That the cultivation of the olive, and the use of its oil for anointing, for light, and for food, belonged to the earliest recorded life in the south of Western Asia, is clear from mention of it in all parts of the Bible; but there is considerable ground for thinking (1) that it was not cultivated among the Greeks in the earliest times of which we have record, and (2) that after its cultivation began its oil was used at first neither for light nor food, but only for anointing the body. The wood of the olive is used in Homer, as a hard wood readily taking a polish, for axe-handles, clubs, &c. (*Il.* xiii. 612; *Od.* ix. 320), which of course does not prove cultivation: it is used for anointing frequently in the Odyssey, but from the way in which it is spoken of (e.g. *Od.* vi. 79) it seems to be even then somewhat rare and costly, and there is still more indication of its being reserved for gods and heroes in the mention of it in *Il.* xiv. 171, xviii. 350, xxiii. 186 (the commoner use in the Doloneia, *Il.* x. 577, belongs to what is now generally considered the latest part of the Iliad): the same perhaps may be said of its being taken to express the sheen of garments in the idealised pictures of the divinely wrought shield (*Il.* xviii. 596), whereas the commoner animal fat suffices to supply the usual Homeric epithets for *bright* (*σιγαλόεις, λιπαρός*), as also in *ἀποστίλβοντες ἀλείφατος* (*Od.* iii. 408): and the *ἔλαιον* is *ὑγρὸν* in contrast with the thick *ἀλεῖφαρ*. On the whole, there is nothing to exclude Hehn's theory, that in the earliest Homeric period oil was an imported luxury, used as an unguent by the rich instead of the ordinary *ἀλεῖφαρ* of fat. The question when the cultivation of the olive began among the Greeks is affected by the sense given to *φολίη* in *Od.* v. 476. If that is a wild olive (*oleaster*), it follows that the *ἐλαίη* of the Odyssey is a cultivated *olea Europaea*. Hehn thinks it is not, and conjectures, without good reason, that it means a myrtle. It is true that Hesychius himself is uncertain, and suggests three trees; but we should find it hard to oppose the direct statement of Eustathius (*Dios.* i. 138) that it was the older name for wild olive, afterwards called *κότινος* and *ἀγριέλαιος*, with which Pausan. ii. 32, 10 agrees: it is an unsatisfactory comment of Hehn's that this opinion may be based solely on the Homeric line. But the evidence of cultivation in the Odyssey does not depend on that passage; we have the olive as a garden tree in *Od.* vii. 16. The simile in *Il.* xvii. 55 may at first sight seem to claim the cultivated olive for the earliest Homeric poem; but, apart from the question whether the simile is a later introduction, the mention of a solitary tree does not suggest cultivated olive-yards for oil-making, and it is noticed for its beauty and its flower, not for its fruit. On the whole, the reasonable conclusion is that in the time of the earliest Homeric writings the cultivation of the olive had not reached the shores of Asia Minor or Greece, and olive-oil is rare and imported: in the later part of the Iliad and the Odyssey the cultivation is just beginning, and oil is more widely used for anointing, though not for light or food (that the *berry* however was eaten, is implied by the description of Tantalus). In Northern Greece it was certainly later than the time of Hesiod, who does not mention the tree at all (Plin. xv. § 3 is not sufficient evidence to the contrary), though he describes the treatment of vines. When it took so firm a root in Attica, it is impossible to say, but probably not much later than 700 B.C.; for, though Chrysostom says that Peisistratus first introduced it at Athens, the statement of Plutarch (*Sol.* 24), that Solon excepted oil when he prohibited export of Attic produce, postulates a much earlier date for the beginning of the industry. We shall, however, no doubt rightly believe that the wise measures of Peisistratus encouraged and extended the cultivation of the olive in Attica. Attica was possibly its earliest home in Greece, though not, as the tradition in Herodotus v. 82 implies, the earliest in the world. When it became identified with the goddess Athena is equally open to question, but the legends were probably in consequence of the olive becoming a source of wealth in Attica. The epithet *ἱερά*, applied to the olive in the Odyssey, may perhaps imply that it was becoming known as a benefactor, but there is nowhere in Homer a connexion of the tree with Athene. (On the subject, however, of the myths connected with the olive, see Bötticher, *Baumcultus der Athen.* pp. 30, 107.) That the Greek colonists brought the cultivation of the olive to Magna Graecia and Massilia, and that it spread thence over Italy and Provence, is probable: we have mention in Amphis (4th cent. B.C.) of the oil of Thurii as famous. Pliny (*H. N.* xv. § 1) cites the authority of Fenestella for the tradition that there was no olive-tree in Italy until the time of Tarquinius Priscus, which may very well mean that it came in with the Greek colonists about the year 600, and was introduced into Latium from the Campanian Greeks in the time of the Tarquins. (See Buchholz, *Homerische Realien*, ii. § 19; and especially Hehn, *Kulturpflanzen*, pp. 88–104.)

Moriae (*μόριαι ἐλαῖαι* or *μορίαι*). Besides the *ἴδιαι ἐλαῖαι*, which were private property, there were other olives, growing both on public and private lands, which were the property of the state. From these came the oil which was used for prizes in special jars (Phot. *s. v.*; Panathenaea). They were called *μορίαι* from the tradition that they had been propagated (*μεμορημέναι*) from the sacred olive of Athene in the Acropolis: they thus acquired a sacred character, and were placed under the control of the Areiopagus, whence monthly inspectors (*ἐπιμεληταί*) and annual commissioners (*γνώμονες*) were sent to visit them. Anyone who destroyed a moria was punishable with banishment and confiscation. The moria, or stump of one which had been cut, was guarded by a fence (*σηκός*), which word sometimes includes the tree itself or the stump, as well as the fence (Lys. περὶ σηκοῦ, *Or.* 7; Jebb, *Attic Orators*, i. 289 f. and note on Soph. *O. C.* 701).

Varieties.—The *Olea Europaea* is the only species of the natural family of *Oleaceae* which yields the highly valued olive oil, but many varieties are produced by different modes of culture, and by peculiarities of soil and climate. Columella enumerates ten, and this number may be considerably increased from the works of other ancient writers. The following seem to have been the most important:—1. *Pausia* s. *Posea*; 2. *Regia*; 3. *Orchis* s. *Orchitis* s. *Orchita* s. *Orchas*; 4. *Radius*; 5. *Licinia* s. *Liciniana*; 6. *Sergia* s. *Sergiana*. Of these the berry of the *Pausia*, according to Columella, was the most pleasant in flavour (*jucundissima*), but only while it is green, for "vetustate corrumpitur:" hence perhaps the apparent contradiction in Virgil, "amara Pausia bacca"; that of the *Regia* was the finest; while both of these, together with the *Orchis* and the *Radius*, and in general all the larger varieties, were better suited for eating than for oil. The *Licinia*, on the other hand, in the Venafrum district, yielded the finest oil; the *Sergia*, the chief olive of the Sabine district, the greatest quantity. (Cat. *R. R.* 7; Varr. *R. R.* i. 24; Columell. v. 8, *de Arbor.* 17; Plin. *H. N.* xv. §§ 1–20.)

Soil and Climate.—The soil considered most congenial was a rich tenacious clay, or a mixture of clay and sand, a gravelly subsoil being essential in either case to carry off the water. Deep fat mould was found to be not unsuitable, but any land which retained moisture was avoided, and also light, stony ground; for, although the trees did not die in the latter, they never became vigorous. Here again, however, Columella and Virgil are at variance; for while the former observes, "inimicus est ager sabulo macer et nuda glarea," and Columella, followed by Palladius, speaks of "creta figuli quam argillam vocant" as unsuitable, the poet declares:

> "Difficiles primum terrae collesque maligni,
> Tenuis ubi argilla et dumosis calculus arvis,
> Palladia gaudent silva vivacis olivae."
> (*Georg.* ii. 179.)

They may, however, be speaking of different varieties, since Cato (approved by Varro, i. 24) says that "ager crassus et calidus" suits most olives, but the *Liciniana* may be planted in ground which is "frigidior et macrior."

The olive is very impatient of frost, and scarcely any of the varieties known to the ancients would flourish in very hot or very cold situations. In hot localities, it was expedient to form the plantations on the side of a hill facing the north, in cold localities upon a southern slope. The *Sergia* liked a colder exposure than most olives. Neither a very lofty nor a very low position was appropriate, but gentle rolling eminences, such as characterised the country of the Sabines in Italy and the district of Baetica in Spain. (Strabo, iii. p. 144.) Under ordinary circumstances, a western exposure lying well open to the sun was preferred. It is asserted by several classical authors that the olive will not live, or at least not prove fruitful, at a distance from the sea-coast greater than from thirty to fifty miles, and there is no doubt that the shores of the Mediterranean best suit it, but the shores of the Lago di Garda must be mentioned as an exception to the rule. If the olives of Italy held the first place, and especially those of Venafrum, Baetica and Istria came next. The partiality of Martial (xii. 63) alters the order:

> "Uncto Corduba laetior Venafro
> Histra nec minus absoluta testa."

(Cat. *R. R.* 6; Varr. i. 24; Columella, v. 8; Plin. *H. N.* xvii. § 30; Pallad. iii. 18; Theophr. *de C. P.* ii. 5; Geopon. ix. 4.)

Propagation and Culture.—Previous to the formation of an olive-yard (*oletum*, *olivetum*) it was necessary to lay out a nursery (*seminarium*) for the reception of the young plants. A piece of ground was selected for this purpose, freely exposed to the sun and air, and in which the soil was a rich black mould. It was the practice to trench (*pastinare*) this to the depth of three feet, and then to leave it to crumble down under the influence of the atmosphere.

The propagation of the olive was effected in various ways.

1. The method generally adopted was to fix upon the most productive trees, and to select from these long, young, healthy branches (*ramos novellos*), of such a thickness as to be easily embraced by the hand. The branches immediately after being detached from the parent stem, were sawed into lengths of a foot and a half each, great care being taken not to injure the bark; these segments, which were called *taleae* or *clavolae* or *trunci*, were then tapered to a point

at each end with a knife, the two extremities were smeared with dung and ashes, they were buried upright in the ground, so that the tops were a few fingers' breadth below the surface, and each *talea* was placed as nearly as possible in the same position, both vertically and laterally, as the branch had occupied upon the tree. During the first year, the ground was frequently loosened by the sarculum; when the young roots (*radiculae seminum*) had taken a firm hold, heavy hand-rakes (*rastra*) were employed for the same purpose, and in the heat of summer water was regularly supplied. For two years no pruning was resorted to, but in the third year the whole of the shoots (*ramuli*), with the exception of two, were lopped off; in the fourth year, the weaker of the remaining two was detached, and in the fifth year the young trees (*arbusculae*) were fit for being transplanted (*habiles translationi*). This latter operation was best performed in autumn where the ground to which they were conveyed was dry; but if it was moist and rich, in spring, a short time before the buds were formed. In the field which they were to occupy permanently, pits (*scrobes*) four feet every way were prepared, if practicable, a year beforehand, so that the earth might be thoroughly pulverised; small stones and gravel mixed with mould were placed at the bottom to the depth of a few inches, and some grains of barley were scattered over all. The young tree was lifted with as large a ball of earth as possible attached to the roots, placed in the pit surrounded with a little manure, and planted so as to occupy precisely the same position, in relation to the cardinal points, as in the nursery. In rich corn land, the space left between each row was at least sixty feet, and between each tree in the row forty feet, in order that the branches and roots might have full space to spread; but in poorer soil twenty-five feet each way were considered sufficient. The rows were arranged so as to run from east to west, in order that the cool breezes might sweep freely down the open spaces in summer. After the trees had become firmly fixed, and had been pruned up into a proper shape,—that is, into a single stem kept without branches to the height of the tallest ox,—the labour attending upon an olive-yard was comparatively trifling. Evey year, the soil around the roots was loosened with hoes (*bidens*), or with the plough, the roots themselves laid bare (*ablaqueare*, *ablaqueatio*), the young suckers cut away, and the lichens scraped from the bark; every third year, in autumn, manure was thrown in, and *amurca* poured in at the roots was said to be useful for destroying worms; every eighth year the trees were pruned. The system of culture here indicated was followed so generally that it had become embodied in a proverb, "Veteris proverbii meminisse convenit, eum qui aret olivetum, rogare fructum; qui stercoret, exorare; qui caedat, cogere" (Columell. v. 9, § 15). Besides this, the whole surface of the ground was regularly ploughed at the usual seasons, and cropped in alternate years, the manure applied for these crops being altogether independent of that supplied to the trees specially. Moreover, since olives bore fruit, in abundance at least, only once in two years, matters were so arranged that the land should yield a crop in those years when the trees were unproductive.

2. A second method of propagation was to cut the roots of wild olives into small pieces in such a manner that each should contain an eye or rudiment of a lateral fibre (*radicum oculis silvestrium olearum hortulos excolere*), and these pieces were treated precisely in the same manner as the *taleae* described above.

3. A third method is indicated by Virgil in the lines—

> "Quin et caudicibus sectis, mirabile dictu,
> Truditur e sicco radix oleagina ligno,"
> (*Georg.* ii. 30,)

and is still pursued in some parts of Italy, where, as we are told, "an old tree is hewn down and the stock cut into pieces of nearly the size and shape of a mushroom, and which from that circumstance are called *novoli*; care at the same time is taken that a small portion of bark shall belong to each novolo. These, after having been dipped in manure, are put into the earth, soon throw up shoots, are transplanted at the end of one year, and in three years are fit to form an olive-yard." (Cf. Theophr. *Hist. Plant.* ii. 2.)

Grafting or budding (*inserere*, *insitio*, *oculos inserere*) were also resorted to for the purpose of introducing fine varieties or of rendering barren trees fruitful. (Cat. *R. R.* 40, 42, 43, 45; Varr. *R. R.* i. 40; Columell. v. 9, *de Arbor.* 17; Plin. *H. N.* xvii. §§ 125–140; Pallad. iii. 8, 18, x. 1, xi. 8; Geopon. ix. 5, 6, &c.; Blunt's *Vestiges of Ancient Manners, &c., in Italy*, p. 215.)

OLIVE-GATHERING (*Oleitas*, *Olivitas*).—The olive usually comes to maturity, in Italy, about the middle or latter end of December; but, according to the views of the proprietors, it was gathered in various stages of its progress, either while yet green (*alba*), or when changing colour (*varia*), or when fully ripe (*nigra*), but it was considered highly desirable that it should never be allowed to remain so long as to fall of its own accord. The fruit was picked as far as possible with the bare hand, but such as could not be reached from the ground or by the aid of ladders was beaten down with long reeds, which were preferred to sticks as less likely to injure the bark of the branches and the young bearers, a want of attention to this precaution on the part of the gatherers (*leguli*) being in the opinion of Varro the cause why olive-trees so seldom yielded a full crop for two years consecutively. (Varr. *R. R.* i. 55; Plin. *H. N.* xv. § 11; Geopon. ix. 17.)

DIFFERENT USES.—The chronological order in the uses of the olive appears to have been—

1. For anointing (from the Homeric age onwards; see the beginning of this article), and in this use frequently as the vehicle of perfumes.

2. For burning in lamps (post-Homeric).

3. For food: (*a*) as a fruit, either fresh or preserved—the eating of the fresh fruit is implied in *Od.* xi. 588; (*b*) oil as food or for cooking purposes seems to have been absolutely unknown in Homeric times, though afterwards a staff of life in Greece and Italy. On this subject see Hehn (*op. cit.* p. 125), who thinks that wine and oil have long been slowly and gradually spreading from South to North; that, though the use of the vine and olive belonged to the civilised parts of the Roman empire, it was

not always so, but that oil had in Italy and Greece supplanted animal fat alike for unguents and for food, just as still (in his opinion) the uses of wine and oil are gradually extending northwards into the countries of beer and butter: and it may be remarked here that butter, though used by the Greeks only for medical purposes, was known not only as *βούτυρον*, but as *ἔλαιον ἐκ γάλακτος*. (Athen. x. p. 447 d; Blümner, *Privatalt.* 228; BUTYRUM.)

PRESERVING OLIVES. (*Condere oleas, olivarum conditura, conditio.*)

Olives might be preserved in various ways, either when unripe (*albae, acerbae*), or ripe (*nigrae*), or half-ripe (*variae, fuscae*).

Green olives, the *Pausia* being used principally for this purpose, were preserved in strong brine (*muria*), according to the modern practice, or they were beaten together into a mass, steeped in water which was frequently changed, then pressed and thrown with salt into a jar of vinegar, to which various spices or flavouring condiments were added, especially the seeds of the Pistachia Lentiscus, or Gum Mastich tree, and fennel. Sometimes, instead of vinegar, inspissated must (*sapa, defrutum*), or sweet wine (*passum*) or honey, were employed, in which case the olives were preserved sweet, and sometimes salt pickle, vinegar, must and oil, seem to have been all mixed together.

Half-ripe olives (and here again the *Pausia* was the favourite) were picked with their stalks and covered over in a jar with the best oil. In this manner they retained the flavour of the fresh fruit for more than a year.

Ripe olives, especially the *orchitis*, were sprinkled with salt, and left untouched for five days; the salt was then shaken off, and they were dried in the sun. Or they were preserved sweet in defrutum without salt.

The peculiar preparation called *Epityrum* was made by taking olives in any of the three stages, extracting the stones, chopping up the pulp and throwing the fragments into a jar with oil, vinegar, coriander seeds, cumin, fennel, rue and mint, the quantity of oil being sufficient to cover up the compound and exclude the air. In fact, it was an olive salad, and, as the name imports, eaten with cheese. (Cat. *R. R.* 118, 119; Varr. *R. R.* i. 60; Columell. xii. 49; Geopon. ix. 3, 32.)

OIL-MAKING (*Oleum conficere*).—The fruit of the olive-tree consists of two parts, the pulpy pericarp (*caro*) and the stone (*nucleus*).

The *caro* or pulp yielded two fluids: one of these of a watery consistence, dark in colour, bitter to the taste, flowed from the olive upon very slight pressure; it was called *ἀμόργη* by the Greeks, *Amurca* by the Latins, and was extensively used as a manure and for a great number of purposes connected with domestic economy. The other fluid which flowed from the pulp, when subjected to more forcible pressure, was the oil (*oleum, olivum*), mingled however to a certain extent with amurca and other impurities (*fraces, faeces*), and this was of different qualities, according to the state of the fruit and the amount of pressure. The finest oil was made from the fruit before it was fully ripe, and from this circumstance, or from its greenish colour, was termed *Oleum viride*, and by the Greeks *ὀμφάκινον*: the quantity given out was however small, and hence the remark of Cato, "Quam acerbissima olea oleum facies tam oleum optimum erit: domino de matura olea oleum fieri maxime expediet."

A distinction is made by Columella between the oil obtained from the fruit when green (*oleum acerbum s. aestivum*), when half ripe (*oleum viride*), and when fully ripe (*oleum maturum*); and while he considers the manufacture of the first as inexpedient, in consequence of the scanty produce, he strongly recommends the proprietor to make as much as possible of the second, because the quantity yielded was considerable, and the price so high, as almost to double his receipts.

Under ordinary circumstances, the ripe fruit when gathered was carefully cleaned, and conveyed in baskets to the farmhouse, where it was placed in heaps upon sloping wooden floors (*in tabulato*), in order that a portion of the *amurca* might flow out, and a slight fermentation took place (*ut ibi mediocriter fracescat*), which rendered them more tender and more productive, and exactly the same system is pursued for the same reason in modern times. The gatherings of each day (*coactura uniuscujusque diei*) were kept separate, and great care was taken to leave them in this state for a very limited period; for if the masses heated, the oil soon became rancid ("Olea lecta si nimium diu fuit in acervis, caldore fracescit, et oleum foetidum fit"). If, therefore, circumstances did not allow of the oil being made soon after the fruit was gathered, the olives were spread out and exposed to the air so as to check any tendency towards decomposition. It is the neglect of these rules and precautions which renders the oil now made in Spain so offensive, for there the olives are frequently allowed to remain in cellars for months before they are used. Although both ancient and modern experience are upon the whole in favour of a slight fermentation, Cato, whose great practical knowledge entitles him to respect, strongly recommends that it should be altogether dispensed with, and affirms that the oil would be both more abundant in quantity and superior in quality: "Quam citissime conficies maxime expediet."

The olives when considered to be in a proper state were placed in bags or flexible baskets (*fiscis*), and were then subjected to the action of a machine consisting partly of a bruising and partly of a squeezing apparatus, which was constructed in various ways, and designated by various names: *Trapetum, Mola olearia, Canalis et Solea, Torcular, Prelum, Tudicula.* [TRAPETUM.] The oil as it issued forth was received in a leaden pot (*cortina plumbea*), placed in the cistern (*lacus*) below the press. From the cortina it was ladled out by an assistant (*capulator*), with a large flat spoon (*concha*), first into one vat (*labrum fictile*), and then into another, thirty being placed in a row for this purpose. It was allowed to rest for a while in each, and the operation was repeated again and again (*oleum frequenter capiant*) until the amurca and all impurities had been completely removed. In cold weather when the oil remained in union with the amurca notwithstanding these transferences, the separation was effected by mixing a little parched salt with the combined fluids; but when the cold was very intense, dry carbonate of soda (*nitrum*) was found to answer better. The oil was finally poured into jars (*dolia olearia*), which had been previously thoroughly cleaned and seasoned, and glazed with wax or gum to prevent absorption, the lids (*opercula*) were carefully secured, and they were then delivered to the overseer (*custos*), by whom they were stored up in the vault reserved for their reception (*cella olearia*).

After a moderate force had been applied to the press, and a considerable quantity of oil had flowed forth, the bruised pulp (*sampsa*) was taken out of the bags, separated from the kernel, mixed with a little salt, replaced and subjected to the action of the press a second, and again a third time. The oil first obtained (*oleum primae pressurae*) was the finest; and in proportion as additional force was applied by the press-men (*factores*, *torcularii*), the quality became gradually worse ("longe melioris saporis quod minore vi preli quasi lixivium defluxerit"). Hence the product of each pressing was kept distinct, the marketable value of each being very different ("plurimum refert non miscere iterationes multoque minus tertiationem cum prima pressura"). The lowest quality of all (*oleum cibarium*) was made from olives which had been partially damaged by vermin, or which had fallen from the trees in bad weather into the mud, so that it became necessary to wash them in warm water before they could be used.

The quantity of fruit thrown at one time into the press varied from 120 to 160 modii, according to the capacity of the vessels: this quantity was termed *Factus*, the amount of oil obtained from one factus was called *Hostus*, but these words are not unfrequently confounded. (Cat. *R. R.* 7, 64, 65, 66; Varr. *R. R.* i. 24, 55; Columell. xii. 52; Plin. *H. N.* xv. § 23; Geopon. ix. 17; Blümner, *Technologie*, i. 348 ff.) [W. R.] [G. E. M.]

OLIGA'RCHIA (ὀλιγαρχία), *the government of a few*, is a term the application of which by writers on political science is less wide than its etymological signification might have warranted. (See Polyb. vi. 4; Arist. *Pol.* iv. 4, p. 1290, from whom we learn that some writers used Oligarchia as a generic name, including Aristocratia as one of its species.) It is shown elsewhere [ARISTOCRATIA] under what conditions the limitation of political power to a portion of the community was regarded as a proper and regular constitution (ὀρθὴ πολιτεία), whose guiding principle was the common good, not the private interest of those in power (Arist. *Pol.* iii. 6, p. 1279; iv. 2, p. 1289). The term *Oligarchia* was applied to that perversion (παρέκβασις) of an *Aristocratia* into which the latter passed when, owing to the rise of the *demus* [DEMOCRATIA] and the vanishing of those substantial grounds of pre-eminence which rendered an Aristocratia not unjust, the rule of the dominant portion of the community ceased to be the exponent of the general interests of the state, and became the ascendency of a faction, whose efforts were directed chiefly towards their own aggrandisement and the maintenance of their own power and privileges (Arist. *Eth. Nicom.* viii. 12; Polyb. vi. 8, § 4). The preservation of power under such circumstances of course depended chiefly upon the possession of superior wealth and the other appliances of wealth which were its concomitants. Thus it came to be regarded as essentially characteristic of an oligarchy, that the main distinction between the dominant faction and the subject portion of the community was the possession of greater wealth on the part of the former. (Arist. *Pol.* iv. 4, p. 1290 b, δῆμος μέν ἐστιν ὅταν οἱ ἐλεύθεροι κύριοι ὦσιν, ὀλιγαρχία δὲ ὅταν οἱ πλούσιοι. A little further on he says: ὀλιγαρχίαι δὲ ὅταν οἱ πλούσιοι καὶ εὐγενέστεροι, ὀλίγοι ὄντες, κύριοι τῆς ἀρχῆς ὦσιν. Comp. iv. 6, p. 1293; Plat. *de Rep.* viii. pp. 550 C, 553 A.) The case of the wealthy portion being also the more numerous would be a very rare exception. Their dominion, of course, would not be an oligarchy; but neither would it be a democracy (Arist. *Pol.* iv. 4, p. 1290). When an aristocracy passed in the natural development of society into an oligarchy, the oligarchs would, of course, be high-born as well as rich. But high birth was not an essential condition. It very commonly happened that the oligarchs were themselves only a section of the old nobility, having excluded the poorer members of their order from the possession of power.

Aristotle (*Pol.* iv. 5, p. 1292 b) distinguishes various species of oligarchy:—1. Where a certain large amount of property is the only requisite for being a member of the ruling class: 2. Where the property qualification is not large, but the members of the government themselves supply any vacancies that may occur in their ranks by electing others to fill them: 3. Where the son succeeds to the power of his father: 4. Where, besides this being the case, the rulers govern according to no fixed laws, but arbitrarily. (Comp. Plat. *Polit.* pp. 301, 302.) The first kind, where privileges were distributed according to certain gradations of property, especially when the τίμημα was not extravagantly high, so that a considerable number shared political power, though only a few of them might be eligible to the highest offices, was sometimes called τιμοκρατία (Arist. *Eth. Nic.* viii. 12). It approximates closely to the πολιτεία, and hence Aristotle (*Pol.* iv. 11) calls it ὀλιγαρχία πολιτική, that is, an oligarchy so moderate as to be nearly a πολιτεία: where more extensive privileges were given to large property, it was called πλουτοκρατία (Xen. *Mem.* iv. 6, 22): Plato, in *Rep.* viii. p. 547 D, uses τιμοκρατία in a different sense.

To the conditions of 3 and 4, where the rule of the few is both arbitrary and hereditary, or, in other words, where arbitrary power has come into the possession of a few ruling families, the name δυναστεία is given (Arist. *Pol.* iv. 5, 2, p. 1292 b): this is described as the extreme oligarchy and corresponding (ἀντίστροφος) to the extreme democracy [OCHLOCRATIA]. This δυναστεία is described as existing in Boeotia at the time of the Persian invasion, and in Thessaly (Thuc. iii. 62; iv. 78) and sometimes in Crete (Arist. *Pol.* ii. 10, p. 1272 b), and the danger of it is given as one cause for ostracism (Arist. *Pol.* v. 3, p. 1302).

The term *Aristocratia* is not unfrequently applied to what the more careful distinctions of the writers on political science would term *Oligarchia*. (Comp. Thuc. iii. 82; Xen. *Hellen.* v. 2, § 7; Aristoph. *Av.* 125.)

Besides the authorities quoted above, the reader may consult Wachsmuth, *Hellenische Alterthumskunde*, §§ 36, 44, 47, 63, 64; Schömann, *Antiq. of Greece*, p. 98; Hermann, *Lehrbuch der griech. Staatsalterthümer*, §§ 58–61; Thirlwall, *Hist. of Greece*, vol. i. ch. 10. [C. P. M.] [G. E. M.]

OLLA, ant. **AULA** (Plaut. *Aulul.*, passim), a word used much in the same sense as our word "jar" or "pot," and corresponding most nearly perhaps to the Greek *χύτρος*, *χύτρα*: a vase which might be of almost any shape, but which, with a view to capacity, would no doubt usually be of a somewhat bellying form.

The *olla* was made of various materials, according to the purpose for which it was intended: thus of *ollae* which were destined for cooking purposes, the material would be either bronze (*aenum*, Ovid, *Met.* vii. 318) or different kinds of stone which were turned upon the lathe. At Pleurs, a village near Chiavenna to the north of the Lake of Como, the manufacture of vessels from the potstone in a neighbouring mountain is still carried on, and has probably existed there from the time of Pliny, who makes express mention of it (*H. N.* xxxvi. §§ 22, 44). Some of these vessels are nearly two feet in diameter, and, being adapted to bear the fire, are used for cooking. ("Oculis observare ollam pultis, ne aduratur," Varro, ap. Non. Marcell. p. 543, ed. Merceri; Festus, s. v. *Aulas.*)

The most ordinary material was earthenware (*testacea*); and in this material the *olla* would be adapted to various uses, principally no doubt for holding solids or liquids and keeping them in store. Thus we read of an *olla* filled with *denarii* (Cic. *Fam.* ix. 18); with resin (Martial, *Ep.* 12, 32); and with oil (Plin. *H. N.* xxxvii. § 10). Fruit was in this manner preserved (Plin. *H. N.* xv. § 22); and from this circumstance the adjective *ollaris* came to mean "preserved" (*uvae ollares*, Colum. xii. 43; Martial, vii. 20).

The Romans as well as the Greeks used pots for holding and for growing flowers (Cato, *de Re R.* 51: see Vas): those which were intended for growing seeds would have the bottom perforated (Plin. *H. N.* xvii. § 10, where a seed of pine is sown in such a perforated *olla*).

In certain sacrificial rites, hand-made *ollae* continued to be used down to a late period, in memory of the primitive construction of those of the old cult. They remained in an unchanged form, as is shown by the examples which were found in the sanctuary of the Fratres Arvales, which, though of a quite late epoch, are still of rough workmanship and hand-made. (See *Giornale Arcadico*, lviii. Giulio, 1868, tav. iv. Nos. 1–18.)

Another very remarkable use of these vessels of earthenware among the Greeks was to put infants into them to be exposed (Aristoph. *Ran.* 1188, Schol. *ad loc.*; Moeris, s. v. *ἐγχυτρισμός*), or to be carried anywhere (Aristoph. *Thesm.* 512–516; Schol. *ad loc.*). Hence the exposure of children was called *ἐγχυτρίζειν* (Hesych. *s. v.*), and the miserable women who practised it *ἐγχυτριστρίαι* (Suidas, *s. v.*).

The term is also used to indicate both the urn (*urna*) in which the ashes of the dead were put, and also the niche in the tomb or *columbarium* in which the urn was placed. After some days, when the ashes had been dried in the sun, the nearest relatives of the deceased gathered them in an urn of clay, glass, marble, alabaster, other kinds of stone, bronze, silver, or gold: these were called *ollae*. In the large public cemeteries in Rome a poor slave, or a person of limited means who could not afford a special grave, had to buy a niche called *olla* for his urn: these *ollae* were themselves objects of presentation which the poorer classes made amongst one another, as the inscriptions show. Below the single *olla* was placed in this case a small inscription which contained the name of him whose bones lay in the urn, and which would be drawn up on the occasion of the gift and as a record of the gift (see *C. I. L.* i. 1047, &c.). A sepulchre which held several of these niches is called a *schola ollarum* (Reines. class. 16, n. 53).

In the year 1732 were found in a vineyard on the right of the Appian Way an extraordinary number of *ollae* of terracotta in a sepulchral chamber. They were all more or less of the same size, capacity, and form. Some good specimens of cinerary *ollae* are preserved in the British Museum in a small apartment in the basement, so constructed as to exhibit accurately the manner of arranging them.

Olla.

Sometimes the *ollae* were buried up to the neck within the niches, so that the only part which showed was the tile or lid (*operculum*, *ἐπίθημα*), on which the name of the person whose ashes were contained inside was engraved (see Muratori, 1756, 7, *ollae quae sunt operculis et titulis marmoreis*). This lid generally corresponded in the material and the style of ornament with the *olla* itself (Herod. i. 48; Col. *de Re Rust.* xii. 48). Sometimes it was so arranged as to be sliding or movable, and might be depressed or raised so as to cover exactly the contents of the vessel it belonged to, like that now used for snuff and tobacco jars; this form of lid was called *operculum ambulatorium.* The Romans sometimes covered their beehives with lids of this kind, in order that the size of the honeycomb and hive might be exactly proportioned to each other (Plin. *H. N.* xxi. § 47; Rich, *s. v.*). From Olla we have the word *Ollaria*, another name for the niches in the *columbarium* in which the cinerary urns (*ollae*) were placed. [C. S.]

OLY'MPIA (ὀλύμπια), usually called the Olympic games, the greatest of the national festivals of the Greeks. It was celebrated at Olympia in Elis, the name given to a small plain to the west of Pisa, which was bounded on the north and north-east by the mountains Cronion and Olympus, on the south by the river Alpheus, and on the west by the Cladeus, which flows into the Alpheus. Olympia does not appear to have been a town, but rather a collection of temples and public buildings, a full description of which does not come within the plan of this work. The whole district within the abovementioned bounds was holy ground (τέμενος), sacred to Olympian Zeus, within which, on its northern side, was a quadrangular enclosure, of peculiar sanctity, called the Altis. The latter was in historic times adorned with the most exquisite work that Hellenic art could produce in sculpture, painting, and architecture. Within it stood the temples of Olympian Zeus (Ὀλυμπιεῖον), of Hêra (Ἡραῖον), and the treasure-houses of many Hellenic states; while in the centre rose the high altar of Zeus, in sacrifice whereon he revealed his will to his chosen priests, the Iamidae (Pind. *Olymp.* vi.). Many relics of ancient art have been recently discovered in the Altis and the surrounding space, and much light has been thrown on the topography of Olympia, by excavations conducted according to the agreement made in 1874 between the Greek and German governments. For a minute, full, and highly interesting account of the results thus obtained, the reader may be referred to the work of Adolf Boetticher, *Olympia, das Fest und seine Stätte*, 2nd edit., Berlin, 1886.

The origin of the Olympic games is buried in obscurity. The legends of the Elean priests attributed the institution of the festival to the Idaean Heracles, and referred it to the time of Cronos. According to their account, Rhea committed her new-born Zeus to the Idaean Dactyli, also called Curetes, of whom five brothers, Heracles, Paeonaeus, Epimedes, Iasius, and Idas, came from Ida in Crete, to Olympia, where a temple had been erected to Cronos by the men of the golden age; and Heracles, the eldest, conquered his brothers in a foot-race, and was crowned with the wild olive-tree. Heracles hereupon established a contest, which was to be celebrated every five years, because he and his brothers were five in number (Paus. v. 7, § 4). Fifty years after Deucalion's flood they said that Clymenus, the son of Cardys, a descendant of the Idaean Heracles, came from Crete, and celebrated the festival; but that Endymion, the son of Aethlius, deprived Clymenus of the sovereignty, and offered the kingdom as a prize to his sons in the foot-race; that a generation after Endymion the festival was celebrated by Pelops to the honour of the Olympian Zeus; that when the sons of Pelops were scattered through Peloponnesus, Amythaon, the son of Cretheus and a relation of Endymion, celebrated it; that to him succeeded Pelias and Neleus in conjunction, then Augeas, and at last Heracles, the son of Amphitryon, after the taking of Elis. Afterwards Oxylus is mentioned as presiding over the games, and then they are said to have been discontinued till their revival by Iphitus. (Paus. v. 8, § 1, 2.) Most ancient writers, however, attribute the institution of the games to Heracles, the son of Amphitryon (Apollod. ii. 7, § 2; Diod. iv. 14; compare Strabo, viii. p. 355), while others represent Atreus as their founder. (Vell. Pat. i. 8; Hermann, *Pol. Ant.* § 23, n. 10.) But of all the traditions respecting the origin of the Olympic games, far the most interesting to us is that which Pindar adopts. According to him (*Olymp.* xi. 24–77; iii. 14), they were founded by Herakles Amphitryoniades to commemorate his victory over the Moliones and Augeas. We translate freely a passage from the Eleventh Olympic ode:—"Thereupon did the valiant son of Zeus, gathering together in Pisa all his host and all the spoil of oxen which he drave, proceed to measure out a hallowed precinct (ζάθεον ἄλσος) consecrate to Zeus most mighty; and in the open plain with a fence of stakes he marked the Altis off, and appointed the space around it to be a place of rest, whereon the folk might take their evening meal; the while he honoured Alpheus' stream in union with the twelve sovereign gods. Then gave he to Kronos' Hill its name; for heretofore, as long as Oinomaos reigned, nameless it rose and wet with many a snowflake. And at this, the birth-rite of the festival, the Destinies, I ween, stood by, yea and Time, sole test of what is good and true, which as it onward sped did manifest in what wise the hero portioned out, and slew, and sacrificed, as first-fruits, the spoils which war had given him; in what wise too, in sooth, with this, the First Olympiad, and the victories thereat won, he ordained that henceforth, as each term of four years closed, the feast should be renewed." The poet goes on to give a list of the victors at this celebration of the games, and it is worth observing that his record differs entirely from that of Pausanias, both in the names of the victors and in the other particulars (Paus. v. 7, p. 392).

Strabo (viii. pp. 354, 355) rejects all these legends, and says that the festival was first instituted after the return of the Heraclidae to the Peloponnesus by the Aetolians, who united themselves with the Eleans. It is impossible to say what credit is to be given to the ancient traditions respecting the institution of the festival; but they appear to show that religious festivals had been celebrated at Olympia from the earliest times, and it is difficult to conceive that the Peloponnesians and the other Greeks would have attached such importance to this festival, unless Olympia had long been regarded as a hallowed site. The first historical fact connected with the Olympian games is their revival by Iphitus, king of Elis, who is said to have accomplished it with the assistance of Lycurgus, the Spartan lawgiver, and Cleosthenes of Pisa; and the names of Iphitus and Lycurgus were inscribed on a disc in commemoration of the event; which disc Pausanias saw in the temple of Hera at Olympia. (Paus. v. 4, § 4; v. 20, § 1; Plut. *Lyc.* 1, 23.) It would appear from this tradition, as Thirlwall (*Hist. of Greece*, ii. p. 386) has remarked, that Sparta concurred with the two states most interested in the establishment of the festival, and mainly contributed to procure the consent of the other Peloponnesians. The celebration of the festival may have been discontinued in consequence of the troubles consequent upon the Dorian invasion, and we are told that Iphitus was commanded by the Delphic oracle to revive it as a remedy for intestine commotions and for pestilence, with which Greece was then afflicted. Iphitus thereupon induced the Eleans to sacrifice to Heracles, whom they had formerly regarded as an enemy, and from this time the games were regularly celebrated. (Paus. *l. c.*) Different dates are assigned to Iphitus by ancient writers, some placing his revival of the Olympiad at B.C. 884, and others, as Callimachus, at B.C. 828. (Clinton, *Fast. Hell.* p. 409, t.) The interval of four years between two successive celebrations of the festival was called an Olympiad; but the Olympiads were not employed as a chronological era till the victory of Coroebus in the foot-race B.C. 776. [OLYMPIAS.]

The most important point in the renewal of the festival by Iphitus was the establishment of the *ἐκεχειρία* (in the Elean dialect *θέρμα* = *θεσμά*; see Müller, *Dor.* i. p. 252), or sacred armistice, the formula for proclaiming which was inscribed in a circle on the disc mentioned above. The proclamation was made by peace-heralds (*σπονδοφόροι*), first in Elis and afterwards in the other parts of Greece; it put a stop to all warfare for the month in which the games were celebrated, and which was called *ἱερομηνία*. The territory of Elis itself was considered especially sacred during its continuance, and no armed force could enter it without incurring the guilt of sacrilege. When the Spartans on one occasion sent forces against the fortress Phyrcum and Lepreum during the existence of the Olympic truce (*ἐν ταῖς Ὀλυμπιακαῖς σπονδαῖς*), they were fined by the Eleans, according to the Olympic law, 2000 minae, being two for each Hoplite. (Thucyd. v. 49.) The Eleans, however, pretended not only that their lands were inviolable during the existence of the truce, but that by the original agreement with the other states of Peloponnesus their lands were made sacred for ever, and were never to be attacked by any hostile force (Strabo, viii. p. 358); and they further stated that the first violation of their territory was made by Pheidon of Argos. But the Eleans themselves did not abstain from arms, and it is not probable that such a privilege would have existed without imposing on them the corresponding duty of refraining from attacking the territory of their neighbours. The later Greeks do not appear to have admitted this claim of the Eleans, as we find many cases in which their country was made the scene of war. (Xen. *Hell.* iii. 2, § 23, &c.; vii. 4, &c.)

The Olympic festival was probably confined at first to the Peloponnesians; but as its celebrity extended, the other Greeks took part in it, till at length it became a festival for the whole nation. No one was allowed to contend in the games but persons of pure Hellenic blood: barbarians might be spectators, but slaves were entirely excluded. All persons who had been branded by their own states with atimia, or had been guilty of any offence against the divine laws, were not permitted to contend (Lex *apud* Dem. *c. Aristocrat.* p. 631, § 37). When the Hellenic race had been extended by colonies to Asia, Africa, and other parts of Europe, persons contended in the games from very distant places; and in later times a greater number of conquerors came from the colonies than from the mother country. After the conquest of Greece by the Romans, the latter were allowed to take part in the games. The emperors Tiberius and Nero were both conquerors, and Pausanias (v. 20, § 4) speaks of a Roman senator who gained the victory. During the freedom of Greece, even Greeks were sometimes excluded, when they had been guilty of a crime which appeared to the Eleans to deserve this punishment. The horses of Hieron of Syracuse were excluded from the chariot-race through the influence of Themistocles, because he had not taken part with the other Greeks against the Persians. (Plut. *Them.* 25; Aelian, *V. H.* ix. 5.) All the Lacedaemonians were excluded in the 90th Olympiad, because they had not paid the fine for violating the Elean territory, as mentioned above (Thuc. v. 49, 50; Paus. iii. 8, § 2); and similar cases of exclusion are mentioned by the ancient writers.

No women were allowed to be present or even to cross the Alpheus during the celebration of the games under penalty of being hurled down from the Typaean rock. Only one instance is recorded of a woman having ventured to be present, and she, although detected, was pardoned in consideration of her father, brothers, and son having been victors in the games. (Paus. v. 6, § 5[*]; Ael. *V. H.* x. 1.) An exception was made to this law in favour of the priestess of Demeter Chamyne, who sat on an altar of white marble opposite to the Hellanodicae. (Paus. vi. 20, § 6; compare Suet. *Ner.* c. 12.) Women were, however, allowed to send chariots to the races; and the first woman whose horses won the prize was Cynisca, the daughter of Archidamus, and sister of Agesilaus. (Paus. iii. 8, § 1.) The number of spectators at the festival was very great; and these were drawn together not merely by the desire of seeing the games, but partly through the opportunity it afforded them of carrying on commercial transactions with persons from distant places (Vell. i. 8; *mercatus Olympiacus*, Justin, xiii. 5), as is the case with the Mohammedan festivals at Mecca and Medina. Many of the persons present were also deputies (*θεωροί*) sent to represent the various states of Greece;

---

[*] It would appear from another passage of Pausanias that *virgins* were allowed to be present, though *married* women were not (*παρθένους δὲ οὐκ εἴργουσι θεάσασθαι*, vi. 20, § 6); but this statement is opposed to all others on the subject, and the reading of the passage seems to be doubtful. (See Valckenaer, *ad* Theocr. *Adon.* pp. 196, 197.)

and we find that these embassies vied with one another in the number of their offerings and the splendour of their general appearance, in order to support the honour of their native cities. The most illustrious citizens of a state were frequently sent as *θεωροί*. (Thuc. vi. 16; [Andoc.] *c. Alc.* § 21.)

The Olympic festival was a Penteteris (*πεντετηρίς*), that is, according to the ancient mode of reckoning, a space of four years elapsed between each and the next succeeding festival, in the same way as there was only a space of two years in a *τριετηρίς*. According to the Scholiast on Pindar (*ad Ol.* iii. 35, Boeckh), the Olympic festival was celebrated at an interval sometimes of 49, sometimes of 50 months; in the former case in the month of Apollonius, in the latter in that of Parthenius. This statement has given rise to much difference of opinion from the time of J. Scaliger; but the explanation of Boeckh in his commentary on Pindar is the most satisfactory, that the festival was celebrated on the first full moon after the summer solstice, which sometimes fell in the month of Apollonius, and sometimes in Parthenius, both of which he considers to be the names of Elean or Olympian months: consequently the festival was usually celebrated in the Attic month of Hecatombaeon. It lasted, after all the contests had been introduced, five days, from the 11th to the 15th days of the month inclusive. (Schol. *ad* Pind. *Ol.* v. 6.) The fourth day of the festival was the 14th of the month, which was the day of the full moon, and which divided the month into two equal parts (*διχόμηνις μήνα*, Pind. *Ol.* iii. 19; Schol. *ad loc.*).

The festival was under the immediate superintendence of the Olympian Zeus, whose temple at Olympia, adorned with the statue of the god made by Phidias, was one of the most splendid works of Grecian art (Paus. v. 10, &c.). There were also temples and altars to most of the other gods. The festival itself may be divided into two parts, the games or contests (*ἀγὼν Ὀλυμπιακὸς, ἀέθλων ἅμιλλαι, κρίσις ἀέθλων, τεθμὸς ἀέθλων, νικαφορίαι*), and the festive rites (*ἑορτή*) connected with the sacrifices, with the processions and with the public banquets in honour of the conquerors. Thus Pausanias distinguishes between the two parts of the festival, when he speaks of *τὸν ἀγῶνα ἐν Ὀλυμπίᾳ πανήγυρίν τε Ὀλυμπιακήν* (v. 4, § 4). The conquerors in the games, and private individuals, as well as the theori or deputies from the various states, offered sacrifices to the different gods; but the chief sacrifices were offered by the Eleans in the name of the Elean state. The order in which the Eleans offered their sacrifices to the different gods is given in a passage of Pausanias (v. 14, § 5). There has been considerable dispute among modern writers, whether the sacrifices were offered by the Eleans and the Theori at the commencement or at the termination of the contests; our limits do not allow us to enter into the controversy, but it appears most probable that certain sacrifices were offered by the Eleans as introductory to the games, but that the majority were not offered till the conclusion, when the flesh of the victims was required for the public banquets given to the victors.

The contests consisted of various trials of strength and skill, which were increased in number from time to time. There were in all twenty-four contests, eighteen in which men took part and six in which boys engaged, though they were never all exhibited at one festival, since some were abolished almost immediately after their institution, and others after they had been in use only a short time. We subjoin a list of these from Pausanias (v. 8, § 2, 3; 9, § 1, 2: compare Plut. *Symp.* v. 2), with the date of the introduction of each, commencing from the Olympiad of Coroebus:—1. The foot-race (*δρόμος*), which was the only contest during the first 13 Olympiads. 2. The *δίαυλος*, or foot-race, in which the stadium was traversed twice, first introduced in Ol. 14. 3. The *δόλιχος*, a still longer foot-race than the *δίαυλος*, introduced in Ol. 15.* For a more particular account of the *δίαυλος* and *δόλιχος* see STADIUM. 4. Wrestling (*πάλη*) [LUCTA], and 5. The Pentathlum (*πένταθλον*), which consisted of five exercises [PENTATHLUM], both introduced in Ol. 18. 6. Boxing (*πυγμή*), introduced in Ol. 23. [PUGILATUS.] 7. The chariot-race with four full-grown horses (*ἵππων τελείων δρόμος, ἅρμα*), introduced in Ol. 25. 8. The Pancratium (*παγκράτιον*) [PANCRATIUM], and 9. The horse-race (*ἵππος κέλης*), both introduced in Ol. 33. 10 and 11. The foot-race and wrestling for boys, both introduced in Ol. 37. 12. The Pentathlum for boys, introduced in Ol. 38, but immediately afterwards abolished. 13. Boxing for boys, introduced in Ol. 41. 14. The foot-race, in which men ran with the equipments of heavy-armed soldiers (*τῶν ὁπλιτῶν δρόμος*), introduced in Ol. 65, on account of its training men for actual service in war. 15. The chariot-race with mules (*ἀπήνη*), introduced in Ol. 70; and 16. The horse-race with mares (*κάλπη*), described by Pausanias (v. 9, § 1, 2), introduced in Ol. 71, both of which were abolished in Ol. 84. 17. The chariot-race with two full-grown horses (*ἵππων τελείων συνωρίς*), introduced in Ol. 93. 18, 19. The contest of heralds (*κήρυκες*) and trumpeters (*σαλπιγκταί*), introduced in Ol. 96. (African. *ap.* Euseb. *Χρον.* I. *Ἑλλ. ὀλ.* p. 41; Paus. v. 22, § 1; compare Cic. *ad Fam.* v. 12.) 20. The chariot-race with four foals (*πώλων ἅρμασιν*), introduced in Ol. 99. 21. The chariot-race with two foals (*πώλων συνωρίς*), introduced in Ol. 128. 22. The horse-race with foals (*πῶλος κέλης*), introduced in Ol. 131. 23. The Pancratium for boys, introduced in Ol. 145. 24. There was also a horse-race (*ἵππος κέλης*) in which boys rode (Paus. vi. 2, § 4; 12, § 1; 13, § 6), but we do not know the time of its introduction. Of these contests, the greater number were in existence in the heroic age, but the following were introduced for the first time by the Eleans:—all the contests in which boys took part, the foot-race of Hoplites, the races in which foals were employed, the chariot-race in which mules were used, and the horse-race with mares (*κάλπη*).

---

* Some words appear to have dropped out of the passage of Pausanias. In every other case he mentions the name of the first conqueror in each new contest, but never the name of the conqueror in the same contest in the following Ol. In this passage, however, after giving the name of the first conqueror in the Diaulos, he adds, *τῇ δὲ ἑξῆς Ἄκανθος*. There can be little doubt that this must be the name of the conqueror in the Dolichos; which is also expressly stated by Africanus (*apud* Eus. *Χρον.* I. *Ἑλλ. ὀλ.* p. 39).

The contests of heralds and trumpeters were also probably introduced after the heroic age.

Pausanias (v. 9, § 3) says that up to the 77th Olympiad all the contests took place in one day; but as it was found impossible in that Olympiad to finish them all in so short a time, a new arrangement was made. The number of days in the whole festival, which were henceforth devoted to the games, and the order in which they were celebrated, has been a subject of much dispute among modern writers, and in many particulars can be only matter of conjecture. The following arrangement is proposed by Krause (*Olympia*, p. 106):—On the first day, the initiatory sacrifices were offered, and all the competitors classed and arranged by the judges. On the same day, the contest between the trumpeters took place; and to this succeeded on the same day and the next the contests of the boys, somewhat in the following order:—the Foot-Race, Wrestling, Boxing, the Pentathlum, the Pancratium, and, lastly, the Horse-Race. On the third day, which appears to have been the principal one, the contests of the men took place, somewhat in the following order:—the simple Foot-Race, the Diaulos, the Dolichos, Wrestling, Boxing, the Pancratium, and the Race of Hoplites. On the fourth day the Pentathlum, either before or after the Chariot and Horse Races, which were celebrated on this day. On the same day or on the fifth, the contests of the Heralds may have taken place. The fifth day appears to have been devoted to processions and sacrifices, and to the banquets given by the Eleans to the conquerors in the games.

The judges in the Olympic games, called Hellanodicae (Ἑλλανοδίκαι), were appointed by the Eleans, who had the regulation of the whole festival. It appears to have been originally under the superintendence of Pisa, in the neighbourhood of which Olympia was situated, and accordingly we find in the ancient legends the names of Oenomaus, Pelops, and Augeas as presidents of the games. But after the conquest of Peloponnesus by the Dorians on the return of the Heraclidae, the Aetolians, who had been of great assistance to the Heraclidae, settled in Elis, and from this time the Aetolian Eleans obtained the regulation of the festival, and appointed the presiding officers. (Strabo, viii. pp. 357, 358.) Pisa, however, did not quietly relinquish its claim to the superintendence of the festival, and it is not improbable that at first it had an equal share with the Eleans in its administration. The Eleans themselves only reckoned three festivals in which they had not had the presidency,—namely, the 8th, in which Pheidon and the Piseans obtained it; the 34th, which was celebrated under the superintendence of Pantaleon, king of Pisa; and the 104th, celebrated under the superintendence of the Piseans and Arcadians. These Olympiads the Eleans called ἀνολυμπιάδες, as celebrated contrary to law. (Paus. vi. 22, § 2; 4, § 2.)

The Hellanodicae were chosen by lot from the whole body of the Eleans. Pausanias (v. 9, § 4, 5) has given an account of their numbers at different periods; but the commencement of the passage is unfortunately corrupt. At first, he says, there were only two judges chosen from all the Eleans, but that in the 25th Ol. (75th Ol.?) nine Hellanodicae were appointed, three of whom had the superintendence of the horse-races, three of the Pentathlum, and three of the other contests. Two Olympiads after, a tenth judge was added. In the 103rd Ol. the number was increased to 12, as at that time there were 12 Elean Phylae, and a judge was chosen from each tribe; but as the Eleans afterwards lost part of their lands in war with the Arcadians, the number of Phylae was reduced to eight in the 104th Ol., and accordingly there were then only eight Hellanodicae. But in the 108th Ol. the number of Hellanodicae was increased to 10, and remained the same to the time of Pausanias (Paus. *l. c.*).

The Hellanodicae were instructed for ten months before the festival by certain of the Elean magistrates, called Νομοφύλακες, in a building devoted to the purpose near the market-place, which was called Ἑλλανοδικαιών. (Paus. vi. 24, § 3.) Their office probably only lasted for one festival. They had to see that all the laws relating to the games were observed by the competitors and others, to determine the prizes, and to give them to the conquerors. An appeal lay from their decision to the Elean senate. (Paus. vi. 3, § 3.) Their office was considered most honourable. They wore a purple robe (πορφυρίς), and had in the Stadium special seats appropriated to them. (Paus. vi. 20, §§ 5, 6, 7; Bekker, *Anecd.* p. 249, 4.) Under the direction of the Hellanodicae was a certain number of ἀλύται with an ἀλυτάρχης at their head, who formed a kind of police, and carried into execution the commands of the Hellanodicae. (Lucian, c. 40, vol. i. p. 738, Reitz; *Etym. M.* p. 72, 13.) There were also various other minor officers under the control of the Hellanodicae.

All free Greeks who had complied with the rules prescribed to candidates were allowed to contend in the games. The equestrian contests were necessarily confined to the wealthy; but the poorest citizens could contend in the athletic contests, of which Pausanias (vi. 10, § 1) mentions an example. This, however, was far from degrading the games in public opinion; and some of the noblest as well as meanest citizens of the state took part in these contests. The owners of the chariots and horses were not obliged to contend in person; and the wealthy vied with one another in the number and magnificence of the chariots and horses which they sent to the games. Alcibiades sent seven chariots to one festival, a greater number than had ever been entered by a private person (Thuc. vi. 16), and the Greek kings in Sicily, Macedon, and other parts of the Hellenic world contended with one another for the prize in the equestrian contests.

All persons who were about to contend had to prove to the Hellanodicae that they were freemen, of pure Hellenic blood, had not been branded with atimia, nor guilty of any sacrilegious act. They further had to prove that they had undergone the preparatory training (προγυμνάσματα) for ten months previously, and the truth of this they were obliged to swear to in the Βουλευτήριον at Olympia before the statue of Zeus Ὅρκιος. The fathers, brothers, and gymnastic teachers of the competitors, as well as the competitors themselves, had also to swear that they would be guilty of no crime (κακούργημα) in reference to the contests. (Paus. v. 24,

§ 2.) All competitors were obliged, thirty days previous to the festival, to undergo certain exercises in the Gymnasium at Elis, under the superintendence of the Hellanodicae. (Paus. vi. 26, § 1–3; 24, § 1.) The different contests, and the order in which they would follow one another, were written by the Hellanodicae upon a tablet (λεύκωμα) exposed to public view. (Compare Dio Cass. lxxix. 10.)

The competitors took their places by lot, and were of course differently arranged according to the different contests in which they were to be engaged. The herald then proclaimed the name and country of each competitor. (Compare Plato, *Leg.* viii. p. 833.) When they were all ready to begin the contest, the judges exhorted them to acquit themselves nobly, and then gave the signal to commence. Any one detected in bribing a competitor to give the victory to his antagonist was heavily fined; the practice appears to have been not uncommon from the many instances recorded by Pausanias (v. 21).

The only prize given to the conqueror was a garland of wild olive (κότινος), which according to the Elean legends was the prize originally instituted by the Idaean Heracles. (Paus. v. 7, § 4.) But according to Phlegon's account (Περὶ τῶν Ὀλυμπίων, p. 140), the olive crown was not given as a prize upon the revival of the games by Iphitus, and was first bestowed in the seventh Olympiad with the approbation of the oracle at Delphi. This garland was cut from a sacred olive-tree, called ἐλαία καλλιστέφανος, which grew in the sacred grove of Altis in Olympia, near the altars of Aphrodite and the Hours. (Paus. v. 15, § 3.) Heracles is said to have brought it from the country of the Hyperboreans, and to have planted it himself at the τέρμα of the hippodrome outside the Altis. (Pind. *Ol.* ii. 14; Müller, *Dor.* ii. 12, § 3.) A boy, both of whose parents were still alive (ἀμφιθαλὴς παῖς), cut it with a golden sickle (χρυσῷ δρεπάνῳ). The victor was originally crowned upon a tripod covered over with bronze (τρίπους ἐπίχαλκος), but afterwards, and in the time of Pausanias, upon a table made of ivory and gold. (Paus. v. 12, § 3; 20, § 1, 2.) Palm branches, the common tokens of victory on other occasions, were placed in their hands. The name of the victor, and that of his father and of his country, were then proclaimed by a herald before the representatives of assembled Greece. The festival ended with processions and sacrifices, and with a public banquet given by the Eleans to the conquerors in the Prytaneum. (Paus. v. 15, § 8.)

The most powerful states considered an Olympic victory gained by one of their citizens to confer honour upon the state to which he belonged; and a conqueror usually had immunities and privileges conferred upon him by the gratitude of his fellow-citizens. The Eleans allowed his statue to be placed in the Altis, which was adorned with numerous such statues erected by the conquerors or their families, or at the expense of the states of which they were citizens. On his return home, the victor entered the city in a triumphal procession, in which his praises were celebrated frequently in the loftiest strains of poetry. (Compare ATHLETAE, Vol. I. p. 239 *a*.)

Sometimes the victory was obtained without a contest, in which case it was said to be ἀκονιτί. This happened either when the antagonist, who was assigned, neglected to come or came too late, or when an Athletes had obtained such celebrity by former conquests or possessed such strength and skill that no one dared to oppose him. (Paus. vi. 7, § 2.) When one state conferred a crown upon another state, a proclamation to this effect was frequently made at the great national festivals of the Greeks (Demosth. *de Cor.* p. 265).

As persons from all parts of the Hellenic world were assembled together at the Olympic games, it was the best opportunity which the artist and the writer possessed of making their works known. In fact, it answered to some extent the same purpose as the press does in modern times. Before the invention of printing, the reading of an author's works to as large an assembly as could be obtained, was one of the easiest and surest modes of publishing them; and this was a favourite practice of the Greeks and Romans. Accordingly, we find many instances of literary works thus published at the Olympic festival. Herodotus is said to have read his history at this festival; but though there are some reasons for doubting the correctness of this statement, there are numerous other writers who thus published their works, as the sophist Hippias, Prodicus of Ceos, Anaximenes, the orator Lysias, Dio Chrysostom, &c. (Compare Lucian, *Herod.* c. 3, 4, vol. i. p. 834, Reitz.) It must be borne in mind that these recitations were not contests, and that they formed properly no part of the festival. In the same way painters and other artists exhibited their works at Olympia. (Lucian, *l. c.*)

The Olympic games continued to be celebrated with much splendour under the Roman emperors, by many of whom great privileges were awarded to the conquerors. [ATHLETAE, Vol. I. p. 241.] In the sixteenth year of the reign of Theodosius, A.D. 394 (Ol. 293), the Olympic festival was for ever abolished; but we have no account of the names of the victors from Ol. 249.

Our limits do not allow us to enter into the question of the influence of the Olympic games upon the national character; but the reader will find some useful remarks on this subject in Thirlwall's *Hist. of Greece*, vol. i. p. 390, and Grote's *Hist. of Greece*, iv. pp. 75 ff.

There were many ancient works on the subject of the Olympic games and the conquerors therein. One of the chief sources from which the writers obtained their materials must have been the registers of conquerors in the games which were diligently preserved by the Eleans. (Ἠλείων ἐς τοὺς Ὀλυμπιονίκας γράμματα, Paus. iii. 21, § 1, v. 21, § 5, vi. 2, § 1; τὰ Ἠλείων γράμματα ἀρχαῖα, v. 4, § 4.) One of the most ancient works on this subject was by the Elean Hippias, a contemporary of Plato, and was entitled ἀναγραφὴ Ὀλυμπιονικῶν (Plut. *Numa*, 1). Aristotle also appears to have written a work on the same subject (Diog. Laërt. v. 26). There was a work by Timaeus of Sicily, entitled Ὀλυμπιονῖκαι ἢ χρονικὰ πραξίδια, and another by Erastosthenes (born B.C. 275), also called Ὀλυμπιονῖκαι (Diog. Laërt. viii. 51). The Athenian Stesicleides is mentioned as the author of an ἀναγραφὴ τῶν ἀρχόντων καὶ Ὀλυμπιονικῶν (Diog. Laërt. ii. 56), and Pliny (*H. N.* viii. § 82) speaks of Scopas (?) as a writer of *Olympionicae*.

There were also many ancient works on the Greek festivals in general, in which the Olympic games were of course treated of. Thus the work of Dicaearchus Περὶ Ἀγώνων (Diog. Laërt. v. 47) contained a division entitled ὁ Ὀλυμπικὸς (Athen. xiv. p. 620 d).

One of the most important works on the Olympic games was by Phlegon of Tralles, who lived in the reign of Hadrian; it was entitled Περὶ τῶν Ὀλυμπίων or Ὀλυμπίων καὶ Χρονικῶν Συναγωγή, was comprised in 16 books, and extended from the first Olympiad to Ol. 229. We still possess two considerable fragments of it. The important work of Julius Africanus, Ἑλλήνων Ὀλυμπιάδες ἀπὸ τῆς πρώτης, &c., is preserved to us by Eusebius; it comes down to Ol. 249. Dexippus of Athens, in his χρονικὴ ἱστορία, carried down the Olympic conquerors to Ol. 262.

In modern works much useful information on the Olympic games is given in Corsini's *Dissert. Agonisticae*, and in Boeckh's and Dissen's editions of Pindar. See also Meier's article on the Olympic Games, and Rathgeber's articles on Olympia, Olympieion, and Olympischer Jupiter in Ersch and Gruber's *Encyclopädie;* Dissen, *Ueber die Anordnung der Olympischen Spiele*, in his *Kleine Schriften*, p. 185; Krause, *Olympia oder Darstellung der grossen Olympischen Spiele*, Wien, 1838; and Boetticher, *Olympia*, 1886.

In course of time festivals were established in several Greek states in imitation of the one at Olympia, to which the same name was given. Some of these are only known to us by inscriptions and coins; but others, as the Olympic festival at Antioch, obtained great celebrity. After these Olympic festivals had been established in several places, the great Olympic festival is sometimes designated in inscriptions by the addition of "in Pisa," ἐν Πείσῃ. (Compare Boeckh, *Inscr.* n. 247, pp. 361, 362; n. 1068, p. 564.) We subjoin from Krause an alphabetical list of these smaller Olympic festivals. They were celebrated at:—

Aegae in Macedonia. This festival was in existence in the time of Alexander the Great. (Arrian, *Anab.* i. 11.)

Alexandria. (Gruter, *Inscr.* p. cccxiv. n. 240.) In later times, the number of Alexandrian conquerors in the great Olympic games was greater than from any other state.

Anazarbus in Cilicia. This festival was not introduced till a late period. (Eckhel, *Doctr. Num.* iii. p. 44.)

Antioch in Syria. This festival was celebrated at Daphne, a small place 40 stadia from Antioch, where there was a large sacred grove watered by many fountains. The festival was originally called Daphnea, and was sacred to Apollo and Artemis (Strabo, xvi. p. 750; Athen. v. p. 194), but was called Olympia, after the inhabitants of Antioch had purchased from the Eleans, in A.D. 44, the privilege of celebrating Olympic games. It was not, however, regularly celebrated as an Olympic festival till the time of the Emperor Commodus. It commenced on the first day of the month Hyperberetaeus (October), with which the year of Antioch began. It was under the presidency of an Alytarches. The celebration of it was abolished by Justin, A.D. 521. The writings of Libanius, and of Chrysostom, the Christian Father, who lived many years at Antioch, gave various particulars respecting this festival.

Athens. There were two festivals of the name of Olympia celebrated at Athens, one of which was in existence in the time of Pindar (Pind. *Nem.* ii. 23, &c.; Schol. *ad loc.*), who celebrates the ancestors of the Athenian Timodemus as conquerors in it, and perhaps much earlier (Schol. *ad* Thuc. i. 126). It was celebrated to the honour of Zeus, in the spring between the great Dionysia and the Bendideia. (Boeckh, *Inscr.* pp. 53, 250–252.) The other Olympic festival at Athens was instituted by Hadrian A.D. 131; from which time a new Olympic era commenced. (Corsini, *Fast. Att.* vol. ii. pp. 105, 110, &c.; Spartian. *Hadr.* 13.) [OLYMPIAS.]

Attalia in Pamphylia. This festival is only known to us by coins. (Rathgeber, *l. c.* p. 326.)

Cyzicus. (Boeckh, *Inscr.* n. 2810.)

Cyrene. (Boeckh, *Explicat. Pind.* p. 328.)

Dium in Macedonia. These games were instituted by Archelaus, and lasted nine days, corresponding to the number of the nine Muses. They were celebrated with great splendour by Philip II. and Alexander the Great. (Diodor. xvii. 16; Dio Chrysost. vol. i. p. 73, Reiske; Suidas, *s. v.* Ἀναξανδρίδης.)

Ephesus. This festival appears by inscriptions, in which it is sometimes called Ἀδριανὰ Ὀλύμπια ἐν Ἐφέσῳ, to have been instituted by Hadrian. (Boeckh, *Inscr.* n. 2810; compare n. 2987, 3000.)

Elis. Besides the great Olympic games, there appear to have been smaller ones celebrated yearly. (*Anecdot. Gr.* ed. Siebenk. p. 95.)

Magnesia in Lydia. (Rathgeber, *l. c.* pp. 326, 327.)

Neapolis. (Corsini, *Diss. Agon.* iv. 14, p. 103.)

Nicaea in Bithynia. (Eustath. *ad* Dionys. Perieg. pp. 172, 173, in *Geogr. Min.* ed. Bernhardy.)

Nicopolis in Epeirus. Augustus, after the conquest of Antony, off Actium, founded Nicopolis, and instituted games to be celebrated every five years (ἀγὼν πεντετηρικός) in commemoration of his victory. These games are sometimes called Olympic, but more frequently bear the name of Actia. They were sacred to Apollo, and were under the care of the Lacedaemonians. (Strabo, vii. p. 325.) [ACTIA.]

Olympus in Thessaly, on the mountain of that name. (Schol. *ad* Apoll. Rhod. *Argonaut.* i. 599.)

Pergamos in Mysia. (Boeckh, *Inscr.* n. 2810; Mionnet, ii. 610, n. 626.)

Side in Pamphylia. (Rathgeber, p. 129.)

Smyrna. Pausanias (vi. 14, § 1) mentions an Agon of the Smyrnaeans, which Corsini (*Diss. Agon.* i. 12, p. 20) supposes to be an Olympic festival. The Marmor Oxoniense expressly mentions Olympia at Smyrna, and they also occur in inscriptions. (Gruter, *Inscr.* p. 314, 1; Boeckh, *Inscr. ad* n. 1720.)

Tarsus in Cilicia. This festival is only known to us by coins. (Krause, p. 228.)

Tegea in Arcadia. (Boeckh, *Inscr.* n. 1513, p. 700.)

Thessalonica in Macedonia. (Krause, p. 230.)

Thyatira in Lydia. (Rathgeber, p. 328.)

Tralles in Lydia. (Krause, p. 233.)

Tyrus in Phoenicia. (Rathgeber, p. 328.)

[W. S.] [J. I. B.]

OLYMPIAS (Ὀλυμπιάς), the most celebrated chronological era among the Greeks, was the period of four years which elapsed between any one and the next following celebration of the Olympic games. The Olympiads began to be reckoned from the victory of Coroebus in the foot-race, which happened in the year B.C. 776 (Paus. v. 8, § 3; viii. 26, § 3; Strab. viii. p. 355). Timaeus of Sicily, however, who flourished B.C. 264, was the first writer who regularly arranged events according to the conquerors in each Olympiad, with which he compared the years of the Attic archons, the Spartan ephors, and that of the Argive priestesses (Polyb. xii. 12, § 1). His practice of recording events by Olympiads was followed by Polybius, Diodorus Siculus, Dionysius of Halicarnassus, and sometimes by Pausanias, Aelian, Diogenes Laërtius, Arrian, &c. It is twice adopted by Thucydides (iii. 8, v. 49) and Xenophon (*Hell.* i. 2, § 1; ii. 3, § 1). The names of the conquerors in the foot-race only were used to designate the Olympiad, not the conquerors in the other contests. Thucydides (*ll. cc.*), however, designates two Olympiads by the name of the conquerors in the Pancratium; but this appears only to have been done on account of the celebrity of these victors, both of whom conquered twice in the Pancratium. Other writers, however, adhere so strictly to the practice of designating the Olympiad only by the conqueror in the foot-race, that even when the same person had obtained the prize in other contests as well as in the foot-race, they only mention the latter. Thus Diodorus (xi. 70) and Pausanias (iv. 24, § 2) only record the conquest of Xenophon of Corinth in the foot-race, although he had also conquered at the same festival in the Pentathlum.

The writers who make use of the eras of the Olympiads usually give the number of the Olympiad (the first corresponding to B.C. 776), and then the name of the conqueror in the foot-race. Some writers also speak of events as happening in the first, second, third, or fourth year, as the case may be, of a certain Olympiad; but others do not give the separate years of each Olympiad.

We subjoin for the use of the student a list of the Olympiads with the years of the Christian era corresponding to them from the beginning of the Olympiads to A.D. 301. To save space the separate years of each Olympiad, with the corresponding years B.C., are only given from the 47th to the 126th Olympiad, as this is the most important period of Grecian history; in the other Olympiads the first year only is given. In consulting the following table it must be borne in mind that the Olympic games were celebrated about midsummer [OLYMPIA], and that the Attic year commenced at about the same time. If, therefore, an event happened in the second half of the Attic year, the year B.C. must be reduced by 1. Thus Socrates was put to death in the 1st year of the 95th Olympiad, which corresponds in the following table to B.C. 400; but as his death happened in Thargelion, the 11th month of the Attic year, the year B.C. must be reduced by 1, which gives us B.C. 399, the true date of his death.

Many of the ancient writers did not consider history to begin till the Olympiad of Coroebus, and regarded as fabulous the events said to have occurred in preceding times. (Censorinus, *de Die Natal.* c. 21; African. *apud* Euseb. *Praep.* x. 10, p. 487 d; Clinton, *Fast. Hell.* vol. ii. Introd. p. ii.)

The old Olympiad era appears only to have been used by writers, and especially by historians. It does not seem to have been ever adopted by any state in public documents. It is never found on any coins, and scarcely ever on inscriptions. There are only two inscriptions published by Boeckh in which it appears to be used (*Corp. Inscr.* n. 2682, 2999). A new Olympiad era, however, came into use under the Roman emperors, which is found in inscriptions and was used in public documents. This era begins in Ol. 227. 3 (A.D. 131), in which year Hadrian dedicated the Olympieion at Athens; and accordingly we find Ol. 227. 3 spoken of as the first Olympiad, Ol. 228. 3 (A.D. 135) as the second Olympiad, &c. (Boeckh, *Corp. Inscr.* n. 342, 446, 1345).

(Krause, *Olympia*, p. 60, &c.; Wurm, *de Pond.*, &c., § 94, &c.) [W. S.]

ONYX. [SCALPTURA.]

OPA. [METOPA.]

OPA'LIA, a Roman festival in honour of Ops (or Opis), which was celebrated on the 14th day before the Kalends of January (Dec. 19), being the third day of the Saturnalia, which in popular usage as a time of holiday extended from the 17th to 23rd December. From the time of Augustus onwards the 17th belonged especially to Saturn, the 19th to Ops, the wife of Saturn. (Macrob. *Sat.* i. 12; Varr. *L. L.* vi. 22, ed. Müller; Festus, s. v. *Opalia.*) The worshippers of Ops paid their vows sitting, and touched the earth, of which she was the goddess (Macrob. *l. c.*), with which may be compared *Il.* ix. 565, Γαῖαν χερσὶν ἀλοία . . . πρόχνυ καθεζομένη: the method of addressing supplications alike to the Earth and to νέρτεροι θεοί. (See Preller, *Röm. Myth.* pp. 416, 417.) [L. S.] [G. E. M.]

OPERIS NOVI NUNTIATIO was a summary extra-judicial remedy provided by the edict against a person who was making an *opus novum*, by which is to be understood the building, altering, or demolishing of some structure attached to the soil (Dig. 39, 1, 1, 12); and its object was either the maintenance of a private right, the prevention of damage, or the protection of the public interest (Dig. *ib.* 1, 16). The right of making the nuntiatio belonged (1) to the owner of land, "qui jus aliquid prohibendi habet:" his right might be founded either on anticipated injury to his own property, on some statutory rule (*e.g.* those relating to the height of buildings), or on a contract or private disposition of his neighbour; (2) to the superficiarius, pledgee, emphyteuta, and bonâ-fide possessor of the land; (3) to any one else who is so endangered by the *opus novum* that he could demand "cautio damni infecti" (Dig. *ib.* 1, 17); and (4) to any full-grown citizen, if the opus is *in loco sacro*, *religioso*, or *publico* (Dig. *ib.* 3, 4). But a lessee, or a person who merely had a servitude over the threatened property, had no right of nuntiatio, and even the usufructuarius could make it only in the name and on behalf of the dominus (Dig. *ib.* 1, 20).

In form the nuntiatio was a notice, given on the spot (Dig. *ib.* 5, 4), to discontinue the opus: it could be made either personally or through an agent (though the latter would have to give the *cautio de rato*, Dig. *ib.* 5, 18), but must be in the presence of the person responsible for the work protested against, or of some subordinate of his from whom he could receive information of it. No application to or assistance from the praetor was requisite (Dig. *ib.* 1, 2), but it was essential that the notice should be given before the opus was completed: after completion it was of no effect (*ib.* 1, 1, "futura opera"), redress being then obtainable only by the interdict "Quod vi aut clam."

If the opus novum consisted in building on the complainant's land, or inserting or causing anything to project into his premises, it was better to apply at once to the praetor, or to prevent it *per manum;* that is (as it is explained) "jactu lapilli," which was a symbolical resort to force for self-protection (Dig. *ib.* 5, 10; 43, 24, 20, pr.).

The result of nuntiatio was that any continuation of the work was unlawful, so that the injured person, in that event, was entitled by the so-called "Interdictum de demoliendo" to be restored *in statum quo* (Dig. *ib.* 20, pr. and 4). It could be extinguished or cancelled in a variety of ways: *e.g.* by waiver on the part of the nuntians, unless made in the public interest (Dig. *ib.* 1, 10; 2, 14, 7, 14); by the death of the nuntians (*ib.* 8, 6), or by his parting with the land which entitled him to raise his voice against the opus; by the person answerable for it giving security that if judgment were delivered against its legality he would at his own cost restore things *in statum quo* (Dig. *ib.* 5, 17), and by the nuntians refusing such security when properly tendered. When the *cautio* was given, or unlawfully rejected by the nuntians, the party was entitled to an "Interdictum prohibitorium" for his protection in prosecuting the work (Dig. *ib.* 20, 9 *sqq.*). Finally, the person to whom notice was given could take legal proceedings (*extra ordinem*, Dig. *ib.* 1, 9) to obtain permission for carrying the work on (*remissio:* "operis novi nuntiationem remiserit," *Lex Gall. Cisalp.* x.), on the ground that the nuntiatio was illegal or had been waived, or that the public interest required its completion; but such *remissio* was not a final determination of the rights of the case, which could be attained only by a real action.

(Dig. 39, 1; 43, 25; Cod. 8, 11. Besides the account given of the law on the matter in the usual text-books on Roman Law, there are express treatises on the subject by Stölzel, Reinhard, Polis, Hesse, Burkhard, and others.) [J. B. M.]

OPI'MA SPO'LIA. [Spolia.]

OPINATO'RES were officers under the Roman emperors who were sent to demand arrears of the *annona militaris.* The regular collector was termed *exactor;* the opinator was an extraordinary official sent to coerce overdue supplies, and was for the army what the *compulsor* was for other tribute. The name is probably derived from *opinari* in the sense of *aestimare*, because they *assessed* what the due amounted to. (Cod. 12, tit. 38, s. 11; *Cod. Theod.* 7, tit. 4, s. 26; Symmach. *Ep.* ix. 49.) [W. S.] [G. E. M.]

OPISTHO'DOMUS. [Templum.]

OPISTHO'GRAPHI. [Liber.]

OPPIDUM, originally the stronghold, commonly overlooking the plain (*ob pedum*), which served as a refuge in times of danger, for the inhabitants of the surrounding district. (The derivation from *opus*, suggested by Mommsen, *H. R.* i. 39, E. T., is impossible, and has been abandoned by him in later editions.) Hence it did not differ essentially from *urbs.* But while the latter word came to be used especially of Rome, *oppidum* became the general name for country towns, including *municipia*, *praefecturae*, and *coloniae* [Colonia]. The term is also commonly used of the towns which possessed Latin rights (*oppida Latina*); for the organisation of these, cf. the Leges Salpensana et Malacitana in *C. I. L.* ii. pp. 253 ff. [A. S. W.]

OPSON (ὄψον: in Latin *obsonium* or *opsonium* corresponds to some extent, but not entirely: see below), by etymology the *non-farinaceous part of a meal* (that which was cooked), but by usage almost restricted in post-Homeric times to *fish.* It must be remarked that in the Homeric age fish does not seem to have been regarded as a proper article of food for those who could get anything else, even when they lived, as in Ithaca, close to the sea: this has been noticed by Plato, *Rep.* iii. p. 404 B, and Plutarch (*de Is. et Osir.* 7; cf. Athen. i. p. 9 d), and the same also is asserted of the old Italians (Ov. *Fast.* vi. 173). It cannot be said that fish was unknown as food, for we have fishermen (*Od.* xii. 251; xix. 113, where it is cheap, *gratuitous* food; xxii. 384: compare the gruesome simile in *Od.* x. 124); and Odysseus and his companions eat fish in Thrinacia; but that is only, as we are told, "under stress of gnawing hunger," when they were wind-bound and had eaten all their provisions. In *Il.* ix. 489, *Od.* iii. 480, &c., ὄψον is cooked meat: in *Il.* xi. 630 the word is used in a sense more like that of later times, of an onion prepared as a "relish" or seasoning, in or with wine. In later times, at any rate at Athens, it is easy to trace its acquired meaning. Those who could afford nothing better had bread in some shape or other as their food and their only staff of life, but all who had the means added something to eat with it, and this naturally took the form of something cooked, ὄψον properly so called: the term, however, became so far conventional that it was *possible* to use it for any dainty which helped to make the bread more palatable (and for which, in default of anything else, λιμὸς is proverbially used, Xen. *Cyr.* i. 5, 12); so Plato, *Rep.* ii. p. 372 C, in describing an imaginary vegetarian diet of a simple people, gives them "salt, olives, cheese, and onions" as ὄψον: but just below, when he returns to ordinary life, he uses ὄψα in the more usual sense of meat, or rather fish. What we should call "butcher's meat" played a comparatively small part in the Athenian diet; it was of course eaten (in early times chiefly when a sacrifice had been offered: Athen. v. p. 192 b; Juv. *Sat.* xi. 85); and birds and game of various kinds (especially thrushes and hares) appeared at the dinner table: still, however, Professor Mahaffy rightly notices (*Social Life in Greece*, p. 306) that "the Attic people ate little meat, and lived chiefly on fish and vegetables." Hence it was that ὄψον is used almost exclusively of fish, and the derivatives ὀψωνεῖν, &c. of buying fish, &c., so that in the words of Athenaeus (vii. p. 276 e; cf. Plut. *Symp.* iv. 2, p. 667 f.), πάντων τῶν προσοψημάτων ὄψων καλουμένων ἐξενίκησεν ὁ ἰχθὺς διὰ τὴν ἐξαίρετον ἐδωδὴν μόνος (*solely*) οὕτω καλεῖσθαι. The ὀψοφάγος is an epicure in fish (τὸν οὐ κρέας ἀλλὰ θάλασσαν τιμῶντα, *Anth. Pal.* i. 287; cf. Plut. *l. c.*): and in Hellenistic Greek ὀψάριον (like the modern Greek ψάρι) may be used as absolutely = ἰχθύς. (At Sparta, however, according to Athenaeus, iv. p. 141 b, the ὄψον was commonly boiled pork.) As regards the cost, one obol for a simple dinner of fish and vegetables, see Boeckh, *Staatshaus.* i.³ pp. 128, 141. As to the fish supply, the commonest were the ἀφύαι, caught off their own shores, which were so abundant that Athenaeus (vii. p. 285 b) says that, though a delicacy elsewhere, they were looked down upon at Athens as the ὄψον of the poor: Lake Copais produced the eels, regarded as the greatest of luxuries (Aristoph. *Acharn.* 880, &c.): otherwise fresh-water fish were despised (Athen. vii. p. 228 f). We may notice especially the great consumption of salt fish (τάριχος), whence ταρίχους ἀξιώτερον became a proverb. Of this supply the Euxine was the chief source (Athen. iii. p. 119 b): there were ταριχεῖαι (establishments for curing fish) at Byzantium (Dem. *Lacrit.* p. 993, § 32; Strab. vii. p. 310; cf. ταριχόπωλος Βόσπορος, Athen. iii. p. 116 b) and at various places at the mouths of rivers running into the Euxine, and as far as the Sea of Azov (Strab. xi. p. 493): abundance also came from Egypt, Sardinia, and Spain (Poll. vi. 48; cf. Herod. ii. 215; Boeckh, *Staatshaus.* i. 128). From these places the salt fish was sent to Athens in jars (κεράμια, Dem. *Lacrit.* p. 934, § 34, or ἀμφορῆς). The most useful fish for salting were various sorts of tunny; the ἀντάκαιος also was used, which seems to be a sturgeon. The roe was made into a sort of caviare in early times: it is stated by Gell (*Pomp.* i. 178) that a jar containing caviare was found at Pompeii: fish sauce or pickle was made principally from the σκόμβρος. A long list of the names of the favourite fish will be found in Athen. vi. p. 281 f., which need not be given here: and indeed translating most Greek and Latin names for fish, like Greek and Latin names for nearly all birds and flowers, is very hazardous guess-work. (For the fish-market at Athens, see AGORA; MACELLUM.)

As regards the Latin use of obsonium (or opsonium), it must be observed that among the Romans there was no such common abstention from butcher's meat as among the Athenians, and consequently no such limitation, in the ordinary use of the word, to one kind of food. In the adapters or translators of Greek comedy, we naturally find the word chiefly, though not exclusively, in the Greek sense (*e.g.* Ter. *And.* ii. 2, 23 and 32), and so in Plautus and Terence *obsonare* (or *obsonari*) is to go to market to buy fish: that, however, it was not exclusively so used, even in these writers, is clear from the *Aulularia* of Plautus, where there is much talk of *obsonium* and *obsonatores*, but in Act. ii. 8 the "macellum" has a choice of fish, veal, lamb, beef, and pork. In Horace, *Sat.* ii. 2, 41, *obsonium* probably refers to the fish which precedes, and in Juv. iv. 64 it certainly does, but we may conclude that in Latin the word could not be used by itself, apart from the context, to distinguish fish from provisions generally: in Mart. xiv. 217 the *obsonator* is clearly the slave sent to market for provisions of any kind required for dinner, which at Rome was certainly not by rule a fish dinner, and in this general sense we may understand *obsonator* where it occurs in inscriptions (*C. I. L.* vi. 6246, 8753). In Pliny, xxxii. 87 and xv. 82, where *obsonium* is used for *salt* and *figs*, we have the Greek idea of it as something added to give a seasoning to the bread, for which sense of sauce or "relish" *pulmentarium* is the correct Latin word, and is used to render the proverbs "hunger the best sauce," &c. in Latin, which the Greeks express by ὄψον: see also Cato, *R. R.* 58, which is wrongly cited sometimes as describing Roman "family" life. Cato speaks of the economies of the slaves (*familia*), and says that you should pickle for them, as the *addition* to their bread (*pulmentarium* = ὄψον), the wind-fallen olives, and then those which will not yield much oil, used very sparingly: if these too are all used up before the year goes round, then the slaves must have the dregs of fish-brine (*allex* or *allec*; *muria* being the clear fish-brine). (For the Roman fish supply, see PISCINA: for further discussion and authorities on the subject of ὄψον, see Becker-Göll, *Charikles*, ii. 316; Blümner, *Gr. Privatalt.* 223 ff.; Marquardt, *Privatleben*, 432 ff.) [G. E. M.]

OPTIMA'TES. [NOBILES.]

OPTIO. [EXERCITUS, Vol. I. p. 801 *b*.]

ORA'CULUM (μαντεῖον, χρηστήριον). In the vast and varied system of practical religion which prevailed in Greece, oracles took the foremost place. An oracle, in the sense in which the word is here used, is some special locality supposed to be chosen by a supernatural power (god, hero, or shade of the dead) as an abode from which he might give answers to his worshippers. (The answer itself is also known as an *oracle*, alike in Greek, Latin, and English.)

Difficult as it is to trace the exact steps by which the oracular system of Greece was formed, it is not difficult to see the general causes which produced it. The Greeks were, excepting the Hebrews, the most sincerely religious race of antiquity; but they differed from the Hebrews in this, that their imaginative powers were far more vivid, but their moral sense was less strong. Hence, while the deep connexion of religion and morality increases steadily in the Greek mind from Homer through Aeschylus and Pindar to Socrates, it is always overshadowed by a set of feelings and conceptions which had not a moral but a naturalistic origin. The early Pelasgian (to take the most ancient of the Greek races) would look with a mixture of trembling and inquiry upon the great features of nature which surrounded him, —the mountains, the rivers, the woods; and while he instinctively personified the powers inherent in these (even before they had well-defined names) and deprecated their anger, he would naturally think that their will was ascertainable through some external feature, motion or sound, especially through any that might be more than usually subtle and recondite. Places of impressive aspect would be to him centres of religious awe. The two most ancient and powerful of the Greek oracles, Dodona and Delphi, were unquestionably created by the operation of this feeling; and it will be well to begin with an account of these two, before approaching those of later origin and inferior importance.

The Oracle of Dodona in Epirus.—Here Zeus himself, the supreme god, was believed to give messages to men through the rustling of the leaves of a lofty oak. We must suppose something notable in the special tree; but the region round about Dodona, besides being mountainous, is said to be the most stormy in the whole of Europe (Mommsen, *Delphika*, p. 4), and would be calculated to excite the primitive feelings of the supernatural in a high degree.

We can trace the oracle of Dodona up to a time of extreme primitiveness, when, it is probable, no other oracle existed in Greece, and before any of the refinements of experimental divination had been systematised. It is first mentioned in one of the most touching passages in Homer, that in which Achilles, before sending out his friend Patroclus to the battle, prays for his safe return. The invocation runs as follows (Hom. *Il.* xvi. 233–235):—

> Ζεῦ ἄνα, Δωδωναῖε, Πελασγικέ, τηλόθι ναίων,
> Δωδώνης μεδέων δυσχειμέρου · ἀμφὶ δὲ Σελλοὶ
> σοὶ ναίουσ' ὑποφῆται ἀνιπτόποδες, χαμαιεῦναι ·

"O king Zeus, Dodonaean and Pelasgian, thou who dwellest afar off, ruler of Dodona the place of wintry storms; and round about thee the Selli thy interpreters dwell, they of unwashed feet, whose couch is on the bare ground . . . . ." Achilles, it is plain, addresses Zeus in these terms because he was believed to stand in a nearer relation to men at Dodona, through his oracle, than elsewhere; but also the passage appears to intimate a difference between the Zeus of Dodona and that more familiar Zeus who quarrelled with Hera on Olympus. And we have other reasons for thinking that the Zeus whom the Pelasgi worshipped in those remote times was something far vaguer than the Zeus of Homer. In the first place, we have the distinct affirmation of Herodotus (ii. 52): "In early times the Pelasgi, as I know by information which I got at Dodona, offered sacrifices of all kinds, and prayed to the gods, but had no distinct names or appellations for them, since they had never heard of any." Herodotus goes on to say that the names of the gods were introduced from Egypt, and that the oracle of Dodona sanctioned their use; statements which are open to criticism. In the next place, Zeus at Dodona was worshipped under a peculiar name, Zeus Naïus (*Ναῖος*), the exact meaning of which is uncertain; and with him was worshipped a goddess, Dione, whose name (as Bouché-Leclercq suggests) is probably the feminine of Zeus. When the worship of Dione was introduced, we do not know; the first mention of it appears to be in Demosthenes (*c. Meid.* p. 531, § 53; *de F. L.* p. 437, § 299): but Strabo (vii. p. 329) tells us that she had a common temple with Jupiter; the researches of Carapanos at Dodona show that votive tablets were dedicated to her jointly with Zeus; and the meaning of her name and antiquity of her worship are testified by the two quaint verses ascribed by Pausanias (x. 12, § 5) to the early priestesses of Dodona:

> Ζεὺς ἦν, Ζεύς ἐστι, Ζεὺς ἔσσεται, ὦ μεγάλε Ζεῦ.
> Γᾶ καρποὺς ἀνίει, διὸ κλῄζετε ματέρα γαῖαν.

Though Dione is not mentioned here, it is difficult not to think that she is identical with the earth (γᾶ) mentioned in the second line; and if so, Zeus and Dione are symbolical of heaven and earth.

We may then in all probability look upon the oracle at Dodona, in its original form, as dedicated to a Zeus who symbolised, simply, Heaven, and the power that dwells therein; and either from the first, or at all events at a very early date, a goddess symbolising the Earth, Dione, was associated with him. Such a worship must have been very different from the elaborate mythology which afterwards prevailed; and it will be observed that the ceremonial described by Homer is no less simple and primitive. The interpreters of Zeus are the "Selli with unwashed feet, whose couch is on the bare ground;" and if one is to take the account in the Odyssey as not far removed in time from that in the Iliad, we must suppose that they listened, as they lay, to the rustling of the oak-leaves; for in that poem (xiv. 327–8, xix. 296–7) Ulysses is said (in a feigned story) to have gone to Dodona to hear the counsel of Zeus "out of the lofty foliaged oak:"

> Τὸν δ' ἐς Δωδώνην φάτο βήμεναι, ὄφρα θεοῖο
> ἐκ δρυὸς ὑψικόμοιο Διὸς βουλὴν ἐπακούσαι.

Further, these Selli appear to have been originally not a caste of priests, but a tribe: Aristotle (*Meteor.* i. 14) speaks of them as such, and brings them into close connexion with the original Hellenes. It is therefore probable that they are the same as the Helli mentioned by Pindar, and that their district in those early times was called Hellopia; for "at the end of Hellopia," says Hesiod (*Fragm. ap. Schol.* Sophocl. *Trach.* 1169), "is the city of Dodona, which Zeus chose to be his oracular seat, and where he lived in the trunk of an oak-tree (φηγοῦ)."

So far the accounts of Dodona testify to a native origin, and to great rudeness of character. But the next step in its history brings it into contact with a foreign country; namely, Egypt. Herodotus, who gives the account referred to (ii. 54–57), professes it to be a narrative of the *foundation* of the oracle. Few will think this probable: but it may very well mark a period when the oracle received a more systematic form, and, above all, when the institution of priestesses began. These are not mentioned by Homer; and though they might have risen from a native source, there is no improbability in their foreign derivation. The priests at the Egyptian Thebes, then, told Herodotus that "two of the sacred women were once carried off from Thebes by the Phoenicians, and they had learnt that one of them had been sold into Libya and the other into Greece; and these women were the first founders of the oracles in the two countries." The Dodonaean story, also told to Herodotus, is the exact counterpart of the above, except that the women are represented as doves. "Two black doves," said the priestesses of Dodona, "flew away from the Egyptian Thebes, and, while one directed its flight to Libya, the other came hither: she alighted on an oak, and sitting there began to speak with a human voice, and said that on the spot where she was, there should henceforth be an oracle of Zeus .... The dove which flew to Libya bade the Libyans to establish there the oracle of Ammon." The correspondence between these narratives, current in localities so distant from one another as the Egyptian Thebes and Dodona, is too great to have come by chance; and when we find from Strabo (vii. *Fragm.* 1 and 2) that the words for "old woman" and for "dove" in the Molossian language are similar, and from Sophocles (*Trachin.* 171–2) and Pausanias (x. 12, § 5) that the priestesses at Dodona were actually called "doves," all objection to the Dodonaean story, on the ground of the seeming miracles, surely vanishes. And it is a further confirmation that Herodotus (ii. 57) tells us that the Dodonaean oracle resembled in character that at Thebes; to which may be added that Strabo (vii. *Fragm.* 1) tells us that the oracles of Dodona and Ammon were similar. Moreover, the quaint verses of the Dodonaean priestesses, quoted above from Pausanias, must remind us (*longo intervallo*) of the celebrated inscription on the temple of the veiled Isis.

It will then appear that at a certain early period of the Dodonaean oracle, an important change took place owing to Egyptian influence; a change which at any rate involved the appointment of priestesses. It is possible that the worship of Dione was introduced at the same period, and so Strabo seems to imply (vii. p. 329): but this is altogether uncertain. When priestesses were once introduced as ministrants of the oracle, the male interpreters of the divine will sank into the background. Sophocles indeed (*Trach.* 1167) speaks of the Selli: but the passage applies to remote antiquity.

Herodotus seems to have met with none; and they are ignored by Plato (*Phaedr.* 244 B). Strabo, however (ix. p. 402), tells us that, owing to a certain tragical occurrence, men and not women communicated the divine messages to Boeotians; though all other nations received them from the priestesses. At the same time the priestesses were under the control of a council of men; and Carapanos has found at Dodona inscriptions bearing the name and title of the president (*ναίαρχος*) of this council, and of one of its officers (*προστάτης*). (Carapanos, *Dodone*, pp. 50, 56.) Strabo tells us that the priests referred to by Homer were called *τομοῦροι*, and that some affirmed this to be the true reading in Hom. *Od.* xvi. 403, in place of *θέμιστες*.

Certain changes in the method of divination employed by this oracle must now be noted. The original method was by the interpretation of sounds (viz. the rustling of leaves); but in Plato's time we find (Plat. *Phaedr.* 244 B) that the priestesses, like those at Delphi, prophesied in a state of divine frenzy. This might be a direct imitation of Delphi; but the imitation would probably be disguised by an intermediate stage, dream-inspiration. Lycophron tells us (ap. Eustath. *ad Iliad.* xvi. 233) that this mode of divination existed at Dodona; and it would be quite natural for the priests or priestesses to listen to their rustling oak-tree by preference at night (and Homer's word *χαμαιεῦναι* suggests this). Again, we learn from Cicero (*Divin.* i. 34, 76) that divination by lots was practised at Dodona; it was an ill omen, he tells us, for the Spartans before Leuctra, that a monkey overturned the vessel in which were the lots that they had sent to the oracle. In later times brazen vessels were used to produce sounds of prophetic import: a circle of such vessels was suspended, which being moved by the wind struck against one another: for the same purpose a present was made by the Corcyraeans of a metal basin with a statue of a man placed over it, in the hand of which was a brazen scourge of three thongs, from which small bones (*ἀστράγαλοι*) were suspended, which being moved by the wind struck against the basin. (Steph. Byz. *s. v.* *Δωδώνη*: Suidas, *s. v.* *Δωδωναῖον χαλκεῖον*: Philostr. *Imag.* ii. p. 830; Strabo, vii. *Fragm.* 3.) This "Corcyraean scourge" was seen in the early part of the 2nd century B.C. by Polemon the geographer (cf. L. Preller, *Polemonis periegetae fragmenta*, Lips. 1838). At a still later date we have mention of a marvellous fountain at Dodona, which kindled torches when applied to it, and whose murmurings had also a prophetic quality (Plin. ii. § 228; Serv. *ad Aen.* iii. 466).

No mention has been made above of a mode of divination which, in times when Dodona had fallen into decay, was thought to have been formerly practised there; namely, by the observation of the flight of doves. Dionysius of Halicarnassus (i. 15) mentions this; as also Strabo (vii. *Fragm.* 1), who however regards it as a misinterpretation of the fact that the priestesses were called "doves." And a misinterpretation it was, no doubt, and one which would very naturally be caused by the original narrative of the foundation of the oracle in Herodotus; or by the expression *δισσῶν πελειάδων* in Soph. *Trach.* 172. But it had a hold on the imagination of the Roman poets, which was increased by the fact that Dione, spoken of by Homer as the mother of Aphrodite (*Il.* v. 371), was afterwards identified with Aphrodite herself (Theocr. *Idyll.* vii. 116; Ovid. *Art. Am.* iii. 3, 769; *Fast.* ii. 461, v. 309), to whom doves were particularly sacred, whence Servius (*ad Aen.* iii. 466) actually speaks of the oracle as dedicated "Jovi et Veneri," and in the Clementine Homilies (iv. 16, v. 13) Dodone is used as synonymous with Aphrodite. But all these are late and inaccurate representations, and receive no support whatever from any author contemporary with the period when the oracle was flourishing.

A curious phrase may here be mentioned, with which Ephorus (*ap.* Macr. *Saturn.* v. 18, 8) tells us the oracles emanating from Dodona always terminated—"Sacrifice to Achelous:" the origin and exact meaning of the injunction is unknown.

Dodona, though the most ancient of the oracles (as Herod. ii. 52 says, and as everything leads us to believe) was of course very inferior in political importance to Delphi, during the historical period. Croesus consulted it (Herod. i. 46), but was dissatisfied with its answer. The Athenians were unfortunately encouraged by it in their Sicilian expedition (Pausan. viii. 11, § 6; Suidas, *s. v.* *Ἀννίβας*). On the other hand, it proved itself incorruptible to the bribes of Lysander, when he wished to make himself king of Sparta (Plut. *Lysand.*); and it may be that Delphi had shown itself less scrupulous (though it also is said to have refused the bribe), for we find that Agesilaus, when meditating his expedition into Asia, gave a most marked preference to Dodona over Delphi (Plut. *Apophth. Lacon. Agesil.* 10). Demosthenes in the *Meidias* (l. c.) appeals to the two as equal authorities; in the *de Falsâ Legatione* (l. c.), however, he refers to Zeus and Dione, but not to Apollo. We read of honours paid by the Athenians to the oracle of Dodona at a still later date (Hyperid. *pro Euxenippo*, § 35). The discoveries of Carapanos prove that the official documents of the Epirotic assembly were kept in the temple of Dodona (*Dodone*, pp. 48–68). But in B.C. 219, Dorimachus, the Aetolian general, razed the temple to the ground, and in B.C. 167 the Roman general Paulus Aemilius devastated and ruined Epirus. The oracle never recovered these blows. Seneca (*Herc. Oet.* 1623) speaks of it as deserted. Hadrian appears from the inscriptions to have been a benefactor to Dodona (Carapanos, *op. cit.* p. 171), and probably even rebuilt the temple; but the restoration, to judge both from probability and from the testimony of Lucian (*Icaromen.* 24), had little vitality; and the oracle may be said to have died under the destructive invasion of Dorimachus.

The actual site of Dodona, which long had been unknown, was discovered in the year 1876 by a Greek explorer, M. Constantin Carapanos, in the valley of the Tcharacovitza, about eleven miles south-west of the town and lake of Janina. Bp. Chr. Wordsworth, however, had already fixed upon the same spot (*Greece*, p. 249). The foundations of the temple and of the sacred enclosure were laid bare; and numerous inscriptions on leaden tablets render this one of the most important antiquarian discoveries ever made. Out of the mass of the votive tablets one inscription of more than ordinary historical interest may be quoted here: that in which the distracted Corcyraeans beg the oracle to tell them "to what god or hero they must pray and sacrifice, in order to agree together for the common good."

It will suffice just to mention the fact that a line of Homer (*Il.* ii. 750) mentions another Dodona in Thessaly, which has been by some supposed to be the original of the Epirotic oracle. The supposition, however, is otherwise entirely unsupported, and may be discarded without any great risk of error.

Special works on Dodona are given at the end of this article.

The Oracle of Delphi.—The site of Delphi—the victorious rival of Dodona, and the centre of Greek religion—has never been in the same doubt as the site of Dodona. The remains have never been so completely covered; and the natural features of the place—the rocky wall of the Phaedriades overhanging the town, the fountain of Castalia issuing from a great cleft in this wall, the double peak in which the rocks culminate, and the Corycian cave on the heights above leading to the summit of Parnassus—are too striking and have been too well described by ancient authorities for their identity to be mistaken. But for a complete account of the geography of Delphi reference must be made to the *Dictionary of Greek and Roman Geography* (art. DELPHI). Anyone who considers the position of Delphi in relation to the Peloponnesus, Boeotia, and Attica, will see how great an advantage it had in its situation; which, without being absolutely under the rule of any of the chief Greek states, was yet at no great distance from any of them, and was at once isolated and accessible.

If the Iliad were to be taken as a poem composed in its entirety as it stands, we should be compelled to say that Delphi was at least as ancient as even Dodona. For in the ninth book, *vv.* 404–5, Achilles speaks of it, under the name of Pytho, as a proverb for wealth; he would not barter his life, he says, for all that is contained within the stone threshold of Apollo at Pytho:

> Οὐδ' ὅσα λάϊνος οὐδὸς ἀφήτορος ἐντὸς ἐέργει
> Φοίβου Ἀπόλλωνος Πυθοῖ ἔνι πετρηέσσῃ.

It is impossible that such wealth can have arisen in any other way but that in which history tells us that the temple of Delphi did grow rich; namely, by the gifts of those who consulted the oracle. Hence the oracle of Delphi was in full vigour when the ninth book of the Iliad was written. But that book was probably not part of the original Iliad; the arguments of Grote on this point (*Hist. of Greece*, vol. ii. pp. 240–246) are almost impossible to controvert. (See also Jebb, *Homer*, pp. 155–170.) And if Apollo, when the greater part of the Iliad was written, had been so distinctly the Pythian god as the 9th book implies that he was, it is scarcely possible that more trace of the connexion should not be found in the poem. It is true that in the Odyssey (viii. 79–82) there is one mention of the Pythian oracle; but the passage is no doubt later than the Iliad generally, and may be much later. On the whole, in spite of the assumption of the tragedians that the Delphic oracle was the source of spiritual guidance to Greece from the remotest past, the probability is that it was still in its infancy when the greater part of the Iliad was written. It must be particularly noticed that the word Delphi does not occur either in the Iliad or in the Odyssey.

To trace the rise of the oracle is a problem of equal interest and difficulty. The persistent tradition among the Greeks was, that it had first been an oracle of the Earth (γαῖα): so say Aeschylus (*Eumen.* 1, 2) and Euripides; the latter even speaking of a certain conflict for possession between Earth and Apollo (*Iph. in T.* 1249, and 1261–1283). It is clear how the rocky chasm at Delphi, in which the oracle was believed to reside, would suggest the notion of Earth as a supernatural power; and though it may be less clear to us why a close association should have been thought to exist between Earth and Themis (*i.e.* Law or Right Order), as Aeschylus (*l. c.*, and compare *Prom.* 209) intimates, still there is a meaning in such alliance. In those dim early ages, the divine agent would receive various names, as chance or the character of the speaker might direct; and hence we may consider it a part of the same tradition, that Night (Νύξ) was sometimes thought to take the place of Earth. (Plut. *de Sera Numinis Vindicta*, c. 22; *Argum.* Pind. *Pyth.*) But how and why did the transition from these vague powers to the clearly conceived and radiant god, Apollo, take place? It would be idle to affirm positively; but it seems better here to desert our oldest authority, Aeschylus, who (*Eumen.* 6, 7) makes a certain Titaness, Phoebe, the intermediary; which sounds like a poetical contrivance. There is really more support for, and more probability in, the view which regards Poseidon as the intermediary. This is practically affirmed by Pausanias (x. 5, § 3, and 24, § 4), by Pliny (vii. § 203), and others; the mention of Poseidon in connexion with Delphi by Aeschylus (*Eumen.* 27) and Euripides (*Ion*, 446) adds strength to this view; still more does the fact that he had an altar in the Delphic temple itself (Pausan. *l. c.*); and it is plain how Poseidon in his quality of Earthshaker (*ἐννοσίγαιος*) would naturally be thought of as a more personal power than the abstract Earth, especially as the region about Parnassus suffers from earthquakes. The proximity of the sea, again, would suggest Poseidon as the presiding deity; and the name Delphi furnishes another ground. But this brings in some intricate points.

What is here affirmed is this: that when men first desired to personify the Delphic divinity (more than by the vague terms Earth or Night), Poseidon was the deity first selected. The dolphin (δελφίς) would manifestly be a symbol of Poseidon; and consequently an altar with the figure of a dolphin sculptured on it (δέλφειος βωμός, *Hymn. ad Pyth. Apoll.* 319) would mark the first site of the city of Delphi, and would be the reason for the name of that city. And when afterwards the votaries of the more youthful, more splendid Apollo—the god to whom the prophetic art was assigned—succeeded in expelling the rude and ungraceful Poseidon (who was not specially believed to be a prophet) from the oracular seat, the altar would still bear its symbol, the dolphin, and legends drawn from that symbol would be invented appropriate to the victorious deity. Whereas, if the worship of Apollo came to Delphi without the previous worship of Poseidon, it is not easy to say why there should be any connexion between Apollo and the dolphin. It is true, we find the temple of Apollo Delphinius at Athens (Plut. *Theseus*); but that is likely to be named after Delphi, as the temple of Apollo Pythius (in the same neighbourhood) after Pytho. And we find that at Anticyra, close by Delphi, Pausanias (x. 36, § 4) saw a temple of Poseidon with a statue of the god, in which he was represented as setting one foot on the back of a dolphin; which, though it may be a mere accident, yet in such a locality suggests a reminiscence of an old tradition. If Delphi had been a large city, we might have expected more evidence than we have; but for a long time it was but small: hence all the earliest records speak of Pytho, the district, not of Delphi, the town. The meaning of the name Pytho, and of the celebrated legend of Apollo, on his advent, slaying the dragon Python, are difficult points; it may even be that some conflict between Apollo and his predecessors is shadowed out by the legend (Eur. *Iph. in T.* *l. c.*).

Whatever may be thought of the claims of Poseidon, the principal fact is, that the Delphic oracle had a complex, and not, like the Dodonaean oracle, a simple origin. The aspect of the place had from immemorial time suggested that a power of divine prophecy was inherent in it; and this in the course of ages was taken possession of by that god, Apollo, in whom the chief prophetic power had been believed to dwell, even before any definite oracular seat was assigned to him. Two currents of strong religious feeling met, and produced the most powerful religious influence that Greece knew.

And there were yet other currents of feeling, and passionate aspirations, which imprinted on the Delphic oracle its exact form. The peculiar influence of the oracle was exerted through the frenzy of the Pythian prophetess. The god was believed to mould her accents, to speak with her voice; an awe-striking phenomenon! much more than when the devout inquirer listened to the rustling of leaves or to the rattling of bronze basins. Such inspiration was a novelty; it may have been imitated afterwards, and the idea of it was always attached to those impalpable personages, the Sibyls (Verg. *Aen.* vi. 44 *sqq.*), one of whom, Herophile, was said to have been closely connected with Delphi (Pausan. x. 12). But at Delphi it was more than an idea: and whatever may have been the exact date or manner in which it arose, there can be little doubt that it was but one form of that religious exaltation which prevailed so strongly in central Greece in the early times, and which sent the Bacchanals to wander and rave on the heights of Parnassus itself (Eurip. *Ion*, 714–718; *Iph. in T.* 1243, 4). Indeed, this identification of the Pythian with the Bacchic frenzy, this close alliance between Apollo and Dionysus, has the authority both of Aeschylus and Euripides, according to Macrobius, *Saturn.* i. 18; who quotes from Aeschylus the line *ὁ κισσεὺς* Ἀπόλλων ὁ Καβαῖος (? Βακχεῖος or Σαβαῖος) *ὁ μάντις*, "the ivy-crowned Apollo" (*fr.* 383), and from Euripides, Δέσποτα φιλόδαφνε Βάκχε, Παιὰν Ἄπολλον εὔλυρε (*fr.* 480). Conversely, Euripides attributes prophetic power to the Bacchic enthusiast: *τὸ γὰρ βακχεύσιμον καὶ τὸ μανιῶδες μαντικὴν πολλὴν ἔχει* (*Bacchae*, 298, 9). We must indeed not quite go the length of these expressions; no doubt there was a difference between the worship of Apollo and the worship of Dionysus, between the Pythia and the Bacchante; but it is important to notice the resemblance too. Delphi and the region round were full of memorials of Dionysus (Plut. *Quaest. Graec.* 12; Pausan. x. 33, § 5); but the traditions do not go so far as to make Dionysus the actual possessor, at any period, of the Delphic oracle.

Conjointly with these religious causes of the Pythian frenzy must be noticed a physical cause supposed by all the later writers on the subject to have co-operated or even to have been the leading agency in the matter. This was an exhalation from the cavernous chasm over which the tripod, or prophetic seat, was placed. Now, an attentive examination of the evidence will show that in all probability this supposed exhalation was a mere product of the imagination. Had it been a real smoke or gas, it is incredible that no mention of it should be found in those descriptions of the temple and shrine which Aeschylus and Euripides have given us. Whereas even the later writers generally speak of it as something abstract and impalpable: Strabo

(ix. 3, § 5) calls it *πνεῦμα ἐνθουσιαστικόν*: Cicero (*de Divin.* i. 36) calls it *terrae vis*. Plutarch, who uses the word *ἀναθυμίασις* to denote it, does indeed treat it as material; but the single sensible quality which he ascribes to it is one unlike a natural product of the earth: he says that a ravishingly sweet smell was sometimes perceived by visitors to the oracle to proceed from the shrine (*Defect. Orac.* 50). These worthy persons had doubtless not inquired if the burning myrrh to which Euripides refers (*Ion*, 89) had been used more freely than usual.

It is of course not to be questioned that Aeschylus and Euripides believed that an influence, causing prophetic frenzy, did ascend from the Delphic chasm. But the materialising of that influence, so as to make it definitely sensuous, was the work of a later day. The story of Diodorus (xvi. 26) and others, that the oracular power was first made known by the fact that some goats, on approaching the chasm, became intoxicated in a marvellous way—an intoxication which the goatherd afterwards experienced—forms a natural transition to the more material view. Pausanias, who when recounting this story uses the very material word *ἀτμὸς* to describe the influence (x. 5, § 3), afterwards (x. 24, § 5) says that it is the water of the fountain Cassotis, flowing through the chasm, which "makes the women prophetic."

Special solemnities accompanied the promulgation of an oracle. Not on every day could a consultant inquire of the god. Plutarch tells us (*Quaest. Graec.* 9), on the authority of Callisthenes and Anaxandrides, that originally only one day in the year was assigned for these deliverances, the 7th of the month Bysius (our March). This is hard to believe of any historical period; and even the after-regulation of which he speaks, permitting consultation once a month, seems hardly adequate. We may suppose, in practice, more frequent possibilities of consultation, though by what rule we do not know. That there were unlucky days (*ἀποφράδες*) when no consultation was permissible, is clear from the anecdote about Alexander seeking to force the Pythia to reply on such a day (Plut. *Alex.* 14). (Her involuntary cry, "My son, thou art invincible," was seized on by him as a true answer.) But a powerful and friendly state, seeking to consult the oracle, would hardly be left very long without an opportunity of doing so. No doubt there were distinctions made, the knowledge of which is quite lost to us. The 7th of the month Bysius was, it may be observed, regarded as the birthday of Apollo.

Three days before the day of oracular utterance, the Pythia is said to have begun her preparation for the solemn act by fasting and bathing in the Castalian spring (Schol. *ad* Eurip. *Phoen.* 223). This last statement has been doubted, but hardly with good reason; at all events to bathe in the fountain of Castalia would seem to have been a duty for all who either asked for or who assisted in giving out the oracular reply (Eurip. *Ion*, 94–101; *Phoen.* 222–225; Pindar, *Pyth.* v. 39, and compare iv. 290; Heliod. *Aeth.* ii. 26). It is just possible that the fountain of Cassotis, which flowed through the actual shrine (Pausanias, *l. c.*), may have been included under the term Castalia; but it is not likely; and the remains of a rock-hewn bath are still to be seen near the Castalian spring. The Pythia herself was chosen from among the virgins of Delphi (Eurip. *Ion*, 1323); she was not allowed to marry, and in early times was always a young girl; but after the Thessalian Echecrates had seduced a Pythia, women above fifty were selected for the office, though they were still dressed as young maidens (Diod. *l. c.*). How strictly these rules were kept, we do not know. In early times there was but one Pythia; later on there were two, and even a third if need were (Plut. *Defect. Orac.* 8); then again in Plutarch's time a single prophetess sufficed for the reduced *clientèle* of the oracle.

When the day arrived, the various consultants determined by lot their precedence in inquiring; except in the case of certain favoured individuals or states, to whom in return for special services a right of precedence (*προμαντεία*) had been accorded; as, *e.g.* to Croesus and the Lydians (Herod. i. 54), the Lacedaemonians (Plut. *Pericl.* 21), and to Philip of Macedon (Demosth. *Phil.* iii. p. 119, § 32). That a certain payment was made to the oracle, appears from the fact that *ἀτέλεια* as well as *προμαντεία* was granted to the Lydians. But, however propitious in itself the day might be, it was necessary that the omens should be taken before the votary could actually put his question to the god. In the earliest times it is probable that the flight of birds would furnish an augury (cf. *Hymn. ad Herm.* 540); but in the historical times a sacrifice was invariably offered,—a goat, an ox, a sheep, or a wild boar (Eurip. *Ion*, 229; Plut. *Defect. Or.* 49). Extraordinary pains were taken to see that the victim was sound in all respects. An ox was fed on barley, a wild boar on chick-peas, to see whether they ate them with appetite; water was poured on the goats, and it was necessary that they should tremble all over (and not merely move the head, as in other sacrifices) for the omen to be good.

If the omen were not good, to consult the oracle was dangerous; nor was this a mere idle fancy; for Plutarch (*Defect. Orac.* 51) records one such case in which the Pythia (overwrought doubtless in the highest degree by the imaginations connected with her office) leaped from the tripod, fell into convulsions, and within a few days died.

But if the omens were good, the Pythia, after burning laurel leaves and flour of barley (Plut. *Pyth. Orac.* 6), or perhaps myrrh (Eurip. *Ion*, 89), in the never-dying flame (Aesch. *Choeph.* 1036) on the altar of the god, and dressed in a costume which recalled that of Apollo Musagetes (Plut. *ib.* 24), mounted the tripod, the three-legged stool, which was suspended over the chasm. Close beside her was a golden statue of Apollo (Pausan. x. 24, § 4). What are we to say about the state of frenzy into which she then fell? Was there true uplifting of the spirit in it, and a mixture of real inspiration? Was the question put to her understood by her, and did her mind, however frenzied, really attempt an answer? Or was she in any degree instructed beforehand? Or was the whole an exhibition of pure raving nonsense? None of these elements would probably be wholly absent; it is but human nature that the inferior should have predominated; but the higher are not quite to be excluded. Of course, the general history of the oracle must guide our opinion.

By the side of the Pythia stood the prophet (Herod. viii. 36; Plut. *Defect. Orac.* 51), whose office was to interpret her vague and wild cries, and put them into ordered language. His proximity, it may be noted, is clear proof that there was not really any intoxicating vapour in the shrine; else he must inevitably have been infected as well as the Pythia. Sometimes more than one official of this sort attended (he seems to have been called "prophet" or "priest" indifferently—the latter is the general term in the inscriptions discovered at Delphi), but no doubt the duty would be discharged by only one at one time. The determination of those who were to serve was made by lot (Eurip. *Ion*, 416), the whole number of the noble families of Delphi being apparently eligible. Besides these prophet-priests, another band of functionaries must be noticed—the "Saints" (*ὅσιοι*), of whom there were five in number, chosen from the most ancient families of Delphi who claimed to be descended from Deucalion (Plut. *Quaest. Graec.* 9). The victim sacrificed at the time of the appointment of a *ὅσιος* was called *ὁσιωτήρ*. It is not quite certain that these "Saints" were not identical with the "priests," "Saints" and "priests" being alike distinguished from the "prophets"; but in any case the two (or three) classes assisted each other in the whole cycle of duties pertaining to the oracle. Three names of these Deucalionic families are known to us: Cleomantids, Thracids (Diodor. xvi. 24; Lycurg. *c. Leocr.* § 158), and Laphriads (Hesych. *s. v.*). (It has been ingeniously conjectured that the "Saints" were a remnant of old forms of worship, anterior to the arrival of Apollo at Delphi.)

Before proceeding to characterise, as far as can be done, the final upshot of these elaborate schemes of divine guidance, a few minor points may be noted. The responses of the oracle, as delivered to the consultant by the prophet, were at first always in hexameters. It was said that this metre was invented by the first Pythia, Phemonoe; but Dodona set up a rival claim: no doubt both were wrong. The verses, composed on the spur of the moment, were often rough enough; nevertheless, when the oracle betook itself to prose, many regretted the change. Plutarch wrote a treatise in which he tried to make the best of the matter; but it must be admitted, that the main cause of the change, the decline in the dignity of the questions which the oracle was called on to solve (seeing that it no longer had high points of government to deal with), might well excite the regret of its votaries (Plut. *Pyth. Orac.* 28).

It is implied in various ways, and especially in the accusation against the Pythia Perialla (of having been bribed by king Cleomenes), that the Pythia was not a mere idle instrument in the matter, but really directed, in part, the answers. Some have thought that there were means of divination at Delphi independent of the Pythia; but, in spite of the *ἔμπυρα* (Eur. *Andr.* 1213) and the dreams (*Iph. Taur.* 1263), all oracular utterances in historical times seem to have been derived from prophetic frenzy. The presence of the *ὀμφαλὸς* or sacred stone in the temple served to put the oracles under the highest guarantee, that of Zeus himself; who, it was believed, had determined this stone to be the earth's centre by sending from the remotest east and west a pair of eagles; they met in this point (Pindar, *Pyth.* iv. 131; iv. 3).

What, in fine, was the good or ill of the Delphic oracle? The general impression that we receive from history is, that it acted for good; and that in the freedom of its own action and the freedom of action of its consultants, it had a great advantage, enabling the Greek race to combine the sense of religious mystery in a rare degree with individual energy; but that it failed, when the Greek race had reached a certain degree of development, in guiding and controlling power. The causes that produced this failure were: the non-reality of the creed of Apollo, whereby intelligent minds were alienated; the attempt on the part of the oracle to be wiser than it could be, and the consequent recourse to evasion and deception; and the lack (not the entire absence) of positive moral force. In private life, it had various beneficent functions, of which the chief perhaps was the aid that it gave in the manumission of slaves [LIBERTUS]: the advice which it gave to individuals could not probably, except where the moral principle involved was clear (*e.g.* Herod. vi. 86), rest on any sure ground.

In treating of the oracle in its public aspect, the idea that it had any extraordinary prophetic power, or second sight, must be laid aside; not that there are not some things in the history that may puzzle us as regards this, especially the *first* oracle given to Croesus; but the second oracle to Croesus, being plainly an evasion, demolishes the effect of the first oracle. The miraculous defence of Delphi against the Persians (Herod. viii. 37–39) is one of the best attested of heathen miracles; the similar defence against the Gauls (Pausan. x. 23, § 3 *sqq.*) has less evidence: but in the first case a natural explanation is open to us; the second is more frankly legendary.

The real good which the oracle did, and especially in the earlier days, lay in the courage which it imparted through the supernatural blessing of which it was believed to be (and perhaps was) the minister. Sincerity of intention, and the belief in a presiding divine power, were elements of value which, on the whole, it impressed strongly on society. Whether we can rely or not on the statements that it supported the great legislators, Lycurgus and Solon (Herod. i. 65; Plutarch, *Solon*, 148), it unquestionably directed and encouraged the colonising spirit of the Greeks. The most remarkable instance of this is the case of Cyrene, the foundation of which appears to have been entirely due to the Delphic oracle (Herod. iv. 150–159): "King Apollo sends thee," are the words of the oracle to Battus (*ib.* 155). But Syracuse (Suid. *s. v.* Ἀρχίας), Crotona (Strabo, vi. p. 262), Rhegium (*ib.* p. 257), Magnesia (Athen. iv. p. 173 e), and probably Metapontium (Strabo, vi. p. 264), are also instances in point; and the remark which Herodotus makes (v. 42) that Dorieus did *not* consult the oracle in his colonising effort shows how exceptional such a case was. There is indeed some likelihood in the supposition that the Delphic oracle had, through its numerous correspondents, real information of the state of foreign countries, such as a private individual could not possess (this is one explanation of the successful reply to Croesus, Herod. i. 47); if so, force would be added to its spiritual encouragement. In the internal relations of Greeks to each other, the oracle was not faultless in its directions, yet sometimes beneficent: *e.g.* we read (Thucyd. i. 103) that it sent word to the Lacedaemonians to spare the captive Helots at Ithome; on the other hand, it countenanced the futile and rapacious attempt of Cylon (Thucyd. i. 126). It is not said that the Amphictyonic council (whose laudable intention to promote peace among Greeks had so little result) was founded from Delphi; but it had close connexions with the oracle (Strabo, ix. p. 420; Pausan. x. 8, § 1; Aeschin. *de Fals. Leg.* § 121). Undoubtedly, however, the most important act of the Delphic oracle, as regards the internal affairs of the Greek states, was the command which it issued to Sparta to liberate Athens from the despot Hippias; a command issued to an unwilling but dutiful agent, and successfully carried out (510 B.C.). Few deeds in the world's history have been more fruitful of great consequences; but it was too great a service to be rewarded with gratitude. The Athenians declared that the Pythia had been bribed (Herod. v. 63), and falsely attributed their own liberation to Harmodius and Aristogeiton. The 6th century B.C., in which the last-named event was one of the closing scenes, is that which shows Delphi at the height of its power. It begins with the first Sacred war, in which Delphi was delivered from the rival pretensions and aggressions of Cirrha and Crissa; yet the severity exercised towards those cities is a blot on its fair fame. In the middle of the 6th century the great gifts of Croesus were made; shortly after which (548 B.C.) the temple at Delphi was burnt down, but rebuilt with great splendour by the Alcmaeonidae. Inside this temple the sayings of the seven wise men (of which γνῶθι σεαυτόν, "know thyself," is the most famous) were inscribed (Pausan. x. 24, § 1).

The Persian wars show, though almost imperceptibly, a turn in the tide of greatness of Delphi. The oracle perhaps knew too much about the power of the Persians; at all events its tendency was to counsel submission, or, what was tantamount, inactivity. This was the effect of its utterances to the Cnidians (Herod. i. 174), to the Argives (Herod. vii. 148), and to the Cretans (Herod. vii. 169, 171). But such advice was not given through mere cowardice; and in the romantic history of the Persian war, few things are more interesting than the clash of sentiment between the fiery and resolute Athenians and the timid but clear-sighted oracle (Herod. vii. 140–143). The counsel that was hammered out, as it were, between these two contending (but not hostile) forces—the counsel that the Athenians should betake themselves to their "wooden walls"—was in fact the very best that could have been given; though, had it failed, the oracle would have no doubt sheltered itself under the ambiguity of the term.

The disastrous Peloponnesian war marks the first point in Greek history in which the Delphic oracle sinks below the level required by the situation. Not that it was unnatural, or wholly wrong, for it to support the Spartans (Thucyd. i. 118, 123); but it had no real command over the combatants. The authority of Aelian (*V. H.* iv. 6) is hardly sufficient for what we would gladly believe, that at the end of the war the oracle pleaded on behalf of Athens. After the beginning of the 4th century B.C. its influence falls. Agesilaus (Plut. *Apophthegm. Lacon. Agesil.* 10) set it below Dodona; and Epaminondas seems not to have consulted it when Messina was made a state (Pausan. iv. 27, §§ 3–6): though he made it gifts after the battle of Leuctra, as Lysander had done at the close of the Peloponnesian war (Plut. *Lysander*).

As the first Sacred war ushered in the highest fame of the Delphic oracle (B.C. 600–590), so the second Sacred war (B.C. 357–346) marks the beginning of the definite decline, alike of Greece and of Delphi; for it introduced Philip of Macedon into Central Greece. Nor only that; but it was marked by the dispersion of the vast Delphian treasures seized by the Phocians. In the preceding century, such a sacrilege would have been impossible. And though neither Philip nor Alexander intended harm to Delphi, yet the enormous conquests of the latter dispersed the Greek race over many lands, and (what was perhaps of still greater moment) transferred the centre of public interest and of power away from Greece altogether. With the saying of Demosthenes, ἡ Πυθία φιλιππίζει, and the exclamation extorted by Alexander from the Pythia, "My son, thou art invincible," the public career of the Delphic oracle may be said to close.

Yet it must not be dismissed without one word more. When it declared Socrates "the wisest of men," it not only uttered the most remarkable of its deliverances, but also transmitted the sign of its great authority to a moral power that was far to transcend its own, and gave the greatest of its vital impulses exactly when its own apparent force was beginning to wane.

For the names of special works on Delphi, see the end of this article.

On the Oracular System generally.—Delphi and Dodona stand apart. These having been treated of, the occasion is the best for some general remarks on all the oracles.

It must not be forgotten that oracles were only the most highly organised form of the general effort to obtain supernatural knowledge and power; that isolated diviners, unconnected with any oracle, abounded throughout Greece: that modes of divination by sacrifice, the flight of birds, the casting of pebbles, were known and practised in all quarters; and that, even when diviners united into a college, there was no oracle, properly speaking, unless the place itself through some known feature, as a tree or a rocky cleft, co-operated. For lack of this, the college of diviners at Telmessus in Lycia cannot be held to constitute an oracle (Herod. i. 78). A scarcely less necessary feature of an oracle was that it should have an organised body of ministers. This is sometimes wanting in a so-called oracle, but never in an oracle of importance. Without priests and sacrifice, there could be no solemnity of approach to the divine power. In an oracle, the intercourse between God and man was thought to be at its highest.

A curious incidental fact is the excessive abundance of oracles in Boeotia, their entire absence from Attica. The Attic temperament was too keen-witted, seemingly, for an oracle to be able to flourish under its close inspection; though, at a distance, the Athenians were very reverential to oracles. On the other hand, the Boeotians were not content unless they had a divinity close by.

The fact that Apollo, not Zeus, is the god who generally presides over oracles, must be noted and understood. It was not meant in disparagement of Zeus. Zeus was so great, that the human mind could not come in immediate contact with him; an intermediary was necessary; and such was Apollo. But what Apollo declared, Zeus had first conceived and intended. (Aesch. *Eum.* 19, 616–618.) Yet this idea was not invariable, for the most primitive oracle, Dodona, belonged to Zeus simply; and two others will immediately be described.

The chief distinction of class between oracles, as respects the method by which the prophecy was procured, was this: some were called artificial, in which signs of future events were derived from external appearances intellectually interpreted; others natural, in which, either through dreams or through a prophetic frenzy, the divine intention was implanted directly in the mind of the seer, and uttered by him (or generally by *her*) in involuntary phrases. Dodona originally belonged to the first class, Delphi to the second. But Dodona, as has been said, resorted afterwards to the method of inspiration. Oracles of Apollo may be generally assumed to have some tinge of the prophetic frenzy, though often softened down. Oracles to which the sick resorted, generally made use of dreams (cf. Tertull. *de Anim.* 46); the patient slept a night in the temple (*incubatio*).

The two most important oracles, after Delphi and Dodona, are the oracle of Zeus Ammon in Libya, and that of Apollo at Branchidae. Those who wish to know the experiences of a consultant of the minor oracles may refer to the discourses of Aelius Aristides (an abstract is given by M. Bouché-Leclercq, vol. iii. pp. 299–307).

The oracles will now be set down according to their several classes.

Oracles of Zeus (other than Dodona).

1. Oracle of Zeus at Olympia. This is an instance of a true and very ancient oracle, slowly metamorphosed under the influence of a system of divination which had grown up under the shelter of the oracle, but yet was not strictly oracular. Pausanias saw at Olympia an enclosure sacred to Zeus the Thunderer (*Ζεὺς Καταιβάτης*), close to the great altar; and also an altar dedicated to Earth, and another to Themis, close by the mouth (*στόμιον*) of a hollow chasm. Here we have something that sounds like the primary form of the Delphic oracle; perhaps a still nearer reminiscence of Dodona. But a family of priestly diviners, the Iamidae, whose origin is far removed in the legendary past, in which their first father Iamus was said to have been a son of Apollo (Pindar, *Olymp.* vi. 47–121), introduced methods of divination unknown to the earliest times; by the observation of the entrails of victims (Herod. i. 59; viii. 134) and of the flames of sacrifices (Pindar, *Olymp.* viii. 4); and the true oracle gave way before the new-comers. With the Iamidae were joined the Clytiades (Pausan. vi. 17, § 6). The divination, according to these rites, was performed before the altar of Zeus Olympius (Pindar, *Olymp.* vi. 118, 119). Yet the oracle did not cease to be called an oracle; Sophocles (*Oed. Tyr.* 900) assigns to it a high dignity; and the change was perhaps not distinctly recognised by most. From what Strabo says (viii. p. 353), and Lucian. *Icar.* 24, we conclude that it was hardly consulted at all on ordinary occasions, in the historical period; this impression is, however, removed by the interesting story in Xen. *Hell.* iv. 72.

2. Oracle of Zeus Ammon, in an oasis of Libya, in the north-west of Egypt. This oracle came immediately after Delphi and Dodona in importance and fame; and there is this point of great interest about it, that it was in all probability founded by Egyptians, and then refined and humanised through the Greek inhabitants of Cyrene. Two distinct national cults united to produce it.

Zeus, in this oracle, was represented as having a ram's head (*κριοπρόσωπος*, Herod. iv. 181, ii. 42). Such a representation cannot rationally be supposed to have had any origin but one; namely, in the Egyptian Thebes, where the chief god, Ammon (Amun), was also represented with a ram's head. The derivation of the oracle of Ammon from the Egyptian Thebes has already been spoken of in treating of Dodona; and though the story of captive Egyptian women, given by Herodotus, could not fairly be expected to have left any trace recognisable by modern research, the other parts of the account of Herodotus do receive confirmation from recent discoveries very remarkably. What Herodotus says (ii. 42) is, that the inhabitants of the oasis of Ammon were descended from a joint colony of Egyptians and Ethiopians, and he implies that the Egyptians were from Thebes, and gives a fanciful story why the Thebans and other Egyptians gave their chief god (whom he calls Zeus) a ram's head. Now, R. Lepsius (in the *Zeitschrift für aegyptischen Sprache und Alterthumskunde*, 1877, pp. 8–23) has shown from the monuments that it was precisely under the Ethiopian dynasty that the god Ammon of Thebes (Amun) was first represented with a ram's head, he having been previously depicted with a human head surmounted by two large feathers; and that it was under a king of that dynasty, Teharqou (692–664 B.C.), that the oasis of Ammon was colonised and the oracle founded, a short time before the colonisation of Cyrene by the Greeks. This fixes the origin of the Ammonian oracle very precisely, and entirely in accordance with Herodotus.

The Cyreneans embraced the worship of Zeus Ammon with eagerness, and extended it among their kindred in Greece, the Spartans and Thebans (Pausan. iii. 18, § 2; ix. 16, § 1). Nevertheless, there was always some little hesitation among the Greeks in identifying this deity absolutely with their own Zeus. The ram's head naturally stood in the way; and hence sometimes only the ram's horns were attributed to him, the head and face being those of a man, and this would appear to have been the case in a statue of him at Megalopolis in Arcadia (*ἄγαλμα Ἄμμωνος, κέρατα ἐπὶ τῆς κεφαλῆς ἔχον κριοῦ*, Pausan. viii. 32, § 1). We may hope, and perhaps believe, that it was so also in the statue of Ammon dedicated in a temple of the god at Thebes by the poet Pindar (Pausan. ix. 16, § 1). Pindar completely identifies Ammon with Zeus (*Pyth.* ix. 89), and, as we learn from the Scholiast on that passage, addressed to him a hymn, hailing him as "master of Olympus"; which hymn was engraved on a pillar by Ptolemy the First, king of Egypt, and seen by Pausanias (*l. c.*). On the other hand, in Plato, Ammon is always Ammon, never Zeus. Few more quaint stories are preserved than the complaint of the Athenians to this oracle as to their own military failure in spite of their splendid sacrifices; while the Lacedaemonians, who troubled themselves little about those things, won their battles ([Plato], *Alcib.* ii. 148, 149). It is scarcely necessary to say that Alexander the Great identified Ammon with Zeus.

We know but little of the methods of divination employed at this oracle; but from Diodorus (xvii. 50, 51) we gather that one was, to carry the statue, flashing with emeralds, in solemn procession, and judge by the changing appearances which it presented: 80 priests joined in this ceremonial. The spring of water in the oasis must have furnished another means; for when the oracle had fallen into decay, the priests provided themselves with a supply of water from it, which they carried about and sold as possessing qualities of divination (Juv. vi. 553–555). The oracle had been nearly deserted long before Juvenal's time (cf. Strabo, xvii. p. 814).

Oracles of Apollo (other than Delphi).

The oracles of Apollo will here be taken in a geographical order: namely, first, those in Boeotia and the neighbouring parts (Phocis and Euboea); next, those in Asia Minor and the adjacent islands; lastly, the few (of which Delos is the most important) scattered elsewhere.

But it is necessary to say, in a few words, the order in which these oracles actually grew. The peculiarity of the case is, that the oracular impulse first came to birth in Greece, while the worship of Apollo (as appears from the legends, from Homer, and from general considerations) originated on the coasts of Asia Minor. The prophetic god was separated from the chief oracular seats. But gradually, the worship of Apollo crossed over the Aegean; and, at Delphi, found the seat that fulfilled all that the imagination required. Then, the centre having been found, the oracular impulse was flashed back over the Aegean; and created on the Ionian coasts those oracular seats which could not have originated there, but which were resorted to and honoured, as soon as their pretensions were understood.

1. Oracle at Abae, in the N.E. of Phocis. This oracle is first mentioned in the 6th century B.C., when Croesus included it among the seven oracles which he tested as a preliminary to his intended inquiry concerning the expediency of making war on Cyrus. It was therefore an oracle of distinction, though it proved unequal to satisfying the test imposed by Croesus (Herod. i. 46, 47). It pretended to great antiquity. Shortly before the Persian wars it received from the Phocians a great number of shields and other booty won in battle from the Thessalians, an equal number being sent to Delphi. After the battle of Thermopylae, the Thessalians determined to take their revenge; they led a Persian army into Phocis, and destroyed among other places the temple of Abae (Herod. viii. 33). Pausanias (x. 35, § 2) tells us that the Greeks passed a resolution to leave in their ruins all temples that had been destroyed in this invasion, as a memorial of undying hatred. But this cannot have been carried out here: it must be inferred from Sophocles (*Oed. Tyr.* 899) that the temple of Abae was fully existent in the latter half of the 5th century B.C. Moreover, we find it predicting victory to the Thebans before the battle of Leuctra (Pausan. iv. 32, § 5): in spite of which, those same Thebans burnt it, and 500 Phocians in it, in the Sacred or Phocian War (B.C. 346). And though the town of Abae, at the end of that war, was exempted from the ruin that fell on the rest of Phocis (Pausan. x. 3, § 2), the temple and oracle were irretrievably gone. Centuries afterwards, Hadrian built a smaller temple close by, and the Romans, from a feeling of piety towards Apollo, allowed the people of Abae to govern themselves. (Pausan. x. 35, § 2.)

2. Oracle of Tegyra. This lay not far from Abae, but just within the Boeotian frontier. Plutarch tells us that it flourished chiefly in the Persian wars, when it had a high priest Echecrates (*Pelopid.* 16), and promised the Greeks the victory over the Persians (*Defect. Orac.* 5). Tegyra was on one occasion declared by the Pythia herself to have been the birthplace of Apollo (Plutarch, *Pelopid.* 16; *Defect. Orac.* 5; Steph. Byz. *s. v.* *Τεγύρα*).

3. Oracle of Mount Ptoon, near Acraephia, in the territory of Thebes. Mythology affirmed that Tenerus, son of Apollo and Melia, was the first prophet here (Strabo, ix. p. 412). More interesting is it to know, on the same authority, that Pindar sang of this oracle. When Mys the Carian was sent by Mardonius to consult it, at the time of the Persian wars, the prophet answered him in the Carian language, so that the Thebans who accompanied him could not write down the reply, and Mys was obliged to do this himself (Herod. viii. 135). This oracle also was consulted by the Thebans before Leuctra (Pausan. iv. 32, § 5), but was destroyed in the general ruin of the Theban territory by Alexander (Pausan. ix. 23, § 3). In the time of Plutarch the whole district was desolate (Plut. *Defect. Orac.* 8).

4. Oracle of Apollo Ismenius, south of Thebes. This was the national sanctuary of the Thebans, and oracles were given here, as at Olympia, by inspection of the entrails of victims (Herod. viii. 134) and by the shape of altar-flames (Soph. *Oed. Tyr.* 21). A stone at the entrance of the temple was pointed out as the seat on

which Manto, the daughter of Tiresias, had prophesied. In this oracle a boy of good family and handsome appearance was selected yearly as priest and termed *δαφνηφόρος* (laurel-bearer); and if in more than usually good position, dedicated a tripod before his year of office was over. (Pausan. ix. 10, §§ 2–4; and compare Pindar, *Pyth.* xi. 7–10.) Herodotus saw three such tripods, inscribed with ancient Cadmean characters (v. 58–61). One was inscribed with the name of Amphitryon, and Pausanias (*l. c.*) says that it was dedicated on behalf of Heracles, and was the most remarkable of all the tripods he had seen. Possibly it was from this collection that a yearly tripod was sent to Dodona (Strabo, ix. p. 402). Before the disastrous conflict with Alexander, the Thebans are said to have asked of this oracle the meaning of a certain cobweb in the temple of Demeter, and to have received an ambiguous answer (Diodor. xvii. 10).

5. Oracle of Apollo Spodios, also at Thebes. Here divination by voice-omens was practised, as at Smyrna. (Pausan. ix. 11, § 5.) This oracle, like the last, was of course destroyed by Alexander.

6. Oracle of Hysiae, at the foot of Cithaeron, near Attica. The temple was unfinished: the mode of inspiration was by drinking from a sacred well. (Pausan. ix. 2, § 1.)

7. Oracle of Eutresis, between Thespiae and Plataea, in the neighbourhood of Leuctra. (Steph. Byz. *s. v.* *Εὔτρησις*: Schol. *ad Il.* ii. 502.)

8. Oracle of Apollo Didymaeus, usually called the oracle of the Branchidae, in the territory of Miletus. This oracle was, as has been intimated, the fourth in importance of all in the Grecian world; and the legends respecting its foundation are highly picturesque. (Conon. *Narrat.* 33; Varr. *ap.* Lutat. *ad* Stat. *Thebaid*, viii. 198.) The antiquity of it has, however, been much doubted, and C. W. Soldau (in the *Zeitschrift für Alterthumswissenschaft*, 1841, pp. 546–584) endeavours to show that it was founded somewhere about the last quarter of the 7th century B.C. But his arguments, though highly ingenious, hardly seem to countervail these two facts: first, that Herodotus calls it "an oracle founded in ancient time" (*μαντήιον ἐκ παλαιοῦ ἱδρυμένον*, i. 157); and, secondly, that Pharaoh-Necho (who died in B.C. 601) sent to Branchidae, "as an offering to Apollo," his military dress (Herod. ii. 159), which he would hardly have done to a quite recent institution. It is true that it is suggested that the temple was more ancient than the oracle; but no one supposes that the family of the Branchidae were more ancient than the oracle; and their arrival (in the person of the head of the family, Branchus) could hardly have been a fact unknown to Herodotus if it had taken place only a century and a half before his own time. Branchus is probably a mythical person; the only argument to the contrary being the obscure reference in Diogenes Laertius (i. 3, 5 [72]), in which he is set side by side with the sage Chilon as a person of brief terse speech.

The oracle, however, is quite unmentioned by Homer or the Homeric hymns, and various points in the myths of its foundation indicate that it was an offshoot from Delphi; to which conclusion the reference in Strabo (xvii. p. 814) also leads. But at the beginning of the 5th century B.C., the sentiments of the Delphic oracle towards Branchidae were the reverse of friendly (Herod. vi. 19). It was the oracle chiefly consulted by the Aeolians and Ionians of Asia Minor; and it was one of the seven selected by Croesus to answer his test question; and though it appears not to have solved his puzzle satisfactorily, he gave it, says Herodotus (i. 92), "offerings, as I learn, equal in weight and similar to those which he made to Delphi." This, under all the circumstances, may be doubted; but Croesus must have been liberal to the Branchidae, to render such a statement possible.

The meaning of the word Didymaeus (*Διδυμαῖος* or *Διδυμεύς*) is not quite certain; but if we accept the statement of Stephanus of Byzantium (*s. v.* *Δίδυμα*) that the temple and oracle were dedicated to Zeus and Apollo, "the twin Apollo" (*i.e.* twin with Zeus) seems the natural interpretation: though "twin with Artemis" cannot be discarded as impossible, if *Διδυμεὺς* has this meaning. In any case, if Stephanus be right, such a dedication suggests an oracular foundation (cf. Aesch. *Eum.* 19), and goes some way to show that the oracle is coeval with the temple.

Of the constitution of the oracle of Branchidae only a few traces are left. As its name implies, it was administered by a sacerdotal family, and this appears further from its later history; for in the unfortunate close of the history of the Branchidae, far away in the Sogdiana, we find them preserving their cohesion and identity. Other families are also mentioned in connexion with this oracle, especially the Evangelides (cf. Conon. *Narrat.* 44); but what their relation to it exactly was we do not know. Perhaps they only entered on the scene after the Branchidae had disappeared. Though Strabo (*l. c.*) describes this oracle as similar to Delphi, in the fact of its replying by words and not by signs, we cannot certainly infer that it had a tripod and a prophetess in the early times; though it had in the times of Iamblichus (*de Myst.* iii. 2). But it had a sacred spring more marvellous than Castalia, which rose in the promontory of Mycale, then (it was said) dived under the sea and reappeared near the temple of Apollo (Pausan. v. 7, § 5; and cf. Euseb. *Praep. Ev.* v. 15).

The Branchidae failed in patriotism (Schol. Aristoph. *Plut.* 1002; Zenob. v. 80); yet the impression which the few stories that have come down to us about them leave, is not wholly unfavourable. When we find the historian Hecataeus proposing to take the treasure of their temple, and to derive thence a fund for repelling the Persians (Herod. v. 36), their coolness for the Greek cause, if not admirable, is intelligible. About the beginning of the 5th century B.C. a catastrophe overwhelmed them. Darius, after capturing Miletus, burnt their temple (Herod. vi. 19, 20) and, we must infer, appropriated its treasures; and when the historian goes on to say that Darius "carried away the Milesians to Ampe on the Tigris," we should suppose that the Branchidae were at any rate among those carried off. But a different story was current in Greece in later days; namely, that it was Xerxes, not Darius, who carried away the Branchidae; that they voluntarily surrendered their treasures to him, bargaining for a safe home in Persia, since they dared not dwell among the Greeks, and that they were accordingly settled in Sogdiana (Curtius, vii. 23; Aelian, *ap.* Suid. *s. v.* Βραγχίδαι: Strabo, xi. p. 518, xiv. p. 634; Plut. *de ser. num. vindicta*, 12); and Strabo says, finally, that it was Xerxes who burnt their temple. Amid this contradictory evidence, it is impossible for us now to decide how the case lay; but the easiest supposition is, that Herodotus was not aware of the exact place to which the Branchidae were transported, and that on this point the four later historians are right; that the four historians, on the other hand, are mistaken in saying that Xerxes had anything to do with the matter (since Herodotus could hardly have erred here); and that the story of the treachery of the Branchidae was the exaggerated shape which the sense of their want of patriotism took in the minds of after-generations. Be that as it may, the final upshot, as reported by the four above-named historians, was tragical. Alexander the Great, in his wild arrogance regarding himself as the avenger of the past wrongs of Greece, slew the descendants of the Branchidae, in their peaceable remote retreat in Sogdiana.

The oracle of Apollo Didymaeus, no longer the oracle of the Branchidae (though still sometimes called so), revived from the ruins in which the Persians had left it; though how soon, we do not know. In the time of Alexander we find it under the direction of the authorities of Miletus (cf. O. Rayet, *Rev. Archéol.* 1874, ii. pp. 106, 107); the priests were chosen annually by lot from among the principal families of the city (cf. *C. I. G.* 2884, 2881): the chief of the priestly body was called *στεφανηφόρος*, "crown-bearer," and it seems possible that he combined with his religious office, either sometimes or always, the position of chief magistrate of the city, for we find him in one case admitting certain persons to citizenship (O. Rayet, p. 108); besides these, there was a prophet, also annually ordained. The temple had been rebuilt, but on a scale so grand that the roof was never put on (Strabo, xiv. p. 634). The oracle flattered Alexander, and after him Seleucus Nicator, from whom it received gifts; and from this time onwards it rapidly became rich. In the year 74 B.C. it was pillaged by pirates, yet Strabo in his visit still found it in a condition of great magnificence. It seems (like the other Asiatic oracles) to have been less affected by a decline in *prestige* than the oracles in Greece proper; and the Roman senate included it among those religious institutions which it was legally permissible to endow with inheritances (Ulpian, *Fragm.* xxii. 6). It shared in the oracular revival of the 3rd and 4th centuries A.D., but after the death of Julian fell irretrievably into ruin.

9. Oracle of Claros. This was situated north of Miletus, near Colophon. It was said to have been founded by Cretans under Rhacius, who were joined afterwards by a Theban colony sent out under the auspices of the Delphic oracle, at an extremely early date. Manto, daughter of Tiresias, was among the Thebans; she married Rhacius, and their son was the prophet Mopsus, from whom the prophets of Claros may have traced their descent; but this is doubtful. (Pausan. vii. 3, §§ 1, 2.) In later times, the prophets were generally taken from Miletus (Tac. *Ann.* ii. 54). The oracle at Claros had its centre in a cave with a beautiful clear pool in it, near a sacred wood, in which, it was said, there were no serpents (Aelian, *Hist. Anim.* x. 49). We hear but little of this oracle in early times: Alexander was said to have been encouraged by it in a design he had of rebuilding Smyrna (Pausan. vii. 5, § 1). A prophet, who drank the sacred water, was the revealer of the divine will (Tac. *l. c.*) and pronounced oracles in verse, answering the questioner without even having heard the question. The cynic philosopher Oenomaus of Gadara (in the 2nd century A.D.) was, however, by no means impressed with the truthfulness of the replies (Oenom. *ap.* Euseb. *Praep. Evang.* v. 2). Germanicus consulted this oracle, which was said to have prophesied his death (Tac. *l. c.*); it was sometimes consulted by letter (Ovid, *Fast.* i. 20); and it was patronised by Apollonius of Tyana (Philostr. *Vit. Apoll.* iv. 1) and Alexander of Abonotichos (Lucian, *Pseudom.* 29). Inscriptions prove that its fame extended even to Britain. Porphyry (*ad Aneb.* p. 3) and Iamblichus (*Myst.* iii. 11) speak of it, but after that time it is unmentioned.

10. Oracle of Patara, in Lycia. The story (not of course likely to be approved of at Delphi) was that Apollo spent six months of the year here (the winter time) and the six summer months at Delos. (Tzetz. *ad* Lycophr. 401; Servius *ad* Verg. *Aen.* iv. 143: cf. Herod. i. 182.)

11. Oracle at Cyaneae, in Lycia. (The *town* is mentioned in Pliny, v. § 101.) Here was an oracle of Apollo Thyrxeus (perhaps = *θυραῖος*: cf. Tertull. *de coron. mil.* 354), near which was a well, into which any one looking saw "all that he desired" (*πάντα ὁπόσα θέλει*, Pausan. vii. 21, § 6).

12. Oracle at Seleucia, in Cilicia (cf. Steph. Byz. *s. v.* *Σελεύκεια*). Here Apollo was invoked as "Sarpedonius" (from the neighbouring promontory, dedicated to the hero Sarpedon). The people of Palmyra, in the height of their pride under Zenobia, asked this oracle if they could conquer the empire of the East. It is not surprising that they were repelled (Zosim. i. 57). It would seem that this is the oracle called by Strabo the oracle of Artemis Sarpedonia (xiv. 5. § 9).

13. Oracle at Hybla, near Magnesia (cf. Athen. xv. § 13). Possibly the true name of this oracle is *Hylae* (Pausan. x. 32, § 6). It seems from its situation to be the same as that of *Hiera Kome*, mentioned in Liv. xxxviii. 13.

14. Oracle at Gryneia or Grynium. The principal oracle among the Aeolic cities of Asia Minor. (Strabo, xiii. p. 622; Verg. *Eclog.* vi. 72; *Aen.* iv. 345; Pausan. i. 21, § 7; Athen. iv. p. 149 d; Hecat. *Fragm.* 211.) The town itself is mentioned in Herodotus (i. 149), and appears from Strabo to have been dependent on Myrina: and as Myrina sent tribute to Delphi (Plut. *Pyth. Orac.* 16), the Grynean oracle was no doubt an offshoot from Delphi. (For an instance of a consultation of this oracle, cf. *C. I. G.* 3538.)

15. Oracle of Apollo Napaeus (Ναπαῖος), near Methymna in Lesbos. (Steph. Byz. *s. v.* Νάπη; Schol. Arist. *Nub.* 144; Macrob. i. 17, 45: cf. Strabo, ix. p. 426.)

16. Oracle of Apollo Actaeus and Artemis at Adrastaea, in the north of the Troad. (Strabo, xiii. p. 588.)

17. Oracle at Zeleia, in the same neighbourhood (Tzetz. *ad* Lycophr. 315).

18. Oracle at Chalcedon (Dion. Byzant. *Anaplus Bospori, Fragm.* 67: cf. *C. I. G.* 3794).

19. Oracle of Delos. The singularity of this oracle is why it should not have existed in times when oracles were most important. It appeared to have every advantage; the Homeric hymn to the Delian Apollo (*v.* 81) shows that from the first it was designed to be an oracle; the island itself had the highest celebrity for its sacredness, and the religious ceremonials with which it was honoured were scarcely surpassed in Greece: yet an oracle it was not. When one asks why this was, the answer must be conjectural. Probably the reason was, that it lay out of the reach of those Greek races who had the disposition suitable for originating oracles (the Boeotians and Phocians), and was peculiarly under the thumb of that race (the Athenians) which was devoid of any such disposition. Under some circumstances, it might have been a religious centre for the Ionians and Aeolians of Asia Minor; but they probably found the sea-voyage a deterrent, and they had their own highly celebrated oracles (see above) derived from Delphi. Not till the 2nd century B.C. is any reference made (outside the brief allusion in the Homeric hymn) to an oracle in the island. Then Zeno of Rhodes speaks of the Rhodians having inquired of this oracle (cf. Diod. v. 58). But Virgil (*Aen.* iii. 90–93) gave it a far higher reputation; though, considering the looseness of the Roman poets in such points, his reference has hardly any historical authority. The satirical allusion in Lucian (*Bis accus.* 1) is, however, real evidence; and in a still later age Julian consulted it (Theodoret. *Hist. Eccles.* iii. 16). When one asks whether the oracle, such as it was, was situated in the temple near the sea-shore or on the top of Mount Cynthus, in the really ancient shrine discovered by M. Lebègue (*Récherches sur Delos*), the testimony of Himerius (*Orat.* xviii. 1) seems to decide the point in favour of the latter. The story that Apollo spent the six summer months of the year at Delos, has already been referred to under the head of the Oracle of Patara.

20. Oracle at Abdera. (Pindar, *ap.* Tzetzes, Lycophr. 445.)

21. Oracle of Apollo Deiradiotes, at Argos. This is stated to have been an offshoot from Delphi (Pausan. ii. 24); but in one point the ceremonies differed remarkably from those of Delphi: the priestess once a month sacrificed a lamb during the night, and tasted the blood, in order to obtain the prophetic ecstasy. This appears to show that the oracle had a higher antiquity than belonged to its Delphic origin, and was in the first instance an oracle of the dead. It was kept alive by the patriotism of the Argives, always mindful of their primaeval renown, and was still active in the time of Pausanias.

22. Oracle of Apollo Lycius, also at Argos. The prophetess is said to have warned Pyrrhus, just before his death (Plut. *Pyrrh.* 31). Pausanias, however, does not mention this oracle, and some doubt consequently attaches to it. Except the two at Argos, there was no oracle of Apollo in Peloponnesus: the neighbourhood of Delphi overpowered minor establishments.

23. Oracle of Daphne, near Antioch in Syria. A very late oracle, and of no good repute. The prophetic fountain had here the name of Castalia, and a bay-tree grew close by. Hadrian obtained from this oracle a prophecy that he should be emperor; but on his becoming such in reality, he destroyed the fountain, lest any one else should draw from it a similar augury. Julian attempted to restore it, but the temple was burnt down (accidentally, it seems) during the struggle which he waged against the Christians, and this practically meant the end of the oracle. (Strabo, xv. p. 750; *C. I. G.* 1693; Sozom. *Hist. Eccles.* v. 19; Amm. Marcell. xxii. 12, 8.)

Oracles of other Gods.

Though the overwhelming *prestige* of Apollo, as the revealer of the will of his father Zeus to men, tended to extinguish the prophetic function of other divinities in the eyes of their adorers, it could not quite succeed in doing so. To be a god, and not to be able to predict the future, was to fall so seriously beneath the divine level, that the worshipper of Athene or Hermes would never admit that the object of his worship was reduced so low. Hence, scattered through Greece, though few in number by comparison, were the oracular seats of the other supernatural powers of the upper or nether world; the rites by which they were approached being sometimes of a very singular nature.

The Earth, as has appeared already, was to the primitive populations almost the chief discloser of the future (thus, originally, at Delphi). The oracle of Earth (γαῖα) at Aegira in Achaia, mentioned by Pliny (xxviii. § 147), may be a mistake of that writer (cf. Pausan. vii. 25, § 13); but at Patrae, not far from Aegira, Earth, associated with Demeter (*i.e.* Γῆ μήτηρ) and Persephone, gave oracles respecting the sick. A mirror was let down by a rope into a sacred well, so as to float upon the surface. Prayers were then performed and incense offered, whereupon the image of the sick person was seen in the mirror either as a corpse or in a state of recovery. (Pausan. ii. 24, § 1.)

A vague tradition of an oracle of the Nymphs called Sphragitides existed on Mount Cithaeron (Plut. *Aristid.* 11; Pausan. ix. 3, § 9). A tradition of an oracle of Poseidon Hippios, at Onchestus in Boeotia, is preserved in the Homeric hymn to Apollo (230–238), with which compare Pausan. ix. 26, § 5, and, as emphasising the word Hippios, Hom. *Il.* xix. 405–417. An oracle of Ino-Pasiphae, who seems to represent the moon, existed in Laconia between Oetylus and Thalamae; the revelation being made through dreams (Pausan. iii. 26, § 1). The other oracle of this deity mentioned by Pausanias, at Epidaurus Limera, seems hardly rightly so called. [INOA.]

There was an oracle of Pluto and Core (Persephone) at Acharaca, between Tralles and Nysa, in Asia Minor, in the basin of the Maeander. A large grove, a temple, and a cave called the

Charonium, were the seat of the oracle. "The sick resort thither, and live in the village near the cave, among experienced priests, who sleep at night in the open air and direct the mode of cure by their dreams. The priests invoke the gods to cure the sick, and frequently take them into the cave, where they remain in quiet without food for several days. Sometimes the sick themselves observe their own dreams, but apply to the priests to interpret them. To others the place is interdicted and fatal." (Strabo, xiv. p. 650, abridged.) The singular ceremony which Strabo proceeds to narrate has no direct bearing on the oracle. There appears to have been an oracle of Pluto at Eana in Macedonia (cf. L. Henzey, *Mission archéol. de Macédoine*, Inscr. N, 120).

An oracle of Dionysus existed at Amphicaea or Amphicleia, in Phocis, to the north of Parnassus. Like the oracle at Acharaca, its function was limited to the cure of the sick, and its mode of operation was by dreams interpreted by an inspired prophet (Pausan. x. 33, § 11). Another oracle of Dionysus was at Satrae in Thrace, and the prophets were called Bessi (Herod. vii. 111). The oracles, however, were given by a prophetess, "as at Delphi, and are not more recondite," says Herodotus. The oracle of Dionysus in Thrace, mentioned by Pausanias (ix. 30, § 9), may perhaps be the same as the one just mentioned.

Oracles of Pan were to be found at Troezen (Pausan. ii. 32, § 6), and in the cave at Paneas, one of the principal sources of the river Jordan (*C. I. G.* 4539); the oracles were given through dreams. An oracle of Aphrodite existed at Paphos in Cyprus, and was consulted by Titus (Tac. *Hist.* ii. 3, 4). An oracle of Hera Acraea (*i.e.* the goddess of the hill-tops) was between Lechaeon and Pagae, on the gulf of Corinth (Strabo, viii. p. 380).

Hermes, from his close connexion with Apollo, was a god that might be expected to give oracles: this power, however, in the Homeric hymn to Hermes, 552 *sqq.*, is only accorded to him in a limited degree by the more exalted deity. He had an oracle at Pharae in Achaia, where his altar stood in the middle of the market-place. Incense was offered there, oil lamps were lighted before it, a copper coin was placed upon the altar, and after this the question was put to the god by a whisper in his ear. The person who consulted him immediately left the market-place. The first remark that he heard made by any one after leaving the market-place was believed to imply the answer of Hermes (Pausan. vii. 22, § 2). This mode of oracular disclosure was so much associated with Hermes that he received the name of Κλεηδόνιος from it; as we learn from an inscription found at Pitane, near Smyrna (Le Bas et Waddington, *Voyage archéol.* v. 1724^{a}). Hence it is probable that the *Κληδόνων ἱερὸν* at Smyrna, mentioned by Pausanias (ix. 11, § 7), was an oracle of Hermes.

Athene, the goddess of rational valour, had scarcely any oracles; though Plato, identifying her with the Egyptian Neith, says that she introduced into Greece "prophecy and medicine" (Plato, *Tim.* p. 24 C). Characteristically enough, the only oracle attributed to her is to the effect of "Help thyself, and heaven will help thee." (Zenob. *Cent.* v. 93; Diogenian. *Cent.* viii. 11; Suidas, *s. v.* *τὴν χεῖρα*: cf. Babr. 20.)

Oracles of Heroes.

Asclepius (Aesculapius) lies almost half-way between gods and heroes; still he may be more properly reckoned among the latter. And the oracular seats where he was believed to instruct men are of peculiar interest, because they furnish the meeting-point between religion and science, as those were conceived in the classical Greek world. For, on the one hand, he was thought of as the god of healing, the son of Apollo, begotten by Apollo that he might heal bodily sicknesses (Menand. *Rhet. Epidict.* p. 327; Olympiod. *Vit. Plat.* p. 4, 42); in whose temples the sick would spend a night in hope of being miraculously relieved by the morning (Pausan. ii. 27, § 2). This aspect of him had a tendency to gain ground; to Aeschylus (*Agam.* 1022) and Pindar (*Pyth.* iii. 96) he is a faulty man; Aristophanes (*Plutus*, 662 *sqq.*), with all his mockery, treats Asclepius as a god. But, on the other hand, Asclepius was the legendary father of a crowd of descendants, the Asclepiadae, who, in whatever degree they considered religious communications important for success in the healing art, had genuinely scientific qualities (Plato, *Rep.* iii. p. 405 *sqq.*; MEDICINA). These two phases of the doctrine and practice connected with the name of Asclepius were so intermingled, that they cannot now be separated. Epidaurus was the chief seat of the religious worship; there Asclepius had a temple and a grove, and a magnificent gold and ivory statue, and innumerable votive tablets on the walls attested the cures wrought on sick persons by the method of incubation (Pausan. ii. 26, 27). But at Cos the medical school culminated, and there Hippocrates, the first great light of medical science, lived and wrote. Yet Epidaurus and Cos were not hostile to one another, and we read of an embassy sent by the Epidaurians to the Asclepius of Cos (Pausan. iii. 23, § 6). We must assume that in the generality of the shrines of Asclepius (of which nearly a hundred are reckoned: cf. Th. Panofka, *Asclepios und die Asclepiaden*, pp. 271–361) the religious element, the prophecy by dreams and incubation, greatly outweighed the scientific. It is a question of much interest why, in view of the paucity of oracles of ordinary gods, other than Apollo, so remarkable an exception should be found in the case of Asclepius. The *theory* was (Menand. *Rhet.* and Olympiod. *l. c.*) that Apollo committed to Asclepius this part of his functions; but it is impossible to suppose that persons erecting a temple to Asclepius had any clear theory of delegation. No doubt the truth is, that the worship of Asclepius was antecedent to the worship of Apollo, and his emblem, the snake, had an origin quite distinct from the Apolline worship; and his affiliation to Apollo was a device of the worshippers of Apollo, in order that they might appropriate a power that they could not expel. At Pergamus, another great seat of Asclepius, the celebrated physician Galen, starting from pure faith in the oracular cures, taught himself principles of more exact medical science. In the year 293 B.C. the Sibylline books commanded the Romans to "seek Asclepius at

Epidaurus." They did so, and brought away a mysterious serpent; then, on the spot where this serpent disappeared, they built a temple to Asclepius (Aesculapius). Oracles were given there through dreams, and miracles performed (*C. I. G.* 5977, 5980). Serapis was joined with Aesculapius in the worship at this temple (Suet. *Claud.* 25). This also was the case at Pergamus. F. A. Wolf (*Vermischte Schriften*, pp. 382 *sqq.*) endeavours to show that mesmerism was used in the curative rites of Asclepius; but the experiences of Aelius Aristides hardly bear this out.

Oracles of Heracles. One was at Hyettus in Boeotia (Pausan. ix. 36, § 6); another at Bura, in Achaia. Those who consulted it prayed and put their questions, and then cast four dice painted with figures, and the answer was given according to the position of these figures (Pausan. vii. 25, § 6). Another oracle of Heracles was at Gades (Dio Cass. lxxvii. 20). Like Asclepius, Heracles was almost to be reckoned as a god; had he been merely the Greek son of Zeus and Alcmena, this would not have been so: but he was identified with foreign deities, such as Melkart.

Oracle of Trophonius at Lebadea. One of the most celebrated of the Greek oracles, and in a place of sombre and impressive aspect, in Boeotia. There were different versions of the legend of Trophonius: the most dignified (found in Plut. *Consol. ad Apoll.* 14) tells us that Trophonius and Agamedes built the temple of Delphi, and, upon desiring a reward of the god, he told them that he would give them one on the seventh day; on which day they were found dead. Apollo made Trophonius a prophet; and the Boeotians were bidden to consult him at Lebadea on the means to put an end to a drought that afflicted the land. A swarm of bees led them to the sacred cave, and the oracle was established (Pausan. ix. 40, 1, 2). The rites necessary before consulting it were complicated and terrifying. First, the consultants had to purify themselves by spending some days in the sanctuary of the good spirit and good luck (Ἀγαθοῦ *Δαίμονος καὶ ἀγαθῆς* Τύχης); to live soberly and purely; to abstain from warm baths, but to bathe in the river Hercyna; to offer sacrifices to Trophonius and his children, to Apollo, Cronos, king Zeus, to Herè who holds the reins (Heniocha), and to Demeter Europe, who was said to have nursed Trophonius; and during each of these sacrifices a soothsayer examined the entrails of the victim. On the last night, the consultant had to sacrifice a ram to Agamedes. Only in the event of all the signs being favourable was admission to the cave granted. If it were granted: two boys, 13 years old, led the consultant again to the river Hercyna, and bathed and anointed him. The priests then made him drink from the well of Lethe, that he might forget all his former thoughts, and from the well of Mnemosyne, that he might remember the visions he was about to receive. They showed him an ancient statue of Trophonius, which he adored; led him to the sanctuary, dressed him in linen garments, with girdles and a peculiar kind of shoes (κρηπῖδες); and bade him descend a ladder into the cave. Close to the bottom was an opening into which he put his foot; some invisible power then drew his whole body through the opening. In each hand he held a honeycake to appease the subterranean deities. The vision then seen by him was carefully remembered, and told to the priests on his remounting to the light; and when he had recovered from his fears, the priests informed him of the meaning of the oracle. (Pausan. ix. 39, § 3 *sqq.*: cf. Philostr. *Vit. Apoll.* viii. 19.) But the vision sometimes left men melancholy for a long time. Epaminondas consulted this oracle just before the battle of Leuctra, and received from it the shield of Aristomenes, the Messenian hero (Pausan. iv. 32, §§ 5, 6). It preserved a certain reputation even down to the time of Plutarch (*de Orac. Defect.* 5), though Sulla had plundered it. It was much consulted by the Romans (Origen, *c. Celsus*, vii. p. 355). *Lebadea* is the origin of the modern *Livadia*.

Oracle of Tiresias at Orchomenus. (Plut. *de Orac. Defect.* 44.)

Oracles of Amphiaraus. Thebes and Oropus (on the Euripus) contended for the honour of possessing the spot in which the hero Amphiaraus was swallowed up by the earth. Hence there were two oracles at which he was invoked: one between Thebes and Potniae, the other in a narrow valley close to the sea, between Oropus and Psaphis (Strabo, ix. 1, § 22). The first was the one consulted by Croesus; it was among the seven to which he proposed his test question, and it was even said to have given an answer not altogether wrong (Herod. i. 46, 49). Hence the Thebans possessed the golden shield and spear presented by Croesus (Herod. i. 52) to this oracle; they placed these gifts, however, not in the temple of Amphiaraus, but in the temple of Apollo Ismenius. Moreover, the Thebans would not themselves consult this oracle; they affirmed that the hero was their ally, and that they would not disturb his impartiality (Herod. viii. 134). This looks like a pretext to cover a feeling of hostility; Amphiaraus had fought against the Thebans. Pausanias (ix. 8, § 2) tells us that the grass round this temple, and the columns of it, were the scene of a perpetual miracle; cattle would not crop the one, nor birds settle upon the other: doubtless as a proof of the genuineness of the tradition attached to the spot. The oracles were given through dreams to persons sleeping in the temple (Herod. viii. 134): they had to prepare themselves for this *incubatio* by fasting one day, and by abstaining from wine for three days (Philostr. *Vit. Apoll.* ii. 37).

At the other oracle, that of Oropus, were two sacred wells and an altar of elaborate workmanship (Pausan. i. 34, §§ 2 *sqq.*). It was especially consulted by the sick, who had to purify themselves and sacrifice a ram; on the skin of which they afterwards slept in the temple. The means of recovery was then supposed to be intimated to them in dreams. If they recovered, they had to throw some pieces of money into the well within the sanctuary. The sacred ground alleged to belong to this oracle was the subject of a curious controversy, which occasioned the speech of Hyperides *pro Euxenippo*.

Oracle of Hemithea, at Castabos in the Carian Chersonese. (Diodor. v. 62, 63.)

Oracle of Mopsus, otherwise called the oracle of Amphilochus, at Mallos in Cilicia. The two rival seers, Mopsus and Amphilochus, had slain each other, and their oracles, which were adjacent, had great celebrity in times succeeding the commencement of our era, and one of the most curious stories connected with oracles is told of that of Mopsus by Plutarch (*de Orac. Defect.* 45. See also Pausan. i. 34, § 3; Lucian, *Pseudom.* 28; Tertullian, *de An.* 46; Dio Cass. lxxii. 7).

Oracles of Calchas and Podalirius, on Mount Drion, in South Italy (Daunia). The character and ceremonial of these oracles were similar to each other, and also to the oracle of Amphiaraus at Oropus (see above). (Strabo, vi. p. 284.)

Oracle of Protesilaus, at Elaeus, in the Thracian Chersonese. This oracle is not mentioned till the 3rd century A.D. by Philostratus (*Heroic.* ii. 6), and probably was of recent date then.

Oracle of Autolycus (an Argonaut, and *not* the celebrated thief) at Sinope. (Strabo, xii. p. 545.)

Oracle of Odysseus, in Aetolia. (Tzetz. *ad* Lycophr. 799.)

Oracle of Menestheus, the companion of Aeneas, near Gades, in Spain. (Strabo, iii. p. 140.)

Oracles of Neryllinus, in the Troad, and of *Proteus* at Parium (Athenagor. *Supplic. pro Christ.* 26). The oracles are said to have been localised in statues.

The oracle which Alexander of Abonotichos endeavoured to found in the age of the Antonines can hardly be reckoned among the number, as it died with him.

Oracles of the Dead.

It was thought that at certain places, where deep openings were seen in the solid earth, the shades of the dead could rise from their subterranean abode, and give answers to the living. Such a place was called νεκυομαντεῖον or ψυχοπομπεῖον. The most ancient oracular seat of this kind was near lake Aornos among the Thesprotians. (Herod. v. 92, § 7; Diodor. iv. 22; Pausan. ix. 30, § 3.) Periander, the sage and tyrant, had recourse to this. Another celebrated Greek, Pausanias the Spartan king, sought relief for his troubled spirit at Phigalia in Arcadia, by summoning the shade of Cleonice (Pausan. iii. 17, §§ 8, 9). Taenarus, in the south of Laconia, presented in its cave another such oracular seat; thither the slayer of Archilochus, the poet, was sent by the Delphic oracle (Plut. *de sera num. vind.* 17). Heraclea on the Propontis was another seat of the kind (Plut. *Cimon*, 6). As at other oracles, sacrifice was necessary before the shade could be moved to appear; and also prayers (Hom. *Od.* xi. 23–37).

Italian Oracles.

Generally speaking, Oracles, in the sense of special places where divine answers were given to men, were not known to the Italian nations. Their modes of divination were different. (Of course, such oracles as those of Calchas and Podalirius mentioned above, or that of Aesculapius at Rome, were of Greek origin.) Yet if we could trust the poets, there were true oracular seats of Faunus at Albunea (Verg. *Aen.* vii. 81 *sqq.*) and on the Aventine (Ovid, *Fast.* iv. 650 *sqq.*). Virgil was so imbued with Greek models that his historical authority on such a point is very small. That of Ovid is better; but on the whole there is no sufficient proof of anything that can be called an oracular seat of Faunus. It is noticeable, that while Virgil makes his oracle complete by bringing in a priest, this essential mark of a fixed place of revelation is absent in Ovid. Moreover, in the somewhat similar passage, *Fast.* iii. 295 *sqq.*, Numa sacrifices, not to Faunus, but to the fountain; and certainly here it can hardly be thought that an oracular seat of Faunus is indicated. Similarly, the tradition preserved by Dionysius of Halicarnassus (i. 14), that at Tiora Matiene, one of the aboriginal cities of Italy, a woodpecker used to perch on a wooden column and pronounce oracles given by Mars, cannot be considered as evidence of a real historical oracular seat.

But the temples of Fortune at Praeneste and Antium were real oracles, and the only instances in Italy. The story of the foundation of the Praenestine oracle is told by Cicero, *de Div.* ii. 41, 85. A noble Praenestine, Numerius Suffucius, was bidden by a dream to cleave open a rock; upon his doing so a large number of wooden "lots" (*sortes*) fell out, inscribed with antique characters. At the same time honey flowed out of an olive-tree near; and at the bidding of the haruspices, the olive-tree was carved into a wooden box, and the lots were enclosed in it. This took place near an image of the infant Jupiter, who was represented (with Juno) as sucking the breast of Fortune (who must be regarded, not as in our sense of the word, but as Primigenia, the origin of life. The Romans borrowed this characterisation of Fortune: cf. Liv. xxix. 36, xxxiv. 53). Once a year, in the month of April, a two-days' festival was held at Praeneste in honour of Fortune and Jupiter, the box was opened, and a child drew out the lots at random (Cic. *l. c.*; *Kal. Praenest.* iii. Id. April). See, for further mention of the "lots" of Praeneste, Propert. ii. 32, 3; Suet. *Tib.* 63, *Domit.* 15; Strabo, v. p. 238.

The temple of Fortune at Antium has been made famous by Horace (*Od.* i. 29, 1). Two sister Fortunes were represented, and were said to give the oracles by bending their heads (Macrob. *Sat.* i. 23, 13: compare Suet. *Calig.* 57, and Ernesti's note on the passage). Martial calls them *veridicas sorores* (v. 1, 3).

At Caere (Liv. xxi. 62) and Folerii (Liv. xxii. 1) there appear also to have been "lots" from which omens were derived.

On the Roman oracles, Niebuhr, *Hist. of Rome*, vol. i. p. 508, &c.; Hartung, *Die Relig. der Römer*, vol. i. p. 96 (besides Bouché-Leclercq's work mentioned below), may be consulted.

Egyptian and Syrian Oracles.

A brief mention may be made of these, in so far as they touch Greek or Roman history.

The connexion of Serapis with Asclepius has been already mentioned. But the oracles of Serapis himself at Alexandria (Tac. *Hist.* iv. 81–84; Suet. *Vesp.* 7; Dio Chrysost. *Orat.* xxxii.), at Canopus (Strabo, xvii. p. 801), and probably at Memphis (see Bouché-Leclercq, vol. iii. pp. 385–6), had great fame. So had the oracle of Apis at Memphis (Diog. Laert.

viii. 90; Amm. Marcell. xxii. 14; Plin. viii. § 46; Dio Chrysost. *Orat.* xxxii. 13), and of Isis at Philae (*C. I. G.* 4894–4947).

Of Syrian oracles, that of Heliopolis (Baalbek) is mentioned by Macrobius (*Sat.* i. 23, 13, and i. 17, 66), that of Hierapolis by Lucian (*Dea Syr.* 36): in each of these the Sun was the revealing deity. At Nicephorium on the Euphrates an oracle of Zeus is mentioned in the Augustan history (*Hadrian*, 2); how far the oracle was Greek, how far Syrian, is uncertain. It will suffice to mention the oracles at Apamea (Dio Cass. lxxviii. 8 and 40), at Gaza (Steph. Byz. s. v. Γάζα, and *Act. Bolland.* Februar. iii. p. 654), and Aphaca (Zosim. i. 58). A reference to the singular story related by Gregory of Nyssa respecting the oracle at Neocaesarea in Pontus (Greg. Nyss. iii. pp. 915, 916, Migne) may conclude this article.

The most complete work on the subject of oracles is Bouché-Leclercq's *Divination dans l'Antiquité* (Paris, 1879–1882). Great use of this work has been made in the present article; the whole subject is elucidated by it in a very remarkable manner. The author's proofs of his views are sometimes rather scattered, and there are some inaccuracies in the quotation-references in the notes. His disposition is to be somewhat too severe on the Delphic oracle; and his views respecting the origin of the Peleiades at Dodona, and the antiquity of the oracle of Branchidae, have not been followed in this article. His work, however, must always be an authority.

Other works on oracles that may be mentioned are Wachsmuth, *Hellen. Alterthum.* ii. p. 585, &c.; Klausen, in Ersch and Gruber's *Encyclop.* s. v. *Orakel*; A. Maury, *Histoire des Religions de la Grèce antique*, vol. ii. ch. xiii. Paris, 1857; K. F. Hermann, *Lehrbuch der griechischen Antiquitäten*, ii.^{2} (1858), §§ 37–41; E. Curtius, *Die Hellenische Mantik* (Göttingen, 1864); L. H. de Fontaine, *De divinitatis origine et progressu*, Rostock, 1867; and an interesting essay by F. W. H. Myers, in *Hellenica*, pp. 425–492, London, 1880, since republished among the author's essays.

On Dodona specially, the important works of C. Carapanos (*Mémoire sur Dodone et le Culte de Jupiter Naios*, 1877, and *Dodone et ses ruines*, Paris, 1878) take the first place. Besides these, may be mentioned Cordes, *de Oraculo Dodonaeo*, Gröningen, 1826; J. Arneth, *Ueber das Taubenorakel von Dodona*, Wien, 1840; L. von Lassaulx, *Das Pelagische Orakel des Zeus zu Dodona*, Würzburg, 1840; L. Preller, *Dodona*, 1842, in Pauly's *Real-Encyclop.* ii. pp. 1190–1195; F. D. von Gerlach, *Dodona*, Basel, 1859; G. Perthes, *Die Peleiaden zu Dodona*, Merseb. 1869; H. R. Pomtow, *Die Orakelinschriften von Dodona*, in Fleckeisen's *Neue Jahrbücher für Philologie*, for 1883, pp. 305–360. This last work is, it will be seen, subsequent to the discoveries of M. Carapanos.

On Delphi specially, it is impossible to quote a quarter of the works written during this century. But these may be mentioned: C. F. Wilster, *De Religione et Oraculo Apollinis Delphici*, Hafniae, 1827; H. Piotrowski, *De gravitate Oraculi Delphici*, Lipsiae, 1829; R. H. Klausen, in Ersch und Gruber's *Encyclopädie*, s. v. *Orakel*; D. Hüllmann, *Würdigung des Delphischen Orakels*, Bonn, 1837; W. Götte, *Das Delphische Orakel*, &c., Leipzig, 1839; L. Preller, art. *Delphi*, 1842 (Pauly's *Real Encyclopädie*, ii. pp. 909–919); J. Kayser, *Delphi*, Darmstadt, 1855; P. Foucart, *Mémoire sur les Ruines et l'histoire de Delphes*, Paris, 1865; A. Mommsen, *Delphika*, Leipzig, 1878.

Other works on oracles in general, and the particular oracles, will be found referred to in the above-mentioned treatise of Bouché-Leclercq. [J. R. M.]

ORARIUM. [SUDARIUM.]

ORATIO'NES PRI'NCIPUM. Many of the *orationes* of the Roman emperors, such as are quoted by the *Augustae historiae scriptores*, are merely communications to the senate, *e.g.* the announcement of a victory (Capitol. *Maxim. duo*, 12, 13), but those which are the subject of this note relate to legislation only. Under the earlier emperors the orationes were *projets de loi* submitted by the princeps either personally or by memorandum (*epistola*, *libellus*: e.g. Dig. 5, 3, 22; 24, 1, 32; 27, 9, 1) to the senate, which in appearance, though not in reality, still possessed legislative power: the consuls, as presidents of the assembly, would then open a discussion on the proposal (*e.g.* Dig. 5, 3, 20, 6), which we cannot doubt was invariably embodied in a senatusconsultum with little or no alteration, and so constitutionally invested with the force of law. Instances are found in Gaius (ii. 285), "ex oratione divi Hadriani senatusconsultum factum est;" and in Dig. 23, 2, 16 (Paulus), "oratione divi Marci .... quam senatusconsultum secutum est."

But the fact that, either through his *jus edicendi*, or in virtue of the Lex Curiata de Imperio, the emperor's own ordinances had the force of law, and the ostentatious unwillingness of the senate to make even a false show of independence by pretending to discuss his legislative proposals, gradually led to the recognition of the oratio as itself law, apart from the senatusconsultum which was founded on it: so that the two are often cited indifferently by the classical jurists—the oratio as containing the reason or grounds of the law, the senatusconsultum for its particular terms and provisions (*e.g.* Dig. 2, 15, 8; 23, 2, 60; 5, 3, 20, 22, 40; 11, 4, 3: so too "divi Pertinacis oratione cautum est," *Inst.* ii. 17, 7): and the actual consultation of the senate gradually sank into a merely formal acclamation. As to the mode of communication, unless the emperor delivered the oratio in person, which seems not to have been very usual, it was embodied in an epistola or libellus (Dig. 5, 3, 20, 22), which was read to the senate by one of the quaestors (Dig. 1, 13): for instance, Suetonius (*Tit.* 6) says that Titus sometimes read his father's orationes in the senate "quaestoris vice," and the practice is frequently referred to: *e.g.* Suet. *Aug.* 65; Tac. *Ann.* iii. 52, xvi. 7; Dio Cass. liv. 25, lx. 2. The mode of proceeding upon the receipt of one of these orationes may be collected from the preamble of the senatusconsultum in Dig. 5, 3; and when it was drawn up with much regard to detail, the subsequent senatusconsultum was clearly a simple reproduction of its terms.

It is not quite clear when the practice of formally giving the force of law to orationes by embodying them in senatusconsulta went out of use. Senatusconsulta originating in this manner are found in the reigns of Septimius Severus and his son Caracalla (*e.g.* Dig. 24, 1, 32), but under the Christian emperors the oratio appears simply as one of the modes of publishing or promulgating emperor-made law, by addressing it to the senate ("leges, quae missae ad venerabilem coetum oratione conduntur," Cod. 1, 14, 3: cf. Cod. Theod. 4, 1, 1): if addressed to a magistrate, it would rather be called mandatum or rescriptum; if "ad populum" or "ad omnes populos," an edictum or edictalis constitutio. Genuine senatusconsulta now occur only in relation to the senatorial games or other burdens which the senate had to bear as a corporation (Symmach. x. 28, 10).

There has been much discussion on the amount of the influence exercised by these orationes on the legislation of the senate. But it seems to be tolerably clear, from the evidence that we have and from the nature of the case, that the oratio might recommend generally some legislative measure and leave the details to the senate, or it might contain all the details of the proposed measure, and so be in substance, though not in form, a senatusconsultum: and it would become a senatusconsultum on being adopted by the senate, which, in the case supposed, would be merely a matter of form. [SENATUSCONSULTUM.] In the case of an oratio expressed in more general terms, there is no reason to suppose that the emperor's recommendation was less of a command: it was merely a command in more general terms. (See Dirksen, *Ueber die Reden der röm. Kaiser und deren Einfluss auf die Gesetzgebung*, in *Rhein. Mus. für Jurisprudenz*, vol. ii., and *Vermischte Schriften*, part i., No. vi.) [G. L.] [J. B. M.]

ORA'TOR. Cicero remarks (*Or. Part.* c. 28, 100) that "a certain kind of causes belong to Jus Civile, and that Jus Civile is conversant about statutes (*lex*) and custom (*mos*) appertaining to things public and private, the knowledge of which, though neglected by most orators, seems to me to be necessary for the purposes of oratory." In his treatise on the Orator, and particularly in the first book, Cicero has given his opinion of the duties and requisite qualifications of an orator in the form of a dialogue, in which Lucius Licinius Crassus and M. Antonius are the chief speakers. Crassus was himself a model of the highest excellence in oratory; and the opinions attributed to him as to the qualifications of an orator were those of Cicero himself, who in the introductory part of his first book (c. 6) declares that "in his opinion no man can deserve the title of a perfect orator unless he has acquired a knowledge of all important things and of all arts: for it is out of knowledge that oratory must blossom and expand, and if it is not founded on matter which the orator has fully mastered and understood, it is idle talk, and may almost be called puerile." According to Crassus, the province of the orator embraces everything: he must be able to speak well on all subjects. Consequently he must have a knowledge of the Jus Civile (i. 44, 197), the necessity for which Crassus illustrates by instances; and he should not only know the Jus Civile, as being necessary when he has to speak in causes relating to private matters and to privata judicia, but he should also have a knowledge of the Jus Publicum, which is conversant about a state as such, and he should be familiar with the events of history and instances derived from the experience of the past. Antonius (i. 49, 213) limits the qualifications of the orator to the command of language pleasant to the ear and of arguments adapted to convince in causes in the forum and on ordinary occasions. He further requires the orator to have competent voice and action and sufficient grace and ease. In i. 58, 246, he contends that an orator does not require a knowledge of the Jus Civile, in support of which he instances himself, for Crassus allowed that Antonius could satisfactorily conduct a cause, though Antonius, according to his own admission, had never learnt the Jus Civile, and had never felt the want of it in such causes as he had defended.

The profession then of the orator, who with reference to a client's case is also called *patronus* (*de Orat.* i. 56, 237; *Brut.* 38, 143), was quite distinct from that of the consulting lawyer [JURISCONSULTI], and also from that of the *advocatus*, at least in the time of Cicero (ii. 74, 301), and even later (*de Orat. dial.* 34). The advocatus assisted a party with legal advice, and accompanied him into court, though there his assistance was not active, being limited to the effect which might be produced by the mere fact of his reputation; but after the fall of the Republic the functions of advocatus and patronus or orator are confused, as the greater jurists ceased to go into court. An orator, who possessed a competent knowledge of the civil law, would have thereby an advantage, as Antonius admits (i. 59, 251); but as there were many essentials to an orator, which were difficult of attainment, he says that it would be unwise to distract him with other things. Some requisites of oratory, such as voice and gesture, could be acquired only by discipline: whereas a competent knowledge of the law of a case (*juris utilitas*) could be got at any time from a jurisconsult or from books. Antonius thinks that in this matter the Roman acted more wisely than the Greek orators, who, being ignorant of law, had the assistance of low fellows who worked for hire, and were called Pragmatici (i. 45): the Roman orators entrusted the maintenance of the law to the high character of their professed jurists.

So far as the profession of an advocate consists in the skilful conduct of a cause, and in the supporting of his own side of a question by proper argument, it must be admitted with Antonius that a very moderate knowledge of law is sufficient; and indeed even a purely legal argument requires not so much the accumulation of a vast store of legal knowledge as the power of handling the matter when it has been collected. The method in which this consummate master of his art managed a cause is stated by himself (*de Orat.* ii. 72, 292); and in another passage (*Brut.* 37, 129) Cicero has recorded his merits as an orator. Servius Sulpicius, who was the greatest lawyer of his age, had a good practical knowledge of the law; but others had this also, and what distinguished him from all his contemporaries was something else: "Many others as well as Sulpicius had a great knowledge of the law: he alone possessed it as an art. But the knowledge of law by itself would never have helped him to this without the possession of that art which teaches us to divide the whole of a thing into its parts, by exact definition to develop what is imperfectly seen, by explanation to clear up what is obscure: first of all to see ambiguities, then to disentangle them, lastly to have a rule by which truth and falsehood are distinguished, and by which it shall appear what consequences follow from premisses, and what do not" (*Brut.* 41, 152). With such a power Sulpicius combined a knowledge of letters and a pleasing style of speaking. As a forensic orator then he must have been one of the first that ever lived: but still among the Romans his reputation was that of a jurist, while Antonius, who had no knowledge of the law, is put on a level as an orator (*patronus*) with L. Crassus, who of all the eloquent men of Rome had the best acquaintance with the law.

How serious a study oratory was among the Romans is attested by Cicero, who (*Brut.* 91, &c.) tells us by what painful labour he achieved excellence. Roman oratory reached its perfection in the century which preceded the Christian era: its decline dates from the establishment of the imperial power under Augustus and his successors: for though there were many good speakers and more skilful rhetoricians under the Empire, the oratory of the Republic was rendered by circumstances unsuitable for the senate, for the popular assemblies, or for cases of crime and high misdemeanour. Upon this subject, see Savigny, *History of the Roman Law in the Middle Ages*, i. p. 25.

In the Dialogue *de Oratoribus*, which is attributed (no doubt rightly) to Tacitus, Messala, one of the speakers, attempts (c. 28, &c.) to assign the reasons for the low level of oratory in the time of Vespasian (when the Dialogue was written) compared with its condition in the age of Cicero and his predecessors. He attributes its decline to the neglect of the discipline under which children were formerly brought up, and to the practice of resorting to *rhetores*, who professed to teach the art of oratory. This gives occasion to speak more at length of the early discipline of the old orators, and of Cicero's course of study as described in the *Brutus*. The old orators (c. 34) learnt their art by constant attendance on some eminent orator, and by actual experience of business: the orators of Messala's time were formed in the schools of Rhetoric, and their powers were developed by exercises on fictitious matters. These however, it is obvious, were only secondary causes. The immediate causes appear to be indicated by Maternus, another speaker in the Dialogue, who attributes the former flourishing condition of eloquence to the political influence which oratory conferred on its possessor under the Republic, and to the party struggles and even the violence that are incident to such a social condition. The allusion to the effect produced by the establishment of the Empire is clear enough in the following words, which refer both to the Imperial and the Republican periods: "Cum mixtis omnibus et moderatore uno carentibus, tantum quisque orator saperet, quantum erranti populo persuaderi poterat."

The memorials of Roman oratory are the speeches of Cicero: but they are only a small portion of the great mass of oratorical literature. The fragments of the Roman orators, from Appius Caecus and M. Porcius Cato to Q. Aurelius Symmachus, have been collected by H. Meyer, Zürich, 1 vol. 8vo, 2nd edit., 1842. [G. L.] [J. B. M.]

ORBUS. [Leges Juliae, p. 45 *a*.]

ORCA. [Sitella.]

ORCHE'SIS (ὄρχησις). [Saltatio.]

ORCHESTRA. [Theatrum.]

ORCI'NUS LIBERTUS. [Manumissio.]

ORCI'NUS SENATOR. [Senatus.]

ORDINA'RIUS JUDEX. [Judex Pedaneus.]

ORDINA'RIUS SERVUS. [Servus.]

ORDO, "properly 'the row,' appears most clearly in its original concrete signification in the banks of oars in a ship, in the tiers of tiles on a roof, or in the benches of a theatre" (Mommsen, *Staatsrecht*, iii. p. 459).

In a military sense the word *ordo* (or its Greek equivalent τάγμα, Polyb. vi. 24, 5) is used of the manipulus of two centuries (see Liv. viii. 8); *ordinem ducere* means "to be a centurion," two of whom held joint command in each maniple (Cic. *Phil.* i. 8, 20; cf. Liv. xlii. 34, 5), and *ordinarius* is said (Festus, *s. v.*) to be equivalent to *manipularis* in the sense of "a man in the ranks." From this military usage is doubtless derived the phrase *in ordinem cogere*, which must originally have meant "to reduce a man to the ranks," but which is generally used of one who treats with contempt the person or office of a magistrate (Liv. xxv. 3, 19; xliii. 16, 9). It is doubtful whether the word *ordo* in Cicero's descriptions of the Servian Comitia Centuriata ("pecunias aevitates ordines partiunto equitum peditumque," "descriptis ordinibus classibus aetatibus," "omnium aetatum ordinumque suffragiis") is to be explained with Mommsen (*Staatsr.* iii. p. 253, n. 1) as meaning "century," or whether it is to be taken (as seems more probable) merely to indicate the two great categories of horse and foot.

In a less technical sense the word is used of any distinct class of persons, as by Cicero (*Verr.* ii. 6, 17), "si cuiquam ordini sive aratorum sive pecuariorum sive mercatorum probatus sit," especially when, as in these cases (*ib.* 55, 137), the class has a common interest and habits of common action. But it seems to have been felt that it was an improper use of the word, when the category so designated had nothing else in common save the single characteristic indicated in its appellation. Cicero, for instance (in the passage last referred to), seems to deny that the term can be correctly applied to the collective censors of the Sicilian states, or again (*Phil.* vi. 5, 14) to all the persons who have ever served as military tribunes. It is possibly on this ground that the word does not appear to signify the Roman magistrates taken collectively, nor the various grades in the senate,—consulares, praetorii, &c.; though, in a more general sense, Livy (xxiii. 23, 4) can use it of the categories of persons chosen into the senate—"ut ordo ordini, non homo homini praelatus videretur." It seems improbable that we can speak of the Roman priests collectively as *ordo sacerdotum*; if these words had habitually borne any such meaning, Festus (*s. v.*) would hardly have used them in an entirely different sense ("the table of precedence among the priests"). The inscription (*C. I. L.* vi. 2010) in which *ordo sacerdotum* occurs merely shows that certain officials of the imperial household formed themselves into a religious guild which they thought fit to call by this name. It is very rare again to find *ordo* designating either of the great classes of "patrician" and "plebeian," though there are exceptions, as where Capito (in Aul. Gell. x. 20) implies it of the patriciate, "quoniam in populo omnis pars civitatis omnesque ejus ordines contineantur, plebs vero ea dicitur in qua gentes civium patriciae non insunt," or where Pliny (*H. N.* xxxiii. § 29) says, "anuli plane tertium ordinem mediumque plebi et patribus inseruere."

On the other hand, the word is constantly applied to the two great dominant classes in the Roman state, the Senate and the Equites, and likewise to the corresponding classes in the municipia, the *ordo decurionum* and the *ordo Augustalium.* At Rome the senate and equites are not unfrequently called *uterque ordo*, just as if no other portion of the state had a claim to this designation. The senate having no fixed meeting-place, a Roman senator did not refer to a speech made therein as being delivered "in this house," but *in hoc ordine* (Sall. *Cat.* 52, 13). While the word *ordo*, as applied to the Roman senate, requires a qualifying pronoun, as *hic* or *noster*, or a qualifying adjective, as *amplissimus*, in the municipia *ordo* written alone indicates the town-council, and is its distinctive appellation as contrasted with the *senatus* of Rome, just as the local *decurio* is distinguished from the Roman "senator" (Mommsen, *Staatsr.* iii. p. 842).

It is more difficult to decide what, exactly, is meant in each passage by the *equester ordo.* It is undoubtedly used in some places of the eighteen centuries of Knights, as by Cicero in *Phil.* vi. 5, 13, "altera ab equitibus Romanis equo publico, qui item adscribunt 'patrono.' Quem unquam iste ordo patronum adoptavit?" Under the Principate this is its common meaning; it is the only sense which will serve in any passage where we find the *ordo* taking action as a formal and legally constituted corporation (*e.g.* Tac. *Ann.* ii. 83, 5). If Mommsen be correct in his supposition that the right of sitting on juries was confined to these *equites equo publico* [see EQUITES], then the phrase is very frequently applied to them in republican times, for the jury-courts are repeatedly said to have been in the possession of the *equester ordo.* This interpretation is, however, more than doubtful. In very many cases, on the other hand, *ordo* is used of the *equites Romani* in the wider sense; of all, that is, who not being senators possessed the qualifying property of 400,000 H. S., and were therefore eligible for the eighteen centuries. We know from Horace (*Ep.* i. 1, 62) and from Juvenal (iii. 159) that it was a pecuniary qualification which gave a man the right, under Roscius Otho's law, to sit in the front rows of the theatre: but Cicero says of Roscius (*Mur.* 19, 40), "equestri ordini restituit non solum dignitatem sed etiam voluptatem." The wider sense is also far more probable in passages where Cicero speaks of the policy or temper of the order, as (*Verr.* iii. 41, 94) "quum aliquid contra utilitatem ejus ordinis fecisset," and again, "qui unum equitem Romanum contumelia dignum putasset, ab universo ordine malo dignus judicaretur." Quintus Cicero (*de Pet. Cons.* 8), speaking of the young men who composed the equestrian centuries, distinguishes them from the *ordo* in its wider sense—"quod equester ordo tuus est, sequentur illi auctoritatem ordinis." (See against this Mommsen, *Staatsrecht*, iii. pp. 484 and 497.)

The other classes to which the term is applicable can be ascertained only by observing the practice in books and in inscriptions. The expression is very frequently used of the *tribuni aerarii*, of the *libertini* (e.g. in Cic. *Verr.* i. 47, 124, and repeatedly in Livy) and of the *publicani* (e.g. Liv. xxv. 3, 12). We have likewise occasionally mentioned an *ordo lictorum* and an *ordo scribarum* in Rome (see ref. in Mommsen, *Staatsr.* i. p. 342, n. 4), and in the municipia an *ordo Seviralium* (Orelli, *Inscr.* 2229). In later times men of any calling who choose to unite themselves into a guild seem to adopt this appellation. Two such guilds are described (*C. I. L.* xiv. 251 and 252) with different adjectives of uncertain meaning (*tabulariorum* and *pleromariorum*), but both as "ordo corporatorum lenunculariorum auxiliarium (lighter-men) Ostiensium." In *C. I. L.* xiv. 2408 we have an *ordo adlectorum* at Bovillae, referring apparently to the *adlecti scaenae*, who seem to have been "licensed" or "certificated" actors. An *ordo haruspicum* is mentioned in *C. I. L.* vi. 2161 and 2162: from the first of these we should infer that the order was not strictly localised; for while the donees appear to be at Rome (where the tablet was found), the donor is not only *haruspex Augustorum* and *magister publicus haruspicum*, but likewise Pontifex and Dictator of Alba.

It remains to notice some peculiar uses of the words *extra ordinem.* "Praeturae extra ordinem" are said by Tacitus (*Ann.* ii. 32, 1) to have been granted to certain informers. This may mean that extra praetorships were specially invented to suit them, or more probably (as Nipperdy supposes) that these persons were allowed to anticipate their regular turn for holding that office. In the Lex de Imperio Vespasiani we find that the recommendation of candidates by the emperor is made effective, by the privilege granted them that "eorum extra ordinem ratio habeatur;" that is to say, they are not to take their chance among the general list of candidates, but to have their case considered specially and first of all [see NOMINATIO]. In criminal procedure, a trial which was to have precedence of all others is said to be taken *extra ordinem*, and the accused in such a case is *extraordinarius reus* (Cic. *ad Fam.* viii. 8, 1). In civil procedure, *judicia ordinaria* are those tried under the formulary system, where the points at issue are referred to a single juror subject to instructions given him by the praetor. When the praetor himself decides without this reference to a judex, we have a *cognitio extra ordinem* (Tac. *Ann.* xiii. 51); and when (as frequently happened under the principate) such suits became too numerous for the personal attention of the magistrate, the substitute to whom he delegated the task without binding him down by a formula was called *judex extra ordinem datus.* (See Mommsen, *Staatsrecht*, ii.^{3} p. 980, n. 1.) [J. L. S. D.]

O'RGANON. [Machina.]

O'RGIA. [Mysteria.]

ORGYI'A (ὀργυιά), a Greek measure of length, derived from the human body, was the distance from extremity to extremity of the outstretched arms, whence the name from ὀρέγω. (Xen. *Mem.* ii. 3, 19; Pollux, ii. 158.) It was = 6 πόδες or 4 πήχεις, and was $\frac{1}{100}$ of the stadium (Herod. ii. 149). It may be expressed nearly enough in English by the word *fathom*. (Compare Mensura and the Tables.) [P. S.]

ORICHAL'CUM (ὀρείχαλκος). During the first three centuries of the Roman Empire, and probably as early as the second century B.C., this word appears to have been used to indicate brass—*i.e.* an artificial alloy of copper and zinc. The chief extant objects made of this metallic compound are the *sestertii* and *dupondii* (sometimes known by coin-collectors as "first" and "second" brass coins) of Augustus and the earlier emperors. Of coins of this class Dr. Percy (*Metallurgy*, i. 521–523) quotes the following analyses:—(i.) Sestertius of Nero (Rome): Copper, 81·07; zinc, 17·81. (ii.) Dupondius of Vespasian (Rome): Copper, 81·97; zinc, 18·68. (iii.) Titus, brass coin (Rome): Copper, 83·04; zinc, 15·84. (iv.) Trajan (Greek Imperial coin of Caria): Copper, 77·590; zinc, 20·700. (v.) Hadrian, brass coin: Copper, 85·67; zinc, 10·85. (vi.) Caracalla (Greek Imperial, large size): Copper, 74·24; zinc, 14·42. Most of the above coins also contain small quantities of tin, lead, and iron. (Cp. Mommsen, *Monn. rom.* iii. 37, 47; Lenormant, *La Monnaie dans l'Ant.* i. p. 202; Plin. *H. N.* xxxiv. 2, 4.) The coins of the Roman Republic—other than those in gold and silver—are, on the other hand, not of brass, but mainly an alloy of copper and tin, *i.e.* bronze.

Orichalcum, though not a costly metal, had the appearance of gold (Cic. *de Off.* iii. 23, 92); hence the mistaken orthography *aurichalcum* and the derivation from *aurum*, which are sometimes found (cp. Fest. 9, 4; Isid. xvi. 20, 3). Orichalcum is the Greek ὀρείχαλκος, apparently "copper found in the mountains." The word ὀρείχαλκος first occurs in [Hom.] *Hymn. in Ven.* 9, where earrings of it are mentioned. It is also found in Hesiod, *Sc. Herc.* 122 ("greaves"); Plat. *Critias*, p. 114 E, p. 116 B (described as a metal no longer existent);—Ps.-Aristot. *Mir. ausc.* 58, p. 834 B, 22; 49, p. 834 A, 1; 62, p. 835 A, 9;—Callim. *Lavacr. Pall.* 19 ("mirror"); Apoll. Rhod. 971–978, and Schol.; Strabo, xiii. p. 610; Anon. *Peripl. m. Eryth.* 6 (Müller, *Geog. Gr. Min.* i. p. 262); Paus. ii. 37, 3; Hesychius, Photius, Suidas, *s. v.* ὀρείχαλκος; *C. I. G.* vol. i. p. 286; 'Αθήναιον (periodical), vii. (1879), p. 87, No. 2, line 24 f. (στλεγγὶς ὀρειχαλκίνη). For a discussion of the meaning of ὀρείχαλκος in individual passages, the reader must be referred to the commentaries and to the pages of Rossignol and Blümner. Generally, it may be said that by ὀρείχαλκος the Greek writers intended a bright metal resembling gold in appearance, and one of which the exact nature was uncertain or unknown to them. Probably in some instances a mixture (whether artificial or natural cannot be determined) of copper and zinc (*i.e.* brass) was indicated by the word.

In the Latin writers, from Plautus onwards, the word *orichalcum* is frequently found; generally, it would seem, with the meaning of brass. The chief passages are as follows:—Plaut. *Curc.* i. 3, 46 (202); *Mil.* iii. 1, 69 (660); *Pseud.* ii. 3, 22 (688); Cic. *de Off.* iii. 23, 92 ("Si quis aurum vendens, orichalcum se putet vendere"); Verg. *Aen.* xii. 87 ("Auro squalentem alboque orichalco Circumdat humeris"). Blümner supposes this "white orichalcum" to have been an alloy, like prince's metal, and compares the χαλκὸς λευκὸς of Theoph. *Fr.* 4, 71; *Etym. M.* p. 630, 51; Tzetz. *ad* Hes. *Scut.* 122; Hor. *A. P.* 202 ("Tibia non ut nunc orichalco vincta"); Plin. *H. N.* xxxvii. § 126; Stat. *Theb.* x. 660 (arms of orichalcum); Suet. *Vitell.* 5 ("Proque auro et argentum stannum et aurichalcum supposuisse"), &c.

(For copious references to ancient and modern writers on the subject, see Rossignol, *Les Métaux dans l'Antiquité*, Paris, 1863; and Blümner, *Technologie*, iv. p. 91; p. 192, note 4; and p. 193 ff.) [W——k W——h.]

ORIGINA'RII. [Coloni, Vol. I. p. 472 *a.*]

ORNAME'NTA TRIUMPHA'LIA. [Triumphus.]

ORNA'TRIX. [Coma.]

ORNI'THON. [Agricultura, Vol. I. p. 80.]

O'RPHICA. Whatever is to be said in any summary of the Orphic doctrines must start from Lobeck's great section on the subject in his *Aglaophamus* (233–1104). Like the Phanes of the Orphic legend, he must be absorbed by any one who coming after him essays, however feebly and imperfectly, to play the part of the ordering Zeus.

1. *Orpheus.*—In early times, the difference between prophet or poet and priest hardly existed, so that it is not surprising that the Thracian Orpheus, who is so well known as a poet, should appear also as a priest. An important passage of Aristophanes (*Ran.* 1032) says that what Orpheus gave the Greeks towards civilisation was τελετάς φόνων τ' ἀπέχεσθαι. But far more in later times came to be attributed to him; viz. the invention of writing, music, medical art, oracles, heroic versification, and other things (Lobeck, 233–243). But it was chiefly as the founder of a mystic brotherhood that he was known. The first mention of him is in Ibycus, 530 B.C. (Bergk, iii. p. 241); but already to Pindar (*Pyth.* 177) he was of older date than Homer, and from the position assigned to him in the passage of Aristophanes cited above the comic poet would seem to have held the same opinion; indeed this belief was so strong that Herodotus (ii. 53) felt called upon to express his entire dissent from it. We have shown in Eleusinia that, during the seventh and sixth centuries B.C., there was a great influx into Greece of Thracian and Oriental worships (cf. Lobeck, 304 ff.), consisting of purificatory and mystic rites—which were all quite foreign to the ordinary Hellenic ideas. For example, the ancient Scholiasts (see Schol. Venet. on *Il.* xi. 680) did not fail to notice that there was no trace of purification for murder in Homer. The earliest instance of such is in the *Aethiopis* of Arctinus, wherein Ulysses purifies Achilles for the murder of Thersites (cf. Grote, i. 25). Now it was round the name of Orpheus that these Thracian and Oriental ideas clustered; he was held to be the founder of the sect, and as time

went on and as it grew in importance, he came to be considered the actual author of the various works written by the members of the sect,—in fact, "eine litterarische Collectivperson," as Preller puts it; and so Aristotle (Cic. *N. D.* i. 38, 107) and a grammarian Dionysius (Suid. *s. v.* Ὀρφεύς) could boldly declare that Orpheus never existed at all; and again others could say that there were two, three, or even six Orpheuses (Lobeck, 351–357). But the sect continued to exist, and did not fail to make its mark in classical Greek times; it continued during the Alexandrine era on into Roman times, gradually gathering round it all sorts of accretions, superstitions without number, and every kind of nonsense in its speculations, which was, however, allegorised away into metaphysical conceptions, till in the third and fourth centuries A.D. it was the Orphic theology and the Orphic life that made the last intellectual struggle against the victorious doctrines of Christianity. It was a recognised theory that all the philosophers had derived their systems from the Orphic school, and even at the Renaissance there were the most extravagant views held of this fount of original wisdom (Lobeck, 407–410). Let us see then, firstly, what the Orphics practised.

2. *The Orphic Life.*—That this was the regular expression is plain from Plato (*Legg.* vi. 782 D). It enjoined abstinence from certain foods,—meat, fish, beans (*Ἶσον τοι κυάμους τε φαγεῖν κεφαλάς τε τοκήων*, as the precept ran)—possibly on account of beans being used at funerals, and on the same ground the votaries appear to have abstained from eggs (Lobeck, 254, 477); they used to wear white garments (Eur. *Frag. Cretens.*—"luculenta vitae Orphicae descriptio," *ib.* 622), but were not allowed to use linen clothes either during religious worship nor as a winding sheet for the corpse—all this on account of certain religious reasons set forth in the Orphic books (cf. Herod. ii. 81). No bloody sacrifices were allowed (Plat. *l. c.*; Plut. *Conviv. Sept. Sap.* 159, 20), for transmigration of souls was a cardinal feature of their doctrine. They believed in the original sin of man, sprung as he was from the ashes of the Titans, and that the human soul passed from one body to another—that is, from one charnel-house to another (*σῶμα, σῆμα*)—till the ingrained taint was washed out and the purified soul was translated to the stars. We can hardly help feeling a connexion between this doctrine and the Buddhist passage from Sansara to Nirvana. Besides, there was specially the taint of guilt in certain families (cf. Plat. *Phaedr.* 244 E); purifications were absolutely necessary for such (Diog. Laert. viii. 33), and purifications according to Orphic rites of course alone availed. Here came the scandal in the eyes of the ordinary Greeks, especially as a certain class of religious beggars, called Orpheotelestae or Metragyrtae or some such title bespeaking their foreign ritual, went about with an ass carrying their sacred utensils (*ὄνος ἄγων μυστήρια*, Aristoph. *Ran.* 159), with great strings of books (*βίβλων ὁρμαθόν*), promising expiations from crimes both for those alive and for the dead by "certain sacrifices and pleasurable amusements," and otherwise trading on the superstitious feelings of the community (Plat. *Rep.* ii. 364 B). Paradise was open to the true votary if he performed the true ceremonial, and a precious paradise it sometimes was—perpetual drunkenness (*ib.* 363 C; Plat. *Comp. Cimon. et Lucull.* 1; Lobeck, 807). But there was no lack of votaries among the superstitious: the *δεισιδαίμων* of Theophrastus (xvi.) goes with wife and child once a month to an Orpheotelestes. The Phrygian worship of Sabazius, too, was full of purifications and superstitious magic; it was celebrated with great wildness both of grief and horror, and thus, highly ecstatic in its nature, was much affected by women and the lower orders (Aristoph. *Lys.* 388)—in all which points it is very similar to Orphic rites (Lobeck, 695). Priestesses appear to have played an important part (cf. Menand. *Frag.* 530, 21, Kock); they were called *περιμακτρίαι* or *ἐγχυτριστρίαι* (Schol. Aristoph. *Vesp.* 289). A priestess called Ninus was put to death for magic (Schol. on Dem. *Fals. Leg.* 431, § 281); and Aeschines's mother, Glaucothea, officiated at most vulgar Sabazian ceremonies, according to Demosthenes (*de Coron.* 313, § 259; Lobeck, 646 ff., 652 ff.). Then, too, there were the Corybantes, who were supposed to cause madness (Eur. *Hipp.* 142), which was cured by exorcisings and purifications according to the rites of these divinities (Schol. on Aristoph. *Vesp.* 119), rites which consisted of elaborate ceremonies, with ecstatic dances and clashing of cymbals round the patient, who sat enthroned (*θρόνωσις, θρονισμός*) in the midst of those officiating (Plat. *Euthyd.* 277 E; *Legg.* vii. 790, 791; Lobeck, 116, 640 ff.). The anxious ceremonial of the genuine Orphics, their abstinences and fastings, their scrupulousness about clothes and so forth, made them appear all of a piece with these pettifogging impostors, and so utterly contemptible in the eyes of the strong-minded Athenian man of the world (cf. the speech of Theseus in Eur. *Hipp.* 952). This genuine Orphic life, however, which was practised by an ascetic religious brotherhood, must not be charged with all the excesses of the impostors who traded on its name, nor with the calumnies which the ordinary pleasure-loving Greek was only too ready to fling against it. It does not appear to have made any mark that we can appreciate till the Pythagorean brotherhood broke up in Italy. This was an ascetic religious society, very similar in some points to the Orphics; and accordingly the scattered Pythagoreans joined naturally to the Orphics, and introduced into their doctrines the more highly-developed speculative principles which their master had taught them: and we take it that it was this influx of Pythagorean members that gave the most important impetus to the development of Orphic doctrine and increased prominence to the Orphic life. To the Orphic speculations we now turn.

3. *The Orphic Authors generally.*—Before the Pythagorean league was broken up, during that period at Athens after the murder of Cylon when the Athenian people were a prey to religious terrors and recourse had to be taken to various foreign methods of purification, it was only natural that the Orphic religion should appear. Onomacritus, who lived at the court of Pisistratus, was a *χρησμολόγος* and *διαθέτης* (arranger and editor) of the Oracles of Musaeus (Herod. vii. 6). He performed the same office for the works attributed to Orpheus (Tatian,

adv. Graecos, xli. 275, p. 885 Migne; Clem. Alex. *Strom.* i. 332, Pott), but at the same time he forged several works and attributed them to the names of Orpheus and Musaeus, which must have been venerable at the time (Herod. *l. c.*; Plut. *Pyth. Resp.* 25; Paus. i. 22, 7; Suidas, *s. v.* Ὀρφεύς). So Aristotle always speaks of τὰ καλούμενα Ὀρφέως ἔπη, τὰ Ὀρφικὰ καλούμενα ἔπη, and such like (Lobeck, 339). A celebrated passage in Pausanias (viii. 37, 5) shows that we are to attribute to Onomacritus the introduction of the Zagreus legend (see below, § 6). Pherecydes of Athens (Suid. *s. v.*) is also credited with the same functions as Onomacritus. Then, after the Pythagorean influence became predominant, we have writings from men called Cercops, Brontinus, Zopyrus, Persinus, from a woman Arignote, and many other Pythagoreans. The Orphic poems gained considerable popularity and were recited by the rhapsodists at the public games (Plat. *Ion*, 536 B), but it was specially by the priestly family of the Lycomidae that the Orphic *ritual* was used (Paus. ix. 27, 2; 30, 5); they introduced Orphic speculations and rites into the Eleusinian worship [ELEUSINIA]. The Peripatetic Eudemus did good service in collecting and editing an Orphic theogony, and we hear of one Epigenes occupying himself with the grammar and criticism of the Orphic poems (Lobeck, 340). For the long succession of writers who busied themselves with Orphic treatises, it will be sufficient to refer to Lobeck, 341–347, and to point out the goodly collection of them there was in Neo-Platonic times. Then we find Charax, Syrianus, and Hierocles occupied chiefly in harmonising Orpheus, Pythagoras, and Plato, and one Asclepiades actually writing a Harmony of All the Theologies (τῶν θεολογιῶν ἀπασῶν τὴν συμφωνίαν), though this was mere child's play compared with later Byzantine efforts (Lobeck, 346). But we must come to the actual writings attributed to Orpheus.

4. *The Orphic Literature specially.*—Preller (in Pauly, iv. 999) divides the Orphic literature into (1) Theological, (2) Liturgical, (3) Theurgical—an excellent division, which introduces order into the chaos of the catalogues given by Clement (*Strom.* i. 397) and Suidas (*s. v.* Ὀρφεύς). This classification we shall follow, giving up any pretence, except in a very few cases, of attempting to discover who were the actual authors of the separate works.

i. *Theological.*—(1) *Theogonia* or *Theologia* (see § 5). (2) Κρατῆρες (there were two works, a greater Crater and a less)—a title taken from the two mixings in Plato wherein the Deity constructed the universal soul and the individual souls, according to Lobeck, p. 736, though his reasons are not very plain. The fragments of the work only speak of the Unity of the Gods (*ib.* 731, 735). (3) Φυσικά, attributed to both Brontinus and Onomacritus, treats of how the individual soul is breathed into or inhaled by the body, after having been carried thereto by the winds (cf. τὴν ψυχὴν ἐκ τοῦ ὅλου εἰσιέναι ἀναπνεόντων, φερομένην ὑπὸ τῶν ἀνέμων, Aristot. *de Anim.* i. 5, 13). The guardians of the winds, or the winds themselves, are called Tritopatores, whatever be the true interpretation of that word, perhaps that they are our ancestors (τρίτοι πάτερες, *proavi* in the general sense of "ancestors"): for further, see Lobeck, 753–773, especially 763. Here, too, may have come in the wide-spread theory of the transmigration of souls, of the circle of births which it should be our aim to get free from: κύκλου τ' αὖ λῆξαι καὶ ἀναπνεῦσαι κακότητος (*ib.* 800). (4) Ἱεροὶ λόγοι—besides the Theogony, which is often so styled (*ib.* 508), there were certain treatises under this name on the mystic import of numbers in Pythagorean style. Pythagoras wrote ἱεροὶ λόγοι in prose on this subject, but he acknowledges his obligations to Orpheus (*ib.* 717, 725, 726). (5) Τριαγμὸς may be mentioned here, a work on the number Three, in prose, and therefore not written by an Orphic, but by Ion the tragedian, or perhaps Epigenes (*ib.* 388). (6) Κατάβασις εἰς Ἀΐδου—concerning the descent of Orpheus to Hades to recover Eurydice, ascribed to Prodicus. It seems to be older than Plat. *Symp.* 179 D; Eurip. *Med.* 557. The detailed description of Hades attributed to Orpheus doubtless came in here (Diod. i. 96; Lobeck, 811, 812). (7) Διαθῆκαι (cf. Justin, *Cohort.* 15) was the testament of Orpheus to Musaeus. It is a sort of palinode in that he reduces the 360 gods he had formerly allowed back to *one* god (Lobeck, 364). See an extensive fragment on this subject in Hermann's *Orphica*, p. 447, and much the same poem, only lengthened, on p. 450 ff. It was written by Alexandrine Jews, as the plain allusions to Abraham and Moses show. On the monotheism of the mysteries, see, besides Lobeck, 460–5, some remarks in MYSTERIA. (8) Δίκτυον appears to have had reference to the formation of the human frame, which is compared to the weaving of a net (Aristot. *de Generat. Anim.* ii. 1 = 734 a. 20, Lobeck, 381). (9) Κτίσις κόσμου: geographical. (10) Πέπλος, attributed to Zopyrus or Brontinus (Suid. *s. v.* Ὀρφεύς), seems to have been a treatise on cosmogony, πέπλος being the heavens (cf. Psalm civ. 2, "who stretchest out the heavens like a curtain;" also Pherecydes, Ζᾶς ποιέει φᾶρος μέγα τε καὶ καλὸν καὶ ἐν αὐτῷ ποικίλλει γᾶν τε καὶ Ὤγηνον καὶ Ὠγήνου δώματα). (11) περὶ σεισμῶν, also attributed to Hermes Trismegistus; but as a portion of a verse is preserved, it is best to give it to an Orphic source, as Hermes wrote in prose. (12) Ἀργοναυτικὰ (still extant) was written in late Christian times, and was an effort to dress up Greek mythology on Orphic principles. (13) Τελεταί, composed by Onomacritus (Suidas, *s. v.* Ὀρφεύς). Of its contents we know nothing for certain. Schuster (*De veteris Orphicae Theogoniae indole atque origine*, p. 54) thinks that it was probably in this work that Onomacritus published the Zagreus legend.

ii. *Liturgical.*—(1) Ὕμνοι to the gods (cf. Paus. ix. 27, 2; 30, 5). They were φυσικοὶ ὕμνοι, τίς ἡ τοῦ Ἀπόλλωνος φύσις, τίς ἡ τοῦ Διὸς παρατιθέμενοι, as Menander, *de Encom.* ii. 30, says; and he justly considers them liable to parody (cf. Lobeck, 390, 745 f.), and they were parodied by the New Comedy. In one of them the Sun is said to be father of everything (Macrob. *Sat.* i. 23, 22). They were composed by one man, in late Christian times, who had some knowledge of the old poets and of mystic theology. The Neo-Platonists do not use them, though they might have, to support their θεοκρασία and extensive allegorising. These hymns are first mentioned in the 12th cent A.D. The elaborate proof of these conclusions by Lobeck is one of the finest arguments in the *Aglaophamus* (389–410). (2) *Θρονισμοὶ μητρῷοι καὶ βακχικά*—prayers and hymns sung at the *θρόνωσις* of votaries in the worship of Cybele and Bacchus: similar to those used in the worship of the Corybantes, § 2. (3) *Ὅρκοι.* A few lines of this poem referring to the Mosaic cosmogony are found in Justin, but they are also attributed to Hermes Trismegistus (Lobeck, 737, 738). (4) *Σωτήρια*—prayers and thanksgivings for safety, attributed to authors called Timocles or Perginus (*ib.* 383). (5) *Ὀνομαστικά,* lists of names of the gods, sometimes with interpretation, possibly like the lists in the *Κρατήρ* (*ib.* 731), or the various names of one and the same god, as in Ov. *Met.* iv. 11 ff. (6) *Νεοτευκτικά,* forms of service for the dedication of temples (*ib.* 375). (7) *Θυηπολικόν.* This was perhaps one of the kind of books the Orphic impostors used to carry about (§ 2).

iii. *Theurgical.* (1) *Ἔργα καὶ ἡμέραι.* These were really separate works at first. That called *ἔργα* is also called *περὶ γεωργίας,* and Lobeck (414–5) quotes some verses from it. This poem has been supposed by Tyrwhitt to have been the same as the *περὶ καταρχῶν* of Maximus, the preceptor of Julian, but the fact is Maximus plagiarised from it (*ib.* 418–424). To it was added an astrological poem called *Δωδεκαετηρίδες.* The *ἡμέραι* is also called *ἐφημερίδες,* a kind of superstitious astrological diary (cf. Juv. vi. 569; Plin. *H. N.* xxix. § 9), treating of what days were lucky and what unlucky, concerning which Lobeck collects a vast mass of learning (428–434), and also of the days on which it was considered that the gods were born. (2) *περὶ φυτῶν, βοτανῶν, φαρμάκων*—concerning the healing properties of certain plants, animals and drugs, which degenerated into absurd magic. We also hear of books written by Orpheus called *περὶ ἐπῳδικῶν καὶ μαγικῶν,* and such like—Orpheus the poet and minstrel, who stayed rivers by his song, and with his lute made trees and the mountain tops that freeze bow themselves when he did sing, being transformed into Orpheus the magician (*ib.* 751–2). (3) *Λιθικά,* on the magical properties of stones. This poem is still extant (Hermann's *Orphica*, pp. 359–442). It was not known to Proculus. Suidas (*s. v.* *Ὀρφεύς*) says that a poem on this subject, called *Ὀγδοηκοντάλιθος,* was composed by Onomacritus, and included in his *Τελεταί,* and this is probable enough, as the virtue of rings is a very old superstition (cf. the story of Gyges in Plato; yet see Lobeck, 377). (4) *Ἱεροστολιστικὰ* and *Καταζωστικά,* concerning the dress and especially the girdles of the initiates and of the statues. Purple bands round the waist were essential in the Cabirian worship [CABIRIA]. Some verses are quoted in Macrob. *Sat.* i. 18, 22, describing the dress as having sun and stars represented on it, very much like the dress we should associate with a magician. Also some verses in Eusebius and Nicephorus (Lobeck, 728 ff.), concerning the special symbols or insignia to be put on statues; *e.g.* lizards round the statue of Hecate, just as the bow was the symbol of Apollo, and the winged sandals of Hermes. Such a statue was said to be *συμβολικῶς ἱδρυμένον.* For superstition in this direction, see Lobeck *l. c.* (5) *Ἀμνοσκοπία* (or *ἀνεμοσκοπία*), *ᾠοσκοπικά,* and *ᾠοθυτικὰ* treated, as their names indicate, of various kinds of divination (*ib.* 410).

5. *The Orphic Theogony.*—The multifarious theogonies which existed among the Greeks are very confusing, and their history has yet to be written, especially in the light of an extensive knowledge of Oriental literature. The philosophical value of these theogonies is that they, at any rate, asked the question of cosmogony. The not very definite evidences of an actual work, called *Θεογονία,* attributed to Orpheus, is given by Lobeck (367, 368). Under what are called the Orphic Theogonies, we have four, which must be mentioned separately.

(1) That systematised under the name of Eudemus, the pupil of Aristotle. It began with Night (*ἀπὸ δὲ τῆς Νυκτὸς ἐποιήσατο τὴν ἀρχήν,* says Damascius, *ap.* Lobeck, 488). Further than this we cannot go with certainty. We can neither with Zeller (*Die Philosophie der Griechen*, i. 99, Eng. trans.) infer from Plato (*Tim.* 40 D) that, according to Eudemus, "beside Night are placed Earth and Sky, both of which apparently proceeded from Night, as with Hesiod the Earth came forth from Chaos; Night being here substituted for Chaos. The children of Uranus and Gaea are Oceanus and Tethys"—this would be to beg the question that Plato used the Eudemian theogony. Nor suppose with Schuster (*op. cit.* p. 16 ff.) that the system of Eudemus which posits *one* first principle (cf. Aristot. *Met.* xii. 6, *οἱ θεολόγοι οἱ ἐκ νυκτὸς γεννῶντες*) is identical with that referred to by Lydus (*de Mens.* ii. 7) which posits *three*—viz. Night, Earth, Sky; however great may be the resemblance (cf. Lobeck, 494). This is well shown by Otto Kern, *De Orphei Epimenidis, Pherecydis theogoniis quaestiones criticae*, pp. 53–55).

(2) That given by Apollonius Rhodius (*Argon.* i. 494 ff.), where Orpheus is introduced as singing how Earth, Sky, and Sea were all commingled together in the beginning, but afterwards separated "by reason of destructive Strife" (*νείκεος ἐξ ὀλοοῖο*); how sun, moon, and stars got their fixed courses in heaven; how mountains arose and sounding rivers with their nymphs, and how all creeping things were produced. And in those primeval days did Ophion and Eurynome rule in heaven, till they were cast into the ocean by Kronos and Rhea, who ruled for a time over the happy gods the Titans (*μακάρεσσι θεοῖς Τιτῆσιν*), while Zeus was still a child and did not wield the thunderbolt. The first part of this cosmogony is unquestionably derived from Empedocles: the Sphairos being divided by Neikos is a cardinal point of his doctrine. But to whom the story about the rule of Ophion and Eurynome is due is not yet decided. Preller (*Ausgewählte Aufsätze*, ed. Köhler, p. 358) says Pherecydes, but this is most probably not the case: see Kern (*op. cit.* pp. 57–61, and chap. 3 on Pherecydes). Preller (*l. c.*) quotes a number of passages where allusion is made to this dynasty (Lycophr. *Alex.* 1192, and Tzetzes *ad loc.*; Schol. on Aristoph. *Nub.* 247, on Aesch. *Prom. Vinct.* 955; Lucian, *Tragopod.* 99 ff.). In Claud. *Rapt. Proserp.* iii. 348, Ophion is a giant.

(3) *ἡ κατὰ τὸν Ἱερώνυμον φερομένη καὶ Ἑλλάνικον, εἴπερ μὴ καὶ ὁ αὐτός ἐστιν* (Damasc. *op.*

Lobeck, 484). Zeller (*op. cit.* p. 103) shows that this Hieronymus was probably the Egyptian who was author of a Phoenician Antiquities (ἀρχαιολογία φοινικική), and mentioned by Josephus (*Ant.* i. 3, 6, 9), not the Peripatetic philosopher; and this is rendered almost certain from the fact that in much (*e.g.* the notion of water and primitive slime at the beginning) this theogony agrees with the Phoenician cosmogonies (Schuster, *op. cit.* 90–98). He it was who probably attributed to Hellanicus a work of his own called Αἰγυπτιακά (Epictet. *Diss.* ii. 19, 14)—for there were many books on foreign nations which were falsely ascribed to Hellanicus—and both in the Αἰγυπτιακὰ and in the Phoenician Antiquities he may have expressed the same view of the Orphic theogony. This view posits water and primitive slime, from which came Earth by solidification. From these two, Earth and Water, comes a dragon with the heads of a bull and a lion, and between the two the visage of a god, and he had upon his shoulders wings, and his name was Never-Aging Time (Χρόνος ἀγήραος), and the same was Heracles. And with him did consort Necessity, and she was none other than the incorporeal Adrastea, who is spread abroad throughout all space and reacheth to the ends of the world, and she is both male and female. Then did Time generate a gigantic egg, and filled by the might of its generator it burst in twain, and its top was Heaven and its bottom Earth (Lobeck, 487). Again, there is mention of another god, though it is not plain whether he belongs to this theogony or not (*ib.* 486), and he was incorporeal, yet he had golden wings on his shoulders, and to his flanks were united heads of bulls, and on his head was a mighty dragon, like unto the manifold forms of beasts, and his name was Protogonos or Zeus or Pan, for he arranged the whole world. Not very different to this is—

(4) The theogony called that of *the Rhapsodists*, which was the one ordinarily in vogue, and which was regarded by both Christians and Neo-Platonists as the genuine Orphic theogony. This is important when we remember that they considered Orpheus as the real author of all the Greek mythologies and disregarded Hesiod (Lobeck, 466). Orpheus was supposed to have learned it from the Sun. According to it, Chronus is the first of all, and he produces Aether and Chaos, by the agency of which two he produces further a silver egg, from which bursts a god called Phanes or Metis or Ericapaeus, also called Protogonos and the cosmogonic Eros. This god contains the germs of everything, so is male and female, has the heads of numerous animals, and so forth. The upper part of the egg becomes Heaven and the lower Earth. Phanes then proceeds to create the Sun of the natural world, and afterwards the Moon with its mountains and cities and palaces (Lobeck, 499). From himself Phanes produces Night, and afterwards a horrid monster called Echidna: from Night Phanes begets Uranus and Gaea. Then follow the generations of these two, pretty much the same as in Hesiod,—the Parcae, Centimani, Cyclopes, Titans, till Cronus dethrones Uranus and later Zeus dethrones Cronus. Then it is that Zeus devours Phanes, and so becomes the sum of all things, but only that he may once more reproduce them in accordance with the dictates of Justice (Δίκη). Then follow accounts of a few of the other gods—Apollo, Athena, Aphrodite, and others, though often with considerable blending of the gods together,—*e.g.* Demeter and Rhea; Persephone, Artemis, and Hecate. But the chief story in this part of the theogony is that of Zagreus, which we reserve for the next section.

It would be trifling to inquire whence came the very obvious idea of the world-egg, whether it was derived from the Semites, whether it was an old Aryan idea or was arrived at independently by the Greeks (Lobeck, 476). As to the derivation of the name Ericapaeus, *quot etymologici tot sententiae.* Delitzsch says it is a Semitic name, *Arik Anpen* (אֲרִיךְ אַנְפִּין), "long-visaged," the first of the ten Sephiroth; so too Schelling, that he is *Erek Appayim* (אֶרֶךְ אַפַּיִם), "long-suffering." Zoega, from Egyptian roots *eri* and *keb*, and that it means "the multiplier;" for Malela interprets him as ζωοδότηρ. Göttling thinks of ἔαρ and κάπυς, the breath of vernal winds; Visconti, of ἐρι and κάπτειν, the fierce devourer (though it is he who is devoured); while Kern (p. 22) with great complacency assures us that he was so called because he was devoured in the morning, just as Eos is called ἠριγένεια, because she is early born. Here again, though for other reasons, we think *quaerere ludicrum esse.* Phanes appears to have been interpreted by the Platonists as the Sun of the intelligible world, creator of the Sun of the natural world, and so the name of Dionysus is given to both (Lobeck, 499). We pass on to Night, who is the Orphic Night, a venerable goddess, the nurse of Cronus, a prophetess, the avenger of the crimes committed by Cronus, the guide of Zeus in the ordering of the world, she who prompts him to devour Phanes, &c.—quite different from the mere personification of the time of darkness in Hesiod. This is well developed by Kern, pp. 17–19, as also his proof (29–31), quite certain, that Echidna was not, as Lobeck supposed (493), another name of the Orphic Night, who was not a monstrous divinity at all, and had no likeness to a serpent. The swallowing of Phanes is the great feature of the Orphic theogony: it leads to the numerous pantheistic hymns in the Orphic collection (cf. Lobeck, 519 ff.).

The lateness of the theogony "according to Hieronymus" is proved by Zeller (*op. cit.* p. 101) with cogent arguments. It must be later than the syncretism of the Stoics. The symbolism so highly developed, the abstract ideas (Time, Necessity), the distinction of corporeal and incorporeal, the spreading of Adrastea through the world, like that of the Platonic world-soul, the pantheistic conception of Zeus—all point to a late origin: and Kern urges that it is much later than the theogony of the Rhapsodists and was borrowed from them. The latter is comparatively plain and simple, the former a medley of philosophical and theological ideas, collected from all sides and run pell-mell together. Why has Chronus-Heracles his multiform attributes?—he does but produce an egg (27): if Earth is solidified from mud, why is the egg introduced at all (28), and why is a regress made from Earth to Chaos (32)? and why is Adrastea, who does nothing, given as a consort to Chronus?

The simpler legend, Kern says (28), is obviously the more ancient. But we cannot follow Lobeck (611) and Kern (35 ff.) in supposing that the theogony of the Rhapsodists was known to Plato, and is to be referred to the age of Onomacritus. Zeller's arguments (*op. cit.* 105–108) to prove that this theogony is later than the syncretists appear to us to have great weight. He urges against Lobeck: (*a*) That the first definite evidence of this theogony appears in the Pseudo-Aristotelian treatise *De Mundo*, c. 7; Plato, *Legg.* iv. 715 E, proves nothing [see MYSTERIA]. (*b*) Plato in *Symp.* 178 B does not mention Eros-Phanes of Orpheus as proof of the antiquity of Eros. (*c*) The Aristotelian evidence, *Met.* xiv. 4 (*Οἱ δὲ ποιηταὶ οἱ ἀρχαῖοι ταύτῃ ὁμοίως ᾗ βασιλεύειν καὶ ἄρχειν φασὶν οὐ τοὺς πρώτους οἷον νύκτα καὶ οὐρανὸν ἢ χάος ἢ ὠκεανὸν ἀλλὰ τὸν Δία*), only points to Eudemus's theogony. (*d*) Apollonius would have hardly made Orpheus sing what was quite different to the ordinary received theogony. (*e*) The peculiar Pantheism points to a late origin: that Zeus is the ultimate origin and support of all things is quite different from supposing him the complex of all things. (*f*) The story of Phanes is an attempt to reconcile the idea of Zeus as the complex of all things with the mythological idea that he is the founder of the last generation of gods. (*g*) The Hesiodic myth of Zeus swallowing Metis is used in such a way that Metis is combined with the Helios-Dionysus of the earlier Orphic theology, with the creative Eros of the Cosmogonies, and with Oriental divinities into the form of Phanes. This could only have happened in the age of the syncretists. It may be perhaps a mere imitation of the theory that the Deity from time to time took all things back into himself, and again put them forth. Preller (in Pauly, iv. 999) sees evidences of Egyptising Gnosticism in it. Even though some of these arguments may be overthrown—as, for example, (*c*) on linguistic grounds by Kern (p. 56); and though such lines as the well-known ones of Aeschylus (or Euphorion), *Ζεύς ἐστιν αἰθήρ, Ζεὺς δὲ γῆ, Ζεῦς δ' οὐρανός, Ζεύς τοι τὰ πάντα χὤτι τῶνδ' ὑπέρτερον*, have as pantheistic an air about them as one could desire—still the bulk of the arguments are untouched; and though it is true that the passages of Plato wherein this theogony is supposed to be alluded to (*Crat.* 402 B; *Tim.* 40 D; *Legg.* iv. 715; *Phaedr.* 248 C; *Phil.* 66 C; *Soph.* 242 D) are too vague to guarantee anything more than the barest probability, yet the absence of all allusion to Chronus, and to such striking features as the World Egg (though this may be alluded to by Aristoph. *Aves*, 695 ff.) and to Phanes, makes us pause before we can feel quite certain that Plato was acquainted with this elaborate story.

6. *The Zagreus-legend* is the most important feature of the later part of the Orphic theogony (Lobeck, 547–593). Zeus violates Proserpina (his own daughter by Deo or Demeter) under the form of a serpent. She bears Zagreus, "the great hunter," a mighty god with a bull's head, destined to become the king of Heaven, whom even as a child Zeus seated on his throne and entrusted with his thunderbolts. He appointed Apollo and the Curetes to guard the child. But Hera in jealousy urged the Titans against the god; who, after beguiling him with a mirror and other toys, slew him, though he resisted violently, cut him in pieces, boiled him, and finally ate him. His heart alone they left intact; it was taken up and preserved by Pallas. Hecate brings news of the murder to Zeus, who strikes down the Titans with his thunderbolt, and gives the heart to Apollo to bury at Delphi (cf. Aesch. *Eum.* 24). It was buried under the tripod (or, according to other accounts, under the omphalos), and from it rose again Dionysus in all his glory. There were probably mystic rites to Semele and Dionysus at Delphi (Lobeck, 619–20), but they are not recorded in any Orphic book. Other accounts tell that Zeus swallowed the heart dissolved in a drink, or gave the drink to Semele, who thereby conceiving bore the Theban Dionysus. From the blood of the Titans who ate Zagreus sprang men, who are as such mainly foes to the gods, but have also something Dionysiac and god-like in their nature, even as had the Titans (Dio Chrys. XXX. 550 R.). For further, see Lobeck, 567–8, though he thinks (580) that this may have been merely a poetical representation of an assumed relationship between men and gods.

This legend, certainly known to Callimachus (*Etym. M.* s. v. *Ζαγρεύς*), is attributed by Pausanias (viii. 37, 5) to Onomacritus. Nor is there any reason to question this statement. Well acquainted as he was with the Pythagorean philosophy, it was Onomacritus who did much to give expression and a kind of rational order to the wild and coarse fancies and practices which had been invading Greece for the previous century. For it is plain that this legend of the passion (*παθήματα*) of the god came from the East. There is a certain similarity between it and that of Soma in the Rig Veda (Maury, *Religions de la Grèce antique*, iii. 325), that of Osiris in Egypt, of Atys in Phrygia, and of Adonis or Thammuz in Phoenicia. Now by the time of the syncretists, from about the 3rd century B.C., all these Eastern religions had got blended together in the Greek mind. Clement (*ap.* Lobeck, 588) says that these Orphic rites of Zagreus came from Phrygia, and Lobeck seems to agree (cf. 655, "Itaque omnia eodem nos deducunt vestigia sacra Orphica a Phrygiis nihil diversa fuisse"). Diodorus says expressly (v. 75) that the Cretans were the first who gave Dionysus as son to Proserpina, though indeed Cretan and Phrygian forms of worship were so confused in his mind that he actually says (iv. 4) the Cretan Dionysus was called Sabazius (Maury, *op. cit.* 328). Yet confirmatory evidence of its Cretan origin can be seen by the Chorus in the *Cretans* of Euripides (cf. § 2). Lobeck (624) is perhaps too cautious in thinking that this is no evidence: a poet would naturally choose the chief votaries of a divinity as the characters into whose mouth to put an account of that divinity's ritual. Now the Cretan religion was mainly Phoenician (Movers, *Die Phönizer*, i. 27–32), and it is from them that we may principally derive the story of Zagreus. For further evidence on this point, see Fr. Lenormant in the *Gazette Archéologique* for 1879, pp. 22, 23, 34. But the rites of Zagreus became blended with ecstatic rites of Dionysus, introduced from Thrace, where the worship of Dionysus was indigenous (Herod. v. 7, vii. 111; Grote, i. 23 ff.), and from whence the Dionysic worship originally came into Greece.

In this legend Zeus and Zagreus are considered as Chthonian gods, Zagreus being sometimes said to be the son of Hades, sometimes Hades himself (Lobeck, 621). Cicero says he was son of Jupiter and the Moon (*Nat. Deor.* iii. 23, 58): cf. Diodorus (iii. 73), who says Zeus and Io were his parents. Lenormant (*op. cit.* p. 19), after Maury (p. 323), sees in him a personification of the vital force in nature. Hence his title *πρωτόγονος* in the Orphic Hymn (xxx. 2), his many names, and many forms (xlvi. xlvii.), and that he unites the attributes of the Hellenic Zeus and the Thracian Sabazius. But we must recollect that he is always called Dionysus, never Sabazius, in Orphic works (Lobeck, 621). As to the date of the introduction of the Zagreus legend into Greek ritual, Lenormant (*op. cit.* 23) places it at the time when Clisthenes substituted the recitations of the passion of Dionysus for that of Adrastus, himself an heroic personage, representing a divine Adrastus, who virtually is identified with Adonis (cf. Apoll. iii. 6, 1; Hygin. *Fab.* 69; and Maury, iii. 327, cf. p. 197). When the Orphic doctrines insinuated themselves into the Eleusinian mysteries, Zagreus came to be identified with Iacchus [ELEUSINIA]. A cardinal feature of this Zagreus worship was the *ὠμοφαγίαι* (Eur. *Bacch.* 139), which point distinctly to savage rites, and do not harmonise at all with the purer and higher Orphic life which abstained from all live creatures, though Euripides (*l. c.*) and Plutarch (*Symp.* viii. 8) and Porphyrius (*V. P.* ii. 28, *γευσάμενοι μόνον πρὸς ἀλήθειαν ἄθικτοι τῶν λοιπῶν ζῴων*) seem to think they do (Lobeck, 623). That the sacrifices were originally human (cf. Porphyr. *Abst.* ii. 55), and that the remembrance thereof was not entirely extinct in 480 B.C., is proved by Themistocles's sacrifice of three Persian prisoners to Dionysus Omestes (Plut. *Them.* 13), but later they were replaced by the lower animals. Thus Dionysus was called **Ταυροφάγος** and **Μοσχοφάγος** (Soph. *Frag.* 602, ed. Nauck, Schol. *ad* Aristoph. *Ran.* 357). Sacrifices called *ὠμοφαγίαι* were also celebrated at Chios, Lesbos, Tenedos, and, as originally, at Crete. (Porphyr. *l. c.*; Clem. Alexandr. *Protr.* ii. 36, Pott.; Ael. *V. H.* iii. 42, *Nat. Anim.* xii. 34; Firmic. Matern. p. 9.) The rite was supposed to be a representation of Zagreus himself, torn in pieces by the Titans (cf. Schol. on Clem. Alex. iv. p. 119, ed. Klotz, *ὠμὰ γὰρ ἤσθιον κρέα οἱ μυούμενοι Διονύσῳ, δεῖγμα τοῦτο τελούμενοι τοῦ σπαραγμοῦ ὃν ὑπέστη Διόνυσος ὑπὸ τῶν Μαινάδων*—the last words showing a strange confusion of Zagreus and Orpheus. A vase from Vulci gives scenes from the *ὠμοφαγίαι*: and these as well as many other vase-pictûres bearing on the Zagreus legend are described by Lenormant (*op. cit.* 24–37). Plato (*Legg.* ii. 672 D) thinks that perhaps the whole story may have arisen from the natural inclination of the undeveloped mind to excited dancing, wild shouting, and generally mad behaviour, and as a subject for such indulgences feigned the passion of the god. This is a very prosaic theory, but we think as near the truth as the unsatisfactory allegorising and symbolising which the later Greek authors applied to the whole story; some (rationalists) supposing that it represented the cultivation of the vine, its pruning, and the pressing of the grapes; others (metaphysicians) seeing therein the necessary discerption of the divine element when it enters into matter (*τὴν θείαν δύναμιν μερίζεσθαι εἰς τὴν ὕλην*); while again the more religious section, such as Plutarch, saw in it a symbol and a testimony of the rebirth of the soul (*μῦθος εἰς τὴν παλιγγενεσίαν*): cf. Lobeck, 710–714.

Besides Lobeck, the following are a few of the works on the Orphic doctrines:—Zoega, *Ueber den uranfänglichen Gott der Orphiker*, in his *Abhandlungen*, 211–265; K. O. Müller, *Prolegomena zu einen wissenschaftlichen Mythologie*, pp. 369–379; Preller in Pauly, s. v. *Orpheus*; Schömann, *Griechische Alterthümer*, ii. 370–377; Gerhard, *Ueber Orpheus und die Orphiker*; Maury, *Les Religions de la Grèce antique*, iii. 300–337; Zeller, *Die Philosophie der Griechen*, i. 83–108, Eng. trans.; P. R. Schuster, *De veteris Orphicae Theogoniae indole atque origine*; Otto Kern, *De Orphei Epimenidis Pherecydis theogoniis quaestiones criticae*, 1–61; Fr. Lenormant, in the *Gazette Archéologique*, 1879, 18–37.

[L. C. P.]

ORTHODO'RON. [MENSURA, p. 161.]

OSCHOPHO'RIA (*ὀσχοφόρια* or *ὠσχοφόρια*), an Attic festival, which as a vintage festival paid honour to Dionysus and Athena, the givers of wine and oil, and at the same time honoured the memory of Theseus, and according to some of Ariadne also (Plut. *Thes.* 23). The time of its celebration was the 7th and 8th of the Attic month Pyanepsion (Plut. *Thes.* 22). It is said to have been instituted by Theseus. Its name is derived from *ὦσχος*, *ὄσχος*, or *ὄσχη*, a branch of vines with grapes, for it was a vintage festival; and on the day of its celebration two youths, called *ὀσχοφόροι*, whose parents were alive, and who were elected from among the noblest and wealthiest citizens (Schol. *ad* Nicand. *Alexiph.* 109), carried, in the disguise of women, branches of vines with fresh grapes from the temple of Dionysus in Athens, to the ancient temple of Athena Sciras in Phalerus. These youths were followed by a procession of persons who likewise carried vine-branches, and a chorus sang hymns called *ὠσχοφορικὰ μέλη*, which were accompanied by dances (Athen. xiv. p. 681). In the sacrifice which was offered on this occasion, women also took part; they were called *δειπνοφόροι*, for they represented the mothers of the youths, carried the provisions (*ὄψα καὶ σιτία*) for them, and related stories to them. During the sacrifice the staff of the herald was adorned with garlands, and when the libation was performed the spectators cried out *ἐλελεῦ, ἰοὺ, ἰού* (Plut. *Thes.* 22). The ephebi taken from all the tribes had on this day a contest in racing from the city to the temple of Athena Sciras, during which they also carried the *ὄσχη*, and the victor received a cup filled with five different things (*πεντάπλοος, πενταπλόα,* or *πενταπλῆ*), viz. wine, honey, cheese, flour, and a little oil (Athen. xi. p. 495). According to other accounts, the victor only drank from this cup. The story which was symbolically represented in the rites and ceremonies of this festival, and which was said to have given rise to it, is related by Plutarch (*Thes.* 22, 23) and by Proclus (p. 388, ed. Gaisford). (Compare Bekker's *Anecdot.* p. 318; *Etymol. Magn.* and Hesych. *s. v.* *Ὦσχοι*; Suidas, *s. v.* *Ὠσχοφόρια* and *ὠσχοφόρος*; Preller, *Griech. Myth.* i. 165; Bötticher, *Baumcultus*, p. 399; A. Mommsen, *Heortol.* p. 271.) [L. S.]

OSCILLA were small figures or masks, representing either the whole human figure or a part of it, generally the face, which is no doubt its original meaning, for we may assume the etymology to be a diminutive of *os*, "a face," through *osculum*. A less acceptable derivation is suggested from *Osci*, on the theory that the custom was derived from that nation—a theory which has no value except so far as it records a belief, that the custom was indigenous in Italy. These figures or masks were hung up as offerings in various ways, and in connexion with various rites. We may notice especially (1) the figures like woollen dolls hung up to Mania = Larunda, the Mother of the Lares [see COMPITALIA]. An account of this deity is given under the name Mania in the *Dictionary of Biography and Mythology*, but it must be observed that there is an error in the statement that these were figures of Mania, for which the authority of Macrobius (i. 7) is cited. Marquardt is undoubtedly right in saying that, in the passage "effigies Maniae suspensae," *Maniae* is the *dative*. The true account is that, as Mania and the Lares were invoked to protect the household, images of this sort, one to represent each member of the family, were hung up as propitiatory (or expiatory) offerings at the cross ways and at the house-doors (Macrob. i. 7, 34). These images were also themselves sometimes called *maniae*, not because they were figures of Mania, but because they were used in her worship. In some parts of Scotland (perhaps of England also?) there is or was not long ago a custom, possibly of similar origin, of hanging up in cottages wheat and oats from the last harvest-loads, tied up with ribbons into some sort of doll-shape and called "Maidens:" it may perhaps be a question whether this name signifies dedicated to the Virgin, or figures of maidens like the *pupae;* and again whether the custom dates since the introduction of Christianity or is an older pagan survival. One form of Roman oscilla was also called *pila*, as in the fragment *ap.* Non. p. 538, 14, "Suspendit Laribus manias, molles pilas;" and in Festus, "pilae et effigies muliebres ex lana compitalibus suspendebantur in compitis, quod hunc diem festum esse deorum inferorum, quos vocant Lares, putarent, quibus tot pilae quot capita servorum, tot effigies quot essent liberi ponebantur, ut vivis parcerent et essent his pilis et simulacris contenti." This passage has important bearing on the expiatory significance, of which more will be said further on, and it also suggests that the *pilae* were not, as Marquardt says, the same as *maniae*, but were a ruder sort of woollen bundle, perhaps signifying a human being, but not so carefully shaped—the use of these *pilae* stuffed with wool in the amphitheatre is well known—in the Compitalia then the members of the family are represented by *effigies* as oscilla, the slaves by the ruder *pilae*.

(2.) Oscilla were hung up at the Feriae Latinae, and we are told also that *oscillatio* (swinging) was a part of the ceremony. The explanations given are rather suspicious. In *Schol. Bob.* p. 256 we are told that there was a reminiscence of the fact that, the bodies of Aeneas and Latinus being undiscoverable, their *animae* were sought in the air. Festus (*s. v.*) says that swinging was called *oscillatio* because persons who indulged in "this sort of amusement" masked themselves "propter verecundiam." We may surmise that this was a comparatively modern addition, and that the swinging of the old religion was not of living persons amusing themselves, but of *oscilla*, which represented, as is explained below, rites of expiation and purification. If, however, from the first those who partook in the festival really did swing themselves (as some assert of the wholly distinct Greek festival AEORA), we may assume that the significance was still that of purification (as in Verg. *Aen.* vi. 740), and not that of a search after the bodies of Aeneas and Latinus.

(3.) The oscilla at the festival of Sementivae and in the country Paganalia are perhaps the best known, from the famous lines of Virgil (*Georg.* ii. 382–396). These masks or figures, whether in honour of Bacchus, Liber pater, or any deity connected with the fruits of the

Offerings at a rustic festival. From an ancient engraved cup. (Bötticher.)

earth, were hung upon the boughs of trees—not always the fruitful vine or olive, for Virgil speaks of a pine—offerings were made below, and songs were sung, like those of the Ambarvalia. The whole scene, as described in Virgil, appears very well in the representation on the onyx cup, figured above. It should be observed that though there can be little doubt that the oscilla here also, as in the festivals before mentioned, represented sacrifices, yet the custom had arisen of making the mask a face of the deity himself to whom it was offered.

(4.) On the Saturnalia presents were made of little pottery figures or faces (Macrob. i. 11, 1).

As regards the ordinary material of the oscilla, that depended no doubt on the wealth of the household: oscilla in marble and in pottery may be seen in the British Museum, the former with a metal loop for the suspension (the metal is ancient also), the latter with holes at the sides of the mask: but these durable oscilla were not the commonest: the epithet *mollia* in Virgil probably refers to the material. Surely we may reject the views cited by Conington *ad loc.*, that *mollia* = *mobilia*, or that it is "because of the beautiful, mild expression:" the expression of many of the oscilla in museums is neither one nor the other. Ladewig's suggestion that it means "waxen" is nearer the truth, and no doubt the ordinary mask-shapes were of wax, but many also were, as has been seen from the passage of Festus quoted above, figures of wool: the word *mollia* would express either: it is likely that wood also was a less common material.

Marble Mask of Bacchus, in the British Museum.

The true significance is a more important point, and there can be no doubt that we have in these oscilla a relic of human sacrifice, either expiatory or propitiatory, or both together. This is stated distinctly by Macrobius (*l. c.*), who says that in the time of Tarquinius Superbus (the date is immaterial) human sacrifices were offered to the Lares and Mania, "ut pro capitibus capitibus supplicaretur...ut pro familiarum sospitate pueri mactarentur Maniae deae, matri Larum;" and he proceeds to say, that in later times the images hung up at each door sufficed instead "periculum expiare:" and the words of Festus, quoted above, show even more clearly the appeasing of a dreaded power by a simulated atoning sacrifice. The same substitution for human sacrifice appears in the rush images of the Argei thrown from the bridge [ARGEI; PONS], and in the customs and traditions connected with the somewhat similar Greek Aeora [AEORA], where no doubt the images swung represented atoning human sacrifices of earlier times. (It may be doubted, as in the Feriae Latinae, whether there was really originally any "swinging" at these rites except of these images.)

As Dionysus was in the older times propitiated by the real bodies sacrificed, life offered for life, so he was afterwards by the unreal, and this is precisely the view of Macrobius in the similar rite, "ut faustis sacrificiis infausta mutarent inferentes Diti, non hominum capita, sed oscilla ad humanam effigiem arte simulata."

We have then the propitiation by human sacrifice, once real and afterwards simulated, at festivals of Jupiter and of gods connected with death, Saturnus (to whom human sacrifice especially belonged, Lactant. *Inst.* i. 21, 6) and the Lares. Further, in the supplication of country or fruit-giving deities, we have a combination of several superstitions: we have the actual tree worship (on which see Bötticher, *Baumcultus*, passim) and the worship of the deities who presided over trees and crops in general, and could give or withhold the fruits; and there is moreover a double symbolism in the swinging images, not only the *symbolical* sacrifices for the *real* sacrifices, mentioned before (with which we may suppose the tree-divinities as well as the personal deities to have once been propitiated), but also a symbolical purification by air, which is the doctrine of Verg. *Aen.* vi. 640, "aliae panduntur inanes suspensae ad ventos:" on which Servius says that there are three modes of purification, "either by fire or water, or by air, which was the mode in the sacred rites of Liber;" that is, by the oscilla. [See also LUSTRATIO.] Hence the swinging images were a lustration of the crops, as well as a propitiation of the Powers, who could give fruitfulness, by an expiatory offering. If the actual swinging of those who partook in the festival was originally part of the Feriae Latinae and the Aeora, then there was also in them a symbol of purification by air; and, at least in the latter case, there was (as Bötticher remarks, citing Serv. *ad* Verg. *Aen.* xii. 603) a *parentatio*.

Olive-tree with oscilla, fistula, and pedum. (From an engraved gem.)

Whether the Italian rite was indigenous or borrowed from Greece, must be regarded as uncertain. Probus (*ad* Verg. *Georg.* l. c.) says that it came from Attica: at the same time there is so much suggestion of antiquity in the expiatory sacrifice to the Lares, that one is inclined to regard both this and the offerings to trees and gods of the country as older than the introduction of the Greek rites, and to think that the similarity with the Aeora is accidental. The hanging up of propitiatory offerings or thank-offerings in the form of waxen limbs, figures, &c., is common enough in many religions and many countries to allow such a coincidence. The chain of connexion afterwards with Liber, Bacchus, and the Aeora is easy; and it must be recollected that the oscilla, which we have surviving, represent not only Bacchus, but various rustic deities. It should be stated also that in the oscilla of collections there may be some confusion between the oscilla properly so called and representations of masks hung up by players in the festival, not as a symbolical sacrifice, but merely as a dedicatory offering along with other articles used, such as a thyrsus or syrinx: we find also many discs with figures in relief; but though Bötticher treats these also as oscilla, it must be a question whether they are not merely offerings placed on the walls of shrines. The theory that the name *oscilla* could be applied to the heads of the sacrificed animals, hung up on the trees, is also put forward, but is hardly consistent with the precise definitions of the word which we have: we see them so hung in ancient works of art, and they may have been compared to oscilla (as in a passage cited by Bötticher), but the true oscilla were probably always manufactured.

In the illustrations given (1) is from an onyx-cup in the Paris collection; (2) is a marble oscillum of Bacchus in the British Museum (described in *Guide to Greek and Roman Sculpture*, 1873, Part ii. 131); (3) is from a gem (Maffei, *Gem. Ant.* iii. 64). (Marquardt, *Staatsverw.* iii.^{2} 192, 200; Preller, *Röm. Myth.* 105, &c.; Bötticher, *Baumcultus der Hellenen*, pp. 80–91; Hermann, *Gr. Alt.* § 27.) [G. E. M.]

O'SCINES. [Augur.]

OSTIA'RIUM, one form of *Tributum Capitis* [see Vectigalia]. A tax imposed in Cilicia, Syria, and perhaps some other provinces, upon doorways, whose number was probably regarded as a sign of the value of the property. (Compare the English window-tax.) Nothing is known of the amount. The word *ostiarium* is found in Caesar, *B. C.* 3, 32. Cic. *Fam.* iii. 8, 5, speaks of *exactio ostiorum.* [F. T. R.]

OSTIA'RIUS. [Domus.]

O'STIUM. [Janua.]

OSTRACINDA (*ὀστρακίνδα*), a game which Greek boys played as follows:—Two sets stand opposite, divided by a line drawn on the ground: a boy throws up a shell or a dish, white on one side and coloured black with pitch on the other, and each set of boys has one or other of these colours allotted to them. As he throws the shell, he calls *νὺξ ἡμέρα*: and if the white (*i.e.* day) side falls uppermost, the set which represents the day pursues, and the other set runs away; if the "night" side falls uppermost, the fugitives and pursuers are reversed. As soon as any boy is caught he is called *ὄνος*, and is out of the game (*ὄνος κάθηται*, Plat. *Theaet.* p. 146 A: see also Basilinda). It is not precisely stated whether the game went on until all the fugitives were caught, nor whether there was a point of safety to be reckoned, but it is very likely that the game was played with varying rules at different times and places. It is not probable that there was the slightest political symbolism in the game, as Becq de Fouquières somewhat too fancifully suggests. The connexion of *ὀστρακίνδα* and *ὀστρακισμός*, as in Aristoph. *Eq.* 855, is merely verbal punning.

The expression *ὀστράκου περιστροφή* seems to have become proverbial for a turn of fortune: see especially Plat. *Rep.* vii. p. 521 C; where there is also an allegory formed from the idea of *νὺξ ἡμέρα.* The game itself supplies an allegory in Plat. *Phaedr.* p. 241 B. Our authorities for *ὀστρακίνδα* are Pollux, ix. 111; Eustath. *ad Il.* xviii. 543; Plato, Com. in Meineke, *Fr. Com.* ii. 2, 664: see also Becq de Fouquières, *Jeux des Anciens*, p. 79; Grasberger, *Erziehung*, p. 57; Becker-Göll, *Charikles*, ii. 37. [G. E. M.]

OSTRACISMUS. [Exsilium.]

O'STRACON (*ὄστρακον*). [Fictile.]

OVA'TIO, a lesser triumph; the terms applied by the Greek writers on Roman history are *πεζὸς θρίαμβος*, *εὐαστής* or *εὔας θρίαμβος*. It was distinguished from Triumphus in the following particulars:—The general did not enter the city in a chariot drawn by four horses, but on foot; he was not arrayed in the gorgeous gold embroidered robe, but in the simple toga praetexta of a magistrate; his brows were encircled with a wreath not of laurel but of myrtle; he bore no sceptre in his hand; the procession was not heralded by trumpets, headed by the senate and thronged with victorious troops, but was enlivened by a crowd of flute-players, attended chiefly by knights and plebeians, frequently without soldiers; the ceremonies were concluded by the sacrifice not of a bull but of a sheep. (Plut. *Marcell.* c. 22; Dionys. v. 47; Gell. v. 6; Liv. iii. 10, xxvi. 21.) We must, however, reject, alike on the grounds of form and probability, the theory of Plutarch (and of some modern writers) that the word *ovatio* is derived from this sacrifice of an *ovis.* It cannot be said that the etymology is certain, but the most probable is that (which Fick holds) from a root *av*, which appears in *αὔω*, "to shout," &c.; hence the views of Festus that it came from saying repeatedly O! in gladness, and of Dionysius that it came from *εὐοῖ*, have at least an element of truth. At least we may surmise that the word *ovo* meant "to rejoice" before it was connected with sacrifice at all. Dionysius is mistaken in assigning a laurel chaplet to the conqueror on these occasions, since all the Roman writers agree with Plutarch in representing that the myrtle crown, hence called *ovalis corona*, was a characteristic of the ovation. (Festus, s. v. *Ovalis Corona;* Pliny, *H. N.* xv. § 125; Plut.; Gell. *ll. cc.*) Compare Corona.

In later times, the victor entered upon horseback (Serv. *in* Verg. *Aen.* iv. 543), and the ovations celebrated by Octavianus, Drusus, Tiberius, &c., are usually recorded by Dio Cassius by a reference to this circumstance (Dio Cass. xlviii. 31; xlix. 15; liv. 8, 33; lv. 2).

Strictly speaking, neither a triumph nor an ovation was granted except to the victor in a *bellum justum:* that is to say, it could not be claimed upon the defeat of revolted citizens or slaves in a *bellum civile.* (Val. Max. ii. 8, 7, "neque *aut ovans*, aut curru;" Dio Cass. xlii. 18, 43; Tac. *Hist.* iv. 4.) This explains Lucan, i. 12, "Bella geri placuit nullos habitura triumphos." This rule held with regard to triumphs, but was relaxed for ovations from an early time, so that Gellius does not mention this as precluding an ovation (v. 6). Thus, for instance, M'. Aquillius had an ovation, *not* a triumph, after the Servile war B.C. 100 (Cic. *de Orat.* ii. 47, 195); see also the instance of Crassus below, and Octavian's two ovations for the civil wars, Suet. *Aug.* 22. (Cf. Mommsen, *Staatsrecht*, i.^{3} 133.)

An ovation was granted when the advantage gained, although considerable, was not sufficient to constitute a legitimate claim to the higher distinction of a triumph, or when the victory had been achieved with little bloodshed, as in the case of Postumius Tubertus, who first received this honour (Plin. *H. N.* xv. § 125); or when hostilities had not been regularly proclaimed (Festus, Gell. *ll. cc.*); or when the war had not been completely terminated, which was one of the ostensible reasons for refusing a triumph to Marcellus on his return from Sicily (Plut. *l. c.*; Liv. xxvi. 21); or when the contest had been carried on against base and unworthy foes: and hence when the servile bands of Athenion and Spartacus were destroyed by Perperna and Crassus, these leaders celebrated ovations only (Florus, iii. 19; Plin. *l. c.*; Gell. *l. c.*), although the latter by a special resolution of the senate was permitted to wear a laurel crown. OVI'LE. [COMITIA, Vol. I., p. 508*a*.]

OU'SIAS DIKE. [ENOIKIOU DIKE.]

OXY'BAPHUM. [ACETABULUM; CYMBALUM.]

P.

PA'CTIO, PACTUM. [OBLIGATIONES.]

PAEAN, strictly a hymn relating to relief from plagues and sickness, but extended also so as to refer to safety from danger of any kind. No doubt it was originally connected with the ancient god of healing; in epic poetry Παιήων, but transferred to Apollo, who, as the god of light, among other attributes, took to himself the especial function of healing—it would be out of place here to discuss that point further: reference may be made to the *Dictionary of Mythology*; Preller's *Griech. Myth.* i. 212; A. Mommsen, *Delphica*, &c. In fact it follows the extended meaning of the personified Paean; under which name we find *Apollo* (Aesch. *Ag.* 146; Soph. *O. T.* 154); *The Sun* (Orph. viii. 12); Dionysus, and even Death as the deliverer from pain and disease (Eur. *Hipp.* 1373). It then became associated with victory, traditionally because it was the song of triumph for the victory of Apollo over the Python, which after all came to the same thing, if the Python symbolised deadly maladies: and hence, lastly, was sung before or after victories in general. With this agrees the statement of Proclus cited by Phot. p. 321, 11, εἶδος ᾠδῆς εἰς πάντας νῦν γραφόμενον θεούς, τὸ δὲ παλαιὸν ἰδίως ἀπενέμετο τῷ Ἀπόλλωνι καὶ τῇ Ἀρτέμιδι ἐπὶ καταπαύσει λοίμων καὶ νόσων ᾀδόμενος. It should be noticed that the paean is a hymn (1) of supplication or propitiation during the pain or danger; (2) a thanksgiving after it is past. Of the first kind is the hymn in *Il.* i. 472, Soph. *O. T.* 5, and also the paean *before* the battle (Thuc. i. 50, iv. 96, &c.): of the second, the hymn *after* victory or deliverance (*Il.* xxii. 391). Though, however, it might be essentially a prayer, yet words and tune expressed, as Müller says, courage and confidence, even if the cure or the victory was still in anticipation. "All sounds of woe (*αἴλινα*) cease when Ie Paean is heard" (Callim. *Apoll.* 20). It was sung by several persons, one of whom probably led (ἐξῆρχε) the others, and the singers either sat at table (Plat. *Symp.* p. 176; Xen. *Symp.* ii. 1; Plut. *Conv.* 5), or marched onwards in a body, as the Cretans, after a happy voyage, at Delphi (Hom. *Hymn. Apoll.* 514). Hence the term among the Spartans παιὰν ἐμβατήριος, of the paean sung by those marching to battle (Plut. *Lyc.* 22). It was sung at festivals of Apollo, especially at the Hyacinthia (εἰς τὰ Ὑακίνθια ἐπὶ τὸν παιᾶνα, Xen. *Hell.* iv. 5, § 11; *Ages.* ii. 17), and was also sung from very early times in the temples of the god (Hom. *Hymn. ad Apoll.* 514; Eurip. *Ion*, 125, &c.).

In later times, paeans were sung in honour of mortals. Thus Aratus sang paeans to the honour of the Macedonian Antigonus (Plat. *Cleom.* 16); a paean composed by Alexinus was sung at Delphi in honour of the Macedonian Craterus; and the Rhodians celebrated Ptolemaeus I., king of Egypt, in the same manner (Athen. xv. p. 696, e, f). The Chalcidians, in Plutarch's time, still continued to celebrate in a paean the praises of their benefactor, Titus Flaminius (Plut. *Flam.* 16).

The practice of singing the paean at banquets, and especially at the end of the feast, when libations were poured out to the gods, was very ancient. It is mentioned by Alcman, who lived in the 7th century B.C. (Strabo, x. p. 482). (Müller, *Hist. of Greek Literature*, p. 27; Bode, *Gesch. der lyrisch. Dichtkunst der Hellen.* vol. i. pp. 9 ff.) [L. S.] [G. E. M.]

PAEDAGO'GIA. [PAEDAGOGUS.]

PAEDAGO'GUS (παιδαγωγός), a slave, to whose care in an Athenian family the sons of the house were committed when they reached the age of six. His duty was rather to guard them from evil, both physical and moral, than to instruct them, though it is probable that before they went to school he gave some home instruction, as did the paedagogi at Rome: this is indicated by Plutarch, when he calls Phoenix the paedagogus of Achilles (*de Educat. Puer.* 7). His chief duty, however, was to accompany them to and from the school, the gymnasium, and out of doors generally: he was responsible for their safety and for their avoidance of bad company (see Plato, *Lysis*, p. 223; Aeschin. *c. Timarch.* § 10). It is probable that he sat with them in the schools; and though it is not certain, it is on the whole most likely that the seated figures with sticks in the Duris vase (shown on page 96) are paedagogi (see Blümner, *Privatleben*, p. 221). Usually they are represented as wearing a short-sleeved chiton, and a small rough himation, bearded, and holding a walking-stick with a crook. (See woodcut under FUNUS, Vol. I. p. 886.) Further account of their duties is given under LUDUS LITTERARIUS, p. 95. We gather from Plutarch (*l. c.*) that in most, or at least in many, households those slaves who were no use for anything else were employed as paedagogi; a carelessness of which he disapproves as much as Tacitus does of something similar at Rome (*Dial.* 29). This was, however, perhaps a bad fashion of later times. We should gather from Plato's manner of speaking about them that they were trustworthy; and it seems best to assume that, in the better age and in well-ordered houses, they were trusted servants (cf. Herod. viii. 75), who were sometimes retained when they grew old as faithful attendants on the ladies of the family. This view is given especially by Euripides, who (as Mr. Verrall remarks on *Med.* 49) assigns a more conspicuous and honourable part to slaves. (See the plays *Medea*, *Phoenissae*, *Ion*, and the *Bacchides* of Plautus, and notice especially the expressions in *Ion*, 853 ff.) Being slaves, they were of course foreigners, Thracian (Plato, *Alcib.* i. p. 122 B) or Asiatic, and therefore speaking Greek with a foreign accent (*ὑποβαρβαρίζοντες*, Plato, *Lysis*, l. c.).

At Rome the custom of having a paedagogus, instead of only a *custos*, was borrowed from Greece towards the end of the Republic, when it became common to teach children to speak Greek. For his duties, see LUDUS LITTERARIUS, p. 97 *b*. An early instance of this custom is seen in the Greek Gorgias, who is called *pedisequus puerorum* (Auct. *ad Herenn.* iv. 52, 65). Antonius has an attendant called *παιδαγωγὸς* in Dio Cass. xlvi. 5, and under the Empire the office was common in all houses which could afford it. The care of the paedagogus lasted till the *toga virilis* was assumed (Stat. *Silv.* v. 2, 68). The feminine paedagoga occurs in inscriptions (*C. I. L.* vi. 6631, 9758; viii. 1506), and was (like the Greek *ancilla* of Tac. *Dial.* 29) a teacher of Greek to the very young children, and perhaps an attendant upon the daughters afterwards.

A different meaning attached to the name in the further development of the slave household in imperial times. Young slaves, whether born in the house or purchased as boys, were trained up under slave instructors. Something of the same sort existed of course in earlier times; *e.g.* we hear of the elder Cato having the slave boys taught useful arts in order that they might be sold at a profit (Plut. *Cat.* 21): but the term *paedagogus* as applied to the teaching of slave boys belongs to a later time than Cato's, and denotes especially the trainer of the ornamental attendant boys, cupbearers at banquets, &c., in rich houses, under the Empire or shortly before: the earlier date may be deduced from Cic. *pro Rosc. Am.* 41, 120; *pro Mil.* 10, 28. Such page boys, who are sometimes called *capillati* (Mart. iii. 58, 29), lived together in a page's room or hall called *paedagogium*, having over them *paedagogi*, *subpaedagogi*, and *decani* (see Spartian. *Hadr.* 2, and numerous inscriptions cited by Marquardt, *Privatl.* 158): hence they were called *pueri paedagogiani* (Ammian. xxvi. 6, 15; xxix. 3, 3). The name of the place in which they were taught was transferred to the boys themselves, and we often find slave boys of this class themselves called *paedagogia* (Senec. *de Vit. beat.* 17; *Ep.* 123; Plin. *H. N.* xxxiii. § 40; Dig. 33, 7, 12), whence it is easy to see the development of the mediaeval *page* (see Littré, *s. v.*). (Becker-Göll, *Charikles*, ii. 46; *Gallus*, ii. 80, 146; Marquardt, *Privatl.* 112.) [J. Y.] [G. E. M.]

PAEDO'NOMUS (*παιδονόμος*) was a magistrate at Sparta (and in some other Doric states) who had the general superintendence of the education of boys, which in Doric states was concerned with little else besides bodily training [LUDUS LITTERARIUS, p. 94]. His office was honourable; the appointment by election. He had control over the discipline and moral conduct of the boys, at Sparta after the age of 7; he inspected them and punished those who were negligent or disobedient. For this purpose *μαστιγοφόροι* were assigned to him by Lycurgus. The more immediate inspection of the gymnastic exercises belonged to magistrates called *βιδιαῖοι* or *βιδέοι* [BIDIAEI]. In Crete also we find *παιδονόμοι* (Strabo, x. p. 483; Schömann, *Antiq.* p. 303), but boys there did not come completely under their control till the age of 17. At Teos (see inscriptions in Gilbert, *Staatsalterth.* ii. 338), the *παιδονόμος* shared with the *γυμνασίαρχος* the charge of education. (Xen. *Rep. Lac.* ii. 2, iii. 10, iv. 6; Plut. *Lyc.* 17; Krause, *Gymnastik u. Agon.* pp. 254, 677; Gilbert, *op. cit.* i. 67.) [W. S.] [G. E. M.]

PAEDOTRIBAE. [PALAESTRA.]

PAE'NULA. [An inscription (Gruter, 646, 5), GN. COSSVTIVS PAENVLARIVS, shows that this is the correct spelling. The derivation of the word is unknown; it certainly is not from *φαινόλης*, which only occurs in late writers, as a translation of the Latin; *μανδύη* being also used.] The paenula was a sleeveless cloak of thick cloth, worn by the Romans as a protection against rain and cold: hence Horace takes a "paenula solstitio," an overcoat, during the dog-days as a telling instance of discomfort. It is frequently mentioned in the literature of all periods, from Plautus down to the Fathers of the Latin Church. The paenula was worn by country-folk who did not wear the TOGA over their tunics, and, although not so fashionable as the LACERNA, was used by all classes when on a journey. (Cic. *pro Mil.* 10, § 20; *ad Att.* xiii. 33;—Quint. *Inst.* vi.; Sen. *Ep.* 87.) It was also part of the dress of slaves (Plaut. *Most.* iv. 2, 74), and at times did them good service in warding off awkward blows (Plaut. *loc. cit.*). Under the Empire we hear of sedan-chairmen (*lecticarii*) clad in what seems to have been a livery of it (Mart. ix. 22, 9; Suet. *Nero*, 30; Sen. *de Ben.* iii. 28, 5).

A *paenula mulionica* is mentioned by Cicero, and we know from other authors that it was occasionally used by soldiers (Sen. *de Ben.* v. 24, 1; Suet. *Galba*, 6). In Imperial times its use seems to have been much extended, and it was worn in Rome as a protection against the rai (Juv. *Sat.* v. 79). Tribunes (Spart. *Hadr.* 3), orators (Tac. *Dial.* 39), and grammarians eve went so far as to adopt it as their special gar in cold weather, though it was considered belo the dignity of the higher magistrates to wear i at all. Spectators at the games, especially n doubt those who could not afford the mor expensive LACERNA, found it convenient (D Cass. lxxii. 21), and Tertullian takes this as it original use, accusing the Lacedaemonians inventing it to satisfy their desire for theatric performances in the winter. Women wore it less than men, for Ulpian (Dig. 34, 2, 23, speaks of it as a *commune vestimentum*; and th this fashion goes back as far as Cicero's time shown by a jest of his, recorded by Quintili (viii. 3, 54). These *paenulas matronales* (Tr bellius, *de quieto Tyr.* 14, 4; cf. Suet. *Cal* 52) were probably of a special cut. Th material used in its manufacture was thi woollen stuff; that from Tarentum and Can sium and, after its introduction, GAUSAP being preferred (cf. Plin. *H. N.* viii. § 193 Mart. xiv. 145). Leather, or more probabl fur (for *scortea* may mean either), was also us (Mart. *l. c.* 130; Sen. *Nat. Quaest.* iv. 6, 21) Its colour was dark (*rufa* or *fusca*), as o would expect a cloak for bad weather to be, and it was perhaps on account of its dingy appearance that it was worn at funerals and formed part of the *munera funebria* (Cic. *in Vatin.* 12, 30; Dio Cass. lxxii. 21, l. 27; Suet. *Tib.* 7, *Claud.* 2).

The notices in literature do not give any very definite information about its shape, or the manner of wearing it, except that it was sleeveless, fitted closely to the body, was drawn over the head, and was sometimes provided with a hood (Plin. *H. N.* xxiv. § 88). [See woodcut under CUCULLUS.] In Christian times it was adopted as a vestment, but in this use is better known as the *casula* or chasuble (see *Dict. Christ. Antiqq.* s. v. "Casula").

Paenula. (From statuette in British Museum.)

Figure wearing Paenula. (From Trajan's Column.)

The paenula occurs but seldom on monuments, chiefly no doubt because its shape does not admit of an artistic arrangement of folds, but also because it is not a garment characteristic of any calling or mode of life. The monuments representing it were first collected by Bartholinus in his admirable *Commentarius de Paenula*, and comparatively few examples have been since added to his list (see, however, Hübner in *Program zum Winckelmannsfest*, Berlin, 1866). All agree in showing a cloak coming down to the knees, very like a long cape, except that it is closed all round, the head passing through a slit in the centre, exactly in the same way as in the *poncho* of Spanish-America. The variety in shape is very considerable, the cloak appearing sometimes square, sometimes round, and sometimes of a bell-shape. In most cases a tuckered seam runs down the centre in front, enabling the wearer to hitch up one side over his shoulder, and to keep his arm free. However, even so, it is plain that the paenula could not be worn when free movement of the arms was necessary; and this is the point which Cicero makes in Milo's favour, when he pleads that he was *paenulatus*, which he assumes really meant *paenula irretitus*. It also explains why it is that out of the numerous figures of soldiers on Roman reliefs so very few wear this cloak. One of these few is the *cippus* of L. Duccius Rufinus Signifer of the Ninth Legion, found and preserved at York. (Wellbeloved, *Eboracum*, plate xiii. fig. 1.) There is no monumental evidence for Marquardt's theory that Cicero's expression *scindere paenulam* (*ad Att.* l. c.) refers to a custom by which the host unbuttoned his guest's cloak on his arrival; none of the representations show anything like buttons. (Besides Bartholinus' work, above mentioned, the best edition of which is that contained in Graevius' *Thesaurus*, tom. vi., see Marquardt, *Privatleben*, ed. 2, pp. 564 f.; and Becker-Göll, *Gallus*, iii. p. 125 f.) [W. C. F. A.]

PAGA'NI, PAGANA'LIA. [PAGUS.]

PAGA'NICA. [PILA.]

PAGUS, a canton. The meaning of this word cannot be given in precise and absolute terms, partly because we can have no doubt that its significance varied greatly between the earliest and the later times of Roman history, partly because its application by Latin writers to similar, but not identical, communities outside Italy (especially in Gaul) and their comparison of *pagi* with the Greek δῆμοι tend to complicate the question. Latium was anciently divided into a number of clan-settlements or villages which were an aggregate of dwellings gathered round a central enclosed or fortified space, an *arx* or *castellum* [cf. OPPIDUM]. As regards the terms *vicus* (οἶκος) and *pagus* in reference to these ancient settlements, we may gather from various passages that *vicus* meant houses closely connected, and so a small village or hamlet of a continuous street, *pagus* a district including scattered houses or scattered hamlets (Varro, *L. L.* v. 145; Festus, p. 371; Ammian. xxxi. 2, 17; VICUS). This will hold good, whether we. take its etymology (*pango*) to signify "buildings" or "fixed boundary" (cf. Mommsen, *Roman Hist.* vol. i. p. 38, with *Staatsrecht*, iii. p. 116). Old writers have connected it with πηγή, the central village well, or with πάγος, *i.e.* a hill-fort (Festus, *s. v.*; Serv. *ad Georg.* ii. 381; Dionys. iv. 15): but the first would rather suit the *vicus* or hamlet, since the *pagus* would have many wells, and the second would do better for the *arx* than for the district round it. In speaking of clan-settlements, we must guard against the notion that the gens and pagus could be identified the one with the other: the pagus was purely local and would remain, if the main body of the gens dwelling in it migrated elsewhere: so long only as they dwelt there, they would be pagani of that pagus. We cannot even assume that the inhabitants of a pagus were, except perhaps in altogether prehistoric times, members of the same gens. It is probable indeed that originally they were so, and that afterwards in some cases two or more gentes might have joined in the same pagus; in others some portions of the old gens or gentes may have left the district, and their places have been filled up by others. Accordingly we find the names of pagi mostly local with the termination *-anus*, but some few gentile, as *pagus Valerius*, *pagus Julius*, or the Roman pagus Lemonius for instance (see Mommsen, *Staatsr.* iii. 113): and even where pagi have gentile names, we cannot always say whether the name belonged to it, as the original clan-settlement, or was given in honour of some member of the gens afterwards connected with it.

Politically, as both Mommsen and Marquardt are careful to point out, the pagus did not form an independent community. Here again, however, we cannot say that this was always true, and the original pagi may have been purely independent clan-settlements: such an opinion would, after all, be in accord with a dictum in Mommsen's *Rome*, "All history begins, not with the union but with the disunion of a nation." But whatever the pre-historic condition of these cantons, we know them as only single members of an aggregate state called *civitas* or *populus*, which gathered together in *fora* or *conciliabula* for markets or for legislation, and, as one people, combined for defensive or offensive warfare. This is indeed clearly indicated by Isidore (*Orig.* xv. 2, 11). The stages were, probably, first the pagus with its own centre of refuge and its own sovereign rights, then several pagi gathering round a common centre for refuge—such, for instance, as Tusculum, which became the urbs or oppidum of the combined pagi, and then a league of various canton centres, such as Alba.

Though, however, the pagus was not (unless in primitive times) an independent state, it had an organisation analogous to that of a collegium: we find that *magister pagi*=*aediles pagi* (sometimes a single *magister pagi*)—whom Dionys. ii. 76, ascribing the institution to Numa, calls *πάγων ἄρχοντας*—are annually elected with priestly functions, to look after the sacred rites of the pagus, with some police control also of local matters, such as the roads (Siculus Flaccus, p. 146), and perhaps of water-supply (cf. Festus, s. v. *sifus*): a power of fining the members of the pagus appears in inscriptions (*C. I. L.* ix. 3513), and a common council for such local business (*C. I. L.* i. 571). It is clear that their administrative importance, whatever it had been once, dwindled to almost nothing,—to nothing in fact, apart from the religious rites, but what necessarily followed on the pagus having common as well as private property,—but to a late period it remained as a geographical term for the district of woodland and tillage outside a town and attached to it for all real administration, containing within itself villages (*vici*), country houses (*villae*), and farms (*fundi* or *praedia*): often several pagi attached to one large town, as for instance 11 pagi to Beneventum (see Isid. *Orig.* xv. 2, 11; and the inscriptions cited by Marquardt, *Staatsr.* i. p. 11).

It may be seen from the above description that the pagi resembled in many respects village *communes* or *Gemeinde*, particularly those in Switzerland [cf. DEMUS], and they have often been compared to the Attic *δῆμος*. It is highly probable that the primitive *δῆμος* and the primitive pagus were essentially the same, but it would be misleading to regard them as identical in historic times, as may be readily seen by comparing the accounts in the separate articles. One salient point of difference was that the connexion with the *δῆμος* was retained whether the members of it dwelt in Athens or not, whereas the contrary was the case with the pagus. Hence Mommsen in his *Staatsrecht* deprecates the comparison with the *δῆμος*, and prefers to compare the pagus with the Egyptian *νόμος* or the subdivision *τοπαρχία* (for an account of which see Marquardt, *Staatsverw.* i. pp. 447 f.): it must be observed, however, that the extent and the administrative importance of the *nome* were much greater than those of the Italian pagus.

At Rome the inhabitants of the old city (for which see SEPTIMONTIUM) were called *montani*; the accretion of other settlements, or *pagi*, later included in the city, furnished the *pagani*. Hence in the age of Cicero *montani et pagani* would come to mean all the inhabitants of the city, as in Cic. *de Domo*, 27, 74; Q. Cic. *de pet. Cons.* 8, 30 (if the reading *montium* for *omnium* is adopted). So the Capitol, the Aventine, and the Janiculum were *pagi*, not *montes*; and the terms *pagus Janicolensis*, *pagus Aventinensis* lasted down to the year B.C. 7, when Augustus re-arranged the city.

The Celtic pagus, at the time of the Roman conquest, had at once a greater extent than the Italian, and a greater power from the fact that these cantons were not in the same way changed from their primitive condition and absorbed into a regularly constituted state, but still retained their own clan government with generally a somewhat loose combination in the *civitas* (closer, however, among the Belgae than among other Gallic tribes). The political state to some extent represents what Aristotle gives as *ἔθνος* in contradistinction to *πόλις*—a people dwelling *κατὰ κώμας κεχωρισμένοι*. From the direct information which we possess about Gaul, we see that a certain number of pagi made up a *civitas* (Liv. *Ep.* 65): of the Helvetii there were four pagi which made up the *civitas Helvetica* (Caes. *B. G.* i. 37): and four was probably the normal number, though Caesar (iv. 1) tells us of the nation which he calls the Suevi with 100 pagi, each contributing 1000 warriors in a national war. The most powerful of the Helvetic pagi was the pagus Tigurinus, whose chief place was Aventicum (Avenches, near the Lake of Morat; *C. I. Helvet.* 159). It would seem that the Pays de Vaud to some extent geographically represents the *pagus Tigurinus*, as etymologically pagus is represented by *pays*. After the Roman conquest and the dissolution of the Helvetic *civitas*, the political and administrative importance of the pagus ceases, and it retains only its religious functions (*inscr. cit.*): that the *vici* subsequently had the power of making decrees is seen in several Helvetic inscriptions (149, 241, &c.). Perhaps some indication of the nature and origin of the Celtic pagus may be found in the fact that Strabo (iv. p. 193) calls it *φῦλον*, and Mommsen (*Hermes*, xix. p. 316) considers that it resembles a Roman *tribus* in its original composition. In the same article he shows that the clue to the real nature and constitution of these cantons may be found in the account of the Galatian state given in Strabo. The *τετραρχία* of the Galatians is one-fourth of the *cicitus* or *ἔθνος*: each tetrarchy had for matters of justice or for command in war a head-man (*τέτραρχος*): the office is for life and hereditary (Strabo, xii. p. 547, *πατρῴα τετραρχία τῶν* Γαλατῶν: cf. p. 541, *τοῖς ἀπὸ γένους τετράρχοις*); under the tetrarch are officials called *δικαστὴς* and *στρατοφύλαξ*, and two *ὑποστρατοφύλακες*. There was a national council of the three *ἔθνη* or *cicitates* who occupied Asia, composed of the twelve tetrarchs and three hundred senators; but except for cases of murder and the national concerns of peace and war, the twelve tetrarchies or pagi had independent local government. For national interests the three *ἔθνη* at various periods had separate princes, whom Strabo calls *ἡγεμόνες* or a single *ἡγεμὼν* for the three combined (Strabo, xii. pp. 566, 567). It is not improbable that we have here an organisation belonging to the Celts in Gaul as well as in Asia. The fourfold division may be traced in the four "kings," or tetrarchs, of the Cantii (Caes. *B. G.* v. 22), whom we see acting together in a national war under the leadership of "Cassivellaunus," but apparently having rule over their respective tetrarchies.

Paganalia.—The Italian pagi had their tutelary deities and sanctuaries, which are mentioned even in Christian times (as in a conservative decree of Constantine, Cod. Theod. xvi. 10, 3). Here were celebrated in January at the end of seed-time, "semente peracta," the country *paganalia*, which corresponded to the *feriae sementivae*. (Preller, however, believes in a festival at the beginning as well as the end of seed-time: the evidence for his view is not satisfactory.) An offering was made to Tellus (in later times to Ceres) of cakes of meal and a pregnant sow. At this festival also masks or small images were hung up [Oscilla], and there were games and rustic songs. (Ov. *Fast.* i. 667 ff.; Dionys. iv. 15; Verg. *Georg.* ii. 385; Hor. *Ep.* i. 1, 49; ii. 1, 140.) The *lustratio pagi* at this festival was a rustic Ambarvalia, which, besides its religious significance, had the advantages of fixing the boundaries of the pagus. [Ambarvalia; Lustratio.] At the festival of the Paganalia the *magister pagi* presided, and his wife (*magistra*) assisted.

Pagani.—It remains only to remark on special acquired senses of this word, which strictly meant only those who for the time being dwelt in any pagus. We find *pagani* used in contradistinction to *milites* or to *armati* (Juv. xvi. 33; Plin. *Ep.* vii. 25, x. 86; Suet. *Aug.* 27, *Galb.* 19; —Tac. *Hist.* i. 53; ii. 14, 88; iii. 24, 43, 77; iv. 20; Dig. 48, 19, 14). From these passages, and especially from Tacitus, taking also notice of the date when the usage began, it is tolerably clear that the original distinction was between the regularly enrolled soldiers and the irregular undrilled half-armed bands of rustics who in the Roman campaigns fought sometimes against them for their country like the rustics in Verg. *Aen.* vii. 505 or modern *francs-tireurs*, sometimes in the ranks of one Roman army against another in times of civil war. The famous "Vos nisi vincitis pagani" (Tac. *Hist.* iii. 24) is not the same as Caesar's use of "Quirites": the word "yokel" might be used, but "militiamen," *i.e.* rustic levies, would more nearly express the taunt which Antonius Primus addressed to his soldiers. The more general opposition of the word to *miles* followed. The modern use of the word "pagan," from the fact that the old religion lingered most in the rural districts, first appears in a law of Valentinian A.D. 368, when the old religion is called *religio paganorum* (Cod. Theod. xvi. 2, 18; cf. Isid. viii. 10).

(For the *pagus*, see Mommsen, *Rom. Hist.* i. 37–40; *Staatsrecht*, iii. pp. 112–119; Marquardt, *Staatsverwaltung*, i. pp. i. 3–15; —for the Gallic *pagi*, Mommsen in *Hermes*, xvi. 449 ff., xix. 316 ff.;—for the *paganalia*, Marquardt, *Staatsverw.* iii. 199; Preller, *Röm. Myth.* 404.) [G. E. M.]

PALA (probably = *σκαπάνη*, *σκαφεῖον*), a spade. The spade was comparatively little used in ancient husbandry, the implements used besides the plough for breaking up and cleaning the ground being mostly of the pick-axe or hoe shape [see Bidens, Ligo, Marra, Sarculum]. The *pala* was used, like our spade, for *digging*, not *picking*: it was of iron (Colum. x. 45), with a broad cutting edge curved at the end. Pliny (*H. N.* xviii. § 46) speaks of it as useful for breaking up rushy ground (*juncosus*), whereas he recommends the *bidens* for stony ground and for loosening the soil before planting slips (xvii. § 123): and this was probably one of its uses in the olive-yard. Cato (*R. R.* 10), in his list of implements requisite for an olive-yard of 240 jugera, gives only 4 *palae*, but 6 *aratra* and 8 *sarcula*: it was used too for digging a trench (Liv. iii. 26), and in gardening (Colum. *l. c.*). The woodcut below, taken from a funeral monument at Rome (Fabretti, *Inscript. Ant.* p. 574), exhibits a deceased countryman with his falx and bidens, and also with a pala, modified by the addition of a strong cross-bar, by the use of which he was enabled to drive it nearly twice as deep into the ground as he could have done without it. In this form the instrument was

Pala, falx, and bidens. (From an ancient relief.)

called *bipalium*, being employed in trenching (*pastinatio*), or, when the ground was full of roots to a considerable depth, in loosening them, turning them over, and extirpating them, so as to prepare the soil for planting vines and other trees. By means of this implement, which is still used in Italy and called *vanga*, the ground was dug to the depth of two spades or nearly two feet. It is clear, however, from Columella, xi. 3, 10, that the cross-bar was placed higher when a deeper spit was required: he speaks of digging three feet deep, but says that in other cases it will be sufficient to dig "*non alto* bipalio, id est minus quam duos pedes;" where the various reading *bipedalio* is clearly a misconception from the "duos pedes." (Plin. *H. N.* xviii. § 230; Cat. *R. R.* vi. 45, 151; Varro, *R. R.* i. 37; Colum. *R. R.* v. 6.)

Cato (*ib.* 11) mentions wooden shovels (*palas ligneas*) among the implements necessary to the husbandman. One principal application of them was in winnowing. The winnowing-shovel, also called in Latin *ventilabrum* (Varro, *R. R.* i. 52), is still generally used in Greece, and the mode of employing it is exhibited by Stuart in his *Antiquities of Athens*. The corn which has been threshed lies in a heap upon the floor, and the labourer throws it to a distance with the shovel, whilst the wind, blowing strongly across the direction in which it is thrown, drives the chaff and refuse to one side. So Isid. *Or.* xx. 14, 10, "pala quae ventilabrum vulgo dicitur, a ventilandis paleis nominata" (the etymology need not be accepted); and Tertull. *Praescr.* 3, "palam in manu portat ad purgandam arcam suam." According to Schol. *ad* Aristoph. *Av.* 806, this was called *σκάφιον* as well as *πτύον* or *λικμητηρίς*. The fruit of leguminous plants was purified and adapted to be used for food in the same manner. (Hom. *Il.* v. 499–502; xiii. 588–592.)

The term *pala* was applied anciently, as it is in modern Italian, to the blade or broad part of an oar. [REMUS.] In a ring the broad part, which held the gem, was called by the name of *pala*. [ANULUS.] [J. Y.] [G. E. M.]

PALAESTE. [PALMUS; MENSURA, p. 161.]

PALAESTRA (*παλαίστρα*). The upshot of a controversy which lasted for many years as to the difference between a *παλαίστρα* and a *γυμνάσιον* is that as a general rule the *παλαῖστραι* were the ordinary schools kept by private individuals, where boys were trained and got regular instruction in physical exercises: while the *γυμνάσια* were the public establishments to which the grown-up young men, and even adults (Plat. *Rep.* 452 B; Xen. *Symp.* 2, 18), resorted for exercise, but where there was no regular instruction given except to those who were training either for the games or to become professional athletes. This distinction was made by K. F. Hermann in his additions to Becker's *Charikles*, ii. 186, 189, and has been accepted by Guhl and Koner,^{4} 256–7, Grasberger (*Erziehung und Unterricht*, i. 252), Göll (*Charikles*, ii. 239), Blümner (*Privatalterthümer*, 336, and in Baumeister's *Denkmäler*, s. v. *Gymnastik*), Mahaffy (*Old Greek Education*, p. 25, note), and Iwan Müller (*Handbuch der klass. Alterthümswissenschaft*, iv. 451 c, 1887).

Becker in his *Charikles* (Eng. trans. p. 294) had maintained "that the Gymnasium was a place including grounds for running, archery, javelin-practice, and the like, along with baths and numerous resorts for those who only sought amusement; while the Palaestra, on the other hand, was the regular wrestling-school, where, originally, wrestling (*πάλη*) and the pancration were principally taught and practised;" and that "the distinction which Krause had attempted to establish that the Palaestra was chiefly for the use of boys is quite untenable." He bases his conclusion on Aristoph. *Av.* 140, *παῖς ὡραῖος ἀπὸ γυμνασίου*: on Plat. *Legg.* vi. 794 D, who wishes for *γυμνάσια καὶ διδασκαλεῖα* for girls as well as boys, proving, he thinks, that *γυμνάσια* were used for boys; on Lucian, *Nav.* 4, where the young men go to the palaestra; and on Theophr. *Char.* vii. (Jebb), which speaks of gymnasia where the ephebi practise, which implies, Becker thinks, that there were gymnasia where the boys practised. But neither in this passage nor in that from Plato is *γυμνάσια* used otherwise than generically in the sense of "places for exercise," with no idea of any distinction from *παλαίστραι*: and as to the passage from Aristophanes, Göll (*op. cit.* 234) shows from Theocritus (*Idyll.* xxiii. 60, 61) and Lucian (*Amor.* 26) that *παῖς* is a term that can be applied to youths up to twenty years of age; while the passage from Lucian represents the young men as setting out in search of Adimantus, who had gone to the palaestra to look for a favourite boy, and not with any idea of exercising. But, again, there is the much-discussed passage in Antiphon (*Tetral.* ii. 2, 3; 3, 6), where a boy (*παῖς*), answering a summons from his *παιδοτρίβης*, crosses the range and is killed by a spear shot by a youth (*μειράκιον*), who is said to be *μελετῶν μετὰ τῶν ἡλίκων ἀκοντίζειν ἐπὶ τῷ γυμνασίῳ*. But this can be explained by supposing either that the *παῖς* was a spectator, or more likely was practising for the games, and the presence of the *παιδοτρίβης* seems an additional proof of this. It is better to explain the passage thus than to force the sense of *ἐπί*, "in the neighbourhood of," with Grasberger, i. 269.

A striking passage to show that palaestrae were for boys, gymnasia for young men, is Theocritus (*Idyll.* ii. 80), where the young men Delphis and Eudamippus come from the gymnasium (*ὡς ἀπὸ γυμνασίοιο καλὸν πόνον ἄρτι λιπόντων*), compared with *vv.* 8, 97, where Delphis is represented as staying about the palaestra of Timagetus to see his boy favourite. It also shows that the palaestrae were called after their proprietor (or perhaps their founder): compare also the palaestrae of Taureas (Plat. *Charm.* 153 A), Timeas (*C. I. A.* ii. 445, l. 22), Antigenes (*ib.* 446, l. 61), Sibyrtius (Plut. *Alc.* 3). The master of the palaestra was called *παιδοτρίβης*: he was regularly paid by the parents of the boys he taught, and the conducting a palaestra was an ordinary private speculation. Sometimes, indeed, we find certain quarters of the town building palaestrae ([Xen.] *Rep. Ath.* 2, 10), probably by subscription, but even these were private undertakings, as the state, as such, had nothing to do with them. That regular instruction was given in the palaestrae can be proved from Theophrastus (*Char.* xix.), where the Loquacious man goes into the *παλαίστραι* and prevents the boys getting on with their work by his endless gossip with the παιδοτρίβαι and διδάσκαλοι.

As to the actual *building*, a palaestra required for wrestling and jumping a smoothly-floored, fairly large room. Throwing the spear and discus and running required indeed a very considerable space; but the palaestra in a strict sense, *i.e.* place for wrestling, was generally separated from the course for running (δρόμος): cf. Herod. vi. 128, Κλεισθένης καὶ δρόμον καὶ παλαίστρην ποιησάμενος εἶχε. In the smaller palaestrae there probably was no δρόμος, only a comparatively small room for wrestling. This was doubtless the chief exercise practised in the palaestra; since instruction would be more necessary for wrestling than for running. Besides this main school-room, there were smaller adjacent rooms: one for holding oil, with which the wrestlers rubbed themselves; another for sand, which was necessary to enable them to get grips; and a third for a bath—unless a river happened to be close by. The elaborate *Palaestra* described by Vitruvius (v. 11) is really a *Gymnasium*, and is fully treated of under that head.

There are many vase-paintings of athletic exercises; a good example is in Baumeister's *Denkmäler*, fig. 671. In these paintings, besides those actually exercising who are naked, there is generally a clothed bearded figure, who carries a rod in one hand and often a staff in the other. He is the παιδοτρίβης, and the rod is used for punishment (cf. Aelian, *Var. Hist.* ii. 6). Corporal punishment was much resorted to in ancient schools. Occasionally a statue of a bearded Hermes is depicted (cf. Gerhard, *Auserlesene Vasenbilder*, Taf. lxvi.). Along with Apollo (Lucian, *Anach.* 7), Hermes was the god who principally presided over athletics (Hor. *Carm.* i. 10, 4; cf. Orelli, *Inscript.* 1417), and he was said by mythologists to have been the father of the goddess Palaestra (Philostr. *Imagg.* ii. 32, p. 433, Kayser).

The παιδοτρίβης was the ordinary trainer in gymnastics (Plat. *Lach.* 184 E; Aristoph. *Nub.* 973, *Eq.* 1238), just as the γραμματιστής was the ordinary schoolmaster in our sense of the word; and the two are often mentioned in connexion (Plat. *Protag.* 312 B; Dio Chrys. *Or.* xiii. 426, Reiske). He trained all the boys who did not want either to compete in the games or to become professional athletes. The latter were trained by the γυμναστής, who had more special scientific knowledge, and who also possessed a greater acquaintance with physiology, which enabled him to tell the effect on the constitution of this or that exercise (Galen, *de sanit. tuend.* ii. 12, vol. vi. pp. 156–7, ed. Kuhn). The παιδοτρίβης was not expected to have a scientific knowledge of the exercises: he had just the knack and trick (τὴν ἐμπειρίαν τε ἅμα καὶ τριβήν, Galen, *op. cit.* ii. 9 = p. 143: cf. Plat. *Gorg.* 463 A), and was only expected to know how to do the exercises and to show his pupils how to do them, but not to determine any special exercises to be assigned to each separate pupil. Just like the ordinary preparatory schoolmaster of the last generation, he put his pupils through a traditional course; believing, like the proverbial unscientific cook, that what was sauce for the goose was sauce for the gander. Indeed the cook is his very analogue, according to Galen (*l. c.*), who says that the παιδοτρίβης is to the γυμναστής as the cook (we should perhaps say the apothecary) is to the physician; that is, that he carried out the directions given by the γυμναστής: and this was the function a παιδοτρίβης performed when he acted in concert with the γυμναστής. However, it must be remembered, on the one hand, that the great mass of Greek boys were never subjected to the training of the γυμναστής: and, on the other, that we are not to suppose *all* παιδοτρίβαι merely gave routine and rule-of-thumb instruction. We hear that Herodicus of Selymbria was quite scientific (Plat. *Rep.* 406 B). But in Plato's time the distinction of παιδοτρίβης and γυμναστής was not marked, as he ranks now the one, now the other, on a level with the physician (*Crit.* 47 B; *Protag.* 313 E). It gradually grew up in after-times (there is a hint of it in Aristotle, *Eth. Nic.* x. 9, 15), owing to the greater number of boys who wished to attain first-rate excellence in athletics; perhaps we may compare the increasing number of schools which with us hire cricket professionals. But though the distinction was certainly made and is much insisted on by Galen and others, still in all the Catalogues of the ephebi coming from Roman times we almost always find the παιδοτρίβης given, often the ὑποπαιδοτρίβης, but there is no mention of the γυμναστής. (See the Catalogues of the ephebi in *C. I. A.* iii. 1077–1275.)

We cannot fix with certainty the details of the instruction. For example, the time of day at which the physical training took place, whether *all* the boys went to their gymnastic exercises in the afternoon, as Grasberger (*op. cit.* i. 292 ff.) maintains, or whether the younger and the older went at different times—the one in the morning, the other in the afternoon—as Stark and Göll hold. The arguments on both sides rest on *à priori* grounds; Grasberger insisting on the whole tenor of ancient life being to work the brains in the morning and the body in the afternoon, and that such is the natural course, while Stark (notes to Hermann's *Privataltertümer*, § 36, note 13) is satisfied with showing against Grasberger that his reference to Plato, *Lysis*, 223 A, proves nothing, as that passage refers to the special occasion of a feast. Certain it is that children went to some sort of school very early in the morning (Plato, *Legg.* 808 C; Thucyd. vii. 29; LUDUS, p. 95).

The actual exercises practised in the palaestra were running, jumping, wrestling, throwing the spear and the discus—which formed what was called the Pentathlon [PENTATHLON]; boxing and the pancration were mostly confined to the gymnasium (I. Müller, *l. c.*), though in a milder form they were perhaps practised by the boys too (Blümner in Baumeister, *l. c.*). But, besides these athletic exercises, the παιδοτρίβης was expected to train the boys in what we would call calisthenics, so that they should walk properly without any swaggering (σοβεῖν, Dio Chrys. *Or.* xxxi. 651, Reiske: cf. Alexis, *Frag.* 263, Kock) and generally have a graceful carriage. It is possibly in this respect that we are to explain what Isocrates says (*de Antid.* § 181) that γυμναστική is a part of παιδοτριβική. The general aim of the exercises was that the boys should be fair and strong in body, as the παιδοτρίβης is represented as saying in Plato, *Gorg.*

452 B, *τὸ ἔργον μού ἐστι καλούς τε καὶ ἰσχυροὺς ποιεῖν τοὺς ἀνθρώπους τὰ σώματα.* There is a very interesting passage in Clement of Alexandria (*Strom.* pp. 823, 4, ed. Potter) in which he tells how the *παιδοτρίβης* directed each several motion of beginners (*σχηματίζειν* and *διαπλάσσειν* are the words used); more forward pupils he instructed by showing (*ἐπιδεικνὺς*) himself how the exercise was done, while to the most advanced pupils he simply told (*προστάττοι ἐξ ὀνόματος*) what exercise was to be performed.

In early times the state exercised a police control over the palaestrae in the interests of morality, Solon enacting that the schools should not be opened before sunrise or kept open after sunset, and forbidding grown men to visit the palaestrae (Aeschin. *Timarch.* §§ 9–12): but this law soon fell into abeyance, as may be seen from the *Lysis* and *Charmides* of Plato, and from Theophrastus's account of the Loquacious man.

The Greek exercises of the palaestra never took any great hold on the Romans. They disapproved of them as leading to idleness, and, owing to the nakedness of those who took part in the exercises, to immorality; and besides, they were no good for war (Plut. *Quaest. Rom.* 40 = 274, 25, Reiske; Senec. *Epist.* 88, 18; Plin. *Epist.* x. 40, 2). But still they were practised a good deal by the Romans, sometimes as a preparation for the bath, but generally by young men who wished for some, but not for very violent, exercise (Hor. *Sat.* ii. 2, 8 ff.: cf. *Carm.* i. 8, 8; iii. 12, 7; and Strabo, v. 236): cf. Marquardt, *Privatleben der Römer*, 120.

But the word "palaestra" has other senses than the one we have treated of. Haase (in Ersch and Gruber, s. v. *Palaestra*) shows that it is used as a special part of a gymnasium, as (at least in Roman times) synonymous with gymnasium, and also in a metaphorical sense. That it was used for part of a gymnasium, probably the part where wrestling was practised, can be proved from Hyperides (*Orat. Att.* ii. p. 404, ed. Didot), Plut. (*Vit. X. Oratt.* 841, 27), and perhaps Lucian (*Parasit.* 51). That it was synonymous with gymnasium in Roman times can be proved from Vitruvius (v. 11), who describes a gymnasium and calls it a palaestra; Plutarch, too (*Sympos.* ii. 4 = 638, 21), says that the place where *all* the athletes exercise is called a palaestra; and Pausanias tells us (v. 15, 8; vi. 21, 2) that there were at Olympia palaestrae especially devoted to athletes. The wealthy Romans often had private palaestrae or gymnasia added to their houses (Cic. *Att.* i. 10, 3; *Verr.* v. 72, 185). For the metaphorical use of "palaestra," as signifying rhetorical academic oratory as opposed to real public speaking, see Cic. *de Orat.* i. 18, 81; and for elegance in composition as opposed to an uncouth and uncultivated style, Cic. *de Leg.* i. 2, 6.

The chief works to consult for further information on the exercises of the Palaestra are Haase's article on *Palaestrik* in Ersch and Gruber; Krause in Pauly, s. v. *Gymnasium;* Grasberger, *op. cit.* i. 244 to end; Hermann-Blümner, *Gr. Privatalterthümer*, 341–351: and Mahaffy, *Old Greek Education*, chap. iii. Detailed accounts of the different exercises will be found in separate articles summarised in the Index. [L. C. P.]

PALI'LIA. [PARILIA.]

PALLA. The *palla* and its Greek counterpart, the *πέπλος*, were identical in shape with the *pallium* or *ἱμάτιον*, being square or rectangular shawls or plaids; but while the *pallium* was worn by both sexes, the *palla* was, originally at any rate, confined to women. It was worn as it came from the loom, generally with the addition of embroidery, but without any alteration in shape at the hands of tailor or sempstress. It is usual to divide the modes of wearing such garments into two great divisions: first, those in which they are loosely thrown round the body [AMICTUS]; and, secondly, those in which they are fastened more closely and securely by means of pins and brooches [FIBULA], and at times a girdle [ZONA]. To the latter class is given, with somewhat questionable correctness, the name *indumenta.* It is unwise to press this division too far, and the failure to perceive that the same garment might be worn either way has led to much needless controversy as to the use of words. The actual modes of wearing dictated by fashion, or suggested by the needs of life, were truly endless, as were also the differences in size, material, and pattern required to suit the wants of woman and girl, matron and maid, rich and poor, mourner and reveller, in all the varied pursuits and on all the many occasions which demand a special dress. These manifold uses are reflected in language, but the difficulty in determining what they were is increased by the fact that, as fashions changed and life became more complex, old words became obsolete or changed their meaning, while new words were applied to garments known formerly by other names. In no case is it so truly necessary to bear this in mind as in that of the *πέπλος*. Its derivation is uncertain, but Studniczka's conjecture that it is a reduplicated form of the root seen in *palla, pallium*, and *pellis*, is at once plausible and satisfactory.

In Homer it is used of the chief dress of women, which is also called *ἑανός* (*Il.* iii. 385; xiv. 178; xxi. 507) or *εἱανός* (*Il.* xvi. 9); but from their use in other passages these would seem to be merely epithets (*Il.* v. 734; viii. 385; xviii. 352, 613; xxiii. 254), *πέπλος* being the distinctive name. It was worn next the skin, for Hera on leaving her bath put it on first (*Il.* xiv. 178); and Athene, when she dons the shirt (*χιτὼν*) and armour of Zeus, has first to loose the brooch at her shoulder and let the *πέπλος* fall from her (*Il.* v. 734). The latter passage shows that the garment was not a sewn one, like the shirt which the men wore (*χιτών*), but one which could be thrown off in an instant (*κατέχευεν*). Everything in fact goes to show that it was worn in the same way as the Doric shift [TUNICA], but fastened below the shoulder just above the breast (cf. *χρυσείῃς δ' ἐνετῇσι κατὰ στῆθος περονᾶτο*, *Il.* xiv. 180); a mode of wearing which is admirably illustrated by the figures on many early Greek vases (*v. infra*). This method of wearing a dress, as heavy as one's chief garment must be, has the obvious defect that it throws the whole weight on the shoulders. This was met by the use of the girdle [ZONA], which had the further advantage of keeping the open side of the *πέπλος* in some degree closed. The girdle was worn universally, and is always mentioned when details of the toilet are given. Even such apparent exceptions as in the case of

Athena (*Il.* v. 734; viii. 385) do not imply that it was not worn; nor is it necessary to suppose that when Aphrodite protected Aeneas from the Greek darts with the πτύγμα of her gown that she necessarily was without a girdle (*Il.* v. 315), for πτύγμα may well have a different meaning (*v. infra*). In many cases the open side was no doubt held together by a row of brooches, for it is impossible to assume that the twelve golden περόναι that accompanied the πέπλος which Antinous presented to Penelope had any other use (*Od.* xviii. 292). Whether the πέπλος still further resembled the Doric shift in being doubled at the top, into a fold falling over the breast, is not clear, though this is very possibly the meaning of πτύγμα in the passage quoted above.

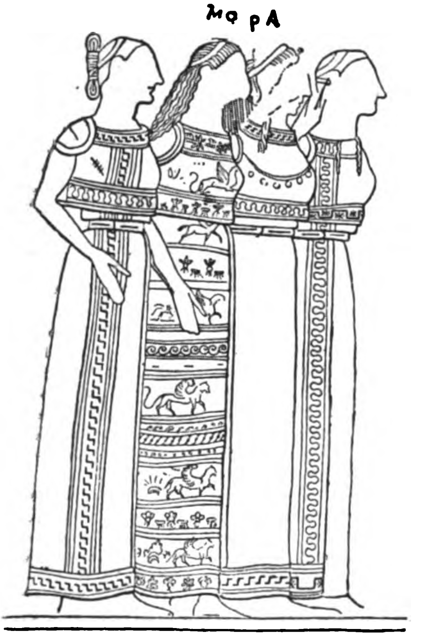
What little knowledge we have of the fashions of the ladies of Epic times, and the way in which they wore their gowns most becomingly, is given by the epithets which the bard applies to fair women. We learn, for instance, that even though their robes were long and swept the ground (ἑλκεσιπέπλοι, *Il.* ii. 442; x. 185), they did not hide the charms of a neat ankle (εὔσφυρος, Hesiod. *Theogn.* 254, 961; *Scut. Herc.* 16, 86;—καλλίσφυρος, *Il.* ix. 557, 560, xiv. 319; *Od.* v. 333, xi. 603, &c.;—and τανύσφυρος, *Hymn. in Cer.* 2, 77) any more than those of their snow-white arms (λευκώλενος, *passim*). Epithets referring to the nice adjustment of the girdle are common, but are, with the exception of εὔζωνος and καλλίζωνος, very obscure, and those cannot be said to give us any very definite information. Βαθύζωνοι is difficult to explain, though it certainly cannot mean that the Homeric ladies wore their gowns with thick folds, hanging over a low-girt girdle, in the style of a later age (best seen in the Parthenon marbles). It very probably refers to slimness of waist, which was beyond any doubt looked on as beautiful. (This is possibly the point of the comparison of the waist of Agamemnon to that of Ares, *Il.* ii. 479.) Neither does βαθύκολπος refer to the fashion mentioned above, as seen in the Pheidiac statues, but rather expresses the poet's admiration for a well-moulded bust (*Il.* xviii. 122; xxiv. 315, &c.). The πέπλος was sometimes richly embroidered (*Il.* vi. 294; *Od.* xv. 107); indeed, to judge by the frequency of the epithets ποίκιλος and παμποίκιλος, it was seldom without this kind of ornament. The cloth from which it was made seems to have been of the brightest colours,—saffron (Ἠὼς κροκόπεπλος, *Il.* viii. 1 *et passim*), purple (*Hymn. in Cer.* 182, 360; Hesiod. *Theogn.* 406), and flaming red (if we may trust the description of Aphrodite's robe, φαεινότερος πυρὸς αὐγῆς, *Hymn. in Ven.* 86). The material cannot have been anything else but wool, for no other stuff would be sufficiently warm for such an important garment, neither is it likely that linen would be embroidered as the πέπλος was. Besides, if we may take the goddesses Calypso and Circe as examples of the fashions of the time, the linen mantle (φᾶρος), which the men of Epic times wore as an over-garment, was used as a dress girded round the waist, and probably was also pinned at the shoulders in the same fashion as the πέπλος (*Od.* v. 230, x. 543; cf. Hesiod, *Op.* 198). Even if this passage does not allow us to argue that the women of the time wore the φᾶρος, we have the account of the dancing maidens on the shield of Achilles (*Il.* xviii. 597), who wore linen raiment, though we are not told in what way.

Besides being a lady's garment, the πέπλος appears in the Homeric poems as a covering for chariots (*Il.* v. 193) and seats (*Od.* vii. 96), and also as the purple pall in which the golden urn that contained the ashes of Hector was wrapped (*Il.* xxiv. 795). It was for these reasons and for the richness of their ornament that the πέπλοι form such a large part of the treasures of the household, and that they were acceptable presents (*Od.* xvii. 292; cf. *Il.* xiv. 178), forming part of Hector's ransom (*Il.* xxiv. 229), and being the choicest gift that could be offered by the Trojan women to the patron goddess of the town (*Il.* vi. 90, 271). [DONARIA.]

Of the changes which Greek dress underwent during the ages which followed that of the Epic, we can learn but little from literature. We gather from the occasional protests of the lyric poets and the rigorous measures of the lawgivers that the influence of Oriental luxury was ever on the increase. It is not, however, until this luxury had given way to the healthy reaction which followed the Persian wars that we can get contemporary information about the costume of the times. Then we find that the πέπλος was no longer an every-day garment, but the characteristic robe of hero and god on the stage, or in poetry. It occurs very frequently in the Attic tragedians, but always with an indefinite meaning, as indeed we might gather from the frequency with which the plural and the word πέπλωμα are used. In Aeschylus, for instance, we find that not only is a woman's robe, be it woollen or linen (*Choeph.* 25; *Suppl.* 111; *Pers.* 125), called πέπλος, but that men's clothing also bears the name. Sophocles uses the word with equal laxity, while Euripides makes it a word for clothes in general, using it for the over- not less than the under-garments of both men and women. In all literature subsequent to the tragedians the word occurs in the same loose way, with one very important exception; that of the πέπλος which was each year carried in the Panathenaic procession on a mast to the Parthenon, where it was solemnly presented to Athena Parthenos. [ARRHEPHORIA; PANATHENAEA.] This robe was embroidered with scenes from the battles between the gods and the giants, in which Athena took a prominent part (Eur. *Hec.* 466–474, cf. *Ion*, 184 ff.). There can be no doubt whatever that this robe, as is usual in the case of such ancient cults, went back as regards texture to very early ages, in fact in all probability prior to the Homeric.

By a fortunate coincidence we are able to date approximately the disappearance of the πέπλος at Athens. Herodotus (v. 87, 88) tells us that the women of Athens gave up the archaic dress of Greece, which resembled the Doric, and adopted the Ionian, in order to be able to dispense with the use of the fibula. The occurrence which brought this change about was the murder of the only man who returned from the disastrous expedition against Aegina; and as this took place in the first half of the sixth century B.C., we have an approximate date for the change in question, even if we discard the story as a fiction. This rough date is moreover borne out by the monuments. As to the monuments: it has so far been impossible to recognise the *πέπλος* in any of the objects found at Hissarlik, Mycenae, Archomenos, and Tiryns; but this does not preclude the possibility of its having been worn at that age, for the objects are in most cases of a foreign origin. The fact, however, that no fibulae were among the numerous ornaments found in the graves at Mycenae would seem to cast a doubt on it.

In the graves of a later date, such as those of the Dipylon and Phaleron at Athens, and of Assarlik in Caria, fibulae have been found in large quantities. Unfortunately the figures on the pottery of this age are too rude to give us any idea of the costume of the time in which they were used. It is in fact on the early "black-figured" ware from Athens and Corinth that we are first able to find a garment answering to the Homeric description. This is, perhaps, best seen on the figures of the famous François vase (now in Florence), which represent the women as wearing an archaic form of the Doric shift, which, in most cases, is their only garment. It is fastened not above, but below, the shoulder (*κατὰ στῆθος*) with a large fibula of archaic pattern. This is well shown by the representations of Moirae. Other vases prove that this garment was open down the side; for instance, a cylix of the vase-painter Xenocles, showing Polyxena as she flies from Achilles, with the whole leg displayed. The style of these vases proves that this costume was at least as old as the seventh century B.C., and it continues to appear in all the vase-paintings of the "black-figured" style. When this style was given up and the "red figure" was adopted, other forms of female garments are seen in the paintings, and this archaic *πέπλος* disappears. If the latest system of dating is correct, this change of style in vase-ornamentation took place not later than the middle of the sixth century B.C.; and as this agrees exactly with what Herodotus tells us, we may accept it as certain that it was then that the *πέπλος*, or archaic dress, was given up by the women of Athens. The statues of the latter half of the sixth century lately discovered on the Acropolis, and the vase-paintings of the same period, show clearly enough how the transition took place. The characteristic of all these statues and figures is that they wear over their linen chiton a mantle, which is pinned or fastened at one shoulder and passes under the left arm. It fits closely to the form, and the top is doubled over into a fold, so that it is nothing but a Doric shift, with the brooch at one shoulder loosened and the arm shoved out. It is in fact the *πέπλος* worn over the linen or Ionic shift, and without a girdle. The resemblance is made still greater by the fact that it is generally richly embroidered. However, in this form it has lost its old name, and was known as *ἱμάτιον* [PALLIUM]. It was noted above that the *πέπλος* of Athena was retained in the original meaning of the word throughout the whole of antiquity, and this is strikingly borne out by the artistic tradition seen in the statues of Athena. In nearly all the oldest representations (*e.g.* in the metope from the oldest temple at Selinus and on the Burgon vase) she is clothed in the garment described in Homer and shown on the vases. The same type was adopted by Pheidias for his Athene Parthenos, as we see by the numerous reproductions of it that have come to light. The best of these is the statuette found at the Varvakeion, near Athens, an accurate Roman copy of the great original. Even in Hellenistic art it is often retained as the characteristic garb of Athena (*e.g.* "Minerve au collier" in the Louvre).



Moirae. (From François vase.)

[The view as to the nature of the *πέπλος* taken above is that first propounded by Franz Studniczka in his *Beiträge zur Geschichte der altgriechischen Tracht*, p. 92 *seq.* (Wien, 1885). It has been accepted by Helbig in *Das Homerische Epos* (Leipzig, 1887), and by Iwan Müller, *Handbuch der klassischen Alterthumswissenschaft*, Band IV. (Nordlingen, 1887).]

Statuette of Athene Parthenos.

Palla, though it denotes a genuinely Roman garment, is used as the translation of *πέπλος* (Serv. *ad Aen.* i. 479), for *peplus* and *peplum* are artificial forms which were never naturalised. Used as a translation, it is *par excellence* the garb of heroic personages on the tragic stage (cf. Hor. *A. P.* 279, "personae pallaeque repertor honestae;" Aeschylus; and Milton, *Il Penseroso*, "Tragedy in sceptred pall"). Closely connected with this is its use in poetry, where it is worn not only by gods and goddesses, but by mythical figures in general. In both cases its meaning is quite as vague as that of πέπλος in Attic tragedy (*v. supra*). The garment itself was a rectangular piece of cloth (Isidor. xix. 25), which could be worn either as a dress or a shawl, which at times served the purposes of a curtain (Sen. *de Ira*, 22, 2).

The notices in literature give us but little satisfactory information as to the various ways in which it was worn, owing to the fact that in very many cases (*e.g.* in Plautus) it is impossible to say whether a Greek or a Roman garment is meant. This difficulty has given rise to a controversy which has raged since the time of Rubenius and Ferrarius, and cannot be said to have yet come to an end. That the original way of wearing it was practically the same as that of wearing the Doric shift, may be regarded as certain, for Varro includes it among the garments *quae indutui sunt* (*L. L.* v. 131), and there is good reason to believe that it took the place of an archaic garment of somewhat the same shape, but of a smaller size, which survived until classical times in a ceremonial dress called the RICINIUM. Whether the *palla* continued to be worn as a shift after the introduction of the tunica, must, at the present state of our knowledge, remain undecided. Marquardt (*Privatleben*, p. 579) maintains that it did, supporting his view by an appeal to the phrases *tunico-pallium*, *tunicae pallium*, and *tunica palliata*, and to statues found at Herculaneum. The statues, however, are Greek, not Roman, while the phrases are only used by late commentators, and must be referred to *pallium* and not to *palla*. Even the *palla picta* which was sent by the senate *cum amiculo purpureo* (Liv. xxvii. 4) does not prove that even at that time it was worn at Rome as an undergarment, for it is probable that it was a περονατρὶς of the style then so fashionable at Alexandria. However this may be, it is as a shawl, covering the *stola*, that we hear of it in classical times, when it took the same place in the dress of women as the *toga* did in that of men. When thus worn, it was thrown over the left shoulder, drawn across the back, brought either over or under the right shoulder, and tucked round the body. This manner of wearing it is well described by Apuleius (*Met.* xi. 3): "Palla nigerrima splendescens atro nitore quae circumcirca remeans et sub dextrum latus ad umerum laevum recurrens, umbonis vicem dejecta parte laciniae multiplici contabulatione dependula ad ultimas oras nodulis fimbriarum decoriter confluebat." Worn thus, it was practically identical with the ἱμάτιον [PALLIUM], and was the outdoor dress of all respectable women (Hor. *Sat.* i. 2, 97; Sen. *Troad.* 91: cf. Mart. xi. 104, 7, where it is called *pallium*), as well as by girls (Tib. iv. 2, 11). As a woman's shawl it seems to have, like the toga, become unfashionable under the Empire; and we find that, even in the time of Tiberius, Caecina inveighed against the change (Tertull. *de Pall.* 4). In the third century it seems to have gone out of use entirely as a garment, for it is not mentioned by Ulpian, nor is it in the list given in the edict of Diocletian. The garments which supplanted it were more especially the *dalmatica* and the *colobium*. [DALMATICA.] On the monuments of all kinds, especially the portrait statues of the Empire, it frequently appears used as a shawl, wrapped round the body as described above. Nowhere, however, do we find any support for the assumption that it was sometimes girded, which some base on the use of *succincta* in Hor. *Sat.* i. 8, 23; Verg. *Aen.* vi. 555. On the monuments the palla is easily recognised in the mantle worn by Roman women, though, except in the case of certain portrait statues and reliefs, there must be always a doubt whether the garment is Greek or not.

Statue of Livia wearing the Palla.

The modes of wearing it are very numerous; but in all a third part is thrown over the left shoulder from behind, and the garment drawn round the body, covering or leaving free the right arm. Sometimes it is wrapped so tightly round the body that the end is thrown once more over the left shoulder from the front. Sometimes it is drawn over the head, to serve either as a veil or as a protection against the weather. In nearly all cases it is a rectangular piece of cloth, the dimensions varying very considerably. In some few instances, however, it resembles the toga in having one of its sides cut in a circular form.

Palla is also one of the names given to the χιτὼν ὀρθοστάδιος (*tunica talaris*), which with the χλαμὺς formed the conventional costume of the Citharoedus (cf. Auctor *ad Herenn.* iv. 47, 60; Apuleius, *Florid.* 2, 15). This had no real connexion with the *palla*, being a long sleeved tunic girded high above the waist; it was also known as stola and *σύρμα*. Statues and reliefs representing citharoedi (especially Apollo Citharoedus) are clad in this robe. The best known of these works is the statue of Apollo Citharoedus in the Vatican. Martial (i. 93) mentions a *gallica palla*, but this is a short jacket ("Dimidiasque nates gallica palla tegit"), which seems to have been peculiar to Gaul, and is described by Strabo, iv. p. 196, (κέλται) ἀντὶ δὲ χιτώνων σχιστοὺς χειριδωτοὺς φέρουσι μεχρὶ αἰδοίων καὶ γλουτῶν.

Apollo Citharoedus. (From the Vatican.)

[References to the earlier literature will be found in Marquardt, *Privatleben*, p. 576 ff. A criticism of Marquardt is given in Göll's edition (1882) of Becker's *Gallus*, p. 258 ff. The best account of palla = χίτων ὀρθοστάδιος is in Stephani, *Compte-Rendu*, 1875, pp. 102–153. For the monuments, see Müller in Baumeister's *Denkmäler des klassischen Alterthums*, s. v. Toga.] [W. C. F. A.]

PA'LLIUM. At all periods of Greek life the characteristic outdoor garment, both of men and women, was a mantle or shawl, consisting of a rectangular piece of cloth. Such mantles were known generally as ἐπιβλήματα or περιβλήματα, or more specially as ἱμάτια. Ἱμάτιον is derived from the root Ϝες or ἑς (cf. *vestis*). The cognate word εἷμα is used in Homer of clothes in general, and Ϝεμα occurs in the celebrated inscription from Gortyn in the same sense. The early form εἱμάτιον is found in an inscription from Andania (Dittenberger, No. 388, 16), with which ἑμάτιον in another inscription (Roehl, *I. G. A.* 395 a) may be compared. The older sense of the word, meaning "raiment," was retained in the plural at all periods of Greek literature.

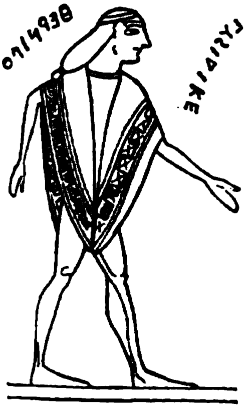
Apart from the name, the use of the cloak or shawl is, as has been shown in the article PALLA, as old as the art of weaving. The garments of men no less than women were woven on the domestic loom, τετυγμένα χερσὶ γυναικῶν, and all of the same rectangular shape. As a consequence the sole difference between the dress of men and that of women lay in the size and material, but not in the shape of their garments. The earliest method of wearing such clothes is undoubtedly as a cloak fastened round the body with a pin or clasp and a girdle. This was the dress of women in the Homeric age [PALLA], but men had already at that time adopted the linen shirt as an under-garment. Some attempt has of late been made to gather, from the representations on objects found at Mycenae and other early sites, the nature of pre-Homeric dress, but the Greek character of those which are clear enough to give definite information is too doubtful to allow of even the most general conclusions. Other attempts to settle the question by an appeal to Egyptian, Assyrian, and Phoenician monuments have been made, but have, at the present state of our knowledge, no claim to serious consideration. In Homer, the dress for men is a mantle, worn over a shirt of linen (χιτών; TUNICA), which is called either χλαῖνα or φᾶρος. The women, on the other hand, are clad in the πέπλος, but the veils which are worn over this cannot be classed as shawls or mantles. There can be no doubt that both the χλαῖνα and φᾶρος were rectangular pieces of cloth, worn without being altered in shape by any cutting or sewing.

Figure of Peleus, from a vase. (Helbig.)

The χλαῖνα [LAENA] was of wool, and had a thick nap (οὔλη, *Il.* x. 134). Those worn by great folk were dyed red (*Il.* loc. cit.; *Od.* xiv. 500, xxi. 118), or purple (*Od.* iv. 115, 154; xix. 225), but it was the dress of the poor man no less than the rich, for it was worn by the swineherd Eumaeus (*Od.* xiv. 529) and by the servants of Penelope's suitors (*Od.* xv. 331). It was fastened round the neck with a brooch or pin (*Od.* xix. 226), and, as the brooch is not always mentioned, it is possible that it may also have been worn without, simply wrapped round the body. Two forms of it are mentioned, the first the ἁπλοΐδες χλαῖναι (*Il.* xxiv. 229), the latter the χλαῖνα διπλῆ (*Il.* x. 134; *Od.* xix. 225). There can be little, if any, doubt that the latter form is the same as the δίπλαξ, a garment often mentioned (*Il.* iii. 126, xxii. 440; *Od.* xix. 245); the only difference between the δίπλαξ and the χλαῖνα being that the former is the latter doubled. That the older commentators were wrong in understanding the difference to be one of pattern is shown by a passage in the Odyssey (xiii. 224), where Athene, disguised as a youthful shepherd, is described as δίπτυχον ἀμφ' ὤμοισιν ἔχων εὐεργέα λώπην, which shows that it lay in the folding. It might be thought perhaps that the δίπτυχος λώπη is a different garment, but there is no reason to suppose that it has any more definite meaning than the later λῶπος: it is in fact a general word for clothing. The δίπλαξ may have been larger than the simple χλαῖνα: but from the analogy of the use of shawls it seems reasonable to suppose that the same garment could be used either way. The larger size would be a simple explanation of the fact that the δίπλαξ was occasionally highly ornamented. Thus Helen (*Il.* iii. 125):

> μέγαν ἱστὸν ὕφαινε
> Δίπλακα μαρμαρέην· πολέας δ' ἐνέπασσεν ἀέθλους
> Τρώων θ' ἱπποδάμων καὶ Ἀχαιῶν χαλκιχιτώνων·

and Andromache (*Il.* xxii. 440) wove a δίπλαξ with a pattern of θρόνα ποίκιλα, though what these were it is impossible to determine.



δίπλαξ. (From François vase.)

Φᾶρος is a word of disputed origin. Curtius derives it from φέρω, but Studniczka, following Krall, prefers to derive it from the old Egyptian *p(h)aar*, meaning "a winding sheet," while Fraenkel proposes the Semitic root *ắfar* (or *ắfar*), but these are from the nature of the case only conjectures. Whatever its derivation may be, the word is used in Homer in a general sense, referring to a textile fabric for women's garments, swaddling clothes, winding sheets, and as a substitute for sails (and in a more special sense for a man's garment). These different uses lead us irresistibly to the conclusion that the material was of linen, not wool; and this is fully confirmed by the epithets ἀργύφεος, λεπτός, νηγάτεος, and ἐΰπλυνής applied to it, all of which are appropriate for linen, but not for wool.

The description of the φᾶρος which Penelope weaves (*Od.* xxiv. 147) is also only applicable to linen. As a man's garment it was worn in place of the χλαῖνα, by the princes and men of rank, never by the poor or ordinary folk. It is also worn by both Calypso and Circe, and it is a moot point whether this implies that ladies ever wore it. The epithet μέγα would seem to imply that it was larger than the χλαῖνα. It does not seem to have been worn double. It was dyed purple in *Od.* viii. 221.

Of the way in which the mantle was worn in the ages which followed the Homeric, literature gives us but little information. The garments, however, mentioned in Hesiod and the Hymns, are the same as in Homer, and there is nothing to lead one to suppose that the fashion of wearing them had changed in any essentials. The sad want of any notices, except the most general, in the Lyric poems, is much to be lamented, for they lived in an age when great changes in costume were taking place, as may be learned from many protests against the growing luxury, and from the repressive enactments of early codes. It is not indeed until Thucydides that any clear account of the nature of this change is to be found. He, in his prefatory sketch of Greek civilisation (i. 6), distinguishes broadly three periods: (1) that when weapons were worn in ordinary life (τοῦ σιδηροφορεῖν); (2) that of a leisurely mode of life, when ease and luxury were possible (τῆς ἀνειμένης διαίτης); (3) that of moderation in dress (τῆς μετρίας ἐσθῆτος). The Athenians, he says, were the first to give up wearing arms and to adopt the leisurely mode of life, while it was the influence of the Spartans that brought about the revolt against luxury and the return to simplicity of the third period,—a reform which took place in the middle of the fifth century; for he adds that it was not long since elderly gentlemen in easy circumstances gave up the long linen shirt (which the Ionian still wore) with the archaic head-dress—a remark which is borne out by the mockery in the Knights of Aristophanes (425 B.C.) of the ancient costume (Ar. *Eq.* 1323 and 1331). This of course only applies to the dress of men, but Herodotus (v. 87, 88) informs us that about the middle of the sixth century the Athenian women gave up the old woollen shift and adopted the linen one.

In both cases it is very important to remember that the changes described took place only within a restricted area, some of them in fact only at Athens. Thus the old πέπλος of wool was still worn in the Peloponnese in the sixth century, and that of linen in Ionia during the fifth; while in the more out-of-the-way parts of Greece, in Aetolia and Thessaly, the costumes were probably almost the same as in the times of Homer and Hesiod. All these changes can be traced with the greatest distinctness in the monuments of the art of the seventh and sixth centuries B.C.

The most important of these remains, both as being the most numerous and as giving the best representations, are the vases of the black-figured and early red-figured styles. Next to these come statuettes of bronze and terra-cotta, and reliefs in stone or metal plate. Least important are the statues in the round; for these, if male, are mostly nude, and, in any case, are of a too conventional type to be good evidence. In the earliest of these monuments we find the men clad either in a long shirt with a mantle, with its ends hanging in front at an equal length from each shoulder, or without shirt and in a mantle folded double and thrown over the shoulders in the same symmetrical way. The former is worn by old men generally, and by others in a time of peace; the latter is the costume of youths and warriors.

There can be little doubt that the long mantle is the χλαῖνα, most probably worn in the same way as in Homeric times. The doubled mantle may perhaps be the δίπλαξ, but this is by no means the way of doubling it. The Homeric χλαῖνα was fastened with a brooch or clasp, but nothing of the kind is shown by the vase-paintings. This, however, does not necessarily disprove its use, for it is very rare to find the *fibula* of a woman's πέπλος shown, and yet it was absolutely indispensable. It is besides difficult to see in what other way than by a clasp the χλαῖνα can have been kept in place in this symmetrical style of wearing it.

Figures from Frieze of the Parthenon.

The women on vases of this class are clad in the πέπλος, and wear a veil, which falls from the head symmetrically over the shoulders, and down the back is practically a shawl. Both this and the symmetrical mantles of the men are well shown on the François vase at Florence.

On vases rather later than these one finds that the women assume the mantle, probably owing to the adoption of the linen shift, which made a warm shawl an absolute necessity. The way in which the change came about is shown by the characteristic fashion in which the shawl appears fastened with a brooch or brooches, but only at one shoulder, leaving the other shoulder and arm free and the breast bare; the mantle being in fact a πέπλος with the brooch at the closed side loosened. This is by far the commonest costume on archaic statues and statuettes, in marble, terra-cotta, and bronze from Rhodes, Athens, Magna Graecia, Etruria, and in fact all the places where objects of archaic art are found. It is peculiarly well-suited for the formal elegance of the period, the Ionic shift of linen showing at the bared breast and shoulder, in contrast with the folds of the woollen shawl, which hangs diagonally down in artificially arranged plaits. It is well seen in many of the statues discovered on the Acropolis in 1886 (Rhomaidis-Cavvadias, *Les Musées d'Athènes*), on the Athene of the Aeginetan East Pediment, and in countless vase-paintings. (Cf. Furtwängler in Roscher's *Lexicon of Mythology*, s. v. Aphrodite.) In Graeco-Roman times, this costume is important, because adopted as an archaic trait by the archaistic artists of that time. Instances of its use in this way are very numerous: the Artemis from Pompeii (cf. Studnizcka, in *Bulletino del Inst.* 1888), the Dresden Pallas, and the Minerva from Herculaneum. It is generally known as the "Spes" costume, early archaeologists having wrongly imagined that it was peculiar to Roman statues of that goddess.

Scarcely less characteristic of archaic and archaistic art is the symmetrical wearing of the χλαῖνα. This is seen on the Hermes Kriophoros of Wilton House, Oinomaos in the East Pediment from Olympia, on the figures of Athene on late Panathenaic vases, and of Poseidon on various coins. It is also a common motive on the flying statues, and reliefs of the Hellenistic time, and is usually wrongly explained as being a χλαμύς.

Early in the sixth, if not in the seventh century B.C., the manner of wearing the cloak which prevailed in classical times begins to appear in works of art. In it the symmetrical fashion, in which the ends are thrown over the shoulders, has been given up, and the cloak is wrapped round the body, being thrown over the left shoulder across the back, and under or over the right arm, according to the desire of the wearer to cover or keep his arm free. At first this fashion was confined to men, but by the fifth century it had become almost universal for women. The cloak thus worn is generally known as the ἱμάτιον: but, as will be shown further on, this is but a very special use of the term, the sole difference between cloaks wrapped round the body in this fashion and cloaks worn in other fashions (*e.g.* the τρίβων) being the immaterial one of size.

At this period, as indeed at every other, such a ἱμάτιον was the indispensable outdoor dress of the Greek; and to appear without it in one's under-garment was indecent, and anyone so dressed was spoken of as naked (γυμνός). In primitive times the cloak had probably been the sole garment of both sexes, and it remained so among some of the Dorians and the poorer working classes down to the close of Greek history. In Homer's time men of quality had already adopted a shirt (χιτών), and we have seen that women followed their example somewhere in the sixth century. By the fifth century, however, it had become so much the exception to wear a cloak without an undergarment that to do so (to be ἀχίτων ἐν ἱματίῳ, Diod. xi. 26) was a sign either of great poverty or determined asceticism. This of course does not apply to warriors or hunters, who wore the old garb, even to late times.

In Athens much importance was attached to the nice adjustment and elegant wearing of the ἱμάτιον. Indeed the way in which it was worn was regarded as an infallible guide to the character of its owner. To leave the left shoulder free instead of the right was a true sign of a barbarian, as can be seen from the horror with which Poseidon in Aristophanes' *Birds* (1567) greets the outlandish god Triballos, who had put it on ἐπ' ἀριστερά, instead of ἐπὶ δέξια. Even Plato, in the *Theaetetus* (p. 175), speaks of one who is not a gentleman as ἀναβάλλεσθαι οὐκ ἐπισταμένου ἐπὶ δεξιὰ ἐλευθέρως. The length it ought to be worn was considered a point of great nicety; and though Quintilian (xi. 3, 143) says that it was customary in antiquity to wear the cloak long enough to touch one's boots, yet Alcibades offended many by wearing it down to his ankles (Plut. *Alc.* 1; cf. Demosth. *F. L.* p. 442, § 314). Theophrastus decides that it must come down as low as the knees. In the time of the early Attic orators it was apparently the custom to keep the right hand wrapped in the folds of the ἱμάτιον when speaking, an attitude which is seen in the well-known statue of Sophocles. Aeschines says (*c. Timarch.* § 27) that the custom had disappeared in his time; Cleon being, according to Plutarch (*Nicias*), the first to disregard it.

We must beware of assuming that the *ἱμάτιον* was a distinct garment, differing specifically from the *χλαῖνα* and other forms of cloak. The word originally was perfectly general, denoting clothes of all kinds; and even when its meaning grew more restricted in classical times, it only meant a cloak or over-garment as opposed to the shirt or under-garment. Fashion, however, only recognised one peculiar mode of wearing it as worthy of a gentleman, and this particular mode has in the usage of modern times usurped the name.

Among the specific garments worn at this time, the *χλαῖνα* [LAENA] is the most important. It was still made of thick woollen stuff (Arist. *Ac.* 493), and was used as a winter cloak (*ἱμάτιον χειμέρινον*, Hesych.) or as a blanket, though it was finer than the *σισύρα*, which was also used for this purpose (Ar. *Vespae*, 1138; *Ranae*, 1459). It is frequently mentioned and its compounds are numerous.

The *χλανίς* was a much finer garment and of Milesian wool; it was worn in hot weather by men, at other times by ladies, old men (Arist. *Eccl.* 848), and effeminate persons. It is first mentioned by Simonides, but *χλάνδια* (= *χλανίδια*, which are among the festival robes in Arist. *Lys.* 1188) and *χλάνισκα* are among the robes in the Komos of the Heraeum at Samos (cf. C. Curtius, *Inschriften und Studien zur Geschichte von Samos*).

The *ληδάριον* was also a summer garment, as we see from Arist. *Av.* 715, where the swallow is said to announce *ὅτε χρὴ χλαῖναν πωλεῖν καὶ ληδάριον πρίασθαι*. The word is a diminutive of *λῆδος* (cf. *λῄδιον* in an Attic inscription, *C. I.* 155, 45).

The *ξυστίς* was also a garment of fine quality worn by women of quality at festivals (Arist. *Lys.* 1189), which would have been intended rather to complete a gorgeous costume than to form an essential part of it. In Theocr. ii. 74, however, it is an ordinary over-garment. It was also worn by men (Arist. *Nub.* 70), especially on state occasions, and seems to have been used on the stage for the attire of heroic personages.

The *ἐφεστρίς* was somewhat similar to the *ξυστίς*, and also worn by both men and women. In Xen. *Symp.* 4, 38, it has the epithet *παχεῖα*, from which it would appear that it was not so light as the *ξυστίς*.

The *ἐφαπτίς*, according to the Scholiast on Clemens Alexandrinus (iv. 128, ed. Klotz), is a more costly form of the *χλαῖνα*, was used by hunters and warriors, and is very probably the garment which is often seen wrapped round a hunter's arm. Polybius uses it (quoted by Athen. 194 f) as a translation of the Latin *sagum*.

The *ἀμπέχονον* (Theocr. xv. 39), *ἀμπεχόνη*, and *ἀμπεχόνιον* do not seem to refer to any special form of *ἐπίβλημα* or mantle, but to be quite general. The same is the case with *λώπη* and *λῶπος*.

Pollux (vii. 47) divides *χλαῖναι* into *ἁπληγίδες* and *διπληγίδες* (cf. *C. I. Afr.* i. 405). The varieties of the *ἱμάτιον* hitherto described come under the former head, while under the latter are grouped varieties in which the mantle was worn folded double and pinned by a clasp or brooch round the neck. Such forms were the natural dress of poor folk and those who led an active life. Lycurgus (*c. Leocr.* § 40) tells how, in the panic which followed Chaeronea, aged citizens went about with their mantles doubled and pinned (*διπλᾶ τὰ ἱμάτια ἐμπεπορπημένους*). For the TRIBON, see that article.

Statue of Sophocles, in the Lateran.

It is only necessary to mention in this place that the *τρίβων*, though not regarded strictly as a *ἱμάτιον* (inasmuch as it was not an over-garment, but a sole garment, supplying the place of *χίτων* and *ἱμάτιον*), yet belongs in form to the cloak and not to the shirt.

The dress of the common people was probably not very different from this, but often consisted of skins or of the *ἐξωμίς*. The *ἐξωμίς* is a hybrid garment, at once cloak and shirt (*χιτὼν ὁμοῦ καὶ ἱμάτιον*, Hesych.), worn by men in much the same way as the Doric shift or *πέπλος* [TUNICA] was by women, only being much shorter, barely reaching to the knees. The right arm, how-

Lady in outdoor dress. (From a terra-cotta in the British Museum.)

ever, was left free by loosing the clasp at the shoulder. On this account it has been generally described as a *χιτὼν ἑτερομάσχαλος*, in contrast to the ordinary *χιτών*, which was *ἀμφιμάσχαλος*. It was essentially the garb of servants (*σχῆμα οἰκετῶν*: cf. Arist. *Vesp.* 444), whereas the *χιτὼν ἀμφιμάσχαλος* was the garb of freemen (*σχῆμα ἐλευθερῶν*, Poll. vii. 47). An immense number of *ἐξωμίδες* were exported from Megara (cf. Blümner, *Gewerbliche Thätigkeit*, p. 71, n. 4). In art the *ἐξωμὶς* is, after the fourth century, the characteristic garb of Odysseus, Hephaestos, and Daedalus, and at all periods is peculiar to handicraftsmen, labourers, seafaring folk, and beggars. In such cases the *πῖλος* is generally worn with it. [EXOMIS.]

Other names for mantles denote colour and texture, but apparently no characteristic difference in the manner of wearing. The *κροκωτὸς* is a good instance of this; it is an over-garment worn exclusively by women (Arist. *Thesm.* 253; *Eccles.* 1332); and when it is adopted by men, as by Agathon in the Frogs (Arist. *Ran.* 46), a joke is always intended. The *βατραχὶς*, a frog-coloured cloak, was on the contrary a man's garment.

Of the cloaks and shawls worn in the Hellenistic age but little that is definite can be said, for, though the material is not scant, no writer of authority has treated of the subject. The old Greek *χλαῖνα*, *ἐξωμίς*, *τρίβων*, and *χλαμὺς* still survived, doubtless in much the same forms as before, but they were no longer fashionable, except perhaps with philosophic Romans, who were more Greek than the Greeks themselves. The cosmopolitan spirit of the age had led to the adoption of many foreign garments; and where Roman dress was not worn, Oriental was to be found. The Greeks had, even in the time of Aristophanes, a liking for Persian dress, but it was not until the third century that garments like the Lydian *μανδύη* or the *καπυρὶς ἀκταῖα* or *σαραπὶς* of Persia were adopted wholesale from the East, and nationalised all over the Greek world. With the exception of the terra-cottas and a few reliefs which unfortunately have, as yet, not been systematically studied, the art of this age gives only the faintest idea of the costume actually worn. In sculpture the love of the nude figure was continually growing, and, with it, the drapery became more and more conventional. On the vases, on the other hand, the costumes, though varied and elaborate, are only too evidently theatrical or idealised. Next to the terra-cottas, which are a perfect mine for garments of every conceivable size and shape, worn in the most diversified ways, the Pompeian wall-paintings are perhaps the most useful guides, though the information they give is rather as to the gaudy colours which were regarded as tasteful, than the actual shape of the dresses. In Rome itself the Greek mantle never became naturalised, though, under the name *pallium*, it was well known to them as the distinctive mark of a Greek. Indeed *palliatus* is used as meaning Greek, in opposition to *togatus*, meaning Roman, not only in the well-known division of comedies into *palliatae* and *togatae*, but apparently in ordinary speech. Conservative Romans regarded it as beneath their dignity to wear a *pallium*, and we find it cast up as a reproach against Scipio Africanus (Liv. xxix. 19) and Rabirius (Cic. *pro Rab.* 9, 25) that they did so. Cicero speaks with indignation of Verres (*in Verrem*, v. 33, 86), "stetit soleatus praetor populi Romani pallio purpureo tunica talari," and even under the Empire Germanicus offended some people by adopting a "par Graecis amictus" (Tac. *Ann.* ii. 59).

Palliolum is frequently used as an equivalent for *τρίβων* or *ἐξωμίς*, but is also found in the more general sense.

(See Hermann - Blümner, *Lehrbuch*, Pt. iii.; Iwan Müller, *Handbuch*, 1887, Pt. iv. p. 396 *seq.*; Baumeister, *Denkmäler*, s. v. *Himation*; and for Homeric and early history of subject, Studniczka, *Beiträge zur Geschichte der altgriechischen Tracht*, Vienna, 1886, the main results of which have been incorporated by W. Helbig in the 2nd edition of *Das homerische Epos*, 1887.) [W. C. F. A.]

PA'LMIPES, i.e. *pes et palmus*, a Roman measure of length, equal to a foot and a palm; or a foot and a quarter, or 15 inches, or 20 digits. (Plin. *H. N.* xvii. § 32; Vitruv. v. 6.) [MENSURA.] [P. S.]

PALMUS (also *palma*, Plin. vii. § 28), properly the width of the open hand, or, more exactly, of the four fingers, was used by the Romans for two different measures of length: namely, as the translation of the Greek *παλαιστή*, or *δῶρον* in old Greek, and *σπιθαμὴ* respectively. In the former sense it is equal to 4 digits, or 3 inches, or 1–4th of a foot, or 1–6th of the cubit. (Varro, *R. R.* v. 1; cf. Colum. v. 1; Frontin. *Aq.* 24.) This was the only sense in Latin of the best age, but a later sense appears (first in ecclesiastical writers, Jerome, *Ezech.* 40, &c.), in which palmus = *σπιθαμή*, a span of 9 inches. It is a mistake to suppose that this measure existed earlier in Latin as "palmus major." The Romans had no special word in earlier times for *σπιθαμή*, but expressed it as *dodrans* ($\frac{3}{4}$ of a foot): "ternas spithamas, hoc est ternos dodrantes" (Plin. vii. § 26). In the passage sometimes quoted from Varro, *R. R.* iii. 7, the ordinary palmus of 3 inches is meant. (Hultsch, *Metrologie*, p. 15, note.) [P. S.] [G. E. M.]

PALUDAMENTUM. The root of this word and its cognate adjective is undoubtedly that contained in *pallium* and *palla*, though it is not possible to trace any real connexion. Varro tells us that Ennius speaks of Minerva as "virago paluda," but does not explain its special meaning (*L. L.* vii. 37). He also remarks that *paludamentum* was used originally of any kind of military decoration, and this statement is borne out by a passage of Veranius given by Festus (*s. v.*). In the extant literature it is only employed to denote the SAGUM or military cloak, and in writers of the best age is applied only to the *sagum purpureum* worn by the Imperator, as distinguished from the *sagum gregale* of the common soldier. The cases in which it is used in the former and more general sense are rare. Lucilius, for instance, if we may trust Nonius, spoke of it as the garb of the *rorarii*, and Sabidius (in the *scholium* in the Veronese MS. on Verg. *Aen.* x. 241) gives it to the *pedites* no less than the *equites*. Livy is the author who uses it most frequently in this way, doubtless from his love of archaeological detail. Thus we find that as the survivor of the Horatii returns from the triple duel his sister recognises the *paludamentum* she had wrought for his slain foe (i. 26, 2); so, too, when Gracchus prepares to die, it is "paludamento circum laevum bracchium intorto." Two other passages in which Livy speaks of a consul being accompanied by "paludatis lictoribus" (xli. 10, 7; xlv. 39, 11) gave the commentators much trouble, but are easily explained by comparing Cic. *in Pis.* 23, 55, with Sil. Ital. ix. 420, the former telling us that the lictors wore the sagum, the latter giving it the epithet *rubens*. [LICTOR.]

With such rare exceptions the *paludamentum* is the cloak which was put on by the Roman general when leaving the city invested with the *imperium*, and was doffed when he re-entered and became once more an ordinary citizen. (Varro, *loc. cit.*; Caes. *B. C.* i. 6; Liv. xli. 10;—Cic. *in Pis.* 13; *ad Att.* iv. 13; *ad Fam.* xv. 17.) Hence we find that the insignia of a consul which the senate sent as a present to Masinissa included "sagula purpurea duo" (Liv. xxx. 17, 13), and that *paludatus* is regularly used to denote a general in command of an army on active service (Cic. *Verr.* ii. 7, 13; Juv. vi. 399). Such phrases as "togam paludamento mutare," meaning to get peace for war (Sallust), are not uncommon (cf. Pliny, *Paneg.* 56, 4).

Figures wearing Paludamentum. (Trajan's Column.)

Purple, though the favourite (Hirt. *de B. Afr.* 57; Plin. *H. N.* xxii. §§ 2, 3, and more especially the customs dues, *C. I. L.* viii. 408) colour, was not the only one, as is shown by the story told by Valerius Maximus (i. 6, 11), of how Crassus on the fatal morn of Charrae went out in a dark-coloured and not in a purple or white *paludamentum*. It was worn regularly by the emperors (Suet. *Claud.* 31), and was, by some who were careful to observe old constitutional forms, laid aside on entering the city (Tac. *Hist.* ii. 89; Suet. *Vitell.* 11). Pliny (*H. N.* xxxiii. § 63) says that at the great sea-fight exhibited by Claudius, Agrippina wore a *paludamentum* of cloth of gold ("indutam paludamento aureo textili sine alia materia"), and Tacitus (*Ann.* xii. 56) describes the same garment as "chlamys aurata;" while Dio Cassius has the expression χλαμύδι διαχρύσῳ ἐκοσμεῖτο (lx. 33). It is not impossible that Pliny may have made a slip in giving Agrippina's cloak the specific name, but there certainly were *paludamenta* embroidered or woven with gold thread in the later days of the Empire (Aurel. Vict., *Epit.* 3). It was probably this form which was adopted as a vestment at Milan, where the Bishop wore a *paludamentum baptismale* (Muratori, *Antiq. It. med. aev.* iv. 897). The monuments which represent it are generally portraits of the emperors; and these show that, while there was no distinction in shape, the *paludamentum* was larger and of thicker and better material than the ordinary *sagum*. It is frequently fringed, and is worn as a rule with the clasp at the right shoulder, though cases occur where it is at the left. In the famous statue of Augustus in the Vatican, it is unclasped, thrown round the loins, and hangs over the left arm. This is of course owing to the difficulty of treating such a one-sided garment in the round,—a difficulty which the Hellenistic sculptors got over in the case of the *chlamys* by letting it hang from the left shoulder. In the case of busts a compromise is made by hitching the *paludamentum* over the left shoulder and leaving both arms free.

Roman Emperor in Paludamentum. (Maffei.)

The origin of this cloak has been the subject of some guesswork, many following Florus (i. 5, 6), and deriving it, like the other insignia of authority, from Etruria; while others prefer to connect it with the *chlamys*, which is worn in the same way. There is, however, surely no need to suppose that the Romans required to be taught the use of a garment which is so obvious, and so universally found all over the world; neither is it very unscientific to assume that, however alike in shape, there must always be a distinction between the dress of the general and those under him. (Marquardt, *Privatleben*, p. 567.) [W. R.] [W. C. F. A.]

PALUS, a pole or stake, was used in the military exercises of the Romans. It was stuck into the ground, and the tiro, armed with a heavy wicker shield and a wooden sword, had to attack it as if it were a real enemy.' Vegetius (i. 11) gives a full account of the drill. This kind of exercise is sometimes called *palaria* (Sosip. Charis. i. p. 11). It was used for exercise (*e.g.* before the bath) as well as for military drill. So Martial (vii. 32, 8) speaks of "nudi stipitis ictus hebes," where the *stipes* = *palus*, and the "ictus *hebes*" expresses the *wooden* sword, which Juvenal (vi. 247) renders by *sudes*, when he is speaking of women taking to these manly exercises (*vulnera pali*). See Becker-Göll, *Gallus*, iii.³ 185 f. [W. S.] [G. E. M.]

PAMBOEO'TIA (παμβοιώτια), a festive panegyris of all the Boeotians, which the grammarians compare with the Panathenaea of the Atticans, and the Panionia of the Ionians. The principal object of the meeting was the common worship of Athena Itonia, who had a temple in the neighbourhood of Coronea, near which the panegyris was held (Strabo, ix. p. 411; Paus. ix. 34, § 1). From Polybius (iv. 3, ix. 34) it appears that during this national festival no war was allowed to be carried on, and that in case of a war a truce was always concluded. This panegyris is also mentioned by Plutarch (*Amat. Narrat.* p. 774 f.). It is a disputed point whether the Pamboeotia had anything to do with the political constitution of Boeotia, and with the relation of its several towns to Thebes. The question is discussed in Sainte-Croix, *Des Gouvernements fédérat.* p. 211, &c.; Raoul-Rochette, *Sur la Forme et l'Administr. de l'État fédératif des Béotiens*, in the *Mém. de l'Acad. des Inscript.* vol. viii. (1827), p. 214. It seems probable that its object was religious, not political, though, as at other panegyreis, there were no doubt political harangues [PANEGYRIS]. The state and constitution of Boeotia is discussed under BOEOTARCHES. (See also Gilbert, *Staatsalterthümer*, ii. 53.) [L. S.] [G. E. M.]

PANATHENAEA (τὰ Παναθήναια) was a very ancient festival in honour of Athena Polias and Erechtheus (A. Mommsen, *Heortologie der Athener*, 14 ff., 37 ff.), said to have been founded by Erechtheus or Erichthonius 729 years before the first Olympiad (*C. I. G.* 2374, cf. p. 325), called at first Athenaea, but after the συνοικισμὸς by Theseus Panathenaea (Plut. *Thes.* 24; Suid. *s. v.* Παναθήναια). Pisistratus renewed it with increased splendour, and attached more especial importance therein to the worship of his protecting divinity, Athena.

1. *The Greater and Lesser Panathenaea.*—The Greater Panathenaea was a πεντετηρίς celebrated every fourth year, and was merely an extended and more magnificent performance of the Lesser Panathenaea, which was always from of old held every year (cf. Hom. *Il.* ii. 551). As each fourth year came round the Lesser was incorporated in the Greater. The procession and the hecatomb always remained the basis of the latter, but the chariot-race also appears to have been considered as belonging to the original festival. Erechtheus is said to have ridden at it himself (*C. I. G.* l. c.). Pisistratus may be virtually considered as the second establisher of the Greater Panathenaea (Schol. on Aristid. p. 323), though we hear that the performance under the Archon Hippoclides in 566 B.C. was attended by a large concourse of strangers and was widely celebrated, especially as on that occasion gymnastic contests were first introduced. Indeed Marcellinus (*Vit. Thuc.* § 3) says the Panathenaea was established in the archonship of Hippoclides. The increased splendour of the Greater festival of course diminished the importance of the Lesser: so, though the adjective μεγάλα is often found attaching to the Greater (*C. I. G.* 380, 1068; Boeckh, *Staatshaushaltung*, ii.³ 513), still generally Παναθήναια alone is used for the Greater, the Lesser one being styled μικρά.

The statement in the Arg. to Dem. *Mid.* 510, that the Lesser festival was a trieteris, is disproved both by such evidence as τὰ Παναθήναια τὰ κατ' ἐνιαυτόν (Rangabé, 814, 32) and also by the fact that inscriptions on vases point to Panathenaea having been held in every single Olympic year (Mommsen, pp. 119, 125). The Greater Panathenaea were celebrated every third Olympic year (e.g. *C. I. G.* i. 251, by the Archon Charondas in 110. 3; Lys. *Accept. Mun. Def.* § 1, by the Archon Glaucippus in 92. 3: see other confirmatory arguments in Mommsen, pp. 120, 121); therefore they were held in the same years as the Pythian games. Solon, we know, took a Pythian calendar to regulate the Athenian one, and Pisistratus in many points followed closely in Solon's steps (Mommsen, 122).

2. *The date of the Panathenaea.*—The principal day was the third from the end of Hecatombaeon (about August 13th). Proclus (in Plat. *Tim.* p. 9) says so expressly of the Greater: and this agrees with Schol. on Hom. *Il.* viii. 39, where Athena is said to have been born on that day. But Proclus says that the Lesser Panathenaea came immediately after the Bendideia [BENDIDEIA], accordingly on the 21st of Thargelion (about June 8th). But the Greater and Lesser Panathenaea are undoubtedly connected in that the former is but an amplification of the latter so that *à priori* there is a presumption tha they are held at the same time. Further *C. I. G.* 157 obviously follows the calendar, an it puts the Panathenaea after the sacrifice t Eirene on Hecatombaeon 16th. According t Demosthenes (*Timocrates*, p. 709, § 28), th Panathenaea are just approaching on Hecatom baeon 11th; but these are certainly the Less Panathenaea (Schaefer, *Demosth.* i. 334; Wa on Dem. *Tim.* § 26), as the year is Ol. 106. not 106. 3. The argument that the list Lysias (*op. cit.* § 4) is necessarily in chronolog order is disproved by such lists as Isaeus *Dicaeog. hered.* § 36), and [Andoc.] *contr.* § 42, which can be seen from comparison to certainly not both in chronological order.

The evidence for a Panathenaea in the spr is Himerius, who gives as a title to his th speech, εἰς Βασίλειον Παναθηναίοις, ἀρχομέ τοῦ ἔαρος: cf. [Verg.] *Ciris*, 21 ff. (probably c posed in Hadrian's time); but this refers to Roman Quinquatria, which were called P thenaea after the disappearance of the o festival (Dionys. Hal. ii. 70).

3. *The Musical Contest.*—This was only at the Greater Panathenaea. Pisistratus of the *gens* of the Philaidae, who lived Brauron, where there was a contest of rhaps

from of old (Schol. on Aristoph. *Av.* 873). Hence he but transferred to the capital the custom of his village. He introduced recitations of the Homeric poems, which were better regulated by Hipparchus: cf. Plat. *Hipp.* 228 B; Ael. *V. H.* viii. 2. (For the meaning of *ἐξ ὑποβολῆς* and *ἐξ ὑπολήψεως*, see Mahaffy, *Hist. of Greek Literature*, i. 29, note.) The poems were now sung in much longer portions than before, and probably *both* the Iliad and the Odyssey as the Neleidae are especially celebrated in the latter (cf. Mommsen, p. 138). In later times other poets (*e.g.* Choerilus of Samos, fl. 420 B.C.) obtained the privilege of being recited at the Panathenaea (Suidas, *s. v.* *Χοίριλος*).

The musical contest proper was introduced by Pericles, who built the new Odeum for the purpose (Plut. *Pericl.* 13). Previously the recitations of the rhapsodes were in the old unroofed Odeum. There is a very important inscription (*C. I. A.* ii. 965 = Rang. 961) concerning these musical contests. The part referring to the rhapsodists is probably lost. Then follow five prizes for the *κιθαρῳδοί*. For the first an olive crown set with gold (*στέφανος θαλλοῦ χρυσοῦς*), value 1000 drachmas and 500 drachmas in silver: for the second, probably a crown value 700, for the third 600, for the fourth 400, and for the fifth 300 (see Rangabé, ii. p. 673). Next two prizes *ἀνδράσι αὐλῳδοῖς*: for the first a crown value 300, for the second one value 100. Next *ἀνδράσι κιθαρισταῖς*: for the first it appears a crown valued at 500 drachmas, or 300 drachmas in money; for the second probably 200, and for the third 100. The fact that we find *ἀνδράσι* added proves that there were contests of boys too (cf. *C. I. G.* 2758, Col. i.). The *αὐληταί* also got prizes, but the inscription does not record what they were. Note that the prizes in the musical contests are reckoned in money, not in kind, as in the older gymnastic and equestrian contests. The first who won a victory in these musical contests was Phrynis in Ol. 83. 3 (446 B.C.): see Schol. on Aristoph. *Nub.* 971 (alter *Καλλίου* to *Καλλιμάχου*). Plutarch appears to have written a treatise on the Panathenaic music (*de Mus.* 8). There were not any dramatic representations at the Panathenaea. When we consider the long recitations of the rhapsodes and the musical contests proper, we may allow perhaps three days for this part of the ceremony on a liberal computation, certainly not less than one and a half days (Mommsen, p. 202).

4. *The Gymnastic Contest.*—There is frequent mention of this contest at the Greater Panathenaea (*C. I. G.* 251, Rang. 849, 18; Dem. *de Cor.* p. 265, § 116—a passage, by the way, which shows that proclamations in honour of benefactors were made at the Greater Panathenaea at the gymnastic contest), none for the Lesser: besides, it had nothing to do with the ritual; it was a purely secular and late addition, said to have been first made by the Archon Hippoclides in 566 B.C., or perhaps Pisistratus himself (cf. § 1). The inscription referred to above, *C. I. A.* ii. 965 (= Rang. 960), also gives details as to the gymnastic contests. The competitors were divided into *παῖδες*, *ἀγένειοι*, and *ἄνδρες*, the *παῖδες* being those from 12 to 16 years of age, the *ἀγένειοι* from 16 to 20, and the *ἄνδρες* above 20. Thus neither a *παῖς* nor an *ἀγένειος* could compete as such twice. In later times (Rang. 964) the *παῖδες* were still further divided, *e.g.* into *τῆς πρώτης ἡλικίας*, *τῆς δευτέρας* (cf. *C. I. G.* 1590, *παίδων τῶν πρεσβυτέρων*, *παίδων τῶν νεωτέρων*), the *παῖδες τῆς τρίτης* being doubtless the *ἀγένειοι*. There is then an event *ἐκ πάντων*, which means an all-comers' race, but for boys, as is plain from its position before *ἄνδρας*. The boys and striplings had their events first: then there was an interval (if a whole night did not intervene); and on re-assembling the men's events took place. According to *C. I. A.* ii. 965, the *παῖδες* and *ἀγένειοι* have five contests,—*στάδιον*, *πένταθλον*, *πάλη*, *πυγμή*, *παγκράτιον*. According to Rang. 963 (belonging to the late period of the Diadochi), the *παῖδες* have six, while the *ἀγένειοι* still have only five. Perhaps the *δόλιχος*, which was added, was for all below the class of *ἄνδρες*. The men's contests were, according to *C. I. A.* 966 (= Rang. 962), of 190 B.C., *δόλιχος*, *στάδιον*, *δίαυλος*, *ἵππιος* (= a double *δίαυλος*), *πένταθλον*, *πάλη*, *πυγμή*, *παγκράτιον*, *ὁπλίτης* (= race in armour). Note the order of the events, though in Plato's time the *στάδιον* came first (*Legg.* viii. 833 A): cf. *C. I. A.* ii. 965. The races were run in heats (*τάξεις*) of four each (Paus. vi. 13, 4); the victors in the heats afterwards running together. There were prizes for the first and second in the deciding heat in the ratio of 5 : 1 (= ox : sheep, cf. Plut. *Sol.* 23): see *C. I. A.* l. c. The prizes consisted of oil from the *μορίαι* in the Academia [OLEA, p. 263 *a*], given in special prize amphorae, which were called *ἀμφορεῖς Παναθηναϊκοί* (Athen. v. 199). The oil was meant to be sold, and could be exported free of duty (*οὐκ ἔστι δ' ἐξαγωγὴ ἐλαίου ἐξ Ἀθηνῶν εἰ μὴ τοῖς νικῶσι*, Schol. on Pind. *Nem.* x. 64). The number of amphorae given, according to the inscription referred to, was about 1450, and the value (1 amphora worth 6 drachmas) about 1 talent 2700 drachmas (see Rangabé, ii. p. 671). The gymnastic games probably lasted two days, certainly not less than one (Mommsen, 202).

5. *The Equestrian Contest.*—There is plenty of evidence for an equestrian contest at the Greater Panathenaea, none for the Lesser; though there may have been a kind of ceremonial race, more as a matter of worship than as a contest in which the victors got substantial prizes. None of the evidences for Athlothetae (cf. § 11) at the Lesser Panathenaea are absolutely conclusive, yet we may perhaps suppose that there was an equestrian contest on a small scale at this festival (Mommsen, 124–127). To understand thoroughly the many events of this division at different times, the reader must study the inscriptions in *C. I. A.* 965 b = Rang. 960 (380 B.C.), 966 = Rang. 962 (190 B.C.), 968 (166 B.C.), 969 (162 B.C.), *C. I. G.* 1591 (250 B.C.), and above all the elaborate table of the comparison of these inscriptions in Mommsen (Taf. IV.). The multifarious details can only be set forth in such a table, and any one who wants to study them very closely must be referred to it. Here we can merely give an idea of the plan, noticing that the events appear to have increased in number as time went on. The first and chief event, the one which legend said Erechtheus introduced, was that of the *ἀποβάτης* (cf. *τῆς ἀπήνης καὶ τῆς κάλπης δρόμος* at Olympia in Paus. v. 9, 1 and 2).

A charioteer (*ἡνίοχος ἐγβιβάζων* or *ζεύγει ἐγβιβάζων*) and a companion, as in the Iliad, occupy the chariot. The companion (here called *ἀποβάτης*, not *παραιβάτης*) leaps out (hence his name) and again up (hence sometimes we find him also called *ἀναβάτης*), partly helped by the driver (who thus gets his title *ἐγβιβάζων*), partly by kinds of wheels called *ἀποβατικοὶ τροχοί* (Mommsen, p. 154). The son of Phocion (Plut. *Phoc.* 20) took part in this contest, so it must not be inferred from its absence in *C. I. A.* ii. 965 that it did not exist in 380 B.C. It is really broken off the inscription. The second division in Mommsen's table is ordinary riding and driving, without any relation to ritual or war. Here the horses are divided into foals and full-grown horses; they are yoked either singly, or two or four together; and the races are divided into *δίαυλοι* and *ἀκάμπιοι*. Then there are various permutations and combinations that may be made of these (e.g. *συνωρίδι πωλικῇ*, *κέλητι τελείῳ*, *ἅρματι τελείῳ* in *C. I. A.* ii. 968): but there is no *δίαυλος* ever for a single horse, only for a yoke or a pair, and not even for these in the case of foals. The third division consists of what we may call military competitions, and they are much the same as the second division, only there do not appear so many combinations (e.g. *ib.* *ἅρματι πολεμιστηρίῳ*, *ἵππῳ πολεμιστῇ*). There is no need to suppose that these contests were exclusively confined to the cavalry (Mommsen, 161–2). The fourth refers to the procession in honour of Athena, and always consisted of four horses *ζεύγει πομπικῷ δίαυλον* or *ἀκάμπιον*. The fifth was of javelin-throwers from horseback, a contest which soon disappeared. Notice further that several events are for all comers (*ἐκ πάντων*): cf. *C. I. A.* 968, 42 ff., as opposed to those for Athenians only (*τῶν πολιτικῶν*).

The inscription *C. I. A.* ii. 965 b, of which the beginning is lost containing the *ἀποβάτης*, gives the following, which Mommsen classifies thus:—

1st Class. [*ἀποβάτης.*]
2nd Class. *ἵππων πωλικῷ ζεύγει* (40 : 8).
ἵππων ζεύγει ἀδηφάγῳ (140 : 40); i.e. *τελείῳ* (see Hesych. *s. v.* *ἀδήφαγος*); was probably a slang word for the great expense such splendid race-horses entailed.
3rd Class. *ἵππῳ κέλητι νικῶντι* (16 : 4).
ἵππων ζεύγει νικῶντι (30 : 6).

(It is specially noted in the inscription that these are *πολεμιστηρίοις*.)

4th Class. *ζεύγει πουπικῷ νικῶντι* (4 : 2,
5th Class. *ἀφ' ἵππων ἀκοντίζοντι* (5 : 1).

(In brackets we have given the number of jars of oil awarded for first and second prizes.) The amateurs who took part in the contests of the second class are the best rewarded; and it was to encourage them to spend their money on keeping horses that these events were made the most distinguished. In *C. I. A.* ii. 966, 41, king Ptolemy Epiphanes appears as victor among them in the *δίαυλος* with a chariot.

The place for both the gymnastic and equestrian contests was perhaps the Eleusinium (Köhler to *C. I. A.* ii. 2, p. 392), or the deme Echelidae, W. of the Piraeus (Steph. Byz. *s. v.* *Ἐχελίδαι*: *Etym. M.* s. v. *Ἐνεχελιδῶ*, 340, 53; Mommsen, 152. Yet cf. Milchhöfer in Baumeister's *Denkmäler*, s. v. *Peiraieus*, p. 1200). It took up a day probably, though possibly only half a day (*ib.* 202).

6. *The Smaller Contests.*—(*a*) That called *Euandria* (*εὐανδρία*) was a means by which the leaders of the procession were chosen. It was a *λειτουργία*, [Andoc.] *in Alcib.* § 42, and he who performed it chose out of his tribe a certain number — perhaps about twenty-four, the number of a chorus—of the tallest and best looking members, and arrayed these with proper festal garments. A member of another tribe did the same, and probably only two tribes contended, as no second prize appears in *C. I. A.* ii. 965. From this contest strangers were expressly excluded (Bekk. *Anecd.* 257, 13). Sauppe and Köhler consider that there were two companies who contended in each case in the Euandria, one of seniors, the other of juniors; perhaps the contest of the seniors was called *εὐανδρία* in the special sense, and that of the juniors *εὐοπλία*: cf. Rang. 964 and Mommsen, 168.

(*b*) The *Pyrrhic* dance [PYRRHICA], performed at both the Greater and Lesser Panathenaea (Lys. *Accept. Mun. Def.* §§ 1, 4). With the Euandria and the Lampadedromia it belonged to the more strictly religious part of the festival (cf. Aristoph. *Nub.* 988 and Schol.). Athena was said to have danced the Pyrrhic dance after her victory over the Giants (Dionys. Hal. vii. 72). As belonging to the religious part of the festival, the prize was an ox for sacrifice, and bore the special title of *νικητηριον* (cf. Xen. *Cyr.* viii. 3, 33, where the ox alone is called *νικητήριον*, not the goblets: also Mommsen, 163; Rangabé, ii. p. 671). There were Pyrrhic dancers of all three ages—*παῖδες*, *ἀγένειοι*, and *ἄνδρες*. A relief published by Beulé (*L'Acropole d'Athènes*, ii., last plate but one) presents eight armed youths performing the Pyrrhic dance. A full body of Pyrrhicists would then be twenty-four, the number of a comic chorus. They wear a light helmet, carry a shield on their left arms, but are otherwise naked. How the victory was gained in the Pyrrhic dance and the Euandria is not stated; probably by decision of a judge. The figure on the left of the relief may be perhaps the judge.

(*c*) The LAMPADEDROMIA, the prize of which in *C. I. A.* ii. 965 was a hydria of oil (cf. Schol. in Pind. *Nem.* xv. 61), value 30 drachmas.

7. *The Pannychis.*—This was the night of the 28th (the day being reckoned from sunset to sunset). The Lampadedromia was the first event in it. Then followed during the greater part of the night litanies (*ὀλολύγματα*) by the elder priestesses, which were originally prayers and thanksgivings for the harvest, and subsequently songs of joy for the birth of Athena. Mommsen (p. 171, note) thinks that possibly the conclusion of the *Eumenides* may have reference to the ceremonies of the Panathenaic pannychis. There were also dances by the younger priestesses, and towards morning songs by cyclic choruses (cf. Lys. *op. cit.* § 2) of youths and men (*νέων τ' ἀοιδαὶ χορῶν τε μολπαί*, Eur. *Heracl.* 779, a passage comprising many features of the Panathenaea, which, however, must not be taken as expressing the order in time, only the order in importance of the several

events). The kind of songs the men sang may perhaps be partly seen in the dithyramb of Lamprocles in Bergk (*Lyr. Graec.* iii. p. 554: cf. Aristoph. *Nub.* 967 and Schol.). The ἱεροποιοὶ got next to nothing for the expenses of the Pannychis, only 50 drachmas, and this had to compensate much other outlay besides (Rang. 814, 27–30, and his note).

8. *The Procession and Sacrifices.*—The procession was most splendid. It comprised the victors in the games of the preceding days, the πομπεῖς or leaders of the sacrifices, both Athenian and those of strangers (for the colonies and cleruchies used to send sacrifices to the Panathenaea, *e.g.* Brea, *C. I. A.* i. 31), a large quota of cavalry (for Demosthenes, *Phil.* i. p. 47, § 26, speaks of ἵππαρχοι: cf. Schol. on Aristoph. *Nub.* 386), the chief officers of the army, ταξίαρχοι and στρατηγοί, dignified elders (θαλλοφόροι, Xen. *Symp.* 4, 17), bearing olive branches (θάλλοι), doubtless with their μέτοικοι as σκαφηφόροι following, in later times the ephebi splendidly equipped: while of women there was a long train of κανηφόροι [CANEPHOROS], with the wives and daughters of the μέτοικοι as their σκιαδηφόροι and διφροφόροι [METOECI]: then the Athenian people, generally marshalled according to their demes. Though the frieze of the Parthenon reproduces some points, especially the genuine Athenian element of the Panathenaic festival, still it must not be supposed that it reproduces all the details; *e.g.* the μέτοικοι, of whom we have most specific evidence, do not appear. For another service of the female μέτοικοι at the Panathenaea, see HYDRIAPHORIA.

One of the most striking features of the procession was the *Peplus*, worked by ἐργαστῖναι, superintended by two ἀρρηφόροι and certain priestesses, which was destined for the ancient statue of Athena Polias, according to certain prescriptions of the Delphic god. Pisistratus probably intended that a new peplus should be brought every four years; the Elean maidens wove a peplus for the goddess only once in every four years (Paus. v. 16, 2); but in republican Athens a new peplus was made each year (Schol. Aristoph. *Eq.* 566). In the time of the Diadochi portraits of some of these were placed where the figures of the gods should have been (Plut. *Demetr.* 10). The peplus was suspended like a sail from the yards on the mast of the Panathenaic Ship (Schol. on Hom. *Il.* v. 734), which was an actual ship, very large and beautiful. The marvellous appearance of a ship going through the streets was effected by subterranean machines (Philostr. *Vit. Soph.* ii. 1, 5, p. 236 Kayser; Paus. i. 29, 1), of which we should very much like to have further information. The Athenians had become a seafaring people, and they wished to signify it: the time of the agrarian Athena was passed (Mommsen, 188). On the peplus were represented the ἀριστεῖα of the goddess, especially her victory over Enceladus and the Giants (Schol. on Eur. *Hec.* 466; Suidas, *s. v.* Πέπλος). It was considered a great sight for the populace (Plaut. *Merc.* prol. 67).

The procession, marshalled mainly in the outer Ceramicus, partly inside the town, passed through the market-place to the Eleusinium at the east end of the Acropolis (cf. Schol. to Aristoph. *Eq.* 566), turned round this to the left, and passed along the Pelasgicon, north of the Acropolis, and so reached the Propylaea (Philostr. *l. c.*; cp. Xen. *Hipp.* 3, 2). Then some of the members performed the sacrifice to Athena Hygiaea, while others offered a preliminary sacrifice on the Areopagus. Prayers accompanied these offerings, and we hear of prayers being offered for the Plataeans at the Greater Panathenaea (Herod. vi. 111). On entering the Acropolis, which was only allowed to genuine Athenians, there was the sacrifice of one cow to Athena Nike (Rang. 814, 20); after this followed the hecatomb to Athena Polias, on the large altar in the eastern part of the Acropolis. In earlier times the hecatomb was offered at the Erechtheum. After the procession followed the ἑστίασις. The flesh of the victims was given, according to demes, to a certain fixed number out of each deme. The σκαφηφόροι supplied bread and cakes.

9. *The Boat-race* was a supplementary event on the 29th of Hecatombaeon, the day on which ships are to be drawn down to the sea (Hes. *Op.* 815). It was held every four years in the Piraeus in honour of Poseidon (identified with Erechtheus) and Athena. The difference of locality forbids our associating it with the Sunian regatta, though this was also held only once in four years (Herod. vi. 87; Lys. *op. cit.* § 5). In connexion with this part of the festival the orator Lycurgus, in whose family was the priesthood of Poseidon Erechtheus, established three cyclic choruses (Westerm. *Biogr. Min.* 273, 50) in honour of that god, with valuable prizes.

10. *The Calendar of the Panathenaea.*—For the Lesser Panathenaea (which was the nucleus of the Greater) the chief day of the festival was the 28th of Hecatombaeon; it comprised the pannychis, the procession, the sacrifices, and the feasting: and the 27th sufficed for the horse-races (when there were any), the Euandria and the Pyrrhic dances. At the Greater Panathenaea these days were allotted to the same events. But the day on which the festival began will vary according as we allow a longer or shorter period for the three chief contests: thus the Musical contest might last three days or 1½ days, the Gymnastic two days or one day, and the Equestrian one day or half a day. According, then, to the longer period, the Panathenaea would begin on the 21st; according to the shorter, on the 24th. The longer period has the advantage that it leaves the afternoons free for prelections (K. F. Hermann, *Gr. Alt.* 54, 24) or dinner-parties (Xen. *Symp.* init.). The shorter will suit Thucyd. v. 47 better; cf. Mommsen, 204, 205.

11. *The Officials of the Festival.*—(1) The ten *Athlothetae*, one chosen from each tribe. They held office for four years, and their function, as Pollux says (viii. 93), was to arrange the musical, gymnastic, and equestrian contests at the Panathenaea. We find in inscriptions that they received subsidies from the ταμίας of the sacred chest of Athena (*C. I. A.* i. 188). (2) The *Hieropoioi* [HIEROPOIOI], who managed the Lesser Panathenaea (Rang. 814, 32). They appear to have had nothing to do with the specially Greater festival (*Etym. M.* p. 469, 4). (3) The *Gymnasiarchae* [GYMNASIUM], who

especially superintended the LAMPADEDROMIA. (4) The *Demarchs* [DEMARCHI], who marshalled the people in demes for the procession and for the ἑστίασις (Schol. on Aristoph. *Nub.* 37; Suidas, *s. v.*). Concerning those who had perquisites in connexion with the festival, such as the μάντεις and archons in the κρεανομίαι, see Rang. 814.

12. *Panathenaea outside Athens* may perhaps be inferred from Παναθήναια ἐν Ἀθήναις in *C. I. G.* 1068. We are told that Themistocles established Panathenaea in Magnesia (Ath. xii. 533), and in Teos there was a guild of Panathenaistae (*C. I. G.* 3073). The cleruchs no doubt celebrated the festival abroad.

(The principal works on the Panathenaic festivals are Meursius, *Panathenaea*, in Gronovius's *Thesaurus*, vii. p. 83 ff.; H. A. Müller, *Panathenaica*, 1837; M. H. E. Meier, *Panathenaea* in Ersch and Gruber, iii. 10, 277–294; K. F. Hermann, *Gottesd. Alt.* § 54, pp. 358–367; Krause, s. v. *Panathenaea* in Pauly, v. 1105–1111; August Mommsen, *Heortologie der Athener*, 116–205; and Rangabé, ii. pp. 667–696.) [L. C. P.]

PANCRATIASTAE. [PANCRATIUM.]

PANCRA'TIUM (παγκράτιον) is composed of πᾶν and κράτος, and accordingly signifies an athletic game, in which all the powers of the fighter were called into action. The pancratium was one of the games or gymnastic contests which were exhibited at all the great festivals of Greece; it consisted of boxing and wrestling (πυγμή and πάλη: cf. Schol. on Plat. *Rep.* 338 C, D), and was reckoned to be one of the heavy or hard exercises (ἀγωνίσματα βαρέα or βαρύτερα), on account of the violent exertions and great weight of body it required, and for this reason it was not much practised in the gymnasia; and where it was practised, it was probably not without modifications to render it easier for the boys. According to the ancient physicians, it had very rarely a beneficial influence upon health (H. Mercurial. *de Art. Gymnast.* v. 7).

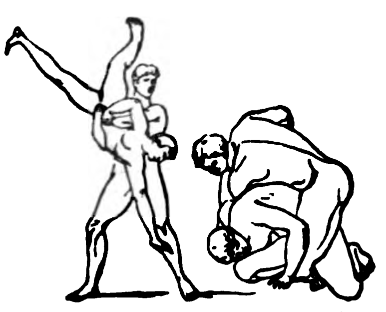
At Sparta the regular pancratium was forbidden, but the name was there applied to a fierce and irregular fight not controlled by any rules, in which even biting and scratching were not uncommon, and in which, in short, everything was allowed by which one of the parties might hope to overcome the other. In Homer we neither find the game nor the name of the pancratium mentioned; and as it was not introduced at the Olympic games until Ol. 33 = 648 B.C. (Paus. v. 8, § 8), we may presume that the game, though it may have existed long before in a rude state, was not brought to any degree of perfection until a short time before that event. It is scarcely possible to speak of an inventor of the pancratium, as it must have gradually arisen out of a rude mode of fighting, which is customary among all uncivilised nations, and which was kept up at Sparta in its original state. But the Greeks regarded Theseus as the inventor of the pancratium, who for want of a sword was said to have used this mode of fighting against the Minotaurus (Schol. *ad* Pind. *Nem.* v. 49). Other legends represented Heracles as having been victor in the pancratium (Paus. v. 8, § 4), and later writers make other heroes also fight the pancratium (Lucan, *Pharsal.* iv. 613, &c.); but these are mere fictions. After the pancratium was once introduced at Olympia, it soon made its way into the other great games of Greece also, and in the times of the Roman emperors we also find it practised in Italy. In Ol. 145 = 200 B.C. the pancratium for boys was introduced at the Olympic games, and the first boy who gained the victory was Phaedimus, a native of a town in Troas (Paus. v. 8, *in fin.*). This innovation had been adopted before in others of the national games, *e.g.* in the Nemean (Pind. *Nem.* v.); and in the 61st Pythiad (Ol. 108 = 348 B.C.) we find a Theban boy of the name of Iolaidas as victor in the pancratium at the Pythian games (Paus. x. 7, § 8). At the Isthmian games the pancratium for boys is only mentioned in the mythical age (Paus. v. 2, 4) till quite late times, but it may have been practised during the Greek classical period.

Philostratus (*Imag.* ii. 6) says that the pancratium of men was the most beautiful of all athletic contests; and the combatants must certainly have shown to the spectators a variety of beautiful and exciting manœuvres, as all the arts of boxing and wrestling appeared here united (Aristot. *Rhet.* i. 5; Plut. *Sympos.* ii. 4, p. 638, 27).

The first person who is said to have fought the pancratium artistically was Leucaros of Acarnania (Schol. to Pind. *Nem.* iii. 27). It was partly fought standing, partly was a rough and tumble on the ground (ἀλίνδησις, κύλισις). This twofold nature explains why the term παγκρατιάζειν is used somewhat variously, sometimes for simple boxing (τὸ παίειν ἀλλήλους ὀρθοστάδην, Lucian, *Anach.* 8); but the idea of *violent* combat seems to be generally associated with it (cf. Aeschin. *Tim.* § 26). Boxing was certainly considered the chief element (Lucian, *Anach.* 8, 24; Pind. *Nem.* iii. 17; Schol. on Pind. *Isthm.* iv. 75; Schol. on Dem. *Mid.* p. 537, § 71), where allusion is specially made to the *blows* received in the pancratium. The fact too that the "successors of Heracles" had to win their victory in wrestling (not boxing) and the pancratium tends to show that boxing must have been a principal part of the latter, for we cannot suppose it to have been disregarded. But still the ἀλίνδησις on the ground was a highly important feature of the pancratium. It is to be noticed that the fist does not appear to have been closed; the usual way to hold the hands was with the fingers curved (see the cuts). The *caestus* [CAESTUS] were not used, for Pausanias never mentions them in any of his accounts of the pancratium, nor are they found on any statues or pictures; further, Paus. vi. 15, 3 seems to show that they were not used, for no *wounds* are anticipated from the pancratium: cf. Artemid. *Oneir.* i. 64, τὸ δὲ παγκράτιον τὰ αὐτὰ τῇ πυγμῇ σημαίνει πλὴν βλάβης. Nor were the lighter gloves called μειλίχαι used, for they would have impeded the movements of the fingers.

The name of these combatants was παγκρατιασταί or πάμμαχοι (Pollux, iii. 150; cf. Plat. *Euthyd.* 271 D). Other predicates applied to the pancratium are ἄμαχος, ἄλειπτος, ἀήττητος, ἀπρόσμαχος, ἀσυνέξωστος, περισθενής, μεγαυχής: cf. Krause, *Gymnastik und Agonistik*, p. 536. The combatants fought naked, and had their bodies anointed and covered with sand, by which they were enabled to take hold of one another (Philostr. *l. c.*; Aristoph. *Pax*, 897).

When two pancratiastae began their contest, they stood with outstretched arms: and the first object which each of them endeavoured to accomplish was to gain a favourable position and grip, each trying to make the other stand so that the sun might shine in his face, or that other inconveniences might prevent his fighting with success (cf. Gell. xiii. 27, §§ 3, 4). This struggle was only the introduction to the real contest, though in certain cases this preparatory struggle might terminate the whole game, as one of the parties might wear out the other by a series of stratagems, and compel him to give up further resistance (*ἀπαγορεύειν*). Sostratus of Sicyon had gained many a victory by such tricks (Paus. vi. 4, § 1). When the real contest began, each of the fighters might commence by boxing or by wrestling, accordingly as he thought he should be more successful in the one than in the other. The using the teeth and butting with the head were considered unfair fighting (*κακομαχεῖν*) and contrary to the law of the games (*νόμος ἐναγώνιος*): cf. Lucian, *Demon.* 49; Philostr. *l. c.* The victory was not decided until one of the parties was killed, or lifted up a finger, thereby declaring that he was unable to continue the contest either from pain or fatigue (Philostr. *l. c.*). It usually happened that one of the combatants, by some trick or other, made his antagonist fall to the ground, and the wrestling which then commenced was called *ἀνακλινοπάλη*, and continued until one of the parties declared himself conquered or was strangled, as was the case at Olympia with Arrhichion or Arrachion of Phigalia, in Ol. 54 (= 564 B.C.), who, however, was declared victor, as his opponent gave up at the last moment from the pain of a broken toe (Paus. viii. 40, § 1, &c.; Euseb. *Chron.* p. 150, Scalig.). A lively description of this struggle is given by Philostratus (*l. c.*). Sometimes one of the fighters fell down on his back on purpose that he might thus ward off the attacks of his antagonist more easily, and this is perhaps the trick called *ὑπτιασμός*. The usual mode of making a person fall was to put one foot behind his, and then to push him backward, or to seize him round his body in such a manner that the upper part being the heavier the person lost his balance and fell. Hence the expression *μέσον λαμβάνειν*, *μεσολαβεῖν*, *μέσον αἱρεῖν*, *τὰ μέσα ἔχειν*, *διὰ μηρῶν σπᾶν*, &c. (Scalig. *ad Euseb. Chron.* p. 48). The above woodcut represents two pairs of pancratiastae; the one on the right hand is an example of the *ἀνακλινοπάλη*, and that on the left of the *μεσολαβεῖν*. They are taken from Krause's *Gymnastik und Agonistik d. Hellen.*, Taf. xii. b, Fig. 35 b, 31 b, where they are copied respectively from Grivaud, *Rec. d. Mon. Ant.* vol. i. pl. 20, 21, and Krause, *Signorum vet. icones*, tab. 10.



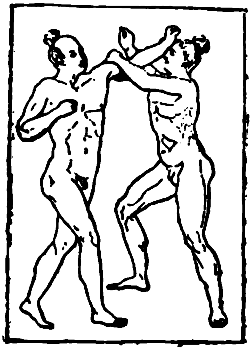
Wrestlers in the Pancratium. (Krause.)

As the contest was in a large measure wrestling, many of the tricks of wrestlers—*ἀκροχειρισμός*, *ἄγχειν*, *λυγίζειν*, *στρεβλοῦν* or *στρέφειν*—were often used. Violently to throw oneself on one's opponent (*ἐνάλλεσθαι*) was a common feature (cf. Pollux, *l. c.*; Philostr. *l. c.*). Many of the recognised figures and movements of the pancratium were imitated in the gymnopaedic dance (Athen. xiv. 631). As an essential part of the pancratium was a struggle on the ground, and as regular battle with an enemy was a standing not a lying combat, Plato (*Legg.* viii. 832 E, 834 A, B) banished the pancratium from his State, and substituted the contest of light-armed warriors (*πελταστική*).

The contests of pancratiastae at Olympia took place about mid-day: for in 472 B.C., beginning rather late, they continued on that occasion into the night (Paus. vi. 24, 1: cf. v. 9, 3; viii. 40, 3).

At Rome the pancratium is first mentioned in the games which Caligula gave to the people (Dio Cass. lix. 13, 9). After this time it seems to have become extremely popular, and Justinian (*Novell.* cv. c. 1, provided *πάγκαρπον* be, as some suppose, a mistake for *παγκράτιον*) made it one of the seven solemnities (*πρόοδοι*) which the consuls had to provide for the amusement of the people.

Several of the Greek pancratiastae have been immortalised in the epinician odes of Pindar, namely Timodemus of Athens (*Nem.* ii.), Melissus and Strepsiades of Thebes (*Isth.* iv. and vii.), Aristoclides, Phylacides and Cleander of Aegina (*Nem.* iii., *Isth.* v. and vi., viii.), and a boy Pytheas of Aegina (*Nem.* v.). But besides these the names of a great many other victors in the pancratium are known. (Compare Fellows, *Discoveries in Lycia*, p. 313, Lond. 1841.) A victor in both wrestling and the pancratium on the same day at Olympia was especially honoured, and considered to be the successor of Heracles. His name was regarded as worthy of being recorded for posterity. The first successor of Heracles (Paus. v. 8, 4) was Caprus of Elea, in 204 B.C. (*ib.* v. 21, 10, where a long list of similar victors in after-times is given). They appear to have been sometimes called *παραδοξονῖκαι* (Plut. *Comp. Cim. et Lucull.* 2). For a distinguished pancratiast to win a victory in one of the races was almost unheard of, the training required in either case being so



Pancratium. (Krause.)

very special (cf. Epictet. iii. 1; Diod. iv. 14), yet the pancratiast Theagenes won the long race at Phthia (Paus. vi. 11, 5). Other celebrated pancratiastae were Polydamas (vi. 5, 4–8), Promachus, Timasitheus (vi. 8, 6–7), Clitomachus (vi. 15, 3–5), &c.

The diet and training of the pancratiastae were the same as those of other athletae. [ATHLETAE.] They generally wore their hair in a bunch (*cirrus*, Suet. *Nero*, 45) on the top of the head; see the preceding cut taken from Krause (*op. cit.* Taf. xviii. Fig. 68).

(Compare Hieron. Mercurialis, *de Arte Gymnastica;* J. H. Krause, *Die Gymnastik und Agonistik der Hellenen*, vol. i. pp. 534–556; also in Pauly, iii. 1019–1021, s. v. *Gymnastica*, sect. xiv.) [L. S.] [L. C. P.]

PANDECTAE or **DIGESTA.** Justinian, having determined at the beginning of his reign to reduce the entire body of Roman law to a new and more compendious form, first caused a compilation or codex to be made of imperial statute law (*lex*), and then proceeded to the more ambitious project of digesting the law contained in the writings of the jurists (*jus*). The difficulty of ascertaining the law from this latter source, owing to the number of books to be consulted, the scarcity of copies of them, and their want of agreement, had long been regarded as a great practical evil. An imperfect remedy for it had been supplied by an enactment of Theodosius II. and Valentinian III. A.D. 426, who had declared that only the writings of five eminent jurists and of other jurists cited by them should have legal authority; and they at the same time laid down rules for determining questions upon which these jurists disagreed [JURISCONSULTI]. It was left to Justinian to carry out a complete measure of reform, though it was one which had long been contemplated. In the last month of A.D. 530, this emperor, in a constitution called from its first words *Deo auctore*, addressed to Tribonian, who had been employed in preparing the Codex Constitutionum, empowered him to name a commission of which he was to be the head, for the purpose of making a Digest from the writings of those jurists to whose works legal authority had been given by emperors, *e.g.* by the law of citations, or, as it is expressed by Justinian, "Antiquorum prudentium quibus auctoritatem conscribendarum interpretandarumque legum sacratissimi principes praebuerunt." The Digest, however, contains extracts from Hermogenianus and Arcadius Charisius, and possibly from one or two other jurists, who were subsequent in date to the classical jurists. The compilers were not bound by the rules of the law of citations for settling cases of dispute, but had full power to declare the law as they thought fit. Many controversies had been previously settled by Justinian in his *quinquaginta decisiones*, which were subsequently embodied in the *Codex repetitae praelectionis.* The instructions of the Emperor were, to select what was useful, to omit what was antiquated or superfluous, to avoid unnecessary repetitions, to get rid of contradictions, and to make such other changes as should produce out of the mass of ancient juristical writings a useful and complete body of law. The work was to be distributed into fifty books, and the books were to be subdivided into titles (*tituli*). The compilation was to be named *Digesta*, a Latin term indicating a collection or arrangement of the works of an author (Mommsen, *Zeitsch. f. Rechtsgesch.* vii. 480), or *Pandectae*, a Greek word expressive of the comprehensiveness of the work. The name *Digesta* had been used by Salvius Julianus for the title of his chief work, and also by the jurists Celsus and Marcellus. The word *Pandectae* had also been applied to compilations which contained various kinds of matter (Gell., Praef.) Thus the Pandects of Ulpian and of Modestinus are spoken of. Justinian strictly prohibited any commentaries being written on the Digest, so as to prevent his work being buried under a mass of interpretation. Permission, however, was given to make *paratitla* or references to parallel passages, with a short statement of their contents (*Const. Deo auctore*, s. 12: cf. Heimbach, *Proleg. ad* Basil. vol. vi. p. 4). It was also provided that abbreviations (*sigla*) should not be used in forming the text of the Digest. The writings of the jurists were deprived of all independent authority, and were not to be used for the purpose of elucidating the meaning of the text. Thus the Digest, together with the other parts of Justinian's legislation, was to be the exclusive source of law. The work was completed in three years, as appears by a constitution both in Greek and Latin, which confirmed the work, and gave to it statutory authority (*Const. Tanta* and *Δέδωκεν*). It became law on the 30th Dec., A.D. 533. The rapidity with which the compilers completed their work is remarkable, though in estimating it we should remember that they had not to draft a code of new rules, but were mainly occupied in selecting and co-ordinating ancient materials. Besides Tribonian, who had the general conduct of the undertaking, sixteen other persons are mentioned as having been employed in the work, among whom were Constantinus, an official of high rank, the professors Dorotheus and Anatolius, who had been invited for that purpose from the law school of Berytus, and the professors Theophilus and Cratinus, who taught at Constantinople. Besides these, there were eleven practising lawyers. The vast extent of the work of the compilers is shown by the statement that they made use of nearly 2,000 different treatises, which contained 3,000,000 lines (*versus*, *στίχοι*), but the amount inserted in their compilation was only 150,000 lines, according to the statement of Justinian. Tribonian procured this large collection of treatises, many of which had fallen into oblivion, and a list of them with the names of their authors was prefixed to the work, pursuant to the instructions of Justinian (*Const. Tanta*, &c. s. 16). Such a list is at present only found in the Florentine MS. of the Digest, written in Greek. Although it is not exact, containing some treatises from which no extracts were taken and omitting others which were used, it is probably a copy of the Index mentioned in the *Constitutio Tanta*. The Index comprises 381 authors, 207 treatises, and 1544 books. Salvius Julianus and Papinian head the list, otherwise the order of names is intended to be historical, and, as a general rule, is so.

In accordance with the instructions of Justinian, the Digest is distributed into fifty books, which with the exception of three books are divided into Titles, of which there are 432. The books 30, 31, and 32 are not divided into Titles, but have one common title, *De legatis et fideicommissis.* Under each Title are placed the extracts from the several jurists, numbered 1, 2, 3, and so on, with the writer's name and the name and division of the work from which the extract is made. These extracts amount to 9,142. No name corresponding to Liber or Titulus is given to these subdivisions of Tituli, which are formed by the extracts from the several writers, but Justinian (*Const. Tanta,* i. 7) has called them *leges,* and they are often designated by this term; another common term used to denote them is *fragmenta.* The fifty books differ materially both in bulk, number of titles, and number of extracts.

Various ways of citing passages from the Digest have been in use at different times and countries. The Byzantine writers gave first the number of the book (βι=βιβλίον), then that of the title (τι), and lastly the extract (διγ). The Glossators simply gave the rubric of the title and the first words of the extract, as also of the paragraph or section. Subsequently the number of the fragment and section was substituted for the first words. Modern writers frequently give the number of the book and title as well as of the fragment and paragraph. Among German civilians it has been usual to put the number of the fragment and paragraph before the rubric, and in modern times to insert after the rubric the number of the book and title: *e.g.* l. or fr. 1, § 5, de obligationibus et actionibus, 44, 7. It has become usual among English writers to cite in the reverse order, and to leave out the rubric: *e.g.* D. 44, 7, 1, § 5. The Glossators and their followers, in referring to the Digest, sometimes indicate the work by P, p, or π (for Pandectae) and sometimes by D or ff.—ff. being derived from a mode of writing Đ with a line through it (*Zeitsch. f. Rechtsgesch.* xii. 300). The oldest printed English work in which the Digest is cited is Bracton's *Treatise on the Law of England,* and his mode of citation is naturally that of the Glossators from whom his knowledge of Roman law was derived. (*Two Discourses* by G. Long, London, 1847, p. 107.)

Justinian divided the whole fifty books into seven large masses, called *partes,* which perhaps corresponded with the seven main divisions of the works on the Edict, and had also a special reference to the course of instruction then established. (For the mystical significance which may attach to the numbers adopted by Justinian, cf. *Const. Tanta,* §§ 1, 2, "Et in septem partes eos digessimus, non perperam neque sine ratione, sed in numerorum naturam et artem respicientes et consentaneam eis divisionem partium conficientes;" and see Hofmann in *Zeitsch. f. Rechtsgesch.* xi. 340, &c.; Roby, *Introd.* p. xxix.) The first part (πρῶτα) comprises the first four books; the second (*de judiciis*), six, *i.e.* from the fifth to the eleventh; the third (*de rebus*), seven, *i.e.* from the twelfth to the nineteenth; the fourth (the *umbilicus Pandectarum,* or central part), from the twentieth to the twenty-seventh; the fifth (*de testamentis*), nine, *i.e.* from the twenty-eighth to the thirty-sixth; the sixth, seven, *i.e.* from thirty-seventh to forty-fourth; and the seventh, five, from the forty-fifth to the fiftieth.

The number of writers from whose works extracts were made is thirty-nine, comprehending those jurists from whom extracts have been erroneously supposed by Gibbon and others to have been made at secondhand, as G. Mucius Scaevola, the Pontifex, from whom four fragments were, and Aelius Gallus, from whom one fragment is taken, whose name is omitted from the Florentine index; but omitting Servius Sulpicius Rufus, who is represented by his pupil Alfenus, distinguishing Aelius Gallus from Julius Aquila, Venuleius from Claudius Saturninus, assuming that there is only one Pomponius, and omitting Sabinus, whose name is erroneously inserted in the Florentine Index. (Zimmern, *Gesch. des röm. Privatrechts,* p. 224.)

The following is the list of jurists from whose writings the Digest was constructed, as it was given in the *Palingenesia* of Hommel, who has arranged the matter taken from each writer under his name, and placed the names in alphabetical order. (The new *Palingenesia* by Lenel is not sufficiently advanced to make it available for this purpose.) The dates of the jurists and the other facts appended are to a great extent taken from Mr. Roby's *Introduction to the Digest.* The figures in the third column indicate the proportions contributed to the Digest by each jurist, estimated in the pages of Hommel. (*a*) denotes that the contribution is under one page of the Palingenesia. The extracts from many of the writers are few and short: those from Ulpian are more than a third of the whole; and next to these the extracts from Paulus, Papinian, Julianus, Pomponius, Q. Cervidius Scaevola, and Gaius, are the largest.

	DATE.	
Sextus Caecilius Africanus	Hadrian and the Antonines	23½
Alfenus Varus	A pupil of Servius Sulpicius and contemporary of Cicero	9
Furius Anthianus	Unknown, last but two in Florentine Index	(*a*)
Julius Aquila	In Florentine Index, Gallus Aquila; unknown; in Index between Marcianus and Modestinus	(*a*)
Aurelius Arcadius Charisius	Constantine	2½
Callistratus	Severus and Caracalla	15
Juventius Celsus	Domitian and Hadrian	14
Florentinus	Unknown, but cf. Dig. 41, 1, 16	4
Gaius	Hadrian and the Antonines	63
C. Aelius Gallus	A contemporary of Cicero	(*a*)
Claudius Hermogenianus	Constantine the Great	9½
Priscus Javolenus	Trajan and Hadrian	23
P. Salvius Julianus	Hadrian	68
M. Antistius Labeo	Augustus	10
Aemilius Macer	Alex. Severus	10
Lucius Volusius Maecianus	Antoninus Pius	7
Lucius Ulpius Marcellus	The Antonines	21
Aelius Marcianus	Caracalla and Alexander Severus	36
Junius Mauricianus	Antoninus Pius	(*a*)
Rutilius Maximus	Unknown; in the Index last but one.	(*a*)
Arrius Menander	Caracalla	2

	DATE.	
Quintus Mucius Scaevola	Pontifex Maximus, Consul B.C. 95	(*a*)
Herennius Modestinus	A pupil of Ulpian	40
Priscus Neratius	Trajan and Hadrian	7½
L. Aemilius Papinianus	Severus and Caracalla	92
Justus Papirius	Commodus.	2
Julius Paulus.	Alex. Severus.	268
Sextus Pomponius	Hadrian and the Antonines	70
Proculus	Tiberius and his successors	6
Licinius Rufinus	Caracalla	1
Claudius Saturninus	The Antonines	1
Q. Cervidius Scaevola	The Antonines	74½
Paternus Tarrentenus	Commodus.	(*a*)
Clemens Terentius	Antoninus Pius	3½
Q. Sept. Florens Tertullianus	The Antonines	1
Claudius Tryphoninus	Caracalla	18
Salvius Aburnus Valens	Hadrian and Antoninus Pius	3
Venuleius Saturninus	The Antonines	10
Domitius Ulpianus	S. Severus and Alex. Severus	610

It follows from the instructions of the Emperor and the object of his work that the extracts from the jurists are not always given in their exact words, alterations and additions being required in them in order that inconsistencies and repetitions might be avoided and the law brought up to date. The presence of these interpolations, called by civilians *emblemata Triboniani*, is not indicated by the compilers, and hence we frequently cannot be sure of the extent to which extracts represent what the jurists to whom they are attributed actually wrote (cf. Gradenwitz, *Interpolationen in den Pandekten*).

In some cases we have the means of comparing extracts with their originals (for such a comparison see Roby's *Introd.* ch. v.), but for the most part the writings of the Roman jurists only exist in the form in which they were adopted by Justinian. The compilers appear to have frequently obscured the meaning of passages by their interpolations; they have in some cases admitted antinomies, and have inserted many repetitions. (On the latter subject, cf. Bluhme, *Dissertatio de geminatis et similibus quae in Digestis inveniuntur capitibus.*)

But the chief defect of the Digest consists in its want of systematic arrangement, subjects belonging to the same department of law being sometimes separated in the most arbitrary way. It will be remembered that the compilers were fettered by the Emperor's instructions, which required them to arrange (*digerere*) the whole body of the law comprised in the Digest according to the Code and the Edictum Perpetuum. Thus the books and titles of the Digest were, generally speaking, arranged after the pattern of the Edict, for the Code also followed the Edict in its arrangement. (For the probable order of topics in the Edict, see Lenel, *Das Edictum Perpetuum.*) This order of subjects, though extremely confusing to a modern reader, would have been familiar to the lawyers of Justinian's time from the commentaries on the Edict, and was no doubt regarded by them as a convenient one for practical purposes.

It has long been a matter of dispute whether the compilers of the Digest were guided by any, and, if any, by what principle in the arrangement of the several extracts under the respective titles. The subject is examined in a very learned essay by Bluhme, entitled *Die Ordnung der Fragmente in der Pandektentiteln* (*Zeitschrift für Rechtsgesch.*, vol. iv.). The investigation is of course founded on the titles of the several works of the jurists, which as already observed are given at the head of each extract: thus, for instance, in the beginning of the third book, the first seven extracts are headed as follows: "Ulpianus Libro sexagesimo quarto ad Edictum;" "Idem Libro primo Fideicommissorum;" "Idem Libro quarto ad Sabinum;" "Idem Libro quinto ad Sabinum;" "Paulus Libro primo ad Sabinum;" "Julianus Libro trigesimo tertio Digestorum;" "Paulus Libro secundo ad Sabinum." These will serve as samples of the whole, and will explain the following remarks from Bluhme, whose conclusions are these:—"The compilers separated all the writings from which extracts were to be made, into three parts, and formed themselves into three committees. Each committee read through in order the books that had fallen to its lot, yet so that books which were closely related as to their contents were extracted at the same time. The books were compared with the Code of Justinian, and what was selected for the new compilation was placed under a title taken either from the Code, the Edict, or in case of necessity from the work itself which was extracted. What came under the same title was compared; repetitions were erased, contradictions were got rid of, and alterations were made, when the contents of the extracts seemed to require it. When the three committees had finished their labours, the present Digest was formed out of the three collections of extracts. In order to accomplish this, they made that collection the foundation of each title which contained the most numerous or at least the longest extracts. With these they compared the smaller collections, striking out, as they had done before, repetitions and contradictions, making the necessary additions, and giving more exact definitions and general principles. What remained over of the smaller collections without having had an appropriate place assigned to it, was placed after the first collection, and its place in the series after the first collection was generally determined by the number of extracts."

"The Digest does not seem to have been subjected to any further revision."

Bluhme remarks that, although the Constitutions *Deo Auctore*, *Imperatoriam*, *Tanta*, and *Cordi* contain much information on the economy of the Digest and the mode of proceeding of the compilers, only the two following facts are distinctly stated:—1. That the extracts from the writings of the jurists were arranged according to the titles of the Code and the Edict. 2. That the extracts were compared with the Code. Accordingly everything else must be proved from an examination of the work itself, and this is the object of Bluhme's laborious essay. He observes that if a person will examine the extracts in the titles De Verborum Significatione and De Regulis Juris (50, tit. 16, 17), he will find a regular order observable in the titles of the juristical works from which the extracts are taken. Generally, the series of the books quoted shows that the original order of the works from which the extracts were to be made has not been altered; and the several works generally follow in both these titles in the same order. A similar remark applies to the title De Verborum Obligationibus (Dig. 45, tit. 1), though there is a variation in all the three titles as to the relative order of the three masses, which are presently to be mentioned. "In the remaining titles of the Digest," adds Bluhme, "at first sight it appears as if one could find no other distinction in the titles of the extracts than this, that one part of them has a certain kind of connexion, and another part merely indicates a motley assemblage of books out of which the extracts have been made. But on a closer comparison not only are three masses clearly distinguishable, but this comparison leads to the certain conclusion, that all the writings which were used in the compilation of the Digest may be referred to three classes. The Commentaries on Sabinus (Ad Sabinum), on the Edict (Ad Edictum), and Papinian's writings are at the head of these three classes. We may accordingly denote these three masses respectively by the names Sabinian, the Edict, and Papinian. In each of these classes the several works from which extracts are made, always follow in regular order." This order is shown by a table which Bluhme has inserted in his essay.

This article, if read in connexion with the articles CODEX and INSTITUTIONES, will give some general notion of the Legislation of Justinian, the objects of which cannot be expressed better than in the following words:—"Justinian's plan embraced two principal works, one of which was to be a selection from the Jurists and the other from the Constitutiones. The first, the Pandect, was very appropriately intended to contain the foundation of the law: it was the first work since the date of the Twelve Tables, which in itself, and without supposing the existence of any other, might serve as a central point of the whole body of the law. It may be properly called a Code, and the first complete Code since the time of the Twelve Tables, though a large part of its contents is not Law, but consists of Dogma and the investigation of particular cases. Instead of the insufficient rules of Valentinian III., the excerpts in the Pandect are taken immediately from the writings of the Jurists in great numbers, and arranged according to their matter. The Code also has a more comprehensive plan than the earlier codes, since it comprises both Rescripts and Edicts. These two works, the Pandect and the Code, ought properly to be considered as the completion of Justinian's design. The Institutiones cannot be viewed as a third work, independent of both: it serves as an introduction to them or as a manual. Lastly, the Novellae are single and subsequent additions and alterations, and it is merely an accidental circumstance that a third edition of the Code was not made at the end of Justinian's reign, which would have comprised the Novellae which had a permanent application." (Savigny, *Gesch. d. röm. Rechts*, i. p. 14.)

For the editions of the Digest, see Teuffel, *Hist. of Rom. Lit.* § 480, 11, 12; and compare CORPUS JURIS. [G. L.] [E. A. W.]

PA'NDIA, a festival celebrated at Athens after the Dionysia, in the middle of the month Elaphebolion (Dem. *Meid.* p. 517, § 9). Its origin has been a matter of dispute even among the ancients, as may be seen by reference to *Etym. M.* and Photius *s. v.*, where three origins are assigned.—Pandia, the moon-goddess, the Attic king Pandion, and Zeus. Hermann takes it to be a general feast of the old tribe Dias, and Welcker as an "all-Zeus" festival; but probably the right view is that of A. Mommsen and Preller, that it was a *full-moon feast* in honour of Pandia, an equivalent name for Selene, or of Artemis when her worship was afterwards identified with that of Selene. It is not impossible that in course of time the tribe Pandionis may have regarded themselves as specially connected with this festival, though we have no clear evidence of it, nor again that Zeus, as Preller thinks, may afterwards have been associated in the worship. The exact date seems to be the 14th of Elaphebolion, if the 13th ended the Dionysia. (See DIONYSIA, Vol. I. p. 640; A. Mommsen, *Heortol.* pp. 61, 389, 396; Preller, *Griech. Myth.* i. 347.) [L. S.] [G. E. M.]

PANE'GYRIS (πανήγυρις) signifies a meeting or assembly of a whole people at fixed periods, varying in the different cases, for the purpose of worshipping at a common sanctuary. But the word is used in three ways:—1. For a meeting of the inhabitants of one particular town and its vicinity [EPHESIA]; 2. For a meeting of the inhabitants of a whole district, a province, or of the whole body of people belonging to a particular tribe [CARNEIA, DELIA, PAMBOEOTIA, PANIONIA]; and 3. For great national meetings, as at the Olympic, Pythian, Isthmian, and Nemean games. Such in its origin also was the great Amphictyonic meeting, which assumed more political importance than other panegyreis. Although, in all panegyreis which we know, the religious character forms the most prominent feature, the spectacles and amusements were the attraction to the larger number, nor were political discussions and resolutions excluded, though they were perhaps more a consequence of the presence of many persons than objects of the meeting. As regards their religious character, the panegyreis were real festivals in which prayers were performed, sacrifices offered, processions held, &c. The amusements comprehended the whole variety of games, gymnastic and musical contests, and entertainments. Every panegyris, moreover, was made by tradespeople a source of gain, and it may be presumed that such a meeting was never held without a fair, at which all sorts of things were exhibited for sale. (Paus. x. 32, § 9; Strabo, x. p. 486; Dio Chrysost. *Orat.* xxvii. p. 528.) In later times, when the love of gain had become stronger than religious feeling, the fairs appear to have become a more prominent characteristic of a panegyris than before; hence the Olympic games are called *mercatus Olympiacus* or *ludi et mercatus Olympiorum*. (Cic. *Tusc.* v. 3, 9; Justin. xiii. 5; Vell. Pat. i. 8.) Festive orations were also frequently addressed to a panegyris, whence they are called λόγοι πανηγυρικοί. The Sophists made this the occasion for epideictic addresses (Quinctil. iii. 4, 14) to the assembled Greeks; as when Gorgias or Lysias at Olympia preached national unity. To the Greeks the speech of Peter the Hermit at Clermont would have been a "panegyric." The Panegyricus of Isocrates, though it was probably never delivered, is an imaginary discourse of this kind. (See Jebb, *Attic Orators*, i. 203 f.; ii. 150.) In later times any oration in praise of a person was called *panegyricus*, as that of Pliny on the Emperor Trajan.

Each panegyris is treated of in a separate article. For a general account see Wachsmuth, *Hell. Alt.* i. p. 149, &c.; Boeckh, *ad* Pind. *Ol.* vii. p. 175, &c.; Hermann, *Staatsalterth.* § 10. [L. S.] [G. E. M.]

PANHELLE'NIA (*πανελλήνια*), a festival, or perhaps rather a panegyris of all the Greeks, which seems to have been instituted by the Emperor Hadrian, with the well-meant but impracticable view of reviving a national spirit among the Greeks. (Philostr. *Vit. Soph.* ii. 1, 5; Boeckh, *Corp. Inscrip.* i. p. 789, ii. p. 580.) [L. S.]

PANIO'NIA (*πανιώνια*), the great national panegyris of the Ionians on Mount Mycale, near Priene and between Ephesus and Miletus (from which Grote conjectures that these towns were the primitive centre round which the other Ionian settlements gathered, forming gradually the confederation of twelve cities), where their national god Poseidon Heliconius had his sanctuary, called the Panionium (Herod. i. 148; Strabo, viii. p. 384; Paus. vii. 24, § 4). One of the principal objects of this national meeting was the common worship of Poseidon, to whom splendid sacrifices were offered on the occasion (Diodor. xv. 49). As chief priest for the conduct of the sacrifices, they always appointed a young man of Priene, with the title of king. But religious worship was not the only object for which they assembled at the Panionium; on certain emergencies, especially in case of any danger threatening their country, the Ionians discussed at these meetings political questions, and passed resolutions (Herod. i. 141, 170), as was usual at an amphictyonic panegyris [see PANEGYRIS].

Diodorus (xv. 49) says that in later times the Ionians used to hold their meeting in the neighbourhood of Ephesus instead of at Mycale. Strabo, on the other hand, who speaks of the Panionic panegyris as still held in his own time, not only does not mention any such change, but appears to imply that the panegyris was at all times held on the same spot, viz. on Mount Mycale. Diodorus therefore seems to consider the Ephesian panegyris [EPHESIA] as having been instituted instead of the Panionia. But both panegyreis existed simultaneously, and were connected with the worship of two distinct divinities, as is clear from a comparison of two passages of Strabo, viii. p. 384, xiv. p. 639. The truth probably is that the more splendid festival of the Ephesia attracted a larger concourse than the real Panionia and threw it in later times into the shade; and although the old festival continued, yet as early as Thuc. iii. 104 the Ephesia was looked upon as the representative Pan-Ionic gathering.

(Compare Tittmann's *Griech. Staatsv.* p. 668, &c.; C. F. Hermann, *Lehrb. der Gottesd. Alterth.* § 66, n. 2, 3; Grote's *Hist. of Greece*, iii. p. 229 ff.) [L. S.] [G. E. M.]

PANOPLIA. [ARMA.]

PANTOMI'MUS (*παντόμιμος*) was the performer in that kind of dramatic piece in which a story was represented by mere dancing and rhythmical movement by a single dancer. The word *pantomimus* is never, like *mimus*, applied to the piece represented, but only to the performer. The custom of pantomimic dancing is almost entirely confined to the time of the Roman Empire.

When the public lost interest in the full acting out of tragedies, the separate parts of those dramas used to be acted, especially those parts which were *cantica*, i.e. what were not mere iambic dialogues (*diverbia*), and among the *cantica* chiefly monologues and choruses. Here by increase of the expression in two directions the action became dancing and the speech became song; with the necessary result that the two performances could not be combined by a single actor, but had to be separated (Lucian, *de Salt.* 30). The result was artistically absurd, that one person should sing and the other dance (not more absurd, however, than say the chorus of bathers in the *Huguenots*); but none the less the practice became fashionable, especially when Pylades of Cilicia and Bathyllus of Alexandria, both very skilled dancers, about 22 B.C. (cf. Roth's *Suetonius*, p. 301, 25; Lucian, *op. cit.* 35) succeeded in making this kind of dancing (called afterwards Ἰταλικὴ ὄρχησις) a fully recognised species of amusement at Rome. It was honestly enjoyed by the cultivated of all classes: the rhetorician Seneca (*Contr. excerpt.* iii. *praef.*) calls it his "weakness" (*morbum meum*); Lucian (if it is Lucian) has an enthusiastic encomium on it (*op. cit.* § 35 to end), and Libanius has a long treatise on it. Lucian finds all excellences in this kind of dancing, even that it makes the spectators know themselves better and leave the theatre with clearer ideas of what to do and what not to do; in fact, altogether morally improved (*op. cit.* 69, 72, 81)—but this is the judgment of an advocate, not of a sober critic.

We hear (Athen. i. 20: cf. Plut. *Quaest. Convic.* vii. 8, 3 = 711, 44; Senec. *l. c.*) that the style of Pylades was of a sedate and tragic nature, but that of Bathyllus more joyful (*ἱλαρωτέρα*), representing a kind of *ὑπόρχημα* [CHORUS], which was a generic name for any expressive dance (Athen. i. 15; xiv. 628): and so not without reason we may in a measure infer with Sommerbrodt (*De triplici genere pantomimorum*, in his *Scaenica*, p. 49) that the different styles of dancing in the Greek theatre were further developed by these performers (Lucian, *op. cit.* 26 ff.), the tragic *ἐμμέλεια* by Pylades, and the satyric *σίκιννις* and possibly the comic *κόρδαξ* by Bathyllus; the art of the latter being, as Plutarch (*l. c.*) says, more commonplace (*πέζαν*) and not so pretentious (*ὀγκώδη*) as that of Pylades. But probably the *κόρδαξ* was not acted by the pantomimes; it would rather belong to the mimes, for the pantomimes, though very licentious, do not appear to have been coarse, and the subjects of the art of Bathyllus are mostly satyric subjects. Even in the passage from Plutarch the subjects are satyric, and he only says that the comic style of dancing is *related to* the cordax (*τοῦ κόρδακος ἁπτομένην*). The striking scenes in the dramas came then to be acted for the most part by mere dancing. This required on the part of the spectator a considerable degree of knowledge in the first place, so as to be fairly familiar with the story acted, and in the second place a certain power of imagination to piece the scenes together and a fineness of taste to appreciate the refinements of the art, which was nothing if not refined and full of delicate points. So that this pantomimic dancing, and especially the dancing of subjects from tragedy, became the fashionable exhibition for the upper and more cultivated classes to frequent, the lower classes preferring the coarser mimes when they went to the theatre at all. The rage for exhibitions of dancing that arose about the time of the Empire cannot be better exemplified than by the fact that poems of Ovid's, not written for the theatre at all, were "pantomimised" (just as our second-rate novels are dramatised), and actually orations were set to music and adapted for dancing (Ov. *Trist.* ii. 519, v. 7, 25; Plin. *Paneg.* 54; Tac. *Dial.* 26).

But the best poets wrote pieces specially for the pantomimes—*fabulae salticae*, as they were called; *e.g.* Silo (Senec. *Suas.* ii. 19), Lucan (*Vit. Vaccae*, in Teuffel, § 298, 4), Statius (Juv. vii. 92), which artistically were probably about on a level with the libretti of our Italian operas. The subjects were most various, but were generally love adventures—Mars and Venus (Lucian, *op. cit.* 63), Jupiter and Leda (Juv. vi. 63), Cinyras and Myrrha (Joseph. *Antiq.* xix. 1, 3), Phaedra and Hippolytus (Lucian, 49), Seleucus and Stratonice (*ib.* 58); but sometimes others, Hercules Furens (*ib.* 41), Isis and Osiris (*ib.* 59), Polycrates (*ib.* 54), Turnus (Suet. *Nero*, 54), Glaucus (Vell. ii. 83). Lucian (37–61) indeed says that all mythical and historical subjects, from Chaos to the death of Cleopatra, were fit subjects for pantomimes; and he gives in immense detail a number of appropriate stories. The dancing was performed by a single actor; it was only very rarely that there was a second (cf. Quint. vi. 3, 65). The actor would appear successively as (say) Atreus, Thyestes, and Aegisthus or Aerope—all in the one piece (Lucian, *op. cit.* 67). There were sometimes as many as five characters to be acted (*ib.* 66). A chorus sang *cantica*, accompanying the various dances. The text to bind together the various scenes consisted probably in a sort of recitative (Friedländer says, like that of our oratorios) sung by the chorus, while the actor had time to change his dress. When there was no change of dress, the actor was said *palliolatim saltare* (Fronto, p. 157, 3, ed. Naber), in which the dancer with a single cloak used to represent the most varied things — *caudam cygni*, *capillum Veneris*, *Furiae flagellum*, &c. Friedländer compares the shawl-dancing of Lady Hamilton, as described by Goethe in his *Italienische Reise* (at Caserta, March 16, 1787). The accompaniment to the dancing and the chorus was performed by an orchestra (which Pylades introduced instead of the single flute accompaniment), consisting of pipes and cymbals, harps and zithers (Lucian, 68; Ov. *Rem. Am.* 753 ff.: cf. Macrobius, *Sat.* ii. 7, 18, where Pylades is said to have declared that the music suited to dancing was *αὐλῶν συρίγγων τ' ἐνοπὴν ὅμαδόν τ' ἀνθρώπων*, Hom. *Il.* x. 13). The music appears to have been of a florid and showy description (Lucian, *op. cit.* 2). The time was given by *scabillarii*, who beat with their feet a kind of wooden or iron instrument, called *scabillum* or *scabellum* (*κρούπεζα*): cf. Lucian, *ib.* 2, 68, 83; Suet. *Cal.* 54; Poll. vii. 87; Liban. iii. 385, 13. There is a celebrated statue of a Satyr with cymbals beating the *scabillum* in the Tribune of the Uffizi Gallery at Florence. In the absence of any definite evidence to the contrary, we may assume that the scenery of the pantomimes was much the same as that of the Greek tragedies.

The real charm lay in the performance of the dancer. The art of dancing has sunk to such a low level with us, and we are naturally so incapable of appreciating the meaning of slight looks and gestures, that it is only when very forcibly brought before us that we can get a faint idea of what "the poetry of motion" means, and understand what the Romans implied by "speaking hands" (*manus loquacissimae, linguosi digiti*, Cassiod. *Var.* iv. 51: cf. Lucian, *op. cit.* 63, 69) and "the eloquence of dancing" (*saltare diserte*, Tac. *Dial.* 26). But the value of action is great to the Southern nations; to them it can signify most things without words (Quint. xi. 3, 65). How important it was to the orator we know from the story of Demosthenes, who said that action was the first, second, and third requisite of an orator; and Quintilian (*l. c.*) devotes a great many pages to the subject, full of injunctions which at times cannot be appreciated by us, though we are not on that account to accuse Quintilian of pedantry. But the pantomimi in some cases aimed at representing even the very words of their texts, a practice justly reprobated by Quintilian (*ib.* 88, 89) and the better pantomimi themselves (cf. Macrob. *Sat.* ii. 7, 13 ff.). The whole art, however, came to be as conventional as possible, neither performer attempting nor audience desiring originality of treatment, but only excellence of execution. This is shown by the story in Lucian (*op. cit.* 80) of an actor who had to dance the devouring of his children by Cronos, and danced the traditional steps of the eating of the children of Thyestes, misled by the similarity of the subject; another danced the steps for the burning of Glauce by Medea's poisoned robe when representing the burning of Semele. But with all the artificiality the effect of the performances of the pantomimi on the audience was most powerful; "so fascinating is the dancing," says Lucian (*op. cit.* 79), a passage well worth reading, "that the lover seeing the bitter end of love is cured of his passion, and one who enters the theatre in depression leaves it brighter and happier just as if he had drunk Homer's nepenthe." Splendid robes (*ib.* 2, 63), attractive masks (which had the mouth shut, not the huge gaping things the actors in the drama had to wear, *ib.* 29; see illustration in Baumeister's *Denkmäler*, fig. 1351, 1352), generally splendid dress, the *tunica talaris* and the *palla* (Suet. *Cal.* 54), all the grace and beauty of youth which necessarily attached to the most famous of the performers (their form, says Lucian, *op. cit.* 75, should be that of the canon of Polycletus), and which were enhanced by careful training; the movements of the dance, now soft, delicate and voluptuous, presently rising into wild passionate outbursts, must have made the whole exhibition most sensuously seductive and intoxicating; and we can well believe the many stories of the passions inspired in the Roman ladies by the pantomimi, and of the disastrous effect the exhibitions had on the morals of the community (cf. Juv. vi. 63 ff.; Plin. *H. N.* vii. 184; Dio Cass. lvii. 21). The introduction of the pantomimes at the commencement of the Empire was the beginning of the moral corruption of the world, according to Zosimus (i. 6); and St. Augustine considered the pantomimes a far more insidious and destructive disease sent by Satan than the more savage pest of the circus (*de Civ. Dei*, i. 32).

But it was not on this ground that the law generally proceeded against the actors, though it was sometimes (Dio Cass. *l. c.*) put forward; it was owing to the disorder caused by the rival factions of the different performers. The actors (in Imperial times *histrio* virtually means one who acts pantomimes) were banished from Italy by Tiberius and Nero, and Domitian only allowed them to perform in private (Suet. *Tib.* 37; *Nero*, 16; *Dom.* 7). But for the most part the emperors were wise enough to let the people busy themselves with the actors (Macrob. *Sat.* ii. 7, 19), and thereby be kept clear of politics. As to the legal position of the actors, they were always *infames* (Cic. *Rep.* iv. 10; Nepos, *Proem.* 5; Tert. *Spect.* 22; Vopisc. *Car.* 16, 7; Dig. 3, 2, 1); in the municipalities they were not eligible to magistracies (Lex Jul. Munic. l. 125). Their children could not form legal marriages with members of the senatorial families (Dig. 23, 2, 42, 44). The soldier who became an actor was punished with death (*ib.* 48, 19, 14). For further on this point, see Mayor on Juv. viii. 188; Marquardt, *Staatsr.* iii. 516 ff. Augustus only allowed the magistrates power to scourge the actors during the games and inside the precincts of the theatre (Suet. *Aug.* 45; Tac. *Ann.* i. 77), though any violation of public morals he visited on them most severely. The actors were mostly slaves or freedmen, and, if free-born, foreigners; and the nominal feeling of the age as to the meanness of their calling may be seen from the scathing satire of Juvenal (viii. 183 ff.) on the Roman nobles who became actors: it was much as if one in high circles were to become a professional jockey. But still the celebrated pantomimi were flattered and petted (Senec. *Q. N.* vii. 32, 3; *Ep.* 47, 17). Flowers and perfumes were strewn over the place where Paris lay murdered (Dio Cass. lxvii. 3), and Martial composed (xi. 13) a beautiful epitaph for him. They became men of considerable wealth and influence (Plut. *Tranquill. Anim.* 13 = 473, 10), especially when they were court favourites like Mnester (Suet. *Cal.* 56), Paris (Dig. 12, 4, 3, 5; Tac. *Ann.* xiii. 19–22, 27), another Paris (Juv. vii. 87), Apolaustus, and Pylades (Dio Cass. lxviii. 10). A very noticeable feature about the *noms de théâtre* of these pantomimi (and indeed of many other kinds of artists also) is that they were assumed from those of famous predecessors; see Friedländer, ii.^{3} 608 ff. It is needless to say that in the clubs and guilds of the actors celebrated performers obtained the highest positions, and were supported at the common expense (Wilmanns, 2619 ff.); but also, at least in later times, we find an actor made a decurio (*e.g.* Acilius at Lanuvium in 187 A.D., Wilm. 2625), another set over the army in Armenia (Dio Cass. lxxvii. 21), a third made praefectus praetorio (Lampr. *Heliog.* 12, 1)—though, to be sure, this was only by the worst emperors. The pay given to the performers, even in the time of Tiberius, was thought too high, and M. Aurelius had to fix a maximum (Capit. *M. Aurel.* 11, 4): yet Pylades, in the time of Tiberius, made so much money that he was able to give games on his own account (Dio Cass. lv. 10, 11), and Pliny (*H. N.* vii. § 128) says that slave actors with their gains often bought their liberty for considerably over 700,000 sesterces (more than £7,000). There do not appear generally to have been regular competitions of pantomimi, their art forsooth being, according to Lucian (*op. cit.* 32), too high for rivalry. But the jealousies and squabbles of the actors were very great (Tac. *Ann.* i. 54; Dio Cass. lvii. 14, 10). The wealthy Romans (*e.g.* Quadratilla in Plin. *Epist.* vii. 24) used to keep troops of *pantomimi* and *pantomimae* (Senec. *ad Helv.* 12) for private exhibitions; but *pantomimae* did not appear on the public stage till later times, *e.g.* in Justinian's time an actress Helladia danced the Hector (cf. *Anthol. Pal.* iv. 75, ed. Jacobs), though even then the performance was mostly by men (Liban. iii. p. 372, 31, ed. Reiske).

The chief works to consult on the pantomimes are Salmasius on Vopiscus, *Carinus*, c. 19 (= *Hist. Aug. Script.* ii. 828–844); Sommerbrodt in his *Scaenica*, 35–50; Arnold in Baumeister's *Denkmäler*, s. v. *Pantomimus*, pp. 1158–1160; and especially Friedländer, *Darstellungen aus der Sittengeschichte Roms*, ii.^{3} 427–442. [L. C. P.]

PAR IMPAR LUDERE (*ἀρτιασμός, ἀρτιάζειν, ἄρτια ἢ περιττὰ* or *ζυγὰ ἢ ἄζυγα* or *ζυγὰ μόνα παίζειν, ποσίνδα*). The game at odd and even was a favourite game among the Greeks and Romans. A person held in his hands a number of astragali, or other things (Pollux, ix. 101, says beans, nuts, almonds, or coins), and his opponent had to guess whether the number was odd or even. The amount to be won or lost, whether merely the articles played with or money staked upon the guess, may have been variously arranged: but probably the usual practice was only to stake what was played with, not to bet on the guess besides. Apollonius (iii. 115) represents Cupid and Ganymede playing, and the winnings are simply the astragali of the opponent: hence the playing with coins is a greater risk (Aristoph. *Plut.* 816): the passage in Suet. *Aug.* 71, however, implies staking a sum of money on the guess at odd and even as well as on the tali. The game *ποσίνδα* differed slightly, as it was necessary to guess the number held in the hand, not merely whether it was odd or even (Xen. *Eq. Mag.* 5, 10; cf. Aristoph. *Plut.* 1055). For further mention of *par impar*, see Plat. *Lys.* p. 206 E; Lucian, *Dial.* 4; Hor. *Sat.* ii. 3, 248; *Nux*, 79;—Becker-Göll, *Charikles*, ii. 40; *Gallus*, iii. 477;—Marquardt, *Privatleben*, p. 849. [W. S.] [G. E. M.]

PARABASIS. [CHORUS, Vol. I. p. 422.]

PARA'BOLON (*παράβολον, παραβόλιον ἀδόκιμον τοῦτο*, *Phrynichus*, ed. Lobeck, p. 238), a fee paid by the appellant party, on an appeal (*ἔφεσις*), as Pollux (viii. 62 f.) states, "from an arbitrator, or a magistrate or the *δημόται* to the dicasts, or from the Senate of Five Hundred to the popular assembly, or from the popular assembly to a Heliastic court, or from such a one to a foreign court." An appeal from a public arbitrator was allowable in all cases except when ἡ μὴ οὖσα δίκη had to be resorted to; *i.e.* when the loser could prove that it was not owing to negligence on his part that judgment had gone by default. Cf. Harpocr. *s. v.* διαιτητής: (οἱ δικασταὶ) καὶ τὰς ἀπὸ τῶν διαιτητῶν ἐφεσίμους ἔκρινον, and Dem. *c. Boeot. de Dote*, p. 1024, § 55; (Meier, *Privatschiedsrichter*, etc. p. 28, n. 3, reads in Pollux, viii. 127, τὰς πίστεις ἐμβ. ἰδ. ἑκατέρων τάς τε τοῦ φευγ. καὶ τὰς τοῦ διώκ. instead of τὰς ψήφους ἐμβαλόντες ἰδίᾳ ἑκατέρας τοῦ φεύγοντος καὶ διώκοντος.) An appeal from a magistrate might arise when the ἐπιβολὴ imposed by him was objected to by the person fined; for then the magistrate had to lay the case before a court [EPIBOLE]. When on the occasion of a διαψήφισις a person was struck off the lists of δημόται and wished to upset such a decision, he might appeal to a court (δίκην λαγχάνειν τῷ κοινῷ τῶν δημοτῶν), or to a public arbitrator (Isae. *pro Euphil.* § 11; Schömann *ad l. c.* p. 479). The next two kinds of appeal referred to by Pollux are very doubtful indeed; when a matter was referred to the popular assembly by the Senate of Five Hundred, or to a Heliastic court by the popular assembly, because the latter were either unable or unwilling to decide it themselves, this might be called ἔφεσις, inasmuch as ἡ βουλὴ ἐφίησι τὸ πρᾶγμα εἰς τὸν δῆμον or ὁ δῆμος ἐφίησι τὸ πρᾶγμα εἰς τοὺς δικαστάς, but in that case ἔφεσις is not used in its strictly technical sense of appeal. As to appeals from an Athenian court to a foreign court, cf. SYMBOLON DIKAI APO. We are uninformed as to the amount to be paid, and as to the occasions when such a sum was to be paid. (*Att. Process*, ed. Lipsius, pp. 986–991.) [C. R. K.] [H. H.]

PARACATA'BOLE (παρακαταβολή), a sum of money required of a plaintiff or petitioner in certain cases, as a security that his complaint or demand was not frivolous, or made on slight and insufficient grounds. Such was the deposit made in certain inheritance causes, viz. not only by a person who claimed an inheritance already adjudged ([Dem.] *c. Macart.* p. 1054, § 16; Isae. *Hagn.* §§ 13, 27; Bunsen, *de jure hered. Ath.* p. 92, limits the paracatabole to such causes, and Boeckh, *Sthh.*³ i. p. 430, explains Harpocr. *s. v.* in the same sense), but also by a person who entered a διαμαρτυρία μὴ ἐπίδικον εἶναι τὸν κλῆρον (Isae. *Philost.* § 12, etc.), or who claimed an inheritance as having a better title than others by having been adopted (Dem. *c. Leoch.* p. 1090, § 34) or by testament (Isae. *Nicostr.* § 4): cf. Pollux, viii. 32, ὅστις ἀντιλέγει ὡς αὐτὸς δικαιότερος ὢν ἔχειν τὸν κλῆρον ἐξ ἀγχιστείας ἢ διαθηκῶν. The amount of the deposit in such causes was a tenth part of the value of the property claimed: it was returned to the petitioner, if successful; otherwise it went to the opponent, or in case of rival claims to an inheritance to the state (Isae. *Nicostr.* § 11). In the proceeding termed ἐνεπίσκημμα, which was a suit instituted against the public treasury by a creditor to obtain payment out of his debtor's confiscated goods ([Dem.] *c. Timoth.* p. 1198, § 46), a fifth part of the value was deposited (Harpocr. *s. vv.* παρακαταβολὴ and πρόκεμματα), which sum went to the state in case the petitioner was not successful (*C. I. A.* ii. No. 777). From this inscription it is likewise evident that the term ἐγγύης καταβολὴ was used in the sense of παρακαταβολὴ in this proceeding (cf. Suid. *s. v.* ἐνεπισκήψασθαι καὶ ἐγγύην καταβαλεῖν = *Etym. M.* p. 340, 38, etc.). The money was deposited either on the commencement of the cause or at the ἀνάκρισις. The word παρακαταβολὴ signifies both the paying of the deposit and the money deposited; and being a word of more general import, we find it used to denote other kinds of deposits, as the πρυτανεῖα and παράστασις (cf. Isocr. *c. Leoch.* § 2); it is probably used in this wider sense in Dem. *c. Pantaen.* p. 978, § 41, in a δίκη βλάβης. (*Att. Process*, ed. Lipsius, pp. 800, 814–822.) [C. R. K.] [H. H.]

PARACATATHE'CE (παρακαταθήκη, παραθήκη: cf. Rutherford, *New Phrynichus*, p. 367) generally signifies a deposit of something valuable with a friend or other person, for the benefit of the owner. Thus, if I deliver my goods to a friend, to be taken care of for me; or if I give a creditor something valuable as a pledge; or if I deposit money with a banker (ἀφορμή, Harpocr. *s. v.*; *argum.* Dem. *pro Phorm.* p. 944), to receive interest for it and to draw on him (Dem. *c. Callip.* p. 1236, § 4; Blümner, *Griech. Privatalt.* p. 454 f.), such delivery or *bailment*, or the gods bailed or delivered, or the money deposited, may be called παρακαταθήκη (Herod. vi. 86; Dem. *pro Phorm.* p. 946, § 5 f., and *c. Stephan.* i. p. 1110, § 29 f.); and the word is often applied metaphorically to any important trust committed by one person to another (Dem. *c. Aphob.* ii. p. 840, § 15; Aeschin. *c. Tim.* § 7; Dem. *c. Mid.* p. 572, § 177, etc.). As every bailee is bound to restore to the bailor the thing deposited, either on demand (in case of a simple bailment) or on performance of the conditions on which it was received, the Athenians gave a παρακαταθήκης δίκη against a bailee who unjustly withheld his property from the owner, ἀπεστέρησε τὴν παρακαταθήκην (Pollux, vi. 154; Schol. to Aristoph. *Plut.* 373, etc.), or who used it without the owner's permission for his own benefit. Examples of such an action are Isocr. *Trapez.* and *c. Euthyn.*: a subject of Satyrus, king of Bosporus, sues Pasion the banker for money alleged to have been placed in his hands (*Trapez.* §§ 11, 27, etc.); Nicias had deposited three talents with Euthynus, and, when he applied to him for the money, Euthynus repaid only two and disclaimed knowledge of the third (*c. Euthyn.* §§ 3, 7, 9, etc.). A pledge given to a creditor could not be recovered, except on payment of the money owed to him; but, after selling the article and satisfying his debt out of the proceeds, he would of course be bound to restore the surplus (if any) to the pledgor. It is not known whether beyond restoring the thing deposited any penalty was inflicted on a defendant who fraudulently denied that he had ever received the deposit; so much is certain from Dem. *c. Mid.* p. 528, § 44, that ἀτιμία was not inflicted, as Meursius, *Them. Attica*, ii. c. 23, p. 120 (τὸν μὴ ἀποδιδόντα τὴν παρακαταθήκην ἄτιμον εἶναι) supposed (Thalheim, *Griech. Rechtsalt.* p. 48, n. 5). The difficulty of procuring safe custody for money, and the general insecurity of movable property in Greece, induced many rich persons to make valuable deposits in the principal temples, such as that of Apollo at Delphi (Plut. *Lysand.* 18), of Artemis at Ephesus (Dio Chrysost. xxxi. 54; cf. Xenoph. *Anab.* v. 3, 6, and Plaut. *Bacch.* ii. 3, 78), of Hera at Samus (Cic. *de Legg.* ii. 16, 41), etc. (Büchsenschütz, *Besitz. u. Erwerb.* p. 508 f.: cf. Posidon. Apam. *fr.* 48, in *Fragm. Hist. Graec.* iii. p. 48.) It may be observed that παρακατατίθεσθαι, *in the middle voice*, is always used of a person making a deposit *for his own benefit*, with the intention of taking it up again, and παρακατακεῖσθαι of the thing thus deposited; κομίζεσθαι is to recover your property (Isocr. *c. Euthyn.* § 4; *Trapez.* § 8, etc.). (*Att. Process*, ed. Lipsius, pp. 700 ff.) [C. R. K.] [H. H.]

PARADI'SUS (παράδεισος) was the name given by the Greeks to the parks or pleasure-grounds which surrounded the country residences of the Persian kings and satraps. They were generally stocked with animals for the chace, were full of all kinds of trees, watered by numerous streams, and enclosed with walls. (Xen. *Anab.* i. 4, § 10; *Cyr.* i. 3, § 14, 4, § 5; *Hell.* iv. 1, § 33; *Oec.* iv. 13; Diod. Sic. xvi. 41; Curt. viii. 1, §§ 11, 12; Gell. ii. 20.) These paradises were frequently of great extent; thus Cyrus on one occasion reviewed the Greek army in his paradise at Celaenae (Xen. *Anab.* i. 2, § 9), and on another occasion the Greeks were alarmed by a report that there was a great army in a neighbouring paradise (*Id.* ii. 4, § 16). In many respects, except as regards their being larger and used for hunting, they were like the Latin *vivarium*, which was a park, warren, or preserve. "Vivaria quae nunc vulgus dicit, quos παραδείσους Graeci appellant, quae leporaria Varro dicit, haud usquam memini apud vetustiores scripta...;" but Scipio, the writer goes on to say, called them *roboraria*, because they were fenced round with wooden palings (Gell. ii. 20; cf. AGRICULTURA, Vol. I. p. 80). In Greece they were first borrowed from the East in the time of the Diadochi (Iwan Müller, *Handbuch*, iv. p. 468).

Pollux (ix. 13) says that παράδεισος was a Persian word, and there can be no doubt that the Greeks obtained it from the Persians, whether its origin etymologically is to be found in Indo-European or Semitic languages. [W. S.] [G. E. M.]

PARAGAUDA. [VESTIS.]

PARA'GRAPHE (παραγραφή). This word does not exactly correspond with any term in our language, but may without much impropriety be called "a plea." It is an objection raised by the defendant to the admissibility of the plaintiff's action: "exceptio rei adversus actorem, actionemve, querentis aut de foro haud competente, aut de tempore, modove procedendi illegitimo." (Reiske, *Index Gr. in Oratt.*) Sir William Jones, in the preface to his translation of Isaeus, compares it with a *demurrer*. But this is not so correct; because a demurrer is an objection arising out of the adversary's own statement of his case: whereas the παραγραφὴ was an objection depending on facts stated by the defendant himself, and therefore rather resembles a plea, or (more strictly) a special plea. This appears from the παραγραφικοὶ λόγοι of Demosthenes, in which we find the defendant introducing new allegations into the cause, and supporting them by proof. Thus, in the speech against Nausimachus and Xenopithes, the ground of objection is, that the father of the defendants having obtained a release from the plaintiffs, it was no longer open to the plaintiffs to bring an action for the same cause (p. 984, § 1; p. 986, § 5, cf. *pro Phorm.* p. 951, § 23; p. 952, § 25;—*c. Pantaen.* p. 966, § 1; p. 972, § 19). But the first mention of this release is made by the defendants in their plea. In the speech against Zenothemis the defendant objects, that the ἐμπορικὴ δίκη does not lie, because there was no written contract between him and the plaintiff; and this (says he) appears from the declaration itself (ἐν τῷ ἐγκλήματι, p. 882, § 1 f.; cf. *c. Apatur.* p. 892, § 2; see also *c. Pantaen.* p. 976, § 35; *c. Lacrit.* p. 939, § 45 f.). As parties could not be defeated at Athens by a technical objection to the pleadings, the defendant in the above case, notwithstanding the defective statement of the plaintiff in the declaration, was compelled to bring forward his objection by plea, and to support it before the jury. In the speech against Phormio, the plaintiff says that as the defendant only denies that he has committed a breach of the contract, there was no occasion for a παραγραφή: the question merely was, whether the plaintiff's charge was true (p. 908, § 4 f.). It seems that a παραγραφὴ might be put in, not only when the defendant could show that the cause of action was discharged, or that it was not maintainable in point of law; but also when the form of action was misconceived, or when it was commenced at a wrong time (*pro Phorm.* p. 952, § 26 f.), or brought before the wrong magistrate (*c. Pantaen.* p. 976, § 33 f.). In the last case the παραγραφὴ would answer to our *plea to the jurisdiction.*

The παραγραφή, like every other answer (ἀντιγραφή) made by the defendant to the plaintiff's charge, was given in writing, as the word itself implies (Dem. *c. Phorm.* p. 912, § 17; *c. Pantaen.* p. 976, § 34; π. ἀντιλαγχάνειν or δοῦναι, or παραγράφεσθαι). If the defendant merely denied the plaintiff's allegations, or (as we might say) *pleaded the general issue*, he was said εὐθυδικίᾳ εἰσιέναι or εἰσέρχεσθαι (Isae. *Philoct.* §§ 3, 43, 52; Dem. *c. Stephan.* i. p. 1103, § 6; εὐθυδικίαν εἰσιέναι occurs only *c. Phorm.* p. 908, § 4, and ἡ εὐθεῖα instead of εὐθυδικία is late, *argum.* Dem. *c. Zenoth.* p. 881).* In this case a court was at once held for the trial of the cause. If, however, he put in a παραγραφὴ (παρεγράψατο μὴ εἰσαγώγιμον εἶναι τὴν δίκην), and the plaintiff acquiesced in the ground of objection raised, the action was either brought before a different magistrate or in a different form (*i.e.* not as δίκη ἐμπορική, but as δίκη βλάβης or χρέως), or it was dropped altogether: if, however, the plaintiff did not acquiesce, a court was held to try the preliminary question, whether the cause could be brought into court or not. Upon this previous trial the defendant was considered the *actor* (Pollux, viii. 58), and hence is said by Demosthenes (*c. Phorm.* p. 908, § 4) κατηγορεῖν τοῦ διώκοντος: he began and

---

* Aeschylus (*Eum.* 433) similarly uses the term εὐθεῖα δίκη as opposed to the oath of one or the other party on which they might have agreed to rest the issue (429): see Aesch. *Eum.* ed. Müller, p. 159 f. Linwood (Lex. to Aesch. *s. v.*) wrongly translates, "pass a righteous sentence."

had to maintain the ground of objection which he relied upon (Dem. *c. Stephan.* i. p. 1103, § 5 ff.). If he succeeded, as Phormio did, by bringing witnesses that he had obtained a release from the plaintiff, the whole cause was at an end; if however the objection was only to the form of action, or some other such technicality, the cause was recommenced in the proper manner. If, however, the plaintiff succeeded, the jury merely decided *εἰσαγώγιμον εἶναι τὴν δίκην*, and then the original action, which in the meantime had been suspended, was proceeded with (Dem. *c. Zenoth.* p. 888, § 22 f.; *c. Lacrit.* p. 939, § 45). Both parties on the trial of the *παραγραφὴ* were liable to the *ἐπωβελία*, on failure to obtain a fifth part of the votes (Isocr. *c. Callim.* 2; Dem. *c. Stephan.* i. p. 1103, § 6). [Epobelia.]

The course of proceeding on a *παραγραφὴ* was obviously calculated to delay the progress of the cause, and was therefore not looked on with favour by the dicasts. *Ὑπωμοσίαι καὶ παραγραφαὶ* (*c. Mid.* p. 541, § 84) and *σοφίσματα καὶ παραγραφαὶ καὶ προφάσεις* (*c. Lacrit.* p. 924, § 2) are classed together by the orator as being the manœuvres of defendants to defeat justice (cf. *c. Euerg. et Mnes.* p. 1151, § 39; p. 1153, § 45; *Lex. Rhetor. Cantabr.* p. 673 ff., and Meier *ad l. c.*; Pollux, viii. 60). Hence we find in the extant *παραγραφικοὶ λόγοι*, that the defendant, in order to remove the prejudice of the dicasts against himself, not only supports the ground of the *παραγραφή*, but discusses the general merits of the cause, and endeavours to show that there is no foundation for the plaintiff's complaint. And there is no doubt that the dicasts were materially influenced by such discussion, however in strictness irrelevant (*argum. pro Phorm.* p. 944; *c. Zenoth.* p. 881).

There was no such thing as this proceeding by *παραγραφή*, where the defendant had the advantage of beginning, until after the expulsion of the Thirty Tyrants, when a law was passed on the proposal of Archinus, *ἄν τις δικάζηται παρὰ τοὺς ὅρκους, ἐξεῖναι τῷ φεύγοντι παραγράψασθαι, τοὺς δὲ ἄρχοντας περὶ τούτου πρῶτον εἰσάγειν, λέγειν δὲ πρότερον τὸν παραγραψάμενον, ὁπότερος δ' ἂν ἡττηθῇ, τὴν ἐπωβελίαν ὀφείλειν*, originally only for the special case that an action was brought in violation of the amnesty, but later on extended to other grounds of defence. Before the time when this law was passed, all special objections to the adversary's course of proceeding seem to have been called by the general term of *ἀντιγραφαί*. Thus when Pancleon was summoned before the polemarch by the speaker of the 23rd speech of Lysias, as being a resident alien, he put in a "plea to the jurisdiction" on the ground that he was a Plataean by birth, and that therefore the action ought not to have been brought before the polemarch (§ 5, *ἀντεγράψατο μὴ εἰσαγώγιμον εἶναι*, cf. § 10; Jebb, *Att. Oratt.* i. p. 302, gives *πρὸς παραγραφὴν* as title of the speech, but it ought to run *πρὸς τὴν Π. ἀντιγραφήν*); and in this case it is clear from the tenor of the speech, that the defendant did not address the court first [cf. Exomosia, 3]. (*Att. Process*, ed. Lipsius, pp. 849–854, 948.) [C. R. K.] [H. H.]

PA'RALUS. [Theoris.]

PARANOIAS DIKE (*παρανοίας δίκη*). This proceeding may be compared to our commission of lunacy, or writ *de lunatico inquirendo.* It was a suit at Athens that might be instituted by a son or other relative for a son against one who, by reason of madness or mental imbecility, had become incapable of managing his own affairs. The intention was to take the management of property out of the hands of such a person—hence the suit might only be instituted by the next heir, *i.e.* sons in the first instance (Plat. *Legg.* xi. p. 928, D f.)—and not to provide for his confinement (Aristoph. *Nub.* 845; Xen. *Memor.* i. 2, § 49; Aeschin. *c. Ctes.* § 251). Pollux (viii. 89) states that this *δίκη* came before the archon (as *ἡγεμὼν δικαστηρίου*), which is very probable, as being a matter connected with family rights, and from other sources we learn that a court of dicasts decided the case. The anonymous author of the Life of Sophocles alone states that the decision of such a suit rested with the phratores of the accused (*καί ποτε ἐν δράματι εἰσήγαγε τὸν Ἰοφῶντα αὐτῷ φθονοῦντα καὶ πρὸς τοὺς φράτορας*, etc.); yet this story of a prosecution of Sophocles by his son on account of mental imbecility is extremely doubtful. It would seem that a comic poet introduced an arraignment of the aged Sophocles by his son before the phratores in a contemporary comedy, the name of the poet being lost (G. Hermann conjectured *καί ποτε Ἀριστοφάνης ἐν Δράμασιν εἰσήγαγε*, etc.). This invented trial, Jebb suggests (Soph. ed. Jebb, ii. p. xl. f.), was accepted by Satyrus, a collector of biographies, whence Cicero (*de Sen.* 7, 22) and later writers (Plut. *Moral.* p. 785 B; Lucian, *Macrob.* 24), directly or indirectly, derived their accounts. (*Att. Process*, ed. Lipsius, p. 566 ff.) [C. R. K.] [H. H.]

PARA'NOMON GRAPHE (*παρανόμων γραφή*). An indictment instituted against a person who had proposed or carried an illegal, or rather unconstitutional, psephisma or law. The illegality might consist either in its form or in its contents, or in both. Thus a psephisma might be impugned for matter of form, if it was *ἀπροβούλευτον*, *i.e.* had not been submitted to the senate: such was the proposal of Androtion (Dem. *c. Androt.* p. 594, § 5), to award a crown to the outgoing senators as usual in spite of their having failed to build the necessary number of triremes (*l. c.* p. 596, § 10 f.), of Aristogiton against Hierocles ([Dem.] *c. Aristog.* i. p. 767, *argum.*), of Thrasybulus to confer citizenship upon Lysias ([Plut.] *Vit. X. Oratt.* p. 835 F);—or a proposal to restore an *ἄτιμος* or release a public debtor or admit him to composition with the state was illegal, if permission (*ἄδεια*) had not first been granted by an assembly at which not less than 6,000 Athenians had voted (Dem. *c. Timocr.* p. 715, § 46). As regards a law, it was illegal if the rules had not been complied with which regulated the introduction of new laws: thus Timocrates had not put up his law in the usual way for public perusal nor observed the regulations as to the time when the nomothetae should be appointed (Dem. *c. Timocr.* p. 708, § 26: cf. *c. Lept.* p. 485, § 94). As to the contents, a psephisma was illegal if inconsistent with a law, for *ψήφισμα μηδὲν μήτε βουλῆς μήτε δήμου νόμου κυριώτερον εἶναι* (Andoc. *de Myst.* § 87: cf. Dem. *c. Aristocr.* p. 649, § 87, and *c. Lept.* p. 485, § 92, *ἀλλὰ ἐναντιώτεροι* [*νεώτεροι* MSS.] *οἱ νόμοι, καθ' οὓς* *τὰ ψηφίσματα δεῖ γράφεσθαι*), and it is clear that this point was capable of very wide interpretation, from the fact that a proposal to confer citizenship on a foreigner might be impugned if the deserts of the foreigner could be called in question, since the law stipulated that this honour should be bestowed only on one deserving it, *δι' ἀνδραγαθίαν εἰς τὸν δῆμον τὸν Ἀθηναίων* ([Dem.] c. *Neaer*. p. 1375, § 89). A law might be impugned as being inconsistent with some other law that had not been repealed (Dem. c. *Timocr*. p. 711, § 34;—c. *Lept*. p. 485, § 93; p. 486, § 96): since a special law provided that new laws should come into operation from the day on which they were passed (unless a date was expressly mentioned, usually the beginning of the year following), Timocrates should have repealed this law, Demosthenes argues (p. 714, § 43; p. 723, § 73), before proposing his own with retrospective action. Some writers have maintained that the *γραφὴ παρανόμων* lay not merely against unconstitutional legislation, but against bad legislation in general, so that a law or psephisma might be assailed on the charge of inexpediency (*μὴ ἐπιτήδειον*, Dem. c. *Timocr*. p. 711, § 33, *lex*; cf. Pollux, viii. 56 and 44). Madvig takes a different view (*Kleine phil. Schriften*, p. 378 ff.). In his opinion a *γραφὴ παρανόμων* only lay against unconstitutional legislation, *i.e.* against a law or psephisma in proposing which certain regulations had not been complied with (*ὡς παρὰ τοὺς νόμους τὸ ψήφισμα εἴρηται*, Dem. c. *Aristocr*. p. 626, § 18 f., cf. p. 653, § 100; c. *Timocr*. p. 721, § 66: these laws which had been contravened the prosecutor wrote in parallel columns with the law or psephisma indicted, *παραγράφεσθαι*, Dem. c. *Androt*. p. 604, § 34, etc., cf. Dem. c. *Aristocr*. ed. Weber, p. 221), and any arguments as to the expediency of the law or psephisma in itself, which in practice played an important part, were beside the legal point at issue, being cited merely as additional reasons for rejection. Lipsius adopts Madvig's view, only separating objections based on the contents, *e.g.* that a psephisma is inconsistent with a law, from objections of a purely formal nature: cf. Gilbert, *Handb. d. gr. Staatsalt.* p. 284, n. 1, and Busolt, *Staats- u. Rechtsalt.* § 193. Wayte (Dem. c. *Androt*. and c. *Timocr*. p. xxxv.), on the other hand, holds that any law, "however carefully all constitutional forms had been observed, might be assailed on the vague charge of inexpediency. The *γραφὴ παρανόμων* lay, therefore, not merely against unconstitutional but against bad legislation in general; and any law might be pronounced 'bad' against which a majority, however small, could be obtained in a court where the last thing expected of the jurors was to leave their politics behind them." Schöll, too (*Sitzungsber. d. k. b. Akad.*, München, 1886, p. 136 ff.), contends that a law (not a psephisma) might be impugned by means of a *γραφὴ παρανόμων* on the ground of inexpediency, relying especially upon Pollux, viii. 87, *οἱ μὲν θεσμοθέται . . . . εἰσάγουσι καὶ τὰς τῶν παρανόμων γραφὰς καὶ εἴ τις μὴ ἐπιτήδειον νόμον γράψειεν*.

Against the proposer of a psephisma a *γραφὴ παρανόμων* might be preferred either before the taking of the votes (*e.g.* against Aristocrates and Ctesiphon: hence their motions are called *προβουλεύματα*, Dem. c. *Aristocr*. p. 625, § 14, etc.; *de Cor*. p. 228, § 9, cf. Xen. *Hellen:* i. 7, 12), or after the voting had taken place and the people had approved of it (Dem. c. *Androt*. p. 594, § 5, etc.; [Dem.] c. *Neaer*. p. 1347, § 5, etc.). Any citizen might prefer this indictment; if he declared in the popular assembly on oath (*ὑπωμοσία, ὑπομόσασθαι*, Xen. *Hell*, i. 7, 34, and Schömann, *de Comit*. p. 161 f., whose explanation of the passage Grote, *Hist. of Gr.* vii. p. 445 n., does not accept; *Lex. Rhet. Cantabr*. p. 665, 3, etc.) that he intended to proceed against the proposer by means of a *γραφὴ παρανόμων*, such a declaration necessitated the postponement of the voting, or had the effect of suspending the validity of the psephisma, until the court had given its decision. The indictment which Aeschines preferred against Ctesiphon's proposal in B.C. 336 was not brought to trial till six years later; since Ctesiphon's proposal was a *προβούλευμα* of the senate, it remained in force only a year (*ἐπέτειον*, Dem. c. *Aristocr*. p. 651, § 92), but, as Schaefer (*Dem. u. s. Zeit*, iii. p. 207 f.) suggests, it was renewed in B.C. 330 (hence Ctesiphon's personal responsibility), and now Aeschines was compelled to proceed with his indictment to escape the fine of 1000 drachmas (Dem. c. *Theocr*. p. 1323, § 6). The same proceeding might be instituted against the proposer of a law, not, however, whilst the law was in due form under consideration on the part of the nomothetae (Schömann, *Opusc*. i. p. 258 f.), but only when an attempt was made to rush it through the popular assembly, or when the law had been approved of by the nomothetae to prevent its becoming *κύριος*: thus Leptines' law had not come into operation in consequence of Bathippus's indictment: cf. Dem. c. *Lept*. p. 497, § 134; p. 499, § 139; p. 501, § 143 (Schömann, *Opusc*. i. p. 239 f.).

The indictment was directed against the mover personally, who, if the court decided against him, incurred more or less punishment: death (Dem. c. *Timocr*. p. 743, § 138) or a fine, 10 talents (c. *Mid*. p. 573, § 182; c. *Theocr*. p. 1332, § 31), 1 talent (instead of the 15 proposed by the prosecutor, [Dem.] c. *Neaer*. p. 1348, § 8), 25 drachmas (Hyp. *pro Eux*. col. 31); and the law or the psephisma was repealed. A person thrice so convicted lost the right of making proposals in the popular assembly in future (Dem. *de Cor. trierarch*. p. 1231, § 12; Meier, *de Bon. Damnat*. p. 130, n. 435). Aristophon was seventy-five times indicted for having moved illegal decrees, and every time acquitted; whilst Cephalus could boast that, though he had proposed more decrees than any one else, he had not once been indicted (Aeschin. c. *Ctes*. § 194). The prosecutor who failed to obtain one-fifth of the votes at the trial, as Aeschines did (Plut. *Dem*. 24), incurred a fine of 1000 drachmas, and lost the right of instituting a *γραφὴ παρανόμων* in future (Theophr. *π. νόμων*, *Lex. Rhet. Cantabr.* p. 677, 8). After the expiration of a year from the day when the psephisma or the law was proposed or passed, the mover was free from personal responsibility: this was the case with Leptines (Dem. c. *Lept*. p. 501, § 144; *argum* p. 453, *νομὸς γὰρ ἦν τὸν γράψαντα νόμον* *ψήφισμα μετὰ ἐνιαυτὸν μὴ εἶναι ὑπεύθυνον*) though, as we learn from this instance, the law itself might still be impeached before a jury and in such case the people appointed advocate to defend it (five *σύνδικοι*, Leptines himself an the four named, p. 501, § 146; cf. Wolf, p. cxxxvi.).

In Grote's opinion the *γραφὴ παρανόμων* "was probably introduced by Pericles at the same time as the formalities of law-making by means of specially delegated Nomothetae" (*Hist. of Gr.* v. p. 430): cf. Gilbert, *Handb. d. gr. Staatsalt.* i. p. 150, n. 2; Busolt, *Gr. Staats- u. Rechtsalt.* § 138. Mahaffy (*Hermath.* vii. 1881, p. 87 f.) places it later: "Though it may have long existed in the special form of an action against direct verbal contradictions of particular laws by new enactments, its importance dates only from the disuse of ostracism (417 B.C.), and was even a direct consequence of this disuse." In B.C. 411 it must have been firmly established as a bulwark of the democratic constitution, or the Four Hundred would not have repealed it before proposing their revolutionary changes (Thuc. viii. 67; Dem. *c. Timocr.* p. 748, § 154; Aeschin. *c. Ctes.* § 191). (*Att. Process*, ed. Lipsius, pp. 428–437.) [C. R. K.] [H. H.]

PARANYMPHUS. [MATRIMONIUM, p. 136.]

PARAPETASMA. [VELUM.]

PARAPHERNA. [DOS.]

PARAPRESBEIA (*παραπρεσβεία*) signifies any corrupt conduct, misfeasance, or neglect of duty on the part of an ambassador; for which he was liable to be called to account and prosecuted on his return home (Dem. *F. L.* p. 430, § 278 f.; p. 342, § 4 f.; *c. Mid.* p. 515, § 5). Ambassadors were usually elected by the people in assembly (*C. I. A.* ii. No. 17, l. 72 ff.; iv. No. 27 a, l. 45 ff.; Aeschin. *F. L.* § 18 f., etc.), on rare occasions by the senate (Heydemann, *de Sen. Athen.* p. 37; cf. Dem. *F. L.* p. 380, § 126). At the time of the Peloponnesian war and before, only men above fifty years of age were eligible as ambassadors (Plut. *Per.* 17; *C. I. A.* i. No. 40, l. 16; cf. Plat. *Legg.* xii. p. 950 D); later on this restriction was removed, for Demosthenes had not reached that age when he was sent to Philip in B.C. 346. Persons fit for the post (*ἄξιοι πίστεως*, Aeschin. *F. L.* § 23; *λέγειν δυνάμενοι*, *c. Ctes.* § 139) and *personae gratae* to the state to which the embassy was to be sent (*l. c.* § 138 f.; Thuc. v. 44, etc.; usually the *πρόξενοι*, Schubert, *de prox. Attic.* p. 78) were proposed by their friends (Aeschin. *F. L.* § 18) or might even propose themselves (Din. *c. Dem.* § 81; Lys. *c. Agor.* § 9). In most cases the ambassadors received definite instructions (*C. I. A.* i. No. 40, l. 16 ff.; Dem. *F. L.* p. 352, § 37; p. 392, § 162; Aeschin. *F. L.* § 98, etc.); but sometimes this was, from the nature of the case, not possible, and they had to act according to their own judgment. Hence such instructions as Aeschin. *F. L.* § 104, *πράττειν δὲ τοὺς πρέσβεις καὶ ἄλλ' ὅ τι ἂν δύνωνται ἀγαθόν*: cf. *C. I. A.* ii. No. 17, l. 74, and as an instance of independent action on the part of ambassadors may be cited the steps taken by Learchus and Ameiniades against the Lacedaemonian envoys (Thuc. ii. 67). Ambassadors who were empowered to make peace or conclude an alliance without further reference to the popular assembly were called *αὐτοκράτορες* (Andoc. *de Pac.* § 33, *αὐτοκράτορας γὰρ πεμφθῆναι εἰς Λακεδαίμονα διὰ τοῦθ', ἵνα μὴ πάλιν ἐπαναφέρωμεν*, as contrasted with Thuc. v. 41, *πρὶν τέλος τι αὐτῶν ἔχειν, ἐς τὸ Ἄργος πρῶτον ἐπαναχωρήσαντας αὐτοὺς δεῖξαι τῷ πλήθει, καὶ ἢν ἀρέσκοντα ᾖ, ἥκειν ἐς τὰ Ὑακίνθια τοὺς ὅρκους ποιησομένους*); yet such ambassadors had no power to settle the conditions on which peace was to be made, etc., these having been determined upon before they were despatched. Egger's definition (*Mémoire histor. sur les Traités Publics*, p. 8) is therefore too wide: "Les ambassadeurs prenaient quelquefois le titre de plénipotentiaires, quand on les dispensait formellement d'en référer à leurs commettants pour la conclusion du traité." That the power of the *πρέσβεις αὐτοκράτορες* was such as described above is borne out, *e.g.* by Lysias' (*c. Agor.* § 8 ff.) and Xenophon's (*Hell.* ii. 2, 11 ff.) accounts of Theramenes' embassy to Sparta. The Athenians had proposed to Agis to become allies of Sparta, retaining their walls and the Peiraeus, and Agis referred the ambassadors to the ephors at Sparta. This they reported to the popular assembly, by whom they were despatched to Sparta. On the frontier the ephors asked what their propositions were; and hearing that they were the same as those made to Agis, they desired them to go back and come prepared with something more admissible, informing them at the same time that no proposition could be received which did not include the demolition of the Long Walls for a continuous length of ten stadia. With this answer the envoys returned to Athens; a senator advised the acceptance of the terms, but was thrown into prison, and a resolution was passed forbidding any such motion in future. Then Theramenes offered to go as envoy to Lysander, to find out the real intentions of the Spartans as regards Athens; and when after three months' delay Lysander referred him to the ephors, Theramenes returned to Athens. He was now chosen *πρεσβευτὴς αὐτοκράτωρ* to Sparta, together with nine others, *i.e.* empowered to conclude peace if the Spartans accepted the conditions which he was prepared to offer, these having been agreed on by the people (*Θηραμένης . . . λέγει ὅτι . . . ποιήσειν ὥστε μήτε τῶν τειχῶν διελεῖν μήτε ἄλλο τὴν πόλιν ἐλαττῶσαι μηδέν*, etc. Lys. *l. c.* § 9). At Sellasia these envoys informed the ephors that they were *αὐτοκράτορες*, and were therefore permitted to come to Sparta; but when the Spartans insisted upon the demolition of the Long Walls, etc., the envoys could do nothing but refer (*ἐπαναφέρειν*, Xen. *l. c.* § 21) these terms to the Athenians; in the popular assembly they strongly recommended submission to Sparta, and the terms were accepted by a large majority. It is clear that if Theramenes and his colleagues had been plenipotentiaries in the usual sense of the word, *i.e.* empowered to make peace on the best terms they could secure, they would have done so at once at Sparta. See also Diod. xii. 4, *διόπερ οἱ περὶ τὸν Ἀρτάβαζον καὶ Μεγάβυζον ἔπεμψαν εἰς τὰς Ἀθήνας πρεσβευτὰς τοὺς διαλεξομένους περὶ συλλύσεως· ὑπακουσάντων δὲ τῶν Ἀθηναίων καὶ πεμψάντων πρέσβεις αὐτοκράτορας ὧν ἡγεῖτο Καλλίας ὁ Ἱππονίκου ἐγένοντο συνθῆκαι περὶ τῆς εἰρήνης*, etc. In Dem. *F. L.* p. 395, § 173, *αὐτοκράτωρ* has of course a different sense (Schäfer, *Dem. u. s. Zeit*, ii. p. 227, n. 1).

For ambassadors to act contrary to their instructions (*παρὰ τὸ ψήφισμα πρεσβεύειν*, Dem. *F. L.* p. 346, § 17) was a high misdemeanour

(Plat. *Legg.* xii. *init.* p. 941 A). On their return home they were required immediately to make a report of their proceedings (*ἀπαγγέλλειν τὴν πρεσβείαν*), first to the senate (*ἐπὶ κεφαλαίων*, Aeschin. *F. L.* § 45) and afterwards to the people in assembly (*l. c.* §§ 17, 25, 45 ff.; Dem. *F. L.* p. 342, § 4, etc.).* If the report made to the senate seemed satisfactory and no complaint was made against the ambassadors, a member of the senate moved a vote of thanks to the envoys and an invitation to dinner in the Prytaneum, and this motion was afterwards submitted to the popular assembly. Thus, after the return of the first embassy to Philip, Demosthenes moved in the senate *στεφανῶσαι θαλλοῦ στεφάνῳ ἕκαστον καὶ καλέσαι ἐπὶ δεῖπνον εἰς τὸ πρυτανεῖον εἰς αὔριον*, and in the popular assembly *ἐπαινέσαι καὶ καλέσαι ἐπὶ δεῖπνον*, etc. (Aeschin. *F. L.* §§ 45, 53; cf. Dem. *F. L.* p. 414, § 234). When objections were raised to the conduct of the ambassadors, as happened after the second embassy, no such vote of thanks, etc. was proposed in the senate (Dem. *F. L.* p. 350, § 31; cf. p. 355, § 45, etc.). This vote of thanks had in course of time become a mere formality (*τὸ νόμιμον ἔθος ποιῶν*, Dem. *F. L.* p. 414, § 234, and *argum.* p. 338; cf. Aeschin. *c. Ctes.* § 178), and to judge from the case of Timagoras, a person, though thus honoured, might later on be severely punished if misconduct in the embassy could be proved against him (Xen. *Hellen.* vii. 1, 38;—Dem. *F. L.* p. 400, § 191; p. 383, § 137). Since it was forbidden by law *στεφανοῦν τοὺς ὑπευθύνους* (Aeschin. *c. Ctes.* § 11), such a motion probably always contained the clause *ἐπειδὰν τὰς εὐθύνας δῷ* (cf. *C. I. A.* ii. No. 114 A; Rangabé, *Ant. Hell.* ii. No. 425). For that the ambassadors had to render an official account of their conduct in the embassy in the usual way [EUTHYNE] is clear (Aristotle in Harpocr. *s. v.* *εὔθυνοι*: Pollux, viii. 45, etc.). At the anakrisis held by the logistae, their *κήρυξ* asked, if any one intended to accuse the functionary who was rendering his account (*τίς βούλεται κατηγορεῖν*; Aeschin. *c. Ctes.* § 23; cf. Dem. *F. L.* p. 341, § 2). If an accuser appeared, he had to establish his complaint and reduce it to the form of a *γραφή*, and the prosecution would be conducted in the usual way, stopping the proceedings of the *εὔθυναι*. (This explains why Aeschines had not rendered his account before Demosthenes brought him to trial, Dem. *F. L.* p. 374, § 104 f.) We do not know within what time this account had to be rendered, whether ambassadors were bound to render it thirty days after their return, as most magistrates had to do after the expiration of their term of office. Thirlwall (*Hist. of Greece*, vi. p. 31) can scarcely be right in saying that the time for doing it was left to their discretion; for the instance from which he draws this inference must be explained differently. From the way in which Demosthenes had attacked him on his return from the second embassy to Philip both in the senate and in the popular assembly, Aeschines had reason to fear that charges would be made against him on the occasion of his rendering his account. He therefore tried at first to escape it altogether; and with a view to that, when Demosthenes wished to render his account in due form, he presented himself before the logistae and argued that there was no occasion to render an account of this second embassy, as it was for a matter of form only, viz. to receive the oath of Philip (Aeschin. *F. L.* § 123). This objection was overruled, and Demosthenes went through the necessary forms and received his discharge, no one complaining of his conduct, and probably some other envoys likewise (Dem. *F. L.* p. 377, § 118; Aeschin. *F. L.* § 178). Now Aeschines changed his tactics, and professed to be eager to render his account (*c. Tim.* § 168), and Demosthenes and Timarchus brought charges of neglect of duty against him (Dem. *F. L.* p. 343, § 8). Aeschines, however, gained time by proceeding against Timarchus: he demanded a judicial scrutiny into Timarchus' character, and thus in a summary way got rid of one of his accusers (*ἠτίμωσεν ὑπακούσαντά τιν' αὑτοῦ κατήγορον*, Dem. *F. L.* p. 423, § 257). At last, more than three years after the embassy (Dion. Halic. *Epist.* i. *ad Amm.* 10, *ἄρχων Πυθόδοτος*, *i.e.* B.C. 343–2. . .*καὶ τὸν κατ' Αἰσχίνου συνετάξατο λόγον, ὅτε τὰς εὐθύνας ἐδίδου τῆς δευτέρας πρεσβείας τῆς ἐπὶ τοὺς ὅρκους*), Demosthenes brought Aeschines to trial, when he, it is said, was acquitted by a majority of only thirty votes (Plut. *Dem.* 15; [Plut.] *Vitt. X. Oratt.* p. 840 B, C). The *γραφὴ παραπρεσβείας* which might be brought only on occasion of the *εὔθυναι* was a *τιμητὸς ἀγών* (Aeschin. *F. L.* § 5, etc.): and as it might comprise charges of the most serious kind, such as treachery and treason against the state, the defendant might have to apprehend the heaviest punishment. Callias (Dem. *F. L.* p. 428, § 273) had to pay a fine of fifty talents *ἐν ταῖς εὐθύναις* (on his embassy: cf. Duncker, *Abh. a. d. Griech. Gesch.* p. 121 ff.). Aelian's story (*V. H.* vi. 5), that the Athenian ambassadors sent to Arcadia, though successful in the object of their mission, were condemned to death because they had not travelled by the prescribed route, wants confirmation. Besides this *γραφή*, an *εἰσαγγελία* might be brought against an ambassador (Dem. *F. L.* p. 374, § 104 f.), *e.g.* against Epicrates (Dem. *F. L.* p. 429 f., § 276 ff.), and probably against Philon (Isocr. *c. Callim.* § 22; *ἐνδειχθέντα* can scarcely be

---

* Boeckh (*Sthh.* i.^{3} p. 393) states that the state paid the ambassadors their *ἐφόδια in advance*, quoting *C. I. G.* No. 107 = *C. I. A.* ii. No. 311, *Ephem. arch.* No. 407 = *C. I. A.* No. 64 (*C. I. G.* 2556 is a Cretan inscr.), and Fränkel adds (vol. ii. p. 67, App.) that sometimes the ambassadors received their pay *after* their return. It would seem that to about the middle of the fourth century the ambassadors received their *ἐφόδια after* their return (*C. I. A.* ii. No. 156, p. 423; No. 64 = Olymp. 105, 4; No. 89 = Olymp. 106, No. 108 c. b. l. 24 = c. Olymp. 107, 4, fifty drachmas), so much per day; Aristophanes (*Acharn.* 66, cf. 602) speaks of two drachmas, and the scholiast's remark is to the point, *καθάπτεται γὰρ τῶν πρεσβευτῶν ὡς ἐπίτηδες χρονοτριβούντων ἐν ταῖς πρεσβείαις ὑπὲρ τοῦ πλείονα μισθὸν λαμβάνειν*. From Dem. *F. L.* p. 390, § 158, we may conclude that the amount was less: each of the ten ambassadors received a hundred drachmas for ninety days, but in fact the journey lasted only seventy days. At a later period the *ἐφόδια* were paid in advance: thus for a journey to Byzantium fifty drachmas (*C. I. A.* ii. No. 251 = Olymp. 118–120), cf. *C. I. A.* ii. No. 311 = Olymp. 123, 3; *τὸ τεταγμένον*; and the Avaricious Man in Theophrastus (*Char.* 26, ed. Jebb=30) leaves the money allowed to him by the state at home and borrows of his colleagues in the embassy.

used here in its technical sense). (*Att. Process*, ed. Lipsius, p. 459 ff., p. 290.) Aeschines (*F. L.* § 139) says that Demosthenes had threatened to bring an eisangelia (*εἰσαγγεῖλαι παραπρεσβεύσασθαι*) against him for going as ambassador to Philip and to the Amphictyonic council, without being appointed as such (cf. Dem. *F. L.* p. 379, § 125 ff.); it is true that Aeschines, when elected to go on the third embassy, declined under the pretext of ill-health (Dem. *F. L.* p. 379, § 124), but the election was renewed by a decree which Demosthenes passed over (Aeschin. *F. L.* § 94, *ψήφισμα τὸ μὲν ἀνέγνως*, scil. Dem. *F. L.* p. 381, § 130, *τὸ δὲ ὑπερέβης*: cf. Dem. *F. L.* p. 395, § 172, *ἐπὶ τὴν τρίτην πρεσβείαν δίς με χειροτονησάντων ὑμῶν δὶς ἐξωμοσάμην*); cf. Plat. *Legg.* xii. p. 941 A. Antiphon and Archeptolemus were proceeded against by an *εἰσαγγελία προδοσίας* ([Plut.] *Vitt. X. Oratt.* p. 833 E, F), and the impeachment of Philocrates was not *παραπρεσβεία* (Schömann, *de Com.* p. 195), but *ῥήτορα ὄντα λέγειν μὴ τὰ ἄριστα τῷ δήμῳ τῷ Ἀθηναίων* (Hyper. *pro Eux.* c. 39). [C. R. K.] [H. H.]

PARASANGA (*παρασάγγης*). According to Herodotus, the parasang was the name given by the Persians to a distance of 30 stades (*παρασάγγας, τοὺς καλέουσι οἱ Πέρσαι τὰ τριήκοντα στάδια*, vi. 42). It was never, properly speaking, a Greek measure, but was simply employed by Greek writers such as Herodotus and Xenophon, who wrote about distances from one place to another in Asia, just as Strabo employed the word *μίλιον* when describing distances in Italy, and as the Romans, on the other band, at times employed the term *στάδιον* to describe distances in Greece. The origin of the measure is not very clear: some have sought to explain it as the distance traversed by an active walker in an hour of equinoctial time, during which the sun traverses a distance in the heavens equal to thirty times his own diameter. According to those metrologists therefore, the Persians simply borrowed the parasang from the Babylonians. But it is probable that it had a much more simple and rude origin, and is rather to be compared with the Gallic *leuga* (league) = 1½ Roman miles, and the German *Rasta* = 2 Roman miles. It will hardly be maintained that the latter were based on astronomical observations. It is more reasonable to suppose that the parasang as well as the *leuga* and *Rasta* were multiples of some native unit of land measure, such as the length of the furrow [MENSURA]. This view is supported by the fact that the Persians used the parasang as their unit of measurement when dealing with large tracts of country. (Herod. vi. 42, *καὶ τὰς χώρας σφέων μετρήσας κατὰ παρασάγγας, κ. τ. λ.*) The scientific theory of its origin is also rendered doubtful by the fact that the parasang varied considerably in extent in different times and places. For instance, Agathias (ii. 21), who quotes the testimony of Herodotus and Xenophon to the parasang being 30 stades, says that the Iberi and Persians in his own time (A.D. 570) made it only 21 stades. Strabo also states (xi. p. 518) that some writers reckoned it at 60 stades, others at 40, and others at 30. The evidence of Pliny is to the same effect, as he complains of the difficulty of giving accurate statements of distances (*H. N.* vi. § 30). Distances in Asia are still reckoned in *parasangs* (Persian *farsang*). Modern travellers variously estimate it at from 3½ to 4 English miles, which agrees closely with the calculations of Herodotus. [W. RI.]

PARASEMON (*παράσημον*). [INSIGNE.]

PARASI'TI (*παράσιτοι*) properly denotes those who dine with, or beside, others: of whose position Athenaeus (vi. p. 34), commenting on the later degradation of the word, says that it was formerly *ἱερόν τι χρῆμα καὶ τῷ συνθοίνῳ παρόμοιον*. From the general sense of "dining beside," we have in the earlier times two senses of the word, civil and sacred, and later a quite different sense. It must be observed that *παράσιτος* differs from *σύσσιτος* in that it implies a difference of rank and status; and, whereas the *σύσσιτοι* are those who dine together *ex officio*, the *πάρασιτοι* are those who are invited to join them. Hence in the original *civil* meaning the *παράσιτοι* were those who dined in the Prytaneum (or in the Tholos) not being magistrates, but invited guests: that this was originally the case is shown by the fact that Solon forbade the same parasite *σιτεῖσθαι πολλάκις* (Plut. *Sol.* 25). After the separate official dinners in the Tholos were instituted, the terms *παράσιτοι* included those subordinate clerks, &c. ("parasites" of the Prytaneis) who were, some time after the Roman conquest, termed *ἀείσιτοι*. [PRYTANEUM.] The *παράσιτοι* of the priests were ministers in the temples above the rank of mere temple servants who assisted the priests in the sacred rites, and dined with them after the sacrifice; and when the word is used to denote a distinct office, it has this meaning. Athenaeus (*l. c.*) in his account quotes various laws and decrees, but he is clearly not quite certain of their meaning. From the obscurely-worded law on p. 235 c, we should infer that the *παράσιτοι* had, besides their ritual duties, to collect (as if sacred *ἐκλογεῖς*) certain dues of corn for their temple, that they stored the offerings of corn in a *παρασίτειον* (which, however, from analogy we should have expected to mean the lodgings of parasiti in the temple precincts), that they were charged with providing food therefrom for those who came for religious purposes to the temple, and that out of funds committed to them they had to pay for repairs of the temple buildings. What the sense of *ἐκ τῆς βουκολίας ἐκλέγειν* can be, it is impossible to say. There is no warrant for giving to *βουκολία* the sense of a "country district," attached to the temple, whence corn was due, which might give an intelligible meaning. Schweighäuser's emendation *ἐκτὸς βουκολίας*, "absque dolo malo," is ingenious, but not a probable expression. Various deities are mentioned in the passages cited by Athenaeus, in whose temples there were parasiti, but there is no reason to suppose that their employment was limited to those temples. When it is said that the archons are to choose parasiti from the demes, the civil parasiti are probably meant (as in *ἄρχοντες καὶ παράσιτοι ἀνέθεσαν*, p. 234, f.). From the analogy of *πάρεδροι*, the assistants of magistrates, we may imagine that the priest of the temple chose his *παράσιτοι*.

From the fact that the priest received one-third of the victim and the *παράσιτοι* the same amount, it is clear that there was always more than one *παράσιτος* in a temple, since the priest's share would certainly be larger than his subordinate's.

Parasites in the modern sense no doubt existed in early times: the comedies of Aristophanes testify to them, and Philippus, who is introduced in the *Symposium* of Xenophon, is a good specimen of the class (cf. Epicharm. *ap.* Athen. vi. p. 235); but the name *παράσιτος* was only so applied in writers of Middle and New Comedy (the first who so used it is said to have been Alexis), upon which the honourable sense gradually fell into disuse. In these later comedians (from whom numerous passages are quoted by Athenaeus, vi. pp. 236–248) the parasites are standing characters.

The features common to all these parasites are importunity, love of sensual pleasures, and above all the desire of getting a good dinner without paying for it. According to the various means which they employed to attain this object, they may be divided into three classes. The first are *γελωτοποιοί*, or jesters (cf. Theophrast. xi. 4; Jebb *ad loc.*), who, in order to get an invitation, not only tried to amuse, but endured the grossest insults and even personal maltreatment (Alciph. *Ep.* iii. 6, 7, 49). This profession of voluntary enslavement was so systematic that they had note-books with a collection of jests (Plut. *Stich.* iii. 2, 1; Pers. iii. 1, 67). Among these we may class Philippus in the *Symposium* of Xenophon, Ergastilus in the *Captivi*, and Gelasimus in the *Stichus.* The second class are the *κόλακες* or flatterers (see Athen. vi. p. 248 d), who by praising vain persons endeavoured to obtain an invitation. Such were Gnatho in the *Eunuchus*, and Artotragus in the *Miles Gloriosus.* The third class are the *θεραπευτικοί*, or the officious, who by service even of the lowest and most degrading description tried to win favour (Plut. *de Adul.* 23; *de Educat.* 17). Characters of this class are the parasites in the *Asinaria* and *Menaechmi*, and especially Curculio in the *Persae* and Saturio in the *Phormio.* We find the parasites haunting the market, the palaestrae, the baths, and other public places in search of a patron. Some examples of the disgusting humiliations which parasites endured are mentioned by Athenaeus (vi. p. 249) and Plutarch (*Symp.* vii. 6; cf. Diog. Laert. ii. 67; Epictet. iv. 1, § 55; Dio Chrys. vi. p. 602, *ῥαπιζόμενοι καὶ αἰσχρὰ λέγοντες*). Under the Roman empire the parasite seems to have been constantly at the tables of the wealthy Roman, and to have been treated in much the same way. (Hor. *Sat.* ii. 7, 102; Mart. ii. 18, 53, 72; Lucian, *de Parasit.* 58.) Their position is described particularly in Juvenal, *Sat.* v. (where see Mayor's notes), and Plin. *Ep.* ii. 6. (Becker-Göll, *Charikles*, i. 157; Blümner, *Privatalt.* 502; Hermann, *Gr. Alt.* ii.^{2} 36.) [L. S.] [G. E. M.]

PARA'STADES. [ANTAE.]

PARA'STASIS (*παράστασις*), a fee of one drachm paid to an arbitrator by the plaintiff, on bringing his cause before him, and by the defendant, on putting in his answer; likewise on making an application for delay, and probably also on making a counter-affidavit (Pollux, viii. 39, 127; Harpocr. *s. v.*: cf. [Dem.] *c. Timoth.* p. 1190, § 19; Photius and *Etym. M.* s. v. *παρακατάστασις*). Meier (*Privatschiedsrichter*, etc. p. 13 f.) is of opinion that the state received these fees, and out of them paid the public arbitrators a drachm for every day they were engaged in their official duties; yet both Pollux and Harpocration use the expression *λαμβάνειν* of the arbitrator.

The same name was given to the fee (probably a drachm) paid to the state by the prosecutor in certain public causes. Aristotle (in Harpocr. *s. v.*) mentions as *γραφαὶ* to be laid before the thesmothetae those in which this fee had to be paid, viz. *ξενίας*, *δωροξενίας*, *ψευδεγγραφῆς*, *ψευδοκλητείας*, *βουλεύσεως*, *ἀγραφίου* and *μοιχείας*: and from Andoc. *de Myst.* § 120, we learn that *παράστασις* had to be paid by one who claimed an heiress in marriage as having a better title than another. On the other hand, this fee was not paid in an *εἰσαγγελία κακώσεως ἐπικλήρων* (Isae. *Pyrrh.* § 45), nor probably in a *γραφὴ ὕβρεως* (Isocr. *Lochit.* § 2). (*Att. Process*, ed. Lipsius, p. 813 f.) [C. R. K.] [H. H.]

PARA'STATAE. [HENDECA.]

PARAZO'NIUM. [ZONA.]

PARE'DRI (*πάρεδροι*), *assessors*, whom we find attached to the three superior archons, the euthyni, and the Hellenotamiae. Each of the three superior archons was at liberty to have two assessors (*πάρεδροι*) chosen by himself, to assist him by advice and otherwise in the performance of his various duties. (Aeschin. *c. Tim.* § 158; Poll. viii. 92.) That the magistrates who had a right to *πάρεδροι* appointed them, and that it was not an appointment by lot, appears from Pollux, *l. c.* and ch. 101, on which see Boeckh's comment (*Staatsaush.* i.^{3} p. 245) and Phot. *s. v.* The assessor, like the magistrate himself, had to undergo a *δοκιμασία* in the Senate of Five Hundred and before a judicial tribunal, before he could be permitted to enter upon his labours. He was also to render an account (*εὔθυναι*) at the end of the year. The office is called an *ἀρχή* ([Dem.] *c. Neaer.* p. 1369, § 72). The duties of the archon, magisterial and judicial, were so numerous, that one of the principal objects of having assessors must have been to enable them to get through their business. We find the *πάρεδρος* assisting the archon at the *λῆξις δίκης.* ([Dem.] *c. Theoc.* p. 1332, § 32.) He had authority to keep order at public festivals and theatres, and to impose a fine on the disorderly (Dem. *c. Mid.* p. 572, § 179). As the archons were chosen by lot (*κληρωτοί*), and might be persons of inferior capacity, and not very well fitted for their station, it might often be useful, or even necessary for them to procure the assistance of clever men of business. ([Dem.] *c. Neaer.* p. 1372, § 81.) And perhaps it was intended that the *πάρεδροι* should not only assist, but in some measure check and control the power of their principals. They are spoken of as being *βοηθοί*, *σύμβουλοι καὶ φύλακες.* Stephanus is accused of buying his place of the *Ἄρχων Βασιλεύς* (*c. Neaer.* p. 1369, § 72). It was usual to choose relations and friends to be assessors; but they might at any time be dismissed, at least for good cause (*ib.* p. 1373, § 84). The Thesmothetae had no assessors: if they chose to have unofficial advisers (*σύμβουλοι*) as in [Dem.] *c. Theoc.* p. 1330, § 27, it was their own private affair, and had no state recognition. (Schömann. *Antiq. of Greece*, p. 413.) The office of *πάρε-*

δρος was called *παρεδρία*, and to exercise it *παρεδρεύειν*.

Each of the Hellenotamiae had a *πάρεδρος* to assist him (*C. I. A.* i. 180–183): for the assessors of the *εὔθυνοι*, see EUTHYNE, Vol. I. p. 763 *b*. (Gilbert, *Staatsalterthümer*, i. p. 240 ff.; Boeckh, *op. cit.*; Schömann, *op. cit.*) [C. R. K.] [G. E. M.]

PARENGRAPTOI (*παρέγγραπτοι*, Aeschin. *F. L.* § 177, or *παρέγγραφοι*, Philoch. *fr.* 90) is the term applied to those who had their names enrolled in the register of citizens without being such either by birth or special grant (*φύσει* or *δωρεᾷ*). Such a one was liable to a *γραφὴ ξενίας* which any Athenian citizen might institute against him; and if condemned, his person and property was forfeited to the state and he was sold for a slave (Dem. *Epist.* iii. p. 1481, § 28; Schol. on *c. Timocr.* p. 741, § 131) [XENIAS GRAPHE], or he might be proceeded against by *εἰσαγγελία* (Dinarch. *c. Agasicl.*: cf. Hyper. *pro Eux.* c. 19; Dinarch. *c. Pyth.* etc.). Moreover the *δημόται* might by their *διαψήφισις* eject any person who was illegally enrolled among them. If he acquiesced in the verdict, his name was simply struck from the register, and he himself was degraded to the rank of an alien; if he did not acquiesce, but appealed to a court of dicasts, a heavier punishment awaited him if the dicasts confirmed the decision of the *δημόται*: he was sold as a slave, and his property confiscated by the state (Dem. *c. Eubul.* p. 1317, § 60 f.; Isae. *pro Euphil.* § 11, and *argum.*). [DIAPSEPHISIS.] Plutarch (*Pericl.* 37) says that in consequence of a law of Pericles, when the Egyptian king Psammetichus sent grain to Athens as a present, proceedings were taken against the *νόθοι*, and that nearly 5,000 were sold as slaves. In Duncker's opinion (*Ber. ü. d. Sitz. d. Berl. Akad.* 1883, p. 935 ff. = *Abhandl. a. d. Griech. Gesch.* p. 124 ff.) this Periclean law is a mere invention of the rhetors, and was confounded with Pericles' proposal of a *διαψήφισις* (Müller-Strübing, *Aristoph. u. d. hist. Krit.* p. 89), occasioned by the distribution of grain sent from Egypt, when 4760 were found to be fraudulently enrolled as citizens (Philoch. *fr.* 90 = schol. Aristoph. *Vesp.* 718). As stated above, not all persons struck off the registers were sold as slaves, but only those who unsuccessfully appealed to a court of dicasts; hence Plutarch's statement cannot possibly be correct. The larger number does not allow us to think of *γραφαὶ ξενίας* (as Philippi, *Beitr. z. Gesch. d. Att. Bürgerr.* p. 34 ff., suggests); and supposing that a *διαψήφισις* was instituted, it is inconceivable that so large a number should have appealed unsuccessfully to the courts. The idea of such a large number of persons having been struck off the registers is probably due to the following calculation:—The total number of citizens was taken at 19,000; according to Philochorus, 14,240 citizens received a share of the grain: thus 4,760 remained over who were looked upon as *παρέγγραφοι*. Yet 14,240 does not represent the total of citizens that remained after the *διαψήφισις* (Fränkel, *Att. Geschworenger.* p. 3 ff.), but only the number of those who received the grain, and the 4,760 includes not only the spurious citizens, but also all those citizens who for reasons of their own did not apply for a share (Busolt, *Griech. Gesch.* ii. p. 574 ff.). The term *παρεισγραφῆς δίκη* (Plut. *Amator.* 13, p. 756 D) is not Attic. (*Att. Process*, ed. Lipsius, p. 438 ff., 1030 f.) [C. R. K.] [H. H.]

PARENTA'LIA. [FUNUS.]

PA'RIES (*τοῖχος*), the wall of a roofed building, in contradistinction to MURUS (*τεῖχος*), a fence wall, and *maceria*, the wall of a small enclosure, such as a garden or courtyard. For the methods of construction of the more solid sorts of *parietes*, see MURUS.

The wall of the primitive huts, used by many races at an early stage of development, were formed of wattled osiers daubed with clay (*paries cratitius*). (See CRATES: also cf. Festus, s. v. *solea*; Pliny, *H. N.* xxxv. § 169; Vitruv. ii. 1; and Ovid, *Fast.* iii. 183 and vi. 261.) In later times thin party-walls were sometimes made of wood framing covered with reeds, and then stuccoed, like a modern lath-and-plaster partition. Walls of sun-dried bricks (*paries lateritius*) have been mentioned under MURUS: a variety of this method, used for humbler purposes, was to make the wall in one mass of beaten earth, *paries formaceus*: see FORMA. In some districts where timber was plentiful, log houses were built: very curious representations of these structures occur, carved in stone, in many of the tombs of Lycia and Lydia: cf. Herod. iv. 108; and Viturv. ii. 1 and 9. Many of these show carpentry of the most elaborate and skilful kind, with long carefully formed tenons, passing through the mortises and secured by wooden pins or wedges. Even under the Roman Empire wood was very largely used for the upper stories of houses, which were frequently built projecting over the ground-floor, like a mediaeval half-timbered structure. Many examples of this have been traced at Pompeii, though in most cases the charred beams fall to pieces as soon as they are exposed to air. In one instance, however, it has been possible to prop up and preserve an example of this overhanging upper story,—*tabulatus* or *maenianum pensile*. The metropolitan building acts of Nero, Trajan, and other emperors were specially framed so as to prevent the use of these highly combustible structures in the city of Rome, where constant fires committed the most fearful devastation (Suet. *Nero*, 38; Aur. Victor, *Epit.* 13; and Vitruv. ii. 8).

The *paries solidus* was a wall unbroken by openings for doors or windows: as in modern language, it was also called "a blind wall" (Verg. *Aen.* v. 589). The *paries communis* was the party-wall common to two houses (Ovid, *Met.* iv. 66): the *κοινὸς τοῖχος* of Thucyd. ii. 3. The party-wall was also called *intergerinus* or *intergerivus* (see Festus, *s. v.*; and Plin. *H. N.* xxxv. § 173); and in Greek *μεσότοιχος* or *μεσότοιχον* (Athen. vii. p. 281, and Ephes. ii. 14). Cross walls for separating the rooms of a house were called *parietes directi*. Cicero (*Topica*, 4) distinguishes four kinds of wall—the *paries solidus* as opposed to the *paries fornicatus*, a wall pierced with arches; and the *communis* or party-wall as distinguished from the *directus* or private-room wall.

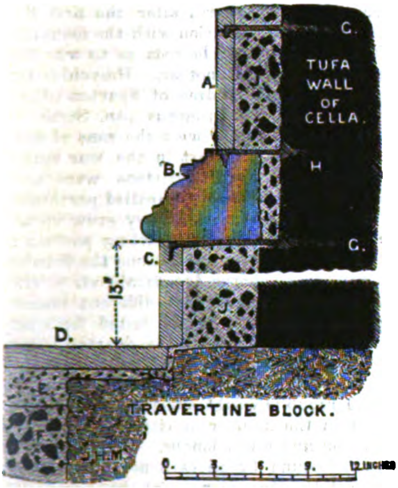
The decoration of the *paries* was very varied and elaborate: for painting and mosaic, both of which were very largely used for Roman mural decoration, see PICTURA: cf. also DOMUS and

MURUS, and *Encyc. Brit.* s. v. "Mural Decoration."

Stucco (*opus tectorium*) was very largely used by the Romans, both for exterior and internal walls. Great care and skill were expended in producing a hard durable substance, quite unlike the soft friable material which we now call stucco. Vitruvius (vii. 2–6) gives an elaborate description of the various methods of preparing and applying stucco: as Pliny's remarks on this subject are copied from Vitruvius, it is needless to refer to what he says about it. Existing examples agree closely with Vitruvius' advice. For internal work, three to five coats of stucco were laid on. If the wall were thought likely to be damp, it was often covered with flanged tiles, fixed with iron T-shaped cramps (Vitruv. vii. 4). Many examples of this have been found in Rome. The first coat was of lime and coarse pozzolana (*lapis Puteolanus*), exactly like the mortar used in the joints of brick facings. Over this, another rough coat was spread, frequently composed of lime, sand, and pounded pottery (*testae tunsae*), which set as hard as rock, and was impervious to moisture. The third coat was of lime and coarsely pounded marble; the finishing coat was of pure white lime or gypsum, mixed with marble ground to an impalpable powder, which usually had some glutinous substance, size made of parchment or tree-sap, mixed with it. The earlier coats were mixed with water only. In some cases one or more intermediate coats of similar composition were added, the composition always growing finer in grain as it approached the surface. The finished surface of this stucco set to a very hard consistency, and had a beautiful ivory-like texture, capable of receiving a high degree of mechanical polish. The final coats were called *opus albarium* or *caementum marmoreum* (Vitruv. vii. 16).

For external work, the same beautiful marble cement was used, but as a rule with fewer undercoats. A wall so treated was called *paries dealbatus.* Brick and concrete buildings were in this way made to look like white marble, and the deception was increased by the common Roman custom of forming incised lines in the stucco, so as to imitate the joints of the blocks of a solid marble wall. The application of the coats of stucco (*trullissatio*) was managed by a small square board at the end of a long handle, just like the modern plasterer's "float." This is shown in a painting from Pompeii representing a plasterer at work (see *Ann. Inst. Arch. Rom.*, vol. for 1881). The use of iron or bronze nails and marble plugs to form a "key" for the stucco is mentioned in the article MURUS (see also Middleton, *Ancient Rome,* pp. 36 and 412 *seq.*). Reliefs modelled in this fine stucco were very largely used by the Romans as a decoration for their walls and vaults. Some examples of extraordinary beauty were recently discovered in a house in the Farnesina gardens by the Tiber, and then destroyed by the works carried on during the formation of the new river embankment in Rome. These reliefs, which dated early in the first century A.D., were modelled with marvellous spirit and refined taste, executed rapidly by the artist in the quick-setting wet stucco, which he applied in lumps to the flat plaster ground, and then rapidly, before it had time to harden, moulded the figures into shape with his fingers and thumb, aided by a few simple wooden tools. The decision and unerring skill with which every touch on the wet stucco was applied is most admirable, and the result is that an amount of vigour and life appears in these hastily-executed reliefs, such as could hardly have been equalled by the slower process of chiselling a hard substance. The only guide which the sculptor had to help him was a mere sketch in outline, incised on the flat background, on to which he was applying the reliefs. Scenes of very great beauty occur among these reliefs: many are Dionysiac, with fauns and nymphs playing and singing. Some figures of winged Victories are marvels of delicate grace in their pose, floating lightly on large wings, with their onward movement skilfully indicated by the flowing curves of the drapery. The modelling of the nude is very skilful, showing complete knowledge of the human form: the play of the muscles under the supple skin being rendered with perfect taste, free from any of the usual Roman exaggeration. These reliefs, and others of the same class, are of pure Hellenic style, and most probably were executed by Greek workmen; in fact, one Greek artist had signed his name *Seleukos* on the walls of the Farnesina house, and other Greek artists' names occur in similar cases. Mouldings of elaborate character were formed in the marble cement by the use of long wooden stamps, the work being finally touched up with the modelling tool. Not only cornices of rooms were made in this way, but very often the whole wall-surface was divided up into panels framed with enriched mouldings—the central space being decorated by figure reliefs or by painting on the flat. Gold, silver, and colours of all kinds were used to increase the decorative effect of the reliefs, which seem very rarely, if ever, to have been left white.

The use of marble for decorative purposes in Rome did not begin before the first century B.C. Its introduction, especially into private houses, was at first regarded as a thing savouring of Greek luxury and unbecoming the stern republican simplicity of a Roman citizen. The earliest example of the use of thin marble wall-linings (*crustae*), according to Cornelius Nepos, quoted by Pliny, *H. N.* xxxvi. § 48, was in the house of a knight named Mamurra, one of Caesar's officials in Gaul. A few years later, marble became very common, in the reign of Augustus, who did all he could to make Rome magnificent (Suet. *Aug.* 29); and all throughout the imperial period immense quantities of the most varied coloured marbles were poured into Rome from countless quarries in Northern Africa, Greece, Asia Minor, Arabia, and other countries. Immense wall-surfaces were covered with costly marbles, and in some cases even by the hard basalts which only diamond or corundum could work. The usual scheme was to have a moulded plinth, a dado above that, and at the top of the wall a richly-moulded cornice; marbles of different colours being used for all the various parts. The main surface, between the dado and the cornice, was often divided into panels of different coloured marbles, each panel being framed with a moulded strip, projecting in front of the general surface like the frame of a picture. These marble linings were fixed with great care. They were backed with a thick coating of cement or mortar, made of lime and pozzolana, and each piece of marble was then tied to the wall behind by long hook-like clamps of iron or bronze, the ends being run with melted lead, or wedged into joints of the brick facing of the wall. Extraordinary skill was shown by the extreme thinness to which many of these marble slabs were sawn. This was done with iron saws and sand and water, or, in the case of the harder marbles, with emery from Naxos (see Pliny, *H. N.* xxxvi. § 51). The use of jewel-tipped drills, both solid and tubular, was introduced into Rome from Egypt, along with the Egyptian granites and basalts (see Pliny, *H. N.* xxxvii. § 200). The Temple of Concord and the House of the Vestals in Rome still have on their walls well-preserved examples of these elaborate linings. A list of the various ornamental marbles used for the walls of Rome is given in Middleton, *Ancient Rome*, pp. 13–19 and p. 39. The annexed woodcut shows the method of fixing the marble linings in the Temple of Concord, which was rebuilt in the reign of Augustus by Tiberius and Drusus (Suet. *Tib.* 20). The slabs used in this building and others of the same period are from 1 inch to 1½ inches thick. It was not till later times that a mere veneer, in some cases not more than ⅛ inch thick, was used.



Marble lining, from the Cella of the Temple of Concord.

A. Slabs of Phrygian marble.
B. Plinth moulding of Numidian *giallo*.
C. Slab of cipollino (Carystian marble).
D. Paving of Porta Santa.
E, F. *Nucleus* and *rudus* of concrete bedding.
G G. Iron clamps run with lead to fix marble lining.
H. Bronze clamp.
J J. Cement backing.

In Italy, where the quarries of Luna supplied unlimited quantities of white marble, the wall-linings were usually of foreign coloured marbles; but in Britain and other Roman provinces, where white marble was rare or absent, we find it treated in the same economical way. At Silchester and other Roman sites wall-linings of white marble only half an inch thick have been found. This use of veneers to make a great show with a small expenditure seems to have specially commended itself to the degraded taste of the Romans, who loved shams of every kind, and in their common building used the most tawdry and meretricious style of decoration that can possibly be imagined. Sham marbling, painted on stuccoed walls, was a favourite method of decorating ordinary houses; and even public buildings and temples, not in Rome itself, but in the provincial towns, such as Pompeii, were daubed with this trashy style of decoration. [J. H. M.]

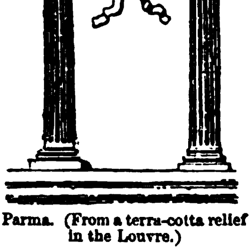
PARI'LIA or **PALI'LIA**, a festival celebrated at Rome and in the country on the 21st of April, in honour of Pales. As regards the form of the word, there is no doubt that *Parilia* is more correct than *Palilia* (Marius Victorinus, p. 25; Prob. *ad* Verg. *Georg.* 3, 1; Calend. Maff.; *Ephem. Epigr.* iii. 7): the derivation, however, is not, as some ancient writers imagined, from *parere, a partu pecoris*, but from Pales, the substitution of Parilia for Palilia being by "dissimilation" to prevent the repetition of the letter *l*, just as popul*aris*, &c. are written instead of *-alis*, or as *caeruleus* is formed from *caelum*. (Roby, *Latin Grammar*, i. § 176; Peile, *Lat. Etymology*, p. 280; Corssen, *Lat. Sprache*, i. 80.) The festival was a lustral rite at the opening of spring, for the lustration of the flocks and herds, over which Pales presided. The 21st of April was the day on which, according to tradition, Romulus began the building of the city, and the festival was therefore also solemnised as the *dies natalitius* of Rome (Fest. *s. v.* Parilibus; Cic. *de Div.* ii. 47, 98; Varro, *R. R.* ii. 1; Plin. *H. N.* xviii. § 247; Dionys. i. 88); and some of the rites customary in later times were said to have been performed by Romulus when he fixed the pomerium. Ovid (*Fast.* iv. 731–805) gives a description of the rites of the Parilia, which clearly shows that he regarded it as a shepherd festival, as it must originally have been when the Romans really were shepherds and husbandmen, and still continued to be among the country people (Dionys. *l. c.*; Varro, *ap. Schol.* Pers. i. 72), for in the city itself it must have come to be regarded principally as the birthday feast of Rome (cf. Ov. *Fast.* iv. 106).

The sacred rites were in old times directed by the king, who made offerings for the people: afterwards his place was taken by the Pontifex Maximus. The first part of the solemnities, as described by Ovid, was a public purification by fire and smoke. The things burnt in order to produce this purifying smoke were the blood of the *October-horse* [OCTOBER EQUUS], the ashes of the calves sacrificed at the FORDICIDIA, and bean-straw, which were all fetched from the Atrium Vestae. The people were also sprinkled with water; they washed their hands in spring-water, and drank milk mixed with must. (Ovid, *Fast.* l. c.; compare Propert. v. 1, 20.) When towards the evening the shepherds had fed their flocks, laurel-branches were used as brooms for cleaning the stables, and for sprinkling water through them, and lastly the stables were adorned with laurel-boughs. Hereupon the shepherds burnt sulphur, rosemary, fir-wood, and incense, and made the smoke pass through the stables to purify them; the flocks themselves were likewise purified by this smoke. The sacrifices which were offered on this day consisted of cakes, millet, and milk. The shepherds then offered a prayer to Pales. After this heaps of hay and straw were lighted, and the sheep were more effectually purified by being compelled to run through the fire, and the shepherds themselves did the same. The festival was concluded by a feast in the open air. (Tibull. ii. 5, 87; compare Propert. v. 4, 75.)

The ludi circenses on this day (mentioned in the Calendars) were not properly a part of the Parilia, but were instituted in honour of the battle of Munda, fought on March 17th, B.C. 45, the news of which reached Rome on April 20th: these games were discontinued (Dio Cass. xlv. 6), and, having been re-instituted by Hadrian, were held annually till the fifth century (Mommsen, *C. I. L.* i. 391). On this day also Hadrian dedicated the temple of Rome and Venus, and, as it was more than ever connected with the birthday of the city, we find the festival called Ῥωμαΐα (Athenaeus, viii. p. 361 f).

There is to this day in Rome a ceremony of blessing the animals and sprinkling them with lustral water; but, though there is a certain resemblance, it would be an error to treat it as a survival of the Parilia. The Christian ceremony is on St. Anthony's Day, in the middle of January, nor is there any trace of continuity, such as has been noticed in the case of the Lupercalia. [L. S.] [G. E. M.]

PARMA, *dim.* **PA'RMULA** (Hor. *Carm.* ii. 7, 10), a round shield, three feet in diameter, carried by the *velites* in the Roman army. Though small compared with the CLIPEUS, it was sufficiently large and strong to be a very effectual protection (Polyb. vi. 22). This was probably owing to the use of iron in its framework. In the Pyrrhic dance it was raised above the head and struck with a sword so as to emit a loud ringing noise (Claud. *de VI. Cons. Honor.* 628). The parma was also worn by the EQUITES (Sallust. *Frag. Hist.* iv.); and for the sake of state and fashion it was sometimes adorned with precious stones (Propert. v. 10, 21). We find the term *parma* often applied to the target [CETRA], which was also a small round shield, and therefore very similar to the parma (Propert. v. 10, 40; Mela, i. 5, § 1; Verg. *Aen.* x. 817). Virgil, in like manner, applies the term to the clipeus of the Palladium, because, the statue being small, the shield was small in proportion (*Aen.* ii. 175). The annexed woodcut shows a votive parma, suspended in a portico, represented on a terra-cotta relief in the Louvre. [J. Y.] [A. H. S.]



Parma. (From a terra-cotta relief in the Louvre.)

PA'ROCHI were certain people who were paid by the state to supply the Roman magistrates, ambassadors, and other official persons, when they were travelling, with those necessaries which they could not conveniently carry with them. They existed on all the principal stations on the Roman roads in Italy and the provinces, where persons were accustomed to pass the night. But as many magistrates frequently made extortionate demands from the parochi, the Lex Julia de Repetundis of Julius Caesar, B.C. 59, defined the things which the parochi were bound to supply, of which hay, fire-wood, salt, and a certain number of beds appear to have been the most important. (Hor. *Sat.* i. 5, 46; Cic. *ad Att.* v. 16, xiii. 2; Heindorf, *ad* Hor. *l. c.*; Marquardt, *Privatleben*, 199.) [W. S.]

PAROPSIS. [CATINUS.]

PARRICI'DA, PARRICI'DIUM. [LEX CORNELIA, Vol. I. p. 38; LEX POMPEIA, p. 50.]

PARTHE'NIAE (παρθενίαι) are, according to the literal meaning of the word, children born from unmarried women (παρθένιοι, Hom. *Il.* xvi. 180). The partheniae, as a distinct class of citizens, appear at Sparta after the first Messenian war and in connexion with the foundation of Tarentum; but the legends as to who they were differ from one another. Hesychius says that they were the children of Spartan citizens and female slaves; Antiochus (*ap.* Strab. vi. p. 278) states that they were the sons of those Spartans who took no part in the war against the Messenians. These Spartans were made Helots, and their children were called partheniae, and declared ἄτιμοι. When they grew up, and were unable to bear their degrading position at home, they emigrated, and became the founders of Tarentum. Ephorus (*ap.* Strab. vi. p. 279), again, related the story in a different manner. When the Messenian war had lasted for a considerable number of years, the Spartan women sent an embassy to the camp of their husbands, complained of their long absence, and stated that the republic would suffer for want of an increase in the number of citizens if the war should continue much longer. Their husbands, who were bound by an oath not to leave the field until the Messenians were conquered, sent home all the young men in the camp, who were not bound by that oath, that they might cohabit with the maidens at Sparta. The children thus produced were called partheniae. On the return of the Spartans from Messenia, these partheniae were not treated as citizens, and accordingly united with the Helots to wage war against the Spartans. But when this plan was found impracticable, they emigrated and founded the colony of Tarentum. (Compare Theopomp. *ap.* Athen. vi. p. 271; EPEUNACTAE.) Modern writers have differed in their preference for one or other of these accounts. Grote prefers to follow Antiochus, while Gilbert gives more weight to the narrative of Ephorus, remarking with truth that the action of the husbands, shocking to our ideas, would be less so to Spartans of that age (see MATRIMONIUM, p. 132). No doubt, as he says, Ephorus stands higher as an authority than Antiochus; but, in dealing with an ancient tradition, this does not go for much. Aristotle (*Pol.* viii. 7), who is a better authority than either, does not enter into the circumstances of the birth of the partheniae at all. His statement, however, that they were born *ἐκ τῶν ὁμοίων* would lead us to reject Antiochus's version; but, on the other hand, it favours the simpler story of Hesychius rather than that of Ephorus. It may be added that the somewhat similar account of degrading marriage in the colonists of Locri Epizephyrii (Polyb. xii. 5) might incline us to suspect the traditions. Thus much seems certain that the partheniae at Sparta, whether illegitimate or not, were debarred from the rights of full citizens, probably from the land-portions, by the exclusive Spartiatae, and, as they formed a dangerous faction, were forced into an emigration, which proved successful and of considerable historical importance. (See *Histories of Greece:* Thirlwall, i. p. 332; Grote, iii. p. 519; Curtius, i. 218, E. T.;—Schömann, *Antiquities*, p. 200; Gilbert, *Staatsalterthümer*, i. 19.) [L. S.] [G. E. M.]

PA'SCUA PU'BLICA. [Scriptura.]

PASSUS (from *pando*), a measure of length, which consisted of five Roman feet. (Colum. v. 1; Vitruv. x. 14.) [Mensura.] The *passus* was not the single step (*gradus*), but the double step; or, more exactly, it was not the distance from heel to heel, when the feet were at their utmost ordinary extension, but the distance from the point which the heel leaves to that in which it is set down. The *mille passuum*, or thousand paces, was the common name of the Roman mile. [Milliare.] In connecting the Greek and Roman measures, the word *passus* was sometimes applied to the *extension of the arms*,—that is, the Greek *ὀργυιά*, which, however, differed from the true *passus* by half a foot; and, conversely, the *gradus* was called by Greek writers *βῆμα*, or *τὸ βῆμα τὸ ἁπλοῦν*, and the *passus τὸ βῆμα τὸ διπλοῦν*. [P. S.]

PASTILLUS, PASTILLUM, strictly a small round cake of fine meal (Plin. *H. N.* xviii. § 102), used in sacrificial offerings (Fest. p. 250). Festus (p. 222) takes it to be a diminutive of *panis*. For the making of these there was a guild of *pastillarii* (*C. I. L.* vi. 9765, 9766). In the masculine form the word was used for small round lozenges (*τροχίσκοι*), compounded from herbs or fruits, and used for medicines (Plin. xx. § 3) or sweetmeats (Id. xii. § 131); and especially scented lozenges of aromatic herbs, eaten to make the breath sweet. (Hor. *Sat.* i. 2, 27; i. 4, 92;—Mart. i. 87; Becker-Göll, *Gallus*, iii. 367; Blümner, *Technologie*, i. 86.) [G. E. M.]

PASTO'PHORI were Egyptian priests, so called because they carried in processions small shrines (*παστοί*) of their deity. They formed an inferior order of the priesthood: according to Diodorus (i. 29), the Egyptian *ἱερεῖς* corresponded in rank to the Eumolpidae, the *παστοφόροι* of Isis to the *κήρυκες* of the Eleusinian worship. They were introduced into Italy along with the worship of Isis, and formed into collegia in various towns. Apuleius (*Met.* xi. 17), speaking of pastophori, says, "quod sacrosancti collegii nomen est." In an inscription (*C. I. L.* v. 2806) the tablet seems to be dedicated by a "perpetuus sacerdos Isidis Augustae pastophorus;" and in another (*C. I. L.* v. 7468) we have a tablet of Industria in the plain of the Po, dedicated to their patronus, the Curator calendarii in that town, by the "Collegium Pastophorum Industriensium." Their lodgings, attached to the temple which they served, were called *παστοφόριον*, whence this name was sometimes given by the LXX. and by Josephus to the priests' apartments attached to the Jewish temple. (Jer. xxv. 4; Joseph. *B. J.* iv. 12.) [J. Y.] [G. E. M.]

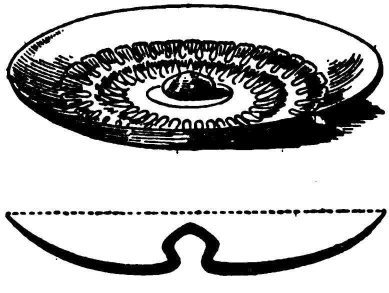
PATELLA (*λεκάνιον, λεκανίς, λεκανίδιον, λεκανίσκη, λοπάδιον*), a small dish or plate. The word is a diminutive of Patina: a supposed connexion with *patera* has been a source of error to some writers [Patera]. 1. The patella was used for holding solid food, meat or vegetables, either in cooking (Plin. *H. N.* xix. § 171, xxx. § 68), or for serving up at table (Hor. *Ep.* i. 5, 2; Mart. v. 78, xiii. 81; Juv. v. 85). It was usually of earthenware (Mart. xiv. 114), but sometimes of metal (Juv. x. 64). Marquardt (*Privatleben*, p. 651) takes the patella used for cooking to be identical with the *sartago:* it seems more probable that, though of the same flat shape, it was smaller. [For the deeper cooking vessels, see Aenum, Lebes, Olla.] 2. The patella was also a sacred vessel of the same shape as the ordinary patella, but reserved for domestic sacred rites, especially for the offering of food to the Lares, *lances* being used when a larger dish was needed [Lanx]. Hence it is called *cultrix foci* (Pers. iii. 26; cf. Ov. *Fast.* vi. 310); and hence, too, every household ought to have one kept solely for religious uses, and Cicero (*de Fin.* ii. 7, 22) notes it as a mark of profanity, "ut edint de patella," meaning of course the patella used for offerings. This sacred dish was, if possible, of silver; even in comparatively poor households it was customary to have at least a patella, patera, salinum, and censer of silver (Cic. *Verr.* iv. 21, 46); and in B.C. 410, as is mentioned by Liv. xxvi. 36, in the general contribution of silver plate, it was provided that the householder should retain a salinum and patella of silver "deorum causa" (cf. Plin. *H. N.* xxx. § 153; Val. Max. iv. 4, 3; Marquardt, *Privatl.* p. 318). Of this offering Varro says, "Quocirca oportet bonum civem legibus parere et deos colere, in patellam dare *μικρὸν κρέας*" [see further under Lararium], and the Lares are thence called by Plautus *patellarii dii* (*Cist.* ii. 1, 46). [G. E. M.]

PATER FAMILIAE. [Patria Potestas.]

PATER PATRATUS. [Fetiales.]

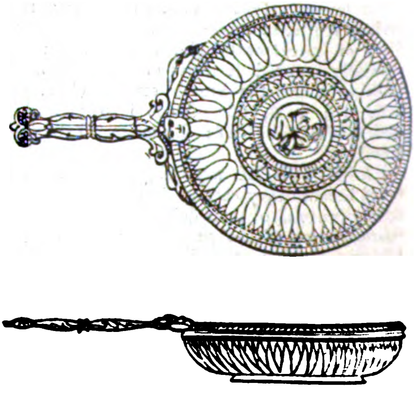
PA'TERA (*φιάλη*), a round shallow vessel like a large saucer, but somewhat deeper than our ordinary saucer. Varro (*L. L.* v. 122) and Macrobius (*Sat.* v. 21) derive its name from its flat, expanded shape ("planum ac patens"). It had neither the foot and stem nor the two handles which belonged to the cylix [Calix; Vas]. It must be observed that alike in sacred and common use it served only for liquids, and those writers who have described it as also used for solids have confounded it with *patella*, which they have erroneously taken to be a diminutive of patera. Another error to be avoided is the confusion of the Homeric *φιάλη* with the later *φιάλη*, which was identical with the Latin patera. As Curtius points out (*Etym.* 498), the Homeric *φιάλη* was not used for drinking, but as a kind of smaller *λέβης* or kettle, which could be placed on the fire (whence the epithet *ἀπύρωτος* for a *new φιάλη*, *Il.* xxiii. 270), and also as an urn for ashes. Aristarchus teaches this in the words *ὅτι φιάλην* (of Homer) *οὐ τὸ* παρ' ἡμῖν ποτήριον, ἀλλὰ γένος τι λέβητος ἐκπέταλον. From these words and from its use in Homer we may conclude that, though shallower than the λέβης and probably smaller, it was still a deep vessel and not of that saucer shape which belongs to the familiar patera. The epithet ἀμφίθετος of the Homeric φιάλη was a puzzle to Athenaeus, a solution of which cannot now be given with confidence. It is not possible in etymology to accept the view that it means *round*, nor the suggestion of Athenaeus himself that it may mean "excellently made." We are left with the view of Aristarchus that it was a vessel which could stand on either end. Heyne understands this to mean a double cup of the hour-glass or dice-box shape: more probably it was so called because, whereas the ordinary Homeric λέβης was rounded at the bottom so that, if otherwise unsupported, it could only stand inverted, the Homeric φιάλη had a flat bottom, and could stand either way (for the discussion, see Athen. xi. p. 501).

The post-Homeric φιάλη was of the shape described at the beginning of this article; it never had a handle (differing in that respect from *one* form of the Italian patera mentioned below), nor any stem, but often, as in the examples given below, a low base; sometimes, as we are told, it had knobs or supports, which were called ἀστράγαλοι: the φιάλη with these knobs at the bottom was called βαλανωτή or καρυωτή (Athen. xi. 502 b), the knobs being compared to nuts or acorns. Another feature very common in φιάλαι and paterae was the ὀμφαλός. This was a hollow boss in the centre of the interior or upper side, as shown in the woodcut. Athenaeus distinguishes φιάλαι ὀμφαλωτοί, and gives an equivalent name φθοῖς. The φιάλη or patera was usually held in the flat of the hand (though not always, as may be seen in the famous Sosias-cylix, Baumeister, *Taf.* xcii.), and it is easy to understand that the ὀμφαλός gave a better hold, the fingers catching in the hollow of the boss underneath. The material was either earthenware or metal, bronze, silver and gold (ἀργυρίς and χρυσίς): the φιάλαι in Plat. *Crit.* 120 A are of gold. (Examples of gold and silver paterae found in Cyprus are given in Cesnola, pp. 316, 337.) The φιάλη of post-Homeric times was used for drinking (Plat. *Symp.* 223 C; Pind. *Nem.* ix. 121), and so classed among ἐκπώματα (Herod. ix. 80); but its most characteristic use was for pouring libations (Herod. ii. 151; Plat. *Crit.* l. c., &c.). The φιάλη for libations, held by the officiating person, was usually filled by an attendant from an οἰνοχόη: in the passage cited from Plato's *Crit.* the wine seems to be dipped in the φιάλη from the κρατήρ.



Φιάλη ὀμφαλωτός. (From the British Museum.)

Patera, from Hadrian's Villa.



Patera, from Pompeii.

The usual Italian *patera* was identical with the φιάλη in shape. [see SIMPULUM]. One of white marble found at Hadrian's villa is now in the British Museum. It is 14 inches in diameter and 1¾ high. It is cut with skill, the marble being not much more than a quarter of an inch thick. In the centre is a female bucchante with a long tunic and a scarf floating over her head, encircled by a wreath of ivy. The decorations indicate a patera dedicated to Bacchus. Some paterae, however, had one handle (which the φιάλη never had), as in the woodcut below, a bronze patera found at Pompeii. This seems to have been commoner in Etruscan paterae, of which there are several in bronze and terracotta in the British Museum with the single handle. An Etruscan relief in Inghirami, *Mon. Etrus.* vi. pl. M, shows a youth bringing for libation the two vessels, an oinochoe and a patera, the latter having a handle. It is possible that the addition of the handle may be an Etruscan invention. The material was often only earthenware (Hor. *Sat.* vi. 116); but often also silver (Mart. iii. 41, vi. 13, viii. 33; Plin. xxxiii. § 156); sometimes gold (Mart. xiv. 95; Juv. v. 39—in both, the word *phiala* is used; Verg. *Aen.* i. 729). It was originally used as a drinking cup (Varro, *L. L.* v. 122), but afterwards especially for libations (Hor. *Od.* i. 31, 2; iv. 5, 34;—Ov. *Met.* ix. 160), whence it became the *insigne* of the EPULONES, though often it served both purposes, as in the passage cited from Virgil. A representation of the libation, from Trajan's Column, is given under PAENULA. [For libations, see SACRIFICIUM.] [J. Y.] [G. E. M.]

PATI'BULUM, from *patere*, seems to have originally denoted any beam placed horizontally; as the cross-bar of a door (Titin. *ap.* Non. p. 366, 16), or of a trellis for vines (Plin. *H. N.* xvii. § 212), or the transverse beam of the cross (CRUX, p. 568 *a*). The word, however, is almost always used of an instrument of punishment, and loosely as an equivalent to *crux* or *furca*. According to Marquardt (*Privatl.* 183), it was a wooden collar in two pieces, opened to receive the neck of the culprit and then closed upon it, while his hands might be bound or nailed to its extremities. This, he admits, is nowhere expressly stated; it is rather an inference from the etymology of the word; and he has produced no passage which does not point more clearly to the *furca* than the patibulum. (Compare the accounts of the slave driven through the Circus, whereby the games were profaned, in Dion. Hal. vii. 69, and Plut. *Coriol.* 24.) Others explain the "opening" as a fork-shaped piece of wood, such as was undoubtedly used for the same purposes, as a prop for vines and a pillory for the necks of criminals [FURCA]. It is scarcely necessary to prove that *patere* is often applied to simple lateral extension, to stretch or spread as well as to be open ("Helvetiorum fines . . . patebant," Caes. *B. G.* i. 2; "qua terra patet," Ov. *Met.* i. 241); and on the whole it seems likely that the patibulum was a straight piece of wood, an explanation which covers all its varieties of meaning. [W. W.]

PA'TINA (*τρύβλιον*), a deep dish used alike for cooking ("patinarius," *stewed*, opposed to "assus," *roast*, Plaut. *Asin.* i. 3, 27) and for serving up food, as is seen from Plaut. *Pseud.* iii. 2, 51, whence we gather also that it was sometimes a covered dish: probably this was generally the case when the food was brought up in the patina in which it had been cooked (cf. Hor. *Sat.* ii. 8, 43). The patina was, however, often the dish for serving up what had been cooked in other vessels. This is clear from our finding silver patinae, *e.g.* a "patina argentea hederata" (with ivy-leaf chasing: cf. *filicata*) in Trebell. Poll. *Claud.* 17, and the patina of Aesopus valued at 100,000 sesterces (Plin. *H. N.* xxxv. § 163). Among costly patinae that of Vitellius holds the first place; not, however, from its material, as it was of earthenware, but because it was so large that a special oven had to be built for it at a cost of a million sesterces (Plin. *l. c.*; Suet. *Vitell.* 13).

As regards the Greek equivalents, the *τρύβλιον* perhaps comes nearest in shape and use (Aristoph. *Av.* 77): it was of earthenware (Id. *Eccl.* 252) and also of silver (Athen. vi. 230 e): the *λοπὰς* was used both for cooking and serving food, but it was flatter and more like the *patella*: the *χύτρα*, on the other hand, was deeper and (serving also both purposes) is equivalent to OLLA. The *λεκάνη* is often given as the equivalent of patina, and it was probably of much the same shape, but its uses were different: a basin *ἵνα ἐξεμοῦσι* (Poll. x. 76; cf. Ar. *Nub.* 907); a trough for brick-makers (LATER, p. 8). [J. Y.] [G. E. M.]

PATRES. [PATRICII; SENATUS.]

PATRIA POTESTAS. Potestas in its original meaning signified "mastery," "dominion" (Curtius, *Gr. Etym.* iii. 265), and hence it came to mean a legal power or authority to which a person was entitled. "Potestas," says Paulus (Dig. 50, 16, 215), "has several significations: when applied to magistratus, it is imperium; in the case of children, it is the patria potestas; in the case of slaves, it is dominium." According to Paulus, then, potestas, as applied to magistratus, is equivalent to imperium. Thus we find potestas associated with the adjectives *praetoria*, *consularis*. But potestas is applied to magistratus who had not the imperium [IMPERIUM], as, for instance, to quaestors and tribuni plebis (Cic. *pro Cluent.* 27, 74); and potestas and imperium are often opposed in Cicero. Both the expressions *tribunicium jus* and *tribunicia potestas* are used (Tac. *Ann.* i. 2, 3). Thus it seems that this word *potestas*, like many other Roman terms, had both a wider signification and a narrower one. In its wider signification it might mean all the power that was delegated to any person by the state, whatever might be the extent of that power. In its narrower signification, it was on the one hand equivalent to imperium, and on the other it expressed the power of those functionaries who had not the imperium. Sometimes it was used to express a magistratus as a person (Sueton. *Claud.* 13; Juv. x. 100); and hence in the Italian language the word *podestà* signifies a magistrate. Potestas is also used to express the authority of the head of a family over his children and slaves, which was an authority analogous in some respects to that of a magistrate. The potestas is *dominica*, as exhibited in the relation of master and slave [SERVUS]; or *patria*, as exhibited in the relation of father and child.

The earliest and most comprehensive term for the patriarchal power of the head of a Roman family appears to have been *manus*, which came to be more specially applied to express the power to which a married woman might be subject in her husband's family. The *mancipium*, or power over persons in a semi-servile state, was framed after the analogy of the dominica potestas. The tutela, in its origin an offshoot of the patria potestas, was itself a kind of potestas (Inst. i. 13, 1; Cic. *pro Mur.* 12, 21, "mulieres—majores in tutorum potestate esse voluerunt"). Patria potestas, then, signifies the power of a Roman paterfamilias over his children and descendants through males in his familia (*filiifamilias*, *filiaefamilias*). [FAMILIA.] It is to be borne in mind that grown-up children were subject to this power as well as those who were of tender years. The government of the family was concentrated in the hands of its head, whose powers were originally more like those of a supreme magistrate than of a father at the present time. Thus the paterfamilias had originally absolute power over the persons of filiifamilias, having the right of inflicting on them the punishment of death (*jus vitae necisque*) or any lesser punishment. It was customary for him only to inflict capital or other serious punishment on a filiusfamilias after the latter had been condemned by a family tribunal (*judicium domesticum*). (Cf. Münster, *de domestic. familiarum judicio;* v. Walree, *de antiq. juris parricidi*, &c.; Geib, *Cr. Pr.* 82, &c.; Zumpt, *Crim. Recht*, i. 349). F. Voigt (*Zwölf Tafeln*, ii. 94) enumerates the following instances of persons being punished in this way:—

a. 245 A.U.C. L. Junius Brutus put his sons to death (Plut. *Popl.* 6, 7).

b. 531–536 A.U.C. M. Fabius Bruteo put his son to death as a punishment for theft (Oros. iv. 13).

c. 651 A.U.C. Q. Fabius Maximus Eburnus punished his son by sending him into exile (Oros. v. 16; Val. Max. vi. 1, 5).

d. 691 A.U.C. A. Fulvius Nobilior inflicted the punishment of death on his son for taking part in the Catiline conspiracy (Val. Max. v. 8, 5; Sal. *Cat.* 39; Dio Cass. xxxvii. 36).

e. Julius Arnus banished his son for attempted parricide (Sen. *de Clem.* i. 15, 2).

f. Pontius Aufidianus put his daughter to death for immorality (Val. Max. vi. 1, 3); as did also

g. P. Alilius Philiscus (Val. Max. vi. 1, 6).

h. A father, named Tricho, put his son to death (Sen. *de Clem.* i. 15, 1).

i. 752 A.U.C. Augustus punished the immorality of his daughter Julia by sending her into exile (Suet. *Aug.* 65; Dio Cass. lv. 10).

The paterfamilias was not criminally responsible on account of the abuse of his powers. But though the power of the father over the persons of his children was almost unlimited in early law, the *nota censoria* and religious censure being the only sanctions to prevent its tyrannical exercise, custom and public opinion kept it within due bounds. As has been frequently remarked, it would be a mistake to infer from the legal absolutism of the head of a Roman family, that his children were treated like slaves. The fact of the long continuance of the patria potestas without complaint seems to show that this could not have been the case.

Under the Empire the occasional cruelty of fathers was punished, and the powers of the father over the persons of his children were curtailed. Thus, in 112 A.D., Trajan compelled a father who had treated his son with cruelty to emancipate him (Val. Max. v. 8), and Hadrian banished a father for killing a son out hunting, who had committed adultery with his stepmother ("patria potestas in pietate debet non in atrocitate consistere").

It became the rule that a father could not kill his son unless the latter had been tried before the praefectus or praeses and convicted (Dig. 48, 8, 2). Under Constantine a father was punished for killing a son, as if he had committed parricide. The power of the father was limited in the later period of Roman law to moderate chastisement. The father might sell his son into slavery or mancipium (Cic. *de Or.* i. 40, 181; *pro Caec.* 34, 98). The provision of the Twelve Tables, that a son sold by his father three times should be free, was directed against the abuse of this power. The sale of children was obsolete in the time of the classical jurists, except as a mere formality, and in the case of children surrendered by the paterfamilias on account of their delicts (*noxae datio*); for, in the case of delict by a filiusfamilias, *noxales actiones* were allowed against the father (Gaius, iv. 75). But Justinian abolished the *noxae datio* in the case of a filius- or filiafamilias (Inst. iv. 8, 7; Dig. 43, 29, 3, § 4). According to early custom, the father had the right of repudiating a new-born child. The child was placed at the feet of the father immediately after birth; and if, instead of being lifted up by the father (*liberum tollere, suscipere, recipere*), he was left on the ground, he was excluded from the familia (Voigt, § 97). Even under the legislation of Justinian, it was lawful to sell new-born children "propter nimiam paupertatem egestatemque" (Cod. 4, 43, 1, 2). The father was a party to the betrothal, marriage, or divorce of his children in early times, and the consent of the father was always an essential condition of a valid marriage [MATRIMONIUM]. If a marriage was accompanied with the *in manum conventio*, his wife came into the power of the father and not into the power of the son. The father could substitute another person as heir to his son, if the latter died before attaining puberty, [HERES], and he could by his will appoint him a tutor. The father could give his child in adoption and emancipate him. The father could recover possession of the person of his son by *vindicatio in patriam potestatem*, or by *interdictum de liberis exhibendis*.

The patria potestas did not interfere with the public rights and duties of filiifamilias. Thus a son could vote at the Comitia Tributa; he could fill a magistratus; and he could be a tutor, for the tutela was considered a part of jus publicum (Dig. 6, 9; Liv. xxiv. 44; Gell. ii. 2).

The child had conubium and commercium like any Roman citizen who was *sui juris*, but these legal capacities brought to him no power or ownership. Thus, although he had commercium, and so could be witness to a transaction *per aes et libram*, he could not hold property, being a mere instrument of acquiring for his paterfamilias. A conveyance to him, or an inheritance acquired by him, or an obligation in his favour, would give rights, not to himself, but to the person who had potestas over him, just as in the case of a slave. The property of which the filiusfamilias had actual enjoyment was his peculium, and of this the paterfamilias was owner. Having no property, the filiusfamilias could maintain no actions which implied that he was owner of property, e.g. *vindicatio;* there were, however, some exceptions to this rule, probably introduced by the praetor under the form of *actiones in factum* [ACTIO]. But a filiusfamilias could maintain actions, such as the *actio injuriarum*, which were not based on proprietary claims. A filius pubes could incur obligations and be sued like a paterfamilias, though perhaps this was not so till about the time when the principle of giving him independent rights in his peculium was first established. Between the paterfamilias and filiusfamilias, or between filiifamilias of the same familia, no actionable obligations could exist; neither of them could have a right of action against the other. But natural obligations could be established between them. [OBLIGATIO.]

The rule as to the incapacity of a filiusfamilias for acquiring property was first varied about the time of Augustus, when the son was allowed to dispose of by will whatever he had acquired in active military service, and after a time to treat such acquisitions as his own for all purposes. This was the *castrense peculium*, with respect to which the son was treated as a person *sui juris* (Juv. xvi. 51; Gaius, ii. 106). But if the filiusfamilias died without making any disposition of this peculium, it came to the father as peculium, *i.e.* as his own property, and not as inheritance: this continued to be the law till Justinian altered it (*Nov.* 118). The privileges of a filiusfamilias miles as to the acquisition of property were extended under Constantine to his acquisitions made during the discharge of civil and ecclesiastical offices; and as this new privilege was framed after the analogy of the *castrense peculium*, it was designated by the name *quasi-castrense peculium*.

By changes in the law carried out by Constantine and his successors, a filiusfamilias became capable of acquiring property for himself in ordinary cases. It was first enacted that a filiusfamilias should acquire the inheritance of his mother (*bona materna*) for himself and not for his father; this rule was then extended so as to apply to property derived from the maternal line (*bona materni generis*), and finally under Justinian to property derived from any one except the paterfamilias himself, which was not *peculium castrense* or *quasi-castrense*. According to this new law, property which a filiusfamilias derived from third parties, called *bona adventicia*, belonged to him, but his paterfamilias had a life-interest (*ususfructus*) in it, and the administration of it. The filiusfamilias could not dispose of it by will, and thus his rights in *bona adventicia* were subject to restrictions which did not apply to *peculium castrense* and *quasi-castrense*. The person from whom the filiusfamilias acquired, might exclude the paterfamilias from the usufruct and administration of his property by an express provision to that effect. In property derived from his paterfamilias (*ex re patris*), the filiusfamilias had no independent rights; such property is called *peculium profectitium*.

Thus by the imperial legislation, and especially by that of the early Christian emperors, the extent of the patria potestas was much reduced. The patria potestas was acquired by the birth of a child in a Roman marriage (*justae nuptiae*). Children born of parents who had not conubium, *i.e.* the capacity of entering into a Roman marriage with one another, were not subject to patria potestas; but in the time of the classical jurists, if a Roman had by mistake married a woman with whom he had no conubium, thinking that conubium existed, he was allowed to prove his case (*causae erroris probatio*), upon doing which the child that had been born and the wife also became Roman citizens, and from that time the son was in the power of the father (Gaius, i. 67). Other instances of the *causae probatio* are mentioned by Gaius.

Patria potestas could be acquired by either of the modes of adoption [ADOPTIO]. Patria potestas could be acquired under the Christian emperors by legitimation of children born out of lawful wedlock.

1. *Per subsequens matrimonium.*—Constantine introduced the rule that children born in concubinage [CONCUBINA], whose parents might have been lawfully married at the time of the birth of such children, should be legitimated by the subsequent marriage of the parents. Even at an earlier time it seems to have been the fashion for the emperor as an act of grace to place such children on the same footing as legitimate children.

2. *Per oblationem curiae.*—In the time of Theodosius II. the rule was established by which a child was legitimated who was made a member of a municipal senate by his father [DECURIO].

3. *Per rescriptum principis.*—To these two modes of legitimation, Justinian added that of imperial rescript.

The patria potestas was dissolved in various ways. It was dissolved by the death of the father, upon which event the grandchildren, if there were any, who had hitherto been in the power of their grandfather, came into the power of their father, who was now *sui juris*. It could also be dissolved in various ways during the life of the father. A *maxima*, *media*, or *minima capitis deminutio*, either of the pater- or filiusfamilias, dissolved the patria potestas; though in the case of either party sustaining a *capitis deminutio* by falling into the hands of an enemy, the relation might be revived by *postliminium*. A father who was arrogated, and consequently sustained a *minima capitis deminutio*, came, together with children who had hitherto been in his power, into the power of his adoptive father. [ADOPTIO.]

The commonest mode of dissolving the patria potestas was by emancipation, which was a *capitis deminutio minima*, having the effect of making the emancipatus the head of a new familia distinct from that of his father's. It is probable that in early Roman law the emancipation of children was not possible, but in course of time a circuitous mode of effecting it was established by the ingenuity of lawyers. For an account of the forms of emancipating a filiusfamilias, which consisted of three mancipations, followed by vindicta, see Gaius, i. 132. The process was simplified by the law of Justinian (Inst. i. 12, 6). The parent could emancipate his child at his pleasure, and thus deprive him of the rights of agnation without his own consent; but the law in this respect was altered by Justinian (*Nov.* 89, c. 11), who made the consent of the child necessary. The child had no means of compelling his father to emancipate him.

(Savigny, *System*, ii. 49, &c.; Mommsen, *Röm. Gesch.* i. 59, &c.; Ihering, *Geist des Röm. Rechts*, ii. 1, 151–155;—Voigt, *Jus Naturale*, ii. 228; *Zwölf Tafeln*, ii. § 93;—Mandry, *Fam. Alterthüm.* §§ 29, 30; Kuntze, *Inst.* i. §§ 741–747, ii. §§ 505–507;—Maine's *Ancient Law*, ch. v.; *Early Law and Custom*, ch. vii. and p. 122, note a.) [G. L.] [E. A. W.]

PATRI'CII. The authorised version of Roman History, as given in the narrative of

Livy and Dionysius and by Cicero in the *de Republica*, represents the state as divided from the first into ordinary citizens and a privileged class who are generally described as *patricii*. These are further stated to have been the families of one hundred persons selected by Romulus for his senate: "Patres certe ab honore, patriciique progenies eorum appellati" (Liv. i. 8, 7). On the other hand, we find in Festus a second tradition: "Patricios Cincius ait in libro de Comitiis eos appellari solitos, qui nunc ingenui vocentur." It is connected with a strange etymological guess, that the patricii were originally those "qui patrem ciere possent;" that is to say, all freeborn persons (Liv. x. 8, 10). The word has, of course, really no connexion with *ciere*, but is simply the adjectival form of *pater*. Nevertheless, it is certain that the explanation of Cincius is right in referring *patricius* to *pater*, not in its sense [illegible] senator, but in its original meaning of father and head of a family. On no other supposition can we account for the fact that the word *patres* is sometimes used of the whole order as synonomous with *patricii* (so in Liv. iv. 4, 5, "ne conubium patribus cum plebe esset"). The true explanation is summed up by Mommsen (*Staatsrecht*, iii. p. 13): "They are called either *patres*, inasmuch as they and [illegible] are or can be fathers, or else in adje[illegible] *patricii*, inasmuch as they and they alo[illegible] a father." If there ever were a time [illegible] when the word *patricius* was strictly and etymologically significant, so that no one but a patricius had a lawful father or could himself become a paterfamilias, then at that time the patricii were the only real citizens of Rome. It is impossible to count as a full burgess anyone who is incapable of becoming as paterfamilias a person of the civil law, able to hold property and to sue and be sued in his own right. The old story, which represents the patricians as from the first a nobility among their fellow-citizens, appears however in a somewhat different light, when we read that Romulus assigned the whole of the plebs as clients to one or other of the patres. According to this, there would be in the state as originally constituted no one but the patricii and their clients; as a client was at first in a position hardly distinguishable from that of a slave, this brings us round again to the proposition that "patrician" and "freeborn man" were originally synonymous.

The development of the rights and capacities of citizens outside the patriciate will be discussed elsewhere [see PLEBS]. It is sufficient here to say that in process of time certain outsiders won their way to the position of patresfamilias. By analogy these persons, or at any rate their children, should have been able to claim the title of *patricii*. But this logical conclusion was never drawn. The word *patricius* survived as a token of an arrested development: it was confined to the descendants of those who once exclusively possessed the qualifications on which the title rested. From the moment when plebeian patresfamilias come into existence the patricii must be counted as a nobility among their fellow-citizens. It is possible that the power to vote in the assemblies [see POPULUS] was for a time a privilege reserved to these nobles. But such a situation, if it ever existed, did not last long enough for the patricians to consolidate into a corporation with a general assembly and officers and powers of separate action. The patriciate as a body never gets free from the body of the Roman people. "Magistratus patricius" and "auspicia patriciorum" are always precisely the same as "magistratus" and "auspicia Populi Romani" [see MAGISTRATUS]. It may be noticed that this fact in itself gives us strong reason to conclude that the patricii were the original stock on which the other branches of the Roman people were grafted.

For a long time the patricians alone were eligible to the great offices of the state. The struggle over this question of eligibility lasted on into historical times. When it finally closed about the year 300 B.C., the members of the two orders were not left in a position of absolute equality. The patrician was weighted in the race for office with certain disqualifications, which had been originally imposed as a means of breaking the ancient monopoly of the order. Both places in the consulship and the censorship were open to plebeians, but only one to patricians. The patricians were likewise, as a matter of course, excluded from the offices of tribune and plebeian aedile. On the other hand, the great colleges of pontiffs, augurs, and *decemviri sacris faciundis* were divided as equally as possible between the two orders (in favour, therefore, of the chances of a member of the less numerous one), and certain other functions still remained for which patricians alone were qualified. The best list of these is derived from Cicero's description (*pro Domo*, 14, 38) of what will happen if the patriciate suffers extinction (a description closely followed by Liv. vi. 41): "Ita populus Romanus brevi tempore, neque Regem sacrorum, neque flamines, neque salios habebit, nec ex parte dimidia reliquos sacerdotes, neque auctores centuriatorum et curiatorum comitiorum: auspiciaque Populi Romani, si magistratus patricii creati non sint, intereant necesse est, quum interrex nullus sit, quod et ipsum patricium esse et a patriciis prodi necesse est."

There are other passages which casually confirm what Cicero here says about the exclusively patrician character of the interregnum. For instance, in Liv. vi. 41, Ap. Claudius says, "sed nos quoque ipsi sine suffragio populi auspicato interregem prodimus;" and again we have in Liv. iv. 43, "prohibentibus tribunis patricios coire ad prodendum interregem," and in later times in Asconius (*ad* Cic. *pro Mil.*), "Tribuni plebis referri ad senatum de patriciis convocandis non essent passi." On the other hand, the elaborate descriptions of the first interregnum by Livy (i. 17) and Dionysius (ii. 57) attribute the whole proceeding to the senate, and the same is distinctly stated by Appian (*Bell. Civ.* i. 98), *τῇ δὲ βουλῇ προσέταξεν ἑλέσθαι τὸν καλούμενον Μεταξὺ βασιλέα*: and above, *βουλευτὴς ἕτερος παρ' ἑτεροῦ ἐπὶ πέντε ἡμέρας ἦρχεν*, &c. There seems no way of reconciling these very clear statements on either side except by adopting Mommsen's hypothesis that the powers of the interregnum were vested in the patrician members of the senate, who met on such occasions unsummoned and without the co-operation of their plebeian brethren.

The same theory must serve to explain the *patrum auctoritas*. The words are sometimes used in a general sense for the approval or recommendation of the senate (*e.g.* Liv. vii. 15, 12; 17, 9; xxxiii. 24, 4; xxxv. 7, 5), and the single word *auctoritas* likewise bears the meaning of a resolution of the senate which has been vetoed by a magistrate. But *patrum auctoritas* in its technical sense is quite distinct from this later usage. It is a confirmatory act necessary to give legal validity to the decrees and elections made by the populus Romanus, and it survived as a form down to the Augustan age. Livy (i. 17), in speaking of the election of king Numa, attributes the confirmation to the senate which had just conducted the interregnum; and we may trust him here, for he appeals to the practice of his own time: "Hodie quoque in legibus magistratibusque rogandis usurpatur idem jus vi adempta; priusquam populus suffragium ineat in incertum eventum comitiorum patres auctores fiunt." Cicero likewise (*Rep.* ii. 32), after beginning with the words "Tenuit igitur in hoc statu senatus rempublicam," proceeds to adduce, amongst other points, "quodque erat ad retinendam potentiam nobilium vel maximum, vehementer id retinebatur populi comitia ne essent rata nisi ea patrum approbavisset auctoritas." On the other hand, we have passages in which the established phrase "patres auctores fiunt" is altered into "patricii:" *e.g.* Liv. vi. 42, "quia patricii se auctores futuros negabant;" and Sallust, *Fragm.* 82, 15, "libera ab auctoribus patriciis majores vostri suffragia paravere"—and Cicero, as we have seen, distinctly says that the *auctoritas* will lapse with the patriciate. The difficulty then is precisely the same as in the case of the interregnum, and may be solved by the same hypothesis of a "patrician senate."

Since the *auctoritas patrum* was reduced to a mere form by being put before instead of after the voting (as was ordered by the Lex Publilia of B.C. 339 and the Lex Maenia), it can never have amounted to the power of rejecting a measure on its merits: such a power could be exercised as easily, perhaps more easily, on a bill before it came to the assembly. If, however, the *patrum auctoritas* was limited to a confirmatory certificate that the law had been passed in due form, it would be rendered nugatory if it had to be given before any objections could possibly be raised to the procedure. (For Mommsen's view, which differs slightly from this, see *Röm. Forsch.* i. p. 242, and *Staatsrecht*, iii. p. 1041.)

In spite of the decay of their political privileges, the patricians retained to the end of the Republic the dignity which attached to the oldest and purest blood in Rome. The number of families known from the lists of magistrates of the later Republic amounts to about 30 (Mommsen, *Staatsr.* iii. p. 12). Dionysius, however, gives 50 as the number of "Trojan families" which remained to his day. It would seem to follow that outside the ranks of the nobility of office there remained a certain number of patricians in equestrian station, though their ancient birth was fully recognised. Their position would somewhat resemble that of the more obscure Scottish peers in our time. Like the Scottish peerage, the patriciate could not be recruited. With the doubtful exception of the Claudii, no instance is known in Republican times of any man or family attaining the patriciate.

When Caesar as Dictator wished to increase their numbers, there appears to have been no machinery by which the patricians could act as a body in admitting fresh members. This admission was accomplished by a special law (Lex Cassia) of the sovereign people, whose mandate was of course absolute in all matters. The same precedent was followed by Augustus, who was authorised by the Lex Saenia to create a fresh batch of patricians. Claudius seems to have made such creations on the strength of his power as censor (Tac. *Ann.* xi. 25), and after him the emperors conferred the rank freely. [Mommsen's view of the patrician senate (*Röm. Forsch.* vol. i. p. 218 *seq.*; *Staatsrecht*, iii. p. 1037 *seq.*), which is maintained in this article, is disputed by Willems, *Sénat de la République*, vol. ii. i. §§ 1–5.] [J. L. S. D.]

Period from the time of Constantine to the Middle Ages.—From the time of Constantine the dignity of patricius was a personal title, which conferred on the person to whom it was granted a very high rank and certain privileges. Hitherto patricians had been only genuine Roman citizens, and the dignity had descended from the father to his children; but the new dignity was created at Constantinople, and was not bestowed on old Roman families; it was given, without any regard to persons, to such men as had for a long time distinguished themselves by good and faithful services to the Empire or the emperor. This new dignity was not hereditary, but became extinct with the death of the person on whom it was conferred; and when during this period we read of patrician families, the meaning is only that the head of such a family was a patricius. (Zosim. ii. 40; Cassiodor. *Variar.* vi. 2.) The name *patricius* during this period assumed the conventional meaning of father of the emperor (Ammian. Marcellin. xxix. 2; Cod. 12, tit. 3, § 5), and those who were thus distinguished occupied the highest rank among the *illustres;* the consuls alone ranked higher than a patricius. (Isidor. ix. 4, 1, 3; Cod. 3, tit. 24, s. 3; 12, tit. 3, s. 3.) The titles by which a patricius was distinguished were *magnificentia*, *celsitudo*, *eminentia*, and *magnitudo*. They were either engaged in actual service (for they generally held the highest offices in the state, at the court, and in the provinces), and were then called *patricii praesentales*, or they had only the title and were called *patricii codicillares* or *honorarii*. (Cassiod. viii. 9; Savaron. *ad* Sidon. Apoll. i. 3.) All of them, however, were distinguished in their appearance and dress from ordinary persons, and seldom appeared before the public otherwise than in a carriage. The emperors were generally very cautious in bestowing this great distinction, though some of the most arbitrary despots conferred the honour upon young men and even on eunuchs. Zeno decreed that no one should be made patricius who had not been consul, praefect, or magister militum. (Cod. 3, tit. 24, s. 3.) Justinian, however, did away with some of these restrictions. The elevation to the rank of patricius was testified to the person by a writ called diploma. (Sidon. Apollin. v. 16; Suidas, *s. v.* *Γραμματείδιον*; compare Cassiodor. vi. 2, viii. 21, &c.)

This new dignity was not confined to Romans or subjects of the Empire, but was sometimes granted to foreign princes, such as Odoacer, the chief of the Heruli, and others. When the popes of Rome had established their authority, they also assumed the right of bestowing the title of patricius on eminent persons and princes, and many of the German emperors were thus distinguished by the popes. In several of the Germanic kingdoms the sovereigns imitated the Roman emperors and popes by giving to their most distinguished subjects the title of patricius, but these patricii were at all times much lower in rank than the Roman patricii, a title of which kings and emperors themselves were proud. (See Gibbon, vols. ii. 109, vi. 158; Bryce, *Holy Roman Empire*, p. 40; Rein, in Ersch und Gruber's *Encyclopädie*, s. v. *Patricier*.) [L. S.]

PATRI'MI ET MATRI'MI, also called *Patrimes et Matrimes*, were those children whose parents were both alive (Festus, s. vv. *Flaminia*, *Matrimes;* called by Dionysius, ii. 22, *ἀμφιθαλεῖς*), in the same way as *pater patrimus* signifies a father whose own fatner is still alive (Festus, p. 234). Servius (*ad* Verg. *Georg.* i. 32), however, confines the term *patrimi et matrimi* to children born of parents who had been married by the religious ceremony called *confarreatio*, and who were still alive; it appears probable that this is the correct use of the term. We know that the *flamines majores* were obliged to have been born of parents who had been married by *confarreatio* (Tac. *Ann.* iv. 16; Gaius, i. 112); and as the children called *patrimi et matrimi* are almost always mentioned in connexion with religious rites and ceremonies (Cic. *de Har. resp.* 11; Liv. xxxvii. 3; Gell. i. 12; Tac. *Hist.* iv. 53; Macrob. *Saturn.* 6; Vopisc. *Aurel.* 19; Orelli, *Inscr.* n. 2270), the statement of Servius is rendered more probable, since the same reason which confined the office of the *flamines majores* to those born of parents who had been married by *confarreatio*, would also apply to the children of such marriages, who would probably be thought more suitable for the service of the gods than the offspring of other marriages. If this restriction ceased when *confarreatio* fell into disuse, it was at least still necessary that the mother should not have been divorced: in such a case the children would obviously cease to be *patrimi et matrimi*. There is, however, reason to think that the rite of *confarreatio* was retained so far as to provide persons qualified for priestly office [MATRIMONIUM, p. 140 *b*], and so the *patrimi et matrimi* of late times may still have been born from parents so married, though it is clear, from the statement of Macrobius (*l. c.*) that after the 3rd century B.C. the service was no longer *restricted* to *patrimi et matrimi*, since the children of *libertini* served also. For the religious functions which required attendance of *patrimi et matrimi*, see CAMILLUS; ARVALES; MATRIMONIUM, p. 143 *b*. (Rein, *Das röm. Privatrecht*, p. 177; Göttling, *Gesch. d. röm. Staatsverf.* p. 90; Marquardt, *Staatsverw.* iii. 227; *Privatleben*, p. 70.) [W. S.] [G. E. M.]

PATRONOMI (*πατρονόμοι*) were magistrates established by Cleomenes III. at Sparta in his reformed constitution, when he abolished both the *γερουσία* and the ephorate, and set up the *πατρονόμοι* to exercise, as it were, a paternal control over the whole state (Pausan. ii. 9, 1). His constitution came to an end after the battle of Sellasia, B.C. 221; and we find ephors and *γερουσία* again (Pausan. iii. 11, 2), but with diminished powers; for the *πατρονόμοι* were retained as the chief magistrates (called *συνάρχοντες τῆς πατρονομίας*, *C. I. G.* 1356). Apparently they were six in number; the chief, or *πρέσβυς τῶν πατρονόμων*, was the *ἐπώνυμος* of the state,—that is, he gave his name to the year, which the first ephor had formerly done. (Compare Philostr. *Vit. Apoll.* iv. 32; Plut. *An seni sit resp. ger.* 24; Gilbert, *Staatsalterth.* i. 24, 26.) [W. S.] [G. E. M.]

PATRO'NUS. The act of manumission gave birth, as it were, to a free person, and created a new relation between the manumissor and the slave, which was analogous to that between father and son. In respect of this new relation the manumissor was called *patronus* (from *pater*), and the manumitted person *libertus* or *liberta*. If the manumissor was a woman, she became *patrona;* and the use of this word instead of *matrona* appears to be explained by the want of a special word to distinguish her position in respect of her freedmen. Viewed with reference to the early ages of Rome, this patronal relation must be considered a part of the ancient *clientela;* but from the time of the Twelve Tables at least, which contained legislative provisions generally on the subject of patronal rights, we may consider the relation of patronus and libertus as the same both in the case of patrician and plebeian manumissores.

The libertus was attached to the family, and adopted the gentile name of his manumissor (Lactant. *Inst.* iv. 3, "servus liberatus patroni nomen accipit tamquam filius"). Cicero's freedman Tiro was called M. Tullius Tiro. [NOMEN.] The patronus and libertus owed reciprocal duties to one another, the one being bound to afford protection and support (cf. Twelve Tables, "Patronus si clienti fraudem fecerit, sacer est"), the other to show loyalty (*obsequium et reverentia*) to and render such other services as were due. In early times it is probable that the libertus was represented by his patronus in courts of justice, suits being maintained by the latter on his behalf. The patron was the statutory guardian (*tutor legitimus*) of his freedman who was under age. It was the duty of the patron to support his freedman in case of necessity, and, if he did not, he lost his patronal rights: the consequence was the same if he brought a capital charge against him.

The libertus owed respect and gratitude to his patron, and had to perform all services which were regarded as tokens of this duty (*opera officiales*). In ancient times he was subject to kind of domestic imperium, and might be punished in a summary way by his patron, wh frequently made a tyrannical use of his autho rity. In later times the patron had the power of relegating an ungrateful freedman to a certain distance from Rome, under a law probably passed in the time of Augustus (Tac. *Ann.* xiii. 2 Dio Cass. lv. 13). In the time of Nero it was proposed to pass a senatusconsultum which should give a patron the power of reducing h freedman to slavery, if he misconducted himse towards his patron. The measure was not enacted, but this power was given by a constitution of Commodus, A.D. 180–192. (Dig. 25, 3, 6, § 1: "Cum probatum sit, contumeliis patronos a libertis esse violatos, vel illata manu atroci esse pulsatos, aut etiam paupertate vel corporis valetudine laborantes relictos: primum eos in potestatem patronorum redigi et ministerium dominis praebere cogi; sin autem nec hoc modo admoneantur, vel a Praeside emptori addicentur, et pretium patronis tribuetur.") The right of a patron to prosecute his freedman for ingratitude (*ut ingratum accusare*), and so to revoke his manumission, appears to have been recognised by the Lex Aelia Sentia (Dig. 40, 9, 30: cf. Inst. i. 16, 1). An ingratus was also called *libertus impius*, as being deficient in *pietas*. If the libertus brought an action against the patronus (*in jus vocavit*) without the leave of the praetor, he was himself liable to a special action on the case; and he could not, as a general rule, institute a capital charge against his patron. Disputes between patrons and freedmen were subject to the extraordinary jurisdiction of the praetor. [JURISDICTIO.] The libertus was bound to support the patron and his children in case of necessity, and to undertake the management of his property and the tutela of his children; if he refused, he was *ingratus* (Dig. 37, 14, 19). If a slave were the property of several masters, and were manumitted by all of them and became a Roman citizen, all of them were his patroni.

In early times freedmen were instruments of acquiring property for their patrons, like slaves. P. Rutilius Rufus provided that in cases of dispute between them as to property they should be regarded as co-proprietors of it (Dig. 38, 2, 1); but the oath of a freedman by which he bound himself to share his property with his manumissor was subsequently declared void. The manumissor could, however, secure to himself certain rights over his libertus by taking an oath from him (see H. Brocher, *de Operis Libertorum*, pp. 38–42), and by *stipulationes*. The subjects of such promises were gifts from the libertus to the patronus (*dona et munera*) and services (*operas*). The oath was not legally valid, unless the person was a libertus when he took it. If then he took the oath as a slave, he had to repeat it as a freeman, which seems to be the meaning of the passage of Cicero, in which he speaks of his freedman Chrysogonus (*ad Att.* vii. 2; compare Dig. 38, 1, 7). These *operae* were of two kinds: *officiales*, which consisted in customary tokens of respect and affection, which were due apart from contract; and *fabriles*, which are explained by the term itself, and which required an express stipulation. The *officiales* determined by the death of the patronus unless there was an agreement to the contrary; but the *fabriles*, being of the nature of money or money's worth, passed to the heredes of the patronus, like any other property. The patronus, when he commanded the *operae* of his libertus, was said *ei operas indicere* or *imponere* (Gaius, iv. 162; Dig. 38, 2, 29).

The patron could not command any services which might have the effect of imposing a burden on the liberty of the slave (Dig. 38, 2, 1, § 1: 38, 1, 2, § 1), or any services which were disgraceful (*turpes*) or dangerous to life, such as prostitution or fighting in the amphitheatre; but if the libertus exercised any art or calling (*artificium*), even if he learned it after his manumission, *operae* in respect to it might be reserved for the benefit of the patron. The Lex Julia et Papia Poppaea released freedmen (except those who followed the *ars ludicra*, or hired themselves to fight with beasts) from all obligations as to gifts or *operae* (imposed *libertatis causa*), who had begotten two children and had them in their power, or one child five years old (Dig. 38, 1; *de Operis Libertorum*, i. 37).

If liberty was given directly by a testament, the testator was the manumissor, and his patronal rights would belong by the law of the Twelve Tables to his children; if it was given indirectly—that is, *per fideicommissum*—the person who performed the act of manumission was the patronus. In those cases where a slave obtained his freedom under the S. C. Silanianum for having discovered his master's murderer, the praetor could assign him a patronus; and if this was not done, that person was the patron of whom the libertus had last been the slave (Dig. 38, 16, 3).

The patronal rights were somewhat restricted, when the act of manumission was not altogether the free act of the manumissor. For instance, a person under a trust to manumit [FIDEICOMMISSUM] had all the patronal rights, except the power to prosecute for ingratitude, the right to be supported by the libertus, and to stipulate for *munera* and special *operae*; his rights against the property of the libertus were, however, the same as those of any other manumissor. (*Frag. Vat.* § 225; Dig. 38, 2, 29.) If a slave had given money to another person in order that this other person might purchase and manumit him, the manumissor had no patronal rights, and he lost even the name of patron, if he refused to perform the act for which he had received the money, and allowed the slave to compel him to perform his agreement, which the slave could do by a constitution of M. Aurelius and L. Verus (Dig. 40, 1, 4 and 5). If a master manumitted his slave in consideration of a sum of money, he retained all patronal rights, but he could not stipulate for special *operae*. A person who purchased a slave, and on the occasion of the purchase agreed to manumit him, had all patronal rights, except the right of prosecuting for ingratitude, in case the slave compelled him to manumit pursuant to the constitution of M. Aurelius and L. Verus (Dig. 40, 9, 30).

A *capitis deminutio*, either of the patron or the libertus, dissolved the relation between them [CAPUT]. (See Tac. *Hist.* ii. 92, where "jura libertorum" means *jura patronorum* or *jura in libertos*.) The relation was dissolved when the libertus obtained *ingenuitas* by the *natalium restitutio*, but not when he merely obtained the *jus aureorum anulorum* [INGENUUS]. Justinian gave *jus anulorum* and the *natalium restitutio* to all freedmen (*Nov.* 78, 1, 2, 5.) The children of a freedman were *ingenui*.

The most important of the patronal rights related to the property of liberti who died intestate or having made a will. The subject, so far as concerns the ante-Justinian period, may be distributed under the following heads:—1. The rules of the old civil law (Jus Civile); 2. The rules of praetorian law, comprehending the *bonorum possessio intestati* and the *bonorum possessio contra tabulas;* and 3. The rules of the Lex Papia Poppaea relating to the rights of patrons.

1. By the law of the Twelve Tables, if a freedman died intestate, without *sui heredes*, the patronus was his heir. A freedman could have no agnates except children, but his patron was in the position of an agnate as regards his succession. The *legitima patronorum tutela* was not expressly mentioned in the Twelve Tables, but it was a legal consequence of the rule as to inheritance (Ulp. *Fragm.* xi. 3). In the case of an intestate liberta, as she could not have a *suus heres*, the patron was her heres in any event. The Senatusconsultum Orfitianum, which was passed after Gaius wrote his Institutes (iii. 51), and in the last year but one of the reign of Marcus Aurelius, made an alteration in this respect, since it gave children a right to the succession of their mother, whether the latter was ingenua or libertina (Dig. 38, 17, 1). These patronal rights belonged both to a patronus and a patrona, and to the liberi of a patronus (Ulp. xxvii.), whether natural or adoptive. It seems that the children of a patrona had not by the Twelve Tables the same rights as the children of a patronus, since they were not in her power; but the Lex Papia Poppaea probably made some change in this respect (Unterholzner, *Zeitsch. f. R. G.* p. 43, &c.). The succession to the property of a freedman belonged to the liberi of a patronus according to proximity of degree, as in the agnatic order of succession. Thus a son of a patron excluded a grandson. If there were several patroni or patronae, they divided the inheritance equally, though their shares in the libertus, when a slave, might have been unequal. These patronal rights resembled a joint tenancy in English law, for the survivor or survivors of the patroni had all the patronal rights to the exclusion of any children of a deceased patronus. If the patroni were all dead, leaving several children, the hereditas was divided among all the children equally (*in capita*), pursuant to the law of succession in the case of agnation (Gaius, iii. 16, 59, &c.). If the patron left no liberi, and the freedman died intestate without *sui heredes*, the inheritance of the latter probably devolved on the gens of the patronus. A freedman had free power of disposing of his property by will, according to the Twelve Tables, and so of excluding his patron from the succession (Gaius, iii. 40). A patron could not transfer his interest in the patronatus by will or otherwise, except that by a senatusconsultum, which was passed in the time of Claudius, he was entitled to assign his patronal rights to the inheritance of a libertus, to any of his children he had in his power, to the exclusion of the rest (Dig. 38, 4, *de assignandis libertis*). In order that the above patronal rights should exist, it was necessary that the libertus should have been made free by a Roman citizen, and have become a Roman citizen by the act of manumission. Accordingly, if a free person obtained the citizenship, it was necessary that he should have a special grant of the *jus patronatus*, in order that he might have these patronal rights against his freedmen who had been previously manumitted, and it was necessary that they should have become Roman citizens at the time of manumission (Plin. *Ep.* x. 6). A *capitis deminuti* loss of citizenship or change of familia, either the patron or the libertus, destroyed the patron rights to the inheritance, as already observe (Gaius, iii. 51).

2. The law regulating the succession to th property of deceased freedmen was supplement and amended by the edict of the praetor, wh extended the rights of patrons. The edict calle to the succession (*bonorum possessio*) of liber who died intestate: (1) the liberi of th deceased freedman (*bonorum possessio unde liber* [but if the deceased only left adoptive childre or a wife *in manu*, the patron had *bonor* *possessio* to one-half the property against the *sui heredes*]; (2) the patron and his agnat descendants (*bonorum possessio unde legitimi*) (3) the cognatic descendants of the decease freedman (*bonorum possessio unde cognati*); (the agnates of the patronus and patrona (*bonoru* *possessio tamquam ex familia*); (5) the patronu patrona, liberi, *et parentes patroni patronaeq* i.e. the patron of the patron, in case the patr was himself a freedman, the children of th superior patron, and the parents of the im mediate patron, if the latter had been man mitted from their mancipium; (6) the husban or wife of the freedwoman or freedman (*unde v* *et uxor*); (7) the cognates of the patronus patrona to the sixth, or in one case to th seventh, degree (*bonorum possessio unde cogna* *manumissoris*).

A manumissor of a person *ex causa mancip* was quasi-patronus of the manumissus and ha the same rights of succession to his property a patronus; but if a filiusfamilias was man mitted by an extraneus manumissor instead by his own father, the praetor postponed th claims of the manumissor, giving a preferen to the father and certain other near relations the manumissus (*bonorum possessio unde dec* *personae*). [Mancipii Causa.]

We have seen that by the law of the Twel Tables, if the freedman made a will, he cou pass over his patron altogether. But by th edict, unless he left his patron as much as ha of his property, the patron or his male childr could obtain *bonorum possessio contra tabulas* one-half of the property, from any perso instituted heirs by him, other than children his own blood (*naturales*). An adopted child the freedman or his wife in his manus could n defeat this claim of the patron. The patr was not excluded if the children of the freedm were exheredated (Gaius, iii. 40; Dio Cass. 15, and the note of Reimarus).

3. The Lex Papia Poppaea further extend the rights of patrons by providing that, if freedman had a property amounting to a hundr thousand sestertii and fewer than three childre the patronus should have an equal share wi the children, whether the freedman died testa or intestate. A patrona, before the Lex Pap was passed, had only the same rights as patronus under the Twelve Tables, not havi been allowed by the praetor the *bonorum posse* *dimidiae partis contra suos non naturales* in ca of intestacy, or the *bonorum possessio cont* *tabulas*. By this lex a patrona ingenua wi had two children, or a patrona libertina havi three children, were given nearly the sa

rights as a patron had under the edict: and a patrona ingenua having three children, was given the same privileges as belonged to a patron under the statute. The lex also gave to patrona filia, mother of three children, the same rights as the patron had by the edict; that is, a right to half the property of the freedman against any heirs except *naturales liberos*. The son of a patrona who had a child was put in almost the same position as a patronus (Gaius, iii. 42, &c.).

According to the old law, as the liberta was in the legitima tutela of her patron, she could make no disposition of her property by will without his sanction (*patrono auctore*). The Lex Papia freed a liberta from this tutela, if she had four children, and she could consequently then make a will without the sanction of her patronus, but the law provided that the patronus should have an equal share (*pars virilis*) with her surviving children. In the case of a liberta dying intestate, the Lex Papia gave no further rights to a patrona who had children (*liberis honoratae*) than she had before; and therefore if there had been no capitis deminutio of the patrona or the liberta, the patrona inherited the property, even if she had no children, to the exclusion of the children of the liberta. If the liberta made a will, the Lex Papia gave to the patrona, who had the number of children required by that law, the same rights which the edict gave to the patronus *contra tabulas liberti*. It is to be noticed that though rights of patronatus under the Twelve Tables were put an end to by capitis deminutio, this was not the case with rights given by the Lex Papia Poppaea (Inst. iii. 4, 2).

By the actio Fabiana or Faviana and actio Calvisiana the claims of patrons to the succession of their freedmen were protected against alienation *inter vivos* on the part of freedmen. Under the later emperors the above rules as to the succession of freedmen were considerably changed, more especially by Justinian. According to his legislation, if a freedman or freedwoman died intestate, their natural children succeeded to the entire exclusion of the patron. In default of children of the freedman or freedwoman, came (1) the patron or patroness, (2) their children, (3) their collateral relations to the fifth degree.

If a freedman left a will, and had property of less value than 100 aurei, his power of passing over his patron was unrestricted. If he had property of this amount and was childless, or had disinherited his children, the patronus or patrona and their descendants to the fifth degree had a right to a third of his property.

The rules of law as to the succession of the patronus to the property of Latini liberti differed in various respects from those that have been explained respecting liberti cives. Their property was regarded as peculium on their death, and so belonged to the patron as if he had previously been owner of it, and not by title of inheritance. Hence it came to his extranei heredes, not to his exheredated children, who would have taken it if the freedman had been civis Romanus. If there were several patrons, it came to them in proportion to their interests in the former slave, and it was consistent with this doctrine that the share of a deceased patronus should go to his heir. A Latinus Junianus could not make a will (*tamquam servus moritur*). The Senatusconsultum Largianum, which was passed in the time of Claudius, assimilated to some extent the devolution of the property of Latini with that which took place in the case of cives liberti. It enacted that the property of Latini should go first to those who had manumitted them; then to their liberi who were not expressly disinherited, according to proximity; and then, according to the old law, to the heredes of the manumissor. The only effect of this senatusconsultum was to prefer liberi who were not expressly disinherited to extranei heredes.

As to the lowest class of freedmen, called *dediticii*, there were two rules. The property of those who on their manumission would have become Roman citizens but for their having suffered some infamous punishment, came to their patroni as if they had been Roman citizens. The property of those who on their manumission would have become Latini but for the impediments thereto, came to their patroni as if they had been Latini. In the time of Justinian all freedmen were cives Romani.

As to the other meanings of patronus, see CLIENS, COLONUS, ORATOR. (Gaius, iii. 39–76; Ulpian, *Frag.* xxvii., xxix.;—Dig. 37, 14, 15; 38, 1, 2, 3;—Institutes, iii. 8; Unterholzner, *Ueber das patronatische Erbrecht. Zeitsch.*; Huschke, *Studien des Röm. Rechts*, i. 59, and in *Rhein. Mus.* vi. 95, &c.; A. Schmidt, *Das Pflichttheilsrecht des Patronus*, &c.; Walter, *Geschichte des Röm. Rechts*, §§ 494–500; Rein, *Das Röm. Privatrecht*, 597, &c.; Kuntze, *Cursus des Röm. Rechts*, i. §§ 801–805, ii. §§ 531–533; Keller, *Inst.* § 254; Puchta, *Inst.* ii. § 215, iii. § 296.) [G. L.] [E. A. W.]

PAVIMENTUM. [DOMUS, Vol. I. pp. 656, 685; PICTURA.]

PAVONA'CEUM. [TEGULA.]

PAUPE'RIES was the legal term for damage to property done to a person by a domesticated animal belonging to another person, contrary to the nature of the animal causing the damage and without any fault of its owner. According to the law of the Twelve Tables, the animal must be a *quadrupes pecus*, to be able to give rise to pauperies; but a Lex Pesulania extended the law to dogs, and the praetorian law comprised under this head all domesticated animals. If the damage done by such animal was due to the fault of the owner, it was not pauperies, but unlawful damage to property [DAMNUM INJURIA DATUM]. Pauperies excluded the notion of unlawful conduct; it is defined as "damnum sine injuria facientis factum," for an animal "quod sensu caret" could not be said to have done a thing *injuria*. It was required that the damage should be contrary to the ordinary nature of the animal: thus, if a horse was incited by some one, as by his striking it, or kicked by another animal, the damage it did to a person in consequence was not pauperies on its part. In case of pauperies arising, the law of the Twelve Tables gave the injured person an action against anyone who was owner of the animal at the time of action being brought, the liability passing to a transferee if the animal was alienated after it had done the damage (*noxa caput sequitur*). The right of action ceased if the animal died. By this action the owner of the animal was required either to give up the animal to the injured party (*noxae dare*), or to pay the full amount of damages. Thus the *actio de pauperie* belonged to the class of *noxales actiones*—such as were brought against a house-father on account of the delicts of his sons and slaves. (There was probably a special action of pauperies called *actio de pastu pecoris*, on account of cattle grazing on a neighbour's crops.) The *actio de pauperie* and other noxal actions seem to have been first given in order to prevent an injured party taking the law into his own hands, as he was likely to do if he had no other remedy. Noxal surrender originated in an archaic state of society, and traces of it are widespread. (Cf. the Greek *βλάβη τετραπόδων καὶ ἀνδροπόδων*, Meier and Schömann, *Att. Proc.* 477; Platner, *Proc.* ii. 371; Voigt, *Zwölf Tafeln*, ii. § 143, n. 2; and see Holmes's *Common Law*, Lecture I., as to the suggestion that noxal liability arose out of a primitive notion of vengeance.)

Wild animals could not make their owner liable for pauperies, but an owner of such animal was liable under the Aquilian law for any damage it caused owing to his negligence, while in his custody; but if a wild animal got away from his master, he was not liable according to Jus Civile, because, when the animal got away, it ceased to be his property. The aedile's edict, however, made a person liable to an *actio popularis* for damage done in a place of public resort to a free person by a dog, boar, wild boar, bear, or lion, which he had neglected to keep under proper control (Inst. iv. 9; — Dig. 21, 1, 40, § 1; 41, 42, *de aed. Ed.*).

(Inst. iv. 9; Dig. 9, 1, *si quadrupes pauperiem fecisse dicatur*; Thibaut, *Versuche*, ii. 8; Zimmern, *System der römischen Noxalklagen*, 79–117; Gesterding, *Zeitsch. f. Civilrecht und Proc.* iv. 261–288; Vangerow, iii. § 689; C. Sell, *Aus dem Noxalrechte der Römer*; Voigt, *Zwölf Tafeln*, § 143.) [G. L.] [E. A. W.]

PAUSA'RIUS. [Portisculus.]

PECTEN (*κτείς*). The use of the comb is almost universal, for it is known to all tribes who have learnt to weave. It is of pre-historic origin, since combs have been found in the cave-dwellings of the early Stone Age (Boyd Dawkins, *Early Man*, p. 267); while specimens made of bone, horn, and wood turn up in considerable numbers in the remains of the Swiss lake-villages (Keller, *Lake Dwellings*, pp. 119, 385, and 638, E. T.). Most of these early combs seem to have been used for weaving, or for the subsidiary processes of carding wool or heckling flax, and it would seem that they were employed for such purposes at least as soon as, if not sooner than, for dressing the hair. For its use in weaving, see Tela. It was also used for carding, a process which is mentioned by Homer (*εἴρια ξαίνειν*, *Od.* xxii. 423; and *εἴρια πείκειν*, *Od.* xviii. 316), as one of the ordinary household occupations. Naturally enough, mention of such menial every-day work is not common in literature, but there can be no doubt about the use of the comb for these purposes throughout the whole of antiquity. Thus Pliny says that it was used for working flax (*H. N.* xix. § 17) and silk (*ib.* xviii. § 297), and from inscriptions (Gruter, 648, 2) we learn of the existence of a guild of *pectinarii lanarii sodales*. Elsewhere the heckler or carder is called *pectinator* (*κτενιστής*), or *carminator*.

Combs used for heckling and carding do not seem to have been as yet discovered in Greece or Italy, but iron heckling combs with a large number of sharp teeth have been found in Egyptian graves (Wilkinson, iii. 140, No. 537). Much more common are the combs for hair-dressing, which have been found in considerable numbers on almost every ancient site. Literature gives but little information of their use, except that it was considered a mark of boorishness to go about with uncombed hair (Juv. xiv. 194). The elaborate head-dresses shown on works of art, both Roman and Greek, are, however, in themselves quite sufficient to prove that the comb was an indispensable article of the toilet, especially in early times, when both men and women wore their hair long and carefully dressed. For the Spartan custom of combing their hair before a battle, see Herod. vii. 208.

Combs are not often shown on the monuments, but appear on some Roman portrait busts of ladies stuck as an ornament into an elaborate head-dress (Kurz and Weisser, *Lebensbilder*, pl. ix. fig. 17). On a sepulchral slab in Gori, *Inscript.* pl. i. p. 10 (Baumeister, *Denkmäler*, fig. 827), a double fine-toothed comb is shown along with other toilet articles. Such combs have been found in great numbers in Greece proper, the Crimea, Etruria, Pompeii, &c., made of wood, bone, and ivory, all of the same pattern, being precisely similar to those found in Egypt, and to those used in the present day. Boxwood was a favourite material, and the comb is frequently spoken of as *buxum* simply (Ovid. *Fast.* vi. 229; Juv. *l. c.*). Ivory, however, and bronze were also used; but this latter, at any rate, in most cases only for combs with one row of teeth, which had highly-decorated handles, and were evidently intended to be worn in the hair. These are not unlike combs used for the same purpose now, but have, as a rule, triangular or semicircular handles. Barbers were in the habit of cutting hair *per pectinem*, to ensure its not being too short (Plaut. *Capt.* ii. 2, 18).

Dictionaries will supply some other meanings of the words *κτείς* and pecten which need not be specified here. (See also Marquardt, *Privatleben*, p. 601; Baumeister, *Denkmäler*, p. 775; Coma.) [W. C. F. A.]

PECUA'RII. [Scriptura.]

PECULA'TUS is the misappropriation or theft of public or sacred property, whether it was done by a public functionary or by a private person. Labeo (Dig. 50, 9, 2) defines it thus: "pecuniae publicae aut sacrae furtum, non ab eo factum cujus periculum est," the qualifying part of the definition meaning that there could not be peculatus in respect of property entrusted to an official to hold at his own risk. The person guilty of this offence was *peculator*. Cicero (*de Off.* iii. 18, 73) enumerates *peculatores* with *sicarii*, *venefici*, *testamentarii* (forgers of wills), and *fures*. Peculatus, derived from *pecus*, a term which originally denoted that kind of movable property which was the chief sign of wealth [Pecunia], seems to have signified in early times the theft of cattle, peculatus publicus having been the offence of stealing cattle from a magistratus which he had taken as *multa* or as *poena sacramenti* (Voigt, *Zwölf Tafeln*, ii. § 137, n. 17; cf. Varro, *L. L.* v. 19, 95, "hinc [*i.e.* a pecude] peculatum publicum primo tum, cum pecore diceretur multa et id esset coactum in publicum, si erat aversum;"—Festus, 237 a, 13;

211 a, 18; 202 b, 13;—Paul. Diac. 75, 11). Peculatus was punished in early times by the infliction of a heavy *multa* on the offender (Liv. i. 37, xxv. 37, xxxvii. 58; Gell. vii. 19). Originally trials for peculatus were before the populus or before the senate (Liv. v. 32, xxxvii. 51, xxxviii. 54). In the time of Cicero matters of peculatus were one of the *quaestiones perpetuae* (*pro Cluent.* 53, 147; *pro Mur.* 20, 42), which implies some Lex de Peculatu, though there is no mention of such a lex in our sources.

Two leges relating to peculatus are cited in the Digest, Lex Julia peculatus and Lex Julia de residuis, but these may perhaps be two chapters of the same lex, just as the Lex Julia de adulteriis comprised a provision *de fundo dotali*, which chapter is often quoted as if it were a separate lex. The Lex de residuis applied to those who had received public money for public purposes, and had retained it when they ought to have paid it over ("apud quem pecunia publica resedit"). The offence differs from ordinary peculatus in that it is constituted by a mere omission. The penalty under this lex on conviction, borrowed from the Lex Silia, was a third part of the sum retained besides liability to restitution. Sacrilegium is treated as a kind of peculatus under the Lex Julia, a sacrilegus being one who plunders sacred property of a public kind (so excluding *sacra privata*). For an account of the special punishments with which this offence was visited, see art. Sacrilegium. The Lex Julia peculatus embraced or was extended by interpretation to various species of public frauds, some of which also belong to the *crimen falsi*, as certain coinage offences, falsification of public accounts or of documents of title to public land, &c. The punishment for peculatus, which under the Lex Julia was *aquae et ignis interdictio*, was subsequently changed into *deportatio:* the property of the offender was forfeited. Special punishments were inflicted in the case of particular species of peculatus. (Dig. 48, 13, *ad legem Juliam peculatus et de sacrilegis et de residuis;* Cod. 9, 28; Inst. iv. 18, 9; Paul. *Sent.* 5, 27; Rein, *Das Criminalrecht der Römer*, p. 672; Rudorff, *Römische Rechtsgeschichte*, ii. § 118; Walter, *Römische Rechtsgeschichte*, § 813.) [G. L.] [E. A. W.]

PECU'LIO, ACTIO DE. [Servus.]

PECU'LIUM. [Servus.]

PECU'LIUM CASTRENSE. [Patria Potestas.]

PECU'NIA. In the use of this word for "money," we have a record of the fact that in primitive times in Greece and Italy values were calculated in sheep and oxen. Stamped money was introduced into Asia Minor and Greece in the 7th century; into Rome in the 5th. For the history of Greek coins, see Pondera; for that of Roman coins, see As; while a few general remarks as to the use of money in antiquity will be found under Numus. [P. G.]

PECU'NIA CERTA. [Obligationes.]

PECU'NIAE REPETUNDAE. [Repetundae.]

PEDA'NEUS JUDEX. [Judex Pedaneus.]

PEDA'RII. [Senatus.]

PEDI'SEQUI, a class of slaves, whose duty was to follow their master when he went out of his house, while the anteambulo preceded him. The pedisequi seem to have formed a special class of slaves, which was almost the lowest of all (Nep. *Attic.* 13; Plaut. *Mil. Glor.* iv. 2, 18; Ter. *Andr.* i. 1, 96; Cic. *ad Att.* ii. 16). There was a similar class of female slaves, called *pedisequae* (Plaut. *Asin.* i. 3, 31). Several inscriptions bearing on this point are cited in Marquardt, *Privatleben*, p. 148; compare Becker-Göll, *Gallus*, ii. 154. [W. S.] [G. E. M.]

PEDUM (*κορύνη*, Theoc. vii. 43), a crook. The accompanying woodcut is taken from a painting found at Civita Vecchia (*Ant. d'Ercolano*, vol. iii. tav. 53). It shows the crook in the hand of a shepherdess. (See also woodcut to Oscillum.)

Pedum. (From a painting.)

The crook is continually seen in works of ancient art in the hands of Pan (Sil. Ital. *Pun.* xiii. 334), and is also the usual attribute of Thalia, as the Muse of Pastoral poetry. The *λαγωβόλον* (Theoc. iv. 49, vii. 128, prob. = *καλαῦροψ*, *Il.* xxiii. 841) was a stick thrown to collect cattle (originally to kill hares, &c.), somewhat like a "boomerang" (Stephani, *Compte Rendu*, 1867; Fritzsche *ad* Theoc. *l. c.*). [J. Y.] [G. E. M.]

PEGMA (*πῆγμα*), a structure of planks joined together, and so in its simplest form shelves in the atrium for *imagines* (Auson. *Epigr.* 26, 10) or book-shelves (Cic. *ad Att.* iv. 8); but in a special sense the origin of our word *pageant*, an edifice of wood consisting of two or more stages (*pegmata* of four stages appeared in the triumph of Titus: Jos. *B. J.* vii. 5, 5), which were raised or depressed, expanded or closed at pleasure by means of weights acting with ropes and pulleys ("ponderibus reductis," Claudian, *de Mall. Theod. Cons.* 323—328; Senec. *Ep.* 89; Prudent. *περὶ Στεφ.* x. 1016). These great machines were used in the Roman amphitheatres, and for spectacles in general, and to some extent resembled the contrivances for transformation scenes in a modern pantomime (Juv. iv. 121; Mart. i. 2; Suet. *Claud.* 34). They were moved on wheels: sometimes they were richly decorated; overlaid with silver (Plin. *H. N.* xxxiii. § 53). At other times they exhibited a magnificent, though dangerous, display of fireworks (Claudian, *l. c.*; Vopisc. *Carin.* 15). Gladiators or other performers were borne aloft upon them, and some editors give *pegmares* as signifying hence *gladiators;* but in the passage of Suetonius (*Calig.* 26), where alone the word is supposed to occur, the reading *paegniaris* is more probable. Strabo saw in the forum a Sicilian brigand-chief placed on a pegma representing Aetna. The machine was so constructed as suddenly to fall asunder and precipitate him among the wild beasts (Strab. vi. p. 273; Mayor on Juv. *l. c.*). Phaedrus (v. 7, 7) mentions an accident to a tibicen on a pegma. [J. Y.] [G. E. M.]

PE'LANOR (*πέλανορ*) is mentioned by Hesychius (*s. v.*) as a coin in use at Sparta, equivalent to four *χαλκοῖ* or half an Attic obol. Plutarch (*Apophtheg. Lacon.* p. 903) says that it was an iron coin of the weight of an Aeginetan mina (20 Troy ounces). These cumbrous coins seem to have constituted the coinage of Sparta down to the time of Alexander the Great; at least, no gold, silver, or copper coins of Sparta of an earlier date than B.C. 310 are extant. (*Brit. Mus. Catalogue of Coins*, Peloponnesus, p. xlvii.) [P. G.]

PE'LATAE (*πελάται*) are defined by Pollux (iii. 82) and other authorities to be free labourers working for hire, like the *θῆτες*, in contradistinction to the Helots and Penestae, who were bondsmen or serfs, having lost their freedom by conquest or otherwise. Aristotle (*ap.* Phot. *s. v.* Πελάται) thus connects their name with *πέλας*: Πελάται, he says, from *πέλας, οἷον ἔγγιστα διὰ πενίαν προσιόντες*: *i.e.* persons who are obliged by poverty to attach themselves to others. Timaeus (*Lex. Plat.* s. v.) gives the same explanation. Πελάτης, *ὁ ἀντὶ τροφῶν ὑπηρετῶν καὶ προσπελάζων*. Its origin is therefore something like that of *ἱκέτης*, but it has more completely the notion of *dependence*, for sustenance as well as for protection. This will explain how some later Greek writers came to use it to translate the Latin *cliens*, though the relations expressed by the two words are by no means similar (*Dionys.* i. 83; Plut. *Rom.* 13). The work of the *πελάτης* was probably as a rule, if not always, field labour: whether a groom who was *μισθωτός*, not a slave, as in Plat. *Lys.* p. 208 A, could rightly be called *πελάτης*, cannot be determined. In Plat. *Euthyphr.* p. 4, we find a *πελάτης* working in the fields along with the slaves, and the word *θητεύειν* is applied more than once in that dialogue as the proper term for his labour [cf. THETES]. Its proper sense of *free* labour was not, however, always preserved in later Greek. Plutarch (*Ages.* c. 6) also uses the word rather loosely for Helots, and we are told of a nation of Illyrians (the Ardiaei) who possessed 300,000 prospelatae, compared by Theopompus (*ap.* Ath. vi. p. 271, d, e) with the Helots of Laconia. (Müller, *Dor.* iii. 4, § 7; Wachsmuth, *Hellen. Alterthumsk.* vol. i. pp. 361, 811, 2nd ed.; Hermann, *Griech. Staatsalterth.* § 101, n. 9; Becker-Göll, *Charikles*, iii. 46.) [R. W.] [G. E. M.]

PELLEX. [CONCUBINA.]

PELLIS. There can be no doubt that the oldest inhabitants of Italy and Greece, no less than those of the rest of Europe, were clad mainly, if not entirely, in skins. The period, however, when skins were thus universally worn, though the ancients assumed its existence just as we do (cf. Varro, *R. R.* ii. 11, 11; Propert. v. 1, 12), has left no trace in literature or art, except perhaps in the costume of certain gods, who, like Herakles with his lion-skin, remained true to primitive fashion. In Homeric times skins were worn as a mantle over the shirt by the poor,—Odysseus, for instance, dons a hairless deer-skin over the rags of a beggar (*Od.* xiii. 436; cf. Hesiod. *Op.* 545),—by archers (Paris, *Il.* iii. 16), and by warriors when reconnoitring, as by the Greeks in the Doloneia (*Il.* x. 23, 29, 197, 334). The manner in which such skins were worn is very possibly shown by the figure of Hermes on the François vase, where he wears a skin fastened closely and symmetrically on his body by two clasps, the fore-legs at his shoulders, the hind-legs hanging down his thighs.

Figure of Hermes.
(From François vase.)

Besides their use as garments, skins of wild and domestic animals, especially fleeces, were used as rugs and bedding. Leather, too, of some kind or other was employed for the manufacture of shoes, caps, harness, armour, and the other manifold uses to which leather is put.

The picture given by the literature of classical times is not far different from the Epic, for there, too, the use of skins as garments is confined to shepherds or folk in out-of-the-way parts. Pausanias tells of people in Euboea and Phocis who wore tunics of pig-skins (viii. 1, 2), and says that the Ozolian Locrians owed their name to the evil smell of the undressed skins which they wore (x. 38, 2).

A number of the *σκύτιναι ἐσθῆτες* are catalogued and described by Pollux (vii. 68, 70). The best known are those which are mentioned in Aristophanes, where they occur as the garments of the poor, or as bed-clothes and rugs. They are:—

(1) The *διφθέρα*, which was a shepherd's cloak or coat of goat-skins sewn together (Aristoph. *Nub.* 71: cf. *Eccl.* 80; Plato, *Crit.* p. 53). According to Pollux (vii. 70), it had a hood and could be pulled over the head. The garment worn by the shepherd in the *Museo Pio Clem.* iii. 34 seems to answer to this description and to be a *διφθέρα*.

(2) The *σισύρα*, according to Pollux, was a tunic with sleeves of skins, with the hair turned inwards (*σίσυρνα χιτὼν σκύτινος ἔντριχος χειριδωτός*). It seems, however, to have been more of a cloak than a tunic, and was worn for warmth (Arist. *Ran.* 1459), but was apparently even more frequently used to sleep in (Id. *Av.* 122) as a blanket (Id. *Eccl.* 421). The *βαίτη*, the cloak of shepherds in Sicily (Theoc. iii. 25; v. 15), and elsewhere, seems to have been practically identical with the Attic *σισύρα* (cf. Schol. *ad* Arist. *Vesp.* 738), both being doubtless of goat- or sheep-skin. In late authors the term *σισύρα* may possibly mean a piece of cloth (Lucian, *Rhet. Praec.* 16; Longus, *Past.* ii. 3).

(3) The *κατωνάκη* was a coarse tunic trimmed with sheep-skin, and was worn by slaves and labourers in the country (Arist. *Lys.* 1151, 1155; Athen. vi. p. 271). Slaves at Sicyon went by the name of *κατωνακοφόροι* (Theopomp. *Hist.* 195).

(4) The *σπολὰς* was a leather jerkin worn by slaves over their tunic (*θώραξ ἐκ δέρματος, κατὰ τοὺς ὤμους ἐφαπτόμενος*, Pollux, vii. 70; cf.

Arist. *Av.* 933, 935, 944). It was also worn by soldiers (Xen. *Anab.* iii. 3, 20; iv. 1, 18).

Besides these garments, Dio Chrysostom mentions (ii. 382) the *κοσσύμβη* as a shaggy shepherd's coat, and Hesychius says *κόσσος* was used with the same meaning.

Greek art gives very little information about the use of skins. Herakles appears in early art closely enveloped in his lion-skin, in later art wearing it hanging from his arm or shoulder, and Dionysus and his train are represented in spotted fawn-skins [Nebris]; but there is nothing in either case to lead one to suppose that the costume represented is one of ordinary use. In the same way the skins which cover chairs in mythological scenes, like the assembly of the gods on the Sosias cylix of the Berlin Museum (*Mon. d. Inst.* i. 25), do not seem to occur in representations borrowed from actual life. In fact, the only articles of dress of this material which may reasonably be considered actual are the fox-skin caps which some of the riders on the Parthenon frieze wear, and the hunting-boots, which show the paws and tail of the skin from which they were roughly made.

In Roman literature garments made of skins are not very often mentioned. Yet the shepherds and goat-herds wore, as they do to this day (particularly in the malarious regions of the Campagna), skin coats with sleeves (*pelles manicatae*, Colum. *R. R.* i. 89). The specific names of such garments have not survived except in the case of the *mastruca*, a sheep-skin coat worn in Sardinia (Quinct. i. 5, 8).

Keller has collected several passages illustrating the use of bear-skins. They are worn by Arcadian auxiliaries in the first Messenian war, and by the *signiferi* in the later Roman army (Veget. ii. 16, borne out by many monuments): in Statius (*Theb.* iv. 304) the Arcadians have a bear's head on their shields: in Silius Ital. iv. 558, an Apulian horseman in the Second Punic War wears a bear-skin instead of a cuirass; so, too, Ancaeus the Arcadian (Orph. *Argon.* 199; cf. Acestes in Verg. *Aen.* v. 37): according to Strabo, xvii. p. 828, the people of Mauritania wore skins of lions, panthers, and bears: for beds we have bear-skins mentioned in Verg. *Aen.* viii. 368, Ov. *Met.* xii. 319.

One of the most important uses of skins at Rome was as a covering for military tents [Tabernaculum], whence *sub pellibus*, "under canvas" (Caes. *B. G.* iii. 29, &c.). The *pelliones* (Plaut. *Men.* ii. 3, 54, 400), *pelliarii* (Varro, *L. L.* viii. 55), and *pellionarii* were important enough to form guilds, for a *collegium pellionariorum* is mentioned in an inscription (Reines. i. 283; Donat. p. 235, 2). These craftsmen probably, even in early times, prepared furs as well as goat-skins and sheep-skins.

The custom of using furs, both as rugs (*stragula pellicia*, Dig. 34, 2, 25) and as articles of dress (*pelles indutoriae*), though furriers' shops are spoken of by Varro (*L. L.* viii. 55), did not become customary until the time of the Empire, when contact with fur-wearing peoples, such as the Germans (cf. *rheno*, a German coat of reindeer skin afterwards adopted at Rome: Caes. *B. G.* vi. 21) brought them in. They speedily were recognised as ordinary articles of dress ("vestis etenim ex pellibus constabit," Dig. 34, 2; 23, § 3), and the growing demand for them supported a lively trade at the factories in Southern Russia (*e. g.* Tanais on the Don, Strab. ii. p. 493), as well as in Cappadocia (*Tot. Orbis Descr.* § 40). The importance of furs as an article of commerce is shown by the Edict of Diocletian, in which skins of oxen, goats, sheep, lambs, deer, wild sheep, stags, martens, beavers, bear, wolves, foxes, leopards, hyaenas, lions, and seals are enumerated, as well as Morocco leather of different kinds. Tanning, or at any rate the careful dressing of skins, was known as early as the Homeric age, when we find various kinds of leather in use for harness, armour, and clothing. Even in the case of skins used as bed-clothes it was apparently the exception to have any not tanned, for the *ἀδέψητος βοέη* on which Odysseus slept (*Od.* xx. 2, 142) was used by poor folk.

Among the common people many doubtless, like Eumaeus (*Od.* xiv. 34: cf. Hes. *Op.* 519), made their own shoes and garments from raw hide, dressing them roughly with oil to render them soft. However, there were even at this period professional workers in leather, such as was Tychios, *σκυτοτόμων ἄριστος* (*Il.* vii. 322), who made Ajax's shield. Shoe-making and tanning seem to have been carried on by the same man even in classical times (Aristoph. *Eq.* 314, 869; Theophr. *Char.* 16). [For the process of tanning, see Coriarius.]

Literature.—Blümner, *Technologie*, i. p. 254 *sq.*; Hermann-Blümner, *Lehrbuch*, iv. pp. 175–6; Iwan Müller, *Handbuch*, iv. pp. 396, 806, 880, 931; Albert Müller, *Bühnenalterthümer*, pp. 237, 250, 252; Becker-Göll, *Charikles*, iii. 260. f.; Marquardt, *Privatleben*, p. 587; Keller, *Thiere des klass. Alterth.* 1887. [W. C. F. A.]

PELO'RIA (*πελώρια*), a festival celebrated by the Thessalians, which is compared to the Roman Saturnalia. Its origin was traced to the ancient Pelasgian times. Sacrifices were offered to Zeus Pelorios; and to the splendid banquets any strangers were admitted, prisoners were set free, slaves enjoyed the greatest liberty and were even waited upon by their masters. (Athen. xiv. p. 639; cf. Panofka, *Abhandl. der Berlin. Akad.* 1839, p. 35.) [L. S.]

PELTA (*πέλτη*), a small shield. Iphicrates, observing that the ancient Clipeus was cumbrous and inconvenient, introduced among the Greeks a much smaller and lighter shield, from which those who bore it took the name of *peltastae* [Exercitus, Vol. I. p. 776]. It consisted principally of a frame of wood or wickerwork (Xen. *Anab.* ii. 1, § 6), covered with skin or leather, without the metallic rim. [Antyx]. (Timaeus, *Lex. Plat.* s. v.) Light and small shields of a great variety of shapes were used by numerous nations before the adoption of them by the Greeks. The round target or *cetra* was a species of the pelta, and was used especially by the people of Spain and Mauretania. [Cetra.] The pelta is also said to have been quadrangular (Schol. *in* Thuc. ii. 29). A light shield of similar construction was part of the national armour of Thrace (Thuc. ii. 29; Eurip. *Alces.* 498, *Rhes.* 410; Max. Tyr. *Diss.* xix. 1, xxiii. 2) and of various parts of Asia, and was on this account attributed to the Amazons, in whose hands it appears on the works of ancient art sometimes elliptic, as in the bronzes of Siris (woodcut, p. 79), and at other times variously sinuated on the margin, but most commonly with a semicircular indentation on one side ("lunatis peltis," Verg. *Aen.* i. 490, xi. 663). Varro, *L. L.* vii. 43, compares this to the *ancile.* [SALII.] A vase fragment in the British Museum (No. E 793) shows clearly the form and construction of the *lunata pelta;* two Persians exhibit the two sides of the shield. [W. S.] [A. H. S.]

Peltae, from a vase in the British Museum.

PELTASTAE. [EXERCITUS, Vol. I. p. 776.]

PELVIS (ποδανιπτήρ), a vessel for washing the feet. Thus much is clear from Varro's derivation, "pedelvis a pedum lavatione" (*L. L.* v. 119), though etymologically the word should be connected with πέλλις; to which Pollux (x. 78) gives much the same meaning (see Lexicons, *s. v.* πέλλα). It was sometimes of earthenware (Schol. *ad* Juv. iii. 277), but probably more often of bronze (Juv. x. 64); also of the more costly Corinthian bronze (Orell. 3838; see AES, p. 39): in Petron. 70 we find a silver pelvis; but that is for holding ointment. The words *pelluvia* and *pelluvium* are other names for the same vessel (Fest. p. 161; Id. *Ep.* 207); but the *pollubrum* was used either for hands or feet: in Fest. p. 247 it = pelvis; in Livius And. and Fabius Pict. (*ap.* Non. 544) it is used to express the Greek χέρνιψ (or χερνίβιον) and = *trulleum,* a basin for washing the hands (Non. 547): no doubt, like the Greek λέβης (*Od.* i. 137, xix. 386), it might be used for either purpose. It must be observed that in both cases the water was ordinarily poured from the jug (πρόχους, *urceolus*) over the feet or hands into the basin. As a special name for the wash-hand basin, we have the *malluvium* (Fest. p. 161) = χειρόνιπτρον (Poll. x. 90). The pelvis was also used for washing up cups and dishes (Non. 544). As regards the ordinary shape of the pelvis, we may gather from the *patulae pelves* of Juv. iii. 167 that it was wide and shallow. The relief of the washing of Ulysses' feet (Baumeister, *Denkmäler*, fig. 1257) shows a somewhat deeper vessel. The *malluvium* in the Aldobrandini marriage picture (*ib.* 946) is like a washing-basin of the present day. (Becker-Göll, *Gallus*, ii. 371; Mayor on Juv. x. 64.) [G. E. M.]

PENA'TES. See *Dict. of Gr. and Rom. Biogr. and Myth.*

PENESTAE (πενέσται), Thessalian serfs. The word is no doubt from the root of πένομαι, πόνος, πένης (Dionys. ii. 9; Curtius, *Gr. Etym.* 272), and we must reject the ancient derivation quoted below. The Penestae of Thessaly were old inhabitants of the land conquered and reduced to villenage by the Thesprotians: according to Theopompus, they were Perrhaebians and Magnetes (Athen. vi. p. 265); but Aristotle (*Pol.* ii. 9, 3) distinguishes these tribes from the Penestae, speaking of them rather as Perioeci than as serfs. Others call them Pelasgi, or, in other words, regarded them as the primitive indigenous people of Thessaly; while Archemachus (*ap.* Athen. vi. p. 264) gives the following account of them:—"The Aeolian Boeotians who did not emigrate when their country Thessaly was conquered (compare Thuc. i. 12), but from love of home surrendered themselves to serve the victors, on condition that they should not be carried out of the country (whence, he adds, they were formerly called Μενέσται, but afterwards Πενέσται), nor be put to death, but should cultivate the land for the new owners of the soil, paying by way of rent a portion of the produce of it; and many of them are richer than their masters." It appears, then, that they occupied an intermediate position between purchased slaves and freemen, being reduced to serfdom by conquest, and they are generally conceived to have stood in the same relation to their Thessalian lords as the Helots did to the Spartiatae; but this is not exactly the case, for they were apparently not, like the Helots, serfs of the state, but belonged each to some family for whom the personal service was performed, for which reason they were sometimes called Θετταλοικέται (Athen. vi. p. 264 a). They were very numerous, for instance, in the families of the Aleuadae and Scopadae (Theoc. xvi. 35; Müller, *Dor.* iii. 4, § 6), but they were not only tillers of the soil; they formed the retainers of these great families, and served under their masters as cavalry: a body of 300 Penestae under Menon of Pharsalus assisted the Athenians in the Peloponnesian war (Dem. *c. Arist.* p. 687, § 199; [Dem.] περὶ Συνταξ. p. 173, § 23). They resembled the Helots, however, in the fact that they often rose against their masters (Arist. *Pol.* l. c.). (See also Grote, *Hist. of Greece*, ii. pp. 373–376; Gilbert, *Staatsalterthümer*, ii. 16 f.) [R. W.] [G. E. M.]

PENTA'LITHUS. [TALUS.]

PENTASPASTON. [MACHINAE, p. 108.]

PENTA'THLON (πένταθλον, *quinquertium*). The pentathlon was one of the competitive games of the great festivals of Hellas, in which, as the name denotes, the competitors entered for a group of five contests. These five were leaping (ἅλμα), the foot-race (δρόμος), throwing the quoit (δίσκος), throwing the spear (ἄκων or ἀκόντιον), and wrestling (πάλη). They are included in the compact and convenient pentameter of Simonides:

ἅλμα, ποδωκείην, δίσκον, ἄκοντα, πάλην.

And Eustathius, commenting on Hom. *Il.* xxiii. 621, quotes the following distich:—

ἅλμα ποδῶν δίσκου τε βολὴ καὶ ἄκοντος ἐρωὴ
καὶ δρόμος ἠδὲ πάλη, μία δ' ἔπλετο πᾶσι τελευτή.

In these lines the contests are placed in a slightly different order, the foot-race being last but one, instead of second. This is also the order given by the Scholiasts on Pindar (*ad Isthm.* i. 35) and on Sophocles (*ad Elect.* 691), who are not trammelled by metre. We may therefore, and for other reasons to be touched on later, suppose this order to be the right one.

Of these five contests the *δίσκος*, *δρόμος*, and *πάλη* are described elsewhere (see DISCUS, STADIUM, and LUCTA). The leaping (*ἅλμα*) was what we call "the long jump," measured by distance on the ground, and not by height. The jumper habitually aided himself by holding in his hands **ἁλτῆρες**, weights of metal or stone, something like our dumb-bells (see art. HALTERES), which he dropped when he took off, thereby gaining additional impetus. But even if we take these **ἁλτῆρες** into account, and even imagine the further assistance of a spring-board (for which there is no authority), we can never feel absolutely satisfied as to the enormous leaps mentioned by Greek writers. The greatest is that attributed to Phaÿllus of Kroton, who is said to have cleared a distance of fifty-five feet. The Scholiast on Lucian (*ad Somn. s. Gall.* 6) writes: *τῶν πρὸ αὐτοῦ σκαπτόντων ✓ πόδας καὶ τούτους πηδώντων, ὁ Φαΰλλος ὑπὲρ τοὺς ✓ πάνυ ἐπήδησεν.* Among modern athletes the longest jumps recorded scarcely attain to even half this distance (the Hellenic foot differing little from ours: see MENSURA), without the use of artificial aid. With the assistance of weights (**ἁλτῆρες**), a leap of 29 ft. 7 in. was made at Chester in 1854. We are almost driven to think that the **ἅλμα** must have been rather a succession of bounds than a single one—possibly such a contest as that known in modern sports as "the hop, step, and jump," where each foot touches the ground once between taking off and alighting finally. The best "hop, step, and jump" on record is 49 ft. 3 in., which closely approaches the feat of Phaÿllus.* But this is of course a purely conjectural inference, and a somewhat bold one, though not without considerable plausibility.

In the passage quoted above from the Scholiast on Lucian the word *σκαπτόντων* will be observed. So Pindar (*Nem.* v. 19, ed. Boeckh) writes:

μακρά μοι
δὴ αὐτόθεν ἅλμαθ' ὑποσκάπτοι τις· ἔχω γονάτων ἐλαφρὸν
ὁρμάν.

It will hardly do to say with the Scholiast on this passage that *τὰ ἐσκαμμένα* are the scratches on the ground marking the length of the other competitors' leaps, for it would seem that they are to be made before the leaps are taken—as indeed the words of the Scholiast on Lucian imply: *τὰ ἐσκαμμένα*, then, were probably a space of broken-up soil prepared in order to break the shock of alighting, besides giving the jumpers a mark to jump towards, and facilitating the after-measurement of the distance cleared.

The **ἀκόντιον**, a spear or javelin, was probably thrown at a mark, but definite details of this contest are wanting. In vase representations the weapon is thrown by a thong (see figure in article HASTA), which gave it a rotatory motion and thus increased the steadiness of its flight, on the principle of our rifled guns.

There remains the perplexing question of how the total competition of the pentathlon was regulated and decided; and with this is connected the question, already touched on, of the order of the five distinct but component events. We may say with some confidence that the order was that accepted above,—viz. leaping, throwing the quoit, throwing the spear, the foot-race, wrestling. This order is supported not only by the authority of Eustathius and the Scholiasts already quoted, but also by the following most important passage in an ode of Pindar (*Nem.* vii. 70–73), written in honour of a boy who had won the prize in this competition at the Nemean Games. The passage contains, according to a habit of Pindar's, a simile allusive to the victory celebrated. He writes:

ἀπομνύω
μὴ τέρμα προβὰς ἄκονθ' ὥτε χαλκοπάραον ὄρσαι
θοὰν γλῶσσαν, ὃς ἐξέπεμψεν παλαισμάτων
αὐχένα καὶ σθένος ἀδίαντον, αἴθωνι πρὶν ἁλίῳ γυῖον
ἐμπεσεῖν.

("I swear that without overstepping the bound I have sent forth the swift speech of my tongue as it were a bronze-headed javelin, such as saveth from the wrestling the strong neck sweatless yet, or ever the limbs be plunged in the sun's fire.") This seems plainly to imply that if a competitor proved himself the best man in the three first contests he was then exempt from contending in the two last (which would also naturally be the most exhausting of the five). Of two matched competitors, therefore, the winner was the one who "scored the odd event." This leads to the further conclusion that at the beginning the competitors were drawn in ties—A against B, C against D, E against F, and so on. Then suppose A, C, and E each to have won three out of five contests in their respective matches; these winners would be drawn again. Suppose A to be drawn against C; then E would be an **ἔφεδρος**, or bye, and would be matched with either A or C for the final heat (or *τάξις*). This is illustrated by the story in Pausanias (iii. 2, 6) of Tisamenos, a descendant of the Eleian seer Iamos, who settled among the Lacedaemonians. Misinterpreting an oracle which promised him success "in five glorious contests," he thought himself destined to win the pentathlon, and trained and entered for it accordingly, but **ἀπῆλθεν ἡττηθεὶς· καίτοι τὰ δύο γε ἦν πρῶτος· καὶ γὰρ δρόμῳ τε ἐκράτει καὶ πηδήματι Ἱερώνυμον Ἄνδριον, καταπαλαισθεὶς δὲ ὑπ' αὐτοῦ καὶ ἁμαρτὼν τῆς νίκης**—he came to understand that the oracle had foretold his success not in games, but in battles. Here it is implied, though Pausanias thinks it needless to say, that though Tisamenos won in the leap and the foot-race, he was beaten in the two throwing competitions, and therefore lost the total match by being finally beaten also in the wrestling (*καταπαλαισθείς*).

Of course, if there were many entries for the pentathlon, the labour for the best competitors would be very great, and also the successive ties would take a long time. Probably, however,

---

* This suggestion was made to the writer of this article by Mr. J. B. Martin, then President of the London Athletic Club. According to a recent traveller, the "hop, step, and jump" is practised by modern Greek youths.

the first consideration would make the field small, and the second accounts for the fact that in the Olympian games three Hellanodikai were appointed to judge in the pentathlon. Thus three matches could be going on at once.

The pentathlon was highly esteemed in Hellas for its influence on both health and comeliness, as promoting a completer development of the body than any of the single contests; and it was in especial favour among the Spartans, who disapproved the injuries and disfigurements incidental to boxing and the pancration. [A full and able discussion of most of the points here touched on will be found in an article by Prof. P. Gardner in the *Journal of Hellenic Studies*, vol. i. p. 210. Some further remarks by the writer of the present article occur in the next volume of the *Journal*, vol. ii. p. 217. For explanations differing from those here given, see A. Holwerda's *Zum Pentathlon* (*Archaeol. Zeitung*, 1881, p. 206); and Fedde's *Der Fünfkampf der Hellen.* may be consulted.] [E. M.]

PENTECOSTE (πεντηκοστή), a customs-duty of 2 per cent. levied probably upon all exports and imports at Athens (Harpoc. *s. v.*). It is known to have been levied on woollen cloth and other manufactured goods (Demosth. *Meid.* p. 558, § 133), on ruddle (*C. I. A.* 2, 546 = Hicks, No. 108), on cattle (*C. I. A.* 2, 814 a, A 39 = Dittenberger, No. 70; Hicks, No. 82), and on corn [Demosth.] *Neaer.* p. 1353, § 27. Corn, however, could only be imported, exportation being prohibited (Plut. *Solon*, 24). On imports the duty was payable on the unloading (Demosth. *Lacrit.* p. 932, § 29); on exports, probably when the goods were shipped. In paying the duty the merchant was said πεντηκοντεύεσθαι (Demosth. *l. c.*). The customs were farmed out, probably from year to year. They were let to the highest bidders by the πωληταί [POLETAE] acting under the authority of the senate. The farmers were called τελῶναι [TELONES], and were said ὠνεῖσθαι τὴν πεντηκοστήν. The chairman or principal of a company of τελῶναι was called ἀρχώνης (Andoc. 17. Boeckh, *Staatshaushaltung*, is apparently wrong in Bk. iii. 6 about the ἀρχώνης τῆς πεντηκοστῆς in this passage of Andocides; the πεντηκοστή meant must be the import-duty, as Bk. iii. 4 takes it). Whether the customs on different articles of merchandise were farmed together or separately does not appear. The corn-duty, at least, was kept distinct ([Demosth.] *Neaer.* l. c.). But Andocides speaks (p. 17) as if all the πεντηκοστή was farmed at once. The collectors of the duty (πεντηκοστολόγοι) kept books, to entries in which (ἀπογραφή) Demosthenes appeals (*Phorm.* p. 909, § 7). For calculations as to the amount of revenue derived at Athens from this source, or in Macedonia, Thrace, or Rhodes, the reader may consult Boeckh, vol. i. pp. 384–7. Pollux (viii. 132) appears to identify the πεντηκοστή with a charge called the ἐλλιμένιον; but it is more probable that the latter was merely a duty paid for the use of the harbour. Another tax at the Piraeus was the ἑκατοστή, or 1 per cent. (cf. Xen. *Rep. Ath.* i. 17), but it is impossible to discover what the tax was. It may have been identical with the ἐλλιμένιον, but there is no proof. For the speculations on its nature of Boeckh and of his editor Fränkel, see the *Staatshaushaltung*, edit. 3, vol. i. p. 390, and vol. ii. p. 77*. Aristophanes (*Vespae*, 658) mentions *many* taxes of 1 per cent. Smuggling was practised in Attica at the φωρῶν λιμήν (Demosth. *Lacr.* p. 932, § 28): see *Dict. Geog.* i. 325 b. [ELLIMENION; TELONES.]

Nothing seems to be known of customs-duties imposed by the Athenians by land. [F. T. R.]

PENTECOSTYS (πεντηκοστύς). [EXERCITUS, Vol. I. p. 769 *a*.]

PEPLUS. [PALLIUM.]

PER CONDICTIO'NEM. This form of statute process (*legis actio*), says Gaius (iv. 18), was so called because the plaintiff gave notice to the defendant to be present in court on the thirtieth day after the notice, in order that a judex might be appointed ("condicere autem denuntiare est prisca lingua:" compare Gell. x. 24; Paul. ex Festo, s. v. *condicere*; Bruns, p. 239). It was a form of personal action, that is, an action founded on an obligation between the parties to it, and applicable in those cases in which the plaintiff claimed that the defendant was bound to transfer to him ownership of a thing (*qua intendit dari oportere*). This legis actio was introduced by a Lex Silia, the date of which is uncertain (according to Voigt it was between 325 and 329 A.U.C.; see on this subject Muirhead's *Intr.* 1, § 40, n. 3), in the case of a money debt, and by a Lex Calpurnia, the date of which is also uncertain, in the case of any other definite thing (*certa res*). Gaius, who wrote long after the legis actio had ceased to be the ordinary procedure, observes that it does not appear why this form of action was needed, for in the case of an obligation to transfer (*dari oportere*) there were the forms of action by sacramentum and per judicis postulationem. The best conjectural explanation of this difficulty seems to be that the judicis postulatio was only applicable to particular obligations defined by statute, and was not, like the legis actio per condictionem, a general action for the recovery of a debt, and that the process of condictio was less formal and more convenient to suitors than that by sacramentum.

According to Keller (*Civ. Proc.* 2, § 18, ed. Wach) and some other modern writers (cf. Eisele, *Except.* p. 158; Bekker, *Act.* 1, 75), the notice in condictio was an informal proceeding executed out of court, the parties being thus saved the preliminary appearance before the magistrate, and the necessity of using solemnia verba. But that the notice did not require the presence of the magistrate seems improbable, considering the formal character of the legis actio, and the statement of Gaius (iv. 29) that in all legis actiones except pignoris capio, the proceedings took place "apud praetorem praesente adversario" (for other reasons, see Keller, *op. cit.*, note by Wach). The denuntiatio would, however, be a summary proceeding; and when the parties reappeared on the thirtieth day to receive a judex, the plaintiff would simply state that he claimed certa pecunia or certa res from the defendant without giving the ground of his claim at this stage, and thus the action would be allowed, not only on account of money lent (*pecunia credita*), but in all cases where the property of the defendant had been unjustifiably increased at the expense of the plaintiff (see Baron, *Die Condictionem*, and Muirhead, *Intr.*

p. 234). But it was necessary that certa pecunia or certa res should be claimed, and thus the plaintiff ran the risk of plus petitio. [ACTIO, Vol. I. p. 19.]

A party to condictio escaped the liability of having to pay a summa sacramenti to the magistratus [SACRAMENTUM]; but it seems probable that a sponsio and restipulatio, a kind of judicial wager, had to be entered by the parties when they came to receive a judex, at least in the case of pecunia credita; the sum staked was a third part of the object of contention. Sir Henry Maine (*Early Inst.* Lecture ix.) regards the sponsio and restipulatio as the essential feature of condictio, and the sponsio and restipulatio as a means adopted by litigants of settling disputes, instead of having recourse to violence. According to his view of the condictio, the wager was entered into by the parties immediately on notice being given, and not, as is generally supposed, on the appearance of the parties before the magistrate to receive a judex. The action called condictio under the formulary procedure developed out of the legis actio per condictionem, but the notice whence the legis actio took its name was discontinued. The condictio was either an actio de certa pecunia with a sponsio tertiae partis, or an actio de certa re, called *condictio triticaria*, an expression probably in use in the legis actio period, or, which was an extension of the action, condictio incerti, *i.e.* where the obligation was not in respect of certa pecunia or certa res. The condictio was the ordinary personal action when the formulary system was established, and was considered in later times as the typical actio in personam. As actio stricti juris, condictio was opposed to actio bonae fidei. (Keller, *Der röm. Civilprocess*, ed. by Wach; Bethmann-Hollweg, *Der röm. Civilprocess*; Karlowa, *Der röm. Civilprocess zur Zeit d. Legis actiones*; Baron, *Die Condictionen*; Muirhead, *Introduction to the Private Law of Rome*, §§ 40, 41.) [E. A. W.]

PER JU'DICIS POSTULATIO'NEM was one of the legis actiones. The passage in Gaius (iv. 17) is wanting in which this form of action is described, and the only direct reference to it is the following note of Valerius Probus (iv. 8):—"T. PR. I. A. V. P. V. D.;" that is—te, praetor, judicem arbitrumve postulo uti des; I pray you, praetor, to appoint an arbiter or judge (for the technical meaning of *postulare*, see art. ACTIO). The procedure probably derived its name from the fact that when the parties to it first appeared before the praetor they might request the immediate appointment of a judex, instead of having to wait till the thirtieth day for such appointment, as the Lex Pinaria required in the process of sacramentum (Gaius, iv. 15), and the Lex Silia in that of per condictionem (Gaius, iv. 18).

Judicis postulatio must have been used in actions under the Twelve Tables to which sacramentum was inapplicable, as would be the case in arbitria as opposed to judicia, *e.g.* actio familiae erciscundae, de arboribus succisis, actio fiduciae. We may infer, however, from a remark of Gaius (iv. 20) that it was to some extent an alternative proceeding to the actio sacramenti in personam. Its application was, perhaps, limited by statute to certain cases of contract and delict. [PER CONDICTIONEM.] (Keller, *Der röm. Civilprocess*, § 17; Bethmann-Hollweg, *Der röm. Civilprocess*, i. p. 62; Bekker, *Die Aktionen*, &c. i. pp. 18–74; Karlowa, *Der röm. Civilprocess zur Zeit. d. Legis Actiones*; Schmidt, in *Zeitsch. der Sav. Stift.* 2, 155, &c.; Voigt, *Zwölf Taf.* 1, § 62; Muirhead, *Intr. to Private Roman Law*, § 35.) [E. A. W.]

PER PI'GNORIS CAPIO'NEM. This legis actio, or form of statute process, was a legal mode of self-redress, by which certain privileged creditors could distrain on the property of their debtors who were in default. The obligations mentioned by Gaius (iv. 27, 28) as being enforceable in this way, were of a religious or public character, and probably did not give rise to any civil action (for a Greek parallel to pignoris capio, see Plato, *Legg.* xii. p. 54; Poste's Gaius, iv. §§ 26–29, comm.).

Pignoris capio, Gaius says, depended in some cases on custom (*moribus*), and in others on statute (*lege*). 1. It was founded on custom in obligations relating to military service. A soldier might seize as a pledge (*pignus capere*) anything belonging to his paymaster or person who had to furnish the aes militare (*qui stipendium distribuebat*), in case he did not make the proper payments (Gell. vii. 10; cf. Bruns, *Cession*, p. 36; Karlowa, *Der Civilproc.* p. 208 f.; Huschke, *Multa*, 401 f.): he might also make a seizure in respect of the money due to him for the purchase of a horse (*aes equestre*) (Fest. s. v. *Equestre*; Liv. i. 43; Cic. *Rep.* ii. 20, 36), and also in respect of the allowance for the food of his horse (*aes hordearium*, Fest. s. v. *Hordearium*) upon what belonged to the person whose duty it was to make the payment. Originally such payments were fixed upon particular persons, and not made out of the aerarium (Liv. i. 43; Gaius, iv. 27).

2. The law of the Twelve Tables made liable to pignoris capio, on default of payment, the buyer of a victim (*hostia*), and the hirer of a beast of burden, when the hire money was intended for a sacrifice (*in dapem*) (Huschke, *Multa*, p. 402). By a lex censoria the publicani had the right pignoris capionis in respect of vectigalia publica which were due by any lex. (Cic. *Verr.* iii. 11, 28; cf. Degenkolb, *Lex Hieronica*, 93; Karlowa, 212, &c.)

Some modern writers think that pignoris capio was also the process in the case of damnum infectum (Gaius, iv. 31; Bethmann-Hollweg, i. 204, Anm. 13; Karlowa, p. 216). The thing was seized with certain formal words (as to the importance of the formalities by which the right of distraint had to be carried out and the wide extent of distress in primitive law, see Maine's *Early Inst.* Lecture ix.), and for this reason pignoris capio was generally considered to be a legis actio; but Gaius adds, that some doubted whether it was so, since it was performed out of court ("extra jus id est non apud praetorem"), and in most cases in the absence of the debtor, and moreover it could take place on a dies nefastus, or day on which a legis actio could not be carried on.

Thus the distress itself was not an action in the ordinary sense, but a kind of self-redress; it must, however, have very frequently given rise to an action in court, where the right to distrain was disputed. Ihering even suggests that the distrainer was bound in all cases to justify his proceeding before the praetor. Thus it is possible that this subsequent action in court may have been the actual legis actio per pignoris capionem, and not the preliminary distress.

There is no statement in Gaius or elsewhere as to the rights of the distrainer in the thing he had taken as a pledge. Most modern writers suppose that if the debtor did not redeem the pignus (*reluere*) within two months (Dig. 42, 1, 31) it became the property of the distrainer, or that the latter had the right to sell it (*caedere pignus*, Cic. *de Or.* iii. 1, 4; Tib. iv. 13, 17). This right of distress came to an end with the abolition of the legis actio procedure. The pignus in causa judicati captum of later times was a means of execution carried out by officials under an order of the court. (Gaius, iv. §§ 26–29, 32; Keller, *Der röm. Civilprocess*, § 20; Bethmann-Hollweg, vol. i. 95; Karlowa, *Der röm. Civilprocess*, 201, &c.; Bekker, *Akt.* 1, 44; Voigt, *Zwölf Taf.* i. 502; Ihering, *Geist. d. r. R.* 1, § 11 c; Muirhead, *Introduction*, &c. § 37.) [E. A. W.]

PERA (πήρα), a wallet for carrying provisions and a drinking cup, worn either slung over the shoulder and under one arm, or hanging from a belt. It was used by travellers and country-folk (Hom. *Od.* xiii. 437, xvii. 197, &c.), and was part of a beggar's outfit (part of the garb of Telephus, Arist. *Nub.* 923). In later Greek times it was adopted, along with the beggar's staff (βακτηρία) and rags, as their professional costume by the Cynics (Mart. iv. 53, 3, "cum baculo peraque senex:" cf. Diog. Laert. vi. 13; Brunck, *Analect.* i. 223, ii. 22, 28; Auson. *Epig.* 53). A similar wallet was worn by the sower, who slung it over his right shoulder and under his left arm (Brunck, *Anal.* ii. 215); though a basket (*cophinus*) hanging from the left arm (cf. vase of Nikosthenes in Berlin Museum: Blümner, *Leben und Sitten*, iii. p. 150) was used for this as well as the other purposes which the wallet served.

In art the *pera* is most often seen in representations of Perseus slaying the Gorgon (cf. British Museum Vases, Nos. 548 and 641*). The wallet he wears was given him by the daughters of Phorcys, and is called by Hesiod (*Scut.* 224), Pindar, and other authors κίβισις, meaning, according to Apollodorus (*Biblioth.* ii. 4, 2, 4), πήρα: the word being explained as Cypriote by Hesychius. [W. C. F. A.]

PERDUELLIO. [MAJESTAS, p. 114.]

PERDUELLIO'NIS DUOVIRI (or, as Mommsen shows, more correctly called *duoviri perduellioni judicandae*) were two officers or judges appointed for the purpose of trying persons who were accused of the crime of *perduellio.* Niebuhr held that they were the same as the *quaestores parricidii;* but this view is undoubtedly erroneous, arising from the mistaken view that the latter term was the title for an office distinct from the ordinary quaestorship, whereas it was really only the full official title of that magistracy (Mommsen. *Staatsr.* ii. 525). But while the *quaestores* were elected annually, the *duoviri perduellionis* were appointed only for a special occasion. We have very little information as to the duoviral process: only three cases of its employment are recorded; and there are difficulties attaching to all of them. In the first, the trial of P. Horatius under Tullius Hostilius (Liv. i. 26), while Livy expressly mentions the nomination of *duo viri* by the king, the account given from Ulpian in the Digest (i. 13) assumes that they were quaestors, named by him after a vote of the people; while Festus, s. v. *sororium*, p. 297 M., agrees with Livy. In the second, that of M. Manlius, in B.C. 384, Livy (vi. 20), while describing it as a prosecution by the tribunes before a *concilium plebis*, adds, "sunt qui per duoviros qui de perduellione anquirerent creatos auctores sint damnatum." Lange (i. 278) proposes to reconcile the accounts, by supposing that the tribunes were elected to prosecute. Mommsen (*Hermes*, v. 253) assumes that Livy's second alternative rests on the older tradition. In the third case, the prosecution of C. Rabirius in B.C. 63 for the murder of Saturninus, thirty-six years before, we have an attempt to revive a long-disused procedure, in the interests of the democratic party, led by Caesar. Other cases of *perduellio* were conducted by tribunes or quaestors, but it is not expressly mentioned that they acted as *duo viri.* Whether *duo viri* were appointed, appears to have been determined in each instance by a special resolution of the people (Mommsen, *Staatsr.* ii. 599). Sometimes they were elected by the people (cf. Dio Cass. xxxvii. 27); but in the case of Rabirius the praetor appointed two taken by lot, but from what body we are not told, doubtless by the direction of the law specially enacted (Cic. *pro Rab. perd. reo*, 4, 12). The *duo viri* received a commission to try the case of *perduellio*, and to pass sentence if they found the prisoner guilty: both Livy, and still more strangely Cicero, seem to think that this commission assumed the guilt of the accused, and excluded the possibility of an acquittal,—an impossible view. But the sentence passed was liable to an appeal to the people, and in this case the *duo viri* appeared to support their decision, viz. virtually to act as prosecutors.

Trials for *perduellio*, if not previously obsolescent, as Mommsen thinks, in consequence of the growing practice of the tribunes to impeach before the centuries, certainly became quite obsolete after the more convenient *quaestio perpetua* dealt with offences of the same nature, under the more precise definition of *majestas.* But the term *perduellio* is found even in the Digest, though as a loose expression for the more serious kinds of *majestas.* (Cf. Mommsen, *Staatsr.* ii. 598 ff.; Clark, *Early Roman Law*, § 12, and especially Cicero's oration *pro Gaio Rabirio perduellionis reo*, with Heitland's introduction and notes.) [A. S. W.]

PEREGRI'NUS. [CIVITAS, Vol. I. p. 449.]

PE'RGULA was a kind of annexe to a house, whether at the top or the side. We find it therefore resembling (1) our verandah, roofed but open at the sides: hence used as a painter's studio (Plin. *H. N.* xxxv. § 84; Lactant. i. 22, 13; Cod. Theod. xiii. 4, 4). Being not very different from a *taberna*, or booth, it was also used to express the same things, viz.: a shop for selling wares (Auson. *Epist.* iv. 6) and a school (Juv. xi. 137; Suet. *de Gram.* 18), both being in open sheds or verandahs; and so we find "*magistrales* pergulae" (Vopisc. *Saturn.* 10). But (2) the pergula was also raised above the ground-floor, like a covered balcony, resting on the top of the tabernae ("tabernae cum pergulis suis," *C. I. L.* iv. 138; or quite on the top of the house, not as an upper room, but an erection with roof and open sides on the house-top, and used for painting (Tertull. *adv. Valent.* 7; Dig. 9, 3, 8, § 12), or as an observatory where astrologers taught (Suet. *Aug.* 94). (3) An *arbour* or trellised walk with open ends (Plin. *H. N.* xiv. § 11, xix. § 69; Colum. iv. 21); whence the modern Italian *pergola*. This sense is illustrated by the word *pergulana* (a vine trained over a trellis; Colum. iii. 2.) (4)=the *cella lupanaria*, partly open to the street (Plaut. *pseud.* i. 2, 78). All these uses probably came from *pergo*, in the sense of something continued or projecting forward from the main building. (Marquardt, *Privatl.* 93.) [L. S.] [G. E. M.]

PERIACTOS. [Theatrum.]

PERIDEIPNON. [Funus.]

PERIDRO'MIDES. [Xystus.]

PERIMERI'DIA, or **PARAMERI'DIA** (περιμηρίδια, Arrian. *Tact.* 4; παραμηρίδια more usually), armour for the thighs, *cuisses*. These articles of armour, though not in common use in the ordinary Greek panoply, are shown sufficiently often on the monuments as occasionally employed by Greek warriors at least as far back as the fifth century B.C. The accompanying illustrations show what may be gathered as to their general form. They seem to have been adapted to the shape of the thigh, clasping it round in the same way as the greave clasped the leg. The lower edge is in some cases curved out in such a way as to allow room for that part of the greave which protected the knee (see fig. 1). Like the greave, too, the parameridia seem to have been constructed of metal, as is probable both from the character of the decorations traced upon them in the vase pictures, and also from the fact that they are usually there coloured like the greave. In the British Museum is a bronze object which from its form would be adapted to the parameridion, and may have been actually intended for this purpose.

Παραμηρίδιον. (From a vase in British Museum.)

For instances of its occurrence in vase-paintings, see *Brit. Mus. Cat. of Vases*, Nos. 473, 557, 591, 608; vase in Brit. Mus. B 50; Gerhard, *Aus. Vas.* ii. pl. cxxii.; *Mon. Inèd.* vi. 78; and *Mus. Greg.* ii. liii.

Παραμηρίδιον. (From *Mus. Greg.*)

All these instances occur upon black-figured vases; at present no illustration of these weapons is known in art later than the fifth century B.C. In Greek writers, however, of the third century B.C. and downwards, they are frequently mentioned, but here almost exclusively as employed by cavalry, both for the rider and his horse. Xenophon (*Anab.* i. 8, 6) describes the armour of the 600 horsemen with Cyrus as consisting of thorax, parameridia, and helmet. The same writer (*de Re Eq.* 12, 8 and 10) speaks of them as among the necessary equipment of a cavalry soldier: cf. especially Id. *Cyr. Inst.* vii. 1, 2, where they are described as of bronze, alike for horses and riders; and Arrian, *Tact.* 4, where the riders have περιμηρίδια, the horses παραπλευρίδια. For parameridia as part of the protective armour of the horse in action, see also Xen. *de Re Eq.* 12, 8, and Pollux, i. 140. Xenophon (*Cyr. Inst.* vi. 4) makes a further distinction of παραπλευρίδια for horses driven in chariots and παραμηρίδια for those ridden by the cavalry. [C. S.]

PERIOECI (περίοικοι). This word primarily denotes the inhabitants of a district lying around some particular locality, but is generally used to describe a dependent population, living without the walls or in the country provinces of a dominant city, and, although personally free, deprived of the enjoyment of citizenship and the political rights conferred by it. The words σύνοικοι and μέτοικοι are in some degree analogous; like περίοικοι, they imply co-residence with a population of higher position and generally of different nationality. Of the three words, however, μέτοικοι, meaning "resident aliens," has the most definite connotation attached to it, while σύνοικοι is the most indeterminate [Metoeci]. It was probably from the Spartan use of the term Perioeci that the notion of "subject population" became so closely attached to it. We have no evidence to show that this word was employed by any other state than Sparta to denote its local dependencies, a great deal to show that it was not. But the Lacedaemonian system of Perioeci was so much the most marked in Greece, that writers often translated the titles given to other subject populations into this Lacedaemonian nomenclature.

A political condition such as that of the Perioeci of Greece, in some measure resembling the vassalage of the Germanic nations, could hardly have originated in anything else than foreign conquest; and the Perioeci of Laconia furnish a striking illustration of this. The question of their origin as a subject population is intimately connected with the question of their nationality; and as the two main accounts of the origin of the Perioeci which have come down to us, that of Ephorus and that of Isocrates, differ both in the description of the causes of their subjection and in the statements as to their original nationality, we must be content to accept the modified conclusions which scholars have supposed may be drawn from such accounts, from other chance notices, and from the probabilities of the case. Ephorus (*ap.* Strab. viii. p. 364) states that they were the original Achaean inhabitants of the territory, which the Lacedaemonian branch of the Dorians had invaded; that, during the first generation which followed on the invasion, they not only remained possessed of all private rights, but even shared the political franchise of the invaders. In the next generation, however, these political privileges were taken from them; they were made into a dependent population, and even forced to pay tribute to the dominant Dorians. Isocrates (*Panath.* § 177) draws no such distinction of race between the Spartans and the Perioeci. On the contrary, he represents the Perioeci as in their origin the *δῆμος* of the Spartan state, which, expelled after a period of *στάσις*, was reduced to the grade of a subject population by the victorious oligarchy, and scattered through the many small townships of Laconia. These accounts agree in representing the condition of the Perioeci as having been originally better than it was in historic times. The different accounts of their nationality also give us a clue to the fact, which Grote has so strongly insisted on, that in historic times there was no recognisable difference between the nationality of the Perioeci and that of the Spartans themselves. The suggestion, however, that the Perioecic population was in a large degree tinged with the old Achaean element is more than probable; and perhaps the safest theory to accept as to the origin of this people is that stated by E. Curtius in his *History of Greece* (bk. ii. ch. 1); namely, that, on the first Dorian immigration into Laconia, the Dorians mingled with the original Achaean populations, with whom they continued to live for some time, the original Hexapolis which they established in Laconia not being peculiarly Dorian. The second stage of Dorian history is marked by two of the ruling families (the originators of the double Spartan kingship) "succeeding in gaining over to their side the central body of the Dorian people, in eliminating it from its intermixture with the rest of the population, collecting its scattered elements at one point, and, supported by the power of the Dorians, establishing this point as the centre of the district and the seat of their government" (Curtius, *l. c.*). With this reaction to pure Dorism the Perioeci originate, and their nationality would thus be a mixed one, their civilisation in particular being affected by the strongly impressive character of Dorian life, precisely in the way in which Herodotus tells us that the original population of Cynuria, which was Ionian, had been "Dorised by the Argives and by time" (Herod. viii. 73). The Perioeci of Laconia in historical times were of still more varied nationality than this mixture of race implies. Amongst them we must class the Cynurians, and possibly the Sciritae, the inhabitants of the mountainous country of South Arcadia (Hesych. *s. v.* *σκεῖρα*: Arnold, in Thuc. v. 67); and, although the latter are sometimes called *σύμμαχοι* of the Spartans, and thus distinguished from the Perioeci, perhaps they were only distinguishable from the main body of the Perioecic population as a higher from a lower grade, and would have been included in the widest meaning of this term, which is a dependent population, not sharing in the political rights of the state on which it is dependent.

After this reduction of the larger part of the population of Laconia from freedom to partial dependence on the central state, we are told that it was forced to pay tribute to Sparta (Ephorus, *ap.* Strab. *l. c.*, *συντελεῖν τῇ Σπάρτῃ*). Of the nature of this tribute we know nothing: but a reference of Aristotle's to the *εἰσφοραὶ* or property taxes of the Spartans, which, though understood to exist, were not paid by the pure Spartans themselves, has been interpreted as meaning that the tax which the Perioeci paid was merely of this nature, a land tax to the state, also understood as affecting the Spartans but evaded by them, and not therefore a tribute paid in token of subservience by a dependent population (Arist. *Pol.* ii. 6, 23). Sir G. C. Lewis, on the other hand, held that this tax was based on the theory of territorial sovereignty; that the land was supposed to belong to the Spartans by right of conquest; and that the Perioeci paid a revenue to them for the right of *possessio* (*Phil. Mus.* vol. ii.). Other tokens of dependence were the absence of all civic privileges in the central state, and the fact that no *jus conubii* existed between them and Spartan citizens. So entirely were they regarded as something external to the Spartan state, that it is even said that the Ephors could put Perioeci to death without trial (Isocr. *Panath.* § 181). This is on the whole what we should expect from the characteristic disregard of the Spartans for rights other than civic, but the statement is rendered improbable from the difficulty of reconciling it with their general treatment of this subject population. For it does not appear that the Perioeci (especially in historic times) were generally an oppressed people, though kept in a state of political inferiority to their conquerors. They served in the Spartan armies as heavy-armed soldiers of the line, and not like the helots, as light-armed only; while at the battle of Plataea we find each of these Perioecic hoplites furnished with an attendant helot (Herod. viii. 61). Again, at Sphacteria 292 prisoners were taken, of whom 120 were Spartans, and the rest in all probability περίοικοι (Thuc. iv. 38). We also read of καλοὶ κἀγαθοί, or "accomplished and well-born" gentlemen, amongst the Perioeci serving as volunteers in the Spartan service (Xen. *Hell.* v. 3, 9). We occasionally find a Perioecus in high command (Thuc. viii. 6), and on one occasion we find one filling the responsible post of admiral, so highly esteemed by Spartans as a source of power during the closing years of the Peloponnesian war (Id. viii. 22). But we never find a Perioecus in command of a Spartan; in the above case, for instance, in which the Perioecus held a high naval command, the fleet he commanded was not a Spartan but an allied fleet from Chios. But, in spite of these possibilities of attaining to high position within their own circle, it was not to be expected that men competent to the discharge of high functions in a state, and bearing its burdens, should patiently submit to an exclusion from all political rights. Accordingly we find that on the rising of the Helots in B.C. 464, some of the Perioeci joined them (Thuc. i. 101). When the Thebans invaded Laconia (B.C. 369), the Perioeci were ready to help them (Xen. *Hell.* vi. 5, 25). In connexion with the insurrection of Cinadon we are told that the Perioeci were most bitter against the ruling Spartans (Id. iii. 3, 6). From these and other facts (Clinton, *F. H.* Append. 22) it appears that the Perioeci of Laconia, if not an oppressed, were sometimes a disaffected and discontented class; though in cases of strong excitement, or of general danger to the whole of Greece, they identified themselves with their conquerors. The very relation, indeed, which subsisted between them, was sufficient to produce in Sparta a jealousy of her subjects, with corresponding feelings on their part. Nor can we suppose that the Dorians would willingly permit the Perioeci to acquire strength and opulence, or even to settle in large towns. In fact, it is stated by Isocrates (*Panath.* § 177) that the Spartan Dorians intentionally weakened the other inhabitants of Laconia by dispersing them over a great number of hamlets (μικροὶ τόποι) which they called πόλεις, though they were less powerful than the country parishes of Attica, and were situated in the most unproductive parts of Laconia, the best land of which was reserved for the Spartans. This last statement probably has some reference to the land distribution of Laconia attributed to Lycurgus (Plut. *Lyc.* 8). The 30,000 allotments which, we are told, were made to the Perioeci, are probably as mythical as the 9,000 equal allotments said to have been made to the Spartans (Grote, *Hist. Gr.* ch. 6); but Isocrates' statement points to the fact that, while the Spartans possessed the rich plateau of the interior, the lands of the Perioeci were mostly in the rugged territory that fringed this plain.

Still, the grievances of the Perioeci were not after all intolerable, nor do they seem to have been treated with wantonness or insolence. The distance at which many of them lived from Sparta must have rendered it impossible for them to share in the administration of the state, or to attend the public assemblies: a circumstance which must in some measure have blunted their sense of their political inferiority: nor were they subjected to the restraints and severe discipline which the necessity of maintaining their political supremacy imposed upon the Spartans (Sosib. *ap.* Athen. xv. p. 674). By way of compensation, too, the Perioeci enjoyed many advantages (though not considered as privileges) which the Spartans did not. The trade and manufactures of the country were exclusively in their hands, and carried on by them with the more facility and profit as they occupied maritime towns. Similarly the island of Cythera, the nucleus of the maritime trade of Laconia, and the port at which the merchants trading from Egypt and Libya usually touched, was a Perioecic settlement (Thuc. iv. 53; vii. 57). The cultivation of the arts, also, as well in the higher as in the lower departments, was confined to the Perioeci, the Spartans considering it beneath themselves; and many distinguished artists, such as embossers and brass-founders, were found in the Laconian schools, all of whom were probably Perioeci (Müller, *Dor.* iii. 2, 3). Nor is there wanting other evidence, though not altogether free from doubt, to show that the Spartan provincials were not in the least checked or shackled in the development of their intellectual powers (Müller, *l. c.*). Moreover, it seems natural to suppose that they enjoyed civil rights in the communities to which they belonged, and which otherwise would scarcely have been called πόλεις: but whether or no these cities had the power of electing their own chief magistrate or magistrates, what was the form of their constitution or whether it was in all cases uniform, can only be a matter of conjecture. It has been thought possible that the 20 harmosts mentioned by the Scholiast on Pindar (*Ol.* vi. 154) were Spartan governors sent to preside over Perioecic districts (Schömann, *Antiq. jur. publ. Gr.* iv. 1, 5). [HARMOSTES.] From the single instance of Cythera, to which we know a magistrate was sent from Sparta with the title κυθηροδίκης (Thuc. iv. 53), no general conclusion can be drawn; but in any case it is probable that, if governors were appointed from Sparta, they were governors, not of the several πόλεις, but of districts amongst which these πόλεις were distributed for administrative purposes. Such a theory does not necessarily imply that the internal administration of each πόλις was not in the hands of its Perioecic inhabitants themselves.

The number of Laconian (as they are called) or subject cities is said to have formerly amounted to 100 (Λακεδαίμων ἑκατόμπολις, Strab. viii. p. 557; Steph. Byz. *s. vv.* Αἴθαια and Αἰτωλία). Several of these lay on the coast, as Gythium, the port of Sparta, whence the whole coast of Laconia is called ἡ περιοικίς (Thuc. iii. 16). Many, however, lay more inland, as Thyrea, the chief town of the Thyreatid as it is often called, a part of Cynuria, which was a comparatively late acquisition of the Spartans, not having been finally wrested from Argos until about the year 550 B.C. It was a long and fertile strip of territory east of the Eurotas, extending down to Cape Malea, and including the island of Cythera (Herod. i. 82). But besides the fact, known to historic times, of the late acquisition of Cynuria, there is a great deal of evidence to show that the possession of the Perioecic territory by Sparta was a slow and gradual process. It has been noticed that some of the towns mentioned by Strabo as belonging to the Lacedaemonian *ἑκατόμπολις* were in Messenia, and cannot therefore have been settled until after the conquest of that territory, about 635 B.C. (Schömann, *l. c.*). When we remember further that it was not until the reign of king Teleclus, about three centuries after the original foundation of Sparta, that such towns as Amyclae, Pharis, and Geronthrae on the Eurotas were conquered (Paus. iii. 2, 6), it is impossible to believe that the distribution of the Perioecic territory was such a rapid and easily completed process as the statements of Ephorus and Isocrates would lead us to believe.

Connected with the accounts of the conquest of the Perioecic territory, there are some statements which would lead us to conjecture that there was some difference of status amongst the Perioecic towns themselves. Amyclae, Pharis, and Geronthrae, for instance, are said to have been colonised from Sparta (Paus. iii. 22, 5). Boeae, which Curtius supposes to have been one of the cities forming the original Hexapolis of Laconia, was said to have been founded by a Heracleid chief (Strabo, viii. p. 364). Whether such considerations led to a difference of political status in the case of such towns, it is impossible to say; but still it seems probable that a town like Amyclae, in which was the temple of the Hyacinthian Apollo, and which was one of the great religious centres of Dorian worship (Thuc. iv. 18), would claim a preference, based on religious sentiment, over other Perioecic towns; and there is some evidence to show that the inhabitants of such towns received more considerate treatment than the general mass of Perioeci (Xen. *Hell.* iv. 5, 11).

The number of the Perioecic population of Laconia is not known; but an attempt has been made by Clinton to determinate it approximately at one stage of its history: namely, at the time of the Persian war (*F. H.* App. c. 22). He says, "At the battle of Plataea in B.C. 479, the Perioeci supplied 10,000 men. If we assume this proportion to be the same as that which the Spartan force bore to the whole number on the same occasion, or five-eighths of the whole number of citizens, this would give 16,000 for the males of full age, and the total population of this class of the inhabitants of Laconia would amount to about 66,000 persons." It will be seen, however, that this conclusion, somewhat doubtful in itself, is based on the supposition that the 10,000 Lacedaemonians who served with the Spartans at Plataea were all Perioeci. It seems more probable, however, on a comparison of two passages in Herodotus (ix. 11 with 61), that the 5,000 whom it is so difficult to account for, and who are only mentioned as making up the total sum, were Helots, and that each Perioecic hoplite was attended by one light-armed helot, just as each Spartan hoplite was attended by seven of the same class.

In the later times of Spartan history, the Perioecic towns of the coast (*Laconicae orae castella et vici*) were detached from Sparta by T. Quinctius Flaminius, and placed under the protection of the Achaean league (Müller, *Dor.* iii. 2, 1; Liv. xxxiv. 29, 30, and xxxviii. 31). Subsequently to this the Emperor Augustus released 24 towns from their subjection to Sparta, and formed them into separate communities under laws of their own. They were consequently called Eleuthero-Lacones (Paus. iii. 21, 6). But even in the time of Pausanias some of the Laconian towns were not *αὐτόνομοι*, but dependent upon Sparta (*συντελοῦσαι εἰς Σπάρτην*).

From the account given above of the probable origin of the Perioeci of Sparta we should naturally expect to find a subject population of this kind existing in most Greek states, which are known to have experienced immigrations not resulting in a total change of population, but in a combined residence of populations of different nationality. Immigrations of this kind, which resulted in combined settlements, were in a high degree the characteristic of Dorian movements; and accordingly we should expect to find a Perioecic population as the basis of the early Dorian states. This is in the main verified by facts. In Argos, for instance, we have an undoubted Perioecic population; and although no true Perioeci can be identified in cities like Sicyon and Corinth, or most of the later Dorian colonies, this is easily explained by the fact that these states were created after the movement of the great Dorian migration was over. The Perioeci of Argos were called Orneatae from the town of Orneae, apparently the first or the most important town reduced to this condition by the Argives (Herod. viii. 73). These Orneatae are called *σύμμαχοι* of the Argives by Thucydides (v. 67, and Arnold's note), and with them are classed the inhabitants of Cleonae; but that they were Perioeci appears from the passage of Herodotus, in which he is evidently translating the less familiar Argive term Orneatae into the more familiar Spartan one Perioeci, to show the status of the Cynurian population he is describing. How large the Perioecic population of Argolis was we do not know. A large part of it, Cynuria, was taken by the Spartans (Herod. i. 82); and the two great Achaean townships, Mycenae and Tiryns, were certainly not Perioecic towns at the time of the Persian war (Id. vii. 102, ix. 28). After their destruction by Argos about 468 B.C. (Diod. xi. 65), they may possibly have been reduced to this condition.

Amongst Dorian states outside Greek proper, we find Perioeci on the largest scale connected with the cities of Crete, which resembled Sparta in having a large subject population. But whether the so-called "Perioeci" of Crete were closely analogous to those of Sparta is an open question. [See COSMI.] Amongst the later Dorian foundations there is some evidence of the existence of Perioeci in Leucadia and Anactorium (Thuc. ii. 81, *οἱ μετὰ τούτων*, Arnold); and in a non-Dorian country, but one that resembled a Dorian state in its foundation, namely Elis, we have evidence of a Perioecic population (Thuc. ii. 25).

There were various other classes of dependent communities in Greece, which we find described as Perioeci; and others that bear a strong resemblance to the Perioeci of Laconia in being permanent dependencies on other states: but neither of these are we quite justified in calling "Perioeci" in the Dorian sense. Of the former class, for instance, are the native populations surrounding Greek colonies like Cyrene (Herod. iv. 159); and among dependent populations of the latter kind we may class many of the states of Thessaly. These are called *ὑπήκοοι* (Thuc. iv. 78; Arist. *Pol.* ii. 9, 3), and include the populations of what was in historical times Thessaly, such as the Perrhaebi, Magnetes, and Achaeans (of Phthiotis), which were subdued after the Thessalian migration.

[References for fuller particulars on this question may be made to Arnold's Thucydides, vol. i. app. ii., "On the Constitution of Sparta," and to a review of this work by Sir G. C. Lewis in the second volume of the *Philological Museum*, p. 39. The most exhaustive treatment of the subject will be found in O. Müller's *History of the Dorians*, bk. iii. See also Schömann, *Antiquit. Juris Pub. Graec.* iv. 1, § 5; A. Kopstadt, *De rerum Laconicarum Constitutionis Lycurgeae Origine et Indole;* Gilbert, *Staatsalterth.* i. 37. The nationality of the Perioeci is discussed chiefly in Curtius, *Hist. of Greece*, bk. ii. ch. 1, and Grote, *Hist. of Greece*, part ii. ch. 6.] [R. W.] [A. H. G.]

PERI'POLI. [EPHEBUS.]

PERI'PTEROS. [TEMPLUM.]

PERI'SCELIS. Greek and Roman women, like those in the East of to-day, wore anklets and bangles. These are frequently shown on the monuments, appearing not only on vase- and wall-paintings (cf. the following illustration from a Pompeian wall-painting, *Museo Borbonico*, vi. tav. xxxiv.), but on statuettes (cf. two bronze statuettes of the Portici Collection, Barré, *Herc. and Pomp.* vi. pl. 13). In literature the custom of wearing them is spoken of by the Scholiast on Horace, *Ep.* i. 17, 56, and by Isidorus (xix. 31, "crurum ornamenta mulierum quo gressus earum ornantur"); while, as late as the third century after Christ, Cyprian inveighs against it (*Hab. Virg.* 16).

Pompeian painting showing Periscelides.

Pliny (*H. N.* xxxiii. §§ 39, 152) says that the plebeian women wore anklets of silver, whereas the patricians wore them of gold. Such anklets were sometimes called *compedes* (Plin. *l. c.*), but the Romans borrowed also the Greek name *περισκελίς*,—a word which occurs in inscriptions as part of the catalogue of the jewellery of a temple (Dittenb. Nos. 367–401), as well as in Menander (*Incert.* 405) and other passages (Longus, i. 5; Plut. ii. 145 C). *Periscelis* is mentioned in Horace (*Ep.* i. 17, 56) and Petronius (67, 4), and *periscelium* in Tertullian (*de Cultu Fem.* ii. 13). A certain amount of confusion as to the meaning of the word has been caused by the use of the kindred words *περισκελῆ* and *περισκέλια*, which were interpreted by the lexicographers as being *βράκκια φεμινάλια*, *i.e.* drawers reaching from the navel to the knee (cf. Hieron. *Epist. ad Fabiol.*), a use which is found in the Septuagint (Exod. xxviii. 42, xxxix. 28; Levit. vi. 10, xvi. 4), but the two words are distinct in meaning. These ornaments are also called *περισφύρια* (Clem. Al. *Paed.* ii. 12, 122; cf. Herod. iv. 176), but elsewhere are referred to by more general names, such as *πέδαι* (Aristoph. *Fragm.* 320, 11 K.), or *ἀμφιδέαι* (Hesych. *s. v.*). [Cf. Iwan Müller, *Handbuch*, iv. p. 435; Marquardt, *Privatleben*, p. 705; Hübner in *Hermes*, i. p. 354.] [W. R.] [W. C. F. A.]

PERISTY'LIUM or **PERISTY'LUM.** The Greek adjective *περίστυλος* is applied either to a court surrounded by colonnades on the inside, or to a building surrounded by them on the outside, as a temple. It is then used alone, in all three genders, with a substantive understood, for a court with colonnades: hence the Latin *peristylum*, or more commonly the substantive form *peristylium*. It is especially used for the courts of a Greek dwelling-house, and for that introduced into Roman houses in imitation of them. [DOMUS, Vol. I. p. 671.] [E. A. G.]

PERO. The boots worn by shepherds and labourers in rough and muddy weather were usually of untanned leather and made at home. The Greek *ἀρβύλη* was of this kind, for the epithet *πηλοπατίς* is given to it (Hipp. *Art.* 828), and it was used by travellers, hunters, and country-folk. It was apparently a low boot, or, at any rate, not so high as the *ἐνδρομίδες*, which were worn by horsemen and hunters and covered the calves. The *ἀρβύλη* in Eur. *Hippol.* 1189 is merely a boot of this kind (see Monk *ad loc.*). The Roman *pero* was much the same; it was of untanned leather (*crudus*, Verg. *Aen.* vii. 690), worn by ploughmen (*peronatus arator*, Pers. v. 102) and by country-folk in general (Serv. *ad* Verg. *l. c.*). Cato (in Fest. p. 142) says that they were used by the old Romans. Sidonius Apollinaris describes the boots worn by Sigismer, a royal youth of Gaul, as being made with the hair remaining upon them (*Ep.* iv. 20, "primi pedes perone setoso talos adusque vinciebantur"), but it seems unlikely that these were identical with the *perones* of classical times. On the monuments, among the many varieties of boot shown, several roughly answer to the description given above, but no satisfactory identification seems possible. (Cf. Daremberg and Saglio, *Dict. d. Antiq.* s. v. Arbylé; Mayor on Juv. xiv. 186.) [W. C. F. A.]

PERPENDI'CULUM (*κάθετος, μολυβδίς, στάθμη*), *a plumb-line*, a string with a piece of metal attached, used by masons, carpenters, &c. to test the correctness of their perpendicular lines (Vitruv. vii. 3, 5; Isid. *Or.* xix. 18): hence the expression *ad perpendiculum* of the correct line (Cic. *Verr.* i. 51, 133; Caes. *B. G.* iv. 17, &c.). Cicero (*ad Qu. Fr.* iii. 1, 2) distinguishes it from *linea* (=*κανών*), the line for measuring horizontally. This *linea* was called in Greek also *σχοῖνος* and *σπαρτίον*, and, from its being coloured to make a mark, *μιλτεῖον*. Blümner, wrongly we think, excludes *στάθμη* from this sense, and makes it altogether equivalent to *perpendiculum*. There is no doubt that it was sometimes a plumb-line, as in *Anth. Pal.* vi. 103, στάθμην μολιβαχθέα: but that it was also (perhaps more commonly) a horizontal line is clear from its use to make a straight τάφρος in Hom. *Od.* xxi. 121. It was probably a line getting the true direction either way; and the expressions παρὰ στάθμην, ἐπὶ στάθμην would come from either use. We have also the phrases πρὸς κάθετον, εἰς κάθετον = *ad perpendiculum*. (Blümner, *Technologie*, ii. 235.) [G. E. M.]

PERPE'TUA ACTIO; PERSECUTORIA ACTIO. [ACTIO.]

PERSO'NA (*larva*, πρόσωπον or προσωπεῖον), a mask. Masks were worn by Greek and Roman actors in nearly all dramatic representations. This custom arose undoubtedly from the practice of smearing the face with certain juices (Hor. *ad Pis.* 277) and colours, and of appearing in disguise, at the festivals of Dionysus [DIONYSIA]. The red colouring was appropriate to that worship (Paus. ii. 2, 6; vii. 26, 11). But leaves were also used as coverings for the face before masks (Suidas, *s. v.* θρίαμβος: cf. Athen. xiv. 622); and we hear, too, of masks made of tree-bark (Verg. *Georg.* ii. 387). Now, as the Greek drama arose out of these festivals, it is highly probable that some mode of disguising the face was as old as the drama itself. Thespis (Suidas, *s. v.* Θέσπις) is said to have smeared the face with white lead (ψιμυθίῳ), afterwards with purslane (ἀνδράχνῃ); and finally to have introduced the linen mask. Choerilus of Samos, however, is said to have been the first who introduced regular masks (Suid. *s. v.* Χοιρίλος). The invention of masks is elsewhere attributed to Aeschylus (Suid. *s. v.* Αἴσχυλος: Hor. *ad Pis.* 278), though the latter had probably only the merit of perfecting and completing the whole theatrical apparatus and costume. Phrynichus is said to have first introduced female masks (Suid. *s. v.* Φρύνιχος). Aristotle (*Poët.* 5=1449 b, 4) was unable to discover who had first introduced the use of masks in comedy. Some masks covered, like the masks of modern times, only the face, but they appear more generally to have covered the whole head like a visor, fastened with bands under the chin, for we find always the hair belonging to a mask described as being a part of it; and this must have been the case in tragedy more especially, as it was necessary to make the head correspond to the stature of an actor which was heightened by the cothurnus. The terms for having a mask put on are περιτίθεσθαι, ἐπικεῖσθαι, περικεῖσθαι: for putting off, ἀποτίθεσθαι, ἀφελεῖν (Lucian. *Tim.* 28, *Nigr.* 11, *de Salt.* 27, *pro Merc. Cond.* 5, *Icaromenipp.* 29). The masks were made by σκευοποιοί. Aristotle (*Poet.* 6=1450 b, 19) notices how important their art was for the stage effect.

I. TRAGIC MASKS. It may at first seem strange to us, that the ancients, with their refined taste in the perception of the beautiful in form and expression, should by the use of masks have deprived the spectators in their theatres of the possibility of observing the various expressions of which the human face is capable, and which with us contribute so much to theatrical illusion. But it must be remembered that in the large theatres of the ancients it would have been impossible for the greater part of the audience to distinguish the natural features of an actor. The features of the masks were for this same reason very strong and marked. Again, the *dramatis personae* of most of the ancient tragedies were heroes or gods, and their characters were so well known to the spectators, that they were perfectly typical. Every one therefore knew, immediately on the appearance of such a character on the stage, who it was, and it would have been difficult for a Greek audience to imagine that a god or hero should have had a face like that of an ordinary actor. The use of the cothurnus also rendered a proportionate enlargement of the countenance absolutely necessary, or else the figure of an actor would have been ridiculously disproportionate. Lastly, the solemn character of ancient tragedy did not admit of such a variety of expressions of the countenance as modern tragedies; the object of which seems to be to exhibit the whole range of human passions in all their wild and self-devouring play. How widely different are the characters of ancient tragedy! It is, as Müller (*Hist. of the Lit. of Anc. Greece*, i. p. 298) justly remarks, perfectly possible to imagine, for example, the Orestes of Aeschylus, the Ajax of Sophocles, or the Medea of Euripides, throughout the whole tragedy with the same countenance, though it would be difficult to assert the same of a character in any modern drama. But there is no necessity for supposing that the actors appeared throughout a whole piece with the same countenance: for if circumstances required it, they might surely change masks during the intervals between the acts of a piece. Whether the open or half-open mouth of a tragic mask also contributed to raise the voice of the actor, as Gellius (v. 7) thinks, cannot be decided here, though we know that all circumstances united to compel a tragic actor to acquire a loud and sonorous voice. The κωφὰ πρόσωπα appear to have had masks (Lucian, *Toxar.* 9; *de hist. conscr.* 4), also the chorus in Comedy (Schol. on Ar. *Nub.* 344; Theophr. *Char.* 6), and most probably the chorus in Tragedy, both because it was likely that all the performers should be fairly uniform in appearance, and also we are told that the Eumenides in Aeschylus's play had masks with snakes in their hair (Paus. i. 28, 6). Yet in certain illustrations, such as in Baumeister's *Denkmäler*, fig. 910, the κωφὰ πρόσωπα appear without masks.

The masks used in ancient tragedies were thus, for the most part, typical of certain characters, and consequently differed according to the age, sex, rank, and other peculiarities of the beings who were represented. Pollux, from whom we derive most of our information on this subject, enumerates (iv. 133, &c.) 28 typical or standing masks of tragedy: six for old men, eight for young men, eleven for females, and three for slaves. The number of masks was indefinite, which were not typical, but represented certain individuals with their personal peculiarities, such as the horned Actaeon, the blind Thamyris with one eye black and the other grey, the myriad-eyed Argus, Tyro with cheeks all bruised from the blows of Sidero; the representations of River and Mountain Gods, Centaurs, Titans, Giants, Indians, Tritons, the Minotaur, &c.; and such allegorical figures as Justice, Death, Madness, Drunkenness, Deceit, &c. See Pollux, iv.

141, 142, who mentions many more such *ἔκσκευα πρόσωπα*, as they were called. The only example of an *ἔκσκευον πρόσωπον* which we possess is from a very beautiful wall-painting from Pompeii, reproduced in Baumeister's *Denkmäler*, fig. 1947, p. 1851. It is Perseus with his Cap of Darkness and its griffin crest. The standing masks of tragedy are divided by Pollux (iv. 133–140) into five classes.

1. *Tragic masks for old men* (133–135).—The mask for the oldest man on the stage was called *ξυρίας ἀνήρ*, from the circumstance of the beard being smoothly shaved. The hair, which was in most cases attached to the masks, was white, and hung down with the exception of a part above the forehead, which was raised by a projection on the mask. This projection rose either into an acute angle (*λαβδοειδὲς* is the word Pollux uses), or was rounded at the top. It was called *ὄγκος*. The size of it varied chiefly according to the social position of the person represented. The chin of this mask was close shaved, the cheeks flat and hanging downwards. This would be the mask worn by Cadmus, and perhaps Priam (Suidas, *s. v. πριαμωθῆναι*). 2. A second mask for old men, called *λευκὸς ἀνήρ*, had grey hair, floating around the head in locks, the beard fixed to the mask and immovable (*γένειον πεπηγός*). It had drooping eyes and a palish colour (*παράλευκος*). This was perhaps the mask Tiresias would wear or the *παιδαγωγὸς* in Sophocles' *Electra* (43). 3. A third mask, called *σπαρτοπόλιος*, had black hair interspersed with grey, and was somewhat pale. It probably represented a hero of from 40 to 50 years, perhaps the mask of Oedipus (cf. Soph. *O. T.* 742 f.). 4. The fourth mask, *μέλας ἀνήρ*, represented a hero in his full vigour, with dark curly hair and beard, strong features and a high *ὄγκος*. This was probably the mask for most of the tragic heroes who were not very much advanced in age. 5, 6. For a secondary class of heroes there were two other masks, the *ξανθὸς* and the *ξανθότερος ἀνήρ*: the former represented a fair man with floating locks, a low *ὄγκος*, and a good colour in his countenance; the second or fairer man was pale and of a sickly appearance.

2. *Tragic masks for young men* (135–137).—Among these are mentioned: 1. The *νεανίσκος πάγχρηστος*, a mask intended to represent a man who had just entered the age of manhood, and was yet unbearded, but of a blooming and brownish complexion, and with a rich head of black hair. This is the mask to be given to such a character as Achilles in the *Iphigenia in Aulis*. The word *πάγχρηστος*, "all-excellent," is used possibly for the virtuous hero of the piece. 2. The *νεανίσκος οὖλος*, a fair youth of a haughty character; his hair was curly and attached to a high *ὄγκος*: his character was indicated by his raised eyebrows. A specimen of the *οὖλος νεανίσκος* is given above from a statue of Melpomene (*Mus. Borb.* xi. Tav. xlii.). 3. *Νεανίσκος πάρουλος*: resembled the preceding mask, but was somewhat younger. The counterpart of these two was (4) the *ἁπαλός*, a young man of a delicate and white complexion, with fair locks and a cheerful countenance, like that of a youthful god. 5, 6. *Πιναρός*. There were two masks of this name, both representing young men of a severe appearance, of yellow complexion and fair hair, gloomy and squalid (*κατηφής, δυσπινής*); the one, however, was thinner and younger. 7. *'Ωχρός*, a mask quite pale, with hollow cheeks and fair floating hair. It was used to represent sick or wounded persons. 8. The *πάρωχρος* might be used for the *πάγχρηστος* if this character was to be represented in a suffering condition or in love.

Mask of a young man. (*Mus. Borb.* xi. Tav. xlii.)

3. *Tragic masks for male slaves.*—Pollux (137, 138) mentions three—viz.: 1. The *διφθερίας*, "leather jerkined," which had no *ὄγκος*, but some sort of a covering (*περίκρανον*) round the smoothly-combed white hair. The countenance was pale, the beard grey, the nose sharp, the eyebrows raised, and the expression of the eyes gloomy. Perhaps like the *θεράπων* in the *Bacchae*. 2. The *σφηνοπώγων*, "wedge-like-bearded," represented a man in the prime of life with a high and broad forehead, a large *ὄγκος*, broad and rounded inwards at the top (*κοιλαινόμενον ἐν τῇ περιφορᾷ*), hard-featured and red like a messenger. 3. The *ἀνάσιμος*, or snub-nosed, had a high *ὄγκος* (*ὑπέρογκος*) with fair hair rising up on it; had a reddish face and no beard. He, too, acted as a messenger.

4. *Tragic masks for female slaves* (139).—Of these five specimens are given. 1. *Πολιὰ κατάκομος* (*i.e.* with long grey hair), originally called *παράχρωμος* (with altered colour). It represented an old woman with long grey hair, a small *ὄγκος*, pale and dignified to indicate one who had seen better days. 2. *Τὸ ἐλεύθερον γραΐδιον*, an old freed-woman with fair hair turning grey, hanging over a small *ὄγκος* down to the shoulders. She was apparently in mourning. 3. *Τὸ οἰκετικὸν γραΐδιον* had a covering for the head of sheep-skin instead of an *ὄγκος*; was very wrinkled. 4. *Τὸ οἰκετικὸν μεσόκουρον* ("with a tonsure," like that of monks) had a small *ὄγκος*, white skin, rather pallid; was not quite grey-haired. 5. *Διφθερῖτις* represented a young slave-girl without any *ὄγκος*.

5. *Tragic masks for free women* (140, 141).—Of these seven specimens are given. 1. *Κατάκομος ὠχρὰ* represented a pale lady with long black hair and a sad expression. She generally shared the sufferings of the principal hero in the play. On the next column is an example taken from Baumeister, *op. cit.* fig. 1945, p. 1849. 2. *Μεσόκουρος ὠχρὰ* resembled the former, only that she had a tonsure and was pale, as well acquainted with sorrow. 3. *Μεσόκουρος πρόσφατος* probably represented one who was just new to some great sorrow. Hence it had the tonsure for mourning,

but not the paleness of 2. 4. Κούριμος παρθένος had no ὄγκος, but hair smoothly combed down on each side of the head with a little cut off in front (καὶ βραχέα ἐν κύκλῳ περικέκαρται). This was the mask of Antigone and Electra (see Brunck, *Analect.* i. 500). 5. Ἑτέρα κούριμος παρθένος, like the other, except that her hair was floating about as if she was in the most violent grief. 6. The κόρη, or beautiful young girl, *e.g.* a daughter of Danaus.

Woman's Tragic Mask. (From a painting at Herculaneum.)

The account which Pollux gives of the tragic masks comprehends a great number, but it is small in comparison with the great variety of masks which the Greeks must have used in their various tragedies; for the distorted masks with widely open mouths, which are seen in great numbers among the paintings of Herculaneum and Pompeii (see the annexed woodcut from *Museo Borbon.* vol. i. tab. 20), would give but a very inadequate notion of the masks used at Athens during the most flourishing period of the arts. All the representations of tragic masks belonging to this period do not show the slightest trace of exaggeration or distortion in the features of the countenance, and the mouth is not opened wider than would be necessary to enable a person to pronounce such sounds as *oh* or *ha*. In later times, however, distortions and exaggerations were carried to a very great extent, but more particularly in comic masks, so that they in some degree were more caricatures than representations of ideal or real countenances (Philostr. *Vit. Apollon.* v. 9, p. 89, Kayser; Lucian, *de Saltat.* 27, *Anach.* 23, *Nigrin.* 11).

Mask, from a painting at Pompeii.

Masks, Tragic and Comic, from Pompeii.

The annexed woodcut represents some masks, one apparently comic and the other tragic, which are placed at the feet of the choragus in the celebrated mosaic found at Pompeii (*Museo Borbon.* vol. ii. tab. 56; Gell, *Pomp.* vol. i. pl. 45). The ὄγκος is fairly well represented.

II. Comic Masks.—In the Old Attic Comedy, in which living and distinguished persons were so often brought upon the stage, it was necessary that the masks, though to some extent they may have been caricatures, should in the main points be faithful portraits of the individuals whom they were intended to represent, as otherwise the object of the comic poets could not have been attained (Platon. *de Diff. Com.* p. xiv. v. 80, Dübner; Aristoph. *Eq.* 230, and Schol.). We know that no σκευοποιὸς ventured to make Cleon's mask; Aelian (*V. H.* ii. 13) says that the mask of Socrates in the *Clouds* was a faithful representation. Of course, the chorus of Birds and Clouds and such like had peculiar masks of their own, as also such out-of-the-way characters as Pseudartabas in the *Acharnians*. The masks of the characters in the Old Attic Comedy were therefore, on the whole, faithful to life, and free from the burlesque exaggerations which we see in the masks of later times. A change was made in the comic masks when it was forbidden to represent in comedy the archon by imitating his person upon the stage (Schol. *ad* Aristoph. *Nub.* 31); and still more, shortly after, by the extension of this law to all Athenian citizens (Schol. *ad* Aristoph. *Ach.* 1150, *Av.* 1297; Suid. *s. v.* Ἀντίμαχος). The consequence of such laws was, that the masks henceforth, instead of individuals, represented classes of men, *i.e.* they were masks typical of men of certain professions or trades, of a particular age or station in life, and some were grotesque caricatures. A number of standing characters or masks was thus introduced in comedy. In the New Comedy they were very ridiculous and unnatural-looking, with enormously wide and distorted mouths (Platon. *de Diff. Com.* p. xiv. 83–91), at least for the characters representing the lower orders and old men. Platonius says the reason was fear of caricaturing any influential Macedonian. Pollux gives a list of such standing masks, which are divided, like those of tragedy, into five classes.

1. *Comic masks for old men* (143–145).—Nine masks of this class are mentioned. The mask representing the oldest man was called πάππος πρῶτος: his head was shaved to the skin, he had a mild expression about his eyebrows, his beard was thick, his cheeks hollow, and his eyes melancholy. His complexion was pale, and the whole expression of the countenance was mild. 2. The πάππος ἕτερος was of a more emaciated and more vehement appearance, sad and pale; he had hair on his head and a beard, but the hair was red and his ears broken from boxing. 3. The ἡγεμὼν πρεσβύτης, likewise an old man, with a thin crown of hair round his head, an aquiline nose, and a flat countenance. His right eyebrow was higher than the left. (Cf. Quintil. xi. 3, 74: "alter erecto alter composito est supercilio; atque id ostendere maxime latus actoribus moris est quod cum iis quas agunt partibus congruat.") An example of the ἡγεμὼν πρεσβύτης is given below from Müller, fig. xxi. 1 = Baumeister, fig. 905 a. 4. The πρεσβύτης μακροπώγων had a long and floating beard, and likewise a crown of hair round his head; his eyebrows were raised, but his whole aspect was that of a dull man. 5. The Ἑρμώνειος was that

of a man getting bald (ἀναφαλαντίας, different from φαλακρός, actually bald, Bekk. *Anecd.* 16, 31), but it had a beard and raised eyebrows and was of a grim appearance. The name of the mask was derived either from an actor or a σκευοποιός, as was also that called Λυκομήδειος, No. 7. 6. The σφηνοπώγων, or wedge-like bearded mask, was likewise bald, had raised eyebrows, and looked rather ill-tempered (ὑποδύστροπος). 7. The Λυκομήδειος (cf. No. 5) had a thick long beard and had one eyebrow raised, as if absorbed in business. 8. The πορνοβοσκὸς was somewhat like the latter, but his lips were contorted to a grin, his eyebrows contracted, and his head either bald or getting bald. 9. The δεύτερος Ἑρμώνειος had a pointed beard, but otherwise no hair.

Ἡγεμὼν πρεσβύτης. (From a terra-cotta mask found at Vulci.)

The annexed comic mask, representing an old man, is taken from the *Museo Borbon.* vol. i. tab. A.

Comic Mask for an old man.

2. *Comic masks for young men* (146–148).—Pollux enumerates eleven masks of this kind. 1. The πάγχρηστος formed the transition from the old to the young men; he had but few wrinkles on his forehead, showed a muscular constitution (γυμναστικός), was rather red in the face, and slightly sun-burnt (ὑποκεχρωσμένος); the upper part of his head was bald, his hair was red, and his eyebrows raised. 2. The νεανίσκος μέλας was younger than the preceding one, and with low eyebrows. He represented a young man of good education and fond of gymnastic exercises. 3. The νεανίσκος οὖλος, or the thick-haired young man, was young and handsome, and of a blooming countenance, his eyebrows were extended, and there was only one wrinkle upon his forehead. 4. The νεανίσκος ἁπαλός: his hair was like that of the πάγχρηστος, but he was the youngest of all, and represented a tender and effeminate youth. 5. The ἄγροικος, or rustic young man, had a dark complexion, broad lips, a pug-nose, and a crown of hair round his head. 6. The ἐπίσειστος στρατιώτης was of dark complexion, and had long dark hair waving about. This would be the mask of the Miles Gloriosus. 7. The ἐπίσειστος δεύτερος was the same as the preceding, only younger and of a fair complexion. 8. The κόλαξ or the flatterer, and 9. the παράσιτος or parasite, were dark (compare Athen. vi. p. 237), and had aquiline noses. Both presented a luxurious and well-fed appearance (εὐπαθεῖς); the parasite, however, had broken ears, was merry-looking, and had a wicked expression about his eyebrows. 10. The εἰκονικός (*i.e.* like a statue) had a few grey hairs spread over his head, a close-shaved chin: the wearer was got up in splendid attire (εὐπάρυφος) and represented a stranger. He could also act a kind of parasite. Böttiger thinks we should read Σικυωνικός. 11. The Σικελικὸς was a third kind of parasite.

3. *Comic masks for male slaves* (149, 150).—Of this class seven masks are mentioned. 1. The mask representing a very old man was called πάππος: it had grey hair, and indicated that he had obtained his liberty. 2. The ἡγεμὼν θεράπων had his red hair plaited, raised eyebrows, and a contracted forehead. He was among slaves the same character as the πρεσβύτης among freemen. 3. The κάτω τριχίας, or κάτω τετριχωμένος, was half bald-headed, had red hair and raised eyebrows. 4. The οὖλος θεράπων, or the thick-haired slave, had red hair and a red countenance; he was without eyebrows, half-bald, and with squinting eyes. 5. The θεράπων Μαίσων was bald-headed and had red hair. Μαίσων was a character in a farce, like Maccus in the Atellanae, though Athenaeus (xiv. 659) and Festus (s. v. *Moeson*) say he was an actor. 6. The θεράπων τέττιξ was bald-headed and dark, but had two or three slips of hair on his head and on his chin, and he also had squinting eyes. Why he was called τέττιξ is not plain. Athenaeus (*l. c.*) says, ἐκάλουν οἱ παλαιοὶ τὸν μὲν πολιτικὸν μάγειρον Μαίσωνα, τὸν δ' ἐκτόπιον Τέττιγα. 7. The ἐπίσειστος ἡγεμὼν, or the audacious slave, resembled the ἡγεμὼν θεράπων with the exception of the hair.

4. *Comic masks for old women* (150, 151).—Pollux mentions three, viz.: 1. The γραΐδιον ἰσχνὸν or λυκαίνιον, the wolfish old woman, who was tall with many but small wrinkles, pale, and with squinting eyes. 2. The παχεῖα γραῦς, or the old woman with large wrinkles, and a band round her head keeping the hair together. 3. The γραΐδιον οἰκουρόν, or the domestic old woman. Her cheeks were hollow, and she had only two teeth on each side of her mouth.

5. *Comic masks for young women* (152–154).—Pollux mentions fourteen, viz.: 1. The γυνὴ λεκτική, or the talking woman; her hair was smoothly combed down, the eyebrows rather raised, and the complexion white. 2. The γυνὴ οὔλη was distinguished from the preceding only by the way she wore her hair. 3. The κόρη had her hair combed smoothly, had high and black eyebrows, and a white complexion. 4. The ψευδοκόρη had a whiter complexion than the former, her hair was bound up on the top of the head, and she was intended to represent a young woman who had been lately married. 5. Another mask of the same name was only distinguished from the former by the fact that the hair was not divided (τῷ ἀδιακρίτῳ τῆς κόμης). 6. The σπαρτοπόλιος λεκτική, an elderly woman who had once been a prostitute, and whose hair was partly grey. 7. The παλλακὴ resembled the former, but had a better head of hair (περίκομος). 8. The τέλειον ἑταιρικὸν was more red in the

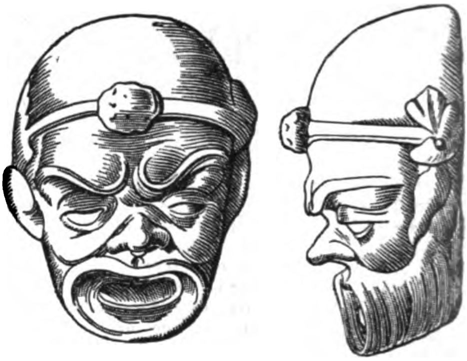
face than the *ψευδοκόρη*, and had locks about her ears. 9. The *ὡραῖον ἑταιρίδιον* was less got up (*ἀκαλλώπιστον*), and wore a band fastened round her head. 10. The *διάχρυσος ἑταίρα* derived the name from the gold with which her hair was adorned. 11. The *διάμιτρος ἑταίρα*, from the variegated band wound around her head. 12. The *λαμπάδιον*, from the circumstance of her hair being dressed in such a manner that it stood upright upon the head in the form of a lampas. 13. The *ἁβρὰ περίκουρος* represented a young female slave with her hair cut round (*περικεκαρμένον*), wearing only a white tucked-up chiton. 14. The *παράψηστον* (with straight hair) was that of a slave distinguished by her hair, and by a somewhat snub-nose: she wore a crocus-coloured chiton and represented an hetaera's servant.

It will be seen from the foregoing list that the chief points of distinction in the masks lay in the colour of the face, in the colour and arrangement of the hair, in the size of the *ὄγκος*, and in the eyebrows. It is to be noticed that the iris as well as the whites of the eyes must have been represented in the mask, as *e.g.* the *διφθερίας* (i. 3, 1) is said to have had *ὀφθαλμοὺς σκυθρωπούς*, the *πάππος πρῶτος* (ii. 1, 1) to have been *τὴν ὄψιν κατηφής*, the *γραΐδιὸν ἰσχνὸν* (ii. 4, 1) to have had squinting eyes, &c. Also it is to be noticed that the teeth are very rarely found in masks, and only once mentioned in Pollux's list (the *γραΐδιον οἰκουρόν*, ii. 4, 3).

Numerous as these masks are, the list cannot by any means be considered as complete, for we know that there were other standing masks for persons following particular kinds of trade, which are not mentioned in Pollux. Maeson of Megara, for example, is said to have invented a peculiar mask called after his own name *μαίσων*, another for a slave, and a third to represent a cook (Athen. xiv. p. 659). Compare Lucian, *Salt.* 27, for reference to special masks for cooks. These were a most prominent class in the New Comedy. From Athenaeus (*l. c.*) we also learn that Stephanus of Byzantium wrote a work *περὶ προσώπων*.

III. MASKS USED IN THE SATYRIC DRAMA (141).—The masks used in this species of the Greek drama were intended to represent Satyrs, Silenus, and similar companions of Dionysus, whence the expressions of the countenances and the form of their heads may easily be imagined. The other characters wore the ordinary tragic masks. Pollux only mentions the grey-headed Satyr, the bearded Satyr, the unbearded Satyr, and the *Σειληνὸς πάππος*. The latter (who perhaps occurs in the *Cyclops*) represented an old man, probably bald (Eur. *Cycl.* 227), rather like a brute (*θηριωδέστερον*). There appear to have been more than one kind of Silenus (Xen. *Symp.* 4, 19). All the Satyric characters appear to have had the ordinary snub-nose and pointed ears of Satyrs. The dress of the Silenus was called *χορταῖος* (Poll. iv. 118). A grotesque mask of a Satyr, together with one of the finest specimens of a tragic mask, is contained in the Townley Gallery in the British Museum, and is represented here. Another Satyric mask, probably that of the Silenus, is also reproduced from Müller, fig. 20, i. = Baumeister, fig. 1630.

Masks in British Museum.



Satyric Mask in front and profile, found in a grave at Vulci.

As regards the earliest representations of the regular drama among the Romans, it is expressly stated by Diomedes (i. 489, 10 Keil), that masks were not used, but merely the galerus or wig, so that the colour of the hair alone indicated in a way who the character was, according as it was white (for the old), black (for the young), or red (for slaves). In the time of Terence there appear to have been no masks used [cf. such a scene as Ter. *Phorm.* i. 4, 32 ff., and the numerous passages in which a remark is said to be made *voltu laeto* or *moesto* (e.g. *Andr.* iii. 3, 20) given by Hoffer, *de personarum usu in Terentii Comoediis*, 23–30, cf. 34]; and it was not till about 110 B.C. that Roscius, as he was not good-looking and had a squint, and his manager Minucius Prothymus, introduced them into tragedy. One Cincius Faliscus is said to have introduced them into comedy (Diomed. *l. c.*: Donat. *de Com. et Trag.* p. 10, 1, Reiff.); it was some time, however, before they met with approval (Cic. *de Orat.* iii. 59, 221). Aesopus sometimes acted without a mask (Cic. *de Div.* i. 37, 80). It should, however, be remembered that masks had been used long before that time in the Atellanae (Fest. s. v. *Personata*), so that the innovation of Roscius must have been confined to the regular drama; that is, to tragedy and comedy. As for the forms of Roman masks, it may be presumed that, being introduced from

Greece at so late a period, they had the same defects as those used in Greece at the time when the arts were in their decline, and this supposition is confirmed by all works of art, and the paintings of Herculaneum and Pompeii, in which masks are represented; for the masks appear unnaturally distorted and the mouth always wide open. The expressions of Roman writers also support this supposition. (Gellius, v. 7; Juv. iii. 175.) We may mention here that some of the oldest MSS. of Terence contain representations of Roman masks, and from these MSS. they have been copied in several modern editions of that poet, as in the edition published at Urbino in 1726, fol., and in that of Dacier. The cut annexed contains representations of four of these masks prefixed to the *Andria.*

Masks from the *Andria.*

When actors at Rome displeased their audience and were hissed, they were obliged to take off their masks; but those who acted in the Atellanae were not obliged to do so (Fest. s. v. *Personata fabula;* Macrob. *Sat.* ii. 7). The Roman mimes never wore masks. [Mimus.] (Compare Ficoroni, *Dissertatio de Larvis scenicis et Figuris comicis ant. Rom.*, Rome 1786 and 1750, 4to; Fr. Stieve, *Dissertatio de rei scenicae apud Romanos Origine;* Witzschel in Pauly, v. 1373–1380, s. v. *Persona;* F. Wieseler, *Theatergebäude und Denkmäler des Bühnenwesens;* Sommerbrodt, *Scaenica*, pp. 199–205; A. Müller, *Die Griechischen Bühnenalterthümer*, 270–289; Bernard Arnold in Baumeister's *Denkmäler*, s. vv. *Lustspiel, Satyrspiel, Schauspieler und Schauspielkunst,* and *Trauerspiel.*) [L. S.] [L. C. PETALISMUS. [Exsilium, Vol. I. p. 819.]

PE'TASUS. [Pilleus.]

PETAURISTAE. [Petaurum.]

PETAURUM (πέταυρον, πέτευρον) was, firstly, *a pole* or *perch* upon which fowls roosted (Theoc. xiii. 13; Pollux, x. 156): hence the better known use, *a spring-board* for acrobats (*petauristae*); in its simplest form a board balanced like a seesaw, from which the performers threw themselves ("corpora jactata petauro," Juv. xiv. 265; cf. Lucil. *fr.* 100); but it might be greatly elaborated, so that they sprang off through hoops, and performed as on a trapeze. The hoops were sometimes on fire, to increase the sensational character of the feat (Petron. 53). On Manilius v. 439–443 Professor Mayor says, "Perhaps a wheel hanging loose in the air, seated on which two jugglers keep the wheel in motion, alternately rising and falling: if either were thrown off, he must leap through flames and burning hoops." This does not give a very plain sense, and it seems pretty clear that the petaurum was not itself a wheel. In the lines referred to we seem rather to see two acrobats springing from an oscillating board, as above described, through the "flammas orbesque" (= the "circulos flammantes" of Petronius): when one has thus leapt off, the other remains for a moment with no one to balance him, while the board is just swinging back, and then he also leaps off. In Mart. xi. 21 one end of the springboard rests on a revolving wheel ("rota *impacta* petauro"), and the acrobat has apparently to pass on to the wheel, which may be the "graciles viae petauri" of Mart. ii. 86. Pollux (*l. c.*) seems to compare the πέταυρον to the contrivance in which Socrates appeared aloft in the *Clouds* of Aristophanes. This will favour the connexion suggested with μετέωρος. (See further authorities in Mayor's note on Juvenal, *l. c.;* Grasberger, *Erziehung*, i. 120.) [W. S.] [G. E. M.]

PETI'TOR. [Actor.]

PETO'RRITUM or **PETORITUM,** a four-wheeled carriage, which, like the Essedum, was adopted by the Romans in imitation of the Gauls (Quint. i. 5, 57; Plin. *H. N.* xxxiv. § 163; Gell. xv. 30). Its name is with probability derived from the Celtic *petvar* or *petwar*, "four," and *rit*, "a wheel." Festus (*s. v.*) observes that *petor* meant "four" in Oscan and in Aeolic Greek. There is no reason to question this statement; but it is probable that Gellius is right in saying that the name as well as the fashion came from Gaul. Ginzrot (who curiously confuses *ducenda* with *ducenta* in Hor. *Sat.* i. 6, 104) asserts that the *petorritum* was a two-wheeled carriage, on the ground that Ausonius (*Ep.* 8, 5) uses the expression "*imposta* petorrita:" he omits to notice that the same author in *Ep.* 5, 35 writes, "*subjuncta* petorrita." In truth, the carriage can be said to be *impostum* through the yoke as well as through the shafts; and the evidence from Festus, who derives the word from *four*, is conclusive. It differed from the Reda in being of rougher and commoner construction and in having no cover. From its less luxurious make, it was intended specially (though probably not exclusively) to convey the household of servants on journeys, while the master travelled in a reda (Schol. Cruq. *ad* Hor. *Ep.* ii. 1, 192). It was perhaps generally drawn by a pair of mules, as in both the passages cited from Ausonius. (Ginzrot, *Wagen der Alten Völker*, i. 224; Becker-Göll, *Gallus*, iii. 21; Marquardt, *Privatleben*, 734.) [J. Y.] [G. E. M.]

PEZETAERI (πεζέταιροι). [Exercitus, Vol. I. p. 777.]

PHAECA'SIA. [Calceus, Vol. I. p. 333.]

PHALANGAE (φάλαγγες), any long cylindrical pieces of wood, such as trunks of trees (Herod. iii. 97; Plin. *H. N.* xii. § 17), truncheons (Plin. *H. N.* vii. § 200). Hence it had two special meanings: (1) poles used to carry burdens, being supported on the shoulders of the carriers with the burden hanging below by ropes. The carriers were called *phalangarii*, and also *hexaphori*, *tetraphori*, &c., according to their number (*C. I. L.* vi. 1785; Non. p. 163, 26; Vitruv. x. 8). (2) The word also signified *rollers* placed under ships to move them on dry land, so as to draw them up on shore (*subducere*) or down into the water (*deducere*). They are the *machinae* of Hor. *Od.* i. 4. 2 (cf. δουράτεοι κύλινδροι, Brunck, *Anal.* iii. 89; Apoll. Rhod. i. 375-389). The rollers were aided by levers (for which the oars were sometimes used) and ropes, often doubled so that the sailors pressed with their breasts, as in ordinary towing (Orph. *Arg.* 239-273). They were employed in the same manner to move military engines (Caes. *Bell. Civ.* ii. 10). [W. S.] [G. E. M.]

PHALANX. [Exercitus, Vol. I. pp. 768-779.]

PHALA'RICA. [Hasta.]

PHA'LERAE. The Latin word is probably derived from its Greek equivalent, φάλαρα (τά). Oddly enough, the singular, both in Latin and Greek, only occurs once in literature, φάλαρον, in Aeschylus, *Persae*, 661, and *phalera*, in a quotation from an old annalist given by Pliny (*H. N.* xxxiii. § 8). (Some commentators regard it as neut. plur.; others amend the text.)

The only passage in Homer where τὰ φάλαρα are mentioned is in the description of the Trojan attack on the Achaean ships (*Il.* xvi. 105). The poet says that the helm of Ajax rang out, as it was struck ever and anon, κὰπ φάλαρα εὐποίητα,—a use of the word very different from that of classical Greek, where it is only used of the ornaments of horses' harness. The old grammarians understood the meaning to be somewhat the same as in later times, and interpreted it as denoting disks worn as ornaments on the vizor of the helmet. Buttmann, however, maintained that they ornamented the strap of the helmet; but this, as Helbig shows (*Das homerische Epos*, ed. 1887, p. 305), assumes a form of helmet not known to Homer. Commentators since Buttmann have been inclined to connect the word, as synonymous, with φάλοι, meaning the ridges to which the crest was fixed; but as the same helmet could be τετραφάληρος and yet ἀμφίφαλος, this must be wrong. Helbig, from the analogy of ancient Italian and Phoenician helmets, decides (*op. cit.* p. 307) that they were studs or bosses, not on the vizor, as the grammarians said, but on the lower part of the casque near the cheek-pieces. There may possibly be a reminiscence of this old meaning in Aeschylus (*Pers.* 661), when he speaks of the φάλαρον of the tiara of the great king. With these exceptions, the word is always used of the metal disks or crescents with which a horse's harness was ornamented. These ornaments, which were used not only in Greece but all over the ancient world, are frequently mentioned, and received different names according to the part of the harness to which they were attached. Thus, the προμετωπίδια (=*frontalia*) were on the brow (Xen. *Cyrop.* vi. 4, 1; vii. 1, 2), the παρήια (Hom. *Il.* iv. 141) and the παραγναθίδες on the cheeks, the ἀνθήλια and παρώπια near the eyes, while the προστερνίδια (Xen. *Anab.* i. 8, 7; *de Re Eq.* 12, 8) and προστηθίδια were on the breast. They were occasionally worn by other animals, as, for instance, by the asses and bulls in the great *pompa* of Ptolemy II. and by the elephants of Antiochus (Liv. xxxvii. 40; and Plin. *H. N.* viii. § 12). They were made not only of bronze, but of silver (Liv. xxii. 52), and even of gold (Herod. i. 215, speaking of the Scythians). They were sometimes jewelled (Appian, *Mithrad.* 115), and were as a rule covered with most artistic designs, so that they were often of great value (cf. Cic. *in Verr.* iv. 12, 29). One of the most favourite ornamentations was the well-known Gorgon's head (Eur. *Rhesus*, 306).

Phalerae, from statue of Alexander. (Naples Museum.)

The Romans attached even more importance to *phalerae* than the Greeks, and Juvenal sarcastically describes the soldier of the old school who cut up masterpieces of chased work "ut phaleris gauderet ecus" (*Sat.* xi. 103). This was no doubt, to a large extent, owing to the Roman custom of bestowing them as *dona militaria*, not only to the cavalry, but also to the infantry. Polybius (vi. 29) says that φιάλαι were given to the infantry and φάλαρα to the cavalry, the difference being probably that the former were without, the latter with ornament. In any case, though there is no distinction in Latin, it would be straining Greek usage to apply the word to ornaments worn by a soldier. However this may be, both kinds of *phalerae* were worn by the soldiers themselves along with the *torques*, *armillae*, *catellae*, *fibulae*, and other military decorations, and as such are mentioned frequently in Latin literature (Verg. *Aen.* ix. 359; Florus, iii. 10, 26; Liv. ix. 46). These, like the Greek φάλαρα, were made of gold and silver no less than bronze (Polyb. xxxi. 3; Plin. *H. N.* xxxvii. § 74). Necklaces worn by women were also occasionally called *phalerae* (P. Syrus quoted by Petronius, 55), as were, too, those worn by the slaves of rich Romans (Suet. *Ner.* 30). In later writers it was used of any kind of external ornament (cf. Pers. iii. 21; Symmach. *Ep.* init. § 222).

In art not only are φάλαρα and *phalerae* shown on monuments of all ages, but the actual ornaments have been frequently found all over the ancient world. The most important of these finds have been made in the Crimea, where, at Great Blisnitza alone, no less than four complete sets of harness were found. The *phalerae* consisted of 20 round disks (ἀσπιδίσκοι, Pollux and Suidas), four lenticular plates, and several crescents. All are of the same make, consisting of a bronze plate, to the top of which a thin piece of metal with a design in hammered work is soldered. In spite of their being crushed, the beauty of the designs, representing Greeks and Amazons and gods and giants in single combat, is very apparent. As a rule, however, such phalerae are ornamented with busts of Aphrodite, Athene, and other deities. The Gorgon's head is the most favourite design, and is interesting as showing that the figures were intended to be *prophylactic* (ἀποτρόπαια). The crescents which are frequently found with the other forms have doubtless the same purpose. One of the most curious varieties is that in which two boar's or other curved teeth are joined together at the base, forming a crescent. This is not only common on monuments and in the graves, but is mentioned in literature, as when Statius (*Theb.* ix. 689) speaks of "niveo lunata monilia dente" (for other references see Stephani, *Compte Rendu*, 1865, p. 180). These crescents of teeth are also seen in antique necklaces, have been found in Saxon graves, and are still in use for the same purpose in parts of Europe, Africa, and Asia. The monuments show that the *phalerae* were worn not only at the joints of the harness, but in long strings round the breast of the horse. The horse of the celebrated bronze equestrian statue from Herculaneum in the Naples Museum, generally known as Alexander the Great, is one of the best instances, showing particularly well the Gorgon's head at the horse's breast. There is a fine chain of pendent *phalerae* (pensilia) in the British Museum, and a very similar one in Vienna (see Arneth, *Die antiken Gold u. Silber Monumente*, S. 1, 1; Vienna, 1850).

String of Phalerae. (From British Museum.)

Roman *phalerae* as worn by soldiers are shown on many gravestones of veterans, who are represented as seated on rearing chargers with enormous *phalerae*, or as wearing the *phalerae* on their breast, with the other *dona militaria*. These were of considerable weight, and were worn on a framework of leather straps, which hung from the shoulders, was braced across the chest with three or four straps, and supported the *phalerae*. On many coins these leather frameworks are represented without a wearer. The best examples of such ornaments are those found near Lanersfort, now in the Museum at Berlin. Like the Greek, they consist of bronze disks covered with a thin plate of hammered silver, ornamented with heads of deities and genii, in high relief; the space underneath the silver being filled up with bitumen. On the back is a stout hasp, by which they were attached to the harness or the leather framework just mentioned. In many cases *phalerae* of this description have pendants in the shape of leaves hanging from them, and specimens of these are very numerous. Besides these undoubted *phalerae*, there are many brooches and necklaces of so similar a description that there seems to be no good reason to refuse them the name, since we know that women occasionally wore them.

Cippus of M. Cælius.

The custom of giving *phalerae* as rewards for good service seems to have been discontinued in the time of Caracalla, who began the custom of giving large gold medals with the emperor's bust in relief instead, especially to the semi-barbarous chieftains on the Danube frontier.

[The best account of φάλαρα, both literary and monumental, is given by Stephani in the *Compte Rendu de la Commission Impériale* for 1865 (St. Petersburg, 1866); the best of the Roman *phalerae* in Otto Jahn's *Die Lanersforter Phalerae*, Bonn, 1860, and Marquardt, *Handbuch*, vii. p. 655 foll., where references to the later literature will be found. The best illustrations are in the *Atlas* of the *Compte Rendu* and in Lindenschmidt's *Tracht und Bewaffnung des römischen Heeres während der Kaiserzeit*, 1882.] [W. C. F. A.]

PHARETRA (φαρέτρα, *ap.* Herod. φαρετρεών), a quiver. A quiver, full of arrows, was the usual accompaniment of the bow. [ARCUS.] It was consequently part of the attire of every nation addicted to archery. Virgil applies to it the epithets *Cressa*, *Lycia* (*Georg.* iii. 345; *Aen.* vii. 816); Ovid mentions the *pharetratus Geta* (*Epist. de Ponto*, i. 8, 6); Herodotus represents it as part of the ordinary armour of the Persians (vii. 61). The quiver, like the bow-case (*corytus*), was principally made of hide or leather (Herod. ii. 141), but also of wood or metal. It was adorned with gold (Anacr. xiv. 6; Verg. *Aen.* iv. 138, xi. 858), painting (Ovid, *Epist. Her.* xxi. 173), and braiding (πολύρραπτον, Theocr. xxv. 265). It had a lid (πῶμα, Hom. *Il.* iv. 116; *Od.* ix. 314). Among the Scythians the quiver and bow-case formed one object (cf. *Antiq. du Bosp. Cimm.* i. pl. 33).

Scythians with bow-case and quiver.

The form of the Greek quiver is shown in the cut below. It was suspended from the right shoulder by a belt [Balteus], passing over the breast and behind the back. Its most common position was on the left hip, in the usual place of the modern sword, and consequently, as Pindar says, "under the elbow" (*Ol.* ii. 151, s. 92) or "under the arm" (ὑπωλένιον, Theocr. xvii. 30). It was worn thus by the Scythians (Schol. *in* Pind. *l. c.*) and by the Egyptians, and is so represented in the preceding figure of the Amazon Dinomache, copied from a Greek vase (Hope, *Costume of the Ancients*, i. 22). The left-hand figure in the same woodcut is from one of the Aegina marbles. It is the statue of an Asiatic archer, probably Paris, whose quiver (fractured in the original) is suspended equally low, but with the opening towards his right elbow, so that it would be necessary for him in taking the arrows to pass his hand behind his body instead of before it. To this fashion was opposed the Cretan method of carrying the quiver, which is exemplified in the woodcut, Vol. I. p. 416, and is uniformly seen in the ancient statues of Artemis. [J. Y.] [A. H. S.]

Pharetrae. (Left-hand figure from the Aeginetan Marbles; right-hand figure from a Greek vase.)

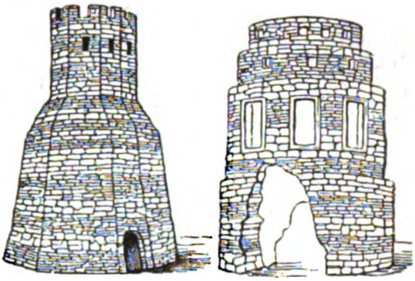
PHARMACON GRAPHE (φαρμάκων γραφή, Dem. *c. Aristocr.* p. 627, § 22, etc.; φαρμακείας κατηγορία, only in *argum.* Antiph. *c. Noverc.*), an indictment against one who caused the death of another by poison, given either by himself or by another person at his instigation (Dem. *c. Aristocr.* p. 628, § 24= p. 627, § 22 *lex*, and Andoc. *Myst.* § 94, τὸν βουλεύσαντα ἐν τῷ αὐτῷ ἐνέχεσθαι καὶ τὸν τῇ χειρὶ ἐργασάμενον: it was under this latter law that the charge of poisoning was brought against the stepmother (Antiph. *Or.* i.: cf. § 20, ἡ δὲ αἰτία ἤδη, καὶ ἐνθυμηθεῖσα καὶ χειρουργήσασα, *i.e.* ἡ πέμψασα τὸ φάρμακον καὶ κελεύσασα ἐκείνῳ δοῦναι πιεῖν, § 26). It was tried by the court of Areiopagus (Dem. *l.* c., and Pollux, viii. 117). That the malicious intent (πρόνοια) was a necessary ingredient in the crime follows from Arist. *Magn. Mor.* i. 17, p. 1188 b, 31, whence we learn that the Areiopagus once acquitted a woman who had given a love potion with fatal results to a man, ὅτι τὴν δόσιν τοῦ φίλτρου οὐ μετὰ διανοίας τοῦ ἀπολέσθαι αὐτὸν ἐδίδου (the woman in Antiph. *c. Nov.* § 20 was put to death for the same offence, but she was a slave). Hence the case in Antiph. *sup. Choreut.* is not an instance of the indictment under discussion, for the boy Diodotus was poisoned by a draught given him to improve his voice (εὐφωνίας χάριν ἔπιε φάρμακον καὶ πιὼν τέθνηκεν, *argum*). The punishment was death (Aelian, *V. H.* v. 18; Plut. *de Ser. Numin. vindic.* 7, p. 552 D). Poisonous drugs were frequently administered as love potions or for other purposes of a similar nature (Alciphr. *Ep.* i. 37). Men whose minds were affected by them were said φαρμακᾶν. Wills made by a man under the influence of drugs (ὑπὸ φαρμάκων) were void at Athens (Dem. *c. Steph.* p. 1133, § 16). Women who practised sorcery were called φαρμακίδες or φαρμακεύτριαι (Lucian, *Dial. Mer.* 4; Theocr. ii.). Demosthenes, as we learn from Philochorus (Harpocr. *s. v.* Θεωρίς), brought a γραφὴ ἀσεβείας against the Lemnian Theoris; she was put to death (Plut. *Dem.* 14; [Dem.] *c. Aristog.* i. p. 793, § 79), and Ninus suffered a like fate (Dem. *F. L.* p. 431, § 281) on a charge brought by Menecles, ὡς φίλτρα ποιούσης τοῖς νέοις (Schol. to Dem. *l. c.*; cf. *c. Boeot.* i. p. 995, § 2; ii. p. 1010, § 9); see also Plat. *Legg.* xi. p. 933 D. (*Att. Process*, ed. Lipsius, p. 382 f.) [C. R. K.] [H. H.]

PHARMACOPO'LA (φαρμακοπώλης), quack doctors and drug-sellers who not only kept shops or booths for their goods, but also hawked them about. Lucian (*pro Merc. Cond.* 7) describes one as hawking (ἀποκηρύττων) his cough-mixture in the streets, and promising an immediate cure to all sufferers (cf. Aristoph. *Thesm.* 504). Plutarch (*de Prof. in Virt.* 8) distinguishes the ἰατρεύων, or trained physician, from the mere charlatan, τὰ φάρμακα ἢ τὰ μίγματα πωλῶν. From Aristoph. *Nub.* 766, and Lucian, *Amor.* 39, we gather that they sold other wares also. In Rome there were many quacks of this sort, who, besides the sale of drugs, professed to cure patients also, whence Pliny complains of the want of a law to punish ignorance in doctors (*H. N.* xxix. § 18; Medicus). Regular medicines under the Empire were sold with a label (ἐπαγγελία) affixed, which specified the name of the drug, of its inventor, the illnesses which it cured, the component parts, and the method of taking it. These were no doubt generally written in a perishable form, but some for eye medicines, engraved on stone, have been preserved (Mommsen, *Epig.* ii. 450). The drugs for compounding the medicines were often brought from distant places (see Marquardt, *Privatleben*, p. 781) and obtained from drug-sellers (whom Galen, xii. 587, calls *μυροπῶλαι* as well as *φαρμακοπῶλαι*, since a great part were cosmetics). The physicians, however, commonly bought not merely the materials but the drugs ready compounded, and the pharmacopola traded on his own account, selling to the public his own compounds, often no doubt counterfeit, inducing the credulous to put themselves under his treatment (Hor. *Sat.* i. 2, 1; Gell. i. 15, 9), and carrying his drugs about to country towns as the *pharmacopola circumforaneus* of Cic. *pro Cluent.* 14, 40, who is not scrupulous about selling poisons as well. (Becker-Göll, *Charikles*, iii. 59; Marquardt, *Privatleben*, 780; Blümner, *Technologie*, i. 354; Friedländer, *S. G.* i. 317.) [G. E. M.]

PHAROS or **PHARUS** (*φάρος*), a lighthouse. The most celebrated lighthouse of antiquity was that situated at the entrance to the port of Alexandria. It was built by Sostratus of Cnidos on an island, which bore the same name, by command of one of the Ptolemies, and at an expense of 800 talents (Plin. *H. N.* xxxvi. § 83; Steph. Byz. *s. v.* *Φάρος*; Achill. Tat. v. 6). It was square, constructed of white stone, and with admirable art; exceedingly lofty, and in all respects of great dimensions (Caesar, *Bell. Civ.* iii. 112). It contained many stories (*πολυώροφον*, Strabo, xvii. p. 791), which diminished in width from below upwards (Herodian, iv. 3). The upper stories had windows looking seawards, and torches or fires were kept burning in them by night in order to guide vessels into the harbour (Val. Flacc. vii. 84; see Bartoli, *Luc. Ant.* iii. 12).

Pliny (*l. c.*) mentions the lighthouses of Ostia and Ravenna, and says that there were similar towers at many other places. They are represented on the medals of Apamea and other maritime cities. The name of Pharos was given to them in allusion to that of Alexandria, which was the model for their construction (Herodian, *l. c.*; Sueton. *Claud.* 20). The Pharos of Brundusium, for example, was, like that of Alexandria, an island with a lighthouse upon it (Mela, ii. 7, § 13; Steph. Byz. *l. c.*). Suetonius (*Tiber.* 74) mentions another pharos at Capreae. Trajan's breakwater at Centum Cellae (Civita Vecchia) had a lighthouse at each end (Plin. *Ep.* vi. 31), to which Merivale (*Hist.* vii. 253) seems to refer the "Pharos Tyrrhena" in Juv. xii. 75. This is, however, probably the lighthouse at the *Portus Romanus* or *Portus Augusti* formed by Claudius two miles N. of Ostia and improved by Trajan (Suet. *Claud.* 20; Dio Cass. lx. 11; Mayor's note *ad* Juv. *l. c.*).

The annexed woodcut shows two phari remaining in Britain. The first is within the precincts of Dover Castle. It is about 40 feet high, octagonal externally, tapering from below upwards, and built with narrow courses of brick and much wider courses of stone in alternate portions. The space within the tower is square, the sides of the octagon without and of the square within being equal, viz., each 15 Roman feet. The door is seen at the bottom (Stukeley, *Itin. Curios.* p. 129). A similar pharos formerly existed at Boulogne, and is supposed to have been built by Caligula (Sueton. *Calig.* 46; Montfaucon, *Supplem.* vol. iv. L. vi. 3, 4). The round tower here introduced is on the summit of a hill on the coast of Flintshire (Pennant, *Par. of Whiteford and Holywell*, p. 112).



Roman Lighthouses in Britain.

Baumeister (*Denkmäler*, fig. 1688) shows a relief from the Torlonia Museum of the lighthouse at the Roman Port, a round tower at the edge of the quay with beacon flames rising from its summit. A tower without flames is shown on a denarius of Sext. Pompeius as the lighthouse at Messina (Id. *ib.* p. 957). [J. Y.] [G. E. M.]

PHASIS (*φάσις*) was often used in a general sense to denote any kind of information (Pollux, viii. 47, *κοινῶς δὲ φ. ἐκαλοῦντο πᾶσαι αἱ μηνύσεις τῶν λανθανόντων ἀδικημάτων*), but technically it was one of the various methods by which public offenders at Athens might be prosecuted (Andoc. *de Myst.* § 88, *ἢ γραφαὶ ἢ φάσεις ἢ ἐνδείξεις ἢ ἀπαγωγαί*: cf. [Dem.] *c. Aristog.* i. p. 793, § 78, etc.). The charge, as in the *γραφή*, was made in writing (also called *φάσις*), with the names of the prosecutor and defendant, the proposed penalty (*τίμημα*), and the names of the *κλητῆρες* affixed (Pollux, *l. c.*; [Dem.] *c. Theocr.* p. 1323, § 5 ff.). The peculiarity by which the *φάσις* was distinguished from other methods of prosecution seems to have been that, if the prosecution was one of a purely public nature, *i.e.* where the offence immediately affected the state, the prosecutor received half the penalty (*τὰ ἡμίση τῶν φανθέντων*, [Dem.] *c. Theocr.* p. 1325, § 13;—*C. I. A.* ii. No. 203 b; cf. No. 17, l. 41 ff.; No. 546, ll. 18, 28;—Plat. *Legg.* v. p. 745 A). According to Pollux (*l. c.*), it might be brought against five classes of offenders: viz. 1st, against those who committed offences against the mining laws,—*e.g.* those who encroached in their mining operations on the district reserved by the state as its own (*ἐντὸς τῶν μέτρων*, Hyper. *pro Eux.* c. 44 f.; *Att. Process*, ed. Lipsius, p. 1020 f.), those working unregistered mines (*ἀναπόγραφα μέταλλα*, Hyper. *l. c.* c. 43; Heffter, *Athen. Gerichtsverf.* p. 188); cf. Photius, *s. v.*; *Lex. Rhet. Cantabr.* p. 676, 23, emended by Meier, etc.;—2nd, against those who committed offences against the laws and customs,—*e.g.* those who conveyed corn anywhere but to Athens, or lent money for any other mart but Athens ([Dem.] *c. Lacr.* p. 940, § 50 f.; Dem. *c. Phorm.* p. 918, 37; Lyc. *c. Leocr.* § 27; Dem. *c. Dionysod.* p. 1284, § 6, cf. Platner, *Proc.*

u. Klag. ii. p. 358 ff.), or who contravened the regulations of import and export (*C. I. A.* i. No. 31, i. A; ii. No. 546) by importing goods from hostile countries (Aristoph. *Acharn.* 819 f., 908 f.; Isocr. *Trap.* § 42), or exporting arms and ship-building material to the enemy (Dem. *F. L.* p. 433, § 286; Aristoph. *Eq.* 278, *Ran.* 362) or by defrauding the customs (Aristoph. *Eq.* 300);—3rd, against those who appropriated state property *sine justo titulo* (Isocr. *c. Callim.* § 6; *Lex. Rhet. Cantabr.* p. 676, 23. Harpocration's definition is too narrow, *ὅταν τις ἀποφαίνῃ τῶν δημοσίων ἔχοντα μὴ πριάμενον*: see also Bekk. *Anecd.* 315, 16, *κατὰ τῶν ἀδικούντων χωρίον ἢ οἰκίαν ἤ τι τῶν δημοσίων*);—4th, against *συκοφάνται*—*i.e.* those who brought false accusations against others, not in general, but for the offences enumerated above (Schömann, *de Com.* p. 178, n. 19):—5th, against guardians who wronged their wards (Dem. *c. Naus. et Xen.* p. 991, § 23; Harpocr. *s. v.*). Pollux (*l. c.*) goes on to say, *ἐφαίνοντο δὲ πρὸς τὸν ἄρχοντα*: here as in the following paragraphs *ἄρχων* is used in a more general sense, denoting any magistrate to whom a jurisdiction belonged. Before the archon only a *φάσις* against guardians might be preferred; but the *σύνδικοι* were the presiding magistrates in all cases of appropriation of public property *sine justo titulo* [SYNDIKOI, 2], and the *ἐπιμεληταὶ τοῦ ἐμπορίου* in all cases of offences against the import and export laws, whilst offences relating to the mines and customs and cases of false accusations came before the thesmothetae. All *φάσεις* were *τιμητοὶ ἀγῶνες*. In prosecutions against fraudulent guardians the *τίμημα* went to the wards (Pollux, *l. c.* *τὸ τιμηθὲν ἐγίγνετο τῶν ἀδικουμένων εἰ καί τις ἄλλος ὑπὲρ αὐτῶν φήνειεν*: Schömann, *Antiq. Jur. Publ.* p. 271, n. 4, the prosecutor probably receiving a share of it); in other cases it was shared by the state and the prosecutor; sometimes a severer punishment than a fine was inflicted (Dem. *c. Phorm.* p. 918, § 37, *τὰ ἔσχατα ἐπιτίμια*: cf. Lyc. *c. Leocr.* § 27), and the cargoes and ships of those contravening the export and import laws were confiscated (Boeckh, *Seeurk.* p. 230; cf. Dem. *c. Mid.* p. 558, § 133). The prosecutor was probably liable to the payment of *πρυτανεῖα*, inasmuch as he might reap advantage from the result; if he failed to obtain a fifth part of the votes, he was subject to the fine of a thousand drachmas and partial disfranchisement (Dem. *c. Theocr.* p. 1326, § 6; *Lex. Rhet. Cantabr.* p. 677, 10). Pollux (*l. c.*), it is true, says that in that case he was liable to the *ἐπωβελία*, but he very probably confounds the two fines. We have no speech left us by the Orators on the subject of a *φάσις*, but only mention of a lost speech of Lysias, *πρὸς τὴν φάσιν τοῦ ὀρφανικοῦ οἴκου* (Harpocr. *s. v.* = *fragm.* 203).

The proceedings taken against those who cut down more olive-trees than the law permitted resembled much those of the *φάσις*: the offender had to pay for each tree a fine of a hundred drachmas to the state, and a like sum *τῷ ἰδιώτῃ τῷ ἐπεξιόντι*, and the prosecutor had to pay *πρυτανεῖα τοῦ αὐτοῦ μέρους* ([Dem.] *c. Macart.* p. 1074, § 71, *lex*). (*Att. Process*, ed. Lipsius, pp. 294–302, 812). [C. R. K.] [H. H.]

PHI'ALA. [PATERA.]

PHONOS (*φόνος*), homicide. The feelings and customs of the Greeks with regard to homicide in general underwent a great change during the early historical period. From the Heroic age downwards, two primitive notions may be traced at work, yielding in different degrees to more modern and civilised ideas: the right and duty of private revenge, passing subsequently into public prosecution and punishment; and the feeling that all homicide, however justifiable or accidental, required a ceremonial purification (cf. Antiph. *de Caed. Herod.* § 11; DICASTERION). Both these institutions are common to primitive societies in general; they are represented by the "avenger of blood" and the "cities of refuge" in the Mosaic law; and the former, at least, is not yet extinct where society fails in the duty of repressing violence. There are still, in America, "parts of the Southern States in which homicide goes unpunished, except by the relatives of the slain" (Bryce, *Amer. Commonwealth*, iii. 150). The parallel between early Greece and early Germany, whether as described by Tacitus or in the post-Roman Teutonic codes, is instructively worked out by Grote (pt. i. ch. 20 = i. 483 ff.).

At Athens the right of private vengeance was discountenanced and driven into the background as early as the Draconian legislation. It survived only in a few special cases: the adulterer caught in the act might be put to death by the injured husband; and personal chastity might be defended, even by bloodshed, against the worst form of *ὕβρις*. The kinsmen of the deceased were no longer allowed to take the law into their own hands, but they were the legitimate and authorised prosecutors.

By the Attic law of historic times, homicide was either *ἐκούσιος* or *ἀκούσιος*, a distinction which corresponds in some measure, but not exactly, with our *murder* and *manslaughter*; for the *φόνος ἐκούσιος* might fall within the description of justifiable homicide, while *φόνος ἀκούσιος* might be excusable homicide (*Att. Process*, pp. 377–8, Lips.). According to the different circumstances under which the homicide was committed, the tribunal to which the case was referred, and the modes of proceeding at Athens, varied. All *φονικαὶ δίκαι* belonged to the jurisdiction of the *ἄρχων βασιλεὺς* as *ἡγεμὼν δικαστηρίου*. He was anciently the sole judge in cases of unintentional homicide; for such an act was considered in a religious point of view, as being a pollution of the city; and it became his duty, as guardian of religion, to take care that the pollution (*ἄγος*) was duly expiated. On the *ἐφέται*, by whom the *ἄρχων βασιλεὺς* was assisted, see EPHETAE in Vol. I. In discussing this subject we have to consider the various courts established at Athens for the trial of homicide, the different species of crime therein respectively prosecuted, the manner of proceeding against the criminal, and the nature of the punishment to which he was liable.

Solon, who seems to have remodelled the court of Areiopagus, enacted that this court should try cases of murder and malicious wounding, besides arson and poisoning (Dem. *c. Aristocr.* p. 627, § 22). One would be deemed a murderer who instigated another to commit the deed, provided the purpose were accomplished (Dem. c. *Conon.* p. 1264, § 25; Matthiae, *de Jud. Ath.* p. 148). Besides the court of Areiopagus, there were four other courts, of which the ἐφέται were judges: τὸ ἐπὶ Παλλαδίῳ, τὸ ἐπὶ Δελφινίῳ, τὸ ἐπὶ Πρυτανείῳ, and τὸ ἐν Φρεαττοῖ (Harpocr. et Suid. *s. v.* Ἐφέται). To the court ἐπὶ Παλλαδίῳ belonged cases of accidental homicide, manslaughter, and attempts to commit murder (βουλεύσεις). Such a case as that mentioned by Demosthenes (*c. Neaer.* p. 1348, § 9), of an unlawful blow followed by death, would be manslaughter. It seems also that this court had a concurrent jurisdiction with the Areiopagus in charges of murderous conspiracy, which was carried into effect. The law perhaps allowed the prosecutor to waive the heavier charge, and proceed against the offender for the conspiracy only. (Harpocr. *s. v.* Βουλεύσεως: Antiph. *Tetral.* iii. β, § 5; Matt. p. 150.) As to the supposed origin of this court, see Harpocr. *s. v.* Ἐπὶ Παλλαδίῳ: Pollux, viii. 118. To the court ἐπὶ Δελφινίῳ were referred cases where the party confessed the deed, but justified it; ἄν τις ὁμολογῇ μὲν κτεῖναι, ἐννόμως δὲ φῇ δεδρακέναι. Demosthenes calls it ἁγιώτατον καὶ φρικωδέστατον (*c. Aristocr.* p. 644, § 74; Harpocr. *s. v.* Ἐπὶ Δελφινίῳ: Pollux, viii. 119). In the court ἐπὶ Πρυτανείῳ the objects of prosecution were inanimate things, as wood, stone, or iron, which had caused the death of a man by falling on him (Apsychon Diké; add to references *Att. Process*, p. 131, Lips.; Suidas, *s. v.* Νίκων: Aeschin. c. *Ctes.* § 244). Matthiae (p. 154) thinks there was an ulterior object in the investigation, viz. that, by the production of the instrument by which death was inflicted, a clue might be found to the discovery of the real murderer, if any. The court ἐν Φρεαττοῖ was reserved for a peculiar case; where a man, after going into exile for an unintentional homicide, and before he had appeased the relations of the deceased, was charged with having committed murder. He was brought in a ship to a place in the harbour called Φρεαττώ, and there pleaded his cause on board ship, while the judges remained on land. If he was convicted, he suffered the punishment of murder; if acquitted, he suffered the remainder of his former punishment. The object of this contrivance was to avoid pollution (for the crime of the first act had not yet been expiated), and at the same time to bring the second offence to trial. (Dem. c. *Aristocr.* p. 646, §§ 77–79; Harpocr. *s. v.* Ἐν Φρεαττοῖ: Pollux, viii. 120; Matth. p. 155.)

To one or other of these courts all φονικαὶ δίκαι were sent for trial; and it was the business of the ἄρχων βασιλεὺς to decide which. The task of prosecution devolved upon the nearest relatives of the deceased; and in case of a slave, upon the master. To neglect to prosecute, without good cause, was deemed an offence against religion; that is, in any relation not further removed than a second cousin (ἀνεψιαδοῦς). Within that degree the law enjoined the relations to prosecute, under penalty of an ἀσεβείας γραφή, if they failed to do so. (Dem. c. *Androt.* p. 593, § 2; c. *Macart.* p. 1069, § 57; c. *Everg. et Mnes.* pp. 1160, 1161, §§ 68–73; Antiph. *de caede Herod.* § 48.) They might, however (without incurring censure), forbear to prosecute, where the murdered man had forgiven the murderer before he died (Dem. c. *Pantaen.* p. 983, § 59); or, in cases of involuntary homicide, where the offender gave the satisfaction which the law required; unless the deceased had given a special injunction to avenge him. (Lysias, c. *Agor.* §§ 41, 78; Matth. p. 170.) The meaning of the phrase ἐντὸς ἀνεψιαδῶν in these cases has been disputed, some thinking that the limit was drawn at a first cousin's son, or what is usually called a first cousin once removed. It is simpler and better to take it as including second cousins, *i.e.* all the descendants of a common great-grandfather. The distinction is not noticed in L. and S. *s. v.* (Cf. Thalheim, *Rechtsalterth.* p. 59; *Att. Process*, p. 199, n. 10, Lips.)

The first step taken by the prosecutor was to give notice to the accused to keep away from all public places and sacrifices. This was called πρόρρησις, and was given at the funeral of the deceased (Antiph. *de caed. Her.* §§ 10, 88; *de Chor.* §§ 4, 34;—Dem. c. *Lept.* p. 505, § 158; c. *Aristocr.* p. 632, § 38; c. *Everg. et Mnes.* p. 1160, § 69). After this, he gave a public notice in the market-place, warning the accused to appear and answer to the charge: here he was said προειπεῖν or προαγορεύειν φόνου (Dem. c. *Macart.* p. 1068, § 69; [Dem.] c. *Neaer.* p. 1348, § 9). The next thing was to prefer the charge before the king-archon. To such charge the term ἐπισκήπτεσθαι or ἐπεξιέναι was peculiarly applied (Pollux, viii. 33, 118; Harpocr. *s. v.* Ἐπεσκήψατο: Antiph. *de Venef.* § 1). The charge was delivered in writing; the prosecutor was said ἀπογράφεσθαι δίκην φόνου (Antiph. *de Chor.* § 36). The king-archon having received it, after first warning the defendant ἀπέχεσθαι τῶν μυστηρίων καὶ τῶν ἄλλων νομίμων (Pollux, viii. 66, 90), proceeded in due form to the ἀνάκρισις. The main thing to be inquired into was the nature of the offence, and the court to which the cognisance appertained. The evidence and other matters were to be prepared in the usual way. Three months were allowed for this preliminary inquiry, and there were three special hearings, one in each month, called διαδικασίαι, or (as now read after Pollux, viii. 24) προδικασίαι (Antiph. *de Chor.* § 42); after which, in the fourth month, the king-archon εἰσῆγε τὴν δίκην (Matth. p. 160). The defendant was allowed to put in a παραγραφή, if he contended that the charge ought to be tried in one of the minor courts (Pollux, viii. 57).

All the φονικὰ δικαστήρια were held in the open air, in order that the judges might not be under the same roof with one suspected of impiety; nor the prosecutor with his adversary (Antiph. *de caed. Her.* § 11). The king-archon presided, with his garland taken off (Pollux, viii. 90; cf. Lycurg. c. *Leocr.* § 122; Boulé, Vol. I. p. 310 *a*). The parties were bound by the most solemn oaths: the one swearing that the charge was true, that he bore such a relationship to the deceased, and that he would in conducting his case confine himself to the question at issue; the other declaring the charge to be false (Antiph. *de caed. Herod.* §§ 11, 90; *de Chor.* §§ 14, 16;—Dem. c. *Everg. et Mnes.* p. 1161, § 73; Matth. p. 163). The witnesses on both sides were sworn in like manner(Antiph. *de caed. Herod.* §§ 12, 15; *Att. Process*, pp. 884–7, Lips.); and slaves were allowed to appear as witnesses (*Att. Process*, p. 875, Lips.). Either party was at liberty to make two speeches, the prosecutor beginning, as may be seen from the *τετραλογία* of Antiphon; but both were obliged to confine themselves to the point at issue (Lys. *c. Simon.* § 46; Antiph. *de Chor.* § 16). Advocates (*συνήγοροι*) were not admitted to speak for the parties anciently, but in later times they were (Matth. p. 164). Two days were occupied in the trial. After the first day the defendant, if fearful of the result, was at liberty to fly the country, except in the case of parricide. Such flight could not be prevented by the adversary, but the property of the exile was confiscated (Pollux, viii. 117; Dem. *c. Aristocr.* p. 634, § 45; p. 643, § 69; Matth. p. 167). On the third day the judges proceeded to give their votes; for which two boxes or urns were provided (*ὑδρίαι* or *ἀμφορεῖς*), one of brass, the other of wood; the former for the condemning ballots, the latter for those of acquittal. An equal number of votes was an acquittal; a point first established (according to the old tradition) upon the trial of Orestes (Aeschyl. *Eumen.* 752; Matth. p. 165).

As the defence might consist either in a simple denial of the killing or of the intention to kill, or in a justification of the act, it is necessary to inquire what circumstances amounted to a legal justification or excuse. We learn from Demosthenes (*c. Aristocr.* p. 637, § 54) that it was excusable to kill another unintentionally in a gymnastic combat, or to kill a friend in battle or ambuscade, mistaking him for an enemy; that it was justifiable to slay an adulterer if caught in the act, or a paramour caught in the same way with a sister or daughter, or even with a concubine, if her children would be free. (As to an adulterer, see Lys. *de caed. Eratosth.* §§ 25, 26; Plut. *Sol.* 23.) It was lawful to kill a robber at the time when he made his attack (*εὐθὺς ἀμυνόμενος*), but not after (Dem. *c. Aristocr.* p. 639, § 60). By a special decree of the people, made after the expulsion of the thirty tyrants, it was lawful to kill any man who attempted to establish a tyranny, or put down the democracy, or committed treason against the state (Lycurg. *c. Leocr.* § 125; Andoc. *de Myst.* § 96). A physician was excused who caused the death of a patient by mistake or professional ignorance (Antiph. *Tetral.* § 5). This distinction, however, must be observed. Justifiable homicide left the perpetrator entirely free from pollution (*καθαρόν*). That which, though unintentional, was not perfectly free from blame, required to be expiated. See the remarks of Antiphon in the *Tetralogia*, B. § 11. (Cf. Thalheim, p. 42; *Att. Process*, p. 377 ff.)

It remains to speak of the punishment.

The courts were not invested with a discretionary power in awarding punishment; the law determined this according to the nature of the crime. Wilful murder was punished with death (Antiph. *de caed. Her.* § 10; Dem. *c. Mid.* p. 528, § 43). It was the duty of the Thesmothetae to see that the sentence was executed, and of the Eleven to execute it (Dem. *c. Aristocr.* p. 630, § 31; Meier, *Att. Proc.* p. 84; Schömann, *Ant. Jur. Publ.* p. 246). We have seen that the criminal might avoid it by flying before the sentence was passed. Malicious wounding was punished with banishment and confiscation of goods (Lys. *c. Simon.* § 42; Matth. p. 148). So were attempts to murder (*βουλεύσεις*). Ho far incitements to murder, by one who did no strike the blow himself, were liable to a *φόνο γραφή*, is a point of some difficulty. Of a cas of this kind Demosthenes says (*c. Conon.* p. 126 § 25), *ἐξέβαλεν ἡ βουλὴ ἡ ἐξ Ἀρείου πάγο* The usual explanation of *ἐξέβαλεν* is "banished (A. Schaefer, *Dem. u. seine Zeit*, iii. 2, 114 n. Sandys *ad loc.*; Meier, in *Att. Process*); Lipsiu pronounces this a mistake, and insists that th word means only "expelled," *i.e.* not from th country, but from the Areiopagus. Probabilit as it seems to us, from the analogy of Athenia practice and its well-known aversion to crim of violence, is all in favour of the former view Whenever such a crime was treated as murde it might be punished with death, at least if was tried in the Areiopagus; for it is doubtf whether the minor courts (except that *Φρεαττοῖ*) had the power of inflicting capit punishment (Matth. p. 150; Schömann, *An Jur. Publ.* p. 294; *Att. Proc.* p. 386, Lips.). the criminal who was banished, or who avoide his sentence by voluntary exile, returned to th country, an *ἔνδειξις* might forthwith be lai against him, or he might be arrested and take before the Thesmothetae, or even slain on th spot (Suidas, *s. v.* *Ἔνδειξις*: Matth. p. 168) The proceedings by *ἀπαγωγὴ* (arrest) mig perhaps be taken against a murderer in the fir instance, if the murder was attended with rob bery, in which case the prosecutor was liable t the penalty of a thousand drachmas if he faile to get a fifth of the votes (Dem. *c. Aristocr* p. 647, § 80; Meier, *Att. Proc.* p. 278, Lips.) But no murderer, even after conviction, coul lawfully be killed, or even arrested, in a foreig country (Dem. *c. Aristocr.* p. 631, § 35; p. 63 § 38). The Greek notion of humanity forbad such a practice; it was a principle of inter national law that the exile had a safe asylum i a foreign land. If an Athenian was killed by foreigner abroad, the only method by which hi relations could obtain redress was to sei natives of the murderer's country (not mo than three), and keep them until the murde was given up for judgment. [ANDROLEPSIA.]

Those who were convicted of unintenti homicide, not perfectly excusable, were c demned to leave the country for a year. T were obliged to go out (*ἐξέρχεσθαι*) by a cert time, and by a certain route (*ταὐτὴν ὁδόν*), to expiate their offence by certain rites. Th term of absence was called *ἀπενιαυτισμ* which probably does not mean, as the gr marians took it, banishment for a year only, for a longer period [EXSILIUM, p. 817 *a*]. was their duty also to appease (*αἰδεῖσθαι*) relations of the deceased, or, if he had n within the prescribed degree (*ἐντὸς ἀνεψι* see above), the members of his clan (*φράτορ* either by presents or by humble entreaty submission. If the convict could prevail them, he might even return before his time expired. The word *αἰδεῖσθαι* is used not only the criminal humbling himself to the relati but also of their forgiving him (Harpocr. *Ὑποφόνια*: Demosth. *c. Pantaen.* p. 983. § *c. Macart.* p. 1069, § 57; *c. Aristocr.* p. § 72;—Matth. p. 170). The property of suc criminal was not forfeited, and it was unla to do any injury to him either on his lea the country or during his absence (Demosth. *c. Aristocr.* p. 634, § 44).

Such was the constitution of the courts, and the state of the law, as established by Solon, and mostly indeed by Draco; for Solon retained most of Draco's *φονικοὶ νόμοι* (Demosth. *c. Everg.* p. 1161, § 71; *c. Aristocr.* p. 636, § 51). But it appears that the jurisdiction of the *ἐφέται* in later times, if not soon after the legislation of Solon, was greatly abridged [EPHETAE]; and that most of the *φονικαὶ δίκαι* were tried by a common jury. With the progress of democratic ideas, the ordinary method of trial was, as has been seen under EPHETAE, preferred to the ancient aristocratical constitution of that court. In an inscription of the year 409–8 B.C. we find that *δικάζειν* (here meaning the *ἡγεμονία δικαστηρίου*) is the function of the *βασιλεύς*, *διαγνῶναι* (i.e. to give a verdict, the ordinary sense of *δικάζειν*) that of the *ἐφέται* (*C. I. A.* i. 61; *Att. Process*, pp. 16, 17, Lips.). Their jurisdiction in the courts *ἐν Φρεαττοῖ* and *ἐπὶ Πρυτανείῳ* was, no doubt, still retained; and there seem to have been other peculiar cases reserved for their cognisance (Pollux, viii. 125; Matth. p. 158; Schömann, *Ant. Jur. Pub.* p. 296). Whether the powers of the Areiopagus, as a *criminal court*, were curtailed by the proceedings of Pericles and Ephialtes, or only their administrative and censorial authority as a *council*, has been discussed under AREIOPAGUS. The strong language of Demosthenes (*c. Aristocr.* p. 641, § 65) inclines one to the latter opinion. See also Dinarchus (*c. Aristog.* init.), from which it appears there was no appeal from the decision of that court (Matth. 166; Platner, *Proc. und Klag.* i. 27; Schömann, *Ant. Jur. Pub.* p. 301; Thirlwall, *Gr. Hist.* vol. iii. c. 17, p. 24).

No extraordinary punishment was imposed by the Athenian legislator on parricide. Suicide was not considered a crime in point of law, though it seems to have been deemed an offence against religion; for by the custom of the country the hand of the suicide was buried apart from his body. (Aeschin. *c. Ctes.* § 244; Aristot. *Eth. Nic.* v. 15 (11) = p. 1138 a, 12; Becker-Göll, *Charikles*, iii. 164 f.; *Att. Process*, p. 381, Lips.)

Little is known as to the *φονικοὶ νόμοι* of other states. At Sparta, it would seem, the law of *φόνος ἀκούσιος* was more severe than at Athens: one Dracontius is mentioned as banished for life for an involuntary homicide committed when a boy (Xen. *Anab.* iv. 8, § 25; cf. Grote, pt. i. ch. 20, p. 486 n.).

(Thalheim, *Rechtsalterth.* pp. 42 f., 106, 109, 125. The references in *Att. Process* are spread through the whole work, and must be found from the Index.) [C. R. K.] [W. W.]

PHOROS (*φόρος*), the tribute paid to Athens by her allies in the 5th century B.C. Upon the formation of the Confederacy of Delos in B.C. 476, the Asiatic and insular allies undertook, with a view to carrying on the war with Persia, to pay to the Confederacy a fixed amount of ships, money, or men, as settled by Aristeides. It is not clear whether states which sent ships and men were also to send money. [Thuc. i. 96 speaks as if some were to supply the one, and some the other; so in vi. 85, vii. 57. But in vii. 57 we find states which supplied money also sending contingents (compare the inscription in *C. I. A.* suppl. to vol. i. p. 10, given in Mr. Hicks' *Manual of Greek Historical Inscriptions*, No. 28): and if the important states which at first certainly supplied ships be deducted, how could the remaining states have made up so large a sum of money as Aristeides imposed?) Be that as it may, the total annual *φόρος* was fixed at starting at no less than 460 talents (Thuc. i. 96); and this amount, as apportioned between the allies, seems to have been thought a fair one (Thuc. v. 18. Plut. *Arist.* 24 says that the allies called the *φόρος* so arranged *εὐποτμία τις τῆς Ἑλλάδος*). The treasury was to be at Delos (an old religious centre, Thuc. i. 104), where also the delegates of the Confederation were to meet. But the delegates soon ceased to meet anywhere; the League was kept together by the firmness of Athens, the strongest state in it; and the treasury was removed to Athens on the suggestion of the Samians, probably the next strongest state (Plut. *Aristid.* 25; Diod. xii. 38). Delos was probably not thought a safe place for the accumulation of bullion. The date of the removal is said to have been 461 (Justin. iii. 6); but it seems more likely to have been about 454, when the stone tables of accounts, to be mentioned below, begin. The Hellenotamiae and Logistae took charge of the funds at Athens [HELLENOTAMIAE].

Athens now of course, if not earlier, charged herself with collecting the tribute. Many states were now sending money instead of their original contingents (Thuc. i. 99; Plut. *Cimon*, 11). The League was complete in numbers and in organisation by 454; and the only states which were then still sending contingents of ships and men on the original footing were probably Samos, Chios, and Lesbos. We may fairly say that by that time the Confederacy of Delos under the hegemony of Athens had been changed into an empire of Athens (*τυραννίδα γὰρ ἔχετε τὴν ἀρχήν*, Thuc. ii. 63). Aristophanes (*Vesp.* 707) speaks of 1000 allies; the names of states actually learnt from inscriptions or other sources only amount to about 300; but many little states may have been grouped into *συντέλειαι*. The empire pretty well enclosed the Aegean. It included more or less completely the coasts of Asia Minor (from the Propontis to Lycia), Macedon, and Thrace, and most of the Aegean islands. Loosely connected with it were the Western islands of Cephallenia, Corcyra, and Zacynthos (Thuc. vi. 85), and the Peloponnesian states of Troezen and Achaia (Thuc. i. 111, 115): to these, however, the organisation of the League or empire hardly applies, nor does it seem that they paid *φόρος*.

More states joined the League, as more states were set free from Persia, and states were presently allowed to send money instead of ships, or even (as Thasos) compelled to do so after the failure of attempts to secede. In these ways, as the gross amount of the *φόρος* remained the same, the quotas of single states fell, till a re-assessment in 442 cancelled most of such abatements and so raised the total. That this was the policy of Pericles may perhaps be inferred from Plut. *Arist.* 24.

At the time of the outbreak of the Peloponnesian War (B.C. 431) the *φόρος* amounted to an average of 600 talents (Thuc. ii. 13). With this fund Athens had triumphantly brought the

Persian wars to an end, and had since expended a great deal of money in embellishing the city. The money was at first brought by the allies; later, probably collected by ἀργυρολόγοι νῆες. The tribute, for such it had now become, was no doubt thought a grievance (Aristoph. *Pax*, 621): but (except in accidental cases) it cannot really have been oppressive, if a 5 per cent. tax on exports and imports was thought likely to produce more than even a double φόρος (Thuc. vii. 28). In 425 the sum was doubled, and the φόρος raised to 1200 talents or more (Andoc. *de Pace*, § 9; Aeschin. *F. L.* § 175, confirmed by inscriptions; 1300 talents, Plut. *Arist.* 24). The assessments, however, of each state do not seem to have been uniformly doubled; some were raised more, some less.

Certain stone tables of accounts, found in pieces at Athens and since put together, give us a great deal of information on the constitution of the empire, and especially on the φόρος. They have been printed in the *C. I. A.*, and edited with explanation by U. Köhler, *Urkunden und Untersuchungen zur Geschichte des delisch-attischen Bundes*, 1870: see, too, Mr. Hicks' *Manual*. The accounts only register a percentage of the whole amount received, which percentage was handed over to Athene Parthenos, at the rate of 1 mina per talent: but we can reconstruct from them a tolerably complete table of what each ally or subject paid. The League or Empire was divided into five financial provinces, and we hear of the Ionic φόρος, the Hellespontine, the insular, Carian, and Thracian. (See the language of Thuc. ii. 9, and of Plut. *Perikles*, 17, for traces of this arrangement.) Thuc. iii. 31 speaks as if the Ionic were the most productive. The tribute was re-assessed every four years (cf. Xen. *de Rep. Ath.* iii. 5), with elaborate forms apparently borrowed from the process of legislation, and the allies affected by proposed changes were heard in defence of their interests (see Hicks' *Manual*, p. 79).

In B.C. 413 the direct tribute was turned into an indirect one, and an εἰκοστὴ or tax of 5 per cent. was imposed on all exports and imports, to be collected by Athenian agents in the harbours of the allies. By this the Athenians, then pressed for money, expected to make more (Thuc. vii. 28); but the arrangement, if ever properly carried out, did not last long. [EICOSTE.]

When an Athenian league or empire was revived about B.C. 378, the term σύνταξις was used instead of φόρος for the contributions of the allies (Harpocrat. Σύνταξις). The necessity of enforcing these again made the empire unpopular.

Ἐπιφορὰ was an extra charge which could be imposed under the first empire.

(On the φόρος generally, see Boeckh's *Staatshaushaltung der Athener*, edit. 3.) [F. T. R.]

PHRA'TRIA. [CIVITAS; TRIBUS.]

PHTHORA TON ELEUTHERON (φθορὰ τῶν ἐλευθέρων) is only mentioned in a spurious law in Aesch. *c. Tim.* § 12, according to which the γυμνασιάρχαι who did not keep those above the age of boys out of the palaestra at the celebration of the Hermaea were liable to this charge; cf. § 10 (*Att. Process*, ed. Lipsius, p. 411). This very feast was the occasion on which Socrates was introduced to the young Lysis (Plat. *Lys.* p. 206 D f.). [C. R. K.] [H. H.]

PHYLARCHI (φύλαρχοι, φυλάρχαι). In ancient times the tribal system prevailed everywhere in Greece; the Dorians having a threefold, the Ionians a fourfold, division of this kind. [TRIBUS.] This institution remained till the latest period, with certain modifications. The phylarchs seem originally to have been the chiefs of the various tribes (φυλαί), whether in peace or war. We have direct proofs that they discharged civil functions, from the case of Epidamnus, a colony of Corcyra. The latter as a Dorian city had the three Dorian tribes, and we may infer that its colony retained them likewise. In earlier times Epidamnus was oligarchic in constitution. The strength of the oligarchy lay in the phylarchs of the three Dorian tribes, and accordingly, when the revolution came, the oligarchic phylarchs were supplanted by a democratic boule (Aristot. *Pol.* 1301 b, 22). They probably were the same as the πρόβουλοι, whom Aristotle (*Pol.* 1299 b, 31) describes performing under an oligarchy the functions discharged by the boule under a democracy. How many of these phylarchs there were, we have no means of deciding. There were probably several from each tribe, possibly the representatives of the γένη within each tribe. We know that at Ilion each tribe had several phylarchs (*C. I. G.* 3599). When the phylarchs in the change from oligarchy t democracy lost their important civil functions, they not unnaturally retained a remnant of their military importance. As they were oligarch they naturally represented that branch of th military organisation which was especially oligarchic, and thus it is that we find them still appearing as the commanders of the cavalry o the tribes. At Athens we do not know how many there were in early times, but probably each o the four old tribes had originally several phylarchs, but subsequently had only one each unde the constitution of Solon. When Cleisthene made his ten new tribes, he increased the numbe of the phylarchs from four to ten, according t Herodotus (v. 19). It has been thought tha the historian should have said ten phylarch instead of the old phylobasileis, who were fou in number, one for each of the old tribes (Tittmann, *Staatsv.* 274–5). But as Herodotus probably identified phylobasileis with phylarchi there is no difficulty in the passage. Under th constitution of Cleisthenes there were ten phylarchi: one tribe (Pollux, viii. 94) commande the cavalry contingent (100 men) of each trib (Cf. αἱ φυλαὶ τῶν ἱππέων, Xen. *Hipp.* 3. 11 They were under the control of the two hipparchi. According to Pollux (viii. 94), the were chosen from each tribe by the archons collectively. This can hardly be regarded as conclusive even on his great authority. It is mor probable that they were elected by Cheirotoni like the strategi, hipparchi, and taxiarchi. A the cavalry were citizens of the two highe classes (pentacosiomedimni and hippeis), we ma infer that the phylarchs always belonged t either of these classes. The office also existed a Cyzicus (cf. Inscription in *Rev. Arch.* xxx. 93 and is mentioned as next in order after th strategi.

At Methymna likewise each tribe has i φυλάρχης (inscript. in *Bull.* iv. 439). [W. Ri.]

PHYLOBASILEIS (φυλοβασιλεῖς). Th origin and functions of the Athenian officia called "tribe-kings" are involved in gre obscurity. Unfortunately the data are exceedingly scanty; all that we know about the office being drawn from the four or five meagre references here given. Our oldest notice is that contained in Plutarch (*Sol.* 19), who quotes the words of the Thirteenth Axon of Solon, *ἐπιτίμους εἶναι πλὴν ὅσοι ἐξ Ἀρείου Πάγου ἢ ὅσοι ἐκ τῶν Ἐφετῶν ἢ ἐκ Πρυτανείου καταδικασθέντες ὑπὸ τῶν βασιλέων ἐπὶ φόνῳ ἢ ἐπὶ σφαγαῖσιν ἢ ἐπὶ τυραννίδι ἔφυγον.* Next comes the *ψήφισμα* of Patrocleides, quoted by Andocides (*de Myst.* § 11), the wording of which is evidently framed after the Solonian law, *ἢ ἐξ Ἀρείου Πάγου ἢ τῶν Ἐφετῶν ἢ ἐκ Πρυτανείου ἢ Δελφινίου ἐδικάσθη ἢ ὑπὸ τῶν βασιλέων, ἢ ἐπὶ φόνῳ τίς ἐστι φυγή, ἢ θάνατος κατεγνώσθη, ἢ σφαγεῦσιν ἢ τυράννοις.* There can be no doubt that the *βασιλεῖς* mentioned in these two passages cannot refer to the Archon Basileus; for in the same passage Plutarch calls them by the name *πρυτάνεις*: and in the decree of Patrocleides, when reference is made to the *ἄρχων βασιλεύς*, he is called in the singular *ὁ βασιλεύς*. That these *βασιλεῖς* are the same functionaries as the *φυλοβασιλεῖς* will be made clear by Pollux, viii. 111, *οἱ δὲ φυλοβασιλεῖς, ἐξ εὐπατριδῶν ὄντες, μάλιστα τῶν ἱερῶν ἐπεμελοῦντο, συνεδρεύοντες ἐν τῷ βασιλείῳ τῷ παρὰ τὸ βουκολεῖον*: and further (viii. 120), *τὸ ἐπὶ Πρυτανείῳ δικάζει περὶ τῶν ἀποκτεινάντων, κἂν ὦσιν ἀφανεῖς, καὶ περὶ τῶν ἀψύχων τῶν ἐμπεσόντων καὶ ἀποκτεινάντων. προειστήκεσαν δὲ τούτου τοῦ δικαστηρίου φυλοβασιλεῖς, οὓς ἔδει τὸ ἐμπεσὸν ἄψυχον ὑπερορίσαι.* Finally, Hesychius says, *φυλοβασιλεῖς· ἐκ τῶν φυλῶν αἱρετοί, οἱ τὰς θυσίας ἐπιτελοῦντες.*

The connexion between the *βασιλεῖς* of Solon and the *φυλοβασιλεῖς* of Pollux is proved by the connexion of the *βασιλεῖς* in the one case, and that of the *φυλοβασιλεῖς* in the other, with the Prytaneion. We have no information as regards their number; but as they existed before the time of Cleisthenes and were elected from the tribes, and as the name itself implies that there was only one for each tribe, it is not unreasonable to infer that they were four in number. As regards their functions, we may gather something from the lex of Solon and the decree of Patrocleides. In the former three distinct tribunals are mentioned—Areopagus, Ephetae, and Basileis; and also three distinct crimes—murder, manslaughter, and aiming at sovereignty. As the Areopagus tried murder cases, and the Ephetae in the courts called Delphinion and Palladion) cases of manslaughter, it would seem that the crime which specially fell under the jurisdiction of the *βασιλεὺς* was that of attempting to become a despot. The same three tribunals and the same three crimes are mentioned in the same order in the decree of Patrocleides. Solon had left to the Ephetae the duty of sitting as judges in certain ancient courts,—the Delphinion, the Palladion, the Court at Phreatto, and the Prytaneion. In the Prytaneion the Ephetae solemnly tried inanimate objects which had taken a human life, and over the Ephetae in this court the Phylobasileis presided; and if the object was found guilty, it was their duty to convey the polluted object beyond the frontier. This, of course, was much more a religious than a legal function. Similarly, too, they acted as assessors to the Archon Basileus, sitting along with him in the Basileion. Now, as the Archon Basileus dealt with all cases of blood-guiltiness, whether murder or homicide, it is evident that the functions of his assessors would be priestly rather than judicial. The fact that the Phylobasileis were Eupatrids is of importance, when we recollect that in cases of death by violence members of certain Eupatrid families were consulted as *ἐξηγηταί* (cf. Plato, *Euthyphro*, p. 4, D). From the priestly nature of their functions it was natural that they were left untouched, both by the reforms of Solon and of Cleisthenes. Whether their number was increased to ten by Cleisthenes when he made his ten new tribes, we cannot now tell. Hesychius seems to refer merely to their office of offering sacrifices on behalf of their tribes. That such sacrifices were offered on behalf of the tribe (just as they were offered for the phratry and genos) is very probable. With reference to their origin we may suggest that just as the Archon Basileus [cf. REX SACRORUM] represented the religious functions of the ancient king of united Attica, so these "tribe-kings" represented the priestly functions of the ancient chieftains of the several separate tribes which were ultimately fused into a single community. In Homer the title *βασιλεὺς* seems given to the chief of a tribe or clan; so, for instance, Antinous and Eurymachus and other suitors are called *βασιλῆες* (*Od.* i. 394). Many traces of these ancient chieftains can be found elsewhere in Greece as well as in Athens. For example, at Elis, there were magistrates called *βασιλᾶες* (*I. G. A.* 112), who had plainly judicial functions. So also at Cyme there was a body called *βασιλεῖς* under the aesymnetes with judicial functions. Similar bodies likewise existed in the islands of Mitylene and Siphnos, but as regards their numbers we have no information. [W. RI.]

PHYLON (*φῦλον*). [TRIBUS.]

PICTU'RA (*γραφή, γραφική, ζῳγραφία*), painting. 1. *Definition of terms.*—The word *γράφω* originally implies the engraving of signs of any kind, and from this it came to be used both for painting and writing: as in Greece the art of painting was known long before the introduction of writing, it is probable that the second meaning was derived from the first, the pictorial origin of writing being an obvious connexion. The same double usage was applied to *γραφὴ* and *γράμμα*: while *γραφικὴ* indicated painting as art in the abstract. As the representation of the living thing is the farthest removed from the mere signs which constitute writing, painting as distinguished from writing came to be called *ζῳγραφία* (*ζῷα γράφειν*) or *ζωγραφική*: with special names for the various branches of the art, as *μεγαλογραφία*, for large subjects; *ῥωπογραφία*, for trivial or miniature subjects; *εἰκονογραφία*, portraiture; and *σκηνογραφία*, scene-painting. In Latin we have not these distinctive terms, *pingere* and its derivatives (originally applied to embroidery) doing duty for all requirements.

It is evident that the rooted idea of the word *γράφω* includes both the elements of *drawing* and also that of colouring: of the two it seems natural to suppose that drawing is the earlier in point of origin, seeing that it forms the basis of painting: and this abstract idea is probably what we are intended to understand by the ancient legends of the origin of painting in

Greece. These legends, to which we shall presently refer, seem to suggest that the earliest "paintings" were really only outline drawings, —a fact which is, however, not borne out by the evidence of the monuments. It has been suggested that what Pliny (xxxv. 15) alludes to as the earliest form of art,—"Monochrome painting," *monochromaton*,—consisted in the filling in of such outline drawings with colour, and thus forming a silhouette, similar in idea to the paintings on the earliest vases. Donner, on the other hand, suggests that the art of writing preceded that of drawing; tablets of wax, *pugillares*, and the *stilus* may be traced, he says, back to the time of Homer. Pliny states (xxi. § 85) that the wax was coloured black with paper ash, and red with *anchusa*. From writing on these tablets people took to drawing: this, in Donner's view, is the explanation of the earliest form of art, Pliny's *monochromaton*. This explanation is obviously untenable: for one thing we have no evidence to show that such red and black drawings existed in early times: the theory that writing preceded drawing is contrary to all our preconceived notions of development; and, besides, another statement of Pliny (xxxiii. § 117; xxxv. § 64) proves that in his time *monochromata* meant something quite different, the pictures being executed in various tones of the same colour. Blümner suggests that the mere outline drawings should rather be called *monogrammata*, because *μονόγραμμος* is the term for a very lean man.

Another word which indicates outline rather than complete drawing is *περιγραφή*: and since outline must to a certain extent be said to underlie all design, it is further called *διαγραφή*, *ὑπογραφή*. Pollux gives *σκιαγραφία*, but in such terms as to leave it in doubt as to whether the word implies the actual shadow, or merely the outline of a shadow: in some instances it means certainly the outline of a shadow; more usually, when referring to the art of a good period, it applies to painting in strong light and shade, or is another expression for *σκηνογραφία*. A special word for a hasty, inefficient shadow outline or sketch is *σκιαριφησμός*. What we in painting call the "drawing" as opposed to the "colouring," the Greeks called *γραμμή*: hence *γραμμὰς ἑλκύειν*, *ἀποτίνειν*, &c. (Blümner, iv. pp. 414–24).

The importance of deciding the exact application of these various terms will be seen when we approach the question of the early history of painting as given in the ancient authorities: where, as we shall see, there is good reason for supposing that the various stages of development as described by Pliny are partly at least based on his interpretations of the terms used in the Greek authorities which formed his sources of information.

In Latin, the art of drawing in the abstract was *graphica*, and the practice of it *adumbrare* or *delineare*: what we call outlining was *circumscribere*. The outline of a picture, or even the drawing, was *linea* (hence *lineas ducere*, *lineamenta*); outline drawing, *linearis pictura*.

For the practice of drawing, various materials were used: the most general would be the tablet of wood, which was covered with wax, and the *stilus*, *γραφίς* or *γραφεῖον*: *γραφίς* was also used for a fine brush, the *penicillus*, which was employed either on wood, such as box or cedar, or on parchment: the silver point seems alluded to in Pliny (xxxiii. 98); and the usage of red pencil and of charcoal is likewise attested.

By the addition of *colour*, drawing becomes painting. For colouring matter, the ancients spoke of *φάρμακον*, *medicamentum*, *pigmentum*, as distinguished from *χρῶμα*, *color*, the actual colour prepared for use. Pollux speaks further of *ἄνθη*, *χρώματα ἀνθηρά*: a further distinction is made in the art writers between *colores floridi* and *colores austeri*. The laying on of colour is *χρώζειν*, *χραίνειν* (with compounds); also *ἄνθεσι φαιδρύνειν*. In a bad sense of "daubing," *καταποικίλλειν* and *ἐναλείφειν*, *inlinere*: the Latin word, however, need not always signify the derogatory sense. *Circumlinere* is the working-up of the background from which the subject stands out.

For shading, Pollux gives *σκίαν ὑποτυπώσασθαι* or *σκιάζειν*. In artistic criticism we find *lumen et umbra* used in the modern sense: *splendor*, probably for strong gleaming lights or reflexion: *τόνος*, the "assistance of light and shade, perhaps the general ground tone of the picture:" *ἁρμογή*, *commissurae et transitus colorum*, the toning of one colour into another. These terms will give some idea of the kind of effects which an ancient art-critic would probably have had principally in his mind.

2. *Technique.*—With a view to a clearer understanding of the usage of terms in the descriptions which follow, it will be well to define first of all those terms mentioned in connexion with the various classes of ancient painting; to describe the technical processes which distinguish these classes; and to enumerate the materials used, as far as they can be identified either from ancient literature or from the actual monuments.

The most convenient division of the subject is that which depends on the ground upon which the painting is laid: the principal headings will be as follows, viz. *Wall Painting*, *Easel Painting*, and *Encaustic*. Of these the first two may be treated together, inasmuch as in both we have the employment of water-colour and the brush. The subject of encaustic, in which wax and a metal tool, the *cestrum*, are the distinguishing materials, involves numerous difficult and complicated questions, and will be best treated separately in connexion with the monuments which illustrate this branch of art.

For wall and easel painting the materials of the artist in antiquity were very much the same as those of a modern painter: of brushes, *γραφεῖον*, *γραφίς*, *penicillus* (or *-um*), he would have every variety at his disposal, the coarser ones made of bristles, *saeta*, the finer of a close-textured sponge; a larger piece of sponge would serve to erase errors or wash out the brush: a palette, or set of palettes, of which the existence is proved by numerous representations of ancient studios, but of which the ancient name is not known; and lastly, an easel precisely similar to those of to-day, called *ὀκρίβας* or *κιλλίβας*: the Latin equivalent is *machina*, but this word is also applied to the scaffold on which the fresco-painter worked.

3. *Wall Painting.*—The practice of decorating walls with coloured designs in fresco obtained in Greece long before the time at which actual

authentic records may be said to begin. The excavations at Tiryns and Mycenae, which illustrate a civilisation of origin probably considerably earlier than the poems of Homer, have brought to light specimens of wall-painting which show us that at that period, whenever it was, artists on these sites were working in a technique very similar to that of the Egyptians. The walls were plastered with clay, and covered with a coating of lime; over this a design in spirited freehand has been drawn *al fresco*. In the Tiryns specimens five colours were used, as against six which are found in Egyptian art; but the omission of the green may here be merely accidental, and in point of fact the use of green seems to be indicated in the specimens found more recently at Mycenae. Of fresco-painting in Greece proper we hear nothing further until the time of Polygnotos: that it was kept up, however, in Italy at least, we know from the wall-paintings of the tombs in some of the early Etruscan sites, such as Veii, which must date from the end of the seventh century B.C.: some of these paintings show a decided connexion with Mycenaean art, both in the style and in the character of their ornamentation. It was not until the fifth century that the great historical compositions of Polygnotos and his contemporaries raised this art to its highest level; so that in this era we hear very little of any other kind of painting. In the fourth century, the work of the greater artists, such as Zeuxis and Parrhasios, lay almost entirely in the execution of easel pictures, and henceforward wall-decoration was reduced to a subordinate position, from which it never again rose.

In the literary accounts of ancient pictures it is often extremely difficult to decide whether the description refers to a wall- or an easel-picture, because the writers have no system of terminology to distinguish the two methods. The words *πίναξ* and *tabula*, which originally applied to an easel-painting on wood, came in course of time to be loosely applied to the general meaning of "picture," without distinction of species; and to increase the difficulty, we know that the ancients both hung pictures on, and also let them into, their walls: so that *γράφειν ἐπὶ τοίχου* or *ἐπὶ τοίχῳ* can and certainly does mean any of these methods; on the other hand, it seems probable that *τοιχογραφία* is strictly only applied to fresco. The real distinction between fresco and other methods is in reality the fact that fresco demands a "fresh" or wet surface; and this is indicated by the expression *ἐφ' ὑγροῖς ζωγραφεῖν*, *udo* (*tectorio*) *pingere* or *illinere*.

The following account of the preparation of the wall and of the method of fresco-painting is taken from Blümner (iv. p. 432).

The groundwork for fresco-painting is formed by a wet stucco, *κονίαμα* or *tectorium*, laid on the wall. This stucco for fresco was specially prepared: both ancient literature and modern research show that the ancients expended greater care on this than we do in modern times. Pliny says that three layers of sand mortar and two of marble stucco were employed; but Vitruvius gives the process in fuller detail. The wall is first treated with a rough-cast of coarse mortar; then follow three layers of sand mortar, so arranged that with the aid of ruler, plummet, and square, the due level is preserved; each fresh layer being put on when the lower one is dry. On these three layers of sand mortar follow three of marble mortar (*i.e.* mortar mixed with pounded marble in such a way as to detach freely from the trowel), varying in degree from coarse to fine. This is pressed down and smoothed with wood; special care being taken that it should be durable and not liable to crack, and, above all things, that the colours laid on it while wet should bind firmly with the lime. For the adhesion of these colours depends on a chemical process, in which the water of the water-colours, combining with that already existing in the mortar, releases a part of the hydrate of lime (into which the lime in the mortar has changed by slaking); and pressing through all the layers of colour, after an interval returns to the surface; here it attracts to itself carbonic acid from the air, changes again into carbonic acid lime, and is deposited over the colours in the form of a thin crystal skin, which is hard to dissolve, and strengthens and protects them in such a way that washing (without friction) causes no injury.

The thickness of the mortar has yet another advantage. The modern fresco-painter, who works on a much thinner layer of mortar, is obliged every morning to have only just so much fresh mortar laid on as he expects to cover in the day: when he breaks off his work, he cuts away all that he has not painted on, and next morning the mason must bring his new mortar up to this mark. This system involves all sorts of inconveniences: the artist cannot work so freely as on a large space; the seams remain visible, and the new stucco has never the same surface as the old. The ancient method avoided these difficulties, since the thick mortar lasted damp much longer. The researches into the wall-paintings of Pompeii, where fresco is certainly used, show that the walls there are not made with so much care as Vitruvius prescribes; but they are nevertheless generally thicker and more carefully constructed than the modern examples.

On this surface the painting was laid with a brush and water-colours. Certain colours, however, do not suit the fresco method; in such cases, a binding medium was necessary which was otherwise not employed in fresco, such as milk or gum: thus, for *purpurissum* it is expressly stated that the ground must be painted *al fresco* with red sandyx or blue, and the purpurissum is laid on this with egg as a binding, *a tempera*. Another special process for cinnabar, which readily sets up chemical action and changes colour in sunlight, was the *καῦσις*, which will be described under *Encaustic*. In Pompeii the cinnabar does not seem to have undergone this treatment, and consequently changes colour rapidly in the sunlight. A peculiar process, which has not been rightly understood, is attributed by Pliny to Panaenus: in the decoration of the temple of Athene at Elis he is said to have mixed the stucco ground with milk and saffron; but whether the saffron had also binding properties does not appear.

4. *Easel Pictures.*—The generality of easel pictures (excluding of course those painted in the encaustic method) were probably executed on a

dry ground *a tempera* in water-colours. The materials for this ground were various: the most usual was a thin slab of wood (*πίναξ*, *πινάκιον*, sometimes *σανίς*, *tabula*, *tabella*), usually of box or cedar, also of cypress, pine, or larch; this was carefully dried, and, as a rule, constructed in several pieces, so as to guard against warping; finally it was primed with whitening (*λελευκωμένος*).

Canvas such as we now employ was probably rare; but that the ancients both knew of and used it, we see from the mention in Pliny, xxxv. § 51, of a colossal portrait which Nero ordered to be painted of himself on "linen" (*pingi in linteo*). Blümner suggests that this was either a unique instance, where the unwonted size of the portrait rendered some such material necessary, or that the portrait may have been executed in embroidery, to which the term *pingi* would equally apply. We have however, among the mummy portraits from the Fayoum, which were executed under Greek influence and date from the second and third centuries A.D., undoubted instances of paintings executed on canvas: in these cases the canvas appears to be primed with whitening of a similar character to that which was used in preparing the wood. The canvas in one case has been stretched upon a wooden panel; in another case it is formed of several sheets stuck one over the other: these instances are both painted in tempera; but the material seems also to have been in requisition for encaustic.

Lastly, we have stone and marble: the colouring of architectural mouldings and reliefs may have suggested the substitution of these members in colour alone: at any rate we have instances as early as the first half of the sixth century B.C., in which the decoration of a funeral stele is indicated in colour alone, and consists of a portrait of the deceased or other scenes which would otherwise have been chiselled. That this work was not always delegated to mere handicraftsmen we see from a statement of Pausanias (vii. 22, 6), who says that the painter Nicias executed the picture on a stele which in his time was to be found at Triteia in Achaia. The Florence sarcophagus from Corneto (*Hellenic Journal*, iv. p. 354, pll. 36–38) is an instance in which painted scenes are introduced in lieu of sculpture; on the sides are contests of Greeks and Amazons painted with great beauty in tempera directly upon the unsmoothed surface of the marble, but with only a plain tinted background. Pictures on marble or stone were used in the decoration of rooms, where they were either hung or inserted in the walls: and to this practice we owe some of the finest examples which have come down to us from Herculaneum.

The *colours* of the ancients were kept in a dry and firm condition, and when required for use would be pounded (*φάρμακα τρίβειν*, *colores terere*) in a stone mortar by the assistants, in preparation for the mixing (*χρώματα κεράσασθαι*, *συμμίξασθαι*, *colores miscere*), done by the master himself according to the tints he required. [COLORES.]

A binding material was necessary for fixing the colours· for this purpose they employed gum (Pliny, xiii. § 67, "Gummis fit e sarcocolla . . . utilissima pictoribus"), glue (*ib.* xxviii. § 236, "Rhodiacum glutinum fidelissimum"), and egg, which was also used in fresco for the same purpose.

Undoubtedly the ancient paintings in water-colour lacked durability, so that we meet with frequent complaints in literature of their fading and destruction: varnish as a protection of the surface was unknown, so was also the use of glass. Pliny tells us that Apelles used to lay a very fine coating of "atramentum" over his pictures after their completion: this toned down the over-bright colours, and lent reflexion to the outward appearance of the picture, besides protecting it against dust. What exactly this atramentum was, is uncertain, as it cannot imply here the ordinary sense of the word, "lampblack": Pliny says that it was a secret of Apelles, which no one after him was able to discover. Possibly he is merely repeating studio gossip, as he certainly is when he relates of Protogenes, that this artist painted his celebrated picture of Ialysos four times over, "in order that if by age or by any other injury one of the upper strata of colouring were lost, the under stratum would replace it!" The only method of protection for pictures which is known to have existed was the practice of constructing folding doors, which fitted over the picture like the triptychs of early Italian art; on Pompeian paintings the open doors of such pictures are frequently represented in perspective.

5. *Encaustic.* — If the brilliant effects and deeper tones of our modern oil-paintings were beyond the sphere of the ancient artist in tempera and fresco, these qualities were more nearly accessible to the encaustic painter; but unfortunately it happens that this branch of ancient art is precisely the method of which we know least. When Donner wrote his great work on the wall-paintings of Campania, he was unable to point to a single specimen of ancient painting which could be definitely attributed to encaustic; while, on the other hand, the statements of ancient authors, which show us how extensive and developed the practice was, leave us in doubt as to important details. It is only within the last two years that a considerable series of encaustic mummy-portraits of the Roman period have been found in Egypt, which have enabled us to examine these statements with some hope of solution.

The principal sources of our literary authorities on this subject are two passages in Pliny, *H. N.* xxxv. In the first of these (§ 122) he says, "It has not been ascertained who first devised the art of painting in wax-colours and of burning in the painting" (*ac picturam inurere*). Donner takes this as implying two distinct operations, *i.e.* first the painting with variously coloured wax; and when this is done, the burning-in of that which has been painted, from which latter process originated the name of encaustic, *i.e.* burned-in painting. If this is so, then heat was not employed in the actual painting, and the wax must have been rendered ductile by the admixture of some solvent.

The second passage is in § 149, and runs as follows: "Encausto pingendi duo fuere antiquitus genera, cera, et in ebore, cestro id est vericulo, donec classes pingi coepere. Hoc tertium accessit resolutis igni ceris penicillo utendi, quae pictura navibus nec sole nec sale ventisque corrumpitur." This Donner, in keeping with his theory, translates, "There have been, time out of mind, two kinds of encaustic painting: with wax—also on ivory—by means of the *cestrum*, i.e. until men began to paint also the ships of war; then was adopted the third kind, that of causing the wax colours to melt over the fire, so as to lay them on with the brush." By this he understands that in the first two processes—viz. (i.) on wood (the ordinary material, and therefore not here specified), and (ii.) on ivory—ductile wax and the *cestrum* alone are employed, no heat being required; also that in these the brush was not used, because he thinks that Pliny lays special stress on the fact that it was only in the third process that liquid wax colour melted over the fire was employed and laid on with the brush.

The wax paste, he thinks, is laid on with the *cestrum*. This word has usually been described as a cutting or graving instrument (from *caedo*, "to cut" or "engrave"). Donner, however, takes it as the Latinized form of *κέστρον* or *κέστρος*, the Greek term for the betony plant, named by the Latins *serratula*, i.e. "finely dentated," because it has a lancet-shaped, dentated leaf with a long stalk. The alternative word in Pliny, *ver(r)iculum*, which had been interpreted as "a small spit" (*veruculum*), he derives from *verro*, "to furrow" or "scrape." The *cestrum* is therefore, according to him, "a lancet-shaped spatula, with a finely dentated edge and rather long handle, the point somewhat curved. The toothing of this instrument enables any agglomeration of the wax pastes to be equalised and smoothed by furrowing or scraping."

Pliny and Vitruvius (vii. 9) both describe a process which Donner thinks has some bearing on the present question, viz. the so-called *καῦσις*, by which the vermilion fresco paint on walls was protected from damage by sun or air. The painting was spread with a mixture of olive-oil and "Punic wax" melted, and, this done, the burning (*καῦσις*) took place: a *cauterium*, filled with hot wood-ashes, or a heated metal rod (*ῥαβδίον*), was passed over the surface to level it (*ut peraequetur*).

Here, Donner thinks, we have the key to the burning-in: it is merely required for the purpose of levelling down the surface of the wax, which, whether laid on with brush or *cestrum*, would present an uneven appearance; in his *cestrum* painting, moreover, it would soften the tones into one another. What "Punic wax" was, Pliny tells us (xxi. § 84): it was obtained by boiling the natural yellow beeswax three times in sea-water with an addition of a little *nitrum*, i.e. natural mineral soda, and then skimming it. The addition of the olive-oil prevents the wax from too rapidly congealing. But here comes the difficulty: too much oil would prevent the wax from drying, while a little would not render the wax sufficiently ductile. If Donner's theory is to hold good, there must have been something further added in order to make the wax in a cold state soft enough to lay on in the form of paste, while possessing at the same time the quality of hardening in a given time. This volatile matter he assumes to have been balm of Chios, the liquid resin of the *Pistacia terebinthus*, well known to the ancients. But for this assumption he can adduce no proof whatever.

It will be seen that Donner's somewhat far-fetched and elaborate explanations arise out of his supposition that Pliny's statement in xxxv. § 149 precludes the use of the brush and of heat in the first two processes there described: he therefore is forced to imagine a kind of painting in which a pasty compound is laid on with a sort of spatula, a clumsy method at best. Now, it so happens that the evidence of the mummy-portraits goes entirely against his theory; for in these pictures it is absolutely certain that the brush was used, and that the wax was laid on in a melted condition.

The difficulty is surmounted if we interpret the passage in Pliny somewhat differently. The key to its solution seems to lie in another statement of the same author. In xxxv. § 147, or only a few lines previously, he has been discussing the works of the lady painter Jaia (or Laia): "Et penicillo pinxit et cestro in ebore imagines mulierum maxume et Neapoli anum in grandi tabula, suam quoque imaginem ad speculum." Here there is no question but that the words *cestro in ebore* are to be taken together as opposed to *penicillo*: her two methods of portrait-painting are (i.) with the brush, *i.e.* probably in tempera, as Pliny elsewhere uses *penicillum* in this application; and (ii.) with the cestrum on ivory. It seems obvious that the usage of *cestro in ebore* in § 147 is the same as that of *in ebore cestro* in § 149, and that Welcker was so far right in supposing that these words in both cases must be taken together. We thus, in the two passages, have three methods of painting mentioned, viz. (i.) *cera*, i.e. encaustic painting proper; (ii.) *cestro in ebore*, encaustic painting on ivory; (iii.) *penicillo* or *tempera*. None of these terms as used by Pliny can possibly be taken as exclusive: the classification is merely popular, according to the prominent feature of each method; thus, though (i.) is called "wax," it does not necessarily imply that wax was not used in (ii.), just as the cestrum may be used in both (i.) and (ii.), and so *penicillum* may equally be used in (i.) and (iii.)*

The following account of the process adopted for the Egyptian portraits is given by Mr. Petrie (*Hawara*, &c., p. 18) as the result of close examination of over sixty originals, and consultation with various experts and artists:—"The colours in powder were ground in thoroughly with the wax (which may have been bleached by heating it to boiling-point, as I have found), and they were then placed out in the sunshine when required, so as to fuse them, or a hot-water bath may have been used in cooler weather. The wooden panel was of cedar

---

* This explanation renders unnecessary the assumption of Klein (*Mittheil. aus Oest.* 1887, p. 219) that Pliny, in xxxv. § 149, did not understand his own statement. Klein considers "with wax and also on ivory" as implying only one method, and that the simplified mode of painting is nothing more than the abandoning of the *cestrum* and therewith of the *tarda picturae ratio* (Pliny, xxxv. § 124). He takes the passage about Jaia as meaning, "Jaia painted both in tempera (*penicillo*) and also in encaustic (*cestro*); in encaustic, she painted both in ivory, smaller pictures, and also larger" (*in grandi tabula*, i.e. on wood).

usually, sometimes of a pine wood, and about $\frac{1}{16}$ inch thick, or occasionally as much as $\frac{1}{4}$ inch; it was about 9 × 17 inches in size. On this was laid a priming of distemper; then a grounding varied in tint, lead colour for the background and draperies, and flesh colour for the face; and then the surface colour was worked on, sometimes in a pasty state, more usually creamy and free-flowing. These details are shown by an unfinished attempt on a panel, which was afterwards turned and re-used; now at South Kensington. The broad surfaces of flesh were often laid on in thick creamy colour with zigzag strokes of the brush, about $\frac{1}{8}$ inch apart, just joining up and uniting in an almost smooth surface: the draperies were usually laid on freely in very flowing colour, with long strokes of a full brush; in one case we see where the full drop of purple wax at the first touch of the brush thinned out as it went down, until at the end of the long stroke the brush was pressed flat out, and every hair has left its streak of wax on the panel. In Egypt one sees white beeswax not only softened, but fused on its surface by the ordinary sun of April and May: it is therefore evident that the wax used in painting might be worked in a flowing state without any artificial means during nearly half the year, by the mere heat of the sun. It is needless to suppose a solvent of the wax to have been used, such as turpentine or oils: and the perfect freedom from yellowing in the well-preserved pictures, or indeed of any change in the tints beyond superficial decomposition, makes it apparently impossible for any changeable organic material to have been added to the wax."

It will be observed, then, that in these Egyptian examples both the brush and a stump, possibly the *cestrum*, are used: the wax is laid on in a fluid condition; and apparently no solvent or drying compound is added. This method, as Mr. Petrie points out, would answer in the hot sun of Egypt; but for the cooler climate of Italy and Greece artificial substitutes for the sun's heat would have to be adopted. In these climates it was necessary, as Varro (iii. 17, 4) says, for the encaustes to have large boxes divided into compartments (*loculatas magnas arculas*) in which the different coloured waxes were kept, doubtless in a fluid condition, as Varro's simile of the fish-ponds (*ibid.*) shows. No wonder that under such difficulties encaustic painting was looked upon as a tedious process (*tarda ratio*), that only small pictures were attempted in it, and that the portrait of a boy by Pausias was esteemed as a wonderful feat and was known as "Hemeresios," from the reason that it was painted in a single day.

The fact is, that this technique probably originated in Egypt, a climate where it presented little difficulty; and here throughout antiquity it was principally practised. The Egyptians made use of preparations of wax at least as early as the Eighteenth Dynasty for preserving paintings; and so we find that the names of most of the encaustic painters of antiquity may be traced to Alexandria or an Egyptian origin. We find a mention of the process in Greece proper in the ode, of doubtful date, falsely attributed to Anacreon: "Paint me my mistress with her soft black tresses, and, if the *wax* can do it, paint them breathing of myrrh." Otherwise it does not seem to have been mentioned in literature until the conquests of Alexander had opened a closer communication between East and West. The practice continued in use late into mediaeval times: in Eusebius it is called *κηρόχυτος γραφή*; but from the ninth century downwards its usage seems to have declined.

To return to the *preparation of the wax*: we saw that Pliny, describing the application of encaustic to walls, spoke of "Punic wax melted on the fire and mixed with a little oil." What was this oil? Pollux (*Onom.* vii. 128) describes the implements of the painter as consisting of wax, colours, *φάρμακα*, and pigments: this word *φάρμακον* is described by Suidas, *s. v.*, as *ὅπερ Μῆδαι νάφθαν καλοῦσι, Ἕλληνες δὲ Μηδείας ἔλαιον*: and it may be that in Greece and Italy it was usual to add some such material as naphtha to the compound, so as to enable the colours and wax to combine more readily.

As to the *colours used*, Mr. Petrie found in one grave at Hawara a set of six paint saucers, which seemed to have been the *χρώματα* of an artist, and are now in the British Museum: although these are water colours, it is probable that they would be similar to the pigments used by the encaustic painter (*Hawara*, p. 11). According to Dr. Russell's examination, they consist of (1) a *dark red*, oxide of iron with a little sand; a good burnt sienna: (2) *yellow*, ochre, oxide of iron, with hardly any alumina; becomes dark-reddish brown on heating: (3) *white*, sulphate of lime, amorphous powder: (4) *pink*, organic colour in a medium of sulphate of lime; probably madder, and can be exactly matched by that: (5) *blue*, glass coloured by copper: (6) *red*, minium, oxide of lead, with apparently some alumina.

In some of the Egyptian pictures Donner notes that a process is adopted which is a mixture of the pure wax-encaustic and egg-distemper: here he thinks the wax has been mixed with the yolk and a little white of egg, also a drop of olive-oil; and this enables the artist to add finishing strokes to the encaustic by means of the ordinary egg-distemper.

As regards the *encaustic painting on ivory*, our knowledge is very limited: it may be assumed that such pictures were small, and possibly, as has been suggested, in the nature of our miniature painting. The instance already quoted of the lady painter Jaia is the only mention of this technique in antiquity. There again the use of ivory seems to point to Africa, and the only specimen of work which it has as yet been proposed to identify with this technique is an ivory box from Egypt now in the British Museum. On the panels of this box are designs which are formed by engraving or hollowing out certain portions and filling in these spaces with a wax paste in various tones of colour. The specimen is rough in execution, but it shows that the process, if well treated, could be made very attractive. Donner thinks that this cannot be called encaustic, but that the second encaustic process attributed by Pliny to Jaia must have been something of which at present we have no representation.

The use of encaustic for the *painting of ships* was referred to in the statement quoted above from Pliny. In spite of the late date that he assigns to its use, there is no doubt that the colouring of ships is alluded to in Homer's frequent epithet of ships as *μιλτοπάρῃοι*: a fragment of Hipponax (Bergk, *Poet. Lyr. Gr.* p. 519) alludes to a serpent painted along the whole length of a trireme; and in a fragment of the Myrmidons of Aeschylus (130 Dind.), according to one interpretation of a corrupt passage, the poet describes how in the burning of a vessel the sign, a Hippalektryon painted with much trouble in wax colours, drops off. The wood was probably first treated with pitch and tar, and then had the wax colours laid on. Pliny states that Protogenes was a painter of ships until his fiftieth year; whence it is argued that this was not a mechanical process: but see p. 415.

6. *Encaustic of Statues.*—After the marble statue left the sculptor's hands, it was usually handed over to an assistant or another artist to undergo the processes of waxing and colouring. In the description of the process for protecting wall-painting by Vitruvius (vii. 9, 3) already quoted, the remark is added that "it is the same process as is adopted for the preservation of nude marble statues (*uti signa marmorea nuda curantur*), and which in Greek = *γάνωσις*." As to this *γάνωσις*, Plutarch (*Quaest. Rom.* ch. 98, p. 287 B) remarks that the first duties of the Roman Censors were to provide for the feeding of the sacred geese and the *γάνωσις* of the statue in the temple of Capitoline Jupiter: "for the vermilion with which statues were anciently coloured quickly fades." Blümner thinks that the process of waxing is therefore separate from that of colouring, and intended to preserve it; or in cases where no colour is used, to soften the tone of the marble: the word *nuda* implying that only the flesh of statues, and not the drapery, was so treated. He thinks that the colouring of the flesh was a habit only found on the older statues, or, if on the later statues at all, only in isolated cases: while Von Rohden (in Baumeister's *Denkmäler*, p. 1345) denies altogether the colouring of the flesh. With regard to the mere toning of the marble by means of wax, it is pointed out that the "Punic" wax ordinarily used, as Vitruvius (vii. 9, 3) says, for the *γάνωσις* of statues, had undergone a special bleaching process; such wax would therefore not perceptibly affect the gleaming whiteness of marble. Treu, who has made a special study of the subject, considers that the toning of the marble by wax alone is out of the question; that the alternative lies between a dazzling whiteness, or, as is more probable, a transparent or opaque tone of colour for the flesh: these tones may be sometimes found side by side, or even one over the other, on the same statue. We shall have to consider this question further under the head of

7. *Polychromy of Sculpture.* — The question, formerly much discussed, as to whether the Greeks coloured their statuary, is no longer open to doubt: it is generally admitted that a statue in flawless white marble could never have suited Greek ideas, and that the chill and staring effect of modern sculpture is mainly due to the fact that the ancient originals which inspired the art of the Renaissance had, at the time of their discovery, retained no evidence of their former colouring. But while the Greeks certainly employed colour, this was only done within the strictest limits of artistic requirement, and never with the idea of aping nature or a wax figure. The surface of marble, as they treated it, presented a warm transparency of effect which recalled, without imitation, the human skin, a slight toning indicating the difference between the various surfaces of the body. It is evident that the prudent application of these laws demanded an artistic sense and experience of high order. Hence we can understand the point of the remark attributed to Praxiteles, who, when he was asked which of his statues he most admired, answered, "Those to which Nicias (the great painter) had lent his hand" ("quibus Nicias manum admovisset"); so highly, says Pliny (xxxv. § 133), did Praxiteles esteem the *circumlitio* of that painter. We know from other passages that this word *circumlitio* implied, not a process like *γάνωσις*, the mechanical treatment of the entire surface alike, but the decoration of details such as the borders of dress, &c. (Quintil. i. 11, 6). Plato (*de Republ.* iv. p. 420 C) speaks of *οἱ ἀνδριάντας γράφοντες*, "the statue painters," as a well-known profession: the word *ἀνδριὰς* no doubt implied originally any kind of portrait, but in the time of Plato it could only have meant a statue; and the scope of the art is well defined in the remarks which follow: he says that it is not by applying a rich or beautiful colour to any particular part, but by giving its local colour to each part that the whole is made beautiful (ἀλλ' *ἄθρει εἰ τὰ προσήκοντα ἑκάστοις ἀποδιδόντες, τὸ ὅλον καλὸν ποιοῦμεν*). The colouring was in fact applied only to certain parts, such as the lips, eyes, hair, and decoration of the dress, while the remaining surface of the flesh was treated with a toning of wax; and this is borne out by the dialogue in Lucian (*Imag.* 5–8), where it is clearly, though indirectly stated, that the Cnidian Aphrodite of Praxiteles, and other celebrated statues, were not coloured, although they were ornamented in parts and covered with an encaustic varnish. In *Anthol. Pal.* vii. 730, *γραπτὸς τύπος* evidently refers to a painted relief; and there are frequent passages in ancient literature in which certain parts of a statue are mentioned as coloured.

The distinct process of toning, *γάνωσις*, is alluded to in Plutarch (*de Gloria Ath.* 6) as *ἀγαλμάτων ἔγκαυσις*: where it is expressly distinguished from the colouring, *ἀγαλμάτων ἐγκαυσταὶ καὶ χρυσωταὶ καὶ βαφεῖς*, *i.e.* "the waxers, gilders, and painters of statues." That a sculptor sometimes did the waxing himself we see from the inscription of an artist Aphrodisios (in Loewy, *Inschr. Gr. Bildh.* No. 551), who signs his name as *ἀγαλματοποιὸς ἐγκαυστής*.

Turning now to the monuments, we see that the earliest traditions of the Greeks, strongly influenced as they were by the gay colouring of the East, were naturally in favour of a system of polychromy; and further, that the meanness of the materials in which the earliest sculptures were executed, such as wood, terra-cotta, and limestone, rendered necessary a scheme of colour which should conceal this inferiority. A third important reason was the close connexion that existed between the arts of the sculptor and the architect. Greek architecture, as we shall show, was invariably coloured, more or less; and in order to adapt a statue or relief to the temple or other building for which it was intended, it was necessary to bring it also into the general scheme of the colouring of its surroundings. One result of this was an entirely conventional system of colour for sculpture, often far removed from that of nature: thus in the early pedimental sculptures in *poros* stone recently discovered on the Acropolis, the beards of two of the figures are coloured a bright blue, and the iris of their eyes green. Herein the advantages of colour were manifold: thus, for figures intended to stand in the background, painting often took the place of the more detailed modelling; and on reliefs such as the frieze of the Parthenon, details of dress, weapons, &c., could be indicated in this method. The sculptor was thus enabled to dispense with trivialities, and his work gained proportionately in breadth of style. The colouring of architectural marbles was necessarily subject to strict laws, dependent upon that of the architecture of the time: in these cases probably even the flesh was usually coloured, and the general effect was very much what we have in the terra-cotta statuettes of Tanagra. In case of independent sculpture, which had no tectonic intention, the artist had freer scope; and here probably, in the best period at any rate, most sculptors were content with *circumlitio*: thus the Hermes of Praxiteles, when it was first discovered, showed only traces of red and gold on the sandals.

The scale of colours employed in sculpture, originally restricted, became enlarged in later times, especially when under the Ptolemaic rule intercourse with the East became more established; and in Roman times it was no longer restrained by the prudent reserve of the Greeks. In Etruria, again, where from the earliest period sculpture had principally been executed in terra-cotta, a separate scheme of colours obtained; the more Oriental tastes of the Etruscans leading them to prefer lively primary colours, as we see in their wall-paintings and in the series of sarcophagi with reliefs which have come down to us from them. While for the γάνωσις a wax process was employed, it seems clear that the colour was laid on usually in tempera; and this probably accounts for the fact that so few traces of it have survived. The surfaces intended for this colour were generally left unpolished; thus in the head of Athene (*Ant. Denkm.* Taf. 3) the white skin is left unpainted and is polished smooth, while the coloured portions are worked with the tool and left rough. Gilding played an important part in polychromy; some have gone so far as to say that in the Parthenon, for instance, all the colour was laid on a ground which had been gilt. Probably the work of the χρυσωτής (see above) lay principally with bronzes, but certain portions of the marble, such as jewellery, as we see also in the Tanagra statuettes, were gilded: the Eros of Thespiae by Praxiteles had gilt wings; and we read frequently of the renewal of faded gilding on cult-statues, the cost of which had been borne as an *ex voto* by some pious devotee. Polychrome effects in bronzes were produced principally by this method, or by inlaying; and here only to distinguish those parts from one another which demanded it, such as the decoration of dress, the lips, and the eyes. The stories in the classics bearing on this point are misleading; thus we cannot credit the statement of Plutarch (*Qu. Conv.* v. 1, 2), who says of the statue of Iocasta that the face was rendered so as to represent a dying person, by the admixture of silver with the bronze: such stories were probably due to a misunderstanding of the terms applied to plating or inlaying. In sculpture also, inlaying was sometimes applied to give polychrome effect: the chryselephantine statues of gold and ivory had early given the idea of a mixture of materials, and we find in the marble statues such details as wings and armour sometimes added in metal. In Roman times realistic effects were frequently attained by composition in marbles of different colours; so that, as in a cameo, the helmet of a figure might be in one marble, the flesh in a second, and the drapery in a third: such processes did more credit to their ingenuity than to their taste.

8. *Polychromy of Architecture.*—As in the previous subject, so here also the main difficulty lies in the lack of material: one thing only seems certain, that while no Greek temple was left uncoloured, the colouring was applied only to certain parts and under strict laws of distribution. As in sculpture too, the usage differed considerably according to period and locality: in the best period, when marble was the principal material employed, very little colour was added; in the early period, and again in the later when stucco was freely introduced, colour was necessary in order to conceal the poverty or dissimilarity of materials. Broadly speaking, colour was reserved throughout for those members which projected from the surface, such as the cymatium, triglyphs, &c., and for those parts of the actual surface which gave a background for the sculptures: the background of a frieze or tympanum of a pediment being usually either red or blue. In the interior, the wooden roof was certainly coloured; but what these colours were, we cannot now judge, except from the imitations in stone which have come down to us, principally in Athens. Of the colouring of Ionic architecture still less is known than that of Doric; in such few traces as have survived, it seems to accord mainly with the principles of Doric. The colouring serves principally as a background for moulding; and as the moulding grows richer and higher in relief, the more compensation in colour is demanded. In Corinthian architecture, with its richer capitals due possibly to the Egyptian palm capitals, the colouring is still further enriched: a tendency which in Roman architecture shows itself in the use of mosaics, wall-paintings, and variously coloured marbles. The colours were probably for the most part laid on in the encaustic process: in the inscription from Athens which records the building accounts of the Erechtheion (*C. I. A.* i. 324 *a*, l. 42) occurs the entry of a sum paid to the encaustic painters for having painted the cymatium on the epistylium of the interior: ἐγκαυταῖς· τὸ κυμάτιον ἐγκέαντι τὸ ἐπὶ τῷ ἐπιστυλίῳ τῷ ἐντός.

9. *Mosaic.*—This subject is most naturally included under the head of Painting, for it is upon the major art that it depends for its inspiration as well as its intention, which is the representation of decorative and pictorial effects in floors and walls by the arrangement in them of coloured stones and glass.

In Greek we meet with no term for this branch of art until quite a late period, descriptions of mosaics in Greek authors usually showing, by the roundabout phrases employed, that there was no such term known. In Roman writers we find the words ἔμβλημα and λιθόστρωτον, which they seem to have adopted, with the process, from the Greeks; but it is a question whether these were not specially applied to distinct classes of mosaic.

The best known term is *opus musivum* or *pictura de musivo* (also *museum* or *musium*, hence *musiarii*, *musivarii*, and our "mosaic"); but this does not appear until late, and its derivation is unknown.

Of the history of mosaic little is known: the Romans certainly borrowed the idea from the Greeks, probably in the time of Sulla; but there is no evidence as to whence, or when, the Greeks themselves adopted the process. It is natural to connect it with the brick and tile constructions of Egypt and Mesopotamia. Inlaying in various coloured glazes was of course known to the Egyptians from an early period, as the tiles of Tell el Yahoudiyeh show (Birch, *Anc. Pottery*,² p. 50): it was equally familiar to the Assyrians and the Persians. The recent researches into the architecture of Persepolis have moreover shown that the bricks in these buildings were made in two tones of colour, and so disposed as to form a literal mosaic pattern. In all probability, then, Greek mosaic was inspired from the East, after the conquests of Alexander. The evidence for this date rests upon the fact that neither in literature nor the monuments can we prove the existence of any mosaic in Greece before this time. The earliest mosaic as yet known is that which decorates the floor of the pronaos of the temple of Zeus at Olympia, which, as has been shown (*Arch. Zeit.* 1879, p. 153), cannot be earlier than the first half of the fourth century B.C., and is probably considerably later. An anecdote of the cynic Diogenes mentioned by Galen (i. p. 19 k) refers to a floor in which the likenesses of gods were represented by arrangements of different kinds of *tesserae* (ἔδαφος ἐκ ψήφων πολυτελῶν . . . θεῶν εἰκόνας ἔχον ἐξ αὐτῶν διατετυπωμένας); but probably this, in common with most of the anecdotes of Diogenes, is a late invention. On the other hand, most of the literary notices of mosaic point to the period of the Diadochi: we hear of it in connexion with the names of Demetrius Phalereus and Hieron II., and with the Pergamene empire. In Greece proper a noted instance is given at Delphi: the Scholiast to Lucian περὶ ὀρχήσεως, 38, says that beside the *omphalos* at Delphi two eagles were represented in mosaic (γεγράφθαι ἀπὸ συνθέσεως λίθων); and Wieseler has suggested with great probability that this decoration must have originated at the restoration of the shrine after the Phocian War, when the golden eagles that formerly stood there had been looted and the ground torn up by treasure-seekers. Everything then points to the third century B.C. for the introduction of mosaic into Greece: probably it was never practised to any great extent there; we do not even know whether the Greeks were familiar with the various classes of mosaic which the Romans distinguished from each other.

The only artist in mosaic whose name is mentioned in ancient literature is Sosos of Pergamon (probably about the middle of the third century B.C.; Pliny, xxxvi. § 184), who made a mosaic which became famous as the *οἶκος ἀσάρωτος*, "the unswept house," representing a floor covered with the remnants of a banquet: several reproductions of this have come down to us; one of these, now in Rome, is signed by the artist, *Ἡράκλειτος ἠργάσατο*. It is possible that representations of the objects likely to be found on an actual floor may have led to the imitation of figured scenes in mosaic: one such mosaic in the British Museum represents strewn leaves. On the other hand, it has been suggested that these floor pictures were due to another reason: in the time of the Diadochi in Alexandria the practice grew up of decorating the walls with marble slabs of different colours; and as there was in this case no space for pictures on the walls, these were supplied in the floor. One of the finest Pompeian mosaics, signed by Dioscorides of Samos, reproduces a wall-painting found at Pompeii; and the great mosaic at Naples of the Battle of Issus was probably inspired by the painting by a Graeco-Egyptian lady Helena. The Egyptian origin of the art is further marked by the occurrence of Egyptian landscapes reproduced in ancient mosaics: the finest is the Palestrina mosaic, ascribed to the first century A.D.

The connexion between wall-painting and tapestry hanging is obvious: and the same connexion may be traced between mosaic and textiles; both directly, from carpets, and indirectly, as at Pompeii, through wall-paintings. This connexion is further illustrated when we examine the Egyptian textiles, of which the design, colouring, and even the treatment are often exactly parallel to those of mosaic work.

The successive stages of the development of mosaic are well illustrated at Pompeii: the simplest kind is that in which different geometric or floral patterns of white rectangular stones are set in a floor of pounded brick and lime; gradually the inlaid portion becomes larger and richer, the *tesserae* smaller and more coloured, and less of the actual floor is seen; until finally the ground, as well as the design, is constructed also of mosaic *tesserae*.

The simplest kind of mosaic consisted in laying in a simple pounded cement a *pavimentum testaceum* or *opus signinum*, i.e. a series of patterns, figures, or inscriptions in white or coloured *tesserae* or *tessellae*. These *tesserae* are in later Greek called ψῆφοι, ψηφῖδες (hence ψηφολόγημα, a mosaic pavement; ψηφοθέτης, a mosaic worker): we also have ἀβακίσκοι, which however seems to correspond more to *abaculi* or *crustae*, i.e. slabs of marble for inlaying. They were made of all kinds of material: besides marble, stone of different kinds and colours, terra-cotta of various degrees of baking and mixed with other substances, glass of all shades of colour; the gilding of glass *tesserae*, frequent in Byzantine work, was only rarely employed in Roman mosaic. In the earlier and simpler kind they are as a rule square in form, but the imitation of elaborate designs made special cutting necessary.

In preparing the ground, Vitruvius recommends the employment of three layers, viz. (i.) the lowest foundation, *statumen*; (ii.) on this a rough mass of mortar, *rudus;* and (iii.) topmost of all, the cement proper, *nucleus*, of pounded brick and lime, in which the *tesserae* are laid: this seems to have been mixed further with a binding material such as bitumen.

Of the ordinary mosaic, the finest kind was the *opus vermiculatum*, so called probably because in this work *tesserae* of the minutest proportions are arranged in long wavy lines suggesting the movement of worms, *vermes*. Possibly the Greek λιθόστρωτον corresponds to this finest work, inasmuch as the passages in which it occurs invariably refer to a luxurious pavement. It was used not only for floors, but also for walls, columns, and even vaults, where the difficulty of attachment made special preparations necessary.

Opus sectile was, broadly speaking, a mosaic made of slabs of different coloured marbles: these slabs were of different sizes, and cut in triangles, shields, squares, and other geometric forms. A special kind of this class was the *opus Alexandrinum*, in which only two kinds of marble were used, generally speaking red and green, porphyry and Lacedaemonian marble. This is said to have been introduced by Alexander Severus, and to have been named after him; but there is no doubt that it was of much older origin: probably it came originally from Alexandria. Under this head is also included a process of mosaic in which figures, &c., are imitated, not with *tesserae*, but with variously coloured slabs: the flesh for instance of a figure being cut out in one stone, the clothes in another, and the hair in another. A notable instance of this class is given in a mosaic representing the Rape of Hylas, from the Basilica of Junius Bassus (Consul A.D. 317), engraved in the *Archaeologia*, xlv. (1880), pl. 47.

10. *Mosaic reliefs.* — Raoul-Rochette, in his *Peintures antiques*, pl. xii., gives a specimen of a mosaic figure in relief, said to have been found at Metapontum: he pronounces it to be of pure Greek style, intended for insertion in a wall. A similar specimen is in the Wilton House Collection, of which Michaelis (*Ancient Marbles*, p. 678) remarks: "After the thorough disquisition of R. Engelmann (*Rhein. Mus.* xxix. pp. 561–589) it can no longer be doubted that mosaic relief is an invention of the last century only, and that all the known examples are impostures, forged at that period. Again, the style of the setting of the several stones, so that broad white seams of cement are to be seen between them, is not antique."

11. *Vase Painting.*—The art of painting fictile vases with decorative subjects was in antiquity a separate art, peculiar to the Greeks; although the idea may have been in the first place borrowed from the Egyptians, it was never extensively practised except among the Greeks, and may be said to have lived and died among that people. The Etruscans, it is true, were large importers of Greek vases, and produced occasional imitations of their ware; and recent evidence seems to show that, for a brief period, Latin (possibly Roman) artists were following their example: but these imitations were as a rule clumsy or vulgar, and can be readily distinguished from the ware to which they owed their origin. The figured scenes on Greek vases commence towards the end of the seventh century B.C., and continue down to the first half of the third century B.C.; and within this period we now have, scattered in the different museums and private collections, many thousands of examples, which form a most important running commentary on every conceivable phase of Greek life and thought. Of the mine of information thus afforded, much yet remains to be explored: and the history of Painting, in the earlier stages at any rate, looks to ceramography as its principal witness. While therefore we must fully recognise the importance of this branch of the subject, it must not be forgotten that vase-painting among the Greeks was only a subsidiary art, or rather a handicraft; and that, of the century or so of vase-painters whose signed works we possess, there is not one name mentioned in the whole field of classic literature. Their works were mainly intended for the temple, for sacred or semi-sacred functions such as the great games, and for the tomb: vase artists and painted vases alike were a class apart. For this reason, and in order to prevent overcrowding this article with a separate voluminous subject, Greek ceramography is treated in a distinct article, VAS; to which the reader must be referred for the numerous allusions which will be found in the course of the present article.

12. *Vases painted in Encaustic.*—There is, however, one class of vase-paintings mentioned in Athenaeus (v. 200 b), which, if the passage is rightly understood, seem to have been a separate class, distinct from the true ceramography of the Greeks. That writer, in describing the *pompa* of Ptolemy Philadelphus, says that among other elements of the procession were 300 boys carrying κεράμια κεκηρογραφημένα χρώμασι παντοίοις (vessels painted in wax with colours of all kinds). It does not seem at all clear, however, what these vessels were. Birch (*Hist. of Pottery*, p. 427) proposes to identify them with a fabric of which specimens were found at Centorbi and elsewhere: the specimen he describes is of terra-cotta, "the colours on which are prepared in wax and laid upon a rose-coloured ground: it is ornamented with gilding, and is of a late style and period." Raoul-Rochette (*Peintures antiques*, p. 430, pl. xiii.) gives a specimen of this fabric: but even supposing that this process is really encaustic, it is not likely that it was ever extensively practised, nor does it seem certain that these examples illustrate the passage in Athenaeus: the "vessels" there alluded to are probably of wood; the habit of painting polychrome decorations on vases of wood was common in Egypt in later times, and the encaustic process would be more appropriately applied to wood than to terra-cotta. Blümner suggests that the κηραγγέες of Maneth. iv. 332 are to be explained as the painters of such vessels.

13. *Drawings on other Materials: Bronze.*—The outline drawings on bronze must be referred to here, as giving important evidence of the ancient art of design, although the subject is more fully treated under SCALPTURA. The earliest examples of engraved design on bronze are the celebrated swords found at Mycenae, of which the blades are decorated with lion-hunts and other scenes in engraving. These, however, form a class by themselves, being inlaid as well

in various metals; a process which as yet is unknown in subsequent Greek art. Of engraved design pure and simple we have a fine specimen of Greek work of the sixth century B.C. in the bronze cuirass (*Bulletin de Cor. Hell.* vii. pp. 1–5, pll. 1–3), and smaller specimens from Olympia: there is no doubt that the art flourished in Greece, although very few examples have been found there, while great numbers have come from Etruria. These Etruscan specimens consist mainly of mirrors and *cistae* dating from the fourth century B.C. downwards; principal among the latter being the Ficoroni *cista*, of which an engraving is given in Vol. I. p. 440, Vol. II. p. 213: the subjects represented on these mirrors are for the most part of Greek origin, though treated in an Etruscan dress and accompanied by Etruscan inscriptions. Probably, if more specimens of the pure Greek engraving had survived, we should recognise the qualities of spirited and firm drawing which are reflected in the best Etruscan specimens, and which ancient critics admired in the works of the great Greek artists.

14. *Boxwood.*—Pliny tells us that the great painter Pamphilus gave lessons in drawing on boxwood; and the words πυξίον (named by Pollux, x. 59, among the implements of the painter) and πυξογραφεῖν (Artemid. i. 53) are referred to as further evidence of this process: but neither of these words in themselves necessarily imply reference to a distinct art; they may allude merely to the tablet of box which, as was before mentioned, was one of the principal grounds on which the easel painter worked. In a tomb in the Crimea (*Ant. de Bosp. Cimm.* pl. 79) certain slabs were found which were engraved with fine drawings in the style of the early part of the fourth century B.C., the lines being filled with colour. The material of these slabs was supposed to be boxwood, and they were adduced as illustrations of the process of Pamphilus: but Stephani (*Compte Rendu*, 1866, p. 6; n. 2) says that this is an error, and that they are in reality slabs of ivory. It is quite possible that the Greeks practised the art of engraving designs on boxwood, just as they did graving upon ivory (see also above under *Encaustic*) and on bronze; but it does not seem necessary at present to consider that the teaching of Pamphilus meant more than the rudiments which every easel painter would have to know as a preliminary to painting on boxwood.

15. *Parchment.*—It would appear from a statement of Pliny that sketches or cartoons for pictures were sometimes executed by the great masters on parchment, and, as in the subsequent history of art, were handed down for the tuition and profit of successive ages of artists (xxxv. § 68: "et alia multa graphidis vestigia extant in tabulis ac membranis ejus, ex quibus proficere dicuntur artifices;" see *infra*, p. 412). Here also belongs the subject of illustrated MSS.: unfortunately, we have scarcely any illustrated classical MS. which does not date from a debased age: "although we know that doctors and architects were in the habit of adding explanatory illustrations to their scientific works, and that M. Varro, for instance, adorned his great biographical work the *Imagines* with 700 portraits of Greek and Roman celebrities."

16. *History.*—The history of Painting in classical antiquity is one which is difficult to treat comprehensively within the limits of an article like the present, on account of the wide field of speculation which it offers, and with which a close student of the subject must necessarily be familiar. As in the case of Sculpture, so here, our knowledge must be based upon the examination of the statements of ancient authors in the light of modern remains: but whereas in the study of Sculpture we have before us an almost complete series of the works of the greatest masters, in that of Painting we are met by the fact that no single example of a great masterpiece has come down to us; nay more, that of one great branch of the art, that of easel-painting, not a single specimen (if we except a few late Roman portraits) has survived. And yet we have every reason to believe that the Greeks achieved as signal success in Painting as they had done in the sister art: the art critics of antiquity, whose judgment we can test in the light of the actual monuments, are no whit less enthusiastic, nor less explicit, about their painting; and although in some branches the ancient painters may not have attained to the technical perfection of modern times, yet we may be sure that, within the limits which they set themselves, the masterpieces of the Greek painters were worthy to rank beside the marbles of Pheidias or the bronzes of Lysippus.

In default therefore of any evidence at first hand, we are forced to accept such other monumental evidence as we can collect of objects which illustrate or reflect the major art. Of such fortunately a fairly large supply has come down to us. This secondary evidence consists of painted vases, painted works in stone or marble, mosaics, and principally the large store of mural paintings which have been rescued, mainly from the buried cities of Pompeii and Herculaneum. It is true that the great majority of these echoes of Greek painting are of a late date and were executed under Roman influence; but as both in sculpture and in painting the art of the Romans is hardly separable from that which Greek artists had taught and were still teaching, it will be convenient in this article to treat the two nationalities together.

With regard to the other peoples of Italy, such as the Etruscans, the same system will equally hold good. If Etruscan painting had for a brief period an independent existence, it was nevertheless subject to much the same influences, and exhibits a similar development during this period to that of the Greeks; while in any case the time soon came when it was first impregnated, and finally absorbed, in the influence which spread abroad from the Greek colonies in Magna Graecia: and though both in Italian and Etruscan art there are certain local elements always separable, these are not of sufficient importance to demand a separate treatment here.

In studying ancient painting, it is necessary to keep constantly in view the parallel between it and sculpture. The problems which are involved in the questions as to which was the earlier art of the two, and as to how much the Greeks borrowed from the Egyptians and Assyrians, are out of the present sphere, and not much is gained by their elucidation. It is sufficient to know that the Greeks were the first people to raise to the level of independent arts what had previously been merely descriptive and decorative processes; and though in Greece sculpture may be said to have reached its culminating point more than a century sooner than painting, yet both are throughout closely allied, and are constantly acting and reacting upon each other. In reliefs especially painting plays a prominent part, and in statuary even of the best period its growing influence is clear: painting was in fact of the sister arts that which led the way in the whole history of Greek development; and when Winckelmann, following Pliny's statement that there was no painting in Greece at the time of the Trojan War, says that sculpture has the earlier origin, this statement is true only in so far that painting did not attain its full development until the end of the fourth century, whereas the bloom of sculpture is assigned to the middle of the fifth century B.C.

The great difficulty of our inquiry is that of reconciling the literary records with the monumental remains, and of establishing accurately the continuous connexion between them. The wealth of new material which has accumulated, especially during the past ten years, and the more scientific methods of investigation which have thus been rendered possible, have together produced this result—that we are now in many respects in a better position to judge of Greek art than were the art critics and historians of antiquity. The literary records of painting indeed, scanty as they are, are not to be accepted without the closest scrutiny: thus it is now generally accepted that Pliny, our chief informant as to the early history of Painting, adopted without criticism and often without understanding the statements of his authorities; these authorities being apparently for the most part certain Greek works περὶ εὑρημάτων: that he seems to ignore everything but easel pictures: and that his historical arrangement is altogether untenable. Pliny connects each successive improvement in the early history of Painting with the name of a master: even when these names have an appearance of reality, it is probable that they represent, not the inventors of definite steps, but pictures associated with their names which showed the first instances of these improvements.

Under these circumstances, it is obvious that the traditions of ancient writers as to the commencement and earliest development of the art of painting in Greece must not be taken as literal contributions to the history of our subject: in some points, indeed, it is quite impossible to reconcile them with the evidence of the monuments of this period which are before us. The principal authority is Pliny in his *H. N.* xxxv. § 15 foll., who himself acknowledges the uncertainty of his subject. "The Egyptians," he says, "falsely claim to have invented painting 6000 years before it crossed into Greece: of the Greeks, some ascribe the invention to Sicyon, others to Corinth, but all agree that the first step consisted in tracing the shadow of a man with lines. This was followed by the introduction of single colours, so called *menochromaton;* and even after the art had advanced, this style was still carried on. Linear drawing was invented by Philocles the Egyptian or Cleanthes of Corinth, and was first practised by Aridices of Corinth and Telephanes of Sicyon: even these made no use of colour, but scattered lines within their paintings (*spargentes lineas intra*), and attached the names to the figures of their paintings. It was Ecphantus of Corinth who first invented those (pictures?) of the colour of pounded potsherd: this was not the Ecphantus who is said by Cornelius Nepos to have followed Demaratus into Italy."

Painting had already an independent footing in Italy. "Even to this day there are pictures in the temples of Ardea of which the date is earlier than the foundation of Rome; also at Lanuvium are two pictures of Atalante and Helena by the same artist; and at Caere some still earlier: so that the connoisseur may well say that no art was more speedily brought to perfection (*consummata*), seeing that in Trojan times it appears to have had no existence." Pliny then proceeds briefly to note celebrated painters or works of art: the picture of Bularchus, in which was a battle of the Magnetes, of such merit that Candaules paid for it its weight in gold (*repensam auro*): the painters of monochrome (*monochromatis*) Hygiainon, Dinias, Charmadas, who must have lived shortly before, but whose period is not given: Eumarus of Athens, who first in painting distinguished male from female and dared to imitate every sort of figure ("qui primus in pictura marem a femina discreverit, ... figuras omnis imitari ausum"): and lastly, Cimon of Cleonae, who developed the inventions of his predecessor: he found out "catagrapha, hoc est obliquas imagines, et varie formare voltus, respicientis, suspicientisve vel despicientis. Articulis membra distinxit, venas protulit praeterque in veste rugas et sinus invenit." (The difficulties of this passage will be referred to later on.)

In *H. N.* vii. § 205, Pliny says further, that painting was a discovery of the Egyptians, but was in Greece invented by Eucheir, kinsman of Daedalus: so also says Aristotle: Theophrastus, however, ascribes it to Polygnotus of Athens. Athenagoras (*Leg. pro Chr.* 14, p. 59, ed. Dechair) relates how in the days before sculpture and painting and statuary were Saurias of Samos, and Craton of Sicyon, and Cleanthes of Corinth, and a Corinthian maiden: shadow-pictures, σκιαγραφία, were invented by Saurias of Samos, who traced the outline of his horse in the sun: and painting (γραφική) by Craton, who smeared in (ἐναλείψαντος) the shadow of a man and woman on a whitened slab (ἐν πινάκι λελευκωμένῳ). The legend of the "Corinthian maiden" is referred to by him (*ibid.*) as the origin of the koroplastic art; and Pliny (*H. N.* xxxv. § 151) refers to the same story: the legend related how the daughter of a certain Butades, a Sicyonian potter at Corinth, struck by the shadow of her lover's face cast by her lamp upon the wall, drew its outline (*umbram ex facie lineis circumscripsit*) with such force and fidelity that her father cut away the plaster within the outline and took an impression from the wall in clay, which he baked with the rest of his pottery.

The main difficulty which confronts us in these various descriptions is that of distinguishing between linear (*i.e.* outline) drawing and silhouette. It will be best to take the statements as to the inventions first, and afterwards to examine in detail the artists' names. We may for the present disregard the reference to Egypt: the name Philocles being a Greek and not an Egyptian name, it is suggested that the author of this statement had seen the work of an

Egyptising Greek, possibly that of an inhabitant of Naucratis, a Greek colony founded in Egypt in the seventh century; or that some such work, originally painted by Philocles in Greece, had been exported to Naucratis, and, being still on view there, had caused the mistake of describing the artist as an Egyptian. We may also disregard the name of Polygnotus in this connexion, wrongly introduced here by Pliny: Theophrastus only meant that Polygnotus was the first who developed monumental painting. The remaining list of inventors points almost exclusively to Corinth and Sicyon: this is in keeping with the intimate connexion which we know existed between these two cities, and the importance of their art, in the sixth century B.C.; they lay close together, and used almost identical alphabets; and the rule of a powerful dynasty of tyranni in each place gave scope for the artistic activity of the "Daedalidae" to flourish there. The extensive spread of this Corinthian-Sicyonian art may well account for such legendary wanderings of artists as that of Eucheir, Eugrammus, Diopus, and Ecphantus (Pliny, *H. N.* xxxv. § 152) into Italy: on the other hand, there is no reason why these artists should belong wholly to legend: we know of the actual existence of a Eucheir in antiquity; and the other names present no further difficulty. There is no reason to suppose the priority of either city: in fact the Butades legend suggests an attempt to compromise this question, by making him a potter of Sicyon working at Corinth.

Pliny says, "All agree that the first step consisted in tracing the shadow of a man with lines": it is evident that in the various accounts no distinction is intended as to the priority of drawing over painting or *vice versâ*; on the other hand, the expression *umbra lineis circumducta* certainly seems to imply outline drawing; and all the accounts except that of Craton seem to refer to the priority of linear drawing, a fact which is not borne out by the evidence of the monuments. The best suggestion for the explanation of this difficulty is that of Klein, who points out that the real distinction between these various "inventions" lies, not in the *method*, but in the *subject* adopted by the legendary artists; and shows that each legend may be respectively traced to one of the different terms applied in Greek to "painting." Thus, the existence of a term *σκιαγραφία* would suggest a general basis for the various shadow-theories: *ζωγραφία*, as distinguished from *γραφική*, might mean the drawing of animals, *ζῷα*, as opposed to the drawing of the human figure, and hence the legends of the horse of Saurias, and the man and woman of Craton. The story of the Corinthian maiden is really more connected with fictile art than with painting, though drawing is doubtless equally at the basis of such works in terra-cotta as are here referred to: the elements of this legend are all supplied in the term for terra-cotta modelling, *κοροπλαστική*. As to this Corinthian maiden, we have two conflicting accounts: Athenagoras says that the lover was asleep, and that the terra-cotta was in his time still preserved in Corinth: whereas Pliny describes the lover as departing, says that the face only was outlined, and that it fell a victim in the sacking of Corinth in B.C. 146: it has been thought, therefore, that the source of Athenagoras' information must have been earlier, that of Pliny later, than B.C. 146: but probably there is no need for supposing the work to have existed except in legend: the circumstantial character of the narrative, as is demonstrable in other similar cases, proves nothing.

With the names of Cleanthes, Aridices, and Telephanes, we come to more definite ground, apparently of the seventh and sixth centuries; before however we approach this period, wherein literary and monumental evidence are both available, we must first go back to the far earlier period which we know only from the actual monuments.

As to the actual origin of painting in Greece, various theories have equally been advanced in modern times. One critic argues that the idea was originally suggested by polychrome embroidery or textile work, and points to the fact that in Homer no mention of painting occurs, while on the other hand mention is more than once made of scenes woven on garments, such as the robe of Helen and of Odysseus, and the veil of Hera; and that two of the earliest recorded names of artists are those of Acesas and Helicon, weavers of Salamis in Cyprus. In this connexion we shall see that the influence of Oriental tapestries is largely felt in the Greek paintings, especially of the coast and islands of Asia Minor, but this probably did not take effect until the end of the seventh century B.C. [see VAS].

Another theory is that of Klein and Milchhöfer, who suggest that both sculpture and painting are jointly preceded by coloured relief. Klein says, "Sculpture and painting are in the earliest period united in a coloured and flat style of relief, which Greece received from Asia Minor and developed (*e.g.* the Cypselus chest and the throne at Amyclae). Painting is at first intended to do no more than replace the actual colour of the metal or wood stuff, in the character of a surrogate. The technical process of engraving (where this is unnecessary) of the painted figure and its surroundings, points still more clearly to an imitation of the hammered, beaten out, and inlaid work: and this explains the striving after gaudiness;" herein referring to the class of "Protocorinthian" paintings in which these characteristics occur, and which he suggests are the result of imitation of inlaid metal. The suggestion may be perfectly true of this particular class of paintings: but these by no means represent the first beginnings of the art in Greece.

Strictly speaking, the subject of Painting embraces every material, even to the humblest, to which it is applied; and for the earliest beginnings of the art, we may accept the evidence of vases where other evidence fails. The earliest painted vases in Greece are a class which come at the end of the Hissarlik and at the commencement of the Mycenae period [VAS]. These show the first introduction of painted ornament, at the point where it takes the place of the primitive engraved patterns with which the decoration of Greek pottery begins. First it occupies itself with decorative devices borrowed from marine fauna and flora; afterwards, in the bloom of Mycenaean art, a wonderful dexterity is attained, which leaves little in the range of nature unattempted. In Mycenaean art we see for the first time the elements of that artistic selection and dramatic force which it was the mission of the Greeks first to introduce; we see these qualities strongly marked in the scenes inlaid and engraved on the famous bronze swords found at Mycenae: especially on one which represents a scene of panther-like animals chasing birds by a river-side; although executed in metals, this is a complete picture of animal life, of which even the requisite colours are indicated by the various metals employed. But the more recent excavations at Tiryns and Mycenae have given us still clearer evidence of the pictorial art of this period. In both these sites fragments have been discovered of wall-paintings which seem to have formed parts of extensive compositions in fresco. The largest fragment represents a bull charging, coloured white with red spots on a blue background: above the bull's back is the figure of a man, whose peculiar position has been explained as that of an acrobat, but is more probably due to a defect of perspective. Besides this are on other fragments part of a frieze of figures with animals' heads, warriors, female figures, &c. The range of subjects is that which we are accustomed to meet with on the so-called "island gems" which begin in this period [SCALPTURA], and which perhaps more than anything show us the connexion between Mycenaean art and the art of later Greece. These subjects are marked by a strong native originality, tinged with the influence partly of Egypt, partly of Asia Minor: in the bronze swords and the wall-paintings the influence of Egypt is especially noticeable, both in point of technique and in the treatment of subject; so that perhaps Pliny's authority was unconsciously correct when he asserted that the art of painting had crossed from Egypt into Greece; though it is certain that his information could never have extended so far back as the times of Mycenae and Tiryns.

With the downfall of the Mycennaean power, the progress of art in Greece doubtless received a check. We see this especially in the vases: the brilliant ware of Mycenae gives place to the rude Geometric system of the conquerors, and survives only in a degraded ware which represents the decadence of the earlier art. In Greece proper the heritage of Argos and Mycenae was doubtless passed on to the neighbouring towns of Corinth and Sicyon; a process which is reflected in the legends narrated by Pliny and others referred to above. On the other hand, the traditions of Mycenae had passed to Asia Minor and the islands: the early pottery of Rhodes shows that late down into the seventh century B.C. vase-painters were still employing a floral system which was a direct survival from Mycenae; and the Euphorbus pinax found at Camirus in Rhodes shows, in the Argive inscriptions which it bears, a direct connexion of this style with Argolis. Unfortunately, we know as yet very little of the early painting in the Greek cities of Asia Minor; but the little evidence which we do possess seems to show that in the seventh century B.C. this style of painting was practised throughout an extensive area of Eastern Hellas. Probably, as the early Greek sites of Asia Minor become more thoroughly explored, we shall see that the painting of this period, like the sculpture and the poetry, centred in some one or more of these cities of the border. Recent excavations at Naucratis, a city in Egypt colonised principally from this district, have shown us what the conditions of this art were in the end of the seventh century; and we have still further important evidence from the locality in question. From Clazomenae has come a series of terra-cotta sarcophagi painted with figured decorations in the style of these schools. These sarcophagi are of various dates, which cover a considerable period; the earliest was probably not made before the first half of the sixth century B.C.; but it seems to represent a tradition which traces its origin back to a period considerably earlier. In these paintings the reddish clay is first covered with a yellowish white pigment, upon which the design is first outlined, and afterwards filled in, in a brownish black. The subjects are for the most part friezes of animals, combats of warriors, and hunting scenes.

The technique of the sarcophagi corresponds with that of the earliest class of the so-called Protocorinthian and Corinthian vases, in which, if their attributions to Corinth are correct, we may trace an unbroken line of connexion between the art of Corinth and that of Mycenae. The most important evidence of this art is afforded by the painted *pinakes* found at Penteskuphia [FICTILE]. Here we have a series of actual pictures, painted as pictures and not as mere decoration, which throw an interesting light on the various branches of art in the seventh century, and illustrate the close connexion then existing among them. These, dedicated principally to Poseidon, are the combined product of the painter and the potter; one of them is signed by an artist already otherwise known to us as a vase-painter; some of the plaques have moulded decoration; and the scenes represent episodes in the arts of the potter, the painter, the sculptor, and possibly also the bronze worker. This close connexion is very much what is reflected in the versatility imputed to the Daedalidae in the early traditions respecting the first art-workers, wherein the members of one family furnish the representatives of all the various branches of art. The range of myths here depicted is as yet small, as in the Hesiodic shield; the time is not yet come for that fulness of mythological material which is set forth in the famous description of the Chest of Cypselus [STATUARIA], equally a work of Corinthian origin.

With the end of the seventh century we reach a more definite standpoint, and it is here that we seem for the first time to find a historical background for the early artists of literary record. Again, in the absence of other evidence, we are obliged to turn to vase-paintings; but inasmuch as vase-painting in its later history certainly reflects the influence and the progress of the major art, we may take this analogy as true of the earlier periods also.

After the invention of linear drawing, Pliny mentions ARIDICES of Corinth and TELEPHANES of Sicyon, *spargentes lineas intra*, and who also attached the names to their figures; the term *lineas* has usually been misunderstood as an allusion to the inner markings of the figure, giving the "drawing of the eyes, nostrils, all in short which goes beyond mere silhouette." We cannot, however, suppose that all previous artists drew their figures as blind; and it is obvious moreover from vases, that inner markings must have been adopted long before the practice of writing in the names. Klein therefore suggests that this expression in Pliny refers to the linear ornaments, borrowed probably from the imitation of textile fabrics, which fill in the background in the designs of the end of the seventh and beginning of the sixth centuries B.C. And though this explanation upsets the chronological sequence of Pliny's statements, we need not reject it on that ground, for in this, as well as many other points, Pliny is demonstrably incorrect.

Next comes **Ecphantus** of Corinth, with whose name are associated the pictures of the colour of pounded potsherd: probably this expression merely refers to the deep purple colour which is added in the earliest vase-paintings of Corinthian style, and which to Pliny's authority may have seemed their most striking characteristic: that writer may have seen some early painting signed by Ecphantus, and was thus led to connect this improvement with his name. Like Eucheir and Eugrammus, he is said to have come out of Corinth with Demaratus. Pliny tries to explain away this difficulty by the stock method of imagining two Ecphanti; but while the journey is of course legendary, there is no reason why we should not accept Ecphantus as a real personality; it is even possible that we possess a monumental record of this very artist in the Columna Naniana (Löwy, *Inschr. Gr. Bildh.* No. 5), of which the inscription runs thus:—

Παῖ Διός, Ἐκφάντῳ δέξαι τόδ᾽ ἀμεμφὲς ἄγαλμα
Σοὶ γὰρ ἐπευχόμενος τοῦτ᾽ ἐτέλεσσε γράφων.

It seems likely that this column, which was found at Melos, and which, from its inscription, dates from the seventh century, supported a painting; possibly this was a Melian vase-painting, by the artist Ecphantus, who thus dedicates his own handiwork.[*]

Cleanthes of Corinth is by Pliny ranked among the inventors of linear drawing; but Pliny's order cannot be accepted here, for it seems clear that the place of Cleanthes is at least posterior to that of Ecphantus. In this case we are not left to Pliny's information alone. Strabo (viii. 343) notes two works by this master in the temple of Artemis Alpheia: an Iliupersis, and a Birth of Athene. Of the first of these pictures we know nothing more: the Birth of Athene, however, is further mentioned by Athenaeus (viii. 346 c), who describes in this picture the figure of Poseidon "offering a tunny fish to Zeus in travail." This is of course an error, the tunny is merely the attribute of Poseidon, whose type is thus distinguished on the Penteskuphia pinakes; and the whole description seems to point to a votive pinax of this kind, dating probably from the seventh century. In all probability it was one among many in this temple. Strabo couples with this picture another from the same temple by **Aregon**, representing Artemis on a Gryphon; this type, however, seems inconsistent with what we know of the methods of this period, and it is likely that either Aregon was of a much later date, or that Strabo's information was incorrect.

Craton of Sicyon painted a man and woman on a whitened pinax; we are naturally led to think of the vase-paintings in black figures on a white ground: the term λελευκωμένος, however, need not imply more than the practice common to all the paintings of this period, which obtains equally in the Penteskuphia tablets and in the Clazomenae sarcophagi, of preparing the ground of the design with a yellowish-white pigment. The "man and woman" of Pliny's statement suggests the symmetrical pairs of figures which are commonly mentioned in the descriptions of works of this period, such as the Chest of Cypselus and the Spartan basis.

Of **Hygiainon**, **Dinias**, and **Charmadas**, Pliny tells us that his information supplies no date; they are painters in "monochrome," a technique which is mentioned nowhere except in Pliny, and which he himself does not seem to understand: if it means anything, it may mean that the colouring of their pictures had faded, or else that they worked in one colour with the natural background, as in the vases with black or red figures. In the latter case, these artists must necessarily range much later in date.

Among the painters of this period we may now include those whose names we know from monuments which they have signed, and who are apparently Corinthian artists of the first half of the sixth century,—**Bias**, **Chares** the son of Bias, and **Timonidas**, who signed one of the Penteskuphia pinakes.

Eumarus of Athens was the first who distinguished male from female, and who "dared to imitate every sort of figure." On the vases with black figures we can trace the epoch at which a white colour is gradually introduced to indicate the flesh of female figures. It is not necessary that this should be precisely the change initiated by Eumarus, but it must evidently have been something analogous to this.[*] The two facts we are told of Eumarus thus lead us naturally to think of the early Athenian vases with black figures. While the Corinthian and Chalcidian painters probably went on using their creamy white background, the Athenians used for background the natural brilliant red of their clay, and laid the white in their design on a surface of black paint. The white on these vases is a feature sufficiently striking to have attracted Pliny's informant; and the wealth of mythological material lavished on the François vase by **Clitias** and **Ergotimus**, and their boldness in attempting difficult motives, may well have justified his expression *figuras omnis*. Like these two artists, Eumarus was also an Athenian; and in the recent excavations on the Acropolis an inscription has been found which seems to mention his name, and fixes his date, if this identification be correct, at the Solonic period in which Athenian art is beginning to take a foremost place. The vases and pinakes show us the influence of Corinthian painting on Athens at this period.

Pliny's description of **Cimon** of Cleonae presents grave difficulties. Most critics agree to the general conclusion that the inventions ascribed to him are represented broadly by what we see in the red-figured vases of the

---

[*] See, however, Murray in *Hellenic Journal*, x. p. 243.

school of EPICTETUS, the date of which is now assigned to the age of the Peisistratidae. With the growing popularity of the athletic exercises of the palaestra, comes in the preference for representation of the nude figure, in attitudes and movements hitherto untried; the innovations in the drawing of dress, the improved treatment of the eye, the fine inner markings indicating veins and muscles, are all to be traced to these vases.

Catagrapha in this connexion is difficult to explain. Pliny's interpretation, which represents Cimon as the inventor of profile drawing, seems altogether untenable; in early sculptures in relief, figures which would naturally be in profile are frequently represented in full face; but there is no evidence of any such priority of full-face treatment in Painting. On the other hand, it is probable that the great paintings of this time must have consisted of outline drawings with washes of colour, as on the alabastos of Pasiades in the British Museum. One explanation refers it to linear perspective, or what we should term "projection!" The most generally accepted interpretation refers it to the practice, common in the vase-paintings of this period, of indicating the outline of the body underneath the dress, which adapts itself to the movements of the figure.

A notable monument of this period is the Stele of Lyseas, an inscribed marble shaft of about 550–525 B.C., with an inscription stating that it is the tombstone and portrait of Lyseas; on the front is painted the full-length figure of the deceased, holding in one hand a cantharus, in the other the twigs of lustration; the chiton is purple, the himation white with a coloured edge, the twigs green, the cantharus black. The outline was first drawn in a dark colour, and the background is red. Below is a minute figure of a galloping horseman. The similarity of this figure to the carved stele of Aristion shows the close connexion that then existed between marble painting and marble relief. Probably such paintings were much in vogue, though naturally very little beyond mere fragments of them have come down to us. The technique corresponds most nearly to that of the black-figured vases. Loeschcke has tried to show that the change from black to red figures in vase-painting was brought about by the influence of marble paintings, such as the Stele of Lyseas; but this suggestion has been generally opposed (see Klein, *Euphronios*,^{2} p. 30, and *Arch.-Epig. Mitth.* 1887, p. 209). We referred above to the statement of Pausanias (vii. 22, 6) that the great artist Nicias painted a sepulchral stele at Triteia: this is important as showing that, even if the Stele of Lyseas is not by a great master, it belongs to a class of work which was not beneath the dignity, and probably reflects the methods, of the great masters.

Another interesting monument, which may probably be referred to this period, has recently been discovered in or near Athens; it is a disk of white marble pierced with two bronze nails for attachment to a wall; on it is painted* a bearded man seated in a chair, and around the picture is an archaic inscription recording that this is the monument of the excellent physician Aineos or Aineios. The name is an uncommon one, and has been identified with that of the great uncle of the famous Hippocrates; assuming this to be a contemporary portrait, the date would thus fall at about 520 B.C.

The decoration of walls by designs painted on them had probably a direct descent in Greece from the time of Mycenae; unfortunately we have no Greek Pompeii to tell us in what this decoration in early times consisted. There have recently been found at Athens two fragments of a marble painting intended for insertion into the wall, probably of a tomb, which give us, perhaps better than anything else, an idea of the methods employed in decorative painting previously to Polygnotos; it also offers strong confirmation of the close connexion between those methods and the methods of vase-painters. The groundwork is a creamy yellow, on which is painted a warrior charging; his figure is drawn in outline, and filled in with different-coloured washes for the various parts and for the drapery. The drawing is strong and spirited, though still retaining traces of archaism; in the field is an inscription which seems to connect it with the vase-painters of the last quarter of the sixth century (Ἐφ. Ἀρχ. 1887, pl. 6).

But if wall-paintings are thus seldom found in Greece, this lack of material is in some degree compensated for when we turn to Italy. It is true that, here again, the actual houses and temples of early times have not survived; but the Etruscans were accustomed to decorate the chamber of their dead as much as possible to resemble that of the living; and the tombs of Veii, Caere, and Tarquinii have given us valuable series of early wall-paintings. These paintings, if not always the work of Greeks, are the living reflection of Greek art. All internal evidence goes to show this, and it further enables us to control the statement of Pliny. In order to show that the Ecphantus of Cornelius Nepos cannot be the same as that early painter of Corinth, he says that already (in the time of Demaratus) painting had attained an independent footing in Italy, and mentions a series of fully-coloured paintings at Ardea, Lanuvium, and Caere, which existed before the foundation of Rome. Pliny's statement is here affected by his sense of patriotism; the vases found in Italy show us beyond a doubt that the earliest Italian paintings were executed under foreign influence. The wall-paintings of Italy are the only class of remains beside vases which enable us to trace the development of the art continuously through all phases; allowance being of course made for the time which must elapse before each innovation of the Greeks could make way among the tomb decorators of Italy.

It is generally accepted that the earliest examples of the art in Italy are the wall-paintings from tombs at Veii; these consist principally of friezes of animals, conventionally or fantastically drawn with long bodies and long slender legs,—a style of art which we know to be essentially Oriental, and which is doubtless connected with the tapestry work of Mesopotamia. In keeping with this textile idea, the groundwork is filled in with conventional designs, which at Veii take the

---

* In the Ἀρχ. Δελτίον, 1889, p. 151, this portrait is said to be painted in *encaustic*, but this is certainly an error; it is probably painted in tempera, like the Stele of Lyseas.

form of floral devices: these floral devices are drawn in many respects identical with the flora of Mycenaean art; it seems therefore that the art of Veii represents the same stage as that which we saw in the vase-paintings of Eastern Hellas at the end of the seventh century B.C., in which the traditions of Mycenae were being combined with the lessons derived from Oriental tapestry. The presence of Mycenaean elements may imply that this form of art traced its origin to a much earlier date, as it certainly also lasted down to a much later period in Etruria. In the Polledrara tomb at Vulci were found a series of imported objects of Egyptian character, including a scarab of Psammetichus I., which probably fixes the date to B.C. 656–611. Among these objects was a large amphora painted in a developed form of the Veii style, and a hydria of a ware which is apparently Graeco-Egyptian, painted in red and blue with a Graeco-Egyptian rendering of the Minotaur legend; a connexion with the Egyptian town of Naucratis, which this same Psammetichus gave to the Greek traders, seems an obvious deduction. The Naucratian traders came principally from the coasts of Asia Minor; so that we have, at the end of the seventh century, evidence of a combined Egypto-Asiatic influence on Italian art. It is this influence which we may suppose reflected in Pliny's statement about Philocles quoted above, p. 400.

The same influence was also communicated through another channel, that of Phoenician trade. The site of Caere in Etruria marked a Phoenician settlement, and had been known in earlier times by the Phoenician name Agylla; and the general character of Phoenician importations would be very much what is found in the Polledrara tomb. At present the earliest paintings which we have from Caere are certain terra-cotta slabs, of which a series of five is in the British Museum; another series, somewhat later in date, is in the Louvre. These slabs served as the wall-decorations of a tomb, so that they may be considered in reality as wall-paintings. The surface is covered with a white slip, on which the design is laid in outline, with washes in reds and blacks; the white ground is left to stand for the flesh of women, while that of the men is coloured red. The technique is thus very much the same as that which we have on the Corinthian vases of the seventh century. The subject consists of a frieze of figures who seem to represent mourners, and carry various offerings to the dead. On each side of the doorway stood a slab painted with a large Sphinx, the drawing of which bears an analogy to that of the animals of Veii, while that of the human figures seems to show the artist's want of familiarity with this class of subject. It would seem then that these slabs must be very little, if at all, later than the Polledrara hydria, and in publishing them Mr. Murray suggests B.C. 600 as an approximate date for them (*Hellenic Journal*, x. p. 247). This date brings us to the period when Etruscan art may have been stimulated by the advent of the artists escaping from the rule of the Cypselidae at Corinth, always supposing that this journey had any ground in fact. In any case, these artists probably chose Etruria as being a district already advanced in art; and this would be some ground for crediting Pliny's statement (xxxv. § 17) as to the antiquity of the art at Caere. In the details of these paintings Mr. Murray finds traces of a marked Asiatic influence, which, coming primarily from Assyria and Chaldaea, was communicated either by the Asiatic Greeks settled in Egypt, or, more directly, from the Greeks of Asia Minor. The Etruscans themselves claimed a Lydian origin, and some such influence is at least apparent in their early art. Dümmler has tried to establish a connexion with Aeolis in the early pottery of Caere. From this site has come a series of vases which are closely related to certain fragments from Cyme, and which seem to have been imported, possibly from Phocaea; in Etruria they gave rise to a local fabric [VAS], which represents the decadence of this imported style.

Though Etruscan art is everywhere characterised by a certain sturdy realism which is unmistakable, it is always based upon the conceptions and technique which it borrowed principally from the Greeks; it has justly been compared with the art of the Tuscan School of the Renaissance, "which sought to bring its own realistic feeling for form into harmony with the results of a renewed study of classical antiquity." The transition from native realism to Greek idealism is especially marked in the comparison between the earlier and later paintings of Corneto (Tarquinii), the best of which seem to point to a period corresponding to, though not necessarily contemporary with, the art of Polygnotus. Of this painter, and of the school of Greek painters who followed him, an account will be found below on pages 407 and 408.

From the dawn of the fifth century we begin to hear the names of painters in Italy, but at first, at any rate, these are exclusively Greeks. In the time of the kings at Rome, painting seems to have been principally in use for the decoration of works in terra-cotta, an example of which has been already mentioned, the vermilion-coloured Jupiter of the Capitol. The earliest painters named in connexion with Rome are DAMOPHILUS and GORGASUS (Plin. *H. N.* xxxv. § 154): these were both painters and modellers, and decorated in both branches of their art the temple of Ceres at the Circus Maximus; this temple was dedicated in 493 B.C., and this date has consequently been assigned to them; Urlichs, however, thinks that Damophilus is to be identified with the teacher of Zeuxis (mentioned *ib.* § 61), and in this case his date would be about 460 B.C., or contemporary with Polygnotus. Pliny's description leaves us uncertain as to the nature of the paintings of Damophilus and Gorgasus: he says that when the temple was restored *crustas parietum excisas tabulis marginatis inclusas esse*, an expression which certainly seems to imply that they were wall-paintings which were at a later date cut out and framed. That this plan of preserving the works of old masters was not unusual in antiquity we know from examples at Pompeii and elsewhere. From this time forward we hear little of painting in Rome: there were no local artists of any importance, and communication with the outside world was cut off on the one hand by the wars with Veii, on the other by the Volsci. Nothing further is heard of

Roman painting until the middle of the third century B.C.

Returning now to the history of the art among the Greeks themselves, we have seen that in the sixth century B.C. the most important centres were in, or bordering upon, Asia Minor, and that it was only towards the end of this century that Athens began to take a foremost part. This is borne out in the little that we know from literary sources of the painters of the sixth century. Candaules, king of Lydia (died B.C. 708), is said to have purchased at a high price a painting of **Bularchus**, which represented a Battle of the Magnetes (xxxv. § 55). It would appear from the expression of Pliny (vii. § 126) that Candaules paid the painter as much gold as would cover the picture (*repensam auro*). The tradition, however, is very doubtful: it was probably borrowed without understanding from a book by Cornelius Nepos, and is mentioned by Pliny on account of the correspondence between the dates of the death of Candaules and that of Romulus.

The old Ionic or Asiatic painting, the "genus picturae Asiaticum," as Pliny terms it, most probably flourished at the same time with the Ionian architecture, and continued as an independent school until the middle of the sixth century B.C., when the Ionians lost their liberty. Herodotus (i. 164) mentions that when Harpagus besieged the town of Phocaea (B.C. 548) the inhabitants collected into their ships all their valuables, their statues and votive offerings from the temples, leaving only their *paintings*, and such works in metal or of stone as could not easily be removed, and fled with them to the island of Chios; from which we may conclude that paintings (probably wall-paintings) were not only valued by the Phocaeans, but were also common among them. Long, however, before the conquest of Ionia, Samos seems to have become a prominent seat of the arts (Herod. iii. 60, iv. 152). We know that a school of sculpture was early in existence there; and although the so-called "invention" of Saurias of Samos is legendary, he may well have had a real existence as a painter. Painting and sculpture went hand in hand in those early times, and the island that boasted the sculptor Theodorus would probably have made its mark in painting as well. Pausanias indeed twice mentions cursorily a celebrated Samiote painter **Calliphon**, who painted the Homeric battle of the ships in the Artemision at Ephesus: the terms used by Pausanias clearly point to the art of the first half of the sixth century B.C. In the temple of Hera at Samos was the celebrated picture dedicated by Mandrocles, a native of the place; we are not told the name of the (doubtless local) artist; it was painted for Mandrocles, who had constructed for Darius Hystaspes the bridge of boats across the Bosporus, and represented the passage of Darius' army, with the king seated on a throne reviewing the troops as they passed. Such a dedication would be quite in keeping with what we know of Samian art tradition, and there is nothing in the epic character of the subject which would make it impracticable. The date of the bridging of the Bosporus must fall between 516–514 B.C., and the picture must have been nearly contemporary with this date. Another painter, possibly also a Samian,[*] is mentioned by Athenaeus (v. p. 210 *b*)—**Sillax of Rhegium**, whose pictures in the Stoa at Phlius had been described by Polemo; his importance is marked by the fact that his name is recorded in the poetry both of Epicharmos and Simonides; and this fact would mark his date at about B.C. 470. The contemporary sculptor Pythagoras of Samos (Rhegium) is stated to have begun life as a painter (*ab initio pictor*); another instance of the close connexion then existing between the arts. We may conclude the list of Samian painters in the fifth century with the name of **Agatharchus, son of Eudemus**: unfortunately of this painter not a single work is described in literature, and we know no more of him than what can be inferred from the three anecdotes which different writers associate with his name. The first is given in Vitruvius (vii. praef. 10), who says that Agatharchus "primum Athenis, Aeschylo docente tragoediam, scaenam fecit et de ea commentarium reliquit." From this it has been supposed that this artist invented scene-painting, and that from him, therefore, dates the feeling for landscape in art and the striving after pictorial illusion. On the other hand, this statement does not coincide with that of Aristotle (*Poet.* 4), that Sophocles invented scene-painting; nor with what we know of the later painter Apollodorus. Klein proposes, in the light of recent discoveries as to the history of the Greek theatre, to refer *scaenam fecit* to the innovation brought about by the addition of the *σκηνή* (the stage proper) to the old dancing ring: this expression might well have been misunderstood by Vitruvius, whose references to treatises left by artists and architects are rarely to be trusted. The second anecdote represents him as set down by a reply of the celebrated younger master Zeuxis, to whom he had boasted of his rapid rate of work (Plut. *Pericl.* 13). The third anecdote relates how Agatharchus, refusing on the score of overwork to decorate the house of Alcibiades, was locked up by him until the decoration was completed; or, according to another version, until the artist escaped. We thus see, at any rate, that Agatharchus was a contemporary of Aeschylus, of Zeuxis, and of Alcibiades; Aeschylus died in B.C. 456, and the speech of Andocides recording the Alcibiades story was probably delivered in B.C. 416. It has therefore been supposed that there must have been two Agatharchi (see *Dict. Biogr.* s. v.), but this supposition is not generally accepted.

Here for the present ends our information about the Samian School: between this time and the period of the Diadochi, when Theon comes forward, Samos is only represented by one or two insignificant names. But that Samos preserved always the tradition of a great school of painting, we see from the fact that the famous contest between Parrhasius and Timanthes took place there; moreover, the temple of the Samian Hera was a perfect storehouse of pictures, which lasted even down to the time of Strabo (xiv. p. 637 C), who says, "The ancient shrine and

---

[*] Klein (*Arch.-Epig. Mitth.* xii. p. 87) claims Sillax as a Samian, but on no very strong grounds. He is contemporary with Pythagoras and Clearchus, both of whom are called "of Rhegium," but are in reality of Samos.

large temple of Hera is now a picture gallery [PINACOTHECA]; and besides the quantity of pictures here exhibited, there are also other galleries and little shrines which are full of specimens of ancient art." We saw that Agatharchus' sphere of activity lay in Athens, and it is to Athens on the one hand, to Colophon and Ephesus on the other, that the heritage of Samian painting is now passed.

The art of the sixth century at Athens has unfortunately offered hitherto but little direct monumental evidence either to the ancients or ourselves. The recent excavations on the Acropolis have brought to light, however, monuments which, fragmentary as they are, yet throw a brilliant light upon a period of which the ancients knew but little. The sack of the Acropolis by the Persians in B.C. 480 must have destroyed most of what would otherwise have served for the art history of pre-Persian times. Possibly some scattered pieces were saved from the wreck, and may have been set up at the time of Cimon's administration in the pinacotheca of the Propylaea; and on these chance survivals the knowledge of the ancients was principally based. "If therefore such a painter as Clitias is not named by Pliny as well as Eumarus, this is merely owing to the chance that the father of art history found no picture by this artist on the Acropolis." Art and handicraft are originally, as we have seen at Corinth, not separated; and probably the early red-figured vases, made at Athens and exported thence to various sites, reflect the art of the painters of Peisistratid times; a developed drama did not yet exist; and it would appear that these artists, both great and small, drew their inspiration from the Cyclic and the Lyric poets. As time went on, the gulf between art and handicraft gradually widened; and the genius of **POLYGNOTUS**, in the middle of the fifth century, finally raised painting to a level far above that of the handicraftsmen.

With Polygnotus the history of Greek painting as an independent art may be said to begin, and in this sense we may accept the statement of Theophrastus (*ante*) that this artist was the "inventor" of painting. It is the period of the great reaction at Athens succeeding to the Persian wars, and for the first time we hear of great historical compositions, and of painters recognised as public characters. The limited space of this article necessarily precludes anything like a general notice of all the various productions of Greek painters incidentally mentioned in ancient writers. With the exception, therefore, of occasionally mentioning works of extraordinary celebrity, the notices of the various Greek painters of whom we have any satisfactory knowledge will be restricted to those who, by the quality or peculiar character of their works, have contributed towards the establishment of any of the various styles of painting practised by the ancients. A fuller account of each artist will be found under their respective names in the *Dictionary of Greek and Roman Biography*.

The fame of Polygnotus is chiefly associated with Athens; he was born at Thasos, and came of a family of Thasiote artists; his father Aglophon, and his brother Aristophon, being both recorded as painters of note. Of the details of his life we know very little; just as his great contemporary Pheidias started life as a painter, so Polygnotus is spoken of as having had some experience in sculpture: an association between the two arts which is clearly reflected in the sculpture of the time. His period of activity seems to have lain between B.C. 475 and 430. Attracted to Athens among the artists whom Cimon was employing for the reconstruction and adornment of the city, he won for himself the freedom of that city, and a special honour from the Amphictyons, by his gratuitous work at Athens and at Delphi. He became the leader of a school of painters who worked on the same monuments, and probably much in the same manner, as himself; principal among these were Panaenus, a relation of Pheidias, and Micon, like his leader both sculptor and painter, and, like him too, of Ionic origin.

Unfortunately, in many cases where these artists were employed conjointly, we cannot always decide which subjects to assign to each of the respective masters. In all probability, the earliest works which can with certainty be attributed to Polygnotus were the large compositions with which he decorated the Lesche or assembly hall of the Cnidians at Delphi, representing the Sack of Troy and the Vision of Hades. These paintings are celebrated in an epigram of Simonides: now we know that in B.C. 477 the poet went to Sicily, and that in B.C. 467 he died; so that the paintings were probably executed at least before B.C. 470. Pausanias devotes seven chapters (x. 25–31) to their description, and from this we can gather a very fair idea of the general character of the compositions. The figures were arranged in an extended form of frieze, but grouped on different levels, and lacking that pictorial unity which a definitive background supplies in modern painting. Each figure had the name written over it, and the wall was covered with distinct groups, each telling its own story, but all contributing together to relate the tale of the general composition. They were in fact painted histories, and each group was no further connected with the contiguous groups, than that they all tended to illustrate different facts of the same story. Intended as they were for the decoration of architecture, they were subservient to tectonic laws; as in sculpture in relief, what was not absolutely necessary to illustrate the principal object was indicated merely by symbolism: thus, in default of more elaborate scenery, locality was suggested rather than expressed,—a tree, a house, or a piece of water representing what the knowledge of each spectator would easily supply for himself.

If we consider the narrow limits thus imposed on Polygnotos by his obedience to ancient laws and canons not yet broken through, we shall expect to find his real claims to the advancement of art more set forth in the details of his style and treatment of his subject; and this is precisely what is most noted of him by ancient writers. While he inherits the strength and firmness of his more archaic predecessors, he adds a breadth of style and an æsthetic beauty which is less external than inherent within the character of his subject. This is what Aristotle means when he (*Poet.* c. 6) speaks of him as an ἀγαθὸς ἠθογράφος, an excellent delineator of moral character, and assigns to him in this respect a complete superiority over Zeuxis; and again (*ibid.* c. 2), speaking of imitation, when he remarks that it must be either superior, inferior, or equal to its model, illustrating his point by the cases of three painters: "Polygnotus," he says, "paints men better than they are, Pauson worse than they are, and Dionysius as they are."

Pliny says (xxxv. § 58) that he was "the first to paint women with translucent drapery, and to decorate their heads with various coloured head-dresses; but that his greatest contributions to painting were those of opening the mouth, showing the teeth, and that he gave expression to the countenance by altering its archaic stiffness." It is in these last characteristics that we see the revolution brought about by Polygnotus; he endeavours, in the whole treatment of the body, to impart an individual character; especially in the face, so that a poet of the Anthology (*Anth. Gr.* iii. 147 B) might say of his Polyxena that "in her eyelids lay the whole of the Trojan war." It is probably more than a coincidence that in his works we have the first glimpse of portrait painting in the modern sense. The artist loved Elpinice, the sister of the great Cimon; and her portrait, as Laodice, figured among the Trojan women represented by him in the Stoa.

With Polygnotus the art of Painting was in point of conception and spiritual beauty at its zenith; but, unlike sculpture, it was as yet lacking in technical power; as Woermann (p. 43) says, "It truly entered into possession of its full technical means in a later generation, when the arts of Greece were no longer bent upon their ideal mission in the same high earnest as of old." The range of colours was scanty;[*] and though we hear of special local tints being applied (*e.g.* the Eurynomus in the Nekyia coloured blue-black, like a carrion fly, as Pausanias says), there is no suggestion of a transition of tones or of local light and shade. Indeed, this is the more natural when we remember that no determinate background was used, but probably the figures stood out on the white ground of the wall.

If we wish to realise the spirit of Polygnotus' paintings, it is principally to the sculptures of the time that we must look; and specially to the series of reliefs upon the marble lekythi and sepulchral stelae, which breathe the same qualities of pathos that underlay the paintings of this master, and the bloom of which art falls just in his time. Possibly even the motives of these sculptures may suggest the types which Polygnotus had created for his great picture of Hades. The influence which his art exercised upon sculpture is best shown in the frieze of the Graeco-Lycian monument of Gjölbaschi, where more than one motive (*e.g.* the Slaying of the Suitors by Odysseus) is directly inspired by the painting of the same subject. But as far as mere types are concerned, much is probably still to be obtained from the study of vases. The gulf between art and handicraft is widening, and "the polychrome vase-paintings (on a white ground) are a last attempt to keep pace with the greater art, but for the most part are not worthy of the simple colouring of Polygnotus." On some red-figured vases, however, of the time of Meidias,[*] it is now shown that the scenes depicted have a close relationship with the painter,—a fact borne out by the inscriptions which they bear, and which are written in the Parian-Thasian, and not the Attic, alphabet. Dümmler has collected as many as six such instances, and more will doubtless be now identified.

For a list of the various works of Polygnotus and his contemporaries, we must refer the reader to Overbeck's *Schriftquellen.* It is sufficient to say here that their principal sphere seems to have been Athens, and the wealth of Athenian local myths supplied them with the most varied and extensive themes. It was a time when the luxuriance of Ionic art was taking a hold upon Athens, not in painting alone, but in the whole range of Attic culture; and this movement is continued in the greatest of the colleagues of Polygnotus, Micon and Panaenus.

Both had, like their leader, strong instincts in the direction of sculpture. Panaenus was of the family of Pheidias; MICON was himself a sculptor. He is the only great painter of whom we have as yet a direct monumental record; and, curiously enough, this record is concerned, not with a picture, but with a statue. At Olympia a square base was found (Löwy, *Inschr. Gr. Bildh.* No. 41) which had supported a bronze statue; the inscription showed that this statue had recorded the victory in the pancration of "Callias, son of Didymion, an Athenian;" and added *Μίκων ἐποίησεν Ἀθηναῖος.* This very statue is described by Pausanias (vi. 6, 1), who gives further in another passage (v. 9, 3) the date of Callias' victory as the 77th Olympiad (B.C. 472–469); the statue must have been set up soon after this date. Another inscribed base (Löwy, No. 42), found at Athens, records a statue made by "Micon, son of Phanomachus," thus correcting the form of the name (Phanochus) given in the Scholiast to Aristoph. *Lysist.* 679. These statues of Athletes remind us of Pliny's statement that Micon was specially esteemed for this class of work ("Micon athletis spectatur").

Of Micon's birth and life we know otherwise very little. In spite of the evidence afforded by the Olympia base, he has usually been considered as of un-Attic origin, on account of the Ionic character of his writing. But the evidence of his work all points to his being an Athenian: the subjects both of his sculpture and of his painting are Attic, and it is here that his activity was chiefly displayed. Six of his works are known to us, viz. (1) Battle of Amazons, and (2) Battle of Marathon, both in the Stoa Poikile; (3) an Argonautic scene, possibly the funeral games of Pelias, in the Anakeion; (4) Battle of Amazons, (5) Battle of Centaurs, and (6) The Recognition of Theseus, all in the Theseion. In describing this last, Pausanias goes on to relate the end of Theseus; and this has generally been considered as the description of a seventh picture: Klein, however, shows good reason for the opinion that this is merely an excursus of the garrulous topographer, and must not be included among Micon's paintings. The

---

[*] Cicero says he used only four colours; Plutarch names *ὤχρα, σινωπίς, μέλας, μηλιάς.*

[*] It is worth noting that one vase-painter of this period is named Polygnotus: a vase signed by him is in the British Museum.

close connexion existing between the great artists of this period, and the probable similarity of their style, is shown in the fact that the Marathon ascribed to Micon (No. 2) was probably painted by Panaenus, and that some of the works in the Theseion are in one author attributed to Polygnotus.

Panaenus, if, as is nearly certain, he was the brother[*] of Pheidias, probably in that case began his training under their father Charmides, who must have been also a painter. His personality is overshadowed somewhat by the superior claims of his greater brother; but the fact of his being chosen to paint the Battle of Marathon, and to decorate the throne rails and walls of the great temple of Olympian Zeus, show the high esteem in which his art was held. From the description which Pausanias gives (v. 11, 5) of his Olympian paintings, it is evident that his method corresponded to that of his contemporaries already described. With him we hear for the first time of those contests of painters which seem to have attracted the great masters in subsequent times to exhibit competitive works usually at the great games or religious festivals. Panaenus is recorded by Pliny (xxxv. § 58) as having been defeated in such a competition at the Pythia by Timagoras of Chalkis, an Ionic master who is otherwise unknown. Probably Pliny had derived this story from a copy that he may have seen of a metrical inscription of Timagoras, and this would explain the "Timagorae vetusto carmine" in the passage of Pliny.

Of **Aristophon** the brother of Polygnotus, and by Plato reckoned as his equal, some well-known pictures are quoted in Pliny and Plutarch: of these a *numerosa tabula* is probably to be identified as the principal scene of an Iliupersis, in which Priamus, Helena and Πειθώ, Ulixes and 'Απάτη, and Deiphobus appear, possibly (as *numerosa* would seem to imply) as an excerpt from a large composition. Besides this, we have an Astypalaea grieving for her son Ancaeus, wounded by a boar (suggestive of Adonis and Aphrodite); a Philoctetes (probably the same which Pliny saw in the Pinacotheca of the Propylaea at Athens); and a picture commemorating the agonistic victories of Alcibiades. This last subject has given rise to much discussion; one author (Satyrus) makes of it two pictures, the one representing Olympias and Pythias crowning Alcibiades, the other Nemea sitting with Alcibiades in her lap. The other authority (Plutarch) names simply Nemea seated with Alcibiades in her arms, and adds that it caused quite a *furore* in Athens; but "the elders took it ill, as savouring of tyrannia and lawlessness (*παρανόμοις*)." Klein explains the *παρανόμοις* as referring to a psephisma of the Athenians forbidding any one from attaching to a female slave or hetaira the name of a Penteteris. The terms of the description make it clear that it was one picture. Satyrus says that the painting was *'Αγλαοφῶντος γραφήν*: if this is so, we must imagine an Aglophon the second, for it is not possible that the father of Polygnotus could have lived so long. Probably either Satyrus or his quoter (Athenaeus) must have omitted the name of the son, and the quotation should run *'Αριστοφῶντος τοῦ] 'Αγλαοφῶντος*.

Two more painters must be named here, the tragedian **Euripides** (B.C. 480–406), who began life in this profession, and whose pictures were to be seen at Megara; and **Pauson**, whose name is thrice mentioned by Aristophanes in plays which give for him a margin of date between B.C. 426–389; only one work of Pauson is recorded, a horse painted to order, which from one aspect appeared to be galloping, and when inverted seemed to be rolling in the dust; but he is brought by Aristotle into comparison with Polygnotus in the passage already quoted (*Poet.* 2), where he says that Polygnotus painted men as better, Pauson as worse than reality, while **Dionysius** (of Colophon) represented them as they are. Of this last painter, we learn from Aelian (*Var. Hist.* iv. 3) that he imitated the technique and style of Polygnotus in everything except its grandeur (*μεγέθους*); while from Plutarch (*Timol.* 36) it would seem that his method was lacking in ease.

With **Apollodorus** of Athens a new epoch is commenced, of such importance that Pliny says of him that he was "the first to give the appearance of reality to his pictures (*exprimere species*), and to bring the brush into just repute." The great discovery here alluded to is the invention of aërial perspective, the treatment of different planes, the right management of chiaroscuro and the fusion of colours (Plut., *de gloria Ath.* 2, *ἐξευρὼν φθορὰν καὶ ἀπόχρωσιν σκιᾶς*), so that he earned the title of *σκιαγράφος*, and Pliny can say that before him no easel picture (*tabula*) had existed fit to charm the eyes of the spectator. Doubtless the school of Polygnotus had paved the way for this change: such a detail as that in the "Vision of Hades" by Polygnotus, representing the river of Acheron with fish and pebbly bed seen through the water; his practice of placing his figures on different levels; and the figures on upper levels half hidden by a line of hill,—these seem to bespeak a step immediately preceding that of true perspective; and it was Apollodorus who took this step. The scarcity of actual records of his works prevents our knowing whether his great fame (*ὁ κλεινὸς ἀν' 'Ελλάδα πᾶσαν*, says Nicomachus the painter-historian) is due to their individual excellence as much as to the value of his new discovery. Two of his works are recorded; a priest in prayer, and an "Ajax struck by lightning, at Pergamon." This last picture has been quoted as an example of the pictorial treatment of Apollodorus; as if it had shown Ajax in his ship, with startling effects of light and shade. Furtwängler, however, is probably right in suggesting that it was not Ajax, but the picture itself, that had suffered disaster; the same thing had happened to a painting of Parrhasius: Pliny records (xxxv. § 69) that a painting of this artist at Rhodes had been thrice struck by lightning and not consumed (*miraculo*). Possibly the Ajax picture also contained the picture of Odysseus, of which the Scholiast to *Il.* x. 265 says that this artist was the first to represent him wearing a seaman's cap, *pilos* (*πρῶτος ἔγραψε πῖλον*

---

[*] Strabo calls him the ἀδελφιδοῦς, which would seem to mean "nephew," of Pheidias. Pausanias, Pliny, and Plutarch, on the other hand, call him the "brother;" and this would seem better to suit the chronology, seeing that he painted in the Stoa Poikile contemporaneously with Polygnotus and Micon.

'Οδυσσεῖ). His date is specially given by Pliny (xxxv. § 60) as the 93rd Olympiad (B.C. 408–405); but if we may judge from his relations with Zeuxis, it must go back considerably before that time. It is from this age that the establishment of easel-painting may be supposed to date; for although paintings on slabs of marble and terra-cotta were naturally in vogue from early times, it is only now that they begin to occupy the front place, hitherto held by the monumental paintings of Polygnotus; and this is the meaning of Pliny's statement, "neque ante eum tabula ullius," &c.; apart from which, Pliny's sources of information seem to deal with easel pictures alone, and to practically ignore the great epoch of monumental painting.

During the period which now terminates, Athens takes the lead in painting, under Polygnotus and Apollodorus, as she had done under Pheidias in sculpture. Though the artists who brought this about were not all Athenians by birth, Athens was the chief seat of their industry; and even afterwards, when by the Peloponnesian wars Athens had lost her supremacy, she still continued an important centre, although the art of painting now branches off into other directions, and is no longer so centralised. It has been customary to consider the sequence of the new schools as (1) Ionian, (2) Sicyonian, and (3) Theban-Attic. But since Athens continues to have an important share, it is better to accept two main branches only, viz. (1) the Helladic, of which Athens is the centre, as opposed to (2) the Asiatic.

Chief of the successors of Apollodorus was **Zeuxis** of "Heraclea." Of the many towns of this name, we cannot be sure which one is meant. Most critics have explained it as the town in Lucania, on account of the subsequent connexion of Zeuxis with that region, the pictures he painted for Agrigentum and Kroton, and because his teacher is named Damophilus of Himera. Klein, however, points out that this Heraclea was not founded until B.C. 432, whereas Aristophanes already in the *Acharnians* (l. 991) names a picture by Zeuxis; the date of this play is B.C. 426, so that the picture mentioned must have been painted in the seventh year of his age. Klein thinks that the Heraclea in Pontus is referred to, the "Heraclea" *par excellence*, and that would account for his being taught by a Thasian, Neseas. At any rate, he came early to Athens, and Xenophon tells us of the warm interest which Socrates felt in the young artist. In the *Protagoras* of Plato he is spoken of as a *νεανίσκος*, just arrived at Athens from Heraclea; this would give us a date for the youth of Zeuxis as between Ol. 89–90 (B.C. 424–417). Pliny, following some chronological authority, says that Zeuxis "entered the doors of art which had been opened by Apollodorus in Ol. 95. 4; ... others assert falsely Ol. 89."* It is evident at any rate that he belongs to the last years of the fifth and beginning of the fourth century. That he adopted and extended the improved methods of Apollodorus is evident; and that he won for his art a social standing far above what had hitherto been attained, is shown by the anecdotes recorded of him: how that he gave away his works as being beyond all price (usually, it is true, to the most influential patrons); how he composed an epigram *μωμήσεταί τις μᾶλλον ἢ μιμήσεται*, "easier to carp than to copy;" and how he acquired so much wealth "ut in ostentatione earum (opum) Olympiae aureis litteris in palliorum tesseris intextum nomen suum ostentaret." This has usually been explained as implying that Zeuxis wore at Olympia a robe in which his name was woven in gold letters. Such an interpretation involves a difficulty, both in the ablative *ostentatione* of the MSS. (which must then be altered to the accusative), and also in the plural *palliorum*. Klein's explanation gets rid of this difficulty: Zeuxis really exhibited his treasures at Olympia, and the *pallia* allude to the curtains hung in front of his pictures there. That curtains were thus used is shown by the well-known story of the curtain painted by Parrhasius, and by the passage in Lucian where Zeuxis, indignant at the dull comprehension of his picture by the public, tells Miccion his pupil to draw the curtain over it (*περίβαλε ἤδη τὴν εἰκόνα*).

Of the style of Zeuxis we have one excellent criterion in the detailed description of one of his paintings by Lucian, a Centauress nursing her young upon a meadow: the Centaur, half seen upon an elevation overlooking the scene, looks smilingly down, holding in his right hand, uplifted above his head, a lion cub to frighten the children. Two monuments have come down to us, which, though they do not bear out the actual words of this passage, yet seem undoubtedly inspired by the style of Zeuxis, and possibly by some such picture. The one, a Centauress suckling her young, is known only from the description of Philostratus, ii. 3; the other is a fine mosaic of the Alexandrine time from the villa of Hadrian (*Mon.* iv. 50). This also represents a scene from Centaur life, but in this case we have, as it were, the antithesis of Zeuxis' picture: a lion and tiger have overthrown and killed the Centauress; the Centaur, rushing up, has killed the lion, and swings over his head with both hands a mass of rock to strike the tiger which growls over its victim. On a rocky ledge above the scene on the left is a second tiger couched ready to spring. The mixture of idyllic and heroic motive combined in these pictures, in a strikingly novel situation, corresponds perfectly with what we can otherwise gather of the method of Zeuxis.

The most famous perhaps of his paintings was the Helena, executed for the temple of Hera Lakinia at Croton; in Cicero's time this picture was in Rome. Urlichs thinks that Pyrrhus must have removed it from Croton to Ambracia, that Fulvius Nobilior brought it thence to Rome (cf. Pliny, xxxv. § 66), and that it was removed from the temple of Hercules there by Philippus, and placed in the colonnade (*porticus*) built by him, where in Pliny's time it still was standing. In Cicero (*de Invent.* ii. 1, 1) we have the story in full. Zeuxis wished to paint a consummate pic-

---

* The same idea in a poetic form is expressed in a verse of Babrius (see *Rhein. Mus.* 1850, p. 479). Klein suggests that the Apollodorus mentioned in the second part of Pliny's passage, "in eum Apollodorus supra scriptus versum fecit," was not the painter, but the chronologist of that name; this does away with the necessity of supposing personal relations to have existed between the painter Apollodorus and Zeuxis, and disposes of the grave difficulties which remain in the passage even if we accept the emendation *ipsi* for *ipsis*.

ture, and asked the Crotoniates for the five most beautiful of their maidens, in order that he might combine the fairest qualities of each in his picture. Like Rosalind, his Helena

> "of many parts
> By heavenly synod was devised;
> Of many faces, eyes and hearts,
> To have the touches dearest prized."

He was therefore allowed to choose out of all the maidens the five whose names, Cicero says, "many poets have handed down to memory." In Cicero's account there are apparently two versions combined; in the one case Zeuxis inspects all the maidens, in the other he only sees their brothers in the palaestra. Probably both stories are legendary. Klein suggests that they may have arisen in this way. We cannot, he says, suppose that the Helena picture was a solitary figure; no one woman, however composed, could represent her adequately to the Greek mind; in the Iliupersis of Polygnotus Helena is accompanied by five women (Paus. x. 25, 4); and on a vase-painting from Kertch, which is certainly influenced by the style of Zeuxis (*Compte Rendu*, 1861, pl. v. 1), we have a representation of her among her women, who are drawn in various stages of nudity. "If we imagine some such picture painted for the people of Croton, if we think of names written over the figures of the maidens, if we conceive them clothed as in the Kertch vase, we have the elements together of which the Crotoniate legend might be, I might almost say, must be, composed."[*]

It seems certain that there existed a second Helena by Zeuxis, which stood in the Corn Exchange (*στοὰ ἀλφίτων*) at Athens (Eustath. *ad Il.* p. 868, 37); and it is difficult to say to which of the two some of the references in literature, which are not distinctly specified, apply. It was doubtless the Athenian picture which was exhibited for gate-money, and which therefore received the nickname "Hetaira:" such an exhibition would certainly be better suited to a *stoa* than to a temple; and it was this to which Plutarch and Aelian must allude in the anecdote of the carping critic who did not admire the picture, and was set down by the reply of Nicomachus, "Take my eyes, and the godhead will be manifested to you." Brunn suggests that the Athenian picture was a copy, or else a replica by Zeuxis of the original at Croton; at any rate we have no means of deciding whether it was different in any particular.

In Pliny, xxxv. § 62, an Alcmene is mentioned which the artist gave to the people of Agrigentum; and an Infant Heracles strangling the snakes. Most critics had been led to make two distinct pictures out of this sentence, especially on the strength of a Pompeian painting of the latter subject (*Arch. Zeit.* 1868, Taf. 4). The question seems to be finally settled, however, by a vase-painting recently acquired by the British Museum (see Murray in the *Classical Review*, 1888, p. 327), which represents the infants and snakes, the Zeus (*magnificus Juppiter*), the assembly of gods (*adstantibus dis*), and the Alcmene who throws one arm around the neck of Zeus and with the other points vigorously down to the scene below, an action which may well correspond with the *matre pavente* of Pliny. The *magnificus Juppiter in throno* at first sounds out of keeping with the homely natural touch of Zeuxis; but in the vase-painting the Olympus is treated with just this absence of stiffness which we may well imagine is inspired by the painting of Zeuxis.

From other pictures mentioned as of Zeuxis, the Pan, Marsyas, and Eros crowned with roses, Brunn seeks to show that his easel pictures seem to have been confined to a few figures and isolated situations. But there is nothing to prove that these figures are not merely extracts from larger subjects; and this would suit better the method of the artist as we know it from the few pictures already identified, and also the vase-paintings of the time, in which as a rule preference is shown for elaborate compositions. When Zeuxis first reached Athens, the traditions of Polygnotus were giving place to the more purely pictorial technique of Apollodorus; to an imaginative genius such as his, a new world of art was disclosing itself; it was natural that he should open up new paths, new ways of looking at the real and at the unreal. Lucian says that he did not paint *τὰ δημώδη καὶ τὰ κοινὰ πᾶντα*, such as his predecessors had done, heroes, or gods, or wars, but was always trying some new creation, *ἀεὶ δὲ καινοποιεῖν ἐπειρᾶτο*. Aristotle sets him up as an instance of the *πιθανὸν ἀδύνατον*: the old fantastic creations of mythology, which had existed as little more than abstract ideas either in poetry or in art, have henceforward imparted to them a new life of their own; the same idyllic treatment will soon be applied to the world of gods as of men; and in Zeuxis we see already the germ of the ideas which are later to blossom out into the art of the Alexandrine age.

Beside the other painted works of Zeuxis, Pliny mentions specimens of his work in two other classes of art: his *monochromata ex albo*, which probably simply means pictures from which the colours had perished, leaving only the outlines sketched in; the same mistake had been made in modern times. At Herculaneum were found a series of drawings in red upon stone, the finest of which is signed by Alexander, an Athenian. It was always supposed that these represented a special technique, but in 1872 a similar slab was found at Pompeii, which showed within red outlines the perfectly distinct remains of a complete painting in colours: these colours have since almost entirely vanished. Besides these *monochromata*, Pliny also mentions certain plastic works of Zeuxis (*figlina opera*), which were alone left behind in Ambracia when Fulvius transferred the other art treasures thence to Rome (cf. Liv. xxxviii. 9, and xxxix. 5). Klein thinks that these were probably paintings on terra-cotta slabs, let into the wall, and therefore difficult to remove. They may have been, like the picture of Pan, painted for the decoration of the palace of Archelaus at Pella, and taken by Pyrrhus to Ambracia when he became master of Macedonia.

The greatest rival of Zeuxis was **PARRHASIUS** of Ephesus. It is true that some late authors represent him as an Athenian, but there seems no ground for supposing that, like Polygnotus, he obtained the freedom of Athens. He began

---

[*] A vase in the British Museum (E 241) of this period shows ΕΛΕΝΗ at her toilet assisted by a small Eros and seven maidens.

life at Ephesus under his father's (Euenor's) tuition, and went early to Athens, which was the principal sphere of his activity. It was doubtless here that he came into contact with Zeuxis; their rivalry, which is by some authors declared to have been in favour of Parrhasius, appears to have been based principally on the difference in their methods of art. After the Peloponnesian wars, he seems to have left Athens, for we hear of him at Rhodes and Samos. About twenty pictures in all are attributed to him, among which some appear to have been of the character of genre, others mythological; in the latter class he seems to have come under the influence of Euripidean tragedy (Robert, *Bild und Lied*, 35); as, for instance, in the pictures representing the Healing of Telephus, the Madness of Odysseus, and Philoctetes on Lemnos.

In the personal traits recorded of Parrhasius, his Ionian character is strongly marked. His genial self-consciousness comes out in his love of luxury, in his purple mantle and gold crown; his wit, and his gift of poetry In his own verse he calls himself *ἀβροδίαιτος ἀνήρ;* which is turned by a contemporary into *ῥαβδοδίαιτος*, "living by his pencil": and he says that he is *Apollinis radice ortum*, that is, through Ion, founder of the Ionian race, sprung from the god. As to his artistic style, Brunn thinks that he can trace a radical contrast to that of Zeuxis: in Zeuxis the pictorial element had predominated; Parrhasius displayed a treatment of form highly finished in the drawing and modelling. Milchhöfer draws attention to his partiality for subjects depicting the emotion of pain, and points out the peculiar power which such a picture as his "Demos of Athens" must have demanded, of representing in one and the same figure the most contrary psychological effects.

In Pliny, xxxv § 68, it is stated that Parrhasius left behind "et alia multa graphidis vestigia in tabulis ac membranis eius ex quibus proficere dicuntur artifices."[*] The passage has given rise to much discussion; that traces of the *graphis* should remain in the easel pictures does not surprise us, but what are the *membrana?* Klein proposes to refer them to the sketches which Parrhasius is known to have made for works of toreutic art; from Pausanias and Athenaeus we learn that more than one metal-worker were occupied in reproducing in his craft the designs of this artist. Athenaeus further gives (xi. p. 782 b) the epigram on a skyphos of Heraclea, which represented the Illupersis:

> *Γράμμα Παῤῥασίοιο, τέχνα Μυός, ἐμμὶ δὲ εἰκὼν*
> *Ἰλίου αἰπεινᾶς ἃν ἕλον Αἰακίδαι.*

Moreover Pausanias (i. 28, 2), in describing the work on the shield of Athene Promachos, says that it was executed by Mys (*τορεῦσαι Μῦν*): "the designs of Mys for this and all other of his works were drawn by Parrhasius son of Euenor." It is clear, then, that there was a close connexion between the great painter and the toreutic art, and it is probable that the emphatic stress laid on the excellence of Parrhasius' drawing is mainly due to the existence of these *graphidis vestigia.* Pliny especially praises his skill in terms which would suit drawings of this nature, and quotes as his authority two writers who are known to have published books on the toreutic art. It is therefore highly probable that the eulogia bestowed upon Parrhasius for his drawing refer specially to this branch, and are not to be taken as detracting from his merit in the other branches of his profession. The evidence indeed is rather to the contrary. Of his colouring we learn from Diodorus (xxvi. 1) that "Apelles and Parrhasius in the skilful mixing of colours brought Painting to its highest point;" Parrhasius is in fact the immediate predecessor of the perfected colouring of Apelles; not yet indeed absolutely perfect himself, so that he is not included among those *in quibus iam perfecta sunt omnia;* but, on the other hand, not to be classed in this respect with Zeuxis, Polygnotus, and Timanthes, "who did not use more than four colours" (Cicero, *Brutus*, 18, 70).

Quintilian, in a comparison between Zeuxis and Parrhasius, says of the latter that "he so circumscribed everything that they call him the Lawgiver, because the types which he has handed down of gods and heroes are followed, as of necessity, by all other artists." Klein seeks to show that gods and heroes were in fact his principal theme; his heroes, in the mentions of them that have come down to us, appear to have been mainly single portrait figures; of his gods, only two are named, a Dionysus with Arete (the artist's favourite patroness) and a Hermes. Whether or no this Hermes was painted by the artist from his own portrait, it shows us at any rate the close relation which obtains now between the portrait and the ideal type.

The main difficulties of technique are now overcome, and the period of struggling with material is well-nigh past; with the new facilities opening out, it is natural that we should now hear of a number of new claimants to fame: principal among these stand the representatives of the Sicyonian school. We saw already that Sicyon had been one of the earliest afoot in the field of Painting; and there seems no doubt that the tradition had been carried on there uninterruptedly: but it is in the age following Zeuxis and Parrhasius that its sphere of activity is most strongly marked. The great sculptor Polycleitus had been a Sicyonian, and doubtless had left his mark on the character of the training which was imparted, for high prices, at the Sicyonian school.

In this school we may include the name of **TIMANTHES**, who is indeed expressly called "the Sicyonian painter" by Eustathius (*ad Il.* p. 1343, 60).[*] Pliny tells us that he successfully competed at Samos (doubtless at one of the annual art exhibitions already mentioned) with Par-

---

[*] Brunn thinks that this was the reason why Pliny includes Parrhasius in the list of authors which he gives in the 35th Book, since no writing by him is otherwise alluded to. Klein supposes that Pliny must have had in mind the verses which Parrhasius wrote about himself and his works, and for this reason considered him as an author.

[*] Quintilian (*Inst. Orat.* ii. 13, 12) speaks of him as *Cythnius*, which Brunn and others have taken to mean that he originally hailed from Cythnos; Klein suggests that this writer misread his authority, taking ΣΕΚΥΟΝΙΟΣ for ΚΥΘΝΙΟΣ. It is possible that the painter Timanthes of Sikyon recorded in Plut. *Arat.* 32, 3, and who must have lived towards the end of the third century B.C., was a descendant of this artist.

rhasius. Parrhasius' picture on this occasion represented the contest between Ajax and Odysseus for the arms of Achilles; and when beaten, he complained that Ajax had again been defeated by an unworthy opponent (*i.e.* in Homer, by Odysseus, and at Samos, by Timanthes). We are not told what was the subject of Timanthes' picture on this occasion; but it is clear that it could not have been, as Brunn supposes, the same as that of Parrhasius. Of the four other pictures ascribed to him, the Palamedes is uncertain, the "hero" in the temple of Pax at Rome tells us nothing, and the Sleeping Cyclops is probably not by him: Pliny (xxxv. § 74) describes it as "a Cyclops sleeping, a tiny picture; to bring out the colossal size of the monster, the artist inserted figures of Satyrs, measuring his thumb with a thyrsos." The whole idea of this picture seems out of keeping with the age of our artist, and to belong rather to that idyllic time which treats the Cyclops from the idyllic point of view as the lover of Galatea. The "Timanthes" therefore who painted this may have been some much later artist of the same name.

We are thus left, for our estimate of Timanthes, to the most famous of his pictures, the Sacrifice of Iphigeneia, and the one with which he overcame in competition Colotes of Teos. The maiden was represented standing before the altar on which she was about to be offered up, and grief is exhibited in the faces of the bystanders. The intensity of emotion is graduated in the different faces, culminating in the climax with the father Agamemnon, whose head is veiled from view. More than one monument has come down to us which seems to have been inspired by this picture (see *Wiener Vorlegebl.* v. 8–10; the mosaic in *Arch. Zeit.* 1869, pl. 14; and Overbeck, *Her. Bildw.* p. 314 fol.): the most important of these is the Pompeian wall-painting (Overbeck, *ib.* pl. xiv. 10), which agrees in most of the important details with the description. The detail which appears constant throughout, the veiled grief of Agamemnon, is what seems most to have caught the fancy of the ancients; and it is possibly this fact which has inspired Pliny's estimate of his *ingenium*, so that he says of Timanthes that in his works the spectator sees more than is actually there (*intelligitur plus semper quam pingitur*). Apart, however, from oratorical gush, we may obtain a real idea of the grandeur of Timanthes' conception, which would seem to place him on a level higher than that of his contemporaries.

Eupompus of Sicyon is named by Pliny as belonging to this period (*hac aetate*), but that he was later than Timanthes we see from the fact that his pupils belong to a considerably later date. Of his pictures we know scarcely anything; but his importance is emphasised by the statement of Pliny, who says that "on his account" the schools of painting were now reckoned as three—viz. Ionic, Sicyonic, and Attic. It is evident from what has gone before that this cannot mean that Eupompus "founded" the Sicyonic school; it had existed from time immemorial; it merely means that from this time the Sicyonic painters begin to raise themselves as a separate class above the level of the rest of the "Helladic" school. The fame of the Sicyonic training spread so much that under **Pamphilus** the fee was raised to a talent for twelve years' instruction, and even the great Apelles was among his pupils. It is difficult to say wherein this great local superiority consisted, which tempted, moreover, wealthy amateurs like Ptolemy II. and Attalus to purchase at enormous prices galleries of specially Sicyonian old masters. Plutarch uses a special term for it, *χρηστογραφία*, which is usually explained as indicating the reaction in art against the methods of Zeuxis and his contemporaries. Klein thinks that the special revolution effected by the Sicyonic masters was their development of the encaustic method. It is certain, at any rate, that it was only from the time of Pamphilus that encaustic took its place on equal terms beside the ordinary methods. We have seen that under the Ptolemies the method found favour in Egypt; and that it took a lasting hold there we saw on p. 392 in the large series of such pictures which have been found in the Fayoum. It is thus that we shall understand the tirade of Petronius against the *audacia* of the Egyptians, which invented a shortened method (*compendiariam*) of obtaining the effects belonging to the great art of painting. This shortened method Klein understands as the abandonment of the use of the *cestrum*, and therewith of the *tarda picturae ratio* which encaustic had hitherto involved. If this is so, it is natural that the fame of these first reformers should rest more upon their method and their teaching powers than on their actual paintings. Of Pamphilus we only know four works, and these only by the barest mention of their subjects.

The same estimate is true also of his pupil **Melanthius**, whose superiority in composition is said to have been conceded by his fellow-pupil Apelles: of him, again, we only know one picture, which represented Aristratus, the Tyrant of Sicyon in Philip's time, standing beside the chariot of Nike: when under Aratus all effigies of Tyrants were subsequently destroyed, the figure of Aristratus was scraped out, and a palm-tree inserted in its place.

Another of the pupils of Pamphilus, **Pausias**, may be considered to have done most to develop the capabilities of the new method (Pliny, xxxv. § 123, "primum in hoc genere nobilem"). Striking effects of transparency, such as the face of his Methe visible through the glass out of which she drank; of gradations of single colours, so that in his famous Sacrifice picture the entire body of a bull seen in foreshortening was coloured black: such were the features of his work; which, moreover, seems to have been limited in other directions by the tediousness of the encaustic method; so that his pictures were almost all on a small scale, and occupied with subjects appropriate to the size, such as scenes of child life (*pueri*) and even (for the first time) flower subjects. Pliny tells a story of his restoring the mural paintings of Polygnotus at Thespiae, and adds that he was not very successful, "quoniam non suo genere certasset." We have, however, seen that Pliny neither knew nor cared anything about the great mural paintings; the "Thespiae" here is a mistake for Delphi, so that we can place no reliance on this evidence of Pausias' practice with the brush.

From this point the history of Painting seems to branch off. Brunn, and most critics following him, have thought to be able to trace a new school existing side by side with the Sicyonian, of which the name of Aristeides stands at the head, and which includes Nicomachus, Euphranor, and Nicias. This school was termed the "Theban Attic," for this reason: Aristeides is frequently termed Thebanus, and we hear of a picture by him in Thebes; after the decline of Theban power the school is supposed to have taken root at Athens; and a contrast is drawn between the "severe academic exactness and thoroughness" (*χρηστογραφία*) of the Sicyonian school, and the "greater ease and versatility, and invention more intent upon the expression of human emotion" of the Theban-Attic. This conclusion, which has been generally accepted, certainly appears to rest on very insufficient grounds, and it leaves us with an impression of the narrowness and one-sidedness of the Sicyonic school which is hardly warrantable in fact. Klein, who has subjected each of the artists of the period now succeeding to a searching examination, advances a theory which seems to do away with the difficulty. He traces the whole of these artists back in two pedigrees to the tutelage of the two artists, Aristeides and Pausias; he finds that Aristeides the "Theban" belongs no less to the Sicyonic school than Pausias or than Pamphilus "of Amphipolis;" that most of these artists can be more or less directly associated with Sicyon. "The powerful reaction which tradition, intelligibly enough, connects with Sicyon, . . . is only comprehensible by the knowledge that it was preceded by a freshening and permeation of the ancestral parent stock with Northern Greek blood. From North Greece it acquired the technique of encaustic, which it developed to the highest perfection; and thence arose the idea that Aristides and Pamphilus were the first artists in encaustic." From what we know of these artists it would appear that all spheres of art, from the highest to the lowest, were handled by them; but there is no reason to suppose that the traditions of technique and style which marked the Sicyonic school were not preserved in painting as they were in sculpture.

The most important figure is now ARISTEIDES, *Thebanus*. The facts which Pliny gives point to two masters of this name, of whom the one is the father (formerly read as Aristiaeus), the other the son, of Nicomachus. The statements in Pliny concerning these two Aristeidae are so hopelessly confused that it is impossible to distinguish between them with any certainty. If the grandfather can be identified with the pupil of Polycleitus, we may take about B.C. 330 as a convenient date for him, and about B.C. 280 for that of his grandson. It is possible that the epithet *Thebanus* is intended to distinguish the older Aristeides; but even here Pliny is confused, for he sometimes calls one and the same person *Thebanus* and contemporary with Apelles. The same confusion is probably traceable in his estimate of style: "is omnium primus animum pinxit et sensus hominis expressit, quae vocant Graeci ethe, item perturbationis (*πάθη*)." Perhaps we should assign to the elder the quality of ethos, to the younger that of *πάθος* and of being *durior paulo in coloribus*; and according to these qualities we may assign some of the pictures. The Dionysus was probably painted by the older and more famous of the two; its great estimation is shown by the fact that Attalus is said to have paid 100 talents for it, and Mummius afterwards sent it to Rome: also the picture of a sacked town, which Alexander acquired at the looting of Thebes, and of which one episode represented a dying mother, with her infant still suckling her breast. To the younger may be assigned the Battle with Persians, the *Leontion Epicuri* and the *anapauomene* (see *Arch. Zeit.* 1883, p. 41).

Of NICOMACHUS, the son of the elder Aristeides, we know very little. He painted, like Melanthius and his pupils, for the Tyrant Aristratus of Sicyon, who was a contemporary of Philip of Macedon; also a portrait of Antipatros, probably about Ol. 115. Among his other works we read of a Rape of Persephone; a Sleeping Maenad surprised by Satyrs (*Arch. Zeit.* 1880, p. 149); a Victory driving a quadriga heavenwards; and other pictures of gods and mythological scenes.

EUPHRANOR, the Isthmian, is mentioned as a pupil of Aristeides (probably about B.C. 360), and, like others of his predecessors, worked both in sculpture and painting; according to Pliny (XXXV. § 128), he was *docilis ac laboriosus ante omnis*, and in both branches of art excelled all his contemporaries. Of his pictures we hear specially of three great compositions for a stoa in the Ceramicus, representing the charge of the Athenians against the Thebans before the battle of Mantineia, pictures of the twelve gods, and a Theseus. Of this last, Pliny says *in quo dixit* that "the Theseus of Parrhasius looked as though fed on roses, while that of Euphranor seemed fed on beef." The *dixit* is usually taken as alluding to Euphranor; Klein suggests that it was a remark more appropriate to Parrhasius; the same confusion of Pliny comes out in his attribution of a "madness of Odysseus" to Euphranor in the same passage. After describing the three works in the Stoa, he adds, "nobilis eius tabula Ephesi est, Ulixes . . ." Now we know from Plutarch that Parrhasius painted a picture of this subject, and it seems absurd to suppose that Euphranor would have painted the same idea for the home of Parrhasius, Ephesus. The *eius* should properly refer to Parrhasius, who alone painted this subject, and the whole passage has been inserted here by Pliny in error. Of Euphranor's style we cannot judge; we only know that he devoted his attention to the canon of proportions, and is said to have written on this subject; but it remains uncertain whether or no he is to be considered as the predecessor of Lysippus in this study.

With NICIAS of Athens we are brought fully into the Alexandrine age. Plutarch narrates a story of his having refused to sell one of his pictures (the Nekyia) at sixty talents to king Ptolemy; on the other hand, we hear of him as a contemporary of Praxiteles: so that his sphere of activity must have lain between about B.C. 340–300. From a statement in Demetr. Phaler. (*de Elocut.* 76) we gather that he tried to bring about a reaction in style against the follies of contemporary artists, who "frittered away their art in painting birds and flower pieces;" and laid down the principle of the importance of choosing a fine subject, such as a battle-piece. Following this principle himself, we find him occupied with more than one subject of the Polygnotan school: the Nemea, probably a personification of the Nemean games, whom he represented bearing a palm and seated on a lion; and a Vision of Hades (Pliny, xxxv. § 132, *necyomantea Homeri*), the picture which he refused to Ptolemy and presented to Athens. It is interesting in connexion with this last to note that an ancient treatment of this subject has come down to us in the famous Odyssey landscapes excavated on the Esquiline in 1848–50 (Woermann, *Antiken Odysseelandschaften*): these six pictures are almost exact illustrations of the Homeric text (*Od.* x. 80 to xi. 600), and though decorative in idea are examples of complete landscape painting, showing due observance of aërial perspective. Their execution dates, as the masonry of the walls on which they were found shows, from the last years of the Republic; but from their style the designs may probably be referred to the Hellenistic period. Among the *grandis tabulas* of Nicias, Pliny mentions an Io, a subject of which several replicas exist at Pompeii; it is probable that the largest and finest of these, found on the Palatine, reproduces the general form of the composition of Nicias (see Woltmann, p. 56). Besides his large pictures, principally of heroines ("diligentissime mulieres pinxit"), he seems to have worked in encaustic; the Nemea was a specimen of this technique, on which the artist inscribed the statement that he had "burned it in" (*inussisse*); and to this style we may perhaps refer his pictures of animals and dogs, as well as the chiaroscuro and quality of relief for which he is praised. Connected also with his encaustic work was doubtless the *circumlitio* of the statues of Praxiteles which has already been dealt with on p. 395; and the painted scene on the sepulchral monument at Triteia which Pausanias describes (vii. 22, 6).

We now enter definitely upon the new phase of Hellenistic life in Greece, and among the many painters of this epoch one stands unquestionably at the head, APELLES, son of Pytheas of Colophon. His father was apparently not a painter, for he was sent to receive his first instruction from Ephorus of Ephesus; at a later age, when he was already beginning to be famous, he went to Sicyon, attracted there by the fame of the teaching of Pamphilus. Under Philip of Macedon he took up his residence at Pella, and continued as "court painter" under Alexander; when Alexander started on his Asiatic campaigns, he returned again to Ephesus. After this we hear of him at various times in Rhodes, where he is brought into contact with Protogenes; at Alexandria, at the court of Ptolemy Soter; and possibly at Cos. The numerous anecdotes and sayings attributed to him, such as *manum de tabula*, *nulla dies sine linea*, *ne sutor ultra crepidam*, must be considered merely as indications of his extensive popularity rather than as detailed evidence of his style. We cannot with certainty connect any picture by him with the material that has come down to us, so that we are left to the scraps of art criticism in ancient authors for an estimate of his style. As might be expected, by far the majority of his works seem to have been in the sphere of portraiture. Pliny says that it is useless to try and enumerate the many portraits by him of Alexander and Philip: besides these we hear of a Cleitos putting on his helmet; an Archelaus in a family group; an Antigonus arranged in profile, so that his defective eye was not seen; besides many others, principally of people connected with the Macedonian court. Perhaps most characteristic of him were the series of personifications of abstract ideas of the mind, represented generally as female figures in action. Such a picture was the Calumnia, which he painted at the court of Ptolemy in Alexandria, in punishment of his detractors there, and of which we have a detailed description in Lucian. To the same category may be referred the pictures of Charis and of Tyche; and the allegorical personifications of the phenomena of nature, as Bronte (thunder), Astrape (lightning), and the thunderbolt, Keraunobolia. His mythological pieces are comparatively few; by far the most important was doubtless the Aphrodite Anadyomene painted for the people of Cos: she was seen rising from the water, a type which may be compared with numerous marbles which have come down to us. Augustus carried the picture to Rome, remitting to the Coans a hundred talents of the tribute due, as compensation; by the time of Nero it had suffered so much that it had to be restored, a work which was carried out by a certain Dorotheus. As we should expect from an artist whose bent lay in portraiture, his talent lay less in large or elaborate compositions than in refinement and the complete study of nature. The stories that we are told of him seem to point to a great dexterity and lightness of touch, with the charm and grace of manner which was the natural outcome of his period.

His greatest contemporary was PROTOGENES of Caunus, an insignificant town on the Carian coast, subject to Rhodes, where the artist took up his abode (see *supra*, p. 395). Mr. Torr (*Classical Review*, 1890, p. 231) suggests that the artist had been accustomed to paint pictures of ships, as thank-offerings for escapes at sea. At any rate, it was probably mainly due to Apelles that his work came to be known and appreciated: on the other hand, this seems inconsistent with the fact that Pliny places him among those who practised sculpture as well as painting. Besides a few portraits, of Philiscus, Antigonus, and the mother of Aristotle, and one work in Athens, his chief themes seem to have been drawn from the local traditions of Rhodes; an often repeated anecdote records his presence at the sacking of Rhodes by Demetrius in B.C. 304, which we may take as a central point of his chronology. Demetrius spared the town from burning in order to save the picture by Protogenes of the Rhodian hero Ialysus. In this picture occurred the dog, the effect of whose foaming mouth was said to have been attained by Protogenes throwing his sponge in desperation at the picture; and the partridge, which though a mere detail attracted so much attention that the artist, in annoyance, erased it. To attain this high degree of realism, he is said to have worked very slowly, and it was against this impression of laboriousness that the criticisms of Apelles were directed.

ANTIPHILUS was by birth an Hellenistic Egyptian, who was already established at Alexandria when Apelles went there. Quintilian calls him *facilitate praestantissimus*, and his versatility is shown in the subjects of his works: these included large pictures in tempera, genre pictures, such as a boy blowing the fire (probably encaustic), and even caricature. The type of one of his works, a Satyr probably dancing, with a panther-skin, and snapping his fingers (*quem aposcopeuonta appellant*), is probably reflected in statuary, for example in the bronze "Dancing Faun" found in the "Casa del Fauno" at Pompeii (Overbeck, *Pompeii*,^{4} p. 550).

The principle of illusion was now becoming an end in itself, and the higher aims of art were neglected in the reproduction of ignoble and unworthy themes: a representative of the age was **Theon** of Samos, of whose *phantasies* the most famous is described by Aelian; it represented a warrior fully armed, charging out of the panel; when exhibiting this picture, the artist would have a flourish of trumpets sounded, and then draw the curtain. Other painters of this time are: **Aëtion**, who painted a marriage of Alexander and Roxane,* which has been fully described by Lucian; in this picture little Erotes are introduced, playing with the king's armour, a motive thoroughly characteristic of the Hellenistic age;—**Helena**, daughter of Timon the Egyptian, said to have painted the Battle of Issos which has inspired the famous Pompeian mosaic; and the school of painters in little, which, like the Dutch school of the same kind, occupied itself with genre and still life. Chief of these was **Peiraïcus**, whose speciality was "barbers' shops, cobblers' booths, asses, eatables," and the like, from which he received the nickname *rhyparographos* (i.e. rag and tatter painter, a parody on *rhopographos*, a painter of small and trivial objects): in spite of the contempt felt for such art, it seems to have commanded high prices, probably on the score of technical finish.

In the centuries following B.C. 300 few artists stand out with any individuality: to study the ideas of this time, we must look at the Hellenistic reliefs, and at the wall-paintings, as they are reflected in Roman imitations. The only artist of the period who won considerable fame is **Timomachus** of Byzantium, of whom Pliny says that Julius Caesar paid a large sum for two of his pictures; but we cannot follow Pliny in making Timomachus contemporary with Caesar: he probably belongs to an earlier century. The most famous of his pictures were: the Madness of Ajax, a Medea about to kill her children, and his Orestes and Iphigeneia in Tauris. Of the Medea picture, celebrated in antiquity no less than the Aphrodite of Apelles, we have several suggestions in wall-paintings, sarcophagi, and elsewhere; perhaps the finest is the picture of Medea herself in *Mus. Borb.* x. 21, in which the conflict of emotions in the mother's mind is admirably represented. It is this power of expressing the emotions and character with delicacy and depth that seems to characterise the works of Timomachus, and probably earned him his fame.

With Timomachus the history of Greek painting proper may be said to have come to an end. Under the successors of Alexander, the art had become cosmopolitan, and under the Romans the chief interest was finally transferred to Italian soil. During the last years of the Republic, and under the Emperors, the art treasures of ransacked Greece poured with a steady flow into Italy, and it is here that we must study its latest developments. But throughout antiquity, painting continued to be an essentially Hellenic art. It is true that we hear occasionally the names of Roman artists:—**Fabius Pictor** (B.C. 304), a member of the illustrious *Fabia gens* whose wall-paintings in the temple of Salus are praised, but whose profession was considered to have degraded his caste; **Pacuvius**, the tragedian (B.C. 219–129); **Jaia** or **Lala**, whose work in encaustic has been already mentioned (about B.C. 100); **Turpilius**, who painted with his left hand; **Titidius Labeo**, a former praetor and proconsul, who made himself ridiculous with his *parvis tabellis*; Q. **Pedius**, a boy of good family, who, being born dumb, was put to learn painting—he became proficient, but died young; and, lastly, **Fabullus** (Amulius), who lived in the time of Nero, and whom Pliny describes as *gravis ac severus idemque floridus pictor*. But even in Roman times the majority of the names are Greek in form, and it is quite certain that the majority of the subjects painted are referable to pictorial originals of Greek and Hellenistic art. It is true that in only a very few instances we are able to trace these Italian paintings back to an original described in literature; but Helbig's researches have proved beyond a doubt that such an origin is to be sought for them. The Greek creations were everywhere circulated and reproduced, in the form of cheap frescoes, and occasionally as the leading motive in works of sculpture.

The large number of scenes from daily life which occur in Italian paintings are divided by Helbig into two main classes, the Hellenistic genre pictures and the Romano-Campanian realistic scenes. The Hellenistic group, the most charming of all these pictures, are probably the nearest reflections we have of the genre spirit of the painters of the Alexandrine period. The subjects are ideal treatments of daily life, principally of women, youths, and children; girls with Erotes, or with Pan; toilet scenes and love scenes; much the same range of subjects in fact as those which we have in the idyllic poetry of the time, and in the terra-cotta statuettes; and filled with the same fresh and simple beauty.

The other class, which represent more directly the art of the time to which they belong, were subjects apparently inspired by the fancy of the handicraftsman; mechanics at their occupations, incidents of the market, bakers, fishmongers, gladiatorial scenes, usually appropriate to the locality in which they stand, and painted with a certain rough realistic dexterity. In these two classes we see reflected the two main styles of the Alexandrine painters, the ideal sensual style of Aëtion and the *rhyparography* of Peiraicus.

Of mythological scenes in Italian painting we have not many examples. The most important of these have been already noted in connexion

---

* It is natural to think of the so-called "Aldobrandini marriage," one of the most famous of the ancient paintings which have come down to us; but the conception and style of this picture seem to reflect an original type belonging to a time far earlier than the period of Aëtion.

with the Greek artists whom they illustrate; we may specially mention here the series of four paintings on marble slabs from Herculaneum (Helbig, *Wandgem.* Nos. 170 b, 1241, 1405, 1464), of which the colours have faded, but the fine drawing in red outlines still survives (see *ante*, p. 411). On the finest of these, which represents five maidens inscribed with mythical names, of whom two are kneeling at the game of *astragali*, the artist has inscribed his name, Ἀλέξανδρος Ἀθηναῖος ἔγραφεν.[*] Marble paintings such as these (and possibly also paintings on wood) were at one period of Italian art used in the decoration of walls, being let into the surface of the wall amidst the other purely decorative designs; sometimes, as in the Roman house on the Palatine, with the object of imitating real views seen through open windows in the wall.

The majority of the mythological scenes now in use are chosen principally from the point of view of their affording scope for the insertion of *landscape:* such as Mount Ida, with the Judgment of Paris; the Caucasos, with the Freeing of Prometheus; Ariadne on Naxos; the Icarian Sea, with Daedalus and Icarus; and the Odyssey landscapes already quoted. The gradual growth of a feeling for landscape has been traceable through the history of the Greek painters. The tectonic, semi-sculptural painting of Polygnotus, with its anthropomorphic ideas and formulae of suggesting locality, had given way to the introduction of a definitive background, until finally, in the Hellenistic time of the Diadochi, landscape had become an end in itself. We see how strong this growing influence was, in the effect it had upon sculpture: from the pictorial scenes on the Gjölbaschi frieze to the Hellenistic reliefs, and such wall-decorations in sculpture as the Destruction of the Niobides, or the Apotheosis of Homer, both in the British Museum: in both these cases the side of a mountain is represented, with the figures, of diminutive size, placed at various levels. The art of landscape painting, first made possible by Apollodorus, was brought into repute by Antiphilus. Commencing with such mythological subjects which easily lent themselves to it, it soon came to the idyllic scenes of mere decoration; shrines in the open air, from the simple tree hung with dedications, to great temples and elaborate buildings, vistas of city architecture thronged with people, village landscapes with goatherds and sheep, and coast scenes; among which, as a reminiscence doubtless of the originals by the Greek painters of Alexandria, Egyptian landscapes also occur. As an instance of this last, we may quote the celebrated Palestrina mosaic; here, in a bird's-eye view, is a town flooded by the Nile, with a background of desert; negroes hunting fabulous monsters, islands with palms and cypresses, and covered with buildings of all kinds, hippopotami and crocodiles. In this connexion we have the name of a Roman painter, contemporary of Augustus, in an interesting passage of Pliny (xxxv. § 116); he says that LUDIUS (or Sextus Tadius?) was "the first[*] to bring in a singularly delightful fashion of wall-painting; villas, colonnades, examples of landscape gardening, woods and sacred groves, reservoirs, straits, rivers, coasts, all according to the heart's desire; and amidst them passengers of all kinds on foot, in boats, driving in carriages or riding on asses to visit their country properties; furthermore, fishermen, bird-catchers, hunters, vintagers; or again, he exhibits stately villas, to which the approach is through a swamp, with men staggering under the weight of the frightened women whom they have bargained to carry on their shoulders; and many another excellent and entertaining device of the same kind. The same artist also set the fashion of painting views, and that wonderfully cheap, of seaside towns in broad daylight." The name of Ludius has a special interest in the fact that he is the only artist mentioned in antiquity of whose painting a specimen has probably come down to us. In the Villa of Livia at Rome were found in 1863 the four walls of a room on which taken together the entire plan of a garden is painted (one of the walls is given in colours in *Antike Denkmäler*, i. Taf. 11; another in outline, *ib.* Taf. 24). "As this kind of garden piece is emphatically attributed to Ludius by Pliny, and as the villa belonged to the Imperial family in his time, and would doubtless therefore have been put into the hands of the decorator most in repute; and lastly, as the technical finish of the work surpasses that of all other existing antique wall-paintings, the opinion advanced by Brunn, that it is from the hand of Ludius himself, must not be hastily set aside" (Woltmann).

If we examine ancient landscapes in the light of our modern knowledge, the great difference that strikes us is the ancient lack of feeling for the charm of atmosphere. As a rule the horizon was placed abnormally high, and the various parts of the subject were distributed over the space in clear and equable light: this is generally toned off towards the sky-line, but special effects of light are rare. In an Endymion subject we have rays of moonlight; in the Odyssey underworld a special ray of light is introduced through an aperture in the rock; and in one case we have a sunset effect: but these are isolated instances. Moreover, the perspective, both aërial and linear, is seldom perfect. But in all these cases we must remember that the specimens before us are merely the work of decorators and handicraftsmen, usually executed in fresco, and that possibly in the works of the great Greek masters these criticisms would not apply.

It will be seen that almost all the paintings by which we can test the Hellenic art were executed in Italy. Very few have as yet been found there of the Republican period. In Rome the pictures found mostly belong to one style. In Pompeii the majority belong to the last ten years before the destruction of the city in A.D. 79,

---

[*] Helbig points out that this signature may possibly refer to the original painter who designed the composition: it is clear, at any rate, that all four of these paintings are copies of earlier pictures, possibly by the same hand.

[*] Pliny's zeal for the honour of his countrymen has led him into an exaggeration here: Ludius was certainly not the first; he may have revived the art in Rome, and perhaps have invented some of the motives which Pliny mentions and which Vitruvius (vii. 5) does not allude to as belonging to the "ancient" style of decoration. The translation of the Pliny passage is taken from Woltmann and Woermann.

but within this limit of date there is great variety of style. Vitruvius (vii. 5), writing at about the time of Augustus, gives a sketch of the history of mural decoration from the Alexandrian age. Formerly, he says, the ancients used to imitate marble incrustations* in combination sometimes with architectural members. Later, it had been customary to paint upon the walls imitation buildings, columns and pediments, landscapes and mythological subjects: such as "harbours, promontories, shores, rivers, fountains, aqueducts, temples, groves, mountains, herds and herdsmen; or in some places specimens of *Megalographia*, such as mythological scenes, Trojan battles, or *wanderings of Odysseus arranged in panels*" (see the Odyssey landscapes above quoted). All these subjects were suitable, "because Painting is the representation of what exists or might exist." But now subjects taken from reality are despised. "We see upon our walls nowadays not so much copies of actual things, as fantastic monstrosities: thus reeds take the place of columns in a design; ribboned and streamered ornaments, with curling leaves and spiral tendrils, take the place of pediments; diminutive temples are supported upon candelabra; vegetable shapes spring from the top of pediments and send forth multitudes of delicate stems, with twining tendrils and figures seated meaninglessly among them; nay, from the very flowers which the stalks sustain are made to issue demi-figures having the heads sometimes of human beings and sometimes of brutes."

Assisted by this criticism of Vitruvius, we are able to trace differences of style in the development of wall decoration, corresponding to the different epochs. (1) The regular and stable painted semi-columns and pilasters, the *topia* of Vitruvius, like the Odyssey scenes. (2) Reed-like supports, which are gradually developed until (3) a network of these constructions covers the whole intermediate space, the structural idea being lost sight of.

Taken all in all, our direct monumental evidence of Greek painting is very small; for our literary evidence, we have mainly to rely on Pliny, who, as we have seen, is as a recorder of bare facts often untrustworthy, and as an independent art critic deplorable. The true art critic of antiquity, Lucian, who in matters of taste and understanding shows excellent judgment, has left a few precious descriptions which give a real insight as far as they go. If Pliny had been gifted with the critical faculty and insight of Lucian, we should now be better able to decide the question as to how far the standard of painting of the ancients was worthy to compare with that of their sculptures. If in technical correctness they were imperfect, we may be sure that their artistic instinct would have served in a great measure to cover this defect, and that in drawing and composition, at least, they did not fall short of the greatest masterpieces of modern times.

17. *Authorities.* — The principal literary sources of information upon the history, methods, and achievements of ancient painting are Pliny the elder, in his *Naturalis Historia*, Pausanias, and Quintilian; the writings also of Lucian, Plutarch, Athenaeus, Aristotle, Aelian, Cicero, the elder and younger Philostratus, and Vitruvius, contain many incidental remarks which are of great value in the history of a subject like Painting, in which so little has survived to us from antiquity.

The whole of the ANCIENT PASSAGES relating to Painting are catalogued under the names of the artists or of the period to which they refer, in Overbeck's *Die antiken Schriftquellen*, Leipzig, 1868.

Of the numerous tracts which have been devoted to the elucidation and emendation of these texts, we may select the following:—Urlichs, *Chrestomathia Pliniana*, 1857, and the same author in *Rhein. Mus.* xxv. p. 507, &c.; Oehmichen, *Plinianische Studien*, Erlangen, 1880; Furtwängler in Fleckeisen's *Jahrbücher für d. Ph.* Spbd. 9; Kroker, *Gleichnamige Künstler*, Leipzig, 1883; Robert, *Archäologische Märchen*, Berlin, 1887; Holwerda in *Mnemosyne*, "De Pictorum historia apud Plinium," 1888; and especially Klein's two articles in *Arch.-Epig. Mittheilungen aus Oesterreich-Ungarn*, xi. pp. 193-233, "Die Sikyonische Schule," and xii. pp. 85-127, "Die Helladische und Asiatische Schule."

In the following works a more or less GENERAL TREATMENT of the subject has been attempted:—Raoul-Rochette, *Peintures antiques Inédites*, Paris, 1836 (somewhat out of date); Brunn, *Geschichte der Griechischen Künstler*, 2nd edit., vol. ii., 1889; Woltmann and Woermann, *History of Painting* (English edition, edited by Sidney Colvin), 1880; and the article "Malerei" in Baumeister's *Denkmäler*.

For the study of individual details, see the following:—

TECHNIQUE.—Blümner, *Technologie und Terminologie der Gewerbe und Künste bei Griechen und Römern*, 1874–87, esp. iv. p. 414 fol.; the article in Baumeister, already quoted; and Helbig und Donner, *Untersuchungen über die Campanische Wandmalerei*, 1873.

ENCAUSTIC.—Helbig und Donner, *loc. cit.*; Blümner, *loc. cit.* iii. p. 200 fol.; Cros et Henry, *L'Encaustique*, 1884; Donner in *Beilage zur Allgemeine Zeitung* (Munich), 1888, pp. 2641-3, Petrie, *Hawara, Biahmu, and Arsinoe*, 1889, pp. 17–21, 37–46.

POLYCHROMY OF SCULPTURE AND ARCHITECTURE.—Baumeister's *Denkmäler*, s. v. "Polychromie;" Boeckler, *Die Polychromie in der antiken Sculptur*, 1882; Treu, *Sollen wir unsere Statuen bemalen?* Berlin, 1884, and in *Arch. Jahrbuch*, 1889, p. 18.

MOSAIC.—Raoul-Rochette, *loc. cit.* pp. 345-6; Engelmann in *Rhein. Mus.* xxix. pp. 561-89; Blümner, *loc. cit.* iii. p. 323; and Baumeister's *Denkmäler*, s. v. "Mosaik."

HISTORY.—Studniczka in *Arch. Jahrb.* 1887, pp. 135–168; Dümmler in the same, 1887, pp. 168–178 (on Polygnotus); *Wiener Vorlegeblätter* for 1888, pll. x.–xii. (for restorations of the Iliupersis of Polygnotus); Schreiber, *Die Hellenistischen Reliefbilder*, 1890; Wustmann, *Apelles' Leben und Werke*, Leipzig, 1870; Woermann, *Die Landschaft in der Kunst der antiken Völker*, 1876; Helbig und Donner, *Wandgemälde der vom Vesuv verschütteten Städte*, 1868; Urlichs, *Die Malerei in Rom vor Cäsar's Dictatur*, Würzburg, 1876; Woermann, *Die antiken Odysseelandschaften* (six plates in colour), Munich, 1875; Mau, *Geschichte der decorativen Wand-*

Arch.* throughout; Bartoli and Bellori, *Le Pitture antiche della Grotta di Roma*, 1706; Bartoli, *Gli antichi Sepolcri*, 1727; Barré et Roux, *Pompei et Herculaneum*, 1840, &c. (7 vols.).

For a fuller bibliography of the subject, see Brunet's *Manuel du Libraire*, tom. vi. pp. 1688–9, and especially E. Hubner's *Bibliographie der klassischen Alterthumswissenschaft*, Berlin, 1889. [C. S.]

PIGNUS. A thing is said to be pledged to a man when it is made security to him for the satisfaction of some debt or obligation due to him, the creditor acquiring a right in the thing pledged available against third parties as well as against the pledger, though the latter remains owner of the thing. Thus the right of pignus or pledge belongs to the class of *jura in re alienâ.*

The progress of the Roman law of pledge can be clearly traced. In the law of the Twelve Tables there was no independent right of pledge as distinct from a right of ownership, the only mode of giving security in early times being by a transfer of Quiritarian ownership of the thing to the creditor by mancipation or *in jure cessio*, on condition of its being re-conveyed when the debt was paid (*ut remancipetur, in jure cedatur*). [FIDUCIA.] The creditor who failed to re-convey when the debt was paid might be sued by a personal action, called *actio fiduciae*, for breach of faith; but as the debtor had parted with the ownership of the thing, he had no real action against third parties in respect of it. The first step in advance from this clumsy contrivance of a conveyance and a re-conveyance was the establishment of pignus, using this term in its strict sense: pignus was constituted by the simple delivery of a thing to the creditor as security for his debt without conveying the ownership of it to him. The creditor acquired by the delivery legal possession of the thing, being protected by possessory interdicts, but he had no real action (*actio in rem*) against third parties; moreover he could not dispose of the pignus to obtain satisfaction of his claim, nor could he make use of it while in his possession, but had simply a right of retention. It was a common practice, however, for the parties to a pledge to make a condition, called Lex Commissoria, by which, if the debt was not paid, the thing became the property of the pledgee. It will be seen that this form of security was less advantageous to a creditor than that of a conveyance with a fiducia, and that, on the other hand, it did not interfere so much with the rights of the debtor, since he remained owner of the pignus and was able to vindicate it from any third party. Ultimately the praetor made a great reform in the law of pledge by allowing a pledge to be constituted by simple agreement (*nuda conventio*); thus making delivery a matter of form, and by giving an *actio in rem* to a pledgee without depriving the pledger of his ownership. This change was first instituted to enable a landlord to recover the property (*invecta et illata*) of his farming tenant (*colonus*) which had been pledged to him for his rent (*pro mercedibus fundi*), the remedies for this purpose being the *interdictum Salvianum* [INTERDICTUM] and the *actio Serviana in rem*. The latter remedy was extended under the name of *actio quasi-Serviana* or *hypothecaria*, generally to creditors who had things pignerated or hypothecated to them, whether by delivery or simple agreement. The creditor also acquired the power of selling the thing pledged if his debt was not satisfied.

The term *pignus* may signify generally a thing pledged in any way, but in a strict sense it means a thing pledged by delivery, hypotheca being the proper term for a thing pledged by mere agreement (Dig. 13, 7, 9, § 2; Isid. *Orig.* 5, 25; see also Cic. *ad Fam.* xiii. 56). Gaius (Dig. 50, 16, 238) says that pignus is derived from pugnus "quia quae pignori dantur, manu traduntur." This is one of several instances of the failure of the Roman jurists when they attempted etymological explanation of words [MUTUUM]. The element of pignus (pig) is contained in the word *pa[n]go* (Gr. πήγνυμι) and its cognate forms.

Having traced the history of pledge, we proceed to give some account of the law on the subject as it appears in Justinian's legislation. A right of pledge or mortgage cannot arise or continue unless there is some principal obligation to which it is accessory. The principal obligation may be of any kind, as for money borrowed (*mutua pecunia*), or for dos, letting and hiring, mandate; it may be conditional or unconditional, for part of a sum of money as well as for the whole (Dig. 20, 1, 5). It could be one not enforceable by action, but only binding *naturaliter* (Dig. 20, 1, 14, § 1). [OBLIGATIO.] The amount for which a pledge was security depended on the agreement: it might be for principal and interest or for either; or it might comprehend principal and interest, and all costs and expenses which the pledgee might be put to on account of the thing pledged (Dig. 13, 17, 8, § 25). Anything could be the object of pignus which could be an object of commerce (Dig. 20, 1, 9; Dig. 20, 3, "quae res pignori vel hypothecae datae obligari non possunt"), movable as well as immovable things, even things which are consumed by the use. It might be a thing corporeal or incorporeal, a single thing or an entire property. If a single thing was pledged, the thing with all its increase was the security, as in the case of a piece of land increased by alluvio. If a shop (*taberna*) was pledged, all the goods in it were pledged; and if some of these were sold and others bought in, and the pledger died, the pledgee's security was the shop and all that it contained at the time of the pledger's death (Dig. 20, 1, 34). If all a man's property was pledged, the pledge comprehended also his future property, unless such property was clearly excepted. A man might also pledge any claim or demand that he had against another. It is to be noticed that the objects of pledge were much extended by the establishment of the principle of hypotheca, since previously only such property could be pledged as was capable of delivery. The act of pledging required no particular form. Nothing more was requisite to establish the validity of a pledge than proof of the agreement of the parties to it. It was called *contractus pigneratitius* when it was a case of pignus; and *pactum hypothecae*, when it was a case of hypotheca: in the former case, as we have seen, delivery was necessary. A man might also by his testament make a pignus (Dig. 13, 7, 26). A man could only pledge a thing when he was the owner and had full power of disposing of it. If a man pledged a thing which was not his, he did not make the thing a pignus, but the creditor had the right of bringing an actio Publiciana for its recovery, if the pledger could maintain this action. If the pledger afterwards became owner of the thing, the pledge became a valid one under certain circumstances (Dig. 13, 7, 20; 20, 2, 5: cf. Windscheid, *Pandekten*, 1, § 230).

A pignus might be created by law; that is, there was among the Romans an implied hypothec (*tacita hypotheca*, *pignora tacite contracta*), which existed not by consent of the parties but by rule of law (*ipso jure*), in respect of particular kinds of obligations (Dig. 20, 2, "In quibus causis pignus vel hypotheca tacite contrahitur"). These hypothecae had either for their object some particular things belonging to the debtor—special hypothec; or his entire property, present and future—general hypothec.

The following are instances of special hypothecae:—1. The lessor of a building or land not intended to be used for agricultural purposes had a hypotheca, in respect of his claims arising out of the contract of hiring, on everything which the lessee (*inquilinus*) brought upon the premises for constant use (*invecta et illata*). 2. The lessor of agricultural land had an hypotheca on the farm as soon as they were collected by the lessee (*colonus*) for claims arising from the lease (Dig. 20, 2, 7; 19, 2, 24. From this rule of Roman law the old Scotch law of hypothec seems to have been derived). 3. A person who lent money to repair a ruinous house had an hypotheca on the house for the amount of his money which had been laid out on such repair. (This hypothec was established by a senatusconsultum under the Emperor Marcus.) 4. Pupilli had a hypotheca on things which were bought with their money, but not in their name. (Constitution of Severus and Caracalla.) 5. A legatee had a hypothec on any property which the person charged with the legacy had derived from the estate of the testator.

The following are the cases of general hypothecae:—1. The fiscus had a general hypotheca on the property of its debtors in respect of all claims for penalties. (For the history of the law on this subject, see Dernburg, i. §§ 41, 43.) 2. The Emperor personally and the Empress on goods of their debtors (Dig. 49, 14, 6, § 1). 3. The husband on the property of him who promised a dos. 4. The wife on the property of her husband for recovery of dos and parapherna in her husband's possession, and in respect of claims arising from *donatio propter nuptias*. 5. Minors and lunatics on the property of their guardians. 6. Children under certain circumstances against the estates of their father or mother (Windscheid, *Pandekten*, ii. § 232). 7. Churches on the property of their emphyteutic tenants for enforcing liabilities on account of waste (Nov. 1, c. 3, 2).

Pignus might be created by a judicial sentence, as for instance by the decree of the praetor giving to a creditor power to take possession of his debtor's property (*missio creditori* *in bona debitoris*); either a single thing or all hi property, as the case might be. But the permission or command of the magistratus did no effect a pledge, unless the person actually too possession of the thing. The following ar instances:—The *immissio damni infecti caus* [DAMNUM INFECTUM]; *legatorum servandoru* *causa*, which had for its object the securing of legacy which had been left *sub conditione* or *di* (Dig. 36, 4); *missio ventris nomine in possessionem*, when the pregnant widow was allowe to take possession of the inheritance for the protection of a postumus. The right which a perso obtained by such *immissio* was called *pign* *praetorium*. *Pignus judiciale* was when the jude ordered the goods of a person to be taken a security for the satisfaction of a judgment (*e* *causa judicati*).

The person who had given a pledge was stil owner of the thing that was pledged. He coul therefore use the thing and enjoy its *fructus* if he had not given up possession. But th agreement might be that the creditor shoul have the use or profit of the thing instead o interest, which kind of contract was calle *antichresis* or mutual use: if there was n agreement as to use, the creditor could not us the thing even if it was in his possession. Th pledger could also sell the thing pledged, unles there was some agreement to the contrary, but such sale could not affect the right of th pledgee (Dig. 13, 7, 18, § 2). If the pledger sold and delivered a movable thing that was pignerated or was specially hypothecated, without the knowledge and consent of the creditor, he was guilty of furtum (Dig. 20, 1 13, 2; 47, 19, 6; 66, 4). If the pledger at the time of a pignus being given was not the owner of a thing, but had the possession of it he could still acquire the property of the thing by usucapion, while it was in the possession of the pledgee, for the pledging was not an interruption of the usucapion [POSSESSIO]. Th pledgee might either have possession of th thing from the first by delivery, or might hav taken possession subsequently on account of th default of the debtor. In either case he wa entitled to keep possession till his demand wa fully satisfied. For the purpose of obtainin possession of the pledge he had the actio hyp thecaria or actio quasi-Serviana against eve person who was in possession of it; his ri to recover in this action was derived from title of the person who had pledged the thing him. If a pledgee could not obtain posses of the thing pledged, or was evicted on acco of some defect in the title of the pledger, only remedy was a personal action against latter. A creditor who had a pignus had a a right to the *interdicta retinendae et recu* *randae possessionis*. [INTERDICTUM.]

A pledgee could pledge the thing that pledged to him; that is, he could transfer pignus (Dig. 20, 1, 13, § 2). In case his dem was not satisfied at the time agreed on, pledgee had a right to sell the thing and himself out of the proceeds (*jus distrahendi* *vendendi pignus*). (Dig. 20, 5; Cod. 8, 27, This power of sale might be qualified by terms of the agreement; but the creditor co not be deprived of all power of sale, nor could he be compelled to exercise his power of sale. Gaius (ii. 64) illustrates the proposition that a person who was not owner of a thing could in some cases alienate it, by the example of the right of a pledgee to sell the thing pledged; but he adds that the right of sale in this case may perhaps be referred to the consent of the debtor or owner, who by entering into a contract of pledge agreed that the pledgee should have such right. In case of a sale the creditor, according to the later law, must give the debtor three separate notices of his intention to sell; and after the last of such notices, he must wait two years before he could legally make a sale. If anything remained over after satisfying the creditor, it was his duty to give it to the debtor; and if the price was insufficient to satisfy the creditor's demand, his debtor was still debtor for the remainder. If no purchaser at a reasonable price could be found, the creditor might become the purchaser, but still the debtor had a right to redeem the thing within two years on condition of fully satisfying the creditor (Cod. 8, 34, 3).

An agreement that a pledge should be forfeited in case the demand was not paid at the time agreed on was originally very common; but it was declared by Constantine, A.D. 326, to be illegal. [COMMISSORIA LEX.]

A pledgee who had acquired possession of a pignus was under an obligation to restore it to the pledger on payment of the debt for which it had been given; and up to that time he was bound to take such care of it as a careful person would take. On payment of the debt, he might be sued by the pledger in a personal action called *actio pignoratitia*, for the restoration of the thing, and for any damage that it had sustained through his neglect. The remedy of the pledgee against the pledger for his proper costs and charges in respect of the pledge, and for any dolus or culpa on the part of the pledger relating thereto, was by an *actio pignoratitia contraria*.

If there were several creditors to whom a thing was pledged which was insufficient to satisfy them all, he whose pledge was prior in time had a preference over the rest ("potior est in pignore qui prius credidit pecuniam et accepit hypothecam," Dig. 20, 4, 11). There were some exceptions to this rule: for instance, when a subsequent pledgee had lent his money to save the thing pledged from destruction, he had a preference over a prior pledgee (Dig. 20, 4, §§ 5, 6). This rule has been adopted in the English law as to money lent on ships and secured by bottomry bonds. Certain hypothecae had a preference or priority (*privilegium*) over all other claims. Of these claimants, the Fiscus came first in respect of taxes and contracts; then the wife in respect of her dos; and then those who had been put to some expense in repairing or restoring a thing. In the case of unprivileged creditors, the general rule, as already observed, was that priority in time gave priority of right. But a hypotheca which could be proved by a writing executed in a certain public form (*instrumentum publice confectum*), or which was proved by the signatures of three reputable persons (*instrumentum quasi publice confectum*), had a priority over all those which could not be so proved. If several hypothecae of the same kind were of the same date, he who was in possession of the thing had a priority. The creditor who had for any reason the priority over the rest was entitled to be satisfied to the full amount of his claim out of the proceeds of the thing pledged. A subsequent creditor could obtain the rights of a prior creditor in several ways. If he furnished the debtor with money to pay off the debt, on the condition of standing in his place, and the money was actually paid to the prior creditor, the subsequent creditor stepped into the place of the prior creditor (Dig. 20, 3, 3). Also if he purchased a thing on the condition that the purchase money should go to satisfy a prior creditor, he thereby stepped into his place. A subsequent creditor could also, without the consent either of a prior creditor or of the debtor, pay off a prior creditor, and stand in his place to the amount of the sum so paid. This arrangement, however, did not affect the rights of an intermediate pledgee (Dig. 20, 4, 16).

The pledge was extinguished by a release of it on the part of the creditor, also by the destruction of the thing, for the loss was the owner's; it was also extinguished if the thing was changed so as no longer to be the same, and not capable of being restored to its former state (Dig. 13, 7, 18, § 3); further, it was extinguished by confusio—that is, when the right of ownership and right of pledge were merged in the same person, and lastly by a prescription of ten or twenty years under certain conditions.

(Dig. 20; Cod. 8, 14–35; Gesterding, *Die Lehre vom Pfandrecht*, &c.; Sintenis, *Handbuch des gemeinen Pfandrechts;* Bachofen, *Das römische Pfandrecht*, &c.; Dernburg, *Das Pfandrecht nach den Grundsätzen des heutigen römischen Rechts;* Windscheid, *Pandekten*, § 224, &c.; Puchta, *Inst.* i. § 246, &c. There is an English treatise entitled *The Law of Pledges or Pawns as it was in use among the Romans*, &c., by John Ayliffe, London, 1732, &c.) [E. A. W.]

PILA, PILA LUSORIA (σφαῖρα), a *ball*. In this article it is proposed to include an account, not merely of the different kinds of balls, but of the exercises and also the games for which they were used by the Greeks and Romans. The subject has been somewhat complicated in modern treatises by regarding as *games* what what were merely gymnastic or medico-gymnastic exercises. It will be more convenient to keep them apart. Exercise merely for the sake of bodily health and vigour and grace of movement was more commonly sought at all times of life among these nations than exercise primarily for the sake of amusement, whereas the converse is now the case: and there can be no doubt that the majority of Greeks and Romans who indulged in so-called "games" at ball were practising and exercising their muscles, not, as we should say, "playing": still, there were some notable exceptions, which will be classed as games.

As regards the historical view of these exercises and games, we find the earliest mention in two passages of the Odyssey (vi. 100; viii. 370). In the former, where Nausicaa is playing with her attendant maidens, the ball is merely tossed from one to the other, as a graceful and healthy exercise, while (probably) they danced in measured time (Athen. i. p. 14 d): in the passage of Apollonius (iv. 952), who no doubt had this scene in his mind, he speaks of maidens playing *σφαίρᾳ περιηγέϊ*, where Becq de Fouquières is certainly right in taking the adjective to mean, not round, but circulating from hand to hand. In the other passage of the Odyssey we have two performers dancing rhythmically, throwing up a ball, and catching it as they danced: in fact, they may be classed as jugglers. As far as we can trace the earliest Greek ball-play, it seems to have been of the nature above described, a sort of adjunct to the dance and music, forming, in fact, part of what we may call the figures of the dance. According to Athenaeus, the practice long remained; for he cites (i. 24 b) Carystius of Pergamum as saying that it was still in vogue among the women of Corcyra. It seems likely that the name *βαλλαχράδαι*, applied to Argive boys keeping festival, had something to do with this choric ball-play (see Krause, *Gymnastik*, i. p. 300; Grasberger, *Erziehung*, i. p. 89). It is useless to discuss the question whence came these amusements or exercises to the Greeks: various opinions are given in Herod. i. 68, Athen. i. 14 d. Without, however, accepting as better than any other the theory that the Spartans invented it (Athen. *l. c.*), we may notice that it early had a strong hold, with other gymnastic exercises, at Sparta. This is also indicated by the term *σφαιρεῖς* applied to Spartan youths, *i.e.* those who were passing out of the stage of *ἔφηβοι*, and were not yet reckoned as *ἄνδρες*. The name was, no doubt, applied to them because the ball-play formed an important element in the gymnastic training at that precise age, probably accompanied with music, as part of the *choric* exercise of the Spartans (Pausan. iii. 14; *C. I. G.* 1386, 1432; Gilbert, *Staatsalt.* i. 68; Schömann, *Antiq.* 264). From whatever country it was introduced the exercise was highly regarded by the Athenians, who recognised the value for general bodily health and development, afterwards elaborately insisted upon by Galen and other medical authorities. The gymnasia had therefore a special room (*σφαιριστήριον*) for the purpose [Gymnasium]; and Athenaeus (i. 19 a) tells of the distinction given to Aristonicus of Carystus, the *συσφαιριστής* of Alexander, who was made a citizen of Athens and honoured with a statue. The fondness of Dionysius of Syracuse for the exercise is noticed by Cicero (*Tusc.* v. 20, 60).

That it took root quite as strongly at Rome is abundantly shown in Latin literature. It was, as Krause, Becker, and many others particularly notice, played by all ages: men, and even old men, as well as boys, "without loss of dignity." This fact cannot, however, at any rate now, be made, as even recent writers make it, a point of distinction between ancient and modern customs. Among notable instances we may mention Augustus, who took exercise with the *pila* and *folliculus*, until he was too old for anything but the litter or a gentle walk (Suet. *Aug.* 83). (For similar record of other emperors cf. Suet. *Vesp.* 20; [Capitol.] *M. Ant.* 4; Lamprid. *Alex. Sev.* 30.) Pliny (*Ep.* iii. 1, 8) tells us of Spurinna, who made this exercise one of his careful methods for preserving a green old age: Seneca (*de brev. Vit.* 13) complains that many made such exercises the main object of their life. In the well-known line of Horace (*Sat.* i. 5), when Maecenas goes to play at ball, Horace and Virgil do not join him, on the ground that "pila lippis inimicum et ludere crudis." It is a curious comment on this passage, that Galen specially notes that those who use other gymnastic exercises become, "like the Litae of Homer, *χωλοί τε ῥυσοί τε παραβλῶπές τ' ὀφθαλμώ*, while those who play judiciously at ball escape such maladies." It is necessary to point out that the exercise was not indigenous at Rome. The old Roman followed the severer exercises of hunting and riding: the *pila* came in with Greek customs (Hor. *Sat.* ii. 2, 10). The Byzantine emperors combined the two in a sort of "polo," which will be described below. The Thermae at Rome had their *sphaeristerium* for games at ball [Balneae, Vol. I. p. 283 *a*]: this exercise was taken *before* the bath (Hor. *Sat.* i. 6, 125; Mart. vii. 32, xiv. 163). Attached to large country-houses there was a similar court (cf. Plin. *Ep.* ii. 17, v. 6; Villa). Where greater space was wanted, the play was in the Campus Martius.

The Apparatus for playing.—In Oribasius, i. p. 529, we find five kinds of balls mentioned, *μικρά, μέση, μεγάλη, εὐμεγεθής, κενή*. Mistakes have been made in the endeavour to construe the description which is there given of the uses of these balls as though they were games, whereas they are merely medical gymnastics: in many cases something like extension exercises with dumb-bells, since the ball does not leave the hand at all. It is probable, however, that we may assume the five sizes of balls to have been used in different games as well as for exercises, and may *possibly* take five Roman names for balls—(i.) *harpastum*, (ii.) *pila trigonalis* or *trigon*, the pila *par excellence*, (iii.) *arenaria*, (iv.) *paganica*, (v.) *follis* to correspond; but it is more probable that *arenaria* is only another name for the *harpastum*, the name being given because the rules of the game permitted taking it at the rebound, which was not allowed in trigon. Martial, in the *Apophoreta*, mentions only the other four without naming the arenaria. The ordinary ball was stuffed with hair; see *Anth. Pal.* iv. 291:

> λίην ἔντριχός εἰμι· τὰ φύλλα δ' ἐμοῦ κατακρύπτει
> τὰς τρίχας· ἡ δὲ τρύπη φαίνεται οὐδαμόθεν.
> πολλοῖς παιδαρίοις ἐμπαίζομαι· εἰ δέ τίς ἐστιν
> εἰς τὸ βαλεῖν ἀφυὴς ἵσταται ὥσπερ ὄνος.

The last line does net, as some writers state refer to a term belonging especially to *σφαιριστική*: the word *ὄνος* is used of the vanquished in many trials of skill. [Basilinda; Ostrakinda.] The "quarters" or lappets (here called *φύλλα*) were often coloured (Ov. *Met.* x. 262, *pictae*; Petron. 27, *prasina*). Seneca uses the word *commissurae* for the seams where they were sewn together (*Q. N.* iv. 11). The hair-stuffed ball was no doubt either of the two smallest sizes: the *μικρὰ σφαῖρα* was the smallest and hardest of the balls, and is in Latin the *harpastum* (Pollux, ix. 105); and the pila arenaria probably = the "pulverulentum harpastum." The next in size, also a hard ball, is the especial pila, the *pila trigonalis*; and then follows the *paganica* (probably the *μαλάκη* of Pollux), which was stuffed with feathers, and according to Martial (xiv. 45) was "tighter" (*i.e.* harder as well as smaller) "than the *follis* and less so than the *pila*." Its name was probably, as Marquardt thinks, derived from its being used at games between the country *pagani*, though it was not confined to them (Mart. vii. 32). Lastly we have the follis, the *κενή*, or air-blown ball, in its construction like our football, but not so used; for there is no trace of football among the Romans.*

Beyond the balls and the court, or the measured space out of doors, and perhaps arm-guards for the follis, neither Greeks nor Romans had any apparatus for ball-play, as far as we know, until the late Byzantine age. There is no trace of any sort of racquet or bat; for in the passage of Ovid, *Art. Am.* iii. 361, the *reticulum* is a network bag holding balls. Galen in his treatise *περὶ τῆς σμικρᾶς σφαίρας* makes a special point of its economy as needing nothing *πλὴν σφαίρας μόνης*, and in contrasting the amusements which require more apparatus he does not mention any game at ball: all our accounts speak of striking with the hand or arm; and Martial, if any sort of bat had existed, would have mentioned it in the *Apophoreta*. It may also be noticed that the game of tennis was called "lusus pilae cum palma" in 1356 (Littré, s. v. *paume*), whence our deduction would be that the use of the racquet is later, and that the name (*cum palma*) was given to the game when "fiving," or striking with the palm, was the only stroke, to distinguish it from those in which catching was allowed. Possibly the arm-guards, before referred to, may have been the genesis of a bat in later times; but whether the "polo" which existed at Byzantium before the 11th century (see below) was the first game in which the ball was struck with any implement, it is impossible to say.

Technical Words.—It is necessary to explain shortly certain words used technically of these exercises in Greek and Latin, and the more so because many writers have imagined separate games in words which are merely descriptive of the method in which the ball was thrown, whatever game might be played. Many terms also which are distinguished should really be taken as synonymous. Thus, to *throw* a ball to another is *διδοναι, βάλλειν, ἀφιέναι, dare, mittere, jactare:* to *catch* it, *λαμβάνειν, δέχεσθαι, accipere, excipere, captare:* and so *datatim ludere* means "to play at catch," *i.e.* merely toss backwards and forwards (Plaut. *Curc.* ii. 13, 17; Naev. *ap.* Non. 96, 15). The words *remittere* and *reddere* (*ἀντιπέμπειν, ἀνταφιέναι*) mean to *throw* the ball back to the sender. But there is a totally different stroke when the ball is "fived;" that is, is struck with the palm of the hand and either returned or sent sideways, without being first caught and then thrown: in Latin this is expressed by *repercutere* (Sen. *de Ben.* ii. 17); when the ball is "fived" back to the sender—(Marquardt in the *Privatleben* wrongly, we think, renders it *zurückwerfen*)—and when the ball is struck sideways to a fresh player, by the words *expulsare* (Mart. xiv. 56) or *expellere* (Petron. 27). One would naturally suppose that the Greek word *ἀπόρραξις* had the same meaning; and though Pollux (ix. 105) and Eustathius (*ad Od.* ix. 376) limit its use to making the ball rebound from the floor, it seems to us that there can be little doubt that the *primary* technical sense was *striking* with the hand instead of throwing, and that it belonged to that sort of stroke applied variously in various games or exercises, whether making the ball rebound against floor or wall, or "fiving" it to other players. We must also differ from other writers who limit the words *expulsim ludere* to this striking against a wall. (Johann Marquardt is still further from the truth in making it = the *βαλεῖν εὐτόνως* of Galen, for that is simply a strong throw.) *Expulsim ludere* expresses the stroke with the palm or the fore-arm: in its simplest form it is the hitting repeatedly against a wall (one sort of *ἀπόρραξις*); as in the picture given by Varro (*ap.* Non. 104, 27), "videbis Romae in foro ante lanienas pueros pila expulsim ludere": but it refers to the *method* of the stroke, not to the game, and it means therefore to strike the ball in that way of which the words *expulsare* or *expellere* and also *repercutere* are used. Similarly "*raptim* ludere" merely expresses the method of play adopted by one who (like the *medicurrens* in *harpastum*) *rapit* or *ἁρπάζει*: that is, catches the ball while it is flying between two other players. Lastly, the feint of pretending to throw the ball to one person and actually throwing it to another is probably expressed by the word *φενίνδα* (which also gave one name to a game: see below), and also by *ἐκκρούειν* (Athen. i. p. 15 a), and in Latin by *fallere* (Prop. iii. 4, 5). In the lines of Saleius Bassus (?), *de laud. Pis.* 172 (*Poet. Lat. Min.* i. 233), "volantem aut geminare pilam juvat aut revocare cadentem, Et non sperato fugientem reddere gestu," the *geminare* must = *repercutere*, to return to the sender by a stroke with the hand (cf. Ter. *Ad.* ii. 1, 19); the "revocare cadentem" to catch it near the ground, and the last line to *throw* it back after a difficult catch when the return had not been expected (*not* = *φενίνδα*, where *mittere* rather than *reddere* would be used).

Ball-exercises.—Here we must class (i.) *οὐρανία*, *datatim ludere*, which is the simple practice of "catch," and has its name because the ball is usually thrown high in the air (Pollux, ix. 106; Eustath. *l. c.*; Phot. *s. v.*), just as a high throw is now sometimes called a "skier": it might or might not be made a rhythmical exercise by accompanying music and dance, as often is the Greek *οὐρανία*; (ii.) various forms of making the ball rebound against a floor or wall, as described above; (iii.) various kinds of posturing with the ball or throwing it forward with no object, except muscular exercise and extension, which Antyllus describes (*ap.* Oribas. i. p. 528: see Becq de Fouquières, *Jeux des Anciens*, 195.)

Sphaeromachiae or *games at ball:* i.e. those in

---

* For the use of this ball, see FOLLIS: probably its fitness for the old (Mart. xiv. 47) depended on the fact that there was little running about, and no grappling (as in the harpastum), and not so quick a return (since the ball was much less elastic) as in the trigon. Though absolute proof is lacking, it is probable that the game was played with an arm-guard, as shown on a coin of Gordian; and it is a fair inference that the modern *pallone*, played with similar *blown* balls and with arm-guards, is a descendant of the *follis*, though possibly with altered and more elaborate rules. For an account of *pallone*, see Story, *Roba di Roma*.

which there are *sides* which win or lose. (i.) The game called *ἐπίσκυρος* (also *ἐφηβική* and *ἐπίκοινος*: Poll. ix. 104, Eustath. *l. c.*). In this game the ground was marked by two base lines (*γραμμαὶ κατόπιν*) and another line drawn parallel to them through the middle of the ground, presumably more than a stone's throw from them, which was called *σκῦρος* or *λατύπη*, because it was marked with finely-broken stones. The ball was placed upon this line (whence the name *ἐπίσκυρος*), and the players started at the same moment from their respective base lines. The player who could first seize the ball threw it as far as he could towards the enemy's base line[*]: the object was to force the line of enemies back by constantly returning the ball further and further over their heads until they were driven over their own base line. Clearly, getting the first throw by fast running at the start must have been an enormous advantage (cf. Schol. *ad* Plat. *Legg.* i. p. 633 C). It is not improbable, though there is no proof of it, that the contest of the pagani (whence the name *paganica* for the third-sized Roman ball) was a game of this kind. It seems to have been regarded as a game for the young (*ἐφηβική*), and for large numbers (*ἐπίκοινος*). Nothing can have been less like golf, to which Becq de Fouquières (p. 203) seems to compare it, when he says, "on le retrouve encore en Écosse."

(ii.) *Harpastum* (or, by the older name, *Phenínda*; in Athen. and Eustath. *φαινίνδα*; in Clem. Alex. *φενίνδα*; in *Etym. Mag.* *φεννίς, φενίνδα, φενακίνδα*).—This game cannot with certainty be reconstructed, but the following seems to us an outline most consistent with our authorities. (Galen, *περὶ τῆς σμικρᾶς σφαίρας*: Sidon. Apoll. v. 17; Mart. iv. 19, vii. 32, xiv. 48; Athen. i. p. 25; Eustath. *l. c.*; Poll. ix. 105.) We have clearly two sides (*i.e.* it was a *sphaeromachia*), for Galen lays stress on the fact that there is emulation (*φιλοτιμία*), which exercises the *ψυχή*, as well as movements which exercise the limbs and the eye: there are presumably base lines as goals, without which it is hard to understand what he says about generalship (*στρατηγία*), and positions won and lost (*φυλάττειν τὸ κτηθὲν ἢ ἀνασώζειν τὸ μεθεθέν*). The ground was then probably rectangular, the two ends being base lines, and it was divided by a line in the centre (the *trames* of Sidonius) into two equal camps. There was always one "middle player," a special feature of the game, called *medicurrens* (Sidon.), or *ὁ μεταξύ* (Galen: cf. *vagus*, Mart. vii. 32), each side being probably so represented in turn: how the "innings" of the medicurrens ended, we do not know, but perhaps he gave up his place to one of the other side whenever a point was scored against his side. One would fain imagine *two* "middle players," one for each side, but the persistent use of the singular both in Greek and Latin authorities would seem to preclude this, and to necessitate some such explanation as is here attempted. It is probable that (as also in the quite distinct modern *pallone*) a ball dropping *dead* (*i.e.* falling again after the first rebound) was a point against that side in whose camp it dropped, and that a point was scored by that side which could send it so as to drop over the base line of the enemy: whether a certain number of points, or the highest score in a given time, decided the victory, we do not know. That the ball could be caught, either as a volley or at the first rebound, is clear from Mart. xiv. 48, and agrees with the epithets *pulverulenta* and *arenaria.* The ball was, no doubt, started from one of the base lines, and the object of the medicurrens was to catch it as it went past ("praetervolantem aut superjectam," Sidon.), in which case he would have a great advantage in either throwing it over the enemies' line or into some unguarded spot of their camp, where it would fall dead, or throwing it to some friend who was advantageously posted. The *feint* of throwing, expressed by *φενίνδα*, would clearly often be employed, as also the *φυγή* (Eustath.) or *καταστροφή* (Antiphanes and Sidon.), *i.e.* turning hastily back after an advance, so as to defend an unguarded spot; for, as seems clear from Galen, the rest of the players could post themselves forward or back as seemed best. They were also permitted to rush upon the medicurrens, and grapple or wrestle with him, or one another, in any way they chose, one side trying to spoil his catch, the other to protect him and foil his assailants (cf. Galen, *ὅταν συνιστάμενοι πρὸς ἀλλήλους καὶ ἀποκωλύοντες ὑφαρπάσαι τὸν μεταξύ, κ.τ.λ.*). For this purpose they may use *τραχηλισμός, ἀντιλήψεις παλαιστρικαί*, &c. The *τραχηλισμὸς* [LUCTATIO, p. 84] explains Martial's description of the game, "grandia qui vano colla labore facit." The view here proposed will explain Galen's words when he eulogises this game for *all ages*, on the ground that you can choose what sort of muscles, and to what amount, you wish to exert:—"It exercises one set of muscles in the advance, another in the retreat, another in the spring sideways . . . also the hands when they try in various postures to catch the balls . . . it also practises the eye, for if one does not accurately mark the course of the ball one must miss the catch . . . while in the wrestling part of it the *θώραξ, ὀσφύς*, &c., are exerted, or you can take running . . . but if you are old and want milder exercise (*τὸ πρᾷον*) you may exercise your arms and rest your legs by throwing from a distance" (*i.e.* by playing *back*), "and you can take as little of the wrestling as you please." The *σφοδρότατον*, which involves throwing, running and wrestling, is the place of medicurrens; the wrestling alone is the part of those who try to thwart him: for the rest of the players the advance and the *καταστροφή* supply the running, without much throwing, while others can stand almost at rest near their base and merely throw when the ball comes to them. It is illustrated by the description of Sidonius, where a bystander at the side is jostled into the middle of

---

[*] This is clearly the sense of *προανελόμενοι ῥίπτουσιν* in Pollux, which Johann Marquardt misunderstands; he is also in error when he says that the players might *kick* the ball as well as throw it (he strangely cites as his authority Becq de Fouquières, though that writer quotes no passage to prove it). We must repeat that we cannot discover any trace of "football" in Greek or Latin writers; and, further than this, Galen speaks of the exercise in these games, to the muscles *of the arms by throwing*, but *of the legs by running:* had kicking the ball been within the rules, he would certainly have mentioned it.

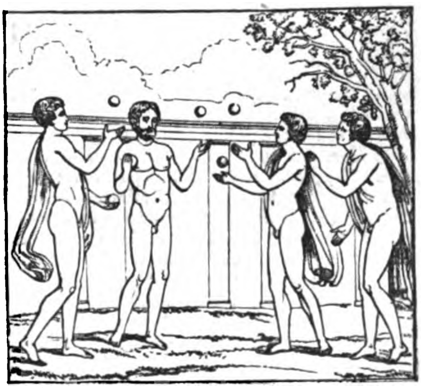
the game, "medicurrentis impulsu," and then knocked over by a rush in the *catastropha*. We have ventured to differ altogether on this point from Johann Marquardt, who imagines three distinct games for three ages and strengths: Galen's language points to one game in which different parts are taken; and it is clear from Pollux ix. 105 and from Clem. Alex. *Paed.* iii. 10, 50, that ἡ μικρὰ σφαῖρα is regarded as a definite well-known game, not several games. As to the identity of pheninda with harpastum we have the positive statement of Athenaeus that it was the old name of harpastum, the belief of Pollux that it was, and the fact that in some places (Clem. Alex., *l. c.*) it still went by that name; and, moreover, no writer mentions both games as distinct. It is no doubt possible that the harpastum which Athenaeus played may have been more elaborate in its rules than the pheninda, of which he quotes a description from Antiphanes. It seems sometimes to be forgotten that the interval between these two writers was as long as between Chaucer and our own time. The play in Antiphanes seems to be as follows:—

There are several players; A (possibly = medicurrens) has caught the ball and intends to throw it to B, which he eventually does, but meantime he slips away from C (τὸν δ' ἔφευγε), misleads D (τὸν δ' ἐξέκρουσε), and calls E's name as a feint (πλαγκταῖσι φωναῖς), though he has no intention of throwing it to him: the last two lines express the flight of the ball passing over and beside the medicurrens, and the verbs should probably be imperatives, giving the actual cries of the players. It gives only a fragmentary view of the game, but so far as it goes might be describing a portion of the harpastum of later authors. For the spelling φενίνδα and its connexion with φενακίζω, see Johann Marquardt, p. 15, note; *Hermes*, iii. p. 455; Grasberger.

(iii.) *The Trigon.* — This favourite Roman game was not strictly a sphaeromachia (cf. Stat. *Silv.* praef.), since there were not *sides*, but each played for himself; still it was a legitimate game, played for winning and losing. The following description may, as it seems to us, best meet the accounts which we have. There were three players standing in the form of an equilateral triangle: each player had one ball to start with, and played for his own score; he would wish both his fellow-players to miss their strokes, and drop the ball as often as possible. He might send his ball to either player (presumably there was some rule about sending it fairly within their reach), and he might do so either by catching the ball which came to him and throwing it, or by "fiving" it, so as either to strike it back to the sender (*repercutere*) or sideways to the third player (*expulsare*). Obviously the most disastrous position would be receiving three balls nearly at the same time—if, for instance, his own ball is smartly "fived" back to him, and almost simultaneously the two others have been sent to him; obviously, also, his easiest position was to receive only one ball at a time with a fair interval before the next. This may explain the vexed passage of Mart. xii. 82 about the flatterer Menogenes—

"Captabit tepidum dextra laevaque trigonem
Imputet acceptas ut tibi saepe pilas."

To say, with Becker, that Menogenes was showing off *his own* skill must be wrong; that would be the worst flattery; but, by catching right and left two balls (not, of course, simultaneously, but as nearly so as possible), instead of returning them sharply he could throw them gently at certain intervals to his patron, so giving him time to deal with the stroke of the third player, without dropping any of them. It is an often repeated error, founded on a misconception of Mart. vii. 72, xiv. 46, that the stroke in the trigon was necessarily left-handed. The left-handed strokes are merely the test of a good player. Probably all players who can make a good stroke left-handed, can do so also with the right hand, but the converse does not hold good. In this game the *pilicrepus*, or juggler (see below), was employed somewhat like a marker at tennis or racquets, to count the won and lost strokes at the end of a "rest" or "rally" ("non quidem eas quae inter manus lusu expellente vibrabant, sed eas quae in terram decidebant," Petron. 27). The inference is that the catches had not a positive value, but the winner was he who least often allowed the ball to drop. As is the case with our markers, the pilicrepus, whose profession led him to exhibit in the Thermae, often gave instruction to the inexperienced; and in games he was probably the umpire of doubtful strokes. This is, we think, the true explanation of the cut from the baths of Titus, which represents four players and six balls. It is not a game at all, but the pilicrepus, who alone is a bearded man, is teaching the art of playing trigon to three young players, throwing in balls in succession, to practise hand and eye; one of his pupils is learning to catch two balls "dextra laevaque." The game would be much faster than this lesson to tirones, and the pilicrepus would stand aside, and count the failures aloud. Seneca, complaining of the noise of ball-play at the baths, says, "Si vero pilicrepus supervenit et numerare coepit, actum est."



Lesson in Trigon. (From the Baths of Titus.)

(iv.) *The Equestrian Sphaeromachia.*—From Cinnamus (*Hist.* vi. 4) it will be seen that the game played on horseback by the Byzantine princes differed little from polo as it is now played. The Emperor Manuel Comnenus (A.D. 1143–1180) plays at this game, "an exercise customary for emperors and princes for a long time past" (ἀνέκαθεν), in which a number of mounted players, divided into two equal sides, throw down a leathern ball, "about the size of an apple," into a measured ground. The ball is placed in the middle: the players start at full speed from their base lines towards it, "each holding in his right hand a long stick of a certain length, with a broad curved end" (*καμπή*); this *καμπὴ* has a network of catgut; the object is to strike the ball over the base line (*πέρας*). The game is "dangerous, as the rider has to stoop low (*ὑπτιάζειν*) from his horse and turn quickly according to the turns of the ball." Manuel's horse fell and rolled upon him, and, though he tried to remount and continue the game, he was forced to take to his bed and defer an intended campaign. [See also FOLLIS.]

It remains only to speak of the *pilicrepus*, or juggler with balls (also called *pilarius*), who, as shown above, also acted as marker. We have many representations of single performers, male and female, tossing up several balls; even throwing and catching them with the feet ("reddere planta," Manil. v. 165). A misunderstanding of this has perhaps caused the utterly erroneous notion that the Romans played football. Ursus Togatus (Momms. *Ephem. Epigr.* i. 55) was a juggler of this kind ("vitrea qui primus pila lusi decenter"). It is an error of Krause (*Gymnastik*, p. 303) to deduce (with Burette) from this passage that the pilicrepus merely = "joueur de paume;" and a still greater error to suppose that the *games* of trigon, &c., could be played with glass balls. Ursus Togatus (as Marquardt and Becq de Fouquières rightly point out) was a juggler who introduced glass balls in his performance as a novelty. As a pilicrepus he tells us that he not only showed off his skill in the Thermae, but also taught the art of playing at ball.

[On this whole subject many different opinions may be found in Krause, *Gymnastik*, 299–315; Grasberger, *Erziehung*, 88 ff.; Marquardt, *Privatleben*, 841–847; Becker-Göll, *Gallus*, iii. 169–183; Becq de Fouquières, *Jeux des Anciens*, 176–211; Johann Marquardt, *de Sphaeromachiis Veterum* (1876).] [G. E. M.]

PILA. [MORTARIUM.]

PILENTUM, a state four-wheeled carriage with cushions, which conveyed the Roman matrons, *flamines*, and Vestals in sacred processions and to the public games (Verg. *Aen.* viii. 666; Hor. *Ep.* ii. 1, 192; Claudian, *de Nupt. Hon.* 285; Isid. *Or.* xx. 12). It had a covered roof (as a *currus arcuatus*) similar no doubt in shape to that which is represented in the woodcut of LECTICA on p. 15 (see also under CARPENTUM and CAMERA); but it was open all round. The well, or body of the carriage, was called *arca* (Macrob. *Sat.* i. 6, 15), or *capsus* (Vitruv. x. 9, 2; Isid. *l. c.*), which corresponds to the Gallic word *ploxenum* of the small Gallic carriage [CISIUM]: here were placed cushions for the occupants, and also any sacred vessels which they were conveying. This explains the account in Macrob. *l. c.*, of a boy looking at the procession out of a garret window and seeing how the *secreta sacrorum* were set out *in arca pilenti*. The distinction of using the pilentum was granted to the Roman matrons by the senate on account of their giving gold and jewels to the state at the time of the fall of Veii (Liv. v. 25; cf. CARPENTUM). As regards the use of it by the flamines, see Liv. i. 21; for the Vestals, Prudentius, *contra Symm.* ii. 1089. The pilentum is distinguished from the carpentum by having four wheels (Isidore, *l. c.*) and by its not being covered in with curtains at the sides, as was, at any rate sometimes, the case with the carpentum. The two-wheeled carriage drawn by lions which Rich gives as a pilentum from a medal of the Empress Faustina must be a carpentum; and its explanation may be found in the fact that in the *pompa circensis* the figures of deceased empresses were taken in a carpentum (Marquardt, *Staatsverw.* iii. 511). Suetonius (*Claud.* ii.) mentions that Livia's was drawn by elephants. It is possible, however, that the lions may be merely a fanciful emblem. (Ginzrot, *Wagen*, cap. liv.; Marquardt, *Privatleben*, 735; Becker-Göll, *Gallus*, iii. 17.) [J. Y.] [G. E. M.]

PILI'CREPUS. [PILA.]

PILL'EUS or **PILL'EUM.** The art of making felt by beating hair or flocks of wool into a compact mass seems to be at least as old as the art of weaving. It was practised in antiquity by the peoples of Greece and Italy, and in fact seems to have been known over the greater part of both Europe and Asia. No details of the processes of manufacture itself have come down to us, though the products are frequently mentioned by Greek and Roman writers from the earliest time. The art (*ἡ πιλητική*, Plato, *Polit.* p. 280 C; *ars coactilaria*, Capitol. *Pertin.* 3, 3) was a recognised industry for a "maker of woollen felt" (*lanarius coactilarius*, Orelli, 4206 [*I. R. N.* 6848]; *lanarius coactor*, Gruter, 648, 3) and is mentioned in Roman inscriptions.

Felt was put to a large number of different uses, such as to provide not only a covering for the sheds of military engines (Aen. Tact. 33), but also garments (cf. Plato, *Polit.* l. c.; Pliny, *H. N.* viii. § 191), as Caesar's soldiers did when they were in need of arrow-proof jerkins (*B. C.* iii. 44). Boots or socks [UDONES] were also made from felt. By far the most important use of it, however, was to provide a covering for the head in the shape of hats and caps. Among the Greeks and Romans of the classical period it was most unfashionable to wear anything, except perhaps a helmet, when out-of-doors, at any rate in a town. Doubtless this was partly due to the prevailing custom of taking a siesta or remaining in the shade during the hottest time of the day, but the reason Lucian puts in the mouth of Solon seems still more plausible. Anacharsis had complained that, wishing not to appear a stranger at Athens, he had left his hat at home and was feeling the heat (*de Gymn.* 16, *τὸν γὰρ πῖλόν μοι ἀφελεῖν ἔδοξεν, ὡς μὴ μόνος ἐν ὑμῖν ξενίζοιμι τῷ σχήματι*), and Solon explains that it was their gymnastic training which enabled the Greeks to do without any head-gear.

The practice, however, of going bare-headed was, as we shall see, far from universal, and apparently characteristic of the well-to-do and leisured rather than of the labouring classes, who for the most part wore caps. Even the upper classes, when hunting or travelling, or otherwise exposed to rough weather, resorted to them, as did sickly or delicate folk. The general name for all such hats was *πῖλος* or *κυνῆ*, both words being applied not only to caps of felt and skin respectively, but even to helmets of metal.

In Homer πῖλος is used of the felt which lined the helmet (κυνέη) of hide which Odysseus wore. Elsewhere the κυνέη is of bronze, or, if nothing else, strengthened and protected with it (cf. Liddell and Scott, *s. v.*); but in the Odyssey we find Laertes wearing a κυνέη of goatskin while working on the farm (*Od.* xxiv. 231). This was probably not far different from the πῖλος ἀσκητὸς which Hesiod recommends for rainy weather (*Op.* 546), and indeed peasants of every period wore caps of this kind often of skin, but also of felt. (Cf. Athen. vi. p. 274: the Romans wore προβατέων δερμάτων πίλους δασεῖς).

They were like a fez, of a conical or sugar-loaf shape, with a crown like the end of an egg, and were loose enough to be dragged over one's ears to keep off the cold or rain (Hesiod, *l. c.*). A sower in the painting of a cylix of Nicosthenes in the Berlin Museum (Catalogue, No. 1806; cf. Gerhard, *Trinkschalen u. Gefässe*, Taf. 1; Blümner, *Leben u. Sitten*, iii. fig. 48) is represented in a hat of this description. The celebrated cylix by Sosias in the same collection (Catalogue, No. 2278; *Mon. d. I.* i. 24, 25; Blümner, *ib.* iii. fig. 22) shows the wounded Patroclus, who has taken off his helmet, wearing a skull-cap of felt, which unmistakably acts as a lining, reminding one irresistibly of the πῖλος in the κυνέη of Odysseus.

This sugar-loaf or fez-like shape of felt cap seems to have been known as the πιλίδιον (= *pilleolum*), though modern archaeologists are in the habit of giving it the name πῖλος, which, when we consider the very general way in which this word is used, can scarcely be said to have classical warrant.

The cap itself was worn universally by artisans and sailors, along with the ἐξωμίς, and accordingly appears with it in art as their characteristic costume; and, in the case of mythological persons, is worn by Hephaestus and Daedalus as craftsmen and by Charon and Odysseus as seafarers (cf. preceding cut from a statuette in Winckelmann's *Mon. Ined.* ii. 154). In the case of Odysseus, we are told by Pliny that Nicomachus was the first to give him the πῖλος (*H. N.* xxxv. § 109, "Ulixi primus addidit pilleum"); but Schöne maintains (*Hermes*, vi. 125) that this was to represent him feigning to be mad, and not necessarily as a sailor. However this may be, it is difficult, with the evidence of vase-paintings of the perfect Attic style before us, to believe that there can have been any novelty in giving him a cap at such a late date.

Odysseus offering wine to the Cyclops.

Sailors with πιλίδιον. (From a vase-painting.)

The πιλίδιον or fez-shaped πῖλος was frequently worn with a band, which made it fit tighter on the head. Below the band there is naturally a piece of the edge left free, and by a perfectly natural process this becomes a brim. As a result we see on the monuments hats with brims of every conceivable width, from those that are little more than a fez, with a band tied round, to the broadest of wide-awakes.

Those with the incipient brim are frequently seen on the monuments as worn by warriors, but it is in most cases difficult to say if it was really of felt and not of bronze. Both were worn, for we hear of πῖλοι Λακωνικοὶ ἢ Ἀρκαδικοί, which were doubtless of felt, as were the πῖλοι, which protected the Spartans at Pylos so badly from the Athenian arrows (Thuc. iv. 34, 3: cf. Iwan Müller, *Handbuch*, iv. p. 254); while, on the other hand, a πῖλος χαλκοῦς is mentioned in Aristophanes (*Lys.* 562). A good instance of a πῖλος worn by a warrior which might possibly be felt is the relief from a tomb in *Bullet. de Corr. Hell.* pt. 7 (cf. Blümner, *ib.* i. fig. 6), while brazen πῖλοι are worn by the soldiers on the frieze from Xanthus in the British Museum (Nos. 32 and 37).

Warrior in πῖλος and ἐξωμίς, from a relief. (Blümner.)

The wide-awake was known by the distinctive name of *πέτασος*, and the fashion of wearing it came from Thessaly along with the *χλαμύς*, which it accompanies almost as invariably as the *ἐξωμὶς* does the *πιλίδιον*, the two forming the characteristic costume of the Athenian youth when serving in the cavalry. Many of the *ἔφηβοι* in the Panathenaic procession on the Parthenon frieze wear this dress, which is also one of the commonest in Greek vase-paintings of the perfect style, a figure from one of which is given in the accompanying cut.

πέτασος and χλαμύς.
(From a vase.)

From the earliest time the *πέτασος* was the constant attribute of Hermes in art, though frequently its brim is so narrow that it scarcely deserves its name. In Greek art of the later part of the fifth century Hermes' hat is occasionally winged, in later times more frequently and in Roman art invariably so. In early art it is only the *κυνέη αΐδου* worn by Perseus that is winged. From a passage in the *Oedipus Coloneus* of Sophocles, where Ismene wears a *θετταλὶς κυνῆ*, which can only mean a *πέτασος*, it would seem as if women occasionally wore it when travelling.

The *πέτασος*, as worn by travellers and hunters, had not only a band which fastened it tightly round the head, but a strap which passed under the chin, and enabled the wearer, who, not being accustomed to it, naturally felt its weight, to let it hang down his back. This is very frequent in works of art, often doubtless because it enables the artist to show the outline of the head more sharply. The Hermes on the celebrated drum of a column from the temple of Artemis at Ephesus is a familiar instance of the fashion.

The brim of the *πέτασος* was usually not even all round, but cut into various convenient or fantastical shapes, of which examples from ancient vase-paintings are here given, after Blümner, the most common being one of *quatrefoil* shape, in which the two side leaves, if one may use the term, could be used as lappets tied over the ears by a chin strap. The brim could also be turned up behind, at one or both sides, giving it quite as many picturesque forms as a *sombrero* or other modern felt hat.

In Hellenistic times a Macedonian variety of the *πέτασος*, called *καυσία*, was worn, but chiefly as an emblem of power [CAUSIA].

The *pilleus*, which was practically identical with the conical *πῖλος*, was worn by the Etruscans, and frequently appears both on men and women on their monuments. (Cf. for this and other detailed information, Helbig in *Sitzungsberichte der phil. Classe der Münchener Akad.*, 1880, pp. 487–554.)

It must have been used in very early times at Rome, for it was the characteristic headgear of the Pontifices, Flamines, and Salii on solemn occasions. It is, however, even better known as the symbol of Liberty, occurring as such on many coins, but especially on the denarius of Brutus and L. Plaetorius Cestianus, where it is represented on the reverse standing between two daggers, with the inscription EID. MAR. below (cf. Dio Cass. xlvii. 25). This use must not be confounded with the pair of *pillei* surmounted by twin stars which also appear on coins, but as the attributes of Castor and Pollux (*pilleati fratres*, Catullus, 37, 2). The symbol is doubtless derived from the fact that it was the garb of slaves who had been freed, on leaving the temple (cf. Serv. *ad Aen.* viii. 564: "(Feronia) etiam libertorum dea est in cuius templo capite raso pilleum accipiunt"). Hence *pilleum capere* (Plautus, *Amph.* 462) means to gain freedom. Saturninus raised a *pilleum* in *modum vexilli* (Val. Max. viii. 6, 2) as a signal for the slaves to take up arms, and *vocare ad pilleum* (Liv. xxiv. 34, 9; Sen. *Ep.* 47; Suet. *Tib.* 4) was a recognised expression for raising a revolt. Gladiators on being discharged were given the *pilleus*, two years after they had received the *rudis* (Ulpian, *Coll. leg. mos.* tit. 11, leg. 7). It was in fact so well understood to be a symbol of recovered liberty that foreign kings like Prusias (Liv. xlv. 44), who wished to display themselves as *liberti* of the Roman people, appeared in public with shaven head wearing the *pilleus* (cf. Plut. *de Alex. fort.* 2, 3). So too, after the death of Nero, the whole plebs wore it (Suet. *Nero*, 57), just as they were accustomed to, during the Saturnalia (Mart. xi. 6, 4; xiv. 1, 2). Among other customs connected with the *pilleus* is the curious one of selling slaves whom the master did not wish to warrant with it on (Gell. vii. 4, 1).

The meaning of *pilleus* was a very general one, like *πῖλος*, not confined to felt caps alone. Thus, Suetonius (*ap.* Serv. *ad Aen.* ii. 683) says that the *apex tutulus* and *galerus* worn by the priests were all *pillei*. *Pilleolum*, however, like πιλίδιον, was the specific name for ordinary caps. [Apex.] As to caps of skin, apart from the *galerus*, Vegetius tells us that soldiers, when not using their helmets, wore *pillei pannonici* of skin (*Milit.* i. 20), and Polybius (*v. supra loc. cit.*) mentions the same. Caps of cloth made from old cloaks (Statius, *Silv.* iv. 9, 13, "usque adeone defuerunt caesis pillea suta de lacernis") seem to have been the pillei worn at the Saturnalia; and Martial sends a friend one as a present, with the jocular regret that he cannot afford to give away the whole cloak (xiv. 132).

The Romans, like the Greeks, seldom wore any covering on the head, though this is truer of the upper than the lower classes. Horace, for instance, speaks of a tribesman carrying his slippers along with his cap on the way to a feast ("ut cum pilleolo soleas conviva tribulis," *Ep.* i. 13, 15); and Nero used to wear one as a disguise at night (Suet. *Nero*, 26). In Imperial times the custom of using hats became much more common; and Augustus in his later life never went out of doors without a *petasus* (Suet. *Aug.* 82), and Caligula allowed them to be worn in the theatre as a protection against the sun (Dio Cass. lix. 7). Even in Cicero's time messengers wore the Greek *petasus* (*ad Fam.* xv. 17, 1), which, as well as the *causia*, is mentioned in Plautus, so that the Greek forms must have been well known, even if not worn, at Rome.

There does not seem to be anything to show that the *pilleus* differed in shape from the πιλίδιον, except the fact that those shown on Etruscan monuments are longer and more peaked than the Greek forms. The varieties seen on coins with the *virga* and chin-straps are the ceremonial caps of priests, rather than those worn in every-day life. [Apex.]

(Becker-Göll, *Charikles*, iii. 262, and *Gallus*, iii. p. 224; Hermann-Blümner, *Privataltherth.* p. 180; Marquardt, *Privatleben*, p. 554; Iwan Müller, *Handbuch*, iv. pp. 405, 805, 879, and 929; Daremberg and Saglio, arts. *Causia* and *Cilicium;* Helbig in *Sitzungsberichte d. Bayr. Akad. d. Wissensch.*, *Hist. phil. Klasse*, 1880, iv. p. 487; Blümner, *Technologie*, i. p. 211 f.; Yates, *Textrinum Antiquorum*, pp. 388–411; Blümner in Baumeister, *Denkmäler*, art. *Kopfbedeckung*.) [W. F. C. A.]

PILUM. [Hasta.]

PINACOTHE'CA (πινακοθήκη, Strab. xiv. p. 367), a picture-gallery. Marcellus, after the capture of Syracuse, first displayed the works of Greek painters and sculptors to his countrymen, whose taste for the fine arts was gradually matured by the conquests of L. Scipio, Flamininus, and L. Paullus, and grew into a passion after the spoils of Achaia had been transported by Mummius to Rome. Objects of this description were at first employed exclusively for the decoration of temples and places of public resort (Cic. *Verr.* i. 21, 55); but private collections were soon formed, and towards the close of the Republic we find that in the houses of the more opulent a room was devoted to the reception of paintings and statues (Varro, *R. R.* i. 2, 59; Cic. *Tusc.* v. 35, 102). In the time of Augustus, Vitruvius includes the pinacotheca among the apartments of a complete house for a rich man, and gives directions that it should be large and lofty, facing the north, in order that the light might be equable and not too strong (Vitruv. i. 2; vi. 5, 7; cf. Plin. *H. N.* xxxv. § 4). The pictures were either let into the wall or hung against it (Cic. *Verr.* iv. 55, 122; Plin. xxxv. §§ 26, 118). A special attendant, called *a pinacotheca*, was employed to look after the collection in great houses (*C. I. L.* x. 692, 6638). (Becker-Göll, *Gallus*, ii. 275; Marquardt, *Privatleben*, 611; Friedländer, *S. G.* ii. 168.) [W. R.] [G. E. M.]

PIPER (πέπερι) was used as a seasoning both by Greeks and Romans, though not, as far as our evidence goes, among the former before the period of the Middle Comedy, and it is unlikely that we should hear nothing of it in Aristophanes if it was in common use in his time. The Romans probably began to use it after their conquest of Greece. It was brought from India (Plin. *H. N.* xii. §§ 26–29), but by way of Alexandria, where it was transferred from camels and sent by sea to Rome (Pers. v. 136; Mayor on Juv. xiv. 293). The two kinds of pepper, black and white, were obtained merely by different treatment of the berry (Plin. *l. c.*; cf. Hor. *Sat.* ii. 4, 74). The pepper-box (*piperatorium*) is mentioned by Paulus (*Sent.* iii. 6, 86) among *vasa argentea*. The woodcut represents a small silver piperatorium, probably of the 2nd century A.D. (see *Gazette Archéologique*, 1885, p. 335) found at Chaourse in France, and recently (1889) acquired by the British Museum. It is formed of the figure of a negro slave clad in a *paenula* with a hood, having small holes drilled in the head. [G. E. M.]

Piperatorium. (British Museum.)

PISCATO'RII LUDI. [Ludi Piscatorii.]

PISCI'NA (κολυμβήθρα, δεξαμενή) is properly a fish-pond, either of salt water or of fresh; see the passages in Forcellini and the Dictionaries. It denotes also any kind of reservoir, especially those connected with the aqueducts and the baths (Aquaeductus, p. 149 *a*; Balneae,

p. 275 *b*, note). Conversely, the Greek κολυμβήθρα was by no means confined to its original meaning of a swimming-bath, but included the various senses of *piscina*.

Reservoirs were made, as in modern times, by damming up the lower end of a valley. One of the largest and finest was constructed at Agrigentum and is described by Diodorus (xi. 25), though in his time it had ceased to exist; it was seven stadia in circumference, twenty cubits deep, an ornamental sheet of water abounding with fish and swans: he calls it κολυμβήθρα, a good example of this use of the word. The hollow of the hill which this reservoir occupied is still plainly to be distinguished, especially from the Temple of Castor and Pollux (cf. EMISSARIUM).

The Romans, with their unbounded command of water-tight cement, were particularly successful in the excavation of underground reservoirs; and having to deal with the highly-calcareous water from the Apennines, they had learnt how to get rid of the sedimentary deposits. In the so-called *Sette Sale* on the Esquiline, a still existing reservoir attached at first to the Golden House of Nero, afterwards to the Baths of Titus, the water was made to flow through no less than eighteen subdivisions, in as devious a course as possible, so that any sediment it contained might be deposited on the way (Middleton, *Anc. Rome in* 1885, p. 352).

An unrivalled work of this description is the *Piscina Mirabile* as it is now called, on the road between Baiae and the promontory of Misenum, and still in perfect preservation. This reservoir is excavated out of the tufa rocks on the sea-coast, and was used for watering the fleet in days when the naval head-quarters were at Misenum; it is not mentioned by Pliny or any other Latin writer, but it is referred by Winckelmann with great probability to the time of Augustus, and to Agrippa as its constructor. It is 223 feet long and 83 broad, with a vaulted roof of massive masonry, supported by 48 large cruciform pilasters, arranged in regular lines of 12 each, and forming 5 distinct galleries or compartments. It is entered at the two extremities by stairs of 40 steps each, one of which has been repaired and made accessible. In the middle of the piscina is a depression or sink, extending nearly from wall to wall, for collecting the sediment from the water. The roof is perforated by square openings, which probably served for ventilating the interior. The walls and pilasters are covered with a calcareous deposit as high as the spring of the arches. It was supplied by the Julian aqueduct from Lake Serino in the Apennines, whose waters have within the last few years been re-introduced into Naples; the traces of the aqueduct entering the piscina may be seen near the entrance.

(Murray's *Handbook of Southern Italy*, ed. 1883, p. 330; *Handbook of Sicily*, s. v. *Agrigentum;* personal observation.) [W. W.]

PISTILLUM. [MORTARIUM.]

PISTOR (ἀρτοποιός), a baker. Both with the Greeks and Romans the bread was originally prepared and baked at home. In large households this practice was long continued. In the Hellenistic period and under the Roman Empire there were numerous slaves skilled as bakers and confectioners (cf. Athen. iii. 112 c); and several of the private houses at Pompeii have baking-rooms on the premises (see Overbeck-Mau, *Pompeii*, 4th ed., pp. 301, 385, Casa di Sallustio; pp. 328 f., 386, Casa di Pansa; p. 343, Casa del Laberinto) There is no mention of the baker's trade in Homer. The flour mentioned in the Homeric poems is of two kinds: coarse barley-flour (ἄλφιτα) and wheat-flour (ἀλείατα = ἄλευρα). It was from the latter that bread was generally made (see Buchholz, *Die hom. Realien*, ii. pt. 1, p. 108 f.; ii. pt. 2, p. 168 f.; cp. Riedenauer, *Handwerk in den hom. Zeiten*, § 5). Schliemann (*Troja*, p. 44; *Ilios*, pp. 234, 235) appears to assert that grain could not have been made into bread into Homeric times, but it is difficult to see the grounds for such a view. The Homeric words for bread are σῖτος, ἄρτος, and πύρνον (specially wheaten-bread). Ἄρτος seems to signify the baked loaves; σῖτος is a more general term, used *e.g.* for food in opposition to drink.

At Athens as early as the 5th century B.C. we find working-bakers (ἀρτοκόποι) who sold their wares in the market and streets through female vendors (ἀρτοπώλιδες), who enjoyed a reputation for abusive language (Aristoph. *Ran.* 858; *Vesp.* 1389, &c.). At Rome (according to Pliny, *H. N.* xviii. § 107) there was no baker's trade till about B.C. 172. Many freedmen are found engaged in the trade, and under the Republic it was one of the duties of the aediles to see that the bread was properly prepared and correct in weight. A bakers' guild (*corpus* or *collegium pistorum*), which long existed, was organised by Trajan, and this body, through its connexion with the *cura annonae*, became of much importance and enjoyed various privileges. There were guilds of *pistores* and *clibanarii* at Pompeii (Overbeck-Mau, *Pompeii*, 4th ed., p. 470). A great increase in the number of bakeries (*pistrinae*, *officinae pistoriae*) afterwards took place at Rome, owing probably to the action of Aurelian in introducing a daily distribution of bread instead of the old monthly distribution of grain that had been usual since the time of the Gracchi. This daily distribution also took place at Constantinople. The businesses of the miller and baker were usually combined: cf. Serv. *ad Aen.* i. 179 (*pistores*, *pinsores*, from *pinsere*, to pound the grain); and authorities in Blümner, *Technol.* i. p. 16, note.

Confectioners and makers of the finer kinds of bread-stuff are distinguished by various names, as πλακουντοποιός, πεμματουργός, ποπανοποιός, *pistores candidarii* (Orelli, 4263), *siliquiarii* (*C. I. L.* vi. 22), *clibanarii* (*C. I. L.* iv. 677), (*pistor*) *Persianus* (Orelli, 4264; cf. Plin. *H. N.* xviii. § 105), *dulciarii* (Mart. xiv. 222, &c.), *libarii*, *crustularii* (Senec. *Ep.* 56, 2), *fictores* (makers of sacrificial cakes), &c. The cakes and confectionery of the pastrycooks had already a literature of their own in antiquity, and are described in Athenaeus, xiv. 643 e, f, and Pollux, vi. 75 ff. Some were made specially for religious festivals and sacrifices (see Lobeck, *De Graecorum placentis sacris*).

A Pompeian painting (Jahn, *Abh. der Sächs. Ges. der Wissensch.* v. pl. 3 = Baumeister, *Denkmäler*, "Bäckerei," fig. 225) shows us a baker's shop-table or counter, and shelves behind piled with loaves of circular form. The shopman sits raised up behind the counter, giving a loaf to a customer. A baker's shop at Pompeii has as its sign a relief of a mill turned by a mule (Overbeck-Mau, *op. cit.*, p. 379, fig. 186). The plan of a bakery at Pompeii is given in Overbeck-Mau, *op. cit.*, p. 386, fig. 189 (cf. also the view, *ib.* p. 385, fig. 188). The working-rooms are there situated in the back part of a tolerably large building. Four large mills have been found there, and on the right is the oven, connected with two rooms, in one of which the kneading of the dough probably took place. Other rooms in the house are shops, sleeping-apartments, &c.

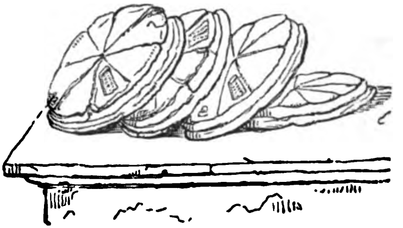
Wheat was the grain chiefly used for bread by the Greeks and Romans. Barley was also used, but at Rome barley-bread (*panis hordeaceus*) was the food only of slaves, soldiers, and barbarians (cf. Plin. *H. N.* xviii. § 74). Spelt (*ζειά*, *far*) was also sometimes used for bread, especially by the Romans at an early period A coarse bread was made from *alica*, a kind of spelt (corresponding to the Greek *χόνδρος*), which was grown in Verona, Campania, and many parts of Italy (cf. Plin. *H. N.* xviii. § 106). Rye (*secale*) was considered unwholesome by the Romans.

As with us, several kinds of flour were produced from the same grain, differing according to the action of the mill and the use of sieves (*κόσκινα*, *κρησέραι*, *cribra*) of greater or less fineness. Bread made of pure and finely sifted wheat-flour was called by the Greeks *ἀλευρίτης*, *γυρίτης*, *κρησερίτης*, &c., and was described as "white" bread (*λευκός*, *καθαρός*). By the Romans the bread made of pure wheat-flour (*simila*, *similago*) was called *panis siligineus*. If the bran was mixed with the wheat-flour, the bread was called by the Greeks *συγκομιστός*, *αὐτόπυρος*, *πύρνον* (or *πιτυρίας* = bread of bran only), and was spoken of as *ἀκάθαρτος*, *ῥυπαρός*, &c. By the Romans, bread made of coarse flour or of flour with the bran was called *panis cibarius*, *plebeius*, *castrensis*, *sordidus*, *rusticus*, *secundus*, *furfureus*, &c.

The dough was prepared by moistening the flour with water (Senec. *Ep.* 90, &c.), by adding salt, and by careful kneading (*μάττω*, *φυράω*, *subigo*, *depso*) in a kneading-trough (*μάκτρα*, *μαγίς*, *σκάφη*, *κάρδοπος*, *alveus*), which was generally made of wood, but sometimes of stone or pottery (Phot. p. 243, 17, *s. v. μάκτρα*). The kneading seems usually to have been done with the hand, though from some monumental representations (see Blümner, *Technol.* i. p. 63) it would appear that a simple machine worked by men or by an animal was sometimes used for the work.

Both fermented and unfermented bread were known to the ancients, but the fermented was the kind usually made. The leaven (*ζύμη*, *ζύμωμα*, *fermentum*) for mixing with the dough was produced in several ways (see Plin. *H. N.* xviii. § 102, &c.). If required in small quantities for immediate use, it was prepared from cakes of barley and water which were roasted on the hearth, and then put in covered vessels till the fermentation took place; or, the baked dough from the previous day's baking was taken and kneaded with salt, and a decoction made from it, which was allowed to stand till it became fermented. Leaven in large quantities, which could be kept for a year, was made during the vintage time by kneading millet with must, or by kneading wheat-bran with must and drying it in the sun. The dough when prepared was placed on a board and shaped, generally with the hand, but sometimes in moulds (*artoptae*). It was then by means of a shovel (*pala*) placed in the oven (*ἰπνός*, *furnus*: for the shape cf. an oven at Pompeii, Overbeck-Mau, 4th ed., fig. 192; Blümner, *Technol.* i. 65, 66). The dough was occasionally baked on the hearth among the embers, or on a spit; or it was sometimes placed in a vessel (*κλίβανος* or *κρίβανος*), usually of pottery, provided with a cover and pierced with small holes. Hot embers were then heaped up round it till the heat penetrated.

The loaves of the Greeks and Romans were usually flat, circular, and indented into four or more parts (*ἄρτος βλωμιαῖος*, *τετράτρυφος*, *panis quadratus*). Loaves were also made in other forms, such as cubes (*κύβοι*). The shape of the Roman loaf is well known to us from the Pompeian paintings, and from actual specimens discovered at Pompeii (Baumeister, *Denkmäler*, "Bäckerei," fig. 225; Overbeck-Mau, *op. cit.*, p. 385).



Loaves found at Pompeii.

A representation of the bread-making processes is to be found on the relief of the tombstone of Eurysaces, a large baker at Rome of the Augustan period or earlier (*Monum. d. Inst.* ii. 58; O. Jahn, *Annali*, x. p. 231 ff.; *C. I. L.* i. n. 1013–1017). Here is shown the grinding of the corn, the sifting of the flour, the kneading and shaping of the dough, the depositing of the dough in the oven, and finally the bringing out of the loaves in baskets to be weighed.

(*Authorities.*—Full references to the ancient authorities are given in an excellent chapter of Blümner's *Technologie*, i. 1 ff.; see also Mommsen-Marquardt, *Handbuch der röm. Alt.* vii. p. 398 ff., and Blümner, art. "Bäckerei" in Baumeister's *Denkmäler.*) [W——K W——H.]

PISTRI'NUM. [MOLA; MORTARIUM.]

PITHUS (*πίθος*). [DOLIUM.]

PLAGA. [RETE.]

PLA'GIUM. This crime was the subject of a Lex Fabia, which is mentioned by Cicero (*pro Rabirio Perd.* 3, 8), and is assigned by some writers to the consulship of Quintus Fabius and M. Claudius Marcellus, B.C. 183; but without sufficient reason. The chief provisions of the lex are collected from the Digest (48, 15, 6: cf. Paul. *Sent. Rec.* v. 30, 13): "If a freeman concealed, kept confined, or knowingly with dolus malus purchased an ingenuus or libertinus against his will, or participated in any such acts; or if he persuaded another person's male or female slave to run away from a master or mistress, or without the consent or knowledge of the master or mistress concealed, kept confined, or purchased knowingly with dolus malus such male or female slave, or participated in any such acts, he was liable to the penalties of the Lex Fabia." The penalty of the lex was pecuniary, and the consequence was infamia; but this fell into disuse, and persons who offended against the lex were punished, either by being sent to work in the mines or by crucifixion if they were *humiliores*, or with confiscation of half of their property or perpetual relegation if they were *honestiores*. These punishments were imposed by the praefectus urbi and the praesides provinciarum (Paul. *l. c.* and *Coll.* xiv. 2, 2: "Et olim quidem hujus legis poena nummaria fuit; sed translata est cognitio in praefectos urbis; itemque praesidis provinciae extra ordinem meruit animadversionem"). The crime of kidnapping men became a common practice, and required vigilant pursuit (Suet. *Aug.* 32). For a remarkable instance, which has been introduced in modern romance, see Socrates, *Hist. Eccl.* v. 8, cited by Marquardt. A senatusconsultum ad legem Fabiam did not allow a master to give or sell a runaway slave, which was technically called *fugam vendere;* but the provision did not apply to a slave who was merely absent. A bonâ-fide possessor of a slave or freeman could not be made liable on account of plagium. The name of the senatusconsultum by which the Lex Fabia was amended, does not appear. The word *plagium* is said to have come from the Greek πλάγιος, "oblique," "indirect," *dolosus*. But this is doubtful. Schrader (*Inst.* iv. 18, § 10) thinks that the derivation from *plaga* (a net) is more probable. He who committed plagium was *plagiarius*, a word which Martial (i. 53) applies to a person who falsely gave himself out as the author of a book; and in this sense the word has come into common use in our language. (Dig. 48, 15; Cod. 9, 20; Paulus, *ll. cc.*; Geib, *Das Röm. Strafrecht*, p. 52; Rein, *Das Criminalrecht*, p. 386; Rudorff, *Rom. Rechtsg.* ii. § 117; Mizerski, *de Crimine Plagii*, Berol. 1865; Marquardt, *Privatleben*, i. 168.) [G. L.] [E. A. W.]

PLANETAE, s. STELLAE ERRANTES (πλανῆται s. πλανώμενοι ἀστέρες as opposed to τὰ ἀπλανῆ τῶν ἄστρων). The popular astronomy of the early Greeks was chiefly confined, as is pointed out elsewhere [ASTRONOMIA], to a knowledge of the morning and evening risings and settings of the brightest stars and most remarkable constellations, since upon these observations the formation and regulation of the primitive calendars in a great measure depended. No single star was more likely to attract attention under such circumstances than the planet Venus, and accordingly *The Morning Star* ('Εωσφόρος) is placed first among the stellar progeny of Erigeneia in the *Theogony* (381)—

> τοὺς δὲ μέτ' (sc. ἀνέμους) ἀστέρα τίκτεν 'Εωσφόρον
> 'Ηριγένεια
> ἄστρα τε λαμπετόωντα τά τ' οὐρανὸς ἐστεφάνωται,

while both the *Morning Star* ('Εωσφόρος) and the *Evening Star* ("Εσπερος) are named in the Homeric poems (*Il.* xxii. 318, xxiii. 226: cf. *Od.* xiii. 93), where they are evidently regarded as distinct from one another, and there is no hint that they are unlike the other stars in their nature. According to Apollodorus, in the second book of his work Περὶ θεῶν, Pythagoras (about B.C. 612) was the first who surmised that Φωσφόρος and "Εσπερος were one and the same, but by Favorinus the honour of this discovery is ascribed to Parmenides. The latter certainly looked upon this body, which he called both 'Εῷος and "Εσπερος, as altogether different in its nature from the fixed stars, for he placed it in his highest region, or aether; below it, but also in the aether, was the sun, and below the sun, in the fiery region (ἐν τῷ πυρώδει) which he calls οὐρανός, were the fixed stars. Achilles Tatius assigns the discovery to Ibycus (circ. B.C. 540). The term πλανῆται seems, if we can trust Plutarch and Stobaeus (*Ecl. Phys.* i. 24), to have been recognised as early as the epoch of Anaximander, according to whom the sun stood highest in the universe; next below was the moon, and then the fixed stars and the planets (ὑπὸ δὲ αὐτοὺς τὰ ἀπλανῆ τῶν ἄστρων καὶ τοὺς πλανήτας). Empedocles supposed the fixed stars to be imbedded in the crystalline sphere which, according to his system, enveloped all things, but the planets to be detached from it, thus implying the necessity felt for some theory which should account for their erratic course. Democritus wrote a treatise Περὶ τῶν πλανητῶν, among which he reckoned the sun, the moon, and Φωσφόρος, but, as yet, their number had not been determined. This is expressly affirmed by Seneca (*Quaest. Nat.* vii. 3), "Democritus subtilissimus antiquorum omnium suspicari ait se plures stellas esse quae currant; sed nec numerum illarum posuit, nec nomina, nondum comprehensis quinque siderum cursibus. Eudoxus ab Aegypto hos motus in Graeciam transtulit." But, although Eudoxus may have been the first to communicate scientific details with respect to the orbits and movements of the planets, Philolaus, a Pythagorean, who flourished more than a century earlier, was certainly acquainted with the whole five, for he maintained that there was a central fire around which the ten heavenly bodies (δέκα σώματα θεῖα) revolved. Of these, the most remote from the centre was οὐρανός, that is, the sphere containing the fixed stars, next in order were the planets, then the sun, then the moon, then the earth, and, below the earth, the Antichthon (ἀντίχθων, see Arist. *de Caelo*, ii. 13), thus completing the number ten if we reckon the planets as five. In the *Timaeus* of Plato (p. 38), the planets are mentioned specifically as five in number (ἥλιος καὶ σελήνη καὶ πέντε ἄλλα ἄστρα ἐπίκλην ἔχοντα πλανητά), and, in the same passage, we for the first time meet with the name *Hermes* as connected with one of these ('Εωσφόρον δὲ καὶ τὸν ἱερὸν 'Ερμοῦ λεγόμενον). It is not, however, until we come down to the Epinomis (p. 987), the work of some disciple of Plato, that the whole five are enumerated, each with a distinguishing appellation derived from a god: τὸν τοῦ Κρόνου, τὸν τοῦ Διός, τὸν τοῦ "Αρεος, τὸν τῆς 'Αφροδίτης, τὸν τοῦ 'Ερμοῦ. In the tract Περὶ κόσμου, found among the writings of Aristotle, although probably not from his pen, we are furnished with a second set of names (p. 392a, 23)—Φαίνων for the star of Kronus; Φαέθων, for that of Zeus; Πυρόεις, for that of Ares; Φωσφόρος, for that of Aphrodite; Στίλβων, for that of Hermes: and these seem to have been the ordinary designations employed by men of science. It is here stated also, that Πυρόεις was by some termed the star of Herakles, and that Στίλβων was by some termed the star of Apollo. Pliny gives additional variations, for in his list they are catalogued as SIDUS SATURNI, JOVIS, MARTIS s. HERCULIS, VENERIS s. JUNONIS s. ISIDIS s. MATRIS DEUM (*Lucifer*, *Vesper*), MERCURI s. APOLLINIS; and these may be still further increased from Achilles Tatius, the grammarians and the lexicographers.

The Pythagoreans, regarding the earth as the centre of the universe, assumed the place of the five planets to be between that of the fixed stars on the one hand, and the sun and moon on the other, a doctrine followed by Plato (cf. Martin, *Timée de Platon*, ii. p. 64), Eudoxus and Aristotle (cf. Proclus, *in Tim.* p. 257 F). Archimedes, however, employing a fuller knowledge of mathematics (Macrob. in *Somn. Scip.* i. 19, § 2), assigned the following order:—1. Saturn; 2. Jupiter; 3. Mars; 4. The Sun; 5. Venus; 6. Mercury; 7 The Moon; and this order was generally adopted, *e.g.* by Cicero (*de Div.* ii. 43, 91), Manilius (i. 803, 6), Pliny (*H. N.* ii. § 6), &c. Macrobius says that the Pythagoreans learnt their doctrine from the Egyptians, whereas the latter was the view of the Chaldaeans (cf. Lewis, p. 246 f.).

Saturnus was believed to perform a complete revolution in thirty solar years, Jupiter in twelve, calculations approaching very nearly to the truth. The period of Mars was fixed at two years, a determination less accurate than the two former, but not very wide of the truth. As to Venus and Mercury, not even an approximation was made, for they were both believed to perform their revolution in exactly or very nearly the same time as the sun (cf. Cicero, *Somn. Scip.* 4). Pliny, who affects great precision in this matter, fixes 348 days for Venus and 339 days for Mercury, the true period being nearly 225 days for the former, and about 88 days for the latter.

Saturnus being thus removed to a great distance from the source of heat was naturally viewed as possessing a cold and icy character (*gelidae ac rigentis naturae; frigida stella Saturni*); Mars, on the other hand, as of a hot and fiery nature; while Jupiter, which lay between them, enjoyed a temperature made up by the combination of the extremes. The astrologers caught up these notions, and, uniting them with the legends of mythology, adapted them to their own purpose, uniformly representing the influence of Saturnus as malign, and that of Jupiter as propitious.

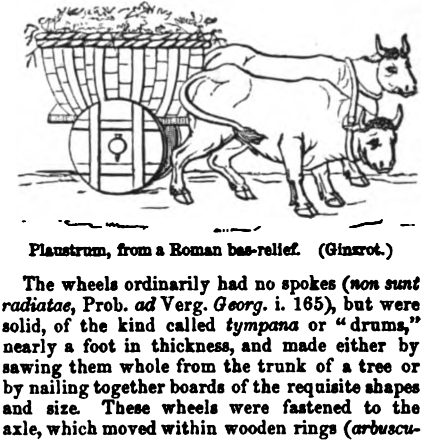
> "Haec tamen ignorat, quid sidus triste minetur
> Saturni."—(Juv. vi. 569.)
>
> "Saturnumque gravem nostro Jove frangimus una."
> (Pers. v. 48.)
>
> "Te Jovis impio
> Tutela Saturno refulgens
> Eripuit."—(Hor. *Carm.* ii. 16, 22.)

It must be understood that, in the above remarks, we have confined ourselves entirely to the popular notions which prevailed among the ancients, without attempting to trace the progress of scientific observation, a subject which belongs to a formal history of astronomy, but does not fall within our limits. (Plut. *de Placitis Philos.* ii. 14–16; Stob. *Ecl. Phys.* i. 23, § 1; 25, § 1; Diog. Laert. viii. 14, ix. 23; Arat. *Phaen.* 454; Gemini, *Elementa Astron.* c. 1; Achill. Tat. *Isag. ad Arat. Phaen.* xvii.; Lydus, *de Mens.* v., &c.; Cic. *de Nat. Deor.* ii. 20, 51–54, with Mayor's notes; Plin. *H. N.* ii. 6, 8; Tac. *Hist.* v. 4; Macrob. *Somn. Scip.* 4; cf. Lewis, *Astronomy of the Ancients*, pp. 62, 144, 152, 245, &c.) [W. R.] [A. S. W.]

PLANIPES. [MIMUS, p. 172.]

PLA'STICA. [STATUARIA.]

PLAUSTRUM or **PLOSTRUM**, a cart or waggon. The plaustrum, strictly so called, was a heavy two-wheeled cart (Isid. *Or.* xx. 12): the four-wheeled waggon was properly distinguished as *plaustrum majus* (Cato, *R. R.* x. 2; Varro, *R. R.* i. 20). The plaustrum was of simple construction—a platform of boards, with a strong pole projecting from it, fastened upon the pair of wheels and axle. The blocks of stone or other things to be carried were either laid upon this platform without any other support, or were secured by upright boards forming sides to the platform (ὑπερτερία, Hom. *Od.* vi. 70; Plat. *Theaet.* p. 270 A), or open-work rails (*palae*, Varr. *L. L.* v. 140); or a large wicker basket was fastened on the platform (*scirpea*, πείρινς). The annexed woodcut shows a cart the body of which is supplied by a basket.



Plaustrum, from a Roman bas-relief. (Ginzrot.)

The wheels ordinarily had no spokes (*non sunt radiatae*, Prob. *ad* Verg. *Georg.* i. 165), but were solid, of the kind called *tympana* or "drums," nearly a foot in thickness, and made either by sawing them whole from the trunk of a tree or by nailing together boards of the requisite shapes and size. These wheels were fastened to the axle, which moved within wooden rings (*arbusculae*, ἁμαξόποδες) attached to the under-side of the platform (Vitruv. x. 20, 14; Varro, *R. R.* iii. 5; Verg. *Georg.* ii. 444). Although these wheels were excellent for the preservation of the roads, they turned with a long circuit, and advanced slowly and with a creaking sound (*stridentia*, *gementia*, Verg. *Georg.* iii. 536, *Aen.* xi. 138). They were drawn usually by oxen, but sometimes by mules (Oppian. *Hal.* v. 20). They could, of course, upon a necessity, be used for transporting people as well as goods, but we are not to conclude from Liv. v. 40, that it was constructed for that purpose, nor (as Ginzrot does) that the plaustrum there mentioned differed from the ordinary kind. The *plaustrum majus*, or four-wheeled waggon, had sometimes solid wheels, sometimes spoked wheels, and sometimes also a body of open-work rails (*palae*), as shown in the cut under AMPHORA, representing part of a plaustrum majus carrying wine-skins.

The Greek ἅμαξα corresponded both to the plaustrum and the plaustrum majus. The four-wheeled ἅμαξα is mentioned in *Od.* ix. 241; Herod. i. 188: but the word also was used to express a vehicle to convey people (Herod. i. 31, &c.). [HARMAMAXA.] Probably it had usually four wheels, differing little from the ἀπήνη [APENE], used for travelling (*e.g.* Diog. Laert. viii. 73), for the use of the bride in weddings (Poll. x. 33, &c.), in processions [DIONYSIA, Vol. I. p. 639]. Baumeister (*Denkm.* Taf. xc.) shows boat-shaped ἅμαξαι, which he conceives to have been used at some time in processions. (Ginzrot, *Wagen*, i. 166, 228; Guhl and Koner, 277; Marquardt, *Privatleben*, 732; Becker-Göll, *Charikles*, ii. 16.) [J. Y.] [G. E. M.]

PLEBE'II LUDI. [LUDI PLEBEII.]

PLEBES or **PLEBS, PLEBE'II.** The word *plebes* is formed from the same root as appears in *compleo, impleo, plenus*, πλῆθος, &c. It properly signifies "the multitude," "the common people," as opposed to any eminent or privileged classes. This, its natural sense, was to a certain extent obscured (as in the case of our own "Commons") by the circumstance that many of the noblest and most powerful men in Rome belonged to the plebeian order, in its technical sense of non-patrician: this order was indeed in later days the whole state less two or three score of families. Nevertheless the natural sense of the word survives, as when Livy says (xxxix. 17, 6) that certain of the Bacchanalian ringleaders were "ex plebe Romana," or when Cicero speaks of Verres as "solitus virgis plebem Romanam concidere" (*in Verr.* i. 47, 122). Under the Empire, after the functions of the plebs as a political corporation had fallen into disuse, the word was used very nearly in its etymological sense of the poorer citizens who were qualified to receive corn largesses (*plebs frumentaria*), as when Augustus is said by Tacitus (*Ann.* i. 8) to have bequeathed money "populo et plebi" (*i.e.* partly to the state-chest, partly to the needy citizens); and again more generally of the common people in distinction from senators and knights, as when Pliny (*H. N.* xxxiii. § 29) says, "anuli distinxere alterum ordinem a plebe," and Horace (*Ep.* i. 1, 57), "Si quadringentis sex septem millia desunt, Plebs eris."

The origin of such a multitude of non-privileged citizens at Rome is wrapped in obscurity. Our ancient authorities, on the one hand, give us a plebs as coeval with Romulus, and, on the other hand, represent it as consisting wholly of the clients of the patricians. Now the term *plebs* implies citizens, but citizens excluded from a privileged class. It is therefore not applicable to the days when the word *patricius* actually meant what it says, and a patricius alone was capable of becoming a paterfamilias. In those days the patricius was the only citizen, because he alone could exercise the rights of a father over his legitimate child, or of a master over his property, and he alone was recognised as having a standing in the Roman law-courts. The client while he remains in his original position, though he may be protected by religion or custom from the actual treatment of a slave, is not really a free man, but rather to be assimilated to those informally emancipated persons who in later times were said "domini voluntate in libertate morari, et tantum metu serviendi liberari" (from the "Consultatio veteris Jurisconsulti," quoted by Ortolan, *Inst. Just.* ii. § 55).

The subsequent process is best described in the words of Mommsen (*Staatsr.* iii. p. 66): "Out of a condition destitute of rights there was developed a capacity for rights, a guaranteed freedom, which was recognised by the state and its courts, ordinarily with the co-operation of the patron, but which in the last resort was enforced even against him. It was a legal status which, though at every given moment definite, seems as we look back on it continually in flux. Even though we had fuller knowledge of it, we could only characterise it as wavering between two extremes, so that the element of servitude, the clientship, is always waning; that of freedom, the plebeiate, always increasing; until the process ends with the conversion of the half-free into the full freeman." If we reckon up all the legal capacities which the freeman possesses while they are denied to the slave, the acquisition of each will serve to mark a possible stage in this development. The freeman has a legal right to property, whereas the slave holds a peculium merely on the sufferance of his lord. A corollary to the possession of property is the power to alienate it, and to make binding contracts regarding it. The next step is a recognised standing in the law-courts, the power to sue and be sued in one's own person. On another line we have the power to contract a legal marriage; from this would follow the patria potestas over the children born of such a marriage, and from thence the agnatic relationship and the rights of succession bound up with it. Next comes the right and duty of serving in the armies of the state, and probably in close connexion with this the right to vote in the comitia. Last of all we have the eligibility to office. It is possible that, in spite of the hereditary nature of clientship, these rights were acquired first of all by clients who had been born in that station, and that they were only afterwards claimed by those who had been themselves released from actual slavery or who had placed themselves as homeless strangers under the protection of a citizen. It is possible likewise, as Mommsen suggests, that some of these privileges may have been exercised first in fact, and only afterwards have obtained formal recognition. In any case it is difficult to draw the line, and to lay down that here a man ceases to be a client and becomes a free plebeian. Perhaps we may say, that in the sphere of private rights the most distinctive characteristic of independence is the capacity to sue and be sued in one's own person, and that of public rights the most significant indication of citizenship is that of voting as a member of the sovereign populus. We have no means of ascertaining when the descendants of the clients attained to the first of these privileges, but of the second we can say with confidence that it was assured to them at least as early as the era known by the name of Servius Tullius, when the Comitia Centuriata with its elaborate grades of military service was organised. The arrangement of the infantry, at least, recognises no distinction in fighting or in voting between patricians, plebeians, and clients.

Though the clients undoubtedly won their way to the position of plebeians, it does not follow that the clients were the only or the most important element of the plebs. We find in very early times two relationships established amongst the kindred communities of Latium, the *jus commercii* and the *jus exulandi*. The first relates to the privileges mutually accorded to the citizens of the contracting states, when trading or temporarily sojourning in each other's territory. The second grants the right of permanent settlement and transfer of civic allegiance to those who wish to renounce their old state and to migrate to a new home ("solum vertere exilii causa"). The legal position of such an *exul* after his transfer of domicile is a matter of dispute, and the question will best be considered in connexion with the privileges enjoyed by such persons before their migration. A Praenestine, while he remains a Praenestine, has the full right of commercium with Rome. This right is explained by the clause in the second Treaty of Rome with Carthage (Polyb. iii. 24, 12), regarding the Romans who go to trade in Sicily: πάντα καὶ ποιείτω καὶ πωλείτω ὅσα καὶ τῷ πολίτῃ ἔξεστιν· ὡσαύτως δὲ καὶ ὁ Καρχηδόνιος ποιείτω ἐν Ῥώμῃ. The privileged foreigner then has the same right to acquire property and the same standing in the lawcourts as a citizen. He is thus in a different position from the *hostis* in the old sense of the word (Varr. *L. L.* v. § 3), "peregrinus qui suis legibus uteretur." The latter has a status only under the laws of his own country, which of course are not enforceable at Rome (see, however, the contrary view in Mommsen, *Röm. Forsch.* i. p. 349): he is incapable of using Roman law, and if he is wronged can sue only in the name of some citizen. He must secure this representation either by entering into an equal contract of hospitality with a Roman, in case he can promise him in turn similar assistance in his own home, or else by subjecting himself to the protection of the Roman, if he be a homeless outcast (see Mommsen, *Röm. Forsch.* i. p. 357). From any such necessities the privileged foreigner who has an independent standing in the Roman law-courts is free. Now let us suppose that our Praenestine by virtue of his *jus commercii* has acquired land in Roman territory, which he can hold, alienate by Roman methods, and defend in his own person in a lawsuit. Suppose next that the Praenestine afterwards finds it convenient to exercise his *jus exulandi*, to renounce his connexion with Praeneste, and to settle in Rome. Are we to believe that he thereby forfeits all his previous rights? Mommsen answers the question in the affirmative (*Staatsr.* iii. p. 58). The rights, he contends, belonged to the man as a guest of the community, and "a domiciled guest is an absurdity." What the *jus exulandi*, he argues above (p. 50, n. 1), guarantees to the fugitive is not the full citizenship, but protection. This may be true in the sense that political as distinct from private rights would not necessarily accrue to the *exul;* but it seems difficult to uphold that the granting of protection consisted in the withdrawal of the privileges which he had previously possessed. Mommsen holds (*ib.* p. 64) that every such *exul* would be obliged to put himself under the protection of a Roman citizen as his client. He defends this view (*ib.* p. 57) by the well-known passage from Cicero, *de Or.* i. 39, 177: "quid quod item in centumvirali judicio certatum esse accepimus, qui Romam in exilium venisset, cui Romae exulare jus esset, si se ad aliquem quasi patronum applicavisset, intestatoque esset mortuus . . . . nonne in ea causa jus applicationis," &c. Now this passage shows that *applicatio* was possible for an *exul*, not that it was obligatory. "Si se applicavisset" is put parallel to the death without a will, as something which might, not which must occur, and the phrase "quasi-patronum" seems to indicate something irregular in the transaction. It is probable that the legal controversy in this case turned on the inconsistency between *exilium* and *applicatio*, and that it was this which made the patron's claim to the inheritance doubtful. As the deceased had the *jus exulandi*, which guaranteed him the rights of a freeman in Rome, was not his act in placing himself in the quasi-servile position of a client void *ab initio?* or, on the other hand, was his voluntary *applicatio* to be taken as a valid renunciation of his rights as an *exul?* Cicero does not inform us what was the answer.

If Mommsen's view be correct, the *exules* would merely swell the numbers of the clients: if the opposite theory be maintained, we have here an independent and more honourable source for the plebs. While the mass of fugitives who come from whence no man knew, would arrive in Rome without rights, and could gain protection only by subjecting themselves to a citizen, those who were openly exercising the *jus exulandi*, secured to them by the common law of Latium, would be under no such necessity. They might set up at once as patresfamilias on their own account, and we must consider them as from the first citizens, though citizens of an inferior order. It is obvious that the existence of such a class, distinct from and yet personally independent of the ruling citizens, would render more easy the acquisition of a similar status by the clients of the latter.

The same question occurs with regard to the people of conquered towns deported to Rome. One of the best attested facts of the Regal period is the destruction of Alba and the transfer of its inhabitants to Rome. Mommsen believes (*Staatsr.* iii. pp. 57 and 67) that in such cases the new comers would necessarily undergo an *applicatio* to some Roman citizen of their choice. This seems hardly probable. The existence of such families as that of the Julii shows that some Albans were, as Livy (i. 28, 7) says, admitted to the patriciate, and it is difficult to believe that the *civitas* which he ascribes to the rest was nothing more than the choice of a master.

Closely connected with the question, whether the original plebeians were all clients, is the question whether a plebeian can be a *gentilis*. According to Scaevola's definition (Cic. *Top.* 6, 29), the descendant of a slave (or client), though he may belong to a gens and so have gentiles, can never himself be a gentilis: he is excluded by the clause "quorum majorum nemo servitutem serviret" (see Ortolan, *Inst. Just.* iii. § 1038). But Scaevola's definition says nothing about the patriciate as a qualification for gentilitas. Many of the later plebeian families could trace a descent in which there was no taint of servile blood. Marius could never (according to the definition) attain to gentilitas, because his family had been clients of the Herennii (Plut. *Marius*, 5); but there is no reason why Cicero (who claimed to spring from a Volscian royal family) should not have been a gentilis. We have the undoubted cases of the plebeian Minucii, who had a right to gentile inheritances (Cic. *in Verr.* i. 45, 115), and of the plebeian Popillii, who supplied the leading case (Cic. *de Leg.* ii. 22, 55) in the law of gentile sepulchre. There seems no reason to follow Mommsen (*Staatsr.* iii. pp. 66 and 74) in ascribing only a quasi-gentilitas to these plebeian houses, and in asserting that they had only a *stirps* and not a real gens of their own. If the view maintained above as to *exilium* be correct, the descendants of the first *exul* would satisfy every point of Scaevola's definition. They would therefore have a gens of their own; and if their house ever came in turn to have its own freedmen and clients, its pure-born members would be gentiles to the descendants of these, and have rights of succession and guardianship over them. The same would be the case with those patricians who had renounced their birthright and had been admitted as members of the plebeian order (see below). When Livy (x. 8, 9) makes Decius Mus say, "Semper ista audita sunt eadem . . . . vos solos gentem habere," he is not to be taken as admitting the claim, but rather as illustrating the insolence of the patricians, who spoke as if all the plebeians were their clients and ignored the more respectable origin which belonged to many of them. The famous lawsuit mentioned in Cicero, *de Or.* i. 39, 176, "Quum Marcelli ab liberti filio stirpe, Claudii patricii ejusdem hominis hereditatem gente ad se rediisse dicerent," illustrates an exception which proves the rule. When there was a patrician and a plebeian family of the same name, it seems to have been the legal presumption that the latter had once been the clients of the former. The Claudii Marcelli had of course long ago extinguished their clientship by attaining to curule office (Plut. *Marius*, 5), but the original taint in their blood precluded the possibility of their ever being gentiles. It is obvious from Cicero's statement that the Marcelli lodged no claim to succeed *patronatus jure*, as they would undoubtedly have done had the deceased been their freedman. The right of the patron to inherit extended in the later Republic only over the actual freedman or applicant, not over his descendants (see Ortolan, *op. cit.* iii. § 1045). The inheritance of the son of a freedman would therefore be determined by the *legitima successio* of the Twelve Tables, which provided, "si agnatus nec sit gentiles familiam habento." The patrician Claudii were clearly the only persons who could claim *gente*, but the Marcelli seem to have maintained that, when they attained to independence of their patrician namesakes, they founded a *stirps* which had rights of inheritance similar to those of the gens over the descendants of their own clients. It is not known whether the patricians in this case made good their claim; but even if they did, it would prove nothing against the gentilitas of plebeians in whose case no ancestral clientship could be established.

It was probably owing to the admixture of servile blood in their order, that the plebeians were so long debarred from the right of intermarriage with the patricians. The prohibition of conubium is first mentioned as part of the law of the Twelve Tables; but there can be no doubt that this law only formulated and confirmed a more ancient disqualification. Marriage between the orders was soon afterwards legalised by the Lex Canuleia of B.C. 445.

The struggle of the plebeians for admission to the magistracies of the Roman People occupies a large portion of the internal history for the first two centuries of the Republic. The quaestorship was held for the first time by a plebeian in B.C. 409, the consulship in B.C. 366, the dictatorship in B.C. 356, the censorship in B.C. 351, and the praetorship in B.C. 337. The priestly colleges were not opened to plebeians till B.C. 300. From that time onwards, though certain disqualifications survived on the one side and on the other [see PATRICII], the members of the two orders were on a footing of practical equality, and the distinction between them remained only as an historical reminiscence with the smallest possible effect upon practical politics.

But in the meantime the plebeians had formed themselves (on their secession to the Mons Sacer in B.C. 494) into an exclusive order, with magistrates and assemblies and powers of corporate action of their own. From that time to the end of the Republic *plebs* generally means not so much the vague and lowly multitude as this clearly defined body, which comprised families as honourable and powerful, though not as ancient, as those of the purest patrician stock. The constitution and political powers of the plebs in its corporate capacity will be more conveniently discussed in the articles PLEBISCITUM and POPULUS. Here it will be sufficient to say a few words on the qualifications for membership.

Every Roman who was not a patrician belonged to this order, so that, unlike the patriciate, the plebeiate was constantly being recruited. All newly-made citizens, whether they had formerly been slaves or foreigners, passed at once and without any special act of admission into this body. A person born a patrician became a plebeian if he underwent the "minima capitis deminutio" by being dismissed from his ancestral house by *emancipatio*. The same result would of course occur if he became by adoption the son of a plebeian. But besides these indirect methods of transfer, the plebeians had (unlike the patricians) a corporate assembly of their own, and so were able to admit new members by their own act. This is the process properly called "transitio ad plebem," by which a patrician renounces his old order and sues for admission to a new one. It is best described by Zonaras (vii. 15), *εἰ δέ τις τὸ τοῦ γένους ἀξίωμα ἐξωμόσατο καὶ πρὸς τὴν τοῦ πλήθους μετεστη νόμισιν, ἀσμένως αὐτὸν προσεδέχοντο. καὶ συχνοὶ τῶν σφόδρα εὐπατριδῶν ἀπείπαντο τὴν εὐγένειαν ἔρωτι τοῦ μέγα δυνηθῆναι καὶ ἐδημάρχησαν.* As far as can be gathered from the somewhat obscure notices, Clodius at first attempted to become a plebeian in this way: but finding opposition too powerful, he afterwards effected his object by the machinery of adoption. Some genealogi[illegible] the time of Augustus invented for the plebeian Octavii a history of this sort, which the emperor himself was sensible enough to ignore; see Suet. *Aug.* 2: "Ea gens a Tarquinio Prisco rege inter minores gentis adlecta in senatum, mox a Servio Tullio in patricias traducta, procedente tempore ad plebem se contulit."

(The best modern authorities on the points discussed in this article are Mommsen, *Römische Forschungen*, vol. i., and *Staatsrecht*, vol. iii.; and Ortolan, *Explication historique des Instituts de l'Empereur Justinien.* The principal references have been given *passim.*) [J. L. S. D.]

PLEBISCITUM is the name for the decrees passed by the corporation of the plebs in answer to the *rogatio* of one of their own magistrates. When in later times these decrees acquired the force of law, the term *lex* was likewise applied to them: so we have repeatedly in the Agrarian Law of B.C. 111 (*C. I. L.* i. p. 175), "ex lege plebive scito quod C. Sempronius Ti. f. tr. pl. rog." But, though sanctioned by official usage, this identification was always recognised as not strictly correct: "ne leges quidem proprie sed plebiscita appellantur, quae tribunis plebis ferentibus accepta sunt" (Laelius Felix in Aul. Gell. xv. 27).

The plebs as a self-governing corporation asserted from the first the power to pass decrees binding on all its members: "evenit ut plebs in discordiam cum patribus perveniret et secederet sibique jura constitueret, quae jura plebiscita vocantur" (Pomponius in Dig. 1, 2, 2, 8). The most important of these were the *leges sacratae* by which the plebeians affirmed the *sacrosanctitas* of their officers, and bound themselves every man to avenge instantly any outrage directed against them. Another clause of the same shows that the plebeians claimed from the first a recognition from the whole state that obedience to these rules must override the ordinary course of law: "Nam lege tribunicia prima cavetur 'Si quis eum qui eo plebiscito sacer sit, occiderit, parricida ne sit.'" (Festus, p. 318, s. v. *Sacer.*) These ordinances were held to have binding force down to the last days of the Republic, for Cicero (*post Red. in Sen.* 13, 33) complains that Clodius and he were not fighting on equal terms: "tribuniciique sanguinis ultores esse praesentes, meae mortis poenas judicio et posteritati reservari." The plebeians also claimed to be judges in their own quarrels and to direct the vengeance of their order against its enemies. The story of Coriolanus represents the tribunes as attempting at first to try him for his life before the plebeian assembly, and there are several instances later on where consuls who have opposed its interests are fined by the plebs after they go out of office (Liv. ii. 52, 54, 61; v. 12). All such matters may be held to come within the somewhat elastic category of self-regarding acts, and in the earliest times the plebs seems not to have gone beyond this, and never to have claimed the right to legislate in matters relating to the whole nation.

The history of the later Roman republic presents us with a widely different picture. We find that by the time of the Punic wars the whole power of sovereignty has been delegated to the plebeian assembly. Side by side with the old sovereign, the populus, a new sovereign, the plebs, exercises in its exclusive concilium, under its own magistrates and with its own forms of procedure, precisely the same powers of legislation as the first: "et ite factum est ut inter plebiscita et legem species constituendi interesset, potestas autem eadem esset" (Pomponius, *ib.*). All the legal writers, our best authorities on such a point, ascribe the delegation of these enormous powers to a law of the dictator Hortensius, B.C. 287, "pro legibus placuit et ea observari lege Hortensia" (Pomponius, *ib.*), and "lex Hortensia lata est, qua cautum est ut plebiscita universum populum teneret, itaque eo modo legibus exaequatu sunt" (Gaius, *Inst.* i. 3).

The difficulty is that Livy gives us, beside the Hortensian law, two previous enactments to precisely the same effect, "ut plebiscita omnes Quirites tenerent," or "ut quod tributim plebs jussisset populum teneret" (Liv. iii. 55, viii. 12). These are attributed to the consuls Valerius and Horatius, B.C. 449, and to the dictator Publilius Philo, B.C. 339.

Mommsen (*Röm. Forsch.* vol. i. p. 211) has sufficiently disposed of the theory that the decrees of the plebs were equal to those of the populus from the consulship of Valerius and Horatius onwards, and that the Lex Publilia and the Lex Hortensia were mere re-enactments of the ordinance of B.C. 449. Mommsen's own conjecture is that the laws of B.C. 449 and of B.C. 339 should be struck out of the history of plebiscita altogether: he thinks that they really referred to the "comitia populi tributa," and were applied to the plebs by a mere blunder of Livy [see COMITIA]. This hypothesis seems very hazardous. Such a blunder on Livy's part is not indeed impossible, but there is not a particle of evidence that he was actually guilty of it.

Apart from the respect due to the ancient authority, we should expect from the nature of the case to find successive enactments on this subject, and to see some share in legislation for the community allowed to the plebs under checks and conditions, before it attained the unlimited power conferred by the Lex Hortensia. This opinion is confirmed by a glance at the history. We find numerous laws called by the names of the tribunes who proposed them (which they could only do of course in a plebeian assembly) which nevertheless relate to matters obviously of national concern. Such, to take a single instance, was the proposal to remove the habitation of the Roman people to Veii. Most of these laws fall in the century between the Valerio-Horatian and the Publilian Law (B.C. 449–339); but two—the Terentilian proposal *de legibus conscribendis*, which led to the codifying of the Roman law in the Twelve Tables, and the Lex Icilia *de Aventino publicando*—are previous to the earliest of our three epochs. The protracted contests over these laws seem, however, to point to some power possessed by the patricians of checking and limiting the force of the decrees which originated with the tribunes.

The "answer to the riddle" is to be found, according to Mommsen (*Röm. Forsch.* i. 311), in the words in which Appian describes Sulla's law about the powers of the tribunes (*Bell. Civ.* i. 59): *εἰσηγοῦντο μηδὲν ἔτι ἀπροβούλευτον ἐς τὸν δῆμον ἐσφέρεσθαι, νενομισμένον μὲν οὕτω καὶ πάλαι παραλελυμένον δ' ἐκ πολλοῦ.* He takes this to mean that, in forbidding for the future any measures to be brought before the plebs without consent of the senate, Sulla revived a definite law which had existed in early times; that is to say, before the dictatorship of Hortensius. "It is probable," says Mommsen (*Staatsr.* iii. p. 157), "that (we know not when, but some time previous to the law of the Twelve Tables) it was enacted by a decree of the populus analogous to that afterwards carried by Hortensius, that a bill brought before the plebs with the assent of the senate, if accepted by the former, bound the whole body of the citizens just as if the populus had commanded it in its comitia." This view is accepted by Soltau, and with some modifications by Willems and Borgeaud. It seems, however, to rest on a very slight foundation. The historical reference in the passage of Appian (*νενομισμένον μὲν οὕτω καὶ πάλαι*, &c.) applies more naturally, not to the days of the early Republic, but to the century of the Punic wars. During this period the senate had asserted, not by positive enactments, but by indirect means, a customary and constitutional right to be consulted before any magistrate proposed a measure for the acceptance of the popular assemblies. For generations this claim was enforced by means of the tribunician veto; but Sulla had been taught by the record of Gracchus, of Saturninus, and of Sulpicius, that the employment of the veto was an insufficient sanction. It had repeatedly failed to guard this most necessary prerogative of the senate against the attacks of a popular tribune. Sulla therefore naturally wished to establish the constitutional claim of the senate on the firmer basis of definite enactment. Appian's reference to an ancient precedent being thus abundantly justified by the usage of which we have ample independent evidence, it seems wrong to invent for its explanation a supposed legal right otherwise unknown to us. The silence of Cicero in the passage of the *de Legibus* (iii. 11, 26) in which he criticises the tribunician power, is a strong negative argument against the existence of any such legal right of the senate over plebiscita.

Nor does the assumption of the modern historians seem to be necessary in order to explain the historical development of plebeian legislation. The known powers of the sovereign populus, of its officers the consuls, and of their advisers the senate, supply sufficient material for a probable answer to the question how the legislative capacity of the plebs may have been gradually established.

A record of the process of tribunician legislation in early times has fortunately been preserved to us in a single case, in which Dionysius has followed the account derived by him from an ancient document. The case is that of the Lex Icilia *de Aventino publicando* (B.C. 456), which was preserved on a brazen column in the temple of Diana on the Aventine. "Icilius," says Dionysius (x. 31), "approached the consuls then in office and the senate, and requested them to pass the preliminary decree for the law that he proposed, and to bring it before the people." By threatening to arrest the consuls he compelled them to assemble the senate, and Icilius addressed it on behalf of his bill. Finally the senate consented; *ἔδοξε διδόναι τῷ δήμῳ τὸν τόπον* (Dionys. x. 32). Then, after auspices and sacrifices, "the law was passed by the Comitia Centuriata which were convened by the consuls." Where, then, does the vote of the plebs come in? It is not mentioned by Dionysius, nor is there any place for it in the proceedings after Icilius has approached the consuls. It seems to follow that it must be placed at the very beginning before the detail of Dionysius' story begins. Icilius must have been armed already with the petition of the plebs when he demanded to plead their cause before the senate.

In this order of proceedings, the formal legislative power lies solely with the populus Romanus. The vote of the corporation of the plebs is not then in early times a legislative act at all. It is merely a strong and formal petition, an appeal to the sovereign assembly to grant their request. But this sovereign assembly can be convened and the question put to it only by a consul. The consul may refuse to put any such bill to the vote, or even so much as to entertain the question as an open one, by taking the opinion of his authorised advisers, the senate, as to how he ought to act. Thus the consultation of the senate, not as a legally necessary preliminary, but as a means of stimulating the official action of the consul, becomes a point on which the reformers are bound to insist; and to bring it about the tribunes must use their powers of compulsion over the consul.

After the matter has been thus forced on the consideration of the senate, an adverse vote in that body would of course justify the consuls in their resistance, and the delay might be prolonged until the plebeians were reduced to their last resort, the threat of secession. In practice the senate commonly yields before this crisis is reached. The petition of the plebs is backed by the recommendation of the senate; and the consuls, though under no legal obligation, cannot, without grave responsibility, now refuse to put the question to the populus. By this time the controversy has been long ago threshed out. All the powers which the nobles could bring to bear against the carrying of the proposal in a popular assembly, whether by tribunician intercession, or by alarms of war, or by violent interference, or by their own influence with the voters (Liv. v. 30), would naturally have been exhausted at an earlier stage of the proceeding while the proposal was still before the plebeian assembly. No instance is recorded of the sovereign populus negativing a bill so brought before it.

The chief objection to our accepting this as the order of proceeding is that Livy seems sometimes (cf. iv. 1, 6 with 6, 4) to represent the conflict over the tribunician bills, the negotiations with the senate, and the compromises frequently arrived at, as all matters which occurred before the voting of the plebs. It may be replied that in Liv. v. 30 we have a proposal, which had certainly not received the sanction of the senate, actually brought to the vote of the plebs and rejected by them; in another case (iv. 49) the refusal of the senate to approve a measure gains effect only by means of the *intercessio* of a tribune. It may also be urged that Dionysius repeatedly speaks of the efforts made to induce the senate *προβουλεῦσαι τὸν νόμον* (x. 26, 48, 52; xi. 54, 59, 60), and that he cannot be understood to mean that such a προβούλευμα was to be followed by a vote in the plebeian assembly, because he has clearly laid down (ix. 41) that no προβούλευμα was necessary for that assembly as organised by Publilius Volero in B.C. 471. The truer answer, however, probably is that neither Livy nor Dionysius really intend to commit themselves at all definitely regarding the legal procedure. They seem rather to desire to reproduce as far as possible in their picture of these early contests a copy of the dissensions between optimates and populares which vexed the later Republic. This tendency may have led them somewhat to mix up the order of events, and so to leave it doubtful whether the vote of the plebs was, or was not, in the earlier time final and conclusive.

If the process of legislation before the age of the decemvirs were really such as has been sketched in the preceding paragraphs, it is not difficult to see that it might be assisted by a series of laws which rendered one or other of its stages more easy. Any of these laws might be roughly described as giving legislative power to the plebs. What precise obstacles were removed by each law can only be conjecturally determined. We may perhaps say that the mere right of petitioning required no legal sanction, and that the powers of the tribunate were sufficient (as the story of Icilius makes them) to force the consuls to advise with the senate about the petition. Possibly the law of Valerius and Horatius formally recognised this position, and laid down that the consul must so consult the senate, or it may even have forbidden him arbitrarily to disregard a recommendation of the senate (should such be obtained) that he should put the question to the populus. It is a reasonable conjecture likewise that the law of Publilius Philo (B.C. 339) may have struck out the intervening consultation of the senate, and may have required the consul to bring the petition of the plebs at once before the populus. If such were the tenor of the Publilian law, it would be only a very slight inaccuracy to describe it as conferring legislative power on the plebs. The majority in the two assemblies being substantially the same persons, the reference to the one of a proposal already affirmed by the other would be little more than the repetition of a foregone conclusion. The Hortensian law, which formally transferred the sovereign power to the plebs, would thus be a change greater *de jure* than *de facto*. In formal law it was a mighty revolution. It was natural and even necessary that the jurists should refer to this law as the source of the legislative power of the plebs. On the other hand, historians and politicians might with equal reason refer the change to the time when it practically took place—to the time, that is, when a vote of the plebs really decided the fate of a measure beyond the possibility of effective appeal. This power, if the theory here put forward be correct, was placed within the reach of the plebeians by the law of Valerius and Horatius, and was fully secured to them by the law of Publilius Philo.

(The view of plebiscita maintained in this article is more fully explained in the *English Historical Review*, Nos. 2 and 19. The question is fully discussed in Mommsen's *Römische Forschungen*, vol. i., and in the *Staatsrecht*, vol. iii. It has been the subject of special treatises by Soltau, *Gültigkeit der Plebiscite*, and by Borgeaud, *Histoire du Plébiscite*.) [J. L. S. D.]

PLECTRUM. [Lyra.]

PLEMO'CHOAE. [Eleusinia, Vol. I. p. 720.]

PLETHRON. [Mensura, p. 162.]

PLINTHUS (πλίνθος), a brick or tile [Later], or a squared stone for building; so of the marble blocks for the walls of the Erechtheum (*C. I. G.* 160, l. 10). The word is especially used by Vitruvius (also *plinthis*) and in modern architectural works, to denote the square block that sometimes forms the lower member of the base in the Ionic and Corinthian orders. In the best known Attic instances of the Ionic order no plinth exists. See Spira, Columna. [E. A. G.]

PLUMA'RII were understood by Becker (whom Göll now corrects) to be persons who made stuffs of feather embroidery, presumably like those for which the Aztecs were famous: but Marquardt has shown that the *opus plumatum* or *opus plumarium*, which these workers made, was embroidery of needlework in plain stitch as opposed to the embroidery of the *Phrygiones*, which was in cross stitch. In the *opus plumatum* the stitches were laid lengthwise, so that they seemed to overlap one another, like the feathers in the plumage of a bird: it might therefore be translated "feather-stitch work" (Rock, *Textile Fabrics*, 116). An analogous use of *pluma* appears in Verg. *Aen.* xi. 770, of the lorica "*in plumam* squamis auro conserta." The idea of Georges (*Philolog.* xxxii. 530) that it was woven work is founded on certain passages where the words *texere*, *textrina* are used loosely, and is disproved by an edict of Diocletian (xvi. 38), where the plumarius works at stuffs already woven, obviously embroidering them by hand. The work is mentioned first by Varro (*ap.* Non. p. 162, 27): it was often, though not necessarily, in gold thread, as "pars auro plumata" (Lucan, *Phars.* x. 125; cf. Procop. *Just.* iii. 1, p. 53). The plumarii (ποικιλτὴς ὃν λέγομεν πλουμάριον, Schol. *ad* Aeschin. *Tim.* § 97) are mentioned in many inscriptions (*C. I. L.* vi. 9813, &c.). (Marquardt, *Privatleben*, p. 538; Blümner, *Technologie*, vol. i. p. 210; Becker-Göll, *Charikles*, vol. ii. p. 338.) [W. S.] . [G. E. M.]

PLUMBUM ALBUM, PLUMBUM NIGRUM. [Metallum, p. 168 *a.*]

PLU'TEUS signified in general any kind of upright, unroofed protection or shelter, and was hence used in the following special significations. 1. A fixed breastwork, whether of planking or of wicker work, and sometimes covered with hides to prevent it from catching fire. These breastworks, *mantlets*, or *blinds* were used to shelter combatants *on board ship* (= παραρρύματα), Caes. *Bell. Civ.* iii. 24: *on towers*, where they sheltered the soldiers in the various *tabulata*, or stories, the battlements or shelter on the top being, strictly, *pinnae* (Caes. *B. G.* vii. 25): *on ramparts*, as in Caes. *B. G.* vii. 41 and 72. In the latter passage the plutei include the whole breastwork of loricae and pinnae and the vallum behind them, the whole shelter in fact placed on the agger, and the *commissurae pluteorum* are the points where this work of wood and wattles rose from the earthen agger. 2. A movable shelter for the besiegers, distinguished from the *vineae* and *musculi* by being unroofed (Liv. xxi. 61, xxxiv. 17; Fest. *s. v.*; Ammian. xxi. 11; Isid. *Or.* xviii. 18). It is particularly described in Veget. iv. 15, as being semicircular (in the form of an apse), of wicker work covered with hides, and with three wheels, one in the forepart or middle of the curve, and two at the extremities: it was thus rolled towards the walls, the working party advancing under its cover (cf. Marquardt, *Staatsverw.* ii. 530). 3. The board at the side of a bed [LECTUS, p. 18]. 4. Some kind of shelf for holding busts and other ornaments (Juv. ii. 7), or books (Sidon. Apoll. *Ep.* ii. 9): it probably had a high ledge to prevent the article placed there from falling off, and so gained its name. Some refer the "*pluteum* caedit" of Pers. i. 106 to a bookshelf or a desk, but it is probably merely the ordinary pluteus of the reading couch [LECTUS, p. 19]. 5. A low wall like a breastwork, closing up spaces between columns (Vitruv. iv. 4). [W. S.] [G. E. M.]

PLYNTE'RIA (*πλυντήρια*), a festival celebrated at Athens in the month Thargelion, in honour of Athena (Phot. *s. v.* Καλλυντήρια: Plut. *Alcib.* 34; Harpocr., Suid. *s. v.*). Dodwell (*de Cyclis*, p. 349) gives the 22nd of the month as the day: A. Mommsen, with more probability, takes the *ἕκτῃ φθίνοντος* of Plutarch to mean that the 25th was the great day of a festival which lasted several days, probably from the 21st to the 25th, as the 20th was the torch-race of Bendis. (He conjectures a date about three weeks earlier, at the rising of the Pleiads, for the prehistoric Plynteria, as a festival for the beginning of the corn harvest: *Heort.* p. 11.) The festival, traditionally connected with the death of Agraulos, who had during her life performed these duties for the goddess, was really a rite partly of purification, partly of expiation, at the beginning of the harvest, to propitiate the favour of the goddess. The temple (Erechtheum) was shut off by a rope (Poll. viii. 141, *περισχοινίσαι*), to guard it from profane entrance; the sacred image of Athena Polias (*τὸ παλαιὸν βρέτας* or *ἄγαλμα, τὸ ἀρχαῖον ἕδος*, Müller, *Eum.* p. 171) was stripped, the *πραξιεργίδαι* taking off the helmet and spear (Hesych. *s. v.*), and the two female attendants called *λουτρίδες* or *πλυντρίδες* (Phot.) removing the dress (*πέπλος*), which it was their duty to wash, and covering over the statue in the meantime (cf. Plut. *Alcib.* 34, where the *πραξιεργίδαι* have the general direction of the whole ceremony). The image itself was bathed,—some think within the Erechtheum, others at the fountain of Callirrhoe—but against this we have the statements of Suidas (*s. v. νομοφύλακες*), who says that the nomophylaces arranged the procession *ὅτε κομίζοιτο τὸ ξόανον ἐπὶ τὴν θάλασσαν*, of Xenophon (*Hell.* i. 4, 12), and of an inscription (*Ephem.* 4098) cited by Mommsen, which gives Phalerum as the place. The statue and the clothes were taken in a chariot attended by the priests and priestesses and followed by *ephebi* and the general crowd: late in the evening it was brought back by torchlight. In the procession strings of figs were carried (*παλάθη ἡγητηρία* or *ἡγητορία*), which may merely symbolise fruitfulness, or may, as Mommsen thinks, have also a more mystical reference to an ancient sacrifice of maidens to Athena, as in the Thargelia the victims were garlanded with figs. The pedestal of the image was washed by a *κατανίπτης* (*Etym. Mag.*). We hear also of a *πλυντήρια* at Paros (*C. I.* 2265); and we may compare also the Argive *λουτρὰ Παλλάδος* in the Inachus, described by Callimachus, and the later Roman ceremony of the Megalesia. The day of the procession at Athens was one of the *ἡμέραι ἀποφράδες* (*dies nefasti*), on which no legal business could be done, as though the city were on that day without its protecting deity. (A. Mommsen, *Heort.* 436 f.; Preller, *Gr. Myth.* i. 166.) [L. S.] [G. E. M.]

PNYX. [ECCLESIA.]

PO'CULUM. [CALIX.]

PO'DIUM is the name given to the continuous base that forms the lower part of a wall or building. Thus it is used for the side of the substructure on which a temple is raised (Vitruv. iii. 3), for the marble panelling or "dado" round the lower part of a wall (Vitruv. vii. 4; Plin. *Ep.* v. 6, 22), for the lower part of the scena-wall in a theatre, on which columns rested (Vitruv. v. 7), or for the wall surrounding the arena in an amphitheatre, and forming a basis for the seats of the spectators [AMPHITHEATRUM]. [E. A. G.]

POENA. The original sense of this word, which is derived from the Greek *ποινή* (Curtius, *Gr. Etym.* No. 373), seems to have been composition paid by a delinquent to the party injured by him, or to his kinsmen, in order to escape vengeance (Dig. 50, 16, 131 pr., "poena est noxae vindicta;" cf. the expressions "poenas solvere, pendere"). (Rubino, *Untersuchungen über röm. Verfassung*, p. 460; Ihering, *Geist. d. R. R.* i. 126.) When crimes came to be visited with punishment by the state, the word *poena* meant a penalty or punishment threatened by the law on account of offences, whether such penalty was exacted at the suit of the injured party, as in the case of theft, or was a consequence of a judicium publicum.

The conception of poena differs from that of *multa*, as Ulpian exclaims in a well-known passage of the Digest (Dig. 50, 16, 131, § 1). *Multa* or *mulcta* was a pecuniary penalty ("cujus animadversio hodie pecuniaria est"), though by the law of the Twelve Tables it had been pecuaria or a certain number of oxen and sheep. (Plin. *H. N.* xviii. § 12; Festus, s. vv. *Multam, Peculatus.*) It was one of the modes of punishment by which the higher magistrates enforced their supreme executive authority, but the right of imposing a multa on offenders was extended to inferior magistrates, and in Ulpian's time belonged to every person who was invested with judicial power in civil or administrative matters, such as municipal magistrates and praesides provinciarum ("item multam is dicere potest, cui judicatio data est"). A multa was imposed according to the discretion of the magistrate, and its amount was determined by the pleasure of him who imposed it, unless a maximum amount was fixed by law. On the other hand, a poena was only inflicted when it was imposed by some lex or some other legal authority (*quo alio jure*). (Cf. Paulus in Dig. 50, 16, 244 (Labeo): "Si qua poena est, multa est; si qua multa est, poena est." (Paulus): "Utrumque eorum falsum est; namque harum rerum dissimilitudo ex hoc quoque apparet, quod de poena provocatio non est. Ex hoc quoque earum rerum dissimilitudo apparere poterit, quia poenae certae singulorum peccatorum sunt, multae contra, quia ejus judicis potestas est, quantum dicat, nisi cum lege est constitutum quantum dicat.") A poena was not necessarily pecuniary, but might affect a person's caput and existimatio. Cicero enumerates the following kinds of poenae, viz. *damnum*, *vincula*, *verbera*, *talio*, *ignominia*, *exilium*, *mors*, and *servitus* (Cic. *de Leg. Aug. C. D.* xxi. 12; *de Or.* i. 43, 194; *de Off.* iii. 5, 23; *pro Caec.* 34, 100). A poena might be inflicted by any one whose function it was to take cognisance of crimes. When no poena was imposed, then a multa might be the punishment. [G. L.] [E. A. W.]

POLEMARCHUS (*πολέμαρχος*). There is probably no official title which was more widely diffused in Greece than that of Polemarchus. It is known at Athens as the name of the third archon [ARCHON], among the Dorians of Sparta, the Aeolian peoples of Thessaly and Boeotia, in Aetolia, Arcadia, and Euboea. It does not appear to have existed (at least, we have no evidence as yet) in any of the cities of Magna Graecia on the one hand, or in those of Asia Minor on the other; in other words, the title does not seem to have struck root in colonies. As its name implies, it originally meant a leader in war (cf. *πολέμαρχος Ἀχαιῶν*, Aesch. *Cho.* 1072); and, as we shall see, probably was an offshoot of the office of the king in his capacity of commander-in-chief of the forces of the state. Everywhere alike we see its original military character continuing to attach itself to the office, for we find the polemarchs either holding actual commands in war, or superintending the military organisation and defence of the state in time of peace. As the polemarch at Athens was the survival of the military side of the ancient kingly office, so we find at Sparta the polemarchs playing an important part in its organisation. When we first hear of them, they appear as forming the immediate military staff of the king. They have no particular body of men under them; for the *λόχος* is under its *λοχαγός*. But in cases where a force took the field, of which the king in person did not hold the command, one of the polemarchs was appointed to lead it in his place. Thus the Spartan force sent to Tempe before the advance of Xerxes was commanded by Evaenetus, one of the polemarchs (*ἐστρατήγεε δὲ τῶν Λακεδαιμονίων Εὐαίνετος ὁ Καρήνου, ἐκ τῶν πολεμάρχων ἀραιρημένος, γένεος μέντοι ἐὼν οὐ τοῦ βασιληΐου*, Herod. vii. 173). From this passage we may likewise infer that it was not usual to appoint any of the polemarchs to such a command unless they were of the blood royal, and at the same time that, whilst the polemarchs were usually members of the kingly house, they were not necessarily so. It was natural that, when the duties of the kings as commanders-in-chief increased, they would find it necessary to have lieutenants or adjutants to aid in organising the forces, and for such important duties they would naturally employ persons connected with themselves by the close tie of clanship. The polemarchs continued in this position until the reorganisation of the Spartan army into six *morae* in 404 B.C. Thus Thucydides (v. 66), when describing the organisation of the Spartan army when in the field, says that the supreme command was vested in the king if he was with the troops; the king gave the necessary orders to the polemarchs, and they in turn gave them to the *lochagi*. Thus they evidently came next to the king, and were superior to the *lochagi*, over whom they were placed to command *lochi* on important occasions. Thus, at the battle of Mantinea (418 B.C.), we find two polemarchs in command of two *lochi*, doubtless detailed by king Agis for this special occasion (Thuc. v. 71). From this occasional supersession of the *λοχαγοί* by the polemarchs, the change to the new organisation (in 404 B.C.) is the natural step, when the polemarchs are now made the regular commanders of the new *morae* (six in number), each *mora* containing two *lochi* under *lochagi*. Thus we find the polemarch Praxitas with his *mora* garrisoning Sicyon (Xen. *Hell.* iv. 4, 7). Xenophon (*Resp. Lac.* 12, 6) speaks of a *πρῶτος πολέμαρχος*, who may possibly be the same officer whom he calls (*op. cit.* 13, 7) *πρεσβύτατος τῶν περὶ δαμοσίαν*. That they formed part of the damosia, or king's body-guard, we may perhaps infer from Xen. *Hell.* vi. 4, 14.

The polemarch was assisted by officers called *συμφορεῖς* (Xen. *l. c.*) When not in active service, the polemarchs had to superintend the Phiditia or public messes at home. We infer from Xenophon (*Resp. Lac.* 13, 6) that they were six in number under the organisation which existed in his time, as there was one for each *mora*. As the Spartans of the same *lochi* messed together, we may infer that the polemarch exercised a general control over the commissariat of the men who formed his own *mora*. In the various cities of Boeotia the office of polemarch was universal. There were usually three in number, though in some cases two only appear. For instance, at Thebes, at the time when Phoebidas the Spartan general got possession of the Cadmeia (482 B.C.) by the aid of Leontiades, one of the polemarchs, Xenophon speaks as if there were only two (*πολεμαρχοῦντες μὲν ἐτύγχανον Ἰσμηνίας τε καὶ Λεοντιάδης, διάφοροι δὲ ἀλλήλοις καὶ ἀρχηγὸς ἑκάτερος τῶν ἑταιριῶν*, *Hell.* v. 2, 25).

We can infer from Xenophon (*Hell.* v. 4, 30) that the polemarchs had the control of the military organisation, having under them the *λοχαγοί*, who commanded the *λόχοι*, into which, as we know from Thucydides (iv. 91), the army was divided. The *πολέμαρχος* had a secretary (*γραμματεύς*, *ὁ γραμματίδδων*, Xen. *Hell.* v. 4, 2; Plut. *Pelop.* 7; Larfeld, *Inscript.* 169). At Thebes the polemarchs had the power of arresting any one who had done an act worthy of death (Xen. *Hell.* v. 2, 30). We know of the existence of *πολέμαρχοι* at Thespiae from Plutarch (*Demetr.* 39), and from an inscription (*Bullet.* viii. 413). At Acraephium there were three *πολεμαρχίοντες* and their *γραμματίδδων* (Larfeld, 184), and a similar board at Hyettus (Id. 144); at Copae (Id. 170), where there were only two in number; at Orchomenus (Id. 13, 17, 18, 21, 22); and at Chaeronea (*Mittheil.* viii. 355). They seemed to have had certain financial duties at Orchomenus, and to have presided in the popular assembly. They commanded the contingents from their several towns, being under the control of the boeotarchs, who were the highest officers of the League.

There were also polemarchs at Aegisthena and Megara, at the latter place probably representing the *στραταγοὶ* of an earlier date. We likewise find three *πολέμαρχοι* at Eretria in Euboea (*C. I. G.* 2144). In Thessaly the League (*τὸ κοινὸν τῶν Θετταλῶν*) consisted of four ancient divisions called *τετράδες*. Each *τετρὰς* had its polemarch, who with the *πέζαρχοι* under him commanded the contingent of infantry which his *τετρὰς* contributed to the army of the League. We may infer the existence of the office of polemarch (or polemarchs) at Phlius from the existence in that city of a *πολεμάρχειος στοά* (Müller, *Fragm. H. G.* iii. 133). The office also existed at Phigalia (*τὸ πολεμάρχειον*, Polyb. iv. 79), at Mantinea (Thuc. v. 47), and at Cynaetha, where their functions were described by Polybius (iv. 189): *κλείειν τὰς πύλας καὶ τὸν μεταξὺ χρόνον κυριεύειν τῶν κλείδων, ποιεῖσθαι δὲ καὶ τὸ καθ' ἡμέραν τὴν δίαιταν ἐπὶ τῶν πυλώνων*). In the days of the Achaean League there were still *πολέμαρχοι* at Dyme, whilst there is also evidence for the office at Thuria in Messenia. That there was a polemarch in the island of Paros, we know from inscriptions (*C. I. G.* 2374, 2379).

Finally, the office seems to have existed both in Ambracia (*C. I. G.* 1797) and in Aetolia (Polyb. iv. 79). As in many of these places above specified we find mention likewise of an archon, we may, on the whole, infer that the duties of the polemarchi corresponded very closely to those of the strategi at Athens, and, in fact, we saw that at Megara they were called *στραταγοὶ* at an earlier period. [W. Ri.]

POLENTA. [Puls.]

POLE'TAE (*πωληταί*). The poletae at Athens were a board of ten officials or magistrates which formed one of the departments of the Treasury. They were chosen by lot, one from each tribe (Harpocration, *s. v.* *πωληταί*). They were under the supervision of the Boule of Five Hundred, and its ratification was required to give validity to their proceedings. It was their duty to let out to farmers by a kind of auction the revenues arising from all tolls, customs, and taxes; to let on lease public lands, and plots of ground for mining purposes at Laurium. They superintended the Architecton in giving out the contracts for works to be done for the state, such as the building and repairing of the walls (*C. I. A.* ii. 167). They likewise put up to public sale the property of public debtors who had failed to discharge their obligations to the state within the appointed time, and of those who were in arrears with their income-tax (*εἰσφορά*), as well as the property and persons of such aliens who had been convicted on a *γραφὴ ξενίας* of usurping the rights of citizenship, and of metoeci, who had been convicted on a charge of not having enrolled themselves under a *προστάτης* (*γραφὴ ἀπροστασίου*), or on a charge of having failed to perform their obligations to their *προστάτης* (*γραφὴ ἀποστασίου*), and for not having paid the resident alien tax of 12 drachms (*τὸ μετοίκιον*). [Metoeci.] They likewise put up for sale all property confiscated (*δημιόπρατα, δημευόμενα*). They had also the duty of setting up public inscriptions (*στῆλαι*, *C. I. A.* i. 61), and under the direction of the Archon Eponymus, who supervised the property of orphans, let out on leases the property of minors. They elected a president (*πρύτανις*); and their office, where they put up for auction the various kinds of property, was called *τὸ πωλητήριον* (cf. [Dem.] c. *Aristog.* 787, § 57, *τῷ πωλητήριον τοῦ μετοικίου*).

We find the office of *πωλητὴς* in other parts of Greece, as, for instance, at Halicarnassus (*Bullet.* v. 212), where there seems to have been but a single poletes instead of a board; whilst at Cos we find on an inscription a board of poletae letting out the contract for the setting up of a proxenia-decree on a pillar (Cauer,[2] 160), and a similar board of poletae giving out a contract for the engraving of a similar pillar accords to the agreement drawn up by the Architecton (Cauer,[2] 181). Finally, we find at Epidamnus, the colony of Corcyra, a functionary called poletes, elected annually. Plutarch (*Quaest. Gr.* 29) says that the Epidamnians being neighbours of the Illyrians, and finding that their citizens became corrupted in their trading with the barbarians, elected a poletes through whom all bargains and barterings were carried out. [W. Ri.]

POLITEIA, POLI'TES (*πολιτεία, πολίτης*). [Civitas.]

POLITOPHY'LACES. [Tagus.]

POLLICITA'TIO. [Obligationes.]

POLLINCTOR. [Funus.]

POLUS (*πόλος*), a word of various meanings, all however connected in some way with a sphere of revolution, the root of the word being the same which appears in *πολέω* and *πέλομαι*, which implies motion, especially motion round a centre. It is only the scientific meanings which will here be noticed, of which the best known is that which has reference to astronomy; the other, much rarer and derived from the former, referring to a part of the sun-dial [Horologium]. In astronomy, again, by far the most common meaning of *polus* or *πόλος* is the heavenly sphere or spheres, or vault of the sky, originally conceived of as solid: thus in the earliest passage in which *πόλος* occurs (Aesch. *Prom.* 427) Atlas is represented as supporting this sphere on his shoulders. Probably the word was not very ancient in the time of Aeschylus, for in Aristophanes (*Av.* 179–182) there is a formal explanation of it, and it is in his contemporary, Euripides, that it first becomes frequent (*Orest.* 1685; *Ion*, 1154, &c.). The account of the heaven accepted among Greek philosophers generally (though with variations) represented it as formed of concentric spheres, the outside sphere being that which contained the fixed stars, while the inner spheres, each having its own proper motion, contained the sun, moon, and five principal planets (which alone are visible to the naked eye). See Plato, *Timaeus*, p. 38, and the second book of Aristotle, *de Caelo;* in which book, especially in the latter half, are to be found acute observations, mixed with obscure reasonings. But it is to be remarked that both in *Timaeus*, 40 B, and *de Caelo*, ii. 14, *πόλος* is used, not for the entire heaven, but for the axis of heaven and earth, around which the whole revolved. Again, in the *de Caelo*, ii. 2, the *πόλοι* are the poles, north and south, in our sense of the word; and the same meaning is common in Latin, when the entire heaven is not intended (Plin. *H. N.* ii. § 63). Another meaning altogether, the *orbit* of a star, is found in [Plat.] *Epin.* 986 C. (Cf. [Plat.] *Axioch.* p. 371 B; Alex. *ap.* Athen. p. 60 a; Ukert, *Geog. d. Griech. u. Röm.* vol. i. pt. ii. p. 115: and for the conception of heaven among the Greeks, Whewell, *Hist. of the Inductive Sciences*, vol. i. pp. 153 *sqq.*; Cornewall Lewis, *Astronomy of the Ancients*, which moreover takes notice of the point next to be mentioned.)

Connected with the most common astronomical meaning of πόλος, the revolving heavenly sphere, is the use of the word to mean a dial. The first scientific attempt to mark the time of day with exactitude was by constructing a hollow hemisphere, so placed as to catch the sun's rays on its interior surface, the axis of the hemisphere being parallel to the polar axis of the heavens. Then on this interior surface the path of the sun was marked by means of the shadow of a bead fixed on the axis of the hemisphere, or (which comes to the same thing) by the extremity of an index (γνώμων) reaching to the same point. The simple index or γνώμων, in the sense of an upright rod, had no doubt been used from very early times as a means of roughly measuring the time of day, by the length and direction of the shadows. But when to the γνώμων was added the above-described hemisphere, or πόλος as it was naturally called, from its being the counterpart of the heavenly πόλος, the result was a scientific sun-dial. Herodotus (ii. 109) uses the two words, πόλον καὶ γνώμονα, together, to describe the compound instrument, and he tells us, no doubt correctly, that the Greeks derived it from the Babylonians. (See Ideler, *Handbuch der Chronologie*, vol. i. p. 233, referred to by Grote, vol. ii. p. 155, in editions after the first; also Bahr's note on Herodotus *ad loc.*, with his references to Bailly, Delambre, Letronne, and Creuzer.) Vitruvius (ix. 9) tells us that this form of sun-dial (*hemicyclium*) was invented by Berosus, who lived at Babylon at the end of the fourth, and during the first part of the third, century B.C. But this, considering the passage in Herodotus, can hardly be correct; though Berosus may no doubt have improved the instrument, and his bust is represented on the base of a dial found at Palestrina. Besides Herodotus, Aristophanes mentions the πόλος in a fragment of the Gerytades, where it clearly means a sun-dial, and is explained as such (ὡρολόγιον) by Pollux (ix. 46), to whom we owe the fragment. Lucian (*Lexiphan.* 4) speaks of the γνώμων as overshadowing the middle of the πόλος, which shows clearly the relation between the two. (See also Alciphron, *Ep.* iii. 4.) Some interesting remarks on ancient sun-dials, with pictures in which the πόλος and its hour-lines are well illustrated, and another of a different make of dial, will be found in Mrs. Alfred Gatty's *Book of Sun-dials* (London, 1889), pp. 1-13, 391-404. [P. S.] [J. R. M.]

POLY'MITA. [TELA.]

POME'RIUM or POMOE'RIUM. As regards the spelling of the word, the latter, which accords more nearly with the etymology, is retained by Madvig, but most modern authorities have agreed that *pomerium* is the more correct (see Mommsen in *Hermes*, x. 40). The pomerium was a space left vacant on the inner side of a city wall (*post-moerium*): it did not, however, necessarily run parallel with the line of fortification; where it did not do so, and preserved only a religious significance, it was marked by a line of stone pillars (*cippi pomerii*, Varro, *L. L.* v. 143; *lapides*, Tac. *Ann.* xii. 24), which indeed, no doubt, were placed at intervals over its whole course. The original pomeria, it may be conjectured, followed the original ring-walls of associated bodies of citizens: hence if by conquest or federation new citizens were brought in and a larger *urbs* became necessary, the ring-wall, and with it the pomerium, was enlarged. It is probable that the first intention was to leave a clear space immediately within the walls for military reasons, that the defenders might have freedom of movement: and that what had become an invariable custom in the builders of walled cities, became a religion. The custom was common to Latins and Etruscans, and a town in the earliest times was founded as follows:—a bullock and a heifer were yoked to a plough, and a furrow was drawn round the place which was to be occupied by the new town, in such a way that the clods fell inwards: the furrow marked the ditch, the mound the ring-wall within it, and within that again was a certain space called the pomerium, its width marked by *cippi*, upon which no buildings could be erected. It is true that Livy (i. 44) states the pomerium to have been a space left vacant *both within and without* the wall; but Mommsen has shown good reason for rejecting this view, which rests on Livy alone, and for imagining that author to have been misled about a point of antiquarian knowledge (Mommsen in *Hermes*, x. 40; *Röm. Forschung.* ii. 23; *Staatsrecht*, i.^{2} 63). The language of Varro, "qui (orbis) *quia erat post murum*," &c., is decidedly against Livy's view; and so is the "per totius urbis circuitum pone muros" of Gellius, xiii. 14: the word itself can be only naturally explained on the theory that it was something "behind" the walls, *i.e.* protected by them (with which postliminium is probably to be compared); and moreover the fact that the Aventine, though within the Servian walls, remained outside the pomerium, can hardly allow us to conceive the pomerium as on the outer side of the fortifications.

Whatever may have been its first intention, the aspect in which the pomerium comes before us is its religious aspect. The space within it was called *ager effatus*, so named, according to Varro, vi. 53, "because the augurs have declared thereby where the limit for urban auspices should be in the direction of the fields without the city" (such is Mommsen's rendering), *i.e.* beyond what point the auspices would no longer be *urbana auspicia* (cf. Gell. xiii. 14; Varro, v. 143). The distinction is seen in the auspices for Comitia Curiata being within the pomerium, those for Comitia Centuriata outside, because this in its origin was a military levy: the general starting for a campaign must take them within the pomerium, but the bellica auspicia *after* his imperium began must be taken outside, in the camp, on the field of battle, &c. Crossing the pomerium did away with the effect of the military auspices; hence, if he came back to Rome, he must take the urbana auspicia over again for his return, and the bellica auspicia after he reached his army. This explains the obscure expression in Tac. *Ann.* iii. 19 (see Mommsen, *Staatsrecht*, i.^{2} 99; AUSPICIA). The pomerium then included in its circle the dwellings of the urbs proper, but practically Rome soon went further, and was expressed technically by "urbs et urbi continentia aedificia."

The *antiquissimum pomerium.*—This ran within the old walls of the Palatine city, taking therefore a somewhat square form, and Mommsen is of opinion that this shape belonging to the templum was to some extent preserved in the subsequent pomeria, from their connexion with auspices; so that, when the Servian walls became more circular, the *cippi* left wider spaces here and there, even excluding great portions (such as the Aventine), and gave a more rectangular shape to the ager effatus. Tacitus (*Ann.* xii. 24) describes the pomerium of Romulus by four points—Ara Maxima, Ara Consi, Curiae veteres, and Sacellum Larium: the first three seem to mark the S.E., S.W., and N.E. corners of the Palatine (O. Richter). There is some difficulty in the "sulcus" including the Ara Maxima which seems to be outside the actual walls of the Palatine city; and it is also strange that if Servius extended the pomerium, he left the old cippi standing. Mommsen inclines to the opinion in Jordan, *Top.* ii. 26, that the cippi which Tacitus describes were placed later, to show the boundaries used for the lustration of the Palatine [LUPERCALIA]. Of the Servian cippi we have neither remains nor record, except that they did not include the Aventine, though his walls did: Gellius (xiii. 14) says that Remus made the Aventine unlucky for auspices: Varro (v. 43), that on this hill stood the temple of Diana common to Latins and Romans: Mommsen's theory, mentioned above, suggests another cause.

Enlargement of the Pomerium.—The *jus proferendi pomerii* belonged to the king who had added territory to Rome, and, even if this passed theoretically to dictator or consuls who "auxerunt fines imperii," it was never exercised after Servius until the dictatorship of Sulla (Dionys. iv. 13; cf. Liv. i. 44). It is true that some Latin writers speak as if we might expect it after any conquest (Sen. *de brev. vit.* 3; Tac. *Ann.* xii. 23; Gell. xiii. 14): but Tacitus himself in the next chapter mentions Sulla as the only conqueror under the Republic who did so. What his extension was, we do not know. Caesar professed to follow his example (Cic. *ad Att.* xiii. 20), but, if we believe Tacitus, did not do so, prevented perhaps by death. Detlefsen (*Hermes*, xxi. 513) takes Gell. *l. c.* and Dio Cass. xliii. 50, xliv. 49, to show that he carried out his proposal: see, however, on the other side, Mommsen, *Staatsrecht*, ii.^{3} 738. The same writer (ii.^{3} 1072) gives good reasons for holding that Augustus did not enlarge the pomerium: if so, it may have been from reluctance to assume the *kingly* state; and so he instead constituted the fourteen regions. Of the emperors:—1. Claudius, after adding Britain and Commagene to the Empire, proceeded to enlarge the pomerium, including within it the Aventine, probably with a view of determining afresh the *templum* of the city (cf. Hulsen in *Hermes*, xxii. 615). Four of his cippi have been discovered (*C. I. L.* vi. 1231): they seem to bring his line nearly up to Mons Testaceus, to the inner border of the Campus Martius, and to the Porta Salaria. An inscription gives his claim "auctis populi Romani finibus pomerium ampliavit terminavitque." 2. Nero (Vopisc. *Aurel.* 21). 3. Vespasian and Titus, two of whose stones have been found with a similar inscription and numbered xxxi. and xlvii., one beyond the Pincian gate, the other near the Porta Ostiensis (*C. I. L.* vi. 1232). Hadrian did not extend the pomerium, but only marked it afresh (*C. I. L.* vi. 1233); one of his cippi was found not far from that of Claudius on the edge of the Campus Martius, and another near the Pantheon: it would appear that the Campus Martius was, at least till after Hadrian, outside the pomerium. The inscription tells us that the limits of a pomerium were arranged by the college of augurs, which agrees with Cic. *de Div.* ii. 35, 75. It will be seen that these extended pomeria, from Claudius onwards, were an ideal unwalled city; their limits were in some places beyond even the site of the later Aurelian walls, though in others considerably short of it. (Jordan, *Topog.* i. 323 ff.; Mommsen in *Hermes*, x. 40 ff.; *Röm. Forsch.* ii. 23 ff.; *Staatsrecht*, ll. cc.; O. Richter in Baumeister, *Denkmäler*, s. v. *Rom.*) [L. S.] [G. E. M.]

PO'NDERA (σταθμοί). In recent years the subject of Greek and Roman weights has received much attention, especially in connexion with the history of the coinage; and the researches of Boeckh, Hultsch, Mommsen, and Brandis have thrown light over what was before their time a most obscure field. The method of these inquirers, especially that of the two latter, has been scientific induction. In the ancient world coins were always struck on one or another of the weight-standards in use for commercial purposes, and in Greece the stater of gold or silver always bore a simple and definite relation to the talent and mina in use in the state where they were struck. In Rome the as was originally merely a pound of copper. Thus it is by weighing great quantities of coins that we are enabled to recover the weights in use in Greece and Italy, and trace the historical succession and the derivation of the various standards. When we have thus reached definite results, we can turn to the works of ancient writers on metrology with better hope of understanding them.

Weights of Babylon.—It is known from the testimony of cuneiform inscriptions that at a very remote period the people of that city developed an elaborate and scientific system of numerical notation, and applied it to the reckoning of time, of weights, and of measures. The basis of this system of notation was neither decimal nor duodecimal, but sexagesimal; that is to say, the first figure in the line represented units, the second sixties, the third 60 × 60, three thousand six hundreds, and so forth. The convenience of this system will be clear if we consider that sixty is divisible by both ten and twelve.

Of the sexagesimal division introduced by the Babylonians into the reckoning of time, traces remain to our own day: still sixty seconds make a minute and sixty minutes an hour. We also inherit from the Babylonians the division of a foot into twelve inches. This system of division was used by the Babylonians, and after them by the Greeks in the case of weights.

For the verification of Babylonic standards, we are not left to conjecture. Mr. Layard brought from the ruins of Nineveh a number of weights, some in the shape of a lion and some in that of a goose or duck. These weights bear upon them complete and satisfactory legends, stating what they are, partly written in the cuneiform character, and partly in the Aramaic character which was commonly used in Asia Minor at the time of the Assyrian dominion. The name of the king in whose reign they were made is added, so that our information regarding them is of the most definite character.

A detailed account of these weights is given by Mr. E. Norris in the *Journal of the Royal Asiatic Society*, vol. xvi., by Dr. Brandis (pp. 43 *sqq.*), and in the ninth *Report of the Warden of the Standards*. The facts established by them may be briefly put. They show that under the Assyrian Empire there were in use in Mesopotamia, Syria, and Asia Minor two principal standards of weight. The minas of these two standards were related one to the other in the proportion of 2 to 1. The mina of the heavier standard weighed about 1010 grammes or 15,600 grains troy; the mina of the lighter standard, 505 grammes or 7,800 grains. Whether the two standards had different origins, or represent only a different mode of calculation, is obscure.

It can scarcely be a coincidence that the sixtieth parts of these two minae, the heavier sixtieth weighing 260 grains (16·8 grammes) and the lighter weighing 130 grains (8·4 grammes), were the weights according to which many of the earliest gold coins of Asia Minor were struck. This fact seems to prove that the weights in question had long been in use in that district for the precious metals, before coins were invented. According to the view of Brandis, accepted by Mr. Head, the heavier sixtieth was the accepted unit in Phoenicia; whereas the lighter travelled overland to Lydia, and thence reached the Greek colonies of the coast of Asia Minor.

On the ground of Homer's mention of the talent, which mention proves at any rate that fixed standards of weight for gold and other metals were in his time current, Mr. Ridgeway has maintained (*Journal of Hellenic Studies*, viii. 133) that by the Greeks, even in the Homeric age, gold bars of the weight of 130 grains were regarded as the equivalent of an ox, and gold bars of 260 grains as the equivalent of a yoke of oxen. But granting the probability of the fact, it seems most likely that the Greeks did not arrive at the gold bar of 130 grains by an empirical process, but derived it directly from some metrological system in force among their neighbours, and perhaps arbitrarily regarded it as equivalent to an ox under ordinary circumstances. If either gold or oxen became abnormally scarce, of course the equation would no longer hold good.

From the gold shekel of 130 or 260 grains, whencesoever the weight was derived, the peoples of Asia Minor and of Syria seem to have formed metrological systems. By multiplying by 50, they formed minae of 6,500 and of 13,000 grains, and from these minae again talents of sixty times those weights. All this appears to have taken place before coins were in use, while the currency of the precious metals consisted only of bars or rings.

It is clear that in the circulation of the precious metals two plans might be adopted. Either bars both of gold and of silver might be current of the weight of the shekel, which would exchange against one another at any time or place according to the proportion between the value of silver and that of gold; or else different standards of weight might be adopted for the two metals, and bars of gold and of silver issued of such weight that a round number of the silver bars would exchange for one of the gold. In point of fact, both these courses were adopted at various periods in the countries of Western Asia and Europe.

In his list of the Persian tribute (iii. 89 *sqq.*), Herodotus reckons the proportionate value of gold to silver as 13 to 1. This proportion seems to have been fixed by custom, and not to have changed during the Assyrian and Persian empires. Mommsen and Brandis, however, agree that the relation would be more exactly expressed by the figures 13⅓:1 or 40:3. In practice the rule of Herodotus might be maintained in small transactions, but there seem to be grounds for holding that in dealing with large sums the fraction was taken into account. Had the fixed proportion been 12:1 or 10:1, bars of gold and silver of the same weight would have exchanged conveniently one against the other. Indeed, in Greece at various periods, this did take place. But the awkwardness of the relation 13 or 13⅓ to 1 necessitated in Asia the adoption of a different standard for silver, in order that a round number of the current bars of silver should exchange for one of gold.

According to the theory of Brandis the Phoenician standard for silver, which was certainly in use from early times to late times, was formed on this principle from bars of gold weighing 260 grains. Multiply 260 by 13⅓, and we get the weight of the silver equivalent of this unit, 3466 grains. Dividing this again by 15, we get a convenient bar of silver of the weight of 231 or 230 grains of the value of the fifteenth part of a gold shekel. Thus four gold shekels would be equivalent to 60 bars of silver formed on this new unit. We have reason to believe that the silver currency in Syria and Phoenicia before the invention of coining was, in accordance with the standard afterwards followed in the earliest coins, composed of bars of metal of about 230 grains each, of which fifteen went to a gold shekel.

In Asia Minor and Lydia the ordinary unit of value in gold weighed but half this amount, 130 grains. Its silver equivalent was 1720 or 1730 grains. This sum was represented in the currency by ten bars of about 172 grains each, which would together be equal in value to a bar in gold. From this new silver unit, 172 grains, were formed, by multiplying by 50, a mina of about 8,600 grains and a talent of 516,000 grains, which were known among the Greeks as the Babylonian silver talent and mina. Dr. Brandis tries to show that these were in use in Mesopotamia as early as the 16th century before our era. In any case, it is clear from the testimony of Herodotus that they were in use in Persia for estimating the tribute paid in silver by subject nations. The passage, indeed, in which Herodotus sums this tribute (iii. 89) is perplexing, and certainly corrupt, since his totals do not represent the sum of his items. As the passage stands, the Babylonian talent is said to be equivalent to 70 Euboic minae. But Mommsen, by an emendation universally accepted (*Röm. Münzwesen*, p. 22), alters the figures to 78, so making Herodotus consistent. 78 Euboic minae give a weight nearly equal to that above attributed to the Babylonic silver talent.

In Egypt, in early times, the weights used were the *kat* and the *outen* or *ten*, which was its tenfold. Various metrologists have given different values of the kat; and as existing Egyptian weights vary considerably in force, no accurate determination is possible. The generally received values are, for the kat about 9 grammes or 140 grains, and for the ten 90 grammes or 1400 grains. Various attempts have been made to derive from these Egyptian weights those current in historical times in Greece. And in fact the smallness of the difference between the kat and the lighter shekel of Babylon seems to indicate that they had either a common or a parallel origin. We cannot, however, prove that Egyptian weights were used out of Egypt, while the Aramaic inscriptions on the Assyrian weights prove that they were in use in countries where the Aramaic writing was used; that is to say, in Asia Minor or N. Syria. Brandis also has argued that when certain weights of precious metal are recorded in Egyptian inscriptions as paid by way of tribute by the peoples of Syria, the sum, though expressed in Egyptian weights, almost always consists of a round number of Babylonish shekels. So far therefore as research has at present gone, it would seem that the monetary systems of Syria, Asia Minor, Greece, and Italy were derived rather from Babylon than from Egypt.

* Brandis (p. 103) reckons the Phoenician talent at 43,650 grammes, remarking that the Phoenician standards were somewhat debased from those of Babylon; but as a matter of fact the coins struck on the Phoenician standard often weigh for the shekel 230 grains.

The silver talent in use among the Jews was that of the Phoenicians in its heavier form. To quite a late date the Jewish mina weighed 11,500 grains and the shekel 230. This is sufficiently proved by the statements of Epiphanius (Hultsch, *Metrolog. Script. reliqq.* p. 265) as well as from the testimony of a Jewish stone weight with the legend PONDO . CXXV. TALENTVM SICLORVM III.: whence it appears that the Jewish talent weighed even in Roman times as much as 125 Roman pounds, 637,500 grains, which is but a little below the heavy Phoenician standard (see table); and contained 3,000 shekels.

We have reason to believe that the Phoenician weight was in use also at Carthage; having doubtless accompanied the emigrants from the mother-country. For the coinage of Carthage, which does not however begin at an early period, is chiefly struck on the Phoenician standard, and slightly heavier than the money of Tyre and Sidon. And no doubt the Carthaginians, like the Phoenicians, applied the same standard they used for money in weighing other articles.

Derivation of Greek Monetary Standards.—We have already seen what were, before the invention of coinage, the principal monetary standards in use in Western Asia. These we will briefly recapitulate, and assign them names, in order that we may cite them with more convenience hereafter. First, there was the heavy Babylonian gold standard, with its shekel of 260 grains. Next there was the light Babylonian gold standard, with its shekel of 130 grains. Next there was the Babylonian silver standard, of which the unit weighed 172 grains. Last, there was the standard called by Brandis Graeco-Asiatic, but which, as it originally spread from Phoenicia, we shall prefer to call the Phoenician. It was used only for silver, and its unit weighed about 230 grains. It is probable that from one or other of these four units all monetary systems, except those of the ancient Chinese and the modern French, have been derived.

Considering the vigorous commercial activity of the Phoenicians in the eighth and ninth centuries before our era, it cannot appear surprising if the standards adopted by them spread more rapidly and obtained wider currency than the standards which were transmitted by land only. In particular they spread to the Greek cities of the Asiatic coast, which were at this time far superior in wealth and splendour to the cities of Greece proper. Ephesus and Miletus, Phocaea and Smyrna, learned to accept as units of value the heavy Babylonian gold shekel of 260 grains, and the Phoenician silver shekel of 230 grains. And from Ephesus and Smyrna the Phoenician silver standard passed to Sardis, the wealthy capital of the Lydian kings, though the greater part of the Lydian money was minted on the Babylonian standard which reached the country by land.

The credit of inventing the idea of money—that is, of stamping an ingot of metal of fixed weight with an official die, which should guarantee its quality and value—belongs to the Lydians. Herodotus (i. 94) states that this people were the first to strike coin in gold and silver. But probably the earliest coins were neither of gold nor of silver, but of electrum, which is a natural mixture of those two metals, found in the bed of the Pactolus and other rivers of Asia Minor, and reckoned by the Greeks as a separate metal. [See ELECTRUM.] Whether ingots of electrum unstamped had previously been current, we cannot say; but it is likely. If we are to suppose, with Brandis, that by a fixed convention the value of the Lydian electrum was regarded as ¾ of that of gold, gold standing to silver in the relation of 13⅓ to 1 as regards value, electrum would appear to have stood to silver in the relation of 10 to 1. In this proportion recent metrologists have found an explanation of the fact that the electrum was struck upon the standard used for silver and not that used for gold, each of the new coins of electrum passing for ten of the previously used bars of silver. We must, however, observe that the proportion of value between gold and electrum cannot be regarded as ascertained fact.

The claim of the people of Lydia to have invented money is usually allowed by numismatists. The invention appears to belong to the seventh century, when Lydia was ruled by the Mermnadae. It spread to the towns of the Ionian coast, and thence with decreased rapidity south and west. The great bulk of the early electrum coins are struck on the Phoenician silver standard. In their division the duodecimal system prevails; the third, fourth, sixth, twelfth, and twenty-fourth parts of the stater being usual. Some of the early coins of Lydia are on the Babylonic silver standard. This, however, was not used out of Lydia. Electrum pieces on the Phoenician standard, on the contrary, were struck in a host of cities; including Sardes, Miletus, Chios, Samos, Lampsacus, and even the distant Aegina. A few cities, such as Samos and Eretria, seem in the earliest times to have struck electrum coins on the Babylonic gold standard. For further details as to the early electrum coinage, see ELECTRUM and the authorities there cited.

The city of Phocaea, which enjoyed great wealth and prosperity during the half-century previous to its destruction by Harpagus, the general of Cyrus, issued at that period coins of dark electrum, containing a considerable proportion of gold, minted on the heavy Babylonian gold standard,—coins which seem during the earlier half of the sixth century to have pushed their way on the Asiatic coast, and in many places to have taken the place of the Milesian electrum. (Head, *Numismatic Chronicle*, xv. 272.)

The supersession in Asia of the electrum coinage by one of gold and silver has been generally regarded as the work of Croesus. This able and wealthy monarch is supposed to have recognised the fact that electrum, in consequence of its varying purity and value, is ill-fitted to be a measure of value, and so to have stopped the issue of electrum coins in the mint of Sardes, and in the place of them to have substituted pieces of pure gold struck on the light Babylonian gold standard (126 grains) and pieces of fine silver struck on the Babylonian silver standard (168 grains). Of these coins, which bear as type the head of a lion and the head of a bull, many specimens survive to our day. Ten of the silver pieces were equal in value to one of the gold, being considerably heavier. It is, however, the view of M. Six that this monetary reform was the work not of Croesus, but of his Persian conqueror, Cyrus (Head, *Historia Numorum*, p. 546). Darius, son of Hystaspes, regulated the internal affairs of the Persian Empire, and introduced a state coinage on the model of that of Lydia, which continued unchanged until the overthrow of the Persian Empire by Alexander the Great.

The coinage of gold he claimed as his own peculiar privilege, and insisted on his exclusive right in this matter with so much vigour that it became a settled principle of Persian rule that no power in Asia, save the Great King only, had the right to issue money of gold. The staters of Darius were in weight identical with those of Croesus (128–130 grains). They were called Darics, perhaps from the king who instituted them; also *τοξόται*. [See DARICUS.] Darius issued also silver coin, in shape and type similar to the gold. He adopted as his monetary unit the half of that of Croesus, at the same time somewhat raising the standard. Thus the silver pieces called *σίγλοι* or shekels weighed about 86 grains, and twenty of them were equivalent in value to a Daric. [See SIGLUS.] But the right of issuing silver money was not reserved exclusively to the king. Satraps, especially when in command of military expeditions, were allowed to strike in silver, to adopt any types or devices they might think proper, and even to place their names on the coin. The cities of the Asiatic coast, of Lycia, and of Cyprus were allowed to have coins of their own. In these cases the standard was the same as that of the siglos, but the pieces issued were usually of the weight of two sigli (about 172 grains). The cities of Phoenicia, on the other hand, which issued silver coin in great abundance, retained, Aradus excepted, their ancient silver standard. Such was the general nature of the Asiatic issues of coin until the Persian Empire fell.

But we must now trace the rise of coining in Greece proper; and for this purpose return to a period before the date of Darius. We have already mentioned that, probably as early as the seventh century B.C., the cities of Euboea minted electrum on the Babylonian gold standard (130 grains), and Aegina on the Phoenician silver standard (230 grains). At this period the cities of Euboea, together with Corinth and Aegina, were the great commercial states of Greece. So it is not surprising that with these issues in electrum all the coinage of Greece proper took its rise. A coinage in electrum, however, could not exist long in Greece, for the substance of which it was formed had to be imported from Asia Minor. Silver, on the contrary, was abundant in Hellas, being procured in large quantities and many places, especially in Thrace. [See ARGENTUM.] It was therefore natural that the cities of Greece proper should have adopted silver for their currencies. But in so doing they adhered in the main, as we shall see, to the standards which had reached them from Asia.

Herodotus states that it was Pheidon, king of Argos, who regulated the measures of the Peloponnese (Herod. vi. 127); and Ephorus, quoted by Strabo (viii. pp. 358 and 376), says that he struck *νόμισμα τό τε ἄλλο καὶ τὸ ἀργυροῦν* at the island of Aegina. Certainly some of the earliest of the coins of Greece proper were the electrum and silver money of Aegina, bearing the type of a tortoise. According to Herodotus (vi. 127), Pheidon's son was one of the suitors of Agariste, daughter of Cleisthenes of Sicyon. If this be true, his date must be brought down to that of Cleisthenes, about 600–580 B.C.; and we agree with Unger, who has discussed the whole question of the date of Pheidon in the *Philologus* (vols. 28, 29), that there is good reason to believe that there was a Pheidon ruling in Argos at that period. The testimony of Herodotus is too clear and explicit to be rejected. And this king it must certainly have been who introduced coins into Greece. It is contrary to all evidence to place that introduction at so early a period as the eighth Olympiad.

Whether it was this Pheidon who also regulated the measures of the Peloponnese may be considered more doubtful. That the same ruler regulated the weights also is not stated by Herodotus, but is probable. That there was an earlier Pheidon is proved by a mass of testimony; and the explicit statement of Pausanias (vi. 22, 2) that he presided at the eighth Olympic festival appears too definite to be disputed. The conjecture of Weissenborn, who wishes to substitute twenty-eighth for eighth, is rightly rejected by Unger, and has indeed nothing in its favour, besides being quite inconsistent with the testimony of Herodotus; and it may be this earlier Pheidon who regulated Peloponnesian weights and measures.

In any case we may allow the truth of the tradition that silver coin was first struck in Hellas proper in the island of Aegina. Of this very primitive coinage we possess many specimens. Their type is a turtle, the emblem of the Phoenician goddess of trade. One specimen in the British Museum weighs 211 grains, but few weigh more than 200 grains. It is difficult to determine whence the Aeginetans or Argives derived this standard, which is called the Aeginetan. It is possible that it is merely a slightly degraded form of the Phoenician. Argos had been from early times in constant commercial intercourse with the Phoenicians, and long before the invention of coinage the Argives must have been in the habit of using bars of metal of fixed weight. It is possible that Pheidon, in regulating the weight of the Aeginetan stater, thought best to adapt it to the Babylonic gold standard, which was already in use, as we shall see, in some parts of Greece for silver. The Babylonic stater weighing 130 grains, he may have lowered the standard of Phoenicia (supposing that to have been in use at Argos) so that his new staters should weigh 195 grains, and two of them exchange for three of the Babylonic staters. Of late years attempts have been made to deduce the Aeginetic mina from the water-weight of the cube of the Olympic foot, and so to connect it with Hellenic systems of metrology.

These, however, are speculations; what is certain is, that the scale of the coins with the tortoise on them, a scale henceforward called Aeginetan, spread with great rapidity over Greece. It was in the sixth century used everywhere in Peloponnesus except at Corinth, and was the customary standard in the Cyclades; in Thessaly, Boeotia, and the whole of Northern Greece, except Euboea; and some parts of Macedon. Its weights are as follows:—

	Grammes.	Grains.
Talent . . .	37,800	585,000
Mina . . .	630	9,750
Stater (didrachm) .	12·60	195
Drachm . .	6·30	97
Obol . . .	1·05	16

It will be seen that we here reach new terms,—stater, drachm, and obol. The first is but a rendering of the Semitic word *shekel* [see STATER]. But the other terms are of Greek origin. The drachm became in Greece the unit in which calculations of weight and of money were made, and the obol, which was the sixth part of the drachm, was the coin used for small payments. [See DRACHMA.]

The only other standard in use in Greece proper before the time of Solon was the Euboic. This was identical with the light Babylonian gold standard. The silver staters struck on the Euboic standard at Chalcis and Eretria weighed about 130 grains. This Euboic standard obtained currency in some other parts, such as the island of Chios. Herodotus in his account of the tribute paid by the Persian Satrapies (iii. 89) states that the gold was measured by the Euboic standard, clearly identifying it with the Persian official standard according to which the Darics were coined. In the course of the fifth century B.C. we find Cumae in Campania and other Euboean colonies striking on a standard which is apparently the Euboic, the coins weighing from 120 to 110 grains. But about the middle of the sixth century B.C. the Attic standard arose, and it is impossible to distinguish henceforth the history of the Euboic from that of the Attic standard.

In the time of Solon the standard used at Athens for weighing both merchandise and the precious metals was the Aeginetan. Whether actual coins were minted then at Athens is uncertain; at all events, none survive to our day. It is probable that Athens was still trading with bars of silver of Aeginetan weight, or adopting the rude coins issued in quantities by Aegina and copied in all parts of Greece. Solon, as we are told by Plutarch (*Solon*, 15), introducing his laws for the relief of debtors, the celebrated *σεισάχθεια*, ordered that the standard of the drachm should be lowered to $\frac{73}{100}$ of what it had previously been; that is to say, that the weight of the drachm should be lowered from 95 grains to 68, but that debts contracted in the old currency might be discharged in the new, the debtors thus gaining 27 per cent. The Aeginetan mina was still retained as a weight for merchandise, as we know both from several surviving specimens of Athenian weights, and from the testimony of a popular decree of later time (Boeckh, *C. I.* 123), which reckons the commercial mina at 138 silver drachmas. Further, Priscian states the larger Attic (commercial) talent, which was of course equal to 60 of its own minae, to be equivalent to 83⅓ of the ordinary minae. These three testimonies agree then accurately as to the relations of the pre-Solonic and the Solonic weights of Attica; and as the coins of Athens of the Solonic standard survive in great quantities, there is nothing in the above account which admits of any doubt. It may indeed excite surprise that Solon should have lighted on so strange a proportion as $\frac{73}{100}$ for the reduction of the coin. Most recent writers have supposed that his motive was to assimilate the new standard to the Euboic, which it only slightly exceeds in weight; but there is here room for doubt. For it does not appear why, if such were his intention, he should not have at once adopted a depreciation of 33 per cent. If he had issued the new coin of two-thirds the weight of the old coins or bars, he would have given greater ease to debtors, have lighted on an easy and simple proportion, and almost exactly adopted the existing Euboic weight. Attention is due to an ingenious suggestion put forth by Mr. Poole (*Dict. of the Bible*, art. "Weights and Measures") that the new Solonic standard is more likely to have been borrowed from Egypt than from Asia Minor. We have already seen that the Egyptian unit of weight, the kat, weighed about 9 grammes or 140 grains, and the Solonic drachms of Athens are thus nearly of the weight of half a kat. The intercourse between Egypt and Attica was in Solon's time very close; and it is far from improbable that in departing from the national standard of the Greeks he should adopt that of Egypt.

The weights of the units of the Solonic standard, henceforward known as the Attic, are as follows:—

	Grammes.	Grains.
Talent . . .	26,400	405,000
Mina . . .	440	6,750
Drachm . . .	4·40	67·5
Obol . . .	·73	11·25

The ordinary coin was the tetradrachm of about 270 grains.

The only remaining standard early used in Greece proper was the Corinthian. This has the same unit of value as the Euboic; namely, a stater of 130 grains, the weight of which rises under Athenian influence to 135 grains. But in the subdivisions of this stater the Corinthian mint took a line peculiar to itself. With it the drachm was not half but a third of this unit, and the obol again a sixth part of that:—

	Grammes.	Grains.
Stater . . .	8·80	135
Drachm . .	2·93	45
Obol . . .	·49	7·5

As many of the Corinthian coins bear marks of value, this fact cannot be disputed. Also Thucydides (i. 27) mentions the Corinthian drachm as a thing apart. The reason of this method of division has been disputed. Mommsen (p. 61) is inclined to see in it a reminiscence of the Asiatic origin of the weight. But it is not improbable that the Corinthian drachms of 45 grains were intended to pass as Aeginetan hemidrachms, of which the weight was about the same. The money of Aegina and Athens would naturally meet in the market of Corinth; and the Corinthian coin seems to have been specially adapted to mediate between the two.

We must now follow the course of the invention of money westwards to Italy and Sicily. It is almost certain that when the people of Phocaea migrated to Velia in Italy, about B.C. 543, they took with them the art of coinage. But at about this period the Achaean cities of Southern Italy—Sybaris and Poseidonia, Rhegium and Caulonia, with Croton, Tarentum, and other towns—were already issuing money much of which still remains in our Museums, and is remarkable for bearing the same type on both sides; on one side in relief, on the other in intaglio. This money is apparently struck on the Euboic standard which the people of Chalcis and Corinth had already introduced in these regions. At some cities the drachm is half the stater, as in Euboea; in some a third of it, as at Corinth. Its date is certain, for we have specimens minted at Sybaris and Siris, which were destroyed not later than B.C. 510. At about the latter date Syracuse as well as Zancle, Naxos, and other Chalcidian colonies in Sicily began to issue coin. The Chalcidian cities, for some unexplained reason, began by issuing pieces weighing about 90 grains, which must therefore either be drachms of the Aeginetan, or, more probably, didrachms of the Corinthian standard. But they soon adopted—as Syracuse, Gela, and Leontini did from the first—the Attic standard, and struck coins as follows:—

Tetradrachm . . .	270	grains.
Didrachm . . .	135	„
Drachm	67·5	„
Hemidrachm . . .	33·75	„
Obol	11·25	„

But, in addition to the obol, we find at Syracuse a litra weighing about 13½ grains. In order to explain its relation to the other coins, it is necessary to give some account of the systems of weighing and the monetary systems of Italy and Sicily. (See below, p. 455.) Among the purely Greek cities of these regions we do not find, until a comparatively late period, any standards in use for money except the Euboic and the Attic.

Monetary Standards of Greece at the time of the Peloponnesian War.—If we attempt a general survey of the standards employed by the Greeks for money, say at about the year B.C. 420, we must confine ourselves carefully to generalities. The monetary history of each city is a study, sometimes an intricate one, and we might often fail to find reasons for the adoption of this or that standard in turn. But a more general survey is not impossible. In Sicily, as has already been stated, the Attic standard was universal; the ordinary coin was the tetradrachm; didrachms, hemidrachms, and obols were in use, and decadrachms occasionally struck. [See DAMARETEION.] In Italy, that is, the Greek colonies of S. Italy, the Euboic standard, appreciably lower than the Attic, was in general use; but the standard coin was not the tetradrachm, but the didrachm, which is said at Tarentum to have been called *νοῦμμος*. [See NUMMUS.] In Hellas proper, including Epirus and Thessaly, the Aeginetan standard was almost universal. The exceptions were Athens, where the Attic standard prevailed; and Corinth, together with the Corinthian colonies in Acarnania, which minted as was natural on the Corinthian standard. The iron money of Laconia was of Aeginetan standard, the *πέλανορ* being of the weight of an Aeginetan mina. Crete and the islands near the European coast also used the Aeginetan weights. In Macedonia several standards were in use. The kings of Macedon in the fifth century used the Persian silver standard for their coins; but the cities of Chalcidice mostly used the standard of their Euboean mother-city, somewhat raised, in fact raised nearly to the Attic level; and the rude tribes of Mount Pangaeum, who coined very largely, used a somewhat degraded form of the Persian or Babylonian silver standard, their staters not weighing more than 160 grains.

On the shores of the Black Sea the Persian standard was almost universally in use; Sinope, Amisus, and other cities issuing large numbers of coins of the weight of the Persian siglus,—that is, of about 86 grains. Probably three of these prices went in exchange for an Attic tetradrachm. In other parts of Asia Minor, in some of the Ionian cities, as Colophon, in Lycia and Cyprus, the same Persian standard was in use; but in the southern district the double siglus of 170 grains or thereabouts was more usual than the single one. Some of the great cities of the west coast retained the Phoenician silver standard, which, however, varied somewhat from place to place. At Ephesus the stater sometimes exceeded 230 grains; at Samos it seldom weighed more than 205 grains. The Samian standard ruled in the African colony of Cyrene. The cities of Phoenicia about this time began to strike coins on their original standard. At this time no gold coin except the Persian Darics was anywhere current. But electrum coin was issued in great quantities by the city of Cyzicus. The standard used by that city was the Phocaic of 260–250 grains, and the denominations issued were the stater and the hecte or sixth. [See STATER and HECTE.] Lampsacus also issued electrum coin.

History of Coinage in the Levant after B.C. 420.—In 408 B.C. the city of Rhodes was founded. The origin of this city coinciding so nearly with the humiliation of Athens by Lysander, the commerce of Rhodes spread rapidly over all seas. The Rhodians adopted from the first a standard of their own, which seems to have been a variety of the Phoenician. Their tetradrachm weighed at first 240 grains, though in the course of a century it sank to 220 grains. This standard made its way in the fourth century rapidly among Greek states. King Mausolus of Caria adopted it. And even the distant Olynthus, head of the Chalcidian league, struck money on the same standard: thence it was adopted by Philip of Macedon for his silver coin.

The early years of the fourth century saw a copper or rather bronze coinage spring up in most cities of Greece proper and the Greek colonies in Italy and Sicily. Hitherto for small change the Greeks had used minute pieces of silver. Pieces of the weight of two grains troy, representing two chalci or the fourth part of an obol, were commonly used at Athens, and survive to our day. Copper money was at first scouted, as we see from the language of Aristophanes (*Eccles.* 818), but it gradually made its way by its superior convenience. At about the same time gold was first minted by Greeks. Small pieces first make their appearance in Sicily; but before the middle of the fourth century gold staters struck on the Attic standard were issued in considerable numbers by Olynthus, Panticapaeum, Athens, Lampsacus, Cius, Rhodes, and other cities, eventually driving out of circulation the electrum money of Cyzicus and Lampsacus.

When Philip of Macedon acquired the gold mines of Thrace, he began issuing large quantities of gold coins with his own types. And as in the case of his issues in silver, so in those in gold, he adopted the standard already current in Chalcidice, the wealthiest and most civilised part of his dominions. That is to say, he minted gold didrachms of the Attic standard, those didrachms which soon became notorious all over the world. They opened to Philip the gates of many a Greek city, they constituted the greater part of the wealth of the capitalists in Greece and Italy, and they were copied by the barbarous nations on the northern frontiers of Greece and even by the remote tribes of Gaul and Britain.

But, as in other departments of Greek activity, so in the coinage, the greatest of epochs is furnished by the life of Alexander the Great. Alexander adopted throughout his vast dominions the Attic standard of weight for both silver coins and gold. We must pause for a moment to consider his objects in taking this measure. Hitherto almost all cities which issued both gold and silver, Athens excepted, had used a different standard for the two metals. The ratio of value between gold and silver being, as we have above seen, as 13⅓ to 1, it was necessary that the standards should be different in order that a round number of silver staters should exchange for one gold stater. In Asia the Euboic standard was in use for gold, and either the Babylonic silver standard or the Phoenician for silver. Gold was seldom minted in Europe; but the states, such as the Olynthian league and Macedon, which did issue gold coin, minted it of Attic weight, at the same time that they adopted for their silver one of the Asiatic standards. This procedure was obviously desirable so long as the old relation of value between gold and silver was maintained. But in the time of Philip of Macedon, consequently on the active use made by that king of the rich gold mines of Thrace, the value of gold in proportion to that of silver fell. Alexander seems to have perceived that in consequence it was impossible to maintain a double standard and to secure that a certain number of silver staters should always pass for a gold one. He therefore minted both metals on one standard, in order that when the ratio of value of silver to gold was 1:12 a gold didrachm should exchange for six silver tetradrachms, when the ratio was 1:10 a gold didrachm should exchange for 5 tetradrachms, and so forth. It was no doubt stated or else implied in all promises of payment whether gold or silver was to be the metal employed.

GREEK COINAGE.

	No. of drachms or part of a drachm.	Phoenician, Rhodian.	Babylonic, Persian.	Samian.	Aeginetan, Cistophoric.	Euboic.	Attic.	Corinthian.

Gold continued to be minted in the name and with the types of Alexander in many cities of Asia for many years after his death, and silver for more than a century longer.

The successors of Alexander coined in their various cities immense quantities of money in gold and silver. The Ptolemies of Egypt used the Phoenician standard for both gold and silver, but the Attic standard was the one in general use by the kings of Macedon, Syria, Pergamus, Bithynia, Bactria, and India, as well as by the Parthians. But it would be a mistake to suppose that all issues except regal ones came to an end, either in Asia or Europe. In Asia we find cities like Ephesus, Miletus, Colophon, and Rhodes, continuing their old coinages, with types and even standards unchanged. In European Greece some cities, such as Athens, Corinth, and Elis, continue their issues as of old, altering the style of their coins to suit the taste of the age. But a new feature is presented by the federal coinages of the new political leagues. The cities of the Achaean league issue a uniform series of coins, only bearing at each city a different monogram or mint-mark. Their silver coins are Aeginetan hemidrachms, or, which is the same thing, Corinthian drachms. The Acarnanian and Aetolian leagues follow the Aeginetan standard.

The only great innovation which takes place after this in the coinage of Asia Minor is the introduction of the coins called Cistophori, on account of their type, which is the *cista mystica* of Dionysiac worship. These coins were first struck in the times of the later kings of Pergamus, and were peculiar to the West and Interior of Asia Minor. They follow the Aeginetan standard, with the variety that what was called a didrachm in the case of the Aeginetan coins was usually called a tetradrachm in the case of the Cistophori. The Cistophoric drachm was therefore equivalent to an Aeginetan hemidrachm, or a Corinthian drachm. How this standard originated is not known, but the coins struck on it formed the main part, together with the drachms of Rhodes, of the currency of Asia Minor during the first century B.C., and pieces of the same class were issued even under the earlier Roman emperors. And by this time the drachms of Rhodes had sunk to the weight of the quarter of a Cistophoric tetradrachm.

When the Romans conquered Asia, they introduced a tariff according to which the various coins in circulation exchanged against the denarius.

The first set of the preceding tables gives the approximate weights of the Greek coins in general use; the others give the values of those coins, roughly, in English money; reckoning gold at the value of 2*d*. a grain Troy, silver at 5*s*. an ounce Troy, and electrum at 1½*d*. a grain: for although as a matter of fact electrum seldom contains ¾ of gold, yet it is supposed that the ancients valued it on that basis.

In this way we get the *metal* equivalents of the ancient coins. Their equivalents in purchasing power cannot be determined. We can only say quite roughly that in many respects a silver drachm in Greece would go almost as far as a sovereign with us. The daily pay of a mercenary in later Greece was four Attic obols, equal in weight to a sixpence. The younger Cyrus gave his soldiers a daric (£1 1*s*. 6*d*.) a month. Probably these mercenaries were able after a few years' service to retire on a competency. Any attempt at closer comparison between ancient and modern prices can only serve to mislead.

Greek Systems of Weight for Commodities.—The history of the weights used by the various states of Greece can thus be established by induction. From the testimony of a few coins we can easily discover the weight of the talent and mina according to which they were minted. And as a rule the talents and minae used for coins were those used for other goods. But to this rule the exceptions were very numerous. There is no reason to think that peculiar monetary standards, such as those of Rhodes and of Samos, were ever applied to the weighing of merchandise. And there are reasons for supposing that whereas the standard used for coins had at all times a tendency to fall, the standard used for merchandise had often a tendency to rise. So even if originally at any place money and merchandise were governed by the same weights, a process of differentiation would soon set in.

There is indeed, for determining the weights in use in the Greek markets, a mass of material available in the shape of extant Greek weights of lead or bronze. But hitherto this material has not been used in a sufficiently methodical manner. And there are very great difficulties inherent in its use. Firstly, weights of lead, unlike gold and silver coins, lose weight in the course of ages by decay or gain weight by oxidation or accretion, so that the original weight of any extant specimen is very hard to determine. Secondly, very few existing weights have inscriptions sufficiently exact to determine their date, locality, and denomination. And, thirdly, we have reason to believe that the standards which prevailed in any city or district were not carefully adhered to by the shopkeepers, who used considerable licence.

The statements of ancient writers on metrology are useful to us in the case of two cities, Athens and Alexandria. But they are of little authority unless we can verify them by an appeal to extant monuments, since the authority of these writers is small, and numbers are notoriously liable to alteration and corruption in the MSS.

Under these circumstances we shall venture to do little beyond giving a sketch of the metrological systems of Athens and Alexandria. Lists of extant weights will be found in the papers of Schillbach (*Annali dell' Instituto*, 1865), Murray (*Numismatic Chronicle*, 1868), Longpérier (*Annali dell' Inst.*, 1847), R. S. Poole (*Dict. of the Bible*, art. "Weights"), and elsewhere.

Athens.—In the case of this city we know from existing inscriptions and extant weights what standards were used for weighing various articles.

First, there was the usual Attic or Solonic standard, corresponding in use to our Troy weight. This is the standard on which all the coins of Athens from first to last were struck. It was also used for weighing all precious articles of gold and silver. This we know from the lists of the treasure stored in the Parthenon, which are still preserved. The same standard was used for their drugs, not only by the physicians of Attica, but by those of Alexandria and other cities. In the writings of Galen, for example, the weights are given according to the Solonic standard. Of the extant leaden weights of Athens, many conform to this standard.

Others among the existing weights of Athens are regulated according to a standard just double the weight of the Solonic. One of them marked ΤΡΙΤΗ weighs 4,440 grains, one marked ΤΕΤΑΡΤ 3,218 grains, and one marked ΗΜΙΤΕΤΑΡΤ 1770 grains. These are clearly fractions of a weight equal to two minae of Attic standard, but used as a unit for certain purposes (12,800 to 14,200 grains). The excess in case of the heavier specimens need not trouble us; it is extremely common to find Greek weights somewhat above the standard; and an inscription quoted below may partially explain the fact. What is important at present is the use at Athens of a standard of double weight. Probably it was used for certain specified kinds of goods only. It is not mentioned by writers or in inscriptions.

The third standard in use at Athens was the Commercial or Emporic. This also is followed in many extant weights. It was identical with the Aeginetan standard for coins of which we have already spoken, with a mina of about 9,700 grains (628·5 grammes). It corresponded in use to our weight avoirdupois, being the ordinary weight in use in the market. There is a very important Athenian inscription (*C. I. G* 123) which throws much light on the use of the Solonic and the Emporic standards at Athens, as well as on other matters connected with weights. It runs thus:—"The Emporic mina (*μνᾶ ἐμπορικὴ*) shall weigh 138 drachms of the Stephanephoros, according to the weights preserved at the mint, and there shall be added (thrown in) twelve drachms of the Stephanephoros; and all bargains shall be regulated by this mina, except in cases where silver-weight is specially mentioned, the scales being balanced so that the rod is level, against a weight of 150 drachms of the Stephanephoros." The inscription goes on to say that in every Emporic *πεντάμνουν* (5 minae) one Emporic mina shall be thrown in, and in every Emporic talent five minae.

From this inscription, the date of which is somewhat doubtful, but must be as late as the third century B.C., and is probably not later than the first, we learn (1) that the Solonic mina and drachm were called *τοῦ Στεφανηφόρου*. The Stephanephoros was an Attic hero or daemon in whose temple the mint was in early times placed; thus the drachms called after him were drachms of money: on the weights the Solonic mina is called *μνᾶ δημοσία*: (2) that the proportion between the Aeginetan or Attic commercial mina and that of the mint remained at 138·100 (just as it had been fixed by Solon) throughout Athenian history: but (3) that Greek weights were sometimes arbitrarily raised by authority, at least in democracies. In this case it is acknowledged that the commercial mina does not exceed 138 drachms; yet all sellers are ordered to act as if it weighed 150 drachms. This will account in part for the curious fact that ancient weights so often exceed their nominal standard. The *ῥοπή*, or weight thrown in, is less in proportion in the higher denominations. In the case of the *πεντάμνουν* 20 per cent. is to be added; in the case of the talent, only 8 per cent. The democratic origin and intention of this distinction are obvious.

That the Emporic mina was also called the mina of the Agoranomi is shown from the inscription of a weight found at Athens which weighs 335 grammes, ΗΜΙ ΑΓΟΡΑΝΟ (*Ann. dell' Inst.*, 1865, p. 199).

A fourth talent of quite a different character was in use at Athens in later times. It is mentioned by the poet Philemon, who writes (*Etym. M.* s. v. *τάλαντον*), *Δύ' εἰ λάβοι τάλαντα, χρυσοῦς ἓξ ἔχων ἀποίσεται.* From which it appears that this talent was made up of three Attic gold staters or didrachms. Six drachms of gold may very well have been equivalent to a talent of copper of 6,000 drachms.

In Greece proper it is very probable that the Attic and Aeginetan standards were in general use from early times to late. Indeed the Aeginetan was for most classes of goods probably almost universal. But as we have few or no weights bearing marks of value which we can with certainty attribute to cities of Hellas, we are unable to establish this by the satisfactory method of induction.

Alexandria.—The only city of the Levant besides Athens in which we can fully trace the systems of weight in use is Alexandria. In this case our guides are less existing weights than the statements of late writers. As these generally use for their standard the weight of the Roman denarius, which is certain, their meaning can usually be fixed with accuracy. By comparing the table which bears the name of Cleopatra, but really belongs to a later date (Hultsch, *Metrolog. Script. Reliqq.* p. 109), with that of Galen, the eminent physician (Hultsch, p. 79), and with others, we reach the following results:—(1) The standard in most general use at Alexandria seems to have been based on the Attic mina. In the prescriptions of doctors this was universal until a late time. The table of Cleopatra calls it *ἡ μνᾶ par excellence.* Its weight was 16 Roman ounces or 6,800 grains. (2) For money and perhaps other things the standard usually employed was the Ptolemaic. The Ptolemaic mina contained the weight of 100 Ptolemaic drachms, which, as we have seen, were struck on Phoenician weight. After the time of Nero this mina was sometimes called the Attic, because it contained 100 of the denarii of Nero, which were commonly considered as Attic drachms. Its weight was that of 12½ Roman ounces or 5,500 grains. Besides these two minae and the Roman libra, three other systems of weight were in use. (3) That also called Ptolemaic, which was, as Hultsch points out, an Egyptian weight of great antiquity. Its mina contained 18 Roman ounces, 7,650 grains, and it is apparently nothing but the old native Egyptian standard. (4) That called Alexandrian. Its mina contained 20 ounces (8,500 grains), and it is identical with the [Babylonian or] Persian silver standard. (5) *Τάλαντον ξυλικόν*, used for wood only, and said to be ⅕ heavier than the Ptolemaic standard. It was a local weight, *τάλαντον ἐπιχώριον*. It was very nearly equivalent to the Attic weight.

The following table gives the values of the weights thus in ordinary use in Greece and in Egypt during the age of their autonomy:—

	Part of Mina.	Attic—Solonian.		Attic—Double.		Aeginetan, Attic commercial.		Ptolemaic, Late Attic.	
		Grammes	Grains	Grammes	Grains	Grammes	Grains	Grammes	Grains

When we pass from Athens and Alexandria to Asia Minor, Syria, and other parts of the Levant, we find insurmountable difficulties in the way of ascertaining the standards of weight in general use. The number of published weights coming from those regions and bearing inscriptions, sufficiently clear and satisfactory to enable them to be used as the basis of induction, is very small. And even of these it is very difficult to determine how far the actual weight has been diminished or increased by burial in the ground and consequent chemical action. It is probable that in obscure collections and museums in Europe and the Levant there may be many unpublished weights which would help us to reach a securer standing ground. But this is of course mere matter of conjecture. At present we can quote little more than the weights mentioned by M. de Longpérier (*Ann. dell' Inst.* for 1847), by Brandis (pp. 154–6), and by Schillbach (*Beiträge zur Gewichtskunde*). All of these appear to belong to the period subsequent to the expedition of Alexander. We add a table of the most important specimens.

It will be at once seen that these weights fall into different categories and belong to various systems. Nos. 3 and 4 give very clear and decisive evidence as to the market weights in use at the Syrian Antioch at the period when they were cast. They give a *μνᾶ δημοσία* of about 1070 grammes, or 16,520 English grains. All the other weights, except No. 11, coming from several parts of Asia Minor and Syria, appear to belong to the same system. The mina of this system would appear to have weighed some 540–560 grammes, and therefore to have been as nearly as may be half as heavy as that according to which 3 and 4 were regulated. On referring to the table of Babylonian weights (p. 446), we shall see that in the Babylonian system for weighing silver the two minas, according to heavy and light standard, respectively are 1122 and 561 grammes. These two weights are certainly strikingly like those which we have just reached. Induced by this correspondence, Brandis (p. 155) suggests that the mina of our weights is that of the Babylonian silver standard. This standard was adopted by the Persian kings for their silver money, as has already been mentioned. After the conquest of Persia by Alexander it ceased, except in some outlying parts of the Empire, such as the Euxine Sea and India, to be used for money, but Brandis supposes that it still persisted as a weight for goods. As in many parts of the Persian Empire it was somewhat lowered, a mina of 1070 grammes might very well belong to this standard. But in this case the term Δημόσιος would still remain to be explained; as things changed very slowly in the East, it is scarcely likely that the Persian silver standard which belonged in an especial degree to silver coin or bars should so have superseded the original Babylonian weights which were used for the weighing of goods other than silver in Mesopotamia and Syria, as to become the usual or normal standard.

Referring again to our table (p. 446), we shall see that of this ordinary Babylonian system for general weighing the minas weighed respectively 1010 and 505 grammes. It is *à priori* far more probable that a mina called *δημοσία* should belong to this standard than to another. And further it is to be observed that although weights used for coin have a strong tendency to fall, yet weights used for other purposes do not experience this tendency in anything like the same force. Indeed, the instance above quoted from the laws of Athens shows that the interest of the purchaser tended sometimes successfully to raise weights in market use. And further, weights of lead which have been long buried vary decidedly from their normal strength. It is then best, on the whole, to leave it undecided whether the public mina of Antioch was derived from the Babylonian system for weighing silver or that used for other articles.

Weight No. 11 in the Museum of Smyrna was probably in use not far from that city, and appears to follow the Phoenician standard.

We learn from an anonymous Alexandrian writer (Hultsch, *Metrologici*, i. p. 301) that wood was at Antioch weighed on a system of its own, by a *ξυλικὸν τάλαντον*, which appears from its equivalent of 375 Roman librae to have been considerably heavier than any of the talents above mentioned. Hultsch reckons it at 128,400 grammes (*Metrologie*, p. 591). The existence of this weight is interesting, as showing that in ancient times bulky articles were sometimes weighed on a different scale from lighter goods: and in fact this custom has held in most countries.

In late Imperial times most of the weights in use in the Levant gave way to the Roman libra, inscribed specimens of which are found in Asia Minor and Syria.

It is thus clear that the cities of Syria, Asia Minor, and Mesopotamia did not, in adopting the Attic system for their coinage, as they did mostly in or soon after the time of Alexander, adopt the same system for weighing goods, but adhered to their ancient standards. For a general review of the systems of weighing actually in use, materials entirely fail.

Italian Systems of Weight.—The Roman libra or pound was from the earliest times used alike for money and for other commodities. It remained unchanged in standard to a very late period. At first pieces of copper were cast in all Roman parts of Italy of the weight of a pound, and of the various fractions of a pound. Soon, as we have seen (under As), the standard of the coins fell rapidly. But the weight continued unchanged. When, at a far later period, the coinages of silver and gold were introduced at Rome, the gold and silver pieces were struck so many to the pound. Even to the time of Diocletian and Constantine the Roman *libra* as a weight remained undiminished; and the late metrologists of Alexandria appeal to it as an unchangeable standard, testing by reference to it the weight of the various Greek talents and minas.

The dominion then of the *libra* as a weight is as durable and extensive as the dominion of Rome herself. Of the *libra* of money we have spoken under As. The weight of the Roman *libra* has been investigated by Boeckh, Mommsen, and Hultsch. The materials for ascertaining it are threefold: (1) existing weights, (2) copper coinage, (3) gold and silver coinage. It is the latter alone which gives consistent and satisfactory results; for the weights vary unaccountably, and the copper coinage very soon sank in weight to a lower level. Letronne made a calculation of weight on the basis of gold coin; and his results with slight modification are accepted by the three metrologists above named. We may safely accept their results. They fix on 327·453 grammes, about 5050 grains, as the true or normal standard. The weights of the fractions of the *as*, with their signs in Roman notation, are as follows:—

Denomination.	Part of *libra*.	Part of *uncia*.	Weight. Grammes.	Weight. Grains.	Sign in notation.
Libra or As	1	12	327·45	5,050	|
Deunx	$\frac{11}{12}$	11	300·16	4,629	S = = –

Scripulum	$\frac{1}{288}$	$\frac{1}{24}$	1·13	17·5	℈, ΣΣ

The only modification which ever took place in this system occurred in connexion with the weighing of drugs in Imperial times. As we have seen, at Alexandria and in the Levant generally, drugs were regulated by Attic weight. But under Roman influence the denarius was regarded as the equivalent in weight of the Attic drachm. The denarius, as we have shown under As, weighed $\frac{1}{84}$ of a pound from the time of the Punic wars to those of Nero, and $\frac{1}{96}$ of a pound after that. The Greek divisions of the drachm were applied to the denarius as a weight. We thus obtain two systems of weight for drugs.

Denomination.	First System.			Second System.		
	Part of *uncia*.	Weight. Grammes.	Weight. Grains.	Part of *uncia*.	Weight. Grammes.	Weight. Grains.
Uncia	1	27·28	420·8	1	27·28	420·8

Siliqua				$\frac{1}{144}$	·19	2·9
Chalcus	$\frac{1}{336}$	·08	1·25	$\frac{1}{384}$	·07	1·1

It is a remarkable fact that, although at Rome the *as* was probably never minted of the full weight of a pound of twelve ounces, yet in some of the Roman colonies, such as Ariminum and Hatria, it was issued of the weight of 14 ounces (5,900 grains). It is doubtful how this change may be accounted for. But it is noteworthy that this heavier weight comes near the standard (5,750 grains; see above, p. 446) of the silver talent of Phoenicia. We are inclined to think, then, that the Roman pound, which, as Hultsch has shown, was not in its origin in any way connected with the Roman measures of length, was derived from the Phoenician mina, as was probably the national or Aeginetan standard in Greece. In both cases a considerable reduction took place, before the weight was fixed for all future time in Greece by Pheidon of Argos, and at Rome by the Decemviri.

Of the Roman librae which have come down to us, many are considerably above standard. One in the Museum of Smyrna, for instance, weighs 374 grammes; others as much as 390 grammes. After what has been above observed as to the tendency of weights to rise in use, this need not surprise us.

It must not be supposed, however, that either in earlier or later times the Roman libra possessed anything like a monopoly in the markets of Italy. There, as in Greece and Asia, local customs largely prevailed. The Greek colonies in South Italy used, until they were absorbed by Rome, the weights which they had brought with them from Greece, the standards of Phocaea, of Athens, and of Corinth. At a later time we find proof of the use of various Italian minae (Hultsch, *Metrologie*, p. 672):—A mina of 16 Roman ounces, 436·6 grammes, which seems to govern the extant weights of Pompeii and Herculaneum. A mina of 18 Roman ounces, 491·2 grammes, called in an ancient metrological table Ἰταλικὴ μνᾶ. A mina of 20 Roman ounces, 545·8 grains, the existence of which is proved by a Roman inscribed weight found in the Danube. A mina equal to two Roman pounds, mentioned by Vitruvius, x. 21. Compared, however, with the libra, these minae had but little historical importance.

Sicilian Weights.—In Sicily the pound of copper was the unit of value in very early times, and was adopted to some extent by the Greek colonies. These, however, as we have above seen, adopted late in the sixth century B.C. the Attic standard for coinage, and struck silver on it of the denomination of tetradrachm, didrachm, drachm, hemidrachm, and obol. Into this system by a peculiar process they incorporated the *litra* or pound of copper. The weight of this litra is not known from direct testimony. But we have means of fixing the weight of its equivalent in silver. The silver litra was a coin in use at Syracuse and other Sicilian cities; and its weight was a tenth part of that of the Corinthian stater (135 grs.), which was called δεκάλιτρος στατήρ (Pollux, iv. 174), and a fiftieth part of that of the Damareteion (*q. v.*). Hence it is safe to assume that the weight of the silver litra was 13·5 grains. Multiplying this amount by 250, which represents the proportion in Italy and Sicily between silver and copper, we reach a sum of 3,387 grains. This is just half the weight of the Attic silver mina. Mommsen (p. 80) concludes on this basis that the weight of the Sicilian litra was 3,387 grains or 217·5 grammes, nearly the weight of 8 Roman ounces. And since he wrote, the researches of Deecke (*Etruskische Forschungen*, Part II.) have made it probable that the same system of the litra in silver and copper passed in the fifth century from Syracuse into Etruria, and is the base of the whole of the later Etruscan coinage. The Etruscan silver pieces which bear marks of value, are all multiples of a litra of the Sicilian weight (13·5 grains), and the Etruscan *aes grave* is of the standard of eight Roman ounces, 3,366 grains. This latter fact seems of sufficient importance to finally establish the theory of Mommsen as to the litra. The Athenian origin of the latter is more than probable. It was divided, like the Roman libra, into twelve parts; but the names of the parts were different, a fact which must have caused some confusion in the minds of the Italians. The names of these parts are given by Aristotle as quoted by Pollux, iv. 174.

	Grammes	Grains	Written	Corresponds to Roman
Litra . .	219·5	3,387	λίτρα	libra
Hemilitron .	109·75	1,693	ἡμιλίτρον	semis
Pentuncium	91·5	1,410	πεντώγκιον	quincunx
Tetras . .	73·2	1,128	τετρᾶς	triens
Trias . . .	84·9	846	τριᾶς	quadrans
Hexas . .	36·6	564	ἑξᾶς	sextans
Uncia . .	18·3	282	οὐγκία	uncia

Thus the tetras corresponds to the Latin triens, and the trias to the Latin quadrans; a most confusing correspondence. The talent, if equal to the Athenian, contained 120 litrae originally. But we are able to trace its rapid degradation. For Aristotle (Pollux, ix. 87) speaks of the older Sicilian talent (τὸ μὲν ἀρχαῖον) as equivalent to 24 nummi, and the later as equal to 12. The nummus here stands for the litra. By the time of Aristotle, then, there had been two reductions in the weight of the litra as applied to money, and it had fallen to a tenth of its early value. But analogy bids us suppose that this reduction did not affect the litra except as money. [P. G.]

PONS (γέφυρα), a bridge. One central idea, round which many curious beliefs and pieces of ritual are grouped, is that the erection of a bridge is an impious act—an injury done to the god of the river, who, by the substitution of a safe method of crossing instead of the primitive fording or swimming, is robbed of a certain number of victims—travellers who without a bridge would have been drowned. This belief has existed among many different races at an early stage of their religious development, and, vaguely understood, still survives in many parts of Europe and Asia. In Greece, Albania, and other countries traditions even now exist of the offering of human sacrifices at the founding of a new bridge; and in many parts of the Moslem world the inhabitants look upon the erection of a bridge as an extremely impious act. Mr. J. G. Frazer, in the *Journal of Philology*, xiv. pp. 156–7, has collected a curious list of examples of this wide-spread belief. Thus, in Germany, when a man is drowned the people say, "The river-spirit is getting his annual victim" (see Grimm, *Deutsche Mythologie*, p. 499); and in part of England the superstition exists that the spirit of the Ribble receives and is satisfied with a human victim every seven years (see Henderson, *Folk-lore of the Northern Counties*, p. 265). Thus, in ancient Rome, the most primitive duty of the *pontifex* or bridge-builder was to propitiate Father Tiber by regular annual sacrifices; and also by special extra sacrifices whenever the one early bridge of Rome, the Pons Sublicius, required repairs (see Varro, *L. L.* v. 15; Dionys. iii. 45; and Plut. *Num.* 9). In early times human victims were offered annually by being flung into the Tiber from the Sublician bridge; but in later times thirty figures or dummies called ARGEI, made of rushes, were solemnly thrown into the Tiber by the Pontifices and Vestal Virgins on the Ides of May, as is recorded by Ovid (*Fast.* v. 622):

> "Tunc quoque priscorum virgo simulacra virorum
> Mittere roboreo scirpea ponte solet."

Another notion, connected with the same class of ideas, is that a light and, as it were, temporary structure is less offensive to the river-god than a more permanent bridge. Hence the primitive reason for building the Sublician bridge of wood, not fastened together with iron in any form, having, as Pliny records, its "contignatio sine ferreis clavis" (*H. N.* xxxvi. § 100). Dionysius (iii. 45) goes further, and speaks of it as *τὴν ξυλλίνην γέφυραν, ἣν ἄνευ χαλκοῦ καὶ σιδήρου θέμις ὑπ' αὐτῶν διακρατεῖσθαι τῶν ξύλων*: but in sacred matters the use of iron was often specially prohibited, as being a more recent invention than bronze, and therefore devoid of its hieratic associations (cf. Plutarch's Life of Numa). Thus the college of the Fratres Arvales were obliged to offer an expiatory sacrifice if ever an iron tool were used within the precincts of their sacred grove, near Rome (see Marquardt, *Römische Staatsverwaltung*, iii. p. 459, ARVALES). In a similar way the use of flint knives for sacrificial purposes survived long ages after the Stone period had passed away.

It should be observed that the Romans themselves had, by the first century B.C., forgotten what appears to be the main reason for the rules and ritual connected with their ancient bridge, and explain its unsubstantial character by the risk of attack; as had happened when Horatius Cocles with so great difficulty held the Etruscan army at bay while the bridge was being demolished. And this may possibly have been at one time a secondary reason for the same thing, though not the chief one.

The oldest bridge of which we have any record, that at Babylon, was also of wood, though built on stone piers. This, according to Herodotus (i. 178-186), was built across the Euphrates to unite the two portions of Babylon by Queen Nitocris, *c.* 606 B.C. The piers were of large blocks of stone fixed with iron clamps, run with lead; and the river is said to have been temporarily diverted from its course during their construction. The superstructure was of wood, part of which was arranged so as to be removed every day at nightfall. The same queen also built a massive river embankment made of burnt brick.

Temporary floating bridges (*σχεδίαι*) for military operations appear to have been used in very early times, boats being used for the points of support, with cables of twisted flax (*λευκολίνου*) and papyrus (*βυβλίνων*), tightly strained by the help of windlasses, to support the intermediate planking. A bridge of this kind was thrown across the Thracian Bosporus by Darius; its engineer being a Samian Greek, named Mandrocles (see Herod. iv. 83, 85, 87, and 88). A similar bridge, constructed for Xerxes across the Hellespont between Sestos and Abydos, was immediately destroyed by a storm (Herod. vii. 34, 35). Xerxes decapitated its constructors, and ordered another bridge to be made of more careful construction. This was done by the help of 674 triremes and penteconters, moored by anchors, and united by six strong cables tightly strained from ship to ship. On these cables the roadway rested, made of thick planks covered with brushwood and earth beaten down. On each side was a high bulwark to prevent the horses from being frightened at the sea (see Herod. vii. 36). The Persian army crossed safely on this second bridge; and thus Xerxes was enabled to accomplish, for a time, his projected invasion of European Greece.

In Greece, partly owing to the insignificant size of the rivers, permanent bridges do not appear to have been constructed till after the Roman conquest. No remains now exist which can be attributed to the period of Hellenic autonomy. And yet it appears probable, from the mention of bridges by various Greek writers, that in some form wooden structures for crossing streams when swollen by rain were of no uncommon occurrence. Simple trestles with movable boarding are even now used in some parts of Italy for temporary emergencies; and most of the Greek bridges were probably structures of this light and unsubstantial class. The religious ideas already described may have tended to prevent any more solid structures from being erected in Greece during its most flourishing period.

Throughout the Roman dominions, especially during the Imperial period, stone bridges with wide-spanning arches of the most massive kind were erected in great numbers. Many of these bridges were of remarkable size, and show in a very striking way the great constructional skill of the Roman engineers. The bridge over the Acheron, which was a thousand feet in length (Plin. *H. N.* iv. 1), and that which united the island of Euboea to the mainland, must have been striking examples of this. The Roman bridges were as a rule rather narrow in proportion: the central roadway for horses and vehicles was called the *iter;* at the sides were slightly raised foot-paths (*decursoria*), defended on the outside by a low parapet wall. In the more handsome bridges, such as the Pons Aelius in Rome, pedestals for statues or honorary columns were set at regular intervals along the parapet. The main arches were decorated with simple mouldings adapted from Greek buildings; and between them, over each pier, a smaller arch was very frequently introduced to relieve the pressure of water during flood-time. Rows of corbels were very commonly inserted at the springing of each arch, the use of which was to support the wooden centering while the arch was being built; thus doing away with the necessity of tall supports resting in the water. In most cases these corbels were not cut away at the completion of the bridge, but were left, so that repairs or rebuilding could be easily carried out. This very useful system was applied not only to bridges, but to all lofty arched structures, such as aqueducts or tall palaces, like that of Severus on the Palatine hill in Rome. In many cases a gate-tower was built as a defence at each end of the bridge: this was the case with more than one of the bridges in Rome, though no remains of these towers now exist.

The chief Roman bridges were built either of brick and concrete, or of solid stone masonry, carefully fixed with iron clamps and lead. In many cases, as for example in Rome itself, a hard "weather stone" was used for the facing, the inner masonry being of some softer and less expensive stone.

Under the later Roman Empire the city of Rome possessed the following bridges:—

1. The *Pons Sublicius*, so called from the *sublicae* or wooden beams of which it was constructed. Till the second century B.C. this was the only bridge in Rome: some of the sacred rites which were connected with it have already been described. According to tradition, the Sublician bridge was originally erected by Ancus Martius, its special purpose being to connect the main city with the long walls which led from the right bank of the river up to the isolated fortress on the Janiculan hill, where the church of S. Pietro in Montorio now stands. The approach to the bridge on the other side was close by the Porta Trigemina, just inside the line of the Servian wall. No traces of it now exist: the ruined piers visible in dry summers by the Marmoratum, under the Aventine hill, belong most probably to the "bridge of Probus," the last mentioned in the Catalogue of the *Curiosum*. The epithet *roboreo*, used by Ovid in the passage quoted above, shows that even in the time of Augustus the bridge was still of oak. In A.D. 69 it was carried away by a flood (Tac. *Hist.* i. 86), and appears not to have been rebuilt. The mistaken notion that the Pons Sublicius was identical with that known as the Pons Lapideus or Aemilius arose from the misunderstanding of a passage in Plutarch (*Num.* 9), and from the statement of the spurious Publius Victor, whose catalogue is a mediaeval forgery. The Roman bridges appear to have been a favourite resort for beggars (see Senec. *de Vita beata*, 15): hence Juvenal (xiv. 134) uses the phrase *aliquis de ponte*, as meaning a beggar (cf. Juv. iv. 116).

2. The first stone bridge in Rome, called on that account the *Pons Lapideus*, was also known as the *Pons Aemilius*. It was begun in 179 B.C. by M. Fulvius Nobilior and the censor M. Aemilius Lepidus, when the conquest of Etruria and the defeat of Hannibal had put an end to all fears of invasion. It was not, however, completed till the time of the censors Publius Scipio Africanus and L. Mummius (Achaicus): see Liv. xl. 51; Juv. vi. 32; and Plut. *Num.* 9 The *Fasti Capranici* describe it as being "ad theatrum Marcelli;" and the *Cosmographia* of Aethicus as "ad Forum Boarium." These indications, and the recent discovery of an ancient basalt-paved road leading up to the mediaeval Ponte Rotto, show that the last-named bridge occupies the site of the Pons Aemilius. The three arches which still exist of the "broken bridge" appear not to be older than the thirteenth century; the present bridge having been mainly rebuilt after its destruction by a flood during the pontificate of Honorius III., 1216–1227. In 1598 about half was swept away by another flood, and the gap is now bridged over by a modern iron structure. The name *Palatinus*, as applied to the Pons Aemilius, appears to be a mediaeval invention.

3. The *Pons Fabricius*, which unites the Insula Tiberina to the left bank of the river, was built in 62 B.C. by L. Fabricius, one of the *curatores viarum*, as is recorded in inscriptions deeply cut in large letters across the face of its arches. Part is now illegible, but the full inscription (repeated over both arches) is given by Pirro Ligorio in his MS. notes on Ancient Rome, *c.* 1570 (Bodleian, *Cod. Canoniciani Ital.* 138): L. FABRICIVS C. F. CVR. VIAR. FACIVNDVM COERAVIT EIDEMQVE PROBAVIT; and in smaller letters over the intermediate arch for storm-water, Q. LEPIDVS M. F. M. LOLLIVS M. F. COS. S. C. PROBAVERVNT. This last inscription records its restoration by the consuls Q. Aemilius Lepidus and M. Lollius in 21 B.C. Like the other existing bridges of Rome, this is built of peperino and tufa, faced on both sides by massive blocks of travertine, which is also used for the corbels at the springing of each arch. A fragment still exists of the parapet; namely, a marble pilaster crowned by a quadruple head, *Janus quadrifrons*, from which the bridge takes its modern name of the *Ponte dei quattro capi*. The pilaster is grooved to receive an open bronze screen or *cancellus*, which formerly filled up the intermediate spaces between the pilasters. This bridge is shown on the reverse of a contemporary denarius, *c.* 62 B.C., with the *legend* L. FABRICIVS, and a snake to indicate the proximity of the Temple of Aesculapius on the Tiber island. It is also represented on a bronze medallion of Antoninus Pius (see Froehner, *Med. Rom.* p. 52; also Dio Cass. xxxviii. 45). During the Middle Ages this bridge was often called the *Pons Judaeus*, from its proximity to the Ghetto or Hebrew quarter.

4. The *Pons Cestius*, which joins the Insula Tiberina to the right or Janiculan side of the Tiber, was probably built by L. Cestius, Praefect of the City in 46 B.C. (see Dio Cass. xxxvii. 45). On one of the large marble slabs which form the parapet is a long inscription recording the restoration of the bridge in A.D. 370 by Valentinianus, Valens, and Gratian. The Pons Cestius consists of one arch only, with an opening for flood-water on each side of it. At present it is called after the adjacent church of S. Bartolommeo, which probably stands on the site of the Temple of Aesculapius.

5. The *Pons Aelius*, modern *Ponte di S. Angelo*, was built in A.D. 135 by Hadrian to connect his mausoleum and circus with the Campus Martius (see Dio Cass. lxix. 23; and Spartian, *Hadr.* 19). It is shown on bronze coins of Hadrian dated from his third consulship. The Einsiedeln MS. gives its dedicatory inscription, which is now lost, IMP. CAESAR DIVI TRAIANI PARTHICI FILIVS DIVI NERVAE NEPOS TRAIANVS HADRIANVS AVG. PONT. MAX. TRIB. POT. XVIIII.

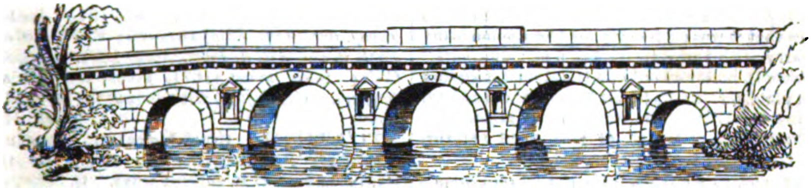
(A.D. 135) COS. III. P. P. FECIT. The name of the bridge was derived either from Hadrian's family name Aelius, or else from his son Aelius Caesar, who died before his father. The five arches of this noble bridge are of peperino faced with travertine; near it, along the left bank, are extensive remains of the ancient embankment wall, built of massive blocks of peperino, now doomed to destruction for the sake of the new quay. This is the bridge mentioned by Dante, *Infer.* xviii. 28–33, as being thronged with pilgrims in the Jubilee year 1300.

6. The *Pons Aurelius*, mentioned in the *Notitia*, was probably on the site of the modern Ponte Sisto. The date of its foundation is not known, but Marlianus (*Topogr. Rom.* cap. cxxi.) gives an inscription (now lost) which recorded its restoration in the reign of Hadrian. The names *Janicularis* and *Antoninianus*, which are sometimes given to this bridge, appear to be inventions of the mediaeval topographers. This is possibly the bridge which, in a recently discovered inscription, is called the *Pons Agrippae*; see *Bull. Com. Arch. Rom.* 1888, p. 92.

7. The *Pons Neronianus* or *Vaticanus* was begun by Caligula and completed by Nero, to give access to the *Horti Agrippinae* and the great circus which stood by the present Basilica of St. Peter. The foundations of its piers still exist, and are visible in summer a little way below the Pons Aelius. It is probable that this is the bridge to which the title *Pons triumphalis* was sometimes applied.

8. The *Pons Mulvius*, modern *Ponte Molle*, is about a mile and a half outside the Aurelian wall of Rome, higher up the river, where the Via Flaminia crosses the Tiber. It was built by the censor M. Aemilius Scaurus, 109 B.C. (see Aur. Victor, *de Viris illust.* xxvii. 8). It was on this bridge that Cicero arrested the ambassadors of the Gaulish Allobroges during the Catiline conspiracy (Cic. *in Cat.* iii. 2). And in A.D. 312 it was the scene of the utter defeat of Maxentius by Constantine. As at the present day, the Pons Mulvius was under the Empire a favourite pleasure resort for the lower classes of Rome (see Tac. *Ann.* xiii. 47).

A very large number of fine stone bridges still exist throughout the greater part of the Roman empire, in various states of preservation. One of the most perfect in Italy is that at Ariminum (modern Rimini), consisting of five massive stone arches, as is shown in the annexed cut. An inscription on it records that it was begun by Augustus and completed by Tiberius.



Bridge at Rimini.

The bridge over the Nera, at the modern town of Narni, to the north of Rome, though partly destroyed, is still a very noble piece of engineering. The arches are more than 100 feet high, and their spans are of unusual width. The combined aqueduct and bridge which crosses the river Gard near Nîmes (Nemausus), commonly called the *Pont du Gard*, is remarkable for its size and stately height, consisting of three superimposed tiers of arches, still well preserved, to a height of 190 feet. Another fine Roman bridge still exists near Brioude, over the Allier; it consists of one arch with a very wide span, and 70 feet high from the water to the soffit of the arch.

In Spain remains exist of a very magnificent bridge across the Tagus at Alcantara, which when perfect consisted of six arches, reaching nearly 200 feet in height and 670 feet in length.

The temporary bridges of the Romans, built for military purposes, were no less remarkable for the engineering skill shown in their construction. Julius Caesar describes (*Bell. Gall.* iv. 17) a wooden bridge which he constructed across the Rhine in the almost incredibly short space of ten days. It was supported on a series of double piles, formed of two baulks of timber, each 18 inches square (in section), pointed at one end, and driven into the bed of the river by machines called *fistucae*; they were set in a sloping direction, so as to resist the force of the current. A corresponding parallel row of piles was driven in at a distance of 40 feet, thus forming a very wide roadway for the Roman army. The cross-pieces were 2 feet thick, and were supported by cross struts so as to diminish the bearing. A

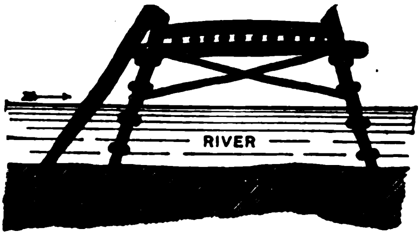
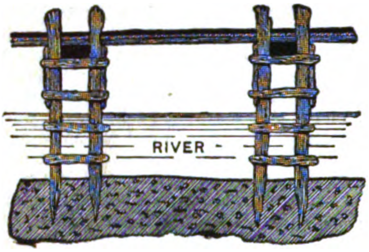
Caesar's Bridge over the Rhine.

(a) Rough joists.
(b) Wattle-work.
(c) Roadway of earth.



TRANSVERSE SECTION

little higher up the stream a third row of piles was fixed to support "fenders," to secure the main structure from injury in case the enemy set heavy trees to float down the river and strike against the supports of the bridge. Fra Giocondo of Verona, Palladio, and other architect-scholars of the sixteenth century have published drawings of this bridge, devised from Caesar's description; but not as a rule with much success (see Giocondo's edition of the *Commentaries*, dedicated to Giuliano de' Medici in 1510; and Palladio, *Architettura*, Venice, 1570, lib. iii. cap. 6).

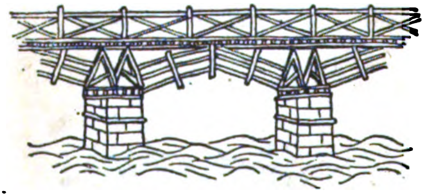


LONGITUDINAL SECTION.

Other temporary bridges were supported on floating casks (*dolia* or *cupae*): see Herodian, viii. 4, 8; and Lucan, iv. 420. Vegetius (iii. 7) states that it was customary for the Roman army to carry with them small boats or "dug-outs" (*monoxyli*), hollowed out of a tree-trunk, together with planks, ropes, and nails to form the roadway. During the Mithridatic war Pompey crossed the Euphrates on a bridge of this kind (Florus, iii. 5). [RATIS.]

The annexed woodcut, from a relief on Trajan's Column, shows the construction of this sort of floating bridge. Another relief on the same column shows a more permanent kind of military bridge, which was constructed by Trajan across the Danube (Dio Cass. lxviii. p. 776, and Plin. *Epist.* viii. 4). This bridge consists of stone piers supporting very skilfully designed trusses of wood, framed like a low-pitched roof. Much ingenuity is shown by the way in which the engineer has spanned wide spaces with short pieces of timber. The engineer who designed this bridge was the celebrated Apollodorus of Damascus, whose criticism on Hadrian's design for the Temple of Venus and Rome by the Sacra Via is said to have irritated the emperor so much that he put the critic to death (see Dio Cass. lxix. 4).

Bridge on boats. (From Trajan's Column.)



Part of the Bridge across the Danube. (From Trajan's Column.)

There appears to be no truth in this story: on the contrary, it is evident that Hadrian had the good sense to adopt the suggestions of Apollodorus. According to Dio Cassius, Hadrian demolished Apollodorus' bridge on the pretence that it might facilitate the incursions of the barbarians into the Roman provinces, but really from jealousy at the success of so great an undertaking. This latter supposition is probably quite untrue.

The reverses of many *first brasses* of the Empire have representations of important bridges: as, for example, one of Gordianus III. with the bridge over the Maeander at Antiochia ad Maeandrum in Caria (see Head, *Num. Hist.* p. 520).

The word *pons* was also applied to any sort of wooden gangway, such as the *pons suffragiorum* by which the file of voters at the Comitia passed into the enclosure (*ovile* or *saepta*); and also to the movable gangway used to give access to the deck of a ship: hence in modern Italian *ponte* has come to mean the deck itself. (See Mayerhöfer, *Die Brücken im alten Rom*, 1884; Zippel, *Jahrbücher für klass. Phil.* 1886, p. 481; Becker, *De Romae vet. muris*, &c., 1842; Jordan, *Topog. der Stadt Rom*, 1875–80; Piale, *Antichi Ponti* in the *Atti d. Pont. Acad.* 1831. Urlichs, *Codex Rom. topog.* 1871, gives the various *Regionary Catalogues*, with lists of the bridges in Rome. [J. H. M.]

PO'NTIFEX (*ἱεροδιδάσκαλος, ἱερονόμος, ἱεροφύλαξ, ἱεροφάντης*). The origin of this word is explained in various ways. Q. Scaevola, who was himself pontifex maximus, derived it from *posse* and *facere*, and Varro from *pons*, because the pontiffs, he says, had built the Pons Sublicius, and afterwards frequently restored it, that it might be possible to perform sacrifices on each side of the Tiber. (Varro, *L. L.* v. 83, ed. Müller; Dionys. ii. 73.) This statement is, however, contradicted by the tradition which ascribes the building of the Pons Sublicius to Ancus Martius (Liv. i. 33), at a time when the pontiffs had long existed and borne this name. Göttling (*Gesch. d. Röm. Staatsv.* p. 173) thinks that *pontifex* is only another form for *pompifex*, which would characterise the pontiffs only as the managers and conductors of public processions and solemnities. Others have suggested (cp. Plut. *Num.* 9) that the word is formed from *pons* and *facere* (in the signification of the Greek *ῥέζειν*, to perform a sacrifice), and that consequently it signifies the priests who offered sacrifices upon the bridge. The ancient sacrifice to which the name in this view alludes, is that of the Argeans on the sacred or Sublician bridge, which is described by Dionysius (i. 38; cf. ARGEI). But as the word *pons* originally meant "way" (Curtius, *Princ. Etym.* i. 323), it is very probable that *pontifex* meant "those who make the roads and bridges" (cp. Lange, *Röm. Alt.* i.^{3} 371), and are therefore possessed of mathematical and engineering skill (Mommsen, *R. H.* i. 178: cf. Jordan, *Topog. Roms*, i. 1, 397). Marquardt prefers to regard the name as coming from the root *pu*, "to purify," in a participial form. No explanation is satisfactory which does not account for the fact that the title was used in many other Italian towns besides Rome.

The Roman pontiffs formed the most illustrious among the great colleges of priests. Their institution, like that of all important matters of religion, was ascribed to Numa. (Liv. i. 20; Dionys. ii. 73; Cic. *de Orat.* iii. 19, 73.) According to Livy (x. 6), the original number of pontiffs were four: it has been commonly assumed that this was exclusive of the pontifex maximus, and that Cicero (*de Rep.* ii. 14, 26) is including him when he says that Numa appointed five pontiffs. But it seems probable that there was no pontifex maximus under the monarchy, the king himself discharging the functions, which afterwards were fulfilled by him. Besides, the number three seems to have been attached to this office as well as to that of the augurs, being retained in the case of colonies, which often keep faithful to the earliest type. Hence we must assume that Livy is in error in the account which he gives of the changes made by the Ogulnian law; and instead of supposing with Niebuhr that *four* pontiffs represent the two earliest tribes, the Ramnes and the Tities, it will be better to assume that the six, including the king, represent the *three* tribes. But we really cannot get beyond conjectures on this point. In the year B.C. 300, the Ogulnian law raised the number of pontiffs to eight, or, more probably according to the researches of Bardt, to nine, and four of them were to be plebeians (Liv. x. 6). The pontifex maximus, however, continued to be a patrician down to the year B.C. 254, when Tib. Coruncanius was the first plebeian who was invested with this dignity (Liv. *Epit.* xviii.). This number of pontiffs remained for a long time unaltered, until in 81 B.C. the dictator Sulla increased it to fifteen (Liv. *Epit.* lxxxix.), and Julius Caesar to sixteen (Dio Cass. xlii. 51). In both these changes the pontifex maximus is included in the number. During the Empire the number varied, though on the whole fifteen appears to have been the regular number.

The mode of appointing the pontiffs was also different at different times. It appears that after their institution by Numa, the college had the right of co-optation; that is, if a member of the college died (for all the pontiffs held their office for life), the members met and elected a successor, who after his election was inaugurated by the augurs (Dionys. ii. 22, 73). This election was sometimes called *captio* (Gellius, i. 12; cf. FLAMEN). But at some time in the course of the third century B.C. the practice sprang up, we do not know more precisely how or when, that the choice of the pontifex maximus from the other members should be made by the votes of seventeen of the tribes, a minority of the whole number, determined by lot. This was the case with the election after the death of L. Lentulus in B.C. 212 (Liv. xxv. 2, 5), and with other later instances (Liv. xxxix. 46, 1; xl. 42). The ordinary pontiffs were still co-opted. An attempt to deprive the college of its right of co-optation, and to transfer the power of election to the people, was made in the year B.C. 145, by the tribune C. Licinius Crassus; but it was frustrated by the praetor C. Laelius. (Cic. *de Am.* 25, 96; *Brut.* 21, 43; *de Nat. Deor.* iii. 17, 43.) In 104 B.C. the attempt was successfully repeated by the tribune Cn. Domitius Ahenobarbus: and a law (Lex Domitia) was then passed, which transferred the right of electing the members of the great colleges of priests to the seventeen tribes; that is, the people elected one from a list of candidates approved by the college, who was then made a member of the college by the *cooptatio* of the priests themselves, so that the *cooptatio*, although still necessary, became a mere matter of form. (Cic. *de Leg. Agr.* ii. 7, 18; *ad Brut.* i. 5; Vell. Pat. ii. 12, 3; Suet. *Nero*, 2.) The Lex Domitia was repealed by Sulla in a Lex Cornelia de Sacerdotiis (81 B.C.), which restored to the great priestly colleges their full right of *cooptatio*. (Liv. *Epit.* lxxxix.; Pseudo-Ascon. *in Divinat.* p. 102, ed. Orelli; Dio Cass. xxxvii. 37.) In the year 63 B.C. the law of Sulla was abolished, and the Domitian law was restored by a plebiscite of Labienus, which prescribed that in case of a vacancy the college itself should nominate two candidates, and the people elect one of them (Dio Cass. xxxvii. 37). This mode of proceeding is expressly mentioned in regard to the appointment of augurs, and was, no doubt, the same in that of the pontiffs (Cic. *Philip.* ii. 2, 4). Julius Caesar modified but slightly this Lex Domitia, but M. Antonius is said to have again restored the right of *cooptatio* to the college (Dio Cass. xliv. 53). Mommsen (*Staatsr.* ii.^{2} 29) doubts the accuracy of this statement. Under the Empire the right of appointment belonged formally to the senate, but virtually to the emperor.

The college of pontiffs had the supreme superintendence of all matters of religion, and of things and persons connected with public as well as private worship. A general outline of their rights and functions is given by Livy (i. 20) and Dionysius (ii. 73). This power is said to have been given to them by Numa; and he also entrusted to their keeping the books containing the ritual ordinances, together with the obligation to give information to any one who might consult them on matters of religion. They had to guard against any irregularity in the observance of religious rites that might arise from a neglect of the ancient customs, or from the introduction of foreign rites. They had not only to determine in what manner the heavenly gods should be worshipped, but also the proper form of burials, and how the souls of the departed (*manes*) were to be appeased; in like manner what signs either in lightning or other phenomena were to be received and attended to. They had the judicial decision in all matters of religion, whether private persons, magistrates, or priests were concerned; and in cases where the existing laws or customs were found defective or insufficient, they made new laws and regulations (*decreta pontificum*) in which they always followed their own judgment as to what was consistent with the existing customs and usages (Gell. ii. 28; x. 15). They watched over the conduct of all persons who had anything to do with the sacrifices or the worship of the gods; that is, over all the priests and their servants. The forms of worship and of sacrificing were determined by the pontiffs, and whoever refused to obey their injunctions was punished by them, for they were "rerum, quae ad sacra et religiones pertinent, judices et vindices." (Fest. s. v. *Maximus pontifex;* cf. Cic. *de Leg.* ii. 8, 12.) The pontiffs themselves were not subject to any court of law or punishment, and were not responsible either to the senate or to the people. The details of their duties and functions were contained in books called *libri pontificii* or *pontificales*, *commentarii sacrorum* or *sacrorum pontificalium* (Fest. s. vv. *Aliuta* and *Occisum*), which they were said to have received from Numa, and which were sanctioned by Ancus Martius. These were preserved under the charge of the pontifex maximus in the regio. Ancus is said to have made public that part of these regulations which had reference to the *sacra publica* (Liv. i. 32); and when at the commencement of the Republic the wooden tables, on which these published regulations were written, had fallen into decay, they were restored by the pontifex maximus C. Papirius (Dionys. iii. 36). One part of these *libri pontificales* was called "Indigitamenta," and contained the names of the gods as well as the manner in which these names were to be used in public worship (Serv. *ad* Verg. *Georg.* i. 21). A second part must have contained the formulas of the *jus pontificium* (Cic. *de Rep.* ii. 31, 54). The original laws and regulations contained in these books were in the course of time increased and more accurately defined by the decrees of the pontiffs, whence perhaps their name *commentarii* (Plin. *H. N.* xviii. 3; Liv. iv. 3; Cic. *Brut.* 14, 55). Another tradition concerning these books stated that Numa communicated to the pontiffs their duties and rights merely by word of mouth, and that he had buried the books in a stone chest on the Janiculum. (Plut. *Num.* 23; Plin. *H. N.* xiii. 27; Val. Max. i. 1, 12; August. *de Civit. Dei*, vii. 34.) These books were found in 181 B.C., and one-half of them contained ritual regulations and the *jus pontificium*, and the other half philosophical inquiries on the same subjects, and were written in the Greek language. The books were brought to the praetor urbanus Q. Petilius, and the senate ordered the latter half to be burnt, while the former was carefully preserved. Respecting the nature and authenticity of this story, see Hartung, *Die Relig. d. Röm.* i. p. 214. The *annales maximi* were records of the events of each year kept by the pontifex maximus, from the commencement of the state to the time of the pontifex maximus P. Mucius Scaevola, B.C. 133 (Cic. *de Orat.* ii. 12, 52).

As to the rights and duties of the pontiffs, it must first of all be borne in mind that the pontiffs were not priests of any particular divinity, but a college which stood above all other priests, and superintended the whole external worship of the gods (Cic. *de Leg.* ii. 8, 20). One of their principal duties was the regulation of the *sacra* both *publica* and *privata*, and to watch that they were observed at the proper times (for which purpose the pontiffs originally had the whole regulation of the calendar: see CALENDARIUM, Vol. I. p. 342 *b*, &c.), and in their proper form. In the management of the *sacra publica* they were in later times assisted in certain performances by the tres viri epulones [EPULONES], and had in their keeping the funds from which the expenses of the *sacra publica* were defrayed [SACRA].

The pontiffs convoked the assembly of the curies (Comitia Calata or Curiata) in cases where priests were to be appointed, and flamines or a rex sacrorum were to be inaugurated; also when wills were to be received, and when a *detestatio sacrorum* and adoption by *adrogatio* took place. (Gell. v. 19, xv. 27; ADOPTIO.) Whether the presence of the pontiffs together with that of the augurs and two flamines were necessary in the Comitia Curiata also in cases when other matters were transacted, as Niebuhr thinks (i. p. 342, ii. p. 223), does not appear to be quite certain. The curious circumstance that after the decemvirate the pontifex maximus was commanded by the senate to preside at the election of tribunes of the people, is explained by Niebuhr (ii. p. 359: cf. Schwegler, iii. 66, and Mommsen, *Röm. Staatsr.* ii. 34, note).

As regards the jurisdiction of the pontiffs, magistrates and priests as well as private individuals were bound to submit to their sentence, provided it had the sanction of three members of the college (Cic. *de Harusp. Resp.* 6, 12). In most cases the sentence of the pontiffs only inflicted a fine upon the offenders (Cic. *Philip.* xi. 8, 18; Liv. xxxvii. 51, xl. 42), but the person fined had a right to appeal to the people, who might release him from the fine. In regard to the Vestal Virgins and the persons who committed incest with them, the pontiffs had criminal jurisdiction and might pronounce the sentence of death (Dionys. ix. 40; Liv. xxii. 57; Fest. s. v. *Probrum*). A man who had violated a Vestal Virgin was according to an ancient law scourged to death by the pontifex maximus in the comitium, and it appears that originally neither the Vestal Virgins nor the male offenders in such a case had any right of appeal. Incest in general belonged to the jurisdiction of the pontiffs, and might be punished with death (Cic. *de Leg.* ii. 19, 47). In later times we find that even in the case of the pontiffs having passed sentence upon Vestal Virgins, a tribune interfered and induced the people to appoint a quaestor for the purpose of making a fresh inquiry into the case; and it sometimes happened that after this new trial the sentence of the pontiffs was modified or annulled (Ascon. *ad Milon.* p. 46, ed. Orelli). Such cases, however, seem to have been mere irregularities founded upon an abuse of the tribunician power. In the early times the pontiffs were in the exclusive possession of the civil as well as religious law, until the former was made public by C. Flavius. [ACTIO.] The regulations which served as a guide to the pontiffs in their judicial proceedings, formed a large collection of laws, which was called the *jus pontificium*, and formed part of the *libri pontificii*. (Cic. *de Orat.* i. 43, 193; iii. 33, 134; *pro Domo*, 13, 34: JUS.) The new decrees which the pontiffs made either on the proposal of the senate, or in cases belonging to the *sacra privata*, or that of private individuals, were, as Livy (xxxix. 16) says, innumerable. (Compare Cic. *de Leg.* ii. 23, 58; Macrob. *Sat.* iii. 3; Dionys. ii. 73.)

The meetings of the college of pontiffs, to which in some instances the flamines and the rex sacrorum were summoned (Cic. *de Harusp. Resp.* 6, 12), were held in the *domus regia* on the Via Sacra, to which were attached the offices of the pontifex maximus and of the rex sacrorum. (Suet. *Jul.* 46; Serv. *ad Aen.* viii. 363;

Plin. *Epist.* iv. 11.) As the chief pontiff was obliged to live in a *domus publica*, Augustus, when he assumed this dignity, changed part of his own house into a *domus publica* (Dio Cass. liv. 27). All the pontiffs were in their appearance distinguished by the conic cap called *tutulus* or *galerus*, with an apex upon it, and the toga praetexta.

The pontifex maximus was the president of the college and acted in its name, the full rights of the king in religious matters having descended to him (Mommsen, *R. Staatsr.* ii. 17–70). He was generally chosen from among the most distinguished persons, and such as had held a curule magistracy, or were already members of the college (Liv. xxxv. 5; xl. 42). Two of his especial duties were to appoint (*capere*) the Vestal Virgins and the flamines [VESTALES; FLAMEN], and to be present at every marriage by *confarreatio*. When festive games were vowed or a dedication made, the chief pontiff had to repeat over before the persons who made the vow or the dedication, the formula with which it was to be performed (*praeire* or *praefari verba*, Liv. iv. 27, v. 41, ix. 46). During the period of the Republic, when the people exercised sovereign power in every respect, we find that if the pontiff on constitutional or religious grounds refused to perform this solemnity, he might be compelled to do so by the people.

A pontifex might, like all the members of the great priestly colleges, hold any other military, civil or priestly office, provided the different offices did not interfere with one another. Thus we find one and the same person being pontiff, augur, and decemvir sacrorum (Liv. xl. 42); instances of a pontifex maximus being at the same time consul are very numerous. (Liv. xxviii. 33; Cic. *de Harusp. Resp.* 6, 12; cf. Ambrosch, *Studien und Andeutungen*, p. 229, note 105.) But whatever might be the civil or military office which a pontifex maximus held besides his pontificate, he was not allowed to leave Italy. The first who violated this law was P. Licinius Crassus, in B.C. 131 (Liv. *Epit.* 59; Val. Max. viii. 7, 6; Oros. v. 10); but after this precedent, pontiffs seem to have frequently transgressed the law, and Caesar, though pontifex maximus, went to his province of Gaul.

The college of pontiffs continued to exist until the overthrow of paganism (Arnob. iv. 35; Symmach. *Epit.* ix. 128, 129); but its power and influence were considerably weakened as the emperors, according to the example of Caesar, had the right to appoint as many members of the great colleges of priests as they pleased (Dio Cass. xlii. 51, xliii. 51, li. 20, liii. 17; Suet. *Caes.* 31). In addition to this, the emperors themselves were always chief pontiffs, and as such the presidents of the college; hence the title of pontifex maximus (P. M. or PON. M.) appears on several coins of the emperors. If there were several emperors at a time, only one bore the title of pontifex maximus; but in the year A.D. 238, we find that each of the two emperors Maximus and Balbinus assumed this dignity (Capitol. *Maxim. et Balb.* 8). The last traces of emperors being at the same time chief pontiffs are found in inscriptions of Valentinian, Valens, and Gratianus (Orelli, *Inscript.* n. 1117, 1118). The last formally renounced the title in A.D. 382. From this time the emperors no longer appear in the dignity of pontiff; but at last the title was assumed by the Christian bishop of Rome.

There were other pontiffs at Rome who were distinguished by the epithet *minores*. Various opinions have been entertained as to what these *pontifices minores* were. Niebuhr (i. p. 302, n. 775) thinks that they were originally the pontiffs of the Luceres; that they stood in the same relation to the other pontiffs as the *patres minorum gentium* to the *patres majorum gentium*; and that subsequently, when the meaning of the name was forgotten, it was applied to the secretaries of the great college of pontiffs. This supposition is contradicted by all the statements of ancient writers who mention the *pontifices minores*. Livy (xxii. 57; compare Jul. Capitol. *Opil. Macrin.* 7), in speaking of the secretaries of the college of pontiffs, adds, "quos nunc minores pontifices appellant;" from which it is evident that the name *pontifices minores* was of later introduction, and that it was given to persons who originally had no claims to it; that is, to the secretaries of the pontiffs. The only natural solution of the question seems to be this. At the time when the real pontiffs began to neglect their duties, and to leave the principal business to be done by their secretaries, it became customary to designate these scribes by the name of *pontifices minores*. Macrobius (*Sat.* i. 15), in speaking of minor pontiffs previous to the time of Cn. Flavius, makes an anachronism, as he transfers a name customary in his own days to a time when it could not possibly exist. The number of these secretaries seems to have been, at least after the time of Sulla, three (Cic. *de Harusp. Resp.* 6, 12). The name cannot have been used long before the end of the Republic, when even chief pontiffs began to show a disregard for their sacred duties, as in the case of P. Licinius Crassus and Julius Caesar. Another proof of their falling off in comparison with former days, is that about the same time the luxurious living of the pontiffs became proverbial at Rome (Hor. *Carm.* ii. 14, 26, &c.; Mart. xii. 48, 12; Macrob. *Sat.* ii. 9). (Cf. Bouché-Leclercq, *Les Pontifes de l'anc. Rome*, Paris, 1871; Marquardt, iii. 227–238; Madvig, *Verf. u. Verw.* ii. 612–633; Mommsen, *R. Staatsr.* ii. 18–70.) [L. S.] [A. S. W.]

PONTIFICA'LES LUDI. [LUDI PONTIFICALES.]

POPA. [CAUPONA; SACRIFICIUM.]

POPI'NA. [CAUPONA.]

POPLIFU'GIA or **POPULIFU'GIA**, the day of the people's flight, was celebrated on the 5th of July, according to Varro (*L. L.* vi. 18), in commemoration of the flight of the Romans, when the inhabitants of Ficuleae and Fidenae appeared in arms against them, shortly after the burning of the city by the Gauls; the traditional victory of the Romans, which followed, was commemorated on the 7th of July (called the *Nonae Caprotinae* as a feast of Juno Caprotina), and on the next day was the *Vitulatio*, supposed to mark the thank-offering of the pontifices for the event. Macrobius (*Sat.* iii. 2), who wrongly places the Poplifugia on the nones, says that it commemorated a flight before the Tuscans, while Dionysius (ii. 76) refers its origin to the flight of the people when Romulus disappeared from the earth. (Marquardt, *Staatsverw.* iii. 325.) [W. S.] [G. E. M.]

POPULA'RES. [NOBILES.]

POPULA'RIA. [AMPHITHEATRUM, Vol. I., p. 112 *a.*]

PO'PULUS. Populus is the collective name for the whole citizens of Rome, of whatever rank and class. There was probably a time when the ancestors of those who retained to the end the title of *patricii* were the only persons who possessed the rights of citizens. At that time the assemblies (*comitia*) of the populus would consist wholly of patricians. It is possible, likewise, that the outsiders, after they had attained to the rights of citizens in private law, were for a time excluded from active participation in the assemblies of the populus. They would then be in the position of the *cives sine suffragio* of later days. It is not impossible (though here we come into dangerous collision with the ancient authorities) that the non-patrician Romans were admitted to a vote when the populus assembled in its military capacity (*comitia centuriata*) before the same privilege was accorded to them when the populus met in peaceful fashion within the walls (*comitia curiata*). But all this relates to pre-historic times. There is no evidence that, from the expulsion of Tarquin onwards, the plebeians were ever excluded from any kind of assembly of the populus Romanus. In all the history of the contest of the orders, we never hear of this privilege as a thing which remained to be fought for.

The populus Romanus is in theory sovereign in all matters. Every difficulty can be solved in the last resort by its interposition, and its command is law: "Lex est quod populus jubet atque constituit" (Gaius, i. 3). It cannot be bound even by its own previous decisions: "quod populus postremum jussisset, id jus ratumque esto" (Law of Twelve Tables). It may ordain and alter what it pleases in its own constitution, or in the powers and tenure of its magistrates, or in the delegation of rights to other persons or bodies, or finally in the ordinances of religion itself. This very omnipotence necessitated caution in the use of such unlimited authority. Especially the Roman people must be careful not to ordain anything which is likely to cause the withdrawal of the blessing of heaven on their actions. The populus by its own act (for there is none above it) protects itself against its own possible mistakes by attaching to each decree a saving clause, "si quid sacrosancti est, quod non jure sit rogatum, ejus hac lege nihil rogatur" (see for references and explanation Mommsen, *Staatsr.* iii. p. 43, n. 3, and p. 335, n. 2). In order to determine what may safely be commanded in the sphere of religion, the people naturally takes the advice of learned men, pontiffs and augurs, who are supposed to have special knowledge in these subjects.

In order to utter its supreme command the people must be properly summoned and have the question properly put to it ("consul populum jure rogavit"). The Romans always recognised the necessity for order and discipline: "ubicunque multitudo esset, ibi et legitimum rectorem multitudinis censebant debere esse" (Liv. xxxix. 15, 11). The magistrate, selected by the community to be its leader and to consult the gods on its behalf, is the only person who can elicit its sovereign will by putting the question with the proper solemnities (*auspicato*). The initiative residing in the magistrate is thus of the highest practical importance. The assembly can only answer Yes or No to his *rogatio*. But while fully admitting the great influence of the magistrate in the comitia, we must be careful not to exaggerate his formal attributes, or to forget that he does not ordain, but only requests the people to ordain ("Velitis jubeatis, Quirites"). We can hardly hold then, with Mommsen (*Staatsr.* iii. 304, 312), that it is of the essence of a *lex rogata* to be an agreement between two independent powers, the magistrate and the people. Other writers have gone further than this. Borgeaud, for instance, approves the doctrine that sovereignty legitimately resides in the magistrate rather than in the people, and that law in its truest conception is something imposed on the people from above: "The fact that the magistrate of ancient Rome, elected though he may be, does not hold his power from the assembly of the people, is a truth which criticism establishes each day more and more. We think that it will establish, likewise, that the law is on the same footing" (*Hist. du Plébiscite*, p. 114). "In the time when the magistrate and the law are by divine right there is no other sovereign than the magistrate, consecrated by the auspices of heaven and clothed with the imperium" (*ib.* p. 167). Such theories are in admitted contradiction with the ideas which the Romans of historical times entertained as to the basis of their own institutions. These institutions are represented as given indeed by the first king, who was also the founder of the state. Before Romulus, the Roman people did not exist, so that it could not of course be depicted as electing its first king or instituting its own senate or assembly. But with this exception, the Roman tradition is essentially republican in spirit. If the Romans had believed in the divine right of monarchy, they would certainly have enshrined it (as did the Spartans) in a heroic family. If they had imagined that the magistrate was inspired to dictate laws to them, they would have ascribed to him and not to the comitia the authority to override the sentence of the law in favour of a condemned criminal, and to undertake an offensive war, and to enable the citizen to dispose of his property to persons other than his natural heirs. It is just in such extreme cases that we can see where sovereignty really resides. Because the power of the magistrate is limited, the unlimited power of the people has to be called upon to intervene in such circumstances.

The practical activity of the populus is at every stage of Roman history hampered and restricted. In early times there was little to be done in the way of government beyond the command in war and the administration of justice, both of which were included in the imperium of the magistrate. The authorised body of advisers attached to the magistrate would likewise make the frequent consultation of the people unnecessary. Later on, the difficulties in the way of a magistrate who wished to put a question to the people were ever on the increase, and every such difficulty might be an obstacle between the people and the utterance of its will. In the presence of this practical nullity the persistence of the doctrine that the People is the fount of power and the fount of law becomes the more remarkable. The magistrate (even the king) is represented as having not a co-ordinate but a derived power. His ministerial functions are necessary for the proper utterance of the voice of the people, but it is the people and the people alone whose commands are absolute. The *sic volo sic jubeo* which is the essential characteristic of sovereignty is to be found here alone. It is open, of course, to the critic to point out that our authorities for this presentation of the Roman constitution are of late time, and that they may have read into the early history ideas which belonged to a subsequent period. This may be a reasonable ground perhaps for scepticism, but hardly for setting up by conjecture a system of doctrines which were unknown to the Romans themselves. We can only present the Roman constitutional theory as it appeared to the Romans of historical times.

The assemblies of the populus Romanus are occasionally called by the general name of *concilia*, but their distinctive title is *comitia*. *Concilium* is more appropriately used of those assemblies which have no right to the more dignified and specific title of *comitia*. The populus Romanus assembles in historical times in three ways,—by curies, by centuries, and by tribes. The most concise account is that of Laelius Felix in Aul. Gell. xv. 27: "Is qui non universum populum sed partem aliquam adesse jubet, non comitia sed concilium edicere debet. Tribuni autem neque advocant patricios neque ad eos ferre ulla de re possunt . . . . Cum ex generibus hominum suffragium feratur curiata comitia esse, cum ex censu et aetate centuriata, cum ex regionibus et locis tributa." [See Comitia.]

From the time of the secession to the Mons Sacer, the populus Romanus has side by side with it another great corporation, that of the plebs. The two corporations, though consisting in the main of the same persons, remained to the end of the Republic distinct in law. But the fact that the assemblies of both are popular assemblies, and that both the words *populus* and *plebs* may be used in a loose and general as well as in a technical sense, causes much confusion when we are dealing with the expressions, not of lawyers, but of politicians or historians. The confusion may best be illustrated by a passage of Livy (xxvii. 5, 16) where the distinction is alternately remembered and forgotten: "Decrevit senatus ut consul, priusquam ab urbe discederet, populum rogaret, quem dictatorem dici placeret, eumque quem populus jussisset, diceret dictatorem; si consul noluisset, praetor populum rogaret: si ne is quidem vellet, tum tribuni ad plebem ferrent. Quum consul se populum rogaturum negasset, quod suae potestatis esset, praetoremque vetuisset rogare, tribuni plebis rogarunt plebesque scivit, ut Q. Fulvius . . . dictator diceretur." So far the words are used with absolute correctness; but immediately afterwards he makes the senate send for the other consul "ut diceret, quem populus jussisset, dictatorem."

By the Hortensian law of B.C. 287 the decrees of the plebs received equal force with those of the populus [see Plebiscitum]. Those writers who view even the legislative capacity of the populus as a setting aside of ancient doctrine, and as an usurpation by the secular power in the province of divine right, consider the power accorded to the decisions of the plebs as a further step on the path of impiety. "Religion," says Borgeaud (*op. cit.* p. 154), "lends its force to the consular or praetorian law, made under the auspices of Heaven. The spear makes the plebiscite equal to the law." "In setting itself up as equal to the holy Law, it a lay and profane thing, the plebiscite secularises law; it emancipates it definitely from religion; it makes it human" (*ib.* p. 192). There is little to justify this contrast. The plebeians were as religious as they knew how to be. Their magistrates are not indeed qualified to take the auspices of the patricians which are those of the Roman people, and so their assemblies cannot be held *auspicato*. The plebs came into existence in an age when it was not at all easy for them to invent auspices of their own and fresh augurs to interpret them. But they went as near to this as possible. They had their consecration of the Sacred Mount, their solemn oaths in the presence of Heaven, the *sacrosanctitas* conferred on their magistrates. These rites were doubtless acquiesced in with contempt by the patricians, much as Sudra rites would be despised though not disallowed by Indian Brahmins, but they were none the less religious. Even supposing that we deny any religious sanctity to the decrees of the plebs as such, it must be remembered that since the Lex Hortensia they could claim a derived right. The law of Hortensius was an enormous act of sovereignty on the part of the populus Romanus. The populus saw fit in the plenitude of its power to decree that an *alter ego* should be set up in the person of the plebs. Whoever then denies the competence of the plebs, limits the power of the populus, and sets at nought all the sanctity which the law may have acquired from the regal prerogatives of the dictator's office, and from the auspices and prayers with which doubtless Hortensius commenced the business of the day.

The equivalence of the powers of the two corporations naturally increased the tendency to use indiscriminately the technical terms belonging to each; and the contrast between *populus*, *comitia*, *lex*, *jubere* on the one hand, and *plebs*, *concilium*, *plebiscitum*, *sciscere* on the other, is practically disregarded. This confused usage has led in one instance to a serious difficulty of interpretation. The corporation of the plebs, which before the law of Publilius Volero in B.C. 471 probably assembled by curies, after that date assembled by tribes, and by tribes only. Thus, while in the case of a curiate or a centuriate assembly we know at once that the body which is meeting must be the populus, in the case of a tribute assembly it is not always clear whether the populus or the plebs is intended. Some modern writers (*e.g.* Madvig, *Verfassung des röm. Staates*, 3, § 5) have imagined that not only was there a confusion of expression, but that there was actually only one such assembly. The ancient authorities seem, however, conclusive on this point. The assembly by tribes which is called together by the tribunes cannot be an assembly of the populus Romanus, for "populi appellatione universi cives significantur, connumeratis etiam patriciis" (Gaius, i. 3), and "tribuni neque advocant patricios neque ad eos ferre ulla de re possunt" (Laelius in Aul. Gell. xv. 27). On the other hand, the assembly of the plebs cannot be that tribute assembly which confers the lesser *auspicia patriciorum* [see MAGISTRATUS], which is presided over by a patrician magistrate (see Cic. *ad Fam.* vii. 30, "Caesar, qui tributis comitiis auspicatus esset," &c.), and which passes laws on the *rogatio* of a consul. (See the preamble to the law in Frontinus, *de Aquis*, ch. 129: "T. Quinctius Crispinus consul populum jure rogavit populusque jure scivit in foro pro rostris aedis divi Julii pri. k. Julias. Tribus Sergia principium fuit, pro tribu Sex. L. f. Varro primus scivit.") There seems no escape from Mommsen's conclusion that the two corporations remained distinct; though the plebs always, and the populus sometimes, assembled by tribes.

Each of the two corporations had of course the election of its own officers, and by a special regulation of the Twelve Tables the populus, and the populus assembled in centuries, was alone competent to hear an appeal from the sentence of a magistrate affecting the life of a citizen. With these exceptions the assembly of the populus by way of tribes or of centuries and the assembly of the plebs were equally competent to pass sovereign decrees in all matters, and there are both leges and plebiscita relating to all manner of subjects of legislation. Even in the few reserved matters, the two approach each other as nearly as possible. The plebs may not indeed elect a consul or a praetor, but it may appoint a man to act *pro praetore* or *pro consule* (Liv. xxxi. 50, 11). It may not deprive a citizen of his *caput*, but it may decree that he shall be held to have deprived himself ("videri eum in exilio esse," Liv. xxv. 4, 9), or it may authorise the senate to try him (Liv. xxvi. 33, 12), or it may itself pronounce a capital sentence against him, conditionally on the finding of a jury. It is a tribune of the plebs, Fufius, of whom Cicero (*Paradox.* iv. 2, 32) says to Clodius: "Familiarissimus tuus de te privilegium tulit, ut si in opertum Bonae Deae accessisses exulares."

The distinction between populus and plebs, all important for the antiquarian and the constitutional lawyer, was practically of no significance for the statesman. Polybius in his elaborate account of the working of the Roman constitution does not so much as mention it. The practical effect of doubling the sovereignty was merely to commit the initiative to the tribunes as well as to the consuls and praetors. This parcelling out of power was probably a convenience as long as the senate kept a firm hand over all the magistrates; it added one more element of anarchy when this constitutional control was set aside. [J. L. S. D.]

PORISTAE (*πορισταί*). Very little has come down to us concerning the constitution and functions of this magistracy. All that we know is that it was at Athens a sort of financial board, appointed probably only from time to time when necessary for the purpose of raising extraordinary supplies (*πόρους πορίζειν*). The office is thus described: *περισταί εἰσιν ἀρχή τις Ἀθήνησιν ἥτις πόρους ἐζήτει* (Bekker, *Anecd.* 294, 19). From this we may infer that they were a kind of committee who discussed how the money required for a special purpose might best be raised (by some special means). They were evidently regarded as belonging to the Treasury department, as we find the term united with *ταμίαις* in Demosthenes (*Philipp.* i. 49, § 33), and in like manner Antiphon classes them with the poletae [POLETAE] and practores [PRACTORES]. (*De Chor.* § 14.)

They were probably a committee of ways and means appointed to deal with such an emergency as that which forms the subject of the First Philippic. Hence it is that Demosthenes urges the Athenians to become their own poristae and treasurers. If such an institution no longer existed at Athens, there would have been no force in the allusion. We may also infer from an allusion in Aristophanes (*Ran.* 1505) that the office existed in his time. It is likewise not improbable that the assumption by robbers of the euphemistic name poristae arose from an allusion to an actual official body of that name (Arist. *Rhet.* iii. 2, 10. *οἱ λῃσταὶ αὑτοὺς ποριστὰς*—commissioners of ways and means—*καλοῦσι νῦν*). Hitherto no record of the existence of a like board elsewhere in Greece has reached us, either in the ancient texts or inscriptions. [W. Ri.]

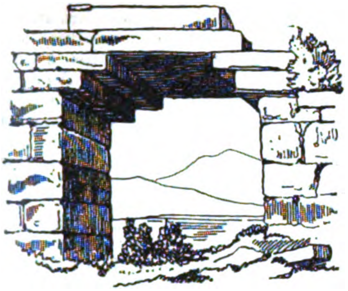
PORNAE (*πόρναι*). [HETAERAE.]

PORPE (*πόρπη*). [FIBULA.]

PORTA (*πύλη*), the gate of a city, citadel, or other open space enclosed by a wall, in contradistinction to JANUA, which was the door of a house or any covered edifice. The word *πύλη* is often found in the plural, even when applied to a single gate, because it consisted of two leaves (Thuc. ii. 4, &c.).

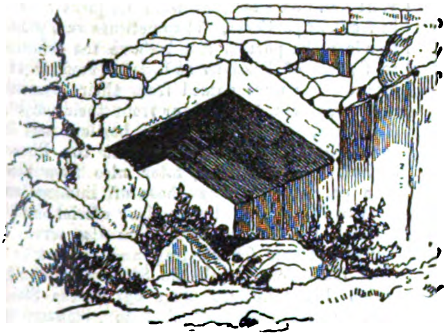
In tracing out the walls of an Italian city with the ceremony described under POMERIUM, the plough was lifted and carried across the openings to be left for the gates. The number and position of city gates in ancient Greece and Italy naturally varied according to circumstances. The old Etruscan custom was to give three gates to a walled city, dedicated to the three chief deities of the Etruscans: the same custom may possibly be seen in the three gates of Roma Quadrata (Plin. *H. N.* iii. § 66, where an alternative tradition of four gates is mentioned): two of these were the Porta Mugonia and Porta Romanula (Varro, *L. L.* v. 164). The ancient walls of Paestum, Sepianum, and Aosta enclose a square: in the centre of each of the four walls was a gate; the arrangement, however, was obviously affected by the nature of the ground, and the size of the city. Thus Megara had five gates; Thebes seven; others, as Rome, many more.

The gates in ancient Greek walls were formed in various ways, showing progressive art in building. We may give, from Reber (*Gesch. d. Baukunst*, 231), four distinct methods:—1. The simple straight lintel, consisting of a long and massive block, as in the "Lion" Gate of Mycenae (see woodcut on p. 185). 2. Stones projecting one beyond another in a step form from each side, and so gradually approaching till they can be topped by a flat lintel: an example is afforded by a gate at Phigalia. 3. A gable shape, formed



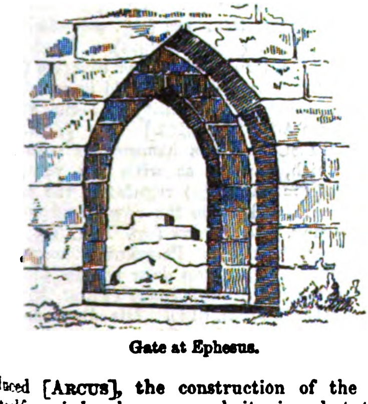
Gate at Phigalia.

by two massive stones meeting in an angle, as shown in a gate at Delos. 4. A refinement on



Gate at Delos.

No. 2, where the stones approach gradually, cut into shape, sometimes with a slight curve, till they join at the apex: they sometimes begin their slope from the ground, as in the gates of Missolonghi and Thoricos, shown by Baumeister (*Denkm.* Taf. xv.), or, in a more developed form, they are straight in their lower part, as the gate of Ephesus. When the arch was intro-



Gate at Ephesus.

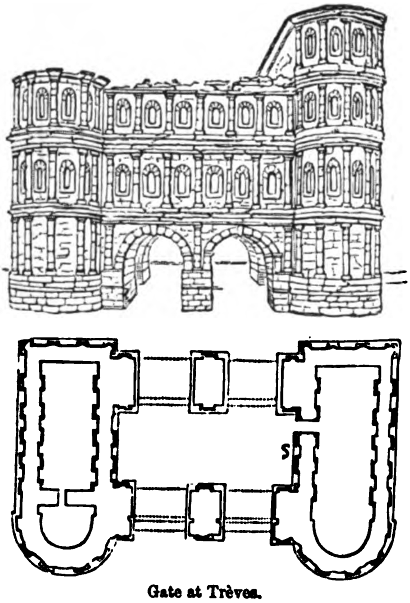
duced [ARCUS], the construction of the gate itself varied only as regards its size: but there were many differences and improvements as regards its defence. From early days the importance of flanking bastions had been seen; these were at first simple projections of the wall at right angles (see an example of the gate at Orchomenus in Guhl and Koner, p. 64), from the summit of which the defenders could shoot, and this developed into bastions formed by circular swellings of the wall on each side of the gate, and thence into regular flanking towers, round or square [TURRIS], often with additional defences, such as are shown in the gate of Posidonia, or Paestum [MURUS, p. 186]. An additional security to the entrance was given by a double gateway, having an outer and inner gate with a space between. At Messene the space between was circular, so that the wall at that part had the shape of a round tower pierced by two opposite openings (see plan in Guhl and Koner, p. 65). This system of double gates was very early, as in the second and third gateways of the fortress at Tiryns (see Plan, Vol. I. p. 655); and it is instructive also in this early fortress to see how the besiegers were exposed to fire when they forced one gateway and passed round to the next. Care was taken here, and elsewhere, that the right or unshielded side should be towards the wall in their approach.

At Como, Verona, and other ancient cities of Lombardy, the gate contains two passages close together, the one designed for carriages entering, and the other for carriages leaving the city. The same provision is observed in the magnificent ruin of a gate at Trèves. (See woodcut.) In other instances we find only one gate for carriages, but a smaller one on each side of it (παραπυλίς, Heliodor. viii. p. 394) for foot-passengers. Each of the fine gates which remain at Autun has not only two carriage-ways, but exterior to them two sideways for pedestrians. (Millin, *Voyage dans les Départemens*, &c., vol. i. ch. 22; Atlas, Pl. 18, figs. 3, 4.) Such sideways are well seen in the Porta d'Ercolano of Pompeii, of which there is a woodcut in Vol. I. p. 384. When there were no sideways, one of the valves of the large gate sometimes contained a wicket (*portula*, πυλίς: ῥινοπύλη), large enough to admit a single person. The porter opened it when any one wished to go in or out by night. (Polyb. viii. 20, 24; Liv. xxv. 9.)

The contrivances for fastening gates were in general the same as those used for doors [JANUA], but larger in proportion. The wooden bar placed across them in the inside (μοχλὸς) was kept in its position by the following method. A hole, passing through it perpendicularly (βαλανοδόκη, Aen. Tact. 18), admitted a cylindrical piece of iron, called βάλανος, which also entered a hole in the gate, so that, until it was taken out, the bar could not be removed either to the one side or the other (Thuc. ii. 4; Aristoph. *Vesp.* 200; βεβαλάνωται, *Aves*, 1159). Another piece of iron, fitted to the βάλανος and called βαλανάγρα, was used to extract it (Aen. Tact. *l. c.*). When the accomplices within, for want of this key, the βαλανάγρα, were unable to remove the bar, they cut it through with a hatchet (Thuc. iv. 111; Polyb. viii. 23, 24), or set it on fire (Aen. Tact. 19). [For the portcullis, see CATARACTA.]

The gateway had commonly a chamber, either on one side or on both, which served as the residence of the porter or guard. It was called πυλών (Polyb. viii. 20, 23, 24). Its situation is shown in the following plan. (See woodcut.)

The Porta Ostiensis, the finest and best-preserved of the gates in the Aurelian wall, affords an instance of the more elaborate kind:—"The central part of the gate with its arched doorway is of travertine, the outer arch is grooved, to receive a portcullis [CATARACTA], and from the inner and higher arch two travertine corbels project, which received the upper pivots of the doors, the lower ones being let into holes in a massive travertine threshold. Above this stone archway is a battlemented wall of brick-faced concrete, pierced with a row of 7 arched windows, opening into a gate chamber with similar windows on the inside. On each side are two brick-faced towers with semicircular projections on the outside." (Middleton, *Rome*, p. 494.) In the gates of Como and Verona the gatehouse is three stories high. At Trèves it was four stories high in the flanks, although the four stories remain standing in one of them only, as may be observed in the annexed woodcut. The length of this building is 115 feet; its depth 47 in the middle, 67 in the flanks; its greatest height, 92. All the four stories are ornamented in every direction with rows of Tuscan columns. The gateways are each 14 feet wide. The entrance of each appears to have been guarded, as at Pompeii, first by a portcullis, and then by gates of wood and iron. [CATARACTA.] The barbican, between the double portcullis and the pair of gates, was no doubt open to the sky, as in the gates of Pompeii. The gate at Trèves was probably erected by Constantine. (Compare also Guhl and Koner, i. 62, ii. 48; Baumeister, *Denkm.* 804; Reber, *Hist. of Ancient Art*, 189, E. T.) [J. Y.] [G. E. M.]



Gate at Trèves.

PORTENTUM. [PRODIGIUM.]

PO'RTICUS (στοά) is a building of which the roof is supported at least on one side by columns; it is thus open to the air, but protected from sun and rain. The simplest form of portico has one row of columns on the outside, and a wall at the back; in this form στοαί frequently surround temples or enclose an open space, such as an ἀγορά: especially in Ionia these porticoes surrounding the ἀγορά were erected with great magnificence. A στοά might also have one or two interior rows of columns, dividing it into two or three aisles, and thus an extensive covered space was provided; in this case it was usual for the intervals between the interior columns to be double that between the exterior ones. Another form was divided by a wall instead of a row of columns, and thus two single porticoes were produced, set back to back (Paus. vi. 24). Στοαί were frequently adorned with paintings, either on the back wall or affixed to it; hence the name ποικίλη is applied to one at Athens, and another at Olympia: this last, as well as one at Hermione, had also the name of the Echo-stoa from its acoustic properties (Paus. v. 21; ii. 35). Statues were frequently placed in front of porticoes, and sometimes were placed, to adorn the portico itself, above the columns; so figures of Persians at Sparta (Paus. iii. 11). Greek stoae were named from their character, ποικίλη, μακρά, Περσική, or from their purpose, βασίλειος, where the archon basileus held his court, ἀλφιτόπωλις, probably at the Piraeus (Schol. Ar. *Ach.* 547); later also from those who erected them, as those of Eumenes and Attalus in Athens. Beside their official or commercial uses, στοαί in Athens also served as covered resorts for meeting and conversation; thus Zeno frequented the Stoa Poecile, after which his followers were called the Stoics. Porticoes were also attached to gymnasia and to baths.

The numerous porticoes in Rome were erected in imitation of the Greek, and served similar purposes, both public and private. Some were already erected during the later centuries of the Republic (*e.g.* Octavia, 168 B.C.; Metelli, 146 B.C.). But especially in imperial times they were constructed of extraordinary extent and richness. They were also a favourite addition to the private houses of rich Romans. Porticoes in Rome were usually named after their founder, the temples or other buildings they were near, their use (e.g. *argentaria*) or their decoration (*argonautarum*). When they surrounded a forum, Vitruvius observes (v. 1) that the intercolumniation should be wider than in Greek examples, for facility in seeing spectacula. [See AGORA; DOMUS.] [E. A. G.]

PORTI'SCULUS, a hammer or truncheon with which, as well as with his voice, the *pausarius* (=κελευστής) regulated the motion of the oars, and made the rowers advance or stop rowing. So Ennius (*ap.* Non. 151, 26): "tonsamque tenentes Parerent, observarent, portisculu' signum quum dare coepisset." The pausarius is also called *hortator* (Plaut. *Merc.* iv. 2, 5; cf. Ov. *Met.* iii. 618). His duties and his station in the stern of the ship are thus described by Silius Italicus (vi. 360):

> "Mediae stat margine puppis
> Qui voce alternos nautarum temperet ictus
> Et remis dictet sonitum."

[W. S.] [G. E. M.]

PORTITO'RES. [PORTORIUM; PUBLICANI.]

PORTO'RIUM. 1. Transit-dues or tolls on goods carried through a country or over a bridg or a toll on travellers (Suet. *Vit.* 14; Seneca, *de Const. Sap.* 14; Digest. 19, 2, 60).

2. Duties paid on goods imported, and no doubt on goods exported too. (Our evidence here is very defective; but see Cic. *Verr.* ii. 74, 182, and perhaps *pro Leg. Manil.* 6, 14.) According to legends the duty was levied under the kings, and removed by T. Valerius Poplicola as a means of attaching the plebs to the new order of things (Liv. ii. 9; Dionys. v. 22; Plut. *Popl.* 11). It must, however, have been restored before long, and in a more historical age the censors of B.C. 179 instituted *portoria et vectigalia multa* (Liv. xl. 51). G. Gracchus extended the system further (Vell. Pat. ii. 6). It was, of course, spread over Italy by Roman conquest; see *e.g.* Liv. xxxii. 7 for dues paid at Capua and Puteoli in B.C. 199. In B.C. 60 all portoria were done away with in Italian harbours by a Lex Caecilia of the praetor Q. Metellus Nepos (Dio Cass. xxxvii. 51; Cic. *Att.* ii. 16, 1); but Caesar *peregrinarum mercium portoria instituit* (Suet. *Jul.* 43), apparently for foreign goods only, *i.e.* goods imported from outside the Empire. The triumvirate introduced new τέλη (Dio Cass. xli. 34), which may mean *portoria* (but see under Vectigalia), and Augustus introduced further new ones and increased some of the old. The subsequent emperors increased or diminished this branch of the revenue as necessity required.

Like other vectigalia, the portorium was farmed out by the censors to the publicani, who employed portitores to collect it [Vectigalia; Publicani]. Later, we hear of imperial procuratores for portoria [see Stationes Fisci].

As a rule, the Romans took over in the provinces the existing import (and export?) duties; but they tended to group the provinces into more or less natural unions each of which reckoned as one customs-district, on whose frontiers duties were paid. The following districts (among which Sicily and Asia were specially productive, Cic. *Verr.* ii. 75, 185; *pro Leg. Man.* 6, 14) are known to us—Italy, Sicily, Gaul (including Alpes Cottiae and Alpes Maritimae), Spain, Britain, Illyricum, Asia, Bithynia (with Pontus and Paphlagonia), Africa, and Egypt. In some few cases the Romans allowed a town or island to raise portoria for its own benefit, stipulating that Roman citizens and socii Latini should be exempted from payment; *e.g.* Ambracia (Liv. xxxviii. 44) and Rhodes (Cic. *Q. F.* i. 1, 33); cf. *C. I. L.* i. 204 on Termessus. But this is perhaps rather to be looked on as an octroi than as a customs-duty.

As regards the articles subject to duty, the rule was that all commodities (including slaves) which were imported to be sold again paid the portorium; whereas things which a person brought with him for his own use were exempt. A list of taxable articles is given in the Digest (39, 4, 4, 16; cf. Cic. *Verr.* ii. 72, 176). Many things, however, which were rather luxuries than necessities, such as eunuchs and handsome youths, had to pay import-duty, even though they were imported by persons for their own use (Suet. *de clar. Rhet.* 1; Cod. 4, 42, 2). Things imported for the use of the state were exempt. But the governors of provinces, when they sent persons to purchase things for the use of the public, had to write a list of the things for the portitores, to enable the latter to see whether more things were imported than were ordered (Dig. 39, 4, 4). Respecting the right of portitores to search travellers and merchants, see Publicani. Such goods as were duly stated to the portitores were called *scripta*, and those which were not, *inscripta*. The latter were confiscated on discovery (Dig. 39, 4, 16).

As to the amount of the duty we have but few statements in ancient writers. The Sicilian portorium in the time of Cicero was 5 per cent. (*vicesima*) of the value of the taxable articles (Cic. *Verr.* ii. 75, 185); and, as this was a familiar rate in Greece (see Eicoste, and Boeckh's *Staatshaushaltung der Athener*, ed. 3, bk. 3, 6), it may have been the sum levied in other provinces too. But the amount may have varied with the place and time. We hear of 2 per cent. (*quinquagesima*) in Spain (*C. I. L.* 2, 5064), 2½ per cent. (*quadragesima*) in Gaul (Wilmanns, *Exempla Inscriptionum Latinarum*, 1295, 1398) and Asia (Suet. *Vesp.* 1). There are traces also of a fixed tariff for single wares (Wilmanns, 2738, for Africa). At a late period the exorbitant sum of one-eighth (Cod. Just. 4, 42, 2) is mentioned as the ordinary import-duty, but it is uncertain whether this was the duty for all articles of commerce, or merely for some (possibly for articles of luxury or for articles imported from or exported to places beyond the Roman empire).

The nature of the *portorium circumvectionis* (Cic. *Att.* ii. 16, 4) is not clear. [F. T. R.]

PORTUNA'LIA (a more correct spelling than *Portumnalia*), a festival celebrated in honour of Portunus on the 17th of August. It is called also *Tiberinalia* (Fast. Philocal.), and Mommsen thence deduces that Portunus = Tiberinus (*C. I. L.* i. p. 399); but Marquardt is probably right in taking Portunus not to be the River God, but the protecting deity of the wharves on the Tiber at Rome and of those at Ostia. He was "deus portuum" (Cic. *de Nat. Deor.* ii. 26, 66; cf. Verg. *Aen.* v. 241). The festival was celebrated in two places: at Rome by the Pons Aemilius (*Cal. Amit.*), and at Ostia (Varro, *L. L.* vi. 19). The connexion of Portunus with Tiberinus, the son of Janus, and therefore of his worship with that of Janus, may explain his being also termed "deus portarum" (Fest. *Ep.* p. 56, 6). [L. S.] [G. E. M.]

POSCA, vinegar mixed with water, was the common drink of the lower orders among the Romans (Suet. *Vitell.* 12), of slaves (Plaut. *Mil.* iii. 2, 23), and of soldiers on service (Spart. *Hadr.* 10). As to the theory that the celebrated *acetum* of Liv. xxi. 37 was *posca* (see Capes *ad loc.*), it is well known that some rocks, as limestone, can be split by any cold liquid poured over them when they are hot, and so more easily cut into a roadway (see Blümner, *Technol.* iii. 71). Hennebert (*Annibal*, ii. p. 253; Paris, 1878) tries elaborately to establish an explosive property for some composition called ὄξος or *acetum*. [W. S.] [G. E. M.]

POSSE'SSIO. Paulus (Dig. 41, 2, 1) gives the following account of the etymology of this word:—"Possessio appellata est a sedibus, quasi positio, quia naturaliter tenetur ab eo, qui ei insistit." We shall probably be right in taking as the elements of *possidere* the Latin equivalent of the preposition προτί (πρός) and *sedes* (see Corssen, *Beitr.* 87; Curtius, *Gr. Etym.* 286). Possessio, in its primary sense, is the control which a man has over a corporeal thing, so that he is able to deal with it at his pleasure, and to exclude other persons from meddling with it. Such possession becomes possessio in a juristical or legal sense, when it is protected by certain legal remedies in case of interference with it. Still even in this sense possessio is not in any way to be confounded with ownership. A man may have possession of a thing in the legal sense without being the owner; and a man may be the owner of a thing without having possession (Dig. 43, 17, 1, § 2: "separata esse debet possessio a proprietate; fieri etenim potest, ut alter possessor sit, dominus non sit, alter dominus quidem sit, possessor vero non sit; fieri potest ut et possessor idem et dominus sit"). Ownership is the legal right to exercise control over a thing according to a man's pleasure, and to exclude everybody else from doing so; but though the owner has the *jus possidendi* or right to the possession, he has not possession unless he is actually exercising his right. Whether control of a thing gives a person possession in the legal sense depends on the intention of the person exercising it. If his intention is to hold the thing for himself (*animus sibi habendi*), then as a rule he has such possession; but if he intends to hold for another, as is the case with a person who borrows a thing, and with one who holds a deposit, he has not possessio but only detention (Dig. 41, 2, 18 pr.: "Nec idem est possidere et alieno nomine possidere; nam possidet, cujus nomine possidetur, procurator alienae possessioni praestat ministerium"). The Greek expression signifying the intention of a possessor to hold the thing for himself or as owner is *ψυχὴ δεσπόζοντος* (Theoph. *ad* Inst. ii. 9, 4, iii. 29, 2; Basil. 50, 2, 7), for which *animus domini* has been used as an equivalent by later commentators.

To have possession in the legal sense, the *animus domini* is generally required, though "in certain exceptional cases a person who held a thing for another, and who therefore had not the *animus domini*, was possessor in the legal sense (see *infra*). A possessor who has a thing under his control exercises a right of ownership, whether he is entitled to exercise such right or not. The legal notion of possession implies a thing which can be an object of ownership, and it also implies that the possessor has a capacity of ownership, which explains why a person in the power of another could not possess on his own account (Dig. 41, 2, 49, 1: "Qui in aliena potestate sunt, rem peculiarem tenere possunt, habere, possidere non possunt quia possessio non tantum corporis, sed et juris est"). Actual control being involved in the notice of possession, it follows that only one person at a time can possess a thing as a whole, but a number of persons can hold a thing in common, sharing the advantages of possession, though not the possession itself.

Though incorporeal things are not strictly speaking capable of possession, yet the actual enjoyment of them, as for instance in the case of servitudes, is sometimes equivalent to possession of a corporeal thing, and is called *juris quasi possessio*. The objects of this *juris quasi possessio* are certain real and personal servitudes and some *jura in re aliena*, which do not belong to the class of servitudes, of which SUPERFICIES is the only proper instance.

A man who has possession or even the bare detention of a thing has the advantage attached to the position of a defendant (*commodum possessoris*) in being free from the burden of proof, and in being entitled to retain the thing as a lien for certain claims. Thus in a vindicatio the defendant is named possessor, though he has not necessarily possession in a legal sense, the plaintiff being called *petitor*. The procedure by the vindicatio was also adapted to the case of an hereditas; and here also the term *possessor* was applied to the defendant.

The rights attached to possession in the legal sense were the following:—

(1) Such possession gives a right to the possessor to the protection of the possessory interdicts (*interdicta retinendae—recuperandae possessionis*) against interference with his possession and dispossession. The right to these interdicts is simply founded on legal possession, in whatever way it may have originated, as even by an act of theft, except that it must not have originated *vi*, *clam*, or *precario* with respect to the person against whom the interdict is claimed. [INTERDICTUM.] Thus, simply by virtue of being possessor, the possessor has a better right than anyone who is not possessor, and is only obliged to surrender the thing to the owner who proves his superior title in the proprietary action called *vindicatio*. In the possessory interdict itself the owner was not allowed to set up his title as a defence, and hence an interdict might be successfully maintained against him. The protection of the interdicts is also extended to *juris quasi possessio*.

(2) Possession for a certain time may give a title to ownership by usucapion, but usucapion requires, besides *possessio* in a legal sense (*i.e.* interdict possession), other circumstances to be present, as that the possession must have been *boná fide*—that is, acquired by a person without knowing that any one else has a better right to possess than himself—and that it must have been *justa causa*. He who buys a thing from a man who is not the owner, but whom he believes to be the owner, and obtains possession of the thing, is a *bonâ fide* possessor with a *justa causa*. [USUCAPIO.]

(3) Possession of a *res nullius* gives rise to ownership at once by title of occupancy.

The term *possessio* occurs in legal writings in various senses. There is possessio generally and possessio civilis and possessio naturalis. Possessio civilis is possession when it has the conditions necessary for acquiring ownership by usucapion, and all other possessio as opposed to *civilis* is *naturalis*. Hence possession as the foundation of the interdicts is possessio naturalis in this sense, as well as mere detention, which is not protected by any possessory remedies. Interdict possession is always expressed by *possessio* simply: and this is the meaning of *possessio* when it is used alone and yet in a technical sense. There is therefore a twofold possessio in the legal sense: possessio civilis, or possession for the purpose of usucapio; and possessio or possession for the purpose of the interdicts. Possessio is included in possessio civilis, which only requires more conditions than possessio. If, then, a man has possessio civilis, he has also possessio, that is, interdict possession, but the converse is not true. Possessio naturalis has two significations, but they are both negative, and merely express in each case a logical opposition; that is, they are respectively not possessio civilis or possessio (ad Interdicta). The various expressions used to denote bare detention are "tenere," "esse in possessione," "corporaliter possidere." Some eminent modern writers reject the above explanation of the terms, which is that of Savigny. Thus, according to Vangerow and Windscheid, possessio civilis and possessio are identical in meaning, signifying interdict possession as opposed to naturalis possessio, which is mere detention (Vangerow, i. § 199, Anm.; Windscheid, i. § 149, n. 12).

We have next to consider how interdict possession is acquired and lost. In order to acquire possessio, apprehension (*corpus*) and intention (*animus*) are necessary (Dig. 41, 2, 3, § 1: "adipiscimur possessionem corpore et animo neque per se animo, aut per se corpore"). The apprehension of a corporeal thing is such a dealing with it as enables the person who intends to acquire the possession to exercise control over the thing to the exclusion of all other persons. Actual corporeal contact with the thing is not necessary to apprehension; it is enough if there is some act on the part of the person who intends to acquire the possession, which gives him the physical capacity to control the thing at his pleasure. Thus in the case of a field he who enters upon part is considered to have entered upon the whole. A man may acquire possession of what is contained in a warehouse or granary by delivery of the key which gives him access to the contents (Dig. 18, 1, 74). The delivery of the key is not a symbolical delivery, as some have supposed, but it is the delivery of the means of getting at the thing. (Compare Lord Hardwicke's remarks on this matter, *Ward* v. *Turner*, 2 Ves.)

The question whether there is sufficient to constitute apprehension can only be determined by reference to particular circumstances, which vary in different cases. If a thing is in the possession of some one, possession of it can be acquired either by his voluntary act of delivery (*traditio*) or by depriving him of it against his will. It was a positive rule that possession of land in the legal sense was not acquired by a secret act of dispossession. The animus consists in the will to treat as one's own the thing that is the object of apprehension (*animus domini*). But persons who are legally incompetent to will—such as infantes, furiosi, and juristic persons—could acquire the rights of possession by means of their representatives. If a man has merely detention of a thing, he can acquire the possessio by the animus alone, for the other condition has been already complied with. Possessio could be acquired without the *animus domini*, so that a person holding property from another was entitled to the possessory interdicts, in the following exceptional cases:—

1. When a thing was delivered to a creditor as security for his debt.
2. When a person held a thing at the leave of another (*precarium*).
3. When a thing was deposited with a person to hold as *sequester*.
4. When a person held land as emphyteutic tenant (*jus in agro vectigali*, *emphyteuta*), though this case is a doubtful one.

In these cases of derivative possession the usucapion possession belonged to the person for whom the interdict possessor held the property, except in case of sequestration, which interrupted possession. In all the cases of *juris quasi possessio*, the acquisition and the continuance of quasi-possessio depend on the corpus and animus; and the animus is to be viewed in exactly the same way as in the case of possession of a corporeal thing, though the intention here is not to control the thing as a whole, but only in certain limited respects (Randa, *Der Besitz*, §§ 24–36). A person might acquire possession by means of those who were subject to his power (*potestas*), what was delivered to such persons being considered as delivered to their superior, since they were incapable of possessing for themselves.

An extraneous agent acquired possession for his principal, if the agent did the necessary acts, and with the intention of acquiring the possession for the other, and not for himself, but there had always to be the animus on the part of the principal to acquire possession. In order to show such animus it was not necessary that the principal should expressly commission the agent to take possession of a thing, or that he should know of the fact of possession having been taken on his account. It was enough that the agent took possession for the principal, and that his act was within the scope of his commission (cf. Inst. ii. 9, 5: "per procuratorem etiam ignoranti acquiritur;" Windscheid, i. § 155). A person who is already the representative of another, and has the possessio of a thing, may by the animus alone cease to have the possessio for himself and have it for that other, retaining only the bare detention.

Every possession continues so long as the corpus and the animus continue. If both cease or either of them ceases, the possession is gone (Dig. 41, 2, 44, § 2). The animus or the corpus can, however, only be put an end to by a contrary act (Dig. 50, 17, 153: "ita nulla amittitur, nisi in qua utrumque in contrarium actum [est]"). Hence possession may continue under circumstances which could not have given rise to its acquisition. As to the corpus, the possession is not lost because there is not the present and immediate possibility of operating on the thing at pleasure, but only by the existence of some circumstance which prevents any further operating on it: *e.g.* possession of land is not lost by the possessor having ceased for a time to exercise acts of ownership over it, but only by adverse possession on the part of some one else. In the case of land there was also a positive rule of Roman law that, if in the absence of the possessor another occupied his land without his knowledge, he was not to use possession till he had knowledge of the occupation, and did not thereupon put an end to it.

In the case of movable things, the possession is put an end to when another person has got hold of them, either by force or secretly, or if they are lost. In the case of possession being lost by the animus only, there must be a determination on the part of the possessor no longer to hold the thing for himself. This determination may either be expressly declared or it may be implied from conduct. The possession is lost *corpore et animo*, when the possessor gives up a thing to another to possess as his own or when he abandons it (*derelictum*). In the case of a *juris quasi possessio*, as well as in that of possessio proper, the continuance of the quasi-possessio depends on the corpus and animus together. There can be no such possessio without the *animus possidendi;* and if there be merely an *animus possidendi*, the *juris quasi possessio* must cease. Possessio can be lost by means of a person who represents the possessor. It may be thus lost either by the person represented ceasing to have the intention to possess or by the representative ceasing to intend to hold the things for the person he has previously represented, or by his ceasing to have the thing under his control. It was, however, ultimately settled by Justinian after some question that the mere abandonment of a thing by a representative did not deprive the person he had previously represented of the possession.

It was necessary that the intention of the representative to hold the thing for himself or for some one else should be expressed in some way, in order to change the possession. According to a prevalent opinion, the possession of a movable thing was not affected unless there was a handling of the thing (*contrectatio*) on the part of the representative for himself or another.

Possession, as a legal relation concerning objects of ownership, has a close connexion with proprietary relations, and so in many of the systematic treatises of Roman law is properly treated as introductory to the theory of ownership. [DOMINIUM.] Savigny regards possession both as a fact and a right—a fact in so far as *de facto* control of a thing apart from any right to possess is the foundation of it, a right in so far as rights are connected with the existence of such control; the only right arising from bare possession is a right to the interdicts. On what ground, he asks, is bare possession protected by the law, when the possessor has not a right to possess? The answer he gives is, that possession cannot be disturbed except by force, and force is not allowed. The fundamental notion then is this: a violent disturbance of possession is an attack on a man's personality, on his freedom; hence engendering an *obligatio ex delicto*.

Another explanation is, that possession is presumptive ownership, *i.e.* the law protects the possessor because he is probably owner. Ihering in an exhaustive treatise on the subject tries to prove that the ground of the possessory interdicts is the proper protection of ownership. As a rule, he says, the possessor is owner, and possessory remedies are more beneficial to an owner than proprietary, since in making use of them he is not called on to prove his title, often a difficult matter to prove; but this benefit of possessory remedies cannot be given to a possessor who is owner without also being given to a possessor who is not owner.

Again the protection of possession by interdicts is often based on the general ground that it is a consequence of the freedom of the will, each man being entitled to exercise his will as he pleases in respect of external objects without interference, until it is shown that his individual will is in conflict with the general will, *i.e.* with the law. (For an examination of these and other theories on this subject, see especially Ihering, *Ueber den Grund des Besitzesschutzes.*)

It is shown in the article AGRARIAE LEGES, that the origin of the Roman doctrine of possession may probably be traced to the possessio of the ager publicus. *Possessio*, *possessor*, and *possidere* are the proper technical terms used by the Roman writers to express the possession and enjoyment of the public lands. A person who occupied such lands by lease of the state had not quiritarian ownership, the ownership being in the state; but it is probable that he was maintained in his possession against third parties by interdicts. The Interdicta uti possidetis and unde vi, which relate only to land, may have been first established in respect of such possession.

The nature of the precarium is explained, when we know that it expressed originally the relation between the patronus and the cliens who occupied the possessio of the patronus as a tenant at will, and could be ejected by the Interdictum de precario if he did not quit on notice. Property in provincial soil came to be called *possessio;* such property was not quiritarian ownership, but it was a right to the exclusive enjoyment of the land [PROVINCIA]. Thus the word *possessio*, which properly means the fact of possession, sometimes signifies a right to the possession of land, *i.e.* a right of property; it is also used to signify the object of the right: ager was a piece of land which was the object of quiritarian ownership, and possessio was of land that could not be the object of quiritarian ownership, such as provincial land (Javolenus, Dig. 50, 16, 115) and the old ager publicus. The expression *bonorum possessio* does not mean the actual possession of property, but the peculiar character of the praetorian as opposed to the civil inheritance. [HEREDITAS.]

POSSE'SSIO CLANDESTI'NA. [INTERDICTUM.]

POSTI'CUM. [JANUA.]

POSTLIMI'NIUM, JUS POSTLIMI'NII. "There are," says Pomponius (Dig. 49, 15, 14, pr.), "two kinds of Postliminium, for a man may either return himself, or recover something;" and similarly Paulus says (Dig. *ib.* 19, pr.) that Postliminium "is the right of recovering a lost thing from an *extraneus* and of its being restored to its former status, which right has been established between us (the Romans) and free peoples and kings by usage and statutes (*moribus ac legibus*): for what we have lost in war or even apart from (*citra*) war, if we recover it, we are said to recover *postliminio:* and this usage has been introduced by natural equity, in order that he who was wrongfully detained by strangers should recover his former rights on returning to his own territories (*in fines suos*):" and Paulus adds, "A man seems to have returned by postliminium when he returns into our territory, just as he is lost when he leaves it; and even if he has come into a state in alliance or friendship with Rome, or to a friendly or allied king, he appears to have at once returned by postliminium, because he then first begins to be safe under the name of the state." These extracts are given in order to clear up the etymology of the term, which was derived by Scaevola from *post* and *limen*, a derivation accepted by Festus, Boethius, and Isidorus, but questioned by Servius Sulpicius: for "what has been lost by us and has come to an enemy, and as it were gone from its own *limen*, and then has afterwards (*post*) returned to the same *limen*, seems to have returned by postliminium" (Cic. *Top.* 8, 36; Inst. i. 12, 5). According to this explanation, the *limen* was the boundary or limit within which the thing was under the authority of Rome and her law: similarly Servius (on Verg. *Aen.* xi. 267) speaks of the *limen imperii*. Mr. Poste (in his note on Gaius, i. 129) suggests that the word is derived from *pot*, the root of *potestas* or *possessio*, and *limen* or *stlimen* = *ligamen*, and therefore would denote the bridging over of the interval of captivity by a fiction of continued capacity or possession, as a doorway is bridged over by a lintel (*limen*): but this begs the question as to the derivation of *limen* itself, and we cannot discover that this etymology is favoured by any consensus among modern scholars. There is a fanciful explanation of the subject by Plutarch (*Quaest. Rom.* 5) in his answer to the question, Why those who have been falsely reported to have died in a foreign land are not received into the house through the door in case of their return, but are let down through an opening in the roof?

As a principle of law, postliminium seems in origin to have been derived from the Jus feciale, as indeed is suggested by the passage of Paulus in Dig. 49, 15, 19, cited above. Speaking generally, it relates to the rights of Roman subjects who were captured in war and subsequently returned to their own country, and to ownership (or analogous rights) over things or persons who after similar capture were recovered from the enemy. As Pomponius remarks, it has two aspects—one active, and the other passive.

As regards the former—if a Roman citizen during war came into the power of an enemy, he underwent *capitis deminutio maxima*, and all his civil rights were in abeyance, because he thereby became a slave. But if he returned to his own country, he was held (subject to certain conditions) to recover by postliminium all the rights which belonged to him at the time of his capture or which had accrued to him since; a doctrine which was based on the fiction that he had never been absent from home: "perinde omnia restituuntur ei jura ac si captus ab hostibus non esset" (Dig. 49, 15, 5, 1). Thus he recovered his freedom and civitas (Cic. *pro Balbo*, 11, 12, 27–30; *de Orat.* i. 40, 181), his own property and rights over the property of others, and his potestas over children who would have been in his power had he never been captured. If he died a captive, it was a question in Gaius' time (i. 129) whether the filiifamilias dated their release from power from the capture or the decease: Justinian, following Ulpian, decided in favour of the former (Inst. i. 12, 5). Originally marriage was dissolved by the capture of either party, and it could not be restored by postliminium, a fresh consensus being required if the captive returned (Dig. 49, 15, 14, 1), but eventually captivity was regarded as in no way differing from ordinary absence, proof being required of the absent party's death before the other could lawfully marry again (*Nov.* 117, 11). These rights, however, were none of them recovered by a returned captive unless he had been taken with arms in his hands, or if he returned during an armistice; and their recovery must have been intended (Dig. 49, 15, 5, 3). Finally, if a man made a will before he was taken prisoner, and afterwards returned, the will was upheld by postliminium notwithstanding his intermediate slavery: if he died in captivity, it was held good by the *fictio* of the Lex Cornelia, a statute passed by Sulla B.C. 80, which imposed penalties on those who forged wills of persons who died in captivity, and thus implicitly recognised their validity (Inst. ii. 12, 5; Dig. 28, 1. 12). If a Roman was ransomed by another person, he became free, but he was in the nature of a pledge to the ransomer, and the *jus postliminii* had no effect till he had repaid the ransom money.

Sometimes a man was given up bound to an enemy by an act of the state; and if the enemy would not receive him, it was a question whether he had the *jus postliminii*. This was the case with Sp. Postumius, who was surrendered to the Samnites, and with C. Hostilius Mancinus, who was given up to Numantia: the latter was restored to his civic rights by a lex, so that the better opinion was that postliminium had no operation (Cic. *de Orat.* i. 40, 141; *de Off.* iii. 30, 109; *Top.* 8, 36; *pro Caec.* 34, 98;—Dig. 49, 15, 4; 50, 7, 18).

The Romans acknowledged capture in war as the source of ownership in other nations, as they claimed it in their own case. Accordingly things taken by the enemy lost their Roman owners: but (in its passive aspect) postliminium operated to subject certain things and persons to the dominion and power under which they had been at the time of capture if recovered. Thus free persons in potestas, if they returned from captivity, fell again under the power of their paterfamilias (Dig. 49, 15, 14, pr.; Inst. ii. 1, 17); and the same principle was applied to land, slaves, ships, horses and mules (Cic. *Top.* l. c.; Dig. 49, 15, 2, 3: cf. Festus, s. v. *Postliminium*). Arms were not included, for it was a maxim that they could not be honourably lost (Dig. *l. c.*). In analogy with a rule already stated, the owner of a thing (*e.g.* a slave) which was ransomed by another person was not entitled to it till he had repaid the ransom; but there may seem to be some difficulty in adjusting the rights of the parties if we suppose that one civis recaptures property subject to the rule of postliminium which had belonged to another Roman citizen. But this may be solved by the observation that in time of war no civis could individually be considered as acting on his own behalf under any circumstances; whatever he did was the act of the state. The rule of the *jus gentium* that enemies' property is *res nullius*, and belongs to him who first seizes on it, only applied to hostile property within the territory of the other belligerent (Dig. 41, 1, 51): what was taken from the enemy on his own soil belonged to the state, and vested in individuals only by sale or grant (Dig. 49, 15, 28; Dionys. vii. 63). From this principle, however, the things subject to postliminium which have been enumerated above, were excepted (Liv. v. 16;—Dig. 49, 15, 19, 10; ib. 28, 30); the actual taker was regarded as the agent of the state, and the state itself restored them to their previous owners.

The law of Postliminium applied to times of peace as well as of war, when the circumstances were such that the person or thing could become the property of another nation (Dig. 49, 15, 5), as, for instance, of a nation which had neither an *amicitia*, *hospitium*, or *foedus* with Rome: for it might be thus related without being *hostis;* for a nation was not *hostis*, in the later acceptation of the term, till either it or Rome had declared war against the other. Robbers and pirates were not *hostes*, but they had no political organisation, so that capture by them did not change the legal position of the person or property seized: the persons continued free in law, and the property never ceased to belong to its rightful owners, so that no occasion arose for the application of postliminium.

[The best treatises on this subject are those of Hase (Halle, 1851) and Bechmann (Erlangen, 1872), both called *Das jus Postliminii und die Fictio legis Corneliae.* For the influence of the principle in International Law the reader may refer to an article on the subject by F. Brockhaus in Holtzendorff's *Rechtslexicon.*] [J. B. M.]

POSTSIGNA'NI. [Exercitus, Vol. I. p. 807 *b.*]

PO'STUMUS. [Heres.]

POTESTAS. [Patria Potestas.]

PRA'CTORES (*πράκτορες*), officers who collected the fines and penalties (*ἐπιβολὰς* and *τιμήματα*) imposed by magistrates and courts of justice, and payable to the state. There seems little doubt that at Athens there were ten *πράκτορες*, chosen by lot, one from each tribe. It has been objected that an inscription of Imbros gives *three* as the number (Kirchhoff, *Monatsber. d. Berl. Akad.* 1865, 121); but Fränkel justly points out in his note on Boeckh (*Staatshaush.* ii.^{3} 39*) that this refers to a *cleruchia*, which was Athens on a reduced scale, with fewer officials, just as it had only three proedri. The Athenian *πράκτορες* were not, as seems to be implied by Pollux, viii. 114, mere subordinates; for they formed an *ἀρχή*. (Arist. *Pol.* vii. 8; Bekker, *An.* 190, 26.) The magistrate who imposed the fine, or the *ἡγεμὼν δικαστηρίου*, gave notice thereof in writing to the *πράκτορες*. He was then said *ἐπιγράφειν τὸ τίμημα τοῖς πράκτορσιν*, and the debtor's name *παραδοθῆναι τοῖς πράκτορσιν*. If the fine or any part thereof was to go to a temple, the like notice was sent to the *ταμίαι* of the god or goddess to whom the temple belonged. (Aesch. *c. Timarch.* § 35; Andoc. *de Myst.* § 73; [Dem.] *c. Theocr.* p. 1328, § 20; 1337, § 47; Dem. *c. Macart.* p. 1075, § 71.) The name of the debtor, with the sum which he was condemned to pay, was entered by the *πράκτορες* in a tablet in the Acropolis. Hence the debtor was said to be *ἐγγεγραμμένος τῷ δημοσίῳ*, or *ἐν τῇ ἀκροπόλει*. It was the business of the *πράκτορες* to demand payment of this sum, and, if they received it, to pay it over to the *ἀποδέκται*, and also to erase the name of the debtor in the register (*ἐξαλείφειν* or *ἀπαλείφειν*). Such erasure usually took place in the presence of some members of the senate. An *ἔνδειξις* lay against any man who made or caused to be made a fraudulent entry or erasure of a debt. (Harpoc. and Suidas, *s. v.* *ἀγραφίου, ἀποδέκται, ψευδεγγραφή*: Andoc. *l. c.*; [Dem.] *c. Aristog.* i. p. 778, § 28; *c. Theocr.* p. 1338, § 52.) The collectors took no steps to enforce payment; but after the expiration of the ninth *πρυτανεία* of the year [*i.e.* during the tenth] (or in case of a penalty imposed on a *γραφὴ ὕβρεως*, after the expiration of eleven days), if it still remained unpaid, it was doubled, and an entry made accordingly. (Aesch. *c. Timarch.* § 16; Dem. *c. Pant.* p. 973, § 22; [Dem.] *c. Theocr.* p. 1322, § 1; *c. Neaer.* p. 1347, § 7.) Thereupon immediate measures might be taken for seizure and confiscation of the debtor's goods; but here the *πράκτορες* had no further duty to perform, except perhaps to give information of the default to the senate. There were no doubt in many, if not most, Greek states officers bearing this title with similar duties. We find them in inscriptions at Tenos, Sikinos, and Ios. (*C. I. G.* 202, 2447; *N. Rhein. Mus.* xxii. p. 294.) In the Phocian cities Medeon and Stiris the form of the word is *πρακτῆρες*. (*Bull. Cor. Hell.* v. 45.) (Gilbert, *Staatsalt.* i. 228; Boeckh, *Staatshaush.* i.^{3} 189.) [Epibole; Timema.] [C. R. K.] [G. E. M.]

PRAECI'NCTIO. [Amphitheatrum, Vol. I. p. 110 *b.*]

PRAECO, a crier. Of these there were two distinct kinds—those in private employment, and those employed and paid by the state as subordinate attendants. The *praecones* of the former kind were (1) criers of lost goods (Plaut. *Merc.* iii. 4, 78; Petron. 97), and (2) especially auctioneers: they were not, it is true, the chief superintendents of the auction [see Auctio]; but besides advertising the time, place, and conditions of sale, they also acted the part of a modern auctioneer so far as calling out the biddings and amusing the company, though the property was knocked down by the *magister auctionis.* (Hor. *Ars. Poet.* 419; Cic. *ad Att.* xii. 40; *de Off.* ii. 23, 83.) The official *praecones* were those whose duty it was to attend (*apparere*) certain magistrates, for purposes mentioned below. We have evidence from inscriptions of a *collegium* with three decuriae of *praecones*, to attend on consuls and censors (the first, or "Julian," decuria for consuls): also for curule aediles, quaestores aerarii, and tribunes (*C. I. L.* vi. 1944, 1945, 1869, 1847; cf. Liv. xliii. 16; Auct. *ad Herenn.* iv. 55, 68): perhaps also for other magistrates, since, as Mommsen remarks, their low status may account for slighter mention of them in inscriptions. They attended the same magistrates in the provinces (Cic. *in Verr.* ii. 10, 27; Liv. xlv. 29).

Their duties were to act in all cases required as the voice through which the magistrate on whom they attended conveyed his orders or remarks to the people: therefore (1) to summon the people to comitia or contiones (Liv. i. 59; vii. 4; xxiv. 8, &c.); (2) to proclaim silence (Auct. *ad Herenn.* l. c.; Liv. xxviii. 27, &c.); (3) to announce the bill which was to be voted on, when the *scriba* dictated [*subicit*] the words already written down which the *praeco* was to announce aloud (*pronuntiare*: Ascon. *in Cornel.*

58): we often find the scribe alone mentioned as reading (Appian, *B. C.* i. 11), but, according to Mommsen, we are to understand that he reads through the voice of the *praeco;* (4) to announce the votes of different sections at an election (Cic. *de Leg. agr.* ii. 2, 4) or the decision of the majority (Cic. *pro Mil.* 35, 96; Gell. xii. 8, 6); (5) to summon the senators to the senate-house (Liv. i. 47; Suet. *Claud.* 36); (6) to make known the orders of the magistrate, the *edictum* being "spoken out" by the *praeco,* and so, for instance, in ordering slaves to quit the theatre or foreigners the city (Cic. *de Harusp. Resp.* 12, 26; Liv. ii. 37). (7) In trials they summoned the accuser, the accused, and the witnesses (Suet. *Tib.* 11; Liv. viii. 32; Cic. *pro Flacc.* 15, 34): they announced the conclusion of the pleadings, gave the dismissal of the judices (by the word *ilicet*), and ordered the executioner to do his office (Liv. xxvi. 15). (8) At the public funeral (*funus indictivum*) they summoned those who were to take part with the formal words: "Ollus Quiris leto datus: exsequias ire, cui commodum est, jam tempus est. Ollus ex aedibus effertur." It is clear that the *praeco* comes in here because it is a *state* funeral, by order of the senate and arranged by a quaestor or praetor. (See Fest. p. 106; Cic. *de Leg.* ii. 24; Becker-Göll, iii. 496; Marquardt, *Privatl.* 351.)

The official dress of the *praeco* was marked by the *angustus clavus* (see Mommsen, *Staatsrecht,* iii. 218). The *praecones* were of a low grade, with little education (Mart. v. 56, 10), as far as can be gathered from inscriptions, of the freedman class: and the contempt in which their office (*praeconium*) was held is seen not only from such passages as Juv. iii. 33, vii. 6 (cf. κῆρυξ, Theophrast. xvi. 10, and Jebb's note), but also from the law (Lex Julia) forbidding those who had exercised it to hold office in the municipia (Tab. Heracl. 54 = *C. I. L.* i. 206; Cic. *ad Fam.* vi. 18, 2). Nevertheless the office (probably the auctioneering part of it) was often very profitable, and made it possible for the *praeco* to become a rich man: for instances, see Mayor's note on Juv. vii. 6; among them the Gallonius mentioned in Hor. *Sat.* ii. 2, 47. (Mommsen, *Staatsrecht,* i.^{3} pp. 363–366.) [W. S.] [G. E. M.]

PRAECO'NIUM. [PRAECO.]

PRAEDA signifies movable things taken by an enemy in war: when captured by a Roman army, they were either distributed by the general among the soldiers (Liv. ii. 42, vi. 13; Sallust, *Jug.* 68), or sold by the quaestors, the proceeds being paid into the Aerarium:—

> "istos captivos duos,
> Here quos emi de praeda de quaestoribus."
> (Plaut. *Capt.* i. 2, 1.)

Property so acquired was regarded by the early Romans as belonging to the individual who had purchased it, or to whom it had been awarded, by the highest and most indefeasible of titles: "Maxime sua esse credebant," says Gaius (iv. 16), "quae ex hostibus cepissent."

The difference between Praeda and Manubiae is explained by Gellius (xiii. 24) to be this: Praeda denotes the things themselves that are taken in war, while Manubiae is "pecunia per quaestorem populi Romani ex praeda vendita contracta:" nor can any objection to this explanation be derived from the words of Cicero (*de Lege agrar.* ii. 22, 59). The etymology of praeda may perhaps be *prae-hida* from *praehendere, prendere* (root *hed*), which would form a connecting link between the term and many other primitive Roman legal words, such as mancipium: see Pott, *Etymologische Forschungen auf dem Gebiete der Indo-Germanischen Sprachen,* i. pp. 142, 199.

When prisoners were sold, they were said to be sold *sub corona;* the true explanation of which expression is probably that given by Gellius (vii. 4). The mode of sale of other things than slaves was at first probably in detail, but afterwards in the lump: that is, the whole praeda might be sold to the highest bidder, or it might be sold in large lots or aggregates which contained a great number of separate things, in which cases the whole or minor aggregate would pass to the purchaser as a universitas, and he might retail it if he chose. This mode of sale was called *sectio* (Cic. *de Invent.* i. 45, 85), and the purchaser was called *sector.* It was the practice to set up a spear at such sales, which was afterwards used at all sales conducted by a magistratus in the name of the people [SECTIO].

Corresponding to the acquisition of movable things in warfare, and their becoming private property, is the transfer of ager Publicus, which was acquired in war, to individuals, by a Lex Agraria de Coloniis deducendis, or by a sale by the quaestors (*ager quaestorius*). [G. L.] [J. B. M.]

PRAEDIA'TOR. [PRAES.]

PRAEDIATO'RIUM JUS. [PRAES.]

PRAE'DIUM etymologically seems to be derived from the root *hed* (PRAEDA), through either *praes* or *praeda:* with the first it is connected by Varro, who says that it originally signified any property which was made security to the state by a *praes* ("praedia dicta, item ut praedes, a praestando, quod ea pignori data publice mancupis fidem praestent," *L. L.* v. 40): by others it is brought into relation with *praeda:* "quod antiqui agros quos bello ceperant ut praedae nomine habebant" (Gromat. Veter. ed. Lachmann, i. p. 369). Subsequently the term was limited to signify land generally, being used in contrast with *fundus* or *solum* especially when the situation of the land, or the purpose for which it was used, was in contemplation: thus *praedia rustica* are parcels of land devoted to tillage or pasture, even though they may be partly built upon, while *praedia urbana* are those which are not used for the production of the fruits of the earth, but for residence and commercial ends: though from different points of view a piece of land might be considered at once both *urbanum* and *rusticum* (Dig. 20, 2, 4, 1; 50, 16, 198). Rights over land which, though less in orbit than dominium, are yet real in their nature (*e.g.* rights of way), were mostly called *jura praediorum:* see SERVITUTES.

Provincialia praedia were called either *stipendiaria* or *tributaria,* because the land tax was termed *stipendium* in those provinces which were considered to belong to the populus, and *tributum* in the provinces of the emperor (Gaius, ii. 21: cf. Dig. 50, 16, 27, 1). This distinction, however, was merely nominal even in Gaius' time, and ceased entirely about the end of the second century. [J. B. M.]

PRAEFECTU'RA. [Colonia, Vol. I. p. 483.]

PRAEFECTUS, a title given to various officials, appointed, not directly by the people, but by the delegation of some magistrate, to discharge special functions. Hence the *praefectus* was not included in the lists of magistrates, although in certain cases he enjoyed the insignia of a magistrate. The most important are as follows. [A. S. W.]

PRAEFECTUS AEGYPTI. Egypt was not included by Augustus either in the senatorial or in the imperial provinces, but was reserved for his more immediate control. None of the senators or *equites illustres* were allowed to set foot in it without the special permission of the emperor (Tac. *Ann.* ii. 59; Dio Cass. li. 17); it was governed for him by a *procurator* of equestrian rank, who, however, as holding a superior position to that of an ordinary procurator and an *imperium ad similitudinem proconsulis* (Dig. 1, 17, 1), was entitled *praefectus Aegypti* (Tac. *Hist.* ii. 74, &c., and often in inscriptions), or in Greek ἡγεμών. His staff consisted of freedmen of the emperor. Everything but the fixing of the revenues and the right of appointment to certain posts was in his hands: the administration of finance, the judicial authority, and the supreme military command. He reported directly to the emperor, and the tenure of his office depended on the emperor's pleasure. Thus Seius Strabo, the father of Seianus, held this post for only a few months, but his successor, Vitrasius Pollio, for sixteen years. (Marquardt, *Röm. Staatsv.* i. 285.) This praefectus held rank second in the scale of the non-senatorial dignities, coming after the praefectus praetorio, but before the praefectus annonae. (Mommsen, *Staatsr.* ii. 997, 2.) [A. S. W.]

PRAEFECTUS AERA'RII. [Aerarium.]

PRAEFECTUS ALIMENTORUM. [Alimentarii.]

PRAEFECTUS ANNO'NAE. Livy (iv. 12, 13) relates that in B.C. 440 L. Minucius was appointed praefectus annonae to deal with the difficulties arising in a time of scarcity, either for a year, being re-elected the next, or for an indefinite period: "Nihil enim constat, nisi in libros linteos utroque anno relatum inter magistratus praefecti nomen." Nothing more is heard of such an appointment under the Republic, and hence it has been not unreasonably argued that Licinius, from whom Livy is here drawing (*Hermes*, v. 266), introduced the title by mistake.

The superintendence of the corn-market throughout the whole Republic was at a later period entrusted to Pompey for a period of five years (Dio Cass. xxxix. 9; Cic. *ad Att.* iv. 1; Liv. *Epit.* 104); and in accordance with this example Augustus took the same superintendence upon himself, and commanded that two persons who had been praetors five years before should be appointed every year for the distribution of the corn. (Dio Cass. liv. 1; *curam frumenti populo dividundi*, Suet. *Aug.* 37.) Subsequently Augustus assigned this duty to two persons of consular rank (Dio Cass. lv. 26, 31). But he also created an officer under the title of *praefectus annonae* to take charge of the more important duty of seeing to the due supply of the corn-market. Under him worked *procuratores* in the provinces and at Ostia, and a large staff of clerks (*tabularii*) and superintendents of granaries (*horrearii*). This office was a permanent one, and only held by one person at a time: he had jurisdiction over all matters appertaining to the corn-market, and, like the praefectus vigilum, was chosen from the Equites, and was not reckoned among the ordinary magistrates. (Tac. *Ann.* i. 7; Dio Cass. lii. 24; Dig. 1, 2, 2, 33; 14, 1, 1, 18; 14, 5, 8; 48, 2, 13.) The praefectus annonae continued to exist till the latest times of the Empire: respecting his duties in later times, see Walter, *Gesch. des röm. Rechts*, § 360, 2nd ed. Cf. Frumentariae Leges, and Hirschfeld in *Philologus*, xxix. 1–96. [W. S.] [A. S. W.]

PRAEFECTUS AQUA'RUM. [Aquae Ductus.]

PRAEFECTUS CASTRO'RUM, praefect of the camp, is first mentioned in the reign of Augustus. There was one to each legion. Hence there were often more than one in a camp. (Vell. Pat. ii. 112; Tac. *Ann.* i. 20, xiv. 37.) We learn from Vegetius (ii. 10) that it was his duty to attend to all matters connected with the making of a camp, such as the vallum, fossa, &c., and also to the internal economy of it. He seems to have taken rank between the tribunes and the centurions. (Cf. Wilmanns in *Eph. Epig.* i. 81 ff.) [W. S.] [A. S. W.]

PRAEFECTUS CLASSIS. This title was frequently given in the times of the Republic to the commander of a fleet (Liv. xxvi. 48, 7, xxxvi. 42, 1, as contrasted with *praefecti navium*, the commanders of the several ships); but Augustus appointed two permanent officers with this title, one of whom was stationed at Ravenna on the Adriatic and the other at Misenum on the Tuscan sea, each having the command of a fleet. (Suet. *Aug.* 49; Veget. iv. 32; Tac. *Ann.* iv. 5, *Hist.* iii. 12.) These were also of equestrian rank, in some cases even freedmen (Tac. *Ann.* xiv. 3; *Hist.* ii. 100). [W. S.] [A. S. W.]

PRAEFECTUS FABRUM. [Fabri.]

PRAEFECTUS JURE DICUNDO. [Colonia, Vol. I. p. 483.]

PRAEFECTUS PRAETO'RIO was the commander of the troops who guarded the emperor's person. [Praetoriani.] This office was instituted by Augustus, and was at first only military, and had comparatively small power attached to it (Dio Cass. lii. 24, lv. 10; Suet. *Aug.* 49); but under Tiberius, who made Seianus commander of the praetorian troops, it became of much greater importance, till at length the power of these praefects became second only to that of the emperors. (Tac. *Ann.* iv. 1, 2; Aurel. Vict. *de Caes.* 9.) The relation of the praefectus praetorio to the emperor is compared with that of the magister equitum to the dictator under the Republic. (Dig. 1, 11.) He was, as the officer of highest rank, always present at court, the natural medium through which the emperor issued his orders and carried out his decisions, although his actual influence would naturally depend mainly on his personal character. From the reign of Severus to that of Diocletian, the praefects, like the vizirs of the East, had the superintendence of all departments of the state, the palace, the army, especially in Italy, the finances, and the law: they also had a court in which they decided cases (Dig. 12, 1, 40), mainly as the representative of the emperor in appeals from the provinces. (Mommsen, *Staatsr.* ii. 932.) Hence the office of praefect of the praetorium was in later times not confined to military officers; it was filled by Ulpian, Papinian, Paulus, and other distinguished jurists.

Originally there were two praefects (Dio Cass. lv. 10); afterwards sometimes one and sometimes two; from the time of Commodus sometimes three (Lamprid. *Commod.* 6), and even four. (Mommsen, *Staatsr.* ii. 831, 3.) They were as a regular rule chosen only from the equites (Dio Cass. lii. 24; Suet. *Tit.* 6; Lamprid. *Commod.* 4); but from the time of Alexander Severus the dignity of senator was always joined with their office (Lamprid. *Alex. Sev.* 21).

Under Constantine the praefects were deprived of all military command, and changed into governors of provinces. He appointed four such praefects: the one (praefectus Orientis) who commonly attended on the imperial court had the command of Thrace, the whole of the East, and Egypt; the second (pr. Illyrici) had the command of Illyricum, Macedonia, and Greece, and usually resided first at Sirmium, afterwards at Thessalonica; the third (pr. Italiae) of Italy and Africa, residing usually at Milan; the fourth (praefectus Galliarum), who resided at Trèves, of Gaul, Spain, and Britain. (Zosimus, ii. 33.) These praefects were the proper representatives of the emperor, and their power extended over all departments of the state: the army alone was not subject to their jurisdiction. They were co-ordinate with the praefects of the two capital cities of Rome and Constantinople. (Walter, *Gesch. des röm. Rechts*, §§ 269, 341; Gibbon, *Decline and Fall*, c. 17.) [W. S.] [A. S. W.]

PRAEFECTUS SOCIO'RUM. (Exercitus, Vol. I., p. 786.]

PRAEFECTUS VI'GILUM. [Exercitus, Vol. I., p. 795.]

PRAEFECTUS URBI, the title given to the deputy who, under the kings, was named to represent the supreme authority during his absence in war, or for any other reason. Lydus (*de Magistr.* i. 34, 38) says that he was originally called *custos urbis;* but this name is inappropriate to the office in its earlier stages, and is probably incorrectly applied (Mommsen, *Staatsr.* i. 639). The office is said by Dionysius (ii. 12) to have been held along with that of Princeps Senatus, and the same statement appears in a still more incorrect form in Lydus (*de Mens.* i. 19), but is quite erroneous. Whether he had the right to convoke the assembly of the populus, is doubtful, but on any emergency he might take such measures as he thought proper; for he had the imperium in the city. (Tac. *Ann.* vi. 11; Liv. i. 59, iii. 24.) Romulus is said to have conferred this dignity upon Denter Romulius, Tullus Hostilius upon Numa Marcius, and Tarquinius Superbus upon Sp. Lucretius. The statement of Lydus (*de Magistr.* i. 38) that in 487 B.C. it was elevated into a magistracy, to be bestowed by election, is wholly to be rejected; his evidence is worthless, and such a notion is foreign to the very nature of the office. All good authorities speak of the praefectus as nominated by the consul who last left the city (Liv. iii. 3, 5, 24; Dionys. vi. 13, viii. 64, x. 23, 24; Tac. *Ann.* vi. 11). Persons of consular rank were alone eligible; and down to the time of the Decemvirate every praefect that is mentioned occurs previously as consul. The only exception is P. Lucretius in Livy (iii. 24), but recent editors here read L. Lucretius, holding the MS. reading an error for this very reason. (Cf. Niebuhr, ii. p. 120, note 255.) In the early period of the Republic the praefectus exercised within the city all the powers of the consuls, if they were absent: he convoked the senate (Liv. iii. 9; Gell. xiv. 7, § 4), held the comitia (Liv. iii. 24), and, in times of war, even levied civic legions, which were commanded by him.

When the office of praetor urbanus was instituted, the wardenship of the city was swallowed up in it (Lydus, *de Mens.* 19, *de Magistr.* ii. 6), or rather became needless, as in the absence of the consuls the praetor acted for them. Mommsen believes that the right of nominating a *praefectus urbi* was expressly taken away by the Licinian law (i. 644). But as the praetor himself was absent during the Latin festivals, which lasted for several days, a *praefectus urbi feriarum Latinarum* was still annually appointed, solely for this period, and thus held a mere shadow of the former office. This praefectus had neither the power of convoking the senate nor the right of speaking in it; as in most cases he was a person below the senatorial age, and was not appointed by the people, but by the consuls. (Gell. xiv. 8.) When Varro, in the passage of Gellius here referred to, claims for the praefectus urbi the right of convoking the senate, he is probably speaking of the power of the praefect such as it was previously to the institution of the office of praetor urbanus. Of how little importance the office of praefect of the city had gradually become, may be inferred from the facts, that it was always given to young men of illustrious families (Tac. *Ann.* iv. 36), and that Julius Caesar even appointed to it several youths of equestrian rank under age (Dio Cass. xlix. 42; xliii. 29, 48). During the Empire such praefects of the city continued to be appointed so long as the Feriae Latinae were celebrated, and even assumed, though perhaps hardly seriously, some kind of jurisdiction. (Tac. *Ann.* vi. 11; Suet. *Nero*, 7, *Claud.* 4; Dio Cass. liv. 17; J. Capitol. *Antonin. Phil.* 4.) On some occasions, however, no praefectus urbi was appointed at all; and then his duties were performed by the praetor urbanus. (Dio Cass. xli. 14, xlix. 16; comp. Marquardt, *Staatsverw.* iii. 285; Mommsen, *Staatsr.* i. 638–649.)

An office very different from this, though bearing the same name, was instituted by Augustus on the suggestion of Maecenas (Dio Cass. lii. 21; Tac. *l. c.*; Suet. *Aug.* 37), and because a permanent post of great importance under Tiberius. This new praefectus urbi was a regular magistrate, whom Augustus invested with all the powers necessary to maintain peace and order in the city, which he exercised even when a praetor or indeed a consul was present at Rome. But his functions were inactive when Augustus was in Italy. It was only during the long absence of Tiberius during the last eleven years of his reign, that the praefectus urbi became a permanent official of great power. He came to be included among the magistratus, and even imperium was accorded to him (Dig. 2, 4, 2). None but consulars were appointed to the office, and it was often the crowning point of a distinguished political career, answering somewhat to the censorship of the Republic. He had the superintendence of butchers, bankers, guardians, theatres, &c.; and to enable him to exercise his power, he had distributed throughout the city a number of *milites stationarii*, whom we may compare to a modern police. These composed the cohorts x., xi., and xii. of the *cohortes urbanae*, their number being afterwards increased. He also had jurisdiction in cases between slaves and their masters, between patrons and their freedmen, and over sons who had violated the *pietas* towards their parents (Dig. 1, 12, 1, 5–14; 37, 15, 1, 2). His jurisdiction, as being based upon a general duty of looking after the peace and prosperity of the city, thus became gradually extended; and as the powers of the ancient republican praefectus urbi had been swallowed up by the office of the praetor urbanus, so now the power of the praetor urbanus was gradually absorbed by that of the praefectus urbi; and at last there was no appeal from his sentence, except to the person of the princeps himself, while anybody might appeal from a sentence of any other city magistrate, and, at a later period, even from that of a governor of a province, to the tribunal of the praefectus urbi. (Vopisc. *Florian.* 5, 6; Suet. *Aug.* 33; Dio Cass. lii. 21, 33; Dig. 4, 4, 38.) His jurisdiction in criminal matters was at first connected with the *quaestiones* (Tac. *Ann.* xiv. 41, with the note of Lipsius), and to avoid collisions with the praetor it was decided that that court should hear a case before which it might first have been brought; but from the third century he exercised it alone, and not only in the city of Rome, but at a distance of one hundred miles from it, and he might sentence a person to *deportatio in insulam.* (Dig. 1, 12, 1, 3 and 4.) During the first period of the Empire and under good emperors, the office was generally held for a number of years, and in many cases for life (Dio Cass. lii. 21, 24, lxxviii. 14; J. Capitol. *Antonin. Pius*, 8; Lamprid. *Commod.* 14; Vopisc. *Carin.* 16); but from the time of Valerian a new praefect of the city occurs almost every year.

At the time when Constantinople was made the second capital of the Empire, this city also received its praefectus urbi. The praefects at this time were the direct representatives of the emperors; and all the other officers of the administration of the city, all corporations, and all public institutions were under their control. (Cod. 1, tit. 28, s. 4; Symmach. *Epist.* x. 37, 43; Cassiod. *Variar.* vi. 4.) They also exercised a superintendence over the importation and the prices of provisions, though these subjects were under the more immediate regulation of other officers. (Cod. 1, tit. 28, s. 1; Orelli, *Inscript.* n. 3116.) The praefects of the city had every month to make a report to the emperor of the transactions of the senate (Symmach. *Epist.* x. 44), where they gave their vote before the consulares. They were the medium through which the emperors received the petitions and presents from their capital. (Symmach. *Epist.* x. 26, 29, 35; Cod. 12, tit. 49.) At the election of a pope the praefect of Rome had the care of all the external regulations. (Symmach. *Epist.* x. 71–83.) [L. S.] [A. S. W.]

PRAEFERI'CULUM was clearly some sort of brazen dish or bowl used in sacrifices, our only definition being, "vas aeneum sine ansa patens summum velut pelvis quo ad sacrificia utebantur" [perhaps in the original *utuntur*] (Fest. *Ep.* p. 248): it was part of the apparatus for sacrifice belonging to the state-priests, and was kept in the Regia in the Sacrarium of Ops (Fest. p. 246; cf. Jordan, *Topog.* i. p. 427). It is strange that, in spite of the distinct *sine ansa*, many should identify it with the jug *with* a handle, used for pouring wine into the patera, as shown among the sacrificial utensils, on a relief from the Arcus Argentariorum (so Guhl and Koner, ed. 5, pp. 721, 733). We think Baumeister rightly doubts this (*Denkm.* p. 1109), and suggests that the shield-like object on the same relief, which is combined with the axe [see cut under SECURIS], is more probably the praefericulum. [The same writer, p. 1384, however, interprets the similar jug (probably the CAPIS), which appears on a coin of Pompey with an augur's staff opposite it, as being a praefericulum.] It may be suggested that its connexion with *ferculum* indicates its use, whether for offering the firstfruits or the cakes (*fercta;* cf. Fest. 85, "ferctum, genus libi dicitur quod ad sacra ferebatur, nec sine strue .... quae qui afferebant strufertarii appellabantur"), or, lastly, to carry the mola salsa for the sacrifice of the victim at a state festival (cf. the formula "Jupiter, macte isto *ferto* esto," Serv. *ad Aen.* ix. 641). It may be conjectured that the "niger catinus" of Numa (Juv. vi. 343) was an ancient earthenware praefericulum. [G. E. M.]

PRAE'FICAE. [FUNUS.]

PRAEFU'RNIUM. [BALNEAE, Vol. I. p. 273; FORNAX.]

PRAEJUDI'CIUM. This word, as appears from its etymology, has a certain relation to Judicium, to which it is opposed by Cicero ("de quo non praejudicium, sed plane jam judicium factum," *Div. in Caecil.* 4, 12) and P. Syrus, 248, 249: "grave judicium est, quod praejudicium non habet: grave praejudicium est, quod judicium non habet." The commentator who goes by the name of Asconius observes on the words cited from Cicero, that a praejudicium is something which when established becomes an *exemplum* for following judges (*judicaturi*, to be guided by): but this leaves us in doubt whether he means something established in the same cause, by way of preliminary inquiry, or something established in a different but similar cause, which would be what we call a precedent. Quintilian (*Inst. Orat.* v. 1, 2) states that the word is used in two senses: in that of a precedent, in which case it is rather *exemplum* than *praejudicium* ("res ex paribus causis judicata"); and in that of a preliminary inquiry and determination about something which belongs to the matter in dispute ("judiciis ad ipsam causam pertinentibus"), whence also comes the name Praejudicium. This latter signification, which is in conformity with the meaning of *praejudicialis actio* or *formula* (Inst. iv. 6, 13; Gaius, iv. 44), appears to be that which the term properly bears in Roman legal language. A "prejudicial" action was one whose object was merely to judicially ascertain facts which were of legal importance, or the existence of alleged legal relations, and whose formula (in the formulary period of Roman civil procedure) consisted consequently simply of an Intentio, by which the judex was instructed to inquire into the truth of the alleged fact, or the existence of the alleged legal relation (Gaius, *l. c.*): there was no condemnation or absolution, as in other actions, but the judge simply declared his conclusion on the matter in a *pronuntiatio* (e.g. Dig. 40, 12, 27, 1): cf. Aurel. Victor. *Ars rhet.* iii. 5, "simplex petitio, cum quaeritur, in quo jure sit res aut persona." The name of the action was derived from the fact that the decision of the judge formed, or might form, the basis of subsequent litigation (*e.g.* it having been ascertained by praejudicium that So-and-so is the illegitimate child of A, the mother can proceed by action against A for its maintenance); as to its legal character, the lawyers seem to have doubted. Justinian says (Inst. iv. 6, 13), "praejudiciales actiones *in rem* esse videntur": they are real, not personal, because there is no *obligatio* between the person who sets the law in motion and his adversary, or, as Gaius would perhaps have said, because the latter is not named in the Intentio: but in Dig. 6, 1, 1, 2; 44, 7, 37, praejudicia are opposed to *vindicationes* or real actions, and in Dig. 3, 3, 35, 2, to *actiones* in general.

Among the questions which were raised in the form of a praejudicium were whether a man was free or not (Inst. *loc. cit.*), or a libertus or not (Gaius, iv. 44; Dig. 2, 4, 8, 1): whether he was the child of So-and-so (Dig. 25, 3, 3, 2): whether he had given to the sureties he was taking for such and such a debt the information required by the Lex Cicereia (Gaius, iii. 123): what was the amount of So-and-so's *dos*, &c. Some *praejudiciales actiones* belonged to the civil law, though Justinian says, in the paragraph already referred to, that perhaps the only one in his time which had a *legitima causa* was that in which a man's freedom was in question, and which we know (from Dig. 1, 2, 2, 24) was older than the Twelve Tables: the rest, according to him, were praetorian in origin.

The *pronuntiatio* of the judge in a prejudicial action was binding on, and conclusive against, not merely the person who in it played the *rôle* of defendant, but on all persons generally (Dig. 1, 5, 25; 25, 3, 2, 3, pr.): but (at any rate in those relating to status) the decision could be disputed by any one within five years on the ground of collusion (Dig. 40, 16), and by persons actually wronged by it at even a longer interval of time (Dig. 40, 12, 42).

The reason why praejudicium is sometimes opposed to *actio* is probably that sometimes the term was used in the sense of a defence, the defendant pleading that the suit ought not to be proceeded with because its decision would prejudge a more important cause. Such a plea was originally expressed in the form of a PRAESCRIPTIO (*pro reo*), but later was formulated as an *exceptio* (Gaius, iv. 133). Examples may be found in the allegation that a single judex is trying a suit which ought to go before the centumviri (Cod. 3, 31, 12, pr.), or recuperatores trying a matter which ought to be made the subject of a criminal prosecution (Cic. *de Invent.* ii. 20, 59; *in Verr.* iii. 65, 152; Dig. 47, 10, 7, 1): cf. also Plin. *Ep.* vii. 6. This seems to be the signification of the term *praejudicium* from which has arisen our own legal phrase "without prejudice to other matters in the cause." (Gaius, iii. 123, iv. 44; Paul. *Sent. rec.* v. 9, 1;—Dig. 22, 3, 8; 43, 30;—Inst. iv. 6, 13; and Theophilus, *Paraphr.*) [G. L.] [J. B. M.]

PRAELU'SIO. [GLADIATORES.]

PRAENO'MEN. [NOMEN.]

PRAEPETES. [AUGUR, Vol. I. p. 250.]

PRAEPO'SITUS, which means a person placed over, was given as a title in the later times of the Roman Empire to many officers: of these the most important was the *Praepositus Sacri Cubiculi*, originally a freedman (cf. Suet. *Dom.* 16), but afterwards of high rank as chief chamberlain in the emperor's palace (Cod. 12, tit. 5; Cod. Theod. 6, tit. 8). Under him was the Primicerius, together with the Cubicularii and the corps of Silentiarii, commanded by three decuriones, who preserved silence in the interior of the palace. (Cod. 12, tit. 16; Friedländer, *S. G.* i. 54; Walter, *Gesch. des röm. Rechts*, § 340, 2nd ed.) [W. S.]

PRAEROGATI'VA. [COMITIA.]

PRAES. According to Ausonius (*Idyll.* xii. 9), Vas was one who gave security or went bail for another in a *causa capitalis*, and he who gave security for another in a civil action was called Praes: similarly Festus (s. v. *Vadem*) says that Vas is a sponsor in a *res capitalis*. But the application of the word Vadimonium in civil causes (*e.g.* Gaius, iv. 184–187) shows that this distinction is not perfectly accurate, and Varro (*L. L.* vi. 74) defines Vas as any person who promised Vadimonium or security for another in any legal proceeding: so that possibly Vas may have both a general and a specific sense, in the latter of which it is occasionally (as by Ausonius and Festus) contrasted with Praes (cf. Sallust, *Jug.* 35, 61; Hor. *Sat.* i. 1, 11, and Heindorf's note). Praes really seems to be a contraction of *prae-vas* (Rivier, *Untersuchungen über die cautio praedibus praediisque*, p. 14), and Vas itself may relate to the freedom which the party obtains by means of the security given ("Vades ideo dicti quod qui eos dedit potestatem vadendi id est discedendi habet," Acron *ad* Hor. *loc. cit.*: cf. Gellius, vii. 19), or more probably, as Rivier holds, it is connected with the old Norse *ved* and high German *wetti*, words denoting "pledge," so that *vas* would mean a surety, and *prae-vas* perhaps a surety who besides pledging his person pledges his property [PRAEDA; PRAEDIUM] for the discharge by another of his obligations, or his appearance in court. Another but very dubious etymology of the word is given by Festus (s. v. *Manceps*), who says that Manceps signifies him who buys or hires any public property, and that he is also called Praes because he is bound to make good his contract (*praestare quod promisit*) as well as he who is his Praes (see also Varro, *l. c.*), so that according to this Praes is a surety of one who is under some liability to the state. The passage of Festus explains some lines in the life of Atticus (Cornelius Nepos, 6), in which it is said that he never bought anything at a public auction (*ad hastam publicam*), and never was either Manceps or Praes. The use of Praes as a surety in a civil action occurs under the Legis actio as well as the formulary procedure: in the Sacramentum the defendant, to whom interim possession of the property in dispute was awarded, had to give "praedes litis et vindiciarum" (Gaius, iv. 16); and under the later formulary system, when a real action was tried *per sponsionem*, the security given by the defendant was called "pro praede litis et vindiciarum" (Gaius, iv. 91, 94 *a*): so too in some MSS. of Dig. 10, 3, 6, 7, the reading is *praedibus* or *praediis cavere*, but in the latest edition of Krüger and Mommsen *pro dedibus* is adopted as correct. According to the Pseudo-Asconius (*in Verr.* i. 54, 142) the goods of a Praes were called Praedia (see PRAEDIUM), and in Cicero (*l. c.*) and Livy (xxii. 60) "praedibus et praediis" come together (Rivier's treatise on the topic has been already referred to): but it is clear from Varro that this use of *praedia* is confined to the case of a debtor to the state, whose sureties were liable both in their persons (*praedibus*) and their property (*praediis*). If, in such a case, the debtor did not pay, the property of the surety was sold by auction under the authority of the state, and the purchaser (*praediator*, Gaius, ii. 61) became owner *ex jure Quiritium*, though the surety might recover it by an anomalous form of usucapio (Gaius, *l. c.*). The chief authority on the *jus praediatorium* is now the Lex Municipalis Malacitana, cap. 63–65. [J. B. M.]

PRAESCRIPTIO. In its original signification, as a legal term of art, this word seems to denote a component part in the formulae of some Roman actions at law, the name being derived from the fact that this part stood first and before all others: "praescriptiones appellatas esse ab eo quod ante formulas praescribuntur plus quam manifestum est" (Gaius, iv. 132). Such praescriptiones might be inserted in a formula in the interest either of the plaintiff (*actor*) or of the defendant (*reus*). "Praescriptiones pro actore" occur in the formulae of actions in which the plaintiff is entitled from the defendant to a number or variety of acts *primâ facie* hanging together, but of which one only, or at least not all, are claimed in the present suit: and by the praescriptio beginning "*ea res agatur*, let the present trial relate exclusively to so and so," the plaintiff reserved his right of action upon the other acts, or those subsequently to fall due, it being a presumption of Roman law (capable, however, of being rebutted by the insertion of a praescriptio in the formula) that when a man instituted an action, it comprised all his claims against the defendant, prospective no less than present, so far at least as they related to the present ground of action, and already had at least a potential existence. Two examples are given by Gaius (iv. 131). In the one, a man to whom an annuity is payable, say every six months, sues for a half-year's instalment, using the praescriptio "ea res agatur cujus rei dies fuit" (cf. Cic. *de Orat.* i. 37, 168); in the other, the purchaser of an estate, claiming its conveyance to him by the form of Mancipatio, reserves to himself the right of subsequently demanding its bare traditio by a praescriptio in the form "ea res agatur de fundo mancipando." Such "praescriptiones pro actore" seem to have been in use throughout the formulary period of Roman civil procedure, from *circ.* 170 B.C. to 294 A.D.

"Praescriptiones pro reo" were the mode of expressing in the formula of an action certain defences against the plaintiff's case. These defences resembled exceptiones in that they were not allowed to be urged at the hearing of the cause unless they had been embodied in the formula of the action, and also in their nature as the allegation of a countervailing right, vested in the defendant, not a direct traverse or denial of the plaintiff's argument: they resembled "praescriptiones pro actore" in being prefixed to the formula, and also apparently in always being introduced by the same words "ea res agatur" (Gaius, iv. 133–137). Among them were the pleas that the suit in question ought not to be tried at all, because its decision would prejudge a *causa major*, Gaius, iv. 133 [PRAEJUDICIUM], and that the action was beyond the jurisdiction of the court ("praescriptio fori," Dig. 2, 8, 7, pr.), or barred by lapse of time ("praescriptio temporis"). It is difficult to see why the Roman law required some defences by way of countervailing right to be stated in the form of a praescriptio and others in that of an exceptio. The difference between them was partly formal, partly material. An exceptio was placed in the formula between the Intentio and the Condemnatio: a Praescriptio, as Gaius observes, was prefixed to and stood at the head of the formula, its object being to indicate to the judex that he was first to examine into the truth or falsehood of the defence advanced, and if he found it well grounded to suspend the hearing either altogether, or at any rate (*e.g.* in praescriptio praejudicii) until the obstacle was removed. Consequently in practical result an exceptio was more favourable to a defendant than a praescriptio; for if a defence so formulated was established, the defendant was entitled to judgment in his favour, and the plaintiff could not sue again (Gaius, iv. 123), whereas in the case of a praescriptio the trial of the action was only suspended, so that the defendant might possibly be condemned after all. But even as early as the time of Cicero (*de Invent.* ii. 20, 59), the practice had commenced of expressing in the form of an exceptio defences which strictly should have been formulated as praescriptiones, the praetor perhaps himself favouring the change because "facilius reis succurrit quam actoribus" (Gaius, iv. 57); and Gaius says (*ib.* 133) that in his time "praescriptiones pro reo" were entirely obsolete: "in speciem exceptionis deducuntur." The result was that the original difference in meaning between the terms exceptio and praescriptio was gradually forgotten, so that they came to be used as practically synonymous, and in the Corpus Juris of Justinian this is shown by Savigny to be the case (see *e.g.* Dig. 5, 1, 52, 3; 31, 34, 3; 44, 2, 29; 46, 3, 91; 48, 5, 15, 7), though for some defences one of them was more commonly and consistently employed than the other. (See Savigny, *System*, iv. 309; v. 163.)

One of these praescriptiones, the original nature and history of which have thus been briefly sketched, has furnished general jurisprudence with one of its most famous terms, viz. the Praescriptio temporis, or plea by the defendant that an action is barred or prescribed by lapse of time. Under the older Roman law all suits were, as it was said, *perpetuae;* there being no Statute of Limitations, to use an English phrase, or other rule of law providing that rights of action should be barred unless sued upon within a definite period from their accrual. The praetor, however, ordained that many of the new actions which he introduced through the Edict should lie only within an *annus utilis* from the moment at which the right of bringing them first accrued (Gaius, iv. 110; Justin. *Inst.* iv. 12, pr.). Far the most important of these *annales actiones* were the praetorian penal actions, with the exception of that on *furtum manifestum* [FURTUM], which was *perpetua* because it substituted a pecuniary penalty for capital punishment (Gaius, iv. 111): though even these were *perpetuae* so far as they were *rei persecutoriae*, i.e. were brought only to deprive the delinquent of any benefit he had derived from his wrong (Dig. 44, 7, 35, pr.). Praetorian actions which merely compensated the plaintiff at the cost of the defendant's pocket (*e.g.* the *actio doli*) were prescribed in a year if *contra jus civile* (Dig. *l. c.*): interdicts, so far as they were penal, were similarly limited: actions for the recovery of property which had been for a defined time in the hands of a bonâ-fide possessor with *justus titulus* without being acquired by usucapio were barred in ten or sometimes twenty years [USUCAPIO], and certain actions on sales, which were introduced through the Edict of the curule aedile, had a prescription of twelve or six months (*actiones redhibitoria* and *aestimatoria:* see EMPTIO VENDITIO). In course of time, too, a period of prescription was fixed by disconnected legislation for other suits, especially one of five years for the *querela inofficiosi testamenti* [TESTAMENTUM] (Cod. 3, 28, 36, 2); and in Gaius' time (iv. 110) actions which fell under the original rule of non-limitation were called *perpetuae*, those which were limited by any of these periods *temporales.*

More systematic legislation upon the subject commenced with Constantine, who enacted that all real actions which were not already limited might be repelled by an exceptio unless brought within forty *anni continui* (Cod. 7, 39, 2), which subsequently seem to have been reduced to thirty (Symm. *Epist.* v. 52). Theodosius II. (A.D. 424) subjected to this same thirty years' limit all actions whatsoever, with a few exceptions, which had hitherto been *perpetuae* (Cod. *ib.* 3); and his law was retained by Justinian, the only actions of importance which were not governed by it being *vindicatio in libertatem* (Cod. 7, 22, 3), fiscal claims for unpaid taxes (Cod. 7, 39, 6), and the *actio hypothecaria*, to which last an additional ten years only was allowed. Consequently, in Justinian's compilations *actio perpetua* means not what it did in Gaius' time, but an action which is barred in not less than thirty years.

For the history of the "Praescriptio longi temporis," which gradually developed into a mode of acquisition, and so gave rise to our term "Prescription" as a title to property and "real" rights less than ownership, see USUCAPIO. (Savigny, *System*, v. §§ 237–255; Puchta, *Institutionen*, § 208.) [J. B. M.]

PRAESES. [PROVINCIA.]

PRAESUL. [SALII.]

PRAETE'RITI SENATO'RES. [SENATUS.]

PRAETEXTA. [TOGA.]

PRAETOR. This title, which Cicero (*de Legg.* iii. 3, 8) connects with *praeire*, is found among the Latin races, and is used by Livy as equivalent to that of strategus with the Achaeans. Among the Romans we first read of it immediately after the expulsion of the kings: for a single hereditary ruler they substituted two annually elected magistrates, first known as Praetors, and only later as Consuls; whence Cicero, in the passage referred to, represents the title as properly descriptive of the Consuls as leaders of the armies of the state; and the familiar use of "Praetorium" in connexion with military command, and the meaning which it bears in Livy of the period and powers of the consular office, are also indicative of the original character of this magistracy.

As distinct from the consulship, the praetorship proper is said by Livy (vi. 42, vii. 1) to have been instituted B.C. 366, though the truth would seem to be that so long as the military tribunate was in existence two consuls were from time to time elected in lieu of tribuni militares, and that when this was the case a third magistrate was always appointed, called praetor, to assist them in their duties. However this may be, the praetor, probably even at this period called praetor *urbanus* in allusion to the older magistracy of the custos urbis whom he superseded (Joan. Lydus, *de Mens.* 19; *de Magistr.* ii. 6), was, as soon as the office became permanent, elected annually from the patricians only, who secured a monopoly of the new office as a compensation to themselves for being compelled to share the consulship with the plebeians (Livy, *l. c.*), none of the latter attaining the praetorship till B.C. 337; he was termed "collega" of the consuls, and was elected with the same auspices at the Comitia Centuriata (Liv. vii. 1, xlv. 44; Gellius, xiii. 15). His chief functions were judicial (*jus in urbe dicere*, Liv. vi. 42; *jura reddere*, ib. vii. 1), it being to relieve the consuls (who according to the passage of Cicero referred to were called *judices a judicando*) of this class of business that his office was established; but the consuls in the earlier Roman history being so constantly engaged on active military service, he frequently had to take their place in the city (Liv. xxiv. 9; Cic. *ad Fam.* x. 12; Dio Cass. xlvi. 14, cix. 24), in the senate (Gell. xiv. 7; Liv. viii. 2, &c.), and in the Comitia (Liv. xxii. 33, xxv. 27), and in some cases of emergency even commanded the Roman armies. He was a curule magistrate and had the imperium, though in a less degree than the consuls (Gell. xiii. 15; Liv. xliii. 14; Val. Max. ii. 8, 2; Cic. *ad Att.* ix. 9), to whom he owed obedience and all the external marks of reverence (Liv. x. 25, xxvii. 5; Dio Cass. xxvi. 24; Polyb. xxiii. 1; Aurel. Victor, *de Vir. illust.* 72). His insignia of office were six lictors (Appian, *de reb. Syr.* 15), whence he is called by Polybius *ἡγεμὼν* or *στρατηγὸς ἑξαπέλεκυς*, and sometimes simply *ἑξαπέλεκυς*. Plutarch (*Sulla*, 5) uses the expression στρατηγία πολιτική. At a later period the praetor had only two lictors in Rome (Censorinus, c. 24). As appears from Livy, the praetorship was at first given to a consul of the preceding year, and L. Papirius was praetor after being consul (Liv. x. 47).

Unlike the consulship, the office was one to the number of whose holders additions might be constitutionally made as circumstances required (Cic. *de Legg.* l. c.), and accordingly in B.C. 246 a second praetor was created, who for distinction's sake was called Praetor Peregrinus, for the administration of justice in all disputes between peregrini or peregrini and cives (Dig. 1, 2, 2, 28; Joan. Lydus, *de Magistr.* i. 38, 45; Liv. *Epit.* 19), and from this time onward the two offices seem to have been regularly divided between the patricians and plebeians (Niebuhr, *Röm. Geschichte*, iii. 177), it being determined by lot which of the two should be urbanus and which peregrinus, though if either was required for military command the functions of both within the city were discharged by the other (Liv. xxiv. 44, xxv. 3, xxvii. 36). When the territories of Rome were extended beyond the limits of Italy, new praetors were created for the government of the provinces: two in 227 B.C. for the administration of Sicily and Sardinia (Liv. *Epit.* 20; Dig. 1, 2, 2, 32) and two thirty years later for the Spanish provinces (Liv. xxxii. 27): it being settled by lot which of the praetorian provinces each of the four praetors who went abroad was to govern. Later it became common for the praetor urbanus or peregrinus, after he had discharged his judicial functions for one year, to be sent to govern a province for another; a period which in many cases was prolonged until by the Lex Julia of Caesar it was provided that no governor should administer a praetorian province for more than one year (Cic. *Phil.* i. 8, 19). In connexion with the institution of *quaestiones perpetuae* for the trial of crimes, Sulla increased the number of praetors from six to eight, all of whom as a rule exercised judicial functions at Rome during their proper year of office, becoming propraetors in the provinces for the following year: under Caesar the number was raised successively to ten, twelve, fourteen, and sixteen (Sueton. *Jul.* 41; Dio Cass. xlii. 51, xliii. 47, 49, 51; Dig. 1, 2, 2, 32), and by Augustus reduced to twelve and earlier to ten (Dio Cass. liii. 32, lvi. 25); but under Tiberius there were as many as sixteen (Dio Cass. lviii. 20, lix. 20). Subsequently additional praetors were created for special departments of legal business: two by Claudius (reduced by Titus to one) for all suits relating to fideicommissa, when the business in this department of law had become considerable (Dig. *l. c.*; Sueton. *Claud.* 23), and one by Nerva for the hearing of actions between the fiscus and subjects of the Empire (Dig. *ib.*): so that, as Pomponius (speaking of his own time), says in Dig. 1, 2, 2, 34, "eighteen praetors *jus dicunt* in the state." According to Capitolinus (*Marc.* 10), M. Aurelius added a nineteenth praetor for matters relating to guardianship, upon whose duties Ulpian wrote a *liber singularis* (Dig. 27, 1, 3, 5, 9).

It will be clear from what has been said that the main business of the praetors was judicial; the praetors urbanus and peregrinus had the control of the whole system of Roman civil judicature, in connexion with which their work is sufficiently described under other articles, especially those on Edictum, Judex, and Jurisdictio. Sometimes, however, extraordinary duties were imposed on them: *e.g.* in B.C. 144 the praetor peregrinus was commissioned by a senatusconsultum to look after the repair of certain aqueducts and prevent the improper use of the water (Frontinus, *de Aquaeduct.* lib. i.): so too, though the appointment of guardians was no constitutional part of the praetor's province (Dig. 26, 1, 6, 2), it was conferred, within the city of Rome, on the praetor urbanus and the majority of the tribuni plebis by a lex Atilia (Gaius, i. 185). It was part of the same magistrate's duties to superintend the Ludi Apollinares, and so close an application to business was required from him that he was permitted to leave the city for only ten days at a time. With criminal prosecutions he had originally no more to do than any other magistrate; but when in 149 B.C. (Cic. *Brut.* 27, 106) L. Calpurnius Piso established the first *quaestio perpetua* for the trial of extortion (*repetundae*), one of the praetors was permanently entrusted with its supervision, and the same practice was followed with the *quaestiones* instituted by Sulla and others for the trial of Ambitus, Majestas, Peculatus, Falsum, Parricidium, &c. Though a praetor presided over the criminal proceedings in these cases, the judges were selected from the senators, knights, or tribuni aerarii at different periods of history, the condemnation or acquittal of the accused being determined by a majority of their votes. [Judicium.]

Any place in which the praetor might by law or custom exercise his magisterial functions was called *jus* (Dig. 1, 1, 11). Some of these, however, could never be performed elsewhere than *pro tribunali*, where his curule chair was set upon the comitium, the patrician portion of the Forum, and where he sat with his friends and assessors: contrasted with the tribunal were the *Subsellia*, or part occupied by the judices or other persons who were present (Cic. *Brut.* 84, 290).

Other judicial acts, however, could even tolerably early be performed by him anywhere (Gaius, i. 20), viz. acts of the *voluntaria jurisdictio*, such as legitimation of manumissions, *in jure cessio*, &c. In such cases he was said to exercise jurisdiction *de plano*, and the volume of business so transacted increased so steadily that at length regular *sessiones de plano* were held (fragm. Vat. 161), at which the praetor sometimes heard and adjudicated upon disputes: the rule as to what occasions required him to sit *pro tribunali*, and for what a *de plano* jurisdiction sufficed, may be gathered from Dig. 38, 1, 3, 8; 38, 15, 2, 1; 1, 16, 9, 1.

The office of the praetor continued to exist throughout the imperial period, though his activity in the issue of annual edicts must have slackened considerably at the fall of the Republic, and ceased altogether on the publication of the Edictum perpetuum of Salvius Julianus [Edictum]. In the Eastern Empire there were at first two praetors only, which number was gradually raised to eight, and then reduced to three, each of whom was distinguished by a special name, *e.g.* Constantinianus, triumphalis (Cod. Theod. 6, 4, 5, 13, &c.); they were selected by the senate, but the selection had to be confirmed by the emperor (Cod. Theod. 6, 4, 8, 9, 10, &c.). They still possessed *jurisdictio*, though their importance in the earlier imperial period was greatly diminished by the development of the emperor's own jurisdiction and of a regular system of appellate courts: under Justinian, and in fact from the abolition of the formula (A.D. 294) onward, the office seems to be merely that of a judge of first instance.

A person who had been ejected from the senate could recover his rank by being made praetor (Dio Cass. xxxvii. 30; Plut. *Cicero*, 17). Sallustius was made praetor ἐπὶ τῷ τὴν βουλὴν ἀναλαβεῖν (Dio Cass. xlii. 52). [J. B. M.]

PRAETORIA COHORS. [EXERCITUS, Vol. I. p. 791.]

PRAETORIANI. [EXERCITUS, Vol. I. p. 793.]

PRAETO'RIUM in its primary sense was the tent of the general (*praetor*), the head-quarters in the camp (Mommsen, *Staatsrecht*, ii.³ 74) [CASTRA, Vol. I. p. 373]. Hence we find it used for the palace of a provincial governor, not only when his official title was praetor (as in Cic. *Verr.* iv. 28, 65), but also when the residence of a proconsul or even of a procurator is meant (cf. John xviii. 28): for the palace of a foreign prince, as Prusias (Juv. x. 161), or Herod (Acts xxviii. 35). It was used also for any large country-house (Juv. i. 75; Mart. x. 79; Suet. *Aug* 72, *Tib.* 39, *Calig.* 37), but it would not rightly be used of a house at Rome, however "palatial" it might be. It is no doubt the case (as Professor Mayor points out in his note on Juv. *l. c.*) that the original idea of head-quarters on active service is retained. The *villa* was the whole property, dwelling-house, gardens, farm, &c.; the house itself, as the head-quarters of the owner, was the praetorium. The word may, however, also be applied (as Bishop Lightfoot shows on *Ep. ad Philipp.* pp. 101 ff.) to a body of men forming the council of war which met in the general's tent (Liv. xxvi. 15; xxx. 5), and later to the imperial body-guard, the attendants on the holder of the imperium, who represented the praetor or general of an earlier period (Tac. *Hist.* ii. 11; Suet. *Ner.* 9). A legionary is said to serve *in legione*, a guardsman *in praetorio* (Plin. *H. N.* xxv. § 17; Tac. *Hist.* i. 20, iv. 46). These *praetoriani* or praetorian guardsmen [EXERCITUS, Vol. I. p. 793] were by Tiberius concentrated in a camp outside the Colline gate (Tac. *Ann.* iv. 2; Merivale, *Rom. Hist.* v. 221); but this camp was not, as has sometimes been stated, called praetorium, but *castra praetoria*, *castra praetorianorum*, or *castra praetorii* (Tac. *Hist.* i. 31; Plin. *H. N.* iii. § 67). These quarters of the praetorian guard were destroyed by Constantine, when he disbanded the guard itself; but he left the outer walls of the camp, because they had been made part of the Aurelian Wall (Burn, *Rome and Campagna*, p. 61). [W. S.] [G. E. M.]

PRAEVARICA'TOR. [SENATUSCONSULTUM TURPILIANUM.]

PRA'NDIUM. [CENA, Vol. I. p. 395.]

PRECA'RIUM. [INTERDICTUM.]

PRELUM, part of the oil and wine press [TORCULAR]. The name is also given to other presses, as (1) that used in making paper (Plin. xiii. § 77; cf. LIBER): (2) the press for clothes used at the end of the fuller's process [FULLO], when the clothes were sprinkled (Sen. *Q. N.* i. 3, 2) and laid in presses, whence they were taken out ready to send home (Ammian. xxviii. 4, 19). The prela in Mart. ii. 46, 3; xi. 8, 5; Claud. *Epithal. Pal.* 101, are similar presses in the houses for keeping the clothes smooth and ready for wear. The Greek name was ἶπος (Poll. x. 135; cf. vii. 41); and a later synonym was *pressorium* (Ammian. *l. c.*; Blümner, *Technologie*, i. 173). [L. S.] [G. E. M.]

PRIMICE'RIUS, a name given to various officers and dignitaries under the later Roman empire, is explained by Suidas (*s. v.*) to be the person who holds the first rank in anything. The etymology of the word is doubtful: it is supposed that a person was called *Primicerius* because his name stood first in the wax (*cera*), that is, the tablet made of wax, which contained a list of persons of any rank.

The word Primicerius does not seem to have been always applied to the person who was at the head of any department of the state or army, but also to the one second in command or authority; as, for instance, the *Primicerius Sacri Cubiculi*, who was under the *Praepositus Sacri Cubiculi*. [PRAEPOSITUS.] Various Primicerii are mentioned, as the *Primicerius Domesticorum* and *Protectorum* (Cod. 12, 17, 2), *Fabricae* (Cod. 11, 9, 2), *Mensorum* (Cod. 12, 28, 1), *Notariorum* (Cod. 12, 7), &c. [W. S.]

PRIMIPILA'RES. [EXERCITUS, Vol. I. p. 800.]

PRIMIPI'LUS. [EXERCITUS, Vol. I. p. 799.]

PRINCEPS (Gk. ἡγεμών: *Mon. Anc. Gr.* vii. 9, ἐμοῦ ἡγεμόνος), the title of courtesy customarily given to the Roman emperors of the first century, and less commonly to those of the second and third. The use of the term, as one which conveniently expressed the pre-eminence of a single citizen, was familiar to the writers of the later Republic, and the term itself is thus applied to both Pompey and Caesar. [The ideal "princeps civitatis" sketched by Cicero (Augustin. *de Civ. Dei*, vi. 13), in a lost book of the *de Republica*, was evidently drawn with a direct reference to Pompey: cf. *ad Att.* viii. 11. Comp. also *ad Att.* viii. 9, "nihil malle Caesarem quam principe Pompeio sine metu vivere"; Sallust, *Hist.* iii. fr. 81, ed. Kritz, "Pompeium malle principem volentibus vobis esse, quam illis dominationis socium." And for Caesar, Cic. *ad Fam.* vi. 6, "esset hic quidem clarus in toga et princeps"; Suet. *Jul.* 26, "difficilius se (Caesarem) principem civitatis a primo ordine in secundum detrudi."] Its significance as accorded by popular consent to Augustus and his successors was the same. It was not an official title, and formed no part of the official designation of the emperors. It did not connote the tenure of any special office or prerogative, nor was it conferred by any formal act of senate or people. It was a title of courtesy pure and simple; marking out its bearer as the "first citizen" (*princeps civium*, Mommsen, *Staatsr.* ii. 733, note 3), or rather as the "foremost man of the state" (*princeps civitatis;* see the passages quoted above), and implied not only a general pre-eminence, as distinct from a specific magisterial authority (Tac. *Ann.* iii. 53, "non aedilis aut praetoris aut consulis partes sustineo, majus aliquid et excelsius a principe postulatur"), but a constitutional pre-eminence among free citizens as opposed to despotic rule. (Tac. *Hist.* iv. 3, "ceterum ut princeps loquebatur, civilia de se, de republica egregia;" Plin. *Paneg.* 55, "sedem obtinet principis ne sit domino locus;" Dio Cass. lvii. 8, *δεσπότης τῶν δούλων, αὐτοκράτωρ τῶν στρατιωτῶν, τῶν δὲ δὴ λοιπῶν πρόκριτός εἰμι.*) For the objections to the view, once commonly held, that the title is only an abbreviation of "princeps senatus," see Mommsen, *Staatsrecht*, ii. 733, notes; Pelham in *Journ. Phil.* viii. p. 323. This view is, however, restated in a modified form by Herzog, *Gesch. u. System d. röm. Verfass.* ii. p. 133.

Principatus.—The title princeps exactly expressed the characteristic features of the position occupied by the emperor, under the Augustan system—a position which depended, not on the tenure of any one great office, still less of any newly-created office, but on the fact that certain powers had been conferred upon an individual citizen by senate and people, in virtue of which he was for the time raised above the heads of his fellows. It was moreover a position created by constitutional means for each holder in turn, and involved an explicit recognition of the continued existence of a free commonwealth.

The principate dates, properly speaking, from January B.C. 27. The summer of B.C. 29 found Octavian the undisputed master of the Roman world (*Mon. Ancyr.* vi. 14); nor probably by any section of Roman society was it considered either desirable or possible that he should literally resign the wide authority he wielded. But while the experience of the last fifty years had amply shown that some concentration of the executive authority was imperatively necessary, if the empire was to hold together, it was scarcely less important in the interests of peace and order that this authority should be legitimised, and as far as possible harmonised with republican institutions and traditions. After twenty years of anomalous or provisional rule, public opinion demanded a government which should be not only strong, but outwardly at least regular and constitutional. The first step towards satisfying this demand was taken by Octavian, when in his sixth consulship (B.C. 28) he put an end by edict to the provisional régime of the triumvirate, laid down the extraordinary authority he had held since B.C. 43, and formally gave back the government of the Commonwealth to the senate and people (*Mon. Ancyr. Lat.* vi. 13; Tac. *Ann.* iii. 28; Dio Cass. liii. 2; cf. Suet. *Aug.* 28). This restoration of the Republic was followed in Jan. B.C. 27 by a settlement of Octavian's own position, a settlement planned unquestionably by himself. By a vote of the senate and people, he was legally re-invested with the essential elements of his former authority. He was given a command, limited indeed both in area and duration, but which yet in both points was unprecedentedly wide. The "province" now assigned to him included with one exception the important frontier provinces. It carried with it the sole command of all the armies of Rome, and the exclusive right of levying troops, of concluding treaties, and of making war and peace (Dio Cass. liii. 12, 17; Suet. *Aug.* 47, "provincias validiores ipse suscepit, ceteras proconsulibus permisit;" Lex Vespasiani, Wilmanns, 917: cf. Strabo, p. 840; PROVINCIA). Finally, it was given to him for a period of ten years, at the expiry of which it was renewable (Dio Cass. liii. 13, 16). But had Octavian rested content with this "consulare imperium" alone, he would have been merely a powerful proconsul, with wider powers indeed than even those held by Pompey under the Gabinian and Manilian laws, but still only a proconsul. As such he would have had no *locus standi* in Rome, and would have been only the equal and not the superior of the proconsular governors of the provinces not included within the area of his own imperium. Nor could the old difficulties arising from the separation between the chief military command abroad and the highest magistracies at home have failed to reappear. (The proconsul lost his imperium on re-entering the city, Cic. *ad Fam.* i. 9; Dig. 1, 16, 16; cf. also Vell. Pat. ii. 31, of Pompey's imperium in B.C. 67, "imperium *aequum* in omnibus provinciis cum proconsulibus.") These disadvantages and difficulties Octavian escaped by retaining the consulship, and by wielding his imperium as consul. As consul he was chief magistrate of the state, with precedence, not only over all other magistrates at home, but over all proconsuls and propraetors abroad (Cic. *Phil.* iv. 4, 9; *ad Att.* viii. 15); while unlike any consul of later times, excepting only Pompey in B.C. 52, the province of his imperium was not confined to Rome and Italy, but extended over a great portion of the Empire. It was a return, in a sense, to the practice of the early Republic, when the consuls were at once the highest civil and the highest military authorities of the state. His control of the administration at home was further confirmed by his retention of the *tribunicia potestas*, granted to him for life in B.C. 36 (Dio Cass. xlix. 15), though it is doubtful what use, if any, he made of the prerogatives attached to it at this stage (Tac. *Ann.* i. 2, "posito iiiviri nomine, consulem se ferens, et ad tuendam plebem tribunicio jure contentum"). Finally, in recognition of his great services, and to mark his pre-eminent dignity, he was invested by senate and people with the cognomen of Augustus (*Mon. Ancyr. Lat.* vi. 16; *C. I. L.* i. p. 384; Ov *Fast.* i. 590).

For four years Augustus continued to exercise the primacy at home and abroad assigned to him in the restored Republic, under the old constitutional form of the consulship. But in B.C. 23 a change was made which gave to the principate a somewhat different shape, and one which in the main it retained down to the time of Diocletian. (See esp. Herzog, *op. cit.* ii. p. 141; Pelham, in *Journ. Phil.* xvii. p. 37.) On June 27 in that year Augustus laid down the consulship which he had held year after year since B.C. 31 (Dio Cass. liii. 32; *C. I. L.* vi. 2014). His "consulare imperium," with its wide province, he still retained, but he now held it only *pro-consule;* and it therefore ceased at once to be valid in Rome and Italy, *i.e.* within the sphere assigned to the actual consuls. He further lost both the precedence (*majus impe-*

rium) over all other magistrates and pro-magistrates which a consul enjoyed, and the various rights in connexion with senate and assembly attached to the consulship. He had, lastly, no further claim to the consular dignity and insignia. These losses, which would have seriously impaired the reality and completeness of his "primacy," were now made good by the following measures:—(*a*) He was exempted from the disability attaching to proconsular tenure of the imperium, and was allowed, though no longer consul, to retain consular imperium in Rome (B.C. 23) as proconsul. (*b*) His imperium was to rank as "majus" over that of proconsuls abroad (B.C. 23). (*c*) He was given the consul's prior right of convening the senate (B.C. 22), and of introducing business (B.C. 23), though the latter extended only to one "relatio," περὶ ἑνός τινος (Dio Cass.), "jus primae relationis." (*d*) He was granted (B.C. 19) equal rank in Rome with the actual consuls by the bestowal of the twelve fasces, and by the permission given him to sit between the consuls on an official seat (Dio Cass. liii. 32; Liv. iii. 10; Lex Vespasiani (Wilm. 917), ll. 4 *sqq.*; Dig. 1, 16, 8). But Augustus seems to have been unwilling openly to rest his position in Rome on that "proconsular imperium" which, until the exemption made in his own favour, had only been exercised abroad, and was associated with the absolute methods of rule prevalent in the camps and the provinces. Hence he brought forward into special prominence his *tribunicia potestas*. This now appears for the first time among his titles, and appears sometimes alone ("summi fastigii vocabulum: qua cetera imperia praemineret;" Tac. *Ann.* iii. 56; Dio Cass. liii. 32; Cohen, *Médailles*, i. Nos. 342 *sqq.*; Mommsen, *Staatsr.* iii. 752). A number is appended indicating for how many years it has been held, and the thirty-seven years of the tribunician power of Augustus are reckoned from B.C. 23 (*Mon. Anc. Lat.* i. 29; Tac. *Ann.* i. 9). On this power Augustus declared that he relied for carrying out the administrative reforms pressed for by the senate, and on this ground refused the extraordinary offices which were offered him (*Mon. Ancyr. Gr.* iii. 19). Henceforward the tribunician power ranked highest among the prerogatives voted to the princeps; higher even than the imperium itself (Mommsen, *Staatsr.* ii. 1050; Dio Cass. liii. 32, liv. 12). To sum up the results of these changes. The "consulare imperium" voted in B.C. 27 gave Augustus the immediate and exclusive control of the frontier provinces, the troops, and the foreign relations of the Empire. From B.C. 27 to B.C. 23 he wielded this imperium as consul, and thus united with this military command that general primacy in the state which belonged of right to the consuls. From B.C. 23 onwards he held it not as consul, but *pro-consule;* and hence the designation of it afterwards current, as *imperium proconsulare*. But he was nevertheless allowed to hold it in Rome, and was, moreover, specially granted the consul's rights of precedence over other magistrates. As if, however, to conceal the startling fact, that there was now in Rome, by the side of the annual consuls, a holder of consular imperium, fully their equal in rank and power at home, and vested besides with a wide command abroad, the *tribunicia potestas* was put forward as the outward sign and symbol, at least in Rome, of the pre-eminence of the princeps. The new form thus given to the principate it retained as long as it lasted: for the future the position of princeps is only occasionally and accidentally connected with the tenure of what continued to be in theory the chief magistracy of the state; and the princeps is, strictly speaking, not a magistrate at all; he stands by the side of the consuls and over the heads of all other magistrates, with a definite province of his own, but vested also with a pre-eminent authority in all departments of state. One more result of importance may be assigned to this resettlement of the principate in B.C. 23: the prerogative of Augustus was now determined by a series of grants conferring upon him various powers, privileges, and exemptions; and so in the case of each succeeding princeps, the question was not one of electing him to an established office with well-understood prerogatives, but of conferring upon him certain powers. Of these a customary list was gradually formed; and embodied in a single statute, under the terms of which the citizen designated for the principate received from the hands of the senate and people the powers, honours, and privileges once voted to Augustus, and after him to each successor in turn. (Of this statute a fragment survives in the so-called Lex Vespasiani: see Pelham in *Journ. Phil.* xvii. pp. 45–51.)

This "Augustan settlement" was in form, possibly in intention, a compromise, which aimed at securing the needed centralisation of the executive authority with the least possible disturbance of the traditional machinery of the Republic. But it was a compromise, which was from the first unreal. The powers vested in Augustus were too wide to make the existence of any other substantial authority possible, and the independence of consuls and senate was even in his own lifetime a fiction, which it became increasingly difficult to respect. Though, however, there is from the first a gravitation of all administrative work towards the princeps as the one real power in the state, yet even in the latter half of the third century the original theory of his position was not entirely discarded. The princeps of the time of Ulpian was still in strictness only a citizen invested by senate and people with certain powers. His position remained always extra-magisterial, and was created only for each princeps for his life. No constitutional provision was ever made for the transmission of his powers to any successor, nor was any one method of selecting a successor legally recognised. The principate died with the princeps: necessity alone determined that some citizen must be selected to fill the position first given to Augustus: accidents, such as kinship by blood or adoption to the last princeps, military ability, or popularity with the senate, determined the selection; and even the invitation "suscipere imperium" might come indifferently from distant legions, from the praetorian guards, or from the senate. Once, however, selected and designated, the citizen received the powers which legally made him princeps, from senate and people, according to the form handed down from the days of Augustus (Mommsen, *Staatsr.* ii. 1038; *Vita Hadr.* 6, "esse respublica sine imperatore non potest;"

Vit. Taciti, 3, "imperator est deligendus quia cogit necessitas:" cf. Tac. *Hist.* i. 16; Mommsen, *l. c.* 1039; *Journ. Phil.* xvii. 47).

But, although the principate remained so far true to its original character, it underwent in other respects important changes during the three centuries which separated the accession of Augustus from that of Diocletian. These changes may be conveniently summed up under the following heads:—(1) The enlargement of the area placed directly under the control of Caesar: (2) the transformation of his *majus imperium* into a direct control even over those departments of administration not properly included within his province: (3) the subordination to him of the originally co-ordinate authority of the regular magistrates and the senate: (4) the increasingly monarchical character not only of the methods of government employed by Caesar, but also of the outward accessories of his position. Of these changes the first two were mainly brought about by the necessities of administration, and are sufficiently explained by the words of Ulpian when describing the institution of the *praefectura vigilum*. Dig. 1, 15, "Salutem reipublicae tueri nulli magis convenire ... nec alium sufficere ei rei quam Caesarem." The two last were the inevitable result of this process of centralisation which at once rendered impossible the existence of any independent authority by the side of that possessed by Caesar, and elevated Caesar himself to a position where the limitations imposed by republican usage and tradition fell away of themselves.

To the "consulare imperium" as held by Augustus was assigned, according to established custom, a definite area or province, within which he was as exclusively supreme as Cicero in Cilicia, or Pompey in Asia. It included (*a*) the command-in-chief of all the forces of the state, and with this the sole right to levy troops and promote or discharge soldiers. [That the taking of a census in the provinces was from the first a prerogative of Caesar is almost certain (Mommsen, *Staatsr.* ii. 945), and it was probably directly connected with the levying especially of auxiliary troops (*ib.* ii. 393; Henzen, 6453; Plin. *H. N.* iii. § 28).] (*b.*) The sole right to declare war and peace, and to conclude treaties. (*c.*) The right to coin gold and silver. (*d.*) The "jus edicendi": *Lex de Imp. Vesp.* 6. (*e.*) The government of certain specified provinces.

The distinction between the department properly belonging to Caesar, and those left to the care of other authorities, had not wholly disappeared even by the close of the third century: but Caesar's province from the first steadily increased in extent. After the transference of Illyricum to Augustus in B.C. 11, and the separation of Numidia from the proconsular province of Africa in 37 A.D. (Strabo, p. 840; Dio Cass. liii. 12, lix. 20; Tac. *Hist.* iv. 48), even the immediate command of regular troops passed absolutely into the hands of Caesar's officers. The senatorial provinces are with Tacitus the "provinciae inermes." In the time of Dio Cassius the proconsuls were even forbidden to wear the military *paludamentum* (Dio Cass. liii. 17), and Gallienus finally excluded senators from all posts in the army (Aurel. Vict. *Caes.* 33). There is some reason for thinking that under the earlier emperors, a census, though ordered by Caesar, was in provinces other than his own carried out by the proconsul; but after Hadrian there is no trace of this distinction, and the whole work throughout the Empire is in the hands of Caesar's servants. The unimportance of the copper coinage was probably the reason why in this case the limits originally imposed upon the emperor were retained until the time of Aurelian (Schiller, *Gesch. d. Kaiserzeit*, i. 867).

The number of provinces originally assigned to Caesar was eight. But inasmuch as all provinces created subsequently were also placed under his authority, the number rose rapidly. At the close of the first century there were already twenty-five provinces of Caesar, including the most populous and wealthy districts of the Empire, and stretching in an almost unbroken line along its frontiers. Outside this area, in the so-called senatorial provinces, and in Rome and Italy, Caesar laid his hand on one department after another. In the case of the former, Caesar possessed from the first exclusive control over the troops, over foreign relations, and over the census. But the proconsul's area of authority was further limited by the appropriation to Caesar of a certain portion of the revenues drawn from his province; and the amount of these steadily increased [FISCUS]. Their collection and management were entrusted to imperial procuratores [PROCURATOR], who from being at first merely private agents, with no official status or powers, gradually came to form a distinct financial executive, virtually independent of the proconsul, with which he is recommended by Ulpian (Dig. 1, 16, 9) to have as little as possible to do. To Caesar lastly belonged the right, even in senatorial provinces, of founding colonies, of granting charters of incorporation to communities, of raising or lowering their status, and of conferring both Latin rights and the Roman franchise. (See CIVITAS, and Mommsen, *Staatsr.* ii. 828 *sqq.* That in the first century questions affecting the status of communities had not yet passed wholly into Caesar's hands may be inferred from the occasional mention of senatusconsulta and of discussions in the senate respecting them: Suet. *Tib.* 37; Tac. *Ann.* xi. 23, xii. 58, 61.)

Rome and Italy lay, like the senatorial provinces, outside the proper province of Caesar, but here too one department of administration after another was brought within the area of his authority, at the cost either of the magistrates in Rome or of the municipal officials. In some cases the transfer was made directly, in others the change was broken by the creation in the first instance *ex senatusconsulto* of senatorial *curatores*. But these curatores were all sooner or later either replaced by imperial praefecti and procuratores, or made so dependent upon Caesar as to differ only in name from his actual servants. The care of the corn supply (ANNONA; Hirschfeld, *Verwaltungsgesch.* 139), of the aqueducts (Id. 164), of the public buildings, the banks of the Tiber, and the cloacae (Id. 149–161), had all by the time of Claudius passed into Caesar's hands. The *praefectura vigilum* [PRAEFECTUS] dates from A.D. 6. The far more important *praefectura urbis* became a permanent office in the reign of Tiberius; and as early as the reign of Domitian, its holder exercised a wide criminal jurisdiction in Italy as well as within the city [PRAEFECTUS URBI].

In Italy the area of direct Imperial government widened more slowly than in Rome. The exclusive military authority vested in Caesar from the first made him, it is true, responsible not only for the levying of troops (Mommsen, *Staatsr.* ii. 797) and for the protection of the Italian coasts and harbours (the fleets at Misenum and Ravenna date from Augustus, and Ostia and Puteoli were special objects of imperial care: Suet. *Claud.* 25), but also for the suppression of such disorders as required the intervention of military force. (Cf. *milites stationarii*, Suet. *Aug.* 32, *Tib.* 37; Tac. *Ann.* xiv. 17.) But Septimius Severus first quartered a legion (II. Parthica) in Italy; and the imperial *correctores*, for the maintenance of order in the various districts of the peninsula, do not appear as a regular institution before the reign of Aurelian. [For further details on this subject, see PROVINCIA.] Closely connected with the maintenance of order in Italy was the care of the main roads [VIAE], the lands of Caesar, and other revenues accruing to him [FISCUS; PROVINCIA]: as regards his control by means of the *curatores reipublicae* over the local government of Italian towns, see PROVINCIA and COLONIA.

Enough has been said to show how enormously the area assigned to the direct imperium of Caesar had expanded since B.C. 23. Outside the limits, wide as they were, of the imperial provinces, in the provinces of the senate and people, and in Rome and Italy, there were prerogatives reserved exclusively for Caesar, and departments of administration controlled absolutely by himself and his own officials.

The settlement of B.C. 23 declared that the *imperium* of Augustus should rank as *majus* over that exercised by all other holders of imperium; excepting only, it is probable, the consuls; and the use made of this *majus imperium* did even more than the extension of Caesar's own proper domain to make him absolute, and to render little more than nominal the distinction between Caesar's department and those of the regular magistrates of the state. The possession of this "greater authority" entitled Caesar to claim from the praetors and lower magistrates in Rome, and from the proconsuls abroad, the deference due in republican times to the consul; and as Caesar became stronger, and the need for administrative unity increased, this deference was easily transformed into a complete subordination, which placed praetors and proconsuls almost as entirely under Caesar's control, as his own legates, prefects, and procurators. The effectiveness of this weapon is best illustrated by the relations between the emperor and the proconsular governors of the senatorial provinces. The proconsul, as holding an independent magisterial authority, derived ultimately from senate and people, was in theory and at first in practice in a wholly different position to the imperial legate. In particular he was responsible not to Caesar, but, like Caesar himself, to the consuls, senate, and people of Rome. And there are instances in which the earlier emperors almost ostentatiously abstain from exercising authority over proconsuls and proconsular provinces outside the limits of the rights specially reserved to them. Deputations from such provinces sent to Caesar are by him referred to consuls and senate (Suet. *Tib.* 31). Administrative questions affecting them are discussed in the senate, and decided by senatusconsulta (Tac. *Ann.* ii. 47, iii. 60; Plin. *Ep. ad Traj.* 72; Mommsen, *Staatsr.* iii. 1211). Nero declared that appeals from these provinces should go to the judgment-seat of the consuls (Tac. *Ann.* xiii. 4). A proconsul charged with extortion was as late as the reign of Trajan ordinarily tried by consuls and senate; and finally the instances in which the maladministration of a proconsular province led to its transference to Caesar, or to the sending thither of a special imperial legate, indicate that down at least to the end of the 1st century Caesar's control over these provinces was less absolute and direct than over his own (Mommsen, *Staatsr.* ii. 227; Plin. *Ep.* 8, 24; *C. I. L.* iii. 567; Wilmanns, *Exempla*, 874). But in the course of the second century the distinction, though retained in form, gradually ceased to have any practical importance; and on the strength of his *majus imperium* Caesar's control over proconsuls was virtually as complete as his control of his own legates. The appeal to consuls and senate disappeared in favour of the appeal to Caesar. Instances of the trial of a proconsul before the senate are rare after the time of Trajan (Mommsen, *Staatsr.* ii. 110). Dio Cassius represents the exercise of this jurisdiction by the senate as a concession on the part of the emperor (Dio Cass. lxxi. 28; *Vita Marci*, 10). Under Commodus, a proconsul of Sicily was tried by the imperial praefectus praetorio. Septimius Severus heard such cases himself (*Vit. Sev.* 4, 8), and Ulpian clearly contemplates Caesar's tribunal as the only one in question. It is no less certain that at least after Hadrian the proconsul was, equally with the imperial legate, controlled, directed, and instructed in the work of administration by the rescripts, edicts, and constitutions of Caesar. The right to do so, derived from the *majus imperium*, and confirmed apparently by a special clause of the Lex de Imperio (see *Lex de Imp. Vespas.* 6; *C. I. L.* vi. 930; Mommsen, *Staatsr.* ii. 843 *sqq.*), was both possessed and exercised by Augustus; but while by the earlier emperors it was sparingly used, in the second and third centuries there is a marked and rapid increase in the numbers of imperial edicts, and in the Digest they are the authorities mainly quoted on points affecting the government of senatorial no less than imperial provinces (Dio Cass. lxx. 3; Euseb. *Hist. Eccl.* 4, 8; Dig. 1, 16, 4, 6, 10; 48, 6, 5, 8, 4, &c.). For the recognition in earlier times of the quasi-independent authority of the proconsul, see the decree of Norbanus (Joseph. *Ant.* xvi. 6, 6).

The increasing intensity and force of Caesar's *majus imperium*, coupled with the rapid extension of the area placed directly under his authority, told with equal effect upon the regular *magistratus cum imperio* in Rome. Their degradation from their original position as the chief executive officers of the state to that of municipal officials of the city of Rome began under the Republic, with the practice of assigning the commands of legions and provinces to proconsuls and propraetors, and was only completed by the transference to Caesar of one department of administration after another even in Rome and Italy. But this process, the converse of that which gradually raised Caesar's private servants to the rank of state officials, scarcely involved so marked a departure from the ancient constitution, or even from the principles of the Augustan system, as the virtual transformation of these theoretically independent colleagues of Caesar into subordinate officials. The two changes were indeed closely connected; for, with the increasing restriction of consuls and praetors to unimportant or purely departmental work, while the general administration and to a great extent the higher jurisdiction both in the city and in Italy was transferred to Caesar and to his officers, the theory of their supremacy and even of their equality with Caesar became an untenable fiction.

The Augustan system left the consulship still the supreme magistracy of the state, and this pre-eminence was formally recognised throughout the first century (Tac. *Ann.* iv. 19, "consulis, cujus vigiliis niteretur ne quod respublica detrimentum caperet:" cf. Suet. *Tib.* 31; Plin. *Pan.* 59, "summa potestas"). Even in the third century there was no appeal to Caesar from the jurisdiction of consuls and senate (Ulpian, Dig. 49, 2, 1), and one right at least attaching to their old position, that of giving their names to the year, remained with the consuls (*i.e.* with the *consules ordinarii:* see CONSUL, and Mommsen, *Staatsr.* ii. 86) in post-Diocletian times. But the Augustan system, in placing by the side of the consuls a holder of consular imperium, brought the nominal supremacy of the consuls into unequal conflict with the wide authority of the princeps. The course of events robbed the consuls of all but purely domestic duties, while it entrusted to the princeps the general guardianship and government of the Empire. Even Tiberius could claim for the princeps a general control, distinct from the limited sphere belonging to the consul (Tac. *Ann.* iii. 53). In Pliny's panegyric the older and newer views of the relative position of the two are both represented. On the one hand, the consulship is still regarded as the "highest authority" and as on a level with that of Caesar (*Pan.* 59); on the other, it is merely the highest post open to a private citizen (*Pan.* 64; *Ep.* ii. 1) as distinct from the sovereign dignity of the principate, and the limited and domestic character of its duties is contrasted with the wider imperial sphere belonging to Caesar (*Pan.* 79). Rather more than a century later in the Digest the subordination of the consulship is complete. The consuls have only specific departmental duties to perform, and the duties are not infrequently spoken of as assigned to them by the emperor (Mommsen, *Staatsr.* ii. 96; CONSUL), while not only Caesar, but Caesar's prefect of the city, ranks above them (Ulpian, Dig. 49, 1, 1, 3; cf. Dig. 5, 1, 12; PRAEFECTUS). In the case of the praetorship there was from the first no question of equality with Caesar, for to the consular rank and imperium of Caesar the praetor owed deference as to the actual consuls. We consequently find the praetors, even under the early emperors, filling a strictly subordinate place. Their jurisdiction was gradually restricted to certain well-defined departments marked out for them by Caesar (Mommsen, *Staatsr.* ii. 204, 206; PRAETOR); and such titles as *praetor tutelaris* and *praetor hastarius* clearly indicate the purely departmental nature of their duties.

This transformation of the originally supreme "magistratus cum imperio" into subordinate officials, with limited and almost entirely municipal duties, was assisted by the control which the emperors obtained over their appointment, and which reduced them to the position of imperial placemen. This control, based as it was on the right of nomination, which the emperor's consular imperium gave him co-ordinately with the consuls (Tac. *Ann.* i. 81), and on that of "commendation" (*ib.* i. 15. It was formally granted to Vespasian, *Lex de Imp.* 4; whether it was ever used in the case of the consulship is doubtful: Mommsen, *Staatsr.* ii. 865 *sqq.*), was already well established and frankly recognised in the time of Trajan. [Plin. *Pan.* 77, "ipsum (sc. Caesarem) qui consules facit:" cf. Id. *Ep.* iv. 15, *ad Traj.* 12. The election of the lower magistrates was still something of a reality, and involved canvassing (Id. *Ep.* ii. 9), corruption (Id. *Ep.* vi. 19), and even disorderly contests (Id. *Ep.* iii. 20).] In the third century the whole business of appointing the "magistrates of the Roman people" is treated by Ulpian as one which concerned Caesar alone (Dig. 48, 14).

The final change by which these magistracies were, with the exception of the consulship, robbed of all imperial significance, by losing their value as qualifications for high provincial and military commands, was not completely carried out until after Diocletian.

For the gradual change in the relations of the emperor and the senate, see SENATUS: by the end of the second century the senate had lost all importance as Caesar's partner; by the end of the third it was virtually discarded even as an instrument of his government.

The changes described above, the extension of the area of government, assigned directly to Caesar, and the complete subordination to him of all other constituted authority within the state, brought about a corresponding change in his personal position. The more absolute he became in fact, the more difficult it was to treat him as anything but a monarch. This natural tendency to clothe the Caesar with the attributes and surround him with the accessories of a legitimate monarchy shows itself even under Augustus; but it was undoubtedly strengthened by a growing feeling that the exceptional and provisional nature of his authority was a real source of weakness, both at home and abroad. The organisation of the principate as a regular and permanent office, with a settled mode of succession, was desirable not only in the interests of good government, but as a check upon the ambition of pretenders; while in the East, at any rate, it was important that the Roman Caesar should be able to challenge comparison in personal splendour and majesty with the kings of Parthia or Persia. To secure the first of these ends was the aim of the ablest emperors of the second century. The endeavour to secure the second lies at the root of much in the policy of Aurelian and Diocletian. It was a policy so far similar in its motives to that which created the Queen of England Empress of Hindostan, and it was encouraged not only by the language and maxims of lawyers, like Ulpian, of Eastern birth, but by the ever-increasing influence of Oriental habits and beliefs in the imperial court and in Roman society.

The original theory that the princeps is nothing but a citizen on whom definite powers have been conferred by senate and people for a limited time, was one never strictly carried out in practice; and by the close of the third century little remained to witness to it, but the formal "lex de imperio" and the absence of any recognised mode of succession. The history of this change it is impossible to follow in detail, and only the main outlines can be traced here.

The limitation of time, observed in form throughout the reign of Augustus, disappeared at his death. Tiberius and his successors received the imperium for life, and only the celebration of the decennalia preserved the memory of the original arrangement [IMPERIUM]. The distinction between the various powers and privileges granted to the princeps, as well as the purely individual nature of the grant, were easily obscured when, as was done first in the case of Gaius, they were not only conferred *en bloc* at one time, but transferred with little or no alteration from one emperor to another (Mommsen, *Staatsr.* ii. 744, and the references given there). The notion thus developed of a single and permanent authority wielded by each emperor in turn, and consequently of a prerogative inherent in the principate, was strengthened when the functions of the censorship were, after the time of Domitian, exercised in virtue only of the general authority belonging to the princeps (Mommsen, *Staatsr.* ii. 1013; CENSOR). The authority conferred upon Augustus was not only built up out of various distinct powers, but was limited by the extent of these, and was subject to the laws, except where its holder had been specially exempted from their operation. In this latter respect also a change took place. At any rate at the close of the second and in the third century the authority of the princeps was regarded not only as single, but as plenary and absolute. The emperors are exempted from the laws (Dio Cass. liii. 18), and it is their privilege to give laws, not receive them (*Vit. Caracall.* 10); a view springing naturally both from the virtual irresponsibility of Caesar as a life ruler and from his monopoly of the work of law-making, and which was finally and authoritatively adopted in the fifth century (Justin. *Nov.* 105, 4; Mommsen, *Staatsr.* ii. 714, note. It appears, however, as early as Pliny, *Paneg.* 65, "ipse te legibus subjecisti, quas nemo principi scripsit").

But it is not only in this unrepublican theory of his prerogative that the tendency to transform Caesar into a monarch is observable. It is as clearly seen in the elevation of his family and friends above the level of private persons, and of his personal servants and agents to that of state officials. These changes, which involved a complete departure from republican principles, commenced with Augustus and were completed in the fourth century. The family of Caesar (*domus Caesaris*) had not properly, any more than that of an ordinary magistrate, any public rank or privileges. Augustus set his face against attempts to pay them honour as a royal house; and though provincials even in his reign coupled with Augustus himself his wife, children and family (Wilm. *Ex.* 104), there was no regular public recognition of the *domus Caesaris* till later. That in the time of Nero the praetorian guards already took the oath to the "whole house of Caesar," is implied by Tacitus (*Ann.* xiv. 7). Under the Flavian emperors the *domus* is associated with Caesar in the *vota publica* (Mommsen, *Staatsr.* ii. 776). The phrase "domus Augusta" occurs in an inscription of the year 159 A.D (Orelli, 4092). "Domus divina" appears first under Commodus (Wilm. 120), and is frequent afterwards (see Orelli-Henzen, *Indices*, p. 57). A similar tendency is observable in the treatment of the individual members of Caesar's house. In the case indeed of the males, republican usage was so far adhered to, that for the most part they have only the rank which followed legitimately from the tenure of public office, though permitted to hold these offices at an earlier age and in more rapid succession than ordinary citizens (Mommsen, *Staatsr.* ii. 772 *sqq.*). To the females, for whom these more legitimate marks of distinction were out of the question, honours of a distinctly royal character were given. The title of "Augusta," first given to Livia, was by the end of the first century commonly granted not only to the wife of the reigning princeps, but to his sisters and daughters. The "empress," as she now became, was in the second century further distinguished by the appellation "mater castrorum," first borne by the younger Faustina. Julia Mammaea in the third century is "mater castrorum et senatus et patriae et universi generis humani" (Wilmanns, 1005). The honour of deification, for which also the first precedent was set in the case of Livia, was freely granted in the second century (Mommsen, *Staatsr.* ii. 780, 781), and after the time of Domitian the heads of the wife and even of other female members of Caesar's house appear frequently on the coins. (For other marks of honour, *e.g.* the special body-guard, the torch-bearers, &c., see Mommsen, *Staatsr.* i. 346, ii. 775.)

More significant is the manner in which not only blood-relationship with Caesar, but even the tie of friendship came in time to confer a definite public status, and ultimately official authority. Augustus himself was obliged to check the tendency to place his "friends" above the laws (Suet. *Aug.* 56: cf. Tac. *Ann.* ii. 34, of Urgulania, "supra leges amicitia Caesaris extulerat"). Under Tiberius the "cohors amicorum" assumed a definite shape. It was divided into classes, with varying privileges; admission to it was a formal act (Tac. *Ann.* vi. 9), expulsion from it a penalty equivalent in its consequences to exile (Suet. *Tib.* 56; Tac. *Ann.* iii. 12, 24). At Rome it constituted a court, with a regular ceremonial and scale of precedence (Plin. *H. N.* xxxiii. § 41; Sen. *de Benef.* vi. 34, *de Clem.* i. 10). From this body were usually chosen the travelling companions (*comites*) of Caesar, to whom fixed allowances were given (Suet. *Tib.* 46), and also the trusted advisers with whom Caesar took counsel (Suet. *Tib.* 55, *Tit.* 7). Val. Max. ix. 15 uses the phrase "cohors Augusta:" the office *a cura amicorum* existed as early as A.D. 51 (Orelli, 1588). In the second century the term *amici* denoted broadly the regular frequenters of the imperial court, and more specially the innermost circle of these, whether chosen confidants or high dignitaries whom the emperor honoured with this title. A more definitely official position was acquired by the *comites*. These "companions" were carefully selected for each expedition; distinct quarters were assigned them in the camp, and in rank they stood above the provincial governors To have been selected as a *comes* was an honour duly recorded on inscriptions along with the legitimate *honores*, such as the consulship. Finally not only Caesar himself, but other members of his family had also their circle of "friends," and their retinue of chosen "companions." (See for a full discussion of the question, Friedlaender, *Sittengeschichte*, i. 118 *sqq.*; Mommsen, *Hermes*, iv. 120 *sqq.*) The *comites* of post-Diocletian times no doubt differed widely in position from those of the second and third centuries; but the fact that high state officers bore this as their distinctive title significantly marked the complete identification of the service of the state with the personal service of Caesar.

The monarchical tendency shown in the elevation of Caesar's family, friends, and companions from a private to a public and quasi-official position, reappears in the similar promotion which awaited both his household servants and his subordinate agents. The household service of Caesar was, like that of private persons, limited at first to slaves and freedmen. But even under the early emperors, and especially under Claudius, some at least of the household offices rose, as regards the extent and importance of the duties connected with them, to the level of the highest magistracies of state (*e.g.* the *liberti a rationibus*, *a libellis*, *ab epistulis:* see Friedl. *Sittengesch.* i. 160; Hirschfeld, *Verwalt.-gesch.* 30). In the second century the freedmen are replaced in the principal of these *ministeria principatus* by free-born Roman knights [PROCURATOR]; while among those which still continued to be filled by "liberti," one at least, the post of chamberlain, acquired an importance, savouring strongly of Eastern monarchies; and which grew, as Oriental fashions gained a greater hold, till it reached its highest point in the "praepositus sacri cubiculi" of the later Empire [PRAEPOSITUS]. (Friedl. i. 99 *sqq.*) But no change did so much at once to consolidate Caesar's power, and to invest his rule with a genuinely monarchical character, as the gradual organisation and diffusion throughout the Empire of a strictly imperial service, distinct from that of the state, and which finally ousted the latter from all but an insignificant share in the administration of the Empire. The history of the growth of this new official hierarchy has been traced elsewhere. (PROCURATOR: see also Hirschfeld, *Verwalt.-gesch.* passim, esp. pp. 240 *sqq.*; Liebenam, *Die Laufbahn d. Procuraturen*, Jena, 1886.) But the fact must be noted here that by the close of the second century we find spread over Rome, Italy, and the provinces an army of officials, who are in the strictest sense the servants only of Caesar. From this service senators were excluded; its members, except in the lowest ranks, were "equites Romani." There was a regular system of promotion upwards from the less important *procurationes* to the procuratorship *a rationibus*, and finally to the coveted prefectures of Egypt or the praetorian guard; and throughout promotion came from Caesar alone. This theoretically private service constituted the really effective part of the machinery of government. It attracted the ablest men; and even emperors, as for instance Pertinax, rose from its ranks (*Vit. Pertin.* 1, 2).

It only remains to notice how even the outward attributes and accessories of monarchy were gradually assumed. The designation of the early emperors adhered tolerably closely to republican usage, except that the gentile nomen was dropped by Augustus, Tiberius, and Gaius. But from the Flavian emperors onwards the case was otherwise. On the one hand the personal majesty of Caesar was magnified by the gradual multiplication of high-sounding cognomina; and on the other there was an evident attempt to disguise the real nature of the principate and to give it the appearance of a permanent office, handed on in legitimate succession from one holder to another, partly by the conversion of originally proper names into official titles (*e.g.* Caesar, Pius), partly by the recitation of a fictitious descent through several generations. Under the Flavian emperors "Imperator Caesar" took the first place, and the only official cognomen was that of Augustus. Trajan set the precedent of assuming cognomina commemorative of his victories; "Pius," originally the proper cognomen of Antoninus, was subsequently adopted as part of the permanent titulature. "Felix" was added by Commodus. "Invictus" first appears under Septimius Severus. By the middle of the third century the regular form was "Imperator Caesar—Pius Felix Invictus Augustus." "Semper Augustus" is found on an inscription of Claudius Gothicus, and towards the close of the third century "dominus noster" frequently preceded "Imperator Caesar;" while the addition of complimentary epithets, such as "pacificator orbis," "restitutor orbis," &c., became more common. The recitation of descent from preceding emperors began with Trajan, the adopted son of Nerva, and had a basis in the fact of adoption, in the case of the Antonine Emperors. It was continued as a useful fiction by Septimius Severus and Caracalla. [With the simple "Imperator Caesar divi filius Augustus," compare the lengthy titles of Caracalla (Wilmanns, 994): "Imp. Caesar (M. Aurelius Severus Antoninus) pius felix Augustus Parthicus maximus, Britannicus maximus, Germanicus maximus . . . divi Septimi Severi . . . filius divi M. Antonini nepos divi Antonini Pii pronepos divi Hadriani abnepos divi Trajani et divi Nervae adnepos dominus noster invictissimus Augustus."] In the list of *honores* the only change of importance was the significant insertion, dating from Septimius Severus, of the title "proconsul," which occurs occasionally in inscriptions of Trajan, Hadrian, and Marcus Aurelius (Mommsen, *Staatsr.* ii. 736, notes): Diocletian first used it on coins: it emphasised the extraordinary character of Caesar's imperium as distinct from that of the regular magistrates, and, as used in Italy, implied that this imperium was paramount there, as in the provinces.

The language used in addressing the emperor, or in speaking of him, departed even more rapidly and widely from republican practice. The use of the term "dominus" as a mode of address, against which Augustus and Tiberius protested, was rapidly becoming common in the time of the younger Pliny. It first found its way into official documents under Severus, and its use was definitely sanctioned by Aurelian (Mommsen, *Staatsr.* ii. 721, 722). By Greek writers and on Greek inscriptions the emperor is not unfrequently styled *βασιλεύς*, as early as the commencement of the second century. The Graeco-Oriental training of Ulpian and a century later of the Scriptores Hist. Augustae introduced such epithets as "regia," "regale" (imperium) into Latin literature (Mommsen, *ib.* 724, note 3). The influence of Caesar-worship is seen in the phraseology even of the time of the Antonines. Trajan is described as "sacratissimus princeps" (Wilm. 693). Rescripts of Antoninus Pius are "caelestes literae" (Wilm. 693). Somewhat later we find "indulgentia sacra" (cf. Severus Alexander, *C. I. L.* v. 1837), "auctoritas sacra" (Wilm. 100, A.D. 244), "appellationes sacrae" (Wilm. 1220, A.D. 253). But not until the time of Aurelian was the emperor directly and officially styled "deus" ("deus et dominus" on coins: Eckhel, vii. 482; Mommsen, *Staatsr.* ii. 720, and note).

Even in the ceremonial and general arrangements of the court the emperors at least of the third century approached very nearly to the semi-Oriental state of the age of Constantine. While the households of the earlier emperors differed from those of great Roman nobles mainly by their greater numbers and magnificence, and the best emperors at any rate eschewed the elaborate ceremonial with which Eastern monarchs fenced round their persons, the courts of Caracalla, of Elagabalus, and even of Severus Alexander are genuinely Oriental in character. We have already the host of court officials, chamberlains, cup-bearers, keepers of the imperial robes, &c., the jealously guarded royal chamber, with its hanging curtains and attendant guards, and even the prostration of the subject before his royal master. (Elagabalus suffered himself "adorari regum more Persarum," *Vit. Sev. Alex.* 18. It is mentioned as a proof of Severus Alexander's moderation that he allowed himself to be saluted "quasi unus e senatoribus *patente velo admissionalibus remotis*," *ib.* 4. He also limited the extravagance of the imperial establishment, *ib.* 41: cf. generally Friedlaender, i. chap. 11, and the Appendix, pp. 177 ff.)

The dress and insignia of the emperors of the first two centuries are all of republican origin, and only became distinctive in so far as the emperor was exempted in the use of them from the restrictions which bound the regular magistrate, or as their use was reserved for him alone. The consular chair and lictors were granted to Augustus in B.C. 23. The right to wear the ordinary magisterial toga was probably conferred at the same time, and down to the close of the second century this was the regular dress of the emperor when in Rome or Italy. (*Vit. Hadr.* 22. In this point, as in others, Severus Alexander returned to the practice of earlier times: *Vit. Sev. Alex.* 40.) On the other hand, the triumphal robes which Augustus was authorised to wear in Rome on special occasions (Dio Cass. liii. 26) became, with the right of celebrating a triumph, the monopoly of Caesar, and were commonly worn by later emperors at public festivals and games in the capital. Domitian wore them in the senate (Dio Cass. lxvii. 4). The purple *paludamentum* belonged from the first to Caesar, in virtue of his exclusive and supreme military authority; and this "imperial purple" was in the first century distinctive of the emperor. In the third century it was frequently worn, even in Rome and Italy, and its assumption was the recognised symbol of accession to the principate (Herodian, ii. 8; Eutrop. 9, 26; Mommsen, *Staatsr.* i. 349). The laurel wreath, of the *vir triumphalis*, was possibly from the first reserved, like the triumphal robe, for Caesar alone; and only he had the right to wear in Rome and Italy the sword and dagger of military authority. But not until the close of the third century did the Roman Caesar openly copy in his dress the fashions of Eastern monarchs. The *corona radiata*, occasionally found at an earlier period, regularly appears on coins after the time of Aemilianus (A.D. 249). The more distinctively Oriental diadem was, according to Victor (*Epit.* 35), first worn by Aurelian [DIADEMA]. Mommsen, however, *Staatsr.* i. 345, rejects the statement: Caligula, the Elagabalus of the first century, is credited with a premature attempt to introduce both the *corona radiata* and the diadem (Suet. *Cal.* 22). Gallienus anticipated the Eastern splendour of the Byzantine emperors, by appearing in Rome with a barbaric display of gold and precious stones (*Vit. Gall.* 16, "gemmatis fibulis aureisque, tunicam auratam, caligas gemmeas"), and much the same is said of Aurelian (Victor, *Epit.* 35). By Eutropius, however (ix. 26), the introduction of these unrepublican and un-Roman novelties is ascribed to Diocletian: "Ornamenta gemmarum vestibus, calceamentique indidit, nam prius imperii insigne in chlamyde purpurea tantum erat." PRINCI'PIA. [EXERCITUS, Vol. I. p. 784.]

PRIVILE'GIUM. [LEX, Vol. II. p. 33 *a*.]

PROAGOGEIAS GRAPHE (*προαγωγείας γραφή*), a prosecution against those persons who performed the degrading office of pimps or procurers (*προαγωγοί*: cf. Plat. *Theaet.* p. 150 A). By the law in Aeschin. *c. Tim.* the heaviest punishment (*τὰ μέγιστα ἐπιτίμια*, § 14), viz. death (§ 184), was inflicted on such a person (*ἐάν τις ἐλεύθερον παῖδ' ἢ γυναῖκα προαγωγεύῃ*). According to Plutarch (*Sol.* 23), Solon imposed a penalty of twenty drachmas for the same offence. To reconcile this statement with that of Aeschines, Platner (*Proc. u. Klag.* ii. p. 216) supposed that the law mentioned by Plutarch applied only to prostitutes. This is very unlikely; more probably the punishment was at a later period made more severe, as in the *δίκη βιαίων* (Plut. *Sol.* 25, a hundred drachmas; but Lys. *de caed. Erat.* § 32, *διπλῆν τὴν βλάβην ὀφείλειν*: cf. Dem. *c. Mid.* p. 528, § 44). A prosecution of Patrocles *ἐπὶ προαγωγείᾳ* by Hyperides is mentioned in Pollux, viii. 27; cf. Hyp. ed. Blass,^{2}

fr. 141–8. The charge brought against Aspasia by Hermippus in his prosecution for *ἀσέβεια*, of getting freeborn women into her house for the use of Pericles, was *προαγωγεία* (Plut. *Per.* 32: cf. Aristoph. *Acharn.* 527), and probably also that against Euthymachus, who was put to death for taking an Olynthian girl to a brothel (Din. *c. Dem.* § 23). (*Att. Process*, ed. Lipsius, p. 410 f.) For the low state of morality amongst the Byzantines, cf. Aelian, *V. H.* iii. 14, and Athenaeus, x. p. 442 c. [C. R. K.] [H. H.]

PRO'BOLE (*προβολή*), an accusation of a criminal nature, preferred before the people of Athens in assembly, with a view to obtaining their sanction for bringing the charge before a judicial tribunal. It may be compared in this one respect (viz. that it was a preliminary step to a more formal trial) with our application for a criminal information; though, in regard to the object and mode of proceeding, there is not much resemblance. The *προβολὴ* was reserved for those cases where the public had sustained an injury, or where, from the station, power or influence of the delinquent, the prosecutor might deem it hazardous to proceed in the ordinary way, without being authorised by a vote of the sovereign assembly. In this point it differed from the *εἰσαγγελία*, that in the latter the people were called upon either to pronounce final judgment or to direct some peculiar method of trial; whereas in the *προβολή*, after the judgment of the assembly, the parties proceeded to the trial in the usual manner. The court before whom they appeared, however influenced they might be by the *praejudicium* of the people, were under no legal compulsion to abide by their decision; for the view of Libanius (*argum.* Dem. *c. Mid.* p. 509), whom Bake (*Schol. Hypomn.* iii. p. 43 ff.) and in a modified form Hermann (*Quaest. de prob.* p. 8 ff.) follow, viz. that the court merely fixed the penalty (*περὶ ὑποτιμήσεως*), is proved to be erroneous by passages like Dem. *c. Mid.* p. 546, § 97, p. 578, § 199, p. 580, § 204 ff., which speak of the possibility of an acquittal; and by p. 562, § 151, which distinguishes the two votes of the court (*καταψηφίζεσθαι* and *τιμᾶν*). The complainant was not bound to follow up the judgment of the popular assembly by proceeding to trial; this is evident from Aeschin. *c. Ctes.* § 52: on the other hand, it seems doubtful, though Platner is of a different opinion (*Proc. u. Klag.* i. p. 382), whether, if the people refused to give judgment in favour of the complainant, he might still proceed against his adversary by a *γραφὴ* or a private action, according to the nature of the case.

The cases to which the *προβολὴ* was applied were complaints against magistrates for official misconduct or other wrong-doings (Harpocr. *s. v.* *καταχειροτονία*; Bekk. *Anecd.* p. 268, 27 ff.); against those public informers and mischief-makers who were called *συκοφάνται* (Isocr. *de Permut.* § 314; Aeschin. *F. L.* § 145, and Schol. *ad l. c.*; Pollux, viii. 46), and against those who outraged public decency at certain religious festivals. This probably does not exhaust the list of cases in which the *προβολὴ* might be resorted to; however, the beginning of Pollux's (viii. 46) paragraph, *προβολὴ ἡ κλῆσις εἰς δίκην κατὰ τῶν κακόνως πρὸς τὸν δῆμον διακειμένων*, cannot be taken to mean that disaffection to the state was one of the cases, as the following words show, *προβολαὶ δὲ γίγνονται*, etc., and *Lex. Rhet. Cantabr.* p. 676, 24 f., *κατὰ τῶν τὰ δημόσια μέταλλα ὑπορυττόντων*, etc., refers to *φάσις* (Meier *ad l. c.*).

With respect to magistrates, Schömann (*de Comit.* p. 231 f.) thinks that the *προβολαὶ* could only be brought against them at those *ἐπιχειροτονίαι* which were held at the first *κυρία ἐκκλησία* in every prytany, when the people inquired into the conduct of magistrates, with a view to continuing them in office or deposing them, according to their deserts. An example of magistrates being so deposed occurs in [Dem.] *c. Theocr.* p. 1330, § 27 f. The people (says Schömann) could not proceed to the *ἐπιχειροτονία* except on the complaint (*προβολὴ*) of some individual; the deposed magistrate was afterwards brought to trial, if the accuser thought proper to prosecute the matter further. Platner (*l. c.* p. 385) objects to limiting the *προβολὴ* against magistrates to these particular occasions. It seems more probable, however, that this kind of *προβολὴ* against magistrates never existed at all, there being no need for it by the side of the *ἐπιχειροτονίαι*, and the grammarians who mention it in all probability use the term inaccurately.

An example of a *προβολὴ* against sycophants is that which the people, discovering too late their error in putting to death the generals who gained the battle of Arginusae, directed to be brought against their accusers (Xen. *Hell.* i. 7, § 34; cf. Fränkel, *Att. Geschworenger.* p. 88). Another occurs in Lys. *c. Agor.* § 65, where the words *καὶ ἐν τῷ δήμῳ καὶ ἐν τῷ δικαστηρίῳ συκοφαντίας αὐτοῦ κατέγνωτε* describe the course of proceeding in this method of prosecution.

But the *προβολὴ* which has become most celebrated, owing to the speech of Demosthenes against Meidias, is that which was brought against persons who had been guilty at certain festivals of such an offence as would fall within the description of *ἀδικεῖν περὶ τὴν ἑορτήν* (p. 514, § 1, less technically *ἀσεβεῖν*, p. 578, § 199; p. 587, § 227; and Schol. Aeschin. *F. L.* § 145: cf. the instances in Dem. *c. Mid.* p. 571, § 175 ff.: p. 584, § 218). The *προβολαὶ* were enjoined against such persons by special laws: thus the *νόμος περὶ τῶν Διονυσίων* was not yet in force at the time when Alcibiades acted as choregus (p. 562, § 147), and the same enactment was later on extended to the Mysteries (p. 571, § 175), and probably to other festivals. (Pollux says in general, *περὶ τῶν ἐξυβρισάντων ἢ ἀσεβησάντων περὶ τὰς ἑορτάς*.) The law inserted in p. 517, § 10, which Foucart (*Sur l'Authenticité de la Loi d'Evegoras*, *Revue de Philol.* 1877) defends as genuine against Westermann's (*de litis instrum. quae extant in Dem. or. in Mid.*) criticisms, enumerates *τὰ Διονύσια ἐν Πειραιεῖ, τὰ Λήναια, τὰ Διονύσια ἐν ἄστει* and *τὰ Θαργήλια*, thus omitting the Anthesteria from, and mixing up the Thargelia with, the *νόμος περὶ τῶν Διονυσίων* (cf. Philippi, *Adnot. ad leg. form. quae in Dem. Mid. extant*). A riot or disturbance during the ceremony, an assault, or other gross insult or outrage, committed upon any of the performers or spectators of the games, whether citizen or foreigner, and even upon a slave, much more upon a magistrate or officer engaged in superintending the performance; an attempt to imprison by legal process, and even a levying of execution upon the goods of a debtor, during the continuance of the festival, was held to be a profanation of its sanctity, and to subject the offender to the penalties of these statutes.

The complaint was made (*προβάλλεσθαί τινα*), probably in writing, to the Proedri, who had to bring forward the charge as soon as possible at an assembly of the people (that of misbehaviour at the Dionysia, at an assembly held in the theatre of Dionysus, *μετὰ τὰ Πάνδια*, Dem. *c. Mid.* p. 517, § 9; *C. I. A.* ii. No. 554 b; *τῇ ὑστεραίᾳ τῶν Πανδίων*, *lex* in Dem. *l. c.* § 8; cf. also Aeschin. *F L.* § 61), those cases excepted for which the senate was empowered to impose a fine (*ὅσαι ἂν μὴ ἐκτετισμέναι ὦσιν*, *lex l. c.*). Both parties were heard (Dem. *c. Mid.* p. 580, § 206), and then the people proceeded to vote by show of hands. Those who voted in favour of the prosecution were said *καταχειροτονεῖν*: those who were against it *ἀποχειροτονεῖν*. The people having given their sentence for the prosecution, the complainant might either drop the prosecution, if content with having gained his point before the popular assembly, or bring the case into the court of Heliaea. In certain cases of a serious nature the defendant might be required to give bail for his appearance, or (in default thereof) go to prison (Xen. *Hell.* i. 7, 34). The persons on whom the *ἡγεμονία δικαστηρίου* devolved were, according to Pollux (viii. 87), the Thesmothetae: that this information is correct is evident from Dem. *c. Mid.* p. 524, § 32 (*τῶν θεσμοθετῶν τούτων*). The dicasts had to pronounce their verdict on the guilt of the party, and, after this, probably the complainant proposed a penalty (death or a fine), which they had to assess. The trial, it seems, was attended with no risk to the prosecutor, who was considered to proceed under the authority of the popular decree. (*Att. Process*, ed. Lipsius, pp. 335–344; p. 229, n. 81.) [C. R. K.] [H. H.]

PROBOULEUMA (*προβούλευμα*). [Boule, Vol. I. p. 311 *b*.]

PROBOULI (*πρόβουλοι*), a name applicable to any persons who are appointed to consult or take measures for the benefit of the people. Thus, the delegates who were sent by the twelve Ionian cities to attend the Panionian council, and deliberate on the affairs of the confederacy, were called *πρόβουλοι* (Herod. vi. 7). So were the deputies sent by the several Greek states to attend the congress at the Isthmus, on the occasion of the second Persian invasion (Herod. vii. 172); and also the envoys whom the Greeks agreed to send annually to Plataea (Plut. *Arist.* 21). The word is also used to denote an oligarchical body, which in oligarchies performed the functions discharged by the *βουλή* in democracies, being a sort of committee for initiating measures. Where it co-existed with the *βουλή*, it was established as a check upon it to prevent more democratic tendencies. (Arist. *Pol.* vi. 15, 11 = p. 1299; vii. 8, 17 = p. 1322.) Such was the government at Corinth after the fall of the Cypselids (Müller, *Fr. Hist. Gr.* iii. 394). A body of men called *πρόβουλοι* were appointed at Athens, after the end of the Sicilian war, to act as a committee of public safety (Thuc. viii. 1; Aristoph. *Lysist.* 467; Lys. *c. Erat.* § 65). Thucydides calls them *ἀρχήν τινα πρεσβυτέρων ἀνδρῶν, οἵτινες περὶ τῶν παρόντων ὡς ἂν καιρὸς ᾖ προβουλεύσουσι*. They were ten in number (Suidas, *s. v.* *Πρόβουλοι*). Whether their appointment arose out of any concerted plan for overturning the constitution, is doubtful. The ostensible object at least was different; and the measures which they took for defending their country and prosecuting the war appear to have been prudent and vigorous; it is clear, however, from the words of Lysias, that their appointment was regarded by him as tending to oligarchy. Their authority did not last much longer than a year; for a year and a half afterwards Pisander and his colleagues established the council of Four Hundred, by which the democracy was overthrown. (Thucyd. viii. 67; Wachsmuth, vol. i. pt. 2, p. 197.) There is no sufficient ground for the conjecture that the *ξυγγραφῆς αὐτοκράτορες* were the same persons as the *πρόβουλοι*. (See Grote, *Hist. of Greece*, viii. 46; Gilbert, *Staatsalt.* ii. 90, 315.) [C. R. K.] [G. E. M.]

PROCHEIROTO'NIA (*προχειροτονία*). [Boule, Vol. I. p. 312.]

PRO'CHOUS (*πρόχους*). [Urceus.]

PROCLE'SIS (*πρόκλησις*). [Diaetetae, Vol. I. p. 622.]

PROCONSUL. The office of proconsul was one resting on the theory of delegated authority. Delegation of the powers exercised by the supreme magistracy of Rome, for certain specific purposes, was a theory always recognised by the Roman commonwealth; although, after the supreme magistracy had been limited, such delegation was not permitted within Rome itself, the *imperium domi* being always vested in a duly elected magistrate. Without the walls, however, this principle did not extend, and consequently, for purposes of administration outside Rome itself, the full consular imperium, on the condition that it did not extend to administrative duties within the city, might for a temporary purpose be conferred on an individual, who was then said to act in the consul's stead (*pro consule*). But, although the theory of the proconsulate was one of delegated authority, in practice this delegation usually assumed the form of a prolongation of existing command (*prorogatio*). Such a prolongation was really a dispensation from the existing term of office recognised by the constitution; and, although such a dispensation was not permitted within the city walls, outside the walls the consul's imperium might, for some purpose, be regarded as indefinitely prolonged: and the proconsulate was, as a rule, such an indefinite prolongation of a pre-existing consular imperium (*prorogare imperium*), recognised by the powers of the state, and extended, as regards its exercise, to the world outside the Roman *pomerium* (Mommsen, *Hist. Rome*, i. pp. 261, 326). It is true that the earliest instance of a magistrate with the title *pro consule* shows us, not a prolongation, but a direct delegation of office by its possessor. It is applied by Livy (iii. 4) to the commander of the reserve of the Roman army as early as the year 464 B.C.; and Dionysius (ix. 12), who calls this magistrate *ἀντιστρατηγός*, says that the appointment was in the hands of the consuls for the year (viii. 64). This is probable enough, but Niebuhr (*Hist. Rome*, ii. p. 123) supposes that the title *pro consule* as applied to this office is an anachronism, and that the real proconsulate did not commence until many years later. The first instance of the proconsulate as a delegation of the full consular powers outside Rome that we meet with was effected by the prolongation of the consular imperium. In 327 B.C. at the commencement of the second Samnite war the consul Q. Publilius Philo had his imperium prolonged, in order that he might continue the conduct of the war, after he had ended his usual term of office (Liv. viii. 23, 12). As a mere recognition of imperium existing in his person, the office was not conferred by the usual elective comitia, but by the really sovereign body, the *comitia tributa plebis* (loosely called *populus* by Livy), on the motion of the tribunes, who themselves acted on the advice of the senate. This was the usual constitutional procedure, originally observed in the *prorogatio:* but in the very next instance of the proconsular command that we meet with, that of the consul L. Fabius Maximus in 308 B.C. (Liv. ix. 42, 2), the senate alone is mentioned as giving its sanction to the *prorogatio*, without a plebiscitum: and Mommsen regards this as having been the constitutional practice from this time forward (*Hist. Rome*, i. p. 326). Subsequently to this, however, when the proconsulate was conferred on L. Volumnius in 296 B.C., the plebiscitum and the senatusconsultum are both mentioned as having been employed for the purpose (Liv. x. 22). It is possible, therefore, that the proconsulate of 308 B.C. was the first in which the senate had definitely taken the initiative, and that the plebiscitum was passed so entirely as a matter of course, on the advice of the senate, that Livy regards the case as practically a prolongation by the senate alone. The senate was, no doubt, constitutionally the proper body for taking the initiative in this matter, as in all matters of foreign administration; but during the second Macedonian war (197 B.C.) we find a tribune interfering with the senate's provisions, insisting that a new consul should not be sent out, and getting the consul's imperium prolonged (Liv. xxxii. 28).

A proconsul thus appointed had only the military imperium, which was incapable of exercise, and therefore of recognition, within the city walls. But for a Roman commander to triumph he must be invested with the imperium domi: otherwise he has no legal status as a magistrate within the walls. For the consul to triumph, during his year of office, a simple decree of the senate was sufficient, recognising his full possession of the imperium with which he was already invested. But the proconsul had no imperium within the walls; consequently, for him to triumph, a special decree of the people was necessary, conferring the imperium on him for the occasion. The constitutional procedure in this case was for the senate, on recognising the proconsul's claim to a triumph, to ask the tribunes of the people to propose the matter to the concilium plebis, and get a plebiscitum sanctioning the arrangement (Liv. xxvi. 21): this was done *ex auctoritate senatus;* and sometimes the senate committed the duty of making the request of the tribune to one of the other magistrates, such as the praetor (Liv. xlv. 35).

Previous possession of the consular imperium, however, was not necessary to qualify a man for the exercise of proconsular powers. In theory it was a delegated authority; and although the system of *prorogatio* was usually adopted and had become the constitutional manner of creating a proconsul, it did not exclude the procedure of delegation. When this office was delegated to a person who did not possess the imperium at all, the procedure was one of election. Thus, in the first known case of the proconsulare imperium being vested in a person who had exercised no previous imperium, the proconsul was elected in the Comitia Centuriata, the regular comitia for consular elections. P. Cornelius Scipio was created proconsul in this way, in 211 B.C. (Liv. xxvi. 18); the case was altogether exceptional ("extraordinaria cura deligendum esse," Liv. *ib.*), constitutional precedent was set aside, and a definite election to the proconsulship was made by the populus. The extraordinary nature of the imperium so conferred was felt especially when a triumph was to be decreed to a proconsul elected in this manner, "quia neminem ad eam diem triumphasse, qui sine magistratu res gessisset, constabat" (Liv. xxviii. 38: cf. xxxi. 20). These difficulties were not, however, felt when the proconsulship was conferred on a magistrate who was not a consul, but had yet exercised the imperium as praetor, of which there are several instances; among them that of M. Marcellus in 216 B.C. (Liv. xxiii. 30) and Ti. Claudius in 177 B.C. (Liv. xli. 12). At a later period of the Republic we find a propraetor, in the exercise of provincial duties, invested with the title of Proconsul, because he governed a proconsular province, as in the case of Q. Metellus Celer, governor of Cisalpine Gaul in 62 B.C. (superscription to Cic. *ad Fam.* v. 1).

Proconsular appointments, such as those mentioned above, were originally created only for a temporary purpose, such as the necessity of prolonged command in war. But with the creation of the Roman provinces outside Italy the prolongation of proconsular command became a definite constitutional necessity. Special administrators (*praetores*) were appointed for the first four transmarine provinces of Rome: but no more were created for this purpose; and, when the number of provinces increased, their administration was divided between the four home offices, the two consuls and the two city praetors. But such a combination of home and foreign functions was impossible without a regular prolongation of their imperium for the purpose of foreign administration; and so, in the interval between the second Punic war and the reforms of Sulla, we find the proconsulship becoming an annual institution, created for the purpose of administering those provinces where the largest military forces were required, but with no definite legal rules to regulate it, either in defining the length of its tenure, or in establishing any complete separation between home and foreign commands. With the institution of the proconsulate as a regular magistracy, the right of the senate to confer it and to assign its functions became unquestioned, and the necessity for the plebiscitum originally required to sanction its creation had entirely disappeared. (For the arrangement of proconsular provinces and for proconsular administration within the provinces, see PROVINCIA.) But there had always been a formal sanction on the part of the whole people, required for the conferring of this kind of imperium, which still continued in force. This was the Lex Curiata, a law passed in the assembly of the curies: which was originally, as Cicero believed, in the nature of a vow of allegiance tendered to the "magistratus cum imperio," when entering on their office, as it had been tendered to the king (Cic. *de Rep.* ii. 13, 25); it was thus required by formal law as a recognition of the imperium vested in the proconsul, as well as in any of the other magistrates who possessed the imperium (Cic. *de Lege Agr.* ii. 11, 26; ii. 12, 30;—Mommsen, *Staatsrecht*, i. pp. 51, 54, 55, notes). It has been supposed from a passage in Cicero's letters (*ad Fam.* i. 9, 25) that the law of Sulla *de provinciis ordinandis* dispensed with the necessity of this law in the case of proconsular appointments confirmed by the senate. The proconsular provinces were always fixed by the senate previously to the election of the consuls who were to fill them by a Lex Sempronia (C. Gracchi) passed in 123 B.C. (Cic. *de Prov. Cons.* 2, 3). Sulla confirmed this enactment; and although he did dispense with the *necessity* of a Lex Curiata where the proconsular provinces were so conferred, he did not do away with its *constitutional advisability* ("legem curiatam consuli ferri opus esse, necesse non esse," Cic. *ad Fam.* i. 9, 25). As the formal popular recognition of the imperium, it still continued down to the end of the Republic; although its necessity seems to have been still further diminished by the senatusconsultum of 52 B.C. (Dio Cass. xl. 30 and 46), by which a proconsul was not assigned a province until five years after he had held office at Rome (Caes. *Bell. Civ.* 1, 6).

The proconsular imperium, since it was exercised without the walls, was unlimited by any of the restrictions—such as the right of appeal, the veto, and even the definite limit of time—that were imposed on it within Rome itself. Outside the walls it maintained all its original *regal* character (Cic. *de Rep.* i. 40, 63; *de Leg.* iii. 3, 6). It was necessarily limited in the proconsul's provincial administration by the definite rights of the *civitates* with which he came into contact (Cic. *ad Att.* v. 11, 2; Tac. *Ann.* ii. 53, 3). But in the field it was unlimited, and hence the extreme severity of the old martial law, from which there was no appeal (Cic. *de Leg.* iii. 3, 6). But between the time of the Second Punic War and the war with Jugurtha, a considerable mitigation of this martial law is known to have taken place; the right of appeal (*provocatio*) seems to have been extended to Roman citizens on service (Sall. *Jug.* 69): and it is not improbable that this limitation of the summary military jurisdiction of the proconsul was brought about by the direct extension of the law of C. Gracchus, "ne de capite civis Romani injussu populi judicetur," to Roman citizens on military service.

After the creation of the provinces, the duration of the proconsulate had been fixed generally at one year, for the purpose of provincial government: and so, although there was no definite regulation respecting it before the time of Sulla, the usual separation of command had been one year in Rome as consul, a second in the provinces as proconsul. Sulla (in 81 B.C.) defined this arrangement by law (Lex Cornelia de provinciis ordinandis), and so established a complete separation betweeen home and foreign commands. Another constitutional rule that had settled itself was that a provincial governor should retain his command until relieved by his successor; this was also recognised by Sulla's law, with the additional enactment that he should leave his province within thirty days after the arrival of his successor, and that he should retain his imperium until he re-entered Rome (Cic. *ad Fam.* xii. 4, 2; i. 9, 25). Really, however, at this time Italy itself was the boundary of a proconsul's exercise of his imperium, through the large extension of the Roman franchise. Pompey, coming from the East, disbanded his army as soon as he reached Italy, and Caesar's crossing the Rubicon with an armed force was practically a declaration of war.

The duration of proconsular government was, after Sulla, annual (Cic. *ad Fam.* ii. 7, 4); this rule continued until the time of Caesar, who fixed the tenure of consular provinces at two years (Cic. *Phil.* i. 8, 19; B.C. 46). Augustus restored the original limit of one year (Tac. *Ann.* iii. 58), and this rule remained in force. The date at which the proconsul entered on his office during the Republic is uncertain: Caesar's second command in Gaul began on March 1st (Cic. *de Prov. Cons.* 15), and this may have been theoretically the proper date for a proconsul to go to his province, being regarded as the commencement of the official year. The date of the actual commencement of his official functions never really corresponded to this date; but depended partly on the time at which he quitted the consular office at home, which from the year 153 B.C. ended with Dec. 31st, partly on the time at which he chose to go out within the year after his consular office had expired (Cic. *ad Att.* v. 16, 4); for the previous governor had to retain the command, or delegate it to an officer within the province, until his successor arrived (Dig. 1, 16, 10; Cic. *ad Att.* vi. 6, 4). Before the year 51 B.C. the two consuls never went out to the provinces assigned them before their election, until ten months after their nominal tenure of them. For instance, in the ordinary course of things the proconsular command which commenced on March 1st, 49, would be assigned to the consul designate for 49 (elected in 50); he, however, could not actually *enter* on the province until his year of office as consul had come to an end, that is, until Jan. 48: his predecessor meanwhile holding the province until his arrival. Hence arose Caesar's dispute with the senate. After the senatusconsultum of 52 B.C. by which proconsular governorships were not filled up until five years after the consulship was held, a proconsul might be sent out at any time: Cicero's government of Cilicia began on July 31st (*ad Att.* v. 16, 2); and from this power of filling up proconsular governments at the earliest date at which they were legally vacant, Caesar would have had to resign his province before March 1st, 49, instead of before Jan. 1st, 48 B.C.: which he refused to do, appealing to the pre-existing constitutional custom (Caes. *Bell. Civ.* 1, 85; Cic. *de Prov.*

Cons. 15). Under the Empire the date varied from time to time, but there was a fixed date for the filling up of such commands. Under Tiberius this date was June 1st, under Claudius April 1st (Dio Cass. lvii. 14, 60, 11;—Mommsen, *Hist. Rom.* iv. p. 350; *Staatsrecht*, ii. p. 255).

With the Empire, and the new division of the provinces into senatorial and imperial that accompanied it [PROVINCIA], there came certain alterations in the mode of appointment and powers of the proconsul. The regulation as to the five years' interval between home and foreign commands, originating in 52 B.C., was enforced by Augustus (Dio Cass. liii. 14), but not strictly adhered to. Some consulares were set aside by the senate, others by the emperor (Tac. *Ann.* iii. 71; iii. 32), while the "jus liberorum" gave the preference to some over others (Dio Cass. liii. 13, 2). Proconsuls were now confined to the senatorial provinces, and the governors of these provinces had the title, even though they may only have been praetors (Dio Cass. liii. 13, 3). This title carried with it in one respect only a formal *proconsulare imperium*, because the provinces were non-military, but within the province they had *majus imperium* over everyone except the princeps. The two great senatorial provinces, Asia and Africa, were always given to consulares, and hence the title *proconsul consularis;* the other proconsuls were only *praetorii.* In Africa, as one of the corn-supplying provinces, the senatorial proconsul had a legion, sometimes two; but when real military power was to be conferred on him, the appointment, instead of being regulated as usual by allotment among the senior consulares, was thrown on the princeps (Tac. *Ann.* iii. 35, 74). Each senatorial proconsul had three *legati pro praetore*, nominally chosen by himself, but approved by the emperor (Dio Cass. liii. 14, 7); he had a salary from the treasury (*salarium proconsulare*, Tac. *Agr.* 43, 3), first given to provincial governors by Augustus; he was attended by lictors, and had the other insignia of his rank, but "did not wear the sword nor the military dress" (Dio Cass. liii. 13, 3), to show that his command was not a military one, and in deference to the full proconsular imperium vested in the emperor, although technically, as the possessor of the proconsular imperium, he was the colleague of the emperor.

Subordinate command is incompatible with the idea of the proconsular imperium. A praetor may have this imperium, in republican times, as in the cases quoted above, or in imperial times, if sent to govern one of the minor senatorial provinces; but never, in either case, when he goes as a subordinate to another official. For this reason the consulares who governed the imperial provinces were never called proconsuls, but *legati pro praetore*, because their command was not an independent one. The only exception to this rule is where, for a special purpose, a proconsul is granted imperium majus over other proconsular governors (Cic. *ad Att.* iv. 1, 7; Tac. *Ann.* ii. 43, 2). Hence, under the Empire, a commander gifted with proconsular imperium, together with full power to exercise it in a military capacity, was a colleague of the emperor (*collega imperii*), and the conferring of this honour was one of the most distinctive modes of nominating a successor to the principate. The proconsular imperium was the legitimised basis on which the emperor's position as commander of the military forces rested; but it was more or less legitimate according to the way in which it was assumed. As conferred by the senate, it was a strictly constitutional power: it was so conferred on Tiberius, and on his colleagues in the Empire, Germanicus and Drusus (Tac. *Ann.* ii. 43, 2; i. 14, 4), and Vitellius also dated his *dies imperii accepti* from the date at which the *soliti honores* were conferred on him by the senate (Henzen, *Act. Fr. Arv.* p. 64). As conferred by the legions, it was less legitimate. Vespasian, for instance, dated his *dies imperii* from the day of his salutation by the legions as Imperator (Suet. *Vesp.* 6), which was equivalent to a recognition of his right to this imperium. The proconsular imperium of the emperor was unique, in that it did not lapse from the fact of his presence within the walls (Dio Cass. liii. 17, 6; 32, 5). But this privilege did not extend to his colleagues: Germanicus, who had held it in Germany, had to have it conferred again before going to the East, because he had been within the city walls (Tac. *Ann.* ii. 43, 2; cf. i. 14, 4), and Drusus could not hold it while he was within the walls as consul designate (*Ann.* i. 14, 5). (Mommsen, *Römisches Staatsrecht*, ii.^{1} 90, 233, 238–246, 257; ii.^{2} 811 *sq.*; *Die Rechtsfrage zwischen Caesar und dem Senat.*) [A. H. G.]

PROCURA'TOR. The term *procurator* signifies agent, and is used to denote the transaction of agency of almost any description. It was applied chiefly to the managing agents of property at Rome, and is often used in a sense almost equivalent to *vilicus* or *calculator* (Senec. *Ep.* 14, 16); although the procurator had more freedom of action than the former, and more extended functions than the latter. While one entrusts a commission to a procurator, one gives direct commands to a bailiff, or *vilicus* (Cic. *de Orat.* i. 58, 249). It is used especially of the managers of the landed property of a *dominus* or owner, who transacts business with others, manages his slaves, and directs his agricultural operations through a procurator; such an agent had the management and control, subject to direction, of one or more estates (Plin. *Ep.* iii. 19, 2). They were generally freedmen, or even favoured slaves, and, if slaves, might be transferred to another party with the sale of the house or estate to which they were attached (Cic. *ad Att.* xiv. 16).

As a term denoting a legal personality, in the civil law of Rome, procurator is a parallel term to *cognitor;* and is almost equivalent to the modern attorney [ACTIO]. Like the cognitor, he was the person through whose agency a legal action, not primarily his own, might be undertaken; the appointment was simple, only depending on the expression of will on the part of the procurator so appointed. The presence of neither of the parties to the dispute was necessary to his taking up the case; and he was thus able of himself to represent the *persona* of an absent litigant, and to become an *actor* in the legal sense (Festus, s. v. *cognitor*).

The political sense of the word *procurator* originated with the Empire, and the personal government that it brought about. In that division of state administration which was managed by the princeps, he himself was the one supreme head; certain state functions he delegated to praefecti; most, however, were managed by the imperial agents, the *procuratores Caesaris*. They were in a strict sense the servants of the emperor, with no independent but only representative authority, appointed to perform the lesser administrative duties of the Empire (*ministeria principatus*, Tac. *Hist.* i. 58, 1). Like other parts of the emperor's household, they were originally slaves or freedmen, generally of the latter class, as is shown by Tacitus (*Ann.* iv. 6, 7), and especially by inscriptions. The holders of offices about the emperor's person, such as are described in the expressions *a libellis*, *a rationibus*, auditors and accountants, would be procurators. Pallas, for instance, one of the favourite freedmen of Claudius, was his *procurator a rationibus*. Gradually, however, as the administrative duties of the princeps extended, these posts came to be of more importance, and there came to be gradations of rank connected with them. The more responsible procuratorships were subsequently given, not to freedmen, but to equites: and this change, due in the first instance to the Emperor Vitellius (Tac. *Hist.* i. 58, 1), was more thoroughly carried out by the Emperor Hadrian (Hirschfeld, *Untersuch.* i. p. 32). The lower grades were held, without distinction, either by equites or freedmen (Dio Cass. lii. 25). The filling of the higher procuratorships gradually became one of the marks of a permanent equestrian career: so much so, that Tacitus expressly calls this office the *equestris nobilitas*. No senator, or man who had a senatorial career in view, could be a procurator; for, in the Roman world of the Empire, there were two distinct patents of nobility. The quaestorship, and certain lower offices that led to it, formed the road to senatorial nobility: a procuratorship in the emperor's household was the stepping stone to a prefecture, which was the crown of equestrian nobility. The original powers with which the procurator Caesaris was supposed to be invested are well defined in the words of Tiberius (Tac. *Ann.* iv. 15, 3), that "his procurator's rights only extended over his slaves and personal property." This reference is only to the emperor's private pecuniary agent in a senatorial province; but, as no real distinction can be drawn between the original legal relations of the fiscus and patrimonium respectively to the emperor, so the distinction between the emperor's private agent and one connected with his public concerns is a difference more of position and importance than of fact or law. It was found impossible, however, to confine the imperial agents to the limits of authority that Tiberius thus lays down. Disputes sprang up between them and the senatorial or other authorities, in the provinces; and it is given as an instance of Claudius's moderation that he requested all decisions to be confirmed that his procurator had awarded (Suet. *Claud.* 12). This points to the judicial authority that the procurators soon gained. As there was no convenient court of arbitration in the provinces that could decide on the rights of the procurator, he was, without being recognised as a proper court for the trial of private claims, empowered to settle disputes that might arise from the exercise of his financial duties (Cod. 1, 13, 1). His duties, as regards the emperor, were strictly limited and defined; he was altogether accountable to him for the use he makes of his finances or any portion of his property; he could not give, sell or transfer it, and his duties are defined as careful management of it (*diligenter gerere*) within the prescribed bounds (Dig. 1, 19, 2); but, while he keeps within these bounds, his acts have all the authority of those of the emperor himself (*ib.* 1, 19, 1).

There were several classes of procurators; most of them, however, being purely finance officers, may be classed under the head of *procuratores fisci*. The officer connected with the fiscus at Rome was originally a procurator, as well as the agent for collecting the Roman or Italian dues for the fiscus. A *procurator summarum* is found in an inscription of Nero's time (Henzen, 6525), who was a freedman; officials may also have been of this class, called *procuratores rationum summarum*, their position being that of keepers and auditors of the imperial accounts, although the latter title seems later to have had a restricted signification. They were originally, perhaps, the highest officers connected with the fiscus; later we find a praefectus of the fiscus, and, under Nerva, a *praetor fiscalis*. We find other names given to officials of this class who may be identified as procurators, such as *rationalis summae rei* (Cod. 3, 26, 7), *dispensator* or *dispensator summarum* (Suet. *Vesp.* 12; Henzen, 6396) and *vilicus summarum* (*C. I. L.* 5, n. 737). We find from a Greek inscription a procurator (*ἐπίτροπος*) appointed for the collection of Roman and Italian dues to the fiscus, such as the *vicesima hereditatium* (*C. I. G.* 2980).

It is difficult to determine the precise importance attaching to the various offices held by the procurators whose titles we know from inscriptions; and this is especially the case with the agents of the fiscus at Rome, the officers attached to it and their titles varying with each reconstruction of the imperial system of finance. It seems certain that from the time of Claudius the title *a rationibus* was reserved for the central director of the fiscus. After Hadrian it became regularly an equestrian post (Hirschfeld, *Untersuch.* i. p. 32), while the members of this central bureau, which was now completely organised, had a higher standing than their provincial colleagues. The title *procurator rationum summarum*, belonging to the second century A.D., undoubtedly denotes some high official connected with the fiscus. As it does not seem to be identical with the title *a rationibus*, it has been supposed to represent a subordinate director of the fiscus, perhaps established for the first time by Marcus Aurelius (Hirschfeld, *l.c.* p. 35). The title *rationalis*, which often in the earlier imperial times was used indiscriminately with *procurator*, and still had this wide sense in the third century A.D. (Dig. 1, 19, tit. "De officio procuratoris Caesaris vel rationalis"), seems at some period within this century to have supplanted the title *a rationibus* as the designation of the chief officer of the fiscus (Hirschfeld, *op. cit.* p. 37; Liebenam, *Beiträge zur Verwaltungsgesch.* p. 32).

Another class of procurators were confined to the imperial provinces alone; they were the finance officers in these provinces, like the quaestors in the senatorial provinces. They were connected, therefore, with the branch of the imperial treasury in the province (*fiscus provincialis*), and managed the collection of taxes due to it as well as their disbursement. There was another treasury connected with the military station in such a province (*fiscus castrensis*), with a corresponding agent (*procurator castrensis*), who superintended the payments made to the soldiers in the district (Strabo, iii. p. 167) and military expenses in general: the title *a copiis militaribus* is found in inscriptions (Orelli, 2922, 3505): and an agent of the mint (*procurator monetae*) is found, in connexion apparently with the provincial fiscus (*C. I. L.* 2, n. 4206). Other provincial procurators are found for the collection of the imperial dues that were imposed on all the provinces alike. The vectigalia with which the provincial fiscus was supplied were collected by various means; some, such as the portoria, were in the hands of the publicani, others were directly collected: and amongst these were certain perquisites which belonged exclusively to the imperial exchequer, whether they were collected in an imperial or a senatorial province: such were lapsed legacies (*bona caduca*) and the property of condemned persons (*bona damnatorum*): others were the *vicesimae manumissionum* and *hereditatium*, after the latter had been extended to the provinces, and the *centesima rerum venalium*. These dues were all collected by the imperial procurators, and accordingly we find in inscriptions such titles as *procurator a caducis* (*C. I. L.* 3, n. 1622), and other procurators connected each with the collection of a separate kind of imperial revenue. Agents of this kind were by the nature of their functions not confined to the imperial provinces: and we find, in senatorial provinces, frequent evidence of dues that fell to the emperor, and of the presence of his agents as their collectors (Tac. *Ann.* ii. 47, 3; iv. 15, 3). These imperial revenues, that extended over the provinces generally, may be divided into three classes. Firstly, there were the dues mentioned above, the *bona caduca* and the like, that fell of right to the fiscus. Secondly, there were dues that went directly to pay for certain responsibilities (*curae*) undertaken by the emperor for Rome and all the provinces,—such was the *annona* or corn-supply for Rome; the supervision of this duty was at Rome delegated to a praefectus of the emperor: and, consequently, in the provinces, the business connected with its supply must have been in the hands of an imperial agent or procurator. Again, the military defences, and the expenses consequent on them, the cost of the transport of troops and the like, fell entirely on the imperial exchequer: and the revenues necessary for the defraying of such expenses were managed by procurators in the provinces, whether senatorial or imperial, that were directly benefited by such administration. Lastly, among the imperial dues that affected all the provinces alike, comes the *patrimonium* of the emperor. The mention of a *procurator patrimonii* or *patrimonii privati* is found in inscriptions (Orelli, 3180). They would have the management of the vast imperial estates in the provinces; and together with the *procurator patrimonii* we find a *procurator rerum privatarum* of the emperor. At first sight they appear identical, and originally they were so. The institution of the twofold procuratorship does not arise until the time of the Emperor Severus (Marquardt, *Staatsverw.* ii. p. 311). There had, in all probability, always been a distinction between the *res privatae* and the *patrimonium*; the former consisting mainly of legacies that had been left to the emperor. Hence the duties of the imperial procurators as regards inheritances (Dig. 1, 19, 2; Orelli, 2921, "servus exactor haereditatum legatorum peculiorum"); but in the early Empire this distinction between *res privatae* and *patrimonium* was not recognised by any formal division of the office of procurator, and in inscriptions (Orelli, 3180) the two are found combined. There were several other unimportant posts recorded in inscriptions as being held by procurators, such as the posts of librarians, managers of spectacles and stores, of daily household expenses, and the like.

Besides the numerous procuratores fisci there was another class of procurators connected with the imperial administration of the provinces. These were the *procuratores Caesaris pro legato*, who were governors of outlying and comparatively unimportant districts, that were classed with the imperial provinces. Such a district was Cappadocia in the reign of Tiberius (Tac. *Ann.* ii. 56; Dio Cass. lvii. 17, 7), which was at first put under the government of an eques as procurator; and Judaea, which was similarly under the government of Pontius Pilate, its procurator pro legato. These procurators were more or less under the control of the nearest imperial legate (*legatus pro praetore*); Judaea, for instance, was attached to the larger province of Syria, and Pilate was deposed from office by Vitellius the governor of Syria (Jos. *Antiq. Jud.* xviii. 4, 2).

Other provinces that are known to have been placed at various times under imperial procurators are the Alps, Raetia, Noricum, Thrace, and Mauretania (Liebenam, *l. c.* p. 26).

The imperial procurators were continued in office for terms of indefinite length; and had fixed salaries from the treasury (Dio Cass. liii. 23, 1). The words *trecenarius*, *ducenarius*, and *centenarius* denote the value of these posts, according as the salary varied from one hundred to three hundred sestertia (Orelli, 946; Suet. *Claud.* 24). The salaries of the civil procurators at Rome were probably higher than those of the same grade in the provinces. Thus the *procuratio rationis privatae* was probably in Rome a *trecenaria*; in the provinces a *ducenaria*: in Italy, where it would be merely a branch-office from Rome, a *centenaria procuratio* (Liebenam, *l. c.* p. 55). The grades of rank through which the various procurators passed, their position in the imperial organisation, and the status of the individuals chosen for these offices, cannot be expressed with any certainty. The scale of rank was often broken through by sudden and extraordinary promotions, which were made through the favour of the princeps or the personal fitness of the individual promoted. Thus we find in one instance a procurator *a memoria* promoted to a praefecture

(*Script. Aug. Nigr.* 7). A more regular promotion is that of Ti. Cl. Bibianus Tertullus, who rose from the procuratorship *ab epistulis Graecis* to that *a rationibus*, and was from this second post promoted to the *praefectura vigilum* (*C. I. G.* iii. 6574); or that of Sex. Var. Marcellus, who rose through the successive grades of *procurator aquarum* and *procurator Britanniae* to the post of *procurator a rationibus*, and was then promoted to be *vice-praefectus praetorio* (Orelli, 946). The political influence of the procurators at various periods of the Empire, and the classes from which they were chosen, changed with the changing conditions of imperial government. The Empire began by being a strictly personal rule marked by undivided responsibility on the part of the *princeps*. At this time the procurators were naturally freedmen, acting as mere servants of the central head of the Roman state; and even after the change initiated by Vitellius, a return to this principle of selection might be made, as it was by the Emperor Domitian (Suet. *Dom.* 7). But with the development of the Empire, the political organisation itself began to replace in part the personal responsibility of the princeps; and we get the order of the equestrian aristocracy filling these posts. The definite political routine lessened the personal influence of these agents, which had been very great under a weak prince like Claudius, in the half-organised earlier Empire. In the later period of the Empire we find a new influence arising—that, namely, of the emperor's personal household. In the fourth and fifth centuries freedmen of the household, such as the chamberlain (*cubicularius*), had the power which in the time of Claudius was possessed by the freedmen filling the great fiscal offices (Friedländer, *Sittengesch.* i. p. 67).

(Mommsen, *Staatsrecht*, ii.^{2} pp. 836 ff., 934; Marquardt, *Staatsverwaltung*, v. p. 296 ff.; Hirschfeld, *Untersuchungen auf dem Gebiete der römischen Verwaltungsgeschichte*, i. p. 30 ff.; Liebenam, *Beiträge zur Verwaltungsgeschichte des römischen Kaiserreichs*, i. p. 52 ff.; Friedländer, *Sittengeschichte*, i. p. 59 ff.) [A. H. G.]

PRODI'GIUM in its original meaning differs little from *ostentum*, *monstrum*, *portentum*. "Quia enim ostendunt, portendunt, monstrant, praedicunt, ostenta, portenta, monstra, prodigia dicuntur" (Cic. *de Div.* i. 42, 93). [It should be observed, however, that *prodigium* cannot be derived from *praedico*.] In its widest acceptation the word denotes any sign by which the gods indicated to men a future event, whether good or evil, and thus includes omens and auguries of every description (Verg. *Aen.* v. 638; Servius *ad loc.*; Cic. *in Verr.* iv. 49, 107). It is, however, generally employed in a more restricted sense to signify some strange incident which was supposed to herald the approach of misfortune, under such circumstances as to announce calamities impending over the nation rather than over private persons.

Hence the distinction of "prodigium quod in privato loco," or "quod in peregrino factum est" (Liv. xliii. 13): the rites and offerings which would in his judgment afford a *procuratio privati portenti* depended upon the owner of the house where it occurred (Liv. v. 15); so, too, as regards the Roman senate a prodigy in a colonia would be looked upon as *in peregrino loco*, and left to the magistrates of the town where it occurred. A common instance of private procuration was when anything in private property was struck by lightning [see BIDENTAL].

Such prodigies were viewed as manifestations of the wrath of heaven and warnings of coming vengeance; it was believed that the wrath might be appeased and the vengeance averted by the proper rites and sacrifices. Although it was impossible to provide for every contingency, rules for expiation applicable to most cases were laid down in the sacred books of the Etruscans (Cic. *de Div.* i. 33, 72); and when the prodigy was of an unprecedented character, recourse might be had not only to the haruspices, but to the Sibylline books or even the Delphic oracle [HARUSPICES; SIBYLLINI LIBRI]. When the senate received information of a prodigy happening *in publico loco*, the first process was either themselves to examine witnesses (Liv. xxii. 1), or to commit the examination and decision to the pontifices (Liv. i. 20). If the fact was proved, and also judged important to the state, then they were said *suscipere procurationem*: when the wrath of heaven was clearly connected with some known crime, the first necessity was atonement by punishing the criminal (cf. Liv. ii. 42; Dionys. ix. 40): the next point was to settle what deities were pointed out by the prodigy as needing appeasement: *e.g.* when the spears of Mars are shaken in the sacrarium regiae, then sacrifices of *hostiae majores* to Jupiter and Mars are indicated (Gell. iv. 6)—where no god was specially pointed to, there was a sacrifice in general terms, "deo aut deae" (Gell. ii. 28): finally, when the offended deity was, if possible, ascertained, it remained to determine what claim (*postilio*) for atonement he made. (See Cic. *de Harusp. Resp.* 10, 20; 14, 31; Varro, *L. L.* v. 148; Arnob. iv. 31, who instances *postiliones* for neglect, perhaps accidental, of duties and ceremonies.) An edict then declared how the expiation should be made, by *hostiae majores* or *novendiale sacrum* or *obsecratio*; and the matter was entrusted to the consuls. Marquardt gives abundant instances of these cases (*Staatsverw.* iii. p. 260), but he gathers from Philarg. *ad Verg. Georg.* ii. 162, that the carrying out of the atonement was sometimes committed to the Pontifices instead of the consuls. When in doubtful and difficult cases, as mentioned above, the haruspices or the Sibylline books were consulted, it usually followed that a greater solemnity, a SUPPLICATIO or a jejunium, was ordered (Liv. xxxvi. 37). (Müller, *Die Etrusker*, ii. 191; Hartung, *Die Religion der Römer*, i. 96; Bouché-Leclercq, *Hist. de la Divination*, p. 181; Marquardt, *Staatsverw.* iii.^{2} pp. 259–264.) [W. R.] [G. E. M.]

PRO'DOMUS. [DOMUS; TEMPLUM.]

PRODO'SIA (*προδοσία*). Under this term was included not only every species of treason, but also every such crime as (in the opinion of the Greeks) would amount to a betrayal or desertion of the interests of a man's country; especially the attempt to subvert the constitution (*κατάλυσις τοῦ δήμου*) and to establish a despotism (*τυραννίς*). Thus Lycurgus (*c. Leocr.* § 127) speaks of the psephisma of Demophantus (*κτενῶ . . . . ὃς ἂν καταλύσῃ τὴν δημοκρατίαν τὴν Ἀθήνησι, καὶ ἐάν τις ἄρξῃ τιν' ἀρχὴν κατα-*

λελυμένης τῆς δημοκρατίας τὸ λοιπόν, καὶ ἐάν τις τυραννεῖν ἐπαναστῇ ἢ τὸν τύραννον συγκαταστήσῃ, Andoc. *de Myst.* § 97) as directed against traitors (τὸν τὴν πατρίδα προδιδόντα), yet there is no instance recorded of an attempt to subvert the constitution ever having been dealt with as προδοσία, and the νόμος εἰσαγγελτικὸς clearly distinguishes between the two crimes. In the eye of the law only the betrayal to the enemy of the state or part of the state, such as a town, a watch-post, a gate, a dockyard, a fleet, an army (Lys. *c. Philon.* § 26; Lyc. *c. Leocr.* § 59; Dem. *c. Lept.* p. 481, § 79; Aeschin. *c. Ctes.* § 171; Hyp. *pro Eux.* 18), or the entering into any kind of treasonable communication with the enemy (cf. the case of Antiphon and Archeptolemus, [Plut.] *Vitt. X. Orat.* p. 833 E), amounted to προδοσία [Eisangelia]; unless when a special decree of the people extended the meaning of προδοσία, *e.g.* to the leaving the state in time of danger (as after the battle of Chaeroneia, Lyc. *c. Leocr.* § 53: ἐνόχους εἶναι τῇ προδοσίᾳ τοὺς φεύγοντας τὸν ὑπὲρ τῆς πατρίδος κίνδυνον), or when it was resolved on the motion of Critias to prosecute Phrynichus, who had been murdered by Apollodorus and Thrasybulus (τὸν νεκρὸν κρίνειν προδοσίας), and also to subject his defenders to the punishment of traitors in case of a conviction (Lyc. *c. Leocr.* § 112 ff.).

The ordinary method of proceeding against those who were accused of treason or treasonable practices was by εἰσαγγελία (only Pollux, viii. 40, speaks of a γραφὴ προδοσίας), as in the case of Gylon, the maternal grandfather of Demosthenes (προδοὺς τοῖς πολεμίοις Νύμφαιον, Aeschin. *c. Ctes.* § 171), Timomachus (προδοὺς Κότυϊ τὴν Χερρόνησον, Schol. Aeschin. *c. Tim.* § 56), Leosthenes (Diod. Sic. xv. 95), Philon, Theotimus (ὁ Σηστὸν ἀπολέσας, Hyp. *pro Eux.* 18), Chabrias and Callistratus (Schol. Dem. *c. Mid.* p. 535, § 64; Aristot. *Rhet.* iii. 10, p. 1411, B 6, and i. 7, p. 1364, 19), etc.: cf. Plut. *Coriol.* 14, Ἄνυτος προδοσίας περὶ Πύλου κρινόμενος, etc. and Diod. Sic. xiii. 64. Leocrates, who left Athens after the defeat at Chaeroneia, was prosecuted by Lycurgus seven years later for desertion of his country. The defence of the accused was, that he did not leave Athens with a traitorous intention (ἐπὶ προδοσίᾳ), but for the purposes of trade (ἐπὶ ἐμπορίᾳ, § 55 and *argumentum*); he was acquitted, the votes being even (Aeschin. *c. Ctes.* § 252). A special decree of the people pronounced those traitors who fled from Athens after the battle, and empowered the council of Areiopagus to bring them to justice by a summary method (Lyc. *c. Leocr.* § 52 ff.): thus we read in Aeschin. *c. Ctes.* § 252, that they seized and put to death *on the same day* a person that tried to sail away to Samos.

The regular punishment appointed by law for treason appears to have been death, refusal of burial within Attic territory, and confiscation of property (Xen. *Hellen.* i. 7, 22: cf. Dem. *de Cor. Trier.* p. 1230, § 8 f.); and when we find instances of treason being punished by a fine, we must either suppose that the Athenians distinguished between high treason and less heinous kinds of προδοσία (the latter τιμητός), or that the writers employ the term in the respective passages not in its proper technical sense (Dem. *c. Timocr.* p. 740, § 127; *c. Theocr.* p. 1344, § 70). The sentence passed on Antiphon and Archeptolemus is preserved in [Plut.] *Vitt. X. Oratt.*: "that they be delivered to the Eleven; that their property be confiscated, and the goddess have the tithe; that their houses be razed and boundary-stones be placed on the sites with the inscription A. καὶ A. τοῖν προδόταιν;—that it shall not be allowed to bury A. and A. at Athens or in any land of which the Athenians are masters; that A. and A. and their descendants shall be ἄτιμοι, and he who adopts any one of the race of A. and A. shall be ἄτιμος: that this decree be written on a bronze column, and put in the same place where the decrees about Phrynichus are set up" (cf. Lyc. *c. Leocr.* § 117 f.; *Journal of Philol.* viii. 1–13). The bones of Themistocles, who had been condemned for treason, were brought over and buried secretly by his friends (Thuc. i. 138, 6; Marcell. *Vit. Thucyd.*). Traitors might be proceeded against even after their death, as we have done in modern times. Thus the Athenians resolved to prosecute Phrynichus; judgment of treason was passed against him, his bones were dug up and cast out of Attica. (*Att. Process*, ed. Lipsius, pp. 419–424.) [C. R. K.] [H. H.]

PROEDRI (πρόεδροι). [Boule.]

PROEI'SPHORA. [Eisphora.]

PROEI'SPHORAS DIKE (προεισφορᾶς δίκη). At first, after the institution of the new census and the introduction of the συμμορίαι in the archonship of Nausinicus in B.C. 378–7 (Harpocr. *s. v.* συμμορία), the state collected the εἰσφορὰ directly from those liable to it, and those who fell in arrear were proceeded against in the same way as all debtors to the state (Lys. *c. Philocr.* § 9;—Dem. *c. Androt.* p. 609, § 54; p. 615, § 70; *c. Timocr.* p. 752, § 166). To avoid the delay necessarily arising from this, the προεισφορὰ was introduced, viz. certain individuals had to pay the whole tax at once and to recover the sum advanced afterwards from the others liable to the tax. Fränkel (Boeckh, *Sthh.*^{3} ii. p. 123, App. n. 838) supposes that at first each demus appointed one of the δημόται and ἐγκεκτημένοι to pay the whole tax at once for the demus; that, to save time, in B.C. 362–1, it was resolved that the senate (instead of the demi) should return the names of those who were to pay the taxes in advance (Dem. *c. Polycl.* p. 1208, § 8; cf. § 6, διὰ τάχους), and that after this date the first class of the census, the 300 richest men, had to make this advance (Dem. *c. Phaenipp.* p. 1046, § 25; cf. Schol. Dem. *Olynth.* ii. p. 26, § 29, εἰσέφερον γὰρ οἱ πλουσιώτεροι ὑπὲρ αὐτῶν καὶ προετέλουν, καὶ ἐδέχοντο ταῦτα ὕστερον κατὰ σχολήν . . . . οὗτοι δὲ ἦσαν οἱ τριακόσιοι οἱ πάνυ πλούσιοι οἱ πρῶτοι, οἵτινες προεισέφερον, etc. Dem. *de Cor.* p. 285, § 171). By this means the possibility of taxes falling into arrears was prevented. To recover money thus advanced was called προεισφορὰν κομίζεσθαι, εἰσπράττεσθαι (Dem. *c. Pantaen.* p. 977, § 37; *c. Polycl.* p. 1209, § 9), and all actions arising from it belonged to the jurisdiction of the strategi. Koehler (*Mitth. d. d. a. Inst. Ath.* vii. 1882, p. 98 ff.) discusses an inscription dating from the first half of the 4th century, referring to the actions (διαδικασίαι) brought to decide who were liable to the *προεισφορά*: the names are arranged according to demi, and the sanctuaries of the demi are not exempted (cf. *C. I. A.* ii. No. 947).

The fact that the *προεισφορὰ* was introduced some time after the archonship of Nausinicus (it is first mentioned in Dem. *c. Polycl.* p. 1208, § 8; *i.e.* B.C. 362–1) throws a new light on Dem. *c. Androt.* p. 606, § 44, *ὑμῖν παρὰ τὰς εἰσφορὰς τὰς ἀπὸ Ναυσινίκου, παρ' ἴσως τάλαντα τριακόσια ἢ μικρῷ πλείω, ἐλλείμματα τέτταρα καὶ δέκα ἐστὶ τάλαντα.* Grote (*Hist. of Gr.* ix. p. 333) is of opinion that "a total sum of 300 talents or thereabouts had been levied by all the various property-taxes imposed from the archonship of N. down to the date of the speech," a period of about twenty-three years; but Lipsius (*Jahrb. f. cl. Phil.* 1878, p. 297 ff.) points out in the first place that the sum of 300 talents is too small, as the aggregate of all property-taxes imposed for twenty-three years; and, secondly, that since the introduction of the *προεισφορὰ* arrears could not possibly accrue. Hence, he concludes, the commission appointed at the instigation of Androtion to collect all outstanding arrears could only collect such arrears as had accrued between the archonship of N. and the introduction of the *προεισφορά*, and the sum of 300 talents represents the total sum of taxes called for within that period only. Boeckh (*Sthh.* i.^{3} p. 607) thought that the 300 talents here mentioned were levied in the single year of N.; yet *ἀπὸ Ναυσινίκου* cannot have this meaning. Fränkel (*ad l. c.* ii. p. 120, App.), not accepting Lipsius' explanation, suspects that the reading of the passage is corrupt. [SYMMORIA.] [C. R. K.] [H. H.]

PROERO'SIA (*προηρόσια*), called also *προαρκτούρια* (Paus. x. 15), a festival in the month Boedromion, celebrated by a procession to Eleusis and offerings there to Demeter It was held by the Athenians on behalf of all Greece, before the land was ploughed for sowing, to entreat for a plentiful harvest. (Suid., Hesych., *Etym. Mag.* s. v.; Arrian, *in Epictet.* iii. 21; Mommsen, *Heortol.* 218, Preller, *Gr. Myth.* i. 608.) [L. S.] [G. E. M.]

PROFESTI DIES. [DIES.]

PROGAMEIA (*προγάμεια*). [MATRIMONIUM, Vol. II. p. 136 *a*.]

PROIX (*προίξ*). [DOS.]

PROLETA'RII. The state, according to the Servian constitution, was divided into those who had property (*locupletes*) arranged in classes, and those who had not and were outside these classes; these unclassed citizens were called *capite censi*, i.e. "reckoned by heads," or *proletarii*, i.e. "begetters of children" (Cic. *de Rep.* ii. 22, 40; Gell. xvi. 10). These included all who were assessed at not more than 1500 asses: the distinction in civil matters is marked by the law of the Twelve Tables, that for a proletarius any one might act as *vindex*, while for the *adsiduus* (or *locuples*) an adsiduus was required [ACTIO]. As to their military service, see EXERCITUS, Vol. I. p. 781. (Mommsen, *Rom. Hist.* i. 196; *Staatsrecht*, iii. 238.) [G. E. M.]

PROMETHEIA (*προμήθεια*). [LAMPADEDROMIA.]

PROMISSOR. [OBLIGATIONES.]

PROMNE'STRIAE (*προμνήστριαι*). [MATRIMONIUM, Vol. II. p. 136 *a*.]

PROMULSIS. [CENA, Vol. I. p. 396.]

PROMUS. [CELLA.]

PRONA'OS. [TEMPLUM.]

PRO'NUBA. [MATRIMONIUM, Vol. II. p. 143 *a*.]

PROPHE'TES. [ORACULUM.]

PROPLASMA (*πρόπλασμα*), the first sketch for a work in clay, preparatory to its execution in bronze, marble, or other materials. We are told that the proplasmata of Arcesilaus, an artist of the end of the Roman republic, were sold to artists for higher prices than others' finished works; and Pasiteles spoke of "plasticen matrem statuariae," &c. This was, however, a late practice. It was after the time of Lysistratus, the brother of Lysippus, that it was so general that "nulla signa statuaeve sine argilla fierent." Even then, however, the artist did not, as in modern times, leave the execution of the statues themselves to skilled workmen. (Plin. xxxv. § 45.) [E. A. G.]

PROPNIGE'UM. [BALNEAE, Vol. I. p. 279.]

PROPRAETOR. The propraetorship was, like the proconsulate, technically a delegation of the praetorian imperium where alone such delegation was constitutionally allowable—that is, outside the pomerium; but, instead of the delegation of a new *imperium militiae*, the course usually adopted was the prolongation of an imperium already existing (*prorogatio*). The title *pro praetore* seems really to be an older title than that of *pro consule*. As the title *praetor* belonged originally to all magistrates who demanded obedience from the army in virtue of their imperium (Pseud.-Ascon. *in Verrin.* p. 168; Festus, p. 161), so the title *pro praetore* was applied to an officer who had this authority delegated to him; and accordingly Dionysius (ix. 12) calls the military delegate appointed by the consuls for the command of the reserve force *ἀντιστρατηγός* (propraetor), which is more likely to have been the original title than proconsul, given by Livy (iii. 4). This view of the propraetorship as a delegated military imperium never died out. When, for instance, the military imperium was to be conferred on an individual who had held no magistracy, or only a minor one, it is generally conferred with the title *pro praetore*. M. Antonius, while still tribune, had this title granted him by Caesar, for the purpose of military command in Italy (Cic. *ad Att.* x. 8 a); and Octavian, who had held no magistracy, had the title *propraetor* conferred on him by the senate for the purpose of acting against Antony (Suet. *Oct.* 10).

But the propraetorship, as a standing office, originated with the necessities of provincial government. When the number of the Roman provinces increased beyond the four original provinces, for which special praetors were appointed, the prolongation of the imperium of the two city praetors became usual. Provincial government was subsequently divorced from the administration of the praetors, and the provinces divided between the past consuls and praetors, the propraetors obtaining those provinces where least military forces were required. As provincial governors they were invested with the imperium with the same ceremonies with which the imperium for military service had been confirmed: among which were especially the religious ceremonies of the *vota* and *auspicia*

(Cic. *in Verr.* v. 13, 14; Festus, *l. c.*) and the Lex Curiata, or popular sanction for all the *magistratus cum imperio* (Cic. *de Lege Agr.* ii. 11, 26). The tenure of his imperium by the praetor was now, as a rule, biennial, one year being spent in office at home, the other as governor of a province; this separation of commands was first formally recognised by Sulla (Lex Cornelia de provinciis ordinandis), and the limit of the propraetor's government of a province fixed at one year. (For the administration of the provinces by propraetors, see PROVINCIA.) The senatusconsultum of 52 B.C. affected the propraetor as it affected the proconsul [PROCONSUL]. The propraetor did not now leave Rome to take command of a province until five years after he had ended his period of office at home (Dio Cass. xl. 30, 1; 46, 2). Although the division of the provinces between the propraetors and the proconsuls was regulated by constitutional usage, and the interval between home and foreign commands regulated by law, yet the senate might by a decree interfere with the ordinary arrangements. In 51 B.C. a senatusconsultum was passed by which the senate commanded that all the praetorii who were qualified for foreign command should be sent to provinces, and that, if there were not sufficient praetorii of five years' standing, those of less standing should be sent out in the order of seniority (Cic. *ad Att.* viii. 8, 8). The effect of this decree was to debar from government consulares duly qualified by the five years' interval (Caes. *Bell. Civ.* 1, 6).

When, under the Empire, the provinces were divided into senatorial and imperial, the republican system was reversed; the military provinces were given to governors with the title *pro praetore*, the non-military to proconsuls. In the latter, however, we find the senatorial proconsuls accompanied by *legati proconsulis pro praetore*. They were assessors (πάρεδροι, Dio Cass. liii. 14, 7) of the senatorial governor, and were all alike called propraetors, though some might be consulares. For a senatorial province of the higher class, such as Asia and Africa, which were governed always by consulares, three such legati pro praetore were selected; to one of the lower class, such as Sicily and Baetica, which were governed by a proconsul who had been praetor, one such legatus accompanied the governor. They were selected by the proconsuls themselves, subject to the approval of the princeps: in the lower senatorial provinces these propraetors might be praetorii; in the higher they might be consulares (Dio Cass. *ib.*).

The title *quaestor pro praetore* is connected with senatorial government. It may mean one of three offices. During the Republic, a magistrate with this title was either (i.) one who replaced an absent or dead superior in a province for the purpose of temporary government (Sall. *Jug.* 103; cf. *ib.* 36), and, from the instances referred to, we see that the quaestor took this title, although he might be commanding in the room of a proconsul; or (ii.) one who, though still only a quaestor, was appointed to an independent command by senate or people. Cato bore this title when sent to annex Cyprus in 58 B.C. (Vell. 2, 45; cf. *C. I. L.* i. 4, 598); and (iii.) in a senatorial province, during the Empire, the quaestor, who is the finance officer in such a province, had this title, as we know from inscriptions, in which the title *quaestor pro praetore* appears by the side of that of his superior the proconsul (Orelli, 151). Two explanations of this are possible. He may have been *adlectus inter praetoris* because the other leading members of the staff, the legati, were propraetors: or, more probably, the title was given him because he was the provincial representative of the finance officer of the aerarium at Rome, which, under the Empire, was in the hands, not of a quaestor, but of a praetor.

The governors of the imperial provinces, under the Empire, were all *legati Caesaris pro praetore*. Their government was not an independent command; they were legati of the Emperor: hence they could not have the proconsulare imperium, which was vested in the princeps, and could not therefore be proconsuls. The imperial provinces, like the senatorial, were divided into a higher and a lower class. To the higher, such as Syria and the two Germanies, consulares were sent; to the lower, such as Aquitania and Galatia, praetorii; but the governors of both were called propraetors (Dio Cass. liii. 13, 5), those who had been consuls adding the title *vir consularis* or *consularis legatus*. These propraetorial governorships had no definite limit of time, and their tenure depended on the emperor's discretion (Dio Cass. liii. 13, 6; Tac. *Ann.* i. 80), their holders having fixed salaries from the imperial treasury (Dio Cass. lii. 23, 1). The imperial provinces all involved military commands; and hence the legati Caesaris wore the military dress and sword (Dio Cass. liii. 13, 6), which were not worn by the proconsuls of senatorial provinces. [A. H. G.]

PROPYLAEA (*προπύλαια*: also occasionally in the singular, *προπύλαιον*), properly the space before the gate, is the name usually applied to a porch or entrance of elaborate architectural construction. Thus it is applied by Herodotus to the "Pylons" of Egyptian temples (ii. 101, 121, &c.). The name is, however, by ancient writers used almost exclusively with reference to the great entrance of the Acropolis at Athens, built by the architect Mnesicles under Pericles (Plut. *Pericles*, 13; Suidas, *s. v.* &c.): this was begun in 437 B.C., and was provisionally completed in five years, though its original plan was never fully carried out, and though 2012 talents were spent. The Propylaea of Mnesicles took the place of an earlier building, of which the foundations and part even of the walls may still be seen. The kernel of the whole structure is a wall pierced by five doors. Of these the central is largest, and admits a carriage-way; the two on each side are raised upon five steps, as approached from the west; those at the extreme sides are smallest. The wall is of white Pentelic marble, with a base of black Eleusinian marble, such as may also be seen beneath other walls, columns, and windows in the Propylaea. On the east of this central wall, facing the Acropolis, was a Doric portico of six columns, projecting from two antae which terminate on the east the two walls which bound the entrance-way on the north and south: to the west of the five doors, there is between these two walls a rectangular court, of which the roof is borne by six Ionic columns in two rows parallel to the north and south walls; to the west of this, again, is a portico of six Doric columns, corresponding to that upon the east face: this west portico is flanked upon the north and south by wings, fronting one another with a face of three smaller Doric columns between antae. The north wing is complete, consisting of a small hall behind the columns and a large chamber opening by a door and two windows into the hall. This chamber contained pictures by Polygnotus and others (Paus. i. 22), and is therefore sometimes called, in modern works, the Pinacothece; no trace of appliances for fixing pictures to the wall has been found. The south wing was originally intended to match this, being, however, open to the west, to face the bastion with the temple of Νίκη: but for some reason, probably priestly objections to infringement on the temenos of Artemis Brauronia, the plan was curtailed. The north face was left as originally designed, but the N.W. corner anta with its architrave was left isolated, and the roof only continued as far as the third column towards the west: the southern portion also was omitted, and a wall built to enclose a portion only of the intended hall. The principal west portico was crowned by a pediment; above this rose a second pediment, resting on the central wall, of the same height as that over the east front. The north and south wings of the west front were covered by hip roofs running down to the western corner. These wings on the west were, in the original intention, to be overlapped by two great porticoes facing the east, and occupying the whole breadth of the hill: part of the foundations of these, as well as the antae to face their columns and the arrangements for their roofing, may still be traced, but they were never erected; nor were the blocks left rough in the stones of the completed walls, to facilitate transport and fixing, ever worked off.

Character of work.—The completed parts of the Propylaea offer perhaps the most perfect example, for execution and finish, of Doric architecture of the best period. The architrave is slightly curved, as usual; not so the stylobate, because it is cut in the middle of the two principal fronts by the road, which also necessitates an exceptionally broad intercolumniation in the middle. The Ionic columns of the central hall have the most perfect specimens of the Attic Ionic capital, and served as a pattern for later examples. They are of a quite different character from those of the Erechtheum. The Propylaea are entirely without architectural sculpture. They contained, however, the statue of Hermes Propylaeus and the Charites of Socrates.

Approach.—The sacred way led from the south side of the Acropolis close under the bastion on which stands the little temple of Νίκη ἄπτερος: thence in the earliest times in a zigzag track first to the S.W. corner of the north wing (where the pedestal of Agrippa was afterwards erected), and thence to the central gate. In Pericles' time the direction was still the same, though the road was terraced up to a higher level. A broad flight of steps, with a roughed path for beasts in the middle, was added in later Roman times. The present steps are modern, and at a lower level. Probably the approach was shut off on the west by a wall, which formed the real barrier, at the foot of the slope; that now visible in this position, with a gate, is of late construction.

Imitation.—A work of such wide fame naturally gave rise to imitations; the best known are the two, the smaller and the greater, at Eleusis. Pausanias (ii. 3) also mentions one at Corinth.

(Bohn, *Die Propyläen du Akropolis zu Athen*, Berlin and Stuttgart, 1882, where earlier authorities will be found; Dörpfeld, in the *Mittheilungen d. deutschen Institut zu Athen*, 1885, x. 38 ff., 131 ff., where the original plan of Mnesicles is discussed; Penrose, *Principles of Athenian Architecture*, London, 1888; a good short account in Baumeister's *Denkmäler des klassischen Altertums*, pp. 1414–1422, with plans and elevations after Bohn and Dörpfeld.) [E. A. G.]

PROSCE'NIUM. [THEATRUM.]

PROSCLE'SIS. [DIKE.]

PROSCRI'PTIO. The word *proscriptio*, signifying primarily the "writing up" of anything, was generally used to denote a written public notice of sale; *proscriptio bonorum* was thus applied to the notice of property sold by auction: and amongst goods disposed of in this way would be the confiscated goods of persons who were declared public enemies by the state. It was this last meaning, that of the sale of goods forfeited by the outlawry of their possessors, that became specially attached to the word after the occupation of Rome by Sulla in 82 B.C. Since, however, a decree of outlawry by the state included not only the forfeit of property, but the forfeit of life ("de capite civis et de bonis proscriptio," Cic. *pro Sest.* 30, 65), the word involved both significations; and the special connotation that attached to it was that of the absence of all protection to the lives of persons so outlawed, who were themselves called *proscripti*. Sulla was the first to "proscribe" in this new sense, and to make a declaration of outlawry against political enemies a definite political measure (Vell. ii. 28, 3; App. *Bell. Civ.* i. 95). The form which the measure took was the posting up of a list setting forth the names of the victims, with certain decrees necessary for its execution attached. Thus this notice did not merely give the passive permission to take the lives of the persons so outlawed, which was recognised by the Roman law (Festus, s. v. *sacer*), but offered rewards, both for information which might lead to their death, and for their execution at the hands of either citizens or slaves; while it imposed penalties on those who should seek to protect them (App. *Bell. Civ.* i. 95). This proscription of large numbers of Roman citizens by Sulla, although an act of individual policy, and in part perhaps an act of vengeance, was yet supported by a political pretext. This was a declaration that they were *hostes*, or enemies to the state, through their complicity with its foreign foes; and enemies besides that had forfeited all claims to protection, through the breach of the covenant that Sulla had made with the consul Scipio, and which, he maintained, bound all the Marian party. All connivance with his enemies subsequent to the date of this treaty was sufficient to place a man's name on the list (App. *ib.*), and the confiscation of property was applied not only to those proscribed at Rome, but to all who had fallen in the ranks of his opponents (Cic. *pro Rosc. Amer.* 43, 126). The fact that those proscribed were regarded as *hostes* naturally affected the status of their children and descendants who suffered a *capitis deminutio.* This loss of status was not rigorously carried out, however, and they were only disfranchised for certain purposes which were specified (Plut. *Sulla,* 31). They were debarred from all public offices in the state, but yet not entirely degraded from their social position, for one of the ordinances declared that the sons of senators, while excluded from the privileges of their order, should yet undertake its burdens (Vell. ii. 28, 3). They seem also to have been forbidden certain private rights, such as the acceptance of legacies; and the spirit, if not the letter, of the law that sanctioned Sulla's arrangements seems even to have cut them off from all active assistance at the hands of their fellow-citizens (Cic. *in Verr.* i. 47, 123). The effect was to debar them as far as possible from all chances of a public career ("a republica summoveri," Cic. *ap.* Quinct. ii. 1, 85), which, considering the hereditary policy of Roman houses, was no doubt the deliberate design of Sulla, to further the permanence of his constitution. The authorities on the Sullan proscriptions agree generally that the proscription list was published before the dictatorial power was conferred on Sulla (Plut. *Sulla,* 32; App. *Bell. Civ.* i. 97). When it was conferred, a retrospective sanction was given to his acts, and a special clause granted him the power to adjudicate on the lives and property of the citizens (Plut. *ib.*; Cic. *de Leg. Agr.* iii. 2, 7). The law which conferred these powers on Sulla was the Lex Valeria, passed by the interrex L. Valerius Flaccus (App. *Bell. Civ.* i. 98): a law, however, which was so entirely the work of Sulla, and so intimately bound up with his own subsequent legislation, that Cicero calls it indifferently the Lex Valeria or Cornelia (Cic. *in Verr.* i. 47, 123). These acts may, however, have received a further legal sanction from Sulla himself, and Cicero's language rather implies that they did (Cic. *ap.* Quinct. ii. 1, 85). The legality of these regulations was never questioned; Cicero, while affirming their injustice, never doubts their legality (*de Leg.* i. 15): and the disabilities imposed on the children of the proscribed still remained in force after many of Sulla's laws had been repealed, and was the one point in his legislation which neither the democratic nor the moderate aristocratic party ventured to assail. The number actually put to death in the Sullan proscriptions is variously given: subsequent additions were continually being made until the list was complete (App. i. 95; Plut. *Sulla,* 31), but the total of 4,700, that is given by Valerius Maximus (ix. 2, 1), of which 2,000 were senators and equites, is probably not above the mark. This proscription of Sulla was merely the legalised form of the massacre and confiscation which his opponents, the Marians, had conducted in a hardly less destructive, though more informal, manner. It was no doubt regarded by its author as necessary to his work of re-organisation; and was almost an inevitable result of the first use of the military power for this purpose. So far as it was a necessity of the times, it was rendered so by the absence of the punishment of death in Roman law, and by the growing extent of the Roman Empire, which rendered the exiling of opponents useless and even dangerous. In Sulla's case it was rendered more desirable by the necessity he was under of raising revenues to recompense his soldiers. After Sulla it was regarded as the natural, and almost necessary consequence, of any violent restoration. Had Pompey been victorious in the civil war, his victory would almost certainly have been followed by a proscription (Cic. *ad Att.* ix. 10, 6; xi. 6, 2); while the same fears were entertained, by the moderate party at Rome, of the probable conduct of Caesar, if he became master of the city (Cic. *ad Att.* ix. 7, 5; x. 8, 2). The assassination of Caesar by those whom he had spared gave an impetus to the next proscription, and a plausible excuse for its advisability (App. *Bell. Civ.* iv. 8). The precedent set by Sulla was taken up with still more vigour by the triumvirs Antony, Octavian, and Lepidus, in 43 B.C. (Suet. *Oct.* 27; App. *Civ. Bell.* iv. 5). The number of the upper classes now proscribed exceeded that of Sulla. For the party chiefly aimed at by the triumvirs was that of the *optimates* (*οἱ δυνατοί*, App. iv. 5), the strict constitutional party, whose power it was necessary to break down; and accordingly 2,000 equites and 300 senators were in the list. The proscription was carried out from motives of personal hatred, except perhaps on the part of Octavian, quite as much as from such considerations of political necessity as were recognised by Sulla. The motive of raising money by confiscation was still more present in this proscription, while private enmity and private greed played a large part in it (App. *Bell. Civ.* iv. 5). But in other respects this second proscription was directed by stricter adherence to the forms of law. It did not definitely commence until the triumvirs had been invested with their extraordinary powers *reipublicae constituendae* (Liv. *Ep.* 20, 24; App. *Bell. Civ.* iv. 7), although a preliminary proscription of sixteen persons, amongst whom was Cicero, had been carried out by the consul Pedius, on a mandate from the triumvirs. In other respects the proscription resembled that of Sulla, and was directed by the same supposed necessities, but, in that it aimed more definitely at the dissolution of a specific party in the state, its effects were more permanently felt; it assisted in destroying a section of the community that had united interests opposed to those of the rising monarchy (Tac. *Ann.* i. 2, 1). [A. H. G.]

PROSTAS. [Domus, Vol. I. p. 662 *b.*]

PROSTATES. [Libertus; Metoeci.]

PRO'STATES TOU DEMOU (*προστάτης τοῦ δήμου*) "denotes the leader of a popular party, as opposed to an oligarchical party (see Thuc. iii. 70 [82], iv. 66, vi. 35), in a form of government either entirely democratical, or at least in which the public assembly is frequently convoked and decides on many matters of importance." (Grote, *Hist. of Gr.* vii. p. 304 n.) Its meaning is practically the same as *δημαγωγός* (Stephan. Byz. *δῆμος· δημαγωγὸς ὁ προεστηκὼς δήμου*: cf. Plat. *Rep.* viii. p. 565 C. *οὐκοῦν ἕνα τινὰ ἀεὶ ὁ δῆμος εἴωθε διαφερόντως* προίστασθαι ἑαυτοῦ: thus Pericles, whom Thucydides (i. 127) describes as δυνατώτατος τῶν καθ' ἑαυτὸν καὶ ἄγων τὴν πολιτείαν, is called δημαγωγὸς by Isocrates (*de Pace*, § 126; *de Permut.* § 234), and προστάτης τῆς πόλεως by Xenophon (*Memor.* i. 2, 40). Thucydides applies the word to Theramenes (viii. 89; cf. viii. 65, 'Ανδροκλέα—τοῦ δήμου μάλιστα προεστῶτα, and vi. 28, 'Αλκιβιάδῃ ἐμποδὼν ὄντι σφίσι μὴ αὐτοῖς τοῦ δήμου βεβαίως προεστάναι), Xenophon to Archidemus (*Hellen.* i. 7, 2; cf. Aristoph. *Ran.* 417), Aristophanes (*Ran.* 569) to Cleon, Plutarcy (*Cim.* 15) to Ephialtes, Aeschines (*F. L.* § 176) to Thrasybulus and Archinus, etc. And just as the person who had placed himself at the head of the people was called προστάτης τοῦ δήμου, the most influential member of the senate might be said to be προστάτης τῆς βουλῆς (Dem. *c. Androt.* p. 591, *argum.*).—In O. Müller's opinion (*Dorians*, ii. p. 149) προστάτης was also the title of a particular magistracy which existed in all the Dorian states in which the government was democratical, and G. C. Müller (*de Corcyr. Rep.* p. 49 ff.) considers as public officers the προστάται τοῦ δήμου in Corcyra (Thuc. iii. 70, 75; iv. 46), in Megara (Thuc. iv. 66), in Elis (Xen. *Hellen.* iii. 2, 27, 30), in Mantineia (*ibid.* v. 2, 3), in Argos and Heraclea (Aen. *Pol.* 11), in Syracuse (Thuc. vi. 35). Wachsmuth (*Hell. Altert.* i. 2, p. 435 ff.), on the other hand, thinks that the term is a general one, sometimes implying a particular office and sometimes not, but that even in the former case the title of the magistrate was not δήμου προστάτης, but something else, such *e.g.* as δημιουργός, which is lost to us in the general appellation. Wachsmuth is no doubt right in denying that the term always denoted a particular officer; thus Athenagoras was evidently not one, as the connexion shows: ἐν τῷ παρόντι πιθανώτατος τοῖς πολλοῖς (Thuc. vi. 35); but he goes too far in saying that προστάτης τοῦ δήμου was not the official title where a magistrate was denoted. That this was the case is evident from inscriptions; thus in a Tegean decree conferring proxenia there occur προστάται τοῦ δάμου, three in number, στραταγοί (eleven), ἵππαρχος, γραμματεύς, and ἱερεὺς τῆς 'Αθηνᾶς (Dittenberger, *Syll. I. Gr.* No. 317), and Sauppe (*Comm. de Tit. Tegeat.* p. 4) expresses an opinion that in Argos too it was the title of a magistrate. Προστάτης was the official title of functionaries of the most different kinds. The Chaonians, whom Herodotus (ii. 56, v. 127) considers as Hellenic, whilst Thucydides (ii. 80) calls them βάρβαροι, had in the time of the Peloponnesian war two presidents (ὧν ἡγοῦντο ἐπ' ἐτησίῳ προστασίᾳ ἐκ τοῦ ἀρχικοῦ γένους Φ. καὶ Ν., Thuc. *l. c.*), whilst other tribes of Epirus, such as the Molossians, had kings; when afterwards these tribes were united probably by Tharypas ("primus leges et senatum annuosque magistratus et rei publicae formam composuit," Justin. 17, 3; cf. Plut. *Pyrrh.* 1). προστάται were the annual magistrates of the single tribes under the king, *e.g.* of the Molossians: ἐπὶ προστάτα Λευχάρου . . . . ἔδοξε τοῖς Μολοσσοῖς (Dittenberger, No. 322); ἐπὶ βασιλέος Νεοπτολέμου 'Αλεξάνδρου, ἐπὶ προστάτα Δέρκα Μολοσσῶν (*l. c.* No. 324), and these προστάται continued even after the abolition of royalty, *e.g.* στραταγοῦντος 'Απειρωτᾶν Λυσυνία Καρώπου προσστατεύοντος Μολοσσῶν 'Εχελάου Παρώρου (*l. c.* No. 442; cf. No. 443).—The symmories of Teos (which were analogous rather to the *gentes* than to the phratries of Athens, as Grote suggests, *Hist. of Gr.* iii. p. 186) had each four προστάται, who held office one year (*C. I. G.* No. 306).—In some states the προστάται seem to have been a kind of executive of the βουλή, analogous to the Athenian πρυτάνεις, who drew up the decrees: thus in Calymna the decrees of politeia are usually headed, ἔδοξε τᾷ βουλᾷ καὶ τῷ δήμῳ, γνώμα προστατᾶν (*Brit. Mus. Gk. Inscr.* ii. No. 232, 233, 235, etc.); a decree of the people of Cnidus which appears to relate to the purification of a temple of Dionysus begins, ἔδοξε Κνιδίοι[ς γν]ώμα προστατ[ᾶν] (Newton, *Halicarn., Cnid. and Branch.*, p. 753, No. 36); γνώμα προστατᾶν stands in the heading of a decree of Cos about the public proclamation of a crown, etc. (Cauer,[2] No. 165). In Calymna the προστάται were charged with inscribing decrees and setting them up (*Brit. Mus. Inscr.* ii. No. 242); they had to assign by lot the new citizens to the phylae and demi (*ibid.* No. 242, 253), and kept the public seal (*ibid.* No. 299), just as the ἐπιστάτης τῶν πρυτανέων at Athens. In the decree of Iulis concerning the export of red ochre, denunciations of those contravening were to be made to the προστάται (*C. I. A.* ii. No. 546 = Hicks, *Manual*, No. 108), just as the impeachment against the corn-dealers was in the first instance laid before the πρυτάνεις at Athens (Lys. *adv. Frument.*). In other states, however, the προστάται had apparently different functions. Thus in Iasus, where πρυτάνεις were the executive of the senate, they were in Hicks' opinion "a board concerned with the admission of strangers to the citizenship, and the keeping of a register of citizens" (*Journ. Hell. Soc.* viii. p. 107). Hence the προστάται were enjoined in a decree (γνώμη πρυτανέων) to bring a proposal before the βουλή for the admission of certain strangers of Priene to citizenship (*Brit. Mus.* iii. 1, No. 420; cf. the Iasian decree in *Journ. Hell. Soc.* viii. p. 112, where the προστάται and στρατηγοί together propose the grant of honours to Teleutias), and were charged in another decree (*C. I. G.* No. 2676) to select the place where a decree of politeia should be inscribed (cf. *C. I. G.* No. 2008 = Hicks, *Manual*, No. 98, Amphipolis); hence they had to seal the boxes supplied to the six νεωποῖαι (one from each tribe), who collected the vouchers of those who attended the popular assembly, the προστάται at the close of the meeting examining the vouchers and authorising the payment of the *ecclesiasticon*. In a Thasian decree, too, a προστάτης is mentioned, who is evidently concerned with the restoration of outlawed members of the oligarchical party to civic rights upon their return (*Journ. Hell. Soc.* viii. p. 401 ff.), and Newton (*Brit. Mus.* ii. p. 114) sees in the προστάται τοὶ σὺν Χαρίνῳ in a Rhodian inscription a board "whose function was to take care of strangers and of those who had no civic rights," and similarly explains the fifteen προστάται in the epigram on the base of a statue of Hermes found by him at Cnidus (*Halicarn., Cnid. and Branch.*, p. 749, No. 31), though the Cnidian inscription No. 36 (referred to above) would rather point to προστάται having had the function of the Athenian *πρυτάνεις*.—A decree of Dyme conferring citizenship mentions a *βούλαρχος*, a *προστάτας*, and a *γραμματιστὰς δαμοσιοφυλάκων* (Dittenberger, No. 316=Cauer,^{2} No. 267): here *προστάτας* seems to denote the president of the popular assembly, just as two *προστατεύοντες τῆς ἐκκλησίας* occur in an inscription from Hypata (Rhangabé, No. 748). Two *προστάται* presided over the council (*συνέδριον*) of the Aetolian league (Rhangabé, No. 692 =Cauer,^{2} No. 239 *sub fin.*). (Gilbert, *Staatsalterth.* ii. *passim.*) [H. H.]

PROSTIME'MA (*προστίμημα*). [TIMEMA.]

PROSTO'ON. [DOMUS, Vol. I. p. 662.]

PROSTY'LOS. [TEMPLUM.]

PRO'THESIS. [FUNUS.]

PROTHE'SMIA (*προθεσμία*) means generally an appointed time: thus in Aeschin. *c. Tim.* § 39, *εἴ τις ἄλλη πώποτε τοιαύτη γέγονε προθεσμία*, the scholiast explains the term *καταχρηστικῶς ἀντὶ τοῦ χρόνου*. The term is specially applied (1) to the time which was allowed by law to a defendant for paying damages, after the expiration of which, if he had not paid them, he was called *ὑπερήμερος* (Harpocr. *s. v.*; or *ὑπερπρόθεσμος*, Suid. *s. v.*; or *ἐκπρόθεσμος*, Schol. Dem. *c. Mid.* p. 540, 22); the accuser might allow the defendant a longer time than the law fixed (*ἀναβάλλεσθαι τὴν ὑπερημερίαν*, [Dem.] *c. Everg.* p. 1154, § 49 f., etc.).

(2) Prothesmia denotes the term limited for bringing actions and prosecutions at Athens. In all systems of jurisprudence some limitation of this sort has been prescribed for the sake of securing possession, and preventing vexatious litigation (cf. Isocr. *Archid.* § 26, *τὰς κτήσεις καὶ τὰς ἰδίας καὶ τὰς κοινάς, ἂν ἐπιγένηται πολὺς χρόνος, κυρίας καὶ πατρῴας ἅπαντες εἶναι νομίζουσιν*). The Athenian *τῆς προθεσμίας νόμος* corresponds to our Statute of Limitations. The time for commencing actions to recover debts,[*] or litigation with guardians, appears to have been limited to five years at Athens (Dem. *pro Phorm.* p. 952, § 26 f., in a *δίκη ἀφορμῆς*—*c. Nausim.* p. 989, § 17 f.; p. 993, § 27; cf. Plat. *Legg.* xi. p. 928 C, *μέχρι πέντε ἐτῶν ἐξηκούσης τῆς ἐπιτροπῆς ἔστω δίκην λαχεῖν ἐπιτροπίας*). Inheritance causes stood on a peculiar footing. When an estate had been adjudged to a party, he was still liable to an action at the suit of a new claimant for the whole period of his life (Isae. *Dicaeog.* §§ 7, 35, etc.) and his heir for five years afterwards (Isae. *Pyrrh.* § 58, and Schömann *ad l. c.* p. 257 and p. 432; cf. Dem. *c. Macart.* p. 1055, § 16, *lex*). We do not know the limit of time for claiming an *ἐπίκληρος* who had been already adjudged by the archon, but Caillemer's suggestion is very probable that she could not be claimed after having given birth to a son (*Le Droit de Succession Légit.* p. 42). The liability of bail continued only for a year, according to Dem. *c. Apatur* p. 901, § 27 (*τὰς ἐγγύας ἐπετείους εἶναι*); Caillemer (*La Prescription*, etc. p. 18 ff.) limits this law to commercial transactions, and Thalheim (*Rechtsaltert.* p. 92, n. 2) quotes *C. I. A.* ii. No. 565, l. 3, No. 1056, No. 1058, l. 20, to show that the liability of sureties for leases continued longer.[*] It is doubtful whether any period was prescribed for bringing criminal prosecutions,[†] at least for offences of the more serious kind, though of course there would be an indisposition in the jury to convict, if a long time had elapsed since the offence was committed. A charge of wounding with intent was brought four years after the affair (Lys. *c. Sim.* §§ 19, 39); Lycurgus proceeded against Leocrates nearly eight years after the latter's flight; we know from Lys. *pro Sacra Olea*, § 17, that there was no fixed time after which the liability of one who had uprooted a moria ceased, but on the other hand Lipsius concludes from Dem. *c. Aristocr.* p. 646, § 80, that there was a limit of time in a *γραφὴ φόνου*. The *γραφὴ παρανόμων* could only be brought against the proposer of a law or psephisma within a year after the propounding of it (Dem. *c. Lept.* p. 501, § 144; cf. *argum.* p. 453); and the *εὔθυναι* against magistrates were limited to a certain period (Pollux, viii. 45), viz. thirty days according to Boeckh, *Sth.* i.^{3} p. 242. (*Att. Process*, ed. Lipsius, p. 963 ff., p. 838 ff.) [C. R. K.] [H. H.]

PRO'THYRON. [DOMUS, Vol. I. p. 661.]

PROTRYGAEA (*προτρύγαια*), a festival celebrated in honour of Dionysus and Poseidon (Hesych. *s. v.*; Aelian, *V. H.* iii. 41; cf. *θεοὶ προτρύγαιοι*, Poll. i. 24). The origin and mode of celebration of this festival at Tyre are described by Achilles Tatius (ii. *init.*). On the association of Poseidon, see Plut. *Symp.* 5, 1; Preller, *Gr. Myth.* i. 554. [L. S.] [G. E. M.]

PROVI'NCIA. This term had originally no geographical signification, but denoted the functions prescribed for a Roman magistrate by law, custom, or agreement (e.g. *urbana provincia*, Liv. xxxi. 6). Whether it is derived from *provincere* (as is suggested by Festus) or is an abbreviated form of *providentia*, is a moot point among scholars and need not be discussed here. Naturally enough it was employed to express a hostile district or territory assigned to a Roman general as the field of his operations, and thence acquired its special geographical meaning as a country outside Italy under Roman dominion and governed by a magistrate of Rome.

The Roman State, in its complete development, consisted of two parts with distinct organisations, Italy and the Provinces. Its provincial dominions commenced with Sicily, which became a Roman province B.C. 241 (Cic. *in Verr.* ii. 1, 2): Sardinia was added six years later, and the two Spains B.C. 179: by the time at which the Republic gave place to the Empire the Roman sway had been extended over Gaul, Illyricum, Macedonia, Greece, parts of Africa, and most of Asia: in B.C. 50 there were fourteen provinciae, a list of which is given by Mr. Watson in his edition of Cicero's Letters, p. 287, note. The

---

[*] In king Antigonus' letter to the Teians one year is fixed as limit (Dittenberger, *Syll. I. Gr.* No. 126, l. 38 ff.; Hicks, *Manual*, No. 149 A, § 7).

[*] For Ephesus, see Dittenberger, *Syll. I. Gr.* No. 344, l. 42 ff.; cf. the Lebadean building contract, *ibid.* No. 353, l. 25 ff. In Heraclea bail is renewed every five years (*C. I. G.* No. 5774, l. 140=Cauer,^{2} No. 40, l. 140).

[†] In a Teian inscription (Dittenb. No. 349, l. 50 ff.) misappropriation of certain public moneys is put on a level with *ἱεροσυλία*, and consequently *προθεσμίᾳ δὲ μηδὲ ἄλλῳ τρόπῳ μηθενὶ ἐξέστω τῶν δικῶν τούτων μηδεμίαν ἐγβαλεῖν*.

organisation of a new territory, on its conquest, did not proceed upon uniform and inflexible lines. The conquering general as a rule sketched its main principles, subject to the approval of the senate (Plut. *Marcell.* 23; Appian, *de Bell. Civ.* ii. 9), though in very important cases the latter sent a commission of its own members, usually ten in number, with instructions for his guidance (Liv. xlv. 17; Appian, *de reb. Hisp.* 99, *de reb. Pun.* 135; Sallust, *Jug.* 16; Plut. *Lucull.* 35, 36). The *forma provinciae* was thus given either by a magisterial decree issued by the commanding consul or other magistrate in virtue of his imperium, or by a senatusconsultum, which in both cases was loosely known as a *lex* and named after its immediate author. The first regulations for Sicily, for instance, were made by Marcellus (Liv. xxv. 40), but more comprehensive and minute provisions were laid down B.C. 131 by P. Rupilius (Cic. *in Verr.* ii. 16, 39; Val. Max. vi. 9, 8): similarly we read of a Lex Pompeia in Pontus and Bithynia (Plin. *Ep.* x. 83, &c.), a Lex Lentuli in Cyprus (Cic. *ad Fam.* xiii. 48), and a Lex Mummia in Achaia. The arrangements made by such ordinances concerned primarily the fields of finance and judicature, and invariably comprised a very minute division of the country into districts for purposes of taxation. But when they had secured themselves against rebellion by extinguishing leagues and combinations which might endanger their supremacy, and provided for the collection of the revenue, the Romans, so far as they found it possible, left pre-existing institutions intact. In Sicily, for instance, the Lex Hieronica, the judicial and financial regulations established by Hiero the ally of Rome, were maintained in their entirety, and no Roman governor, according to Cicero (*in Verr.* iii. 6, 12–15), was known to violate them till the time of Verres. [DECUMAE.] The same policy was followed in Egypt (Marquardt, *Röm. Staatsverwaltung*, i. 279–296) and in the Greek East. It is of the organisation of Sicily that we have the fullest knowledge, from the large notices of the subject in the Verrine orations of Cicero. The island was divided into an eastern and a western district, with Syracuse as the capital of the former and Lilybaeum of the latter: a quaestor resided at each, receiving from the Roman Aerarium the sums necessary for the administration of his district, and collecting the taxes, except those which were let out by the censors at Rome. The towns were not all treated in the same manner. Messana, Tauromenium, and Netum were made FOEDERATAE CIVITATES and retained their land. Five other cities, among them Panormus and Segesta, were "Liberae et Immunes,"—that is, they paid no tithe; but it does not appear whether they were free from the burdens to which the *foederatae civitates* as such were subject by virtue of their *foedus* with Rome. Seventeen conquered towns forfeited their land, which was restored (as Possessio, not in absolute ownership) on condition of their paying the *decumae* and *scriptura*. The towns which paid tithe were called by the general name of Stipendiariae. The settlement of the municipal constitutions of the towns was generally left to the citizens; but in some instances, as in that of C. Claudius Marcellus and Alesa, a constitution was given by some Roman, at the request, as it appears, of the town. The Senate and the People still continued as the component parts of the old Greek cities. Cicero (*in Verr.* ii. 55, 137, &c.) mentions a body of 130 men, called Censors, who were appointed to take the census of Sicily every five years after the Roman fashion. The island was also bound to furnish and maintain soldiers and sailors for the service of the state, and to pay *tributum* for the carrying on of wars; and Rome also appropriated the Portoria or harbour dues, which were let out to persons in the metropolis to farm. The governor might take provisions for the use of himself and his cohors on condition of paying for them. In the condition of the two Spanish provinces there was greater diversity. Pliny (*H. N.* iii. § 7) mentions Coloniae, Municipia or Oppida Civium Romanorum, Latini veteres or towns "Latio antiquitus donata," Foederati, and Oppida Stipendiaria. The distribution of the provincial territory into *fora* or *conventus* for judicial purposes, which is spoken of below, seems to have sometimes caused great confusion, especially in the East. Strabo remarks (xiii. p. 629) that the boundaries of Phrygia, Lydia, Caria, and Mysia were confused, and that the Romans had added to the complication by not attending to the subsisting national divisions, but making the administrative divisions (*διοικήσεις*) different, in which are the Fora (*ἀγοράς*, MS.) and the administration of justice. The word *ἀγορὰ* probably represents *conventus* (as to the reading, see Casaubon's note).

The first provincial governors were praetors specially created for the purpose, in addition to the two praetors who administered justice at Rome (Liv. *Epit.* 20). They held office for a year only, except in Spain, where a Lex Baebia for some while extended their tenure of it to two years. Between the settlement of Spain and the Sullan reforms five new provinces were created, viz. Macedonia, Africa, Asia, Narbonensis, and Cilicia, and the government of these was provided for by "proroguing" for a year the imperium of the consuls and the two praetors whose functions properly lay in the city, two ex-consuls and two ex-praetors being thus annually available for provincial command. The "prorogation" was effected by a special plebiscitum. The Lex Sempronia of C. Gracchus (Cic. *de Prov. Cons.* 2 and 7; *pro Balb.* 27, 61) enacted that the senate should each year determine before the election of the consuls what provinces they were to govern, the object of this being to prevent intrigue and favouritism. Sulla added two praetors to the six already in existence, and enacted that all of them should administer justice in the city during their proper year of office: the provinces, of which there were now ten, were thus in future governed by proconsuls and propraetors, the two former as a rule obtaining those in which the largest number of troops was required (Liv. xli. 8). The exact province of each was determined by lot, though the distribution was sometimes arranged by agreement among the persons entitled to them. Sulla's statute made these governorships strictly annual, and required the holder to leave the province within thirty days after the arrival of his successor (Cic. *ad Fam.* iii. 6); but the first of these rules was practically infringed by the extraordinary commands conferred successively on Pompey and Caesar, and by the failure of the senate to provide a successor in time: thus Verres, Fonteius, and Q. Cicero were three years each in Sicily, Gaul, and Asia respectively (Cic. *Div. in Caec.* 4, 11; *pro Font.* 10, 32; *ad Qu. Frat.* 1, 1). A law of Pompey (Sueton. *Jul.* 28; Dio Cass. xl. 56), passed B.C. 52, enacted that provinces should be given only after an interval of five years from a man's original tenure of office in Rome: this was re-enacted by Augustus after its repeal by Julius Caesar (Dio Cass. xlii. 20, liii. 14), who also ordained that a consular province should be held for two, a praetorian for one year only (Cic. *Phil.* i. 8, 19; ii. 42, 109, &c.; Dio Cass. xliii. 25). The governor might not leave Rome until he had been invested with the imperium in the ordinary manner, and had offered the usual prayers and sacrifices (Cic. *ad Fam.* i. 9, 25; *in Verr.* v. 13, 34; Caesar, *Bell. Civ.* i. 6): he could display the insignia of his rank, especially the fasces, as soon as he was outside the city gates (Dio Cass. liii. 13), but might not exercise any actual powers until he reached his province (Dig. 1, 16, 1, 4, 6). When once he had arrived there, he united in his single person both civil and military authority. The first thing he did was to issue his edict, by which, like the praetor at Rome, he stated the rules of law which he intended to apply and enforce during his year's administration. To a large extent this was based on the *lex* by which the province had received its original constitution and on the edicts of the governor's predecessors (Cic. *ad Att.* v. 21, 11, vi. 1, 2; *ad Fam.* iii. 8, 4); but large portions of the Edictum Urbanum gradually crept into the provincial edicts, and the law of the provinces was thus slowly but steadily Romanised. Cicero, for instance, when proconsul of Cilicia, says that as to some matters he framed an edict of his own, and as to others he referred to the Edictum Urbanum, on which he proclaimed that he should base his decisions where no regulations of his own had been made (*ad Att.* vi. 1, 15); so, too, he observes (*in Verr.* i. 46, 118) that the rules established by the praetor urbanus as to inheritance had been regularly transferred into their annual edicts by the governors of Sicily long before the time of Verres. Other topics with which the edict of a provincial governor dealt were the position of the publicani, and the law of civil procedure, debt, and usury.

So far as we can judge from Cicero's Letters and from Caesar's work on the war in Gaul, the former of which in particular are a storehouse of information upon the affairs with which a provincial governor was occupied, he was principally engaged with matters military and judicial. At one time he was administering justice at various centres, at others he was busy with an army exterminating bands of robbers or reducing a rebellious population. Even when the province was in profound peace he would find enough to do, as commander-in-chief, in filling up his legions with fresh levies, or directing the arrangements for billeting his troops during the winter. But the less he was occupied with active military operations, the more time could he give to the administration of justice. For judicial purposes each province was divided into a number of departments called Fora or Conventus, which latter term also denoted the chief city or place "in quem conveniebant" as well as the assize or court over which the governor presided, and which was attended by the Romans who resided in the district, and generally by all persons who had any business to settle there. It may perhaps be doubted whether this organisation was at all precise during the republican period, though even then certain towns seem to have been regarded as centres where the governor might conveniently spend some time and hold a court (*forum* or *conventum agere*, Liv. xxxi. 22;—Cic. *in Verr.* v. 11, 28; *ad Att.* v. 16). Before the time of Gaius *conventus* had also acquired the meaning of the time during which the assize lasted (Gaius, i. 20). In Cilicia, during Cicero's administration, Tarsus and Laodicea were *conventus*; in Baetica there were four, in Lusitania five. The procedure in civil causes seems to have been much the same as that in vogue at Rome during the formulary period [ACTIO]; at least the governor appointed a judex or judices to try each cause, usually from the Roman citizens who attended the assize; for him to hear and decide the case in person, so far as we can judge from the instance of Verres, was considered improper or unconstitutional (Cic. *in Verr.* v. 9, 22). Within the free and allied towns the governor had not strictly any civil jurisdiction; they had their own law, their own courts, and their own municipal magistrates, though it not unfrequently happened that these privileges were set at nought. For instance, Cicero tells us (*in Verr.* ii. 22, 53) that Verres treated with contempt an apparently well-founded claim on the part of the citizens of Bidis in Sicily to have their legacy cases determined by their own municipal law. The relations between the jurisdiction of the governor and that of the local magistrates were usually defined by the Lex Provinciae: by the so-called lex of Rupilius, Sicilians who belonged to the same town had their disputes settled according to its laws: citizens of different towns had theirs decided by judices appointed by the governor: in case of differences between an individual and a community, the senate of any Sicilian town might act as judices, if the parties did not choose to have as judices the senate of their own town: if a Roman sued a Sicilian, a Sicilian was judex; if a Sicilian sued a Roman, the judge was a Roman: but no one could be judex who belonged to the governor's cohors. Disputes between the lessees of the tithe and the Aratores were decided according to the Lex Hieronica (Cic. *in Verr.* ii. 13, 32). By the Lex Rubria de Gallia Cisalpina the magistrates of the municipia were authorised to decide all civil suits in which the sum involved did not exceed 15,000 sesterces, and the same provision occurs in the Lex Julia municipalis. The governor's judicial assistance was also largely needed for the legitimation of certain dispositions, such as manumissions, adoptions, and emancipations (*jurisdictio voluntaria*). His criminal jurisdiction was in the nature of that exercised under martial law: he decided in person on the guilt or innocence of the accused, though under the advice of a consilium formed from the leading Roman citizens of the neighbourhood (Cic. *in Verr.* i. 29, 73; ii. 29, 71; v. 21, 55), and over a condemned criminal he had power of life and death, though if he were a Roman citizen he enjoyed the right of *provocatio* to the tribuni plebis, which enabled him to remove the matter to Rome (Plut. *Caesar*, 4).

The nature of the taxes paid by the provincial subjects of Rome has been alluded to in speaking of the organisation of Sicily, but this subject cannot be understood without some knowledge of the tenures by which land in the provinces was held. The general principle was that provincial soil belonged, as a whole, to the Roman state (*ager publicus*), and could not be owned *ex jure Quiritium* by individuals, but only "possessed" (Cic. *ad Att.* vi. 1, 12; Gaius, ii. 7). The great bulk of the taxes was levied on these "possessions" in the hands of the provincials, who from this point of view are termed *Stipendiarii;* though some of the *ager publicus* was differently treated, being either sold outright by the state, which imposed a nominal tax in order to show that it did not waive its right of property in the soil (*ager privatus vectigalisque*), or let out by the censors at Rome to tenants for life, who paid both *decumae* and *scriptura* (grazing tax, Varro, *de Re Rust.* ii. 1, 16). The tax levied on the Stipendiarii was either tithe (*decumae*) or stipendium. The first was not common, being found only in Sicily and Sardinia, and for some little while in Asia. The second was charged both on the land (*tributum soli*), in which case it was sometimes paid in money, as in Macedonia; sometimes in kind, as in Pontus and Cyrene; and on persons (*tributum capitis*), who were taxed on account of their incomes, trades, and professions. Besides these sources of income, the Romans derived large sums from the customs' dues (*portoria*), ship-money, mines, &c. No taxes were paid to the state by the free and allied towns, but this exemption does not seem to have extended to the Roman colonies and municipia or the "oppida Latio donata."

The practice of letting out the taxes to publicani to farm is well known, and it often happened that a firm of these capitalists engaged to pay the state a fixed sum per annum for five years in exchange for all the taxes of a province—vectigal, decimae, scriptura, portoria, &c. In such cases it would seem that the publicani paid the money over directly to the quaestors at Rome: but all taxes which were not farmed were collected by and paid to the quaestor of the province or its districts, an officer who was assigned to his province by lot, and not appointed by the governor. In theory the quaestor had the entire management of financial matters, though he was often largely interfered with by the governor, who decided, according to his own view of the local requirements, what sums should be transmitted to Rome, and who had power to remit taxation (Cic. *in Verr.* iv. 9, 20; *ad Fam.* iii. 7). Though properly a financial officer, he had jurisdiction in matters which fell under his official cognisance, like the aediles at Rome (Gaius, i. 6) and the early Exchequer authorities in England; and he had to give a full account of his receipts and expenditure on his return from the province (Cic. *in Verr.* i. 14, 36). After the passing of a Lex Julia (B.C. 61) the governor was bound to deposit two copies of his accounts in the two chief cities of his province, and to forward one (*totidem verbis*) to the Aerarium (Cic. *ad Fam.* ii. 17, v. 20; *ad Att.* vi. 7). The governor might even delegate his own powers to a quaestor, either *in toto* (*e.g.* Cic. *ad Att.* vi. 6, 3) or for a special purpose, such as the administration of justice (*e.g.* Suet. *Jul.* 7).

The *personnel* of a provincial administration comprised also (1) *legati*, of whom there were usually three in a consular, one in a praetorian province: they were appointed by the senate, very often on the nomination of the governor, who would entrust them with minor military commands or assign them a district to look after, with civil jurisdiction; (2) *comites*, appointed by the governor himself, and maintained at the public charge, presumably on the supposition that they discharged secretarial functions and employed their time in learning the business of administration; (3) *praefecti*, three in number, whom the governor seems to have employed principally as military lieutenants; and lastly a large miscellaneous body of lictors, praecones, scribae, haruspices, &c., whose duties are too unimportant to be here detailed.

Those who have read the Verrine orations of Cicero will remember what a gloomy picture he draws of the condition of the provinces under Roman rule. "It is difficult," he says in his speech for the Lex Manilia (c. 22), "to describe into what hatred we have been brought by the wrongdoing and lust of the governors whom we have sent among foreign peoples during these years." Pay was first attached to the office of proconsul or propraetor by Augustus (Dio Cass. liii. 15; Sueton. *August.* 36), so that under the Republic the governor had to pay himself as best he could during his tenure of power; and the boast of Verres recorded by Cicero (*in Verr.* iv. 1, 14) is ample proof that a magistrate whose conscience was not over-tender found numerous opportunities of filling his own pockets. The old rule that a governor and his retinue must pay for their lodging and entertaiment was seldom observed, and his progresses through the province, to say nothing of the Legationes liberae, entailed vast expenditure on its inhabitants: the extortions practised by himself and his subordinates were even outdone by those of the publicani, who farmed the taxes, and the negotiatores or money-lenders; and in many of the provinces, especially in Greece and Asia, protracted wars had inflicted miseries on the people from which they could hardly hope for recovery. Practically no remedy for all these evils was afforded by the nominal control of the senate, which had the right of deciding on the number of troops which a governor should have under his command, and of altering or overriding his policy, and which, if he did not follow its instructions, could refuse to sanction his arrangements, or to grant him a triumph or supplicatio even after a successful war. But, towards the end of the Republic, it is patent that, so far from controlling the provincial governors, the senate was itself ruled by such men as Sulla, Pompey, and Caesar. The strongest check upon the misconduct of a governor ought in reality to have been found in statutory enactments. A number of these (a Lex Valeria, a Lex Julia, and Leges Porciae) were designed to protect

Roman citizens residing in the provinces from ill-treatment by him. The Lex Calpurnia (B.C. 149), the first statute against *repetundae* or extortion, was followed by a Lex Acilia (B.C. 125) and a Lex Servilia (B.C. 111) dealing with the same offence, the former of which was especially severe; and the Lex Julia defined the requisitions which a governor might make upon the inhabitants of his province without payment. The laws on the subject of Majestas and Peculatus were also weapons which on occasion might be turned against governors who abused the trust confided to them. But when we consider the condition of things described to us by Cicero, we cannot but be struck by the smallness of the result obtained by prosecutions under these statutes. There can be little doubt that this is to be explained by the political use which was made of the judicia. Between the times of C. Gracchus and Sulla, while the knights were sole judges in criminal trials, their sympathies with the publicani would prejudice them against the cause of the provincials: the venality of the senators, whom Sulla substituted for the knights, was shameless and notorious, though according to Appian (*de Bell. Civ.* 122) not more so than that of the knights themselves: in any case the senate would do its best to screen a governor for whom it was itself mainly responsible, and whose condemnation would in a way condemn itself. Some improvement was perhaps effected by the Lex Aurelia (B.C. 46), which divided the judicia between the senators, knights, and tribuni aerarii: but it was in the Empire that the provincials first found relief from oppression, and redress for wrong inflicted on them by Roman magistrates.

In the year 43 B.C. Gallia Cisalpina ceased to be a province: it was incorporated with Italy, though the term Italia was sometimes improperly used to describe it even before this date (Caesar, *Bell. Gall.* i. 54, v. 1, vi. 44, &c.; Cic. *Phil.* v. 12, 31), and a new organisation was given to it by the Lex Rubria, by which in particular jurisdiction in certain classes of suits was conferred on the municipal magistrates [RUBRIA LEX]. With the establishment of the imperial power under Augustus a considerable change was made in the administration of the provinces, the control of some of which he reserved absolutely to himself, while the rest remained under the nominal management of the senate; this being the origin of the distinction drawn by Gaius (ii. 21) and others of the older jurists between those provinces which are "propriae populi Romani" and those which are "propriae Caesaris." The division was modelled in principle upon the older one between consular and praetorian provinces: the "Imperial" provinces were those in which the chances of invasion from without or rebellion within necessitated the presence of considerable forces, especially those which formed the frontiers of the Empire; those in which peace was assured were ostensibly left to the senate (Sueton. *August.* 47; Dio Cass. liii. 12, 14, liv. 4; Strabo, xvii. p. 840). Subject to frequent interchange of provinces (Tac. *Ann.* i. 76, 80; Sueton. *Claud.* 25; Dio Cass. lx. 24; Capitol. *Marc.* 22), these arrangements subsisted until the third century. Strabo, in the passage referred to, gives the division into provinces (ἐπαρχίαι) as constituted by Augustus. The provinces of the Populus (δῆμος) were two consular (ὑπατικαί) and ten praetorian provinces (στρατηγικαί); the rest of the eparchies, he says, belong to the Caesar. Lusitania is not enumerated among the eparchies of the Populus, and if it was a distinct province it must have belonged to the emperor. The list of provinces in the "Demonstratio Provinciarum" (*Mythog. Vat.*, Bode) mentions the province of Asturia et Gallaeca Lusitania. Dio Cassius (liii. 12) states the distribution of the provinces by Augustus thus: the provinces of Africa, Numidia, Asia, Hellas (Achaia), with Epirus, Dalmatia, Macedonia, Sicilia, Crete with the Cyrenaica, Bithynia with Pontus, Sardinia and Baetica, belonged to the senate and people (δῆμος and γερουσία). Tarraconensis, Lusitania, all Gallia, Coele Syria, Phoenice, Cilicia, Cyprus, and Egypt belonged to Augustus, who afterwards took Dalmatia from the senate and gave it Cyprus and Gallia Narbonensis in exchange, while Tiberius appropriated Achaia and Macedonia without any compensation (Tac. *Ann.* i. 76), though they were restored by Claudius (Sueton. *Claud.* 25). Bithynia became definitely imperial under Hadrian. The *provinciae populi* were administered for one year according to usage (Dio Cass. liii. 12, 14; Strabo, *loc. cit.*; Sueton. *August.* 4) by the old republican magistrates; two of them, viz. Africa and Asia, by ex-consuls; and the rest by ex-praetors. The two oldest consulares cast lots for the consular, the praetors also by seniority for the praetorian provinces, though the title of proconsul belonged generally to these governors without reference to the offices which they had actually held at Rome (Dig. 1, 16). They enjoyed imperium, including unlimited jurisdictio, and the administration of justice must have been their main business, as owing to the nature of the case their military duties must have been quite inconsiderable. In the "provinciae Caesaris" the emperor was himself proconsul, but conducted their government through lieutenants, a "legatus Augusti pro praetore" having in effect the same power and authority here as a proconsul in the provinces of the people (Dig. 1, 18). These legati were selected by the emperor from those who had been consuls or praetors (whence they were called *consulares* or *praetorii*) or sometimes from senators of less rank (*e.g.* Dio Cass. liii. 13: Appian, *de reb. Hisp.* 102; Sueton. *August.* 23): they held their office at the emperor's pleasure, being mere delegates of his authority. Thus Agricola governed Aquitania for three years, in accordance with Maecenas' advice to Augustus (Dio Cass. liii. 23); but Galba was in Spain eight years (Plut. *Galba*, 4), Sabinus in Moesia seven, and Silius in Gaul apparently at least ten (Tac. *Ann.* i. 31, iv. 18). The theory of delegated authority was not, however, consistently observed; the jurisdiction of a legatus, for instance, not being regarded as *mandata*, but as belonging to him independently, so that he could himself delegate it to one of his subordinates (Dig. 1, 21, 5, pr.). These imperial governors are in the inscriptions always designated as "legati pro praetore;" but when not viewed as the emperor's agents, they were termed "provinciarum praesides" (Sueton. *August.* 23, *Tib.* 42; Vopisc. *Prob.* 13; Dig. 1, 18, 8, 20, 1, 16, 9, 6); like the praefectus urbi or praetorio, they were magistrates, but magistrates of the princeps, not of the populus (Dig. 4, 2, 3, 1), though it is true that as all the provinces tended more and more to fall under the emperor's direct control the term *praeses* came to be applied also to the governors of senatorial provinces (Dig. 1, 18, 1; Sueton. *Claud.* 17; Lamprid. *Alex. Sever.* 46). No quaestors were sent to the Imperial provinces, in which the functions entrusted to these officers in districts administered on the old system were discharged by "procuratores Caesaris" (Dig. 1, 19), selected from the knights or the emperor's freedmen, who had jurisdiction in financial matters (Cod. 3, 13, 1): and such procuratores are even found in provinces of the people for the purpose of guarding the interests of the Fiscus in connexion with inheritances, legacies, &c., where too they had in such concerns a jurisdiction concurrent with that of the proconsul. Sometimes an unimportant province, or an outlying portion of a considerable one, was governed by a procurator with the powers of an ordinary governor, as *e.g.* Judaea by Pontius Pilate (Joseph. *Ant. Jud.* xvii. 13, 5; xviii. 1, 1, &c.). Egypt received a peculiar organisation from Augustus (Tac. *Hist.* i. 11; Dig. 1, 17). He placed it under the government of a praefectus Augustalis, who took the place of the Egyptian king with the powers of a Roman magistrate; but the old division of the country into *νομοὶ* administered by native *νόμαρχοι* was retained (Plin. *H. N.* v. § 49), and a special magistrate for judicial purposes called *juridicus*, with the powers of a provincial governor, was assigned to Alexandria.

But notwithstanding the epithet "Senatorial" applied to those provinces which were governed by a proconsul, they were in reality hardly less under the control of the emperor from the beginning than those which were "propriae Caesaris:" from him the proconsuls as well as the "legati pro praetore" received instructions and mandata as to the administration (Dio Cass. liii. 15; Plin. *Ep.* x. 64), and in all important matters not already provided for they had to apply to him for advice. Their position in fact was so different from that of a provincial governor under the Republic or of a legate in an imperial province that, according to Tacitus (*Ann.* vi. 27), Tiberius found it difficult to get competent men to accept the office, which was one of great responsibility, and could be valued only on account of the salary which Augustus attached to it.

The "Romanisation" of the law of the provinces continued to be carried on by edicts, statutes (Ulpian, *Reg.* xi. 18;—Gaius, i. 183, 185; iii. 122), imperial enactments (Plin. *Ep.* x. 71, 72), and senatusconsulta (*ib.* 77); and even some laws passed for the citizens of Rome were expressly extended to the provincials (*e.g.* Gaius, i. 47; Ulpian, *Reg.* x. 20; Dig. 30, 41, 6;—Cod. 7, 9, 3; 7, 71, 4): but the local laws still remained outside Italy the foundation of private rights and duties until the celebrated edict of Caracalla, by which the Roman civitas was early in the third century bestowed upon all free subjects of the Empire. With the fall of the Republic more substantial alterations took place in the matter of taxation. Julius Caesar abolished the decumae in Asia and probably also in Sicily, and under Augustus a complete survey was made of the provinces, extending over more than twenty years, and a census taken of their inhabitants; both of which were of the greatest value in adjusting the taxes upon an equitable basis. The vectigal of the *ager publicus* or domain land was paid into the Aerarium or the Fiscus, according as the province belonged to the senate or to the emperor, until the time of Vespasian, who took the whole of the domain land under his charge. All the provinces seem now to be charged also with *annona*, a payment from the land in kind, which was applied to supporting the civil and military officials within them; in this form Africa and Egypt supplied in addition enough corn to feed Rome during one-third of the year (Josephus, *Bell. Jud.* ii. 16, 4). The old revenue from poll-tax (*tributum capitis*), mines, and portoria still continued: to them were added under Augustus new imposts in the 5 per cent. duty on legacies, though this was paid only by Roman citizens in Italy, until the edict of Caracalla, the centesima on *res venales*, levied apparently throughout the Empire, and a tax of 4 per cent. on all purchases of slaves. The system of farming the taxes was still followed, though with most of its abuses corrected. The emperor also derived large sums from the "patrimonium Caesaris," or his private estates in the provinces, which were of vast extent; Augustus owned all Egypt, and the Thracian Chersonese belonged to the emperors up to Trajan. The property of condemned criminals was in some cases forfeited to the Aerarium, and later to the Fiscus; and the same was done with *bona vacantia* and *bona caduca* under the Leges Julia and Papia Poppaea. But the Aerarium, though nominally the Senatorial Exchequer, was really under the control of the emperor (Dio Cass. liii. 16; cf. Tac. *Ann.* vi. 2, "bona Sejani ablata aerario ut in fiscum cogerentur, *tanquam referret*"), by whom its officials were appointed; and when the distinction between imperial and senatorial provinces ceased to exist in the time of Severus, it became the treasury of the corporation or municipality of Rome. The really heavy expenses of the State were paid from the Fiscus, which bore the costs of the naval and military forces, the civil organisation, the construction and maintenance of public works, such as roads and aqueducts, the supply of corn to Rome, &c.

After the edict of Caracalla (A.D. 215), little reason remained for preserving the old distinction between Italy and the provinces, which now entailed a grave injustice on the latter, which became liable to the vicesima on legacies and inheritances besides having to pay the old land-tax. Accordingly within half a century Italy itself was subdivided into provinciae, and had to pay tributum equally with the most distant parts of the Empire. Towards the end of the third century Diocletian completely remodelled the provincial organisation by dividing the whole Roman world into twelve *διοικήσεις*, each of which comprised a number of provinces with new geographical limits: thus in the *διοίκησις* of Britain there were four provinciae, in that of the Oriens sixteen: the total number was 101. Each *διοίκησις* was under the administration of a new officer called Vicarius, who was answerable only to the praefectus praetorio as lieutenant of the emperor: the governors of the provinciae were proconsuls, consulares, or praesides, and enjoyed different ranks in the hierarchy or peerage of the Empire. The administration of justice was in a way revolutionised by Diocletian's abolition of the formulary procedure in civil causes, which applied to the provinces no less than to Rome, the magistrates being directed to hear and determine all suits in person. The Empire was resurveyed for financial purposes, and all taxation, so far as it affected the land, being based on a division of the soil into *juga*, each of which, though differing in acreage from others according to its fertility, being rated in the same value; the customs' dues were increased, and the *tributum capitis* was taken off the towns and levied chiefly on the new class of Coloni. Constantine made further administrative changes by completely separating the civil and military powers, so that the governors of provinces even on the frontiers of the Empire had nothing to do with the troops stationed in them, which were under the command of a general without any civil authority: but Justinian re-united the two sets of functions, at any rate in those provinces in which Constantine's arrangements had not worked satisfactorily (*Nov. Just.* viii. 2, 5; xxiv.—xxxi.; cii., ciii.).

It remains to give a short account of the condition and organisation of the provincial towns. In the republican period the vast majority of these were subjected absolutely to the power of the governor, and had no free municipal constitution or independent jurisdiction: these citizens were under the same authorities, financial, judicial, and military, as the purely rural population. Some of them, however, were privileged, though in their immunities there were various degrees. *Foederatae civitates*, such as Messana and Tauromenium in Sicily, and Gades in Spain, owed no duties to Rome beyond those imposed on them by their treaty with her, though these were often oppressive (*e.g.* Cic. *in Verr.* v. 19–24, §§ 48–61). Some towns were after their conquest declared free again by a lex or senatusconsultum (*populi liberi*, such as Termessus in Pisidia, Strabo, xvii. p. 839, &c.), whereby their citizens became capable of owning land within their territory, and acquired rights of self-government, especially in matters of taxation and legislation: others were *liberae et immunes*, being released from the taxes usually paid to Rome, and from the liability to have troops quartered on them during the winter months. In many provinces, again, there were colonies, either Latinae or civium Romanorum, for whose relation to the ordinary provincial administration reference should be made to the article on COLONIA; and sometimes towns, without being made to receive a colony, were endowed with the "jus Latii" (*e.g.* in Gallia Transpadana by Cn. Pompeius, Strabo, B.C. 89), which freed them from the control of the Roman governor (Strabo, iv. p. 187) and gave them the rights of self-government and having their own coinage, and other privileges described under COLONIA and LATINITAS. Under the Empire we find also numerous municipia in the provinces, *i.e.* towns on which the Roman civitas had been bestowed —*e.g.* on Gades and other Spanish towns by Julius Caesar (Liv. [illegible]; Dio Cass. xli. 24, xliii. 39), whose example was followed by Augustus (Suet. *Aug.* 4[illegible]; Dio Cass. liv. 25) and his successors. Th[illegible] that the ordinary free municipal constitution of Italian towns, with elected duoviri or quattuorviri, who possessed a tolerably extensive civil and criminal jurisdiction, aediles, quaestors, an ordo decurionum, and assemblies for their citizens: in fact, their condition was much the same as that of the "coloniae civium Romanorum," except that the latter ranked above them in dignity (Gellius, xvi. 13). Finally there were towns endowed with the "jus Italicum," the conception of which arose after the Social war and the statutes it occasioned, and which led to the familiar opposition between municipia, coloniae, and praefecturae of Roman citizens in Italy and all other towns whatsoever (*e.g.* Lex Julia municipalis, ll. 142, 143). It does not seem to have been granted with any great freedom (Plin. *H. N.* iii. § 25; Dig. 50, 15, 1, 6–8), and apparently only to coloniae and municipia, not to oppida which were merely "stipendiaria" or had the "jus Latii" only; though this is a disputed matter, Puchta (*Institutionen*, § 95) and Zumpt (*Comm. Epigraph.* i. pp. 477–491; *Studia Romana*, pp. 337, 338) denying its possession by municipia in any case, and the latter maintaining that it was sometimes given to mere peregrini. As to its nature also there are considerable differences of opinion. Conceivably it affected the soil, the municipal constitution, the taxes, and the persons of those who inhabited the towns on which it was conferred. The soil would be released from tributum, and subjected to Quiritarian ownership with all its legal incidents. In relation to finance, the citizen of a town possessed of "jus Italicum" would have his name entered in the local census with the formula employed at Rome, and the lists would be incorporated with those of Rome herself (Lex Julia munic. ll. 142–160; Huschke, *Census*, p. 62); he would further be discharged from the payment of all taxes not paid in Italy, including tributum, annona, and the poll-tax on trades and professions. It would affect the person of the citizen by giving him the benefit of certain laws which applied to Italy alone, or at any rate conferred on persons domiciled in Italy advantages over those domiciled elsewhere (*e.g.* the rewards given to those who contracted a fruitful marriage by the Lex Papia Poppaea, and the benefits of the Lex Furia de sponsu). These consequences, and these only, are ascribed to a grant of "jus Italicum" by Schwartz (*de jure Italico*, Exerc. Academ. 1783, 1–37) and Walter (*Geschichte des röm. Rechts*, § 319); but Savigny (*Ueber das Jus Italicum*, Verm. Schriften. i. 29–80) and Puchta (*loc. cit.*) deny the last of the three, and affirm as one of the chief consequences of the "jus Italicum" a free municipal constitution, which, according to Schwartz and Walter, must have belonged to the town already.

Provincial towns which belonged to none of these privileged categories (*civitates stipendiariae*) had some sort of municipal constitution, and the Romans as a rule interfered but little with arrangements which they found already established, provided they were not a menace to their own supremacy. But such constitutions were not *free*: they did not exclude the jurisdiction of the governor of the province. The towns had their own magistrates of various denominations: in Temnos there were praetors, quaestors, and mensarii (Cic. *pro Flacco*, 19, 44), names which doubtless are intended to represent Greek titles: in Thyatira there were στρατηγοί: in fact the names of the local magistrates are legion, but their functions are regarded as burdens (*munera*) rather than as privileges (*honores*), and there was no local jurisdiction, the administration of justice, civil as well as criminal, being in the hands of the governor alone. Most provincial towns seem to have had elective senates (*curiae*), an arrangement encouraged by Rome herself, who was adverse to democracies; but to be a "decurio" or senator was burdensome and expensive, and the citizens had to be expressly rewarded for undertaking or getting others to undertake the office. [For details see DECURIONES; DECEM PRIMI.] Under the Empire the electorate was controlled from Rome, no one being permitted the full local franchise unless his income reached a certain minimum; thus Dio Chrysostom (ii. 43 R) says that at Tarsus, besides the βουλὴ and the πλῆθος, "there was no small multitude which stood, as it were, outside the constitution." The provincial towns had no independent right of legislation, even in relation to municipal affairs, but were obliged to resort to the emperor, as is shown by the number of Rescripts on the subject; and upon nearly all matters which with us are transacted by the corporation or vestry of a town, such as the construction and maintenance of public works, they had to refer to the governor. It does not appear that the religion of the provincials was ever interfered with, nor had it been put under any restraint in the republican period.

The constitution of the provincial towns was affected in the second half of the fourth century by the establishment in all of them of a new office, that of *defensores civitatis*, *plebis*, or *loci*. These magistrates were chosen for five years, which Justinian reduced to two, by all the citizens of the town who possessed the franchise, but no decurio could be elected: their chief function was the protection of the town and its citizens against oppression and injustice at the hands of the imperial officials, as to which they were to address complaints to the governor of the province, or, if he were himself the offender, to the emperor or praefectus praetorio; by reason of their independence in relation to the governor they ranked above all the other municipal magistrates (Cod. i. 55, *de Defensoribus*). They were even invested with a limited jurisdiction in civil causes, which Justinian extended from matters of the amount of 50 to those of 300 solidi, and from which there was an appeal to the *praeses* (*Nov.* 15, 5); and they could appoint tutors where the property of the ward did not exceed a certain minimum in value (Inst. i. 20, 5). In the fifth or sixth century they also acquired a small jurisdiction in criminal matters (Cod. i. 55, 5; Cod. Theod. i. 29, 7; *Nov.* 15, 6).

The most complete treatment of the Roman provincial organisation and its history is that of Marquardt, *Römische Staatsverwaltung*, i. pp. 90–425. English readers will find a careful and accurate account of the matter, based upon the best authorities, in Mr. W. T. Arnold's *Roman Provincial Administration* (Macmillan, 1879), which the writer of this article has found of the greatest service. Reference may also be made to Walter's *Geschichte der römischen Rechts*, §§ 233–248, 308–320, 387–392; Puchta, *Institutionen*, §§ 66–69, 93, 94, 122, 123; Sigonius, *de Antiquo Jure Provinciarum*, lib. i.–iii.; Savigny, *Geschichte des röm. Rechts im Mittelalter*, vol. i.; and Goettling's *Geschichte der römischen Staatsverfassung*. [J. B. M.]

PRY'TANES. [BOULE, Vol. I. p. 310.]

PRYTANE'UM (πρυτανεῖον). The nearest approach that modern usage makes to the Prytaneum of a Greek state may be found in the town-hall or *hôtel de ville*; but the religious character attaching to it gave it a much higher significance, and it had also state purposes which were peculiar to cities of ancient Greece, being non-existent even at Rome, where, as will be pointed out, we have a near parallel on the religious side. The Prytaneum, so far as our evidence goes, was a requisite for every Greek state (Paus. i. 43; v. 15); but only in the capital, not in *demes* or villages attached to it. Its archaic history appears to be as follows. Every Greek tribal settlement of primitive times (and probably the same holds good for most nations of the world) had a common hearth in the chief's house, where the fire was scrupulously preserved, because of the difficulty in those days of procuring fire at all. To pursue this question further is unnecessary here: any book on the folk-lore and customs of almost any primitive nation will supply examples: numerous references are given in a paper on the Prytaneum by Mr. Frazer (*Journal of Philology*, xiv. 28, 1885). The perpetual maintenance of this fire was the duty of the chief, but delegated by him to daughters or slaves; in Rome, no doubt, to daughters, who reappear in history as the Vestals [VESTALES]. If the settlement was moved, the firebrand was taken carefully from the hearth and carried onward, a custom which Parkman has particularly noted in the Indian tribes of America; and similarly, if a swarm of colonists went out to settle elsewhere, they took fire with them.

What had in early times been a necessity became afterwards a religious ceremony, and accordingly we find practically the same usage—even, as it seems, the *shape* of the primitive chief's dwelling—surviving in civilised Greek and Roman states. When one state or πόλις absorbed others, which had previously had separate πρυτανεῖα, the chief town alone retained a πρυτανεῖον common to all: that is to say, a single βασιλεὺς replaced the many chiefs, and his single palace contained the common hearth for the sacred fire. That this is not mere surmise may be seen from Thucyd. ii. 15; Plut. *Thes.* 24, where we are told of the abolition of the separate πρυτανεῖα, and the establishment of the common πρυτανεῖον in the ἄστυ: and though the single ruler at Athens became βασιλεύς, and not πρύτανις, yet even this latter title in some states, as at Rhodes, continued to be the title of the chief magistrate. It is reasonable then to assume that the Prytaneum in Greek states was originally the house of the king or chief magistrate, and that similarly at Rome the temple of Vesta was once part of the king's house or Regia (see Middleton, *Rome*, p. 181; Frazer, *op. cit.*).

At Athens it is probable that there were several changes in the position of the Prytaneum before the building which Pausanias knew by that name under the northern side of the Acropolis (Paus. i. 18). Full discussions of these migrations of the state hearth will be found in E. Curtius, *Attische Studien*, and in an article by Schöll in *Hermes*, v. 340. We have little doubt, though it cannot be proved, that the original Prytaneum of the "Cecropian" city was upon the Acropolis, but of that no trace in the ground, and little, if any, in literature, has been discovered (Pollux, ix. 40, however, seems to allude to this Prytaneum). It may, we think, be now considered as fairly established that the historical Prytaneum was in the *old* Agora of the "Theseian" city, *i.e.* of the city formed by the aggregation mentioned above; and this Agora must be placed to the south of the Acropolis. Here it is likely that there were both the Prytaneum or state hearth and dining-place for those state-guests who will be described hereafter, and also an original Thesmothesion for the archons to dine in.

Later on, when the city spread, and the Agora was shifted (perhaps, as Curtius thinks, by Pisistratus), the Ceramicus quarter having become the centre of Athenian life and business, the *θόλος* was built near the *βουλευτήριον* (Paus. i. 57); and there the Prytanes thenceforth dined, for the obvious reason that they could not quickly pass from their business to their meals; and in that neighbourhood also, for the convenience of the Archons, was their dining-place, the Thesmothesion: here too was the *στοὰ βασίλειος*, the office of the Archon Basileus, which to some extent represented the old *βασιλεῖον* of kingly times. A very fair inference has been drawn from the shape of the Tholus, a round building with a pointed "umbrella-shaped" roof, that it preserved the orthodox shape of the old Prytaneum; and so, further, that *πρυτανεῖα* represented the primitive circular wattled huts, with peaked roof and hearth in the centre, where dwelt the chief of the tribe: if this theory is correct, it will apply also to the circular temples of Vesta. At a later time, probably after the Roman conquest, the larger building was constructed which Pausanias (i. 18) describes as the Prytaneum on the northern side of the Acropolis, containing the statue of Hestia, to represent the sacred hearth of the state, the statue of Peace and the remains of Solon's tables of law [NOMOS] which denoted its sovereign character, and some other statues.

There were then probably three Prytanea of different dates: (1) the oldest in the Acropolis of prehistoric times; (2) that in the old Agora, south of the Acropolis, which, even after the Tholos took part of its duties, remained as the Prytaneum of the classical age, and was still the state hearth from which fire was taken for colonies, having itself supplied the sacred fire kept also for the altar in the Tholos; and (3) the Prytaneum of Pausanias, which seems to have supplanted the older Prytaneum (No. 2) for all purposes, unless we are to conclude from the way in which Pausanias speaks of *τὸ ἐν πρυτανείῳ καλούμενον δικαστήριον* (i. 28), that the judicial court [see PHONOS] of that name was not transferred to the new building. It may be noted that in this court, as well as in the general term of *πρυτανεῖα* for court fees, we seem to have a relic of the old royal or palace jurisdiction.

At Athens the *πῦρ ἄσβεστον* was, according to Plut. *Num.* 9, as also at Delphi, kept up not by vestal maidens, but by aged widows (*γυναῖκες πεπαυμέναι γάμων*), who perhaps represented the female slaves of the primitive chief, as the Roman Vestals represented the daughters. As regards the supply of sacred fire for colonists starting to found a new state, see above, and compare COLONIA, Vol. I. p. 474.

Sitesis.—It will be convenient to describe here all the classes of persons who were entertained at the cost of the state, though it must be understood that it is entirely erroneous to suppose that they all dined in the Prytaneum —at any rate before the Roman conquest; whether they did so later is open to dispute. We cannot doubt that in the invitation to dine in the Prytaneum we have a relic of the custom that the *γέροντες* or chief counsellors should dine at the king's table, and that the hospitality should be extended to other honoured citizens or distinguished visitors. This custom was not peculiar to Athens; for we have record of entertainment in the Prytaneum as belonging to various Greek towns. Athenaeus mentions it in Thasos, Naucratis, and Mitylene (i. p. 32; iv. p. 149; x. p. 425): we hear of it also at Tenedos (Pind. *Nem.* xi. 8), Rhodes (Polyb. xxix. 5), Cyzicus (Liv. xli. 20), and to this list many additions can be made from inscriptions. In fact, we are brought to the conclusion that if *πρυτανεῖα* as state hearths were probably universal in Greek capital towns, the public entertainment of certain officials, citizens, or foreign guests was at least general.

As regards the regulations of this entertainment at Athens, we are able still to gather a good deal of evidence. Plutarch (*Symp.* iv. 4, 1) tells us that Celeus first had a daily entertainment of *εὐδόκιμοι καὶ ἀγαθοὶ ἄνδρες*. Looking to the connexion of Celeus with the Eleusinian rites, we may conjecture that this tradition is the attempt to explain the right of the Eleusinian priests to partake in the *σίτησις*. There is at any rate little doubt that the early rulers of Athens thus entertained three classes of persons, viz. magistrates, priests, and unofficial guests, alike distinguished Athenians and foreign princes or envoys. Those who *by right of office* dined with the king (or, after the end of the monarchy, dined together) were *σύσσιτοι* (also *ἔνσιτοι*): those unofficial persons, who were invited to dine besides, were *παράσιτοι* (cf. Plat. *Lach.* p. 179 C), but this word became limited to the subordinates of the priests [PARASITI]. The word *ἀείσιτοι* or *αἴσιτοι* is of later times (see below). We must carefully notice also a threefold division of *place* in historical times: I. the Prytaneum, in which the unofficial guests dined; II. the Thesmothesion, where the Archons dined; III. the Tholos. It is of course not impossible, as Schöll thinks, that the Archons had a separate Thesmothesion for dining in the old Agora as well as in later times; but on the whole it seems more likely that before the alteration of the Agora all alike dined together in the Prytaneum; but when, as stated above, the government offices were transferred along with the busy life of Athens to the inner Ceramicus, the division of meals began, and the Archons dined thenceforth in the Thesmothesion.

I. The meals in the Prytaneum continued as before, for (*a*) foreign princes and envoys of other states, the formula for whose invitation is *καλέσαι τοὺς πρέσβεις ἐπὶ δεῖπνον* (or *ἐπὶ ξένια*) *εἰς τὸ πρυτανεῖον εἰς αὔριον*, *i.e.* for the day following their audience in the assembly, and as the conclusion of their mission (Poll. viii. 138; Dem. *F. L.* p. 350, § 31; [Dem.] *de Halon.* p. 81, § 20): the invitation ran in the name of the senate, *ἡ βουλὴ καλεῖ* (Aristoph. *Ach.* 124; Dem. *l. c.*) or the *δῆμος* (Dem. *Polycl.* p. 1210, § 13): Demosthenes says *ἐκάλεσα* (*F. L.* p. 414, § 234), as being the member of the senate who proposed it: (*b*) citizens who had done good service; *e.g.* who had returned from a successful embassy: (*c*) citizens honoured with this entertainment for life, the honour to which Socrates refers in his *Apology*. Such were (1) Olympic victors (Plat. *de Rep.* v. p. 465 D; Plut. *Arist.* 27; Athen. vi. p. 237) and victors in the other great games (*Insc. Ephem.* 29, 2). Schöll appears to be right in his view that this honour was given to an Athenian who won the chariot-race at Olympia, *or* the gymnic contest at any of the four games; (2) distinguished generals or statesmen (Aristoph. *Eq.* 709; Aeschin. *F. L.* § 80; Dem. *Aristocr.* p. 663, § 130); and lastly (3) the representatives of certain families, in which the honour was hereditary: thus we find it a privilege for the nearest representatives for the time being of Harmodius and Aristogeiton (Isae. *de Dic. her.* § 47); the nearest representatives of Demosthenes (Plut. *Dem.* 31).

Schöll (in *Hermes*, xxii. p. 561, 1887) shows that the daughters of such persons were dowered by the state.

II. The meals of the Archons, as mentioned above, were transferred to the Thesmothesion in the New Agora.

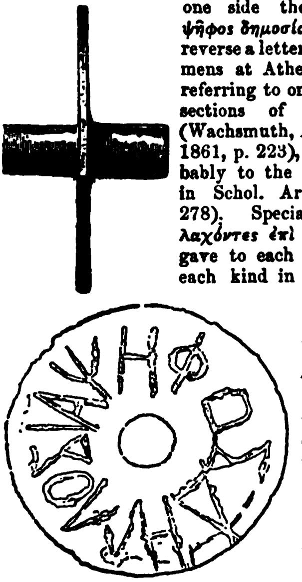
III. In the *Tholos* or *Skias*, for the same reason which made the Archons dine in the Thesmothesion, that they might be near their business, the Prytanes and certain other officials, *during their tenure of office*, took their meals together, after sacrifice offered at the state hearth; for the sacred fire was now in the Tholos as well as in the Prytaneum. Who these officials were may be gathered from the account of the ἀείσιτοι, though it is possible that the number of offices so privileged may have been greater in the period to which our extant lists belong than in earlier times.

The ἀείσιτοι (or *αἴσιτοι*) are not found under that name before the second century A.D.; and, though we cannot say when they were first so called, it is clear from Athen. vi. p. 435 that παράσιτοι was used in that sense by a pupil of Aristotle. It must be particularly observed that ἀείσιτοι does not, as is often supposed, mean, those who had this privilege for life: the element ἀεὶ in the word means *for the time of his office*: for example, ὁ ἀεὶ γραμματεύων was ἀείσιτος. No one who studies the lists of ἀείσιτοι preserved in inscriptions can doubt this for a moment. We have a number of Prytany lists dating from the middle and latter half of the second century A.D. In these we find a list of the Prytanes, and then a separate heading ἀείσιτοι, under which came, first the Eleusinian priests, *ἱεροφάντης, δᾳδοῦχος, ὁ ἐπὶ βωμῷ, ἱεροκήρυξ, πυρφόρος* (for these offices, see ELEUSINIA, Vol. I. p. 721); then the lay officials connected with the Prytaneis, viz. the clerk of the *βουλή*, the clerk of the Prytanes (*ὑπὲρ τὸ βῆμα*), the keeper of records (*ἀντιγραφεύς*), the under-clerk, the custodian (or priest) of the Tholos (*ὁ ἐπὶ τῆς Σκιάδος*) = apparently the priest of the Phosphori, and lastly the flute-player at the sacrifices (*ἱεραύλης*). Now in these lists it is noticeable that, whereas the Eleusinian priests, who held office beyond the year, appear under the same name in various years, this is not the case with the lay ἀείσιτοι. Take for instance the inscriptions, *C. I. A.* iii. 1029–1032, which range from the years 165 to 169 A.D., the four lists being shown to fit these four different years. The Hierophant Flavius of 165 appears in 166; a Julius replaces him in 167 and reappears in 168; the daduchus and hieroceryx bear the same name in all four lists. But when we come to the various clerks, we find that the same name never appears in two different years —(the inscriptions 1032 and 1034 are for the same year, 168 A.D.). The same holds good of the sacred officials of the Prytanes, the *ἐπὶ σκιάδος* and *ἱεραύλης*. It may be well, however, to say a word about the former. He was apparently both the custodian of the Tholos or Skias, and also the priest who offered the daily sacrifice at the state hearth for the Prytanes. In an inscription of 180 A.D. (*C. I. A.* iii. 1042) he is called *ἱερεὺς τῶν φωσφόρων καὶ ἐπὶ τῆς Σκιάδος*. Schöll explains the Phosphori as = Dioscuri, but surely it is more likely that the word should mean the Light Deities who were honoured in the torch-race [LAMPADEDROMIA], and from whom the sacred fire was derived.

The only point remaining for consideration is the condition of things in the newer Prytaneum which Pausanias describes in the second century A.D., the larger and more elaborate building north of the Acropolis, of which we have spoken above. Did the union of the separate meals follow the erection of this larger Prytaneum, so that those who were fed in the old Prytaneum and in the Tholos thenceforth amalgamated? Curtius declares that it did; Köhler (in *Hermes*, v. 340) denies it, and refers to the lists of the age of Pausanias, which seem to imply that the Prytanes and the ἀείσιτοι still dined apart in the Tholos. It cannot be said, however, that the lists distinctly prove this; and the view of Curtius may, after all, be correct. In other words, it is possible that the Tholos was still a sacred place for the offering on behalf of the Prytanes, with the ἐπὶ σκιάδος, as before, in charge of it, but was no longer used for their meals. (On the subject of the Prytaneum and the *σίτησις*, see Frazer in *Journal of Philology*, xiv. 28; Curtius, *Att. Stud.* ii.; Schöll in *Hermes*, v. and xxii.) [G. E. M.]

PSEPHISMA [Boule; Ecclesia; Nomothetes, p. 243.]

PSEPHUS (ψῆφος). In voting by ballot the Greeks used, according to Pollux (viii. 16 f., 123), sea-shells (χοιρῖναι) or imitations of such in metal, beans (φρυκτοί), σπόνδυλοι of metal (φασὶ δέ τινες τῶν ἐξηγησαμένων ὅτι ἀπὸ χοιρείων ὀστῶν αὗται ἐγίνοντο, Schol. Dem. *c. Tim.* p. 747), and ψῆφοι of metal (τετρυπημέναι and ἀτρύπητοι). At Athens in early times sea-shells were in use (Aristoph. *Eq.* 1332 and Schol. on 1147; *Vesp.* 332, 349), and probably also beans (Aristoph. *Eq.* 41: cf. Schömann, *Opusc.* i. p. 269 ff.), and pebbles (Aristoph. *Vesp.* 110; black ones for condemnation and white ones for acquittal, Plut. *Alcib.* 22, cf. Schol. Aeschin. *c. Tim.* § 79); in the times of the orators, however, the dicasts used ψῆφοι of metal. These were not balls of metal, but discs with a cylindrical axis (αὐλίσκος) running through the centre and projecting on either side, and this cylinder was either solid (πλήρης ψῆφος) for acquittal, or pierced (τετρυπημένη) for condemnation (Aeschin. *c. Tim.* § 79; Arist. in Harpocr. *s. v.* τετρυπημένη, cf. *C. I. A.* ii. No. 778). Rusopulos (Ἀρχ. Ἐφημ. 1862, p. 305) gives the following measurements of the two specimens preserved in the Collection of the Athen. Arch. Soc. Of the pierced one the diameter of the disc is 0·062 French met., thickness 0·001, length of cylinder 0·043, diameter of cylinder 0·013 at one end and 0·012 at the other. The measurements of the solid one vary but slightly: diameter of the disc 0·061, and of the cylinder 0·01. The specimen described by Vischer (*Epigr. u. Archäol. Kleinigk.* p. 16 ff.), which is reproduced below, has a somewhat smaller diameter of the disc (0·060) and shorter cylinder (0·0375). The disc bore on one side the inscription ψῆφος δημοσία, and on the reverse a letter (in the specimens at Athens Γ and Κ), referring to one of the ten sections of the dicasts (Wachsmuth, *Archäol. Anz.* 1861, p. 223), or more probably to the court (Arist. in Schol. Aristoph. *Plut.* 278). Special officers (οἱ λαχόντες ἐπὶ τὰς ψήφους) gave to each dicast one of each kind in sight of the parties, when both sides had spoken (Harpoc. *l.c.*), and the dicasts walked up to the βῆμα (Dem. *F. L.* p. 441, § 311) where two[*] boxes (κάδοι, καδίσκοι) stood, into each of which they placed one ψῆφος (the remark of the Schol. Aristoph. *Vesp.* 750, τοῦ κήρυκος τὴν κληρωτρίδα προσφέροντος, ἔβαλον (οἱ δικασταὶ) τὰς ψήφους, is contradicted by Aristophanes' words, κἀπισταίην ἐπὶ τοῖς κημοῖς ψηφιζομένων ὁ τελευταῖος). Of these καδίσκοι one, called κύριος (because the dicast put into it the ψῆφος by which he gave his vote), was made of metal; the other, called ἄκυρος, was made of wood, and into this he dropped the second ψῆφος. In this way that absolute secrecy was secured (κρύβδην ψηφίζεσθαι, in an eisangelia, Lyc. *c. Leocr.* § 146; in a γραφὴ φόνου, Lys. *c. Erat.* § 91; in a γραφὴ ἀστρατείας, Lys. *c. Alcib.* ii. § 10) which was considered a guarantee for the freedom of voting (Dem. *F. L.* p. 415, § 239). For since the old funnel-shaped top of the καδίσκος made of wickerwork (σχοίνινος ἠθμός, Cratinus, fr. 260; Schol. Aristoph. *Eq.* 1147; Bekk. *Anecd.* 275, 25; and Photius, *s. v.* κημός) had been replaced by a top of lead (*Lex. Rhet. Cant.* s. v. κημός), with an opening filed through large enough to admit one ψῆφος only (διερρινημένον ἐπίθημα εἰς τὸ αὐτὴν μόνην τὴν ψῆφον καθίεσθαι, Schol. Aristoph. *l. c.*), and with a rim running round (*Lex. Rhet. Cant.* l. c. μετέωρα εἶχε χείλη ὥστε ἐπισκοτεῖν), it is evident that if the dicast held the ψῆφος sideways by the two ends of the cylinder with thumb and second finger, lowered it to the opening in the lid and pushed it in with the first finger (Hesych. κόγξ . . . . καὶ τῆς δικαστικῆς ψήφου ἦχος: the φιληλιαστὴς gets up in the morning τοὺς τρεῖς ξυνέχων τῶν δακτύλων through being accustomed to hold the ψῆφος, Aristoph. *Vesp.* 94 f.), it was not possible for anyone to see if he put in the pierced or the solid one. After all had voted, the κύριος καδίσκος was emptied out on to a table, and the ψῆφοι were counted (cf. Aristoph. *Vesp.* 331 f.).[*] Even votes amounted to an acquittal (Antiph. *de caed. Her.* § 51; Aeschin. *c. Ctes.* § 252; Aristotle in *Lex. Rhet. Cant.* s. v. Ἴσαι αἱ ψῆφοι, etc.). Euripides (*Elect.* 1269; *Iph. Taur.* 1470 f.) connects this principle with the trial of Orestes before the court of Areiopagus, when Athena proclaimed νικᾷ δ' Ὀρέστης κἂν ἰσόψηφος κριθῇ (Aesch. *Eum.* 741). As Kirchhoff (*Monatsber. d. K. Pr. Akad.* 1874, p. 105 ff.) shows, in trials for murder the βασιλεὺς had a vote (Pollux, viii. 90); hence Athena, who acted as ἡγεμὼν in Orestes' trial, having taken off her crown, voted after the eleven dicasts, and by giving her vote to Orestes brought about evenness of votes, and thus his acquittal. A heliastic court always consisted of some multiple of a hundred, + 1, to prevent even votes (Schol. Dem. *c. Tim.* p. 702, § 9): thus Pollux (viii. 48) mentions four hundred and one, two hundred and one, as the numbers of dicasts in two different cases of φάσις (cf. *Lex. Rhet. Cant.* s. v. λογισταί, Boeckh, *Secur.* p. 464, etc.); the common way, however, of indicating the number was, for brevity's sake, to mention the variable constituent, omitting the invariable one. Even votes could therefore only come about by the default of individuals at the last moment (Schömann, *de Com.* p. 153). The total of votes in *C. I. A.* ii. No. 778 is four hundred and



Ancient ψῆφος.

---

[*] Pollux (viii. 123 = Schol. Aristoph. *Eq.* 1150) alone speaks of there having been one κάδος into which the dicast put whichever of the two ψῆφοι he pleased.

[*] Hippodamus suggested a different way of taking the verdict, viz. by means of πινάκια (Arist. *Pol.* ii. 5, 35).

ninety-nine; on the voting in Socrates' trial, cf. *Att. Proc.* ed. Lipsius, p. 169 n. A similar system of balloting was employed when the dicasts voted on the question of penalty (Dem. *c. Aristocr.* p. 676, § 167; [Dem.] *c. Neaer.* p. 1347, § 6); hence the verdict on the question *guilty or not guilty* or *for the plaintiff or defendant* is called *πρώτη ψῆφος* (Aeschin. *c. Ctes.* § 197; Dem. *F. L.* p. 434, § 290; [Dem.] *c. Aristog.* i. p. 795, § 83). In the time of Aristophanes a curious custom was in vogue. Each dicast had a waxen tablet (*πινάκιον τιμητικόν*, Aristoph. *Vesp.* 167; Pollux, viii. 16), on which, if he awarded the heavier penalty, he drew a long line (vertically on the tablet); if the lighter penalty, a short line (horizontally on the tablet): cf. *τιμᾶν τὴν μακράν*, sc. *γραμμήν*, Aristoph. *Vesp.* 106, and Photius, *s. v.* *μακρὰν τιμῆσαι*, etc.

A different system of voting was in use in the time before the archonship of Eucleides, and this seems in some cases to have been continued also in the fourth century: viz. there were two boxes, one for condemnation and the other for acquittal (*ὁ ἀπολλὺς καδίσκος* and *ὁ ἀπολύων* in Phrynichus, **Μοῦσαι**, B.C. 405; *τὸ αἱματηρὸν τεῦχος* and *τὸ ἐνάντιον κύτος*, Aesch. *Agam.* 788 f.; *ὁ θανάτου κ.* and *ὁ ἐλέου*, Scholiast. Aristoph. *Vesp.* 985), and each dicast had one *ψῆφος* only, which received its meaning from the box into which it was put. The two boxes were, we must suppose, so placed that the nearer one (*ἡ προτέρα*) was that of condemnation, the further one (*ἡ ὑστέρα*) that of acquittal: thus in Aristoph. *Vesp.* 987 ff., Philocleon acquits Labes by throwing his vote into the second (*ὕστερον*) cup (cups being here used instead of urns, 855); cf. also Xen. *Hell.* i. 7, 9. It is difficult to understand how secrecy was possible with this method of voting, and yet we are clearly told that it was so. Lysias (*c. Agor.* § 37) complains of the irregular mode of voting introduced by the Thirty in the senate: the *ψῆφοι* had to be placed on the two tables—this at once makes it open voting—instead of being put into the *καδίσκοι*, and, further, the vote of condemnation had to be placed on the further table, *i.e.* on that nearest the seats of the Thirty. The voting in Orestes' trial, too, is conceived of as secret, for the result is not known before the counting of the votes takes place. Schömann and Sauppe (*de Athen. ratione suffr. in iudic. fer.* p. 9) suppose that secrecy was secured by the two urns being so placed that the people standing around could not see into which of them the *ψῆφος* was thrown; but this explanation is insufficient, inasmuch as voting could only be said to be secret if even the other dicasts did not know how each had voted. To meet this difficulty, Lipsius suggests that each dicast had, besides his *ψῆφος*, some other token to put into the second box. It has not yet been fully established to what extent this mode of voting continued in the fourth century. Lipsius quotes two instances of it, viz. the eisangelia against Leocrates and a *δίκη ψευδομαρτυριῶν* in Isae. *Dicaearch.* § 18. As regards the former, the words of Lycurgus have been differently explained: *ὑμῶν δ' ἕκαστον χρὴ νομίζειν τὸν Λεωκράτους ἀποψηφιζόμενον θάνατον τῆς πατρίδος καὶ ἀνδραποδισμὸν καταψηφίζεσθαι καὶ δυοῖν καδίσκοιν κειμένοιν τὸν μὲν προδοσίας τὸν δὲ σωτηρίας εἶναι καὶ τὰς ψήφους φέρεσθαι τὰς μὲν ὑπὲρ ἀναστάσεως τῆς πατρίδος τὰς δὲ ὑπὲρ ἀσφαλείας καὶ τῆς ἐν τῇ πόλει εὐδαιμονίας.* Whilst Schömann, whom Lipsius follows, identifies the *προδοσίας καδίσκος* with the *ἀπολύων*, and the *σωτηρίας καδίσκος* with the *ἀπολλύς*, Sauppe supposes that the orator alludes to the *κύριος καδίσκος* and the *ἄκυρος*. Directions as to voting may be given in two ways: either the dicast is told which of the two *ψῆφοι* he is to put into the *κύριος καδίσκος*, as in Aeschin. *c. Tim.* § 79, viz. the pierced one, if he thinks Timarchus guilty, the solid one if not; or he is directed into which of the two urns to place the pierced one. Thus in the trial of Leocrates, if he places it in the *κύριος*, he condemns Leocrates and votes for the safety of the state; if on the other hand he places it in the *ἄκυρος*, he acquits Leocrates and betrays the state: and these urns may thus in a rhetorical manner be called *σωτηρίας καδίσκος* and *προδοσίας* respectively.* As for the second instance (a *δίκη ψευδομαρτυριῶν*), there the dicast had clearly but one *ψῆφος*. For when on the *ψῆφοι* being taken out of the urns it was evident that the defendant had been found guilty, the prosecutor allowed the archon *μὴ συναριθμεῖν ἀλλὰ συγχέαι τὰς ψήφους*, *i.e.* to mix up the *ψῆφοι* of the two urns (of the plaintiff and the defendant respectively), not to count those in each; if two kinds of *ψῆφοι* had been used, and therefore some of each had been placed in the *κύριος*, it would have been rather a question of *διαριθμεῖν* (Szanto, *Wiener Stud.* 1881, p. 28 f.). The same system seems to have been regularly in use, when, as in inheritance cases, there were several parties before the court, to one of whom an estate or some other thing was to be adjudged, and where it was customary to have as many boxes as there were parties, or at least parties in distinct interests ([Dem.] *c. Macart.* p. 1053, § 10, *καὶ αἱ ψῆφοι ὀλίγαις πάνυ ἐγένοντο πλείους .... ἐν τῷ Θεοπόμπου καδίσκῳ ἢ ἐν τῷ τῆς γυναικός*: cf. Isae. *Hagn.* § 21 f.). (*Att. Process*, ed. Lipsius, p. 934 ff.)

As regards the senate, Pollux (viii. 19) says, *ἡ βουλὴ οἱ πεντακόσιοι φύλλοις ἀντὶ ψήφων ἐχρῶντο.* This refers to the expulsion of an unworthy member by this body, the votes being written on leaves (Harpocr. *s. v.* *ἐκφυλλοφορῆσαι*); it was followed by a second vote where *ψῆφοι* were used (Aeschin. *c. Tim.* § 111 f. and Schol. *ad l. c.*), when the person expelled might be restored to his place in the senate (*Att. Process*, ed. Lipsius, p. 246 f.). The *Etym. Magnum*, s. v., says that beans were used at first in voting, and that leaves were substituted on account of a fraud practised with the beans. When an eisangelia was laid before the senate, they gave their verdict by secret ballot, whether the defendant was guilty or not; and if he was found guilty, they voted on a second day by show of hands (*διαχειροτονία*) whether they should sentence him to a fine of 500 drachmas, which it was competent for them to impose, or hand him over to a court ([Dem.] *c. Euerg. et*

---

* In public trials it would seem that only one method of voting was in use after the archonship of Eucleides, viz. that with two *ψῆφοι*.

Mnes. p. 1152, § 42 f.; Aeschin. *c. Tim.* § 35, *lex*). Secret voting in deciding the question *guilty or not guilty* was here the rule, and Lysias complains of the irregularity introduced by the Thirty, viz. that the votes should be placed, not in boxes, but openly on tables (*c. Agor.* § 37). Similarly the Thirty introduced open voting in the popular assembly (Xen. *Hell.* ii. 4, 9: cf. the action of the oligarchs in Megara in B.C. 424, Thuc. iv. 74). Here the usual method of voting was by show of hands (χειροτονία); but on the occasions when the ballot was employed, it was deemed important that the voting should be secret, and that the numbers should be accurately counted. Thus to pass a psephisma for the naturalisation of a foreigner ([Dem.] *c. Neaer.* p. 1375, § 89), or to grant liberty (ἄδεια) to speak concerning a disfranchised person or a state debtor (Dem. *c. Tim.* p. 715, § 46), it was necessary that 6,000 persons should vote in secret (not a majority of 6,000). The same regulation applied to ostracism [EXSILIUM], both as regards number of voters and secrecy of voting (στρέφοντες τὴν ἐπιγραφήν, Philochorus in *Lex Rhet. Cant.* s. v.). When the assembly acted in a judicial capacity, the proceedings were probably the same as those detailed in the προβούλευμα concerning the generals in Xen. *Hell.* i. 7, 9: διαψηφίσασθαι Ἀθηναίους ἅπαντας (*i.e.* the 6,000 necessary for νόμοι ἐπ' ἀνδρί, Fränkel, *Att. Geschworenger*, p. 18) κατὰ φυλάς, θεῖναι δὲ εἰς τὴν φυλὴν ἑκάστην δύο ὑδρίας· ἐφ' ἑκάστῃ δὲ τῇ φυλῇ κήρυκα κηρύττειν, ὅτῳ δοκοῦσιν ἀδικεῖν οἱ στρατηγοὶ .... εἰς τὴν προτέραν ψηφίσασθαι, ὅτῳ δὲ μή, εἰς τὴν ὑστέραν. This mode of voting was in no way irregular, as Löschcke shows (*Jahrb. f. Philol.* 1876, p. 755 f.); the irregularity consisted, among other things, in the fact that it was proposed to vote upon the case of all the accused persons at once (μιᾷ ψήφῳ, Xen. *l. c.* 26, or ἀθρόοι, Plat. *Apol. Socr.* 23 B; cf. Lys. *c. Eratosth.* § 52), not κατὰ ἕνα ἕκαστον (Xen. *l. c.* 23, 34). This was, however, not specially ordained by the psephisma of Cannonus, as Grote thinks (*Hist. of Gr.* vii. p. 438 n.), but was a generally recognised principle of Attic law (Bamberg, *Herm.* 1878, p. 509 ff.; Philippi, *Rh. M.* 1880, p. 607 ff.).

Secret voting was also practised when the members of a phratry registered a new-born child or an adopted son in the φρατερικὸν γραμματεῖον (Dem. *c. Macart.* p. 1078, § 82; cf. the continuation of *C. I. A.* ii. No. 241 b, published in *Berl. Philol. Wochenschr.* 1889, No. 7, p. 225); when the demotae entered the name of the youth in the ληξιαρχικὸν γραμματεῖον (Dem. *c. Eubul.* p. 1318, § 61; Euxitheus learned the fact of Eubulides not having voted against him only from the circumstance that all had voted for him), and in a διαψήφισις (Suidas, *s. v.*; Dem. *c. Eubul.* p. 1302, § 13 f. speaks of ψῆφοι: Pollux, viii. 18, says that φύλλα were used on such occasions); cf. also *C. I. A.* ii. No. 578, l. 16 ff., τῷ δὲ εὐθύνῳ μὴ ἐξεῖναι ἐξελεῖν τὴν εὔθυναν ἐὰν μὴ τοῖς πλέοσιν δόξει τῶν δέκα τῶν αἱρεθέντων διαψηφιζομένοις κρύβδην.

The people or senate or jury were said ψηφίζεσθαι, ψῆφον φέρειν or τιθέσθαι or διαφέρειν (Thuc. iv. 74; Xen. *Symp.* 5, 8), *to vote, or give their vote or judgment* (ψῆφον τιθέναι in Dem. *de Cor.* p. 304, § 229, is *to cast accounts*). The presiding magistrate or officer, who called on the people to give their votes, was said ἐπιψηφίζειν or τὴν ψῆφον ἐπάγειν or διδόναι (Lys. *c. Alcib.* ii. § 2; Dem. *c. Mid.* p. 542, § 82, etc.), the people ἐπιψηφίζεσθαι: ψηφίζεσθαί τινι (Isae. *Cleon.* § 38, etc.) is *sententiam ferre pro aliquo* = τὴν ψῆφον διδόναι or φέρειν τινί (Dem. *c. Mid.* p. 575, § 188, etc.). Ψηφίζεσθαι, *to vote, to resolve*, ἀποψηφίζεσθαι, *to acquit*, and other derivations from ψῆφος, are often used metaphorically, where the method of voting was χειροτονία, and conversely (Schömann, *de Com.* p. 123 f.). [C. R. K.] [H. H.]

PSEUDENGRAPHES GRAPHE (ψευδεγγραφῆς γραφή). It is shown under PRACTORES that the name of every state debtor at Athens was entered in a register by the practores, whose duty it was to collect the debt, and erase the name of the party when he had paid it. The entry was usually made upon a return by some magistrate, to whom the incurring of the debt became officially known; as, for instance, on a return by the πωληταί, that such a person had become a lessee of public lands, or farmer of taxes, at such a rent or on such terms. In case, however, the authorities neglected to make the proper returns, any individual might, on his own responsibility, give information to the registering officers of the existence of the debt; and thereupon the officers, if they thought proper, might make an entry accordingly, though it would probably be their duty to make some inquiry before so doing. If they made a false entry, either wilfully or upon the suggestion of another person, the aggrieved party might institute a prosecution against them. It would lie also, where a man was registered as a debtor for more than was really due from him. In the case of debts to a sacred fund, where the penalty for non-payment was tenfold, the like remedy would doubtless be open to one who was falsely recorded as a debtor by the ταμίαι τῆς θεοῦ. Such prosecution was called γραφὴ ψευδεγγραφῆς, and was brought before the Thesmothetae. If the defendant were convicted, the name of the complainant was struck out of the register and that of the defendant was entered in his stead, as debtor for the same amount (Boeckh, *P. E.* p. 390 = *Sthh.*³ i. 460). It is also probable that he had to pay a like sum as damages to the plaintiff; a conclusion to which Boeckh was led by the very precise language of an inscription (*C. I. A.* ii. 811 c, line 147; cf. *Seeurk.* p. 537 ff.; Fränkel, n. 607 on Boeckh; Thalheim, *Rechtsaltertk.* p. 46 n.).

Some questions connected with this action have already been discussed under the very similar BOULEUSEOS GRAPHÉ (Vol. I. p. 314): (1) whether the atimia of the state debtor was in abeyance while this action was pending; and (2) against what class of persons it would lie. The conclusion there arrived at, that it lay only against the public officer who had made the false entry, not against the informer who had misled him, may be regarded as definitely established by the inscription already referred to (*Seeurk.* p. 538; Platner, p. 118; *Att. Process*, p. 417 n. Lips.). We may presume that on such a charge it was necessary to prove fraudulent or malicious motives; but it is reasonable also to suppose that, in any case of gross negligence, fraud or malice might (as matter of course) be presumed by the dicasts. (Pollux, viii. 40, 43; Harpocr. and Suid. *s. vv.* *βουλεύσεως, ψευδεγγραφή, ψευδέγγραφος δίκη*: Boeckh, *P. E.* pp. 349, 390 = *Sthh.*³ i. 419, 460; Platner, *Klagen und Process*, ii. 117 f.; *Att. Process*, p. 515 ff. Lips.) [C. R. K.] [W. W.]

PSEUDOCLETEIAS GRAPHE (*ψευδοκλητείας γραφή*), a prosecution against one who had falsely appeared as a *κλητὴρ* or *κλήτωρ*, *i.e.* a witness to prove that a defendant had been duly summoned, and who had thereby enabled the plaintiff to get a judgment by default. To prevent fraud the Athenian law directed that the names of the witnesses (usually two in number; CLETERES) who attended the summons should be subscribed to the bill of plaint or indictment (*ἔγκλημα*), so that the defendant, if he had never been summoned and judgment had nevertheless been given against him by default (*ἐρήμη δίκη*), might know against whom to proceed. A good example of the practical necessity for legislation on this point occurs in Dem. *c. Nicostr.* p. 1251, § 14, where we read of *ἀπρόσκλητον ἐξ ἐμφανῶν καταστάσεως ἐπιβολήν*, "a fine for non-production of property in court demanded (and even registered) without formal citation" (cf. Sandys *ad loc.*; *Att. Process*, p. 976 Lips.). The false witness (*κλητὴρ*) was liable to be criminally prosecuted, and punished at the discretion of the court. Even death might be inflicted in case of gross conspiracy (Dem. *op. cit.* p. 1252, § 18). A person thrice convicted of this offence was, as in the case of other false testimony, *ipso jure* disfranchised; and even for the first offence the jury might, if they pleased, by a *προστίμησις* inflict the penalty of atimia upon him (Andoc. *de Myst.* § 74; Meier, *de Bon. Damn.* p. 125). Here we may observe this distinction, that the proceeding against the false witness to a summons was of a criminal nature, while the witness in the cause (*μάρτυς*) was liable only to a civil action. The reason may have been that the former offence was more likely to do mischief. The magistrates before whom the defendant neglected to appear, when by the evidence of the witness it was shown that he had been duly summoned, had no discretion but to pronounce judgment against him; whereas the dicasts, to whom the witness gave evidence at the trial, might disbelieve him and find their verdict according to the truth. If the fraud was owing to a conspiracy between the plaintiff and the witness, it is probable that an action at the suit of the defendant would lie against the former to recover compensation; for, though the conviction of the witness would lead to a reversal of the judgment, still he (the defendant) might have suffered damage in the meantime, which the setting aside of the judgment would not repair. Such action might, it would seem, be a *δίκη συκοφαντίας* (*Att. Process*, p. 413, Lips.) or *κακοτεχνιῶν* (*ib.* 492–3). If the name of the witness had been fraudulently used by the plaintiff, and the witness had thereby been brought into trouble, there is evidence, as well as probability, that he had a *δίκη βλάβης* against the plaintiff (*ib.* 415; Dem. *c. Aphob.* iii. p. 849, § 16). The *γραφὴ ψευδοκλητείας* came before the Thesmothetae, and the question at the trial simply was, whether the defendant in the former cause had been summoned or not. Theopompus, in a passage which is perhaps a libel upon the Athenians, says that Athens was full *λωποδυτῶν ψευδομαρτύρων καὶ συκοφαντῶν καὶ ψευδοκλητήρων* (*ap.* Ath. vi. p. 254 b). (Pollux, viii. 40; Harpocr. *s. v.*; Bekk. *Anecd.* 317; Boeckh, *Kl. Schriften*, iv. 120 ff.; Platner, *Klagen u. Process*, i. 417; K. F. Hermann, *Staatsalterth.* § 140; *Att. Process*, p. 414 f., Lips.) [C. R. K.] [W. W.]

PSILO'THRUM (*ψίλωθρον*), in Latin authors sometimes spelt *psilotrum*, an application for removing superfluous hair, a depilatory. The favourite kind was made of heated arsenic and unslaked lime (Theophr. *H. P.* ix. 20, § 3); the arsenic is mentioned by Pliny (*H. N.* xxxiv. § 178). The roots and juices of various pungent plants were also used; the root of the wild vine, Theophr. *l. c.*: on the other hand, *lacrima vitium*, Plin. *H. N.* xxiii. § 3; *lacrima hederae*, id. xxiv. § 79; other vegetable substances, xx. § 90, xxi. § 118, xxii. § 134, xxiv. § 58, xxvii. § 72; animal matters, xxviii. §§ 46, 250, 255, xxx. § 132, xxxii. § 76. Several receipts are given (*H. N.* xxxii. §§ 135–6), with the remark appended that the hairs must first be pulled out [VOLSELLAE], when psilothrum will prevent their growing again. Pitch-plaster (*δρῶπαξ*) was used for the same purpose (Mart. iii. 74, x. 65; Phrynich. p. 405 Lobeck = 488 Rutherford).

The practice of getting rid of hairs from the body (*παρατίλλεσθαι, λεαίνεσθαι*) was at first peculiar to women (Aristoph. *Ran.* 516, *Lysistr.* 82, 151; a Roman lady's toilet in Mart. vi. 93), but in later times extended to men of effeminate habits. (See quotations from Theopompus *ap.* Athen. vi. 260 e, xii. 518 a; Clearchus, *ib.* xii. 522 d; Antigonus of Carystus, *ib.* xiii. 565 f; and cf. Plin. *H. N.* xxvi. § 164.) The foppish and obscene excesses of the later Romans are well known (Suet. *Jul.* 45; Mart. iii. 74, viii. 47, x. 65; Pers. iv. 35–41; Juv. ii. 12; Clem. Alex. *Paedag.* iii. p. 261 P.). Cf. ALIPILUS; VOLSELLAE. (Hermann-Blümner, *Privatalterth.* p. 209 n.; Marquardt, *Privatl.* p. 581; Becker-Göll, *Gallus*, iii. 241.) [W. W.]

PSYCTER (*ψυκτήρ*), a vessel for cooling wine or water. Wine was also cooled more simply by putting it in wells (Athen. iii. p. 124 d; Plut. *Quaest. Conv.* 6, 4), or mixing it with snow (Athen. iii. p. 125 c), or, less commonly, with ice (Sen. *Ep.* 78). These special wine-coolers were introduced to keep the snow separate from the wine. The vessel bore various names, in Greek usually *ψυκτὴρ* or *ψυγεύς*, but also *βαύκαλις* (*Anth. Pal.* xi. 244) and *κάλαθος* (Hesych.); in Latin *calathus* (Verg. *Ecl.* 5, 71; Mart. xiv. 107) or *gillo*. In Plat. *Symp.* p. 214 A, the *ψυκτήρ*, which Alcibiades substituted for a drinking-cup, contained two quarts, but this was a small size; on the other hand the enormous *ψυκτῆρες* mentioned in Athen. v. 199 as carried in a procession and containing from 18 to 54 gallons were clearly not for ordinary use. The material was metal (silver or bronze, Athen. *l. c.* and iv. p. 142 d) as well as earthenware, and therefore the cooling cannot have depended on evaporation through a porous substance. As regards the shape, an example is given by Baumeister (*Denkm.* p. 1989), but it is not likely that they were all of one type. Pollux (vi. 99) says that it was a *δῖνος*, which implies that it was rounded at the bottom (Schol. Aristoph. *Nub.* 1474, *Vesp.* 618; cf. Athen. iv. p. 142, where it is on a tripod), and he adds that it was distinguished from the ACRATOPHORUS by having no pedestal, but standing on little knobs (*ἀστραγαλίσκοι*), with which Ussing compares a vessel figured in *Mus. Borbon.* iii. 14. It is not improbable that the rounded shape was found convenient for the inner vessel in the double *ψυκτήρ*. The name *calathus* also may be descriptive of one of the shapes which it took (perhaps most commonly), like the ordinary pail-shape, larger at the top and diminishing towards the base. [CALATHUS.]

The name Psycter might probably be given to any vessel in which wine was cooled, even when the process was merely putting in snow, but the contrivance specially so called consisted of a smaller vessel placed within a larger one. Sometimes the wine (or water) to be iced was placed in the smaller and plunged into the larger vessel which contained snow, sometimes the snow was placed in the smaller vessel and let down into the larger vase of wine. When the wine was sufficiently iced, the smaller vessel was no doubt removed, and the wine ladled out with a *cyathus* (Athen. xi. p. 503): we have no reason to suppose that a tap was used, as seems to have been sometimes the case in the AUTHEPSA for hot drinks. A contradiction has been imagined between Suidas, who derives the name *ἀπὸ τοῦ ψύχεσθαι ἐν αὐτῷ θᾶττον τὴν κρᾶσιν*, and Pollux, who says, *ἐν ᾧ ἦν ὁ ἄκρατος*: but there is no difficulty in assuming that the wine was sometimes mixed before it was cooled, and sometimes afterwards.

Iced water, the *gelida* of Juv. v. 63 (*frigida*, Tac. *Ann.* xiii. 16), which, like the *calida*, was handed round to mix with the wine, or was used as a drink by itself (Athen. iii. p. 121 e, 122 f), was prepared in a *ψυκτήρ* as above described (in Mart. xiv. 116, *lagona nivaria*), and a special term *decocta* belongs to it, because it was boiled first in order that it might more readily be iced afterwards (Plin. xix. § 55; Juv. v. 50, and Mayor *ad loc.*). Pliny (xxxi. § 40) says that this *decocta* was an invention of Nero's (cf. Suet. *Ner.* 48), and that the water, which had sometime previously been boiled, was placed in a glass vessel and so plunged into a larger vessel of snow, that it might escape any impurities (*vitia*) of the snow. The word *δηκόκτα* was borrowed by some Greek writers (Galen, x. p. 467; cf. Athen. iii. p. 121).

The snow for this purpose, or for use in the *colus* or *saccus nivarius*, was kept through the summer in pits covered over with chaff and woollen cloths (Plut. *Symp.* vi. 6; Augustin. *de Civ. Dei*, xxi. 4): compare the narrative of Chares (*ap.* Athen. iii. p. 124 c), who tells us that Alexander preserved snow in India by putting it in trenches and covering it with oak boughs. The method of Antiochus stated below (p. 124 e), when *ὑδρίαι κεράμεαι* were placed on straw on the top of the house at night, seems to have been the method of freezing by evaporation which is common in Persia at the present time. (See also Ussing in *Annal. d. Inst.* 1849; Beckmann, *Hist. of Inventions*, iii. 322; Becker-Göll, *Charikles*, ii. 346; *Gallus*, iii. 430; Marquardt, *Privatleben*, 333.) [J. Y.] [G. E. M.]

PUBES, PUBERTAS. [CURATOR; IMPUBES.]

PUBLICA'NI. The name was applied to the farmers-general of the Roman revenues; the word *publicum* denotes both state revenue and state service (Dig. 39, 4, 1; Tac. *Ann.* xiii. 51; Livy, xxiii. 49, 1), and publicani, which is derived from it, combines both these ideas, in its meaning of persons who served the state in the collection of its revenues. The mode of collection is shown further by the definition of publicani in the Digest as "contractors for the public vectigalia" (Dig. 39, 4, 12). From a very early period the Roman state employed a peculiar mode of getting in a very large amount of its revenues. It was a system of indirect collection by means of middlemen, a class of individuals intermediate between the government itself and the subjects of governmental taxation. Such a system was probably employed for the collection of the old port-dues of Ostia on goods exposed for sale (*promercale*), and certainly for the working of the salt monopoly, which originated as early as the year 508 B.C. (Livy, ii. 9, 6). The system was simply that of the purchase or lease by a publicanus of a prospective source of revenue, which he farmed at his own risk and for his own profit. This was the general principle, as illustrated by all the sources of revenue to which the system was applied; but its application was different, as the sources of revenue themselves differed; and we can distinguish two methods of tax-farming, which were regarded as distinct both in law and in fact. In one of these the publicanus is not directly employed in working the source of revenue, in the other he is; in the one case, therefore, the publicanus is not the *possessor* or occupant of the land, or other source of wealth, from which the revenue is derived: in the other case the *possessor* and *publicanus* are identical. It is only to the first of these two classes of tax-farmers—to those, that is, who are regarded as collecting *vectigal* from *possessores* other than themselves—that the name *publicanus* is strictly applied; the latter class are regarded in law not as publicani, but as *publicanorum loco* (Dig. 39, 4, 12, 13), although, in the current literature of Rome, they were, equally with the former class, called *publicani*.

It will be more convenient to treat the latter class of publicani first; their relations to the state were simpler, and their sphere of action more limited. To this class belong the revenue-farmers who worked certain fixed sources of wealth, such as mines, salt-works, fisheries and the like, which belonged wholly to the state, and which the state, for purposes of revenue, leased directly to the publicanus as a contractor. The publicanus is, in this case, a contractor (*conductor*) for supplying a fixed revenue to the state from such property. The terms of his contract are fixed by a *lex censoria* made with the censor as the representative of the state; and the *lex censoria*, besides specifying the revenue that the state requires him to pay, also states certain conditions under which the contract is to be undertaken. To this class of fixed sources of revenue directly contracted for by the publicanus belong fisheries (Dig. 43, 14, 7), amongst which the right of fishing in the Lucrine lake was a monopoly vested in a publicanus; salt-works, perhaps the oldest of this class at Rome (Livy, ii. 9, 6; Dig. 50, 16, 17), the monopoly of which was continued down to a very late period of the Empire [SALINAE]; mines, in connexion with which we find certain conditions stated in the *lex censoria*, as, for instance, that not more than five hundred workmen should be employed in the gold mines of Vercellae (Pliny, *H. N.* xxxiii. § 78) by the contractor who worked them; and forest-land (*silva caedua*), which was also let to a contractor who paid a fixed revenue to the state. These were all in the nature of state monoplies; either wholly so, as in the case of the mines and salt-works, or partially, as in the case of certain fisheries retained by the state; while new monopolies might be artificially created, as were the quarries in Crete, by forbidding the exportation of such goods to any one but the government contractor (Dig. 39, 4, 15). The reason of their being worked by this class of middlemen can only be found in the incapacity of the Roman government, as it was constituted, to work them for itself. The rapid succession of magistrates and the singular absence of permanent officials at Rome accounts for its putting such sources of wealth into the hands of publicani, to the equal injury of the consumer and loss of the state. Before the powers of the senate were firmly established and distinctly recognised there was no really permanent administrative body in Rome; and when the powers of the senate were established, the system of middlemen was found established too. But this system of direct farming was not applied to remunerative monopolies only; it was applied, in certain exceptional cases, to Roman domain-land. The only land in Italy believed to have been so dealt with was the Campanian land, which, for this reason, was specially exempted from the agrarian legislation of the Gracchi (Cic. *de leg. Agr.* ii. 29, 81; *ad Att.* ii. 16, 1). Certain lands in the provinces, which had been royal domains of the kings whom Rome had either conquered or supplanted, were also dealt with in this way; such were the royal domain-lands in Bithynia, the lands of Attalus in the Chersonnese, those which had been the private property of the Macedonian kings Philip and Perseus, and which were, in Cicero's time, *a censoribus locati* to the publicani (Cic *de leg. Agr.* ii. 19, 50); in the same way certain portions of confiscated territory were leased to *conductores*, among which we find mentioned the territory round Corinth (*ib.* ii. 19, 51).

But, as a whole, we find the public land of Rome (*ager publicus*) dealt with in quite a different manner by the state. The greater part of the land over which the Roman state claimed dominion was either tilled land (*ager*) or pasture (*silva pascua*, *saltus*, Dig. 50, 16, 30; Varro, *L. L.* 5, 36). As such it was enjoyed, if tilled land, by the *possessor*; if pasture land, by the *pastor*: but the state makes no fixed bargain with either of these, it only tolerates them, and the possessor in this case is not the publicanus. The publicanus is the man who has a right to collect *vectigal* (ἀποφορά, App. *Civ. Bell.* i. 7; Plut. *Tib. Gracch.* 8) from the person who uses the land. The revenue to be paid is determined by the *lex dicta*, under which the censor sold the right to the publicanus (Lex Agraria, § 85, *ex lege dictâ, quam censores deixerunt, publicano dare oportuit*). The conditions of sale with the publicanus obviously determine what the possessor or pastor has to pay. The possessor according to Appian, paid one-tenth of the produce of sown land, one-fifth of the produce of planted (*Bell. Civ.* i. 7), although the vectigal actually collected seems to have been in most cases less. The pastor paid a vectigal, which in this case was called *scriptura* (Festus, s. v. *scriptuarius ager*). The relations between the publicanus and the occupants of the land were regulated by the *lex dicta* of the censor. The third great class of revenues collected in this manner were the custom-dues (*portoria*), which were similarly leased to the publicanus by the censor, who fixed the conditions under which they were to be collected.

A very great extension was given to the system of tax-farming by the adoption of this method in provincial administration. The first province to which the system was directly applied was the province of Asia. In Sicily and Sardinia it had been found already in force on the Roman occupation, and by the Lex Sempronia (C. Gracchi) this method of raising revenues, with a nearer approximation to the Italian system, was applied to Asia (C. Gracch. *ap.* Gell. xi. 10; Cic. *in Verr.* iii. 6, 12–14). The theory which this system implied was that most of the provincial land was *ager publicus*, and that the dominium had therefore passed to the Roman people; that its occupiers were only possessores, and should therefore pay the customary revenues, the *decumae* and *scriptura* on the land, as well as the *portoria*, all included under the generic name *vectigal* (Cic. *pro lege Man.* 6, 15), which were paid in Italy [see PROVINCIA]. While, however, in Sicily the existing Lex Hieronica was adhered to, and the tenths of the soil (*decumae*) were sold in Sicily itself (Cic. *in Verr.* ii. 25, 63; ii. 60, 147; iii. 7, 16), Asia was subject to a *lex venditionis*, which enjoined that the Asiatic taxes should be put up for sale for the province as a whole and in Rome (*in Verr.* iii. 6, 14).

For the collection of such provincial taxes the publicani made a fixed contract with the state, and then farmed the taxes at their own risk (Cic. *ad Quint. Fr.* i. 1, 11; *ad Att.* v. 13, 1); sometimes they over-estimated the resources of the province, with the result that they farmed them at a loss (Cic. *ad Att.* i. 17, 9; ii. 1, 8). The connexion of the publicani with the provinces, especially with that of Asia, was much closer than that of being merely its tax-farmers. They invested their money largely in the province (Cic. *de leg. Man.* 7, 17), and themselves carried on business as *negotiatores* there (Id. *ib.* 7, 18). This double character of public contractors and private investors gave them an opportunity for unfair exactions. The provincials were often in arrears with the publicani, either from bad years or the peculations of their own magistrates (Cic. *ad Att.* vi. 2, 5), and would have to borrow from these same publicani in their character of bankers. Another source of unfair dealing was the interest provincial governors sometimes had in these exactions. Interference with the customary modes of collection might be sanctioned, and more or less legalised by the governor's edictum perpetuum. Thus Verres' edicts in Sicily were altogether in favour of the tax-farmers (Cic. *in Verr.* iii. 10, 24), and he is accused by Cicero of sharing the profits with the decumani; and although it was illegal, or at least considered highly improper, for a Roman governor or magistrate to be a member of a society of publicani (*ib.* iii. 56, 130), yet, by collusion with a decumanus, and with the large powers a governor had of making new rules in his edict, indirect interference and profit were easily possible (*ib.* iii. 30, 71). In Asia we know that considerable interference with the conditions of the *lex dicta* was permitted, nominally for the convenience of both parties (Cic. *ad Quint. Fr.* i. 1, 12), and with this permission it is clear how the publicani could increase their exactions, when backed up by the representative of Roman authority in the province. Instances of what the additional charges of a provincial publicanus might be are given by Cicero (*in Verr.* iii. 78, 181). In this case there were charges made for the examination of the corn-dues (*pro spectatione*), for discount on foreign money (*pro collybo*), for writing materials and stamp (*pro cerario*), four per cent. (*binae quinquagesimae*) for the secretary, and six per cent. (*ternae quinquagesimae*) for an additional present to the collector. The difficulty of a Roman governor was to be in favour both with the publicani and the provincials at once (Cic. *ad Quint. Fr.* i. 1, 12); Cicero boasts to have effected this as proconsul of Cilicia (*ad Att.* vi. 25), and remarks how much easier matters were made for him, on his arrival in the province, by the fact of the arrangements between the publicani and the provincials having been already concluded (*ad Att.* v. 13, 1). Other injuries were inflicted, without the cognisance of the publicani themselves, by the lower officials employed for the actual work of collection, especially in the case of the *portoria* (Dig. 39, 4, 12; Cic. *ad Quint. Fr.* i. 1, 11).

With the Empire came a great restriction of the operations of the publicani. Tax-farming as a general mode of raising provincial revenue had ceased [PROVINCIA], and private enterprise in the working of monopolies was also largely restricted (Suet. *Tib.* 49). But publicani are still found employed for a great many public purposes in the reign of Tiberius; for the working of the *publici fructus*, such as mines, forests and the like, and for the supply of corn to the army (Tac. *Ann.* iv. 6; xiii. 51). They still, in Nero's time, collected the *portoria* (*ib.* xiii. 50); and we find, in much later inscriptions, the *conductores* mentioned by the side of the *procuratores*, for the collection of different sorts of revenue from the same province (Henzen, 6648, 6650). But they were, from this time, subject to much greater scrutiny than formerly. Nero issued an edict that the laws which regulated their several contracts should be formally published, and increased the powers of the praetors at Rome and the governors of the provinces, of dealing summarily with such matters (Tac. *l. c.*). The title in the Digest that treats of the publicani (Dig. 39, tit. 4, *De publicanis et vectigalibus et commissis*) shows us a number of laws made by later emperors on the subject, the object of most of them being to restrain the illegal exactions of the publicani: as, for instance, that the penalty for illegal claims was double the amount so exacted; or, if force had been used, quadruple (Dig. 39, 4, 9, 15); and that the publicanus was to be held responsible for the misdeeds of his slaves who were employed in collecting the revenue (*ib.* 39, 4, 12, 1).

From the earliest times we find that the publicani do not undertake their contracts singly; the extent of the undertakings, and the amount of security which the state required them to deposit, would have rendered it impossible. They worked in companies (*societates publicanorum* or *socii publicorum vectigalium*), which were composed of shareholders (*socii*), who might have a greater or smaller share in the concern (*partes* or *particulae*). These companies had a legal representative (*manceps*) who acted for the *societas* as its formal head (*princeps publicanorum*, Ps.-Asc. *in Div.* p. 113). The manceps bid for the contract, agreed to the terms imposed by the censor, saw that security (*praedia*) was deposited by the sureties (*praedes* or *fidejussores*, Ps.-Asc. *in Verrin.* p. 196: Dig. 39, 4, 9), and undertook the risk of the contract on behalf of the company. Polybius (vi. 17) mentions three stages in the business of a company of publicani: the bidding for the contract, the depositing of the security, and finally the handing of the vectigal due into the treasury. He mentions the manceps and praedes as distinct persons; they were very often so in fact, but the *manceps* himself was called *praes*, inasmuch as he was equally responsible for the fulfilment of the contract (Festus, s. v. *manceps*). The word *lustrum*, primarily denoting the ceremonies attending the taking of the census, was applied to the period during which the contract ran (Cic. *ad Att.* vi. 2, 5), which was usually a period of five years. Fresh contracts were made at the close of each lustrum, and open competition invited; the contract was purely voluntary,—no state contract was compulsory; and consequently any company that outbid all the others, when the vectigalia were put up to auction, might undertake their collection, provided it could find sufficient security (Dig. 39, 4, 9, 1, 2). The conditions of the contract were contained in a *lex censoria* or *lex dicta*, of which frequent mention has been made, and which was also called a *lex locationis* (Lex Julia Municip. l. 72). Occasionally, however, the people or senate modified the terms fixed by the census, in the interest of the publicani (Plut. *Flamin.* 19; Polyb. vi. 17; Liv. xxxix. 44), and in some cases even the tribunes of the people interfered to effect this object (Liv. xliii. 16). Each company of publicani had a central manager and banker at Rome, called *magister societatis*; these magistri were appointed annually, and handed over their accounts at the end of each year to their successors (Cic. *ad Att.* v. 16, 3; *in Verr.* ii. 74, 182). They had under them a staff of subordinate officials who were said *operas dare publicanis* or *in operis esse publicanorum* (Cic. *ad Fam.* xiii. 65), and who were also called the *familia* of the publicani, this term including not only slaves, but all subordinate officials (Dig. 39, 4, 1). Where the business of the publicani was extended to the provinces, they had a deputy in each local centre called *pro magistro*, with a corresponding *familia* under his direction (Cic. *in Verr.* ii. 70, 171; *de leg. Man.* vi. 16). There was an organised system of communication kept up between the provinces and Rome by means of letter-carriers (*tabellarii*), of whose services general correspondents frequently availed themselves (Cic. *ad Att.* v. 15, 3; Ter. *Phorm.* i. 2, 100). The companies of publicani received their names from the respective dues it was their business to collect. Thus the collectors of *decumae* were called *decumani;* they ranked highest, and are described by Cicero as "the chiefs and, as it were, senate of the publicani" (*in Verr.* ii. 71, 173). The collectors of *scriptura* were called *pecuarii*, *scriptuarii* or *pascuarii* (Ps.-Asc. *in Divin.* p. 113); and the contractors for salt-works and the collectors of *portoria* were termed *socii salarii* and *portitores* respectively. There is, however, some doubt about the meaning of *portitores.* The Pseudo-Asconius classes them with pascuarii as a division of the publicani (*in Divin.* p. 113); elsewhere they are spoken of as though they were the servants or lower officials of this branch of the publicani (Plaut. *Asin.* i. 3, 7; Cic. *Off.* 1, 42, and perhaps Cic. *ad Quint. Fr.* i. 1, 11). It is not, however, impossible to reconcile these two meanings, and to suppose that the staff (*familia*) of a certain company of tax-farmers might themselves be called by the name applicable to this company. Usually each company seems to have collected but one kind of revenue; but we find an instance in which two kinds, the *portoria* and the *scriptura*, were farmed by the same company (Cic. *in Verr.* ii. 70, 171).

It only remains to touch briefly on the political position and importance of the publicani. They had always been the great capitalists of Rome, and whenever capital was needed for state purposes they were always to the front. As early as the Second Punic War we see them coming forward to offer their assistance, when the state was in pressing pecuniary difficulties; after the battle of Cannae (Liv. xxiv. 18), and again in 215 B.C., when the Scipios wrote from Spain for supplies, which the state was unable to afford them (Liv. xxiii. 48). As the representatives of capital, Cicero calls them the *firmamentum ceterorum ordinum* (*pro leg. Man.* 7, 17), and maintains that their claims should be primarily regarded in any act of state administration. Their political importance was heightened by the organisation of the capitalists of Rome as the body of Equites, probably brought about by C. Gracchus. In one respect this political organisation reacted on the administration of their provincial functions; for, between the times of C. Gracchus and Sulla (123 to 81 B.C.), the Equites formed the judicial body at Rome; and, as they consisted in great part of publicani, they had the power of approving, by their treatment of provincial governors accused of extortion, the regulations of these governors connected with the position of the provincial tax-farmers. In Cicero's letters *publicani* is used almost indiscriminately with *equites*, to denote a political power in the state (Cic. *ad Att.* i. 17, 9; ii. 1, 8). Many political actions that had the most important consequences were brought about by a representation of their claims backed by their influence, as, for instance, the passing of the Manilian law (B.C. 66): and in one instance the neglect of the claims of the publicani was the cause of a breach between the equites and the senatorial government (Cic. *ad Att.* ii. 1, 8), that helped to accelerate the downfall of the Republic. [A. H. G.]

PUBLICIANA IN REM ACTIO is the action granted by the Praetor's Edict to a person who had commenced the usucapion of a thing, and by which he was enabled to recover possession of it if lost before that usucapion was completed. Possibly the Publicius by whom it was introduced was the one who was praetor in Cicero's time (*pro Cluentio*, 45, 126). The terms of the Edict are given in Dig. 6, 2, 1, pr., and the formula of the action by Gaius (iv. 36), from whom it appears that the ground upon which the recovery proceeded was a fiction that the period of time required for a complete usucapion had run its course: "dicit (actor) rem se usucepisse, et ita vindicat suam esse" (Inst. iv. 6, 4). The action was open to the bonitarian owner [DOMINIUM] as well as to the bonâ-fide possessor, though it is disputed whether this was so under the original Edict of Publicius, or whether it was not extended to the former, with a distinct formula, by a later edict; it being in fact a moot point among civilians whether the true and original principle on which the action rested was inchoate ownership or bonâ-fide possession: in favour of the former are Huschke and Schirmer, of the latter Brinz and Bruns. Probably the first view is correct, with the proviso that a person who had commenced to acquire by *longi temporis possessio* (a merely praetorian title) was no less able to institute the action than one who had entered upon the civil law usucapion (Dig. 6, 2, 11, 1; *ib.* 12, 2): though the fact that usucapio extraordinaria was proceeding (*e.g.* of a res furtiva) was not sufficient basis for it (Dig. *ib.* 9, 5). By the classical jurists it was disputed (Dig. *ib.* 4; *ib.* 7, 2; 41, 2, 16) whether the action could be founded on a *titulus putativus*, i.e. where the possessor was mistaken as to the ground on which he had acquired possession (*e.g.* Inst. ii. 6, 11), though in the modern civil law this is generally admitted. But in no case would it lie against the real owner of the property in question (Dig. 6, 2, 16, 17), unless the latter, had he brought a real action against the possessor for its recovery, could have been himself repelled by a justa exceptio (*e.g.* doli, rei venditae et traditae, or rei judicatae); in this case, on the actio Publiciana being met by the exceptio justi dominii, the plaintiff could retort with replicatio doli, rei venditae et traditae, &c. Nor could the Publician action be effectually brought against another bonâ-fide possessor of the same property, unless the latter derived his possession from the same "auctor" as the former, but by a later act of traditio (Dig. 6, 2, 9, 4).

Even though it be admitted that the sole condition of the action was usucapion possession (civil or praetorian), it cannot be denied that it found a very large application in cases of bonitary ownership, especially where a res mancipi had been merely tradita, so that ownership in it was not transferred. Upon Justinian's abolition of the distinction between res mancipi and nec mancipi, it became useless for any other purpose than a case of bonâ-fide possession, and this seems to explain why the words "non a domino" appear in the Edict as cited in the Digest, as it seems clear from Dig. 6, 2, 7, 11 (cf. Gaius, iv. 36) that they did not originally form part of it.

The action was further extended, from the recovery of a feigned ownership, to the establishment of servitudes which could not be claimed by a civil law actio in rem (Dig. 6, 2, 11, 1), and of other jura in re aliena: emphyteusis (Dig. 6, 2, 12, 2), superficies (Dig. 43, 18, 1, 3, 6) and pignus (Dig. 20, 1, 18). So, too, the bonâ-fide possessor and other persons who could bring the actio Publiciana directly could bring an actio negatoria in Publician form against persons claiming servitudes over the property in question.

(Dig. 6, 2; Gaius, iv. 36; Inst. iv. 6, 4 and 31; Huschke, *Das Recht der publicianischen Klage*, Stuttgart, 1874; Schirmer and Schulin, *Krit. V. J. Schrift.* xviii. pp. 347–362, 526–545; Brinz, *Lehrbuch*, i. §§ 178, 179; Windscheid, *Lehrbuch*, § 199; Vangerow, *Pandekten*, § 335.) [J. B. M.]

PUGILA'TUS (πύξ, πυγμή, πυγμαχία, πυγμοσύνη), boxing. The fist being the simplest and most natural weapon, it may be taken for granted that boxing was one of the earliest athletic games among the Greeks. Hence even gods and several of the earliest heroes are described either as victors in the πυγμή, or as distinguished boxers, such as Apollo, Heracles, Tydeus, Polydeuces, &c. (Paus. v. 7, § 4; Theocrit. xxiv. 113; Apollod. iii. 6. § 4; Paus. v. 8, § 2). The Scholiast on Pindar (*Nem.* v. 89) says that Theseus was believed to have invented the art of boxing. The Homeric heroes are well acquainted with it (Hom. *Il.* xxiii. 691, &c.; compare *Od.* viii. 103, &c.). The contest in boxing was one of the hardest and most dangerous, whence Homer gives it the attribute ἀλεγεινή (*Il.* xxiii. 653). Boxing for men was introduced at the Olympic games in Ol. 23, and for boys in Ol. 37 (Paus. v. 8, § 3). Contests in boxing for boys are also mentioned in the Nemea and Isthmia (Paus. vi. 4, § 6).

In the earliest times boxers (*pugiles*, πύκται) fought naked, with the exception of a ζῶμα round their loins (Hom. *Il.* xxiii. 683; Verg. *Aen.* v. 421); but this was not used when boxing was introduced at Olympia, as the contests in wrestling and racing had been carried on here by persons entirely naked ever since Ol. 15 [cf. LUCTATIO, p. 82 *b*]. Respecting the leathern thongs with which pugilists surrounded their fists, see CAESTUS, where its various forms are illustrated by woodcuts.

The boxing of the ancients appears to have resembled the practice of modern times. It was a point of skill, we are told, not to attack the antagonist, but to remain on the defensive, and thus to wear out the opponent, until he was obliged to acknowledge himself to be conquered (Dio Chrysost. *Melanc.* ii. *orat.* 29; Eustath. *ad Il.* p. 1322, 29). It was considered a merit in a boxer to conquer without *receiving* any wounds, so that the two great points in this game were to inflict blows, and at the same time not to expose oneself to any danger (πληγή καὶ φυλακή, Dio Chrysost. *Serm.* vii. 1; Plut. *Sympos.* ii. 5; compare Paus. vi. 12, § 3). As regards the position of the hands, no doubt it varied according to circumstances, then as now. In art representations we see sometimes the right arm guarding and the left striking, sometimes the contrary: the blows were directed against the upper parts of the body, and the wounds inflicted on the head, especially when the μύρμηκες [CAESTUS] were worn, were often severe (Hom. *Od.* xviii. 96; Apollon. Rhod. ii. 785; Theocrit. ii. 126; Verg. *Aen.* v. 469; Aelian, *V. H.* x. 19). The ears especially were exposed to great danger, and with regular pugilists they were generally much mutilated and broken (Plat. *Gorg.* p. 516; *Protag.* p. 342; Martial, vii. 33, 5). Hence in works of art the ears of the pancratiasts always appear beaten flat, and, although swollen in some parts, are yet smaller than ears usually are. In order to protect the ears from severe blows, little covers, called ἀμφωτίδες, were invented (Pollux, ii. 82; *Etymol. Mag.* s. v.). But these ear-covers were undoubtedly never used in the great public games, but only in the gymnasia and palaestrae, or at most in the public contests of boxing for boys; they are never seen in any ancient work of art.

Pugilists, from a tomb at Chiusi. (Dennis.)

Two points of distinction between ancient and modern pugilists may be noticed: (1) that, as we gather from vase-pictures, the fist was not constantly doubled, as with us, but the fingers were often merely curved over, sometimes almost extended; in some representations, however, the fists are fairly clenched: probably the differences are due to the caestus;—(2) the inarticulate sounds emitted by the boxers, instead of the modern silence: this, according to Cicero, was to add force to the blow (*Tusc.* ii. 23, 54; cf. Sen. *Ep.* 57).

The game of boxing, like all the other gymnastic and athletic games, was regulated by certain rules. Thus pugilists were not allowed to take hold of one another, or to use their feet for the purpose of making one another fall, as was the case in the pancratium (Plut. *Symp.* ii. 4; Lucian, *Anach.* 3). Cases of death, either during the fight itself or soon after, appear to have occurred rather frequently (Schol. *ad* Pind. *Ol.* v. 34); but if a fighter wilfully killed his antagonist, he was severely punished (Paus. viii. 40, § 3; vi. 9, § 3). If both the combatants were tired without wishing to give up the fight, they might pause a while to recover their strength; and in some cases they are described as resting on their knees (Apollon. Rhod. ii. 86; Stat. *Theb.* vi. 796). The contest did not end until one of the combatants was compelled by fatigue, wounds, or despair, to declare himself conquered (ἀπαγορεύειν, Paus. vi. 10, § 1), which was generally done by lifting up one hand (Plut. *Lycurg.* 19).

The Ionians, especially those of Samos, were at all times more distinguished pugilists than the Dorians, and at Sparta boxing is said to have been forbidden by the laws of Lycurgus (Paus. vi. 2, § 4; Plut. *Lycurg.* 19; PANCRATIUM). But the ancients generally considered boxing as a useful training for military purposes, and a part of education no less important than any other gymnastic exercise (Lucian, *Anach.* 3; Plut. *Cat. Maj.* 20). Even in a medical point of view, boxing was recommended (Aretaeus, *De Morb. diut. cur.* i. 2).

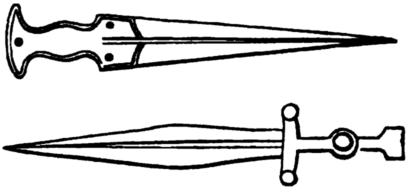
In Italy boxing appears likewise to have been practised from early times (Liv. i. 35; Dionys. vii. 72). It continued as a popular game during the whole period of the Republic as well as of the Empire (Suet. *Aug.* 45; Cic. *de Leg.* ii. 15, 38; Suet. *Calig.* 18). We gather, especially from the passage in Suet. *Aug.*, that the Greek pugilists were regarded as much more skilful than the Latin. Besides the "legitimi pugiles," there was a peculiarly Italian institution of *catervarii pugiles*, who fought, not in pairs, but in a general *mêlée* (Suet. *l. c.*; *C. I. L.* x. 1074, where they are distinguished from *pyctae*). See Krause, *Die Gymnastik und Agon. d. Hellenen*, pp. 497–534; Blümner in Baumeister, *Denk.* p. 523; Grasberger, *Erziehung*, p. 205. [L. S.] [G. E. M.]

PUGILLA'RES. [TABULAE.]

PU'GIO (μάχαιρα, *dim.* μαχαίριον; ἐγχειρίδιον), a dagger; a two-edged knife, commonly of bronze, with the handle in many cases variously ornamented or enriched, sometimes made of the hard black wood of the Syrian terebinth (Theophr. *H. P.* v. 3, § 2). The accompanying woodcuts show three ancient daggers. The first was found in Italy, and belongs to a primitive period. The blade is attached to the handle by eight studs (cf. the Homeric epithet of a sword, ἀργυρόηλος). The second and third are copied from Beger (*Thes. Brand.* iii. pp. 398, 419). The handle of the second is fitted to receive a plate of wood on each side, attached by three rivets.

Ancient Dagger.

In the Heroic ages the Greeks sometimes wore a dagger suspended by the sword on the left side of the body [GLADIUS], and used it on all occasions instead of a knife (Hom. *Il.* iii. 271, xix. 252; Athen. vi. p. 232 c). The custom is continued to the present day among the Albanians, who are descended from the ancient Illyrians. The Romans (see woodcuts, Vol. I. pp. 3, 884) sometimes wore the dagger as the Persians did [ACINACES], on the right side, and consequently drew it with the thumb at the upper part of the hilt, the position most effective for stabbing. The terms *pugio* and ἐγχειρίδιον denote both its smallness and the manner of grasping it in the hand (πύξ, *pugnus*).



Ancient Daggers.

On some of the Roman monuments, although the arrangement appears to be inconvenient, the long sword was worn by the right side, while the shorter dagger was by the left hand. (Cf. the sepulchral reliefs of Roman Legionaries, Baumeister, *Denkmäler*, figs. 2266, 2267, 2269.) In the same way we must understand "the two swords" (*duos gladios*, Gell. ix. 13) worn by the Gallic chieftain, slain by Manlius Torquatus; and the monuments of the Middle Ages prove that the custom long continued in our own and in adjoining countries. (See Stothard, *Mon. Effigies of Gt. Britain.*) Among some of the northern nations of Europe, a dirk was constantly worn on the side, and was in readiness to be drawn on every occasion (Ovid, *Trist.* v. 7, 19, 20). The Chalybes employed the same weapon, stabbing their enemies in the neck (Xen. *Anab.* iv. 7, § 16). For the Greek horsemen the dagger was considered preferable to the long sword as a weapon of offence (Xen. *de Re Equest.* xii. 11). [J. Y.] [A. H. S.]

PULLA'RIUS. [AUGUR.]

PU'LPITUM. [THEATRUM.]

PULS was a thick gruel or porridge made of spelt (*far*, *ador*): as regards this grain, see AGRICULTURA, Vol. I. pp. 64 f. We are told that this porridge formed the staple of Roman food in early times in place of bread (Varro, *L. L.* v. 105; Plin. *H. N.* xviii. § 83): Pliny adds that for this reason puls was still used in sacred rites (cf. Juv. xvi. 39; Arnob. ii. 21). As it was a national dish of the early Romans, we find *pultiphagus* in Plaut. *Mostell.* 818, used to describe a Roman, or "barbarus" (cf. Id. *Poen. prol.* 54). It remained a common food for the poorer class or those who affected homely fare (Juv. xiv. 170; Mart. v. 78, xiii. 8; Ammian. xxv. 2, 2). This dish of puls must be distinguished from the later introduction *polenta*, which was made of barley-meal (Plin. xviii. § 72), and was borrowed from Greece, "videtur tam puls ignota Graeciae fuisse, quam Italiae polenta" (Id. *ib.* § 84). It was, in fact, the Greek μᾶζα in its more fluid state. The name *polenta* has now been transferred to a different substitute for puls. It is a stiff porridge of Indian meal, and is at the present time a principal food of the peasants in North Italy. (Marquardt, *Privatleben*, p. 415; Becker-Göll, *Gallus*, iii. 313; *Charikles*, ii. 312.) [G. E. M.]

PULVI'NUS (also *pulvinar*, *culcita*, *προσκεφάλαιον*), a cushion, used for beds, couches, and litters, whether a *cervical*, to support the head in beds, or a *cubital*, to support the arm on couches. The stuffing was usually of feathers [LECTUS, p. 18 *b*]; the covering often of bright coloured silk (Hor. *Epod.* 8, 15; Mart. iii. 82). The pillow was supported on a raised framework (which is shown in the woodcut on p. 15), sometimes being merely the end of the torus, or mattress, passed over this framework. Mr. Anderson (*Class. Review*, iii. 323) has shown good reason for thinking that *fulcrum*, *fulcra*, usually taken to mean *legs* of the bedstead, really meant this support of the pillow, often richly carved (Juv. xi. 95: cf. Prop. iii. 5, 5; Ov. *Pont.* iii. 3, 14). For the sacred pulvinar, see LECTISTERNIUM. [J. Y.] [G. E. M.]

PUPA (*κόρη*, *νύμφη*), a doll. Greek and Roman children commonly had dolls, made often of terra-cotta, but also of other substances,—wood, ivory, wax, &c. Wax dolls were by no means uncommon, and for these the Greeks had special names, *δάγυνον* or *δαγὺς* and *πλαγγών* (Phot. *s. v.* *πλαγγών*: Schol. *ad* Theocr. ii. 110). They were frequently made with movable limbs, as in the example given by Baumeister (*Denkm.* p. 778) from the Crimea. The Greek girls before their marriage dedicated their dolls to Artemis (*Anth. Pal.* vi. 280); at Rome girls dedicated their dolls to the Lares, as boys did their *bullae*, or to Venus (Pers. ii. 70): but if they died as children, the dolls were buried with them; many have been found in tombs. Those whose limbs were moved by strings were called *νευρόσπαστα*, and figures so constructed were exhibited as regular marionettes on a stage, or for entertainment in private houses. (Xen. *Symp.* iv. 55; Athen. i. p. 19; cf. Hor. *Sat.* ii. 7, 82.) [Becq de Fouquières, *Jeux des Anciens*, p. 27 ff.; Becker-Göll, *Charikles*, i. 282; *Gallus*, ii. 34; Blümner, *Technologie*, ii. 123.] [G. E. M.]

PUPILLUS. [IMPUBES; TUTELA.]

PU'TEAL, the stone kerb round the mouth of a well. This was sometimes nearly flush with the ground, a flat stone with a circular opening, of which there is an example in the Capitol (figured in Baumeister, *Denkm.* p. 5): it is carved in relief of a late period with scenes from the life of Achilles. But in most cases it was an enclosure surrounding the opening, high enough to protect persons from falling into it, about three or four feet from the ground, and either round or square. There is a round one in the British Museum made of marble, which was found among the ruins of one of Tiberius's villas in Capri; it has five groups of fauns and nymphs, and on the edge at the top may be seen marks of the ropes used for drawing water. Such putealia were no doubt common in Roman villas, and the *putealia sigillata*, which Cicero (*ad Att.* i. 10) wanted for his Tusculan villa, must have been of the same kind as the one in the British Museum; the word *sigillata* refers to its being adorned with figures. From its resemblance to a well-enclosure, that which surrounded a place struck by lightning, and therefore consecrated, was sometimes called *puteal* [BIDENTAL; PRODIGIUM]. At Rome we have (without referring to the Lacus Curtius) two sacred putealia, erected over places struck by lightning, one in the Comitium (Cic. *de Div.* i. 17, 33; Liv. i. 36), another in the Forum, of which the remains are thought to have been discovered between the temples of Vesta and Castor. This was the *Puteal Libonis* or *Puteal Scribonianum*, consecrated probably by L. Scribonius Libo, which is often shown on coins of the Scribonian gens, and of which an example is given below. The puteal is on the reverse of the coin, and is adorned with laurel wreaths and two lyres. It must be noticed that the puteal here has taken distinctly an altar shape. Tongs have been traced below the wreaths, and are understood to symbolise Vulcan as the maker of lightning. Libo erected in the neighbourhood of this puteal a tribunal for the praetor, in consequence of which the place was frequented by those who had lawsuits, money-lenders, &c. (Comp. Hor. *Sat.* ii. 6, 35; *Ep.* i. 19, 8;—Ov. *Remed. Amor.* 561; Cic. *pro Sest.* 8, 18; O. Richter in Baumeister, *Denkm.* p. 1468; Burn, *Rome and Campagna*, p. 86; Middleton, *Rome*, p. 178.) [W. S.] [G. E. M.]

Coin of the Scribonian Gens.

PYANE'PSIA (*πυανέψια*, *πυανόψια*, *πανόψια*), a festival celebrated at Athens every year on the 7th of Pyanepsion in honour of Apollo (Harpocr., Hesych., Suidas, *s. v.* *πυανέψια*). It was said to have been instituted by Theseus after his return from Crete (Plut. *Thes.* 22; cf. EIRESIONE; OSCHOPHORIA). The true account is probably that given by A. Mommsen, that the old Pyanepsia, in the age of Solon, was a festival, at the close of the vintage, in honour of Apollo and Athena Skiras, and that the worship of Bacchus and of Theseus was a later association with it of the ceremonies of the OSCHOPHORIA in the time of Cimon, when the worship of Theseus was introduced at Athens. The festival as well as the month in which it took place are said to have derived their names from *πύαμος*, another form for *κύαμος*, *i.e.* pulse or beans, which were cooked at this season and carried about (Harpocr. and Suid. *l. c.*; Athen. ix. p. 408). A procession appears to have taken place at the Pyanepsia, in which the *εἰρεσιώνη* was carried about. This *εἰρεσιώνη* was an olive-branch surrounded with wool and laden with the fruits of the year; for the festival was in reality a harvest feast. It was carried by a boy whose parents were still living, and those who followed him sang certain verses, which are preserved in Plutarch (*l. c.*; compare Clem. Alex. *Strom.* iv. p. 474; Eustath. *ad Il.* xxii.; Suid. *s. v.* Εἰρεσιώνη: and *Etym. Mag.*, where a different account is given). The procession went to a temple of Apollo, and the olive-branch was placed at its entrance. According to others, every Athenian planted, on the day of the Pyanepsia, such an olive-branch before his own house, where it was left standing till the next celebration of the festival, when it was exchanged for a fresh one. (Schol. *ad* Aristoph. *Plut.* 1050; comp. Preller, *Gr. Myth.* i. 203, ii. 297; A. Mommsen, *Heort.* pp. 57, 270.) [L. S.] [G. E. M.]

PYCNOSTY'LOS. [TEMPLUM.]

PYELUS (πύελος). [FUNUS.]

PYGME, PYGON. [MENSURA, Vol. II. p. 161.]

PYLA'GORAE (πυλαγόραι). [AMPHICTYONES, Vol. I. p. 104 *a*; HIEROMNEMONES.]

PYRA. [FUNUS.]

PYRGUS (πύργος), a tower. 1. The towers used in fortification and in war are spoken of under TURRIS and HELEPOLIS. 2. In Homer πύργος, πυργηδὸν are used of an army in close column (*Il.* iv. 434; xiii. 152; xv. 618). 3. A dice-box, so called from its resemblance to a tower [FRITILLUS]. 4. The territory of the town of Teos was distributed among a certain number of towers (πύργοι), to each of which corresponded a symmory or section of the citizens, compared to the Attic demes (see Boeckh, *Corp. Inscr.* No. 3064; and the elucidations of Grote, *Hist. of Greece*, vol. iii. pp. 247, 248). Scheffer, however (*de rebus Teiorum*, p. 35 ff.), takes them to be regions or quarters of the town of Teos, and Gilbert is disposed to agree with him (*Staatsalt.* ii. 38). [W. S.] [G. E. M.]

PY'RRHICA (πυῤῥίχη) among the Greeks was properly the military dance of the Lacedaemonians and Cretans—dance, that is, in the sense of rhythmical marchings and evolutions, which became stereotyped afterwards into a kind of ornamental parade. There is the greatest divergence among the authorities as to the inventor; a Cretan called Pyrrhicus, or Pyrrhus son of Achilles, or the Dioscuri, or the Curetes, or Athena, being assumed by different authors (Krause, *Gymnastik und Agonistik*, ii. 836). Plato says the pyrrhic dance "imitates the modes of avoiding blows and darts by dropping, or giving way, or springing aside, or rising up, or falling down; also the opposite postures, which are those of action, as, for example, the imitation of archery and the hurling of javelins, and of all sorts of blows" (*Leg.* vii. 815, Jowett's translation). Athenaeus (xiv. 631) calls it προγύμνασμα τοῦ πολέμου, and that it required the best music and most stirring strains. It was practised at Sparta by children when they were as young as five years. Exhibitions of pyrrhic dancers also took place at the Panathenae at Athens, and it was a common λειτουργία to furnish them (Isaeus, *de Dicaeog. hered.* § 36; Lysias, *Accept. Mun. Def.* § 1); also at Aphrodisias (*C. I. G.* 2758) and Teos (3089). There is a lively account of a πυῤῥίχη danced by a woman in Xenophon (*An.* vi. 1, 12). Grasberger (*Erziehung und Unterricht*, iii. 297) says that the youths used to strike the shields with their daggers, and, forming into two opposing lines, used to strike their daggers against the shields of those of the opposite line. The Romans sometimes gave somewhat similar exhibitions, which they called *pyrrhicae militares* (Spart. *Hadr.* 19; cf. Amm. xvi. 5, 10, xviii. 7, 7; Herodian, iv. 2, 9). It is a mistake to suppose that this is the same as the Ludus Trojae, as is stated by Servius (*ad Aen.* v. 602). But with the Romans pyrrhica for the most part signified a dramatic representation by several dancers, male and female, like our ballet, with all kinds of marching, evolutions, and groupings (Apul. *Met.* x. 29). There were also kinds of sham fights; an epigram on the pyrrhica (*Anthol. Lat.* 959, ed. Meyer) says, "In spatio Veneris simulantur praelia Martis Cum sese adversum sexus uterque venit." The subjects were most various: the Judgment of Paris, Icarus and Pasiphae (Suet. *Ner.* 12); but a very common one was something connected with Bacchic worship, as it lent itself so well to picturesque treatment, the dancers being got up with fawn-skins, thyrsi, &c. Thus we hear of the invasion of India by Bacchus and Pentheus being subjects (Ath. xiv. 631). Boys and girls for this kind of dance were imported from Asia Minor (cf. Suet. *Caes.* 39). They were sometimes free, and given citizenships if they gave satisfaction (Suet. *Ner.* 12), but generally they were slaves (Wilm. 222). The pyrrhica was sometimes danced by criminals in the amphitheatre (Dig. 48, 19, 8, 11; Plut. *de sera Numinis vind.* i. 9 = 554 ed. Reiske). The dancers had masks and splendid purple cloaks (*ib.*). Pliny (*H. N.* viii. 5) tells us that elephants were taught to dance the pyrrhica, and Lucian (*Pisc.* 36) mentions a ballet of monkeys. An elaborate account of a pyrrhica representing the Judgment of Paris is given by Apuleius (*Met.* x. 30–34). It was very like our ballets. We may notice especially the characteristic music, solemn with the entrance of Juno, the martial Doric mood as Minerva appears, and voluptuous Lydian strains accompanying Venus (c. 31); also the elaborate scenery, Mount Ida with real living bushes and trees, real goats browsing on it, and real water in its many fountains (c. 30). These at the end shot up a stream of crocus and wine just before, at the end of the performance, the mountain sank (c. 34). The machinery used in such ballets must have been most elaborate; and it is doubtless to a pyrrhica that Juvenal

Pyrrhic dancer, from a tomb at Chiusi. (Dennis.)

(iv. 122) alludes when he speaks of *pegma et pueros inde ad velaria raptos* (cf. Mayor *ad loc.*).

(Most that is to be known about the Roman pyrrhicae is given in Friedländer, *Sittengeschichte Roms*, ii.^{3} 443–445.) [L. C. P.]

PY'THIA (πύθια), one of the four great national festivals of the Greeks. It was celebrated in the neighbourhood of Delphi, anciently, and always by Herodotus, called Pytho, in honour of Apollo, Artemis, and Leto. The place of this solemnity was the Crissaean plain, which for this purpose contained a hippodromus or race-course (Paus. x. 37, § 4), a stadium of 1000 feet in length (Censorin *de Die Nat.* 13), and a theatre, in which the musical contests took place (Lucian, *adv. Indoct.* 9). A gymnasium, prytaneum, and other buildings of this kind, probably existed here, as at Olympia, although they are not mentioned. Once the Pythian games were held at Athens, on the advice of Demetrius Poliorcetes (Ol. 122. 3; see Plut. *Demetr.* 40; Corsini, *Fast. Att.* iv. p. 77), because the Aetolians were in possession of the passes around Delphi.

The Pythian games were, according to most legends, instituted by Apollo himself (Athen. xv. p. 701; Schol. *Argum. ad* Pind. *Pyth.*); other traditions referred them to ancient heroes, such as Amphictyon, Adrastus, Diomedes, and others. They were originally, perhaps, nothing more than a religious panegyris, occasioned by the oracle of Delphi, and the sacred games are said to have been at first only a musical contest, which consisted in singing a hymn to the honour of the Pythian god with the accompaniment of the cithara (Paus. x. 7, § 2; Strab. ix. p. 421). Some of the poets, however, and mythographers represent even the gods and the early heroes as engaged in gymnastic and equestrian contests at the Pythian games. But such statements, numerous as they are, can prove nothing; they are anachronisms in which late writers were fond of indulging. The description of the Pythian games in which Sophocles, in the *Electra*, makes Orestes take part, belongs to this class. The Pythian games must, on account of the celebrity of the Delphic oracle, have become a national festival for all the Greeks at a very early period; and when Solon fixed pecuniary rewards for those Athenians who were victors in the great national festivals, the Pythian agon was undoubtedly included in the number, though it is not expressly mentioned (Diog. Laërt. i. 55).

Whether gymnastic contests had been performed at the Pythian games previous to Ol. 47, is uncertain. Boeckh supposes that these two kinds of games had been connected at the Pythia from early times, but that afterwards the gymnastic games were neglected; but, however this may be, it is certain that about Ol. 47 they did not exist at Delphi. Down to Ol. 48 the Delphians themselves had been the agonothetae at the Pythian games; but in the third year of this Olympiad, when after the Crissaean war the Amphictyons took the management under their care, they naturally became the agonothetae (Strab. ix. p. 421; Paus. x. 7, § 3). Some of the ancients date the institution of the Pythian games from this time (Phot. *Cod.* p. 533, ed. Bekker), and others say that henceforth they were called *Pythian games.* Owing to their being under the management of the Amphictyons, they are sometimes called Ἀμφικτυονικὰ ἆθλα (Heliod. *Aeth.* iv. 1). From Ol. 48. 3, the Pythiads were occasionally used as an era, and the first celebration under the Amphictyons was the first Pythiad. Pausanias (*l. c.*) expressly states that in this year the original musical contest in κιθαρῳδία was extended by the addition of αὐλῳδία, *i.e.* singing with the accompaniment of the flute, and by that of flute-playing alone. Strabo (*l. c.*) in speaking of these innovations does not mention the αὐλῳδία, but states that the contest of cithara-players (κιθαρισταί) was added, while Pausanias assigns the introduction of this contest to the eighth Pythiad. One of the musical contests at the Pythian games in which only flute and cithara-players took part, was the so-called νόμος Πυθικός, which, at least in subsequent times, consisted of five parts, viz. ἀνάκρουσις, ἄμπειρα, κατακελευσμός, ἴαμβοι καὶ δάκτυλοι, and σύριγγες. The whole of this νόμος was a musical description of the fight of Apollo with the dragon and of his victory over the monster (Strabo, *l. c.*). A somewhat different account of the parts of this νόμος is given by the Scholiast on Pindar (*Argum. ad Pyth.*) and by Pollux (iv. 79, 81, 84).

Besides these innovations in the musical contests which were made in the first Pythiad, such gymnastic and equestrian games as were then customary at Olympia were either revived at Delphi or introduced for the first time. The chariot-race with four horses was not introduced till the second Pythiad (Paus. x. 7, § 3). Some games on the other hand were adopted which had not yet been practised at Olympia, viz. the δόλιχος and the δίαυλος for boys. In the first Pythiad the victors received χρήματα as their prize, but in the second a chaplet was established as the reward for the victors (Paus. and Schol. *ad* Pind. *l. c.*). The Scholiasts on Pindar reckon the first Pythiad from this introduction of the chaplet, and their system has been followed by most modern chronologers, though Pausanias expressly assigns this institution to the second Pythiad. (See Clinton, *F. H.* p. 195; Krause, *Die Pyth. Nem.*, &c. p. 21, &c.) The αὐλῳδία, which was introduced in the first Pythiad, was omitted at the second and ever after, as only elegies and θρῆνοι had been sung to the flute, which were thought too melancholy for this solemnity. The τέθριππος, or chariot-race with four horses, however, was added in the same Pythiad. In the eighth Pythiad (Ol. 55. 3) the contest in playing the cithara without singing was introduced; in Pythiad 23 the foot-race in arms was added; in Pythiad 48 the chariot-race with two full-grown horses (συνωρίδος δρόμος) was performed for the first time; in Pythiad 53 the chariot-race with four foals was introduced. In Pythiad 61 the pancratium for boys, in Pythiad 63 the horse-race with foals, and in Pythiad 69 the chariot-race with two foals were introduced (Paus. *l. c.*). Various musical contests were also added in the course of time; and contests in tragedy as well as in other kinds of poetry, and in recitations of historical compositions, are expressly mentioned (Philostr. *Vit. Soph.* ii. 27, 2; Plut. *Sympos.* ii. 4). Works of art, as paintings and sculptures, were exhibited to the assembled Greeks, and prizes were awarded to those who had produced the finest work (Plin. xxxv. § 35). The musical and artistic contests were at all times the most prominent feature of the Pythian games, and in this respect they even excelled the Olympic games.

Previous to Ol. 48 the Pythian games had been an *ἐνναετηρίς*, that is, they had been celebrated at the end of every eighth year; but in Ol. 48. 3, they became, like the Olympia, a *πεντετηρίς*, *i.e.* they were held at the end of every fourth year, and a Pythiad therefore, ever since the time that it was used as an era, comprehended a space of four years, commencing with the third year of every Olympiad (Paus. *l. c.*; Diod. xv. 60; compare Clinton, *F. H.* p. 195). Others have, in opposition to direct statements, inferred from Thucydides (iv. 117, v. 1) that the Pythian games were held towards the end of the second year of every Olympiad. Respecting this controversy, see Krause, *l. c.* p. 29, &c. As for the season of the Pythian games, they were in all probability held in the spring, and most writers believe that it was in the month of Bysius, which is supposed to be the same as the Attic Munychion. Boeckh (*ad Corp. Inscript.* n. 1688), however, has shown that the games took place in the month of Bucatius, which followed after the month of Bysius, and that this month must be considered as the same as the Attic Munychion. The festival was probably timed to coincide with the spring meetings of the Amphictyons at Delphi (Aeschin. *c. Ctes.* § 254). The games lasted for several days, as is expressly mentioned by Sophocles (*Elect.* 690, &c.), but we do not know how many. When ancient writers speak of *the day* of the Pythian agon, they are probably thinking of the musical agon alone, which was the most important part of the games, and probably took place on the 7th of Bucatius. It is quite impossible to conceive that all the numerous games should have taken place on one day.

The concourse of strangers at the season of this panegyris must have been very great, as undoubtedly all the Greeks were allowed to attend. The states belonging to the amphictyony of Delphi had to send their theori in the month of Bysius, some time before the commencement of the festival itself (Boeckh, *Corp. Inscr.* l. c.). The theories sent by the Athenians were always particularly brilliant (Schol. *ad* Aristoph. *Av.* 1585). [For the meaning of the word Πυθαϊσταί, Strab. ix. p. 404, see THEORI.] As regards sacrifices, processions, and other solemnities, it may be presumed that they resembled in a great measure those of Olympia. A splendid, though probably in some degree fictitious, description of a theoria of Thessalians may be read in Heliodorus (*Aeth.* ii. 34).

As to the order in which the various games were performed, scarcely anything is known, with the exception of some allusions in Pindar and a few remarks of Plutarch. The latter (*Symp.* ii. 4; comp. Philostr. *Apoll. Tyan.* vi. 10) says that the musical contests preceded the gymnastic contests, and from Sophocles it is clear that the gymnastic contests preceded the horse and chariot races. Every game, moreover, which was performed by men and by boys, was always, as at Olympia, first performed by the latter (Plut. *Symp.* ii. 5).

We have stated above that, down to Ol. 48, the Delphians had the management of the Pythian games; but of the manner in which they were conducted previous to that time nothing is known. When they came under the care of the Amphictyons, especial persons were appointed for the purpose of conducting the games and of acting as judges. They were called Ἐπιμεληταί (Plut. *Symp.* ii. 4, vii. 5), and answered to the Olympian Hellanodicae. Their number is unknown. There must, however, have been at least three: one for the musical, gymnastic, and equestrian contests respectively (Krause, *l. c.* p. 44). In later times it was decreed by the Amphictyons that king Philip with the Thessalians and Boeotians should undertake the management of the games (Diod. xvi. 60), but Krause thinks this was a purely honorary office, the real work of presiding remaining in the hands of the Amphictyons; and afterwards, even under the Roman emperors, the Amphictyons again appear in the possession of this privilege (Philostr. *Vit. Soph.* ii. 27). The ἐπιμεληταὶ had to maintain peace and order, and were assisted by *μαστιγοφόροι*, who executed any punishment at their command, and thus answered to the Olympian ἀλύται (Luc. *adv. Indoct.* 9, &c.).

The prize given to the victors in the Pythian games was from the time of the second Pythiad a laurel chaplet (*τὸ φυτὸν τῆς δάφνης*); so that they then became an *ἀγὼν στεφανίτης*, while before they had been an *ἀγὼν χρηματίτης*. The laurel sprays of which the chaplet was composed were brought by boys whose parents were both alive (παῖδες ἀμφιθαλεῖς) from the Vale of Tempe, accompanied on the way by a flute-player (Plut. *περὶ μουσ.* c. 14). (Paus. x. 7, § 3; Schol. *in Argum. ad* Pind. *Pyth.*) In addition to this chaplet, the victor here, as at Olympia, received the symbolic palm-branch, and was allowed to have his own statue erected in the Crissaean plain. (Plut. *Symp.* viii. 4; Paus. vi. 15, § 3, 17, § 1; Justin. xxiv. 7, 10.) That sometimes apples were presented to victors in the great Pythian games as prizes is clear from many passages in later writers. (Cf. Luc. *Anach.* 9, 10, 13, 16; Liban. *Eloqu. Rom.* t. ii. 716 R.; Paus. vi. 9, 1; Schol. Pind. *Pyth.* Arg. p. 298 B.)

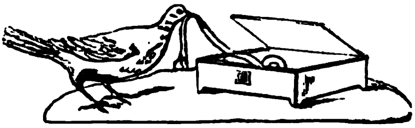
The time when the Pythian games ceased to be solemnised is not certain, but they probably lasted as long as the Olympic games, *i.e.* down to A.D. 394. In A.D. 191 a celebration of the Pythia is mentioned by Philostratus (*Vit. Soph.* ii. 27), and in the time of the Emperor Julian they still continued to be held, as is manifest from his own words (Jul. *Epist. pro Argiv.* p. 35 a).

Pythian games of less importance were celebrated in a great many other places where the worship of Apollo was introduced; and the games of Delphi are sometimes distinguished from these lesser Pythia by the addition of the words ἐν Δελφοῖς. But as by far the greater number of the lesser Pythia are not mentioned in the extant ancient writers, and are only known from coins or inscriptions, we shall only give a list of the places where they were held:—Ancyra in Galatia, Aphrodisias in Caria, Antiochia, Carthaea in the island of Ceos (Athen. x. pp. 456, 467), Carthage (Tertull. *Scorp.* 6), Cibyra in Phrygia, Delos (Dionys. *Perieg.* 527), Emisa in Syria, Hierapolis in Phrygia, Magnesia, Megara (Schol. *ad* Pind. *Nem.* v. 84, *Ol.* xiii. 155; Philostr. *Vit. Soph.* i. 3), Miletus, Neapolis in Italy, Nicaea in Bithynia, Nicomedia, Pergamus in Mysia, Perge in Pamphylia, Perinthus on the Propontis, Philippopolis in Thrace, Side in Pamphylia, Sicyon (Pind. *Ol.* xiii. 105, with the Schol.; *Nem.* ix. 51), Taba in Caria, Thessalonice in Macedonia, in Thrace, Thyatira, and Tralles in Lydia, Tripolis on the Maeander in Caria. (Krause, *Die Pythien, Nemeen und Isthmien*, pp. 1–106.) [L.'S.] [J. I. B.]

PY'THIA. [Oraculum.]

PY'THII (πύθιοι), called also Ποίθιοι (Phot. *s. v.*), were four officers at Sparta who were chosen by the kings, two by each king, as their assistants in their religious and priestly functions. Their most important duty was to go as envoys to Delphi, to receive the oracles committed to writing, and to take charge of them when they had been delivered to the kings. They were in immediate attendance on the kings, and messed with them, boarded at the public expense. [Damosia.] (Herod. vi. 57; Plut. *Pelop.* 21; Xen. *de Rep. Lac.* xv. 5; Suid. *s. v.*; Schomänn, *Antiq.* p. 246; Gilbert, *Staatsalt.* i. 48.) [W. S.] [G. E. M.]

PYXIS (πυξίς), a casket, a jewel-box (Mart. ix. 38); also a small box for holding drugs or poisons (Cic. *pro Cael.* 25, 61; Quintil. vi. 3, 25). Quintilian (viii. 6, § 35) produces this term as an example of catachresis, because it properly denoted that which was made of box (πύξος), but was applied to things of similar form and use made of any other material. In fact, the caskets in which the ladies of ancient times kept their jewels and other ornaments were made of gold, silver, ivory, mother-of-pearl, tortoise-shell, &c. The pyxis, in which Nero dedicated the cuttings from his beard to Jupiter, was of gold, studded with pearls (Suet. *Ner.* 12). They were also much enriched with sculpture. A silver coffer, 2 feet long, 1½ wide, and 1 deep, most elaborately adorned with figures in bas-relief, is described by Böttiger (*Sabina*, vol. i. pp. 64–80, plate iii.). The first woodcut (from *Ant. d'Ercolano*, vol. ii. tav. 7) represents a very plain jewel-box, out of which a dove is extracting a riband or fillet: the second is of terra-cotta, from Etruria. The word is also used for the iron cap at the end of a pestle (Plin. *H. N.* xviii. § 112). [J. Y.] [G. E. M.]



Pyxis.

Terra-cotta Pyxis. (Dennis.)

Q.

QUADRAGE'SIMA. (1.) The fortieth part of the imported goods, or 2½ per cent., was the amount of the portorium in some provinces [Portorium]. Separate *stationes fisci* seem to have looked after this tax in each province, under the Empire (see Wilmanns, *Exemp. Inscr. Lat.* 1397, 1398; and see Stationes Fisci).

(2.) *Quadragesima litium* (Suet. *Cal.* 40); a tax imposed by Caligula of the fortieth part of the value of all property about which there was a lawsuit.

In what sense does Tacitus (*Ann.* xiii. 51) mean that Nero abolished *quadragesima?* Not (1), for that tax is heard of later (see Symmachus, *Ep.* v. 62; and perhaps Suet. *Vesp.* 1); nor (2), because Claudius had already abolished the new taxes of Caligula (Dio Cass. lx. 4; though many persons think that the *quadragesima litium* was not abolished before Galba's principate), and also because a *quadragesima litium* could not well be farmed, whereas the context shows that the tax spoken of by Tacitus was farmed. It is therefore probable that Tacitus is speaking of charges otherwise unknown to us and (as *alia*, &c. in the passage would show) illegal. [F. T. R.]

QUADRANS. [As, Vol. I. p. 202; Pondera.]

QUADRANTAL, or **AMPHORA QUADRANTAL,** or **AMPHORA** only, was the principal Roman measure of capacity for fluids. (*Amphora* was the later name for the quadrantal, and is not found as a measure earlier than Cic. *pro Font.* 9, 19; cf. Fest. p. 258, "quadrantal vocabant antiqui, quam ex Graeco amphoram dicunt"; so also Volus. Maecian. *Dist. Part.* 79, "quadrantal, quod nunc plerique amphoram vocant." This was in the middle of the 2nd century A.D.) All the Roman measures of capacity were founded on weight, and thus the *amphora* was originally the space occupied by eighty pounds of wine.

There is also preserved to us by Festus (s. v. *Publica Pondera*, p. 246) a plebiscitum [Lex Silia] of unknown date, regulating the weights and measures, to the following effect:—"Ex ponderibus publicis, quibus hac tempestate populus oetier (uti) solet, uti coaequetur sedulum, uti quadrantal vini octoginta pondo siet: congius vini decem p. (i.e. *pondo*) siet: sex sextari congius siet vini; duodequinquaginta sextari quadrantal siet vini:"—that is, that the *quadrantal* should contain 80 pounds of wine,* and the *congius* 10; and that the *sextarius* should be 1-6th of the *congius*, and 1–48th of the *quadrantal*. The quadrantal was subdivided into 2 *urnae*, 8 *congii*, 48 *sextarii*, 96 *heminae*, 192 *quartarii*, 384 *acetabula*, 576 *cyathi*, and 2304 *ligulae*. As compared with the Roman dry measure, the *quadrantal* was three times the

---

* The Romans were aware that there is a difference in the specific gravity of wine and of water, and in the different sorts of each, but, for the sake of simplicity, they regarded them as the same specific gravity: when, however, they wished a very exact determination, they used rain-water. (Boeckh, c. 3.)

modius. The only measure larger than the *quadrantal* was the *culleus* of 20 amphorae, which was used, as well as the amphora itself, in estimating the produce of a vineyard. [CULLEUS: comp. AMPHORA, *sub fin.*]

The quadrantal was connected with the measures of length, by the law, that it was the cube of the foot, whence its name *quadrantal*, or, as other writers give it (using the Greek κύβος instead of the Latin *quadrantal*) *amphora cubus.* (Cato, *R. R.* 57; Gell. i. 20; Auct. *Carm. de Mens. et Pond.* vv. 59–63:—

> "Pes longo in spatio latoquè altoque notetur:
> Angulus ut par sit, quem claudit linea triplex
> Quatuor et medium quadris cingatur inane:
> Amphora fit cubus, quam ne violare liceret,
> Sacravere Jovi Tarpeio in monte Quirites.")

A standard model of the *amphora* was kept with great care in the temple of Jupiter in the Capitol, and was called *amphora Capitolina* (*Carm. de Mens.* l. c.; Capitol. *Maximin.* 4). It was under the charge of the aediles (*C. I. L.* vi. 1520, x. 8067; Polyb. iii. 26; cf. Mommsen, *Staatsrecht*, ii.^{3} p. 500). There still exists a *congius* which professes to have been made according to this standard. [CONGIUS.] For a full account of this congius, see H. Hase, *Abhandl. d. Berl. Akad.* 1824.

There are two questions connected with the Roman *quadrantal:* namely, (1) whether the equality to the cubic foot was originally exact, or only approximate; and (2) whether there was any exact ratio between the Roman and the Grecian measures. The full discussion of these questions would be inconsistent both with the limits and with the chief object of this work. A general statement of the matters in dispute will be found under MENSURA, pp. 160, 161. It may here be added that, whether there was or was not originally any precise ratio between the Greek and Roman measures of capacity, they were at least so nearly related to one another, that, when the two systems came to exist side by side, it was found easy to establish the following definite ratios. Of the liquid measures: the Roman *amphora*, or *quadrantal*, was 2–5ths of the Aeginetan, and 2–3rds of the Attic *amphora* or *metretes;* and the *congius* of the Roman system was equal to the χοῦς of the Attic. Again, comparing the Roman liquid with the Greek dry measures, the *quadrantal* was 1–3rd of the Aeginetan, and one-half of the Attic, *medimnus.* Consequently, of the dry measures, the *modius* (which was 1–3rd of the *quadrantal*) was 1–9th of the Aeginetan, and 1–6th of the Attic, *medimnus.* The connecting subordinate unit in all these sets of measures is the Roman *sextarius*, or *sixth part of the congius*, which was introduced into the Greek system under the name of ξέστης, and which stands to the several measures now mentioned in the following relations:—

1. *Liquid Measures.*

The Roman *quadrantal*	=	48	sextarii
,, Attic *metretes*	=	72	,,
,, Aeginetan ,,	=	120	,,

2. *Dry Measures.*

The Roman *modius*	=	16	sextarii
,, Attic *medimnus*	=	96	,,
,, Aeginetan ,,	=	144	,,

The ξέστης, or Roman *sextarius*, is not to be confounded with the genuine Attic ἑκτεὺς or *sixth of the medimnus*, which was equal to the Roman modius.

From the preceding remarks it will be seen that the only safe mode of computing the content of the amphora in terms of our own measures of capacity is by deducing it from the value already assigned to the Roman pound, on the authority chiefly of the coins. That value may be taken, in round numbers, at 5050 grains. [PONDERA, Vol. II. p. 455.] Now the imperial gallon contains 70,000 grains. Therefore the Roman amphora $= \frac{5050 \times 80}{70000} = 5\cdot77$ imperial gallons, *i.e.* a very little over 5 gallons and 6 pints. It is clear, therefore, that for rough calculations, at any rate when the numbers dealt with are not very large, if we reckon the sextarius as a pint (instead of ·96 of a pint) and the quadrantal or amphora at 6 gallons, it will be a close enough approximation. (Boeckh, *Metrol.* 167; Hultsch, *Metrol.* pp. 112 ff., ed. 2, 1882.) [P. S.] [G. E. M.]

QUADRI'GAE. [CURRUS.]

QUADRIGA'TUS. (Denarius with quadriga as type.) [AS, Vol. I. p. 205.]

QUADRIRE'MIS. [NAVIS, Vol. II. p. 221 *a.*]

QUA'DRUPES. [PAUPERIES.]

QUADRUPLA'TOR, a professional accuser in cases involving a pecuniary penalty (Plaut. *Pers.* i. 2, 18; Cic. *Verr.* ii. 8, 22; *Div. in Caecil.* 7, 24; Liv. iii. 72; Fest. p. 259). The *index* was one who was himself involved in the crime or conspiracy, and, by coming forward as informer, gained immunity for himself and a reward paid by the state treasury (Liv. ii. 5, iv. 45, xxii. 33, xxxii. 26, xxxix. 19; Cic. *Cat.* iv. 5; Suet. *Jul.* 17). The quadruplator differed from the index in the nature of the cases involved, in the fact that he was not himself liable but took up the accusation as a means of making money, and thirdly because he derived his gains from a share of the penalty, and so from the property of the accused, not from the state. [For a later development of the professional accuser under the Empire, see DELATOR.] Several emperors tried to get rid of quadruplatores (Capitol. *Anton. P.* 7; *M. Ant. Phil.* 11): in the later Empire the term disappears.

As to the origin and strict meaning of the word, there is some controversy. Ps.-Ascon. (*in Cic.* l. c.) gives two opinions. As to the first—that the quadruplator received one-fourth of the accused person's property—this scarcely agrees with the etymology, which should mean *fourfold*, and is probably a confusion arising from the fact that the later delatores received one-fourth. So far as we know, this began with the Lex Julia de majestate. The second view is probably more correct—that the quadruplator had to do with cases where the penalty was four times the damage; as, for instance, violation of the laws of usury (Liv. vii. 28; Cato, *R. R.* init.; FENUS], and it is probable that the condemnation to pay fourfold was not uncommon in other cases: we find it as the penalty for provincials who kept back the corn tribute (Cic. *Verr.* iii. 13, 34), and the term *quadruplator* applied, in Sidon. *Ep.* v. 7, to one who farmed the tolls, is perhaps derived from his exacting fourfold from defaulters. Possibly, as Mommsen thinks, the quadruplator originally received the whole penalty (*quadruplus*) from the accused; afterwards only a proportion, large or small. The *locus classicus* in Plaut. *Pers.* i. 2, 18 does not lay down the actual law, but only what the poet wishes to be the law, that the quadruplator should, if he made good his accusation ["*si*—damnet"], pay half the penalty to the treasury, receiving only half for himself; and that, on the other hand, he should himself be condemned in the fourfold penalty if he failed in his proof.

[Geib, *Criminalprocess*, 106; Walter, *Gesch. d. röm. Rechts*, § 860; Rudorff, *Röm. Rechtsgesch.*, 463; Mommsen, *Staatsrecht*, ii.^{3} 599; and (for the passage of Plautus) Götz, in *Rhein. Mus.* xxx. 167.] [W. S.] [G. E. M.]

QUADRUPLICA'TIO. [Actio, Vol. I. p. 20 *a*.]

QUAESTIO'NES, QUAESTIONES PERPETUAE. [Judicium.]

QUAESTOR, the name of a class of Roman officers. The origin of the quaestorship is somewhat uncertain. The best authorities know nothing of it in the time of the kings. Cicero (*de Rep.* ii. 35, 60) mentions it in connexion with the trial of Sp. Cassius in B.C. 485. Livy (ii. 41) refers to it first on the same occasion, and in a chronological enumeration of the magistrates places it between the tribuneship of the commons (B.C. 493) and the decemvirate (B.C. 451). Dionysius mentions quaestors incidentally in speaking of the sale of booty in B.C. 507 (v. 34), and speaks also of their action in the case of Sp. Cassius. Tacitus (*Ann.* xi. 22) ascribes them to the time of the kings, but on grounds which plainly do not bear out his view. The silence of our earlier authorities on occasions like the trial of Horatius makes it evident that there was no good reason for believing that the office was then in existence; and this view is confirmed by the fact that the quaestors were elected in the comitia of the tribes. It cannot be upset by the assertions of later writers, such as Ulpian (in Dig. 1, 13, 1 pr.) and Lydus (*de Mag.* i. 24). Further, the quaestors were at first two in number; and this of itself makes it highly probable that the office came into being along with the consulship, as a part of the earliest republican constitution. When the consulship was suspended under the decemvirate, the quaestorship ceased along with it.

As early as B.C. 421 the number was raised to four, one being assigned to each consul for domestic affairs and one for war. In B.C. 267, or perhaps not until B.C. 241, four more were added to take part in the administration of Italy. The number probably steadily increased with the addition of new provinces; but we are only told that Sulla raised the annual total to twenty (Tac. *Ann.* xi. 22; cf. *C. I. L.* i. p. 108). Julius Caesar increased it to forty, but there is reason to believe (Mommsen, *Staatsrecht*, ii. 516, note 1) that Augustus reduced it again to twenty.

The quaestorship was the first of the ordinary magistracies to be thrown open to the plebeians: in B.C. 421 it was agreed that patricians and plebeians should be eligible without distinction (Liv. iv. 43), and in B.C. 409 three of the four were actually plebeians (Liv. iv. 54). Tacitus asserts (*Ann.* xi. 22) that the quaestors were at first nominated by the consuls, and that it was only sixty-three years after the expulsion of the kings that they were elected by the people: that is, probably in consequence of the Valerio-Horatian laws of B.C. 449. This is at variance with the view of Junius Gracchanus (in Dig. 1, 13, 1 pr.), that they were elected by popular vote, even under the kings; but that we have already seen to be erroneous, and, though Livy does not mention the introduction of popular election, the probabilities of the case are decidedly in favour of the statement of Tacitus. The quaestors were elected in the comitia of the tribes (Mommsen, *Röm. Forsch.* i. 159 ff.), and their elections came off last in the annual series. The office was held for one year: but when the custom sprang up that the consul should govern a province as proconsul in the year after his consulate, it came to be usual that his quaestors should accompany him with an extension of powers as proquaestors. The quaestors had the usual insignia of magistrates, but a *sella* which was not *curulis*, but one with straight legs, such as that used by the *judex quaestionis*, if he was not a curule magistrate. They were attended by *scribae*, *viatores*, and *praecones*.

The provinces of the various quaestors were determined by a resolution of the senate each year, before the new quaestors entered upon office. The number of the posts to be filled probably exceeded that of the new quaestors before their number was increased by Sulla, seventeen being known to us. Deficiencies seem to have been made good by continuing some in office as proquaestors; perhaps also by giving governors of provinces the right of choosing their proquaestors. Under the Empire the number of posts appears to have exactly equalled that of the annual appointments.

When the *provinciae* had been determined by the senate, they were distributed among the quaestors, partly by selection by the superior magistrates, to whom they were severally attached (Liv. xxx. 33; Cic. *ad Att.* vi. 6, 4), confirmed by the senate, partly by lot (Cic. *pro Mur.* 8, 18; *Div. in Caec.* 14, 46, and elsewhere). Under the Empire the selection was made by the emperor and by the consuls (Plin. *Ep.* iv. 15).

The duties of the quaestors will be best discussed under the head of the various *provinciae*.

1. *Quaestores urbani.* This was the official designation, frequently occurring in inscriptions, of the two quaestors whose duty required them to remain in Rome during their year of office. Their primary function was to be officials subordinate to the consuls, the only other magistrates in existence at the time of the creation of the office. Hence such duties as the latter could discharge by deputy commonly fell to the quaestors. They had no functions in connexion with civil jurisdiction; the superintendence of this naturally lay with the supreme authority, while the decision of details was committed to a private *judex*. But in criminal jurisdiction they took an important part, from which indeed they originally derived their name. The title *quaestor* is only another form of *quaesitor* (cf. *sartor* by the side of *sarcitor* from *sarcire*), and denotes "investigator." In the Twelve Tables they appear under the full title of *quaestores parricidii* (cf.

Pomponius in Dig. 1, 2, 2, 23; Festus, p. 221, "parricidi quaestores appellabantur qui solebant creari causa rerum capitalium quaerendarum:" cf. p. 258). When this part of their functions fell into desuetude, the term *parricidii*, at first necessary for distinctiveness, was dropped, or replaced by some other phrase, a fact which led some late authorities into the error of supposing that the term *quaestores parricidii* denoted an obsolete office, distinct from the later quaestorship. That this is an error is proved indirectly by the silence of Livy, Dionysius, and Tacitus, and explicitly by the language of Varro (*L. L.* v. 81, "quaestores a quaerendo, qui conquirerent publicas pecunias et maleficia"). Modern scholars have been misled by the statement of Pomponius (Dig. l. c.), which must certainly be rejected. But the quaestors never had the *imperium*, nor the right of convoking the centuries on their own account. It is therefore necessary that we should regard them as acting by virtue of a mandate from the consuls. It is a reasonable conjecture that under the kingship, as an appeal from a capital sentence to the judgment of the people was allowed, the king, in order to avoid the appearance of a conflict between his authority and the rights of the community, exercised his jurisdiction through a representative; and that the consul, after the institution of the quaestorship, was bound by tradition to choose a quaestor as his representative. Thus, through the action of the right of appeal, the power of criminal jurisdiction came to attach itself to the quaestorship. This accounts for the fact that originally this jurisdiction extended only to capital offences, where the accused had a right of appeal, if condemned. It did not, however, include the offences against the state, included under the head of *perduellio*: these were tried, not by the standing magistrates, the quaestors, but by special commissioners [PERDUELLIONIS DUO VIRI] appointed specially for the purpose. It is probable that in cases of less gravity, where the punishment was not capital, the quaestors had no right of jurisdiction, as no appeal was allowed; but when an appeal came to be permitted in cases of fine above a fixed maximum, these too fell under their cognisance.

We hear very little of the criminal jurisdiction of the quaestors, because they had nothing to do with political prosecutions, almost the only prosecutions of which history takes notice. A formula preserved by Varro (vi. 91) proves that it was in operation in the latter part of the third century B.C. We know further that there was no authority which could have taken their place until a century after this date. The tribunes prosecuted only political offences; the aediles only offences against special laws entailing a fine for their violation: the *tres viri capitales* acted as police magistrates, and in cases of ordinary offences, where individual citizens were the complainants. Hence it seems clear that the quaestors must have tried cases of murder and arson until these were brought under the jurisdiction of the *quaestiones perpetuae*.

The second main branch of the duties of the quaestors likewise devolved upon them as subordinates of the consuls. The same consuls who passed the Valerio-Horatian law of appeal (*provocatio*), founded th[illegible]found in the [illegible]puli *Romani*; and it is probable under the first quaestors were *quaestores aerarii* [illegible]l as *parricidii*. The consuls indeed retained, subject to the senate, the supreme control of the treasury, but the quaestors had the actual charge of the money and kept the accounts, receiving the former from the consuls and paying it out on their order. They held the keys of the treasury in the temple of Saturn (cf. Polyb. xxiii. 14, where Scipio threatens, as consul, to take the keys and open it himself), and had charge of all that was in it, including not only coin and bullion, but also the military standards (Liv. iii. 69; iv. 22; vii. 23). State papers of all kinds were also preserved there, not only account-books, contracts, and lists of persons who had claims on the treasury, but (after the institution of the curule aedileship) decrees of the senate, and (after the Lex Licinia Junia of B.C. 62) all laws and proposals of laws. Lists of magistrates and senators, who had taken the oaths of office, of jurymen, and of other official appointments were also preserved there, and it seems to have been the duty of the quaestors to satisfy themselves as to their genuineness and accuracy (Plut. *Cat. Min.* 17; Cic. *Phil.* v. 4, 12).

It was further the duty of the quaestors to see to the payment of arrears of taxation (Liv. xxxiii. 42), probably through the *tribuni aerarii*, and to keep lists of defaulters; to receive the sums due from the *publicani* (Cic. *pro Flacc.* 32, 79), the balances in the hands of ex-governors of provinces, fines due on a legal sentence to the treasury, and the war indemnities exacted from a conquered enemy (Liv. xxxii. 2; xlii. 6).

In cases of default the quaestors had the right to proceed against the debtor *per manus injectionem*; but we hear nothing of any state-debtors being sold into slavery, or serving as *nexi*: hence it seems that the custom of proceeding against the debtor's property and not his person established itself earlier here than in private legal actions. The property was seized and sold by auction (*sectio*).

The quaestors also had to conduct the ordinary sales of state property, so far as these were not managed by the censors, including prisoners of war and booty, and also estates coming to the nation by will or by confiscation.

We know very little about the details of the receipt of taxes and payments from the exchequer: but there is evidence that there were distinct treasuries attached to different departments. The payment of the soldiers, for instance, was made through the tribuni aerarii: the few salaries paid under the Republic, and the cost of maintenance for the public slaves, were defrayed directly from the treasury. So were the expenses of entertaining distinguished strangers, in connexion with whose visits we often find the quaestors mentioned (Val. Max. v. 1, 1; Liv. xlv. 13, 12; 44, 7, &c.).

Contracts were only managed by the quaestors in comparatively unimportant cases. They naturally took a part in discussing financial questions in the senate, like that of our Chancellor of the Exchequer (Auct. *ad Herenn.* i. 12, 21). It seems strange to us that such important duties should be assigned to young and inexperienced magistrates, changing yearly;

but the duty per s, the quadr ake the perma our pen te offices. It was onl battle Actium that Augustus gave of the treasury to two ex-praetors (calle *fecti aerarii Saturni*), elected annually by senate (Tac. *Ann.* xiii. 29; Sueton. *Aug.* 36): subsequently, to avoid the excitement of elections, it was committed to two of the praetors chosen by lot. Claudius in A.D. 44 gave it back to two of the quaestors, selecting himself those who were to fill this office, which now was held for three years, under the title of *quaestores aerarii Saturni*. Finally Nero, in A.D. 56, restored it to ex-praetors, again holding the title of *praefecti aerarii Saturni*, but now appointed by the emperor for three years at a time (Tac. *Ann.* xiii. 28, 29), sometimes extended, as we see from the case of Pliny (see *Hermes*, iii. 90). *Quaestores urbani* continued to be elected late into the third century; possibly their functions were restricted to the charge of such state papers as were not of a financial nature.

The duties of criminal prosecution and of the charge of the treasury were the main, if not the sole duties of the *quaestores urbani:* and they were both of a nature to make their continuous presence in the city necessary. On the other hand, the

2. *Quaestores*, not distinguished as *urbani*, nor by any special appellation, were regularly attached, each to some general or governor of a province, as his adjutant. The dictator alone was not required to have any such assistant. Nor were quaestors attached to the praetors who remained in the city to preside in the courts. But the magistrates who had quaestors at all, always had them. If the term of office of the quaestor expired before that of his superior, it was extended by *prorogatio:* if the quaestor died or left the province, the governor nominated some one, usually one of his *legati*, to be *pro quaestore* (Cic. *in Verr.* i. 4, 12). It was only in Sicily, where the province was divided into an eastern and a western district, that more than one quaestor was ever assigned to a governor: in that case there were two. The praetor was supposed to hold a kind of parental relation to his quaestor (Cic. *pro Planc.* 11, 28; *ad Fam.* xiii. 10, 1, and often), even after the term of office had expired.

The special duties of what may be termed (somewhat loosely) provincial quaestors were financial. As the consul could only draw upon the state treasury through the quaestores urbani, so the generals and governors were similarly restricted. Receipts and payments passed through his hands, and he seems to have been in charge of the military stores (Polyb. vi. 31). Even when coins were stamped by a general, the quaestor's name often appears alone upon them (Mommsen, *Röm. Münzwesen*, p. 374). The accounts of the campaign had to be given in by him, although the commander shared the responsibility. But the booty was disposed of by the commander at his pleasure; and if he sold it, he often did so through inferior officers, especially the *praefecti fabrum*.

But even from a military point of view the quaestor ranked next to the commander: he had three sentinels, and the legati only two, nd the *quaestorium* was an important centre in e camp [CASTRA]. In case of the death of commander, he succeeded to the vacancy; d if the former left the camp, it was usually he quaestor whom he chose to replace him *pro praetore* (Cic. *ad Fam.* ii. 15, 4). Similarly, in judicial business, as the governor exercised the jurisdiction of the praetor in civil business, the quaestor exercised that of the aediles, and issued the appropriate edicts (Gaius, i. 6). Under the Empire no quaestors were sent to imperial provinces (*ib.*); but a senatorial proconsular governor had attached to him a *quaestor pro praetore*.

While no quaestor was specially attached to a consul for his duties in the city, each would receive one as a military adjutant when he took the field, and doubtless he would use his services also in the city as he had occasion for them: for instance, for the organisation of a consular army. So, at the time of the conspiracy of Catiline, P. Sestius, the quaestor attached by lot to the consul C. Antonius, was sent with an armed force to Capua, to remove the danger of a rising there (Cic. *pro Sest.* 4, 9). When the custom came in for a consul to proceed at the end of his year of office to govern a province as proconsul, it was the regular thing for his quaestor to accompany him as *pro quaestore:* thus Sestius followed Antonius to Macedonia in B.C. 6. From B.C. 38 each consul had two quaestors, selected by himself (Dio Cass. xlviii. 43), who assisted him, among other things, in his duties of presiding in the senate. Nothing is known as to the disuse of this practice. Under the Empire we meet with *quaestores principis* or *Augusti;* they were two in number, assigned to the emperor as holding proconsular power, and employed by him, when he thought fit, to read in the senate any written communication to that body (Ulpian, Dig. 1, 13, 1, 2). But the duty did not necessarily fall upon them: Augustus in his later years employed the services of Germanicus (Dio Cass. lvi. 26), Nero the consuls (Suet. *Nero*, 15), and Vespasian one of his sons (Suet. *Tit.* 6). The

3. *Quaestores classici* were four in number, established after the reduction of Italy in B.C. 267, originally subordinates of the consuls, charged especially with the defence of the coast. Their stations were at Ostia, at Cales,* the oldest Latin colony in Campania, and doubtless the centre of the Roman administration of that district [*Calles*, in Tac. *Ann.* iv. 27, can be hardly anything but a corruption for *Cales*], in Cisalpine Gaul about the Po (ταμίας τῆς περὶ Πάδον Γαλατίας, Plut. *Sert.* 4), probably at Ariminum, and at a fourth place, nowhere mentioned, but possibly Lilybaeum in Sicily. Their duties were generally those of the provincial quaestors: but as they had no resident superior, they had in practice more independent powers, including certainly military authority, as we see from Tac. *Ann.* iv. 27. They had also the duty of seeing that the allies furnished the proper contingents for the fleet, and the quaestor at Ostia had important and onerous functions in connexion with the corn supply, which made it an unpopular office (Cic. *pro Mur.* 8, 18). If the quaestorship at Lilybaeum ever belonged to this

---

* Willems, *Le Sénat*, ii. 603, rejects this view.

group, its character must have been changed, after Sicily became a province; and that at Cales seems to have been suppressed soon after A.D. 24 (the date of the events mentioned by Tacitus, *l. c.*), for when Claudius in A.D. 44 transferred again to the quaestors the charge of the treasury, he suppressed the other two, and none were then left. There are references to a *provincia aquaria*, discharged by one of the quaestors (Cic. *in Vatin.* 5, 12), which had probably reference to the water-supply, but we know nothing of it definitely.

The quaestors, as a body, were charged, probably at an early date under the Empire, with the expense of paving roads, but we do not know to what extent: this seems to have been a device for making them "pay their footing" when entering the senate. Claudius substituted for this the duty of giving a gladiatorial show (Suet. *Claud.* 24, "collegio quaestorum pro stratura viarum gladiatorium munus injunxit:" cf. Tac. *Ann.* xi. 22, xiii. 5). This is the only instance of common action on the part of the college.

(The above account follows closely that given by Mommsen, *Römisches Staatsrecht*, ii.^{2} 511–537. The account in Becker, *Handbuch*, ii. 2, 327–358, is confused by an attempt to distinguish two different kinds of quaestors from the first, following, as usual, the theories of Niebuhr. Madvig, *Verf. u. Verwalt.* i. 438 ff., also shares this view, rightly rejected by Bouché-Leclercq, *Manuel*, p. 75; Willems, *Droit Public*, p. 303: cf. Lange, *Röm. Alt.* i.^{3} 881–897; Herzog, *Gesch. d. Röm. Verf.* i. pp. 814–826.) [A. S. W.]

QUAESTO'RIA MU'NERA. [Ludi, Vol. II. p. 87 *a*.]

QUAESTO'RIUM. [Castra, Vol. I. pp. 373, 381.]

QUALUS. [Calathus.]

QUANTI MINO'RIS, or AESTIMATO'RIA A'CTIO. A seller of a thing was not liable to the buyer by the rules of Jus Civile for any faults or defects in the thing sold, unless he was aware of such defects and did not disclose them, or unless he had warranted their absence. But the curule aediles, who had jurisdiction over the market, promised in their edict to give actions to buyers against sellers on account of any non-apparent faults or defects, even if the seller was not aware of them.

The actions which the aediles framed for the purpose of thus extending the liabilities of sellers were the actio redhibitoria [Redhibitoria Actio] and the actio quanti minoris. The object of this latter action was to obtain an abatement in the purchase-money proportionate to the decrease in the value of the thing at the time of the sale, owing to its defects. This action was to be brought within a year (*annus utilis*). [Emptio et Venditio.]

(Cic. *de Off.* iii. 16, 17; Dig. 21, 1, *de aedilicio edicto et redhibitoria et quanti minoris;* Cod. 4, 58, *de aediliciis actionibus;* Neustetel, *Röm. Rechtliche, Untersuchungen*, 155, &c.; Keller, in Gell's *Jahrb.* iii. 86, &c.; Walter, *Gesch. des röm. Rechts*, § 602; Windscheid, *Pandekten*, iii. § 393.) [E. A. W.]

QUARTA'RIUS, a Roman measure of capacity, one-fourth of the *sextarius*, and consequently a little less than a quarter of a pint imperial. It is also found in the Greek system of liquid measures under the name of *τέταρτον*. [P. S.]

QUINCUNX. [Pondera, Vol. II. p. 455.]

QUINDECIMVIRI. [Decemviri, Vol. I. p. 601 *b*.]

QUINQUAGE'SIMA. (1.) A tax of the fiftieth part, or 2 per cent., upon the value of all slaves who were sold; instituted by Augustus (Dio Cass. lv. 31).

In A.D. 56 the rate was 1–25th, or 4 per cent. (*vectigal quintae et vicesimae venalium mancipiorum*, Tac. *Ann.* xiii. 31). Marquardt (*Staatsverwaltung*, ii. 270) would reconcile the two passages by reading, with Lipsius, *πεντεικοστῆς* for *πεντηκοστῆς* in Dio Cassius.

(2.) Tacitus (*Ann.* xiii. 51) speaks of Nero abolishing a *quinquagesima*. But the charge on slaves was now 1–25th, not 1–50th; Nero, therefore, must have abolished some different tax. It may have been one of Caligula's taxes (Suet. *Cal.* 40), though Claudius seems to have repealed these (Dio Cass. lx. 4); or similar to the charges of quinquagesimae mentioned by Cicero (*Verr.* iii. 49, 78) as made by publicani on the aratores of Sicily; or it may have been some other illegal exaction (see under Quadragesima, and Marquardt's *Staatsverw.* ii. 184).

A duty of 2 per cent. was levied at Athens on exports and imports [Pentecoste]. [F. T. R.]

QUINQUATRUS (fem. plur.) or **QUINQUATRIA** (neut. plur.), a festival which was celebrated on the 19th of March. The word signified the fifth day after the Ides, just as *triatrus*, *sexatrus*, *septimatrus*, *decimatrus* signified the third, sixth, seventh, and tenth days. (See Varro, *L. L.* vi. 14; Fest. p. 254; Gell. ii. 21; Roby, *Lat. Gr.* § 902.) A false etymology led to its being afterwards regarded as a five-days' festival (Ov. *Fast.* iii. 809; *Trist.* iv. 10, 13; Liv. xliv. 20), and as such it was observed under the later Republic and the Empire from March 19–23. Strictly it was (as appears in the Calendars, and as its name really implies) a one-day's festival, celebrated originally as a *lustratio* of the *arma ancilia*, when the arms were brought out to be ready for the campaigning season, just as the Armilustrium on the 19th of October was the inventory, so to speak, before they were put away again (Charis. 81, 20). A sacrifice was offered, and there was a dance of the Salii in the Comitium, the ceremony being under the direction of the Pontifices and Tribuni Cel. (*Cal. Praen.*; Varro, *L. L.* v. 85). [Salii.]

The day acquired a fresh significance from being selected for the dedication of the temple of Minerva on the Aventine, and, instead of being purely military, became the festival of various trades (Ov. *Fast.* iii. 809–834; *artificum dies*, *Cal. Praen.*) and of arts. Hence it became also a holiday for the schools, extending over the whole five days, which now became included under the name Quinquatrus or Quinquatria (Hor. *Ep.* ii.

2, 197; Juv. x. 115; Ludus Litterarius, p. 97): hence also it was a day of receipts for fortunetellers (Plaut. *Mil. Glor.* iii. 1, 98); and for the same reason Domitian, who claimed Minerva as his guide, gave prizes, at his Alban villa, at this time to orators and poets, and established a collegium, the members of which should exhibit venationes and stage-plays (Suet. *Dom.* 4; Dio Cass. lxvii. 1).

The first and regular day of the festival was marked by the offerings, &c., as above mentioned, and the commemoration of the temple dedicated to Minerva; on the other four days there were shows of gladiators, and a season of general merrymaking (Suet. *Aug.* 71, *Ner.* 34; Tac. *Ann.* xiv. 4). On the fifth day, March 23, was the *tubilustrium* (Fest., Varr. *s. v.*), sacred to Mars and Nerio (Lyd. *de Mens.* iv. 42; Porphyr. *ad* Hor. *Ep.* ii. 2, 209), for whom Ovid (*Fast.* iii. 849) substitutes Pallas. On this day the trumpets used in the sacred rites were passed in review, and purified by the Salii Palatini and the *tubicines sacrorum populi Romani* (Gell. i. 12; *C. I. L.* ix. 3609, x. 5394).

There was a festival called Quinquatrus Minusculae on the 13th of June, when the tibicines went through the city in procession to the temple of Minerva, and observed a sort of carnival for three days (Liv. ix. 30; Ov. *Fast.* vi. 651; Varro, *L. L.* vi. 17; Val. Max. ii. 5, 4); they were masked and gaily dressed (Censorin. xii. 2). The "collegium tibicinum et fidicinum, qui sacris publicis praesto sunt," is mentioned in several inscriptions (*C. I. L.* vi. 3696, 3877; ix. 3609; x. 6101). As this festival was on the Ides, it is clear that the name was not given on any etymological principle, but, as Varro says, from a connexion of ideas with the greater Quinquatrus.

It has been observed that the March school festival reappeared in Christian times as the festival of St. Gregory (Gregory the Great, a founder of schools), and was kept in some places on March 12th, in others on March 19th.

(Marquardt, *Staatsverw.* iii.^{2} 434; Mayor on Juv. x. 115.) [W. S.] [G. E. M.]

QUINQUENNA'LIA were games instituted by Nero A.D. 60, in imitation of the Greek festivals, and celebrated like the Greek πεντετηρίδες at the end of every four years; they consisted of musical, gymnastic, and equestrian contests, and were called *Neronia*, or *Agon Neroneus*. (Suet. *Ner.* 12; Tac. *Ann.* xiv. 20; Dio Cass. lxi. 21.) Suetonius and Tacitus (*ll. cc.*) say that such games were first introduced at Rome by Nero. The *Quinquennalia*, which had previously been instituted both in honour of Julius Caesar (Dio Cass. xliv. 6) and of Augustus (Id. li. 19; Suet. *Aug.* 59, 98), were confined to the towns of Italy and the provinces. The Quinquennalia of Nero appear not to have lasted long, but they were revived by Gordian III. (Friedländer, *Sittengeschichte*, ii.^{5} 436 f.; Marquardt, *Staatsverw.* iii.^{2} 566.) For the *Agon Capitolinus* of Domitian, see Ludi, p. 85 *b*. [W. S.] [G. E. M.]

QUINQUENNA'LIS. [Colonia, Vol. I. p. 483 *a*.]

QUINQUERE'MIS. [Navis.]

QUINQUE'RTIUM. [Pentathlon.]

QUINQUEVIRI, or five commissioners, were frequently appointed under the Republic as extraordinary magistrates to carry any measure into effect. Thus *Quinqueviri Mensarii*, or public bankers, were occasionally appointed in a financial crisis, to manage loans and other banking business [Argentarii, Vol. I. p. 181]; the same number of commissioners was sometimes appointed to superintend the formation of a colony, though three (*triumviri*) was a more common number. [Colonia, Vol. I. p. 479 *b*.] We find, too, that Quinqueviri were created to superintend the repairs of the walls and of the towers of the city (Liv. xxv. 7), as well as for various other purposes.

Besides the extraordinary commissioners of this name, there were also permanent officers, called *Quinqueviri cis Tiberim* (Liv. xxxix. 14), who were responsible for the safety of the city after sunset, especially to guard against fires, as it was inconvenient for the regular magistrates to attend to this duty at that time: they were first appointed soon after the war with Pyrrhus. (Dig. 1, 2, 2, 31.) Mommsen (*Staatsrecht*, ii. 611) suggests that these were originally four, one for each of the old regions, and that the fifth was added for the Transtiberine region. The title *cis Tiberim* was still retained, and they were also called collectively Cistiberes (Dig. *l. c.*). [W. S.] [G. E. M.]

QUINTA'NA. [Castra.]

QUIRINA'LIA, a festival sacred to Quirinus, which was celebrated on the 17th of February, on which day Romulus was said to have been carried up to heaven. (Ovid, *Fast.* ii. 457; Festus, *s. v.*; Varro, *L. L.* vi. 13, and Calendars.) This day was also called *Stultorum Feriae*, for the meaning of which see Fornacalia. (Marquardt, *Staatsverw.* iii. 117, 570.) [W. S.] [G. E. M.]

QUIRINA'LIS FLAMEN. [Flamen.]

QUIRI'TES, QUIRI'TIUM JUS. [Jus.]

QUOD JUSSU ACTIO. [Jussu Quod.]

QUORUM BONORUM, INTERDICTUM. The object of this interdict was to give a person who had a primâ-facie claim to an inheritance interim possession of things belonging to it, until a suit respecting the inheritance was determined. Thus it was an interdict for acquiring possession (*adipiscendae possessionis causa*). [Interdictum.] The Interdictum quorum bonorum was originally the only means by which the bonorum possessor or praetorian heir could obtain possession of the property of the inheritance, since such successor, not being heres, could not claim by hereditatis petitio, nor by vindicatio, since he was not civil owner; in course of time, however, when bonitarian ownership (*in bonis*) was established, this kind of equitable ownership was attributed to the bonorum possessor, and so he might be able to maintain vindicatio utilis. Moreover, if the bonorum possessor lost possession, he could in many cases recover it by the possessory interdicts. If he continued in possession for the period of usucapion, he became civil owner. Only property of which a person could have possession or quasi-possession was the object of the interdictum quorum bonorum, but in the matter of obligations the praetor put the bonorum possessor in the same position as the heres by allowing him to sue in respect of the claims that the deceased had, and allowing any person to sue him in respect of claims against the deceased, in an actio utilis (Ulp. *Fr.* 28, § 12; Gaius, ii. 52–58). Ultimately the bonorum possessio was put on the same footing in respect of actions as the hereditas, the possessoria hereditatis petitio being given to the bonorum possessor, corresponding to the hereditatis petitio of the heres.

The new form of procedure co-existed with the interdict, and a person might avail himself of either mode of proceeding, as he thought best, the two remedies differing not only in their extent but also in the fact that the one was a provisional remedy pending an action, while the petitio was an action definitively determining the right to the inheritance. Thus in the legislation of Justinian we find both forms of procedure mentioned. Some writers maintain that the p. p. her. was recognised in the Edictum Perpetuum of Hadrian, while others think that it must have been of later origin (see Leist, i. 295; Lenel, *Das Edictum Perpetuum*, xv. § 67).

The name of the Interdictum quorum bonorum is derived from its introductory words, and it runs as follows: "Ait Praetor: quorum bonorum ex edicto meo illi possessio data est: quod de his bonis pro herede aut pro possessore possides, possideresve si nihil usucaptum esset: quod quidem dolo malo fecisti, uti desineres possidere, id illi restituas." ("The Praetor declares: Whatever portion of the property granted in pursuance of my edict to be possessed by such and such a one, thou possessest as heir or as unentitled occupant, or wouldest so possess but for usucapion, or hast fraudulently ceased to possess, such portion do thou deliver up to such a one.") (Poste's *Gaius*, iv., §§ 138–170 comm.)

Accordingly he was entitled to this interdict when he had obtained a grant of bonorum possessio from the praetor, if any one of the following conditions applied to the defendant:—

1. That he was in possession claiming to be heir.
2. That he was in possession without any title.
3. That he had acquired ownership by usucapio pro herede.
4. That he would be in possession, if he had not fraudulently made away with the property.

The third condition requires some explanation.

According to the old law, any malâ-fide possessor could acquire the ownership of a thing belonging to the hereditas, in the interval between the death of the deceased person and the entrance (*aditio*) of his heres on the inheritance. But Hadrian (Gaius, ii. 57) by the SC. Juventianum changed the law so far as to protect the heres against the usucapion of an improbus possessor, and to restore the thing to him. Hence the words relating to usucapion were introduced into the formula of the interdict. In the legislation of Justinian these words have no meaning, since usucapio lucrativa pro herede forms no part of it; yet the words have been retained in the compilation of Justinian, like many others belonging to an earlier age, though they had lost their practical significance. According to another explanation, a title by lucrativa usucapio pro herede was not a defence to the Interdictum quorum bonorum, even before the enactment of the SC. Juventianum, the effect of this law being only to allow the heres to recover by hereditatis petitio from a person who had acquired property of the inheritance by such usucapion. [HERES; BONORUM POSSESSIO.] (Dig. 43, 2; Gaius, iv. 144; Savigny, in *Zeitsch. für gesch. Rechtsw.* v. 1, and vi. 239; Francke, *Das Recht der Notherben*, c. 97, &c.; Fabricius, *Ursprung und Entw. der B. P.* 158, &c.; Leist, *Bonorum Possessio*, i. 342; Huschke, in Richter's *Jahrg.* iii. pp. 19, 20, 26, &c.) [E. A. W.]

R.

RA'DIUS. 1. A straight pointed rod used by geometricians and astronomers for describing figures on their abacus, a table covered with sand. (Cic. *Tusc.* v. 23, 64, "a pulvere et radio," of Archimedes; cf. Cic. *N. D.* ii. 18, 48, "eruditum illum pulverem," of geometry; Pers. i. 131; Aristoph. *Nub.* 177.) In Verg. *Ecl.* iii. 41, *Aen.* vi. 850, it is probably the actual rod (as above) used for the actual drawing of terrestrial and celestial globes on the abacus, rather than, as Conington says, a mere "phrase for scientific delineation." [See also ABACUS, III. *a.*]

2. Used in weaving. [TELA.]

3. Of a wheel. [CURRUS.] [G. E. M.]

RAMNES. [PATRICII.]

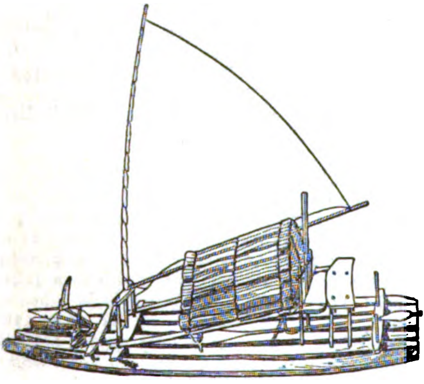
RAPI'NA. [FURTUM.]

RASTRUM, RASTRI, RASTELLUS. In this word the neuter form belongs to the singular; the masculine, as though from *raster*, to the plural. As regards its use, it seems to us necessary to make a clear distinction between (1) the rastrum quadridens, which is a rake; and (2) the rastrum bidens, which is a hoe or mattock. When rastrum stands alone, the quadridens or rake is usually meant, but not always in poetry; for instance, in Verg. *Georg.* i. 94, *Aen.* ix. 608, the bidens is to be understood. (1.) The quadridens or four-toothed rake (in Greek probably λίστρον) was sometimes of iron; it is mentioned by Cato in his list of *ferramenta*, for an olive garden (Cat. *R. R.* 10), and for a vineyard (*ib.* 11); but in Colum. ii. 11, 4, *lignei rastri* are used to rake the earth over seeds. The diminutive *rastellus* is nearly always a rake, and, as far as its material is stated, a wooden rake, for raking sown ground (Colum. ii. 12, 6), for raking up straw (Varr. *R. R.* i. 49). In Suet. *Ner.* 19, however, the rastellus is a light bidens.

(2.) The two-pronged rastrum, *rastrum bidens* (nearly always *bidens* alone), was used as a hoe or mattock for breaking up the ground (= Greek δίκελλα or σμινύη). It was probably always of iron (as in Pallad. viii. 5), so as to be driven forcibly into the ground, "fossores *jactant* bidentes" (Colum. iii. 13): the farmer uses it in the vineyard, turning up the earth "vel aratro vel bidente"; "fossor qui crebris bidentibus soli terga *comminuit*" (id. iv. 14). It is used for stony ground, while the *pala* or spade suits marshy ground (Plin. *H. N.* xviii. § 46). The woodcut under PALA shows a bidens with curved prongs; cf. *curvi rastri* in Catull. 64, 39. [J. Y.] [G. E. M.]

RATIO'NIBUS DISTRAHENDIS A'CTIO. [TUTELA.]

RATIS (*σχεδία*), a raft. Its nature is roughly described by Festus, p. 136, "rates vocantur tigna colligata quae per aquas aguntur," and by Hesych. *ξύλα ἃ συνδέουσι καὶ οὕτω πλέουσι*: it was used in early times or among primitive people for voyages across narrow straits or from island to island (Thuc. vi. 2; Plin. *H. N.* vii. § 206; compare the "catamaran" of the Pacific islands, in the Torres straits, and off the coast of New Guinea, McGillivray, *Voyage of the Rattlesnake*, ii. 256); but in all times for crossing rivers, whether as a moving raft (Liv. xxi. 28), or as a fixed pontoon bridge (Liv. xxi. 27 and 47; Herod. iv. 97), or as a bridge of boats, we find *rates* and *σχεδίαι* mentioned. We have, in Lucan iv. 420, a description of a large movable raft supported on casks (*cupae*), such as were used also for pontoon bridges (Veget. iii. 7). The account of the raft in *Od.* v. has a peculiar interest and value, both as explaining fully the construction of the *σχεδία*, and also as throwing light on some terms of the ancient shipwright's art.



Modern Catamaran.

Ulysses was to leave Ogygia upon a raft, *ἐπὶ σχεδίης πολυδέσμου* (l. 33), an epithet which recurs l. 338: the "many fastenings" are the chief problem of the construction; cf. Herod. ii. 96, *περὶ γόμφους πυκνοὺς καὶ μακροὺς περιείρουσι τὰ διπηχέα ξύλα.* Calypso had pointed out the place where the material for the raft was to be found in the shape of trees, standing long withered and dry, which would float lightly.

Of those named, the floating power is very different, viz.:—

Alder	·20	specific gravity,		·80
Poplar	·62	,,	,,	·38
Fir	·53—·40	,,	,,	·47—·60

Alder is a very heavy wood, and not fit for shipbuilding. It might, however, be used for the *σταμῖνες* and the dowels. Poplar and fir, but chiefly the latter, would furnish the floor of the raft. Twenty trees are thrown, and trimmed with the axe, the branches and knobs hewn off. Then the adze comes into play, and the skilful shipwright makes two smooth surfaces which are straight to the line. The timbers, thus shaped, will touch all along their inner surfaces when laid together (*ἀντίξοα, vide infra*).

Next comes the process of tying them together. For this the goddess brings him borers, or augers (*τέρετρα*, plur.), doubtless of different diameters. In tying heavy timbers together, where metal is not available or suitable for the purpose, two kinds of fastenings are necessary, commonly called trenails (*γόμφοι*), and dowels or coaks, which are here represented by the *ἁρμονίαι*. The trenail (tree-nail) is a long peg of tough wood tapering from an inch or inch and a half in diameter, to three-quarters of an inch at the thin end. The holes into which this is driven run through both pieces of timber, and of course they must correspond exactly on the inner surface when the two timbers are laid alongside of each other. Trenails, however, are not thick enough in diameter to stand a vertical strain tending to wrench one timber from the other. To make them of a greater diameter would weaken the timbers themselves dangerously; and so in order to meet a vertical strain, such as the rise and fall of the waves under the bottom of a raft, shipwrights join the timbers not only with trenails but with dowels, or coaks, as they are also called. These are short pieces of hard wood, from three to four inches in diameter and four to five inches long, according to the size of the spars. These are let in at intervals between the trenails with shallow holes bored to correspond in each timber. Being short and of hard wood, they will take a great vertical strain, as long as they remain fast. Hence Ulysses makes up his mind to remain on the raft—

> *ὄφρ' ἂν μέν κεν δούρατ' ἐν ἁρμονίῃσιν ἀρήρῃ.*

When once the timbers had slipped outside the dowels, the trenails would not be of much use in holding the raft together.

As for *ἁρμονίαι*, the word occurs in Ar. *Eq.* *τῶν θ' ἁρμονιῶν διαχασκουσῶν*, where, if a flute is the instrument spoken of, it would mean the joints gaping, *i.e.* the sockets opening from the pieces that fitted into them. A little above the expression *τέκτονες εὐπαλάμων ὕμνων* occurs, so that it is probable that the metaphor of joiners' work is being kept up. The joints of the flute are not unlike the dowel and its socket. The word *ἁρμὸς* is also noticeable in this connexion, meaning a peg or stop: cf. Eur. *Fr. Erechth.* *ἁρμὸς πονηρὸς ὥσπερ ἐν ξύλῳ παγείς.*

Ulysses having planed his spars with the adze and bored them all and fitted them exactly, then (read *ἄρασσεν*: cf. Ap. Rhod. ii. 615, *εὖτε μιν Ἄργος γόμφοισιν συνάρασσεν*, with Aristarchus) knocks them together, so that trenails and dowels fit into their respective holes and the inner surfaces of the spars meet together. This work of knocking the timbers together is well described by Ap. Rhod. *Arg.* ii. 79:—

> *ὡς δ' ὅτε νήϊα δοῦρα θοοῖς ἀντίξοα γόμφοις*
> *ἀνέρες ὑλῃουργοὶ ἐπιβλήδην ἐλάοντες*
> *θείνωσι σφύρῃσι.*

The raft thus constructed is compared as to size and shape to the setting out of the floor of a wide merchant vessel in design by a skilled shipwright.

The word *τορνώσεται* seems to imply the curvature of the lines of a vessel in plan rather than of those in section, which would not be so applicable to a raft. The breadth of the raft is that to which attention is chiefly called, though from the expression *τορνώσεται* we might perhaps infer the rounding off of the ends (cf. *Il.* xxiii. 255).

The floor completed, the next work was the raising of the deck according to the goddess's suggestion. This was a matter of some time and labour, as the imperfect *ποίει* implies. First of all, he had to set up his *σταμῖνες*, many in number and pretty close together. The *τέρετρα* would here come into play again. The *σταμῖνες*, uprights, would be let into holes bored in the floor of the raft, and the deck timbers also bored and fitted on to the tops of them. With regard to the word *σταμίς*, there can be hardly any doubt as to its meaning. Hesychius gives *τὰ ἐπὶ τῆς σχεδίης ὀρθὰ ξύλα.* Eustathius, *οἱ παλαιοί, ἑρμηνεύοντες ἐπιμήκη ξύλα, τὰς σταμίνας φάσιν, ἃ στημόνων τρόπον ἔχοντα, παρατιθέμενα τοῖς ἰκρίοις ἑκάτερθεν ἑστάναι αὐτὰ ποιοῦσιν.*

But they must not be confused with the ribs of a ship, with which they have nothing in common, being straight and not curved. Compare *στημόνιον*, the upright sticks in wickerwork round which the osier twigs were twined. Hence Aristarchus interpreted *σταμῖνες* as being *ὀρθὰ ξύλα οἷον στήμοσιν ἐοικότα.*

Upon these uprights the deck timbers were laid and fastened. There can be no doubt as to *ἴκρια* meaning "deck, platform." The attempt to translate it as "bulwarks," seems perverse in the face of the well-known passage of Herod. v. 16. Eustathius gives clearly *κατάστρωμα νεώς.* After setting up his platform or deck by fitting these cross-beams upon the uprights, he finishes off and makes fast his *ἴκρια* by long gunwales (*ἐπηγκενίδες*). These laid lengthwise on either side would prevent the timbers of the deck from jumping, and would so finish the deck as such (*τελεύτα*). The interpretation of the word given in *Etym. Mag.* *τὸ ἐπὶ μῆκος παρατεταμένον μακρὸν ξύλον* is misleading if taken to imply a planking alongside of the *σταμῖνες*. The raft is open, and the water would wash freely through the front and sides of the stage carrying the deck.

The carpentering is concluded with the fashioning of mast and yard and paddle for steering. There still remained the construction of a bulwark to protect the sailor from the wash of the wave. This is effected by a wattle-work of osiers set up on the *ἴκρια* as a fence all round. Not being very strong in itself, it is backed by piles of brushwood (*ὕλη*), which, bound up in the shape of fascines or faggots, would be light, and at the same time offer a good resistance. The idea of "ballast" for the raft seems absurd, and out of place altogether. [E. W.]

RECEPTA; DE RECEPTO ACTIO. The praetor declared that he would allow an action against *nautae*, i.e. against *exercitores* or shipowners (Dig. 14, 1, 2, 4; see EXERCITORIA ACTIO), *caupones* (innkeepers), and *stabularii* (livery stable keepers), in respect of any property which they had taken under their charge if they did not restore it ("quod cujusque salvum fere receperint, nisi restituent"). At first sight there seems no reason for this special action on account of the receiving of goods, which is called *actio de recepto*, as a person who had sustained loss would either have an *actio locati* (in case a whole ship were let for transport it would be *actio conducti*), where payment had been agreed on, or an *actio depositi*, where the goods were received without any promise of payment; but the reason was this, as explained by the jurist Pomponius (Dig. 14, 1, 3, 1). Under a contract of letting and hiring (*locatio, conductio*), the receiver was only answerable for loss when he was guilty of negligence (*culpa*); and under a contract of deposit, only when he was guilty of dolus malus; but a *nauta, caupo*, or *stabularius* who received goods in the course of his business was liable to the *actio de recepto* if the thing were lost or injured, even without any negligence on his part, and he was only excused in case of *damnum fatale*, such as shipwreck, piracy, and so forth, or in case of negligence on the part of the person from whom he had received the property. The ground of imposing this special liability is explained to be that there is, generally speaking, a necessity of entrusting property to the care of the classes of person in question (Dig. 14, 1, 1). It was possible to exclude this liability by special agreement between the parties. English law follows the example of Roman law in making innkeepers and common carriers, on account of the public nature of their employment, absolutely responsible for the safety of property which they are given the custody of, unless the loss arises from the negligence of the owner, or is caused by *vis major* or the act of God.

The praetor also gave a penal action against *nautae, caupones*, and *stabularii* on account of any property which he had received, if such loss or damage was due to the dishonesty or negligence of those in their employment, &c.; but an innkeeper was not responsible in this action for delicts of a mere traveller. In this action the plaintiff recovered double the value of the property he had lost, whereas the object of the *actio de recepto* was simply the recovery of damages. This penal action could not be maintained against the heir of the *nauta, caupo*, and *stabularius*. Both the *actio de recepto* and the penal action were *in factum conceptae* [ACTIO]. (Dig. 4, 9; 47, 5; Inst. iv. 5, 3; Arndts, *Pandekten*, § 289; Windscheid, *Pandekten*, § 384.)

There is a title in the Digest (4, 8), "De Receptis, qui arbitrium receperunt ut sententiam dicant." When parties who had a matter to litigate, had agreed to refer it to an arbitrator, which reference was called *compromissum*, and a person had accepted the office of arbitrator (*arbitrium receperit*), the praetor would compel him to pronounce a sentence, unless he had some legal excuse. The praetor could compel a person of any rank, as a consularis for instance, to pronounce a sentence after taking upon him the office of arbiter; but he could not compel a person who held a magistratus or potestas, for he had no imperium over them. The arbitration involved a judicial inquiry and award. It was usual for the parties to enter into mutual penal stipulations (*poena, pecunia compromissa*: hence the term *compromissum*), which would secure a right of action for the penalty to the successful party, but effect might be given to an arbitration in certain other ways, so as to give a right of action for damages. (Dig. 4, 8; Windscheid, *Pandekten*, §§ 415–417; Arndts, *Pandekten*, § 270.) [G. L.] [E. A. W.]

RECI'NIUM. [RICINIUM.]

RECISSO'RIA A'CTIO. [INTERCESSIO.]

RECUPERATO'RES. [JUDEX.]

REDA, a large carriage with four wheels (Isid. xx. 12; Cod. Theod. viii. 5, 8, where it is distinguished from a *birota*): used as a travelling carriage (Cic. *pro Mil.* 10, 28; 20, 54; *ad Att.* v. 17; Hor. *Sat.* i. 5, 86, ii. 6, 42; Helv. Cinna *ap.* Gell. xix. 13). It is clear from the above passages that it was the carriage commonly used by the Romans who could afford it for rapid travelling, and that it held several persons: probably it had several seats like a *char-à-bancs:* it also carried luggage (Juv. iii. 10; Mart. iii. 47; Cod. Theod. *l. c.*). Like the Covinus and Essedum, it was of Gallic origin (Quintil. i. 5, § 68; Caes. *B. G.* i. 51): but it had been completely adopted by the Romans and possibly modified in shape. It probably had a cover. It was drawn by two horses usually (or mules, Varr. *R. R.* iii. 17), but sometimes by four horses for greater speed. Venantius Fortunatus writes in the 6th century—

> "Curriculi genus est, memorat quod Gallia redam,
> Molliter incedens orbita sulcat humum,
> Exsiliens duplici bijugo volat axe citato,
> Atque movet rapidas juncta quadriga rotas."

There were also redae as hired carriages (*redae meritoriae*, Suet. *Jul.* 57); and in the later Empire as government stage-coaches (*fiscalis reda*, Sulp. Sever. *Dial.* ii. 4): Cod. Theod. *l. c.* speaks of these as carrying 1000 lbs. of goods. *Epiredia* were probably traces, though the Schol. on Juv. viii. 66 calls them "ornamenta redarum." Quintil. *l. c.* mentions the word as a mixture of two languages, Greek and Gallic; Professor Mayor (*ad loc.*) however remarks that *ῥέδα, ῥαιδίον* occur in late Greek (e.g. *Apocal.* xviii. 13), and this word may of course have been compounded after it became a Greek word and the compound borrowed by the Romans. (Marquardt, *Privatl.* 733; Becker-Göll, *Gallus*, iii. 19; Baumeister, *Denkm.* 2082.) [W. S.] [G. E. M.]

REDEMPTOR. [Locatio; Manceps; Publicanus.]

REDHIBITO'RIA A'CTIO was an action given by the edict of the curule aediles to a buyer against a seller for rescinding a sale, when the thing sold turned out to be defective, the seller not having known of the existence of the defect. If the seller was aware of the defect, or if he had warranted the thing to be free from defects, he was liable at civil law; but in case the defect was unknown to both parties at the time of the sale, and there had been no warranty, there was only a remedy under the edict of the aediles. "*Redhibere*," says Ulpian, "is so to act that the seller shall have back what he had, and because this is done by restoration; for that reason it is called *redhibitio*, which is as much as to say *redditio*." The effect of the *redhibitio* was to rescind the bargain and to put both parties in the same position as if the sale had never taken place. The time allowed for prosecuting the actio redhibitoria was "sex menses utiles." The buyer had an alternative remedy to the actio redhibitoria, viz. the actio quanti minoris, for an explanation of which see the article on the subject. (Dig. 21, 1; Cod. 4, 58; Windscheid, *Pandekten*, § 393.) [G. L.] [E. A. W.]

REDIMI'CULUM. [Mitra.]

RE'GIA (in Greek historians *τὸ βασίλειον, ῥηγία*), at first the building in which the king, as head of the state religion, performed the functions belonging to it: after the overthrow of the monarchy, when the continuity of the king's religious functions was preserved, it supplied the offices of the Pontifex Maximus, and perhaps also of the Rex sacrorum (Mommsen, *Staatsr.* ii.^{3} 15). [For the apparent connexion of the king's or chief's house with the state hearth, see Prytaneum, p. 513 *b*.] But, though many even of the most recent writers have thought otherwise, there appear to us strong reasons for maintaining that the Pontifex Maximus and the Rex sacrorum had each his official dwelling-house elsewhere in the Via Sacra. The Regia was said to have been built and occupied by Numa (Ov. *Trist.* iii. 1, 28; *Fast.* vi. 263; Tac. *Ann.* xv. 41) [but the words of Plut. *Num.* 14 imply that it was never his dwelling-house]: it was partly destroyed by the Gauls, 391 B.C., and again in great part burnt B.C. 210 (Liv. xxvi. 27). Julius Caesar as Pontifex Maximus had his offices by day for religious functions in the Regia, and lived in the house in the Via Sacra which was assigned to the Pontifex[*] (Suet. *Jul.* 48; Plut. *Caes.* 10). It is usually said that, when Augustus became Pontifex Maximus in B.C. 12, he gave the Regia to the Vestals because it adjoined their house (*ὁμότοιχος ἦν*, Dio Cass. liv. 27): but the historian there speaks of the house *τοῦ βασιλέως τῶν ἱερῶν*, and we see no reason for assuming that he mistook the Pontifex Maximus for the Rex sacrorum: on the contrary we have the express testimony of Pliny (*Ep.* iv. 11) that the Pontifex used the Regia as an office in the reign of Trajan. The Vestals pulled down most of the buildings given up to them, and rebuilt their house on an enlarged scale upon the same site.

Besides the above-mentioned use, the Regia contained a sacrarium of Mars, in which were the sacred spears (Gell. iv. 6) [but *not* the ancilia: see Salii], and a sacrarium of Ops, containing a Praefericulum and Secespita, perhaps also of Janus and of Jupiter (Varro, *L. L.* vi. 21; Marquardt, *Staatsverw.* iii. 250). In one or other of these sacraria were preserved the libri pontificum and the Calendars. (For the topography and the construction of the Regia, see Middleton, *Rome*, p. 185; Richter in Baumeister, *Denkm.* 1465; and compare Pontifex, Rex Sacrorum, Vestales.) [G. E. M.]

REGIFU'GIUM, an annual festival at Rome on the 24th of February. On this day the Rex Sacrorum offered sacrifice in the Comitium, and

---

[*] The view here expressed is mainly that followed by Jordan (*Topog.* i. 426), who remarks that the Regia had the character of a *fanum*, not of a dwelling for mortals. We may add to his arguments the following considerations:—1. *A priori*, it is unlikely that any part of the Regia could be altogether given over to the custody of women, as was Caesar's house for the rites of Bona Dea (Plut. *Caes.* 10). 2. Since in all Latin writers the name Regia is always given to the building described in this article, and in Plutarch always *ῥηγία*, it is surely impossible that, when they speak of the house which Caesar occupied as Pontifex Max., they should never mention it as part of the Regia, if such it was, but as "domus Pontificis Maximi" (Cic. *pro Dom.* 39, 104; *de Harusp. Resp.* 3, 4); "domus publica" (Suet. *l. c.*); "domus" (Plin. *H. N.* xix. § 23); *ἡ τοῦ Καίσαρος οἰκία, οἰκία μεγάλη* (Plut. *Cic.* 28, *Caes.* 10). The "visum in regia" of Cic. *ad Att.* x. 3 we regard as an ironical use of "palace" for Caesar's house. For the explanation of the passage in Dio Cass. xliii. 44, see Salii.

after the sacrifice hastily fled from the spot (Plut. *Q. R.* 63; cf. *Cal. Praen.* March 24). That this was a symbolical flight is plain enough, but of what it was a symbol is not so certain. The convenient interpretation of some Roman writers, that it commemorates the expulsion of Tarquin (Ov. *Fast.* ii. 685; Fest. *s. v.*), we should probably reject, as an idea started by the apparent meaning of the word. It is, we think, more correct to assume that the ceremony is an old one belonging to the times of the monarchy, and that the offering by the Rex sacrorum is one which was originally made by the king himself. It is suggested by some, not without probability, that the offering was an atonement and purification for the city; that the victim received, like a scapegoat, the guilt upon itself; and that the officiating minister therefore fled from it, as from something polluted (Hartung, *Rel. d. Römer*, ii. 35; Marquardt, *Staatsverw.* iii. 324). If so, there may be a reason for this sin offering near the end of February, as the month of purification, and perhaps as marking the close of the most ancient year. Mr. Warde Fowler has suggested that we should seek for the origin of this custom in the connexion of Mars with Apollo (see Roscher, *Lexicon*), and the flight of Apollo as one guilty of bloodshed [see DAPHNEPHORIA; THEOPHANIA]. In two other months, March and May, the 24th was marked by an offering of the Rex in the Comitium. These days are indicated by the letters Q. R. C. F. = *quando rex comitiavit fas* (Varro, *L. L.* vi. 31; Ovid's first conjecture in *Fast.* v. 727 is more correct than his second). They were probably, as Marquardt says, the two days for making wills at the Comitia Calata under the authority of the king, the day involving *nefas* before the offering and *fas* after it (cf. Gell. xv. 27; Mommsen, *Staatsrecht*, ii.^{3} 38; TESTAMENTUM). It must be observed, however, that the name Regifugium belongs to the 24th of February alone. (Marquardt, *Staatsverw.* iii.^{3} 323 f.; Mommsen, *Staatsrecht*, ii.^{3} 4.) [L. S.] [G. E. M.]

REGILLA. [TELA; MATRIMONIUM, Vol. II. p. 142 *b*.]

RE'GIO. The topographical description of Rome and Italy does not belong to this work, and, for the definition in that sense of the Roman and Italian regions, reference may be made to the *Dictionary of Greek and Roman Geography*, articles ROMA and ITALIA; also to Middleton, *Rome*, pp. 243–246, and Richter, in Baumeister's *Denkm.* s. v. *Röm.* It is only necessary here to point out generally the different meanings and purposes of regiones. The word *regio* meant merely a district, or *μοῖρα*, of land, and signified thus the *territorium* round the Italian towns and subject to the same jurisdiction: "regiones dicimus intra quas singularum coloniarum et municipiorum magistratibus jus dicendi coercendique est libera potestas" (Sic. Flacc. p. 135). The whole regio so attached might comprise several pagi. [PAGUS, p. 309.]

At Rome we have, after the extension of the Palatine city, four regions which dated from a period older even than the "Servian" city, since the area is less than that contained by the Servian walls: its limits correspond with the pomerium of republican times until the age of Sulla [POMERIUM, p. 444], and mark the settlement of the four city tribes. For the administration in early times of these four regions, see QUINQUEVIRI, TRIBUNI AERARII, and TRIBUS. In religious observances we may recognise these ancient districts in the sacraria of the ARGEI (Vol. I. p. 179). The regions of Rome with which we are more often concerned in Latin literature are those of Augustus, who did not enlarge the pomerium, but divided the whole inhabited city within and without the walls into 14 regions, and each region into vici of a varying number according to its size [VICUS]. These regions were each under the immediate control of a magistrate chosen by lot from the praetors, aediles, and tribunes (Suet. *Aug.* 30; Dio Cass. lv. 8): one cohors vigilum was assigned to each two regions [EXERCITUS, Vol. I. p. 794 *b*].

Distinct from these are the eleven regions into which Augustus divided Italy (Plin. *H. N.* iii. § 46), Rome forming in this category the 12th region. These do not seem to have been administrative units, but only intended for convenience of denomination. The "regio Aemilia," in Mart. iii. 4, vi. 85, is one of them. The *regiones annonariae* and *urbicariae* were a later division under Maximian, who in A.D. 286, residing himself at Milan, made a *regio annonaria* in the country north of the Rubicon, which supplied his court, and *regiones urbicariae* or *suburbicariae* to supply Rome. The disputed question as to the precise limits of these regions is beyond our scope here: on that point see Marquardt, *Staatsverwalt.* i. 231. [G. E. M.]

RE'GULA (*κανών*), the ruler used by scribes for drawing right lines (Brunck, *Anal.* iii. 69, 87); also the rule used by carpenters, masons, and other artificers, for drawing straight lines on plane surfaces, whereas the perpendiculum or *στάθμη* was used for a vertical direction [PERPENDICULUM]. (Aristoph. *Ran.* 798; Vitruv. vii. 3, § 5; cf. Plat. *Phileb.* p. 56 B; Aeschin. *c. Ctes.* § 199; Plin. *H. N.* xxxvi. § 188.) That it was marked with equal divisions, like our carpenters' rules, is manifest from the representations of it among the "Instrumenta fabrorum tignariorum," in the woodcut at p. 243. The substance with which the lines were made was raddle or red ochre (*μίλτος*, Brunck, *Anal.* i. 221; *φοίνικι κανόνι*, Eurip. *Herc. Fur.* 925). The *linea* (*σχοῖνος, σπάρτον, μιλτεῖον*, *Anth. Pal.* vi. 103, 205; Poll. x. 186) was a line or cord for the same purpose, either red or chalked (Cic. *ad Qu. Fr.* iii. 1, 2; Vitruv. vii. 3; Pallad. iii. 9, 10). Regula is also the *thread* of the screw [COCLEA]: see Vitruv. x. 11, 2; Blümner, *Technologie*, iv. 124. For the regula of a wine or oil press, see TORCULAR. [J. Y.] [G. E. M.]

REI UXO'RIAE or DOTIS A'CTIO. [DOS.]

RELA'TIO. [SENATUS.]

RELEGA'TIO. [EXSILIUM.]

REMANCIPA'TIO. [EMANCIPATIO.]

REMULCUM (*ῥῦμα, ῥυμουλκεῖν τὰς ναῦς*), a rope for towing a ship ("*Remulcum*, funis, quo deligata navis magna trahitur vice remi," Isid. *Orig.* xix. 4, § 8; "*Remulco* est, quum scaphae remis navis magna trahitur," Festus, *s. v.*; comp. Caes. *B. C.* ii. 23, iii. 40; Hirt. *B. Alex.* 11; Liv. xxv. 30, xxxii. 16; Polyb. i. 27, 28, iii. 46). Looking to the form of the word *ῥυμουλκεῖν*, and the frequent use of *ῥῦμα* for the tow-rope (Polyb. i. 26, 14, &c.), we can hardly doubt that the word *remulcum* is borrowed from the Greek, and that the connexion with *remus* is false. The ships were no doubt often towed by boats with oars, but this word would be used whatever might be the method of towing. In Latin of the best age it is found only in the ablative. [W. S.] [G. E. M.]

REMU'RIA. [Lemuria.]

REMUS. [Navis, Vol. II. pp. 212, 215.]

REPA'GULA. [Janua.]

REPETUNDAE, or PECUNIAE REPETUNDAE. Repetundae pecuniae in its widest sense was the term used to designate such sums of money as the socii of the Roman state or individuals claimed to recover from magistratus, judices, or public curatores, which they had improperly taken or received in the Provinciae or in the Urbs Roma, either in the discharge of their jurisdictio, or in their capacity of judices, or in respect of any other public function. Hence the word *repetundae* came to be used to express the illegal act of officials in extorting or taking money from those subject to them, as in the phrase "repetundarum insimulari, damnari;" and *pecuniae* meant not only money, but anything that had value. The expression which the Greek writers use for repetundae is *δίκη δώρων* (Plut. *Sulla*, 5). The crimen repetundarum, then, is the crime of official corruption and oppression, an offence which became more frequent as the Roman dominion extended, and was therefore made the subject of various penal enactments.

It is stated by Livy (xlii. 1) that before the year B.C. 173 no complaints were made by the socii of being put to any cost or charge by the Roman magistratus. Subsequently, when complaints of exactions came to be made, an administrative inquiry was instituted into this offence by extraordinary commissions of the senate, as appears from the case of P. Furius Philus and M. Matienus, who were accused of this offence by the Hispani (Liv. xliii. 2). Regulations respecting donations to governors of provinces by their subjects were prescribed by the Lex Porcia (Liv. xxxii. 27), but the first lex repetundarum was the Calpurnia, which was proposed and carried by the tribunus plebis, L. Culpurnius Piso (B.C. 149), who was distinguished also as an historical writer. The Lex Calpurnia established for the first time a perpetua quaestio to try persons charged with this offence, a special praetor being appointed to conduct the trial (Cic. *de Off.* ii. 21, 75; *Brut.* 27, 106). The lex only applied to provincial magistrates, because in the year B.C. 141, according to Cicero (*de Fin.* ii. 16, 53), the like offence in a magistratus urbanus was the subject of a *quaestio extra ordinem.* It seems that the penalties of the Lex Calpurnia were merely pecuniary, being recovered by the actio sacramenti, and at least did not comprise exsilium, for L. Cornelius Lentulus, who was censor B.C. 147, had been convicted on a charge of repetundae in the previous year. The sum to be restored was ascertained after conviction by the proceeding of *litis aestimatio*, or taking an account of all the sums of money which the convicted party had illegally received. Various leges de repetundis were passed after the Lex Calpurnia. The Lex Junia was passed probably about B.C. 126, on the proposal of M. Junius Pennus, tribunus plebis. We have no information respecting its contents, but it may possibly be the lex under which C. Cato, Proconsul of Macedonia, was living in exile at Tarraco (Cic. *pro Balbo*, 11, 28; Vell. Pat. ii. 8); for at least exsilium was not a penalty imposed by the Calpurnia Lex. The Lex Servilia Glaucia was proposed and carried by C. Servilius Glaucia, tribunis plebis B.C. 100. This lex applied to any magistratus who had improperly taken or received money from any private person; but a magistratus could not be accused during his year of office. It perhaps only included provincial magistrates, being extended to urban by a subsequent statute (Cic. *pro Rabir. Post.* 6, 13). The Lex Servilia enacted that the praetor peregrinus should annually appoint 450 judices for the trial of this offence: the judices were not to be senators. The penalties of the lex were pecuniary and exsilium; the law allowed a comperendinatio (Cic. *in Verr.* i. 9, 26). Before the Lex Servilia there was simple restitution of what had been wrongfully taken, and also the summa sacramenti forfeited to the state: this lex seems to have raised the penalty to double the amount of what had been wrongfully taken; and subsequently by the Lex Cornelia it was made quadruple. Under this lex were tried M. Agillius, P. Rutilius, M. Scaurus, and Q. Metellus Numidicus. The lex gave the civitas to any person on whose complaint a person was convicted of repetundae (Cic. *pro Balbo*, 23, 24).

The Lex Acilia, which is of uncertain date (probably B.C. 101), was proposed and carried by M'. Acilius Glabrio, a tribunus plebis. It made some changes in the procedure of trials for repetundae, enacting that there should be neither ampliatio nor comperendinatio. It is conjectured that this is the Lex Caecilia mentioned by Valerius Maximus (vi. 9, 10), in which passage, if the conjecture is correct, we should read Acilia for Caecilia (Cic. *Act.* i. *in Verr.* 17, 50). It is a subject of dispute whether the Acilia or Servilia was first enacted, but it appears that the Acilia took away the comperendinatio which the Servilia allowed.

The Lex Cornelia was passed in the dictatorship of Sulla, B.C. 81, and continued in force to the time of C. Julius Caesar. It extended the penalties of repetundae to other illegal acts committed in the provinces, and to judices who received bribes, to persons abetting the crime into whose hands the money came (*quo ea pecunia pervenerit*, Cic. *pro Rab. Post.* 4, 7), and to those who did not give into the Aerarium their proconsular accounts (*proconsulares rationes*). The praetor who presided over this quaestio chose the judges by lot from the senators, whence it appears that the Lex Servilia was repealed by this lex, at least so far as related to the constitution of the court. This lex also allowed ampliatio and comperendinatio. The penalties were pecuniary (*litis aestimatio*), and the form of banishment called *aquae et ignis interdictio.* Under this lex were tried L. Dolabella, Cn. Piso, C. Verres, C. Macer, M. Fonteius, and L. Flaccus, of whom the last two were defended by Cicero. In the Verrine Orations Cicero complains of the comperendinatio or double hearing of the cause, which the Lex Cornelia allowed, and refers to the practice under the Lex Acilia, according to which the case for the prosecution, the defence, and the evidence were only heard once, and so the matter was decided (*in Verr.* 1, 9). The last Lex de repetundis was the Lex Julia passed in the first consulship of C. Julius Caesar, B.C. 59 (Cic. *in Vat.* 12). This lex consisted of numerous heads (*capita*), which have been collected by Sigonius (Cic. *ad Fam.* viii. 8). It repealed the penalty of exsilium, but, in addition to the *litis aestimatio*, it enacted that persons convicted under it should lose their rank, and be disqualified from being witnesses, judices, or senators. This is the lex which was commented on by the jurists, whose expositions are preserved in the Digest (48, 11) and in the Code (9, 27). The Lex Julia was an act embodying provisions that existed in previous laws, as, for instance, that by which the money that had been improperly retained could be recovered from those into whose hands it could be traced. It contains provisions prohibiting governors of provinces from contracting debts and entering into other legal transactions within their provinciae, with which Mr. Justice Stephen compares (*Hist. of Criminal Law*, i. p. 22, 1st ed.) the rules prevailing in India, which prevent civilians from holding land in their own districts and from receiving presents.

The Lex Julia had been passed when Cicero made his oration against Piso, B.C. 55 (*in Pis.* 21, 50). A Gabinius was convicted under this lex. Many of its provisions may be collected from the oration of Cicero against Piso. Cicero boasts that in his proconsulship of Cilicia there was no cost caused to the people by himself, his legati, quaestor, or anyone else; he did not even demand from the people what the Lex (Julia) allowed him.

Under the Empire the offence was punishable with exile (Tac. *Ann.* xiv. 28, and the note of Lipsius). It was treated under the Antonines as a crimen extraordinarium, except in very grave offences, when it was punished with death. (Walter, *Geschichte d. röm. Rechts*, ii. § 814; Rudorff, *Geschichte d. röm. Rechts*, ii. § 120; Rein, *Criminalrecht*, 604, &c.; Geib, ii. 40–42; Zumpt, *de legg. judiciisque repetundarum in republica Romana.*) [G. L.] [E. A. REPOTIA. [MATRIMONIUM, Vol. II. p. 144 *b*.]

REPU'DIUM. [DIVORTIUM.]

RES. [DOMINIUM.]

RESCRIPTUM. [CONSTITUTIONES.]

RESTITU'TIO IN I'NTEGRUM signifies the rescinding of an act by the magistratus in order to prevent the legal consequences which ordinarily attach to such act from taking effect, the parties affected by it being restored to the same position which they occupied before it took place. Such restitution is founded on the edict and given by the magistratus on grounds of equity in cases of contractual and other relations, which are not in their nature or form invalid; for if they are such as not to be valid according to the Jus Civile, this restitutio is not needed. The *in integrum restitutio* is an extraordinary remedy (*extraordinarium auxilium*), available in cases of conflict between strict law and equity (*jus strictum*, *aequitas*), which are determined by the magistratus in accordance with the principles of the latter through his imperium as distinguished from his JURISDICTIO.

In order to entitle a person to the restitutio, he must have sustained some injury in consequence of the contract or act in question, and not through accident or any fault of his own; except in the case of one who is *minor* xxv *annorum*, who was protected by the restitutio against the consequences of his own carelessness. The injury also must, as a rule, be one for which the injured party has no other remedy. Further it was necessary that there should be some ground of restitution (*justa causa*) recognised by the equity of the magistratus, though not by strict law. The grounds of restitutio were those expressed in the praetor's edict, in the case of restitutio against a positive act, such as entering into a contract, or any which appeared to the praetor good and sufficient, in the case of restitutio as a remedy against the consequences of omissions: "item si qua alia mihi justa causa esse videbitur in integrum restituam quod ejus per Leges, Plebiscita, Senatusconsulta, Edicta, Decreta Principum licebit" (Dig. 4, 6, 1).

The following are the chief grounds on account of which a restitutio might be decreed:—

Vis et metus (Dig. 4, 2; Cod. 2, 20). If a man were induced to enter into a legal transaction or act through duress, the proceeding was not for that reason invalid, since his assent was not considered to be wanting (Dig. 4, 2, 21, § 5), and his motives for assenting were in strict law immaterial; but it was *contra bonos mores* to allow such an act to have legal effect, and so it having been done under the influence of force or reasonable fear ("metum non vani hominis, sed qui merito et in hominem constantissimum cadat") an *in integrum restitutio* was allowed. An alternative and generally preferable remedy to this mode of restitution was after a time established by the praetor in the *actio quod metus causa*, by which restitution or a fourfold penalty could be obtained against the party who was the wrongdoer, and also against an innocent person who was in possession of anything which had been got from him, and also against the heredes of the wrongdoer in so far as they were enriched by the wrong (*quantum ad eos pervenit*). If a person was sued in respect of a transaction which he had entered into under duress, he was allowed to defend himself by an *exceptio quod metus causa*. The *actio quod metus* was first given by the Praetor L. Octavius, a contemporary of Cicero (formula Octaviana, Cic. *in Verr.* iii. 65).

The case of *dolus* (Paul. 1, 8; Dig. 4, 3; Cod. 2, 21). When a man was induced to enter into a legal transaction by the fraud of the other contracting party, he was bound according to *jus strictum*, but was entitled to an *in integrum restitutio*. Redress could also be obtained by means of the *actio de dolo malo* or *doli* against the guilty person and his heredes, so far as they were made richer by the fraud, for restitution or damages. Against a third party who was in bonâ-fide possession of the thing obtained by dolus, he had no action. If he was sued in respect of the transaction, he could defend himself by the *exceptio doli mali*. As the *actio doli* entailed infamia, it could only be brought in case the injured party had no other actio, and even the extraordinary remedy of *in integrum restitutio* would frequently be given by the praetor in preference to it. The *actio doli* was instituted by C. Aquilius Gallus in 688 A.U.C., when he was praetor (Cic. *de Off.* iii. 14, 60; *de Natura Deor.* iii. 30, 74).

The case of *minores* XXV *annorum* (Paul. 1, 9; Dig. 4, 4; Cod. 2, 22). A person above the age of puberty could bind himself by a legal act, but the Lex Plaetoria imposed a penalty on account of the overreaching and circumventing persons below the age of twenty-five, and subsequently the praetor promised in his edict to give *in integrum restitutio* to such persons, when the circumstances of the case seemed to him to require this remedy. In order to obtain restitutio it was not necessary for the minor to show that he had been defrauded; it was sufficient that an improper advantage had been taken of his inexperience. A minor was not prevented from claiming an integrum restitutio by the fact that his curator had assented to the transaction in question. A legal transaction which a pupillus had entered into, to which the auctoritas of his tutor had been given, could also be rescinded in this way on sufficient ground being shown. If the auctoritas of the tutor had not been given, and the act of the pupillus was one which required it, no restitutio was necessary, since the act would not be legally binding.

There were cases in which minores could claim no restitutio: for instance, when a minor with fraudulent design gave himself out to be *major vigintique annis;* or when he confirmed the transaction, and in other cases. The benefit of this restitutio belonged to the heredes of the minor. The claim to it could only be made, as a general rule, against the person who had circumvented the minor and his heredes. The time for making it was limited. The praetor also gave restitutio to municipal corporations on account of the injurious acts of their representatives (Dig. 49, 1, 29;—Cod. 2, 54, 4; 1, 50, 1; 11, 29, 3).

The case of *capitis deminutio* through *arrogatio* [ADOPTIO] or *in manum conventio* [MATRIMONIUM], which according to the Jus Civile was followed by the extinction of all the debts of the person arrogated or brought into the power of her husband. On account of the injustice to creditors thus occasioned the praetor restored them to their former rights, giving them *actiones fictitiae* or *in factum* (Gaius, iii. 83; iv. 38).

The case of *absentia* (Dig. 4, 6; Cod. 2, 54). Owing to the shortness of the time of acquiring property by usucapion, and to the fact that the right of bringing many praetorian actions was limited to a year, it must frequently have happened that rights were lost owing to a person's absence or to some other cause, which entitled to relief. In such cases the praetor gave *in integrum restitutio*, if sufficient cause was shown. Absence of the plaintiff on account of metus or on state service (*reipublicae causa*), or his imprisonment (*in vinculis*), or his capture by the enemy (*in hostium potestate*), and also absence of the defendant, are the chief causes mentioned in the edict; but there are others referred to, as loss of action owing to delay in appeal from one magistratus to another, or by refusal of an action within the time prescribed, and also causes not specified in the edict, which seemed to the praetor sufficient. If the absence or delay of the plaintiff was avoidable, or if his action could have been maintained by a procurator on his behalf, and he was blamable for not having appointed one, he could not claim restitutio.

The doubtful case of *alienatio judicii mutandi causa facta* (Dig. 4, 7; Cod. 2, 55), which occurs when a man alienates a thing for the purpose of injuring a claimant by substituting for himself another against whom the plaintiff cannot so easily prosecute his right. Though the alienor has here only made use of his legal right, the praetor perhaps at one time granted restitutio, if the exercise of such right operates unfairly on the plaintiff; though this may be questioned (Windscheid, *Pandekten*, 1, § 116, n. 2), he certainly gave an *actio in factum* for damages in such case. The rule that a vindicatio would lie against a person who had fraudulently parted with possession of the thing claimed, on the fiction that he was still in possession, had a similar object with this actio. If a man assigned a claim or right with the view of injuring his adversary by giving him a harder claimant to deal with, the adversary could meet the assignee, when he sued, with an *exceptio judicii mutandi causa.*

The case of alienation by an insolvent (*non solvendo*) to the injury of creditors (Inst. iv. 6, 6), though some writers would bring this case under the head of *restitutio* on the ground of fraud (Schröter, *l. c.* 131–142; Vangerow, 1, § 177). The praetor gave an action called Pauliana against alienees, by which the creditors destroyed the effect of an illegal alienation. The creditors were also entitled to an Interdictum Fraudatorium in order to get possession of the thing that had been fraudulently aliened (Dig. 36, 1, 67; 42, 8).

The case of error or mistake. A person who had bound himself by a legal act might sometimes obtain restitutio in respect of it on the ground of mistake. Restitutio was principally given on account of mistakes in procedure. Gaius (iv. 57; cf. Suet. *Claud.* 14) gives an example, when he says that if too large an amount was inserted in the condemnatio of the formula, the matter is set right by the praetor, or, in other words, "reus in integrum restituitur"; but if too little was inserted, the praetor would not make any alteration; "for," he adds, "the praetor more readily relieves a defendant than a plaintiff."

It is thought by some writers that restitutio was sometimes given in order to avoid the effect of the SC. Velleianum, but there is not sufficient evidence for this view. (Vangerow, 1, § 177.)

The application for a restitutio could only be made to a magistratus with imperium, who held an inquiry into the case (*causa cognitio*), and decided the matter by his decree (*decretum sententia*). Thus the proceeding did not belong to his ordinary jurisdiction (*cognitio ordinaria*), but to his *extraordinaria cognitio*, by which he decided certain cases himself without a judicium. Restitutio could be sought by the person injured, and by his singular or universal successors, and it could be maintained against anyone who had immediately benefited by the act which had injured the plaintiff, and against his heres or universal successor. It could only be maintained against a third person to whom the right had been assigned, if he had notice of the ground for restitutio at the time when he acquired his interest, and in certain other cases where great injury would result to the plaintiff if he were not allowed this remedy.

When a restitutio was decreed, each party restored to the other what he had received from him, with all its accessions and mesne profits, except in so far as the mesne profits on one side might be set off against the interest of money to be returned on the other side. If the object of the restitutio was a right, the injured party was restored to his right; or if he had incurred a duty, he was released from the duty. When restitutio consisted in the recovery of a right, a judicium might be granted at the same time as the decree, which is called *judicium rescissorium* or *actio restitutoria*, but the decree itself was always the act of the magistratus. The application for restitutio must as a general rule be made within four years (*quadriennium continuum*) of the time of the injury being discovered, and of the party being capable of bringing his action; in the case of minores, the four years were reckoned from the time of their attaining their majority. According to the law of the classical jurists, the application had to be made within an annus utilis.

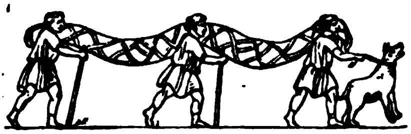
In the imperial times the term *restitutio* was also applied to the remission of a punishment (Tac. *Ann.* xiv. 12; Plin. *Ep.* x. 64, 65; Dig. 48, 19, 27), which could only be done by imperial grace. (Paul. 1, 7, 8, 9; Cod. Gregor. ii. 1–4; Dig. 4, 1; Cod. 2, 20–55; Burchardi, *Die Lehre von der Wiedereinsetzung*, &c.; Schröter, *Ueber Wesen und Umfang der In Integrum Restitutio* in *Zeitschr. für Civ. und Pr.* 1883, vi. 3; Schneider, *Die allgemeiner subsidiären Klagen*, &c.; Savigny, *System*, vii. §§ 317–343; Vangerow, *Pandekten*, 1, §§ 175–188; Windscheid, *Pandekten*, 1, § 114, &c.) [G. L.] [E. A. W.]

RESTITUTO'RIA ACTIO. [Intercessio.]

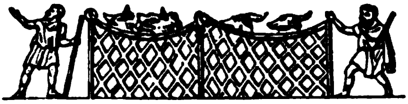
RETE; *dim.* **RETI'CULUM** (δίκτυον), a net. Nets were made most commonly of flax from Egypt, Colchis, Spain, and some other places (Poll. v. 26; Artem. *Oneir.* iii. 56; Plin. *H. N.* xix. § 10). Occasionally they were of hemp (Varro, *R. R.* iii. 5; Plin. xix. § 174): sometimes also of *σπάρτος* or broom (Xen. *Cyn.* 9, 13); and of fibres of palm leaves (Theophr. iv. 2, 7). They are sometimes called *lina* (λίνα) on account of the material of which they consisted (Hom. *Il.* v. 487; Brunck, *Anal.* ii. 494, 495). The meshes (*maculae*, Ovid, *Her.* v. 19; Cic. *Verr.* v. 11, 27; Varro, *R. R.* iii. 11; Nemesianus, *Cyneg.* 302; *βρόχοι*, Xen. *Cyn.* 2, 5; Eur. *H. F.* 729) were great or small according to the purposes intended; and these purposes were very various. But by far the most important application of net-work was to the three kindred arts of fowling, hunting, and fishing: and besides the general terms used alike in reference to all these employments, there are special terms to be explained under each of these heads.

I. In fowling the use of nets was one among many methods (Aristoph. *Av.* 528); thrushes were caught in them (Hor. *Epod.* ii. 33, 34); and doves or pigeons with their limbs tied up or fastened to the ground, or with their eyes covered or put out, were confined in a net, in order that they might allure others into the snare (Aristoph. *Av.* 1083). The ancient Egyptians, as we learn from the paintings in their tombs, caught birds in clap-nets (Wilkinson, *Man. and Cust.* vol. iii. pp. 35–38, 45). [Auceps.]

II. In hunting it was usual to extend nets in a curved line of considerable length, so as in part to surround a space into which the beasts of chase, such as the hare, the boar, the deer, the lion, and the bear, were driven through the opening left on one side (Aelian, *H. A.* xii. 46; Tibullus, iv. 3, 6 *sq.*; Plin. *H. N.* xix. § 10). This range of nets, which was called *indago*, was flanked by cords, to which feathers dyed scarlet and of other bright colours were tied, so as to flare and flutter in the wind. The hunters then sallied forth with their dogs, dislodged the animals from their coverts, and by shouts and barking drove them first within the *formido*, as the apparatus of string and feathers was called, and then, as they were scared with this appearance, within the circuit of the nets. Descriptions of this scene are given in some of the following passages, all of which allude to the spacious enclosure of net-work:—Verg. *Georg.* iii. 372 *sq.*, *Aen.* iv. 121, 151–159, x. 707–715; Ovid, *Her.* iv. 41, 42; Lucan, iv. 435 *sq.*; Oppian, *Cyn.* iv. 120–123; Eurip. *Bacchae*, 866–876. The accompanying woodcuts are taken from two bas-reliefs in the collection of ancient marbles at Ince-Blundell in Lancashire. In the uppermost figure three servants with staves carry on their shoulders a large net, which is intended to be set up as already described (Tibullus, i. 4, 49, 50; Sen. *Hippol.* i. 1, 44; Propert. v. 2, 33). The foremost servant holds by a leash a dog, which is eager to pursue the game. In the middle figure the net is set up. At each end of it stands a watchman holding a staff (Oppian, *Cyneg.* iv. 124). Being intended to take such large quadrupeds as boars and deer (which are seen within it), the meshes are very wide (*retia rara*, Verg. *Aen.* iv. 131; Hor. *Epod.* ii. 33). The net is supported by forked stakes (*στάλικες*, Oppian, *Cyneg.* iv. 67, &c.; Pollux, v. 31; *amites*, Hor. *Epod.* ii. 33; *ancones*, Gratius, *Cyneg.* 87; *vari*, Lucan, iv. 439). To dispose the nets in this manner was called *retia ponere* (Verg. *Georg.* i. 307), or *retia tendere* (Ovid, *Art. Amat.* i. 45). Comparing it with the stature of the attendants, we perceive the net to be between five and six feet high. For deer they should be somewhat higher. The upper border of the net consists of a strong rope, which was called *σαρδών* (Xen. *Cyn.* 6, 9). This *σαρδὼν* in some nets had loops (*στρόφια*) or rings (*κρίκοι*) which attached it to the *περίδρομος* or



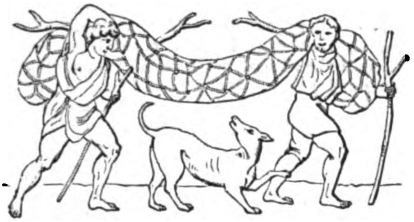
Servants carrying net. (From ancient relief.)



Indago.

ἐπίδρομος (cf. Plin. *H. N.* xix. § 11), *i.e.* the drawing cord, which was itself supported on the forked stakes (Pollux, v. 26–31). The figures in the following woodcut represent two men carrying the net home after the chase; the stakes for supporting it, two of which they hold in their hands, are forked at the top, as is expressed by the terms for them already quoted, *ancones* and *vari*, and δίκροι in Pollux.

Besides the nets used to enclose woods and coverts or other large tracts of country, two additional kinds are mentioned by those authors who treat on hunting. All the three are mentioned together by Xenophon (δίκτυα, ἐνόδια, ἄρκυες, ii. 4), and by Nemesianus (*Cyneg.* 299, 300).



Servants bearing home *retia* and *amites*.

The two additional kinds were placed at intervals in the same circuit with the large hunting-net or haye. The road-net (*plaga*, ἐνόδιον) was much less than the others, and was placed across roads and narrow openings between bushes (Poll. *l. c.*). The purse- or tunnel-net (*cassis*, ἄρκυς) was made with a pouch (κεκρύφαλος, Xen. *de Venat.* vi. 7), intended to receive the animal when chased towards the extremity of the enclosure. Within this pouch were placed branches of trees, to keep it expanded and to decoy the animals by making it invisible.

III. Fishing-nets (ἁλιευτικὰ δίκτυα, Diod. xvii. 43) were of six different kinds, which are enumerated by Oppian (*Hal.* iii. 80–82) as follows:—

> Τῶν τὰ μὲν ἀμφίβληστρα, τὰ δὲ γρῖφοι καλέονται,
> Γάγγαμα τ', ἠδ' ὑποχαὶ περιηγέες, ἠδὲ σαγῆναι
> Ἄλλα δὲ κικλήσκουσι καλύμματα.

Of these by far the most common were the ἀμφίβληστρον, or casting-net (*funda*, *jaculum*), and the σαγήνη, *i.e.* the drag-net, or sean (*tragum*, Isid. *Orig.* xix. 5; *tragula*, Plin. *H. N.* xvi. § 34; *verriculum* or *everriculum*, Ulp. Dig. 47, 10, 13, § 7; cf. Cic. *Verr.* ii. 14, 24). Consequently these two are the only kinds mentioned by Virgil in *Georg.* i. 141, 142, and by Ovid in *Art. Amat.* i. 763, 764. Of the κάλυμμα we find nowhere any further mention. We have no distinct information about the form of the γρῖφος, but it seems that it was made of rush-work, and therefore probably was sometimes a fishing-creel, but, when classed with nets, was a sort of eel-pot or lobster-pot = the ἐκ σχοίνων λαβύρινθοι of Theocr. xxii. 11. It is easy to connect the sense of *riddle* in γρῖφος with the intricacies of the eel-pot (cf. Poll. vi. 107), and it may be conjectured that *scirpus* and *scirpiculus* correspond to all three meanings of γρῖφος (cf. Plaut. *Capt.* iv. 2, 36; Gell. xii. 6). We know no more of the γάγγαμον (Hesych. *s. v.*; Aeschyl. *Agam.* 352): but from the fact that the word was also used for the *omentum* of the human body, it may be surmised that it was a circular net. The ὑποχὴ was a landing-net, made with a hoop (κύκλος) fastened to a pole (Oppian, *Hal.* iv. 251). That ἀμφίβληστρον denoted a casting-net may be concluded both from its etymology and from the circumstances in which it is mentioned by various authors (Hesiod, *Scut. Herc.* 213–215; Herod. i. 141; Is. xix. 8; Hab. i. 15–17, LXX. and Vulgate versions; St. Matt. iv. 18; St. Mark i. 16).

The English term *sean* (which is also in the south of England pronounced and spelt *seine*, as in French; cf. Littré, *s. v.*) has been brought into our language by a corruption of the Greek σαγήνη through the Vulgate Bible (*sagena*, Ezek. xxvi. 5, 14, xlvii. 10; St. Matt. xiii. 47, 48; St. John xxi. 6–11). This net, which, as now used both by the Arabians and by our own fishermen in Cornwall, is sometimes half a mile long, was probably of equal dimensions among the ancients, for they speak of it as nearly taking in the compass of a whole bay (Hom. *Od.* xxii. 384–387; Alciphron, i. 17, 18). This circumstance well illustrates the application of the term to describe the besieging of a city: to sweep a country of its population by an uninterrupted line of soldiers was called σαγηνεύειν (Herod. iii. 145, vi. 31; Plato, *Legg.* iii. *sub fin.*). The use of corks (φελλοί, *cortices suberini*, Sidon. Apollin. *Epist.* ii. 2; Plin. *H. N.* xvi. § 34) to support the top, and of leads (μολιβδίδες) to keep down the bottom, is frequently mentioned by ancient writers (Ovid, *Trist.* iii. 4, 11, 12; Aelian, *H. A.* xii. 43; Pausan. viii. 12, § 1), and is clearly exhibited in some of the paintings in Egyptian tombs. Leads, and pieces of wood serving as floats instead of corks, still remain on a sean in the collection of Egyptian antiquities at Berlin.

The *nassa* (κημός, κυρτίς, κυψέλη) was especially used for catching the murex used for purple dye. It was sometimes a small net in the shape of a bag with thick close meshes of cord, but apparently more usually a sort of basket of rushes or osiers. Bait was placed in it, for which, according to several writers, bivalves were used; these closed on the murex attacking them, and so kept it imprisoned till the net or basket was drawn up (Ael. *A. N.* vii. 34; Plin. *H. N.* ix. § 132; Oppian, *Hal.* v. 600). Others describe the nassa in more ordinary fashion, as constructed like an eel-pot, narrowing after the entrance and then widening again, with the rushes or osiers so projecting inside as to make the return more difficult than the entrance (Sil. v. 43; Poll. i. 47, where it is called κυψέλη). Hesych., *s. v.* κημός, compares the shape to a strainer (ἠθμός). (See Yates, *Textrinum Antiquum*, Appendix C; and, for the material of nets, Blümner, *Technol.* i. 229, 292 ff., may also be consulted.) [J. Y.] [G. E. M.]

RETIA'RII. [GLADIATORES.]

REUS. [ACTOR; OBLIGATIONES.]

REX (βασιλεύς), king. 1. GREEK. Derivation possibly root βα, "make to go," and λευ = λαο, "people" (cf. Λευτυχίδης). Government by a single king was perhaps the rule in the towns of pre-historic Greece (cf. Dionys. v. 74, κατ' ἀρχὰς μὲν γὰρ ἅπασα πόλις Ἑλληνικὴ ἐβασιλεύετο, πλὴν οὐχ ὥσπερ τὰ βαρβαρικὰ ἔθνη δεσποτικῶς, ἀλλὰ κατὰ νόμους τε καὶ ἐθισμοὺς *πατρίους*). Where, as so often, state and town were almost synonymous terms, the "king" was probably no more than the senior member of the most distinguished family, and these petty *βασιλῆες* or chieftains must have been very numerous. Thus we find traces of kings, many of them more or less mythical, in Thebes, Athens, Argos and Mycenae; in Chalcis of Euboea (Hes. *Op.* 654 f.), Phlius (Paus. ii. 13, 1), Corinth (Paus. ii. 4, 3), the towns of Achaia (Paus. vii. 6, 1; Polyb. ii. 41), possibly Tegea (Paus. viii. 45, 1; Herod. ix. 26), Orchomenus (Theoph. in Müll. *Frag. Hist. Gr.* iv. 515), the dodecapolis of Ionia (Herod. i. 147; Paus. vii. 3, 10), Samos (Herod. iii. 59), Chios (Paus. vii. 4, 9, 10), Cyme (Heracl. in Müll. *op. cit.* ii. 216), Tenedos (Aristot. in Müll. *op. cit.* ii. 157, 213), Ialysus (Paus. iv. 24, 2), towns of Cyprus (Diod. xvi. 42; Herod. v. 109, 110; Aristot. in Müll. *op. cit.* ii. 166, 203), and Cyrene (Herod. iv. 155), besides many others. In other cases we find kings of a district rather than of a town, *e.g.* Minos, king of Crete and the Cyclades (Thuc. i. 4); the Theban kings dominate Boeotia; the Athenian, Attica; the Spartan, Laconia.

According to Aristotle (*Pol.* i. 12), the relation of a king to his subjects is precisely analogous to that of Zeus to the other gods, or to that of a father to his children. In the earliest times, when every action of life, private or public, had a religious significance, his sacerdotal functions were doubtless the most important part of the king's duties. As the house-father was priest in his own house, so the king, the state-father, was priest of the greater household—the state; he offered sacrifice for the city, his virgin daughters tended the city's *ἑστία*. The king appears to have been called indifferently *ἄρχων*, *πρύτανις*, or *βασιλεύς*. See Arist. *Pol.* vii. (vi.) 8, *ἀπὸ τῆς κοινῆς ἑστίας ἔχουσι τὴν τιμὴν καλοῦσι δ' οἱ μὲν ἄρχοντας τούτους οἱ δὲ βασιλεῖς οἱ δὲ πρυτάνεις*: Aesch. *Supp.* 371, *πρύτανις ἄκριτος ὢν κρατύνεις βωμὸν ἑστίαν χθονός*. Charon of Lampsacus gave to his treatise on the Spartan kings the title *Ἄρχοντες καὶ πρυτάνεις Λακεδαιμονίων*.

Absolute monarchy, in the modern acceptation of the term, appears to have been unknown among the Greeks. The nearest approaches to it were the *τυραννίς*, which was, in origin at least, a weak imitation of Persian despotism, and the Macedonian military kingship. It is true that Aristotle in his classification of *βασιλεῖαι* (*Pol.* iii. 14–17) discusses what he terms *παμβασιλεία* or *βασιλεία κυρία*, but he treats the question rather from the theoretical than the practical point of view; such a *βασιλεία* is only justified by the *ἀρετὴ* of the individual or family being far in excess of that of any other individual or family (*Pol.* iii. 17).

Aristotle (*Pol.* iii. 14) classifies *βασιλεῖαι* as follows: (1) the *heroic* (*ἡ κατὰ τοὺς ἡρωϊκοὺς χρόνους*), (2) the *barbaric* (*ἡ βαρβαρική*), (3) the *αἰσυμνητεία*, or elective tyranny (*αἱρετὴ τυραννίς*), (4) the *Laconian*, or hereditary life-generalship (*στρατηγία κατὰ γένος ἀΐδιος*).

The *Heroic king*, the king as represented in Homeric poetry, is far from possessing absolute power. Every chieftain bears the title of *βασιλεύς*: in Phaeacia alone there are thirteen *βασιλῆες* (*Od.* viii. 390). [In the Iliad, Agamemnon is *βασιλεύτατος* (ix. 69), suzerain of the rest, only as commander of the Trojan expedition, not in virtue of any territorial sovereignty.] The obedience of his people is voluntary; his rights are subject to definition (*ἑκόντων μὲν ἐπί τισι δ' ὡρισμένοις*, Ar. *Pol.* iii. 14). Thucydides defines the heroic kingships as *ἐπὶ ῥητοῖς γέρασι πατρικαὶ βασιλεῖαι* (i. 13), and Aristotle is expressing the same idea when he calls them *ἑκούσιαί τε καὶ πάτριαι γινόμεναι κατὰ νόμον* (*ib.* iii. 14). Sometimes an oath was interchanged between king and subjects (*τοῦτο δ' ἐποίουν οἱ μὲν οὐκ ὀμνύοντες οἱ δ' ὀμνύοντες*, *ib.* iii. 14; see also below, remarks on the Macedonian kings). The same author regards the origin of the kingship as a gift of a grateful people for services conferred; cf. Id. *ib.* *διὰ γὰρ τὸ τοὺς πρώτους γενέσθαι τοῦ πλήθους εὐεργέτας κατὰ τέχνας ἢ πόλεμον, ἢ διὰ τὸ συναγαγεῖν ἢ πορίσαι χώραν, ἐγένοντο βασιλεῖς ἑκόντων καὶ τοῖς παραλαμβάνουσι πάτριοι.*

The heroic kingship was hereditary: see Thuc. and Aristot. above, and *Il.* ii. 186, *σκῆπτρον πατρώϊον, ἄφθιτον αἰεί*. Each successor was hailed by the approving voice of the *πλῆθος*. The office was of divine institution, and the kings are, in a certain sense, children of Zeus, the king of the gods. Thus they are *διοτρεφεῖς* and *διογενεῖς* (cf. Hes. *Theog.* 96, *ἐκ δὲ Διὸς βασιλῆες*), and even *θεῖοι*, as partaking of the divine nature (*Od.* iv. 691). The genealogies of both the royal lines at Sparta are traced back to Heracles, son of Zeus (Herod. vii. 204; viii. 131). Aeneas was son of Aphrodite, Nestor grandson of Poseidon, Ajax Telamonis and Odysseus were great-grandsons of Zeus. The king's office is derived from Zeus (*τιμὴ δ' ἐκ Διός ἐστι*, *Il.* ii. 197); he is king to whom Zeus grants it (*εἷς βασιλεύς, ᾧ ἔδωκε Κρόνου παῖς ἀγκυλομήτεω*, *ib.* 205); the sceptre of Agamemnon descends from Zeus in direct line (*ib.* 101). The kings in Homer are characterised by personal beauty; vigour of body and mind is a condition of the maintenance of the office (*Od.* xi. 174, 184, 495). Manual employments are often part of a king's accomplishments. "Odysseus, in the island of Calypso, is a wood-cutter and ship-builder (*Od.* v. 243, 261); Odysseus on his throne was the carpenter and artisan of his own bed (*Od.* xxiii. 195–201); Odysseus in disguise challenges Eurymachos the suitor to try which of them would soonest mow a meadow, and which drive the straightest furrow down a four-acre field (*Od.* xviii. 366–375)." (Gladstone, *Juvent. Mundi*, p. 420.) Laertes has a passion for gardening (*Od.* xxiv. 226 f.), Achilles and Paris for the lyre (*Il.* iii. 54).

The king succeeds to certain royal possessions and goods, termed his *τέμενος*. These were granted for signal services in war or elsewhere, and passed from father to son. Cf. *Il.* ix. 578 (of Meleager), vi. 193 f. (of the Lycians and Bellerophon); *Od.* xi. 184 (of Telemachus), xvii. 299 (of Odysseus), xxiv. 205 (of Laertes); *Il.* xii. 313; *Od.* vii. 150; Herod. vi. 161, where a corresponding *τεμενος* is given to Battus, the founder of Cyrene. It is thought that this was the solitary instance of private property in land, which was otherwise managed on the common-field system, held in temporary tenure (Ridgeway in *Journ. Hell. Stud.* vi. 319).

The heroic king inherited the threefold functions of *general*, *judge*, and *high-priest* (*στρατη-*

γὸς γὰρ ἦν καὶ δικαστὴς ὁ βασιλεὺς καὶ τῶν πρὸς τοὺς θεοὺς κύριος, Ar. *Pol.* iii. 14).

As *general*, he had supreme control of matters in the field, and power of life and death during expeditions: *ἐξελθόντων δὲ καὶ κτεῖναι κύριος ἦν· λέγει γοῦν ὃν δέ κ' ἐγὼν ἀπάνευθε μάχης . . ., οὔ οἱ ἄρκιον ἐσσεῖται φυγέειν κύνας ἠδ' οἰωνούς· πὰρ γὰρ ἐμοὶ θάνατος*, Ar. *Pol.* iii. 14, but the last sentence does not occur in the existing texts of Homer (*Il.* ii. 391 f.); see, however, *Il.* xv. 348. As *high-priest* he performed, on behalf of the state, all such functions as were not specially assigned to other priests: *κύριοι δ' ἦσαν . . . καὶ τῶν θυσιῶν ὅσαι μὴ ἱερατικαί* (Ar. *Pol.* iii. 15); cf. also *Il.* ii. 402 f. As *judge*, the king dispensed the *θέμιστες* or "dooms," which were divinely suggested to him by Θέμις, the assessor of Zeus: thus it was in his judicial capacity that the king gave chief evidence of his divine connexion and origin; cf. *Il.* ix. 97 f., *οὕνεκα πολλῶν λαῶν ἐστὶ ἄναξ καί τοι Ζεὺς ἐγγυάλιξεν σκῆπτρόν τ' ἠδὲ θέμιστας, ἵνα σφίσι βουλεύησθα*: *Il.* i. 238, *δικασπόλοι, οἵτε θέμιστας πρὸς Διὸς εἰρύαται*: Hes. *Theog.* 85, *οἱ δέ νυ λαοὶ πάντες ἐς αὐτὸν ὁρῶσι διακρίνοντα θέμιστας ἰθείῃσι δίκῃσι.* The regal symbol was the *σκῆπτρον*, which was transmitted from father to son (*Il.* ii. 100 f.): Odysseus bears the *σκῆπτρον* as Agamemnon's representative (*Il.* ii. 186 f.). The crown is unknown in Homer as a distinctly regal symbol, and only becomes so in later times, because worn by the king in his character of priest; garlands always being associated with sacrifice and other joyful occasions.

The king convoked the Council of the Elders (*βουλὴ γερόντων*, *Il.* ii. 53) to deliberate on all matters of policy, military as well as civil (*Il.* ix. 89; vii. 382 f.). There seems to have been no obligation upon the king to consult the *βουλή*, or to take its advice if consulted, but none the less was it his duty to do so (*Il.* ix. 100–108). The decisions of the king, or of the king and council, were made known to the general assembly of adult male citizens (*ἀγορά, ἀγών*). No debate was allowed; the multitude received the will of the king with silence or with applause; objections were summarily dealt with. It is not till the Odyssey that any special regard is paid to the *δήμου φῆμις* (cf. vi. 273; xiv. 239); though promises like those of Agamemnon, to give seven cities as his daughter's portion (*Il.* ix. 149), or of Menelaus, to sack one of his own cities in order to establish Odysseus therein, are either poetical exaggerations or proceed from those who are *βασιλεύτεροι τῶν ἄλλων βασιλέων*.

The title *ἄναξ ἀνδρῶν*, forty-four times applied to Agamemnon in the Iliad, and applied also to five other sovereigns—Aeneas (*Il.* v. 311), Euphetes (xv. 532), Anchises (v. 268), Augeias (xi. 701), and Eumelus (xxiii. 288)—is regarded by Gladstone (*Juv. Mundi*, p. 151) as of foreign rather than Hellenic colour, patriarchal rather than Greek, savouring of serfdom and absolutism. Jebb, on the other hand (*Homer*, p. 47), denies this; and, regarding *ἄναξ* merely as a descriptive epithet, suggests a metrical reason for its use in the passages quoted. Grote (*Greece*, ch. xx.) seems to incline to the former view.

The *αἰσυμνητεία* or *αἱρετὴ τυραννίς* is stated by Aristotle to have existed *ἐν τοῖς ἀρχαίοις Ἕλλησιν*. It differed from *βαρβαρικὴ βασιλεία* not in being constitutional (*κατὰ νόμον*), but simply in being not hereditary. The office lasted sometimes for life, sometimes for a specified time, or during the performance of a specified duty. As far as its power was concerned, the office was "tyrannical;" it is classified as a *βασιλεία*, as being *αἱρετὴ καὶ ἑκόντων* (Ar. *Pol.* iii. 14). Solon was practically *αἰσυμνήτης* of Athens during his revision of the constitution, though the title is not applied to him by any Greek writer.

The Laconian kingship is defined by Aristotle (*l. c.*) as *στρατηγία τις αὐτοκράτωρ καὶ ἀΐδιος*, to which he afterwards adds the fact that it is hereditary (*κατὰ γένος*). The king's authority is by no means supreme (*οὐκ ἔστι κυρία πάντων*), although eminently constitutional (*μάλιστα τῶν κατὰ νόμον*); his power only begins when he is outside Laconian territory. This view of the Spartan kingship is clearly drawn from its position in times nearly approximating to Aristotle's own. Weakened by the encroachments of the *γερουσία*, the *ἔφοροι*, and the *ναυαρχία*, it preserved only the shadow of its ancient power. Thus the Spartan kingship is really the "exception which proves the rule," that kings disappeared from Greece before historic times. For the duties, position, &c., of the Spartan kings, see GEROUSIA.

Some of the kingdoms which lay outside the circle of Greek politics lasted much longer than those within it. The Molossian kingdom of the Pyrrhidae, which derived its origin from the son of Achilles, extended its sway over the whole of Epirus shortly after the Peloponnesian War: cf. Thuc. i. 136; ii. 80. It was no doubt due to the strictly constitutional nature of its rule that the Molossian kingdom lasted until the latter half of the third century B.C. (Ar. *Pol.* viii. (v.) 11 *init.*). The kings every year, after sacrificing to Zeus Areius, swore to govern Epirus according to the laws, and the people for their part swore to protect the kings according to the laws. Transgression on the part of the king relieved the people from their oath, and thus we find that the king was sometimes removed and another appointed (Plut. *Pyrr.* v. Diod. xv. 13).

The Macedonian kings traced back their origin to the Heracleid race of Argos. Perdiccas I. was the founder of the monarchy (Herod. viii. 137, 138; v. 22). Originally established at Edessa, the dynasty extended the area of its sway by the conquest of the Briges, the Pierians, the Bottiaeans, and the inland tribes. The succession was hereditary. The Macedonian monarchy of Philip and Alexander approaches more nearly to the military imperialism of Rome than any other Greek institution. It is true that Arrian (*Exp. Alex.* iv. 11) asserts that *Μακεδόνων ἄρχοντες οὐ βίᾳ ἀλλὰ νόμῳ διετέλεσαν*: but this was probably more the result of a prudent policy than of any definite circumscription of the royal power. The king and the army appear to be the sole instruments of government, the army even acting as a criminal court. (See Quint. Curt. vi. 32, 2 "de capitalibus rebus vetusto Macedonum more inquirebat exercitus; in pace erat vulgi: nihil potestas regum valebat nisi prius valuis auctoritas.") This, however, probably bears reference only to military offences. We hear of a Macedonian assembly ("ad contionem vocato populo," Just. xiv. 6), but it "appears to have been summoned chiefly as a mere instrument to sanction some predetermined purpose of the king or military leader predominant at the time." There is "no evidence of co-ordinate political bodies or standing apparatus, either aristocratical or popular, to check the power of the king" (Grote).

Gilbert, *Griechische Staatsalterthümer*; Grote, *Greece*, part i. ch. 20; Thirlwall, *Greece*, chaps. 6, 8, and 10; Freeman, *Comparative Politics*, Lect. iv.; De Coulanges, *La Cité Antique*, p. 203 f., 283 f.; Jebb, *Homer*, p. 46 f.; Gladstone, *Juventus Mundi*, p. 413 f.; Auerbach, *de Lacedaemoniorum regibus*; Meier und Schömann, *Attische Process*, p. 6 f.; Busolt, *Griechische Geschichte*, vol. i. p. 376 f.; Schömann, *Antiquities of Greece*, tr. by Hardy and Mann, vol. i. p. 114 f.; Duncker, *History of Greece*, tr. by Alleyne and Abbott, vol. i. p. 469 f., ii. p. 3 f.; Id. *Gesch. des Alterthums*, v. (1881), p. 334 f. [A. H. C.]

2. ROMAN.—That Rome was once governed by kings, and that the later republican constitution was a development, traceable in its outlines, of an original regal rule, was the universal belief of Roman antiquity itself, and has never been doubted, even by those scholars who have expressed most disbelief in the details of such accounts of the kingship as have been handed down to us. Some consideration of the nature of the evidence on which the Roman monarchy rests is clearly necessary for an appreciation of its real nature and character. Of the evidence in this question there are two main lines. One is that of tradition; for the literary accounts we have of this period cannot be considered as other than traditional, since the earliest historical records from which our present sources were derived were not, so far as we know, composed until some 300 years after the expiration of this period, and there is little or no original documentary evidence of a credible nature on which we can suppose even the earliest of these accounts to have rested (Lewis, *Credibility of Early Roman History*, vol. i. ch. iii. p. 70; Seeley, *Livy*, Introd. p. 17). The other and surer line of evidence is to be found in the manifest survivals of an original kingly rule which meet us everywhere in the Roman republic, and which enable us partly to supplement the accounts of tradition, but more often to correct them where it seems likely that they have transferred to this early period the constitutional usages of the later republic. Some of these survivals, such as the *rex sacrorum* and the *interrex*, throw considerable light on some points of the regal constitution; while others are merely traces of the past monarchy indelibly imprinted on the later republican community. Such are the existence of the REGIA, or kingly palace, on the Sacra Via (Becker, *Topogr.* § 223), the festival of the Regifugium on Feb. 24th (Festus, *s. v.* p. 137 and p. 230; Orelli, *Inscr.* ii. p. 384; Ov. *Fasti*, 2, 685), and the days marked by the formula Q R C F [see REGIFUGIUM]. Finally, if we were to seek evidence, beyond tradition and such survivals, for the original existence of a Roman Rex, it would be found in the probabilities of a constitution such as that of Rome, so peculiar in the conception of its supreme magistracy, with its different personal representatives, each possessing in theory a single indivisible imperium, having been the development of a constitution in which the imperium was really indivisible because vested in a single person. That this form of constitution was in no degree peculiar to Rome, but that in this, as in other respects, Rome was merely a typical Italian community, there is every reason to believe. A distinct survival of an original kingly power is found in the standing dictatorship of certain Latin-towns, such as Lanuvium (Cic. *pro Mil.* 10, 27).

The theory on which the Roman monarchy rested is not quite paralleled in any ancient or modern state. The Roman state has been aptly described by Mommsen as a "constitutional monarchy inverted" (*Hist. of Rome*, i. p. 84): that is, the ultimate sovereignty resided not with the king, but with the community he represented, and the constitutional limitation was not that of personal rule by the people, but of the people by personal rule. The Roman monarchy rested on authority delegated by the people; and this is true whatever we consider the immediate basis to have been on which the king's power rested, whether we regard it as elective, hereditary, or held by right divine. It is shown by the fact that the sovereign attribute of pardon rested with the people in the last resort (Liv. i. 26; Cic. *de Rep.* ii. 31). Secondly, by the fact which is stated by tradition, and rendered probable by the later theory of republican legislation, that the Roman people was the sole source of law, which, though elicited by the king through his sole right of initiative, could only be rendered valid by the assent of the burgesses (Dionys. ii. 14); and finally that tradition affirms it to have been the source of honour. We are told at least that the regal insignia of Etruria, which the Roman kings adopted, were only assumed after ratification by the senate and people (Dionys. iii. 6, 2; Cic. *ib.*); and it is possible that the appointment of special officers of state, though in theory they were merely delegates nominated by the king, had to be ratified by similar *leges curiatae*. Such at least seems to be implied by the account given by Tacitus of the institution of the earliest quaestores (*Ann.* 11, 22; cf. Dig. 1, 13, "quaestores quos ipsi populi suffragio crearent").

To such a personal representative had the Roman people transferred the whole of the executive, and so much of the legislative power as is implied in the sole right of initiative, without, however, forfeiting certain ultimate rights of their own. The personal head thus constituted possessed a variety of titles which marked the various aspects of the collective authority he exercised; and which, when this administrative authority was differentiated in republican times, were applied to different individuals. As supreme judge he would be *judex*, as leader in war *praetor* (*prae-itor*: cf. Varro, *L. L.* v. 80); while the title *dictator*, which signified a temporary, though incomplete, resumption of the kingship in republican times, and the title *magister populi* which was applied to this office (Festus, p. 198), were probably originally mere appellatives of the king, applied according to the aspect in which his power was viewed. The title that marked him out as supreme head of the state, and summed up all his other powers, was that of Rex, the "orderer" of the state, the regulator of all things human and divine (Mommsen, *Staatsr.* ii.^{3} p. 5); and this title of Rex, when it had ceased to apply to civil duties, and had gained the connotation not of ordered administration but of absolutism, was still applied to the Rex sacrorum, the orderer of religion, who had inherited that branch of the kingly functions. Similarly the position of the Rex as supreme head of the state was denoted by the word *regnum* (Cic. *de Rep.* ii. 27); but the powers with which the king was invested were summed up under the word *imperium*. While *regnum* denotes the position of the monarch, *imperium* denotes the powers on which this position was based (Mommsen, *l. c.*; Cic. *de Rep.* i. 26).

The unique position in the state which the Roman king thus held, and which has been compared to the position which the Roman paterfamilias held in the family (Mommsen, *Hist. of Rome*, i. p. 61), was expressed by certain special marks (*insignia*), which distinguished him from the rest of the burgesses. The question as to what were the special insignia of the Roman monarchy is rendered difficult by the fact, that while they must necessarily have borne a close relation to the insignia of the supreme magistrates of the Republic, they yet in all probability differed in some degree from the latter; but to what extent it is almost impossible to determine, for the tendency of tradition is, on the one hand to assimilate the two, on the other, while assuming the consular and praetorian insignia to be an inheritance from regal times, to attribute to the monarchy other special marks of royalty which it derives mainly from a foreign source. The chief marks of the regal as of the later consular imperium were the *fasces* and *lictores*. (As regards the number of the king's lictors, see **Lictor**, p. 65.) That the king could have the axe borne within the fasces, even while remaining within the walls, we must believe, if we admit that he was exempt from the necessity of admitting the provocatio, and could exercise the same full jurisdiction *domi* and *militiae*. Next, the wearing of the purple must have been wholly reserved for the king, but whether merely in the form of the later consular *praetexta* (Liv. i. 8) or of the full purple robe besides the praetexta attributed to him by Dionysius (iii. 61) is uncertain; the latter, however, is more probable: for in the later consulship we probably see throughout a limitation of the insignia which accompanied the limitation of the powers of the supreme magistracy. The purple robe which Dionysius assigns along with the *toga praetexta* to a foreign origin, must, however, be identical with one variety of the *trabea*, undoubtedly one of the insignia of the king, and said to have had a purely Latin origin. It is connected with the name of Romulus (*Quirinalis trabea*, Verg. *Aen.* vii. 612), and is associated in the later Republic chiefly with the officers of religion. If the distinction between the three kinds of trabea (Servius *in Aen.* vii. 612)—the purple one for the priestly office, that of purple and saffron for the augurs and of purple striped with white for the king—existed in this early period, they must have been all worn by the king for the performance of the several functions of his office. The trabea is probably an inheritance the Roman republic owed to the kingship: and it is difficult to see how the idea could have originated of differences in this dress being appropriate to difference of functions, had the distinction not originated in a period when all these functions were united in the king (cf. Serv. *in Aen.* vii. 187. xi. 334; Plin. *H. N.* viii. § 48, ix. § 39; Ov. *Fast.* ii. 503). The eagle-headed sceptre and the golden crown tradition also attributes to the king, as well as the *solium* or throne (Cic. *de Fin.* ii. 21, 69; Dionys. iii. 61, *θρόνον ἐλεφάντινον*) and the chariot within the walls, from which the *sella curulis* was derived (Festus, p. 49). Most of the regal insignia, the crown, the *toga picta* and the chariot especially, reappear in the Roman triumph, and render probable the statement that the triumphal insignia of the Roman magistrate were but the revival of those of the monarchy (Dionys. iv. 74).

Amongst the privileges of the king must be counted that portion of the public domain ("arvi et arbusti et pascui lati atque uberes," Cic. *de Rep.* v. 2, 3; Liv. ii. 5) set apart exclusively for the king's use. Though in a sense the owner of the whole state, and as such capable of commanding the *munera* of the burgesses (Liv. i. 56), he was peculiarly the owner of these royal domains, which he might employ for his own support; and in a peculiar degree also would he be master of the services of that large *clientela*, the body of half-free citizens that helped to make up the *plebs*, which were only connected with the community through him its personal representative, but which he might make more closely dependent, as *clientes*, on other leading families of the community, if it was his pleasure (Cic. *de Rep.* l. c.).

The mode in which the Roman kings entered on their position in the state is one of the most difficult questions connected with the monarchy. It is true that tradition is unanimous in representing it as elective—depending, that is, on free popular election, or on such election guided by the senate (Liv. i. 17; Cic. *de Rep.* ii. 17, 31)—and in representing the procedure as being conducted in every case with the regular formalities of the *comitia*, the *auctoritas patrum*, and the *interregnum*: the last of which, though in the republican period an extraordinary office, is represented as having been a part of the invariable constitutional procedure in the transmission of the kingly power (Liv. i. 47). When, however, we consider the manner in which such a tradition may have grown up,—that the conception probably arose with the Roman jurists, who had before their eyes the mode in which the consuls and other curule magistrates were appointed to their office; when further we consider that what seems the alternative, the hereditary principle, was never represented by tradition as having been strictly recognised in the transmission of the Roman monarchy, we see how inevitable it was that they should have concluded it to be purely elective. But there are many considerations which throw doubt on such a theory. In the first place, the election was regarded as free in a far wider sense than the election of the higher magistrates at Rome; since, if we are to trust the traditional accounts, Roman citizenship was not a necessary qualification for the monarchy. Thus the non-burgess Numa, the foreigner Tarquin, the slave's son Servius, are all represented as having been elected kings of Rome (Liv. i. 18, 35, 42, 46): although Roman citizenship must have been a necessary qualification, even if patrician descent was not; and it is unlikely that while the *interrex* had, down to the latest republican times, to be a patrician, the king might have been not only a plebeian but a non-citizen (Mommsen, *Staatsr.* ii. p. 7, n. 2). The absence of any mention of a qualification for election throws suspicion on the circumstantial accounts given of the king's election, and the suspicion is increased by an examination of the legends of Rome's foundation so far as they refer to the institution of the monarchy. To bear out the juristic theory of election, we should expect to find the first king of Rome an elected monarch. But, on the contrary, we find the community organised through the king rather than the king through the community. There is no trace in the best tradition of a first election to the kingship; for the account of Dionysius, that Romulus was chosen to be the supreme head by a vote of the people, chiefly through his character of founder of a colony, belongs to Greek sentiment, not to Roman: and the *salutatio* mentioned by Livy (i. 7) on his successful taking of the auspices, represents merely the recognition of his imperium as favoured by heaven. From the traditional accounts of the earliest kings, which represent Romulus as the son of a god, as awaiting the verdict of heaven before he assumes his rule, and Numa his successor as insisting that the same verdict should be appealed to (Liv. i. 7 and 19), a conclusion might be drawn that the Roman monarchy rested on divine right (cf. Rubino, *Untersuchungen über römische Verfassung*, p. 107); but, as will be shown in considering the question of the inauguration of the king, this theory raises into a material what was probably merely a formal element in the monarchy: and there is nothing in Roman history or sentiment that could give colour to the idea of such a pure theocracy. That the monarchy was hereditary is contradicted by the facts of the traditional history of the period, and expressly denied by other authors, as by Cicero (*de Rep.* ii. 12, 24) and Appian (*Bell. Civ.* i. 98), who state that the early Romans in the choice of their kings had more regard to merit than to birth; and when the hereditary principle is first realised in the last king, the monarchy comes to an end. On the other hand there are considerable difficulties, besides those mentioned above, in the way of assuming, as the Roman constitutional thinkers did, that the king's position depended on free election by the people; for, in what must be regarded as definite survivals of the Roman monarchy, such election was not recognised. The *Rex sacrorum* was not elected, but nominated by the Pontifex Maximus (Dionys. v. 1; Liv. xl. 42, 8); and it is probable that, at the close of the monarchy, when the religious functions of the priest were first separated from the secular functions of the magistrate, the older method of regal appointment would have been retained for the former, the new principle of election introduced for the latter. Again, the Dictatorship, which was practically a re-establishment of the kingship for a temporary purpose in republican Rome, also dispensed with election. Perhaps another piece of evidence against the theory that the kingship was purely elective is to be found in the fact that the king was not bound to allow the *provocatio* any more than the early dictator was (Liv. ii. 18 and 30; Dionys. v. 75; Mommsen, *Staatsr.* ii.^{3} p. 163). Now it seems to have been a principle in republican Rome that when there was election, then the provocatio was demanded as a right; and if we consider this principle to be applicable to the earliest period of Roman constitutional history, the fact that the people had no standing right of provocatio against the king will be an argument against their having the free power of electing to this office. If we are led by these considerations to regard the monarchy as not purely an elective office, we must consider that it was the right, and perhaps the duty, of the king of Rome to nominate his successor; that this *nominatio*, which became only a form under the Republic, but which was again revived with some of its old material force in the election to office under the principate (Dio Cass. liii. 21, 7; lviii. 20, 3; Tac. *Ann.* i. 14, 81), was the chief mode of transmission of office in the regal period. The survival of the interrex into historic times as a factor in an elective process is no proof that the Roman monarchy was purely elective (cf. Seeley, *Livy*, Introd. p. 56). Had there been no due nominatio, and consequently no distinctly marked-out successor to the monarchy, the duty of providing such a successor would naturally have lapsed to the senate, from which body the interrex was appointed (Liv. i. 17: see INTERREX and SENATUS); and it is probable that the *Interregnum*, in the time of the monarchy, as in that of the Republic, was an extraordinary measure, only resorted to when the regular line of succession had been broken and the regular procedure interrupted, through some unforeseen cause. But although the monarchy cannot be regarded as depending on free election on the part of the people, there are certain quasi-elective processes connected by tradition with the appointment of the king, both on the part of senate and people, which there is no reason to discredit. That the authority of the senate (*auctoritas patrum*) was constitutionally necessary for the appointment of a successor to the monarchy is stated by Livy in connexion with all the transmissions of the supreme power (Liv. i. 17, 22, 32, 41, 47); and, even if we do not hold the theory of a definite election, will still be a natural outcome of the constitutional necessity the king was under of consulting the senate in all important measures that affected the popular welfare, one of the most important of which would be the nomination of a successor. Such a procedure would not spring from any theory of the senate's possessing elective power, but simply from the principle that underlay the whole Roman community, both in its public and private relations, that no man in authority should act without taking advice of his *concilium*. The other principle is that of the formal ratification of the king's power by the people, which continued into the Republic under the title of the Lex Curiata; and was the formal sanction always required for the ratification of an imperium already assumed (Cic. *de leg. Agr.* ii. 10, 26; ii. 11, 28; *ad Fam.* i. 9, 25: see LEX CURIATA and PROCONSUL). That it was a merely formal ratification in the time of the monarchy is stated by Cicero as being shown by the fact that the king himself proposed the Lex Curiata which was to sanction his own power (Cic. *de Rep.* ii. 13, 25: "Numam—qui quamquam populus curiatis eum comitiis regem esse jusserat, tamen ipse de suo imperio legem curiatam tulit"), as was indeed necessary, since no other power but the king had the right of putting the question to the people; and it might undoubtedly be legally, though not perhaps constitutionally, withheld by the king, as we are told it was withheld by king Servius during the early part of his reign (Liv. i. 42). It is thus carefully distinguished from the election to the monarchy, and the people were supposed by the Roman jurists to have performed two distinct acts in the creation of a king first in the way of election, and next in the way of formal ratification of such an election (Cic. *de Rep.* ii. 17, 31, "Tullum Hostilium populus regem, interrege rogante, comitiis curiatis creavit, isque de imperio suo—populum consuluit curiatim"). That such a formal sanction, however, should have been required where free popular election had preceded, seems unlikely; and the Lex Curiata is a far more explicable procedure if we suppose the king to have first been nominated independently of the people, and then to have challenged their allegiance in this manner: and although in the Republic this Lex was taken by magistrates already elected, as a necessary preliminary to the exercise of the full imperium, yet there it was a mere constitutional survival, with its meaning partly lost, and far more a matter of form apparently than it had been in its origin. That an exercise of the regal imperium, which was not sanctioned by these two acts of senate and people, the expressed will of the one and the declared allegiance of the other, was regarded by the later authorities as unconstitutional, is shown by the language of Cicero, where he says (*de Rep.* ii. 24, 44) that the last *injustus dominus* of Rome ruled "neque populi jussu neque auctoribus patribus."

But the king's assumption of his power was regarded as incomplete until a religious act had been performed which showed that the gods sanctioned the rule which he had assumed. The ceremony of taking the auspices which had this meaning was observed by magistrates of the Republic before entering on the exercise of their office [AUSPICIA; AUGUR]; but the religious act performed by the king is represented by our authorities as having been, not merely this taking of the auspices, but a special inauguration. There is a difference between these two acts. In the ordinary form of the auspicia the official entering on office had himself the right of *spectio* which belonged to Roman magistrates as such, was never regarded as a merely priestly function, and still continued to be possessed by magistrates under the Republic, even when their office had been completely divorced from that of the priesthood. In the special inauguration, on the contrary, the *spectio* is taken by some other than the person inaugurated; as in the case of Numa, the first who is represented as being thus inaugurated, a specially appointed augur is employed to watch for signs (Liv. i. 18, "de se deos consuli jussit"); unlike Romulus, who is represented as taking his own auspices on the Palatine (Liv. i. 6). This ceremony of inauguration by one of the priesthood other than the person so inaugurated is represented as having been from the time of Numa the standing procedure in the act of entering on the regal office (Liv. i. 18). If we can argue in this case from survivals, some support is given to the assertion by the fact that the Rex Sacrificulus had, as we know, a special inauguration (Labeo, *ap.* Gell. xv. 27, 1; Liv. xl. 42, 8). But this resulted from the fact of his purely priestly character; and if we suppose that the inauguration as well as the taking of the auspices existed for the early kings, we must suppose that already at this period there was a separation, in idea at least, between the functions of the king as priest and his functions as magistrate: the special inauguration through the spectio of another attaching to him in his first character, the taking of the auspices through his own spectio belonging to him in his other character as magistrate (Mommsen, *Staatsr.* ii. 1, p. 8); but that so marked a separation of functions existed in the regal period is unlikely, and it seems more probable that the inauguration of the Rex Sacrorum, who represented the priestly side of the king's functions, was but a continuation of the first act of taking the auspices performed by the king.

There was no separation in fact, and probably none in idea, between the position of the king as priest and his position as magistrate. The Roman state was by no means a theocracy. It united the civil and religious powers as closely as possible, but employed the latter not as an infallible guide to, but as a test of the effectiveness of, the former. Thus in the personal head of the state the two were indissolubly combined. The king was first priest as he was first magistrate (Dionys. ii. 14, iv. 74; Plut. *Tib. Gracch.* 15); and as he possessed the nomination of all subordinate magistrates, so he possessed that of all subordinate priests. Thus tradition tells us that the three great Flamines, the Salii, and the Pontifex were instituted by Numa, although most of the important ceremonies of religion were performed by himself personally (Liv. i. 20), as the augurs had been appointed by that "best of augurs" Romulus (Cic. *de Rep.* ii. 9, 16; *de Div.* i. 2, 3); and the appointment of special individuals to fill these priesthoods must have been likewise a part of his office; as, for instance, the nomination of the flamines that belonged to the Latin dictator must have been likewise in the hands of the king (Ascon. *in Mil.* p. 32); and all the powers that, with the secularisation of the Roman civil magistracy passed to the Pontifex Maximus as the head of the Roman priesthood may without hesitation be attributed to the king. In republican times the Rex Sacrorum himself was nominated by the Pontifex Maximus, the reason being that, since the theory of nomination was carried on in his person, he could only be nominated by the greatest member of the priesthood; but the nature of his duties gave him precedence even over the Pontifex Maximus as well as over the three great Flamines in the *ordo sacerdotum* (Festus, *s. v.* p. 185; Labeo, *ap.* Gell. xv. 27, 1; Ov. *Fasti*, ii. 21), and points to the position of the king as priest, while his regularly recurring sacred duties, his sacrifices on the day of the new month and at the festival of the *Agonalia* (Varro, *L. L.* v. 3, 54; Festus, s. v. *Agonium*, p. 9), point to the fact that the king's sacred functions were a regular *cultus*, not the occasional religious duties of a Roman magistrate. [REX SACRORUM.]

The task of determining what were the civil powers possessed by the Roman kings is easier than that of deciding what were the precise modes of their exercise. That they possessed the sole executive power of the state, without any of the limitations with which the magistrates of the Republic were hampered, appears in the traditional accounts of the kingship, and in the more general notices of ancient writers. That the Roman kings possessed *πᾶσα ἀρχή* (Plut. *Tib. Gracch.* 15), and exercised the imperium at their own discretion (Tac. *Ann.* iii. 26), follows naturally from the fact that we can in no way imagine them bound by the definite restraints which shackled the Roman consul or praetor in the exercise of his imperium. These restraints were the limitation of office by time, and the collegiate principle which carried with it the right of intercession. The king held office for life; he had no colleague, and could therefore be trammelled by no veto. Again, he was freed from the necessity of allowing the appeal, and from the necessity of delegating his power to other officials or appointing special standing offices for special purposes. As the dictatorship could suspend for a time the free action of offices at Rome, so the monarchy, which was a standing dictatorship, was not bound to permit such offices to exist. The regal imperium being thus unshackled, there was no room for the distinction, recognised in republican times, between its exercise *domi* and *militiae*; and the fact that the full power exercised over the lives and persons of the citizens, which the Roman magistrate possessed until a late period of the Republic without the walls, was possessed by the king within them, was the most characteristic aspect of the king's position in the state. But, legally free from restraint as the king's power undoubtedly was, it could not have been free from the limitations imposed by custom and constitutional usage. The acts of one king must have bound the acts of his successor, and the assertion of Tacitus that Servius Tullius was the author of laws "meant to bind even the kings themselves" (*Ann.* iii. 26), may be taken in its least sense to mean that it was hardly possible for a king to overstep the constitutional usages of his predecessor. Such usages are said to have been those embodied in the *leges regiae* collected by Papirius (Dig. 1, 2, 2), the earliest customary public law of Rome. Amongst such constitutional obligations was that of consulting the senate in any important matter. The formula of the Fetiales, which is said to have dated from their institution, either by Tullus Hostilius (Cic. *de Rep.* ii. 17) or by Ancus Martius (Liv. i. 32), contains the clause, "but on these matters we will consult the elders at home, how we may obtain our rights" (Livy, *l. c.*); and, as the king was expected to consult the senate in matters affecting the international relations of the state, so no doubt in the most important of these—in declarations of war—it was the custom that the people should be consulted (Dionys. ii. 14). But there were other manifestations of his power as general over which the people would have no control. Such was the disposal of the booty taken in war and of the conquered lands (Dionys. ii. 28 and 62; Cic. *de Rep.* ii. 9, 14), a right which belonged subsequently to the Roman imperator in the field, limited only by the constitutional necessity of consulting his [illegible]*nsilium*, and of subsequent ratification by the senate; the first of which may also have been requisite in the regal period. Such also was the right of making treaties with conquered states (*foedus*), which would have been a part of his administrative duties in the field, over which the community could have no control. Not only was the senate consulted as a body on matters of state, but the special *consilia*, we are told, which the king chose to advise him in special matters, as in the exercise of his jurisdiction, were taken from this body (Dionys. ii. 14); again, we are told that regular delegates were appointed by the king for the exercise of special functions, and that some of the names of offices we meet with in republican or imperial times go back to the regal period. Of these the *praefectus urbis* was the most important; he was an *alter ego* left behind by the king for the control of the capital, when himself absent on foreign service; he is defined by Tacitus as one "qui jus redderet ac subitis mederetur" (*Ann.* vi. 11; Liv. i. 59; Dionys. ii. 12), and must have had delegated to him the whole of the executive power of the king, except perhaps the right of questioning the people. This office was, from its nature, merely occasional; but there were others to which portions of the king's power were more regularly delegated. The collective imperium of the king may be described by its three sides—of command in war, jurisdiction, and the *jus rogandi*. That assessors or delegates were chosen for the first two there is reason to believe; but that the last power was or could be delegated is improbable, although both Livy and Dionysius represent the *tribunus celerum* as summoning the assembly (Liv. i. 59; Dionys. iv. 71). For military command the king possessed delegates such as the *tribuni celerum* (Liv. i. 59). In the matter of jurisdiction there are abundant statements to the effect that such power was delegated, but whether to standing or to specially appointed officials is uncertain. We are told that a distinction was made between cases brought before the king, the more important being tried by himself in person, the less important transmitted to judges chosen from the senate (Dionys. ii. 12); and again of Servius Tullius, that, while public suits were tried by him, private suits were entrusted to special judges, the king giving the formula (*νόμους—ὅρους καὶ κανόνας*, Dionys. iv. 25) under which the case was to be tried. In the only detailed instance we have of a public suit, that of Horatius for *perduellio* (Liv. i. 26), delegates were appointed in the shape of *duumviri perduellionis*, the king giving the formula within which the case is to be decided. The duumviri mentioned in this passage are probably to be identified with the *quaestores* ("examiners" or "inquirers"), the institution of whom is ascribed to the regal period and especially to the reign of Tullus Hostilius (Tac. *Ann.* xi. 22; Dig. 1, 13, "ita Tullo Hostilio rege quaestores fuisse certum est"), and who are said originally to have performed the duties afterwards exercised by the *triumviri capitales* (Varro, *L. L.* v. 11). That it became the duty of the king in the more important cases—those especially involving the *caput* of a Roman citizen—to employ a consilium of some sort is stated in the charge brought by Livy against Tarquinius Superbus (Liv. i. 49, "cognitiones capitalium rerum sine consiliis per se solus exercebat"); but whether such a consilium is to be identified with the judices, such as the duumviri, to whom the king relegated a case, or whether they were a board summoned to advise him when he exercised his own personal jurisdiction, cannot be determined. We are told further that all civil jurisdiction was performed in the king's courts (*judiciis regiis*, Cic. *de Rep.* v. 2, 3), and that these were generally relegated to judices along with a formula such as that given in criminal jurisdiction we may well believe (Dionys. iv. 25). From the trial of Horatius given by Livy (i. 26) two further facts appear which have been noticed already, and are important as showing both the limits and the powers the Roman jurists assigned to the king's jurisdiction, both of which are amply borne out by such revivals of the kingly power as meet us in later Roman history. One is the fact that the king has no power to pardon; pardon resides with the people, the ultimate sovereign. The other is the fact that, though the provocatio existed in the regal period (Livy, *l. c.*; Id. viii. 33;—Cic. *pro Mil.* 3, 7; *de Rep.* ii. 31; Festus, s. v. *sororium tigillum*, p. 297), yet the citizens have no standing right of appeal against the king like that secured by the Lex Valeria. The king Tullus Hostilius *allows* the appeal (Liv. i. 26, "Si a duumviris provocavit provocatione certato;" Id. § 8, "auctore Tullo 'provoco' inquit"); and the fact that the appeal might not have been so allowed, and was a matter not of law but of constitutional usage, is shown by the similar freedom of the early dictatorship from the necessity of allowing the appeal (Liv. ii. 18, iii. 55; Dionys. v. 75. In Liv. viii. 33, where the dictator is appealed against, the instance of Horatius is taken to show that the king had allowed, and therefore the dictator should allow, the appeal). The limitations of the king's power came here, as elsewhere, not from the force of law, but from the necessity of observing formalities once established. The existence of the senate and the custom of the provocatio formed the two permanent checks on the capricious exercise of his power. His rights, too, were everywhere balanced by duties which precedent had established, and which are especially apparent in matters of religion, of which we know most from the survival of these duties in the person of the REX SACRORUM (see that article). Although in the civil organisation of republican Rome a continuity is traceable with that of the monarchy (and indeed, if it were not, we could not hope in any degree to reconstruct the latter), yet it is none the less true that the abolition of the monarchy was an act of revolution not justified by the theory of the constitution. The justification is usually found by Roman writers in the character of the last king, who had broken through the constitutional usages of the monarchy (Liv. i. 49, 4), and above all had never challenged the allegiance of the people (Cic. *de Rep.* ii. 24, 44). That there was some fearful abuse of the kingly power by one of its representatives is shown not merely by the fact of the revolution, but by the associations which immediately gathered round the words *rex* and *regnum*, and remained connected with them to the close of the Republic (Cic. *de Rep.* ii. 30), these names becoming still more hateful as contact with the outer world made the Romans realise in single rule only the evils of Oriental despotism (cf. Liv. ii. 8; Plut. *Poplic.* 12; Dionys. v. 19). The mere charge of *regnum adfectatum* often proved the ruin of eminent men in Rome, such as Sp. Maelius and Tib. Gracchus (Cic. *ib.* 27), and lastly of the dictator Caesar (Cic. *ad Fam.* xi. 27, 8: cf. *ad Qu. Fr.* i. 2, 16; *ad Att.* viii. 11, 3).

(Mommsen, *Staatsrecht*, ii. pp. 1–17; Id. *Hist. of Rome*, bk. i. ch. iv. pp. 66–70; Walter, *Gesch. d. röm. Rechts*, § 17, 2nd edit.; Becker, *Handbuch der röm. Alterthümer;* A. Schwegler, *Römische Geschichte*, vol. i. pp. 1–127; Sir G. C. Lewis, *op. cit.* vol. i. ch. iii.; and Seeley, *Livy*, bk. i. Introd.) [A. H. G.]

REX NEMORENSIS, the priest of Diana in the grove by the lake of Nemi, near Aricia. Tradition speaks of Virbius, an ancient king of Aricia (in legend identified with Hippolytus), as founder of this priesthood (Verg. *Aen.* vii. 761; Serv. *ad loc.*; cf. Ov. *Met.* xv. 497, *Fast.* vi. 756; Pausan. ii. 27). The peculiarity of the office lay in the fact that it was gained by killing the holder of it: the aspirant must be a fugitive; according to Pausanias, a runaway slave: he must pluck the golden bough from a tree (the oak?) in this grove (Serv. *ad Aen.* vi. 136), and then fight with the priest, whom Strabo (v. p. 239) describes as going about ever on guard with a drawn sword. If he wins in this duel, he takes the office and title of the slain: if he falls, the priesthood is unchanged, till a stronger assailant comes (cf. Suet. *Cal.* 35). There were probably vestal attendants on Diana (for she is spoken of as "Vesta," Orell. *Inscr.* 1453), and the grove was sought by women wishing to bear children, who hung garlands and votive tablets (Ov. *Fast.* iii. 266; Stat. *Silv.* iii. 1, 56): at an annual purification, perhaps a harvest feast, there was a procession with blazing torches. Over all this the Rex presided, perhaps, as some think, in early times with human sacrifices akin to those of the Tauric Artemis; perhaps himself, in the last combat, the only victim. Mr. Frazer, in his *Golden Bough*, has with great learning and ingenuity offered an explanation of the myth. He conceives this Rex not to have been (like the REX SACRORUM) the survival, in priesthood alone, of a monarchy both temporal and priestly; but to have been originally regarded as divine, the incarnate spirit of the wood, whose office and fertilising power passed by a violent death to his successor, because his death by natural decay would have implied the wasting of the vegetable world. The golden bough is taken to be the mistletoe (cf. Plin. *H. N.* xvi. § 249), therefore pointing to this grove as the seat of a primitive Aryan worship, like that which the Druids of Gaul preserved. Whether the fugitive slave represents the flight of Orestes, or some older symbolism like that of the scapegoat, is a further question, as also whether the conjunction of Diana and Virbius is to be compared with that of Isis and Osiris. For full discussion, see Frazer, *The Golden Bough* (1890): his arguments, by the nature of the case, must fall short of positive demonstration, but at least afford the most probable explanation which has yet been presented. [G. E. M.]

REX SACRO'RUM. In this form, or as *rex sacrûm*, the title is always found in inscriptions (*C. I. L.* vi. 2122, &c.), and so in Plut. *Q. R.* 63, *τῷ καλουμένῳ ῥῆγι σακρώρουμ*, and in Dionys. iv. 74, *ἱερῶν βασιλεύς*. The title *rex sacrificulus* is used in some post-Augustan writers (Liv. ii. 2, xli. 9; Gell. x. 15, &c.); *rex sacrificus* (Liv. xl. 42); *rex sacrificiorum* (Liv. ix. 34). Cicero speaks of him simply as *rex* (Mommsen, *Staatsrecht*, ii.^{3} 15).

When the monarchy came to an end, the chief sacred functions of the king, and all that was particularly important on the religious side, passed to the Pontifex Maximus [PONTIFEX], but a certain part fell to the Rex Sacrorum, a priest who preserved the name of king much as the *βασιλεὺς* did at Athens. The Romans seem to have wished to preserve a continuity in religious matters, and not to deprive the gods of the service of the king by their change of constitution, while they carefully assigned him nothing that could give him political weight, and precluded him from holding any other office in the state. It is probable that the ceremonies described below, which fell specially to him, were regarded as marking particularly the royal priesthood. The office was not peculiar to Rome; there was a Rex Sacrorum at Tusculum, Lanuvium, Velitrae, Bovillae, and perhaps at other places (Orell. 2279; *C. I. L.* vi. 2125, x. 8417; Wilmanns, 1773).

The Rex Sacrorum belonged to the collegium of which the Pontifex Maximus was the head, and the pontifices and flamines were also members [PONTIFEX]. (Cf. Cic. *de Dom.* 52, 135; *de harusp. Resp.* 6, 12; Marquardt, *Staatsverw.* iii.^{2} 243.) In the *ordo sacerdotum* he stands first, above the three chief flamines, and at the priestly banquet he sat in the first place, and next to him the flamen dialis (Gell. x. 15, cf. Fest. p. 185; Serv. *ad Aen.* ii. 2; Gell. xv. 27). It is probable that this was the place originally reserved for the king; and perhaps also the appearance of his wife as assistant in the sacrifices which fell to him, with the title *regina sacrorum* (Fest. p. 113; Macrob. i. 15, 19; *C. I. L.* vi. 2123), was a remnant of the king's priestly office under the monarchy: the wives of flamines, however, also took part in sacrifices. His traditional royalty appears, too, in the fact that the pontifices received the februa for the purification from the Rex and the flamen dialis, and perhaps also, as Mommsen thinks, in his official residence [see REGIA]. In spite, however, of these shadows of ancient supremacy, he ranked below the Pontifex Maximus in real dignity as well as in political importance (Liv. ii. 2) [compare SACERDOS], and this is marked by the mode of his appointment; and indeed, though, as was said above, standing first in the *ordo sacerdotum*, the Rex was practically only a subordinate member of the College of Pontifices, nominated by them, appointed by the Pontifex Maximus, and inaugurated by the augurs. It appears that when a vacancy occurred, out of certain persons nominated by the College of Pontifices, the Pontifex Maximus selected the Rex Sacrorum, who was then inaugurated by the augurs at the Comitia Calata (Liv. xl. 42; Gell. xv. 27; Marquardt, *Staatsverw.* iii. 322, note). His office was for life (Gaius, i. 112; Serv. *ad Aen.* viii. 646), and he was always a patrician (Cic. *de Dom.* 14, 38; Liv. vi. 41).

His duties, so far as our information goes, were as follows: on the calends of each month, the state of the moon having been announced to him by one of the pontifices, he summoned the people in Comitia Calata to the Curia Calabra on the Capitol, and announced when the nones of that month would fall, and offered sacrifice there to Janus, while his wife offered in the Regia (Macrob. i. 15); on the nones the people were again gathered in the Arx to learn from his declaration (*edictum*) what festival days fell in that month, and he offered the *sacra nonalia in arce* (Varro, *L. L.* vi. 28); on Jan. 9 [AGONIA] he offered a ram to Janus in the Regia (Fest. p. 10; Varro, *L. L.* vi. 12; Ov. *Fast.* i. 317). For other ceremonies specially attributed to the Rex Sacrorum on Feb. 24, March 24, and May 24, see REGIFUGIUM.

It was, as has been said, carefully provided, from jealousy of the royal power, that the Rex Sacrorum should be cut off from political power and incapable of holding any other office (Liv. xl. 42; Plut. *Q. R.* 63; Dionys. iv. 74). This disability (which did not exist in other priestly offices) was not always maintained under the Empire, for we find Cn. Pinarius Severus Rex Sacrorum and Consul under Trajan (*C. I. L.* xiv. 3604, 4246); but still the office being, as will be seen from the above account, purely ceremonial, and regularly divorced from power and influence in the state, it became less and less coveted (cf. Liv. xxviii. 6; xl. 42), though it remained till a late period, at any rate till the middle of the 3rd century A.D. (Trebell. Poll. *Valer. duo*, 6, 6). (See further in Marquardt, *Staatsverw.* iii.^{2} 321–324; Mommsen, *Staatsrecht*, ii.^{3} 13–15. A general survey of the changes in the relative importance of priestly offices will be found under SACERDOS.) [L. S.] [G. E. M.]

RHETO'RICE GRAPHE (*ῥητορικὴ γραφή*). The interpretations of this expression offered by the grammarians differ widely. The *Lex. Rhet. Cantabr.* p. 667, 14, has *τὰς γρώμας* (*γραφάς*, Sauppe, *Oratt. Att.* ii. p. 436) *ἃς εἰσῆγον εἰς τὸ δικαστήριον μετὰ ψηφίσματος· καὶ Ὑπερίδης ἐν τῷ κατὰ Αὐτοκλέους προδοσίας, ῥητορικῆς ἐκ δήμου. ἔστι γὰρ καὶ ἐκ βουλῆς· οἷον εἰ τὰ αὐτὰ ἔδοξε τῷ δήμῳ καὶ τῇ βουλῇ.* Meier reads: (*διὰ ταύτας*) *τὰς γνώμας, ἃς* (*εἶπεν ἐν τῷ δήμῳ, ῥητορικὴν γραφὴν*) *εἰσῆγον εἰς τὸ δικαστήριον* μετὰ ψηφίσματος (τῆς βουλῆς καὶ τοῦ δήμου). Καὶ Ὑπερίδης ἐν τῷ κατὰ Αὐτοκλέους προδοσίας (μέμνηται γραφῆς) ῥητορικῆς ἐκ δήμου, etc. Harpocration, *s. v.*, gives two interpretations of the term: either it is a γραφὴ κατὰ ῥήτορος γράψαντός τι ἢ εἰπόντος ἢ πράξαντος παράνομον, and he adds by way of explanation ὥσπερ λέγεται καὶ πρυτανικὴ ἡ κατὰ πρυτάνεως καὶ ἐπιστατικὴ ἡ κατ' ἐπιστάτου (cf. Suidas, *s. v.*, and Bekker, *Anecd.* p. 299, 21); or some γραφαὶ were so called ὅτι κατὰ διαφόρους νόμους αἱ κατὰ (this κατὰ is not in the MSS., but was inserted by Petitus, *Legg. Attic.* iii. 2, p. 347) τῶν ῥητόρων γραφαὶ εἰσάγονται (cf. Suidas, *s. v.*). Suidas, *s. v.*, offers a third explanation: ἣν ἠγωνίζοντο οἱ ῥήτορες· οὐ γὰρ πάσας ἠγωνίζοντο τὰς δίκας τῶν παλαιῶν οἱ ῥήτορες, ἀλλ' ἐνίας, and the first gloss of ῥήτωρ seems also to bear on the term in question: καὶ πολλοῖς ψηφίσμασι παραγέγραπται ῥητορικὴ ἐκ βουλῆς, εἰ εἰσφέρει τις γνώμην ἀλλὰ μὴ αὐτὸς ἰδίαν γνώμην εἰσηγούμενος (Bernhardy; τύχην ἡγούμενος, MSS.). Modern scholars differ as widely: in Meier's opinion the ῥητορικὴ γραφὴ is the same as the παρανόμων γραφὴ or the δοκιμασίας ἐπαγγελία (cf. Wachsmuth, *Hellen. Alterth.* ii. pt. 1, p. 294 n.); Sauppe supposes it to be the same as the προβολή (this is not likely to be correct on account of ἔστι γὰρ καὶ ἐκ βουλῆς, *Lex. Rhet. Cantabr.*, l. c.); and Lipsius (*Att. Process*, p. 248, n. 123: cf. p. 325, n. 358) identifies it with the εἰσαγγελία: all however agreeing in interpreting the term as meaning a proceeding *against* an orator, as in Harpocration's first definition. Yet it may seem strange that, if ῥητορικὴ γραφὴ is merely another name for an εἰσαγγελία against a ῥήτωρ, the term should not occur in any of the speeches delivered in such a trial, and that the expressions πρυτανικὴ and ἐπιστατική, which Harpocration quotes by way of explanation, are not found anywhere else. When Socrates as ἐπιστάτης (Xenoph. *Mem.* i. 1, 18) refused to put the motion to the vote, his opponents threatened ἐνδεικνύναι καὶ ἀπάγειν (Plat. *Apol.* p. 32 B). The prytaneis were frequently charged with venality, *e.g.* Andocides is said to have bribed them, [Lys.] *c. Andoc.* § 29; cf. Aristoph. *Pax*, 905, and Schol. *Thesmoph.* 936, etc.; but nowhere is a γραφὴ πρυτανικὴ mentioned. A different meaning of ῥητορικὴ γραφὴ may be deduced from Harpocration's second explanation (without Petitus' κατὰ before τῶν ῥητόρων) taken in connexion with the corrupt gloss (1) of Suidas, *s. v.* ῥήτωρ, and the *Lex. Rhet. Cantabr.*, l. c., viz. that by it a γραφὴ (in its wider sense "public trial;" cf. [Dem.] *c. Stephan.* ii. p. 1131, § 9; [Xenoph.] *de Rep. Ath.* 3, 2) is meant which was brought before a court (for this use of εἰσάγειν cf. Dem. *c. Mid.* p. 527, § 39) by ῥήτορες, not in their private capacity, but μετὰ ψηφίσματος, and on that account κατὰ διαφόρους νόμους. The ῥήτορες were not a distinct class, elected and invested with a kind of public authority, as Petitus supposed; they were "public men" who made it their business to lead the deliberations of the people, οἱ δήμῳ συμβουλεύοντες καὶ ἐν τῷ δήμῳ ἀγορεύοντες (Suidas, *s. v.*; cf. Dem. *c. Mid.* p. 575, § 189, and Schol.), and as such they were distinguished from the ἰδιῶται, *e.g.* in the νόμος εἰσαγγελτικός, and *C. I. A.* i. No. 31, l. 21, etc. Sometimes, however, they were invested with a kind of official authority, viz. when they were elected by the people to represent them in court in a prosecution of importance, wherein the state was materially interested [SYNEGORI]. Thus when the Areiopagus, by command of the people, instituted an inquiry (ζητεῖν, ζήτησιν ποιεῖσθαι) and reported (ἀποφαίνειν, ἀπόφασιν ποιεῖσθαι) to the popular assembly, the people elected, if they thought fit, men to bring the case before a court (Dinarch. *c. Dem.* § 51; Hyper. *c. Dem.* col. 37); and that such συνήγοροι, or κατήγοροι (as they were officially styled), belonged to the class of ῥήτορες, *i.e.* men skilled in speaking and experienced in the conduct of lawsuits, is natural (Suidas, ῥήτωρ· συνήγορος, δικολόγος καὶ ὁ τὴν ἰδίαν ἀποφαίνων γνώμην). Pericles was chosen for this office (Plut. *Per.* 10), Alcibiades ([Andoc.] *c. Alcib.* § 16; cf. Dem. *c. Mid.* p. 561, § 145. λέγειν ἐδόκει πάντων, ὥς φασιν, εἶναι δεινότατος), Demosthenes (Plut. *Demosth.* 10), in the Harpalian cause Hypereides, Pytheas, Menesaechmus (Ps.-Plut. *Vitt. X. Oratt.* p. 846 C), etc. Now the question arises, were such official prosecutors liable to a fine in case they did not obtain one-fifth of the votes at the trial, as was the rule in all criminal suits (except in an εἰσαγγελία κακώσεως, and for a time in an εἰσαγγελία for political offences; cf. also Lys. *pro Sacr. Olea*, § 37)? and this case did occur: cf. Dinarch. *c. Dem.* § 54, ὡς ἄρα πολλοὺς ἡ βουλὴ ἀποπέφαγκεν ἀδικεῖν τὸν δῆμον οἳ ἀποπεφεύγασιν εἰσελθόντες εἰς τὸ δικαστήριον καὶ ἡ βουλὴ ἀπ' ἐνίων τὸ πέμπτον μέρος οὐ μετείληφε τῶν ψήφων. Demosthenes, to discredit the ἀποφάσεις of the Areiopagus, on which the popular assembly relied in ordering the prosecution, had emphasised this point. Since the complainant in a προβολή, who had merely obtained the *praejudicium* of the people, was not liable if he did not obtain one-fifth of the votes at the trial (*Att. Process*, ed. Lipsius, p. 344), ῥήτορες, when chosen to act as public prosecutors, are still less likely to have been liable to a fine (*l. c.* p. 952), and to this Harpocration may be supposed to point: κατὰ διαφόρους νόμους αἱ τῶν ῥητόρων γραφαὶ εἰσάγονται. [C. R. K.] [H. H.]

RHETRA (ῥήτρα). This word is variously explained by both ancient and modern writers. Hesychius, *s. v.*, defines it συνθῆκαι διὰ λόγων: cf. Photius, *s. v.* συνθῆκαι, λόγοι, ὁμολογίαι. Gilbert (*Stud. z. altspart. Gesch.* p. 140) considers this to have been the original meaning (*e.g.* the covenant of the nature of a wager in *Od.* xiv. 393; the treaty between Eleians and Heraeans, Röhl, *Inscr. Gr. Ant.* No. 110 = Hicks, *Manual*, No. 8; cf. *I. G. A.* No. 118), from which that of "law" was deduced, whilst Wilamowitz (*Homer. Untersuch.* p. 280) looks upon "covenant" as its only meaning. Yet it would seem that ῥήτρα meant "law" (*Etym. M.* p. 703, ῥ. γὰρ κατὰ Δωριεῖς ὁ νόμος: Photius, *s. v.* Ταραντῖνοι δὲ νόμον καὶ οἷον ψηφίσματα) in *I. G. A.* No. 112 = Cauer,^{2} No. 253, regulating the prosecution for witchcraft, and "decree" in No. 113, conferring citizenship on Deucalion; in Xen. *Anab.* vi. 6, 28, it means a "revolution" of the army (cf. § 2, δημόσιον ἔδοξεν εἶναι); and king Agis' proposal for cancelling all debts and making a new distribution of lands is called ῥήτρα by Plut. *Agis*, 8, 9, as well as that of Epitadeus for changing the law of inheritance (*l. c.* 5).

In *Lyc.* 13 Plutarch identifies *ῥῆτραι* with *χρησμοί*: *τὰ μὲν οὖν τοιαῦτα νομοθετήματα ῥήτρας ὠνόμασεν, ὡς παρὰ τοῦ θεοῦ νομιζόμενα* (*κομιζόμενα*? cf. 6, *ὥστε μαντείαν ἐκ Δελφῶν κομίσαι περὶ αὐτῆς, ἣν ῥήτραν καλοῦσιν*) *καὶ χρησμοὺς ὄντα*: cf. Photius, *s. v.*, *παρὰ Λακεδαιμονίοις ῥήτρα Λυκούργου νόμος, ὡς ἐκ χρησμῶν τεθέμενος*. In this Plutarch is followed by Göttling (*Verh. d. Leipz. Ges. d. Wissensch.* i. p. 136 ff.), Oncken (*Staatsl. d. Arist.* ii. p. 332 f.), etc.; since, however, oracles were usually in verse (Plut. *de Pyth. Orac.* 19 specially states that these were given *καταλογάδην*), Göttling restores the verse form, whilst Bergk (*Poet. Lyr.* ii.^{4} p. 10 n.) looks upon them not as the oracles themselves, but as the prose explanations of the oracles given by the Delphian priesthood. *Ῥήτρα* (from root *ἐρ*, *Fερ*, Curtius, *Gk. Etym.* i. p. 428, transl.) may easily bear all these meanings; in NOMOS instances are given of *νόμος* being explained by *συνθήκη*, as something agreed on by a community, and it is shown how of old a divine origin was claimed for law as *εὕρημα καὶ δῶρον θεῶν*: see also Grote (*Hist. of Gr.* ii. p. 346 n.).

Plutarch (*Lyc.*) gives four *ῥῆτραι*, the first in c. 6, the other three in c. 13 (but see *Ages.* 26, *ἐν ταῖς καλουμέναις τρισὶ ῥήτραις*, and *de Esu Carn.* p. 997 C, *ἐν ταῖς τρισὶ ῥήτραις*). The first runs: *Διὸς Ἑλλανίου* (some MSS. *Συλλανίου*: for the numerous alterations of the name, see Thumser, *Staatsalterth.* i. p. 166, n. 4) *καὶ Ἀθηνᾶς Ἑλλανίας ἱερὸν ἱδρυσάμενον, φυλὰς φυλάξαντα καὶ ὠβὰς ὠβάξαντα, τριάκοντα γερουσίαν σὺν ἀρχαγέταις καταστήσαντα, ὥρας ἐξ ὥρας* (*ὥραις ἐξ ὡρᾶν*, Wilamowitz, *Isyllos v. Epid.* p. 10, since Isyllus has *ὥραις ἐξ ὡρᾶν* in B, l. 16) *ἀπελλάζειν μεταξὺ Βαβύκας τε καὶ Κνακιῶνος, οὕτως εἰσφέρειν τε καὶ ἀφίστασθαι· δάμῳ δὲ τὰν κυρίαν ἦμεν* (Sintenis, *δάμῳ δ' ἀγορὰν εἶμεν*, Coray, etc. MSS. *γαμωδαν γοριανημην*) *καὶ κράτος*. These directions, which Lycurgus is said to have received from Delphi, are fully explained by Plutarch, who seems to have largely drawn on Aristotle's *Λακεδαιμονίων πολιτεία*. They are: the building of a temple to Zeus Hellanios and Athena Hellania; the division of the people into *φυλαί* (*i.e.* the local *φ.*, Pausan. iii. 16, 9) and *ὠβαί* (O. Müller connects *τριάκοντα* with *ὠβάς*, but it would be strange if the number of the *ὠβαί* were given and that of the *φυλαί* omitted); the establishment of the *γερουσία*, consisting of 28 *γέροντες* (cf. c. 5, *sub fin.*) with the two kings (Ulrichs, *Rhein. Mus.* 1848, p. 210, adds *πρεσβυγενέας* after *τριάκοντα* from Plut. *an seni*, etc. 10: *διὸ τὴν μὲν ἐν Λακεδαίμονι παραζευχθεῖσαν ἀριστοκρατίαν τοῖς βασιλεῦσιν ὁ Πύθιος πρεσβυγενέας, ὁ δὲ Λυκοῦργος ἄντικρυς γέροντας ὠνόμασεν*. Göttling, *l. c.* p. 342, and Curtius, *Gr. Gesch.* i.^{6} p. 654, n. 31, consider *τριάκοντα* a late addition); the calling together of the people at the time of the full moon (Schol. Thuc. i. 67, *τὸν εἰωθότα λέγει ξύλλογον ὅτι ἐν πανσελήνῳ ἐγίγνετο ἀεί*) between Babyca and Cnacion (Aristotle and the other commentators do not agree as to the locality meant; but see ECCLETI). *Εἰσφέρειν* evidently refers to the function of the gerousia "to bring forward proposals," but the meaning of *ἀφίστασθαι* is not so clear; Göttling (*l. c.* p. 339) and Ulrichs (*l. c.* p. 231) refer *ἀφίστασθαι* too to the gerousia, and translate it "withdraw a proposal;" Grote (*l. c.* p. 346 n.) takes it to mean "to put the question for decision;" Meyer (*Rhein. Mus.* 1887, p. 84 n.), following one part of Plutarch's explanation (*διαλύειν τὸν δῆμον*), translates it "to dissolve," whilst Gilbert (*l. c.* 135 f.), accepting the other part (*μὴ κυροῦν*), explains it "to refuse," so that it refers to the function of the *ἀπέλλα*, viz. to their power of rejecting the proposals of the gerousia.

Later on the kings Polydorus and Theopompus added, according to Plutarch, *εἰ δὲ σκολιὰν ὁ δᾶμος ἕλοιτο, τοὺς πρεσβυγενέας καὶ ἀρχαγέτας ἀποστατῆρας εἶμεν*, and managed to represent this clause as likewise ordained by the god. To prove this, Plutarch quotes three distichs, which he ascribes vaguely to Tyrtaeus (*ὥς που Τυρταῖος ἐπιμέμνηται*); Diodorus, who follows Ephorus (vii. 14, 5), quotes the second and third of them with slight verbal discrepancies (he has *εὐθείην ῥήτραις ἀ.* instead of *εὐθείαις*), but does not assign them to Tyrtaeus; besides, his first is different from the one given by Plutarch, and he adds two more. There is, therefore, very slight reason for considering these three distichs quoted by Plutarch as a fragment from Tyrtaeus' *Εὐνομία*, and dating so far back the notion of the Delphian origin of the Spartan constitution (cf. Herod. i. 65).

Triebner (*Forschungen z. spart. Verfassungsgesch.*) declares this rhetra, as well as Aristotle's commentary on it, to be a late forgery; but that it was generally known as a genuine document of Lycurgus in the beginning of the third century is evident from the allusion to it in Isyllus of Epidaurus (*l. c.* p. 23 E, l. 14 f.): when Philip marched against Sparta, Asclepius promised to help the Lacedaemonians,

> *οὕνεκα τοὺς Φοίβου χρησμοὺς σώζοντι δικαίως*
> *οὓς μαντευσάμενος παρέταξε πόληϊ Λυκοῦργος.*

Grote (*l. c.* p. 355 n.) calls this rhetra "the primitive constitutional rhetra of Sparta," which Lycurgus brought with him from Delphi. Gilbert (*l. c.* p. 140 ff.) sees in it the covenant made by the three communities—the Agiadae, Eurypontidae, and Aegidae—on uniting into one community (*συνοικισμός*), viz. Sparta. Wilamowitz (*Homer. Unters.* p. 280 f.) considers it to have been the covenant between the king (he takes "the king," not Lycurgus, as Plutarch does, to be the subject of *ἱδρυσάμενον*, etc.) and the *δᾶμος*, *i.e.* the aristocracy. Busson (*Lykurgos u. d. grosse Rh.* p. 21) connects it with a constitutional change effected by Lycurgus, through which the state was made to include all those of Dorian blood, whether of noble birth or not. Meyer's view (*l. c.* p. 85 f.) seems the most probable, viz. that this rhetra was not the basis on which the Spartan constitution has been built up, but was simply the main features of that constitution reduced to a formula about half a century before the time of Aristotle.

This explanation applies also to the other *ῥῆτραι*, which were merely general formulae, and by no means explicit laws. The 2nd rhetra runs, *μὴ χρῆσθαι νόμοις ἐγγράφοις*, *i.e.* the Lacedaemonians had no written code of laws, never going beyond the stage of customary law [NOMOS]; the 3rd, *ὅπως οἰκία πᾶσα τὴν μὲν ὀροφὴν ἀπὸ πελέκεως εἰργασμένην ἔχῃ, τὰς δὲ* *θύρας ἀπὸ πρίονος μόνου καὶ μηδενὸς τῶν ἄλλων ἐργαλείων*: and the 4th forbade *ἐπὶ τοὺς αὐτοὺς πολεμίους στρατεύειν, ἵνα μὴ πολλάκις ἀμύνεσθαι συνεθιζόμενοι πολεμικοὶ γένωνται.* [H. H.]

RHOMBUS. [Turbo.]

RHOMPHAEA. [Gladius.]

RHYTHMICA. The sources from which our knowledge of Greek rhythm is to be drawn are the following: the remains of Greek poetry and music, and the extant Greek and Latin writings on rhythm and metre. None of these, however, are altogether trustworthy or complete. The most important is the first mentioned, and, in regard to the simpler kinds of metres, the form of a metrical composition is generally sufficient for the determination of its approximate rhythmical value; but with lyrical poetry this is not usually the case, for the same combination of long and short syllables may be capable of different rhythms, and, even where the feet into which a metrical composition falls are sufficiently obvious, there is still a further question, not to be determined by the metrical form alone, as to the larger groups ("sentences," "periods," &c.) formed by combination of the feet.

The existing remains of ancient music consist of three "hymns," none of them probably earlier than the middle of the second century A.D., and a few fragments of instrumental music (apparently of the nature of exercises) preserved by an unknown writer of uncertain date [see Musica]. These, though they furnish some important data, are yet too fragmentary and too late to throw much light on the rhythms of the classical period of Greek music. Of the writers on *rhythm* whose works have been at all preserved, the first in order of time and importance is Aristoxenus (fourth century B.C.). Though he lived more than a century later than the time at which Greek poetry and music attained their highest development, he was still thoroughly acquainted with the music of that time; but, unfortunately, his rhythmical works are preserved only in a fragmentary condition. The writings of later theorists are chiefly valuable in so far as they are based on Aristoxenus. The writers on *metre* (i.e. that species of rhythm which is exhibited in the measurement of syllables) are all of late date, and are for that reason to some extent untrustworthy. They are not acquainted with the music of the classical period, and their purely metrical point of view is inapplicable to the less obvious forms of metre in which the long syllable is not invariably equal to two short syllables, and in which feet of apparently different values (*e.g.* trochees and dactyls) are mixed together. The most important of the extant treatises on metre is the *ἐγχειρίδιον* of Hephaestion (second century A.D.).

Rhythm in its strict sense consists of a continuous succession of short equal intervals of time, marked off from one another as separate groups by the alternation of an accentuated and an unaccentuated element.* These intervals may be marked in different ways, *e.g.* by musical sounds, or by syllables, or, as in dancing, by the motions of the body (appealing to the eye rather than the ear). In order that a sense of rhythm may be produced it is not enough for the sounds to occur simply at equal intervals: thus there is, strictly speaking, no rhythm in the ticking of a clock, for each tick being equal in intensity the ear by itself does not necessarily divide the sounds into groups or rhythmical divisions.

The groups into which a succession of sounds fall are clearly recognised only when a sound more intense than its neighbours occurs at equal intervals of time. This accentuated part of each group is called by Aristoxenus *βάσις*, by the earliest writers after Aristoxenus *θέσις*. The unaccentuated part is called *ἄρσις*. Other names are for the "thesis," *ὁ κάτω χρόνος* or *τὸ κάτω*; for the "arsis," *ὁ ἄνω χρόνος* or *τὸ ἄνω* (so in Plato, *Rep.* 3, p. 400, and in Aristoxenus, p. 288, ed. Mor.). All these terms originated in the fact that the accentuated portion of the group was marked by setting down the foot, the unaccentuated by lifting it up. Confusion is, however, caused by later writers using the terms "arsis" and "thesis" in different senses. Sometimes they are applied to the raising and lowering of the *voice*, so that "arsis" denotes the accentuated, and thesis the "unaccentuated" beat. This, which is the exact opposite of the original meaning of the terms, is the sense given to them by most modern writers, following the example of Bentley. In Marius Victorinus, p. 2482, the two meanings are given, apparently without any sense of their incongruity, "est enim arsis sublatio *pedis* sine sono, thesis positio *pedis* cum sono: item arsis elatio temporis soni *vocis*, thesis depositio et quaedam contractio syllabarum." Sometimes a wholly different meaning is given to the terms, "arsis" denoting the first element of the foot in order of succession, "thesis" the second; then the "arsis" of the iambic is the short syllable, the "thesis" the long, and *vice versâ* with the trochee (so *e.g.* in Marius Victorinus, p. 2487). In this article the words are used in their original senses.

The Syllable.—Rhythm when applied to language is marked by an alternation of accentuated and unaccentuated syllables. In Greek and Latin there is a further distinction between long and short syllables. The rhythmical groups or "feet" are generally, but not invariably, marked by an alternation of long and short syllables, the "ictus" falling more frequently on the long than on the short syllable. The long syllable in its normal value is equal to two short syllables, but there is evidence that this was not the only value of the long syllable. The anonymous writer *περὶ μουσικῆς*, who has preserved the musical exercises already referred to, states (§ 1, ed. Bellermann) that the long syllable has sometimes the value of three, four, and even five

---

* We are not here concerned with the more general sense of the word (as *e.g.* when we speak of the rhythm of prose), in which it is used of a combination of longer and shorter sounds, which produces on the ear a general impression of proportion and orderly arrangement. It must further be noticed that the word "accent" is ambiguous. It is here applied to the *stress* or *ictus* upon a syllable or sound, which is produced with greater force or intensity than its neighbours. Properly, however, the term denotes *pitch*. The Greek accent is a pitch accent: thus the acute accent marks the syllable on which it is placed as being pronounced on a higher pitch than the other syllables in the word. The "ictus" is in Greek independent of the pitch accent.

short syllables, the symbols of these values being as follows:—

⏗ for the long syllable which = three short syllables.
⏘ „ „ = four „
⏙ „ „ = five „

The short syllable being regarded as the usual unit of time, not further divisible (called by Aristoxenus *χρόνος πρῶτος*, later *σημεῖον*), the long syllable may be either *δίχρονος* (or *δίσημος*), *τρίχρονος* (*τρίσημος*), *τετράχρονος* (*τετράσημος*), or *πεντάχρονος* (*πεντάσημος*). According to Pseudo-Euclid, *εἰσαγωγὴ ἁρμονική*, p. 22, ed. Meibom., it appears that the name *τονή* was applied to the prolongation of the long syllable beyond its usual value (*τονὴ δὲ ἡ ἐπὶ πλείονα χρόνον μονὴ κατὰ μίαν γινομένη προφορὰν τῆς φωνῆς*). The Anonymus (§ 3) also refers to *pauses* (*κενοί*, sc. *χρόνοι*) as constituent elements in rhythm, and enumerates four kinds—viz. the

∧, *κενὸς βραχύς* (or *λεῖμμα*, Arist. Quint. *de Mus.* pp. 40, 41, ed. Meibom. = one short syllable).

$\overline{\wedge}$, *κενὸς μακρός* (or *πρόσθεσις*, *ibid.* = one long syllable).

$\overset{⏗}{\wedge}$, *κενὸς μακρὸς τρίχρονος* = three short syllables.

$\overset{⏘}{\wedge}$, *κενὸς μακρὸς τετράχρονος* = four short syllables.

From the musical notation of the "hymns," already referred to, it appears that the long syllable equal to three short syllables is sometimes noted by a pause ∧ placed after the note on which the long syllable falls.

Aristoxenus (p. 292, ed. Mor.) also speaks of a quantity which is intermediate between the normal long and the normal short, which, if the short syllable be taken as = 1, will be represented by 1½. A foot in which the thesis is to the arsis in the "irrational" proportion of 2 : 1½ is called by Aristoxenus *χορεῖος ἄλογος*, and is probably to be identified with the spondee, which is often found in trochaic and iambic metres in the even and odd places respectively. If this be so, the long syllable in the arsis of trochaic and iambic feet is of abnormal value = 1½ instead of 2. According to Bacchius (*εἰσαγωγὴ τέχνης μουσικῆς*, p. 23, Meibom.) the exact measurement of the *ἄλογος χρόνος* is difficult to determine, but it is shorter than the normal long, and longer than the normal short.

The Foot.—The smallest rhythmical groups marked by alternation of thesis and arsis are called "feet" (*πόδες*, *pedes*). These feet are divided into three genera, according to the relation between the thesis and the arsis. Feet in which thesis : arsis : : 2 : 1, as *e.g.* the trochee, belong to the *γένος διπλάσιον* or *ἰαμβικόν*; those in which thesis : arsis : : 2 : 2, as *e.g.* the dactyl, to the *γένος ἴσον* or *δακτυλικόν*; those in which thesis : arsis : : 3 : 2, to the *γένος ἡμιόλιον* or *παιωνικόν*. The genera are further divided into species according to the relative position of thesis and arsis. Thus the *γένος διπλάσιον* comprises the species of the iambus ⏑–́ in which the arsis precedes the thesis, and the trochee –́⏑ in which the thesis precedes the arsis; the *γένος ἴσον* comprises the anapaest ⏑⏑–́ and the dactyl –́⏑⏑.

The *γένος παιωνικόν*, according to Hephaestion, c. 13, comprises three species—the cretic –⏑–, the bacchiac ⏑––, and the palimbacchiac ––⏑. The latter, however, is said to be unfitted for use in music (*ἀνεπιτήδειόν ἐστι πρὸς μελοποιίαν*, *ibid.*) Moreover, as will be seen, the scholiast on Hephaestion (page 125, ed. Westphal) asserts that the paeonic genus was not subdivided into species. There seems, therefore, to be some confusion and contradiction in the doctrines of the metricians on this subject. As to the relation of thesis to arsis it appears from Marius Victorinus (p. 2483) that the thesis was to the arsis sometimes as 3 : 2, sometimes as 2 : 3, *i.e.* either $\overset{\text{thesis}}{\overline{\smile\smile\smile}} \mid \overset{\text{arsis}}{\overline{\smile\smile}}$ or $\overset{\text{arsis}}{\overline{\smile\smile\smile}} \mid \overset{\text{thesis}}{\overline{\smile\smile}}$. From the analogy of the *paeon epibatus* (see below), and from the fact that the paeon is sometimes combined with the trochaic dipodies, it may be inferred that the foot was sometimes treated as if in compound time (see below), *i.e.* –́⏑ | ⏑́⏑. Bacchius (p. 25, Meibom.) says that the paeon is *σύνθετος ἐκ χορείου* (= trochee –⏑) *καὶ ἡγεμόνος* (= pyrrich ⏑⏑).

Those species of feet which contain an equal number of units of time are classed together, and the union under one class is called *ἐπιπλοκή* (Schol. to Hephaest. p. 136, ed. Westphal, *ἐπιπλοκή ἐστι τοῦ μέτρου τὸ ἀνώτατον γένος ἐξ ἧς τὰ μέτρα γίνεται*). Of these *ἐπιπλοκαί*, according to the same passage, there are at least three, viz.:—

(1) The *ἐπιπλοκὴ τρίσημος δυαδική*, *i.e.* that of the trochee and the iambus in the *γένος διπλάσιον*, called *τρίσημος* because each foot = three units of time, and *δυαδική* because the genus contains two species.

(2) The *ἐπιπλοκὴ τετράσημος δυαδική*, *i.e.* that of the dactyl and the anapaest in the *γένος ἴσον*.

(3) The *ἐπιπλοκὴ ἑξάσημος τετραδική*. This comprises the *ἰωνικὸν ἀπὸ μείζονος* –́–⏑⏑, the *χοριαμβικὸν* –́⏑⏑–, the *ἰωνικὸν ἀπ' ἐλάσσονος* ⏑⏑–́–, and the *ἀντισπαστικὸν* ⏑––⏑. The "antispast" is due to a mistaken interpretation of certain metres, founded on their apparent metrical value. This *ἐπιπλοκή* may be regarded as another form of the *γένος διπλάσιον*, the thesis being to the arsis as 4 : 2 = 2 : 1.

In this classification of the *ἐπιπλοκαὶ* the *γένος παιωνικὸν* is omitted, and this omission is shown not to be accidental by the assertion of the Schol. to Hephaestion (p. 125, ed. W.), *τὸ δὲ παιωνικὸν ἐπιπλοκὴν οὐκ ἔχει*.

The metres which are combined in each genus, as *e.g.* the trochaic and the iambic, are said to be opposed to one another, *ἀντιπαθῆ* (Schol. to Hephaest. p. 155, ed. W.). Those feet which are composed of two or three syllables, *e.g.* –⏑, ⏑–, and –⏑⏑, ⏑⏑–, are said to be *τῆς πρώτης ἀντιπαθείας*: those which are composed of four syllables, *e.g.* ––⏑⏑, ⏑⏑––, *τῆς δευτέρας ἀντιπαθείας* (Schol. to Hephaestion, p. 208, ed. W.).

As to the notation of the metres which fall under these genera, it must be observed that even those species which begin with the arsis are in modern books often noted as if the foot began with the thesis, just as in modern music the "bar" begins with the accentuated note. Thus the iambic dipody is noted ⏑ | –⏑ | –. In such metres the first arsis was by Hermann called the "anacrusis," a name which has been adopted by other modern writers.

Some of the feet given above are usually combined in couples, the ictus on one foot being stronger than the ictus on the other with which it is combined. The feet which are usually thus combined are the trochee, the iambus, and the anapaest: –́ ⏑ –́ ⏑, ⏑ –́ ⏑ –́, ⏑ ⏑ –́ ⏑ ⏑ –́. Dactyls were sometimes so combined (Schol. Hephaest. p. 174 W.), but more frequently treated as single feet. The combination of the two feet differs from the single foot as in modern music compound from simple time. Thus, if the trochee be regarded as = the ¾ time of modern music, the combination of the two trochees = 6/8 time. A verse which is scanned in double feet is said *κατὰ συζυγίαν βαίνεσθαι*, and the combination of two feet is called a *διποδία*, *βάσις*, or *μέτρον*. Hence the iambic line of six feet is called a trimeter, the anapaestic line of four feet a dimeter, &c. When two feet are thus combined, the strongest ictus may fall either upon the first or upon the second, *e.g.* either –́ ⏑ –́ ⏑ or –́ ⏑ –́ ⏑. When iambi or trochees are thus combined, except in certain cases at the close of a line, a long syllable can be substituted for the short syllable at the end of each couple of feet in the trochaic verse, at the beginning of each couple in the iambic, thus: – ⏑ – ⏒, ⏒ – ⏑ –. The combination – ⏑ – – was in metrical treatises called *ἐπίτριτος*, because the relation of the second foot to the first *appeared* to be in the proportion of 4 : 3 (*ἐπίτριτος λόγος*). In reality, as has been seen, it is probable that the relation was that of 3½ : 3, the effect of the long syllable instead of the short syllable being that it was slightly and almost imperceptibly prolonged beyond the value required if strict time was kept. In verses intended for mere recitation and not for singing, it is unlikely that in any case the reciter would give each syllable its exact metrical value.

Besides the feet already enumerated, there are some feet of rare occurrence which are of longer duration. These are the *σπονδεῖος μείζων* or *διπλοῦς*, *ὄρθιος*, *τροχαῖος σημαντός*, and *παιὼν ἐπιβατός* (Aristides Quintilianus, i. pp. 36–39, ed. Meibom.). The *σπονδεῖος μείζων* consisted of a thesis = 4 and an arsis = 4, *i.e.* ⊔́ ⊔; the *ὄρθιος* of an arsis = 4 and a thesis = 8, *i.e.* ⊔ ⊔́ ⊔́; the *τροχαῖος σημαντὸς* of a thesis = 8 and an arsis = 4, *i.e.* ⊔́ ⊔́ ⊔, and the *παιὼν ἐπιβατὸς* of five long syllables, viz. a long syllable in thesis + a long syllable in arsis + two long syllables in thesis + a long syllable in arsis, *i.e.* –́ – –́ –́ –, altogether a foot in ten time. The dialogue *περὶ μουσικῆς* which bears the name of Plutarch (chapters 28 and 33) gives some information as to the originators of these long feet. The *παιὼν ἐπιβατὸς* is said to have been used by Archilochus and Olympus, and it has been conjectured that the exclamation *ἰηπαιήων* is an instance of this rhythm. The invention of the *ὄρθιος* and of the *τροχαῖος σημαντὸς* is attributed to Terpander, and it is possible that the fragments of a hymn quoted as the composition of Terpander and of two others conjecturally assigned to Terpander by Bergk (*Lyr. Graec.* frag. 1, 3, 4), which are composed in long syllables alone, may have been sung to one of these rhythms. It appears at first sight that the *ὄρθιος*, the *τροχαῖος σημαντός*, and the *σπονδεῖος μείζων* differed from the ordinary iambic, trochee, and spondee, only in being slower in *tempo* (*ἀγωγή*). It is, however, just possible that each long note in the vocal part may have been combined with an instrumental accompaniment, which would show that the long note corresponded to a foot, thus:—

Vocal, ⊔́ ⊔
Instrumental, –́ ⏑ ⏑ – ⏑ ⏑, &c.

If this was so, these long feet were in reality combinations of feet, *i.e.* *κῶλα*.

The Sentence (*κῶλον*).—A series of feet recurring without a break, in which the thesis always had an ictus of equal intensity and which did not form larger groups, would soon become monotonous. Hence the feet are combined in larger groups called *κῶλα* or "sentences." The structure of these "sentences" is similar to that of the feet. There are three genera of *κῶλα* as there are of feet; like the feet, they fall into two portions bearing a definite relation to one another, and, like the feet, they are strictly limited in extent. In consequence of this analogy they are sometimes called *πόδες*. The single foot is a *ποὺς ἁπλοῦς* or *ἀσύνθετος*: the *κῶλον*, or combination of feet, is a *ποὺς σύνθετος*. The number of feet combined in a *κῶλον* is never more than six, and seldom more than four. A *κῶλον* of two or four feet belongs to the *γένος ἴσον* or *δακτυλικόν*, being composed of feet bearing an equal relation, viz. either 1 : 1 or 2 : 2. A *κῶλον* of three or six feet belongs to the *γένος διπλάσιον* or *ἰαμβικόν*, being composed of feet bearing the relation 2 : 1 or 4 : 2. A *κῶλον* of five feet belongs to the *γένος ἡμιόλιον* or *παιωνικόν*, the relation of the feet of which it is composed being 3 : 2. As to the extent of the *κῶλον* it is stated by Aristides Quintilianus, i. p. 35, and by Psellus, *προλαμβανόμενα*, § 12 (apparently an extract from Aristoxenus), that a *κῶλον* of the *ἴσον γένος* cannot exceed sixteen units of time; a *κῶλον* of the *διπλάσιον γένος* cannot exceed eighteen units of time; and a *κῶλον* of the *ἡμιόλιον γένος* cannot exceed twenty-five units of time. In these calculations the short syllable is taken as the unit of time. Applying these canons to the different *πόδες ἁπλοῖ*, it appears that the iambic or the trochee may form *κῶλα* of two, three, four, five, or six feet:—

⏑ – | ⏑ – } = 6
– ⏑ | – ⏑
⏑ – ⏑ – | ⏑ – ⏑ – } = 12
– ⏑ – ⏑ | – ⏑ – ⏑
} γένος ἴσον.

⏑ – ⏑ – | ⏑ – } = 9
– ⏑ – ⏑ | – ⏑
⏑ – ⏑ – ⏑ – ⏑ – | ⏑ – ⏑ – } = 18
– ⏑ – ⏑ – ⏑ – ⏑ | – ⏑ – ⏑
} γένος διπλάσιον.

⏑ – ⏑ – ⏑ – | ⏑ – ⏑ – } = 15 γένος ἡμιόλιον.
– ⏑ – ⏑ – ⏑ | – ⏑ – ⏑

The dactyl or anapaest may form *κῶλα* of two, three, four, or five feet:—

– ⏑ ⏑ | – ⏑ ⏑ } = 8
⏑ ⏑ – | ⏑ ⏑ –
– ⏑ ⏑ – ⏑ ⏑ | – ⏑ ⏑ – ⏑ ⏑ } = 16
⏑ ⏑ – ⏑ ⏑ – | ⏑ ⏑ – ⏑ ⏑ –
} γένος ἴσον.

– ⏑ ⏑ – ⏑ ⏑ | – ⏑ ⏑ } = 12 γένος διπλάσιον.
⏑ ⏑ – ⏑ ⏑ – | ⏑ ⏑ –

– ⏑ ⏑ – ⏑ ⏑ – ⏑ ⏑ | – ⏑ ⏑ – ⏑ ⏑ } = 20 γένος ἡμιόλιον.
⏑ ⏑ – ⏑ ⏑ – ⏑ ⏑ – | ⏑ ⏑ – ⏑ ⏑ –

The paeon or cretic may form *κῶλα* of two, three, or five feet:—

$$\left.\begin{array}{r|l} \text{– ⏑ ⏑ ⏑} & \text{– ⏑ ⏑ ⏑} \\ \text{– ⏑ –} & \text{– ⏑ –} \end{array}\right\}=10\ \text{γένος ἴσον.}$$

$$\left.\begin{array}{r|l} \text{– ⏑ ⏑ ⏑ – ⏑ ⏑ ⏑} & \text{– ⏑ ⏑ ⏑} \\ \text{– ⏑ – – ⏑ –} & \text{– ⏑ –} \end{array}\right\}=15\ \text{γένος διπλάσιον.}$$

$$\begin{array}{r|l} \text{– ⏑ ⏑ ⏑ – ⏑ ⏑ ⏑ – ⏑ ⏑ ⏑} & \text{– ⏑ ⏑ ⏑ – ⏑ ⏑ ⏑} \\ \text{– ⏑ – – ⏑ – – ⏑ –} & \text{– ⏑ – – ⏑ –} \end{array}=25\left\{\begin{array}{l}\text{γένος}\\ \text{ἡμιό-}\\ \text{λιον.}\end{array}\right.$$

The ionic or choriambic may form *κῶλα* of either two or three feet:—

$$\left.\begin{array}{r|l} \text{– – ⏑ ⏑} & \text{– – ⏑ ⏑} \\ \text{⏑ ⏑ – –} & \text{⏑ ⏑ – –} \\ \text{– ⏑ ⏑ –} & \text{– ⏑ ⏑ –} \end{array}\right\}=12\ \text{γένος ἴσον.}$$

$$\left.\begin{array}{r|l} \text{– – ⏑ ⏑ – – ⏑ ⏑} & \text{– – ⏑ ⏑} \\ \text{⏑ ⏑ – – ⏑ ⏑ – –} & \text{⏑ ⏑ – –} \\ \text{– ⏑ ⏑ – – ⏑ ⏑ –} & \text{– ⏑ ⏑ –} \end{array}\right\}=18\ \text{γένος διπλάσιον.}$$

It is probable that the unity of the *κῶλον* was marked by its having one ictus stronger than the rest and dominating the group, and that this ictus might fall on any foot in the *κῶλον*, so that *e.g.* a trochaic tetrapody might be accentuated in any of the following ways:—

–́ ⏑ – ⏑ – ⏑ – ⏑ ‖*

– ⏑ –́ ⏑ – ⏑ – ⏑ ‖

– ⏑ – ⏑ –́ ⏑ – ⏑ ‖

– ⏑ – ⏑ – ⏑ –́ ⏑ ‖

In each of the *κῶλα* hitherto considered the feet are all of the same metrical value, *i.e.* all trochees, iambics, dactyls, anapaests, paeons, ionics, choriambics, or their equivalents, *e.g.* tribrachs, spondees, cretics. The only exception is that of the "irrational" spondee in trochaic and iambic metres, *e.g.* – ⏑ – – for – ⏑ – ⏑. There is, however, a class of metres of very frequent occurrence in which feet of different metrical value, viz. trochees and dactyls (or iambics and anapaests), *e.g.* – ⏑ | – ⏒ | – ⏑ ⏑ | – ⏑ | – ⏑ ‖ are combined in the same *κῶλον*. These metres are called "mixed" (*μικτά*), or logaoedic (*λογαοιδικά*). The latter name was probably given to these metres because, from their apparent irregularity, they seemed to be intermediate between prose (*λόγος*) and poetry or song (*ἀοιδή*). The explanation of this union of trochee and dactyl, and the rhythmical relation between them, is uncertain, though it is generally admitted that the time occupied by the trochee and the dactyl must have been equal. The popular theory, adopted by J. H. H. Schmidt in his *Kunstformen der griechischen Poesie*, is that the long syllable and the first short syllable in the dactyl both lost something of their normal value, the long syllable being in this case = $1\frac{1}{2}$ and the first short syllable = $\frac{1}{2}$, so that the dactyl = $1\frac{1}{2} + \frac{1}{2} + 1 = 3 =$ the trochee = $2 + 1$. This value, which is represented in modern books by the symbol –⏑ ⏑, is supposed to be confirmed by two passages in Dionysius of Halicarnassus, *de Comp. Verb.* chapters 17 and 20, and the foot is usually called the "cyclic" dactyl, because Dionysius (*ibid.* c. 17) says that the rapid dactyl of which the long syllable loses something of its normal value is parallel to the anapaest with an "irrational" long syllable, which is called *κύκλος*. Westphal, however, has shown that the passages in Dionysius cannot be used in support of the so-called "cyclic" dactyl in logaoedics, because Dionysius is speaking of mere recitation, not of singing. The rhythm was probably always less exact in the former than in the latter, just as in the case of modern poetry the rhythm of recitation is less exact than that of singing. It is more probable that the long syllable and the short syllable in the logaoedic dactyl retained their normal relation to each other, viz. that of 2 : 1, but that the long and short syllables were each pronounced more rapidly than the long and short syllables in the trochee. This may be expressed in figures as follows: If in the trochee the long syllable = 2 and the short syllable = 1, then in the dactyl the long syllable = $\frac{6}{4}$, the short syllable = $\frac{3}{4}$. Then the trochee = $2 + 1 = 3 =$ the dactyl = $\frac{6}{4} + \frac{3}{4} + \frac{3}{4} = \frac{12}{4} = 3$. Possibly, however, it should rather be supposed that the equality between the trochee and the dactyl was not thus accurately defined, but that the ear was satisfied if the time occupied by the two feet was approximately equal, the difference between them being imperceptible, without any obvious violation of the usual proportion between long and short syllables.

The limits of the logaoedic *κῶλον* seem to be the same as those of the iambic or trochaic. It may consist of either two, three, four, five, or six feet; the six-feet *κῶλα* are, however, apparently rare, and it is possible that what seem to be six-feet *κῶλα* are a combination of two *κῶλα* of four feet and two feet respectively.

If the account of the logaoedic *κῶλον* here given is correct, the time occupied by all the feet which compose it is the same; but there is one peculiar metre, the dochmiac, the *κῶλα* of which are probably composed of feet which differ from one another in duration. The normal form of the dochmiac is ⏑ – – ⏑ –, but as all the long syllables admit of resolution into two short syllables, and the first (as well as occasionally the second) short syllable may be long, it assumes very various forms. It is doubtful whether the chief ictus is on the first or on the second long syllable, *i.e.* ⏑ –́ – ⏑ – or ⏑ – –́ ⏑ –. The dochmiac seems to consist of a union of feet in which there is a real change of rhythm, one foot being in three time, the other in five time, *i.e.* ⏑ – | – ⏑ – or ⏑ – – | ⏑ –. Westphal (*Metrik*, ed. 3) supposes that either there is a pause equal to one long syllable at the end of each dochmiac, or the final syllable is lengthened by *τονή*, *i.e.* ⏑ – – ⏑ – ∧ or ⏑ – – ⏑ ⊔. In this case the dochmiac would fall into two equal portions, each containing five units of time $\overset{1}{\smile}\,\overset{2}{-}\,\overset{2}{-}$. But this view seems inconsistent with the fact that occasionally a dochmiac ends with two short syllables in the middle of a word.

A *κῶλον* may be either completely filled by the syllables used in their ordinary metrical value, or it may require for its completion a pause (*λεῖμμα, πρόσθεσις*) or a prolongation (*τονή*) of a syllable beyond its ordinary value. An instance of a *κῶλον* which is complete without either pause or prolongation is the trochaic tetrapody – ⏑ | – ⏒ | – ⏑ | – ⏑ ‖, while the *κῶλον* – ⏑ | – ⏑ | – ⏑ | – ‖ is incomplete and requires either a pause – ⏑ | – ⏑ | – ⏑ | – ∧ ‖ or a prolongation – ⏑ | – ⏑ | – ⏑ | ⊔ ‖ for its completion.

---

* ‖ is the symbol for the end of a *κῶλον*,]] for the end of a "period" (see below).

When the *κῶλον* is complete without these devices, it is called *acatalectic* (*ἀκαταληκτικόν*), *i.e.* not stopping (*καταλήγω*) before its proper end; when it is incomplete, it is called *catalectic* (*καταληκτικόν*). When a *κῶλον* is scanned *κατὰ συζυγίαν*, *i.e.* in couples of two feet, if, according to the metrical form, the last foot is wanting, as in – ⏑ | – ⏑ | – ⏑ ⊔∧ ‖, it is said to be *brachycatalectic* (*βραχυκατάληκτον*). When a *κῶλον* which is scanned *κατὰ συζυγίαν* has one apparently superfluous syllable exceeding the last dipody in the *κῶλον*, as *e.g.* in ⏑ – ⏑ – | ⏑ – ⏑ – | ⏑, it is said to be *hypercatalectic* (*ὑπερκατάληκτον*). Cases of this latter kind are, however, probably more apparent than real. A *κῶλον* of the apparent form – ⏑ – ⏑ | – is usually a trochaic tripody – ⏑ – ⏑ ⊔ or – ⏑ – ⏑ – ∧, and a *κῶλον* of the apparent form ⏑ – ⏑ – | ⏑ may be found where the next *κῶλον* begins with a thesis, and where therefore the arsis of the preceding *κῶλον* combines with the thesis of the following *κῶλον* to form a single foot, or where the *κῶλον* before it ends with a thesis, and therefore the arsis of the apparently *hypercatalectic κῶλον* combines with the thesis of the preceding *κῶλον*.

It is not always possible to divide a metrical composition into its *κῶλα* with certainty. In the simpler forms of metre the divisions are usually obvious, but in the more elaborate kinds of lyrical poetry this is not so. One criterion by which it has been sought to determine the length of the *κῶλα* in such doubtful cases will be considered under the next head, viz. that of the "period."

The Period.—As a combination of feet forms a *κῶλον*, so a combination of *κῶλα* forms a *περίοδος*. It has been seen that the unity of the *κῶλον* was probably marked by its having one ictus stronger than the rest; the unity of the period was marked probably by the modulation of the voice varying in pitch and intensity with the beginning, middle, and end of the period, and certainly by the admission of a distinct pause at the end of the period, separating it from what follows. This pause is indicated in three ways. (1) Each period ends with the end of a word: a word cannot be divided between two periods as it can be between two *κῶλα* (Hephaest. c. 4, p. 16, ed. W., *πᾶν μέτρον εἰς τελείαν περατοῦται λέξιν*). (2) Hiatus is allowed at the end of a period; *i.e.* a period may end with a vowel, and the following period begin with a vowel without elision taking place. (3) The last syllable of each period may be either long or short (*συλλαβὴ ἀδιάφορος*, *syllaba anceps*) without reference to the quantity strictly required by the rhythm. This is explained by the pause at the end of the period. As there is a pause, it does not matter whether the last syllable is long or short: if it is long where the rhythm otherwise would require a short syllable, this is immaterial, because the short syllable would in this case be followed by a pause; if it is short where the rhythm otherwise would require a long syllable, the pause makes up the required length. Where the same period recurs frequently, as in the odes of Pindar, the observance of these three conditions makes it possible to determine the places at which the period ends, in most cases with complete certainty. The odes of Pindar were first divided into periods by the help of these criteria by Boeckh, in his edition of Pindar (Leipzig, 1811). The pause may occur at the end of a single *κῶλον*: in this case the *κῶλον* is a period. The word *period* is the most general term for a *κῶλον*, or a combination of *κῶλα*, after which a distinct pause is admissible. There are, however, other terms which are used to distinguish certain species of periods. When a *κῶλον*, or a combination of *κῶλα*, consists of not less than three *συζυγίαι* (six feet), and not more than four *συζυγίαι* (eight feet), it is called a verse (*στίχος*, *versus*) (Hephaest. *περὶ ποιήματος*, c. 1, p. 64, ed. W.).

On this principle the iambic trimeter (six feet) and the dactylic hexameter (six feet) are both called *στίχος*. Another name for a period not exceeding eight feet is *μέτρον*. The *μέτρον* must not exceed thirty units of time, according to Hephaestion (c. 13, pp. 42, 43, W.), where it is said that the paeonic *μέτρον* (of which each foot contains five units ⏓⏓ ⏑⏑⏑) may extend to six feet, which will not exceed the thirty units; but the scholiast on this passage (p. 199, ed. W.) asserts that, according to other metricians, the *μέτρον* might extend to thirty-two units. It is probable that the anapaestic tetrameter (⏑⏑–⏑⏑–⏑⏑–⏑⏑– ‖ ⏑⏑–⏑⏑–⏑⏑–– ⟧) was the longest verse (*στίχος* or *μέτρον*) recognised by the metricians, and that this was regarded as containing thirty-two or thirty *χρόνοι*, according as the penultimate syllable was lengthened by *τονή* (= ⊔) or not. A period which exceeds thirty-two *χρόνοι* is a *ὑπέρμετρον*.

The commonest form of the "verse" in non-lyrical poetry is that which is formed by two *κῶλα*: this structure is illustrated by the dactylic hexameter and the trochaic tetrameter:—

– ⏔ – ⏔ –, ⏔ ‖ – ⏔ – ⏔ – ⏓ ⟧
– ⏑ – ⏒ – ⏑ – ⏒ : ‖ – ⏑ – ⏒ – ⏑ ⏓ ∧ ⟧

The comma and the colon in this notation indicate the end of a word. When a verse of two *κῶλα* is divided in such a way that the arsis of the first *κῶλον* is formed by the beginning of a word belonging to the second *κῶλον*, it is said to have a *caesura* (*τομή*); when the end of the first *κῶλον* coincides with the end of a word, it is said to be divided by *διαίρεσις*. The dactylic hexameter has caesura, marked by the comma; the trochaic tetrameter has diaeresis, marked by the colon.

In these verses the *κῶλα* belong to the same species; there are, however, verses or periods in which the combined *κῶλα* belong apparently to different genera. Such rhythms are called *μέτρα ἐπισύνθετα* (Hephaest. c. 15, p. 56, W., and Schol. to Hephaest. pp. 201, 202, W.). Such is the verse – ⏑ ⏑ – ⏑ ⏑ – – ‖ – ⏑ – ⏒ – ⏑ – ⏒ ⟧, which appears to be a combination of the *κῶλα* contained in the dactylic hexameter and the trochaic tetrameter. These episynthetic metres are also called *dactylo-trochaic* or *dactylo-epitritic*, according as the trochees are pure (*e.g.* – ⏑ – ⏑), or admit the "irrational" syllable (– ⏑ – –). There is a difficulty in determining the rhythmical value of these metres, similar to that which has already been discussed in connexion with logaoedics, and, as in the former case, two different solutions of the difficulty have been proposed. The popular explanation is, that in the apparent trochee the value of the long syllable is longer by half than its normal value, *i.e.* = three instead of two units; then –⏑ = ⊔⏑ = 3 + 1 = 4 = the dactyl = 2 + 1 + 1. The more probable explanation is that in the trochee the long syllable retains its normal proportion to the short syllable, but that the long syllable and the short syllable in the trochee are each pronounced more slowly than the long syllable and the short syllable in the dactyl. Thus, if the long syllable and the short syllable in the dactyl = 2 and 1 respectively, the long syllable and the short syllable in the trochee = $\frac{8}{3}$ and $\frac{4}{3}$ respectively; hence the dactyl = 2 + 1 + 1 = 4 = the trochee = $\frac{8}{3} + \frac{4}{3} = \frac{12}{3}$ = 4. In the third edition of Rossbach and Westphal's *Metrik*, vol. 3 (1889), it is argued that episynthetic metres are in three time, the spondee being "irrational" = 2 : 1½, and the dactyl being "cyclic" = 3.

There is another term for certain combinations of *κῶλα* in periods the meaning of which is doubtful. This is the word *asynartete*, of which Hephaestion (c. 15, p. 47, W.) gives the following explanation: *γίνεται δὲ καὶ ἀσυνάρτητα, ὁπόταν δύο κῶλα μὴ δυνάμενα ἀλλήλοις συναρτηθῆναι μηδὲ ἕνωσιν ἔχειν ἀντὶ ἑνὸς μόνου παραλαμβάνηται στίχου.* He then proceeds to give instances of "asynartete" verse, and his account is supplemented by the Scholia on the chapter (pp. 201 ff. W.). It is obvious that the definition given by Hephaestion is little more than verbal, and the meaning must be sought by comparing the different instances which he gives and observing what they have in common. The first modern scholar who brought the word to light, and attempted an explanation of it, was Bentley, in his edition of Horace. In a note on the 11th Epode he arrives at the conclusion that asynartete verses are those in which there is a combination of *κῶλα* belonging to different rhythmical genera, *e.g.* dactylic and trochaic, as in the verse –⏒⏒–⏒⏑–⏒⏑–⏑⏑ ‖ –⏑–⏑–⏓]], and in which, although the two *κῶλα* coalesced to form a verse, the preceding *κῶλον* was separated by a pause from the following, so that hiatus and "syllaba anceps" were allowable, as in the lines of Horace:—

arguit et latere petitus imo spiritus
–⏑⏑–⏑⏑⏓ ‖ ⏑–⏑ –– –⏑⏓]]
Epod. xi. 10.

fervidiore mero ‖ arcana promorat loco
–⏑⏑–⏑⏑– ‖ ––⏑ ––– ⏑–]]
Epod. xi. 14.

It has, however, been shown by Westphal that Bentley's theory is applicable only to one of the seventeen asynartete verses quoted by Hephaestion. His own view is that asynartete verses are those in which there is catalexis in the first of the two *κῶλα*, as *e.g.* in the dactylic pentameter.

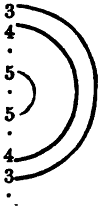
–⏒⏑–⏒⏑– ‖ –⏑⏑–⏑⏑–]]

The rhythm in such a case may be completed either by *τονή* or by a pause, thus:—

–⏑⏑–⏑⏑⊔ ‖ –⏑⏑–⏑⏑–⋀̄]]
–⏑⏑–⏑⏑–⋀̄ ‖ –⏑⏑–⏑⏑–⋀̄]]

This explanation is applicable to the majority of the asynartete verses quoted by Hephaestion, but it is certainly not applicable to all the "episynthetic" asynartetes, of which Hephaestion quotes seven kinds, and it cannot be applied to any of them without the unwarrantable assumption that the apparent dactylic tripody –⏑⏑–⏑⏑–– is really "brachycatalectic," *i.e.* = –⏑⏑–⏑⏑⊔⊔ or –⏑⏑–⏑⏑⊔–⋀̄. It appears, therefore, that the meaning of the term asynartete cannot be determined with certainty.

The word *period* is used by J. H. H. Schmidt in his *Kunstformen der griechischen Poesie* in a sense different from that of the ancient writers on rhythm and metre. He understands by it a combination of *κῶλα* or verses, which are bound together by a definite principle of arrangement or symmetry. According to this theory, in the majority of lyrical compositions, every *κῶλον* (with certain definite exceptions) corresponds to some other *κῶλον*, and contains precisely the same number of feet as the *κῶλον* with which it corresponds. Any set of *κῶλα* which is bound together by such correspondences is called by him a "period." These periods are variously constructed. The simplest form of period is that in which one *κῶλον* is followed by another containing the same number of feet, as *e.g.* in the dactylic hexameter –⏒⏒–⏒⏑–⏒⏑ ‖ –⏒⏑–⏒⏑–⏓]]: the period is divided into two *κῶλα*, each consisting of three feet; such a period he calls "stichic." A more developed form is that in which a *κῶλον* of the same number of feet is repeated more than once, *e.g.* a period consisting of three dactylic tripodies; such a combination he calls a repeated "stichic" period. A "palinodic" period is one in which, instead of a single *κῶλον*, two *κῶλα* forming a group are answered by two *κῶλα* forming a similar group: thus, *e.g.*, if a group of two *κῶλα*, consisting of six feet and five feet respectively, were followed by a second group consisting of a hexapody and pentapody. If the group were repeated a second time, the result would be a repeated "palinodic" period. If the period be such that the correspondence is between the first *κῶλον* and the last, between the second and the last but one, Schmidt calls it "antithetic"; such would be a period of the annexed form, where the dot denotes the end of a verse, and the numbers the number of feet in each *κῶλον*.



The first verse would contain two *κῶλα* of three and four feet respectively, the second verse a single *κῶλον* of five feet, and so on. If in a period of this kind the central *κῶλον* has no correspondence, it is called "mesodic." A simple instance of such a period would be the annexed form.

Such are the outlines of Schmidt's theory, which has been adopted by some modern editors of Greek dramatists and Pindar. The general principle, which demands correspondence between one *κῶλον* and another, is called by Schmidt "eurhythmy," and it is chiefly by the assistance of this principle that he determines the division into *κῶλα* of any lyrical composition. There is no doubt that there is often a correspondence of this kind: the elegiac couplet, for example, is an instance of two periods, each formed by two tripodies, the tripodies being acatalectic in the hexameter and catalectic in the so-called pentameter. But it has not been shown that such "eurhythmy" is invariably present, and it cannot therefore be accepted as a criterion for determining the length of the κῶλα where it is not otherwise obvious. The limits of this article do not admit of a detailed discussion of the theory, but some objections to it may be pointed out.

(1) The ancient writers on rhythm and metre do not show the slightest acquaintance with "eurhythmy" of this kind.

(2) The symmetry produced by Schmidt's method is often a symmetry for the eye, not for the ear; there is no reason to think that the ear could take in the rhythmical structure of many of his periods, even with the assistance of a musical accompaniment and the movements of the dance.

(3) Modern music and poetry do not offer any real analogy for the more elaborate forms of his periods, although modern poetry has in the rhyme a special means of emphasising the correspondence between κῶλα, while, on the other hand, they show that a sense of rhythmical proportion may be produced without exact correspondence between the κῶλα.

(4) The fact that Schmidt has been able to arrange the odes of Pindar and the lyrical portions of the great dramatists, in such a way as to exhibit "eurhythmy,". is no proof of the truth of his theory; for as soon as it is granted that the long syllable admits of different values, that *e.g.* it may be either – or ⏗ or ⏘, it is obvious that the same combination of syllables may admit of being interpreted as containing a different number of feet. Thus –⏑–⏑–⏑ may be either an acatalectic tripody or a catalectic tetrapody = –⏑–⏑⏗⏓. Moreover, even if the number of feet in a series be determined, it may often be divided into κῶλα in more ways than one. As, therefore, the same metrical form admits of different interpretations, it is not difficult to manipulate it so as to produce the assumed "eurhythmy."

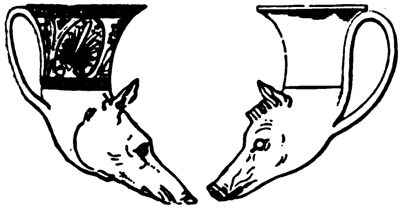
This theory of "eurhythmy" was first suggested in the first edition of Rossbach and Westphal's *Metrik;* in the second edition it was rejected by Westphal, but it has been revived by Rossbach in the third edition.

The Strophe.—When either a single rhythmical period (in the ancient sense of the word), exceeding the limits of a "verse," or a combination of periods, is repeated in the same form, such a period, or a combination of periods, is called a *strophe*, and, if it is repeated only once, it is called on its recurrence an *antistrophe*. A simple instance is the strophe formed by the dactylic hexameter and "pentameter," a strophe of two verses, each consisting of two tripodies, which, however, are different in form in the two lines, being acatalectic in the first and catalectic in the second. Other familiar examples are the Alcaic and Sapphic strophes, each consisting of four lines. In the odes of Pindar a further development is found. The strophe and antistrophe are here usually succeeded by a strophe of another metrical form, which is then called an *epode* (ἐπῳδός). The triad formed by strophe, antistrophe, and epode, is then repeated. The metrical structure of the fourth Pythian ode of Pindar is formed by a strophe, antistrophe, and epode, each of which occurs thirteen times. In Pindar and the dramatic poets there is, as a rule, an exact syllabic correspondence between strophe and antistrophe; and where the correspondence is not thus exact, except in certain limited deviations which are admitted to be permissible, it has been in most cases supposed that there is some corruption in the text. It is, however, possible that the assumption of exact syllabic correspondence has been carried too far, and that there was more licence in this respect than is generally recognised.

Metrical compositions are either κατὰ στίχον or κατὰ συστήματα (συστηματικά), and in the latter case they fall into further subdivisions, of which the most important are τὰ κατὰ σχέσιν and τὰ ἐξ ὁμοίων (Hephaest. περὶ ποιήματος, pp. 59 ff. W.). They are κατὰ στίχον when they are composed in "verses" of the same length, which do not fall into definite groups; the Greek epics in hexameter verse are an example of this form of composition. They are κατὰ σχέσιν when they contain strophes and antistrophes, as the odes of Pindar and most of the lyrical portions of the drama. They are ἐξ ὁμοίων when they are composed of a series of κῶλα of the same metre, forming groups which are unequal in extent, and each of which exceeds the limits of a "verse." Such are the anapaestic hypermetra used often in tragedy, consisting mainly of groups of anapaestic dimeters acatalectic, *e.g.* ⏑⏑–⏑⏑–⏑⏑–⏑⏑– terminated by a catalectic dimeter, *e.g.* ⏑⏑–⏑⏑–⏑⏑–⏓ I. Sometimes a lyrical passage is composed of periods of different metrical form and length without antistrophic responsion. In this case it is called ἀπολελυμένον. Instances of this may be found in melodies sung by actors on the stage (τὰ ἀπὸ σκηνῆς) in the Greek drama. Sometimes a composition contains all these different forms of metrical structure (as *e.g.* a Greek play), in which case it is called μικτόν.

It would be beyond the scope of the present work to give any detailed account of the metres employed by the Greek and Roman poets; on that subject, as well as on the general principles of rhythm as applied to language, reference may be made to the following authorities among the more recent writers:—Rossbach and Westphal, *Metrik der Griechen*, the third edition of which is published under the title *Theorie der musischen Künste der Hellenen*, Leipzig, 1885–1889; J. H. H. Schmidt, *Die Kunstformen der griechischen Poesie*, 4 vols., Leipzig, 1868–1872; Christ, *Metrik der Griechen und Römer*, 2nd edition, Leipzig, 1879; Gleditsch, *Metrik der Griechen und Römer* in Iwan Müller's *Handbuch der klassischen Alterthumswissenschaft*, vol. ii., Nördlingen, 1885. The value of the rhythmical principles of Aristoxenus, in their application to modern music, has been very ingeniously shown by Westphal in his *Allgemeine Theorie der musikalischen Rhythmik seit J. S. Bach*, Leipzig, 1880. The remains of the Greek writers on rhythm have been collected by Westphal in *Die Fragmente und die Lehrsätze der griechischen Rhythmiker*, Leipzig, 1861, the text of which is reprinted in the second edition of Rossbach and Westphal's *Metrik der Griechen*, vol. i., Leipzig, 1867. The rhythmical fragments of Aristoxenus are translated and explained in Westphal's *Aristoxenus von Tarent*, Leipzig, 1883. The most modern edition of the text of Hephaestion with the Scholia is that of Westphal, Leipzig, 1866; but a new edition, discriminating as far as possible the sources of the various scholia, is much required. The so-called "Scholia A" have been edited by Studemund, in his *Anecdota varia*, Berlin, 1886; the "Scholia B" by Hoerschelmann, Dorpat, 1882. [C. B. H.]

RHYTON (*ῥυτόν*), a drinking-horn (*κέρας*), by which name it was originally called (Athen. xi. p. 497 b). Athenaeus adds that it was introduced into the statues of Arsinoë by Ptolemy Philadelphus, and this may be seen on the coins of Arsinoë [*Dict. of Biogr.* ARSINOË]. It is impossible that by *ὑπὸ πρώτου* [*τοῦ*] *Φιλαδέλφου Πτολεμαίου Βασιλέως*, Athenaeus can have meant to assert that Ptolemy invented the *ῥυτόν*, since he himself cites the passage of Demosthenes (*Meid.* p. 565, § 158) where it is mentioned. It is probable that the word *πρώτου* merely distinguishes the earlier Philadelphus from the later (Attalus II.). The oldest and original form of this drinking-horn was probably the horn of the ox, but one end of it was afterwards ornamented with the heads of various animals and birds. We frequently find representations of the *ῥυτὸν* on ancient vases depicting symposia. Several specimens of these drinking-horns have also been discovered at Pompeii (*Museo Borbonico*, vol. viii. 14, v. 20): representations of two of these are given in the annexed cut.



Drinking-horns from Pompeii.

Etruscan *rhyta*. (Dennis.)

The *ῥυτὸν* had a small opening at the bottom, which the person who drank put into his mouth, and allowed the wine to run in: hence it derived its name (*ὠνομάσθαι τε ἀπὸ τῆς ῥύσεως*, Athen. xi. p. 497 e). We see persons using the *ῥυτὸν* in this way in ancient paintings (*Pitt. d'Ercol.* v. tav. 46; Zahn, *Ornam. und Wandgem.* taf. 90). Martial (ii. 35) speaks of it under the name of *rhytium*. (Becker-Göll, *Charikles*, vol. iii. p. 91; Guhl u. Koner, p. 164.) [W. S.] [G. E. M.]

RICA. [FLAMEN; MIMUS.]

RICA. [RICINIUM, *ad fin.*]

RICINIUM. Before the *palla* came into use at Rome, a mantle of a smaller size, the *ricinium*, was worn by women, and occasionally, it would seem from certain ceremonial survivals, by men. It was a rectangular piece of cloth (Fest. p. 274 b, 32, "Ricinium omne vestimentum quadratum ii qui xii interpretati sunt esse dixerunt"), and (though we cannot doubt its connexion with *rica*), according to Varro and the grammarians, it got its name from the fact that it was worn with one-half thrown back over the shoulder (Varro, *L. L.* v. 132, "Antiquissimis amictui ricinium. Id, quod eo utebantur duplici, ab eo quod dimidiam partem retrorsum jaciebant, a rejiciendo ricinium dictum." Cf. Isid. *Orig.* xix. 25, 4; Non. 542, 1; Serv. *ad Aen.* i. 282). The word occurs as early as the Twelve Tables, where it is used of the cloth with which funeral pyres were decorated (Schöll, *Legis XII. Tabularum Reliquiae*, p. 57; cf. Cic. *de Legg.* ii. 23, 59).

In classical times it was only used for ceremonial purposes, and was worn by the *magister* of the Fratres Arvales at the Ludi Circenses (Henzen, *Acta fr. Arv.* p. 37), by the boys who attended them (Id. *ib.* 38;—Marini, *Atti d. fr. Arvali*, xxiv. 2, 9, 21; xxxii. 3, 12; xxxvii. 7), and, to judge from the monuments, by the Camilli in general. (Cf. Henzen in *Annali dell' Inst.* xxx. (1858), p. 9; Daremberg and Saglio, s. v. *Camilli*, p. 859.)

The *ricinium* was also, according to Varro, worn by women at funerals before the burial, whereas after it they put on black *pallae* (quoted by Nonius, p. 549, 31, "ut dum supra terram essent riciniis lugerent, funere ipso ut pullis pallis amictae"), a passage which clearly shows that there was an essential difference between the *ricinium* and the *palla*. Of the material of the *ricinium* nothing is known except that Lucilius speaks of one embroidered with gold (Lucil. *Fragm.* p. 246).

Sacrificial attendant (camillus) wearing the Ricinium. (From a relief.)

Owing no doubt to its having disappeared from ordinary use at an early date, the monuments give no representations of it on women. On certain Roman sarcophagi, however, Camilli wearing over one or both shoulders a piece of cloth fringed and with a long nap (cf. Clarac, ii. p. 218, n. 310; Daremberg and Saglio, *l. c.* and fig. 1053) are shown; and this very probably is closely connected with the *ricinium*, but not identical with it, for they are mentioned together in a fragment of Novius as the *ricinium* and the *rica* or *ricula* (cf. Ribbeck, edit. 2, p. 265, 71), which was also rectangular. The *Flaminica*, or wife of the Flamen Dialis, wore one of purple and fringed, apparently not as a cloak (Fest. *Epit.* p. 288, 10), for the garment is of smaller size and worn as a kerchief on the head (Id. p. 277a, 5; FLAMEN), a use which is referred to in Aulus Gellius (vi. 10), and would seem to be akin to that of the FLAMMEUM.

[Marquardt, *Privatleben*, p. 575; Becker-Göll, *Gallus*, iii. p. 264; Iwan Müller, *Handbuch*, vol. iv. (Schiller), pp. 805 and 807. Many references to monuments where Camilli wearing what is almost certainly the *ricinium* are to be found in Daremberg and Saglio, s. v. *Camilli*, p. 859.] [W. C. F. A.]

ROBIGA'LIA, a public festival in honour of the god Robigus, to preserve the fields from mildew, is said to have been instituted by Numa, and was celebrated on April 25th (Varro, *L. L.* vi. 16; *R. R.* i. 1, 6; Fest. p. 267; Plin. *H. N.* xviii. § 285). A procession was made to the grove of Robigus (or *Robigo*, according to Ovid and Columella), five miles out of Rome on the Via Claudia (*Cal. Praen.*), where sacrifices were offered by the Flamen Quirinalis, a sheep and a dog, fancifully explained as averting harm to the crops from the dog-star (Ov. *Fast.* iv. 907 *sq.*; Colum. x. 342; Fest. p. 285). It is probable that the deity Robigus represents Mars Rusticus (Cato, *R. R.* 141; Tertull. *de Spect.* 5; Mommsen, *C. I. L.* i. p. 392; Marquardt, *Staatsverw.* iii.^{2} p. 574). [W. S.] [G. E. RORA'RII. [EXERCITUS, Vol. I. pp. 782–784.]

ROSTRA was the name applied to a stage or platform at Rome, first between the Comitium and Forum, afterwards in the Forum, from which orators addressed the people [CONTIO]. This platform was originally called *templum* (Liv. ii. 56; iii. 17; viii. 14), because it was consecrated by the augurs (Cic. *in Vat.* 10, 24) [TEMPLUM]; but it received the name of Rostra at the conclusion of the great Latin war, when C. Maenius adorned it with the beaks (*rostra*) of the ships taken from the Antiates (Liv. viii. 14; Flor. i. 11; Plin. *H. N.* xxxiv. § 20). The Greeks also mutilated galleys in this way for the purpose of trophies: this was called by them *ἀκρωτηριάζειν*. [ACROTERIUM.]

From the mention of the *volcanal* as the speakers' platform in early times (Dionys. vi. 67; vii. 17; xi. 39), some have inferred that the Rostra was not merely adorned with ships' beaks in the year B.C. 338, but was then first built; the fact, however, that the Twelve Tables were placed on the Rostra (Diod. xii. 26) would lead us to conclude that it was an older structure which received this adornment and a new name in the 4th century. The language of Livy will bear either interpretation.

The Rostra lay, as has been said, between the Comitium, or place of meeting for the curies, and the Forum, or place of meeting for the whole people, so that the speaker might turn to the one or the other. No doubt the custom of turning towards the Comitium and addressing the curies from that spot originated in an age when that assembly was of importance alike in legislation and in judicial appeals, and it became a mark of democratic principles to turn the back on the Comitium and speak towards the Forum. According to Cicero (*Lael.* 25, 96), C. Licinius Crassus (tribune B.C. 145) first began "in forum versus agere cum populo;" a practice of which Plutarch makes C. Gracchus the originator (*C. Gracch.* 5). Julius Caesar transferred the position of the Rostra to the western side of the Forum (Cic. *Phil.* ix. 2; Dio Cass. xliii. 49). A description of the Rostra will be found in Middleton, *Rome*, pp. 157–164, and in still greater detail in O. Richter's *Gesch. der röm. Rednerbühne.* It was reached by steps from the back, and was a rectangular platform, 78 feet long, 33 feet broad, and 11 feet above the pavement of the Forum, with end and side walls of tufa blocks; the upper floor was supported on travertine piers; along the front, facing the Forum, there were marble railings (*cancelli*), except in the centre, where the speaker stood (the marks of the railings being still apparent): in this central portion, which occupied one-fifth of the whole length, it is probable, as Richter thinks, that there was originally a lower stage, the *locus inferior* (see below), 5½ feet beneath the level of the higher platform, or Rostra proper, and as many above the pavement of the Forum. At each end were colossal seated figures, as apparently was also the case in the older Rostra (cf. Cic. *Phil.* ix. 2, 5). In the remains of the Rostra holes and metal pins may still be seen where the ships' beaks were fixed, 19 in the lower and 20 in the upper tier. A representation of the emperor speaking from the Rostra is given on the Arch of Constantine.

Rostra, from the Arch of Constantine. (Middleton's *Rome*.)

The *rostra Julia*, so called to distinguish them from the Rostra proper, formed the projecting podium of the Aedes Divi Juli, built by Augustus, on which were fixed the beaks of ships taken at Actium. The lower platform, or *locus inferior*, is traced by Richter alike in the Rostra and in the rostra Julia. In the latter it was a semicircular depression in the central portion, reaching back to half the width of the platform, and was at a later time filled up to the higher level: in the Rostra the depression was a square piece of the central portion

reached by steps from above; but this also was filled and levelled up, so that on the Arch of Constantine the *locus inferior* does not appear at all, and in this later phase of the Rostra the entrance was by steps from the Forum instead of from the back. The distinction of Rostra and *locus inferior* seems to correspond with the distinction of place in the arrangement of the *tribunal* (see Mommsen, *Staatsr.* iii.^{3} p. xii.), and perhaps was primarily devised for the lower station of the appellant in a judicium populi [JUDICIUM]. As contrasted with the station of the magistrate, it was the place whence a *privatus* could speak in the suasio or discussion of a rogation. Though, however, men of magisterial rank might expect to speak from the Rostra, it was in the power of the superior magistrate who convened the assembly to order anyone to speak from the lower platform (*ex inferiore loco*), as did Caesar to Catulus, possibly by way of a studied slight to the optimates, while to Vettius on another occasion he gave the higher place (*in rostra eum produxit*, Cic. *ad Att.* ii. 24, 3; cf. Sueton. *Jul.* 15); and Papirius sent Fabius, as though he were an appellant and not a magistrate, into the lower platform (Liv. viii. 33). In Cic. *de Or.* iii. 6, 23, the contrast of *ex inferiore loco*, *ex aequo*, and *ex superiore loco* is not precisely to our point, because he is speaking there of three classes of orators, viz. pleaders in court, senators, and magistrates on the Rostra; but the Rostra with its *locus inferior* attached was adapted in principle for the first as well as the third of these classes. When the judicium populi passed away, this use, probably the original purpose, of the *locus inferior* ceased, and in process of time the Rostra was altered in structure, so as to have only one platform. (See on this point Mommsen, *Staatsr.* iii.^{3} 383, and note on p. xii.: and, for the locality and construction of the Rostra, the writings of Middleton and O. Richter cited above; Nichols, *Notizie dei Rostri.*)

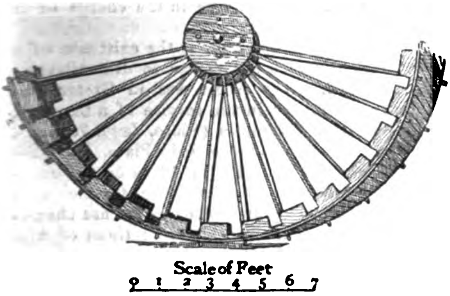
ROSTRUM. [NAVIS, pp. 217, 220.]

ROTA. The various kinds of wheels are described under CURRUS, MACHINA, MOLA, TYMPANUM; and the *rota aquaria* for raising water under ANTLIA: but, as regards the last, it is necessary to add a few words in explanation of the cut here given, showing the portion of an actual Roman water-wheel, lately (1889) acquired by the British Museum. It was found in the Rio Tinto mines in the south of Spain, which were worked by the Romans for silver and copper: its excellent preservation, though entirely of wood, and perhaps dating from the time of Nero, is accounted for by the action of the cupreous water with which it was saturated. The water was taken up in the boxes at the outer circumference (which are covered, but with an opening at the side) and discharged into a trough, when the wheel had nearly completed its half-revolution. The water is then lifted into a channel about fifteen feet above the original level: another wheel (or pair of wheels, for they are found in pairs) then raises it to a higher channel, and so by a succession of stages it is removed from the mine. The wheels were probably turned by slaves by means of ropes, of which some remains have been found attached to the wheels, and in such a position that they could be worked with the feet, as a treadle, as well as with the hands (Stevenson in *Archaeologia Aeliana*, vii. 279). As was stated under ANTLIA, Vitruvius describes three kinds of water wheels (x. 4): this kind is not exactly like any of the three, but is an improvement upon No. 2 (that with the *modioli* attached), because that wheel could only raise water to a height equal to half its diameter, whereas the wheel shown in this article could raise it to a height nearly equal to the whole diameter, which in this example is little short of fifteen feet. [G. E. M.]



Wooden wheel, for raising water from mines. (British Museum.)

RUDENS. [NAVIS, p. 217.]

RUDIA'RII. [GLADIATORES.]

RUDIS. [GLADIATORES.]

RU'FULI. [EXERCITUS, Vol. I. p. 797 *a*.]

RUNCI'NA (ῥυκάνη), a plane (Tertull. *Apol.* 12; Plin. *H. N.* xvi. § 225), is delineated among joiners' tools (*Instrumen. Fabr. Tignar.*) in the woodcut at p. 243. Another example of similar form, but with the wooden box also shown, may be seen in Blümner: in both these we see two holes for the passage of the shavings, one on each side of the handle, instead of one, as in modern planes. The Latin and Greek names for this instrument gave origin to the corresponding transitive verbs *runcino* and ῥυκανάω, meaning "to plane." (Varro, *L. L.* v. 96; Poll. x. 146; *Anth. Pal.* vi. 204; Blümner, *Technol.* ii. 227.) [J. Y.] [G. E. M.]

RUTILIA'NA ACTIO. [BONORUM EMPTIO.]

RUTRUM, *dim.* **RUTELLUM,** a kind of hoe, probably of iron (and so in one reading of Cato, *R. R.* 11, "inter ferramenta"), which had the handle fixed perpendicularly into the middle of the blade, thus differing from the RASTRUM. It was used before sowing to level the ground, by breaking down any clods which adhered too long together (Non. Marc. p. 18). This operation is described by Virgil in the following terms, which also assign the derivation of the name: "Cumulosque *ruit* male pinguis arenae" (*Georg.* i. 105). See Festus, *s. v.*; Varro, *L. L.* v. p. 137. The same implement, made of wood, was used in mixing lime or clay with water and straw to make plaster for walls (Cato, *R. R.* 128; Pallad. i. 15; Plin. *H. N.* xxxvi. 23, § 55).

The word *rutabulum* ought to be considered as another form of *rutrum*. It denoted a wooden hoe or rake of the same construction, which was used by the baker in stirring the hot ashes of his oven (Festus, *s. v.*). A wooden rutabulum was employed to mix the contents of the vats in which wine was made (Colum. xii. 20, 4; cf. xii. 23, 2). [J. Y.] [G. E. M.]

S.

SACCUS, besides being the general word in Latin (as in all other Indo-European languages) for a bag of any material, shape or size, has special significations which may be noticed here. 1. A form of head-dress. [COMA, Vol. I. p. 499.] 2. A strainer, *saccus vinarius*. This was a linen bag, and often appears simply as *linum* (Hor. *Sat.* ii. 4, 54; Mart. xiv. 103), or *lintea* (*ib.* 104). As will be seen from these and other passages, it was regarded as a bad substitute for the COLUM, because it gave a flavour of its own to the wine. In Greek, *σάκκος* was thus used (Poll. vi. 19). The saccus was often filled with snow to cool the wine, though this was not the most approved method. [PSYCTER.] [W. S.] [G. E. M.]

SACELLUM, a diminutive of *sacer*, signifies a small place consecrated to a deity with an altar in it (Trebon. *ap.* Gell. vii. 12). Festus further defines it as being without a roof (p. 318). Often besides the altar there was a shrine [AEDICULA], as in the line "aram constitui signaque parva deum" (Ov. *Fast.* v. 130), whence the whole would ordinarily be spoken of as a sacellum, though in *Fast.* i. 275 the ara and sacellum are distinguished. The sacred spot, whether it contained merely an altar or an altar and a shrine, was often, and probably most usually, protected by a fence: "uti locus ante eam aram . . . . stipitibus robustis saepiatur" (*C. I. L.* xi. 1420; cf. ix. 5019). This fence was called *cancelli* (*ib.* vii. 83), *concameratio ferrea* (*ib.* vi. 543), *maceria* (*ib.* x. 2066), according to the material of the fence. The word *caulae*, properly used of sheep-hurdles, is used often as a general term for this fence, as of Janus: "quia bello caulae ejus patent" (Macrob. *Saturn.* i. 9, and similarly in Serv. *ad Aen.* vii. 610), whence, in Serv. *ad Aen.* ix. 60, "in sacris aedibus et in tribunalibus saepta quae turbas prohibent, *aulas* vocamus," is, no doubt rightly, altered to *caulas*. The Greek term for this fence is *μάνδραι* (Charis. p. 549), or simply *περίβολος*. These sacella, if they were publicly consecrated, were strictly distinguished as *sacella publica*—we find "curator sacellorum publicorum" (Ephem. *Ep.* iv. 863; cf. MAGISTER VICORUM, p. 110 *b*)—and, with *luci* and *delubra*, were included under the general term *fana* [FANUM]. Such was the sacellum of Hercules in the Forum Boarium, of the Lares (Tac. *Ann.* xii. 24), of Naenia (Fest. p. 161), Pudicitia (Liv. x. 23), Ruminae (Varro, *R. R.* ii. 11), and we may suppose that they represent the oldest kind of consecrated spots before the more costly aedes or templum was built, though many such smaller shrines were of recent construction also. The Romans dedicated also *privata sacella* on their own properties, regarding which Festus (p. 321) quotes Gallus Aelius as saying, "quod privati suae religionis causa deo dedicent, id pontifices Romanos non existimare sacrum." That is to say, its sanctity would derive from the feeling of those who instituted it and would not depend on any state law of religion: hence that which Cicero dedicated to his daughter was not really *consecratum*, but only so regarded by him—"quantum fieri poterat" (Cic. *ad Att.* xii. 18). (See also Marquardt, *Staatsverw.* iii.^{2} 152.) [L. S.] [G. E. M.]

SACENA. [DOLABRA.]

SACERDOS, SACERDOTIUM. A priest among the Greeks and Romans was a person whose duty was to perform on behalf of a state, or of some organic group within the state, a certain ritual, the object of which was to maintain the proper salutary relations between the state or group and the local gods. This definition, it will be seen, implies a fully developed state. That a priesthood did indeed exist before the state, both in Greece and Italy, there can hardly be a doubt; but of its nature and history we have scarcely any knowledge. Nor, indeed, do we certainly know at what point in the development of a people the priest proper first appears. Roughly, it may be said that an organised priesthood is found wherever the relation of God to man is believed to have a certain stable personal character on which the worshippers can calculate and act. (See W. Robertson Smith in *Encycl. Brit.* s. v. *Priest.*) In Greece and Italy this stability of relation seems to have gone with a corresponding stability of human society, *i.e.* a certain amount of social and political development. In the following sketch of the priesthoods of Greece and Rome such development is assumed, and no attempt is made to unravel the earliest history of the growth of a priesthood.

Priests in Greece.—The most general word for a priest is *ἱερεύς* (for a priestess *ἱέρεια*). This word is found in Homer, and lasted throughout Greek history. At all periods its meaning is in the main the same; it denotes a person charged with regular and permanent duties towards a particular deity on behalf of a particular community, and thoroughly acquainted with the traditional mode of performing those duties, whether they consisted of prayer, sacrifice, purification, prophecy, or all of these. He is one "skilled in the rules of sacrifice, prayer, purification," &c. (Stobaeus, *Ecl. Eth.* vi. 5, 122; Gaisf. vol. ii. p. 562). These rules, too technical for the ordinary individual, by which the gods could be in a sense controlled and their goodwill secured, must necessarily be in the charge of a specialist.

The word *ἱερεῖς* also implies the existence of a holy place to which the person so denominated was attached. The priest was in Greece essentially a minister in the service of a temple; this is his true differentia (Plato, *Legg.* 759 A). He was the servant of the god (Plato, *Pol.* 290 C; Eur. *Ion*, 94, 309; Poll. i. 14, *οἱ δὲ τῶν θεῶν θεραπευταὶ ἱερεῖς*) to whom the temple was sacred. His history and development are therefore in each case inseparable from those of the temple itself. In some places, we may suppose, which had become famous for a sacred fountain, tree, or cavern, it became convenient to build the local god a house for his own habitation, and a keeper would be assigned to the house from among the members of the community interested in the worship. This person, who devoted his life, or a certain portion of it, to the care of the god's house and its ἱερά, would be the ἱερεύς. He would thus be a priest of a simple deity, for each temple was the dwelling of one only. To the Greek, a priest was not a priest in a general sense, but the priest of some local Zeus or Apollo, and was almost always so distinguished in Greek literature. (See Nägelsbach, *Nachhomerische Theologie*, p. 207.)

Thus the word is far from containing the idea of a sacred caste, and suggests no settled distinction between clergy and laity. The ἱερεύς was indeed, as compared with the ordinary Greek citizen, a man of professional knowledge, but only in respect of the ritual of his own temple. As every temple had its own strict rules, there was no opportunity for any combined action which might produce a common professional interest. Nor was there at any time a common school of the priesthood, for each priest could learn his duties in his own temple only. And it must be borne in mind that the priests were by no means the only persons who exercised priestly functions; for the king or other magistrate of a state, as well as the heads of families and gentes, could, and did, all offer sacrifices and prayers on behalf of their respective communities. How far the aid of the priest was necessary in any such sacrifice is an obscure question (see Martha, *Les Sacerdoces Athéniens*, p. 73 foll.); but Aristotle clearly distinguished between those sacrifices which were ἱερατικαί, *i.e.* could only be performed by a priest (probably in a temple), and those which were undertaken by the lay head of the community (*Pol.* iii. 14, 12 = p. 1285 b, 10). Thus much is certain, that the Greek mind did not connect the word ἱερεύς with any exclusive prescriptive right of exercising liturgical functions, such as at the present day we are apt to associate with the word *priest*, save only in respect of those which he exercised in his own temple. It is essential to remember this in studying the Greek idea of a minister of religion; but in the present article it is necessary to limit the subject by confining our attention to its more technical aspect.

Not much is to be gathered from Homer as to the position and duties of the priest in the age represented in the poems. Homer describes a state of war and disturbance in which local priesthoods would naturally play no part; and what we hear of them is chiefly from passages of incidental reference. They are not mentioned among the prophets, poets, physicians, &c., in the catalogue of δημιόεργοι in *Od.* xvii. 382 foll.: and this may show (1) that they were not a trained professional body or guild; (2) that they were distinguished from the μάντεις, or wandering diviners. Their duties seemed to have been chiefly, as in later times, those of prayer and sacrifice; hence the names ἀρητὴρ (*Il.* i. 11; v. 78) and θυόσκοος (*Il.* xxiv. 221). They were held in high honour: of the priest of Scamander it was said that he was honoured as a god by the whole people (*Il.* v. 78; cf. xvi. 605). On one occasion only do we hear of insult offered to a priest; *i.e.* at the opening of the Iliad, by Agamemnon to the priest Chryses: and this was so startling as to rouse the anger of the army and bring down the wrath of Apollo in the form of a pestilence. The local priest is represented in *Il.* v. 10 as wealthy and important, a fact quite in keeping with the feeling of later times that priests should be of high descent and substantial means. In *Od.* ix. 200 we hear of a local priest dwelling in a house in close proximity to his temple, with his wife and children; a glimpse of old Greek life which is confirmed, as we shall see, by the evidence of a later age. But further details of the Homeric priests are wanting, even in the Odyssey, and it cannot be assumed that they played an important part in the civilisation which the poems represent. (See Buchholz, *Hom. Realien*, vol. iii. pt. 2, § 178; Gladstone, *Homer and the Homeric Age*, iii. 279 ff., where, however, the Trojan priests are wrongly considered as belonging to a separate civilisation.)

Our information about priests in *historic times* is not only scattered about in a great number of authors and inscriptions, but naturally refers to a great variety of the cities of the Hellenic world, in which the usages varied considerably. It extends also over a period of several centuries, down to the age of the Roman empire; and it is unfortunately the last half of this long period, and not the age of genuine Greek civilisation, which has yielded by far the greater part of our results. It is, therefore, difficult to present a consistent picture of the position and duties of the Greek priest in the centuries which may more properly be called those of Greek history. Under the heads, however, of the qualifications, mode of appointment, duties, and privileges of the priesthood, some account may be given of certain features of special interest.

Qualifications.—In the first place, it was essential that a priest, if a man, should be a full citizen of the state to which the temple belonged of which he had charge; and so also, if that worship were the peculiar property of a gens or family within the state, he must be a full member of that gens or family. Thus, at Athens, no μέτοικος could hold a priesthood; *e.g.* in the case of the priesthood of Heracles, we learn from Demosthenes that no foreigner or metoec could qualify, or anyone who was not a member of a phratria (at that time the test of true citizenship); and he speaks of the priesthood as under the same conditions as the magistracy (Dem. *Eubul.* p. 1313, §§ 46–48). In general terms Plato expresses the same necessity (*Legg.* 759 C), when he lays it down for his ideal state that the priest should be ὁλόκληρος καὶ γνήσιος, *i.e.* sound in all respects, including birth. So also an inscription of Chalcedon (probably of the 2nd century B.C.) forbids a priesthood to be sold to anyone who was not thus sound and in full possession of civic rights (Dittenberger, *Syll. Ins. Gr.* 369). These regulations, however, did not exclude women from priesthoods, and priestesses are met with in all parts of Greece. At Athens a priestess seems to have enjoyed at least some rights of a citizen; *e.g.* she could plead before the council, sign documents, &c. (Martha, *op. cit.* p. 22). For priestesses persons of rank and substance seem to have been preferred; thus in an inscription from Halicarnassus we find that the priestess must be of aristocratic descent for three generations at least (Dittenberger, No. 371). And Aristotle insists that no husbandman or mechanic should be a priest; the gods should receive honour from the citizens only (*Pol.* vii. 9, 8 = p. 1329 a, 29). The Pythia of Delphi seems to have been an exception to this rule, as she was chosen at large from among all the women of Delphi (Eur. *Ion*, 1323: cf. Plut. *Pyth. Or.* 22; Hermann, *Gr. Alterth.* ii. p. 256). This was perhaps for reasons of state, or because it was difficult to procure a woman of the peculiar temperament required by the office.

The second chief qualification was that of purity, bodily and mental. This is also explicitly laid down by Plato in the passage just quoted from the Laws, and is partly implied in the word ὁλόκληρος already mentioned. As all approach to the gods without purification was a sin even in the ordinary worshipper, *à fortiori* it was so in the priest. At Athens no one could hold a priesthood who had led a vicious life (Aeschines, *Timarch.* § 19), or who had neglected his parents (Xen. *Mem.* ii. 2, 13). Bodily purity was equally essential. Strict regulations were often posted at the doors of temples for the guidance of worshippers in keeping themselves pure, which applied even more to the priest; and the highest state of purity was to have a healthy mind, free from guilty conscience, in a healthy body (Newton, *Art and Archaeology*, p. 156). All contact with a dead body, for example, defiled a man; and if a priestly family were temporarily defiled by the death of one of its own members, the priesthood was sometimes forfeited. Thus the death of a child of a priest of Messene is said by Pausanias to have caused a vacancy (Paus. iv. 12, 4). In the same way we find that many priesthoods could only be filled by virgins; and Pausanias mentions one at Calauria where a girl must resign the priesthood of the temple of Poseidon when of age to marry (ii. 33, 3). On the other hand, all the priests of the Ephesian Artemis were eunuchs (Roscher, *Myth. Lex.* s. v. *Artemis*, p. 501 a); and the priest and priestess of Artemis Hymnia at Orchomenus, in Arcadia, were not only cut off from all bodily impurity, but from all intercourse with the world (Paus. viii. 13, 1). Such exaggerated asceticism, however, was not truly Greek in character, and was undoubtedly of Oriental origin. There was no general rule against the marriage of a priest. The regulations suggested by Greek thinkers were also more moderate; both Aristotle and Plato recommend only that priests should be of advanced age (Ar. *Pol.* vii. 9, 9; Plato, *Legg.* 759 D). Old men and women actually occur, as at Delphi and Athens, instead of virgins, for the care of the perpetual fire; but this may have been a later custom, arising from the difficulty of getting virgins to serve (Plut. *Num.* 9). Boy-priests are occasionally mentioned, who served until the age of puberty (Paus. vii. 24, 2, where the boy must be of remarkable beauty; and *C. I. G.* 6206). In these examples of priesthoods filled by persons of old age or extreme youth, we may also perhaps see the call for purity combined with the Greek feeling that a man in the prime of life was required for the service of the state.

Mode of appointment.—This was by no means uniform; but we may discern three principal methods, which in rough chronological order would be—(1) by hereditary descent, *i.e.* by devolution or selection out of a gens or family; (2) by public election, either by means of open voting or the lot; (3) by purchase.

1. As regards the first of these, we have abundant evidence that many priesthoods descended in the same family or gens, though we know little of the method by which the priest was chosen from among its members. The reason of such hereditary right is not far to seek. A cultus which had been peculiar to a family or gens before its absorption in a state, retained, even after that absorption, the right to be served by a member of that minor group only; the perfect performance of its ritual being in this way better secured. Thus the family of Gelo of Syracuse claimed to be hereditary hierophants of Demeter and Persephone in the city of Gela, because their ancestor Telines had brought the *sacra* of that worship from Cnidos (Herod. vii. 153). At Athens the Eumolpidae held the office of hierophant of the Eleusinian mysteries, the Eteobutadae the priesthood of Athene Polias, the Gephyraei that of the Achaean Demeter, the Hesychidae that of the Eumenides, the Phytalidae that of Demeter, Poseidon and Theseus, &c. (see for these and other instances, Maury, *Rel. de la Grèce*, vol. ii. 387 foll.). So too, at least in later times, it was not uncommon for a state to grant a hereditary priesthood to one who had been a benefactor of the cult (*C. I. G.* 2448; Martha, *op. cit.* p. 38). Maeandrius of Samos proposed to establish in his family a perpetual priesthood of Zeus, as compensation for giving up the tyranny, on the ground that he had built the temple of the god (Herod. iii. 142). As to the mode of succession to the office in these cases, we know of instances in which the eldest son succeeded (*C. I. A.* ii. 410; *C. I. G.* 2448; Martha, *l. c.*); and a Halicarnassian inscription informs us of a priesthood in which the succession was not from father to son, but from brother to brother, devolving to sons of the eldest brother in order of seniority, then to sons of the next brother, and back again to the grandsons of the eldest brother (Newton, *op. cit.* p. 152). In other cases the lot seems to have been used. Thus in the family of the Eteobutadae a priest is mentioned as λαχὼν ἐκ τοῦ γένους τὴν ἱερωσύνην: in this case, however, he was able to hand on the office to his brother, and perhaps too much stress should not be laid on the word λαχών (Plut. *Vit. X. Oratt.* 38. 39, p. 843 F; Schömann, *Gr. Alt.* ii. 405). But our knowledge on this point is still scanty.

2. Of appointment by voting we hear little. An instance seems to occur as early as Homer (cf. *Il.* vi. 300, τὴν γὰρ Τρῶες ἔθηκαν Ἀθηναίης ἱέρειαν, with the note of the Scholiast in *Cod. Venet. Marc.* 453). Another is recorded in *C. I. G.* 2270, 18, from Delos; but this seems to have been a preliminary selection of candidates only, and not the final election, which was by means of the lot. At Athens, as elsewhere in Greece, the commonest practice seems to have been to elect by lot; and it is recommended by Plato on the ground that the lot was an indication of he divine will (*Legg.* 759 C). Virgil was aware of the Greek custom, and describes Laocoon as "ductus Neptuno *sorte* sacerdos"

(*Aen.* ii. 201). Examples are found in inscriptions (see *C. I. A.* 352 b and 567 b; and a paper by Boeckh in *Phil. Museum*, vol. ii. p. 453; also Dittenberger, No. 356, 9 = *C. I. A.* 489 b.). In some cases at least, this sortition seems to have been preceded by some kind of selection of candidates for whom the lot might be cast. Thus in the case of the priesthood of Hercules, mentioned in Demosth. *Eubul.* l. c., it was counted an honour to Eubulides to have been among those so selected. A somewhat similar practice is mentioned in Paus. vii. 25, 13, in the case of a priestess at Aegae in Achaia; and the Delian inscription quoted above (*C. I. G.* 2270; Martha, p. 32) mentions a priest of Dionysus who was both chosen by the people and also by lot, and points therefore in the same direction. But it does not appear whether the selection was always by voting, or in some other way.

3. As to the practice of purchasing priesthoods, we have only in recent years gained any adequate information. A passage of Dionysius of Halicarnassus (ii. 21) had indeed suggested it, in which Romulus is described as appointing to the Roman priesthoods neither by *putting them up for sale* nor by the lot, but in another way. In 1830 Boeckh published an inscription from Halicarnassus (*C. I. G.* 2656; Dittenberger, No. 371) which contains a decree affecting the priestess of Artemis Pergaea, who had purchased her priesthood; and it became evident that Dionysius was alluding to a practice of his own city. Since that time several other inscriptions have come to light, which show that Halicarnassus was by no means the only place where priesthoods were sold, and the practice is now proved for Chalcedon, Erythrae, Andros, and Myconos (see Dittenberger, Nos. 369, 370, 371; Le-Bas Waddington, *Asie Mineure*, pp. 408 and 457). The details of the transaction are still imperfectly understood, and further light is needed. The inscription from Erythrae, however (Ditt. 370), is an extremely interesting document, giving a very long list of these purchases, and the prices paid for the priesthoods, which ran as high as 4,600 drachmas in the case of that of Hermes Agoraios, while others fetched comparatively small sums. These priesthoods seem to have been put up for sale at the same time, and could hardly have been held for life (see Lehmann, *Quaest. Sacerdot.* p. 52, Königsberg, 1888; cf. also Herbrecht, *de Sacerdoti apud Graecos venditione*, Strasb. 1885); but these questions are still under discussion. It is to be noticed that the practice, so far as we know, was confined to Asia Minor and the islands of the Archipelago; no instance is known at Athens, nor any of earlier date than the 3rd century B.C. (Herbrecht, p. 6). It is probable, therefore, that the custom arose under the financial pressure caused by the wars among the successors of Alexander (Droysen, *Hellenismus*, ii.² p. 355; iii. 191 foll.), and was found a sufficiently lucrative source of revenue to spread rapidly (Lehmann, p. 53 foll.). It points not only to the material advantages of the priest's position in later Greek history, but also to a great multiplication of priesthoods, and to a serious degeneracy in the popular estimation of the priestly office. (The literature of this still obscure subject will be found quoted, up to date, in Lehmann, *op. cit.* p. 7.)

Duties.—These may be described as partly liturgical, partly administrative. In no case did they include education, either moral or intellectual. The liturgical duties would include the whole of the temple-service: viz. the conduct of sacrifices, both those which were public (*i.e.* on behalf of the state) and those offered by individuals on their own account (see SACRIFICIUM and Dittenb. No. 371), including the offering of the proper prayers and invocations. How far the priest had the *exclusive* right of sacrifice and prayer in his own temple is uncertain; but there is no doubt that it was usual for him to superintend private as well as public worship, as being expert in the proper ritual and formulae. Thus in the parody in Aristoph. *Av.* 864 foll. it is the priest who leads the prayer, selecting the proper epithets of the supposed gods. (Cf. Aesch. *in Ctes.* § 18, where the proper function of the priests is described as to pray to the gods on behalf of the people; cf. also Dittenberger, 369, 371.) To these duties may also be added that of the care of the statue of the deity to whom the temple was dedicated, which, in some cases at least, had to be constantly washed, dressed, and served with repasts on τράπεζαι (Martha, *op. cit.* p. 45, foll.), in accordance with the survival of the primitive belief that the god actually resided in the statue. Thus the priest was essentially the servant of the god (Serv. *ad Aen.* i. 73, "dicatus est numini, hoc est ad obsequium datus est"; cf. Eurip. *Ion*, 131; Poll. i. 14).

Under the head of administration may be included in the first place the charge of the fabric and contents of the temple. In the Chalcedonian inscription already quoted, the priest is directed κοσμεῖν τὸν ναὸν καθ' ἡμέραν, and to see that the stoa in front of it is swept clean. He had also to see that the regulations of the temple in respect of the conduct of worshippers were thoroughly carried out, as we learn, *e.g.*, from an inscription of Ialysus in Rhodes containing a law relating to the sacred precinct round the temple of Alectrona (Newton, *Trans. Royal Soc. Lit.* xi. 443). From Athens we have also an inscription (*Ephem. Arch.* 3139) containing a proclamation issued by the priest of the temple of Apollo, who, in conjunction with the demarch, is to exact a fine from anyone taking timber or firewood from the ἱερόν (Newton, p. 156). The priest was thus in this case, as no doubt in many others, joined with the civil authority in the protection of the temple from sacrilege. But with him, as with the dean of a modern cathedral, lay the immediate responsibility: thus we find the priestess of Athene on the Acropolis personally withstanding Cleomenes the Spartan king when he tried to force an entrance into her temple (Herod. v. 73). In enforcing these rules they were in larger temples assisted by vergers and constables under various names (ῥαβδοφόροι, κλειδοῦχοι, ζάκοροι, νεωκόροι, &c.; see Martha, *op. cit.* p. 88 foll.; for slaves and diaconi, Newton, *Essays*, p. 165). With the more important management of the revenues, repairs, &c., and the general administration of the property of the temple, the priest in historical times seems to have had little to do. The union of all functions, liturgical and other, survived no doubt in smaller temples in country districts (see esp.

Arist. *Pol.* vi. 8, 18); but in all large cities of which we possess detailed information, the management of sacred property had passed almost entirely into the hands of the state by the time when inscriptions begin to be instructive on this subject (*i.e.* from the latter half of the 5th century B.C.). As the temples developed into public and also private banks, it became impossible to make the priests responsible for their treasures; under various names (*ταμίαι, ἱεροποιοί, ναοποιοί, ἐπιμέληται*, &c.) public officers were appointed for the purpose not only of taking charge of the treasures and other property, executing repairs, &c., but for providing victims and disposing of their skins. [On this subject, which lies outside of the scope of this article, see articles ARGENTARII, DERMATICON, SACRIFICIUM, and VECTIGALIA TEMPLORUM; Schömann, *Gr. Alth.* ii. 397; Homolle in *Bull. Corresp. Hell.* vi. pp. 1–167 (for Delos); Martha, *op. cit.* pp. 88–114, and Hicks, *Gr. Hist. Ins.* p. 88 foll. (for Athens); Dittenberger, No. 294 (for Delphi); Newton, p. 154.]

On the whole it may be concluded that the later the age the more strictly ritualistic do the priest's duties become; and it is significant that in one inscription, of a date not long before the Roman empire, the conditions under which the priesthood is sold include a rule that even the fees paid in by worshippers in the temple of Artemis are to be under the charge, not of the priestess, but of *ἐξετασταί*, *i.e.* auditors (Dittenb. No. 371, line 30, foll.).

Privileges.—In return for their duties, the advantages of the priests were considerable. At all times they were held in high honour, and their persons were deemed inviolable. Homer, as we saw, describes them as honoured by the people like gods (*Il.* v. 78, xvi. 605). When Cleomenes insulted a priest at Argos, he was considered mad (Herod. vi. 81 and 84). When Alexander sold the Thebans into slavery, he excepted the priests only (Aelian, *Var. Hist.* xiii. 7). At Athens, where we know most about their position, they were reckoned as equal to the magistrates, accompanied them in public processions, and had seats of honour with them at the dramatic representations (*C. I. A.* ii. 410, 589; Martha, p. 128 f.); facts which are not astonishing if it be remembered that the distinction between magistrate and priest was not clearly conceived in the earliest times, nor at any time so sharp as that to which we are ourselves used. Decrees of special honours awarded them are not uncommon in inscriptions (*C. I. G.* 1063, 2270, 2462; *C. I. A.* ii. 410, 589). In many cases they enjoyed a house adjoining the temple (*Od.* ix. 200; Paus. ii. 11, 6; x. 34, 7); whether this was so, however, at Athens and in large cities, may be doubted (Martha, p. 119). Lastly, they had certain perquisites arising from sacrifices, which must have formed a considerable source of income. These are described in many inscriptions from various parts of Greece, and show a great variety of usage in respect of the portion of the victim which fell to the priest; generally, however, these were the skin and legs, and often the tongue (Dittenb. 373, 376, 379; *C. I. A.* 610, 631; *Journ. of Hellenic Studies*, vol. ix. p. 328; and article SACRIFICIUM). These perquisites were apparently universal in the case of private sacrifices, and fees paid on these occasions are also mentioned (*C. I. G.* 2656; Newton, p. 158); but at Athens, when public sacrifices of a great number of victims were offered at one time, the skins were sold for the state (Martha, p. 123 foll.; Boeckh, *Staatsh.* Appendix viii. and viii. b; DERMATICON). They were also enriched by the offerings of fruits, cakes, &c., constantly brought by worshippers for the use of the god, which, believed by primitive man to be consumed by the god himself, had gradually come to be regarded in Greece, as elsewhere, as the priest's perquisite (see esp. Aristoph. *Plut.* 676). In some few cases, but apparently only in later times, they were empowered to collect money (Dittenb. 369, 371, 393; for the priests of Cybele, Cic. *de Leg.* ii. 9, 21). They must, therefore, have had ample means of amassing wealth; and this is confirmed both by the monetary value of priesthoods noticed above, by the competition for them, and by the evidence we possess from inscriptions of valuable endowments presented by some of them to their temples (Newton, p. 161).

In conformity with their general character as a part of the community, and not distinct from it, the Greek priests wore no dress that can be called distinctive. The wreath on the head, with which the priest always appears in vase-paintings and sculptures, was worn by all persons when sacrificing, and was as much the mark of the magistrate as the priest. These wreaths seem to have been often taken from the tree sacred to the deity to whom the sacrifice was made; thus the laurel was used in the worship of Apollo (Bötticher, *Baumkultus*, p. 313). The hierophant and daduchus of Eleusis wore also a *στρόφιον* or head-band (Arrian, *Epictet.* iii. 21, 16), and also wore their hair long, a practice which seems to have been not uncommon (Plut. *Arist.* 5). On the monuments priests generally appear in a long chiton, of the old-fashioned kind discarded by the Athenians in the Periclean age; so the priest and priestess of Athene appear in the frieze of the Parthenon. Such a chiton would seem also to have been worn by the Pythia of Delphi, as appears from a vase-painting of which a cut is given in Baumeister's *Denkm.* p. 1110. These garments were certainly as a rule white. This is what Plato enjoins in the Laws (956 A); and it is also enjoined on the initiated in the mysteries of Andania (Dittenberger, 388, 17). Thus Plutarch, writing of the son of Aratus offering sacrifice at his father's grave, mentions, as an exception to the general rule, that he wore a *στρόφιον* which was not entirely white (Plut. *Arat.* 57; Id. *Arist.* 21). A more ornamental dress, both as to colour and adornment, seems to have been occasionally worn in later times, *e.g.* at the Eleusinian mysteries (Maury, *op. cit.* ii. 400), and purple is mentioned as early as Aeschylus (in the cult of the dead: *Eum.* 982; cf. Schömann, *Gr. Alt.* ii. 412). But in most cases where the dress is peculiar, we may suspect that the priest or priestess is *personating* the deity to whom sacrifices are offered. This may be so in the case of Iphigeneia as priestess of Artemis represented on a vase (Baumeister, p. 757; cf. Paus. x. 24, 4). The aegis of Athene was worn on certain occasions by her priestess at Athens (Suidas, *s. v.* αἰγίς). For this class of practices, which in some cases seems to have a totemistic origin, see F. Back, *de Graecorum caerimoniis in quibus homines deorum vice fungebantur*, Berlin, 1883; Hermann, *Gr. Alth.* ii. sec. 35.

There remains the question whether the Greek priest was consecrated to the service of his deity by any kind of ceremony. If such ceremony existed, we hear nothing certain of it. Lucian, indeed, mentions the ὁσίωσις of the hierophant and daduchus of the Eleusinian mysteries (*Lexiph.* 10); and in the Chalcedonian inscription already quoted the word ἄνθεσις = ἀνάθεσις indicates some kind of dedication of the priest; either an inauguration only, as Dittenberger thinks (p. 524 note), or a dedication to the god of the kind by which slaves at Delphi and elsewhere were made over to the service of the temple (Herbrecht, *op. cit.* p. 33). Whatever was the ceremony at Chalcedon, it is at least significant that the word ἀνατιθέναι is habitually used of dedicating objects by way of gift in the temples, and the inference would seem to be that the priest himself was reckoned as the property of the god; a notion which falls in sufficiently well with the other facts which have been already mentioned in the foregoing account.

Priests at Rome.—An account of the several Roman priesthoods will be found in the articles on **Pontifices**, **Augures**, **Flamines**, &c.; it will be sufficient here to give a brief outline of the history of the Roman priesthood generally, in order to compare it with the Greek sacerdotal system. In the earliest times it is probable that the Roman idea of a priest and his duties differed but little from that of the Greeks; he was assigned to the worship of a particular god and exercised no direct political influence. The general name for such priests was flamen (*i.e.* kindler of sacrificial fire), and they continued in existence with gradually decaying importance to the latest times. But their influence was steadily overshadowed by that of those great colleges which we always associate with religious government in Roman antiquity, especially the pontifices and augurs; and thus a new element was introduced which is quite foreign to anything we have met with in Greece. It is a curious fact that at the very time (the end of the monarchy and first age of the Republic) when Rome was becoming penetrated by Greek religious ideas, the simple and unpolitical priestly system which survived in Greece was giving way to a new development which was distinctly Roman and political. It is the history of this change which we must be content to trace here.

Period of the Monarchy.—Every Roman was the priest of his own household [Sacra], and every action of the household had its religious aspect. In the state we see the same leading feature, that the rex was priest for the whole people. This is sufficiently proved (1) by the appointment of the rex sacrorum when the monarchy came to an end, in order to keep up the virtue of certain sacrifices which had been performed by the king; (2) by the position of the pontifex maximus from the outset of the Republic: his office was in the king's house [Regia], the flamens and vestals were in his *patria potestas*, and it was he who succeeded the rex in most of his religious functions.

To maintain, then, the full rights of the god as against the state, *i.e.* to fulfil in the minutest detail the state's duties towards the gods, was a most important part of the king's sphere of action; and here we get at once the germ of the whole Roman conception of a public cult, which was maintained consistently throughout Roman history. The gods are always in direct relation to the state and to its magistrates. They are regarded as interested in the state as a state, and as calling for the fulfilment of duty from the state in the person of its appointed rulers. (This point may be illustrated by reference to the significant fact that the property belonging to the temples was not managed by the priests, but by the magistrates. See Mommsen, *Staatsrecht*, ii.^{2} 1, 60 foll.)

In the earliest form of the state the king and his household may have sufficed for the performance of these duties. His unmarried daughters were the vestals who attended to the sacred fire of the state in the king's house (Frazer, *Journal of Philology*, vol. xiv. 154 foll.); and the origin of flamines may be traced to the king's sons, whose duties were to kindle the sacrificial fire for the worship of particular deities, *e.g.* Jupiter, Mars, Quirinus, &c. Such at least is a fair inference from the fact that, as was mentioned above, both flamens and vestals were in the *patria potestas* of the rex, as afterwards of the pontifex maximus. This was the earliest form of state worship so far as we can guess it; for further details as to the religious duties of the king, see Rex.

It is obvious that as the state increased in size and began to come into collision with its neighbours, *i.e.* as the judicial and military duties of the king grew more complex, he would find it more difficult to fulfil with the necessary precision the state's duties towards the gods. Thus already in the regal period we hear of the introduction, generally ascribed to Numa by the Romans themselves, of certain colleges of priests besides the vestals and flamens. Dionysius (ii. 64, 70 foll.) mentions the **Augures**, **Pontifices**, **Salii**, **Fetiales**, and **Tribuni Celerum**, to which may certainly be added the **Fratres Arvales** and **Sodales Titii**. He also mentions the thirty curiones or priests of the Curiae (see **Curia** and **Sacra**), but these were not state priests in the strict sense of the word.

None of these priesthoods, however, had any great influence on Roman history, or contributed to the great change in the religious system which took place in the period of the Republic. In order to understand this, we must turn to the Pontifices and the Augurs.

It is not possible to determine with certainty what part was played by these two colleges under the monarchy, or to what extent they were, strictly speaking, *sacerdotes* at all (Mommsen, *Hist.* i. 177). They may have formed bodies of advisers of the king on religious matters of importance; and the king was probably at the head of each of them, and chose them himself from the patrician gentes, to which all priesthoods then and for long afterwards were confined (Marquardt, iii.^{2} 240 foll.; Mommsen, *Staatsrecht*, ii.^{3} 24 foll.). The Augurs, we may presume, advised the king, or acted for him in all the minute lore of the old Italian ritual of dedication and inauguration [see TEMPLUM and AUSPICIA]; the Pontifices, in all matters of the *jus divinum*, i.e. of the laws of marriage, burial, portents, and general religious supervision (Liv. i. 20). For detailed information about these colleges, references may be made to the separate articles. It is easy to see how with the rapid development of the state under the last two kings, and with the admission of the Plebs to a voice in the government, the increase of territory and the consequent admission of new cults, the administration both of the *auspicia* and the *jus divinum* must have tended to pass more and more from the king into the hands of these experts. And it is in this way that we must explain their rapid rise to power when the Republic came to an end.

Period of the Republic.—Three great, though gradual, changes are to be noted in this period. The first of these is the natural development of the influence of the Pontifices and Augurs, which was already on the increase towards the close of the Monarchical period, and the corresponding decay of the purely sacrificial priesthoods. So long as the king was the centre of all state religion, appointing and controlling the priests, and being himself of their number, it had been impossible for them to acquire any overpowering political influence; but when the state came to be governed by yearly elected magistrates, who could not be specially trained in religious law or lore, a great opportunity was offered to the experts both in the *jus divinum* and in the *ritus auspiciorum*, of which full advantage was taken. The Pontifices became the advisers of the republican magistrates on all technical matters relating to religious law, and thus gained a permanent hold on the state machinery as well as on the private life of individuals.

Secondly, we have to note the rise to power in this period of a third great priesthood, already instituted by the last king, which henceforth ranked with the Pontifices and Augurs as one of the three great religious collegia,—the *decemviri* (at first *duoviri*, later *quindecimviri*) *sacris faciundis*. [See DECEMVIRI, Vol. I. p. 601; SIBYLLINI LIBRI.]

Thirdly, the decay of the older priesthoods in this period is hardly less striking than the gradual development of the power of the three great colleges. So long as the Romans retained something of their native religious feeling, these priesthoods no doubt kept a certain hold on the popular mind; but as new forms of religion came in, as the pontifical theology adapted itself to them, and as Rome advanced in conquest and the absorption of foreigners, they were left, as it were, stranded, and void of meaning. Towards the close of the Republic they began to disappear altogether, and we have the singular historical phenomenon of obsolete curiosities like the Flamen Dialis and the Fratres Arvales being restored at the beginning of the Empire, when once more the general supervision of the state religion was concentrated in the hands of a monarch. One only of these priesthoods retained its life and prestige almost undiminished throughout the whole of Roman history—that of the Vestal virgins; a fact that can be explained partly by its feminine character, which kept it out of all competition for political influence, and still more by the nature of the worship of Vesta as the religious focus of the state-life, and the legends which in the popular fancy connected it with the foundation of the city.

There were other changes of a more technical character in this period, besides those which immediately affected the relative importance of the several priesthoods. While the offices of Rex sacrorum and the older sacrificial priesthoods were always confined to patricians, the three great collegia were in course of time thrown open to plebeians also. With the gradual equalisation of the orders, it was found that those had grown too politically important to escape the plebeianising of the secular magistracy. The democratic changes first in the number of members in these collegia and the admission of plebeians, and secondly in substituting election for the more exclusive cooptation, have been detailed in the articles AUGUR, DECEMVIRI, and PONTIFEX. Thus the great Roman priesthoods were in this period steadily carried along by the full force of the political current to which they owed their power, while the more antiquated ones left the centre of the stream and were gradually stranded. And thus also it came about that the Roman religion and its ministers, though having to deal with matters so technical and a sacred law so minute as apparently to offer every chance for the growth of a powerful priestly caste, never became dissociated from the state, or from the public life and interests of the individual citizen; and Cicero could boast with truth that there was no grander principle in the constitution than that which placed the best men in the state at the head at once of the religious system and of the political machinery (*de Dom.* 1, 1). And this in spite of the fact that the priesthood and the magistracy were as such entirely dissociated from each other in Roman constitutional law; no priest having by virtue of his office any direct hold upon the state-machinery, and no magistrate having any part in the state's religious functions (Mommsen, *op. cit.* pp. 17 foll.). This was the republican theory; and though towards the end of that period there were signs of its collapse (as in the details of the new system of election), it maintained itself on the whole until further great changes took place on the establishment of the Empire.

(For the relation of the *haruspices* to the priesthoods during the Republic, see Marquardt, *Staatsverw.* iii. 410; they were not properly a priesthood, and are here omitted from consideration. For what little is known of the municipal priesthoods of Italy in this period, see the same work, pp. 475 foll.)

Period of the Empire.—The history of the priesthood under the Empire is a subject of great difficulty, and as yet imperfectly investigated. It must suffice here to give a brief outline, which may partly be filled up from the works of Mommsen and Marquardt already quoted, Henzen's *Acta Fratrum Arvalium*, and especially from a tract by P. Habel, *de pontificum Romanorum inde ab Augusto usque ad Aurelianum condicione publica.* Popular accounts of particular aspects will be found in Boissier, *Religion Romaine*, vol. i., and Friedländer, *Sittengeschichte*, vol. iii. Cp. also Bouché-Leclercq, *Les Pontifes*. But no work can be done in this period without constant reference to the *Corpus Inscriptionum*, and the best works on coins of the period.

The subject falls into three divisions: 1. The union of the existing priesthoods in the person of the emperor; 2. The new priesthoods connected in Italy and the provinces with the worship of the emperors; 3. The priesthoods of the foreign worships introduced in the period.

1. Julius Caesar was already pont. max. when he attained to supreme power. Augustus waited until the death of Lepidus, who had succeeded Julius, and was not elected till B.C. 11 (*Mon. Ancyr.* ed. Mommsen, p. 28). From that time onwards the office was not only an invariable accompaniment of the imperium, but was reckoned at the head of all the other offices (Mommsen, *Staatsr*. ii. 19), and in the title followed the *cognomina* immediately. With this the emperor also held the augurship, and was a member of the other two great collegia of the *quindecimviri* and the *epulones* (Marquardt, 222); and the same policy was pursued, in a greater or less degree according to the standing of the individual, with regard to his sons or other male relatives (Habel, *Caesares*, p. 60 f.). In his hands also, directly or indirectly, was the power of filling up vacant places in these colleges (Dio Cass. xlii. 51); and thus it may be said without exaggeration that the days of the early monarchy had returned, and that the union of the secular and religious powers in the state was complete. It must, however, be remembered that these great priesthoods had by this time done their work, and that we rarely find instances of their being put by their imperial holders to any important practical use. They served to increase the *dignitas* rather than the *potestas* of the emperor, who was seldom present at meetings of the collegia, and the actual work, such as it was, was probably done by substitutes (*promagistri*, Habel, 90). Even in the case of the supreme pontificate, which alone might be regarded as exercising a great influence over the life of Roman citizens so long as questions of adoption, sepulture, &c., could arise, it is hard to prove this influence by actual examples (see, however, Tac. *Ann.* iv. 16, vi. 12; Plin. *Epp. ad Traj.* 68). We must in fact regard them as little more than useful ornaments; but as ornaments which increased their prestige, and carried it into the remotest parts of the Empire. In the same way the right of filling up the *collegia* became a powerful source of patronage, and served to secure the goodwill and allegiance of important personages and their families, without giving them burdensome duties. (*Agricola*, e.g., was many years absent from Rome after his appointment to the pontificate: Tac. *Agr.* 9.) Thus it was an object of ambition to secure one of these priesthoods, and we have the evidence, both of historians and inscriptions, that they were valued at a higher rate even than magistracies (Habel, 88, and reff.). Thus the greater priesthoods of the Republic were absorbed into the personal equipment and patronage of the emperors, and so continued, gradually losing more and more of their original use and meaning, until Christianity became the state religion. Meanwhile the more antique priesthoods, which we left in a state of decay at the end of the republican period—the Rex Sacrorum, Flamines, Fratres Arvales, Salii, Sodales Titii, &c. [see under the separate articles]—had been revived indeed by Augustus, according to his policy of renovating and completing the religious outfit of the state, and thus satisfying the popular feeling for a better service of the gods; but in most cases they survived, not so much by pursuing their original ritual as by transforming it to suit the worship of their patrons (Marquardt, iii. 438), and may thus be better noticed under the next heading.

2. The most striking feature of the religious history of the Empire, viz. the deification of the emperor, naturally produced new priesthoods, the importance of which, both in regard to society in the capital and organisation in the provinces, forms a complete study in itself, and can only be very briefly alluded to here. In Rome and Italy, it was the policy of Augustus to discourage his own worship (Suet. *Oct.* 52; Dio Cass. lii. 35); but inscriptions show that in spite of this there was an unauthorised cult of him even in his lifetime in several Italian cities, presided over by *flamines* or *sacerdotes* (flamen being the general word in use in municipia), *e.g.* in Pisa, Praeneste, Pompeii, Beneventum (Marquardt, iii. 465, note 1). Later on this cult was organised in all the municipia of Italy, in conjunction with that of other emperors, and was maintained by *flamines* together with *Augustales*, a kind of sacred guild belonging chiefly to the inferior classes, but invested apparently with a certain priestly character (*C. I. L.* v. 3386; AUGUSTALES). After the death of Augustus, Tiberius pursued the policy of declining divine honours for himself, while on the whole he encouraged the worship of his predecessor; and in the first year of his reign (A.D. 14) was established the famous priesthood which was specially intended in Italy to maintain the cult of Augustus [AUGUSTALES], which reckoned thenceforward as one of the great priesthoods, and received as its symbol the *bucranium*, answering to the *simpulum* of the pontifices, the *patera* of the *epulones*, &c. In its sphere was included the worship of Claudius, the next emperor who was deified, and then we hear of Sodales Augustales Claudiales; later on again of a new priesthood on the same model for the worship of Vespasian, and afterwards of Titus (Sodales Flaviales Titiales), and so also with that of Hadrian and Antoninus Pius, so that the number of these priesthoods became eventually four, the last established serving for the cult of later emperors (Marquardt, iii. 479 foll.; Dessau in *Eph. Epigr.* iii. 205 f.; Desjardins, in *Revue de Philologie*, iii. 33 f.). Thus, even in Rome and Italy, not only did the emperors absorb into their own persons and families the dignity and prestige of the great existing priesthoods, but they enjoyed the advantage arising from an organised priestly worship of their predecessors, with the anticipation of the same honour for themselves after death. And, with the same object as was mentioned under the last head, the ancient sacrificial priesthoods revived by Augustus were made to contribute, so that throughout the whole range of priestly functions the new political system

and the new turn given to religion were alike everywhere present. Thus the name of Augustus was included in the *Saliare Carmen* used by the Salii (*Mon. Ancyr.* p. 27), and this honour was also paid to several later emperors and members of the imperial families. The LUPERCI had a new collegium gentilicium added to them in B.C. 44, that of the Luperci Julii, which continued far into the Empire. The Sodales Titii numbered Augustus and Claudius among their members, and were under obligations to Vespasian (Marquardt, 447). But it is from the fortunate discovery of the inscriptions of the Arval Brotherhood that we gain far the most insight into the way in which all kinds of religious ceremony were pressed into the service of the Empire; and a study of Henzen's *Acta Fratrum Arvalium* is perhaps the best introduction to a study of the new system [see ARVALES FRATRES]. Thus the odour of sanctity adhering to the oldest rural priesthood of the primitive Romans was made to contribute to the lustre of the latest imperial system, even down to the time of Constantine and his sons, and after Christianity had become the recognised religion of the Empire (Marquardt, 462).

In the *provinces* the priesthoods of the new worship came to be of very great importance. It was here the policy of Augustus to associate his own cultus with that of *Dea Roma;* and this conjunction was steadily retained and systematised, and is to be carefully distinguished from all other forms of the apotheosis which made their way into the provinces. (See Desjardins, in *Rev. de Philol.* 1879, pp. 42, 63.) In almost every province we find a *sacerdos* (or *flamen*) *Romae et Augusti provinciae;* the priestly title is found in numberless inscriptions under various forms, both in Latin and Greek (ἀρχιερεύς), and occurs in a shortened form as simply *sacerdos provinciae.* This great priest was elected yearly (in most provinces, but for Asia see W. M. Ramsay in *Classical Review,* vol. iii. p. 175) by the general meeting of representatives from the various cities of the province (*communia, concilia, κοινά*), from persons of consideration among the provincials, and was charged with important duties, such as the collection and management of the funds for the temples of the cult, the presidency of the games, and also of the assemblies of *legati* just mentioned [NEOCORI]. Of this assembly he was also the immediate representative in all communications with the emperor, and was thus independent even of the provincial governor. His importance in the development of the imperial system can hardly be over-estimated. (Desjardins, *l. c.*; P. Giraud, *Les Assemblées Provinciales,* Paris, 1888; Marquardt, *Staatsv.* i. 366; *Ephem. Epigr.* i. 200 f.)

The cities of the provinces, as well as the *communia* or *κοινά*, possessed priests of the worship of Rome and Augustus: this was at least the case in the African provinces, where they constantly occur in inscriptions under the titles of "flamen Augusti," "flamen Augusti perpetuus," or "flamen" simply. As these appear to have been elected yearly, it is probable that the epithet "perpetuus" indicated an honorary rank conferred in some cases on the holder. *Flaminicae* also occur, as in the worship of the *Divi* in Italy. The word *sacerdos* is also found in these inscriptions, but it is uncertain whether these were identical with the flamines. These municipal priesthoods may be considered as a subordinate part of the main provincial organisation of the worship of Rome and the emperors, and distinct from that of the Divi, which is found in the provinces also (Desjardins, *op. cit.* 55 f.; FLAMEN).

In the 4th century A.D., after the establishment of Christianity by the state, these titles, under the forms of *sacerdotales* and *flamines perpetui,* constantly occur, though their original meaning had vanished; and it is supposed that they indicated some dignity or honorary rank in the Ordo or Senate of a municipium (Desjardins, *l. c.*); i.e. they are no more than the civil survival of a once living religious organisation. It was in fact in the first three centuries of the Empire that these priesthoods were working realities in the imperial system; and both the nature of the cult and of their duties would enable them easily either to survive as non-religious titles or to disappear entirely. But the process by which these changes were effected is not yet fully investigated.

3. Some reference must be made here, in general terms, to the priests of the foreign worships which found their way to Rome and Italy in the first three centuries of the Empire. In a priesthood are usually found expressed the leading characteristics of a religion, as we have already seen both in Greece and Italy; and the success of a new form of priesthood indicates the presence of a new type of religious feeling. The Roman world, now become cosmopolitan, had outgrown the narrow formulae of the native religion, and the Roman priesthood had become first political, then imperial, in its character. Ever since the attempted introduction of the Bacchic rites in the 2nd century B.C., it had been obvious that there was a growing desire in Italy for some more emotional form of worship, which that priesthood could not supply, and which could not be satisfied even with the continuous invasion of Greek rites under the influence of the Sibylline books and their keepers. The Roman priests had little or no desire or opportunity of inculcating virtue; the notions of sin, penitence, regeneration, brotherhood, were wholly foreign to their worship, or at best were present there in a fossilised form, and had reference to the state rather than the individual. These were exactly the ideas which ruled in the Oriental forms of religion which the Romans met with as their empire extended itself in the East; and these, transported to Italy and even further west, found there a congenial soil. It is the tendency of all such worships to magnify the influence and mystic power of the priesthood; and thus the last type of priest which we find in the ancient world before the final victory of Christianity was, in its relations with individuals, the most powerful and efficacious of all the series. So much was this the case, that the priestly defenders of the old religion against Christianity frequently found it politic to clothe themselves also with the attributes of one of these more effective priesthoods (Boissier, *Religion Romaine,* i. 445).

Among these may be mentioned—1. The priests of Cybele or the Magna Mater, whose worship was introduced as early as 208 B.C., but did not take its most emotional form till the period we are now dealing with [see MEGALESIA]. Of the same character were the famous TAUROBOLIA, where the priest (*taurobolus*) underwent a baptism in the blood of the victim, the virtue of which he then communicated to others.

2. Another cult in which the priestly power was great was that of the Cappadocian *Bellona*, who even in republican times had usurped the place and name of an old Italian goddess. The priests and priestesses of this deity walked the city robed in black (Mart. xii. 57), wounding themselves as a sacrificial act: "ipsi sacerdotes non alieno sed suo cruore sacrificant" (Lact. *Inst.* i. 21, 16; cf. Tibull. i. 6, 45).

3. But the most striking of all these priesthoods was that of Isis and other Egyptian deities, especially noticeable for the important share obtained in it by women (one of the characteristic features of the religion of the age); for the licence practised in its rites, as described by Juvenal (vi. 522 foll.); and on the other hand for the asceticism it preached, and its doctrines of conviction of sin and the necessity of purification and atonement. There can hardly be a doubt that these priests really believed their initiations and fastings to have a real power of bringing the worshipper nearer to a knowledge of the divine nature, and of leading him "ad portum quietis et aram misericordiae" (Apul. *Met.* xi. 15); and it is only thus that the marvellous spread of this cult even to the western provinces of the Empire can be accounted for (see Marquardt, iii. 77; Boissier, *R. R.* i. 398, 418). The same tendencies are also seen in the cults of Jupiter of Heliopolis, and especially in that of the Persian sun-god Mithras, so famous in the third and fourth centuries of the Empire. In all the priests are all-powerful and all-persuasive; working privately and independently of the state; having a definite yet mystic doctrine to preach, and preaching it to all comers without respect of persons; and lastly with a graduated process of initiation, amounting to a veritable discipline. As all these features were almost wholly absent from the Roman notion of a priesthood, there arose by degrees and spread over the whole Empire an entirely new idea of the priestly office and its duties; and this, eventually coinciding with the old Roman idea of a state religion, pointed out earlier in this article, paved the way for an official recognition in the fourth century of an organised Christian hierarchy. [W. W. F.]
