείνοντες δὲ, τοὺς ὑπηκόους* (pārentes) *σημαίνουσιν* (Johannes Lydus, *de* [illegible] i. 26). "Parricida, quod vel a pari [illegible]r, vel a patre: quibusdam a parente v[illegible]se" (Prisc. *Gram.* i.: cf. Cic. *pro Clu*e[illegible]32; Liv. xl. 24; Quinctil. *Inst.* viii. 6, 3[illegible] by the time of Cicero *parricidium* s[illegible] have acquired the specific sense of k[illegible]r relatives: the application of it to C[illegible]nd to the murderers of Caesar (Sueton.

Jul. 88) may perhaps be regarded merely as an oratorical survival of older usage. There seems to be no doubt that the Lex Cornelia de sicariis et veneficis contained provisions as to the killing of near relations (Dig. 48, 9, 1; *Inst.* iv. 18, 6 *ad fin.*): the Lex Pompeia de parricidiis, some thirty years later, apparently re-enacted these, and defined the crime of *parricidium* as the deliberate and wrongful slaying of ascendants, husbands, wives, *consobrini*, brothers and sisters, uncles and aunts, stepfathers and mothers, fathers and mothers in law, patrons and descendants; but the killing of a child by its father was excepted (Dig. 48, 9, 1). Hadrian sentenced a man who killed his son to *deportatio* (Dig. *ib.* 5); but it was not *parricidium* to kill one's own children till the age of Constantine, who prescribed for it the punishment of the sack described below (Cod. ix. 17; *Inst.* loc. cit.). For most cases of *parricidium* no change was made in the penalties of the Lex Cornelia (death, banishment, and forfeiture) by the statute of Pompeius; but for the murder of a father, mother, grandfather or grandmother, the old punishment of the *culleus* was ordained (Dig. 48, 9, 9, 1; Paul. *Sent. rec.* v. 24). This consisted in the guilty person being first whipped till he bled, sewn up in a sack with a dog, a cock, a viper, and an ape, and thrown into the sea or a river: if there was no water near, Hadrian sanctioned his being torn in pieces by wild beasts (Dig. 48, 9, 9, pr.), and in Paulus' time he seems sometimes to have been burnt. The antiquity of this punishment is attested by Valerius Maximus, who records that it was inflicted on M. Tullius by Tarquinius when king (i. 1, 13: cf. "more majorum," Dig. 48, 9, 9, pr. and 1; and Cic. *pro Rosc. Am.* 25, 70, *ad Quint. Fratr.* i. 2; Juv. *Sat.* iii. 8, 212 *sq.*). The selection of animals was supposed to be symbolical: *μετὰ ἀσεβῶν ζώων ἀσεβὴς ἄνθρωπος* (Dosith. iii. 16): *τὰ δὲ προειρημένα θήρια ἐμβάλλεται διὰ τοῦτο, ἐπειδὴ ὁμοιότροπα αὐτῷ ἐστί· τὰ μὲν γὰρ ἀναιρεῖ τοὺς γονεῖς, τὰ δὲ πρὸς αὐτοὺς οὐκ ἀπέχεται μάχης* (Theophilus). Accessories to the crime were punished as severely as principals under the Lex Cornelia (Cod. 9, 16, 7).

POMPE'IA DE VI, a privilegium relating to the trial of Milo by a *quaestio extraordinaria* for killing Clodius, though there was a permanent commission for trying offences of this class (Cic. *Phil.* ii. 9, 22): it also seems to have contained some general provisions as to the procedure and penalty in cases of violence (Ascon.; and Schol. Bob. *pro Milone*: cf. Wächter's note, cited by Orelli, *Cicero*, vol. viii. pp. 247–250, and Walter, *Geschichte des röm. Rechts*, § 834, note 7).

POMPE'IA FRUMENTARIA (Dio Cass. xxxix. 24).

POMPE'IA JUDICIARIA (Cic. *Phil.* i. 8, 20; *in Pison.* 39, 73; Ascon. *in Pison.* p. 16; Sall. *de Rep. Ord.* ii. 3). [JUDEX.]

POMPE'IA TRIBUNICIA, B.C. 70, restored the old *tribunicia potestas* which Sulla had almost destroyed (Sueton. *Jul.* 5; Vell. Pat. ii. 30; Cic. *de Leg.* iii. 9, 11; Liv. *Epit.* 97). [TRIBUNI.]

PO'RCIA, probably B.C. 197, appears to have enacted that a Roman citizen might save himself from the punishment of death or flogging by withdrawing into exile (Sall. *Cat.* 51; Cic. *pro Rabirio*, 3, 4; *in Verr.* v. 63, 163; Liv. x. 9; Gell. x. 3, 13). Cicero (*de Rep.* ii. 31, 54) allud to three leges Porciae on this or similar matter but nothing more is known about them.

PO'RCIA DE PROVINCIALIBUS SUMPTIBU apparently due to M. Portius Cato, praetor B. 298, and perhaps referred to in Liv. xxxii. 27 it is mentioned in the Plebiscitum de Termes ensibus (Lex Antonia), which enacts "nei qu magistratus prove magistratu legatus neu qu alius neive imperato quo quid magis iei de praebeant ab ieisve auferatur nisei quod eos e lege Portia dare praebere oportet oportebit (Haubold, *Mon. legal.* p. 137).

PRAEDIATO'RIA, the reading in som editions of Gaius (iv. 28); but the true readin according to Studemund, is *lege censoria*.

PUBLI'CIA permitted betting at certa games which required strength, such as runni and leaping (Dig. 11, 5, 2, 1 and 3). [COR NELIA; TITIA.]

PUBLI'LIA, proposed by Publilius Voler tribunus plebis, and carried after much opp sition B.C. 471. It provided "ut plebeii magis tratus (tribunes and plebeian aediles) tribut comitiis fierent" (Liv. ii. 56); but this app rently should not be taken to mean that th magistrates had previously been elected in th Comitia Centuriata (as is held by Mommsen *Röm. Tribus*, p. 83; Becker-Marquardt, ii. 253–260, &c.): the choice had practically bee made by the plebs, but in a less organi fashion than became the rule after it had b this statute been definitely assigned to th Comitia in which the plebeians had the prepon derance (Schwegler, xxvi. 7: cf. Walter, *Ge schichte des röm. Rechts*, § 44; for another view see Mommsen, *Röm. Geschichte*, ii. 2). "Fro this time onward," says Dionysius (ix. 49), "u to my own day, the election of tribunes an aediles was made without birds (augural cere monies) and all the rest of the religious forms the Comitia Tributa." By the same enactmen the number of the tribunes ~~was raised~~ fr two to five (Liv. ii. 58; Diod. ii. 38), B.C. 454 to ten (Liv. iii. 30; Dionys. x. 30), were elected in equal proportions from the classes of the Servian Constitution (Ascon. *Cornel.* p. 77): this change was readily quiesced in and perhaps even suggested by patricians, who foresaw in the larger num increased chances of disagreement, and more likely to win over to their own side one many than one of few plebeian magistra Possibly, too, the office of tribune was opened the patricians, two of whom were tribuni ple B.C. 448 (Liv. iii. 65), though these, accordi to Mommsen (*Röm. Staatsrecht*, ii. p. 265), only coopted members of the Collegium.

We are told by Dionysius (ix. 43, 44) when Publicius failed in the first attempt carry his measure, he added a fresh provis enabling the Comitia Tributa to discuss resolve on matters of public importance Zonaras, vii. 17): this was carried along w his earlier proposal, and was of considera constitutional significance: for it thus bec easy for the tribunes to unite the plebeians any matter on which they had to vote in Comitia Centuriata, and also to consult them to the submission of proposals for legislation the senate: these, if approved, could then referred in the ordinary way to the centu and thereby become genuine enactments of the sovereign populus (Val. Max. ii. 2, 7; Dionys. x. 30, 48, 52). For the further history, see PUBLILIAE and PLEBISCITUM.

PUBLI'LIA DE SPONSU gave the kind of surety called a *sponsor* an *actio depensi* to recover twice the sum which he had paid for his principal unless reimbursed within six months, and enabled him after obtaining judgment to proceed at once by *manus injectio pro judicato* (Gaius, iii. 127, iv. 22). [INTERCESSIO.]

PUBLI'LIAE LEGES, carried B.C. 339 by the Dictator Q. Publilius Philo: their substance is thus described by Livy (viii. 12): "Tres leges secundissimas plebei, adversas nobilitati tulit: unam ut plebiscita omnes Quirites tenerent: alteram, ut legum quae comitiis centuriatis ferrentur, ante initum suffragium Patres auctores fierent: tertiam, ut alter utique ex plebe, quum eo ventum sit ut utrumque plebeium consulem fieri liceret, censor crearetur." The first of these seems to stand in connexion with one of the leges Valeriae Horatiae, B.C. 449, which enacted "ut quod tributim plebs jussisset populum teneret" (Liv. iii. 55): *i.e.* it restored the Comitia Tributa after the second secession of the plebs, and perhaps also provided that plebiscita which had no constitutional import, or which related purely to matters of private law, should have the force of statute, even without subsequent confirmation or enactment by the centuries. In B.C. 339, the patricians having now brought themselves to take regular part in the business of the Comitia Tributa, confirmation by the centuries must have seemed a superfluity in any case; and accordingly the first Lex Publilia seems to have dispensed with it for all plebiscita whatsoever. They still, however, required to be sanctioned by the senate before they acquired complete validity; but the necessity of this seems to have been abolished by the Lex Hortensia, B.C. 287, which enacted "ut eo jure, quod plebs statuisset, omnes Quirites tenerentur" (Gaius, i. 3; Dig. 1, 2, 2, 8; Laelius Felix in Gell. xv. 27; Plin. *H. N.* xvi. § 37). There is, however, great difference of opinion as to the real import of, and the relation between, these three leges, which, if literally taken, seem all to have enacted the same thing. Walter (*Geschichte des Röm. Rechts*, § 65) thinks that the last two dispensed with the senatorial confirmation of plebiscita which were not proposed "ex senatus auctoritate;" Niebuhr (ii. 415; iii. 170, 171, 472), that the Lex Publilia did away with the necessity of confirmation by the Comitia *Curiata*, and that the senatorial approval was dispensed with by the Lex Hortensia: while Mommsen (*Röm. Geschichte*, ii. 3) and Lange (i. 469–473) take the accounts given to us literally, and hold the last two laws to be merely re-enactments of the Lex Valeria Horatia, which got rid of confirmation by the senate and the Comitia Curiata as well. The view adopted above is that of Puchta (*Institutionen*, § 59).

As to the meaning of the second Lex Publilia, there is also some difference of opinion, occasioned by our uncertainty as to the signification of "Patres" in the text of Livy cited above. According to one view, it simply re-affirmed the constitutional doctrine that no measure should be submitted for enactment to the Comitia Centuriata without having been previously approved by the senate: such re-affirmation seeming desirable in consequence of the recent changes in respect of plebiscita, which were sanctioned by the senate after, and not before, being passed by the Comitia Tributa. But Livy's remark that all the leges Publiliae were "adversae nobilitati" makes the view of Niebuhr more probable, that by "Patres" is meant the Comitia Curiata; the assent of which was by this statute reduced to a mere formality by the requirement that it should be given *before* the centuries had considered whether they should pass any given measure or not.

The third Publilian law requires no explanation. We read of a plebeian being censor as early as B.C. 351 (Liv. vii. 22; x. 8, 8): but this statute required that one of the censors should always be selected from the plebs.

PU'PIA (Cic. *ad Q. Fratr.* ii. 13; *ad Fam.* i. 4) enacted that the senate should not sit on dies Comitiales. Previously it could deliberate on any day whatsoever (see Cic. *ad Fam.* xii. 55; *ad Q. Fratr.* ii. 1, &c.; *ad Att.* iv. 2; Liv. xxxix. 39). Its date was perhaps B.C. 224.

QUI'NTIA, a lex proposed by T. Quintius Crispinus (consul B.C. 9) for the preservation of the Aquaeductus. It is preserved by Frontinus (*de Aquaeduct. Roman.*).

RE'GIA, properly LEX DE IMPERIO PRINCIPIS. The nature of the imperium, and the mode in which it was conferred, are explained under IMPERIUM. Augustus united in his own person most of the republican powers and magistracies, though they were bestowed upon him by the populus separately and at different times. After holding the consulship for nine years in succession, he received the *proconsulare imperium* and the *potestas consularis* and *tribunicia* for life: the powers of the censorship were granted him at first for five years, but were periodically renewed without interruption: he was also Pontifex Maximus and Princeps Senatus, whence, according to some, he took the title "Princeps" by which the earlier emperors were known, and which personally he preferred to the style of "Imperator," which, though it belonged to him, he never asserted within the city of Rome. [PRINCEPS.] The practice of investing the emperor with these various powers or authorities by distinct leges was followed for a considerable time. The preservation of the Lex de imperio Vespasiani (which seems to have been only a senatusconsultum representing the old Lex Curiata de imperio) has led to the belief that in the time of that emperor all the powers enjoyed by Augustus were conferred on the sovereign by a single statute. The fragment which is extant (Haubold, Spangenberg, *Monum. Legal.* p. 221) empowers Vespasian to make treaties, originate senatusconsulta, propose persons to the people and the senate for election to magistracies, extend the *pomoerium*, and make edicts with the force of law: it releases him from the same laws from which Augustus, Tiberius, and Claudius had been released; and provides that all that he had done before its enactment should have the same effect as if it had been done by the people. [illegible]ping as the form seems to be, it is clear that the senate continued even after Vespasian "to dispense the various prerogatives of sovereignty, one by one, with affected hesitation." It was not really till the time of Alexander Severus that the whole of the imperial powers (including the *proconsulare imperium*, the *principatus senatus*, and the *tribunicia potestas*) were conferred on the emperor *uno ictu*, and Severus himself remarks upon this as a novelty ("quae omnia *novo exemplo* uno die in me contulistis," Lamprid. *Alex. Sev.* 1): but from his time the practice became usual, the formal imperium however being bestowed first by a separate resolution of the senate (cf. Capitol. *Max. et Balb.* 8; Vopisc. *Prob.* 2). For the meaning of *legibus solutus* as applied to the emperor, see Mommsen, *Röm. Staatsrecht*, ii. p. 728, and Merivale, *Hist. of the Romans under the Empire*, iii. p. 466 *sq.*

The Lex de Imperio is in the Corpus Juris of Justinian sometimes called "Lex Regia," an expression which occurs in Dig. 1, 4, 1, pr. (Ulpian), transcribed in *Inst.* i. 2, 6, and in Cod. 1, 17, 1, 7. The title of Dominus was applied to the emperor as early as Trajan, but the phrase "lex regia" does not appear to occur before the third century, when to avoid the comparison between "rex" and "imperator" would have been mere affectation. For the whole subject, see Dio Cass. liii. 16–19; Tac. *Hist.* i. 47, iv. 3, 6; and Merivale, *Hist.* chap. 31.

RE'GIAE (LEX, p. 32*a supr.;* and JUS CIVILE PAPIRIANUM).

RE'MMIA (Cic. *pro Rosc. Am.* 19, 55). [CALUMNIA.]

RHO'DIA, a term used to denote those portions of the Rhodian maritime code (referred to by Strabo, xiv. p. 652; and Cic. *pro lege Manilia*, 18, 54) which were adopted into the Roman law, and on which information may be obtained from Dig. 14, 2, and Schryver, *Sur la loi Rhodia de jactu*, Brussels, 1884. Its main principle was that, where property was thrown overboard to lighten and so assist in saving a ship, the loss should be portioned out among all in whose interest the sacrifice was made.

RO'SCIA THEATRA'LIS, carried by the tribune L. Roscius Otho, B.C. 67: it assigned to the Equites the fourteen rows of seats in the theatre next to those of the senators, who sat in the orchestra, to which apparently (Vell. Pat. ii. 32, 3) they had a kind of prescriptive right (Liv. *Epit.* 99; Dio Cass. xxxvi. 25; Cic. *pro Murena*, 19, 40; *ad Att.* ii. 19; Juv. xiv. 324; Hor. *Epod.* iv. 16). This provision was re-enacted by the Lex Julia theatralis. The statute also seems to have assigned seats in the theatre to persons who had lost their property, whether by their own fault or by misfortune (*decoctores*), Cic. *Phil.* ii. 18, 44. The law caused some popular disturbances when Cicero was consul, which he allayed by a speech (*ad Att.* ii. 1; Plut. *Cic.* 13).

RU'BRIA or **GA'LLIAE CISALPI'NAE.** When Cisalpine Gaul ceased to be a province and became part of Italy, it was necessary to provide for the administration of justice, as the usual forms of provincial administration would cease with the determination of the provincial mode of government. This was done (B.C. 49, Mommsen and Rudorff; B.C. 42, Savigny and Puchta) by a plebiscitum proposed by an otherwise unknown tribune, named Rubrius, of which a portion was discovered in 1760 on a tablet in the ruins of Veleia, which is preserved in the
Museum at Parma. The whole lex probabl
covered five Tables, and was divided into cha
ters, of which we have caps. 20–22 complet
and parts of the 19th and 23rd: it apparentl
followed the order of the praetorian edict, an
regulated the judicial competence and procedu
of the Cisalpine municipia. Its policy seem
to have been restrictive: *e.g.* it is provided tha
the municipal magistrates shall have juri
diction to try by judices (in the ordinar
Roman fashion) all suits in which the sum i
volved does not exceed 15,000 sesterces, an
some even irrespective of their amount: as f
actions to which their jurisdiction does n
extend, they may conduct the preliminary i
quiry, but must remit them for trial to tl
praetor at Rome. The 19th chapter relates
"operis novi nuntiatio;" the 20th, to "dan
num infectum;" the 21st and 22nd, to tl
jurisdiction, especially restricting the right
imprisoning for money debts; and the 23rd,
the "judicium familiae erciscundae."

The text of the lex is lithographed in Ritschl
Inscriptions, vol. i. Tab. xxxii., and may also
found in Mommsen's Inscriptions, vol. i. N
205, as well as in the earlier editions of Car
Pietro di Lama, and Haubold (Spangenberg
The subject is expressly handled by Savig
(*Zeitschrift*, ix.) and Puchta, *Kleine civil. Schri*
ten, 1851: cf. Huschke, *Ueber die Klagforme*
in der Lex Rubria; Gaius, pp. 203–242; Hug
Civil. Magazin, vol. ii. pp. 431–496; a
Dirksen, *Obs. ad selecta legis Gall. Cisalp. capi*
Berlin, 1812.

RUPI'LIAE. These are not leges prope
but regulations for the organisation of Sicil
comprised in a decretum issued by P. Rupiliu
its proconsul (B.C. 131), in accordance wi
instructions given him by the ten lega
sent by the senate, as was usual (Liv. xlv. 1
Appian, *Iber.* 99, *Pun.* 135; Sall. *Jugurth*
16) when the organisation of a province w
being settled (Cic. *in Verr.* ii. 13, 16, 4
Pseudo-Ascon. p. 212: cf. Val. Max. vi. 9, 8
There is frequent mention in Cicero's seco
speech against Verres of the regulations (*lege*
of Rupilius in respect of the Sicilian judici
procedure, *e.g.* one by which he there establish
the supposed principle of the Lex Pinaria, r
quiring an interval of thirty days between tl
proceedings *in jure* and the appointment of
judex (cap. 15). Other leges of the sam
person, relating to the co-optation of the sena
of Heraclia, where he had established a colon
are mentioned *in Verr.* ii. 50, 125; and as
"res frumentaria," *in Verr.* iii. 40, 91. (S
Marquardt, *Röm. Staatsverwaltung*, i. p. 341.)

RUTI'LIA related to the appointment of tl
tribuni militum (Festus, *s. v.* Rufuli; Liv. vii
5; Ascon. *in Verr.* i. 10, p. 112, Orelli).

SACRA'TAE (mentioned or referred to b
Liv. ii. 33, iii. 55, vii. 41, &c.; and Cic. *p*
Sest. 7, 16, 30, &c.; *de Off.* iii. 31, 111; *de Le*
ii. 7, 18, &c.). The term seems properly to hav
been used of laws to which a religious sanctio
was attached, so that the person who was co
victed of violating them became *sacer:* "S
cratae leges sunt, quibus sanctum est, qui qu
adversus eas fecerit, sacer alicui deorum s
cum familia pecuniaque" (Festus). As to tl
nature of the sanction, something more may b
gathered from Festus, *s. v.* Sacer mons: "A

homo sacer is est, quem populus judicavit ob maleficium, neque fas est eum immolari: sed qui occidit parricidii non damnatur, nam lege tribunicia prima cavetur: *si quis eum qui eo plebei scito sacer sit occiderit parricida ne sit.*" Among such leges sacratae were the Lex Valeria *de provocatione*, the statute affirming the inviolability of tribuni plebis (Liv. ii. 8, 33, iii. 55; Cic. *de Leg.* iii. 4, 11), the Lex Icilia de Aventino (Liv. iii. 32) and the Lex militaris referred to by Liv. vii. 41. See Ernesti's note cited by Orelli, *Cicero*, viii. p. 257; Ihering, *Geist des röm. Rechts*, pp. 273–276.

SAE'NIA DE PATRICIORUM NUMERO AUGENDO, enacted in the fifth consulship of Augustus (Tac. *Ann.* xi. 25; *Mon. Ancyr. Pilae prioris*, tab. 2. See CASSIA).

SALPENSA'NA, a lex of the Emperor Domitian, A.D. 81–84, regulating the constitution of the Latin colony of Salpensa in Baetica.

SA'TURA. [LEX, p. 33 *b supr.*]

SCATI'NIAE, another reading for Atiniae in Cic. *Phil.* iii. 6, 16.

SCANTI'NIA, a lex of unknown date, enacted for the suppression of unnatural crime (Auson. *Epigr.* 89; Juv. ii. 44; Cic. *ad Fam.* viii. 12, 14; Suet. *Domit.* 8), which was treated by the Lex Julia de adulteriis merely as *stuprum* (Dig. 48, 5, 34, 1; Collatio, v. 2; Paul. *Sent. rec.* ii. 26, 13), and punished by partial confiscation of property, flogging, and relegatio (*Inst.* iv. 18, 4). For these death was substituted by imperial constitutions (Coll. v. 3; Cod. 9, 9, 31).

SCRIBO'NIA, of unknown date, enacted that praedial urban servitudes should not be acquirable by usucapio (Dig. 41, 3, 4, 29): rustic servitudes could never be so acquired (apart from the *praedia* to which they were annexed), owing to the impossibility of applying to them the notion of possession (Dig. 8, 1, 14, pr.). The statute, however, did not prohibit the extinction of a servitude by lapse of time, which the Romans call "usucapio libertatis" (Dig. 41, 3, 4, 29). But the prescriptive acquisition of servitudes was re-introduced through the praetorian doctrine of *longi temporis possessio.* [SERVITUTES; USUCAPIO.] See Unterholzner, *Verjahrungslehre*, ii. §§ 195–197.

SCRIBO'NIA ALIMENTA'RIA (Cael. *ad Fam.* viii. 6, 5).

SCRIBO'NIA VIA'RIA, carried by the tribune C. Scribonius Curio, B.C. 51. Its motive and purport are explained by Appian, *Bell. Civ.* ii. 26 *sq.*: cf. Orelli's *Cicero*, viii. pp. 259, 260.

SEMPRO'NIA AGRA'RIA, carried by Tiberius Gracchus when tribune, B.C. 133. In settling its provisions he was aided by the advice of Crassus, then Pontifex Maximus, Mucius Scaevola, then Consul and later Pontifex Maximus himself, and Appius Claudius (Plut. *Tib. Gracchus*, 9); their main objects being to relieve the poverty of the humbler Roman citizens, and to establish a population of free and independent yeomen over the vast tracts of public land, the enjoyment of which the patricians had practically appropriated, notwithstanding the Lex Licinia, and which were at that date but sparsely peopled by shepherds, herdsmen, and a few slave cultivators. Its main enactment was that no person should hold more than 500 jugera of ager publicus (Liv. *Epit.* 58; Aurel. Victor *de Vir. ill.* 64), with an additional 250 jugera for each of two sons: but in no case was the holding to exceed 1000 jugera. From the estates recovered from the present tenants, as being in excess of the maximum fixed by the statute, holdings were to be provided for the poorer and landless citizens, which they were to have no power of alienating or even letting (Appian, *Bell. Civ.* i. 9, 10); the taxes assessed on the land were to be paid by the tenant. The execution of the statute was entrusted to a commission of three, which was to be elected every year (Appian, *loc. cit.*), the first three commissioners being Tiberius himself, his brother C. Gracchus, and Appius Claudius; but it was attended with great difficulties. The ager publicus had been held by private persons for generations as private property, had often changed hands by sale or assignment, and had been improved and built upon. Proposals were originally made for the payment of compensation for buildings and unexhausted improvements (Plut. *loc. cit.*; Appian, *Bell. Civ.* i. 11); but these, it would appear, were withdrawn.

The execution of the measure was stopped by a senatusconsultum which extinguished the powers of the commissioners to whom it had been entrusted; but it was revived by the Lex Sempronia of C. Gracchus, B.C. 123. The senate, however, practically rendered it a dead letter by employing Livius Drusus, another of the tribunes, to bring forward agrarian proposals even more popular with the proletariate than that of Gracchus; especially one permitting alienation of the holdings, whereby the tenants got money instead of land, and the rich were enabled to buy back the estates of which they had been temporarily deprived. (Plut. *C. Gracchus;* Appian, *Bell. Civ.* i. 21 ff.: for the whole subject, see Merivale's *Fall of the Roman Republic*, chap. i.)

SEMPRO'NIA DE CAPITE CIVIUM, carried by Caius Gracchus, B.C. 123: it re-affirmed the old legal principle that no judgment should be pronounced involving the life or freedom of a citizen without the assent of the Roman people (Cic. *pro Rabirio*, 4, 8; *in Cat.* 4, 5; *in Verr.* v. 63, 163; Gell. x. 3). See Ahren's Excursus on the statute, cited by Orelli, *Cicero*, vol. viii. pp. 264, 265.

SEMPRO'NIA DE PECUNIA CREDITA or DE FENORE, passed by the tribune M. Sempronius Tuditanus, B.C. 193. It was occasioned by the fact of citizens lending money in the names of non-cives in order to evade the laws against usury, to which it subjected the Socii and Latini (Liv. xxxv. 7).

SEMPRO'NIA DE PROVINCIA ASIA provided that the taxes of the Roman province of Asia should be let out to farm by the censors (Cic. *in Verr.* iii. 6, 12: cf. *ad Att.* i. 17, 9): probably a different lex from that which next follows. [DECUMAE.]

SEMPRO'NIA DE PROVINCIIS CONSULARIBUS, passed by C. Gracchus, B.C. 123: it enacted that before the election of consuls the senate should in each year determine the two provinces which they were to have at the termination of their year of office; which of the two each was to take, was to be settled by them afterwards by lot or otherwise (Sall. *Jugurtha*, 27;—Cic. *pro Domo*, 9, 24; *pro Balbo*, 27, 61; *ad Fam.* i. 7, 10; *de Prov. Cons.* 2, 3).

SEMPRO'NIA DE SUFFRAGIIS, passed by C. Gracchus: it enacted that the order in which the centuries should vote should be determined by lot (Sall. *de Republ. ordin.* ii. 8; Mommsen, *Röm. Geschichte*, iv. 3).

SEMPRO'NIA FRUMENTARIA of C. Gracchus (Cic. *Tusc.* iii. 20, 48; *pro Sestio*, 48, 103; *de Off.* ii. 21, 72; *Brut.* 62, 222). [FRUMENTARIAE LEGES.]

SEMPRO'NIA JUDICIARIA, carried by C. Gracchus, B.C. 122: it took the judicia publica from the senate and transferred them to the Equites (Appian, *Bell. Civ.* i. 22; Vell. Pat. ii. 6, 32; Cic. *in Verr.* i. 13, 40; Tac. *Ann.* xii. 60; Florus, iii. 13, 17).

SEMPRO'NIA MILITARIS, for providing soldiers with an outfit at the cost of the state (Plut. *C. Gracchus*, 5).

SEMPRO'NIA NE QUIS JUDICIO CIRCUMVENIRETUR (Cic. *pro Cluentio*, 55, 151). It seems in reality to have been somewhat of the same nature as the Lex Cornelia de sicariis et veneficis.

SERVI'LIA AGRA'RIA, brought forward by the tribune P. Servilius Rullus, B.C. 63: it proposed to divide the ager campanus and campus stellatis among the poorer citizens (Cic. *in Rull.* 2, 28), to compensate all who had been robbed of their property by Sulla by the sale of all the ager publicus in Italy and the provinces (Cic. *ib.* 2, 15, 38), and to purchase lands in Italy for the poor otherwise unprovided for from the wealth which had poured into the treasury from the recent conquests of Pompeius. It was successfully opposed by Cicero as consul, but was in substance carried by Julius Caesar, B.C. 59 (Cic. *in Pison.* 2, 4; *ad Fam.* 8, 6, 5: see JULIA AGRARIA).

SERVI'LIA GLAU'CIA DE REPETUNDIS, B.C. 104 (Cic. *pro Scauro*, 1, 2; *pro Rab. Post.* 4, 9; *in Verr.* i. 9, 26; *pro Balbo*, 24, 54: see the next note). [DELATIO NOMINIS; REPETUNDAE.]

SERVI'LIA JUDICIA'RIA, B.C. 106: by this the consul Q. Servilius Caepio restored to the senators the monopoly of the judicia publica of which they had been deprived by the Lex Sempronia judiciaria (Tac. *Ann.* xii. 60; Cic. *Brut.* 43, 44, 86; *de Invent.* i. 49; *de Orat.* ii. 55, 223; *pro Cluent.* 55, 151), but it seems to have been almost at once repealed by the Lex de repetundis of Servilius Glaucia: see Klenze's work, *Fragmenta legis Serviliae*, &c., Berlin, 1825, and the extracts from it in Orelli's *Cicero*, vol. viii. p. 268.

SES'TIA DE REVOCANDO CICERONE, B.C. 67 (Cic. *ad Att.* iii. 20, 3; *ib.* 23, 4).

SI'LIA, *circ.* 244 B.C., introduced the legis actio called *condictio*, for the recovery of "certa pecunia" (Gaius, iv. 19). [PER CONDICTIONEM.]

SI'LIA, a plebiscitum proposed by P. and M. Silius, tribuni plebis, in respect of publica pondera (Festus, *s. v.* Publica Pondera).

SILVA'NI ET CARBO'NIS. [PAPIRIA PLAUTIA.]

SULPI'CIAE, proposed by the tribune P. Sulpicius Galba, a supporter of Marius, B.C. 88, and enacting the recall of the exiles (Auct. *ad Herenn.* ii. 28, 45), and the distribution of the new citizens and the libertini among all the thirty-five tribes (Ascon. *in Corn.* p. 64, Orelli): conferring the command in the Mithridatic war on Marius in lieu of Sulla (Vell. Pat. ii. 18, 6), and prohibiting senators from incurring debts beyond 2,000 drachmae, or 20,000 asses (Plut. *Sulla*, 8). Appian (*Bell. Civ.* i. 59) says that all these laws were repealed (*ὡς οὐκ ἔννομα*) by Sulla and Pompeius. (Cf. Liv. *Epit.* 77; Cic. *Phil.* viii. 2, 7.)

SULPI'CIA SEMPRO'NIA, B.C. 304; clearly the same as the LEX PAPIRIA DE CONSECRATIONE AEDIUM, and improperly named after the consuls of the year by some writers; its true title is clear from Cic. *pro Domo*, 49 and 50, 128. (Cf. Gaius, ii. 5–7.)

SUMPTUA'RIAE. [SUMPTUARIAE LEGES.]

TABELLA'RIAE. [TABELLARIAE LEGES.]

TARPE'IA ATE'RNIA. [ATERNIA TARPEIA.]

TERENTI'LIA, the proposals of the tribune C. Terentilius Arsa (B.C. 462), which eventually led to the enactment of the Twelve Tables (Liv. iii. 9, 10, 31; Dionys. x. 1 *sq.*) [DUODECIM TABULARUM.]

TESTAMENTA'RIAE. [CORNELIA; FALCIDIA; FUFIA CANINIA; FURIA; VOCONIA.]

THO'RIA. This agrarian law, proposed by a tribune named Sp. Thorius, is mentioned by Cicero (*Brut.* 36, 136; *de Orat.* ii. 70, 284) and Appian (*Bell. Civ.* i. 27), and was one of three statutes by which such provisions of the Lex Agraria of C. Gracchus as had not been repealed by M. Livius Drusus were abrogated (Appian, *loc. cit.*). The first, whose author is unknown, was passed B.C. 121, and apparently confirmed the enactment attributed above [SEMPRONIA AGRARIA] to Drusus, which permitted the sale of lands assigned to the poorer citizens under the law of Gracchus: the second (Lex Thoria), B.C. 119 or 118, prohibited all future distributions of ager publicus, abolished the "triumviri agris dandis assignandis" established by Tiberius Gracchus, and confirmed the old *possessores* in their holdings subject to the payment of a tax (*vectigal*), which was to be divided among the needier citizens in lieu of land: the third (B.C. 111), possibly proposed by the tribune C. Baebius (Sall. *Jug.* 32, 33), relieved the *possessores* of this tax altogether.

The relation of these leges to one another is connected with the fragments of an extant bronze tablet, containing inscriptions on both sides: on one, parts of the Lex Servilia de repetundis (the chief authority on which is Klenze's work); on the other, parts of a Lex Agraria. The largest and most important of the fragments is now in the Museo Borbonico at Naples. The Lex Agraria was cut on the rough back of the tablet, the smooth side of which was intended for and occupied by the Lex Servilia; and the agrarian law being considerably longer than the latter, "the characters [on the reverse side] are remarkably small, the lines narrow, the abbreviations numerous, and the chapters only separated by two or three points, whereas on the other side the letters are uniform, large, and well made, the lines wide, the words written at full length, and the chapters of the lex separated by superscriptions . . . Further, the lines of the Agraria Lex are often so oblique that they cross the straight lines on the opposite side, which are cut very deep, and consequently are visible on the side on which the agrarian law is cut" (Rudorff).

The main subject of the lex, to which the first eighteen chapters or forty-three lines refer, is the public land in Italy as far as the rivers Rubico and Macra. Its second part, covering fifty-three lines, relates to land both public and private in the province of Africa: the final portion to the Roman public land in the territory of Corinth. Rudorff (*Zeitschrift für rechtsgesch. Wissenschaft*, vol. x. pp. 1–194) is of opinion that the lex applied to other land also, and for two reasons. First, the Roman agrarian laws of the seventh century of the city (*e.g.* the Lex Servilia of Rullus) apparently related to all the provinces of the Empire. Secondly, the fragment of this lex, which is preserved, is so broad compared with its height that the whole tablet may be concluded to have contained three times as much as the portion which we have: for nearly all the bronze tablets, on which Roman laws are cut, are oblong in form, with the height much greater than the width. Of the two-thirds of the tablet which he supposes to have been lost, no trace has yet been discovered.

Rudorff, in his essay on this lex (written in 1839), identified it with the Lex Thoria, by which name it was known for some considerable time. But more recently (*Röm. Rechtsgeschichte*, i. § 16: cf. his note in Puchta's *Institutionen*, § 72, *l*) he has accepted the conclusion of Mommsen (*Berichte der Sächs. Gesellschaft*, 1850, p. 92) that it really is the third of the leges above mentioned, which possibly was a Lex Baebia. It is certainly said by Cicero (*Brut.* 36, 136) that Sp. Thorius "agrum publicum vitiosa et inutili lege vectigali levavit;" but this Mommsen renders "relieved the ager publicus of the useless agrarian law of Gracchus by imposing on it a vectigal." The 19th and 20th lines of the lex on the tablet (which decree the repeal of the vectigalia) seem to be conclusive in favour of this and against Rudorff's earlier theory.

The extant text of this statute is printed by Mommsen, *Inscr. Lat.* No. 200, and by Rudorff in the essay referred to: cf. Huschkè, *Kritisches Jahrbuch*, 1841, pp. 579–620; Zumpt, *Comment. Epigraph.* 1850, pp. 205–221; and Walter, *Geschichte des röm. Rechts*, § 252, and note 69 *ib.*

TI'TIA. Similar in its provisions to the Lex Publicia (Dig. 11, 5, 2, 3).

TI'TIA AGRA'RIA (Val. Max. viii. 1; Cic. de *Leg.* ii. 12, 31; Julius, *Obs.* c. 45).

TI'TIA DE TUTORIBUS [JULIA ET TITIA]. Another Lex Titia is referred to in Cic. *pro Mur.* , 18.

TREBO'NIA, carried by the tribune L. Trebonius (B.C. 448), and enacting that if the Comitia were unable to elect ten tribuni plebis on the proper day, these actually selected should not fill up the vacancies by cooptation, but the Comitia be continued until the full number was complete (Liv. iii. 64, 65; v. 10).

TREBO'NIA DE PROVINCIIS CONSULARIBUS, B.C. 55 (Liv. *Epit.* 105; Dio Cass. xxxix. 33; Plut. *Cato min.* 43).

TRIBUNI'CIA. Plebiscita are commonly described as "leges tribuniciae:" but the term is also applied by Cicero (*in Verr.* i. 16, 42) to the lex by which Pompeius restored to the tribunes the powers of which they had been shorn by Sulla.

TU'LLIA DE AMBITU, carried by Cicero B.C. 63 (*pro Mur.* 3, 23, 32, &c.; *pro Sest.* 64, 163; *in Vatin.* 15, 37; Dio Cass. xxxvii. 29). [AMBITUS.]

TU'LLIA DE LIBERIS LEGATIONIBUS, also carried by Cicero (*de Leg.* iii. 8, 18). See LEGATUS.

UNCIA'RIA (Festus, p. 375). [CORNELIA UNCIARIA; cf. VALERIA DE AERE ALIENO.]

VALE'RIA DE AERE ALIENO, carried B.C. 86 by L. Valerius Flaccus, reducing all debts by three-fourths (Vell. Pat. iii. 23; Sall. *Cat.* 33; Cic. *pro Fonteio*, 1, 1).

VALE'RIA DE CIVITATE CALLIPHANAE VELIENSIS, B.C. 98, a privilegium by which a priestess of Ceres was made a civis Romana (Cic. *pro Balbo*, 24, 55).

VALE'RIA DE CIVITATE FORMIANORUM, &c., B.C. 88 (Liv. xxxviii. 36).

VALE'RIA DE MANUS INJECTIONE. [VALLIA.]

VALE'RIA DE SULLA DICTATORE, carried by L. Valerius Flaccus, B.C. 82, giving the force of law to all Sulla's acts (Cic. *de Lege agr.* iii. 2, 7; *de Leg.* i. 15, 42; *pro Rosc. Am.* 43, 126; Plut. *Sulla*, 33).

VALE'RIAE, proposed and carried B.C. 508 by the consul P. Valerius, with the object of relieving himself from the suspicion of aiming at the kingly power and increasing his own popularity: means by which he acquired the name of Publicola or Poplicola, by which he is generally known. The first and best known of his laws is that which reduced the powers of the magistrate (de Provocatione—de Multa) by enacting that every citizen, whether patrician or plebeian, should have an appeal (*provocatio*) to the Comitia (*curiata*, Walter, *Geschichte des röm. Rechts*, § 40; Schwegler, xxi. 17, xxv. 12; *centuriata*, Mommsen, *Röm. Geschichte*, ii. 1, and Huschke, Rein, Becker-Marquardt, &c.) from any magisterial sentence by which he was condemned to death or flogging (Cic. *de Rep.* ii. 31, 54; Val. Max. iv. 1; Liv. ii. 30), or to payment of any fine larger than two sheep and five oxen (Plut. *Popl.* 11). Cicero (*de Rep.* ii. 31, 54) says that this was the first lex passed at the Comitia Centuriata. The right of appeal only applied to Rome and its precincts within a mile of the city, for the imperium of the consuls beyond this boundary was unlimited ("neque enim provocationem esse longius ab urbe mille passuum," Liv. iii. 20). The second Lex Valeria of Publicola declared accursed anyone who formed designs to grasp the kingly power, and made both him and his property *sacer* [SACRATAE LEGES]: Dionys. v. 19, 70; Plut. *Popl.* 12.

VALE'RIAE HORA'TIAE, carried B.C. 449 by the consuls L. Valerius Potitus and M. Horatius Barbatus. The probable import of one of these, relating to the binding force of *plebiscita*, has been stated above [PUBLILIAE LEGES]. A second was intended to secure the principle of the Lex Valeria de provocatione, enacting "ne quis ullum magistratum sine provocatione crearet: qui creasset eum jus fasque esset occidi, neve ea caedes capitalis noxae haberetur" (Liv. iii. 55: cf. Cic. *de Rep.* ii. 31, 54). This principle was re-asserted again almost at once by the Lex Duilia (Liv. *loc. cit.*), and many years afterwards by a third Lex Valeria, passed by M. Valerius, consul B.C. 300, which Livy (x. 9) says was armed with more precise sanctions "quod plus paucorum opes quam libertas plebis poterant."

A third Lex Valeria Horatia made "sacrosancti" the persons of the plebeian tribunes and aediles and the "judices decemviri" (Liv. iii. 55): anyone who violated the enactment being made "sacer" to Jupiter, and his property confiscated to the temple of Ceres and Liber. The "judices decemviri" seem not to be two separate classes of judges, but the collegium of decemvirs.

VA'LLIA, according to Studemund's recension, the name of the statute mentioned by Gaius (iv. 25), which limited the operation of Manus injectio for execution purposes to judgment debts (*judicatum*) and debts established by *actio depensi*. [PUBLILIA DE SPONSU.]

VA'RIA (Val. Max. viii. 6, 4; Appian, *Bell. Civ.* i. 37; Cic. *Tusc.* ii. 24, 57; *pro Scauro*, 1, 3; *Brut.* 56, 89). [MAJESTAS.]

VATI'NIA DE COLONIS, under which the Latin colony of Novum Comum in Cisalpine Gaul was founded B.C. 59 (Suet. *Jul.* 28).

VATI'NIA DE IMPERIO C. CAESARIS, carried B.C. 59 by the tribune P. Vatinius: it conferred on Julius Caesar the province of Cisalpine Gaul, with Illyricum, for five years: Gallia Transalpina was subsequently added by a senatusconsultum (Sueton. *Jul.* 22; Dio Cass. xxxviii. 8; Appian, *Bell. Civ.* ii. 13; Vell. Pat. ii. 44; Cic. *in Vatin.* 15, 36: cf. TREBONIA).

VATI'NIA DE REJECTIONE JUDICUM, carried by the same P. Vatinius: it enabled both accuser and accused in a trial for Repetundae to once reject the whole *consilium* of judges drawn by the praetor: previously they had been able only to challenge individual members of the panel (Cic. *in Vatin.* 11, 27; Schol. Bob. pp. 321, 323, Orelli).

VATI'NIA DE L. VETTII INDICIO (Cic. *in Vatin.* 11, 26; Dio Cass. xxxviii. 9; Appian, *Bell. Civ.* ii. 12; Schol. Bob. *in Vatin.* p. 320, Orelli).

VECTIBULICI, a law supposed to have been passed by the Comitia in the time of Trajan, and so later than the Lex Agraria of Nerva, generally held to have been the last enacted in this manner. The reading in Cod. 7, 9, 2, on which the assumption rests, is probably corrupt: see Puchta, *Institutionen*, § 106, note b.

VE'RRIA FRUMENTA'RIA (Cic. *in Verr.* iii. 49, 117).

VIA'RIA, a name sometimes given to the lex of Scribonius Curio, de viis muniendis [SCRIBONIA], because described under it by Cicero, *ad Fam.* viii. 6.

VICESIMA'RIA (Gaius, iii. 125, 126; Dig. 2, 15, 13; 11, 7, 37; 28, 1, 7, &c.). [JULIA VICESIMARIA.]

VI'LLIA ANNA'LIS, B.C. 180. [ANNALES LEGES.]

VISE'LLIA, A.D. 23, rendered libertini liable to a criminal prosecution who fraudulently attempt to exercise the rights of *ingenui* (Cod. 9, 21; 10, 32, 1): it also enabled Latini Juniani to acquire the civitas by service in the Roman guards (*vigiles*) for six years, which was subsequently reduced to three by a senatusconsultum (Ulpian, *Reg.* iii. 5). [J. B. M.]

LEX VOCONIA. [VOCONIA LEX.]

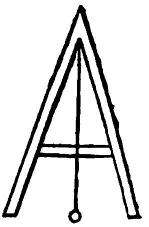
LEXIARCHI (ληξίαρχοι). [ECCLESIA.]

LEXIARCHICON (ληξιαρχικόν). [DEMUS.]

LEXIS (λῆξις). [DIKÉ.]

LIBELLA. 1. The diminutive form of *libra*, a Roman pound, and naturally applied not to the heavy pound of copper, but its equivalent in silver. Varro writes as follows (*L. L.* v. 174) of the libella: "Nummi denarii decuma libella, quod libram pondo as valebat, et erat ex argento parva." This phrase has been much discussed, and has misled many metrologists, but the latest researches (Hultsch, *Metrologie*, ed. 2, p. 275) seem to show that Varro's words contain two errors and one truth. He is wrong in supposing that the denarius was ever equal in value to ten heavy or libral asses; in fact it was equivalent to four (AS, p. 205): and he is wrong in supposing that the libella was ever issued as an actual coin; it was in fact a mere money of account, like the guinea among ourselves. But he is probably right in his assertion that originally the libella was the tenth of a denarius, and so equal to seven grains of silver, or one *as* of the triental reduction [AS, Vol. I., p. 205]. Later it was reckoned as the tenth of the sestertius, and so as equivalent only to 1·75 grains of silver. The half of the libella was the sembella (Varro, v. 174), and its quarter the teruncius. The relation (one-tenth) of the libella to the sestertius or denarius gave rise to the phrase "heres ex libella" (Cic. *ad Att.* vii. 2, 3), applied to those who inherited the tenth of an estate; while he who inherited the fortieth part was called "heres ex teruncio" (*ib.*). [P. G.]

2. (Also, but less frequently *libra.*) A carpenter's level, called by the Greeks διαβήτης, and also in poets (from the pendant tongue) σταφυλή (Hom. *Il.* ii. 765, where Schol. σταφυλὴ γὰρ ὁ τεκτονικὸς διαβήτης): in Colum. iii. 13, 12, *libella fabrilis*, —cf. Plin. xxxvi. 172; Vitruv. iii. 5, 2: in Lucret. iv. 515 (where other instruments also are mentioned), "libella aliqua si ex parti claudicat hilum," the idea is clearly of the legs not being set truly. In Caesar (*B. C.* iii. 40) the form *libra* is used, which seems to be the regular form when it is applied to water-level, so that *infra libram maris* means "below the sea-level." (Blümner, *Technologie*, &c., ii. p. 236.) [G. E. M.]



Libella, a carpenter's level. (From a grave-stone, Gruter, p. 644, 1.)

LIBELLUS, properly the diminutive form of *liber*, and therefore means a small book-roll [see LIBER]; but as regards its use in that sense, it belonged particularly to books of poetry. There are other technical meanings which require notice in this place. We find libellus most frequently used in writers under the Empire for a *memorial* of any kind, either an accusation (whence our *libel*), or a petition; and also to official notifications of any kind. In all these senses the libellus implies a roll made up of very few pages, or it might be only a single page. (Cf. Birt, *Antike Buchwesen*, p. 22.) It was used by the Romans as a technical term in the following cases:—

1. *Libelli accusatorum* or *accusatorii* were the written accusations which in some cases a plaintiff, after having received the permission to

bring an action against a person, drew up, signed, and sent to the judicial authorities, viz. in the city to the praetor, and in a province to the proconsul. (Cod. 9, 2, 8; Dig. 48, 5, 2, 17, 29; 47, 2, 74.) The form in which a *libellus accusatorius* was to be written, is described by Ulpian in a case of adultery (Dig. 48, 2, 3). The accuser had to sign the libellus, and, if he could not write, he was obliged to get somebody else to do it for him. If the libellus was not written in the proper legal form, it was invalid, but the plaintiff had still the right to bring the same action again in its legal form. (Juv. vi. 244, &c.; Tac. *Ann.* iii. 44; Plin. *Epist.* vii. 27; compare Brisson, *de Form.* v. c. 187, &c.)

2. *Libelli famosi* were what we call libels or pasquinades, intended to injure the character of persons. A law of the Twelve Tables inflicted very severe punishments on those who composed defamatory writings against any person (Cic. *de Re Pub.* iv. 10, 33; Arnob. iv. p. 151). During the latter part of the Republic this law appears to have been in abeyance, for Tacitus (*Ann.* i. 72) says that previous to the time of Augustus libels had never been legally punished (compare Cic. *ad Fam.* iii. 11), and that Augustus, provoked by the audacity with which Cassius Severus brought into disrepute the most illustrious persons of the age, ordained, by a *lex majestatis*, that the authors of *libelli famosi* should be brought to trial. On this occasion Augustus, who was informed of the existence of several such works, had a search made at Rome by the aediles, and in other places by the local magistrates, and ordered the libels to be burnt; some of the authors were subjected to punishment (Dio Cass. lvi. 27). A law quoted by Ulpian (Dig. 47, 10, 5) ordained that the author of a *libellus famosus* should be *intestabilis*, and during the later period of the Empire we find that capital punishment was not only inflicted upon the author, but upon those persons in whose possession a *libellus famosus* was found, or who did not destroy it as soon as it came into their hands (Cod. 9, 36). For further information on this subject see Rein, *Das Criminalrecht der Römer*, pp. 378, &c., 531.

3. The "comites in fasce libelli" (Juv. vii. 107; see Mayor's note) are the extracts from laws and other matters connected with his *brief*, which the barrister brought into court. (Cf. Juv. vi. 244.)

4. *Libellus* is used by Roman jurists as equivalent to *Oratio Principis*. [ORATIONES PRINCIPUM.]

5. The word *libellus* was also applied to a variety of writings, which in most cases probably consisted of one page only:—

a. To any short letters or reports addressed to the senate or private individuals (Suet. *Jul.* 56, *Aug.* 84; Cic. *ad Fam.* xi. 11).

b. To the bills or programme called *libelli gladiatorii*, or *munerarii*, which persons who gave gladiatorial exhibitions distributed among the people. [GLADIATORES.]

c. To petitions to the emperors (Juv. xiv. 194; Suet. *Aug.* 53; Mart. viii. 31, 3; 82, 1). The emperors had their especial officers or secretaries who attended to all petitions (*libellis praefectus*, or *magister libellorum*, or a *libellis*, Dig. 20, 5), and who read and answered them in the name of the emperor (Suet. *Domit.* 14). Such a libellus is still extant. See Gruter, *Inscript.* p. DCVII. 1.

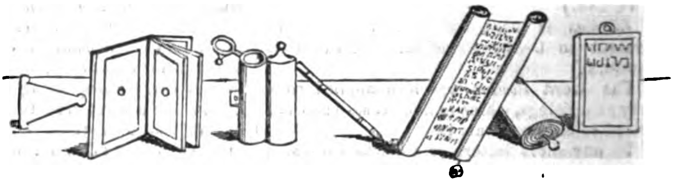
d. To the bill of appeal called *libellus appellatorius*, which a person who did not acquiesce in a judicial sentence had to send in after the lapse of two or three days. (Dig. 40, 1.)

e. To the bills stuck up in the most frequented parts of the city, in case of a debtor having absconded (Cic. *pro Quint.* 6, 15, 19; Rein, *Röm. Privatr.* p. 499). Such bills were also stuck up on the estates of such a debtor, and his friends who wished to pay for him sometimes pulled down such bills (Senec. *de Benef.* iv. 12).

f. To bills in which persons announced to the public that they had found things which had been lost, and in which they invited the owner to claim his property (Plaut. *Rud.* v. 2, 7, &c.; Dig. 47, 2, 44). The owner gave to the finder a reward (*εὕρετρα*) and received his property back. Sometimes the owner also made known to the public by a libellus what he had lost, stating his name and residence, and promising to give a reward to the person who found his property and brought it back to him. (Propert. iii. 21, 21, &c.) [L. S.] [G. E. M.]

LIBER (*βίβλος, βιβλίον*), a book. But it must be recollected that these words in Greek and Latin until a very late period mean a book in the form of a roll, as will be explained below, and that the modern book shape was used only for the codex (in Greek, *τεῦχος*: see CODEX), and not for literary publications. The name *liber* itself is either a misconception or a relic of antiquity applied to something different. It means "rind" or "bast;" but there seems no doubt that not the rind of the papyrus, but the pith (which Cassiodorus rightly gives as *medullae*), was used to make paper (*charta*). The true *liber* or bast is thought to have been used in pre-historic times for writing in some form, as were also leaves of trees (Plin. *H. N.* xiii. § 69); but this has nothing to do with the material of *charta*; nor has the substance *philyra*, which Pliny seems to apply wrongly in describing the manufacture of paper. Philyra, as Pliny himself elsewhere (xvi. § 65) explains, was the inner bark or skin of the lime-tree, which, as it happens, was also used for writing, though not in the form of *charta* (Ulpian, Dig. 32, 52). It is unnecessary to go further here into this point, which is fully discussed by Birt (*Antike Buchwesen*, p. 229 *sq.*). The same view is adopted by Marquardt (*Privatleben*, 800) and Blümner (*Technologie*, i. 309). Of the linen material for books little need be said. It belonged to very early times among the Romans; for the *Libri lintei* are referred to by Livy not as existing in his own time, but as mentioned by Licinius Macer (Liv. iv. 7, 13, 20, 23). They were not *books*, but merely public records with lists of magistrates, kept in the temple of Juno Moneta. Livy also speaks of a Samnite ritual-book as a "liber vetus linteus" (x. 38). In much later times linen was used for note-books by Aurelian (Vopisc. *Aur.* i. 7). The Egyptian papyrus of which paper (*charta*) was made formed an article of trade before the time of Herodotus (v. 68). He calls the plant *βύβλος* or *βίβλος*, but Theophrastus distinguishes *πάπυρος* as the plant and *βίβλος* as the pith, the true material of the paper. It was so largely exported that Cassiodorus (*Ep.* xi. 38) speaks of the abolition of the tax upon it by Theodoric as the removal of an impediment to learning. The papyrus plant grows in swamps to a height of ten feet or more, and paper was manufactured from it (principally at Alexandria, but also at Rome) in the following manner (see Pliny, xiii. § 77). The pith of the papyrus was cut into strips called *schidae* (or, in Festus, *inae*); these strips were placed alongside one another on a wetted board, and, if there was not glutinous property enough in the papyrus, they were smeared with paste: upon them transversely was placed a second layer forming a cross pattern or network: the whole was pressed and beaten into a consistent form and smoothed down with an ivory instrument (hence *charta dentata*), or a shell (Mart. xv. 209), forming a single page (*pagina*, *σελίς*), which was called in its manufacture *plagula*, because of the network pattern in the initial stage (cp. the expressions "*texere* chartam," *ἤτρια βύβλων*, &c.). Pliny (*l. c.*), unless the reading is altered, seems to think that the Nile water itself acted as a paste: this is in itself highly improbable, and we may more safely conclude that the papyrus itself yielded the glutinous substance when, as in Egypt, it was fresh, but when it was imported and dry the paste was necessary, which Pliny describes as used at Rome. Pliny reckons nine sorts or qualities of paper: (1) the best sort had once been called in Egypt *hieratica*, because it was specially used for sacred books, but in the Empire it was called *Augusta*, and was 13 *digiti* broad, and from a similar compliment the second quality was called *Livia*, so that, as Pliny notes, the *hieratica* was relegated to the third class; (4) the *amphitheatrica*, so called because it was manufactured near the amphitheatre at Alexandria, 9 *digiti* broad: (5) an improvement upon this by a Roman Fannius, and therefore called *Fanniana*, 10 *digiti* broad; (6 and 7) *Saitica* and *Taeniotica* (8 *digiti*), so called from the places of their manufacture in Egypt; (8) *emporetica*, used not for writing, but, as the name suggests, for wrapping up parcels. Later in Claudius's reign came the *Claudia*, which was a foot broad, and was regarded as an improvement, because it was thick enough for writing on both sides, whereas the Augusta was thin and transparent, and could only take writing on one side. Parchment (*membrana*) was also a common material for writing; but the uses of *charta* and *membrana* were distinct until late in the Empire. Skins of animals had been used for writing in very ancient times: in fact, in Asia among the Persians and, as is well known, among the Jews, it had been what papyrus was to the Egyptians (Diod. xi. 32; Herod. v. 58; and see Birt, p. 49). It is therefore not strictly correct of Varro (*ap.* Plin. xiii. § 70) to say that parchment for writing was an invention of Eumenes II., king of Pergamum (about 180 B.C.), in consequence of the jealousy of Ptolemy Epiphanes, who prohibited the exportation of papyrus. (Jerome tells the same story of Attalus.) The true account seems to be that great improvemen in the preparation of *διφθέραι* was intr duced either by Eumenes or Attalus at Per gamum, whence the term *pergamena*, parchmen inasmuch as formerly *διφθέραι* were used (li *charta*) only on one side, and now they we smoothed for writing on both sides, and in th improved form exported to Rome. But it important to notice that *charta* was until lon after the Augustan age exclusively used f literary publications. Parchment was bound the codex form (or book shape), and used f account books, for wills, and for notes. In fac it competed rather with wax tablets than wi paper. The *membrana* in Horace, *Sat.* ii. 3, *A. P.* 389, is used for the rough copy of poems be altered and published later ("delere liceb quod non edideris"); and the same purpose served by the parchment in a diptych staine yellow in Juv. vii. 24. For *books*, i.e. literar publications, the codex was used first b Christian writers, beginning with the codices the sacred writings; for other writings scarcel before the second half of the 3rd century, and i general use not before the 5th century. Excep tions to this appear in Martial, xiv. 188, 19 192; but the *membrana* there may only refe to the wrapper, which enclosed the roll: cf. Mart i. 3, 3. Letters were written on wax tablets o on paper, not on parchment. That the wor *palimpsestus* in Cic. *Fam.* vii. 18 does not gainsa this, is shown by his use of *chartula* in tha passage.

The pages (*σελίδες*, *paginae*) having been prepared in the manner described above, they were pasted together (*conglutinatae*) to form a long roll; but sometimes the pages were written first and pasted into a roll afterwards, for which purpose some people kept *glutinatores* (Cic. *Att.* iv. 4). The writing was in columns, so that the lines of writing were parallel to the sides of the roll: on each page there was a column, and there was a blank space between each column. Down to the time of Caesar, however, it was the custom to write official documents *transversa charta*; that is to say, across the whole breadth of the roll, so that the lines of writing were at right angles to the sides of the roll. This explains the passage in Suet. *Jul.* 56. The shape and appearance of Greek and Roman books will be understood from the following woodcut.



Ancient Writing Materials. (From a painting at Herculaneum.)

The roll was sometimes of considerable length. The Scholiasts indeed (quoted by Birt, p. 444) speak of Thucydides and Homer being written each in one long roll. The roll of Thucydides is estimated at about 578 pages, nearly 100 yards —surely an incredible length; and a Homer roll, 120 yards in length, is said to have been in existence at Constantinople. But this was certainly not the usual system, and the roll rarely exceeded 100 pages (cf. Mart. viii. 44), and was usually much smaller. It was customary to divide a long work (*opus* or *corpus*) into several books (*libri*); each *liber* being in one roll (*volumen*; in Greek, τομὸς or κύλινδρος). Greek writers sometimes called these *libri* or divisions of a work βιβλία, sometimes λόγοι, and in the later Empire συγγράμματα. Thus, in contrast to the huge roll of Homer, said to have been at Constantinople, we have the papyrus of the 24th book of the Iliad from Elephantine, so that the complete Iliad would have been in 24 rolls or volumes. The pages were numbered, or at any rate the total number was usually put on the *titulus*: even the total number of verses, or of lines in a prose work, were sometimes written on it. Thus Josephus reckons 60,000 στίχοι at the end of his 20th book of Antiquities, and Justinian gives to the Digests "centum quinquaginta paene milia versuum." The price of the book was in part estimated by this number, and Marquardt cites an edict of Diocletian (*C. I. L.* iii. p. 831) in which the payment of the copyist was fixed at so much for every hundred lines.

The writing was usually only on one side of the paper. The other side in cast books was utilised for schoolboys' exercises: "libelle inversa pueris arande charta" (Mart. iv. 86), or as scribbling paper (Mart. viii. 62). Both sides were, however, sometimes used for the original work, and the books were then called *opisthographi* (Plin. *Ep.* iii. 5: see Juv. i. 6, and Mayor's note). Sometimes the writing was sponged out (as in a parchment palimpsest) and the paper used over again. This is the point of the joke made by Augustus, "Ajacem suum in spongiam incidisse" (Suet. *Aug.* 82).

The roll was protected against worms by being smeared with cedar oil, which gave the paper a yellow tinge (Ov. *Trist.* iii. 1, 13; Mart. iii. 2; Hor. *A. P.* 331): then the last leaf was pasted on to a thin piece of wood called the *umbilicus* or ὀμφαλος (the *umbilicus* is found also made of tightly-folded paper). Hence the last page is called *eschatocollion* (Mart. ii. 6); and the expression "ad umbilicum adducere" means, to finish (cf. Hor. *Epod.* 14, 8; Mart. iv. 89) = "ad cornua," Mart. xx. 107. The edges (*frons*) of the roll were carefully cut, and also smoothed with pumice-stone, whence the book is "pumice mundus" (Ov. *Trist.* iii. 1, 13; Mart. i. 67, viii. 72; Catull. xxii. 8; Tibull. iii. 1, 10). There is an amusing mistake in Isidore's statement, "Circumcidi libros primum Siciliae increbuit, nam initio pumicabantur," where he has confused *sicilire*, "to *cut*" (*sica*), with Sicilia. His statement is adopted by some modern writers, but there seems no reason to doubt that the book was both cut and smoothed with pumice-stone. As a further decoration, the ends (*cornua*) of the *umbilicus* were sometimes gilded as far as they projected (Mart. viii. 61). The edges themselves (*frons*) were also coloured (nigra *frons*, Ov. *Trist.* i. 1, 8). A strip of parchment on which the title or subject of the work, and sometimes its number of pages or even lines, was written, was pasted on to the roll. (In this sense "praetexat summa fastigia" = "praetexat frontes.") This strip was called *titulus* or *index*, in Greek σίττυβοι or σίττυβαι (Cic. *Att.* iv. 4). (Others spell the word σίλλυβοι, but see Phot. and Hesych. *s. v.* and Marquardt's note, *Privatleben*, 817.) This *titulus* or index was often painted a bright colour, and perhaps the "lora rubra" (Catull. 22, 7) have the same meaning (though Göll takes the words to stand for the parchment case). Finally, a cover for the roll (*membrana*, διφθέρα) was made of parchment coloured red or yellow, "Lutea sed niveum involvat membrana libellum" (Tib. iii. 1, 9), which is called *purpurea toga*, and also *sindon* (Mart. x. 93; xi. 1). If one work was in several *libri*, they were tied in a bundle (*fasces*, *fasciculus*, Gell. ix. 4, or δέσμη). So Aristot. *fr.* 134: δέσμας πάνυ πολλὰς δικανικῶν λόγων Ἰσοκρατείων περιφέρεσθαι ὑπὸ τῶν βιβλιοπωλῶν. The only other addition to be noticed is, that occasionally the portrait of the author was placed on the first page of the book (Senec. *de Tranq. An.* 9; Mart. xiv. 186). It is for the imaginative a matter for speculation whether the portrait of Virgil in the Vatican edition is the copy of an original.

Book held by a crowned Poet. (From a painting at Herculaneum.)

In reading, the roll (*liber* or *volumen*) was held in both hands and unrolled with one, while the other rolled it up: the unrolling was called *evolvere*, *revolvere*, or *volvere*; going right through was called *explicare*: rolling up again, *convolvere*, *replicare*, or *complicare* (Cic. *Q. F.* iii. 1, 3). So in Mart. iv. 82, "charta *plicetur*" means, "let it remain unread"; "opus explicitum" (xiv. 1) means "read all through" (cf. "explicet volumen suum," Cic. *pro Rosc. Am.* 35, 101). In rolling it up tightly, it was convenient to do so by holding the *umbilicus* with both hands while the first page was pressed under the chin. This is the meaning of "quae trita duro non inhorruit mento" (Mart. i. 66; cf. x. 93) and ᾗ ῥά σ' ἀναγνοὺς παῖς τις ἀναθλίψει πρὸς τὰ γενεῖα τιθείς, in the Anthology. The above apparatus of a book is given completely by Martial (iii. 2):

> "Cedro nunc licet ambules perunctus
> Et frontis gemino decens honore
> Pictis luxurieris umbilicis;
> Et te purpura delicata velet
> Et cocco rubeat superbus index."

The multiplication of books at Rome began after the conquest and pacification of Italy, but booksellers' shops were not known until the end of the Republic. The earliest mention of such shops is in Cic. *Q. Fr.* iii. 4, and Phil. ii. 9, 21; but they were then still uncommon, and we find Atticus selling books for the copying of which he had a large number of slaves (Cic. *Att.* ii. 4). Booksellers were called *librarii* and also *bibliopolae* (Mart. iv. 71, &c.), and in Greek *βιβλιοκάπηλοι*. Horace gives us the name of the Sosii (*Ep.* i. 20, 2; *A. P.* 345). Martial names several, and specifies Argiletum as the booksellers' quarter (i. 3, 117): there were also the *Vicus Sandilarius* (Gell. xviii. 4) and the Sigillaria (Gell. v. 4). There were booksellers, too, in the provincial towns, *e.g.* at Lugdunum (Plin. *Ep.* ix. 11; cf. Hor. *Ep.* i. 20, 13), at Brundisium (Gell. ix. 4). As to the price, we have no very clear information; but it would seem that a book was not necessarily, as regards cost of production, very expensive, though it might from special circumstances command a large price. Gellius (ii. 3) speaks of the 2nd Aeneid being bought for *viginti aurei* = nearly £18; but it was an antiquarian curiosity, as being reputed (however unlikely that might be) Virgil's own copy: and as a literary tradition, possibly untrue, it was said that Aristotle gave three talents for an autograph MS. of Speusippus, and Plato nearly two for three books of Philolaus (Gell. iii. 17). Such instances merely show that book-fanciers lived then as now, and price was regulated by fashion and rarity. Trustworthy copies of Ennius, for instance, were so rare in the time of Gellius that one of undoubted authority was *hired* for a large sum to decide a dispute as to the reading "quadrupes *ecus*" or "quadrupes *eques*" (Gell. xvii. 5). That, on the other hand, the real cost of production was not great, may be seen from the fact that Statius (*Silv.* iv. 9, 9) speaks of a book (possibly one of his own) in a neat purple cover costing about fivepence: the first book of Martial, in the shop of Atrectus, cost 5 denarii (Mart. i. 117); but even that was dear; for the bookseller Tryphon could sell it at a profit for two (Mart. xiii. 3). The author's profit could be made (1) by selling his original copy to a bookseller (Sen. *de Ben.* vii. 6; Suet. *de Gr.* 8), (2) by selling copies made by his own slaves: but in the absence of all legal protection, the gains so to be made were very small, and the author who sought profit from his writing depended mainly on the liberality of rich patrons. (See Friedländer, vol. iv. p. 66–120, French translation; Birt, ch. vii.)

How early or to what extent booksellers existed at Athens is a matter of dispute. It is not unreasonable (with Birt and Becker) to deduce from the mention of *βιβλιογράφοι* in Cratinus (Poll. vii. 211) that they existed as early as 430 B.C. This name, for which *βιβλιοπώλης* was afterwards used, would imply that the first booksellers were copyists who both copied and sold books: and though Boeckh thinks that the proverbial use of *λόγοισιν Ἑρμόδωρος ἐμπορεύεται*, with Suidas's explanation, implies the rarity of such a trade, even after Plato's time, we have, on the other hand, the statement of Xenophon (*Anab.* vii. 5, 14) that books were on sale even at Salmydessus; we have a book-market (*τὰ βιβλία*) at Athens in the time of Eupolis (Poll. ix. 47); and we might conclude from Aristoph. *Ran.* 1109, *βιβλίον τ' ἔχων ἕκαστος μανθάνει τὰ δέξια*, that books were then easily to be purchased: and the same may be inferred from the mention of the book collector Eudemus in Xen. *Mem.* iv. 2. It is indeed probable that the well-known passage in the Apology (26 D) is wrongly adduced as an additional argument. When Socrates says that you can buy the opinions of Anaxagoras at the theatre for one drachma, he does not mean, as has often been imagined (even by Boeckh), that there was a bookstall there, but simply that one drachma would procure admission to the dearest place (*εἰ πάνυ πολλοῦ*) in the theatre, where the doctrines of Anaxagoras might be heard in some play, perhaps, of Euripides. That a book of Anaxagoras could be bought there or anywhere else for a drachma is unlikely, since an inscription of the year 407 gives the price of the paper alone as 1 drachma 2 obols a sheet (*i.e.* a single roll which would serve for one small book). (*C. I. A.* i. 324: see Birt, p. 433.) Without this passage, however, there is enough for a fair inference that some kind of book-market began at Athens and in some other Greek towns in the latter part of the 5th century B.C. (See further on this subject Birt, *Buchwesen*, chap. ix.; Becker-Göll, *Charikles*, ii. 160; Boeckh, ed. Fränkel, i. 60: see also art. BIBLIOTHECA.) [W. S.] [G. E. M.]

LIBER, LIBERTAS. The division of men into free and slaves is the "summa divisio de jure personarum" (Gaius, i. 9; *Inst.* i. 3, pr.): according as a man is a member of the one or the other class, it is decided whether he is capable of having any legal rights whatever, or is not a mere thing or chattel in the eye of the law. Free men were either so from birth [INGENUI] (Gaius, i. 11; *Inst.* i. 4, pr.), or they became free by release from slavery, in which case they were called *libertini* [LIBERTUS] (Gaius, *loc. cit.*). *Libertas* is defined by Justinian after Florentinus (in Dig. 1, 5, 4, pr.) as "naturalis facultas ejus quod cuique facere libet, nisi si quid aut vi aut jure prohibetur;" that is to say, a man is restrained of his natural freedom when his hands are tied behind his back, or when the law forbids him to do this or that, though civil liberty at any rate does not require that one should be free to act against the laws (Cic. *pro Cluentio*, 53, 146; Pers. *Sat.* v. 89; Dio Chrysost. *Or.* 14). By the Roman jurists freedom was considered the natural condition of man, and slavery an artificial result of organised political society (Florentinus in Dig. 1, 5, 4, 2; Ulpian in Dig. 1, 1, 4, copied into Justinian's Institutes, i. 4, 2; 1, 5, pr.), and in their eyes it was the first and indispensable condition of protection from the law either to person or property. Every free man had certain legal rights; every *civis* had more; and his legal status was completed by membership of a Roman familia [see CAPITIS DEMINUTIO], though in theory every *civis* had a "family" ("emancipatus . . . sui juris effectus propriam familiam habet," Dig. 50, 16, 195, 2). The rights which a man possessed at Rome as being merely free were those conferred by the *jus gentium* as represented in the edict of the Praetor. A *peregrinus* who was *liber* had no *commercium* or *conubium*, and consequently no share in the *jus civile*: but he could own property, which was protected by *utiles actiones* or *actiones in factum* [ACTIO]: his possession was secured by interdicts; he could make a valid testament, if such was the practice of his own state, and he could engage in commerce through those contracts which were said to be derived from the *jus gentium*. [J. B. M.]

LI'BERA FUGA. [Exsilium.]

LIBERA'LIA were celebrated on March 17. Though the day was sacred to Bacchus, this must be understood of Liber, the Italian Bacchus; and the Liberalia must not be confounded with the festivals Dionysia or Cerialia, which were of Greek origin and celebrated with *ludi* at different times. On this day the boys who took the *toga virilis* (called also *toga pura* and *toga libera*) went in procession and made an offering in the Capitol, of cakes (*liba*), which were bought in the streets at little altars. (See the curious description in Varro, *L. L.* vi. 14, "per totam oppidum eo die sedent sacerdotes Liberi, anus hedera coronatae cum libis et foculo pro emptore sacrificantes." As to the origin of the name, some are disposed to derive it solely from *toga libera*, allowing no real connexion with the name of the deity, and Marquardt seems to take this view (*Staatsverwaltung*, iii. 363): but (1) the day was certainly regarded as sacred to the god Liber (Ov. *Fast.* iii. 371; Varro, *l. c.*), and was probably the day of an old Italian festival in his honour; (2) the offering was made by the boys at the shrine of Liber in the Capitol (" Liberalia Libero in Capitolio," Calend. Farnes.); (3) the toga, when not called *virilis*, was oftener called *pura* than *libera*; so Cicero (*ad Att.* vi. 1, 12) says, "Quinto Liberalibus togam *puram* cogitabam dare;" and Tertullian (*de Idol.* 16) calls the Liberalia "sollemnitas togae purae" (cf. Plin. *H. N.* viii. 194); and in poetry the name *pura* is the older (Catull. lxviii. 15). While, however, it seems most natural to connect the name *Liberalia* with the Italian deity *Liber*, there is little doubt that the idea of freedom from pupilage was always connected in the Roman mind with this day, on which the boy was "liberatus paedagogo." But in truth there is no need to quarrel about it; for even if the name of the god and the adjective are not etymologically the same (and, though Curtius distinguishes them, the distinction is by no means certain), there is no doubt that Liber was regarded as the god of freedom at Rome (see Preller, *Röm. Myth.* 442): so that it is no mere poetic conceit, when Ovid says of this day:

> "Sive quod es Liber vestis quoque libera per te
> Sumitur et vitae liberioris iter."

Latin writers sometimes use the word *Liberalia* to translate the Greek festival Dionysia, which must always be distinguished from the above; and whenever the *ludi liberales* are mentioned, they refer either to the Bacchanalia or the Cerialia (see those articles), not to the Liberalia properly so called. (See also Serv. *ad* Verg. *Ecl.* iv. 50; Marquardt, *Staatsverwaltung*, l. c.; Preller, *Röm. Myth.* p. 445.) [G. E. M.]

LIBERA'LIS CAUSA. [Assertor.]

LIBERA'LIS MANUS. [Manus.]

LIBERA'LITAS. [Ambitus.]

LIBERO'RUM JUS. [Lex Julia et Papia Poppaea.]

LIBERTUS (*ἀπελεύθερος*), a freedman. I. Greek. Concerning freedmen, as concerning slaves, our information mostly relates to Athens; but we have reason to believe that there was a general likeness between all the Greek states in this respect, though Sparta had some distinctive peculiarities. When we remember that slaves in Greece were mainly (though not exclusively) taken from non-Greek and more or less barbarous nations, but yet were not distinguished (like the negro) by any special external mark, we shall see how natural was the position that Aristotle took; namely, that some men were fitted by nature to be slaves, while yet the prospect of freedom as a reward for good work ought to be held before them (*Polit.* vii. 10; *Oecon.* i. 5, ed. Bekker). Emancipation, then, formed a cardinal point in the philosophic view of the subject, and mitigates the force of Aristotle's approval of slavery.

Emancipation was of course generally the act of the master of the slave; but sometimes the state would give freedom as a return for important public services, compensating (as it would seem) the master (Plato, *de Leg.* xi. p. 914). Thus the slaves who fought in the battle of Arginusae received freedom and even citizenship as a reward (Aristoph. *Ran.* 33, 192, 693); and the same promise was made to the slaves who fought at Chaeronea (Dio Chrysost. xv. 21). Other historical instances are known; and slaves who revealed a dangerous conspiracy were always set free at Athens (Lysias, *pro Call.* 5; *περὶ τοῦ σηκοῦ*, 16); it is clear that such a rule gave dangerous facilities to an accuser.

When an individual master set his slave free, it would either be from gratitude or affection, or because the slave purchased his freedom. Slaves could often earn money on their own account; at the same time they could not personally make any contract with their masters that the law would recognise. Hence the procedure was for the slave to deposit the money in some temple; the god to whom the temple was dedicated then bought the slave from his master, and in the contract thus made the provision for the freedom of the slave was inserted. Numerous inscriptions, embodying such contracts, have been discovered at Delphi and elsewhere. Conditions are in most cases found attached to the emancipation; certain duties to be performed, or payments to be made, by the freedman for his former master; or, in case the freedman dies without children, his former master is to be his heir (this even without special contract was, it appears, the rule at Athens: Rhetor. *ad* Alex. i. 16; Isaeus, *de Nicostr. hered.* 9; and compare Bunsen, *de Jur. hered. Ath.* p. 51); or perhaps even the freedman has to serve his master until the death of the latter. It is worth notice that the inscriptions record nearly twice as many female slaves liberated as males. It was not unfrequent for a master to emancipate his slaves by testamentary disposition; directions of this kind are contained in the wills of the philosophers Plato, Aristotle, Theophrastus, Straton, Lycon, Epicurus, as communicated to us by Diogenes Laertius (iii. 30;—v. 1, 15; 2, 55; 3, 63; 4, 72;—x. 21).

For the security of the freedman, the act of emancipation would often take place in a theatre (Aeschin. *c. Ctes.* § 44) or other public place, that there might be as many witnesses as possible. There was, however, no recognised form of emancipation; and the state as such took no interest in it, though for fiscal purposes lists of the freedmen would in some states be kept (Curtius, *Anecd. Delph.* p. 13 *sqq.*).

When the emancipation was complete, and all conditions fulfilled, the freedman (except in special cases, as in that of the slaves who fought at Arginusae) took the status of a *μέτοικος*, or resident alien; and as such was bound to choose as his patron (*προστάτης*) the master who had set him free. He had then certain duties towards his patron (beyond, it would appear, those of the ordinary *μέτοικος*), on the transgression of which he was liable to be proceeded against at law [Apostasiou Diké]; the most serious offence would be choosing for himself another patron. (Meier and Schöm. *Att. Proc.* p. 473, &c.; Petit, *Leg. Att.* ii. 6, p. 261; compare Plato, *de Leg.* xi. p. 915.) He had to pay the *μετοίκιον*, or tax of 12 drachmae yearly, and a triobolon besides; this triobolon was probably the tax which slave-holders had to pay to the Republic for every slave they kept, so that the triobolon paid by freedmen was intended to indemnify the state, which would otherwise have lost by every manumission of a slave. (Boeckh, *Publ. Econ.* p. 331 = *Sthh.*^{2} i. 403.) Whether the relation between a patron and his freedman extended to the children of the latter, is unknown; but in one of the Delphic inscriptions it is specially stated that if any of the children of the freedman die childless, the patron is to be the heir. A freedman was said to be *καθ' ἑαυτὸν* (Dem. *pro Phorm.* p. 945, § 4), and the expression *χωρὶς ᾤκει* in Dem. *c. Euerg. et Mnesib.* p. 1161, § 72, is plainly synonymous with "he had been emancipated;" probably in Dem. *Phil.* i. p. 50, § 36, *τοὺς χωρὶς οἰκοῦντας* means the same thing, though from the context some difference is clearly implied between these and the *μέτοικοι*, due no doubt to the imperfect character of the emancipation of many freedmen.

Freedmen, like the resident aliens generally, appear to have taken much to commerce; and two of the bankers whose names we know best in all Athenian history, Pasion and Phormio, had both been slaves, and some years after their emancipation received the Athenian citizenship. In the case of Pasion, this was the reward of services rendered to the state.

We have no mention of any emancipation of public slaves at Athens; and since these generally worked in the mines, and were more hardly treated than others, it is not likely that their emancipation was frequent. But at Sparta the emancipation of the helots (who were, properly speaking, not slaves, but serfs) was frequent. They were called Neodamodes when emancipated (Pollux, iii. 83), and formed from B.C. 421, when they are first mentioned (Thucyd. v. 34), to B.C. 369, when they are last mentioned (Xenoph. *Hellen.* vi. 5, 24), not an inconsiderable part of the Spartan armies. The emancipation of the helots required the action of the state, and could not be carried out by an individual (Ephorus, in Strabo, viii. p. 365). Another class of emancipated slaves at Sparta were the *μόθακες* or *μόθωνες*, who were children brought up with the children of citizens. (Phylarchus in Athenaeus, vi. 102. See Müller's *Dorians*, ii. 3, § 6.) Other class are named in the same chapter of Athenaeus *ἀφέται, ἀδέσποτοι, ἐρυκτῆρες*, and *δεσποσι ναῦται*. The *δεσποσιοναῦται* served on boa the fleet; of the other classes nothing is know (See especially in relation to this subje Büchsenschütz's *Besitz und Erwerb im griech schen Alterthume*, pp. 168–181, to which th article is much indebted.) [L. S.] [J. R. M.]

2. Roman. Freedmen are defined by Gaiu i. 11, and Justinian, *Inst.* i. 5, pr., as tho "qui ex justa servitute manumissi sunt." As class they are denoted by the term *libertini*, bu each freedman, in relation to his late maste is called *libertus* (i.e. *liberatus*). In the time the censor Appius Claudius, and for some tim after, *libertinus* meant the son of a *libertu* (Suet. *Claud.* 24); but this is not the meanin of the word in the extant Roman writers.

Originally there was but one species *libertini*, viz. *liberti cives*: they possessed i substance all the rights, private and public, a free-born citizen of Rome. In other words if a full owner of a slave *ex jure Quiritium* se him free in one of the three civil or statutor modes of manumission (*vindicta, censu, testa mentum*), he became a *civis*: any other kind manumission, or even civil manumission by merely "bonitarian" owner, left him a slave in the eye of the law, though protected by the praetor in the actual enjoyment of freedom (Gaius, iii. 56). The children of *liberti cives* were *ingenui*.

Legislation under the first two emperors had the effect of creating two new classes of freedmen. The Lex Aelia Sentia, A.D. 4, enacted that slaves who had been put in chains by their masters or branded as a punishment, or convicted of crime after torture or imprisoned, or made to fight in the arena, or entered at the gladiatorial school, should, if subsequently manumitted, have no higher status than that of enemies who had surrendered at discretion ("peregrini *dediticii*," Gaius, i. 13). The Lex Junia Norbana, *circ.* A.D. 19, gave a legal status to slaves manumitted under circumstances which prevented their becoming *cives* without being *dediticii*, the number of whom must have been largely increased by other clauses of the Lex Aelia Sentia (Gaius, i. 18, 38); they were to have the rights of Latini Coloniarii (i.e. *commercium* without *conubium*), though the statute expressly disabled them from making a will, being testamentary guardians, or taking under the will of another person either as heirs or legatees (Gaius, i. 23, 24: see Latinitas): they were called Latini Juniani. Hence Ulpian writes in the third century (*Reg.* i. 5): "Libertinorum genera sunt tria: cives Romani, Latini Juniani, dediticiorum numero."

Dediticii were capable of owning property so far as other *peregrini* were, but it went inevitably to the patron on their decease, as they could not make a will, and had no *sui heredes* or agnates: they might not live within 100 miles of Rome, or be manumitted a second time, under penalty of being made slaves again; and there was no means by which they could rise to any higher civil condition (Gaius, i. 15, 26, 27). The rights of Latini Juniani, and the modes in which they could rise to the status of *civitas*, are noticed under Latinitas.

Both of these classes were abolished by Justinian, who thus restored the simplicity of the early law and made all manumitted slaves citizens of Rome (*Inst.* i. 5, 3; Cod. 7, 5; 7, 6).

The main point in which a *libertus civis* was inferior to an *ingenuus* was his relation to his *patronus* or quondam master. Towards him he was bound to show *obsequium* and *reverentia*, as a child towards his father (Dig. 37, 15, 9), and on that account he could bring no action against him without the praetor's permission, while he could not bring an *actio famosa* under any circumstances whatever (Dig. 37, 14, 1; 37, 15, 5, 1; *ib.* 7, 2; Gaius, iv. 183; *Inst.* iv. 16, 3): for breach of this duty he was liable "in servitutem revocari" (Suet. *Claud.* 25; Dig. 37, 14, 5, pr.). He was also bound to provide the patron, his parents, and children with alimony, if their circumstances became reduced; and he could bind himself to perform certain services (*operae officiales*) for the patron by mere oath (*jurata promissio liberti*), which between ordinary persons would create no legal obligation whatever (Dig. 38, 1, 7, 3), though this was not extended so far as to reduce him to a dependence inconsistent with freedom (Dig. 44, 5, 1, 5). Finally, the patron had certain rights of inheritance in respect of the freedman's property, if he died intestate, leaving no issue of his own; and if it exceeded a certain minimum, he had a claim to receive a specific proportion of it under his will. This subject is too long to be entered into here, but it is treated at length in Gaius, iii. 39–76; *Inst.* iii. 7.

The rights of the patron devolved on his decease upon his children (Gaius, iii. 58; Dig. 38, 1, 29), and, so far as they related to *liberti cives*, could not be bequeathed away by will to an outsider, because they were based upon the fiction of relationship. But a Senatusconsultum Ostorianum (*Inst.* iii. 8) enabled the patron to assign a freedman or any number of them to any child in his power, either by declaration in his lifetime or by testament; and if the child was still in the father's power at the latter's decease, he became sole *patronus* of the *liberti* so assigned to the exclusion of the other children.

The patron might lose his rights, either in whole or part, by their abuse (Dig. 37, 14, 15), or by neglect of his own duties towards the freedmen (Dig. *ib.* 5, 1; 38, 2, 14, pr.). By special imperial favour, too, a *libertus* could become *ingenuus*, and this in two ways. By a grant of the *jus anulorum aureorum*, he acquired the position of an *ingenuus* in relation to all men except his patron, the latter's privileges remaining unaffected (*Fragm. Vat.* 226; Dig. 38, 2, 3, pr.; 40, 10, 6). By *natalium restitutio*, he became *ingenuus* in every respect, the relation of freedman and patron being extinguished (Dig. 40, 11, 2). [J. B. M.]

LIBITINA'RII. [FUNUS.]

LIBRA, the unit of weight among the Romans and Italians. The libra or pound of copper was also the unit of value, and was called As (*q. v.*). The weight of the libra has been fixed by metrologists as 5050 grains (327·5 grammes), nearly 12 ounces avoirdupois. It was divided into twelve unciae or ounces. For further details, see As, Vol. I. p. 202, and PONDERA. [P. G.]

LIBRA (*σταθμός*), a balance, a pair of scales. The principal parts of this instrument were: (1) the beam (*jugum*, *ζυγόν*), whence *ζυγὸν ἱστάναι*=*to weigh* (Dem. 1461); (2) the two scales called in Greek *τάλαντα* (Hom. *Il.* viii. 69; xxii. 209, &c.; Aristoph. *Ran.* 797) and *πλάστιγγε* (Aristoph. *Ran.* 1378), and in Latin *lances* (Verg. *Aen.* xii. 725, &c.). [LANX.] Hence the verb *ταλαντεύω* is employed as equivalent to *σταθμῶ*, and to the Latin *libro*, and is applied as descriptive of an eagle balancing his wings in the air (Philostrat. Jun. *Imag.* 6; Welcker, *ad loc.*). The beam was sometimes made without a tongue, being held by a ring or other appendage fixed in the centre (see the woodcut). When the tongue working in an eye (*agina*) is used, as in our scales, it is called *examen* or *ligula* (Suet. *Vesp.* 25). The word *trutina* and the Greek *τρυτάνη* were used of this sort of balance, as may be seen from Juv. vi. 437 and Demosth. p. 60, where there are clearly two scales. Specimens of bronze balances may be seen in the British Museum and in other collections of antiquities, and also of the steel-yard [STATERA], which was used for the same purposes as the libra. The woodcut to the article CATENA shows some of the chains by which the scales are suspended from the beam. In the works of ancient art, the balance is also introduced emblematically in a great variety of ways. The annexed woodcut is taken from a beautiful bronze patera, representing Mercury and Apollo engaged in exploring the fates of Achilles and Memnon, by weighing the attendant genius of the one against that of the other. (Winckelmann, *Mon. Ined.* 133; Millin, *Peintures de Vases Ant.* i. pl. 19, p. 39.) A balance is often represented on the reverse of the Roman imperial coins; and to indicate more distinctly its signification, it is frequently held by a female in her right hand, while she supports a cornucopia in her left, the words AEQVITAS AVGVSTI being inscribed on the margin, so as to denote the justice and impartiality with which the emperors dispensed their bounty.

Libra. (From an ancient vase.)

The constellation Libra (in Greek *ζυγός*) is placed in the Zodiac at the equinox, because it is the period of the year at which day and night are equally balanced. (Verg. *Georg.* i. 208; Plin. *H. N.* xviii. §245; Lucan. viii. 467, "quo Libra pares examinat horas." [J. Y.] [G. E. M.]

LIBRAMENTUM, LIBRA'TIO AQUA'RUM. [Aquaeductus.]

LIBRA'RII, slaves who were employed for writing or copying in any way, and sometimes also the readers or reciters (Anagnostae) were included under this name (Orelli, 2872). They must be distinguished from the *Scribae publici*, who were freemen [Scriba], and also from the booksellers, who were also called *librarii* (see under Liber). The slaves to whom this name of *librarii* was given may be divided into three classes:—

1. *Librarii* who were employed in copying books, called Scriptores Librarii by Horace (*Ars Poet.* 354): these librarii were also called *antiquarii*, or, more correctly, the *antiquarii* were a special class of *librarii* who were skilled in reading and copying ancient MSS. (see Isid. *Orig.* vi. 14; Cod. Theod. iv. 8, 2; Auson. *Ep.* 16; and Becker-Göll, *Gallus*, ii. 423). The name *librarii* was also given to the slaves who had charge of libraries, and to those who made up the book-rolls, more properly called *glutinatores* (Cic. *ad Att.* iv. 4).

2. *Librarii a studiis* were slaves who were employed by their masters when studying to make extracts from books, &c. (Orelli, *Inscr.* 719; Suet. *Claud.* 28; Cic. *ad Fam.* xvi. 21). To this class the *notarii*, or short-hand writers, belonged, who could write down rapidly whatever their masters dictated to them. (Plin. *Ep.* ii. 5; Martial, xiv. 208.) [Notarii.]

3. *Librarii ab epistolis*, whose principal duty was to write letters from their master's dictation. (Orelli, *Inscr.* 2437, 2997, &c.) To this class belonged the slaves called *ad manum*, *a manu*, or *amanuenses*. [Amanuensis.] (See also Marquardt, *Privatleben*, 151, and Becker-Göll, *l. c.*) [W. S.] [G. E. M.]

LIBRA'TOR is in general a person who examines things by a *libra;* but the name was, in particular, applied to two kinds of persons.

1. *Librator aquae*, a person whose knowledge was indispensable in the construction of aqueducts, sewers, and other structures for the purpose of conveying a fluid from one place to another. He examined by a hydrostatic balance (*libra aquaria*) the relative heights of the places from and to which the water was to be conducted. Some persons at Rome made this occupation their business, and were engaged under the *curatores aquarum*, though architects were also expected to be able to act as *libratores*. (Plin. *Ep.* x. 50; Frontin. *de Aquaed.* 105; compare Vitruv. viii. 6; Cod. 10, 66, 1.) [L. S.]

2. Libratores (or *libritores*, according to some MSS.) were soldiers who are coupled with slingers (*funditores*) in Tacitus, *Ann.* ii. 20, xiii. 39. There is much difference of opinion about them. Some recent writers take them to be engineers of some description engaged in the management of *tormenta*, and the derivation *librare*, "to level," is suggested as though they levelled and directed them. It can be inferred from Marquardt's note (*Staatsverwaltung*, ii. 526) that he also classes them with the managers of *tormenta*, but he gives no definite statement of his opinion. In Tac. *Ann.* xiii. 39, in a fresh sentence after the words "multos tormentis faces et hastas incutere jubet," we find "libratoribus et funditoribus attributus locus unde eminus glandes torquerent," from which the inference surely would be that they have nothing to do with the *tormenta*, and are an arm of the service more like the slingers: and the other passage of Tacitus tells the same way, "funditores libratoresque excutere tela et proturbare hostes jubet: missae et tormentis hastae." Forcellini conceives slings which discharged stones of a pound weight to explain the *libralia* or *librilia saxa* (cp. Caes. *B. G.* vii. 81). If this were a correct view, the key to the precise explanation might be found in Liv. xxxviii. 29, where, at the siege of Same in B.C. 189, slingers are described as brought from Achaia, who "a pueris" practised slinging *saxa globosa:* the force is greater than that of the Balearic slinger, and the sling is not a single thong but a triple "scutale" made stiffly, so that the missile "librata quum sederit velut nervo missa excutiatur:" apparently they could fire more nearly point-blank and with heavier charge. But against this we have first the fact that the *libratores* were to be distinguished from slingers generally, and not merely from Balearic slingers; and, secondly, the passage of Vegetius, ii. 23, which tells us that *libralia saxa* were thrown *by the hand* and with less preparation *as requiring no sling*: and Festus explains *librilia* as "saxa ad brachii crassitudinem loris revincta." This suggests the conclusion that the stones were swung by the thong, to which they were fastened, and discharged thong and all. And it is perhaps best to regard the *libratores* as stone-throwers employed, not with the *tormenta*, but along with the *funditores* (cp. the λιθοβόλοι coupled with σφενδονῆται, Thuc. vi. 69), throwing with the hand by the thong attached missiles heavier than the *glans* of the slinger: and the word should probably be connected with the sense of *swinging* in *libro* (as in Livy, *l. c.*), rather than with *libra*, "a pound." [G. E. M.]

LICTOR (in Greek writers, ῥαβδοῦχος or ῥαβδοφόρος), an attendant upon certain magistrates and other persons discharging official duties at Rome and in the provinces. Their name has been derived by many (following Plutarch, *Rom.* 26) from *ligare;* but apart from the difficulty of the form of the word for *ligator*, it is clear that binding was not the most ordinary duty of the lictor, nor the duty most likely to confer the name. Though Corssen favours the derivation from *licium*, "a girdle" (see Gell. xii. 3), it is far more probable that the word comes from *licere*, "to summon," and that their original function was to summon assemblies: if so, the *lictores curiatii* (see below) probably represent the oldest class of lictors; though the title "summoner" might also refer to the magisterial *vocatio* through a lictor. We have, however, no account of their first institution, but find them mentioned in the earliest times of the monarchy. Livy (i. 8), laying stress on the favourite Etruscan number *twelve*, derives the office from Etruria, and Müller endorses this opinion, in which, however, as Professor Seeley in his note on that passage observes, no great confidence can be placed, since there was a tendency to ascribe all ancient institutions to Etruria. Virgil (*Aen.* vii. 173) might be quoted against it, when he gives "primos attollere fasces" of the early Latin kings; but that is merely a synonym for *regnum excipere*, and it would be absurd to give it any antiquarian authority. All that can be said is, that this attendance was in earliest times "insigne regium" (Liv. iii. 36; Dionys. x. 59), in the same way as the breaking of the fasces was a sign of rebellion or deposition (Liv. ii. 55; Dio Cass. xl. 29). It is necessary to distinguish two kinds of lictors: (1) *lictores qui magistratibus (et Caesari) apparent;* (2) *lictores qui sacris publicis apparent.* Both are handed down from the kingly times, inasmuch as the king held also priestly office, and it is impossible to say which class is the older; but the attendants on magistrates are certainly the more important. They were the outward mark of authority: they were not sent for on special occasions, but attended the magistrate like his shadow: if he is at home, they are in his vestibule (Liv. xxxix. 12); if he goes to the rostra, they precede him (Liv. xxiii. 23); when he takes his seat on the tribunal, they stand by him (Cic. *Cluent.* 53, 147); when he pays a visit, the lictor knocks for his admission (Liv. vi. 34; Mart. viii. 66; Juv. iii. 128). The sovereignty of the people is admitted by the lictors lowering the fasces when the consul comes to the *contio* (Liv. ii. 7; Plut. *Popl.* 10), and Plutarch says the custom remained to his own time. (Cicero calls this "the insolence of liberty:" *de Rep.* ii. 31, 53.) So also, if a magistrate of lower rank met a superior, his lictors lowered the fasces, or, if with imperium, removed their axes; as Dionysius mentions, when he tells the story of Coriolanus ordering this to be done as a mark of respect to his mother. The magistrate must, however, dismiss his lictors when he enters the territory of an allied independent state. We find in Tacitus (*Ann.* ii. 53), Germanicus with one lictor at Athens; but that this is allowed him as an *accensus*, not as a sign of *proconsulare imperium*, is clear, for if it had been his sign of office he would have had twelve.

The lictors bore fasces with axes, to show that the king or magistrate had the power of life and death. Therefore this distinction belonged to the dictator, from whom there was no appeal; to a commander in the field; and in older times to consuls, before the Valerian law of *provocatio* (Cic. *Rep.* ii. 31, 55): and the withdrawal of the axes showed the withdrawal of summary jurisdiction or martial law. The axes were allowed also to consuls in the triumph, because they still held the imperium, and in *processus consularis* (Claud. *Prob. et Olybr.* 232). The lictors actually carried out the sentence of death under the old system, for all Roman citizens who were condemned, so long as the execution was in the hands of the Quaestores Parricidii or Duumviri Perduellionis, as representatives for this purpose of the consul (see articles on these offices): but, when executions were controlled by tribunes and aediles, who were not attended by lictors, the death sentence was carried out either by the tribune or aedile in person or by a carnifex. The carnifex seems, too (probably after the appointment of Tres viri capitales), under the Republic, to have taken the place of the lictor for execution even of citizens: such, at least, would be the natural inference from the description in Suet. *Claud.* 34, "Quum spectare antiqui moris supplicium concupisset et deligatis ad palam noxiis carnifex deesset," &c. On active service the execution under martial law naturally belonged to the lictors (Liv. iv. 29; xxviii. 29, &c.). The ordinary duty of the lictors in the city was *submovere turbam*, i.e. to make the people give way to the magistrate, and to disperse any crowd which might interfere with the business in hand (cf. Hor. ii. 16, 9). This duty was heralded by the cry *animadvertite*, i.e. "pay due observance to the magistrate" (Suet. *Jul.* 80). Pliny speaks of this as "sollennis ille lictorum et praenuntius clamor." From Liv. xxiv. 44, it would appear that the technical word *animadvertere* was also used of the lictor noticing and reproving disrespect, unless (which would make better sense) the word *jubere* is added there. The lictors are also the instruments of the magistrate for *vocatio*, i.e. the summons of any citizen who offends; whereas tribunes, as being without lictors, could only arrest by their own hand, or their *viator*, but could not summon (Varro, *ap.* Gell. xiii. 12); and resistance to a lictor was equivalent to resistance to the magistrate.

As regards the number of lictors allowed to different offices, the king was attended by twelve; though Mommsen (*Staatsrecht*, i.^{3} 343) suspects from the words *decuriae* and *decem primi* used of lictors, that the number 12 superseded an original number 10. Twelve, at any rate, is the number given by Cicero, *Rep.* ii. 17, 31; Liv. i. 8; and others. Appian is the only writer who (*B. C.* i. 100) says twenty-four, thinking perhaps of the dictator, and he is inconsistent in this (see Appian, *Syr.* 15). As the consuls originally performed the regular duties of administration by turns on alternate months, so the officiating consul was attended by twelve lictors, the other only by an *accensus* (Liv. ii. 1; Cic. *Rep.* ii. 31, 55). Similarly, as the decemvirs held office each for a day in turn, the decemvir of the day had twelve lictors, the others an *accensus* each (Liv. iii. 33). It appears, however, from Suet. *Jul.* 20, that at some time the custom came in of an *accensus* preceding the consul out of office, while twelve lictors followed him. There can be no doubt that the state of the consular military tribunes was regulated by the same principle as that of the decemvirs.

The dictator had twenty-four (Polyb. iii. 87; Dio Cass. liv. 1; Appian, *B. C.* i. 100). Yet Livy (*Ep.* 89) says that Sulla was the first so to appear: perhaps, as Mommsen suggests, the dictator was attended by twenty-four only without the city, and Sulla's innovation consisted in his using them also within it. The *magister equitum*, nominated by the dictator, had six lictors (Dio Cass. xlii. 47; xliii. 48), and the same number was assigned to the *praefectus urbi* nominated by Caesar in his dictatorship (Dio Cass. *l. c.*). Two belonged to the praetor at Rome (Censorin. xxiii. 3; Cic. *de Leg. Agr.* ii. 34, 93); six to the praetors in the provinces (Appian, *Syr.* 15; Cic. *Verr.* v. 54, 142), whence Polybius constantly terms the praetor *στρατηγὸς ἐξαπέλεκυς*, and, treating it merely as a synonym for the magistrate, uses this adjective to express even the praetor at Rome (Polyb. xxxiii. 1). (Under the Empire, however, the praetor at Rome actually had six lictors: Mart. xi. 98, 15.) Proconsuls outside Rome had twelve under the Republic, as would belong to those who acted as consuls; and those of Africa and Asia, at any rate, had the same number in the earlier Empire. Ulpian (Dig. 1, 16, 44), however, speaks of the limitation to six for proconsuls. Six was certainly the number for propraetors, but five only for a quaestor or *legatus pro praetore* (Cic. *Att.* x. 4, 9); and for Augustus's time a propraetor who was the imperial *legatus pro praetore* had only five, and was called *quinquefascalis.*

The emperors had twelve lictors to the time of Domitian, to whom twenty-four were assigned (Dio Cass. liv. 10; lxvii. 4), but in the later Empire the attendance of lictors gradually fell into disuse. It marks the importance of the *curatores viarum* under the Empire, that in their office they had two lictors.

As to the status of the lictors, they are ranked before *viatores* and *praecones*, but after *scribae* and *accensi* (Cic. *Verr.* iii. 66, 153; *ad Q. F.* i. 1, 4; Orelli. *C. I.* 4109). From Tacitus, xiii. 27, we learn that most lictors were freedmen; whether it was so in republican times it is impossible to say: in Liv. ii. 55 they are spoken of as belonging to the plebs; it is clear that at Rome, whether freeborn or not, they were always free. In the provinces it appears from Gellius, x. 3, that sometimes at least they were taken from the class of reduced Italians called *Bruttiani.* At Rome there was a community of three decuriae of lictors under ten directors (*decem primi*).

In Rome they wore the toga, which, one would gather from Gellius *l. c.* and from Plut. *Rom.* 26, was girded with the *licium* or *limus;* but Mommsen observes that ancient representations of lictors do not show them with any girdle, and that the limus belonged rather to *servi publici.* Outside Rome they wore the red *sagulum* (Sil. ix. 20), and at triumphs naturally also the same war-dress (Appian, *Pun.* 61, calls it χιτὼν φοινικόεις): at funerals, black (Hor. *Ep.* i. 7, 5). The fasces, tied with a red strap, were held in the left hand and carried on the left shoulder: at funerals they were carried reversed (Tac. *Ann.* iii. 2; cf. Verg. *Aen.* ii. 45): the fasces wreathed with laurel (*laureati*) in the Republic marked the magistrate who had been saluted as a victorious imperator, and under the Empire distinguished the imperial lictors.

Lictors.

The lictors always walked in single file (cf. Val. Max. ii. 2, § 4; Liv. xxiv 44) before the magistrate in office, whence the last in order, wh was the principal lictor, was called *proximus* (Ci *Div.* i. 28, 59; *Verr.* v. 54, 142; Tac. *Hist.* iii. 80), but perhaps also *primus* (Cic. *ad Q. F.* i. 1, 7); and ἡγούμενος (Appian, *B. C.* v. 55) may have the same meaning, applied to *rank,* not *order of march.*

Coin representing th children of Bru led to death Lictors.

(2) *Lictores curiatii* (not *curiati*, as may be seen from Inscriptions: see Mommsen, *Staatsrecht,* i.³ p. 389) were employed originally to summon the Comitia Curiata. Of these there wer thirty, according to the number of the curiae and, when the meeting of the Comitia Curiat became a mere form, it was represented b the thirty *lictores curiatii* (Cic. *Leg. Agr.* ii. 1 31). Ovid (*Fast.* ii. 23) speaks of lictors used i sacred rites, whom Mommsen with some probability takes to be *lictores curiatii;* and he als suggests the possibility that they acted a *flamines curiales.* They attended specially o the Pontifex Maximus, probably the same number (ten or twelve) as had belonged to the king and they are called "lictores curiatii qui sacri publicis adparent." The Flamen Dialis wa attended by one of these lictors (Plut. *Quaes Rom.* 93); as was also any Vestal who appeare in public (Plut. *Num.* 10): a similar distinctio was granted to widows of emperors, as thoug they were priestesses of a deified husband (Ta *Ann.* xiii. 2; note the *refusal* of it by Tiberius *Ann.* i. 14). These *lictores curiatii* were constituted as a separate decuria (*C. I. L.* xiv. 296).

(3) Lictors were specially assigned to atten for the time on the givers of games who ha not otherwise the right to lictors: as, for instance, in funeral games (Cic. *Legg.* ii. 24, 61) perhaps originally because givers of games wer so constantly of magisterial rank that lictor became a customary part of the spectacle; o the public function conveyed the temporar magisterial rank.

(4) In the games of the Vicomagistri ther were two *lictores populares denuntiatores,* wh belonged to separate decuria, to attend upo them (Dio Cass. lv. 8, cf. Liv. xxxiv. 7; Asco *in Pison.* 7; and see article COMPITALIA). Th origin of the name *denuntiator* may be gather from "ludicrum denuntiare" (Liv. xlv. 32).

As regards the attendance of *lictores atri* at funeral (Hor. *Ep.* i. 7, 5), it must be understoo that this can be said only of great funeral having a more or less public character, whe either the deceased himself was of magisteria rank and his own lictors attended, or wher funeral games were given, and there were therefore lictors assigned (cf. Cic. *Legg.* ii. 24, 61).

(For full information respecting lictors, se Mommsen, *Staatsrecht*, i. 374 ff.) [G. E. M.]

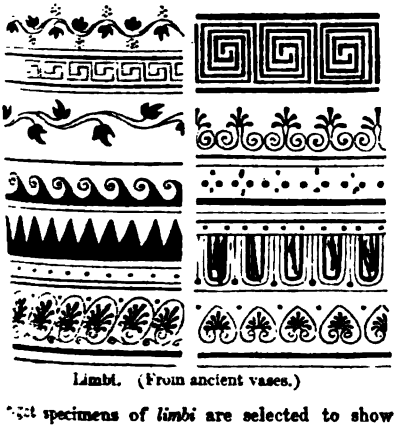
LIGO (δίκελλα o[illegible] μάκελλα) was a hoe forme either of one broad iron or of two curved iro prongs fixed at right angles to the handle, whic was used by the ancient husbandmen to cle the fields from weeds. (Ovid, *ex Pont.* i. 8, 59 Mart. iv. 64; Stat. *Theb.* iii. 589; Colum. x. 89 The *ligo* seems also to have been used in turnin up and breaking the clods. (Hor. *Carm.* iii. 38; *Epist.* i. 14, 27; Ovid, *Amor.* iii. 10, 31

Compare Dickson, *On the Husbandry of the Ancients*, i. p. 415.) [L. S.]

LI'GULA, a Roman measure of fluid capacity, containing one fourth of the CYATHUS. (Columella, *R. R.* xii. 21; Plin. *H. N.* xx. § 36.) It signifies *a spoonful*, like *cochlear*; only the ligula was larger than the *cochlear* (see Mart. 33 and 71). The spoon which was called ligula, or *lingula* (dim. of *lingua*), from its shape, was used like a dessert-spoon. (Cato, *R. R.* 84; Plin. *H. N.* xxi. § 84; Mart. xiv. 120; Becker-Göll, *Gallus*, iii. 293; Marquardt, *Privatleben*, 4.) For a drawing of the *ligula*, see under COCHLEAR, where the larger spoon is the *ligula*, the smaller the *cochlear*. The word is also used for the leather tongue of a shoe (Pollux, ii. 109, vii. 80: Festus, *s. v.*). (See under CALCEUS, p. 35.) [P. S.] [G. E. M.]

LIMA (*ῥίνη*), a file, was made of iron or steel, for the purpose of polishing metal or stone, and appears to have been of the same form as the instruments used for similar purposes in modern times. (Plin. *H. N.* ix. § 109, xxxiv. § 148, xxxvii. § 109; Plaut. *Menaechm.* i. 1. 9; Xen. *Cyrop.* vi. 2, 33.) [L. S.]

LIMBUS (*παρυφή*), the border of a tunic or scarf, chiefly in the woman's dress (Verg. *Aen.* iv. 137: Serv. *ad loc.* 7). This ornament, when displayed upon the tunic, was of a similar kind with the CYCLAS and INSTITA (Servius *in* Verg. *Aen.* ii. 616), but much less expensive, more common and more simple. It was generally woven in the same piece with the entire garment of which it formed a part, and it had sometimes the appearance of a scarlet or purple band upon a white ground; in other instances it resembled foliage (Verg. *Aen.* i. 649; Ovid, *Met.* vi. 127), or the scrolls and meanders introduced in architecture. A very elegant effect was produced by bands of gold thread interwoven in cloth of Tyrian purple (Ovid, *Met.* 51), and called λῆροι or *leria*. (Festus, *s. v.*; Brunck, *Anal.* i. 483.) Demetrius Poliorcetes was arrayed in this manner (*χρυσοπαρύφοις ἁλουργίσι*, Plut. *Demet.* 41). Virgil (*Aen.* v. 251) mentions a scarf enriched with gold, the border of which was in the form of a double meander. In illustration of this account examples of both the single and the double meander are introduced at the top of the annexed woodcut. The other eight specimens of *limbi* are selected to show some of the principal varieties of this ornament, which present themselves on Etruscan vases and other works of ancient art.



Limbi. (From ancient vases.)

An ornamental band, when used by itself as a fillet to surround the temples or the waist, was also called *limbus*. (Stat. *Theb.* vi. 367, *Achill.* ii. 176; Claud. *de Cons. Mallii Theod.* 118.) A later name for the limbus was *lorum*, whence dresses with one or more rows of stripes were called *monolores*, *dilores*, *trilores*, &c. (Vopisc. *Aurel.* 46, 6). The makers of *limbi* were called *limbolarii* (Plaut. *Aul.* 514, and Wagner's critical note). For these *limbi*, see also Marquardt, *Privatleben*, 544; Blümner, *Technologie*, i. 202; Becker-Göll, *Charikles*, iii. 255, *Gallus*, iii. 266. [J. Y.] [G. E. M.]

LIMEN. [JANUA.]

LIMUS was the apron tied round the waist and reaching nearly to the feet worn by the *popa*, or slaughterer who attended on the priest at a sacrifice (Serv. *ad Aen.* xii. 120), and by *servi publici* in general (Isid. *Orig.* 19, 33). Hence *servi publici* were known as *limo cincti*; and when (as in *C. I. L.* v. 3401) *apparitores* and *limo cincti* are mentioned together as attending on a magistrate, the former are free, the latter slave attendants (see Mommsen, *Staatsrecht*, i.^{3} 324). It would appear from Gellius, xii. 3, that the word *licium* was synonymous with *limus*, and he states that the lictors were girded with this limus or licium in former times; but Mommsen throws doubt upon this (*Staatsrecht*, i. 375), and thinks it arose from a confusion of lictors with *servi publici* and a desire to derive their title from *licium*, since lictors are never represented in such a dress. That the *licium* alone should be worn by a person seeking stolen property (whence phrase *per licium quaerere*) no doubt was arranged to prevent his bringing in the goods concealed in his dress (see Gell. xi. 18, and cf. Gaius, *Inst.* iii. 192). [G. E. M.]

LITHOBO'LIA (*λιθοβόλια*), a festival celebrated at Troezen in commemoration of two maidens who came there from Crete, and were stoned to death during the civil broils of the place. (Paus. ii. 32, 6; Lobeck, *Aglaoph.* 680; Hermann, *Relig. Alterth.* § 52.) [L. S.]

LITHOSTRO'TA. [PAVIMENTUM; PICTURA.]

LITIS CONTESTA'TIO. Under the oldest Roman civil process—that known as the *legis actiones*—the proceedings prior to hearing and judgment were of an exceedingly formal and technical character. The parties, on appearing before the praetor, had to repeat certain prescribed forms of words, appropriate to the nature of the particular action, and to perform a variety of solemn and symbolical acts (*e.g.* Gaius, iv. 16); and any error or omission in these on the part of the plaintiff inevitably lost him his remedy: "Ex nimia subtilitate veterum qui tunc jura condiderunt eo res perducta est, ut vel qui minimum errasset litem perderet" (Gaius, iv. 30). The object of these proceedings was preliminary: they were intended to ascertain the question in dispute, and to prepare it for hearing and decision. The hearing and decision itself was in many cases entrusted to a private person appointed by the praetor, though selected by agreement between the parties, or to the standing collegia of judges (decemviri and centumviri): but sometimes the praetor would undertake it himself. In any case, however, it seems to have been far less formal than the preliminary proceedings, which had always to take place before the praetor in person, and to which alone the term *legis actio* was applied (Gaius, iv. 11). Owing to the supreme importance to the parties of their being gone through with perfect precision, and to the fact that at this period no written records were preserved of judicial proceedings, which were purely oral, it was the practice for both parties, at the close of the formal *legis actio* (though before a word of evidence or argument on the question at issue), to appeal to the bystanders to take note of the proceedings, that if any dispute subsequently arose as to their validity evidence might be forthcoming of what had been done (cf. Ulpian, *Reg.* 20, 9; Dig. 28, 1, 20). This appeal was called *litis contestatio:* "Contestari est cum uterque reus dicit TESTES ESTOTE"; "Contestari litem dicuntur duo aut plures adversarii quod ordinato judicio ('when the cause has been made ready for hearing') utraque pars dicere solet TESTES ESTOTE" (Festus). The view here taken of the nature of *litis contestatio* is that of Bethmann-Hollweg (*Civil Process*, i. p. 177) and Keller (*Civil Process*, p. 281). By others it is held that what the parties called upon the bystanders to attest was, not that the *legis actio* had been duly consummated, but that they had solemnly agreed to submit their dispute to arbitration instead of settling it in the more primitive way of self-redress (Ihering, *Geist des römischen Rechts*, i. p. 171); and some (*e.g.* Mayer, *Die Litis Contestation*, 1830, and originally Rudorff, *Römische Rechtsgeschichte*, ii. § 71) go so far as to assert that the form in which the agreement was made was *per aes et libram* [NEXUM]. This theory is based upon the fact that in the formulary period, as will be seen below, *litis contestatio* produced (or, more correctly, was the outward sign of) consequences which usually are only producible by contract; but it is rejected by most writers on the subject (*e.g.* Puchta, *Institutionen*, § 172; Keller, § 62), and seems too fanciful to be seriously entertained. Others (*e.g.* Heffter, *Institutionen des röm. und teutschen Civilprocesses*, 1825) even hold that there was no real *litis contestatio* at all in the *legis actio* period, but that it was introduced with the formulary system to give a solemnity to the proceedings *in jure* and their results, which in themselves they did not possess.

The *legis actio* procedure was swept away by the Lex Aebutia, *circ.* 170 B.C., and its place was taken by the system of formulae, one of the main features of which was the universal division of the proceedings in an action into two portions: those which took place before the praetor (*in jure*) and those which took place before the judex (*in judicio*). The object of the proceedings *in jure* was to fix the issues to be tried: when they had been settled, they were briefly embodied in a written document or formula, by which the judge was appointed and
informed of the points which he had to dete
mine: the actual hearing of the case was
and not the praetor's function (Gaius, iv. 3
Under this system of procedure, *litis contestat*
in its old sense of an appeal to witnesses, see
no longer to have taken place, for the best e
dence that could be desired of the correctness
the proceedings *in jure* was the written formu
though Bethmann-Hollweg (*Civil Process*,
p. 480) thinks that it may have survived
some time through the Roman fondness of
forms, but at any rate not till the time of
classical jurists. The term "litis *contestati*
however, is retained throughout to denote
point of time in the history or development
an action at which it passed from praetor
judex (Cic. *pro Rosc. Com.* 11, 32; 12, 3
Lex Gall. Cisalp. i. 48; Gaius, iii. 180,
114). It means, technically, the moment
which the matter really becomes an "action"
all: the legal position of the parties in respe
of the particular suit is definitely fixed; a
though perhaps it is incorrect to say that *li*
contestatio (in this sense) *produces* importa
results for them, it certainly is the sign a
symbol that those results have ensued. F
instance, from that moment the plaintiff's rig
of action is consumed (Gaius, iv. 106, 107):
cannot subsequently sue at all, or at any rate
cannot sue with any effect, on the same groun
Similarly prescription of the right of acti
ceases to run, for the action has been co
menced; and consequently also the defenda
cannot as a rule evade condemnation, if t
plaintiff proves his case, even though after *lit*
contestatio it should become impossible for hi
(*e.g.*) to restore the property in dispute owi
to its accidental destruction. For these, a
other points in which the rights and duties of t
parties were irrevocably fixed by this defin
commencement of the action (and which a
sometimes improperly described as consequen
of *litis contestatio*), reference may be made
Mr. Poste's edition of Gaius (pp. 447–451,
edit.). In point of fact, these consequences
analogous to those which would be produced
contract, and many writers attribute th
modifications in the legal relation of the part
to an assumed contract, by which they are s
posed to voluntarily submit themselves to
jurisdiction of the court, to bind themselve
abide by its judgment, and to waive any
which they may have had to settle the m
after another fashion. But such an assum
is in reality needless, for these consequences
more correctly be ascribed to the very n
of the proceedings *in jure*, the law impli
ordaining that they shall necessarily flow
the fixing of the issues in the formula (Pu
Institutionen, § 172; Walter, *Geschichte*
römischen Rechts, § 720); and if this vie
accepted, it would seem to be unnecessary
some of those by whom it is supporte

procedure being called simply *cognitio*. In
period *litis contestatio* denotes the sum
statement of his case before the judge by
plaintiff, and the similarly summary stat

by the defendant of the nature of his defence, evidence and argument following in detail: "Lis tunc contestata videtur, cum judex per narrationem negotii causam audire coeperit" (Cod. 3, 9; cf. Cod. 3, 1, 14, 1; Cod. 2, 59, 2, pr.). The Greek equivalent of *litis contestatio* in this sense is προκάταρξις (Nov. 53, 3, 2; 80, 10; 96, 1; Basil. vii. 1, 3). Many of the old results for the parties still ensue, though most writers are of opinion that the right of action was no longer necessarily extinguished (see Bethmann-Hollweg, *Civil Process*, iii. pp. 257–262).

(See Holtzendorff's *Rechtslexicon*, s. v., and the literature of the topic *ad fin.*, especially Keller, *Litis Contestation und Urtheil*, and Windscheid, *Actio*, §§ 8, 9.) [J. B. M.]

LITRA (λίτρα) was the unit corresponding, *though not equivalent* among the Greeks of Sicily, to the libra of the Italians, and in use for weighing various substances, including copper. The word was in use as early as the time of Epicharmus, and occurs frequently in Aristotle. It was divided into twelve ounces, ὀγκίαι. [See PONDERA.] Writers like Polybius naturally use the word to render the Latin *libra*. The weight of the litra was about 3366 grains, 218 grammes (Hultsch, *Metrologie*, 2nd edit., p. 662). The equivalent in silver of a litra of copper was a small coin weighing 13·5 grains, which was in common use in Sicily, and was the tenth of the Corinthian stater, called from that fact δεκάλιτρος στατήρ. Pollux (ix. 80) gives the value of the silver litra as the same as that of an Aeginetan obol (16 grains); but this is only a rough approximation. [P. G.]

LITTERA'RUM OBLIGA'TIO. [OBLIGATIONES.]

LITU'RGIA. [LEITURGIA.]

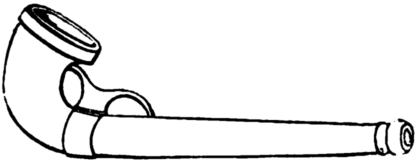
LITUUS. Müller (*Die Etrusker*, iv. 1, 5) supposes this to be an Etruscan word signifying *crooked*, but more probably it is connected with the verb *litare*, its augural sense being the original, and the military *lituus* being so called from a resemblance in shape. In the Latin writers it is used to denote—

1. The crooked staff borne by the augurs, with which they divided the expanse of heaven, when viewed with reference to divination (*templum*), into regions (*regiones*); the number of these according to the Etruscan discipline being sixteen, according to the Roman practice four (Müller, iii. 6, 1; Cic. *de Div.* ii. 18, 42). Cicero (*de Div.* i. 17, 30) describes the lituus as "incurvum et leviter a summo inflexum bacillum;" and Livy (i. 18) as "baculum sine nodo aduncum" (cf. Serv. ad *Aen.* vii. 407; Marquardt, *Staatsverwaltung*, iii. 402). It is very frequently exhibited upon works of art. The figure in the middle of the following illustrations is from a most ancient specimen of Etruscan sculpture in the possession of Inghirami (*Monumenti Etruschi*, tom. vi. tav. P. 5, 1), representing an augur; the two others are Roman denarii. It is thought with much probability that the pastoral staff of bishops (not the archiepiscopal crosier) was borrowed as regards its form from the augur's lituus, which in the earliest Christian representations it exactly resembles. (See *Dict. of Christian Antiquities*, s. v.)

2. A sort of trumpet slightly curved at the extremity (Festus, *s. v.*; Gell. v. 8). It differed both from the *tuba* and the *cornu* (Hor. *Carm.* ii. 1, 17; Lucan, i. 237), the former being straight, while the latter was bent round into a spiral shape. Lydus (*de Mens.* iv. 50) calls the lituus

Lituus, the Augural Staff.

the sacerdotal trumpet (ἱερατικὴν σάλπιγγα), and says that it was employed by Romulus when he proclaimed the title of his city. Ascon. (*ad* Hor. *Carm.* i. 1, 23) asserts that it was peculiar to cavalry, while the tuba belonged to infantry. This is not quite correct, for in the armies of the Sabines and Romans (Ovid, *Fast.* iii. 216), where the lituus is mentioned, it is clear that infantry are to be understood. The *bucinator* and the *tubicen* are both attached to the cavalry as well as the infantry (Marquardt, *Staatsverwaltung*, ii. 553). As regards its shape, Seneca (*Oedip.* 733) says, "Sonuit *reflexo* classicum cornu Lituusque *adunco* stridulos cantus elisit aere." Its tones are usually characterised as harsh and shrill (*stridor lituum*, Lucan, i. 237; *sonitus acutos*, Ennius, *ap.* Fest. *s. v.*; Stat. *Theb.* vi. 228, &c.). The following representation is from Fabretti. See also the representation of a liticen [under CORNU] from the altar of Julius Victor (Vol. I. p. 544). [W. R.] [G. E. M.]



Lituus, a trumpet. (Fabretti.)

LIXAE were sutlers who followed the Roman legions for trading purposes. So far as they are distinguished from *mercatores*, they sold provisions, while the *mercatores* dealt in other wares; but while in Caesar the *mercator* stands for both (*B. G.* vi. 37), in Livy and Tacitus we find *lixae* alone for petty traders of all kinds, distinct only from the negotiator who speculated on a large scale. Thus in Liv. xxxix. 1, where there is no prospect of plunder, the army is unencumbered by *lixae*, i.e. traders who would have bought up what they could from the soldiers: so Liv. v. 8, "Lixarum in modum negotiabantur" (cf. Liv. xxi. 63); and Hirt. *de Bell. Afr.* 75, "Lixae mercatoresque qui plaustris merces portabant." These traders of all descriptions had booths for their goods outside the camp, which were called *canabae*, so that *ad canabas legionis* means in the market quarter or bazaar, and in some cases out of these temporary bazaars more permanent settlements sometimes arose, becoming at last transformed into municipia. (See Marquardt, *Staatsverwaltung*, i. 20.) The *lixae* were sometimes forbidden to follow the legion (Sall. *B. J.* 45), from which it is clear that they came for their own profit, and not as a necessary commissariat adjunct. They are sometimes coupled with *calones*, the slaves who attended soldiers, though quite different from them, merely because both were distinct from the fighting army. In emergencies both might be pressed into the service, as in Liv. xxiii. 16, where they have somewhat the same effect as the camp-followers at Bannockburn. [G. E. M.]

LOCA'TIO CONDU'CTIO, or letting and hiring, is, like sale [EMPTIO VENDITIO], one of the four Roman contracts which were said to be made *consensu*, because neither form nor part performance was required to make the agreement actionable. It comprises two varieties, which are distinguished below, viz. *locatio conductio rerum* and *locatio conductio operarum*. The contract was concluded, and the parties bound, as soon as they were agreed upon what was to be hired, and the consideration (*merces*) to be paid for it (Gaius, iii. 142; *Inst.* iii. 24, pr.). This *merces* must be money, "pecunia numerata" (*Inst.* ib. 2), except that the rent of agricultural land might be a certain proportion of its annual produce (Cod. 4, 65, 21).

Locatio conductio rei is the letting or hiring of a *res*, but the *res* may be anything which could be bought and sold (and so not merely a tangible object, movable or immovable, but a *res incorporalis*, such as a usufruct, Dig. 7, 1, 12, 2). The lessee of a house was called *inquilinus*, of agricultural land *colonus*. The letter (*locator*) of a *res* was bound to allow the other to have it for the time or purpose agreed upon, and for that time to take its fruits if it were a fruit-bearing object; but as he remained its owner, he could always recover it back at the cost of having to pay damages for the breach of his contract: and similarly, if he sold or otherwise alienated the *res locata*, the alienee could always make the conductor give it up (whence the German maxim *Kauf bricht Miethe*), though the latter of course had his remedy against the *locator* (Dig. 19, 2, 25, 1; Cod. 4, 65, 9). The hirer was bound to pay the *merces* agreed upon; to show the *diligentia* of a *bonus paterfamilias* [CULPA] in his charge of it, and to redeliver it at the termination of the contract in as good condition as when it came into his hands, saving ordinary wear and tear.

Locatio conductio operarum is the letting by a free man (*locator*) of his services at a fixed *merces*. If he was employed to make some specific object for the employer (*e.g.* to build a house, to make a piece of plate, &c.), *he* was called *conductor* or *redemptor* (Hor. *Carm.* iii. 1) and the employer *locator*, and the transaction is sometimes called specifically *locatio conductio operis* (*faciendi*). If the agreement was to do the whole job at a sum absolutely fixed, as distinct from so much *per diem*, or so much for each portion completed, it was said to be made *per aversionem* (Dig. 19, 2, 35, pr.; *ib.* 36; *ib.* 51, 1).

The jurists were often doubtful whether a given contract was sale or hire; as where, in consideration of so much money to be paid by a customer, a goldsmith agreed to make him ring out of his (the smith's) gold (Gaius, iii. 14 *Inst.* iii. 24, 4): other similar cases will found in Gaius, iii. 146. Among them was th of a lease of land in perpetuity at a rent, wh Gaius says was, according to the better opini in his time, hire, not sale, but which in lat times became an independent contract distin from either [EMPHYTEUSIS]. Sometimes ag the transaction was held to be neither sale hire, though closely resembling both, but on the so-called innominate contracts, enforced an *actio praescriptis verbis* (*Inst.* iii. 24, 1 and (Gaius, iii. 142–147; *Epit.* ii. 9, 15; Pau *Sent. rec.* ii. 18; *Inst.* iii. 24; Dig. 19, 2; Co 4, 65.) [J. B. M.

LOCHUS (λόχος). [EXERCITUS, Vol. I. p 769, 770, 775.]

LO'CULI, a small coffer or casket with com partments (cf. *loculatae arculae*, Varro, *R. R.* i 17), whence it comes that in this significati the word is only used in the plural. It wa smaller than the *arca* (Juv. i. 89: see Mayor note), but, like the *arca*, was used to hold mon (Hor. *Sat.* i. 3, 17; *Ep.* 11, 1, 175; Mart. 39, 7); for jewels (Juv. xiii. 139); to hold key (Plin. xiv. 13, § 89), &c. It takes the place the larger *arca* as the treasure chest of the hou (Hor. *Sat.* ii. 3, 146), and then was placed i the atrium [see ARCA]: it was made of woo (Mart. xiv. 13) or sometimes of ivory (Ovi *Fast.* vi. 749; Juv. xiii. 139); for security had a lock (Hor. *Sat.* ii. 3, 149) or was seale up (Plin. *l. c.*). In Hor. *Sat.* i. 6, 74, *Ep.* i. 1 56, the word *loculi* is used for a small cas holding a schoolboy's *libri*, *chartae*, and *st* which would generally be called *capsa* (Juv. x 117) or *theca* (Suet. *Claud.* 35). (See Orelli's Excursus on Hor. *Sat.* i. 6.) [G. E. M.]

LO'CULUS. [FUNUS.]

LOCUPLE'TES (or *adsidui*) were Roma freeholders of land who were included in th five classes of Servius as liable for summon to service or *tributum*. Under this head cam all who held land valued over 11,000 asses (c also Liv. xlv. 15, "eos qui praedium praedia rustica pluris H. S. triginta millium haberen censendi jus factum est:" for the arrangement of the classes, see COMITIA). The state wa therefore divided into *adsidui* (or *locupletes*), i.e those who had property, and *proletarii*, "begetters of children," who were counted by heads, not by property [see PROLETARII]. This is shown in Cic. *de Rep.* ii. 22, 40: "Servius Tullius quum locupletes adsiduos appellasset ab aer dando, eos qui aut non plus mille quingent aeris aut omnino nihil in suum censum praeter caput detulissent, proletarios nominavit, ut ex iis quasi proles, id est quasi progenies civitat expectari videretur." As to the origin of th two words, for *adsiduus* we may safely reject the etymology given by Cicero, "ab aere dando," and that suggested in Gellius, x. 16, "a muner faciendi adsiduitate." It means no doubt "settled on the soil," or permanently domiciled (from *adsidere*; cf. *residuus*) = the German *ansässig* (Mommsen, *Hist. of Rome*, i. 196): *locuples* is derived by Ovid (*Fast.* v. 280) from *landholding*, where *locus* is made equivalent to *ager*; and so Plin. *H. N.* xviii. § 11, "Locupletes dicebant *loci* id est *agri* plenos." But it is clear that this is not the natural sense of *locus*, and it is better with Mommsen (*Staatsrecht*, iii. 257) to take it as referring to wealth of money and connect it with *loculi*, the money-chests. From the passage in Cic. *Top.* ii. 10, "Cum lex adsiduo vindicem adsiduum esse jubeat, locupletem jubet locupleti; locuples enim est adsiduus, ut ait Aelius," it is clear that *adsiduus* was the older term, written in the Twelve Tables (cf. Gellius, *l. c.*). [W. S.] [G. E. M.]

LODIX, *dim.* **LODI'CULA** (*σάγιον*), a small shaggy blanket (Juv. vii. 66). Sometimes two lodices sewed together were used as the coverlet of a bed (Mart. xiv. 148). The Emperor Augustus occasionally wrapped himself in a blanket of this description on account of its warmth (Sueton. *Aug.* 83). It was also used as a carpet ("ancilla lodiculam in pavimento diligenter extendit," Petron. *Sat.* 20). The Romans obtained these blankets from Verona (Mart. xiv. 152). Their lodix was nearly, if not altogether, the same as the *sagulum* worn by the Germans (Tac. *Germ.* 6) [SAGUM.] [J. Y.]

LOGISTAE (*λογισταί*). [EUTHYNE.]

LOGI'STICA [*λογιστική*, sc. *τέχνη*, Plat. *Gorg.* 450 D, &c.: the nearest Latin equivalents appear to be *ratiocinandi ars* (cf. Cic. *Tusc.* i. 2. 5), *dinumeratio* (Id. *Rep.* iii. 2, 3), *rationis subductio* (cf. *subducere*, iii. in Smith's *Lat. Dict.*), or *computatio* (*post. Aug.*)] means "the art of calculation" as opposed to the "theory of numbers," *arithmetica* (q. v.). Neither, of course, can exist without the other; but as the operations of *arithmetica* were generally performed by means of geometrical figures, which were found more suggestive as representing not numbers only, but magnitudes generally, the customary numerical symbols and the operations in which they were used were deemed to belong to *logistica*, and are more properly treated in this article. We shall divide the subject accordingly into two parts, dealing first with the representation of numbers, and secondly with calculations.

I. NUMERAL SIGNS.

(*a.*) *Greek.*—(1.) *Finger-signs.* From the general use among Aryan peoples of a denary or vigesimal notation, it may be inferred, with as much certainty as can ever be obtained about pre-historic culture, that these nations at a very early time used the fingers and toes as symbols of number (cf. A. F. Pott, *Zählmethode*, &c., Halle, 1847, and *Sprachverschiedenheit etc. in den Zahlwörtern*, Halle, 1867; Tylor, *Primit. Culture*, i. ch. 7). A relic of a yet earlier notation, the quinary, survives in the words *πεμπάζειν, πεμπάζεσθαι, πεμπαστής* (Hom. *Od.* iv. 412; Aesch. *Pers.* 981, &c.), which imply that 5 was at one time the limit of the units in ordinary counting. At this time, and indeed for long after the denary notation was adopted, the Greeks clearly used both hands to count no higher than 10 (cf. Herod. vi. 63, 65; Arist. *Problem.* xv.), and no doubt this simple practice was never lost. But the references to finger-reckoning in literature are very scanty until a late date (Plut. *Apophth.* 174 b; Dio Cass. lxxi. 32, § 1; *Anth. Pal.* xi. 72, &c.), when a far more complicated system, common to Greece, Italy, and the East, is found in use. (See Roediger in *Jahresb. der Deutsch. Morgenl. Gesellsch.* 1845, pp. 111–129.) This is fully described by Nicolaus Smyrnaeus (called also Rhabda or Artabasda) in a work entitled *ἔκφρασις τοῦ δακτυλικοῦ μέτρου*, written probably in the 13th or 14th century, and printed by N. Caussinus in his book *De Eloquentia Sacra et Humana* (lib. ix. ch. viii. pp. 565–568, Paris, 1636; also in Schneider's *Eclog. Physic.* p. 447). In this system, units and tens were represented on the left hand, hundreds and thousands on the right. The thumb and forefinger of the left hand were devoted to tens, those of the right to hundreds; the remaining fingers of the left hand belonged to the units, those of the right to thousands. The fingers might be straight (*ἐκτεινόμενοι*), bent (*συστελλόμενοι*), or closed (*κλινόμενοι*). In the left hand, *bending* the fourth finger marked 1; bending the third and fourth, 2; the middle, third, and fourth, 3; the middle and third only, 4; the middle only, 5; the third only, 6. *Closing* the fourth finger gave 7; the fourth and third fingers, 8; the middle, third, and fourth, 9. The same motions on the right hand indicated thousands, from 1000 to 9000. The motions of the forefinger and thumb in representing tens and hundreds, on the left and right hands respectively, are more difficult to describe. The reader is referred to Roediger's article, above cited; to Friedlein's *Zahlzeichen und Elem. Rechnen der Gr. u. Römer*, p. 6; and to Prof. Palmer's art. in *Journal of Philology*, vol. ii. p. 247 *sqq.*, where a plate is given. Martianus Capella (*De Nuptiis Philol.* &c., bk. vii. p. 244 of Grotius' ed. 1599) says, "Nonnulli Graeci etiam *μυρία* adjecisse videntur," and adds, apparently in reference to this usage, "quaedam brachiorum contorta saltatio fit," of which he does not approve. The motions were probably the same as those described by Bede in the tract *De loquela per gestum digitorum* (Opera, Basileae, 1563, col. 171–173). Various positions of the left hand on the left breast and hips indicated the ten thousands, corresponding positions of the right hand on the right side the hundred thousands, and the hands folded together represented a million. There is no means of ascertaining the origin or the time of introduction of this method of finger-numeration. It is thought by some commentators that Aristophanes alludes to it in *Vesp.* 656, but it is observable in that passage that Philocleon only concludes from his "easy" calculation, that 150 talents are less than a tenth of 2,000, so that he probably used his fingers in the ordinary way to divide the latter number by 10. The more complicated system was obviously of no use in calculation, save as a *memoria technica* in cases where the mind might be embarrassed by the consideration of several numbers at once. It was probably, at first, only a means of communication between buyers and sellers who were ignorant of each other's language. The same or a similar system is still used for secret transactions in Persia (cf. De Sacy in *Journal Asiat.* vol. ii., and Tylor, *Primit. Culture*, i. p. 246, n.).

(*b.*) *Pebble-signs.*—Under this head may be included all the representative signs used with the reckoning-board, *abacus*, *ἄβαξ* or *ἀβάκιον* (*q. v.*). These were generally small stones or balls, or dots marked in sand, and the signs varied in value according to the row of the abacus in which they were placed. (Herod. ii. 36;

Diog. Laert. i. 59: cf. Becker-Goll, *Charikles*, ii. 67 ff.; and see below under Roman "pebble-signs," p. 74.) [ABACUS.]

(c.) *Written Characters.*—Iamblichus says (*in Nicom. Arithm.*, ed. Tennulius, p. 80), without citing any authority, that among the earliest Greeks numbers were represented in writing by repeated strokes. In one inscription (Franz, *Epig. Graeca*, p. 347; Boeckh, *C. I. G.* 2919, vol. ii. p. 584) from Tralles, ἔτεος I I I I I I I is found, but Boeckh suspects this to be a forgery of imperial times. With some limitations, however, the statement of Iamblichus may be true. It is possible that with the Greeks, as with the Phoenicians and Egyptians, the signs of the units, tens, &c. were at an early date repeated nine times without any intermediate compendia. (Cf. Pihan, *Exposé des Signes de Numération*, &c. Paris, 1860.)

But the earliest known system of written numerical symbolism in Greek is that which used to be called after Herodianus, a Byzantine grammarian of the 3rd century, who alleged that these "Herodianic" signs occurred in laws of the Solonian period and other ancient documents, coins or inscriptions, seen by him. (See App. Gloss. to Steph. *Thesaurus*, vol. xii.; Valpy's ed. p. 690.) His statement has since been most abundantly corroborated, especially in Athenian inscriptions, and the system of numeration is now generally called Attic. For our present purpose, however, the old name is more convenient. Upon this system strokes served for units less than 5, and the chief higher numbers are represented by their initial letters, Γ for *πέντε*, Δ for *δέκα*, H for *ἑκατόν*, X for *χίλιοι*, M for *μυρίοι*, with further compendia, 𐅄 for 50, 𐅅 for 500, &c. (See *C. I. A.* vols. i. and ii.; or Hicks, *Gr. Inscr.* passim; or Boeckh, *Att. Seewesen*, p. 547 *sqq.* &c. For curious Boeotian variations, see Franz, *Epig. Graec.* App. II. ch. i. p. 348.) These signs alone are used in all the known Athenian inscriptions of any date B.C. (in other words, in all the Inscr. of *C. I. A.* vols. i. and ii.). Outside Attica they certainly remained in use along with the alphabetical signs, to be next described, and are found with them on papyrus-rolls preserved in Herculaneum, which cannot have been written before Cicero's time. The two styles are there used, as we use Roman and Arabic numerals together, on occasions when arithmetical division proceeds on two distinct principles, *e.g.* to mark the books of an author as distinguished from the number of lines in the whole work. (Ritschl, *Die Alex. Bibliotheken*, pp. 99, 100, 123, n.) But at some date which, as will be shown directly, cannot now be ascertained, the letters of the alphabet with some additions came to be used in the Semitic manner as numeral signs. It has been well pointed out (Cantor, *Vorles. über Gesch. der Math.* i. p. 108) that the change was, for all purposes except brevity, a mistake. With the Herodianic signs many patent analogies were exhibited which were wholly obscured by the new symbolism. To take a very simple instance, Δ multiplied by Π gave 𐅄, and H multiplied by Π gave 𐅅; but on the new system ι′ × ε′ gave ν′, and ρ′ × ε′ gave φ′, and none of these signs contained in itself the least clue to its meaning. Hence, at every arithmetical operation with alphabetical symbols, the mind was really strained, first to interpret the signs, then to effect the calculation, and lastly to express the result in signs again. We shall see later how cumbrous the process was.

When and how the arithmetical use of the alphabet was adopted in Greece, is a subject of the greatest difficulty. It is the custom to say that the practice was originally Semitic (cf. Nesselmann, *Algebra der Griechen*, p. 72 *sqq.*), but no such practice appears on the Phoenician inscriptions at present known, and it is not found on any Hebrew coins before 141–137 B.C. (Cf. Schröder, *Phönikische Spr.*, quoted by Hankel, *Zur Gesch. der Mathem.* p. 34, and Dr. Euting there cited. Also Madden, *Coins of the Jews*, p. 67, *temp.* Simon Maccabaeus.) On the other hand, the Hebrew cabbalistic practice of *gematria* (*i.e.* of treating as interchangeable, for purposes of interpretation, words whose letters, regarded as numerals, amount to the same total) is said to be as old as the 7th century B.C., and, if so, points to the numerical use of the alphabet at that time (Cantor, *Vorles.* i. pp. 87, 104, 105, quoting Lenormant, *La Magie chez les Chaldéens*, p. 24: cf. also Rev. xiii. 18, and Dr. Ginsburg's art. *Kabbalah* in *Encycl. Brit.*, 9th edit. vol. xiii.). And there is a peculiarity in the Hebrew and Greek alphabetical numerals which suggests some connexion between them. In both cases the proper alphabet is deficient, and is supplemented up to the same limit. The Hebrew alphabet of 22 letters gives numbers only up to 400. The deficiency is supplied, up to 900, by using the *final* forms of letters, the *medial* forms of which (cf. Greek *σ* and *ς*) had already been used to represent 20, 40, 50, 80, and 90. The Ionic alphabet of 24 letters, which was formally adopted at Athens in 403 B.C., could give numbers only as far as 600. Three letters are wanting to complete the hundreds, and for this purpose the three *ἐπίσημα*, ϛ, ϙ, and ϡ, two of which had certainly been used in older alphabets, but are omitted in the Ionic, are introduced. But these *ἐπίσημα*, unlike the Hebrew finals, do not occur together, but stand for 6, 90, and 900 respectively, at widely distinct places in the series. Now ϛ no doubt represents the old *Vau* (*F*), and both this and *κόππα* (ϙ) occur at the proper places of those letters in the alphabet, yet the last sign ϡ, whether it represent the Phoenician *shin* (Gr. *σάν*, Herod. i. 139) or *tzade*, occurs, in either case, out of its place and is clearly resumed into the alphabet for arithmetical purposes. But if we consider the difficulty of reviving a long-forgotten letter at all, and remember that ϛ and ϙ occur in their proper order, we should conclude that the Greek numerical alphabet, if it was settled by custom only, was settled at a very early time indeed, possibly before the Hebrew. It is even conceivable that the non-Phoenician letters, *υ*, *φ*, *χ*, *ψ*, *ω*, were originally invented for purely arithmetical purposes, and were afterwards adopted as alphabetical signs.

But against these suppositions there is a most formidable array of facts. In the first place, the inscriptions at present known do not disclose the existence, for literary purposes, of so full an alphabet as that used in numeration. There is none in which both *F* and ϙ occur side by side with both ψ and ω. (See the charts appended to Kirchhoff, *Zur Gesch. des Griech. Alph.* 3rd edit., 1877, and pp. 157–160 of the text. The transcript in Hicks, *Gr. Inscr.* No. 63, p. 117 *sqq.*, is misleading. The original in *Rhein. Mus.* 1871, p. 39 *sqq.*, contains neither η nor ω.) Secondly, the common alphabetic numerals do not appear on inscriptions proper (exclusive, that is, of coins and MSS. to be mentioned presently) before the 2nd century B.C., and, among these, only on the Asiatic. The oldest specimen is probably one of uncertain place (printed in *C. I. G.* vol. iv. pt. xxxix. No. 6819), which is assigned by E. Curtius to about 180 B.C. (Franz, *Epigr. Gr.* p. 349, cites, as oldest, one of Halicarnassus, *C. I. G.*, No. 2655, which Boeckh thinks to be little earlier than the Christian era.) A (not yet published) Rhodian inscription in the British Museum, assigned to about the same time, still uses the Herodianic signs. It should be added, also, that the earliest Asiatic inscriptions, which contain alphabetic numerals, arrange them generally with the lowest digit first, reversing the usual order (*e.g.* η̅κ̅, ζκ, &c. in No. 6819 above cited). It has already been mentioned that no Attic inscriptions before imperial times contain alphabetic numerals at all. (It is, no doubt, purely accidental that ϡ does not occur in any inscription: Franz, *Epigr. Gr.* p. 352.) It may be admitted that public inscriptions would be the last place into which a new system of numerals would force its way, but it is hardly likely that the Herodianic signs would have survived in public documents several centuries after the alphabetic had come into general use among merchants, &c. Thirdly, the earliest numerical or quasi-numerical use of the Greek alphabet, of which we can be quite sure, is not the same as that now in question. The tickets of the 10 panels of Athenian *heliastae* were marked with letters from a to κ, omitting ϛ. (Schol. to Ar. *Plut.* 277; Hicks, *Inscr.* No. 119, p. 202; Franz, *Epigr. Gr.* p. 349.) The books of Homer, as divided by Zenodotus, are headed with the 24 letters of the Ionic alphabet, omitting ϛ and ϙ. The books of the *Ethics*, *Politics*, and *Topics* of Aristotle are numbered in the same way; and that this division is ancient is evident from Alex. Aphrodisiensis, who (*in Metaph.* 9, 81 b, 25) quotes from ϛʹ τῶν Νικομ. a series of definitions which are now found in the 6th book. It should be mentioned finally, to complete the perplexity of the subject, which, considering its importance, has been strangely neglected, that there is no evidence (it would, of course, be hard to find) of a time when a short alphabet was used as far as it would go, and the remaining hundreds were represented by double letters or Herodianic signs; nor any evidence of fluctuation in the value of the letters. Ϙ, for instance, might be expected to have sometimes its Semitic value 100, instead of 90, or Σ might occasionally represent 100, instead of Ρ.

The Greek inscriptions already collected are so numerous that the statements here made are not likely ever to want correction in any important detail. The fact, at present indisputable, to which they point, is that alphabetic numerals do not appear at all until long after ϛ and ϙ had disappeared from the literary alphabet, and that these letters are nevertheless used, and used in their right places, for numeration. The revival of these letters and of ϡ implies, under the circumstances, a degree of antiquarian learning such as cannot be attributed to the public at large. It looks like the work of some scholar, backed by the influence of paramount political authority. It will be conceded that Alexandria is the most likely place, in the first three centuries B.C., to find kings and scholars in co-operation, and to find some mutual influence of Greek and Semitic literary usages. It remains only to add, what has been reserved for this place, that by far the most ancient and certain evidence of alphabetic numeration comes from Egypt under the first Ptolemies. The oldest Graeco-Egyptian papyrus (at Leyden, No. 379: *v.* Robiou, quoting Lepsius, in *Acad. des Inscr. Suj. div.*, 1878, vol. 9), which is dated 257 B.C., contains the numerals κθʹ (=29). Still earlier evidence is furnished by coins, especially a great number of Tyrian coins of Ptol. II. Philadelphus, assigned to 266 B.C. (The κ on some coins of Ptol. I. Soter, and the double signs AA, BB, &c., on those of Arsinoë Philadelphi, are of doubtful signification.) From this time onwards the evidence of Ptolemaic coins and papyri is abundant. It is not unreasonable to suppose that the ordinary Greek alphabetic numeration was first used at Alexandria on coins, for which its brevity, its sole advantage, would make it especially useful. Jewish usage may have suggested it or been suggested by it; but, however that may be, Alexandrian commerce and the fame of Alexandrian learning would be sufficiently potent agencies to disseminate the new system throughout the Hellenic East.

Before proceeding to exhibit the Greek use of alphabetic numerals, it will be well here to mention briefly two facts, of some interest in themselves, which need not further concern us. Heilbronner, in his *Historia Matheseos* (pp. 735–737), cites from Hostus, who refers to Noviomagus, a system of numeral signs in which arms, as it were, are attached to a central line according to a fixed plan, which may best be exhibited by an example. └ or ┌ is 1, ┌ or ┐ is 10, ┘ or └ is 100, ┐ or ┘ is 1000, ⌶ is 1111 in the vertical form, and similarly for the other numbers: *e.g.*  is 7744,  is 7766,  is 9999. The work of Noviomagus has been at last identified by Friedlein (*Zahlz.* p. 12) as *De Numeris*, libri ii. (Cologne, 1539) book i. ch. 15. This style is said by Noviomagus to be used by "Chaldaei et astrologi." It was known to John of Basingstoke, who learnt it in Athens about 1240, and is described by Matthew Paris (*Chronica*, v. 285, ed. Luard). Secondly, Greek arithmetic has no cipher. The Ō which Delambre (*Astron. Anc.* i. p. 547, ii. pp. 14, 15) found in the Almagest is a contraction of οὐδέν, and occurs only in the measurements of angles which contain no degrees or no minutes. It stands, therefore, always alone, and is not used as a digit of a high number. The stroke which Otfried Müller found on an Athenian inscription, and which Boeckh thought to be a cipher, is clearly explained by Cantor as the *iota*, the customary sign of 10. (See Cantor, *Math. Beitr.* p. 121 *sqq.*, and pl. 28; Nesselmann, p. 138, n. 25; Hultsch, *Scriptores Metrol. Graeci*, Vorrede, pp. v., vi.; Friedlein, p. 82.) The numerical values attributed to each letter in the Greek alphabet are stated in every Greek grammar. Suffice it here to say that the letters α′—θ′, including ϛ′ for 6, represent the units, ι′—ϙ′ the tens, ρ′—ϡ′ the hundreds. For the thousands the alphabet recommences, but the stroke or acute accent which marks the numerical use of a letter is now placed in front of the letter, and rather below it, so that ͵α—͵θ represent 1000—9000. For 10,000 Mυ or M, the initial letter of μύριοι, was generally used on the Herodianic principle; and with multiples of 10,000 the co-efficient might be placed before, after, or over this M. If the co-efficient were placed first, the M was sometimes omitted and a dot substituted. Other devices appear in MSS., *e.g.* ͵ι for 10,000, ͵κ for 20,000 in Geminus, or ά, β́, &c. (See Hultsch, *Metrol. Script. Rellig.*, vol. i. pp. 172, 173; and Ritschl, *op. cit.* p. 120; Nicomachus, ed. Hoche, Introd. p. x.) In the case of high numbers, accents were usually omitted and a stroke was drawn over all the component letters (cf. *C. I. A.*, vol. iii. Nos. 60 and 77, for the two styles); and as these were arranged in the modern order, with the highest on the left and the lowest on the right, the distinguishing mark of the thousands was also often omitted and the value of the letter was indicated by its place, *e.g.* $\overline{\beta\tau\epsilon}$ is 2305. The improved nomenclatures invented by Archimedes (in the ψαμμίτης) and Apollonius (exhibited by Pappus, *Math. Coll.*, bk. ii.) may have been originally accompanied by improved symbolisms, but no trace of them now remains.

The representation of fractions (λεπτά) in MSS. is also various, but the most common methods are either to write the denominator over the numerator, or to write the numerator once with one accent and the denominator twice with two accents, *e.g.* $\overset{\kappa\alpha}{\iota\varsigma}$ or $\overline{\iota\varsigma}^{\,\kappa\alpha'}$ or ιϛ′ κα″ κα″. Fractions of which the numerator is unity ("sub-multiples," as they are sometimes called) are the most common. With these the numerator is omitted and the denominator is written above the line, or is written once with two accents. (See for special details Nesselmann, pp. 112–115; Hultsch, *op. cit.*, vol. i. pp. 172–175; Friedlein, *Zahlzeichen*, pp. 13, 14.) Special signs for ½, L or Ł, C′ and S, and for ⅓, ω″, are found. Brugsch (*Numerorum Demot. Doctr.*, Berlin, 1849, p. 31) gives, on the authority of Greek papyri, the signs / for addition, ⌝ for subtraction, and ⌐ for a total. (See the plate appended to Friedlein, *op. cit.*, and references there given.)

(b.) *Roman.*—(1.) *Finger-signs.* The later mode of representing numbers on the fingers seems to have been the same among the Romans as the Greeks. The best known reference is Juvenal, x. 248 (where see Prof. Mayor's note). The oldest is possibly Plautus, *Mil. Glor.* ii. 3, "dextera digitis rationem computat," but the meaning of this is not very clear. Pliny indeed (*H. N.* xxxiv. § 16) says that Numa set up a statue of Janus with the fingers so arranged as to represent 355, the number of days in a year (cf. Macrob. *Conviv. Sat.* i. 9).

(2.) *Pebble-signs.*—The Romans used at least two forms of abacus, one in which buttons (*claviculi*) moved in grooves (*alveoli*), another in which the stones were loose. A drawing of a very elaborate abacus of the first kind is given by Friedlein in *Zeitschr. f. Math. und Phys.*, 1864, vol. iv. pl. v. (cf. *Zahlz.* p. 22). It is capable of representing whole numbers up to 999,999, all fractions with 12 for denominator, and some others. It employs 45 buttons in 19 grooves. Seven vertical grooves at the bottom of the instrument contain four buttons each, those in the left-hand groove representing a million, the values descending towards the right down to the units. Opposite these grooves, at the top of the board, are seven smaller grooves, containing 1 button each, representing 5,000,000, 500,000, &c., down to 5. The eighth lower groove contains 5 buttons, each representing $\frac{1}{12}$; the eighth upper groove contains 1 button, representing $\frac{6}{12}$. Three grooves at the side contain a button for $\frac{1}{24}$ at the top, another for $\frac{1}{48}$ in the middle, and two for $\frac{2}{72}$ at the bottom of the board respectively. It is possible also that some *abaci* had balls moving on wires or strings, similar to those still used in schools. In these, of course, the lines would be held horizontally, and not vertically. The so-called Pythagorean abacus, with its accompanying *apices*, is not mentioned by any writer of classical times. The MSS. of the *Geometria*, attributed to Boethius, in which it is first described, cannot be considered earlier than the 11th century, and no trace of any such abacus appears elsewhere before the 9th century. It need not therefore be discussed in this article (*v.* Friedlein, *Zahlz.* pp. 22–27).

(3.) *Written characters.*—There are some signs that the Romans occasionally used their alphabet for numerical purposes; but the practice was neither general nor reduced to any fixed rule, and the dates of our authorities for it, where known, are all late. Some verses on the subject appear, with slight variations in several MSS. One version of them is given by Noviomagus in the work *De Numeris*, already mentioned (lib. i. cap. 10). It begins:—

> "Possidet A numeros *quingentos* ordine recto,
> Atque *trecentos* B per se retinere videtur.
> Non plus quam *centum* C litera fertur habere,
> Litera D velut A *quingentos* significabit," &c.

(See Friedlein, *Zahlz.* pp. 20, 21.) But it is unlikely that an alphabet so short and so capable of disturbance as the Roman certainly was, could ever have been used, in the Greek manner, for numerical purposes.

The ordinary Roman numerals are too well known, and are still in too common use, to require detailed exhibition. The well-known theory that 10 was represented by two strokes (X), 100 by three (⊏), and 1000 by four (M), and that V, L and Λ or ∩ are the halves of these signs (Nesselmann, pp. 89, 90; Key's *Latin Grammar*, § 251), has the advantage of symmetry, but does not account for the more ancient forms of these symbols. (See the plates appended to Friedlein, *op. cit.*, and Cantor, *Vorles. Math.*) The more common theories of recent times are that L, C, and M or ᛦ are corruptions of Ψ (the Chalcidian form of χ, written ⊥), Θ and Φ, while X is referred either to ⊗, the old form of Θ, or to the Greek X, so that all these signs would be adopted from the letters of the Greek alphabet, for which the Romans had no use.

(See Ritschl in *Rhein. Mus.* 1869, xxiv. p. 12; and Mommsen, *Unter It. Dial.* pp. 19–34; Roby, *Lat. Gram.* App. D, ii.; Friedlein, *op. cit.* p. 27.) The objections to this theory are, of course, that the proposed letters are not used in their Greek order, and that the Romans and Etruscans used, in conjunction with these very signs, a wholly peculiar mode of representing intervening numbers. Such forms as IX, XL, XC are so original, as to suggest the originality also of the signs of which they are compounded. (Still stranger forms, as XIIX for 18, are also found: Friedlein, p. 32; Corssen, *Etrusker*, i. 39–41.)

A few of the more uncommon Roman numerals should be here mentioned. The sign for 1000 being ↀ (not M till post-Augustan times: Mommsen, *op. cit.* p. 30), that for 10,000 was (ↀ), and that for 100,000 ((ↀ)); but the ordinary sign for a million was ⊠, and any higher multiple of 100,000 was similarly enclosed with side and top lines. But the repetition of ↀ and the other signs above given being found cumbrous, it was usual, with intervening multiples of 1000, to write the coefficient with a stroke over it, or with *milia*, or merely M appended, *e.g.* $\overline{\text{XII}}$DC, or XII *milia* DC or XIIMDC. (Cf. Friedlein, *Zahlz.* pp. 28–31, where the forms attributed to Pliny are specially discussed; and Marquardt, *Röm. Alt.* iii. 2, p. 32, and v. 1, p. 98, notes 161 and 522.) Other forms are found, but it is to be remembered that MSS. are not safe guides to the usages of classical times. The form Ч for 6, for instance, is not uncommon in MSS., but is not attested by any coins or inscriptions older than the 6th century (Friedlein, p. 33).

The fractions generally used by the Romans were the divisions of the *as* and *uncia*. It should be remembered that the *as* was, for all purposes, the type of unity. Thus Balbus (*ad Celsum de Asse*, 1) says, "Quidquid unum est, assem ratiocinatores vocant" (cf. Marquardt, iii. 2, pp. 42–44), and the fractions of the *as* are applied to divisions of any kind of magnitude. Livy (v. 24, 5) has "terna jugera et septunces" and (vi. 16, 6) "bina jugera et semisses agri." Columella and the *gromatici* (ed. Lachmann, &c., Berlin, 1848) use the same terms for divisions of time or length. (Cf. Varro, *de R. R.* i. 10; Friedlein, pp. 34, 35; Roby, *Lat. Gram.* i. App. D, vi.–xiii.) The names of the divisions of the *as* from *deunx* to *uncia*, i.e. from $\frac{11}{12}$ to $\frac{1}{12}$, are set out below in the Appendix, Table XIII. Those of the *uncia* are given in Table XIV. It may be mentioned, however, in this place that *scrupulum* is also very often called *scrupulus* and *scriptulum*, and that the book *De Asse* of the 3rd century gives, besides *duella*, the unusual fractions *drachma* ($\frac{1}{8}$), *tremissis* ($\frac{1}{18}$), and the name *hemisecla* for *semisextula* or *dimidia sextula* (Friedlein, p. 41). Other fractions were, of course, expressible (e.g. *quattuor septimae*, sc. *partes*, &c.), and after the time of Constantine new terms appear as translations of Greek or adaptations of older Roman names (e.g. *superdimidius*, *supertertius*, &c., for ἡμιόλιος, ἐπίτριτος, &c.: Friedlein, pp. 41–43, 97, 98), but the divisions of the *as* and *uncia* given in the Appendices are the only fractions for which special signs are found. The signs from *uncia* to *quincunx* are merely arrangements of horizontal strokes or dots, as ., :, :·, ::, ::·. *Semis* is represented by S, and from this to *deunx* the signs are S, with those for *uncia*, &c., added to the right of it. Then *as* is an upright stroke I. The signs below *uncia* are usually *semuncia*, L or Є or V, *sicilicus* Ↄ, *sextula* \\, ∾ or 2, *dimidia sextula* Ξ or χ, *scriptulum* ꟻ or Ħ. (Cf. Bede, *De Ratione Assis*, Opera, Basileae, i. col. 182.) Much fuller tables are given in Friedlein, plates 13–15, and the forms applicable to divisions of the *denarius* are set out in Roby, *Lat. Gram.* i., App. D, viii. It is possible in this place only to mention the most common and interesting facts and to refer to the authorities who treat the subject in detail. The reader cannot expect here an adequate commentary on Frontinus or Victorius. (*Vide*, beside the references already given, Hankel, *Zur Gesch. der Math.* pp. 56–63; Cantor, *Vorles.* p. 445.)

II. CALCULATION.

It has been already remarked that finger-signs are of no practical assistance to calculation save as a mode of representing a sum, difference, product, &c., and so relieving the memory to some extent in the processes of mental arithmetic. The actual work of calculation was done with the *abacus* or with written signs. Addition and subtraction were always done with the former. So also were multiplications and divisions, where the multiplier or divisor was a low number, but as a general rule multiplication was done with written signs, and division by both methods together. The schemes of addition and subtraction set out by Nesselmann (p. 119) are without authority, and it is to be remarked that it was in multiplication only that the ancients approached at all nearly to the modern facility of using written signs (cf. Friedlein, pp. 26 and 74).

(a.) *Greek.*—Addition (σύνθεσις) and subtraction (ἀφαίρεσις) seem to have involved generally some mental arithmetic, for apparently on the ordinary *abaci* only one number of several digits could be represented at a time. The practice probably was to set out one of two numbers to be added, to add the other mentally and set out the sum (κεφάλαιον), removing or adding to the ψῆφοι previously arranged as the calculation progressed. (This perhaps is what Herodotus alludes to in ii. 36.) Some *abaci*, however, notably the Salaminian table (see Cantor, *Vorles.* i. pp. 111, 112), have two sets of columns at opposite ends of the board. It is supposed by Cantor that these columns were used by two different persons—a banker, for instance, and his customer; but it may also be suggested that the two sets are intended for the representation of two numbers in an addition or subtraction. Multiplication was sometimes effected by repeated additions (cf. Lucian, Ἑρμότιμος, 48); but the process, even where the multiplier is low, is very cumbersome when the multiplicand is high, and some sort of a multiplication table must early have been compiled. The fullest specimens of Greek arithmetic which we possess are a great number of multiplications set out by Eutocius of Ascalon in his notes to Archimedes (*Circ. Dimens.*, Torelli's ed., pp. 208

sqq.). One of these, which is rendered in modern figures by Nesselmann (p. 118), and with some improvements by Friedlein (p. 76), may be here given. It is the more interesting because it involves fractions. (The letter *k* is used here instead of the Greek sign for $\frac{1}{2}$.) The modern figures are given at the side.

$\overline{,\gamma\iota\gamma}\ k\ \delta'$	$3013\ \frac{1}{2}\ \frac{1}{4}$
$\overline{,\gamma\iota\gamma}\ k\ \delta'$	$3013\ \frac{1}{2}\ \frac{1}{4}$
$\overset{ϡ}{M}\ \overset{\gamma}{M},\theta\ \overline{,\alpha\phi}\ \overline{\psi\nu}.$	9000000, 39000, 1500, 750.
$\overset{\gamma}{M}\ \overline{\rho\lambda}\ \bar{\epsilon}\ \bar{\beta}k$	30000, 130, 5, $2\frac{1}{2}$.
$,\theta\ \overline{\lambda\theta}\ \bar{\alpha}k\ k\delta'$	9000, 39, $1\frac{1}{2}$, $\frac{1}{2}$, $\frac{1}{4}$.
$\overline{,\alpha\phi}\ \bar{ϛ}k\ \delta'\ \eta'$	1500, $6\frac{1}{2}$ $\frac{1}{4}$, $\frac{1}{8}$.

$\overset{ϡ\eta}{M}\ \overline{,\beta\chi\pi\theta}\ \iota ϛ'.$	$9082689\ \frac{1}{16}$.

(Cf. also Delambre, *Astr. Anc.* vol. ii. ch. 1.) The reader sees that the process begins by taking the highest multiple of 10 in the multiplier and multiplying therewith all the digits of the multiplicand, beginning on the left. The second digit of the multiplier is then taken, and so on. The treatment of the fractions should be observed. Two other very interesting examples, taken from Heron's *Geomctica* (ed. Hultsch, pp. 81 and 110), are also given by Friedlein (p. 77). In the first of these the process involves the multiplication of $\frac{63}{64}$ by $\frac{2}{64}$. The product is given in the form $\frac{126}{64}\cdot\frac{1}{64}$, reduced to $\frac{1}{64}+\frac{62}{64}\cdot\frac{1}{64}$, and is there left. (*καὶ ξγ′ ξδ″ξδ″ τῶν δύο ξδ″ξδ″ ρκϛ′ξδ″ξδ″ τῶν ξδ″ξδ″, γινόμενα καὶ ταῦτα ἑξηκοστοτέταρτον α′ καὶ ξβ′ξδ″ξδ″ τῶν ξδ″ξδ″.*)

The nearest approach to modern multiplication with Indian numerals is made by Apollonius, according to the extracts preserved by Pappus in his 2nd Book above mentioned. Apollonius recommends that with all multiples of 10 the co-efficients alone (*πυθμένες*) should be multiplied first, and the tens or powers of ten multiplied afterwards. But this method, as we have said, does not seem to have been accompanied by a new symbolism, and is strictly confined to multiples of 10, with no added units. It was accompanied by a new nomenclature, similar to that of Archimedes, according to which numbers from 1–9999 belonged to the first group (*μυριάδες ἁπλαῖ*), 10,000–9999,9999 to the second group (*μυριάδες διπλαῖ*), and so on, so that a certain simplicity of description was gained; *e.g.* 1,0001,0001 would be described as *α* of the third group + *α* of the second + *α* of the first (cf. Nesselm. p. 127, and Papp. ii. 27). But the invention seems, like that of Archimedes, to have been sportive chiefly, and is certainly illustrated only by the multiplication of the numbers symbolised by all the letters in the two lines—

> *Ἀρτέμιδος κλεῖτε κράτος ἔξοχον, ἐννέα κοῦραι*

and

> *Μῆνιν ἄειδε θεὰ Δημήτερος ἀγλαοκάρπου.*

Eutocius, however (*ad* Arch. *Circ. Dim.* loc. cit.), speaks of the *ὠκυτόκιον* of Apollonius (MSS. *ὠκυτόβοον*: the emendation was originally Halley's) as a great aid to multiplication. This was possibly a "ready reckoner," or table of calculated products. It is difficult to see how, as Cantor suggests (*Vorles.* pp. 298, 387), it can have been connected with the new classification of numbers described by Pappus (cf. Nesselmann, pp. 126–135).

No example of the division of whole numbers occurs with the working-out in any Greek author. It is obvious, however, from the expressions used and the mode in which remainders are stated, that the practice was to take a multiple of the divisor and subtract it from the dividend; then take another multiple of the divisor and subtract it from the first remainder, and so on until the last remainder was less than the divisor. The series of quotients was then added together, and the fractional remainder, if any, was separated into a series of "submultiples" or fractions with unity for numerator. Thus Heron (*Geom.* ed. Hultsch, p. 56), dividing 25 by 13, sets out the quotient as $1+\frac{1}{2}+\frac{1}{3}+\frac{1}{13}+\frac{1}{78}$. No name for "quotient" is found. The customary Greek expression for the result of a division was that the divisorth part of the dividend was so and so (Friedlein, p. 79). The theory of the extraction of square roots is exhibited geometrically by Theon in his commentary to the first book of the Almagest (ed. Halma, 1821: *vide* also Cantor, *Vorles.* p. 420; Nesselmann, pp. 108–110; Friedlein, p. 84). The practice, however, as has been said above under the article ARITHMETICA (*q.v.*), was probably rough and empirical. The theory of finding a G. C. M. or a L. C. M. is exhibited in Euclid, vii. 2, 3, and 36, 38. Compound divisions, in which the divisor and dividend contain degrees, minutes and seconds, are given by Theon in his commentary to Ptolemy before mentioned. (Nesselmann, pp. 142–144.) The following example is selected by Friedlein (p. 83):—1515° 20′ 15″ is to be divided by 25° 12′ 10″. The first quotient 60 is found by trial. Then $60\cdot25^\circ=1500^\circ$. $1515^\circ-1500^\circ=15^\circ=900'$: $900'+20'=920'$: $60\cdot12'=720'$: $920'-720'=200'$: $60\cdot10''=10'$. $200'\,15''-10'=190'\,15''$. The next quotient is 7′. Then $25^\circ\cdot7'=175'$, $190'-175'=15'=900''$: $900''+15''=915''$: $12'\cdot7'=84''$. $915''-84''=831''$: $10''\cdot7'=70'''=1''\,10'''$: $831''-1''\,10'''=829''\,50'''$. The last quotient 33″ is a little too high, but is adopted by Theon as near enough for his purpose. The mode of multiplication and subtraction need not be further exhibited. The final quotient is 60° 7′ 33″.

No method of extracting cube-roots is mentioned in any Greek writer, and such an operation would, in any case, belong more to *ἀριθμητική* than to *λογιστική*.

(b.) *Roman.*—Of the methods of calculation in use among the Romans even less is known than the little which is discoverable of Greek *logistic*. What is certain is that the Roman *abacus* was adapted to higher needs than the Greek, and that it was used in very complicated calculations (cf. Columella, *de Re Rust.* iii. p. 115; Friedlein, *Zahlz.* pp. 88–90, and plate 21 shows the use of the *abacus* above described for various purposes of elementary calculation). The *Calculus* of Victorius, written in the 5th century of our era, is a ready-reckoner of sums, differences, products, quotients, and reductions of extraordinary fulness (*v.* Friedlein, pp. 93 *sqq.*, and Appendix). The existence of such a book, which provides answers to questions of great simplicity as well as to the more difficult, seems to show that the Romans were not more adept at arithmetic than the Greeks. The passages of Roman writers which refer incidentally to calculations, deal almost entirely with fractions. We may guess from Horace (*A. P.* 327–330) how long a time was spent in schools in learning by heart the divisions of the as and the differences between them. We may gather from Pliny (*H. N.* vi. § 38) how inexact the treatment of fractions was, and yet how difficult were the problems attempted. This latter passage is very neatly explained by Friedlein (p. 90), whose note may be here given. Europe, says Pliny, is rather less than $1\frac{1}{2}$ of Asia and $2\frac{1}{6}$ of Africa. It follows that ("si misceantur omnes summae") Europe is rather more than $\frac{1}{3}+\frac{1}{8}$, Asia $\frac{1}{4}+\frac{1}{16}$ (reading *sexta decima* for *quarta decima*), Africa $\frac{1}{5}+\frac{1}{60}$ of the whole earth. If T be the earth, E Europe, As Asia, and Af Africa, then $T=E+As+Af$. $As=\frac{2}{3}E$. $Af=\frac{6}{13}E$: therefore $T=(1+\frac{2}{3}+\frac{6}{13})E=(\frac{5}{3}+\frac{6}{13})E=\frac{83}{39}E$. Therefore $E=\frac{39}{83}T=\frac{117}{249}=\frac{83}{83\cdot3}+\frac{34}{83\cdot3}=$ almost $\frac{1}{3}+\frac{1}{8}$, &c. It will be observed that the mode of treating the fractions is exactly similar to the Greek. The treatment of divisions of the *as* and other monetary fractions is, of course, far simpler, because here both numerators and denominators are strictly limited, and the terms themselves suggest by their definition the mode of calculating with them. Similarly any English boy, in dealing with pounds, shillings, and pence, soon perceives that the admissible fractions of a pound are limited to $\frac{19}{20}$ or $\frac{239}{240}$, of a shilling to $\frac{11}{12}$. The methods of arithmetic in use in the Roman empire from the time of Boethius to that of Planudes are exhaustively discussed by Friedlein in the work *Zahlzeichen, etc. der Griechen und Römer und des Christlichen Abendlandes vom 7. bis 13. Jahrhundert*, of which frequent use has been made in this article. But these methods cannot be said to belong to classical antiquity; and, if they did, they could not be conveniently summarised in this place. We have attempted here no more than to give such facts with regard to Greek and Roman arithmetic as are of importance to the interpretation of the authors most generally read, to the criticism of inscriptions, or to a due conception of ancient life and manners. [J. G.]

LOGO'GRAPHI (λογογράφοι) is a name applied by the Greeks to two distinct classes of persons.

1. To the earlier Greek historians previous to Herodotus, though Thucydides (i. 21) applies the name logographer to all historians previous to himself, and thus includes Herodotus among the number. The Ionians were the first of the Greeks who cultivated history; and the first logographer, who lived about Olymp. 60, was Cadmus, a native of Miletus, who wrote a history of the foundation of his native city. The characteristic feature of all the logographers previous to Herodotus is, that they seem to have aimed more at amusing their hearers or readers than at imparting accurate historical knowledge. They wrote in the unperiodic style called λέξις εἰρομένη. They described in prose the mythological subjects and traditions which had previously been treated of by the epic and especially by the cyclic poets. The omissions in the narratives of their predecessors were probably filled up by traditions derived from other quarters, in order to produce, at least in form, a connected history. In many cases they were mere collections of local and genealogical traditions. (Thirlwall, *Hist. of Greece*, ii. p. 127, &c.; Müller, *Hist. of Greek Lit.* i. p. 206, &c.; Wachsmuth, *Hellen. Alterth.* ii. 2, p. 443; Curtius, *Hist. of Greece*, translated by Ward, ii. p. 499.)

2. To persons who wrote judicial speeches or pleadings and sold them to those who were in want of them. These persons were called λογοποιοί as well as λογογράφοι. Antiphon, the orator, was the first who practised this art at Athens, towards the close of the Peloponnesian war (Plut. *Vit. Dec. Orat.* p. 832; Aristot. *Rhet.* i. 33). After this time the custom of making and selling speeches became very general; and though the persons who practised it were not very highly thought of and regarded as pedants (Demosth. *de Fals. Leg.* pp. 417, 420, where see Shilleto's note; Plat. *Phaedr.* p. 257 C; Anaxim. *Rhet.* xxxvi. 22 and 24; compare Plat. *Euthydem.* p. 272 A, 289 D, 305 A), yet we find that orators of great merit did not scruple to write speeches of various kinds for other persons. Thus Lysias wrote for others numerous λόγους εἰς δικαστήριά τε καὶ βουλὰς καὶ πρὸς ἐκκλησίας εὐθέτους, and besides πανηγυρικούς, ἐρωτικούς, and ἐπιστολικούς. (Dionys. Hal. *Lys.* i. 3; compare *Att. Proc.* p. 707 = 919 Lipsius; Jebb's *Attic Orators*, i. 3.) [L. S.]

LOIDO'RIAS DIKÊ (λοιδορίας δίκη). [KAKEGORIAS DIKÊ.]

LONCHÊ (λόγχη). [HASTA.]

LOPHOS (λόφος). [GALEA.]

LORA'RII. [FLAGRUM.]

LORI'CA (θώραξ), a cuirass. The epithet λινοθώρηξ applied to two light-armed warriors in the Iliad (ii. 529, 830), although it occurs in the comparatively late catalogue of the Ships, indicates the early use of the linen cuirass. But with the exception of the passages quoted, all allusions to the cuirass in Homer imply a defence of rigid metal; for it is certainly wrong to suppose that the στρεπτὸς χιτὼν of the Iliad (v. 113, xxi. 31) is a hauberk of twisted mail, or that χαλκοχίτων is more than a poetical epithet. The Homeric cuirass was usually of bronze (but cf. *Il.* xi. 19–28; xxiii. 561). As regards the parts of the body protected, it covered the γαστέρα μέσσην (*Il.* xiii. 371, 397, 506), but there is no proof that it reached lower than this. It consisted of the two γύαλα, viz. the breastplate (*pectorale*), which covered the breast and abdomen, and the corresponding plate which covered the back (Paus. x. 26, 2; *Il.* v. 99, xv. 530). In Homeric times the γύαλα cannot have been made to fit very closely to the body, for a warrior might have his cuirass pierced and yet escape unwounded (*Il.* iii. 360; vii. 254). The Homeric body-armour consisted of the θώραξ, ζωστήρ, ζῶμα, and μίτρη. There is some uncertainty as to the respective functions of these different pieces. It seems probable that the annexed woodcut of a bronze statuette of a Greek warrior found at Dodona (*Arch. Zeit.* 1882, pl. 1) shows the form of the thorax. It is clear that at the point of junction the ζωστὴρ was upon the thorax, and the thorax upon the μίτρη (*Il.* iv. 132, 185). Probably the ζωστὴρ was a girdle round the lower part of the thorax, helping to keep the two γύαλα together, and itself kept in position by the projecting rim at the bottom of the thorax, which was the ζῶμα. It is plain from a comparison of *Il.* iv. 136 and 187 that the ζῶμα was a part of the thorax. The μίτρη was perhaps a metal band, protecting the lower part of the abdomen, its upper edges lying beneath the projecting rim of the thorax. Such bands have been found in very early tombs in Euboea and Italy (Helbig, *Das Homerische Epos aus dem Denkmälern erläutert*, p. 199, fig. 67). Specimens are in the British Museum. (On the whole question of Homeric body-armour, see Helbig, *loc. cit.* p. 197; W. Leaf, *Journ. of Hellen. Studies*, iv. p. 73; and Leaf's *Homer*, *Il.* iv. 137). A remarkable fragment of a thorax, apparently of the early form, has incised designs of an archaic character, with human figures, animals, and conventional patterns (*Bull. de Correspondance hellénique*, vii. pll. i.-iii.).

Ancient Lorica as worn by a Greek warrior. (From bronze statuette found at Dodona.)

In historical times the rigid thorax (θώραξ στάδιος or στατός, so called because, when placed upon the ground on its lower edge, it stood erect) was developed as follows. The projecting rim at the bottom of the thorax disappeared. The lower part was prolonged in the middle to protect the abdomen. (For an early example of such a prolongation, see Froehner, *Choix de Vases Grecs*, pl. iii. See also below the woodcut of a Roman emperor.) Round the lower edges of the thorax a series of flaps was attached, consisting of leather or felt covered with metal, and serving to protect the hips and groin, while not interfering with the wearer's freedom of movement. They are well shown in the following woodcut of a figure of a young warrior from one of Mr. Hope's fictile vases (*Costumes of the Ancients*, i. 102).

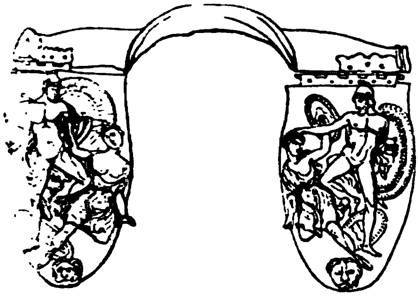
Instead of the straps here described, which the Greeks called πτέρυγες (Xen. *de Re Equest.* xii. 4), the Chalybes, who were encountered by Xenophon on his retreat (*Anab.* iv. 7, § 15), had in the same situation a kind of cordage.

Lorica as worn by a Greek warrior. (From a vase.)

Appendages of a similar kind were sometimes fastened by hinges to the lorica at the right shoulder, for the purpose of protecting the part of the body which was exposed by lifting up the arm in throwing the spear or using the sword. (Xen. *de Re Equest.* xii. 6.) Other straps were sometimes attached round the holes for the arms, thus serving as short sleeves (cf. *Alt. von Pergamon*, ii., Atlas, pl. xlvii. fig. 2).

The γύαλα were modelled so as to fit accurately to the form of the body, as may be seen in the representations of them in the woodcuts at Vol. I. pp. 189, 284. It appears (Xen. *Memorabilia*, iii. 10) that great pains were taken to secure that the thorax should fit the individual wearer. The two plates were united on the right side of the body by two hinges, as seen in the equestrian statue of the younger Balbus at Naples, and in various portions of bronze cuirasses still in existence. On the other side, and sometimes on both sides, they were fastened by means of buckles (περόναι, Paus. *l. c.*). [FIBULA.] In Roman statues we often observe a band surrounding the waist and tied before. The breast-plate and the back-plate were further connected together by leathern straps passing over the shoulders, and fastened in front by means of buttons or of ribands tied in a bow. In the above woodcut both of the connecting ribands are tied to a ring over the navel. The breast-plate of Caligula (see woodcut below) has a ring over each breast, designed to fulfil the same purpose.

Bands of metal often supplied the place of the leathern straps, or else covered them so as to become very ornamental, being terminated by a lion's head, or some other suitable figure ap-bearing on each side of the breast. The most beautiful specimens of enriched bronze shoulder-bands now in existence are those which are reported to have been found A.D. 1820, near the river Siris in S. Italy, and which are preserved in the British Museum. They were originally gilt, and represent in very salient relief two Greek heroes combating two Amazons. They are seven inches in length, and belong to the description of bronzes called ἔργα σφυρήλατα, having been beaten into form with wonderful skill by the hammer. Bröndsted (*Bronzes of Siris*, London, 1836) has illustrated the purpose which they served, by showing them in connexion with a portion of another lorica, which lay upon the shoulders behind the neck. This fragment was found in Greece. Its hinges are sufficiently preserved to show most distinctly the manner in which the shoulder-bands were fastened to them (see woodcut).



Lorica. (British Museum.)

The form and appearance of the thorax as worn by Roman generals and emperors is shown in the annexed woodcut, which is taken from a marble statue of Caligula found at Gabii (Visconti, *Mon. Gab.* No. 38). The gorgon's head over the breast, and the two griffins underneath it, illustrate the style of ornament which was common in the same circumstances (Mart. vii. 1, 1–4. A classified table of the designs that occur on imperial cuirasses is given by Wroth, *Journal of Hellen. Studies*, vii. p. 126). [AEGIS.] The execution of these ornaments in relief was more especially the work of the Corinthians (Cic. *Verr.* iv. 44, 132).

Lorica as worn by a Roman emperor. (Statue of Caligula found at Gabii.)

Of Grecian cuirasses the Attic were accounted the best and most beautiful (Aelian, *V. H.* iii. 24). The cuirass was worn by the heavy-armed infantry and by the horsemen, except that Alexander the Great is reported to have given to the less brave of his soldiers breast-plates only, in order that the defenceless state of their backs might diminish their propensity to flight (Polyaen. iv. 3, 13). These were called half-cuirasses (ἡμιθωράκια).

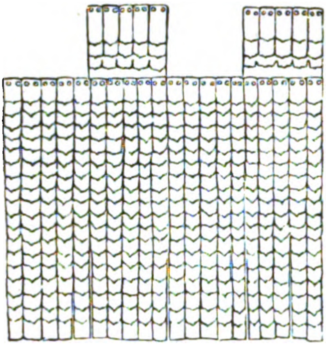
The rigid cuirasses which have now been described were sometimes found to be very oppressive and cumbersome (cf. Tac. *Ann.* i. 64), and various forms of flexible cuirasses were devised, which could adapt themselves better to the movements of the body.

In Homer (*vide supra*) the only indication of a flexible cuirass is contained in the epithet λινοθώρηξ applied to two light-armed warriors, the Locrian Ajax and the Mysian Amphios.

In later times the linen cuirass continued to be worn, principally amongst the Oriental nations, especially the Persians (Xen. *Cyrop.* vi. 4, § 2; Plut. *Alex.* p. 1254, ed. Steph.), the Egyptians (Herod. ii. 182, iii. 47,—description of the famous linen cuirasses of Amasis), the Phoenicians (Paus. vi. 19, § 4), and the Chalybes (Xen. *Anab.* iv. 7, § 15). One of the inventories of the Parthenon contains the (conjecturally restored) entry of thirteen θώρακες λινοῖ καὶ φολιδωτοί (*C. I. A.* ii. 731, l. 25). Iphicrates endeavoured to restore the use of it among the Greeks (Nepos, *Iphicr.* i. 4), and it was occasionally adopted by the Romans, though considered a much less effectual defence than a cuirass of metal (Sueton. *Galba*, 19; Arrian, *Tact.* p. 14, ed. Blancardi).

A much stronger material for cuirasses was horn, which was applied to this use more especially by the Sarmatae and Quadi, being cut into small pieces, which were planed and polished and fastened, like feathers, upon linen shirts (Amm. Marcell. xvii. 12, ed. Wagner). Hoofs were employed for the same purpose. Pausanias (i. 21, § 8) having made mention of a thorax preserved in the temple of Aesculapius at Athens, gives the following account of the Sarmatians: Having vast herds of horses, which they sometimes kill for food or for sacrifice, they collect their hoofs, cleanse and divide them, and shape them like the scales (φολίδες) of a serpent, or the petals of a fir-cone. They then bore holes in the scales and sew them together, so as to produce a cuirass, inferior neither in elegance nor in strength to those of Greek workmanship. This author adds that the loricae made of these horny scales are superior to linen cuirasses, which are useful to hunters, as a protection against the bites of wild beasts, but are not adapted for fighting. The woodcut on page 80, taken from Meyrick's *Critical Inquiry into Ancient Armour* (plate iii.), exhibits an Asiatic cuirass exactly corresponding to this description. It consists of slices of some animal's hoof, which are stitched together, overlapping each other in perpendicular rows, without being fastened to any under-garment. The projection nearest the middle must be supposed to have been worn over the breast, and the other over the back, so as to leave two vacant spaces for the arms.

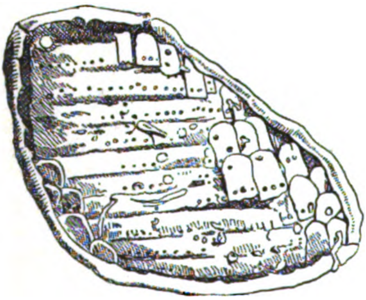
This invention no doubt preceded the metallic scale armour. The Rhoxalani, a tribe allied to the Sarmatians, defended themselves by wearing



Lorica of horn. (Meyrick.)

a dress consisting of thin plates of iron and hard leather (Tac. *Hist.* i. 79). The Persians wore a tunic of the same description, the scales being sometimes of gold (Herod. vii. 61; *θώρηκα χρύσεον λεπιδωτόν*, ix. 22); but they were commonly of bronze (*thoraca indutus aënis squamis*, Verg. *Aen.* xi. 487). The basis of the cuirass was sometimes a skin, or a piece of strong linen to which the metallic scales, or "feathers," as they are also called, were sewed (Verg. *Aen.* xi. 770; Serv. *in loc.*; Justin, xli. 2, 10).

The New Museum at Oxford contains a remarkable specimen from Kertch of a piece of a *θώραξ λεπιδωτός*: the scales of bronze are fastened by leather thongs to a lining of hide. (See woodcut from *Journ. of Hellen. Studies*, pl. xvii. fig. 3.)



θώραξ λεπιδωτός. (From Kertch.)

An armed horseman, on the frieze of the west side of the Parthenon, wears an interesting combination of a *θώραξ στάδιος* and *λεπιδωτός*. On the breast and on the back are metal plates (handsomely ornamented), which are joined together at the sides by scale armour.

The epithet *λεπιδωτός*, as applied to a thorax, is opposed to the epithet *φολιδωτός* (Arrian, *Tact.* p. 13, 14). The former denotes a similitude to the scales of fish (*λεπίδες*), the latter to the scales of serpents (*φολίδες*). The resemblance to the scales of serpents, which are long and narrow, is exhibited on the shoulders of the Roman soldier in the woodcut at Vol. I. p. 190. These scales were imitated by long flexible bands of metal, made to fold one over another according to the contraction of the body. There is a specimen in the New Museum at Oxford o this armour in bronze, from Kertch. The band

θώραξ στάδιος and λεπιδωτός, combined. (From the Parthenon.)

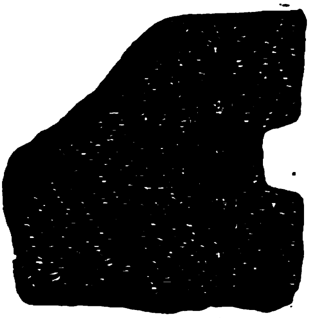
are riveted together by bronze wire, and fastened upon a lining of tough hide, which is still in a wonderfully good state of preservation. (*Journ. of Hellen. Studies*, pl. xlvi. fig. 1: cf. *Compte-rendu de la Comm. Imp. Arch.* 1876, pl. ii. figs. 11, 12, 20.) They appear very frequently on the Roman monuments of the times of the emperors, and the following woodcut places in immediate contrast a *θώραξ λεπιδωτὸς* on the right and *φολιδωτὸς* on the left, both taken from Bartoli's *Arcus Triumphales*.

θώραξ φολιδωτός. θώραξ λεπιδωτός.
(Bartoli, *Arcus Triumphales.*)

A lighter and more inexpensive thorax of leather without metal additions was introduced at an early period (cf. *e.g.* the archers on the pediments of the temple at Aegina), and was known as the *σπολάς* (Poll. vii. 70).

The hauberk or habergeon of chain-mail (*ἁλυσιδωτοὺς θώρακας*, Polyb. vi. 21; Athen. v. 22; Arrian, *l. c.*), which was worn by the Roman hastati, was also a characteristic weapon of the Gauls (Varro, *L. L.* v. 116; Poseidonius *ap.* Diod. v. 30). Examples occur on the reliefs of Gaulish trophies from the temple of Athena Polias at Pergamon (*Alt. von Pergamon*, ii.

Atlas, pl. xliv. fig. 1, pl. xlvi. fig. 2, pl. xlix. fig. 4 = woodcut). The cuirass of chain-mail



Lorica of chain-mail. (Temple of Athena Polias at Pergamon.)

appears to have been nearly the same shape as that of horn, engraved above. The two sides are joined, and the projecting pieces are brought over each shoulder, and are fastened by the bar upon the breast. The whole is made of thick wire twisted in an elaborate pattern. Virgil several times mentions hauberks in which the rings, linked or hooked into one another, were of gold ("loricam consertam hamis, auroque trilicem," Verg. *Aen.* iii. 467; v. 259; vii. 639). According to Val. Flaccus (*Argon.* vi. 232), the Sarmatae covered both themselves and their horses with chain-mail. [J. Y.] [A. H. S.]

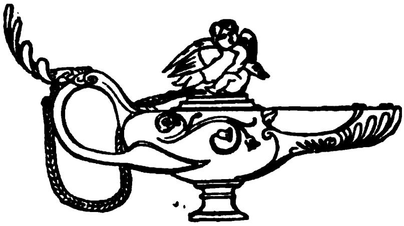
LORI'CA, LORICA'TIO, in architecture. [Murus; Tectorium Opus.]

LOUTRON (*λουτρόν*). [Balneae.]

LUCAR was the money paid from the state treasury to those who presided over the ludi scenici, as the state contribution towards the expenses (τὸ *τελούμενον εἰς θέας*, Plut. *Q. R.* 88). It seems originally to have been the money derived from *luci*, or sacred groves (Fest. s. vv. *lucar* and *pecunia*; Plut. *l. c.*); but, being paid into the public treasury and devoted to the expenses of the ludi, it bears regularly this acquired meaning of money devoted to payment of actors especially and other expenses of the games. In Tac. *Ann.* i. 77, it is stated that decrees were made under Tiberius to remove certain abuses relating to theatrical shows, and among them to limit the payments from the treasury ("de modo lucaris"); with which corresponds Suet. *Tib.* 34, "Ludorum ac munerum impensas arripuit mercedibus scenicorum recisis." The holder of the games (*e.g.* the praetor, Plut. *Brut.* 21; Juv. vi. 379) paid the *mercedes* to actors and the other expenses which were incurred; but towards this he received the *lucar* from the state. As a mark of liberality he might forego this aid. Thus in the inscription Orell. 3882 a certain Marius Lupercianus "in ludos cum accepisset publice lucari misso de suo erogationem fecit." According to a regulation of Servius Tullius at each death (partly with the object of securing a register of deaths), a piece of money had to be presented to the goddess Libitina (Dionys. iv. [illegible]) This money was called *lucar Libitinae* (Orell. 3349). Hence in Horace, *Sat.* ii. 5, 19, autumn is called "Libitinae quaestus:" so in Suet. *Ner.* 39, "pestilentia unius autumni quo triginta funerum millia *in rationem Libitinae* venerunt." (Preller, *Röm. Myth.* 387; Marquardt, *Staatsverw.* iii. 488; Mommsen, *Staatsrecht*, ii. 61.) [Ludi, p. 87.] [G. E. M.]

LU'CERES. [Patricii.]

LUCERNA (*λύχνος*), an oil lamp. The Greeks and Romans originally used candles; but in later times candles were chiefly confined to the houses of the lower classes. [Candela.] A great number of ancient lamps has come down to us; the greater part of which are made of terra-cotta (*τροχήλατοι*, Aristoph. *Eccl.* 1), but also a considerable number of bronze. Most of the lamps are of an oval form, and flat upon the top, on which there are frequently figures in relief. (See the woodcuts, Vol. I. pp. 211, 619.) In the lamps there are one or more round holes according to the number of wicks (*ellychnia*) burnt in it; and as these holes were called from an obvious analogy, *μυκτῆρες* or *μύξαι*, literally nostrils or nozzles, the lamp was also called *Monomyxos*, *Dimyxos* or *bilychnis*, *Trimyxos*, or *Polymyxos*, according as it contained one, two, three, or a greater number of nozzles or holes for the wicks; and there is besides the central hole for pouring in the oil, usually covered with a lid. The following example of a *dimyxos lucerna*, upon which there is a winged boy with a goose, is taken from the *Museo Borbonico*, vol. iv. pl. 14.



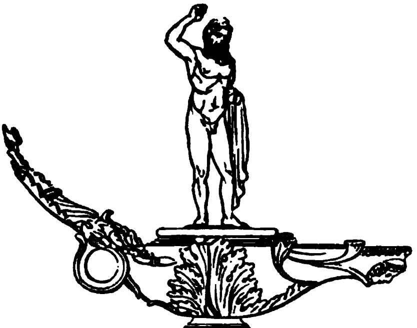
Lucerna. (*Mus. Borb.* iv. pl. 14.)

For the polymyxos cf. Mart. xiv. 41:

> "Illustrem cum tota meis convivia flammis,
> Totque geram myxas, una lucerna vocor;"

and see the woodcut Vol. I. p. 331.

The next woodcut, taken from the same work (vol. i. pl. 10), represents one of the most beautiful bronze lamps which has yet been found. Upon it is the figure of a standing Silenus.



Lucerna. (*Mus. Borb.* i. pl. 10.)

The lamps sometimes hung in chains from the ceiling of the room (Verg. *Aen.* i. 726; Petron. 30; Stat. *Theb.* i. 521), but generally stood upon

Lucerna. (*Mus. Borb.* vii. pl. 15.)

a stand. [CANDELABRUM.] Sometimes a figure holds the lamp, as in the annexed woodcut (*Museo Borbon.* vol. vii. pl. 15), which also exhibits the needle or instrument which served to trim the wick, and is attached to the figure by means of a chain. (Comp. Verg. *Moret.* 11, "Et producit *acu* stupas humore carentes.")

We read of *lucernae cubiculares, balneares, tricliniares, sepulcrales,* &c.; but these names were only given to the lamps on account of the purposes to which they were applied, and not on account of a difference in shape. The *lucernae cubiculares* were burnt in bedchambers all night. (Mart. xiv. 39, x. 38.)

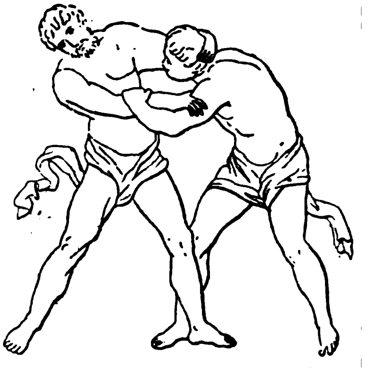
Perfumed oil was sometimes burnt in the lamps (Petron. 70; Mart. x. 38, 9). The sepulchral lamps were not merely placed and left, but were lighted as a pious duty. So in the following condition of freedom: "Saccus servus meus et Eutychia ancilla mea sub hac conditione liberi sunto, ut monumento meo alternis mensibus lucernam accendant et solemnia mortis peragant" (Dig. 40, 4, 44).

(Passeri, *Lucernae fictiles;* Birch, *Ancient Pottery,* ii. 277; Marquardt, *Privatleben,* 645; Becker-Göll, *Charikles,* iii. 86; *Gallus,* ii. 390.)

[W. S.] [G. E. M.]

LUCTA, LUCTATIO (πάλη, πάλαισμα, παλαισμοσύνη, or καββαλική), wrestling. The word πάλη is sometimes used in a wider sense, embracing all gymnastic exercises with the exception of dancing, whence the schools of the athletae were called *palaestrae;* that is, schools in which the πάλη in its widest sense was taught (Plat. *Legg.* vii. p. 795). [PALAESTRA.] There are also many passages in ancient writers in which πάλη and παλαίειν are used to designate any particular species of athletic games besides wrestling, or a combination of several games. (See Krause, *Gymnastik und Agonistik,* p. 400, note 2.)

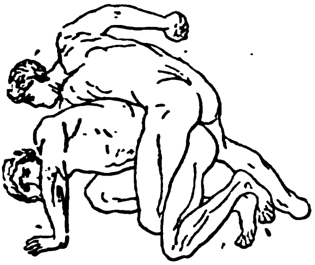
The Greeks ascribed the invention of wrestling to mythical personages, such as Palaestra, the daughter of Hermes (Apollod. ii. 4, § 9), Antaeus and Cercyon (Plat. *Legg.* vii. p. 796), Phorbas of Athens, or Theseus (Schol. *ad* Pind. *Nem.* v. 49). Hermes, the god of all gymnastic exercises, also presided over the πάλη. Theseus is said by Pausanias (i. 39, § 3) to have been the first who reduced the game of wrestling to certain rules, and to have thus raised it to the rank of an art; whereas before his time it was a rude fight, in which bodily size and strength alone decided the victory. The most celebrated wrestler in the heroic age was Heracles. In the Homeric age wrestling was much practised, and a description of a wrestling match is given in the Iliad (xxiii. 710, &c.; compare *Od.* viii. 103, 126, 246). During this period wrestlers contended naked, with the exception of the loins, which we covered with the περίζωμα (Paus. i. 44, 1) ζῶμα (*Il.* xxiii. 683), and this custom remain throughout Greece until Ol. 15 (= 720 B.C from which time the perizoma was no long used, and wrestlers fought entirely nake (Thucyd. i. 6, with the Schol. and Boeckh's no to *C. I. G.* i. p. 554, who shows that from t time of Orsippus (Paus. *l. c.*), i.e. 720 B.C. 632, runners put off the περίζωμα, but that was only a short time before the age of Thuc dides that those who contended in other depar ments of athletics put it off.) In the Homer age the custom of anointing the body for t purpose of wrestling does not appear to ha been known, but in the time of Solon it w quite general, and was said to have been adopt by the Cretans and Lacedaemonians at a ve early period (Thucyd. *l. c.*; Plat. *de Re Publ.* p. 452). At the festival of the Sthenia in Arg the πάλη was accompanied by flute-musi [STHENIA.]



Wrestlers with περίζωμα. (Krause.)

The contest in wrestling was divided by t ancients into two parts, viz. the πάλη ὀρθὴ ὀρθία (ὀρθοστάδην παλαίειν); that is, the fig of the athletae as long as they stood uprigh and the ἀλίνδησις or κύλισις (*lucta volutori* in which the athletae struggled with each oth while lying on the ground. Unless they co trived to rise again, the ἀλίνδησις was the la stage of the contest, which continued until o of them acknowledged himself to be conquer (ἀπαγορεύειν, ἀπειπεῖν). The πάλη ὀρθὴ appea to have been the only one which was fought the times of Homer, as well as afterwards in t great national games of the Greeks; and as so as one athlete fell, the other allowed him to ri and continue the contest if he still felt incline (Senec. *Ep.* 13, 2; Lucian, *Lexiph.* 5). But the same athlete fell thrice, the victory w decided, and he was not allowed to go (Senec. *de Benef.* v. 3; Aeschyl. *Eum.* 58 *Anthol. Gr.* vol. ii. p. 406, ed. Jacobs). As t winner of three falls, the victor was calle τριακτήρ (Aesch. *Ag.* 171); similarly one wh is not conquerable is ἀτρίακτος (*Choeph.* 338 The ἀλίνδησις was only fought in later times the smaller games, and especially in the pa cratium. The place where the wrestlers con tended was generally soft ground, and covere with sand (Xen. *Anab.* iv. 8, § 26; Lucia *Anach.* 2). Each of the various tribes of th

Greeks seem to have shown its peculiar and national character in the game of wrestling in some particular trick or stratagem, by which it excelled the others.

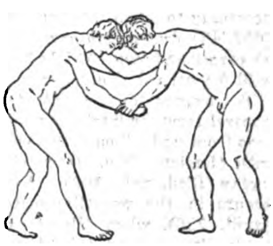


Wrestlers—ἀλίνδησις. (Krause.)

There were certain rules for wrestling (Plat. *Legg.* viii. 833 E; cf. Lucian, *Demon.* 49), *e.g.* that striking was not allowed, though pushing was quite fair (Plut. *Symposiac.* ii. 5; Lucian, *Anach.* 24; yet cf. *Ocyp.* 86). But within these laws all kinds of feints and tricks were practised; hence wrestling is called by Plutarch (*op. cit.* ii. 4) *τεχνικώτατον καὶ πανουργότατον τῶν ἀθλημάτων* (cf. Xen. *Cyr.* i. 6, 32). Well-trained wrestlers were not satisfied with merely effecting the defeat of their adversary, but always strove to display grace and elegance in their performances (Cic. *Orat.* 68, 228). Prior to the contest each combatant used to anoint the other, and rub him over with fine dust or sand (Ov. *Met.* ix. 35; Lucian, *Anach.* 1). The oil was useful to make the wrestlers more flexible and agile (*εὐτονώτερα*, *ib.* 24), and the dust to allow the adversary to get a grip, besides being advantageous to the wrestler himself in that it prevented him from perspiring too diffusely and from catching cold, as one is likely to do if exposed to the wind with one's pores open, and also in that it enabled the dirt to be more easily scraped off after the contest was over (*ib.* 29). There are a great many technical terms applied to different kinds of wrestling (Poll. iii. 155), which are set forth by Krause (*Gymnastik und Agonistik der Hellenen*, i. 400–430, also in his art. *Gymnastica*, § viii. in Pauly's *Realencyclopädie*, iii. 1006–1009) and Grasberger (*Erziehung und Unterricht*, i. 331–373), such as—

1. ἀκροχειρισμός. This consisted in one of the wrestlers, if he had very powerful hands, seizing the fingers of the other, and sometimes breaking them, thus compelling his adversary to give up (Artemid. *Oneir.* i. 60; cf. Aristot. *Eth. N.* iii. 1, 17). One athlete, Sostratus of Sicyon, from his success in this, was called ἀκροχειριστής (Paus. vi. 4, 1). This feature, however, as well as breaking the toes (Paus. viii. 40, 2), belongs mostly to the Pancratium [PANCRATIUM].

2. *δράσσειν* or *δράσσεσθαι*—a word for grasping, getting the "grip" (*λαβή*, *ἅμμα*). The primary method appears to have been this:—The wrestlers used to approach one another with upraised and extended arms, and take up a firm position of attack with the right leg advanced and the upper part of the body drawn somewhat back. Then each advanced his left leg till they were close together (*cum pede pes junctus*, Ov. *Met.* ix. 45, a position called by Plutarch, *l. c.*, *σύστασις* or *παράθεσις*), arched his neck and shoulders, contracted (*σφηκώσας*) his body as much as possible, and thus standing each tried to get his grip (Heliod. *Aeth.* x. 31; Ov. *Met.* ix. 33 ff.; Stat. *Theb.* vi. 850 ff. See also cut in Guhl and Koner, p. 267). The efforts to get the grip are vividly described by Statius in his account of the wrestling match between Agylleus and Tydeus (*ib.* 860): "Et jam alterna manus frontemque humerosque latusque Collaque pectoraque et vitantia crura lacessit Interdumque diu pendent per mutua fulti Bracchia," &c. In making these efforts to grasp one another, as each kept his body back as much as possible while he bent forward his head, the wrestlers often necessarily knocked their heads together (*συναράττειν τὰ μέτωπα*, Lucian, *Anach.* 1; "et frontem fronte premebam," Ov. *Met.* ix. 45). Cf. illustration No. 1589 in Baumeister's *Denkmäler*: but such "butting" was only incidental, and not, as Guhl and Koner say, a regular feature of the wrestling. Frequently both wrestlers took "body-grips" (*διαλαμβάνειν*), as in the wrestling-match in the *Iliad*, xxiii. 711. In that case, if one fell, the other did too, he who was uppermost being considered the victor in that fall. This is the meaning of *πίπτει δ' ἀσφαλὲς οὐδ' ἐπὶ νώτῳ* in Aesch. *Suppl.* 90. We have several illustrations of wrestlers grasping just above the waist, so as, either by extreme pressure or by dragging his adversary about, to force him to surrender (Krause in Pauly, p. 1006); or sometimes an arm and a shoulder are grasped.



Wrestlers getting the "grip" (δράσσοντες). (Krause.)

3. *ἄγχειν*, *ἀποπνίγειν*, choking. This was done either by throwing both arms round the neck, generally from behind (Theocr. xxv. 268; Philostr. *Imag.* i. 6, p. 384, Kayser) or by a very tight pressure in the middle of the body, as Hercules strangled Antaeus (*ἀράμενος τὸν Ἀνταῖον μετέωρον ἅμμασιν Ἡρακλῆς κλάσας ἀπέκτεινε*, Schol. to Plat. *Legg.* 796 A; Stat. *Theb.* vi. 897), or by the elbow pressed up under the chin (Lucian, *Anach.* 1), a method of strangling which is perhaps meant by *ἀγκωνίζειν*.

Wrestler—ἄγχων. (Hercules and Antaeus.) (Krause.)

4. *λυγίζειν* is a general term for the bending and twisting which is seen in all wrestling: cf. Hesiod, *Scut.* 302, *μάχεσθαι ἑλκηδόν*, which refers to wrestling.

5. *ἀγκυρίζειν* was some trick of "hooking" (*ἄγκυρα*, "a hook") the leg round the leg of the adversary. It differs according to Hermann

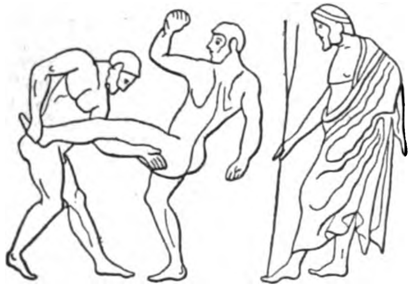
(*ap.* Grasberger, *op. cit.* i. 355) from ὑποσκελίζειν in this respect, that in the latter the tripping foot is not taken off the ground, while in ἀγκυρίζειν it is. But more probably ὑποσκελίζειν is a generic term.

6. ἐμβάλλειν, παρεμβάλλειν (Plut. *Symposiac.* ii. 4; Lucian, *Ocyp.* 60) was probably making a charge in front or on the side of the opponent: for we know that pushing was allowed. Cf. ῥάσσειν. ἀράσσειν.

7. παρακρούειν, to make a feint of grasping: cf. Stat. *Theb.* vi. 876, "fictumque in colla minatus Crura subit." The word is derived, according to *Etym. Magnum*, s. v. παρακρούεται (652, 48), ἀπατᾷ, ἀπὸ μεταφορᾶς τῶν παλαιστῶν οὐ καταβαλλόντων ἀλλ' ἐν ὥρᾳ παρακρουόντων ἢ ποδὶ ἢ χειρὶ καὶ οὐ ῥιπτόντων.

8. ὑποσκελίζειν, *supplantare.* This is a general term for "tripping up" or "taking the legs from under" one's opponent: cf. ὑφελὼν τὼ πόδε (Lucian, *Dial. Deor.* vii. 3), ὑπέσυρε τὰ σκέλη (Diod. xvii. 100). A special form of this occurs in the wrestling-match in the *Iliad* (xxiii. 726), when Ulysses strikes Ajax, probably with his heel, behind at the hollow of the knee (κώληψ). This appears to have been also called πτερνίζειν (cf. LXX. Gen. xxvii. 36). Another form consisted perhaps in pressing the right leg of the opponent inwards ἐν δὲ γόνυ γνάμψεν (Hom. *Il.* xxiii. 731). This the Scholiast calls παρακαταγωγή.

9. ἀνατρέπειν, the general word for "upsetting," which was the result of ὑποσκελίζειν (cf. Plat. *Euthyd.* 278 B). Plutarch (*l. c.* 5) speaks of περιτροπαί. The methods were various, *e.g.* grasping the opponent's leg and suddenly pulling it, lifting him clean off the ground (Lucian, *Anach.* 24).



Wrestlers—ἀνατρέπων. (Krause.)

10. στρέφειν. This consisted in one wrestler turning his adversary right round by suddenly springing on him. After the turn was effected, he generally leaped on his adversary's back (Ov. *Met.* ix. 52 ff.), twisting his legs tightly round his thighs (Hesych. *s. v.* πλίγμα); or grasped his adversary's sides low down round the stomach, raising him off the earth and crushing him with a violent pressure at the same time; or drove his elbow up under his chin to choke him (Lucian, *Anach.* 31). In Statius (*l.c.* 898), when Tydeus gets his adversary well raised up off the ground, he turned him obliquely (as in the cut under PANCRATIUM), let him fall, and falling along with him had an ἀλίνδησις on the ground (cf. Lucian, *Anach.* 1). The Argives were celebrated for this kind of sudden twist in order to get on the opponent's back, and were called by Theocritus (xxiv. 109) ἑδροστρόφοι = "cro buttock men." Cf. τὴν ἕδραν στρέφειν, Theop *Char.* x. (xxvii.).

11. κλιμακίζειν appears to mean that, after s denly turning his opponent round, the wrest clambered up his back, as it were up a ladd This is Hermann's not very satisfactory expla tion of ἀμφίπλεκτοι κλίμακες in Soph. *Trach.* 5 Krause (in Pauly, 996) says it is a rapid mo ment of the thigh, whereby the adversary thrown down. But this is far from definite, does not explain the origin of the term. Schol. explains it as ἐπαναβάσεις, παρὰ ἄνω καὶ κάτω αὐτοὺς στρέφεσθαι ἐν τῇ μάχῃ. this "being turned upside down" means be rolled over and over, the κλῖμαξ will be a spe of ἀλίνδησις. For further conjectures, see Gr berger, *op. cit.* i. 367–369.

12. διαλαμβάνειν, to seize round the mid (Aristoph. *Eq.* 262; Plut. *Ant.* 33); διαλ βάνων τοὺς νεανίσκους ἐτραχήλισεν (cf. Gr berger, *op. cit.* iii. 465).

13. τραχηλίζειν, to bend the neck ba Theophr. *Char.* x. (xxvii.): hence in the pass metaphorically used for "to be conquere Plut. *de Curios.* 521, 6.

In a diaetetic point of view the ἀλίνδησις w considered beneficial to the interior parts of t body, the loins, and the lower parts in gener but injurious to the head; whereas the ὀρθὴ was believed to act beneficially upon t upper parts of the body. It was owing to th salutary effects that wrestling was practised all the gymnasia as well as in the palaestr and that in Ol. 37 (= 632 B.C.) wrestling for bo was introduced at the Olympic games, and so after in the other great games, and at Athe in the Eleusinia and Thesea also. (Paus. v. § 9; Pind. *Ol.* viii. 68; Gell. xv. 20; Pl *Symposiac.* ii. 5.) The most renowned of all t Greek wrestlers in the historical age was M of Croton, whose name was known througho the ancient world (Herod. iii. 137; Strab. p. 263, &c.; Diod. xii. 9). Other distinguish wrestlers are enumerated by Krause (*Gymn.* 434 ff.). (To the works of Krause and Gr berger referred to, add Hermann-Blüm *Griech. Privatalterthümer,*[3] pp. 344, 345, a Iwan Müller's *Handbuch*, vol. iv. *Die Grie Privatalterthümer*, § 97, p. 451 c, where a copio bibliography is to be found.) [L. S.] [L. C. P.

LUDI is a general term comprising t various spectacles and contests of the circ and amphitheatre (*ludi circenses*), and those the theatre (*ludi scenici*) and stadium.

1. *Kinds of games.*—In their *legal aspect* w may divide the games into public and priva (*a*) *Public.* Originally the games were r ligious ceremonies, the two oldest being t Equirria [EQUIRRIA] and Consualia [CONSUALIA held in honour of Mars and Consus. B games were frequently vowed (*ludi votivi*) o the eve of or during times of war (for a lo list see Friedländer, *ap.* Marquardt, *Staat* iii. 476, note 7), especially to Jupiter (hen called *ludi magni, maximi*: Festus, s. v. *Magn Ludos*), which gradually came by custom to solemnised every year, and afterwards esta lished by law as annual (Liv. i. 35, 9) [LU ROMANI]. During the time of the Republ there were seven such games,—the *ludi R mani, Plebeii, Ceriales, Apollinares, Megalens*

Florales, *Victoriae Sullanae*. The first two were called *sacri*, because they had an *epulum* connected with them (Dio Cass. li. 1). These two, as well as the Apollinares, had also a day set apart for the *equorum probatio*. During imperial times many new games were added. The birthday feasts and games (*ludi natalicii*), celebrated in honour of the reigning emperors (called τὰ γενέθλια, whereas τὰ γενέσια were those celebrated in honour of dead emperors), were allowed by even the most modest of the Caesars, *e.g.* Antoninus Pius (see Capit. *Ant. Pii*, 5); but they seem to have been retained after death only for those emperors who were consecrated (*ib.* 13). Mommsen (in *C. I. L.* i. p. 380) derives from the Calendar of Philocalus (constructed 354 A.D.) a list of nineteen such birthday games as were celebrated at that date. These games were nearly always circensian, as were also those celebrated in honour of the day the emperor ascended the throne (*ludi natalis imperii*). Only in the case of Sept. Severus (Dio Cass. lxxviii. 8) were the latter games retained beyond the time of the reigning emperor (cf. Capit. *Pertinax*, 15). *Ludi votivi*, too, were often instituted after a war, *e.g.* the *ludi Parthici* (perhaps on Sept. 18, Trajan's birthday), instituted by Hadrian in celebration of Trajan's Parthian war (Dio Cass. lxix. 2, and Reimar *ad loc.*); and such are frequent in the Constantinian period, *e.g.* Ludi Alemannici (Oct. 5–10), Gothici (Feb. 4–9), Sarmatici (Nov. 25–Dec. 1), &c.; see a list in *C. I. L.* i. p. 376. (b) *Private.* Besides these *ludi publici*, there were *ludi privati*, especially *ludi funebres*. Though the whole people took part in them, still they are private games, as being given by private individuals and not by the state. The *ludi funebres* were celebrated on the ninth day after death, hence sometimes called *ludi novendiales* (Serv. *ad* Verg. *Aen.* v. 64). Gladiatorial exhibitions in the Forum were frequent at these games (indeed were not given elsewhere during republican times), in accordance with the old belief that human blood should flow over the grave of a dead man (Serv. *ad* Verg. *Aen.* iii. 67; v. 78). The beginning at Rome of gladiatorial contests, which came from Etruria and Campania, dates from the funeral games of D. Junius Brutus in 264 (Liv. *Epit.* xvi.; Mommsen, *R. H.* ii. 412). Exhibitions of gladiators were often ordered by will to be given at the funeral of the testator (Cic. *Vat.* 15, 37; *Sulla*, 19, 54; Hor. *Sat.* ii. 3, 84). Dramatic representations were also held at funeral games: *e.g.* the *Adelphi* was acted at the funeral games of Aemilius Paullus in 160 B.C. Generally the games only lasted one day, and only a few pairs of gladiators fought; but at the funeral of M. Aemilius Lepidus (Liv. xxiii. 30, 15), in 216 B.C., the games lasted three days, and twenty-two pairs of gladiators fought; at those of M. Valerius Laevinus, in 200 B.C., the games lasted four days, and twenty-five pairs fought (Liv. xxxi. 50, 4); while at those of P. Licinius in 183 B.C. the games lasted three days, and 120 gladiators fought (Liv. xxxix. 46, 2), a very large exhibition indeed (cf. Liv. xli. 28, 11). It was thought disgraceful for women to be present at *ludi funebres*, and P. Sempronius Sophus, consul in 268 B.C., sent a divorce to his wife because she attended funeral games (Val. Max. vi. 3, 12; Plut. *Quaest. Rom.* 267). Another kind of *ludi privati* were those given by people of high rank voluntarily, on occasions of great public rejoicing, such as Stella's games in 93 A.D. (Mart. viii. 78: cf. Pers. vi. 48). For giving such games, non-senators had to get permission from the senate (Dio Cass. lx. 23). These games were perhaps the *ludi honorarii* referred to by Suet. *Aug.* 32, for which thirty days in the year had been set apart. Augustus reconstituted these as working days. *Ludi honorarii* appear to have been most constantly given at the Liberalia (Fest. p. 102, and Müller's note). Private exhibitions, to which special invitations were issued, were often given by the emperors; such as the LUDI PALATINI, the JUVENALES. Such also, too, were given by Caligula (Suet. *Cal.* 54), Nero (Tac. *Ann.* xiv. 44), Commodus (Lampr. *Comm.* 8), Caracalla (Dio Cass. lxxix. 10), Elagabalus (Lampr. *Elag.* 23), &c.

In the Calendar of Philocalus (354 A.D.) several other public games are mentioned, devoted to gods, but they are of little importance. The principal are on Jan. 7 to Janus; April 1, to Venus Verticordia (Macrob. *Sat.* i. 12, 15); April 5, to Quirinus; April 8, to Castor and Pollux; May 29–June 1, Fabarici to the goddess Carna (Macrob. *Sat.* i. 12, 31; Ov. *Fast.* vi. 101 ff.); July 23–24, to Neptune (Tertull. *Spect.* 6); Aug. 5 (Cic. *Att.* iv. 1, 4), to Salus; Sept. 29–30, to the Fates; Oct. 19–22, to the Sun; Nov. 1, to Osiris and Isis (*C. I. L.* i. 405).

According to their *intrinsic nature*, the games may be divided (cf. Cic. *de Leg.* ii. 15, 38) into (1) *ludi circenses* [CIRCUS], which include both the races in the circus and the gladiatorial shows [GLADIATOR], and baitings of beasts [VENATIO] in the amphitheatre [AMPHITHEATRUM]; (2) the *ludi scenici*, or dramatic and spectacular shows in the theatre. [COMOEDIA; TRAGOEDIA; THEATRUM; HISTRIO; MIMUS; PANTOMIMUS.] To these are to be added (3) the Greek contests of musicians and athletes, strictly called *Agones*. The performances and performers of the first two kinds are sufficiently treated in the articles referred to. Here we must say a word on the *Agones*. These contests were first introduced into Rome by M. Fulvius Nobilior in 186 B.C. (Liv. xxxix. 22, 2). In 169 B.C. we are told that Aemilius Paullus gave similar shows at Amphipolis, in which the Romans were quite unversed (Liv. xlv. 32, 9–10). And at the triumph of L. Anicius Gallus in 167 B.C. it was attempted to give a musical exhibition, but the people made the performers box instead of playing the music: that was the only sort of ἀγών they understood (Polyb. xxx. 13). In the last century of the Republic we hear of Sulla (App. *B. C.* i. 29), Scaurus (Val. Max. ii. 4, 7), Pompeius (Dio Cass. xxxix. 38), Curio (Plin. *H. N.* xxxvi. § 120), and Caesar (Plut. *Caes.* 39) giving exhibitions of athletes. Such contests were not appointed to occur at regular intervals till imperial times. Then there were three principal *agones*: (1) the *Actia*; (2) the *Agon Neroneus*; (3) the *Agon Capitolinus*. The first two are described in the articles LUDI ACTIACI and QUINQUENNALIA. The *Agon Capitolinus* was established in 86 A.D. by Domitian (Suet. *Dom.* 4), and celebrated every fourth year in early summer (Herodian, vii. 8, 3; and Clinton, *Fasti Rom.* p. 252). It lasted till the end of antiquity (Friedländer, *S. G.* ii.^{3} 620–1), and even into modern times: for it was on Easter Sunday 1341, on the Capitoline hill, that Petrarch was crowned (Gregorovius, *Gesch. der Stadt Rom*, vi. 207–216; Gibbon, viii. 227, ed. Smith). It comprised contests in Greek and Latin poetry, Greek and Latin oratory (the subjects being the praises of Jupiter Capitolinus and Domitian, Quintil. iii. 7, 4; Suet. *Dom.* 4), and music, for which Domitian built a covered theatre (the Odeum) in the Campus Martius (Preller, *Regionen*, 169), and in the same place he built a stadium for the athletes who contended in boxing, wrestling, and the pancratium (Friedländer, *op. cit.* 616–620, an important collection of evidence). Originally there was a foot-race for girls (Suet. *l. c.*). The victors were crowned with oak-leaves (Mart. iv. 1, 6). For the other *agones*, which were mostly gymnastic, such as the *Agon Minervae* of Gordian, and the *Agon Solis* of Aurelian, see Friedländer, *op. cit.* 467.

2. *The Length of the Games.*—They originally lasted each only the portion of one day (Liv. xlv. 9, 4; Mommsen, *R. H.* i. 472). From one day they gradually increased during the Republic,—the Ludi Romani to 15, and after Caesar's death to 16, the Ludi Plebeii to 14, the Ceriales to 8, the Apollinares to 8, the Megalenses to 7, the Florales to 6, and the Ludi Victoriae Sullanae to 7: *i.e.* 66 in all. Of these the Ludi Romani had 5 *dies circenses*, the Ludi Plebeii 3, and the rest one each: *i.e.* 13 in all. (See the Calendar in *C. I. L.* i. and p. 377.) Various games were added during the Empire: in the time of M. Aurelius there were 135, and in 354 A.D., when the Calendar of Philocalus was drawn up, there were 175 (*C. I. L.* i. p. 378). Gradually, too, the whole of each day came to be filled up with events, beginning from early morning (Cic. *Fam.* vii. 1, 1; *Nat. Deor.* i. 28, 78; Suet. *Cal.* 26, *Claud.* 34), and continued on into the night (Suet. *Cal.* 18, *Dom.* 4; Tac. *Ann.* xiv. 20, xvi. 5) on a memorable occasion with living torches (Tac. *Ann.* xv. 44). Night festivals probably began with the Floralia (Ov. *Fast.* v. 361 ff.); and the part of the secular games celebrated at night was the most important. After 61 B.C. there was a pause in the middle of the day for the audience to get their dinner (Dio Cass. xxxvii. 46); and this period was filled up, at least in the case of the *circenses*, with the exhibition of inferior gladiators, the *meridiani*. It was during this pause for dinner on one of the days that the giver of the games feasted the people, if he did feast them; though sometimes the *epulum* lasted for more than one day (Vell. ii. 56). But we hear of viands being also brought into the circus and the theatre (Stat. *Silv.* i. 6, 28 ff.; Mart. v. 49, 9; cf. Suet. *Dom.* 4).

3. *Instauratio* (Macrob. *Sat.* i. 11, 5).—The anxious scrupulousness with which the Romans observed ritual is often insisted on (for examples, see Liv. v. 17, 2; xxxii. 1, 9; xli. 16, 1). So in the case of the games Cicero tells us (*de Harusp. resp.* 11, 23): "Si ludius constitit aut tibicen repente conticuit aut puer ille patrimus et matrimus si tensam non tenui aut lorum omisit aut si aedilis aut verbo au simpulo aberravit, ludi non sunt rite fac eaque errata expiantur et mentes deorum immortalium ludorum instauratione placantur. That is, that in any such case when th games were performed *non rite, non rect minus diligenter*, they had to be held ov again, either entirely or the ceremonies certain days were performed again. The stri phrase for the repetition of the games in the entirety was *ludi toti instaurati sunt*; that f the repetition of the ceremonies of certai days was *ludi* (*semel, ter, quinquies*, or *pe unum diem, per triduum, per quinque dies*) instaurati sunt.* See a long list of examples i Weissenborn on Liv. xxiii. 30, 16. Games s repeated were called *instaurativi* (Cic. *de Di* i. 26, 55). Sometimes the games were repeated as often as ten times, owing to fault purposely committed by the performers wh were interested. This was put a stop to b the Emperor Claudius, who forbade the Circenses to be renewed for more than one day with the most salutary results (Dio Cass. lx. 6). For further details on *instauratio*, see Ritschl *Parerga zu Plautus u. Terenz*, p. 311 ff.

4. *The Givers of the Public Games.*—(a *Consuls.* In order that they might be binding o the people, *ludi votivi* had to be administered by magistrate with the imperium, usually then by the consul (Liv. xxx. 2, 8; 27, 11; Cic. *pro Sest* 55, 117; Dio Cass. xlviii. 32, lvi. 1, lx. 23). Th Ludi Romani were administered by the consul till the appointment of the curule aediles in 366 B.C. After that the consuls had only the presidency in these games (Liv. viii. 40, 2, xlv. 1 6; Mommsen, *Staatsrecht*, i.^{2} 397). The fact was the giving of the games held out too great opportunities of bribery for the higher magistrate (Mommsen, *op. cit.* ii.^{2} 129). But in imperial times the consuls were appointed to administe the Ludi Actiaci on Sept. 2 (Dio Cass. lix. 20) the birthday of Augustus on Sept. 23 (*ib.* lvi. 49; cf. *C. I. L.* i. pp. 401–2), and probably many others (*ib.* p. 377). The shows o gladiators given by consuls elect date from the beginning of the second century A.D. (Dig. 35, 1, 36, pr.). The first evidence of the games given by the consuls on their *entry* into office, which became so important in the fourth century (*C. I. L.* i. p. 382), appears to be Fronto *ad Marcum*, ii. 1. But in the early Empire the consuls were expected some time or other during their year of office to give shows (cf. Epictet. *Diss.* iv. 10, 21); and though even in the time of Claudius this was considered a great burden (Dio Cass. lx. 27), the custom continued (*ib.* lxi. 6; Vopisc. *Aurel.* 12, 12). Alexander Severus lessened the expense of the consuls and defrayed part of it himself (Lamp. *Alex. Sev.* 43; Dio Cass. lxxx. 5). (*b*) *Aediles.* From the time of their appointment in 366 B.C., they were given the administration of the Ludi Romani (cf. Liv. vi. 42, 13), and gradually they had entrusted to them the administration of all the other games except the Ludi Apollinares, which were administered by the praetor urbanus (Liv. xxv. 12, 10), as were also the Ludi Piscatorii (Festus, *s. v.*). The Ludi Plebeii were held by the plebeian aediles, and so too were the Ludi

Ceriales. Cicero (*Verr.* v. 14, 36) indeed implies that the latter were celebrated by the curule aediles; but the Cerialia was the plebeian counter-feast to the Megalensia of the patricians (Gell. xviii. 2, 11; Mommsen, *Staatsr.* ii.^{2} 509). After 44 B.C. the administration of the Ludi Ceriales was most probably transferred from the curule aediles to the newly-appointed (Dio Cass. xlvii. 40) plebeian aediles Ceriales. The Ludi Megalenses and Florales were held by the curule aediles (Cic. *Verr.* l. c.; *Mur.* 19, 40; Liv. xxxiv. 54, 3; Dio Cass. xliii. 48). In 22 B.C. Augustus took the *cura ludorum* from the aediles and gave it to the praetors (Dio Cass. liv. 2), after which time any games given by the aediles were voluntary (*ib.* liv. 8; Capitol. *Gord.* 3). (*c*) *Praetors.* They had the charge of the Ludi Apollinares and Piscatorii during the Republic. But in imperial times we find the urban praetors (this is probably the meaning of *τῶν στρατηγῶν τῶν πάνυ* in Dio Cass. lxxviii. 22) administering the Ludi Megalenses (Juv. xi. 193, and Mayor's note), Florales (Suet. *Galb.* 6), and gladiatorial shows (Dio Cass. lv. 31). The Augustalia were administered by the praetor peregrinus (Tac. *Ann.* i. 15). A special praetor Parthicarius (Wilm. 1167) was appointed to superintend the Ludi Parthici of Trajan (Dio Cass. lxix. 2). Lots seem to have been cast as to which praetor should give the games (*ib.* lix. 14). The son of Symmachus was praetor urbanus when he gave his celebrated games (Symm. *Epist.* iv. 69). For the praetorian games of the post-Constantinian period at Constantinople, see Gothofred. *Paratitlon* to Cod. Theod. vi. 4, *init.* (*d*) *Quaestors.* Gladiatorial exhibitions during the Republic were confined to the private funeral games. In imperial times they were given as public games, and are strictly called *munera*, not *ludi*. In 47 A.D. we find the duty of giving these *munera* imposed on the quaestors in lieu of paving the streets (Suet. *Claud.* 24; Tac. *Ann.* xi. 22, xiii. 5). This was discontinued in 54 A.D., from which time till the age of Domitian (Suet. *Dom.* 4) it was only occasionally and voluntarily that the quaestors gave such shows. From the time of Domitian the *munera*, though fewer than the *ludi*, became, however, regular entertainments (Hirschfeld, *Verwaltungsgeschichte*, p. 177). In the time of Alexander Severus it was only the *quaestores candidati principis* who had to give the games at their own expense, and as a reward they were advanced at once to the praetorship (Lampr. *Alex. Sev.* 43). The rest got a subsidy from the treasury and were called *quaestores arcarii* (Lampr. *l. c.*; Mommsen, *Staatsr.* ii.^{2} 518, 522). (*e*) *Curatores.* The emperor in virtue of his consular power (Dio Cass. lx. 23)—for it was the consuls who gave extraordinary games (cf. Hirschfeld, *l. c.*)—often gave very brilliant games, which were administered by *curatores ludorum* or *curatores munerum*. The *procuratores munerum* (Wilm. 1235, cf. 1243), according to Mommsen (*op. cit.* ii.^{2} 911, notes 1, 2), were permanent officials, the *curatores* those appointed for a special occasion (Suet. *Cal.* 27; Tac. *Ann.* xiii. 31; Plin. *H. N.* xxxvii. § 45). For further, see Hirschfeld, *op. cit.* pp. 175–8.

5. ***The Cost of the Games*** (see especially Marquardt, *Staatsv.* ii.^{2} 85–87).—The cost of the games was defrayed partly by the state and partly by the giver of the games. The state part was called *lucar* [LUCAR], because it was originally the revenue from the produce of the sacred groves (*luci*), which was devoted to the games (Festus, *s. v.*; Plut. *Quaest. Rom.* 88, p. 285). For the *ludi votivi* a definite sum (*pecunia certa*) was voted (in Liv. xxxi. 9, 7, the sum is indefinite, and that is mentioned as an exceptional circumstance), usually 200,000 asses (cf. Mommsen in *Rhein. Mus.* xiv. p. 87), as it was also for the Ludi Romani till the Punic Wars (Dionys. vii. 71; Ascon. p. 142, Or.). In 217 B.C. the sum voted was 333,333⅓ asses (Liv. xxii. 10, 7). For the Ludi Apollinares in 212 B.C. the state gave 12,000 asses (Liv. xxv. 12, 12); in 51 B.C., for the Ludi Romani, 760,000 sesterces, for the Ludi Plebeii 600,000, and for the Apollinares 380,000 (see the Fasti Antiates in *C. I. L.* i. 328, 329),—sums which fell so far short of the actual amount expended that the magistrates who gave the games had to resort to the help of their friends and to extortions from the provincials to supply what was considered necessary (Liv. xl. 44, 11; Cic. *Q. Fr.* i. 9, 26). The people sometimes made subscriptions among themselves towards the expenses of the games: *e.g.* in 186 B.C. for the games of Scipio Asiaticus (Plin. *H. N.* xxxiii. § 138), in 37 and in 27 B.C. (Dio Cass. xlviii. 53, liii. 24); but such were unusual and did not go far. We know that Scaurus expended vast sums on the games he gave in 58 B.C. (Plin. *H. N.* xxxvi. § 113), and that Milo expended three patrimonies (Cic. *Mil.* 35, 95) in giving his extra-splendid games (*ad Q. Fr.* iii. 8, 6). The expense in fact was so enormous that in 28 B.C. no senator could take the aedileship (Dio Cass. liii. 2). Augustus did not allow one praetor to give more than another to the games (*ib.*); in 17 B.C. we find him allowing them to give three times the grant of the state (*ib.* liv. 17); in 7 A.D. the money paid to them for gladiatorial shows was withheld by the state (*ib.* lv. 31); but in the Ludi Augustales the tribunes were not allowed to defray the whole expense themselves (Dio Cass. lvi. 47; Tac. *Ann.* i. 15). The state always continued to make grants (cf. Spart. *Hadr.* 3), and sometimes advances to be repaid (Fronto, *Ep. ad Verum*, 6, 9); while in a somewhat opposite direction it tried to limit the expenses of the games (Suet. *Tib.* 34; Dio Cass. lxviii. 2; Capitol. *Ant. Pius*, 12). But the enormous sums expended on the games may be seen from what has been said about the games of Scaurus and Milo, from what Martial (v. 25, 10) tells us that the chariot-races sometimes cost 400,000 sesterces (4,000*l.* nearly), from the case of Symmachus, who though not one of the richest senators expended 2,000 pounds of gold (= 80,000*l.* about), and Justinian's games, which cost 288,000 solidi (= 220,000*l.* about). For further details, see Friedländer, *Sittengesch.* ii.^{3} 276–278.

The games accordingly were splendid. As a sample, take those which are elaborately described by Calpurnius, *Ecl.* vii., and commented on by Gibbon, ii. 58–60, ed. Smith; those given by Trajan, and described in Dio Cass. lxviii. 15; and the games of Symmachus, by Friedländer, *op. cit.* ii.^{2} 319 ff. For enactments on the games in the post-Constantinian period, see *Cod. Theod.*

xv. titles 5, 6, 7, 9, especially the latter on the expenses of the games.

6. *The Audience.*—In early times slaves were not allowed to attend the games (Cic. *Har. Resp.* 12, 26); nor were any strangers present except state-guests. But in later times slaves certainly as a matter of fact used to frequent the games (Columella, *R. R.* i. 8, 2; Dig. 21, 1; 65, pr.; 10, 3, 1–5; Juv. vi. 353), and also strangers (Ov. *A. A.* i. 173; Mart. *Spect.* 3). Apparently by law reserved seats were retained for the magistrates, *e.g.* consuls (Cic. *Att.* ii. 1, 4), praetors (Suet. *Nero*, 12), tribunes (Dio Cass. xliv. 4), priests and vestals (Arnob. *adv. Gentes*, iv. 35, an important passage), some of the public apparitors (Tac. *Ann.* xvi. 12), and many of the officially recognised collegia (Hübner, *ap.* Marquardt, iii. 471, note 7). The emperor had a regular closed-in box (*cubiculum*), which Trajan opened, so that he could be seen like any other spectator (Plin. *Panegyr.* 51; Suet. *Nero*, 12). The actual seats were doubtless corresponding to the rank of each individual; *e.g.* the curule magistrates had a *sella curulis*, the tribunes a *subsellium*, &c. It was a custom frequently practised to give a free seat in perpetuity to a distinguished man and to his descendants (Val. Max. iv. 4, 8; Cic. *Phil.* ix. 7, 16); this we find as early as 494 B.C. in the case of M. Valerius Maximus (*C. I. L.* i. p. 284; cp. Liv. ii. 31); and occasionally a curule seat was dedicated in memory of a great man after his death (Dio Cass. xliv. 6, liii. 30; Tac. *Ann.* ii. 83; *C. I. L.* vi. 912). Those who had reserved seats could transfer them to another for the performance (Cic. *Mur.* 35, 73), and in the time of C. Gracchus, on the occasion of a show of gladiators, we read that several of the magistrates erected seats which they tried to sell, encroaching on the space which the people ought to have enjoyed (Plut. *C. Gracch.* 12). If we may judge from the initials of names on the seats in the amphitheatre at Syracuse, it appears that seats could be sold for lengthened periods (Friedl. *ap.* Marq. iii. 473, note 1). Of course occasionally games were given by speculators to make money out of them, though such a course was looked on as sordid (Tac. *Ann.* iv. 62): in that case, nearly, if not all, the places were sold. But at the ordinary games there appears to have been three kinds of seats (Mommsen, *ap.* Friedl. *op. cit.* 472): (1) those reserved by the exhibitor to *give* to his friends or to those who had legal right to reserved seats; (2) the seats which he reserved to *sell* to such as wished to avoid the long waiting and severe crush (cf. Suet. *Cal.* 26) attendant upon trying to secure them; (3) the seats or rather places (for the mass of the spectators stood) which were open gratis to the public. The traffic in the second kind of seats was pretty considerable, and box-officers (*locarii*, Mart. v. 24, 9) doubtless derived a large income from buying up the reserved seats and selling them at a raised price. A noticeable feature about the audience at the games was the way the exhibitor thought it advisable often to give them presents. This he did by throwing them among the spectators to be scrambled for, such being called *missilia*: see Stat. *Silv.* i. 6, 10 ff. Fruits (Mart. xi. 31, 10), vegetables (Pers. v. 180; Hor. *Sat.* ii. 3, 182), and other eatables (Joseph. *Ant.* xix. 1, 3) were often thrown, but generally *tesserae*, which admitted to the most various kinds of pleasures (see Friedländer on Martial, viii. 78, 9). One of these tesserae which we have is marked *prandium* (Friedl. *ap.* Marquardt, iii. p. 476, note 3). Occasionally the presents were fastened to a string (*linea dives*), which was jerked up and down (Mart. viii. 78, 7). For the variety of articles scrambled for, see Suet. *Nero*, 11. We may well believe that the crush and violence were very great (Herodian, v. 6), and wise people left before the scrambling began (Suet. *Epist.* 74, 7; cf. Friedländer, *op. cit.* ii.^{5} 286–7).

Another point to be noticed was the opportunity the people took of giving free expression to their opinions in the theatre ("et, ubi plurima vulgi licentia, in circum ac theatra effusi seditiosis vocibus strepere," as Tacitus says, *Hist.* i. 72). In republican times much importance was attached to the manner in which public men were greeted in the theatre by the people (Cic. *Att.* ii. 19, 3; *Sest.* 54, 115). In imperial times we hear of the audience rising up when the emperor or a distinguished man entered, clapping (Suet. *Aug.* 56) or waving handkerchiefs (*oraria*, Vopisc. *Aurel.* 48) and vociferously addressing complimentary titles or good wishes (Suet. *Dom.* 13), often in a kind of song (Tac. *Ann.* xvi. 4; Dio Cass. lxxiii. 2). Of course there was the most clamorous outcry for the liberation of slaves or criminals who had made a good exhibition in the contests (Dig. 40, 9, 17, pr.), for the discharge of distinguished gladiators (Mart. *Spect.* 29, -3); and many a gibe was directed at unpopular people (Juv. v. 3, and Mayor's note; Tac. *Ann.* xi. 13), and even the emperor himself (Capitol. *Macrin.* 12; Tertull. *Spect.* 16). The people also made use of these occasions (as it was very difficult to refuse requests made in this way, Joseph. *Ant.* xix. 1, 4) to declare against laws (Dio Cass. lvi. 1; Joseph. *l. c.*), against detested ministers, *e.g.* Tigellinus (Plut. *Galb.* 17), Cleander (Herodian, i. 12, 5), Plautianus (Dio Cass. lxxvi. 2), and make many other appeals (cf. Tac. *Ann.* vi. 13; Plin. *H. N.* xxxiv. § 62; Suet. *Dom.* 13) and demonstrations (Cic. *Att.* xiii. 44, 1; Dio Cass. lxxv. 4). Indeed, these were pretty much the only occasions on which the feelings of the people could be expressed or gauged under the Empire; and the importance which was attached to this expression of the popular will may be seen from the fact that Titus, in order to carry out certain executions which he considered advisable, put people throughout the theatre to demand them (Suet. *Tit.* 6). See further in Friedl. *Sittengesch.* ii.^{5} 266–274. For the frantic excitement of the audience during the actual games, especially the chariot-races, see the passages quoted by Mayor on Juv. xi. 197, and Tert. *Spect.* 16; and for the tumults occasioned by the partisans of rival performers, see Friedländer, *S. G.* ii.^{5} 457 ff.

The spectators who were Roman citizens had to wear their toga at the games, and the higher ranks and magistrates appeared in official dress (Suet. *Aug.* 40). Augustus allowed the spectators to come in slippers, without boots, in summer, a permission revoked by Tiberius, but granted again by Caligula (Dio Cass. lix. 7). Cloaks (*lacernae*), which had by order of Domitian to be white (Mart. xiv. 137), could be worn over the *toga* in bad weather, but they were (at least in the reign of Claudius) laid aside on the entry of the emperor (Suet. *Claud.* 6). We are told that Caligula also allowed, besides cushions for the senators, the broad-brimmed Thessalian or Macedonian *causia* [CAUSIA] as a protection against the sun (Dio Cass. *l. c.*; Mart. xiv. 39), so that it seems the audience before 37 A.D. used not to wear anything on their heads. Domitian revived the old customs of theatrical etiquette, and compelled the audience to appear in white, forbidding coloured costumes (Mart. v. 8; 23, 1), though we still hear that the favourers of the different factions wore their colours (cf. Mart. xiv. 131). When owing to wind the awning (*velarium*) could not be used, the spectators were allowed to hold up umbrellas (Mart. xiv. 28). The *dissignator* (Plaut. *Poen.* prol. 18) was the official who directly saw that these regulations were observed, and he was responsible to the aediles (cf. Suet. *Aug.* 40).

7. *The Performers and the Performances.*—See the special articles referred to above, p. 85 *b*.

For the political and social aspects of the games, how in regard to them idleness took the place of strenuousness till the people were content to give up their rights and assemblies in return for *panem et circenses;* and the demoralisation spread among the community in various ways by the passion for these shows, as such subjects lie outside the sphere of Antiquities, we must be content to refer to Friedländer, *Sittengesch.* i.^{4} 468 ff., ii.^{3} 263 ff., 288, 391 ff.; and H. Schiller, *Geschichte der Röm. Kaiserzeit*, 244, 433 ff.

(Further, on the games generally, see Friedländer in Marquardt, *Röm. Staatsverwaltung*, iii. 462–475; also in his *Darstellungen aus der Sittengeschichte Roms*, ii.^{3} 263–289 (abbreviated *S. G.*); Mommsen in *Corpus Inscript. Lat.* i. pp. 293–412, esp. 375–381.) [L. C. P.]

LUDI ACTI'ACI or **A'CTIA** (Ἄκτια). Games celebrated to the Actian Apollo.

1. *At Rome.*—Though under this actual name there were not any games celebrated at Rome, still there were games in honour of the Actian Apollo. These were decreed at Actium by Augustus in 31 B.C. after his victory, and first held at Rome in 28 (Dio Cass. liii. 1). They consisted of horse-races among the patrician youths and men, gymnastic contests, and sometimes gladiatorial exhibitions. They were held every fourth year (Dio Cass. li. 19), and administered generally by one of the four chief colleges of priests in succession (*ib.* liii. 1), though sometimes by the consuls (Mommsen, *Res gestae d. Aug.* p. 42). Thus the first exhibition was held by the consuls, or rather by Agrippa alone (Dio Cass. liii. 2); but in 16 B.C. we find them celebrated by the Quindecimviri (*ib.* liv. 19). We are to suppose the celebration of 24 B.C. was held by the Pontiffs, that of 20 B.C. by the Augurs, that of 16 B.C. by the Septemviri Epulones, and so on in rotation till 13 A.D., when they were probably held for the last time (Mommsen, *l. c.*). The last recorded celebration is 9 A.D. (Plin. *H. N.* vii. § 158), and we do not hear of them again till 62 A.D., when they had been a considerable time discontinued (Tac. *Ann.* xv. 23). We find these games sometimes alluded to as *pro salute* (or *valetudine*) *Caesaris* (C. *I. L.* vi. 877): cf. ὑπὲρ τῆς ἐμῆς σωτηρίας (*Res gest. d. Aug.* v. 8–11, Greek) and Plin. *l. c.*; also *ludi pontificales* (Suet. *Aug.* 44), *i.e.* when they were held by the Pontiffs. That these games were celebrated to the Actian Apollo may be proved from the coin of C. Antistius Vetus of 16 B.C. (Eckhel, vi. 104; Mommsen, *Röm. Münzwesen*, p. 742). On one side is a sacrificing priest, with the inscription *pro valetudine Caesaris* S. P. Q. R.; on the other, Apollo sacrificing, with the inscription *Apollini Actio.* In Suet. *Tib.* 6 *Actiaci* is a mistake for *astici* (Mommsen, *Res gest.* p. 43).

2. *At Actium.* [See ACTIA.]

3. *In the Provinces.*—Similar quinquennial games seem to have been held in many provincial towns (Suet. *Aug.* 59): *e.g.* at Caesarea by Herod (Joseph. *Ant.* xv. 11, xvi. 9; *B. J.* i. 21, 8); also at Antioch and Alexandria (*C. I. G.* 5804). [L. C. P.]

LUDI APOLLINA'RES. These games were established in the year 212 B.C., in accordance with a prophecy of the old seer Marcius (*carmina Marciana*, Liv. xxv. 12, 2), and after an inspection of the Sibylline books (Macrob. *Sat.* i. 17, 27–29), on the motion of the praetor and decemvir *sacris faciundis*, P. Cornelius Rufus, to the god who warded off evil, Apollo. As nothing was yet decreed about their continuance, they were, for this first year at least, ordinary *ludi votivi.* They were at first, and continued to be, celebrated by the praetor urbanus (Liv. *l. c.* § 10; Cic. *Phil.* ii. 13, 31); thus we find them held by the praetor Lentulus in 60 B.C. (Plin. *H. N.* xix. § 23), Brutus in 44 B.C. (Cic. *l. c.*), Agrippa (Dio Cass. xlviii. 20). They were to a large degree a Greek festival. The decemviri s. f. sacrificed with victims after the Greek fashion; the state supplied the victims, and also gave 12,000 asses to recoup the expenses of the games, and the people aided with a small subscription (Liv. xxv. 12, 12–14). The next year the praetor L. Calpurnius Piso proposed that the games should be vowed each year (Liv. xxvi. 23, 3), and hence the Calpurnii have the head of Apollo on their denarii (Mommsen, *Röm. Münzwesen*, pp. 580, 626). After this they were celebrated every year, but till 208 B.C. on no definite day (Liv. xxvii. 23, 5–7). In consequence of a pestilence in that year, the praetor P. Licinius Varus voted that they should be held every year on a fixed day. That day was not "a. d. iii. Non. Quint." as Livy (*l. c.*) says, but "a. d. iii. Id. Quint," *i.e.* July 13 (Weissenborn *ad loc.*). This day always continued to be the last day on which these games were held. The number of days gradually increased from one till it finally reached eight, or perhaps nine. In 190 B.C. we find July 11 one of the days (Liv. xxxvii. 4, 4), and in 44 B.C. July 7 (Cic. *Att.* xvi. 1, 1; 4, 1). They were for the most part theatrical exhibitions from the very beginning (see the interesting story in Festus, s. v. *Thymelici*, p. 326 M.); it was at these games that the *Thyestes* of Ennius was acted (Cic. *Brut.* 20, 78); but sometimes there was a *venatio* (Plin. *H. N.* viii. § 53; Cic. *Att.* xvi. 4, 1), and Dio Cassius (xlviii. 33) speaks of ἡ τῶν Ἀπολλωνείων ἱπποδρομία. In the Apollinarian games held by Agrippa in 40 B.C., two days were given to the games of the circus, during one of which the *Ludus Trojae* was exhibited (Dio Cass. xlviii. 20). In all the calendars these games are entered as beginning on July 6, except in that of Philocalus (354 A.D.), according to which they are given as beginning on the 5th: perhaps an additional day was added in the fourth century. (See generally Preller, *Röm. Mythologie*, 269–271.) [L. C. P.]

LUDI AUGUSTA'LES. [AUGUSTALES.]

LUDI CAPITOLI'NI. Livy (v. 50, 4) tells us that in the year 390 B.C., after the defeat of the Gauls, on the motion of Camillus a decree of the senate was passed that *Ludi Capitolini* should be instituted, inasmuch as Jupiter, the best and greatest, had preserved his settlement and citadel in a serious crisis, and that the dictator M. Furius should appoint for that purpose a collegium, consisting of those who dwelt in the Capitol and citadel (cf. Liv. v. 52, 11). As being administered by a collegium, the Capitoline games were like the Circensian games of the Fratres Arvales (cf. Henzen, *Acta Fr. Arv.* p. 36 ff.). After 384 B.C., when Marius Capitolinus was condemned, a motion was brought before the people that no patrician should dwell in the citadel or the Capitol (Liv. vi. 20, 3), so that from this time only plebeians could be members of this collegium.

For the guild of the Capitolini, cf. Cic. *Q. Fr.* ii. 5, 2. They had *magistri* of their own (Henz. 6010, where as well as in the passage of Cicero they are found associated with the Mercuriales: cf. 6011). Preller (*Röm. Myth.* 202) thinks this is a very old festival in honour of Jupiter Capitolinus, so old that it was attributed to Romulus (cf. Tert. *Spect.* 5). Mommsen (on *C. I. L.* i. 805 = Henz. 6011) shows that these collegia of Capitolini and Mercuriales were *pagi within the city*, both having a substantive and independent constitution for religious purposes. A curious ceremony was performed at these Capitoline games, from a supposed connexion of the Capitoline games with a triumph of Romulus over Veii; or, as Mommsen (*R. H.* i. 340) holds, with the capture of Veii by Camillus in 396 B.C. An old man who was considered to represent the King of Veii was led through the Forum to the Capitol, dressed in regal attire and wearing a bulla suspended from his neck; and a herald accompanying him proclaimed the "sale of the Sardians," because the Veientines being Etruscans were supposed to have come from Sardis in Lydia (Plut. *Quaest. Rom.* 53 = p. 227; Festus, s. v. *Sardi venales*). Hence was supposed to be derived the proverb *Sardi venales, alius alio nequior* (Cic. *Fam.* vii. 24, 2), but that is more correctly referred to the great number of slaves acquired by the Romans when Tiberius Gracchus conquered Sardinia in 177 B.C. (Liv. xli. 17; Aurel. Vict. 57; Mommsen, *R. H.* ii. 199). [L. C. P.]

LUDI CERIA'LES. [CERIALIA.]

LUDI COMPITALI'CII. [COMPITALIA.]

LUDI FLORA'LES. [FLORALIA.]

LUDI FU'NEBRES. [LUDI, p. 85 *a*.]

LUDI HONORA'RII. [LUDI, p. 85 *b*.]

LUDI JUVENA'LES. [JUVENALES.]

LUDI LIBERA'LES. [BACCHANALIA.] (These must not be confounded with the LIBERALIA.)

LUDI MAGNI. [LUDI, p. 84 *b*.]

LUDI MARTIA'LES or rather **MARTIS ULTO'RIS.** The temple to Mars Ultor was dedicated on Aug. 1, 2 B.C., in the Forum Augusti (Dio Cass. lx. 5). The dedication of the temple and celebration of games to Mars Ultor held on May 12 (Fasti Maffeiani in *C. I. L.* i. p. 305; Ov. *Fast.* v. 597) refer to the temple provisionally erected in the Capitol in 20 B.C. (Dio Cass. liv. 8): cf. Mommsen in *C. I. L.* i. 393. These games were celebrated annually (Dio Cass. lx. 5) by the consuls (*ib.* lvi. 46). Senators had the privilege of contracting for the horses used in these games (*ib.* lv. 10). A naumachia was given on the occasion of the dedication of the temple (Vell. ii. 100); also *ludi sevirales*, i.e. evolutions of the six turmae of cavalry, each with its *sevir* at its head (Dio Cass. *l. c.*). There appears to have been occasionally a *venatio* (*ib.* lvi. 27). [L. C. P.]

LUDI MEGALENSES. [MEGALESIA.]

LUDI NATALI'CII. [LUDI, p. 85 *a*.]

LUDI PALATI'NI. After Augustus died, Livia and Tiberius had dedicated an altar to the Numen of Augustus (Plin. *H. N.* xii. § 94). We know from the Fasti Praenestini (in *C. I. L.* i. p. 312; cf. p. 385) that on January 17 the Pontiffs, Augurs, Quindecimviri, and Septemviri sacrificed victims on this altar. On Jan. 21, 22, and 23, theatrical exhibitions were held in a private theatre erected in front of the palace. These exhibitions were strictly private, and only the highest nobles and their families invited (Dio Cass. lvi. 46, lix. 16; Joseph. *Ant.* xix. 1, 11; Tac. *Ann.* i. 73). In the year Caligula was murdered there was just for that year an extra day added, viz. Jan. 24 (ix. Kal. Febr.): cf. Suet. *Cal.* 56, 58; Dio Cass. lix. 29; Joseph. *l. c.* In the Calendar of Philocalus (354 A.D.) the 23rd was removed and the 17th to 19th added (*C. I. L.* i. pp. 384 and 385). [L. C. P.]

LUDI PISCATO'RII. We know that the fishermen and the divers of the whole bed of the Tiber formed a corporation (Wilmanns, 1737). To them probably refer the *ludi piscatorii* held each year on the 7th of June across the Tiber by the praetor urbanus (Festus, *s. v.*; Ov. *Fast.* vi. 235–240). [L. C. P.]

LUDI PLEBE'II. These were certainly held in the Circus Flaminius (Val. Max. i. 7, 4), and are mentioned as early as 216 B.C. (Liv. xxiii. 30, 17). Now as the Circus Flaminius was built in 220 B.C. (Liv. *Epit.* xx.), we may assign the establishment of the Ludi Plebeii to the same date, and also the *Jovis epulum* on the Ides (for all Ides are sacred to Jupiter) which is connected with these games (Liv. xxv. 2, 10; xxvii. 3, 9). This is a more probable view than that of Cicero, who (*de Orat.* iii. 19, 73) makes the Epulum Jovis to exist in the time of Numa, or that of the Pseudo-Asconius (p. 143, 12), who supposes the Ludi Plebeii to have been established either after the expulsion of the kings, or after the secession of the plebs. (See Marquardt, *Staatsverw.* iii. 349.) We find from the Calendar of Philocalus (354 A.D.) that the Ludi Plebeii lasted till the fourth century; cf. also Lampr. *Alex. Sev.* 37. The date of them was originally Nov. 15 (the *Equorum probatio* being on the 14th), just as that of the Ludi Romani was Sept. 15 (*C. I. L.* i. 401). They were celebrated by the plebeian aediles; and already in 207 B.C. they lasted for more than one day (Liv. xxviii. 10, 7). In some early calendars, *e.g.* the Fasti Maffeiani, they are put down as lasting from Nov. 4 to Nov. 17: in the Calendar of Philocalus, from Nov. 12 to 16 (*C. I. L. l. c.*). That plays were acted at the Ludi Plebeii is proved from the didascalia to the *Stichus* of Plautus (Ritschl, *Parerga zu Plaut.* p. 261). [L. C. P.]

LUDI PONTIFICALES. [LUDI ACTIACI.]

LUDI ROMANI. These games (the chief Roman festival) were in honour of Jupiter (Festus, s. v. *Magnos Ludos*), and are said to have been established by Tarquinius Priscus on the occasion of his conquest of the Latin Apiolae (Liv. i. 35, 9); though Dionysius (vii. 71) and Cicero (*de Div.* i. 26, 55) refer the establishment to the victory over the Latins at Lake Regillus. At first they lasted for one day only; a second day was added on the expulsion of the kings in 509 B.C. (Dionys. vi. 95), a third after the first secession, 494 B.C. (Liv. vi. 42, 12). From the year 191 to 171 they lasted ten days (Liv. xxxvi. 2, xxxix. 22, 1; Mommsen, *Röm. Forsch.* ii. 54), and shortly before Caesar's death they appear to have been a fifteen-day festival (Cic. *Verr.* i. 10, 31), Sept. 5 to 19. After Caesar's death a day was added (Cic. *Phil.* ii. 43, 110): this day must have been Sept. 4. For Cicero says (*Verr.* ii. 52, 130) that there was an interval of 45 days from the Ludi Romani to the Ludi Victoriae Sullanae on Oct. 26. Accordingly, Sept. 19 in the time the Verrines were composed must have been the last day of the Ludi Romani (*C. I. L.* i. 401); and so it appears in the Calendars of the Augustan time, the days of the games being Sept. 4 to 19. There was the *Epulum Jovis* on the 13th, and the *Equorum probatio* on the 14th. The games in the circus lasted from the 15th to the 19th. In the Calendar of Philocalus (354 A.D.) they run from Sept. 12 to 15. The celebration was in the hands at first of the consuls, afterwards of the curule aediles.

But we must not suppose that these games were regularly established as annual from the beginning. Games, as we have seen, in many cases began from a vow made by the commander, and were celebrated as a special festival after his triumphal procession. As the army, however, used to go forth as a general rule each summer, it became customary when it returned in autumn to celebrate such games, though connected with no triumph, and though no signal victory had been gained. But still in all cases they were celebrated as extraordinary games, and not as games regularly established by law. They were *sollemnes*, "customary," but had not yet become *annui* ("sollemnes, deinde annui mansere ludi Romani magnique varie appellati," Liv. i. 35, 9); for we must remember that *sollemnes* need not mean anything more than "customary." Livy indeed in the passage quoted identifies the two kinds, the *ludi magni* and the *ludi Romani*, and so do Cicero (*Repub.* ii. 20, 35), Festus (*l. c.*), and Pseudo-Asconius (pp. 142–3, Or.); but in all his other books Livy observes a distinction which has been pointed out by Ritschl (*Parerga zu Plautus*, &c. p. 290), that *ludi magni* is the term applied to extraordinary games originating in a vow (*ludi votivi*), while *ludi Romani* is that applied to the games when they were regularly established as annual (*ludi stati*). The latter term, i.e. *ludi Romani*, is first used by Livy in viii. 40, 2 (see Weissenborn *ad loc.*); and after that the terms varied according as the games are *stati* (e.g. x. 47, 7; xxv. 2, 8) or *votivi* (xxii. 9, 10; 10, 7; xxvii. 33, 8; xxxvi. 2, 2; xxxix. 22, 2, &c.; Suet. *Aug.* 23). The distinction drawn by Ritschl is to be considered proved. But when was the fixed festival, the *ludi Romani*, definitely established as annual?

Most probably, says Mommsen (*Röm. Forsch.* ii. 53; cf. *R. H.* i. 472), on the occasion of the first appointment of the curule aediles in 367 B.C., who were to be the *curatores ludorum sollemnium* (Cic. *Leg.* iii. 3, 7). For in the oldest Roman calendars which date from the time of the Decemvirs (cf. Mommsen, *Die röm. Chronologie*, &c. p. 30) these festivals are not engraved in capitals but in small characters, therefore are additions (*C. I. L.* i. 361) made after 449 B.C.; also in 322 B.C. the ludi Romani are mentioned as a regular annual festival (Liv. viii. 40, 2): accordingly the final establishment of these games must lie between these dates; and the year 367 B.C., when so many changes were effected, and when we are told a day was added to these games and curule aediles appointed to superintend them, seems the most reasonable to assume.

Yet Livy and the other authors who identify the ludi magni and Romani are not altogether in error: for the arrangement of the two kinds of games was similar. An incidental proof of this is that when Pompeius established *ludi votivi* in 70 B.C., they lasted for fifteen days (Cic. *Verr.* i. 10, 31), like the ludi Romani; and we find similar sums, viz. 200,000 asses, bestowed for both ludi magni and ludi Romani (Pseud.-Ascon. p. 142; Dionys. vii. 71). The actual ludi Romani consisted of first a solemn procession, *pompa* [CIRCUS]: then a chariot-race, in which each chariot in Homeric fashion carried a driver and a warrior, the latter at the end of the race leaping out and running on foot (Dionys. vii. 72; and cf. Orelli, 2593, where a charioteer is spoken of as *pedibus ad quadrigam*). This is a practice confined to the ludi Romani. In the exhibitions of riding, each rider had a second horse led by the hand (Festus, *s. v. Paribus Equis*), as it appears the Roman horsemen in early times were in the habit of using two horses in battle (cf. Gran. Licinian. lib. xxvi.), like the Tarentini in Greek warfare (Liv. xxxv. 28, 8). Such riders were called *desultores* (Liv. xxiii. 29, 5). Originally, in all probability, there was only one contest of each kind, and only two competitors in each contest (Liv. xliv. 9, 4), as "may be inferred from the circumstance that at all periods in the Roman chariot-race only as many chariots competed as there were so-called factions; and of these there were originally only two, the white and the red" (Mommsen, *R. H.* i. 236, note). These few events allowed further minor exhibitions, such as boxers, dancers, competition in youthful horsemanship (*ludus Trojae*), &c. It was allowed that the wreath the victor won (for this in Greek style was the meed of victory) should be put on his bier when dead (Twelve Tables, 10, 7, and Mommsen's remarks, *Staatsrecht*, i.^{2} 411, note 2). During the festival, too, the successful warrior in real warfare wore the spoils he had won from the enemy, and was crowned with a chaplet. After the introduction of the drama in 364, plays were acted at the ludi Romani, and in 214 B.C. we know that *ludi scenici* took up four days of the festival (Liv. xxiv. 43, 7). In 161 B.C. the *Phormio* of Terence was acted at these games.

(The chief work on the ludi Romani is Mommsen's article *Die ludi magni und Romani* in his *Römische Forschungen*, ii. 42–57 = *Rheinisches Museum*, xiv. 79–87. Compare also his *Roman History*, i. 235–237 (where the Greek influences on the Roman games are traced), 472, 473; and Friedländer in Marquardt's *Staatsverwaltung*, iii. 477, 478.) [L. C. P.]

LUDI SAECULA'RES. *Saeculum*, like so many words expressing time in Latin (*annus*, *mensis*, *dies*, Censorin. *De die natali*, 19, 22, 23), has a twofold meaning. There is the *saeculum civile* and the *saeculum naturale*. In the years 363 B.C. and 263 we find a recognition of the *saeculum civile* in the appointment of a dictator *clavi figendi causa*—a custom which originated probably in 463 B.C., when a grievous plague attacked Rome (Liv. iii. 6, 2; Dionys. ix. 67, 68), and a testimony to the irresistible force of fate was made by driving a nail (*clavus*), the symbol of Destiny, into the wall of the cella of Minerva on the Capitol on the Ides of September (Liv. vii. 3, 6; Mommsen, *Röm. Chron.* 175). The *saeculum naturale* was not, says Censorinus (238 A.D.) in his *locus classicus* on the meaning of the word (*op. cit.* chap. 17), ever established by the Romans, though they fixed the *saeculum civile* at 100 years. But its significance can be gathered from the celebration of certain games, which in later times indeed were called *Ludi saeculares*, but in early times *Ludi Terentini*. This *Terentum* (from *terere*) was a volcanic cleft in the Campus Martius, at which even under the monarchy the gens Valeria sacrificed dark victims to Dis and Proserpina (cf. Mart. x. 63, 3, "Romano Terento"). Valerius Maximus (ii. 5, 2: cf. Zosimus, ii. 1) tells a story of a certain Valesius who got his sons cured of a serious illness by giving them water from the Tiber boiled over this cleft; and these sons saw in the sleep that restored them to health a vision which ordered the sacrifice of dark-coloured victims to Dis and Proserpina on an altar to be found in the Terentum, and the celebration of lectisternia and nocturnal games for three nights in their honour. The altar was found deep buried, the sacrifice was offered, and from this sacrifice date the Ludi Terentini. We are told that P. Valerius Poplicola, first consul, in a case of pestilence offered the same sacrifice and held the same games, and thereby saved the state (Val. Max. *l. c.*). But this latter is a very old mistake, due to the confusion of the first consul with the L. Valerius Poplicola, consul in 449 B.C. For though we cannot be certain of any celebration of these games in 349 B.C., we have the most distinct evidence for their being held in 249 B.C. Varro (*ap.* Censorinus, *op. cit.* 17, 8) says of this year: "Cum multa portenta fierent, et murus ac turris, quae sunt inter portam Collinam et Esquilinam, de coelo tacta essent et ideo libros Sibyllinos xvviri adissent, renuntiarunt, ut Diti patri et Proserpinae ludi Terentini in campo Martio fierent tribus noctibus et hostiae furvae immolarentur, utique ludi centesimo quoque anno fierent." (Here, too, we should notice what St. Augustin, *de Civ. Dei*, iii. 18, says of these games, deriving his knowledge probably from Varro: "Jam vero Punicis bellis instaurati sunt ex auctoritate librorum Sibyllinorum ludi saeculares quorum celebritas inter centum annos fuerat instituta. Renovarunt etiam pontifices ludos sacros inferis et ipsos abolitos annis retrorsum melioribus.") The next celebration was not in 149 B.C. but in 146 (Censor. *op. cit.* 17, 11, who quotes contemporary authorities, Piso, Gellius, and Hemina). In the year 49 B.C. religion was silent amid the turmoil of the civil war; and the games were not solemnised till the well-known celebration of Augustus in 17 B.C. But why in this year?

There were many Greek myths (Lobeck, *Aglaoph.* 791 ff.) of certain ages of the world—the golden age, the silver age, &c.—mixed up with astronomical theories of the whole order of the universe beginning anew when the planets returned to their original positions after what was called a *magnus annus*. The same series of people would reappear on earth and repeat again the various exploits of their lives (cf. Verg. *Ecl.* 4, 34 ff.). Among these myths was one that the cycle began anew after four periods of 110 years each. (Cf. Probus *ad* Verg. *l. c.*; and Varro, *op.* St. Augustin, *de Civ. Dei*, xxii. 28: "Genethliaci quidam scripserunt esse in renascendis hominibus quam appellant παλιγγενεσίαν Graeci: hanc scripserunt confici in annis numero quadringentis quadraginta ut idem corpus et eadem anima quae fuerint conjuncta in homine aliquando eandem rursus redeant in conjunctionem.") Again, there was an influence from Etruria. Just as at Rome at the end of every five years there was a propitiatory offering made to the gods for the people, so in Etruria a similar sacrifice was made at the beginning of what they considered a *saeculum*, i.e. that space of time which embraced even the longest life. The propitiatory offering was made for all alive at the time: when that whole race had passed away, the gods signified that the cycle was over by sending prodigies, and a new sacrifice had to be offered (Censorin. *op. cit.* 17, 5). The first four *saecula* of the Etruscans lasted 100 years each, the fifth 123, the sixth and seventh 119 (Varro, *ap.* Censorin. *l. c.*): so that something over 100 years was the average *saeculum*. The definite Greek theory that the *saeculum* lasted 110 years was taken up by the Quindecimviri (Censor. *op. cit.* 17, 9: cf. "undenos decies per annos," Hor. *Carm. Saec.* 21), and in the interests of Augustus they proceeded to invent celebrations for 456 B.C., 346, 236, 126, Augustus's games being celebrated in the last year of the *saeculum*, 17 B.C. (cf. Mommsen, *op. cit.*, note 363, p. 185). The contemporaries of Augustus, however, Livy (cxxxvi. *ap.* Censor. *op. cit.* 17, 9) and Verrius Flaccus in Festus (s. v. *Saeculares Ludos*), adopt the theory of the *saeculum* being 100 years. The successors of Augustus celebrated the secular games according to different kinds of computation. Claudius, says Gibbon, did not treat the oracle with implicit respect. He celebrated the games, "which none had ever seen before," in the 800th year of the city (47 A.D.), with an actor who had taken part in the secular games of Augustus (Plin. *H. N.* vii. § 159). Domitian celebrated them in 841 of the city (=87 A.D.), six years too early if they were to be 110 years after those of Augustus.

(For this somewhat famous celebration, see Fast. Capitol. in *C. I. L.* i. p. 442; Suet. *Dom.* 4; Tac. *Ann.* xi. 11; Mart. iv. 1, 7, x. 63, 3; Stat. *Silv.* i. 4, 17, iv. 1, 37; Eckhel, vi. 383.) Antoninus Pius in the year 900 of the city (147 A.D.) celebrated them (Aurel. Vict. *Caes.* 15, 4), while Sept. Severus held them 220 years after Augustus in 204 A.D. The last celebration was in the 1000th year of the city (247 A.D.) by the Emperor Philip (Eutrop. 9, 3; Eckhel, vii. 323-4). It may be that Gallienus in 257 A.D. (Eckhel, vii. 409, viii. 22) held them as an extraordinary solemnity in a period of great trouble (Trebell. Pollio, *Gall.* 5), and Maximian in 304 A.D. certainly intended to hold them (*ib.* viii. 20), but does not appear to have carried out his intention: so from Philip's time we may say that the secular games disappear till they were revived in the Middle Ages as the Popish Jubilees instituted by Pope Boniface VIII. in 1300 (Gibbon, i. 327, 328; viii. 217, ed. Smith).

The *Ludi Terentini*, then, and their continuation, the *Ludi Saeculares*, are not a really genuine Roman ceremony. They rest on reference to the Sibylline books (Zosim. ii. 4; Varro, *ap.* Censor. *op. cit.* 17, 8; Hor. *Carm. Saec.* 5), are celebrated by the Quindecimviri (Hor. *Carm. Saec.* 70; Tac. *Ann.* xi. 11) outside the pomoerium (that the gods of the lower world might not be brought inside the city), the gods honoured are not Roman, and the Roman antiquarians considered the solemnities to be derived from Etruria (Censorin. *l. c.*: "Dein quod Etrusci quorum prima saecula centenum fuerant annorum etiam hic ut in aliis plerumque imitari voluerunt Romani"). It was as Magister of the College of Quindecimviri that Augustus celebrated the games with M. Agrippa as his colleague (Mommsen, *Res gestae d. Aug.* pp. 91-93; Eckhel, vi. 102).

The rites of the celebration are given by Zosimus (ii. 5), who also quotes *verbatim* the Sibylline oracle ordering the celebration. His account is in many points confirmed by coins, and is as follows: Heralds summoned the people to the spectacle they had never seen before and never would see again (cf. Herodian, iii. 8, 10). Then in the Capitoline temple of Jupiter and the Palatine temple of Apollo the Quindecimviri gave to all present (slaves were excluded) purificatories (*καθάρσια*, *suffimenta*), consisting of torches, sulphur, and bitumen; and in the same temples, and that of Diana on the Aventine, wheat, barley, and beans were given to the people to make an offering with (cf. Eckhel, vi. 387, for medals with the inscriptions *Suf(fimenta) p(opulo) d(ata)* and *A Pop(ulo) Frug(es) ac(ceptae)*, &c.), though Zosimus says these were to be given to the actors in the games. Then began the feast, which lasted three nights and three days. Offerings were made to Jupiter, Juno Lucina, Apollo, Latona and Diana, the Fates, Demeter (Tellus, Hor. *Carm. Saec.* 29), Pluto and Proserpina. On the first night at the second hour the emperor, with the assistance of the Quindecimviri, sacrificed to the Fates, at the Terentum, on the border of the Tiber, three rams on three altars, letting the blood flow all over the altars and then thoroughly burned the victims. A stage is then erected, the people light torches, a newly-composed hymn is sung, and splendid shows are exhibited: for the oracle said (l. 34) that the grave was to be mingled with the gay. On the next day a sacrifice was made on the Capitol of white bulls to Jupiter and a white cow to Juno, in accordance with the oracle (ll. 12, 15), and then in the theatre there were dramatic representations in honour of Apollo. On the second night a white pig and a white sow were sacrificed to Tellus, in accordance with the oracle (l. 11), and dark victims offered to Dis and Proserpina (Varro, *ap.* Censor. *op. cit.* 17, 8; Festus, s. v. *Saeculares Ludos*). On the second day the matrons offered supplications and sang hymns to Juno on the Capitol; and on the third day in the Palatine temple of Apollo there was a sacrifice of white oxen (Hor. *Carm. Saec.* 49), and thrice nine noble boys and maidens whose parents were still alive (*ἀμφιθαλεῖς*, *patrimi ac matrimi*) sang hymns in Greek and Latin for the preservation and prosperity of the Roman empire. Such a hymn was called *Carmen Saeculare*, and we still possess the hymn which Horace wrote for the celebration of the games by Augustus.

On the secular games generally, consult Mommsen, *Die römische Chronologie bis auf Cäsar*, pp. 172-194 (chapter on the *Saecula*); K. L. Roth, in the *Rheinisches Museum*, viii. (1853), pp. 365-376; Preller, *Römische Mythologie*, 469-478; Marquardt, *Staatsverwaltung*, iii. 370-378. [L. C. P.]

LUDI SEVIRA'LES. [LUDI MARTIALES.]

LUDI TAU'RII were of a similar nature, and due to a somewhat similar origin as the Ludi Saeculares. They were instituted to the gods of the lower world, according to Festus (s. v. *Taurii*, p. 350 M. The absurd interpretation given by Varro on p. 351 may be discarded), in the reign of Tarquinius Superbus, when a great pestilence fell on pregnant women, owing to the sale of bulls' flesh among the people. Other interpretations of the name are that it is from *taura* or *taurea*, a barren cow, which was sacrificed to Proserpina, or that the games were instituted by the Sabines that a pestilence which had attacked them might be turned on the bulls which they sacrificed (Serv. on Verg. *Aen.* ii. 140). At these games there was a chariot-race in the circus (Varro, *L. L.* v. 154). We hear of their being celebrated *religionis causa* for two days in 186 B.C. (Liv. xxxix. 22, 1). [L. C. P.]

LUDI TERENTI'NI. [LUDI SAECULARES.]

LUDI VICTO'RIAE CAE'SARIS or VE'NERIS GENETRI'CIS. These were first celebrated in 46 B.C. by Julius Caesar on the dedication of the temple of Venus Genetrix, voted at the battle of Pharsalia, which took place on Sept. 24 (*C. I. L.* i. 397); but they appear in the Calendars as being celebrated in July, from the 20th to the 30th. This is due to the introduction of the Julian Calendar, according to which July 23, 24 would correspond to Sept. 24, 25 (*C. I. L.* l. c.). They are called *Ludi Victoriae Caesaris* by the Fasti Maffeiani and Amiternini, by Matius Calvena in Cicero, *Fam.* xi. 28, 6, and Suet. *Aug.* 10; but *Ludi Veneris Genetricis* by App. *B. C.* iii. 28, Plin. *H. N.* ii. § 93, Senec. *Quaest. Nat.* vii. 17, Dio Cass. xlix. 42. But Victoria was identified with Venus Genetrix (Varro, *L. L.* v. 62; Gell. x. 1, 7; Preller, *Röm. Myth.* 389, 707; Mommsen in *C. I. L.* i. 397). These games were administered by a special collegium (Suet. *l. c.*; Plin. *l. c.*; Jul. Obseq. 68 [128]). [L. C. P.]

LUDI VICTO'RIAE SULLA'NAE were established by Sulla in 82 B.C. The original day was the Kalends of November, the date of the victory at the Colline Gate; but afterwards the games lasted from Oct. 26 to Nov. 1 inclusive. They were called Ludi Victoriae Sullanae by Velleius (ii. 27) and the Fasti Sabini (*C. I. L.* i. p. 302), to distinguish them from the Ludi Victoriae Caesaris. They do not appear in the Calendar of Philocalus (354 A.D.). [L. C. P.]

LUDI VOLCANA'LICI. The coins of 20 B.C., stamped *Mars Ultor* and *Volkanus ultor* (Eckhel, vi. 96), would seem to point to these games being established after the recovery of the standards from the Parthians; but the Fasti of the Augustan age do not mention them. These games were abolished by Macrinus, but soon renewed, owing to a religious feeling among the people that they ought to be restored, which was confirmed by the burning of the amphitheatre (Dio Cass. lxxviii. 25). They were celebrated in the temple of Vulcan outside the city (Plut. *Quaest. Rom.* 47 = p. 276) on the 23rd of August (*C. I. L.* i. 400). [L. C. P.]

LUDUS LITTERA'RIUS (*διδασκαλεῖον*), a school.

1. **In Greece.**—The education of children in Homeric times is not definite enough to come under our subject: it may, however, be noted that the sons of princes are represented in Homer as being trained under some instructor, not only in martial exercises, which would correspond to the palaestric course in later times, but (to take the instance of Achilles) also in something answering to rhetoric, under Phoenix (*Il.* ix. 414), whom Plutarch (*de Educ. Lib.* 12) calls *παιδαγωγὸς Ἀχιλλέως*, and in music and medicine under Chiron. The latter being represented to us as an instructor of boys away from their homes, may be said to give the earliest hint of anything like school teaching. Passing to historical times, we must draw a general distinction between Doric and Ionic races. In Doric states (for instance, Sparta and Crete) there was much gymnastic and little mental training. A boy at Sparta was taken from his parents' control at seven, and his subsequent training was supervised by the Bidiaei, under whom (with the real management) was the Paedonomus [Bidiaei; Paedonomi]. This referred, however, only to bodily exercises and chorus-singing. The state took no heed of literary education, and, if any was to be gained, it was a private concern of the parents. Many no doubt learned to read and write, and acquired some amount of simple arithmetic; but even this was far from being universal. In the *Hippias Major*, p. 285 C, it is said that few Spartans knew any arithmetic. Music, however, all learnt, the cithara and flute, and especially singing in chorus.

In Ionic states more attention was paid to literary culture. It is a question how far even among Ionians literary schools were ordered or controlled by the state, and it is still more doubtful whether they received state payment, or rather it is tolerably certain that the cases in which they did so may be regarded as exceptional. There is, however, abundant evidence of the importance attached to schools in Ionian states, even in early times. Herodotus (vi. 27) mentions a school of 120 boys at Chios in the year 500 B.C.; and so important was school education regarded, that, when the Athenians went to Troezen during the occupation of Athens by Xerxes, special provision was made to supply teachers there (Plut. *Themist.* 10). That education was regarded as a necessity appears even more clearly in the decree of the Mitylenaeans, given by Aelian (vii. 15), that the punishment of disobedient allies should consist in the prohibition of schools. Diodorus (xii. 12) tells us that Charondas (between 600 and 500 B.C.) passed laws for Thurii to the effect that all boys should have literary teaching at the public expense (*χορηγούσης τῆς πόλεως τοὺς μισθοὺς τοῖς διδασκάλοις, ὑπέλαβε γὰρ τοὺς ἀπόρους ἀποστερήσεσθαι τῶν καλλίστων ἐπιτηδευμάτων*). This is important testimony as to state regulation and state payment, if it can be accepted as authentic history. Most scholars deny that these laws are genuine, though others (as Göll) do not altogether reject them. It is to be feared that their date must be regarded as uncertain. As regards later times in Greece, it is clear from Polybius xxxi. 17 that there was state payment for education at Rhodes, since the Rhodians devoted a gratuity of Eumenes, king of Pergamus, to that purpose; and we learn from an inscription at Teos that in the last century B.C. there was in that island a payment for three *γραμματοδιδάσκαλοι* to teach boys and girls fixed at 600, 550, and 500 drachmas, two for the gymnastic school at 500 and a musical teacher at 700: a rich man of the place, Polythrus, had given the state 34,000 dr. to further the education of the poor (Hirschfeld, *Hermes*, ix. 501; Fränkel's note on Boeckh, *Staatshaush.* ii. 35*). We may pass from Greece in general to Athenian education, as the most important branch of the subject, and that on which we have most information. It does not appear that there was any state payment of schools at Athens before the Roman Imperial age, when Hadrian endowed chairs of rhetoric and philosophy (Gibbon, v. 91, ed. Smith). As regards state control, there was certainly a law of Solon fixing an obligation on parents and guardians to provide for the education of boys (Plat. *Crit.* 50 D). The neglect of this duty was noticed by the Areopagus, and brought at least some public stigma. There is no evidence of any penalty, and Becker thinks that it was merely an injunction, and that the only consequence of neglect was that the parents lost the right of claiming support from their children (cf. Aeschin. *Timarch.* § 13). The passage in Plato, *Legg.* vii. p. 804 C, is a Utopian scheme, not a statement of existing institutions. On the other hand, there is the question whether the public officers, the Sophronistae and Epimeletae, exercised any functions of inspection which would give the state a control. It is usual to think that they had nothing to do with schools (*διδασκαλεῖα*), though something with the gymnasium (see Göll on Becker's *Charikles*, ii. 56). And this agrees with Aristot. *Pol.* v. (or viii.) 1 (= p. 1336), where Aristotle desiderates public superintendence of education rather than leaving it in private hands, "*as it is now*": but Curtius (*Hist. of Greece*, ii. 385) believes the Sophronistae to have been appointed about 459 B.C. (at the same time as the Nomophylaces), to take over that part of the Areopagitic duties which related to orderly public life, and especially to the education of the young. And Fränkel, in the note mentioned above, cites a decree of Eleusis, which praises Dercylus for his efforts as *στρατηγὸς* in the cause of education; and this seems to imply some kind of state interference. Whether, however, state officials controlled and inspected schools or not, there is no doubt that feeling and custom made some considerable amount of literary education universal for boys at Athens. For girls there were no schools; what they did learn was from their mothers or from female slaves, and consisted chiefly in useful works, such as spinning: that sometimes at any rate they learnt to read and write may be gathered from Dem. *c. Spud.* pp. 1030, § 9, and 1034, § 21.

School period.—At the age of six, when the boy was strong enough to do without a woman's care, he was entrusted to a *paedagogus* [PAEDAGOGUS], who conducted him everywhere,—to school, to the palaestra, &c.,—carrying his books and other school requisites. (Cf. Plat. *de Leg.* vii. 808 D, who says that, if animals have caretakers, of course the boy must, "being the most unmanageable of all animals.") There is a kindlier notice of the genus schoolboy and his progress to school in Lucian, *Am.* 44, which is worth quoting: *ὄρθριος ἀναστὰς ἐκ τῆς ἀζύγου κοίτης τὸν ἐπὶ τῶν ὀμμάτων ἔτι λοιπὸν ὕπνον ἀπονιψάμενος ὕδατι λετῷ καὶ χιτωνίσκον καὶ χλανίδα ταῖς ἐπωμίοις περόναις συῤῥάψας ἀπὸ τῆς πατρῴας ἑστίας ἐξέρχεται κάτω κεκυφὼς καὶ μηδένα τῶν ἀπαντώντων ἐξ ἐναντίου προσβλέπων, ἀκόλουθοι δὲ καὶ παιδαγωγοί*, . . . carrying tablets, books or lyre." It is true that in the same author we find *σκυθρωπὸς ὥσπερ οἱ εἰς διδασκαλεῖα φοιτῶντες*, and of the severe discipline of cane and rod we have evidence from Arist. *Nub.* 972, Xen. *Anab.* ii. 6, 12, &c. The school began early in the morning and ended at sunset, according to Solon's law (Aesch. *Timarch.* § 12; cf. Plat. *Legg.* vii. 808 B; Thuc. vii. 29); but there was an interval for the *ἄριστον* at mid-day (Lucian, *de Parasit.* 61). In grammar schools the Musea was a school festival (see Theophrast. 26 and Jebb's note). And there were holidays at great festivals, so much so that in the month Anthesterion there was comparatively little school-time (Theophrast. 22).

Subjects.—The regular school course (*ἐγκύκλιος παιδεία*) was intended to convey, besides mere reading and writing, a knowledge of the poets, and proficiency in music and gymnastics. In the Socratic age some mathematical training was added, and at least a knowledge of simple arithmetic was universally imparted (*Hippias Maj.* 285 B; Plat. *Legg.* vii. 819 C). This mere reckoning, however, was taught mainly at home by means of a calculating table [ABACUS; LOGISTICA]; and accordingly Aristotle (*Pol.* v. or viii. 1) speaks of three usual subjects, *γράμματα*, *γυμναστική*, and *μουσική*. (In Plato *μουσικὴ* would include *γράμματα*.) The elementary reading lesson was sometimes made easy and attractive by methods like those of the modern *Kindergarten*, the use of ivory letters, &c. (Cf. Plat. *Legg.* vii. 819 D.) Grasberger cites from Philostratus (*Vit. Soph.* ii. p. 240) a device of Herodes, who gives to a weak pupil twenty-four companions named from the letters of the alphabet, *ἵνα ἐν τοῖς τῶν παίδων ὀνόμασι τὰ γράμματα αὐτῷ μελετῷτο*. For the method of teaching writing, see Plat. *Protag.* 326 D. The literary course consisted of reading and explaining the best poets (Plat. *Protag.* l. c.), such as Homer, Hesiod, Theognis, Phocyllides; but of these especially Homer. In Xen. *Symp.* 3, 5, Niceratus says, "My father, to make me a good man, compelled me to learn all the poems of Homer, and now I could say by heart the whole Iliad and Odyssey." (Cf. Dio Chrysost. *Or.* xi. 4.) This poetical training was intended to impart a knowledge of mythology and philosophy (especially through the *γνῶμαι*), as well as taste and power of expression. Of course time was freer, since there was no language, natural science, or history to be learnt.

To this literary course was sometimes added special teaching in tactics and strategy for those who looked to a military career (Plat. *Euthydem.* 273 C; Xen. *Mem.* iii. 1), and drawing was taught before the time of Aristotle (*Pol.* l. c.), having been, according to Pliny, introduced by Pamphilus (the teacher of Apelles) first at Sicyon, whence it spread over Greece, and was regarded for all sons of citizens a most important branch of education—slaves might not learn it (Plin. *H. N.* xxxv. § 77). It was chiefly correct outline drawing without colour, on boxwood tablets. The musical teaching began at 12 or 13, and was so ordered that the pupils might appreciate and accompany lyric poetry. Aristotle, in the book cited above, says that, while the literary education and the drawing are useful for the mind, music is to be maintained on the ground that, though of no practical use, it provides a noble and liberal employment of leisure. It should be observed that the instrument taught was the lyre: the flute, a favourite instrument at Thebes, and once commonly learnt at Athens, was tabooed, except for professionals, about the time of the Peloponnesian war. Aristotle (*l. c.*) gives reasons for this. The *διδασκαλεῖα* lasted till *ἥβη*, *i.e.* till 16; and afterwards for those of the richer classes, who wished for advanced learning, came the schools of the rhetoricians and Sophists, who taught various departments of knowledge. Curtius (*Hist. of Greece*, ii. 414) remarks that "the training was for life in general: the palaestra lessons fitted them for military exercises: power of judgment and readiness of speech came from their poetic studies: the music learnt at school was useful in social meetings, where the lyre passed from hand to hand." And it is easy to see that the literary course above described qualified the Athenians to take an intelligent and critical interest in their great dramas, and indeed in literature and art generally, such as was possible for no other nation as a whole in ancient or modern times; though there is some justice in the remark of Professor Mahaffy, that the development of the system led to elegant trifling and intellectual idleness (*Social Life in Greece*, 335). Such questions, however, need not be enlarged on here. They belong rather to Greek history.

Place of Education.—The schoolroom itself was called *διδασκαλεῖον* or *παιδαγωγεῖον* (Dem. *de Cor.* p. 313, § 258; Pollux, iv. 19, 41); also *φωλεόν*, or *φωλεός*. Hesychius gives curtly the combination of meanings *φωλεόν· διδασκαλεῖον· ἢ οὗ τὰ θηρία κοιμᾶται*. Some indeed maintain that the *παιδαγωγεῖον* was only an ante-room, where the paedagogi sat and waited; but Grasberger (vol. ii. 207) remarks that it was unlikely that so poor a school as that of Elpias would have an ante-room, and cites Philostr. *Vit. Soph.* ii. 263, to show that the paedagogi sat with their charges. In Roman times certainly we have Remmius Palaemon, as paedagogus, learning more than the schoolboys from the lesson (Suet. *Gr.* 23). Some schools had not even one room, but were held in the open air, as by Dionysius the younger (Gell. xxi. 5); cf. *Anth. Gr.* xi. p. 437:

> *αἰάζω Διότιμον ὃς ἐν πέτρῃσι κάθηται*
> *Γαργαρέων παισὶν βῆτα καὶ ἄλφα λέγων.*

But this is only in the case of the very poor: even the father of Aeschines is described by Demosthenes as in a schoolroom, and Demosthenes contrasts that establishment with the respectable (*προσήκοντα*) schools to which he went himself. The boys sat on benches (*βάθρα*), the master on a chair (*θρόνος*). See the rather unattractive picture in Liban. iv. p. 868, where we are told that the master "sits aloft, like a dicast, with an awful frown and an expression of implacable wrath, before which the pupil must tremble and cringe." In the vase-picture given below, we see the various departments, each group representing a class: (1) repetition of poetry; (2) music lesson on the lyre (where both teacher and pupil sit, and both have laid aside the *himation* to give free play to the arms); (3) the writing master with a tablet (or possibly a master correcting an exercise); (4) a singing lesson, where the master is not *teaching* the forbidden flute (see above), but giving a note from it. On the walls are articles of the school apparatus,—book-roll, tablets, lyre, geometrical instrument (?), drinking vessel, basket for books. It is a disputed question whether the seated spectators are government inspectors, paedagogi or parents, and the question is so impossible to decide, that the picture unfortunately cannot be made an argument for the presence of any one of the three at the lesson.

Athenian School. (From the Duris Vase.)

Payment.—The poor status of the Athenian schoolmaster (*γραμματιστής*) is sufficiently indicated by the line *ἤτοι τέθνηκεν ἢ διδάσκει γράμματα* (Meinek. *Fr. Incert.* 453 = Zenob. *Cent.* iv. 17). He was ill-paid, and often did not receive his payment at all (Dem. *c. Aphob.* i. p. 828, § 46; cf. Theophrast. 22). This does not apply to the Sophists in the more advanced school, who were able to charge as much as 100 minae for their complete course to each pupil (see Boeckh, *Staatshaus.* i. 154): and the chairs founded in later times by Hadrian had a stipend of 100 minae a year attached to them.

2. ROMAN.—At Rome, education, though not made obligatory by any law, was always, so far as our knowledge extends, considered of importance. In early days, however, the father himself generally taught his son. ("Erat autem antiquitus institutum ut a majoribus disceremus . . . suus cuique parens pro magistro erat." Plin. *Ep.* viii. 14: cf. Plaut. *Most.* i. 2, 42.) So Servius Tullius is said to have been taught by king Tarquin (Cic. *de Rep.* ii. 21, 37); and of Cato the elder it is said, as part of his conservatism, *αὐτὸς μὲν ἦν γραμματιστής, αὐτὸς δὲ νομοδιδακτής, αὐτὸς δὲ γυμναστὴς* to his own son (Plut. *Cat. Maj.* 20). This old training no doubt consisted much in living with the father and learning his business of public life; but there was also direct instruction in reading, writing, and arithmetic (*i.e.* reckoning), and in saying by heart the twelve tables which formed a sort of catechism to the Roman of the old school. Thus Cicero says, "discebamus pueri xii tabulas ut carmen necessarium;" though he adds with regret, "quas jam nemo discit." But it of course often happened that the father wanted either the ability or the inclination to teach his son, and so arose the custom of wealthy parents employing educated slaves or freedmen as private tutors at home. Livius Andronicus, late in the 3rd century B.C., was so employed by Livius Salinator: Augustus so employed the freedman Verrius Flaccus to teach his grandsons; and in some cases, when the teacher was a slave, his master let him teach a class of outsiders and so made a profit (Plut. *Cat. Maj.* 20). For this private tuition in early times, see also Plaut. *Bacch.* iii. 1, 27. It is probable, however, that even in the earliest times there were schools to which those who could neither teach themselves nor provide competent slaves as teachers, sent their children, boys and girls alike. Plutarch (*Rom.* 6) represents Romulus and Remus as learning at a school at Gabii *ὅσα χρὴ τοὺς εὖ γεγονότας*, and, in less purely legendary times, there is no reason to discredit the account of Virginia going to school (Liv. iii. 44), or of the schools at Falerii (Liv. v. 44) and Tusculum (Liv. vi. 25) early in the 4th century B.C.

Against this has by some been adduced the passage of Plutarch (*Quaest. Rom.* 59), which states that Spurius Carvilius was the first person who opened a school (*γραμματοδιδασκαλεῖον*) at Rome, B.C. 231: but Plutarch probably only means that Carvilius was the first *grammaticus* or teacher of the more advanced literary schools, which came in along with the influence of Greek literature, and be does not thereby negative the elementary schools mentioned by Livy (and indeed by himself elsewhere) as existing much earlier. It is necessary therefore to distinguish (1) *litterator*, or *magister litterarius* (=γραμματιστής), the elementary schoolmaster; (2) *grammaticus* (also *litteratus*), a more advanced teacher; (3) *rhetor*. This distinction explains Apul. *Flor.* 20: "prima cratera *litteratoris* ruditatem eximit, secunda *grammatici* doctrina instruit, tertia *rhetoris* eloquentia armat." So Augustin. *Confess.* i. 13, 1: "adamaveram litteras, non quas *primi magistri*, sed quas docent qui *grammatici* vocantur." Private teachers were employed in later as in older times, by many men of high station, but still, except the imperial family, it was common for those of the highest rank to send their sons to schools. Thus we find Sulla sending his son Faustus to the school in which Cassius also was being educated (Plut. *Brut.* 9); and Ausonius, a man of the highest rank in the state, recommends school education in a passage cited below. The question whether home or school education is to be preferred is discussed by Quintilian (*Inst. Or.* i. 2), with a result in favour of the latter, and the arguments on either side have a striking resemblance to those which are used at the present day.

Place.—The elementary schools and those of the *grammatici* were usually in a verandah partly open to the street, and the schoolroom is accordingly called *pergula* (see Marquardt, *Privatleben*, 93, note), *taberna*, or *porticus* (Suet. *Gr.* 18; Juv. xi. 137; Liv. iii. 44, vi. 25; Eumen. *pro Inst. Schol.* 20). Hence the noise of teaching and of punishing was audible through the street and annoying to the neighbours (Mart. xii. 57, &c.). Boys and girls were taught in the same school, as is shown alike by passages such as Mart. viii. 3, ix. 68; Ovid. *Trist.* ii. 369, and by old paintings which have been discovered.

School-time.—The school began early, even before dawn, when "nondum cristati rupere silentia galli" (Mart. ix. 68); so that the boys brought lamps with them (Juv. vii. 226): there was a break for the prandium (Lucian, *de Pras.* 61), after which the school was continued. Each boy was accompanied from his home by his paedagogus, or slave (who acted as a sort of private tutor, both in regard to control and not unfrequently in teaching), also called *custos* (Juv. vii. 218; cf. Hor. *Sat.* i. 6, 81), and by an inferior slave called *capsarius*, carrying the books and tablets, the "custos angustae vernula capsae" of Juv. x. 117, who is to be distinguished from the paedagogus. (Cf. Suet. *Ner.* 36, and Mayor's note on Juv. *l. c.*) Juvenal in *Sat.* vii. 222 ff. describes for us the schoolroom (which was, as was said above, generally in a sort of verandah); the busts of the poets blackened by smoke from the scholars' lamps, the master seated on his chair (*cathedra*), while his class stood before him or sat on benches (*subsellia*). We hear also of wall-maps in a remarkable passage of Eumenius, a teacher at Autun at the end of the 3rd century: "The boys should have daily before their eyes on the walls all lands and seas, all cities and peoples, comprehended under our empire: for the name and position of places, the distances between them, the source and outflow of rivers, the coast-line with all its seaboard, its gulfs and its straits, are better taken in by eye than ear" (*pro Instaur. Schol.* 20; cf. Propert. v. 3, 37). There were also tables of authors and of dates hung up (see Marquardt, *Privatleben*, 109).

Discipline.—That this was generally severe may be seen from the line of Juvenal (i. 15), "et nos ergo manum ferulae subduximus," and from the abundant illustration given by Professor Mayor on that passage. Zonaras mentions that the prince Arcadius was flogged by Arsenius without apparently any objection from the Emperor Theodosius. Arsenius, however, seems to have been a private tutor, teaching only the emperor's children. Quintilian (i. 3, 14) argues against corporal punishment altogether. On the other hand, prizes were given to encourage the industrious — some valuable or prettily got-up book: "praeposito praemio quod virtus auferret. . . . Is erat liber aliquis antiquus, pulcher aut rarior" (Suet. *Gr.* 17). Grasberger (ii. 335) cites an inscription found near the Porta Salaria about Q. Sulpicius Maximus, who at the age of 11½ won a prize against fifty-two competitors for Greek verses about Phaethon. Prizes are mentioned also at Athens in the Roman period for the best ἐγκώμιον or essay. Few passages will better give an idea of a Roman school than Idyll iv. which Ausonius (once tutor to Valentinian's sons, but afterwards a count of the empire and consul) addresses to his grandson, just going to school (line 27):

"Tu quoque ne metuas, quamvis schola verbere multo
Increpet, et truculenta senex gerat ora magister.
Nec matutinis agitet formido sub horis,
Quod sceptrum vibrat ferulae, quod multa supellex
Virgea, quod fallax scuticam praetexit aluta,
Quod fervent trepido subsellia vestra tumultu.
Haec olim genitorque tuus, genetrixque secuti
Securam placido mihi permulsere senectam."

Schooltime and Holidays.—The Roman school year began on March 24th, after the Quinquatria, when the new boy brought his entrance-fee (*Minerval*, see Tertull. *de Idol.* 10; Juv. x. 116, and Mayor's note). Sometimes the money for the whole previous year was brought then (Juv. vii. 242), but (as appears from Hor. *Sat.* i. 6, 72) it was usually paid each month; and this is prescribed by an edict of Diocletian (*C. I. L.* iii. 831). The regular holidays or vacation were the week at the Saturnalia in December and the five days at the Quinquatria in March, but there was also a holiday on each *nundinae* (Varr. *ap.* Non. 133; Suet. *Gr.* 7), and at the time of the important games. This is indeed a very much shorter estimate of holidays than that which Marquardt gives (*Privatl.* 43), of *four months'* continuous holidays in the summer! But his view cannot be accepted. He bases it on two well-known passages: (1) Hor. *Sat.* i. 6, 75, from the reading, "Ibant *octonis* referentes Idibus *aera*;" (2) Mart. x. 62, "ferulae . . . cessent et idus dormiant in Octobris." As regards the first passage, there is little doubt that we should read *octonos*, *aeris*, which must have been the reading of Schol. Cruqu., "Hoc est singulis idibus referebant octonos asses aeris," and of Acron, "Octonis (*-os?*) numos pro mercede, octonos asses aeris, quia ante Idus mercedes dabantur." For the expression we may compare Cic. *pro Rosc. Com.* 10, 28, "duodecim aeris," and Plin. *H. N.* xiv. § 16, "octonis aeris vendere." Horace is contrasting with Rome the countrified school where boys carried their own books instead of having a *capsarius*, and paid a very small sum. Martial, even if the passage were taken to convey a fact, would not convey what Marquardt postulates, since the poet represents the schools as going on at any rate in July, and therefore expressly excludes the *four* months. But in truth Martial makes no statement: bored by the noise of a neighbouring school, doubly tiresome in hot weather, he is expressing a wish, which he never expects to be fulfilled. There is therefore nothing in these passages to discredit the plain inference to be drawn from the manner in which the Quinquatria and Saturnalia are spoken of as the *principal* holiday-times for schoolboys, though neither lasted more than a week.

Subjects.—The school life began usually at seven years of age (Quint. i. 1, 15); but no doubt in most cases there was some earlier home instruction. Tacitus (*Dial.* 29) mentions, with no approval, the custom of having a Greek maid, like a *bonne*, for children to give them an early familiarity with the Greek language. In the elementary schools the course consisted of reading, writing, and simple arithmetic. (Cf. Augustin. *Conf.* i. 13, "illas primas ubi legere et scribere et numerare discimus.") Quintilian (i. 1, 26) mentions the system of making the reading lesson attractive by using ivory letters, as above in Greek schools. The writing lesson was on a wax tablet, with lines or furrows (*sulci*) to guide the hand (Quint. i. 1, 27). Arithmetic (as we know from Horace, *A. P.* 325) was of great importance in the Roman judgment, and we find from an edict of Diocletian that the arithmetic master (*calculator*) was paid more highly than the teacher of reading and writing. (For the method, see LOGISTICA.) In the schools of the grammarians (which we may assume, according to the passage quoted from Pliny, to have been started by Sp. Carvilius) came the study of poets. This school differed from the elementary school, because that was training merely for the bare necessities of practical life, while the grammar school (if we may so term it) was nearer the ideal Greek training, an *eruditio liberalis* or "liberal education" (Cic. *Tusc.* ii. 11, 27). The central point was to read with full explanation Greek and Latin poets (these were sometimes distinct under *grammatici Graeci* and *Latini*): the boy must first learn to read the poet with understanding and with correct emphasis. It is clear that the Romans, like the Greeks, laid the greatest stress on elocution. Eloquence under the Republic was the only avenue to power (Tac. *Dial.* 37; Friedländer, vol. iv. 7); and the school was intended to train the utterance as well as to supply a flow of words, "os tenerum puero balbumque poeta figurat." This is abundantly shown in Cicero and Quintilian *passim*, and perhaps better than elsewhere in Ausonius, *Id.* iv. 45:

"Perlege quodcunque est memorabile: priva monebo
Conditor Iliados, et amabilis orsa Menandri
Evolvenda tibi: tu flexu et acumine vocis
Innumeros numeros doctis accentibus effer,
Adfectusque impone legens: distinctio sensum
Auget, et ignavis dant intervalla vigorem."

With this object the master read over t
passage and made the class repeat it, as we s
from the frequent *reddere dictata*, i.e. to repe
passages after the master (Hor. *Ep.* i. 1, 5
i. 18, 13). This is expressed also by the wo
praelegere (Mart. i. 36; Quint. i. 8, 8). Besid
this, however, the passage was thorough
threshed out as to its meaning, its metre, t
questions of geography, history, mythology, a
ethics connected with it (Quint. i. 4, 4; C
Verr. i. 18, 47; Tac. *Dial.* 30). Hence Cice
says of these schools of *grammatici*, "In gra
maticis poetarum pertractatio, historiarum co
nitio, verborum interpretatio" (*de Orat.* i. 4
187; cf. Juv. vii. 231). The questions rai
were, however, often extremely trivial, "t
name of Anchises' nurse," &c. (Juv. vii. 23
see the instances in Mayor's note *in loc.*). Th
were also learning by heart and practice in ve
composition: prose belonged to the rheto
school, when that was established as separ
from the grammatical. As regards the auth
read, Homer universally held the first pl
(Hor. *Ep.* ii. 2, 42; Quint. i. 5, 8; Plin. *Ep.*
14), and next perhaps the favourite
Menander (Ov. *Trist.* ii. 23; Auson. *l. c.*),
then the great tragedians. We have an acco
in Stat. *Silv.* v. 3 of the books read in the sch
kept by the father of Statius at Naples; and t
list comprises Homer, Hesiod, Theocritus, Pind
Ibycus, Stesichorus, Sappho, Corinna, Cal
machus. It is possible, as Friedländer remar
that at Naples, as a town preserving Greek
and habits, Greek literature might be m
deeply studied than elsewhere. The La
authors most read in the 1st century w
Virgil, Horace, and Lucan; Statius lived to
his own works read in schools (*Theb.* xii. 81
A reaction took place as to the literature
vogue about 100 A.D. (see Grasberger, vol.
p. 204; Friedländer, vol. iv. p. 20), and,
place of the authors of the Augustan age,
older prose writers and the poets of the
cent. B.C.—Gracchus, Naevius, Ennius, Plaut
Accius, and Lucilius—were adopted as scho
books. This was at the time when Hadrian p
ferred Cato to Cicero, Ennius to Virgil (
Hadr. 16). Fronto, the teacher of Mar
Aurelius, was a leader in the depreciation of
Augustan writers (see Teuffel, *Hist. of Rom*
Lit. § 351 ff.). Music began to be stud
towards the end of the 1st century—a mar
Greek influence (Sen. *Ep.* 88, 9; Suet. *Tit.*
and the above course, with the addition
geometry, formed what Quintilian (i. 10,
calls the ἐγκύκλιος παιδεία with which
majority were content. Many, however, p
ceeded to the school of the *rhetor*. Like
school of the *grammaticus*, this was origin
formed after the Greek pattern. The e
Latin rhetors, Plotius, &c. were not appro
and the censors in B.C. 92 closed the L
schools of rhetoric, because, as they alleged, t
were a pretence for idleness. (Suet. *Rhe*
Gell. xv. 11). Cicero (*ap.* Suet. *Rhet.* 2) te
to the superior teaching of the Greek *rhet*
In these schools prose authors took the pla
poets: but the principal part was the
exercise, which, for the beginner a mere
narrative, passed on to the *declamatio*.
easier kind of *declamatio* was *suasoria*, on
historical and mythological subject, ado

some view on this or that story or point of history and arguing it (see Juv. i. 16). They advanced to *controversiae* or declamations on some legal point. (See Friedländer, vol. iv. p. 23, French translation.) Pliny (*Ep.* ii. 3) may be referred to for a description of a celebrated *rhetor*—the Isaeus alluded to in Juv. iii. 74.

The status and emoluments of the schoolmasters, *grammatistae* and *grammatici* alike, were low. Ovid calls them "turba censu fraudata:" compare the poverty of the famous Orbilius, described in Suet. *Gr.* 9, and especially Juv. *Sat.* vii. 228–243. What their ordinary fee was, cannot, however, be determined. In Diocletian's time (when their position was probably better than when Juvenal wrote), the maximum fee for the *grammatistes* from each pupil was 50 denarii a month, and for the *grammaticus* 200 (*C. I. L.* iii. 831).* The *rhetor* seems to have received twice as much as the *grammaticus*, and his emoluments were increased by the state endowments begun by Vespasian (Suet. *Vesp.* 18). Remmius Palaemon is cited as an instance of a wealthy *grammaticus*, and by a *rhetor* wealth was more often acquired. There were, besides, the turns of fortune, of which Juvenal speaks (vii. 197), and of which the Emperor Pertinax (once a *grammaticus*) and Ausonius afford instances. (See Mayor's note on Juv. *l. c.*)

For the literature on this subject, the most important Latin and Greek authors have been cited in this article: a long additional list will be found in Grasberger, vol. ii. p. 12, whose work, *Erziehung und Unterricht in classischen Alterthum*, forms the most complete modern authority. See also Becker-Göll, *Charikles*, ii. 19 ff.; Göll's excursus on Becker's *Gallus*, vol. ii. pp. 61–114; an excellent popular work of Blümner, *Leben und Sitten der Gr.*; Marquardt, *Privatleben*, p. 80 ff. [G. E. M.]

LUDUS TROJAE. [Trojae Ludus.]

LUMINA. [Servitutes.]

LUPA'NAR. [Caupona, Vol. I. p. 388 *b*.]

LUPA'TUM. [Frenum.]

LUPERCALIA, probably the most ancient of the Roman festivals, was held every year on the 15th of February, in honour of a deity who is described as *Faunus* or Pan by Ovid (*Fasti*, ii. 353 foll.), *Inuus* by Livy (i. 5), *Lupercus* by Justin (xliii. 1, 7). The later Romans had lost the secret of the god's real name, and their scholars merely made guesses about it, which are represented in the names above given; Faunus being brought in through his supposed connexion with the Palatine hill, Inuus being an obscure deity of the same character as Faunus, and Lupercus probably a mere invention, based on the name of the festival. Remembering the great multiplicity and fluidity of the names of Roman deities, and the tendency to avoid fixing a god's name in ritual, we may hesitate to form a conclusion where the Romans themselves were uncertain. (*Liber* is suggested by Servius on *Aen.* viii. 343, who also says that others held the divinity in question to be a *deus bellicosus.*) The general character of the rites suggests an extreme, possibly even a pre-Roman, antiquity; and though their meaning can be in part explained, they do not suggest any particular deity as specially concerned in them.

These rites were as follows:—On the day in question the members of the two colleges of Luperci (see Luperci) met at the cave of the Lupercal, under the Palatine, where Romulus and Remus were said to have been nurtured by the she-wolf, where (according to Justin, *l. c.*) there was a temple and an image of the deity girt with a goat-skin—most probably of comparatively late origin. Here they sacrificed goats and young dogs (Plutarch, *Quaest. Rom.* 68; *Rom.* 21), and at the same time were offered the sacred cakes made by the Vestal Virgins from the first ears of the previous harvest (Serv. *Ecl.* 8, 82). Then two young men of birth, themselves perhaps members of the Luperci, were brought forward: these had their foreheads smeared with the knife still bloody from the victims, and then wiped with wool dipped in milk, after which they were obliged to laugh. They then, or other Luperci, girt themselves with the skins of the slaughtered goats, and feasted luxuriously; after which they ran round the Palatine hill, striking at all the women who came near them with strips of skin cut from the hides of the victims. These strips bore the name of *februa*, a word applied by the Romans to many kinds of instruments of purification. (For the above details, see Plut. *Rom.* 21, *Caesar* 61; Dion. Hal. i. 79, 80; Val. Max. ii. 2, 9; Ov. *Fasti*, ii. 267; Juv. *Sat.* ii. 142.)

The immediate object of this striking was believed to be that of rendering the women fertile—and this is confirmed by a considerable number of parallels in classical antiquity (see Mannhardt, *Mythologische Forschungen*, 113 foll.)—and at the same time was regarded as a purificatory rite, or as a *lustratio* of the Palatine city round which they ran (Tac. *Ann.* xii. 24). This is a combination of ideas which is not hard to explain, if we recollect that other processional ceremonies of the Romans (see Lustratio) had the combined objects of purifying, averting evil, and fertilising land, people, or city. Other parts of the festival are, however, extremely difficult to explain. In the smearing of the young men's foreheads with blood, we may see a relic of human sacrifice, which actually occurred in the somewhat similar worship of the Lycaean Zeus in Arcadia; or this may have been a symbolic or quasi-dramatic act, signifying that the young men had died, like the victims, but had gained a new life with the wiping off of the blood—a resuscitation which may have been marked by the rule that they should *laugh* at this point in the rite. If this latter explanation were true, the thing symbolised would be the revival of the powers of fertilisation with the return of spring (Mannhardt, *op. cit.* p. 91 foll.).

The girding on of the goatskins may possibly be partially explained by certain similar usages in which the priest wears the skin of the victim he has slain. By some this is referred to totem-worship—the god himself (cf. Justin, *l. c.*) and his priests wearing the skin of the sacred totem (Lang, *Myth Ritual and Religion*, ii. 177 and 213; Robertson Smith, *s. v.* Sacrifice, in *Encycl. Brit.*).

The victim should, in these totem sacrifices, be the animal which represents the deity, and so far the popular conception of Faunus bears out the view above given, when we see the statue of

---

* Diocletian's *pretia* are all in the *copper* denarius = (according to Hultsch) about $\frac{3}{10}$ of a penny. Hence the yearly fee of 600 den. = 15 shillings. (See Marquardt, *Staatsverw.* ii. 84.)

the goat-footed deity clothed in the skin of the sacrificed goat. (Compare the clothing of the ram-faced god Ammon in the skin of a sacrificed ram, Herod. ii. 42.) As to the sacrifice of the dog, it is perhaps simplest to connect this also with the pastoral use of that animal as protector of the flocks, rather than to refer it, as Preller does, to a worship of infernal powers. (He cites the case of Hecate.) While, however, there is much to be said for the probability of these views, they are at best conjectural. Thus much seems at any rate clear, that the rites are those of a primitive pastoral tribe occupying at first the Palatine, and that they were understood to bring fertility and security not merely of flocks, but of the whole people: for the running round the pomoerium is clearly meant to include the whole existing state.

While (probably) the most ancient festival of Rome, it was also the festival which lasted longest. We find it celebrated in the 5th century, apparently with the approbation of the Emperor Anthemius (Gibbon, vol. iv. p. 281), and finally prohibited, A.D. 496, by Pope Gelasius, who is thought by some to have ordered the Christian festival now held on February 2 (originally February 14), in order to make the populace forget the pagan rites of purification connected with that month. The date, however, at which this Christian festival was first instituted is not quite certain. It is worth noticing, as bearing on the significance of the Lupercalia, that in these later times popular superstition valued them as piacular rites which were a safeguard against pestilence. This seems clear from the arguments against them which are used in the letter of Gelasius (see Fleury, *Histoire Ecclés*. xxx. 41). In addition to the authors cited in the article, reference may be made to Marquardt, *Staatsverw*. iii. 442; Preller, *Röm. Mythol*. 342 ff. [W. W. F.]

LUPERCI were the members of a very ancient, perhaps the most ancient, corporation of priests at Rome, which also outlived the other institutions of the old Roman religion. An account of the rites which they superintended will be found in the preceding article [LUPERCALIA]. As regards their institution there are two separate legends; one ascribing their foundation to the Arcadian Evander (Liv. i. 5; Ov. *Fast*. ii. 423; Plut. *Rom*. 21), the other to Romulus and Remus (Ov. *Fast*. ii. 361; Plut. *l. c.*). It is probable that both are untrue. It seems that the idea of a Greek institution is only an attempt of later times to connect this priesthood with the worship of the Greek pastoral god Pan. They were said to be priests of Faunus, the Italian deity of flocks and herds, and Evander is perhaps merely a translation of Faunus, "the favourer" (see Marquardt, *Staatsverwaltung*, iii. 439). It is probable, as Marquardt points out, that the connexion with the legends of Romulus, though much older than the Grecising legends, is more recent than the institution of the priesthood, and arose from the fact that the neighbourhood of the Lupercal was connected with many traditions about Romulus, the Ficus Ruminalis, Casa Romuli, &c., and also from the compound *lupus* in the word itself, just as those who adopted Greek tradition found an argument in the word Λύκαια. The name of Faustulus, it is to be noticed, in the Romulean legends, has the same
meaning as that of Faunus. We can have
doubt that the priesthood belongs to the
tribal settlement on the Palatine, and de
its name from neither of the above-menti
legends. Rejecting many improbable de
tions, such as *luere-capra* (Servius), *lupa-pa*
(Arnobius), *lues-parcere* (Unger), *lupus-h*
(Schwegler), we may adopt as the most li
origin of the name Luperci, that w
Mommsen (*Hist. of Rome*, i. 176) and Marqu
prefer, *lupus-arceo*: i.e. "the protectors of
flock from wolves." The priesthood wa
the hands of two collegia, of which the *so*
were called respectively *Luperci Quincti*
(or *Quinctiales*?) and *Luperci Fabiani*, or s
times Quinctilii and Fabii. In other w
originally it was a gentile sacred rite, and
in very ancient times under the exclusive ch
of these two *gentes*, although that attachn
to a particular *gens* lasted only in the n
and was retained neither in respect of
members nor the organisation. So far as reg
the second collegium, there is no difficult
understanding it of the gens Fabia (cf. Prop
v. 1, 26), though Unger (*Rhein. Mus.* 1
pp. 50 ff.) seeks to connect the name
februare; but there is more doubt about
signing the other collegium to the gens Qu
tilia. It may be assumed that these Lup
ranked before the Fabian; for this prio
of rank will explain the legends which at
bute the Quinctilii to Romulus and the F
to Remus (Ov. *Fast*. ii. 373; Vict. *de O*
22), and the name might be regarded
fairly settled, if we could satisfy oursel
whether the Quinctii or the Quinctilii were
older. Mommsen (*Hist. of Rome*, i. 51;
Staatsrecht, i. 560, note) and Marquardt (*op.* c
take the Quinctii to be the old gens,
Quinctilii a later introduction from Alba (
which the authority is Dionys. iii. 29);
they cite also an inscription (Orelli, 2253
C. I. L. vi. 1932), "lupercus *Quinctialis* vet
and the coincidence of the praenomen *K*
belonging to the Quinctii and Fabii *alone*,
possibly derived from the thongs with wh
the Luperci strike (*caedunt*), as proving t
the name should be *Quinctianus* or *Quinct*
from the Quinctii, not *Quinctilianus*, as tho
from the Quinctilii. We have, however, on
other hand, the fact that Livy (i. 30) gives
the opposite account to Dionysius, and m
the Quinctii come from Alba; and that
ancient authorities, except the inscription a
give the name Quinctilii or Quinctiliani to
priesthood. We can hardly therefore
Mommsen's view as proved beyond a d
We shall be on more certain ground in assu
that this gens, whether the Quinctii or
Quinctilii, exercised the priesthood in this
ship on the Palatine for the *Montani*, and
them, when the tribal communities am
mated, were joined the Fabii for the
rites on behalf of the *Collini*. (That the F
gens belonged to the Collini is shown by
having their *sacra gentilicia* on the Quir
Liv. v. 46, 52.) Possibly the Fabii used or
ally their separate sanctuary on this hill fo
Lupercalia, but there can be no doubt tha
associated worship of the two *collegia* of Lu
(as afterwards of the third also) was in
Lupercal on the Palatine—the only Lup

mentioned—a cave in the western angle of the Palatine, the site of which cannot be positively identified, where the rites in the festival were begun. It was in later times adorned with some masonry, perhaps a portico at the entrance; for it is stated in the inscription of Ancyra that Augustus rebuilt it. (See Middleton's *Rome*, p. 57; Burn's *Rome and Campagna*, p. 156.) Julius Caesar, in the beginning of the year 44, added a third corporation of priests called the *Luperci Julii* (Dio Cass. xliv. 6; Suet. *Jul.* 76), and assigned to them revenues which the senate after his death took away (Cic. *Phil.* xiii. 15, 32), and of this collegium Antonius was *magister*. The assumption from this is that each of the collegia had its own *magister*, though in inscriptions we find only "magister lupercorum" without distinction. The word *vetus* applied to a *lupercus* (as in the inscription given above) means no doubt that he belonged to one of the two older corporations. The members (*sodales*, ἑταῖροι) were ordinarily of the equestrian rank, rarely senators (cf. Mommsen, *Staatsrecht*, l. c.). Under the Republic they were probably (like the *Fratres Arvales*) coopted into the body, but Mommsen thinks that under the Empire they were appointed by the emperor. Some have asserted the office to be terminable, on the authority of two inscriptions, which seem to give "lupercus *iterum*," "lupercus *ter*" (*C. I. L.* vi. 496; 2610), but the wording and significance of these are by no means certain, and Marquardt believes the office to have been for life (as was also the office of the Fratres Arvales). It is also questionable whether this priesthood existed in any Italian town except Rome. The inscriptions found in various municipia perhaps record merely the names of men who belonged to one of the three collegia at Rome, and who kept the title in their new domicile. At any rate, we have no mention of the festival being held anywhere but at Rome. Of the manner in which the functions were partitioned among the different collegia we have no record. For an account of the rites which they celebrated, see LUPERCALIA. (In addition to the works cited above, reference may be made to Preller, *Röm. Myth.* 111.) [G. E. M.]

LUPUS FE'RREUS, the grappling-iron used by the besieged in repelling the attacks of the besiegers, and especially in seizing the battering-ram and diverting its blows. [ARIES.] (Liv. xxxviii. 3; Veget. *de Re Mil.* ii. 25, iv. 23.) [J. Y.]

LUSTRA'TIO (*luo*, to purify), called by the Greeks κάθαρσις, is a term which covers a great variety of ceremonies in the religious usage of the ancients: of these only the most remarkable and best attested can be referred to in this article. It should be remarked at the outset, that ceremonial purification, which is found in some shape among peoples of all stages of development, may be traced to an origin in the necessities of bodily ablution, especially in connexion with certain well-marked events in human life, such as birth, marriage, bloodshed, and burial. There gradually follows a transition "from practical to symbolic cleansing, from removal of bodily impurity to deliverance from invisible, spiritual, and at last moral evil" (Tylor, *Primitive Culture*, ii. 388).

This transition was complete by the time at which Greek and Roman literature enables us to become acquainted with the rites of this kind practised by the two peoples; but the primitive idea may be often noted underlying usages which had lost their original meaning. Cicero reflects this idea in the following remarkable passage:—"Caste jubet lex adire ad deos, animo videlicet, in quo sunt omnia; nec tollit castimoniam corporis, sed hoc oportet intelligi, quum multum animus corpori praestet observeturque, ut casta corpora adhibeantur, multo esse in animis id servandum magis; nam illud vel *aspersione aquae* vel dierum numero tollitur; animi labes nec diuturnitate evanescere nec amnibus ullis elui potest" (*de Legibus*, ii. 10, 24).

The various usages of lustration may conveniently be grouped under the following heads:—1, purification necessary before entering holy places; 2, purification from blood-guiltiness; 3, purification at birth, marriage, and death; 4, purification of house, land, city, or people, on certain stated occasions, or with some special temporary object.

1. Both in Greece and Italy we have sufficient evidence that worshippers could not enter a temple without a previous symbolic act of washing. Even before engaging in ordinary prayer this was proper, as may be seen from Homer, *Od.* iv. 750 (cf. *Il.* xvi. 228 ff.); but in temple-worship it was indispensable. At the entrance of temples were placed vessels holding pure water (περιρραντήρια), in which the worshippers dipped their hands; or the water was sprinkled over them by a whisk, frequently a laurel-branch (Bötticher, *Baumkultus der Hellenen*, p. 353; Lucian, *Sacrif.* 13; Pollux, i. 8). Sea-water or spring-water was preferred; and salt was sometimes added to fresh water (Theocr. 24, 95). Temples were usually placed near running water, for convenience (Bötticher, *Tektonik der Hellenen*, ii. 485). In Latium the word *delubrum* signified the space before the temple where this purification was performed (Serv. *ad Aen.* ii. 225); and it was as indispensable as in Greece, as may be clearly seen from Livy (xlv. 5, 4): "Cum omnis praefatio sacrorum eos, quibus non sint purae manus, arceat" (cf. i. 45, 6, where the priest of the temple of Diana, on the Aventine, requests a Sabine who wished to sacrifice there, to bathe in the Tiber in the valley below). The temples themselves were no doubt kept pure from defilement in the same manner as the worshippers; for we find that the Vestal Virgins daily sprinkled that of Vesta with some kind of mop (which is represented on coins) and with water brought from the holy springs of Egeria or the Camenae (cf. Eur. *Ion*, 101). For further information about this kind of lustration, see K. F. Hermann, *Griech. Alterthümer*, vol. ii. sects. 19 and 23, ed. 2; Marquardt, *Staatsverwaltung*, vol. iii. (ed. 2), pp. 154 and 175.

2. The notion that blood-guiltiness could be removed by symbolic purification was not apparently indigenous in Greece, for it is not found in Homer (Grote, *Hist. of Greece*, i. 21). Müller (*Eumen.* § 53) takes a different view. In later times, whether the murder had been voluntary or not, it was indispensable (see Lobeck, *Aglaoph.* 968, where passages are collected); and is familiar to us in the story of Orestes, both from the Eumenides of Aeschylus and from numerous painted vases. Herodotus (i. 35) tells us that the κάθαρσις of the Greeks was identical with

that used by the Lydians, whence it has been inferred that the Greeks borrowed the idea from Lydia; and considering the strong negative evidence of the Homeric poems on the point, it is not unlikely that the practice of expiation from blood-guiltiness may have been of later date, and suggested by Eastern influences. There is no certain sign of it in Roman antiquity; the so-called lex regia of Numa, quoted in Festus (221, s. v. *parricida*), makes no mention of it; and it would seem that a murderer was totally and permanently excluded from temple-worship (Liv. xlv. 5, 3), though this cannot be regarded as fully proved by the evidence. When Ovid, in the well-known lines, "A nimium faciles qui tristia crimina caedis Fluminea tolli posse putetis aqua" (*Fasti*, ii. 45), refers to the Greek belief and practice as based on a delusion, he is perhaps reflecting not only the opinions of educated scepticism, but also the view which was natural to the Roman mind.

3. Purification was necessary after the birth of an infant, as is shown by the Roman expression *dies lustricus* for the day (the ninth after birth for a boy, the eighth for a girl) on which the child received its name (Macrob. i. 16, 36: "Est autem lustricus dies *quo infantes lustrantur* et nomen accipiunt"). In the corresponding Athenian rite of the Amphidromia, we are not informed of any such lustration, except that the women who had attended at the birth then washed their hands (Suidas, *s.v.* ἀμφιδρόμια); but the practice of some form of baptism is so universal (Tylor, *Prim. Culture*, ii. 389 ff.) that we may be justified in assuming it. At marriage the practice of lustration is clearly seen in Greece: both bride and bridegroom bathed, on the day before the wedding, in water brought from a holy spring (*e.g.* Callirrhoe, at Athens), to signify that they entered the married state in purity (Pollux, iii. 43; Schol. Eur. *Phaen.* 349). So at Rome, the bride, on arriving at her husband's house, was sprinkled with lustral water (Festus, p. 87), and her feet were washed (Serv. *ad Aen.* iv. 167). In Greece, after a death, all who were in the house, and all who subsequently came in contact with the corpse, were contaminated and in need of purification (*Odyss.* x. 481; Eur. *Iph. Taur.* 380), and a cask of water, called ἀρδάνιον, was placed outside the house with this object (Pollux, viii. 65). Among the Romans we find the same ideas prevailing in funeral rites: a day was fixed on which, by sacrifices and other ceremonies, the polluted household was cleansed. This was called "feriae denicales" (Festus, p. 70; cf. Cic. *de Leg.* ii. 22, 25); a pig had been previously sacrificed at the grave (Cic. *l. c.*) to render it holy ground.

4. From the illustrations given in the three preceding paragraphs it will have been seen that the idea of the necessity of purification, in the simple and ordinary sense of the word, and as symbolised chiefly by some act of ablution, was one which pervaded the whole life of the individual and the family, both in Italy and Greece. The words καθαιρεῖν and *lustrare*, however, were applied to a great number of other purificatory rites on a larger scale, and occurring either on days fixed in the calendar of religious operations, or on peculiar occasions, which concerned certain portions of land, cities, or a whole community of individuals. It is by no means clear in all these rites, how far th leading idea is simple purification, or expiatio for some crime or other taint, or even a kin of dedication to a divinity for the purpose procuring good fortune, *e.g.* in agriculture in war. Doubtless these ideas ran into eac other, and were not clearly distinguished in th minds of those who took part in the rites the time when we first become acquainted wit them. A few examples, of which the mo instructive are the Italian, will serve to sho the nature of the rites, and to give some id of their object or objects.

Of extraordinary purifications of this kin the most famous in Greece were: 1. The wor done by Epimenides at Athens after the Cylonia massacre, described by Plutarch in his Life Solon (ch. 12; cf. Diog. Laert. i. 10, 3); th details are uncertain, but the general characte seems to have resembled that combination actual and moral purification which wa wrought on the worshippers in the Gree mysteries. 2. The purification of Delos by th Athenians in the year 426 B.C., with the obje of releasing their own city from the plague an the wrath of Apollo. All dead bodies we then removed from the island, and it wa decreed that neither birth nor death shoul take place there in future (Thuc. iii. 104 With these examples may be compared th Roman *amburbium*, which, unlike other rites the kind at Rome, seems only to have bee celebrated on occasions of great distress, a for example, after the battle of the Trebi (Liv. xxi. 62, 7). Victims were led round th city wall and sacrificed, accompanied by th Pontifices, Vestal Virgins, and members of th other priestly colleges. (Lucan, i. 592 ff. Festus, p. 5.)

Of regularly recurring lustrations we fin the best examples in Italy; but they also too place at Athens. Every meeting of the Ecclesi was preceded by a lustration (*περίστια*), when th *περιστίαρχος* sacrificed young pigs, which wer afterwards thrown into the sea. [ECCLESIA Vol. I. p. 699 *b*.] Of the great Athenian festivals, some at least had the object of purification: such for example was the harvest festival of the Thargelia (*ὅτε καθαίρουσι Ἀθηναῖοι τὴν πόλιν*, Diog. Laert. ii. 5, 23), o which occasion two men called *φαρμακοὶ* wer driven out of the city as *καθάρσια* (Harpocrat *s. v. φαρμακός*).

Of parallel rites at Rome we have more certain information. Sometimes it was the *land* that was the object of lustration, whether the land of a private owner or the land of the state; sometimes it was the *people*, whether brought together in the form of a public assembly, or in the form of an army or fleet. Of the lustration of a farm we have an account preserved in Cato's treatise *de Re Rustica* (§ 41). The *suovetaurilia* (offering of pig, sheep, and ox) were driven round the farm, libations offered to Janus and Jupiter, and a fixed form of prayer used to propitiate Mars, the special deity of the agriculturist. This was doubtless the original and simplest form of this kind of lustratio, for we find exactly the same ritual applied to the land of the state on the 29th of May each year, in the Ambarvalia [AMBARVALIA], of which the best description will be found in Verg.

Georg. i. 345. The great inscription from Iguvium in Umbria, which consists of exact regulations and formulae to be observed in a procession round the land of that city, offers a parallel case of lustration from North Italy, and a more minute description of the kind of ritual in use than we possess from any other source. (See Bréal, *Tables Eugubines*, p. xxi. ff.)

A complete lustration of the whole Roman people took place at the end of every *lustrum*, when the censor had finished his census and before he laid down his office. This took place in the Campus Martius, where the people were assembled for the purpose. The sacrifices were carried three times round the assembled multitude, as in the Ambarvalia they were carried round the land (Dionys. Hal. iv. 22). All Roman armies before they took the field were lustrated (Dio Cass. xlvii. 38; App. *Hist.* 19, and *B. C.* iv. 89); and as this solemnity was probably always connected with a review of the troops, the word lustratio is also used in the sense of the modern review (Cic. *Att.* v. 20, 2). The rites customary on such occasions are not mentioned, but they probably resembled those with which a fleet was lustrated before it set sail, and which are described by Appian (*B. C.* v. 96). Altars were erected on the shore, and the vessels manned with their troops assembled close at hand. Silence was kept, while the priests carried the purifying sacrifices (*καθάρσια*) in boats three times round the fleet; these sacrifices were then divided into two parts, one of which was thrown into the sea, and the other burnt on the altars, while the multitude prayed to the gods. (Cf. Liv. xxxvi. 42 and xxix. 27, where also a prayer is recorded such as generals used on these occasions.)

The examples given in the foregoing account are to be taken only as selected illustrations of a very large and widespread series of purificatory rites. There were indeed few religious ceremonies either in Greece or Italy of which some kind of lustration did not form a part; for as the simple idea of purification became connected with other ideas, such as fertilisation, as in rites of spring and summer, or the averting of evil from a community and its property, the field over which its influence extended became continually enlarged. It may be studied in the Greek Mysteries, which had as their chief object the removal of moral evil from the minds of the worshippers, and were accompanied by preliminary rites of a purely lustral character; in the Bacchic rites, where fire, sulphur, and air were used as means of purgation, besides water (Serv. *ad Aen.* vi. 741); in the Palilia of the Romans, where the flocks and herds were made to pass through the fire, as a means both of purification and fertilising; in the Lupercalia in the month of February, which was the special season of purification (februum = an instrument of purifying); in the singular ceremony of the ARGEI on the Ides of May, called by Plutarch "the greatest of the purifications" (*Quaest. Rom.* 86), and in many other rites.

The articles on the festivals above mentioned may be referred to for further information: and on the general subject of lustration, for Greece, Hermann, *Griech. Alterthümer*, vol. ii. sects. 19, 23 and 24; for Rome, Marquardt, *Staatsverwaltung*, vol. iii. (2nd edit.), pp. 200 ff., and Preller, *Röm. Mythol.* (3rd edit.), vol. i. 419 ff. [W. W. F.]

LUSTRICUS DIES. [LUSTRATIO, p. 102 *b*.]

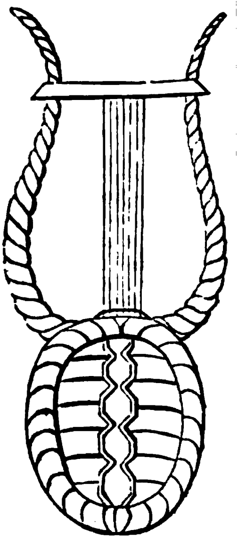
LUSTRUM. The term *lustrum* primarily meant a purification by sacrifice. Varro (*L. L.* vi. 2) explains it thus: "lustrum nominatur tempus quinquennale a luendo, id est solvendo, quod quinto quoque anno vectigalia et ultrotributa per censores persolvebantur." The derivation is probably right, but the explanation is wrong. Paul. D. 120 says, "Cum ejusdem vocabuli prima syllaba producitur, significat nunc tempus quinquennale, nunc populi lustrationem." In the regal period this sacrifice without doubt had been one of the duties performed by the king in his capacity of priest. Thus Livy (iv. 44) represents king Servius Tullius as celebrating the first *lustrum* in 566 B.C. when he had completed the census. ("Censu perfecto edixit, ut omnes cives Romani in campo prima luce adessent. Ibi omnem exercitum suovetaurilibus lustravit: idque conditum lustrum appellatum, quia is censendo finis factus est.") Under the early Republic it was naturally performed by the consuls, who represented the king of the previous epoch. When with the growth of the state the duties of the consuls had largely increased, and it was found necessary to establish the censorship in 443 B.C. (or 435 B.C., according to Mommsen), the duty of performing this rite devolved on the censors. The latter held office not from *lustrum* to *lustrum*, but were appointed at intervals of five years [CENSOR]. They entered on their office in April, and by May of the following year they had completed the census and their other duties. They then celebrated the *lustrum*, without which, according to some, their official acts were devoid of authority (Mommsen, *Staatsr.* ii. 322). The lustration [LUSTRATIO] took place in the Campus Martius. All the men of military age were assembled there; thrice round them were borne on spears a boar, a ram, and a bull (*suovetaurilia*), which were sacrificed by the censors to Mars for the fulfilment of the vows made by the preceding censors. One censor at the same time offered fresh vows for the coming years. They then led the whole host to the city gate, and as a mark of the completion of the *lustrum* drove a nail into the wall of a temple (that of Mars Ultor since the 2nd century B.C.), and then deposited the new register of the citizens in the treasury. After this the censors immediately laid down office. From the fact that the *lustrum* took place (as a rule) every fifth year, the term was likewise applied to the period of five years preceding. The solemn rite was thus regarded as completing this *quinquennium*, and hence the term *condere lustrum* was used to describe it. But though it was usual to hold it every five years, its celebration was by no means invariable. Sometimes the rite was omitted on religious grounds, as we learn from Livy, iii. 22: "Census actus eo anno, lustrum propter Capitolium captum, consulem occisum, condi religiosum fuit" (cf. Livy, xxiv. 43), and probably from other causes likewise; for the Fasti Capitolini, in which are entered the censors, and the letters L F attached to the names of those who completed this rite, show that, although the customary interval was five years, not unfrequently six and seven years elapse, or sometimes only four between each celebration. According to Livy (x. 47), in the period between the first appointment of censors (443 or 435 B.C.) and 294 B.C., there had only been twenty-six pairs of censors, and only twenty-one *lustra*. In later times the ceremony was probably simplified. Cicero (*de Or.* ii. 66, 268) says, "lustrum condidit et taurum immolavit." The last celebration of a *lustrum* took place under Vespasian, 74 A.D.

From the interval between the *lustra* being usually five years, the term *lustrum* came gradually to be used as a general expression for a period of five years. But, according to the Roman method of computation, the phrase *quinto quoque anno* might mean every four years. Thus Cicero (*de Or.* iii. 32, 127) calls the Olympic festival "maxima illa quinquennalis celebritas ludorum." Thus likewise the Roman priests interpreted the *quarto quoque anno* of the Julian Calendar as meaning every *three* years (Macrob. i. 14, 1). Hence from the earliest times there would be a vagueness in the use of the term. In the writers of the Augustan age, who commonly use *lustrum* in its general sense, we find its use fluctuating. Ovid, for instance, uses it for a period of five years (*Amor.* iii. 6, 27: "nondum Troia fuit lustris obsessa duobus"). In *Fasti*, iii. 119, he uses it in the same sense when describing the year of Romulus ("mensibus egerunt lustra minora decem"), but in the same poem (l. 165) where he is explaining the Julian year and the intercalation of the *dies bissextus* ("hic anni modus est: in lustrum accedere debet quae consummatur partibus una dies"), *lustrum* must mean a period of four years. Again, from *Trist.* iv. 10, 96, and *Epp. ex Pont.* iv. 6, 5, we find that he identifies the Roman *lustrum* with the Greek Olympiad ("in Scythia nobis quinquennis Olympias acta est: jam tempus lustri transit in alterius"), just as Polybius (vi. 13) uses *πενταετηρὶς* to translate the Latin *lustrum*. The later writers seem to use it only as a period of four years. Pliny (*H. N.* ii. § 47) twice uses it of the four-year Julian cycle. We also find on inscriptions the intervals of four years between the Capitoline games instituted by Domitian described as *lustra;* and Censorinus (18), when defining the *lustrum* or *annus magnus*, seems unaware that it ever differed from the Olympiad, or denoted any other period than four years. [W. R.]

LYCAEA (*λύκαια*), a festival celebrated by the Arcadians in honour of *Ζεὺς Λυκαῖος* on Mount Lycaeus. The account given by Pausanias (viii. 38) is that it was founded by Lycaon, son of Pelasgus, and that besides the games (of which we have no particular account) there was a sacrifice to Zeus of a child, whose blood was poured over the altar, after which Lycaon himself was turned into a wolf, and he records the tradition that ever after at the annual festival a man was turned into a wolf for a period of ten years, or, if he tasted human flesh, for life. (Paus. viii. 2; cf. Augustin. *de Civ. Dei*, xviii. 17.) It is not improbable that these wehr-wolf stories, however ancient, are a perversion of something older still from a false connexion of the name with *λύκος*, and similarly that the references to the sacrifice as a rite of the pastoral Arcadians as a protection against *wolves*, like the Roman Lupercalia (cf. Plut. *Caes.* 61), &c., are equally illusory. It is more likely that the name of the mountain belongs to the root *λυκ*, "light," as in the Attic hill *Λυκάβηττος*, with which we may compare many mountain names of other countries, such as the *Strahlhorn*. These names come from the fact of the mountain peak catching the sunlight first and retaining it last. It is a remarkable coincidence that Pausanias, speaking of Lycosura, the town founded by Lycaon on the Lycaean mountain, which he calls the most ancient in Greece, uses the phrase *καὶ ταύτην εἶδεν ὁ ἥλιος πρώτην*. In accordance with this origin of the name, the worship was the earliest Pelasgian worship of Zeus, represented by no statue, but dwelling in light on the summit of the Lycaean mountain, where was the altar of human sacrifice on the highest point, with two pillars standing eastward of it surmounted in later times by two golden eagles. Below the altar was a grove, which no man might enter, where it was believed that no shadow could fall, and in the grove the holy spring *Ἁγνώ*, in which the priest in time of drought dipped an oak-bough after sacrifice. (Paus. viii. 38.) The sacrifice was particularly connected with prayers for rain; and it is probable that human sacrifices were retained to a late period. Pausanias does not mention their discontinuance, and says, *ἐπὶ τούτου τοῦ βωμοῦ τῷ Λυκαίῳ Διὶ θύουσιν ἐν ἀπορρήτῳ. πολυπραγμονῆσαι δὲ οὔ μοι τὰ ἐς τὴν θυσίαν ἡδὺ ἦν, ἐχέτω δὲ ὡς ἔχει καὶ ὡς ἔσχεν ἐξ ἀρχῆς*. The contests seem to have included horse-races and foot-races; for Pausanias mentions in front of the grove of Pan on the same mountain *ἱππόδρομος καὶ στάδιον*, where at one time the Lycaean festival was held. [G. E. M.]

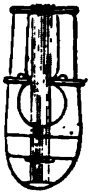
LYCEUM. [GYMNASIUM.]

LYRA (Lat. *fides*), a lyre, the chief stringed instrument used in Greek music. Two main varieties are known to us from ancient art and literature, viz. the *lyre* (*λύρα*) properly so called, and the *cithara* (*κιθάρα*).



Lyra. (Blanchini.)

The distinctness of the lyre and the cithara may be shown from Plato (*Rep.* iii. p. 399 D, *λύρα δή σοι, ἦν δ' ἐγώ, καὶ κιθάρα λείπεται κατὰ πόλιν χρήσιμα*), and from Aristotle, who excludes the cithara from education (*Pol.* viii. 6 = p. 1341, 18, *οὔτε γὰρ αὐλοὺς εἰς παιδείαν ἀκτέον οὔτ' ἄλλο τεχνικὸν ὄργανον, οἷον κιθάραν κἂν εἴ τι τοιοῦτον ἕτερόν ἐστιν*). Mythologists generally taught that the cithara was invented by Apollo, the lyre by Hermes (Paus. v. 14, 8). The difference between the two instruments seems to be sufficiently ascertained from the representations of them



Cithara. (Guhl and Koner.)

found on ancient monuments, especially painted vases, on which two well-marked types can be traced. One of these answers closely to the description which the author of the Homeric hymn to Hermes gives of the lyre invented by the youthful god (*H. Merc.* 41 ff.). The lower part or body of the instrument consists of a tortoise-shell, or of a wooden case in which the original tortoise-shell is more or less faithfully reflected. In this shell are fixed two curved arms (πήχεις) or horns, joined at the upper end by a cross-bar (ζυγόν). The strings pass from the shell, over a bridge or fret of reeds (δόνακες), to the ζυγόν. The instruments of the other type are larger, and show a decided advance in point of construction. The shell is replaced by a wooden case, usually square or angular, and instead of "horns" we find the sides of the case prolonged upwards, so that the whole framework acts as a resonance box of considerable power. Now, it is clear from the evidence of the monuments that the first of these was the instrument of education and of every-day life; while the second was the "technical instrument," seen in the hands of professional players (κιθαρῳδοί), who wear the long robe proper to musical contests and other festivals. The first, therefore, must be the lyre, and the second the cithara.

The early history of the lyre and cithara is obscure. In Homer we find a stringed instrument called the φόρμιγξ, used especially to accompany singing or epic recitation (ἀοιδή). We also hear, somewhat less frequently, of the κίθαρις: but there is no trace of a difference between them. The verb φορμίζω is used of the κίθαρις (*Od.* i. 153–155); and conversely we find the phrase φόρμιγγι κιθαρίζειν (*Il.* xviii. 569). The word λύρα is post-Homeric: it occurs once in the Hymn to Hermes (l. 423), but does not seem to have been in common use before the time of Pindar. It is worth noticing, as a consequence of the comparatively late date of the word, that the derivatives λυρίζω, λυριστής, &c., are unknown in good Greek, κιθαρίζω and κιθαριστής being always used of the lyre and cithara alike; just as χαλκεύς, "bronze-smith," was applied to workers in iron as well as in the older metal. It would be rash, however, to infer that the Homeric instrument resembled the cithara rather than the lyre. We may suppose that the later form of the cithara was developed gradually, retaining the original name, which therefore included all varieties, until the new word λύρα came into vogue for the commoner and more primitive kind. The author of the Hymn to Hermes recognises only one form, that of the lyre, to which he applies the terms κίθαρις and φόρμιγξ as well. The identity of the κίθαρις and the lyre is also maintained by Aristoxenus, the pupil of Aristotle (Ammon. *de diff. Voc.* p. 82, κίθαρις καὶ κιθάρα διαφέρει, φησὶν Ἀριστόξενος ἐν τῷ περὶ ὀργάνου· κίθαρις γάρ ἐστιν ἡ λύρα κ. τ. λ.).

Regarding the original number and tuning of the strings, contradictory accounts were current. According to one statement in Diodorus (i. 16), Hermes was the author of harmony of sound, and in that character invented a lyre with three strings, answering to the three seasons. The same author elsewhere (v. 75) says that Hermes invented his lyre in place of the cithara, which Apollo had laid aside in remorse for his cruelty to Marsyas. According to the Hymn to Hermes (l. 51) the primitive lyre was one of seven strings:

> ἑπτὰ δὲ συμφώνους ὀΐων ἐτανύσσατο χορδάς.

On the other hand, the increase of the number of strings from four to seven appears to be claimed by Terpander, in two lines attributed to him:

> σοὶ δ' ἡμεῖς τετράγηρυν ἀποστέρξαντες ἀοιδὰν
> ἑπτατόνῳ φόρμιγγι νέους κελαδήσομεν ὕμνους.

A different account, however, is given by Aristotle (*Probl.* xix. 32), where he touches on the question why the interval of an Octave is not called δι' ὀκτώ (as a Fourth is διὰ τεσσάρων, a Fifth διὰ πέντε). He suggests by way of answer that the scale was formerly one of seven notes only, saying that Terpander left out the note called τρίτη, and added the νήτη at the upper end of the scale (the octave of the ὑπάτη, or lowest note). If this account is the true one, what Terpander did was to raise the scale to the compass of an Octave, but without increasing the traditional number of strings. However this may be, the comparative antiquity of a scale of at least seven notes is proved by their names. The following are the notes of the central octave in the later system, with the modern notes which show the intervals on the diatonic scale:—

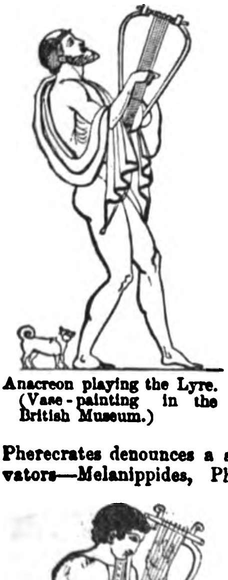
e ὑπάτη, lit. "uppermost," our "lowest" note.
f παρυπάτη, "next to ὑπάτη."
g λιχανός, "forefinger" note.
a μέση, "middle" note.
b παραμέση.
c τρίτη, third, viz. from the νήτη.
d παρανήτη.
e νήτη, for νεάτη, "lowest," our "highest."

Of these names there is only one that is admittedly later than the rest, viz. παραμέση, which probably dates from the time when the heptachord of Terpander acquired an eighth string, and consequently a complete diatonic scale of the compass of an Octave. If we may trust a passage quoted from Philolaus (*Nicom.* p. 17), the gap then filled up was not that between μέση and τρίτη. Philolaus gives the name τρίτα (he writes in Doric) to the later παραμέση, the note which was a tone above the μέση. The change, therefore, consisted in inserting a note half a tone above the τρίτη of Philolaus, which new note then became the "third," and made it necessary to find a new name—παραμέση—for the old τρίτη. But the language of Aristotle himself (*Probl.* xix. 7, 32, 47) shows that the exact steps of this progress were no longer known. According to Nicomachus, the eighth string of the scale was added by Pythagoras. Probably, however, this is a mere inference from the Pythagorean discovery of the numerical ratios on which the musical intervals—the Octave, Fifth, Fourth, and Tone—are based. Another notice (Boeth. *de Mus.* i. 20) attributes the improvement to a certain Lycaon of Samos.

The lyre was originally played without the aid of a plectrum; and each string seems to have been sounded by a particular finger. Thus the *λιχανὸς* or "forefinger" was so called, according to Nicomachus (p. 22), because it was sounded by the forefinger of the left hand. It follows, as has been pointed out by Gevaert (ii. p. 254), that the left hand was used for the lower tetrachord, and that the little finger was not used to touch the strings. When the plectrum came into use, it was held in the right hand, and perhaps was specially employed for the air, while the softer tones produced by the fingers of the left hand served for the accompaniment. This is suggested (though by no means proved) by the epigram of Agathias (*Anth. Pal.* xi. 352) quoted by Gevaert:

> *Τὸν σοφὸν ἐν κιθάρῃ, τὸν μουσικὸν Ἀνδροτίωνα,*
> *εἴρετό τις τοίην κρουματικὴν σοφίην·*
> *δεξιτερὴν ὑπάτην ὁπότε πλήκτροισι δόνησας,*
> *ἡ λαιὴ νήτη πάλλεται αὐτομάτως.*

The phenomenon here referred to is the "sympathy" by which a sounding body excites the vibration of another whose note is in unison with it, or with one of its harmonics.



Anacreon playing the Lyre. (Vase-painting in the British Museum.)

The seven-stringed lyre was still in use in the time of Pindar, unless we suppose that the epithets *ἑπτάκτυπος* (*Pyth.* 2, 70) and *ἑπτάγλωσσος* (*Nem.* 5, 24) are due to mere poetical tradition. On the other hand, we are told that Lasus of Hermione, who was an older contemporary of Pindar, introduced new notes, by which he broke up (*διέρριψεν*) the existing scale (Plut. *Mus.* cc. 29, 30). A passage quoted by Plutarch (*l. c.*) from the comic poet Pherecrates denounces a series of similar innovators—Melanippides, Phrynis, Cinesias, and finally Timotheus of Miletus, who "outraged music with his twelve strings." The object of the additional strings seems to have been not so much to obtain greater compass as to make it possible to combine different modes or keys, perhaps also different genera (see the art. MUSICA), on the same instrument, and to pass easily from one to another. It is the "multiplicity of keys or scales" (*πολυαρμονία*) which is always associated with "multiplicity of strings" (*πολυχορδία*) in the minds of those who, like Plato, regarded such changes as dangerous and corrupting.

Citharista with Lyre. (Dennis's Etruria.)

It is characteristic of the lyre and the cithara that the strings are all of the same length, so that the difference of pitch is entirely due to different thickness. In this respect they differed from instruments such as the harp, which have strings of different length, and again from those in which the length of the string is varied by the player, as in the case of the violin. The woodcuts above show the method of holding the lyre, in playing with the right hand only or with both. It was also played sitting, and supported on the knees. The cithara was held in the same manner. The harp type was represented in Greek music by the *τρίγωνον* or triangular harp, a Phrygian instrument, with which we find associated the Lydian *πηκτίς*. Both are condemned by Plato (*Rep.* iii. p. 399) for the excessive number of their strings. They are also mentioned together in a fragment of Sophocles, *fr.* 361:

> *πολὺς δὲ Φρὺξ τρίγωνος ἀντίσπαστά τε*
> *Λυδῆς ἐφυμνεῖ πηκτίδος συγχορδία.*

The *μάγαδις*, which was closely akin to the *πηκτίς*, was so called from the bridge or fret (*μαγάς*), by which a string could be divided by the player, so as to yield a higher note. It had twenty strings, and admitted of playing the same tones simultaneously in different octaves (hence called *μαγαδίζειν*). This is also attributed by Aristotle (*Probl.* xix. 14) to an instrument called the *φοινίκιον* or Phoenician lyre. The most perfect of all these instruments seems to have been the *ἐπιγονεῖον*, called after its inventor, Epigonus of Ambracia, which had forty strings. Besides these, we hear of the *βάρβιτος*, which is thought to have been nearly related to the lyre, also the *νάβλα* and the *σαμβύκη* (Strab. x. p. 471). Several of these names are confessedly barbarous, and all the instruments now in question lay under the imputation of being more or less alien to genuine Greek art. They evidently enjoyed much popularity, but were never regarded as of equal dignity with the lyre and cithara.

(Compare Carl von Jan, *De fidibus Graecorum*, Berolini, 1859; Westphal, *Geschichte der alten und mittelalterlichen Musik*, Breslau, 1864; Gevaert, *Histoire et Théorie de la Musique de l'Antiquité*, Gand, 1875–81.) [D. B. M.]

M.

MACELLUM (*ὀψοπωλία, ὀψοπωλεῖον, κρεοπωλεῖον*), a provision market for butchers, fishmongers, poulterers, fruiterers, and confectioners: see Ter. *Eun.* ii. 2, 24, "ad macellum ubi advenimus concurrunt . . . cuppedinarii omnes, cetarii, lanii, coqui, fartores, piscatores" (cf. Plaut. *Aul.* ii. 8, 3; Hor. *Sat.* ii. 3, 229; *Epist.* i. 15, 31). These provisions were formerly found at Rome in their separate markets—the forum boarium, piscatorium, olitorium: but for convenience the market was brought together in the *macellum*, built B.C. 179 to the north of the Forum (Fest. s. v. *macellum*). Varro (*L. L.* iv. 32) and Festus speak of a robber Romanius Macellus, whose house was demolished that a market might be established on the site; but it must be confessed that the story has a suspicious appearance of growing out of the name *macellum Romanum*, and either Curtius' reference to *macto* (*Greek Etym.* 338), or the identification with the Greek *μάκελον* or *μάκελλον* (which Varro himself suggests as the alternative), may be accepted in preference. The latter, which seems the more probable, is connected with the word *maceria*, a roughly built wall, and thus macellum may be assumed to have got its name from being an enclosed space. With this agrees Varro's expression "aedificatus locus appellatus macellum;" and it had booths in its colonnade (*macellarias tabernas*, Val. Max. iii. 4, 4). To this earliest macellum we refer Cic. *pro Quint.* 6, 25, "ab atriis Liciniis et faucibus macelli." The atria Licinia seem to have been auction rooms (cf. *de Leg. Agr.* i. 3, 7) near the forum. The Macellum magnum was in the second region on the Cispian hill, and is placed by some at S. Stefano Rotondo, it being suggested that the circular construction, with pillars, is planned upon the old market buildings (Burn, *Rome and Compagna*, p. 221). This is purely conjectural. A similar rotunda is found on a coin of Nero, with the inscription "macellum Augusti" (Eckel, vi. 273). The Macellum Livianum was near the Porta Esquilina and the Arch of Gallienus. It is probable that the macellum of B.C. 179 was destroyed to make room for the forum Augusti, and that Augustus built, instead of it, the macellum which he named after Livia. (See Richter, *ap.* Baumeister, *Denkm.* p. 1534.) To the macella the cooks would go to buy, and the less wealthy marketed there for themselves (Juv. xi. 10). The salesmen in it were called *macellarii* (Suet. *Jul.* 26; *Vesp.* 19). Julius Caesar tried to check extravagance by putting the macella under police control, and the same control through the aediles was attempted by Tiberius, moved apparently by the sale of mullets at 10,000 sesterces apiece (Suet. *Jul.* 43; *Tib.* 34).

The Athenian provision market was called, as a general term, *ὀψοπωλία* (Athen. p. 6 a); but more frequently we find the different departments *αἱ ἰχθῦς, τὸ ὄψον, τὰ ἄλφιτα*, &c., which were in divisions in the market-place called *κύκλοι*. [AGORA.] The signal for a sale was given by a bell ringing, when marketers, cooks, &c., flocked there (see Mahaffy, *Social Life in Greece*, ch. 10). [J. Y.] [G. E. M.]

MACHAERA (*μάχαιρα*). [CULTER; PUGIO.]

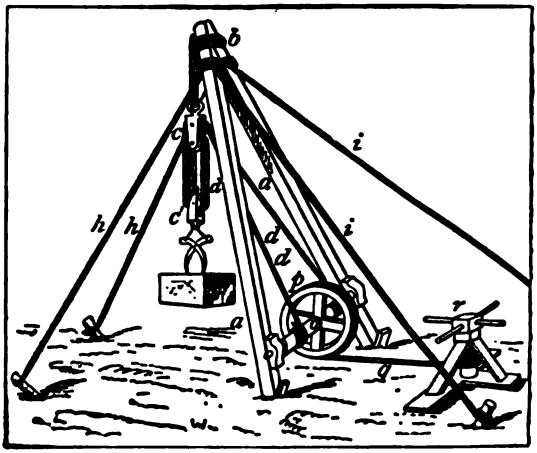
MA'CHINAE (*μηχαναί*) and **O'RGANA** (*ὄργανα*). The object of this article is to give a brief general account of those contrivances for the concentration and application of force which are known by the names of *instruments*, *mechanical powers*, *machines*, *engines*, and so forth, as they were in use among the Greeks and Romans, especially in the time of Vitruvius, to whose tenth book the reader is referred for the details of the subject.

The general but loose definition which Vitruvius gives of a *machine* (x. 1, § 1), is a wooden structure, having the virtue of moving very great weights. A *machina* differs from an *organon*, inasmuch as the former is more complex and produces greater effects of power than the latter: perhaps the distinction may be best expressed by translating the terms respectively *machine* or *engine* and *instrument*. Under the latter class, besides common *tools* and *simple instruments*, as the plough for example, Vitruvius appears to include the *simple mechanical powers*, which, however, when used in combination, as in the crane and other machines, become *machinae*. Thus Horace uses the word for the machines used to launch vessels (*Carm.* i. 4, 2), which appears to have been effected by the joint force of ropes and pulleys drawing the ship, and a screw pushing it forwards, aided by rollers (*φάλαγγες*) beneath it. The word *organon* was also used in its modern sense of a musical instrument. [See HYDRAULA.]

The Greek writers, whom Vitruvius followed, divided machines into three classes,—the (*genus*) *scansorium* or *ἀκροβατικόν*, the *spiritale* or *πνευματικόν* [HYDRAULA], and the *tractorium* or *βαροῦλκον*, according to the most probable reading, for moving heavy weights. Some explanation is needed for the *genus scansorium* or *ἀκροβατικόν*, which has been much discussed by commentators. Vitruvius clearly describes the machina which he thus classes. It is a scaffolding formed of upright poles, fixed in the ground with cross planks tied to them, and the "catenationes et erismatum fulturae," which he mentions afterwards, are no less obviously the ties of sloping supports for these upright poles. It is in fact such a scaffolding as may be seen any day for building purposes, and is the machine below (No. V.) on which Isidore says the workmen stand "propter altitudinem parietum." It is somewhat of a puzzle, when Vitruvius says that it differs from the other machinae in respect of having *audacia* rather than *ars*; but he probably means only this: that a very high scaffolding may cause wonder at its boldness; but there is no scientific principle in it, as in the other classes of machinae, which are mechanical powers. It must be confessed however that his account of its purpose, "ut ad altitudinem sine periculo scandatur *ad apparatus spectationem*" (unless some such alteration as "ad parietum structionem" is adopted) cannot be explained in a wholly satisfactory manner. If it is for workmen to stand on, it is hard to see why the word *spectatio* is used, but the only explanations offered by commentators—(1) for seeing theatrical shows, or (2) for viewing the enemy's works within the walls—cannot satisfy us. The theatre had its own tiers of seats: the words *sine periculo* would be wholly out of place, and moreover it is impossible that he should have so used apparatus when there is nothing in the context to explain its meaning, as is the case in Cic. *ad Fam.* vii. 1, 1. The same objection must prevent us from adopting the second view, for there is nothing whatever to indicate that Vitruvius is speaking of military affairs. We may be content to say that this class of machina is not what we should call a machine at all, *i.e.* it had no mechanical power, but was used as we use a scaffolding. The information which Vitruvius gives us may perhaps, however, be exhibited better under another classification.

I. *Mechanical Engines.*

1. *The Simple Mechanical Powers* were known to the Greek mechanicians from a period earlier than can be assigned, and their theories were completely demonstrated by Archimedes. Vitruvius (x. 3, s. 8) discusses the two modes of raising heavy weights, by *rectilinear* (*εὐθεῖαν*) and *circular* (*κυκλωτὴν*) motion. He explains the action of the *lever* (*ferreus vectis*), and its three different sorts, according to the position of the fulcrum (*ὑπομόχλιον*), and some of its applications, as in the *steelyard* [STATERA], and the oars and rudder-oars of a ship; and alludes to the principle of *virtual velocities.* The *inclined plane* is not spoken of by Vitruvius as a *machina*, but its properties as an aid in the elevation of weights are often referred to by him and other writers; and in early times it was, doubtless, the sole means by which the great blocks of stone in the upper parts of buildings could be raised to their places.



Drawing of a Machina Tractoria. (Blümner, *Techn.* iii. fig. 10.)

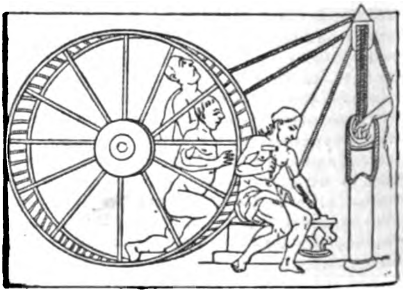
Under the head of circular motion, Vitruvius makes a passing allusion to the various forms of wheels and screws,—*plaustra*, *redae*, *tympana*, *rotae*, *cocleae*, *scorpiones*, *balistae*, *prela*, about which see the respective articles. It is worth while, also, to notice the methods adopted by Chersiphron and his son Metagenes, the architects of the temple of Artemis at Ephesus, and by later architects, to convey large blocks of marble from the quarries, by supporting them in a cradle between wheels, or enclosing them in a cylindrical framework of wood (Vitruv. x. 6, s. 2; cf. Blümner, *Technologie*, iii. 129 ff.); and also the account which Vitruvius gives of the mode of measuring the distance passed over by a carriage or a ship, by an instrument attached to the wheel of the former, or to a sort of paddle-wheel projecting from the side of the latter (c. 9, s. 14). What he says of the *pulley* will be more conveniently stated under the next head.

2. *Compound Mechanical Powers*, or *Machines for raising heavy weights* (machinae tractoriae). Of these Vitruvius (x. 2–5) describes three principal sorts, all of them consisting of a proper erect framework, from which hang *pulleys*. He describes the different kinds of pulleys, according to the number of *sheaves* (*orbiculi*) in each block (*troclea* or *rechamus*), whence also the machine received special names, such as *trispastos*, when there were *three* sheaves (as in the explanatory drawing), one in the lower block and two in the upper; and *pentaspastos*, when there were *five* sheaves, two in the lower block and three in the upper. The Greek name for the axis (*axiculus*, Vitruv.) was *μάγγανον*.

In the explanatory drawing by which Blümner illustrates Vitruvius, we see (*a*) the two upright beams (*tigna*) supported in place by (*h*) forestays (*antarii funes*) and (*i*) backstays (*retinacula*), tied at the top by (*b*) a *fibula*. From the top hangs (*c*) a fixed pulley-block (*troclea*, *τροχιλία*, Aristoph. *Lys.* 722): to this the *funis ductarius* (*d*) passes from the lower movable block (*c′*), to which again the weight, which is to be raised, is attached by iron grapnels (*forfices*). In this case the sheaves in each block are double (*duplices ordines orbiculorum*). The two portions of the funis ductarius are then fastened to an axle (*o*), with (*p*) a wheel (*tympanum* or *rota*, *περιτρόχιον*) upon it. The sockets on the beam which receive the pivots of the axle are called *chelonia* (*χελώνεια*). A separate rope passing round the tympanum is taken back to a capstan (*ergata*, *ἐργατοκύλινδρος*), which is worked round by levers (*vectes*). This well explains Lucret. iv. 905:

> "Multaque per trocleas et tympana pondere magno
> Commovet atque levi sustollit machina nisu."

Sometimes, however, the tympanum is of larger size, and is moved as a treadwheel without any capstan by treaders inside it.



Machina Tractoria, from a relief at Capua. (Blümner.)

The woodcut above is from a relief found in the amphitheatre at Capua, where it had been placed by the *redemptor* of the work. It represents the raising of a pillar. Blümner thinks that the attachment of the pulling-rope to the axle of the treadwheel is left to the imagination, and that the two ropes which go in that direction must be the supports of the beam: but perhaps we should rather take the lower rope to be a single rope from the pulley to the axle, and the upper rope to be a stay of the beam. Vitruvius describes also a crane of less power which has single sheaves in each block, and in which, instead of the *tympanum* and *ergata*, there is, fixed by *chelonia* to the beam, simply a windlass (*sucula*, ἄξων or ὄνος), round which the pulling-rope is wound; and a crane of a single beam, where triple *funes ductorii* pass from the pulley-blocks down to a fixed horizontal pulley (*artemo*, ἐπάγων) at the base of the beam, and are pulled horizontally by three rows of men without windlass. The machine is then called a *polyspastos*. This crane, he says, having a single beam, is more easily transferable. It may be noticed that Pollux, x. 140, speaks of a καρκίνος for raising stones; but it is probable that the καρκίνος was strictly that part of the machine above described, which held the stone = Lat. *forfices*: γέρανος (*crane*) is the name which Pollux (iv. 130) gives to the machine for raising actors in the theatre. (For further description, see Blümner, *Technologie*, iii. pp. 111–128.)

II. *Military Engines*. (Vitruv. x. 15–22; Vegetius and the other writers *de Re Militari*; Aries; Helepolis; Testudo; Tormentum; Turris, &c.)

III. *Theatrical Machines*. [Theatrum.]

IV. *Hydraulic Engines*.

1. *Conveyance and delivery of water through pipes and channels*. [Aquaeductus; Emissarium; Fistula; Fons.] It has been shown, under the articles referred to, that the ancients well knew, and that they applied in practice, the hydrostatic law, that water enclosed in a bent pipe rises to the same level in both arms. It also appears, from the work of Frontinus, that they were acquainted with the law of hydraulics, that the quantity of water delivered by an orifice in a given time depends on the size of the orifice and on the height of the water in the reservoir; and also, that it is delivered faster through a short pipe than through a mere orifice of equal diameter.

2. *Machines for raising water*. The ancients did not know enough of the laws of atmospheric pressure to be acquainted with the common sucking pump; but they had a sort of forcing pump. [Ctesibica Machina.] For raising water a small height only they had the well-known screw of Archimedes, an instrument which, for this particular purpose, has never been surpassed. (Vitruv. x. 11; Coclea.) But their pumps were chiefly on the principle of those in which the water is lifted in buckets, placed either at the extremity of a lever, or on the rim of a wheel, or on a chain working between two wheels. (Vitruv. x. 9; Antlia; Tympanum.)

3. *Machines in which water is the moving power*. (Vitruv. x. 10; Mola.)

4. Other applications of water, as to the measurement of time, and the production of musical sounds, in the *clepsydra* and the *hydraulic organ*. (Vitruv. ix. 5, 6, x. 13; Horologium; Hydraula.)

V. The word *machina* in Latin also signifies the scaffolding on which plasterers or masons work (Plin. xxxv. § 120; Dig. 13, 6, 5 and 7). Hence *machio* is used for the workman (Isid. Or. xix. 8, 2), whence the modern words *maçon*, "mason."

VI. In Plin. *H. N.* xxxv. § 81, *machina* is a painter's three-legged easel = ὀκρίβας or κιλλίβας. [P. S.] [G. E. M.]

MAENIA'NUM signified, originally, a projecting balcony, which was erected above the arcades of shops on the south-west of the Roman forum and overhanging the street, in order to give more accommodation to the spectators of the gladiatorial combats, by the censor C. Maenius, B.C. 318 (Festus, *s. v.* p. 135, ed. Müller; Isidor. *Orig.* xv. 3, § 11); and hence balconies in general came to be called *maeniana*. The front panels of the balconies were painted by Serapion (Plin. *H. N.* xxxv. § 113). Many allusions to such structures, and to the regulations which were found necessary to keep them within due bounds, are found in the ancient writers (Cic. *Acad.* ii. 22, 70; Non. p. 83, s. 65, Müll.; Sueton. *Calig.* 18; Vitruv. v. 1; Val. Max. ix. 12, § 7; Cod. Just. viii. 2, 20, 10, 11, xliii. 8, 2, § 6; l. 16, 242, § 1; Amm. Marc. xxvii. 9, 10). From these passages it appears that as they were inconvenient in narrow streets, the praefectus urbis in 368 A.D. enforced older laws against their construction, and the emperors Theodosius and Honorius extended the prohibition so as to include provincial towns as well as Rome, unless there was a space of at least ten clear feet between the opposite maeniana. (See also Amphitheatrum, Vol. I. p. 112; Cancelli; and, for a drawing of a maenianum, Domus, Vol. I. p. 666; Burn's *Rome and Campagna*, p. 90; Becker-Göll, *Gallus*, ii. 288.) [P. S.] [G. E. M.]

MAGADIS. [Lyra, p. 106.]

MAGISTER, which contains the same root as *mag-is* and *mag-nus*, was applied at Rome to persons possessing various kinds of offices, and is thus explained by Festus (s. v. *Magisterare*):—"*Magisterare*, moderari. Unde *magistri* non solum doctores artium, sed etiam pagorum, societatum, vicorum, collegiorum, equitum dicuntur; quia omnes hi magis ceteris possunt." Paulus (Dig. 50, tit. 16, s. 57) thus defines the word: "Quibus praecipua cura rerum incumbit, et qui magis quam ceteri diligentiam et sollicitudinem rebus, quibus praesunt, debent, hi magistri appellantur." The following is a list of the principal magistri:—

Magister Admissionum. [Admissionales.]

Magister Armorum appears to have been the same officer as the Magister Militum. (Amm. Marc. xvi. 7, xx. 9.)

Magister Auctionis or Bonorum. [Bonorum Emptio.]

Magistri Augustales or Larum Augustorum. [Augustales.]

Magister Bibendi. [Symposium.]

[*]Magister a Censibus (or *praepositus a censibus*) was an official who examined the qualifications of persons who applied to be enrolled among the knights. He is sometimes

---

[*] It should be noticed that these private offices in the imperial household were in the earlier Empire discharged by slaves or by freedmen (some of whom, Narcissus and Parthenius, had exceptional official rank); in the later Empire they gradually assumed a higher public standing. Vitellius thus employed men of equestrian rank (Tac. *Hist.* i. 58), and therefore the statement that Hadrian "ab epistulis et a libellis *primus* equites Romanos habuit" (Spart. *Hadr.* 22) is not correct; but it probably marks the date from which this became the rule. The three chief departments were *a rationibus, a libellis, ab epistolis*. (See for a full account, Friedländer, *Sittengeschichte*, i. pp. 51 ff.)

connected with the *a libellis*, who received the application in the first instance. [Equites.]

Magister Collegii was the president of a collegium or corporation. [Collegium.]

*__Magister Epistolarum__ (or ab Epistolis), a private secretary, answered letters on behalf of the emperor. (Orelli, *Inscr.* 2352.)

Magister Equitum. [Dictator, Vol. I. p. 633 *b*.]

Magister Fani in coloniae and municipia was appointed each year by the duumviri of the town (one for each temple or shrine), to arrange the ceremonies, sacrificia, pulvinaria, &c. (Lex Col. Genet. c. 128, Orelli, 2218.) They were equivalent to the Roman *aedituus*, who was also called *magister fani.* (Marquardt, *Staatsverwaltung*, iii. 215.)

*__Magister Libellorum__ (or a Libellis) was an officer or secretary who read and answered petitions addressed to the emperors. [Libellus, p. 57 *a*.] He is called in an inscription "Magister Libellorum et Cognitionum Sacrarum." (Orelli, *l. c.*)

*__Magister Memoriae__, an officer whose duty it was to receive the decision of the emperor on any subject and communicate it to the public or the persons concerned. (Amm. Marc. xv. 5, xxvii. 6.)

Magister Militum, the title of the two officers to whom Constantine entrusted the command of all the armies of the Empire. One was placed over the cavalry, and the other over the infantry. On the divisions of the Empire their number was increased, and each of them had both cavalry and infantry under his command. In addition to the title of *Magistri militum*, we find them called *Magistri armorum, equitum et peditum, utriusque militiae* (Zosim. ii. 33, iv. 27; Vales. *ad* Amm. Marc. xvi. 7). In the 5th century, there were in the Eastern empire two of these officers at court and three in the provinces; in the Western empire, two at court and one in Gaul. Under Justinian, a new magister militum was appointed for Armenia and Pontus. (Walter, *Geschichte des römischen Rechts*, § 342, 2nd ed.)

Magister Navis. [Exercitoria Actio.]

*__Magister Officiorum__ was an officer of high rank at the imperial court, who had the superintendence of all audiences with the emperor, and also had extensive jurisdiction over both civil and military officers. They originally took part of the duty of the court *cubicularius;* the other part went to the *praefectus sacri cubiculi.* [See also Admissio.] (Cod. 1, tit. 31; 12, tit. 16;—Cod. Theod. 1, tit. 9; 6, tit. 9;—Amm. Marc. xv. 5, xx. 2, xxii. 3; Cassiod. *Variar.* vi. 6.)

Magister Pagi. [Pagus.]

Magister Populi. [Dictator.]

*__Magister a rationibus__, more usually called *procurator*, had the charge of the emperor's private expenses [see Fiscus].

*__Magister Scriniorum__ had the care of all the papers and documents belonging to the emperor. (Cod. 12, tit. 9; Spartian. *Ael. Ver.* 4; Lamprid. *Alex. Sev.* 26.)

Magister Societatis. The equites, who farmed the taxes at Rome, were divided into companies or partnerships; and he who presided in such a company was called Magister Societatis. (Cic. *Verr.* ii. 74, 182; *ad Fam.* xiii. 9; *pro Plancio*, 13, 32.) [Societas.]

Magistri Vicorum. These officials had existed under the Republic, and we have no account of their beginning. Livy (xxxiv. 7) introduces them into a speech of the year 195 B.C. as officials of an inferior class, but allowed to have the magisterial insignia—no doubt at the festivals which were under their charge. The magistri vicorum were, however, entirely re-organised by Augustus in the year B.C. 7, when he divided the city into 14 regions and 265 vici, and assigned 4 magistri vicorum to each vicus (the number may be gathered from inscriptions, *C. I. L.* vi. 445, 975), who were elected annually by the inhabitants of the vicus (Suet. *Aug.* 30). The first so appointed entered upon their office on August 1, B.C. 7, and accordingly in several inscriptions we find mentioned magistri *anni secundi, tertii,* &c., equivalent to the years B.C. 6, 5, &c. (*C. I. L.* vi. 764, 282). Those of the year B.C. 7 are "magistri qui primi Kal. Aug. magisterium inierunt." The total number of magistri vicorum remained 1060 till the beginning of the 4th century, when it was reduced to 672, and 48 were assigned to each *region:* the title magistri *vicorum* was, however, retained. Their functions were partly civil, partly religious. When Augusti appointed them, they had (with servi publici under them) especially to guard against fires. This had been a function of the old magistri vicorum, who accordingly were in charge of the worship of Stata Mater, the protectress against fire (see Fest. p. 317; Preller, *Röm. Myth.* 531; Mommsen, *Staatsrecht*, i. 328). They had other duties, as to the limits of which we have not very clear information, regarding the maintenance of order within their district. The duty of watching against fire was in A.D. 6 transferred to the newly constituted *cohortes vigilum.*

As regards their religious duties (their most characteristic function), they presided over the Compitalia in honour of the Lares Compitales [Compitalia], besides the worship of Stata Mater mentioned above, and these offices were continued to the newly constituted magistri vicorum under Augustus, with increased importance when the Genius Augusti was included in the same worship. They had also to superintend the building or repairs of the Sacella of the Lares, as churchwardens, so to speak, of their vicus: but in this they had to obtain the approval of the praetor or of the official over the region who was appointed by lot from the aediles, tribunes, and praetors (see Suet. *Aug.* 30; Dio Cass. lv. 8; Mommsen, *Staatsrecht*, ii. 516). In the exercise of their religious office they wore the toga praetexta, and had two lictors assigned to them. (Dio Cass. *l. c.*; Liv. xxxiv. 7; Marquardt, *Staatsverwaltung*, iii. 203.) [W. S.] [G. E. M.]

MAGISTRATUS. *Magistratus* is properly the abstract form of the concrete *magister*, but it comes to be used indifferently to indicate the office and the person who holds it. In the *S. C. de Bacchanalibus* we find *magistratus* side by side with *magister*, denoting the governor of a religious guild. In the later practice, however, only the word *magister* applies to lesser corpora-

---

* See note in preceding page.

tions; *magistratus* is commonly restricted to the person or office of the governors of the Populus Romanus, of the Plebs, and of the municipia and coloniae. The powers of the municipal magistrates are discussed elsewhere [see COLONIA]; the following remarks apply to the magistrates of the populus and of the plebs.

Every such magistrate has *coercitio*, the power within his proper sphere of duty to compel the citizens by force of punishment to obey him, and to avenge any act which argues contempt of his magisterial authority (*in ordinem cogere magistratum*). He has likewise the power of addressing the people by word of mouth (*jus contionis*) and by written proclamation (*jus edicendi*).

The magistrates are grouped in colleges; there are two consuls, ten tribunes, and so forth. But these colleges do not, with very rare exceptions (see Liv. ix. 46, 7), act as boards deciding by a majority of votes. Each individual magistrate is invested with the full powers of his college, and is qualified, if not interrupted by his colleagues, to act in all matters alone. A particular subdivision of duties (*provinciae*) may, however, be prescribed by the senate or people for the individual members of a college. This division is specially important in the case of the praetors at home and of the governors of the transmarine possessions of Rome. The first have particular departments of business assigned to them; the latter have particular localities in which they are to exercise their functions. When it may be a matter of dispute which of the equally qualified persons is to perform a particular act or series of acts, the question has to be settled by arrangement, by taking turns, or by the lot.

Magistratus Populi Romani.—Though the word seems never to be applied directly to the king, our authorities trace all magistracy back to the regal power. Pomponius, for instance (Dig. i. 2, 2, 14), begins his discussion with the words, "Quod ad magistratus attinet, initio civitatis hujus constat reges omnem potestatem habuisse." At the institution of the consulship this power was put in commission. "Regio imperio duo sunto," is Cicero's description of the office (*de Leg.* iii. 3, 8); and Livy (ii. 1, 7) comments—"libertatis originem inde magis quia annuum imperium consulare factum est, quam quod deminutum quicquam sit ex regia potestate, numeres. Omnia jura, omnia insignia primi consules tenuere."

The college representing the kingly power was modified by various additions and alterations; as, for instance, when a dictator was co-opted into it as a superior colleague, or praetors were created as inferior colleagues to the consuls, or when their place was filled by an interrex or by tribunes with consular power. Each one of these officials had the imperium: he possessed, like the kings, the right to command the individual citizen in peace and war [see IMPERIUM], and to be the president and mouthpiece of the sovereign corporation, the Populus Romanus. Further certain specialised functions were committed to assistants not invested with these plenary powers: such were the censors, curule aediles, and quaestors, besides the lesser officials, who collectively made up the vigintivirate. The more specific name for power (*imperium*) being denied to these, the generic term *potestas* serves as descriptive of their authority. Thus we may say at pleasure "consularis potestas" or "consulare imperium," but only "censoria potestas." To both classes belong the *auspicia patriciorum*, and all holders of these offices are *magistratus patricii*, whether they be personally members of the patrician order or not.

Messalla (Aul. Gell. xiii. 14) divides these *auspicia patriciorum* into greater and lesser, and the magistrates in like manner into *majores* and *minores*. The censor, from the practical importance of his office, ranks among the *majores magistratus;* but with this exception Messalla's division of greater and lesser answers to the division between those magistrates who have and those who have not the imperium. The greater magistrates receive their office from the populus assembled by centuries, the lesser magistrates from the populus assembled by tribes. What Messalla says is confirmed by Cicero's account (*ad Fam.* vii. 30) of the proceedings of Caesar. When assembling the populus for the election of quaestors, he was "tributis comitiis auspicatus"; when in the course of the day he wished to elect a consul instead, "centuriata habuit." Messalla proceeds to point out, however, that the powers of magistracy are more formally and regularly (*justius*) entrusted by the subsequent passing of a Lex Curiata. All the magistrates with imperium are colleagues, and so their auspices may collide (*turbant, retinent, vitiant, obtinent*), in which case those of the superior override those of the inferior. In illustration of this we find that a praetor acting in the field in conjunction with a consul could not, though he had an imperium of his own, claim a triumph, because his imperium and his auspices were overborne by those of the consul (Val. Max. ii. 8, 2). It is certain that any of the magistrates *cum imperio* could in the same way overbear any of the minor magistrates. On the other hand, Messalla tells us that a magistrate may be "non ejusdem potestatis," "non eodem rogatus auspicio" with another. In this case the two have not merely different *provinciae* or spheres for the exercise of their authority, but the authority itself is different; they are not colleagues, and no collision of their auspices is possible. Such was the censor in relation to the consul or praetor, and such by parity of reasoning would be the curule aedile in relation to the quaestor. The same principle obtains in the matter of *intercessio*. It is summed up in the words of Cicero (*de Leg.* iii. 3, 6): "ni par majorve potestas prohibessit." Magistrates *non ejusdem potestatis* cannot veto each other's actions.

The magistrates *cum imperio* alone had the *jus agendi cum populo*. The voice of the Roman people could be uttered only in answer to a question (*rogatio*) put to it by such a magistrate. This power could not be delegated in case of elections or of legislation; but when the people met to hear an appeal from the sentence of a magistrate in a criminal case, the consul or praetor might lend his auspices to an inferior (as, for instance, the quaestor), who could then preside and put the question. [See Varro, *L. L.* vi. 91, "ad praetorem aut ad consulem mittas auspicium petitum;" and 93, "alia de causa hic magistratus (quaestor) non potest exercitum urbanum convocare."]

As all magisterial power is derived from the people, it follows that those magistrates who have the *jus agendi cum populo* must provide for the succession, not only in their own college, but in all the other magistracies. The censor or the curule aedile cannot submit the question of the choice of their successors to the people, but this must be done by the consul or praetor. The presiding officer is said *rogare* or *creare* the newly elected magistrate. Most modern writers (including Mommsen) hold that this is a relic of an ancient power of nomination or selection on the part of the magistrate, that the obligation to consult the people on the choice is of later origin, and that the primary notion of magistracy is that of a power passing from hand to hand through successive generations of officers. This opinion is, however, in direct contradiction to the belief of the Romans themselves, who represented the higher magistrates, including the king, as chosen from the first by the people; and the cases adduced in favour of the modern hypothesis seems inconclusive. The co-optation of the dictator is an exception, which is probably to be explained on the ground that he was to be appointed in emergencies when the delay necessary for a popular election might be dangerous. Nor is it safe to draw any conclusion from the fact that neither the Rex Sacrificulus nor the Pontifex Maximus was elected by the people. The Romans were evidently uneasy lest by abolishing the kingship they should have offended the gods, and it was not unnatural that, when severing the oversight of religion from the chief magistracy, they should have emphasised the partition of functions by committing the transmission of religious power to the Sacred College itself. Mommsen's theory necessarily leads him to believe that the interrex who reigned for only five days was entrusted with the enormous responsibility of imposing on the people a ruler for life. There is no need to accept the premises which lead to so improbable a conclusion. The unanimous evidence of the ancients justifies us in regarding the people as the fount of power, and in limiting the part of the magistrate in the creation of his successor to those sufficiently ample powers which belonged to him as the necessary convener and regulator of the assembly which had to elect.

Jurisdictio, the power of administering justice between the citizens, belongs in its full extent only to the magistrate *cum imperio*. The formal competence of every such magistrate to administer justice is recognised in the fictitious lawsuits necessary for manumissions, adoptions, and transfers of property (*in jure cessio*). The consul or even the pro-consul at the gates of the city may hold a court for such purposes. But all serious litigation at Rome is specially reserved as the provincia of one or other of the praetors. After the conquest of Sicily, that island was made the province of a special praetor, who exercised therein the fullest *jurisdictio*, and similar functions were assigned to the governors of districts subsequently annexed. Besides the full jurisdiction which goes with imperium, a limited jurisdiction in special cases belongs to the curule aediles, the decemviri litibus judicandis, and to the municipal magistrates. [See JURISDICTIO.]

Criminal justice—that is, the punishment of heinous offences, supposed to endanger the state—falls likewise under the imperium. But the action of the magistrate in this sphere is early limited by the right of appeal to the people, when the punishment to be inflicted is serious. This right subjects the magistrate to the necessity of defending his sentence and to the possibility of having it reversed; it practically reduces him from a judge to an accuser. Such a situation was felt to be beneath the dignity of the superior magistrate; and accordingly we find that he habitually refrained from the exercise of any such powers, and allowed the task of condemning or accusing to devolve on his inferiors (at first probably his delegates) the duoviri perduellionis and the quaestors. By a curious combination of constitutional exigencies, the tribune may find himself with regard to the centuriate trial in the same position as the quaestor. If he has condemned a citizen to death, and is appealed against, his own (plebeian) assembly is, by the law of the Twelve Tables, incapable of hearing the case; he must therefore ask one of the magistrates *cum imperio* for a day of the Comitia Centuriata: see Liv. xliii. 16, 11, "Utrique censori perduellionem se judicare pronuntiavit (tribunus), diemque comitiis a C. Sulpicio praetore urbano petiit." Whenever *provocatio* is suspended, as on the appointment of a dictator or on the decree of senate or people to constitute a special *quaestio*, the superior magistrate is seen as criminal judge, and inflicts death by virtue of his imperium. The most notable case is the proceeding against the Bacchanalians in B.C. 186, of which a full account is given by Livy (xxxix. 14–19).

A relic of the criminal jurisdiction of the consuls and praetors survived in their power to sharpen their *coercitio* by throwing citizens into prison. This was a consequence of their right of summons and seizure (*vocatio et prensio*) as a preliminary to trial. This right was not possessed by the inferior magistrates, who could only enforce their orders by seizing pledges or inflicting a small fine.

The senate is the *consilium* or authorised body of advisers attached to the chief magistrate. Accordingly only those magistrates of the Roman people who as possessors of the imperium represent the kingly office, can summon and consult the senate. This power is absent from the censor, the curule aedile, and the quaestor. These magistrates appear, however, no less than those *cum imperio*, to have been relieved during their term of office from the duty of giving advice as senators (*suo loco sententiam dicere*) to the presiding magistrate. On the other hand, they could, any of them, address an official statement to the senate (*verba facere*) regarding the matter in hand.

The office of the magistrate ceases immediately on the expiry of the period for which he has been elected. If he is present in the city (*domi*), his powers lapse with his office; but if he is absent on service (*militiae*), he is to continue at his post and exercise all powers until he is relieved by a successor. Meanwhile he is acting *pro consule*, *pro praetore*, or *pro quaestore*, as the case may be. Such a necessity could hardly arise, while a campaign lasted only for a single summer. When in B.C. 326, during the Samnite War, it became desirable for the consul Q. Publilius Philo to remain at the head of his army for a second year, a special decree of the people to extend his command, though not strictly necessary, was held to be proper, and for some time this precedent appears to have been followed. By the time of the Second Punic War, however, it is recognised that a simple decree of the senate is sufficient for the prorogation of an existing command. It is otherwise of course when a command *pro consule* is conferred on a private man—as for instance on P. Scipio, when he went to Spain in B.C. 211. For this a law of the populus or the plebs is always necessary.

It may perhaps be counted as an exception to the rule of purely local division, that the pro-magistrate cannot preside at the meetings either of senate or people, even when these are held outside the walls. These are the exclusive prerogatives of the actual magistrates. The pro-magistrate is commonly confined, even more strictly than the magistrate in his year of office, to a special district as his *provincia*. The Lex Majestatis of Sulla particularly forbids him to overstep the bounds of that district. When he has handed over his province to a successor, his power is therefore in abeyance, but it is not extinguished till he enters the city gates. He still keeps his official title, and wears his official dress: he is still attended by lictors and axes, and exercises formal acts of jurisdiction. At a word from the senate he is authorised to stir up again his dormant imperium; and when the state is in danger, "those who are present with pro-consular command near the city" are included in the mandate which arms the magistrates against the enemy: see Caesar, *Bell. Civ.* i. 5, "dent operam consules, praetores, tribuni plebis, quique pro consulibus sint ad urbem, ne quid respublica detrimenti capiat."

Magistratus plebis.—When the non-patrician Romans formed themselves into an exclusive corporation on the Mons Sacer in B.C. 449, their first act was to elect magistrates of their own; and these officers, the tribunes and aediles of the plebs, existed from thenceforth side by side with the magistrates of the Roman people. The resemblances and differences between the functions of the two kinds of magistrate produce some of the most curious complexities known to any constitution. The authority of the plebeian magistrates was from the first acknowledged (though somewhat grudgingly) by the whole community, inasmuch as the law of the state accorded to them the right absolutely to protect the private citizen against any action of the patrician magistrate. As the corporation of the plebs gradually assumed to itself the right to legislate on matters concerning the whole community, its officers became necessarily more and more magistrates of the Roman state. When by the Hortensian law (B.C. 287) the decree of the plebs was formally placed on an equal footing of power with the decree of the sovereign populus, the reason for any distinction between the magistrates of the two corporations really disappeared. In the case of the plebeian aediles this distinction was practically abolished. Originally the subordinate assistants of the tribune and his instruments in giving effect to his duty of protection, the aediles of the later Republic were assimilated to the minor magistrates of the Roman people. Though still necessarily plebeians, and elected by the plebs, their powers and duties bore no relation to their original functions, but were precisely similar to those of their curule namesakes. This identity is best illustrated by the fact that Caesar divided the city into wards, each in charge of a single aedile, without any distinction between the two kinds. The plebeian (like the curule) aedileship gave the opportunity for conciliating the people by gifts and shows, and so paving the way of the candidate to the higher posts. In the ordinary career of a Roman statesman the office was a step in advance, after a man had served the tribunate and before he proceeded to the praetorship.

The position of the tribune in the later Republic is much more anomalous. As the ruling magistrate of his corporation he has the *jus agendi cum plebe*, which confers on him precisely the same powers of initiative in legislation as are possessed by the consul who puts the question to the populus. The senate likewise is assigned as a *consilium* of advisers to him as well as to the consul, and he has the same right of summoning it and eliciting its decrees. So far we have only a multiplication of the chief magistracy. But here the identity ceases. The tribune had not the essential attribute of the chief magistrates of the Populus Romanus, the imperium. He could neither command in war nor administer justice between the citizens. On the other hand, certain eminent prerogatives derived from the historical nature of his office survived. The "word of might that guards the weak from wrong" had been made effective by investing the person of the tribune with *sacrosanctitas*, and this *sacrosanctitas* could be used in attack as well as in defence. The *coercitio* of him whom it is death to resist must necessarily overbear all other authority. If the tribune thinks fit to throw the consul into prison or to drag the censor to the Tarpeian rock for execution (Pliny, *H. N.* vii. § 143), no one but another tribune can hinder him. In like manner the intercessio of the tribune transcends the rule that magistrates *non ejusdem potestatis* cannot interfere with one another. The veto of the tribune is absolute over the actions of consul, of praetor, and of censor, while these have no corresponding power over him. In case of collision the patrician magistrate must always yield to the *sacrosancta potestas*. Such powers would be nothing short of a legalised tyranny, were they placed in a single hand. As a matter of fact the great number of the tribunes, and the principle that each of them could hinder the action of his colleague, rendered these enormous powers practically harmless. In ordinary times the college of tribunes, divided against itself, excluded from military command, and incapable of action outside the city walls, possessed little influence or dignity, and was commonly the humble instrument of the senate, and a convenient check on any vagaries of the superior magistrates. (See Liv. xxviii. 45; xlv. 21.) The survival, however, of so irrational an institution became eminently dangerous in times of revolution. In the hands of the Gracchi the tribunician power proved strong enough to overbear the other elements of the constitution, and could be resisted only by violence and bloodshed. Under the control of Marius, of Pompey, and of Caesar, the same office afforded an effective support to the military chiefs against the senatorial government. After serving for a century the purpose of party strife or of individual ambition, the power of the plebeian magistrate, united at last with military and provincial command, became the basis of the despotism of the emperors. For their appointment, see NOMINATIO.

(This article is in the main a summary of the first volume of Mommsen's *Staatsrecht*, to which the reader is referred for more detailed information.) [J. L. S. D.]

MAJESTAS. The only term for treason in early Roman law was *perduellio*, a word made up of *per, para* = "very," and *duellum*, "war" (Charisius, ii. 14, 159). *Perduellis*, a person guilty of this crime, originally signified a pronounced public enemy of the state, and then came to mean one who assisted a public enemy by his treachery (Varro, *L. L.* v. 1, 3; Cic. *de Off.* i. 12, 37; Dig. 50, 16, 234: cf. L. Lange, *de duelli vocabuli origine et fatis*). According to the Twelve Tables, a citizen was *perduellis* who showed a hostile disposition against his country, either by stirring up an enemy against it (*hostem conciere*) or by surrendering a Roman citizen to an enemy (*civem hosti tradere*) (Voigt, *XII. Tafeln*, ii. § 172); but the offence, like that of treason in early English law, was not clearly defined, as is shown by the fact that the crime of Horatius in killing his sister was included, according to Livy (i. 26), under the head of *perduellio*, and not under that of *parricidium*, to which it seems legally to belong. (Festus, s. v. *Sororium:* cf. Mommsen, *Staatsrecht*, ii.^{3} p. 615; Clark, *Early Roman Law*, p. 73.)

The earliest trial and form of procedure is that which is given by Livy (i. 26) in respect of this case (cf. Liv. vi. 20). In the regal period the jurisdiction over this and other capital offences belonged to the king, who might delegate his power to commissioners, called *duoviri perduellioni judicandae*. Under the Republic the jurisdiction was given directly to duoviri, who were appointed for each particular occasion by the Comitia. There was always an appeal (*provocatio*) from the duoviri to the populus. The *perduellionis judicium* existed at least in theory to the later times of the Republic (Cic. *Orat.* 46, 156); but the name seems almost to have fallen into disuse. (Mommsen, *Staatsrecht*, ii. pp. 542, 615–618.)

Perduellio was regarded as a religious offence in early times, the tutelary god being propitiated by the death of the offender (*deo necari*), who was put to death by flogging and hanging ("infelici arbori reste suspendi . . . verberatum," Cic. *pro Rabir. perd.* 4, 13; Liv. i. 26, 6). In course of time the punishment was *aquae et ignis interdictio*.

Voigt gives the following as cases of *perduellio* by stirring up an enemy against the state:—1. The case of Vitruvius Vaccus, 426 A.U.C., who was tried before a *quaestio extraordinaria* and convicted (Liv. viii. 19, 4; 20, 6). 2. The case of the Tusculans, in 431 A.U.C., who were prosecuted by the tribunes and acquitted (Liv. viii. 37, 8–11). 3. The case of Sempronius Gracchus, in 631 A.U.C., who was acquitted. The case of C. Popilius Laenas, in 647 A.U.C., is given as one of *perduellio* by surrendering a Roman citizen to an enemy (Auct. *ad Herenn.* iv. 24, 34; Cic. *de Leg.* iii. 16, 36; Liv. *Ep.* 65). It should be added that Cn. Fulvius was charged with the offence of treason for losing a Roman army (Liv. xxvi. 1, 3).

The term *perduellio* was still used under the Empire and is found in Justinian's legislation, but it is a question whether it was not merged for all legal purposes in the *crimen majestatis*. Ulpian, as cited in Dig. 48, 4, 11, distinguishes between the legal consequences of *majestas* which is *perduellio* and *majestas* which is not, so that we should perhaps regard *perduellio* at this time as a species of *majestas*.

The word *majestas* consistently with its relation to *mag*[*nus*] signifies the magnitude or greatness of a thing. "Majestas," says Cicero (*Part. Orat.* 30, 105), "est quaedam magnitudo Populi Romani;" "Majestas est in Imperii atque in nominis Populi Romani dignitate." Accordingly the phrases *majestas Populi Romani*, *Imperii majestas* (Hor. *Carm.* iv. 15), signify the whole of that which constituted the Roman state; in other words, the sovereign power o the Roman state. The expression *minuer majestatem* consequently signifies any act by which this *majestas* was impaired; and it is thus defined by Cicero (*de Invent.* ii. 17, 53): "Majestatem minuere est de dignitate, aut amplitudine, aut potestate Populi aut eorum quibus Populus potestatem dedit, aliquid derogare." (See Cic. *ad Fam.* iii. 11: "Majestatem auxisti.") The phrase *majestas Publica* in the Digest is equivalent to the *majestas Populi Romani*. The *crimen majestatis*, or, to use the complete expression, *crimen laesae, imminutae deminutae, minutae, majestatis*, is the offence o injuring or attempting to injure the sovereig power of the Roman people. Accordingly it i defined by Ulpian (Dig. 48, 4, 1) to be "crime illud quod adversus Populum Romanum ve adversus securitatem ejus committitur." Thu the conception of the *crimen majestatis* is mor abstract and wider in scope than *perduellio* o than that of treason in English law.

Various *leges* were passed for the purpose determining more accurately what should *majestas*. These *leges* were a Lex Apuleia, pr bably passed in the fifth consulship of Mariu the exact contents of which are unknown (Ci *de Or.* ii. 25, 49); a Lex Varia, B.C. 91 (Appia *Bell. Civ.* 1, 37; Cic. *Brut.* 89, 304; Vale Maxim. viii. 6, § 4; Cic. *pro Scaur.* 1, 3; *Tu cul.* ii. 24, 57); a Lex Cornelia, passed by Cornelius Sulla, which appears to have conso dated and made considerable additions to t law of *majestas*, bringing under it a number acts of usurpation on the part of provinc governors and of magistrates. Sigonius h attempted to collect its *capita*. By this l *majestas* became the subject of a *quaestio p petua* (Cic. *in Pis.* 21, 50; *pro Cluent.* 35, 9 *ad Fam.* iii. 11: cf. Zachariä, *Corn. Sulla*, 129–131; Volkerstaert, *de L. Cornelio Su legislatore*, pp. 154–160). Lastly, there was t Lex Julia de majestate, which continued und the Empire to be the fundamental enactment the subject. This Lex Julia is by some attributed to C. Julius, and assigned to the year B.C. 48, and this may be the lex referred to in the Digest and Code. That a Lex de majestate was passed in Caesar's time appears from Cicero (*Philipp.* i. 9, 23). But more probably the Lex Julia de majestate was one of the Leges Juliae of Augustus. Like many other *leges*, the Lex Julia was modified by senatusconsulta and imperial constitutions; and we must not conclude from the title in the Digest (48, 4), *ad Legem Juliam majestatis*, that all the provisions enumerated under that title were comprehended in the original Lex Julia.

The offences comprised under the head of *crimen majestatis* may be divided into two heads: (1) Attacks against the public security generally; and (2) treason specially directed against the person of the emperor.

(1.) Under this head we may include acts of the following kind:—Bearing arms against the state, adhering to the public enemy in various ways, sedition directed against the state, inciting to mutiny, making war or levying troops without authority to do so, killing a Roman magistrate, the refusal of a governor to leave his province after he had been superseded, and other unlawful acts of officials, the forgery of public instruments, &c. (Dig. 48, 4, 1, 2; Paul. 5, 29, 1.)

(2.) Under the Empire the term *majestas* was applied to the person of the reigning Caesar, and we find the phrases *majestas Augusta*, *imperatoria*, and *regia*. It was, however, nothing new to apply the term to the emperor, considered in some of his capacities, for it was applied to the magistratus under the Republic, as to the consul and praetor (Cic. *Philipp.* xiii. 9, 20; *in Pisonem*, 11, 24). Horace even addresses Augustus (*Ep.* ii. 1, 258) in the term "majestas tua," but this can hardly be viewed otherwise than as a personal compliment, and not as said with reference to any of the offices which he held. It was by the extension of the crime of *majestas* that the emperors first raised themselves above the ordinary law. They were not content with the protection which the Lex Cornelia had given to magistrates by making it treason to kill, or perhaps even to attempt to kill them; but the most trivial acts of disrespect to the emperor's person or authority became treasonable in course of time. Augustus availed himself of the Lex Julia for prosecuting the authors of *famosi libelli* ("cognitionem de famosis libellis, specie legis ejus, tractavit," Tac. *Ann.* i. 72; Dio Cass. lvi. 27; Sueton. *Aug.* 55). The proper inference from the passage of Tacitus is that the Lex Julia did not properly apply to words or writings, for these were punishable otherwise. [Libellus, 2.] The passage of Cicero (*ad Fam.* iii. 11) is manifestly corrupt, and, as it stands, inconsistent with the context; it cannot be taken as evidence that the Lex Majestatis contained any express provisions as to libellous words, as to which there were other sufficient provisions [Injuria]. Under Tiberius the offence of *majestas* was extended to all acts and words which might seem to be disrespectful to the Princeps, as appears from various passages in Tacitus (*Ann.* i. 73, 74; ii. 50; iii. 38, 66, 67).

It was treason to do anything which could possibly be construed as disrespectful to the statues of the emperor. It is stated by Marcianus, as cited in the Digest, that it was not *majestas* to repair the statues of the Caesar which were going to decay; and a rescript of Severus and his son Antoninus Caracalla declared that, if a stone was thrown and accidentally struck a statue of the emperor, that also was not *majestas*; and they also graciously declared that it was not *majestas* to sell the statues of the Caesar before they were consecrated. In the time of Tiberius it was a matter of charge against a man that in selling a garden he had included a statue of Augustus; which Tiberius declared to be no offence (Tac. *Ann.* i. 73). There is also an extract from Saturninus, *de Judiciis*, who says that if a person melted down the statues or *imagines* of the emperor, which were already consecrated, or did any similar act, he was liable to the penalties of the Lex Julia majestatis. Augustus wished to treat an act of adultery with a female member of the imperial family as treason; but it was declared by Tiberius that this was not the law (Tac. *Ann.* ii. 50; Mommsen, *Staatsrecht*, ii. 754). The violation of an oath which a person had sworn by the Genius or Salus of the emperor was included in the *crimen majestatis*. The assumption by a private person of a divine as well as of a regal title of honour made him subject to the law of treason (Mommsen, *op. cit.* ii. 755, 817). It was sufficient to constitute treason that a treasonable act should have been begun, but a mere intention to commit the offence without any overt act was not treason. (For the mode of procedure in trials on account of *laesa majestas*, see Crimen, Quaestio.)

An inquiry might be made into an act of treason against the Imperator even after the death of the offender (Cod. 8, 9, 6); a rule which was established (as we are informed by Paulus) by M. Aurelius in the case of Druncianus or Druncanius, a senator who had taken part in the outbreak of Cassius, and whose property was claimed by the fiscus after his death. Perhaps the account of Capitolinus (*M. Ant. Phil.* c. 26) and of Vulcatius Gallicanus (*Avidius Cassius*, c. 9) is not inconsistent with the statement of Paulus. On the case of Druncanius, see Tillemont, *Histoire des Empereurs*, vol. ii. p. 382. Women were admitted as evidence in a case of *laesa majestas*, and the case of Fulvia is cited as an instance.

The torture was only applicable generally to slaves and not to freemen, but it is provided that, in case of treason against the emperor, all persons should be in the same position as slaves in respect of liability to torture. (Dio Cass. lx. 15; Paul. 5, 29, 2; Tac. *Ann.* xv. 56; Dig. 48, 18, 10, § 1.) Tiberius sold a man's slaves to the *actor publicus* (*Ann.* iii. 67) in order that they might not fear to give evidence against their master, who was accused of *repetundae* and also of *majestas*.

The crime of *majestas* was punished with increasing severity under the Empire. The old punishment was perpetual interdiction from fire and water; but now, says Paulus (*S. R.* v. 29, 1), writing at or about the close of Caracalla's reign, persons of low condition are thrown to wild beasts, or burnt alive; persons of better condition are simply put to death. The property of the offender was confiscated and his memory

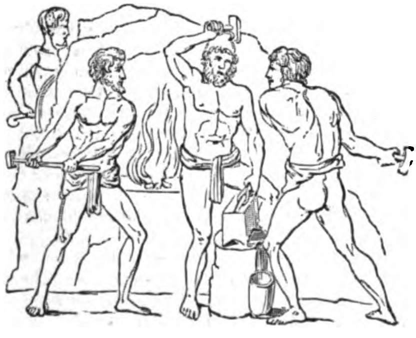
I 2

was infamous (*damnatio memoriae*). A constitution of S. Severus and Antoninus Caracalla declared that from the time that an act of *majestas* was committed a man could not alienate his property or manumit a slave, to which the great (*magnus*) Antoninus (probably Caracalla is still meant) added that a debtor could not after that time lawfully make a payment to him. (Dig. 48, 4; Cod. 9, 8; Walter, *Römische Rechtsgeschichte*, § 803; Rein, *Crim. Recht*, p. 493; Dieck, *Geschichte des Röm. Majest. verbrechen;* J. Weiske, *Das Crimen Majestatis der Römer;* Brugmans, *de Perduell. et Majest. Crim.*) [G. L.] [E. A. W.]

MAJO'RES. [INFANS.]

MALACENSIS LEX or **MALACITA'NA LEX**, a statute regulating the municipal constitution of Malaga in Spain, of which chapters 51–69 were discovered on a bronze tablet in five columns near that city in 1851. No doubt the law was no enactment of the Roman comitia, but was bestowed on Malaga by Domitian, between the years A.D. 81–84. Along with the Lex Salpensana, which was excavated at the same time and place, it throws considerable light on the institutions and organisation of the Latin municipia, and on some purely legal topics, such as the "cautio praedibus praediisque." [Printed in the *C. I. L.* 2, No. 1964, and in Bruns, *Fontes juris Romani Antiqui.* First published by R. de Berlanga at Malaga in 1853. See particularly Mommsen's monograph, *Die Städtrechte der lateinischen Gemeinden Salpensa und Malaca in der Provinz Baetica*, Leipzig, 1855. They have also been written on by Laboulaye, Paris, 1856; Asher, Paris and Heidelberg, 1868; Giraud, Paris, 1856–8, 1866–8; Van Lier, 1865; and Van Schwinderen, 1866.] [J. B. M.]

MA'LLEUS, *dim.* MALLE'OLUS, (1) a hammer, a mallet, was used much for the same purposes in ancient as in modern times. In Greek the general term is *σφῦρα*; the large smith's hammer, such as that used by Hephaestus, is specially called *ῥαιστήρ* (also *κέστρα*); the word *κροταφὶs* is used for a hammer with one end sharpened, like a coal-pick. In Latin, while *malleus* is the general term, *marcus* is specially used for the heavy smith's hammer, and *marcellus*, *marculus* for smaller varieties (Isid. *Orig.* xix. 7). When several men were striking with their hammers on the same anvil, it was a matter of necessity that they should strike in time, and Virgil accordingly says of the Cyclopes, "Inter se brach
tollunt *in numerum*" (*Georg.* iv. 174; *Aen.* vi
452). The scene which he describes is repr
sented in the above woodcut, taken from
ancient bas-relief, in which Vulcan, Bront
and Steropes are seen forging the metal, whi
the third Cyclops, Pyracmon, blows the bello
(*Aen.* viii. 425). Beside the anvil-stand [INCU
is seen the vessel of water in which the h
iron or bronze was immersed (*ib.* v. 450, 451
[LACUS.]



The forge of Vulcan. (From a bas-relief.)

But, besides the employment of the hamm
upon the anvil for making all ordinary utensi
the smith (*χαλκεύs*) wrought with this instr
ment figures called *ἔργα σφυρήλατα* (or *ὁλ*
σφύρητα, Brunck, *Anal.* ii. 222), which we
either small and fine, some of their parts bei
beaten as thin as paper and being in very hi
relief, as in the bronzes of Siris [LORICA], or
colossal proportions, being composed of separ
plates, riveted together: of this the most
markable example was the statue of the sun
wrought bronze (*σφυρήλατος κολοσσόs*, Theocr
xxii. 47; *ῥαιστηροκοπία*, Philo *de 7 Spectac.*
p. 14, ed. Orell.), seventy cubits high, whi
was erected in Rhodes. Another remarka
production of the same kind was the gold
statue of Jupiter (Strabo, viii. p. 378; Pl
Phaedr. p. 236 B), which was erected at Oly
pia by the sons of Cypselus.

By other artificers the hammer was used
conjunction with the chisel [DOLABRA], as
the carpenter (*pulsans malleus*, Coripp. *de La*
Justini, iv. 47; woodcut, Vol. I. p. 126) and t
sculptor.

Several drawings of ancient hammers may
seen in Blümner, *Technologie*, ii. 196, every o
of which might be matched by a pattern now
use.

2. To be distinguished from the above
malleolus, a sort of rocket, having lighted to
and pitch attached to one end, which was thro
in sieges and in naval warfare. Its name
probably derived from *malleolus*, the shoot of
plant, or else because the head with the to
attached was compared to a hammer. (See C
Cat. i. 13, 32; Liv. xlii. 64; Amm. Marcell. xxi
4, 14; Veget. iv. 18.) [W. S.] [G. E. M.

MALUS. [NAVIS.]

MALUS O'CULUS. [FASCINUM.]

MANCEPS has the same relation to *ma*
cipium that *auspex* has to *auspicium*, and in i
original sense = *is qui manu capit* or *qui ma*
cipat; that is, it means an acquirer or purchas
of a thing by the form of conveyance call
mancipium or *mancipatio* (*mancipio accipiens*, s
MANCIPIUM; cf. Tertull. *Apolog.* 11). But
an early time the word was also used to signi
a party conveying by mancipation (*mancip*
dans), in which sense it is equivalent to *emanc*
(Plaut. *Curc.* 4, 2, 29).

From its original meaning *manceps* deriv
several special significations. It frequent
means a person who purchases or hires a thi
at a public auction. *Mancipes* were they w
bid at the public lettings of the censors for t
purpose of farming any part of the public pr
perty (Festus, s. v. *Manceps:* "Manceps dicit
qui quid a populo emit conducitve quia," &c.
Sometimes the chief of the Publicani general
are meant by this term, as they were t
bidders for the public revenue and gave t

security, and then they shared the undertaking with others or underlet it (Ascon. *ad Div. in Caecil.* 10, 33). These *mancipes* would accordingly have distinctive names, according to the kind of revenue which they took on lease, as Decumani, Portitores, Pecuarii. Suetonius (*Vesp.* 1) says that the father of Petro was a *manceps* of labourers (*operae*), who went yearly from Umbria to Sabinum to cultivate the land; that is, he hired them from their masters and paid so much for the use of them, as has been often done in slave countries. Conductores Thermarum et Salinarum are called *mancipes* in the Theodosian Code (14, 5, 1). The word is also used in the Theodosian Code to denote a class of public officials (8, 5, 53; 60, 24, 65, *mancipes* [illegible]). In one place of this Code (14, 16, 2) *manceps* means a manager or manciple of a public bakery. (See Forcellini, *Lex.*; Dirksen, *Manuale*, s. v.; and Voigt, *XII. Tafeln*, ii. § 84, n. 4.) [G. L.] [E. A. W.]

MANCIPA'TIO. [MANCIPIUM.]

MANCI'PII CAUSA. The three expressions by which the Romans distinguished the different species of power (*manus* or *potestas*) to which a free person might be subject in the hands of another, were *in potestate*, *in manu*, and *in mancipio ejus esse* (Gaius, i. 138). This last kind of power arose when a paterfamilias transferred a filiusfamilias to another person by process of mancipation [MANCIPIUM], as he had a right to do. The legal effect of such mancipation was that the filiusfamilias who was the object of it ceased to be in the power of his paterfamilias, and came into the *mancipium*, or power, of the person to whom he was given in mancipation: thereby he was degraded to a servile state, undergoing a *capitis deminutio*. A husband had the same power over a wife *in manu*, for she was *filiae loco*. The mancipation was in form a conveyance by sale, and it cannot be doubted that at one time the right of selling children in this way was freely exercised, children being hardly distinguished from slaves and other property. In course of time, however, the effect of the mancipation of free persons became considerably modified by custom. Generally speaking, such mancipation was mere matter of form (*dicis gratia*) in the classical period of Roman law, and probably from a much earlier time; the form being used in order to free a filiusfamilias from *patria potestas* [EMANCIPATIO; ADOPTIO], and was not intended to give the person to whom the transfer was made any real power, though for the moment until manumission the person mancipated was nominally *in mancipii causa*, and thus suffered *capitis deminutio* (Gaius, i. 141). The mancipation came only to be used for the purpose of creating a real and lasting *causa mancipii* when a filiusfamilias was surrendered by his paterfamilias to some one on account of a delict which the filiusfamilias had committed against the surrenderee.

The power exercised over persons *in mancipii causa* resembled that of a master over his slaves (*mancipia*). Thus Cicero compares the position of a person *in mancipio* with that of a criminal condemned to slavery (*pro Caecin.* 34, 98). Being like slaves to the person to whom they were transferred, they had no agnatic rights in his family, and they were manumitted in the same way as slaves, the person manumitting them acquiring thereby a kind of patronal relation to them. Still such persons were not exactly in the relation of slaves to the persons to whom they were mancipated; thus they were to some extent protected from the ill-treatment of the latter by the *actio injuriarum* which they might maintain (Gaius, i. 141): their children were not *in mancipio*, according to Gaius (Gaius, i. 135); they were not possessed as property (Gaius, ii. 90), and though they were *necessarii heredes*, if instituted by their master, they had the *beneficium abstinendi* like *sui heredes* (Gaius, ii. 160). [HERES.]

But the great distinction between a person *in mancipio* and a *mancipium* or slave was that whereas a slave had no rights, a person *in mancipio* was only in a servile condition in respect to the person to whom he was mancipated, not losing his general status as a freeman. The semi-servile position of persons *in mancipio* is expressed by the phrase *causa mancipii*.

In respect of property, the same rule applied to persons *in mancipio* as to other persons who were *alieni juris*: all that they had or acquired belonged to the person in whose *mancipium* they were. *Mancipium* was put an end to by manumission *vindicta*, *censu*, or *testamento*. According to Gaius (i. 140), manumission *censu* of a person *in mancipio* might take place without the consent of the person whose *mancipium* was taken away; but this was not applicable to a person mancipated on condition of remancipation to his father, or to a person mancipated *ex noxali causa*; that is, on account of his delict (Gaius, i. 140). When, however, a person surrendered *ex noxali causa* (*noxae datus*), had made satisfaction for the injury he had committed, the person *noxae accipiens* might be compelled to make a remancipation or manumission by order of the praetor. (*Collat.* ii. 3, 1; *Inst. Just.* 4, 8, 3: cf. Theoph. *ad loc.*) The limitations of the Lex Aelia Sentia and Fufia Canidia in respect to the manumission of slaves did not apply to this kind of manumission.

The *mancipium* was put an end to by remancipation to the father; it did not terminate *ipso jure*, but always required some act of remancipation or manumission. Justinian put an end to the *noxae datio* in the case of children, which indeed before his time had fallen into disuse. (*Inst. Just.* 4, 8, 7; Gaius, i. 116–123, 138–141; A. Schmidt, *Die Persönlichkeit d. Sklaven*; Danz, *Geschichte des römischen Rechts*; Walter, *Geschichte d. röm. Rechts*; Böcking, *Pand. Inst.* i. § 48; Kuntze, *Cursus d. R. R.* §§ 796, 797.) [E. A. W.]

MA'NCIPI RES. [DOMINIUM.]

MANCI'PIUM, or according to an earlier form *mancupium*, is the formal legal proceeding *per aes et libram*, by which power and dominion over persons and over things was transferred by one person to another. The word in this sense is of ancient origin, and occurs in the Twelve Tables (Dicksen, *Uebersicht*, &c. p. 395; Voigt, *XII. Tafeln*, ii. § 84). Cicero only uses *mancipium*, but Gaius and other writers express this act of transfer by the more modern word *mancipatio*, which is in its conception the act of transfer regarded from the side of the purchaser or person *qui mancipat* [MANCEPS], as *emancipatio*, *emancipare*, which sometimes mean generally a conveyance or to convey *per aes et libram* (Quintil. vi. 3; Plin. *Ep. ad Traj.* 4, 3; Gell. xv. 27, 3), refer to the side of the transferor; *mancipium* is the conveyance regarded as an act both of transferor and transferee (Voigt, *l. c.*). The etymology of the word *mancipium* is the same as that of the word *mancipatio*, of which Gaius (i. 121) says, "Mancipatio dicitur quia manu res capitur." The term *mancipium*, then, is derived from the act of corporeal apprehension of the thing to be conveyed, which took place in this process of transfer. This explanation of the origin of the word, which is adopted by most modern writers, is rejected by Mr. Muirhead (*Introduction to the Law of Rome*, p. 61), who maintains that the notion of mancipium is not *manu capere*, but *manum capere*, to take or acquire by transfer power or dominion over persons and things. He urges as an objection to the common etymology that there was no taking with the hand when land or a house was being conveyed, for the parties did not require to be near them; and there could be none in the mancipation of a praedial servitude, for it was intangible. This criticism is based on the assumption, that the law on the subject of mancipation, as it is described by Gaius, was also the law of earlier times, when the word *mancipium* was first formed; it seems probable, however, that a taking of the thing or of some part of it by the hand was at first required in every *rei mancipatio*, as well as in every *rei vindicatio*, and that it was subsequently dispensed with in the case of land on account of its inconvenience. There is also reason to suppose, that praedial rustic servitudes were not one of the original objects of an independent mancipation.

The party who made a transfer pursuant to the form of mancipation was said *mancipio dare*; he to whom the transfer was made was said *mancipio accipere* (Plaut. *Trin.* ii. 4, 18). The verb *mancipare* is sometimes used as equivalent to *mancipio accipere* (cf. Schol. Crug. *ad* Hor. *Ep.* ii. 159; "mancipat: mancipio accipit," Voigt, *l. c.*). Horace uses the phrase "mancipat usus," which is not an unreasonable licence; he means to say that *usus* or usucapion has the same effect as mancipation, which is true; but the effect in case of usucapion is produced by possession for a certain time, when the possessor has not already acquired ownership by mancipation or other title.

Some Latin writers who lived towards the close of the Republic appear to have considered *mancipium* to be a species of *nexum*, the term *nexum* being used by them in a more general sense than had attached to it in earlier times. According to Aelius Gallus, as cited by Festus (s. v. *nexum*), everything was *nexum*, "quodcunque per aes et libram geritur;" and as *mancipatio* was effected *per aes et libram*, it was consequently a *nexum*. M. Manilius, as cited by Varro (*L. L.* vii. 105), attaches the same comprehensive sense to the term *nexum*. Cicero (*Top.* 5, 28) says that the alienation of a *res mancipi* was effected either by *traditio nexu* or by *in jure cessio*. These two modes correspond to the *mancipatio* and *in jure cessio* of Gaius (ii. 41), and accordingly *mancipatio* (or the older term *mancupium*) is equivalent to *traditio nexu*.

But, as we see from a passage of Varro which contains a definition of *nexum* by G. Mucius Scaevola, the term *nexum* was, properly speaking, only applicable to proceedings *per aes et libram*, in so far as obligations resulted from them, and so would not include the notion of conveyance, which attaches to *mancipium*. (Varr. *L. L.* vii. 5, 105: "(Q. Mucius) nexum (est), quae per aes et libram fiant, ut obligentur, praeterquam quae mancipio dentur (Varr.): hoc verius esse ipsum verbum ostendit, de quo quaerit: nam id est, quod obligatur per libram neque suum fit; inde nexum dictum.") A *nexum* was, however, contained in a *rei mancipatio*, since the latter proceeding, besides transferring ownership, which was its main object, also gave rise to subsidiary obligations. Thus the *mancipio dans* was bound to warrant the title to the thing conveyed against eviction, and the *mancipio accipiens* might be bound by a *fiducia* attached to the mancipation to reconvey the thing on the happening of some condition. Hence a *res* was said to be *nexa* or *obligata* which was mancipated subject to a pledge or mortgage. Cicero (*de Harusp. Resp.* 7, 14) includes in the same sentence both the *jus mancipii* and the *jus nexi*, where he is speaking of various titles to property. He may mean here to speak of the *jus mancipii* in the sense of title by absolute conveyance as contrasted with the *jus nexi* or title by mortgage. (Cf. Cic. *de Orat.* i. 38, 173; *ad Fam.* iv. 30.)

The forms of mancipations are described by Gaius (i. 119): "Mancipatio is effected in the presence of not less than five witnesses, who must be Roman citizens and of the age of puberty (*puberes*), and also in the presence of another person of the same condition, who holds a pair of brazen scales, and hence is called *libripens*. The purchaser (*qui mancipio accipit*) taking hold of the thing says: I affirm that this slave (*homo*) is mine *ex jure Quiritium*, and he is purchased by me with this piece of money (*aes*), and he gives it to the seller (*ei a quo mancipio accipit*) as a symbol of the price (*quasi pretii loco*)." The same account of the matter is given more briefly by Ulpian (*Frag.* xix.).

Mancipation was instituted at a time when only copper money was in use, as we learn, Gaius says, from the Twelve Tables; and it also dates from a time when money was weighed in scales, there being no coined money (Gaius, i. 122), though subsequently the scales were struck with a coin. Mancipation, like all early conveyances, is of a public or semi-public nature. It was not, indeed, as was *in jure cessio*, executed in the presence of a magistratus, but the five Roman citizens who were required to attest it probably stood in the place of the community, and their number may have been originally intended to correspond with the five classes into which the populus was divided by Servius.

The *libripens* was supposed to be an impartial third person, and was perhaps at one time designated by some public authority. We do not know whether the scales used in the sale were public or private; but it is probable that there were public scales in the market to enable persons to mancipate slaves and cattle. Mr. Muirhead (*Introd.*, &c., p. 58, n. 10) refers to a statement of Varro (*L. L.* v. 183) that scales were still preserved in his time in the temple of Saturn.

An act of calling the attention of the witnesses to the execution of the mancipation (*antestari*) is mentioned (cf. Huschke, *Jurisprud. antejust., C. Aelius Gallus*, § 6); but whether it was performed by a person exclusively employed for the purpose, or by one of the parties to the mancipation, is uncertain. The terms *antestari*, *antestatus*, do not occur in Gaius and Ulpian, and it is clear that when they wrote there was no special person in the proceeding known as *antestatus*.

The description which Gaius gives of mancipation shows that the proceeding consisted of an assertion of title to the thing on the part of the purchaser, as well as of the purchase itself *per aes et libram*. This assertion of title, which varied in its terms according to the character of the mancipation, corresponded to some extent with the claim made by a person acquiring a thing by *in jure cessio* (Gaius, ii. 24), though it was made before witnesses, and not to the praetor. The sale *per aes et libram* was no doubt at first a real one, but the mancipation was converted into a general form of transfer by the formal payment of a small piece of copper (*aes*, *raudus*, *rauduscululm*), the adequacy of the price paid being legally immaterial. Thus Gaius calls *mancipatio* "imaginaria quaedam venditio:" for though the law required the sale, the real cause of the transaction was outside the mancipation, and might just as well be gift or dowry as actual sale. The cause would, however, appear in the instrument, which was generally drawn up as a record of title (see inscriptions cited by Voigt, ii. § 84, n. 9).

The essential parts of the formula of mancipation might be accompanied by qualifications called *leges mancipii* (Cic. *de Or.* i. 39, 178), which would be obligatory on the parties. Thus mancipations might be made subject to a trust (*fiducia*) of remancipation, and servitudes might be reserved (*deductio*) by this means. Effect was given to such additional terms by the clause of the Twelve Tables, "Cum nexum faciet mancipiumque, uti linguâ nuncupassit, ita jus esto." The *nuncupatio* was the declaration of the terms of the mancipation by the parties to the conveyance. In Roman law of the classical period it was more usual to make independent covenants concerning accessory terms, instead of incorporating them in the mancipation itself. Mancipation was a general form of transfer, and was not only used in the conveyance of property, but in other transactions, as in emancipation, adoption, co-emption. As to the application of mancipatio to wills, see TESTAMENTUM.

Mancipatio and *in jure cessio* (a conveyance probably of later origin than mancipation) were the only means of transferring ownership recognised by the law of the Twelve Tables. After a time, however, only certain kinds of things, called *res mancipi*, were required to be conveyed by mancipatio, other *res* (*nec mancipi*) being allowed to pass by mere informal delivery of possession (*traditio*). It is not to be supposed that the effect of this change was to prevent *res nec mancipi* being transferred by mancipation, should the parties to a conveyance wish to use this form; mancipation seems, in fact, to have been sometimes used for conveying important *res nec mancipi* (*e.g.* Plin. *H. N.* ix. § 117), probably on account of its evidentiary value and the warranty of title which attached to it.

The following *res* were *res mancipi*:—Lands and houses *in Italico solo*, praedial rustic servitudes, slaves, oxen, horses, mules, and asses. (Gaius, i. 120; ii. 15, 17.) [DOMINIUM.]

Lands (*praedia*) might be transferred by mancipation, though the parties to the mancipation were not on the land; but all other things which were mancipated were only transferable in the presence of the parties. The purchaser or person to whom the *mancipatio* was made did not in the time of the classical jurists acquire possession by the act of mancipation, but only ownership, the acquisition of possession being a separate act (Gaius, iv. 131) [POSSESSIO], though as a matter of fact the transfer of ownership and possession would generally take place at the same time, at least in the case of movables. The conveyance of a *res mancipi*, by informal delivery only, had no legal effect in respect of transfer of ownership according to Jus Civile, but in course of time the praetor protected a person to whom a *res mancipi* had been conveyed by *traditio*, giving him the same security as if he had acquired a civil title by mancipation (*in bonis rem habere*, Gaius, ii. 40). The establishment of a praetorian title in such a case was a great step towards the abolition of *mancipium* as a conveyance. When things were transferred by *mancipatio* under a contract of sale, the vendor was bound to warranty in double of the amount of the thing sold (Paul. *S. R.* ii. 17). A vendor therefore who had a doubtful title would not sell by *mancipium*, but would merely transfer by delivery, and leave the purchaser to acquire the Quiritarian ownership of the thing by usucapion (Plaut. *Curc.* iv. 2, 9; *Persa*, iv. 3, 55). Accordingly Varro observes (*R. R.* ii. 10) that if a slave was not transferred by *mancipium*, the seller entered into a *stipulatio dupli* to be enforced by the buyer in the case of eviction; when the transfer was by *mancipium*, the stipulation was not necessary.

Mancipation, an institution of the Jus Civile, was not suited to the customs of non-Italian people, and came to be regarded as an inconvenient form; hence it gradually lost its importance, and in Justinian's legislation was entirely superseded by the informal conveyance *traditio*, which was derived from the Jus Gentium (Cod. Just. 1, 31: "de sublata differentia rerum mancipi et nec mancipi." In passages of the Corpus Juris, where the jurists speak of *mancipatio*, the compilers substitute *traditio*. The last mention of the conveyance occurs in *Vat. Frag.* § 313; *Hermog. Cod.* 7, 1; *Theod. Cod.* 8, 12, 4, 5). *Mancipatio* ceased also to be a formality in adoption and emancipation.

The word *mancipium* is used in a cognate sense to the above as equivalent to complete ownership, and may thus be opposed to *usus*, as in a passage of Lucretius that has often been quoted (iii. 971), and to Fructus (Cic. *ad Fam.* vii. 29, 30). Sometimes the word *mancipium* means the thing mancipated, and hence it frequently signifies a slave, as being a most important *res mancipi*. This is probably the sense of the word in Cicero (*Top.* 5, 27) and certainly in Horace (*Ep.* i. 6, 39). (Brisson, *Antiq.* i. 7; Giraud, *Recherches sur le droit de propriété chez les Rom.* i. 217, &c.; Leist, *Mancipation und Eigenthumstradition*, rev. by Degenkolb, *Krit. Vierteljahrschrift*, vol. xx. p. 481; Deiters, *de* *mancipat. indole et ambitu;* Bechmann, *Kauf*, i. 47, &c.; Kuntze, *Excurse*, 167, &c.; Voigt, *XII. Tafeln*, ii. §§ 84–88; Ihering, *Geist*, ii. § 46; Maine's *Ancient Law*, p. 318.) [E. A. W.]

MANDA'TUM. 1. *Mandatum*, "a commission," is the name of a contract which arises from consent; *i.e.* it requires no special form of words, no entry in a ledger, no passing of property or of the possession of property from one party to the other: as soon as the two parties have mutually agreed, the one to employ the other, and the other to be so employed, the legal relation exists, subject however to two conditions. The employment must be one which is not merely for the benefit of the person employed, and payment for the service must not be part of the agreement. If payment is intended, the contract is hiring (*locatio*, *conductio*), not mandate: if A suggests to B to do something in B's own interest solely, A's instructions are held to amount merely to advice (*consilium*), on which no legal responsibility is incurred (Dig. 17, 1, 2, 6). On the other hand, if B does some act for A and in A's interest, without previous instructions, B may have an action to recover his expenses, but this action is a special one founded simply on the business done (*negotiorum gestorum:* cf. Dig. 3, 5, 2, &c.). The person who gives a commission is called *mandator* or *mandans;* the person who undertakes the commission is called *is qui suscipit*, or *recipit*, *mandatum*, *cui mandatum est*, &c. (in modern Latin, *mandatarius*, "mandatee"). The mandatee is bound to execute the commission diligently and faithfully, or else to renounce it in time to prevent loss to the mandator (Dig. 17, 1, 22, 11). He is to account to him for all profit arising from it. For any expense or loss properly incurred, or strictly incidental, the mandator is liable. The mandator's right of action to enforce fulfilment of the mandatee's obligations to him is *actio mandati:* the mandatee's action to obtain reimbursement is *actio mandati contraria*. As a rule the mandate is extinguished by the death of either party, at least if the event be known to the other party and the commission be yet unexecuted. But rights arising from a commission may be enforced by or against the heirs of either party (Dig. 17, 1, 58, pr.). This rule, however, seems in early times to have been doubtful; M. Drusus, the city praetor (under what circumstances we know not), refusing the right of action and Sex. Julius (a successor?) granting it (Auct. *ad Heren.* ii. 13, § 19). Either party adjudged guilty of breach of good faith became thereby disgraced, *ignominiosus* (Gaius, iv. 182), *infamia notatur* (Edict. *ap.* Dig. 3, 2, 1; *ib.* 6, 5). So Cicero says, "mandati constitutum est iudicium non minus turpe quam furti" (*Rosc. Am.* 38, 111 *sqq.*); and the heir was eventually held responsible for fraud on the part of his predecessor (Dig. 44, 7, 12).

A special case of mandate, called by modern lawyers *mandatum qualificatum*, is a request from A to B to lend C money. A was taken to guarantee payment, and B (the creditor) had, if the debtor failed to pay, an action on the mandate (*act. m. contraria*) against A to recover the money, and then in return ceded to him the creditor's right of action on the loan. A surety proper (*fidejussor*), on the other hand, was regarded as assuming the responsibility at the instance of the debtor, and, if forced to pay the debt of his principal, had an action of mandate against him (Gaius, iii. 127). Hence *mandatores* and *fidejussores* are often discussed together, though their legal positions were different in several respects (*e.g.* Dig. 17, 1, 28; 37; 46, 1, &c.).

The principal authorities are Cic. *Rosc. Am.* l. c.; Gaius, iii. 155 *sqq.*; Dig. 17, 1; 46, 1; Cod. iv. 35, 36; Inst. iii. 26.

2. *Mandata* is technically used of the "commission" or instructions given, especially to provincial governors, by the emperor. These were very various and related to their own conduct (*e.g.* Dig. 1, 16, 6, 3; 32, 1, 4), or to their administration (*e.g.* Dig. 37, 14, 7, 1; 47, 11, 6; 22, 1), or even established new rules of private law: *e.g.* the validity of a soldier's will, though not in due form (Dig. 29, 1, 1). These instructions, like the Edicts, appear by frequent repetition to have assumed the character of standing orders (cf. Dig. 29, 4); and Justinian A.D. 535 further consolidated some such instructions into what is now called the 17th Novel. Pliny in his letters to Trajan refers to them (*Ep.* 97, § 7; 111, 112). Cicero applies the term to a legate's instructions (*de Leg.* iii. 8, 18); and Frontinus (*Aquaed.* 110, 111) quotes from a chapter of the Instructions (*ex capite mandatorum*) rules for the use of water from the Italian aqueducts (cf. Cod. i. 85; Rudorff, *R. G.* i. 56). [H. J. R.]

MA'NDYAS (*μανδύας*). [LACERNA.]

MANES. See *Dict. of Greek and Rom. Biography and Mythology.*

MANGO'NES. [SERVUS.]

MA'NICA, a sleeve, regarded as effeminate until the later Empire. Verg. *Aen.* ix. 616. "Et tunicae manicas et habent redimicula mitrae O vere *Phrygiae*," and Gell. vi. 12, "Tunicis uti virum prolixis ultra brachia et usque in primores manus ac prope digitos Romae atque omni in Latio indecorum fuit." But the fashion changed, "Talares et manicatas tunicas habere apud Romanos veteres flagitium erat nunc autem honesto loco natis, cum tunicati sunt non eas habere flagitium est." (Augustin. *de doct. Christ.* iii. 20.) Besides the use of sleeves sewed to the tunic, which, when so manufactured, was called *chiridota* or *manicata tunica* (Curt. iii. 7, p. 12, ed. Zumpt), sleeves were also worn as a separate part of the dress. Palladius (*de Re Rust.* i. 43) mentions the propriety of providing *ocreas manicasque de pellibus*, i.e. leggings and sleeves made of hides, as useful both to the huntsman and to the agricultural labourer. The Roman gladiators wore, together with greaves, a sleeve of an appropriate kind on the right arm and hand (Juv. vi. 255), as is exhibited in the woodcuts under GLADIATOR.

These parts of dress are mentioned together even as early as the Homeric age (see *Od.* xxiv. 228, 229). In this passage the manicae (χειρῖδες) seem to be fingerless gloves, worn on the hands to protect them from briars and thorns; and Eustathius, in his commentary on the other passage, distinguishes between these and gloves, which he calls χειρῖδες δακτυλωταί (p. 1930, *init.*). The χειρὶς πλέα ἀργυρίου was probably not (as in Liddell and Scott) a sleeve, but a leathern glove, like that in the Odyssey, used as a purse.

Gloves with fingers (*digitalia*, Varro, *de Re Rust.* i. 55) were worn among the Romans for the performance of certain manual operations. Pliny the younger refers also to the use of manicae in winter to protect the hands from cold (*Epist.* iii. 5). Those used by the Persians were probably made of fur, perhaps resembling muffs: the Persians also wore gloves in winter (δακτυλῆθραι, Xen. *Cyrop.* viii. 3, § 17). In an enumeration of the instruments of torture used in the fourth century of the Christian era we observe "the glove" (Synes. *Epist.* 58); probably an iron glove for crushing the hand, as the "boot" did the leg.

Handcuffs were called *manicae*. (Verg. *Georg.* iv. 439; *Aen.* ii. 146;—Plaut. *Asin.* ii. 2, 38; *Capt.* iii. 5, 1; *Most.* v. 1, 17;—Non. Marcellus, s. v. *Manicae.*)

In Lucan. iii. 565, *manica* is used as equivalent to MANUS FERREA. [J. Y.] [G. E. M.]

MANI'PULUS; MANIPULA'RES; MANIPULA'RII. [EXERCITUS, Vol. I. p. 783.]

MA'NSIO (σταθμός). When the kings of Persia, and afterwards the Romans, constructed the great roads through their empires, there naturally sprung up certain resting-places, where travellers stayed for the night, or refreshed themselves. The term σταθμός, which primarily meant a lonely habitation for shepherds and their flocks, was applied by the Greeks to these stations. Herodotus (v. 52) gives a full account of the royal road which ran from Sardes to Susa (and from Sardes to Ephesus, *id.* v. 54). There were stations and halting-places (σταθμοὶ βασιλήϊοι καὶ καταλύσιες) all along it, 20 within the limits of Phrygia and Lydia, a distance of 94½ parasangs (about 320 English miles); in Cappadocia, a distance of 104 parasangs, there were 28 stations; in Cilicia, a distance of 15½ parasangs, there were 3; in Armenia, in a space of 56½ parasangs, there were 15, and so on, making 111 σταθμοί in all. The whole distance is estimated at 13,500 stades, so that the average number of stades in each stathmus was about 121, or just 4 parasangs (less than 14 English miles). But as Herodotus (*loc. cit.*) puts the average day's journey at 150 stades, it is evident that the stathmi were frequently a less distance apart than a usual day's journey. As a matter of fact the day's journey varied in different regions, for Herodotus, when discussing the extent of Scythia (iv. 101), makes the day's journey amount to 200 stades. It is plain from Herodotus (*loc. cit.*) and Xenophon (*Anab.* i. 2) that the stathmi were situated at very irregular intervals. The term σταθμὸς naturally came to be used of the distance or stage between the halting-places. Hence Herodotus, to distinguish the halting-places themselves, uses in one place the phrase καταγωγαὶ σταθμῶν, in another σταθμοὶ καταγωγέων. Xenophon, who employs σταθμὸς as a measure of distance, finds it necessary, on account of the varying distances between the stopping-places, to specify the number of parasangs in every case. These halting-places, which were naturally situated at fertile and well-watered spots, would be more numerous in the more fertile regions: cf. Polyaenus (vii. 40, 1), τῆς Περσίδος, ἔνθα κῶμαι πολλαὶ καὶ λεὼς πολὺς καὶ σταθμοὶ πολλοί. There would be in those places inns for the accommodation of travellers (κατάλυμα, πανδοκεῖον). As the great ancient roads of Asia still form the main highways for caravans, there is every probability that the modern *Khan* or *Caravanserai* represents the ancient κατάλυμα. The *Khan* is usually a square building, enclosing a large open court, surrounded by balconies with a series of doors, entering into plain unfurnished apartments, and often with a fountain in the middle of the court. The Great King seems sometimes to have settled conquered peoples in these stations; for instance, Darius planted the captive Eretrians at Ardericca (τῆς Κισσίης χωρῆς κατοίκισε ἐν σταθμῷ ἑωυτοῦ, τῷ οὔνομά ἐστιν Ἀρδέρικκα, Herod. vi. 119). Treatises, or handbooks to these σταθμοί, were composed, one by Baeto (Athenaeus, x. 442 b, Βαίτων ὁ Ἀλεξάνδρου βηματιστὴς ἐν τῷ ἐπιγραφομένῳ Σταθμοὶ τῆς Ἀλεξάνδρου πορείας), and another by Amyntas, called simply οἱ Σταθμοί (id. *ib.*) or Σταθμοὶ Περσικοί (id. ii. 67 a), or οἱ τῆς Ἀσίας σταθμοὶ (id. xi. 500 d). Arrian (*Anab.* i. 2, 1) uses σταθμὸς as a definite measure of distance without any reference to parasangs or stades (ἀπέχει δὲ οὗτος ἀπὸ τοῦ Ἴστρου, ὡς ἐπὶ τὸν Αἶμον ἰόντι σταθμοὺς τρεῖς). From this it would appear that some average day's journey was taken as a σταθμός. Herodotus (viii. 98), speaking of the Persian couriers (ἄγγαροι), tells us that the road was divided into portions, corresponding to the distance that a man and horse could traverse in a day (at a high rate of speed), and Xenophon (*Cyrop.* viii. 6, 17) ascribes this institution to Cyrus, who, having found out what distance a horse could do in a day, divided the roads into corresponding stages, built stables (ἱππῶνες), placed couriers and horses, and a man in charge at each station.

When Augustus organised the Roman empire, he established an Imperial Postal System (Suet. *Aug.* 49), which conveyed despatches from station to station by means of couriers, who were called under the Empire *Speculatores*, corresponding to the *tabellarii* of the Republican period. (Tac. *Hist.* ii. 73; Suet. *Cal.* 44; cf. Liv. xxxi. 24.) For this purpose the stations (*stationes*) were divided into *mansiones* and *mutationes*. The former were places where travellers rested for the night (cf. Hor. *Sat.* i. 5, 9, *mansuri oppidulo*, for this use of *manere*), and where there were inns (*deversorium*, *caupona*, *hospitium*, *taberna*), or stopped for refreshment; there were often likewise houses (*palatia*) for the accommodation of the provincial governors, or the emperor himself, in case he passed that way. The *mutationes* (cf. the late Greek ἀλλαγαί) were mere posting-houses for the changing of horses. The word *mansio*, from meaning a stopping-place at the end of a day's journey, came to be used like σταθμὸς as a measure of distance (Suet. *Tib.* 10, "deinde ad primam statim mansionem febrim nactus;" Plin. *H. N.* xii. § 52, "a quo [*monte*] octo mansionibus distat regio"). There were usually four or five *mutationes* to one *mansio*. The *Itinerarium a Burdigala Hierusalem usque*, a guide-book composed about the time of Constantine the Great, mentions in order the *mansiones* from Bordeaux to Jerusalem, with the intervening *mutationes*, and the more considerable places near the road, which are called either *civitates*, *vici*, or *castella*, and the distances are given in leagues (*leugae*) or miles (*milia*). [Compare CURSUS PUBLICUS.] [W. Ri.]

MANTE'LE, in the imperial times, was a table-cloth, but originally, as its etymology shows, was a towel or napkin used by priests at sacrifices (Serv. *ad Aen.* i. 701; Ovid. *Fast.* iv. 933) and by guests at a banquet. It is natural that the antique use of the word should be found in accounts of sacrifices, and in Virgil (*Georg.* iv. 377; *Aen.* i. 701), where we find the woollen mantele, with soft and even nap (*tonsis mantelia villis*), used to wipe the hands when water was poured over them before the feast [see MAPPA]: so Isidore, *Or.* 19, 26, 6, says, "Mantelia nunc pro operiendis mensis sunt, quae, ut nomen ipsum indicat, olim tergendis manibus praebebantur." For the newer fashion of using a table-cloth (*mantele*), see Martial, xii. 29, 12; xiv. 138. After Hadrian's time it was the custom to use table-cloths of costly material and embroidery (Lamprid. *Heliog.* 27; *Alex. Sev.* 37). We may gather from Horace (*Sat.* ii. 8, 10) that no table-cloth was used in his time, and no doubt the fashion of giving extravagant prices for dining-tables of a beautiful grain arose at a time when the table was fully shown. In fact, there is no mention of the covering of the table earlier than the passage cited from Martial, and, when this custom arose, the name of the larger or sacrificial napkin was adopted for the table-cloth (see Marquardt, *Privatleben*, 312). [W. S.] [G. E. M.]

MA'NTICA (πήρα, θύλακος), properly a hand-bag, a wallet or travelling bag, in which a few necessaries could be carried. It was carried in the hand or slung over the shoulder (Appul. *Met.* i. 60; Catull. 22, 21; Pers. 4, 24), or strapped on behind the saddle of the horse, "mantica cui lumbos onere ulceret" (Hor. *Sat.* i. 6, 106). The later word *averta* was a larger sort of saddle-bag, usually of leather. Either would suffice to carry, besides provisions, whatever change of clothes the poorer traveller needed. The rich entrusted their luggage to the attendant slaves, who packed it up in bundles. Thus the Greek στρώματα (Arist. *Av.* 616; *Ran.* 12), carried on a journey by the slave, means a roll of clothes as well as bedding; and these were also more methodically packed in a στρωματόδεσμος, or large bag. (Plat. *Theaet.* p. 175 E; Aesch. *Fals. Leg.* § 99; Poll. vii. 79; Rutherford, *New Phryn.* p. 487.) [G. E. M.]

MA'NTIKE (μαντική). [DIVINATIO.]

MANU'BIAE. [SPOLIA.]

MANUM, CONVENTIO IN. [MATRIMONIUM, p. 138.]

MANUMI'SSIO was a legal act by which slaves and persons *in mancipii causa* were released from the *manus* or power of their masters, thereby acquiring freedom (Dig. 1, 1, 4, pr.; Inst. 1, 5, pr.). Accordingly the word *manumissio* is equivalent to *e* or *de manu missio* (cf. Voigt, *XII. Tafeln*, ii. § 77, n. 2). There were three modes of effecting a legal manumission according to Jus Civile (*justa et legitima manumissio*),—namely, *vindicta*, *census*, and *testamentum*,—which are enumerated both by Gaius (i. 17) and Ulpian (*Frag.* 1) as necessary in order to free a slave and make him *civis* (cf. Cic. *Top.* 2, 10; and Plaut. *Cas.* ii. 8, 68). Of these the *manumissio vindicta* was probably the oldest and, at one time, the only mode of manumission. It is mentioned by Livy (ii. 5) as in use at an early period, and indeed he states that some persons refer the origin of the *vindicta* to the event there related, and derive its name from *vindicius*: the latter part at least of this supposition is of no value.

Manumissio by the *vindicta* was originally an action between a third person, who vindicated the freedom of the slave to be manumitted before the praetor, and the master of the slave, who was in the position of defendant. The form of the *vindicta* supposes, not that the person manumitted was a slave, but that he was a person whose freedom (*libertas*) was the matter in issue. Thus it had for its professed object the maintenance of a previously acquired status, and not the conversion of a slave into a freeman. The proceeding before the magistratus was in form an assertion of the slave's freedom (*manu asserere liberali causa*, Plaut. *Poen.* iv. 2, 83), to which the owner made no defence, but allowed the slave to be declared by the magistratus a freeman.

The proceeding then was a species of *in jure cessio*, and was in fact a collusive action, which was based on the fiction of the slave's freedom. When the magistratus had pronounced in favour of freedom *ex jure quiritium*, there could be no further dispute about the *libertas* or about the *civitas* which was attached to *libertas*. The slave had been manumitted with the consent of the master by the act of the magistratus. The ceremony of the manumissio by the *vindicta* was as follows:—The master brought his slave before the praetor, since it was his province to exercise jurisdiction in civil causes. The praetor's lictor, who came to be used as *adsertor libertatis*, in order to save the trouble of bringing a person to take this part, holding a rod (*vindicta* or *festuca*) with one hand, and with the other laying hold of the slave, said, "Hunc ego hominem ex jure quiritium liberum esse aio," at the same time touching him with the rod; the master then using the same formalities, and turning the slave round and releasing his hold of him, as seems to have been the custom ("momento turbinis exit Marcus Dama," Pers. *Sat.* v. 78), admitted his freedom, either expressly or by his silence, which was followed by the *pronuntiatio* of the magistratus, "Quandoque Numerius Negidius non contra vindicat, hunc ego hominem ex jure quiritium liberum esse dico."

Addicere is the technical term to express this act of a magistratus by which he pronounced in favour of a right, in this case a right to freedom; it is so used by Cicero in respect of manumission (*ad Att.* vii. 2; cf. Gaius, ii. 24). This form of manumission derived its name from the *vindicta* or rod, otherwise called *festuca*, which was used in the proceeding (Plaut. *Mil.* iv. 1, 15; Hor. *Sat.* ii. 7, 76; Pers. v. 125; Gaius, iv. 16). In course of time the formalities of *manumissio per vindictam* were very much curtailed. The master ceased to act as if he were party to an action (Dig. 40, 2, 23), and the presence of the lictor became unnecessary. All that seems to have been required in the time of Justinian was that the master should take his slave before the magistratus, wherever the latter was to be found,—it might be in the public road (*in transitu*), as when the praetor or proconsul was going to the bath or to the theatre,—and that he should declare to the magistratus his desire to have the slave manumitted (Gaius, i. 20; Dig. 40, 2, 8).

The manumission by the *census* is thus briefly described by Ulpian (1, 8): "Slaves were formerly manumitted by census, when at the lustral census (*lustrali censu*) at Rome they gave in their census at the bidding of their masters." The slave must of course have had a sufficient *peculium*, or the master must have given him property, so that he might become a taxpayer. *Manumissio per censum*, like *manumissio per vindictam*, was not in form a manumission, but supposed the slave to be already free. It was the act of the censor in enrolling the slave on the list of citizens, which gave validity to the manumission, just as *manumissio per vindictam* was effected by the *addictio* of the praetor. Cicero tells us that there was a question of law whether a slave should be considered free immediately on being entered on the censor's roll, or not until the lustrum was celebrated (Cic. *de Or.* i. 40, 183; see CENSUS); and this was a matter of some importance, for his acquisitions were only his own from the time when he became a freeman.

Manumissio per censum seems to have been a common mode of manumitting persons *in mancipio*, who had been surrendered on account of their offences (*noxae dediti*), and this form of manumission may have been first used for the purpose of manumitting such persons (Gaius, i. 140; cf. Voigt, *XII. Tafeln*, ii. § 143, n. 15; MANCIPII CAUSA). The republican institution of the census became obsolete under the Empire, and with it this mode of manumission; the last lustrum was under Vespasian, A.D. 74, up to which time since the beginning of the Christian era only two had taken place.

The law of the Twelve Tables confirmed freedom which was given by will. The earliest wills were made in the Comitia, and so testamentary manumission may at first have implied a legislative act, but the *testamentum per aes et libram*, which was recognised by the Twelve Tables, and which gradually superseded the *testamentum calatis comitiis*, was not executed before any public authority, though the witnesses required for its validity may have been regarded as representatives of the populus. [TESTAMENTUM.]

There came to be three kinds of testamentary manumission:—1. Where a master by his will made a slave free and appointed him *heres*. 2. Where a master gave his slave a direct legacy of his freedom. 3. Where a person requested his heir or legatee to manumit a slave.

1. A testator might declare in his will that his slave should be free and *heres*, in which case on the death of the testator the slave became both free and *heres*, whether he wished to undertake the liabilities of the succession or not (*necessarius heres*, Gaius, ii. 153; Ulp. *Frag.* 22, 11); it was common to manumit a slave and appoint him *heres* in a substitutional clause, in order to make intestacy impossible.

According to the law of Justinian, the appointment of a slave as *heres* by his master was sufficient to show an intention to manumit, without any express declaration of freedom, since a slave could not become *heres*.

2. Where freedom was given to a slave as a *legatum*, the slave acquired his freedom by the act of the testator, and this from the moment that the will took effect, if the bequest was absolute. A testamentary manumission might, however, be made subject to a suspensive condition, in this respect differing from manumission *per vindictam* or *per censum*. A slave who was made conditionally free by testament was called *statu liber* (Festus, 314, 67; Ulp. *Fragm.* 2, 1; Dig. 40, 7, 1); until the condition was fulfilled, he was the slave of the *heres*. If a *statu liber* was sold by the *heres*, or if the ownership of him passed to some one else by usucapion, he had still the benefit of the condition; a condition to this effect being contained in the law of the Twelve Tables. Although the *statu liber* was legally a slave, the *peculium* which he possessed at the death of the testator and all subsequent acquisitions derived from it could not be taken from him by the *heres*, and might be used by him in order to fulfil the condition of his freedom, if this consisted, as was not unfrequently the case, in the payment of a sum of money to the *heres*. A slave who was made free *directo* was called *orcinus libertus*, because he had been made free by a person who was dead. (Cf. the application by Suetonius, *Aug.* 35, of the term *orcini* to certain senators of a low class.)

3. Where a slave was manumitted by an heir or legatee at the request of the testator, the will of the deceased only operated indirectly; the slave did not become *libertus orcinus* on manumission, but was the *libertus* of the heir or legatee who manumitted him. If the person who was requested to manumit refused, he might be compelled to manumit on application to the praetor. A man might request his *heres* or legatee not only to manumit his own slaves, but also slaves belonging to the *heres* or legatee or to any other person. In case of *libertas* being thus given to the slave of any other person, the gift of *libertas* was extinguished, if the owner would not sell the slave at a fair price.

The legal act of manumission was often followed by a religious ceremony in the temple of Feronia, where the freedman appeared clad in the toga or dress of a Roman citizen, and with a pileus, or particular kind of cap, on his shaven head. This last circumstance explains the expression "servos ad pileum vocare" (Liv. xxiv. 32), which means to promise slaves their liberty in order to induce them to join in some civil disturbance (cf. Plaut. *Amph.* iii. 4, 16; *Poen.* v. 2, 2; Serv. *ad Aen.* viii. 564). The pileus was still worn in the time of Justinian, since he declares that slaves who attend the funeral of their master with the cap of freedom on their heads (*pileati*) become Roman citizens (Cod. 7, 6, 1, § 5).

Manumission according to the forms recognised by the civil law not only made a slave free, but also *civis*. Besides the due observance of the legal forms, however, it was required that the manumissor should have quiritarian ownership of the slave, and that he should be of legal capacity to perform the act of manumission.

If a slave belonged to a person, but only under a praetorian title, he became Latinus and not *civis* on manumission. [LATINITAS.] If several persons were joint owners of a slave, and one of them manumitted him in such form as would have effected complete manumission, if the slave had been the sole property of the manumissor, such manumissor lost his share in him, which accrued to the other joint owner or joint owners. Justinian enacted that, if only one joint owner was willing to manumit a slave, the others might be compelled to manumit on receiving the price fixed by law for their shares. If one person had the usufructus and another the ownership (*proprietas*) of a slave, and the slave was manumitted by the *proprietarius*, he did not become free till the *usufructus* had expired: in the meantime there was no legal owner (*dominus*).

The modes of manumission above described were of a formal and public character, but in course of time other ways of giving freedom to a slave of an informal and private kind came to be recognised. Thus a form of manumission *inter amicos* is referred to by Gaius and Ulpian (Gaius, i. 41, 44; Ulp. *Fragm.* 1, 10, 18), which was a declaration of a slave's freedom made by his master in the presence of friends, or it might be done by inviting the slave to table, or by writing a letter to an absent slave. These were not manumissions recognised by the Jus Civile, and so originally had no legal effect; but after a time the praetor protected the liberty of slaves who had been made free in this manner, so that they were free in fact (*in libertate esse*), though they had not the legal status of freemen (*liberos esse*). The Lex Junia Norbana gave then the status called Latinitas [LEX JUNIA NORBANA; LATINITAS]; finally under Justinian these manumissions were given the same effect as those belonging to Jus Civile, but it was required that they should be attested by five witnesses (Cod. 7, 6, 1, § 1). A new form of manumission—*manumissio in ecclesiis*—was established by the Church, and first recognised by a constitution of Constantine, A.D. 316 (Cod. 1, 13): this manumission was carried out before the bishop in the presence of the congregation.

A *manumissio sacrorum causa* is sometimes mentioned as a kind of manumission, whereas the words *sacrorum causa* point to the cause and not to the mode of manumission. (Festus, s. vv. *Manumitti*, *Puri;* Savigny, *Zeitschrift*, vol. iii. p. 402.) A manumission by adoption is spoken of (Gell. v. 19; Inst. 1, 11, 12); the form of adoption required the intervention of a magistratus.

Laws were passed under the early emperors for the purpose of preventing the degradation of *civitas* by an incautious exercise of the right of manumission. The Lex Aelia Sentia laid various restrictions on manumission [LEX AELIA SENTIA], particularly as to the age of the person manumitting, which was raised from fourteen to twenty, and as to the age of the slave, which was required to be thirty, as a general rule, in order to qualify him to become *civis*. Moreover it prevented slaves who had suffered an infamous punishment from becoming *cives*, and declared manumissions in fraud of creditors void. The lex was almost entirely repealed by Justinian, who abolished the division of freedmen into *cives*, *Latini*, and *dediticii*, making all freedmen *cives*. The Lex Fufia Caninia fixed limits to the number of slaves who could be manumitted by will; the funerals of the wealthy being often attended by a large number of freedmen, who had been manumitted by the deceased to the injury of their inheritance. The number allowed to be manumitted in this way was a half, one-third, one-fourth, and one-fifth of the whole number that the testator possessed, according to a scale fixed by the lex. As its provisions only applied to cases where a man had more than two slaves, the owner of one slave or two slaves was not affected by this lex. The exact date of the law is doubtful, but there is some evidence to show that it was passed A.D. 8; several senatusconsulta were passed to prevent evasions of it (Sueton. *Aug.* 40; Gaius, i. 42–46). This lex was repealed by Justinian (Cod. 5, 3). A tax was levied on manumission by a Lex Manlia, B.C. 357; it consisted of the twentieth part of the value of the slave, hence called *vicesima* (Liv. vii. 16, xxvii. 10; Cic. *ad Att.* ii. 16).

Manumission was as a rule optional on the part of a master, but in some cases it was obligatory, as in the case of a master treating his slave with extreme cruelty, according to a constitution of Antoninus Pius (Gaius, i. 53). The act of manumission, which made the slave a new man, established the relation of *patronus* and *libertus* between the manumissor and manumitted, which was a quasi-parental relation [LIBERTUS; PATRONUS]. When manumitted by a citizen, the *libertus* took the praenomen and the gentile name of the manumissor, and became in a sense a member of the gens of his patron.

Freedmen who became *cives* enjoyed public as well as private rights, but subject to various drawbacks. They had not the *jus honorum*, and they could only vote in one of the four *tribus urbanae*, not in the *tribus rusticae*, though various attempts were made to give them a better suffrage. [LIBERTUS; CIVITAS.] (Dig. 40, 1, 4; Holtzman, *de Emanc. Jur. Rom. et Hod.;* Becker, *Alt.* ii. 1, 65; Unterholzner in *Zeitschr. f. Gesch. Rechtswiss.* ii. 1391; Keller, *Inst.* 211, &c.) [G. L.] [E. A. W.]

MANUS FE'RREA. [HARPAGO.]

MANUS INJE'CTIO is a kind of legalised self-help, which consists in a claimant laying hands on and arresting the person subject to his claim, according to the forms of early procedure. *Manus injectio* is used to signify either (1) an arrest of this kind made out of court, and (2) an arrest carried out in court before the magistratus, which is the strict sense of the term.

1. The seizure of a slave by his master is called *manus injectio;* e.g. the act of Claudius in seizing Virginia is so described (Liv. iii. 44). A plaintiff might bring a defendant into court by *manus injectio*, if the latter refused to obey his *in jus vocatio* or summons; and in the case of a judgment debtor or person in the position of a judgment debtor, he could do this without any *in jus vocatio*.

2. *Manus injectio*, carried out in court before the magistratus, is the process of execution for debt according to the law of the Twelve Tables; it is one of the five forms of *legis actio*, and as

such is described by Gaius (iv. 12). The law of the Twelve Tables relating to it is cited and explained in a well-known passage of Gellius (xx. 1). It appears from these sources that a debtor who had formally acknowledged his debt and a judgment debtor had thirty days allowed them to make payment, and after that time were liable to arrest at the hands of their creditor and to be brought into court ("aeris confessi rebusque jure judicatis triginta dies justi sunto. Post deinde manus injectio esto. In jus ducito," Gell. *l. c.*). Both parties being before the magistratus, the creditor addressed the debtor as follows: "Quod tu mihi judicatus (sive damnatus) es sestertium decem milia, quandoque non solvisti, ob eam rem ego tibi sestertium decem milium judicati manum injicio" (Gaius, *l. c.*); and he at the same time laid hold of some part of the debtor's body, which was the act of *manus injectio*. The debtor was not allowed to resist the arrest and maintain an action (*manum sibi depellere et pro se lege agere*): all he could do was to provide a responsible substitute called *vindex* (*qui vim dicit*), who could resist (*manum depellere* or *vindicare*) and carry on an action as defendant. The debtor was released, it seems, by such intervention on his behalf, and the vindex liable if his defence was unsuccessful (cf. Liv. vi. 14). In default of a vindex, the creditor might carry the debtor to his house (*domum ducere*), and keep him in confinement for sixty days, during which time the debtor's name and the amount of his debt were proclaimed at three successive markets (*nundinae*). This *domum ductio* probably required an order of the magistratus, which would be given as a matter of course, supposing the judgment or acknowledgment to have been proved (Lex Rubr. cc. 21, 22). During this period of sixty days, the debtor was not a slave, but he was kept in chains, which could not be above a certain weight ("quindecim pondo, ne majore, aut si volet, minore, vincito"); the creditor being bound to supply him with a bare maintenance, if he did not keep himself. ("Si volet, suo vivito. Ni suo vivit, qui eum vinctum habebit, libras farris endo dies dato. Si volet, plus dato.") If there was no arrangement between the parties, and the debtor did not pay his debt or anyone on his behalf, he suffered a *maxima capitis deminutio*, and might be put to death or sold as a slave beyond the Tiber, all his property passing to his creditor, and when there were several joint creditors being divided amongst them (as to the different interpretations of the words *partis secanto*, see NEXUM). According to some writers, there was an *addictio* or magisterial assignment of the debtor to the creditor at the end of the sixty days; but there is no mention in our authorities of any reappearance of the parties in court, and it is perhaps better to suppose that a conditional assignment was contained in the original order of the magistratus. Persons who contracted a money debt by *nexum*, which was a formal proceeding *per aes et libram* in the presence of witnesses, were probably considered to have made a sufficiently public acknowledgment of their debt, and so may have been liable at once to *manus injectio* on default; but the opinion of some writers that no execution or proceedings in court were necessary in this case cannot be supported, nor can it be shown that any part of the ordinary process was omitted.

Manus injectio was not applicable for the enforcement of any but a liquidated money claim; and was confined under the Twelve Tables to *judicati*, *damnati*, and *confessi*. In course of time, however, some other debtors were put either wholly or partly on the same footing as *judicati* (Gaius, iv. 22–25). The Lex Publilia, evidently following the analogy of the Twelve Tables, allowed the *manus injectio* in the case of money paid by a sponsor, if the sponsor was not repaid in six months. The Lex Furia de sponsu allowed it against him who had exacted from a sponsor more than his just proportion (*virilis pars*). These and other leges allowed the *manus injectio pro judicato*; that is, treated the debt as if it were a *res judicata*. Other leges granted the *manus injectio pura*; that is, *non pro judicato*, as the Lex Furia testamentaria and the Lex Marcia adversus feneratores. But in these cases the defendant might resist the manus injectio (*manum sibi depellere*), and defend his cause; but it would appear that he could only relieve himself from the *manus injectio*, by actually undertaking to defend himself by legal means. Accordingly it was in these cases an execution, if the defendant chose to let it be so; if he did not, it was the same as serving him with process to appear before the praetor. In course of time a law was passed called the Lex Vallia, by which every *manus injectio* was made *pura*, except in the cases of judicatus and of a person whose debt had been paid by his sponsor (*is pro quo depensum est*); and consequently in the two latter cases, even after the passing of this lex, an insolvent person could only escape arrest by finding a vindex. The Lex Poetelia had previously put an end to *manus injectio* on account of *nexum*. This form of execution for debt was however put an end to by the Lex Aebutia, which partly abolished the *legis actio* procedure. A dramatic scene of *manus injectio* is portrayed on a sarcophagus at Rome (Voigt, i. 63, n. 3; Helbig, *Bullet. dell' Inst.* 1866, 90, &c.). (Keller, *Der röm. Civilprocess*, §§ 19, 83; Bethmann-Hollweg, *Der römische Civilprocess*, vol. i. § 45; Bekker, *Die Aktionen d. röm. Privatrechts*, vol. i.; Karlowa, *Der röm. Civilprocess z. Zeit. d. legis actionis*; Huschke, *Nexum*, p. 79, &c.; Savigny, *Das Alt.-Röm. Schuldrecht*, Verm. Schr. vol. ii. p. 369; Voigt, *XII. Tafeln*, 1, §§ 63–65; Muirhead, *Roman Law*, § 36.) [E. A. W.]

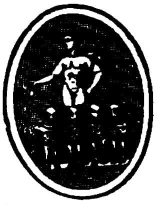
MAPPA (χειρόμακτρον, ἐκμαγεῖον), a linen napkin. Among Greeks and Romans alike, before the meal began and after it was over, means were provided for washing the hands of the guests. A slave carried round a basin (*malluvium*, *trulleum*, *polubrum*; in Greek, λέβης, χέρνιψ, χειρόνιπτρον), which he held under the hands to receive the water poured over them from a jug (*urceolus*, πρόχους); and the slave who poured the water carried also a napkin or towel to wipe the hands dry: κατὰ χειρὸς ὕδωρ, παράπεμπε τὸ χειρόμακτρον (Arist. *ap.* Athen. ix. p. 410. See Hom. *Il.* xxiv. 304; *Od.* i. 136; Plat. *Symp.* p. 175 A, &c.). But, besides this, as forks are a modern invention of the 14th century, it was necessary that the guests should often wipe their fingers during the meal: for this purpose the Greeks used, not napkins, but pieces of bread, called ἀπομαγδαλιαί (Poll. vi. 93; Eustath. *ad Od.* xix. 92). Herodotus (iv. 64) mentions a ghastly practice of the Scythians, who used the scalps of their enemies as ἀπομαγδαλιαί: and Pliny (*H. N.* vii. § 12) says that the Scythian Anthropophagi, besides making drinking cups from the skulls of their slain enemies (compare the story of the Lombard Alboin, Gibbon, vol. v. 339), also used the scalps *pro mantelibus* (= mappis) *ante pectora*. From "ante pectora" it may be seen that the napkin was sometimes tucked under the chin, like a bib, according to a fashion still lingering in some countries. The mappa in Horace's time was provided by the host (Hor. *Sat.* ii. 4, 81; Varr. *L. L.* ix. 47); but, as far as we have evidence, it was the custom in Martial's time for the guests to bring their own napkins (see Mart. xii. 29); and the same is implied by the fact that persons whose rank entitled them to the *latus clavus* had it embroidered as a border to the mappa (Mart. iv. 46), and also by what we are told of mean-spirited guests carrying off food from the dinner table wrapped in their napkin (Mart. ii. 37; Petron. 66). We hear of napkins in the time of Heliogabalus embroidered with gold (Lamprid. *Heliog.* 27; *Alex. Sev.* 37, 40). Athenaeus (ix. p. 479) speaks of gaily-coloured napkins worn by women as a head-dress, like a handkerchief. In the circus the signal for starting a race was given by the presiding consul or praetor dropping a white napkin (hence "*cretata* mappa"). From this the Megalesian games are called *spectacula Megalesiacae mappae* (Juv. xi. 193): compare Tertullian (*Spect.* 16), "mappam missam putant, sed est diaboli ab alto praecipitati figura." (Cf. also Mart. xii. 29; Suet. *Ner.* 22.) (Compare above MANTELE; and see Marquardt, *Privatleben*, p. 313; Becker-Göll, *Gallus*, iii. 389.) [W. S.] [G. E. M.]

MARCUS. [MALLEUS.]

MARIS (μάρις, μάρης, Hesych. μάριστον), a Greek measure of capacity, which, according to Pollux (x. 184) and Aristotle (*Hist. An.* viii. 9), contained 6 cotylae (or nearly 3 pints). Polyaenus (iv. 3, § 32) mentions a much larger measure of the same name containing 10 congii, or nearly 8 gallons. [COTYLA.] [P. S.]

MARRA was apparently a sort of single-headed pick-axe, perhaps heavier and with a broader head than the *ligo*, for Columella (x. 72) applies the epithet *lata* to the marra: its use for breaking up the hard ground in preparation for lighter digging and hoeing is sufficiently shown by Col. x. 88 (quoted by Mayor on Juvenal, xv. 166), "mox bene cum glaebis vivacem cespitis herbam contundat marrae vel fracti dente ligonis . . . tunc quoque trita solo splendentia sarcula sumat angustosque foros adverso limite ducens rursus in obliquum distinguat tramite parvo." In Plin. xviii. § 147, it is prescribed for cleaning the ground of weeds too strong and obstinate to be got out by the hoe, ploughing being the last resource, if the weeds beat even the marra. The contrast of the marra with the *dens fracti ligonis* in the passage quoted from Columella suggests that its head had a smooth blade, not indented or split into two prongs. [G. E. M.]

MARSU'PIUM (μαρσύπιον, βαλλάντιον), a purse. (Non. Marcellus, *s. v.*; Varro, *de Re Rust.* iii. 17;—Plaut. *Men.* ii. 1, 29; ii. 3, 33, 35; v. 7, 47; *Poen.* iii. 5, 37; *Rud.* v. 2, 26;—Xen. *Conviv.* iv. 2.) The word is a diminutive of μάρσιππος, a bag, which occurs in Xen. *Anab.* iv. 3, 11, as a clothes-bag, equivalent to στρωματόδεσμος. *Marsupium*, therefore, is strictly a small bag or pouch.



Mercury holding a Marsupium.

The purse used by the ancients was commonly a small leathern bag, and was often closed by being drawn together at the mouth (σύσπαστα βαλάντια, Plat. *Symp.* p. 190 D). Mercury is commonly represented holding one in his hand, of which the annexed woodcut from an intaglio in the Stosch Collection at Berlin presents an example. For journeys and campaigns, the safer girdle-purse (*zona*) was used. (See also CRUMENA, ZONA.) [J. Y.] [G. E. M.]

MA'RSYAS. [COLONIA, Vol. I. p. 481 *a*.]

MARTIA'LES LUDI. [LUDI MARTIALES.]

MARTIA'LIS FLAMEN. [FLAMEN.]

MARTY'RIA (μαρτυρία) signifies strictly the deposition of a witness in a court of justice, though the word is applied metaphorically to all kinds of testimony. We shall here explain—1, what persons were competent to be witnesses at Athens; 2, what was the nature of their obligation; 3, in what manner their evidence was given; 4, what was the punishment for giving false evidence.

The capacity to give evidence was regarded more as a privilege of the witness than as a right of justice. Hence it was limited to freemen, males, and adults. The incapacity of women and minors may be inferred from the general policy of the Athenian law: thus a woman or a child could make no contracts beyond the value of a bushel (μέδιμνος) of barley, *i.e.* for the barest necessaries of life (Isae. *Or.* 10 [*Aristarch.*], § 10; Schol. Aristoph. *Eccles.* 1025; Harpocr., Phot., Suid., *s. v.* ὅτι παιδὶ καὶ γυναικί). A woman could, however, take an oath if tendered to her by challenge (πρόκλησις); and this oath had an evidentiary value, being in fact a substitute for evidence. It differed, however, because the consent of the adversary was required before it could be taken. For an example of this kind of oath tendered and refused, see Dem. c. *Aphob.* iii. p. 852, § 26; tendered and taken, *c. Boeot. de Dot.* p. 995, § 3, *de Nom.* p. 1011, § 10. (Cf. DIAETETAE, p. 623 *a*; Thalheim, *Rechtsalterth.* p. 8; Lipsius, *Att. Process*, pp. 876, 900.)

Slaves were not allowed to give evidence, unless upon examination by torture (βάσανος): nor were female slaves exempted (Dem. c. *Aphob.* iii. p. 852, § 25). There appears to have been one exception to this rule: a slave might be a witness against a freeman in cases of murder (Antiph. *de caed. Herod.* § 48). The suggestion of Platner (*Process und Klagen*, p. 215) that μαρτυρεῖν is here equivalent to μηνύειν, "lay an information," is rejected both by Schömann and by Lipsius (*Att. Process*, p. 876 n.). The party who wished to obtain the evidence of a slave belonging to his opponent challenged him to give up the slave to be examined (ἐξῄτει τὸν δοῦλον). The challenge was called πρόκλησις.

The owner, if he gave him up, was said *ἐκδοῦναι* or *παραδοῦναι*. But he was not obliged so to do, and the general practice was to refuse to give up slaves, which perhaps arose from humanity, though the opponent always ascribed it to a fear lest the truth should be elicited. The orators affected to consider the evidence of slaves wrung from them by torture more valuable and trustworthy than that of freemen; but it must be observed, they always use this argument when the slave had *not* been examined. (Demosth. c. *Aphob.* iii. p. 848, § 13; c. *Onet.* i. p. 874, § 37; Hudtwalcker, *Ueber die Diäteten*, p. 44 ff.)

Citizens who had been disfranchised (*ἠτιμωμένοι*) could not appear as witnesses (any more than as jurors or plaintiffs) in a court of justice; for they had lost all honourable rights and privileges (Dem. c. *Mid.* p. 545, § 95; c. *Neaer.* p. 1353, §§ 26, 27). State debtors were not allowed to bring actions (Isae. *Or.* 10 [*Aristarch.*], § 20; Dem. c. *Mid.* p. 542, § 87; perhaps also c. *Nicostr.* p. 1251, § 14 ff.), but had apparently sometimes a *locus standi* in their own defence; the plaintiff *against Phaenippus* is a state-debtor, p. 1049, § 32 (Thalheim, *op. cit.* p. 16). But there was no objection to alien freemen (Dem. c. *Lacr.* p. 927, § 14, p. 929, § 20; Aeschin. *de F. L.* § 155). We learn from Harpocration (*s. v.* *διαμαρτυρία*) that in actions against freedmen for neglect of duty to their patrons (*ἀποστασίου δίκαι*) foreigners were not allowed to put in an affidavit that the action was not maintainable (*μὴ εἰσαγώγιμον εἶναι*). But this can hardly be considered an exception, for such affidavits gave an undue advantage to the party for whom they were made.

Neither of the parties to a cause was competent to give evidence for himself, though each was compelled to answer the questions put by the other. The law declared *τοῖν ἀντιδίκοιν ἐπάναγκες εἶναι ἀποκρίνασθαι ἀλλήλοις τὸ ἐρωτώμενον, μαρτυρεῖν δὲ μή.* ([Dem.] c. *Steph.* ii. p. 1131, § 10.) That the friends of the party, who pleaded for him (called *συνήγοροι*), were not incompetent to give evidence, appears from the fragment of Isaeus *pro Euphil.*, and also from Aeschines, who, on his trial for misconduct on the embassy, calls Phocion to assist him both as a witness and an advocate (*de F. L.* §§ 170, 184).

The obligation to attend as a witness, both in civil and criminal proceedings, and to give such evidence as he is able to give, arises out of the duty which every man owes to the state; and there is no reason to believe that any persons (except the parties themselves) were exempted from this obligation. The passages cited in support of the contrary view (Isae. *Or.* 2 [*Menecl.*], § 33; [Dem.] c. *Timoth.* p. 1195, § 38; *Att. Process*, p. 880 Lips.) prove nothing more than that the near relations of a party were *reluctant to* give evidence against him; whereas the fact that they were bound *by law* to give evidence may be inferred from Demosthenes (c. *Aphob.* iii. p. 849, § 15; p. 850, § 20; p. 855, § 36). At Athens, however, it was less easy than it is now in England to keep men to their legal obligations: hence the defiant tone of the friends of a powerful defendant (c. *Timoth.* l. c.).

The party who desired the evidence of a witness summoned him to attend for that purpose. The summons was called *πρόσκλησις*. (Plat. *Legg.* xi. p. 936 E; Dem. c. *Aphob.* iii. p. 850, § 20; c. *Timoth.* p. 1190, § 19; c. *Theocrin.* p. 1324, § 8. In the two former passages *προκαλεῖσθαι* is an unsound correction; cf. *Att. Process*, p. 884 Lips.) If the witness promised to attend and failed to do so, he was liable to an action called *δίκη λειπομαρτυρίου.* Whether he promised or not, he was bound to attend; and if his absence caused injury to the party, he was liable to an action (*δίκη βλάβης*). This is the probable distinction between these forms of action, as to which there has been much doubt. (Meier and Schömann, *Att. Proc.* p. 672 = 881 Lips.; Platner, *Att. Proc.* p. 221; Schömann, *Antiq.* i. 487 n., E. T.).

The attendance of the witness was first required at the *ἀνάκρισις*, where he was to make his deposition before the superintending magistrate (*ἡγεμὼν δικαστηρίου*). The party in whose favour he appeared, generally wrote the deposition at home upon a whitened board or tablet (*λελευκωμένον γραμματεῖον*), which he brought with him to the magistrate's office, and, when the witness had deposed thereto, put into the box (*ἐχῖνος*) in which all the documents in the cause were deposited. If the deposition were not prepared beforehand, as must always have been the case when the party was not exactly aware what evidence would be given, or when anything took place before the magistrate which could not be foreseen, as for instance a challenge, or question and answer by the parties; in such a case it was usual to write down the evidence upon a waxen tablet. The difference between these methods was much the same as between writing with a pen on paper, and with a pencil on a slate; the latter could easily be rubbed out and written over again if necessary (Demosth. c. *Steph.* ii. p. 1132, § 11). If the witness did not attend, his evidence was nevertheless put into the box; that is, such evidence as the party intended him to give, or thought he might give, at the trial. For all testimonial evidence was required to be in writing, in order that there might be no mistake about the terms, and the witness might leave no subterfuge for himself when convicted of falsehood. (Demosth. c. *Steph.* i. p. 1115, § 44; ii. p. 1130, § 6.) The *ἀνάκρισις* might last several days, and, so long as it lasted, fresh evidence might be brought, but none could be brought after the last day, when the box was sealed by the magistrate, and kept so by him till the day of trial. (Demosth. c. *Aphob.* i. p. 836, § 1; c. *Boeot. de Nom.* p. 999, § 17; c. *Everg. et Mnes.* p. 1143, § 16; c. *Conon.* p. 1265, § 27.)

The form of a deposition was simple. The following example is from Demosthenes (c. *Lacr.* p. 927, § 14):—"Archenomides son of Archedamas of Anagyrus testifies, that articles of agreement were deposited with him by Androcles of Sphettus, Nausicrates of Carystus, Artemon and Apollodorus both of Phaselus, and that the agreement is still in his hands." Here we must observe that whenever a document was put in evidence at the trial, as an agreement, a will, the evidence of a slave, a challenge, or an answer given by either party at the *ἀνάκρισις*, it was certified by a witness, whose deposition was at the same time produced and read. (Demosth. *pro Phorm.* pp. 946, 949, 957; *c. Phaenipp.* p. 1046; *c. Steph.* p. 1120.)

The witness, whether he had attended before the magistrate or not, was obliged to be present at the trial, in order to confirm his testimony. The only exception was, when he was ill or out of the country, in which case a commission might be sent to examine him. [Ecmartyria.] All evidence was produced by the party during his own speech, the *κλεψύδρα* being stopped for that purpose. (Lys. *c. Pancl.* §§ 4, 8, 11, 14, 15; Isae. *Or.* 3 [*Pyrrh.*], §§ 12, 76; Dem. *c. Eubul.* p. 1305, § 21.) The witness was called by an officer of the court, and mounted on the raised platform (*βῆμα*) of the speaker, while his deposition was read over to him by the clerk; he then signified his assent, either by express words, or bowing his head in silence. (Lys. *de caed. Eratosth.* § 29; Aeschin. *de F. L.* § 156; Dem. *c. Mid.* p. 560, § 139; *c. Phorm.* p. 913, § 19; *c. Steph.* i. p. 1109, § 25; *c. Eubul.* p. 1305, § 22.) In one passage an *ἄτιμος*, whose mouth is shut, is directed to stand up in silence in order to excite compassion (Dem. *c. Mid.* p. 545, § 95). In the editions that we have of the orators we see sometimes Μαρτυρία written (when evidence is produced) and sometimes Μάρτυρες. The student must not be deceived by this, and suppose that sometimes the deposition only was read, sometimes the witnesses themselves were present. The old editors merely followed the language of the orators, who said "call the witnesses," or "mount up witnesses," or "the clerk shall read you the evidence," or something to the same effect, varying the expression according to their fancy. (See Lys. *pro Mantith.* § 8; Isae. *Or.* 3 [*Pyrrh.*], §§ 76, 80; Dem. *c. Callipp.* p. 1238, § 7; *c. Neaer.* p. 1352, § 23).

If the witness was hostile, he was required by a solemn summons (*κλητεύειν*) either to depose to the statement read over to him, or to take an oath that he knew nothing about it (*μαρτυρεῖν ἢ ἐξόμνυσθαι*). One or the other he was compelled to do, or, if he refused, he had to pay a fine of a thousand drachmas to the state, which sentence was immediately proclaimed by the officer of the court, who was commanded *ἐκκλητεύειν αὐτόν*, *i.e.* to give him notice that he was in contempt and had incurred the fine. The distinction between *κλητεύειν*, of the party summoning the witness, and *ἐκκλητεύειν*, of the herald or crier, has been wrongly denied by some authorities, and is not noticed in L. and S. ed. 7; but it is established by Aeschin. *c. Timarch.* § 46, *de F. L.* § 68, compared with Lycurg. *c. Leocr.* § 20, Dem. *c. Zenoth.* p. 890, § 30, *c. Neaer.* p. 1354, § 28. For the compulsion of an unwilling witness (like the English subpoena), see also Isae. *Or.* 2 [*Astyph.*], § 18; Dem. *de F. L.* p. 396, § 176=194, p. 403, § 193=220; *c. Aphob.* iii. p. 850, § 20; *c. Theocrin.* p. 1324, § 7 (Lipsius, *Att. Process*, p. 882 n.). The *ἐξωμοσία* was not a safe way of getting off giving evidence; it was liable to the penalties of perjury (Dem. *de F. L.* § 176; *c. Steph.* i. p. 1119, § 58).

An oath was usually taken by the witness at the *ἀνάκρισις*, where he was sworn by the opposite party at an altar (*πρὸς τὸν βωμὸν ἐξωρκίσθη*). If he had not attended at the *ἀνάκρισις*, he might be sworn afterwards in court; as was always the case when a witness took the oath of denial (*ἐξώμοσε*). In the passage just cited from Lycurgus, the expression *λαβόντας τὰ ἱερὰ* means nothing more than touching the altar or its appurtenances, and has no reference to victims. (Valckenaer, *Opusc. Philol.* vol. i. pp. 37–39.) Whether the witness was always bound to take an oath, is a doubtful point. Schömann formally retracts (*Antiq.* i. 485 n., E. T.) his earlier opinion, that evidence was usually unsworn (cf. *Att. Process*, pp. 885–6 Lipsius). It seems certain, however, that the other side could put a witness on his oath (*ἐξορκοῦν*, Dem. *c. Steph.* i. p. 1119, § 58; *ἐξορκίζειν*, c. *Conon.* p. 1265, § 26, with Sandys on both passages). See also *c. Eubul.* p. 1305, § 22; Aeschin. *de F. L.* § 156.

The oath of the witness (the ordinary *νόμιμος ὅρκος*) must not be confounded with the oath taken by one of the parties, or by some friend or other person out of court, with a view to decide the cause or some particular point in dispute. This was taken by the consent of the adversary, upon a challenge (*πρόκλησις*, [Dem.] *c. Timoth.* p. 1203, § 65) given and accepted; it was an oath of a more solemn kind, sworn by (or upon the heads of) the children of the party swearing (*κατὰ τῶν παίδων*, Dem. *c. Aphob.* iii. p. 852, § 26; *c. Conon.* p. 1269, § 40), or by perfect or full-grown victims (*καθ' ἱερῶν τελείων*, [Dem.] *c. Neaer.* p. 1365, § 60), and often with curses upon himself or his family (*κατ' ἐξωλείας*, c. *Eubul.* l. c.), and sometimes was accompanied with peculiar rites, such as passing through fire (*διὰ τοῦ πυρός*, *c. Conon.* l. c. and Sandy *ad loc.*). The mother or other female relation of the party (who could not be a witness) was at liberty to take this oath. (Dem. *c. Aphob.* l. c.; *c. Boeot. de Dot.* p. 1011, § 10: it is tendered to the father, *c. Callipp.* p. 1240, § 15; cf. Wachsmuth, *Hellen. Alterth.* ii. 1, p. 335; Hudtwalcker, *Diät.* pp. 52–57.)

With respect to hearsay evidence, see Akoe Martyrein; and for the affidavit called *διαμαρτυρία*, Anakrisis, p. 122 *a*.

The question whether freemen were put t the torture is reserved for fuller discussio under Tormentum. We may here briefly sa that (1) the torture of citizens was forbidde by a decree in the archonship of Scamandriu of unknown date; that (2) the "omnipotent" people claimed a power of suspending this la by psephisma on extraordinary occasions [Ecclesia, p. 702 *b*]; that (3) this suspension of the la though demanded in times of excitement, seem never to have been really acted upon. Th leading case which proves all these points i that of the mutilation of the Hermae (Ando *de Myst.* § 43 f., and Grote's remarks thereo ch. 58, v. 175; see also the speech πε *συντάξεως*, p. 170, § 14, and Plut. *Phoc.* 35).

It is not too much to say, with Thalhei (*Rechtsalterth.* p. 29, n. 2) and Lipsius (*At Process*, p. 896, n. 372), that we have *no* exampl of the torture of an Athenian citizen. Abou aliens they were less scrupulous; but (as general rule) it is certain that freemen coul not be tortured in courts of justice, and eve an emancipated slave, Demosthenes says, would be an act of impiety (*οὐδ' ὅσιον*) to gi up for such a purpose (Dem. *c. Aphob.* ii

p. 856, § 39; c. *Timoth.* p. 1200, § 55). The recorded exceptions are mostly in the cases of foreign spies, especially when the Athenians were alarmed for the safety of their dockyards (Dem. *de Cor.* p. 271, § 133; Lys. c. *Agorat.* § 39).

The above remarks apply equally to causes which came before the dicasteries in the ordinary way, and those which were decided by the public arbitrators. The *διαιτητὴς* discharged the duties of the magistrate at the *ἀνάκρισις* as well as those of the *δικασταὶ* at the trial. He heard the witnesses and received the depositions from day to day as long as he sat, and kept the *ἐχῖνος* open until the last day (*κυρίαν ἡμέραν*). (Cf. Dem. c. *Mid.* p. 541, § 84; c. *Timoth.* p. 1199, § 50; *Att. Process*, p. 886 Lips.; Diaetetae.)

If the witness in a cause gave false evidence, the injured party was at liberty to bring an action against him (*δίκη ψευδομαρτυριῶν*) to recover compensation. The proceeding was sometimes called *ἐπίσκηψις*, and the plaintiff was said *ἐπισκήπτεσθαι τῇ μαρτυρίᾳ* or *τῷ μάρτυρι* (Isae. *Or.* 3 [*Pyrrh.*], § 11; *Or.* 5 [*Dicaeog.*], § 17; Dem. c. *Aphob.* iii. p. 846, § 7, p. 856, § 41; Harpocrat. *s. v. ἐπεσκήψατο*). This cause was probably tried before the same presiding magistrate as the one in which the evidence was given (*Att. Process*, p. 59 Lips.). The form of the plaintiff's bill, and of the defendant's plea in denial, will be found in Demosthenes (c. *Steph.* i. p. 1115, § 46). From the same passage we also learn that the action for false testimony was a *τιμητὸς ἀγών*, in which the plaintiff laid his own damages in the bill; and from Demosthenes (c. *Aphob.* p. 849, § 16; p. 859, § 50), it appears that the dicasts had power not only to give damages to the plaintiff, but also to inflict the penalty of *ἀτιμία* by a *προστίμησις* (Isae. *Or.* 5 [*Dicaeog.*], § 19; Dem. c. *Aphob.* iii. p. 849, § 16; [Aristot.] *Rhet. ad Alex.* p. 1431 b, 30). A witness who had been a third time convicted of giving false testimony was *ipso jure* disfranchised (Andoc. *de Myst.* § 74; cf. *Att. Process*, p. 485 ff. Lips.; Thalheim, *Rechtsalterth.* p. 119 n.). The main question to be tried in the cause against the witness was, whether his evidence was true or false; but another question commonly raised was, whether his evidence was material to the decision of the previous cause (Dem. c. *Everg. et Mnes.* p. 1139, § 1, p. 1161, § 74; c. *Aphob.* pp. 853–856; c. *Steph.* i. p. 1117, § 51; Platner, *Process u. Klagen*, vol. i. p. 400, &c.).

When a witness, by giving false evidence against a man upon a criminal trial, had procured his conviction, and the convict was sentenced to such a punishment (for instance, death or banishment) as rendered it impossible for him to bring an action, any other person was allowed to institute a public prosecution against the witness, either by a *γραφή*, or perhaps by an *εἰσαγγελία* or *προβολή*. (Andoc. *de Myst.* § 7; Platner, *op. cit.* p. 411; *Att. Process*, p. 488 Lips.)

After the conviction of the witness, an action might be maintained against the party who suborned him to give false evidence, called *δίκη κακοτεχνιῶν* (Dem. c. *Timoth.* p. 1201, § 56; c. *Everg. et Mnes.* l. c.). And it is not improbable that a similar action might be brought against a person who had procured false evidence to be given of a defendant having been summoned, after the conviction of the witness in a *γραφὴ ψευδοκλητείας* (Meier, *Att. Process*, p. 977 Lips.).

It appears that in certain cases a man who had lost a cause was enabled to obtain a reversal of the judgment (*δίκη ἀνάδικος*), by convicting a certain number of the adverse witnesses of false testimony. Thus in inheritance causes the law enacted *ἐὰν ἁλῷ τις τῶν ψευδομαρτυριῶν, πάλιν ἐξ ἀρχῆς εἶναι περὶ αὐτῶν τὰς λήξεις* (Isae. *Or.* 11 [*Hagn.*], § 46; *Or.* 5 [*Dicaeog.*], §§ 8, 14; see, however, some doubts of Lipsius, *Att. Process*, p. 982 n.). This was the more necessary, on account of the facility afforded to the parties to stop the progress of these causes by affidavits, and also because no money could compensate an Athenian for the loss of an inheritance. The same remedy was given by the law to those who had been convicted in a *δίκη ψευδομαρτυριῶν* or in a *γραφὴ ξενίας*. In the last case the convicted person, who proceeded against the witness, was compelled to remain in prison until the determination of his suit (Dem. c. *Timocr.* p. 741, § 131). We are informed that these are the only cases in which a judgment was allowed to be reversed in this way; the Scholiast on Plato (*Legg.* xi. p. 937 C) adds a third, cases of inheritance (*κλήρων*); but see *Att. Process*, p. 612 n. 350, p. 979 n. 609, Lips. From the words of Isaeus quoted above, *ἐὰν ἁλῷ τις τῶν ψευδομαρτυριῶν*, it has been inferred that the conviction of a single witness sufficed for the granting of a new trial; this is surely making too much of the indefinite *τις*, and the Scholiast on Plato says expressly that it was necessary to convict more than half the number of witnesses. The Athenians, as we know, were very chary of granting an *ἀναδικία* (*Att. Process*, p. 982 n.; Appellatio).

We conclude by noticing a few expressions. *Μαρτυρεῖν τινι* is to testify in favour of a man, *καταμαρτυρεῖν τινος* to testify against. *Μαρτύρεσθαι* to call to witness (a word used poetically); *διαμαρτύρεσθαι* and sometimes *ἐπιμαρτύρεσθαι τοὺς παρόντας*, to call upon those who are present to take notice of what passes, with a view to give evidence. (Dem. c. *Everg. et Mnes.* p. 1150, § 38.) *Ψευδομαρτυρεῖν* and *ἐπιορκεῖν* are never used indifferently, which affords some proof that testimony was not necessarily on oath. The *μάρτυς* (witness in the cause) is to be distinguished from the *κλητὴρ* or *κλήτωρ*, who merely gave evidence of the summons to appear. [C. R. K.] [W. W.]

MASTE'RES (*μαστῆρες*). [Zetetae.]

MASTI'GIA. [Flagrum.]

MASTIGO'PHORI or **MASTIGO'NOMI** (*μαστιγοφόροι* or *μαστιγονόμοι*), the name of the lower police-officers in the Greek states, who carried into execution the corporal punishments inflicted by the higher magistrates. Thus Lycurgus assigned mastigophori to the Paedonomus at Sparta, who had the general superintendence of the education of the boys (Xen. *Rep. Lac.* ii. 2, iv. 6; *Hellen.* iii. 11; Plut. *Lyc.* 17). In the theatre the mastigophori preserved order, and were stationed for this purpose in the orchestra, near the thymele (Schol. *ad* Plat. p. 99, Ruhnken; Lucian, *Pisc.* 33). In the Olympic games the *ῥαβδοῦχοι* performed the same duties. At Athens they were discharged by the public slaves, called bowmen (τοξόται), or Scythians (Σκύθαι). [Demosii.] [W. S.]

MA'TARA. [Hasta.]

MATERFAMI'LIAS. [Matrimonium.]

MATHEMA'TICI. [Astrologia.]

MATRA'LIA, a festival celebrated at Rome every year on the 11th of June, in honour of the goddess Mater Matuta, whose temple stood in the Forum Boarium from the time of Servius Tullius (Liv. v. 19; xxxiii. 27). It was celebrated only by Roman matrons, and the sacrifices offered to the goddess consisted of cakes baked in pots of earthenware (Varro, *L. L.* v. 106; Ovid. *Fast.* vi. 475, &c.). Slaves were not allowed to take part in the solemnities, or to enter the temple of the goddess. One slave, however, was admitted by the matrons, but only to be exposed to a humiliating treatment, for one of the matrons gave her a blow on the cheek and then sent her away from the temple. The matrons on this occasion took with them the children of their sisters, but not their own, held them in their arms, and prayed for their welfare (Plut. *Camil.* 5; *Quaest. Rom.* p. 267). The statue of the goddess was then crowned with a garland, by one of the matrons who had not yet lost a husband (Tertull. *Monogam.* c. 17). There can be little doubt that the peculiar ordinances in this festival arose from an identification of Mater Matuta with Leucothea, also a goddess of the Dawn. The story of Ino will explain the sisters' children, the punishment of the slaves and the honour of the once-married, and it is difficult to find any other satisfactory explanation. At the same time it is not improbable that the rites connected with the Greek myth are mingled with a simpler Roman festival of *Mothers*, in which the goddess of lawful marriage and of the birth of children (as of the birth of light) was honoured. (Compare Preller, *Röm. Myth.* p. 286, and *Dict. of Greek and Roman Biography*, arts. Ino and Matuta.) [L. S.] [G. E. M.]

MATRIMO'NIUM, NU'PTIAE (γάμος), marriage. I. Greek. The history of the marriage relation among the Greeks takes us back to some of the very earliest forms of the connexion between the sexes. In many of the wild tribes that surrounded the Greek world we are told that the sexes mingled promiscuously—*e.g.* the Massagetae (Herod. i. 126), the Nasamones (Herod. iv. 172), the Ausenses (Herod. iv. 180, &c.); and legends recount the same of the earliest times in Athens itself. "At Athens, Cecrops was the first person who married a man to one wife only, whereas before his time connexions had taken place at random, and men had had their wives in common" (Clearchus of Soli, *ap.* Athen. xiii. 2). Absurd as it would be to treat such a tradition as authentic history, it is possible that it embodies a true reminiscence of an early development; and it is curious to find that according to a quite separate legend (quoted from Varro by St. Augustine, *de Civit. Dei*, xviii. 9) the exclusion of women from public assemblies at Athens, and therewith their definite political subordination, is placed in the time of Cecrops. And indeed there are other reasons which lead us to believe that the institutions of Athens were, from the first, singularly averse to feminine predominance. Athenian mythology has no Antigone, not even a Helen; Athenian history has no Sappho, no Corinna. Aspasia herself was a Milesian.

In the rest of Greece, the marital tie developed more slowly, and with somewhat different results. The fierce stories of the Lemnian women, the Danaides, the Amazons, indicate that in the primeval times, amidst the frail organisations that then constituted society, women were occasionally capable of successfully contending against the stronger sex. Taking a step downwards in history, we come to the Homeric period; but before speaking of this, it will be expedient to notice a form of society which, though we meet with it at a later date, bears the mark of an earlier stage in the process of growth. This is the custom, which Herodotus (i. 173) and other authorities attribute to the Lycians, of reckoning families according to descent on the mother's side, and of giving to the wife and daughter much of that predominance (especially as to the inheritance of property) which is generally given to the father and son. It is clear that this custom was a survival from those times when paternity was uncertain, and when the only known relationships were through the mother; but it continued, in some few instances, among peoples who, we have every reason to believe, were monogamists, according to the ordinary Greek acceptation of that term. Besides the Lycians, the Epizephyrian Locrians are stated by Polybius (xii. 5) to have reckoned descent through the mothers; and Nicolaus Damascenus (p. 160) says of the Sarmatians (to whom Herodotus in bk. iv. 110–114 attributes a descent on the mother's side from the Amazons) that they obeyed their wives in everything (ταῖς δὲ γυναιξὶ πάντα πείθονται ὡς δεσποίναις). Those who wish to know more on this curious development of the conjugal bond may consult the learned and eloquent work of Bachofen (*Da Mutterrecht*), whose enthusiasm on behalf the "government by women" transcends sob bounds; or the more moderate theories McLennan (*Studies in Ancient History*, 1876).

It will be worth while remarking, in passing, that polygamy just touches the confines Greece, in Thrace (Herod. v. 5, 16; Eurip *Androm.* 215); as indeed the court of Priam though Hecuba alone appears to have enjoye the title of his wife, bore much resemblance t that of a polygamous monarch. We now com to the Greek society described in Homer.

The Iliad and Odyssey describe a society i which monogamy, and on the whole a pu monogamy, is the rule. No doubt "concubines are mentioned, as well as "wedded wives" (e. *Odyss.* xiv. 203); yet Laertes is said to ha abstained from the bed of his favourite mai servant, "fearing the anger of his wife" (χόλ δ' ἀλέεινε γυναικός, *Odyss.* i. 433): Agamemn refrains from Briseis, even though he had tak her from Achilles (*Il.* ix. 133); and the beau ful lines 340–343 of the same book assu monogamy as the natural condition. The stri ideas of modern times would not permit us describe Ulysses as wholly faithful to Penelop but he would seem to have had little choice the hands of Circe and Calypso, and he w clearly faithful at heart. No queen could ha more royal offices assigned to her than Are the queen of king Alcinous (*Odyss.* vi. 310;

69–74, 142). Moreover, though women as well as men suffered from the roughness of the times, women were under no peculiar disadvantages; they were not forbidden to appear in the open streets. McLennan (*op. cit.*) gives reason to think that the relationship through mothers, already noticed as of predominant importance in Lycia in a later age, was in the Homeric period esteemed as superior to the relationship through fathers over the whole of Greece; and this would account for the comparatively high position attributed to women in Homer. (See *Il.* xxi. 95, where the epithet ὁμογάστριος is pointedly used to express a closer tie than brotherhood on the father's side.) In itself, the fact that the Homeric chiefs bought their wives, instead of receiving a dowry with them, might suggest a lower state of society. But the absence of any mention of divorce in Homer is in favour of the view here taken. [Dos.]

In reference to these early states of society, two remarks of Aristotle, interesting in their connexion, should be borne in mind: first, that "among the barbarians, the female element and the servile element are in the same rank" (*Pol.* i. 2); secondly, that "the greater number of military and warlike races are governed by their women" (*Pol.* ii. 9). In the Homeric society the latter or chivalrous condition is predominant; but it is difficult to be sure that the "barbarian" estimate of women was nowhere prevalent in early times in Greece; and it may be a part explanation of the decline in the position of women which took place over so large a portion of Greece afterwards.

In the main, however, this decline was due to other causes. In treating of it, the topic of the "wife" must for a short space be merged in the broader topic of the "woman." The great distinction between the Homeric age and the historic period of Greece is the importance to which the "city" had attained in the latter period; the city being a community governed by laws (even though it might sometimes fall under the sway of a tyrant), self-centred, and priding itself on its independent existence. It seems certain that this city life, with its public deliberations, its collections of laws, and the large intellectual element which these demanded, was one to which women in that stage of the world's history were unequal. They fell still more behind than they had done in the merely warlike Homeric society. And other causes co-operated. Athens was from the first the type of this city life; now it was from Athens that the Ionian cities in Asia (and in many of the Aegean islands) were founded; and we are told (Herod. i. 146) that these colonists did not take their wives with them, but married Carian women, so that from the first their wives started as on an inferior footing, and with antagonistic feelings to their husbands, which Herodotus implies continued more or less in subsequent generations. Further, these Ionian colonies were in direct contact with the Asiatic monarchies, in which women occupied a very inferior position. And as a final point, it must be noted that both in Athens and Ionia (as elsewhere) the city life, implying as it did a body of citizens, required a clear means of discrimination as to who was and who was not a citizen; and as citizenship was mainly handed on from father to son, purity of race assumed an importance unknown before. Achilles might marry his Phrygian captive Briseis with no complaint on the part of his Myrmidons; but the son of Pericles by the Milesian Aspasia could not be accounted a citizen of Athens without a special vote of the people. If then in a large city, such as Athens or Miletus, swarming with traders from all parts of Greece, an accurate distinction was to be kept up between citizens and aliens, it was necessary that the matrons of the city should be clearly severed off from all others, and also that they should be preserved from temptation; both of which ends were crudely but to a certain extent effectively secured by their comparative seclusion. From all these causes (and probably from other deep veins of character hard to trace), across that middle belt of the Greek world which extended from Athens to Ionia,—a belt containing the most advanced and cultivated cities of Greece,—the female sex was lowered from the position which it held in the time of Homer, and regulated by customs approximating to those which have always existed in the East.

It was impossible that other parts of Greece should be uninfluenced by such a result; and besides, some of the causes which acted in Attica and Ionia would be forcible elsewhere. Thus, though about 500 B.C. Corinna and other poetesses enjoyed an honourable publicity at Thebes, yet in 379 B.C. we find it a breach of etiquette for Theban women to walk freely about the streets (Plut. *de Genio Socr.* 32). The Aeolian colonies of Lesbos and the adjacent coast of Asia Minor resisted the tendency for a time; and Sappho and her brilliant compeers, about the beginning of the 6th century B.C., raised the female sex to the highest glory in respect of imaginative power, and perhaps attempted social changes as well. But the phenomenon was a transitory one; perhaps, even, not a favourable one for steady development: the Mytilenaeans had an honourable history after this, but we hear no more of their women. Argos, half-way between Athens and Sparta, shows also an intermediate character as regards its female population. We can hardly wholly reject the story of its heroic defence by Telesilla the poetess and the other women against the Spartans, about 510 B.C., after the slaughter of the Argive army by Cleomenes (Plut. *de Mulierum Virtutibus*; Paus. ii. 20, § 7); but in the succeeding century the city lost to a great degree its Dorian character, and of its women too we scarcely hear anything more.

We may assume then that, by the middle of the 5th century B.C., the restriction of the liberty of free-born citizen women, which had begun some centuries earlier, attained its full development in Northern Greece. The most celebrated of the Greek colonies in Asia, most of the islands of the Aegean, and the northern part of the Peloponnesus itself, were subject to the same influence.

But there were parts of Greece that never in the smallest degree succumbed to this influence. In Sparta, from the first moment of its history down to the death of king Cleomenes in B.C. 220 (if not later), women enjoyed an authority, a distinction, rarely accorded to them even in modern times. With Sparta, Crete and Cyrene may, though in a minor degree, be reckoned;

and here, too, the population was Dorian. But Cyrene and Crete will only enter into a small portion of the following observations.

As to the original cause of this lofty position of women among the Dorian race—and the observation is true of Argos also, down to about 500 B.C.—Müller conjectures (*Dorians*, i. 4, § 9) that it arose from the fact that the Dorians took their wives and children with them in their original emigration from the north to the south of the Corinthian gulf. Such a cause is certainly adequate, implying, as it does, association in perilous adventure; and it is difficult to conjecture another equally strong. The causes, moreover, which depressed the position of women elsewhere, existed very sparingly at Sparta. There was not there, as at Athens, any great influx of strangers; Sparta was not a commercial city; and those who came were at any time liable to be expelled by the authorities. [XENELASIA.] Hence the strain of citizenship was easily kept pure at Sparta, without the seclusion of the wives. And Spartan husbands were the reverse of jealous; of which more presently. And since Spartan men were unable under the institutions of Lycurgus to make free use of wealth, the dowries of wives were large, and there were many heiresses. Aristotle tells us (*Pol.* ii. 9) that two-fifths of the soil of Laconia was possessed by women. Hence ensued a condition of which the concise answer of Gorgo, wife of Leonidas, is the proud expression: "Why," she was asked by a foreign lady, "do you Lacedaemonian wives, unlike all others, govern the men?" "Because we alone are the mothers of men." (Plut. *Lac. Apophtheg.*)

Exaggeration, however, must be avoided, both as to the extent of liberty allowed to wives at Sparta, and as to the goodness of the result. The laws of Sparta bound women as well as men: perhaps, because they bound men more than elsewhere, they bound women less; but with the detailed accounts of Xenophon and Plutarch before us, we cannot believe, with Aristotle (*l. c.*), that Lycurgus tried to legislate for women, and failed. Undoubtedly, however, there was much singularity in the legislation. Before marriage, the Spartan girl passed an open-air life of continuous exercise; she wrestled, she raced with her equals (Xen. *de Rep. Lac.* i. 4); intercourse with young men was not forbidden to her, and she was present at the public games. All this was allowed with a view to marriage; the girl would as a matter of course be given in marriage by her parent or *κύριος* (guardian); the youth who did not marry was liable to severe penalties (Pollux, viii. 40; Plut. *Lycurg.* 15). The form of marriage was a mock capture, a reminiscence of the time when wives were really captured with the strong hand; after marriage the bridegroom did not at once take his bride home, lest they should be soon tired of each other, but visited her in her parents' house clandestinely, and this secret intercourse sometimes continued till children were born to them (Plut. *l. c.*). When at last the husband took his wife home, he often took her mother with her (cf. Müller's *Dorians*, iv. 4, § 2). The married woman was forbidden to attend gymnastic contests (Paus. v. 6, § 5); and when she went out of doors, wore a veil (Plut. *Lac. Apophthegm., anecdote of Charillus*). The custom of the newly-wedded wife remaining i her parents' house prevailed in Crete als (Strabo, x. p. 482); and the object there i stated to have been that she might learn housekeeping. Müller (*l. c.*) after Hesychius explain the word *παρθένιος* as meaning a son bor during this period of quasi-secret marriag (cf. Hom. *Il.* xvi. 180).

More singular than the method of wooin among the Spartans was the regulation tha permitted polyandry. The production of chil dren was so far regarded by the legislator as th main end of marriage, that if a woman had n children by her husband, it was common fo her, with full consent of her husband, to admi another man to her bed; and this might tak place even if she had children by her husban so that a wife might be the mother of tw separate families (Plut. *Lycurg.*; Xen. *Rep. La* i. 9). It would appear, too, that several brothe might share one wife (Polyb. xii. 6). Yet w know no specific case of this last; and as far our information goes, the husband was alwa recognised as such, whatever intercourse wi his wife he permitted on the part of other Once, and only once in the history of Spart was bigamy permitted on the part of the ma this is the case of king Anaxandridas (Herod. 39, 40), who for love of his first wife refused put her away, but was obliged by the ephors take a second for the sake of posterity. (O other case of bigamy is recorded among genui Greeks, that of Dionysius of Syracuse, accordi to Aelian, *V. H.* xiii. 10.) It may be inferr from the case of Anaxandridas, and from t narrative in Herod. vi. 61, that the divorce of wife on the ground of barrenness was sanction by Spartan law.

While connexions which we consider irregul were thus legalised at Sparta, illicit vice w very rare, and affection between husband a wife was often very tender. (See the lives Agis and Cleomenes in Plutarch, especially t beautiful story of Chelonis, the wife of Cleo brotus.) The Spartan women were by far t finest and handsomest in Greece (Aristoph. *L* 78–84); and their sayings and deeds record in Plutarch (especially in the *Apophthegmat* though sometimes stern, are always striki (One of them anticipated the celebrated spe of Cornelia, mother of the Gracchi.) T Athenians, as was natural, criticised their fr dom (*e.g.* Eurip. *Androm.* 595 ff.); and we hardly refuse to admit, on the joint authority Plato (*Legg.* i. p. 637) and Aristotle (*Pol.* ii. that after the great successes of Sparta in Peloponnesian wars, they, as well as the Spar men, lost some of their virtue. But noble wom are found among them even then: it is harsh blame them severely for the single occasion which they lost their nerve and showed timid when Epaminondas with his great army 40,000 or 70,000 men was threatening unwalled city of Sparta; and when Arist alleges (*Pol.* ii. 9) that they caused the de pulation of Laconia by keeping the exten tracts, of which they were the mistresses, inhabited, we cannot, but remember that incessant military exercise of the Spartans the practice of infanticide (which all the Gre sanctioned) were much more probable cause diminution of the population than that wh

Aristotle suggests. (He says that Sparta fell through her ὀλιγανθρωπία: an interesting, and in itself doubtless a true, observation.)

But it is necessary to hasten to that Greek state of which, after all, we know very far the most; the antipodes of Sparta—Athens. At Athens, as has been stated, both the unmarried girl and the wife lay under restrictions greater than anywhere else in Greece. It must be admitted, that even as regards Athens, there is a great deal which we do not know; and one of the problems of the case is to reconcile the recurring statements of the obscurity and weakness of women, as well as the unfeeling tone in which they are treated by the orators (but see, for an exception, and in a very unlikely place, [Dem.] c. *Neaer*. p. 1364, § 56), with the striking and elevated female characters that so often appear in the pages of the Greek tragedians. Some experience, one would think, Sophocles must have had of a free and noble maiden, when he drew Antigone; and Euripides of a noble wife, when he drew Alcestis. Even in Aristophanes, Lysistrata, in spite of the indecency of the play named after her, acts an essentially honourable part. Haemon, in Sophocles, is a lover of the high chivalrous type. And it is justly remarked by Becker, that we do know of one actual case in which a wealthy Athenian married for love—Callias, who married Elpinice, Cimon's sister (Plut. *Cimon*, 4). But the balance of evidence is on the unfavourable side. Perhaps the *Andria* of Terence will give us the best idea of the possibilities and actualities of Athenian marriage. The plot of that play is romantic: each of the lovers marries his beloved. But the êthos of the play is totally against such a successful result, which happens by pure accident. Evidently, the father's will, and not the lover's passion, is the real animating cause which produces marriage in any ordinary case. "All lovers," says Simo, one of the fathers, "feel it a sad grievance that a wife should be assigned to them" (Act i. scene 2). The wife, then, was not generally the beloved. And the unlimited obedience professed by Pamphilus, Simo's son (v. 3), leaves him wholly in his father's power, at the risk of unspeakable misery to the object of his affections. Not less absolute is the obedience promised by the profligate son in the *Trinummus* of Plautus (v. 3, 8): "Ego ducam, pater, etiam si quam aliam jubebis." Evidently these are meant to be moral sentiments; but to us it is repellent, that a man's individuality should have no rights assigned to it in such a matter, and that duty should be held to consist in mere external obedience to another. The plain prose of the matter is expressed by the author of the speech against Neaera (p. 1386, § 122): "We have female companions (ἑταίρας) for our pleasure, concubines for daily attendance on our persons, but wives in order that we may beget legitimate children and that we may have a faithful guardian of our households." The immorality of such a remark is the more excusable when we remember that it is in part intended to be the acknowledgment of a certain duty to the state.

Strictly speaking, the Athenians did not think meanly of marriage; but they did think meanly of the wife. The most honourable side of their conception of it was that which concerned the family; the necessity that a man should prevent his "heritage being desolate, and his name being cut off" (ὅπως μὴ ἐξερημώσουσι τοὺς σφετέρων αὐτῶν οἴκους); that some one should make offerings at his grave (ἀλλ' ἔσται τις καὶ ὁ ἐναγιῶν, Isaeus, *de Apoll. Hered.* § 30): a feeling which is eloquently expressed by Plato in the Laws (vi. p. 773 B), "We must take hold of the eternal nature by providing to God ministers to stand before him in our stead, the descendants whom we leave behind us." Even this very praiseworthy sentiment was sometimes abused through the practice of unlimited adoption (for instances of which, see the speech of Demosthenes against Leochares).

Of the three most celebrated Greek writers who have treated of the subject of marriage—Plato, Aristotle, and Xenophon—Plato is the one who comes nearest to touching the real error of Athenian sentiment respecting marriage. In the beginning of the speech in the Laws just referred to, he clearly shows that reciprocation of vital influences is the root of the beneficent effects of marriage. Had he seen that this reciprocation lies in the interchange of noble thought and feeling between husband and wife personally, he would have penetrated to the secret of the whole. And he cannot have been far from seeing it: for he thought better of the capacities of women than any of his contemporaries. But he falls short, partly because the reciprocation which he commends is contemplated by him in too physical a manner, and partly because, when he does regard it spiritually, it is the wife's family in its entirety that he looks upon as influencing the husband. His faith in womanhood is imperfect: hence there is a vagueness in his conception, though it is a noble one. A similar defect appears in his lofty sentiment that marriage should be entered into for the good of the community, and not for the pleasure of the individual; he is not aware that there are moments when personal sentiment has supreme rights. Aristotle (*Eth. Nic.* viii. 14) gives a picture of marriage, beautiful of its kind; he insists on the elements of affection, and of a common interest, which it involves: but the idea of a reciprocal influence in it is not present to him in any considerable degree. He is aware indeed that there is a sphere in which the wife ought to rule the husband (*Pol.* i. 12); but he clearly regards that sphere as a superficial one. Xenophon, in the quaintly tender narrative of the *Oeconomicus*, shows a somewhat similar appreciation of the wife; she comes to her husband's house as an untamed creature, who has to be made pliable and taught the duties of housekeeping; beyond the household her sphere does not extend; she is recommended, though not absolutely enjoined, to keep indoors. Yet he assigns to her a share in the education of the children (vii. 12); she is to be a friend to the whole household; and what is still more valuable, Xenophon has a deep sense that the husband should esteem her, nay possibly look up to her. Akin to this is the reverence for a mother inculcated by Socrates in the *Memorabilia* (ii. 2). It is the universal assumption that the husband will be considerably older than the wife: Plato puts the age of marriage for the man at from 25 or 30 to 35, for the wife at from 16 to 20 (*Legg.* iv. p. 721; vi. pp. 772, 785), and he affixes penalties for the man who does not marry before the highest age mentioned; Aristotle recommends 35 as the best age of marriage for the husband, 18 for the wife (*Pol.* vii. 16).

Let us now consider what is laid down in the Athenian law concerning marriage. Monogamy is, of course, assumed. Marriage, we are told, was made compulsory by Solon (Plut. *de Amore Prol.* 2); but if so, the law fell into disuse; and in later days bachelors were subject to no disadvantages in Athenian territory (cf., *e.g.*, Demosth. *c. Leoch.* p. 1083, § 10). A youthful citizen was not allowed to marry until his name was entered in the tribal register (ληξιαρχικὸν γραμματεῖον). The restrictions as to whom he might marry differed from those imposed in modern times, being in part looser, in part more severe. Prohibitions on the ground of consanguinity were less numerous than with us. A man might not marry a direct ancestor or descendant; nor might he marry stepmother or stepdaughter, mother-in-law or daughter-in-law; nor, with an exception to be noticed, his sister. It may be difficult to prove the existence of these prohibitions in every single case; but compare Eurip. *Androm.* 174–177, Lysias *in Alcib.* i. § 28; also the list of *allowed* relationships in Plato, *Legg.* xi. p. 925 C; and with respect to the mother-in-law, Andocid. *de Myst.* § 124, may be referred to, though not absolutely demonstrative. It is worth also referring to the well-known passage in St. Paul (1 Cor. v. 1), though of so late a date. The marriage of Oedipus was looked on with horror, and the fact that it was accidental was not regarded as an alleviation. On the other hand, the marriage of a brother with a half-sister on the father's side did sometimes occur (Dem. *c. Eubul.* p. 1304, § 20; Plut. *Themist.* 32). Marriage with a niece was common; with an aunt naturally less so, but there was nothing to forbid it.

The prohibition of marriage between a citizen and an alien belongs to a different class from the prohibition by reason of relationship. It would hardly seem to have existed in the early period of Athenian history; Megacles (Herod. vi. 130) and Miltiades (Herod. vi. 39) both married foreigners; the mother of Themistocles was a foreigner (Plut. *Themist.* 1). The influx of foreigners into Athens in the time of Pericles was doubtless the cause that necessitated a more stringent law; namely, that both the parents of a citizen must be citizens; whence it resulted that marriage with an alien was forbidden (Plut. *Pericl.* 37; Schol. *ad* Arist. *Vesp.* 717). Infringement of this law took place; hence it was re-enacted in the archonship of Eucleides (B.C. 403), with the reserve that the re-enacted law was not to be retrospective (Dem. *c. Eubul.* 1307, § 34). Timotheus, son of Conon, whose mother is said to have been a Thracian woman (Athen. xiii. p. 577 b), may probably have owed his citizenship to this saving clause. According to the Scholiast to Aeschines (*c. Timarch.* § 39), the law had to be re-enacted yet a third time. Clearly then the application of it was irregular; and we may infer this on other grounds. The speech against Neaera shows that it was not a dead letter; and the penalties for the breach of it there stated ([Dem.] *c. Neaer.* pp. 1350, 1363) are very severe. So, too, the plot of the *Andria* of Terence largely turns upon this law. Yet on the other hand we find such a singular case as that of Phormion, the freedman and afterwards the successor of the banker Pasion, who while still an alien married Pasion's widow, a female citizen; and though Apollodorus, Pasion's son, was vehemently incensed at the marriage, and brought divers actions at law to prove that Pasion's will, under which the marriage was sanctioned, was a forgery, yet he did not, until more than ten years had elapsed, allege this ground, which would so greatly have helped his case, that the marriage was intrinsically illegal. At last he did put forward this ground (Dem. *c. Steph.* ii. p. 1132, § 13), but by that time Phormion had received the citizenship by a vote of the people. By way of important exception to the law, it should be noted that the right of intermarriage was granted by the Athenians at various times to other peoples: to the Thebans shortly before the battle of Chaeronea (Dem. *de Cor.* p. 291, § 187), to the Plataeans (Isocrates, *Plat.* § 51), to the Euboeans (Lysias, ὑπὲρ τῆς πολιτείας, § 3).

Marriage at Athens took place in two ways; either by ἐγγύησις or by ἐπιδικασία. Ἐγγύησις was the ordinary method, and meant the act of the father or guardian (κύριος) of a maiden in giving her in betrothal to her future husband. The act was a solemn one, the relatives of either side being witnesses. Whenever any woman had a κύριος, marriage could take place by no other method than this. If, however, a woman were left an heiress (ἐπίκληρος) without having a κύριος (and according to the law given in Dem. *c. Steph.* p. 1134, § 18, only the father, the brother born of the same father, and the grandfather on the father's side, could discharge this office by virtue of natural relationship), then the next of kin might claim her in marriage (Isaeus, *de Pyrrh. hered.* § 78), preference being given to kindred on the father's side; such a claim was called ἐπιδικασία, and was brought in the first instance before the archon. [EPICLERUS.] The public interest in such a claim being allowed lay in the danger of dissensions being caused by rival suitors, of which Aristotle (*Pol.* v. 4) gives instances. If the heiress were poor (θῆσσα), it was likely that no claimant would come forward; in this case the archon was bound to compel the next of kin either himself to marry the heiress or to portion her and give her in marriage (Dem. *c. Macart.* p. 1067, § 51). It is to be inferred that the next of kin was regarded as κύριος of the heiress in such a case as this. Legitimate children at Athens were invariably the offspring of a marriage ratified according to one of these forms.

At the time of the betrothal the dowry of the bride was settled; and this indeed was a most important point for her future welfare. For—and, among the many points which show that Athenian law looked upon the wife as a sort of foreigner in the family, this is one of the most remarkable—the wife was reckoned to have no claim at all on her husband's property. Supposing her husband died, even the most distant cousin might inherit from him; but the wife, never. Nay, she might not even continue to reside in his house after his death, unless she pleaded pregnancy; in that case she would come under the protection of the archon, and would remain undisturbed until the child was born (Dem. c. *Macart.* p. 1076, § 75). Thus in Dem. c. *Boeot.* p. 1010, § 6, the wife of Cleomedon leaves her husband's house, and is portioned out again by her brothers. If in Dem. c. *Phaenipp.* p. 1047, § 27, this does not happen, the reason is that the two women there mentioned are the wards of their own sons, who maintained them out of their dowries. Neither could a mother inherit from her own children (Isaeus, *de Hagn. hered.* § 12). Hence the dowry was the only security to the wife against extreme poverty, in the event of her husband's death, or if she were divorced; the husband therefore had to give a guarantee for its return in the shape of some piece of landed property. [Dos.] We find that wealthy men would sometimes portion the daughters of their poorer neighbours (Lysias, *de bonis Aristoph.* § 17). It would, however, be incorrect to suppose that the dowry would ever become the wife's absolute property; it would in the case supposed revert to her κύριος, who would either support her from it, or give her in marriage again. But as against her husband or his creditors, it was absolutely hers. The dowry, as has been said, did not exist in Homer's time, and was a gradual growth; Plato disapproved of it (*Legg.* vi. 774 A) as tending to produce avarice; in early times it was small. The law which Plutarch attributes to Solon (Plut. *Solon*, c. 20) restricting the amount of dowry to three garments and some household utensils (for dowry is what Plutarch clearly means, though he uses the word φερνή and not the more usual προίξ) is a highly probable one; and highly probable also is it that it should have fallen into desuetude. Attempts to legislate against the unavoidable tendencies of society are a very familiar feature of history; and there seems no reason for depriving Plutarch's statement of all its meaning by supposing the φερνή to mean simply wedding presents. Even in later times the dowry was not an absolute necessity (Plaut. *Trinummus*, ii. 2, 97–102): though the want of it might entail difficulty and discredit.

It is again very notable that, in spite of the formal betrothal and marriage, the husband was no more κύριος over his own wife than before. The father, or whoever had been the previous protector, retained his office. Thus in Dem. c. *Spud.* p. 1029, we find the father taking away his daughter from the husband to whom he had given her in marriage, and marrying her to another husband. This would not have been sanctioned by Roman law. Nay, even if the father died, the husband did not become κύριος, unless he had been adopted by the father: as we see from the case of the daughter of Aristarchus (Isaeus, *de Arist. her.* § 27), whose husband dared not claim the property which was due to his wife, because the next of kin threatened to take away his wife if he raised difficulties. Isaeus (*de Pyrrh. hered.* § 78) tells us that many husbands had been deprived of their wives in this way. If, however, the father had left his daughter by will in marriage to anyone, the husband so constituted became κύριος over his wife. In default of any special provision either in this way or by the husband being adopted into the house of his father-in-law, the protectorship over the wife, after her father's death, would belong to her brother, or perhaps grandfather; and whoever was κύριος, had the entire disposal of the wife, just as if she had been unmarried. (Cf. Dem. c. *Eubul.* p. 1311, § 40.) Supposing, however, the husband was κύριος over his wife, he had then rights as anomalous, to our thinking, as his want of rights was in the other case; in his office of κύριος he could give her in marriage to another person just as if he had not been her husband (Dem. *pro Phorm.* p. 953, § 28; Isaeus, *de Menecl. hered.* §§ 7, 8). And, as a matter of course, he could direct by his will that she should be married to another person. In short, a woman, whether maiden, wife, or widow, was always under guardianship, always at the disposal of another. Her own sons, if two years past the age of manhood, would be her guardians, supposing she were left a widow without any other κύριος.

Those who regard the catalogue of wrongs (if it is fair to say that the absence of rights constitutes a wrong) suffered by women at Athens, as recapitulated in the last two paragraphs, will not think that the Athenians had any reason for pluming themselves over the Spartans as respects their treatment of the weaker sex. The plaintive lament in the *Tereus* of Sophocles, "We women are nothing: happy indeed in our childhood, for then we are thoughtless; but when we arrive at maidenhood, driven away from our homes, sold as merchandise, compelled to marry and to say, 'All's well':" and the more vigorous invective of Medea against the oppression of her sex (Eurip. *Med.* 230–266), doubtless had their prototypes in some, at any rate, of the suffering Athenian women. It is curious, however, to find that Medea complains of the dowry as a wrong. "We have to buy ourselves a husband," she says. With much more reason does she complain of the terrible risk to which women are subjected, without any choice when a husband is forced upon them; of the tedium of the life indoors, debarred from that general society which the husband enjoyed; and still more of the worst possible injury, if that happened, when the husband left her and sought the bed of another. The poets, like the philosophers, had sympathies in which the legislators and orators of Athens were wanting; and Euripides (who was very unjustly, as far as we can tell, termed a woman-hater) seems even to have thought that a woman should not marry a second time (*Troad.* 656–671), and therefore of course that she should not be compelled so to marry. If it cannot be inferred from *Alcestis*, 328–331, that he disapproved of a man marrying a second time, the lines are at any rate remarkable.

The provision for heiresses marrying their next of kin, mentioned above, was a single example of a customary practice; to marry within the family was common; whether it was equally salutary may be doubted. It had its points of convenience, of course. (Compare the Hebrew law, Numbers xxvii. 1–11, and the example of it in Ruth iv.) But there were professional matchmakers called προμνηστρίδες or *προμνήστριαι* (Xen. *Mem.* ii. 6, 36; Pollux, iii. 31), who, however, did not stand in high esteem (Plato, *Theaet.* p. 150 B).

The marriage ceremonial at Athens, among the higher classes, was more elaborate than with us. The consecration of all girls to Artemis, when they were ten years old, at the festival Brauronia, stood in intimate relation with it. [BRAURONIA.] When the marriage itself drew near, the sacrifice to the tutelar gods of marriage (*θεοὶ γαμήλιοι*) took place. This was performed by the father, and might take place some days before the marriage (Eur. *Iph. in Aul.* 718), or on the day itself (Achill. Tat. ii. 12). As to who the tutelary deities were, custom appears to have varied. Diodorus Siculus (v. 73) names Zeus and Hera; but Pollux names Hera, Artemis, and the Fates (iii. 38): Artemis is also mentioned in relation to Boeotia and Locris in Plut. *Aristid.* 20; and the Nymphs are mentioned in Plut. *Amat. Narr.* 1. The sacrifice itself was called *προτέλεια γάμων*, or *προγάμεια*, and it was regarded as a dedication of the bride to the deities named, some locks of the bride's hair (*ἀπαρχαί*) being offered as a symbol of the dedication (Pollux, *l. c.*). On the wedding day itself, bride and bridegroom bathed in water drawn from a particular fountain of running water: at Athens this was the fountain Callirrhoë, also called *ἐννεάκρουνος* (Thucyd. ii. 15). The water from this fountain was carried either by a boy (Harpocration) or a girl (Pollux, iii. 43); from which custom was probably derived that other custom of placing over the tombs of those who died unmarried the image of a girl carrying water (Dem. c. *Leoch.* pp. 1086, 1089). Sometimes the pitcher of water alone was carved (Eustath. *ad Iliad.* xxiii. 141). Late in the evening of the wedding day, the bridegroom fetched his bride from her parents' house, on a car (*ἅμαξα*) drawn by horses, mules, or oxen; on either side of her sat the bridegroom and his "best man" (*παράνυμφος* or *πάροχος*, Arist. *Av.* 1735). In front of the car went the torch-bearing procession (*δᾷδες νυμφικαί*), the nuptial torch having been lit by the mother of the bride (Eurip. *Iph. in Aul.* 732) or of the bridegroom (Eurip. *Med.* 1027; *Phoeniss.* 344); bride and bridegroom were crowned with chaplets, and clothed in festal attire, as also were the attendants, the bride being covered with a long veil; congratulations were poured out by relations, friends, and well-wishers, and the cry *Ὑμὴν Ὑμέναι' ὦ* resounded to the sweet playing of flutes (Aristoph. *Pax*, 1316–1356; Hom. *Il.* xviii. 490, *Odyss.* vi. 27; Plut. *Amat.* 26; Harpocration). On their reaching the bridegroom's house, a peculiar custom prevailed in Boeotia: the axle of the car was burnt, to symbolise the irreversible step taken. Yet be it observed, that the bridegroom who had been married before could not bring his bride home in this exultant way; a friend (*νυμφαγωγός*) in that case brought the bride to him from her house. At the entrance to the bridegroom's house, sweetmeats (*καταχύσματα*) were poured upon the wedded pair (Schol. *ad* Arist. *Plut.* 768): the doors of the house were covered with garlands, as were those of the bride's house. Then followed the wedding-feast (*θοίνη γαμική*), usually in the house of the bridegroom,—one of the most important parts of the entire ceremonial; for the guests were in fact witnesses to the marriage, and their testimony was the final and single proof that it had taken place, since documentary evidence was not looked for or provided (Dem. c. *Onet.* p. 869, § 20; Athen. v. p. 185 a). At the wedding-feast women were allowed to be present, though at different tables from the men (Lucian, *Conviv.* 8; Athen. xiv. p. 644 a; Eurip. *Iph. in Aul.* 722). Sesame-cakes, symbolical of a fertile marriage, formed a part of the feast (Schol. *ad* Arist. *Pax*, 869). At the conclusion of the feast, the bride was conducted veiled into the bridal chamber; the bridegroom closed the door; and a law of Solon enjoined that the bride and bridegroom should eat a quince together, to symbolise the sweetness of their conversation (Plut. *Solon.* 20). The epithalamium was then sung before the door of the bridal chamber by a chorus of maidens, and the song was accompanied with dancing (Theocr. *Idyll.* xviii.). But the Scholiast on this passage tells us that some epithalamia were sung in the early morning to wake the wedded pair, the two kinds being called *κατακοιμητικὰ* and *διεγερτικὰ* respectively.

On the day after the marriage (according to Harpocration) the bride for the first time showed herself without a veil, and the gifts which she on that day received from her relatives were thence called *ἀνακαλυπτήρια* or *ὀπτήρια.* Hesychius, however, says that these presents were made not on the second but on the third day; and this may be correct: for Pollux (iii. 39) mentions that the gifts made on the day after the marriage were called *ἀπαύλια*, and that among them was a garment (*ἀπαυλιστηρία*) presented by the bride to the bridegroom, who on the succeeding night did not sleep with his bride, but in his father-in-law's house, the bride being unveiled, and the *ἀνακαλυπτήρια* presented the day after.

An offering to Aphrodite was made by the wedded pair, either on the wedding-day (Plut. *Amator.* 26) or on the day after (Aeschin. *Ep.* 10, p. 681). Another ceremony observed after marriage was the sacrifice which the husband offered up on the occasion of his bride being registered among his own phrateres (Dem. c. *Eubul.* pp. 1312, § 54, 1320, § 84; Isaeus, *de Pyrrh. hered.* § 45).

Marriages generally took place in the winter (Arist. *Polit.* vii. 16); and the month Gamelion (our January) derived its name from the favour in which it was held for this purpose. The fourth day of the month, according to Hesiod (*Op.* 800), was the most favourable day; and as in a lunar month this would be the day on which the first crescent of the new moon appeared, the interpretation of Proclus seems correct, that the day when sun and moon met in the same quarter of the heavens was the day when man and woman might best meet in wedlock. Pindar, however (*Isthm.* vii. 44), and Euripides (*Iph. in Aul.* 717) prefer the full moon.

After marriage the wife lived with the other female inmates of the house in the *γυναικωνῖτις*, or women's apartments: in a large house these would be a separate building, connected by a passage with the men's rooms; but in the little house mentioned in Lysias (*de caed. Eratosth.*

p. 92) the women's rooms were on the upper floor, the men's rooms below: for the convenience and safety of the wife, however, the two sets were changed, and the husband lived upstairs. The wife then had the superintendence of the entire household: she had charge of the education of the boys till they were put under a master, of the girls till they were married; she tended the sick, whether free or slave; the kitchen, the furniture, the stores, came under her; and last, not least, the ταλάσια ἔργα (Xen. Oecon. vii. 6), all that related to the spinning and weaving of wool, and the making of clothes —for it must be remembered that the clothes of an ancient household were mostly made within the house itself. If the establishment were a large one, the wife would have a housekeeper (ταμία) to assist her. If the husband were alone, the wife would dine with him, and familiar jesting would pass between them (Lysias, *l. c.*), or perhaps even serious conversation on the doings of the Assembly (Dem. *c. Neaera*, p. 1382, § 142); but if the husband had other male friends with him, it was thought indecorous for the wife to appear.

It will be seen that the wife had no lack of duties, but they were duties that would naturally be felt to be monotonous; and it is curious to find that religious exercises were then, as in later times, one of the chief resources to which she betook herself. Thus the husband in Menander's *Misogynist* (fragm. 3 and 4) complains:

> ἐπιτρίβουσιν ἡμᾶς οἱ θεοὶ
> μάλιστα τοὺς γήμαντας· ἀεὶ γάρ τινα
> ἄγειν ἑορτήν ἐστ' ἀνάγκη·

What amount of liberty had the wife? The young maiden had practically none; ὀχυροῖσι παρθενῶσι φρουροῦνται καλῶς, says Euripides of them (*Iph. in Aul.* 738). But the wives were on a somewhat different footing; and the question divides itself into two parts: Whom might they converse with? and, Where might they go? The clearest answer to the first of these questions is supplied by Euripides, *Iph. in Aul.* 819–852. In that scene Clytemnestra meets Achilles, having been informed that her daughter, Iphigenia, was about to be married to that hero; and though she had never met him before, treats him familiarly on the ground of that supposed connexion, and offers to greet him by clasping his hand. Achilles, however, knowing nothing of any such alliance (which was a fiction imposed on Clytemnestra by Agamemnon), declares that he is ashamed to converse with a woman, tries to get away, and rejects her proffered hand. An explanation then takes place, and Clytemnestra, quite overcome, declares that now for her part she is ashamed to look at him. This passage proves clearly, that a woman might in the time and country of Euripides hold familiar conversation with any near male relative, but not with any other male person. A similar conclusion on the positive side appears to be deducible from Dem. *c. Spud.* p. 1033, § 17, where we find Spudias commissioning his wife to represent him on the occasion of her father making his will, when clearly other male relatives were present; a commission which, it may be remarked in passing, shows that an Athenian woman might and probably would be able to read and write, and was sometimes by no means incapable in business matters.

But how far had an Athenian matron freedom of locomotion—how far might she go out of doors? This is by no means so simple a question as the former. Nevertheless, as far as the latter period of the Athènian commonwealth, and as far as the city of Athens, are concerned, a very clear and exact answer seems to be given by Hypereides (*ap.* Stob. lxxiv. 33): "The woman who goes out of her own house ought to be in that time of life when the men who meet her will ask, not, Whose wife is she? but, Whose mother is she?" We may fairly suppose then that a woman of fifty (or perhaps one still younger) might without censure walk about Athens in the middle of the 4th century B.C., provided she were accompanied by an attendant. This would apply to women in the highest rank (though these, it is likely, would not wish to leave their homes much); in lower ranks there would be greater freedom, and really poor women, as Aristotle expressly tells us (*Pol.* iv. 15, vi. 8), were obliged to go out to purchase necessaries. Thus, too, we find citizen women selling in the market (*e.g.* Aristoph. *Thesmoph.* 448), and in Dem. *c. Eubul.* p. 1308, § 30, a law is referred to which made it an offence to reproach them for so doing. There is, however, some reason to think that this law was annulled or forgotten afterwards; for in [Dem.] *c. Neaera*, p. 1367, § 67, another law is quoted which certainly casts a slur on such occupation. On the whole, the passages bearing on the question do not favour the idea that Athenian wives acquired greater liberty as time went on. Solon, it should be observed, laid down a law that a woman must not go out at night except in a vehicle and with a lantern in front of her (Plut. *Solon*, 21), from which we gather that a woman might go out at night under these conditions, and might sometimes go out in the day-time without complying with these conditions. This gives a very different idea of the liberty of women from that implied in the well-known passage of the orator Lycurgus (*c. Leocrat.* § 40), in which, after the defeat at Chaeronea, the Athenian women are described as cowering in a panic at their house-doors, inquiring after the safety of those dear to them, "being gazed upon in a manner unworthy of themselves and of the city." It is true, however, that the comparative smallness of Athens in the time of Solon may have made it less dangerous for a woman to be seen in the public ways then. It may be inferred from some expressions in Xenophon's *Oeconomicus*, that women enjoyed more liberty in the country than in the town, as would indeed be expected. When in Athens, they would leave their houses to join in processions at the festivals, and also to witness the tragedies at the theatres (see the evidence on this point in the excursus on theatre-going in Becker's *Charikles*); on other occasions seldom, except for causes of real necessity. And in a similar way, for a man to intrude into the γυναικωνῖτις was a very unseemly act (Lysias, *c. Simon.* § 6); nay, a friend of the family might not enter the house in the absence of its master, even for the sake of helping the family against assailants (Dem. *c. Euerg.* p. 1157, § 60). Numerous other passages might be quoted bearing on this question, but these will be sufficient. [See also GYNAECONOMI.] The subjects of divorce and adultery are treated under the articles DIVORTIUM, ADULTERIUM.

Athenian law did not concern itself, as far as we know, about the marriage of the *μέτοικοι* (resident aliens). Slaves, of course, were incapable of marriage; but we find the author of the *Oeconomicus*, attributed to Aristotle (i. 5), recommending that they should be allowed to beget children, as they will thus be more faithful to their masters. It is then to be inferred that they would be allowed generally to retain their children as their own.

Besides the works of Bachofen and McLennan, referred to in an early part of this article, the following works may be referred to on the subject treated of: — Müller's *Dorians*, for the Spartan customs. Becker-Göll, *Charikles*, iii. pp. 308 ff. (the excursus on the Women contains more general information on the subject than any other modern work). Van den Es (*de Jure Familiarum apud Athenienses*, 1864); the fullest book on the law of the subject. For the philosophy, Newman's *Aristotle*, vol. i. pp. 168–198 (Oxford, 1887). For the Homeric period, Lenz's *Geschichte der Weiber im heroischen Zeitalter*, may be consulted. Mahaffy (*Social Life in Greece*, pp. 170–194) has some interesting remarks on the relation of the poets to the question, especially as regards Euripides. [J. R. M.]

II. ROMAN. Marriage, an institution regulated by law, but to a great extent beyond the domain of law, was among the Romans a complete union for life between a man and one woman, an intercommunion of sacred and human law (Dig. 23, 2, 1), which had for its main object the procreation of children (*liberum quaesundum gratia*). To marry and beget children, who could keep up the *sacra familiaria*, was a religious duty of a Roman (Fustel de Coulanges, *La Cité Antique*, pp. 41–54), and also a duty to the commonwealth. [LEX JULIA ET PAPIA POPPAEA.]

On account of its religious and social importance, marriage was attended with many rites and observances, which were not necessary for its legal formation. In the first part of this article it is proposed to confine the reader's attention for the most part to the legal aspect of marriage as regards its formation and consequences, and in the latter part to describe the nature of marriage rites and observances.

The only marriage recognised in early Roman law was that which was conformable to the Jus Civile, and which was called Justae Nuptiae, in later times also Justum Matrimonium. (Ulpian, v. 1, 2.) To this marriage of Jus Civile the *matrimonium juris gentium*, or marriage according to gentile law, came to be opposed (Gaius, i. 87). The word *matrimonium* seems to have been used originally to signify a marriage which was not a civil marriage, the child of such marriage following the condition of his mother instead of that of his father, as would have been the case if he had been born from *justae nuptiae*.

A Roman civil marriage was either *cum conventione uxoris in manum viri*, or it was *sine in manum conventione* (Ulpian, xxvi. 7). The marriage *cum conventione in manum* differed from that *sine conventione*, in the effect which it had on the condition of the wife.

By the marriage *cum conventione*, the wife came into the power (*manus*) of her husband, or, if he were a filiusfamilias, of his paterfamilias: leaving her own *familia*, she passed into the *familia* of her husband, and was to him in the relation of a filiafamilias (Cic. *Top.* 3, 14; "filiae loco est," Gaius, ii. 159). In marriage *sine conventione* the wife did not pass into the power of her husband; she was, as it were, a stranger (*extranea*) in his household, her relation to her own family remaining as before the marriage; she did not share in the *familiaria sacra* of her husband, and was no civil relation to her own children.

A marriage *cum conventione* was a necessary condition to make a woman a materfamilias in the strict sense of the word. In the marriage *sine conventione* the wife was merely *uxor*; that is, a wife and nothing more. Thus Cicero (*l. c.*) says: "Uxor is a genus of which there are two species ('duae formae,' Quintil. x. 62): one is materfamilias, 'quae in manum convenit;' the other is uxor only."

The term "materfamilias" would only be applicable to a woman "quae in manum convenit," when her husband was *sui juris*, not if he were a filiusfamilias. Gellius (xviii. 6) also states that the above was the old meaning of materfamilias. *Matrona* was properly a wife not *in manu*, and equivalent to Cicero's *tantummodo uxor* (Gellius, xviii. 6, 8). But these words are not always used in their original and proper meanings (cf. Voigt, *XII. Tafeln*, ii. § 158, n. 4). As an *uxor sine conventione* was not a member of a patriarchal family, but a stranger in her husband's household, it seems probable that in the most ancient Roman family law such a wife was not recognised, and that *manus* was a necessary consequence of marriage; from an early time, however, *justae nuptiae* could exist without *manus* being attached to them, and this freer kind of marriage being preferred by women and their families gradually supplanted marriage with *manus*, and came into general use. In the time of Gaius marital *manus*, which had long ceased to be common, was almost obsolete, and soon afterwards it altogether disappeared from the law.

A Roman civil marriage may be viewed, first, with reference to the capacity for entering into it; secondly, with reference to the mode in which it was contracted; thirdly, with reference to its legal consequences.

The right of entering into a valid civil marriage, *uxoris jure ducendae facultas* (Ulp. *Frag.* 5, 3), is called the Jus Conubii. The Jus Conubii belonged only to Roman citizens; the cases in which it at any time existed between parties not both Roman citizens, were exceptions to the general rule. "Roman men citizens," says Ulpian (*Fragm.* 5, 4, 11), "have *conubium* with Roman women citizens (Romanae cives), but with Latinae and Peregrinae only in those cases where it has been permitted. With slaves there is no *conubium*."

Originally there was no *conubium* between the patricians and plebeians, and it is a question whether previous to the Servian reforms plebeians could enter into *justae nuptiae* among themselves, since they first became *cives* under the Servian constitution (cf. Liv. iv. 2), and *civitas* was a condition of *justae nuptiae*. But though before this change patricians may not have recognised plebeian marriage by purchase as being on the same footing with their own marriage by confarreation, marriage had long been established by the plebeians, and had been a means of acquiring *patria potestas*.

By the Lex Canuleia, *conubium* between the patricians and plebeians was declared. A female gentilis could not, as a rule, marry anyone outside her gens—*enuptio gentis*—by which the number of gentiles would be diminished, unless with the consent of the gens. (Mommsen, *Röm. Forsch.* i. p. 10: see Muirhead, *Roman Law*, iii. 26, n. 3.)

The division of the inhabitants of the Roman empire into Cives, Latini, and Peregrini, which existed in the time of the classical jurists, though without any ethnological significance, and the rule, which was subject to various exceptions, that *justae nuptiae* could only be contracted between cives, made the law of status, as it is described by Gaius and Ulpian, extremely complicated. We may see by a comparison of the first book of Gaius with Justinian's Institutes how much the liberal extension of *civitas* in the interval between these works simplified the law.

The Lex Julia et Papia Poppaea placed certain restrictions on marriage as to the parties between whom it could take place. [LEX JULIA ET PAPIA POPPAEA; INFAMIA.] Thus certain marriages were prohibited on account of disparagement, as marriages between a senator and freedwomen (Dig. 23, 2, 31). The lex allowed freeborn persons (*ingenui*) to marry freedwomen (*libertinae*) (Dig. 23, 2, 23). Persons within certain prohibited degrees of relationship could not intermarry. A union of persons within the prohibited degrees was an incestuous one. Relations who had the *jus osculi*, or right of kiss with one another, could not marry one another. (Klenze, *Das Familienricht der Cognaten und Affinen nach Röm. u. verwandten Rechten*, p. 16. See Muirhead, *Roman Law*, iii. p. 26.)

In early times there could be no marriage between cognates within the seventh degree, but subsequently the prohibited circle was made less wide. There could be no marriage between ascendants and descendants, whether the relation was natural or by adoption; and a man could not marry an adopted daughter or granddaughter, even after he had emancipated her. Brothers and sisters, whether of the whole or half blood, could not marry, but a man might marry a sister by adoption after her emancipation, or after his own emancipation. It became legal to marry a brother's daughter after Claudius had set the example by marrying Agrippina; but the rule was not carried further than the example, and in the time of Gaius it remained unlawful for a man to marry his sister's daughter (Gaius, i. 62; Tac. *Ann.* xii. 5; Sueton. *Claud.* 26). Constantine prohibited a marriage between a man and his brother's daughter. Marriages between first cousins were recognised, but Ulpian (v. 6) says that at one time the impediment to marriage between collaterals reached the fourth degree—that is, first cousins—but it had receded to the third.

The marriage of Domitius, afterwards the Emperor Nero, with Octavia, the daughter of Claudius, seems at first sight somewhat irregular. Nero was adopted by Claudius by a Lex Curiata (Tac. *Ann.* xii. 26), but he was already his son-in-law; at least the fact of his being so is mentioned before the adoption (Tac. *Ann.* xii. 9). There seems to be no rule of law which would prevent a man from adopting his son-in-law; though if the adoption took place before and existed at the time of marriage, the marriage would be illegal, as stated by Gaius. There was also no right of intermarriage between persons within certain relations of affinity, as between a man and his *socrus*, *nurus*, *privigna*, and *noverca*. [AFFINITAS.]

When marriage was dissolved, the parties to it might marry again, but public opinion made it improper for a woman to marry again, a second marriage being regarded as showing a want of *pudicitia*. (Fest. 242, 31; Liv. x. 23, 5, 9; Val. Max. ii. 1, 3; Quint. *Decl.* 306.) A woman was required by religious usage to wait ten months, and subsequently a year, which was her period of mourning, before she contracted a second marriage; otherwise she incurred a religious penalty and also infamia.

There were some absolute impediments to marriage. Thus, as the procreation of children was a main object of marriage, physical incapacity prevented a person from contracting a valid marriage. Hence *impuberes* and persons who had certain bodily imperfections, as eunuchs and others, who from any cause could never attain to puberty, could not marry. But the law did not inquire whether persons were past the age of begetting or bearing children: persons of any age above puberty might marry, though if they had reached a certain age they did not by their marriage escape the disabilities of the Lex Julia et Papia Poppaea. (Ulp. *Fragm.* xvi. 4.) Insanity was a bar to marriage.

Betrothal (*sponsalia*) was the proper and usual preliminary of marriage, though it was not legally necessary. "Sponsalia," according to Florentinus (Dig. 23, 1, 1) "sunt mentio et repromissio nuptiarum futurarum." In *sponsalia* a maiden was promised in solemn form to a man as his bride. Such promise was not made by the maiden herself, but by her paterfamilias, or if she was not under *patrias potestas* by her tutor, who were said *spondere*, the betrothed becoming *sponsa* (Plaut. *Aul.* ii. 2, 79 f.; *Poen.* v. 3, 38; Ter. *And.* i. 1, 72 f.; Liv. xxxviii. 57, 6: cf. Voigt, *XII. Tafeln*, ii. 682); the promise was accepted by the man, or by his paterfamilias if he were under *potestas*, who in so doing were said *despondere*, according to the strict sense of this word. (Donat. in Ter. *And.* v. 6, 16; Serv. *in Aen.* x. 79: cf. Voigt *sup.*) It is to be noticed that there was no reciprocal promise on the part of the man to the person who promised the bride, as there seems to have been according to Latin custom. Gellius has preserved (iv. 4) an extract from the work of Servius Sulpicius Rufus *de Dotibus*, which defines the Latin as distinguished from the Roman custom on this subject. (Compare Varro, *L. L.* vi. 70.) In that part of Italy called Latium *sponsalia*, according to Servius, was a contract by *stipulationes* and *sponsiones*, the former on the part of the future husband, the latter on the part of him who gave the woman in marriage. The woman who was promised in marriage was accordingly called *sponsa*, which is equivalent to *promissa;* the man who engaged to marry was called *sponsus*. The *sponsalia* then was an agreement to marry, made in such form as to give each party a right of action in case of non-performance, and the offending party was condemned in such damages as to the judex seemed just. This was the law (*jus*) of *sponsalia*, adds Servius, to the time when the Lex Julia gave the *civitas* to all Latium.

But according to Roman usage, corresponding in this respect to Greek, the *sponsalia* consisted simply in a unilateral promise on the side of the woman, and did not create any legal obligation, neither party to the *sponsalia* having a right of action in the event of a refusal to marry. It was always possible for the person who had entered into the *sponsio* on account of the maiden to renounce it—*repudium renuntiare*, *renuntiare* (Plaut. *Aul.* iv. 10, 53, 69; Ter. *Phorm.* iv. 3, 72; Dig. 23, 1, 10). The renunciation was generally made by means of a *nuntius* (Brisson, *de v. s. nuntius*). If a man made a gift to his betrothed with a view to future marriage (*propter nuptias donatio*), and he broke off the match, he lost the right of recovering what he had given (Cod. 5, 3, 15). If a person entered into double *sponsalia* at the same time, he was liable to infamia. [INFAMIA.] Persons might be betrothed who were below the age of puberty, if they were not under seven years of age. By a regulation of Augustus, comprised in the Lex Julia et Papia, it was declared that no *sponsalia* should be valid if the marriage did not follow within two years, but this rule was subject to various exceptions. (Sueton. *Aug.* 34; Dio Cass. liv. 16, and the note of Reimarus; Gaius, Dig. 23, 1, 17.)

Voigt suggests the following as the form of the *sponsalia:*—"Spondesne Gaiam tuam filiam (or, if she were pupilla), Gaii, Lucii filiam filio meo, (or) mihi, uxorem dari?

"Dii bene vortant! Spondeo.

"Dii bene vortant."

Marriage carried into effect the object of betrothal. The essence of marriage was consent, and the consent, says Ulpian, "both of those who come together and of those in whose power they are"; and "marriage is not effected by sexual union, but by consent." The consent of the man and woman was necessary, and was commonly shown at the time of the marriage by the acts of the parties, as by *dextrarum junctio*, and in later times by the *subsignatio tabularum*, but the subject members of a family were bound to marry at the bidding (*jussus*) of their paterfamilias (Gell. ii. 7, 18), and without his consent they could not marry. Thus a filiusfamilias was given a wife by his paterfamilias (*aliquam filio uxorem dare:* cf. Ter. *Phorm.* v. 8, 32 f.; Liv. xlii. 24, 3), and a bride was given in marriage by her paterfamilias, or if not *in patria potestate* she may possibly have been given away at one time by her agnatic tutor, but in later times persons *sui juris*, women as well as men, married of their own accord. If a paterfamilias refused his consent to the marriage of those subject to him without proper ground, he might be compelled to allow their marriage by order of a magistrate.

The marriage *cum conventione in manum* differed from that *sine conventione*, in that the ordinary mode of entering into it was formal, whereas marriage without *manus* only required consent, however informally expressed.

A marriage *cum conventione* might be effected by *confarreatio*, *coemptio*, or *usus*. *Confarreatio* was a form of marriage peculiar to the patricians, while *coemptio* seems to have been originally confined to the plebeians; but when *conubium* was extended to the plebeians, *coemptio* became a common form of intermarriage between the two orders. *Confarreatio* or *farreum* was a religious form of marriage, which principally consisted in an offering, with solemn words, of *panis farreus* to Jupiter Farreus, in the presence of ten witnesses, the Pontifex Maximus and Flamen Dialis taking part in the ceremony. Its formalities are described in the latter part of this article. (Gaius, i. 112; Ulp. ix. 1.) The form seems to have been in use among other Latin races.

Patrician women were unwilling to marry in this way, because its effect was to give their husbands *manus* over them, and hence this form of marriage fell into disuse. It was necessary, however, to maintain it to some extent, because certain priestly offices, viz. those of flamines majores and reges sacrorum, could only be held by those who were born of parents who had been married by this ceremony (*confarreati parentes*), and the holders of these offices had themselves to be married by *confarreatio* (Gaius, i. 112). In order to induce persons to enter into confarreate marriages, so that these priestly offices might be filled up, a change in the law was instituted by Augustus, and fully carried out by Tiberius, to the effect that *manus* should no longer be a consequence of *confarreatio* except *quoad sacra*. (Gaius, i. 136; see note in Muirhead's ed. Tac. *Ann.* iv. 16; Suet. *Aug.* 31.) Gaius informs us that this form of marriage was in use in his time, as required for the above religious offices.

Coemptio was a form of mancipation (*mancipium*) or conveyance by fictitious sale; and was probably a survival of the early form of marriage by sale or purchase (McLennan, *Primitive Marriage;* Rossbach, *Ehe*, p. 198). The woman was mancipated in marriage to the man by her paterfamilias, or, if she were a filiafamilias, possibly by her tutor. According to some ancient authorities, there was not only a mancipation of the woman to the man in a *coemptio*, but also a mancipation of the man to the woman (Servius *in Aen.* iv. 103, *in Georg.* i. 31; Boethius, *in* Cic. *Top.* ii. 3, 14; Isid. *Or.* v. 24, 26: cf. Muirhead, *Roman Law*, Appendix B); and accordingly several modern writers of repute maintain that there must have been such a double mancipation. It is objected to this view of the nature of *coemptio*, that it supposes a person could mancipate himself to another, whereas it is clear from the nature of *mancipium*, and especially from the description given of it by Gaius, that besides the object of sale a vendor (*coemptionator*) and a purchaser were necessary as parties to the conveyance. Gaius in i. 113 says, "emit is mulierem, cujus in manum convenit," but there is no direct legal authority in support of the view that there was a purchase of the man, though Boethius cites Ulpian as having asserted it. It is also to be noticed that the authorities for a double mancipation wrote long after *coemptio* had become obsolete. The *coemptio* seems to have comprised, besides the mancipation, a reciprocal form of question and answer, in which the consent of the parties to the marriage was expressed. (Boeth. *in* Cic. *Top.* 3, 14; Serv. *in Aen.* iv. 214; Isid. *Or.* v. 24, 26: cf. Voigt, *XII. Tafeln*, § 159, n. 24.) The *coemptio* was the only surviving way of acquiring *manus* over a wife when Gaius wrote; but it had probably become obsolete in practice. *Coemptio* was either *matrimonii causa* or *fiduciae causa*. This latter kind of *coemptio*, which was the mancipation of a woman to a man not her husband, is considered under TESTAMENTUM and TUTELA. *Manus* could also be acquired according to the law of the Twelve Tables by *usus*. If a woman lived with a man continuously for a whole year as his wife, she came *in manum viri* by virtue of this matrimonial cohabitation, just as ownership of a movable thing was acquired by a year's possession [USUCAPIO]. The law of the Twelve Tables provided that a woman should not come into the *manus* of her husband in this manner, if she absented herself from him annually for three nights (*trinoctium*), and so interrupted the period of *usus* (Gellius, iii. 2; Gaius, i. 111). Married women generally availed themselves of this means of escaping *manus*, and after a time *usus* fell into desuetude (Gaius, i. 111). It was obsolete when Gaius wrote.

It is probable that in the time of Cicero marriage without the *manus* had become the usual marriage of Roman law. No forms were requisite in marriage: the consent of two persons capable of marrying to live together *matrimonii causa*, i.e. as husband and wife, being alone sufficient to constitute marriage, cohabitation was not necessary to complete it, but the best evidence of marriage was cohabitation *matrimonii causa*. The fact that the parties had cohabited with *affectio maritalis*, or as husband and wife, and not with the intention of living in *concubinatus*, which was a union recognised to some extent by the law, might be proved by various kinds of evidence, *e.g.* by production of the dotal instruments, commonly executed at the time of marriage [DOS]. But though consent was the only condition required for marriage, some act of personal union between the parties was necessary for the expression of such consent, or, in other words. marriage could not be entered into simply by letter or by means of a messenger (*nuntius*).

The bringing of the bride (*uxorem ducere*, *γυναῖκα ἄγειν*) from her father's house to her husband's house (*in domum deductio*) was customary among the Romans, as among the Greeks and others: if this was done, it was sufficient to constitute marriage, although the bridegroom might be absent. Thus, according to Pomponius in Dig. 23, 2, 5, a woman might marry a man, who was absent, by letter or through a messenger, if she was brought to his house (*in domum ejus deduceretur*), but a man could not marry an absent woman in a corresponding way, because it was not required by custom to bring the man to the house of the woman—"deductione enim opus esse in mariti, non in uxoris domum, quasi in domicilium matrimonii." A marriage required consent for its continuance as well as for its formation, and so might be put an end to at any time by the renunciation (*repudium*) of either party. [DIVORTIUM.]

As regards the consequences of marriage, the position of a wife married *cum conventione* differed materially from that of one married *sine conventione*. In the first kind of marriage, as already observed, the wife ceased to belong to her family [CAPUT, Vol. I. p. 360 *b*], and became a subject member of her husband's family, being in the position of a daughter to her husband; or if her husband was in the power of his father, she became to her husband's father in the relation of a granddaughter. All her property passed to her husband or to his father by a universal succession (Gaius, ii. 96, 98); and whatever she acquired during the marriage, she acquired for the person into whose *manus* she had come. The succession did not carry with it any liability for the antenuptial debts of the wife, and the wife herself could not be sued on them, according to civil law, but the praetor gave the creditors rights of action against her, and ordered execution against the property acquired by the succession, putting the creditors into possession of it (Gaius, iii. 84; iv. 38, 80).

Manus, though a consequence of certain modes of marriage, belonged to its acquirer as paterfamilias and not as husband. But though the conceptions of *manus* and of marriage are distinct, *manus* could not, it seems, be put an end to during marriage by emancipation. A husband might, however, put an end to his *manus* by a fiduciary coemption of his wife to some third person, in which case their marriage would continue as if it had been entered into *sine conventione*. If a woman was married *cum conventione* to a filiusfamilias, and he was emancipated or given in adoption, she would remain subject to the *manus* of his father as before, and would not on the death of the latter come into the *manus* of her husband, since he would belong to a different *familia*. A woman married by *confarreatio* could only be divorced by *diffarreatio*, and this put an end to *manus* as well as to marriage. A woman married by *coemptio* might be divorced by simple renunciation, but the *manus* over her could only be put an end to by a remancipation, which required the same formalities as the original coemption. Thus *manus* might continue after marriage had come to an end. In the time of Gaius a woman was entitled to a remancipation and manumission if there had been a renunciation of the marriage (Gaius, i. 137). When marriage was without *manus*, as it came to be in all cases, a married woman enjoyed a remarkable degree of independence in respect of her husband. The woman remained a member of her own family, her legal status continuing as it was before; if she was not in the power of her father, she was capable of acquiring and holding property, and of bringing actions as if she were a single woman; she had for all purposes a legal personal existence independently of her husband, and consequently her property was distinct from his; between husband and wife there was no community of property in Roman law. The husband acquired no right by marriage to the property of his wife: the *dos* which his wife usually brought to him he acquired not by act of law, but under the dotal instrument, and during the marriage he was sole owner of the *dos*. Under the edict of the praetor and imperial legislation husbands and wives had certain rights of inheritance to each other's property. The relations of husband and wife with respect to property belong to the heads of Dos, Donatio propter Nuptias, Donatio inter Virum et Uxorem, Heres.

A husband was bound to provide a maintenance for his wife. The husband might inflict slight chastisement on the wife for violating the respect (*reverentia*) which she owed him. Each party to a marriage had a right to the society of the other while the marriage continued. For the liabilities of either of the parties to the punishments affixed to the violation of the marriage union, see Adulterium and Divortium. *Justae nuptiae* had an important effect on the position of the children of the marriage, since only those who were born from such marriage were *cives*, and subject to the *patria potestas*. [Civitas; Patria Potestas.] At Rome, the *justae nuptiae* was originally the only marriage. But under the influence of the Jus Gentium, a cohabitation between Peregrini, or between Latini, or between Peregrini and Latini and Romani, which in its essentials was a marriage, a *consortium omnis vitae* with the *affectio maritalis*, was recognised as such; and, though such marriage had not all the effects of *justae nuptiae*, it had its general effect in this, that the children of such marriage had a father, and so were legitimate. The wife of such a marriage could bring an action for the recovery of her *dos* (Cic. *Top.* 4, 20; Muirhead, *Roman Law*, § 42); and she was liable on account of adultery. In the system of Justinian, the distinction between a civil and gentile marriage ceased to have any importance, on account of the division of free persons into Cives, Latini, and Peregrini having been abolished [Civitas]. (Dig. 23, 1, *de Sponsalibus*; 23, 2, *de Ritu Nuptiarum*;—Gaius, i. 56–65; Inst. Just. 1, 10, *de Nuptiis*; Cod. 5, 4; Fr. Hotman, *de Ritu Nupt. et Jure Matrimon.* i. 490 ff.; A. Rossbach, *Untersuch. über die römische Ehe*; O. Karlowa, *Die Formen der röm. Ehe und Manus*; E. Hölder, *Die röm. Ehe*; Voigt, *XII. Tafeln*, ii. 321 ff., 680 ff.) [E. A. W.]

It remains to describe the actual ceremonies of Roman marriage: and it must be premised (1) that there was some difference according to the precise form of marriage adopted, though this distinction gradually disappeared (see above); (2) that, as was said above, the greater part of marriage formality was voluntary, and that then, as in our own day, there might be weddings of a far simpler character. When therefore the complete ceremony of the most elaborate kind is described, it must be understood that a great deal of it was often omitted, and the marriage rites narrowed to little beyond the *deductio in domum*. In the choice the wedding-day superstition played a large part. May (as by many even now) and the first half of June were unlucky for marriages (Ov. *Fast.* v. 487; vi. 225). The reason was that the month of May took its general character from the festivals of the Lemuria [Lemuria], and also from the Argean offering: in the early part of June came *dies religiosi* connected with the worship of Vesta. Besides these periods, it was necessary to avoid the *dies parentales*, Feb. 13–21 (Ov. *Fast.* ii. 555); the first half of March (Ov. *Fast.* iii. 393); the three days of the opening of the lower world (*mundus patet*), viz. Aug. 24, Oct. 5, Nov. 8; and also the days of Kalends, Ides, and Nones.

At the *sponsalia* (see above), besides the formal words of the parent or guardian, "Spondesne? spondeo" (Plaut. *Aul.* ii. 2, 78), the bridegroom gave the bride a present, as an earnest or pledge (*arra, pignus*, Capitol. *Marim. jun.* i.; Juv. vi. 27), which was often a ring (Plin. *H. N.* xxxiii. § 12; Tertull. *Apol.* 6), placed on the fourth finger of the left hand (our "ring finger"), which Gellius (x. 10) states to be connected by a nerve with the heart.

On the day before the marriage the bride put aside her *toga praetexta* (Propert. v. 11, 33), which, with other belongings of childhood, was laid before the Lares (Varro, *ap.* Non. p. 538), and put on the *tunica recta*, or *regilla* (Fest. p. 286), which was woven in one piece in the old-fashioned way at the upright loom [Tela]. (See also Blümner, *Technologie*, i. p. 122.) The bride wore this dress also at the marriage, and a flame-coloured veil (*flammeum*, Lucan. ii. 361; Plin. *H. N.* xxi. § 46), with which she was said *nubere caput*. The dress was fastened by a woollen girdle (*cingulum*) in the *nodus Herculeus*, as to the significance of which there is some difference of opinion. It has been explained by some as intended to secure a fruitful marriage, because Hercules had many children (Fest. *Ep.* p. 63): Marquardt (*Privatleben*, p. 44) and Göll take it to be an amulet against the evil eye (*fascinum*). But may we not be nearer the truth in taking it to be the symbol of a stable marriage, and perhaps the original of the "true lovers' knot"? Hercules (in his own name the god of the enclosed homestead) was undoubtedly identified with the Sabine deity Semo Sancus (=Dius Fidius), the protector of matrons in their married life, as well as the deity of good faith and stable treaties (see Preller, *Röm. Myth.* pp. 655 ff.). Pliny, on Varro's authority, tells us (*H. N.* viii. § 194) that the spindle and distaff of Tanaquil (or Gaia Caecilia), who was regarded as the ideal of a Roman wife, were kept in the temple of Semo Sancus, and the bridal dress (*tunica recta*) is in the same passage traced back to her. From these considerations we may be justified in taking the "Herculean knot" to have been so called because of an ancient belief that Hercules (or Semo) was the guardian of the married life. The hair was arranged in six locks (*sex crines*) parted by the point of a spear (*hasta caelibaris*), and held in place by *vittae* or bands (Fest. p. 62; Ov. *Fast.* ii. 558). Hence the words *crines* and *vitta* are used by poets as a synonym for marriage. (Plaut. *Mostell.* i. 3, 69; *Mil. Glor.* iii. 1, 195; Ov. *Trist.* ii. 252; Propert. v. 3, 15.) The custom of parting it with a spear is perhaps a relic of the old marriage by capture, and may convey the idea of the word δορίληπτος. The bride had also a wreath of flowers and sacred herbs (*verbenae*) gathered by herself, and the bridegroom wore a similar wreath (Plut. *Pomp.* 55). As an account of the dressing of the bride, the passage in Claudian, *VI. Cons. Hon.* 523–

528, is worth reading, as well as for its own merit.

In the house of the bride, which was decked with garlands (Juv. vi. 227; Stat. *Silv.* i. 2, 230), were assembled the relations, friends, and clients, as an *officium* (Juv. ii. 132). Then the omens were taken and announced by the *auspices* (Cic. *pro Cluent.* 4, 14; Juv. x. 336), with the sacrifice of a sheep (cf. Verg. *Aen.* iv. 56). It had always been the custom to begin the sacred ceremony of *confarreatio* by consulting the omens, and the practice probably was as a rule extended to all marriages (Cic. *de Div.* i. 16, 28; Plaut. *Cas. Prol.* 85; Plin. *H. N.* x. § 21). Valerius Maximus (ii. 1, 1) says that in his time the *auspices* formed in name part of the attendance, though no *auspicia* for marriage were taken any longer. After these preliminaries, the omens being favourable, the marriage ceremonies began. They were in four main parts: (1) the contract; (2) the giving away of the bride, with whatever sacred rites were used; (3) the conducting (*deductio*) to her husband's house (the only *invariable* part); (4) her reception there. First the marriage tablets (*tabulae nuptiales* or *dotales*) were signed before witnesses (*signatores*), though the marriage was valid without this formality (see above; and Quintil. v. 11, 32). When the form of marriage called *coemptio* was adopted (when either or both were plebeians), the formalities of an imaginary sale were gone through before not less than five witnesses, and a *libripens* (who held the scales at a sale): questions and answers as to the willingness on both sides followed, and with that ended this distinctive part of the *nuptiae per coemptionem*; the other ceremonies followed which were usual in all marriages. On the legal significance and origin of the marriage by *coemptio* and its gradual disuse, see above. After the *coemptio*, or, where that was not used, after the signing of the *tabulae nuptiales*, a married woman (who must have been married only once, Serv. *ad Aen.* iv. 166) acting as *pronuba* led the bride up to the bridegroom and joined their right hands. It seems probable that there was always some formal expression of willingness to marry; in the old patrician rite of *confarreatio* the set form of response from the bride was "quando tu Gaius, ego Gaia," which form of words was used also in the *coemptio* (Cic. *pro Muren.* 12, 27). When the rite of *confarreatio* was followed, the bloodless offering was made: a cake of spelt (*farreum libum*) was offered by the Pontifex Maximus and the Flamen Dialis to Jupiter: ten witnesses were present (Gaius, i. 109–112; Serv. *ad Georg.* i. 31). Marquardt thinks that this form of marriage was originally performed not in the house of the bride's father, but in the sacellum of the Curia, and that the ten witnesses originally represented the ten gentes of the Curia. This is a probable explanation of the number ten, but as regards the place we lack evidence that the marriage was ever anywhere but in the bride's home. There is no mention of any passing from the house before the *deductio* to her new home. With the offering to Jupiter, a prayer was recited by the Flamen, to Juno as the goddess of marriage, and the deities of the country and its fruits,—Tellus, Picumnus, and Pilumnus (cf. Verg. *Aen.* iv. 166, and Serv. *ad loc.*; Non. p. 528). During this ceremony the bride and bridegroom sat together upon two seats which were placed side by side and covered with the skin of the sheep sacrificed before for the auspices (Serv. *ad Aen.* iv. 374): they sat to the left of the altar in the Atrium and looked towards it: meanwhile a *camillus*, i.e. an attendant boy who was *patrimus et matrimus* [CAMILLUS], held (perhaps) all that was required by the priest for the offering in a covered basket called *cumerus* (Varr. *L. L.* vii. 31; Fest. *Ep.* p. 63). The latter authority has rather complicated the question by saying that the *cumerus* contained "nubentis utensilia," and what that means it is impossible to say: that the basket held materials for spinning, as Becker thinks, seems improbable. We may leave the matter with Varro, who says that he does not know what the contents were. In Ovid, *Fast.* ii. 650, the boy in an ordinary sacrifice holds a canistra with *fruges* for the *mola salsa* [CAMILLUS]. The legal aspect of the *confarreatio* and its history is given in the first part of this article. Sir John Lubbock suggests that the wedding-cake cut by the bride is a survival of the *farreum* in this rite; but the original for that will be found, if anywhere in the Roman matrimonium, in the *mustaceum*. The rite of *confarreatio* suggests rather the sacramental view of marriage.

In all that follows, marriages in general of all forms are described. The prayer where there was no *confarreatio* (and therefore no Flamen Dialis) was pronounced by the auspex, and, according to Plutarch (*Q. R.* 2), was addressed to five deities,—Jupiter, Juno, Venus, Suadela, and Diana. It would seem that, sometimes at least, a victim was here offered (besides that offered for the auspicia); for Varro (*R. R.* ii. 4, 9) speaks of a pig offered *by the newly married pair*, and Tac. *Ann.* xi. 27 seems to point the same way (cf. Sen. *Oct.* 700). There was next a formal congratulation from the wedding-guests in the word "feliciter" (which, if there was no sacred rite, came directly after the contract; so Juv. ii. 119, "Signatae tabulae, dictum *feliciter*"). Then (as in Juv. *l. c.*) came the *cena nuptialis*, which was certainly, as a rule, given by the bride's father, and therefore *before* the procession (Catull. 62, 3; Dio Cass. xlviii. 44; Capitol. *Ant. Pius*, 10; and, by implication, Plaut. *Aul.* ii. 4, 15). But, as in modern weddings, the place of the wedding-feast might be altered from considerations of space, economy, &c., and it seems sometimes to have been in the bridegroom's house (Cic. *ad Q. Fr.* ii. 3, 7; Juv. vi. 200). The wedding-cake (*mustaceum*), which was made of meal steeped in *must* and placed on bay-leaves (Plin. xv. § 127), was cut up and distributed to the guests (Juv. *l. c.*). Afterwards came the procession (*deductio*), the invariable part of the matrimonium (see above, page 141). This took place usually at dusk, whence arose the custom of having torches (Catull. 62, 1; Serv. *ad Ecl.* 8, 29). The bride was taken with simulated force from her mother's arms (Fest. p. 289; Catull. 61, 3; Macrob. i. 15, 21): clearly a survival of the marriage by capture; or, as the Romans themselves put it, a reminiscence of the Sabine marriage (cf. Lubbock, *Origin of Civilization*, pp. 82 ff.; and, for the similar Greek usage, *supr.* p. 132). Flute-players and torch-bearers went in front

(Ter. *Adelph.* v. 7, 5; Fest. p. 245). The bride was conducted by three boys *patrimi et matrimi*, two leading her by the hand, the third carrying a torch of whitethorn for luck (Plin. *H. N.* xvi. § 75; cf. Ov. *Fast.* vi. 129). In the procession, besides the general crowd, there came also the camillus with his cumerus; and the bride's spindle and distaff were carried after her (Plin. *H. N.* viii. § 194). Plutarch (*Q. R.* 31) makes her carry them herself. Fescennine songs were sung during the procession (Catull. 61, 126), with interjections of *Talasse* (Mart. xii. 42; Catull. 61, 134, &c.). As to this deity of the marriage day, reference may be made to Marquardt, *Privatl.* p. 54; Preller, *Röm. Myth.* p. 584 ff. He appears as Talasius, Talasio, Talassus, Thalassius, Thalassio. Livy (i. 9) gives us as bearing that name a companion of Romulus prominent in the rape of the Sabines, and derives the cry *Talasse* from him: but Talus (Fest. p. 359) is an old Sabine name, and Talassius may have been a Sabine deity of marriage: Varro connects him with τάλαρος, a work-basket: θαλάσσιος as equivalent to Consus is suggested, which at first sight has something plausible about it; but it seems doubtful if Consus had really any connexion with Neptune or the sea, and moreover it is unlikely that the word should be borrowed from Greek. On the whole a Sabine origin is most probable. The part of the bridegroom in the procession was to scatter nuts for the boys in the crowd (Verg. *Ecl.* 8, 30; Catull. 61, 131). Though Catullus says that it shows the putting away of childhood, it is much more likely that the nuts symbolised fruitfulness of marriage and plenty (cf. Plin. *N. H.* xv. § 86). The custom, which may be compared with the Greek καταχύσματα (*supra*, p. 136 *a*), has its representative in the throwing of rice at the present day. When the bridal train reached the bridegroom's house, the bride bound the doorposts with wool, probably as dedicating her work to it; and anointed them with oil or fat to signify health and plenty (Pliny, xxviii. § 148, says wolf's fat, which in the Roman nation has a totem appearance). All these actions were, so to speak, personified in a Dea Iterduca, Domiduca, and Unxia (Martian. 2, 149). The bride was lifted over the threshold (Plaut. *Cas.* iv. 4, 1; Catull. 61, 166; Lucan. ii. 359 f.), which, according to some, symbolises the marriage by capture: others (as Preller) suppose the object to be the prevention of the bad omen which would be caused by her stumbling on it. Sir John Lubbock (*op. cit.* p. 97) adopts the former view, and finds a similar custom among such widely divided races as the American Indians, the Chinese, and the Abyssinians. At the entrance she repeated the formula "ubi tu Gaius, ego Gaia;" and the husband met her bearing fire and water, to signify that he admitted her to a share in the family hearth and the family lustral rites (Varro, *ap.* Serv. *ad Aen.* iv. 104; Dionys. ii. 30): the bride on her part brought three coins; one she gave as symbol of the *dos* to her husband, another to the Lares of the house, a third was dropped in the neighbouring street as an offering for the Lares compitales. The torch of whitethorn seems to have been scrambled for by the guests as a lucky possession (Serv. *ad Ecl.* viii. 29), and the ceremonies were over. The *lectis genialis* had been prepared by the pronuba in the atrium [LECTUS, p. 19 *a*.] On the following day the second wedding-feast called *repotia* was given to the friends and relations in the new home (Hor. *Sat.* ii. 2, 60; Gell. ii. 24, 14, where it is said that Augustus tried to limit the expense), and the bride as a *matrona* offered at the family shrine (Macrob. i. 15, 22). See further Marquardt, *Privatleben*, pp. 42–57; Becker-Göll, *Gallus*, ii. pp. 25–49: Preller, *l. c.*; Rossbach, *Röm. Hochzeits- u. Ehedenk.*, Leip. 1871. [G. E. M.]

MATRONA'LIA, also called **MATRONA'LES FE'RIAE**, a festival celebrated by the Roman matrons on the 1st of March, originally the beginning of the year, in honour of Juno Lucina. It represented the purity of old Roman life and the sanctity of the marriage tie: hence it is celebrated only by married women and maidens, and by a law of Numa, "pellex aram Junonis ne tangito" (Gell. iv. 3). It commemorated the dedication of the temple to Juno Lucina on the Esquiline, B.C. 375, soon after the Gallic occupation (Plin. *H. N.* xvi. § 236). It kept in memory, too, the first Roman marriages with the Sabine women and the peace which they brought about (Ov. *Fast.* iii. 229). An offering was made in the houses of married people with prayers that the married life might prosper, in which the *caelebs* could have no part (Hor. *Od.* iii. 8, 1). At this festival wives received presents from their husbands (Suet. *Vesp.* 19; cf. Plaut. *Mil. Glor.* iii. 1, 97), and they gave a feast to female slaves, as their husbands did to male slaves on the Saturnalia (Macrob. i. 12, 7). Hence it is called the Saturnalia of women (Mart. v. 84), and *feminae kalendae* (Juv. 9, 53). Girls also received, at least in later times, presents from their lovers (Tibull. iii. 1, 1; Mart. *l. c.*), which is perhaps the reason why Martial (ix. 90, 13) speaks of the day as though it were sacred to Venus. (Compare Marquardt, *Staatsverwaltung*, iii. p. 571; Preller, *Röm. Myth.* p. 244.) [W. S.] [G. E. M.]

MAUSOLE'UM. The tomb of Mausolus or Maussolus, ruler of Caria under the Persian king, is usually known to us as the Mausoleum, and this name was in later times applied to other tombs remarkable for greatness of scale, beauty of design, or exceeding sumptuousness. Greek writers sometimes call Mausolus prince or dynast of Caria, but he was in reality a satrap under the King of Persia, and ruled in Caria from B.C. 377 to B.C. 353, succeeding his father Hecatomnus in a dominion which under the feeble rule of the Great King became hereditary in his family, till the victories of Alexander put an end to the dynasty. The seat of government of these princes had up to the time of Mausolus been at Mylasa, in the interior of Caria, but was transferred by him to Halicarnassus (now Budrum), on the coast. This city, the birthplace of Herodotus, was greatly enlarged and embellished by Mausolus, who rebuilt it on a plan the symmetry and beauty of which is described by Vitruvius. The successor of Mausolus in his dominions was his sister and consort, Artemisia, who during her short reign (B.C. 353–351) erected the magnificent tomb which commemorated for all time the fame of her husband and her own sorrow. For the construction and decoration of this tomb the most renowned architects and sculptors of her time were employed by Artemisia. The architects, as we learn from Vitruvius, were Satyrus and Pythius; the sculptures which adorned the sides of the monument were the work of four artists of the later Athenian School—Scopas, Leochares, Bryaxis, and Timotheus. The sculptor of the chariot group which crowned the pyramid of the Mausoleum is called Pythis by Pliny, but this name is probably a mistake for Pythius, one of the two architects mentioned by Vitruvius. The sculpture and architecture were executed in Parian marble of the finest quality, and the exceeding costliness of the material employed and the perfection of the execution contributed not a little to the world-wide fame of the monument. (Paus. viii. 16, 4; Lucian, *Infer. Dialog.* xxiv.; Vitruv. ii. 8.)

In searching for the site of the Mausoleum, our first guide is the following well-known passage in Vitruvius (ii. 8): "Mausolus perceiving that Halicarnassus was a place naturally fortified, favourable for trade and with a convenient harbour, made it the seat of his government. As the form of the site was curved, like that of a theatre, on the shore near the port was placed the forum. Along the curve, about half-way up its height, was made a broad street,—as it were, a *praecinctio*. In the centre of this street stood the Mausoleum, constructed with such wonderful works, that it is considered one of the seven wonders of the world." Vitruvius goes on to notice the temple of Mars in the centre of the fortified heights above, and the temple of Venus and Mercury on the extremity of the right-hand curve, and on the left the palace of Mausolus himself.

On turning to the plan (Plate 1 of Newton's *History of Discoveries*), it will be seen that the shore of the harbour at Budrum bends round in a curve, terminating in two horns, on one of which, the ancient Salmacis, stands the Turkish arsenal, on the other the Castle of St. Peter. On the site of this castle the foundations of an ancient citadel may still be traced. On examining the ground overlooking the harbour, many fragments of shafts of columns, volutes, and other ornaments of an Ionic edifice in white marble, rivalling in beauty and finish the finest examples of Athenian architecture, were remarked by Professor T. L. Donaldson many years ago; and in a memoir on the Mausoleum (*Classical Museum*, v. pp. 170–201) Mr. (now Sir C. T.) Newton stated that these fragments were probably those of the Mausoleum lying *in situ*, as the position of this spot corresponded with the description in Vitruvius already mentioned. In 1856 an expedition to Budrum was dispatched from England under the auspices of the British Government, the direction of which was entrusted to Sir C. T. Newton, who has embodied the results in his *History of Discoveries at Budrum, Cnidus, and Branchidae*.

The exploration of the site already referred to presented peculiar difficulties, because it was encumbered with Turkish houses and gardens, the owners of which had to be separately dealt with before possession of the ground could be obtained. Fragments of the architecture and sculpture found, some in the soil, others in the rubble walls of the houses and gardens, soon enabled the explorers to identify the ground as the site of the Mausoleum, though of the ancient structure not a single stone remained above ground in its original position. The whole of the edifice had been removed except a few courses of the lowest foundations: these were laid in a rectangular cutting sunk in the native rock, and varying in depth from 15 feet on the west to 4 feet on the east. (Newton, *Hist. Disc.* pll. ii.–iv.) In this sunken area and in the soil above and around it were found drums and capitals of columns, pieces of cornice and architrave, stones from lacunaria, and steps of a pyramid. The sculpture comprised fragments of a colossal chariot group, of an equestrian group, of statues of colossal or heroic dimensions, and of many lions and other animals; there were four pieces of a frieze suitable in dimensions for the Ionic order, and many fragments of at least two other friezes. (See Newton, *Guide to Mausoleum Room in British Museum*.) All the remains of sculpture and the more important of the architectural marbles were sent to the British Museum in 1858–9, and after their arrival in England were carefully examined and arranged, with a view to the restoration of the original design. Many restorations had been attempted before the discovery of the remains *in situ*; but as the only data for these were the scanty notices in Pliny and other ancient authors, they may be put aside now. Since the arrival of the marbles in the British Museum three restorations have been published: that by the late Mr. R. P. Pullan, the architect sent to Budrum to assist Sir C. T. Newton in the expedition (see *History of Discoveries*); that by the late Mr. James Fergusson, and a more recent one by Mr. Petersen (*Das Mausoleum*, Hamburg, 1867. See also the memoir on Scopas by Urlichs).

What we know of the original design of the Mausoleum is derived in the first instance from certain scanty notices in Pliny, Vitruvius, and other ancient authors. With these have to be combined the remains discovered *in situ*. According to a much-discussed statement in Pliny, *H. N.* xxxvi. § 30, the tomb itself measured 63 feet from north to south, being shorter on the fronts; its entire circuit was 411 feet, or, according to the Codex Bambergensis, 440; its height 25 cubits, equal to 37½ feet. Round it were 36 columns. This peristyle was called the *Pteron*. Above this Pteron a pyramid equalled the lower part, contracting by 24 steps to an apex like that of a *meta*. On the summit was a marble chariot with four horses, the work of Pythis. The addition of this made the height of the entire structure 140 feet. From this description we may assume that there was a Pteron or peristyle edifice surmounted by a pyramid, which in turn was crowned by a marble chariot group.

When we confront Pliny's statement with the architectural marbles found *in situ*, we obtain an order 37½ feet in height, equivalent to Pliny's 25 cubits for the height of the Pteron, and the remains of a chariot group of which the height may be calculated at from 13 to 14 feet. Again, from the measurement of the steps of the pyramid found *in situ*, we obtain for its whole height 24 ft. 6 in. if we assume that all the 24 steps were exactly of the same height. The pyramid, according to Pliny, equalled in height the lower elevation. As the text stands, the words are *altitudine inferiorem aequabat*, so that the substantive with which *inferiorem* should agree is wanting. According to ordinary rules, the word to be supplied would be *pyramidem*, but that is inadmissible, as there is no evidence to show that there was a lower pyramid. If we leave the text as it stands, we must either supply *altitudinem* or *partem* after *inferiorem*: "Above the Pteron was a pyramid equalling in height the lower height, *i.e.* the Pteron;" or read *altitudinem*, "equalling in height the lower *altitudo*."

By this lower *altitude* Pliny can hardly have meant any other part of the elevation than the Pteron. But this, as has been already stated, was 37½ feet in height; the pyramid, according to actual measurement of the steps, was only 24½ feet. To make it equal to the Pteron, we must add 13 feet either to its base or to its apex, or partly to the one and partly to the other. Mr. Fergusson, in his restoration, brings the height of the pyramid to 37½ feet by adding 11 feet 9 inches for a pedestal under the chariot group (Pliny's *meta*), and 2 feet for a plinth intervening between the lowest step and the cornice. In Mr. Pullan's arrangement the entire chariot group is reckoned in with the pyramid as 37 feet 9½ inches. The main objection to this was pointed out by Mr. Fergusson: the group itself would not be sufficiently raised above the pyramid to be properly visible from below except at some distance. Further, it would be necessary, in order to complete Pliny's sum of 140 feet, to allow 65 feet for the basement under the Pteron, which in Mr. Pullan's restoration seems out of all proportion to the rest of the design. Moreover, the words of Pliny do not justify us in reckoning the 37½ feet of the pyramid as *inclusive* of the chariot group. Pliny's words, *haec adjecta*, show clearly that this was to be added in order to make up the whole height of the monument to 140 feet. Mr. Fergusson allows 11 feet 9 inches for the height of the *meta*, and 14 feet for that of the *quadriga*.

The next question is, what was the spread of the pyramid laterally. On examining the steps of the pyramid, of which from 40 to 50 were found *in situ*, we find that with the exception of a few blocks (A 17-23 of the Guide), they have a tread of either 1 foot 9 inches or 1 foot 5 inches; or, in the case of corner stones, a tread of 1 foot 9 inches on one side and 1 foot 5 inches on the other. The number of these steps, according to Pliny, was 24. If we assume with Mr. Pullan that 22 of these had a tread of the dimension already stated, and add a step of 10½ inches and one of 9 inches below the platform on which the chariot group stood, we obtain 39 feet 11½ inches for the spread of the pyramid on one side and 32 feet 6 inches for its spread on the other. But it is not proved that all Pliny's steps had exactly the same tread, or that the two stones with the exceptional treads of 10½ and 9 inches formed the uppermost course of the pyramid, as Mr. Pullan assumed, though they may have belonged to the upper part which Pliny describes as "in metae cacumen se contrahens," tapering like a *meta*.

The dimensions of the platform on which the chariot group stood are still more uncertain. Mr. Pullan calculates it at 25 ft. 6 in. by 20 ft. 5 in., but Mr. Fergusson is probably nearer the mark in reckoning it as 20 by 16 Greek feet. It follows that Mr. Pullan's calculation of 105 ft. 5 in. for the length of the base of the pyramid and 85 ft. 5 in. for its breadth cannot be relied on. Mr. Fergusson makes the lowest step of the pyramid 100 by 80 Greek feet.

If we turn from the pyramid to the Order below it, we get on surer grounds. Mr. Pullan gives 100 feet English for the length of the peristyle from centre to centre of the columns, and 80 feet for its breadth. He arranges nine columns on the front and eleven on the flank, and allows an intercolumniation of 10 feet from centre to centre of the columns. But to this arrangement there is a grave objection. The lions' heads of the cornice cannot be so disposed that one may range over each column, according to the usual rule in Ionic architecture.

Mr. Fergusson calculates the measurement of the lower step of the pyramid 100 by 80 Greek feet. He arranges the 36 columns of the peristyle so as to have eleven columns on the longer sides and nine at the ends, counting the angle columns twice. He reckons the intercolumniation at 10 ft. 6 in. except at the angles, where he supposes the columns coupled, so as to have half an intercolumniation, viz. 5 ft. 3 in. The longer sides of the peristyle would thus measure 94 ft. 6 in. Greek; the shorter sides, 73 ft. 6 in. if we add 2 ft. 9 in. for the projection of the cornice. In order to make this arrangement fit in with the general scheme of his restoration, he is obliged to allow only half an intercolumniation (5 ft. 3 in.) for the distance of the angle column from the one next it on either side. But for such a coupling of the columns in an Ionic edifice he can adduce no other example.

Petersen concurs with Fergusson in allowing 10½ feet for the intercolumniation, which, with eight columns on the front and eleven on the flank, yields ten intercolumniations on the longer and eight on the shorter side. If we add to this half the thickness of the base of the two angle columns, we may calculate the dimensions of the stylobate as 109 × 88. He thus obtains for the circumference of the building 394 feet, and there is room for two lions' heads between each pair of columns.

Pliny says that the tomb itself—meaning, it is to be presumed, the *cella* within the peristyle—was 63 Greek feet in length, but shorter in width. How much shorter he does not state. According to Mr. Pullan's scheme, the space between the cella wall and the peristyle would on the fronts be 17 feet. In his Plate XXI. figs. 1 and 2, he shows how by the use of through stones this space can be corbelled out, the beams acting as ties, and in the lowest course of the corbelling the stones being of sufficient length to extend from beam to beam.

Mr. Fergusson, having diminished the length of the Pteron by the expedient of coupling the angle columns, reduces the space between the cella wall and the Pteron to 14 feet in the fronts; 2 ft. 8 in. less Mr. Pullan makes it.

Petersen supposes that the Pteron had an inner row of columns, and that Pliny's *cingitur* only applies to the outer row. This no doubt would solve several difficulties, but the text of Pliny will not bear such a forced interpretation.

The size and plan of the basement or *podium* have lastly to be considered. According to the Codex Bambergensis, which ranks as the most reliable MS. of Pliny, the whole circuit of the tomb was not 411 but 440 feet: other MSS. read 411. Messrs. Pullan and Fergusson adopt the lower dimension, but Mr. Petersen follows the Codex Bambergensis.

Mr. Pullan makes the measurement of the podium 119 ft. by 88 ft. 6 in., which gives 415 feet for the circumference. Mr. Fergusson, measuring it on its lowest step, makes the podium 126 Greek feet by 105 Greek feet; so that it would extend on each side as far as the sides of the quadrangular cutting, and its total circumference would be 462 feet, in which dimension he includes piers projecting all round the basement at the height of 17 feet from the ground. In the recesses formed by these piers he places statues: above these piers a cornice and frieze connect the podium with the stylobate of the Pteron, and below it is a wall of plain masonry.

Mr. Petersen substitutes for recesses between the piers arched niches for statues, which give the podium a very Roman look, and neither his designs for the podium nor Mr. Fergusson's have been generally accepted by architectural authorities. On the other hand, Mr. Pullan's basement, besides being too tall, is too bald, and its mouldings are deficient in boldness. The one thing that we may assume is that the basement was crowned with a cornice, below which may have been one or more friezes. The remains in relief, of which a description is given (*Guide to Mausoleum Room*, Nos. 26, 28), and which represent a centauromachia, are probably from the podium. The height of this frieze is 2 feet 10½ inches. It probably ornamented the podium.

Mr. Fergusson reduces the height of the basement to 51 feet 6 inches, in which dimension he includes an entablature of 14 feet. Mr. Petersen assigns 44 feet as the height of the basement.

Whatever the height of the basement may have been, we may assume that it was not less than 40 feet above ground. It has been already stated that the quadrangular cutting below the natural level of the ground, in which the foundations of the Mausoleum had been laid, was cut in the native rock, in various depths, the lowest part of the area being on the west side, where the cutting was 15 feet below the natural level of the rock, while on the east side the bed rises within 4 feet of it. The whole of this area had been originally filled up with the courses of the foundation stones, consisting of blocks of a green ragstone strongly bound together with iron clamps, and generally measuring about 4 feet square by 1 foot thick. In some places all the foundation courses had been removed, and the original bed of the rock laid bare. On the west side of the quadrangle was discovered a staircase of twelve steps, 29 feet wide and cut in the solid rock. On the north this staircase was flanked by a wall of good solomous masonry, built of large blocks of native rock. A few feet to the east of the stair were found some alabaster jars, such as were used by the ancients for precious ointments. On one of these jars were two inscriptions, one in hieroglyphics, the other in the cuneiform character. These inscriptions contained the name of the Persian king Xerxes, written in four languages. Immediately to the east of the spot where these jars were found was a block of green ragstone, 7 ft. high by 4½ ft. square, and weighing about 10 tons. It rested on two slabs of white marble, in which were bronze sockets, adjusted to receive dowels, fixed at the bottom of the stone, but by some accident in the original process of fixing the stone these dowels had never descended from their collars into their sockets.

It may be inferred from the position of the remnant of marble pavement under the great stone, that a passage paved with marble led from it into the royal sepulchral chamber, which may have been nearly in the centre of the basement, where the cutting in the rock is deepest. After the body of the personage interred had been carried down the steps to its final resting-place in the heart of the basement, the great stone was let down into its place, like a portcullis, and wedged in on either side by smaller stones. The alabaster vases, found between the great stone and the foot of the staircase, must have been deposited there shortly after the interment, as an offering to the dead.

There, too, were found bones of oxen from a sacrifice, and small terra-cotta figures. The staircase must have been then filled in with earth to the level of the upper surface, and the soil to the east of the stair was supported by a wall running from flank to flank, which was more than a yard broad, and constructed of massive blocks of native rock carelessly thrown together without bond. The great stone, the remnant of marble pavement under it, and the alabastra and other sepulchral offerings found between the great stone and the foot of the stair, are all that the exploration of the site yielded to indicate the arrangement of the interior of the basement. Mr. Pullan, adopting a suggestion previously made by Sir Robert M. Smith, R.E., the engineer officer attached to the Budrum expedition, supposes that in the interior of the basement there was a circular chamber, covered with a vault similar in structure to that of the lion tomb at Cnidus, the so-called Treasury of Atreus at Mycenae, and many other ancient tombs. Mr. Fergusson, rejecting this arrangement, proposes an elaborate plan of the basement which is mainly grounded upon a narrative in Guichard (*Funerailles des Grecs et Romains*, Lyon, 1581, pp. 378–81). That author states that in 1522 some of the Knights of St. John were sent from Rhodes to Budrum to repair the castle there, then threatened by the Sultan Solyman. These knights, on their arrival at Budrum, at once began to strengthen the fortifications of the castle, which had been built rather more than a century before by a German knight, called Henry Schlegelholt, who, as we are told by his contemporary Fontana, used as materials the ruins of the Mausoleum then lying above ground. The materials first used would naturally be the marbles from the upper part of the edifice, which were lying *in situ* detached by their fall, such as the steps of the pyramid, the architrave, the fragments of the frieze of the Order and cornice, the drums, capitals, and bases of the columns. As the ruins were thus gradually cleared away, the stylobate and marble facing of the basement would be stripped off till nothing was left but the inner core of the masonry, composed of large blocks of green rag, such as were found in position in the quadrangular cutting. Between 1402 and 1522 the fortifications of the castle were repaired by the Knights at intervals; through all this time the ruins of the Mausoleum must have supplied both stone and lime to the building.

The Knights employed in 1522 found still in position certain steps of white marble, which Guichard compares to a *perron*. "These they made into lime, and, having cleared them away above ground, proceeded to search by excavation for more marbles of the same quality. As they proceeded deeper, the base of the structure was enlarged, and they found not only marble for the limekiln, but good building stone. After working downwards for four or five days, they came upon an opening like that of a cellar. Descending through this, they found themselves in a large square apartment, ornamented all round with columns of marble, with their bases, capitals, architrave, frieze, and cornices engraved and sculptured in half relief. The space between the columns was lined with slabs and bands of marble, ornamented with mouldings and sculptures in harmony with the rest of the work, and inserted in the white ground of the wall, where battle-scenes were represented sculptured in relief."

All this sculpture, according to Guichard, was broken up and destroyed by the Knights. He goes on to narrate how, "besides this apartment, they found afterwards a very low door, which led into another apartment serving as an antechamber, where was a sepulchre with its vase and helmet (*tymbre*) of white marble, very beautiful, of marvellous lustre." They deferred opening this till the next day, retiring to the castle for the night. On returning the next morning, they found the tomb opened and the earth all round strewn with fragments of cloth of gold and spangles of the same metal. It was supposed that pirates had plundered the tomb in the night. Guichard had this story from Dalechamps, a learned contemporary, who, we may presume, was the editor of Pliny, and to whom it was narrated by the Commander La Tourette, a Lyonnese knight, who was sent to Budrum with other Knights and was present at the siege of Rhodes in the same year.

There seems to be no reasonable ground for rejecting this story in its general outline, but it must be borne in mind that it is based on hearsay evidence, and we are hardly justified in insisting on the accuracy of its details as strongly as more than one recent writer has done.

It may be assumed that the *perron* mentioned by Guichard was the remnant of the steps on which the stylobate of the Pteron had rested, the ruins above which had been gradually cleared away by the Knights in the course of the fifteenth century. If we accept the narrative of Guichard literally, we must suppose a square apartment ornamented all round with a frieze and other sculptures. It is not likely, however, that marbles of different colours would have been used, but the frieze may have been painted, as was certainly the case with the fragments of the frieze of the Order, found in the excavations above ground. Mr. Fergusson supposes in his restoration a sepulchral chamber 52 feet 6 inches by 42 feet. It would thus have been identical in dimensions with the interior of the *cella* in his restoration.

In the walls of the castle were formerly to be seen a number of lions broken off behind the shoulder, and pieces of frieze from the Mausoleum, which the knights had inserted at intervals in the walls, and which attracted the notice of travellers from Thevenot down to our own time. All these sculptures are now in the British Museum, having been presented by successive Sultans. Other forehands, heads, and fragments of lions were found on the site of the Mausoleum. From the evidence of these fragments, it is clear that they stood on detached rocky bases, which average in thickness 6 inches. These bases appear to have been inserted in a lower plinth at an average depth of 2 inches from the upper surface. The proportions of the lions are adjusted to three different scales. The largest measure 4 ft. 6 in. from the point of the shoulder to the hind quarter, and the second in scale about 3 inches less. Their height probably did not exceed 5 ft. One head measured across the forehead in a line with the eyes was 2 inches less in width than the largest head. A paw was found smaller than any of the others, which seemed to correspond in scale with this head.

On the north of the quadrangular cutting was a wall of white marble blocks, beautifully jointed with isodomous masonry. Behind this wall on the north was a mass of white marble blocks, which on examination were recognised to be steps from the pyramids. From forty to fifty of these steps were found. Intermixed with these steps were fragments of the chariot group, of which the most important were the anterior half of a colossal horse (the harness of which showed that it was from a chariot, the bronze bit and bridle still remaining attached to the head) and the hinder half of a horse, similar in style and scale: this extended from the middle of the body to the root of the tail, and measured in length rather more than 6 feet. There were various fragments of feet and legs of horses; also pieces of one of the wheels of the chariot, from which its diameter has been ascertained, and the remains of a colossal male figure, which has been made up of seventy-four fragments collected *in situ*. This figure is generally held to be the portrait of Mausolus himself (Guide, No. 34). There was a draped female figure of colossal size, probably representing a goddess acting as charioteer in the quadriga (Guide, No. 35). Both these statues are remarkable for the breadth and grandeur of effect in the drapery, and the refined delicacy in the execution.

For further details of the sculptures which were found, see Sir C. Newton's *Guide to the Mausoleum Room*, especially Nos. 8–11, 17, 26, 29, 38–49.

Mr. Pullan and the others who have attempted restorations of the Mausoleum differ widely in their disposition of the sculptures in the round. It is generally accepted that the two colossal figures found among the ruins of the pyramid steps belong to the chariot group, and represent Mausolus and the Goddess who acted as his charioteer. The lions must have been arranged round the tomb as its watchful guardians, some stationed at its doors, others perhaps at the base of the pyramid: the equestrian torso was probably one of four groups from the angles, but beyond this we are left entirely to conjecture. Statues were probably placed between the columns, as in the Xanthian monument, but of the torsoes preserved most are on a scale too small to stand by the side of the columns for support of the roof of both apartments.

Where the remaining statues were placed is at present a matter on which we have no more evidence than we have as to the arrangement of the columns, the area of the basement or of the platform on the top of the pyramid, or the circumference of the building as expressed by Pliny's *totus circuitus*. As the author of the Guide remarks, "The problem of the restoration of the Mausoleum will probably remain unsolved, unless some unexpected discovery at Budrum or elsewhere in the Hellenic world contributes fresh evidence. As we know that the Castle of St. Peter was built by the Knights out of the ruins of the Mausoleum, it may be assumed that many fragments of architecture and sculptures are still imbedded in its walls."

The native rock of the platform is pierced at two different levels by subterranean galleries, with which shafts communicate at intervals. The lower of these galleries runs all round the quadrangle, and must have served for the drainage of the Mausoleum. It is cut throughout in the solid rock to a height ranging from 6 to 8 feet, except in front of the stair on the west side, where it passes between the stair and the big stone, where it is only 2 ft. 10 in. in height. It is evident that, before the foundations of the Mausoleum had been laid in the quadrangle, the rock had been quarried out to various depths, and had also been used as a place of interment in early times, before the city had been enlarged and embellished by Mausolus. The centre of his new city was probably selected as the most appropriate site for his tomb, because he considered himself the new founder of Halicarnassus.

Hyginus, a Latin writer of uncertain date under the Roman Empire, states (in the *Fabulae*) that the Mausoleum was surrounded by a peribolos 1340 ft. in circumference. Supposing Greek feet to have been used in this measurement, one-fourth of the peribolos would be 335 Greek feet (equal to 339 English). On the north side of the Mausoleum a wall constructed of marble blocks of fine masonry (*Hist. Disc.* pl. vi.) was traced east and west for a distance of 337 English feet. A similar wall was traced under the soil for 260 English feet on the east side. We may assume that the four sides of the peribolos formed a rectangle. No trace was found of the western wall, but on the southern side Mr. Biliotti, exploring the ground in 1865, traced a cutting in the rock running east and west, which he believed to be the bed prepared to receive the foundation of the southern wall. It is probable that the platform on which the Mausoleum stood was connected with the Agora on the shore by a series of terraces, with intervening flights of steps, so disposed as to set off the elevation to advantage when viewed from below. [C. T. N.]

Though none of the proposed restorations of the Mausoleum can be accepted with certainty, as the preceding writer has remarked, still the ingenious restoration by the late Mr. Fergusson is not without value. (See cut on following page.) The principles on which he constructed it, and the objections that may be taken to it, have been already fully stated.

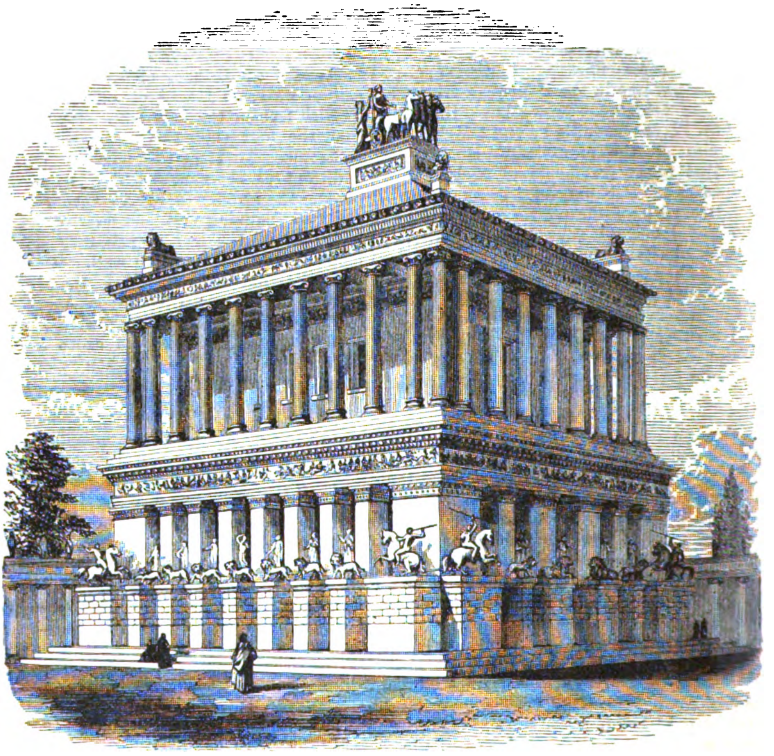
Of the other magnificent sepulchral edifices to which the name of Mausoleum was given the two most important are:—

1. The MAUSOLEUM OF AUGUSTUS, which was erected by Augustus, during his lifetime and in his sixth consulship (B.C. 28), in the northern part of the Campus Martius, between the Via Flaminia and the Tiber (Suet. *Aug.* 100). It was a magnificent circular building (called by Dio Cass. lviii. 22, *βασιλικὸν μνημεῖον*), erected on foundations of white marble, covered to the summit with plantations of evergreen, and surmounted with a bronze statue of Augustus: in the interior were sepulchral chambers, containing his ashes and those of his family. The ground round the Mausoleum was laid out in groves and public walks. (Strab. v. p. 236.) Several members of the family of Augustus were entombed in the Mausoleum before the ashes of the emperor were deposited in it, as Marcellus, Agrippa, Octavia, and Drusus, the brother of Tiberius (Verg. *Aen.* vi. 873 *seq.*; Dio Cass. liii. 30, liv. 28, lv. 2; Ov. *Cons. ad Liv.* 37; Pedo, *Eleg.* i. 69: for the burial of Augustus himself, see Dio Cass. lvi. 43; Suet. *Aug.* 101). The ashes of Livia, the mother of Tiberius, were also deposited there (Dio Cass. lviii. 2), and it was the regular tomb of the imperial family, whence it is called by Tacitus (*Ann.* iii. 9) *tumulus Caesarum*. Caligula had the ashes of his mother Agrippina and his brother Nero interred here with great pomp (Suet. *Cal.* 15; Dio Cass. lix. 3). By the time of Hadrian this Mausoleum was completely filled, which caused him to build a new one on the opposite side of the river (Dio Cass. lxix. 23: see below). Martial alludes to the Mausoleum of Augustus under the name of *Mausolea* (v. 64, 3), as the *deos* in the following line clearly refer to the Caesars. (See Friedländer's note.) There are still considerable remains of this Mausoleum; but "it is now so completely ruined," remarks Mr. Fergusson, "that it is extremely difficult to make out its plan; it appears however to have consisted of a circular basement about 300 feet in diameter, and about 60 feet in height, adorned with twelve large niches. Above this rose a cone of earth as in the Etruscan tombs, not smooth like those, but divided into terraces, which were planted with trees." (Fergusson, *Hist. of Arch.* i. p. 343.) It was converted into an amphitheatre for bullfights till the time of Pius VI., and is now used as a theatre for the display of fireworks and other spectacles of the lowest description.

2. The MAUSOLEUM OF HADRIAN, also called the *Moles Hadriani*, now the *Castle of S. Angelo*, a much more splendid building than the Mausoleum of Augustus, was erected, as we have already seen, by the Emperor Hadrian on the right bank of the Tiber, near the Aelian bridge in the gardens of Domitia (Dio Cass.

lxix. 23; Spart. *Hadr.* 19). Hadrian died at Baiae, and his remains were first deposited in a temporary tomb at Puteoli, from which they were removed to the Mausoleum at Rome by Antoninus Pius, who probably completed the building (Spart. *Hadr.* 25; Capitol. *Ant. Pius*, 5, 8). This Mausoleum was the sepulchre of the subsequent emperors and their families down to Commodus and perhaps to Caracalla, but not beyond. It is expressly mentioned as the sepulchre of Antoninus Pius (Capit. *Ant. Phil.* 7), of Lucius Verus (Capit. *Ver.* 11), of Commodus (Lamprid. *Commod.* 17). As to the other emperors, see Becker, *Röm. Alterth.* vol. i. p. 661, where the subject is fully discussed.

The Mausoleum is described by Procopius (*B. G.* i. 22) on the occasion of the siege of Rome by the Goths, A.D. 537. He says that it had been converted into a fortress considerably before his time ("by the men of old," *οἱ παλαιοὶ ἄνθρωποι*), and was joined to the line of fortifications by two walls. This was probably done when the walls were repaired by Honorius about A.D. 423. Procopius (*l. c.*) describes it as a memorable sight (*θέαμα λόγου πολλοῦ ἄξιον*), outside the Porta Aurelia, distant from the walls about a bow-shot. "It is made," he says, "of Parian marble, and the stones fit closely into one another with no other fastening. It has four equal sides, each about a stone's throw in length, and in height rising above the walls of the city. Above are statues of men and horses made of the same Parian marble and wonderful to behold." Many of these precious works of art were hurled down from the Tomb on the Gothic besiegers. The Barberini Faun at Munich and the Dancing Faun at Florence were found in the ditch below the Tomb. The subsequent history of the Mausoleum will be found in all the guide-books. (See Murray's *Handbook of Rome*, p. 73 *seq.*)

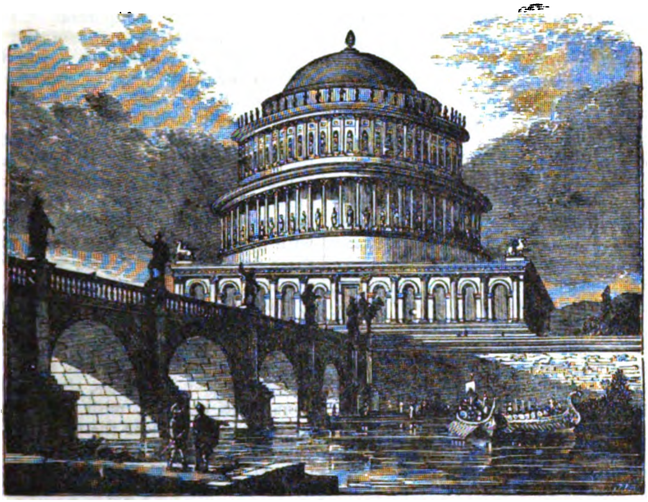


The Mausoleum of Artemisia restored by Mr. Fergusson.

From the existing remains, and the description of writers in the Middle Ages, the Mausoleum has been restored by modern archaeologists. "A quadrangular structure of dazzling white marble, each side 300 Roman feet long and 85 feet high, it had upon its sides inscriptions to the various emperors from Trajan to Severus who were buried within its walls. At the corners of this structure were equestrian statues of four emperors. Above, two circular buildings, one over the other, were surrounded with colonnades and peopled with marble statues. Over all rose a conical cupola whose summit was 300 feet above the ground. Visitors to the gardens of the Vatican may still see there a bronze fir-cone, 8 feet high, which according to tradition once surmounted the cupola of Hadrian's tomb." (Hodgkin, *Italy and her Invaders*, iv. p. 202; Dante, *Inf.* xxxi. 59; cf. Fergusson, *Hist. of Arch.* i. p. 344.) [W. S.]

MAZO'NOMUS (*μαζονόμος, dim. μαζονόμιον*, Athen. v. 149 a), from *μάζα*, a loaf, or a cake; properly a dish for distributing bread: but the term is applied also to any large dish used for bringing meat to table (Varro, *de Re Rust.* iii. 4). These dishes were made either of wood (Pollux, vii. 87), of bronze (Athen. iv. 136 c), or of gold (Athen. v. 197 *f*). In the most familiar passage (Hor. *Sat.* ii. 8, 86) we have the mazonomus as a large dish, on which portions of meat sprinkled with meal and salt are brought to table (the theory of *pastry* is unfounded). There is no ground for assigning the word a special significance as a sacred vessel, though, no doubt, like *lanx*, &c., it might be used to express a large dish used for sacred as well as for profane purposes.

[J. Y.] [G. E. M.]



Mausoleum of Hadrian restored.

MEDDIX TUTICUS (= "community manager") was the chief magistrate among Oscan or Sabellian communities. Hence we find the title at Capua after the Samnites wrested the dominion of that city from the Greeks. The word appears as Medix in the MSS. of Liv. xxiii. 35, varied by Maedix xxiv. 19 and Media xxvi. 6. The double consonant, however, appears in Festus and in most inscriptions, as meddies, μεδδειξ, metdiss. Mommsen (*Unterit. Dial.* p. 278) considers that the first syllable is naturally short (as evidenced by the Greek ϵ), and derives it from the same root as *mederi*: Curtius suggests, but on the whole rejects, *μέδω*, to which however there would be no objection if there is merely a doubled *d*. It was clearly the Oscan name for a *magistrate* who might be alone in office or one of many. So Ennius gives us "Summus ibi capitur meddix occiditur alter," but that does not prove that the title Meddix belongs only or specially to a dual magistracy. The inscriptions give us two meddices at Messana (Mommsen, *l. c.*), but in most Sabellian communities, as far as we can gather, there was only one: possibly, as Mommsen (*Staatsrecht*, iii. 581) suggests, the dual constitution at Messana was owing to Roman influence. We have the qualifying word *Tuticus* added at Capua (Livy), at Pompeii, Herculaneum, and Bovianum (see the inscriptions cited by Mommsen), and this word is probably connected with Umbrian and Oscan words for town, *tauta*, *tota*, *touta* (Curtius, *Gr. Etym.* p. 225): so that the title means chief magistrate of the town, and seems to imply that the word meddix alone might be used of other magistrates. We have no means of ascertaining the precise limits of his jurisdiction, which, moreover, may have varied in different towns, but a good deal may be gathered from the accounts of Capua preserved in Livy. This town became subject to Rome B.C. 329 with *caerite* rights, i.e. *civitas sine suffragio* (Liv. viii. 14), and consequently had not autonomy, but kept its own senate and magistrates (see Mommsen, *Hist. of Rome*, i. 369; *Staatsrecht*, iii. 581), perhaps with some coordinate jurisdiction of Roman officials. We learn from Livy that the meddix was annually elected, as *summus magistratus Campanis*, and, like sole periodical magistrates in more modern and larger states, had the reproach of seeking by all means the popular vote; he summoned the senate, presided at religious rites, and (during the revolt) appointed commanders of troops and acted himself as general (probably one of his original functions): the office ceased with the Second Punic War. (Liv. xxiii. 4; xxiv. 19; xxvi. 6. See also Mommsen, *Hist. of Rome*, i. 255; *Staatsrecht*, iii. 581, and index; *Unterital. Dialecte*, p. 277 f.; Marquardt, *Staatsverwalt.* i. 30 ff.) [W. S.] [G. E. M.]

MEDIASTI'NI, the name given to slaves of all work either in town or country, who are said by the Scholiast on Horace, *Ep.* i. 14, 14, to be those "qui in medio stant ad quaevis imperata parati." They would therefore be those of whom Cicero speaks (*Par.* v. 2, 37), "qui tergunt, qui ungunt, qui verrunt, qui spargunt." In Ulpian they are spoken of as equivalent to *vulgares servi*. In Pliny (*H. N.* xxix. § 4) the slaves of an apothecary used for general purposes are so called to distinguish them from skilled slaves employed as rubbers, &c.

But although Horace (*l. c.*) seems to distinguish the *mediastinus* from the country slave, the distinction is only found in the context, not in the word itself; for Columella (ii. 13) gives the allowance of field labour for 200 jugera as two yoke of oxen, two *bubulci* and six *mediastini:* he separates them from the special labourers, *vinitores* and *aratores* (i. 9), saying that, while the *arator* should be tall, the *mediastinus* might be any height provided he was industrious. To be precise therefore, the low class general slaves would be distinguished as *mediastini urbani* and *mediastini rustici* (which is a disputed reading in Cic. *Cat.* ii. 3, 5). [W. S.] [G. E. M.]

MEDICI'NA (*ἰατρική*), the name of that science which, as Celsus says (*de Medic.* lib. i. Praef.), promises health to the sick, and whose object is defined in one of the Hippocratic treatises (*de Arte*, vol. i. p. 7, ed. Kühn) to be "the delivering sick persons from their sufferings, and the diminishing the violence of diseases, and the not undertaking the treatment of those who are quite overcome by sickness, as we know that medicine is here of no avail." This and other definitions of the art and science of Medicine are critically examined in Pseudo-Galen (*Introduct.* c. 6, vol. xiv. pp. 686–8, ed. Kühn). The invention of medicine was almost universally attributed by the ancients to the gods. (Hippoc. *de Prisca Medic.* vol. i. p. 39; Pseudo-Galen, *Introd.* c. i. p. 674; Cic. *Tusc. Dis.* iii. 1; Plin. *H. N.* xxix. § 2.) So also in Aeschylus (*Pr.* 478) we have the claim advanced for Prometheus, that he first taught men the art of medicine both externally applied and as potions, and there is a remarkable passage in Pindar (*Nem.* iii. 45) where Aesculapius is taught by Chiron the triple art of healing by drugs, incantations, and surgical operations. Another source of information too was observing the means resorted to by animals when labouring under disease. Pliny (*H. N.* viii. § 97) gives many instances in which these instinctive efforts taught mankind the properties of various plants, and the more simple surgical operations. The wild goats of Crete pointed out the use of the dictamnus and vulnerary herbs; dogs when indisposed sought the *triticum repens*, and the same animal taught the Egyptians the use of purgatives, constituting the treatment called syrmaïsm. The hippopotamus introduced the practice of bleeding, and it is affirmed that the employment of clysters was shown by the ibis. (Compare Pseudo-Galen, *Introd.* c. i. p. 675.) Sheep with worms in their liver were seen seeking saline substances, and cattle affected with dropsy anxiously looked for chalybeate waters. We are told (Herod. i. 197; Strabo, xvi. p. 348) that the Babylonians and Chaldaeans had no physicians, and that in cases of sickness the patient was carried out and exposed on the highway, in order that any of the passers-by, who had been affected in a similar manner, might give some information respecting the means that had afforded them relief. (Comp. Plut. *de occulte vivendo*, § 21.) Shortly afterwards, these observations of cures were suspended in the temples of the gods, and we find that in Egypt the walls of their sanctuaries were covered with records of this description. The priests of Greece adopted the same practice, and some of the curious tablets suspended in their temples will illustrate the custom. The following votive memorials are given by Hieron. Mercurialis (*de Arte Gymnast.* Amstel. 4to. 1672, pp. 2, 3):—"Some days back a certain Caius, who was blind, was ordered by an oracle that he should repair to the sacred altar and kneel in prayer, then cross from right to left, place his five fingers on the altar, then raise his hand and cover his eyes. [He obeyed,] and his sight was restored in the presence of the multitude, who congratulated each other that such signs [of the omnipotence of the gods] were shown in the reign of our emperor Antoninus." "A blind soldier named Valerius Aper was ordered by the oracle to mix the blood of a white cock with honey, to make up an ointment to be applied to his eyes, for three consecutive days: he received his sight, and came and returned public thanks to the god." "Julian appeared lost beyond all hope from a spitting of blood. The god ordered him to take from the altar some seeds of the pine, and to mix them with honey, of which mixture he was to eat for three days. He was saved, and gave thanks in presence of the people."

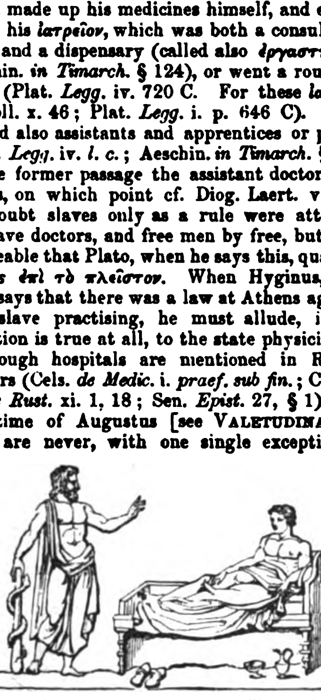
With regard to the medical literature of the ancients: "When" (says Littré, *Œuvres complètes d'Hippocrate*, tome i. Introd. p. 3) "we search into the history of medicine and the commencement of science, the first body of doctrine that we meet with is the collection of writings known under the name of the works of Hippocrates. Science mounts up directly to that origin, and there stops. Not that it had not been cultivated earlier, and had not given rise to even numerous productions; but everything that had been made before the physician of Cos has perished. We have only scattered and unconnected fragments remaining of them; the works of Hippocrates have alone escaped destruction; and by a singular circumstance there exists a great gap after them, as well as before them. The medical works from Hippocrates to the establishment of the school of Alexandria, and those of that school itself, are completely lost, except some quotations and passages preserved in the later writers; so that the writings of Hippocrates remain isolated amongst the ruins of ancient medical literature." The Asclepiadae, to which family Hippocrates belonged, were the supposed descendants of Aesculapius (*Ἀσκλήπιος*), and were in a manner the hereditary physicians of Greece. They professed to have among them certain secrets of the medical art, which had been handed down to them from their great progenitor, and founded several medical schools in different parts of the world. Galen mentions (*de Meth. Med.* i. 1, vol. x. pp. 5, 6) three, viz. Rhodes, Cnidos, and Cos. The first of these appears soon to have become extinct, and has left no traces of its existence behind. From the second proceeded a collection of observations called *Κνίδιαι Γνῶμαι*, "Cnidian Sentences," a work of much reputation in early times, which is mentioned by Hippocrates (*de Rat. Vict. in Morb. Acut.* vol. ii. p. 25), and which appears to have existed in the time of Galen (*Comment. in Hippocr.* lib. cit. vol. xv. p. 427). The school of Cos, however, is by far the most celebrated, on account of the greater number of eminent physicians that sprang from it, among whom was the great Hippocrates. We learn from Herodotus (iii.

131) that there were also two celebrated medical schools at Crotona in Magna Graecia, and at Cyrene in Africa, of which he says that the former was in his time more esteemed in Greece than any other, and in the next place came that of Cyrene. In subsequent times the medical profession was divided into different sects; but a detailed account of their opinions would be out of place in the present work. The oldest and perhaps the most influential of these sects was that of the *Dogmatici*, founded about B.C. 400 by Thessalus, the son, and Polybus, the son-in-law of Hippocrates, and thence called also the *Hippocratici*. These retained their influence till the rise of the *Empirici*, founded by Serapion of Alexandria and Philinus of Cos, in the third century B.C., and so called because they professed to derive their knowledge from experience only. After this time every member of the medical profession during a long period ranged himself under one of these two sects. In the first century B.C., Themison founded the sect of the *Methodici*, who held doctrines nearly intermediate between those of the two sects already mentioned; and who, about two centuries later, were subdivided into numerous sects, as the doctrines of particular physicians became more generally received. The chief of these sects were the *Pneumatici* and the *Eclectici;* the former founded by Athenaeus about the middle or end of the first century A.D.; the latter about the same time, either by Agathinus of Sparta or his pupil Archigenes.

It only remains to mention the principal medical authors after Hippocrates whose works are still extant, referring for more particulars respecting their writings to the articles in the *Dictionary of Biography*. Celsus is supposed to have lived in the Augustan age, and deserves to be mentioned more for the elegance of his style, and the neatness and judiciousness of his compilation, than for any original contributions to the science of Medicine. Dioscorides of Anazarba, who lived in the first century after Christ, was for many centuries the greatest authority in Materia Medica, and was almost as much esteemed as Galen in Medicine and Physiology, or Aristotle in Philosophy. Aretaeus, who probably lived in the time of Nero, is an interesting and striking writer, both from the elegance of his language and the originality of his opinions. Caelius Aurelianus, whose matter is excellent, but the style quite barbarous. The next in chronological order, and perhaps the most valuable, as he is certainly by far the most voluminous, of all the medical writers of antiquity, is Galen, who reigned supreme in all matters relating to medical science from the third century till the commencement of modern times. After him the only writers deserving particular notice are Oribasius of Pergamus, physician to the Emperor Julian in the fourth century; Aëtius of Amida, who lived probably in the sixth century; Alexander Trallianus, who lived something later; and Paulus Aegineta, who belongs to the end of the seventh. [W. A. G.]

ME'DICUS (*ἰατρός*), the name given by the ancients to every professor of the healing art, whether physician or surgeon, and accordingly both divisions of the medical profession will here be included under that term. In Greece and Asia Minor physicians seem to have been held in high esteem; far more so than at Rome. This was at least to some extent due to the religious sense, *ἰατρικὴ* and *μαντικὴ* being regarded as akin (Eustath. *ad Il.* i. 63), and to the apotheosis of Aesculapius, of whom physicians speak as *ὁ ἡμέτερος πρόγονος* (Plat. *Symp.* p. 186 A). When we meet such expressions as that in Athen. xv. p. 666 b, *εἰ μὴ ἰατροὶ ἦσαν οὐδὲν ἂν ἦν τῶν γραμματικῶν μωρότερον*, the allusion is to the pedantry of physicians after the type ridiculed by Molière, and does not show a general depreciation of their class. Aelian mentions one of the laws of Zaleucus among the Epizephyrian Locrians, by which it was ordered that if any one during his illness should drink wine contrary to the orders of his physician, even if he should recover, he should be put to death for his disobedience (*Var. Hist.* ii. 37); and, according to Mead, there are extant several medals struck by the people of Smyrna in honour of different persons belonging to the medical profession (*Dissert. de Nummis quibusdam a Smyrnaeis in Medicor. Honor. percussis*, 4to. Lond. 1724). According to the Decree of the Athenians and the Life of Hippocrates by Soranus (Hippocr. *Opera*, vol. iii. pp. 829, 853, ed. Kühn), the same honours were conferred upon that physician as had before been given to Hercules; he was voted a golden crown, publicly initiated into the Eleusinian mysteries, and maintained in the Prytaneum at the state's expense. Both these pieces, however, are more legendary than historical. (Compare Plin. *H. N.* vii. § 123.) The physician made up his medicines himself, and either sat in his *ἰατρεῖον*, which was both a consulting-room and a dispensary (called also *ἐργαστήριον*, Aeschin. *in Timarch.* § 124), or went a round of visits (Plat. *Legg.* iv. 720 C. For these *ἰατρεῖα* cf. Poll. x. 46; Plat. *Legg.* i. p. 646 C). Here he had also assistants and apprentices or pupils (Plat. *Legg.* iv. *l. c.*; Aeschin. *in Timarch.* § 40). In the former passage the assistant doctors are slaves, on which point cf. Diog. Laert. vi. 30. No doubt slaves only as a rule were attended by slave doctors, and free men by free, but it is noticeable that Plato, when he says this, qualifies by *ὡς ἐπὶ τὸ πλεῖστον*. When Hyginus, *Fab.* 274, says that there was a law at Athens against any slave practising, he must allude, if his assertion is true at all, to the state physicians.

Though hospitals are mentioned in Roman writers (Cels. *de Medic.* i. *praef. sub fin.*; Colum. *de Re Rust.* xi. 1, 18; Sen. *Epist.* 27, § 1) after the time of Augustus [see VALETUDINARIA], they are never, with one single exception in Crates, mentioned by Greek writers before the Roman period. The function, so far as it was



Aesculapius and a Sick Man. (Millin, *Gal. Myth.*, tav. 32, No. 105.)

performed at all, was discharged by the temples of Aesculapius, and accordingly the chief places of study for medical pupils were the Ἀσκληπιεῖα, or temples of Aesculapius, where the votive tablets furnished them with a collection of cases. Hence we find in ancient works of art Aesculapius represented as visiting the sick. The Asclepiadae [MEDICINA] were very strict in examining into and overlooking the character and conduct of their pupils, and the famous Hippocratic oath (which, if not drawn up by Hippocrates himself, is certainly very ancient) requires to be inserted here as being the most curious medical monument of antiquity. "I swear by Apollo the physician, and Aesculapius, and Hygeia (*Health*), and Panaceia (*All-heal*), and all the gods and goddesses, calling them to witness that I will fulfil, according to the best of my power and judgment, this oath and written bond:—to honour as my parents the master who has taught me this art, and to share my substance with him, and to minister to all his necessities; to consider his children as my own brothers, and to teach them this art should they desire to follow it, without remuneration or written bond; to admit to my lessons, my discourses, and all my other teaching, my own sons, and those of my tutor, and those who have been inscribed as pupils and have taken the medical oath; but no one else. I will prescribe such regimen as may be for the benefit of my patients, according to the best of my power and judgment, and preserve them from anything hurtful and mischievous. I will never, if asked, administer poison, nor be the author of such advice; neither will I give to a woman a pessary to produce abortion. I will maintain the purity and integrity both of my conduct and of my art. I will not cut any one for the stone, but will leave the operation to those who cultivate it. Into whatever dwellings I may go, I will enter them for the benefit of the sick, abstaining from all mischief and corruption, especially from any immodest action, towards women or men, freemen or slaves. If during my attendance, or even unprofessionally in common life, I happen to see or hear of anything which should not be revealed, I will consider it a secret not to be divulged. May I, if I observe this oath, and do not break it, enjoy good success in life, and in [the practice of] my art, and be esteemed for ever; should I transgress and become a perjurer, may the reverse be my lot."

Some idea of the income of a physician in those times may be formed from the fact mentioned by Herodotus (iii. 131) that the Aeginetans (about the year B.C. 532) paid Democedes from the public treasury one talent per annum for his services, *i.e.* (if we reckon the Aeginetan drachma to be worth 1*s.*) not quite 304*l.*; he afterwards received from the Athenians one hundred minae, *i.e.* (reckoning the Attic drachma to be worth 9¾*d.*) rather more than 406*l.*, and he was finally attracted to Samos by being offered by Polycrates a salary of two talents, *i.e.* (if the Attic standard be meant) about 422*l.* Valckenaer doubts the accuracy of this statement of Herodotus with respect to the Aeginetans and Athenians, but we have no right to reject it, and it is accepted as true by Boeckh (*Staatshaush.* i.^{3} 153). A physician, called by Pliny both Erasistratus (*H. N.* xxix. § 5) and Cleombrotus (*H. N.* vii. § 123), is said by him to have received one hundred talents, *i.e.* considerably over 20,000*l.*, for curing king Antiochus.

State physicians were employed in Greece (from Democedes downwards). They were selected on the ground of knowledge evidenced in their private practice (Xen. *Mem.* iv. 2, 5; Plat. *Gorg.* 455 B, 514 D). In Plat. *Polit.* p. 259 A we see them distinguished from those who practised privately: their practice and official status are described by the word *δημοσιεύειν* specially applied to them, and in their public capacity they received salary but took no fees (Aristoph. *Av.* 587; *Acharn.* 994); their expenses, however, were paid besides their salary, and they received public honours for distinguished service (*C. I. A.* ii. 256, p. 424). It appears from Diod. xii. 13 that they attended gratis any one who applied to them, and it is at least probable that they were bound to give their services on military expeditions. From Aristoph. *Plut.* 407 it appears that in that period of depression at Athens the office was discontinued from motives of economy. [W. A. G.]

As regards the rise and progress of the medical profession at Rome, we must distinguish between the slaves skilled in medicine, who were kept in the larger households, and the physician in general practice. The former, no doubt, came earlier in date, and those who could afford skilled slaves for medical treatment already employed them, when for the masses there was no practising physician: but in the yet earlier times for all alike, and for the general public to a comparatively late period, the treatment of sickness was by traditional family recipes, partly founded on experience, partly on superstition, the Romans being for the most part, as late as the 600th year of the city (according to Pliny, *H. N.* xix. § 11). "sine medicis nec tamen sine medicina." A little earlier however than this (B.C. 219), says Pliny on the authority of Cassius Hemina, the first professed physician, the Greek Archagathus, came to Rome. He was made a citizen and started in a shop at the public expense (Plin. xxix. § 12): but his treatment was unpopular from its heroic method, "a saevitia secandi urendique." There was much opposition, for the Romans regarded with suspicion the skill of the foreigners, and shunned the calling themselves as a degradation. Cato, who still held to the old custom, and used a family manual of medicine (*commentarium*), "quo mederetur filio, servis et familiaribus," strongly opposed the whole class of medici, against whom he warns his son, as banded together to kill Roman citizens. In Plautus (*Menaechm.* v. 1) we have perhaps evidence of the same mistrust and contempt; but it is never possible to assume that the customs and sentiments described in Plautus are Roman rather than Greek.

Gradually however, after the time of Archagathus, the number of foreign physicians in Rome increased, alike those in private houses, who were either slaves (cf. Suet. *Ner.* 2) or freedmen, and those who had general practice. As a household physician of this kind we may instance Strato from the *Cluentius* of Cicero (63, 176). We have the price of a slave physician fixed at 60 *solidi* (Just. *Cod.* vii. 7, 1, 5). The practising physicians at Rome were nearly all of the freedman class (see the inscriptions cited by Marquardt, *Privatleben*, p. 772). They had booths (*tabernae*), where they practised with slaves or freedmen as their assistants and pupils, whom they took about with them in their visits (Mart. v. 9). Few Romans took up the profession (though we hear of Vettius Valens, a man of equestrian rank in the reign of Claudius); and Julius Caesar, avowedly to encourage their residence, gave the citizenship to foreign physicians (Suet. *Jul.* 42), with the result which he desired.

Among physicians who seem to have risen to greater repute we have Asclepiades of Prusa (Cic. *de Or.* i. 14, 62; cf. Plin. *H. N.* vii. § 124); Asclapo of Patrae, whom Cicero treated as a friend (Cic. *ad Fam.* xiii. 20); Alexio, for whom he seems to have had even greater regard (*ad Att.* xv. 1); Antonius Musa, the freedman and trusted physician of Augustus (Suet. *Aug.* 59; cf. Hor. *Ep.* i. 15, 3); M. Artorius (Vell. Pat. ii. 70, 1; Plut. *Brut.* 41); A. Cornelius Celsus, who wrote a medical treatise under Tiberius; Eudemus (Tac. *Ann.* iv. 3), &c.

The professional gains of physicians under the Empire seem often to have been large: we are told of Stertinius by private practice making more than 5,000*l.* a year, and the surgeon Alcon amassing a fortune of nearly 100,000*l.* by a few years' practice in Gaul (Plin. *H. N.* xxix. §§ 7, 22; cf. Mart. xi. 84). Regular medical posts were instituted with large appointments: as court physicians with salaries varying from 250.000 to 500,000 H.S. (Plin. *l. c.*); as doctors for the army, for gladiatorial schools (*C. I. L.* vi. 10171), and for the poorer public [ARCHIATER]. Apart from these state appointments the practice was entirely free from control or training: as a rule probably the training was gained by the sort of apprenticeship to some medicus described above, but anyone was at liberty to practise, and, in the words of Pliny, "experimenta per mortes facere"; ignorance was not, as in our country, penal, and hence "medico hominem occidisse summa impunitas" (Plin. xxix. § 18).

Besides the archiatri at Rome itself (one for each region), there were by order of Antoninus Pius in each city of Asia Minor state physicians (paid by the state, with immunity from taxes), in numbers varying from five to ten according to the size of the town (Dig. 27, 1, 6, § 2; 59, 9, 1; see Friedländer, iii. ch. 4). We can trace specialist physicians also, such as the oculist (*ocularius* or *ab oculis*), the aurist (*auriarius*). (Orelli, 4228, 2983; *C. I. L.* vi. 6192; 8908.) The profession of dentist is implied at a very early date by the remarkable extract from the XII. Tables in Cic. *de Leg.* ii. 24, 60, relating to teeth stopped with gold. (See further Mart. x. 56.) We may also notice that female doctors (*medicae*) for attendance on women, apparently distinct from midwives (*obstetrices*), are found in many inscriptions (see Marquardt, *op. cit.* 779).

As regards army doctors among the Greeks, we find them in the heroic age when the *ἰητρὸς ἀνὴρ* is *πολλῶν ἀντάξιος ἄλλων*. It would appear from Homer, *Il.* xvi. 28, that there were several; perhaps, as some suggest, each contingent had an *ἰητρός*. In historical times we may learn something of their presence from Xenophon, *Anab.* iii. 4, 30; *Cyrop.* i. 6, 16, iii. 2, 12, v. 4, 17. Perhaps, as Dr. Hager suggests (*Journ. of Philology*, vol. viii. No. 15), the *δημόσιοι ἰατροὶ* had to accompany the army, as was the case in Egyptian armies (Diod. i. 82). [For Roman army doctors, see EXERCITUS, Vol. I. p. 802 *b*; for quack doctors, PHARMACOPOLA; for hospitals, VALETUDINARIA; for surgeons, CHIRURGIA; and see also the articles ARCHIATER, IATROSOPHISTA.]

(For this article and the preceding, reference may be made, besides the ancient authorities, to Becker-Göll, *Charikles*, iii. 48 ff.; *Gallus*, ii. 139 ff.; Marquardt, *Privatleben*, 772 ff.; Mahaffy, *Social Life in Greece*, 290; Daremberg, *Hist. de la Médecine*, ch. i.; Vercoutre, *La Médecine dans l'antiq.*, *Revue Archéol.*, 1880; Friedländer, *Sittengeschichte*, i.^{5} 298 ff.) [G. E. M.]

MEDIMNUS (*μέδιμνος* or *μέδιμνος σιτηρός*), the principal dry measure of the Greeks. It was used especially for measuring corn. It contained 6 *hectes*, 12 *hemiecta*, 48 *choenices*, 96 *xestae* (*sextarii*), 192 *cotylae*, and 1152 *cyathi*. The Attic medimnus was equal to six Roman modii, or two amphorae (Nepos, *Att.* 2; Cic. *in Verr.* iii. 42, 110; 49, 116)=52·53 litres, and therefore the Attic medimnus contained nearly 12 imperial gallons (11·556 gallons) or 1½ bushel. The Aeginetan and Ptolemaic were about half as much again, or in the ratio of 3:2 to the Attic; the Aeginetan being = 72·7 litres, the Ptolemaic = 78·8 (Hultsch, p. 505). The Sicilian was equal to the Attic. For the values of the subdivisions of the medimnus, see the Tables. (Hultsch, *Metrologie*, pp. 104, 503; MENSURA.) The symbol in Greek MSS. for medimnus was M^e. (Hultsch, *Metrol. Script.* i. 170). [P. S.] [G. E. M.]

MEDITRINA'LIA, a festival on October 11th in honour of Meditrina, the old Roman goddess of healing (cp. Varro, *L. L.* vi. 21; Fest. *s. v.*). On this day, when the new wine (*mustum*) was tasted, it was the custom to pour a libation with the prayer that the wine might have health-giving powers, "novum vetus vinum bibo, novo veteri vino morbo medeor." According to the Calendar of Amiternum it was "feriae Jovi," and perhaps a libation was poured to him as the god of the prosperity (*salus*) of the state, as well as to Meditrina, with whose healing power the festival was identified. We may compare the prayer used at the *πιθοίγια*, "*ἀβλαβῆ καὶ σωτήριον τοῦ φαρμάκου χρῆσιν γενέσθαι*;" and also the *primitiae pomorum*, Plin. *H. N.* xxviii. § 23. (Preller, *Rom. Myth.* pp. 175, 594; Marquardt, *Staatsverw.* iii. 584.) [L. S.] [G. E. M.]

MEGALE'SIA, MEGALENSIA, or **MEGALENSES LUDI**. It is important to mark the distinction between the celebration of this festival under the Republic, and its later development under the Empire. We find it early in the 2nd century B.C. celebrated at Rome in the month of April and in honour of the great mother of the gods (Cybele, *μεγάλη θεός*, whence the festival derived its name; Cic. *de Harusp. Resp.* 12, 24). The sacred stone representing the goddess was brought to Rome from Pessinus in the year 204 B.C., and the day of its arrival was solemnised with a magnificent procession, lectisternia, and games, and great numbers of people carried presents to the goddess, whose temporary resting-place was the temple of Victory on the Palatine. (Varro, *L. L.* vi. 15; Liv. xxix. 14.) The celebration of the Megalesia, however, did not begin till ten years later (194 B.C.), and the temple which had been vowed and ordered to be built in 204 B.C. was completed and dedicated by M. Junius Brutus (Liv. xxxvi. 36) on April 10, B.C. 191, after which time the celebration was annual. The temple (*Matris Magnae Idaeae*) was on the Palatine, a position within the pomoerium, which, as Marquardt points out, shows that she was not regarded as a foreign deity: she came from Ida, the home of their race. The rites were originally under the charge of a Phrygian priest and priestess (Dionys. ii. 19); but the numbers were afterwards greatly increased, and we find an *archigallus* at their head, as chief priest, and a *sacerdos maxima matris*, as chief priestess, mentioned in numerous inscriptions. (See Marquardt, *Staatsverw.* iii. 368, note 6.) These archigalli bear Roman names; but the ordinary galli were foreigners. The priestly dress is a *mitra* (Propert. v. 7, 61), a veil, a necklace (*occabus*), and a purple dress: a small image of the goddess or of Attis in an *aedicula* was suspended at his breast: in his hand he bore a basket of fruit, cymbals, and flutes. The festival lasted for six days, beginning on the 4th of April (reading *Prid. Non.* in Liv. xxix. 14, according to the Cal. Praen.). The season of this festival, like that of the whole month in which it took place, was full of general rejoicings and feasting. It was customary for the Patricians on this occasion to invite one another to their repasts (*mutitare*), and the extravagance was such, that a senatusconsultum was issued in 161 B.C., prescribing that no one should go beyond a certain extent of expenditure. (Gellius, ii. 24; compare xviii. 2.)

The games which were held at the Megalesia were scenic, but there is some indication that they were also *circenses* (Mommsen, *C. I. L.* i. 391). They were at first held on the Palatine in front of the temple of the goddess, but afterwards also in the theatres. (Cic. *de Harusp. Resp.* 11, &c.) The day which was especially set apart for the performance of scenic plays was the third of the festival. (Ovid. *Fast.* iv. 377; Ael. Spartian. *Antonin. Carac.* c. 6.) We know that four of the extant plays of Terence were performed at the Megalesia. Cicero (*de Harusp. Resp.* 12, 24), probably contrasting the games of the Megalesia with the more rude and barbarous games and exhibitions of the circus, calls them *maxime casti, solemnes, religiosi:* they were under the superintendence of the curule aediles (Liv. xxxiv. 54), till in B.C. 22 Augustus took the cura ludorum from the aediles and gave it to the praetor. The procession of galli, which began the festival (Ovid. *Fast.* iv. 179 ff.), bore the sacred image in a chariot through the city. The priests sang *Greek* hymns and collected coins from the people as they went (Cic. *de Leg.* ii. 16, 40): the passage in Lucret. ii. 618 ff. describes the procession.

Under the Empire there was a great increase in the ceremonial, which took a new character, more Eastern, and more elaborately symbolical. In its first observance it was a thanksgiving for the aid granted in the Second Punic War, and a time of feasting and theatrical shows for the patrician houses. In its later form Cybele represents the earth and fruitfulness, and it is recollected that the year of her entry was marked by great plenty (Plin. *N. H.* xviii. § 16). Attis represents the sun, and in this sun-myth it is observed by Macrobius (i. 21, 7) that the day of rejoicing (*Hilaria*) is that day when the sun begins to make the day longer than the night. The tendency to adopt the full Phrygian rites instead of the simpler rites first introduced may perhaps be beginning when Lucretius (*l. c.*) and Catullus take up the subject, and it appears from inscriptions that the Phrygian rites existed earlier in South Italy (see Preller, *Röm. Myth.* p. 736): but they were not fully celebrated under the Republic, and perhaps not before the time of Claudius. Preller notes that the first mention of the March ceremonies is in Lucan, i. 599 (cf. Suet. *Oth.* 8). The festival so developed began on March 15, which day stands in the Calendar as *canna intrat*, because there was then a procession of men and women bearing reeds, which were sacred to Attis. There is some allusion to Attis hiding himself among reeds, and being there discovered by Cybele. There were colleges of *Cannophori* or *Cannofori* in several places, the heads of which are called *pater* and *mater*. Inscriptions about them have been found at Locri, Ostia, Milan, &c. (*C. I. L.* x. 24; v. 5850). They have sometimes been confused with κανηφόροι. On March 22 was the day of *Arbor intrat*, when the sacred pine of Attis (Ovid. *Met.* x. 103) was borne to the temple of Cybele on the Palatine. The pine was hung with wool and with violet crowns (Arnob. v. 16). For this service there was a *collegium dendrophororum Matris Magnae* (*C. I. L.* vi. 641). March 24 was *Dies sanguinis*, on which, to commemorate the wounds of Attis, the *archigallus* cut his arm with a knife; it was a fast and a day of mourning (Mart. xi. 84; Arnob. *l. c.*): on March 25 was the day of rejoicing (*Hilaria*), a great festival (Lamprid. *Alex. Sev.* 37; Macrob. *l. c.*); and, finally, on March 27 a procession of priests bore the sacred image on a chariot down to the Almo (Mart. iii. 47; Sil. Ital. viii. 365), to wash it in the place where the Almo joins the Tiber near the Ostian road, half a mile from the walls (Burn's *Rome and Campagna*, p. 329). The image was the sacred black stone (Preller suggests a meteorite), to which a female head of silver was added. The ceremonies ended with a general carnival. The Ludi Megalenses of the original Megalesia, ludi scenici and ludi circenses, were as before for seven days, from April 4 to April 10. It should be noted that the bathing of the goddess was not an entirely new ceremony, since Ovid mentions it as belonging to her first entry, and we hear also of the image being bathed in the sea by order of the Sibylline books in the year B.C. 38 (Dio Cass. xlviii. 43); but this was an exceptional case, and there is no trace of the annual March ceremonies under the Republic. The ceremonies lasted till a late period in various places. Marquardt cites a passage from Gregory of Tours, who says that Simplicius (in the 5th century) saw the procession of the image at Autun, with the attendants singing and playing before it *pro salvatione agrorum ac vinearum*. (See further on this subject Preller, *Röm. Myth.* pp. 448 ff. and

735 ff., and Marquardt, *Staatsverwaltung*, pp. 367–374, where a mass of authorities from ancient writers and inscriptions is given in the notes.) [L. S.] [G. E. M.]

MELITENSIS VESTIS, a specially fine and soft material for dresses and the covering of couches made at Malta, a relic probably of the Phoenicians, who colonised it. Diodorus (v. 12, 2) says that the inhabitants were good in all industries, and particularly in manufacturing *ὀθόνια λεπτότητι καὶ μαλακότητι διαπρεπῆ* (cf. Hesych. *s. v.* Μελιταῖα). Isidore (*Orig.* xix. 22, 21) speaks of a *textrinum ad muliebrem vestem conficiendam*, and the same material is spoken of as a luxury in Cic. *Verr.* ii. 72, 176; 74, 183. This gives probability to the reading *Melitensia* in Lucret. iv. 1129. [G. E. M.]

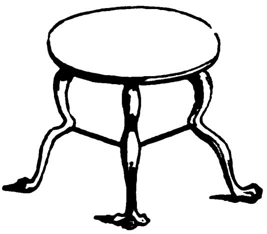
MELLEIREN (*μελλείρην*). [EIREN.]

MEMBRA'NA. [LIBER, p. 58.]

MENELAEIA (*μενελάεια*, Hesych. *s. v.*), a festival celebrated at Therapnae in Laconia, in honour of Menelaus and Helen, who were believed to be buried there. (Paus. iii. 19, 9; Isocr. *Helen. Encom.* § 61.)

Though, however, Menelaus was associated in this worship, and the festival connected with the place as stated above sometimes bears his name, it is a question whether the Ἑλένεια is not the name under which the great festival of Therapnae should be known. In divine honours Helen was certainly the prominent figure, regarded as a goddess of dawn; and, further, as the bestower of grace and beauty on children (Herod. vi. 61). We have no description of the separate rites for Menelaus; but there is mention of a procession of Spartan maidens to Therapnae in honour of Helen. They drove in the carriages with wicker tilts called *κάνναθρα* or *κάναθρα* (Hesych. *s. v.*). [CANATHRON.] See also Preller, *Griechische Myth.* ii. p. 109. [L. S.] [G. E. M.]

MENSA (*τράπεζα*), a table. The simplest kind of table was one with three legs, round, called *cilliba* (Festus, *s. v.*; Varro, *L. L.* v. 118: cf. Hor. *Sat.* i. 3, 13; Ovid. *Met.* viii. 662; Xen. *Anab.* vii. 3, § 10). It is shown in the drinking-scene painted on the wall of a wine-shop at Pompeii. (Gell's *Pompeiana*, 1832, vol. ii. p. 11.) (See woodcut.) It often had legs carved to represent the feet of animals (see woodcut in Vol. I. p. 395). In Homeric times, beside the seat (*θρόνος*) of each guest a small table was placed to receive his portion of food, which was cut up on the large dresser (*ἔλεος*). The table was probably then, as in later times when the same custom of small tables prevailed, lower than the seat, as is seen in the vase-painting below. (See also CENA, Vol. I. p. 394.) The term *τράπεζα*, though commonly used in Greek for a table of any kind, must, according to its etymology, have denoted originally a four-legged table. Accordingly, in paintings on vases, the tables are usually represented with four legs, of which an example is given in the cut below. (Millin, *Peintures de Vases Antiques*, vol. i. pl. 59.) Horace used at Rome a dining-table of white marble, thus combining neatness with economy (*Sat.* i. 6, 16). For the houses of the opulent, tables were made of the most valuable and beautiful kinds of wood, especially of maple (*σφενδαμνίνη*, Athen. ii. p. 47 d; *acerna*, Hor. *Sat.* ii. 8, 10; Mart. xiv. 90), or of the citrus of Africa, which was a species of cypress, the *Thuja articulata* of the Atlas range. (*Citrea*, Cic. *Verr.* iv. 17, 37; Mart. ii. 43, xiv. 89; Plin. *H. N.* xiii. §§ 91–99.) For this purpose the Romans made use of the roots and tubers of the tree, which, when cut, displayed the greatest variety of spots, beautiful waves, and curling veins. These were called *tigrinae* or *pantherinae*, according to the marks on them, or are compared to a peacock's tail (cf. *lectus pavoninus*, Mart. xiv. 85). The finest specimens of tables so adorned were sold for many thousand pounds. Pliny (*l. c.*) mentions such prices as a table bought by Cicero for 500,000 sesterces, by Asinius Pollio for a million (= about 8,500*l.*).



Table, from Gell's *Pompeiana*.

Table beside a dining-couch. (From an ancient vase.)

One of the principal improvements was the invention of the *monopodium*, a round table (*orbis*) supported by a single foot; this with other kinds of expensive and elaborate furniture was introduced into Rome from Asia Minor by Cn. Manlius after the war with Antiochus, B.C. 187 (Plin. *H. N.* xxxiv. § 14; cf. Liv. xxxix. 6). The value of these *orbes*, which were sections of the trunk of the tree, depended on their size. Pliny (xiii. § 93) mentions as remarkable the table of Ptolemy, king of Mauretania, 4½ feet in diameter, but of two joined pieces; that of Nomius, a freedman of Tiberius, 3 ft. 11¼ in.; and that of Tiberius, 4 ft. 2 in. in diameter. These *orbes* were often supported on ivory feet (Juv. xi. 122; Mart. ii. 43, ix. 22). Sometimes the citrus or maple was only a veneering (Plin. xxxiii. § 146). Tables were also made of metal, bronze, silver (Petron. 73) or gold (Mart. iii. 31; perhaps overlaid with plates of gold). From the fashion of round tables came that of arranging the lecti so as to form a continuous crescent-shaped couch called *sigma*, from the form c of that letter (*sigma* was the couch, *not* the table), also called *stibadium* and *accubitum* (Mart. x. 48; xiv. 87). (For further description of the arrangement of table and couches, see TRICLINIUM; for *mensae Delphicae*, see ABACUS.) The tables among the Greeks, and until later times among the Romans, were not covered by cloths, which only came into use about Domitian's time [MANTELE]. They were cleansed by wet sponges (Hom. *Od.* i.

111, xx. 151; cf. Mart. xiv. 144), for which purpose the Romans also used a thick cloth with a woolly nap (*gausape*, Hor. *Sat.* ii. 8, 11).

Among the Greeks the small tables described above were removed bodily with their course of dishes on them (Athen. ii. p. 60 b, v. p. 150 a), whence the phrase *πρῶται, δεύτεραι τράπεζαι*, which answer to the Latin *cena prima*, &c. As the board of the Greek table is sometimes called by a distinct name, *ἐπίθημα* (Athen. ii. p. 49 a; Pollux, x. 81), it appears that it was sometimes separate from the tripod or other stand (*κιλλίβας*) on which it was set. The Roman practice, however, was to bring in the courses (*fercula* or *missus*) on trays (*repositoria*), which were set down on the *mensa*. Such phrases as *mensas removere*, &c. (Verg. *Aen.* i. 216, &c.) mean the conclusion of the meal; and the phrase *mensae secundae* means not "second course," but dessert, which was regarded as a break in the entertainment, and came after the offering to the Lares, which was the Roman grace after meat. [See Cena, Vol. I. p. 396 *b*; Lararium.]

The name of *τράπεζα* or *mensa* was also given to a flat tombstone (Cic. *de Leg.* ii. 26, 66). Of *mensae sacrae* in the temples there were two sorts: (i.) a sort of subsidiary altar set before the image in the cella, to receive offerings of fruit, flowers, coins, &c., so that in inscriptions we find dedication of "ara et mensa" (*C. I. L.* x. 205); and (ii.) *mensae anclabres*, tables about the temple upon which vessels, &c., required in the sacred rites might be placed, like credence tables (Marquardt, *Staatsverw.* iii. 165). Like the former kind were the *mensae curiales*, for the offerings (to Juno Curitis especially) by the Flamen curialis in each curia. (For the mercantile sense, see Argentarii; and, for further description of *mensae* and *τράπεζαι*, Becker-Göll, *Charikles*, iii. p. 81; *Gallus*, ii. 350; Marquardt, *Privatleben*, p. 723; Mayor's notes on Juv. i. 137.) [J. Y.] [G. E. M.]

MENS'ARII. [Argentarii.]

MENSIS. [Calendarium.]

MENSO'RES, measurers or surveyors. This name was applied to various classes of persons whose occupation was the measurement of things.

1. To land-surveyors who measured and defined the extent of fields, apparently the same as the *agrimensores* (Colum. v. 1, 2; Ov. *Met.* i. 136; Agrimensores).

2. To military officers, who had a twofold duty, as measurers of the ground for a camp, and measurers of corn for the troops, unless indeed they were two distinct classes of officers. (i.) As measurers of the ground for the camp (Veget. *R. Mil.* ii. 7) they were usually called *metatores* (Cic. *Phil.* xi. 5, 12; xiv. 4, 10). [Castra, Vol. I. p. 372 *b*.] They were a kind of quartermaster-general, and thus provided quarters for the soldiers in the towns through which they passed, and where they made a temporary stay (Cod. Theod. 6, 34, 1; 7, 8, 4.) (ii.) In military inscriptions we find *mensor frumenti* (Orelli, *Inscr.* No. 3523), and sometimes simply *mensor* (Orelli, 3473; Henzen, 6820; Marquardt, *Röm. Staatsverw.* ii. p. 536; Walter, *Gesch. d. Röm. Rechts*, § 343).

3. *Mensores frumentarii* was the name of officers who had to measure the corn which was conveyed up the Tiber for the public granaries (Dig. 27, 1, 26; *mensores Portuenses*, Cod. Theod. 14, 4, 9; 14, 15, 1). They were stationed in the port of Ostia, and were employed under the *praefectus annonae*. Their title is mentioned in several ancient inscriptions (*Corpus mensorum frumentariorum Ostiensium*, Henzen, 7194; *mensores frumentarii Cereris Augustae*, Orelli, 4190).

4. *Mensores aedificiorum*, sometimes applied to architects, or more especially to such architects as conducted the erection of public buildings, the plans of which had been drawn up by other architects (Plin. *Ep.* x. 19 (28), 5; x. 20 (29), 3). [L. S.] [W. S.]

ME'NSTRUUM. [Servus.]

MENSU'RA (*μέτρον*). The simplest and probably most primitive measures are those derived from the various parts of the human body. Such was the view of the ancients themselves (cf. Heron Alexandr. *Tab.*, *τὰ μέτρα ἐξεύρηνται ἐξ ἀνθρωπίνων μελῶν ἤγουν δακτύλου κονδύλου παλαιστοῦ σπιθαμῆς πήχεως βήματος ὀργυιᾶς καὶ λοιπῶν*; Vitruv. iii. 1, 5, "mensurarum rationes . . . ex corporis membris collegerunt, uti digitum palmum pedem cubitum"). Among primitive and unmixed races, where all live under the same conditions, idiosyncrasies of stature are rare, and consequently the average sized foot will give a standard sufficiently accurate for all their purposes. When, however, peoples of different stocks come into contact, and different modes of life may cause differences in stature among the various classes of a single community, many variations of the foot or cubit will naturally be found.

The growth of the arts of civilisation will require greater accuracy in measurements of various kinds: accordingly the interrelations of various standards will be carefully ascertained by the use of some small natural object of uniform size, such as the barleycorn of the English system. Finally, with the advance of science, efforts will be made to get some more general units fixed with great accuracy, and probably to bring those into relation with the measures of capacity and standards of weight.

Measures of capacity are probably first obtained from natural products of a uniform size. The Hebrews and ancient Irish employed the hen's egg as their unit; at Zanzibar a small gourd is now employed as a general unit; and the Chinese use the joints of the bamboo in a similar fashion. The Roman cochlear (from *cochlea*, "a mussel"), their smallest measure of capacity, and possibly the *κύαθος* of the Greeks (which perhaps originally meant "a gourd"), indicate a like origin for standards of capacity. It is natural to expect many local variations in such measures, and it is only a strong centralised government which can introduce some universal standards, such as those established in this country by the Act of 1824. Of such regulation of standards in ancient times we have examples in the case of Pheidon of Argos, who, according to Herodotus, fixed the standard measures used by the Peloponnesians (*τοῦ τὰ μέτρα ποιήσαντος Πελοποννησίοισι*, vi. 127); in Solon, who fixed the standards of weights and measures at Athens (*Decret. ap.* Andocid. 11, 25, *νόμοις χρῆσθαι τοῖς Σόλωνος καὶ μέτροις καὶ σταθμοῖς*), and in Augustus at Rome. It is possible that at such a time an effort may be made to fix certain relations between the standards of length, capacity, and weight.

The Tables at the end of the volume give a general view of the various systems of measures of the ancients, setting forth as accurately as possible their value, according to modern standards. The following pages give a more detailed account of the different systems. A large mass of valuable information has reached us from the ancient metrologists, whose fragments have been collected by Hultsch (*Metrologicorum Scriptorum reliquiae*, Leipzig, 1864–6). The tables named after Heron, an Alexandrine mathematician, are of especial value, although they are probably of various dates; whilst the excerpts from the ancient lexicographers, such as Pollux, afford much important information.

The German metrologists have assumed that the Greeks and Romans, who derived theirs from the Greeks, borrowed their standards from the East: one school, that of Brandis and Hultsch, deriving them from the Chaldaeans, whilst that of Lepsius derives not merely the Greek, but also the Chaldaean from Egypt, although both alike admit the ultimate origin to be the parts of the human body. It is therefore a question worth considering how far like conditions of development may not have produced the close general approximation between the various systems.

Whilst admitting that measures of length were based on the parts of the human body, the German metrologists have sought outside Greece for the standards there in use. One school—that of Brandis and Hultsch — consider the standards of measures and weights to have been invented by the Chaldaeans: the other school—that of Lepsius (*Längenmasse der Alten*)—makes the Greeks to have borrowed their systems from the Egyptians. The latter had two cubits, one based on the average length of the fore-arm of a full-grown man, from the point of the elbow to the tip of the middle finger. This was fixed at 0·450 metre. Beside it was another cubit, evidently of later construction, which was about one-sixth larger than the natural cubit. The fact that it varies so much from nature shows that it is later in point of time. It may be fixed at 0·525 metre. This cubit is found not only in Egypt and in Palestine, but also in the regions of the Euphrates and Persia, although in the latter cases somewhat raised, as it may be fixed at about 0·532 metre. In both Egypt and Mesopotamia it is called the *royal* cubit, as we learn in the one case from the inscriptions on the measuring-rods, which have survived; in the other from the testimony of Herodotus (i. 178). Whilst the natural cubit was used for the general purposes of life, according to Lepsius the *royal* cubit was exclusively used in building. It would seem, however, that our data are not yet sufficient to enable us to decide whether the Egyptians borrowed the royal cubit from the peoples of the Euphrates, or whether the latter borrowed it from the Egyptians. If the Egyptians came from Asia into the Nile Valley (as supposed by the best modern authorities), there is no reason why they should not have brought the *royal* ell with them from their early home. The Egyptian cubit was subdivided into six *palms*, each containing four *fingers*. But at Babylon the sexagesimal system influenced the subdivision of the cubit. The Chaldaeans made the cubit consist of six *hands*, each of which contained five *fingers*. The *royal* cubit thus contained *thirty fingers*, according to Lepsius. But there can be little doubt that Lepsius is wrong. Dörpfeld (*Mittheil.* 1883, p. 36) has shown from Herod. i. 178, vii. 117, that the *μέτριος πῆχυς* there mentioned is the common Greek cubit: but, as Herodotus says that the royal cubit is three fingers longer than the *μέτριος* (*ὁ δὲ βασιλήϊος πῆχυς τοῦ μετρίου ἐστι πήχεος μείζων τρισὶ δακτύλοισι*), the royal cubit therefore = 27 δάκτυλοι.

In Greece proper at least three different foot-standards were employed,—*Attic*, *Olympic*, and *Aeginetan*. Dörpfeld has shown from the measurements of the cella of the Parthenon, called the Ἑκατόμποδον, that the Attic foot was 295·7 mill. The measurement of the stadion at Olympia has proved the Olympic foot to be 320·5 mill. Tradition said that this was the size of Hercules' foot. (Aul. Gell. i. 1.) The mythical connexion of Hercules with Olympia may indicate Oriental influence. The Aeginetan foot, according to the temple measurements, = 333 mill. Other measures mentioned by the ancient writers are the Philetaerean foot (ποῦς Φιλεταίρειος), which was probably so called from Philetaerus, king of Pergamus, shown by Dörpfeld to = 330 mill.; the Samian cubit, which Herodotus (ii. 168) regarded as the same size as the Egyptian.

In Western Europe we find three foot-standards: the *Italian*, proved from the writings of the Gromatici (Surveyors) and from buildings to be about 275 mill.; the *Roman*, known to us from actual measures to be 296 mill.; and the *pes Drusianus*, used by the Surveyors in Gaul and Germany = 333 mill.

It will be seen that the Attic and Roman standards are practically identical; that so also the *pes Drusianus*, the ποῦς Φιλεταίρειος, the Aeginetan foot, and Ionian foot are almost identical; whilst the Italian foot is almost identical with the Phrygian foot of 277·5 mill.

Method.—It is of course of the greatest importance that in metrological investigations a strictly scientific method should be followed. From the nature of the case it is necessary that we should obtain by means of actual measures, if they still survive, at least one of the units of measure mentioned by the ancient writers. As the tables of Heron and other writings give the comparative values of various units and standards, it follows that if we can obtain with accuracy one such unit, we can deduce from it all the rest. Linear units are of course the most important, as from them we can deduce the itinerary and superficial measures, and the most important of these is the Roman foot.

The Roman Foot.—There are five different ways of determining the length of the Roman foot. These are: (1) from ancient measures still in existence, including feet laid down on sepulchral monuments, and foot-rules found in the ruins of various cities of the Roman empire; (2) from measurements of known distances along roads, both between milestones and between places; (3) from measurements of buildings and obelisks; (4) from contents of certain measures of capacity; and (5) from measurements of a degree on the earth's surface.

(1) It might appear at first thought that

ancient measures in actual existence would at once give the required information. But these measures are found to differ among themselves. They are of two kinds,—foot measures cut upon grave-stones, and brass or iron measures intended in all probability for actual use. From the nature of the case the latter would probably be more exact than the former, and in fact the measures on the gravestones are rudely cut, and their subdivisions are of unequal length, so that they have no pretensions to perfect accuracy, but on the other hand it would be absurd to suppose that they would have been made very far wrong. We may safely conclude that they would have about as much accuracy as a measure hastily cut on a stone by a mason from a foot-rule used by him in working. Three such measures are preserved in the Capitol at Rome, and one in the Capponi collection. They are called the Statilian, the Cossutian, the Aebutian, the Capponian feet. They have been repeatedly measured, but unfortunately the different measurements gave different results. Besides these, we have two models of feet cut on the rocks at Terracina. The bronze and iron foot-rules, of which several have been found at Pompeii, do not precisely agree in length. There was anciently a standard foot measure kept in the Capitol, called the *pes monetalis*, which was probably lost at the burning of the Capitol under Vitellius or Titus.

(2) The itinerary measurements are of two kinds, according as they are obtained by measuring the distance from one place to another, or the distance from one milestone to another on a Roman road. Both methods have the advantage of the diminution of error which always results from determining a lesser magnitude from a greater, but both are subject to uncertainties from turnings in the road, and from the improbability of the milestones being laid down with minute accuracy; and two other serious objections apply to the former mode, namely, the difficulty of determining the points where the measurement began and ended, and the changes which may have taken place in the direction of the road. Both methods have been tried: the former by Cassini, who measured the distance from Nîmes to Narbonne, and Riccioli and Grimaldi, who measured that between Modena and Bologna; and the latter by Cassini, between Aix and Arles.

(3) The measurement of buildings is rather a verification of the value of the foot as obtained from other sources than an independent evidence. (The method was first employed by Raper in his *Enquiry into the Measure of the Roman Foot*, Philosoph. Transact. 1760, who obtained a foot = 295·7 mill.) It is very seldom that we know the number of ancient feet contained in the building measured. We have one such example in the Parthenon, the *cella* of which was called the Hecatompodon, *the hundred-footed* (Plut. *Pericl.* 13; *Cato*, 5), but even in this case we could not have told exactly, till we knew something of the length of the Greek foot, to what part of the edifice this measurement applied. Furthermore, the measurement of the stadion at Olympia laid bare by the German excavations has enabled us to ascertain with accuracy the length of the Olympian foot; but in this case likewise, it would have been impossible to arrive at an accurate result had we not known already that this stadion was 600 feet long. Again, there are the obelisk in the Piazza del Popolo at Rome, and the Flaminian obelisk, the heights of which are given by Pliny (*H. N.* xxxvi. § 71). But the actual heights of these obelisks as compared with Pliny would give a value for the foot altogether different from that obtained from other sources. Indeed, the numbers in Pliny are undoubtedly corrupt, and as they stand it is only the difference of height between the two that can be of any service, and even this gives a result by no means satisfactory. An ingenious emendation from Stuart would remove the difficulty, but it is obvious that a passage which requires a conjectural emendation cannot be taken as an independent authority. There is another mode of deducing the value of the foot from buildings of the dimensions of which we have no information. The building is measured, and the lengths thus obtained are divided by the supposed value of the ancient foot (as derived from other evidence), and if a remainder be left the value of the foot is corrected so that there may be no remainder. It is assumed in this process that no fractions were allowed in the dimensions of the building, and also that the plans were worked out with minute exactness, both of which assumptions are not very probable. In fact these measurements have given different values for the foot. Thus some metrologists have found by this method that two separate foot standards were employed in the temple at Aegina, a supposition which can scarcely be credited. Modern architects do not allow that such calculations could be depended on in modern buildings for determining the true length of the measures by which they were planned. Nor are the dimensions of the parts of mediaeval buildings in our own country, as churches and cathedrals, found to agree exactly, so as to give whole numbers of the standard measure. On the other hand these measurements, like those on roads, have the advantage of involving in all probability very small errors, and of the diminution of the error by division. It must however be borne in mind that buildings, like temples, were liable to have their dimensions conditioned by the nature of the site, and also that those which remain to us have been built on the foundations of older and smaller ones.

The results of these various methods are as follows: (1) The Roman foot as obtained from the measures varies between 295·6 and 296 mill. (2) The foot obtained from itinerary measures is 295·85 mill.; and (3) that obtained from the measurements of buildings at Pompeii by Nissen is 296 mill.

From these results we cannot be far from the truth in setting the Roman foot at 296 mill., or a little less than the English foot (301 mill.).

(4) Some have attempted to deduce the length of the Roman foot from the solid content of the congius of Vespasian. Since the *congius* was ⅛ *amphora*, and the content of the *amphora* was a cubic foot [QUADRANTAL], the process is to multiply the content of the congius by 8, and to extract the cube root of the product. But this method is very uncertain. Hultsch, for instance, will not allow that the measures of capacity were obtained from the linear unit, but rather

from a certain weight of water or wine. Further, there is a doubt about the actual content of the congius; and even granting that the congius had been adapted to the foot with tolerable accuracy, there is a risk of error in reversing the process.

(5) Some French geographers have supposed that the ancient astronomers were acquainted with the dimensions of a great circle of the earth, and that they founded their whole system of measures on the subdivisions of such a circle. But we have no evidence of any sort to show that the ancients were acquainted with any such method.

The Greek Foot.—We have no ancient foot-rules surviving, so therefore we fix the Greek (Attic) foot from the testimony of ancient writers that it was about the same as the Roman, confirming this by the measurements of buildings, such as the Parthenon, from which Dörpfeld has shown the foot to be 295·7 mill. The Olympian foot is derived similarly from the testimony of ancient writers comparing it with other feet, and from the actual measurement of the *stadium*.

Greek Measures of Length.—In Homer the following measures are mentioned: *δῶρον* (=the later *παλαιστή*), *πούς* (in compound *ἑκατόμποδος*), *πυγών* (in adjective *πυγούσιος*), *ὄργυια*, *πλέθρον* (in form *πέλεθρον*). The *πυγὼν* is a short cubit, being the distance from the point of the elbow to the knuckles (*εἰ συγκάμψειας τοὺς δακτύλους, ἀπ' ἀγκῶνος ἐπ' αὐτοὺς πυγὼν τὸ μέτρον, εἰ δὲ συγκλείσειας, πυγμή*). It is to be noted that the *πῆχυς* does not occur as the name of a measure in the poems. Homer makes mention also of a long measure, called simply *μέτρον* (*ὥστ' ἀμφ' οὔροισι δυ' ἀνέρε δηριάασθον μέτρ' ἐν χερσὶν ἔχοντες*, *Il.* xii. 422). It is impossible for us to say what was the length of this measuring-rod—whether it was the length of an *ὄργυια*, or of the *ἄκαινα* or *κάλαμος* of later date. Of course there are no data for fixing the length of the Homeric *πούς*, *ὄργυια*, and *πέλεθρον*.

Superficial Measure.—The unit of superficial measure in Homer is the *γύης* (found only in the compounds *πεντηκοντόγυος* and *τετράγυος*), which probably meant the space traversed by the plough in one day's work. It probably derived its name from the ancient form of the plough (called *αὐτόγυον* by Hesiod), and was thus somewhat analogous to the English *ploughgate*. The term was applied to the patches of ground in the common field (*ἐπιξύνῳ ἐν ἀρούρῃ*, *Il.* xii. 422), which were separated from each other by land-marks (*οὖρα*) made of stones (*Il.* xii 421; xxi. 405), corresponding to Latin *limes*, "balk." In such common fields or early communities the *furrow* was always of a customary length, hence our fur-long (*furrow*-long), which doubtless depended on the distance which a yoke of oxen could drag, and a man could steer, the plough without a rest. The breadth of the *γύης* was the distance between the *οὖρα*, which bounded each side. The Scholiast sets it at about 10 fathoms = 60 feet. But we know from Homer (*Il.* x. 351; *Od.* viii. 124) that the distance between the *οὖρα* of mules—that is, the breadth of the patch ploughed by mules—was greater than that between those of oxen. Consequently the breadth (*πλέθρον*) varied. Now the old name for the *στάδιον* was *αὖλος*, and its double was called *δίαυλος*, from which it is probable that the stadion represented the furrow-long (*αὖλος* being an old form of *αὖλαξ*). The stadion being 600 feet, is therefore ten times the breadth of the *γύης*, a ratio found to exist in similar land systems elsewhere.

Measures of Capacity.—Homer has but the word *μέτρον* to express the unit of both *Dry* and *Liquid* measure. Telemachus (*Od.* ii. 355) takes 20 *μέτρα* of barley-meal as provision for his crew. Some have identified the *μέτρον* both in liquid and dry measure with the Hebrew *saton*, but it is more probable that in the *μέτρον* of barley-meal we have the *μέδιμνος* of later times. It is almost certain that the *μέτρον* used for liquids differed from that used for dry measure. The *μέτρον* of barley-meal is evidently a considerable amount, from the passage quoted above. But as the capacity of the various vessels offered as prizes by Achilles is given in *μέτρα*, it is not probable that the *μέτρον* by which their capacity is expressed is the same as that used for the barley-meal. On the other hand, it seems not improbable that the *μέτρον* used for wine was the same as the *δέπας* or cup of *Od.* ix. 208–10:

> τὸν δ' ὅτε πίνοιεν μελιηδέα οἶνον ἐρυθρόν,
> ἓν δέπας ἐμπλήσας, ὕδατος ἀνὰ εἴκοσι μέτρα
> χεῦε.

To suppose that the proportion was one cup of wine to twenty *μέδιμνοι* of water is absurd; whereas the proportion of one cup of wine to twenty cups of water is sufficiently marvellous to show the strength of the wine without falling into grotesque exaggeration. The word *κοτύλη* occurs occasionally in Homer (only in the Odyssey) in the sense of cup. It probably is the same as *δέπας*, and thus connects the Homeric *δέπας* with the *κοτύλη* of later times.

Greek and Roman Linear Measure. — The *finger-breadth* (*δάκτυλος*, *digitus*) was the smallest measure employed in both systems, and was regarded as the unit (*μονάς*). Later writers, *e.g.* Isidorus, mention the use of the *barleycorn* as the unit, 5 barleycorns making a *finger*, 7 making a *thumb* (*pollex*).

The *κόνδυλος*, the middle joint of the finger, = 2 fingers.

The *παλαιστή* (later *παλαιστής*, in strict Attic *παλαστή*), *δῶρον* (Homer and Hesiod), or *δοχμή* (according to some writers), *palmus*, handbreadth = 4 fingers. This measure was in very common use with both Greeks and Romans.

The *διχάς* = 2 hands = 8 fingers, usually called *ἡμιπόδιον*.

The *λιχάς*, the space between the thumb (*ἀντίχειρ*) and forefinger (*λίχανος*), = 10 fingers.

Ὀρθόδωρον, space from the base of the hand to the finger-tips, = 11 fingers.

Σπιθαμή, span = 3 handbreadths = 12 fingers = ½ cubit. This measure, much used by the Greeks, was not employed by the Romans, who used instead the *dodrans* = ¾ *pes*.

Πούς, *pes*, foot = 16 fingers. The Romans also used their national uncial system in dividing the *pes*, thus giving it 12 parts, which in later times passed into general use.

Πυγών (Homer, Herod. ii. 175, and some other isolated passages), the distance from the elbow to the first joint of the fingers, = 20 fingers. The Romans employed as its equivalent the *palmipes* = *palmus* + *pes*.

Πῆχυς, *cubitus*, cubit or ell, distance from the point of elbow to the point of the middle finger, = 24 fingers. Roman writers employ *cubitus* when following Greek sources; the native Roman term is *sesquipes*.

Βῆμα, *gradus*, pace, = 2½ feet.

Passus, double pace or stride, = 5 feet. The later Greeks employed the *ἄμπελος* as its equivalent.

Ὄρεγμα (Heraclean Tables) = 4 feet (or, according to others, 5 feet).

Ὀργυιά, fathom, the space which a man can stretch with both arms, = 6 feet. The Romans had no corresponding term (although *tensum* is used in Low Latin), but occasionally used *ulna* to express it, although usually employing this term for the cubit.

Ἄκαινα (in late writers *ἄκενα*) = 10 feet. It probably means the goad used in driving the plough oxen, which was finally fixed at 10 feet and employed as the special *land measure*. To it corresponds the Roman *pertica*, or *decempeda* (ten-foot rod), the square of which formed the basis of all land measures. Hence the Roman *agrimensores* were sometimes called *decempedatores*.

Πλέθρον (*πέλεθρον*, Homer) probably was originally the breadth of the *γύης* or acre-strip, the space lying between the *οὖρα* or boundary stones, which form the longer sides of the patch. It = 100 feet; and its square became the regular limit of land measure with the Greeks of historical times. To it corresponds in size the *vorsus*, used by the Oscans and Umbrians, which properly means the "turning place" or headland (cf. *αἱ στροφαὶ* sc. *τῶν βοῶν*, Hesych.).

The Roman *actus*, = 120 feet, properly meant the "headland" (called *actus minimus*, 4 feet broad). It then came in later times to mean the distance which oxen can draw the plough at a single draught ("sulcum autem ducere longiorem quam pedum centum viginti contrarium pecori est, quoniam plus aequo fatigatur ubi hunc modum excessit," Colum. ii. 2, 27).

Itinerary Measures.—For the higher measures of length, although the continuity of the system was preserved by making them exact multiples of a foot, it is obvious that convenience would demand higher denominations, one of which would be regarded as a new unit. Nay, these higher measures may be viewed with respect to their origin, as in a certain sense independent of those smaller measures with which they were afterwards made to agree. For just as we have seen that the smaller measures of length are taken from natural objects, so we shall find that at an early period the larger measures were not derived artificially from the smaller, but from distances which occur in nature and in ordinary life. Thus Homer expresses distances by the cast of a stone (*Il.* iii. 12, *ὅσον τ' ἐπὶ λᾶαν ἵησι*), and so even too in later times (Thuc. v. 65; Polybius, v. 6); of a quoit (*Il.* xxiii. 431, *ὅσσα τε δίσκου οὖρα . . . πέλονται*); of a spear (*Il.* xv. 358, *δουρὸς ἐρωή*); by the distance which a man can reach with a spear (*Il.* x. 357, *δουρηνεκές*); and by the still more indefinite expression, "as far as a man makes himself heard distinctly when he shouts" (*Od.* v. 400, vi. 294 *et alib.*, *ὅσσον τε γέγωνε βοήσας*); and again by standards derived from agriculture (*Il.* x. 352, *ὅσσον τ' ἐπὶ οὖρα πέλονται ἡμιόνων*), which from what we have seen above represents the breadth of the acre piece or *γύης*, the amount ploughed in one day: as mules are superior to oxen, the *breadth* ploughed in one day of a piece of ground of a fixed length would be greater than the *breadth* (*πλέθρον*) ploughed in the same time by a yoke oxen. (See Ridgeway's article in *Journal of Hellenic Studies*, 1885.) Of the longest distances time was made the measure, as in the case of the German *Stunden*: the journey of a day by an active traveller (*εὔζωνος ἀνήρ*), or of a day and a night, or on horseback, or with a merchant ship (*ναῦς στρογγυλή, ὁλκάς*), a method too frequently employed now as well as in ancient times to need illustration. (Comp. Ukert, *Geograp. d. Griech. u. Röm.* vol. i. pt. 2, pp. 54–5.) The system of measuring by *stations* or *posts* [Mansio] should probably be referred to this head, as it is most likely that such distances would be fixed with reference to the powers of endurance of man and horse, before the trouble was taken actually to measure them out. Another plan was that which Herodotus several times adopts, and which is also familiar to all ages, the description of one distance by comparing it with another which is well known. It is true that in many cases the method is only general and indefinite, as when Herodotus describes the length of the Nile as equal to that of the Danube, but there are other cases in which the method was definite, and especially one case, in which it actually formed the foundation of the common system of itinerary measures in use among the Greeks. We refer of course to the *stadion*.

Στάδιον (*σπάδιον*, Doric), *stadium* = 600 feet. The Doric *σπάδιον* (from *σπάω*) indicates that it was the distance traversed in a single draught by the plough. It thus was probably the *length* of the *γύης* strip, just as the *πλέθρον* was its breadth. It always contained 100 *orgyiae* or 600 feet, no matter what the size of the foot might be. The Homeric *γύης* (*vide supra*) was in breadth 10 *orgyiae*: the stadion is thus ten times the breadth of the *γύης*. A similar proportion is found between the length (*furlong*) and breadth of English and Irish acre strips. The Germans regard the stadion as of Babylonian origin. Brandis (*Münz-, Mass-, und Gewichtswesen*, p. 20) holds that the Babylonians determined the length of an hour of equinoctial time by the water-clock: in one hour the sun traversed a portion of the sky thirty times his own diameter; therefore every two minutes a portion equal to his apparent diameter. With this they equated the distance which an active walker can traverse on the earth in the same time: the stadion therefore is the distance traversed by an active walker in two minutes. As the Greeks had provided themselves with all the other measures by purely empirical means, it is not likely that they went to the East to borrow the stadion, but derived it from their own system of agriculture, which was not borrowed from the East. The Romans only employed the *stadium* in later times, and that only for distances by sea, where they simply followed the Greeks. The *στάδιον* in historical times was the distance of the racecourse, and was the regular unit of *road measure*, and was in later times the unit used by the astronomers and geographers.

Δίαυλος (or διστάδιον), so named from αὖλος, the old name of the στάδιον, probably meant originally "double furrow," and then came to mean a course up and down the stadion.

Ἱππικόν, the course for the horse-race, = 4 stades, as they ran twice up and down the στάδιον.

Μίλιον, *miliarium*. The Romans measured all long distances by *milia passuum*, or shortly *milia*. Strabo is the first Greek to use the borrowed μίλιον, and that only when speaking of distances which he had derived from the chorography of Agrippa. *Miliarium* is only a late word, as the good writers use *lapis* or *lapis miliarius*.

Παρασάγγης, a Persian *road measure*, used by Greek authors writing about Asia Minor, as Herodotus and Xenophon. It contained 30 stades, or 4 Roman miles. Modern metrologists assign it an origin similar to that of the στάδιον given above, regarding it as the distance traversed by an active walker in an hour of equinoctial time. It may have been so adjusted in a later and scientific age, but it is more probable that it had its origin long before the beginnings of scientific metrology.

Land Measures.—We have seen that a distinct source of some of the greater measures of length (*e.g.* the πλέθρον and στάδιον) arose out of the measures of surface, which must of necessity be employed from a very early period in every civilized community for determining the boundaries of land. Herodotus (ii. 109) mentions a tradition which assigns the invention of geometry to such a necessity which arose in Egypt in the reign of Sesostris. This tradition is of course now only referred to as an illustration, not as an expression of an historical fact. As in the other cases, the origin of the system lies far back beyond the reach of history, and all that can be done is to trace with some probability its successive steps as indicated by the names of the measures and by the statements of ancient writers. Here too, as in the itinerary distance, the original unit of the system was probably not a specific number of feet, but some natural quantity which was afterwards brought into accordance with the standard of the smaller measures. Also it is to be observed that these measures are from the nature of the case measures of surface, although in practice often used (as the *stadium* and *plethrum*) as measures of length. The precise fact seems to be that the first natural measure of the sort was a strip of ground of considerable length and moderate breadth, being the amount which could be ploughed in one day's work by a yoke of oxen. (See Homeric γύης, *supra*.) This is borne out by what we know of the Roman system. The Roman settlers in Further Spain called the *actus quadratus* by the name *acnua*, an old Latin term; the same people gave the name *porca* to a strip of land = 180 × 30 feet. They had evidently brought this customary unit from Italy, which was 60 feet longer than the *actus* as finally fixed by the land-surveyors. Now we know that the *actus* was originally the headland, where the plough was turned, and along which the cattle were driven; this was called by Varro (*L. L.* v. 3, 10, § 22) *actus minimus*, being only 4 feet wide. It is not then unreasonable to suppose that the length of the original furrow, that is, of the patch ploughed in one day, was shortened until the furrow became equal to the breadth of the strip, that is, to the *headland* or *actus* of 120 feet. This patch, the square of the headland, became the basis of the Roman land measure. The Gallic *arepennis* (French *arpent*), which according to Columella corresponded in size to the Roman *actus*, certainly meant originally the *headland*. We may not unreasonably assume a similar development for the Greek unit of 100 feet square, the *plethrum*, and also for the Oscan *versus*; namely, that it arose from a land unit of larger extent and oblong in shape, the breadth of which may have been originally about 60 feet, corresponding to the measure called *clima* (half of an *actus*) mentioned by Columella, and the breadth of the Homeric γύης.

The unit employed by the Greeks was the square of the πλέθρον, which = 10,000 square feet. The Italians used similarly the square of the *vorsus*, which was of like size.

The γύης (or γύη) was the unit employed in Homer (*supra*).

On the Heraclean Tables (found at Heraclea in Lucania) the γύης probably represents a piece of land 100 feet broad and 5000 feet long; that is, 50 *plethra*.

The σχοῖνος is another Heraclean measure = 120 feet square, corresponding to the *actus*. Each σχοῖνος was divided into 30 ὀρέγματα of 4 feet each.

Μέδιμνος: in two parts of Hellas we find a system which was common in many parts of the ancient and mediaeval world. The μέδιμνος at Cyrene and in Sicily means as much land as can be sown by a *medimnus* of seed. In Sicily this was equal to the Roman *jugerum* (Cic. *Verr.* ii. 3, 112).

The Roman system of the *agrimensores* represents a later stage of development. The square foot (*pes constratus* or *quadratus*) was the unit of the system ("modus omnis areae pedali mensura comprehenditur," Colum. v. 1). The system is partly decimal, partly duodecimal.

The *scripulum* = 1 *decempeda quadrata* (square rod) = 100 sq. feet.

The *clima* = 36 sq. rods.

The *actus quadratus* = 144 sq. rods.

The *jugerum* = 288 sq. rods, being an oblong piece of ground, consisting of two *actus*. It means the amount ploughed by a yoke of oxen in one day ("jugerum vocabatur quod uno jugo boum in uno die exarari posset," Plin. xviii. 9).

The *heredium* = 2 *jugera*. So called (according to Varro) from two *jugera* being the birthright of every Roman citizen.

The *centuria* = 200 *jugera* generally, but varied, at times containing 50, 210, 240, or 400 *jugera*. From its name it is not improbable that it originally contained 100 *jugera* ("centuria primo a centum jugeribus dicta est, post duplicata retinuit nomen," Varro, *R. R.* v. 34).

The *saltus* = 800 *jugera*.

The term *jugum* was used in Spain to denote a day's work of a yoke of oxen (Varro, *R. R.* i. 10).

Acnua was the Latin name for the Roman *actus quadratus* (Varro, *R. R.* i. 10), likewise used by the farmers of the province of Baetica in Spain (Colum. v. 1, 5).

Porca was the name given in Baetica to a piece of ground 180 × 30 feet.

Arepennis was a Gaulish unit of land measure, corresponding in size, according to Columella (v. 1), to the Roman *actus quadratus*. Hence French *arpent*.

The Romans likewise applied the system of the *as* to land measure; regarding the *jugerum* as the *as* or unit, they carried out its subdivision on the rigid duodecimal system (*vide* Tables at the end of the volume).

Measures of Capacity.—The most important products of ancient agriculture are, on the one hand, wine and oil, on the other various kinds of corn. Hence naturally arose two kinds of measures, *liquid* and *dry*. The smaller units are common to both systems (*vide* Tables).

Liquid and Dry. — The *κύαθος*, *cyathus* (according to some connected with *κύλιξ*, and possibly originally meaning a kind of gourd), was the unit in common use. It contained about 4 centilitres = 0·08 English pint. A smaller measure = ¼ *cyathus*, called *ligula* (spoon) or *cochlear* (mussel-shell), was sometimes employed.

Ὀξύβαφον, *acetabulum*, vinegar bottle, = 1½ *cyathi*.

Quartarius, so called from being ¼ *sextarius*, = 3 *cyathi*, has no Greek equivalent.

Κοτύλη, at Athens, was a kind of bowl, called *τρύβλιον* in other parts of Greece, and the same as the Sicilian *ἡμίνα* (the *half mina* = *ἡμιμναῖον*), which, borrowed by the Romans, = ½ *sextarius* = 6 *cyathi*.

Ξέστης, *sextarius* = 12 *cyathi*. **Ξέστης** is a loan word from the Roman *sextarius*, so named as the ⅙ of *congius*.

So far the measures are common to both systems, but they now diverge as follows:—

Liquid.—**Χοῦς**, *congius* (derived from *κόγχη*) = 12 *κοτύλαι*. Its half, the *ἡμίχους* (plur. *ἡμίχοα*), also is found: *ἡμιάμφορον* (or *ἡμικάδιον*), *urna*.

Ἀμφορεύς, *amphora* (*ἀμφιφορεύς*, Homer), the large wine jar with handles on both sides, as it was used for the storing of wine, was used as the chief unit of liquid measure. It was also called *κάδος*, *cadus*. The Roman *amphora* = 8 *congii* = 48 *sextarii* = 576 *cyathi*.

Μετρητής is commonly used as equivalent of *ἀμφορεύς*, but strictly was larger.

Culleus, tun, = 20 *amphorae*.

Dry.—The Greek (distinctively) *dry* measure starts from the *κοτύλη*, the Roman from the *sextarius*.

Χοῖνιξ (mentioned in Homer, *Od.* xix. 28), a day's allowance for a man at Athens, = 4 *κοτύλαι*.

Ἡμίεκτον, *semodius*, the half of the following, = 4 *χοίνικες*.

Ἑκτεύς, or *μόδιος*, *modius*. The first name is the Old Attic, but the second is already used by Deinarchus. The former indicates that it is ⅙ of the chief unit, the *medimnus*.

Μέδιμνος at Athens = 8 *modii*. The Romans did not employ this measure, but only *modius* or its compounds, such as *trimodium*.

Ptolemaic.—To above we may add certain measures in use in Egypt under Ptolemaic and Roman rule, for which see also Tables.

Ξύλον = 3 royal cubits = 72 fingers.

Σχοῖνος, an itinerary measure, usually counted equal to the Persian Parasang (= 30 stades), but actually containing 32 stades of th common Greek standard. It was probably als in use among the Hebrews.

Ἄμμα = 10 fathoms = 60 feet. Its squar was used as a land measure.

Σχοινίον was another name (probably th Greek one) of the (Egyptian) *ἄμμα* just described

Σωκάριον, with the addition of *δεκαόργυιο* was another name applied to the square *ἄμμ* being a name derived from the amount of see required to sow that amount of land.

Ἄρουρα was a piece of ground 100 cubit square, and which formed the regular Egyptia land unit from early times. (Herod. ii. 168, **δὲ ἄρουρα ἑκατὸν πηχέων ἐστὶ Αἰγυπτίων πάντῃ**

ME'NUSIS (*μήνυσις*). [ECCLESIA, Vol. I p. 702 *a*.]

MERCENA'RII (*μισθωτοί*, *μισθοφόροι*, mor commonly *ξένοι* or *τὸ ξενικόν*), mercenary troop At an early period there was no such thing as standing army, or mercenary force, in the Gree republics. The former would have excite jealousy, lest it should oppress the people, a the chosen band did at Argos (Pausan. ii. 20, § 2 Thuc. v. 81); and for the latter there wa rarely any occasion. The citizens of every stat formed a national militia for the defence of thei country, and were bound to serve for a certai period at their own expense, the higher classe usually serving in the cavalry or heavy-arme infantry, the lower classes as light-armed troop Foreigners were rarely employed; the Carian Cretans, and Arcadians, who served as merce naries (Herod. i. 171; Pausan. iv. 8, § 3; 10, § 1 19, § 4; Wachsmuth, *Hell. Alterth.* vol. i. pt. p. 30; Schömann, *Ant. jur. pub. Gr.* p. 159), a an exception to the general rule. In the Persia war we find a small number of Arcadians offe ing to serve under Xerxes (Herod. viii. 26); a they seemed to have used themselves to su employment down to a much latter period, mu as the somewhat similarly situated people Switzerland did in the 16th century. (Xenop *Hellen.* vii. 1, § 23; Schömann, *op. cit.* p. 409 The practice of maintaining a standing force w introduced by the tyrants, who kept guards a soldiers in their pay (*δορυφόροι*, *μισθοφόροι*) prevent insurrections of the people, and preser their influence abroad. As it was unsafe trust arms in the hands of their own subject they usually employed foreigners. (Thuc. 55; Diod. xi. 67, 72; Ar. *Pol.* iii. 14, 7.) will be sufficient on this topic to refer to Jas of Pherae and his successors, and the Sicelic tyrants of Gela and Syracuse, as instance From their history the dangers of the system well as its use can be traced out (see Grote, *Hist. of Greece*, x. 613 ff.; xi. 286 ff.; xii. 540 ff.). Hence, and because citizen soldiers used to fight without pay, *ξένοι* came to signify *mercenaries*. (Harpoc. s. v. *Ξενιτευομένους*.) We must distinguish, however, between those who fought as auxiliaries, whether for pay or otherwise, under commission from their own country, and those who did not. The former were *ἐπίκουροι*, not *ξένοι*. (Herod. i. 64, iii. 45, v. 63; Thucyd. i. 60, 115, iii. 34, iv. 80.) The terms *ξένοι* and *ξενικὸν* implied that the troops were independent of, or severed from, their own country.

The first Grecian people who commenced the employment of mercenaries on a large scale were the Athenians. While the tribute which they received from the allies placed a considerable revenue at their disposal, the wars which their ambition led them into compelled them to maintain a large force, naval and military, which their own population was unable to supply. Hence they swelled their armies with foreigners. Thucydides makes the Corinthian ambassador at Sparta say, *ὠνητὴ ἡ Ἀθηναίων δύναμις* (i. 121). They perceived also the advantage of employing men of different nations in that service for which from habit they were best qualified; as, for instance, Cretan archers and slingers, Thracian peltastae. (Thuc. vi. 25, vii. 27; Aristoph. *Acharn.* 159.) At the same time the practice of paying the citizens was introduced; a measure of Pericles, which was indeed both just and unavoidable (for no man was bound by law, or could be expected, to maintain himself *for a long campaign*); but which tended to efface the distinction between the native soldier and the foreigner. Other Greek nations soon imitated the Athenians (Thuc. iv. 76), and the appetite for pay was greatly promoted by the distribution of Persian money among the belligerents. (Thuc. viii. 5, 29, 45; Xenoph. *Hellen.* i. 5, § 3.) At the close of the Peloponnesian war, large numbers of men who had been accustomed to live by war were thrown out of employment; many were in exile or discontented with the state of things at home (Isocr. *Archid.* § 68); all such persons were eager to engage in a foreign service. Hence there arose in Greece a body of men who made arms their profession, and cared little on which side they fought, provided there were a suitable prospect of gaining distinction or emolument. Conon engaged mercenaries with Persian money. Agesilaus encouraged the practice, and the Spartans allowed the members of their confederacy to furnish money instead of men for the same purpose. (Xenoph. *Hell.* iii. 4, § 15; iv. 3, § 15; v. 2, § 21.) The Greeks who followed Cyrus in his expedition against Artaxerxes, were mercenaries. (Xenoph. *Anab.* i. 3, § 21.) So were the famous peltastae of Chabrias and Iphicrates. (Harpocr. *s. v. Ξενικὸν ἐν Κορίνθῳ*: Aristoph. *Plut.* 173.) The Phocians, under Philomelus, Onomarchus, and Phayllus, carried on the sacred war by the aid of mercenaries, paid out of the treasures of the Delphian temple. (Diod. xvi. 30, &c.) But higher pay and richer plunder were in general to be found in Asia, where the disturbed state of the empire created continued occasions for the services of Greek auxiliaries, whose superior discipline and courage were felt and acknowledged by the Barbarians. Even the Spartans sent their king Agesilaus into Egypt, for the sake of obtaining Persian gold. Afterwards we find a large body of Greeks serving under Darius against Alexander. It is proper here to notice the evil consequences that resulted from this employment of mercenaries, especially to Athens, which employed them more than any other Greek state. It might be expected that the facility of hiring trained soldiers, whose experience gave them great advantages, would lead to the disuse of military service by the citizens. Such was the case. The Athenian citizens stayed at home and became enervated and corrupted by the love of ease and pleasure; while the conduct of wars, carried on for their benefit, was entrusted to men over whom they had little control. Even the general, though commonly an Athenian, was compelled frequently to comply with the humours, or follow the example of his troops. To conciliate them, or to pay them their arrears, he might be driven to commit acts of plunder and outrage upon the friends and allies of Athens, which thus found enemies where she least expected. It was not unusual for the generals to engage in enterprises foreign to the purposes for which they were sent out, and unconnected with the interests of their country, whose resources they wasted, while they sought their own advantage, like the *condottieri* of the 14th and 15th centuries. The expeditions of Chabrias and Iphicrates to Egypt are examples of this. But the most signal example is the conduct of the adventurer Charidemus. Upon all these matters we may refer the reader more particularly to Demosthenes, whose comments upon the disastrous policy pursued by his countrymen were no less just than they were wise and statesmanlike. (Demosth. *Philip.* i. p. 46, § 27; *c. Aristocr.* pp. 666, §§ 163–166; *περὶ τοῦ στεφ. τῆς τριηρ.* p. 1232, &c.; Isocr. *Paneg.* § 195, *ad Philipp.* § 112; Grote, *Hist. of Greece*, vol. xi. pp. 390 ff.)

Among the Romans before the Empire the non-Roman part of the army was composed of auxiliary troops from states allied or subject, which cannot strictly be called mercenaries. (See however EXERCITUS, Vol. I. p. 785.) To this it is true there is some exception in the employment, even in the Punic and Jugurthine wars, of mercenary light troops, as archers and slingers, from Africa, Crete, Syria, &c. (Liv. xxii. 37, xxiv. 20; Appian, *Hisp.* 89, &c.) But this was very different from such a case as that of Carthage, who was conspicuously and unfortunately prominent as the example of a state depending for her protection on mercenary troops. As the Roman empire grew, the fact that legions were levied in various countries out of Italy did not make them mercenaries in the proper sense: but the system of donatives, especially to the praetorian guards, gradually gave to Roman troops the character and the danger of a mercenary force. Moreover, whereas the armies at first consisted of Roman citizens, and the conquered provinces supplied tribute for their support, when the provincials received the civitas it followed that the poor became soldiers and the rich supplied money. This tendency was strengthened by the law that those who paid the land tax should not bear arms (on which point Gibbon iii. 65 seems to be in error), and accordingly under Constantine we find the army recruited by slaves and barbarians, and in great measure of a mercenary character. In the wars of Justinian we find a twofold army: (1) levied by conscription of citizens in various provinces, and of barbarians who were allowed to occupy certain lands on condition of military service; and (2) another kind, and that too the best and strongest portion, provided by princes dwelling on the borders of the empire, such as the Heruli and Gepidae, who received subsidies and provided troops under their own leaders. Instances of wholesale desertion by such alien contingents (which may remind us of the Swiss mercenaries of the age of Charles V.) occur even under so great a general as Belisarius. It would be out of place here to pursue the question into greater detail: reference may be made to Finlay, *Hist. of Greece*, i. 144, 204, ii. 27, &c. [C. R. K.] [G. E. M.]

MERENDA. [Cena, Vol. I. p. 395 *a*.]

MERGA. [Agricultura, Vol. I. p. 64.]

MERIDIA'NI. [Gladiatores.]

METAE. [Circus, Vol. I. p. 435 *a*.]

METAGEI'TNIA (*μεταγείτνια*), a festival celebrated by the Attic demos Melite, in honour of Apollo Metageitnios. The chief solemnities consisted in offering sacrifices, and the festival was believed to commemorate the emigration (*γειτνίασις πρὸς ἑτέρους*) of the inhabitants of Melite to Diomis. (Plut. *de Exil.* § 6; comp. Suidas and Harpocrat. *s. v.* *Μεταγειτνιών*.) But it seems not improbable that the institution of this festival is connected with the extension of the worship of Apollo so as to embrace all classes, under the influence of Epimenides (cf. Curtius, *Hist. of Greece*, i. 323). The idea of migration in the worship of Apollo is indicated in the story of Ion, and from that idea may come the title Metageitnios given to Apollo and thence to the Attic month. [L. S.] [G. E. M.]

METALLUM (*μέταλλον*). The Greek word bears only the meaning of *mine*; the Latin means either a mine or its product, mineral or metal.

I. *Metals in Antiquity.*—Of the precious metals—gold, silver, electrum, and copper—we have spoken under Aurum, Argentum, Electrum, and Aes. It remains to speak briefly of the commoner metals.

(*a*) Iron (*ferrum*, *σίδηρος*). Although iron ore is common in all countries, yet the difficulty of smelting and manufacturing iron is so great that it is one of the latest of metals to come into use in the course of history. Of this fact the Greeks were aware, and the knowledge moulded the traditions recorded in Hesiod's *Works and Days*, in which the heroic age is represented as an age of bronze: *τοῖς δ' ἦν χάλκεα μὲν τεύχεα, χάλκεοι δέ τε οἶκοι, χαλκῷ δ' εἰργάζοντο, μέλας δ' οὐκ ἔσκε σίδηρος* (l. 150). The transition from this age of bronze to an age when iron was commonly employed was very gradual, and took place in various countries at different times. In Greece it was in progress in the Homeric age. In the *Iliad* swords are often made of iron (xviii. 34, *μὴ λαιμὸν ἀποτμήξειε σιδήρῳ*), but it is specially in use for ploughshares and other agricultural implements (*Il.* xxiii. 826): the axle too of Hera's chariot is of iron (*Il.* v. 722). But defensive armour, as well as the heads of axes and points of spears and arrows, were in the Homeric age still made of bronze; and the epithet *πολ κμητος* which is applied to iron shows that was still worked with difficulty. Many write have supposed that the word *κύανος* in Hom stands for steel; but it has been proved l Lepsius that this is incorrect, and that really means either lapis-lazuli or an artifici imitation of that mineral, and the view Lepsius has been confirmed by the discovery a frieze of alabaster and glass (*θριγκὸς κυάνοι* in one of the rooms of the very early palace Tiryns (Schliemann, *Tiryns*, p. 287).

From this time the use of iron gradual spreads. In one passage of the *Odyssey* (ix. 39 knowledge is shown of the process of hardenin iron by repeated plunging when hot in wat [Lacus]; in Hesiod's *Shield of Herakles*, th hero is represented as arming himself with helmet of steel, *κυνέη ἀδάμαντος*. In the age Croesus, Glaucus of Chios is said to have di covered how to solder iron (*σιδήρου κόλλησις* After that, iron was used in Greece not only f arms and utensils, but also for works of ar But we must beware of supposing that the us was at this time universal. Herodotus sa that the Massagetae in his time used no iro and that the Aethiopians in the army of Xerx used arrows with points of stone, and lanc with points of horn. The general use of iro passed slowly westward and northward, and too several centuries to reach the Gauls, Briton and Germans, as is proved by the long-continue prevalence of bronze as a material for weapon in cemeteries, such as that of Hallstadt.

The nature of the process by which an iro age succeeded in various countries an age o bronze is well discussed by Mr. John Evans i the Introduction to his work on *Ancient Bron Implements*.

Herodotus and Pausanias give us a clea record of this process as regards Greece. I the time of Croesus, during a war with Tege the Spartans found bones supposed to belong t Orestes under a smithy used for the manufactur of iron weapons (Hdt. i. 67). Commenting o this story, Pausanias (iii. 3, 6) remarks tha the arms of the heroic age preserved in Greel temples, such as the spear of Achilles and th sword of Memnon, were of bronze, but that b the time of Croesus iron was generally used fo weapons.

We are told by Pliny (*H. N.* xiv. § 139) that when Porsena had conquered the Romans, he forbade them to use iron except for agricultural purposes; which would indicate that they were already accustomed to use arms of iron. In their earlier encounters with the Gauls the Romans are said to have had the advantage of using swords of a superior quality to those of their enemies, which bent at every stroke, and had to be straightened by the foot. Mr. Evans, however, considers that these inferior weapons were made, not of bronze, but of soft iron. The Cimbri who invaded Italy in the time of Marius had, according to Plutarch, not only swords and javelins, but even breastplates of iron. In Caesar's time the Gauls were expert in working iron, and even made chains of it for their ships (*B. G.* iii. 13).

In Greece the cities of Chalcis and Lacedaemon were celebrated for their iron goods. The sword-blades of Chalcis were praised in Aeschylus (Plut. *de Def. Orac.*, 43): weapons and agricultural implements of steel were largely made at Lacedaemon (Steph. Byzant. *s. v.*). Not unfrequently iron was used as a material for works of art: Alcon made an iron statue of Herakles, and iron vessels were dedicated in the temple of Mars Ultor at Rome (Plin. *H. N.* xxxiv. § 141). But as a rule the Greeks did not excel in the working of iron, but imported goods in this metal from nations at a lower level of civilisation. Most noted were the Chalybes of Pontus, known to Aeschylus (*Prom. V.* 714) as *σιδηροτέκτονες Χάλυβες*: Xenophon (*Anab.* v. 5, 1) says they lived entirely by iron-work. The manufacture of arms and armour was carried to a high point of perfection by the people of Cyprus, who furnished Alexander the Great with a sword, and Demetrius Poliorcetes with a cuirass of wonderful power of resistance. In the time of Pliny (*H. N.* xxxiv. § 145) the best iron came from China, the second best from Parthia. Iron was found in large quantities in the island of Elba (Aethalia), and thence exported to the neighbouring Populonia, where it was worked. Toletum in Spain was celebrated even in Roman times for sword-blades, and the toreutic art was applied to iron at Cibyra.

We are told that a currency of iron was in use at Sparta in antiquity, and this story has become more credible since the discovery of iron coins of Argos and other Peloponnesian cities. The people of Byzantium also used iron coins (Pollux, ix. 78).

The extreme variation from place to place in the value of metals may be shown from the statement of the author of the *Periplus R. M.* (p. 59), that on the Arabian shore of the Red Sea gold passed as equivalent to three times its weight of copper, half its weight in iron, and one-tenth its weight in silver.

(*β*) Lead (*Plumbum nigrum*; *μόλυβδος*). An account of the sources and uses of lead in antiquity will be found in Pliny (*H. N.* xxxiv. §§ 156 ff.). Its easiness to work and its imperishable nature made it useful for certain purposes, as for coffins and pipes. Its great value in medicine as a cooling remedy was also fully recognised. But it was scarcely used for purposes of art.

(*γ*) Tin (*Plumbum album*). Few metals were in antiquity more widely used or more indispensable than tin. The implements and arms of the bronze age, the chief means of living during many centuries, contain almost invariably a proportion of tin. Tin (*κασσίτερος*) was in the Homeric age largely used for the decoration of arms. Yet tin is a rare metal, and not found in the Levant. Herodotus (iii. 115) gives as its source islands of the Western Sea, the Cassiterides, generally identified with the Scilly Isles, where tin is abundant. Diodorus derives the metal from the British coast. But Pliny (xxxiv. § 156) rejects these accounts as fabulous, and says that it came from Gallaecia and Lusitania in Spain. The likeness of the Greek word *κασσίτερος* to the Sanskrit *kastira* has induced some moderns to think that the chief source of tin was the coast of India. In any case it is probable that the purveying of it to the peoples of South Europe was an employment of the Phoenicians, and one of the chief sources of their wealth.

(*δ*) Stannum. Pliny (xxxiv. § 159) says that when mixed ores of silver and lead are melted together, the first liquid product is stannum, the second silver. Stannum was used for plating bronze vessels, for mirrors, horse-trappings and other purposes.

(*ε*) Quicksilver (*argentum vivum*; *ὑδράργυρος*, *ἄργυρος χυτός*). The use of quicksilver in gold mining was known to the ancients (Pliny, *H. N.* xxxiii. § 99). It was commonly produced artificially out of cinnabar (Dioscor. *de M. M.* v. 110).

(*ζ*) Zinc. The metal zinc does not seem to be mentioned by ancient writers, the word *σποδός* (Diosc. *de M. M.* v. 85) meaning only oxide of zinc. But in the analysis of Roman coins zinc is found in considerable proportions. It is present in some of the pieces of *aes grave* found at Vicarello; and in the large coins of yellow brass, sestertii and dupondii, issued by Augustus and his successors, the proportion of zinc to copper is sometimes more than 1 to 3 (Mommsen, *Röm. Münzwesen*, p. 763).

(*η*) Nickel. This metal was used for coins by some of the Greek kings in India in the 3rd century B.C. (*Numismatic Chronicle*, 1868, p. 305).

The passages in ancient writers bearing on the subject of metals and minerals are collected and translated into German by Lenz in his *Mineralog. d. alten Griechen und Römer*, 1861. [P. G.]

II. *Working of Mines in Antiquity.*—The subject of the working of mines in ancient times is obscure and difficult. It is only with reference to the silver and lead mines of Laurion in Attica, and the gold and silver mines in Spain, that we have any considerable data. Boeckh in his *Dissertation on the Silver Mines of Laurion* (printed as an appendix in the English translation of his *Public Economy*) discusses fully all that is known about the former. Xenophon, *de Vectigalibus*, 4, 2 (a chief source of information on the subject), says that the mines had been worked from time immemorial. The mines were worked by means of shafts and adits, and by the removal of whole masses, so that supports alone (*μεσοκρινεῖς*) were left standing. The processes of fusion carried on in furnaces on the spot seem on the whole to have been of the same imperfect kind as those carried on in other ancient mines. This is proved by the fact that at the present time a very handsome revenue is obtained by a French company from the working of the *scoriae* of the mines of Laurion by modern processes. The ores were smelted by means of charcoal (*ἄνθρακες*), the chief supply of which came from Acharnae. The state was sole proprietor of the mines; but they were never worked directly by the state, nor did the state ever let them for a term of years, like other landed property. Portions of them were sold or demised to individuals, with the reservation of a perpetual rent, and these leases were transferred from one person to another by inheritance, sale, and every kind of legal conveyance. The sale of the mines (that is, of the right of working them) was managed by the Poletae (POLETAE); this right was purchased at an appointed price, in addition to which the possessor paid the twenty-fourth part of the net produce as a perpetual tax. The purchase-money was paid direct to the state; the metal-rents were, in all probability, let to a farmer-general. The income derived from the mines of course depended on a variety of circumstances, and consequently the revenue fluctuated. In the time of Socrates it was less than at the time when Themistocles persuaded the Athenians to build a fleet with the proceeds of the mines instead of dividing them. Boeckh estimates the annual revenue at that time as 33½ talents. Citizens and isoteleis could alone possess mines. The number of owners was considerable. The common price of a share in a mine was a talent, or a little more. The labour was performed by slaves either belonging to the mine-owners or hired: great capitalists, such as Nicias, who owned 1000, bought slaves and let them out to the mine-owners at a drachm *per diem*. There was a special mining law (*μεταλλικὸς νόμος*) and a peculiar course of legal procedure in cases relating to mines (*δίκαι μεταλλικαί*), which in the time of Demosthenes were annexed to the monthly suits. [Emmenoi Dikai.]

Herodotus (vi. 46) tells us that the gold mines of Scapte Hyle brought the Thasians an annual income of 80 talents, and the mines on Thasos itself a sum not so great.

Diodorus Siculus (v. 36), Strabo (iii. p. 146 ff.), and Pliny (*H. N.* xxxiii.) are our chief sources of information for the working of mines in Roman times. Diodorus (v. 36) describes the elaborate system of shafts and galleries in the mines in Spain, the methods of draining them by cross drains and the use of the pump invented by Archimedes, and the miseries of the workmen, who were slaves and criminals (*metallum* was one of the regular penalties for lesser offences). Much gold was obtained in Lusitania and Gallicia by washing the river-sands in wicker baskets or cradles, just as placer gold is worked in modern times. Strabo (iii. p. 146) describes the process of refining the gold found in nuggets (*πάλαι, βοῦλοι*). The nuggets were first refined by means of an astringent clay containing vitrol (*στυπτηριώδης γῆ*): the metal thus obtained was called *electrum*, a mixture of silver and gold. This was again subjected to a refining process, the silver was burnt away (*ἀποκαίεσθαι*) and the gold remained. On account of its soft nature gold was melted by means of a fire of chaff (*ἄχυρος*), the heat of coal (*ἄνθραξ*) being considered too strong and wasteful. Gold dust was obtained by washing in pits dug in the beds of the streams (*ἐν δὲ ρείθροις σύρεται καὶ πλύνεται ἐν σκάφαις, ἢ ὀρύττεται φρέαρ, ἡ δὲ ἀνενεχθεῖσα γῆ πλύνεται*). They built tall furnaces for smelting the silver, that the fumes, which were considered baleful, might be carried high into the air.

Pliny (*H. N.* xxxiii. § 66) describes three methods of gold mining, and the elaborate method by which water for the washings was brought in a series of pipes or troughs along the precipitous sides of the mountains in Gallicia. By this method of washing some authors said that 20,000 lbs. of gold were obtained annually in Asturia and Gallicia.

Under the Roman Empire, the mines and quarries of all kinds, whether in the imperial or senatorial provinces, were worked for the emperor, and formed part of the revenue for the Fiscus, and also for the emperor's private purse, although under the Republic mines of all kinds belonged to private persons. Sometimes even under the Empire private persons owned saltworks and quarries. Thus Herodes Atticus worked the quarries of Pentelic marble. Quarries in some cases belonged not to the Fiscus, but to the emperor's private purse (*patrimonium*).

There was no central organisation for working the mines, but each mine or mining district was worked separately under an overseer (*procurator*, e.g. *procurator aurariorum*), probably himself a slave; sometimes the emperor let out the mines to a company of *publicani*. The revenue was managed by departments, consisting of a *commentariensis*, a *dispensator*, a *tabularius*, and an *arcarius*. Officers such as a *tribunus militum*, a *centurion*, or *decurion*, were detailed to superintend the carrying on of the operations. Under the Empire the workmen were slaves, free labourers, soldiers, or criminals. In the latter case there was a military station always near the mines. (Marquardt, *Staatsverwaltung*, ii. 252 *seqq.*) [Vectigalia.] [W. Ri.]

METATO'RES. [Castra, Vol. I. p. 372.]

METOECUS (*μέτοικος*), a resident foreigner, a permanent settler in an alien state. Resident aliens were common in nearly all Greek cities, especially centres of commerce, the sole known exceptions being Sparta, whose *ξενηλασίαι* were notorious (Thuc. i. 144, ii. 39; Xen. *Resp. Lac.* xiv. 4), and possibly Apollonia (Ael. *Var. Hist.* xiii. 16). A list of thirty-one towns which are known to have harboured *μέτοικοι* is given by Schenkl (*Wiener Studien*, 1880, ii. p. 163 f.), the authorities being chiefly inscriptional. The name appears with the variants *πάροικοι*, *πεδάFοικοι* (Argos, *C. I. G.* 14, 19), and *ἔνοικοι*.

The μέτοικοι at Athens. 1. *Institution of the class.*—Mention of resident foreigners at Athens is made by Plutarch, *Solon* 24 (*γενέσθαι πολίταις οὐ δίδωσι* [*Σόλων*] *πλὴν τοῖς . . . πανεστίοις Ἀθήναζε μετοικιζομένοις ἐπὶ τέχνῃ*). Yet this can hardly be taken to imply that all craftsmen who migrated to Athens in Solon's time received citizen rights, nor do we find in the fragments of Solon's laws any mention of a class intermediate between the *πολῖται* and *ξένοι*, between whom a sharp line appears to have been drawn. It seems more probable that Cleisthenes first created the *ordo*. A very possible interpretation of the well-known passage Arist. *Pol.* iii. p. 1275 (*πολλοὺς γὰρ ἐφυλέτευσε* [*Κλεισθένης*] *ξένους καὶ δούλους μετοίκους*) is to take *μετοίκους* in a non-technical sense, either with both substantives or with the latter only (see however Demus, Vol. I. p. 616 *b*). Now the most ancient inscription in which the word occurs as the designation of an *ordo* is in *C. I. A.* i. 2, the date of which is not much after Cleisthenes. A large admission to citizenship, such as Cleisthenes had carried, would necessitate the definite regulation of what constituted non-citizenship, in the case of those who did not now become enfranchised, and of new arrivals at Athens. Hence the "order" *μέτοικοι*, intermediate between the fully enfranchised *πολῖται* and the non-enfranchised *ξένοι*.

2. *Numbers.*—Thuc. ii. 13, after mentioning 13,000 as the full hoplite citizen force, gives 16,000 as the number of those who manned the battlements, consisting of *πρεσβύτατοι καὶ νεώτατοι καὶ μέτοικοι*. In ii. 31 he distinctly tells us that the full metoec hoplite force amounted to 3,000. Thus the whole number of *πολῖται* liable to military service between the ages of 18

and 60 (taking the *πρεσβύτατοι* as from 50 to 60, and the *νεώτατοι* as from 18 to 20) was, at that time, 13,000+(16,000−3000), *i.e.* 26,000. This would give, taking 1:4½ as the proportion of grown males to the rest of the citizen body, nearly 120,000. It would be rash to infer from this the number of the *μέτοικοι* as a whole, for we do not know that the hoplite status was the same for *μέτοικοι* as for *πολῖται*: and as they, as a rule, only manned the walls, they must have been less exposed to loss. The number of *μέτοικοι* is obscured by the fact that special draftings of *μέτοικοι* into the ranks of *πολῖται* are known to have taken place, when the numbers of *πολῖται* had been thinned by a serious disaster. Such cases are related by Diodorus Siculus, xiii. 97 (later years of Peloponnesian war), and the pseudo-Plutarchian author of the life of Hyperides, p. 9 (after Chaeronea, B.C. 338, at which 1000 *πολῖται* fell). There is distinct testimony that in the time of Demetrius of Phalerum there were 21,000 *πολῖται*, 10,000 *μέτοικοι*, and 400,000 *δοῦλοι* in Attica (Athen. *Deipn.* vi. 272 b). Some regard these numbers in the case of *πολῖται* and *μέτοικοι* as referring only to able-bodied men. The *μέτοικοι* consisted of Lydians, Phrygians, Syrians, and other barbarians (Xen. *Vect.* ii. 3), Syracusans, *e.g.* Lysias the speech-writer, Corinthians, *e.g.* Deinarchus, the orator.

3. *Position.*—Any stranger not a slave who remained more than a certain time at Athens was compelled to register himself as *μέτοικος*. During the days of grace he was termed *παρεπίδημος* (*μέτοικός ἐστιν, ὁπόταν τις ἀπὸ ξένης ἐλθὼν ἐνοικῇ τῇ πόλει, τέλος τελῶν εἰς ἀποτεταγμένας τινὰς χρείας τῆς πόλεως· ἕως μὲν οὖν ποσῶν ἡμερῶν παρεπίδημος καλεῖται καὶ ἀτελής ἐστιν, ἐὰν δὲ ὑπερβῇ τὸν ὡρισμένον χρόνον, μέτοικος ἤδη γίνεται καὶ ὑποτελής.* Aristoph. Byz. in *Herodian. Epimer.* ed. Boisson. p. 287). The civic disabilities of *μέτοικοι* were almost proverbial. Xenophon speaks of the Corinthians after their fusion with Argos as *ἐν τῇ πόλει μετοίκων ἔλαττον δυνάμενοι* (*Hell.* iv. 4, 6). Demosthenes (*Callip.* p. 1243, § 29) expresses the same idea by the phrase *μέτοικος καὶ οὐδὲν δυνάμενος.*

Aristotle (*Pol.* iii. p. 1275 a) defines the *μέτοικος* as *ὁ τῶν τιμῶν μὴ μετέχων.* These *τιμαί* were (*a*) *ἀρχαί*, *i.e.* the right of serving as magistrate and dicast, and of voting in elections. (*b*) *ἐπιγαμία*, marriage with *πολῖται*. (*c*) *γῆς καὶ οἰκίας ἔγκτησις*, acquisition of land or house property. (*d*) *ἱερωσύνη*, right of performing public sacrifice.

Each *μέτοικος* was obliged to enrol himself (*ἀπογράφεσθαι, ἐπιγράφεσθαι*) under a patron (*προστάτης*). This custom was no doubt originally due to the fact that in the eye of Greek law and religion the stranger was of the same status as a woman or a minor. Thus the *προστάτης* was at once a security for the good behaviour of the *μέτοικος*, and his representative to the *δῆμος*. (See Aristoph. *Pax*, 683; Harpocrat. *s. v. προστάτης*; Suidas, *s. v. νέμειν προστάτην*.) A *μέτοικος* who failed to register himself under a *προστάτης* incurred *ἀπροστασίου δίκη*: one who deserted his *προστάτης* incurred *ἀποστασίου δίκη* (Bekk. *Anecd.* p. 435; Dem. *Lacr.* p. 940, § 61, 48). The character of the *μέτοικος* might be inferred from that of his *προστάτης* (Isocr. *de Pace*, § 53). Yet it seems that a *μέτοικος* could plead a case in person. The speech of Demosthenes against Eubulides is spoken by a man presumed to be a *μέτοικος*, and no mention is made of a *προστάτης* in Lysias v. and xxiii., both of which speeches are made on behalf of *μέτοικοι*.

His civic disabilities left the *μέτοικος* free to engage in pursuits for which the ordinary citizen had little leisure. He was devoted to trade and could undertake long journeys on business. Hence *μέτοικοι* were distinctly valuable to the state and were encouraged to settle there. (See Aristoph. *Lys.* 579; Isocr. *de Pace*, § 21; [Lys.] *Andoc.* § 49; Xen. *Vect.* iv. 40; Grote, *Greece*, Part II. ch. xi. p. 336, large ed.) Their close connexion with the *πολῖται* is compared by Aristophanes to the relation of bran to flour, while *ξένοι* are but the chaff, which is winnowed away (*Ach.* 508). Their wealth often made them an object of envy and oppression, especially in matters of taxation (Dem. *Androt.* p. 609, § 66; *Timocr.* 166). A special instance of this is seen in their treatment under the Thirty (Xen. *Hell.* ii. 3, 30; *Lys.* xii. § 6).

Each *μέτοικος* paid an annual tax (*μετοίκιον*) of twelve drachmae, widows paying six drachmae, mothers whose sons paid already being exempt (Harpocr. *s. v. μετοίκιον*). This tax, like all others at Athens, was farmed out ([Dem.] *Aristog.* i. p. 787, § 68; Harpocr. *s. v. πωληταί*).

4. *Duties.*—Of the public *λειτουργίαι* the *χορηγία* alone is certainly known to have been open to *μέτοικοι*. (See Dem. *Lept.* pp. 462, § 18, 476, § 70; Lys. xii. § 20; *C. I. A.* ii. 86.) *Μέτοικοι* were liable to *εἰσφοραί*, which they paid on a rating of one-sixth of their property, a rating high in comparison to the *πολῖται* (Dem. *Androt.* p. 612, § 75). For this purpose they were formed into *μετοικικαὶ συμμορίαι* (Hyperid. *ap.* Poll. viii. 144; see also Boeckh, *Staatshaus.* ed. 3, vol. i. p. 624 ff.). With regard to military service, Pericles (Thuc. ii. 13) appears to speak of the *μέτοικοι* as only manning the walls. Yet they seem to have taken part in some distant expeditions, both as hoplites and oarsmen, *e.g.* to Megara (Thuc. ii. 31), coasts of Peloponneus (id. iii. 16), Boeotia (id. iv. 90). See also Thuc. i. 143, Dem. *Phil.* A. 36, from which it would seem that the employment of the *μέτοικοι* was usually regarded as a last resource. They were not allowed to serve as *ἱππεῖς* in any case (Xen. *Vect.* ii. 5; Hipparch. ix. 6).

The difference between *μέτοικοι* and *πολῖται* is naturally most marked in religious matters. Yet, as being an integral part of the state, they had a claim to some share in the state's religion. They took part in the Panathenaea, *ἵνα ὡς εὖνοι ἀριθμῶνται μετέχοντες τῶν θυσιῶν*, the men (*σκαφηφόροι*) carrying skiff-shaped bowls, the matrons (*ὑδριαφόροι*) pitchers, the maidens (*σκιαδηφόροι*) parasols (Hesych. *s. v. σκάφαι*: Ael. *Var. Hist.* vi. 1; Poll. iii. 55; Harpocr. *s. v. μετοίκιον*; Bekker, *Anecd.* pp. 214, 242). Others, however, think that the males alone took part in this *σκαφηφορία*, and that the *σκιαδηφορία, ὑδριαφορία*, and *διφροφορία* were quite distinct ceremonies.

5. *Special privileges.*—Individual *μέτοικοι*, as a reward for distinguished state services, might receive by vote of the *ἐκκλησία* special privi-

leges, such as *προξενία* (Dem. *Lept*. p. 475, § 68; *C. I. A.* ii. 91), *ἀτέλεια* (*C. I. A.* ii. 27, 42, 91; Dem. *ll. citt.*), *ἔγκτησις γῆς καὶ οἰκίας* (*C. I. A.* ii. 41, 70, 186, 380), *πρόσοδος πρὸς τὴν βουλὴν καὶ τὸν δῆμον* (*C. I. A.* ii. 41, 91). A special class of *μέτοικοι* were termed *ἰσοτελεῖς*. These had no *προστάτης*, paid no *μετοίκιον*, enjoyed (this is disputed) *ἔγκτησις γῆς καὶ οἰκίας*, and were, as far as payment of taxes and service as hoplites were concerned, on an equality with *πολῖται*. They were excluded from office, *ἐκκλησία*, and *δικαστήριον* (Poll. iii. 56; Harpocr. *s. v. ἰσοτελεῖς*: *C. I. A.* ii. 54, 176).

Actions at law in which *μέτοικοι* were concerned, either as plaintiff or defendant, were heard before the *ἄρχων πολέμαρχος δίκαι δὲ πρὸς αὐτὸν λαγχάνονται μετοίκων ἰσοτελῶν προξένων* (Poll. viii. 91). While liable *διδόναι δίκην* in all cases to which *πολῖται* were subject, they were only able *λαμβάνειν δίκην* in actions arising out of matters in which *μέτοικοι* were specially concerned. Thus a *μέτοικος* could indict a *πολίτης* for non-fulfilment of contract, but not for *ἀσέβεια*. See Aristotle in Harpocr. *s. v. πολέμαρχος*: Dem. *Lacr*. 48; Isocr. *Trapez*. (where Pasion the banker institutes a *δίκη βλάβης* before the polemarch against a nameless *μέτοικος*); Lys. xxiii. 2, 3. [A. H. C.]

ME'TOPA (*μετόπη*) is the name given to the interval between the *triglyphi* in the frieze of the Doric order [TRIGLYPHI], and also, according to Vitruvius (iv. 2, 4), to the interval between the denticuli in the Ionic order. The word is derived from *μετὰ* and *ὀπή*, but it is doubtful whether we should interpret it with Vitruvius as "space between holes" (*i.e.* between the sockets made in the architrave to hold the beams ending in triglyphs) or with most modern authorities as "hole between" triglyphs (Zwischenöffnung).

It is probable that the metopes were originally open, as we hear of the possibility of passing between the triglyphs (Eur. *Iph. T.* 113 c); but this may be only a story invented to suit the name. No trace of such an arrangement survives, the space being invariably filled with plain or sculptured slabs. It is probable that the use of painting, first in a plain colour, red to contrast with the blue triglyphs, and afterwards with figures, preceded the sculptural ornamentation, and survived in conjunction with it.

Metopes are of particular importance from the use of sculpture to ornament them; for of this sculpture numerous examples have survived, illustrating the various periods of Greek art. From Selinus in Sicily there survive (in the Museum at Palermo) sets of metopes from three temples, belonging to the beginning of the sixth and the beginning of the fifth century B.C. respectively. The earlier are most important examples of uncouth but powerful archaic art; the later have white marble insertions for the nude parts of female figures. From Athens we have metopes of the finest period, those of the Theseum and the Parthenon. The Parthenon had sculptures in all its metopes; the Theseum only upon the east front and the four eastern metopes of the north and south sides. At Olympia, the great temple of Zeus, which is of a somewhat earlier period, has all its external metopes plain, the sculpture being confined to the Doric frieze above the second row of columns upon the east and west fronts. For examples, see the woodcuts under COLUMNA.

As in the case of all architectural sculpture, the subjects and treatment are alike prescribed by the conditions of the surroundings. A series of square spaces with massive architectural frames require high and massive relief, and are especially adapted for scenes of violent action; hence we find most commonly various contests or battles, those of the Gods and Giants or the Lapithi and Centaurs, or the labours of Heracles or Theseus. Such subjects also must be chosen as may readily be represented in a connected series of small and concentrated groups; thus while the whole set of metopes should have a similarity or unity of subject, each ought also to be complete in itself. This principle is, however, violated in one or two instances: *e.g.* The fight of Heracles and Geryon is spread over two metopes on the Theseum. A contemporary description of the metopes of the temple at Delphi may be found in Euripides, *Ion*, 184 *sqq.* (Vitruv. iv. 2, 4; Benndorff, *Die Metopen von Selinunt*; Feuger, *Dorische Polychromie*, p. 41; Overbeck, *Gesch. d. gr. Plastik*, pp. 283–4, &c.) [E. A. G.]

METRE'TES (*μετρητής*), or **AMPHORA METRETES** (*ἀμφορεὺς μετρητής, the standard amphora*; it appears also as *ἀμφορεύς*, the shorter form of the old Homeric *ἀμφιφορεύς*, and as *κάδος* [Herod. i. 51, iii. 20]), was the principal Greek liquid measure. It contained 12 *choes*, 72 *xestae* (*sextarii*), 144 *cotylae*, 576 *ὀξύβαφα*, and 864 *cyathi*. It was 3-4ths of the *medimnus*, the chief dry measure. The Attic metretes was half as large again as the Roman *amphora quadrantal*, and contained 39·39 *litres*=69·33 pints, or slightly over 8⅔ gallons=a water-weight of 1½ talents. (See Tables.) The Aeginetan metretes contained 54·56 *lit.* or a little over 12 gallons, about the same content as the Persian *artabe* (Herod. i. 192).

The Macedonian metretes is estimated by Hultsch (p. 563) as equal to the Attic. (Hultsch, *Metrologie*; MENSURA; PONDERA.)

[P. S.] [G. E. M.]

METRO'NOMI (*μετρονόμοι*) were officers in the Athenian police appointed by lot, whose special duty was to see that proper weights and measures were used in the market and to proceed against those who used false measure (cf. Aristoph. *Thesm.* 348, *εἴ τις τοῦ χοὸς ἢ τῶν κοτυλῶν τὸ νόμισμα διαλυμαίνεται*). It is probable that they also had charge of the standard weights and measures, which were kept in the shrine (*ἡρῴον*) of the hero Stephanephoros (whom some take to be Theseus), just as those at Rome were kept in the temple of Juno Moneta (Boeckh, *Staatshaush.* ii.^{3} p. 324 f.), and hence we may conjecture that the metronomi also supervised the coinage. They had as subordinates in the market *Prometretae* (Boeckh, i. p. 62). As to their number, there is a conflict between Harpocr., Suid., Phot. and *Lex. Seg.* s. v., as the texts now stand, but Fränkel in his note on Boeckh (vol. ii. p. 14*) gives plausible reasons for taking as the true reading a total number of ten; five for the city and five for Peiraeus. According to this view, one was chosen by lot from each tribe. (Schömann, *Antiq. of Greece*, pp. 416, 420; Boeckh, *op. cit.*) [L. S.] [G. E. M.]

METRO'ON (*μητρῷον*). [ARCHEION.]

METRO'POLIS. [COLONIA, Vol. I. p. 474 *b*.]

MICA'RE DI'GITIS, a favourite game in ancient Italy, as the precisely similar *morra* is among Italians of the present day. Though not so common in Greece, it was known to the Greeks, and Aristotle seems to speak of it as *ἡ ἐνάλλαξις τῶν δακτύλων* (*de Insomn.* 2). The game was played by two persons, who simultaneously held up their right hands, of which some fingers, or all or none, were extended. At the same moment each calls out a number which he guesses to be the sum of the fingers extended by himself and his opponent. If he is right, he wins; or, according to one form of the game now played, he opens one finger of the left hand for each correct guess, and the winner is he who first guesses right five times and so opens all the fingers of the left hand. We get a fairly clear description in Nonnus, xxxiii. 77:

> *λαχνὸς ἔην μεθέπων ἑτερότροπα δάκτυλα χειρῶν·*
> *καὶ τὰ μὲν ὀρθώσαντες ἀνέσχεθον ἄλλα δὲ καρπῷ*
> *χειρὸς ἐπεσφήκωτο συνήορα σύζυγι δεσμῷ.*

It was sometimes the custom to play holding each one end of a staff with the left hand, as a security against that hand being used dishonestly, or in the excitement of the game. (See woodcut below.) The modern Italians often play with the left hand behind the back for the same reason.

Game of Morra, from a vase-painting. (Baumeister, *Denkmäler*, 997.)

The cut shows two women playing the game as described, and Victory hovering above them. As a proverbial expression for honesty, they spoke of a man with whom it would be safe to play morra in the dark (*quicum in tenebris mices*, Cic. *de Off.* iii. 19, 77; cf. Petron. 44). It was used also instead of casting lots for a chance decision. So in Calpurnius, *Ecl.* ii. 20, it is decided which singer shall begin by three turns of morra. Probably in such a case the *nearest* guess won, since it was possible that no correct guess might be made. Similarly in Cic. *de Off.* iii. 23, 90, we find *micando* joined with *sorte* (cp. also Cic. *de Div.* ii. 41, 85); and Suetonius (*Aug.* 13) mentions to the discredit of Octavianus, that after the battle of Philippi he made a father and son decide in this way which should be spared. Modern Italians use it to decide which shall pay the wine-bill. It was even used by tradesmen to decide a bargain; a practice which was condemned by an edict of the praefectus urbi, A.D. 372, "consuetudine micandi summota sub exagio [*i.e.* by scales] potius pecora vendere quam digitis concludentibus tradere" (*C. I. L.* vi. 1770). It is clear that this form of barter was not merely the habit which modern Italians have of holding up so many fingers when they bargain for anything, and was at best gambling, at worst sheer dishonesty. (See also Varro, *ap.* Non. 347, 30; Marquardt, *Privatleben*, 836; Becker-Göll, *Gallus*, ii. 479; *Charikles*, iii. 377.) [G. E. M.]

MILLIA'RE, MILLIA'RIUM, or **MILLE PASSUUM** (in Greek writers *μίλιον*), the Roman mile, consisted of 1000 paces (*passus*) of 5 ft. each, and was therefore = 5000 ft. Taking (with Hultsch) the Roman foot at ·2957 *met.* = ·3234 yards, the Roman mile would be 1617 English yards, or 143 yards less than the English statute mile. This = ·1996 German geographical mile. [MENSURA.] The Roman mile contained 8 Attic stadia. The most common term for the mile is *mille passuum*, or only the initials M. P.; sometimes the word *passuum* is omitted (Cic. *ad Att.* iii. 4; Sallust, *Jug.* c. 114): less frequently *mille passus*.

The mile-stones along the Roman roads were called *milliaria*. They were also called *lapides*; thus we have *ad tertium lapidem* (or without the word *lapidem*) for 3 miles from Rome, for Rome is to be understood as the starting-point when no other place is mentioned. Sometimes we have in full *ab Urbe*, or *a Roma*. (Plin. *H. N.* xxxiii. § 159; Varro, *R. R.* iii. 2.) The laying down of the mile-stones along the Roman roads is commonly ascribed to C. Gracchus, on the authority of a passage in Plutarch (*Gracch.* 6, 7). It is true that this only proves that Gracchus erected mile-stones on the roads which he made or repaired, without necessarily implying that the system had never been used before, and there are passages in the historians where mile-stones are spoken of as if they had existed much earlier; but such passages are not decisive; they may be anachronisms, in which *lapis* simply expresses the distance. (Liv. v. 4; Flor. ii. 6; comp. Justin. xxii. 6, § 9.) The passage of Polybius (iii. 39), which states that, in his time, that part of the high road from Spain to Italy, which lay in Gaul, was provided with mile-stones, is probably an interpolation.

The system was brought to perfection by Augustus, probably in connexion with that measurement of the roads of the Empire which was set on foot by Julius Caesar, and the results of which are recorded in the so-called *Antonine Itinerary* (of the 4th century A.D., according to Teuffel, *Rom. Lit.* § 406). Augustus set up a marble pillar with a gilt tablet in the forum, close to the flight of steps which lead up to the temple of Saturn, to mark the central point from which the great roads diverged to the several gates of Rome (Dio Cass. liv. 8; Plut. *Galb.* 24). It was called the *Milliarium Aureum*; and its position is defined as being *in capite Romani Fori* (Plin. *H. N.* iii. § 66), *sub aedem Saturni* (Tac. *Hist.* i. 97; Suet. *Otho*, 6). Some remains still exist, close to the Arch of Septimius Severus, consisting of a round brickwork pedestal, which is by many assumed to have been the base of the Milliarium Aureum: a cylindrical piece of marble, found near it, may have been part of the mile-stone. (Burn, *Rome and Campagna*, p. 124.) Professor Middleton, however (*Rome*, p. 167), takes these remains (a cylinder of concrete faced with brick and lined with slabs of marble) to be work of the third century A.D., and believes them to be the base of the *Umbilicus Romae*, a gilt column marking the centre of Rome, which is mentioned in the *Notitia* and also in the anonymous author of the Einsiedeln Itinerary. This stands at the north end of the supposed Graecostasis, and Professor Middleton places the Milliarium Aureum at the opposite end. Mr. Burn and others make the Milliarium and the Umbilicus different names for the same thing, but against that is the evidence of the *Notitia*, which mentions both. It seems that the marble pillar was covered, on each of its faces, with tablets of gilt bronze. These tablets recorded the numbers of miles covered by the various trunk roads from Rome and the names of the chief stations. The stone is called *Umbilicus Romae* in the anonymous Einsiedeln Itinerary.

It must be observed that the miles on the Roman roads were measured, not from the Milliarium Aureum in the forum (which was set up long *after* the regular mile-stones were placed), but from the gates of the city. (Burn, *op. cit.* p. 49.)

The *Milliarium Aureum* at Byzantium, erected by Constantine in imitation of that of Augustus, was a large building in the forum Augusteum, near the Church of S. Sophia. (See Buchholz, in the *Zeitschrift für Alterthumswissenschaft*, 1845, No. 100, &c.)

London also had its *Milliarium Aureum*, a fragment of which still remains; namely, the celebrated London Stone, which may be seen affixed to the wall of St. Swithin's Church in Cannon Street.

From this example it may be inferred that the chief city of each province of the Empire had its *Milliarium Aureum*.

The ordinary *milliaria* along the roads were short marble columns inscribed with some or all of the following points of information:—(1) the distance, which was expressed by a number, with or without M. P. prefixed; (2) the places between which the road extended; (3) the name of the constructor of the road, and of the emperor to whose honour the work was dedicated. Several of these inscriptions remain, and are collected in the following works:—Gruter, *C. I.* pp. cli. &c.; Muratori, *Thes.* vol. i. pp. 447, &c.; Orelli, *Inscr. Lat. Sel.* Nos. 1067, 3330, 4877; and especially Bergier, *Hist. des grands Chemins des Rom.* vol. ii. pp. 757, &c., Bruxelles, 1728, 4to. An example may be seen in the first milestone of the Appian road, which has been placed in the Piazza of the Capitol, having been found one Roman mile from the Porta Capena.

On some of these mile-stones, which have been found in Gaul, the distances are marked, not only in Roman miles, but also in Gallic *leugae*, a measure of 1500 *passus*. [P. S.] [G. E. M.]

MIMUS (*μῖμος*) properly signifies an imitation or imitator of a situation or person.

1. Greek. In Greek literature the word *mime* is associated with the name of Sophron of Syracuse (fifth century B.C.) and his son Xenarchus (Suid. *s. v.* *ῥηγίνους*). What we know about Sophron is mainly derived from Suidas (*s. v.* *Σώφρων*) and the other lexicographers, the Scholiasts on Nicander and Theocritus, and Athenaeus (see Gaisford's Suidas). We are told that he wrote *μίμους ἀνδρείους* and *μίμους γυναικείους* in the Doric dialect, that they were in prose and imitated by Plato, who used to keep a copy of Sophron under his pillow. The names of some of the mimes are *ἄγγελος*, *θυννοθήρας*, *γέροντες ἁλιεῖς*, and *ἀκεστρίαι*, *νυμφοπόνος*, *πενθέρα*, *Ἰσθμιάζουσαι*. The Second Idyll of Theocritus is borrowed from the *Ἀκεστρίαι* ("The Women Quacks"), and the Fifteenth from the *Ἰσθμιάζουσαι*. Mahaffy (*Hist. of Greek Literature*, § 240) supposes that Sophron's compositions were, like the so-called poems of Walt Whitman, written in a rhythmical prose (*οὗτος γὰρ μόνος*, says an old Scholiast, *τῶν ποιητῶν ῥυθμοῖς τισι καὶ κώλοις ἐχρήσατο ποιητικῆς ἀναλογίας καταφρονήσας*), and were clever delineations of ordinary character, full of patois, wise saws and outspokenness. He further considers that they may have been performed in private society, like the marriage of Dionysius and Ariadne at the end of Xenophon's *Symposium*. Besides Plato, Persius was also said to have imitated Sophron (Lyd. *de Magistr.* i. 41). Botzon has collected the fragments of Sophron in a Programm, 1867. For further, see Fuhr, *De Mimis Graecorum*, 1860.

2. Roman. The Roman *mimus* (a term applied to the piece as well as to the actor) was, like the Atellan farce, an improvised character play of ordinary life, but without the stock character-masks and buskins; and it was more concerned with the humorous side of the low life of the town than of the country. It was indigenous in Latium, and developed out of the dances in character to the flute which were performed in the pit of the theatre during the intervals between the acts, and sometimes in private circles to amuse the guests during dinner (Mommsen, *Rom. Hist.* iv. 579). Later it assumed a certain amount of stage wisdom and wise saws from the works of the Greek New Comedy, which are known chiefly from the great number of Sententiae in Iambic verse of Publilius Syrus. (See the list of over 500 certain instances in Ribbeck, *Com. Lat. Reliquiae*, 261 ff.) But the chief function of the mime was to raise a laugh, and so the language was that of the lower orders, coarse and vulgar. *Mimi* and *mimae* first appear about the time of Sulla (Auct. *ad Herenn.* i. 14, 24, ii. 13, 19; Plin. *H. N.* vii. § 158; Plut. *Sulla*, 2, 36), and in Cicero's time the mime was often given as an afterpiece instead of the Atellana (Cic. *Fam.* ix. 16, 7); hence a *mimus* may fairly be called an *exodium* (cf. Suet. *Dom.* 10), though that term is generally applied only to the Atellanae (Liv. vii. 2, 11). They were played in front of the stage before the *siparium* (Juv. viii. 185, and Schol.; Senec. *de Tranquill. An.* 11). The actor had no buskins (*planipes*, Juv. viii. 181; Gell. i. 11, 12; *excalceatus*, Senec. *Ep.* 8, 8), and no mask: he wore a sort of harlequin costume (*centunculus*, Apul. *Apol.* 13), with the *ricinium* (Festus, *s. v.*; Marquardt, *Privatl.* p. 558) [Ricinium], and the phallus (Schol. on Juv.

vi. 66; Arnob. vii. 33). Along with the principal character (*mimus* or *archimimus*) was a sort of pantaloon called *parasitus* or *stupidus* (Wilmanns, 2635), got up with puffed cheeks and shaved head, who used to have to stand a great deal of noisy slapping (*alapae*) and abuse from the principal actor (Mart. ii. 72, 4; Tert. *Spect.* 23; Arnob. *l. c.*). This *stupidus*, as well as the other actors of the secondary parts, had as his *rôle* to imitate the chief actor (Hor. *Epist.* i. 18, 14; cf. Suet. *Cal.* 57). The female parts were played by women: for example, Thymele in Juv. i. 36, vi. 66; Arbuscula (Cic. *Att.* iv. 15, 6), Dionysia (ib. *Rosc. Com.* 8, 23), Cytheris (ib. *Phil.* ii. 8, 20), Claudia Hermione (Orelli, 4760), *Luria privata mima vixit annis* xix. (Wilm. 2634; cf. *C. I. G.* 6335, 6750), a burial-ground *sociarum mimarum* in Wilm. 326. Their performances, originally at the Floralia, later at all the exhibitions, were decidedly loose (*ut mimae nudarentur postulare*, Val. Max. ii. 10, 8). The dancing in the mimus was of a grotesque nature, accompanied by extravagant grimaces and obscene gestures and jokes (Ov. *Trist.* ii. 497 ff., 515), with plenty of ribald abuse and blows (Mart. *l. c.*; Juv. viii. 192, and see especially Mayor on Juv. v. 171).

The subjects were of the most varied kinds (see the long list, with the fragments which are preserved, in Ribbeck, *Com. Lat. Reliquiae*, 237 ff.), but they nearly always involved some incident of an amorous nature in which ordinary morality was set at defiance (Ov. *l. c.*; Juv. vi. 44; Val. Max. ii. 6, 7). There were often sudden changes of fortune introduced, beggars becoming millionaires (Cic. *Phil.* ii. 27, 65) and *vice versâ* (Senec. *Ep.* 114, 6), mimicking and parodies of people of the day, such as lawyers for example (Wilm. 2627), general character pieces (*e.g.* Augur, Colax, Ephebus, Hetaera, Virgo), scenes from the life of tradesmen (*e.g.* Restio, Fullo) or of foreigners (*e.g.* the Etruscan Women, the Gauls), subjects with ghosts in them (Descensus ad Inferos by Laberius, Phasma by Catullus), description of popular festivals (Compitalia, Parilia, Saturnalia, reminding one of Sophron's mimes), representation of careers that attracted the imagination of the people (*e.g.* that of Laureolus, the Dick Turpin of the ancients, Juv. viii. 187), mythological caricatures (*moechum Anubim et masculam Lunam, Dianam flagellatam et Jovis mortui testamentum recitatum et tres Hercules famelicos*, Tert. *Apol.* 25). In Imperial times they were sometimes intricate enough (Quint. iv. 2, 53): Plutarch (*de sollert. Anim.* 19 = 973, 46) tells us of a mime in which a dog took a prominent part. There was always a great deal of political criticism allowed in the mimes (Macrob. *Sat.* ii. 7, 5; Cic. *Att.* xiv. 3, 2; Suet. *Aug.* 53, 68, *Tib.* 45; Friedländer, ii.^{3} 420 ff.).

The principal writers of mime under the late Republic were Laberius and Publilius Syrus. The mimographi under the Empire are numerous: Catullus (Juv. viii. 186), Lentulus and Hostilius (Tert. *Apol.* 15), Aemilius Severianus (*C. I. L.* 4092), Philistion (Suet. ed. Roth, p. 299, 3). As the mimes were not so fashionable as the pantomimes, we hear less about their performers. Still we occasionally hear of them, *e.g.* Latinus and Panniculus (Mart. *l. c.*), Alytyros (Joseph. *Vita*, 3), &c.; and at times they were advanced to great honours, *e.g.* a mimus Eutyches was made a decurio at Bovillae, and he was so rich as to be able to give a distribution of money to the citizens (Wilm. 2624, cf. 2625). The epitaph of the actor Vitalis says of his profession as mime, *Hinc mihi larga domus hinc mihi census erat* (*Anthol. Lat.* ii. p. 89, ed. Meyer).

For further, see Friedländer, *Sittengeschichte Roms*, ii.^{3} 416–422; Teuffel, *Röm. Litteraturgeschichte*, § 8 (who however confuses mimes and pantomimes); Patin, *Études sur la Poésie latine*, ii. 346–365. [L. C. P.]

MISTHO'PHORI (*μισθοφόροι*). [MERCENARII.]

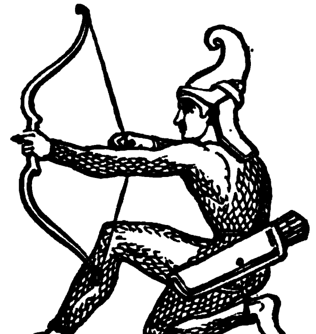
MISTHO'SEOS PHASIS (*μισθώσεως φάσις*), also called *μισθώσεως οἴκου φάσις*, is the action brought against a guardian for either having neglected to make profitable use of the property of his ward, or for having made no use of it at all. Use might be made of such property either by letting it, if it consisted of lands or houses, or by putting it out to interest, if it consisted of capital. Like the kindred action *κακώσεως τῶν ὀρφανῶν*, it might be brought against the guardian, during the minority of his ward, by any person who took an interest in the welfare of the orphan. After the orphan came of age, the remedy lay in his own hands by a *δίκη ἐπιτροπῆς*: in the confused notices of the grammarians we find also a *γραφὴ ἐπιτροπῆς* (Poll. viii. 35), but this is almost certainly a mistake (*Att. Process*, p. 360 Lips.). The question whether the action *μισθώσεως* was public or private, a *γραφὴ* or a *δίκη*, has been discussed by Boeckh (*P. E.* p. 355 f. = *Sthh.*^{3} i. 425 f.) and the authors of the *Attische Process* (p. 294 f.) without coming to any very definite conclusion. In reality, as the recent editors of these two works have pointed out, the only word used by good authorities is *φάσις*, a particular kind of public prosecution by way of information (Fränkel on Boeckh, n. 566; Lipsius, *A. P.* p. 361; cf. Thalheim, *Rechtsalterth.* pp. 14, n. 4, 84, n. 2; PHASIS). There is a further doubt whether the *φάσις* lay only against a guardian who had not let the property at all, or also against one who had not let it to the best advantage. Most grammarians include the latter case (*κατὰ τῶν οὐ δεόντως μεμισθωκότων*, Harpocrat., Suid., *s. v.*; *Lex. Rhet.* p. 667, 7; *Etym. M.* p. 788, 50); the *Lex. Seguer.* mentions only the non-letting (pp. 312, 24; 315, 18). Complaints of this kind were brought before the first archon. In cases where the guardian would not or could not occupy himself with the administration of the property of his ward, he might request the archon to let the whole substance of his ward's property to the highest bidder, provided the testator had not expressly forbidden this mode of acting in his will. (Demosth. *c. Aphob.* ii. p. 837, § 5; compare iii. p. 853, § 29, 857, § 42; Lys. *c. Diogeit.* § 23.) The letting of such property took place by auction, and probably in the presence of a court of justice, for we read that the court decided in cases where objections were made against the terms of letting the property.

(Isae. *Or.* 6 [*Philoct.*], § 36 ff.) The person who took the property had to pay an annual percentage for the right of using it, and this percentage frequently amounted to more than 12 per cent. per annum. If one man alone was unwilling to take the whole property on such conditions, it might be divided and let to several persons separately. (Isae. *Or.* 2 [*Menecl.*], § 28 ff.) The tenant or tenants of the property of an orphan had to give security (*ἀποτίμημα*) for it, and to mortgage (*ἀποτιμᾶν*) his own estate, and the archon sent especial persons, *ἀποτιμηταί*, to value his property, and to ascertain whether it was equivalent to that of the orphan. (Suidas, *s. v.* Ἀποτιμηταί.) The technical term for letting the property of an orphan, whether it was done by the guardian himself or by the archon, was *μισθοῦν*, and those who took it were said *μισθοῦσθαι τὸν οἶκον* (*οἶκος* here signifies the whole substance of the property, Dem. *c. Aph.* i. p. 818, § 15; 826, § 40; 827, § 43; 831, § 58). The tenants of the estate of an orphan had the right and perhaps the obligation to protect it against any other person. (Isae. *Or.* 7 [*Hagn.*], § 16.) It is not clear what resource was open to an orphan against a tenant who did not fulfil his obligations, but it is probable, that if any disputes arose, the guardian or the archon alone were answerable and had to procure justice to the orphan.

(Boeckh, *P. E.* pp. 142, 355 = *Sthh.*^{2} i. 179, 425; *Att. Process*, pp. 294, 532 = 361, 726 f. Lips.; Thalheim, *ubi supra*; cf. Epitropus, p. 752 *a.*) [L. S.] [W. W.]

MITRA (*μίτρα*) means in its first sense a band of any kind, and accordingly it was (1) the Homeric *μίτρη*, a band beneath the *θώρηξ* over the lower part of the abdomen [Lorica, p. 78 *a*], and (2) is equivalent to the *ζώνη παρθενική*, the maiden's girdle [Cingulum, Vol. I. p. 427), so that the word *ἄμιτρος* (Callim. *Diom.* 14) means a young girl, not old enough for a girdle, not yet of a marriageable age.

The word is then used for a band fastening the hair; thence developing into a regular head-dress for women, with lappets hanging over the ears, apparently something like a *κρήδεμνον* or the Calautica (Serv. *ad Aen.* ix. 616; see Coma, Vol. I. p. 449, and the woodcuts on that page): but it does not seem to have been worn either in Greece or at Rome by women of a respectable class. (See Serv. *l. c.* and the passages cited by Professor Mayor on Juv. iii. 66.) Cicero speaks indignantly of the *mitella* being worn by effeminate young men (*pro Rabir. Post.* 10, 26).



Paris, with Phrygian mitre. (Aegina Marbles.)

As an Asiatic head-dress it was sometimes shaped like a turban, as in the mosaic of the battle of Issus, sometimes in a peaked form, as in the woodcut from the Aeginetan sculptures representing Paris; also with lappets (the *redimicula* of Verg. *l. c.*), as is well shown in a vase-painting *ap.* Baumeister, *Denkm.* fig. 1318: from this Asiatic head-dress the episcopal mitre was a very late development. In the LXX. in Ex. xxviii. 33 and some other passages the word *μίτρα* renders the priestly cap which is commonly called *κίδαρις*. It is noticeable that the ecclesiastical mitre of the Middle Ages is by some ecclesiastical writers called a *Phrygium*. (Marriott, *Vestiarium Christ.* p. 220.) [Tiara.] [W. S.] [G. E. M.]

MIXTA ACTIO. [Actio.]

MNA (*μνᾶ*). [Talentum.]

MNE'MATA, MNEMEIA (*μνήματα, μνημεῖα*). [Sepulcrum.]

MNOIA, MNOTAE (*μνοία, μνῶται*). [Cosmi, Vol. I. p. 555.]

MOCHLUS (*μοχλός*). [Janua.]

MODI'OLUS, the diminutive of Modius, is used for various kinds of small vessels: for a drinking-cup, Dig. 34, 2, 36; for the buckets on the edge of the *tympanum*, by which water was raised (Vitruv. x. 10), and generally for any kind of bucket or small cistern in hydraulic machinery (*ib.* 12, 13); and hence, from its shape, it is also used for the box or nave (*πλήμνη*) of a wheel (Plin. *H. N.* ix. § 8; Vitruv. x. 14), for the nave or socket into which the axle of the crusher in an oil press fits (Trapetum), and for other kinds of sockets (Vitruv. x. 18). [P. S.] [G. E. M.]

MO'DIUS, the principal dry measure of the Romans, was equal to one-third of the amphora (Volusius Maecianus, Festus, Priscian, *ap.* Wurm, § 67), and was therefore equal to nearly two gallons English. It contained 16 *sextarii*, 32 *heminae*, 64 *quartarii*, 128 *acetabula*, and 192 *cyathi*. Compared with the Greek dry measure, it was 1-6th of the Medimnus. Its contents weighed, according to Pliny, 20 pounds of Gallic wheat, which was the lightest known at Rome. Farmers made use of vessels holding 3 and 10 modii (Colum. xii. 18, § 5). As a land-measure the third part of the jugerum was called *σπόρμος μόδιος* = *Castrensis Modius*. The symbol in Latin MSS. is M^{o}, in Greek M$^{\delta}$, μ^{o} (Hultsch, *Metr. Script.* i. 70.) [P. S.]

MO'DULUS (*ἐμβάτης*), the standard measure used in determining the parts of an architectural order. It was originally the lower diameter of the column; but Vitruvius takes in the Doric order the lower semi-diameter for the module, retaining the whole diameter in the other orders. Modern architects use the semi-diameter in all the orders. The system of dividing the module into minutes was not used by the ancient architects, who merely used such fractional parts of it as were convenient. The absolute length of the module depends of course on the dimensions of the edifice: thus Vitruvius directs that, in a Doric tetrastyle portico, $\frac{1}{28}$, and in a hexastyle $\frac{1}{44}$ of the whole width should be taken as the module, if diastyle, or $\frac{1}{23}$ and $\frac{1}{33}$ respectively, if systyle (Vitruv. i. 2; iv. 3; v. 9). Instead of the accepted view, that the bottom diameter of the column was taken as the modulus, M. Aurés, in his *Nouvelle Théorie du Module* (Nîmes, 1862), has tried to prove from Vitruvius and extant examples, that both for the column and for the intercolumnia the measurement was taken at the middle height. This seems improbable, as such a measurement could not be obtained till the building was complete; and the passages quoted hardly bear such an interpretation. (See Reber, *Philologus*, xxvii. pp. 185–191.) [P. S.] [E. A. G.]

MOENIA. [MURUS.]

MOICHEIAS GRAPHE' (*μοιχείας γραφή*). [ADULTERIUM.]

MOLA (*μύλη* or *μύλος*), a mill. Curtius (*Gr. Etym.* p. 339) remarks that all European languages have the same word for these contrivances—a sufficient proof of their antiquity. The Greeks and Romans of course identified the process with certain deities or heroic beings, such as Myles of Alesiae (Pausan. iii. 20), Μυλαντεῖοι Θεοί (Hesych.): in Pliny, vii. § 191, the invention is ascribed to Ceres: Varro (*ap.* Plin. xxxvi. § 135) more practically derives the Roman mills from Volsinii in Etruria.

All mills no doubt started from a simple process of grinding between two stones, and it is impossible to say when the machines, properly so called, for grinding began. The mention of stones "like millstones" in Hom. *Il.* vii. 270, xii. 161, proves that corn was ground between stones of some particular size and shape, but does not tell us more. The same may be said of the passages in *Od.* vii. 104, xx. 105, though perhaps in the latter passage the number of mills in the palace (presumably six with two female slaves at each) implies that they were small and rude. Dr. Schliemann (*Ilios*, p. 234) shows "saddle querns" of trachyte, found at Hissarlik, flat on one side and convex on the other, between which the corn was ground or bruised. It is not quite clear why we need, with him, assume that corn could not be ground by such a method. The process may have been such as Livingstone describes in Africa, where the upper stone is moved round and round over the lower by the hand. The process would be more troublesome than the rudest quern worked by a handle, but, given sufficient time, the result would be the same.

All mills were anciently made of stone, the kind used being a volcanic trachyte or porous lava (*pyrites*, Plin. *H. N.* xxxvi. § 30; *silices*, Verg. *Moret.* 23–27; *puniceas*, Ovid. *Fast.* vi. 318), such as that which is now obtained for the same purpose at Mayen and other parts of the Eifel in Rhenish Prussia. They were obtained especially from the volcanic island Nisyros (Strabo, x. p. 488). Hence the complaint of the horse in *Anth. Pal.* ix. 21, 5:

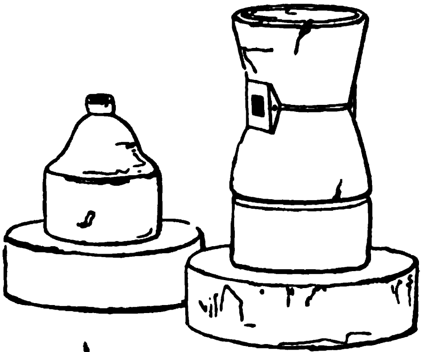
> νῦν δὲ βάρος πέτρης Νισυρίτιδος ἔγκυκλον ἕλκω
> λεπτύνων Δηοῦς καρπὸν ἀπ' ἀσταχύων.

Hence also the epithet *mola scabra* in Ovid. This species of stone is admirably adapted for the purpose, because it is both hard and cavernous, so that, as it gradually wears away, it still presents an infinity of cutting surfaces.

Every mill consisted of two essential parts,—the upper mill-stone, which was movable (*catillus*, *ὄνος*, *τὸ ἐπιμύλιον*, Deut. xxiv. 6), and the lower (*meta*, *μύλη*), which was fixed and by much the larger of the two. Hence a mill is sometimes called *molae* in the plural. The stones were kept rough by cutting or scratching them when they wore smooth, which is the sense of *νεόκοπτος* in Aristoph. *Vesp.* 648, and *lapis incusus* in Verg. *Georg.* i. 274. There are three kinds of mills mentioned by ancient authors,—the hand-mill, the mill worked by animals, and the water-mill. Windmills are an invention of the Middle Ages.

I. The hand-mill, or quern, called *mola manuaria*, *versatilis*, or *trusatilis*. (Plin. *H. N.* xxxvi. § 135; Gell. iii. 3; Cato, *de Re Rust.* 10.)

The islanders of the Archipelago use in the present day a mill, which consists of two flat round stones about two feet in diameter. The upper stone is turned by a handle (*κώπη*) inserted at one side, and has a hole in the middle into which the corn is poured. By the process of grinding the corn makes its way from the centre, and is poured out in the state of flour at the rim. (Tournefort, *Voyage*, Lett. 9.) The description of this machine exactly agrees with that of the Scottish quern, formerly an indispensable part of domestic furniture. (Pennant, *Tour in Scotland*, 1769, p. 231; and 1772, p. 328.) There can be no doubt that this is the flour-mill in its most ancient form. In a very improved state it has been discovered at Pompeii. The annexed woodcut shows two which were found standing in the ruins of a bakehouse. In the left-hand figure the lower millstone only is shown. The most essential part of it is the cone, which is surmounted by a projection containing originally a strong iron pivot. The upper millstone, seen in its place on the right hand of the woodcut, approaches the form of an hour-glass, consisting of two hollow cones, jointed together at the apex, and provided at this point with a socket, by which the upper stone was suspended upon the iron pivot, at the same time touching on all sides the lower stone, and with which it was intended to revolve. The pivot could be made slightly longer if coarser meal was desired. The upper stone was surrounded at its narrowest part with a strong band of iron; and two bars of wood were inserted into square holes, one of which appears in the figure, and were used to turn the upper stone. These bars or levers, whether



Mills at Pompeii.

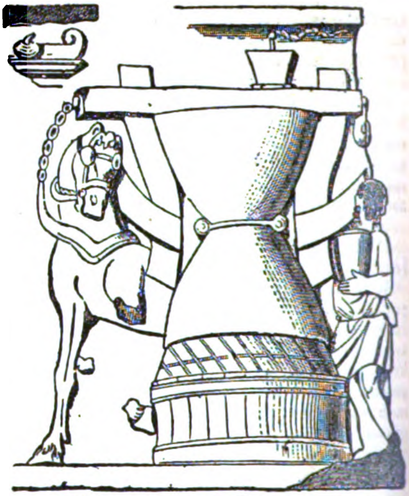
worked by hand or by an animal attached to them, were called *κῶπαι*, in Latin *molilia*. The uppermost of the two hollow cones served the purpose of a hopper. The corn with which it was filled gradually fell through the neck of the upper stone upon the summit of the lower, and, as it proceeded down the cone, was ground into flour by the friction of the two rough surfaces, and fell on all sides of the base of the cone into a channel formed for its reception. The mill here represented is five or six feet high.

The hand-mills were worked among the Greeks and Romans by slaves. Their pistrinum was consequently proverbial as a place of punishment for refractory town slaves (see Ramsay's excursus on the *Mostellaria*): smaller hand-mills were however worked, especially in the Homeric age, by women. (Hom. *Od.* vii. 104; Exod. xi. 5; Matt. xxiv. 41.)

In every large establishment the hand-mills were numerous in proportion to the extent of the family. Thus in the palace of Ulysses there were twelve, each turned by a separate female slave, who was obliged to grind every day the fixed quantity of corn before she was permitted to cease from her labour. (*Od.* xx. 105–119; compare Cato, *de Re Rust.* 56.) We have special mention of the *ἐπιμύλιοι ᾠδαί*, sung as they worked in time. (Poll. iv. 53; Athen. xiv. 618 d.) It seems also to have been called *ἱμαῖον μέλος* (Hesych. *s. v.*; Phot. *s. v.* *ἱμαοιδός*). An instance is given in Plut. *Conviv. vii. Sap.* p. 157 d: *ἄλει μύλα, ἄλει καὶ γὰρ Πίττακος ἄλει, μεγάλας Μιτυλάνας βασιλεύων.*

II. The mill worked by animals (*mola jumentaria, mola asinaria:* Lucian, *Asin.* 28; Ov. *Fast.* xi. 318, &c.). The horses so used were old and worn out (Juv. viii. 67; Apul. *Met.* ix. 11), such as the worn-out racehorse of the fabulists (Babr. 29; Phaedr. 19). The woodcut below shows the horse attached under the cross-beam, as in Babrius, *l. c.*: *ζευχθεὶς ὑπὸ μύλην.* The animal was blinded by a bandage (*ὀθόνη*) over the eyes, by way of blinkers. The woodcut gives an instance of something more like ordinary blinkers. It was common also to prevent the animals from eating the corn by a contrivance called *παυσικάπη*, which was a *τροχοειδὲς μηχάνημα* round the neck, which made it impossible for an animal to lower its mouth to the corn or for a man to bring his hands up to his mouth, for slaves also were sometimes so muzzled. (Poll. vii. 20; Eustath. *ad Il.* xxii. 467; Phot. *s. v.* *παυσικάπη*.) It was also called *καρδοπεῖον* (Poll. x. 112, who quotes from Aristoph. *Heroes*; cf. Schol. *ad* Aristoph. *Pax*, 14). These mills were larger but of exactly the same construction as the hand-mill described above, except so far as the apparatus for attaching the animal was concerned. In the woodcut, from a relief in the Museo Chiaramonti, there is a cross-beam above the *catillus* connected by two curved vertical beams with another lower cross-beam. The hopper for filling the mill appears above the beam. It may be remarked that the lamp on the bracket in the corner exactly illustrates Verg. *Moret.* 19: "tabella quam fixam paries illos servabat in usus lumina fida locat." The mill-driving animals had a holiday at the festival of Vesta. (Cf. the *coronati aselli*, Ov. *Fast.* vi. 311; Prop. v. 1, 21.)

III. The water-mill (*mola aquaria, ὑδραλέτης, ὑδρόμυλος*). The first water-mill of which any record is preserved, was connected with the palace of Mithridates in Pontus. (Strabo, xii. p. 556; Pompon. *ad* Verg. *Moret.*) That water-mills were used at Rome is manifest from the description of them by Vitruvius (x. 10). A cogged wheel, attached to the axis of the water-wheel, turned another which was attached to the axis of the upper mill-stone: the corn to be ground fell between the stones out of a hopper (*infundibulum*), which was fixed above them. (See also Brunck, *Anal.* ii. 119; Pallad. *de Re Rust.* i. 42.) Ausonius, as cited below, mentions their existence on the Ruwer near Treves; and Venantius Fortunatus, describing a castle built in the sixth century on the banks of the Moselle, makes distinct mention of a tail-race, by which "the tortuous stream is conducted in a straight channel." (*Poem.* iii. 10.) The following epigram of the time of Augustus describes them as in use to save labour:—



Mill, from an ancient relief. (Blümner.)

ἴσχετε χεῖρα μυλαῖον, ἀλετρίδες, εὕδετε μακρά,
  κἢν ὄρθρον προλέγῃ γῆρυς ἀλεκτρυόνων·
Δηὼ γὰρ Νύμφαισι χερῶν ἐπετείλατο μόχθους·
  αἱ δὲ κατ' ἀκροτάτην ἀλλόμεναι τροχιὴν
ἄξονα δινεύουσιν· ὁ δ' ἀκτίνεσσιν ἑλικταῖς
  στρωφᾶται πισύρων κοῖλα βάρη μυλάκων.

IV. The floating-mill. When Rome was besieged by the Goths, A.D. 536, and when the stoppage of the aqueducts rendered it impossible to use the public corn-mills (*οἱ τῆς πόλεως μύλωνες*) in the Janiculum, so that the citizens were in danger of starvation, Belisarius supplied their place by erecting floating-mills upon the Tiber. Two boats being moored at the distance of two feet from each other, a water-wheel, suspended on its axis between them, was turned by the force of the stream, and put in motion the stones for grinding the corn. The invention being found useful was retained, according to Procopius, in later times. (Procop. *de Bello Gothico*, i. 15.)

V. The saw-mill. Ausonius mentions mills situated on some of the streams falling into the

Moselle, and used for cutting marble into slabs. (*Id*, *ll.* x. 362, 363.)

VI. The pepper-mill. A mill for grinding pepper, made of boxwood, is mentioned by Petronius (*molea buxea piper trivit*, *Sat.* 74). For the olive-mill (*mola olearia*), see TRAPETUM. (Blümner, *Technologie*, i. pp. 23–49; Marquardt, *Privatleben*, p. 421.) [J. Y.] [G. E. M.]

MONA'RCHIA (*μοναρχία*), a general name for any form of government in which the supreme functions of political administration are in the hands of a single person. The term μοναρχία is applied to such governments, whether they are hereditary or elective, legal or usurped. If all the officials and ministers of the ruler are merely his deputies, appointed and removable by him, then the term *μοναρχία* strictly applies. Aristotle (*Pol.* iii. 15, 2,= p. 1287) calls this *παμβασιλεία*. This form of monarchy did not belong to Greek states except as a consequence of revolution, when some citizen usurped this power for himself, and sometimes transmitted it. Monarchy of the more constitutional kind, as described in Homer, probably existed throughout Greece at the time of the Dorian conquest, and gradually disappeared, as in each state the weak or violent rule stirred up successful opposition of the people. In Argos, however, it lasted to the time of the invasion of Xerxes (Herod. vii. 149), but disappeared before the Peloponnesian War. In Sparta it remained in a peculiar form. In its commonest application, it is equivalent to *βασιλεία*, whether absolute or limited. But the rule of an *aesymnetes* or a *tyrant* would equally be called a *μοναρχία*. (Arist. *Pol.* iii. 16, iv. 8 = pp. 1286, 1294; — Plato, *Polit.* p. 291, C, E; p. 302, D, E.) Hence Plutarch uses it to express the Latin *dictatura*. Aristotle defines four sorts of *βασιλεία*: "firstly, the kingship of the heroic period, when the obedience was voluntary, but the power of the kings strictly defined, the king being general, judge, and supreme religious functionary; secondly, the non-Greek, which was a hereditary despotic rule of a constitutional character; thirdly, the Asymneteia, as it is called, an elective tyranny; and, fourthly, the Laconian, which may be broadly defined as a hereditary generalship for life." (Arist. *Pol.* iii. 14, Welldon's translation.) It is by a somewhat rhetorical use of the word that it is applied now and then to the *δῆμος*. (Eurip. *Suppl.* 352; Arist. *Pol.* iv. 4.) For a more detailed examination of the subject, the reader is referred to the articles REX, ARCHON, TYRANNUS, PRYTANIS, AESYMNETES, TAGUS. [C. P. M.] [G. E. M.]

MONE'TA (*ἀργυροκοπεῖον*), a mint. The mint of Rome was a building on the Capitoline hill, attached to the temple of Juno Moneta, which was dedicated, in consequence of a vow, by L. Furius Camillus when dictator. (Liv. vii. 28; Ovid. *Fasti*, vi. 183.) Under this head should come an account of the *law* in ancient coinage, of rights of coinage, monetary magistrates, and the organisation of mints. The fullest treatment of these subjects will be found in the second and third volumes of Lenormant's *La Monnaie dans l'Antiquité*; but as regards Roman coinage, Mommsen's *Röm. Münzwesen* is the soundest authority. In this place a brief summary must suffice.

(1) *Rights of Coinage.*—No privilege of power was in antiquity more highly regarded or more jealously preserved than that of issuing money. In Asia the king of Persia appears from the first to have claimed and reserved the sole right of issuing gold money. The royal Darics or *τοξόται* thus constituted a sort of royal standard coin: they circulated in vast quantities, and thus controlled and kept within limits the issues of Asiatic mints. But the Greek cities of the coast seem to have enjoyed the privilege of issuing silver and copper money at pleasure. Even the issue of electrum coins by trading cities, such as Phocaea and Cyzicus, does not seem to have been regarded as a breach of the monopoly of the Great King. Satraps also, at least in the western provinces of Asia, were allowed to issue silver money bearing their own names: we possess many specimens bearing the names of Pharnabazus, Tiribazus, Datames, and other Persian satraps; though some numismatists suppose that this privilege was exercised only on occasion of military expeditions. Herodotus states (iv. 166) that Darius put to death Aryandes, governor of Egypt, for issuing silver coins of a finer quality than his own, but his narrative clearly shows that the issue of silver coins by satraps was usual; it was only the innovation in the quality, and the ambitious motives which prompted it, which amounted to an act of rebellion. In Greece proper and in the Greek colonies in Italy, Sicily, and Africa, and the shores of the Euxine Sea, each separate state or *πόλις* claimed and exercised the full right of issuing such money as it chose, but in the exercise of that right did not of course lose sight of the reasons of commercial expediency. As a result of perfectly free competition the money circulating in each region acquired a certain general character, and to this character all the coins issued in that region tended to conform, as regards material and weight. Subject to such general control as this, the mint-cities of Greece exercised the freest choice in all their successive issues. Hence the condition of the Hellenic world, while it was a congeries of small independent states, is exactly reflected in the great abundance and unlimited variety of the issues of Greek coins, large numbers of which enrich the museums of the present day, every specimen evidencing civic independence, complete political organisation, and local religious cults. Already we know of some 2,000 mints which issued coin of their own before the fall of the Roman Empire, and fresh mints are discovered every year. We have money of more than fifty Greek cities of Sicily; and the little island of Ceos, not ten miles across, had three active mints. Colonies sent forth by the great commercial cities had no sooner settled in their new abodes than they began to issue coin, commonly of quite a different character from that of the mother-city. There are of course certain exceptions to this rule. Athenian cleruchies appear to have used the coins of Athens; and when the towns of any district in Greece formed among themselves a close alliance for any political or commercial purpose, greater uniformity at once appeared in their monetary issues. Thus the cities of Magna Graecia which were united in the sixth century for mutual defence against the semi-barbarous Italic races issued coins in which a common character clearly appears: and

the cities which belonged to the Aetolian and Achaean Leagues used uniform weights and types for their coins. In late Greek times those cities of Greece which had lost their civic autonomy and become dependent upon the Hellenistic kings of Pergamon, Macedon, and Syria, appear still to have preserved to a considerable extent their right of issuing money: even when it became necessary to place on it the effigy of their regal protector, they retained the control of the mint. In the Roman age the issues of Greek silver money came to an end, except in the case of a few favoured cities, like Antioch, Tarsus, and Caesareia in Cappadocia; but the issue of copper money was still permitted to hundreds of towns, great and small, in Greece and the Asiatic mainland.

Turning to Italy, we have to observe the process by which the Roman state, acting without pause or change in one direction, reduced the number of mints and gradually introduced uniformity in the place of wide diversity. In the fourth century B.C. the Italian, Greek, Etruscan and Oscan coinages present the same variety and autonomy as those of Greece. At that time Rome issued only the heavy libral asses of copper. But as soon as denarii in silver were coined at Rome, in B.C. 269 [see As, Vol. I. p. 205], the Senate awoke to the desirability of putting down rival issues in cities which came under Roman dominion; and from this policy the rulers of Rome never swerved until in the reign of Diocletian coinage was uniform through the length and breadth of the Empire. Within the Roman organisation, however, the right of coinage did not always belong to the same functionaries. In consular times it was exercised within the city by regularly appointed officials, usually three in number, *iiiviri monetales*, though their number, as well as the conditions attached to their duties, appears to have fluctuated. Abroad, Roman Imperators exercised the right of issuing such coins as suited their military necessities, and placing upon it their name or even their image. This accounts for the existence of money, especially in gold, belonging to the last century of the Roman Republic, and bearing the names and portraits of Sulla, Pompeius, and other generals. Augustus, on his accession to power, having such precedents to allege, took into his own hands the issue of all Roman gold and silver money, leaving to the Senate only the issues in copper, each specimen of which bears thereafter the letters S. C. to show that it was minted by senatorial authority.

(2) *Organisation of Mints.*—On this subject our information is very insufficient; and we are confined in the main to the testimony of the coins themselves, which is not exact or conclusive. Of the Athenian coin issued after Alexander the Great, the type is an owl standing on an amphora: there are in the field three names of magistrates, and detached letters, some on the amphora and some below it. The first two names are those of annual magistrates, no doubt high officials and treasurers: these names change but once a year. The third name changes twelve times a year, and with it changes the letter on the amphora (A to M),—facts which show that the third magistrate, probably the man actually responsible for the goodness of the coin, was elected in rotation for one month from one of the twelve tribes. The letters indicate the division of the year, first to twelfth, during which the tribe represented by this official prytanised. The letters below the amphora are supposed to indicate the particular workshop of the mint where each of the coins was manufactured. Thus every piece could be traced back with certainty to those who were actually responsible for its production, and the possibility of forgery was almost destroyed. At Rome we find no such elaborate scheme for fixing responsibility, but on the other hand great care in stating the authority by which the coin was issued. The name of the person who ordered the coin to be made, whether imperator or monetalis, is after a certain time never wanting. We meet on coins such inscriptions as IIIVIR · AAAFF, *i.e.* "triumvir auro argento aere flando feriundo" (Cic. *ad Fam.* vii. 18; *de Leg.* iii. 3, 7); AED · CVR · EXSC, "aedilis curulis ex senatus consulto," and the like. Some of the Roman denarii also bear, in addition to the name of the issuer, some device, letter or numeral which seems to have reference to the particular officina whence they issued. See also As, Vol. I. pp. 206, 207.

The processes used in minting were of course very simple compared with those of modern times. One engraved die was let into an anvil, another into the end of a metal bar. Between the two was placed a blank, roughly cast in the required shape and size and heated to redness. A single blow from a heavy hammer on the upper end of the metal bar would probably usually suffice to finish the coin, which would then be removed by the tongs and a fresh blank substituted. Collars and milling were unknown. Such a process would very soon wear out any die; and as a consequence, the continual engraving of new dies was one of the chief occupations of the workmen of the mint. The rapidity with which they could be prepared is shown by the fact that the most ephemeral pretenders to the throne of the Caesars seldom failed to leave us coins bearing their name and effigy. On this subject, see Gardner's *Types of Greek Coins*, chap. iii. [P. G.]

MONI'LE (*ὅρμος*), a necklace. In Homer the words *ὅρμος* and *ἴσθμιον* are both employed for ornaments worn round the neck. It seems probable that the meanings of the two words are to be distinguished in the following manner:—The *ἴσθμιον* was an ornament fitting close round the neck in the manner of a torc, and without any pendants: the *ὅρμος*, on the other hand, was sometimes of great length (*ἐννεάπηχυς*, *Hymn. in Apoll.* 105), and hung loosely down, so as to be seen on the breast (*Hymn. in Venerem*, 90). This distinction is stated by the Scholiast on Hom. *Od.* xviii. 300, *ἴσθμιον οὖν περιτραχήλιον κόσμον περιπεπλεγμένον, οὐ μέντοι κοσμήματά τινα, καὶ ἄλλως . . . . διαφέρει τοῦ ὅρμου. τὸ μὲν γὰρ προσέχεται τῷ τραχήλῳ, ὁ δὲ ὅρμος κεχάλασται.*

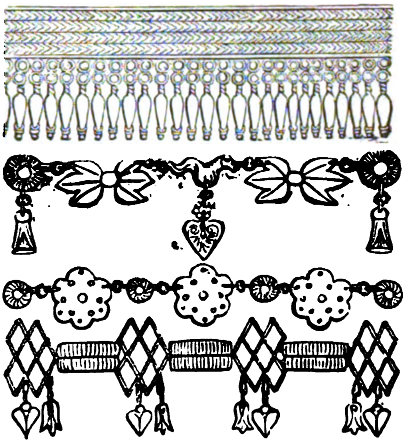
The Homeric *ὅρμος* is described as made of gold and amber (*Od.* xv. 460; xviii. 295); of golden threads (*Hymn. in Apoll.* 104), and (apparently) of gold inlaid work (*καλοὶ χρύσειοι παμποίκιλοι*, *Hymn. in Ven.* 88). Specimens of work in gold and amber are quoted by Helbig (*Das homerische Epos aus den Denkmälern erläutert*, p. 183), who should be consulted on the whole question of the Homeric ornament. The British Museum possesses necklaces from Praeneste of gold and amber, or silver and amber.

The necklace was worn by both sexes, among the most polished of those nations which the Greeks called barbarous, especially the Indians, the Egyptians, the Persians, and the Etruscans. [ARMILLA.] Among the Greeks and Romans, it was worn by women, boys, and effeminate persons (Anacreon, *apud* Athen. xii. p. 534; Quintil. ii. 1; Ovid. *Met.* v. 52; *Heroid.* 9, 57). It is particularly mentioned among the bridal ornaments of Roman females (Lucan, ii. 361; Claud. *de VI. Cons. Honor.* 527).

The simplest kind of necklace was the *monile baccatum*, or bead necklace (Verg. *Aen.* i. 654; Lamprid. *Alex. Sev.* 41), which consisted of berries, small spheres of glass, gold, amber, crystal, &c., strung together. This is very commonly shown in ancient frescoes and vase-paintings. (See cut under ARMILLA.) The head of Athene under GALEA exhibits a frequent modification of the bead necklace, a row of drops hanging below the beads. These drops, when worn, arrange themselves upon the neck like rays proceeding from a centre (*monilia radiata*).

The first figure in the cut on the next column exhibits the central portion of an exquisitely wrought necklace which was found at S. Agata dei Goti (Saticola) near Naples, in the sepulchre of a Greek lady. The necklace has seventy-one pendants. Above them is a band consisting of several rows of the close chain-work which we now call Venetian. [CATENA.] The clasps, on each of which is a frog in relief, were set with rubies (see *Mus. Borbonico*, ii. pl. xiv.; Overbeck, *Pompej*, p. 623).

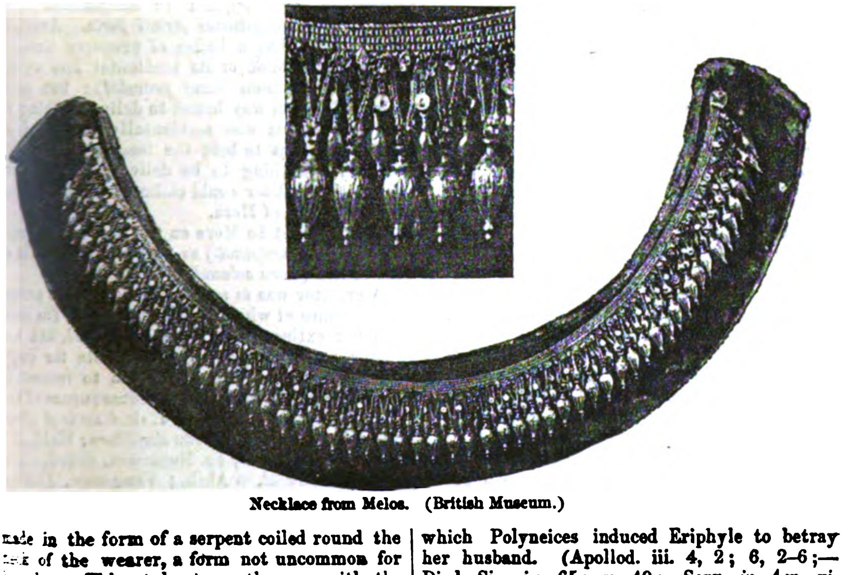
We also give here the central portions, exhibiting the patterns, of three gold necklaces purchased from the Prince of Canino for the British Museum. These were found in Etruscan tombs. The ornaments consist of disks, lozenges, rosettes, ivy-leaves, lotus buds, and hippocampi.



Ancient Necklaces.

Among the most masterly productions of the Greek goldsmith, are certain necklaces from the Castellani Collection, now in the British Museum. (Consult also *Compte-rendu de la Comm. Arch. Imp.* 1865, pl. ii., 1869, pl. i.; *Antiquités du Bosphore Cimmérien*, pl. ix.–xii.; Fontenay, *Les Bijoux anciens et modernes*, p. 129.)

The necklace appears sometimes to have been made in the form of a serpent coiled round the neck of the wearer, a form not uncommon for bracelets. This at least was the case with the necklace which was given by Venus or by Cadmus to Harmonia as a nuptial present, and which is described by Nonnus (*Dionysiaca*, v. 135–189) at a length of fifty lines. The same necklace afterwards appears as the bribe with which Polyneices induced Eriphyle to betray her husband. (Apollod. iii. 4, 2; 6, 2–6;—Diod. Sic. iv. 65; v. 49;—Serv. *in Aen.* vi. 445.)



Necklace from Melos. (British Museum.)

The beauty and splendour as well as the value of necklaces were enhanced by the addition of pearls and precious stones. These were either set in the gold necklace ("monilia, in quibus gemmae et margaritae insunt," Dig. 34, 2, 32, § 7; cf. *ibidem*, § 1) or suspended freely from it (cf. Pollux, v. 98). For this purpose emeralds ("smaragdi," *C. I. L.* ii. 3386) or other stones of a greenish hue ("virides gemmae," Juv. vi. 363) were often employed. The necklace of Harmonia, quoted above, was elaborately set with precious stones. As stated above, the necklace from Saticola was set with rubies. The hooks or clasps for fastening the necklace behind the neck (*clusurae*) were also various, and sometimes neatly and ingeniously contrived. Some account of the different kinds of links employed is given in the article Catena.

Besides a band encircling the neck, there was sometimes a second or even a third row of ornaments, which hung lower down, passing over the breast. Such objects on the vase-paintings are usually worn by *hetaerae*. (Hom. *Hymn. in Ven.* ii.; "longa monilia," Ovid. *Met.* x. 264; Böttiger, *Sabina*, ii. p. 129.)

Valuable necklaces were sometimes placed as dedicated offerings upon the statues of Minerva, Venus, and other goddesses. (Sueton. *Galba*, 18.) Necklaces and other ornaments were also occasionally placed on the statues of deceased women. For inventories of such dedications, see *C. I. L.* ii. 2060, 3386, and Henzen, 6141, discussed by Hübner, in *Hermes*, i. (1866), p. 345.

Horses and other favourite animals, such as deer, were also adorned with splendid necklaces ("aurea pectoribus demissa monilia," Verg. *Aen.* vii. 278; "gemmata monilia," Ovid. *Met.* x. 113; Claudian. *Epig.* xxxvi. 9; A. Gell. v. 5). [Torques.] [J. Y.] [A. H. S.]

MONUMENTUM. [Sepulcrum.]

MORA. The mere fact of a legal duty not being discharged at the time when it is due can give rise to important legal consequences, which either may depend on the terms of the contract giving rise to the duty, or on rules of positive law. After such delay the creditor is entitled to use all legal means to obtain satisfaction for his demand: thus he may be able to bring his action against his debtor or against those who have become sureties for him, and, in the case of pledge, he may sell the thing and pay himself out of the proceeds of the sale. For particular cases there are particular provisions; for instance, the purchaser of a thing after receiving it must pay interest on the purchase-money, if there is delay in paying it after the time fixed for payment (Dig. 29, 1, 13, § 20). The rule is the same as to debts due to the fiscus, if they are not paid, when they are due. An emphyteutic tenant could be ejected if he delayed the payment of his rent for three years.

A stipulation, similar in principle to our bond, was frequently entered into, by which a party was made subject to a penalty, if he did not perform some act within the time agreed on. The delay of which we have been speaking was simply a non-fulfilment of a duty at the proper time; and the term *mora* is sometimes applied to such cases. But that which is properly Mora is when the delay on the part of him who owes a duty can be attributed to his fault (*culpa*).

Mora in this its technical sense presupposes the existence of an obligation enforceable by action and also knowledge of liability on t part of the debtor. As a general rule a debt was not *in mora*, until he had received an *int* *pellatio* or notice from his creditor demandi satisfaction of his claim ("si interpellatus opp tuno loco non solverit, quod apud judicem e minabitur"). In delictal obligations, howev and in case of the absence of the debtor, *int* *pellatio* was not required. Where, too, a pers was bound to make some payment or perfor ance by a fixed date, he was understood to ha sufficient notice of the wish of the creditor receive payment at this date without any spec *interpellatio* being necessary. (For references the modern literature relating to the maxim the glossators, *dies adjectus interpellat pro homi* see Windscheid, *Pandekten*, iii. § 278, n. 4.)

A debtor was not *in mora* who failed to p form his obligation, if there was a good excuse his non-performance. Some modern writers of opinion that all delay in a person discharg an *obligatio* is Mora, unless there be some im diment which is created by causes altogeth external to the debtor himself (*impedimen* *naturalia*), but there are many reasons for t opinion that Mora in its proper sense always i plied some *culpa* on the part of the debt (Vangerow, *Pandekten*, § 588). In fact, t special rules about *excusationes a mora* only ha a meaning on this supposition.

When Mora could be legally imputed to man, he was bound to make good to his credit all loss which was a consequence of it. Thus, cases where a man did not pay money or deliv property of another when he ought, he w liable after Mora had taken place, if not pr viously liable, for interest and mesne profit this rule, however, owing to technicalities procedure, only applied to *obligationes bon* *fidei*, not to *obligationes stricti juris*. Again, was a rule that a bailee of property was n liable on account of its accidental loss or d terioration (*casum nemo praestat*); but aft Mora, if a man was bound to deliver a thing another, and it was accidentally destroyed injured, he was to bear the loss (Dig. 12, 1, 5 So, too, if a thing to be delivered declined value, the creditor could claim its highest val since the date of Mora.

There might be Mora on the side of the cr ditor (*mora accipiendi*) as well as on the side the debtor (*mora solvendi*).

A creditor was *in mora* if he refused to acce performance of what was due to him. The de was not extinguished by such refusal, but t debtor was subsequently only liable for cu *lata*, and the creditor was bound to indemn him for any loss which was a consequence of *mora accipiendi*. (Dig. 22, 1, *de Usuris et Fr* *tibus*; Madai, *Die Lehre von der Mora*; Wolff, *Lehre von der Mora*; Fr. Mommsen, *Beiträge* *Obligationenrecht*, 3 Abth.; Vangerow, *Pand* *ten*, iii. § 588; Windscheid, *Pandekten*, §§ 281, 345, 346; Id. *im Rhein. Arch.* xliv. 2; Kni *Die Mora des Schuldners*.) [G. L.] [E. A. W.

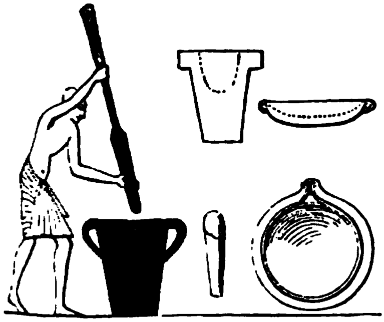
MORA. [Exercitus, Vol. I. p. 769.]

MO'RIO. [Nanus.]

MORTA'RIUM, also called **PILA**, a m tar: the Greek words to express it are ὅλμ θυεία, and in old Attic ἴγδις. (See Rutherf *New Phryn.* p. 252.)

Before the invention of mills [Mola] co

was pounded and rubbed in mortars (*pistum*), and hence the place for making bread, or the bakehouse, was called *pistrinum*. (Serv. *in* Verg. *Aen.* i. 179.) The ancient process, as usual, is identified with a special deity in the name *Pilumnus*. Also long after the introduction of mills this was an indispensable article of domestic furniture. (Plaut. *Aul.* i. 2, 17; Cato, *de Re Rust.* 74–76; Colum. *de Re Rust.* xii. 55.) Pliny (*H. N.* xviii. § 97) says that it was still in the imperial times used in many parts of Italy for corn instead of a mill. The material was sometimes wood, sometimes stone. (Hesiod. *Op.* 421), enumerating the wooden utensils necessary to a farmer, directs him to cut a mortar three feet, and a pestle (*ὕπερος*, *δοίδυξ*, *pilum*, *pistillum*) three cubits long. Both of these were evidently to be made from straight portions of the trunks or branches of trees, and the thicker and shorter of them was to be hollowed (Hes. *l. c.*). They might then be used in the manner represented in a painting on the tomb of Rameses III. at Thebes (see woodcut, left-hand figure taken from Wilkinson, vol. ii. p. 383); for there is no reason to doubt that the Egyptians and the Greeks fashioned and used their mortars in the same manner. (See also Wilkinson, vol. iii. p. 181, showing three stone mortars with metal pestles.) In these paintings we may observe the thickening of the pestle at both ends, and that two men pound in one mortar, raising their pestles alternately as is still the practice in Egypt. The expression "*ruidum* pilum" (Plin. *H. N.* xviii. § 97) merely implies the perpendicular downward stroke (*ruere*) of the pestle. Pliny (*H. N.* xxxvi. § 43) mentions the various kinds of stone selected for making mortars, according to the purposes to which they were intended to serve. Those used in pharmacy were sometimes made, as he says, "of Egyptian alabaster." The annexed woodcut shows the forms of two preserved in the Egyptian Collection of the British Museum, which exactly answer to this description, being made of that material. They do not exceed three inches in height: the dotted lines mark the cavity within each. The woodcut also shows a mortar and pestle, make of baked white clay, which were discovered, A.D. 1831, among numerous specimens of Roman pottery in making the northern approaches to London Bridge. (*Archaeologia*, vol. xxiv. p. 199, plate 44.)



Egyptian Mortars.

Schliemann's *Ilios*, p. 235, figures an ancient stone mortar and pestle found at Hissarlik.

Besides the old-fashioned use instead of corn-mills, they were retained for all purposes for which the mortar and pestle are now employed in the kitchen or the laboratory. (For drugs, Pausan. v. 18, 1; Plin. *H. N.* xxxiii. § 123, xxxvi. § 176, for making mortar or plaster.)

Another sort of *pila* or *mortarium* is described (rather obscurely) by Pliny (xviii. § 97) as used in Etruria, where, instead of the ordinary shape, there seems to have been a sort of tube of iron notched inside and with star-shaped points or teeth, through which the grain was forced by the iron pestle, working probably inside with a circular motion. It is perhaps a similar kind of mortar that Polybius is thinking of in his description of the battle of Mylae (i. 22, 7) when he speaks of the *corvus*, with the *στῦλος στρόγγυλος* and the *σιδηροῦν οἷον ὕπερον* attached to it, as in outward appearance resembling *μηχαναὶ σιτοποιικαί*. (See also Blümner, *Technologie*, i. 15.) For the *mortarium* of the oil-press, see Trapetum. [J. Y.] [G. E. M.]

MUNY'CHIA (*μουνύχια*), a festival celebrated in April in honour of Artemis Munychia, as the goddess of the full moon shining alone by night (*μουνυχία* for *μονονυχία*). Plutarch (*de Glor. Ath.* p. 349 F) says that it was instituted to commemorate the victory over the Persians at Salamis, and that it was held every year on the sixteenth of Munychion, near the port which was named after the goddess. (Cf. *πότνια Μουνυχίη λιμενοσκόπε*, Callim. *Dian.* 259.) It was believed that the goddess had helped the Greeks with her light on the night before the battle. (Compare Suidas and Harpocrat. *s. v.* *Μουνυχιών*.) The sacrifices which were offered to the goddess on this day consisted of cakes called ἀμφιφῶντες, because these cakes were adorned all round with burning candles. (Athen. xiv. p. 645; Suidas, *s. v.* Ἀνάστατοι: Hesych. and *Etym. M.* s. v. Ἀμφιφῶν.) Lysander added insult to injury by ordering the long walls to be demolished on the day of the Munychia. (Plut. *Lys.* 15; Preller, *Gr. Myth.* i. p. 236.) [L. S.] [G. E. M.]

MURA'LIS CORONA. [Corona.]

MUREX. [Tribulus.]

MU'RIES. [Vestales.]

MU'RRHINA or **MU'RREA VASA** were first brought to Rome in 61 B.C. by Pompey, who, after his triumph, dedicated cups of this material to Jupiter Capitolinus (Plin. *H. N.* xxxvii. § 18). Pliny (*ibidem*) states that the price of these vases was continually increasing, and that 70,000 sesterces were paid for a cup holding three *sextarii*. He also speaks of a *trulla* which cost 300,000 sesterces, and of a drinking cup for which Nero paid a million sesterces. The costliness of these objects may also be inferred from Seneca, *de Ben.* vii. 9; Martial, iii. 82, 25; Plin. *H. N.* xxxvii. § 20.

According to Pliny's account (*H. N.* xxxvii. § 8), the material came from various little-known regions in Parthia, the best specimens being obtained from Carmania. He states that it was supposed to be a moist substance (*humor*), solidified by subterranean heat; that the pieces never exceeded the size of small tablets (*abaci*) in breadth, and were rarely as thick as the drinking cups above quoted. They were also fragile, and the chief value lay in the variety of the colours, which were purple and milky-white, with subtle gradations and interchanges between the two. Some connoisseurs chiefly admired an effect of iridescence; others admired opaque fatty spots (*pingues*), crystalline deposits (*sales*), and warts (*verrucae non eminentes, sed ... plerumque sessiles*). The smell was also approved.

There has been much discussion as to the nature of the material thus described by Pliny, and it has frequently been held that the murrhina vasa were true Chinese porcelain. Confirmation is sought for this view in the words of Propertius (iv. 5, 26), "Murreaque in Parthis pocula cocta focis."

It is also argued that the importation of porcelain from the far East is proved by the discovery of Chinese vases in Egypt. But probably all such vases belong to a very late date. One specimen, for example, which is now in the Egyptian Collection of the British Museum, is inscribed with a line from a Chinese poet of the 11th century A.D. Moreover, the ancient witnesses to the fact that the material is a natural mineral are too numerous and too clear in their testimony, to let this theory be admissible. In addition to Pliny's account above quoted, the following authorities may be cited:—Plin. *H. N.* xxxiii. § 5, xxxvii. § 204; Sidon. Apoll. *Carm.* 11, 20; *Peripl. M. Erythr.* p. 27, c. 48; cf. also Dig. 34, 2, 19, § 19.

No mineral, however, has been suggested which answers very exactly to Pliny's description. The onyx has been proposed, but our authorities plainly imply that the onyx was a material akin to but yet distinct from that here in question. (Cf. Lamprid. *Heliogab.* 32, and *Peripl. M. Erythr.* p. 27, c. 48.) Jade, fluor-spar, and a special kind of agate, the "Chinese agate," have also been advocated, but at present the problem is unsolved. (King, *Precious Stones, Gems, and precious Metals*, p. 237; Marquardt, *Privatleben d. Römer*, p. 743; Blümner, *Technologie*, iii. p. 276.) [A. H. S.]

MURUS, MOENIA (τεῖχος), a wall surrounding an unroofed enclosure, in contradistinction to PARIES (τοῖχος), the wall of a roofed building, such as a temple or a house. This distinction appears to be the true *differentia* of the words: the fact that the *murus* usually was a wall of more massive construction is rather an accidental than an essential difference. As far as concerns construction, there is no difference between them, and so the following remarks on this point may be taken to refer equally to *Murus* and *Paries*.

A third word, *maceria*, is often used by Latin authors to denote a fence wall of a less massive kind than the *murus* (see Cato, *R. R.* 15; and Caes. *B. G.* vii. 69); and hence it is also used, like the Greek μάκελον or μάκελος, to denote the space enclosed.

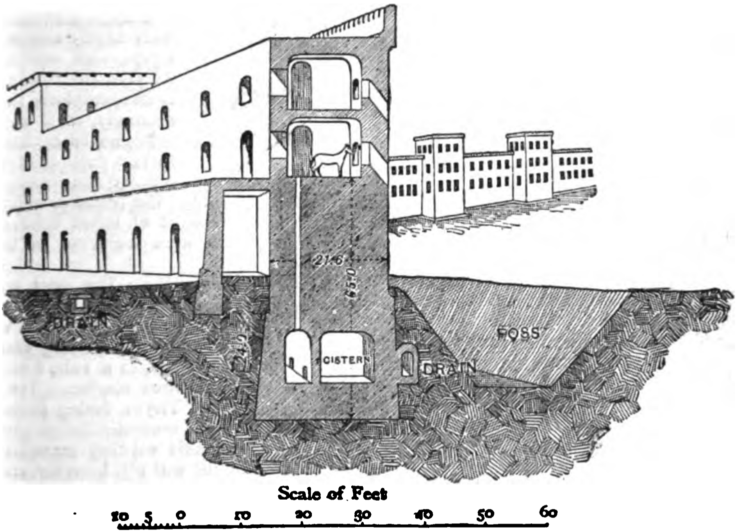
Pre-Roman Methods of Construction.

I. *Bricks.*—It is only within recent years that archaeologists have realised how very important and extensive the use of sun-dried bricks was, not only in Egypt and the plains of the Euphrates, but also in Greece and Rome, even as late as the Christian era. The fact is that, as long as a wall of unburnt bricks is protected from the weather, either by a facing of stone or even by a coating of fine stucco, it is almost as durable as stone or kiln-fired bricks. When, however, it once begins to fall into ruin, the process of decay is very rapid and complete, and it is only in exceptional circumstances that remains of this kind of wall have lasted to the present day.

In Egypt, although carefully dressed blocks of stone were used for the main walls of the principal temples, yet unburnt brick was by far the most common method of construction, not only for ordinary domestic buildings, but also very largely for the outer precinct walls of the temples, and for such magnificent royal palaces as that of Rameses the Great, which was discovered a few years ago at Tel-el-Yahoudeh in the Delta. In the Greek city of Naucratis, also in the Egyptian Delta, unburnt clay was not only used for all the houses of the colony [DOMUS, Vol. I. p. 659 *a*], but was also employed for the walls of the various temples, and for the great Pan-hellenicon or commercial Guildhall of the associated Greek states. In the account of the pre-historic palace at Tiryns [DOMUS, Vol. I. p. 655], a common early method of construction is described; the lower part of the wall being of stone to a height of about 3 feet, and the upper part of sun-dried bricks covered with painted stucco.

The most remarkable examples of the use of sun-dried bricks for the most massively built and lofty structures of every kind were to be found in ancient Assyria and Chaldaea, where stone was scarce, and large quantities of the finest clay had been deposited by the Tigris and Euphrates. Great care was taken in the preparation of these bricks: the clay was tempered by long beating and turning over for complete exposure to the weather, then mixed with straw or rushes, and firmly pressed by hand into wooden moulds; lastly, the bricks were thoroughly dried in the summer sun. The outer faces of the more important walls, those of the temples, palaces, and circuit walls of the cities were defended by casings of stone or of burnt brick, built "battering" with offsets, so as t be much thicker at the base than at the top An excellent natural cement was supplied b the numerous springs of hot bitumen, applicabl both to fired and sun-dried bricks (see Herod. i 179). Bond-courses, consisting of layers o reeds, were built in at regular intervals: thi is mentioned by Herodotus (*loc. cit.*), and examples of the practice have been found b recent excavators. Great care was taken t keep the masses of crude brick from sufferin from damp: ventilating pipes were arranged s as to expose the inner parts of the walls to th drying power of the wind, and also to allow th escape of any enclosed moisture. This w specially necessary, as in some cases no bitume or other mortar was used; instead of which th bricks were set while still moist, so that each adhered to the next course, and thus the whole wall became one homogeneous mass of clay. Kiln-fired bricks were also used from very early times, not only as facings, but for vaults, domes, arches, and other important constructional purposes. The Tower of Babel, mentioned in Gen. xi. 3, was of burnt bricks set in bitumen; and the most magnificent kind of mural decoration was produced by the use of bricks coated with brilliant coloured enamels. (See Vitruv. i. 5. For further information, see Layard, *Nineveh*; Loftus, *Travels in Assyria*; Place, *Ninive*; and Perrot and Chipiez, *Chaldaea and Assyria*, vol. i.; and, by the same authors, *Egypt*.) [LATER.]

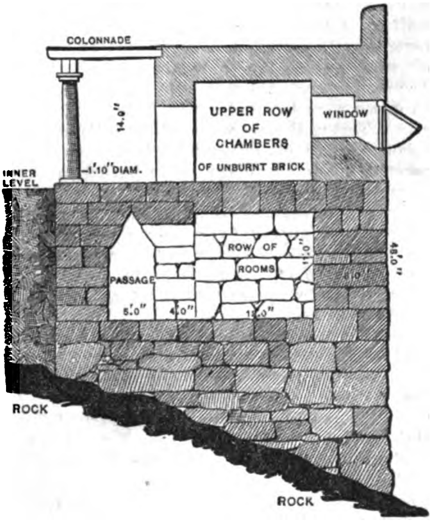
Among early examples of skilfully constructed walls for purposes of defence, some of those erected by people of the Phoenician race, in various parts of the world, are perhaps the most striking. Recent excavations at Thapsus, near Carthage, have brought to light the elaborate and massive character of the city wall, which was about 21 feet thick, with square towers projecting outwards at regular intervals, so as to command the flank of an attacking army. The lower part of this wall, above the ground-level, was built of solid stone, roughly dressed, so as to resist battering-rams. The upper part was of sun-dried bricks coated with stucco, and contained two tiers or stories of guard-chambers, sufficient to give accommodation for a large garrison of both men and horses. Access was given to the lower story of chambers by inclined planes for the use of the horses. Cisterns for the storage of rain-water in case of siege were constructed below the ground-level in the thickness of the wall—a common arrangement in early systems of fortification. (See Perrot and Chipiez, *Phoenicia*, i. p. 354.)



Section of Wall of Thapsus.

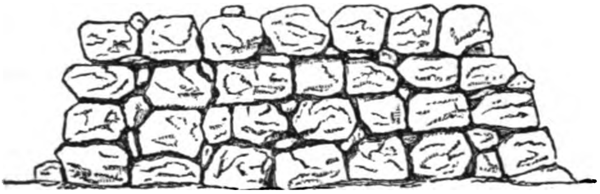
In other places the Phoenicians appear to have built wholly of stone. According to Appian (*Anabasis*, ii. 21, 3), the walls of Tyre were built of large stones set in lime (mortar). Only scanty traces now exist of this once almost impregnable city; but another Phoenician wall near Banias (Syria) still exists in places to a height of 35 feet, varying from 16 to 30 feet in thickness. It is built of roughly-dressed blocks of limestone, set on horizontal beds, but with irregular butt joints filled up by the insertion of small stones. The remains of the Punic citadel at Eryx in N. Sicily are of similar character, with massive stones roughly shaped and coursed in an irregular manner.

It is interesting to compare with these Phoenician walls the famous citadel of Tiryns, surrounded with a most massive wall, constructed of blocks of such immense size that the Greeks of the historic period attributed their erection to the fabled Cyclops, working for god-like



Tiryns. Section of outer Wall.

heroes (see Paus. ii. 25). The above cut shows a probable restoration of the Tirynthian wall, as discovered by Dr. Dörpfeld (see Schliemann and Dörpfeld, *Tiryns*, p. 318 *seq.*). The base of the wall rests on a levelled surface cut for it in the rock: its lower part is built of those immense blocks which aroused the wonder of Herodotus and other Greeks down to Pausanias. Some are as much as 10 feet long, roughly shaped, with smaller stones to fill up the interstices, and the whole bedded carefully in clay, used instead of mortar: another common early method of construction. As in the walls of the Punic Thapsus and Byrsa, the lower part is solid, but above that rows of chambers are formed, together with a covered passage into which each room opens. The roofing is formed by large blocks, set like corbels, each projecting over the course below, a very usual primitive method of obtaining the arch shape without the principle of the arch. Above this, along part of the circuit, was a second story of chambers, built of sun-dried bricks; and above the passage was an open colonnade, with wooden pillars resting on stone blocks, and supporting (probably) a flat wooden roof covered with clay.



Pre-historic Wall in Greece.

A very interesting inscription (*Cor. Insc. Att.* ii. 167), relating to a restoration in the 4th century of the walls of Athens, shows that a very similar arrangement existed there. It mentions the upper portion of the Athenian wall as being of brick, with, at the top, a covered gallery supported on columns, and rows of windows closed by wooden flap-shutters. The roofing consisted of wooden beams or joists, on which were burnt clay tiles bedded in moist clay. This wall was destroyed by Sulla, and a large number of fine tomb-reliefs were discovered a few years ago safely buried in the decomposed crude clay bricks of which the upper part of the walls of Athens had been constructed. As appears to have been the general custom, the walls of Tiryns, and those of Athens nearly a thousand years later in date, were strengthened by square towers set at intervals along the circuit.

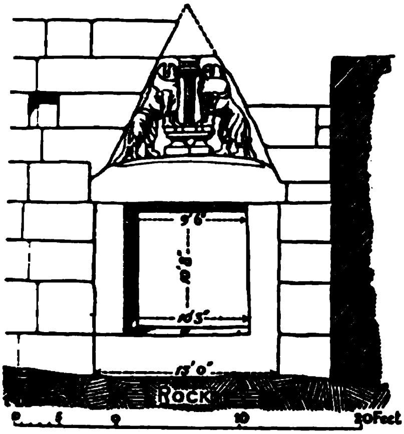
Another interesting example of this use of crude brick and stone is still to be traced at Mantineia, where almost the whole circuit of the city wall still exists up to where the brick began. The stone base, which is nearly 4 feet high, is formed with a level bed at the top to receive the upper clay part. Its thickness is 10 feet, made up thus—first an outer facing of dressed stone 4 feet thick, a similar inner facing 2 feet thick, and an intermediate filling in 4 feet thick. The facing is of closely-jointed blocks, set without mortar: the inner portion is a sort of concrete made of small stones, lime and gravel. The wall had ten gates and closely-set towers, with a moat on the outside.

The use of crude brick for city walls led to a curious system of attack being sometimes adopted. Thus, when Agesipolis, king of Sparta, besieged Mantineia, he directed the stream Ophis along its walls, and so washed away the brick at one place sufficiently to make a breach. The same method of attack was employed by Cimon, the son of Miltiades, against the walls of Eion on the Strymon.

Though kiln-fired bricks were largely used in ancient Egypt and still more in Assyria, the Greeks appear to have employed them very sparingly, and no Roman examples are known of earlier date than the 1st century B.C. According to Pausanias (v. 20), the circular Philippeion at Olympia was built of baked brick, but the existing remains were found to be of stone ashlar.

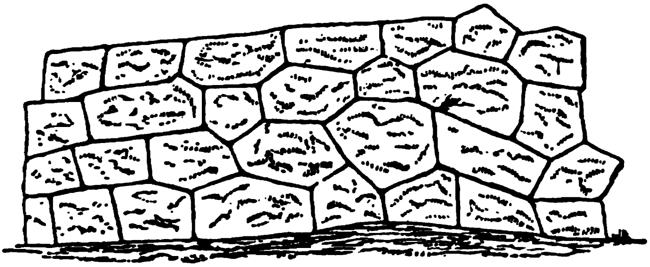
II. *Stone Construction.*—The most primitive type of stone masonry is that in which large blocks are used, very roughly dressed with an axe or hammer; small stones being used to fill up the open joints, and, as a rule, a bedding of clay instead of a lime mortar. The above-mentioned walls of Tiryns, dating probably not less than 11 or 12 centuries before Christ, are the most remarkable existing examples. This method of building was not, however, employed, even at so early a date as the construction of the Tirynthian Acropolis, on account of want of sufficient skill to work stone neatly; but simply because such rough and massive masonry was practically as good as the finest ashlar for the outer walls of a fortification. Within the palace Dr. Dörpfeld found ample evidence to show that the Tirynthian builders possessed tools of the most varied kinds, fit for the most elaborately finished stone-work. Not only chisels were used, but even jewel-tipped drills, both solid and tubular, and saws set with corundum, or other hard crystals, such as were used as early as 4000 B.C. in Egypt to work the refractory granites and basalts of the ancient dynasties.

Any chronological arrangement of the various kinds of masonry would be misleading. One of the oldest existing buildings in the world, the so-called "Temple of the Sphinx," near the Great Pyramid in Egypt, is built of the most perfectly regular and neatly-fitted blocks of stone; its inner walls being lined with great slabs of beautiful translucent alabaster, 5 or 6 inches thick, so perfectly fitted that the joints are hardly visible: this beautiful lining is now rapidly being stolen. The walls of Mycenae, certainly earlier than 1000 B.C., consist in most places of large blocks very accurately squared, with perfectly fitting beds and joints: enormous monoliths are used for the jambs, lintel, and threshold of the principal gate, over which still exists the well-known relief of the pillar between the guardian lions. This is shown in the annexed cut. The slab itself fills up the "relieving" opening, which was of triangular shape, as was usual at that date. The missing heads of the lions appear to have been of bronze: holes for their attachment still exist, with blue stains of copper oxide.



Lion Gate of Mycenae.

The name Cyclopean or Pelasgic has been popularly given to masonry constructed of polygonal blocks, which in many cases are fitted together with great care and skill. Examples of this exist at Signia (Segni), Norba, and many other ancient sites in Etruria, Central Italy, and in Greece itself. This style of building appears really to belong to no special race or date. (See Bunbury, *Cyclopean Remains*, in *Museum of Class. Arch.* ii. p. 147; and Dodwell, *Tour in Greece.*) The latest dated example of this polygonal masonry is the cella of the small Temple of Themis *in antis* at Rhamnus, not earlier than the 5th century B.C.: in this case the blocks are smaller than those used in the primitive fortifications of Central Italy. Though more economical of material, the polygonal method of construction would not require less, but rather more skill on the part of its masons; it being no easy matter to fit together such irregular forms with the perfect accuracy that in many cases had been attained: and it should not therefore be taken as a proof of very early date.

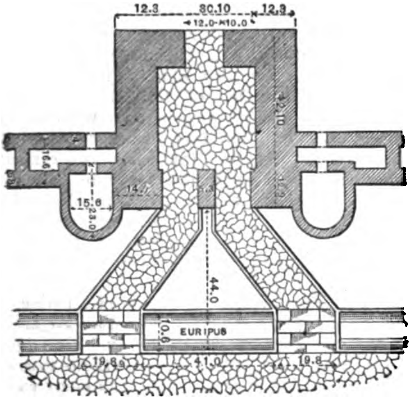


Polygonal Masonry.

During the historic period of Greece, the more important buildings, such as the temples, were usually built of quadrangular blocks of stone, each course having a level bed running from end to end of the wall. The beds and joints were worked to a much more accurately smooth surface than the visible faces of the wall, because whenever stone was used by the Greeks it appears to have been the custom to cover it with a thin skin of very fine white stucco, made of lime and powdered marble or limestone, mixed with some kind of size. (See Vitruv. vii. 6.) This mixture set to the hardness and durability of the best quality of stone; it received, by working over while soft, a pleasant ivory-like texture, and its slightly absorbent surface formed an excellent ground for the application of the coloured ornament which seems to have been always used on Greek buildings. The modern word "stucco" gives a very erroneous notion of this beautiful material. The chief existing examples of this fine stone masonry are those at Selinus and Agrigentum in Sicily, and Paestum in Magna Graecia. (See Serradifalco, *Antichità di Sicilia*, and Wilkins, *Magna Graecia.*)

After the Persian war, in the first half of the 5th century B.C., the Athenians began to use marble for their finest buildings. The walls, for example, of the Athenian Propylaea and the Parthenon are marvels of perfect masonry. The blocks of marble are cut in courses of regular depth; and, no cement being used, each block was made to fit with absolute precision to the adjacent blocks by being moved backwards and forwards over its bed, till its surfaces were rubbed perfectly smooth. So absolutely air-tight were these surfaces that in many cases age and pressure have made adjacent surfaces actually, as it were, grow together: this is shown in a very striking way by the fact, that in certain places, where the wall is broken, the fracture has gone through the solid block rather than cause a separation of two blocks at the joint or bed. Great labour was also spent in clamping horizontally with iron or bronze each block to the next one on the same course; and vertical dowels were used to fix each block to the next courses above and below. In most cases the metal clamps were fixed by pouring in fluid lead, the cavity in the marble being cut a little larger than the actual clamp required at its turned down ends. Even during the 5th century the use of marble was as a rule limited to places which, like Athens, had marble quarries at hand; and such important buildings as the Temple of Zeus at Olympia, and that of Apollo at Bassae, had their walls constructed of local stone. It was not till the 4th century, when many of the great temples of Western Asia Minor were reconstructed on so magnificent a scale—as *e.g.* those at Didyme, Ephesus, Teos, Magnesia, and the Smintheum in the Troad—that the use of marble was considered necessary for the construction of a magnificent building. The fact is that, as long as they were not ruined, the general effect of the stone temples coated with their fine skin of marble dust *gesso*, enriched by brilliant coloured decoration, must have been as beautiful as that of a building of solid marble, and not distinguishable from it except by the closest examination.

During the 5th to the 3rd century B.C. stone masonry of almost equal beauty to that of the temples was often used for the fortification walls of Greek cities. The usual scheme of defence was to have, on the outside, a deep foss, either filled with water or, where that was not possible, merely an empty trench. The wall was from 10 to 15 feet in thickness, with, on the top, a walk for sentinels and a parapet with battlements all along. At regular intervals were towers, usually square, but sometimes rounded in plan, projecting on the outside like those of the Phoenicians, two being placed to flank each gateway. This general scheme was adopted in the walls of the Greek city of Posidonia (Paestum) in Magna Graecia, which, like Tiryns, had chambers for the garrison: they are well illustrated in the *Museum of Classical Antiquities*, vol. i. p. 35. The walls of Messene, on the slopes of Mt. Ithome, are among the most perfect remains of Greek building in the Peloponnese, and are a beautiful example of Hellenic masonry during the best period. They are wholly built of neatly-dressed blocks, regularly bedded without mortar in horizontal courses. Along the top of the wall is a levelled walk defended by a battlemented parapet: in each of the many projecting square towers is a chamber with its floor at the level of the top of the curtain wall, on to which access is given from the towers by doorways with flat lintels, so that the towers do not interrupt the passage round the wall. Square battlements crowned the summit of each tower, as a defence to the soldiers posted on the roof of the tower chamber.



Wall and Gateway of Posidonia.

In the finest sorts of masonry, both among the Greeks and Romans, metal clamps instead of cement were used, each block fitting with absolute closeness to the next; but in the rougher sort of walling the blocks were less carefully dressed, and a fine lime mortar was used to bed each course. The famous "Long Walls" from Athens to Peiraeus were of this latter sort, as Plutarch describes (*Cim.* 13), *χάλικι πολλῇ καὶ λίθοις βαρέσι τῶν ἐλῶν πιεσθέντων*. Other parts, perhaps the facing, of this wall described by Thucydides (i. 93) appear to have been of the finer kind of masonry, with blocks so large that each was a cart-load (ἁμαξιαῖοι), closely fitted (*ἐν τομῇ ἐγγώνιοι*) and secured by metal clamps run with lead, like those used in the Parthenon.

Though as a rule the joints in fine masonry must have been practically invisible, owing either to the coating of stucco or to the perfect grinding together of the surfaces, yet we read of one case (Plin. *H. N.* xxxvi. § 98) in which the joints were treated in a conspicuously decorative way. This was a temple at Cyzicus, in which the interior walls of the cella had a fine thread of gold inserted in the joints of every course. That this statement is probably true is borne witness to by the discovery, among the ruins of the Artemision at Ephesus, of certain bases of the great Ionic columns, in which the quirks between the astragals still contained bits of a strip of pure gold fixed with lead into its place: thus forming two or more rings of gold ornament all round each of the main bases of the order.

Pre-Roman Methods of Mural Decoration.

The earliest example of a decorated wall-surface is the Temple of the Sphinx, c. 4000 B.C., mentioned above as being lined with slabs of alabaster. Sculpture, in low relief, was used in the most lavish way, during a space of between three and four thousand years, to decorate the tombs and temples of Egypt. This sculpture is, as a rule, not cut on slabs affixed to the wall, but on the coursed blocks of which the wall consists: the joints, which, in the present ruined state of the building, cut through and disfigure the reliefs, were originally concealed by a thin skin of fine stucco, like that used by the Greeks, on which the colouring was applied. In ancient Assyria and Chaldaea wall reliefs were used in no less lavish a way; but, as a rule, with this difference, that the sculpture was carved on thin slabs, which were fixed to the surface of the wall, not, as in Egypt, cut on the solid wall itself.

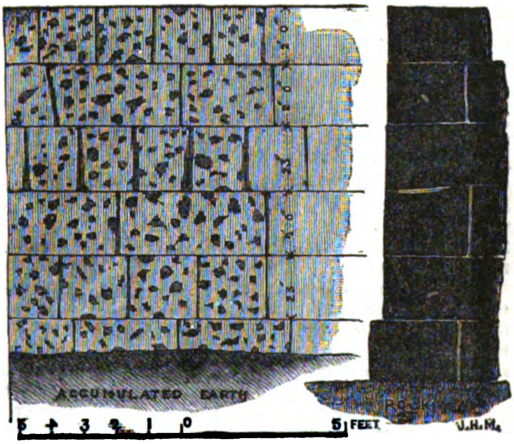
Painting on stucco is perhaps the most widely used method of wall decoration among all classical races and at all periods [see PICTURA]. Another very costly and magnificent method of wall decoration, largely used in early times, was to cover the surface with plates of bronze, beaten into relief, and usually gilt. Traces of this method of enriching wall-surfaces have been found in the palaces of Persepolis, the so-called treasuries of Mycenae and Orchomenos, and in the palace of the Tirynthian Acropolis. The splendour of these delicately enriched metal surfaces, gleaming with gold and broken into points of light, varied with the half-shadows of the reliefs, must have been of the most dazzling kind. We know now that such descriptions as Homer's golden house of Alcinous need not be considered wholly the offspring of a poet's fancy. The Treasury of Myron and the Shrine of Athene Chalcioecus, mentioned by Pausanias (vi. 19 and iii. 17), were probably examples of the same method of decoration by bronze *repoussé* plates.

Reliefs moulded in clay, and then coloured with brilliant enamel pigments, were used for wall-decoration in Egypt, Assyria, and Persia. Friezes, with lines of kings, soldiers, and processions of captives, in enamelled relief, formed on tiles or plaques, were found in Rameses the Great's palace at Tel-el-Yahoudeh. Their execution is a marvel of technical skill, in the minute use of the most delicate relief, and the most varied enamels of jewel-like brilliancy. Recent excavations at Susa have brought to light examples of this kind of decoration on the most magnificent scale. The walls of one room were lined with life-sized figures, moulded, not on slabs but on the ordinary coursed brickwork, so that each figure is built up of about 20 courses of bricks, all fitting together with great accuracy. The whole of this magnificent procession is covered with enamels of various colours—a combination of the plastic and pictorial arts which gives an effect of unrivalled splendour, and from its vitreous surface has the advantage of being almost imperishable. Some of these wonderful reliefs were brought in 1887 to the Museum of the Louvre, and give one a most vivid notion of the skill and decorative taste of the Persian craftsmen.

The decoration of wall-surfaces by thin marble linings does not appear to have been much used by the Greeks. According to Pliny (*H. N.* xxxvi. § 47), thin slabs (*crustae*) of Proconnesian marble were used to decorate the Palace of Mausolus at Halicarnassus, *c.* 360 B.C.; and when the remains of Queen Artemisia's mausoleum were used by the Knights of St. John, in the 15th and 16th centuries, to build the castle of St. Peter at Halicarnassus (Budrum), they are said to have found the interior of the Heroon lined with slabs of various coloured marbles. (See Newton, quoting Guichard, *Travels in the Levant*, vol. ii. p. 126.) As a rule, however, the use of coloured marbles for wall-linings was not introduced till later times, and would have been rather displeasing to the severe taste of the best period of Hellenic art, though it was the favourite method of mural decoration in the artistically inferior period of the Roman empire. [See DOMUS.]

The Roman Period.

A great deal that is wholly misleading has been written about the methods of building used in the walls of ancient Rome, partly because the real methods of construction are frequently hidden behind very deceptive modes of surface decoration. The systems of wall-building in Rome may be classified thus:—I. Sun-dried bricks (*lateres crudi*), of which no example now exists. II. *Opus quadratum*, solid walls of squared stone. III. Concrete, *opus coementitium*. (*a*) unfaced concrete; (*b*) faced with *opus incertum*; (*c*) faced with *opus reticulatum*; (*d*) faced with burnt brick (*lateres cocti*); (*e*) faced with the so-called *opus mixtum*. The usual error has been to class *opus incertum*, *opus reticulatum*, &c., as separate constructional categories; whereas, in reality, they are merely different methods of facing concrete walls.



Existing piece of the "Wall of Romulus."

I. *Sun-dried bricks* in Rome, as in Greece, appear to have been largely used for all except the more important public buildings, till about the 1st century B.C. The remarks of Vitruvius (ii. 3) about the names and the sizes of bricks appear to refer wholly to crude bricks; the kiln-baked bricks used for wall-facing in Rome being always triangular in shape, not rectangular, like those described by Vitruvius. Care was taken to dig out the clay at the right season, and also to keep the bricks for a long time before being used—a precaution that would have been useless in the case of kiln-fired bricks. Careful directions are given in the same chapter (Vitruv. ii. 3) as to the formation of good "bond," by alternate courses of "headers" and "stretchers." This, again, does not apply to the burnt bricks of Rome, which are never used to build a wall, but merely as facing.

II. *Opus quadratum*, masonry of solid ashlar. The earliest existing example of this in Rome is the pre-historic fortification wall of *Roma Quadrata* on the Palatine, popularly called the "wall of Romulus." This consists of blocks of the local tufa, with very even beds, but less careful vertical joints. The blocks run in fairly even courses of nearly 2 Roman feet in depth, but vary in length. The bond is imperfect: joints are often allowed to come one over another; and no mortar is used. The cut shows a piece of the best preserved part at the west angle of the Palatine. The Servian wall shows the next stage; harder stone is used, the courses are more regular, the surfaces more truly dressed, and the bond more workmanlike. Under the later republic the harder *peperino* was usually employed for external work, the soft tufa being reserved in many cases for internal walls. The most perfectly developed *opus quadratum* is to be seen in the walls of the Capitoline *Tabularium*, which, on the exterior, are built of perfectly regular blocks of *lapis Albanus* (peperino), each exactly 2 Roman feet × 2 ft. × 4 ft. long, arranged in alternating courses of "headers" and "stretchers," such as in modern language is called technically "English bond." So accurately are the blocks worked and set, that each series of joints comes exactly over those below, up the whole height of the wall. These blocks are bedded in a very thin layer of pure lime, used, not as a binding cement, but as a method of obtaining absolutely perfect contact in all the adjacent surfaces—a very early practice in Rome, which is to be seen even in the primitive *Tullianum* or lower chamber of the "Mamertine prison."

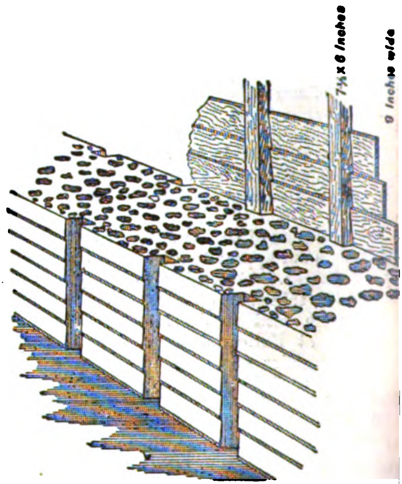
In the 1st century B.C. the hard, cream-coloured limestone, *lapis Tiburtinus* (Travertino), came into use for the more costly buildings, but the principal examples of its use date from the 1st and 2nd centuries A.D., as in the lower part of the cella walls of the temples of Concord, Vespasian, and Faustina. In these the blocks are worked with courses of varying thickness, and the beds and joints are rubbed to such a perfect surface that absolutely close contact is obtained without the use of the thin skin of lime mortar. As among the Greeks, the blocks of the finest masonry are fixed by iron clamps run with lead ("ansis ferreis et plumbo," Vitruv. ii. 7), or, in some cases, by wooden "dovetail dowels." In the same chapter Vitruvius describes the methods of bonding derived, as he says, from the Greeks. The best class of masonry (ἔμπλεκτον) was formed by alternating "headers" and "stretchers," *i.e.* blocks laid cross-wise or lengthways; and, in some cases, "through stones" (διατόνοι) were introduced, *i.e.* blocks set as "headers," of sufficient length to reach through the whole thickness of a wall —a needless precaution, unless the wall were rather thin.

Existing specimens of domestic architecture in Rome, built with *opus quadratum*, are very rare. One of the chief examples is the older part of the *Regia*, or official house of the Pontifex Maximus, in which remains still exist of early tufa masonry, with accurately squared blocks. Similar tufa blocks are also used for the walls of the oldest houses in Pompeii,—those, that is, which survived the earthquake by which the town was mostly destroyed, a few years before its final destruction in 79 A.D. Some of these probably date from the 1st century B.C., or even earlier.

In all cases in ancient Roman buildings, whether tufa or peperino were used, it appears to have been the custom to coat the stone with the fine marble or limestone stucco (*opus marmoreum*), such as was used in Greece, and is described in great detail by Vitruvius (vii. 2, 3 and 6). Thin coatings of this beautiful hard substance were used in some cases to cover travertine, and even marble walls. With tufa, as with unburnt brick, it was a constructional necessity, the soft tufa being the worst possible "weather stone;" but in other cases it appears to have been applied for decorative purposes.

III. *Concrete.*—The use of concrete, both among the Greeks and Romans, is really much older than has usually been supposed. It was largely used in the palace of Tiryns, especially for floors; and in Rome still exists as backing to part of the Servian wall on the Aventine. Concrete in Rome was made of broken stones, together with lime and *pulvis Puteolanus* (pozzolana); or else, during the Imperial period, broken pieces of burnt brick frequently replaced the stone. The *pozzolana*, great beds of which, showered down from long extinct volcanoes, exist over most of the Roman Campagna, forms, when mixed with lime, a very strong hydraulic cement, applicable to a great variety of purposes, such as concrete walls, mortar, and stucco. In the older concrete *tufa* is the stone usually employed, but under the Empire other harder stones were used, especially for foundations of walls which had to carry a heavy weight. The best and most durable kind of concrete was made with pieces of lava, the *silex* of Pliny and Vitruvius, with which the Roman roads were generally paved.

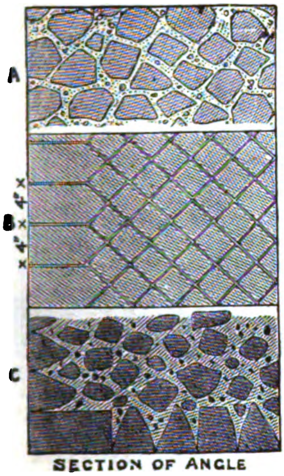
The method of forming concrete walls is shown in the annexed cut. Upright posts, about 6 × 5 inches thick and 10 to 15 feet high, were stuck at intervals of about 3 feet in the ground along the line of both faces of the future wall; and against these posts wooden planks, 10 to 12 inches wide, were nailed horizontally, overlapping one another. Into the intermediate space the semi-fluid concrete was poured, receiving on its surface the imprint of the posts and boards. When the first layer of concrete had set hard, the wooden framing was removed and refixed on the top of the concrete wall. The process was then repeated till the wall was raised to the required height. Walls thus formed, especially if the hard lava or travertine were used, were stronger and more durable than even the most solid masonry. Blocks of stone could be removed, one by one, by the same force that set them in place; but a concrete wall was one perfectly solid and coherent mass, which could only be destroyed by a laborious process, like that of quarrying hard stone from its native bed.



Method of casting concrete Walls.

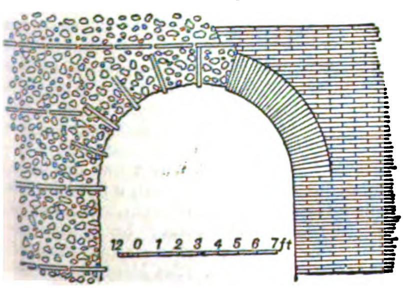
As a rule, except when used for foundations, the Roman concrete was not left without some facing. During the Republican period, the method of facing was *opus incertum*, but it was nearly obsolete in the reign of Augustus, as Vitruvius (ii. 8) writes: "*reticulatum*, quo nunc omnes utuntur, et antiquum quod *incertum* dicitur." In this method irregularly shaped bits of tufa, 3 to 5 inches across, were cut smooth on one face, and roughly pointed behind. The whole face of the concrete wall was studded with these stones, like a magnified mosaic, the points sticking into the wall, and the smooth ends appearing on the surface.

Opus reticulatum, universally used (as Vitruvius says) in his time, is very like *opus incertum*, except that each little block of tufa is cut to a true square at one end, and all are arranged to run in regular diagonal lines, like a piece of network, whence came its name. Though of no real constructional importance, it is very neat in appearance, and it is rather strange to find that, like the *incertum*, it was usually, if not always, covered with stucco. It appears to have come into use about the beginning of the 1st century B.C., and continued in use, though becoming less common, till the reign of Hadrian. Facing with kiln-fired brick appears not to have been used in Rome before the 1st century B.C. In fact, no examples are known to exist earlier than the wall of J. Caesar's *Rostra*, rebuilt on a new site in 44 B.C.

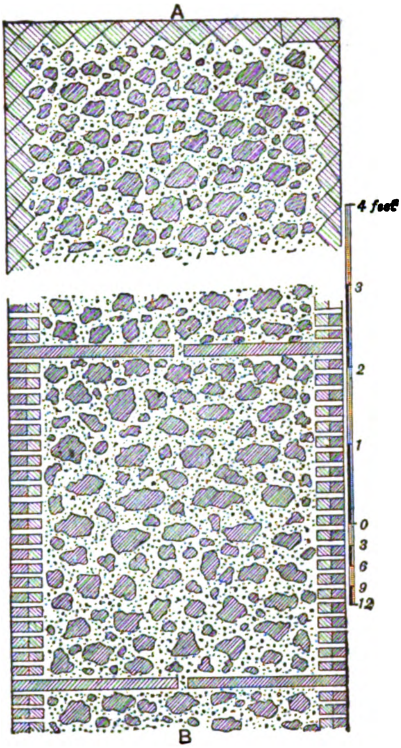


Concrete Wall faced with (A) Opus incertum and (B) Opus reticulatum. C shows the section, similar in both.

It is an important thing to observe that in ancient Rome burnt brick was never used to build walls, but merely as a thin facing. In the true sense of the word, there is no such thing as a brick wall among all the ruins of Rome; the actual wall being of concrete, with merely a thin facing of triangular bricks, arranged as is shown in the woodcut. Even party-walls of small houses, sometimes only 7 inches thick, are not built of solid brick, but have an inner core of concrete faced with small brick triangles. Thus, for example, such a building as the Pantheon of Agrippa, which appears to be built of brick, is found on examination to consist of walls with about 18 feet in thickness of concrete, and a facing of brick averaging only 3 or 4 inches in depth.



Concrete Arch: half with its brick facing removed.



Concrete Wall faced with brick.

The advantages of this concrete construction, both for walls and vaults, were very great: each wall was like one solid slab of stone, any part of which might be cut away without destroying the rest. A striking example of this is to be seen in the Thermae of Caracalla: in one place the concrete wall originally rested on two marble columns. The columns were stolen some centuries ago, and the wall above still remains hanging like a curtain from the concrete vault.

It is not easy to explain why the Romans were so fond of using this brick facing over their concrete. It was not a constructional necessity, as the many walls of unfaced concrete which still exist clearly show. It was not for the sake of its appearance, as, except in a very few cases, such as the great aqueducts, the brick facing was concealed by stucco or by marble linings. The very smoothness of the brick was practically a disadvantage, being unsuited to the reception of stucco; and great cost and labour were expended in studding the brick facing with metal nails or plugs of marble in order to form a "key" for the coating of stucco, which adhered firmly, without any such help, to the bare concrete of unfaced walls.

The character of brick facing, the thickness of the bricks and the mortar joints, is often a very valuable indication of the date of a building; the general tendency being for the bricks to get thinner and the mortar joints thicker. Thus the Pantheon, dated 27 B.C., has bricks 1½ inches thick, with joints averaging ⅜ inch. In the palace of Sept. Severus, 200 A.D., the bricks are 1 inch and the joints ⅝ inch in thickness. In the Aurelian walls of Rome, *c.* 270 A.D., bricks and joints average the same thickness, both measuring about 1¼ inches.

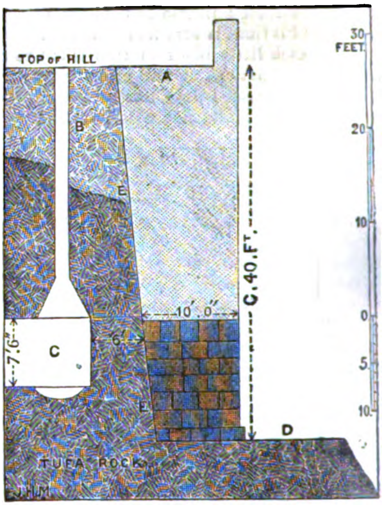
The term *opus mixtum*, though not a classical one, is now used to denote wall-facings of a late period, with alternating courses of brick and small rectangular blocks of tufa. The earliest dated example is the Circus of Maxentius, *c.* 310 A.D.; it continued in use till the time of Theodoric, *c.* 500 A.D.; after which destruction, not construction, went on in the unhappy city of Rome.

The above methods of Roman construction are those which were employed in the greater part of Italy; but in their distant provinces, such as Britain or Gaul, the systems of building were often modified to suit the nature of the materials which the country supplied. Thus, outside of Italy, owing to the lack of pozzolana to make a strong hydraulic cement, concrete was less extensively used for walls. In Britain one of the favourite Roman methods was to build the wall with more or less carefully dressed stone for the facing, and an internal filling in of rubble. At regular intervals "lacing courses" of brick were built, extending through the whole thickness of the wall; large rectangular bricks (*tegulae*) being used instead of the triangles of Rome itself. The Roman fortification walls of London, Richborough, and many other places are examples of this mixed construction.

In all cases the mortar used in Roman walls is of a very hard and durable character, owing to the great care taken in preparing and mixing the materials. Much of the Roman mortar owes its strength to the lime being mixed with finely-pounded brick or pottery, the *opus e testis tunsis* of Vitruvius; a much better substance for the purpose than such sand as is now commonly used. Vitruvius' chapters on sand (*arena*, ii. 4), on lime (*calx*, ii. 5), and the preparation of concrete, mortar, cements, and stucco of all kinds, are of the highest practical value; and modern builders would produce much better work if they would follow Vitruvius' injunctions. It is, however, useless to hope for that: the chief secret of the immense superiority of the Roman work to that of the 19th century is due to the fact that in the old days the builder's first object was to produce a strong and lasting piece of work, not to erect his building at the lowest possible cost, as is the case now.

Fortification Walls of the Romans.

Many different systems of fortification were adopted, according to the varying natures of the sites. The pre-historic defence of *Roma Quadrata*, on the summit of the Palatine hill, was arranged thus. The base of the circuit was set neither at the foot of the cliff nor at its summit, but on an artificially cut shelf, at an average distance (along the *Velabrum* side) of about 40 feet from the top. The face of the cliff above this shelf was cut back into an almost perpendicular precipice, slightly sloping back or "battering" inwards, as is shown in the cut. Against this the wall was built, rising to the top of the hill, and probably a little above it, to shelter the garrison. The native *tufa* at this point is very soft, and so it was thought advisable to line the cliff with a wall of harder tufa, which would not give foothold to an enemy. In other places, as on the Capitoline hill, the native rock is harder; and so the place was made secure simply by scarping the rock to a perpendicular surface, and then only a low wall of defence was required at its summit. The above cut shows also one of the cisterns for storing rain-water, which were cut in the rock for use in time of siege.

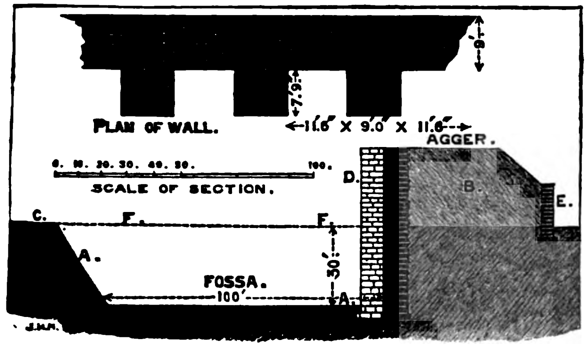


Section of the Wall of Roma Quadrata.

A. Original height of wall.
B. Upper part of cliff, now crumbled away.
C. Cistern cut in tufa rock.
D. Levelled platform to receive base of wall.
E E. Cliff made steeper by cutting.

Along one space of about 1400 yards, in the circuit of the early or "Servian city," the wall had to cross a level piece of ground, and so the defence got no help from the natural contour of the rock, as it did in most other parts of the circuit (see Dionys. ix. 68). For this reason a more elaborate system of fortification was adopted: a great *fossa*, 30 feet deep and 100 wide, was dug, and its earth heaped up on the inside to form an *agger*, which was kept up by a massive stone retaining wall, 9 feet thick and about 30 feet or more in height. This wall, in some places, is strengthened by great square buttresses. A lava-paved road ran along the outer edge of the *fossa*. (See Middleton, *Ancient Rome*, pp. 69–74.)

The later fortification wall of Rome, which encloses a very much larger area than the *Regiones* of Servius, was planned and in great part built by Aurelianus, in 270–5 A.D. It is built of concrete faced with brick, and extends along a circuit of about 12 miles. Like the early Greek walls, its lower part is solid, to resist battering-rams, and the upper part contains in its thickness a passage for the garrison, extending all along its circuit. This passage opens on the interior with a series of tall arches, something like those of an aqueduct, and is vaulted overhead, forming a wide platform at the top, guarded by battlements, for the soldiers. At close intervals, only 45 feet apart, tall and massive square towers were set, 383 in all, with a guard-room below, and a sleeping-room for the garrison above. The plan of one of these towers and a bit of the sentinels' passage is shown in the woodcut. The passage, which continued through the towers, formed a covered walk along the whole 12 miles of the circuit. The height of the wall varied according to the contour of the ground: it probably averaged nearly 50 feet; the towers rising about 20 feet above the top of the intermediate wall. Except where the wall skirted the river along the Campus Martius, its circuit still exists, more or less perfectly preserved. In some places, as e.g. in the now destroyed Ludovisi gardens, it is still in a very perfect state, with the exception of its battlements, almost all of which have perished.



Section of Wall and Agger of Servius. The plan is double the scale of the section.

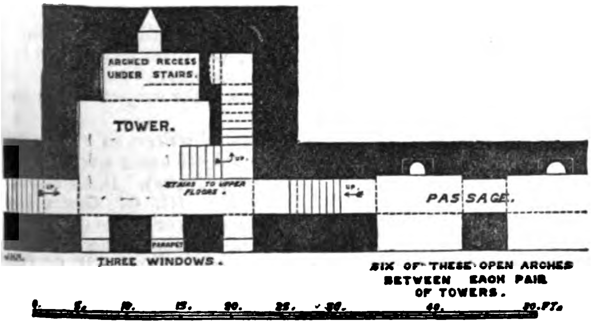
F. Level to which the fossa was filled up and built upon under the Empire.



Aurelian's Wall. Plan showing one of the towers and the passage in the thickness of the wall.

The walls of Pompeii, which are in parts very perfect, are an interesting example of the defences of a smaller city. They, too, have towers, square in plan, set at close intervals, and near the top a broad platform for the defenders of the town.

In other cases—as, for example, in the Roman fort at Old Cairo (the mediaeval Babylon)—towers of circular plan are used. (See A. J. Butler, *Coptic Churches*, i. p. 155.) This system is recommended by Vitruvius, on the very reasonable ground that the angles of square towers form weak points when attacked by the battering-ram. (See the whole of Vitruv. i. 5.)

Respecting the gates, see PORTA.

See also DOMUS. [J. H. M.]

MU'SCULUS was a shelter for soldiers engaged in undermining the enemy's walls or towers (Caes. *B. C.* ii. 10; Isid. *Orig.* xviii. 11, 4), or in filling up the ditch so as to bring the battering-rams, &c. up to the wall (Veget. iv. 16). As described by Caesar (*l. c.*), in the siege of Marseilles it was strongly made of wood, 60 feet long, 4 feet wide, and 5 feet high, with a sloping roof. The construction is as follows:—Two beams, 60 feet long, were placed at the base, 4 feet apart: in these were fixed upright posts (*columellae*), 5 feet high and joined by gable beams (*capreoli*) meeting in an angle, across which thick planks or beams are laid lengthways, so as to form a roof sloping both ways. These beams (*bipedalia*, 2 feet thick) are nailed and clamped together; at the bottom of the slope each side rises a ledge (*regulae*), 4 digits high, so as to support the layers of bricks, &c. The layers over the wooden roof are bricks and earth; over these, hides to prevent the bricks being displaced by water; and over the hides are cushions or mattresses (*centones*) kept wet, so as at once to prevent fire and to break the force of stones hurled from above. The machine is constructed beneath the tower of the besiegers, and then is moved on rollers up to the wall. The besiegers throw down huge stones and blazing tar barrels, which roll harmlessly off the sloping roof. The difference between the musculus and the vinea was that in the vinea one of the long sides was open for working, while the musculus was open at the ends, hence giving a long sheltered gallery, the end of which was against the city wall. It was, of course, rolled lengthways to the wall. The vinea was rolled broadside up to the wall. The musculus also was more solidly built than the vinea, and not so high. The *testudo* was something like the musculus, but squarer. (Lipsius, *Poliorcet.* i. 9; Marquardt, *Staatsverwalt.* ii. 531.) [L. S.] [G. E. M.]

MUSE'A (*Μούσεια*), a festival with contests celebrated in a grove on the lower slopes of Mount Helicon in Boeotia, not far from the spring of Aganippe, in honour of the Muses. It was held every fifth year and with great splendour. (Plut. *Amator.* p. 748 F.) It was first under the charge of the Ascraeans, having been instituted according to tradition by the Aloidae: afterwards it was superintended by the inhabitants of Thespiae. (Paus. ix. 29, § 1; 31, § 3; *C. I.* 1585, 1586.) There was also a festival called Museia, which was celebrated in schools, with sacrifices, to which the pupils contributed. (Aeschin. *in Timarch.* § 10; Theophrast. 25, 11; LUDUS, p. 95 *a.*) [L. S.] [G. E. M.]

MUSE'UM (*Μουσεῖον*) signified in general a place dedicated to the Muses, but was specially the name given to an institution at Alexandria founded by Ptolemy Philadelphus, about B.C. 280, or perhaps by his father and predecessor Ptolemy Soter, for the promotion of learning and the support of learned men. (Athen. v. p. 203.) We learn from Strabo (xviii. p. 794) that the museum formed part of the palace, and that it contained cloisters or porticoes (*περίπατος*), a public theatre or lecture-room (*ἐξέδρα*), and a large hall (*οἶκος μέγας*), where the learned men dined together. The museum was supported by a common fund, supplied apparently from the public treasury; and the whole institution was under the superintendence of a priest, who was appointed by the king, and, after Egypt became a province of the Roman empire, by the emperor (Strabo, *l. c.*). Botanical and zoological gardens appear to have been attached to the museum (Philostr. *Apollon.* vi. 24; Athen. xiv. p. 654). The Emperor Claudius added another museum to this institution (Suet. *Claud.* 42, with Casaubon's note). The studies at the Alexandrian Museum had been arranged by Ptolemy Philadelphus in four faculties,—literature, mathematics, astronomy, and medicine,—and it is said to have received at one time as many as 14,000 students.

It should be observed that in all probability the original of this institution was the museum at Athens (similar in its object of encouraging learning and art and like in form, though on a smaller scale), which was founded or enlarged in pursuance of the will of Theophrastus to receive the statue of his great master Aristotle, and to become a school of Aristotelian philosophy (Diog. Laert. v. 51). The name was the more appropriate because there was a *Μουσεῖον* at Stagira (Plin. *H. N.* xvi. § 133). Baumstark (*ap.* Pauly, *Real Encycl.*) argues for the foundation of the Alexandrian Museum by Ptolemy I. (Soter) from the well-known favour which Ptolemy Soter showed to men of learning, and especially his regard for Theophrastus (Diog. Laert. v. 37), who founded or enlarged the Museum at Athens, and for Demetrius Phalereus, and from the fact that the manner in which Athenaeus (*l. c.*) speaks of the Museum at the beginning of Ptolemy II.'s reign we should imagine that it had been developing for some time. It is easy to understand how the word *μουσεῖον*, losing religious significance, came to imply solely places of learning and art, so that we find Athens itself called *τὸ τῆς Ἑλλάδος Μουσεῖον* (Athen. iv. 187 d), and Longinus himself spoken of as "a walking museum" (*ἔμψυχον καὶ περιπατοῦν μουσεῖον*, Porphyr. 16). [W. S.] [G. E. M.]

MU'SICA. The term *μουσική* signified the art or circle of arts over which the Muses presided, viz. poetry in its various kinds, with the music, whether of voice or instrument, required for its worthy presentation. The word which most nearly denotes what we call the *science* of Music is *ἁρμονική*, but that word does not include the subject of rhythm or "time" (*ῥυθμική*). "Harmonic," therefore, deals only with sounds and their relations in respect of tune: *Ἁρμονική ἐστιν ἐπιστήμη θεωρητικὴ καὶ πρακτικὴ τῆς τοῦ ἡρμοσμένου φύσεως· ἡρμοσμένον δέ ἐστι τὸ ἐκ φθόγγων καὶ διαστημάτων ποιὰν τάξιν ἐχόντων συγκείμενον* (Pseudo-Euclid. *Introd. Harm.* p. 1). The ancient science of rhythm dealt not only with musical sounds, but with everything susceptible of rhythmical division, including (in particular) spoken language, and the movement of the dance. Accordingly it has been made the subject of a separate article [RHYTHMICA].

The Greek technical writers on "Harmonic" usually treat the subject under seven heads:—I. Of Sounds (*περὶ φθόγγων*). II. Of Intervals (*περὶ διαστημάτων*). III. Of Genera (*περὶ γενῶν*). IV. Of Systems or Scales (*περὶ συστημάτων*). V. Of Keys (*περὶ τόνων**). VI. Of Transition (*περὶ μεταβολῆς*). VII. Of Composition (*περὶ μελοποιίας*). This division will be generally made use of in the present article.

A Sound is musical when it has a determinate pitch (*τάσις*); that is to say, when it is produced by vibrations in which waves of a particular length sensibly predominate. The pitch must also, of course, be maintained sufficiently long to make a distinct impression on the memory. When two musical sounds differ in pitch, one is said to be more *acute* (*ὀξύς*), the other more *grave* (*βαρύς*): in common language, one is called higher, the other lower. The term *ἐμμελής*, applied to a sound, signifies that it is capable of being used in the same melody with other sounds.

An Interval is the difference or distance in respect of pitch between two musical sounds. The interval between any pair of sounds can be compared in point of magnitude with that between any other pair, and the magnitude of an interval can be measured with more or less

---

* The word *τόνος*, lit. "tension," "pitch," has two distinct special senses. It is applied to the *keys*, as being scales which differed in pitch. It is also the name of an interval, a *tone*; perhaps as being the interval through which the voice is most naturally raised at one effort.

accuracy by the ear. Further, certain intervals—the Octave, the Fifth, &c.—are recognised as possessing a definite pleasing character; and thus become the foundation of systems of music.

If two strings, similar in material, thickness and tension, be made to vibrate, the rate of vibration is inversely proportional to their length: and the interval between the sounds produced depends only on the ratio of the lengths, *i.e.* of the numbers of vibrations. Thus:

If the ratio be	2 : 1,	the interval is an	Octave.
„ „	3 : 2,	„ „	Fifth.
„ „	4 : 3,	„ „	Fourth.
„ „	9 : 8,	„ „	Major Tone.

The discovery of these ratios is attributed to Pythagoras, and probably with truth, although the details with which it is told by later writers (Nicomachus, p. 10; Diog. Laert. viii. 12) are plainly false. According to these writers, Pythagoras happened to be passing a blacksmith's workshop, and noticed that the musical intervals were produced by four hammers, whose weights he found to be in the proportion of 12, 9, 8, and 6. He then stretched four similar strings by weights which were in the same proportion, and found that they gave the Octave (12 : 6), the Fifth (12 : 8 or 9 : 6), the Fourth (12 : 9 or 8 : 6), and the Tone (9 : 8). But under these conditions the vibrations would have been as the *square roots* of these numbers. The discovery of Pythagoras strongly impressed the imagination of Greek thinkers, and had a great effect upon the general course of speculation, but did not lead at once to progress in musical theory. His followers busied themselves with *à priori* combinations of numbers, but neglected the observation of new facts. This led to a reaction, and the rise of a school which left the physical basis of music out of sight, and adopted (in principle at least) the method of "equal temperament." Thus Greek writers are divided, in their general treatment of intervals, into (1) the Pythagorean or mathematical (called by themselves *κανονικοί*, or *ἁρμονικοί*), who identified each interval with a ratio, and (2) the "musical" (*μουσικοί*), who measured all intervals as multiples or fractions of the Tone. Of the former school were Archytas (400 B.C.), Euclid the geometer, Eratosthenes, and the later writers Thrasyllus, Didymus, and Ptolemy: of the latter were Aristoxenus (pupil of Aristotle) and his followers, the chief of whom were Aristides Quinctilianus and the author of the *εἰσαγωγὴ ἁρμονική* which bears (quite wrongly) the name of Euclid.

Intervals were distinguished as *consonant* (*σύμφωνα*) or dissonant (*διάφωνα*), according as the two sounds could or could not be heard together without offending the ear (Ps.-Eucl. § 8). The intervals reckoned as consonant were the Octave (*διὰ πασῶν*), the Fifth (*διὰ πέντε*), the Fourth (*διὰ τεσσάρων*), and any interval produced by adding an octave to one of these.* All other intervals (as the Third, Sixth, Tenth) were considered as dissonant. It is curious that this class should have included the double tone (*δίτονον*) and the tone and half (*τριημιτόνιον*), even after these intervals had been identified with the natural Major Third (5 : 4) and Minor Third (6 : 5). But the distinction between consonant and dissonant is a matter of degree, and doubtless the Pythagorean tradition tended to keep up the notion of a special character for the Octave, Fifth, and Fourth.

Aristotle and other writers use the term *ὁμοφωνία* of unison, *ἀντιφωνία* of the consonance of the Octave. Later writers (as Gaudentius) distinguish a third relation, intermediate between consonance and dissonance, to which they apply the term *παραφωνία*. The instances given are the ditone and the tritone.

An aggregate of intervals, or rather of sounds separated from one another by a particular series of intervals, constituted a System, or scale.

Every system capable of use in music (*σύστημα ἐμμελές*) could be analysed as a combination of Tetrachords or systems of four notes, either *conjunct* or *disjunct*. Tetrachords are "conjunct" (*συνημμένα*) when the highest note of one is the same as the lowest note of the other (as with the octaves of a modern scale). They are "disjunct" (*διεζευγμένα*) when the highest note of one is separated by a Major Tone from the lowest note of the other. This Tone is called *τόνος διαζευκτικός*. In reality the Octave scale had much the same place in ancient as in modern music: but the tetrachord was taken as the theoretical unit. Thus the scale *a b c d e f g a* would be regarded as composed of the conjunct tetrachords *b c d e* and *e f g a*, plus the tone *a—b*: and the scale *e f g a b c d e* as composed of the disjunct tetrachords *e f g a* and *b c d e*.

The Genus of a system depended upon the relation of the three intervals into which the tetrachord composing it was divided. The Greeks made use of three Genera,—the Diatonic, the Chromatic, and the Enharmonic: and of the two former of these there were certain varieties called Colours (*χρόαι*). It was allowed, moreover, under certain restrictions, to combine the intervals of one Genus or Colour with those of another, so as to produce "mixed" divisions of the tetrachord. The different forms of the Chromatic and Enharmonic genera were broadly distinguished from the Diatonic by the use of two small intervals in succession—so small that taken together they were less than the third. Two such intervals were said to form a *πυκνόν*, or "crowding" of notes, and the three notes were sometimes called, from their position in the group, *βαρύπυκνος*, *μεσόπυκνος*, and *ὀξύπυκνος*. The Enharmonic again is distinguished from every Colour of the Chromatic by the *δίεσις* or quarter-tone, the smallest interval known to Greek music.

It is not easy to harmonise the different accounts of the Genera and Colours, especially as it is impossible to say how far these accounts rest upon actual observation. The following list includes the chief varieties mentioned or recognised by writers of both schools:—

1. The "highly strung" Diatonic (*διάτονον σύντονον*). According to Aristoxenus, the in-

---

* Euclid considers no intervals consonant but such as correspond to super-particular (*ἐπιμόριοι*) or multiple (*πολλαπλάσιοι*) ratios: the former being such as 3 : 2, 4 : 3, &c., the latter such as 2 : 1, 3 : 1, &c. On this theory the Octave and Fourth (8 : 3) would be dissonant, but the Octave and Fifth (3 : 1) consonant.

tervals (in the ascending order) were semitone, tone, tone (*e f g a*). The ratios given by the Pythagoreans, such as Euclid and Eratosthenes, are $\frac{256}{243} \times \frac{9}{8} \times \frac{9}{8}$ (*λεῖμμα, τόνος, τόνος*). Didymus (a contemporary of Nero) proposed the ratios $\frac{16}{15} \times \frac{10}{9} \times \frac{9}{8}$, thus introducing the Minor Tone (10 : 9), and with it the true Major Third ($\frac{10}{9} \times \frac{9}{8} = \frac{5}{4}$). Ptolemy inverted the order of the tones, making the division $\frac{16}{15} \times \frac{9}{8} \times \frac{10}{9}$, thus obtaining also the true Minor Third ($\frac{16}{15} \times \frac{9}{8} = \frac{6}{5}$).

2. The Diatonic, called by Ptolemy "middle soft" (*διάτονον μέσον μαλακόν*), or "Tonic" (*δ. τονιαῖον*), formed by the ratios $\frac{28}{27} \times \frac{8}{7} \times \frac{9}{8}$. These ratios were given for the ordinary Diatonic by Archytas—apparently as a simplification of the Pythagorean scheme. No corresponding division appears among the Colours of the Aristoxeneans: but Aristoxenus himself says (p. 27, 9 Meib.; cp. p. 52, 15) that a musically correct system (*σύστημα ἐμμελές*) may be formed by combining the Diatonic *λιχανὸς* (second highest note) with the *παρυπάτη* (second lowest note) of a Soft Chromatic. Such a tetrachord would correspond to the "middle soft Diatonic" of Ptolemy and Diatonic of Archytas. In the system of Ptolemy it is taken as the standard division of the octave. We shall see that its existence is confirmed by the notation.

3. The Soft Diatonic (*διάτονον μαλακόν*), formed, according to Aristoxenus, of the intervals semitone, three-quarters of a tone, tone and a quarter. The ratios given by Ptolemy are $\frac{21}{20} \times \frac{10}{9} \times \frac{8}{7}$.

4. The standard or tonic Chromatic (*χρῶμα σύντονον* or *τονιαῖον*). Aristoxenus gives the intervals semitone, semitone, tone and a half: Ptolemy the ratios $\frac{22}{21} \times \frac{12}{11} \times \frac{7}{6}$. In this, and also in the preceding Colour, if Ptolemy is right, the highest interval is slightly over-estimated by Aristoxenus.

5. The Soft Chromatic (*χρῶμα μαλακόν*), for which Ptolemy gives the ratios $\frac{28}{27} \times \frac{15}{14} \times \frac{6}{5}$. It answers to two Colours in the scheme of Aristoxenus, the *χρῶμα μαλακόν*, in which the two small intervals are each a third of a tone, and the *χ. ἡμιόλιον*, in which they are each three-eighths of a tone. The distinction between these two Colours is rejected by Ptolemy; but as he mentions that they were both obsolete in his time, his opinion can only rest upon *à priori* considerations.

The earliest analyses of the Chromatic scale agree partly with the standard kind, partly with this "soft" variety. The following schemes are mentioned:—

Chromatic of Archytas, $\frac{28}{27} \times \frac{243}{224} \times \frac{32}{27}$;
" " Eratosthenes, $\frac{20}{19} \times \frac{19}{18} \times \frac{6}{5}$;
" " Didymus, $\frac{16}{15} \times \frac{25}{24} \times \frac{6}{5}$.

It will be seen that Eratosthenes was the first to recognise the natural Minor Third, and (by consequence) the Minor Tone.

6. The Enharmonic, in which the intervals, according to Aristoxenus, were diesis, diesis, ditone. The schemes proposed by Pythagorean writers were:—

Enharmonic of Archytas, $\frac{28}{27} \times \frac{36}{35} \times \frac{5}{4}$;
" " Eratosthenes, $\frac{40}{39} \times \frac{39}{38} \times \frac{19}{15}$;
" " Ptolemy, $\frac{46}{45} \times \frac{24}{23} \times \frac{5}{4}$.

The scheme of Archytas is interesting as the earliest recognition of the natural Major Third. The 19 : 15 of Eratosthenes is almost exactl the Pythagorean ditone 81 : 64, and is doubtle meant as a simplification of it. It is to b observed that the true Major and Minor Thir were admitted in the Enharmonic and Chromat genera long before they replaced the Pythag rean division in the Diatonic.

All these scales, except the first, are so unlik anything now known, at least in European musi that modern writers have great difficulty i forming any idea of their real character an effect. The most plausible view of the Enha monic, and of the Chromatic "colours," is that th pair of small intervals which gives them thei peculiar character was due in each case to th insertion of a note that stood in no harmoni relation to the rest of the scale, and consequentl was not essential to the melody, but might b used as a "passing" or ornamental note (*appo giatura*). At the same time, or more probabl as an earlier step, the large interval whic belongs to the Chromatic and Enharmonic scal was created by the omission of a note from th Diatonic scale. Thus the tetrachord *e f g a*, b the omission of *g*, and the insertion of a dividin note between *e* and *f*, would give the Enharmoni *e e* f a*. Similarly, from the trichord *e f a*, b inserting a passing *f*♯, we obtain the Chromati *e f f*♯ *a*. In the case of the Enharmonic the is direct evidence that this was the actu process by which it was formed. Aristoxen (quoted by Plut. *de Mus.* p. 11) says that thi genus was discovered by the musician Olympu who observed that a peculiarly beautiful charac ter (*ἦθος*) was given to a melody by the omissio of the second highest note of the Diatonic tetra chord. Hence certain of his compositions, i particular those called *σπονδεῖα*, employ onl the notes common to all three genera, viz. *e f*— *a b c*—*e* (omitting *g* and *d* as peculiar to th Diatonic). The Enharmonic *πυκνόν* (Aristoxen goes on to say) does not appear to be due t Olympus. Further, in the archaic style o flute-playing the semitone is undivided: after wards it was divided (into quarter-tones), both i the Lydian and the Phrygian music. On thi view the distinctive character of the Enharmoni is given by the largeness of the highest interva in the tetrachord rather than the smallness o the two others.

This method of explanation evidently fails i the case of genera in which the large interv cannot have been obtained by the omission of note in a Diatonic scale. Such are the "Sof Diatonic, in which the large interval is found on the ratio 8 : 7, and the standard Chromat in which (according to Ptolemy) it is found on 7 : 6. These intervals, however, may h been obtained by direct observation. They ex in the natural scales of the horn and trump and are in fact used instead of the Minor Thi and Tone ($\frac{6}{5} \times \frac{10}{9}$) in the harmony of the domin Seventh, both by stringed instruments voices when unaccompanied by *tempered* instr ments. (See the instances quoted by Gevae vol. i. p. 315.)

All that we know of the history of the no Diatonic scales tends to show that they w used in combination with the Diatonic rat than as an independent form of music. In t time of Ptolemy only one division, that of t "middle soft" Diatonic, could be used for t whole of a scale. The four others that were still in ordinary use—the Pythagorean, the *διάτονον σύντονον*, the *δ. μαλακόν*, and the standard Chromatic—could only be used in combination with the "middle soft." Thus there were five varieties of the octave, one in which the standard genus only was used, and four in which it was "mixed" with a tetrachord of a different kind. The curious rule is given that the "highly strung" genera, the Pythagorean and the *διάτονον σύντονον*, must be in the upper tetrachord of the octave; the relaxed genera, the "soft" Diatonic and the Chromatic, in the lower one. We cannot indeed extend such rules to the earlier periods of Greek music; but it would seem from the stress which all writers lay on the subject of "mixture" (*μίγμα*) of genera—viz. the combination of the intervals of different genera either within the same tetrachord, or in different tetrachords of the same system—that this was the way in which some at least of these strange varieties found their way into practice.

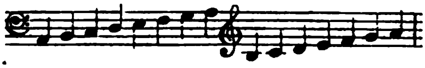
All writers recognise the natural priority of the Diatonic genus. Next to it Aristoxenus places the Chromatic, the most difficult being the Enharmonic: *πρῶτον μὲν οὖν καὶ πρεσβύτατον αὐτῶν θετέον τὸ διάτονον, πρώτου γὰρ αὐτοῦ ἡ τοῦ ἀνθρώπου φύσις προστυγχάνει, δεύτερον δὲ τὸ χρωματικόν, τρίτον δὲ καὶ ἀνώτατον* (v. l. *νεώτατον*) *τὸ ἐναρμόνιον· τελευταίῳ γὰρ αὐτῷ καὶ μόλις μετὰ πολλοῦ πόνου συνεθίζεται ἡ αἴσθησις* (p. 19). Elsewhere he complains of the tendency to depart from the severity of the Enharmonic, and pass into the "sweeter" and more emotional Chromatic. In the second century A.D. (as we learn from Ptolemy) the Enharmonic and the "Colours" of the Chromatic had gone out of use.

Regarding the systems actually employed in Greek music. something has already been said in connexion with the instruments. [See LYRA, p. 105 *b*.] At an early period we find evidence of an octachord system or octave scale of eight notes, named as follows:—

ὑπάτη, lit. "highest," in our terminology the lowest (sc. *χορδή*).
παρυπάτη, "next to *ὑπάτη*."
λιχανός, the "forefinger" note.
μέση, the "middle" note.
παραμέση.
τρίτη, the "third finger" note.
παρανήτη.
νεάτη or *νήτη*, the "lowest," our highest.

The octave consisted of two disjunct tetrachords, (1) from *ὑπάτη* to *μέση*, and (2) from *παραμέση* to *νήτη*. The names were the same for all the genera; but the genus was specified if necessary in the case of the "movable" notes (*e.g.* *λιχανὸς διάτονος*, *λ. χρωματική*, *λ. ἐναρμόνιος*, and so on). In the Diatonic genus it may be represented in our notation by the octave *e f g a b c d e*.

This scale was in ordinary use in the time of Plato and Aristotle: see Plat. *Rep.* p. 443 D (*ξυναρμόσαντα τρία ὄντα ὥσπερ ὅρους τρεῖς ἁρμονίας ἀτεχνῶς, νεάτης τε καὶ ὑπάτης καὶ μέσης, καὶ εἰ ἄλλα ἄττα μεταξὺ τυγχάνει ὄντα*), and Arist. *Probl.* xix. (especially §§ 3, 4, where he discusses the difficulty of singing the *παρυπάτη*, though it is only separated by a *δίεσις* from the *ὑπάτη*). The technical writers describe two systems, obtained from this octave by the addition of tetrachords at each end. One of these consisted of two complete octaves, viz.:



This was called the *greater perfect system*. Another system, called the *smaller perfect system*, was composed of three conjunct tetrachords, called *ὑπατῶν*, *μέσων*, and *συνημμένων*, with *προσλαμβανόμενος*, thus—

and these two together constituted the *immutable system*, i.e. system without "transition" or modulation (*σύστημα ἀμετάβολον*), described by all the writers later than Aristoxenus.

The sounds in these systems were named in the way before described, the names of the tetrachord only being added, except in the case of *μέση* and *παραμέση*. Thus, taking the sounds in the ascending order—

A	*προσλαμβανόμενος.*	
B	*ὑπάτη ὑπατῶν.*	
C	*παρυπάτη ὑπατῶν*	*τετράχορδον ὑπατῶν.*
D	*λιχανὸς ὑπατῶν*	
E	*ὑπάτη μέσων*	
F	*παρυπάτη μέσων*	*τ. μέσων.*
G	*λιχανὸς μέσων*	
A	*μέση*	

So far the sounds are common to the greater and smaller systems. Then follow, in the greater,

B	*παραμέση*	*τ. διεζευγμένων.*
C	*τρίτη διεζευγμένων*	
D	*παρανήτη διεζευγμένων*	
E	*νήτη διεζευγμένων*	
F	*τρίτη ὑπερβολαίων*	*τ. ὑπερβολαίων.*
G	*παρανήτη ὑπερβολαίων*	
A	*νήτη ὑπερβολαίων*	

The interval between *μέση* and *παραμέση* is a tone. But in the smaller system *μέση* serves also for the lowest sound of the tetrachord *συνημμένων*, which terminates the scale, thus—

A	*μέση.*
B♭	*τρίτη συνημμένων.*
C	*παρανήτη συνημμένων.*
D	*νήτη σμνημμένων.*

This system is "perfect" and "unmodulating," in the sense that any particular musical scale, provided that modulation is excluded, must be similar to some part of it. Let us now suppose that a partial scale, of a certain number of notes, is to be taken on the Perfect System. By taking different notes as limits, the order of the intervals in any such partial scale may be varied, while the genus remains the same. The varieties obtained in this way are called Species. It is evident, further, that the number of species of a scale of a given compass is the same as the number of its intervals. Thus the Diatonic tetrachord has three species, as the semitone is first, second, or third:

1st. ½ 1 1, 2nd. 1 ½ 1, 3rd. 1 1 ½

The Octachord has seven species, viz. in the Diatonic genus—

1st.	½	1	1	½	1	1	1	(*b—b*)
2nd.	1	1	½	1	1	1	½	(*c—c*)
3rd.	1	½	1	1	1	½	1	(*d—d*)

and so on, the semitones changing their place by successive steps. Similarly in the Enharmonic genus there were seven species, to which, according to the statement of one writer (Ps.-Eucl. p. 15), names were anciently given as follows:—

1. Mixolydian .	¼	¼	2	¼	¼	2	1
2. Lydian .	¼	2	¼	¼	2	1	¼
3. Phrygian .	2	¼	¼	2	1	¼	¼
4. Dorian .	¼	¼	2	1	¼	¼	2
5. Hypolydian .	¼	2	1	¼	¼	2	¼
6. Hypophrygian	2	1	¼	¼	2	¼	¼
7. Hypodorian .	1	¼	¼	2	¼	¼	2

A late writer, Aristides Quinctilianus (p. 21), describes six very ancient divisions of the scale (*διαιρέσεις αἷς καὶ οἱ πάνυ παλαιότατοι πρὸς τὰς ἁρμονίας κέχρηνται*), which he tells us are the six "Modes" (*ἁρμονίαι*) characterised by Plato in the well-known passage of the *Republic* (p. 398). He gives the order of the intervals as follows (assuming that *δίεσις* may be represented by a quarter-tone):—

Lydian .	¼	2	1	¼	¼	2	¼	
Dorian .	1	¼	¼	2	1	¼	¼	2
Phrygian .	1	¼	¼	2	1	¼	¼	1
Ionian .	¼	¼	2	1½	1			
Mixolydian .	¼	¼	1	1	¼	¼	3	
Syntonolydian	¼	¼	2	1½				

No satisfactory attempt has been made to reconcile this scheme with the Species of the Octachord, but traces of a connexion may be pointed out. The *Lydian* of Aristides agrees with the Hypolydian species; and as Plato opposes his *λυδιστί*, as a "slack" or low-pitched scale, to the *συντονολυδιστί*, we may regard it as the "mode" elsewhere called Hypolydian. The *Mixolydian* of Aristides is derived from the corresponding species (*b—b*) by combining the Diatonic with the Enharmonic in the lower tetrachord, and omitting the second highest note. The *Dorian* exhibits the central octave, which is of the Dorian species, with an additional tone at the lower end. The *Phrygian* is unlike the Enharmonic Phrygian species, but may be derived from the Diatonic by dividing the semitones and omitting the diatonic *λιχανός*: thus $d\ e\ e^*\ f\ (g)\ a\ b\ b^*\ c\ d$. The upper tetrachord is a "mixture" of Diatonic and Enharmonic. The *Ionian* (*ἰαστί*) and *Syntonolydian* present the greatest difficulties, since so many notes are wanting. Westphal makes it probable that the names have been interchanged; if so, the Ionian may be regarded as an octave of the Diatonic *g*-species, with four notes omitted, and the semitone divided enharmonically: $(g\ a)\ b\ b^*\ c\ (d)\ e\ (f)\ g$; and the Syntonolydian becomes a Diatonic *a*-species, with like omissions and subdivision: $(a)\ b\ b^*\ c\ (d)\ e\ (f)\ g\ a$. These results, however, are of very doubtful value. In particular, they are open to the serious objection that they are partly obtained by connecting the Enharmonic scales of Aristides with the species of the Diatonic genus: whereas the writer who is our authority for the list of the Species (Pseudo-Euclid) connects their names only with the Enharmonic.* Nevertheless the scales of Aristides are of interest, as confirming the view that the Enharmonic divisions were formed upon the basis of Diatonic or other natural scales, and that the two genera were practically employed in combination. It has been noticed that the upper tetrachord of his Phrygian, and the lower tetrachord of his Mixolydian, are in fact Diatonic scales with the Enharmonic notes added.

The fifth head of Greek musical science is that which treats of the Keys or "pitch" of the various scales (*περὶ τοὺς τόνους ἐφ' ὧν τιθέμενα τὰ συστήματα μελῳδεῖται*, Aristox. p. 37 Meib.). The distinction of keys was of high antiquity; but the arrangement and completion of the system was first carried out by Aristoxenus, who thus did for Greek music what was done for that of the modern world by the *Wohltemperiertes Clavier* of John Sebastian Bach. In the important passage already quoted (p. 37) he goes on to tell us that in his time there was a great want of agreement as to the names and relative pitch of the keys. Each part of Greece had its own, as each had a different calendar, with different names for the months. The most generally recognised keys were:—

Mixolydian †	interval of a semitone.
Lydian	„ „ tone.
Phrygian	„ „ tone.
Dorian	„ „ semitone.
Hypodorian	

Some added a Hypophrygian below the Hypodorian. Others, again, made an interval of three quarters of a tone between the successive keys, except between the Dorian and Phrygian, which seem to have been always separated by a tone.

To these six keys Aristoxenus, or some one in his time, added a new Hypodorian, a tone lower than the Hypophrygian: the old Hypodorian was then called Hypolydian. Thus the convention was arrived at by which the prefix hypo- always denoted a key a Fourth lower than the key to whose name it was prefixed. The next step, expressly attributed to Aristoxenus himself (Ps.-Eucl. p. 19), was the addition of six new keys, thus giving one for every semitone of a complete octave. At a later time two more were invented, obviously for the sake of symmetry, and the whole list was as follows:—

Hypolydian	Lydian	[Hyperlydian]
Hypo-aeolian	Aeolian	[Hyper-aeolian]
Hypophrygian	Phrygian	Hyperphrygian
Hypo-ionian	Ionian	Hyper-ionian
Hypodorian	Dorian	Mixolydian

Each of these keys was a transposition of the *σύστημα ἀμετάβολον*: but we are told that

---

* It will be evident that a species of the Diato genus and the similarly named species of the Enharm are two utterly different scales. Compare (*e.g.*) the Diatonic and Enharmonic Lydian, which can never ha belonged to the same "mode." This is a difficul which the writers who maintain the practical importa of the Species have not recognised.

† The passage is unfortunately corrupt. It see clear from the context that Westphal is right in plac the Mixolydian highest in pitch and in condemning t word *αὐλὸν* after *τὸν ὑποφρύγιον*.

only that part of each was used which was within the compass of the human voice.

It will be seen that the order in pitch of the seven oldest keys—Hypodorian, Hypophrygian, Hypolydian, Dorian, Phrygian, Lydian, Mixolydian—is exactly the reverse of that of the seven species of the same names on the Perfect System. This is the chief fact which a theory of the Greek "modes" has to explain.

The fifteen keys kept their ground, at least in theory, until the time of Ptolemy, in whose *Harmonics* a new scheme is set forth at great length. In this scheme the keys are again reduced to seven, and are brought into direct relation to the species of the Octachord. The use of different keys, according to Ptolemy, is not that the pitch of a melody may be higher or lower. That can be done by raising or lowering the pitch of the whole instrument. The object is that different successions of intervals may be brought within the ordinary compass of the voice: and that object will be fully attained if every octave contains as many different scales (successions of intervals) as possible. But the number of possible scales is not greater, in any one genus, than the number of species, viz. seven. Let us take, then, as the part of the scale most completely within the reach of all voices, the old central octave, from *ὑπάτη μέσων* to *νήτη διεζευγμένων*, in the Dorian key. It is also of the Dorian species (*e—e*). If now we take an octave a tone *lower* on the scale (*d—d*), we have the Phrygian species. But if we at the same time raise the scale into the Phrygian key, we obtain the Phrygian species in an octave of the same pitch as the Dorian, viz. *e f# g a b c# d e*. Similarly the Lydian species, taken on a scale in the Lydian key, is *e f# g# a b c# d# e*. Proceeding thus, we obtain what Ptolemy aims at—an octave of fixed absolute pitch, furnishing every possible succession of intervals or species.

The octave scales obtained by this process are of the same absolute pitch, but are relatively different parts of the Perfect System. The notes which compose them have therefore a double character. They have a place in the Perfect System, and a place in the new octave. Hence a double nomenclature. The notes are called *ὑπάτη*, *παρυπάτη*, &c., from their place in the new octave (*τῇ θέσει*); the old names which belong to them as part of the Perfect System are said to be *κατὰ δύναμιν*.

These octaves, again, may be varied by the use of different genera. Here Ptolemy aids us very much by giving the scales actually used in his time on the lyre and the cithara. Their limited number is in curious contrast to the immense theoretical variety which he sets forth. The scales of the lyre were of two kinds, called *στερεὰ* and *μαλακά*. The former or "hard" scale was an octave of the standard or Middle Soft Diatonic genus. In the latter or "soft" variety the lower tetrachord was Chromatic. Apparently there was no limitation in respect of key or species.

The scales of the cithara were of at least six kinds:—

(1) *τρίται*, Middle Soft Diatonic, and of the Hypodorian species: *a b b# d e e# g a*.

(2) *ὑπέρτροπα*, the same genus, Phrygian species (*d—d*).

(3) *παρυπάται*, "mixture" of Soft and Middle Soft Diatonic, of the Dorian species:

$$e \;\tfrac{21}{20}\; f \;\tfrac{10}{9}\; g \;\tfrac{8}{7}\; a \;\tfrac{9}{8}\; b \;\tfrac{28}{27}\; b\# \;\tfrac{8}{7}\; d \;\tfrac{9}{8}\; e.$$

(4) *τρόποι*, mixture of Chromatic and Middle Soft Diatonic, of the Hypodorian species:

$$a \;\tfrac{9}{8}\; b \;\tfrac{22}{21}\; c \;\tfrac{12}{11}\; c\# \;\tfrac{7}{6}\; e \;\tfrac{28}{27}\; e\# \;\tfrac{8}{7}\; g \;\tfrac{9}{8}\; a.$$

(5) *ἰαστιαιολιαῖα*, mixture of Pythagorean and Middle Soft Diatonic, of the Hypophrygian species:

$$g \;\tfrac{9}{8}\; a \;\tfrac{9}{8}\; b \;\tfrac{256}{243}\; c \;\tfrac{9}{8}\; d \;\tfrac{9}{8}\; e \;\tfrac{28}{27}\; e\# \;\tfrac{8}{7}\; g.$$

(6) *λύδια*, probably a mixture of *διάτονον σύντονον* with Middle Soft Diatonic: but the text of Ptolemy at this point (ii. 16) is defective. In another place (i. 16) Ptolemy speaks of the mixture in question as found "in the *λύδια* and *ἰάστια*." Owing to the break in the text, it is uncertain whether there were not more than these six varieties.

From an incidental notice in Athenaeus (xiv. p. 625) we learn that there was an ancient *Locrian* key, with a distinct character. The Locrian and *Aeolian* species are identified by the Pseudo-Euclid with the Hypodorian. The ancient *Ionian* (*ἰαστί*) is generally identified with the Hypophrygian (Boeckh, p. 225). According to Aristotle (*Pol.* iv. 3), there are two chief keys, Dorian and Phrygian, of which the others may be regarded as varieties. Plato opposes the Dorian as the true Hellenic key to the Ionian, Phrygian, and Lydian (Lach. p. 188 E). In the *Republic* he makes a threefold division: the "slack" keys, as Lydian and Ionian, are soft and voluptuous (fit for drinking-songs, &c.); the Mixolydian and "tense" Lydian are plaintive and exciting; the Dorian and Phrygian hold the middle place, and represent the two aspects of a good *ethos*, the Dorian being the key of calm endurance (*ἀνδρεία*), the Phrygian of sober enjoyment (*σωφροσύνη*).

The nature of the Greek "modes" has been investigated by Westphal with characteristic ingenuity and learning; and his conclusions, which leave no part of the subject unexplained, have been generally adopted by Gevaert. According to the view supported by this high authority, there are three groups of "modes" (*modalités fondamentales*, Gev.): the Dorian, based on the octave *a—a*, the modern Minor scale (descending); the Phrygian, based on *g—g* (the Major with a flat seventh); and the Lydian, based on *f—f* (the Major with a sharp fourth). Each of these, again, has three possible varieties, distinguished by the melody ending on the tonic, the dominant, or the third. Thus we have—

Keynote *a*, ending on *a*, Hypodorian or Aeolian.
„ „ *e*, Dorian.
„ *g*, „ *g*, Hypophrygian.
„ „ *b*, Mixolydian.
„ „ *d*, Phrygian.
„ *f*, „ *f*, Hypolydian.
„ „ *a*, Syntonolydian.
„ „ *c*, Lydian.

To discuss the combination of inferences upon which this theory rests would take more space than we can afford. It will be enough to indicate the nature of the doubts that may be felt on the subject. The chief difficulty is the want of any direct statement regarding the tonality of the ancient modes, or the note on which the melody ended. The *locus classicus* on the first point is the passage of the Aristotelian *Problems*, xix. 20, πάντα γὰρ τὰ χρηστὰ μέλη πολλάκις τῇ μέσῃ χρῆται, καὶ πάντες οἱ ἀγαθοὶ ποιηταὶ πυκνὰ πρὸς τὴν μέσην ἀπαντῶσι, κἂν ἀπέλθωσι ταχὺ ἐπανέρχονται, πρὸς δὲ ἄλλην οὕτως οὐδεμίαν. The note here called μέση, Westphal maintains, can only be the μέση τῇ θέσει, or fourth note of the octave actually used; for if it were the μέση of the Perfect System (μέση κατὰ δύναμιν), the keynote would have the same *relative* pitch in all the modes, and they would therefore be mere *transpositions* of the same system. But (1) there is no trace in the *Problems* of any octave except the old one of the Dorian species (*e—e*), or of any notes being named in more than one way. And (2) Westphal's argument only applies to those "modes" in which, according to him, the μέση "by position" is the keynote, viz. the Dorian, Phrygian, and Lydian. Still less evidence can be shown for Westphal's assumption that in each mode the species of octave used is determined by the ending of the melody. There is no certain trace in the ancient musical writers of a rule about the ènd of the melody.

Other difficulties are suggested by the early history of the keys. We are asked to believe that the τόνοι of Aristoxenus were wholly distinct from the ἁρμονίαι of the same names of which we read so much in Plato and Aristotle. Now up to the time of Aristoxenus, as he himself tells us (*l. c.*), the names of the keys, with their relative pitch, were still unsettled. But the names of the seven Species, as we have seen, are directly dependent on the Aristoxenean scheme of keys. Consequently these names cannot have been given till the time of Aristoxenus. It is true that Aristoxenus recognises the difference of species, and indeed devotes much pains to ascertaining the number of admissible species of the Octachord (p. 6 and p. 36 Meib.). But he never connects them with his scheme of keys, or with any names such as Dorian, Phrygian, and the rest. It surely follows that the perplexing double application of these ancient names is the work of a later theorist.[*]

It may be said that the ethical character of a scale is more likely to have depended upon its "mode"—*i.e.* upon a difference such as distinguishes our Major and Minor scales—than upon its pitch. But the writers who dwell most on the ethical value of the ἁρμονίαι connect it expressly with the element of pitch. Plato rejects one group of ἁρμονίαι as too low-pitched (χαλαραί), another as too "highly strung" (σύντονοι), and therefore emotional. If we adopt the scheme of Ptolemy, in which transposition is only used to obtain different species, the arguments of Plato have no meaning.

It should be considered, further, that along with difference of Key the ancients had an important source of variety in the Genera, which (as well as the Keys) were regarded as possessing a distinct ethical or emotional character. It is surely in the Genera, rather than in the Species of Ptolemy and Aristides, that we find the true artistic analogue of the modern Modes. Perhaps we may go further, and connect the loss of the Chromatic and Enharmonic with the practical importance of the Species in the time of Ptolemy. Thus the system of the second century A.D. would be midway between the classical Greek music, with its Keys and Genera, and the Tones of the mediaeval Church.

On the last two of the heads enumerated a the beginning of the article, very little real information can be obtained. In fact they could not be intelligibly discussed without *examples*, a method of illustration which unfortunately is never employed by the ancient writers. Μεταβολὴ was the transition from one genus to another, from one system to another (as fro disjunct to conjunct or *vice versâ*), from one key to another, or from one style of melody t another (Ps.-Euclid. 20), and the change wa made in the same way as in modern *modulatio* (to which μεταβολὴ partly corresponds), viz. b passing through an intermediate stage, or usin an element common to the two extremes be tween which the transition was to take place (See Ps.-Euclid. 21.)

Μελοποιΐα, or composition, was the applica tion or use of all that has been described unde the preceding heads. This subject, which oug to have been the most interesting of all, treated of in such a very unsatisfactory wa that one is almost forced to suspect that only a *exoteric* doctrine is contained in the works whic have come down to us. On composition *propr* so called, there is nothing but an enumeratio of different kinds of *sequence* of notes, viz.:— 1. ἀγωγή, in which the sounds followed o another in a regular ascending or descendin order; 2. πλοκή, in which intervals were take alternately ascending and descending; 3. πεττεί or the repetition of the same sound several time successively; 4. τονή, in which the same sou was sustained continuously for a considerabl time. (Ps.-Eucl. 22.) Besides this divisio there are several classifications of melodies ma on different principles. Thus they are divide according to *genus*, into Diatonic, &c.; accordin to *key*, into Dorian, Phrygian, &c.; according *system*, into grave, acute, and intermedia (ὑπατοειδής, νητοειδής, μεσοειδής). This la division seems to refer to the general pitch the melody; each of the three classes is said have a distinct *turn* (τρόπος), the grave bein *tragic*, the acute *nomic* (νομικός), and th intermediate *dithyrambic*. Again, melody distinguished by its *character* (ἦθος), of whic three principal kinds are mentioned, διαστα τικόν, συσταλτικόν, and ἡσυχαστικόν, and the terms are respectively explained to mean apt tude for expressing a magnanimous and hero or low and effeminate, or calm and refine character of mind. Other subordinate class are named, as the erotic, epithalamian, comi and encomiastic. (Ps.-Euclid. 21; Aristid. 2 No account is given of the *formal* peculiariti of the melodies distinguished by these differen characters, so that what is said of them merel excites our curiosity without tending in th least to satisfy it.

It has long been a matter of dispute wheth the ancients practised *harmony*, or music parts. The following are the facts usuall

---

[*] It is true that according to the Pseudo-Euclid (p. 15) these names were given to the species "by the ancients" (ὑπὸ τῶν ἀρχαίων). But the Romans and Byzantines used this term of Greeks of the Alexandrian period.

appealed to on each side of the question. In the first place, the writers who professedly treat of music make no mention whatever of such a practice: this omission constitutes such a very strong *primâ facie* evidence against it, that it must have settled the question at once but for supposed positive evidence from other sources on the other side. It is true that *μελοποιΐα*, which might have been expected to hold a prominent place in a theoretical work, is dismissed very summarily; but still, when the subjects which ought to be explained are enumerated, *μελοποιΐα* is mentioned with as much respect as any other, whilst *harmony* is entirely omitted. In fact there seems to be no Greek word to express it; for *ἁρμονία* signifies a well-ordered *scale* of sounds, and *συμφωνία* only implies the concord between a single pair of sounds, without reference to succession. There is, however, a passage in the Aristotelic *Problems* (xix. 18) where succession of consonances is mentioned: *διὰ τί ἡ διὰ πασῶν συμφωνία ᾄδεται μόνη; μαγαδίζουσι γὰρ ταύτην, ἄλλην δὲ οὐδεμίαν.* The word *μαγαδίζειν* signifies the singing or playing in two parts at the interval of an octave—a practice which would arise as soon as men and women or boys attempted to sing the same melody at once. The obvious meaning of the passage is that since no interval except the octave was *magadised* (the effect of a similar use of any other is known to be intolerable), *therefore* no other was employed at all in singing: implying that nothing of the nature of counterpoint was thought of. And this interpretation is borne out by the absence of any other reference to singing in parts, or to harmony in purely instrumental music.

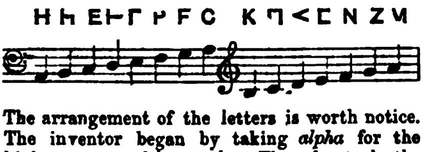
On the other hand, there are several indications of the use of harmony in the *κροῦσις* or instrumental accompaniment. The most decisive is a passage in the *Laws* of Plato (vii. p. 712). Speaking of the musical education which is to be common to all citizens, he says that the pupils are to learn to sing to the accompaniment of the lyre, and that this is to be note for note the same as the melody, eschewing all divergence and variation in the instrumental part, by which the strings are made to yield a different melody from that which the poet composed, combining "close" with "open" intervals, quick time with slow, high with low notes, consonant and in octaves. In the rhythm, too, they are to abstain from intricacy in the accompaniment, because the effort to attend to opposites at the same time produces only confusion and perplexity. It appears, therefore, that a note of the air might be accompanied by a different note, or by two or more successive notes, of the instrument; and that an accompaniment with variations and ornaments of this kind, though not a matter of course, was familiar at least to professional musicians. In the *Problems* of Aristotle (xix. 12) the question is asked, "Why the lower of two strings always takes the melody?" implying that the accompaniment, in instrumental music at least, was always higher than the air. In another passage (xix. 39) Aristotle speaks of the effect of an accompaniment which ends in unison with the air, after having been different from it: *τὰ ἄλλα οὐ προσαυλοῦντες ἐὰν εἰς ταὐτὸν καταστρέφωσιν εὐφραίνουσι μᾶλλον τῷ τέλει ἢ λυποῦσι ταῖς πρὸ τοῦ τέλους διαφοραῖς.* His language is exactly what we should use to describe the pleasure given by the resolution of a discord. The use of dissonant as well as consonant intervals in ancient harmony is shown by a passage in Plutarch's dialogue *de Musica* (c. 19). Speaking of the use in the accompaniment (*πρὸς τὴν κροῦσιν*) of notes which do not occur in the air,—a peculiarity of certain ancient styles,—he instances the *τρίτη* which was found as accompaniment to the *παρυπάτη* (the interval being a fifth), and the *νήτη συνημμένων*, found with the *παρανήτη* and the *μέση*. The interval between *νήτη* and *παρανήτη* depends on the genus, but in any case is reckoned by the ancients as dissonant. The late writers Gaudentius and Bacchius apply a special term, *παραφωνία*, to intervals which they say "are intermediate between consonant and dissonant, but appear consonant in the accompaniment" (*ἐν τῇ κρούσει*).

These notices make it clear that the Greeks were acquainted with some at least of the effects out of which systems of harmony are formed. That their harmonies were of a simple kind, and had a very subordinate place in their music, is no less evident. There is no certain trace of the use of *chords* or groups of more than two notes. The art of harmony has no history; it is nowhere connected with national forms of music, or with the names of eminent musicians. It never emerges from the stage of the singer with the lyre in his hand.

The musical notation (*σημασία*) of the Greeks consisted of two distinct systems of signs,—one for the voice, the other for the instrument. The vocal signs are taken from the common or Ionic alphabet. The notes of the middle part of the scale are denoted by the letters in their usual order; those of the lower part by an alphabet of inverted or otherwise altered letters; the upper notes are distinguished by accents—an accent signifying that the note is an octave higher than that of the unaccented letter. The nature of the instrumental notation was first explained by Westphal, whose admirable investigation has thrown much light on the early periods of Greek music, and even on the history of the alphabet. The following is a brief summary of his discoveries:—

1. The instrumental notation was derived from the first fourteen letters of a Peloponnesian alphabet, possessing *digamma*, *F*, the old form of *iota*, ϟ, and two forms of *lambda*, < and ⊢. In a few cases the forms of the letters have been modified: thus *alpha* (originally ⋈) appears as Ч, *beta* as ⊏, *delta* as ⅂, *theta* as C, *my* (originally M) as ⊬, *iota* as ⊢. By treating the two forms of *lambda* as distinct characters the number is raised to fifteen.

2. These characters are applied to denote a scale of two octaves, as follows:—



The arrangement of the letters is worth notice. The inventor began by taking *alpha* for the highest note of his scale. Then he took the other characters in pairs, ⊏ Γ, ⅂ E, F Z, H C, Ⱨ K, < ⊢, ⊬ N, and made each pair stand for the extreme notes of an octave. This scale may be regarded as the framework of the system of notation.

3. A character may be varied by being reversed, *i.e.* written from right to left (*ἀπεστραμμένον*), or by being turned half round backwards (*ἀνεστραμμένον, ὕπτιον*). When reversed, it denotes a note half a tone higher: when half reversed, it denotes a note a quarter of a tone higher. The combination of the two varieties evidently gives an Enharmonic *πυκνόν*, or group obtained by dividing a semitone: *e.g.* if we take the four "stable" notes of the central octave, Γ C K ⊏, we complete the scale in the Enharmonic genus by inserting the varieties of Γ and K, thus obtaining Γ L ⅂ C K ⊻ ꓘ ⊏.

In some cases this method of varying the letters is impracticable; *e.g.* H reversed does not change, N half-reversed becomes Z, and *vice versâ*. Other modifications are accordingly employed, and we have the groups Ⅵ Ⲅ Ч, Z λ ⅄, N / \, ⅂ ⊲ Δ, and H ⊎ R.

4. In the Diatonic genus the second lowest note of a tetrachord is not represented, as we should expect, by the reversed letter, but by the half-reversed one, the same character as the second lowest Enharmonic note. Westphal infers that the Diatonic for which the notation was originally devised was a scale such as the Middle Soft Diatonic of Ptolemy, or the Diatonic of Archytas, in which the lowest interval was less than a semitone.

5. In the Chromatic genus the characters used are the same as in the Enharmonic, but the reversed letter is distinguished by an accent. Thus the Chromatic tetrachord *e f f♯ a* is written Γ L ⅂ ʹC or (in the upper octave) ⊏ ⊔ ⊐ ʹⅥ. Here again the notation does not answer to the standard form of the genus, but is exactly suited to the Chromatic of Archytas, in which the lowest interval is the same as in the Enharmonic.

6. The system was enlarged by the addition of two tones, each with the corresponding *πυκνόν*, at the lower end of the scale, and an octave, except the highest note, at the upper end. The two groups were denoted by the characters ᑫ ⋹ T and ∈ ω ∋, which are evidently invented on the analogy of the letters already in use. The new upper notes were denoted by accented letters, Kʹ to Zʹ, repeating the scale from K to Z an octave higher. In this shape the system contained the notes of the Greater Perfect System in all the fifteen Keys, and in the three Genera.

It is remarkable that we find no trace of a distinction between Greek and Roman music. The Latin writers—the chief of whom are Martianus Capella and Boethius—derive their material from Greek sources.

The extant fragments of Greek music are as follows (see Gevaert, i. pp. 141 ff.):—

Hymn to Calliope, by a certain Dionysius, of unknown date.

Hymn to Apollo, ascribed to the same.

Hymn to Nemesis, probably by Mesomedes, a musician of the second century A.D.

These three hymns are edited with a commentary by Bellermann (Berlin, 1840).

The Anonymus, edited by the same scholar (Berlin, 1841), contains some fragments in the instrumental notation, given to illustrate the technical terms of *μελοποιΐα*.

A melody for the first eight verses of the first Pythian ode of Pindar was published by Kircher in his *Musurgia Vniversalis*. He professed to have taken it from a MS. of the monastery of S. Salvatore at Messina; but the MS. has never been found. It is given by Boeckh (*De Metr. Pind.* iii. 12), who accepts it as genuine. It is also admitted, though with grave doubt, by Gevaert (i. p. 6).

A Hymn to Demeter, given in Greek notation by the Venetian composer Marcello, is of still more doubtful authenticity (Gevaert, *ibid.*).

The chief ancient authorities on the subject of this article are, the "Antiquae Musicae Auctores Septem"—viz. Aristoxenus, Euclid (including the *εἰσαγωγὴ ἁρμονική* which bears his name), Nicomachus, Alypius, Gaudentius, Bacchius, Aristides Quintilianus—and Martianus Capella, edited by Meibomius, in two vols. (Amsterdam, 1652); the *Harmonics* of Ptolemy (in vol. iii. of Wallis, *Op. Mathemat.* Oxford, 1699); Theon Smyrnaeus, *De Musica* (ed. Bullialdus, Paris, 1644); the Anonymus edited by Bellermann (Berlin, 1841); the Dialogue of Plutarch *De Musica;* Aristotle, *Probl.* xix.; and several chapters of Athenaeus, book xiv. The *Harmonic* of Aristoxenus has also been edited by P. Marquardt (Berlin, 1868), and translated with commentary by Ruelle (Paris, 1870) and by Westphal (Leipzig, 1883). There is a new edition of Aristides Quintilianus by Alb. Jahn (Berlin, 1882).

The chief modern sources of information are, Boeckh, *De Metris Pindari;* Fortlage, *Das musikalische System der Griechen* (Leipzig, 1847); the various writings of Westphal, of which his book *Die Musik des griechischen Alterthums* (Leipzig, 1883) may be mentioned as an excellent introduction to the subject in a comparatively small compass; Gevaert, *Histoire et Théorie de la Musique dans l'Antiquité* (Gand, 1875, 1881); Helmholtz, *Die Lehre von den Tonempfindungen*, §§ 13, 14. [W. F. D.] [D. B. M.]

MUSIVUM OPUS. [PICTURA.]

MUSTAX (*μύσταξ*), moustaches. The different parts of the beard [BARBA] had different names, which also varied with its age and appearance. The young beard, first appearing on the upper lip, was called *ὑπήνη* or *ὑπήνη πρώτη* (Diod. v. 28; Philostr. Sen. *Imag.* i. 30, ii. 7, 9), and the youth just arrived at puberty, who was graced with it, was *πρῶτον ὑπηνήτης*. (Hom. *Il.* xxiv. 348, *Od.* x. 279; Schol. *in loc.*; Brunck, *Anal.* iii. 44; Aelian, *V. H.* x. 18.) By its growth and development it produced the moustaches, which the Greeks generally cherished as a manly ornament. (Theocrit. xiv. 4; Antiphanes, *ap.* Athen. iv. 21; Pollux, ii. 80, x. 120; Aristoph. *Lys.* 1072; *Vesp.* 476.) To this practice, however, there seems to have been one exception. The Spartan EPHORI, when they were inducted, made a proclamation requiring the people "to shave their moustaches and obey the laws." (Plut. *Cleom.* 9.) For what reason they gave the former command does not appear, nor how it is to be reconciled with the passages cited from Aristophanes and Antiphanes, unless we understand it to refer to the young only, which the succeeding sentence seems to imply. (Proclus *in* Hes. *Op. et Dies*, 722; Müller, *Dor.* iii. 7, § 7, iv. 2, § 5; Becker-Göll, *Charikles*, iii. p. 298.) [J. Y.] [G. E. M.]

MUSTUM. [Vinum.]

MUTATIO'NES. [Mansio.]

MU'TULUS. [Columna, Vol. I. p. 491.]

MU'TUUM. A *mutui datio* exists when things "quae pondere, numero, mensurave constant,"—as coined money, wine, oil, corn, bronze, silver, gold,—are conveyed by one man to another, so as to become his property, but on the understanding that an equal quantity of things of the same kind shall be returned. The *obligatio* thus arising belongs to the class of those things "quae re contrahuntur," since, besides informal agreement, delivery of the *res mutua* was required in order to establish it. A *mutui datio* was not contracted unless the ownership of the thing delivered passed to the borrower; hence it was necessary that the lender should have a good title to the thing and the power of alienating it. The contract would also be void, if the borrower was incapable of legally binding himself by his act. When, however, a *mutui datio* was invalid, as not complying with these conditions, the borrower was not entitled to retain the benefit of the loan, but on grounds apart from contract might be compelled to restore the thing or its value to the lender.

In the *mutui datio*, inasmuch as the thing became the property of the receiver, the Roman jurists were led to the absurdity of saying that mutuum was so called for this reason, "quod ex meo tuum fit." (Curtius, *Gr. Etym.* 301, derives mutuum from *movere*, *moviturus*.) The only obligation created by mutuum was the undertaking of the borrower to return a thing of exactly the same kind and quantity, though not the same specific thing, as in the contract of loan called *commodatum*. He was not excused if the things were lost by any accident, as by fire or shipwreck, since he had become owner of them, and it was always possible to return an equivalent. This contract was confined by its nature to exchangeable things (*res fungibiles*), and most commonly had for its object a loan of money. The borrower could not be obliged to pay interest on the debt except by means of an independent stipulation. The action which the lender could maintain for the enforcement of his claim was called *condictio*, and was the same action as that of the formal contracts *verbis* and *litteris*. It was a *stricti juris actio*, not *bonae fidei*, and hence the borrower could only be condemned to pay what he had received without interest. It is a peculiarity of *mutui datio* that although it originated in the Jus Gentium, the action belonging to it was *stricti juris*. The fact that it belonged to the Jus Gentium shows that it was not legally recognised till some time subsequent to the Twelve Tables. Voigt suggests 525–544 A.U.C. as the probable date of its first establishment. (Cf. the following passages cited by him:—Plaut. *Trin.* iii. 2, 101, iv. 3, 44; *Bacch.* ii. 3, 16; Liv. xxxii. 2, 1; Cic. *pro Rosc. Com.* 4, 13; Gell. xvii. 6, 1.) It was certainly older than the other *contractus re*. The borrowing by way of mutuum and at interest are sometimes opposed, as by Plautus (*Asin.* i. 3, 95). The S. C. Macedonianum did not allow a right of action to a lender against a filiusfamilias to whom he had given money. [Senatusconsultum Macedonianum.]

(Dig. 12, 1; Cod. 4, 1; Heimbach, *Die Lehre vom Creditum*, p. 131, &c.; Bekker, *Aktionen*, i. 27–29; Demelius, *Zeitschrift für Rechtsgesch.* ii. 217; Ubbelohde, *Zur Geschichte d. benannter Realcontracte*; Huschke, *Die Lehre vom Darlehn.*) [G. L.] [E. A. W.]

MYINDA (*μυΐνδα*) was a game in which one was blindfold, or was obliged to keep his eyes shut (*μύειν*). As may be seen from the description in Pollux, there were other varieties of the game besides our "blind-man's buff" included under this name. Pollux (ix. 113) says, "Either one who is blinded (*καταμύων*) cries *φυλάττου* and compels any one whom he catches to be blinded in his place, or searches for the others, who hid themselves while he had his eyes covered (*μύσαντος κρυφθέντας*), till he finds them; or lastly, still blindfold, when any one touches him, or if any one gives a sign (*προσδείξῃ*), guesses who it is until he gives a right name." There seems no need for any alteration in the last clause such as Grasberger's *μύσας τοὺς κρυφθέντας* (where the force of the concise genitive absolute appears to be misunderstood), or *προσθρέξῃ* for *προσδείξῃ*, which means, probably, giving some clue to identity by laughing or speaking. Clearly the second variety is our "hide and seek" (much the same as *ἀποδιδρασκίνδα*); the first and third are two forms of blind-man's buff, differing in the point that the third requires the "blind-man" to guess the name of any one who touches him or speaks. (Becq de Fouquières seems to change the nominatives *τις* into the objective case.) The guessing by the blindfold occurs also in the game which Pollux calls *κολλαβισμός* (*i.e.* buffeting = *κολαφισμός*), to which, rather than to *μυΐνδα*, we must refer Luke xxii. 64. It is a more difficult question to decide the origin of the name *χαλκῆ μυῖα* for another kind of blindman's buff (Poll. ix. 123; Eustath. *ad Il.* xxi. 394). We are told that the players blindfolded one of their number (*ταινίᾳ τὼ ὀφθαλμὼ προσφίγξαντες*), who cried *χαλκῆν μυῖαν θηράσω*, to which the others answered *θηράσεις ἀλλ' οὐ λήψει*, and struck him with whips of papyrus till he caught one of them. It is clear that the warning cry before the pursuit is like the *φυλάττου* in *μυΐνδα*, and also that the pursued are the "bronze flies." From Eustathius we gather that the *χαλκῆ μυῖα* was a sort of bronze-coloured cockchafer, which boys let go in the dark after they had tied a small lighted wax taper to it (compare the *μηλολόνθη* attached to a thread, Poll. ix. 124; and Schol. *ad* Aristoph. *Vesp.* 1322). It is said that the same, not very creditable, amusement is known to Cretan boys of the present day, and Grasberger (p. 75) adopts this explanation of the difficult passage in Aristoph. *Acharn.* 920–924, *τίφη* being an insect treated in this manner. It is possible that we may also find in this practice the explanation of the name *χαλκῆ μυῖα* in the above game, as derived from the general idea of chasing something in the dark. (Becq de Fouquières, *Jeux des Anciens*, p. 84; Grasberger, *Erziehung*, pp. 42 ff.) [G. E. M.]

MY'RII (*μυρίοι*), the name given to the popular assembly of the Arcadians, which was established after the overthrow of the Spartan supremacy by the battle of Leuctra, and which used to meet at Megalopolis in order to determine upon matters affecting the whole people.

The name "Ten Thousand" indicates merely a large indefinite number, and it is probable that every citizen of the confederate Arcadian cities (*i.e.* all Arcadia except Orchomenus and Heraea) had a right to attend. A body of troops called *Epariti* were at their disposal, under a Panarcadian general. They received envoys, concluded war and peace, and held state trials of public offenders. We hear of Callistratus, Demosthenes, and Aeschines arguing before them (Corn. Nep. *Epam.* 6; Dem. *de Fals. Leg.* p. 344, § 11; Aeschin. *de Fals. Leg.* § 49). Pausanias saw the ruins of their house of assembly. (Xen. *Hell.* vi. 5, § 6; vii. 1, § 38; vii. 4, § 2;—Diod. xv. 59; Paus. viii. 32, § 1; Harpocrat., Suid., Phot. *s. v.*; Grote, *Hist. of Greece*, x. p. 318.) [W. S.] [G. E. M.]

MYRMILLONES. [GLADIATORES.]

MY'SIA (*μύσια*), a festival celebrated by the inhabitants of Pellene in Achaia, in honour of Demeter Mysia. The worship of this goddess was introduced at Pellene from a place called Mysia in the neighbourhood of Argos. (Paus. ii. 18, § 3.) The festival of the Mysia near Pellene lasted for seven days, and the religious solemnities took place in a temple, called *τὸ μύσαιον*, surrounded by a grove. The first two days men and women took part in the celebration together; on the third day the men left the sanctuary, and the women remaining in it performed during the night certain mysterious rites, during which not even male dogs were allowed to remain within the sacred precincts. On the fourth day the men returned to the temple, and men and women now received each other with shouts of laughter and assailed each other with various railleries. (Paus. vii. 27, § 9; Cornutus, *de Nat. Deor.* 28.) [L. S.]

MYSTAE, MYSTAGO'GUS (*μύσται, μυσταγωγός*). [ELEUSINIA.]

MYSTE'RIA (*μυστήρια*). Though the term *μυστήρια* is that which has survived, still it was only one and that a late one, and perhaps the least common of the terms used by the Greeks to express their mystic rites. The word *ὄργια* is found in the Homeric Hymn to Demeter, ll. 274, 476, derived from *ἔοργα* (cf. Lat. *operari*), which signifies "to perform" ritual, and it was only in later times that it came to connote ecstatic worship. The term *μυστήρια* is derived from *μύειν*, used of closing the lips or eyes; *μύστης*, according to Petersen (in Ersch and Gruber, lxxxii. 228, note), means "with eyes shut," as opposed to *ἐπόπτης*. *Μυστήρια* is applied both to the objects of secret worship (Themist. *Or.* iv. 55) and also the secret ritual; *ἀπόρρητα* is similarly used. According to Lobeck (*Aglaophamus*, 85 ff.) *μυστικὸν* is anything recondite, enigmatical, indirect, allegorical; in fact, what is purposely not simple, plain, and straightforward. Again there is the term *τελετή*. It is used of an ordinary festival (Pind. *Nem.* x. 34); as applied to sacred worship, it signifies the consummation of the votary's progress in his religion. (Cf. such phrases as *τέλος γάμοιο*, *τέλη* used for the magistrates of the state, and *τελετή* taken by the philosophers to express complete knowledge of the subject.) "Diutius initiant quam consignant," says Tertullian (*contra Valentin.* 1), translating *πλείονα χρόνον μυοῦσιν ἢ τελοῦσιν*: compare *σφραγὶς* and *τελείωσις*, used for baptism (Lobeck, 38). The Latins used *initia*, which signified an ideal beginning ("initia ut appellantur ita re vera principia vitae cognovimus," Cic. *de Leg.* ii. 14, 36),—a sort of new birth, as Preller says. Thus then we have terms signifying both the objective secret nature of the ritual and the subjective condition of the votary.

1. *The Kinds of Mysteries.*—We can hardly consider under the head of mysteries those mystic usages which occur here and there in certain festivals, such as the marriage of the *βασιλεὺς* and *βασίλισσα* at the DIONYSIA; nor the multitude of purifications and sin-offerings found in most religions, all with more or less of a mystic meaning. Again the mystic worships performed by private families are hardly to be reckoned either, and do not come under our notice except in some few cases, such as the Orphic rites of the Lycomidae [ELEUSINIA]. But the mysteries properly so called, viz. those which were recognised by the state and required a regular initiation, may be divided into (1) those performed by a special sex, *e.g.* the THESMOPHORIA, celebrated by women only, as was also the worship of Dionysus in Laconia (Paus. ii. 20, 3), of Cora in Megalopolis (*ib.* viii. 31, 8), Rhea in Thaumasion (*ib.* 36, 3), Dionysus on Parnassus (*ib.* x. 4, 3). Special mystic ceremonies for men only are rarely found, such as that to Demeter, Cora, and Dionysus at Sicyon (*ib.* ii. 11, 3). (2) Those open to all Greeks, such as the Eleusinian and Samothracian mysteries. It is often stated that the only gods who had a mystic worship were the Chthonian ones; but this statement is not quite true, though the Chthonian gods are the gods principally worshipped in mysteries, as might be inferred even *à priori* from their very nature. But there are some Olympian gods to whom mystic worship was performed, *e.g.* Zeus Idaeus (Eur. *Cretes*, Frag. 2), a mixture of Phrygian Cybele-worship and Cretan or Thracian Zagreus-worship, in honour of Zeus, celebrated *φανερῶς*, according to Diod. v. 77, *i.e.* during the day, not at night; the Argive Hera (Paus. ii. 38, 2), even the Graces (*ib.* ix. 35, 3). For further discussion, see Hermann, *Die Gottesdienstlichen Alterthümer*, § 32, 6. Foreign mystic worships are those of Cybele, which were wild and enthusiastic, with flutes, drums, and cymbals (Herod. iv. 76); the trieteric worship of Dionysus [DIONYSIA]; of Hecate at Aegina (Paus. ii. 30, 2) and in the Zerynthian cave in Samothrace (Schol. on Lycophr. 77). This goddess was especially worshipped in the Roman Empire just before it became Christian; during which period too, and indeed earlier also, the mysteries of Isis, Sabazius, and Mithras were much in vogue. For these the reader must be referred to the articles RHEA, HECATE, ISIS, SABAZIUS in *Dict. of Mythology*. There is a good article on MITHRAS in the *Dict. of Christian Biography*. A remarkable Roman mystery confined to women was that of the celebrated Bona Dea, which Cicero (*Att.* vi. 1, 26) calls *Romana mysteria*. See *Dict. of Myth.* s. v. BONA DEA.

As to the *general* character of the gods of the mysteries, we cannot do better than quote Lenormant (*Contemp. Review*, xxxvii. 414): "Like all the worships of antiquity, the Eleusinian mysteries were founded on the adoration of Nature, its forces and its phenomena, conceived rather than observed, interpreted by the imagination rather than by the reason, transferred into divine figures and histories by a kind of theological poetry, which went off into pantheism on the one side and into anthropomorphism on the other. The nature and concatenation of their rites and plays were connected with precise beliefs; which tended to efface the distinction between the divine personages of the poetical and popular mythology, in such a manner as to lead to what has been called *μυστικὴ θεοκρασία*, and to reduce these gods who were exoterically individuals to mere general abstractions. But the form under which these beliefs were presented was such that, among the ancients themselves, some have been able to find in it a kind of philosophy of nature or *physiologia*, and others bring out of it euhemerism and with it atheism." So far we will go, emphasising the fact, that this *physiologia* was of late growth in the mysteries; but no further. However, to such students as do not easily get dizzy and who may wish to pursue the subject into its details, we recommend Lenormant's articles on *Bacchus*, *Ceres*, and the *Cabiri*, in Daremberg and Saglio; also chapter vi. of his *Voie Sacrée*, where his views issue in the purest pantheism, which he supposes to be the doctrine taught by the Hierophant at Eleusis and to be the primitive Aryan dogma that lay at the base of the mysteries.

2. *The Origin of the Mysteries.*—That they were mostly old Pelasgian worships, which were driven into the background by the conquering races, and accordingly carried on as mysteries, is a very reasonable view, and is supported by what Herodotus says of the Thesmophoria (ii. 171) and the Cabiri (ii. 51). By the Pelasgians we mean what Curtius means (*Hist. of Greece*, i. 35 ff.), viz. the first great body of emigrants westward from among the Phrygians, that tribe which forms the link by which the Aryans of the West were connected with the Asiatics proper. They are the primitive indigenous race of Hellas, "the dark background of history, children of the black earth (as the poets called Pelasgus), who amidst all the changes of the ruling generations calmly clave to the soil, leading their life unobserved under unchanging conditions, as husbandmen and herdsmen." They brought with them their Phrygian forms of worship, as they passed through Thrace into Hellas. Curtius (*ib.* p. 52) represents their religion to have been of the purest and noblest type—the worship of the Pelasgian Zeus upon the mountain-tops, a god without images or temples, a god unnamed except as the pure, the great, the merciful, &c.—and that Greek polytheism was a development in decadence as far as spirituality went. When the fascination of Curtius's eloquence is passed, we are unable to feel that the religion which the Pelasgians brought from Phrygia was much better than that of ordinary savages. Mr. Andrew Lang (*Myth, Ritual and Religion*, i. 282 ff.) mentions several points in which the Greek mysteries are in harmony with Australian, American, and African practice: the mystic dances (cf. *τοὺς ἐξαγορεύοντας τὰ μυστήρια ἐξορχεῖσθαι λέγουσιν οἱ πολλοί*, Lucian, *de Salt.* 15), the fastings, the elaborate and anxious purifications; the use of the *κῶνος* described by Lobeck (p. 700) as *ξυλάριον οὗ ἐξῆπται τὸ σπαρτίον καὶ ἐν ταῖς τελεταῖς ἐδονεῖτο ἵνα ῥοιζῇ*, similar to the *turndun* of the Australians, to call the votaries together; the plastering of initiates with clay or dirt of some kind and washing it off to symbolise purification (cf. Dem. *de Cor.* 313, § 259, and Soph. *Frag.* 32, *στρατοῦ καθαρτὴς κἀπομαγμάτων ἵδρις*), and the purifications by blood of swine mentioned in Aesch. *Eum.* 273—an undoubted savage custom, though not immediately connected with the mysteries—the use of serpents in the mysteries (Dem. *l. c.*), and so forth. Mr. Lang goes on to repeat again and again in his gentle vein of satire how easy it is to think anything as a symbol of anything, and wonders why the allegory should choose the practices of early savage tribes. Nor is it any disgrace to the Greek race to allow this; rather that the list of savage survivals is not many times as large and very much more apparent. Most of the savage elements disappeared soon, and what remained became blended with purer and later speculations.

This old religion was thrust into the background by the conquering tribes, the gods of the latter becoming predominant and the state-gods of the nation, while the old religion for the most part gradually disappeared. But by some families and tribes its ritual was in a large measure retained, and they probably formed themselves into brotherhoods, like those of the Roman Church, and preserved their rites doubtless with great strictness. Surely they were sodalities or confraternities that lived the "Orphic life." Now, the Greeks never persecuted doctrine, unless indeed any doctrine was much blazed abroad and seemed likely to involve danger to the state-worship; and no danger seemed to arise from the remnants of this primitive worship. Indeed, they were sometimes adopted into the state-religion on occasions of religious terror, when a feeling of sin and need for purification laid hold of the people. Thus it was that the mysteries of Eleusis and Samothrace were adopted. The gradual development of the Eleusinian worship (that mystic ritual with which we are best acquainted), from its original Phrygian-Pelasgian beginnings to its adoption into the Athenian religion, we have attempted to sketch in outline in ELEUSINIA, § 1.

3. *Silence enjoined on the Votaries.*—This is an important feature in the mysteries; the votaries could not divulge the mysteries to non-initiates. Its original reason doubtless lies in the separatism of early worships, a fear lest any outsider should learn how to get the favour of the god; and the reason why it was retained in later and more enlightened periods was to enhance the solemnity of the ritual. Strabo says x. 717, *ἡ κρύψις ἡ μυστικὴ τῶν ἱερῶν σεμνοποιεῖ τὸ θεῖον μιμουμένη τὴν φύσιν αὐτοῦ ἐκφεύγουσαν τὴν αἴσθησιν.* "Every expression," says Renan (*Études d'Histoire religieuse*, 70), "is a limit, and the only language not unworthy of things divine is silence." It prevented familiarity breeding contempt, as in the ordinary religion. Chrysippus, *Etym. Mag.* 751, thinks it was intended for an ethical purpose, viz. to teach the government of the tongue, *τῆς ψυχῆς ἐχούσης ἕρμα καὶ πρὸς τοὺς ἀμυήτους σιωπᾶν δυναμένης.*

4. *The Ceremony.*—Whatever is to be said specially about the initiated, the priests, and the ceremony, we have endeavoured to set forth in the particular articles, especially ELEUSINIA. There will be found some description of the "mystic drama," such as it was in later times when it was part of the state-religion and full of foreign accretions. It was of a splendid, solemn, vague nature, such as fettered the imagination of the votary; and, if it only put the worshipper in a certain state and did not teach anything (*τοὺς τετελεσμένους οὐ μαθεῖν τι δεῖν ἀλλὰ παθεῖν καὶ διατεθῆναι*, as Aristotle says, *ap.* Synes. *Orat.* p. 48), yet it made a man here and there think of things spiritual and proceed on the task of working out his own salvation. To such a man further progress was possible and a higher and deeper knowledge open, imparted by gradual stages, after due time being given to allow the awakened thought and imparted knowledge to germinate and fructify. All this is very Eastern, but it is none the less very rational. "Among the peasants who attend a midnight mass, how many are there who think of the mystery of the Incarnation?" asks M. Renan (*op. cit.*, p. 56). Yet, if a man here and there does think about it, he can learn more about it from his teachers. But to the majority of the worshippers (and everyone who spoke the Greek language and was not stained with gross crime was welcome, no previous *κατήχησις* being required) the impression of the whole, not the perception of each particular, was the important part. We may allow that the whole drama of Eleusis would appear a miserable travesty to us, even its "fireworks" (Lobeck, p. 107); but we answer in the bold words of Renan, "You are not to ask for *reason* from the religious *feeling*. The spirit bloweth where it listeth; and if it chooses to attach the ideal to this or to that, what have you to say?"

But was there any reality at the back of it all, any doctrine like the Incarnation, symbolised by the midnight ceremonies? There certainly was in later times. The reality which the priests then appear to have taught was some kind of system of cosmogony: cf. Cic. *de Nat. Deorum*, i. 42, 119 (of the Samothracian mysteries), "quibus explicatis ad rationemque revocatis rerum magis natura cognoscitur quam deorum;" Clem. Alex. *Stromat.* v. 689, *τὰ δὲ μέγαλα [μυστήρια] περὶ τῶν συμπάντων οὐ μανθάνειν ἔτι ὑπολείπεται, ἐποπτεύειν δὲ καὶ περινοεῖν τήν τε φύσιν καὶ τὰ πράγματα.* But the true value of the mysteries did not lie here, in this kind of dogmatic teaching, but in the moral improvement apparent in the votaries (Diod. v. 48), in the comfort they gave in the present life and the glad hopes for the world to come (Isocr. *Panegyr.* § 28).

5. *Monotheism and Immortality.*—It is generally supposed that the mysteries were the fountain from which Greek philosophy derived the two great ideas of monotheism and immortality. The mystic school of theological teaching is the Orphic; to it we must look for these ideas. Now, as regards *monotheism*, we have attempted to show in ORPHICA that the passages which refer to monotheism in the Jewish or Christian sense date from Alexandrine times, and in the pantheistic sense are hardly much earlier: even the celebrated *Ζεὺς κεφαλή, Ζεὺς μέσσα, Διὸς δ' ἐκ πάντα τέτυκται*, supposed to be alluded to by Plato (*Legg.* iv. 715 E), as Zeller (*Philosophie der Griechen*, i. 53 = i. 65 Eng. trans.) shows, does not imply more than Homer's line that Zeus is the father of gods and men, or Terpander's (650 B.C.) address, *Ζεῦ πάντων ἀρχὰ πάντων ἀγήτωρ*. The Greeks with their personifying of everything in nature came to have a feeling of the Divine pervading all nature,—"one and the same Nature-power," as Petersen puts it. "This unity of the Divine element which polytheism presupposes was made concrete in Zeus as king of the gods; and so far all that exists and all that happens is ultimately referred to Zeus, but it does not imply that Zeus is the ideal complex (*Inbegriff*) of all things" (Zeller, *l. c.*). Zeller goes on to contrast the polemic of Xenophanes against polytheism, with the syncretism of the Stoics and Alexandrines, showing how the Greeks arrived at the idea of the Divine unity less by way of syncretism than of criticism. But if the idea of monotheism was naturally developed into a distinct form by Greek thought, and that only in comparatively late times, it was thereafter adopted into the mysteries, and especially some of the Orphic ones, and doubtless taught in them to those who had gone through the various stages and shown themselves naturally fitted to receive and understand it.

As to *immortality*, the case is different. Mr. Tylor has shown that the doctrine of Transmigration was universal among savage and barbarian races (*Primitive Culture*, ii. *init.*). This doctrine the Aryans probably brought with them into Europe. Herodotus thinks it came from Egypt (ii. 123); but when we find similar notions among the Indians from the earliest times even to the present day, and among the ancient Druids in Gaul (Caes. *B. G.* vi. 14; Diod. v. 28; Amm. Marc. xv. 9 *fin.*), we may infer that it was an original idea of the Aryan race, which gradually developed into the purer doctrine of what we call a Future Life; we find a strange example of this latter doctrine among the Thracians (Herod. iv. 94, 95). For the further discussion of immortality in the Orphic doctrine, see ORPHICA.

6. *The modern Critics of the Mysteries.*—Passing over such treatises as Warburton, *On the divine Legation of Moses* (ii. 133–234), and Sainte-Croix, *Recherches sur les Mystères du Paganisme* (1784), the first really great work on the mysteries was that by Creuzer, *Symbolik und Mythologie der alten Völker*, 1810–1812, written by a genuinely religious Doctor in Theology of the Roman Church. The title is certainly not a misnomer, for he finds symbolism everywhere. He is in fact too symbolical. He does not distinguish the ideas of different epochs, does not weigh evidence nor take sufficient thought of development in religious ideas. After him followed J. H. Voss, a zealous Protestant, who attacked Creuzer with unpardonable virulence and little success, especially in his *Anti-Symbolik* (1824). Abuse of priests occupies a large portion of the work. In 1829 Lobeck's great work, *Aglaophamus*, was published with the view of crushing the symbolical school. Its learning is portentous, its satire grim and savage. But with all his great gifts Lobeck had one thing

wanting, the sense of things religious. Everything is judged from the level of the intellect, but religion is of another order. The whole book bears the character of a violent reaction, and so far is necessarily unfair; and Lobeck sometimes quite forgets himself, as for example when he says (p. 119) that the spectacles at Eleusis were seen with the eyes of the mind, not with those of the body. K. O. Müller (art. *Eleusinia* in Ersch and Gruber), and after him Preller (*Demeter und Persephone*, 1837; art. *Mysteria* in Pauly), make accurate distinctions of times, places, and races. They allow a mystic character to the worship of the Pelasgi, who adored Nature regarded as living and divine, especially in their worship of the Chthonian divinities, the naturalism of the Pelasgi being contrasted with the anthropomorphism of the Hellenes, as exemplified in the Homeric Age; but hold that, when this warrior age passed away at the time of Solon, there was a reaction in favour of the ancient cults. François Lenormant, in his *Voie Sacrée Éleusinienne* (1864) and in the articles in Daremberg and Saglio mentioned above, is a strong symbolist; cf. also his articles in the *Contemporary Review* for May, July, September 1881. Other works to be consulted with advantage are Hermann, *Die Gottesdienstlichen Alterthümer*, §§ 32, 55; Maury, *Histoire des Religions de la Grèce antique*, ii. chap. xi.; Renan, *Les Religions de l'Antiquité*, No. 1 of his *Études d'Histoire religieuse*; Ramsay, s. v. *Mysteries*, in the *Encyclopaedia Britannica*. [L. C. P.]

MYSTI'LE (*μυστίλη*). [Cena, Vol. I. p. 394.]

MYSTRUM (*μύστρον*), *a spoon* (cf. *μυστίλη*), a Greek liquid measure, strictly *a spoonful*, of which there were two sizes, called the large and small mystrum, and these again also of various dimensions. The small, which was the more common of the two, was $\frac{1}{24}$ of the cotyla, and $\frac{1}{4}$ of the cyathus, and therefore contained about 1-50th of an English pint. [Cyathus.] (Galen, *Frag.* c. 15.) Galen adds that the smaller mystrum contained $2\frac{1}{2}$ drachms, that the larger was $\frac{1}{16}$ of the cotyla, and contained $3\frac{1}{3}$ drachms; but that the most exact mystrum (*τὸ δικαιότατον μύστρον*) held 8 scruples, that is, $2\frac{2}{3}$ drachms. According to this, the small mystrum would be $\frac{3}{4}$ of the larger. But in the 13th chapter of the same fragment he makes the large mystrum $=\frac{1}{3}$ of the cotyla, and the small mystrum $\frac{1}{4}$ of the large. In c. 4 he makes the large mystrum $=3$ oxybapha, and the small $=1\frac{1}{2}$. Cleopatra makes the large $=\frac{1}{16}$ of the cotyla, the small $=\frac{1}{24}$. (Hultsch, *Metrologie*, p. 636 ff.) [P. S.]

N.

NABLA. [Lyra, p. 106 *b*.]

NAE'NIA. [Funus.]

NANI, dwarfs, kept as an amusement in rich Roman houses. According to Gellius, xvi. 7, xix. 13, the word *nanus* was an introduction of Laberius, and the older word for dwarf was *pumilio*: both words afterwards existed together and in the same writers. The fashion of keeping dwarfs may have come from Syria and Egypt (cf. Stat. *Silv.* v. 5, 66); for they do not seem to have been a feature in households of Greece proper before the Roman conquest (cf. Plut. *de Curios.* 10, *ἐν Ῥώμῃ τινές* . . .), or it may have started in Italy: they are mentioned as kept at Sybaris (Athen. xii. p. 518 e), where they were called *σκωπαῖοι* and *στίλπωνες*. It is probable that the former name is not, as Liddell and Scott say, from *σκώπτω*, but rather from *σκώψ*, because of the misshapen head and short neck, and the latter name from their baldness, since their heads were shaven (see Lucian, *Conviv.* 18, and Mayor's note on Juv. v. 171). As to their appearance in later Greek banquets, see Lucian, *l. c.* At Rome great ladies especially delighted in them, as Livia (Dio Cass. xlviii. 44), Seneca's wife (Sen. *Ep.* 50); and the prevalence of the fashion at Rome is marked by Suetonius, when he mentions particularly (*Aug.* 83) that Augustus did not care for them.

There is no clear distinction between *nanus* or *pumilio* or *pumilus*, "the dwarf," and *morio* (*γελωτοποιός*), "the jester," since the jesters seem to have been selected for their absurd appearance as well as for that power, often found in the half-witted, of making comical remarks, for which the mediaeval jesters were in demand. So the *morio* in Mart. vi. 39 is "acuto capite et auribus longis;" and in xiv. 212, "si solum spectes hominis caput, Hectora credas, si stantem videas Astyanacta putes." The *nanus* at Tiberius's banquet is a privileged jester (Suet. *Tib.* 61; cf. *Dom.* 4): that they were half-witted if not absolute *cretins* is shown by Mart. viii. 13, which passage also gives a notion of their price, "morio dictus erat, viginti milibus emi: redde mihi numos, Gargiliane, sapit." Misshapen limbs as well as small stature added to their price (Plut. *l. c.*; Quintil. *Inst.* ii. 5, 11; *Decl.* 298); and the most revolting part of the fashion was that the deformity was sometimes caused by artificial means, the children being kept in a case or frame (*γλωττόκομον*) which would stunt and distort their growth (Longin. *de Sublim.* 44, 5). The Romans kept female as well as male dwarfs and jesters (*nanae*, *fatuae*, Lamprid. *Alex. Sev.* 34; Sen. *Ep.* 50). For more authorities, see Becker-Göll, *Gallus*, ii. 148 ff.; Marquardt, *Privatleben*, 152; Mayor on Juv. viii. 32. [G. E. M.]

NAOS. [Templum.]

NASSITERNA was some sort of vessel for carrying water. From the description in Festus (*s. v.*), that it is wide (*patens*), with a handle (*ansata*), and is a vessel "quo equi perfundi solent," we may imagine something like a stable bucket or pail, especially as no spout is mentioned. Vessels of this shape are figured by Guhl and Koner (448) as kitchen utensils. In Plaut. *Stich.* ii. 2, 28, the nassiterna is used like a housemaid's pail. There seems no good reason for saying, with Rich, that the first part of the word implies a vessel with a *spout*: still less can we argue from the end of the word that it had three spouts. The first syllable (*nass.* in Festus; *nasc.* in the MSS. of Plautus, but corrected by Ritschl to *nass.*) is from the root of words meaning "to flow" (*νάω*, *νᾶμα*, *νασμός*, &c.; German *nass*?), and has nothing to do with *nasus*, though that word very likely comes from the same root: the termination may be compared with *lanterna*, *hesterna*. Its etymology therefore merely proves that it is something from which water is poured. [G. E. M.]

NATA'LIBUS RESTITUTIO. [INGENUI.]

NATALI'CII LUDI. [LUDI, p. 85 *a*.]

NATA'TIO, NATATO'RIUM. [BALNEAE, Vol. I. p. 275 *b*.]

NATU'RA, NATURA'LIS RA'TIO. [JUS.]

NAVA'LES DUO VIRI. [DUO VIRI.]

NAVA'LES SO'CII. [EXERCITUS, Vol. I. p. 786; SOCII.]

NAVA'LIA were dry docks where ships were built, or drawn up (*subductae*) to be repaired or laid up till they were again needed. Those at Rome were opposite the Prata Quinctia in the upper bend of the Tiber (Liv. iii. 26, viii. 15; Burn, *Rome and Campagna*, p. 51), and so described as above the Aventine (Plut. *Cat. Min.* 39). In Liv. xlv. 42 we are told of *navalia* in the Campus Martius, where the ships taken from Perseus were laid up. The use of these Roman navalia for large ships was generally lessened under the Empire when the mouth of the Tiber was much more silted up, and Puteoli became the harbour where vessels trading to Rome discharged their cargo and were docked: others, however, still ran up to Rome after they had been lightened by discharging part of their cargo at Ostia, to be taken up in smaller boats (*naves codicariae*). (Strabo, v. p. 231; Sen. *de brev. Vit.* 13; cf. Marquardt, *Privatleben*, p. 408.) The docks (νεώσοικοι or νεώρια: see below) at Piraeus were constructed by Pericles (Pausan. i. 29, 16) at a cost of 1000 talents, according to Isocrates (*Areopag.* § 66), and, having been destroyed after the Peloponnesian War, were restored in the administration of Lycurgus. For their management, see EPIMELETAE (6), Vol. I. p. 749 *b*. As to the distinction between νεώσοικοι and νεώρια, Arnold rightly points out in his note on Thuc. vii. 25 that νεώρια are strictly the dockyards, νεώσοικοι the large covered sheds for the reception of ships laid up, on the roofs of which the Syracusans stand (cf. Demosth. *de Symm.* p. 184, § 26). But there can be no doubt that in Thuc. i. 108, when Tolmides burns τὸ νεώριον at Gytheum, we are to understand especially the νεώσοικοι, and conversely Isocrates (*l. c.*) uses νεώσοικοι for dockyard, sheds and all. [W. S.] [G. E. M.]

NAVA'LIS CORO'NA. [CORONA, Vol. I. p. 548 *b*.]

NAVARCHUS (ναύαρχος) was a naval commander whose rank varied in different states. It cannot, for instance, be correctly used as equivalent to our admiral in speaking of the Athenian fleet, though it is rightly so used by historians speaking of other states of Greece or of the Persian fleet. As an official title in Greece, it belongs particularly to the Spartan head of naval affairs. How early this office (ναυαρχία) existed at Sparta (as distinct from the mere admiral of a fleet in commission) is not quite certain. In Herod. vii. 42 Eurybiades bears the title, but it means no more than that he commanded the fleet there mentioned. It is probable that the office did not begin until Sparta had greater naval operations than in the Persian War. Her naval force at Artemisium consisted of only 10 ships, at Salamis of 16. But something more like an admiralty was needed when the new phase of the Peloponnesian War, after the campaigns at Syracuse, extended the sphere of Spartan naval enterprise. The expression in Thuc. viii. 20 regarding Astyochus, ὥσπερ ἐγίγνετο ἤδη πᾶσα ἡ ναυαρχία, perhaps indicates, by the use of the imperfect tense, that the office grew out of circumstances at that time. Henceforth the Spartan army and navy were rarely (as happened in the case of Agesilaus) subordinated to the same commander. Hence Aristotle (*Pol.* ii. 9, 33) finds fault with the ναυαρχία as a cause of disunion, "being a sort of second kingship set up as a counterpoise to the kings, who are generals for life." The Spartan navarchus had the supreme direction of all naval affairs, whether he was actually commanding in the fleet at sea or not, and had under him an ἐπιστολεύς. There seems no ground for Schömann's statement that the ναύαρχος had ἐπιβάται "to advise him." No such meaning can be given to Thuc. viii. 61. The marines of the fleet were taken from the Perioeci; the rowers were Helots or ξένοι. Some limitation of this power of the navarchus, of which Aristotle complains, seems to be intended by the rule that no one could hold the office more than once (probably for a year); but this could practically be evaded by appointing the ex-navarchus as epistoleus with power only nominally subordinate (cf. Xen. *Hell.* i. 2, 23; ii. 1, 7; iv. 8, 11; v. 1, 5).

At Athens the word ναύαρχος was applied as an official title only to the commanders of the sacred triremes [THEORIS], the naval administration and command of fleets being under the strategi [STRATEGI].

At Rome the title navarchus is not used of supreme naval command or naval administration [for which see DUO VIRI NAVALES and PRAEFECTUS CLASSIS]. The navarchus was the captain of a ship. So far as the distinction between navarchus and trierarchus in the Roman fleet can be made out, it appears that the title trierarchus was applied strictly to the captains of triremes, the title navarchus to the captains of ships with more banks of oars, quadriremes, quinqueremes, &c. (*C. I. L.* x. 3361; Tac. *Hist.* ii. 16); but it is not unlikely that the distinction was loosely kept, or at any rate that the title navarchus might be applied to the captain of any sort of ship (cf. Veget. iv. 32, 43). The liburnae being ships with various numbers of banks were sometimes under navarchi, sometimes under trierarchi, as may be seen from the passages cited above. Marquardt (*Staatsverwaltung*, ii. 512) cites Polybius as using ναύαρχος in i. 53 and 54 for an admiral, and i. 21 for a captain of a ship; but it should be observed that in the former case he is speaking of the Carthaginians, in the latter of the Romans. When Livy (xlv. 25) speaks of the admiral of Rhodes (called ναύαρχος in Polyb. xvii. 1), he calls him *praefectus classis*; and though it would be too much to assert that a Greek historian might not conversely translate *praefectus classis* by ναύαρχος (the commoner equivalent is ἔπαρχος στόλου), that is no argument as to the significance of navarchus in the Roman fleet. For *correct* expression it is sufficient to compare Πόπλιος ὁ τῶν Ῥωμαίων *στρατηγός* (Polyb. i. 50) with *ὁ τῶν Καρχηδονίων ναύαρχος* (Polyb. i. 53). It is true that the navarchus in Cic. *Verr.* v. 24, 60 seems to command a fleet, but this is explained by the fact that he was the admiral of a Siciliot town whose admiral would rightly be called *ναύαρχος*, and Cicero does not translate the title into its Latin equivalent. The word has probably the same meaning in *Verr.* v. 32, 84. It is necessary, however, also to notice the title *navarchus princeps* (*C. I. L.* x. 3440, 3448, 8215), who seems to be the commander of a part of the fleet or of a squadron of ships detached from the main fleet, and is taken by Mommsen as = *archigybernes* (*C. I. L.* x. 3349); with which compare Diod. xx. 50, 4. [L. S.] [G. E. M.]

NAUCRA'RIA (*ναυκραρία*), a subdivision of the inhabitants of Attica in early times, for purposes of taxation as applied to military equipment.

The institution of *ναυκραρίαι* and *ναύκραροι* has been for a long time a much-debated point: see Schol. in Aristoph. *Nub.* 37, *οἱ πρότερον ναύκραροι εἴτε ὑπὸ Σόλωνος κατασταθέντες εἴτε καὶ πρότερον.* That their establishment was due to Solon is the view of Gilbert (*Jahrb. Class. Phil.* cxi. 1875, p. 9 ff.) and of Stein (on Herod. v. 71). We have the testimony of a fragment of Aristotle to this effect; see Photius, *s. v.* *ναυκραρία: τὸ πρότερον οὕτως ἐκάλουν ναυκραρία καὶ ναύκραρος· ναυκραρία μὲν ὁποῖόν τι ἡ συμμορία καὶ ὁ δῆμος, ναύκραρος δὲ ὁποῖόν τι ὁ δήμαρχος, Σόλωνος οὕτως ὀνομάσαντος, ὡς καὶ Ἀριστοτέλης φησί· καὶ ἐν τοῖς νόμοις λέγει, ἐάν τις ναυκραρίας ἀμφισβητῇ καὶ τοὺς ναυκράρους τοὺς κατὰ ναυκραρίαν· ὕστερον δὲ ἀπὸ Κλεισθένους δῆμοί εἰσιν καὶ δήμαρχοι ἐκλήθησαν· ἐκ τῆς Ἀριστοτέλους πολιτείας ὃν τρόπον διέταξε τὴν πόλιν ὁ Σόλων· φυλαὶ δὲ ἦσαν τέσσαρες καθάπερ πρότερον καὶ φυλοβασιλεῖς τέσσαρες· ἐκ δὲ τῆς φυλῆς ἑκάστης ἦσαν νενεμημέναι τριττύες μὲν τρεῖς, ναυκραρίαι δὲ δώδεκα καθ' ἑκάστην.* From this passage it has been held that Solon constituted, out of the members of each of the four old Ionic tribes, three large divisions, called *τριττύες*, subdividing each *τριττὺς* into four *ναυκραρίαι*. Thus there were in all (4 × 3 =) 12 *τριττύες* and (12 × 4 =) 48 *ναυκραρίαι*. So also Pollux, viii. 108: *ναυκραρία δ' ἦν τέως φυλῆς δωδέκατον μέρος· καὶ ναύκραροι ἦσαν δώδεκα, τέτταρες κατὰ τριττὺν ἑκάστην*:—and Hesychius, *s. v.* *ναύκλαροι: τινὲς δὲ ἀφ' ἑκάστης φυλῆς δώδεκα.* In the formation of the *ναυκραρίαι*, neighbouring members of the same tribe would seem to have been grouped together in such a way that a *ναυκραρία* was practically a local district or parish, and came to be so regarded: this follows from its comparison above to the Cleisthenean demos, and from the fact that the single surviving name of a *ναυκραρία* (Phot. *s. v.* *Κωλιάς*, Bekker, *Anecd.* 275, 20) is clearly a local designation.

Schömann, however (*Jahrb. Class. Phil.* cxi. 1875, p. 454 ff.), and Duncker (*Gesch. Alt.* v. p. 120, ed. 5) contest the correctness of this view, so far as the institution of *ναυκραρίαι by Solon* is concerned. They hold that the words of Aristotle quoted by Photius (see above) by no means amount to an assertion that Solon established the *ναυκραρίαι*, and they hold that what he did was perhaps to re-organise a previously existing method of subdivision, and modify it to suit his new constitution. The well-known passage in Herod. v. 71 is of cardinal importance in this question. In relating the abortive attempt of Cylon to make himself tyrant of Athens, Herodotus, referring to the defeated revolutionists who had taken refuge at the shrine of Athena, uses the words *τούτους ἀνιστᾶσι μὲν οἱ πρυτάνεις τῶν ναυκράρων, οἵπερ ἔνεμον τότε τὰς Ἀθήνας.* (Stein, *in loc.*, very reasonably suggests the emendation *ναυκραριέων*, "representatives of the *ναυκραρίαι*," *i.e.* the *ναύκραροι*.) Unless Herodotus is mistaken in his use of the words, this passage is proof positive that the *ναυκραρίαι* existed some time before Solon, and probably some time before Cylon also. It is not, however, easy to see in what sense the *ναύκραροι* could be said, at that period of time, *νέμειν*, *i.e.* to govern, *τὰς Ἀθήνας*. Stein and others therefore maintain that Herodotus, perhaps following an account which sought to lessen the responsibility of the Alcmaeonidae for the murder, has erroneously attributed to the *ναύκραροι* what was really done by the nine *ἄρχοντες*, and that the account given by Thucydides of the Cylonian revolution is specially intended to correct Herodotus on this point. See Thuc. i. 126: *χρόνου δὲ ἐπιγιγνομένου οἱ Ἀθηναῖοι τρυχόμενοι τῇ προσεδρείᾳ ἀπῆλθον οἱ πολλοί, ἐπιτρέψαντες τοῖς ἐννέα ἄρχουσι τήν φυλακὴν καὶ τὸ πᾶν αὐτοκράτορσι διαθεῖναι ᾗ ἂν ἄριστα διαγιγνώσκωσι· τότε δὲ τὰ πολλὰ τῶν πολιτικῶν οἱ ἐννέα ἄρχοντες ἔπρασσον.*

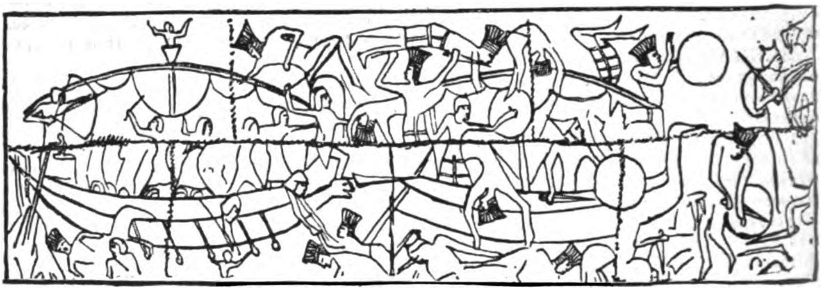
The derivation of the word (*ναῦς* and the root *καρ*, by metathesis *κρα*, as seen in *κραίνω*; see G. Meyer, *Curtius' Stud.* vii. p. 175 f., in opposition to Wecklein, *Bayr. Ak.* 1873, p. 42 f., who connects *ναυ-* with *ναίω*, "to dwell") suggests the object of the institution, which was to provide Athens with a fleet. The *ναυκραρίαι* were thus the predecessors of the *συμμορίαι* (Bekk. *Anecd.* 283, 20: *ναύκραροι· οἱ τὰς ναῦς παρασκευάζοντες καὶ τριηραρχοῦντες*:—Aristot. in Phot. *s. v.* *ναυκραρία· ναυκραρία μὲν ὁποῖόν τι ἡ συμμορία*).

Besides superintending the building of the ships and acting as captains when built, the *ναύκραροι* assessed the amount of taxation annually due from each *ναυκραρία*, and dealt with the money thus collected (Poll. viii. 108, *τὰς δὲ εἰσφορὰς τὰς κατὰ δήμους διεχειροτόνουν οὗτοι καὶ τὰ ἐξ αὐτῶν ἀναλώματα*).

Each *ναυκραρία* provided two horsemen and one ship (Pollux, *l. c.*: *ναυκραρία δὲ ἑκάστη δύο ἱππέας παρεῖχε καὶ ναῦν μίαν, ἀφ' ἧς ἴσως ὠνόμαστο*). The whole organisation, as part of the military force of Attica, was subject to the *πολέμαρχος* (Bekk. *Anecd.* l. c.: *ναύκραροι . . . τῷ πολεμάρχῳ ὑποτεταγμένοι*).

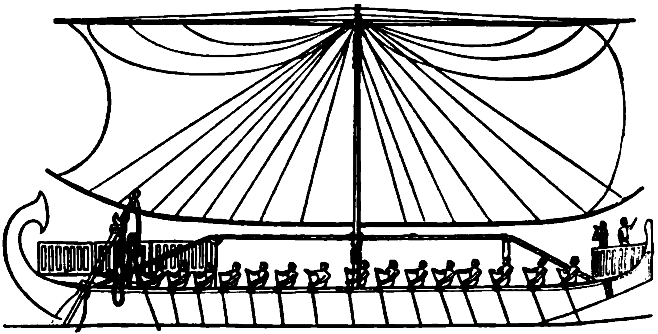
With the institution of *δῆμοι* by Cleisthenes the *ναυκραρίαι* probably ceased to exist, at all events as a working part of the state organisation. One authority indeed (Cleidemus in Phot. *s. v.* *ναυκραρία*) tells us that they continued, being raised from 48 to 50, five from each of the new tribes, furnishing in all 100 *ἱππεῖς* and 50 ships. Boeckh (*Staatshaush. Ath.* ed. 3, i. pp. 323, 636, note c) sees a confirmation of this in the fact that, according to Herodotus vi. 89, the Athenians in the war against Aegina before the Persian invasion could only muster 50 ships of their own. [A. H. C.]

NAVIS (ναῦς). Though the earliest efforts of mankind in navigation are pre-historic, yet the characteristics of these efforts, and many stages in their development, are sufficiently evident from the methods in vogue among savage races in various parts of the globe at the present day. (See article "Ship," *Encycl. Britan.* 1888.) There is sufficient evidence to show that a point far in advance of the primitive types of navigation and ship construction had been reached by peoples inhabiting the littoral of the Mediterranean at a very early period. (Chabas, *L'Antiquité historique*, p. 120.) Dardanians, Mysians, Lycians, and Maeonians figure on the wall-paintings of Egypt, as combined against Pharaoh in the 13th century B.C., and in the 12th century a still more powerful league of Pelasgians, Teucrians, Etruscans, Daunians, and Oscans appears to have invaded Egypt and to have suffered a crushing defeat at the hands of Rameses III. The bas-relief of Medinet Habou, which represents the great victory of this Pharaoh over the marauding "Northmen" of the Mediterranean, is the earliest known representation of a naval battle. In this bas-relief two distinct types of vessels are apparent: first, the Egyptian, which have stem and stern following the curved line of the keel, the stem ornamented with a lion's head or some other device, the stern sharp-pointed and rising somewhat higher than the stem. At the bows is shown a kind of platform or forecastle, and the bodies of the rowers, whose heads are visible, are protected by a side-planking, from under which the oars, the ports of which are hidden, project. At the stern there is a raised platform, from which archers are discharging their arms, and the steersman is there also seated, with his hand on the broad-bladed steering paddle. A mast with a crow's-nest and a look-out man, and a yard with the sail brailed up, are also shown. The number of rowers indicated is usually ten on one side; but, owing to want of space, the artist, limited in this respect, has probably contented himself with depicting a conventional number.



Naval battle of Rameses III. (Medinet Habou.)

The vessels of the allies, which presumably have crossed the Mediterranean, present a striking difference in type. They show much less camber of keel, with stem and stern post rising abruptly, and at a considerable height above the water curving outwards, and finishing (though without any such ornamentation as is apparent in the Egyptian ships) in a rudely-shaped swan- or goose-head. The bow is in fact very similar to the στόλος of the old Greek type, seen on the coins of Chios, Megara, and Sinope. Their vessels have also raised fighting decks fore and aft, and side planking as a protection for the rowers. These details, slight as they may appear to be, are valuable as giving indications of maritime enterprise and naval construction in the Mediterranean some centuries before the Trojan War, of which the ordinary date given is 1184 B.C.



Egyptian Ship. (Duemichen.)

(For the whole subject of Egyptian boats and shipping, the student should consult the works of Rosellini and Lepsius, in which he will find numerous representations of ships and boats, ranging from the time of the Fourth Dynasty, or more than 3,000 years before Christ: and besides these, Duemichen's *Historische Inschriften* and *Die Flotte einer Aegyptischen Königin*, and especially an essay by Bernhard Graser, *Das Seewesen der alten Aegypter*, in Duemichen's *Resultate der auf Befehl S. R. Majestat des Königs Wilhelm I. von Preussen im Sommer* 1868 *nach Aegypten entrendeten*, &c., Berlin, 1869.)

In the fleet of an Egyptian queen, her Red Sea fleet, several vessels exhibit apertures as if for a second tier of oars, though no oars are shown in them. If this be so, the invention of the bireme must be referred to a very early date (B.C. 1700). It is probable, however, that the Red Sea fleet differed in many particulars from the Mediterranean fleet, and of this latter unfortunately we have no similar record. It is, however, not unlikely that the fleets of the Pharaohs, at different times, swept the northern sea and penetrated as far as Sardinia.

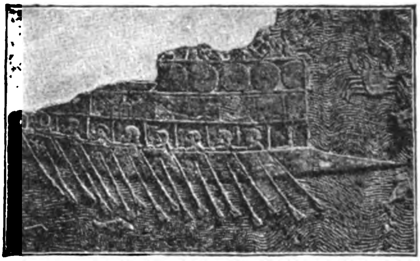
It is clear from the legend of Danaus that intercourse between Egypt and Greece was frequent at a very early period, and it is noticeable that the marauding expeditions, such as may have led to battles similar to that depicted at Medinet Habou, find an echo in the Homeric poems. In the feigned narrative of Ulysses, a raid upon Egypt is described as undertaken and carried out, quite in the ordinary course of things (*Od.* xiv. 245 *sqq.*; xvii. 425):

> Αἴγυπτόν δέ με θυμὸς ἀνώγει ναυτίλλεσθαι
> νῆας εὖ στείλαντα σὺν ἀντιθέοις ἑτάροισι,
> ἐννέα νῆας στεῖλα θοῶς δ' ἐσαγείρατο λαός.

Five days bring them from Crete to one of the mouths of the Nile, and the feigned tale presents the typical behaviour of the buccaneers, with a typical disaster to follow. It is worthy of remark that the same story, a fictitious story, is twice repeated, from which we may infer that the narrative was such as would be readily accepted as true in the Homeric age, and founded on an ultimate basis of fact.

A list with dates is given by Eusebius, "ex Diodori libris breviter de temporibus maria imperio tenentium," in which Lydians, Pelasgians, Thracians, Rhodians, Phrygians, Cyprians, Phoenicians, Egyptians, Milesians, Carians, are named in order, extending from the date 1186 B.C. to 731 B.C., or for a period of about 450 years, as exercising thalassocracy or mastery of the seas. The names that follow—Lesbians, Phocaeans, Samians, Lacedaemonians, Naxians, Eretrians, Aeginetans—bring the list down to the year 485 B.C. But in these cases hardly more than a local superiority can be intended. The earlier names, however—Lydians, Pelasgians, Thracians—corroborate the evidence of the Egyptian monuments, and point at any rate to the maritime activity and seafaring habits of these peoples at a very early period. (For Lydians, cf. Herod. i. 94; Strabo, v. p. 219; Dionys. i. 28, 27;—Pelasgians, Dionys. i. 22; Strabo, ix. p. 401, xiii. p. 582; Herod. iv. 145, vi. 137, 138; Apoll. Rhod. *Arg.* iv. 1760;—confused with Tyrrhenians, Soph. *Inach. Fr.* Τυρσηνοῖσι Πελασγοῖς; Thuc. iv. 109; Aesch. *Suppl.* 237-246;—Thracians, Herod. vii. 75; Strabo, xii. p. 541; Diod. v. 50;—Rhodians, Strabo, xiv. pp. 652-654; Colonies, Diod. v. 53, 54.)

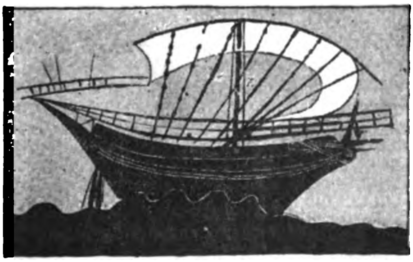
It is surprising, considering the fame and activity of the Phoenicians, that we have so little evidence regarding their vessels in early time. Herodotus in his opening chapter speaks of them as migrating from the Indian Ocean to the Mediterranean coast, and at once venturing on long voyages, carrying Egyptian and Assyrian wares to Argos and elsewhere. To their kidnapping propensities was ascribed the beginning of troubles between Europe and Asia by the Persian historians; and this statement may be illustrated by the jealousy and dislike with which they are mentioned in Homer (*Od.* xv. 415 sq.: cf. Ezek. xxvii. 13). Their vessels seem to have been only half-decked, if we may judge from *Od.* xv. 479: these were probably traders, φορτίδες εὐρεῖαι. And yet to the Phoenicians in all probability, if not to the Egyptians, must be ascribed the invention of the bireme, and consequently of the system of banked vessels. To them also probably belongs the invention of the Ram. The representation of the war-galley in motion (copied from a bas-relief in the British Museum from Kouyunjik (?)) cannot be much earlier than 700 B.C. It is a bireme, aphract, with fighting deck and fish-like snout for ram, similar in construction to those which are depicted upon the Graeco-Etruscan vases of the following century, but plain and without the ornamentation exhibited in these latter. Some few representations of Phoenician vessels are also given in Layard and Rawlinson. These all have this drawback, that the Assyrian conquerors, for whose glory the representations were made, were not a maritime people, and that therefore details and proportion were not likely to be criticised, or accuracy to be studied in their sea-pieces. Hence we can learn but little from them as to any distinctive features of the Phoenician marine.



Assyrian (? Phoenician) Bireme. (From relief in British Museum.)

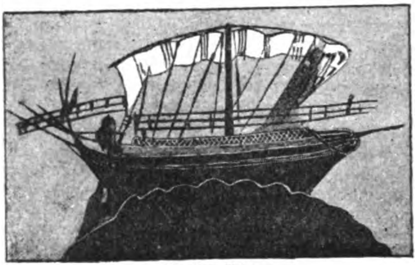
Piracy, as Thucydides points out in the opening chapters of his history, was the curse of the Archipelago from very early times, the antagonistic force opposed to all progress in civilisation. Piracy implies the possession of sea-going craft and familiarity with maritime enterprise. It implies also, to a certain extent, a contemporaneous commerce upon which it may prey. And again, being antagonistic to commerce, which strong rulers and organised states are anxious to develop and protect for their own use and benefit, it is naturally followed by efforts on the part of such rulers and states to put it down. Thus we have from early times, corresponding to these influences, three types of vessels:—

1. The trader, wide and roomy, trusting

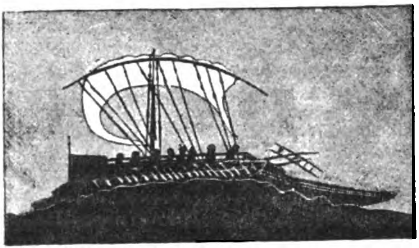


Trading Ship.

mainly to sail for movement. 2. The pirate vessel, sharper but still capable of stowing plunder, and of using sail as well as oars. 3. The long ship, the ship of war (*ναῦς μακρά*), the business of which was not plundering, but fighting. The development of the latter, which was slow, finds its highest expression in the swift and handy Attic trireme, and terminates in the huge many-banked vessels of Demetrius Poliorcetes. The trader, of which illustrations from the early Graeco-Etruscan vases are sufficiently clear, varied but little in type, and the same type survives in the coasting vessels of the Levant to this day.



Trading Ship.



Pirate Ship.
(The above are from vases in the British Museum.)

The chief points noticeable are the height of the hull above water as compared with the pirate vessels of the same date, and the form of the bow, which curves upwards and outwards, terminating in a point, which, though not fashioned into a figure-head, has immediately behind it the eye of the vessel, serving probably for a hawse-hole. Strong bulwarks run the whole length of the ship, which has two broad-bladed paddles for steering purposes, and a landing ladder fastened to a high prolongation of the stern-post. The sail is attached to a yard, which is secured by a number of braces; the mast, which for the size of the vessel is shorter than that of the pirate, is kept in its place by two stays.

The figures on the vases, to which we shall revert hereafter, may possibly give us the representations of vessels of the 6th or 7th century B.C. But for the description of the early Greek vessel of the pirate type we must turn to Homer, whose familiarity with the sea and with ships is everywhere apparent in his poems. Thucydides (i. 10), in his reflections upon the relative magnitude of the Greek fleet that went to Troy and the fleets employed in the Peloponnesian War, touches the salient points: "1200 ships, the largest holding 120, the smallest 50 men, the warriors being th oarsmen; no room for supernumeraries (*πε-ρίνεω*) except the kings and great chiefs, especially as they were to cross the open sea with arms, &c. for the war; the vessels unfenced (not *κατάφρακτα*), and in the old fashi fitted out more like pirate vessels."

And further he observes (i. 14) that even man centuries later the triremes possessed by th naval powers were few in number, and the great part of the vessels in use were penteconters an long ships (? biremes), fitted in the sam way as in Homer's time. The Sicilian tyrant and the Corcyraeans were the first Greek power who possessed any large number of trireme Even the vessels built by the Athenians unde the advice of Themistocles, which ultimatel fought at Salamis, were not decked throughou Thus, if we take the Homeric ship to give t type of the ancient Greek sea-going vessel of t pirate class, as distinct from the trader (*φορτίς* we shall not go astray.

In two points only are developments to traced, which will be mentioned in their plac viz. in the form of the bow and in the arrangement of the oars.

We shall best obtain an idea of the Homer vessel by comparing Homer with himself, a afterwards with what we are able to ascerta of the epochs that followed. If it be a questi how far the ship-lore of Apollonius Rhodiu and of the so-called Orphic *Argonautica*, drawn from early and trustworthy sources, in many instances it is useful as throwin light upon details.

In the Iliad and Odyssey we find certain epithets of ships common to both, which may classified as follows:—

1. EPITHETS OF COLOUR.

	Iliad.	Odyssey.	Total.
μέλαινα	35	41	76
κυανόπρῳρος	2		11
μιλτοπάρῃος	1	1	2

2. EPITHETS OF SHAPE AND QUALITY.

	Iliad.	Odyssey.	Total.
θοός	41	48	89
ὠκεῖα	1	2	3
ὠκύαλος	1	2	3
ὠκύπορος	7	3	10
ποντόπορος	13	5	18
γλαφυρός	36	18	54
κοῖλος	19	19	38
κορωνίς	14	2	16
ἀμφιέλισσα	7	12	19
ἐΐση	7	10	17
ἐΰσσελμος	12	12	24
εὐεργής	1	9	10
πολυκλήϊς	5	4	9

EPITHETS PECULIAR TO THE ILIAD.

καλός	1	*πολύζυγος*	1
μεγακήτης	2	*ἑκατόζυγος*	1
ὀρθόκραιρος	2	*εὔπρυμνος*	1

EPITHETS PECULIAR TO THE ODYSSEY.

περικαλλής	2	*πρωτόπλοος*	1
κυανοπρώρειος	1	*ἐεικόσορος*	1
δολιχήρετμος	2	*φοινικοπάρῃος*	2
ἐπήρετμος	5	*εὔζυγος*	2

Of these epithets we may observe that t two which concern colour and shape as se from the outside preponderate, viz. *μέλας* a *θοός* (black and sharp); and next in freque the two which, as it were, regard the vessel from within (*κοῖλος, γλαφυρός*), hollow, hollowed out, and so roomy. There can be no doubt that the first two epithets give the main characteristics seen from without. The black sharp hull (like those of the Northmen in later times) inspired thoughts of terror and swiftness; seen from within, it satisfied the mind of the Greek buccaneer that the vessel was roomy, one in which much plunder could be stowed. (Cf. *Od.* iv. 81; xiii. 20.)

Of the other epithets *ἀμφιέλισσα* (which cannot mean "rowed on both sides," but might possibly mean "rocking from side to side") represents probably the curvature of the ship's side when seen either stem or stern on, from in front or from behind; *κορωνίς*, on the other hand, is of the curvature upwards of bow and stern, such as we have seen in the bas-relief of Medinet Habou (p. 208), and such as appears on many of the early coins—that upward lift and prolongation of stem or stern post (the highly ornamented *ἀκροστόλιον* and the *ἄφλαστον* of later time) which makes apt the epithet *ὀρθόκραιρος*, strictly applicable to the horns of oxen. (Cf. *Il.* xviii. 3, 573, xix. 344; *Od.* xii. 348.)

In *ἐΐση* and *ἐΰσσελμος* we have probably epithets that refer to material,—gallant, good, well-timbered (not well-benched). The cross-pieces, thwarts, that tied the vessel's sides together and fitted on them like yokes, were too important, both structurally and as serving as benches for the rowers, not to furnish descriptive epithets (such as *πολυκλήϊς, πολύζυγος, εὔζυγος, ἑκατόζυγος*), and yet they are not frequent. Commonplace epithets are absent; *καλὸς* is only once used. It may also be noticed that the epithets *μιλτοπάρῃος* (*Il.* ii. 637; *Od.* ix. 125) and *φοινικοπάρῃος* (*Od.* xxiii. 271, xi. 124) belong apparently to vessels of or from the western isles of Greece. In the Catalogue of the Ships it is the distinctive epithet of the vessels of Ulysses.

With regard to the construction and parts of the vessel, we have mention of the keel, *τρόπις* (*Od.* xii. 420), which probably was first laid upon the *δρύοχοι*, short upright baulks of timber laid level at intervals, of sufficient height to enable a man to work at the keel and its fittings (*Od.* xix. 574), and the *τοῖχοι* or walls of the vessel attached to it (cf. *ὄφρ' ἀπὸ τοίχους λῦσε κλύδων τρόπιος*). The ribs are not mentioned, unless *δούρατα, δόρυ νήϊον* cover them. Cf. also *πίνακες* (*Od.* xii. 67) for planking. From the keel sprung the *στεῖρα* or stem-post, carried upwards and finishing high in the *ἀκρὰ κόρυμβα*. Similarly, the stern-post must have run up into the *ἄφλαστον* (*Il.* xv. 716) or stern ornament. As yet no spur or ram seems to have been attached to the bows of the vessel:

> ἀμφὶ δὲ κῦμα
> στείρῃ πορφύρεον μεγάλ' ἴαχε νηὸς ἰούσης.—*Il.* i. 483.

The sides (*τοῖχοι*) were tied together by the thwarts (*ζύγα, κληῖδες*), which served as seats for the rowers, and lengthways amidships there must have been a gangway: for Ulysses (*Od.* xii. 229), while his crew are rowing to pass the dreaded Scylla, arms himself and passes from the stern to the forecastle. (Cf. Apoll. Rhod. iv. 1651, where Jason gives his hand to Medea, as she passes through the vessel, *διὰ κληῖδος ἰοῦσαν.*) At the bows there was a raised platform, or deck, the *ἴκρια πρώρης*, upon which armed men could stand and fight; and similarly there was a deck at the stern, upon which the chiefs had their place, and laid their weapons (*Od.* xiii. 72; xv. 282, 557), and under which was room for stowage (*Od.* xv. 206).

In a remarkable passage (*Il.* xv. 680) we have the description of a warrior (Ajax) passing from vessel to vessel:

> Ἐπὶ πολλὰ θοάων ἴκρια νηῶν
> φοίτα μακρὰ βιβάς·

the ships evidently being hauled up quite close to each other, and the height is in a measure indicated, for the attacking warrior (Hector) seizes hold of the stern of the ship (*Il.* xv. 716):

> πρύμνηθεν ἐπεὶ λάβεν οὐχὶ μεθίει
> ἄφλαστον μετὰ χερσὶν ἔχων·

while Ajax, forced to give way, being in an exposed position,

> ἀνεχάζετο τυτθὸν οἰόμενος θανέεσθαι
> θρῆνυν ἐφ' ἑπταπόδην λίπε δ' ἴκρια νηὸς ἐΐσης.

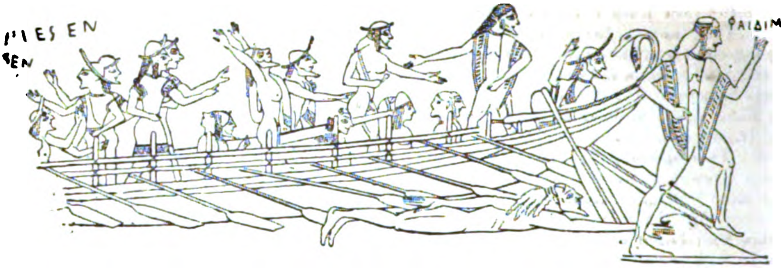
This *θρῆνυς*, in all probability, was the stretcher, as we should call it, of the stroke oar. Some interpret it of the steersman's seat, but less well, as *θρῆνυς* in Homer is in all other passages *ὑποπόδιον*, something to rest the feet upon. This would give us the normal beam of the Homeric ship, nearly at the point where the stern deck began; while, allowing to Hector heroic stature, the height of the *ἄφλαστον* would, we may fairly conjecture, be from 7 to 9 feet, and the *ἴκρια* themselves some 5 feet from the ground, when the vessel was drawn up on land. Taking the normal interspace for the rowers (*σχῆμα διπηχαϊκὸν*) at 2 cubits, the rowing space of the penteconter gives a length of 75 feet, to which must be added some 6 feet for the bows and 9 or 10 for the stern, with their respective decks. We should have thus a long low galley, about 90 feet from stem to stern, and from 10 to 12 feet broad amidships. The length would of course be reduced if the interspace between the rowers was less.

The Homeric galley was propelled by sail as well as by oars. The mast could be raised and lowered. It had a step (? *ἱστοπέδη*: cf. Alcaeus, *Frag.*) above the keel (cf. *ἐκ δὲ οἱ ἱστὸν ἄραξε ποτὶ τρόπιν*), and was raised so as to rest in and against a "tabernacle" (*μεσόδμη*), fitted as the name implies amidships. It was kept in its place by fore-stays (*πρότονοι*), by which also it was lowered, and rested on a crutch (*ἱστοδόκη*, *Il.* i. 434). A back-stay (*ἐπίτονος*) is also mentioned as attached to it (*βοὸς ῥινοῖο τετευχώς*, *Od.* xii. 423).

The sail was hoisted upon a yard (*ἐπίκριον*, *Od.* v. 254), which had braces (*ὑπέραι*) and halyards (*κάλοι*) attached to it. The sails were white, and square in shape. To the ends (*πόδες*) sheets were attached, which were either fastened or held in the hand. The ropes with which the sail was hoisted and the stays appear to have been of plaited or twisted thong (*ἐϋστρέπτοισι βοεῦσι*). Larger cables (*ὅπλα, πείσματα*) were made of byblus (*Od.* xxii. 391). "The twisted teaching of Egypt" (Eurip. *Troad.* 129, *πλεκτὰν Αἰγύπτου παιδείαν*) seems to have come in later for smaller tackle. The *σπάρτα* mentioned in *Il.* ii. 135 may have been of hemp or rushes.

Large poles for pushing the ship (*περιμήκεα κοντόν*) were also in use; and the weight and bulk of the vessel receive illustration from the passage in which Ulysses single-handed pushes her off the shore with a pole (*Od.* ix. 487). There were also long poles or spears used for fighting. Cf. *Il.* xv. 388, 677:

> μακροῖσι ξυστοῖσι τὰ ῥά σφ' ἐπὶ νηυσὶν ἔκειτο
> ναύμαχα κολλήεντα κατὰ στόμα εἱμένα χαλκῷ.



Penteconter. (From the François vase at Florence.)

The ship was steered by paddles (*πηδάλια*), which, as the representations on the early vases indicate, were of various patterns. They were generally two in number, fastened to either side of the vessel. Some are merely broad-bladed oars; others approach more nearly in form to the modern rudder. They differed as a rule from the oar in having the blade unequally divided, the front part being narrow, the hinder part broad, so as to have more power. When at rest, the steering paddles were kept parallel to the longer axis of the vessel. At the upper end of the loom was a projecting handle, *οἰήιον* (*Od.* xii. 218), by which the steersman could turn the blade of one or both at an angle to the vessel's course.

The oars, *ἐρετμά*—of which the parts were *κώπη*, the handle, and *πηδόν*, the blade—were made of fir (cf. Apoll. Rhod. *Arg.* i. 1188; *ξεστῇς ἐλάτῃσι*, *Od.* xii. 172). The breadth of the blade is illustrated by its comparison on the part of a landsman ignorant of the sea to a winnowing shovel (*Od.* xi. 128). The oars amidship were probably the largest, to allow for the curvature of the vessel's sides (cf. Apoll. Rhod. i. 395, where the midship oars are reserved for Hercules and Ancaeus as being the strongest of the heroes). The result of breaking an oar while rowing hard seems to have been similar to that of later times. Cf. Apoll. Rhod. *Arg.* i. 1167, where Hercules

> μεσσόθεν ἆξεν ἐρετμόν, ἀτὰρ τρύφος ἄλλο μὲν αὐτὸς
> ἄμφω χερσὶν ἔχων, πέσε δόχμιος.

The oars were fastened to thowls (*σκαλμοί*) by thongs (*τροποὶ δερμάτινοι*), and, when not in use, drawn in and fastened with the blade projecting (Apoll. Rhod. *Arg.* i. 378; *Od.* viii. 34). The rowers are described as taking their places, with their arms laid (Apoll. Rhod. i. 527) in order by them, which flash in the sunlight (*l. c.* 540 ff.) as the vessel speeds onward. (Compare the shields hung at the side of the Vikings' vessels.) The *κυβερνήτης* had his place on the *ἴκρια πρύμνης*, where he could handle both steering paddles and see over the heads of the crew. Hence there was nothing to intercept the falling mast (*Od.* xii. 409) when the forestays snapped:—

> ἱστὸς δ' ὀπίσω πέσεν, ὅπλα δὲ πάντα
> εἰς ἄντλον κατέχυνθ'· ὁ δ' ἄρα πρύμνῃ ἐνὶ νηὶ
> πλῆξε κυβερνήτεω κεφαλήν,
> ὁ δ' ἄρ' ἀρνευτῆρι ἐοικὼς
> κάππεσ' ἀπ' ἰκριόφιν.

From the foregoing and similar passages we learn that the bilge was open (*ἄντλος*). The place for stowage was under the thwarts against the sides of the vessel. (Cf. Theognis, 513: *νηός τοι πλευρῇσιν ὑπὸ ζύγα θήσομεν ἡμεῖς οἷ' ἔχομεν.*) The *ξεστὸν ἐφόλκαιον* (*Od.* xiv. 350) may have been the landing ladder (*κλῖμαξ*), which is so conspicuous upon the vases (Grashoff, *Schiff.* 22). The vessel was moored by means of stones (*εὐναί*, *Il.* i. 436; *Od.* xiv. 498), which served both as ballast and as anchors.

The following passages illustrate the seafaring life as depicted in Homer:—Preparation for starting, *Od.* iv. 780, viii. 51, xv. 282. Setting sail, *Il.* i. 480, vii. 44; *Od.* ii. 412. Storm, *Il.* xv. 625; *Od.* ix. 70, v. 313, xii. 405, xiv. 295. Coming into harbour, *Il.* i. 433; *Od.* iii. 10, xv. 496. A safe harbour, *Od.* ix. 125. Crew grumble at not being allowed to land, *Od.* xii. 281. Arsenal, *Od.* vi. 263. Housing ship for winter, Hes. *Op.* 622.

The post-Homeric period receives its best illustration from the early Greek or Graeco-Etruscan vases that remain. In these the space is necessarily restricted, so that accuracy as regards details is hardly to be expected, yet the evidence they afford is extremely valuable, and without them the information drawn from the poets would, in many cases, be much more obscure than it is at present. Between Homer and Herodotus there is but little information to be gathered. Hesiod disclaims all knowledge of seafaring life (*Op.* 647), though his father had been a merchant venturer. The Homeric Hymn to Apollo and the story of Dionysus and the Pirates (if rightly ascribed to this period) contain a few interesting details (42, *πάντε δὲ σκαλμοὶ στεφάνους φέρον*). One valuable fragment of Alcaeus preserves the vivid picture of a storm-tossed vessel, and a much-disputed line (*παρ' μὲν γὰρ ἄντλος ἱστοπέδαν ἔχει*). *ἱστοπέδη* be the mast step,—a solid block of wood placed above the keel,—with a shallow socket cut in it, wherein the foot of the mast rested, then the progress of the water increasing in the hold of the vessel would be marke by its rising to the level of the top of the mast step.

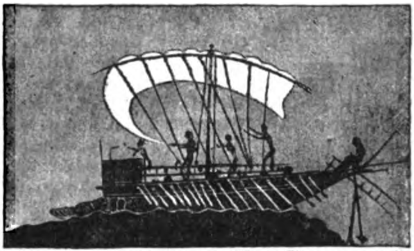
Dionysus Vessel. (Gerhardt, *Vasenbilder.*)

The unseaworthy character of the early Greek vessel is amply testified by the use and application of the word *ἄντλος*, *ἀντλεῖν*. Baling, if the weather was at all rough, was the constant and toilsome duty of the sailor, and the term became expressive of labour and sorrow. Sometimes the crew, from weariness or fright, refused to persevere (*ἀντλεῖν δ' οὐκ ἐθέλουσιν, ὑπερβάλλει δὲ θάλασσα ἀμφοτέρων τοίχων*, Theog. 673). The point is important, as illustrating one of the chief necessities of construction in the early Greek vessel. It had to be built as light as possible, because it was necessary to draw it up on shore. It was frequently subjected to the rack and strain which this process implies. Hence it is not surprising that it was liable to leak. There ensued naturally the desire to run ashore as soon as possible out of a seaway, an operation which the numerous creeks and bays on the coastline of the tideless sea facilitated. This lightness of construction, and the necessity (for so it appeared to the Greek sailor) of drawing up the vessel on shore, must not be lost sight of when we come to consider the trireme. It is one which apparently has been entirely overlooked by those who wish to identify the problem involved in the construction of ancient ships with those of the mediaeval galley and of ocean-going wooden ships of comparatively modern date, which were not subject to this requirement.

Stern of Bireme, with *κλῖμαξ*. (From Figaroni Cista.)

The epoch of the vases introduces us to the Bireme, and it is possible that in this department of archaeology fresh discoveries await us, which may contribute largely, after their kind, to the knowledge of the subject. The bireme of Phoenician type represented on the walls of Kouyunjik (Rawlinson, *Ancient Monarchies*, vol. ii. 176) is possibly of an earlier date than the vase-paintings. At any rate, we must, in all probability, refer the invention of the bireme to the shipwrights of Tyre and Sidon, if not to Egypt (see above). And here it is necessary to inquire into the character of this invention, which gave a new power to early navigation and led the way to the trireme, and so on to the *Polyeres* (*πολυήρεις*), the many-banked vessels, of later date.

It is clear that the penteconter was the typical vessel of the pirate type. The *ζυγά* (benches, thwarts), twenty-five in number, seated two men on either side. The longest oars were wielded by those who sat amidships (Apoll. Rhod. i. 395 ff.). We may take the normal *interscalmium*, or measure of interval, between thowl and thowl, to have been 2 cubits (Vitruv. i. 2, "in navibus ex interscalmio quod *διπηχαϊκὴ* dicitur"). Efforts had been made to increase speed by adding to the number of rowers, but the increased number of benches involved also an addition to the length and weight of the vessel. The term *ἑκατόζυγος* seems to point to the limit which this effort had reached. Such a galley, even if we take the epithet to mean simply 100 rowers, and therefore really only 50 benches, would have upwards of 150 feet for its length, and presents difficulties at once as to hauling on shore and turning which can easily be imagined. Some clever shipwright, when construction was thus confronted with the difficulty of the additional length and weight exceeding in disadvantage the advantage gained by increase of man-power, conceived the design whereby the motive power might be almost doubled without increasing the length or beam of the vessel. Dividing the 3-foot space between the zyga, and perhaps raising these a little, he placed a rower with a shorter oar, to work nearer the water-line, on a lower level than the men on the zyga.



War Ship of the pirate type. (From Etruscan vase.)

In fact, he seated these lower oarsmen more in the hold of the vessel (*θάλαμος*), whence they got their name of *thalamite*. It would be necessary to keep them in the same line vertically, parallel to the axis of the vessel, as there was no room to spare, and so the thalamite sat immediately behind his zygite, with his head just a little above the level of the latter's seat (cf. Aristoph. *Ran.* 1074). The experiment was tried and found feasible, and the thing was done.*

Once approved and known, the principle was sure to be widely adopted. The representations of biremes are sufficiently numerous to indicate that in the early vase period they were the typical vessel. It is remarkable that on some coasts they were never superseded. Of the famous galleys that turned the scale at Actium we read, "Ordine contentae gemino crevisse Liburnae;" and it is also to be observed that they outlived the larger rates far into the Byzantine period, as is seen in the *Tactica* of Emperor Leo. The invention of the bireme was really a much greater step in the art of naval construction than any of the subsequent improvements, which increased the numbers of banks, till the *Polyeres* in their turn became "inhabilis prope magnitudinis." The motive power was doubled; the length and bulk of the vessel hardly increased.

From the bireme to the trireme was but a small step in advance. Where this was made is not at all certain; probably in the dockyards of Tyre or Sidon. But the Greeks were quick to adopt the inventions of their Oriental rivals. Wealthy Corinth was naturally the first place in Greece to exhibit the new model, and to use its superior powers for the purpose of clearing out pirates and protecting its growing commerce (Thuc. i. 13). The Corinthian shipbuilder Ameinocles made a name and fame for himself, and marked an epoch in the maritime history of Greece, when, about the year 700 B.C., he constructed four of the new sea-going three-banked type of galleys for the Samians.

Coin of Cydonia. 450 B.C.

Coin of Pharnabazus. 400 B.C.

Before proceeding to the description of the trireme, it is necessary to insist on the fact that, according to the evidence to be gathered from ancient authorities, the principle of *one man to each oar* was always observed. The question of the arrangement of the rowers has been complicated by the neglect of this principle on the part of authors, who have sought for a solution of difficulties by reference to the mediaeval galley with its long sweeps worked by three or more oarsmen apiece. The ancients knew nothing of such a system, nor has any sufficient evidence been brought forward to support it. When we reflect that to the early shipwright sharpness and length (cf. epithets *θοή, μακρά*) were the essential ideas in the construction of the fighting galley, and that increase of beam involved increase of bulk, it is not surprising that the narrowness of the vessels should *ab initio* have restricted the length of the oar, and have, so to speak, prevented the idea of double-banking the oars from entering into their heads.

When in early mediaeval times the *Parodus* was superseded by the *Apostis*, then the system of long heavy oars, worked by two or more men, came into vogue, but not before.

It should here also be observed that the terms *Aphract* and *Cataphract* are of importance as denoting a difference and an improvement in the construction both of biremes and triremes,—a difference which has not to do with the deck (*κατάστρωμα*), but with the sides of the vessel. In the Aphract vessel the upper tier of rowers were unprotected and exposed to view, and consequently to the enemy's missiles, though in some of the earliest vessels we do see some attempt at protection in the way of planking, or (as commonly in the Vikings' ships) shields set up round the bulwarks to afford a covering to the crew. But in the Cataphract class, the rowers of the upper tier were entirely under cover, behind the wall of the Parodus, a projecting gangway, which screened them both from the sight and from the missiles of the enemy. The speciality of the construction was sufficiently important to differentiate the two classes, as Aphract and Cataphract.

In the detailed description of the trirem which follows, amid a multitude of conflicting opinions we have in the main followed Gras and Cartault as the most trustworthy authori ties. The subject, as is well known, has a vas and still accumulating literature of its own Since the discovery in 1834 of a number o inscriptions which proved to be inventories o galleys and their gear, belonging to the dock yard at the Piraeus, dating from a perio possibly not more than fifty years after th Peloponnesian war, the whole question has bee placed upon a new basis by the labours of Boeck and Graser, and after them of Cartault an Breusing. The evidence that we have to rel upon as regards ancient ships of war consists— (1) of passages from ancient authors, and (2) explanations of terms in the scholiasts and lexi cographers. Besides these, there are (for pent conters and biremes, but not for triremes) th representations on vases. The representatio on coins, though numerous, are useful only regards types, the scale being too small to giv certainty as to details. But very few bas-relie or marbles or frescoes have survived whic throw any light upon naval construction. As rule, in the representations the artist, anxious glorify the human figure, has treated all the a cessories in a conventional manner, dwarfing t rest out of all proportion. We are therefo chiefly dependent for our information up ancient texts, and must accept with caution a

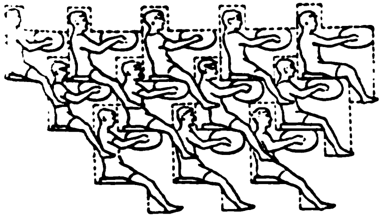
---

* The writer had a section of a trireme upon Graser's measurements constructed, and placed in it six oarsmen, two sets of three, to row, and the movements were not only easy, but it was practically shown that the space allowed was too much rather than too little.

theories, however plausible, which cannot find support in these, or in any way contradict their evidence.

In the classification of ancient vessels we find the termination *-ορος* referring to number of oars —*e.g.* *τριακόντορος*, *πεντηκόντορος*: whereas the termination *-ήρης* or *-κροτος* refers to banks of oars—*e.g.* *μονήρης*, *διήρης*, *τριήρης*, up to the *ἑκκαιδεκήρης* of Demetrius Poliorcetes and *τεσσερακοντήρης* of Ptolemy Philopátor; *μονόκροτος*, *δίκροτος*, *τρίκροτος*, *κ.τ.λ.* It is this question of the superposition of the banks of oars which is the main problem to be solved. These banks or ranks of oars were called *στίχοι* or *ταρσώματα* (Poll. i. 93). In the trireme there were three, called respectively *θρανῖται*, *ζύγιοι* or *ζυγῖται*, and *θαλάμιοι*, *θαλαμῖται* or *θαλάμακες*. Of these the thranites rowed with the longest oars, and were the highest; the zygites occupied the middle stage; the thalamite the lowest, and these used the shortest oars, and earned least pay because they rowed with short oars (*διὰ τὸ κολοβαῖς χρῆσθαι κώπαις*, Schol. *ad* Thuc. vi. 31). That the rowers in three ranks in the trireme cannot have been separated by decks, as some authors have held, is sufficiently proved by the passage in Aristophanes (*Ran.* 1074). The thranite sat nearest the stern, the zygite next behind him, and the thalamite nearest the prow in each set of three, which was thus arranged obliquely, probably, though not certainly, in the same vertical plane.

In the trireme the number of thranites was 62; of zygites, 58; thalamites, 54. This gives on each side the series of 31, 29, 27; the reduced number in the lower ranks being necessitated by the contraction of the space nearer the water-line, owing to the curvature of the vessel's sides. Hence at each end of the vessel we find in the *ἔγκωπον*, or rowing space, one zygite and two thalamites less than the thranites. The whole ordinary rowing strength of the triremes was 174. Sometimes the supernumeraries (*περίνεῳ*) had to help with oars, the length of which is given in the Attic tables: these are supposed to have rowed from the Parodus, and to have struck the water beyond the thranite oars. Their length is given as 14¼ feet. We have said that the oarsmen sat probably in the same vertical plane, disposed obliquely one behind the other, the thranite of each set of three being nearest the stern. It is probable that the thranite oars were a little shorter than those of the *περίνεῳ*, mentioned above. They would in fact be not very much longer than the oars ordinarily in use in our University eights.



Complexus Remigum. (From Cartault.)

The horizontal space between two men of the same bank was 3 feet. The zygite seat was 1 ft. behind the thranite; the thalamite the same distance behind the zygite. The zygite seats were 2 feet below the level of the thranite, and the thalamite the same below the zygite. This disposition of the rowers as illustrated by the figure seems at first sight to be crowded, but the practical experiment, tried as above mentioned, showed that the oarsmen had plenty of room for the movement of their oars, and that there was no danger of clashing with the oars of separate banks. The motion of rowing was, as shown in the bas-relief of the trireme figured below, with very little forward inclination of the body. The arms were well extended, and then the weight of the body thrown on the oar, the course of the stroke following the *ὠὸπ ὄπ*, or the *ῥυππαπαί*, with the incidence of the blade in the water at the last sound (*e.g.* *ὠὸπ* marking the recovery, *ὄπ* the stroke).

Acropolis Trireme. (From Baumeister.)

In rowing the zygites fell back between the knees of the thranites, and the thalamites between those of the zygites; the two upper banks having an *appui* for their feet on either side of the man in front of them in the next bank below. The port-holes for the thalamite oars are placed by Graser at 3 feet above the water-line (Cartault reduces this distance to 1 ft. 6 inches); and if we allow 1 foot above the heads of the thranites (including the thickness of the deck and the cross timbers supporting it), we have the deck of the trireme 11 feet above the water-line. The zygite port-holes were vertically 2 feet above the thalamite, and the thranite the same distance above the zygite; the zygite port-hole was horizontally 1 foot nearer the bows than that of the thranite of the set of three to which he belonged, and the thalamite port-hole 1 foot nearer the bows than that of the zygite of his set. Taking the Vitruvian interscalmium of 2 cubits as the normal scale, we shall thus have 94 feet for the *ἔγκωπον* or rowing space of the trireme.

Viewed from within, if we adopt Graser's hypothesis, the trireme must have had, when ready for sea, and before the crew had come on board, the appearance of a long cloister, a central space of 7 feet, and on either side uprights corresponding to the vessel's ribs 3 feet apart and forming the support of the deck. From the foot of each of these uprights a strong piece of timber, probably cut plank-wise, inclined at an angle of about 62°, reached to the head of the upright next to it nearer the stern. Between these and the vessel's sides were attached the zyga or rowers' seats. These seats were part of the ship's furniture, and removable, as is seen from the Attic tables. A vessel fitted with them was said to be *διάζυξ*: not fitted, *ἄζυξ*. To the system of upright and inclined timbers thus constituting the rowing quarters of the crew, Graser attaches the term *διαφράγματα*. (Boeckh, xiv. 6, 145; *Inscr.* 3144, 3271, 3124.)

The crew was so densely packed that, as we learn from a passage in Cicero, there was not room for one man more. They entered in a regular order and took their places in accordance with the strictest discipline, and similarly disembarked. Each man had a cushion (*ὑπηρέσιον*) to put upon his bench. The oars appear to have been graduated as regards length inboard, so that those amidships were longer inboard, though striking the water in the same line parallel to the axis of the vessel with those of the same bank. (Hence the comparison of Aristotle and Galen to the fingers.) This confirms the opinion that the oarsmen in the trireme sat all in the same vertical plane, or nearly so; the thranite seat in the trireme being about 7 ft., the zygite 5 ft., and the thalamite 3 ft. above the water-line. This would give us 13 ft. 6 in., 10 ft. 6 in., 7 ft. 6 in. respectively for the average length of the three banks; the midship oars having somewhat more inboard, and possibly a heavier blade than those fore and aft. The Virgilian "triplici pubes quam Dardana versu Impellit, terno consurgunt ordine remi" (*Aen.* v. 120), gives an exact picture of the stroke (*versus*), i.e. the work of the oar in the water, and the recovery (*consurgunt*). In the trireme the triple *versus* were 2 ft. 6 in. apart, on a line at right angles to the vessel's side. The recovery would exhibit the oars rising in three banks. The rowing port-holes were protected by leathern bags (*ἀσκώματα*), through which the looms of the oars passed. These, if the sea was at all rough, prevented the wash from coming through the oarports. The oars were apparently, if we may judge from the representation from above (p. 215 *b*), rowed with the lower hand over and the upper hand under the oar. This implies a considerable angle to the water. Perhaps the thalamite had both hands over. It is a moot point whether they rowed against the *σκαλμός*, the wooden pin or thowl, or against the thong (*τροπωτήρ*) by which the oar was fastened to it. Looking at the weight to be moved, it seems not improbable that the latter was the case. At any rate, it is very frequently so in the Levant at the present day. They would certainly have been less liable to breakages at starting. The position of the oars, as shown in the woodcut above (p. 212), would seem to indicate that this was the case in the penteconter.

According to Graser, the floor of the vessel (*ἔδαφος*) was 1 foot above the water in the Cataphract class. Below this was the hold, and through the floor a hole through which the buckets used in baling were passed. The keel (*τρόπις*) had considerable camber. Under it was a strong false keel (*χέλυσμα*), very necessary for vessels which were frequently drawn up on shore. Above the keel was the kelson (*δρύοχον*, *columba*), under which the lower ends of the ribs, probably 3 feet apart, were fastened. Above the kelson lay an upper false keel (*δευτέρα τρόπις*), into which the masts were stepped.

The stem-post (*στεῖρα*) rose at an angle of 69° to the water from the keel; within was an apron (*φάλκης*), giving solidity to the bows, which had to bear the weight of the beak and of concussion. The stem was carried upwards and curved sometimes forwards, but generally back, terminating in an ornament called the *acrostolium* (*ἀκροστόλιον*). Of this every variety is to be seen upon the coins.

The stern-post was carried up at about the same angle as the stem, curving upwards and forwards, and terminating in an ornament called *ἄφλαστον*, *aplustre*. Sometimes, as shown chiefly in later instances, the stern-post was ornamented by a swan or goose head (*χηνίσκος*). curving downwards behind the prolongation of the stern-post, symbolising no doubt the floating powers of the vessel.

Round the hull of the vessel, horizontally at about the level of the feet of each bank of rowers, stretched waling-pieces (according to Graser, *νομεῖς*: Cartault, *ζωστῆρες*), and in the case of the Attic triremes the sides of the vessel were again strengthened by long cables (*ὑποζώματα*), which were bound round the ship from stem to stern. These tightened by shrinking when wet, and gave additional security to the vessel, which from her length and narrow beam and lightness of build was apt to strain in bad weather.

On either side of the vessel, about the level of the thranitic bench, projected the gangway (*πάροδος*, *fori*), giving probably a passage of about 3 ft. wide. The Parodus was supported by brackets, the lower ends of which found a footing in the waling-piece below, and probably an attachment to the ribs. It was also fenced in by an upright bulwark extending the whole length of space occupied by the rowers. The ribs from a point below the Parodus curved upwards and inwards to a level 10 inches above the heads of the thranites. Upon them at this height were placed the cross-beams (*στρωτῆρες*) which supported the deck (*κατάστρωμα*). This was a clear 3 feet above the *πάροδος*, thus allowing the marines (*ἐπιβάται*) in action free play for their weapons over the heads of the supernumeraries (*περίνεῳ*) and seamen whose place was in the *πάροδος*.

On either side the main deck rose an open lattice-work (*cancelli*), seen as such in Aphract vessels, but in the Cataphracts usually covered with hides, or with goat's-hair curtains (*cilicium*), such as St. Paul may have worked at with his hands.

Beyond the space occupied by the rowers there was the *παρεξειρεσία* of 11 feet at the bows and 14 feet at the stern, which took the place of the *ἴκρια*, noticed in the Homeric vessels. In the bows there was an elevated forecastle, serving to protect the vessel in a seaway from the waves, and as a station for fighting men in combat. On either side of the bows was a hawse hole which figured as the eye (*ὀφθαλμός*) of the vessel. Here also was the *παράσημον* or badge of the vessel. Behind this projected the catheads (*ἐπωτίδες*) on either side, which in the case of the earlier Attic triremes seem to have been merely sufficient to hold the anchor. They afforded, however, a natural protection to the parodus. In the Corinthian build these were greatly strengthened and backed with stays (*ἀντηρίδες*, Thuc. vii. 36) within and without, so as to receive the impact of the light Athenian trireme, and to inflict the damage they were intended to suffer.

In front of the stem the prolongation of the two upper waling-pieces, meeting from either side, projected one above the other and were called προεμβολίς, προεμβόλιον, respectively. The purpose of these seems to have been to give a vessel when pressed by the beak a racking blow above, thus making her heel over and easing her off, so that the attacking vessel might more readily disentangle herself by backing water. Underneath the prolongation of the lower waling-pieces, and probably of the keel itself, met and formed the ἔμβολον, *rostrum*, or beak, at about the water-level (in the early times a little above, later below): this was generally cased with metal. In the earlier Attic vessel it projected about 10 feet. The success of the Corinthian build seems to have led to a shorter form, and a division into three teeth, which took the place of the long sharp spur. The elevation of the spur was necessary in the lighter vessels, which were frequently beached and drawn up on the shore. In the larger rates, with which this was no longer feasible, the spur came to be depressed, and, when thus shown in artistic representations, indicates a later date.

Prow of Trireme. (From Greek terra-cotta vase in British Museum.)

Quarter-decks.—At the stern was a raised quarter-deck on which the helmsman (κυβερνήτης) and the trierarch or captain had their place. The quarter-deck was the sacred part of the ship. Here was the image of the patron god or goddess (Eur. *Iph. A.* 209). Here also near the stern rose the flagstaff, on which was hoisted the pennant, and from which, in the case of the admiral's ship, the red flag gave the signal for action, and such other signals for manœuvring as were from time to time required.

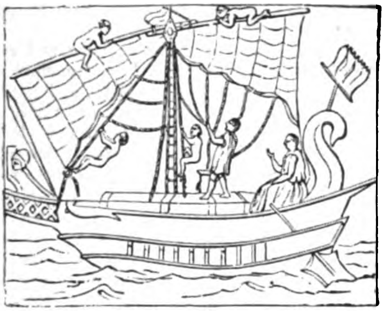
Steering gear.—The trireme was steered by two paddles, which worked in sockets attached to either side of the vessel. These had tillers (οἴακες) in the upper part of the loom (αὐχήν), by which the helmsman could turn the blades at an angle to the vessel's course. In the larger ships, quinqueremes and upwards, it is probable that the steering was effected by means of a rope (χαλινὸς) attached to the tillers, and passing over wheels (τροχιλίαι), which gave the helmsman the power to turn both rudders by a single effort simultaneously.

The trireme had at least two masts (ἱστὸς μέγας, ἱστὸς ἀκάτειος), but it is to be remembered that the use of sails was auxiliary, and not its normal mode of propulsion. When any fighting had to be done, it was relieved, if possible, of the weight of large mast and sails, which were left ashore. Hence it is difficult to agree with Graser in his restoration of a full-rigged trireme with three masts, and enough canvas spread for a modern man-of-war.

The μεσόδμη of the Homeric vessel had its place taken by παραστάται, uprights, which had their footing on either side of the ληνὸς or mast-hole, into which the heel or foot of the mast (πτέρνα) was stepped. The παραστάται were attached to the mast by a collar (κλοιός). The aperture in the deck through which the mast passed was sometimes called ἱστοδόκη. Wedges (σφῆνες) were driven in round the mast so as to keep it tight (Ap. Rhod. i. 1204). The mast when lowered rested upon a crutch aft (ἱστοδόκη, κάπηξ). At the top of the mast was the ἠλακάτη, which was encircled at its base by the top (καρχήσιον), itself surrounded by a breastwork (θωράκιον). Above was a small mast (ἄτρακτος), which carried the pennant (ἐπισείων). The sail was carried on a yard (ἐπίκριον, κεραία), sometimes made of two pieces (Athen. xi. p. 475). It does not appear anywhere that more than one yard was carried by any mast, though spare yards were supplied to the Athenian navy. The yard was attached to the mast by a collar (ἄγκοινα, ἄγκοινα διπλῆ); and if we can take Servius (*ad Aen.* v. 489) as an authority, the ancients were not unacquainted with "parrels," wooden balls, which enabled the collar to be run up and down the mast without sticking ("malus quibusdam malis ligneis cingitur quorum volubilitate vela facilius elevantur"). The yard was hoisted by halyards (ἱμάντες), which passed over τροχιλίαι in the καρχήσιον. The terms κάλοι, κάλωες, were generally applied to all the cordage of the rigging, and specially in larger vessels to the shrouds which served to keep the mast in its place.

The sail (ἱστίον) was often made up of pieces made separately and stitched together (whence the plural ἱστία often means only a single sail). The only kind of sail known by the Greeks, according to Boeckh (*Urk.* 141), was the square sail. The *velum triangulare* of the Alexandrian corn ships was of later date. The sails were often strengthened, when made of separate pieces, by strips of leather sewn over the stitching. (Cf. bas-relief from Pompeii, Smith, *Voyage and Shipwreck of St. Paul*; Joseph. *Ant.* iv. 8, 37, παρὰ τὸν ἱστὸν ἐπὶ πολὺ ἕστημεν ἀναβλέποντες ἀριθμοῦντες τῶν βυρσῶν τὰς ἐπιβολάς.) The sail was fastened to the yard by the περιτόνιον, which passed through eyelets (κρίκοι) made in the border of the sail (cf. παρακρούειν). At the lower extremities of the sail were the sheets (πόδες) and tacks (πρόποδες).

The ancients, instead of reefing, appear to have brailed up their sails (*στέλλειν*, *παραιρεῖν*, *συστέλλειν*), so as to reduce the area exposed to the wind; and thus either from the side, or from underneath along its whole length (Arist. *Prob.* 7; Ar. *Eq.* 434, Schol.). (See Graser, *Gemme*, for numerous instances.) The word *ἀναστέλλειν* seems to have been used for unbrailing the sail, where we should "shake out a reef" (cf. *ἐξιέναι*, Pind. *Pyth.* i. 176).



Brailling the sails of a *moneris*. The *ἐπισείων* is shown at the stern. (Mazois, *Pomp.* i. 22.)

The yard in good weather was hoisted to the top of the mast (Ar. *Ran.* 999), but, if the wind freshened, was lowered. Braces (*ὑπέραι*) were in use in order to give the yard a position oblique to the keel (cf. Verg. *Aen.* v. 16, "Obliquatque sinus in ventum"). The representations show also "lifts," but the proper term is doubtful. Κερουλκός (Lat. *ceruchus*, Luc. *Phars.* viii. 177) is perhaps right.

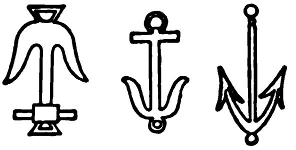
The trireme carried two masts, the main mast (*ἱστὸς μέγας* or *γνήσιος*) and a small foremast, placed near the forecastle, and more nearly related to the modern bowsprit than to the modern foremast. Later the *ἴστιον ἀκατεῖον*, spritsail, was called *ὁ δόλων*, and later still *ὁ ἀρτέμων* (Acts xxvii.). In all probability the Greeks never used sails for combat. The manœuvres depended on the oars for motive power. The attempt to combine the use of the sail, where great agility in turning and much backing water (*πρύμνην ἀνακρούειν*) were constantly required, could only have complicated matters unnecessarily, and led to disaster (Xen. *Hell.* vi. 2, 27; Liv. xxvi. 39). Ramming tactics would hardly have been pursued with mainmast and its gear standing. It is probable, however, that the *ἱστὸς ἀκατεῖος* was used with its yard for the employment of the *δελφίς*, a heavy weight, which, on coming alongside of the enemy's vessel, could be dropped on his deck (cf. Thuc. vii. 25, where the bowsprits are used to draw the piles in the port of Syracuse).

The sprit-sail might be used to ease the rowers, but would be furled on approaching the enemy. In the same way it might be set for the purposes of flight, whence the expression in Plutarch, *τὸ ἀκάτιον αἴρεσθαι*, "to slip out of danger." (Cf. Suid. *s. v.* *δόλων*: Diod. xx. 61; Liv. xxxvi. 44; Eur. *I. T.* 1132.)

Anchors.—For anchors, the Homeric vessels used stones (*εὐναί*), perforated so that a cord could be passed through them. Anchors properly so-called are said to have been invented by Anacharsis (Strabo, vii. p. 303; Schol. *ad* Ap. Rhod. i. 1277). The anchors were furnished with flukes (*ἄγκιστρα*), and from the representations it is clear that in most cases they had stocks and crowns. By the ring fastened to the latter they were buoyed. (Cf. Hesych. *s. v.* *σαργάναι*: Paus. viii. 12.) The anchor was carried in the bows, sometimes over the spur (Pind. *Pyth.* iv. 342:

ἐπεὶ δ' ἐμβόλου
κρέμασαν ἀγκύρας ὕπερθεν):

though Breusing thinks that the *ἐπωτὶς* is here intended by the word *ἔμβολον*. Vessels of war carried more than one anchor. Boeckh (*Urkund.* p. 166) gives four to the Attic trireme. The heaviest was called *ἱερά* (Lucian, *Jup. Trag.* 51) and used in the last resort. We find chain cables for anchors mentioned as used by the Veneti (Caes. *Bell. Gall.* iii. 13).



Ancient Anchors. (Baumeister, *Denkm.*)

We have now mentioned the principal details of equipment in the Greek man-of-war. For other nautical terms and their meaning, the reader is referred to the Glossary appended to this article.

The dimensions of the trireme were, according to Graser:—

	Feet.
Length of *ἔγκωπον*	124
Bows	11
Stern	14
Total length	149
Breadth at water-line	14
At Parodus	18
With Parodus	21
Space between diaphragmata	7
Deck in Cataphract class above water	11
Draught	8¼
Depth of hold	10¼
*Capacity of trireme	232¼ tons

Measurements, &c., according to Cartault:—

	Feet.
Length of *ἔγκωπον*	94
Bows	9
Stern	10
Total length	113
Breadth at water-line	12
Breadth at Parodus	15·31
Deck above water	10
Draught	6

M. Cartault reduces the height of the thalamite port-holes above the water to 1½ ft., so as to diminish the instability which forms the obvious objection to Graser's dimensions given above.

Taking the proportions in the Acropolis trireme to be exact, and the distance from seat to seat

---

* Graser's calculation of the capacity of the trireme at 232¼ tons seems excessive.

and hand to hand to be the normal 3 feet, and applying the scale thus obtained, the height of the Aphract trireme would appear to be even less than that assumed by M. Cartault; that is to say, apparently not more than 8 feet, if so much, from the under-side of the deck to the water-line.

As all the Attic triremes seem to have been made on the same model, their gear was interchangeable, an arrangement which, in a fleet of from 300 to 400 vessels, was of the utmost importance for refitting.

The regular crew of the Attic trireme consisted probably of 220 persons. Of these 174 were rowers, viz.: 62 thranites, 58 zeugites, 54 thalamites. To these must be added 10 epibatae, 17 sailors, 1 trierarch, 1 *κυβερνήτης*, 1 *πεντηκόνταρχος*, 2 *τοίχαρχοι*, 1 *πρωρεύς*, 1 *κελευστής*, 1 *τριηραύλης*, 1 *ἐσχαρεύς*, making the total number 220.

The number of epibatae varied greatly, and depended on the style of fighting preferred. The Athenians held to speed and dexterity in the use of the ram, and so carried but few fighting men. Xerxes' great fleet carried 30 marines to each trireme. Each Chian vessel at the battle of Lade had 40 picked men as marines on board. The Corinthians and Corcyreans had their decks crowded at the battle of Sybota; and in the great harbour of Syracuse, where there was no space for their favourite manœuvres (*Diecplus* and *Periplus*), the unfortunate Athenians found themselves obliged to imitate their enemy's tactics with disastrous results to themselves (Thuc. vii. 70).

The bulk of the rest of the ship's company consisted of the sailors, who were under the orders of the *κυβερνήτης*, and whose duties were connected with the mast and sails and tackle of the ship, and who are supposed sometimes to have manned the oars called *περίνεω* in the Attic Tables.

Besides these were the officers, five of superior rank, viz.: 1. The Trierarch or captain was supreme on board his own vessel, though under the orders of the *στρατηγὸς* when in company with the fleet (Dem. *c. Polycl.* p. 1212, § 19). Many Athenian trierarchs were no doubt practised seamen, but the state burden of trierarchy must constantly have fallen upon men less competent to command a vessel. Hence the great need of having as second in command a professional seaman. This was (2) the *κυβερνήτης*, originally the actual helmsman, but in later times the master of the vessel, under whose orders were the seamen and the whole crew. He had probably risen from the ranks, and passed through all the various stages of promotion, so as to have intimate and special acquaintance with his professional duties (Ar. *Eq.* 541). It is probable that the trierarch had to find the officers, though he might have the crew furnished by the state *ἐκ καταλόγου*. Naturally it would be of the greatest importance to him to obtain the services of a first-rate *κυβερνήτης*, on whose skill depended the navigation of the vessel and its safety at sea. The references to his art (*κυβερνητική*) in the philosophers are sufficient to show the high estimation in which it was held (Plat. *Rep.* vi. p. 448 E; *Gorg.* p. 511 D; Arist. *Rhet.* 2, 21). The inferior officers were immediately under his command, and through them the crew, especially that part which was towards the stern of the vessel. (Xen. *Anab.* v. 8, 20; *Econ.* 8, 14.)

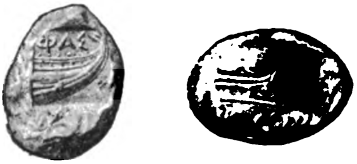
Next under the *κυβερνήτης* of the navigating officers was the *πρωρεύς* (Plut. *Agis*, 101), who had charge of the crew in the forepart of the vessel, and was also responsible for the look-out. Under him two *τοίχαρχοι* superintended the two lines of rowers, one on each side; the discipline of the motive power of the vessel being thus provided for, while the voice of the *κελευστής* and the flute of the *τριηραύλης* provided the harmony to which the pulsation of the stroke and the throb of the recovery against the thowl-pin responded in unison.

Besides these an important personage on the staff of the trireme was the *πεντηκόνταρχος*, who was immediately under the trierarch. (Dem. *c. Polycl.* pp. 1212, 1214, §§ 19, 24; Plato, *Leges*, iv. p. 507 A.) His function was to buy all the necessary stores, and to feed and pay the crew, and, in a word, to attend to the general economy of the vessel. Under his orders for these administrative purposes the *κελευστὴς* seems to have been placed.

An interesting question arises after the consideration of the construction and the motive power of the trireme; viz. what rate of speed could be obtained? Unfortunately the instances from which any deduction could be drawn with certainty as to this matter, are rare and inconclusive. The pace of sailing vessels has indeed numerous illustrations (Ap. Rhod. i. 602; Lycurgus, *Leocr.* 17 and 70; Thuc. ii. 97). The conclusion drawn as to these may be stated as giving them from six to eight miles an hour, under favourable circumstances. Now the trireme must have been able to overhaul the sailing vessel. It was a cause of terror to its enemies and admiration to its friends by reason of its speed (Xen. *Occon.* 8, 8). Yet measuring the man-power as compared with horse-power even at the ratio of 8–1, which would give, with Graser, about 24 horse-power for the propulsion of the trireme, it is difficult to obtain a very high rate of speed as a result. Graser cites an instance (Xen. *Anab.* vi. 42) in which it is stated that from Byzantium to Heraclea in Bithynia (a distance of about 150 nautical miles) could be rowed in a day by a trireme, and was a very long day's work. From this he deduces a pace of from 9 to 10 miles an hour. But the passage does not absolutely exclude the use of sails as an auxiliary motive power. Given a long vessel with fine lines, strongly built in its lower parts, with all the lines of resistance converging to the beak, which would receive the shock in ramming, while the upper works were built as lightly as would be consistent with carrying the weight of the crew and the mast and sails and their gear, we may conceive a pace of 8 or 9 knots to have been possible with a strong and well-trained crew. Such speed, if at any time, was attained by the *καλαὶ τριήρεις* of Athens in the days of her glory, when her maritime superiority was acknowledged by friends and foes alike.

At this point, before quitting the trireme, we may touch on the development of the ram or beak, and its effect upon naval tactics. Pliny refers the invention of the ram to Piseus, a

Tuscan pirate, but there is not much to support his statement. The indications given in the Egyptian wall representations (cf. p. 208) incline us to infer that the East and not the West was the parent of the invention. As we have seen, there is no indication of its existence in Homer. The Assyrian bireme given above is perhaps the earliest actual representation of the beak. In Diodorus, Semiramis is credited with the construction in Bactria of vessels of war with brazen beaks, the crews of which were furnished from Phoenicia and Syria. The early Greek types as shown on the vases present a projecting beam for a beak often fashioned into the likeness of some sea-monster's head. Behind this the line of the forecastle ascends sharply at almost a right angle. We trace in the coin of Phaselis and in the coin of Samos figured here, a tendency to fill up the angle thus formed, and the fore-part of the vessel thus assumes the look of the boar's head (cf. Herod. iii. 59), which became typical of the Samian navy. Hence the *Samaena* with which the Samian prisoners were branded by the Athenians (440 B.C.), which Plutarch explains to be the image of a kind of vessel invented by Polycrates, low in the fore-part, wide and hollow in the sides, light and expeditious for sailing, and with a curvature of prow like a boar's head (*ὑόπρωρος τὸ σίμωμα*).



Coins of Phaselis. B.C. 480.

Coin of Samos. B.C. 494.

The Attic trireme was on finer lines, the lowest waling-pieces on either side prolonged to meet a strong timber projecting from the end of the keel, which still had considerable camber, met so as to form a strong beak just above the water-level. The shock of ramming would thus be received along the line of greatest resistance. But with this exception the lightness necessary to the speed of the Athenian trireme forbade any accumulation of heavy timbers elsewhere. Hence when the Corinthians, cutting down the bows of their vessels, shortening the beaks, and greatly strengthening the two catheads on either side, determined to meet the Athenians stem-on (*προσβολή*), which was thought by the latter a clumsy and unseamanlike manœuvre, the solid work of the Dorian vessels was sufficient to receive the blow of the Athenian beak and to break up the light work behind it, while the great catheads served to tear away the *παρεξειρεσία* and parodus, and exposed the *ἔγκωπον*.

From this time, whatever might remain for skill and speed to do by way of manœuvring the trireme in the open sea, yet the increase of weight naturally led to the attempt to increase the motive power; and first, quadriremes, then quinqueremes, and then in quick succession hexeremes, octeremes, and from ten up to sixteen banks of oars ("inhabilis prope magnitudinis") came into vogue, culminating in the gigantic toy of Ptolemy, the TESSERACONTERES.

Demetrius. B.C. 294–287.

The manœuvring of a fleet can only be glanced at briefly here. Sailing in "column line ahead" (*ἐπὶ κέρως*), in as many lines as the admiral (*στρατηγός*) ordered, the fleet came when in view of the enemy into "column line abreast" by the manœuvre called *παράταξις*. The formation of a circle, especially by those who wished to stand on the defensive, is not without instances; but this formation had manifold disadvantages, as the Peloponnesians discovered to their cost in the battles against Phormio in the Corinthian Gulf (Thuc. ii. 83). The formation of a semicircle (*lunata classe*, *μηνοειδεῖ στόλῳ*) was also common (Herod. viii. 16; Lucan, iv. 45; Prop. iv. 380; Veg. iv. 45). The common manœuvres of attack were: first the *diecplus* (Herod. vi. 12, 15; Thuc. i. 49, vii. 36), rowing through the enemy's line, doing what damage was possible with missiles in passing, and then turning suddenly and ramming him before he could get round. To effect this successfully was regarded as the acme of skill. Second, the *periplus* (Xen. *Hell.* i. 6, 31; Thuc. ii. 84: Ar. *Ran.* 535), in which, while the front line attacked as usual, a portion of the squadron wheeled round (as in cavalry tactics) and took the enemy's fleet in flank.

Antigonus. B.C. 292.

Leucas. B.C. 200.

Ships lightened before naval action.—Polyb. i. 61; Liv. xxii. 14, xxxvi. 43.

Action only in calm weather.—Veget. iv. 43; Lucan, iii. 522; Liv. xxv. 27, xxvi. 39.

Action avoided in narrows by superior fleet.—Veget. iv. 46; Thuc. ii. 83 ff. (Phormio); Appian. *B. C.* v. 96 (Calvisius); Polyb. i. 49 (action of Romans with Adherbal); Liv. xxviii. 40; Diod. Sic. xiii. 49 (Athenians and Mindarus); Polyaen. iv. 6 (Nicanor).

Sails taken in before fighting and masts lowered.—Liv. xxxvi. 44; Polyb. i. 61; Xen. *Hell.* vi. 2 (Iphicrates).

Small sails used in flight.—Liv. xxxvi. 45 ("sublatis dolonibus effuse fugere"); Herod. vi. 14 (Samians, from Lade); Polyb. xvi. 15.

Orders of battle.—Liv. xxxvi. 44, xxxvii. 23; Polyb. i. 49, 61; Diod. Sic. xiii. 97.

Semicircle.—Lucian, iv. 45; Silius, xiv. 367; Polyaen. iii. 10 (Timotheus); Propert. iv. 380; Herod. viii. 16; Veget. iv. 45.

The defeat of the Athenians at Syracuse, and the success of the Peloponnesian shipwrights in their improvements in the build of their vessels, led to further innovations. The quadrireme (Plin. *H. N.* vii. § 57; Diod. xiv. 41, 42, probably invented by Carthaginians and adopted by Dionysius of Syracuse, about 400 B.C.) added the motive power of 66 more oars to a length and breadth but slightly increased. The quinquereme, which practically superseded the trireme as the typical *man-of-war* in the 3rd and 2nd centuries, had a complement of 300 oarsmen, according to Polybius (i. 26, 7), while the increase in height and general dimensions was not very great. The Athenians appear to have had a certain number of quadriremes in their navy by 330 B.C.; the first quinqueremes mentioned in the Attic Tables (Boeckh, *Urk.* xiv.) belong to 325 B.C.

The following table gives the relative proportions, according to Graser:—

	Trireme.	Quadrireme.	Quinquereme.
Length	149	158½	168
Breadth at water-line .	14	16	18
Greatest breadth . .	18	22	26
Height of deck above water-line. . . .	11	13	15
Draught	8½	10	11½
Total height. . . .	19½	23	26

These figures in all probability admit of some reduction, but the proportion may be regarded as correct.

Graser gives the number of rowers thus:—Trireme, 174; quadrireme, 240; quinquereme, [illegible]: hexeres, 384; hepteres, 462; octeres, 514; enneres, 630; deceres, 720.

The quinquereme was soon exceeded, though not superseded, by larger rates. It plays the most important part in naval history up to the time of Actium, when with the victory of the Liburnians the larger rates fell into disrepute, and the art of constructing them gradually decayed. (The student will find interesting descriptions of naval actions and manœuvres in Xen. *Hell.* i. 6, i. 1, vi. 2; Polyb. xvi. 2–9.)

The Romans, though not a seafaring people, appear from the treaty with Carthage to have been familiar with the sea, and to have had maritime interests as early as the time of the Kings. The existence of duumviri navales, officers charged with repairing the fleet, the right of electing whom was transferred to the people in 311 B.C., proves that the state had, at that time and previously, some naval force. And coins of a date as early as 350 bear the representation of the bows of a ship, of a type more rude and bluff than the Greek, but still very possibly borrowed from the Greek cities in Magna Graecia. In the instances exhibited by the coins, which belong to the half-century preceding the First Punic War, there are apparently two varieties of construction. In one the depression of the beak is remarkable, and the timbers which support it appear to be compacted with cross-pieces. These vessels were probably triremes. In the year 303 B.C. a treaty was made with the Tarentines, by which the Lacinian Promontory was made the boundary beyond which the Roman war-ships were not to pass. L. Cornelius in 282 B.C. violated that treaty, and was defeated by the Tarentines with the loss of half his fleet. The Samnite wars seem to have diverted the attention of the Romans entirely from maritime affairs, and at the beginning of the Punic wars they were practically without a fleet. ~~They then~~ first seem to have realised ~~the~~ fact that in the conflict which was before them, the mastery of the Mediterranean was an absolute necessity, not only for the protection of their own coasts, which already had suffered from the descents of the Carthaginian fleets, but also as the first step towards empire (Polyb. i. 20, 21). Hence in the year 260 B.C., when a Carthaginian quinquereme which had been driven on shore fell into their hands, they determined to construct a fleet of similar vessels. No less than 100 were built in six weeks, while their future crews were practised rowing in frame-work set up on land. Cn. Cornelius with seventeen of these vessels sailed in advance to attack the Carthaginians. He was himself attacked and taken with all his vessels. Duilius, who then took the command of the fleet, by the invention of the *corvus* (Polyb. i. 22, 23)—a swinging bridge with a heavy iron spike, which, when let fall on the enemy's deck, not only grappled his

Roman coin. B.C. 350.

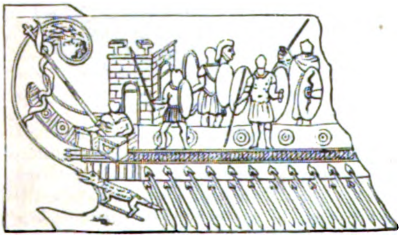
Roman coin. B.C. 91.

Roman coin. B.C. 38.

vessel, but gave the boarders access to it—was enabled to neutralise the ramming tactics of the Carthaginians and their superior naval skill. The battles of Mylae and of Ecnomus, in which the Carthaginians were defeated with great loss, were the prelude of maritime dominion to Rome. The importance of the ram was thus much diminished, and in the coins of the century following we see the ram much less projecting and apparently less strongly supported. On the other hand, the δελφίς, great beams and great grappling hooks, iron hands, and *falces* with curved steel heads, such as those with which the sailing vessels of the Veneti were crippled by Caesar off the coast of Gaul (Caes. *B. G.* iii. 14), came into use and favour. Great towers—*turres* ("alta navium propugnacula")—were placed in the bows,—whence our term "forecastle,"—from which missiles could be showered on the enemy's deck. Vipsanius Agrippa is credited by Servius with an invention by which these could suddenly be raised when coming into action, so as to take the enemy by surprise. In all the naval battles in which the Roman fleets engage, the main object of their tactics seems to be to leave as little as possible to seamanship and skill, and to come to close quarters and a hand-to-hand fight as soon as possible. In a word, boarding-tactics superseded ramming tactics.



Bireme. (From Winckelmann, *Mon. Ined.* 207.)

(The student will find interesting accounts of Roman naval actions in Polyb. i. 61;—Liv. xxxvi. 44, 45; xxxvii. 24, 30.)

As early as 190 B.C. the use of fire (Liv. xxxvii. 30) in a naval action is mentioned. Later, Siphons, the precursors of artillery, launched Greek fire rocket-fashion against the enemy.

The Liburnian galleys were biremes (Lucan, iii. 534: "ordine contentae gemino crevisse Liburnae"). According to Suidas, *Λιβυρνικαὶ ἦσαν οὐ κατὰ τὸν τριηραρχικὸν* (lege *τριηρικὸν*) *ἐσχηματισμέναι τύπον, ἀλλὰ ληστρικώτεραι χαλκέμβολοί τε καὶ ἰσχυραὶ καὶ κατάφρακτοι καὶ τάχος αὐτῶν ἄπιστον*. The name seems to have been taken from the vessels of the Liburnians, an Illyrian race, inhabiting the islands of that coast and much given to piracy. The name Liburnian, in the same way as the name trireme, came afterwards to be used for any ship of war. (Appian, *Mithr. proem.*; Vegetius, iv. 57.)

Coin of Hadrian.

In the time of Trajan, some attempt was made to build larger rates than biremes, and Valentinian had quinqueremes constructed. But in the Byzantine period no vessels with more banks than two appear; and the tendency is to return to single banks, which, according to the Emperor Leo (*Tactica*), are called *γαλαῖαι*, "galleys."

Under the Emperors two great naval stations were established for the fleets that were intended to keep the peace of the Mediterranean: (1) at Ravenna, for the east; and (2) at Misenum, on the Campanian coast, for the west. There were also guard-ships regularly stationed on the coast of Gaul at Forum Julii (Fréjus) and Portus Herculis Monoeci (Monaco). But after Actium there is little to interest us in naval affairs, with the exception perhaps of Germanicus's operations in the North Sea, and at a later date the war with the Vandals, for which Procopius is our authority, until the time of the Byzantine Emperor Leo (800 A.D.). No student of naval history should omit to read the chapters of the *Tactica* which refer to the construction and equipment of a fleet. In the following centuries came the invention of the "Apostis" (a projecting framework, upon the edge of which were set the thowlpins, thus enabling oars of greater length to be used) and the birth of the mediaeval galley, which, with its construction "alla Scaloccio" and its long sweeps worked by several men, was a vessel quite distinct from the ancient men-of-war.

One point remains yet for consideration, viz. the manning of ancient navies. In the fleet of Agamemnon, as we have seen, they were *αὐτερέται καὶ μάχιμοι πάντες*. The Athenian fleet was manned in its best days by freemen. Xenophon (*de Republ. Athen.*) tells us that the seafaring habits of the Athenians were such that every one knew how to handle an oar, and that the crew of a trireme could be got together at once. At the time of the Peloponnesian War, the pay of an ordinary oarsman was three obols a day, increased towards the end of the war to four obols. The pay of the thranites was higher, their services being valued at a drachma. Raising the pay of seamen during hostilities was a favourite expedient with a view to induce the enemy's crews to desert. There were, however, many causes that led to the employment of forced labour, and with it to the deterioration and unpopularity of sea-service. The absolute discomfort in a cataphract ship must have been extreme. In a hot climate, with little ventilation, the participation with 200 or 300 human beings, all stark naked, packed so closely that there was not room for one man more (Cic. *Verr.* v. 51, 133, "Ea est enim ratio instructarum ornatarumque navium ut non modo plures sed ne singuli quidem possint accedere"), in a laborious mechanical toil, could only have been voluntarily endured under the pressure of some great necessity or sense of duty. The heat, the smells, the drudgery, must have been terrible; and we can understand the desire of the Ionians at Lade to be free from the severe discipline of Dionysius. Besides the discomfort, the actual danger was very great. The crews might at any time be drowned or burnt, or as at Sybota (Thuc. i. 50) butchered perhaps in cold blood. We have only to think of the moment of conflict,—the crash of the beak through the timbers, and the mangled mass of humanity hurled into the bilge, while the water swiftly followed the blow, the thranites perhaps escaping, but the lower ranks almost certainly drowned—and it is easy to understand how the service was avoided by the free and left to the slave.

The Romans manned their fleet by levies from the lowest orders and forced service of the allies. The greater proportion of the crews were slaves contributed as substitutes, and it is this fact perhaps which explains the equanimity with which such wholesale loss of life at sea as is recorded by Polybius (bk. i.) was endured. Among the Romans themselves, service on board ship was most unpopular; and it is not surprising to find discontented classiarii wishing to be transferred to the legions, "in spem honoratioris militiae" (Tacitus).

[Citizens: "In classem scripti," Liv. xxii. 56; Polyb. vi. 17. Allies: Liv. xxxii. 8; xxxvi. 4. Libertini, Liv. xl. 16; xlii. 27. Servi: Liv. xxiv. 11; xxvi. 35. Criminals: Val. Max. ix. ult.; Appian, bk. v.]

Smaller vessels.—**Ἄκατος, ἀκάτιον,** cutter, (?) yacht: Schol. Ar. *Lys.* 64, εἶδος πλοίου ἁλιευτικοῦ; Thuc. iv. 67; *Etym. Magn.* s. v.; Pind. *Nem.* v. 5. Sometimes carried on board ship: Agathias, iii. 21, 97, *νῆες φορτίδες μεγάλαι μετεώρους εἶχον τὰς ἀκάτους*; Plin. *H. N.* ix. § 94, "acatii modo carinatam, inflexa puppe, prora, rostrata;" Strabo, λεπτά, στενὰ καὶ κοῦφα ὅσον ἀνθρώπους πέντε καὶ εἴκοσι δεχόμενα, σπάνιον δὲ τριάκοντα τοὺς πάντας δέξασθαι δυνάμενα.

Κέρκουρος, *cercurus*, cutter: Plin. vii. § 56, invented by Cyprians. Not small: Diod. I. 61; with a long stern, Schol. Ar. *Pax*, 142; smaller than penteconter, Herod. vii. 97.

Καράβια, κάραβοι, shallop; the name origin of mediaeval caravel, and our carvel-built (Hesych.; *Etym. Mag.* s. v.).

Λέμβος, *lembus*: Liv. xxxiii. 33. Next in size to *cercurus*, used as scouts: Polyb. i. 53, 9; Thuc. ii. 83, Schol. Swift, with fine bows and light draught: Ar. *de animi incess.* 10; Polyb. xx. 85; Liv. xxxiv. 25. Sixteen oars, generally more. [LEMBUS.]

Κέλητες, *celoces*, avisos: Xen. *Hell.* i. 6, 26; Thuc. iv. 9. Pirate craft: Thuc. iv. 9; Polyb. v. 62, δίκροτα καὶ κέλητες, "narrow and swift."

Ἐπακτροκέλητες, a modification of the former: *Etym. Mag.*, ἐπακτροκέλης συνετέθη ἔκ τε κέλητος, καὶ ἐπακτρίδος. Πλοῖα δὲ λῃστρικὰ βραχέα ἡ μὲν ἐπακτρὶς ἐκ τοῦ κατάγειν τὰ συλώμενα ὁ δὲ κέλης εἰς τὸ διώκειν καὶ φεύγειν κουφότατος.

Μυοπάρωνες, *myoparones*, small pinnaces chiefly used by pirates: Cic. *in Verr.* passim. Sails and oars, generally more than six.

Actuariae.—All the above-mentioned vessels belong to this class, *μονήρεις μονόκροτοι.* Hence used as a general term opposed both to the πολυήρεις and to *onerariae*: Caes. *B. G.* v. 1. Number of oars varied: Liv. xxxviii. 38, "naves actuarias, nulla quarum plus quam triginta remis agatur, habeto;" Cic. *Ep. ad Att.* xvi. 3, "tribus actuariolis decem scalmis."

Phaselus = bark; name used also poetically (Catull. 4, &c.); might be large or small (Sall. *Jug.* 3, "cohors una grandi phaselo vecta"); not a ship of war.

Γαῦλοι, *onerariae*: Ar. *Av.* 592. Phoenician originally: Callim. *Fr.* 217; Herod. iii. 136, viii. 97.

Ἡμιόλιαι. Furnished with 1½ banks of oars.

Τριηρημιολία, with only half the thranitic bank. Cp. Pol. xvi. 2, where a vessel of this class is pierced under the θρανιτικὸς σκαλμός, not decked throughout (Hesych.): so more room obtained for the ἴκρια, by the reduction of the upper bank, which rowed only amidships.

Glossary of certain Naval Terms, not explained above.

Ἄγκοινα, *anquina*: Isid. xix. 47, "Anquina funis quo ad malum antenna constringitur;" *Attic. Tab.* 3122, ἄγκοινα[ν] διπλῆν.

Ἀκροστόλιον: used of ornament both at bow and stern (cf. ἀκροκόρυμβα); but more properly of the bow ornament: ἄφλαστον and κορώνη of the stern.

Ἄσκωμα. Leather bags fitting over the oar at the oar ports, to prevent the wash of the sea from entering. Zonar. *s. v.*; Suidas; Schol. *Ran.* 367; *Acharn.* 97.

Δρύοχοι. *Etym. Mag.* gives the true interpretation: ξύλα ὀρθὰ ἐφ' ὧν ἡ τρόπις ἐρείδεται τῆς πηγνυμένης νεώς, ἤγουν στηρίγματα. Eustath. p. 1878, 63; p. 1879, 4, πάσσαλοι ἐφ' ὧν στοιχηδὸν διατεθεμένων ἡ τρόπις ἵσταται τῶν καινουργουμένων νεῶν διὰ ἰσότητα. Plat. *Tim.* p. 81 B, στηρίγματα τῆς πηγνυμένης νεώς. Hesych., δρύακες τῶν ξύλων τῶν βασταζόντων τὴν τρόπιν τοῦ πλοίου. It is clear that they were the pieces of timber which supported the keel of a vessel while building. They had to be carefully adjusted in a line, and on a level or slight incline. Hence the use of the term as regards the setting of the axe-heads in the Odyssey (xix. 574).

Ἔδαφος, floor, either actual of the vessel (Dem. *Zenoth.* 883) or the lowest deck above the bilge—our orlop deck.

Ἐπίσειον, according to Cartault, the piece between the stern-post and the aphrasta, just as the στόλος is between the stem-post and the acrostolium. (Pollux, i. 90, MS. ὑπηρτημένον.)

Ἠλακάτη, the stem part of the mast, above the καρχήσιον. (Ap. Rhod. i. 565, Schol.)

Καταβλημα. Probably an awning, possibly of skin, to keep off missiles from deck. (Cf. Athenian preparation against grappling irons at Syracuse.)

Κρίκοι. Rings set in eyelet-holes for ropes to pass through, either on the borders or at the corners of sails. Herod. ii. 36: τῶν ἱστιῶν τοὺς κρίκους καὶ τοὺς κάλους οἱ μὲν ἄλλοι ἔξωθεν προσδέουσι, Αἰγύπτιοι δὲ ἔσωθεν.

Νομεῖς. Graser, "waling-pieces;" Cartault, "couples." Phot., ἐγκοίλια πλοίου: Hesych., ξύλα περιφερῆ· ἐγκοίλια πλοίου: Herod. i. 194, ii. 96. The passages seem to leave it doubtful as to whether "waling-pieces," *i.e.* longitudinal pieces from stem to stern, or "ribs" from keel to gunwale, are intended.

Παραβλήματα: Xen. *Hell.* i. 6, 19; *vid. seq.*

Παραρρύματα. Suid. δέρρεις, σκεπάσματα. Two kinds appear in the Attic Tables, τρίχινα and λευκά. The former probably were of skin, the latter of felt (*cilicium*). The former used probably along the πάροδος, and the latter along the τράφηξ or deck-rail, as a protection against missiles. (Boeckh, *Urkun.* p. 159.) [PLUTEI.]

Siparum, Supparum. Isid. *Orig.* xix. 32: "Siparum genus veli unum pedem habens quo navigia juvari solent in navigatione quoties vis venti languescit." Sen. *Ep.* 77: "Subito hodie nobis Alexandrinae naves apparuerunt . . . omnis in pilis Puteolorum turba consistit et ex ipso velorum genere Alexandrinas intelligit solis enim licet supparum intendere." A triangular topsail, which all merchant vessels except the Alexandrian corn-ships were obliged to strike on coming into harbour. (Cf. Senec. *Med.* 327; Lucan, *Phars.* v. 429; Schol. "vela minora in modum Δ litterae."

Ταρρός, ταρρὸς ἐντελής. Of the whole equipment of oars for a trireme, Attic Tables; properly of the blade of the oar, Ar. *Nub.* 226, Schol. So τάρρωμα.

Τέρθριοι. Kinds of κάλοι used for brailing the sails. Clue lines, or leech lines, or brunt lines. Hesych.: οἱ εἰς τὸ κέρας τοῦ ἱστίου ἑκατέρωθεν δεδεμένοι ἐν οἷς τὸ ἄρμενον ἕλκουσι.

Τέρθρον. Galen. ii. p. 645: κυρίως μὲν οὕτως ὀνομάζεται τὸ ἄκρον τῆς κεραίας.

Τράφηξ. Hesych.: τὸ τῆς νεὼς χεῖλος. So *Etym. Mag.* and Tzetzes, *ad Lyc.* 641. The gunwale, in which in small vessels the thowls were fixed. In larger vessels the balustrade or lattice-work, through parts of which oars were used sometimes. See figures of vessels on Col. Traj.

Τροπός, τροπωτήρ. The thong which fastened the oar to the thowl (τροποῦσθαι). (Hesych. *s. v.*; Aesch. *Pers.* 376; Hom. *Od.* iv. 728; Thuc. ii. 93.)

Ὑπηρέσιον. The oarsman's cushion. (Cf. Ar. *Eq.* 785, Schol.)

Ὑπόβλημα. (?) A tarpaulin used to cover the oar-ports when sailing. (Graser, *R. N.* 82.)

Ὑποζώματα. Strong cables stretched lengthwise from stem to stern, which, shrinking when wetted, helped to tighten the vessel, and relieve the strain upon her from the motion of the stroke when rowing. Frequently mentioned in Attic Tables. Two apparently furnished to each trireme. In Egyptian vessels, one apparently from stem to stern over crutches to prevent vessel hogging (see cut 2 on p. 208). Cf. Ap. Rhod. i. 367. Plato (*Rep.* x. p. 616 C) compares the Milky Way to the ὑποζώματα of a trireme.

List of articles of equipment for one trireme from Attic Tables.—1 ἱστὸς μέγας, 1 ἱστὸς ἀκάτειος, 2 κεραῖαι μεγάλαι, 2 κεραῖαι ἀκάτειοι, 1 ἱστιον, ταρρὸς ἐντελής, 2 πηδάλια, 2 κλιμακίδες, 3 κοντοί, 2 παραστάται, 2 ὑποζώματα, 1 ἄγκοινα, 2 ἱμάντες, 2 πόδες, 2 ὑπέραι, 1 χαλινός, 2 παραρρύματα τρίχινα, 2 παραρρύματα λευκά, 1 κατάβλημα, 1 ὑπόβλημα, 4 σχοίνια ἀγκυρεῖα, 4 σχοίνια ἐπίγυα, 2 ἄγκυραι, μηρύματα καλῳδίων, 30 κῶπαι περίνεῳ.

W.]

NAUMACHIA was the name given to the representation of a naval battle among the Romans, and also to the places where such exhibitions took place. These sham fights were sometimes arranged in the Amphitheatre, sufficient water being introduced to float the ships [AMPHITHEATRUM, Vol. I. p. 113]; but more frequently in places specially constructed for the purpose, that is, vast basins faced with stone and surrounded by stone seats, like an amphitheatre.

The first representation of a sea-fight was given B.C. 46 by Julius Caesar, who caused a basin to be dug for the purpose in a district called Codeta Minor (Suet. *Jul.* 39; Dio Cass. xliii. 23), which, according to Friedländer and Marquardt, was in the Campus Martius. According to Burn (*Rome and Campagna*, p. 268), the Codeta Major was in the Campus, the Codeta Minor in the Transtiberine region: both derived their name from the abundance of marestail (*equisetum*) which grew there. The second was given by Augustus, B.C. 2, at the dedication of the temple of Mars Ultor, and for this purpose a basin was dug, 1800 feet by 1200, probably in the gardens of Caesar in the Transtiberine region. It is pretty clear from the wording of the inscription of Ancyra, "Navalis praelii spectaculum dedi trans Tiberim in quo loco nunc nemus est Caesarum, cavato solo," &c., that the construction was in a new place, and not, as Burn says, an enlargement of Julius Caesar's basin. Even about the site of this naumachia there is some question, since Dio Cass. lv. 10 places it in the Circus Flaminius, and in Tacitus there are various readings, *cis* and *trans* Tiberim. We may, however, best conclude that (as stated in the *Mon. Ancyr.* and in Suetonius) the naumachia of Augustus was in the *horti Caesaris*, on the further side of the river, and that its site is marked by remains recently found. (See Middleton's *Rome*, p. 291; Burn's *Rome and Campagna*, p. 268.) This naumachia continued in use after others had been made (the *Notitia* speaks of five), and was subsequently called *vetus naumachia* (Suet. *Tit.* 7). Dio Cass. lxi. 9 speaks of it as the place where Nero gave a public banquet. The most remarkable naumachia was that given by Claudius, A.D. 52, on Lake Fucinus, to celebrate the draining of the lake (but before the completion of the work), where 19,000 men dressed as Rhodians and Sicilians manœuvred in the fight with fifty ships on each side, the spectators being grouped on the shore and the surrounding hills, as on the tiers of seats in an amphitheatre: the signal for battle was given by a trumpet, sounded by a silver image of a Triton. (Suet. *Claud.* 21; Tac. *Ann.* xii. 56.) Nero's naumachiae are mentioned by Dio Cass. lxi. 9, lxii. 15; but they seem to have been sometimes in the amphitheatre, sometimes in the *stagnum Neronis*, a great basin in Nero's Golden House, on the site where the Flavian Amphitheatre or

Colosseum was afterwards built (Mart. *Spect.* 2). Titus used the *vetus naumachia* of Augustus, but Domitian had a new and larger lake dug below the Vatican ("in a new place," Dio Cass. lxvii. 8). He afterwards pulled it to pieces and used the stone to replace the wooden seats of the Circus Maximus which had been burnt (Suet. *Dom.* 4, 5). Naumachiae were not confined to Rome: on the contrary we can have no doubt that they took place in many provincial amphitheatres. In the amphitheatres at Capua and Nimes, for instance, the arrangements for flooding the amphitheatre have been traced.

The combatants in these sea-fights, called *naumachiarii* (Suet. *Claud.* 21), were captives (Dio Cass. xlviii. 19), or criminals condemned to death (Dio Cass. lx. 33), who fought as in gladiatorial contests till one party was killed, unless preserved by the clemency of the emperor (cf. Suet. *Claud.* 21). The ships were divided into two parties (cf. the domestic imitation mentioned in Hor. *Ep.* i. 18, 61), and the crews were dressed to represent different maritime nations, as Tyrians and Egyptians (Suet. *Jul.* 39), Rhodians and Sicilians (Suet. *Claud.* 21; Dio Cass. lx. 33), Persians and Athenians (Dio Cass. lxi. 9), Corcyraeans and Corinthians (Id. lxvi. 25). These sea-fights were exhibited with the same magnificence and the same lavish expenditure of human life which characterised the gladiatorial combats. In Nero's naumachia there were sea-monsters swimming in the lake (Suet. *Ner.* 12); the magnificence of the naumachia given by Claudius is mentioned above: in the games exhibited by Titus in the vetus naumachia of Augustus, we find on the first day the basin covered with planks supported on piles forming an arena for gladiators and a *venatio*, on the second day a chariot-race, on the third a naval combat of 3000 Athenians and Syracusans, in the course of which the Athenians landed on an island in the basin and took a fort there. Martial, however (*Spect.* 24), vaunts the naumachia of Domitian as superior to all that went before. (See also Friedländer, *Sittengeschichte*, ii. 367 ff.; Marquardt, *Staatsverwaltung*, iii. 558 f.) [W. S.] [G. E. M.]

NAUTA. [NAVIS.]

NAUTICON (*ναυτικόν*). [FENUS.]

NAUTO'DICAE (*ναυτοδίκαι*) were judicial authorities in disputes between merchants (*ἔμποροι*) who carried on traffic by sea, and in suits against foreigners who usurped the rights of citizenship; in other words, in the *δίκαι ἐμπορικαὶ* and *δίκαι ξενίας*. The connexion of the two classes of cases may be explained by the fact that the trading metoecs were just the most likely men to get themselves wrongly enrolled as citizens (Schömann, *Antiq.* i. 474, E. T.). The nautodicae were appointed every year by lot in the month of Gamelion (Lys. *Or.* 17, *περὶ δημοσ. ἀδίκ.*, § 5), and probably attended to the *δίκαι ἐμπορικαὶ* only during the winter, when navigation ceased, whereas the *δίκαι ξενίας* might be brought before them all the year round. There can be no doubt that they dated from an early period of Athenian history, when it was sufficient for a man to be a citizen if only his father was a citizen, whatever his mother might be; that is, previous to the time of Pericles (Plut. *Pericl.* 37; compare CIVITAS, p. 444 *b*).

In what precise capacity they administered these suits was formerly a matter of dispute, some grammarians calling them *δικασταὶ* or jurymen (Hesych. *s. v.*; *Lex Seguer.* p. 283, 3), others *ἀρχαὶ* or *εἰσαγωγεῖς*, presiding magistrates (Poll. viii. 126; Harpocrat., Suid., *Lex. Rhet.* s. v.). The weight of authority was in favour of the latter view; but a difficulty was found in the fact that, in the time of Demosthenes and the orators contemporary with Philip of Macedon, the suits in question are shown to have been tried before the Thesmothetae. The only orator who mentions the nautodicae belongs to an earlier period (Lys. *l. c.* §§ 5, 8), and is clearly in favour of their having been an *ἀρχή*. But in all the speeches of Demosthenes no trace occurs of them, and in that against Lacritus (p. 940, § 47 ff.), where all the courts are mentioned before whom such a case as that of Lacritus might be brought, the orator could scarcely have failed to include the nautodicae if they had still existed in his time. Hence Boeckh (*P. E.* p. 49, and with slight modification in his later view, *Sthh.*³ i. 64) thought that the thesmothetae had the *ἡγεμονία δικαστηρίου*, while the nautodicae sat as a jury under them. The better attested opinion that they were a magistracy is now shown to be correct by an inscription (*C. I. A.* i. 29, *οἱ ναυτοδ[ίκαι . . . τ]ὸ δικαστήριον παρεχόντων*, *i.e.* shall be the *εἰσαγωγεῖς* of the case; Lips. *Att. Process*, p. 96; Fränkel, n. 92 on Boeckh). The difficulty vanishes if we suppose that the *δίκαι ἐμπορικαὶ* in the middle of the 4th century, when they became *δίκαι ἔμμηνοι* [EMMENOI DIKAI], were taken from the nautodicae and transferred to the thesmothetae; and that as the principal occupation of the former was gone, the *δίκαι ξενίας* were likewise transferred to the thesmothetae, and the office of the nautodicae was abolished. If Lucian mentions them in a dialogue supposed to have taken place after the death of Alexander, this is not the only similar anachronism in his writings (Lucian, *Dial. Meretr.* 2, § 2 = p. 282 R.; Lipsius, *Att. Proc.* p. 97 n.). The notion of Schömann (*Antiq.* l. c.) that the nautodicae judged the *ἐμπορικαὶ δίκαι* themselves, while they prepared *δίκαι ξενίας* for trial and brought them before the Heliastic courts, is an unnecessary attempt to reconcile the grammarians; for we find *δικάζειν* and *δικαστὴς* occasionally used of magistrates in their capacity of *εἰσαγωγεῖς* (cf. *Att. Process*, p. 43 Lips.). (Baumstark, *de Curatoribus Emporii et Nautodicis apud Athenienses*, Freiburg in Breisgau, 1828, pp. 65–78; *Att. Process*, pp. 95–98 Lips.; the old edition pp. 83–86 is much less satisfactory.) [L. S.] [W. W.]

NEBRIS, a fawn's skin (from *νεβρός*, a fawn; see AEGIS), worn originally by hunters and others as an appropriate part of their dress, and afterwards attributed to Dionysus (Eurip. *Bacch.* 111, 126, 176; Aristoph. *Ranae*, 1211, &c.), and consequently assumed by his votaries in the processions and ceremonies which they observed in honour of him. [DIONYSIA.] The annexed woodcut, taken from Sir W. Hamilton's *Vases* (i. 37), shows a priestess of Bacchus in the attitude of offering a nebris to him or to one of his ministers. The works of ancient art often show it as worn not only by male and female bacchanals, but also by Pans and Satyrs.

It was commonly put on in the same manner as the aegis, or goat-skin, by tying the two fore-legs over the right shoulder so as to allow the body of the skin to cover the left side of the wearer. (Ovid. *Met.* vi. 593.) [J. Y.]

Nebris, fawn's skin. (From Greek vase.)

NECRODEIPNON (*νεκρόδειπνον*). [Funus.]

NECY'SIA (*νεκύσια*). [Funus.]

NEFASTI DIES. [Dies.]

NEGATI'VA, NEGATO'RIA ACTIO. [Confessoria Actio.]

NEGLIGE'NTIA. [Culpa.]

NEGOTIATO'RES (*οἱ πραγματευόμενοι* or *ἐργαζόμενοι*, *C. I. G.* 2053) signified specially during the later times of the Republic Roman citizens settled in the provinces, who lent money upon interest or bought up corn on speculation (Caes. *B. G.* vii. 3), which they sent to Rome as well as to other places. Their chief business, however, was lending money upon interest as usurers; and hence we find the words *negotia*, *negotiatio*, and *negotiari* used in this sense. The *negotiatores* are distinguished from the *publicani* (Cic. *ad Att.* ii. 16, "malo *negotiatoribus* satisfacere, quam *publicanis*:" comp. Cic. *Verr.* ii. 3, 7; *pro Flacc.* 16, 38; *pro Leg. Manil.* 7, 18), and from the *mercatores* (Cic. *pro Planc.* 26, 64, "*negotiatoribus* comis, *mercatoribus* justus"). That the word *negotiatores* was, during the later times of the Republic, always used in the signification above given, is amply proved by Ernesti in the treatise quoted below, and is also sufficiently clear from the following passages:—Cic. *pro Flacc.* 29, 71; 37, 92;—*Verr.* 60, 137; *ad Q. Fr.* i. 1;—Hirt. *B. Afr.* 36. Hence the *negotiatores* in the provinces corresponded to the *argentarii* and *feneratores* at Rome; and accordingly we find Cicero giving the name of *feneratores* to certain persons at Rome, and afterwards calling the very same persons *negotiatores* when they are in the provinces (Cic. *ad Att.* v. 21, vi. 1–3). The negotiatores, like the publicani, belonged to the Equestrian order, but men of senatorial rank, though forbidden so to trade themselves, indirectly shared the gains, in return for their countenance and support. Cato the elder was a creditable exception to this, and exerted himself to protect the provincials (Liv. xxxii. 27; Plut. *Cat.* 6); but to show the extent of the evil we need only cite the instance of M. Junius Brutus, who (acting of course through another, the negotiator Scaptius) lent money to the state of Salamis in Cyprus at 48 per cent.: Scaptius demanded 200 talents for 106 received, and, having obtained troops from Appius Claudius, proconsul of Cilicia, so maltreated the senate of Salamis that five senators died. Cicero, the next proconsul, had honesty enough to desire a moderate and just settlement of the debt, but lacked the resolution to enforce it. (Compare Ernesti, *De Negotiatoribus*, in his *Opuscula Philologica;* Marquardt, *Staatsverwaltung*, i.^{2} 542.) [W. S.] [G. E. M.]

NEGOTIORUM GESTORUM ACTIO. *Negotiorum gestio* is the intentional management of another person's affairs or business without instructions (*mandatum*) or any official obligation to do so, and was first recognised as ground for an action (*quasi ex contractu*, Inst. iii. 27, 1, and, in character, *bonae fidei*) between the principal and the would-be agent by the praetorian edict *utilitatis causa* (Dig. 3, 5, 1, 3).

The intention of the *negotiorum gestor* must be to act on behalf of *another* person, even though his motive may also be self-seeking (Dig. 3, 5, 20): his duties practically coincide with those of a duly commissioned agent [Mandatum]; the chief of them being to bestow the care and attention of a "bonus paterfamilias" [Culpa] on the business he has taken in hand, so that he was responsible for *exacta diligentia*, and in some cases he was liable even for *casus* or accident (Dig. 3, 5, 3, 9; *ib.* 10). Naturally, too, he was bound to deliver up to his principal all property or profit which came to him from the transactions he undertook (Dig. *ib.* 2). These duties were enforced by *actio negotiorum gestorum directa.*

The gestor may have a converse remedy (*actio negotiorum gestorum contraria*) against his principal for all reasonable costs and expenses incurred on the latter's behalf, with interest, and for indemnity against all liabilities undertaken in his interest (Dig. *ib.* 10), provided (1) the principal had not prohibited his interference (Cod. 2, 19, 24); (2) his intention was to lay the principal under a legal obligation (Dig. 10, 3, 14, 1), and not one of Liberalitas or Pietas: if his object was his own sole advantage, he could sue the principal only so far as the latter had derived material benefit from his action (Dig. 3, 5, 6, 3); (3) the state of the principal's affairs was such that, except for the gestor's intervention, he would be seriously prejudiced (Dig. 44, 7, 5, pr.). If this was the case, the gestor could recover, even though the anticipated benefit was as a fact not realised: or, as it is sometimes put, the negotia need not have been "utiliter gesta," it is enough if they were "utiliter coepta" (Dig. 15, 3, 10, 1; *ib.* 12, 2); *e.g.* if he paid for medical attendance on a sick slave, who died notwithstanding all his care. Where the interference was not warranted by genuine necessity, but the gestor's object was merely to secure a great advantage for the principal, he could recover only so far as the advantage actually went (Dig. 15, 3, 11; *ib.* 43). To the rule as to prohibition by the principal there was an exception in the case of burying a dead body, if the gestor had good reasons for disregarding the injunction (Dig. 11, 7, 14, 3).

It seems to have been a question among the classical jurists whether ratification of the gestor's proceedings by the principal converted the relation from *negotiorum gestio* into *mandatum* or not: Ulpian (Dig. 42, 1, 60) decides it in the affirmative, while Scaevola (Dig. 3, 5, 9) maintains the opposite. Perhaps the solution of this conflict in the authorities is that after ratification the gestor could treat his principal as mandator, though the latter, ratification being merely a unilateral act, was not entitled to treat the former as mandatarius: though it is maintained by some writers, on the authority of Cod. 5, 16, 25; 4, 28, 7, pr., that Justinian confirmed the view of Ulpian.

See the article on Negotiorum Gestio in Holtzendorff's *Rechtslexicon*, where monographs on this topic by Chambon, Dankwart, Köllner, and others are referred to. [J. B. M.]

NE'MEA (Νεμέα) was a valley in Argolis, between Kleonae and Phlius. It was the reputed scene of many famous mythical events. Here (it was said) Argos had watched Io: and here Heraklês slew the lion. Pausanias (ii. 15, 2) relates that in his time the den of the Nemean lion was pointed out in a mountain range, a little less than two miles from Nemea. And here too, in historic times, stood a splendid temple of Nemean Zeus, with a sacred enclosure (ἄλσος, not to be rendered "grove"), in which the Nemean games (Νέμεα or Νέμεια) were held (Strab. viii. p. 377). Pindar describes the locality of these games by a variety of imaginative expressions: *e.g.* Νεμεαίου ἐν πολυυμνήτῳ Διὸς ἄλσει (*Nem.* ii. 4, 5); ἀσκίοις Φλιοῦντος ὑπ' ὠγυγίοις ὄρεσιν (*Nem.* vi. 45, 46); χόρτοις ἐν λέοντος (*Olymp.* xiii. 44). The valley of Nemea from its situation belonged naturally to the people of Kleonae, who for a long time were presidents of the games (ἀγωνοθέται). But, before Olymp. 53, 1, the Argives obtained possession of the temple and the presidency at the games. At a later time the Kleonaeans recovered the right of presiding, but did not retain it (Pind. *Nem.* x.; Pausan. ii. 15, 3).

In *prehistoric* times we find the institution of the Nemean festival connected with the expedition of the Seven against Thebes (Apollodor. iii. 6, 4), or with the slaying of the Nemean lion by Heraklês (Schol. Pind. *Nem.*). Writers who held the former opinion uniformly describe the festival as an ἀγὼν ἐπιτάφιος, established to commemorate the youth Archemoros, who was killed by a serpent (Apollodor. *l. c.*), but differ as to the particular Archemoros whose death was thus honoured. Some represented him to have been the son of Lycurgus, king of Nemea, while others (among whom was Aeschylus) related that he was the son of Nemea, daughter of Asopus (Schol. Pind. *Nem.*). Apollodorus in the passage referred to gives the names of the victors, together with the contests in which they were victorious at the first Nemean games. The second celebration of these games is attributed by Pausanias (x. 25, 2, 3) to the Epigoni.

As regards the first *historic* occurrence of the festival, we have but scanty evidence. In its local character it had no doubt been in existence from immemorial antiquity; but not until long after the Olympic games had become famous did those of Nemea rise to the rank of a Pan-Hellenic festival. Eusebius dates the first Nemead from Olymp. 53, 2: but it is probable from the dissertation of G. Hermann, whose conclusions are supported by Boeckh, that the series of historical Nemeads began in the winter of Olymp. 51 (Boeckh, *C. I.* i. n. 34, p. 53). The Nemean games, like the Isthmian, in this respect were biennial (ἀγὼν τριετηρικός), *i.e.* two complete years elapsed between each festival. Accordingly they fell twice within the Olympic period, occurring alternately in winter and summer in the second and fourth years respectively of each Olympic πεντετηρίς. We read in the Schol. to Pindar's Nemean odes that they took place on the 12th of the month Panĕmos (μηνὶ πανέμῳ δωδεκάτῃ), but such authority helps us but little in settling the matter.

The games comprised musical, gymnic, and equestrian contests (ἀγὼν μουσικός, γυμνικός, ἱππικός). (Plut. *Philop.* 11; Pausan. viii. 50, 3; Schol. Pind. *Nem.*) The *gymnic* contests at Nemea, as regards the subjects of competition, corresponded closely with those at Olympia. The following are expressly mentioned:—The simple foot-race (γυμνὸν στάδιον) for men and boys; the wrestling bout (πάλη) for men and boys; the πένταθλον for men and boys; the παγκράτιον for men and boys (Pind. *Nem.* passim; Herod. vi. 92, ix. 75). That boxing (πυγμαχία) was a subject of competition may be inferred from Pausan. viii. 40, 3. We learn further from Pausanias (ii. 15, 2) and Pindar that, besides the simple foot-race, the Nemean games included the armour-race (ὁπλίτης δρόμος) and the long race (ὁ δόλιχος—*notice accent*). In the *equestrian* contests we know that Alcibiades, Chromios of Aetna, and Polyklês of Sparta (Pausan. i. 22, 6) were victorious.

That the games occupied more than one day may be inferred from Liv. xxvii. 31, where he uses the words *per dies festos* in reference to them.

The Argives, as has been said above, ultimately supplanted the Kleonaeans as presidents of the Nemean festival, but they occasionally delegated this function to military chieftains, like Philip of Macedon or Titus Quintius Flamininus (Liv. xxvii. 30, xxxiv. 41). In a late inscription the officers who actually presided are referred to as Hellanodikae (Ἑλλανοδίκαι). Boeckh conjectured that these were twelve in number, while those who discharged the like duty at Olympia, and bore the same title, numbered only ten (Boeckh, *C. I.* 1126, p. 581).

Like the other great Pan-Hellenic festivals, the Nemean was an ἀγὼν στεφανίτης, *i.e.* one in which the victor obtained a wreath in token of his victory. The Nemean wreath was, according to some accounts, at first woven of olive-sprays (ἐλαία), the garland of green parsley (χλωρὰ σέλινα) having replaced it afterwards; according to others, the parsley wreath was the original prize (as it continued to be throughout historical times) on account of its special fitness, as an emblem of mourning, to be associated with the memory of Archemoros. But a different myth, already alluded to, represents Heraklês, when he instituted the games after overcoming the lion, as having also appointed the parsley-wreath to be the victor's reward. And this latter account seems to have been present to the mind of Pindar, for he speaks of the wreath as *βοτάνα λέοντος* (*Nem.* vi. 71, 72).

During the celebration of each Nemean festival a cessation of hostilities (*ἐκεχειρία, σπονδαί*) between belligerents was an imperative duty (cf. *ἐν ἱερομηνίᾳ Νεμεάδι*, Pind. *Nem.* iii. 2, with *schol.*). A sacred embassy, too, was on these occasions sent by each of the several Hellenic states to Nemea, with offerings to Nemean Zeus (Demosth. *Meid.* p. 552, § 115).

Historians, as well as late coins and inscriptions, testify that the (still so called) Nemean games came to be regularly held in Argos (Polyb. v. 101, 5; Diod. xix. 64; Liv. xxx. 1; Boeckh, *C. I.* 234, p. 356). On a comparatively early occasion, indeed, Argos had been the scene of the festival. For the circumstances, *vid.* Plut. *Arat.* 28. Local festivals, named after the great Nemean, were established in many places, *e.g.* at Aetna in Sicily (Schol. Pind. *Olymp.* xiii. 158) and at Megara (Schol. Pind. *Olymp.* vii. 157). That Nemea were also instituted at Anchialos in Thrace may be inferred from a medal stamped under Caracalla, bearing the name NEMAIA (instead of the usual NEMEIA); and, from the fact of its bearing also the word CEOYHPIA, the further inference has been drawn that the Thracian Nemea were founded in honour of Sept. Severus. (For more detailed information respecting Nemea, see Krause, *Pythien, Nemeen, u. Isthmien*, whose guidance has been mainly followed in the present article.) [J. I. B.]

NEMESEIA (*νεμέσεια*), undoubtedly the same as the Genesia (*γενέσια*), was a public festival celebrated at Athens on the 5th of the month of Boedromion (Bekker, *Anecd.* pp. 86, 231, and 282). As to the rites and ceremonies observed on the occasion, nothing is known. The name Nemeseia or Nemesia was given to the solemnity, because *ἡ Νέμεσις ἐπὶ τῶν ἀποθανόντων τέτακται.* It would seem that the name was sometimes applied to certain funeral rites performed by private persons in honour of a deceased member of a family. (Demosth. *πρὸς Σπουδ.* p. 1031; comp. Harpocrat. p. 206, and A. Mommsen, *Heortol.* p. 209.) [L. S.]

NE'NIA. [FUNUS.]

NEO'CORI (*νεωκόροι*) signified originally a temple-attendant; perhaps a temple-*sweeper* (Hesych. *s. v.*), which may well be illustrated by Ion's description of his office (Eur. *Ion*, 121): others, however, prefer to connect the termination with the root of *βουκόλος, αἰγικορεῖς, colo* in the sense of *tending* (cf. Suid. *s. v.*; Curtius, *Gr. Etym.* 463). However that may be, the word was applied, even in early times, to priestly officers of high rank, who had the superintendence of temples and their treasures (Plat. *Legg.* vi. p. 759 A; Xen. *Anab.* v. 3, § 6). Under the Empire the word was especially applied to those cities in Asia which erected temples to the Roman emperors, since the whole city in such a case was regarded as the guardian of the worship. These sanctuaries for the cult of the emperor began in the lifetime of Augustus, at Cyzicus (Tac. *Ann.* iv. 36) and elsewhere. Not only the cities which possessed a temple of this kind (distinct from the worship of Rome and Augustus by the entire province), but also those which contributed (Dio Chrysost. ii. p. 70) to its support, were called *νεωκόροι* of the emperor: the name belonged to the city, not to any religious official. Accordingly we frequently find on the coins of Ephesus, Smyrna, and other cities the epithet ΝΕΩΚΟΡΟΣ, which also occurs in the inscriptions of those cities (see Conybeare and Howson, *St. Paul*, ch. xvi. *fin.*). No city was allowed to assume this office without the permission of the Roman senate, as is clear both from inscriptions and from Tac. *Ann.* iv. 55, 56, from whom we learn also that Cyzicus was punished for neglecting the duties. The name belonged to the city, not to any religious official. These local cults were directed by a sacerdos or *ἀρχιερεύς*, who must be distinguished from the *ἀρχιερεὺς Ἀσίας* (=*Ἀσιάρχης*), or priest of the *Koinon*, i.e. the union of the whole province of Asia for the worship of Rome and Augustus [ASIARCHAE]. The neocorate (as was said above) was distinct from this, and belonged to separate cities, a single neocorate implying a single temple maintained to an emperor or imperial family: a city might be *δὶς* or *τρὶς νεωκόρος*, if it had two or three temples to two or three different emperors or imperial families. (See Ramsay in *Class. Review*, iii. 175 [1889]; Marquardt, *Staatsv.* i. 504, iii. 464.) [AEDITUI.] [W. S.] [G. E. M.]

NEODAMO'DEIS (*νεοδαμώδεις*). [HELOTES.]

NEPTUNA'LIA, a festival of Neptune, celebrated at Rome (Varr. *L. L.* vi. 19). The day on which it was held was the 23rd of July. In the ancient calendaria this day is marked as *Nept. ludi et feriae*, or *Nept. ludi*, from which we see that the festival was celebrated with games. Respecting the ceremonies of this festival, nothing is known, except that the people used to build huts of branches and foliage (*umbrae*, Fest. s. v. *Umbrae*), in which they probably feasted, drank, and amused themselves. (Hor. *Carm.* iii. 28, 1, &c.; Tertull. *de Spect.* 6.) The lines of Ausonius (*Ecl. de Feriis*, 19 ff.) may perhaps imply that *navigia* took part in the festival of Neptune, while *quadrigae* belonged to the *Consualia*. [L. S.]

NERO'NIA. [QUINQUENNALIA.]

NERVUS, a sort of stocks (*ξύλον*, also *ποδοκάκκη, χοῖνιξ*), in which criminals were confined, used frequently as a punishment for slaves. The original meaning was probably a thong or a strap (corresponding to the other uses of the word), and with this strap the feet were tied to a post: so Festus defines it as "ferreum vinculum quo pedes impediuntur," but adds that it also confined the neck sometimes; hence it may be said to have combined the pillory and the stocks. This will explain the expression *nervum brachialem* (Plaut. *Poen.* v. 4, 99), which means embracing by throwing the arms about the neck. The words *numella* and *boiae* had the same sense, and both of these (though not *nervus*) were used to express the ordinary method, still in use, of fastening up cattle by the neck (Colum. *R. R.* vi. 19). It is clear that the nervus was not merely bonds, like *compedes*, but, more like modern stocks and pillory, had a wooden framework with holes for hands, feet, and neck, which were kept in their places by iron bands and collars: hence Aristophanes, *Equit.* 1049, calls the *ξύλον πεντεσύριγγον*, i.e. having five holes, for feet, hands, and neck. (The κλοιὸς seems to have confined the neck and hands only: Lucian. *Toxarch.* 29; the *κύφων* held the neck.) This "support" of the neck is probably indicated by Plautus in the expression *os columnatum*, when he speaks of the punishment of Naevius for libel: probably also by the *porrectum jugulum* of the *captivus* (Hor. *Sat.* i. 3, 88). The stocks were used for the imprisonment of freeborn malefactors as well as for slaves, both among Greeks and Romans. The *κύφων* is used for state-prisoners at Thebes (Arist. *Pol.* viii. 6, 15 = p. 1306): we find the *nervus* for thieves (Plaut. *Aul.* iv. 10, 13); for debtors, by Law of Twelve Tables (*ap.* Gell. xx. 1), "vincito aut nervo aut compedibus" [NEXUM]: compare Liv. vi. 15. So as a common part of imprisonment (cf. *Act. Apost.* xvi. 24) it is often used as equivalent to *carcer* (Ter. *Phorm.* iv. 4, 15, &c.). [G. E. M.]

NEUROSPASTA. [PUPA.]

NEXUM. The most general meaning of this obscure and much-debated term seems to be any legal transaction entered into with the well-known form of the Balance and Bronze. Festus says, "Nexum est, ut ait Gallus Aelius, quodcunque per aes et libram geritur, idque necti dicitur: quo in genere sunt haec: testamentifactio, nexi datio, nexi liberatio:" similarly Varro (*L. L.* vii. 105), "Nexum Manilius scribit omne quod per aes et libram geritur, in quo sunt mancipia:" the similarity of the expression suggesting strongly that both writers were transcribing somewhat unintelligently from an older author. But some writers (among whom Varro mentions Mucius Scaevola) seem to have restricted the signification of nexum to transactions effected *per aes et libram* with the object of creating an obligation—in other words, to contract as opposed to mere conveyance: and there is a large consensus, if not complete unanimity, among those learned in the antiquities of Roman law, in favour of the view that there was a very old contract-form among the Romans called *nexum*, in which the obligation or *juris vinculum* was established by the use of the *aes et libra*, and which, so long as it subsisted, possessed at least one very peculiar characteristic, which made it extremely popular among the wealthy patrician lending class at Rome.

It is supposed that the form was originally employed for creating money loans. The ceremonial was the same in substance as that in every mancipation, and included the presence, besides the parties themselves, of the five witnesses and a libripens. But to the conveyance of the money, which alone an ordinary mancipation would have contained, there seems to have been superadded a *damnatio* by the lender, analogous to that in one of the four old forms of bequest [LEGATUM], which Huschke conjectures to have run somewhat as follows: "Quod ego tibi mille asses hoc aere aeneaque libra nexos dedi, eos tu mihi post annum cum fenore unciario dare damnas esto." According to this view, the obligation arose, as it were, from an act of legislation, the five witnesses representing the whole populus, as in other transactions in which the same form was observed. By others (especially Niebuhr, following Salmasius) the obligation is held to originate in a second mancipation: the lender conveyed the money to the borrower, and then the latter sold or pledged himself to the former as a security for repayment, it being provided that no action was to be taken on this sale or mortgage of the person until default had been made in performance of the obligation: but since Savigny's essay referred to at the conclusion of this article, the hypothesis of a sale or pledge of himself by the borrower seems to find few supporters. So much as to the divergent views as to the precise mode in which the obligation to repay the money loan originated. Subsequently it is believed that by the *fiction* of a money loan other contracts (*e.g.* sales) came to be represented as made by nexum, which thus became an abstract form in which any transaction which left an outstanding money debt could be expressed (Liv. viii. 28). The debt was termed *nexum aes* ("nexum aes apud antiquos dicebatur pecunia, quae per nexum obligatur," *Festus:* so, too, Varro observes, "Quod obligatur per libram, nec suum sit, inde Nexum dictum"), and sometimes, too, perhaps *nuncupata pecunia;* for, according to Festus, "nuncupata pecunia est, ut ait Cincius in lib. ii. de officio jurisconsulti, nomina certa nominibus certis pronuntiata: CUM NEXUM FACIET MANCIPIUMQUE, UTI LINGUA NUNCUPASSIT, ita ut nominavit locutusve erit, ITA IUS ESTO." The making of a contract in this form was known as *nexi datio*, and the debtor was said *nexum inire*" (Liv. vii. 19).

The peculiarity of this form of incurring obligation, to which it owed its popularity among the lending class, was that, if the day fixed for payment passed without such payment being made, the creditor was under no necessity of bringing an action at law to prove the existence of the debt: the debtor stood on the same footing with a defendant against whom a judgment had been given (*judicatus*), or who had admitted his liability in court (*in jure confessus*): he became *nexus* himself, and liable forthwith to the severe execution procedure by *manus injectio*, or, as Hölder expresses it, "Nexum ist die Begründung einer Executionsreifen Geldschuld per aes et libram." "Liber" (says Varro) "qui suas operas in servitutem pro pecunia quadam debebat, dum solveret, nexus vocatur, ut ab aere obaeratus;" a definition clearly referring to the nexus' liability to be sold into foreign slavery at one time, and later to work out his debt as quasi-slave of his creditor. As soon as the day fixed for repayment had passed, the latter could arrest him at once, take him before the praetor, and after statement of the contract (supported, it may be presumed, by the evidence of the five witnesses) have him, along with the children in his power (Liv. ii. 24; Dionys. vi. 29, 37), *addictus* in the usual way to himself by the magistrate. After such *addictio*, the debtor was in the unenviable position described under MANUS INJECTIO, of which a full account is given by Gellius (xx. 1). Unless he paid the debt, or got a vindex to undertake his defence at the risk of being condemned in double damages, the creditor led him away and kept him chained and fettered in one of the private prisons so familiar to readers of early Roman history, in which he had the privilege of being supported on his own means, in default of which the creditor was bound to provide him daily with at least a pound of meal. His detention here lasted for sixty days, during the first half of which he could still procure his release by payment or compromise: during the second half the creditor had to take him before the praetor on three successive market-days, and publicly proclaim the amount of the debt, to give anyone else an opportunity of saving him from the final severities prescribed by the Twelve Tables. At the conclusion of the sixty days, if the money were still unpaid, the creditor had the choice of two alternatives: either to set him free, or to remove him from the list of Roman citizens by selling him into foreign slavery or killing him. If there were more than one creditor, the statute permitted them to cut each from his body a portion proportionate to their claims: "tertiis nundinis partes secanto: si plus minusve secuerunt, se fraude esto." The advantages of nexum, as a form of contract, thus consisted in the creditor's being dispensed from the necessity of proving his debt by the ordinary legal process; over the ordinary creditor he had a superiority analogous to that of the landlord who can distrain for rent. But this was seriously curtailed by a Lex Vallia (Gaius, iv. 25, Studemund), which limited the operation of *manus injectio* in its original form to the cases of judgment debtors and defendants condemned in an *actio depensi* [INTERCESSIO]: the nexum-debtor, on being arrested for non-payment, was allowed "sibi manum depellere et pro se agere;" he was no longer obliged to submit to imprisonment until the debt was proved against him by ordinary legal process, and against this he could defend himself in person, instead of through a vindex, though still he would have to pay double damages if cast in the suit. Subsequently a statute usually called Poetelia or Poetelia Papiria, the relation of which to the Lex Vallia is very obscure, is believed to have practically put an end to nexum as a form of contract altogether. The passages on which this inference is based are the following:—Liv. viii. 28, "Eo anno plebei Romanae velut aliud initium libertatis factum est, quod necti desierunt: mutatum autem jus ob unius feneratoris simul libidinem simul crudelitatem insignem. L. Papirius is fuit, cui cum se T. Publilius ob aes alienum paternum nexum dedisset, quae aetas formaque misericordiam elicere poterat, ad libidinem et contumeliam animum accenderunt. Victum eo die ob impotentem injuriam unius ingens vinculum fidei: jussique consules ferre ad populum, ne quis, nisi qui noxam meruisset, donec poenam lueret, in compedibus aut in nervo teneretur, pecuniae creditae bona debitoris non corpus obnoxium esset. Ita nexi soluti cautumque in posterum ne necterentur;"—Cic. *de Republ.* ii. 34, 59, "Cum sunt propter unius libidinem omnia nexa civium liberata, nectierque postea desitum;"—Varr. *L. L.* vii. 105, "ut omnes, qui bonam copiam jurarunt, ne essent nexi sed soluti" (cf. Dionys. xvi. 5). The general result of the statute seems to have been to release all those who at the time of its enactment were in private imprisonment under a nexum, because they had not chosen to dispute their liability, and to prohibit for the future the employment of *manus injectio* in any form against debtors who had incurred an obligation in this manner; nexum lost the last of its old advantages for the creditor which the Lex Vallia had left it, and so went out of use: "Nectier postea desitum." It is not improbable that the Lex Silia, which introduced a new *legis actio* for the recovery of money debts, was occasioned by this legislation.

It would seem that even before the Lex Poetilia the rule of the Twelve Tables, which compelled the creditor, after the lapse of sixty days, to either release, kill, or sell the *debitor addictus* into foreign slavery, had been repealed or gone into desuetude. The Lex Poetilia sanctioned the retention of the debtor as a quasi-slave of the creditor, but prohibited the use of bonds or fetters unless the action in which he had been condemned was *ex delicto:* he could be kept at work by the creditor, the value of his labour being deducted from the sum of his debt, and returned to his former status as soon as it had been discharged in full.

Corresponding to the creation of an obligation by nexum was a similar method of discharge, called *nexi liberatio.* The form of this, though no longer used for this particular purpose after nexum had ceased to exist, survived for the discharge of other obligations held to be incurred *per aes et libram* or in a similar manner: its application in the payment of judgment debts and of legacies given *per damnationem* is described by Gaius (iii. 173–175).

Though this general theory of nexum as a contract-form is accepted (with more or less of divergence and modification) by most writers on Roman law, it should be remarked that the passages in the Latin authors in which the words *nectere, nexum, nexus* occur, contain in themselves very little to support it. The writer of this article has been favoured by Professor Nettleship of Oxford with an exhaustive examination of these passages, the general conclusion to which he was led being that the terms express only obligation in general, especially obligation in the way of pledging, and that the hypothesis of a special contract called *nexum,* coordinate with stipulatio and expensilatio, is really untenable. If the writer understands him correctly, he takes the passages dealing with the so-called Lex Poetelia to chronicle only the abolition of the private prisons of the Roman usurers, or at any rate the prohibition of the older severities on the part of the gaoler, whatever the nature of the action in which the defendant had been condemned.

Among earlier writers there appears to have been considerable confusion between *nexum* and *addictio.* "Addicere" apparently expresses the magisterial award of one person to another—under the older and more severe procedure, for private execution or sale into foreign slavery: under the later system, to work out by his labour the sum due to his unsatisfied creditor. A man might be *addictus* either because he was *judicatus* or *confessus,* because he had failed to perform a contract into which he had entered by nexum, or under the Twelve Tables because he had been convicted of *furtum manifestum* (Gaius, iii. 189); but the relation between the two terms seems sufficiently clear, though Niebuhr was the first writer who placed it in clear light. He himself found the leading characteristic of *nexum* in the sale or pledging of his own person by the debtor; but this idea, as has been observed above, was strongly combated by Savigny, who propounded the theory that the personal execution known as *manus injectio* was allowed only on money loans and other debts fictitiously represented as money loans by means of nexum; the execution upon all other judgments was against the property, not against the person, of the debtor. This, however, has found little favour with Savigny's successors, and seems to be sufficiently disproved by Gaius (iv. 21), who says that *manus injectio* was prescribed as the proper procedure on all judgment debts whatsoever by the Twelve Tables. A divergent view expounded with great fulness by Huschke, and adopted by Mr. Long in the earlier editions of this work, is that nexum entitled the creditor to seize the debtor, and to treat him in the manner described by Gellius, without resorting to the magistrate for formal *addictio* at all. Van Heusde represents nexum as the condition from which *addictio* proceeded, and thinks that the Lex Poetelia abolished both by permitting in the future only execution against the property; but the survival of *addictio* in consequence of *manus injectio* resorted to upon a judgment to far later times is proved clearly by Liv. xxxiii. 14; Sallust. *Cat.* 33; Cic. *pro Flacco*, 20–22, 48–53.

(The best discussions on the subject are Niebuhr, *Röm. Geschichte*, i. 637–644, ii. 667–673, iii. 178–181; Savigny, *Ueber das altrömische Schuldrecht, vermischte Schriften*, ii. 396–470; Scheurl, *Vom Nexum*, Erlangen, 1839; C. Sell, *de juris Romani nexo et mancipio*, Brunswick, 1840; C. Van Heusde, *de lege Poetelia Papiria*, 1842; Bachofen, *Das Nexum*, 1843; Danz, *Geschichte des röm. Rechts*, 1846, Theil ii. 85–106; Huschke, *Ueber das Recht des Nexum*, Leipzig, 1846; Giraud, *Des Nexi ou de la condition des débiteurs chez les Romains*, Paris, 1847; Muirhead, *Roman Law*; Puchta, *Institutionen*, §§ 162, 269, 277, 321.) [J. B. M.]

NO'BILES, NOBI'LITAS. In the earliest period of Roman history the Patricians or Patres, who belonged to the older organisation of the populus in curiae, gentes, and familiae, were the nobles as opposed to the Plebs: they practically monopolised political power and the distinction which such power brings. Livy, who wrote in the age of Augustus, and is not very careful in the use of terms, often designates the Patricians by the term *nobilis* (vi. 42); and yet *nobilis*, in its proper historic sense, has a different meaning.

In B.C. 366 the plebeians obtained the right of being eligible to the consulship, and finally were admitted to all the curule magistracies. Thus the two classes were put on the same footing as to political capacity. Those plebeians who had obtained a curule magistracy were thus elevated above their own body, and the personal distinction of a father would confer distinction on his descendants. It is in the nature of aristocratic institutions to perish if they are exclusive: but they perpetuate themselves by giving a plebeian class the power of acquiring a share in the lustre they bestow. Those who are received within the body of nobles are pleased at being separated from their former companions, and are at least as exclusive in their notions as the original members of the class which they have joined.

This was the history of Nobilitas at Rome. The sharp distinction between plebeians and the old patricians became blurred no less by their political equalisation than by the greater frequency of marriages between them after the enactment of the Lex Canuleia; but the descendants of plebeians who had filled curule magistracies formed a class called Nobiles or men "known," in contrast with Ignobiles or people who were not known. The Nobiles had no legal privileges as such: but they were bound together by a common distinction derived from a legal title and by a common interest; and their common interest was to endeavour to confine the election to all the high magistracies to the members of their own body, to the Nobilitas. Thus the descendants of those plebeians who had won their way to distinction combined to exclude other plebeians from the distinction which their own ancestors had transmitted to them.

The external distinction of the Nobiles was the Jus Imaginum, a right or privilege which apparently was established on usage only, and not on any positive enactment. These Imagines were figures with painted masks of wax, made to resemble the person whom they represented (Pliny, *H. N.* xxxv. § 2, "expressi cera vultus"); and they were placed in the atrium of the house, apparently in small wooden receptacles or cases somewhat in the form of temples (*ξύλινα ναΐδια*, Polyb. vi. 53). The Imagines were accompanied with the *tituli* or names of distinction which the deceased had acquired; and the *tituli* were connected in some way by lines or branches so as to exhibit the pedigree (*stemma*) of the family: cf. the passages quoted in Becker, *Handbuch der römischen Alterthümer*, ii. p. 222, note 53. These Imagines were generally enclosed in their cases, but were brought out on festival days and other great ceremonials, and crowned with bay (*laureatae*): they also formed part of a solemn funeral procession. The most complete account of them is in the passage of Polybius already referred to; but there is frequent mention of them in the Roman writers.

These were the external marks or signs of a Nobilis Familia: a kind of heraldic distinction in substance. The origin of this use of Imagines, from which the notion of Roman Nobilitas must not be separated, is uncertain. The term Nobilitas, as already observed, is applied by Livy to a period of Roman history before the consulship was opened to the plebeians; and it is not improbable that the patricians had the use of Imagines, which those plebeians afterwards adopted, when the curule magistracies were made accessible to them. The patricians carried back their pedigrees (*stemmata*) to the remotest historical period, and even beyond it (Tac. *Ann.* iv. 9); and the practice of having Imagines, clearly connected with the ancestor worship of primitive races which Sir Henry Maine has so fully discussed in his *Early Law* *and Custom*, probably existed before the notion of the Jus Imaginum was established, though it is equally likely that that notion, as well as the technical conception of Roman Nobilitas, originated in the admission of the plebeians to the consulship. Indeed, as the object of the patricians, who were all of equal rank so far as their class was concerned, would be to attach to themselves such plebeians as were elected to curule magistracies, it seems conformable to the nature of the thing that the family of such plebeians should be allowed or invited to adopt some existing distinction which should separate them from the body to which they properly belonged. Usage would soon give to such a practice the notion of legality; and thus the Jus Imaginum would be established, as many Roman institutions were, by some general conviction of utility or upon some prevailing notion, and it would be perpetuated by custom.

A plebeian who first attained a curule office was the founder of his family's Nobilitas (*princeps nobilitatis—auctor generis*). Such a person could have no Imagines of his ancestors; and he could have none of his own, for such Imagines of a man were not made till after he was dead (Polyb. *l. c.*). Such a person then was not *nobilis* in the full sense of the term, nor yet was he *ignobilis*. He was called by the Romans a *novus homo* or a new man, and his condition was known as Novitas: see the speech which is put in the mouth of C. Marius in Sallust, *Jug.* 85. The term *novus homo* was never applied to a patrician. The first *novus homo* of Rome was the first plebeian Consul, L. Sextius, and the two most distinguished *novi homines* were C. Marius and M. Tullius Cicero, both natives of an Italian municipium.

The patricians would of course be jealous of the new nobility, which however, when once formed, would easily unite with the old aristocracy to monopolise political power, and to prevent more *novi homines* from polluting this exclusive class (Sallust. *Jug.* 63). Their efforts, in particular, to exclude the poorer citizens from rising to their own order is attested by the rule established from the time of the First Punic War, that the cost of the public games should be no longer defrayed by the treasury, but by the aediles (Dionys. vii. 71), and the aedileship was the first step to the higher magistracies. As early as the Second Punic War, the new class, composed of patricians or original aristocrats, and Nobiles or newly engrafted aristocrats, was able to exclude *novi homines* from the consulship (Liv. xxii. 34). They maintained this power to the end of the Republican period, and the consulship continued almost in the exclusive possession of the Nobilitas. The testimony of Cicero, himself a *novus homo*, on this point is full and distinct.

As to the persons who would be included in the stemma of a noble family, it appears that all the ascendants of a man up to the ancestor who first attained a curule office would be comprehended, and also the ascendants on the mother's side who had been *nobiles*. Adoption would also increase the number of persons who would be comprised in a stemma: and if Affines were occasionally included, as they appear to have been, the stemma would become an enormous pedigree.

The term Optimates, as explained by Cicero (*pro Sest.* 45), is opposed to Populares: he describes the Optimates to be all those "qui neque nocentes sunt nec natura improbi nec furiosi nec malis domesticis impediti." This is no political definition: it is nothing more than such a name as Conservative or any other. The use of it by Livy (iii. 39) shows how he understood it; but it is only confusing to employ it in relation to the early times of which he is speaking. Velleius (ii. 3) describes the Optimates as the Senatus, the better and larger part of the Equestris ordo, and such part of the Plebs as were unaffected by pernicious counsels: all these joined in the attack on Gracchus. This opens our eyes to the real meaning of Optimates: they were the Nobilitas and the chief part of the Equites, a rich middle class, and also all others whose support the Nobilitas and Equites could command: in fact all who were opposed to change that might affect the power of the Nobilitas and the interests of those whom the Nobilitas allied with themselves. Optimates in this sense are opposed to Plebs, the mass of the people: and Optimates is a wider term than Nobilitas, inasmuch as it would comprehend the Nobilitas and all who adhered to them.

The term Populares is vague. It could be used to signify the opponents of the Nobilitas, whether the motives of these opponents were pure and honest, or whether their aim was self-aggrandisement through popular favour. Of Caesar, who sought to gain the popular favour, it was truly said, that it was not so much what he gave to the people which made him formidable, as what he would expect to get from them in return. A *popularis* might be of the class of the Nobilitas, and very often was. He might even be a patrician, like Caesar: his object might be either to humble the nobles, to promote the interests of the people, or to promote his own: or he might have all these objects, as Caesar had.

The chief passages in classical writers bearing on the contrast of *nobiles*, *ignobiles*, and *novi homines* are Cicero, *in Rull.* ii. 1, 2; *pro Cluentio*, 40, 111; Appian, *de Bell. Civ.* ii. 2; Plutarch, *Cato Maj.* i.; Vell. Pat. ii. 128, and Asconius in *Argum. Orat. in toga candida*, p. 82 (Orelli). The subject of Nobilitas is handled by Becker, in the work already referred to, and there are also some remarks on the Roman Nobiles in Zachariae, *Sulla* (i. 5). He observes of Sulla that though his family was patrician, he could hardly be considered as belonging to the Nobiles in the strict sense, as the term Nobilitas implied that some one of a man's ancestors had filled a curule magistracy, and also implied the possession of wealth. But this is a confused view of the matter. Sulla's ancestors had filled curule magistracies; and though his family was poor, it was still Nobilis. A Nobilis, though poor, as Sulla was, was Nobilis still: want of wealth might deprive a man of influence, but not of the Jus Imaginum. If there was any patrician whose ancestors had never filled a curule office, he would not be nobilis in the technical later sense. But when the Nobilitas had been formed into a powerful body, which was long before the reforms of the Gracchi, the distinction of patrician was of secondary importance. It would seem unlikely that there was any patrician gens existing in the year 133 B.C., or indeed long before that time, the families of which had not enjoyed the highest honours of the state many times. The exceptions, if any, would be few.

In reading the Greek writers on Roman history, it is useful to attend to the meaning of the political terms which they employ. The δυνατοὶ of Plutarch (*Tib. Gracch.* 13, 20) and the πλούσιοι are the Nobilitas and their partisans; or, as Cicero would call them after he was made consul, the Optimates. In such passages as Dio Cass. xxxviii. 2 the meaning of δυνατοὶ may be collected from the context. [G. L.] [J. B. M.]

NODUS, in a special sense, was applied to the following parts of dress:—1. The knot used in tying on the scarf [CHLAMYS] or other article constituting the AMICTUS. This was often effected by the aid of a brooch [FIBULA], a ring, or some jewel (Verg. *Aen.* i. 320, vi. 301, xi. 776; Claud. *de Rapt. Pros.* ii. 40); but frequently in the method shown in the woodcut of Diana, Vol. I. p. 416. 2. The knot of hair (κόρυμβος, κρωβύλος), either at the top or at the back of the head, adopted by both sexes in fastening their long hair, which was turned upwards or backwards for the purpose ("crine rursus adducto revocare nodo," Sen. *Oedip.* ii.; Verg. *Aen.* iv. 138; Hor. *Epod.* xi. 28). Examples may be seen in the woodcuts under COMA. 3. The knot of leather worn by boys of the poorer classes at Rome instead of the golden BULLA. [J. Y.]

NOMEN (ὄνομα), name. 1. GREEK. The Greeks, as is well known, bore only one name (Paus. vii. 7, § 4), and it was one of the especial rights of a father to choose the names for his children, and to alter them if he pleased. (Dem. *c. Boeot.* i. p. 1006, § 39; *c. Macart.* p. 1075, § 74.) It was customary to give to the eldest son the name of the grandfather on his father's side. The history of Greece contains many instances of this custom, and Sositheus (*ap.* Dem. *c. Macart.* l. c. says, "I gave to my eldest son, as is just (ὥσπερ καὶ δίκαιόν ἐστι), the name of my father." (Compare Eustath. *ad Il.* v. 546; Dem. *c. Boeot.* i. p. 1002, § 27.) Similarly girls were called after the grandmother (Isae. *de Pyrrh. hered.* § 30). What custom was generally followed in regard to the other children may be inferred from the same passage, for Sositheus goes on to say, that he called his second son after the name of his wife's father, the third after a relation of his wife, and the fourth son after his own grandfather on his mother's side. Mothers seem also sometimes to have assumed the right of giving the names to their children (Eurip. *Phoen.* 58), and it may be that, as in the case described by Aristophanes (*Nub.* 60, &c.), sometimes a quarrel arose between the parents, if they could not agree upon the name to be given to a child. A boy also sometimes received the name of his father, as in the cases of Demosthenes and Demades, or one similar to that of his father. Nausinicus thus called his son Nausiphilus, and Callicrates called his son Callistratus. (Boeckh, *ad* Pind. *Pyth.* iv. p. 265.) A similar method was sometimes adopted in the names of several brothers; thus two brothers in the speech of Lysias against Diagiton are called Diodotus and Diogiton. In some cases lastly, the name of a son was a patronymic, formed from the name of the father, as Phocion, the son of Phocos.

The day on which children received their names was the tenth after their birth (Aristoph. *Av.* 922, &c.). According to some accounts, a child received its name as early as the seventh or even fifth day after its birth. [AMPHIDROMIA.] The tenth day, called δεκάτη, however, was a festive day, and friends and relations were invited to take part in a sacrifice and a repast, whence the expressions δεκάτην θύειν and δεκάτην ἑστιᾶν. If in a court of justice proofs could be adduced that a father had held the δεκάτη, it was sufficient evidence that he had recognised the child as his own. (Dem. *c. Boeot.* ii. p. 1017, § 28.)

The fact that every Greek had only one name rendered it necessary to have an innumerable variety of names. But, however great the number of names might be, ambiguity and confusion could not be avoided; and in reading the works of the Greeks we are not always certain whether the same name in different passages or writers belongs to one or to several persons. The Greeks themselves were aware of this, and where accuracy was of importance they used various means to prevent mistakes. Sometimes they added the name of the father in the genitive case, as Ἀλκιβιάδης ὁ Κλεινίου, Πλειστοάναξ ὁ Παυσανίου: sometimes they added the name of the place or country in which a person was born, in the form of an adjective, as Θουκυδίδης ὁ Ἀθηναῖος, Ἡρόδοτος Ἁλικαρνασσεύς, Χαρμαντίδης Παιανιεύς, Δικαίαρχος ὁ Μεσσήνιος, &c.; sometimes they added an epithet to the name, expressing either the occupation or profession which a person followed, or indicating the school to which he belonged. Instances are of such frequent occurrence that it is superfluous to quote any. The custom of adding the father's name was called πατρόθεν ὀνομάζεσθαι (Paus. vii. 7, § 4; Xenoph. *Oeconom.* 7, § 3).

In common life the Greeks had yet another means of avoiding ambiguity, and this was the frequent use of nicknames, expressive of mental or bodily peculiarities and defects. Thus Demosthenes was from his childhood called Βάταλος. (Aeschin. *c. Timarch.* §§ 126, 141; Dem. *de Cor.* p. 288, § 180.) Aristophanes (*Av.* 1291, &c.) mentions several names of birds which were used as nicknames; other nicknames are preserved in Athenaeus (vi. p. 242). [Cf. Xen. *Hell.* ii. 2, 31; Lucian, *Symp.* 6; Athen. x. p. 436.]

(Compare Becker-Göll, *Charikles*, vol. ii. p. 26.)

2. ROMAN. It has been said that the Romans originally had only one name ("simplicia nomina," Varro, *ap.* Auct. *de Praenom.* 1), but Mommsen justly remarks that the instances given—*Romulus*, *Remus*, *Faustulus*—are all of the mythical age, and that even then we hear of *Numa Pompilius*, &c. (*R. Forsch.* i. 5). Though there can be no doubt that there was greater simplicity of nomenclature in the earliest times, and though the prevalence of single names is not impossible, the view taken by Mommsen is most probable that the early Roman custom was to have two names; the second in the genitive, representing the father or head of the household, as *Marcus Marci*, *Caecilia Metelli*. In process of time we find

for freeborn men a triple name, the *nomen* or name *par excellence* to designate the gens, the *cognomen* the family, and the *praenomen* the individual. The order properly (and so used in good prose) was *praenomen*, *nomen*, *cognomen;* but in metrical writing this is not preserved: *e.g.* "Cornelius Lucius Scipio Barbatus," as an epitaph in Saturnian verse (*C. I. L.* vi. 1285). For formal description the name of the father, grandfather, and even great grandfather was added, and sometimes the tribe also, as *M. Tullius M. f. M. n. M. pr. Cor(nelia tribu) Cicero* (Momm. *I. R. N.* 4320). When the praenomen (for ordinary speech) was omitted, the order does not appear consistent in all writers. In older times the cognomen, in this case, stands first, as Pulcher Claudius, Balbus Cornelius, and this is followed by Cicero: whereas Caesar preserves the order belonging to the triple name and keeps the cognomen after the praenomen, Livy and Tacitus vary their practice (see Marquardt, *Privatl.* 9, note). For every-day use the praenomen alone was used for relations or intimate friends (and those who wished to appear as such) addressing each other; the cognomen alone in ordinary intercourse, with the praenomen added sometimes in emphatic address: the nomen being used only for formal purposes. As, however, the triple name grew out of something simpler, so as time went on it spread into a much longer and more complex system of names, and finally ended in what cannot be called a system at all. It is necessary to examine the names more in detail.

1. *Nomen.*—This, the gentile name, in patrician families always ended in *ius*, which probably marks an original patronymic: the terminations *eius*, *aius*, *aeus*, *eus* are merely variations of it. Other terminations of the nomen mark a different origin, and are thus classed by Mommsen,—*acus* (e.g. Avidiacus) as Gallic; *enus* as Umbrian; *na* (*Caecina*, &c.) as Etruscan: some others are formed from the names of towns, whence the family sprung, as Norbanus, &c.: *Verres* stands apart, and was perhaps an original cognomen turned into a nomen (Mommsen, *R. Forsch.* i. 51).

2. *Praenomen.*—This individual name was given to boys on the ninth day after their birth on the *dies lustricus* [LUSTRATIO, p. 102]: when it is said (Auct. *de Praen.* 3) that this name was not given till the assumption of the toga virilis, it can only be meant that the official entry was then made: for we have inscriptions speaking of young children under their praenomina (*C. I. L.* x. 2221). The number of recognised praenomina was originally larger, and Varro (as cited by the above author) mentions as ancient praenomina disused in his time *Agrippa*, *Ancus*, *Caesar*, *Faustus*, *Hostus*, *Lar*, *Opiter*, *Postumus*, *Proculus*, *Sertor*, *Statius*, *Tullus*, *Volero*, *Vopiscus*.

There survived 18 for patrician families, represented in an abbreviated form: *Aulus* (*A.*), *Decimus* (*D.*), *Gaius* (*C.*), *Gnaeus* (*Cn.*), *Kaeso* (*K.*), *Lucius* (*L.*), *Manius* (*M.'*), *Marcus* (*M.*), *Publius* (*P.*), *Quintus* (*Q.*), *Servius* (*Ser.*), *Sextus* (*Sex.*), *Spurius* (*Sp.*), *Tiberius* (*Ti.*), *Titus* (*T.*), *Mamercus* (*Mam.*), *Appius* (*Ap.*), *Numerius* (*N.*). The number, no doubt, decreased from the custom of different families using only a few praenomina, usually only five or six (the Cornelii used only Cn., L. and P.). Of the above some were used by particular families and by no other; *K.*, for instance, by the Fabii and Quinctilii alone, Mam. only by the Aemilii. (See Mommsen, *op. cit.* 15.) In plebeian families there was not the same restriction, and a greater variety appears (*Novius*, *Vibius*, &c.); yet those who became *nobiles* followed the patrician rule, so that the Domitii have only the praenomina *Gnaeus* and *Lucius* (Suet. *Ner.* 1). The reaction under Sulla revived some old praenomina or introduced others, as *Faustus*, *Iulus*, *Cossus:* but it is difficult to say how far all such should be regarded as genuine praenomina. Mau is probably right in his note on Marquardt, *Privatl.* 13, when he demurs to the view that *Paullus*, *Agrippa*, *Nero*, *Drusus*, *Germanicus*, &c., became praenomina, and holds them rather to be cognomina which by a later fashion for various reasons in some distinguished families displaced the proper praenomen, as when we find *Africanus Aemilius Regillus* a consul in B.C. 9, and so described on a coin.

3. *Cognomen.*—Every Roman citizen, besides belonging to a gens, was also a member of a familia, contained in the gens, and as such he might have a cognomen or third name, which marked off that familia from others of the same gens. This was in the Republic probably universal, or nearly so, in patrician families (Plutarch, however, *Cor.* 11, says that C. Marcius had no cognomen till he took Corioli). In plebeian families it was not the rule: for instance, the Marii, Sertorii, and Mummii had none (Plut. *Mar.* 1); but many afterwards gained them, as Pompeius, when he took the cognomen *Magnus*. Some from mere assumption took cognomina to which they were considered to have no right: witness the case of Staienus calling himself *Paetus* (Cic. *pro Cluent.* 26, 72). Marquardt, from the fact that the cognomen stands after the tribe, when the tribe also is given, conjectures that the use of cognomina does not date further back in ordinary usage than Servius Tullius: as a *legal* form in laws and decrees, it is enjoined only in Sulla's time (see the citations in Marquardt, *op. cit.* 14). As to their origin we can have little doubt that they were *personal* names, originally given for some reason (often a bodily peculiarity) to some man, and then transmitted to all his family: sometimes they are descriptive, as *Pulcher*, *Calvus*, *Naso;* sometimes they mark an origin, as *Sabinus*, *Maluginensis*. (As regards the representative of the cognomen in family emblems, the *apex* of the Flaminii, the *torques* of the Manlii, &c., see INSIGNE.) It is probable that under the Republic the third name implied *nobilitas*, but it came later to be the mark merely of *freedom* (Cod. Just. vii. 16, 9); and in Juv. v. 127, "tanquam habeas tria nomina" means rather, as Professor Mayor says, "as though you were free," than, as Marquardt puts it, "tanquam nobilis sis."

The nobiles, however, proceeded further to multiply their cognomina: such fourth or fifth names were still, like the third, called *cognomen* in classical Latin (Cic. *pro Mur.* 14, 31): the practice of calling them *agnomina* did not begin till the grammarians of the 4th cent. A.D. Under this head we have (i.) the adoptive names, for which see ADOPTIO, Vol. I. p. 26. It may be observed that the termination *anus* was not usual after Sulla, when the original cognomen was added instead of the altered nomen: *e.g.* M. Terentius Varro *Lucullus*. It is a peculiarity that Brutus adopted by Q. Servilius Caepio is called simply Q. Caepio Brutus (Mommsen, *R. Forsch.* 51). (ii.) The *cognomen ex virtute*: Africanus, Asiaticus, &c. (iii.) Those added more like nicknames, as Q. Caecilius Metellus *Celer* (cf. Plin. *H. N.* vii. § 54). The *cognomina ex virtute* were passed on to children (Cic. *de Rep.* vi. 11), though how far is uncertain: Mommsen thinks, only to the eldest son.

The name-system became altered or altogether lost under the Empire. The emperors, as Gaius and Titus, used sometimes the praenomen alone with the imperial title, sometimes the cognomen only, as Imp. Caesar Vespasianus (see Mommsen, *R. Forsch.* 741): for the citizens, as mentioned above, we find sometimes the use of cognomen in place of praenomen, sometimes the multiplication of gentile names by adding the names of the mother's family or other relations; sometimes again a second praenomen is put in, often quite out of its place: *e.g.* C. Antius *Aulus* Julius Quadratus, P. Aelius Aelianus Archelaus *Marcus*. As a climax we have a string of thirty names. (Orell. 2761.)

In later times we find a pure nickname, which is termed *signum* (Capitol. *Gord.* iv. 8) or *vocabulum* (Tac. *Ann.* i. 41), coupled by the words *sive* or *qui et*, as "Eustatius sive Lampadius" (*C. I. L.* v. 4410), "M. Datellius Trophimus qui et Fortunatus," but sometimes as Lucilius Metrobius *signo* Sapricus (*C. I. L.* x. 3796). Remarkable instances of these *signa* or *vocabula* are "Caligula," "Cedo alteram" (Tac. *Ann.* i. 23, 41), "Manus ad ferrum" (Lamprid. *Aurelian.* 6).

Names of Women.—Wives and daughters added originally the name of the man in whose *manus* they were, the wife her husband's, the daughter her father's, as Metella Crassi, Caecilia Metelli; but later it became usual for the daughter to express the relationship by adding *f.* after the father's name. The praenomen might be used also before the gentile name, as Secunda Valeria M. f., but without the limitation of praenomina observed in the sons of the family. In the later Republic the single gentile name is more common; but under the Empire we find two names usual, formed from the nomen and cognomen of the father, or the combined gentile names of father and mother (Caecilia Metella, Valeria Attia): three names are exceptional (Suet. *Claud.* 56).

Slaves originally bore the affix *por* = *puer* to the master's praenomen, as *Marcipor* or *Marpor*, *Quintipor*, &c., which Pliny (*H. N.* xxxiii. § 26) thinks pointed to the simplicity of life when a man had usually only one slave: it must be observed, however, that the termination is found comparatively late (Sall. *Hist.* iii. *fr.* 69), and also that we find it for freedmen, "Aulus Caecilius, Auli libertus, Olipor." When slaves were multiplied and *servus* legally replaced *puer*, we find slaves in republican times distinguished by their own names with the master's in inverted order: thus the slave of P. Egnatius is "Pharnaces Egnatii Publii servus"; under the Empire more naturally as "Eleutherus C. Julii Florentini servus." A curious practice was the tacking on the name of a previous master with the suffix *anus*, as "Secundus Caesaris servus Crescentianus," "Anna Liviae serva Maecenatiana," when the slaves had been formerly in the household of Crescens or Maecenas.

Freedmen originally took before their own names the gentile name of their master and any praenomen, as L. Livius Andronicus, the freedman of M. Livius Salinator. The *condition* is also expressed in inscriptions: *e.g.* "M. Ramnius P. l. Diopantus" means that Diopantus was a freedman of P. Ramnius, and took for himself the praenomen M. Later it became customary to take the master's praenomen also. Freedmen of a woman took the names of the father of their mistress, as "M. Livius, Augustae l., Ismarus." Cicero however, while Tiro becomes M. Tullius Tiro, gives Dionysius the nomen of Atticus and his own praenomen (Cic. *ad Att.* iv. 15, 1). The names indicating servile origin disappeared in the second generation. (Marquardt, *Privatleben*, 6–28; Mommsen, *Röm. Forschungen*, 1–68: a mass of literature on the subject is cited by Marquardt on page 6.) [L. S.] [G. E. M.]

NOMEN. [FENUS; OBLIGATIONES.]

NOMENCLA'TOR. For the ordinary nomenclator, see AMBITUS, Vol. I. p. 100 *a*. There was also a *nomenclator censorius* to attend upon the censor (who had no lictors): he was a freedman of the censor and held the same place as the *accensus* of other magistrates [ACCENSUS]. The use of a nomenclator in the duties of the censorial office, especially in the *equitum census* or *recognitio*, is obvious. [See CENSUS; EQUITES.] Inscriptions mentioning the *nomenclator censorius* may be found in Mommsen's *Staatsrecht*, i. p. 359. As the censorial power passed to the emperor, it is natural that we find these attendants reappearing as *nomenclatores a censibus* attached to the imperial bureau which received petitions for admission to the Equites (*C. I. L.* xiv. 3553). [See also MAGISTER A CENSIBUS.] [G. E. M.]

NOMINATIO and **NOMINO** are the technical words used to denote the first stage in the appointment to the augurship and other priestly colleges, under the law of Labienus, B.C. 63. On a vacancy in their college, each of the augurs "nominated" a candidate for the post, and the choice between those so nominated was decided by a popular vote of seventeen tribes chosen by lot. In order that the assembly might exercise an effective choice, a sufficient number of candidates was secured by a rule that not more than two augurs might give their nomination to any one candidate. (Cic. *Phil.* ii. 2, 4.)

The term *nominare* is likewise used of a function of the emperors in the election of magistrates from the time that these elections were transferred (Tac. *Ann.* i. 15) to the senate. This "nomination" is different from the right of recommending candidates which the emperor possessed; for Tacitus (*l. c.*) tells of Tiberius that he limited himself "ne plures quam quattuor candidatos commendaret, sine repulsa et ambitu designandos;" while in the previous chapter he says, "candidatos praeturae duodecim nominavit, numerum ab Augusto traditum, et hortante senatu ut augeret, jure jurando obstrinxit se non excessurum." In the same way when Asinius Gallus proposed (Tac. *Ann.* ii. 36) that appointments for five years on should be made at once, he added, "princeps duodecim candidatos in annos singulos nominaret." This passage however, as it merely repeats the words of *Ann.* i. 14, and extends the system there described to suit a quinquennial arrangement, may be left out of account. The description (*Ann.* i. 81) of the consular elections, on the other hand, cannot be passed over: "plerumque eos tantum apud se professos disseruit, quorum nomina consulibus edidisset: posse et alios profiteri, si gratiae aut meritis confiderent." Lastly, we have an electioneering letter of the younger Pliny (ii. 9): "Anxium me et inquietum habet petitio Sexti Eruci mei . . . ego Sexto latum clavum a Caesare nostro, ego quaesturam impetravi, meo suffragio pervenit ad jus tribunatum petendi, quem nisi obtinet in senatu vereor ne decepisse Caesarem videar."

The last passage would naturally be taken to mean (see Nipperdey *ad* Tac. *Ann.* i. 81) that the emperor's leave was necessary before a candidate could offer himself for election, and it would be further natural to identify such leave with the "nomination" mentioned by Tacitus. In that case we should expect to find the emperor "nominating" a long list of candidates (beside those specially recommended) and the senate choosing out of this list. When, however, we find that the senate begs Tiberius to increase the number of his nominees, it becomes clear that "nomination" can have no such meaning as has been suggested. Twelve was the ordinary number of annual vacancies for the praetorship; so that if the emperor gave leave only to twelve candidates, these twelve persons must necessarily be elected; the distinction between those of them who were and those who were not recommended would vanish; *nominatio* and *commendatio* (which are always contrasted by our authorities) would have precisely the same effect. The value of such a nomination would manifestly be diminished by every addition to the number nominated. It is quite impossible, considering the relations between Tiberius and the senators, that they should at the beginning of his reign have urged him to lessen his own powers by giving them greater freedom of choice, and that he should have positively refused to do so. We have indeed a somewhat similar question of appointment in *Ann.* iii. 32 and 35, but there the senate wish the emperor to give them one name, and he insists on giving two for them to choose from.

It is clear from Pliny's letter that there were contested elections in the senate to the office of tribune. As regards the praetorship, we may draw the same conclusion from the account in Tacitus (*Ann.* ii. 51) of the election of a "praetor suffectus," and still more clearly from an incident in Nero's time (*Ann.* xiv. 28): "Comitia praetorum arbitrio senatus haberi solita, quoniam acriore ambitu exarserant, princeps composuit, tres, qui supra numerum petebant, legioni praeficiendo." On the other hand, we never hear of contested elections to the consulship.

Mommsen (*Staatsrecht*, ii.^{3} pp. 917 ff.) has an explanation which lessens though it does not remove the difficulty of reconciling these passages. He first gets rid of Pliny's canvassing letter by the supposition that "meo suffragio pervenit ad jus tribunatum petendi" does not refer to any fresh privilege obtained by him for Erucius, but merely sums up what he had got for him before, namely the latus clavus and the quaestorship, these being the qualifications which now enabled him to be a candidate for the office of tribune. This interpretation would seem very forced if we were dealing with a simple and straightforward letter-writer, but it is not inadmissible in the case of the artificial epistles of the younger Pliny. Mommsen proceeds to point out that under the Republic the magistrate conducting an election had the duty of examining the legal qualifications of the candidate, and was bound to accept only those votes which were given to persons legally eligible ("rationem alicujus in comitiis habere"). Under the principate this ministerial duty would belong jointly to the emperor and to the consuls. Either of the two co-ordinate powers might examine the qualifications of a candidate, and declare him capable or incapable of standing. Manifestly the emperor's certificate would be the more prized; all candidates would press to have their claims vouched for by him, and (if this tendency were not checked) on the emperor alone would fall the responsibility of deciding who was, and who was not, to be on the list of candidates. This responsibility the senate press Tiberius to assume, but he insists on the consuls taking some part of it, and will only certify in a limited number of cases. Such is Mommsen's explanation of "candidatos praeturae duodecim nominavit."

It may be objected to this that we should expect that the candidates who were sent to the consuls would be at a disadvantage compared with the eight candidates who, though not "commended," were selected by the emperor for the honour of his certificate. The senators, we might suppose, would be as unlikely to vote against the eight "nominated" as against the four avowedly "commended." The system seems to have led to precisely this result in the elections to the consulship. Tiberius (*Ann.* i. 81) does not commend anyone for this office; he merely announces that two qualified candidates have sent in their names to him; any others may send in their names to the consuls. The effect naturally is that no one does so; the emperor's certificate to the consular candidate, by driving all others from the field, has the same result as commendation. Mommsen (*op. cit.* p. 923) quotes an inscription where such a one actually describes himself as commended by Tiberius for the consulship.

How then are we to account for the practical difference between the consular and the praetorian elections? There must have been some understanding, by which candidates more numerous than the vacancies were encouraged to stand in the one case and discouraged from standing in the other. We may suppose that all candidates laid their names, formally or informally, before the emperor. If he announced (as Tacitus says he did in the case of the consulship) that only two properly qualified candidates had come to his official knowledge, this would be a sufficient hint to the rest of the competitors that they were to efface themselves. If, on the other hand, he brought forward the names of all, and ordered the consuls to examine the qualifications of some of them while he himself undertook that duty in the case of others, this may have been done in such a way as to imply that he wished them all to be voted for indifferently. This would be especially the case, if we may conjecture that the emperor did not arbitrarily pick and choose the candidates he was to "nominate," as he undoubtedly did those whom he was to "commend." A passage of Dio Cassius (lviii. 20), relating to Tiberius, may perhaps throw some light on this. After saying that Tiberius commended certain candidates, who were elected at once by all voices, he proceeds to describe his practice in the case of those not commended—*τοὺς δὲ ἐπί τε τοῖς δικαιώμασι καὶ ἐπὶ τῇ ὁμολογίᾳ τῷ τε κλήρῳ ποιούμενος.* It may perhaps be allowable to interpret this as meaning that certain ancestry or certain services (*δικαιώματα*) gave a man a claim by custom to have his certificate from the emperor, and that in some other cases persons were marked out for the honour by general acclamation of the senate or by consent of their competitors (*ὁμολογίᾳ*); but that for the rest Tiberius in the case of the praetorship decided by lot which names he should examine for himself and which he should refer for examination to the consuls. In the latter case, as chance alone would decide, it can have been no indication of disfavour that a man should not come armed with the imperial certificate. [J. L. S. D.]

NOMI'SMATOS DIA'PHORAS GRAPHE (*νομίσματος διαφορᾶς γραφή*) is the name of the public action which might, at Athens, be brought against anyone who coined money either too light in weight or not consisting of the pure metal prescribed by the law. The lawful punishment inflicted upon a person in case he was convicted was death. (Demosth. *c. Lept.* p. 508, § 67; *c. Timocrat.* p. 765, § 212.) What action might be brought against those who coined money without the sanction of the republic, and how such persons were punished, is not known (*Att. Process*, ed. Lipsius, p. 437). Xenophon (*de Vect.* iii. 2) remarks that the Athenian silver coins were actually worth their nominal value. [L. S.] [H. H.]

NOMOPHY'LACES (*νομοφύλακες*) were certain magistrates or official persons of high authority, whose duty it was to see that nothing unconstitutional was proposed, and to punish those who acted unconstitutionally (Xen. *Oec.* 9, 14; Cic. *de Leg.* iii. 20, 46): they had also to provide for the safe custody of written laws and records (*C. I. G.* 3794). Generally speaking, they were intended to uphold the established order of things against hasty innovators (cf. Plat. *Leg.* vi. p. 755 A). We find them at Abdera, Mylasa, Chalcedon, Corcyra (see the inscr. cited by Gilbert, *Staatsalt.* ii. p. 337): but the office sometimes has a different title, *νομοδεῖκται* at Andania (Dittenberg, 388, 114) and *θεσμοφύλακες* at Elis (Thuc. v. 47). At Sparta there were five *νομοφύλακες* and a *γραμματοφύλαξ* or keeper of records, who in some inscriptions is ranked with his superiors, so that the number appears to be six. (See Gilbert, i. p. 27.)

At Athens this supervision had originally belonged to the Areiopagus, and, when Ephialtes deprived that body of its power [Areiopagus, Vol. I. p. 177], it seemed necessary to have some "guardians of the law" who should be a check upon too rapid legislation, by protesting against propositions which were detrimental to the state or subversive of the constitution. (*Lex. Cantab.* s. v.; Phot. *s. v.*; Schömann, *Antiq.* p. 342; Grote, *Hist.* v. 503, ch. xlvi.; E. Curtius, *Hist.* ii. p. 385.) These were a board of seven Nomophylaces, chosen annually by lot, who sat beside the Proedri in the senate and in the assembly. They were abolished in the archonship of Eucleides, when the Areiopagus regained some of its supervising powers, but were instituted again by Demetrius of Phalerum. Some writers hold this to have been the first institution of nomophylaces at Athens (see Gilbert, *Staatsalt.* i. p. 153). It may be observed that the importance of the board was really small, since the control which belonged to them was in practice superseded by the Graphe Paranomon; and this may account for our hearing nothing of their activity. [C. R. K.] [G. E. M.]

NOMOS (*νόμος*). The definition of *νόμος* in [Dem.] *c. Aristog.* i. p. 774, § 16—a definition which has passed into the Digests, l. 2, *de legibus*—contains all the points which must be touched upon in discussing law and legislation amongst the Greeks: *πᾶς ἐστὶ νόμος εὕρημα μὲν καὶ δῶρον θεῶν, δόγμα δ' ἀνθρώπων φρονίμων, ἐπανόρθωμα δὲ τῶν ἑκουσίων καὶ ἀκουσίων ἁμαρτημάτων, πόλεως δὲ συνθήκη κοινή, καθ' ἣν πᾶσι προσήκει ζῆν τοῖς ἐν τῇ πόλει.* In the heroic ages the king's authority, which the family derived from the favour of Zeus (*τιμὴ δ' ἐκ Διός ἐστι*, *Il.* ii. 197) and which passed by descent, as a general rule, to the eldest son, was not absolute, but limited *ἐπὶ ῥητοῖς γέρασι* (Thuc. i. 13: cf. Dion. Halic. *A. R.* v. 74). As Aristotle says (*Pol.* iii. 10 [14 B.] 1), "he commands the army, administers justice" (chiefly, though not exclusively), "and conducts the rites of religion." The king received from Zeus the sceptre, the symbol of the judicial authority, and with it the *θέμιστες* (*Il.* ii. 206; ix. 98 f.), which belong properly to Zeus (*Od.* xvi. 403): so that "when he decided a dispute by a sentence the judgment was assumed to be the result of direct inspiration;" when he called in the assistance of the *γέροντες*, "they sat on polished stones in the holy circle and held in their hands the heralds' sceptres; with these they rose up and gave sentence in turn" (*Il.* xviii. 504 ff., *δικασπόλοι, οἵτε θέμιστας πρὸς Διὸς εἰρύαται*, *Il.* i. 238 f.), and he himself occupied probably the same position among them which is ascribed to Minos when judging the dead (*Od.* xi. 568 ff.). [Rex.] The same idea which caused these judgments of the king to be attributed to divine inspiration shows itself here and there at a later period in the claim of a divine origin for entire systems of laws. "Do you believe, as Homer says," asks the Athenian of the Cretan Cleinias, "that Minos went every ninth year to converse with Zeus and made laws for your cities in accordance with his sacred words?" "Yes, that is our tradition" (Plat. *Legg.* i. *init.*). According to the tradition of the Spartans preserved by Herodotus (i. 69), Lycurgus introduced the laws of Crete into Sparta: "Some, however," he adds, "said that the Pythia gave him the constitution which still exists in Sparta;" and the latter belief gained general acceptance (Xen.

de Rep. Lac. 8, *πυθόχρηστοι νόμοι*), so that Lycurgus came to be looked upon as *φύσις τις ἀνθρωπίνη μεμιγμένη θείᾳ τινὶ δυνάμει* (Plat. *Legg*. iii. p. 691 E). Zaleucus, too, is made to say that Athene had appeared to him in a dream and given him laws (Plut. *de se ips. laud.* p. 534 A: cf. Arist. *Λοκρῶν πολιτ. fr.* 230). The great fundamental conceptions of morality, common alike to all mankind, the *ἄγραφοι νόμοι*, were also believed to have come from the gods (Soph. *Oed. R.* 864 ff.; Eurip. *Antiop*. fr. 219; Xen. *Memor*. iv. 4, 19); and being derived and having their sanction from heaven, they were considered superior to the enactments of human societies (Soph. *Antig*. 454 ff.; Eurip. *Suppl*. 19, 526, 537; Thuc. iv. 97, etc.). This is the *κοινὸς νόμος—ὅσα ἄγραφα παρὰ πᾶσιν ὁμολογεῖσθαι δοκεῖ*—as opposed to the *ἴδιος νόμος, καθ' ὃν γεγραμμένον πολιτεύονται*, which applies only to the citizens of each individual state (Arist. *Rhet*. i. 10, 3). The *ἴδιος νόμος* did not protect the foreigner (*ἀτίμητος μεταναστής*, *Il*. ix. 648); there never was at Athens a state law *τοὺς ξένους μὴ ἀδικεῖσθαι*, as Petit supposes (*Legg. Attic*. viii. tit. iv. p. 678), but there, as everywhere, *ξένοι* were looked upon as protected by *Ζεὺς Ξένιος* (*οὔ μοι θέμις ἔστ' . . . ξεῖνον ἀτιμῆσαι*, *Od*. xiv. 56, ix. 270; Plat. *Legg*. v. p. 729 E, etc.; *κατὰ τὸν κοινὸν ἁπάντων ἀνθρώπων νόμον ὃς κεῖται τὸν φεύγοντα δέχεσθαι*, Dem. *c. Aristocr*. p. 648, § 85). When aliens became residents (*μέτοικοι*) in Athens, they were admitted to the protection of the law under certain conditions, but were never placed on the same footing as the Athenians, and the special jurisdiction over them was entrusted to the polemarch. (As to the *κόσμος ξένιος* in Gortyn, see *Bull. de Corr. Hellén*. xi. p. 243.) [METOECI.]

The *θέμιστες* of the king were not laws, but single, isolated judgments. Zeus, as Grote says, or the human king on earth, was not a lawmaker, but a judge (the word *νόμος* does not occur in Homer); but, owing to parities of circumstances in the simple conditions of ancient society, awards were likely to follow and resemble each other in the succession of similar cases. Thus a beginning was made of customary law which was fully developed in the era of aristocracies following upon the period of kingly rule. The regal power, though limited, was liable to be abused, and Hesiod complains bitterly of the crooked and corrupt judgments of which the kings were habitually guilty. The nobles, who had originally served as council to the king, superseded him (except in Sparta, where however his power was greatly reduced), and alternated the functions of administration among themselves; and at Athens, as we are told (Pausan. iv. 5, 10, *ἀντὶ βασιλείας μετέστησαν ἐς ἀρχὴν ὑπεύθυνον*: cf. Herod. iii. 80), the archons were made responsible (to the Eupatrids, Schömann, *Jahrb. f. kl. Philol*. 1872, p. 105 ff.). These aristocracies did not claim direct inspiration for every sentence, as the kings had done, but they claimed that they alone possessed the knowledge of the law: this, then, is the epoch of Customary Law, of the unwritten law known exclusively to one class. The Spartans never went beyond this stage. Their *νόμιμα* were held to be as old as their race: "The descendants of Pamphylus and of the Heracleidae who dwell under the brow of Taygetus wish always to retain the *τεθμοὶ* of Aegimius," *i.e.* the son of Dorus and their mythical ancestor (Pind. *P*. vi. 64 f.); and Hellanicus, the most ancient writer on the constitution of Sparta, makes no mention of Lycurgus (for which he is censured by Ephorus, Strab. viii. p. 366), and attributes what are called the institutions of Lycurgus to the first kings, Procles and Eurysthenes. When Herodotus (i. 65) describes the Spartans before the time of Lycurgus as being *κακονομώτατοι*, he can only mean that these *τεθμοὶ* of Aegimius had been overthrown, and that Lycurgus restored them. Lycurgus' laws were not written (the Spartans were forbidden by a rhetra to have written laws); Lycurgus connected the problem of legislation chiefly with education (Plut. *Lyc*. 13, *τὸ γὰρ ὅλον καὶ πᾶν τῆς νομοθεσίας ἔργον εἰς τὴν παιδείαν ἀνῆψε*). Hence we find that the *γέροντες* in Sparta could punish with death and exile (Arist. *Pol*. vi. 7 [iv. 9^b B.], 5; *τὰς φονικὰς δικάζουσιν*, iii. 1, 7) without being responsible (ii. 6 [9 B.], 17) or being bound by a written code. The kings decided disputes about heiresses, and all adoptions were made in their presence (Herod. vi. 57); the ephors decided civil suits (*τὰς τῶν συμβολαίων δίκας*, Arist. *Pol*. ii. 7 [10 B.], 6), and for these Lycurgus did "not prescribe any positive rule or inviolable usage, willing that their manner and form should be altered according to the circumstances of time, and determination of men of sound judgment" (Plut. *Lyc*. 13).—In Crete the position of the *γέροντες* (called there *βουλή*, Arist. *Pol*. ii. 7 [10 B.], 3) was exactly the same as in Sparta: they were not bound in their sentences by a written code; but private law was reduced to writing. In 1884 near Gortyn an inscription was discovered (on part of an inside wall of what was probably the *δικαστήριον*), in twelve columns, written *βουστροφηδόν*, dating from between 450 to 350 (cf. Svoronos in *Bull. de Corr. Hellén*. xii. p. 404 ff. against Comparetti's earlier date), containing an elaborate code of private laws, in which reference is made several times to previous written laws, partly still in force, partly amended by this code, *e.g*. xii. 16 f., *ᾇ ἔγραπτο πρὸ τῶνδε τῶν γραμμάτων*. [COSMI; add to the literature there given Merriam, *Amer. Journ. of Archaeol*. i. 4 and ii. 1.] This brings us to a new epoch: to the era of Codes. The aristocracies seem to have abused their monopoly of legal knowledge, and at all events their exclusive possession of the law was a formidable impediment to the success of the popular movements beginning to be universal. Laws written on tablets and published to the people took the place of usages deposited with the recollection of a privileged class. The first written code, we are told, was that of Zaleucus (Strab. vi. p. 259); it is specially mentioned of him, that whilst it had hitherto been left to the discretion of the judge to settle the punishment for every offence, he fixed the penalty by law (Strab. vi. p. 260), and also gave simple regulations for private suits (Diod. xi. 21, 3: cf. Polyb. xii. 16). In B.C. 621 the archon Draco (Pausan. ix. 36, 8) was appointed to draw up a written code of laws for Athens (Arist. *Pol*. ii. 9 [12 B.], 9); these are usually called *θεσμοί*, and by that name distinguished from the *νόμοι* of Solon, *e.g*. Andoc. *de Myst*. §§ 81, 83; yet Solon uses the term *θεσμὸς* of his amnesty law on the 13th *ἄξων*

(Plut. *Sol.* 19, 3; cf. Dem. *c. Leoch.* p. 1094, § 46); and [Dem.] *c. Euerg. et Mnes.* p. 1161, § 71, speaks of Draco's *νόμοι*. We know very little about Draco's laws with the exception of those on homicide, which Solon retained (Plut. *Sol.* 17), and which were always considered excellent (Antiph. *de caed. Herod.* § 14). They were probably no more than such ancient ordinances reduced to writing as the ephetae had been accustomed to enforce ever since the community had, step by step, put an end to the blood-feud and reduced the pursuit of the murderer and the atonement for murder to legal forms, making the *νόμος* instead of the prosecutor *κύριος* of the murderer (Dem. *c. Aristocr.* p. 642, § 69, *φόνος ἑκούσιος*; p. 643, § 71, *φόνος ἀκούσιος*, etc.). The extreme severity of Draco's punishments, on which Aristotle remarks, was not due to any cruel disposition on his part, but to the spirit of the age: moreover their severity has been somewhat exaggerated (Pollux, ix. 61; viii. 42). At all events the people gained little by the written code except a more perfect knowledge of its severity. In B.C. 594[*] Solon was chosen archon and *διαλλακτὴς καὶ νομοθέτης* (Plut. *Sol.* 14, cf. 16; Herod. i. 29, *Ἀθηναίοισι κελεύσασι νόμους ἐποίησε*). Unfortunately so small are the fragments which have come down to us of Solon's laws (collected by Duncker, *Gesch. d. Alterth.* vi.⁵ p. 198 ff.), and so much has been ascribed to him by the orators, which belongs really to subsequent times, that it is scarcely possible to form a clear opinion respecting his legislation in all its details. Certain it is that it shows a remarkable progress in the Greek mind respecting legislation. No special divine inspiration was claimed for Solon's laws, nothing beyond that divine influence which the Greeks felt to underlie and support every social institution: they were looked upon as the laws of a just and practically wise man (*οὐκ ἔφυγον ἕνα τὸν δικαιότατον καὶ φρονιμώτατον ἐπιστῆσαι τοῖς πράγμασιν*, Plut. *Sol.* 14), who fitted his laws to the existing state of things rather than made things suit his laws (*l. c.* 22), and who, when asked whether he had given the Athenians the best laws, could truly answer, "The best of those which they would accept" (*l. c.* 15),—of a man who, believing in human progress, did not endeavour to secure fixity or finality for his laws (*τοὺς νόμους ἔφη μετακινητοὺς εἶναι*, Plut. *Sept. Sap. Convic.* p. 152 a, as contrasted with Lycurgus' theory in Plut. *Lyc.* 29, *ἀκίνητον ἐς τὸ μέλλον*), but only exacted from the Athenians an oath that they would not rescind any of them for ten years (Herod. i. 29; for a century, Plut. *Sol.* 25), and devised wise regulations for the revision of the code. For, knowing on the one hand that laws consecrated by long usage are more readily obeyed (cf. on this point Arist. *Pol.* ii. 5 [8 B.], 14), and foreseeing on the other that the best legislation would in course of time require adaptation to existing circumstances, he so contrived matters that whilst his laws were subject to constant revision, all attempts at hasty legislation were checked. [NOMOTHETES.] Any law thenceforward added to the code was in fact "a contract of the state according to which it befits all who belong to it to live:" cf. Arist. *Rhet.* i. 15, 21, *καὶ ὅλως αὐτὸς ὁ νόμος συνθήκη τις ἐστίν*; Anaxim. *Ars Rhet.* ed. Spengel, p. 2, 2, p. 13, 12 f.; and the same principle in Plato, *Legg.* i. p. 644 D, *ἐπὶ δὲ πᾶσι τούτοις λογισμὸς ὅ τί ποτ' αὐτῶν ἄμεινον ἢ χεῖρον· ὃς γενόμενος δόγμα πόλεως κοινὸν νόμος ἐπωνόμασται*. For any law which was *ἐπιτήδειος* (Dem. *c. Tim.* p. 722, § 68; *c. Lept.* p. 482, § 83 f.) the proposer could reckon upon ready acceptance; for it was the outcome of practical needs which required only to be duly stated within the prescribed forms. To satisfy a practical need (*ἐκ γὰρ τοῦ πράττεσθαί τινα ὧν οὐ προσῆκεν, ἐκ τούτου τοὺς νόμους ἔθηκαν οἱ παλαιοί*, Aeschin. *c. Tim.* § 13; *ὁ μὲν γὰρ νόμος πέφυκε προλέγειν ἃ μὴ δεῖ πράττειν*, Lyc. *c. Leocr.* § 4), not to build up a system of laws which provided for every conceivable case, was the aim of Greek legislation (Theophr. *π. νόμων*, fr. 1 and 2, in *Journ. of Philol.* vi. p. 1: "jura constitui oportet, ut ait Th.," in his "quae *ἐπὶ τὸ πλεῖστον* accidunt, non quae *ἐκ παραλόγου*," *Digest.* i. 3, 3; *τὸ γὰρ ἅπαξ ἢ δίς*, ut ait Th., *παραβαίνουσιν οἱ νομοθέται*, *Digest.* i. 3, 6).

Solon's laws were inscribed *βουστροφηδὸν* on square wooden tablets (*ἄξονες*) on a pivot (Aristotle in Aul. Gell. *N. A.* ii. 12; Harpocr. *s. v.* *ἄξονι*, Plut. *Sol.* 25). Draco's laws on homicide, which Solon retained, were likewise inscribed on *ἄξονες*, but these were counted by themselves. This is evident from *C. I. A.* i. No. 61, where Draco's law *περὶ φόνου* is mentioned as being inscribed on the *πρῶτος ἄξων* (cf. Dem. *c. Aristocr.* p. 629, § 28, *ἐν τῷ α' ἄξονι*, Cobet, *Var. Lect.* p. 123), whilst the *πρῶτος ἄξων* of Solon's legislation contained quite different laws. From Plut. *Sol.* 24 we learn that it contained a law forbidding the exportation of any native produce except olive oil; and from Harpocr. *s. v.* *σῖτος*, that on it were inscribed regulations for the maintenance of widows and orphans. This first *ἄξων* evidently contained the *νόμοι τοῦ ἄρχοντος*: for the *ἄρχων* was bound, on pain of forfeiting 100 drachmas, to

---

[*] A different date for Solon's legislation is fixed by Holzapfel (*Berl. Stud.* vii. 3) and Th. Case (*Class. Rev.* ii. No. 8). The former places it in B.C. 584–3, as Demosthenes does, who in B.C. 343–2 (the date of *de fals. Leg.*) places the era of Solon 240 years back (p. 420, § 251). After Damarias had held the archonship for two years (587–585 B.C.) and was driven by force from office, a compromise was effected, by which four Eupatrids, three *ἄγροικοι*, and two *δημιουργοὶ* should be elected archons. This arrangement lasted only one year (B.C. 585–4), according to Busolt (*Griech. Gesch.* i. p. 544), for in the following year fell Solon's legislation. Th. Case distinguishes Solon's seisachtheia, passed in the year of his archonship, *i.e.* B.C. 594, and his general legislation, which occurred after B.C. 570; in fixing the latter so late he relies especially on Herodotus' remark (ii. 177), that Solon borrowed his law against idleness from Amasis king of Egypt, who succeeded to the throne *c.* 570 B.C. (Wiedemann, *Aegypt. Gesch.* p. 602; *Class. Rev.* ii. No. 9, p. 291.) It is, however, anything but certain that this law was introduced by Solon; a better authority, Lysias (*Lex. Rhet. Cantabr.* p. 665, 20 ff.; cf. Plut. *Sol.* 17), ascribes it to Draco, who ordained death as the penalty (disfranchisement, Pollux, viii. 42), whilst Solon, who retained this law, inflicted a fine of 100 drachmas for the first conviction and disfranchisement only when a person was convicted a third time. According to Theophrastus (*περὶ νόμων*, *fr.* 27), it was Peisistratus who first passed the law: this probably means that he introduced further modifications. Duncker (*l. c.* p. 156 n.), too, is of opinion that one year was not sufficient for carrying out all Solon's reforms.

pronounce solemn curses upon any offender against the law regulating export, and to him was also entrusted the care of widows and orphans (*Att. Process*, ed. Lipsius, p. 57). From this it would appear that Solon's laws were arranged according to the magistrates who had to administer them—an arrangement which seems to have been the usual one at Athens (*Att. Process*, ed. Lipsius, p. 206 f.: *νόμος τοῦ βασιλέως*, Athen. vi. p. 235 c; Pollux, iii. 39; *νόμοι βουλευτικοί*, *lex* in Dem. *c. Tim.* p. 706, § 20, etc.; the *νόμοι ἐπικλήρων*, *τελωνικοί*, *ἐμπορικοί*, etc., were subdivisions, *e.g.* the *νόμοι ἐπικλήρων* of the *νόμοι τοῦ ἄρχοντος*, etc.). According to the scholiast on Plat. *Polit.* p. 298 D, Solon divided his laws into *νόμοι περὶ τῶν ἱερῶν*, *νόμοι πολιτικοί*, and *νόμοι περὶ τῶν ἰδιωτικῶν*, and the third class was placed on the *ἄξονες*, the other two on the *κύρβεις* (cf. *Sol.* 25); but earlier writers knew of no such difference between *ἄξονες* and *κύρβεις* (cf. Eratosthenes in Schol. on Aristoph. *Nub.* 447). According to others, the *ἄξονες* were wooden tablets, whilst the *κύρβεις* were stone pillars (Apollodorus in Harpocr. *s. v.*); but from the passage from Cratinus quoted by Plut. *Sol.* 25 it is clear that the *κύρβεις* were of wood. In all probability, as Aristotle suggests, *ἄξονες* and *κύρβεις* were synonymous terms [AXONES]. Solon's laws were preserved first in the Acropolis, subsequently brought by Ephialtes *εἰς τὸ βουλευτήριον καὶ τὴν ἀγοράν* (Anaximenes in Harpocr. *s. v. ὁ κάτωθεν νόμος*), and ultimately to the prytaneum, where Polemon, *c.* 200 B.C., saw them yet (Harpocr. *s. v. ἄξονι*), and where some remnants (*λείψανα μικρά*) existed even in the days of Plutarch (*Sol.* 25); some sixty years later Pausanias said inaccurately *ἐν ᾧ* (sc. Prytaneum) *νόμοι τε οἱ Σόλωνός εἰσι γεγραμμένοι*, etc. (i. 18, 3). According to Aristotle, copies of the laws were placed in the *στοὰ βασιλεία* (Harpocr. *s. v. κύρβεις*). Whether Aristotle refers to the legislation of B.C. 409 and 403, or to an earlier measure (perhaps to Ephialtes, *l. c.*, *τοὺς κύρβεις εἰς . . . τὴν ἀγοράν*, etc.), it is perfectly clear that for practical use such copies of all the laws on *στῆλαι* were in the court of the basileus in the market-place: cf. *C. I. A.* i. No. 61, *ἀναγραψάντων οἱ ἀναγραφεῖς τῶν νόμων . . . ἐν στήλῃ λιθίνῃ καὶ καταθέντων πρόσθεν τῆς στοᾶς τῆς βασιλείας*, and the psephisma in Andoc. *de Myst.* § 84, *τοὺς δὲ κυρουμένους τῶν νόμων ἀναγράφειν εἰς τὸν τοῖχον*, *i.e.* *εἰς τὴν στοάν* (*l. c.* §§ 85, 82). There were besides, in the offices of the different magistrates, copies of those laws which they had to administer: thus Andocides speaks of a law which he considered Solonian as *ἐν τῇ στήλῃ ἔμπροσθεν τοῦ βουλευτηρίου* (*de Myst.* § 95 f.: cf. the *νόμοι βουλευτικοὶ* in Dem. *c. Tim.* p. 706, § 20); the laws on homicide were engraven on a *στήλη* in the Areiopagus (Dem. *c. Aristocr.* p. 627, § 22; Lys. *de caed. Erat.* § 30; [Lys.] *c. Andoc.* § 15; [Dem.] *c. Euerg. et Mnes.* p. 1161, § 71).*

Within a year after the deposition of the Four Hundred the complete democracy was restored, and a revision of the laws ensued: commissioners (*συγγραφεῖς*, *C. I. A.* i. No. 58: Demophantus was one of them, *τάδε Δ. συνέγραψεν*, Andoc. *de Myst.* § 96) were appointed with *ἀναγραφεῖς* (*C. I. A.* i. No. 61; cf. Lys. *c. Nicom.* § 2) under them to copy the laws within four months after the revision (R. Schöll, *de extraord. quibusd. magistr. Athen.* in *Comment. Philol. in hon. Th. Mommseni*, p. 458 ff.), and from *C. I. A.* i. No. 57 and No. 61 it is evident that the law on the competency of the senate and the popular assembly, and Draco's law respecting homicide, were copied afresh. This revision was interrupted by the unfavourable turn which the war took, and was not resumed until the archonship of Eucleides, B.C. 403. Then it was proposed *χρῆσθαι τοῖς Σόλωνος νόμοις καὶ τοῖς Δράκοντος θεσμοῖς* (Andoc. *de Myst.* § 82; cf. Xen. *Memor.* ii. 2, 42, *τοῖς νόμοις τοῖς ἀρχαίοις*) in the meantime; the senate selected ten *νομοθέται* (*ὁπόσων δ' ἂν προσδέῃ, οἱ δέκα* [Sluiter, *lect. Andoc.* p. 134, *οἳ δε* MSS.] *ᾑρημένοι νομοθέται ὑπὸ τῆς βουλῆς*), who had to write on tablets all proposals for new laws, post them up for public inspection before the statues of the Eponymous Heroes, and hand them over within a month *ταῖς ἀρχαῖς*, *i.e.* to the different magistrates interested, all the laws to be examined first by the senate and then by the 500 nomothetae (after having taken the oath), elected by the *δημόται*, and during the discussion before the senators every private citizen was to have liberty to enter the senate and tender his opinion. All the laws thus approved were written out in the Ionian alphabet (Suid. *s. v. Σαμίων ὁ δῆμος*). At the same time it was enacted that no magistrate should act upon any law not among those inscribed; that no psephisma either of the senate or of the people should overrule any law; that no law should be passed *ἐπ' ἀνδρὶ* unless by the votes of the majority in an assembly at which at least 6000 Athenians were present and voted (secret voting by ballot), *e.g.* in case of naturalisation of a foreigner; and that in future the code as revised in the archonship of Eucleides should be used (Andoc. *l. c.* § 87; cf. Dem. *c. Tim.* p. 713, § 42, *lex*).—After the Lamian war the democratic constitution was overthrown by Antipater; Demetrius of Phaleron, the third *νομοθέτης* of Athens (Syncellus, *Chron.* 273), established again a professedly democratic government (*οὐ μόνον οὐ κατέλυσε τὴν δημοκρατίαν ἀλλὰ καὶ ἐπηνώρθωσε*, Strab. ix. p. 398), but Plutarch's (*Demetr.* 10) description of it as in fact a *μοναρχικὴ κατάστασις* seems more accurate; three years after his death, in B.C. 304–3, a new *ἀναγραφὴ* of the laws took place (*C. I. A.* ii. No. 258).

The magistrates and dicasts were bound by solemn oaths to administer the laws, executive and judicial: the nine archons swore *συμφυλάξειν τοὺς νόμους* (Pollux, viii. 86; cf. Plut. *Sol.* 25), the senators *βουλεύσειν κατὰ τοὺς νόμους* (Xen. *Memor.* i. 1, 18), the dicasts *κατὰ τοὺς νόμους δικάσειν . . . καὶ περὶ ὧν ἂν νόμοι μὴ ὦσι, γνώμῃ τῇ δικαιοτάτῃ κρινεῖν* (Dem. *c. Lept.* p. 492, § 118, etc.). In the decree of Tisamenus the senate of Areiopagus were enjoined to see *ὅπως ἂν αἱ ἀρχαὶ τοῖς κειμένοις νόμοις χρῶνται* (Andoc. *de Myst.* § 84; cf. Plut. *Sol.* 19). As the dicasts performed the functions both of

---

* The ancient law respecting the wife of the basileus engraven on a stone pillar *ἀμυδροῖς γράμμασιν Ἀττικοῖς* was preserved in the temple of Dionysus *ἐν Λίμναις*, which was opened only once every year ([Dem.] *c. Neaer.* p. 1370, § 76 f.).

judge and jury, *i.e.* were entrusted with the whole judicial power after the cause was brought into court (they decided upon the law as well as upon the facts without being directed or controlled by a presiding judge), it is evident that the important question how the laws of Athens worked depends on the discretion which in practice they exercised in the interpretation of the written law, or, where there was no written statute, in applying the general principles of law and justice to the case before them. This is only to be discovered by a careful perusal of the Attic orators, and is too wide a question to be discussed here. The materials for a trial were prepared by the parties themselves under the superintendence of the magistrate, and the dicasts had to decide upon the materials thus prepared. Of the five *ἄτεχνοι πίστεις* which Aristotle mentions (*Rhet.* i. 15, *νόμοι, μάρτυρες, συνθῆκαι, βάσανοι, ὅρκος*) we are here concerned only with the first; the parties procured copies or extracts of such laws as were material to the questions to be tried, and brought them before the *ἡγεμὼν δικαστηρίου* at the *ἀνάκρισις*, by whom they were put into the box (*ἐχῖνος*), together with the other evidentiary documents, and produced at the trial to be read to the dicasts by the *γραμματεύς*. To produce a fictitious law is said to have been an offence punishable with death ([Dem.] c. *Aristog.* ii. p. 807, § 24). It was easy for the parties to procure copies, since every citizen had access to the public places where the laws were open to inspection, and to the Metroon which served as state archives (*νομοφυλάκιον*, Suid. *s. v.* *μητραγύρτης*; from the fourth century, according to Wilamowitz-Möllendorf, *Philol. Unters.* i. p. 205 f.) for all kinds of documents: laws (Lycurgus in Harpocr. *s. v.*; Lyc. *c. Leocr.* § 66, etc.), decrees (the originals, Athen. v. p. 214 e; Dinarch. *c. Dem.* § 86), etc., and was in charge of a public servant (*δημόσιος*, Dem. *de fals. Leg.* p. 380, § 129). (C. Curtius, *de Metroon in Ath. als Staatsarchiv.*) There was at Athens no class of persons corresponding to our counsel or attorneys, whose business or profession it was to expound the laws. The office of the *ἐξηγηταί* related only to religious observances. The laws were not complicated; at all events it was considered a requirement of a good law that it should be drawn simply and intelligibly (Dem. *c. Tim.* p. 722, § 68), and nothing seems more directly opposed to Solon's aims than the charge brought against him by Plutarch (*Sol.* 18), that he wrapped his laws in studied obscurity. Every Athenian on coming of age swore to obey the laws (*τοῖς θεσμοῖς τοῖς ἱδρυμένοις πείσομαι καὶ οὕστινας ἂν ἄλλους τὸ πλῆθος ἱδρύσηται ὁμοφρόνως*, Stob. *Flor.* xliii. 48; cf. Pollux, viii. 105 f.), and Pericles pointed to the fear of the laws as the source of every civic virtue (Thuc. ii. 37). But, to use Burke's words (*Reflections on the Revolution in France*, p. 459), "The vice of the ancient democracies, and one cause of their ruin, was, that they ruled . . . by occasional decrees, psephismata. This practice soon broke in upon the tenour and consistency of the laws; it abated the respect of the people towards them, and totally destroyed them in the end." (Hermann, *Ueber Gesetz, Gesetzgebung, etc. im griech. Alterth.*; Maine, *Anc. Law*, ch. 1; Leist, *Graeco-ital. Rectsgesch.*) [H. H.]

NOMO'THETES (*νομοθέτης*), legislator, is a word which may be applied to any person who causes laws to be enacted (*ὁ νόμον καινὸν εἰσφέρων*, Schol. on Dem. *Olynth.* iii. p. 31, § 10). Thus, Pericles and Themistocles are called *νομοθέται*, movers or proposers of laws (Lys. *c. Nichom.* § 28; *c. Phil.* § 27, etc.). It is, however, more commonly given to those eminent men whose laws have been celebrated for their intrinsic merit, or for the important influence which they exercised over the destinies of their country. Such were Minos of Crete (Plat. *Min.* p. 318 C); Zaleucus at Locri; Charondas at Catana, whose laws were adopted by the Chalcidian cities in Sicily and Italy (Arist. *Pol.* ii. 9 [12 B.], 8, praises his laws as superior to all others of his time in accuracy of definition and fineness of discrimination; they were sung *παρ' οἶνον Κατάνῃσι*, *Philologus*, v. p. 421, *i.e.* at Catana, not *Ἀθήνῃσι*, the usual text in Athen. p. 619 b); Draco at Athens (Dem. *c. Tim.* p. 765, § 211); Pittacus of Lesbos; Androdamas of Rhegium (Arist. *Pol.* ii. 9 [12 B.], 9), etc. But the name of *νομοθέτης* is given *κατ' ἐξοχὴν* to Lycurgus and Solon; for they were also founders of *constitutions* (*πολιτεῖαι*, Arist. *Pol.* ii. 9 [12 B.], 1). So high was the esteem in which Solon was held by the Athenians as the founder of their social polity, that although many important reforms were effected at various periods, he still continued to be regarded as *the lawgiver*, and the whole body of laws passed under his name (Meier, *de Bon. Damn.* p. 2).

As pointed out in NOMOS, Solon did not endeavour to secure fixity and finality for his laws. Zaleucus (Dem. *c. Tim.* p. 744, § 139; Polyb. xii. 16) discouraged changes in his laws by the regulation that he who proposed a new law had to bring the matter before the council with a cord about his neck, and was to be put to death if his proposal was negatived (Diod. xii. 17 ascribes this regulation to Charondas). When Lycurgus went on his last journey from which he never returned (so the story runs), he bound his countrymen by an oath to observe all his laws till his return (Plut. *Lyc.* 29). Solon exacted a similar oath of the Athenians for ten years only (Herod. i. 29; for a century, Plut. *Sol.* 25), and devised certain formalities for repealing an existing law and enacting a new one (Dem. *c. Lept.* p. 484, § 89 f., p. 485, § 93; Aeschin. *c. Ctes.* § 38 ascribes them *τῷ νομοθέτῃ τῷ τὴν δημοκρατίαν καταστήσαντι*). Grote (*Hist. of Gr.* iii. p. 123 f.) doubts whether Solon made any such provisions (as we find in operation in the time of Demosthenes), and refers "to post-Solonian matters in the supposed Solonian law, *e.g.* to the regulation (Dem. *c. Tim.* p. 707, § 23) that the proposer had to put up his project of law before the Eponymi." Of course this regulation cannot have proceeded from Solon, but the existence of such post-Solonian matters may be admitted without giving up the main point, viz. that it was Solon who laid down the principle of periodical revision of the laws (Schömann, *Verfassungsgesch. Ath.* p. 57).*

---

* In Busolt's opinion (*Griech. Staats. u. Rechtsaltert.* § 195) the mode of enacting laws in the fifth century differed from that in use in the fourth, inasmuch as in

The method of procedure at the *ἐπιχειροτονία νόμων* was as follows:—At the first assembly of the first prytany, *i.e.* on the eleventh of Hecatombaeon, after speeches recommending new laws and defending the old ones had been delivered, the question was put to the vote (*χειροτονία*) whether the laws should be confirmed as they stood or be revised. The laws were submitted in groups, according to Dem. *c. Tim.* p. 706, § 20, *lex*: first *οἱ βουλευτικοί*, *i.e.* those concerning the *βουλή*; secondly, *οἱ κοινοί*, then *οἳ κεῖνται τοῖς ἐννέα ἄρχουσι*, and *οἱ τῶν ἄλλων ἀρχῶν*—evidently arranged according to the different magistrates who had to administer them, though the term *οἱ κοινοὶ νόμοι* is not clear in this connexion. If a revision of one or more groups of the laws was voted for, in the third assembly following, the appointment of *νομοθέται* was taken into consideration (*σκέψασθαι καθ' ὅ τι τοὺς νομοθέτας καθιεῖτε*, *l. c.* p. 707, § 25), viz. their number and the length of their session, and how their pay was to be provided. In the interval those who wished to propose a new law had to put up a copy of it before the statues of the Eponymi (*l. c.* p. 705, § 18; p. 708, § 25; p. 711, § 36), that every one might have an opportunity of seeing it; and to give it still further publicity, they had to hand a copy to the secretary of the senate to have it read out at the intervening assemblies (Dem. *c. Lept.* p. 485, § 94), probably together with the old law which it was intended to replace (*παραναγνούς*, Dem. *c. Tim.* p. 712, § 38). The popular assembly was thus enabled to form an opinion as to the extent and nature of the revision, and accordingly to fix the number of the *νομοθέται* to be selected by lot from among the heliasts, and to determine their term of office; for the nomothetae were not a standing committee of the heliasts with their own *ἐπιστάτης* and *πρόεδροι* (Fränkel, *d. Att. Geschworengerichte*, p. 23 f.), but were chosen *ad hoc*, and their number was probably not uniform (a thousand, as Pollux, viii. 101, says), but seems to have varied according to the importance of the laws under consideration. The number of nomothetae given in Dem. *c. Tim.* p. 708, § 27, is 1001; in Andoc. *de Myst.* § 84, it is 500 (Blass reads here *ἡ βουλὴ οἱ πεντακόσιοι καὶ οἱ νομοθέται* instead of *ἡ βουλὴ καὶ οἱ νομοθέται οἱ πεντακόσιοι*). At the same time as the nomothetae (not at the first assembly, Dem. *c. Tim.* p. 707, § 23) five *συνήγοροι* (*l. c.* p. 711, § 36; Dem. *c. Lept.* ed. Wolf, *Proleg.* p. 145) were chosen to argue in defence of the laws which it was proposed to repeal (not five *συνήγοροι* for each law, as the Schol. on Dem. *c. Tim.* p. 707, § 23, says). Before the nomothetae were called upon to give their final decision, the proposed laws were examined by the senate (*συννομοθετεῖν δὲ καὶ τὴν βουλήν* (*l. c.* p. 708, § 27, *psephisma*); cf. [Xen.] *de Rep. Athen.* iii. 2, *τὴν δὲ βουλὴν βουλεύεσθαι* (*δεῖ*) . . . *πολλὰ* . . . *περὶ νόμων θέσεως*, and Pollux, viii. 101, *τοὺς γὰρ νέους* (sc. *νόμους*) *ἐδοκίμαζεν ἡ βουλή*, etc.); and if we may take the revision of laws in B.C. 403 as an example, the senate performed this duty by themselves, not in conjunction with the nomothetae. The meetings of the nomothetae resembled the assemblies of the people: the prytanes convened them; *πρόεδροι* presided over them, probably appointed in the same way, viz. by lot one from each of the non-presiding tribes, and their *ἐπιστάτης* chosen by lot from among themselves. The statement that the *πρόεδροι* put the question to the nomothetae (Dem. *c. Tim.* p. 710, § 33; p. 723, § 71) is not "a blunder on the part of the compiler;" they are mentioned in *C. I. A.* ii. No. 115^b, *ἐν δὲ τοῖς νομοθέταις τοὺς προέδρους οἳ ἂν προεδρεύωσιν καὶ τὸν ἐπιστάτην προσνομοθετῆσαι*, etc. The law in favour of which the nomothetae voted, whether the established law or the proposed one, was *κύριος*.

Besides this, the thesmothetae (*καλοῦνται δὲ οὕτως, ὅτι τῶν νόμων τὴν ἐπιμέλειαν εἶχον*, Harpocr. *s. v.*) of each year were directed to examine the whole code of laws (*διόρθωσις τῶν νόμων*), and to see if there were any laws contradictory or useless (Aeschin *c. Ctes.* § 38; Dem. *c. Lept.* p. 484, § 90; Harpocr. and Photius, *s. v.*). If they found such, they had to put up copies of them before the statues of the Eponymi, the prytanes had to convene an assembly of the people for the appointment of nomothetae (*ἐπιγράψαντες νομοθέτας*), and the *ἐπιστάτης τῶν προέδρων* had to submit the laws to the decision of the nomothetae. The usual text of the last clause is *τὸν δ' ἐπιστάτην τῶν προέδρων διαχειροτονίαν διδόναι τῷ δήμῳ*: *τῷ δήμῳ* is, however, wrongly repeated from the previous paragraph. It is clear from what follows, *τῶν δὲ πρυτάνεων ἀποδόντων τοῖς νομοθέταις ἀνῄρητ' ἂν ὁ ἕτερος τῶν νόμων*, that the nomothetae, not the assembly of the people, would have repealed the law. (Höffler, *de nomothes. Att.* p. 10, connecting this passage with Photius' explanation of *νομοθέται*, strangely supposes that the whole people when engaged in the revision of the laws might be called *νομοθέται*.) The proceedings in the *ἐπιχειροτονία τῶν νόμων* and in the *διόρθωσις* are therefore only different in this respect, that in the former any citizen so disposed, in the latter the thesmothetae in their official capacity, proposed the repeal of a law.

If, after the repeal of an old law by the nomothetae, it was found that the law proposed in its stead was not expedient (*οὐκ ἐπιτήδειος*) for the Athenian people, or was contrary to any of the established laws (*lex* in Dem. *c. Tim.* p. 710, § 33), the proposer was within the limit of a year liable to prosecution (Dem. *c. Lept.* p. 501, § 144; *argumentum*, p. 543). (Schöll, *Ueber attische Gesetzgebung, Sitzungsber. Akad. München*, 1886.) [PARANOMON GRAPHE.]

These regulations for the revision of laws were not always observed; *e.g.* Demosthenes (*Olynth.* iii. p. 31, § 10 f.) recommended the appointment

---

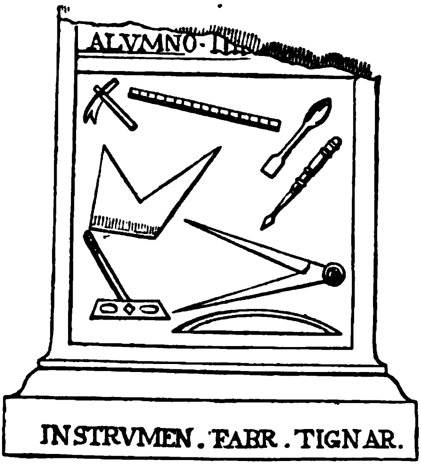
the fifth century certain individuals (*συγγραφεῖς*) were commissioned to draw up the laws which, after having been approved by the senate, were laid before the popular assembly; *συγγραφεῖς* for 450 B.C. in *C. I. A.* iv. No. 22 a, for 446 B.C. in the decree about the *ἀπαρχαί* in *Bull. de Corresp. Hell.* 1880, pp. 225 ff., in March 411 B.C. *ξυγγραφεῖς αὐτοκράτορες* were appointed to prepare a new constitution (Thuc. viii. 67), cf. Xen. *Hell.* ii. 3, 2, 11; *Memor.* i. 2, 31; but immediately after the overthrow of the Four Hundred *νομοθέται* were appointed (Thuc. viii. 97). Hicks (*Greek Hist. Inscr.* 149, A, § 8) gives an interesting inscription, according to which three *νομογράφοι* were commissioned to draw up a new code of laws for Teos after the incorporation of the people of Lebedos with the Teians, the laws of Cos being in the meantime in force.

of nomothetae for the special purpose of repealing the laws concerning the theoric fund; one of the charges against Timocrates was that he induced the people to appoint nomothetae out of the usual time, viz. on the day following the first assembly of the year (p. 706, § 18; p. 708, § 26: cf. *c. Lept.* p. 488, § 91). The practice had grown up of passing legislative measures in the shape of decrees, dispensing with the regular course of law. The mere resolution of the people in assembly was a *ψήφισμα*; such decrees were originally measures of government, relating to individuals, or to particular occasions, *e.g.* for the despatch of an embassy. They had indeed the force of laws so far as regarded the obedience due to them, and sometimes *νόμος* and *ψήφισμα* seem to be used indiscriminately, *e.g.* Ps. Plut. *Vitt. X. Oratt.* p. 481 E f., and Aelian, *V. H.* xiii. 24 (Schömann, *de Comit.* p. 249), but one psephisma might be set aside at any time by another. It was ordained by a decree of the people that no free Athenian could be put to torture, but Peisander urged the Athenians to set it aside (*λύειν τὸ ἐπὶ Σκαμανδρίου ψήφισμα*, Andoc. *de Myst.* § 43: cf. [Dem.] *c. Aristog.* i. p. 784, § 47, *Att. Process*, ed. Lipsius, p. 896, n. 372).

Andocides quotes the law: *ψήφισμα μηδὲν μήτε βουλῆς μήτε δήμου νόμου κυριώτερον εἶναι* (*de Myst.* §§ 87, 89; cf. Dem. *c. Aristocr.* p. 694, § 87; *c. Tim.* p. 709, § 30); as long as this law was observed, the democracy was one of the kind in which (as Aristotle, *Pol.* vi. [iv. B.], 4, 3, says) *κύριος ἦν ὁ νόμος, ἀλλ' οὐ τὸ πλῆθος*: but later on things changed: *κύριον ἦν τὸ πλῆθος, ἀλλ' οὐχ ὁ νόμος*,—a change brought about *ὅταν τὰ ψηφίσματα κύρια ᾖ ἀλλὰ μὴ ὁ νόμος, συμβαίνει δὲ τοῦτο διὰ τοὺς δημαγώγους* (cf. Dem. *c. Lept.* p. 485, § 92, *ψηφισμάτων δ' οὐδ' ὁτιοῦν διαφέρουσιν οἱ νόμοι*: Xen. *Hellen.* i. 7, 12, *τὸ δὲ πλῆθος ἐβόα δεινὸν εἶναι εἰ μή τις ἐάσει τὸν δῆμον πράττειν ὃ ἂν βούληται*: [Dem.] *c. Neaer.* p. 1375, § 88, *ὁ γὰρ δῆμος ὁ Ἀθηναίων κυριώτατος ὢν τῶν ἐν τῇ πόλει ἁπάντων καὶ ἐξὸν αὐτῷ ποιεῖν ὅ τι ἂν βούληται*, etc.; Hermann, *Griech. Staatsalt.* § 67, n. 8). Like other despotic sovereigns, the Athenian people claimed "a dispensing power" of overriding the law upon occasion; and their advisers, the professional statesmen and orators, were as such the "keepers of the royal conscience," and liable to severe punishment if their master's conscience consequently reproached him with what he had done at their bidding (Dem. *c. Androt. et Tim.* ed. Wayte, Introd. p. xxxiv.). The same Athenians who declared it intolerable that the people should not be allowed to do as it pleased them, repented soon of their decree and directed a prosecution of those who had advised it. However, proposing decrees paid the *ῥήτορες* well and was worth some risk: Demosthenes and Demades are said to have made more than 6[illegible] talents each *ἀπ' αὐτῶν τῶν ἐν τῇ πόλει ψηφισμάτων καὶ προξενιῶν* (Hyper. *c. Dem.* col. 23: cf. Dinarch. *c. Dem.* § 41 ff.). [C. R. K.] [H. H.]

NONAE. [Calendarium.]

NORMA (*γωνία*, Plat. *Phileb.* p. 51 C; *γνώμων*, Arist. *Categ.* 14), a square, used by carpenters, masons, and other artificers, to make their work rectangular (Vitruv. vii. 3; Plin. *H. N.* xxxvi. § 172). It was made by taking three flat wooden rulers [Regula] of equal thickness, one of them being 2 feet 10 inches long, the others (called *ancones*, Vitruv. viii. 6) each 2 feet long, and joining them together by their extremities so as to assume the form of a right-angled triangle. (Isid. *Orig.* xix. 18.) This method, though only a close approximation, must have been quite sufficient for all common purposes. For the sake of convenience, the longest side, *i.e.* the hypotenuse of the triangle, was discarded, and the instrument then assumed the form in which it is exhibited among other tools in woodcut at Vol. I. p. 429. A square of a still more simple fashion, made by merely cutting a rectangular piece out of a board, is shown on another sepulchral monument, found at Rome and published by Gruter (p. 229), and copied in the woodcut which is here introduced.



Norma. (Gruter.)

The square was used in making the semicircular striae of Ionic columns [Columna], a method founded on the proposition in Euclid, that the angle contained in a semicircle is a right angle (Vitruv. iii. 5, § 14).

From the use of this instrument a right angle was also called a *normal* angle. (Quintil. xi. 3, p. 446, ed. Spalding.) Any thing misshapen was called *abnormis*. (Hor. *Sat.* ii. 2, 3.)

A rather more elaborate norma made of iron is preserved in the Museum at Zurich. It has another leg added at right angles to the long side of the triangle at one end of it, so that angles of 45°, 90°, and 135° can be measured. (Blümner, *Technol.*, ii. p. 236.) [J. Y.] [G. E. M.]

NOTA CENSO'RIA. [Census.]

NOTAE (*σημεῖα*) in a technical sense means those signs and abbreviations which were used (1) for secret writing, *cipher*; (2) for rapid writing, i.e. *shorthand* or *stenography*.

1. We have frequent mention of the use of cipher, for despatches or letters of an important or compromising nature, at the end of the Republican period. Thus of Caesar's correspondence with Oppius and Balbus we are told by Gallus that there were "litterae singulariae sine coagmentis syllabarum: erat autem conventum inter eos (the writer and his correspondents) clandestinum de commutando situ litterarum." The cipher used by Caesar was, according to

Suetonius (*Jul.* 56), a simple one, and consisted in making D stand for A, E for B, and so on through the alphabet, "si qua occultius perferenda essent." The cipher used by Augustus was on the same principle. (Suet. *Aug.* 88; Becker-Göll, *Gallus*, i. 62.) Whether the words διὰ σημείων in Cic. *ad Att.* xiii. 32 mean, in cipher, or simply with abbreviations of words (*sigla*), or in shorthand, is uncertain. The letter to which he refers (xiii. 30) does not seem to be one which particularly requires secrecy, but it is quite possible that he may have sent it in cipher: on the other hand, he may, though less probably, have sent Atticus the copy taken down in shorthand from his dictation. However that may be, we may feel tolerably certain that in Cicero's correspondence cipher was used at least as frequently as in Caesar's.

2. The whole system of signs for numeration [see LOGISTICA] is no doubt essentially stenography; but it existed quite apart from, and probably was much anterior to, the art of shorthand writing which is usually expressed by that word: the same may be said of signs or letters for money value, weights, coins, &c., which, like the signs for numeration, arose from consideration of economy in space, rather than from any necessity for *rapid* writing. Such a necessity was the origin of the *Notae Tironianae* (called also *Notae Tironis et Senecae*), which we may take as the representative of ancient shorthand writing.

As to the history of this art, it is impossible to say with certainty whether the Romans originated their own shorthand and communicated it to the Greeks, or whether the Greeks had it first. The idea of its earlier use in Greece is started by a passage of Diogenes Laertius (ii. 48), which states that Xenophon took down lectures ὑποσημειωσάμενος τὰ λεγόμενα. It is quite possible that this may, as some think, mean that he wrote in shorthand; but, in the absence of other mention of the art at that time, we should prefer to understand it merely of ordinary note-taking. We have not in fact any direct mention of its use among Greeks or Romans before the time of Cicero. (For a much earlier use in Asia, some adduce the "ready writer" in Psalm xlv., in which sense the LXX. translator possibly took it, when he rendered it ὀξυγράφος.) The use of shorthand at Rome may have been developed from cipher-writing, or more probably from the frequent use of abbreviations, such as *S. C.*, &c. Of its use by Cicero we have abundant record. Plutarch (*Cato Min.* 23) tells us that the speech on the punishment of the Catilinarians was the only speech of Cato that was preserved, and that this was owing to Cicero, "who had previously instructed those clerks who surpassed the rest in quick writing, how to use certain signs (σημεῖα) which in small and brief characters (τύποις) comprehended the force of many letters, and had placed them in many parts of the senate-house. For the Romans at that time were not used to employ, nor did they possess, what are called shorthand writers (σημειογράφοι), but it was on this occasion, as they say, that they first conceived the idea." Dio Cassius (lv. 7) ascribes the invention to Maecenas, which probably means merely that he, or his secretaries, made considerable additions and improvements, and this is exactly the account which Isidore gives in the 7th century, derived, as it seems, from Suetonius. He ascribes the invention of the shorthand in general use (*vulgares notae*) to Ennius, who used 1100 signs: for taking down public speeches or the proceedings in law-courts, there was also a division of labour among several *librarii* (= notarii), who took different portions. He says that Tiro had first used *notae* at Rome, "sed tantum praepositionum:" if that is correct, we must suppose that the actual shorthand of Tiro consisted of abbreviations (*sigla*), with arbitrary signs only for particles of frequent occurrence: he goes on to say that additional signs were added in succession by Vipsanius, Philargyrus and Aquila, the freedman of Maecenas, till at length Seneca reduced the whole to a regular system and increased the number of signs to 5,000. As regards the Ennius here mentioned, whom many writers have taken to be the *poet* (whence they make Isidore assert a much earlier date to Roman stenography), there can be little doubt that he was the *grammarian* Ennius of the Augustan period (see Suet. *de Grammat.* 1; Teuffel, *Hist. of Rom. Lit.* § 178, 4). Indeed the context shows clearly enough that Isidore speaks of Ennius as improving on something which existed in a smaller shape in Cicero's time. From Cicero's account of Tiro (*ad Fam.* xvi. 4, &c.; cf. Gell. vi. 3, 8) it is extremely probable that the real labour of the work was his, not Cicero's, and that the title "notae Tironianae" is just: but the addition "et Senecae" seems to be rejected by Seneca himself, who says, "quid loquar verborum notas, quibus quamvis citata excipitur oratio et celeritatem linguae manus sequitur? vilissimorum mancipiorum ista commenta sunt." The arrangement and additions were, however, probably effected by him through his *notarii*.

From this time its use spread. It served not only for taking down public speeches (as in Plutarch, *l. c.*), but also for the use of students in the lecture-room (Quint. *Inst. procem.* 7), and for any writing from dictation, *e.g.* for the rough draft of wills: "Silius notario testamentum *scribendum notis* dictavit, et priusquam litteris perscriberetur (the full text for signature) defunctus est" (Dig. 29, 1, 40). The same distinction between *notae* and *perscriptio* may be seen in the fragment of Valerius Probus about cipher-writing, "est etiam circa perscribendas vel paucioribus litteris notandas voces studium necessarium." It was taught in schools: see Prudent. Περὶ Στεφάνων, 9.

"Praefuerat studiis puerilibus et grege multo
  Saeptus magister litterarum sederat,
Verba notis brevibus comprendere cuncta peritus,
  Raptimque punctis dicta praepetibus sequi."

So Fulgentius (*Mythol.* iii. 10) divides the writing lesson into the *abecedaria* or regular alphabet, and the *notaria*. Many Romans kept slaves trained for the purpose [NOTARII], and Suetonius tells us that Titus, who prided himself on his skill in writing, and said that he was a "forger spoilt," used to race his secretaries in shorthand writing (Suet. *Tit.* 3). The use was still further developed among the Christians for taking down sermons, episcopal addresses, &c.; and, if it was not as old as Xenophon in Greece, it was at any rate widely employed in early Christian times. The extant examples of Greek shorthand writing are considered to date only from the 10th century (see the article Palaeography in *Encyclop. Brit.*), but we can have no doubt that if the art was originated at Rome it was not much later in reaching Greece. As to its general use in Christian synods, St. Augustine (*Ep.* 141) says that eight *notarii* in relays of two at a time followed the speeches of bishops assembled at Carthage: and we are told by Trithemius (abbot of Wurtzburg in 1506 A.D.) that St. Cyprian added to the original Tironian notes. The words are worth quoting, since the learning and research of the writer make it likely that his account of the development of the notae is correct: "M. Tullius Cicero librum scripsit notarum quem Sanctus Cyprianus multis et notis et dictionibus ampliavit, adjiciens vocabula Christianorum usibus necessaria ut opus ipsum fieret non solum utile paganis sed multo magis etiam fidelibus." The notae fell apparently into disuse for a considerable time, but were revived under the Carlovingian dynasty and used in Capitularies, &c. The MSS. written in the "Tironian" character long remained incomprehensible, till Charpentier deciphered them and published an account of them in 1747.

As to the ancient system itself, we have some contemporary description from the passage of Plutarch cited above (*Cat. Min.* 23), who tells us clearly that arbitrary signs, not merely abbreviations or *sigla*, were used. Compare Manilius iv. 197:

"Hic et scriptor erit velox, cui littera verbum est,
Quique notis linguam superat, cursimque loquentis
Excipiat longas nova per compendia voces."

Auson. *Epigr.* 146:

"Cui multa fandi copia
Punctis peracta singulis
Ut una vox absolvitur."

From the passage of Seneca quoted above, and from Mart. xiv. 208, we can merely gather that the writer could keep pace with the speaker. It is impossible to say how far what we possess under the name of *notae Tironianae* reproduces the system used in the Augustan age. Common sense would suggest what Trithemius states to be the fact, that great additions were made at various times; and the view which he gives may fairly be accepted, that the system of Tiro was much the same in its general outlines as that which is still extant under his name, though far less full and elaborate. The system consists mainly (1) in using an alphabet more or less based on the Roman letters which can be so modified as to facilitate the junction of letters.

(2) In representing terminations by arbitrary signs, such as B. for *bam*, .B for *bant* (or, instead of the regular letters, new characters similarly multiplied by the variation of the point). To this the "punctis" in the passages of Ausonius and Prudentius refer.

(3) In employing all sorts of abbreviations (*sigla*) independently of the character used. (Cf. "cui littera verbum est" above.)

(4) In adopting arbitrary signs, such as Trithemius describes, for words in common use. With this correspond the τύποι πολλῶν γραμμάτων ἔχοντα δύναμιν of Plutarch and the "nova compendia" of Manilius.

For further information on the subject, see Kopp, *Palaeographica Critica*, vol. i.; Ruess, *Tachygraphie*; and especially Jules Tardiff, *Mém. sur Not. Tiron.*, *Acad. des Inscriptions*, sér. 2, vol. iii. 1852, who all give tables of the alphabet and examples of the writing as it has come down to us. [W. S.] [G. E. M.]

NOTA'RII, shorthand writers, were slaves or freedmen (see preceding article) whom wealthy Romans kept in their service and often took about with them on their travels (Plin. *Ep.* iii. 5, ix. 36; Mart. x. 62). They were employed for taking notes in the law-courts (Mart. v. 51, &c.), and were sometimes called *actuarii* (Suet. *Jul.* 55). They were also employed by the emperors (Lamprid. *Alex. Sev.* 28, *Aurel.* 36; Trebell. *Claud.* 14), and in course of time the title of *notarii* was exclusively applied to the private secretaries of the emperors, who, of course, were no longer slaves, but persons of high rank. The shorthand writers were now called *exceptores*. On the re-organisation of the empire by Constantine, the *notarii* were constituted into a kind of imperial chancery, who, in addition to their regular duties, were frequently employed by the emperor on important public missions. The first of them in rank was called *Primicerius Notariorum*, and the second, *Secundicerius Notariorum*. Others were called *tribuni et notarii*, and another class *domestici et notarii*, who probably acted specially as private secretaries of the emperors. Others again who served under the Praefecti Praetorii were called *Notarii Praetoriani* (Cod. Theod. 6, tit. 10; Cassiod. *Var.* vi. 16; Pauly, *Real Encycl.* s. v.; Becker-Göll, *Gallus*, i. 62; Walter, *Gesch. des römischen Rechts*, § 345, 2nd ed.) [W. S.] [G. E. M.]

NOVA'LE. [ARATRUM.]

NOVA'TIO. [OBLIGATIONES.]

NOVELLAE or **NOVELLAE CONSTITUTIONES** (νεαραὶ διατάξεις) are the disconnected enactments of Roman emperors following upon a codification of the existing legislation. The first such codification was that effected A.D. 439 by Theodosius II. [CODEX THEODOSIANUS], and the first Novellae were those issued by Theodosius himself nine years later, and confirmed for the Western Empire by Valentinian III. A.D. 448. Similarly Theodosius' successor, Marcian, made Novellae in co-operation with the Western emperor, and the same was done by Leo, but after him the legislation of the two empires was distinct, and none of the Western enactments seem to have possessed validity in the East. Several collections of the Novellae of Theodosius and his successors on the throne of Constantinople were made at unknown times and by unknown authors, and they have been edited by Haenel (1844): such of them as are of any importance for the modern civil law were of course incorporated in the Code of Justinian, and so lost the character of Novellae.

The Novellae Constitutiones of Justinian were his enactments subsequent to the publication of his second Codex, A.D. 534, and form a portion of the Corpus Juris Civilis. The first was issued on Jan. 1 in A.D. 535, and related to testamentary law: it was followed in the next thirty years (Justinian dying A.D. 565) by over 160 others, though far the greater number were issued before Tribonian's death in A.D. 545. Many consist of but one short chapter, but some of from forty to fifty: most concern ecclesiastical and administrative matters, but some are of great importance in relation to private law, effecting sweeping reforms in the rules of the family, and still more of inheritance. As a rule they are in Greek, but fifteen are in Latin and three in both languages: in this last case it was ordered that the Latin version, that being the official tongue, should be considered the authentic one. Justinian himself contemplated making a special and separate collection of his Novellae (Const. cordi, § 4), but we know that this was never done from a contemporary of his own, Johannes Scholasticus (from A.D. 557 Patriarch of Constantinople), who speaks of them as existing σποράδην. Three private collections have come down to us: (1.) The Epitome Juliani, a Latin condensation of 125 Novellae made by Julianus, a professor in Constantinople, A.D. 556. (2.) The Authenticum or Liber Authenticorum, a collection of 134 Novellae, all in Latin, of unknown origin, largely circulated in Italy in the twelfth century: their genuineness was at first denied by Truerius, but he subsequently retracted his opinion, and this collection was considered by the glossators as having the force of law. (3.) A collection of 168 Novellae in Greek, some of which however are in duplicate, and others were enacted by various successors of Justinian; only 153 are Justinian's own. This was first published in Germany by Haloander in 1531. Besides these, there are other Novellae of uncertain origin and force, including the thirteen so-called "Edicta Justiniani."

The most complete work on the history of the Novellae is by Biener, *Geschichte der Novellen Justinians*, Berlin, 1824: cf. also *Beitrag zur Litterar-Geschichte des Novellen-Auszugs von Julian;* Von Haubold, *Zeitschrift*, vol. iv.; and an excellent account of the history of the various collections and editions of them in Puchta's *Institutionen*, vol. i. § 147. NOVENDIA'LE. [SACRUM; FUNUS.]

NOVI HO'MINES. [NOBILES.]

NOVI O'PERIS NUNTIA'TIO. [OPERIS NOVI NUNTIATIO.]

NOXA. [NOXALIS ACTIO.]

NOXA'LIS ACTIO. Those actions were "noxal" which were brought on the delict (*e.g.* theft, assault, damage to property) or quasi-delict of a slave or child in power, or on damage done by an animal, against the master, paterfamilias, or owner. Primarily they claimed damages for the wrong, but the defendant could escape the pecuniary loss, if he preferred it, by surrendering (*noxae dedere*) the guilty body to the plaintiff: and from *noxa* (meaning that guilty body) the name of the action was (according to Justinian, *Inst.* iv. 8, 1) derived, though by other writers *noxa* is used to express the wrong itself (*e.g.* Liv. xxi. 30) or the punishment (*e.g.* Servius). No action properly lay against the dependent wrong-doer himself under the older law; but the remedy against the dominus or paterfamilias was the ordinary action on the delict, or quasi-delict, to which the edict or statute (*Inst.* iv. 8, 4; Dig. 9, 4, 2, 1; 47, 1, 1, 2) gave the "noxal" character by permitting the defendant to escape damages by surrendering the delinquent to the plaintiff: "Namque erat iniquum" (says Justinian) "nequitiam eorum ultra ipsorum corpora dominis damnosam esse." The true significance of the legal principle involved is admirably expounded in Mr. O. W. Holmes' *Common Law*, chap. i. In practical effect, though not in form, noxal actions were *arbitrariae* [ACTIO]; the defendant, if the judge pronounced against him, being condemned in the alternative, either to pay the damages assessed, or to give up the delinquent: "praetor ait . . . si servus insciente domino fecisse dicetur, in judicio adiciam aut noxam dedere" (Dig. 9, 3, 1, pr.).

It would seem from *Inst.* iv. 8, 7, that daughters were originally as liable to noxal surrender by their paterfamilias as sons in power, but that so far as they were concerned the usage had gone out in the time of the classical jurists, for Gaius (iv. 74, 79) speaks of the *deditio* of filiifamilias and slaves only. By the age of Justinian even the father's right of surrendering sons in his power in this manner had ceased to be exercised, and he expressly took it away, directing that children in power should be suable in person for their own delicts, the damages being paid out of their peculium. The master's right, however, of evading damages by noxal surrender of his slave was explicitly retained in his legislation. It would seem that the property in the slave was transferred by decree of the praetor: sons had been conveyed by mancipation, and stood *in mancipio* to the surrenderee (Gaius, iv. 79), but could demand their release as a matter of right as soon as by the result of their labour or otherwise they contrived to pay the damages assessed in the action (Papinian, *Coll.* 2, 3). This principle, as Justinian remarks in *Inst.* iv. 8, 3, was extended to the case of surrendered slaves. For the *deditio* of animals in a noxal action, see PAUPERIES.

A leading rule in all such cases was "noxalis actio caput sequitur," which apparently became a proverb. The action followed the *noxa*, and had to be brought against the person under whose lawful control he or it was, not at the commission of the wrong, but at the commencement of legal proceedings. Thus, if A's slave stole a purse, and then was sold to B, B was the proper defendant; and if the delinquent were manumitted, he could be sued in person by direct, not noxal action. Similarly, if a free man did the wrong, and then became a slave, the remedy was against his master; and on the same principle, if the slave died before the action had reached the stage of *litis contestatio*, the master's liability terminated, even though his death was not known (Dig. 9, 4, 39, 4). A master had no remedy by action if a delict were committed against him by a slave of his own, even though the latter were manumitted or alienated (*Inst.* iv. 8, 6); and if A's slave stole from B, and then became B's property, B's right of action was absolutely lost (as the law was settled by Justinian), though the Proculian School of jurists had maintained that it was only suspended, recovering its vitality so soon as his ownership over the delinquent determined (Gaius, iv. 78). It has been conjectured that noxal actions were originally the expression of an absolute claim to have the offender delivered up for the exercise of private vengeance, whether his offence were delictual or merely breach of contract. The surrender of Postumius to the Samnites by the Romans with all the forms of *noxae deditio* (Liv. ix. 10) was made as atonement for non-observance of the treaty which he had concluded with them, and from which the Romans wished to release themselves—"ut populus religione solvatur." Under Roman municipal law non-fulfilment of a promise made by sponsio entailed in the end quasi-slavery [MANUS INJECTIO], and the idea was consistently applied by them in international relations. See Mr. Holmes' work already referred to, pp. 8–12, and cf. Ihering, *Geist des römischen Rechts*, i. p. 131.

The chief original authorities for *noxae deditio* are Gaius, iv. 74–79; Paulus, *Sent. rec.* ii. 31, 7-9:—Dig. 2, 9; 9, 4;—Cod. 3, 41; *Inst.* iv. 8 and 9. [J. B. M.]

NUCES. It seems most convenient to include under this head several Greek and Roman games of skill, which were played with nuts, though frequently (and indeed usually in Greece) missiles of other material were used, such as pebbles, shells, knuckle-bones (*ἀστράγαλοι, tali*), or, in some cases, coins. The love of the Roman boy for these amusements makes the phrase *nuces relinquere* = "to pass out of childhood" (Pers. i. 10; cf. Catull. 71, 131). Five of these games (we cannot think Marquardt right in making out six) are given in the poem *Nux*, ascribed to Ovid, and, according to Teuffel, the work of some writer not much later than Ovid. It will be seen that very similar Greek games are mentioned by Pollux and others. It is asserted by some scholars that marked *nuces* were used in the same way as dice by those who could not afford *tali* or *tesserae*. Considering that, even if the trifling cost of these was too great, pieces of wood would make much better dice than the awkwardly rounded nut, this seems antecedently improbable, and the passages adduced from Latin writers do not really support the contention. It is true that if *ocellatis nucibus* is read in Suet. *Aug.* 83 (see below), the obvious sense will be, nuts marked with dots, presumably as dice, but that is not a reading of authority. As regards the passages mainly relied upon, in Mart. iv. 76, "Alea sed parcae sola fuere nuces," the meaning is that nuts are the only property staked and lost, because he played only in the games of *nuces* described below and *not* at dice: if he could have used *nuces* for dicing, the whole point would be lost. In Mart. v. 84, the *nuces* in the first line are one amusement, the *fritillus* in the third are another and a different one; and the case is the same in Mart. xiii. 1, 7. The nuts themselves were won and lost in the games just as marbles are in children's games of the present day, but there is no reason to think that numbers could be thrown as with a gambler's dice, or that they were thrown from a dice-box: except in the game of *par impar*, the games with *nuces* were trials of skill, not of chance.

1. The simplest game of skill played with these materials consisted in pitching the nuts (or, as Pollux gives it, *astragali* or acorns) into a hole, from which the players stood at some distance ("spatio distante," *Nux*, 85). The usual Latin name for this game was probably *orca*, so called because the nuts were pitched into a narrow-mouthed jar which the author of *Nux* calls "vas cavum," Persius (iii. 50) "orca": some indeed assert that Persius in this passage (where there is no direct mention of *nuces*) is using *orca* to mean dice-box. We think this less probable; Persius has finished the subject of dice in the two preceding lines, he now speaks of *nuces*, and of tops in line 51. In this game the Greeks pitched their *astragali* not into a jar, but either (*a*) into a circle drawn on the ground called *ὤμιλλα*, whence the game itself was called *εἰς ὤμιλλαν* (Poll. ix. 102) and *ὤμιλλα* (Schol. Plat. p. 320, Bk.), for Marquardt is, we think, certainly wrong in identifying the *ὤμιλλα* with the *delta* mentioned below: or (*b*) into a hole dug in the ground, called *βόθρος* (Poll. ix. 103) or *βόθυνος*, whence the game, essentially the same as *ὤμιλλα*, was called *εἰς βόθυνον* (Schol. *l. c.*). It is to be noted, however, that Pollux calls this form of the game *τρόπα*, while Hesychius says of *τρόπα* simply, that it is a game *καθ' ἣν στρέφουσι τοὺς ἀστραγάλους εἰς τὸ ἕτερον μέρος*. The explanation by which Becq de Fouquières (p. 115) attempts to make Hesychius and Pollux describe the same game, is forced and unnatural, nor could the words *εἰς ἕτερον μέρος* bear the sense which he gives them. It is stated by Grasberger, apparently on good authority, that in Greece at this day the same game is called *τρούπη, τρύπη*, or *λάκκα* (i.e. *a hole*), and it is ingeniously suggested that the game which in Pollux we find as *τρόπα* should be *τρύπα*. We may offer the further suggestion that Hesychius is not speaking of any game at all similar, but by *τρόπα* is either describing what Pollux calls *στρεπτίνδα*, which consisted in throwing a shell or coin or *ἀστράγαλος* in such a way as to turn over to the reverse side a shell, coin, &c., already lying on the ground, or else is alluding to one branch of the astragali game where the bones are to be reversed in the air before they are caught [TALI]. The name *ἐφετίνδα* (from *ἐφίημι*) might probably be applied to any one of the variations of the above-mentioned game: Pollux (ix. 117) makes it the same as *ὤμιλλα*, except that it is played with shells. It is clear that in all these games the nut or other missile which fell outside the jar or hole or circle was forfeited.

2. *Castella.*—In *Nux* 73–76 there is a game which has caused some difficulty, but which may be explained as follows:—Three nuts are placed on the ground with a fourth resting on them, so as to form a pyramid: (when Pliny, *H. N.* xix. § 112, speaks of planting bulbs "castellatim" in *grumuli* or heaps, he follows this meaning.) The first player aims with his nut so as to scatter (*dilaminare*) the pyramid (*rectas*), and having overthrown this he has at most two more shots (*bisve semelve*), in which he *may* win all four, presumably by making two cannons, flipping (*digito*) his nut at them on the ground (*pronas*). If we read *rectus*, *pronus*, which Becq de Fouquières prefers, the sense must be that he takes his first shot standing (*rectus*), his two next kneeling (*pronus*), as in what is called "knuckle-down" at marbles. For the name *castella*, or *ludus castellorum*, we have Trebell. Poll. *Gallien.* 16, 2, "de pomis castella composuit." In the passage of Suet. *Aug.* 83,

where Augustus is described as in his old age playing "modo talis aut ocellatis nucibusque," some read *castellatis nucibus*, which would mean the game of castella as described above. By *ocellati*, which is the authoritative reading, Becq de Fouquières understands agate or onyx marbles, and no doubt *nuces* and marbles would be played in the same way: the dictionaries translate *ocellati* "dice," as being marked with dots, but, if so, they would be coupled with *tali* rather than with *nuces*. Marquardt is certainly wrong in taking lines 75, 76 to describe a separate game: in the sequence of lines the words *alter*, *etiam*, *quoque* obviously mark the transition to different games: nor does his rendering make satisfactory sense, and he confesses that he finds line 74 unintelligible.

3. A variation in aiming at the nuts was introduced by rolling the missile down a sloping board ("tabulae clivus," *Nux*, 77), as is shown by a relief in the Blundell Collection (Rich, s. v. *Tabula*). The kneeling boy is probably arranging the pyramid for a shot.

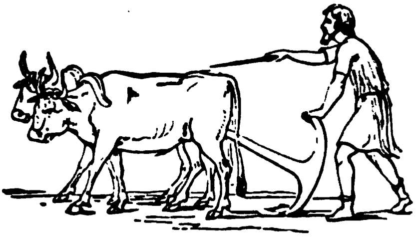
4. *Delta* (*Nux*, 81–84).—This game was played by chalking on the ground a triangle (which the author of *Nux* compares to the Greek letter and the constellation named after it). This triangle is divided by bars or lines drawn parallel to the base and called *virgae* (cf. *virgatus*="striped"): the nut is rolled into the triangle and the player wins as many nuts as he crosses bars, provided he does not roll it out of the triangle. Obviously the best possible throw is to pitch the nut just within the base line and make it stop just within the apex: it will thus in its course have touched all the parallel bars, and will win an equal number of nuts ("quot tetigit virgas, tot rapit inde nuces"). This is, in the main, the view of Becq de Fouquières. Barth, reading *virgo*, gives a strange explanation, imagining a blindfold girl groping for nuts.

5. For the game of chance, odd and even, commonly played with nuts (*Nux*, 79), see PAR IMPAR.

(Becq de Fouquières, *Jeux des Anciens*, 114–126; Grasberger, *Erziehung*, i. 68 ff.; Marquardt, *Privatleben*, 839 f.) [G. E. M.]

NUDIPEDA'LIA. This name was given to a procession of barefooted matrons, as an *obsecratio*, in time of great drought, "cum stupet coelum et aret annus" (Tertull. *de Jejun.* 16; *Apol.* 40; cf. Petron. *Sat.* 44). The magistrates laid aside their insignia, the fasces were reversed, and a sacrifice was offered at the temple of Jupiter, the pontifices bearing at the head of the procession a sacred stone called the *lapis Manalis*, from the temple of Mars outside the Porta Capena. (Non. p. 547; Fest. pp. 2, 128; Marquardt, *Staatsverw.* iii. 261.) [G. E. M.]

NUDUS (*γυμνός*). These words, besides denoting absolute nakedness, which was to be *ἀναμπέχονος καὶ ἀχίτων* (compare Moschus, iv. 98), were applied to anyone who, being without an AMICTUS, wore only his tunic. (Aristoph. *Eccles.* 409; *Lysist.* 150; John xxi. 7.) In this state of semi-nudity, the ancients performed the operations of ploughing, sowing, and reaping. (Hes. *Op. et Dies*, 391; Aristoph. *Lysist.* 1177; Verg. *Georg.* i. 299; Aelian, *V. H.* vi. 11, xiii. 27; Matt. xxiv. 18.) Thus Cincinnatus was found *nudus* at the plough when he was called to be dictator, and sent for his *toga*, that he might appear before the senate. (Plin. *H. N.* xviii. § 20; Aur. Vict. *de Vir. Illust.* 17; Liv. iii. 26.) The accompanying woodcut is taken from an antique gem in the Florentine Collection, and shows a man ploughing in his tunic only.



Man ploughing in his tunic. (From an ancient gem.)

This term applied to the warrior expressed the absence of some part of his armour. Hence the light-armed were called *γυμνῆτες*. [J. Y.]

NU'MERUS, the name of a body of troops in the imperial period. [EXERCITUS, Vol. I. p. 793.]

NUMMULA'RII or **NUMULA'RII.** [ARGENTARII.]

NUMMUS or **NUMUS**, money. The history of Greek money being set forth under PONDERA, and that of Roman money under AS, we will confine ourselves in the present article to the following points:—(1) the names of money in antiquity, and more especially the usage of the word *nummus*; (2) the materials of which it was made; (3) the inscriptions of ancient coins; (4) their types and accessory devices or symbols. We discuss the history of the right of coinage in antiquity, and the regulations and organisation of mints, under MONETA.

(1.) *The ancient Names of Money.*—The term *χρήματα* originally stood for possessions of any kind; in fact, wealth. And hence at a later time, when wealth came to be measured by money, *χρήματα* might vaguely be used for money. But in speaking of money as distinguished from other kinds of property, the Greeks would call it either *ἀργύριον* or *νομίσματα*. Of these terms the former came into use at an early period in Greece proper, where silver rather than the other precious metals was the standard of value. *Νομίσματα* (from *νόμος*, "law") stands for coin which was legal tender in a state, and so for all moneys coined by authority (Hdt. i. 94). In the South of Italy and Sicily the word *νόμος*, or as it was locally written *νοῦμμος*, was applied to coin, and in particular to the standard coin of the district. It thus corresponded in usage nearly to the term *stater*, which was in use in the East [STATER]. And in fact, in the transliterated form *nummus*, it is frequently used by the Roman writers as equivalent to *stater*. Thus Plautus (*Pseud.* iii. 2, 19) uses *nummus* for didrachm, and in other places (*Trin.* i. 2, 115) speaks of the staters of Philip as *nummi*. So the Roman denarius was sometimes called *nummus*; but the term was applied in a special and restricted sense to the Roman sestertius. The reason of this is that the sestertius nearly represented in silver the value of a pound of copper, which among the peoples of Italy and Sicily was the unit of value, and so became the *νόμος* or standard coin. The term *moneta* is only equivalent to money at a late period of Roman literature. The Roman mint (Liv. vi. 20, 13) was connected with the temple of Juno Moneta: thus the word *moneta* came into use in the sense of *mint*, and afterwards in that of money produced by the mint. Among the Greeks, whose currency (except in Asia) mostly consisted of silver, the ordinary word for money was regularly *ἀργύριον*; and *aes* was sometimes used for a parallel reason in the same sense by the Romans.

It used to be disputed whether the Greek and Roman coins which have come down to us were actual money, or rather medals issued on occasions. This controversy is completely closed. It is universally agreed that the only medals of antiquity are the Roman so-called medallions, pieces of unusual size issued at Rome to commemorate various events, which may be distinguished among Roman copper coins by the omission of the letters S. C. (senatus consulto), which regularly distinguish these latter; as well as a few pieces of the Greek Imperial class, struck in imitation of the Roman medallions in cities of Asia Minor, and distinguished by a special formula of inscription. Greek coins and the regular issues of Rome frequently contain allusion to political events, but they were nevertheless fully intended to pass as money, as the uniformity of their weight and other indications abundantly show.

(2.) *Materials of Money in Antiquity.*—An important distinction holds between money of intrinsic value and money of account. Money of the former class consisted merely of ingots, the weight and fineness of which was certified by the state or the ruler who stamped them, and which passed in the market according to their actual value. Money of account, on the other hand, might consist of pieces in themselves nearly worthless, made for instance of tin or leather, but kept in circulation at a fictitious value, either in consequence of their being at will exchangeable for valuable coin, or in consequence of the arbitrary law of some ruler, who obliges people to accept them at a fictitious value under some penalty. In modern phraseology the money of account is said in the one case to be convertible, in the other to be inconvertible. We will speak in order of the two classes of coin:—

(α) Money of intrinsic value. The bulk of this has at all times consisted of gold, silver, and copper, or rather bronze, pure copper not having been used by the ancients except in rare cases. As to the use of these three substances in antiquity, see AURUM, ARGENTUM, and AES. Electrum was also a usual material for money. [ELECTRUM.] In addition, iron is said to have been used as money at Sparta; and although no specimen has come down to us, we may easily account for this fact by the liability of iron to rust away when buried. It is also noteworthy that Sparta had no coinage in any other metal until the reign of Areus. Iron money was also current at Byzantium (Aristoph. Nub. 249). Some specimens of iron money struck in the cities of Peloponnesus are now extant. Greek kings in India issued coins of nickel (*Num. Chron.* 1868, p. 305).

(β) Money of account. The smaller denominations of coin were usually among the Greeks, from the 4th century onward, issued in copper, but for the convenience of the people these coins were seldom of such weight as to be in actual value what they were in nominal value. The subject is a difficult one. Greek copper coins seldom bear marks of value, and it is nearly always uncertain in regard to them what is their real denomination. But when that denomination is fixed by type or inscription, we usually find that they passed at a nominal value greatly in excess of the intrinsic worth of the material. There are exceptions: the Ptolemaic kings of Egypt, for instance, issued copper of full weight; but such a proceeding was as unusual in the Greek as it was usual in the Roman world. The light copper of the Greeks was thus in a sense fiduciary; but it is well known that small change may be fiduciary without affecting trade or credit, and the English bronze coinage is now, strictly speaking, money of account no less than was that of the Greeks. Making this exception, we may state the general rule that the Greeks seldom made any attempt to pass any of their coin at a fictitious rate; usually they were contented to let it find its own level in trade and pass for what it was. The reason of this is not so much the commercial morality of the Hellenic race as their keen sense of business, and the incessant competition which the issues of various cities had to keep up in neutral markets and on the tables of the money-changers. A few important exceptions to this rule should be noted. Thus it is said, though the story is open to doubt (Hdt. iii. 56), that Polycrates passed off as gold on the Lacedaemonians a quantity of leaden coins gilt. We are informed that Dionysius of Syracuse issued coins of tin, which he compelled people to accept as tetradrachms, though they weighed but a drachm (Pollux, ix. 79); also that Perdiccas II. of Macedon paid his mercenaries with copper coins plated with silver (Polyaen. *Strat.* iv. 10, 2). A better attested instance than any of these, because recorded in an inscription, occurred in Boeotia in the 2nd century B.C., drachms of copper, not even plated, being there forced into circulation as the equivalent of silver pieces of the same size and types. The frequency in certain classes of Greek coins of plated specimens which have not the appearance of being the work of forgers, drives us to the supposition that the mints of Greece may have on occasion mingled a certain proportion of plated coins with their regular issues. In fact, that this was done in Rome openly, and in accordance with law, has been completely proved. There were even stringent laws passed at that city to compel citizens to accept these plated pieces as legal tender: and the bad custom may have spread from Rome into Greece. Of course there existed, in Rome and Greece alike, a natural tendency, which especially showed itself in time of poverty and need, to diminish the weight and the fineness of current coin. But in the great commercial cities of Greece this tendency was counteracted by circumstances, and the classes of coin most used in commerce, such as the pieces of Aegina, Athens, and Corinth, retain their excellence to a late period. This does not hold to the same extent in later Greek days. The drachm of Rhodes, for instance, which weighed in the 4th century nearly 60 grains, fell in the course of the 2nd to half that weight; and the coins of the later Ptolemies, though they did not lose in weight, were made of continually baser metal. At Rome, as was natural from the imperious and uncommercial character of the people, laws were frequently passed from the first debasing the coin, and attempting to substitute worse money for better in the public issues. More than once in Roman history this process took a course so rapid and violent that the value of the various denominations of state-coin became entirely confused, and all coin passed only by weight. [See As.] If Seneca is to be believed (*de Benef.* v. 14), the Laconians used pieces of leather stamped with the state-mark as fiduciary coins. This may have arisen from the weight and clumsiness of their iron currency. We hear of a similar practice among the Carthaginians. The subject of the mixture of metals is too complicated to be here treated of. Naturally the alloy used in coining in Greece and in Italy varied greatly, both in quality and quantity. The best account will be found in Lenormant's *Monnaie dans l'Antiquité*, vol. i. pp. 187–206.

(3.) *The Inscriptions of Coins.*—Greek coins bear several kinds of inscriptions; the name of the city or the ruler who issued them, that of the monetary magistrate or magistrates who directed their production, that of the artist who cut the die. Sometimes their inscription is of another kind; stating their denomination or value, explaining the type, or occasionally stating the occasion on which they were issued. It is very difficult to make general statements as to these classes of inscriptions, especially as this has scarcely been before attempted; and the present sketch must be considered as tentative.

(α) Names of rulers and cities. The earliest coins bear no legends; but when by degrees these make their appearance, they at first nearly all contain the name of a city, whether in full or in abbreviated form, or the name of a dynast. The usual civic inscription is in the genitive plural of the ethnic: thus the coins of Syracuse are usually inscribed *Συρακοσίων*, and those of Cos *Κωίων*. Sometimes the adjective in *-κὸν* takes the place of this form, as in the cases *’Αρκαδικόν*, *Σολικόν*, *Πανορμιτικόν*, &c., in which case we must understand some such noun as *ἀργύριον*, *κόμμα* or *νόμισμα*. Sometimes the name of the city occurs in the nominative or genitive, as *Τάρας*, *’Ακράγαντος*. More often still this name is represented by a few letters of it only, more especially in early times; the coin of Athens bears only the letters ΑΘΕ, that of Elis only FA, that of Corinth only the *koppa*. Kings and dynasts, on the other hand, usually inscribe their names in full in the genitive; the money of Alexander I. of Macedon is inscribed *’Αλεξάνδρο*, that struck by Themistocles at Magnesia *Θεμιστοκλέος*. In the coin of Seuthes, king of Thrace, we have the genitive *Σεύθα*, but the words *κόμμα* and *ἀργύριον* are added in some specimens to explain and to govern the genitive. Some of the money of Alexander of Pherae is inscribed with the adjective *’Αλεξανδρεῖος*, with which we must understand *νόμος* or some such word, and a parallel form is not rare among civic coins, *e.g.* *Νεοπολίτης*, *Καταναῖος*. Sometimes, as in early dedicatory inscriptions, the word *ἐμὶ* or *εἰμὶ* is added for explanation. The earliest of inscribed coins, struck probably at Halicarnassus (*Num. Chron.* N.S. 18, 261), has the legend *φανός ἐμι σῆμα*. The proprietary name on a coin, if we may use the expression, is sometimes neither that of a city nor of a ruler, but of a district or tribe, as *Αἰτώλων*, *’Απειρωτᾶν*, sometimes of a religious body or a temple, as in the case of the coins reading *’Αμφικτιόνων*, and *ἐκ Διδυμῶν ἱερή*, the latter being the mintage of the temple of the Branchidae near Miletus.

In regard to the comparative frequency of the names of cities and those of rulers on coins, it should be observed that despots of cities in Greece and the West did not before the age of Alexander place their names on coin. We have no coins stamped with the name of Anaxilaüs of Rhegium, Hiero I. of Syracuse, Pisistratus or even Jason of Pherae. To this rule Alexander of Pherae is an almost solitary exception. On the other hand, kings of Macedon and Thrace, despots of Asiatic cities, and even satraps of the Persian king, very usually place their names on money. After Alexander the custom spread into all the Hellenic world save Greece proper, and even there was adopted at various times by a variety of rulers. Areus of Sparta, Aristotimus of Elis, and a few others place their names on coins; so do Agathocles and all the subsequent kings of Syracuse.

(β) Names of magistrates. The period at which these first appear, and the prominence given to them, vary in a most marked way from city to city, and we are usually without sufficient historical information to enable us to trace the reasons of the variety. At Abdera in Thrace, almost from the foundation of the city (B.C. 543), we have on the coin a succession of magistrates' names in the genitive preceded by the preposition *ἐπί*, or sometimes in the nominative. These were, as the *ἐπὶ* sufficiently proves, the eponymous magistrates of the city, and it may be that they exercised a stronger rule than that of magistrates in other cities. At most Greek cities before the middle of the 4th century, magistrates' names occur only at intervals, and usually in an abridged form. Early in the 4th century the magistrates of Boeotia, whether Boeotarchs or not is uncertain, begin regularly to sign the coin; and about the same time a parallel custom began to obtain at the principal cities of the Asiatic coast—Ephesus, Samos, Miletus, and others. In the regal coinages of later Greece magistrates' names seldom occur, or are concealed in the form of monograms; but in the Greek cities which remained free, whether in Asia or Hellas, the names of officers begin to take a place more regularly and with more evident purpose. Thus at Athens, during the later days of her independence, every coin bears the name of three distinct magistrates, whereof two have been conjectured to be high functionaries of state, and the third the officer specially detailed to control the mintage of the money which bears his name. The later coins of Rhodes, Ephesus, and other cities, as well as the copper money of the Achaean League, and the coins of the Thessalian Epirote and Acarnanian Leagues, bear the name of a single magistrate; the coins of Dyrrhachium and Apollonia those of two magistrates. The most important works on the subject of magistrates' names on coins are Beulé's *Monnaies d'Athènes* and a dissertation on the coins of Apollonia and Dyrrhachium by Dr. Brandis, *Zeitschrift für Numismatik*, vol. i.

(γ) Artists' names. That artists' signatures do occur on coins is rendered certain by the occurrence of the full phrases *Νεύαντος ἐποεῖ* on coins of Cydonia in Crete and *Θεοδότος ἐποεῖ* on coins of Clazomenae. A full list of supposed signatures will be found in Von Sallet's *Künstlerinschriften auf gr. Münzen* (1871), and Lenormant's *Mon. de l'Antiq.* iii. p. 255. Among the more certain and important signatures are those of Aristoxenus at Heraclea in Lucania, of Exacestidas at Camarina, Herakleidas at Catana, and of Euaenetus, Eucleidas, Eumenus, Cimon, Sosion, and Phrygillus at Syracuse. It is to be observed that, save in the two cases already mentioned of Neuantus and Theodotus, we have no certain engraver's name out of Italy and Sicily. They are by far commonest in Sicily; but there, as elsewhere, are only found during a period of about sixty years, from B.C. 410 to 350.

(δ) Explanatory inscriptions. The object of these is to acquaint us with the meaning of the types of a coin, with its value or denomination, or with the circumstances of its issue. The word Σοτερ (Σωτήρ) accompanies the figure of Zeus on a very early coin of Galaria in Sicily, *Νίκα* that of Nike at Terina, *Σελινοῦς* and *Ὕψας* those of the two river-gods at Selinus, *Αἴας* that of a warrior at Locris, *Σώτειρα* that of Artemis at Cyzicus, and so forth. At the Italian Locri a group representing a standing female figure crowning a seated one is explained by the inscription to represent the crowning of Roma (*Ῥώμα*) by Good-faith (*Πίστις*). The denomination of a coin is seldom stated at full-length on it, but often indicated by a few letters or a slight variety in the type (see next head). ΔΙΟ and ΤΡΙΗ occur on the diobols and trihemiobols of Corinth, *Ὀβολὸς* at Metapontum, *Ἡμιοβέλιν* at Aegium, *Δράχμη* and *Δίδραχμον* at Ephesus. On the late coins of Chios the number of *Ἀσσάρια* represented by a coin is regularly marked on it. In the Peloponnese in early times a single letter usually sufficed to mark denomination, H being placed on hemiobols, T on tetartemoria, and so forth. The circumstances of issue are stated in the inscriptions of many coins of Imperial times, especially those which bear the names of the games, Pythia, Actia, Olympia, &c., in connexion with which they were struck, and those with a legend *ὁ δεῖνα ἀνέθηκε*, followed by the genitive or dative of the name of a city. The latter class are supposed to be the result of the munificence of individuals who on some special occasion struck a quantity of coin at their own private cost, but for general use and enjoyment. Even in early times, however, a few inscriptions of the same class may be found, as in the case of the archaic coin of Metapontum, which bears the legend *Ἀχέλοιο ἄεθλον*, and was clearly issued on the occasion of public games. The coin of Locri already mentioned contains in the words *Ῥώμα* and *Πίστις* a clear allusion to the circumstances under which it was issued, some instance of good faith on the part of the Romans towards the people of Locri.

The inscriptions of Roman coins present us with less variety than those of Greek. The earlier gold and silver money bears no inscription save the word ROMA or ROMANO, together with a mark of value. About the time of Sulla (Mommsen, *R. M.* p. 451) the name of the city and the indication of denomination alike disappear. The empire of Rome by that time was so widely extended that her coin was known on every shore, and her system of reckoning in all markets. The place of these simpler legends is henceforth taken by the name of a monetary magistrate, which is usually that of one of the triumvirs appointed to strike the money of the Republic. In a more modest and abbreviated form indeed we find such names as early as B.C. 190, but they appear more prominently as time passes on. About B.C. 100 occurs the first appearance (Mommsen, p. 453) of such formulae as S. C. (Senatus Consulto), ARG. PVB. (Argento Publico). At about the same period first occur legends explanatory of the types of the coins, which first consist of mere initials, as I. S. M. R. (for Juno Sispes Mater Regina), or P. P. (for Penates Publici). Afterwards we have inscriptions like those mentioned under (δ) above in the case of Greek coins; for instance, Numa Pompili beside a figure of Numa Pompilius, and Salus beside a head of that deity. In the case of Roman Imperial coins one side is regularly occupied with the name and titles of the emperor accompanying his effigy; the other side bears sometimes merely a date, as COS III TR P XX, which indicates that the piece was issued in the third consulate and the 20th tribunician year of the emperor: but more usually an inscription containing allusion to a historical event and accompanying a type of similar allusion, such as Fides Militum, when the army presented a loyal address; Fecunditati Augustae, when the empress bore a child; Debellatori Gentt. Barbara(rum), when the emperor reduced a refractory tribe, and so forth.

(4.) *Types and Symbols.*—In the language of numismatists the term *type* is applied to the principal device or subject of either obverse or reverse of a coin; the term symbol is applied to any subordinate or smaller figure which accompanies the type. In the later coinage of Athens, for instance, the type of reverse is always an owl standing on an amphora, but the symbol varies continually, changing indeed every year. The type belongs to the mint-city, and is usually either the figure or head of a deity, some object sacred to a deity, or the effigy of a king or emperor. The symbol, on the other hand, belongs to the monetary magistrate, and is impressed by him to indicate his responsibility for the weight and fineness of any issue of coin. It is usually supposed to be copied from his signet, the signet in antiquity answering in many points of use to the modern signature. [P. G.]

NUNCUPA'TIO. [TESTAMENTUM.]

NU'NDINAE (in an older form *noundinae*), *the market day*, a regular division of the Calendar, and hence the market itself. The Romans had a system of eight-day weeks, which, like our seven-day weeks, ran on from one month to another and from one year to another without breaking, and starting afresh with the new month or year, so that the nundinae was a day "qui nono semper ab orbe redit" (Ov. *Fast.* i. 54). By the ordinary inclusive reckoning the eighth day was counted as the ninth and called *nundinae;* the whole week, or period of eight days, being termed *inter nundinum*, or, in one adjective, *internundinum* (tempus). The days were marked in calendars by the letters A, B, C, D, E, F, G, H, and it would naturally be supposed that H would always be the letter of the nundinae; but this was not so, because the 1st of January always began afresh with A, while the first nundinae of the new year was invariably the eighth day after the last nundinae of December, and consequently, unless the nundinae had fallen on the 31st of December, was marked by a different letter, which belonged to all the nundinae of that year. It may be observed that this system of letters cannot belong to the earliest times, because the letter G was only introduced in the third cent. B.C. But this does not prevent the eight-day division being a very ancient Roman arrangement, as Dionysius (ii. 28) and others describe it. (The Sabines, however, even till the end of the Republic, had a seven-day week, which appears in the *fasti Sabini:* see Marquardt, *Staatsverw.* iii. 281.) The countrymen, having worked seven days in the fields, came into the towns on the eighth for the market (Macrob. i. 16, 33; Verg. *Moret.* 80). The *jus nundinorum*—that is, the exclusive right of the dwellers in a particular spot to hold the periodical markets for a particular district—was granted by the senate (cf. Suet. *Claud.* 12; Plin. *Ep.* v. 4). As to the regulations about law business and comitia on the nundinae, see DIES, Vol. I. p. 636, and COMITIA, Vol. I. p. 506 *b*; as regards school holidays, LUDUS LITTERARIUS, p. 97 *b*.

The expression *trinum nundinum* (whence an adjective *trinundinus*, *trinundino die*, &c.) is disputed, and still open to dispute, both as to its grammar and its meaning. The usual explanation is that it is a genitive from *trinae nundinae*, with an ellipse of a word signifying *space* or *lapse*, and this is agreeable to the rule for the use of numerals in the best Latinity, though the rule is not without exceptions. That Cicero took it as a genitive is clear from *de Dom.* 16, 41; and its use elsewhere is not against this, if we take *trinundino* to be an adjective. The sense, according to this view, is, such a period as to include three nundinae (*i.e.* seventeen days), from the 1st to the 3rd nundinae. That Plutarch and Dionysius so understood it, is clear from their rendering it by ἡ τρίτη ἀγορά (Dionys. vii. 58, ix. 41; Plut. *Coriol.* 18). On the other hand, Mommsen brings instances which seem to show that the period was longer than seventeen days, at any rate in republican times, and he holds that it was a space of three complete *internundina*, i.e. twenty-four days, and, if a genitive at all, stands for *trinorum nundinorum.* He does not seem to us to overthrow beyond dispute the usual interpretation. It might be suggested that, if the required notice had to extend over three nundinae, it was originally a varying length, extending from seventeen days, when notice was given on the nundinae, to twenty-three days, when the notice was given just after a "market day" was past, and therefore the trinundinum may sometimes come before us as a period longer than twenty days (as in the cases cited by Mommsen), sometimes as a conventional term for exactly seventeen days. For the notice required for holding COMITIA, see Vol. I. p. 533 *a*.

Nundinium, a later form of nundinum, is found = nundinae (*C. I. L.* viii. 408), and = internundinum (Macrob. *l. c.*); but a use specially to be noticed is its signification, *the period of consulship.* When, under the Empire, several pairs of consuls were created in one year [CONSUL, Vol. I. p. 537], the period of a single consulship was called *nundinium* (Lamprid. *Vit. Alexand.* 28, 43; Vopisc. *Vit. Tacit.* 9). (Marquardt, *Staatsverwalt.* iii. 289; Mommsen, *Staatsrecht*, ii. 84, iii. 375.) [L. S.] [G. E. M.]

NUNTIATIO. [OPERIS NOVI NUNTIATIO.]

NUPTIAE. [MATRIMONIUM.]

NYMPHAEUM. [DOMUS, Vol. I. p. 678.]

O.

OBAE. [TRIBUS; GEROUSIA.]

OBBA, a bowl either of wood or earthenware, apparently broad at the bottom and narrowing towards the top, used for holding wine, but a cheap ware for common wine (Pers. v. 148). It is said by Gellius (xvi. 7) to be a provincialism used by Laberius. From Tertullian, *Apol.* 13, it appears that it was used also at funeral rites. The shape cannot be regarded as certain. Tertullian need not be speaking precisely of the ~~shape when he~~ says, "Quid differt a simpulo obba?" There is no clear proof for Rich's theory, that it was pointed at the bottom, and in fact Persius's epithet *sessilis*, i.e. squat or dumpy with a firm base, rather makes against it: if the reading "*obbatae* cassides," in Apul. *Met.* x. 234, is correct, we are none the wiser, since we cannot determine the shape of this particular *cassis* except by deciding that of the obba. (Marquardt, *Privatleben*, p. 654; Jahn, *ad* Pers. *l. c.*) [G. E. M.]

OBELISCUS (ὀβελίσκος) is a diminutive of *Obelus* (ὀβελός), which properly signifies a *sharpened thing*, a *skewer* or *spit*, and is the name given to certain works of Egyptian art.* A detailed description of such works would be inconsistent with the plan of this work, but some notice of them is required by the fact that several of them were transported to Rome under the emperors. Ammianus Marcellinus (xvii. 4) says that "an obelisk is a very rough stone in the shape of a kind of land-mark or boundary stone, rising with a small inclination on all sides to a great height; and in order that it may imitate a solar ray by a gradual diminution of its bulk, it terminates in a prolongation of four faces united in a sharp point. It is very carefully smoothed." Most ancient writers consider obelisks as emblematic of the sun's rays. (Comp. Plin. *H. N.* xxxvi. § 64.)

An obelisk is properly a single block of stone, cut into a quadrilateral form, the sides of which diminish gradually, but almost imperceptibly from the base to the top of the shaft, but do

---

* Herodotus (ii. 111) uses ὀβελὸς in the sense of an obelisk.

not terminate in an apex upon the top, which is crowned by a small pyramid, consisting of four sides terminating in a point. The Egyptian obelisks were mostly made of the red granite of Syene, from which place they were carried to the different parts of Egypt. They were generally placed in pairs at the entrance to a temple, close to other monuments of proportionate size. But the Romans, as Mr. Burn remarks, viewed them only as trophies, and, except those at the Mausoleum of Augustus, they stood apart from anything of equal height, presenting a naked and forlorn appearance. (*Rome and Campagna*, p. xliv.)

Obelisks were first transported to Rome under Augustus, who caused one to be erected in the Circus and another in the Campus Martius. (Plin. xxxvi. § 71; *Mon. Ancyr.* iv.) The former was restored in 1589, and is called at present the Flaminian obelisk. Its whole height is about 116 feet, and without the base about 78 feet: it now stands in the Piazza del Popolo. The obelisk in the Campus Martius was set up by Augustus as a sun-dial. It stands at present on the Monte Citorio, where it was placed in 1792. (Burn's *Rome and Campagna*, p. 333.) Its whole height is about 110 feet, and without the base about 71 feet. Another obelisk was brought to Rome by Caligula, and placed on the Vatican in the spina of the Circus of Caligula. (Plin. xxxvi. § 74, xvi. § 201.) In drawings of the 16th century it is represented as still standing in its original place. It stands at present in front of St. Peter's, where it was placed in 1586, and its whole height is about 132 feet, and without the base and modern ornaments at top about 83 feet. But the largest obelisk at Rome is that which was originally transported from Heliopolis to Alexandria by Constantine, and conveyed to Rome by his son Constantius, who placed it in the Circus Maximus (Amm. Marc. xvii. 4). Its present position is before the north portico of the Lateran church, where it was placed in 1588. Its whole height is about 149 feet, and without the base about 105 feet. (See Gibbon, *Hist. of Rome*, vol. ii. p. 400.)

There are nine other obelisks at Rome besides those mentioned above, but none of them are of historical importance. Three, however, which were found under and near the church of S. Stefano del Cacco, one as late as 1882, are interesting as remains of the temples of Isis and Serapis on that site. They are now in the Piazza della Rotonda, the Piazza della Minerva, and the Piazza del Collegio Romano. (See Middleton's *Rome*, p. 392.) There are also obelisks in various other places, as at Constantinople, Arles, Florence, Catana in Sicily, &c., some of which are works of Egyptian art, and others only imitations.

The preceding brief account is chiefly taken from Long's *Egyptian Antiquities*, vol. i. cc. 14, 15. [W. S.] [G. E. M.]

OBEX. [JANUA.]

OBLIGATIO LITTERARUM. One of the four modes in which, according to Gaius (iii. 89), contractual obligations could be incurred, was *litteris*. The contract was made by the creditor's entry (Gaius, iii. 137) of so much as *expensum* to the debtor in his account book (*codex accepti et expensi*). The debtor's assent to the entry was necessary (Cic. *pro Rosc. Com.* 1, 5; Val. Max. viii. 2, 2), but apart from that it was immaterial whether he had in fact received the money or not. For the practice of accurate book-keeping, which the Romans very possibly adopted from the system of the bankers in the Greek cities of Campania, reference may be made, in addition to the passages last cited, to Cic. *in Verr.* i. 23, 60; 39, 99;—ii. 76, 186;—*pro Quint.* 4, 11; *pro Font.* 3, 15; *pro Cluentio*, 30, 82; and Pliny, *H. N.* ii. § 7. The items of receipt and expenditure appear to have been entered without distinction, in the order of their occurrence, in a day-book (*adversaria*), and transcribed at the end of each month into a ledger (*tabulae*, *codex accepti et expensi*), the precise form and character of which is much disputed, though most probably it was arranged in two sides or columns after the fashion of an ordinary banker's pass-book. The entry in this ledger (*nomen facere*, Cic. *in Verr.* i. 36, 92; 39, 102;—*ad Att.* iv. 18; Seneca, *de Benef.* iii. 15) made the contract, and bound the debtor to repay the specified sum: it was not merely evidence, admitting of the possibility of rebuttal.

We are told by Gaius (iii. 131) that if an entry were made in the codex of an *actual* money loan, the obligation to repay it arose *re* (MUTUUM), not *litteris*, and the debt was called specifically *nomen arcarium*, the written record serving merely as evidence. It follows that wherever a genuine money debt was created *litteris* it must have been under the fiction of a loan, as appears to have been the case in two instances of debts originally incurred in this manner of which we have a record (Cic. *ad Att.* iv. 18; Val. Max. viii. 2, 2). But it seems clear that the most common purpose for which Expensilatio (as the contract is termed) was used was that of novation (*inf.* p. 259): and there were two modes in which an obligation could be novated *litteris*. By the first ("Transcriptio a re in personam," Gaius, iii. 129) a debt owing on some other ground, such (*e.g.*) as consensual contract or legacy, might be converted into a "literal" debt: for instance, an heir might be given time to pay a legacy on the condition that the legatee should be allowed to enter the money as *expensum* to him. The object of this, beyond a doubt, was to subject the strict action known as *condictio certi*, with its penal wager of a third of the sum in dispute, for an action (usually *bonae fidei*) by which only the actual sum due could be recovered. The old contract and the old action ceased to exist, their places being taken by new ones more favourable to the creditor. The second form of novation ("Transcriptio a persona in personam," Gaius, iii. 130) was employed where it was desired that money owed by one person to a second should be owed to him by a third instead: thus, if A owed money to B, and it was agreed that C should enter it in his codex as *expensum* to A, C would become A's creditor instead of B. In a similar way one debtor could be substituted for another, the creditor remaining the same.

Whether the "literal" contract could be entered into by aliens was disputed between the Sabinian and Proculian schools of lawyers. The latter held that it was too peculiarly *juris civilis* to be available to them at all: the former thought that they could be bound by it *a re in* *personam*, but not otherwise (Gaius, iii. 133). But Gaius says (*ib.* 134) that aliens had a kind of literal contract of their own, differing from Expensilatio materially in form, but similar to it in its operation. This was a species of bond (*chirographa*, *syngraphae*), signed by the debtor, and acknowledging the debt, of Greek origin, as the names denote; and it seems clear, from the language of Gaius, that the bond, like the debt, was or constituted the obligation: it was not mere evidence, like the entry of a *nomen arcarium*.

Although Gaius speaks of Expensilatio as a form of contract actually existing in his own day, there can be little doubt that it had gone out of use, along with the regular keeping of accounts, among the generality of Roman citizens, and was still in vogue only with bankers, who kept their customers' accounts for them. Perhaps no explanation of this need be required beyond the general decay of republican manners under the Empire; but probably the disuse of the literal contract was connected with the introduction of *constitutum*, which secured all the advantages of Transcriptio without the extinction of the prior obligation, and still more with that of the *exceptio doli*, which may be attributed with some certainty to Gallus Aquilius, who was Cicero's colleague in the praetorship. The action for breach of an obligation incurred *litteris* was *stricti juris*, and the law was that fraud was no defence to an action of that kind, so that a defendant was helpless whose consent to the creditor's entry had been obtained by misrepresentation, or by an unfulfilled undertaking to advance money or give credit in consideration of that promise being given. An anecdote told by Cicero (*de Off.* iii. 14, §§ 58–60) puts the matter in a strong light. Pythius, a Syracusan banker, induced Canius to buy a country-house from him by fraudulently inducing him to believe, on the evidence of his own eyesight, that the estate and neighbourhood abounded in spoils for the hunter and the fisherman. Knowing that a consensual contract of sale would be radically vitiated by his dishonesty, he produced his codex, and got Canius to assent to the debt being transcribed on the spot. Canius, says Cicero, had no remedy, for his colleague Aquilius had not yet introduced his *formulae de dolo*. When however that had been done, Expensilatio had virtually ceased to be a contract binding through its form alone; and whenever there had been anything in the nature of chicane or dishonesty on the creditor's part, he could not but fail in his action.

The later history of the literal contract, and in particular of the so-called "literal obligation" of Justinian's Institutes (iii. 21), is intimately bound up with that of Stipulation, the contract made *verbis*. In the Greek provinces of the Empire the old oral stipulation of Rome, and the provincial chirographum or syngrapha, appear to have become merged together in the written and signed memorandum (*cautio*, *instrumentum*), purporting to attest a stipulation actually made by oral question and answer (Paul. *Sent. rec.* v. 7, 2; *Inst.* iii. 19, 17). If such a *cautio* were obtained by the promise of a pecuniary consideration, which in fact had not been given, it could when sued upon be met by the "exceptio pecuniae non numeratae," a specific variety of the *exceptio doli*: and it was enacted in 213 A.D. (Cod. 4, 30, 3) that when this plea was entered by the defendant, the plaintiff should be bound to prove that the alleged consideration had actually been given, unless a certain interval of time had elapsed from the date of the document. It seems that when, in compiling the Institutes, Justinian found that he had no genuine literal contract, corresponding to the old Expensilatio, to describe, he thought the best equivalent would be this *cautio* purporting to evidence a stipulation, and the kindred topic of the "exceptio pecuniae non numeratae." That this is the true significance of the very difficult title (21) in the third book of the Institutes appears clear on a careful examination of the passage in Gaius (iii. 134), upon which it is obviously modelled, and in view of a later paragraph (iv. 13, 2) of the Institutes themselves. But between the old contract, made by entry in the codex, and the *cautio* which Justinian put in its place, there is the same radical difference that there is in English law between a deed under seal and a mere written memorandum of a contract. The entry in the codex *was* the contract; and if its genuineness was not disputed, the party against whom it was made was technically bound, though he might escape judgment by pleading the *exceptio doli*. That the *cautio* was not itself a contract, and never more than evidence of an alleged contract made (expressly or impliedly) by stipulation, which could be rebutted by counter-evidence that the alleged contract had never been made at all, is placed beyond all reasonable doubt by the passage of the Digest (44, 7, 1, 2) in which the sources of contractual obligations in Justinian's time are enumerated. In that passage, which is taken from another work of Gaius, we read "obligationes ex contractu aut re nascuntur aut verbis aut consensu:" and the "aut literis" which Gaius no doubt originally wrote was deliberately suppressed by the compilers of the Digest, so as to bring the extract into agreement with the actually existing law of the day. (Savigny, *Verm. Schriften*, i. 205 *sq.*; Gneist, *Die formellen Verträge*, 321 *sq.*; Rein, *Civilrecht*, p. 677 *sq.*; Voigt, *Jus Naturale*, iv. 74, and his treatise *Ueber die Bankiers, die Buchführung und die Litteralobligation der Römer*; Keller, *Beitrag zu der Lehre von dem röm. Literal-contracte* in *Sell*, Jahrbücher 1; Schüler, *Die literarum obligatio des älteren röm. Rechts*, 1842; Buonamici, *Sulle literarum obligationes in diritto Romano*, *Arch. giurid.* xvi. 3 *sq.*; Padeletti, *History of Roman Law*, ch. 21, note 6.) [J. B. M.]

OBLIGATIONES. *Obligatio* is defined by Justinian (*Inst.* iii. 13, pr.) as "juris vinculum, quo necessitate adstringimur alicujus solvendae rei, secundum nostrae civitatis jura:" a legal bond, with which we are bound by a necessity of performing some act according to the laws of our state. It is thus a legal relation between two ascertained persons, respectively debtor and creditor (using these terms in a wide sense), in virtue of which the latter is entitled to a certain act or forbearance from the former. Sometimes the term is used to denote specifically the right of the creditor (e.g. *Inst.* iii. 28; Dig. 45, 1, 126, 2, &c.) or the duty of the debtor (e.g. Dig. 12, 1, 6, &c.), and it occasionally bears other divergent but cognate meanings: but its proper signification is that which has been stated. It differs from the legal relations exemplified in ownership, servitudes, or possession, in that it involves only what jurists call rights *in personam:* the person who owes the duty is specific and ascertained from the outset, whereas the duty owed to the owner of property, not to interfere with his proprietary rights, is incumbent not on any particular person, but on persons generally: and this contrast is well put by Paulus in Dig. 44, 7, 3, pr.: "Obligationum substantia non in eo consistit, ut aliquod corpus nostrum, aut servitutem nostram faciat, sed ut alium nobis obstringat ad dandum aliquid, vel faciendum, vel praestandum." According to the Roman view, the relation between the two parties is strictly personal: the right is the creditor's, and the duty is the debtor's only: neither debtor nor creditor can be really changed without destroying the existence of the obligation itself: or, as has been said, "The personal relation in an obligatio, according to the Romans, is so essential, that its active or passive transfer—assignment of the right, assumption of the liability by another—cannot in any way be directly effected."

The result of an obligatio is the partial subjection (in law) of one person's will to another, the debtor's freedom of action being partially limited in favour of the creditor: "debitor intelligitur is, a quo invito pecunia exigi potest" (Dig. 50, 16, 108). But even this must not be taken to imply that the creditor can in all cases enforce his right by action at law. In the earlier period of the Roman legal system it was otherwise: obligation and actionability went hand in hand; unless there was an action, the obligation had no legal existence. But when the ideas of equity and the *jus gentium* began to gain ground, the praetor came to recognise other legal incidents to an obligatio than actionability, and would allow the creditor's right to be enforced or realised in other ways. Hence the distinction of obligations into *naturales* and *civiles:* a civil obligation is one enforceable by action; a natural obligation is one which, though not actionable, possesses all the other legal properties of obligationes in general. For instance, though the debtor could not be made to pay, yet if he paid voluntarily, even by mistake, he could not recover the money back on the ground that it was not due (Dig. 46, 1, 16, 4). So, too, a debt "naturally" owed could be set-off against an actionable claim of the debtor against the creditor (Dig. ib. 26), and it could form a sufficient basis for a pledge, a guarantee, or a novation (of which something will be said below). The causes which made obligations natural instead of civil are mainly two: insufficiency of form in contracts, and defective capacity of legal right or legal action in a party. As regards the first, agreements according to Roman law were actionable only if they were expressed in a definite form, or else belonged to one or other of certain specially favoured classes; otherwise they were called *nuda pacta;* no action would lie on them, but yet the promisee might get and retain what was due to him in other ways. As regards the second, there were certain classes of persons between whom there could be no civil obligation. A slave could not be bound *civiliter* to any one, but was capable of natural obligation, and similarly no one could be bound *civiliter* to a slave. So, too, between pater- and filiusfamilias there could be natural obligation only. Lastly, *civilis* obligatio sometimes became *naturalis* by operation of law: *e.g.* through the rules as to limitation of actions, or capitis deminutio (Dig. 4, 5, 2, 2).

Another division of obligations is based upon the character of the legislative organ (so to speak) to which they respectively owe their validity. When that organ was the mouthpiece of the civil law (*e.g.* the comitia, emperor, or custom), the obligatio was said to be *civilis* (in another sense): when it was the praetor or some other magistrate, it was said to be *honoraria* or *praetoria.* And sometimes obligations are classified in a manner more proper to the actions which lie upon them, as either *stricti juris* or *bonae fidei.* Personal actions of the CONDICTIO class were *stricti juris,* others were *bonae fidei;* and these terms were transferred to the obligations which they were brought to enforce. Hence the contracts which were ascribed to the *jus gentium* (with the exception of *mutuum*) are sometimes said to create *bonae fidei* obligations; *e.g.* sale, hire, agency, pledge, deposit, and others.

Finally, modern writers usually divide obligations into *unilateral* and *bilateral.* An obligation is unilateral when only one of the parties is bound, as where A lends B five pounds: the latter alone owes anything. It is bilateral where duties exist on both sides, as in a contract of sale, where the vendor has to convey the thing sold, and the vendee has to pay the price. But, strictly speaking, every obligation is unilateral, for a person cannot play two different *rôles* in the same legal relation: so that the so-called bilateral obligations are in reality two separate obligations regarded as one by reason of the identity of their origin.

The "object" of an obligation is always either an act or a forbearance; the person bound has to do or not to do. If A agrees to sell B a horse, B has in law no right to the horse (for in that case his right would be *in rem,* not *in personam*); all he has a right to is a conveyance from A, which is an act. Of the possible objects of an obligation, in this sense, the Romans have no scientific classification; the nearest approach to one is that suggested in the passage of Paulus cited above into *dationes, factiones,* and *praestationes.* But this originated in the technicalities of pleading under the formulary system, and in the finished law of Justinian is merely a worthless survival of an older and obsolete procedure. But whatever the act or forbearance may be which is owed under an obligation, it is subject to three rules. It must have an appreciable money value in relation to the creditor: "ea enim in obligatione consistere, quae pecunia lui praestarique possunt" (Dig. 40, 7, 9, 2): though whether this rule was in force under Justinian has been denied by modern writers (*e.g.* Windscheid, *Lehrbuch,* § 251, note 3; Ihering, *Jahrbuch für Dogmatik,* xviii. pp. 34–115). It must be lawful, and further possible both in nature and in law: and thirdly it must be, or be capable of being rendered, sufficiently definite; *e.g.* one cannot be bound to do just as much as and no more than one pleases (Dig. 45, 1, 108, 1).

Viewed with reference to the facts on which the law operated so as to give them binding force, obligations arose, according to the Institutes of Gaius, from Contract and Delict: to these he adds in the third book of his Aurei (Dig. 44, 7, 5) "variae causarum figurae," a source which in Justinian's Institutes is represented by the more intelligible heads of quasi-contract and quasi-delict. Justinian's enumeration of the sources of obligations, though hardly exhaustive and not scientifically adequate, is more satisfactory than the classification of Modestinus, who in Dig. 44, 7, 52 says that obligations arise from *res*, *verba*, *consensus*, *lex*, *jus honorarium*, *necessitas*, and *peccatum*. To make Justinian's statement at all a good one, the term *contractus* must be taken to include all agreements, for every agreement, if Savigny is correct, gave rise to at least a "natural" obligation, though by Justinian himself it is used to denote only certain agreements which, owing to their form or nature, were actionable under the civil law. The general Roman terms signifying "agreement" are *conventio*, *pactio*, *pactum*: "et est pactio duorum pluriumve in idem placitum consensus" (Dig. 2, 14, 1, 2). The essential element here is the consent of two (or more) wills, but this was not enough, in the Roman view, to make a *contractus*, a term differentiated from *pactum* by the circumstance that to certain agreements (*pacta*) a "civil" obligation was annexed by the older law in virtue either of their nature, or of their being attended by some other fact besides the mere fact of agreement. An unaccepted promise, or promise without agreement (*pollicitatio*), gave rise to an obligation only in certain cases when made to a municipal corporation (Dig. 50, 12, 3, pr.), and where vows were made to the Deity or pagan gods (Dig. ib. 2, pr. and 1). Actionable *pacta* are called by modern writers *pacta vestita*: they include, firstly, the contracts recognised by the older law:—NEXUM (which is not treated by Gaius or Justinian), and the contracts made *verbis* and *litteris*, *re* and *consensu*: and, secondly, certain agreements which were made actionable at different times by the edict or imperial legislation (*pacta praetoria* and *legitima*). Agreements on which no action lay were termed by the Romans *pacta nuda*: "nuda pactio obligationem non parit, sed parit exceptionem" (Dig. 2, 14, 7, 4): *i.e.* they could be relied upon in defence, *e.g.* for purposes of set-off, and according to Savigny possessed all the incidents of *naturalis obligatio*, but could not be sued upon: "ex nudo pacto inter cives Romanos actio non nascitur" (Paul. *Sent. rec.* ii. 14, 1).

Perhaps the oldest of the Roman contracts was NEXUM, to the article on which reference may be made. But there were two other very old formal contracts which had a longer history, and of which we have far fuller knowledge, viz. Stipulatio and Expensilatio or literal contract. The first is by Gaius and Justinian identified with the obligation made *verbis*, which is usually taken to comprise two other far less important formal promises: *dotis dictio* (Ulpian, *Reg.* 6, 2; Cic. *pro Flacco*, 35, 86; *pro Caec.* 25, 72; Terence, *Andr.* v. 4, 47: see DOS) and *jurata promissio liberti* (Dig. 38, 1, 7: see LIBERTUS). Stipulatio was a form of contract which gave rise only to a unilateral obligation, the promiser binding himself to the *stipulator* or promisee by returning an oral affirmative answer to the oral question of the latter (Cic. *pro Caec.* 3, 7). Originally the only terms which could be used were *spondes? spondeo* (Plaut. *Capt.* iv. 2, 117), and the strictest correspondence between question and answer was insisted upon: moreover in this form no one could contract except Roman citizens, so that *peregrini* could not avail themselves at first of stipulation at all (Gaius, iii. 93, 179). Later, other words became sanctioned by usage: e.g. *promittis? promitto*, *dabis? facies?* &c. (Gaius, iii. 93; *Inst.* iii. 15, 1), by employment of which the form was made accessible to aliens; and in Gaius' time Greek equivalents were permitted. Similarly, by degrees the requirement of strict and literal correspondence between question and answer was dispensed with, and, owing to a constitution of Leo, A.D. 469 (Cod. 8, 38, 10; *Inst.* l. c.), the law allowed in Justinian's age the use of any terms and any language whatever, provided the parties understood one another: by which time, too, it had been discovered to be so inconvenient that the proceedings must be oral, and so necessitated the presence of the parties, that the original solemnities of stipulation had in most cases dwindled down to a written memorandum of a promise fictitiously represented as having been made in answer to a preceding question (*cautio*), upon which an action would successfully lie unless the defendant chose dishonestly to rely upon the defence that the contract had not been made (as, strictly speaking, the law required) by oral question and answer (*Inst.* iii. 19, 17 and 12). The value of such *cautiones* was merely evidentiary: oral stipulations were probably always made in the presence of witnesses (Cic. *pro Rosc. Com.* 5, 13), which, however, were not prescribed by law, as in the case of mancipations and nexum.

Stipulation is not so much a peculiar species of contract as a universal contract form: a form in which any agreement whatever could be concluded, and into which many were thrown, even though actionable in themselves (*e.g.* sales), on account of the superiority of the remedy (*condictio*) that would then be enforced. Justinian (*Inst.* iv. 15, 7) recommends that whenever the object of a stipulation is other than the payment of a sum of money, it should be expressed in the form of a condition to a bond: *e.g.* "If you do not do so and so for me, do you promise me so much?" The advantages secured by this were that the promisee, if the condition was not fulfilled, was not under any necessity of proving what loss he had suffered (*Inst.* l. c.), which perhaps would have given him very inadequate damages ("et ad exiguam summam deducitur," Dig. 46, 5, 11), and that the ground of action was not a promise to do, but a promise to pay, so that until Justinian's time the plaintiff recovered more than the sum actually due by means of the penal wager involved in *condictio certi* [see PER CONDICTIONEM ACTIO].

Various grounds are stated by Gaius (iii. 97–109) and Justinian (*Inst.* iii. 19) on which stipulations were void (*inutiles*), some of which, however, affect all contracts, and not stipulation only. Among the latter are impossibility of performance (Gaius, iii. 97; *Inst.* iii. 19, 1 and 2), impossible conditions (Gaius, iii. 98; *Inst.* ib. 11), and the elementary principle of law that a contract can confer rights and impose duties only on those who are parties to it (Gaius, iii. 103; *Inst.* ib. 3, 4, 19–21). To stipulation alone relate the rules as to the correspondence of question and answer (Gaius, iii. 102; *Inst.* ib. 5), to the incapacity of deaf or dumb persons to be parties (Gaius, iii. 105; *Inst.* ib. 7), and to the necessity of the parties being simultaneously present with one another (Gaius, iii. 138; *Inst.* ib. 12). Something also is said upon the contractual capacity of *pupilli* and *infantes*, as to which see IMPUBES and INFANS.

It was not unusual for the promise to be made on the stipulator's behalf to a second promisee as well as to himself, who was called the *adstipulator*, and was a kind of trustee for the real creditor. He could accept and even sue for performance of the promise (Gaius, iii. 111), but could be compelled by *actio mandati* to deliver up to his principal or the latter's heir anything which thereby came into his hands, and was liable to a penal procedure under the Lex Aquilia (Gaius, iii. 215) if he fraudulently released the promiser. Some peculiar rules as to adstipulatio are noticed by Gaius (iii. 114). Its object was to facilitate representation of the promisee by an agent in an action at a time when attorneys were not generally allowed for that purpose, and to enable a promise to be validly made of performance to a person after his death, which otherwise could not have been done till the time of Justinian (Gaius, iii. 100; *Inst.* iii. 19, 13). In the latter's legislation adstipulatio disappears, both of the purposes which it had served being directly attainable.

Stipulation was also perhaps the commonest mode in which the contract of suretyship was made. [See INTERCESSIO.]

For Expensilatio, or literal contract, see the article on OBLIGATIO LITTERARUM. The "real" contracts, those in which the obligation is generated *re*, i.e. by delivery of property or possession, are four in number, viz. two varieties of loan, MUTUUM and COMMODATUM, Deposit [DEPOSITUM] and Pledge [PIGNUS]. Both Gaius and Justinian also speak of the duty of a man to repay money paid to him in the mistaken belief that he could legally claim it as "real," though (Gaius, iii. 91; *Inst.* iii. 14, 1) they hesitate to attribute to it a contractual character, and later in the Institutes (iii. 27, 6) Justinian enumerates it among quasi-contractual obligations.

The Consensual Contracts, agreements on which an action lay in virtue of the mere consent of the parties (Gaius, iii. 136; *Inst.* iii. 22), apart from all form, are sale [EMPTIO VENDITIO], hire [LOCATIO CONDUCTIO], partnership [SOCIETAS], and agency [MANDATUM]. With regard to the last, it should be observed that where an agent made a contract on behalf of his principal, the Roman law never allowed the latter to sue directly on it; but only as the assignee of his own agent (Dig. 3, 3, 68; 41, 2, 49, 2). The only exception to this was where the agent was the principal's filiusfamilias; and this was due to the rule that, as persons in potestas are incapable of proprietary rights, rights acquired by them *ex contractu* vest immediately in their dominus or paterfamilias. The dominus could not sue on contracts made by his slave, for they gave rise to *naturalis obligatio* only, but he was entitled to any advantage otherwise derivable from them; on those made by his son in power the paterfamilias had an action: the modifications of this principle by the development of the doctrine of *peculium* are described under PATRIA POTESTAS. Manus and Mancipium were also conditions which vested in the superior the benefit arising from contracts made by the inferior: see Gaius, iii. 163–167, and *Inst.* iii. titles 17 and 28.

Among the agreements which were actionable without being termed *contractus* by the Romans, the first place is to be given to the so-called Innominate Contracts, which were a development of the principle—in reality part-performance—involved in the obligations arising *re*. The simple reason why the borrower in a Mutuum (*e.g.*) or the pledgee in a Pignus was bound by a civil obligation was that the other party had first done all he had engaged to do. Apparently owing to the influence of the jurist Labeo, a more general application of this principle shortly after the fall of the Republic gave a great extension to the Roman contract system; and by a gradual development it was at length held that every agreement (even though not belonging to any of the hitherto established classes of contract), in which an act on the one side was the consideration for an act on the other, was enforceable by action at the suit of that party who had done all to which he was bound under its terms (Dig. 2, 14, 7, 2). Such agreements are by modern writers termed Innominate Contracts because they have no specific names, such as Sale, Pledge, &c.; their characteristic marks are mutuality and part-performance: until one of the parties has done what he has engaged to do, no action lies, whereby they are clearly distinguished from the contracts which are actionable in virtue of the mere fact of agreement (Dig. 19, 4, 1, 2). By Paulus they are roughly classified according to the possible acts which might be the consideration for one another respectively ("aut enim do tibi ut des, aut do ut facias, aut facio ut des, aut facio ut facias," Dig. 19, 5, 5, pr.): but the most usual clue to them is the mention of the actio (*civilis in factum*, or *praescriptis verbis*) by which the party who had performed could exact counter-performance or recover damages from the other (e.g. *Inst.* iii. 24, 1 and 2). If the part-performance had consisted in conveyance of property (*dare*), the plaintiff might, as alternative to the *actio praescriptis verbis*, redemand what he had conveyed by the older remedy known as "condictio causa data causa non secuta" (Dig. 12, 14, 3, 2). The commonest examples of Innominate Contract are exchange (*Permutatio*, Inst. iii. 23, 2); *Aestimatum*, the acceptance of property valued at a certain maximum under the condition of either returning it or paying the price at which it is valued (Dig. 19, 13, 1, pr.); *Transactio*, or compromise (Dig. 2, 15; Cod. 2, 4); and *Precarium*, or permissive occupancy (Dig. 43, 26, 19, 2). But the practical value of the *actio praescriptis verbis* is best realised in cases which cannot certainly be regarded as within the principle of any named (*i.e.* Real or Consensual) Contract, and in which the jurists say, "*tutius esse*, praescriptis verbis agere" (Dig. 19, 3, 1, pr.; 4, 3, 9, 3, &c.). This extension was apparently due to juristic action. Other agreements, as has been observed above, were made actionable by the praetor or by the emperor. The chief *pacta praetoria* are Constitutum [INTERCESSIO], Hypotheca [PIGNUS]; Receptum arbitrii, the agreement to refer a dispute to arbitration (Dig. 4, 8); and Receptum nautarum, cauponum, &c., the obligation (*quasi ex contractu* rather than contractual) of innkeepers, shipowners, and others in similar positions, to be answerable for the safe custody and restitution of property put under their charge and control (Dig. 4, 9, 1, pr., &c.). Of the *pacta legitima* first made actionable by the emperors, the chief example is DONATIO: compare also the legislation of Zeno on the subject of EMPHYTEUSIS. It is also usual to enumerate among *pacta vestita* what civilians call *pacta adjecta:* subsidiary conventions annexed to an agreement remedied by *bonae fidei* action, and themselves enforceable by that action if entered into substantially as part of and at the same time with the main agreement (*ex continenti*), even though expressed in the guise of a condition. For instance, if A agreed to buy B's house on condition that the latter put it in repair, this condition would itself be construed as a promise; and an action would lie for its breach, the contract being consensual: had the transaction been Stipulatio or Mutuum (on which the action was *stricti juris*), it would have been otherwise (Dig. 2, 14, 7, 5; ib. 7; 19, 1, 13, 30; 19, 5, 6; 18, 1, 75).

Obligationes arising *quasi ex contractu* are illustrated in the Institutes (iii. 27) and in Dig. 44, 7, 5 by Negotiorum gestio [NEGOTIORUM GESTORUM ACTIO], the relation of guardian and ward [CURATOR, TUTOR], joint-ownership arising from gift, inheritance or legacy, &c. In all these cases the party or parties are bound by an obligation, though not under any express agreement; but the circumstances being more analogous to Contract than to Delict, the obligation is said to be quasi-contractual.

Obligationes arising from Delict denote the *vinculum juris* which the law creates in certain cases of wrong-doing between the injured person and the delinquent. As soon as a "delict," in the Roman sense, is committed, the wrong-doer is "bound" to the man he has wronged, to pay him a penalty; and where the act is one which causes loss of or damage to property, he is also bound to indemnify the person on whom such loss or damage falls. Such delicts are four in number, viz. Theft [FURTUM], Robbery [BONA VI RAPTA or RAPINA], Damage to property [DAMNUM INJURIA DATUM], and Assault, Libel, Slander, &c. [INJURIA]. Quasi-delictual obligations are illustrated in the Institutes (iv. 5) by instances of two kinds: cases of vicarious responsibility, imposed on a man because he employs careless or dishonest servants (e.g. *Inst.* iv. 5, 3), or because it may be difficult to ascertain the real offender (*ib.* 1 and 2), and wrongs which result directly from a man's own *culpa* or *dolus*, but which do not come under the definition of any of the four delicts proper (*ib.* pr.).

Hitherto obligations have been spoken of as existing between two parties only: but to the same obligation there may possibly be two or more debtors, or two or more creditors, all of whom are comprehended under the general name of *rei* (Cic. *de Orat.* ii. 43, 183). Two distinct forms of such plurality of parties are found in the Roman law, called by modern writers Solidarity and Correality. Solidarity is mainly passive: one creditor is entitled against two or more debtors by different obligations, but these obligations, though different from one another, have one and the same act or forbearance as their object: so that when that object is once attained by the performance of one of them, all the rest, having no longer any object, cease *ipso facto* to exist. For instance, where two persons jointly commit a delict—*e.g.* break a man's windows—the obligation to make compensation (though not that to pay the penalty prescribed by law) is of this nature: as soon as one has paid for mending the windows, the other's liability is at an end (Dig. 2, 10, 1, 4; 4, 2, 14, 15, &c.). Other examples of solidary obligation are found in the liability of co-tutors for *dolus* and *culpa* in the discharge of their duties (Dig. 16, 3, 1, 43), and in those cases where two or more persons jointly incur duties *ex contractu* without becoming *correi* (e.g. Dig. 17, 1, 60, 2; 16, 3, 1, 43; 13, 6, 5, 13). Correality resembles Solidarity in the identity of the obligation-object which is owed to one creditor by several debtors, or by one debtor to several creditors; but it differs in that there is also but one obligation: there is but one single *vinculum juris* by which the debtor and the creditors, or the creditors and the debtor, are bound to one another; so that any act or event which extinguishes that single obligation between the creditor and one of the debtors, or between the debtor and one of the creditors, puts an end to it between them all. Correal obligation arose most commonly from contract, usually stipulation in the form described in *Inst.* iii. 16, pr.: but it could also be created in a testament, by the testator charging a bequest on one or other of his heirs in the alternative (Dig. 30, 8, 1), and similarly in a banking partnership the *socii* were liable *correaliter* on all their business transactions, whether entered into by one or all of them (Dig. 2, 14, 9, pr.).

Of the modes in which obligations could be extinguished (which extinction is commonly expressed by *solvere* in the general sense of loosing or releasing, Dig. 42, 1, 4, 7; 50, 16, 47; ib. 176), the first to be noticed is performance ("solutio *stricto sensu*"). So far as the release of the debtor was concerned, it was immaterial from whom performance proceeded—whether from himself or from some third person (Gaius, iii. 168). Whether he was equally discharged by what is called *datio in solutum*, the acceptance by the creditor of something other than what was really owed in lieu of it, had been disputed between the two schools of jurists: the Sabinians, whose view was eventually confirmed by Justinian (*Inst.* iii. 29, pr.), answered in the affirmative, while the Proculians held that in law the debtor remained bound, though if sued he could successfully meet the creditor's action by the plea of fraud (*exceptio doli mali*). Secondly, certain obligations could be properly discharged only by an "imaginaria solutio per aes et libram" (Gaius, iii. 173–175): for these reference may be made to the article on Nexum. A third mode of extinction was Acceptilatio, a formal release from an obligation incurred by stipulation only (Terence, *Adelph.* ii. 1, 10), and expressed in a solemn corresponding form of question and answer—"Quod ego tibi promisi habesne acceptum? Habeo: consentaneum enim visum est," says Gaius (iii. 170), "verbis factam obligationem posse aliis verbis dissolvi." But though Acceptilatio was specialised to the discharge of obligations created *verbis*, a liability incurred in any other way whatsoever could be transformed by Novatio (of which below) into a verbal obligation, and then released in this manner (Gaius, iii. 170; *Inst.* iii. 29, 1): and the jurist Gallus Aquilius devised a comprehensive formula, called the Stipulatio Aquiliana (*Inst.* ib. 2), by which all obligations in which one and the same person was debtor, and another and the same creditor, could be embraced in a single *novatio*, whereby they were converted into a single obligation, which could then, if required, be discharged by Acceptilatio: "Quidquid tibi hodierno die per Aquilianam stipulationem spopondi, id omne habesne acceptum? Habeo, acceptumque tuli" (*Inst.* iii. 29, 2, after Florentinus in Dig. 46, 4, 18, pr. and 1). Novation, which has already been more than once referred to, is the extinction of one obligation by the substitution for it of another (Dig. 46, 2, 1, pr.). Originally this could be effected in two ways: by Transcriptio (Gaius, iii. 128–130: see Obligatio Litterarum) and Stipulation: but the former had gone out of use long before Justinian's time, and perhaps even as early as that of Gaius. The end in view in a Novation was sometimes to change one of the parties to a subsisting obligation, as where A stipulates from B for payment to him of a debt due to himself from C (change of debtor), or where C (with B's consent) stipulates from A for payment to himself of a debt owed by A to B (change of creditor): but more commonly perhaps it was to alter the nature of a subsisting liability by converting a real or consensual into a verbal obligation (so as to substitute a *stricti juris* for a *bonae fidei* action), or by modifying its terms. It was immaterial whether the obligation "novated" was *civilis* or *naturalis*, and the obligation created by the "novating" contract would extinguish the old one even though itself *naturalis* only (Gaius, iii. 176; *Inst.* iii. 29, 3). Whether an absolute obligation was extinguished at once by a conditional novating stipulation was at one time a question: the great jurist Servius Sulpicius had held that extinction ensued even though the condition of the novating contract was never fulfilled, but Justinian confirmed the view upheld by Gaius (iii. 179), that the old obligation subsisted until the condition of the new one was fulfilled, but that if the creditor sued upon it before such fulfilment he could be repelled by *exceptio doli* or *pacti* (Dig. 23, 3, 50; *Inst.* iii. 29, 3). He also enacted that in order to effect a novation the parties to the contract must expressly state this as their intention.

Gaius (iv. 108) tells us that under the old procedure by *legis actio* no second action could ever be brought on the same ground, so that obligations were extinguished by being sued upon: and also (iii. 180) that under the formulary system of procedure the same result ensued from *litis contestatio* or joinder of issue, if the action belonged to the class of Judicia legitima: *litis contestatio* thus having a quasi-novative effect, and substituting for the original obligation a new liability on the defendant to be condemned if the plaintiff proved his case (Gaius, iii. 181); though according to Dig. 12, 6, 60, the old obligation was not really destroyed, but continued to exist *naturaliter*. The judicia which were not *legitima litis contestatio* did not destroy the obligation, but if the plaintiff sued on it a second time he could be defeated by *exceptio rei in judicium deductae* or *rei judicatae* (Gaius, iv. 106). When the formulary system was superseded (A.D. 294), *litis contestatio* ceased to have this operation in any case, though if the action had been decided on its merits the *exceptio rei judicatae* was as powerful to repel a second suit as before (*Inst.* iv. 13, 5). [See the article on Litis Contestatio.] Justinian also observes (*Inst.* iv. 29, 4) that the obligation of a consensual contract could be extinguished by *contraria voluntas*, i.e. by the parties agreeing to be off their bargain, provided neither had done anything in execution of his side of it (*re integra*): such an agreement, when the *res* was no longer *integra*, had not the same effect, but operated as a new contract, which bound the party in whose favour performance had taken place to restore the other *in statum quo*, but which was unable to affect injuriously rights acquired under the original agreement by third persons (Dig. 2, 14, 58).

There were other modes in which obligations were discharged, and of which no mention is made in the Institutional works of Gaius and Justinian: *e.g.* physical impossibility of performance arising *ex post facto* without default of the debtor (Dig. 46, 3, 92): in some cases Confusio (Dig. ib. 95, 2); and sometimes death of one of the parties to a contract, as in societas (*Inst.* iii. 25, 5) and mandatum (ib. 26, 10). The obligation to pay a penalty on a delict was also destroyed by the delinquent's decease, and those involved in the *actiones furti* and *injuriarum* were dissolved *ipso jure* by "pactum de non petendo" or agreement not to sue (Dig. 2, 14, 17, 1).

A few words are necessary on the transfer *inter vivos* of the rights and liabilities in an obligation. The latter could in no way be transferred without the creditor's assent, and then only by means of a novatio, the old obligation being destroyed, and a new one with different parties taking its place. Similarly the creditor's right could be transferred, with the debtor's co-operation, by substituted agreement; but without such novation he had no means of assigning his right so as to enable the assignee to sue in his own name, or indeed to sue at all till the introduction of the formulary procedure. After this the assignee could bring his action as the assignee's agent and in the latter's name (Gaius, ii. 39; iv. 86), but subsequently he was enabled to sue in his own name by *actio utilis* (Dig. 3, 3, 55;—Cod. 4, 15, ult.; 6, 37, 18). The Roman law, however, apparently never recognised a genuine assignment of rights *in* *personam*, by which the assignee simply and actually stepped into the shoes of his assignor, who simultaneously dropped altogether out of the matter.

(Gaius, iii. 88–225; *Inst.* iii. 13—iv. 5; Dig. 2, 14; 44, 7;—Cod. 4, 10; Savigny, *Obligationenrecht;* Unterholzner, *Quellenmässige Zusammenstellung der Lehre des römischen Rechts von den Schuldverhältnissen*, Leipzig, 1840. Reference may also be made to the part on Obligations in the works of the leading modern civilians, such as Vangerow, Windscheid, Ortolan, Thibaut, Arndts, Baron, Puchta, and to Dr. Bruns' article on the modern Roman law in Holzendorff's *Encyclopädie* (4th edit.), pp. 458–509. Compare also for some points only slightly touched on in this article Excursus v., vii., viii. and ix. in Mr. Moyle's edition of the Institutes of Justinian.) [J. B. M.]

O'BOLUS (ὀβολός) was the sixth part of a drachm [see PONDERA, DRACHMA], whether as weight or coin. As a silver coin the obol was in circulation in Greece, Asia, and the West from early times, as well as its multiples the tetrobol, triobol (hemidrachm), and diobol. In the sixth and fifth centuries B.C. the fractions of an obol, the hemiobol, tetartemorion, &c., were issued in silver at Athens and other cities. About B.C. 400 copper coin began to be in use, and the obolus and its parts were issued in that metal. As an instance we figure a copper coin of Metapontum, identified as an obolus by its inscription. The metal value of the obolus varied according to the standard followed in its striking; it would be between one penny and twopence. In Athens the obolus contained 8 χαλκοῖ. [P. G.]

OBSIDIONA'LIS CORO'NA. [CORONA.]

OBSO'NIUM. [OPSON.]

OCCA'TIO. [AGRICULTURA, Vol. I. p. 63.]

OCCUPA'TIO is the advisedly taking possession of a thing which belongs to no one (*res nullius*), with the intention of appropriating it: the property in it is thereby *ipso facto* vested in him who takes possession (Cic. *de Off.* i. 7, 21): "quod nullius est, id ratione naturali occupanti conceditur" (Dig. 41, 1, 3, pr.). Hence (following Gaius, ii. 66, and also in the passage just cited) Justinian enumerates occupatio in his Institutes as one of the *adquisitiones naturales*, or modes of acquiring property recognised practically among all peoples, as being based on the *jus gentium* or *naturale.* Among the things of which one can become owner in this fashion are wild animals, birds, bees, and fishes (*Inst.* ii. 1, 12–16), enemies' property on Roman soil (*ib.* 17), stones and pebbles found on the sea-shore (*ib.* 18), islands which rise in the sea (*ib.* 22), treasure trove (*ib.* 39), and *res derelictae*, property abandoned by its former owner (*ib.* 47). [J. B. M.]

OCHLOCRA'TIA (ὀχλοκρατία), the dominion of the rabble, or mob-tyranny, a name of later origin than the time of Aristotle, and applied to that perversion of a democracy which extends the idea far beyond that of a state where all have equal legal rights and equal franchise, so that the natural and wholesome inequalities of society were removed or counteracted by the introduction of devices, such as paying citizens for attendance in the popular assembly, or increasing the number and restricting the duration and authority of public offices. Hence the exercise of all the highest functions of government came to be practically in the hands of a mere faction, consisting of the lowest and poorest, though most numerous class of citizens, who were thus tempted to adopt as their avocation that which they would formerly have delegated to others; and the state came to be regarded as a *property* of which each citizen was entitled to an equal share. In some respects therefore it most nearly represents the modern idea of a socialist state. Though, however, as was said above, Aristotle does not recognise the term, we may find perhaps his conception of the ochlocracy in his "extreme democracy" (τελευταία δημοκρατία). He says of this that it corresponds to the extreme oligarchy or δυναστεία (*Pol.* iv. 5, p. 1292 b); and he defines it as a democracy which overrides the constitution: κύριον εἶναι τὸ πλῆθος καὶ μὴ τὸν νόμον (whereas in his other kinds of democracy it is in each case ἄρχειν δὲ τὸν νόμον) τοῦτο δὲ γίγνεται ὅταν τὰ ψηφίσματα κύρια ᾖ ἀλλὰ μὴ ὁ νόμος· συμβαίνει δὲ τοῦτο διὰ τοὺς δημαγωγούς. Here we have no *constitution*, except that which may be formed and re-formed from hour to hour by the hasty legislation of the masses, following impulse or the voice of the popular leaders: it is clear that, if this is not exactly the ὀχλοκρατία described above, it would soon pass into it. [C. P. M.] [G. E. M.]

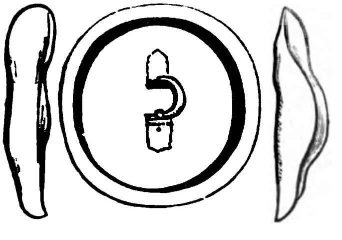
O'CREA (κνημίς), a greave, a legging. A pair of greaves (κνημῖδες) was one of the six articles of armour which formed the complete equipment of a Greek or Etruscan warrior [ARMA], and likewise of a Roman soldier, as fixed by Servius Tullius (Liv. i. 43). The greaves were always put on before the thorax, which made it difficult to bend the body (*Il.* iii. 330, &c.). In the Homeric poems, εὐκνήμιδες is a standing epithet of the Achaeans, and proves the general use of the greave. The Homeric greaves were usually made of bronze (*Il.* vii. 41, χαλκοκνήμιδες). The greaves of Achilles (*Il.* xviii. 613, xxi. 592) are said to be made of tin (κασσίτερος), and "rang terribly" (*Il.* xxi. 593, σμερδαλέον κονάβησε), a statement which has caused difficulty, as tin does not resound when struck. Helbig (*Homerisches Epos*, p. 196) suggests either that tin was an unfamiliar metal to the poet, or that the greaves were made of bronze, plated with tin. The Homeric greaves were sometimes "fitted with silver anklets" (ἀργυρέοισιν ἐπισφυρίοις, *Il.* iii. 331, xi. 18, &c.), which were perhaps the ring-like margins at the bottom of the greave (see illustration below).

In historical times, bronze was the usual material, as shown by the specimens discovered. In poetical passages greaves are described as of orichalc (Hes. *Scut.* 122), silver, electrum, and gold (Verg. *Aen.* vii. 634, viii. 624, xi. 488).

Greaves frequently had a lining, probably of leather, felt or cloth. Traces of leather were found in a specimen from the Crimea (*Antiq. du Bosp. Cimm.*, pl. xxviii., fig. 8; i. p. 195); and many specimens, in the British Museum and elsewhere, have a row of small holes round the edge for the attachment of the lining (cf. the engraving *s. v.* Galea). Another method of fitting the greave to the leg so as not to hurt it was by the interposition of a kind of sponge (ἀχίλλειος), which was also used for the lining of helmets. Aristotle (*Hist. An.* v., xvi.) describes it as of remarkable fineness, closeness, and toughness, and as used for the purpose of deadening a blow.

The greaves were accurately modelled to fit the leg, the two sides meeting exactly at the back of the calf. In order to put them on it was necessary forcibly to open them. How accurately the greave was intended to fit at the back of the leg may be observed in the heroic bronze fragment of which a view is given below.

Greaves thus fitted required in many cases no other fastening than their own elasticity. Often, nevertheless, they were further secured with two straps, as may be seen in the woodcut at Vol. I. p. 189. Their form and appearance will be best understood from the accompanying woodcuts.



Bronze Shield and pair of Greaves. (Brit. Museum.)

This woodcut represents the interior view of a bronze shield and a pair of bronze greaves which were found by Signor Campanari in an Etruscan tomb, and are now in the British Museum. These greaves are made right and left.

Ancient Greave. (British Museum.)

The annexed illustration represents a fragment of a bronze statue of heroic size, found in Magna Graecia, and now in the British Museum. It is the right leg of a warrior, wearing a closely-fitting greave, adorned above the knee with a carefully worked Gorgoneion of the archaic type. (*Journ. of Hellen. Stud.*, pl. lxix.) The top of the greave is seen projecting somewhat above the knee. The illustration shows very clearly the ankle-ring (ἐπισφύριον: see the explanation proposed above). That the Greeks took delight in handsome and convenient greaves may be inferred from Homer's allusions to the subject, and from the extant remains. A specimen of an elaborately adorned Greek greave is engraved in *Antiq. du Bosp. Cimm.*, pl. xxviii. fig. 7 (= Baumeister, *Denkmäler*, fig. 2221).

The modern Greeks and Albanians wear greaves, in form resembling those of their ancestors, but made of softer materials, such as velvet ornamented with gold, and fastened with hooks and eyes (cf. Hobhouse, *Travels*, i. p. 133).

Among the Romans, greaves made of bronze and richly embossed were worn by gladiators. Specimens have been found at Pompeii (Overbeck, p. 458; Baumeister, *Denkmäler*, fig. 2347–9; Gell, *Pompeiana*, 1817, pl. 18). In the time of the Empire greaves had not been entirely abandoned (Lamprid. *Alex. Sev.* 40), but were a distinguishing mark of the centurions. Compare a relief from Verona (Lindenschmidt, *Tracht und Bewaffnung des röm. Heeres*, pl. 1, fig. 6) and the relief from Petronell (Baumeister, *Denkmäler*, fig. 2276, and p. 2060; cf. also Zoega, *Bassirel.* pl. xvi.). At an earlier period the heavy-armed wore a single greave on the right leg, as that which was foremost in close combat (Veget. *de Re Mil.* i. 20). The Roman greaves were further distinguished from those of Greece, by the fact that they only covered the front part of the leg (*προκνημίς*, Polyb. vi. 23, 8).

Leggings of ox-hide or strong leather, probably of the form already described, were worn by agricultural labourers (Hom. *Od.* xxiv. 228; Pliny, *H. N.* xix. § 7; Pallad. *de Re Rustica*, i. 43) and by huntsmen (Hor. *Sat.* ii. 3, 234). The word *κνημίς* was also used in a more general sense (*κνημίς· τὸ ὑπόδημα*, Hesych. *s. v.*). [J. Y.] [A. H. S.]

OCTA'VAE. [Vectigalia.]

OCTO'BER EQUUS. On the Ides of October in each year there was a race of *bigae* in the Campus Martius, after which the off-horse of the winning biga was sacrificed by the flamen Martialis at the altar of Mars: the tail was cut (*offa penita*, Arnob. vii. 24: cf. Plaut. *Mil. Glor.* iii. 1, 165; and *curto equo*, Prop. v. 1, 20) and, taken to the Regia, the blood from it sprinkled on the hearth of Vesta: the blood from the sacrificed horse was kept and stored up within the Regia, for future sacred rites [Parilia]. For the head of the victim there was a struggle between the inhabitants of the Via Sacra and those of the Subura: if the former got it, it was fixed on the walls of the Regia; if the latter, on the *turris Mamilia* in the Subura. This struggle, representing a competition between two halves of the old city, marks the festival as dating from the earliest beginning of Rome (Mommsen, *Hist. of Rome*, i. 53; Burn, *Rome and Campagna*, p. 38). Marquardt sees also in the struggle a form of lustration or expiation, comparing Lobeck, *Aglaoph.* 680. The horse was clearly the appropriate sacrifice to Mars (to whom also the Equiria were sacred), and the fact that the blood was reserved for another ancient lustral rite suggests that we have here the original purely Roman lustration. (See also Marquardt, *Staatsverwaltung*, iii. 334 f.) [G. E. M.]

ODE'UM. [Theatrum.]

OENO'PHORUM, a vessel for holding wine. It had two handles, as is clear from a passage (cited by Marquardt, *Privatleben*, 650) from the comedy *Querolus*, where among dilapidated goods we have "oenophorum exauriculatum." It is described by Isidore (*Or.* xx. 6, 1) as "vas ferens vinum;" much larger than a drinking-cup (Juv. vi. 425), and such that it could be held by the handles and inverted, in pouring the contents into cups, as in the line of Lucilius, "vertitur oenophoris fundus, sententia nobis" (cf. "invertunt allifanis vinaria tota," Hor. *Sat.* ii. 8, 39). It is clear from the above passages that it was *not* (as has often been stated by commentators on Hor. *Sat.* i. 6, 109, and Pers. v. 140) a wine-basket or "cellaret," but a large wine-vessel. The slaves, in these passages of Horace and Persius, carry it outside their luggage, ready for use. The word "oenophorum" in Plin. xxxiv. § 69, adduced by some as from *oenophorus* and meaning "a slave bearing a wine-basket," cannot have anything to do with this subject: if the passage is so read, it is merely a statue of a wine-carrier by Praxiteles—but the true reading seems to be "canephoram." [G. E. M.]

OFFENDIX. [APEX.]

OI'KIAS DIKE (*οἰκίας δίκη*), an action to recover a house (like any other action where property was the subject of litigation, as *χωρίου, ἀνδραπόδων, νεώς, ἵππου δίκη*), belonged to the class of *διαδικασίαι*, *i.e.* actions in which the dispute was *ὅτῳ προσήκει μᾶλλον*, *Lex. Seguer.* 236 = *Etym. M.* p. 267, 7), *e.g.* one claiming it because he had bought it, the other because it had been mortgaged to him. Certain speeches of Lysias, Isaeus, Hyperides, and Deinarchus, which dealt with this subject, are all lost; in some, it would seem, private creditors made claims upon a confiscated estate by this action (Harpocr. *s. v. παρακαταβολή*). By the laws of Zaleucus (Polyb. xii. 16) possession of the property in dispute was secured till after the action to the last *bonae fidei* possessor; Attic law directed probably the same. Such actions belonged to the jurisdiction of the Forty (*Att. Process*, ed. Lipsius, pp. 674–81). The *ἐνοικίου δίκη* was another action to recover a house, not merely the bygone rents, as Hudtwalcker (*Diaet.* p. 143 n.) supposed; cf. Thalheim, *Griech. Rechtsaltert.* p. 84, n. 2. If house-rent was not paid by the tenant, the owner might evict him, but he was not, it seems, assisted by the authorities in so doing: *καθάπερ καὶ ἐξ οἰκίας, φησὶν ὁ Βίων, ἐξοικιζόμεθα, ὅταν τὸ ἐνοίκιον ὁ μισθώσας οὐ κομιζόμενος τὴν θύραν ἀφέλῃ, τὸν κέραμον ἀφέλῃ, τὸ φρέαρ ἐγκλείσῃ* (Stob. *Floril.* v. 67). [C. R. K.] [H. H.]

O'LEA, OLI'VA (*ἐλάα*, or, in older Attic and Trag., *ἐλαία*); **O'LEUM, OLI'VUM** (*ἔλαιον*); **OLE'TUM, OLIVE'TUM** (*ἐλαιών*).
