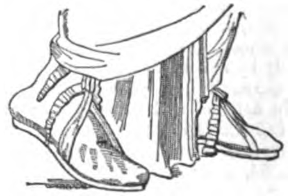
Certain differences of rank were marked by different kinds of boots; indeed Zonaras (vii. 9) says that the plebeians during the Republic in no wise differed from the patricians (*εὐπατρίδαι*) except in their boots. And in the Edict of Diocletian we find the maximum prices of three different kinds of *calcei* fixed: viz. *calcei* *patricii* at 150 denarii, about three shillings and nine pence (this value depends on the very difficult question of the value of the Diocletian denarius. The view adopted is that of Hultsch, *Metrologie*, p. 333, note 3, who fixes it at 2¼ Pfennige; but Waddington, *Édit*, p. 2, fixes it at 6¼ centimes); *calcei senatorum* at 100 denarii (=2*s.* 6*d.*); *calcei equestres* at 70 denarii (=1*s.* 9*d.*). Besides these, there were probably the *calcei* of the ordinary Roman citizen. We must now consider each of these classes separately.

The *calceus patricius* was a red-coloured boot; hence also called *mulleus*, from the colour of the fish (*mullus*, Isid. *Orig.* xix. 34, 10). True, Festus (pp. 142–3, Müller) says it is derived from *mullare* (=to stitch); but, as Heuzey remarks (in Saglio's *Dict.* p. 818), the derivation from *mullus* suits better the adjectival ending in *-eus* and also the Roman practice of denominating differences in colour from common objects (cf. *cereus*, *hederaceus*). In this same passage Festus tells us that in ancient times this kind of boot was worn by the kings of Alba, and afterwards by the patricians; and he quotes Cato, *Orig.* vii.: "Qui magistratum curulem cepisset calceos mulleos †alutaciniatos [aluta laciniatos (Müller), vinctos (Mommsen), cinctos or consutos (Heuzey)], ceteri perones." But Festus is not quite accurate. Though called *calcei patricii*, they were not worn by all patricians nor by all patrician senators. It is only late writers, such as Zonaras (*l. c.*), Isidore (*l. c.*), and Scholiast on Juv. vii. 192, who say so; but this view has the support of Mommsen (*Staatsr.* i.^{2} 408). Nor were they worn by patricians only. Their use was really confined to curule magistrates, and that too only on great public occasions, in this respect like our orders, such as the Garter. They were part of the triumphal apparel; and so, on the occasion of the dedication by Marius of the temple erected to Honor and Virtus out of the Cimbrian spoils, he wore the triumphal robe and the *patricii calcei* (*C. I. L.* i. p. 291, and Mommsen *ad loc.*). Yet Marius was no patrician. It was made a reproach to Caesar, that after his triumph he entered the senate with such boots on (Dio Cass. xliii. 43). In the 2nd century A.D. the lucky Quintilian, who was neither curule magistrate nor patrician, got the right of wearing them (Juv. vii. 192); and also Vettius Crispinus, a mere child (Stat. *Silv.* v. 2, 28), and the son of Herodes Atticus (*C. I. G.* 6280 B, 23 *sqq.*), obtained the same privilege. They did so in virtue of the grant of *ornamenta* of one of the curule magistracies, which was a function of the senate, rather than in virtue of the *adlectio*, which was a privilege of the emperor (Willems, *Le Sénat*, &c. i. 126, note 3). For the grant of the *ornamenta* generally, see Mommsen, *Staatsr.* i. 450 *sqq.* The fact is, the *calcei patricii* were formerly the insignia of the kings of Alba, of the Roman kings, and later of the *patrician* (*i.e.* curule) magistracies; but when the curule magistracies were opened to the plebeians, the latter got the right of wearing the patrician insignia of these magistracies. (See Willems, *l. c.* i. 128 *sqq.*) This is why they are called *patricii*, not that any particular modification of this kind of boot was, after very early times, confined to the patricians, as is the view of Mommsen in more than one passage (*Staatsr.* i. 408, note 1; *Röm. Forsch.* i. 255, note 7; *C. I. L.* i. p. 291).

In the Flavian era and subsequently, there is no doubt that they are generally mentioned with a certain irony, as a sign of ostentation in upstarts; but that does not prove, as Heuzey thinks, that it was not expected of curule magistrates (and those who had the *ornamenta* of them) that they should wear this kind of boot on state and official occasions. Aurelian (Vopisc. *Aur.* 49) is said to have put a stop to their use; but they reappear in the Edict of Diocletian. It may be remarked that in old classical French, and in the provinces still, *mules* (from *mulleus*) is used for slippers or goloshes. In modern classical French it and its cognates in Italian and Spanish are used for the Pope's shoe on which there is a cross. See Littré *s. v.*

The boot was of tanned leather (*aluta*, Mart. ii. 29, 7; Lyd. *de Mag.* 32), with hooks (*malleoli*, Isid. *Orig.* xix. 34, 10) on the upper (*superiore parte*). These hooks Heuzey, and apparently Mommsen (*R. F.* i. 255, note 6), suppose to be the *lunula*; if so, they must have been on the ankle. But more probably they were on the instep, and the *lunula* was a mere ornament. To these hooks were fastened four (Isid. *Orig.* xix. 34, 4) black leather (Juv. vii. 192) straps (*corrigiae*, Cic. *de Div.* ii. 40, § 84; *lora patricia*, Senec. *Tranquill. Animae*, 11, 9), which were wrapped crosswise (Zon. vii. 9) round the calf of the leg, half-way up to the knee. But we do not find these hooks on any certain Roman *calceus*, though the arrangement of bands in the accompanying figure of a patrician youth from a statue in the Louvre seems to represent a hook (*ap.* D. and S. p. 817). More generally, two of the *corrigiae* were inserted at the juncture of the sole and the upper, very broad at the base, but getting narrower, and fastened on or a little above the instep, after being wrapped once round the leg. The other band was higher and wrapped several times round the leg. The knots in which these bands were fastened were in front; and the extremities of the bands hung down sometimes to near the ground. The boots resembled the *cothurni*, in having a high sole (Isid. *l. c.*; Acron on Hor. *Sat.* i. 6, 86), but we cannot suppose that the sole was as high as in the latter. On the outside of the ankle to one of the black bands was affixed an ivory ornament in the shape of a crescent (*ἐπισφύριον ἐλεφάντινον μηνοειδές*, Philostr. *Soph.* ii. 1, 18), called *lunula* or *luna* (Isid. and Juv. *ll. cc.*), and by Suidas (*s. v.* *χλαμύς*) the Roman *kappa*.



Calceus of a Patrician Youth. (From a statue in the Louvre.)

The popular explanation was that the original wearers were the hundred (C) senators chosen by Romulus; but it was probably of the nature of an amulet, like the *bulla* of children; for the Romans were superstitious with regard to their shoes (Cic. *de Div.* ii. 40, 84; Suet. *Aug.* 92. See Heuzey, p. 818; Marquardt, *Privatl.* 574). There is no certain representation of the *calceus patricius* containing the *lunula;* for the example given by Balduinus and reproduced by Rich (*s. v.* Luna), Heuzey says, is very late, and we do not know whence it is derived. Moreover it has the *lunula* on the instep and not on the ankle. But there are many which reproduce in essentials the shape and arrangement of the boot and the bands; and two specimens of these are given, which are taken from Baumeister's *Denkmäler*, p. 575.

Patrician Calcei. (From Baumeister.)

That the *calceus senatorius*, or boot of the ordinary senators, differed from that of the curule magistrates, may be considered certain, from Apuleius, *Flor.* i. 8. It seems, however, to have resembled the *calceus patricius* in every respect, except that it had not the *lunula* (" hac lunula nam adsuta calceis discernuntur patricii a noviciis," Schol. on Juv. vii. 192: cf. Marquardt, *Privatl.* 593; Mommsen, *Staatsr.* i. 408, note 1). It had certainly black bands (Hor. *Sat.* i. 6, 86); but it does not seem quite clear of what colour the boot itself was. Willems (*Le Sénat*, i. 124, note 2) and Göll (*Gallus*, iii. 234) think the shoe was black, on the not very strong support of Lyd. *de Mag.* i. 17 (who is talking of the CAMPAGUS), the Schol. on Juv. i. 111 (though *necdum* is probably relative to the time of the Scholiast himself), and the *à priori* argument that if the colour were not black, Horace (*l. c.*) would have mentioned it. Mommsen (*l. c.*) says that to assume that the shoe was black rests on a confusion of the shoe and the bands. The distinct statements of Cato and Martial (ii. 29, 7), he says, make for the colour being red. But in these two passages it is the *calceus patricius* which is spoken of. On the basis of the Schol. to Juv. vii. 192, quoted above, it may appear best to suppose that the *calceus senatorius* differed from the *calceus patricius* only in having the *luna*, and so was red in colour; but really no decisive answer can be given. This boot was worn when the senator appeared in public, especially at sittings of the senate; Milo, for example (Cic. *Mil.* 10, § 28), on returning from the senate, changes his boots. Lange (*Röm. Alt.* ii.^{3} 373) thinks this special senatorial boot dates from the 7th century A.U.C. Cato, as we saw above, says that in his time the senators wore *perones*.

The *calceus senatorius* was unquestionably different from that of other ranks. Cicero (*Phil.* xiii. 13, 28) speaks of a certain Asinius who " saw the senate-house open after the death of Caesar, got new boots (*mutavit calceos*), and forthwith became a senator." And the strict division which subsisted, both under the Republic and Empire, between the senatorial and equestrian rank and career, gives us reason to suppose that the *calceus equester* was a distinct kind of boot, especially as we find it mentioned in Diocletian's Edict. We have, however, in the Louvre the statue of a certain Canius, who was, it appears, the *procurator quattuor publicorum Africae*, which was an equestrian office (*ap.* D. and S., p. 816).

Calceus of a Procurator of Africa. (From a statue in the Louvre.)

If we can regard his boot as the *calceus equester*, it will be seen that it was a genuine boot, with no bands, and that it was composed of two pieces. We can say nothing about the colour.

Somewhat different were the boots of the ordinary citizens, which do not seem to have gone so high up over the ankles, and which had a piece of leather extending from the side of the boot by which it was fastened over the instep. This piece of leather was called *lingula* or *ligula* (Becker-Göll, *Gallus*, iii. 230), and is shown in the first illustration (see p. 332, No. 5). It was called *lingula* from its likeness to a projecting tongue (Fest. p. 116, Müll.; cf. Pollux, ii. 109), not from *ligare*, " to bind " (Charis. p. 104, Keil). To leave these untied was a mark of haste (*ligulas demittere*, Juv. v. 20). They were also used as handles (Schol. on Juv. *l. c.*). As we are specially told by Scribonius Largus (*Comp. Med.* 208) that these *lingulae* were blackened, we may perhaps conclude that the rest of the boot was of the colour of ordinary leather. For the *atramentum sutorium*, see Plin. *H. N.* xxxiv. § 32.

An explanation may now be offered of the difficult lines of Martial, ii. 29, 7:

> " Non hesterna sedet lunata lingula planta,
> Coccina non laesum pingit aluta pedem."

(The upstart who was yesterday a simple citizen, wearing the ordinary uncomfortable common kind of boots with a *lingula*, to-day has got the *ornamenta* of a curule magistracy, and wears the red *calcei patricii*, which are adorned with a *lunula* and which do not pinch his feet.)

In later times we read of great extravagance and vulgar ostentation in the matter of boots, silk-work being embroidered on them, and, after the manner of the Easterns, gold (Cassiod. *Var.* vi. 1) and jewels (Plin. *H. N.* ix. § 114) being let into them (Lampr. *Heliog.* 23; Marquardt, *Privatl.* 575).

For general information on the subject of *calceus*, see especially Heuzey in Daremberg and Saglio, *s. v.*; Becker-Göll, *Gallus*, iii. 230 *sqq.*; Willems, *Le Sénat de la République Romaine*, i. 123–132, 653–4; Marquardt, *Das Privatleben der Römer*, 570 ff.; Blümner in Baumeister's *Denkmäler des klassischen Altertums*, art. *Fussbekleidung*; Guhl and Koner, *Das Leben der Griechen u. Römer*, 649, ed. 5. [L. C. P.]

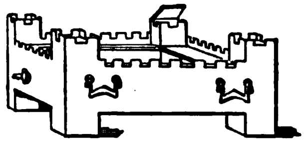
CALCULA'TOR (λογιστής) signifies a keeper of accounts in general, but was also used in the signification of a teacher of arithmetic (Isid. *Orig.* i. 3; Dig. 38, tit. 1, s. 7); whence Martial (x. 62, 4) classes him with the *notarius* or writing-master; but the teacher of arithmetic held a high position among teachers (cf. Cod. Just. 10, tit. 52, s. 4; Becker-Göll, *Gallus*, ii. p. 101; Marquardt, *Röm. Privatleben*, p. 95). The name was derived from *calculi*, which were commonly used in teaching arithmetic, and also in reckoning in general. [ABACUS.] Among the Greeks the λογιστὴς and γραμματιστὴς appear to have been usually the same person. [W. S.]

CAL'CULI. [ABACUS; DUODECIM SCRIPTA; LATRUNCULORUM LUDUS.]

CALDA, or CAL'IDA, sc. *aqua*, the warm drink of the Greeks and Romans, occurs as early as Plato (*Rep.* iv. 437 E, where it is simply θερμόν). It probably consisted of hot water flavoured with spices or aromatic herbs. Wine was constantly drunk with it, but it is almost certainly a mistake to suppose that the *calda* was a kind of negus in which the wine was already mixed. We find θερμὸν ὕδωρ as a drink in Athenaeus (ii. 45 d; iii. 123 a) and Lucian (*Asin.* p. 575); and the phrase *calidae gelidaeque minister* in Juvenal (v. 63) and several epigrams in Martial (i. 11; vi. 86; viii. 67, "Caldam poscis aquam, nondum mihi frigida venit") all point to the conclusion that the wine was served separately, while the guests had the choice of hot or cold water to mix with it according to their taste or the season. The passages just cited refer to the use of this drink in the better sort of private houses; besides this, it could always be procured at certain shops or taverns called *thermopolia* (Plaut. *Curc.* ii. 3, 13; *Rud.* ii. 6, 45; *Trin.* iv. 3, 6). The less sensible emperors, such as Caligula and Claudius, sometimes stopped the sale of hot drink (θερμὸν ὕδωρ) and hot viands on the occasion of a death in the imperial family; public mourning was to be marked by abstinence from such luxuries, and the breach of this regulation was punished with death (Dio Cass. lix. 11, lx. 6).

The water for this purpose was heated in the AENUM ("nec multum refert inter caccabos et aenum, quod supra focum pendet; hic aqua ad potandum calefit, in illis pulmentarium coquitur," Dig. 33, 7, 18, § 3), and kept hot in the AUTHEPSA, a vessel not unlike our tea urns, both in appearance and construction, and often of a very elegant form. (See the illustrations under AUTHEPSA; also Böttiger, *Sabina*, ii. 34; Becker-Göll, *Gallus*, ii. 364.) [W. S.] [W. W.]

CALDA'RIUM. 1. The hot or thermal chamber of Roman baths (Vitruv. v. 10; Sen. *Ep.* 86; Cels. i. 4; BALNEAE). Also the boiler in which the water for supplying the baths was heated (Vitruv. *l. c.*); see the illustration, BALNEAE, p. 279 *b*. These are the only usages of the word in classical Latin. 2. A portable cooking-stove. In this sense the word *caldarium* occurs only in late authors, though the thing itself is well known through numerous specimens found at Pompeii, and now in the Naples Museum. The classical term for it is probably *focus*. In Seneca's time, Roman epicurism brought these stoves into the dining-room (*cenatio*), that the dishes might be served to perfection ("tumultus coquorum est ipsos cum obsoniis focos transferentium . . . cenam culina prosequitur," Sen. *Ep.* 78, § 23).



Caldarium. (*Museo Borbonico*, xii. pl. 46.)

The caldarium here figured (*Mus. Borbon.* xii. pl. 46) has been described by Rich, who, however, with less probability, calls it an *authepsa*. The sides, which are hollow, contained water, and a small cock projects from one of them (seen in the engraving), by which it was drawn off; the four towers at the angles are provided with moveable lids; the centre received the lighted charcoal, and cooking vessels might be placed on it or suspended over it. Another contrivance already figured (see the second cut under AUTHEPSA) seems to combine the two purposes of supplying hot water and keeping dishes hot. It has the cylinder with a place in the centre for a charcoal fire, which is the characteristic of an *authepsa*; and it is also furnished with a shallow oblong tray, into which the hot-water from the cylinder was drawn by a cock, and on which dishes may have been placed.

These *caldaria* might be shaped like a milestone (as in a specimen figured *Mus. Borbon.* iv. pl. 59, also by Saglio) or in more eccentric designs ("dracones et miliaria et complures formas," Sen. *Nat. Quaest.* iii. 24, § 2). The same passage describes boiler-tubes, not unlike those of a modern steam-engine. These contrivances show great skill in the economy of fuel and the conveniences of life. Pollux (x. 66) gives a long list of vessels for heating water, but little by which we can identify the different shapes. [W. W.]

CALENDA'RIUM, or rather KALENDA'RIUM, is the account-book in which creditors entered the names of their debtors and the sums which they owed. As the interest on borrowed money was due on the *Calendae* of each month, the name of *Calendarium* was given to such a book. (Senec. *de Benef.* i. 2, § 3; vii. 10, § 3.) The word was subsequently used to indicate a register of the days, weeks, and months, thus corresponding to a modern almanac or calendar.

1. GREEK CALENDAR.—In the earliest times the division of the year into its various seasons

appears to have been very simple and rude. Homer speaks of three seasons—ἔαρ, θέρος, and χειμών—coupling with θέρος as a later summer ὀπώρα (*Od.* xi. 191, &c.); and the threefold division seems to have been the most usual as late as the time of Aristophanes [ASTRONOMIA]. Where greater precision was required, it was common to use as determining points the rising or setting of certain stars. Thus Hesiod (*Op. et Dies*, 381) describes the time of the rising of the Pleiades as the time for harvesting (ἄμητος), and that of their setting as the time for ploughing (ἄροτος); the time at which Arcturus rose in the morning twilight as the proper season for the vintage (*l. c.* 607), and other phenomena in nature, such as the arrival of birds of passage, the blossoming of certain plants, and the like, indicated the proper seasons for other agricultural occupations; but although they may have continued to be observed for centuries by simple rustics, they never acquired any importance in the scientific division of the year. [ASTRONOMIA.]

The moon being that heavenly body whose phases are most easily observed, formed the basis of the Greek calendar, and *all* the religious festivals were dependent on it. The Greek year was a lunar year of twelve months, but at the same time the course of the sun also was taken into consideration, and the combination of the two (Gemin. *Isag.* 6; comp. Censorin. *de Die Nat.* 18; Cic. *in Verr.* ii. 52, § 129) involved the Greeks in great difficulties, which rendered it almost impossible for them to place their chronology on a sure foundation. It seems that in the early times it was believed that twelve revolutions of the moon took place within one of the sun; a calculation which was tolerably correct, and with which people were satisfied. The time during which the moon revolved around her axis was calculated at an average or round number of 30 days, which period was called a month (Gemin. *l. c.*); but even as early as the time of Solon, it was well known that a lunar month did not contain 30 days, but only 29½. The error contained in this calculation could not long remain unobserved, and attempts were made to correct it. The principal one was that of creating a cycle of two years, called τριετηρίς, or *annus magnus*, and containing 25 months, one of the two years consisting of 12 and the other of 13 months. Boeckh (*Zur Gesch. des Mondcyclen*, p. 10, 63 ff.) regards the τριετηρίς as wholly fabulous; but his views have been refuted by Mommsen (*Röm. Chron.* p. 211 ff.). The months themselves, which in the time of Hesiod (*Op. et Dies*, 770) had been reckoned at 30 days, afterwards alternately contained 30 days (full months, πλήρεις) and 29 days (hollow months, κοῖλοι). According to this arrangement, one year of the cycle contained 354 and the other 384 days, and the two together were about 7½ days more than two tropical or solar years. (Gemin. 6; Censorin. 18.) When this mode of reckoning was introduced, is unknown; but Herodotus (ii. 4) mentions it as still in use in his own time, although he recognises the superior correctness of the Egyptian method of intercalation. (In i. 32 there is either great carelessness or some corruption of the text.) The 7½ days, in the course of 8 years, made up a month of 30 days, and such a month was accordingly omitted every eighth year. (Censorin. *l. c.*) But a more usual method of treating the ἐνναετηρίς, or the cycle of 8 years,* was the following. The calculation was that as the solar year is reckoned at 365¼ days, eight such years contain 2922 days, and eight lunar years 2832 days; that is, 90 days less than eight solar years. Now these 90 days were constituted as three months, and inserted as three intercalary months into three different years of the ἐνναετηρίς,—that is, into the third, fifth, and eighth. (Censorin., Gemin. *ll. cc.*) It should, however, be observed that Macrobius (*Sat.* i. 13, § 9) and Solinus (*Polyhist.* iii.) state that the three intercalary months were all added to the last year of the *ennaeteris*, which would accordingly have contained 444 days. But this is not very probable. The period of 8 solar years, further, contains 99 revolutions of the moon, which, with the addition of the three intercalary months, make 2923½ days; so that in every eight years there is 1½ day too many, and in fifty years the year would begin not with a new moon, but with a full moon. The *ennaeteris*, accordingly, again was incorrect. The time at which the cycle of the *ennaeteris* was introduced is uncertain, but the prominent place which an eight years' cycle has in many legends and ancient customs leads to the belief that it was very ancient. Its inaccuracy called forth a number of other improvements or attempts at establishing chronology on a sound basis, the most celebrated among which is that of Meton. The cycle of Meton consisted of 19 years, in 7 of which there was an intercalated month. The total number of months was therefore 235, amounting to 6940 days. The average year thus was one of 365$\frac{5}{19}$ days, *i.e.* about 30′ 9″ too much. Callippus about a century later, by combining four of Meton's cycles into one and omitting one day, brought the duration of the year to 365¼ days, the length afterwards adopted in the Julian Calendar. The slight error which still remained was finally removed about B.C. 126 by Hipparchus of Nicaea, who again combined four of the cycles of Callippus into a period of 304 years, deducting from this one more day, so bringing the total to 111035 days. By this means the greatest attainable accuracy was secured. But this calendar of Hipparchus was never introduced into practice. Meton's new year began probably on the 20th of June B.C. 432: but it has been shown by Boeckh (contrary to the view previously current) that it is erroneous to suppose that it was at this date formally adopted by the Athenian state: it is, indeed, extremely doubtful whether it was ever so adopted (cf. Unger, *Zeitrechnung der Griechen und Römer*, § 33). Very elaborate calculations have been made to determine the precise equivalence of the Athenian years to those of our own calendar, and many coincidences can now be determined by the aid of inscriptions, but scholars are still at variance on many details, and much has to be left to uncertain conjectures. It seems probable that an eight-year cycle was in use until B.C. 336, although somewhat

---

* The cycle of eight years was called sometimes ἐννεαετηρίς (or more commonly ἐνναετηρίς), sometimes ὀκταετηρίς, according as the inclusive or the exclusive reckoning was adopted.

modified in B.C. 422: then a cycle of 19 years appears to have been in use, but not one identical with that of Meton. There is reason, however, to believe that the eight years' cycle was again adopted, for thus only can we explain the fact, that in the time of the early empire the Attic new year seems to have fallen one month too late. The Athenians were much later than some of the Oriental Greeks in adopting the Roman calendar, with its year based wholly upon the sun, and neglecting the phases of the moon. These circumstances render it almost impossible to reduce any given date in Greek history to the exact date of our calendar.

The Greeks, as early as the time of Homer, appear to have been perfectly familiar with the division of the year into the twelve lunar months mentioned above; but no intercalary month (μὴν ἐμβόλιμος) or day is mentioned. Independent of the division of a month into days, it was divided into periods according to the increase and decrease of the moon. Thus, the first day or new moon was called νουμηνία. (Hom. *Od.* x. 14, xii. 325, xx. 156, xxi. 258; Hes. *Op. et Dies*, 770.) The period from the νουμηνία until the moon was full was expressed by μηνὸς ἱσταμένου, and the latter part during which the moon decreased by μηνὸς φθίνοντος. (Hom. *Od.* xiv. 162.) The 30th day of a month, *i.e.* the day of the conjunction, was called τριακάς, or, according to a regulation of Solon (Plut. *Sol.* 25), ἕνη καὶ νέα, because one part of that day belonged to the expiring and the other to the beginning month. The day of the full moon, or the middle of the month, is sometimes called διχομηνία (*Inscr. Att.* i. 1): cf. Μήνα διχόμηνις (Pind. *Ol.* iii. 35).

The month in which the year began, as well as the names of the months, differed in the different countries of Greece, and in some parts even no names existed for the months, they being distinguished only numerically, as the first, second, third, fourth month, &c. In order, therefore, to acquire any satisfactory knowledge of the Greek calendar, the different states must be considered separately.

The Attic year began with the summer solstice, and each month was divided into three decads, from the 1st to the 10th, from the 10th to the 20th, and from the 20th to the 29th or 30th. The first day of a month, or the day after the conjunction, was νουμηνία: and as the first decad was designated as ἱσταμένου μηνός, the days were regularly counted as δευτέρα, τρίτη, τετάρτη, &c., μηνὸς ἱσταμένου. The days of the second decad were distinguished as ἐπὶ δέκα, or μεσοῦντος, and were counted to 20 regularly, as πρώτη, δευτέρα, τρίτη, τετάρτη, &c., ἐπὶ δέκα. The 20th itself was called εἰκάς, and the days from the 20th to the 30th were counted in two different ways, viz. either onwards, as πρώτη, δευτέρα, τρίτη, &c., ἐπὶ εἰκάδι, or backwards from the last day of the month with the addition of φθίνοντος, παυομένου, λήγοντος, or ἀπιόντος, as ἐννάτη, δεκάτη, &c., φθίνοντος, which, of course, are different dates in hollow and in full months. But this mode of counting backwards seems to have been more commonly used than the other. With regard to the hollow months, it must be observed that the Athenians, generally speaking, counted 29 days, but in the month of Boedromion they counted 30, leaving out the second, because on that day Athena and Poseidon were believed to have disputed about the possession of Attica. (Plut. *de Frat. Am.* p. 489; *Sympos.* ix. 7.) It is to be noticed also that the 21st day was called δεκάτη φθίνοντος, not, as some have supposed, ἐνάτη, and that there was no δευτέρα φθίνοντος in the hollow months. (Cp. Schol. on Hesiod, *Op. et Di.* 763.) So in the Rhodian inscription in Newton, *Ancient Greek Inscr.* 1883, No. 334, τριακὰς follows immediately upon τρίτη φθίνοντος in such cases, προτριακὰς being omitted. (This has been proved by K. F. Hermann against Ideler and Boeckh.) The following table shows the succession of the Attic months, the number of days they contained, and the corresponding months of our year:—

1.	Hecatombaeon (Ἑκατομβαιών)	contained	30	days, and	corresponds	nearly to our	July.
2.	Metageitnion (Μεταγειτνιών)	,,	29	,,	,,	,,	August.
3.	Boedromion (Βοηδρομιών)	,,	30	,,	,,	,,	September.
4.	Pyanepsion (Πυανεψιών)	,,	29	,,	,,	,,	October.
5.	Maimacterion (Μαιμακτηριών)	,,	30	,,	,,	,,	November.
6.	Poseideon (Ποσειδεών)	,,	29	,,	,,	,,	December.
7.	Gamelion (Γαμηλιών)	,,	30	,,	,,	,,	January.
8.	Anthesterion (Ἀνθεστηριών)	,,	29	,,	,,	,,	February.
9.	Elaphebolion (Ἐλαφηβολιών)	,,	30	,,	,,	,,	March.
10.	Munychion (Μουνυχιών)	,,	29	,,	,,	,,	April.
11.	Thargelion (Θαργηλιών)	,,	30	,,	,,	,,	May.
12.	Scirophorion (Σκιροφοριών)	,,	29	,,	,,	,,	June.

At the time when the Julian Calendar was adopted by the Athenians, probably about the time of the Emperor Hadrian, the lunar year appears to have been changed into the solar year; and it has further been conjectured, that the beginning of the year was transferred from the summer solstice to the autumnal equinox.

The following lists of months may also be given with some confidence, although there is uncertainty as to the exact place of some of them:—

Delphian.	Lacedaemonian.	Delian.	Boeotian.	Corresponding nearly to
1. Ἀπελλαῖος	10. Ἡράσιος	7. Ἑκατομβαιών	7. Ἀγριώνιος (?)	July.
2. Βουκάτιος	11. Καρνεῖος	8. Μεταγειτνιών	8. Ἱπποδρόμιος	August.
3. Βοαθόος		9. Βουφονιών	9. Πάναμος	September.
4. Ἡραῖος		10. Ἀπατουριών	10. Παμβοιώτιος	October.
5. Δαδαφόριος		11. Ἀρησιών	11. Δαμάτριος	November.
6. Ποιτρόπιος		12. Ποσειδεών	12. Ἀλαλκομένιος	December.
7. Ἀμάλιος		1. Ληναιών	1. Βουκάτιος	January.

Delphian.	Lacedaemonian.	Delion.	Boeotian.	Corresponding nearly to
8. Βύσιος		2. Ἱερός	2. Ἑρμαῖος	February.
9. Θεοξένιος	6. Ἀρτεμίσιος	3. Ταλαιών	3. Προστατήριος	March.
10. Ἐνδυσποιτρόπιος	7. Γεράστιος	4. Ἀρτεμισιών	4. Θιούιος (?)	April.
11. Ἡρακλεῖος	8. Ἑκατομβεύς	5. Ταργηλιών	5. Θειλούθιος (?)	May.
12. Ἰλαῖος	9. Φλιάσιος	6. Πάνημος	6. Ὁμολώιος (?)	June.

The intercalated month was probably in all cases a repetition of that which corresponds nearly to our December.

The names of the months at Cyzicus and in Sicily are probably as follows:—

Cyzicene.	Sicilian.	Answering nearly to
1. Boedromion (Βοηδρομιών)	1. Thesmophorius (Θεσμοφόριος)	October.
2. Cyanepsion (Κυανεψιών)	2. Dalius (Δάλιος)	November.
3. Apaturion (Ἀπατουριών)	3. Unknown.	December.
4. Poseideon (Ποσειδεών)	4. Agrianius (Ἀγριάνιος)	January.
5. Lenaeon (Ληναιών)	5. Unknown.	February.
6. Anthesterion (Ἀνθεστηριών)	6. Theudasius (Θευδάσιος)	March.
7. Artemision (Ἀρτεμισιών)	7. Artamitius (Ἀρταμίτιος)	April.
8. Calamaeon (Καλαμαιών)	8. Unknown.	May.
9. Panemus (Πάνημος)	9. Badromius (Βαδρόμιος)	June.
10. Taureon (Ταυρεών)	10. Hyacinthius (Ὑακίνθιος)	July.
11 and 12 are unknown.	11. Carneius (Καρνεῖος)	August.
	12. Panamus (Πάναμος)	September.

We further know the names of several isolated months of other Greek states; but as it is as yet impossible to determine what place they occupied in the calendar, and with which of our months they correspond, their enumeration here would be of little or no use. We shall therefore confine ourselves to giving some account of the Macedonian months, and of some of the Asiatic cities and islands, which are better known.

On the whole it appears that the Macedonian year agreed with that of the Greeks, and that accordingly it was a lunar year of twelve months, since we find that Macedonian months are described as coincident with those of the Athenians. (See a letter of King Philip in Demosth. *de Coron.* p. 280; Plut. *Camill.* 19, *Alex.* 3, 16.) All chronologers agree as to the order and succession of the Macedonian months; but we are altogether ignorant as to the name and place of the intercalary month, which must have existed in the Macedonian year as well as in that of the Greek states. The order is as follows:—1. Dius (Δῖος), 2. Apellaeus (Ἀπελλαῖος), 3. Audynaeus (Αὐδυναῖος), 4. Peritius (Περίτιος), 5. Dystrus (Δύστρος), 6. Xanthicus (Ξανθικός), 7. Artemisius (Ἀρτεμίσιος), 8. Daesius (Δαίσιος), 9. Panemus (Πάνημος), 10. Lous (Λῷος), 11. Gorpiaeus (Γορπιαῖος), 12. Hyperberetaeus (Ὑπερβερεταῖος). The difficulty is to identify the Macedonian months with those of the Athenians. From Plutarch (*Camill.* 19, comp. with *Alex.* 16) we learn that the Macedonian Daesius was identical with the Athenian Thargelion; but while, according to Philip, the Macedonian Lous was the same as the Athenian Boedromion, Plutarch (*Alex.* 3) identifies the Lous with the Attic Hecatombaeon. This discrepancy has given rise to various conjectures, some supposing that between the time of Philip and Plutarch a transposition of the names of the months had taken place, and others that Plutarch made a mistake in identifying the Lous with the Hecatombaeon. But the best solution is probably to suppose that by the time of Plutarch the beginning of the Attic year had come to be one month after its true date according to the Roman calendar. We know that the Macedonian year began with the month of Dius, commencing with the autumnal equinox. When Alexander conquered Asia, the Macedonian calendar was spread over many parts of Asia, though it underwent various modifications in the different countries in which it was adopted. When subsequently the Asiatics adopted the Julian Calendar, those modifications also exercised their influence and produced differences in the names of the months, although, generally speaking, the solar year of the Asiatics began with the autumnal equinox. During the time of the Roman emperors, the following calendars occur in the province of Asia:—

1. Caesarius (Καισάριος)	had 30	days, and	began on the	24th of September.
2. Tiberius (Τιβέριος)	31	„	„	24th of October.
3. Apaturius (Ἀπατούριος)	31	„	„	24th of November.
4. Posidaon (Ποσιδαών)	30	„	„	25th of December.
5. Lenaeus (Λήναιος)	29	„	„	24th of January.
6. Hierosebastus (Ἱεροσέβαστος)	30	„	„	22nd of February.
7. Artemisius (Ἀρτεμίσιος)	31	„	„	24th of March.
8. Evangelius (Εὐαγγέλιος)	30	„	„	24th of April.
9 Stratonicus (Στρατόνικος)	31	„	„	24th of May.
10. Hecatombaeus (Ἑκατόμβαιος)	31	„	„	24th of June.
11. Anteus (Ἄντεος)	31	„	„	25th of July.
12. Laodicius (Λαοδίκιος)	30	„	„	25th of August.

Among the Ephesians we find the following months :—

1—4.	Unknown.		
5.	Apatureon (Ἀπατουρεών)	nearly answers to our	November.
6.	Poseideon (Ποσειδεών)	„ „	December.
7.	Lenaeon (Ληναιών)	„ „	January.
8.	Unknown.		
9.	Artemision (Ἀρτεμισιών)	„ „	March.
10.	Calamaeon (Καλαμαιών)	„ „	April.
11, 12.	Unknown.		

At a later time the Ephesians adopted the same names as the Macedonians, and began their year with the month of Dius on the 24th of September.

The following is a list of the Bithynian months :—

1.	Heraeus (Ἡραῖος)	contained	31	days, and began on the	23rd of September.
2.	Hermaeus (Ἕρμαιος)	„	30	„	24th of October.
3.	Metrous (Μητρῷος)	„	31	„	23rd of November.
4.	Dionysius (Διονύσιος)	„	31	„	24th of December.
5.	Heracleius (Ἡράκλειος)	„	28	„	24th of January.
6.	Dius (Δῖος)	„	31	„	21st of February.
7.	Bendidaeus (Βενδιδαῖος)	„	30	„	24th of March.
8.	Strateius (Στράτειος)	„	31	„	23rd of April.
9.	Periepius (Περιέπιος)	„	30	„	24th of May.
10.	Areius (Ἄρειος)	„	31	„	23rd of June.
11.	Aphrodisius (Ἀφροδίσιος)	„	30	„	24th of July.
12.	Demetrius (Δημήτριος)	„	31	„	23rd of August.

The following system was adopted by the Cyprians :—

1.	Aphrodisius (Ἀφροδίσιος)	contained	31	days, and began on the	23rd of September.
2.	Apogonicus (Ἀπογονικός)	„	30	„	24th of October.
3.	Aenicus (Αἰνικός)	„	31	„	23rd of November.
4.	Julius (Ἰούλιος)	„	31	„	24th of December.
5.	Caesarius (Καισάριος)	„	28	„	24th of January.
6.	Sebastus (Σεβαστός)	„	30	„	21st of February.
7.	Autocratoricus (Αὐτοκρατορικός)	„	31	„	23rd of March.
8.	Demarchexusius (Δημαρχεξούσιος)	„	31	„	23rd of April.
9.	Plethypatus (Πληθύπατος)	„	30	„	24th of May.
10.	Archiereus (Ἀρχιερεύς)	„	31	„	23rd of June.
11.	Esthius (Ἕσθιος)	„	30	„	24th of July.
12.	Romaeus (Ῥωμαῖος)	„	31	„	23rd of August.

The system of the Cretans was the same as that used by most of the inhabitants of Asia Minor, viz.—

1.	Thesmophorion (Θεσμοφοριών)	contained	31	days, and began on the	23rd of September.
2.	Hermaeus (Ἑρμαῖος)	„	30	„	24th of October.
3.	Eiman (Εἴμαν)	„	31	„	23rd of November.
4.	Metarchius (Μετάρχιος)	„	31	„	24th of December.
5.	Agyius (Ἄγυιος)	„	28	„	24th of January.
6.	Dioscurus (Διόσκουρος)	„	31	„	21st of February.
7.	Theodosius (Θεοδόσιος)	„	30	„	23rd of March.
8.	Pontus (Πόντος)	„	31	„	23rd of April.
9.	Rhabinthius (Ῥαβίνθιος)	„	30	„	24th of May.
10.	Hyperberetus (Ὑπερβέρετος)	„	31	„	23rd of June.
11.	Necysius (Νεκύσιος)	„	30	„	24th of July.
12.	Basilius (Βασίλιος)	„	31	„	23rd of August.

It should be observed that several of the Eastern nations, for the purpose of preventing confusion in their calculations with other nations, dropped the names of their months, and merely counted the months, as the first, second, third, &c., month. For further information see Corsini, *Fast. Att.*, which however is very imperfect; Ideler, *Handbuch der Mathem. u. technischen Chronol.*, Berlin, 1826, vol. i. p. 227, &c.; Clinton, *Fast. Hellen.* vol. ii. Append. xix.; and more especially K. F. Hermann, *Ueber Griechische Monatskunde*, Göttingen, 1844, 4to; Th. Bergk, *Beiträge zur Griechischen Monatskunde*, Giessen, 1845, 8vo; A. Boeckh, *Ueber die vierjähriger Sonnenkreise der Alten*, Berl., 1863; Mommsen, *Chronologie*, Leipz., 1883. [L. S.] [A. S. W.]

2. Roman Calendar.—The early history of the Roman calendar is a question of great difficulty, and on some of the most important points involved the opinions of scholars are still widely divided, according as they are inclined to attach more or less weight to the statements of ancient authorities. In the following article an attempt is made to state both the traditional views and the criticisms to which they have been recently subjected, especially by Mommsen in his work on Roman Chronology.

I. Censorinus (*de die natali*, c. xx.) says: "Licinius Macer, and after him Fenestella, maintained that from the first there was at Rome a solar year (*annus vertens*) of twelve months; but we ought rather to follow Junius Gracchanus, Fulvius, Varro, and Suetonius, in the belief that the year consisted of ten months, as it was with the Albans, from whom the Romans were sprung. These ten months had

304 days, as follows: March 31, April 30, May 31, June 30, Quintilis 31, Sextilis and September 30, October 31, November and December 30; the four longer months being called full (*pleni*), the other six hollow (*cavi*)." This view is confirmed by Ovid (*Fast.* i. 27, 43; iii. 99, 119, 151), Gellius (*Noct. Att.* iii. 16), Macrobius (*Saturn.* i. 12), Solinus (*Polyh.* i.), and Servius (on *Georg.* i. 43). The existence of a year of ten months is established in the judgment of Niebuhr by the fact that ten months is a period frequently employed in legal provisions: *e.g.*, for the time of a widow's mourning, for the paying back of a dowry, for the credit allowed for goods not bought for ready money, for the calculation of interest, and apparently for truces. (*Hist. Rom.* i. 275 ff.) He further endeavours to support it by pointing out that 110 solar years correspond to 132 years of 304 days; but inasmuch as the supposed cycle of 110 is merely a figment of a later age, the view obtains no confirmation from this source. Mommsen regards the existence of the ten-month year as proved, not only by the excellent authorities which vouch for it, but still more convincingly by the indications of its legal use; but he regards it as adopted merely for business purposes, in order to avoid the inconvenience arising from the varying lengths of the ordinary years, produced by intercalation. He holds that it was in earlier times composed of ten calendar months, varying thus between 298 and 292 days, but that after the decemviral calendar reforms it was fixed as ten-twelfths of the average year of 365 days. On the other hand, Hartmann sees in it an evidence of the statement of Macrobius, that originally it was only the period between the beginning of spring, when the activities of life recommenced, and mid-winter when they ceased, which was divided into months, while what remained over of the sun's course was left undivided, and unmarked by Kalends, Nones, and Ides. The number of 304, which does not correspond to any number of lunar months, he regards as a late invention.

II. Mommsen holds that the earliest full Roman year was one which attempted to take account both of the moon and of the sun. That the moon was regarded as especially the "measurer" of time is proved by the common origin of most of the Indo-European names for month and moon in the root *ma*, "to measure." (Curtius, *Principles of Greek Etymology*, i. 415.) But the names of the Roman months show that at a very early time the months must have been grouped into a cycle, the length of which was determined by the course of the sun. Names like *Aprilis* (from *aperio*), *Maius* (the month of growth, akin to *maior*), and *Junius* (the month of increase, connected with *iuvo*), could not have been used, except at a time when their place was fixed as falling in the spring and early summer. Now the simplest way of reconciling approximately the lunar and the solar years is that which seems to have been adopted in the Greek *trieteris*. Taking the average length of a lunation at 29½ days, the months have to be made up of 29 and 30 days alternately. Now, a solar year answers pretty nearly to 12½ of such months: that is to say, a cycle can be framed by taking alternately 12 and 13 months of alternating length (the additional month in every alternate year being in the first instance of 30 days, in the next of 29, and so on), which shall not at first depart very widely from the actual phenomena. Thus:—

The first ordinary year $= 6 \times 30 + 6 \times 29 = 354$ days.
The first intercalated year $= 6 \times 30 + 6 \times 29 + 30 = 384$ „
The second ordinary year $= 6 \times 30 + 6 \times 29 = 354$ „
The second intercalated year $= 6 \times 30 + 6 \times 29 + 29 = 384$ „
The period of four years $= 1475$ „
The average of each year $= 368\frac{3}{4}$ „

The Romans, it is supposed, having learnt this cycle from the astronomers of Magna Graecia, kept to the total number of days, but re-arranged the months so as to harmonise with that love of odd numbers which marked the Pythagorean system, and produced the following cycle:—

First ordinary year $= 4 \times 31 + 7 \times 29 + 28 = 355$ days.
First intercalated year $= 4 \times 31 + 8 \times 29 + 27 = 383$ „
Second ordinary year $= 4 \times 31 + 7 \times 29 + 28 = 355$ „
Second intercalated year $= 4 \times 31 + 7 \times 29 + 28 + 27 = 382$ „

with the sum total and average as before. This theory represents as close an approximation as is possible to the traditional account, consistently with an intelligible explanation of the origin of the system. The date of the introduction of this cycle cannot be fixed with precision. It must have been long enough before the decemviral legislation to allow the effects of the accumulated error of 3¾ days in each year to have become so marked as to call imperatively for reform; but it cannot have been before a considerable Greek influence had been felt in matters of science.*

III. The year as we find it employed after the decemviral reforms is that which is commonly known as the year of Numa. Censorinus (c. xx.) says expressly that it consisted of 355 days, "although the moon appeared to make up 354 days in its course of 12 months." The one additional day, he says, was due either to carelessness, or (and this explanation he prefers) to

---

* It may be noticed that while the Greek calendar did fairly well follow the phenomena of the moon, the introduction of uneven numbers in the Roman calendar made the divergence very marked; while the slight error in the total length of the year rapidly accumulated so as to produce an almost equally complete divergence from the solar seasons. Hence Mommsen is justified in saying that "even at a very early period the Roman calendar went on its own way, tolerably unconcerned about moon and sun."

Mommsen's view of this ante-decemviral cycle has been strongly contested, but it is supported by the elaborate calculations of Matzat.

the superstitious feeling in favour of an unequal number. The diminution in the length of the year was effected by cutting down the number of days assigned to February in an intercalated year to 23 or 24, and by intercalating a period of 27 days, or what comes to the same thing, of intercalating 22 or 23 days in the course of February. Thus the cycle now became—

$$\begin{array}{lll}
\text{First ordinary year} & = 4 \times 31 + 7 \times 29 + 28 & = \ 355 \text{ days.} \\
\text{First intercalated year} & = 4 \times 31 + 7 \times 29 + 23 + 27 & = \ 377 \ \text{,,} \\
\text{Second ordinary year} & = 4 \times 31 + 7 \times 29 + 28 & = \ 355 \ \text{,,} \\
\text{Second intercalated year} & = 4 \times 31 + 7 \times 29 + 24 + 27 & = \ 378 \ \text{,,} \\
 & \text{Total of four years} & = 1465 \ \text{,,} \\
 & \text{Average of a year} & = \ 366\tfrac{1}{4} \ \text{,,}
\end{array}$$

This is again in excess of the real year by one day; but the inaccuracy of the cycle is no justification for rejecting the positive testimony of good authorities like Censorinus, who must have quoted the statement of Varro about a calendar which he had used all his life. The notion of an intercalated day, based upon a statement by Macrobius, Mommsen rejects altogether, as a transference from the imperial times to those of the republic. Matzat, however (*Röm. Chron.* i. 47), defends it, and would regard the 23rd of February as the invariable day after which intercalation was made, and the intercalated month as varying between 28 and 27 days. There is no practical difference between these views (Matzat, i. 228–9).

It hardly admits of doubt that the origin of this reform in the calendar is to be sought in the Greek *octaeteris*. In this, as has been shown above, three months of 30 days each were intercalated in the course of eight years; and it cannot be by accident that the intercalation of 22 + 23 days every four years exactly corresponds to this. Of the date of the change we have no positive evidence: but Macrobius tells us (i. 13, 21), on the authority of Tuditanus and of Cassius, that "the decemvirs, who added two tables to the ten, brought a proposal before the people for intercalation." As so much of the decemviral legislation was based upon the Athenian jurisprudence, it is natural to suppose that the same reformers made an attempt to incorporate in their own calendar the period then current at Athens: and it may well have been the case that one of the additional tables was really a calendar, with directions for intercalation. Varro indeed (quoted by Macrobius, i. 13, 21) shows that there was intercalation in the consulship of Pinarius and Furius, B.C. 472, twenty years before their time; but this statement may naturally have referred to the earlier system. Dionysius (x. 59) intimates that the decemvirs brought the calendar into harmony with the phenomena of the moon's course again: and though this statement is erroneous as it stands, it points in the same direction as the other evidence. Ovid, too (*Fast.* ii. 47), states that before the decemvirs January was the first month of the year and February the last, so that the order was January, March, &c., December, February—a statement which, though rejected by Mommsen and many other scholars, seems strongly confirmed by the nature of the festivals held in these two months. In any case this points to an alteration made by the decemvirs in the treatment of February. We may therefore safely ascribe to the decemvirs a change in the calendar, which entirely deprived it of its connexion with the phases of the moon—a connexion which, however, had long ceased to be more than nominal.

It remains now to consider how it was possible that in this reform an average length should have been assigned to the year exceeding its true length by a whole day. It is impossible to suppose that this was mere error. The true length of the solar year was known to the Greeks at least as early as the introduction of the *octaeteris*. It is evident that the Greek advisers of the decemvirs must have had some reason for this inaccuracy. Mommsen's explanation, which is at least plausible, is as follows. They started from the assumption that the Roman calendar was essentially the same as that of Athens before the *octaeteris*, and must be set right in the same way, by reducing the average intercalation from 14¾ to 11¼ days, and that it was a matter of indifference how the previous intercalation was reduced in each four years by 4 × 3½ days. It would evidently have been the simplest thing to reconstruct the whole system, but the strongly conservative religious feelings of the Romans made this impossible. Hence they did not venture to attack either the ordinary year, or the alternation of intercalated and ordinary years, or the four-year period of intercalation, or the intercalated month of 27 days. The only course left was to shorten the month of February, which preceded the intercalated month. Now, if they had reduced this month to 22 and 21 days in the alternate years of intercalation, all would have been well, and the cycle would have been 1461 days, instead of 1475. Other considerations may have contributed to hinder them from doing this, but probably the main difficulty lay in the fact that the festival of Terminus fell on February 23. The obstinate god, who had refused to yield his shrine even when required for a temple to Jupiter Optimus Maximus (Liv. i. 55), would not have surrendered his ancient feast-day for all the mathematics in the world. That the intercalation was not always after the 23rd, which would have lessened the mischief by one-half, but in alternate years after the 24th, was probably due to the love for lucky odd numbers, which had already been the source of confusion.

The first attempt to reform the system of intercalation of which we have any indication was made by a *lex Acilia* of B.C. 191 (Censor. xx. 6). This law empowered the pontiffs to deal with intercalation at their discretion ("pontificibus datum negotium, eorumque arbitrio intercalandi ratio permissa"). But, as Censorinus informs us, this only made matters much worse, for "most of them, either from hatred or from favour, to cut short or to extend the tenure of office, or that a farmer of the public revenue might gain or lose by the length of the year, by intercalating more or less at their pleasure, deliberately made worse what had been entrusted to them to set right." This statement is supported by what Cicero says in *Legg.* ii. 12, 29. We find in fact that great irregularity prevails, and that the years known to us from Livy and the Fasti Triumphales to have been intercalated cannot be brought into any system.

Similar to this is the language employed by Macrobius (i. 4), Ammianus (xxvi. 1), Solinus (c. i.), Plutarch (*Caes.* c. 59); and their assertions are confirmed by the letters of Cicero, written during his proconsulate in Cilicia, the constant burthen of which is a request that the pontifices will not add to his year of government by intercalation.

In consequence of this licence, says Suetonius (*Caes.* 40), neither the festivals of the harvest coincided with the summer, nor those of the vintage with the autumn. But we cannot desire a better proof of the confusion than a comparison of three short passages in the third book of Caesar's *Bell. Civ.* (c. 6), "Pridie nonas Januarias navis solvit"—(c. 9), "jamque hiems adpropinquabat"—(c. 25) "multi jam menses transierant et hiems jam praecipitaverat."

Livy (i. 19, 6) asserts that Numa established a year to suit the revolutions of the moon (*ad cursus lunae*), which, because the moon does not complete thirty days in each month, and some days are lacking to the complete solar year (even if it did), he arranged by inserting intercalary months, so as to agree at the end of nineteen years (*vicesimo anno*) with the solar year. It seems to be generally admitted that this statement of Livy's is a mere invention of some late authority (perhaps one of the pontiffs) who was acquainted with the Metonic cycle, and who wished to ascribe the credit of it to the traditional founder of the Roman year, and the confusion into which the calendar afterwards fell, to the neglect of the original provision. Cicero (*de Leg.* ii. 12, 29) has probably the same tradition in his mind when he writes: "diligenter habenda ratio intercalandi est; quod institutum perite a Numa posteriorum pontificum neglegentia dissolutum est." But there is no reason to believe that this cycle was ever really the guide for intercalation at Rome. Macrobius (*Sat.* i. 13, 13) talks of a cycle of twenty-four years (*tertio quoque octennio*) by which the errors of the decemviral system had been removed; and some have wished to bring Livy's statement into harmony with this by inserting *quarto* after *vicesimo* (l. c.). But Mommsen has acutely seen that this, too, only represents a suggestion put forward by some reforming pontiff. He points out that, assuming that the years are to be of one of the three normal lengths—355, 377, or 378 days—there are two cycles by which these can be made to coincide with the number of days in the (Julian) solar year. Either

$$20 \times 365\tfrac{1}{4} = 7305 = 11 \times 355 + 2 \times 377 + 7 \times 378,$$

or

$$24 \times 365\tfrac{1}{4} = 8766 = 13 \times 355 + 7 \times 377 + 4 \times 378.$$

The former is the shortest possible cycle; and if it is adopted, one intercalated month of twenty-two days is omitted, and two of twenty-two days are lengthened into two of twenty-three days. In the latter, one intercalated month of twenty-three days is omitted, and a second of the same length is shortened by one day. Hence the longer cycle has a slight advantage in the way of simplicity.

It is extremely difficult, or rather quite impossible, to determine the actual dates, which correspond to the nominal dates of any events before the Julian reform of the calendar, especially after the irregularities introduced by the *lex Acilia.* The eclipse of the sun, mentioned by Ennius (*apud* Cic. *de Rep.* i. 16) as happening on June 5th in the year after the foundation of Rome 351, must have been that which took place on the Julian June 21st, B.C. 400: the eclipse of July 11th, in Varro's year 564 (Liv. xxxvii. 4), was that of the Julian March 14th, B.C. 190. But to deduce any other correspondences from these ascertained facts requires very elaborate and (in part) very untrustworthy calculations.

Year of Julius Caesar.—In the year 46 B.C. Caesar, now master of the Roman world, crowned his other great services to his country by employing his authority, as pontifex maximus, in the correction of this serious evil. For this purpose he availed himself of the services of Sosigenes, the peripatetic, and a *scriba* named M. Flavius,* though he himself too, we are told, was well acquainted with astronomy, and indeed was the author of a work of some merit upon the subject, which was still extant in the time of Pliny. The chief authorities upon the subject of the Julian reformation are Plutarch (*Caes.* c. 59), Dio Cassius (xliii. 26), Appian (*de Bell. Civ.* ii. ad extr.), Ovid (*Fasti*, iii. 155), Suetonius (*Caes.* c. 40), Pliny (*H. N.* xviii. § 211), Censorinus (c. xx.), Macrobius (*Sat.* i. 14), Ammianus Marcellinus (xxvi. 1), Solinus (i. 45). Of these Censorinus is the most precise: "The confusion was at last," says he, "carried so far that C. Caesar, the pontifex maximus, in his third consulate, with Lepidus for his colleague, inserted between November and December two intercalary months of 67 days, the month of February having already received an intercalation of 23 days, and thus made the whole year to consist of 445 days. At the same time he provided against a repetition of similar errors by casting aside the intercalary month, and adapting the year to the sun's course. Accordingly to the 355 days of the previously existing year he added ten days, which he so distributed between the seven months having 29 days, that January, Sextilis, and December received two each, the others but one; and these additional days he placed at the end of the several months, no doubt with the wish not to remove the various festivals from those positions in the several months which they had so long occupied. Hence in the present calendar, although there are seven months of 31 days, yet the four months, which from the first possessed that number, are still distinguishable by having their nones on the seventh, the remaining three having them on the fifth of the month. Lastly, in consideration of the quarter of a day, which he considered as completing the true year, he established the rule that, at the end of every four years, a single day should be intercalated, where the month had been hitherto inserted,

---

* The existence of this M. Flavius, who is mentioned only by Macrobius (i. 14, 2), has been recently denied by Hartmann (*Röm. Kal.*, pp. 120–123), who believes that his name is due only to a confusion with Cn. Flavius.

that is, immediately after the Terminalia; which day is now called the *Bisextum*."

This year of 445 days is commonly called by chronologists the year of confusion; but by Macrobius, more fitly, the last year of confusion. The kalends of January, of the year 708 A.U.C., fell on the 13th of October, 47 B.C. of the Julian Calendar; the kalends of March, 708 A.U.C., on the 1st of January, 46 B.C.; and lastly, the kalends of January, 709 A.U.C., on the 1st of January, 45 B.C. Of the second of the two intercalary months inserted in this year after November, mention is made in Cicero's letters (*ad Fam.* vi. 14).

It was probably the original intention of Caesar to commence the year with the shortest day. The winter solstice at Rome, in the year 46 B.C., occurred on the 24th of December of the Julian Calendar. His motive for delaying the commencement for seven days longer, instead of taking the following day, was probably the desire to gratify the superstition of the Romans, by causing the first year of the reformed calendar to fall on the day of the new moon. Accordingly it is found that the mean new moon occurred at Rome on the 1st of January, 45 B.C., at 6h. 16′ P.M. In this way alone can be explained the phrase used by Macrobius: *Annum civilem Caesar, habitis ad lunam dimensionibus constitutum, edicto palam proposito publicavit.* This edict is also mentioned by Plutarch (*Caes.* 59), where he gives the anecdote of Cicero, who, on being told by some one that the constellation Lyra would rise the next morning, observed, "Yes, no doubt, in obedience to the edict."

The mode of denoting the days of the month will cause no difficulty, if it be recollected that the kalends always denote the first of the month, that the nones occur on the seventh of the four months March, May, Quinctilis or July, and October, and on the fifth of the other months; that the ides always fall eight days later than the nones; and lastly, that the intermediate days are in all cases reckoned backwards upon the Roman principle of counting both extremes.

For the month of January the notation will be as follows:—

1 Kal. Jan.
2 a. d. IV. Non. Jan.
3 a. d. III. Non. Jan.
4 Prid. Non. Jan.
5 Non. Jan.
6 a. d. VIII. Id. Jan.
7 a. d. VII. Id. Jan.
8 a. d. VI. Id. Jan.
9 a. d. V. Id. Jan.
10 a. d. IV. Id. Jan.
11 a. d. III. Id. Jan.
12 Prid. Id. Jan.
13 Id. Jan.
14 a. d. XIX. Kal. Feb.
15 a. d. XVIII. Kal. Feb.
16 a. d. XVII. Kal. Feb.
17 a. d. XVI. Kal. Feb.
18 a. d. XV. Kal. Feb.
19 a. d. XIV. Kal. Feb.
20 a. d. XIII. Kal. Feb.
21 a. d. XII. Kal. Feb.
22 a. d. XI. Kal. Feb.
23 a. d. X. Kal. Feb.
24 a. d. IX. Kal. Feb.
25 a. d. VIII. Kal. Feb.
26 a. d. VII. Kal. Feb.
27 a. d. VI. Kal. Feb.
28 a. d. V. Kal. Feb.
29 a. d. IV. Kal. Feb.
30 a. d. III. Kal. Feb.
31 Prid. Kal. Feb.

The letters *a. d.* are an abridgment of *ante diem*, and the full phrase for "on the second of January" would be *ante diem quartum nonas Januarias*. The word *ante* in this expression seems really to belong in sense to *nonas*, and to be the cause why *nonas* is an accusative. Hence occur such phrases as (Cic. *Phil.* iii. 8, 20) *in ante diem quartum Kal. Decembris distulit*, "he put it off to the fourth day before the kalends of December," (Caes. *Bell. Gall.* i. 6) *Is dies erat ante diem V. Kal. Apr.*, and (Caes. *Bell. Civ.* i. 11) *ante quem diem iturus sit*, for *quo die*. The same confusion exists in the phrase *post paucos dies*, which means "a few days after," and is equivalent to *paucis post diebus*. Whether the phrase *Kalendae Januarii* was ever used by the best writers is doubtful. The words are commonly abbreviated; and those passages where Aprilis, Decembris, &c. occur, are of no avail, as they are probably accusatives. The *ante* may be omitted, in which case the phrase will be *die quarto nonarum*. In the leap year (to use a modern phrase), the last days of February were called—

Feb. 23 = a. d. VII. Kal. Mart.
Feb. 24 = a. d. VI. Kal. Mart. posteriorem.
Feb. 25 = a. d. VI. Kal. Mart. priorem.
Feb. 26 = a. d. V. Kal. Mart.
Feb. 27 = a. d. IV. Kal. Mart.
Feb. 28 = a. d. III. Kal. Mart.
Feb. 29 = Prid. Kal. Mart.

In which the words *prior* and *posterior* are used in reference to the retrograde direction of the reckoning. Such at least is the opinion of Ideler, who refers to Celsus in the Digest (50, tit. 16, s. 98).

From the fact that the intercalated year has two days called *ante diem sextum*, the name of bissextile has been applied to it. The term *annus bissextilis*, however, does not occur in any writer prior to Beda, but in place of it the phrase *annus bisextus*.

It was the intention of Caesar that the bisextum should be inserted *peracto quadriennii circuitu*, as Censorinus says, or *quinto quoque incipiente anno*, to use the words of Macrobius. The phrase, however, which Caesar used seems to have been *quarto quoque anno*, which was interpreted by the priests to mean every third year. The consequence was, that in the year 8 B.C. the Emperor Augustus, finding that three more intercalations had been made than was the intention of the law, gave directions that for the next twelve years there should be no bissextile (Plin. *H. N.* xviii. § 211).

The services which Caesar and Augustus had conferred upon their country by the reformation of the year seems to have been the immediate causes of the compliments paid to them by the insertion of their names in the calendar. Julius was substituted for Quinctilis, the month in which Caesar was born, in the second Julian year, that is, the year of the dictator's death (Censorinus, c. xxii.); for the first Julian year was the first year of the *corrected* Julian Calendar, that is, 45 B.C. The name Augustus, in place of Sextilis, was introduced by the emperor himself, at the time when he rectified the error in the mode of intercalating (Suet. *Aug.* c. 31), *anno Augustano xx.* The first year of the Augustan era was 27 B.C., viz. that in which he first took the name of Augustus, *se vii. et M. Vipsanio Agrippa coss.* He was born in September; but gave the preference to the preceding month, for reasons stated in the senatus consultum, preserved by Macrobius (i. 12): "Whereas the Emperor Augustus Caesar, in the month of Sextilis, was first admitted to the consulate, and thrice entered the city in triumph, and in the same month the legions, from the Janiculum, placed themselves under his auspices, and in the same month Egypt was brought under the authority of the Roman people, and in the same month an end was brought to the civil wars; and whereas for these reasons the said month is, and has been, most fortunate to this empire, it is hereby decreed by the senate that the said month shall be called Augustus." "A plebiscitum, to the same effect, was passed on the motion of Sextus Pacuvius, tribune of the plebs."

Domitian gave to the month of September the name of Germanicus from his own surname, and to the month of October the name of Domitianus; but these names fell into disuse after the death of the tyrant.

Our days of the Month.	March, May, July, October, have 31 days.	January, August, December, have 31 days.	April, June, September, November, have 30 days.	February has 28 days, and in Leap Year 29.

The Fasti of Caesar have not come down to us in any one table, in their entire form. Such fragments as exist may be seen in the *Corpus Inscriptionum Latinarum*, vol. i. (Berlin, 1863), edited with the most minute accuracy, and with very valuable notes, by Mommsen. They are nineteen in number, and by combining them the Fasti can be completely reconstructed. Three others have been discovered since, and published in the *Ephemeris Epigraphica*.

The official year before the Julian reforms, with its frequent and irregular intercalations, could not have at all met the practical requirements of an agricultural population; and there is reason to believe that the "farmers' year" was that which had been adopted with slight modifications from the Egyptian sages of Heliopolis by Eudoxus. This gave up altogether the attempt to take notice of the phases of the moon, and was a purely solar year. The cycle was made up of four years,—the first of 366, the others of 365 days,—thus corresponding exactly with the reformed Julian system. There was no division into months, but the subdivisions were marked by the entrance of the sun into the various signs of the zodiac, and by the tropics and equinoxes. Spring began when the sun was in Aquarius, summer when it was in Taurus, autumn when it was in Leo, and winter when it was in Scorpio. (Varro, *de R. R.* i. 28.) The new year began when the sun entered Leo and the dog-star rose.

The Gregorian Year.—The Julian Calendar supposes the mean tropical year to be 365 d. 6 h.; but this exceeds the real amount by 11′ 12″, the accumulation of which, year after year, caused at last considerable inconvenience. Accordingly, in the year 1582, Pope Gregory XIII., assisted by Aloysius, Lilius, Christoph. Clavius, Petrus Ciacconius, and others again reformed the calendar. The ten days by which the year had been unduly retarded were struck out by a regulation that the day after the fourth of October in that year should be called the fifteenth; and it was ordered that, whereas hitherto an intercalary day had been inserted every four years, for the future three such intercalations in the course of four hundred years should be omitted, viz. in those years which are divisible without remainder by 100, but not by 400. Thus, according to the Julian Calendar, the years 1600, 1700, 1800, 1900, and 2000 were to have been bissextile; but, by the regulation of Gregory, the years 1700, 1800, and 1900 were to receive no intercalation, while the years 1600 and 2000 were to be bissextile, as before. The bull which effected this change was issued Feb. 24, 1582. The fullest account of this correction is to be found in the work of Clavius, entitled *Romani Calendarii a Gregorio XIII. P. M. restituti Explicatio.* As the Gregorian Calendar has only 97 leap-years in a period of 400 years, the mean Gregorian year is (303 × 365 + 97 × 366) ÷ 400; that is, 365 d. 5 h. 49′ 12″, or only 24″ more than the mean tropical year. This difference in 60 years would amount to 24′, and in 60 times 60, or 3600 years, to 24 hours, or a day. Hence the French astronomer, Delambre, has proposed that the years 3600, 7200, 10,800, and all multiples of 3600 should not be leap years. The Gregorian Calendar was introduced in the greater part of Italy, as well as in Spain and Portugal, on the day named in the bull. In France, two months after, by an edict of Henry III., the 9th of December was followed by the 20th. The Catholic parts of Switzerland, Germany, and the Low Countries adopted the correction in 1583, Poland in 1586, Hungary in 1587. The Protestant parts of Europe resisted what they called a Papistical invention for more than a century. At last, in 1700, Protestant Germany, as well as Denmark and Holland, allowed reason to prevail over prejudice; and the Protestant cantons of Switzerland copied their example the following year.

In England the Gregorian Calendar was first adopted in 1752, and in Sweden in 1753. In Russia, and those countries which belong to the Greek Church, the Julian year, or *old style* as it is called, still prevails.

In this article free use has been made of Ideler's work *Lehrbuch der Chronologie* (2 vols. Berlin, 1826). Cf. also Mommsen, *Die Römische Chronologie*, Berlin, 1858; and Matzat, *Röm. Chronologie*, 2 vols., Berlin, 1883. For other information connected with the Roman measurement of time, see ASTRONOMIA; DIES; HOROLOGIUM; LUSTRUM; NUNDINAE; SAECULUM. [T. H. K.] [A. S. W.]

CAL'IDA. [CALDA.]

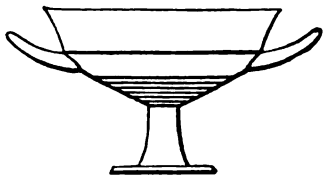
CALIDA'RIUM. [CALDARIUM.]

CALIENDRUM, a tall female head-dress, but whether a wig of false hair or an arrangement of draperies it is not easy to determine. The Cruquian scholiast on the *locus classicus* of Horace (*Sat.* i. 8, 48) gives both explanations, without attempting to decide between them ("peplum capitis aut crinis suppositicius seu capillamentum aut galericulus capitisve ornamentum"). But *galericulus* (or *-um*) may mean a wig (Suet. *Oth.* 12, with Casaubon's note); and the humour of the passage is decidedly in favour of this rendering: one of the two old women drops her false teeth in her flight, the other her false hair. A fragment of Varro quoted by the same scholiast suggests a stage peruke ("tantis cothurnis accipit Critona caliendrum"). Of the only other passages where the word occurs, Arnobius (v. 26, p. 209) mentions *caliandria* among female vanities; Tertullian, on the contrary (*de Pall.* 4), seems to imply a staid and sober covering which the immodest women of his time had discarded. [W. W.]

CA'LIGA, a strong and heavy shoe, or rather sandal, worn by the Roman soldiers. Although the use of this species of calceamentum extended to the centurions, it was not worn by the superior officers. Hence the common soldiers, including centurions, were distinguished by the name of *caligati* (Suet. *Aug.* 25, *Vitell.* 7; οἱ ἀπὸ κάλιγος, Dig. 27, 1, 10). Service in the ranks was also designated after this article of attire. Thus Marius was said to have risen to the consulship *a caliga*, i.e. from the ranks (Sen. *de Benef.* v. 16), and Ventidius *juventam inopem in caliga militari tolerasse* (Plin. *H. N.* vii. § 135). The Emperor Caligula received that cognomen when a boy, in consequence of wearing the caliga, which his father Germanicus put on his son in order to please the soldiers. (Tacit. *Ann.* i. 41; *manipularis habitus*, Suet. *Calig.* 9.) The triumphal monuments of Rome show most distinctly the difference between the caliga of the common soldier and the calceus worn by men of higher rank. When Cicero says of "Epicrates," *i.e.* Pompey, "mihi caligae ejus non placebant" (*ad Att.* ii. 3), a breach of the *convenances* is implied. The caliga exhibits a number of straps, through which the foot is partially seen, as in the figure of the Roman soldier from the Arch of Severus, engraved under ARMA; while the CALCEUS is an ordinary closed shoe. The sole of the caliga was thickly studded with hobnails (*clavi caligarii*, Plin. *H. N.* xxxiv. § 143; *caligares*, id. ix. § 69: cf. Juv. *Sat.* iii. 248, 322, xvi. 24; ἧλοι, Jos. *B. J.* vi. 1, 8).

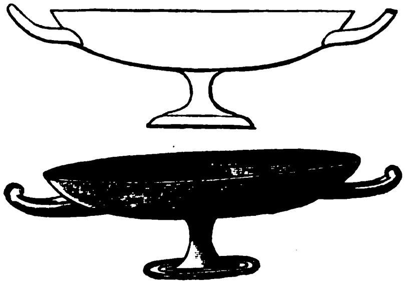
The *caliga speculatoria* (Suet. *Calig.* 52), made for the use of couriers [SPECULATOR], was probably much lighter than the ordinary shoe worn by the soldiers. [J. Y.] [W. W.]

CALIX (κύλιξ). Though not found in Homer or Hesiod, this was the most common kind of drinking cup among the Athenians (Ar. *Lys.* 841): cf. ἐπὶ τῇ κύλικι λέγειν (Plat. *Symp.* 214 B) and κυλικεῖα (Ath. 480 b), sideboards for exhibiting cups (we should say, "plate"). It was of earthenware and round, hence its name, according to Athenaeus (480 b), ἀπὸ τοῦ κυλίεσθαι τῷ τροχῷ. It had a broad top (Pherecr. *ap.* Ath. 481 b), as is evidenced from its comparison to a shield (Ath. 472 c) and to a woman's breast (Plin. *H. N.* xxxiii. § 81). It had feet (Soph. *Frag.* 541) and horizontal handles (Ath. 470 e). It is mainly in having vertical handles and in its greater size that CANTHARUS differed from *calix*. The *calices*, however, varied to some extent in size, just as our tumblers, and there is some slight evidence (Plat. *Lys.* 219 E)

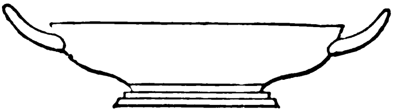


Early Calix. (Birch.)

that an average one held three cotylae (=1·3 pints). The archaic form of the calix is depicted by Birch (*Ancient Pottery*, p. 180); but the ordinary forms are here given from Birch and Dennis. Those of the early period are distinguished by their deeper bowl and taller stem. Those of a later period are of a more elegant shape, have a shallow bowl, and a stem not so high. Cups of this shape are generally painted inside as well as out. In banqueting scenes depicted upon vases, they are often represented as twirled round upon the finger. See the drawing given in SYMPOSIUM. In the latest period the bowl of the calix is without a stem, and has only a moulded base.



Later Calix. (Birch and Dennis.)



Latest Calix. (Birch.)

Athenaeus tells us that these cups were made at various places: Argos (480 d), Attica (480 c), Chios (480 e), Lacedaemon (484 f), Naucratis (480 e), Rhodes (497 f), Teos (481 a). In Martial we hear of Surrentine (xiv. 102) and Saguntine *calices* (xiv. 108). These places gave their names to different kinds of cups, all more or less agreeing with the general description above. The κύλιξ made at Naucratis, however, was very flat, like a *phiala*, as if made with the hand, with a broad bottom and four handles (ὦτα). (See Ath. 480 e.) Panofka (Plate iv., No. 34 *a*, *b*) professes to give a representation; but it agrees in nothing except in having four handles.

Thericlean Calix of early form, with black figures. (Birch.)

But cups were called after individuals as well as after places: *e.g.* the much-discussed Θηρίκλειοι, *sc.* κύλικες. The principal examination of these vessels is by Welcker in *Rhein. Museum*, vi. 404–420. But we must not suppose with him that they were called from the figures of animals which were on them, but rather with Ath. 470 f and Bentley (*Diss. on Phalaris*, ed. Dyce, i. p. 169 ff.), from their maker, Thericles of Corinth. But though their maker was a Corinthian, yet they were genuine Attic cups, properly of earthenware, though sometimes of other material: e.g. wood (*C. I. G.* 139, 8, 9), brass (Ath. 469 b), silver (Jos. *Ant.* xi. 1), gold (Ath. 199 b), sometimes only gilt (Ath. 478 a; cf. *C. I. G.* l. c.); also apparently of glass (θηρίκλειον· ποτήριον ὑέλινον, Photius, *s. v.*). Further they were made of terebinth (τέρμινθος), which was blacker than ebony, yet such that they could not be distinguished from earthenware (Theophrast. *Hist. Plant.* v. 4, 2; Plin. *H. N.* xvi. § 205). Other authors say that these cups were black and very bright (καθαρός), *e.g.* Eubulus in Ath. 471 d; and it is this black polish that Schwenck thinks (*Philologus*, xxiv. 3, 1866, pp. 552–554) is the distinctive feature of these vessels. The oldest Thericlean vessel we know of is that referred to in *C. I. G.* 139, 8, 9, which belongs to 425 B.C. A κύλιξ Θηρίκλειος had a broad top, and is compared to a shield (Aristoph. *ap.* Ath. 472 c). It was rather large, holding three or four cotylae, and sometimes even as much as seven. (Ath. 472 b, d, e.) The figure of one as given by Panofka (Plate iv., No. 34) is also represented by Krause (No. 26); but this does not agree with Eubulus *ap.* Ath. 471 d, who calls it ὀξυπύνδακα, *i.e.* with bottom coming to a point. The Schol. on Clem. Alex. *Paed.* ii. 3, who says it was round at the bottom, with the upper part like a funnel (χωνοειδές), so that it was easy to drink from, does not agree with the previously mentioned and more reliable statements. Possibly the figure given by Lau (*Die Griechischen Vasen*, Plate xix. fig. 4) may represent the kind, though it is very like a woman's breast (Plin. xxxiii. § 81). Birch (p. 381) gives as a specimen of a Thericlean cup, one with a deep bowl and a long stem. (See cut below.)

These Thericlean cups were heavy in weight and expensive, and in competition the Rhodians (Ath. 469 b) made a similar kind of cup of lighter material and sufficiently cheap for persons of humble means to acquire. These were called ἡδυποτίδες. Further we hear of Ἀντιγονίδες, which, according to the Schol. on Clem. Alex., were like the Θηρίκλειοι in some points, but they had not the spherical bottom, and ended in a narrow aperture. Also of Σελευκίδες, whose handles were not closed, but consisted of four rods. Each two of these rods were close together at their junction with the cup, but diverged widely at the other extremity (Ath. 488 e).

In Juvenal, v. 48, we read of *calices* called after a shoemaker of Beneventum, which had four nozzles. This was Vatinius (Mart. xiv. 96), who was afterwards a buffoon in the court of Nero (Tac. *Ann.* xv. 34), and the cups were called *Vatinii* (Mart. x. 3, 4).

For the cups used in the Christian Church, see Smith's *Dictionary of Christian Antiquities*, art. *Chalice*.

Of somewhat different meaning to that of κύλιξ are the cognates κυλίχνη, κυλιχνίς, κυλίχνιον, which were covered vessels, and used as soup-tureens (if we may so infer from Aristoph. *ap.* Pollux, x. 88), but more specially as pots for medicines (Galen, *Lex. Hippocr.*; Poll. vi. 98; Suidas, *s. v.* κυλίχνιον: cf. also Aristoph. *Eq.* 906; Ath. 480 d, where Ussing rightly reads κυλιχνίδα). *Calices* are also found mentioned as covered vessels for cooking (Plin. *H. N.* xxxv. 193), or serving up (Ovid. *Fast.* v. 509) food in. Varro (*L. L.* v. 127) derives it from *calidus*.

The chief works on the subject of Greek and Roman cups are Th. Panofka, *Recherches sur les véritables noms des Vases Grecs*, Paris, 1829; J. L. Ussing, *De nominibus vasorum Graecorum*, Copenhagen, 1844; J. H. Krause, *Angeiologie*, Halle, 1854; Birch, *History of Ancient Pottery*, London, 1873; Marquardt, *Röm. Alterth.* vii. p. 632 ff. [L. C. P.]

CALIX, a tube, regulating the supply of water, attached to the extremity of each pipe, where it entered the castellum of an aqueduct. (Frontin. *Aquaed.* 36.) It is explained under AQUAEDUCTUS, p. 156 a. [W. S.]

CALLIS, defined by Isidor. *Orig.* xv. 16, 20, as "iter pecudum inter montes angustum et tritum, a callo pecudum tritum:" cf. Serv. *ad* Verg. *Aen.* iv. 405. In the *lex Agraria* (*C. I. L.* 300), § 26, we find "quod quisque pecudes in calleis viasve publicas itineris causa induxerit," where Mommsen notes that *calleis* corresponds to what are now called *tratture*. Suetonius (*Jul.* 19) says that when Caesar and Bibulus were made consuls, "provinciae minimi negotii, id est, silvae callesque," were decreed to them, which can hardly mean, as Mommsen (*Hist.* iv. 203) takes it to be, "provinces in which the governor should find no other employment than the construction of roads and other such works of utility." In Tac. *Ann.* iv. 27, the MS. reads, "quaestor, cui provincia vetere ex mori calles evenerat," which is defended by Orelli, and taken to mean the charge of the mountain-pastures in the southern Apennines; but most scholars adopt the conjecture of Lipsius, *Cales*, regarding Cales, the oldest Latin colony in Campania, as the residence of the *quaestor classicus* in charge of South Italy. (Cf. Mommsen, *Staatsr.* ii. 536, note; and Nipperdey *ad loc.*) [R. W.] [A. S. W.]

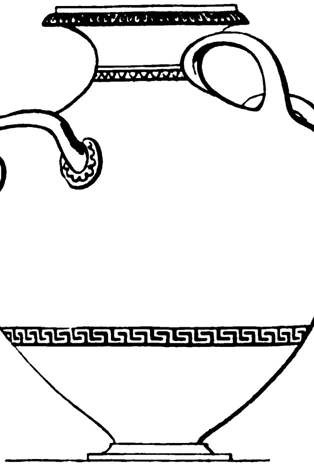
CALLISTEIA (καλλιστεῖα), contests for beauty, festivals celebrated in different parts of Greece. (Schol. *ad Il.* ix. 128; Suidas, *s. v.*; *Anth. Pal.* ix. 189; Athen. xiii. p. 609.) [L. S.]

CALLYNTE'RIA. [PLYNTERIA.]

CALO, a slave of the lower kind, usually but not always (cf. Hor. *Sat.* i. 2, 44, i. 6, 103; *Ep.* i. 14, 42; Cic. *de Nat. Deor.* iii. 5, 11) applied to a soldier's slave. The derivation given by Festus, *s. v.*, "calones militum servi dicti, qui ligneas clavas gerebant, quae Graece κᾶλα vocant," repeated by Servius *ad* Verg. *Aen.* vi. 1 and others, is manifestly false: the word is contracted from *caclo*, akin to *cacula*, used by Plautus (e.g. *Trin.* 721) in the same meaning and derived in the same way by Festus, with the absurd addition "ad tutelam dominorum." Accius, quoted by Fest. p. 146, has the line "calones famulique metellique caculaeque." Even under the Republic the number of slaves following a Roman army was large; under the Empire it sometimes exceeded the number of the soldiers. Each legion was followed by its own *calones*; and to prevent confusion, in case of an attack, they were organized and subjected to military discipline (Joseph. *B. J.* iii. 6; Veget. *R. M.* iii. 6).

The *calones*, though often mentioned with the *lixae* (q. v.), must be carefully distinguished from them. [W. S.] [A. S. W.]

CALPIS (κάλπις), a water-urn, a pitcher or ewer. It is another name for the *hydria* (ὑδρία), and Aristophanes (*Lysistr.* 327, 358) speaks of the *calpis* and *hydria* as identical. Writers on Greek vases make the *calpis* a later modification of the *hydria*, the body being rounder, the neck shorter, and the handles cylindrical. The *hydria* is more commonly found in Etruria, the *calpis* in Southern Italy. (Birch, *Ancient Pottery*, p. 364.) But this distinction between the *calpis* and *hydria* is conventional. The *calpis* occurs in the earliest times. It is mentioned both by Homer (*Od.* vii. 20; *Cer.* 107) and Pindar (*Ol.* vi. 68). Its chief use was for holding water, and was carried on the head by maidens, as we frequently find depicted on vases. It was also used for holding unguents (Polyb. xxxi. 3, 17), for drawing lots or collecting votes (*Anth. Pal.* vii. 384; Luc. *Hermot.* 40, 57), as a cinerary urn (*Anth. Pal.* xii. 74), and the name was also applied to a Panathenaic vase (Callim. *Frag.* 122). See Liddell and Scott, *s. v.* [HYDRIA.] [W. S.]



Calpis. (Birch.)

CAL'THULA. [Crocota.]

CALUM'NIA signifies generally the taking of legal proceedings, criminal or civil, against another person, when one has good reason for believing that the criminal charge or the civil action has no substantial foundation: "calumniosus est qui sciens prudensque per fraudem negotium alicui comparat" (Paulus, *Sent. Rec.* i. 5); and on the part of the defendant in a civil action it also means defending the suit without believing himself to be in the right. In all cases the intention to annoy the other party seems essential to the offence, for "calumnia in adfectu est, furti crimen" (Gaius, iv. 178).

From *calumnia* in criminal charges persons were deterred by the following provisions:—(1) The accuser had always to take the oath of *calumnia*, i.e. swear that he believed the charge to be well founded (*Fragm. Leg. Servil.* c. 8; Cic. *ad Fam.* viii. 8, 3). (2) A lex Remmia of unknown date established certain penalties for *calumniatores* (Cic. *pro Rosc. Am.* 19, 55); among them probably being that of having the letter K, the initial of *Kalumnia*, branded on the forehead (Cic. *ib.* 20, 57). The provisions of this statute seem to have been superseded by Trajan's enactment that a false accuser should be liable to the punishment which the accused would have suffered if condemned (Plin. *Paneg.* 35), and he was taken in law to have voluntarily subjected himself to this liability by signing the indictment (Dig. 48, 2, 7, pr.). If the charge had been one of treason, he could be tortured in order to discover the names of his instigators. (3) An accuser might not, as a rule, drop criminal proceedings after their commencement, so as to leave a charge hanging over the head of the accused without the consent of the latter (Dig. 48, 16, 18, 1, 2) and of the court (Paul. *Sent. Rec.* 5, 17, 1): he had to bind himself with sureties to push the charge to a verdict (Dig. 48, 2; 7, 1); and if he failed to do so, he not only forfeited the sum in which he had bound himself, but was also liable to punishment under the Senatusconsultum Turpillianum, passed in the time of Nero (Tac. *Ann.* xiv. 41; Dig. 48, 16; Cod. 9, 45).

There were some few crimes the accusation of which, even without ground, did not expose the accuser to be proceeded against as *calumniator*; but as a general rule, if he failed in his proof, the injured person might have an inquiry into his conduct and motives. If the person by whom this was conducted found that he had acted merely from error of judgment, he acquitted him in the form *non probasti*; if he convicted him of evil intention, he declared his sentence in the words *calumniatus es*, which sentence was followed by the legal punishment described above.

In the time of Gaius (and perhaps throughout the formulary procedure, B.C. 170 to A.D. 294, which he describes) a defendant in a civil action (1) could call on the plaintiff to take the *jusjurandum calumniae*, i.e. swear that he honestly believed his cause to be a good one (Gaius, iv. 176). (2) In default of this he might, if acquitted, bring the *calumniae judicium* (Cic. *pro Cluent.* 59, 163), by which he could recover a tenth of the value in dispute in the previous action, and one-fourth if the latter had been an interdict; but this remedy was unavailable unless it could be proved that the original plaintiff's motive had been merely to annoy the other party (Gaius, iv. 175). (3) After acquittal in some actions (*e.g.* the *actio injuriarum*, Gaius, iv. 177), the defendant could sue the plaintiff by *judicium contrarium* (the latter's *bona fides* in the earlier action here being immaterial: Gaius, iv. 178), and thereby recover sometimes a tenth, sometimes a fifth, of the sum at issue in the previous proceedings. (4) In all actions in which there was a *sponsio poenalis* (for which see below) in favour of the plaintiff, the defendant was entitled to a promise by *restipulatio* of an equivalent sum in case the action went in his favour.

If the *restipulationis poena* was required from the plaintiff, the defendant could not have the benefit of the *calumniae judicium* or of the *jusjurandum calumniae*; and the *judicium contrarium* was not applicable to such cases.

Similarly, in the formulary period, if the plaintiff was not sufficiently secured against unwarranted defence of the action by other provisions,—*e.g.* duplication of damages (*lis crescens*) in case of defeat (Gaius, iv. 171; Cic. *pro Flacco*, 21, 49); the *sponsio poenalis* in *condictio certi*, in the *actio de constituta pecunia*, and in interdicts tried *per sponsionem*; and the infliction of *infamia* on a defendant who was condemned (Gaius, iv. 182),—he could require the defendant to take the *jusjurandum calumniae*: "non calumniae causa ad inficias ire" (Gaius, iv. 172).

Under Justinian the *judicia calumniae* and *contrarium* and the penal *sponsio* and *restipulatio* had become obsolete. *Infamia* and duplication of damages were still incidental to some actions; the oath of *calumnia* was administered to both parties to an action and their advocates, and the losing side had to pay the other's costs (*Inst.* iv. 16, 1). [J. B. M.]

CAM'ARA (καμάρα), or **CAM'ERA**, properly signifies any arched or vaulted covering, and anything with such a covering: Herodotus, for instance, calls a covered carriage καμάρα (i. 199). [See the first illustration under Carpentum.] It is chiefly used in the two following senses:—

1. An arched roof which might be (*a*) a mere open trellis-work with creeping plants trained over it, like the covered walks called *berceaux* in French. Of this kind was probably the καμάρα under which Alexander slept during his last illness in a park (παράδεισος) near Babylon (Arrian, *Anab.* vii. 25, § 3); though Liddell and Scott explain it as a tester-bed. (*b*) An arched or vaulted ceiling formed by semicircular bands or beams of wood, over the intervals of which a coating of lath and plaster was spread, resembling in construction the hooped awnings in use among us. (Vitruv. vii. 3; Cic. *ad Q. Fr.* iii. 1, § 1; comp. Plin. *H. N.* xvi. § 156.) Under the emperors *camarae* were gilded (id. xxxiii. §§ 52, 57), or filled with plates of glass (id. xxxvi. § 189; cf. Stat. *Silv.* i. 5, 42; Marquardt, vii. 642). In one passage *camara* seems to be used as equivalent to *lacunar*, the sunken panel of a roof between the beams (Propert. iv. 2, 10 [= 1, 50]). (*c*) More rarely a barrel vault in solid stone-work, like that of the Tullianum at Rome. (Sall. *Cat.* 55, quoted under Carcer.)

2. Small boats used in early times by the

people who inhabited the shores of the Euxine and the Bosporus, and called *καμάραι* from their having a broad arched deck. They were made with both ends alike, so as to work in either direction without turning; and were put together without iron. They continued in use until the age of Tacitus, by whom their construction and uses are described. (Strab. xi. p. 495; Eustath. *ad Dionys. Perieg.* 700; Aul. Gell. x. 25; Tac. *Hist.* iii. 47.) For other uses of the word, see the Lexicons. [P. S.] [W. W.]

CAMILLI, CAMILLAE, boys and girls employed in the sacrifices of the Flamen Dialis, the Flaminica Dialis, and in general in religious rites and ceremonies. They were required to be perfect in form and sound in health, free born, and with both their parents alive; or, in other words, according to the expression of the Romans, *pueri seu puellae ingenui, felicissimi, patrimi matrimique.* The origin of these words gave rise to various opinions among the ancients. Dionysius supposed them to correspond to the *κάδμιλοι* among the Curetes and Corybantes; others connected them with Cadmilus or Casmilus, one of the Samothracian Cabeiri; but we know nothing certain on the matter. Respecting the employment of the Camillus at Roman marriages, see MATRIMONIUM. (Dionys. ii. 21, 22; Varr. *L. L.* vii. § 34; Macrob. *Sat.* iii. 8, § 7; Serv. *ad* Verg. *Aen.* xi. 543; Plut. *Num.* 7; Festus, s. vv. *Camillus, Cumera, Flaminius Camillus;* Hartung, *Die Religion der Römer*, i. p. 157, ii. p. 71; Marquardt, *Röm. Staatsverw.* iii. pp. 220, 316.) [W. S.]

CAMI'NUS. [DOMUS.]

CAMIS'IA, whence French *chemise*, a linen shirt worn next to the skin, is first mentioned in the fourth century by St. Jerome (*Ep.* 64, n. 11), from whom we learn that the word was used in the popular language, and that in his time the camisia was worn by soldiers ("solent militantes habere lineas, quas camisias vocant"). It is also mentioned by Isidorus (*Orig.* xix. 22), and by Paulus (Fest. s. v. *supparus*, p. 311, M.), who gives it as the equivalent of the older word *subucula.* [W. S.]

CAM'PAGUS, a kind of boot worn by the Roman emperors and military officers under the later empire. (Trebell. Poll. *Gallien.* 16, with the note of Salmasius; Capitol. *Max. Jun.* 2; Edict. Diocl. p. 24; Joh. Lydus, i. 17.) [W. S.]

Campagus, boot from marble statue of an emperor found at Carthage. (British Museum.)

CAMPANA. [TINTINNABULUM.]

CAMPESTRE (sc. *subligar*) was a kind of girdle or apron, which the Roman youths wore around their loins, when they exercised naked in the Campus Martius, whence the name (Augustin. *de Civ. Dei*, xiv. 17). The campestre was sometimes worn in warm weather in place of the tunic under the toga (*campestri sub toga cinctus*, Ascon. *ad* Cic. *pro Scauro*, p. 30, ed. Orell.; Hor. *Ep.* i. 11, 18; Vulcat. *Avid. Cass.* 4). [W. S.]

CAMPIDOCTO'RES, officers who taught soldiers their drill and exercises (Veget. i. 13, ii. 23, iii. 6, 8, 26; Lamprid. *Alex. Sev.* 53; Amm. xv. 3, § 10; Orelli, *Inscr.* 1790, 3495). In the times of the republic this duty was discharged by a centurion, or veteran soldier of merit and distinction. (Cf. Plin. *Pan.* 13.) [W. S.]

CAMUS. [CAPISTRUM.]

CAN'ABUS (*κάναβος* or *κάνναβος*) was a wooden stock or framework used by potters and sculptors round which the clay was laid (Poll. vii. 164). In small statues (*sigilla*) and vessels it was of the simplest description, and mostly of the form of a cross, *crux* or *stipes* (Tertull. *Apol.* 12; *ad Nat.* i. 12). Scaliger on Festus (*s. v. Stipatores*) compares it to the framework of a trophy. It is applied to very lean persons (Strattis *ap.* Pollux, x. 189; *Anth. P.* xi. 107), as we should say a "scarecrow." It is the same word as the Latin *cannaba*, "a booth," both signifying a construction like a scaffold or framework (Fick, *Vergl. Wörterb.* ii. 50). The word seems to have been also used for the outline figure which sculptors and painters used as a model (Suidas, *s. v.*). In this sense Aristotle (*Gen. An.* ii. 6, 18 = 743, 2 *a*) compares the appearance of the arteries and veins diverging from and converging to the heart to those who draw *κάναβοι* on the walls; they present, he says, the form of the whole body (*αἱ μὲν γὰρ φλέβες ὥσπερ ἐν τοῖς γραφομένοις κανάβοις τὸ τοῦ σώματος ἔχουσι σχῆμα παντός*, *H. A.* 3, 5, 3 = 515, 35 *a*). They are, as Blümner says (*Technol.* ii. 117), figures indicated by the sketch of the most essential muscles. [L. C. P.]

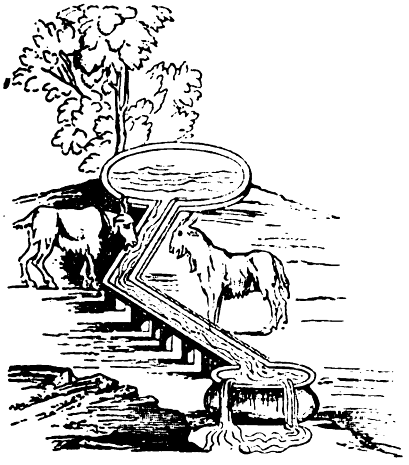
CANALICULUS, a small channel or canal (Vitr. x. 14; Col. viii. 15, 6), is also used in the following special senses:—to denote (1) the channel or barrel of a catapult (Vitr. x. 15); (2) a splint (Cels. viii. 2); (3) the grooves carved on the face of a triglyph between the three uprights (*femina, μηροί*), while those at each end where the outside *femina* sank to the level of the metope were called *semicanaliculi.* [CANALIS, COLUMNA.] [J. H. F.]

CANA'LIS (*σωλήν*), a channel or canal, is used, like its English derivatives, to signify a watercourse, whether open or closed, and next any other passage which resembles a watercourse.

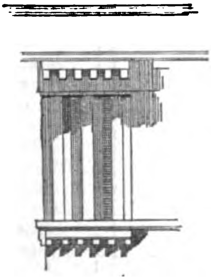
1. The method of constructing conduits is described by Vitruvius (viii. 7), who distinguishes the *canalis*, which is lined with masonry (*structilis*), from the leaden *fistula* and the earthenware *tubulus* (cf. Suet. *Claud.* 20). A ruder kind of conduit, which was made of timber or earthenware to carry water from a spring or stream to cattle in a meadow, is figured in the illustration below, taken from the Vatican Virgil (Verg. *Georg.* iii. 330; Varro, *R. R.* iii. 5, 2). Again by *canalis* is denoted a feeding-trough, which was in the case of domestic birds placed inside their house, and fed from the outside by pipes (*ib.* iii. 7, 8; 11, 2).

Similarly *canalis* denotes the channel of a sewer, as, for instance, that in the Forum, which is at one spot exposed to view, and was a favourite station for loungers (Plaut. *Curc.* iv. 1, 15; Fest. s. v. *canalicolae*).

2. *Canalis* is also a trench or vein in a gold-mine (Plin. *H. N.* xxxiii. § 68), the barrel or channel for missiles (*σύριγξ*) in a catapult (Vitr. x. 13, 7), a reed-pipe (Calp. *Ecl.* iv. 76); in the medical writers, a splint (Cels. viii. 10, 65) or a canal of the human body (Id. iv. 1, 38); and finally, in architecture, the "channel" or flat surface running between the *abacus* and the *echinus* inside the volute, as in the accompanying cut from one of the triglyphs of the temple of Segesta in Sicily (Saglio, *Dict. s. v.*). [Columna.] [J. H. F.]



Canalis. (From the Vatican Virgil.)

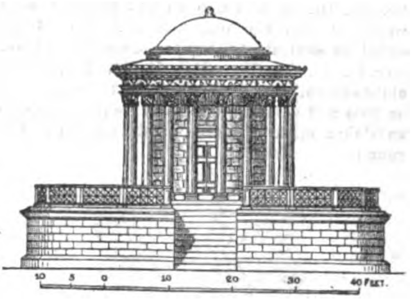


Canalis in Architecture.

CAN'ATHRON (*κάναθρον* or *κάννα-θρον*) was a Laconian car made of wood, with an arched plaited covering,—*πλέγματα ἔχουσα*, as Hesych. says (hence the derivation probably from *κάννα*, "a reed"),—in which the Spartan ladies used to go to Amyclae for the celebration of the Hyacinthia. We may compare the Roman *pilentum*. The capital passage is Polycrates *ap.* Athenaeus, xv. 4, 139 f: *τῶν δὲ παρθένων αἱ μὲν ἐπὶ καννάθρων καμαρωτῶν ξυλίνων ἁρμάτων φέρονται πολυτελῶς κατεσκευασμένων.* The nature of the adornments was at times fantastic: *εἴδωλα γρυπῶν ἢ τραγελάφων* (Plut. *Ages.* 19; cf. Xen. *Ages.* 8, 7; Müller, *Dorians*, ii. 298). Eustath. on *Il.* xxiv. 190 is in error in stating that *κάνναθρον* and *πείρινς* are the same. The latter is a basket put into the chariot, and used for holding the necessaries for a journey, and also for a seat (Buchholz, *Hom. Real.* ii. 1, 228). [L. C. P.]

CANCELLA'RIUS. [Cancelli.]

CANCELLI (*κιγκλίδες, δρύφακτοι*), a screen or lattice of open work, placed before a window, a doorway, the tribunal of a judge, or any other place. At Athens, in the senate-house (*βουλευτήριον*) and law-courts, *δρύφακτοι* were the bar or fixed partition, *κιγκλίδες* the gates opening into it (*αἱ μὲν οὖν τῶν δικαστηρίων θύραι κιγκλίδες ἐκαλοῦντο, ἃς Ῥωμαῖοι καγκελλωτὰς λέγουσιν*, Poll. viii. 124). Balconies projecting from the fronts of houses were also called *δρύφακτοι*, Lat. *maeniana* (Heracl. Pont. fr. 10, with Müller's note, ii. 209; *τὰ τῶν οἰκοδομημάτων ἐξέχοντα ξύλα*, Schol. Aristoph. *Eq.* 672, *Vesp.* 385; this sense is not noticed in L. and S., ed. 7). The material was originally wood, as the name *δρύφακτος* shows (L. and S. *s. v.*); and such were also the *cancelli* put up at Rome for temporary purposes, as when funeral games were given in the Forum (*cancelli fori*, Cic. *pro Sest.* 58, § 124; cf. Ov. *Am.* iii. 2, 64). But they might also be in metal, as in the *cancelli* before the Temple of Vesta, rebuilt by Severus, conjecturally restored by Comm. Lanciani from existing remains, and figured here from Middleton (p. 184); or in marble, as those on the Rostra from a relief on the Arch of Constantine, figured under Rostra. In the Basilica Julia, low marble screens or *cancelli* shut in the otherwise open arches on the ground-floor; a great number of fragments of these screens are scattered about the Forum (*ib.* p. 172). For the *cancelli* of law-courts see further Cic. *in Verr.* iii. 59, § 135, with Long's note; and compare Varr. *R. R.* iii. 5; Dig. 30, 41, s. 10; 33, 7, s. 10.



Cancelli before the Temple of Vesta. (From Middleton.)

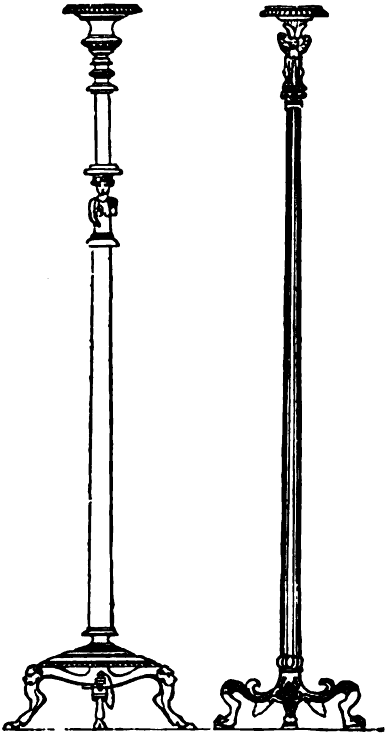
Hence was derived the word *Cancellarius*, which originally signified a porter, who stood at the latticed or grated door of the emperor's palace. The Emperor Carinus gave great dissatisfaction by promoting one of his Cancellarii to be Praefectus urbi (Vopisc. *Carin.* 16). The cancellarius also signified a legal scribe or secretary, who sat within the cancelli or lattice-work, by which the crowd was kept off from the tribunals of the judges (Cassiod. *Var.* xi. 6). The chief scribe or secretary was called Cancellarius *κατ' ἐξοχήν*, and was eventually invested with judicial power at Constantinople; but an account of his duties and the history of this office do not fall within the scope of the present work. From this word has come the modern Chancellor. [W. S.] [W. W.]

CANDE'LA, a candle, made either of wax (*cerea*) or tallow (*sebacea*), was used universally by the Romans before the invention of oil lamps (*lucernae*). (Varr. *L. L.* v. § 119; Serv. *ad* Verg. *Aen.* i. 727; Mart. xiv. 43; Athen. xv. p. 700.) They used for a wick the pith of a kind of rush called *scirpus* (Plin. *H. N.* xvi. § 178). They were used in funeral processions (Pers. iii. 103). In Livy (xl. 29) *fasces candelis involuti* appear to be packets wrapped up in a kind of wax cloth. In later times candelae were only used by the poorer classes; the houses of the more wealthy were always lighted by lucernae (Juv. *Sat.* iii. 287; cf. Plin. *H. N.* xxxiv. § 11. Becker-Göll, *Gallus*, ii. p. 390). [W. S.]

CANDELA'BRUM (λυχνεῖον, λυχνίον, λύχνιον, λυχνία) was originally a candlestick, but was afterwards used to support lamps (whence also called *lychnuchus*, λυχνοῦχος), in which signification it most commonly occurs. The candelabra of this kind were usually made to stand upon the ground, and were of a considerable height. The most common kind were made of wood (Cic. *ad Q. Fr.* iii. 7; Mart. xiv. 44; Petron. 95; Athen. xv. p. 700); but those which have been found in Herculaneum and Pompeii are mostly of bronze. Sometimes they were made of the more precious metals (silver, Dig. 34, tit. 2, s. 19, § 8) and adorned with jewels, as was the one which Antiochus intended to dedicate to Jupiter Capitolinus (Cic. *Verr.* iv. 28, 64, 65; cf. *ib.* ii. 74, 183, "candelabra aenea," and iv. 26, 60). In the temples of the gods and palaces there were frequently large candelabra made of marble, and fastened to the ground.

Marble Candelabrum in the Vatican. (Visconti, vol. iv., tav. 5.)

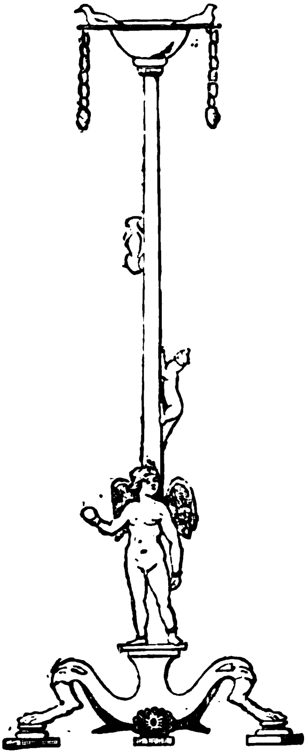
There is a great resemblance in the general plan and appearance of most of the candelabra which have been found. They usually consist of three parts:—(1) the foot (βάσις); (2) the shaft or stem (καυλός); (3) the plinth or tray (δισκός), large enough for a lamp to stand on, or with a socket to receive a wax candle. The foot usually consists of three lions' or griffins' feet, ornamented with leaves; and the shaft, which is either plain or fluted, generally ends in a kind of capital, on which the tray rests for supporting the lamp. Sometimes we find a figure between the capital and the tray, as is seen in the candelabrum on the right hand in the annexed woodcut, which is taken from the *Museo Borbonico* (iv. pl. 57), and represents a candelabrum found in Pompeii. The one on the left hand is also a representation of a candelabrum found in the same city (*Mus. Borb.* vi. pl. 61), and is made with a sliding shaft, by which the light might be raised or lowered at pleasure.



Pompeian Candelabra.

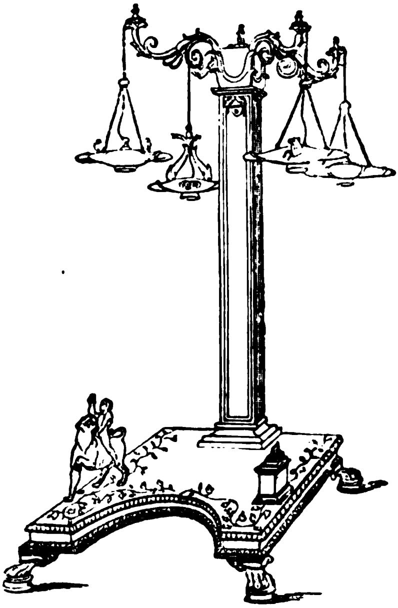
The best candelabra were made at Aegina and Tarentum (Plin. *H. N.* xxxiv. § 11). There were also Corinthian candelabra (Mart. xiv. 43). The Etruscan bronze candelabra were celebrated in antiquity, and are mentioned even in the time of Pericles by the Athenian poet Pherecrates (Athen. xv. p. 700 c).

There was another kind of candelabrum, entirely different from those which have been described, which did not stand upon the ground, but was placed upon the table. Such candelabra sometimes consist of a figure supporting a lamp (*Mus. Borb.* vii. pl. 15), or of a figure, by the side of which the shaft is placed with two branches, each of which terminates in a flat disc, upon which a lamp was placed. A candelabrum of the latter kind is given in the annexed drawing (*Mus. Borb.* iv. pl. 59). The stem is formed of a liliaceous plant; and at the base is a mass of bronze, on which a Silenus is seated, engaged in trying to pour wine from a skin which he holds in his left hand, into a cup in his right. Vitruvius (vii. 5, § 3) describes candelabra "aediculárum sustinentia figuras." Sometimes the candelabra consist of pillars, from the capitals of which several lamps hang down, or of trees, from whose branches lamps also are suspended. The following woodcut represents a very elegant candelabrum of this kind, found in Pompeii. (*Mus. Borb.* ii. pl. 13.)



Etruscan Candelabrum. (Dennis, *Etruria*, i. p. lxxv.)

Candelabrum from Pompeii.

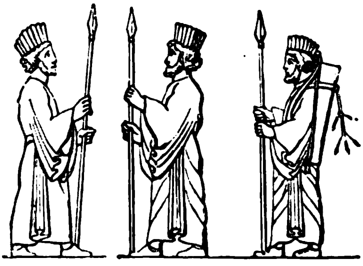


Candelabrum from Pompeii.

The original, including the stand, is three feet high. The pillar is not placed in the centre, but at one end of the plinth, which is the case in almost every candelabrum of this description yet found. The plinth is inlaid in imitation of a vine, the leaves of which are of silver, the stem and fruit of bright bronze. On one side is an altar with wood and fire upon it; and on the other a Bacchus riding on a tiger. The *candelabrarii*, or makers of candelabra, are mentioned in inscriptions (Orelli, *Inscr.* 4157). (Becker-Göll, *Gallus*, ii. p. 398 *seq.*) [W. S.]

CANDIDA'TUS. [AMBITUS.]

CANDYS (**κάνδυς**), a gown worn by the Medes and Persians over their trowsers and other garments (Xen. *Cyr.* i. 3, § 2; *Anab.* i. 5,



Candys, Persian dress.

§ 8; Diod. Sic. xvii. 77). It had wide sleeves, and was made of woollen cloth, which was either purple or of some other splendid colour. In the Persepolitan sculptures, nearly all the principal personages are clothed in it. The three shown above are taken from Sir R. K. Porter's Travels (vol. i. pl. 94). [J. Y.]

CANE'PHORUS (*κανηφόρος*) is "a basket-bearer." The *κάνειον* or *κανοῦν*, derived from *κάννα*, "a reed" (Ebeling, *Hom. Lex.* s. v.), was in the Homeric times a basket used for putting in bread (*Il.* ix. 217) or other edibles (*e.g.* onions, *Il.* xi. 630) for meals, or the sacred *οὐλαί* for sacrifice (*Od.* iii. 441). We find the remains of a feast also placed therein (*Od.* xx. 300). The epithets used are *καλὸς* or *χάλκεος* (*Il.* xi. 630) or *χρύσειος* (*Od.* x. 355). The latter is in the fairy palace of Circe; but the Schol. on Ar. *Lys.* 645, says the *κανηφόροι* carried flat dishes all of gold (*λοπάδας τινας ὁλοχρύσους*). These were perhaps the *κανᾶ*. Some few golden utensils were used in state sacrifice: cf. the *χερνίβια* in Andoc. *c. Alcib.* § 29, though the usual *κανᾶ πομπικά* were no doubt *χαλκᾶ* (Michaelis, *Parthenon*, p. 259). One of silver is referred to in *C. I. G.* 2855, 19, and one of earthenware in Dion. H. ii. 23 (Grimm). At Athens the *κανοῦν* was used in religious service only. A particular part of the ceremony seems to have been called *κανοῦν* or *κανᾶ*, when the basket was carried round the altar (Eur. *H. F.* 926), laid down (Ar. *Ach.* 244), and the *οὐλαί* taken therefrom. (Cf. *ἐξάρχου κανᾶ*, Eur. *I. A.* 435.) *Κάναστρον* signifies both a bowl (*τρύβλιον*) and also a dish made of cork (*φελλώδης τις πινακίσκος*, Poll. x. 85) or earthenware (Hom. *Epig.* xiv. 3). The Roman *canistrum* was used for just the same purposes as the Homeric *κανοῦν*, viz. for holding bread (Cic. *Att.* vi. 1, 13; Juv. v. 74), necessaries for sacrifice (Verg. *Aen.* viii. 180; Tibull. i. 10, 27), remains of a feast (Hor. *Sat.* ii. 6, 105). The epithets signify "flat:" e.g. *patulis* (Ov. *Met.* viii. 675), *lata* (Id. *Fast.* ii. 650).

Canephori. (British Museum.)

They were, then, flat baskets used, among other purposes, for carrying the requisites for religious ceremonies. At the Panathenaea they were carried by grown-up maidens of high birth, who were genuine native Athenians (Harpocr. *s. v.*). The annexed cut represents the two canephori approaching a candelabrum. Each of them elevates one arm to support the basket, while she slightly raises her tunic with the other. The sister of Harmodius was not allowed to carry the basket in a procession, as she was a Gephyrean (Thuc. vi. 56, compared with Herod. v. 57, 61). They were accompanied by the daughters of metics, carrying umbrellas and seats (Schol. Ar. *Av.* 1508, 1549; Aelian, *V. H.* vi. 1). Dressed in splendid and costly raiment and arrayed with golden ornaments (Ar. *Lys.* 1188 *sqq.*; Boeckh, *Pol. Ec.* i. 571, ii. 142), maintaining too a stately and dignified attitude, one hand holding the basket supported on the head, the other slightly raising the dress, they naturally formed a fine subject for artistic treatment; and so we have notice of special statues of *κανηφόροι* by Polycletus in bronze (Cic. *Verr.* iv. 5) and Scopas in marble (Plin. *H. N.* xxxvi. § 25). It is possible, as Saglio remarks (*Dict.* i. 877), that the *κανηφόροι* suggested the idea of the Caryatides of the Erechtheum, the basket being altered into the capital, a view taken also by Guhl and Koner (p. 191); but this opinion is combated by Dr. Julius (in Baumeister's *Denkmäler*, &c., *s. v.* Erechtheion), on the ground that the Caryatides support, not a basket but a Doric capital; and fig. 1202 in Saglio's *Dict.* affords strong reason why we are not to regard *all* Caryatides as having been suggested by the *κανηφόροι*.

Though mostly spoken of with reference to the Panathenaea, yet, as was natural, we find them in processions to other divinities, both at Athens (Harpocr. *s. v.*) and elsewhere: *e.g.* Zeus in Boeotia (Plut. ii. 771), Dionysus at Athens (Ar. *Ach.* 237 *sqq.*) and in India (Plut. ii. 1164), Artemis (Theocr. ii. 66), Hera (Hor. *Sat.* i. 3, 11), Isis at Delos (*C. I. G.* 2298). This inscription, as well as 3602, 3603, shows that at times public recognition was taken of *κανηφόροι* who fulfilled their duty in worthy fashion (*καλῶς καὶ ἀξίως*). [L. C. P.]

CANISTRUM. [CANEPHORUS.]

CANNA. [CALAMUS.]

CANON (*κανών*), derived probably from *κάννα*, "a reed," meant a straight rod; hence the following special applications.

1. In the Homeric shield (the *ancilia*, too, had them: see Dion. H. ii. 71, 387 R), bars to which the *τελαμὼν* or shoulder-belt was attached (Hesych. *s. v.*), generally of wood, but in Nestor's shield of gold (Hom. *Il.* viii. 192; Buchholz, *Hom. Real.* ii. 1, 363); or two parallel bars used as handles, through one of which the warrior placed his arm while he grasped the other. This was prior to the invention of regular handles (*ὄχανα*) by the Carians (Herod. i. 171; Ebeling, *s. v.*, where see Scholiasts). Others again suppose the *κανόνες* to be a framework of the shield, over which the leather was placed. But this would be superfluous in the golden shield of Nestor (Seiler, *Hom. W.*, s. v.).

2. In Hom. *Il.* xxiii. 761, by some supposed to be the shuttle to which the threads of the woof (*πηνίον*) were attached, and by which they were drawn through and out of the warp (*μίτος*). This was the ordinary view, and it is still held by Buchholz (*Hom. Real.* ii. 1, 186). But the Scholiast says, *κανών· ὁ κάλαμος περὶ ὃν εἰλεῖται ὁ μίτος ὁ ἱστουργικός*. Rightly; for with Blümner (*Technologie*, i. 130) and Marquardt (*Privatleben*, 506 ff.) we should consider the *κανὼν* to be the straight round rod to which the alternate threads of the warp were attached by means of strings, which strings had loops at either end, one loop fastening the string to the *κανών*, the other fastening it to the warp. Of course, in weaving there must be two *κανόνες*. This arrangement of strings and loops was called *μίτος* by the Greeks, *licia* by the Romans. The *κανὼν* was originally made of reed, and we find *arundo* in this sense in Ov. *Met.* vi. 55. Now, if we bear in mind that *πηνίον* is not the woof, but the spool or shuttle to which the

threads of the woof were attached, we shall find the Homeric simile quite explicable and apposite.

3. A carpenter's rule, very like our own, to judge from the representation of it we find on carpenters' tombs, which show that it was graduated. [See REGULA.] It differed from στάθμη, *amussis* (cf. Vitruv. vii. 3, 5), in that the latter was a flexible string, the former generally a rigid ruler (Arist. *Rhet.* i. 1, 5), though sometimes it was made of lead and could be bent, μολύβδινος κανών (Arist. *Eth. N.* v. 10, 7). The carpenter used to correct errors in the κανὼν by the aid of his eye and the στάθμη (Soph. *Frag.* 421). Both the στάθμη (Schol. on Hom. *Il.* xv. 410) and the κανὼν (*Anth. P.* vi. 205, 4; cf. Eur. *H. F.* 945) were rubbed over with some coloured substance, generally vermilion (μίλτος, *rubrica*). Κανὼν is also used as a ruler for drawing straight lines with pen and ink (*Anth. Pal.* vi. 63, 2; 64, 4).

4. In descriptions of machinery κανὼν is used just as indefinitely as we use "rod:" *e.g.* in the account of the organ made by Ctesibius, given in Heron's *Pneumatika*, we find κανὼν used at one time for a piston rod, next for the beam of a lever, again for the fulcrum upon which the lever works, and also the rods which connect the keys and the pipes or perhaps the rods of the stops. (See Chappell, *Hist. of Music*, i. 343, 376, and his elucidation of the puzzling passage κανόνας συμφραδμόνας αὐλῶν in the Emperor Julian's riddling epigram, *Anth. P.* ix. 365, 7.) Κανὼν is used just as indefinitely in the description of the military engines in Heron: e.g. *Belop.* 124, 125; and also *regula* in Lat. (Vitruv. x. 15, 17).

5. The beam (not tongue) of a balance (*Anth. Pal.* xi. 334: ἕστησ' ἀμφοτέρων τὸν τρόπον ἐκ κανόνος). It is generally called ζυγόν.

6. Horizontal curtain-poles, gilt and silvered, in the description given by Chares *ap.* Athen. 538 d, of the marriage tent which Alexander got made.

In the figurative sense κανὼν came to be used for anything which served as a model or rule: *e.g.* in *Athletics*, Pollux iii. 152 tells us that the *average* or normal jump (τὸ μέτρον τοῦ πηδήματος) was called κανών, or what was normal. In *Ethics*, for the rule of right, the Ethical Standard (Eur. *Hec.* 602: cf. Arist. *Eth. Nic.* ii. 3, 8, κανονίζομεν τὰς πράξεις ἡδονῇ καὶ λυπῇ), or the measure of attainment assigned or permitted to an individual. (St. Paul, 2 Cor. x. 13–16: cf. Hor. *Ep.* i. 7, 98, "Metiri se quemque suo modulo ac pede verum est.") In *Grammar*, for the rules of that science; see Theodorus of Alexandria, *ap.* Bekker, *Anecdota Graeca*, 975–1065, and esp. 1180: κανών ἐστι λόγος ἔντεχνος ἀπευθύνων ὁμοιότητα πρὸς τὸ καθόλου τὸ διεστραμμένον τῆς λέξεως, τουτέστι λόγος μετὰ τέχνης διὰ τῶν ὁμοίων ἐπ' εὐθείας ἄγων ἢ ἐλέγχων πρὸς τὰ πλείονα τὸ διεστραμμένον καὶ ἡμαρτημένον τῆς λέξεως· τὰ γὰρ πλείονα τῶν ἐλαττόνων κανόνες. Cf. *Etym. M.* p. 489, 29 (Gaisf.). Also cf. Auson. *Epigr.* 136 *fin.* As regards style in *Literature*, very few rules can be laid down. The opinion of the "wise man," the φρόνιμος, in style, as in each branch of art, is the only criterion of good and bad. In this respect Cicero calls Tiro (*Fam.* xvi. 17, 1) the κανὼν of his writings. Hence of first-class authors as the standard or model in various respects: *e.g.* Dion. H. vol. vi. 775 (Reiske), Ἡρόδοτός τε γὰρ τῆς Ἰάδος ἄριστος κανών, Θουκυδίδης δὲ τῆς Ἀτθίδος: 813, Thucydides is κανόνα τῆς ἱστορικῆς πραγματείας: cf. 1083. In reference to *Music*, Euclid has a treatise called κανόνος κατατομή: the 19th theorem of which, the main point at which he is arriving, is τὸν κανόνα καταγράψαι κατὰ τὸ καλούμενον ἀμετάβολον σύστημα. Here the κανὼν is the string which is regarded as the unit. Euclid takes for this the note external to the tetrachords, the προσλαμβανόμενος (on the meaning of this term see F. A. Gevaert, *Histoire, &c. de la Musique*, Gand, 1875, p. 90, note 2),—A natural. He determines the length of the strings requisite to produce the other notes of the Diatonic scale as fractions of this. Κανὼν was also applied to the table thence derived, which expressed the relations of the intervals of sounds. (See Saglio, *Dict.* s. v., and Lunn in Smith's *Dict. of Christian Antiquities*, s. v.) Ptolemy advised his pupils to discover the intervals by measurement, and recommended the κανὼν ἁρμονικός, consisting of a rule and movable bridges to be placed under the strings; and, the legends notwithstanding, in all probability Pythagoras obtained the measurement of the intervals in the same manner (Chappell, *Hist. of Music*, i. 8, 73, 74). Lastly, we may mention that the wind-chest of Ctesibius's hydraulic organ was called "the regulator of the music" (κανὼν μουσικός, Vitruv. x. 8). In *Philosophy*, that branch of Logic which dealt with the tests of truth was called by the Epicureans τὸ κανονικόν. (See Zeller, *Stoics*, &c. Eng. trans. pp. 400–1.) Epicurus wrote a book called περὶ κριτηρίου ἢ κανών (Diog. L. x. 27). In *Sculpture*, the rules of the proportions of the human figure were first definitely laid down by the sculptor Polycletus of Sicyon, who flourished 452–412. To exemplify these rules he made a statue of a Persian δορυφόρος (Cic. *Brut.* 296), which is now lost. Both the rules and the statue were called κανών (Galen, iv. pp. 354–5, Kühn). The rules, too, are lost to us: for the measurements and method given by Vitruvius, iii. 1, are in error. (See G. Schadow, *Polyclet.*, Eng. trans., London, 1883; and A. Blanc, *Grammaire des Arts du Dessin*, pp. 40–47, Paris, 1867.) The head is a bad unit of measurement; it does not vary with the growth of the body: the hand does so vary; accordingly it is the right unit to adopt, and it was adopted by Polycletus, theoretically (Galen, vol. v. 449, ed. Kühn) and practically (Plin. xxxiv. §§ 55, 56, compared with 65), as well as by the Egyptians (Blanc, *l. c.* 44–46). For elaborate accounts of the science of artistic proportion and its history, with numerous illustrations, see Schadow, *l. c.*; and J. Bonomi, *The Proportions of the Human Figure* (London, 1872).

Rules often take the form of tables or lists, and so we find κανὼν sometimes in this sense. But the older writers did not use it as such; and the Alexandrine grammarians no more used the word κανὼν for a *catalogue* of classic writers than they made any such catalogue. This idol of the tribe has been exhibited in its worthlessness by G. Steffen, *De Canone qui dicitur Aristophanis et Aristarchi* (Leipzig, 1876). But in *Astronomy* we have κανόνες πρόχειροι of Ptolemy (vol. vi. ed. Halma), "handy tables," giving the mean motions of each of the planets and the differences of their observed positions therefrom, so that their actual (*i.e.* from Ptolemy's point of view, geocentric) position could be discovered for any date, and conversely the date be found given their position. These were helps to chronologists. And specially in *Chronology* there was a table of kings (κανὼν βασιλικός) made out by Hipparchus and Ptolemy (vol. iii. ed. Halma, *init.*), with the length of their reigns in whole years. Ptolemy took the first year of Nabonassar, king of Babylon, as his era (ἐποχή, "stopping point") of the Babylonian kings, the accession of Cyrus the Great of the Persian kings, the accession of Philip Arrhidaeus of the Macedonian kings, and the battle of Actium of the Roman emperors as kings of Egypt. Such chronological tables were in vogue in Plutarch's time, but he will not give up the story of the meeting of Solon and Croesus for any so-called chronological tables (χρονικοῖς τισι λεγομένοις κανόσιν, *Sol.* 27) of Dion. H. (*Ant. Rom.* i. 74).

In the *fiscal* affairs of the later Roman empire *canon* was used for regular payments of tribute (*e.g.* Cod. Th. xi. 1, 30, 31 *et passim* throughout the title), especially for the corn supply to the capital (*canon P. R.*, Spart. *Sev.* 8; *canon frumenti urbis Romae* or *urbicarius*, Cod. Th. xiv. 15, 3); also for the ordinary annual income a state derived from its landed property (Cod. Th. xv. 1, 32, and Gothofred's note): opposed to extraordinary taxation, *tributum superindictum* (ib. vi. 26, 4; xi. 1, 36).

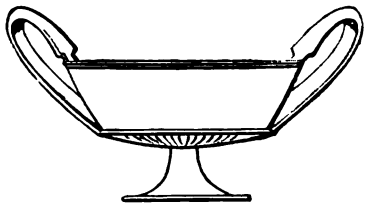
For the multitudinous applications of Canon and its derivatives in the Christian Church,—Canon of the Mass, Canon of Scripture, &c.—the reader is referred to Ducange, to Smith's *Dictionary of Christian Antiquities*, and to Addis and Arnold's *Catholic Dictionary*. [L. C. P.]

CANTABRUM, a standard used in the time of the Roman empire, of which the form is unknown, and carried in festive processions (Tertull. *Apol.* 16; Minuc. Felix, *Oct.* 29). [W. S.]

CAN'THARUS (κάνθαρος) is the name of a kind of boat—of what shape we do not know (Aristoph. *Pax*, 143, and *ap.* Ath. 473 d)—and also of a drinking vessel; called either from resemblance to an inverted beetle (κάνθαρος), as Ussing supposes (p. 135), or more probably from the name of the inventor (Pherecr. *ap.* Ath. 474 d; Poll. vi. 96). From the cup came the name of Cantharus, the follower of Dionysus, to whom it was sacred (Plin. xxxiii. § 150; Macrob. v. 21). Hence Dionysus is frequently represented on ancient vases holding a cantharus in his hand. It had feet (Ath. 488 f), handles (*cantharus ansa*, Verg. *Ecl.* vi. 17), which were what we may call vertical, stretching from the rim down to near the foot, the curve often extending far higher than the rim. These vertical handles are what mainly distinguish the *cantharus* from the CALIX, which latter had horizontal handles. It differed from CARCHESIUM in not having the centre narrower than the rim, and in being as a rule a much less splendid article. As regards depth, it varied considerably; but in size it was generally large (Eubul. *ap.* Ath. 474 c), also called ἁδρός (473 d, 474 a), but sometimes medium-sized (*modicis cantharis*, Hor. *Od.* i. 20, 2). It was usually made of earthenware (Ath. 473 f), but also of metal (Hor. *Ep.* i. 5, 23). We hear of them even of gold (Menand. *ap.* Ath. 474 c; cf. Plin. *H. N.* xxxiii. § 53), silver (Orelli, 6071), and gilt (6140). Like all the other kinds of drinking cups among the ancients, *canthari* were often highly adorned.

Dionysus, holding a cantharus. (Millin, *Peintures Antiques*, pl. 53.)

Subjoined are two representations of *canthari*, taken from Dennis (*Etruria*, i. p. cxvii.). The usual form is shown in the first cut; the second is a late variety, with the handles differently arranged.



Cantharus. (Dennis.)

Cantharus. (Dennis.)

In the Digest, 30, 41, 11 (reading *siphones*, Orelli, *Inscr.* 2504), it appears that the name *cantharus* was given to basins for catching water from fountains (Plin. *H. N.* xxxvi. § 184). A splendid one in the Museum at Naples is reproduced by Saglio (*Dict.* p. 894). One appears outside a Christian church in a mosaic in San Vitale at Ravenna (*Rev. Arch.* 1850).

For works bearing on Greek drinking vessels, see CALIX. [L. C. P.]

CAN'TICUM. The grammarian Diomedes (p. 491, Keil) says: "Latinae comoediae duobus tantum membris constant, diverbio et cantico;" and he adds, "in canticis una tantum debet esse persona, aut si duae fuerint, ita debent esse, ut ex occulto una audiat, nec colloquatur, sed secum, si opus fuerit, verba faciat." Hence it has been commonly supposed, on this authority, that the *cantica* were lyric monologues, sung to the music of the flute, while the *diverbia* were simply recited. But this hypothesis is at variance with another statement of the same grammarian, "in Latinis fabulis plura sunt cantica quae canuntur:" for lyrical monologues take a very subordinate place in most Roman comedies, and in some do not appear at all. Ritschl (*Rhein. Mus.* xxvi. 599–637 = Opusc. iii. 1–54) showed by a careful examination of the scenes to which the letters C (*canticum*) and DV (*diverbium*) are prefixed in certain MSS. of Plautus, that while the *diverbia* are always written in iambic senarians, we must distinguish between two kinds of *cantica:* (1) those which are written in lyric metres, *i.e.* anapests, cretics, and bacchiacs; and (2) those which are composed in trochaic or iambic septenarians. The latter, marked in some copies of Terence with the sign M.M.C. (= *modi mutati cantici*), were delivered melodramatically, with a musical accompaniment; the former were sung to a sort of recitative. Taking these two kinds together, the *cantica* usually form a larger part of the play than the *diverbia,* and they appear to have been the better adapted to the taste of the Roman public, for there are instances in which, where the Greek original is in iambics, the Latin adaptation is written in septenarians. There is no doubt that *cantica* of both kinds occurred also in tragedies: cf. Cic. *Tusc.* i. 44, 107, "cum tam bonos septenarios fundat ad tibiam." According to Livy (vii. 2), Livius Andronicus introduced the custom that the *cantica* should be sung by a young slave standing near the flute-player, while the actor accompanied his singing with the proper gesticulation. Whatever may be the historical value of this statement, it seems certain that in Livy's own time this was the practice; one which naturally led before long to the development of the pantomime. There are many indications that favourite *cantica,* like airs in modern operas, were sung separately at musical entertainments (Suet. *Jul.* 84; Tac. *Ann.* xiii. 15). [A. S. W.]

CAPIS, an earthen vessel used in sacrifices. Other forms are *capedo* (Cic. *Parad.* i. 2, 11), *capeduncula* (id. *N. D.* iii. 17, 43), and *capula* (Varr. *L. L.* v. 121, "capis et minores capulae a capiendo, quod ansatae ut prehendi possint, id est capi"). We thus see that it was fitted with a handle, but its shape is variously described. According to Varro (*ap.* Non. p. 547, 15), it was a small pitcher (*urceolus*); according to Festus (P. Diac. p. 48 M.), a cup (*poculum*). It is joined with the *lituus* among the sacred implements of the augurs (Liv. x. 7), and the two are often represented on coins and medals struck in honour of persons belonging to the more distinguished priesthoods. One of these coins is figured under AUGUR, another under URCEUS. Another shape occurs on coins given by Daremberg and Saglio; but in these the vessel is more probably the SIMPULUM, which was also used in sacrifices, and which is figured under SECESPITA and SIMPULUM. The presence of the *lituus* makes the pitcher shape the most probable. The conservatism of Roman religion required the retention of the primitive plainness of material as well as of the antique shape; in the time of Cicero (*ll. cc.*) costly vessels were only beginning to be used in sacrifices. Pliny dates a great increase in the luxury of *capides et pocula* from Pompey's third triumph, B.C. 61: and after this time the *capis* was no longer reserved for sacred purposes, but passed into ordinary use. (Plin. *H. N.* xxxvii. §§ 18, 20; cf. Petron. 52; Marquardt, *Privatl.* 684.)

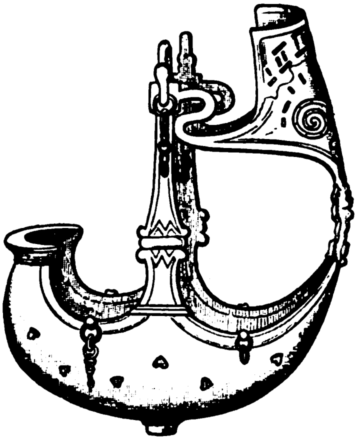
[W. W.]

CAPISTE'RIUM, an instrument employed for cleansing the ears of corn after they had been threshed out and winnowed. It was used differently from the sieve (*cribrum*) and the winnowing shovel (*pala, vannus*); and was probably a wooden trough (*alveus*), into which the corn was put and shaken up, so that the heavy grains subsided to the bottom (Rich). Saglio suggests that these heavy grains may have been selected for sowing. (Colum. i. 9, 11; Apul. *Met.* x. p. 193.) [W. W.]

CAPISTRUM (**φορβειά, κημός, φιμός**) is derived from *capio*, and means "a halter" for animals, just like our own in shape, made apparently of leather (Marquardt, *Privatalt.* 718). It was used especially in the manger (Xen. *Eq.* 5, 1; Calp. *Ecl.* i. 41): hence φορβειά, derived from φέρβω. It may be questioned if φορβειὰ was not originally of the nature of a nose-bag, like χειλωτὴρ (see Stephanus, *Thesaurus*), with the provender at the bottom of it. We also find *capistra* used for leading or guiding animals when quite tame (Ovid. *Met.* x. 125; *Heroid.* ii. 80; Mart. i. 104, 7); hence the satirical application to the married state in Juv. vi. 43. The term φορβειὰ was further applied to the band of leather which flute-players put over their mouths and about their heads, like a halter, to keep them from blowing too hard and so to enable them to get a softer tone and to hold out longer (Soph. *Fr.* 753; Arist. *Vesp.* 582). It is also called κημός (Phot.), στομὶς (Poll. x. 56): cf. ἐπιστομίζειν. Plut. ii. 713 D. The Latin *capistrum* is not used in this sense. Guhl and Koner say that in representations of theatrical players where the long double clarionet required a great effort of breath, in order to avoid any side-loss of breath, this mouth-band is frequently found; but never on the vase-pictures of female flute-players at banquets, nor ever where a single clarionet is played. The φορβειὰ sometimes had no second strap going *over* the head, but simply the one strap tied over the mouth and round the back of the head. On the next page is an illustration taken from Baumeister's *Denkmäler des klassischen Altertums* (art. Flöten).

This leads on to the meaning of "muzzle," which also belongs to *capistrum,* which was used to prevent animals eating or biting (Cato, *R. R.* 54; Plin. *H. N.* xviii. § 177); in Verg. *Georg.* iii. 399 the *capistra* for kids have iron spikes to prevent them sucking. In ecclesiastical Latin *camus* is used for a muzzle; but where that word occurs in Plautus (*Cas.* ii. 6, 37), it rather means a log put on the neck of a refractory slave. The Greeks called it κῆμος (Xen. *Eq.* 5, 3), or more generally φιμός, which may be regarded as put round (Lucian, *Vit. Auct.* 22) the neck (Ar. *Nub.* 592). Often φιμοῦν is found in the N. T. in the sense of "to put to silence:" *e.g.* Matt. xxii. 34. As might be expected, the *capistra* appear to have been generally soft, whether halters (Ov. *Met.* x. 125) or muzzles. These latter appear to have sometimes been of platted osiers (*fiscellae*, Plin. *H. N.* xviii. § 177), or of perforated leather (Saglio, *Dict.* i. 897). Sometimes they were of bronze. There are two such in the British Museum, one of which is figured above. Such muzzles, with short pipes (αὐλωτοὶ φιμοί, Aesch. *Fr.* 343) instead of mere perforations, were occasionally used on war-horses, so that their snorting should give a whistling sound (Aesch. *Theb.* 463), and we need not suppose with Eustath. (on *Il.* 1157, 39) and Hesych. that bells were attached to them.

Capistrum or mouth-band for flute-player. (Baumeister.)



Capistrum, bronze horse-muzzle. (British Museum.)

In the general sense of "holder" or "supporter" we find *capistrum* used as a band for fastening up vines (Colum. iv. 20, 3), and by Cato (*R. R.* 12) as a strap for the wine-press. [L. C. P.]

CAPITA AUT NAVIA, "head or tail," the name of a game at "pitch and toss," derived from the fact that the early *as* had on one side a double-faced Janus, on the other the prow of a ship. See cut of *as* on p. 202. (Macrob. *Sat.* i. 7, 22; Fest. *s. v.* Navia, p. 169 M.) [A. S. W.]

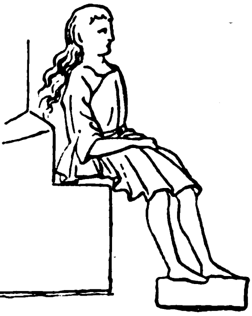
CAPITAL, a kerchief of woollen (Varr. *L. L.* v. 130) or linen cloth (P. Diac. p. 57 M.), worn round the head by Roman women in early times, and, after it had gone out of general use, retained as part of the costume of certain priestesses (Varr. *l. c.*). Among these may have been the Vestals; a coin engraved by Saglio shows a kerchiefed female head and the letters V. V., i.e. *Virgo Vestalis;* but not the Flaminica (Rich), whose coiffure was undoubtedly the TUTULUS. [W. W.]

CAPITA'LIS. [CAPUT.]

CAPI'TE CENSI. [CAPUT.]

CAP'ITIS DEMINU'TIO. [CAPUT.]

CAPIT'IUM, a portion of a woman's dress, said by Varro to be so called because it covers (*capit*) the breast (Varr. *L. L.* v. 131, and *de Vita P. R.* iv. *ap.* Nonium, p. 542, s. v. *capitia:* cf. Gell. xvi. 7, § 9; Dig. 34, 2, 24). The word itself might lead us to suppose that it was originally, like *capital*, a covering for the head; but there is express testimony that it was worn over the tunic (Laber. *ap.* Aul. Gell. *l. c.*) and covered the breast, not the head (Müller, *ad* Fest. p. 57). Rich, and after him Saglio, have identified it as a corset, not unlike those still worn by the present women of Italy, and have figured it from a sepulchral marble published by Gori (*Inscript. Antiq. Florent.* p. 344). [W. S.] [W. W.]



Capitium. (Gori.)

CAPITOLI'NI LUDI. [LUDI.]

CAPIT'ULUM. [COLUMNA.]

CAPSA (dim. CAPSULA, CAPSELLA) or **SCRINIUM,** the box for holding books and papers among the Romans (Cic. *Div. in Caecil.* 16, § 51; Cat. lxviii. 36; Hor. *Sat.* i. 4, 22; i. 10, 63). These boxes were usually made of beech-wood

(Plin. *H. N.* xvi. § 229), and were of a cylindrical form. Many representations of them exist: the following cut represents the Muse Clio with an open capsa by her side.

The Muse Clio with a Capsa. (*Pitture d'Ercolano*, vol. ii. pl. 2.)

The *scrinium* was a larger *capsa*, holding a considerable number of rolls, and hence jokingly assigned to voluminous authors (Hor. *Sat.* i. 1, 120; Mart. i. 2, 4). Boxes used for preserving other things besides books, for instance fruit, were also called *capsae* (Plin. *H. N.* xv. § 65; Mart. xi. 8; *capsella* in this sense, Dig. 33, 7, 12). *Scrinium*, on the other hand, is almost exclusively applied to cases for writings; yet we find *scrinium unguentorum* in Pliny (*H. N.* vii. § 108).

The circular toilet- or jewel-cases of the Romans, if in wood, were called *capsae*; if in metal, *cistae*. Some fine examples of the latter, both in silver and bronze, have been preserved, and are described under Cista: whether *capsa* and *cista* could be used interchangeably, as some think, seems doubtful, though we find *cista* for a book-box in Juvenal (iii. 206). In Petronius (c. 67) a lady wears a golden *capsella* suspended from her neck. The phrase in Seneca, *Noris complures juvenes ... totos de capsula* (*Ep.* 115, § 2), means "redolent of the pouncet-box."

The slaves who had the charge of these book-chests were called *capsarii*, and also *custodes scriniorum*; and the slaves who carried in a capsa behind their young masters the books, &c., of the sons of respectable Romans, when they went to school, were also called *capsarii* (Juv. x. 117). We accordingly find them mentioned together with the *paedagogi* (Suet. *Ner.* 36).

When the capsa contained books of importance, it was sealed or kept under lock and key (Mart. i. 66); whence Horace (*Ep.* i. 20, 3) says to his work, *Odisti claves, et grata sigilla pudico.* The fastening of a lock is shown in the engraving; other representations of the capsa exhibit locks and keys, and the straps by which it was carried. (Becker-Goll, *Gallus*, ii. p. 443; Böttiger, *Sabina*, i. 102 ff.) [W. S.] [W. W.]

CAPSA'RII, the name of three different classes of slaves:—1. Of those who took care of the clothes of persons while bathing in the public baths. [Balneae, p. 275 a.] In later times they were subject to the jurisdiction of the praefectus vigilum (Dig. 50, tit. 15, s. 3). 2. Of those who had the care of the capsae, in which books and letters were kept. [Capsa.] 3. Of those who carried the books, &c., of boys to school. [Capsa.] 4. A fourth kind of capsarii are mentioned, not as slaves, but as a class of soldiers enjoying certain privileges. In an inscription they are joined with *librarii*, and probably guarded the chests containing military papers and registers. (Dig. 50, 6, 7; Rénier, *Inscr. de l'Algérie*, 63; Saglio, *s. v.*) [W. S.] [W. W.]

CAP'SULA. [Capsa.]

CAP'ULUS (κώπη, λαβή). 1. The hilt of a sword, which was frequently much ornamented. (Verg. *Aen.* ii. 553; Ov. *Met.* vii. 442, &c.) [Gladius.] The handles of knives were also elaborately carved; and of the beautiful workmanship sometimes bestowed on them, a judgment may be formed from the three specimens here introduced. (Montfaucon, *Ant. Expliquée*, iii. 122, pl. 61.)

Capuli, ancient knife-handles.

2. The handle of a plough (Ov. *Pont.* i. 8, 57), of which the usual name was *stiva*. [Aratrum, p. 160 a.]

3. A bier or coffin. [Funus.] [W. S.]

CAPUT (from the sense of "head," literal or metaphorical, including under the latter the meaning of "source," "beginning") comes to signify: (1) A single person or thing as distinct from an aggregate (*Inst.* iii. 16, 6; Dig. 6, 1, 1, 3). Hence perhaps its use to express a "chapter" of a law (Dig. 9, 2, 2, pr.) and a territorial unit for the purpose of land taxation under the later empire (Cod. 10, 2). (2) A human being (Caes. *Bell. Gall.* iv. 15): *e.g.* as a subject of the poll-tax (Dig. 50, 4, 18, 8: cf. Livy, iii. 24, x. 47): and in this sense even slaves may be included, as in the phrase *noxalis actio caput sequitur* (*Inst.* iv. 8, 5). But there is a tendency to restrict the term to citizens of some substance: thus the lowest century of Servius Tullius comprised the *proletarii* and *capite censi*; of whom the latter, having little or no property, were barely rated as so many *head* of citizens (Gell.

xvi. 10; Cic. *de Rep.* ii. 22). (3) A human being regarded as capable of legal rights (=*persona*, Dig. 37, 11, 11, 2). (4) That capacity or those legal rights themselves.

The rights enjoyed in the aggregate by any free person under the protection of Roman law are denoted generally by the terms *caput* or *status*. The Romans themselves habitually regarded them as referable to three *momenta* or capacities—freedom, citizenship, and membership of a Roman *familia*. The free man, as such, whether *civis* or *peregrinus*, possessed some legal rights: the *civis* possessed more, even in the domain of private law; but there were many, especially rights of guardianship and inheritance, which he enjoyed only as belonging to a specific *familia*. Properly speaking, the slave, not being free, *nullum habet caput:* he has no *persona* (*Nov. Theod.* xvii. 2): he is ἀπρόσωπος (Theoph. iii. 17, pr.). But a free man always had a *caput*, and this he might lose: so that, according as the *caput* which he lost was that of freedom, citizenship or *familia*, he was said to suffer *capitis minutio* or *deminutio*, *maxima*, *media* or *minor*, or *minima* (Hor. *Carm.* iii. 5, 42; Auson. *Idyll.* xi. 65; Boethius *ad* Cic. *Top.* ii. 4). It is hardly necessary to add that loss of *civitas* involved loss of *familia*, and loss of *libertas* involved both.

Capitis deminutio maxima occurred when a free man, whether *ingenuus* or *libertinus*, became a slave (Gaius, i. 160; Ulp. *Reg.* xi. 11), as he might (1) by being taken captive by an enemy of the Roman state, though he might recover his civil rights by returning to his country. [Postliminium.] (2) By being sold as a slave by a person thereunto entitled: especially by the state for evading public burdens (*e.g.* by not entering his name in the census), or for attempting to escape military service (Cic. *pro Caec.* 34, § 99; Ulp. *Reg.* xi. 11). Similarly the creditors of an insolvent debtor might sell him *trans Tiberim*, into foreign slavery, under the execution procedure known as *Manus injectio* (Gell. xx. 1); and a *libertus* convicted of gross ingratitude towards his patron might on the latter's application be sold as a slave by the praetor (Dig. 25, 3, 6, 1), and later the patron might resume his rights over him as *dominus* (Cod. 6, 7, 2: cf. Sueton. *Claud.* 25; Tac. *Ann.* xiii. 26, 27). (3) If a free man over twenty years of age collusively allowed himself to be sold as a slave in order, after proving his freedom, to participate in the purchase-money, he forfeited his freedom (*Inst.* i. 3, 4; Dig. 40, 12, 23, pr.). (4) A free woman who cohabited with a slave, after notice given to her by the latter's owner, became a slave herself by a senatus consult of Claudius (Ulp. *Reg.* xi. 11: cf. Tac. *Ann.* xii. 23; Suet. *Vesp.* 11). (5) Condemnation on a criminal charge to hard labour in the mines made the convict a *servus poenae* (Paul. *Sent. rec.* iii. 6, 29).

Capitis deminutio media or *minor* occurred (1) when a *civis Romanus* accepted citizenship in another state (*e.g.* a *civitas peregrina* or *colonia Latina*), no *civis* of which could also be a full citizen of Rome; and also when a *libertus civis* returned to his own country with the intention of resuming citizenship there (Cic. *pro Balbo*, 11, 12; *pro Caec.* 33, 34; *de Orat.* i. 40;—Boeth. *ad Top.* ii. 4). (2) As a result of condemnation to loss of citizenship for crime. Originally this was effected by *aquae et ignis interdictio* (Livy, xxv. 4), but under the empire it took the form of *deportatio in insulam* or banishment (Cic. *pro Caec.* 33, 34; Dio Cass. lv. 20, lvi. 27; Gaius, i. 161).

Capitis deminutio minima is defined by Gaius (i. 162) as a *status commutatio:* according to Paulus (Dig. 4, 5, 11) it occurs "cum familia tantum mutatur;" or, as Ulpian says (*Reg.* 11, 13), when "civitate et libertate salva status duntaxat hominis mutatur." Thus it signifies the leaving by the *capite deminutus* of his agnatic family, and it took place (1) when a person *sui iuris* became *alieni iuris* by adrogation, legitimation, or by subjection to the *manus* of a husband; (2) when a person already *alieni iuris* entered a new family—as when a *filius familias* was sold *in mancipium* or given in adoption, or when a person adrogated or legitimated had children in his own *potestas;* (3) when a person *alieni iuris* became *sui iuris* by emancipation.

A different view as to *capitis deminutio minima* is maintained by Savigny (*System*, vol. ii.), who holds that its essence lies in a civil degradation analogous to that which ensued on the two higher kinds of *deminutio*, so that (according to him) the only instances of it are adrogation and subjection to *manus* and *mancipium*. But this is in conflict with a great weight of textual authority, and is strongly combated by many of Savigny's most eminent successors.

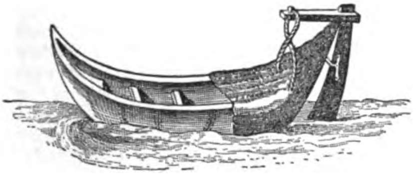
Legal proceedings which affected either *libertas* or *civitas* are said to be "capital:" "Capitalia (judicia) dicimus, quae ultimo supplicio adficiunt, vel aquae et ignis interdictione, vel deportatione, vel metallo: cetera, si qua infamiam irrogant cum damno pecuniario .... non capitalia" (*Inst.* iv. 18, 2). Elsewhere the term is rather confined to the punishment of death: *capite puniri, plecti, luere* (Cod. 48, 19, 11, 4, &c.). [J. B. M.]

CAPUT. [Fenus.]

CAPUT EX'TORUM. The Roman soothsayers (*haruspices*) pretended to a knowledge of coming events from the inspection of the entrails of victims slain for that purpose. The part to which they especially directed their attention was the liver, the convex upper portion of which seems to have been called the *caput extorum*. (Plin. *H. N.* xi. §§ 189, 190.) Any disease or deficiency in this organ was considered an unfavourable omen; whereas, if healthy and perfect, it was believed to indicate good fortune. The haruspices divided it into two parts,—one called *familiaris*, the other *hostilis:* from the former, they foretold the fate of friends; from the latter, that of enemies. Thus we read (Liv. viii. 9) that the head of the liver was mutilated by the knife of the operator on the "familiar" part (*caput jecinoris a familiari parte caesum*), which was always a bad sign. But the word "caput" here seems of doubtful application; for it may designate either the convex upper part of the liver, or one of the upper prominences of the various lobes which form its lower and irregularly concave part. It is, however, more obvious and natural to understand by it the upper part, which is formed of two prominences, called the great and small, or right and left lobes. If no caput was found, it was a bad sign (*nihil tristius accidere potuit*); if well defined or double, it was a lucky omen. (Cic. *de Div.*

ii. 12, 13, § 28 ff.; Liv. xxvii. 26, xxx. 2, xli. 14.) [R. W.]

CARABUS (*κάραβος*, *καράβιον* [Hesych.], Mod. Gr. *καράβι*, whence *caravel* and its cognates in other languages), a coracle or boat made of wicker-work and covered with raw hides. The word is late, not before Isidore (*Orig*. xix. 1, 26); but the thing is described by Caesar (*B. C.* i. 54) as employed by him in Spain, from having seen it in Britain. It was used by the Veneti on the Padus, as well as by the Britons (Lucan, *Phars.* iv. 131 ff.; and a gloss of Papias, quoted by Saglio, *s. v.*). The illustration, given both by Rich and Saglio, is taken from Scheffer, *de Mil. Nav. Veterum*, who describes it as from an ancient MS. of Vitruvius (Polenus, *Supplem. ad Graev. et Gronov.* v. p. 831). The lines down the sides show the seams where the different skins are sewn together. A similar form is seen on a sepulchral marble in Boldetti (*Cimiterj*, p. 366, cited by Rich). [W. W.]



Carabus or Coracle. (From a MS. of Vitruvius.)

CARACALLA was an outer garment used in Gaul, and not unlike the Roman lacerna. [LACERNA.] It was first introduced at Rome by the Emperor Aurelius Antoninus Bassianus, who compelled the plebeians who came to court to wear it, and thence obtained the surname of Caracalla. (Aurel. Vict. *Epit.* 21.) The caracalla, as worn in Gaul, was a close-fitting garment with long sleeves, and slit before and behind like a modern overcoat (Strab. iv. 4, § 3). In its original shape it reached only to the knee, but the emperor lengthened it so as to reach the ankle. It afterwards became common among the Romans, and garments of this kind were called *caracallae Antoninianae*, to distinguish them from the Gallic caracallae. (Aurel. Vict. *de Caes.* 21; Spartian. *Sev.* 21, *Anton. Car.* 9, with Salmasius' note.) In its longer form it came to be worn by the clergy, and is retained almost unaltered under the name of cassock (*sottana*, *soutane*). Like the lacerna, it was furnished with a cucullus or cowl for the protection of the head: hence Jerome, speaking of the Jewish ephod, calls it *palliolum mirae pulchritudinis in modum caracallarum sed absque cucullis.* (*Ep.* 64, *ad Fabiolam.*) [W. S.] [W. W.]

CAR'BASUS (*κάρπασος*), "cotton," from Sansk. *karpâsa*, was an Eastern product, originally called *ἔρια ἀπὸ ξύλου* (cf. German *Baumwolle*), "superior in beauty and quality to the wool of sheep" (Herod. iii. 106). Herodotus also mentions it in his account of the corslet Amasis of Egypt had given the Lacedaemonians (iii. 47). It was brought by the Phoenicians into Spain: and indeed Pliny (xix. 10) is of opinion that it was originally found near Tarraco. The Greeks first got a real knowledge of it from the expedition of Alexander (Strab. 693, 694; Plin. *H. N.* xii. § 38 ff.). It is described by Theophrastus (*H. P.* 4, 9 *init.*, ed. Budaeus a Stempel, and of his notes, pp. 425 ff.) and by Pliny in various passages. The Latin term Pliny uses (xii. § 39) is *gossypium*. The common kind, grown in India, had small leaves like a mulberry, buds like a dog-rose (xii. § 25), and fruit like apples (xix. § 14). The cotton plant among the Arabians and in the island of Tylos in the Persian Gulf had a gourd-like fruit about the size of quince apples, and was called *cyna* (xii. §§ 38, 39; cf. Theophr. *l. c.*). The finest cotton was got in Egypt; its fruit presented the appearance of *nux barbata*, and from the fine substance within the husk the yarn was spun. The Egyptian priests used to wear garments made of this cotton. The article is called *κάρπασος* in Schol. on Ar. *Lys.* 736, and is mentioned by Caecilius Statius (*ap.* Non. 548, 15) about 180 B.C. This seems to be the earliest time we hear of cotton at Rome: for we cannot suppose the Vestal in Prop. v. 3, 54, to have really worn a cotton garment. Carbasus was used at Rome not only for articles of dress, but also for tent curtains (Cic. *Verr.* v. 12, § 30), sails (Verg. *Aen.* iii. 357), awnings in the theatre (Lucr. vi. 109). There was no great distinction maintained in ordinary language between cotton and linen (Catull. 64, 227; Prop. v. 3, 64: cf. also Becker-Göll, *Charikles*, iii. 233; *Gallus*, iii. 289), and *σινδὼν* ("Indian muslin") is confused with linen stuffs (Auson. *Epp.* parecbas. 2, "puer eia surge et calceos et linteam da sindonem"). *'Οθόνη* is not the same as *κάρπασος* in that it does not apply to the same article, and is used of any fabric woven from byssus flax or cotton (Marq. *Privat.* 473). In Malta there were a great many manufactories of *ὀθόνια* (Diodor. v. 12) which were called *vestis melitensis* at Rome (Cic. *Verr.* ii. 72, § 176; 74, § 183). This may have been cotton brought by the Phoenician colonists (Mövers, ii. 2, 347; Blümner, *Gewerb. Thätigkeit*, p. 125), or, as Yates (*Textrinum*, p. 286) thinks, linen. Silius indeed (xiv. 250) speaks of *telâque superba lanigerâ Melite;* but, in the confusion of ideas that existed among the average Romans between linen and cotton, this does not prove much. Raw cotton was used as stuffing for pillows and bolsters (*τύλαι*) at Tralles, Antinoopolis, and Damascus: see *Ed. Diocl.* xviii. 46, ed. Wadd., p. 41, and a secondary meaning of *tula* in Sansk. is cotton. The Macedonians with Alexander had already (Strab. 693) used it as stuffing for pillows and padding for saddles (*ἀντὶ κναφάλλων καὶ τῆς σάγμασι σαγῆς*). On the subject of cotton among the ancients, see Marquardt, *Röm. Privatleben*, pp. 470–474. For the botany of cotton, see Royle, *Culture of Cotton in India*, pp. 136 *sqq.* [L. C. P.]

CARBA'TINA (*καρβατίνη*) probably in strictness means "made of dried skin," connected with *κάρφω*; but is generally applied to shoes worn by rustics, with sole and upper leather all in one—*ἀγροικικὸν ὑπόδημα μονόδερμον* (or *μονόπελμον*)—Hesych., cf. Phot. *s. v.*; Lucian, *Alex.* p. 246. It was, in fact, a piece of untanned ox-hide placed under the foot and tied up by several thongs, so as to cover the whole foot and part of the leg. The *crepidae carbatinae*, "coarse ox-hide shoes," of Catull. 98, 4, are of the same nature. Thus there was no manufacture in it at all; and so we find it resorted to in an emergency by the Ten Thousand (Xen.

An. iv. 5, 14). The same term was applied to the covering put on the feet of camels when they got sore from the march (Aristot. *Hist. An.* ii. 1, 27 = 499 *a*, 30); and also to a skin-covered structure used by besiegers (Philo in *Math. Vet.* 101).

[L. C. P.]

Carbatina, from bronze foot of a statue. (British Museum.)

CARCER (*δεσμωτήριων*), a prison.

1. GREEK. Imprisonment was seldom used among the Greeks as a legal punishment for offences. Among the Athenians, with whom we are chiefly concerned, it was practically unknown in the sense of confinement for a definite period after conviction. They had neither the appliances in the shape of walls and bars, nor were they willing to incur the expense; and they preferred either banishment or the death penalty. Capital punishment was inflicted without hesitation for comparatively trifling offences, but by more humane methods than those of modern Europe until quite recent times.

Imprisonment before trial, on the other hand, was common enough, though bail was freely accepted in cases other than capital; the terror of exile was in general thought sufficient to keep a man to his bail (Demosth. *c. Timocr.* p. 739, § 125; p. 741, § 131; ENGYE). The farmers of the taxes and lessees of other revenues (*τελῶναι, μισθούμενοι*), as well as their sureties (*οἱ ἐγγυώμενοι*), were liable to imprisonment if the duties were not paid by a specified time; and in cases where default was to be feared, they might even be imprisoned at the discretion of the senate or law-courts (Demosth. *l. c.* p. 713, §§ 40, 41; BOULÉ, p. 312 b). This, as Demosthenes insists throughout the speech in question, was the great safeguard to insure regularity of payment. Again, persons who had been mulcted in penalties might be confined till they paid them, not only in criminal cases (Lex *ap.* Demosth. *c. Mid.* p. 529, § 47), but in some civil actions for damages as well, especially when the *ἐπωβελία* had been incurred (Demosth. *c. Lacr.* p. 939, § 46; *c. Dionysod.* p. 1204, § 4; EPOBELIA). Certain of the *ἄτιμοι* also, if they exercised the rights of citizenship, were subject to the same consequences (Demosth. *c. Timocr.* p. 732, § 103). We read, moreover, of *δεσμὸς* as a public stigma put upon disgraceful offences, such as theft; but this was a *προστίμημα* or additional penalty, the infliction of which was at the option of the court; and the *δεσμὸς* itself was not so much an imprisonment as a public exposure in the *ποδοκάκκη* or stocks, for five days and nights—called also *ἐν ξύλῳ δεδέσθαι* (Demosth. *op. cit.*, p. 700, § 2; pp. 732–3, §§ 103, 105; p. 736, § 114). One more description of imprisonment remains to be noticed, that in the interval between condemnation and execution. In this last case, owing to the insecurity of the building, the prisoner was chained, and was under the special custody of the Eleven, who were also responsible for the execution itself.

There are, no doubt, several passages from which we might infer the existence at Athens of imprisonment as a punishment by itself: *e.g.* Plat. *Apol.* 37 C; *Laws*, ix. 864 E, 880 B, and especially x. 908. In this last passage Plato proposes to have three prisons: one of these was to be a *σωφρονιστήριον* or reformatory, and another a place of punishment for the incorrigible—a sort of penal settlement away from the city. But such vague allusions, as Westermann rightly insists (*ap.* Pauly, *s. v.* *δεσμωτήριον*), prove nothing against the persistent silence of the historians and orators. The speech of Andocides against Alcibiades, where we read (§ 4) *ἐξὸν κολάζειν χρήμασι καὶ δεσμῷ καὶ θανάτῳ*, is a mere rhetorical exercise; and the words of Lysias, *ἐν τῷ δεσμωτηρίῳ δεδεμένος ἀπέθανε* (*c. Agorat.* § 67) may easily refer to an untried prisoner. "Of imprisonment as a punishment by itself," Schömann argues, "we have no certain example;" and this remark in his text is supported by a good note (*Antiq.* i. 489, E. T.). The opposite and, as it seems to the present writer, less probable opinion has, however, been maintained by K. F. Hermann (*Staatsalterth.* § 139) and Caillemer (*ap.* Daremberg and Saglio).

The prison at Athens is frequently mentioned in the orators, both by its usual name *δεσμωτήριον* and the euphemistic equivalent *οἴκημα*. But the plural *δεσμωτήρια* does not seem to occur in any Attic writer, though there are passages (such as Demosth. *c. Androt.* p. 614, § 68; *c. Timocr.* p. 764, §§ 208, 209) where, if a plurality of prisons existed at Athens, we should almost certainly find them mentioned. This argument seems almost decisive in favour of the opinion of Ullrich (*Ueber die Elf-Männer*, p. 231 f.) and J. H. Lipsius (*Att. Process*, p. 73 n.), that there was only one. The authority of Hesychius and the *Etym. M.* is insufficient to prove, in the face of probability, that there was an Athenian prison called *Θησεῖον*: and there is no proof that the other names for prisons recorded by the grammarians are to be referred to Athens. Among these local names was *ἀναγκαῖον* or *ἀνάκαιον* in Boeotia, *κέραμος* in Cyprus, *κῶς* at Corinth; and among the Ionians *γοργύρη*, as at Samos (Herod. iii. 145; Pollux, ix. 45); *βάλλαικες* or *βαλαίκακες*, *βλέορον*, *ἴψον*, *σιρός*, all mentioned by Hesychius. The appearance of the Latin *carcer* in the Sicilian Greek *κάρκαρον*, and conversely of the Greek *λατομίαι* in the Latin *lautumiae*, is noticed by Mommsen as a proof of the early intercourse between the Romans and Sicily (*R. H.* i. 167, E. T.). Some of the above names may be slang or nicknames, such as are often applied to prisons in our own day: thus *γοργύρα* is explained to mean "a sewer;" *ἴψον* may be connected with *ἶπος*, "a mousetrap." The gate through which criminals were led to execution was called *χαρώνειον* or *θύρα χαρώνειος* (Poll. viii. 102, Suidas, and several times in the Paroemiographers); a grim joke which can hardly have arisen at Athens, where executions were private.

The Attic expression for imprisonment was *δεῖν*, a word which by no means implies the use of chains or fetters. The phrase in the oath of the *βουλευταὶ* or senators, *οὐδὲ δήσω Ἀθηναίων* *οὐδένα*, is explained by Demosthenes (*c. Timocr.* p. 746, § 147) as a security against arbitrary imprisonment by the executive government without trial. It was in fact the Habeas Corpus of the Athenian constitution. But he is careful to add (§ 151) that no such words occur in the oath of the Heliastae or dicasts; the law-courts had absolute power over men's lives, liberties, and fortunes. We have also the phrase *ἄδεσμος φυλακή* (as in Thucyd. iii. 34), like the *libera custodia* of the Romans, signifying that a person was under strict surveillance and guard, though not confined within the walls of a prison.

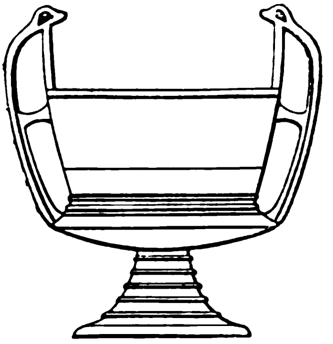
2. ROMAN. The oldest prison at Rome, traditionally the only one in early times (Juv. *Sat.* iii. 312), was called simply *Carcer*; and is still to be seen on the eastern slope of the Capitoline hill, to the right of the ascent from the Forum. The name Mamertinus, usually applied to the Carcer, is mediaeval and not classical. It consists of a larger oblong upper and a smaller underground circular dungeon; the latter is that called the Tullianum, a name which has often been incorrectly explained. As the original erection of the Carcer was attributed to Ancus Marcius (Liv. i. 33), it was conjectured by the etymologists that the name Tullianum must have been derived from Servius Tullius, "evidently a double mistake, as the lower chamber would certainly not have been added after the upper one." (Middleton, p. 80.) It is now agreed that it is from the *tullii* or springs for whose waters it formed a reservoir; that it was built in the first instance simply to protect the water supply of the Capitol, and was only in later times used as a part of the prison, when a captive, as in the well-known instance of Jugurtha, was doomed to be killed by cold and starvation (Festus and P. Diac. s. v. *Tullii*, pp. 352–3, Müller; Plut. *Mar.* 12; Burn, *Rome and the Campagna*, p. 81; Caillemer, *ap.* Daremberg and Saglio). Thus Livy speaks of the infamous Pleminius as "dejectus in Tullianum" (xxix. 22), which in another passage is expressed by the words "in inferiorem demissus carcerem, necatusque" (xxxiv. 44). It was here, too, that Lentulus and the other accomplices of Catiline were strangled by order of the Triumviri Capitales; and Sallust describes it as sunk twelve feet in the earth, strongly walled, and with a roof vaulted with stone arches ("insuper camera, lapideis fornicibus vincta," *Cat.* 55). In reality, as modern investigations have shown, the construction is so old that it points to a time when the arch was not used in Roman architecture; the roof being of stone slabs, each overlapping the one beneath it, an approximation to the true arch found also in the well-known treasury of Mycenae and other primitive buildings. The upper chamber is also of very early date, but later than the Tullianum; and it is not in its primitive condition. A projecting string-course on the outside records a restoration in the reign of Tiberius by the *Consules Suffecti* for the year 22 A.D.: C. VIBIUS C. F. RVFINVS. M. COCCEIV[S NERVA] COS. EX S. C. Another name for this part of the prison was *robur*, in old Latin *robus*, thus explained by Festus (p. 264 M.): "Robus in carcere dicitur is locus, quo praecipitatur maleficorum genus, quod ante arcis robusteis includebatur." The *robur* is spoken of as a place of execution in several passages. "In robore et tenebris exspirare," Liv. xxxviii. 59; "Robur et saxum (sc. Tarpeium) minitari," Tac. *Ann.* iv. 29. So also we read of "Catenas—et Italum robur," Hor. *Carm.* ii. 13, 18. The concluding words of Festus, "quod ante arcis robusteis includebatur," must of course be explained of the oaken planks or beams with which the dungeon was formerly lined (Rein *ap.* Pauly, s. v. *Tullianum*, Orell. *ad* Tac. *l. c.*); not as by Caillemer, of wooden cages in which dangerous criminals were confined.

This prison was obviously too small to contain any number of prisoners, and probably from the first was appropriated to those condemned to death. The earliest mention of another prison is in the days of the Decemvirate, B.C. 450. Appius Claudius is said to have built one for political purposes, to overawe the champions of plebeian liberties ("quod domicilium plebis Romanae vocare sit solitus," Liv. iii. 57). It was into this prison that he was himself thrown, and committed suicide while awaiting his trial. At a later period we find an additional prison called *Lautumiae* or stone-quarries in the immediate neighbourhood of the original Carcer; whether this was the prison of Appius, we do not know. It is not likely that there were ever any quarries on this spot, which was to the north-west of the Forum; but it may have been named after the Syracusan λατομίαι which were thus used (Mommsen, *ubi supra*). Varro (*L. L.* v. 151, Müll.) identified the Lautumiae with the Tullianum, and has been followed by some of the moderns; but they are distinguished by the best writers on Roman topography (Becker, *Röm. Alterth.* i. 262–268; Burn, p. 80). The Lautumiae were clearly of much greater extent; a conflagration in the region about the Forum, B.C. 210, extended to them, but not, it would seem, to the Carcer or the Capitol (Liv. xxvi. 27); in B.C. 198 they were again full of prisoners and hostages, and were specially guarded in a time of conspiracy (id. xxxii. 26); a few years later no less than forty-three leading Aetolians (*Aetolorum principes*, id. xxxvii. 3) were confined there.

With the growth of the city other prisons became necessary; but the words of Roman historians generally refer to these alone. Close to the Carcer, and between it and the Temple of Concord, were the Scalae Gemoniae, where the bodies of criminals were exposed after execution. The cases are mentioned of Caepio, the consul defeated by the Cimbri (Val. Max. vi. 9, § 13, but cf. iv. 7, § 3; Cic. *pro Balbo*, 11, § 28); Sejanus (Dio Cass. lviii. 5; Juv. *Sat.* x. 66); other victims of Tiberius (Suet. *Tib.* 61; cf. cc. 54, 75); Sabinus (Tac. *Hist.* iii. 74). Compare Burn, p. 81; Middleton, *Anc. Rome in* 1885, p. 78 ff. [R. W.] [W. W.]

CAR'CERES. [CIRCUS.]

CARCHE'SIUM (*καρχήσιον*), according to Callixenus (in Ath. 474 f), was a kind of cup, rather long (*ἐπιμήκεις*), narrower in the middle than at either extremity, and with handles (*ὦτα*) stretching from the top to the bottom. Asclepiades (in Ath. 488 f) mentions *carchesia* among those vessels which have feet. It was a peculiarly Greek cup (Macrob. *Sat.* v. 21 *init.*), and generally of a splendid nature. Legend tells how Jupiter gave one to Alcmena, and that very cup, we are informed (Ath. *l. c.*), used to be pointed out to travellers at Lacedaemon. At Babylon Diodorus (ii. 7) says there were two *carchesia* weighing 30 talents; and it is mentioned among the splendours of a royal court in Alciphr. *Ep.* ii. 3. We never hear of it as made of clay; but of metal or precious stone, *e.g.* gold (Ath. 198 c), and with embossed work (Val. Flacc. ii. 655), silver (Ath. 605 b), brass (Ovid, *Met.* vii. 246), sardonyx (*vid. infr.*). Dennis (*Etruria*, i. p. cxvii.), however, and Birch (*Hist. of Ancient Pottery*, p. 380) (cf. Krause, *Angeiologie*, Taf. iv. fig. 9 a), consider the vase made of early black ware of Chiusi, in the possession of Sig. Terrosi of Cetona, to be a carchesium; and Dennis also regards as a carchesium the vase with a lid and relieved decorations which is given in the second illustration of a vase from Chiusi. The lists of donations to the temples in *C. I. G.* 139, 140, 141, 150, show how very usual it was to dedicate silver *carchesia*. The passage quoted from Ovid is evidence that it was used for other substances (*e.g.* milk), though generally it was used for wine (*carchesia Bacchi*, Verg. *Georg.* iv. 380). They are mentioned by Athenaeus as being used in the cottabos (667 e). The derivation is uncertain. Athenaeus (475 b) considers it to come from the same root as *καρχάλεος*, and, if so, it means "rough" with embossed work (cf. Val. Flac. *l. c.*). Our last woodcut represents the splendid *carchesium* known as the "cup of the Ptolemies," which formerly belonged to the Abbey of St. Denys, and now is in the Bibliothèque Nationale at Paris. It is of Oriental sardonyx, with Bacchanalian subjects engraved thereon.



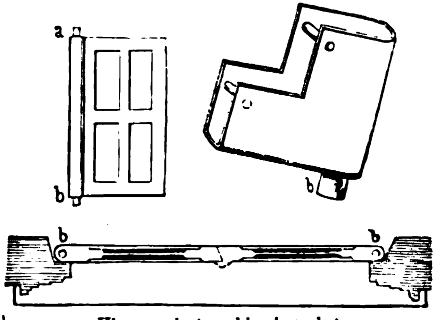
Carchesium. (Birch and Dennis.)

Carchesium. (Dennis.)

From its likeness to this kind of goblet the name *carchesium* was applied to (1) the "top" above the yards, which with the *θωράκιον* or "waist-cloth of the top" formed an elevated place for look-out or for signalling (cf. Catull. in Nonius, xv. 28, "Lucida cum fulgent summi carchesia mali") or for discharging weapons from in warfare (Ath. 208 e). (2) This top sometimes revolved, and into it was fastened a horizontal beam, which was used as a crane for loading and unloading the ship (Vitruv. x. 5). (3) A block of pulleys at the top, through which were run the ropes used for hoisting the sail (the Schol. on Pind. *Nem.* 5, 50; Non. xv. 28; Serv. on *Aen.* v. 77; the Schol. on Lucan v. 418). For full particulars, see Navis. [L. C. P.]

Carchesium. (Bibliothèque Nationale, Paris.)

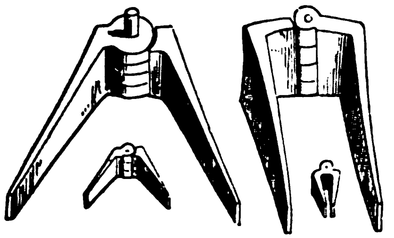
CARDO, a hinge. The older and simpler form of hinge was a pivot working in a socket; of this kind must have been the *θαιροὶ* of Homer (*Il.* xii. 459) and the *στροφεὺς* and *στρόφιγξ* of the later Greeks (Aristoph. *Thesm.* 487). The word *γίγγλυμος* is applied to the hinge-joints of the human body, and to joints in armour (see L. and S., *s. v.*); but there is no authority for the statement that it was used for door-hinges. In this construction the stile or axis of the door (Lat. *scapus cardinalis*, Vitruv. iv. 6, 4) was fitted with pivots at each end, turning in a socket excavated in the sill and lintel respectively. The notion that the pivots were called *στρόφιγγες*, the sockets *στροφεῖς* (Rich; L. and S., ed. 7), wants sufficient proof: thus Sextus Empiricus (*adv. Math.* x. 54) writes *ὁ κατὰ τοῦ ὁλμίσκου βεβηκὼς στροφεύς*, where *στροφεὺς* is clearly the pivot and *ὁλμίσκος* "the little mortar" = the socket.



Hinges: pivot working in socket.

The first of the annexed woodcuts illustrates this description of hinge. The upper figure to the left shows the general form of a door, as we find it with a pivot at top and bottom (*a*, *b*) in ancient remains of stone, marble, wood, and bronze. Theophrastus specifies the hard woods which were preferred for making the pivots (*Hist. Plant.* v. 5, 4 ff.); but they were more frequently of metal. The second top figure represents a bronze hinge in the Egyptian collection of the British Museum: its pivot (*b*) is exactly cylindrical. The lower figure shows the ground-plan of a pair of folding-doors. The pivots move in holes fitted to receive them, each of which is an angle behind the *antepagmentum* or door-jamb (*marmoreo aeratus stridens in limine cardo*, Verg. *Ciris*, 222). In Eurip. *Phoen.* 114 ἔμβολα χαλκόδετα have been explained as hinges, but are more probably bolts or bars.

The Romans (and perhaps the Greeks, though this is less certain) also used hinges exactly like those now in common use. Four Roman hinges of bronze, preserved in the British Museum, are here shown.



Hinges: modern type. (British Museum.)

The form of the door above delineated makes it manifest why the principal line laid down in surveying land was called "cardo" (Festus, *s. v. Decumanus*; Isid. *Orig.* xv. 14) [Agrimetatio]; and it further explains the application of the same term to the North Pole, the supposed pivot on which the heavens revolved. (Varr. *de R. R.* i. 2; Ovid, *Ex Ponto*, ii. 10, 45.) The lower extremity of the universe was conceived to turn upon another pivot, corresponding to that at the bottom of the door (Cic. *N. D.* ii. 41, § 105; Vitruv. vi. 1, ix. 1); and the conception of these two principal points in geography and astronomy led to the application of the same term to the East and West also. (Lucan. v. 71.) Hence our "four points of the compass" are called by ancient writers *quattuor cardines orbis terrarum*, and the four principal winds, N. S. E. and W., are the *cardinales venti*. (Serv. *ad Aen.* i. 85.) [J. Y.] [W. W.]

CARI'NA. [Navis.]

CARIS'TIA or Charistia, a Roman domestic feast, celebrated on viii. Kal. Mart. (Feb. 22). Following the Dies parentales (Feb. 13–21) and Feralia (Feb. 21), days sacred to the dead (Ov. *Fast.* ii. 533 ff.; Mommsen-Marquardt, vi. (iii.), 283 note 6, 298), this festival was a day of rejoicing and thanksgiving for the survivors. None but relations and members of the same family were invited, and the opportunity was taken to reconcile any quarrel or disagreement that might have arisen among them (Val. Max. ii. 1, § 8). The derivation is from χαρίζομαι, to grant a favour or pardon; but *caristia* is the approved spelling, and Ovid seems to have connected the word with *carus*. (Ov. *Fast.* ii. 617 ff.; Mart. ix. 54, 55; Tertull. *de Idolol.* 10; Orell. *Inscr.* 2417; *Kalend. Rust.*; Mommsen-Marquardt, vi. (iii.) 125; Paley on Ov. and Mart. *ll. cc.*) [R. W.] [W. W.]

CARMENTA'LIA, an old Roman festival celebrated in honour of the nymphs called Carmenta or Carmentis, for an account of whom see *Dict. of Biog.* s. v. *Camenae.* This festival was celebrated annually on the 11th and the 15th of January: the sacrifice was offered by the *flamen Carmentalis* (Cic. *Brut.* 14, 56) and the Pontifices, in the *fanum Carmentis*, near the Porta Carmentalis, at the south-west of the Capitol. One Carmentis was known as *Porrina* (Ov. *Fast.* i. 633) or *Prorsa* (Gell. xvi. 16) or *Antevorta* (Macrob. i. 7, 20), the other as *Postvorta* (Serv. on Verg. *Aen.* viii. 339). They were regarded as goddesses foretelling the fortunes of newly-born children; and hence the festival was chiefly observed by married women. Nothing in any way connected with death was allowed to be used in the worship, not even leather. The second day of the festival was given up especially to rites bearing upon childbirth. The explanation given by Livy (v. 25) of the addition of this day is manifestly due only to a false etymology. [A. S. W.]

CARNA'RIUM. 1. A larder (Plaut. *Curc.* ii. 3, 45; Plin. *H. N.* xix. § 57); used also for sheltering plants in the winter (Plin. *H. N.* xviii. § 227). 2. In the more modest dwellings a bar or beam, furnished with meat-hooks or pegs, hung against the wall and served the same purpose (Plaut. *Capt.* iv. 4, 6). A carnarium of this sort is figured under Caupona. A fork (*furca*) was used in taking down and replacing joints of meat (Petron. 135, 4; 136, 1). [W. W.]

CARNEIA (καρνεῖα), a great national festival, celebrated by the Spartans in honour of Apollo Carneios, which, according to Sosibius (*ap.* Athen. xiv. p. 635), was instituted Olymp. xxvi.; although Apollo, under the name of Carneios, was worshipped in various places of Peloponnesus, particularly at Amyclae, at a very early period, and even before the Dorian migration. (Müller, *Dor.* i. 3, § 8, and ii. 8, § 15.) Wachsmuth (*Hellen. Alterthumsk.* ii. p. 582, 2nd ed.), referring to the above passage of Athenaeus, thinks that the Carneia had long before been celebrated; and that when, in Olymp. xxvi., Terpander gained the victory, musical contests were only added to the martial solemnities of the festival. But the words of Athenaeus, who is the *only* authority to which Wachsmuth refers, do not allow of such an interpretation, for no distinction is there made between earlier and later solemnities of the festival, and Athenaeus simply says, the institution of the Carneia took place Olymp. xxvi. (Ἐγένετο δὲ ἡ θέσις τῶν Καρνείων κατὰ τὴν ἕκτην καὶ εἰκοστὴν Ὀλυμπιάδα, ὡς Σωσίβιός φησιν, ἐν τῷ περὶ χρόνων.) The festival began on the seventh day of the month of Karneios = Metageitnion of the Athenians, and lasted for nine days. (Athen. iv. p. 141; Eustath. *ad Il.* xxiv. *sub fin.*; Plut. *Symp.* viii. 1.) It was, as far as we know, a warlike festival, similar to the Attic Boëdromia, and was celebrated by all the Dorians. During the time of its celebration nine tents were pitched near the city, in each of which nine men lived in the manner of a military camp, obeying in everything the commands of a herald. Müller also supposes that a boat was carried round, and upon it a statue of the Carneian Apollo (Ἀπόλλων στεμματίας), both adorned with lustratory garlands, called δίκηλον στεμματιαῖον, in allusion to the passage of the Dorians from Naupactus into Peloponnesus. (*Dorians*, i. 3, § 8, note *s*.) The priest conducting the sacrifices at the Carneia was called Ἀγητής, whence the festival was sometimes designated by the name Ἀγητόρια or Ἀγητόρειον (Hesych. *s. v.* Ἀγητόρειον); and from each of the Spartan tribes five unmarried men (Καρνεᾶται) were chosen as his ministers, whose office lasted four years, during which period they were not allowed to marry. (Hesych. *s. v.* Καρνεᾶται.) Some of them bore the name of Σταφυλοδρόμοι. (Hesych. *s. v.*; compare Bekker, *Anecd.* p. 205.) Terpander was the first who gained the prize in the musical contests of the Carneia, and the musicians of his school were long distinguished competitors for the prize at this festival (Müller, *Dor.* iv. 6, § 3), and the last of this school who engaged in the contest was Perikleidas (Plut. *de Mus.* 6). When we read in Herodotus (vi. 106, vii. 206) and Thucydides (v. 54, and in other places) that the Spartans during the celebration of this festival were not allowed to take the field against an enemy, we must remember that this restriction was not peculiar to the Carneia, but common to all the great festivals of the Greeks: traces of it are found even in Homer (*Od.* xxi. 258, &c.).

Carneia were also celebrated at Cyrene (Callimach. *Hymn. in Apoll.* 72 *seq.*), in Thera (Callimach. *l. c.*; Pindar, *Pyth.* v. 99 *seq.*), in Gythion, Messene, Sicyon, and Sybaris (Paus. iii. 21, § 7, and 24, § 5; iv. 33, § 5; ii. 10, § 2; Theocr. v. 83; compare Müller's *Orchom.* p. 327; Welcker, *Griech. Götterlehre*, i. p. 469, &c.). [L. S.]

CARN'IFEX, the public executioner at Rome, who put slaves and foreigners to death (Plaut. *Bacch.* iv. 4, 37; *Capt.* v. 4, 22), but no citizens except in the case of those convicted of *perduellio*, and occasionally under the empire. It was also his business to administer the torture. He was usually a public slave, and his office was considered so disgraceful that he was not allowed to reside within the city (Cic. *pro Rab. Perd.* 5, 15), but he lived without the Porta Esquilina (Plaut. *Pseud.* i. 3, 98; cf. Ritschl, *Opusc.* ii. 382), near the place destined for the punishment of slaves (Plaut. *Cas.* ii. 6, 2; Tac. *Ann.* xv. 60; Hor. *Epod.* v. 99), called Sestertium or Sessorium under the emperors (Plut. *Galb.* 28).

It is thought by some writers, from a passage in Plautus (*Rud.* iii. 6, 19), that the carnifex was anciently keeper of the prison under the triumviri capitales; but there does not appear sufficient authority for this opinion. (Lipsius, *Excurs. ad Tacit. Ann.* ii. 32.) [W. S.] [A. S. W.]

CARPENTUM (κάρπεντον, Dio Cassius) was a two-wheeled carriage with an arched covering [CAMARA]. The use of it is mentioned in very early times at Rome, but only by privileged persons, at least within the walls. The *currus arcuatus* assigned by Numa to the Flamines (Liv. i. 21) is no doubt the same as the carpentum which was the travelling carriage of the elder Tarquin while still a private person (id. 34), and in which Tullia drove through the streets (id. 48). In its original form it must have been simply a covered cart, thus distinguished from the *plaustrum* or open cart.

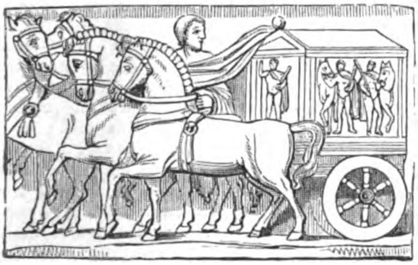
The use of carriages in the city was entirely forbidden during the whole of the republic and for the first two centuries of the empire (Marquardt, vii. 706; Friedländer, *Sitteng.* i.^{5} 60 ff.). The permission granted to L. Metellus, the Pontifex Maximus, who lost his sight B.C. 241, while rescuing the Palladium from the conflagration of the temple of Vesta, is mentioned by Pliny as absolutely unique ("tribuit ei populus Romanus, quod nulli alii ab condito aevo, ut, quotiens in senatum iret, curru veheretur ad curiam. Magnum et sublime, sed pro oculis datum," *H. N.* vii. § 141). It was, therefore, a considerable privilege when Roman ladies (*matronae*), as a reward for their patriotic generosity at the time of the fall of Veii, were allowed to drive in the pilentum (or four-wheeled carriage) at the games and public festivals, and in the carpentum on all occasions (*festo profestoque*, Liv. v. 25; cf. Isid. *Orig.* xx. 12). This privilege seems to have been abridged by the Lex Oppia of B.C. 215 [SUMPTUARIAE LEGES]; and though that law was repealed twenty years afterwards, the prohibition remained in full force. It applied to all Italian towns, and was no doubt occasioned by the narrowness of ancient streets; but it was often disregarded and had to be re-enacted from time to time. The Lex Julia Municipalis, B.C. 45, forbad the use even of carts and waggons within the walls and for a mile beyond them, except at night (*C. I. L.* i. 206). The privileges of the Vestals, *rex sacrorum*, and *flamines* are specially reserved under this law: and those employed in the construction or demolition of buildings by public contract are excepted under certain restrictions (*certeis hominibus, certeis de causeis*, ib.). In other towns the law was found less easy to enforce, as we see by repeated imperial edicts (Suet. *Claud.* 25; Spart. *Adr.* 22; Capitolin. *M. Ant. Phil.* 23). Even empresses like Messalina and Agrippina the mother of Nero only used the carpentum in the city by special vote of the senate (Dio Cass. lx. 22, 23; Tac. *Ann.* xii. 42). In the reign of Septimius Severus the use of state carriages was conceded to high officials, such as the *praefectus praetorio*, provincial governors and their legati. Alexander Severus extended the privilege to all senators. It was only in the fourth century that all restrictions on driving within the city were removed. In the country it had always been free.

The carpentum of later times was a luxurious and richly ornamented carriage, used for travelling purposes and also for state occasions (Juv. viii. 147; ix. 132). We read of silken curtains (or cushions?), *scrica carpenta*

Carpentum. (From a medal of Caligula.)

(Propert. v. 8, 23). It was commonly drawn by a pair of mules (*carpentum mulare*, Lamprid. *Heliog.* 4); more rarely by oxen or horses, and sometimes by four horses as a quadriga. The form of this carriage is seen on the preceding medal. When Caligula instituted games and other solemnities in honour of his deceased mother the elder Agrippina, her carpentum went in the procession (Suet. *Cal.* 15); and medals, still extant, commemorated the event. Agrippina's carriage, as represented above, shows painting or carving on the panels, and the head is supported by Caryatides at the four corners.

The carriage represented in the following cut is probably also a carpentum. It is from an alto-rilievo which once adorned a sarcophagus, and is now in the British Museum. Instead of the arched *camara* of the last example, it has a sloping roof of low pitch, and is drawn by four horses. Like the former, it is undoubtedly a funeral car. Mercury, in his character of ψυχοπομπὸs or conductor of souls, appears in the front, and Castor and Pollux with their horses on the side panel.



Carpentum. (From a relief in the British Museum.)

Carpenta, or covered carts, were much used by the Britons, the Gauls, the Cimbri, the Allobroges, and other northern nations (Florus, i. 18; iii. 2, 3, and 10). These, together with the carts of the more common form, including baggage-waggons, appear to have been comprehended under the term *carrus* or *carrum*, which is the Celtic name with a Latin termination. The Gauls and Helvetii took a great multitude of them on their military expeditions; and, when they were encamped, arranged them in close order, so as to form lines of circumvallation (Caes. *B. G.* i. 24, 26).
[J. Y.] [W. W.]

CARPOU DIKE' (καρποῦ δίκη), a civil action under the jurisdiction of the thesmothetae, might be instituted against a farmer for default in payment of rent (Meier, *Att. Proc.* p. 531). It was also adopted to enforce a judicial award when the unsuccessful litigant refused to surrender the land to his opponent (Hudtwalcker, p. 144; Meier, *Att. Proc.* p. 750), and might be used to determine the right to land (Harpocrat. *s. v.*, and 'οὐσίας δίκη), as the judgment would determine whether the plaintiff could claim rent of the defendant. [J. S. M.] [W. W.]

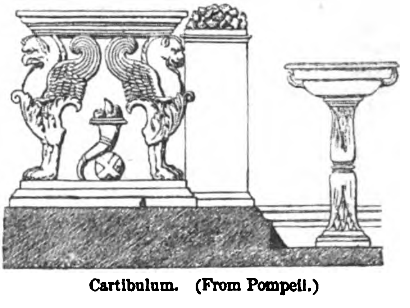
CARRA'GO, a kind of fortification, consisting of a great number of waggons placed round an army. It was employed by barbarous nations, as, for instance, the Scythians (Trebell. Poll. *Gallien.* 13), Gauls [CARPENTUM], and Goths (Amm. Marc. xxxi. 7, § 7). Compare Veget. iii. 10.

Carrago also signifies sometimes the baggage of an army. (Trebell. Poll. *Claud.* 8; Vopisc. *Aurelian.* 11.) [W. S.]

CARRU'CA, a carriage used in imperial times, and first mentioned by Pliny (*H.N.* xxxiii. § 140). Like the reda [REDA], it was a travelling carriage on four wheels, whence Martial in one place (iii. 47) uses the words as synonymous. Nero is said to have travelled with 500 (Lamprid. *Heliog.* 31) or even 1000 carrucae (Suet. *Ner.* 30). These carriages were sometimes used in Rome by persons of distinction, like the carpenta [CARPENTUM], in which case they appear to have been covered with plates of bronze, silver, and even gold, which were sometimes ornamented with embossed work (Plin. *l. c.*). Martial (iii. 72) speaks of an *aurea carruca* which cost the value of a farm; and Alexander Severus allowed senators at Rome to use carrucae and redae plated with silver (Lamprid. *Alex. Sev.* 43). These are the *carrucae argentatae*, the use of which within Rome spread in the course of the third century from the high officials, to whom they were at first limited, to private persons (Vopisc. *Aurelian.* 46; Amm. Marc. xiv. 6; Cod. Theod. xiv. 12, 1; Cod. Just. xi. 19). We have no representations of carriages in ancient works of art which can be safely said to be carrucae; but we have several representations of carriages ornamented with plates of metal. (See Inghirami, *Monum. Etrusch.* iii. 18, 23; Millingen, *Uned. Mon.* ii. 14.) Carrucae were also used for carrying women, and were then, as well perhaps as in other cases, drawn by mules (Dig. 34, tit. 2, s. 13: in s. 11 a *carruca dormitoria* is mentioned); whence Ulpian (Dig. 21, tit. 1, s. 38, § 8) speaks of *mulae carrucariae.* [W. S.] [W. W.]

CARRUS. [CARPENTUM.]

CARTIB'ULUM, a particular kind of table described by Varro (*L. L.* v. 125) as frequently seen in the atrium of Roman houses during his boyhood (about B.C. 100). Both the name and the thing were apparently becoming obsolete in his time. It was an oblong slab of marble supported on a single bracket or console (*una columella*); it stood near the impluvium, and bronze vessels were placed upon it. Such a table has been discovered in more than one house at Pompeii, with a fountain behind it shaped like a cippus or square pillar, and flowing into the impluvium. It has been ingeniously conjectured that this was a survival, in the more



Cartibulum. (From Pompeii.)

elaborate Roman house of later times, of the primitive arrangement of the atrium, as at once kitchen and living-room; the cippus, now turned into a fountain, being the ancient *focus* or domestic altar (Saglio, *s. v.*). The *aenea vasa* on the cartibulum will then be, not ornamental bronzes as some have thought, but ordinary cooking vessels [AENUM, CACCABUS]. The engraving represents a marble table of the kind, from the house of the Nereids at Pompeii (Rich); beneath it is a drain or sink, no doubt communicating with the impluvium. Another, figured by Saglio, corresponds less closely to Varro's description, having two brackets. [W. W.]

CARYA'TIDES is the name commonly given to female figures used in place of columns as the supports of an entablature. This was not the only or even the usual meaning of the word in ancient times. Thus the Caryatids made by Callimachus (Brunn, *Künstlergesch.* i. 251; Plin. *H. N.* xxxiv. § 92, "Saltantes Lacaenae"), by Praxiteles (Plin. *H. N.* xxxvi. § 23), and for the Pantheon by Diogenes (Plin. *H. N.* xxxvi. § 38; Overbeck, *Gesch. d. Gr. Pl.* ii. 380) were probably maidens executing the dance in honour of Artemis Caryatis, though by a misapprehension those of Callimachus have been by some identified with the figures supporting the portico of the Pandroseum at Athens (Rangabé, *Rev. Arch.* ii. 425), and those of Diogenes with similar figures now extant in Rome. The maidens of the Pandroseum are called simply *κόραι* in contemporary records (*C. I. G.* 160); the word Caryatis in this application is found, however, in Lynceus (*ap.* Athen. vi. 241 e), a writer of about 300 B.C., and in Vitruvius (i. 1). The traditional story refers their introduction to retaliation on the people of Caryae by the Greeks, at the same time as a portico was erected at Delphi, supported by figures of Persians. Others suggest that these Caryatides may be derived from maidens, perhaps Canephori, in the service of Artemis Caryatis.

Caryatid from the Pandroseum (Erechtheum) at Athens. (From Fergusson.)

It will be as well to include under this head also Atlantes and Telamones, the names given by the Greeks and Romans to male figures similarly applied in architecture ("bearers," from **τλάω*).

Several specimens of Caryatides and similar figures are still extant. The most important, and also probably the earliest, are the six maidens (one now in the British Museum) who support the portico of the Pandroseum (Erechtheum) at Athens (408 B.C.). At Cambridge there is part of a colossal Caryatid from Eleusis, probably dating from the time of Demetrius Phalereus (317–307 B.C.). In the temple of Zeus at Agrigentum, Giants, as Atlantes, take the place of square pilasters within the cella. This temple probably dates from the beginning of the 5th century. In the Braccio Nuovo of the Vatican and in the Palazzo Giustiniani at Rome are Caryatids found near the Pantheon; these are imitated from those of the Pandroseum. Others are preserved in the Villa Albani, in the Glyptothek at Munich, and elsewhere. Satyrs and Sileni, who had served as supports to entablatures, have been found near the scena of the theatre of Dionysus at Athens. At Pompeii was discovered a relief representing Caryatids; but the inscription on it, *τῇ Ἑλλάδι τὸ τρόπαιον ἐστάθη κατανικηθέντων τῶν Καρυατῶν*, is probably forged.

From these examples we may learn the characteristics of this class of architectural figures. They naturally fall into two divisions, of each of which we have representative specimens in the maidens of the Pandroseum and the Giants of Agrigentum respectively. The former are regarded as the willing performers of an honourable service, while the latter are vanquished enemies compelled to a laborious task; and therefore in the two cases we have very different treatment. The burden of the maidens of the Pandroseum is lightened by the omission of the frieze from the entablature, and what they support is only a portico. An explanation of their service is suggested by their assimilation to the Canephori, or basket-bearers, who held an honourable place in the Panathenaic procession. Too sudden a transition from the architrave to the human figure is avoided by the sloping sides of the basket-capital; the neck is strengthened by a careful arrangement of the hair. Their position is one of ease and firmness, and their weight rests in each case upon one leg: thus is gained an appearance of elasticity and also of reserve power. This supporting leg is also in each case that towards the outside of the building, and the apparent concentration of pressure thus produced gives additional stability to the general effect. Other means are taken to emphasise the similarity of the human figure to a column: thus the swelling of the body at the hips corresponds to an entasis, and the treatment of the drapery in regular parallel folds recalls flutings. In other respects, also, the drapery of these and other Caryatids calls for notice: we often find a broad mantle hanging down the back from two brooches on the shoulders, a garment used also by Canephori; in the Caryatid from Eleusis there are also fastened to the same two brooches straps which cross on the breast, with a Gorgoneion at their place of crossing. This whole scheme recurs on some Canephori in the Villa Albani. In the best examples of Caryatids the arms hang freely at the sides; but in some cases one hand supports the basket on their heads.

In the second class of such figures—the Giants of Agrigentum, for instance, figured under ATLANTES—the treatment is quite different. Here the weight borne is emphasised rather than lightened, and no drapery conceals the muscular strain. But a slight archaicism of execution, especially in the faces, prevents this strain from being too painful to the spectator. These Giants stand firmly on both feet, with their backs against the cella-wall, and raise both arms to bear part of the weight that rests on their heads. But such figures as these do not lend themselves to architectural treatment so easily as draped Caryatids. Hence their characteristics hardly require so much notice. [E. A. G.]

CASSIS. [Galea; Rete.]

CASTELLUM AQUAE. [Aquaeductus.]

CASTRA. I. Greek.—The naval camp of the Greeks in Homer, lying between Rhoeteum and Sigeum, was very large. It had numerous streets which crossed one another (*Il.* x. 66), an agora which was capable of holding all the fighting forces of the Greeks, and in this stood the altar to Zeus Panomphaeus (*Il.* viii. 249). The games in honour of Patroclus appear to have been held within the camp. It had a wall, probably of earth, with high two-leaved gates (*Il.* xii. 154), and at a short distance a dug ditch (*Il.* ix. 67). The ditch was protected at the top by many sharp stakes (*Il.* xii. 59). At intervals in the walls were wooden towers (*Il.* xii. 36) and battlements (*ἐπάλξεις*), which were probably stakes rammed into the wall, with pinnacles of different sorts (*κρόσσαι, στῆλαι προβλῆτες*, *Il.* xii. 258). It was guarded by watches (*φυλακαί*) at night (*Il.* ix. 66), who numbered 700 (*Il.* ix. 85). We hear of Ulysses and Diomedes going the rounds to see if the watch were awake (*Il.* x. 180). The habitations within the camp were not tents, but, if we may judge from that of Achilles, more solid wooden structures (*Il.* xxiv. 448 foll.). Of course we must remember that this was a permanent camp. On the whole matter, see Buchholz, *Die homerischen Realien*, ii. pt. i. 331–342.

The ancient Greeks of the historical period were neither methodical nor capable of enduring drudgery. Hence their camp-constructions were quite contemptible compared with those of the Romans. They always looked out for a position with natural defences (cf. Xen. *Resp. Lac.* 12), so that they avoided as far as possible the trouble of fortification, but at the expense of being unable to arrange themselves in any fixed order within their encampments; for these must have varied in position and size (Polyb. vi. [illegible]). Again, Polybius (xviii. 1, and cf. Liv. xxxiii. 5) contrasts, unfavourably to the Greeks, the many-branched and cumbrous stakes, the latter used for any fortification they had to take, with the well-trimmed stakes with few branches the Romans carried so easily. Xenophon (*l. c.*) tells us that the Spartans generally formed their camp in a circle, and placed senti-[illegible] over the arms of the camp to guard these, [illegible] from their enemies, but from their friends! [illegible]semen on an adjacent height used to observe [illegible] enemy. The Spartans frequently changed their camp. They used to drill each morning. After that the commander by a herald gave the order to sit down, which afforded a sort of review (*ἐξέτασις*) of the troops. After this followed the mid-day meal (*ἄριστον*) and change of guard; and then amusement (*διατριβαί*) or rest till evening exercise. Thereafter the herald gave the signal for the evening meal (*δεῖπνον*), [illegible] hymn was sung to the gods to whom the sacrifices had been favourable, and the soldiers retired to rest.

II. Roman.—It is well known that Roman armies never halted for a single night without forming a regular entrenchment, termed *castra*, capable of receiving within its limits the whole body of fighting men, their beasts of burden, and the baggage. So essential was this operation considered, that even when preparing for an immediate engagement, or when actually assailed by a hostile force, it was never omitted, but a portion of the soldiers were employed in constructing the necessary works, while the remainder were standing to their arms or resisting the enemy (Caes. *B. G.* viii. 15; Liv. xxvii. 12): and so completely was it recognised as a part of the ordinary duties of each march that *pervenire ad locum tertiis . . . quartis . . . decimis castris* (Liv. xxvii. 32) are the established phrases for expressing the number of days occupied in passing from one point to another. Whenever circumstances rendered it expedient for a force to occupy the same ground for any length of time, then the encampment was distinguished as *castra stativa.* (Liv. xxvii. 12: Caes. *B. G.* viii. 15; *B. C.* i. 42, iii. 30.) We also read of *castra navalia* for protecting ships hauled up on land (Liv. xxix. 35; Caes. *B. G.* v. 11).

When the protracted and distant wars in which the republic became engaged, as its sway was gradually extended first over the whole of Italy, and subsequently over Greece, Asia, and Africa, rendered it impossible for the legions to return home in winter, they usually retired, during the months when active military operations were suspended, into some city where they could be protected from the inclemency of the season, and where the comforts of the men could be readily secured; or they were dispersed up and down in detachments among friendly villeges (*in hiberna concedere; exercitum in hiberna dimittere; exercitum per civitates in hiberna dividere*). It is true that extraordinary emergencies, such as a protracted blockade, or the necessity of maintaining a constant watch upon the movements of a neighbouring and vigorous foe, might compel a commander to keep the field for a whole year or even longer; but to order an army, except in case of necessity, to winter under canvas (*hiemare sub pellibus; hiemem sub tentoriis exigere*) was long regarded as a severe punishment, inflicted only in consequence of grievous misconduct. (Frontin. *Strat.* iv. 1, § 24.) As the boundaries of the empire were gradually pushed forward into wild and barbarian lands, where there were no large towns and no tribes on whose faith reliance could be placed, such arrangements became impracticable; and armies, whether of invasion or occupation, were forced to remain constantly in camps. They usually, however, occupied different ground in summer and in winter, whence arose the distinction between *castra aestiva* and *castra hiberna*, both alike being *stativa*. Such posts were frequently, if situated advantageously, garrisoned permanently; and the peaceful natives who sought to enrich themselves by trading with their conquerors, settled for security in the immediate vicinity. (Caes. *B. G.* vi. 37.) This was one of the most important ways in which towns grew up. Merchants, both Roman and foreign, came and settled outside the fortifications of these camps (*ad canabas legionis consistere*, as the phrase was; see Wilmanns, 2409 foll.), the inhabitants of the adjoining country helped to swell the numbers, veterans both from the legion quartered and from other legions and companies settled there, and thus the *canabae* grew into a village, and from that often to towns and colonies of considerable size and importance. Lambaesis in Numidia is a most noticeable example (see *C. I. L.* viii. pp. 283–285). Mayence, Strasburg, and Vienna owe their existence to a similar origin, as do possibly also the towns in England with the termination *-chester*. See on the whole matter Mommsen, *Die römischen Lagerstädte*, in *Hermes*, vii. 299–326; and Mommsen-Marquardt, iv. 19–21.

But whether a camp was temporary or permanent, whether tenanted in summer or in winter, the main features of the work were always the same for the same epoch. In *hiberna*, huts of turf or stone would be substituted for the open tents of the *aestiva* (hence *aedificare hiberna*), and in *stativa* held for long periods the defences would present a more substantial and finished aspect, but the general outline and disposition of the parts were invariable: a camp was laid down, arranged and fortified according to a fixed and well-known plan, modified only by the numbers for whom it was required to provide accommodation, but altogether independent of the nature of the ground or of the fancy of the general, so that each battalion, each company, and each individual had a place assigned to which they could at once repair, without order, question, delay, or confusion. (Polyb. vi. 42, § 10.)

At what period the practice of throwing up elaborate field-works for the protection of an army engaged in active service was first commenced by the Romans, it is impossible to determine; but we may safely conclude that, like all other parts of their military tactics, it was matured by a slow and gradual process. Livy and Dionysius, indeed, would lead us to suppose that regular camps existed from the most remote epoch to which their annals extend; but the language of these historians is in general so loose upon all matters of antiquarian research, and they are so much in the habit of transferring to the earliest ages the usages of their own contemporaries, that no safe inference regarding points of this nature can be drawn from their words. Frontinus, on the other hand, declares that the idea of a fortified enclosure, calculated to contain a whole army, was first suggested to the Romans by the camp of Pyrrhus, which they captured near Beneventum (cf. Liv. xxxv. 14); but as the statements of this author have never been deemed to possess much weight, and as we are also told that Pyrrhus looked with admiration on the Roman camp (Plut. *Pyrrh.* 16), we cannot lay much stress on his testimony. It is evident, however, from the facts detailed in the article Exercitus, that a camp, such as the earliest of those of which we possess any detailed account, could not have assumed that shape until the tactics of the phalanx were superseded by the manipular divisions; and it may be held as certain that each of the great wars in which the Commonwealth was successively engaged for more than a century—with the Samnites, with Pyrrhus, with the Cisalpine Gauls, and with the Carthaginians—must have led to a series of improvements. The system was probably brought to perfection in the campaigns against Hannibal, and underwent no material alteration until the organic changes in the constitution of the army, which took place not long before the downfall of the constitution, during the civil broils, and under the earlier emperors, rendered a corresponding change in the internal economy of the camp unavoidable. Hence, although it would be at once vain and unprofitable to attempt an investigation of the various changes through which a Roman camp passed before it assumed what may be called its normal shape, it is evidently absolutely necessary for all who desire to obtain even a slight knowledge of the Roman art of war, to make themselves acquainted with this important feature in their system during the best days of the republic and the empire. And fortunately the records of antiquity enable us to supply such information with considerable minuteness. Polybius, the friend and companion of the younger Scipio, has transmitted to us a description of a Roman camp, such as he must have often seen with his own eyes; and the writer of a treatise which is generally entitled *Hygini gromatici liber de munitionibus castrorum*, who flourished probably under Septimius Severus, has left us a technical memoir on the art of castrametation as practised in his own day. To these some might feel inclined to add the remarks of Vegetius, who lived during the reign of Valentinian, but for reasons which are stated elsewhere [Exercitus] it will be more safe to neglect him altogether.

We shall proceed to describe these two camps in succession, it being understood that the leading statements with regard to the first are taken directly from Polybius (vi. 27–37 and 41), and those with regard to the second, from Hyginus, unless when the contrary is distinctly indicated. But while we endeavour to explain clearly all the parts of the camps themselves, we must refer to the article Exercitus for everything that concerns the different kinds of troops, their divisions, their discipline, and their officers.

It must be carefully borne in mind that the camps described in the following pages were the normal ones—*i.e.* the sum of all the arrangements which the Romans aimed at effecting; though we cannot doubt but that actually in each case some of these arrangements must have been incapable of being carried out, owing to one cause or another, such as increased numbers, position of the enemy, lie of the ground, &c.

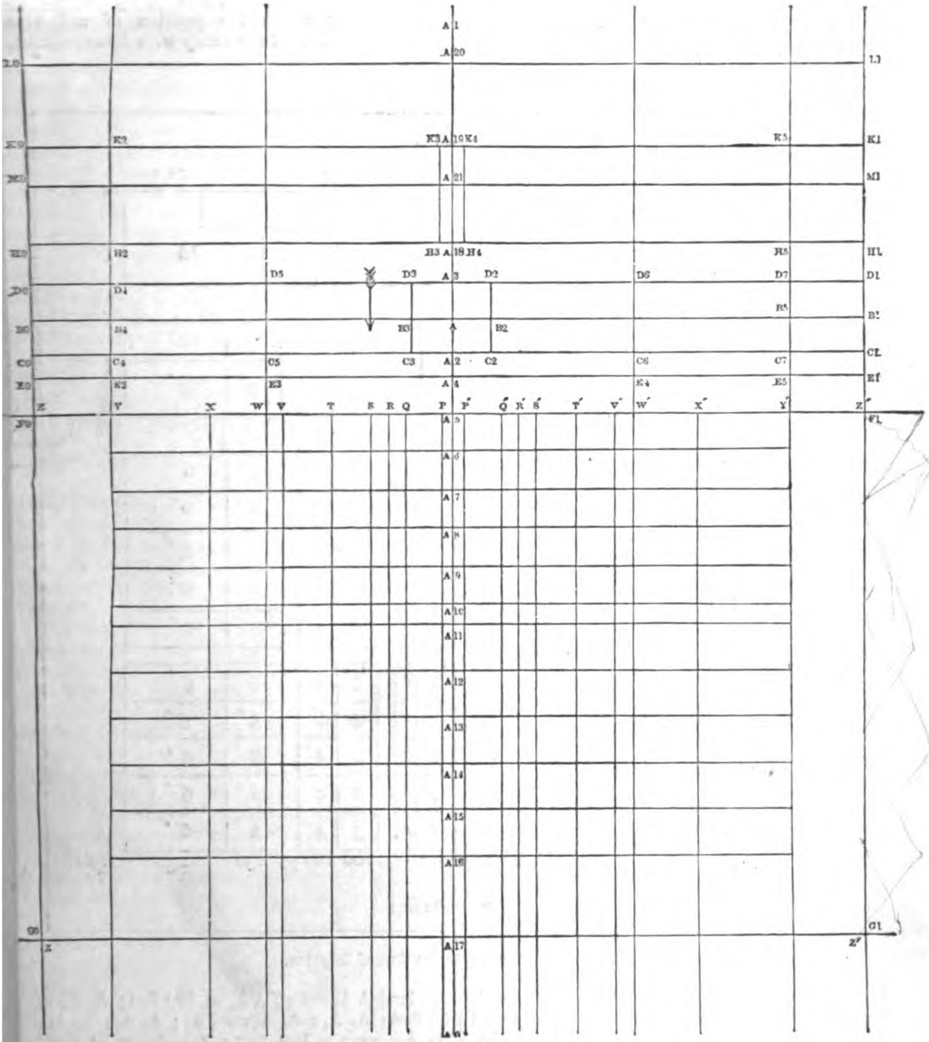
I. Camp of Polybius.

[Simple numbers in the following refer to the chapters and sections of the sixth book of Polybius.]

The camp described by Polybius is such as would be formed at the close of an ordinary day's march by a regular consular army consisting of two Roman legions with the full contingent of Socii. Each legion is calculated at 4,200 infantry and 300 cavalry; the Socii furnished an equal number of infantry and twice as many cavalry as a regular contingent. But there were besides four *cohortes extraordinariae* (containing each 400 men) and two *alae extraordinariae* (containing each 300 men), taken from the Socii, so that the whole force amounted to 18,400 foot and 2,400 horse (Mommsen-Marquardt, ii. 379, 380, 386). When the legion was increased to 5,000 infantry, there was no doubt a proportional increase in the numbers in a camp.

Choice of the Ground.—Although the general outline, the defences, and the internal economy of a camp were altogether independent of the nature of the ground, yet great importance was attached to the choice of a fitting situation which should admit of being readily laid out in the required form, which should afford no facilities for attack or annoyance, which should be convenient for procuring wood, water, and forage, and which the army might enter and quit without danger of surprise. Skill in the selection of such a spot (*capere locum castris*) was ever considered as a high quality in a general, and we find it recorded among the praises of the most renowned commanders that they were wont in person to perform this duty (*e.g.* Liv. ix. 17, xxxv. 14, 28; Tac. *Hist.* ii. 5, *Agric.* 20; comp. Quintil. *I. O.* xii. 3, § 5). Under ordinary circumstances, however, the task devolved upon one of the military tribunes, and a certain number of centurions appointed from time to time for the purpose. These having gone forward in advance of the army until they reached the place near which it was intended to halt, and having taken a general survey of the ground, selected a spot from whence a good view of the whole proposed area might be obtained, that spot being considerably within the limits of the contemplated enclosure

(Fig. 1.)



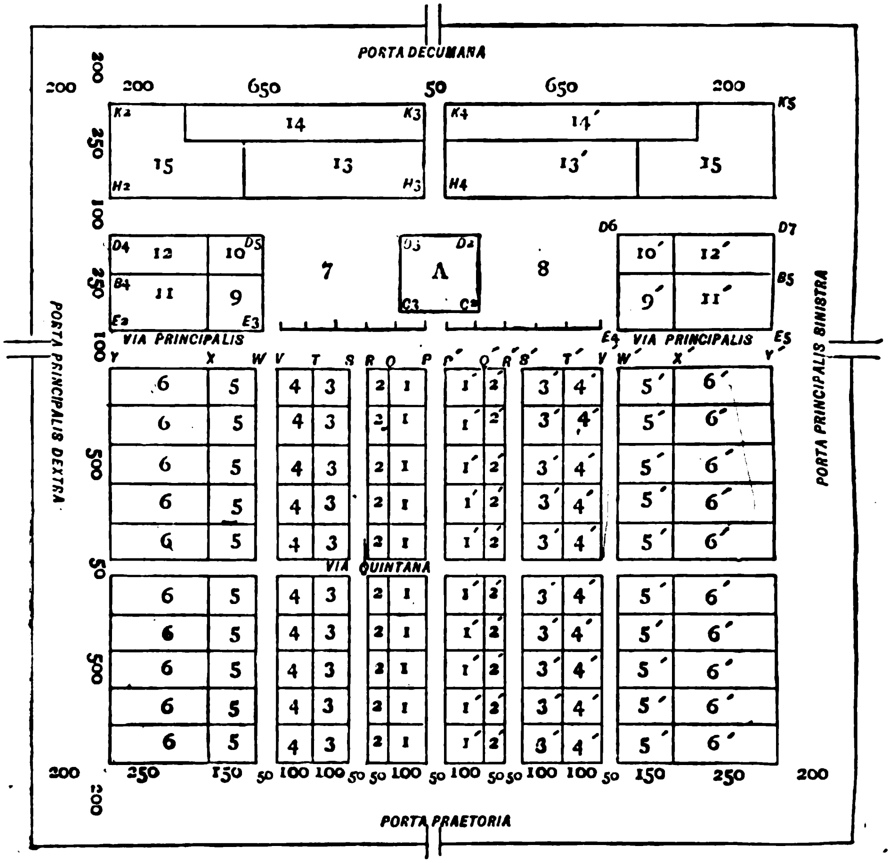
Construction of a Roman camp.

(41, §§ 1, 2). An essential point was, of course, to have water and fodder in close proximity to the camp (27, § 3).

Construction.—The spot answering these conditions and which we shall call A (fig. 1) was marked by a small white flag. The next object was to ascertain in what direction the front of the camp should face—this direction we indicate by the arrow in the subjoined figure. Upon the position of A and the direction of the arrow depended the disposition of all the other parts of the work; for these two preliminary points being decided, the business of measuring out the ground (*metari-castra*) commenced, and was executed, as we learn from various sources, with graduated rods (*decempedae*) by persons denominated *metatores* (Cic. *Phil.* xiv. 4, 10). The different steps of the process may be most briefly and distinctly set down in the ordinary language of a geometrical construction.

Through A draw a straight line A_0 A_1, parallel to the direction of the arrow, a straight line B_0 B_1 at right angles to A_0 A_1. These two straight lines, A_0 A_1 and B_0 B_1, served as the bases by which the position of all the different divisions of the camp were determined.

(Fig. 2.)



Plan of a Roman camp in the time of Polybius.

In the technical language of land measurement, which was derived from augural science and was used also in the foundation of colonies, these two lines were called respectively *decumanus maximus* and *cardo maximus*; or, to be perfectly accurate, the *cardo maximus* ran through the middle of the *via principalis*, at the very outer point of which the *groma* was fixed to regulate the lines. The camp, then, theoretically faced east (see Nissen, *Das Templum*, p. 11); but as a matter of fact usually faced the enemy (Veget. i. 23). Extension along A_0 A_1 was called length (μῆκος); along B_0 B_1 was depth (βάθος).

Along A A_0 set off A A_2 = 100 feet; A_2 A_4 = 50 feet; A_4 A_5; A_5 A_6; A_6 A_7; A_7 A_8; A_8 A_9; A_9 A_{10} each = 100 feet; A_{10} A_{11} = 50 feet; A_{11} A_{12}; A_{12} A_{13}; A_{13} A_{14}; A_{14} A_{15}; A_{15} A_{16} each = 100 feet; A_{16} A_{17} = 200 feet.

Along AA_1 set off AA_3; A_3 A_{18}, each = 100 feet; A_{18} A_{21} = 150 feet; A_{21} A_{19} = 100 feet; A_{19} A_{20} = 200 feet.

Through A_2; A_3; A_4; A_5; A_{17}; A_{18}; A_{19}; A_{20} draw C_0 C_1; D_0 D_1; E_0 E_1; F_0 F_1; G_0 G_1; H_0 H_1; K_0 K_1; L_0 L_1 straight lines parallel to B_0 B_1, and in like manner draw through A_6; A_7; .... A_{16} straight lines parallel to B_0 B_1, as marked in the figure.

On B_0 B_1 make A B_2; A B_3 each = 100 feet.

Through B_2 and B_3 draw straight lines parallel to A_0 A_1, cutting C_0 C_1 in C_2 and C_3, and cutting D_0 D_1 in D_2 and D_3; in this manner a square area C_2 C_3 D_3 D_2 is determined, each side of which = 200 feet.

Along A_5 F_0 set off A_5 P = 25 feet; P Q = 100 feet; Q R = 50 feet; R S = 50 feet; S T = 100 feet; T V = 100 feet; V W = 50 feet; W X = 150 feet; X Y = 250 feet; Y Z = 200 feet.

Along A_5 F_1 set off A_5 P′; P′ Q′; Q′ R′ .... Y′ Z′, equal respectively to A_5 P; P Q; Q R; .... Y Z.

Through Z Z′ draw straight lines parallel to A_0 A_1, cutting G_0 G_1 in z and z′, and cutting L_0 L_1 in L_0 and L_1. The square area O O′ z′ z thus determined was the camp.

Again, through P; Q; R....Y, and through P′; Q′; R′ .... Y′ draw straight lines parallel to A_0 A_1, cutting the parallels to B_0 B_1 in the points marked in the figure.

Finally, on H_0 H_1 lay off A_{18} H_3 and A_{18} H_4 each = 25 feet, and through H_3; H_4; draw straight lines parallel to A_0 A_1, cutting K_0 K_1 in K_3 K_4.

This construction being completed, we now proceed to explain the arrangement of the different parts referring to figure 2, in which the lines no longer necessary are obliterated, the spaces occupied by the troops or officers enclosed by dark lines, and the streets (*viae*) distinctly laid down. In practice the most important points were marked by white poles, some of which bore flags of various colours, so that the different battalions on reaching the ground could at once discover the place assigned to them (47, § 7).

The white flag A, which served as the starting point of the whole construction, marked the position of the consul's tent, or *praetorium*, so called because *praetor* was the ancient term for any one invested with supreme command. It had a roof like a temple (Joseph. *B. J.* iii. 5, 2). The square area C_2 D_3 was left open, extending, as we have seen, a hundred feet each way from the praetorium. That portion of the camp which lay in the direction of the arrow towards the space out in front (*πρὸς τὴν ἐκτὸς ἐπιφάνειαν*) from the line E_0 E_1 (fig. 1) was termed the front or fore-part of the camp (*τοῦ παντὸς σχήματος κατὰ πρόσωπον*, 27, §§ 3, 6).

The number of legions being two and the number of tribunes in each being six, their tents were arranged six and six at equal distances along the line E_0 E_1 (fig. 1), exactly opposite to and looking towards the legions to which they belonged. Hence, as will be seen from what follows, they did not extend beyond the points E_3 and E_4; but whether they were distributed at equal distances along the whole of the line E_3 E_4, or whether the space in front of the praetorium was left vacant, as in our figure, as seems most probable, may admit of doubt. The space of fifty feet included between the parallels C_0 C_1 and E_0 E_1 (fig. 1), immediately behind the tents of the tribunes, was appropriated to their horses, beasts of burden, and baggage (27, §§ 4, 5). The probability is, as we shall see below, that there was a space in front as represented in the figure.

The ten areas marked 1 were set apart for the cavalry of one legion, and the corresponding t[illegible] areas marked 1′ for the cavalry of the other legion (28, §§ 2, 3). These all faced towards the street P P′; and each area, containing a space of 10,000 square feet, was allotted to one turma or troop of 30 dragoons, with their horses and baggage. Such long rows were called *strigae* (*ῥῦμαι*); for this word cf. Festus, p. 315. When there were larger numbers in the camp than those we are considering, the depth, not the length, was increased (29, § 5; 30, § 3).

Back to back with the cavalry, and looking out upon the streets R S, R′ S′, the Triarii of the two legions were quartered in the areas 2 and 2′ (29, § 3). Each area contained 5000 square feet, and was allotted to a maniple of 60 men; hence, according to the calculation here followed, a dragoon and his horse were allowed as much space as 4 foot-soldiers.

In the areas marked 3 and 3′ facing the Triarii were quartered the Principes of the two legions; each of these areas contained 10,000 square feet, and was allotted to a maniple of two centuries, that is, 120 men (29, § 6).

In the areas marked 4 and 4′, back to back with the Principes, and looking out upon the streets V W, V′ W′, were quartered the Hastati of the two legions, the number of men being the same as in the Principes, and an equal space being assigned to them (29, § 8).

Facing the legionary Hastati, in the areas marked 5 and 5′, were the cavalry of the allies. The total number was 900 to each legion, but of these ⅓ or 300 were separated under the name of *extraordinarii*, and quartered in a different part of the camp (30, §§ 1, 3). Consequently, each of the spaces 5 and 5′ was calculated to accommodate 60 dragoons with their horses. We can hardly suppose that the dragoons of the allies had such comparatively roomy quarters as those of the Roman cavalry were. Allowing, then, the 60 allied dragoons half as much space again as the 30 Roman ones, we find each of these areas to contain 15,000 square feet.

Back to back with the cavalry of the allies, and looking towards the rampart which enclosed the camp, the infantry of the allies were quartered in the areas marked 6 and 6′ (30, § 4). The total number was 5000 for each legion; but of these 800 were separated as *extraordinarii*, and quartered in a different part of the camp. Hence there would remain 4,200 or 420 for each of the spaces 6 and 6′; and as we cannot allow the allied foot-soldiers less than the confined spaces of the legionaries, each space must have contained 25,000 square feet.

The open space immediately behind the tents and baggage of the tribunes, extending to the right and left of the space allotted to the general, was assigned on one side to the *quaestorium* and its appliances (*τῷ τε ταμιείῳ καὶ ταῖς ἅμα τούτῳ χορηγίαις*), and on the other to a forum (31, § 1). They are marked 7 and 8. This is the most probable arrangement, but we cannot be absolutely certain of it.

Still further to the right and left at an angle to the tents of the tribunes (*οἷον ἐπικάμπιον τάξ[illegible] ἔχοντες πρὸς τὰς σκηνάς*), looking respe[illegible]ely towards the quaestorium and the fo[illegible], were a body of cavalry, selected from the [illegible]ordinarii equites (*οἱ τῶν ἐπιλέκτων ἱππέων [illegible]λεκτοι*), and a body of cavalry serving as [illegible]unteers out of compliment to the general (*καὶ* *τινες τῶν ἐθελοντηδὸν στρατευομένων τῇ τῶν ὑπάτων χάριτι*, 31, §§ 2, 3), who were analogous perhaps to the *Evocati* of later times, or, as Masquelez thinks (*ap.* Saglio, *Dict.*, p. 948), were clients of the consul. Back to back with these, looking towards the rampart, in 11, 12, and 11′, 12′, were quartered the foot-soldiers belonging to the same classes as the cavalry just named (31, § 4). In the camp, then, as well as on the march, these troops were always near the person of the consul and of the quaestor, and served as a sort of body-guard to them. Their number is nowhere specified, and hence the exact space required for their accommodation cannot be determined.

In 13, 13′, looking towards the quaestorium, praetorium, and forum, were quartered the remainder of the *extraordinarii equites*. Allowing the picked cavalry mentioned previously to have been 2 double turmae of 60 men each, we have remaining 8 double turmae, *i.e.* 480 men. If we allow these as much room or a little less than the Roman *equites*, we may assume a surface of 150,000 square feet for them. Back to back with these, stretching a little beyond them on each side, and facing the ramparts in 14, 14′, were the remainder of the *extraordinarii pedites* (31, §§ 7, 8). Supposing these to be at the most 1500 in number, and allowing them as being picked troops a little more room than the ordinary foot-soldiers of the allies, let us assume for them a space of 130,000 square feet. The spaces marked 15, 15′ were assigned to foreign troops (*auxilia*), or to allies not included in the regular contingent who might chance to be present (*τοῖς ἀλλοφύλοις καὶ τοῖς ἐκ τοῦ καιροῦ προσγιγνομένοις συμμάχοις*, 31, § 9). If these troops were more numerous than usual, part of the quaestorium and the forum were made use of (32, §§ 4, 5).

The form of the camp was an exact square (*τετράγωνον ἰσόπλευρον*), the length of each side being 2150 Roman feet.

The clear space between the ramparts and the tents (*intervallum*) was 200 feet, and this was of the greatest service in facilitating the marching in and out of the soldiers without crowding or confusion. Here, also, cattle and other booty were kept and guarded; and the breadth was sufficient to prevent any ordinary missile or firebrand hurled into the camp from doing serious injury (31, § 12 ff.).

The principal street, stretching right across in front of the tents of the tribunes, was 100 feet wide and called *via principalis* (Liv. x. 33), so called because the chief officers, *principes* (Amm. Marc. xxii. 3, 2), had their quarters there. The main portion of this street, that in close proximity to the tents of the tribunes, was called *principia* (*ἀρχεῖα*, Plut. *Galb.* 12), though perhaps strictly the term should be applied to the officers' quarters themselves: thus Suet. *Otho*, 1, speaks of an execution *ante principia*. We often hear of the soldiers congregating *in principiis praetorioque* (*e.g.* Liv. vii. 12). The latter is that space immediately in front of the general's tent, between it and the line of the legionaries' tents, thus taking in a part of the *via principalis* (see Weissenborn on Liv. xxi. 53, § 6; xxvii. 25, § 5). It will be observed that the lengthened lines of the ten turmae and manipuli in each division is intersected at the termination of the first five by a road fifty feet wide, called the *Via Quintana* (30, § 6). The position of the remaining five *viae* in the fore-part of the camp, all of which intersect the Via Quintana at right angles, will be understood at once by inspecting the plan, the width of each being fifty feet.

When two consular armies encamped together within the same rampart, two ordinary camps were, it may be said, applied to each other at the ends nearest to their respective praetoria; the decuman gate, accordingly, in each camp disappearing. The two praetoria faced in opposite directions, and the legions of the two consuls stretched their lines in front of each praetorium, so that the figure of the camp was now no longer a square, but a rectangle, whose length was twice that of an ordinary camp, the breadth being the same. Here we must say a word on the great *crux* in Polyb. vi. 32, § 8: *ὅταν μὲν οὖν συμβαίνῃ τοὺς ὑπάτους ἀμφοτέρους ὁμοῦ στρατοπεδεύειν, οὕτως ἀεὶ χρῶνται ταῖς στρατοπεδείαις· ὅταν δὲ χωρὶς, τἄλλα μὲν ὡσαύτως, τὴν δ' ἀγορὰν καὶ τὸ ταμιεῖον καὶ τὸ στρατήγιον μέσον τιθέασι τῶν δυεῖν στρατοπέδων.* That *ὁμοῦ* and *χωρὶς στρατοπεδεύειν* mean camping within one enclosure under one general-in-chief (*castra conjungere*, Liv. iii. 8), and with two separate enclosures under two separate generals,—like Minucius and Fabius in Polyb. iii. 105, § 10, and 103, §§ 7, 8,—is certain. Equally certain is it that Polybius's whole previous description of the camp is at variance with the idea that in a camp of two legions the forum, quaestorium, and praetorium were *between* the two legions. Accordingly, Masquelez (*l. c.* p. 952) wishes to take *ὁμοῦ* as meaning "at the same time," and *χωρὶς* "at different times," "one after the other;" but does not make it plain how the praetorium would be in the middle of the two camps, seeing that the construction of the first camp was, by his hypothesis, according to the normal method, and so started from the praetorium in the normal position. Marquardt (in Mommsen-Marquardt, v. p. 404, note 1) transposes *χωρὶς* and *ὁμοῦ*, a drastic but wholesome remedy. We must note, too, that whereas Polybius nearly always uses *στρατόπεδον* for a legion (as in § 6 of this chapter), yet here the last words mean "between the two *camps*."

Although the words of Polybius are, as a whole, so full and clear that we can have little difficulty in forming a distinct conception of the camp which he describes and in delineating the different parts, it must not be concealed that he has altogether passed over many important points on which we should desire information, and that occasionally his language is not entirely free from ambiguity.

Under the head of omissions, we must note—

1. The absence of all definite information with regard to the manner in which the *velites* were disposed of. These, at the time when Polybius wrote, amounted to 1200, or, at the lowest computation, to 1000 for each legion; and taking the same number for the contingent of the Socii, we shall thus have a body of at least 4000 men to account for. Polybius says (vi. 35, § 5): *τὴν δ' ἐκτὸς ἐπιφάνειαν οἱ γροσφομάχοι πληροῦσι παρ' ὅλον καθ' ἡμέραν τὸν χάρακα παρακοιτοῦντες· αὕτη γὰρ ἐπιτέτακται τούτοις ἡ λειτουργία· ἐπί τε τῶν εἰσόδων ἀνὰ*

δέκα ποιοῦνται τούτων αὐτῶν τὰς προκοιτείας. What is τὴν ἐκτὸς ἐπιφάνειαν? It appears to be a vague expression, "the space out in front" (cf. 27, § 6). Further, πληροῦσι presupposes a limited space, the boundary of which is no doubt the wall of the rampart. We are thus led to believe that the *velites* occupied the whole line of the ramparts (compare Caes. *B. C.* i. 21, "perpetuis vigiliis stationibusque ut contingant inter se atque munitionem *expleant*;" so that there is no necessity to adopt Schweighäuser's emendation τηροῦσι), and especially that part of the ramparts in front which faced the enemy. What Polybius says (vi. 24, § 4) merely means that a certain number of velites were *attached to* each division of the legions, not that they *encamped* in juxtaposition with them. Space would not admit of their encamping together; and even if it did, then surely the velites and not the triarii would have been the fit persons to look after the horses of the equites (see below), as is pointed out by Masquelez (*l. c.* p. 953). Also, when Polybius says (vi. 33, § 8) that the velites οὐ λειτουργοῦσι, he refers to the smaller but less arduous camp duties, such as keeping clean the streets, mounting honorary guard at the officers' tents, &c. But further, Masquelez notices that for the whole line of the ramparts all round such a considerable number of velites as 4000 would be far more than was necessary. We can then suppose that a considerable proportion of them were used for the large outposts (*stationes*) outside the camp, which we so often hear of (see Weissenborn on Liv. xxi. 4, § 7). And we know that one of the punishments inflicted on the legionaries was to make the delinquents bivouac outside the camp (Liv. x. 4, § 4; Polyb. vi. 38, § 3), at the same time as degrading them to the velites (Frontin. *Strat.* iv. 1, 18; cf. Val. Max. ii. 7, 15). Thus we see, following Masquelez, that the velites served both inside the camp to man the wall and outside as pickets. This seems a better view than that of Marquardt (*l. c.* p. 396), who holds that the light-armed troops always bivouacked outside the camp; or that of Justus Lipsius, who thinks that they all occupied the intervallum. The velites ceased to form a portion of the legion about the time of Marius, so that later writers throw no light upon the question. It is remarkable also, that while Polybius passes them over completely in the internal arrangements of his camp, so also he takes no notice of them when describing the order of march.

2. No mention is made of the *legati.* Lipsius, in his plan of a Roman camp after Polybius, assigns to them a compartment next to the praetorium on the side opposite to that where the quaestorium stood; but this is merely a conjecture.

3. The *praefecti sociorum* likewise are passed over. Since they corresponded among the troops of the allies to the *tribuni* in the legions, it seems highly probable that their tents were ranged along a prolongation of the line on which the latter stood, and thus they also would be placed immediately opposite to and looking towards the soldiers under their immediate command.

4. The number of tents allowed to each maniple or century is nowhere stated, and consequently the number of men in each tent is unknown, nor are we very distinctly told how the centurions and other officers of the infantry and cavalry inferior to the tribunes were provided for; it is merely said that the ταξίαρχοι in each maniple took the first tents on each side, that is, probably, at each end of the row which held one maniple (30, § 5).

5. With regard to the fortifications of the camp it is stated that the digging of the ditch (ταφρεία) and the formation of the rampart (χαρακοποιΐα) upon two sides of the camp was assigned to the Socii, each division taking that side along which it was quartered; while the two remaining sides were in like manner completed by the legionaries, one by each legion. The work upon each side was portioned out among the maniples, the centurions acted as inspectors of the tasks performed by their respective companies, and the general superintendence was undertaken by two of the tribunes (34, §§ 1, 2). The nature and the dimensions of the defences are not, however, specified. These consisted of a ditch (*fossa*), the earth from which was thrown inwards, and formed, along with turf and stones, into a mound (*agger*), on the summit of which, on the outer edge, a strong palisade of wooden stakes (*sudes, valli*) was fixed forming the rampart (*Vallum* s. *Vallus*—χάραξ). [VALLUM.] We can scarcely doubt that the depth of the ditch, together with the height and breadth of the agger, were, under ordinary circumstances, fixed; but the measurements incidentally mentioned in isolated passages do not perfectly accord with each other. Among the works at Dyrrhachium (Caes. *B. C.* iii. 63) we read of a ditch 15 feet deep, and a vallum 10 feet high and 10 feet broad; in the war against the Bellovaci and other Gaulish tribes we find Caesar (*B. G.* viii. 9) fortifying his camp with a double ditch, 15 feet deep, with perpendicular sides (*directis lateribus*), and a vallum 12 feet high, on the top of which was a breast-work (*loricula*) and numerous towers, three stories high, connected with each other by bridges, the sides of these bridges next to the enemy being protected by a breast-work of fascines (*viminea loricula*). Both of these, however, as well as several others which we might quote, must be regarded as special cases. The practice of a later period is, as we shall see below, more clearly defined by Hyginus and others.

Neither the number nor the names of the openings in the vallum are given. We have, however, abundant evidence to prove that they were four:—(1) *Porta Principalis dextra*, and (2) *Porta Principalis sinistra*, at the two extremities of the street called *via principalis.* As the praetorium most probably faced in the same direction as the tents of the tribunes, the position of these gates is as represented in the plan. (3) *Porta Praetoria.* It is sometimes said that this gate was also called *Extraordinaria.* But this name, which seems to occur in Livy, xl. 27, § 3, rests on a conjecture of Gelenius. Most MSS. read *extraordinariis*, which has crept into the text from the same word a line before; and the Mayence MS. reads *praetoria*, which is no doubt right, and is adopted by Weissenborn (*ad loc.*), Nissen (*Das Templum*, 41), and Marquardt (*l. c.* 401, note 2). (4) *Porta Decumana*, which was also called *Quaestoria* (Liv. xxxiv. 47; xl. 27). (3) and (4) were at the extremities of the *decu-*

manus maximus. Great diversity of opinion attaches to the question as to whether these two gates were as marked in the plan, or just the reverse. There can be no doubt that the *porta decumana* was the one which was turned away from the enemy (Liv. x. 32), and the *porta praetoria* the one which faced them (Veget. i. 23; Festus, *s. v.*; Hyg. *de Munit. Castr.* 56). Now, according to those who hold that the names of the two gates on the plan should be just reversed, the gate was called *decumana* because it was near where the tenth maniples and the tenth turmae were quartered (cf. Hyg. *l. c.*, § 18); and compare *Quintana*, on which Festus has this gloss: "*Quintana* appellatur porta in castris post praetorium ubi rerum utensilium forum sit;" and from Quintana in the sense of market comes the modern *canteen* (cf. Suet. *Nero*, 26). Further, they say that their view agrees with Polybius, who says (27, § 3) that the direction in which the legionaries lay was that which looked towards the quarter whence forage and water could be most easily secured; and that would hardly be the side which faced the enemy. But their opponents hold that the *porta decumana* was called from the augural *decumanus maximus* (see Weissenborn on Livy, iii. 5, § 5); that the statements of Festus and Hyginus do not apply to the Polybian camp, but to a camp of the kind Hyginus himself has described (see below); that the other name of the gate, viz. *Quaestoria*, was given from its proximity to the quaestorium, though probably as to use Mommsen's words (*Staatsrecht*, ii.² 552), "the whole arrangement of the camp rests on the opposition of the two head-quarters of the general (*praetorium*) and the quaestor (*quaestorium*," the two chief gates were called after them; that Polybius distinctly calls "front" (**κατὰ πρόσωπον**) the part of the camp in which the legionaries lay, and towards which the tents of the officers faced (27, § 6; 29, § 7); and he calls the opposite part of the camp the "rear" (**τὴν ὄπισθε πλευράν**, 31, § 7; cf. 32, § 6). This seems to be the correct view of the position of the gates; and the undoubted difficulty in the words of Polybius (27, § 3), that the camp lay **παρὰ μίαν ἐπιφάνειαν καὶ πλευράν, ἥτις ἂν ἐπιτηδειοτάτη φανῇ πρός τε τὰς ὑδρείας καὶ προνομάς, παραβάλλεται τὰ Ῥωμαικὰ στρατόπεδα,** may be obviated by translating **παρὰ**, "alongside of,"—*i.e.* water and forage were on the sides of the camp not directly in front or rear.

We can scarcely doubt that the Portae must have been always defended by barriers of some kind; but when special precautions were required, they were closed by regular gates defended by towers (*portis fores altioresque turres imposuit*, Caes. *B. G.* viii. 9).

We now proceed to notice various particulars connected with the internal discipline of the camp.

The Camp Oath.—When an army encamped for the first time, the tribunes administered an oath to each individual quartered or employed within its limits, including slaves as well as freemen, to the effect that he would steal nothing out of the camp, but if he chanced to find any property that he would bring it to the tribunes (33, § 2). We must suppose that the solemn promise being once made, was considered as binding during the whole campaign, for it would have been impossible to have repeated a ceremony so tedious at the close of each march. (Marquardt, *l. c.*, p. 374, note 1.)

Distribution of Duty among the Officers.—In each legion the tribunes divided themselves into three sections of two each, and each section in turn undertook for two months the superintendence of all matters connected with the camp (34, § 3 ff.). It is most probable that one tribune in each section assumed the chief command upon alternate days, or perhaps during alternate months (Liv. xl. 41, § 8; Marquardt, *l. c.*, p. 353, notes 1 and 2); and hence Polybius generally speaks of one tribune only as acting, or of two when reference is made to both legions.

Officers' parade.—Every morning at daybreak the centurions and the equites presented themselves before the tents of the tribunes, and the tribunes in like manner, attended perhaps by the centurions and equites, presented themselves at the praetorium. The orders for the day were then issued by the consul to the tribunes, communicated by the tribunes to the centurions and equites, and through the centurions and equites reached the soldiers at the proper time (34, § 5).

Guards, Sentinels, &c.—Out of the twenty maniples of Principes and Hastati in each legion, two were appointed to take charge of the *via principalis*. The main part of the centre of this road, the *Principia*, was the place of general resort during the day. The tribunes heard complaints (Dig. 49, 16, 12, 2) and administered justice (Liv. xxviii. 24, § 10) in the *principia*; where punishments, too, were inflicted (Val. Max. ii. 7, 9; Suet. *Otho*, 1). There also was the altar right in front of the praetorium (Val. Max. i. 6, 4). At the left angle of the praetorium facing the *via principalis* (C_2 in the figure) was no doubt the *tribunal* (Weissenborn on Livy, viii. 32, § 2), and at the angle at the right (C_3 in the figure) was the *augurale* (Tac. *Ann.* ii. 13) or *auguratorium* (Orelli, 2286); cf. Hygin. § 11. The *via principalis* was accordingly an important place; so that great pains were taken that it should be kept perfectly clean and regularly watered—a labour which would fall very light when portioned out among four maniples (33, §§ 3, 4).

Of the remaining eighteen maniples of Principes and Hastati in each legion, three were assigned by lot to each of the six tribunes, and of these three maniples one in turn rendered each day certain services to the tribune to whom it was specially attached. It took charge of his tent and baggage, saw that the former was properly pitched upon ground duly levelled all round, and protected the latter from damage or plunder. It also furnished two guards (**φυλακεῖα**) of four men each, who kept watch, some in front of the tent and some behind, among the horses (35, §§ 5, 7). We may remark in passing, that four was the regular number for a Roman guard (**φυλακεῖον**): of these one always acted as sentinel, while the others enjoyed a certain degree of repose, ready, however, to start up at the first alarm. Compare the Acts of the Apostles, xii. 4, **παραδοὺς τέσσαρσι τετραδίοις στρατιωτῶν φυλάσσειν αὐτόν.**

The Triarii were exempted from those duties imposed upon the Principes and Hastati, but each maniple of the Triarii furnished daily a guard of four men to that turma of the Equites which was quartered immediately behind them, in order to watch the horses, and to take care that they did not sustain any injury from getting entangled with their halters and heel ropes, or break loose and cause confusion and mischief (33, §§ 10–12). How necessary this was may be seen from the panic caused by such an occurrence in the German war (Tac. *Ann.* i. 66).

One maniple was selected each day from the whole legionary force, to keep guard beside the tent of the general, that he might be secured alike from open danger and hidden treachery; this honourable task being devolved upon every maniple in rotation (33, § 12). Three sentinels were usually posted at the tents of the quaestor, and two at those of the legati; and by night sentinels kept watch at every maniple, being chosen out of the maniple which they guarded (35, §§ 2–4).

The Velites, as we have seen, besides furnishing men for the outlying pickets (*stationes*), also mounted guard by day and by night along the whole extent of the vallum; and to them also in bodies of ten were committed the charge of the gates (35, § 5).

Excubiae, *excubias agere*, *excubare* are the general terms used with reference to mounting guard, whether by night or by day, but usually by day (Isid. *Orig.* ix. 3, 42). The day watches were probably changed twice a day (Liv. xliv. 33). *Vigiliae*, *vigilias agere*, *vigilare* are restricted to night duty. *Excubiae* and *Vigiliae* frequently denote not only the service itself, but also the individuals who performed it. *Stationes* is used specially to denote the advanced posts thrown forward in front of the gates, *Custodes* or *Custodiae* the parties who watched the gates themselves, *Praesidia* the sentinels on the ramparts; but all these words are employed in many other significations also.

Going the Rounds (ἐφοδεία).—In order to ascertain the vigilance of the night sentinels (νυκτεριναὶ φυλακαί), an ingenious scheme was devised. Each guard (φυλακεῖον) consisted, as we have seen, of four men, and each of these in turn stood sentinel for one of the four watches into which the night was divided. The sentinels to whom it fell to go upon duty in the first watch, were conducted in the afternoon to the tent of the tribune by lieutenants of the maniples to which they belonged. Each of these men received from the tribune four small tokens (ξυλήφια), numbered from one to four, for the four watches, and bearing also marks indicating the legion, and maniple or century from which the guard was taken. The individual who received these tokens retained the one which answered to his own watch, and distributed the rest among his three comrades. The duty of going the rounds (*vigilias circuire s. circumire*; comp. Fest. s. v. *fraxare*) was committed to the Equites (cf. Liv. xxii. 1, § 8), and for this purpose each legion supplied daily four young men (νεανίσκοι), picked out before breakfast (πρὸ ἀρίστου) from each turma. The eight persons thus selected decided by lot in which watch they should make their rounds, two being assigned to each watch. They then repaired to the tribune, and each individual received a written order specifying the posts which he was to visit, every post being visited in each watch by one or other of the two to whom the watch belonged. They then repaired in a body to the first maniple of the Triarii, and there took up their quarters, because it was the duty of one of the centurions of that maniple to give notice of the commencement of each watch by a trumpet blast. At the appointed time each eques, accompanied by some friends, who acted as witnesses, visited all the posts named in his written order, and from each sentinel whom he found on the alert he received one of the tokens described above; but if the sentinel was asleep or absent, then the eques of the rounds called upon his companions to witness the fact, and departed. The same process was followed by all the others, and on the following morning the officers of the rounds repaired to the tent of the tribune and delivered up the tokens. If the number of these was found to be complete, then all was well; but if any one was wanting, then it could be at once ascertained to what guard and to what watch the missing token belonged. The centurion of the company was ordered to bring forward the men implicated, and they were confronted with the officer of the rounds. If the latter could prove by means of his witnesses, that he had actually visited the post in question, and found the sentinel asleep or absent, then the guilt of the sentinel could not be a matter of doubt; but if the officer failed to establish this, then the blame fell upon himself, and in either case the culprit was forthwith made over to a court-martial, and if convicted suffered the fearful punishment of ξυλοκοπία [FUSTUARIUM]; and accordingly the guards were hardly ever neglected (35, § 8—37, § 6). Sometimes we find centurions (Tac. *Hist.* ii. 29), tribunes (Liv. xxviii. 24, § 8), and even the general-in-chief (Sall. *Jug.* 45), represented as going the rounds; but under ordinary circumstances the duty was performed as we have described.

Watchword.—The watchword for the night was not communicated verbally, but by means of a small rectangular tablet of wood (πλατεῖον ἐπιγεγραμμένον—*tessera*—to be carefully distinguished from the ξυλήφιον of the last paragraph, though Polybius applies the same term to both), upon which it was written. One man was chosen out of each of those maniples and turmae which were quartered at that extremity of the lines most remote from the Principia. Each of these individuals (*tesserarius*) repaired towards sunset to the tent of the tribune, and received from him a *tessera*, on which the password and also a certain number or mark were inscribed. With this he returned to the maniple or turma to which he belonged, and, taking witnesses delivered it to the officer of the next adjoining maniple or turma, and he to the next until it had passed along the whole line, when it was returned by the person who received it last to the tribune. The regulation was that the whole of the tesserae should be restored before it was dark; and if any one was found wanting at the appointed time, the row to which it belonged could be at once discovered by means of the number or mark noticed above: an investigation took place at once into the cause of the delay, and punishment was inflicted upon the parties found to be in fault (34, §§ 7–12).

Not only mere passwords were circulated in this manner, but also, occasionally, general orders, as when we read in Livy, xxvii. 46, "Tessera per castra ab Livio consule data erat, ut tribunum tribunus, centurio centurionem, eques equitem, pedes peditem acciperet." It was accordingly sometimes called *tacitum signum* (Liv. xxxix. 30, § 4; cf. Sil. It. xv. 475).

Although the tesserarius received the tessera from the tribune, it proceeded in the first instance from the commander-in-chief, as we may perceive from the passage just quoted, and many others. Under the empire it was considered the peculiar function of the prince to give the watchword to his guards. (Tac. *Ann.* i. 7; comp. Suet. *Claud.* 42, *Ner.* 9.)

Breaking up a Camp.—On the first signal being given by the trumpet, the tents were all struck and the baggage packed (*vasa colligere*), the tents of the general and the tribunes being disposed of before the others were touched. At the second signal the baggage was placed upon the beasts of burden; at the third, the whole army began to move (40, §§ 1–3).

II. Camp of Hyginus.

Another account of a camp is that contained in the treatise *De munitionibus castrorum* (edited, with a commentary, by L. Lange, Göttingen, 1848, and later by Gemoll in the Teubner series). It bears the name of no author; but is usually attributed either as by Lange to the elder Hyginus, who was a land-surveyor under Trajan, or to a younger Hyginus, who lived at all events before Constantine the Great, as by Lachmann. The following are the arguments of Marquardt (in Mommsen-Marquardt, v. 579, 580) to prove that probably the author of the treatise wrote under Sept. Severus.

1. In the camp described there is no legionary cavalry. Now such certainly existed in Hadrian's time, but after that gradually disappeared, faint traces indeed being found up to 240 A.D. (*C. I. L.* iii. 5942).

2. Among the *nationes* mentioned in the camp (§ 29) are Palmyreni. Now under Caracalla (211–217) Palmyra was a *colonia iuris Italici* (Dig. 50, 15, 1, 5).

3. The mention of camels (§ 29) shows that probably the author had an Eastern expedition in his mind's eye.

4. The reading "domine Trajane," § 45, is a conjecture. The Arcerianus reads "domine frater" (for this phrase cf. *Anth. Pal.* ii. 293, ed. Jacobs).

Passing, then, from the time of Polybius over a space of about 350 years, we find ourselves amidst an order of things altogether new. The name *Legiones* still remains, but all the ancient divisions, with the exception of the *Centuriae*, have disappeared. The distribution of the soldiers into *Velites*, *Hastati*, *Principes*, and *Triarii* did not endure more than half a century after the era of Polybius; the organization by maniples was about the same period in a great measure superseded by the cohorts, and the cavalry were detached from the infantry and formed independent corps. In like manner the *Socii*, after the admission of the Italian states to the Roman franchise, ceased to form a separate class, and their place is now occupied by a motley crew of foreigners and barbarians serving in bands, designated by strange titles. We are reminded also that the republican form of government had given way to the dominion of a single individual by the appearance of a multitude of household troops and imperial body-guards, distinguished by various appellations, and invested with peculiar privileges. A complete Roman army did not now consist of *Romanae Legiones cum Sociis*, or of *Legiones cum Sociis et Auxiliis*, but of *Legiones cum Supplementis*, the term *Supplementa* including the whole of the various denominations alluded to above. In what follows, we shall attempt to delineate a summer camp (*castra aestivalia*), intended to contain three legions, with their supplements—a force which, in the time of Hyginus, corresponded to the regular consular army of the sixth and seventh centuries of the city. It is but right, however, to call attention to the fact, that we do not here tread upon ground so firm as when Polybius was our guide. The text of Hyginus presents many difficulties and many corruptions; and there are not a few passages in which we are thrown too much upon conjecture. This, however, be it understood, applies almost exclusively to the minute details, for the general outline of the whole is clear and well ascertained. The plan sketched below is taken entirely from Lange, and the proportions of the different parts are carefully preserved. Omitting in this case the geometrical construction, we proceed at once to explain the figure.

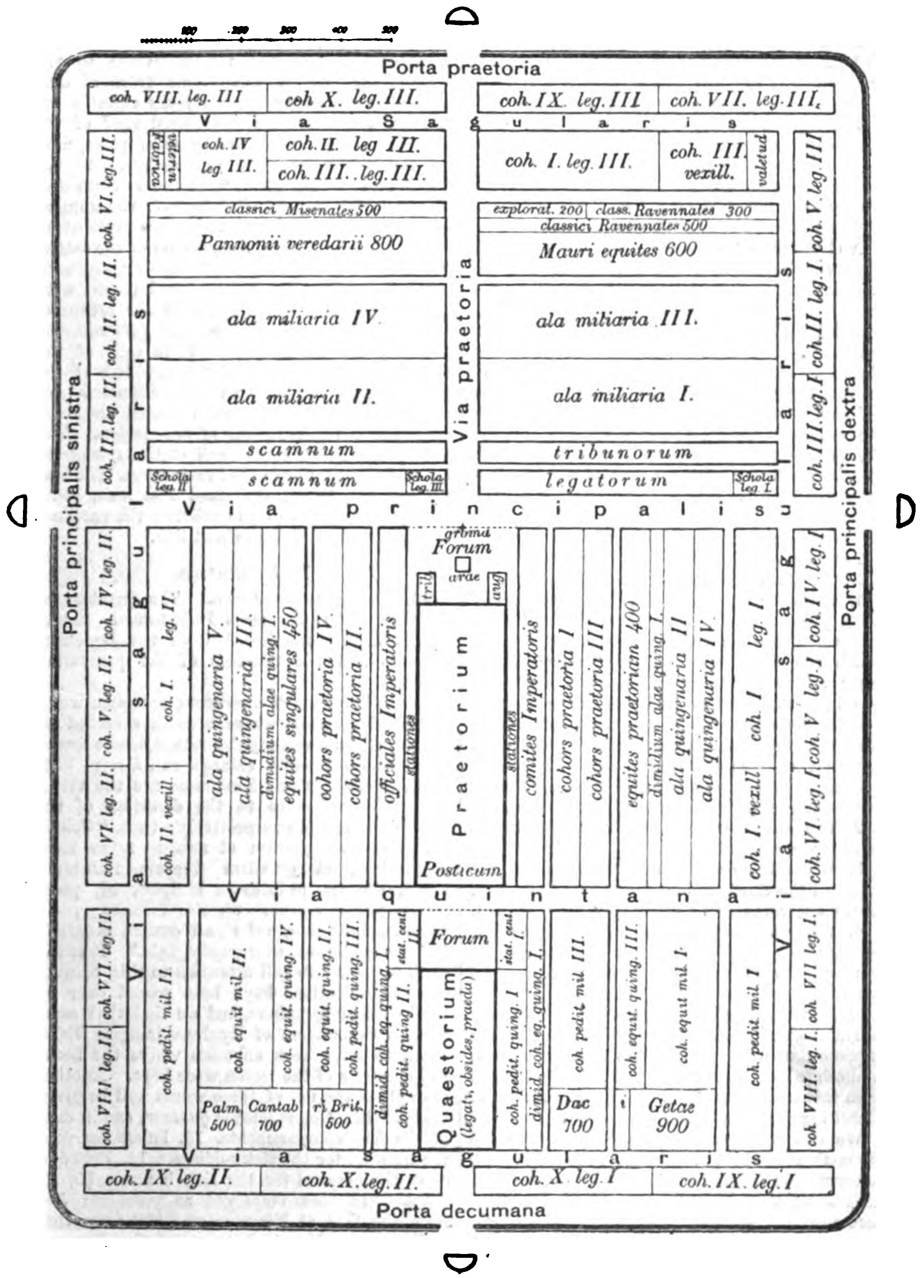
The point from which the whole of the measurements proceeded is marked with a small cross, and was called *Groma*, that being the name of an instrument employed by surveyors, analogous, in its uses at least, to the modern cross staff, plane table and level.

The general form of the inclosure was an oblong, the two longer sides being at equal distances from the Groma, rounded off at the angles (*angulos castrorum circinare oportet*), 2320 feet in length by 1620 feet in breadth, the general rule being that the length should exceed the breadth by one-third (*castra in quantum fieri potuerit tertiata esse debebunt*); when larger, it was called *Castra Classica*, because, says Hyginus, the ordinary *buccinum* or bugle could not be heard distinctly from one extremity to the other (Hyg. § 21).

The Groma stood in the middle of the principal street (*Via Principalis*), which was sixty feet wide, extending right across the camp, with the two *Portae Principales* at its extremities. The two remaining gates, which, like the former, retained their ancient names, were the *Porta Praetoria*, which was nearest to the enemy (*porta praetoria semper hostem spectare debet*), and the *Porta Decumana*, and these were placed in the centre of the two shorter sides of the oblong. If we may judge from the remains of the gates we find in the stations of the Roman Wall in the North of England, the gates were double ones, the leaves of which probably consisted of wood strengthened with iron plates. The portals seem to have been covered with arches of stone, and had guard-chambers on each side. (See, for example, Dr. Bruce's account of the west gate at Borcovicus (Housesteads) in *The Roman Wall*, p. 182.) Immediately behind the Groma, a rectangular space, 720 feet long by 180 broad, was set apart for the emperor or commander-in-chief, and, as in the consular camp, termed the *Praetorium*. Immediately behind the Praetorium—that is to say, at the extremity most distant from the Groma—a street called the *Via Quintana*, 40 feet wide, extended across the camp parallel to the Via Principalis (Hyg. § 17). When the camp exceeded the ordinary dimensions, then two additional gates were formed at the extremities of the Via Quintana, the breadth of which was in that case increased to 50 feet.

It will be seen at a glance that the camp was

(Fig. 3.)



Plan of a Roman camp in later times.

divided into three segments by the Via Principalis and the Via Quintana. Each of these segments had a name. The whole of the middle segment, lying to the right and the left of the Praetorium, formed the *Latera Praetorii* (§ 4). The segment included between the Via Principalis and that side of the camp in which the Porta Praetoria stood formed the *Praetentura* (§ 14). The segment included between the Via Quintana and that side of the camp in which the *Porta Decumana* stood formed the *Retentura* (§ 17).

The legiones being the most trustworthy of the troops in the provinces, were quartered by cohorts next to the rampart all round the camp, encircling completely with their lines the masses of foreigners, who, together with the imperial guards, formed the supplementa.

A clear space of 60 feet (*intervallum*) was left between the tents of the legionaries and the ramparts, and they were separated from the quarters of the other troops, whom they surrounded, by a street called the *Via Sagularis*, which ran completely round the camp, so that the whole of the legionaries, with the exception of the first cohort in each legion, and three ordinary cohorts for whom there is not room in the outer ring, were bounded on one side by the intervallum and on the other by the *Via Sagularis.* The remaining streets not particularly specified were comprehended under the general name *Viae Vicinariae* s. *Vicinales*, and their breadth was 20 feet (§ 37).

The defences of a camp might be fourfold:—
1. *Fossa.* 2. *Vallum.* 3. *Cervoli.* 4. *Arma.*

1. The *Fossa* might be of two kinds: *a.* The *Fossa fastigata*, with both sides sloping, so as to form a wedge; or, *b.* the *Fossa Punica*, of which the outer side was perpendicular, the inner side sloping, as in the fossa fastigata. The breadth in either case was to be at least 5 feet, the depth 3 feet. Outside of each gate a ditch was dug extending on both sides somewhat beyond the gate: this, on account of its shortness, was called *Titulus*, and in front of the titulus was a small semicircular redoubt (*clavicula*).

2. The *Vallum* was formed of earth and turf, or of stone, 6 feet in height, 8 feet broad.

3. When the nature of the ground did not admit of the construction of a sufficient vallum, then a chevaux de frise (*cervoli*) was substituted.

4. When neither a Vallum nor Cervoli could be employed, then the camp was surrounded by a ring of armed men four deep, numerous sentries were posted in each line, and the cavalry patrolled in turn in every direction.

The words of Hyginus would lead us to suppose that when no danger was apprehended, a ditch alone was considered sufficient; and even this was excavated merely for the sake of exercising the men (*causa disciplinae*).

We can now proceed to point out in what manner the three segments were occupied, referring to the numbers on the figure, it being understood that, as before, we shall not enter here into any discussions regarding the origin and character of the different battalions named, all information upon such matters being given in the article EXERCITUS.

A. *Praetorium et Latera Praetorii.*

1. *Praetorium.* 2. *Arae*, on which public sacrifice was offered. The position assigned to them is conjectural; but they were, at all events, in the immediate vicinity of this spot. 3. *Auguratorium*, in which the Imperator took the auspices—the altars were perhaps erected in front of this place; at least, such was the case sometimes. (See Tac. *Ann.* xv. 30, where the form *Augurale* is employed.) 4. *Tribunal*, the elevated platform from which addresses were delivered to the troops. Close to the praetorium was a guardhouse (*stationi dari oportet secundum praetorium pedes viginti*). 5. *Comites Imperatoris*, the personal staff of the Imperator, among whom the chief place, next to the Via Principalis, was assigned to the Praefectus Praetorio. 6. *Equites singulares Imperatoris et Equites Praetoriani:* the number of these was variable; but Hyginus gives as an average 450 of the former and 400 of the latter. 7. *Cohortes praetoriae quatuor. Primipilares. Evocati.. Officiales.* These picked troops were allowed twice as much space as the troops of the line (§§ 3, 5, 6). 8. *Alae quingenariae:* probably five in number. 9. In each of the spaces on the extreme right and left of the praetorium, bordering on the Via Sagularis (*per rigorem viae sagularis*), were placed the first cohort and the *vexillarii* of one legion. The first cohort and the *vexillarii* of the remaining legion will be found in the Praetentura. The first cohort of a legion contained 960 men, being twice as numerous as the others; the *vexillarii* of a legion amounted to about 500.

B. *Praetentura.*

10. *Scamnum Legatorum.* The quarters of the legati. 11. *Scamnum Tribunorum.* Immediately behind the legati were the legionary tribunes and the tribunes of the praetorian cohorts.

In the language of surveyors, *scamnum* was a rectangular figure, whose breadth exceeded its length, *striga* a rectangular figure, whose length exceeded its breadth (Marquardt, *l. c.* p. 394, n. 3). So, *Signa* and *Tabulinum* are the terms used with reference to the direction of the length and breadth respectively: thus, "Cohors prima causa signorum et aquilae intra viam sagulariam, et quoniam duplum numerum habet, duplam pedaturam accipiet, ut, puta, *signis pedes centum viginti, tabulino pedes trecentos sexaginta, vel signis centum octoginta tabulino pedes ducentos quadraginta.*" It is the more necessary to call attention to this, because these significations have been passed over by the best lexicographers, and we find that some modern expounders of Hyginus imagine *Tabulinum* to have been an office where the books 207 and accounts of the legion were kept. Another example of the use of these words will be given below. 12. *Alae milliariae quatuor*, one in each of the four compartments. 13. *Valetudinarium*, the hospital for the sick soldiers. 14. *Veterinarium*, the hospital for the sick horses. 15, 16. *Classici*, marines employed as pioneers: 500 from the fleet at Misenum and 800 from that at Ravenna. *Mauri equites sexcenti. Pannonii veredarii octingenti.* These two bodies of light cavalry were quartered near the classici, because, when the latter were sent in advance to clear the way, they were guarded by the former. 17. *Exploratores*, 200 in number. General Roy in his plan places them in these two small compartments, but it appears more probable from the words of Hyginus, that they were quartered all together on the side next to the first cohort of the third legion. 18. The first cohort of the third legion; 19, its *vexillarii*.

On the opposite side of the Via Praetoria, three legionary cohorts, for whom there was not sufficient space outside of the Via Sagularis.

In the Praetentura stood also the *Fabrica* or workshop of the carpenters and armourers, erected at a distance from the Valetudinarium, so that the noise might not disturb the patients.

Within the scamnum of the legati were the *Scholae* of the first cohorts, the places apparently where the superior officers of the legions assembled in order to receive the general orders of the day.

C. *Retentura.*

20. *Quaestorium.* This space corresponded in name only with the Quaestorium of the Polybian camp, for it was no longer assigned to a quaestor (*Quaestorium dicitur quod aliquando ibi quaestores pedaturam acceperint*). It was occupied partly by prisoners of rank, hostages, and plunder; and here perhaps the Praefectus Castrorum may have been quartered, unless we are to look for him among the *Comites Imperatoris*.

21. *Statorum centuriae duae*, who guarded the rear of the praetorium, and always kept close to the person of the Imperator. These, like the praetorians, had double space assigned to them.

22. *Cohortes equitatae milliariae duae. Cohortes equitatae quingenariae quatuor.*

23. *Cohortes peditatae milliariae tres. Cohortes peditatae quingenariae tres.*

24. *Nationes.* Barbarian troops. *Palmyreni quingenti. Gaetae nongenti. Daci septingenti. Britones quingenti. Cantabri septingenti.* Among these we find enumerated *Sumactares*, a word which no one has succeeded in explaining, but it is in all probability a corrupt form.

Camels with their riders (*cameli cum suis epibatis*) were frequently included among the constituents of an army, being used both in offensive operations and also in carrying plunder.

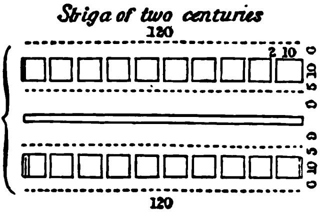
Three points strike us forcibly when we compare the camp of Hyginus with that of Polybius: first, the flimsy character of the fortifications, which must be attributed to the disinclination felt by the soldiers to perform regularly and steadily the same amount of labour which was cheerfully executed by soldiers of the republic; secondly, the desire everywhere visible to economise space, and compress everything within the narrowest possible limits; and, thirdly, the adoption of the duodecimal system of measurement in place of the decimal system, which is found in Polybius (Rudorff, *Feldmesser*, ii. 291). Although the numbers of an army, such as we have been considering above, cannot be determined with absolute precision, they must, on the lowest computation, have exceeded 40,000 men, and these were crowded together into less than one-half the space which they would have occupied according to the ancient system, the proportion of cavalry, moreover, being much larger in the imperial force. The camp of Polybius, calculated for less than 20,000, contains upwards of four millions of square feet, while the camp of Hyginus embraces little more than three millions and seven hundred thousand.

We may conclude with a few words upon a topic entirely passed over by Polybius, but on which Hyginus affords ample information in so far as the usages of his own day are concerned—the number and arrangement of the tents.

A double row of tents (*papiliones*) facing each other, with a space between for piling the arms of the soldiers and for receiving the beasts of burden and the baggage, was termed *Striga*; a single row, with a corresponding space in front, *Hemistrigium*. The normal breadth of a *Striga* was 60 feet, of a *Hemistrigium* 30 feet, made up as follows:—10 feet were allowed for the depth of each tent, 6 feet for a passage behind the tent, 5 feet for the arms piled in front of the tent, 9 feet for the *jumenta* and baggage; total 30 feet for the hemistrigium, which doubled for the striga gives 60, the space between the rows being 28 feet. The length of the striga or hemistrigium varied according to circumstances.

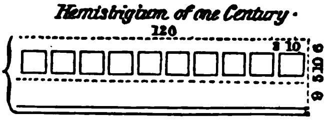
A full legionary century (*plena centuria*), when Hyginus wrote, consisted of 80 men, who occupied 10 papiliones. The length allowed for each papilio was 12 feet, 10 feet for the papilio itself, and 2 feet for lateral passages (*incrementum tensurae*), and thus the length of the line along which the papiliones of a century stretched was 10 × 12 = 120 feet. Out of this the centurion had a space allotted to him equal to that required for 2 tents, so that the privates of the century occupied 8 tents only; that is, they were quartered at the rate of 10 men to each tent. The men in each tent formed a *contubernium* (σύνταξις, Joseph. *B. J.* iii. 5, 3). But since 16 men or 4 guards (τετράδια) in each century were always out upon duty, there were never more than 8 men actually in a tent at the same time.

(Fig. 4.)



Since a striga 120 feet in length and 60 feet in breadth, containing 7200 square feet, was allotted to 2 centuries, and since an ordinary legionary cohort contained 6 centuries, it follows that the space required for each cohort (*pedatura cohortis*) of 480 men was 21,600 square feet.

(Fig. 5.)

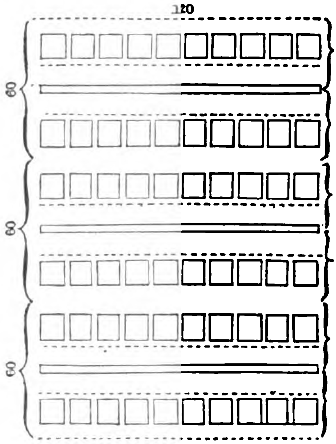


For the cavalry a hemistrigium was assigned to 40 men, *i.e.* two dragoons had as much space as five foot-soldiers. Accordingly an *ala quingenaria* would require 12½, and an *ala milliaria* 25, hemistrigia. A *cohors equestris quingenaria*, which contained 380 foot and 120 horse, would require as much space as 680 foot, *i.e.* nearly 7 hemistrigia, and a *cohors equestris milliaria* double that amount, *i.e.* 14 hemistrigia.

The troops were usually quartered in cohorts, and these might be variously disposed, it being always desirable that a whole century should always be ranged in an unbroken line.

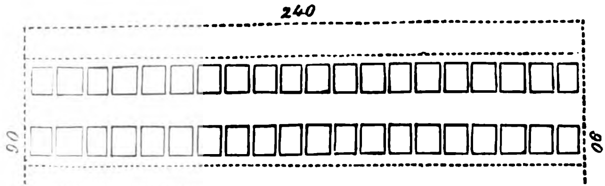
If the striga was equal to one century in length, then the cohort would occupy three strigae in breadth; that is, a space 120 feet long by 180 broad = 21,600 square feet. See fig. 6.

(Fig. 6.)



If the striga was equal in length to two centuries, then the cohort would occupy one whole striga and a hemistrigium; that is, a space 240 feet long by 90 feet broad = 21,600 square feet. See fig. 7.

(Fig. 7.)

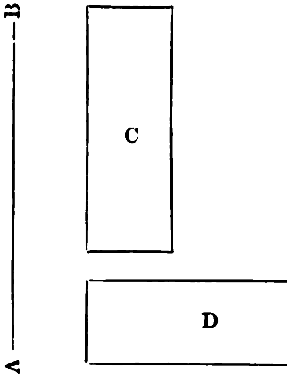


If the striga was equal in length to three centuries, then the cohort would occupy one striga only, or a space 360 feet long by 60 feet broad = 21,600 square feet. See fig. 8 (on next page).

It is to be observed that in the plan of the camp given above, the legionary cohorts on the longer sides are in strigae of 240 feet those on the shorter sides in strigae o in length.

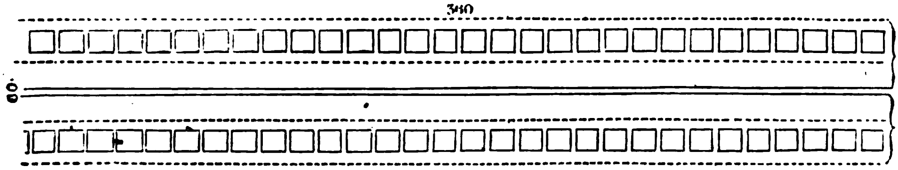
When the number of legions in an greater in proportion to the supplem in the array which we have reviewe order that they might still be ranged the Via Sagularis, the strigae prese breadth to the vallum instead of thei or, to use the technical phrase, the len in the former case had been assign *Signa* was now given to the *Tabulinu* *legiones plures acceperimus et supplem ciora ut necessarium sit cohortes cir crebrius ponere convertemus pedatur* FUERAT SIGNIS TABULINO DABIMUS).

If A B be the line of the vallum, C sent the position of the cohort in the D in the other.



Josephus, in his account of the Je takes special notice of the Roman enca and although he does not enter int details, his observations, with which conclude this article, form a useful s to Hyginus. It is evident from the artizans for whom workshops are from the towers with which the v strengthened, and from the precaution fire to everything left behind, that of the historian r to Castra Sta begins by remark iii. 5) that th when invading a country never engagement u have fortified a πρὶν ἅπτονται τειχίσαι στρ which, in for square (διαμετ παρεμβολὴ τε with four gate each side. He if the ground is it is levelled. T by which it is surrounded exhibits t ance of a wall furnished with equal distances, and in the space the towers is placed the artillery immediate service (τούς τε ὀξυβελεῖς, πέλτας, καὶ λιθοβόλα, καὶ πᾶν *ὄργανον τιθέασιν, ἅπαντα πρὸς τὰς βολὰς ἕτοιμα*). The camp is divided conveniently by streets; in the middle are the tents of the officers, and in the very centre of all the praetorium (*τὸ στρατήγιον*); there is also a forum (*ἀγορά τις ἀποδείκνυται*), and a place for artificers (*χειροτέχναις χωρίον*), of whom a great number follow the army with building tools, and seats for the tribunes and centurions (*θωκοί τε λοχαγοῖς καὶ ταξιάρχοις*), where they decide any disputes which may arise. When necessary (*εἰ δὲ ἐπείγοι*) a ditch is dug all round, four cubits deep and four cubits broad.

(Fig. 8.)



At day-dawn (*ὑπὸ δὲ τὴν ἕω*) all the soldiers repair to the tents of their respective centurions (*ἐπὶ τοὺς ἑκατοντάρχας*) and salute them: the centurions repair to the tribunes (*πρὸς τοὺς χιλιάρχους*), along with whom all the centurions (*ταξίαρχοι*) repair to the commander-in-chief, from whom they receive the watchword (*σημεῖον*) and the general orders of the day, to be conveyed by them to their respective divisions.

When a camp is broken up, at the first blast of the trumpet the soldiers strike the tents and pack up the utensils; at the second they load the mules and other beasts of burden, set fire to everything which could prove serviceable to an enemy, and stand like coursers ready to start forward on a race; the third gives the last warning that all things being now prepared every man must be in his place. Then the herald, standing at the right hand of the general, demands thrice if they are ready for war, to which they all respond with loud and repeated cheers that they are ready, and for the most part, being filled with martial ardour, anticipate the question, and raise their right hands on high with a shout. (*B. J.* iii. 5, §§ 1–4.)

Besides Polybius and Hyginus, the chief works on the subject are Mommsen-Marquardt, v. 390–408 (where all the important literature on the subject is collected) and 578–584; Masquelez in Daremberg and Saglio, *Dict. des Antiquités*, s. v. *Castra*; Nissen, *Das Templum*; Lange, L., *Historia mutationum rei militaris Romanorum.* [W. R.] [L. C. P.]

CASTRENSES, a name applied under the early empire to the *ministri* of the emperor, whose residence was often spoken of as *castra'* or *praetorium*, in reference to his position as commander-in-chief. The whole of his servants formed the *familia castrensis*, and were under the orders of a *procurator castrensis*, an officer mentioned in inscriptions between the times of Claudius and of Commodus: *e.g.* Wilmanns, *Exemp. Inscr. Lat.* No. 1243. [A. S. W.]

CATAGO'GIA (*καταγώγια*). [ANAGOGIA.]

CATAGR'APHA. [PICTURA.]

CATAL'OGUS (*κατάλογος*), the catalogue of those persons in Athens who were liable to regular military service. At Athens, those persons alone who possessed a certain amount of property were allowed to serve in the regular infantry, whilst the lower class, the thetes, had not this privilege. Thus the former are called *οἱ ἐκ καταλόγου στρατεύοντες*, and the latter *οἱ ἔξω τοῦ καταλόγου.* (Xen. *Hell.* ii. 3, § 20.) Those who were exempted by their age from military service are called by Demosthenes (*de Synt.* p. 167, § 4) *οἱ ὑπὲρ τὸν κατάλογον.* It appears to have been the duty of the generals (*στρατηγοί*) to make out the list of persons liable to service [ASTRATEIAS GRAPHÉ], in which duty they were probably assisted by the demarchi, and sometimes by the *βουλευταί.* (Dem. *c. Polycl.* p. 1208, § 6.) [W. S.]

CATALY'SEOS TOU DEMOU GRAPHE' (*καταλύσεως τοῦ δήμου γραφή*) was an action brought against those persons who had altered, or attempted to alter, the democratical form of government at Athens; and was closely connected with, and scarcely distinguishable from, the *προδοσίας γραφή* (*ἐπὶ προδοσίᾳ τῆς πολέως, ἢ ἐπὶ καταλύσει τοῦ δήμου συνιών*, Dem. *c. Timocr.* p. 745, § 144). The form of proceeding was the same in both cases; namely, by *εἰσαγγελία.* In the case of *καταλύσεως τοῦ δήμου*, the punishment was death; the property of the offender was confiscated to the state, and a tenth part dedicated to Athena. A person was also liable to this action who held any public office in the state after the democracy had been subverted (Psephisma of Demophantus *ap.* Andoc. *de Myst.* §§ 96–98). The orator Lycurgus argues reasonably enough that a conspiracy to subvert the constitution must be punished if it fails, for if it succeeds the criminal will be out of the reach of punishment (*c. Leocr.* §§ 124–126). But if his statement of the law may be relied on, too much scope is allowed for vague suspicion by the words *ἥν τις αἴσθηται μόνον μέλλοντας αὐτοὺς τούτων τι ποιεῖν*: and his argument in § 147, that Leocrates by his flight had become liable, among other penalties, to an action *καταλύσεως τοῦ δήμου*, is an instance of constructive treason pushed to its extremest limits. According to Andocides and Lycurgus, the decree of Demophantus provided not only that the offender might be slain with impunity, but that all Athenians should bind themselves by the most solemn oaths to do their part in killing him. [W. S.] [W. W.]

CATAPHRACTI (*κατάφρακτοι*), a kind of mail-clad cavalry found principally among the Eastern nations (Justin. xli. 2; Lampr. *Alex. Sev.* 56, 5) and the Sarmatians (Tac. *Hist.* i. 79). For the description of their armour, itself called *cataphractes* or *cataphracta*, the principal passage is Heliod. *Aeth.* ix. 15, of the Persians at the siege of Syene. Moderately thin pieces of brass or iron a span square were so fastened together to some soft substance on the inside that the lower end of each was above the upper end of the plate below it; and sideways the arrangement was similar. This effected a kind of scale-armour (*φολιδωτός*), and the authorities agree that it was singularly flexible (Amm. Marc. xvi. 10, 8; Suidas, *s. v.* *θώραξ*). The armour also had sleeves (*χειριδωτός*); in fact, the whole body was covered except that part of the thighs which grips the horse. The helmet was close-fitting, all down the neck, the eyes alone being exposed. The soldier had to be lifted on his horse. He was armed with a long spear, which was supported by a chain attached to the horse's neck, and at the end by a fastening attached to the horse's thigh, so as to get the full force of the horse's weight into the spear-thrust. No doubt, however, there were diversities in the exact nature of the armour in different times and places. In the picture of the cataphractus on Trajan's Column, the plates are fastened diamond-wise, and the rider has his whole face and neck uncovered. The horse, too, was all covered with armour, except just that part which was gripped by the legs of the rider; even the eyes were covered by discs pierced with a few small holes. When charging, the cataphractus appeared, we are told (Heliod. *l. c.*; Amm. *l. c.*), like a bronze statue in motion (*σιδηροῦς τις ἀνὴρ φαινόμενος ἢ καὶ σφυρήλατος ἀνδριὰς κινούμενος*).

Cataphractus. (From Column of Trajan.)

They were called *clibanarii* by the Persians (Lampr. *l.c.*; Amm. *l. c.*). John of Lydia (158, 25) has this note: **Κλιβανάριοι ὁλοσίδηροι· κηλίβανα γὰρ οἱ Ρωμαῖοι τὰ σιδηρᾶ καλύμματα καλοῦσιν ἀντὶ τοῦ κηλάμινα** (i.e. *clibanarius* is derived from *celo* through *celamen*, *celibanum*). He thus holds it to be a Roman word; but on the face of it absurdly. Salmasius considers it not to be a Persian word (in Lampr. *l. c.*), a view justly objected to by Favre in his new edition of Ducange. For it is probably either a Persian or Syrian word, just as *cruppellarii* (Tac. *Ann.* iii. 43), who were a mail-clad infantry among the Gauls, is probably a Celtic word. (See Furneaux *ad loc.*)

We first hear of such mail-clad cavalry in the army of the elder Cyrus (Xen. *Cyr.* viii. 8, 22); later we know that they were in the army of Antiochus Epiphanes (Polyb. xxxi. 3, 9; Liv. xxxv. 48, 3). In the Roman armies the first notice we have of them is on Trajan's Column. (See Fröhner, *La Colonne Trajane*, plates 55, 62, 91.) From the time of Antoninus Pius they
became frequent. (Orell. 804, 3383; *C. I.*
99; Not. Dig. Seeck's *Index*, pp. 316, 317,
Catafractarii and *Clibanarii.*) [L. C

CATAPIRA'TES (-er or -a; *κατα*
τηρίη, Herod. ii. 5, 28), a sounding lea
consisted of a small piece of unwrought
fastened to twisted cord. The lead was c
with grease, so that specimens of the k
bottom might attach to it. See Lucilius,
(p. 16, ed. L. Müller): "Hunc catapirate
eodem deferat unctum Plumbi pauxillum
linique mataxam." The unit of measur
in soundings was a fathom (*ὄργυια*): see
ii. 5; *Act. Apost.* xxvii. 28. "To soun
βολίζειν; and by *βολὶς* in the sense of a

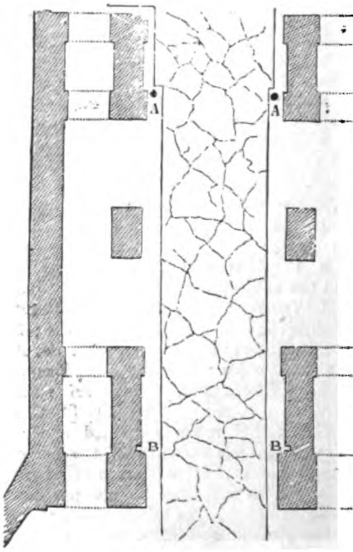
CATAPULTA. [TORMENTUM.]

CATARACTA (*καταρράκτης*). 1. A
cullis, so called because it fell with great
and a loud noise. This contrivance for gu
against the surprise of a fortified town
use in Italy in very early times (Dion. Ha
67); and the Romans had no occasion to b
the thing itself, as they borrowed its na
classical Latin, from the Greeks. Vegeti
Re Mil. iv. 4) speaks of the cataracta
invention of great antiquity; and som
like it is found in very primitive buil
such as the lake-dwellings of the Pae



Plan of a gate at Pompeii.

(*καταπακτὴ* or perhaps *κατεπακτὴ πύλη*,
v. 16, with Stein's note). As early proba
the 4th century B.C. the simple portcull
been improved in order to obviate the
by the enemy of an obstruction in the
its groove (Aen. Tact. *Poliorc.* 39); the r
which it was raised or lowered were

ἀνασπαστήρια and χαλαστήρια (App. *B. C.* iv. 78). Vegetius (*l. c.*) says that it was hung outside the regular gate: and this statement is confirmed by a narrative in Livy (xxvii. 28) as well as by existing remains. In the above plan of the principal entrance to Pompeii, now called the Porta d'Ercolano, there are two sideways for foot-passengers, and a road between them, fourteen feet wide, for carriages. The gates were placed at A, A, turning on pivots [CARDO], as is proved by the holes in the pavement, which still remain. This end of the road was nearest to the town; in the opposite direction, the road led into the country. The portcullis was at B, B, and was made to slide in grooves cut in the walls. The sideways, secured with smaller gates, were roofed in, whereas the portion of the main road between the gates (A, A) and the portcullis (B, B) was open to the sky. When therefore an attack was made, the assailants were either excluded by the portcullis; or, if they forced their way into the barbican and attempted to break down the gates, the citizens, surrounding and attacking them from above, had the greatest possible facilities for impeding and destroying them. (Liv., App., Veget., *ll. cc.*)

2. A boarding bridge, something like the *corvus* of Duilius [CORVUS], so called because it descended like a portcullis (App. *B. C.* v. 82).

3. A sluice, or perhaps rather a weir with hatches or sluices in it for regulating the height of water in a running stream (Plin. *Ep.* x. 69; Rutil. Numat. *de Reditu suo*, i. 481, "Tum cataractarum claustris excluditur humor;" cf. Amm. Marc. xxiv. 1, 11; 3, 10; 6, 2: Heliod. *Aeth.* ix. 8). [J. Y.] [W. W.]

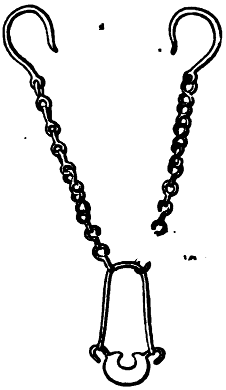
KATASKOPES GRAPHE' (*κατασκοπῆς γραφή*), an action brought against spies at Athens. If a spy was discovered, he was placed on the rack, in order to obtain information from him, and afterwards put to death. (Antiphanes, *ap.* Ath. ii. p. 66 d; Dem. *de Cor.* p. 272, § 137; Aeschin. *c. Ctesiph.* § 224; Plut. *Vit. dec. Orat.* p. 848 a.) It appears that foreigners only were liable to this action; since citizens who were guilty of this crime were accused of *προδοσία*. (Meier, *Att. Process*, p. 365.) [W. S.] [W. W.]

CATASTA. [SERVUS.]

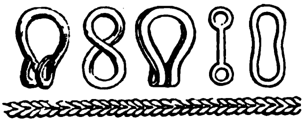
CATEIA, a missile used in war by the Germans, Gauls, and some of the Italian nations, ascribed also to Persians and other Orientals (Verg. *Aen.* vii. 741; Val. Flacc. vi. 83; Aul. Gell. x. 25), and supposed to resemble the *aclys* (Serv. *l. c.*; Isid. *Orig.* xviii. 7). Now the *aclis* or *aclys* is said by Servius to have been obsolete in his time, and therefore imperfectly known; but it is described (he adds) as a club a foot and a half long, studded with points, and furnished with a thong, so that it can be recovered by the thrower (ad *Aen.* vii. 730, where Virgil himself mentions the thong, *flagellum*). As far as the two can be distinguished, the *aclys* seems to have been more of a club, the *cateia* more of a spear. Papias (*s. v.*) makes it a Persian word: later writers consider it Celtic, which, as Conington observes (ad *Aen.* l. c.), would agree with Virgil's *Teutonico ritu*, the Celtae and Teutones being often confounded. The weapon was also called *teutona* from the name of the people (Isid. *l. c.*; Aelfric, *Gloss. Saxon.* ap. Lersch). The *francisca* or *francisque*, the peculiar weapon of the Franks, is described as a two-edged axe used as a missile and carried in the belt: a modification perhaps of the *aclys* rather than the *cateia*. Cf. Lersch. *Antiq. Verg.* (Bonn, 1843), § 40, *de cateia et aclyde.* [J. Y.] [W. W.]

CATELLA. [CATENA.]

CATE'NA, dim. CATELLA (ἅλυσις, dim. ἁλύσιον, ἁλυσίδιον), a chain. The true chain in which the metal links are joined together by soldering can be traced as far back as the 8th century B.C.; and beyond that, relics of the Bronze age show rings interlaced by very laborious processes without the aid of solder. This is seen especially in the bronze bits of primitive antiquity which have been discovered in Italy [FRENUM]. In the classical period the art of chain-making was quite as well understood as in modern times, and the variety of patterns was as great. The specimens of ancient chains which we have in bronze lamps, in scales [LIBRA], and in ornaments for the person, especially necklaces [MONILE], are equally elegant and ingenious. Besides a plain circle or oval, the separate link is often shaped like the figure 8, or as in the accompanying cut from a steelyard in the British Museum, a figure 8 with one of its loops turned at right angles to the other. We find also a bar with a circle at each end, and other forms, some of which are here shown. The links are also found so closely entwined that the chain resembles plaited wire or thread, like the gold chains now manufactured at Venice. This is represented in the lower figure of the woodcut.



Catena, chain. (British Museum.)



Catenae, chain links. (British Museum.)

The chains which were of superior value, either on account of the material or of the workmanship, are commonly called *catellae*, the diminutive expressing their fineness and delicacy, as well as the smallness of their size. These ornamental chains were sometimes given as rewards to the soldiers (Liv. xxxiv. 31), but they were commonly worn by women (Hor. *Ep.* i. 17, 55; Pollux, x. 167; Philippides, fragm. 32, Meineke), either on the neck (περὶ τὸν τράχηλον ἁλύσιον, Menand. fr. 252, Meineke), round the waist (Plin *H. N.* xxxiii. § 40), or over one shoulder, as in some of the pictures from Herculaneum and Pompeii. They were used to suspend pearls, or jewels set in gold, keys, lockets, and other trinkets (Petron. 67, quoted under CAPSA). [J. Y.] [W. W.]

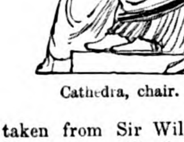
CATERVA'RII. [Gladiatores.]

KATHARMI. [Lustratio.]

CATHEDRA (**καθέδρα**), a seat; French, *chaire, chaise;* Eng. *chair:* but the term was more particularly applied to a seat with a back but no arms, whereas the *sella*, however splendid in its material or dignified in its associations, had neither. The back was usually curved or hollow, and low enough for the arm to rest upon it with ease, as in the annexed woodcut, taken from Sir William Hamilton's work on Greek vases. On the cathedra is seated a bride, who is being fanned by a female slave with a fan made of peacock's feathers: under her feet is a footstool.

Cathedra, chair. (From a Greek vase.)

There was also the cathedra longa, *chaise longue* or easy chair; and, more luxurious still, the cathedra supina or reclining chair. Then as now, they were often made of wicker-work: [*salices*] *supinarum in delicias cathedrarum aptissimae* (Plin. *H. N.* xvi. § 174). The cathedra was more used by women than by men (hence *femineae*, Mart. iii. 63, xii. 38; cf. Hor. *Sat.* i. 10, 91; Propert. v. 5, 37). It was a mark of effeminacy when a man was seen *strata* (cushioned) *positus longaque cathedra* (Juv. ix. 51). To sit on cathedrae at table was, however, less luxurious than the ordinary reclining posture, and was considered proper for boys [Arvales, p. 199 a; Cena]. The seat was not stuffed, but a cushion was commonly placed upon it; and a cover might also be thrown over the back.



Professorial chair. (Visconti.)

Another sort of cathedra was a sedan-chair, in which women were accustomed to be carried about, instead of in a lectica. The *nuda cathedra* of Juvenal (i. 65), in which the successful forger is carried *supinus*, is probably an uncurtained lectica; it is insolence rather than effeminacy which here provokes the rage of the satirist: cf. Cic. *Phil.* ii. 24, § 58, "aperta lectica mima portabatur."

The above illustration shows a p
chair (Juv. vii. 203; Mart. i. 77) fron
(*Icon. Grec.* i. pl. 35). (Compare
Sabina, vol. i. p. 35; Scheffer, *de*

of red pottery is small enough to serve
purpose). (Mommsen-Marquardt, vii.
leben], 705.) [W. S.] [

CAUPO. The nature of the business of a *caupo* is explained by Gaius (Dig. 4, 9, 5): "Caupo . . . mercedem accipit non pro custodia, sed ut viatores manere in caupona patiatur . . . et tamen custodiae nomine tenetur." Thus he lodged travellers in his house, and was answerable for the safe custody of their property while remaining there, his liability being of two distinct kinds.

1. He was answerable as on a quasi- or implied contract to take extreme care of such property: "nautae caupones stabularii quod cujusque salvum fore receperint nisi restituent in eos judicium dabo" (Dig. 4, 9, 1, pr.); he was responsible for *custodia*, and not merely for *culpa*, so that loss of or damage to such property not attributable to *damnum fatale* or *vis major* (Dig. *ib.* 3, 1) fell on his shoulders, though for unavoidable calamity—such as robbery, fire, or the like—he could not be called to account. The introduction of the praetorian action ("recepti nautarum cauponum," &c.) was due to the desire to exact a high responsibility where great confidence was placed (Dig. *ib.* 1, pr.): the civil actions on hire (*locati conducti*) or bailment (deposit) would often lie against the *caupo*, but the former was of no use unless there had been at least *culpa levis*, and the latter availed only in cases of *dolus* and *culpa lata*. But the obligation of *custodia* could be excluded by express agreement between the parties.

2. He was answerable as on a quasi-delict (as we should say, he was vicariously liable in tort) for theft of such property by his employés or slaves, or for all damage done to it by them while under his charge (*Inst.* iv. 5, 3; Dig. 47, 5; 44, 7, 5, 6), and he seems to have been similarly liable when the actual delinquent was merely another person staying in the house (Dig. 47, 5, 1, 6). The penalty in this case was double the value of the property stolen, or double the loss occasioned by damage (Dig. 47, 5, 1, 2); and here, too, the action was *in factum*, i.e. praetorian in origin (*Inst.* loc. cit.). [J. B. M.]

CAUPONA signified: 1. An inn, where travellers obtained food and lodging; in which sense it answered to the Greek words *πανδοκεῖον*, *καταγώγιον*, and *κατάλυσις*. 2. A shop, where wine and ready-dressed meat were sold; in Greek *καπηλεῖον*. The person who kept a caupona was called *caupo* or *copo*; a hostess is *copa*, rarely *caupona*.

1. *Greek Inns.* In the earliest ages of Greece, as in the East at all times and in newly settled colonies, there was no provision for the entertainment of travellers, and the duty of hospitality was universally acknowledged [HOSPITIUM]. The growth of traffic rendered inns necessary; and in later times they appear to have been very numerous. The great number of festivals which were celebrated in the different towns of Greece, besides the four great national games, to which persons flocked from all parts of the Hellenic world, must have required a considerable number of inns to accommodate strangers, not only in the places where the festivals were celebrated, but also on the roads leading to those places.

The accommodation provided was however far from luxurious; and the character both of the houses and of their landlords was very indifferent. Inns were regarded as little better than brothels: *πανδοκεῦσαι καὶ πορνοβοσκῆσαι* are joined together, Theophr. *Char.* 6; *καπηλεῖα καὶ πορνεῖα*, Poll. ix. 34; the orgies of Demetrius Poliorcetes in the Acropolis suggest to a comic poet that "he took it for an inn:"

> *ὁ τὴν ἀκρόπολιν πανδοκεῖον ὑπολαβὼν*
> *καὶ τὰς ἑταίρας εἰσαγαγὼν τῇ παρθένῳ*

(Philippid. *fr.* 25 M. *ap.* Plut. *Demetr.* 26). And besides the charges of fraud and adulteration to which they were liable in common with other *κάπηλοι* or retail dealers, the hosts were often accused of more serious crimes. Two stories told by Cicero, but taken from Greek life, both turn on murders committed by innkeepers for the sake of gain (*de Inv.* ii. 4, § 14; *de Div.* i. 27, § 57). The higher classes used these *πανδοκεῖα* as little as possible; yet in default of other accommodation the public ambassadors of Athens were sometimes constrained to lodge and even to transact diplomatic business in them (Aeschin. *de F. L.* § 97; Dem. *de F. L.* p. 390, § 158=175).

The word *καπηλεῖον* signified, as has been already remarked, a place where wine and ready-dressed provisions were sold. *Κάπηλος* signifies in general a retail trader, who sold goods in small quantities. (For the distinction between *κάπηλος* and *παλιγκάπηλος*, which are not synonymous, cf. Aristoph. *Plut.* 1156 with the scholia; pseudo-Dem. i. *Aristog.* p. 784, § 46; Dem. c. *Dionysod.* p. 1285, § 7; Büchsenschütz, *Besitz und Erwerb*, p. 455, n.). The term, however, is more particularly applied to a person, who sold ready-dressed provisions, and especially wine on draught (*ὁ κατὰ τὴν κοτύλην πωλῶν ὥσπερ οἱ νῦν λεγόμενοι κάπηλοι*, Schol. Aristoph. *l. c.*; Plat. *Gorg.* p. 518 B). When a retail dealer in other commodities is spoken of, the name of his trade is usually prefixed: thus we read of *προβατοκάπηλος* (Plut. *Pericl.* 24), *ὅπλων κάπηλος* (Aristoph. *Pax*, 1175), *ἀσπίδων κάπηλος* (*id.* 439), *βιβλιοκάπηλος*, &c. These *καπηλεῖα* were not resorted to as clubs (*λέσχαι, ἑταιρεῖαι*), or for purposes of good fellowship, but merely for sottish drinking; and hence were extremely disreputable. Isocrates tells us that in the "good old times" (*i.e.* the democracy of Solon and Cleisthenes) no respectable (*ἐπιεικὴς*) slave would have ventured to eat or drink in a *καπηλεῖον*: whereas in his own time young men of the greatest respectability (*ἐπιεικέστατοι*), driven by an absurd prejudice from the schools of philosophy and rhetoric, spent their whole time in these and similar establishments, in drinking, gambling, and debauchery (Isocr. *Areiop.* § 49; *Antid.* § 287). We are not surprised to read of the low estimation in which inn-keepers were held (Theophr. *Char.* l. c.; Plat. *Legg.* xi. pp. 918, 919). (Compare Becker-Göll, *Charikles*, ii. 1 foll.; Hermann-Blümner, *Privatalterth.* § 53, pp. 497–500.)

2. *Roman Inns.* A Roman wayside inn for the reception of travellers was called not only *caupona* but also *taberna*, *deversorium* and *taberna deversoria* (the last in Plaut. *Men.* ii. 3, 81; Varr. *R. R.* i. 2, 23). Along all the great roads of Italy there were inns, as we see from the description which Horace gives of his journey from Rome to Brundusium (1 *Sat.* v.). They were built as a speculation by neighbouring

proprietors (Varr. *l. c.*), and either let to a landlord or managed by slaves. They usually included a *stabulum* for horses and mules: hence in the Digest *caupones* and *stabularii* are more than once mentioned together (4, 9, l. 1, 5; *ib.* l. 5, pr.). Where the traffic was greatest, there might be several in the same place: to take the Appian way alone, we find the station Tres Tabernae (Cic. *ad Att.* ii. 12 and 13; *Act. Apost.* xxviii. 15); Forum Appii *differtum cauponibus* (Hor. *l. c.* 4); Tabernae Caediciae near Sinuessa (Fest. *Epit.* p. 45 M.); *Caudi cauponas* (Hor. *l. c.* 51). From Plautus downward, these hostelries occur repeatedly in Latin literature. Ambassadors were usually received at the public expense in decent lodgings [LEGATUS]; but the Rhodian embassy of B.C. 167 was driven to a *sordidum deversorium* (Liv. xlv. 22). Clodius, when wounded, was carried *in tabernam proximam in Bovillano* (Ascon. *Argum. ad* Cic. *pro Mil.*; in another passage it is *cauponula*). Cicero mentions a *copo de via Latina* suborned as a false witness (*pro Cluent.* 59, § 163), and the discreditable tippling of Antonius in a *cauponula* a few miles from Rome on the Via Flaminia (*Phil.* ii. 31, § 77). Cynthia drives past a *taberna* on her way to Lanuvium, and the remarks of the tavern-brawlers disgust the poet-lover (Propert. v. 8, 19). The sprightly Virgilian *Copa* shows us, in a very modern fashion, the competition between rival establishments and the advertiser's art in full operation. The accommodation at these places was generally of a poor kind, but extremely cheap. In Polybius' time in Cisalpine Gaul there were no items in the bill; the inclusive charge (inquired beforehand, it should be added) rarely exceeded half an as (Polyb. ii. 15). For the early imperial period we have the record of the well-known relief at Aesernia, representing a hostess reckoning with a parting guest. The dialogue between the two is given at length, and the charges are: bread and a pint of wine, 1 as; meat (*pulmentarium*), 2 asses; mule's provender, 2 asses; and another item, for which we refer the curious to the inscription itself. (This relief is figured in the *Bullettino Napolitano*, vi. 1, and thence in D. and S.; the inscription in Mommsen, *Inscr. Regn. Neap.* 5078=Orelli-Henzen, 7306).

At Rome there must have been many inns to accommodate strangers, but they are hardly ever spoken of. We, however, find frequent mention of houses where wine and ready-dressed provisions were sold, and which appear to have been numerous in all parts of the city. The houses where people were allowed to eat and drink were called almost indiscriminately *cauponae*, *popinae*, *thermopolia*, and *tabernae vinariae*. The speciality of the *thermopolia* is noticed under CALDA. These places were principally frequented by slaves and the lower classes (Cic. *pro Mil.* 24, § 65; Hor. 1 *Ep.* xiv. 21); and are qualified by such epithets as *nigra*, *fumosa* (Verg. *Copa* 3, cf. Hor. 1 *Sat.* v. 73), *immunda* (Hor. 2 *Sat.* iv. 62; Lucil. *fr.* 1, 19), *uncta* (probably "greasy," though it has also been taken in a good sense, Hor. 1 *Ep.* xiv. 21). Amongst other discomforts they were only furnished with stools to sit upon instead of couches, whence Martial (v. 70) calls them *sellariolas popinas*. This circumstance is illustrated by a painting found at Pompeii in a wine-sl senting a drinking-scene. There are sons sitting on stools round a tripod t

A wine-shop. (From a painting at Po

dress of two of the figures is remarka hoods, which resemble those of the ca by Italian sailors and fishermen at t day. They use cups made of horn glasses, and from their whole appe dently belong to the lower orders. A are different sorts of eatables hung of pegs.

From the moral point of view the R whether lodging-houses, or mere d were no better than the Greek. He *salax taberna*, Cat. 37, 1; *fornix* jo *uncta popina*, Hor. *l. c.*; and the lega Dig. 23, 2, 43, § 9. Nor are oth wanting. Behind the wine-shop a where the painting described above w the too celebrated *Lupanar*, the c which are now under lock and key in Museum. The Aesernian inscriptio mentioned tells the same tale. Wine-shops used for immoral purposes w *ganeae* (Cic. *in Pis.* 6, § 13; *ga* *Adelph.* iii. 3, 5); and are often classe *lustra* (Cic. *pro Sest.* 9, § 20; *Phi* § 24; Liv. xxvi. 2). Naturally, the sons who kept houses of public entert any kind were held in low estimation mon opinion as to their honesty is e the epithets *perfidus* and *malignus* wh gives to them (1 *Sat.* i. 29; v. 4).

Under the emperors many attempts to regulate the popinae, but appar little success. Tiberius forbad all c visions to be sold in these shops (Sue here' *popinae* are coupled with *gan* Claudius commanded them to be sh gether (Dio Cass. lx. 6; cf. Suet. C They appear, however, to have been s again, if they were ever closed; restricted them to the sale of cooked and prohibited meat (Suet. *Ner.* 16; lxii. 14); and an edict to the same also published by Vespasian (Dio Cass (Zell, *Die Wirthshäuser der Alten*, in *schriften*, Freiburg, 1826; Becker-Gö iii. pp. 27-45; Mommsen-Marqu [*Privatl.*], pp. 452-7.) [W. S.]

CAUSA LIBERA'LIS. [ASSERT

CAUSAE PROBA'TIO. [CIVIT

CAU'SIA, a broad-brimmed felt h was part of the national costume of donians and neighbouring nations (*e.g.* the Illyrians, Plaut. *Trin.* iv. 2, 10). The name is obviously derived from its keeping off the heat of the sun (*καῦσις, καύσων*); but, as the native poet Antipater of Thessalonica tells us, it was a protection against bad weather generally (*ἐν νιφετῷ*), and also served as a helmet (*ap.* Brunck, *Anal.* ii. 111). It was familiar to the Greeks of the Macedonian period (Menand. *fr.* 313, Meineke; Polyb. iv. 4, 5); and to the Romans as early as the time of Plautus (*Mil. Glor.* iv. 4, 42, where it is part of a sailor's dress; *Pers.* i. 3, 75; the mushroom-shaped hat of *Trin.* iv. 2, 9, must have been an exaggerated causia). A purple (ἁλουργής) causia was worn regularly by the Macedonian kings as part of the royal costume (Val. Max. v. 1, § 4); the diadem or white scarf was wrapped round it and the ends hung down behind. (See the second illustration.) Hence we read of the *καυσία* and *διάδημα* as worn together by Alexander the Great (Arr. *Anab.* vii. 22), and his imitator Caracalla (Herodian, iv. 8, § 5); and of the *καυσία διαδηματοφόρος* of the last of the Ptolemies (Plut. *Anton.* 54). These purple hats, of course without the diadem, were sometimes distributed as the highest military decoration (Plut. *Eum.* 8 *fin.*). The illustrations are taken from a fictile vase, and an early Macedonian coin of Alexander I. (about B.C. 500–460). [J. Y.] [W. W.]

Hermes wearing the Causia.
(From a fictile vase.)

Royal Causia, with diadem.
(From a Macedonian coin.)

CAUTIO has a variety of meanings, corresponding in the main with those of the verb from which it is formed, of which the following are the most prominent.

1. The giving of security for the future performance of a legal obligation. The value of such security varied with its form. First, it might be a merely personal undertaking by the party liable (*nuda cautio*, Dig. 5, 1, 2, 6; Cod. 6, 38, 3), which would be actionable in itself if clothed in the form of stipulation (*stipulatio cautionalis*, Dig. 46, 5, 1, pr.), though not if it were made simply by oath (*cautio juratoria*, *Inst.* iv. 11, 2; Cod. 12, 1, 17, pr.): in Justinian's time the oath of persons of high rank seems to have been regarded as equally good security with an actionable promise given by others less exalted (Cod. 12, 22, 8). Secondly, the promise, though actionable perhaps in itself, might be fortified by the promisor's giving the promisee a right of pledge or *hypotheca*, or by the subsidiary liability of sureties: in these cases, as, on the person primarily liable failing, recourse might be had to the pledge or sureties, the *cautio* was said to be *idonea*. And from the act by which the security was given, *cautio* came also to mean the protection which it afforded: "plus cautionis in re est (*i.e.* when a thing is pledged) quam in persona" (Dig. 50, 17, 25).

Roman Law made a very extensive use of *cautiones*, especially those fortified by sureties (*satisdatio*) for the protection of legal rights which otherwise might have been brought into jeopardy. Thus the defendant in an action was frequently required to give security *judicatum solvi*, that the judgment, if it went against him, should be satisfied (Gaius, iv. 91, 102), or "pro praede litis et vindiciarum," that the property, the title to which was in question, should be delivered up if found to belong to the plaintiff; and if the plaintiff appeared in any action by an attorney or procurator, the latter had to bind himself with sureties "ratam rem dominum habiturum," that his principal would be bound by his acts (Gaius, iv. 98). Of much the same kind are the *stipulationes judiciales de dolo* and *de persequendo servo*, &c., mentioned by Justinian in *Inst.* iii. 18, 1: unless they were entered into by the party from whom they were required, the judge might refuse to proceed with the action. Similarly the praetor and aedile often had occasion, in the discharge of their constitutional functions, to require persons to give security by means of a *cautio* (*Inst.* iii. 18, 2). The "praetorian stipulations" are there exemplified by those *damni infecti* and *legatorum.* By the first the owner of land or houses threatened with damage from the defective condition of adjoining premises could demand security from the owner of or other persons having interests in the latter, and in default was entitled to be put in possession (Cic. *Top.* 4, 22; Dig. 39, 2, 7, pr.): the second was employed when a legacy was given under a condition or from a specified future day, or was disputed; the legatee being entitled to security with sureties for its future payment, or in default to be put in possession (Dig. 36, 4, 5, pr.). And the obligation of a vendor under Roman law to indemnify the purchaser in case his title proved defective originated (according to Theophilus) in the aedile's requiring all vendors to enter into a *stipulatio dupli*, i.e. to promise the purchaser twice the purchase-money if the property were recovered from him by some one having a better title (Dig. 21, 2, 60). Other illustrations may be found in the following:—Guardians and curators were as a rule required to give security "rem pupilli salvam fore," that the property entrusted to them should not be squandered, misappropriated, or wrongly administered (Gaius, i. 199). Persons who had a usufruct (Dig. 7, 9) or right of *usus* over property had to bind themselves in the same way that it should be returned to the owner when their interest determined: analogous to this is the *cautio* in respect of quasi-usufruct referred to by Justinian in *Inst.* ii. 4, 2. In many cases a *heres* could not safely pay legacies unless the legatee gave security to refund, in case the will under which he claimed should turn out to be bad (Dig. 5, 3, 17). The *cautio Muciana* applied to the case of testamentary conditions, which consisted in not doing some act, which, if done, would deprive the *heres* of the *hereditas*, or the legatee of the legacy: the contingent right of the person who would take in the event of the condition being broken was secured in this manner.

The security was very commonly attested by a written instrument, which is itself called *cautio* or *chirographum* ("cautio chirographi mei," Cic. *ad Fam.* vii. 18), though the *chirographa* mentioned by Gaius (iii. 134) seem to be different: they were writings actually creating an obligation between *peregrini*, whereas the *chirographum* of a *civis* was merely evidence of a liability which arose on some other ground (Savigny, *Verm. Schriften*, i. p. 246). Hence—

2. The common use of *cautio* in the legal literature of the middle and later empire to denote a memorandum acknowledging an existing debt or liability (*cautio pollicitationis*, Dig. 4, 2, 9, 3; *depositionis*, Dig. 36, 3, 18, 1; *dotalis*, Dig. 31, 89, 5), especially acknowledgment of loans of money (Dig. 12, 1, 40, pr.; 44, 7, 29; Cod. 5, 14, 11; cf. *Inst.* iii. 21). And by a slight change of meaning it comes to signify in other passages the acknowledgment of payment or performance, *i.e.* a receipt (Dig. 22, 3, 15; Cod. 9, 1, 2; Cic. *Brut.* 5, 18).

3. Very rarely *cautio* is used as equivalent simply to "contract," agreement: "*privatorum cautione* legibus non esse refragandum" (Dig. 35, 2, 15, 1). [J. B. M.]

CAVAE'DIUM. [DOMUS.]

CA'VEA. [THEATRUM.]

CAVE'RE in legal language means (1) to take precautions on behalf of any one (Dig. 22, 3, 9). (2) To procure from another a promise which will support an action, especially a promise in the nature of a warranty ("ab emptore, venditore, [sibi] cavere; lege venditionis cautum est," Dig. 18, 7, 6, pr.; 39, 2, 44, 1). (3) To give security, whether personal (*personis*) or real (*rebus*), the latter denoting a pledge or hypotheca (Dig. 50, 16, 188, 1). (4) To acknowledge either a debt (especially by the contract of stipulation, Dig. 3, 3, 35, 2, or by a written memorandum, Dig. 16, 3, 26, 2) or payment of a debt (Dig. 46, 3, 5, 3). (5) To ordain, of a statute (Cic. *Legg.* ii. 24, 61; Dig. 4, 4, 2); of a senatus consult (Dig. 33, 2, 1); of the edict (Dig. 2, 6, 1); of a testament (Cic. *Legg.* ii. 21, 53). (6) Of a lawyer or jurisconsult, to give advice: "Sin autem quaereretur, quisnam jurisconsultus vere nominaretur, eum dicerem, qui legum et consuetudinis ejus, qua privati in civitate uterentur . . . ad cavendum peritus esset" (Cic. *de Orat.* i. 48, 212; *ad Fam.* iii. 1, vii. 6). [J. B. M.]

CE'ADAS (Κεάδας) or **CAE'ADAS** (Καιάδας) was a deep cavern or chasm, like the *Barathron* at Athens, into which the Spartans were accustomed to thrust persons condemned to death. (Thuc. i. 134; Strab. viii. p. 367; Paus. iv. 18, § 4; Suidas, *s. v.* Βάραθρον, Καιάδας, Κεάδας.) [W. S.]

CEDIT DIES. [LEGATUM.]

CEL'ERES, according to Livy (i. 15, 8), a body-guard of 300 chosen by Romulus to attend him in peace and war. Livy leaves it uncertain whether they were cavalry or infantry; according to some accounts (cf. Dionys. ii. 13, 16, 29), they were infantry, while according to others (id. ii. 64) they included both, or were only cavalry. The last view is that which has been usually taken, and it has been regarded as confirmed by the meaning of the name, derived ἀπὸ τῆς περὶ τὰς ὑπουργίας ὀξύτητος, as Plutarch says (*Rom.* 26). Some identify them with the *equites*: it is an objection to this view that the
third tribe, the Luceres, could not
added before the time of Tullus Hos
Schwegler, *Röm. Gesch.* i. 583); and
equites were only raised to 300 after th
of this tribe. Niebuhr's theory which
the *celeres* with the *patricii* is of all
least tenable; but it is impossible to

each wall.

The slave to whom the charge of th
was intrusted was called *cellarius* (Pla

iv. 2, 115; Sen. *Ep.* 122; Orelli, *Inscr.* 5732, 6287), *a rationibus cellae* (Orelli, 2891), or *promus* (Colum. xii. 3, § 9; Hor. *Sat.* ii. 2, 16), and sometimes *promus condus* and *procurator peni* (Plaut. *Pseud.* ii. 2, 14), who had under him a *subpromus* (Plaut. *Mil. Glor.* 3, 2, 24). This answers to our butler and housekeeper.

Under· the empire all the provisions required for a Roman camp were preserved in a *cellarium* (Cod. Theod. 1, 10, 3; Marquardt, *Röm. Alterth.* v. p. 225).

2. Any number of small rooms clustered together like the cells of a honeycomb (Verg. *Georg.* iv. 164; *Aen.* i. 433), and the niches of a dovecote or poultry-house (Colum. viii. 8, 3) were also termed *cellae.* Hence the name was applied to the dormitories of slaves and menials (Cic. *Phil.* ii. 27, 67; Hor. *Sat.* i. 8, 8; Becker-Göll, *Gallus*, i. p. 276), to the bedrooms of an inn (Petr. *Sat.* 29; 77, 4), and to the vaults of a brothel (Petron. 8, 4; Juv. vi. 128). The price of each female was inscribed: hence *cella inscripta* means a brothel (Mart. xi. 45, 1). *Cella* was also used of a poor man's garret (Mart. vii. 20, 21; viii. 14, 5). Hence the phrase *pauperum cellae* denotes the small apartments of affected simplicity to which the rich Roman of the empire sometimes retired to take refuge from the ennui of luxury (Sen. *Ep.* 18, 7; 100, 6; *Cons. ad Helv.* 12: cf. Mart. iii. 48; Becker-Göll, *Gallus*, i. p. 115). *Cella ostiarii* (Vitruv. vi. 10; Petron. 29), or *janitoris* (Suet. *Vitell.* 16), is the porter's lodge.

3. In the baths the *cella caldaria, tepidaria*, and *frigidaria*, were those which contained respectively the warm, tepid, and cold bath. [Balneae.]

4. The interior of a temple—that is, the part included within the outside shell, *σηκός* (see the lower woodcut in Antae)—was also called *cella* (Vitruv. iii. 1; Cic. *Phil.* iii. 12, 30). [Templum.] [J. H. F.] [W. S.]

CELLA'RIUS. [Cella.]

CELOX (*κέλης, κελήτιον*), derived from *κέλλω, cello*, "to urge on," means a swift boat. The Greek word also means "a race-horse;" and some maintain (*e.g.* the Schol. on Thuc. i. 53, and Graser) that from this is derived the meaning "boat." This peculiar build of boat is said to have been invented by the Rhodians (Plin. *H. N.* vii. § 208). It was much used by pirates (Phot. 154, 10; Liv. xxxvii. 27); but was more especially employed as attendant on the fleet (Isid. *Orig.* xix. 1, 22), either for bringing news (Xen. *Hell.* i. 6, 26) or negotiating with the enemy (Thuc. i. 53; cf. Plaut. *Mil.* iv. 1, 39). Further, each state appears to have had such boats for various official purposes, just as we hear of *δημόσιαι ἄκατοι* at Athens (cf. Plaut. *Capt.* iv. 2, 93). Built for swiftness, they were necessarily narrow, and Appian (*B. C.* ii. 56 *fin.*) calls one *ὀξύ.* They had no decks, and only one bench of oars (Polyb. v. 62, 3: *τούτων κατάφρακτα μὲν εἴκοσι διαφέροντα ταῖς κατασκευαῖς ἐν οἷς οὐδὲν ἔλαττον ἦν τετρήρους, τὰ δὲ λοιπὰ τριήρεις καὶ δίκροτα καὶ κέλητες*). When Isidore (*l. c.*) says *celoces* were biremes or triremes, he means worked by two or three pairs of oars, not having two or three benches of rowers (Jal, *Glossaire Nautique*, art. *Celes*). Each oarsman probably pulled two oars, else we should not find the epithet *πεντέσκαλμος* (Ephipp. *fr.* 3, Mein.) applied to the *κέλης*; for then the oarage would be uneven: or else only one side of oars was counted. We also hear of *κελήτιον δίσκαλμον* (Synes. *Ep.* 167 A); and the Schol. on Thuc. iv. 9 tells us that a *κελήτιον* was a small vessel rowed by a single man. But we must suppose the piratical vessels to have been manned by a fairly large crew; still, perhaps, less than forty (Thuc. iv. 9). It was the build, then, not the size, which was the distinctive feature of the *κέλης*. In order to be independent of the weather, it appears to have been always rowed. (See Varro in Nonius, 527, ed. D. Gottofred: "Nautae remivagam movent celocem.") In many points of employment, it will be seen that these *κέλητες* resembled our gunboats.

A slightly different build of vessel, rather more round, like our brigantine, also used by pirates (Suidas, *s. v.*), was the *ἐπακτροκέλης* (Aeschin. *c. Timarch.* § 191), which (according to the *Etym. M.*) combined the properties of an *ἐπακτρὶς* or transport for carrying away the spoils, and of a *κέλης* for swiftness in pursuit and flight. (See generally Scheffer, *Militia Navalis*; Jal, *Glossaire Nautique*; and especially B. Graser, *De veterum re navali*, § 59.) [L. C. P.]

CENA, less correctly Coena (*δεῖπνον*), the principal meal of the Greeks and Romans, corresponding to our dinner rather than supper. As the meals are not always clearly distinguished, it will be convenient to give a brief account of all of them under the present head.

1. Greek. The materials for an account of the Greek meals, during the Classical period of Athens and Sparta, are almost confined to incidental allusions of Plato and the comic writers. Several ancient authors, termed *δειπνολόγοι*, are mentioned by Athenaeus; but, unfortunately, their writings only survive in the fragments quoted by him. His great work, the *Deipnosophistae*, is an inexhaustible treasury of this kind of knowledge, but ill-arranged, and with little attempt to distinguish the customs of different periods.

The poems of Homer contain a real picture of early manners, in every way worthy of the antiquarian's attention. As they stand apart from all other writings, it will be convenient to exhibit in one view the state of things which they describe. It is not to be expected that the Homeric meals should at all agree with the customs of a later period; indeed it would be mere waste of time to attempt adapting the one to the other. Athenaeus (i. p. 8), who has entered fully into the subject, remarks on the singular simplicity of the Homeric banquets, in which kings and private men all partake of the same food. It was common enough for royal personages to prepare their own meals (*Il.* ix. 206–218; compare Gen. xxvii. 31), and Ulysses (*Od.* xv. 322) declares himself no mean proficient in the culinary art:—

> *Πῦρ τ' εὖ νηῆσαι, διὰ δὲ ξύλα δανὰ κεάσσαι,*
> *Δαιτρεῦσαί τε καὶ ὀπτῆσαι καὶ οἰνοχοῆσαι.*

Three names of meals occur in the *Iliad* and *Odyssey* — *ἄριστον, δεῖπνον, δόρπον* or *δόρπος.* The word *ἄριστον* uniformly means the early (*ἅμ' ἠοῖ, Od.* xvi. 2) as *δόρπον* does the late meal; but *δεῖπνον*, though generally meaning the mid-day meal, is sometimes used where we should expect *ἄριστον* (*Od.* xv. 397, xix. 320) or even δόρπον (*Od.* xvii. 170). We should be careful, however, how we argue from the unsettled habits of a camp to the regular customs of ordinary life.

In the Homeric age it was usual to sit at table (καθέζονται δ' ἐν τεῖς συνδείπνοις οἱ ἥρωες, οὐ κατακέκλινται, Ath. i. p. 17 f); and this custom, we are told, was kept up in historical times by the Cretans (Heracl. *Pol.* c. 3, § 6, *ap.* Müll. *Fragm.* ii. 212; Pyrgion *ap.* Ath. iv. p. 143 e). Each guest had generally his own table (but see *Od.* i. 138; *Il.* xxiv. 625, ix. 216), and an equal share of food was placed before each (hence δαὶς ἐΐση), except when a specially distinguished guest was honoured by getting a larger portion (*Il.* vii. 321; *Od.* xiv. 437, xx. 280, 293). What strikes us as peculiar in the Homeric dinners is their religious character. They partake more or less of the nature of a sacrifice, beginning with an offering of part of the meat to the gods (*Od.* xiv. 446; *Il.* ix. 219), and both beginning and ending with a libation of wine (*Od.* iii. 40, xix. 447), while the terms for slaughtering animals for a meal (ἱερεύειν, θύειν) and for the slaughtered animals (ἱερήϊα) are borrowed from the language of religious ceremony.

The description of Eumaeus's dinner to Ulysses gives us a good picture of a dinner in the Homeric age in humble society (*Od.* xiv. 420 *sqq.*): "Therewithal he cleft logs with the pitiless axe, and the others brought in a well-fatted boar of five years old; and they set him by the hearth, nor did the swineherd forget the deathless gods, for he was of an understanding heart. But for a beginning of sacrifice, he cast bristles from the head of the white-tusked boar upon the fire, and prayed to all the gods that wise Odysseus might return to his own house. Then he stood erect, and smote the boar with a billet of oak which he had left in the cleaving, and the boar yielded up his life. Then they cut the throat and singed the carcase, and quickly cut it up, and the swineherd took a first portion from all the limbs, and laid the raw flesh on the rich fat. And some pieces he cast into the fire after sprinkling them with bruised barley-meal, and they cut the rest up small, and pierced it, and spitted and roasted it carefully, and drew it all off from the spits, and put the whole mess together on trenchers. Then the swineherd stood up to carve, for well he knew what was fair, and he cut up the whole, and divided it into seven portions. One, when he had prayed, he set aside for the nymphs and for Hermes, son of Maia, and the rest he distributed to each. And he gave Odysseus the portion of honour, the long back of the white-tusked boar . . . and made burnt offering of the hallowed parts to the everlasting gods, and poured the dark wine for a drink offering, and set the cup in the hands of Odysseus, the waster of cities, and sat down by his own mess. And Mesaulius bare them wheaten bread . . . So they stretched forth their hands upon the good cheer spread before them."

It does not much differ from the description of a dinner in a higher rank of society given by Achilles to Ulysses (*Il.* ix. 219 *sqq.*): "He cast down a great fleshing-block in the fire-light, and laid thereon a sheep's back and a fat goat's, and a great hog's chine rich with fat. And Automedon held them for him, while Achilles

Homeric age, see Brosin, *De coenis home*

The Greeks of a later age usually pa
three meals, called ἀκράτισμα, ἄριστ
δεῖπνον. The last, which corresponds to th
of the Homeric poems, was the evening
dinner; the ἄριστον was the luncheon;
ἀκράτισμα, which answers to the ἄρι
Homer, was the early meal or breakfast.

The ἀκράτισμα was taken immediate
rising in the morning (ἐξ εὐνῆς, ἕωθεν, A
Aves, 1286). It usually consisted
dipped in unmixed wine (ἄκρατος), w
derived its name. (Plut. *Symp.* viii.

courts, and partaking of a good ἄριστον.
usually a simple meal, but of course

according to the habits of individuals. Thus Ischomachus, in describing his mode of life to Socrates, who greatly approves of it, says, Ἀριστῶ ὅσα μήτε κενὸς μήτε ἄγαν πλήρης διημερεύειν (Xen. *Oecon.* xi. 18).

The principal meal, however, was the δεῖπνον. It was usually taken rather late in the day, frequently not before sunset (Lysias, *de Caed. Eratosth.* § 22). Aristophanes (*Eccl.* 652) says:

> Σοὶ δὲ μελήσει
> Ὅταν ᾖ δεκάπουν τὸ στοιχεῖον λιπαρὸν χωρεῖν ἐπὶ δεῖπνον·

that is, towards sunset.

The Athenians were a social people, and were very fond of dining in company (Plut. *Symp.* 7). Entertainments were usually given, both in the Heroic ages and later times, when sacrifices were offered to the gods, either on public or private occasions; and also on the anniversary of the birthdays of members of the family, or of illustrious persons, whether living or dead. Plutarch (*Symp.* viii. 1, § 1) speaks of an entertainment being given on the anniversary of the birthdays both of Socrates and Plato.

Dining clubs were very common, the members of which contributed each a certain sum of money, called συμβολή, or brought their own provisions with them. When the first plan was adopted, they were said ἀπὸ συμβολῶν δειπνεῖν, and one individual was generally entrusted with the money to procure the provisions and make all the necessary preparations. Thus we read in Terence (*Eunuch.* iii. 4)—

> "Heri aliquot adolescentuli coimus in Piraeo,
> In hunc diem ut de symbolis essemus. Chaeream ei rei
> Praefecimus: dati annuli: locus, tempus constitutum est."

When the second plan was adopted, they were said ἀπὸ σπυρίδος δειπνεῖν, because the provisions were brought in baskets (Athen. viii. p. 365). This kind of entertainment is spoken of by Xenophon (*Mem.* iii. 14, § 1). In Homer the word ἔρανος corresponds with the later ἀπὸ συμβολῶν δεῖπνον (e.g. *Od.* i. 226), while εἰλαπίνη, which is opposed to ἔρανος (*Od.* l. c.), denotes a public entertainment on a festival, or some such occasion (Athen. viii. p. 362 e; *Il.* xviii. 491; Eur. *Med.* 193, *Hel.* 1337).

The most usual kind of entertainments, however, were those in which a person invited his friends to his own house. It was expected that they should come dressed with more than ordinary care, and also have bathed shortly before; hence, when Socrates was going to an entertainment at Agathon's, we are told that he both washed and put on his shoes—things which he seldom did. (Plato, *Symp.* 174 A.) As soon as the guests arrived at the house of their host, their shoes or sandals were taken off by the slaves, and their feet washed (ὑπολύειν and ἀπονίζειν). In ancient works of art we frequently see a slave or other person represented in the act of taking off the shoes of the guests, of which an example is given, from a terra-cotta in the British Museum. After their feet had been washed, the guests reclined on the κλῖναι or couches. (Καὶ ἓ μὲν ἔφη ἀπονίζειν τὸν παῖδα, ἵνα κατακέοιτο, Plato, *Symp.* 175 A.)

Sitting at meals was, as has already been remarked, the practice of the Heroic age, but in the Classical period was confined to Crete (see p. 392 *a*). Women, however, when admitted to banquets on extraordinary occasions, such as a marriage (for they were generally excluded from table when guests were invited), took the sitting posture (Lucian, *Conv.* 13), and so did children (Xen. *Symp.* i. 8; Aristotle, *Polit.* vii. 17, p. 1336 b, 9). A very common representation on funeral monuments is the family meal, with the husband reclining, and the wife and children sitting at his side. Where women are represented as reclining at a meal, they are meant for Hetaerae (Becker-Göll, *Charikles*, ii. p. 302).

Slave taking off the shoes of a guest. (British Museum.)

It was usual for only two persons to recline on each couch. Thus Agathon says to Aristodemus, Σὺ δ', Ἀριστόδημε, παρ' Ἐρυξίμαχον κατακλίνου, and to Socrates, Δεῦρο, Σώκρατες, παρ' ἐμὲ κατάκεισο. (Plat. *Symp.* p. 175 A, C.) Also at a banquet given by Attaginus of Thebes to fifty Persians and fifty Greeks, we are told that one Persian and one Greek reclined on each couch. In ancient works of art we usually see the guests represented in this way; but sometimes there is a larger number on one long κλίνη: see the cut under the article SYMPOSIUM. The manner in which they reclined—the σχῆμα τῆς κατακλίσεως, as Plutarch (*Symp.* v. 6) calls it—will be understood by referring to the woodcut already mentioned, where the guests are represented reclining with their left arms on striped pillows (ὑπαγκώνια), and having their right free; whence Lucian (*Lexiph.* c. 6) speaks of ἐπ' ἀγκῶνος δειπνεῖν. (Compare Aristoph. *Vesp.* 1210.)

After the guests had placed themselves on the κλῖναι, the slaves brought in water to wash their hands (ὕδωρ κατὰ χειρὸς ἐδόθη); and then the dinner was served up, the expression for which was τὰς τραπέζας εἰσφέρειν, as in Aristoph. *Vesp.* 1216:—

> Ὕδωρ κατὰ χειρός· τὰς τραπέζας εἰσφέρειν·
> Δειπνοῦμεν· ἀπονενίμμεθ'· ἤδη σπένδομεν.

By τὰς τραπέζας εἰσφέρειν we are to understand not merely the dishes, but the tables themselves (Philoxen. *ap.* Athen. iv. p. 146 f). It appears that a table, with provisions upon it, was placed before each *κλίνη*: and thus we find in all ancient works of art which represent banquets or symposia, a small table or tripod placed before the *κλίνη*: and when there are more than two persons on the *κλίνη*, several of such tables. These tables are evidently small enough to be moved with ease.

In eating, the Greeks had no knives or forks, but made use of their fingers only, except in eating soups or other liquids, which they partook of by means of a spoon (**μύστρον**), or a piece of bread scooped out in the shape of a spoon (*μυστίλη*, Pollux, vi. 87, x. 89; Aristoph. *Eq.* 1164; Suidas, *s. v.* *μυστίλη*). After eating, they wiped their fingers on pieces of bread, called **ἀπομαγδαλιαί** (Pollux, vi. 93), which were then thrown to the dogs (Aristoph. *Eq.* 415). Napkins (**χειρόμακτρα**) were not used till the Roman period.

It appears that the arrangement of the dinner was entrusted to certain slaves (Plato, *Symp.* p. 175 B). The one who had the chief management of it was called **τραπεζοποιός** or **τραπεζοκόμος** (Athen. iv. p. 170 e; Pollux, iii. 41, vi. 13). The Greek word for a *menu* was *γραμματίδιον* (Athen. ii. p. 49 d).

It would exceed the limits of this work to give an account of the different dishes which were introduced at a Greek dinner, though their number is far below those which were usually partaken of at a Roman entertainment. The most common food among the Greeks was the **μάζα** (Dor. *μάδδα*), a kind of frumenty or soft cake, which was prepared in different ways, as appears by the various names which were given to it (Pollux, vi. 76). The *μάζα* is frequently mentioned by Aristophanes. The *φυστὴ μάζα*, of which Philocleon partakes on returning home from the courts (Aristoph. *Vesp.* 610), is said by the Scholiast to have been made of barley and wine. The *μάζα* continued to the latest times to be the common food of the lower classes. Wheaten or barley bread was the second most usual species of food; it was sometimes made at home, but more usually bought at the market of the *ἀρτοπῶλαι* or *ἀρτοπώλιδες*. The vegetables ordinarily eaten were mallows (**μαλάχη**), lettuces (**θρίδαξ**), cabbages (**ῥάφανοι**), beans (**κύαμοι**), lentils (**φακαῖ**), &c. Pork was the most favourite animal food, as was the case among the Romans; Plutarch (*Symp.* iv. 5, § 1) calls it **τὸ δικαιότατον κρέας**. Sausages also were very commonly eaten. It is a curious fact, which Plato (*de Rep.* iii. c. 13, p. 404) has remarked, that we never read in Homer of the heroes partaking of fish. In later times, however, fish was one of the most favourite foods of the Greeks, insomuch so that the name of **ὄψον** was applied to it **κατ' ἐξοχήν**. (Athen. vii. p. 276 e.) A minute account of the fishes which the Greeks were accustomed to eat is given at the end of the seventh book of Athenaeus, arranged in alphabetical order.

The ordinary meal for the family was cooked by the mistress of the house, or by the female slaves under her direction; but for special occasions professional cooks (**μάγειροι**) were hired, of whom there appear to have been a great number (Diog. Laërt. ii. 72). They are frequently mentioned in the fragments of the comic poets; and those who were acquainted with all the refinements of their art were in great demand

Sev. 30). Bread and cheese (Apul. *Met.*

and even meat, appear to have been sometimes taken (Mart. xiii. 31); but to make *jentaculum* a heavy meal was not in accordance with simple manners.

If one gets up early and eats only a slight breakfast, hunger begins to assert itself about noon or a little later. And as with our own fathers this was the time for the principal meal of the day, viz. dinner, so with the primitive Romans this was the time for *cena* (Fest. 54: "cena apud antiquos dicebatur quod nunc est prandium; vesperna quam nunc cenam appellamus;" cf. p. 338). It was only in later times that *prandium* became customary (Isid. *Orig.* xx. 2, 14). We may fairly translate this word "luncheon." When city-life pushed the dinner-hour later and later, a mid-day meal became essential. It was taken about the sixth hour (*Anth. Pal.* x. 43, and Scholiast), not so early as the fifth (Mart. viii. 67, 9) or as late as the seventh; for C. Caninius Rebilus was nominated Consul suffectus at that hour on Dec. 31, 45 B.C.; and Cicero says (*Fam.* vii. 30, 1), "Ita Caninio consule scito neminem prandisse." But if one took no *jentaculum*, he must needs take *prandium* earlier, and this is the reason why we find Ausonius taking his *prandium* a little after the fourth hour (*Ephemeris* in *Corp. Poet. Lat.*, ed. Walker, p. 1070; ed. Weber, p. 1217). *Prandium* seems to have been properly the name of the soldier's morning meal (Isid. *Orig.* xx. 2, 11; cf. Liv. xxviii. 14, 7). For the ordinary citizen the meal varied from a piece of bread eaten in the hand (Senec. *Ep.* 83, 6) to an elaborate entertainment with hot and cold fish, fowl and meat, with vegetables and fruit (cf. Mayor on Plin. *Ep.* iii. 5, 11). The meats were rather savoury dishes than solids: *e.g.* they were kernels of pork (*glandulae, glandia*, "sweetbreads"? cf. Paley on Mart. vii. 20), ham, pig's-head, &c. (Plaut. *Men.* i. 3, 27; *Curc.* ii. 3, 44). Often, as at our luncheons, the meat of the previous day's dinner was served cold or warmed up (Plaut. *Pers.* i. 3, 25). Wine (Tac. *Ann.* xiv. 2; cf. Cic. *Phil.* ii. 41, 104), hot wine and water (Mart. viii. 67, 7), and mulsum (Cic. *Cluent.* 60, 166) were drunk at it. This latter passage refers to a large wedding breakfast which is called *prandium*.

Merenda was in ancient times an afternoon meal, given to workmen, also called *antecenia* (Isid. *Orig.* xx. 2, 12; 3, 3; Nonius, p. 59). "Merenda *ἄριστον δειλινόν δειλινή*" is a gloss in Steph. *Thes.*, ed. Lond., ix. 278. This gloss shows the real nature of the meal. If *prandium* was not taken at mid-day, *merenda* was a late *prandium* taken in the afternoon. Thus Calpurnius (*Ecl.* v. 60) says:—

> "Verum ubi declivi iam nona tepescere sole
> Incipiet *seraeque* videbitur hora *merendae*,
> Rursus pasce greges."

The principal meal of the day was *cena*, "dinner." The eighth hour in summer and the ninth in winter was sometimes the time for the bath (Plin. *Ep.* iii. 1, 8), and after that came dinner, but probably the bath was usually a little earlier. The ninth was considered the normal dinner hour (Cic. *Fam.* ix. 26; Mart. iv. 8, 6), though business must have often deferred it till after the tenth (Mart. ii. 7, 33; vii. 51, 11), and even later (Mart. iii. 36, 5). These were homely repasts: for the more fashionable banquets were, the earlier they began (see Palmer on Hor. *Sat.* ii. 8, 3). Banquets which began earlier than the ninth hour were called *tempestiva convivia* (for this phrase, see Marquardt, *Privatleben*, 291, note 3, and Reid on Cic. *Sen.* 14, 46) or *de die cenare* (Catull. 47, 5). The *cena* always lasted for what would seem to us a very long time. Even Pliny the Elder, who was so miserly of his time, used to spend three hours over his dinner (Plin. *Ep.* iii. 5, 13), Spurinna longer (*ib.* iii. 1, 9), and old Cato used to remain conversing over this meal till late at night (Cic. *Sen.* 14, 46). The business of the day was done and the time for enjoyment had arrived (*Anth. Pal.* x. 43); there was accordingly no necessity to break into the meal till bed-time, which was much earlier than with us, as the Romans got up at daybreak. Symposia of course lasted till midnight, and even morning (Hor. *Od.* iii. 21, 23, *et passim*). The ancient Romans, like the ancient Greeks, used to sit at dinner (Isid. *Orig.* xx. 11, 9), and Columella (xi. 1, 19) thinks the vilicus should not recline except on holidays; and Cato the Younger, in sign of mourning, always sat at meals after the battle of Pharsalia (Plut. *Cat. Min.* 56). However, in the times with which we are best acquainted, the Romans dined in the *atrium* (Serv. on *Aen.* i. 730), in the circle of the family, the men reclining, the wife sitting on the lectus (Val. Max. ii. 1, 21), the children beside the couches ("ad fulcra lectorum," Suet. *Claud.* 32), or on a lower couch (Suet. *Aug.* 64), and with a separate and more frugal table (Tac. *Ann.* xiii. 16); the subordinate persons (Plaut. *Capt.* iii. 1, 11; Suet. *Vit. Ter.* p. 292, ed. Roth) and slaves (Senec. *de const. Sap.* 15, 1) on benches (*subsellia*). It was customary for the wife and children to dine with the men, except apparently in times of mourning (Suet. *Cal.* 24); though of course there were gentlemen's dinner-parties (*e.g.* Hor. *Sat.* ii. 8).

On the other hand, we find cases of women reclining, where there was conceived to be nothing bold or indelicate in their posture. Thus, in the following cut, taken from Montfaucon (*Ant. Exp. Suppl.* iii. 66), which seems intended to represent a scene of perfect matrimonial felicity, the husband and wife recline on a sofa of rich materials. A three-legged table is spread with viands before them. Their two sons are in front of the sofa, one of them sitting, in the manner above described, on a low

A family Feast. (Montfaucon.)

stool, and playing with the dog. Several females and a boy are performing a piece of music for the entertainment of the married pair.

The very wealthy Romans built separate dining-rooms [TRICLINIUM], and to this article and that on LECTUS and PULVINUS the reader is referred for the arrangement of the couches and of the guests at table. For the tables, see MENSA.

A Feast. (Vatican Virgil MS.)

During the later republic and empire the number of guests at a private dinner-party was usually nine, sometimes less (Gell. xiii. 11, 2), but to have more was considered unseemly (Cic. *Pis.* 27, 67). Generally uninvited guests (*umbrae*) were brought by one of the invited guests to make up the nine (Hor. *Sat.* ii. 8, 22; *Epist.* i. 5, 28), or perhaps a client was asked, in order not to leave a place empty (Juv. v. 17). The guests used to dress for dinner; the dinner dress (*vestis cenatoria*, Mart. x. 87, 12, xiv. 135; *στολὴ δειπνῖτις*, Dio Cass. lxix. 18) being generally a light highly-ornamented coloured tunic (*prasina synthesis*, Mart. x. 29, 4; *χιτώνιον ἄνθινον*, Dio Cass. lxiii. 13). It cannot be supposed that the changing of one's *synthesis* during dinner was other than vulgar ostentation (Mart. v. 79, 2); but it was sometimes required by religious ceremonials [ARVALES]. Dress sandals (*soleae*) were generally worn in the house of the host, but were taken off (*demere soleas*) before reclining for the meal. They were taken charge of by the guest's own slave whom he brought with him: for each guest had his own footman (*a pedibus*) to wait on him at table (Plaut. *Truc.* ii. 4, 16; Petron. 58 and 62; Mart. xii. 88, 2; Senec. *de Benef.* iii. 26, 27). If the guest did not come in a litter but walked, he often came in boots (*calcei*, Plin. *Ep.* ix. 47, 3). The regular expression for rising from table was *soleas poscere* (Hor. *Sat.* ii. 8, 77).

The places were pointed out to the guests by the *nomenclator* (Ath. ii. p. 47 e); and when they had taken up their reclining position (*accumbere*, *discumbere*) at table, water was brought round and poured over the hands of each guest (Plaut. *Pers.* v. 1, 17), and the hands wiped in a towel or napkin [MANTELE, MAPPA] provided by the host, though sometimes brought by the guest, in order to carry away the presents that the host frequently gave [APOPHORETA]. Later *mantele* was used for a table-cloth (Isid. *Orig.* xix. 26, 6; cf. Fest. 133). It was not till towards the end of the 1st century A.D. that table-cloths began to be used. Martial appears to be the first to allude to them (ix. 59, 7; xii. 29, 11). There was plainly no table-cloth in the banquet of Nasidienus (Hor. *Sat.* ii. 8, 11). Sometimes apparently grace was said (Quintil. *Declam.* No. 301, p. 583, ed. Burmann: "adisti mensam ad quam cum venire coepimus invocamus deos"), and then the first of the three parts of the meal was proceeded with.

This was called *promulsis* or *gustatio*, *gustus*; also *frigida mensa* (*ψυχραὶ τράπεζαι*). The cold dishes of this part of the meal used in early times to occupy a place at the conclusion (Plut. *Quaest. Conviv.* viii. 9, 28; Mart. xiii. 14; Verg. *Moret.* 76). It consisted rarely of substantial meats (Macrob. *Sat.* ii. 9, 12), mostly of *hors d'œuvre* which whetted the appetite, and also served the purpose of the modern dinner-pill (Galen, vi. 333), *e.g.* shell-fish (Hor. *Sat.* ii. 4, 28), vegetables with savoury sauces (Mart. iii. 50, 4; x. 48, 7), olives (Hor. *Sat.* ii. 2, 46), mushrooms (Juv. v. 147), also eggs; from which came the expression *ab ovo ad mala* (Hor. *Sat.* i. 3, 6), to signify from the beginning to the end of the meal: cf. Cic. *Fam.* ix. 20, where the end of the meal is represented by roast veal (*assum vitulinum*). See further for the edibles which constituted the *gustus*, Apicius, 4, 5; Plin. *Ep.* i. 15; Macrob. *Sat.* l. c.; Celsus, ii. 29; Mart. x. 48, 7–12; v. 78, 3–5. The drink was *mulsum*, mead, a mixture of wine and honey; plain wine was too strong (Hor. *Sat.* ii. 4, 26). Hence the term *promulsis*, i.e. the mulsum taken before the chief portion of the meal. Compare Martial's (v. 78, 3) calling the *gustus προπίνειν*.

After this followed the *cena* proper, which in early times (Serv. on *Aen.* i. 641), and even later in simple families, was the whole dinner (Mart. x. 48, 3). It is from Lucullus that Athenaeus (vi. p. 274 e) dates the beginning of extravagance in dining. When this part of the meal consisted of several courses (*fercula*, *missus*)—we hear of six, Augustus never had more (Suet. *Aug.* 74), and seven (Juv. i. 94, and Mayor's note), but the usual number was three (Mart. xi. 31)—the separate courses were called *prima*, *altera*, *tertia cena* (Mart. *l. c.*), and appear to have followed in a regular order (Lucian, *de Merc. Cond.* 15). Each course was brought in on a tray (*repositorium*, Petron. 33), which was generally of wood, but sometimes of silver (Plin. *H. N.* xxxiii. § 146); and the arrangement of the viands on each dish and of the dishes on these trays was a branch of art (Juv. vii. 184; cf. Petron. 35 and 69), the artist being called *structor*. Indeed, the arranging of the whole dinner was such an important function that it required a special major-domo called *tricliniarcha* (Henzen, Index, p. 189; cf. Petron. 23), with his "decuries" of special *servi tricliniarii* (Henzen, 6367; cf. Plaut. *Pseud.* i. 2, 30). It was probably only at the imperial court that there were tasters (*praegustatores*, Tac. *Ann.* xii. 66). Between the *promulsis* and the *cena*, as well as after each course of the *cena*, the *repositorium* was carried away and brought back with the following course, the table having been previously wiped down (Hor. *Sat.* ii. 8, 11), and the bits that had fallen having been gathered up by the *analecta* (Mart. vii. 20, 17). Occasionally the carver (*carptor*, *diribitor*, *scissor*), whose function the *structor* sometimes fulfilled (Mart. x. 48, 15), carved the meat (Petron. 36 and 40) at the open side of the table, and it was carried round by slaves (Petron. 33 and 40; Mart. vii. 48; Ath. iii. p. 100 f). Carving, too, was a branch of art and had its learned professors (*docti Trypheri*, Juv. xi. 137; cf. v. 120). Sometimes the course was put on the table and the guests themselves took what they desired, and in the way they did so it was easy to see what guests had the manners of good society (Lucian, *de Merc. Cond.* 15). There appear to have been *menus* (*γραμματίδια*, Ath. ii. p. 49 d); and to point out the peculiarity of each dish was a part of the nomenclator's duty (Petron. 47; Plin. *H. N.* xxxii. § 63); so that we need not suppose that it was utter vulgarity when Nasidienus and his hanger-on Nomentanus did so (Hor. *Sat.* ii. 8, 43, &c.). Between each course the guests washed their hands (Lampr. *Heliog.* 25): for it must be remembered that the Romans used to eat with their fingers (Mart. v. 78, 6), except in the case of soup, eggs, and shell-fish, for which a COCHLEAR and a LIGULA were used.

The viands served up at luxurious dinner-parties are far too numerous to be described. Elaborate descriptions will be found in Hor. *Sat.* ii. 8; Macrob. *Saturn.* ii. 9, 12; Petron. 33 ff.; also in Becker-Göll, *Gallus*, chap. 8. They contained, as Philo says (*de Vita contempl.* 6 = ii. p. 479 M.), "all the products of land and sea, rivers and air." Copious accounts of the different kinds of foods and drinks are given in *Gallus*, iii. 331–367, 412–442; Marquardt, *Privatleben*, 398–448; Daremberg and Saglio, s. v. *Cibaria*. To admit of the gluttony required to consume such dinners, vomiting was resorted to, rules for which were laid down by physicians (Celsus, i. 3, p. 29, ed. Krause; Galen, vi. 391), an indirect proof of the prevalence of over-eating among the wealthy. But such extravagance must have been confined to the upper classes, and can give us no idea of ordinary family meals (cf. Marquardt, *Privatl.* 318). The bill of fare of a plain dinner is to be found in Martial (x. 48, 13 foll.). The main course consisted of kid, cutlets (*ofellae*), beans, early sprouts (*prototomi*), chicken and cold ham. A similarly frugal dinner is mentioned in Hor. *Sat.* ii. 2, 120–125; Juv. xi. 64–76. While eating, wine was usually drunk (Petron. 34), but in small quantities, for it was thought to blunt the taste (Hor. *Sat.* ii. 8, 38).

After the cena proper "was taken away, and the tables were removed, the offerings to the gods (the *mola salsa*, &c.) were thrown into the hearth; and when a slave announced that the gods were propitious, silence for a short time was observed in respect for the gods. The Greeks called this *θεῶν παρουσίαν*" (Serv. on *Aen.* i. 734). The gods were the Lares. If they were not in the dining-room, they used to be carried in and placed on the table (Petron. 60; cf. Hor. *Od.* iv. 5, 21), or a special table with a salt-cellar and some meat was placed before their shrine (Arnob. *adv. Gentes*, ii. 67).

Thereafter followed the dessert, *mensae secundae* (Hor. *Sat.* ii. 2, 122), also called *bellaria* (Gell. xiii. 11, 7), just as "second course" and "sweets" signify to us the same part of the meal. Other names were *impomenta*, Fest. 108; *ἐπιδειπνίς*, Mart. xi. 31, 7. It consisted of all sorts of pastry (for various kinds, see Becker-Göll, *Gallus*, iii. 363–367), fresh and dried fruits, apples, grapes, &c. (Mart. *ll. cc.*). The *mensae secundae* formed the transition to the COMISSATIO.

At distinguished dinner-parties the company used to be amused in various ways. These amusements were called ACROAMATA (see Reid on Cic. *Arch.* 9, 20). Respectable and cultivated hosts used to afford readings by their anagnostae (Mart. v. 78, 25; Mayor on Juv. xi. 180), often of their own works, and we can well believe that this was an insufferable nuisance (Mart. iii. 44, 15; 50, 4 foll.). It was no doubt a note of culture to ask for some charming poetry (Pers. i. 30). The practice of reading during meals is still kept up in Roman Catholic colleges. Music, too, used to be introduced, sometimes choral and orchestral performances (*symphonia*, Cic. *Verr.* iii. 44, 105; and Wilkins on Hor. *Ars Poet.* 374); with reference to which the sound sense of Martial (ix. 78, 6) declares that the best banquet is that where there is no musician. There used to be actors also (Plin. *Ep.* i. 15, 2), and story-tellers (*aretalogi*, Suet. *Aug.* 74). At "fast" entertainments there used to be all kinds of girls to play, sing, and dance (Liv. xxxix. 6; Hor. *Sat.* i. 2, 1; Mayor on Juv. xi. 162; Plin. *l. c.*), gymnasts (*petauristae*, Petron. 53), fools (*moriones*), "amusing vagabonds" (*scurrae*), &c.: cf. Plin. *Ep.* ix. 17, and Marquardt, *Privatleben*, 327–8. Formal speech-making was happily unknown. These amusements were produced during the *cena* and continued on into the COMISSATIO if such followed.

On Roman meals see especially Marquardt, *Privatleben der Römer*, 257–60, 289–321; Becker-Göll, *Gallus*, iii. 311–370; Daremberg and Saglio, s. v. *Coena*, in which works all the literature on the subject is collected. [L. C. P.]

CENA'CULUM. [DOMUS.]

CENATO'RIA VESTIS. [CENA, p. 396 *a*; SYNTHESIS.]

CENOTAPH'IUM (*κενοτάφιον*, *κενὸς τάφος*, in Virgil *tumulus inanis*), a cenotaph, *i.e.* an empty or honorary tomb. It was erected sometimes as a memorial of a person buried elsewhere (Verg. *Aen.* iii. 304), more often in cases where the body had not been found for burial at all (Xen. *Anab.* vi. 4, § 9; Verg. *Aen.* vi. 505; App. *Mithr.* 96. Compare Thucyd. ii. 34, § 3; Eurip. *Hel.* 1057–60.) [FUNUS.] Cenotaphia were considered as *religiosa*, and therefore *divini juris*, till a rescript of the emperors Ant. Pius and Verus pronounced them not to be so. (Heinecc. *Ant. Rom.* ii. 1.) [R. W.] [W. W.]

CENSI'TOR. [CENSOR, p. 403 *a*.]

CENSOR (*τιμητής*), the name of two magistrates of high rank in the Roman republic. Their office was called *Censura* (*τιμητεία* or *τιμητία*). The *Census*, which was a register of Roman citizens and of their property, was first established by Servius Tullius, the fifth king of Rome. After the expulsion of the kings it was taken by the consuls; and special magistrates were not appointed for the purpose of taking it till the year B.C. 443. Livy (iv. 8, 5) assigns as the reason of this alteration the appointment in the preceding year of *tribuni militum* with consular power in place of the consuls; as these tribunes might be plebeians, the patricians were unwilling that the right of taking the census and performing the formal sacrifice of purification should pass into their hands. This explanation is very doubtful, considering the comparative unimportance of the office at this time. It is more probable that it had been found to be inconvenient that the chief magistrates should be detained at home by duties necessarily discharged at Rome, when their presence might be required in the field, and this view is confirmed by the fact that no lustrum was held for at least sixteen years before the appointment of censors. The office was at first restricted to patricians, but was probably thrown open to plebeians by the Licinian laws of B.C. 367, and in B.C. 351 C. Marcius Rutilus was the first plebeian censor (Liv. vii. 22). Twelve years afterwards, B.C. 339, it was provided by one of the Publilian laws, that one of the censors must necessarily be a plebeian, and that both might be plebeians (Liv. viii. 12), but it was not till B.C. 280 that a plebeian censor performed the solemn purification of the people (*lustrum condidit*, Liv. *Epit.* 13). In B.C. 131 the two censors were for the first time plebeians.

There were always two censors, because the two consuls had previously taken the census together. If one of the censors died during the time of his office, another had at first to be chosen in his stead, as in the case of the consuls. This, however, happened only once, namely, in B.C. 393; because the capture of Rome by the Gauls in this lustrum excited religious fears against the practice (Liv. v. 31). From this time, if one of the censors died, his colleague resigned, and two new censors were chosen. (Liv. vi. 27, ix. 34, xxiv. 43, xxvii. 6.)

The censors were elected in the comitia centuriata held under the presidency of a consul. (Gell. xiii. 15; Liv. xl. 45.) It was necessary that both censors should be elected on the same day; and accordingly, if the voting for the second was not finished, the election of the first went for nothing, and new comitia had to be held. (Liv. ix. 34.) The comitia for the election of the censors were held under different auspices from those at the election of the consuls and praetors; and the censors were accordingly not regarded as their colleagues, although they likewise possessed the *maxima auspicia* (Gell. xiii. 15). The comitia were held by the consuls of the year very soon after they had entered upon their office (Liv. xxiv. 10, xxxix. 41); and the censors, as soon as they were elected and the censorial power had been granted to them by a *lex centuriata*, were fully installed in their office. (Cic. *de Leg. Agr.* ii. 11, 26; Liv. xl. 45.) As a general rule the only persons chosen for the office were those who had previously been consuls; but a few exceptions occur. At first there was no law to prevent a person being censor a second time; but the only person who was twice elected to the office was C. Marcius Rutilus in B.C. 265, who received in consequence the surname of Censorinus (Plut. *Coriol.* 1; Val. Max. iv. 1, § 3). A law was shortly afterwards passed enacting that no one should be chosen censor a second time (Mommsen
Staatsr. i.^{2} 502, note 2).

The censorship is distinguished from al
Roman magistracies by the fact that it w
conferred for a definite period. The
were appointed to discharge a special du
ut conderent lustrum; and although in
this duty was performed once in ever
years (*quinto quoque anno*), in practi
interval varied considerably, partly ow
accidental irregularities, and partly from
interpretation of the language employed,
made the interval one of five, not fou
(cf. Mommsen, *Staatsr.* ii. 331). The
during which the lustra were held w
greatest regularity is the half-century fo
the outbreak of the Second Punic War;
this time there are numerous irregularit
after it they occur occasionally. Accor
Livy (iv. 24; cf. ix. 33), the censors w
quired by a law of the dictator Mam. A
to resign office within eighteen months
appointment; but it is a probable conjec
Mommsen's that this limitation was int
from the first, and that they were
eighteen months from the time of their
for a duty which the consuls had been r
to complete within a year. The cens
held a very peculiar position with res
rank and dignity. No imperium was b
upon them, and accordingly they had no
(Zonar. vii. 19.) The *jus censurae* was
to them by a *lex centuriata*, and not,
curiae, and in official precedence they
below the consuls and praetors, and eve
the magister equitum. (Mommsen, *Röm.*
i. 543, note 3.) But notwithstanding t
censorship was regarded as, in some
the highest dignity in the state, wi
exception of the dictatorship; it was
ἀρχή, a *sanctus magistratus*, to whi
deepest reverence was due. (Plut. *Ca*
16, *Flamin.* 18, *Camill.* 2, 14, *Aemil. Pa*
Cic. *ad Fam.* iii. 10, 11.) The high r
dignity, which the censorship obtaine
owing to the various important duties gr
entrusted to it, and especially to its po
the *regimen morum*, or general control o
conduct and morals of the citizens;
exercise of which power they were re
solely by their own views of duty, and w
responsible to any other power in th
(Dionys. *Excerpt.* xx. 13, Kiessling;
24, xxix. 37; Val. Max. vii. 2, § 6.
censors possessed of course the sella
(Liv. xl. 45), and during their term
wore the *toga praetexta* (Zonar. vii. 19;
xiv. p. 660 c), but were honoured at
with the *toga purpurea* (cf. Polyb. vi.
Mommsen, *Staatsr.* i. 425, note 3). The
of a censor was always conducted wit
pomp and splendour, and hence a *funus ce*
was voted even to the emperors (Tac.
15; xiii. 2).

The censorship continued in existence
years, namely, from B.C. 443 to B.C.
during this period many lustra passed b
out any censor being chosen at all. Ac
to one statement, the office was abolis
Sulla (Schol. Gronov. *ad* Cic. *Div. in Ca*
p. 384, ed. Orelli), but the authority on
this statement rests is not of much weig

the fact itself is not probable (cf. Cic. *in Pis.* 5, 10); for although there was no census during the two lustra which elapsed from Sulla's dictatorship to the first consulship of Pompeius (B.C. 82–70), there is no reference to any law restoring it, and censors reappear in B.C. 70. Its power was limited by one of the laws of the tribune Clodius (B.C. 58), which prescribed certain regular forms of proceeding before the censors in expelling a person from the senate, and the concurrence of both censors in inflicting this degradation. (Dio Cass. xxxviii. 13; Cic. *pro Sest.* 25, 55, *de Prov. Cons.* 19, 46.) This law, however, was repealed in the third consulship of Pompey (B.C. 52), on the proposition of his colleague Caecilius Metellus Scipio (Dio Cass. xl. 57), but the censorship never recovered its former power and influence. During the civil wars which followed soon afterwards no censors were elected; and it was only after a long interval that they were again appointed, namely in B.C. 22, when Augustus caused L. Munatius Plancus and Paullus Aemilius Lepidus to fill the office. (Suet. *Aug.* 37, *Claud.* 16; Dio Cass. liv. 2.) This was the last time that such magistrates were appointed; the emperors in future discharged the duties of their office under the name of *Praefectura Morum.* Some of the emperors sometimes took the name of censor when they actually held a census of the Roman people, as was the case with Claudius, who appointed the elder Vitellius as his colleague (Suet. *Claud.* 16; Tac. *Ann.* xii. 4, *Hist.* i. 9), and with Vespasian, who likewise had a colleague in his son Titus. (Suet. *Vesp.* 8, *Tit.* 6.) Domitian assumed the title of *censor perpetuus* (Dio Cass. liii. 18), but this example was not imitated by succeeding emperors. In the reign of Decius we find the elder Valerian nominated to the censorship without a colleague (Trebell. Pollio, *Valer.* 1, 2); and towards the end of the fourth century it was proposed to revive the censorship (Symmach. *Ep.* iv. 29, v. 9), but this design was never carried into effect.

The duties of the censors may be divided into three classes, all of which were however closely connected with one another: I. *The Census*, or register of the citizens and of their property, in which were included the *lectio senatus*, and the *recognitio equitum;* II. *The Regimen Morum;* and III. *The administration of the finances of the state*, including also the superintendence of the public buildings and the erection of all new public works. The original business of the censorship was at first of a much more limited kind, and was restricted almost entirely to taking the census (Liv. iv. 8); but the possession of this power gradually brought with it fresh power and new duties, as is shown below. A general view of these duties is briefly expressed in the following passage of Cicero (*de Leg.* iii. 3, 7):—"Censores populi aevitates, suboles, familias pecuniasque censento: urbis templa, vias, aquas, aerari [so Mommsen: MSS. *aerarium*] vectigalia tuento: populique partes in tribus discribunto: exin pecunias, aevitates, ordines partiunto: equitum, peditumque prolem describunto: caelibes esse prohibento: mores populi regunto: probrum in senatu ne relinquunto."

I. THE CENSUS, the first and principal duty of the censors, for which the proper expression is *censum agere* (Liv. iii. 3, 22, iv. 8), was always held in the Campus Martius; like all public acts concerning the Roman people, viewed as an *exercitus:* and from the year B.C. 435 a special building called *Villa Publica*, which was erected for that purpose by the second pair of censors, C. Furius Pacilus and M. Geganius Macerinus (Liv. iv. 22; Varr. *R. R.* iii. 2), was used as the censor's office, the actual census, however, being conducted in the open air. But all other business of the censors, including the *recognitio equitum*, was transacted in the forum. An account of the formalities with which the census was opened is given in a fragment of the *Tabulae Censoriae*, preserved by Varro (*L. L.* vi. 86, 87, ed. Müller). After the auspicia had been taken, the citizens were summoned by a public crier (*praeco*) to appear before the censors. Each tribe was called up separately (Dionys. v. 75); and the names in each tribe were probably taken according to the lists previously made out on the basis of the latest *census* by the *curatores* of the tribes. Every paterfamilias had to appear in person before the censors, who were seated in their curule chairs; and those names were taken first which were considered to be of good omen, such as Valerius, Salvius, Statorius, &c. (Festus, s. v. *Lacus Lucrinus;* Schol. Bob. *ad* Cic. *pro Scaur.* p. 374, ed. Orelli.) The censors do not appear to have considered themselves responsible for determining whether a man claiming to be enrolled was really entitled to the franchise; hence the occurrence of a name on the censor's roll was evidence merely that the franchise had been claimed, not that there was any justification for the claim (Cic. *pro Arch.* 5, 11). The census was conducted *ad arbitrium censoris;* but the censors laid down certain rules (Liv. iv. 8, xxix. 15), sometimes called *leges censui censendo* (Liv. xliii. 14), in which mention was made of the different kinds of property subject to the census, and the way in which their value was to be estimated. According to these rules, each citizen had to give an account of himself, of his family, and of his property upon oath, *ex animi sententia.* (Dionys. iv. 15; Liv. xliii. 14.) First he had to give his full name (*praenomen*, *nomen*, and *cognomen*) and that of his father, or if he were a freedman that of his patron, and he was likewise obliged to state his age. He was then asked, *Tu, ex animi tui sententia, uxorem habes?* and if married he had to give the name of his wife, and likewise the number, names, and ages of his children, if any. (Gell. iv. 20; Cic. *de Orat.* ii. 64, 260; Tab. Heracl. 142 (68); Dig. 50, tit. 15, s. 3.) Single women who were *sui iuris* (*viduae*) and orphans (*orbi orbaeque*) were represented by their tutores; their names were entered in separate lists, and they were not included in the sum total of capita. (Comp. Liv. iii. 3, *Epit.* 59.) After a citizen had stated his name, age, family, &c., he then had to give an account of all his property, so far as it was subject to the census. In making this statement he was said *dedicare* or *deferre in censum*, or sometimes *censere* or *censeri*, as a deponent, "to value or estimate himself," or as a passive, "to be valued or estimated:" the censor, who received the statement, was also said *censere*, as well as *accipere censum.* (Comp. Cic. *pro Flacc.*

32, 79; Liv. xxxix. 15.) Only such things were liable to the census (*censui censendo*) as were property *ex jure Quiritium*. At first each citizen appears to have merely given the value of his whole property in general without entering into details (Dionys. iv. 15; Cic. *de Leg.* iii. 3, 7; Festus, s. v. *Censores*); but it soon became the practice to give a minute specification of each article, as well as the general value of the whole. (Comp. Cic. *pro Flacc.* 32, 79; Gell. vii. 11; Plut. *Cat. Maj.* 18.) Land formed the most important article in the census; but public land, the *possessio* of which only belonged to a citizen, was excluded as not being Quiritarian property. If we may judge from the practice of the imperial period, it was the custom to give a most minute specification of all such land as a citizen held *ex jure Quiritium*. He had to state the name and situation of the land, and to specify what portion of it was arable, what meadow, what vineyard, and what olive-ground; and to the land thus minutely described he had to affix his own valuation. (Dig. 50, tit. 15, s. 4.) Slaves and cattle formed the next most important item, as constituting along with the land the necessaries of agriculture, and being *res mancipi* (=*res censui censendo*, Cic. *pro Flacc.* 32, 79). The censors also possessed the right of calling for a return of such objects as had not usually been given in, such as clothing, jewels, and carriages. (Liv. xxxix. 44; Plut. *Cat. Maj.* 18.) They undoubtedly possessed the power of setting a higher valuation on the property than the citizens themselves had put. It is in fact expressly stated that on one occasion they made an extravagant surcharge on articles of luxury (Liv. xxxix. 44; Plut. *Cat. Maj.* 18); and even if they did not enter in their books the property of a person at a higher value than he returned it, they accomplished the same end by compelling him to pay down the tax upon the property at a higher rate than others. The tax (*tributum*) was usually one per thousand upon the property entered in the books of the censors; but on one occasion the censors, as a punishment, compelled a person to pay eight per thousand (*octuplicato censu*, Liv. iv. 24). The censors were aided by certain assessors (*in consilio vocati*) and *iuratores* (Liv. xxxix. 44; Plaut. *Trin.* 878, *Poen. prol.* 56), who administered the oath, *i.e.* asked the formal questions.

A person who voluntarily absented himself from the census, and thus became *incensus*, was subject to the severest punishment. Servius Tullius is said to have threatened the incensus with imprisonment and death (Liv. i. 44); and in the republican period he might be sold by the state as a slave (Cic. *pro Caecin.* 34, 99). In the later times of the republic a person who was absent from the census might be represented by another, and thus be registered by the censors (Varr. *L. L.* vi. 86). Whether the soldiers who were absent on service had to appoint a representative, may be questioned. In ancient times the sudden breaking out of a war prevented the census from being taken (Liv. vi. 31), because a large number of the citizens would necessarily be absent. It is supposed from a passage in Livy (xxix. 37), that in later times the censors sent commissioners into the provinces with full powers to take the census of the Roman soldiers there; but this seems
to have been only a special case. It
contrary, probable from the way
Cicero pleads the absence of Archias f
with the army under Lucullus, as a
reason for his not having been enrol
census (*pro Arch.* 5, 11), that servi
army was a valid excuse for absence
the Social War the *census* of the
taken in their own towns: and thi
seems to have continued after they
admitted to the franchise (Cic. *pro*
41).

After the censors had received the na
the citizens with the amount of their
they then had to make out the li
tribes, and also of the classes and

position of each citizen in the state
mined by the amount of his property.
CENTURIATA.] These lists formed
important part of the *Tabulae*
under which name were included
documents connected in any way
discharge of the censors' duties. (C
iii. 3, 7; Liv. xxiv. 18; Plut. *Cat.*
Cic. *de Leg. Agr.* i. 2.) These lists,
least as they were connected with th
of the state, were deposited in the
which was the temple of Saturn (
37); but the regular depository f
archives of the censors was in ear
the Atrium Libertatis, near the Vil
(Liv. xliii. 16, xlv. 15), and in later
temple of the Nymphs (Cic. *pro Mi*
which has recently been discovered
(*Ephem. Epigr.* i. 35).

Besides the arrangement of the ci
tribes, centuries, and classes, the c
also to make out the lists of the se
the ensuing lustrum, or till new ce
appointed; striking out the names
they considered unworthy, and mak
tions to the body from those who w
fied. This important part of their
explained under SENATUS. In the sa
they held a review of the *equites eq*
and added and removed names as th
proper. [EQUITES.]

After the lists had been completed,
ber of citizens was counted up, and
total announced; and accordingly we
in the account of a census, the numb
zens is likewise usually given. Th
such cases spoken of as *capita*, somet
the addition of the word *civium*, and
not; and hence to be registered in
was the same thing as *caput habere*.

II. REGIMEN MORUM. This was
important branch of the censors' duti
one which caused their office to be th
vered and the most dreaded in the Ro
It is not mentioned in connexion with
tution of the censorship (Liv. iv.
appears in the account of the second *l*
iv. 24). Its main purpose was to
how far each citizen fulfilled his dut
the state; but the limits of the inq
defined only by the discretion of th
In this manner the censors graduall
possessed of a complete superintend
the whole public and private life of
zen. They were constituted the conse

public and private virtue and morality; they were not simply to prevent crime or particular acts of immorality, but their great object was to maintain the old Roman character and habits, the *mos majorum*. The proper expression for this branch of their power was *regimen morum* (Cic. *de Leg.* iii. 3, 7; Liv. iv. 8, xxiv. 18, xl. 46, xli. 27, xlii. 3; Suet. *Aug.* 27), which was called in the times of the empire *cura* or *praefectura morum*. The punishment inflicted by the censors in the exercise of this branch of their duties was called *Nota* or *Notatio*, or *Animadversio Censoria*. In inflicting it they were guided only by their conscientious convictions of duty; they had to take an oath that they would act neither through partiality nor favour; and, in addition to this, they were bound in every case to state in their lists, opposite the name of the guilty citizen, the cause of the punishment inflicted on him,—*Subscriptio censoria*. (Liv. xxxix. 42; Cic. *pro Cluent.* 6, 42–48; Gell. iv. 20.) A citizen was usually required to appear before the censors in his own defence, when threatened with the *nota;* and in some cases a censor required the appearance of a prosecutor, before he would take any action (Cic. *pro Cluent.* 48, 133; cf. Val. Max. iv. 1, 10). In fact, a kind of trial was held, but one not fettered by the ordinary legal forms of procedure.

This part of the censors' office invested them with a peculiar kind of jurisdiction, which in many respects resembled the exercise of public opinion in modern times; for there are innumerable actions which, though acknowledged by every one to be prejudicial and immoral, still do not come within the reach of the positive laws of a country. Even in cases of real crimes, the positive laws frequently punish only the particular offence, while in public opinion the offender, even after he has undergone punishment, is still incapacitated for certain honours and distinctions which are granted only to persons of unblemished character. Hence the Roman censors might brand a man with their nota censoria in case he had been convicted of a crime in an ordinary court of justice, and had already suffered punishment for it. The consequence of such a nota was only *ignominia* and not *infamia* (Cic. *de Rep.* iv. 6, 6) [INFAMIA], and the censorial verdict was not a *judicium* or *res judicata* (Cic. *pro Cluent.* 42, 117), for its effects were not lasting, but might be removed by the following censors, or by a lex. A nota censoria was moreover not valid, unless both censors agreed. The ignominia was thus only a transitory capitis deminutio, which does not even appear to have deprived a magistrate of his office (Liv. xxiv. 18), and certainly did not disqualify persons labouring under it for obtaining a magistracy, for being appointed as judices by the praetor, or for serving in the Roman armies. Mam. Aemilius was thus, notwithstanding the animadversio censoria, made dictator. (Liv. iv. 31.)

A person might be branded with a censorial nota in a variety of cases, which it would be impossible to specify, as in a great many instances it depended upon the discretion of the censors and the view they took of a case; and sometimes even one set of censors would overlook an offence which was severely chastised by their successors. (Cic. *de Senect.* 12, 42.) But the offences which are recorded to have been punished by the censors are of a threefold nature.

1. Such as occurred in the private life of individuals, *e.g.* (*a*) The dissolution of matrimony or betrothment in an improper way, or for insufficient reasons. (Val. Max. ii. 9, § 2.) (*b*) The obligation of marrying was frequently impressed upon the citizens by the censors, and the refusal to fulfil it was punished with a fine [AES UXORIUM]. But celibacy in itself can hardly have been visited with a *nota;* for, however undesirable, it cannot have been regarded as a *probrum*. (*c*) Improper conduct towards one's wife or children, as well as harshness or too great indulgence towards children, and disobedience of the latter towards their parents. (Plut. *Cat. Maj.* 17; compare Cic. *de Rep.* iv. 6, 16; Dionys. xx. 3.) (*d*) Inordinate and luxurious mode of living, or an extravagant expenditure of money. A great many instances of this kind are recorded. (Liv. *Epit.* 14, xxxix. 44; Plut. *Cat. Maj.* 18; Gellius, iv. 8, xvii. 21, 39; Vell. ii. 10; Val. Max. ii. 9, § 4.) At a later times the leges sumptuariae were made to check the growing love of luxuries. (*e*) Neglect and carelessness in cultivating one's fields. (Gell. iv. 12; Plin. *H. N.* xviii. § 11.) (*f*) Cruelty towards slaves or clients. (Dionys. xx. 3.) (*g*) The carrying on of a disreputable trade or occupation (Dionys. *l. c.*), such as acting in theatres. (Liv. vii. 2.) (*h*) Legacy-hunting, defrauding orphans, &c.

2. Offences committed in public life, either in the capacity of a public officer or against magistrates. (*a*) If a magistrate acted in a manner not befitting his dignity as an officer, if he was accessible to bribes, or forged auspices. (Cic. *de Senect.* 12, 42; Liv. xxxix. 42; Val. Max. ii. 9, § 3; Plut. *Cat. Maj.* 17; Cic. *de Div.* i. 16, 29.) (*b*) Improper conduct towards a magistrate, or the attempt to limit his power or to abrogate a law which the censors thought necessary. (Liv. iv. 24; Cic. *de Orat.* ii. 64, 260; Val. Max. ii. 9, § 5; Gellius, iv. 20.) (*c*) Perjury. (Cic. *de Off.* i. 13; Liv. xxiv. 18; Gell. vii. 18.) (*d*) Neglect, disobedience, and cowardice of soldiers in the army. (Val. Max. ii. 9, § 7; Liv. xxiv. 18, xxvii. 11.) (*e*) The keeping of the equus publicus in bad condition. [EQUITES.]

3. A variety of actions or pursuits which were thought to be injurious to public morality might be forbidden by the censors by an edict (Gellius, xv. 11), and those who acted contrary to such edicts were branded with the nota and degraded. For an enumeration of the offences that might be punished by the censors with ignominia, see Mommsen, *Staatsr.* ii. 364–368.

The consequence of the censor's *nota* was the removal of the citizen thus censured from the tribe to which he belonged, and his degradation to the *aerarii*. The former act was the main one, and therefore in exact language is always mentioned first ("tribu movere et aerarium facere:" Liv. iv. 24, 7; xxiv. 43, 3; xliv. 16, 8; xlv. 15, 8), though sometimes the order is reversed. In the earlier times, when the tribes represented the freeholders [TRIBUS], this degradation brought with it the serious disadvantage that the degraded citizen paid taxes on the whole of his property, and not merely on his landed estate. But after the changes introduced by Appius Claudius, by which the *aerarii* were included in the *tribus urbanae*, and the distinction between *aerarii* and *tribules* thus ceased to exist, the phrase *tribu movere*, or what was now the same thing *in aerarios referre*, came to mean the removal from the country to the less respectable city tribes. In the case of a senator this degradation involved the loss of his place in the senate, which could however be recovered by subsequent election to a curule office. (Cic. *pro Cluent.* 42, 117.) In the case of an *eques*, it accompanied the *ademptio equi*. Women, as not included among the *tribules*, did not come at all under the control of the censors.

III. The Administration of the Finances of the State was another part of the censors' office. In the first place the *tributum*, or property-tax, had to be paid by each citizen according to the amount of his property registered in the census, and, accordingly, the regulation of this tax naturally fell under the jurisdiction of the censors. (Comp. Liv. xxxix. 44.) [Tributum.] They also had the superintendence of all the other revenues of the state, the *vectigalia*, such as the tithes paid for the public lands, the salt works, the mines, the customs, &c. [Vectigalia.] All these branches of the revenue the censors were accustomed to let out to the highest bidder for the space of a lustrum or five years. The act of letting was called *venditio* or *locatio* (cf. Fest. p. 376, *venditiones dicebantur olim censorum locationes*), and seems to have taken place in the month of March (Macrob. *Sat.* i. 12), in a public place in Rome (Cic. *de Leg. Agr.* i. 37; ii. 21, 55). The terms on which they were let, together with the rights and duties of the purchasers, were all specified in the *leges censoriae*, which the censors published in every case before the bidding commenced. (Cic. *ad Qu. Fr.* i. 1, § 12, *Verr.* iii. 7, 18, *de Nat. Deor.* iii. 19, 49; Varr. *de Re Rust.* ii. 1.) For further particulars see Publicani. The censors also possessed the right, though probably not without the concurrence of the senate, of imposing new vectigalia (Liv. xxix. 37, xl. 51), and even of selling the land belonging to the state (Liv. xxxii. 7). It would thus appear that it was the duty of the censors to bring forward a budget for a lustrum, and to take care that the income of the state was sufficient for its expenditure during that time. So far their duties resembled those of a modern minister of finance. The censors, however, did not receive the revenues of the state. All the public money was paid into the aerarium, which was entirely under the jurisdiction of the senate; and all disbursements were made by order of this body, which employed the quaestors as its officers. [Aerarium; Senatus.]

In one important department the censors were entrusted with the expenditure of the public money; though the actual payments were no doubt made by the quaestors. The censors had the general superintendence of all the public buildings and works (*opera publica*); and to meet the expenses connected with this part of their duties, the senate voted them a certain sum of money or certain revenues, to which they were restricted, but which they might at the same time employ according to their discretion. (Polyb. vi. 13; Liv.
xliv. 16.) They had to see that the
and all other public buildings were in
state of repair (*aedes sacras tueri* and *sa*
exigere, Liv. xxiv. 18, xxix. 37, xlii. 3
Madvig rightly emends *locare tuenda*
tuenda], xlv. 15), that no public plac
encroached upon by the occupation of
persons (Liv. xliii. 16), and that the aq
roads, drains, &c. were properly atte
[Aquaeductus; Viae; Cloaca.]
pairs of the public works and the ke
them in proper condition were let ou
censors by public auction to the lowest
just as the *vectigalia* were let out to the
bidder. These expenses were call
tributa,—a remarkable phrase, probably
to imply the complete discretion wh
senate desired to reserve to itself in c
or refusing the application of a magis
the usual grants; and hence we freque
vectigalia and *ultro tributa* contrasted
another. (Liv. xxxix. 44, xliii. 16;
Municip. l. 73: "publiceis vectigalibus
tributeis.") The persons who undert
contract were called *conductores*, *man*
demptores, *susceptores*, &c.; and the du
had to discharge were specified in t
Censoriae. The censors had also to sup
the expenses connected with the worsh
gods, even for instance the feeding of t
geese in the Capitol, the contract fo
was always the first given out. (Plut
Rom. 98; Plin. *H. N.* x. § 51; Cic. *pro*
20, 57.) Besides keeping existing publ
in a proper state of repair, the cen
constructed new ones, either for orna
utility, both in Rome and in other
Italy, such as temples, basilicae, theatr
coes, fora, walls of towns, aqueducts,
bridges, cloacae, roads, &c. These wo
either performed by them jointly,
divided between them the money wh
been granted to them by the senate.

[Lustrum.]

In the Roman and Latin colonies and in the municipia there were censors, who likewise bore the name of *quinquennales*. They are spoken of under COLONIA.

A census was usually taken in the provinces, even under the republic (Cic. *Verr.* ii. 53, 131; 56, 139); but there seems to be no single instance of a general census under the empire, with the exception of that mentioned by St. Luke (ii. 2) in the time of Augustus: on which see Mommsen, *Staatsr.* ii. 412, and Meyer, *ad loc.* (Cf. Joseph. *Ant. Jud.* xvii. 13, § 5; xviii. 1, § 1; 2, § 1.) As a rule the census of the various provinces was taken quite independently, often called *censitores*, sometimes by persons of equestrian rank, charged with the census of particular communities or groups of communities, sometimes by imperial *legati pro praetore* appointed for whole provinces (Tac. *Ann.* ii. 6; vi. 41; xiv. 46), sometimes by officials of still higher rank for several provinces together. It was quite in accordance with the principles of imperial government that while the lists, upon which taxation and levies were based, should be kept with great accuracy, and regularly transmitted to Rome, no public or general statement should be made as to the results so obtained (cf. Mommsen, *Staatsr.* ii. 410–413). At Rome the census still continued to be taken under the empire, but the old ceremonies connected with it were no longer continued, and the ceremony of the lustration was not performed after the time of Vespasian. The two great jurists, Paulus and Ulpian, each wrote works on the census in the imperial period; and several extracts from these works are given in a chapter in the Digest (50, tit. 15), to which we must refer our readers for further details respecting the imperial census.

The word *census*, besides the meaning of "valuation" of a person's estate, has other significations, which must be briefly mentioned: 1. It signified the amount of a person's property, and hence we read of *census senatorius*, the estate of a senator; *census equestris*, the estate of an eques. 2. The lists of the censors. 3. The tax which depended upon the valuation in the census. The Lexicons will supply examples of these meanings.

(Becker, *Handbuch der römischen Alterthümer*, vol. ii. part ii. pp. 191–247, with additions and corrections by Mommsen, *Staatsrecht*, vol. ii. pp. 319–461. CENSUA'LES. [CENSOR.]

CENSUS. 1. GREEK. The Greek term for a man's property as ascertained by the census, as well as for the act of ascertaining it, is *τίμημα*. The only Greek state concerning whose arrangement of the census we have any satisfactory information, is Athens; for what we know of the other states is only of a fragmentary nature, and does not enable us to form an accurate notion of their census. Previous to the time of Solon no census had been instituted at Athens, as a citizen's rights were always determined by birth; but, as Solon substituted property for birth, and made a citizen's rights and duties dependent upon his property, it became a matter of necessity to ascertain by a general census the amount of the property of the Athenian citizens. According to his census, all citizens were divided into four classes: 1. *Πεντακοσιομέδιμνοι*, or persons possessing landed property which yielded an annual income of at least 500 medimni of dry or liquid produce. 2. *Ἱππεῖς*, *i.e.* knights or persons able to keep a war-horse, wore those whose lands yielded an annual produce of at least 300 medimni, whence they are also called *τριακοσιομέδιμνοι*. 3. *Ζευγῖται*, *i.e.* persons able to keep a yoke of oxen (*ζεῦγος*), were those whose annual income consisted of at least 150 medimni. 4. The *Θῆτες* contained all the rest of the free population, whose income was below that of the Zeugitae. (Plut. *Sol.* 18, and the Lexicographers, *s. vv.*) These classes themselves were called *τιμήματα*: and the constitution of Athens, so long as it was based upon these classes, was a timocracy (*τιμοκρατία* or *ἀπὸ τιμημάτων πολιτεία*). The highest magistracy at Athens, or the archonship, was at first accessible only to persons of the first class, until Aristides threw all the state offices open to all classes indiscriminately. (Plut. *Arist.* 1, 22.) The maintenance of the republic mainly devolved upon the first three classes, the last being exempted from all taxes. Sometimes we indeed find mention of a *θητικὸν τέλος*, and the expression *θητικὸν τελεῖν*, to pay the tax of *θῆτες* (Lex *ap.* Dem. *c. Macart.* p. 1067, § 54; Bekker, *Anecd. Graec.* p. 261; *Etym. M.* s. v.); but this cannot be understood of a special tax which the fourth class had to pay, but must be explained in a more general sense, for *τέλος τελεῖν* means generally, to perform the duties arising out of persons being connected with one or other of the classes, and need not therefore refer to any special tax.

In regard to the duties which the above-mentioned census imposed upon the first three of the classes, we must distinguish certain personal obligations or liturgies (*λειτουργίαι*) which had to be performed by individuals according to the class to which they belonged [LEITURGIAE], and certain taxes and burdens which were regulated according to the classes; so that all citizens belonging to the same class had the same burdens imposed upon them. As the land in the legislation of Solon was regarded as the capital which yielded an annual income, he regulated his system of taxation by the value of the land which was treated as the taxable capital. There is a passage in Pollux (viii. 130, 132) in which he says that a pentacosiomedimnus expended one talent on the public account, a *ἱππεὺς* thirty minae, and a *ζευγίτης* ten minae. Now this seems to be impossible; for, as Solon (Plut. *Sol.* 23) reckoned the medimnus of dry produce at one drachma, we must suppose that a member of the first class was reckoned to have an annual income of 500 drachmae, or the twelfth part of a talent. But the difficulty may be solved in this manner. The valuation which Solon put upon the land of an Athenian citizen was in reality neither the real value of the property, nor the amount of the property tax, but only a certain portion of the real property which was treated as the taxable capital. Solon in his census ascertained a person's landed property from its net annual produce; and the number of medimni which it was supposed to produce were reckoned as so many drachmae. But the produce was probably not calculated higher than was done when the estate was let out to farm. The rent paid by a farmer was probably not much more than 8 per cent., as it was in the time of Isaeus (*Or.* 11 [*Hagn.*], § 42). Now, if we suppose that in the time of Solon it was $8\frac{1}{3}$ per cent., the net produce of an estate was exactly $\frac{1}{12}$ of the value of the property, and accordingly the value of the property of a person belonging to the first class was one talent; in the second, 3600 drachmae; and in the third, 1800 drachmae. Solon, in taxing the citizens, was wise enough to see that the same standard could not be applied to all the three classes; for the smaller a person's income is, the smaller ought to be the standard of taxation. Accordingly, a person belonging to the first class, being the wealthiest, had to pay a tax on his entire property, while only a portion of the property of the persons belonging to the two other classes was regarded as taxable capital; viz. persons of the second paid the tax only of $\frac{5}{6}$, and persons of the third class only of $\frac{5}{9}$ of their property. Lists of this taxable property (ἀπογραφαί) were kept at first by the naucrari, who also had to conduct the census (Hesych. *s. v.* ναύκλαρος), and afterwards by the demarchi (Harpocrat. *s. v.* δήμαρχοι). As property is a fluctuating thing, the census was repeated from time to time, but the periods differed in the various parts of Greece, for in some a census was held every year, and in others every two or four years. (Aristot. *Polit.* v. 8.) Every person had conscientiously to state the amount of his property; and if there was any doubt about his honesty, it seems that a counter-valuation (ἀντιτίμησις) might be made. Now, supposing that all the taxable capital of the Athenian citizens was found to be 3000 talents, and that the state wanted 60 talents, or $\frac{1}{50}$ part of it, each citizen had to pay away $\frac{1}{50}$ part of his taxable property: that is, a person of the first class paid 120 drachmae (the 50th part of 6000); a person of the second, 60 drachmae (the 50th part of 3000); and a person of the third class, 20 drachmae (the 50th part of 1000). It is, however, not improbable that persons belonging to the same class may have had to pay a different amount of taxes according as their property was equal to the minimum or above it; and Böckh, in his *Public Economy of Athens*, has made out a table, in which each class is subdivided into three sections.

This system of taxation according to classes, and based upon the possession of productive estates, underwent a considerable change in the time of the Peloponnesian war, though the division into classes itself continued to be observed for a considerable time after. As the wants of the republic increased, and as many citizens were possessed of large property without being landed proprietors, the original land-tax was changed into a property-tax. In this manner we must explain the proposal of Euripides, shortly before B.C. 393, to raise 500 talents by imposing a tax of one-fortieth part. (Aristoph. *Eccles.* 823, &c.) For the taxable capital, viz. 20,000 talents, far exceeds the amount of all the landed property in Attica.
This property tax, which was subst
the land tax, was called εἰσφορά,

CENTONA'RII. [CENTO.]

CENTUM'VIRI. The history of
of the Centumviri is obscure. It for
the two permanent courts or collegia
judges, instituted probably by Servi
(Niebuhr, i. 472), and exercising juri
least from the time of that king unti
the fall of the Western Empire.

collegium—that of the decemviri—was, according to Pomponius (Dig. i. 2, 2, 29; confirmed by Plin. *Ep.* v. 21, and Dio Cass. 54, 26), in some way combined with the centumviri in the presidential functions, though they had an exclusive jurisdiction in questions relating to freedom. The actual number of centumviri varied at different periods. Festus (s. v. *centumviralia judicia*) says that they were nominated by the praetor, three being taken from each of the thirty tribes: the ninety thus obtained would, with the presiding decemviri, make up the exact sum which the name denotes. When the number of tribes was increased in B.C. 241 to 35, there were 105 centumviri; but the old name was retained, according to Festus, "quo facilius nominarentur," and under the empire the number had risen to 180 (Plin. *Ep.* vi. 33). At this time it is improbable that they were any longer selected from the tribes, between whose number and their own there was no relation: from the passage of Dio Cassius referred to above, one might conjecture that they were taken by lot from the *decuriae judicum* instituted by Augustus, and from Ovid (*Trist.* ii. 96) that no one could escape the duty if drawn. It would seem that under the republic the court had no jurisdiction unless the whole number of members sat together, for it was only in the aggregate that they represented the people; but later (probably under Augustus) it was divided into four divisions or sub-courts, which sat and judged apart and independently of each other for the quicker despatch of business (Quintil. *Inst.* xiii. 5, 6), though some causes were heard by two divisions sitting together (*ib.* v. 2, 1), and others even by the whole united body (*ib.* vi. 33), which then (Plin. *Ep.* v. 21), as under the republic, was presided over by a praetor. The old custom was for the court to sit in the open forum, but in Quintilian's time (xii. 5, 6) the four divisions sat on raised seats (*tribunalia*) in the Basilica Julia.

The procedure before the centumviri was always that of the *legis actio* called *sacramentum.* Even when the *legis actiones* in the aggregate were swept away by the Lex Aebutia, *circ.* 240 B.C. (Voigt), the old process was expressly retained by that statute for *centumviralia judicia* (Gaius, iv. 31; Gell. xvi. 10); so that where an action was to be tried in this manner the solemn formalities of *sacramentum* (described by Gaius, iv. 16, 17) had first to be gone through *in jure*, before the praetor, who then remitted it for trial to the centumviri: but the latter were never instructed (like a *judex privatus*) by formula [ACTIO], probably because they could get all the information which a judge got from the formula from the praetor himself, who was their president.

It seems to be the better opinion that the jurisdiction of the centumviri was limited to civil causes: the assumption that they dealt also with criminal matters (for which the only substantial authority is Phaedrus, *Fab.* iii. 10) is rebutted by Dionys. iv. 25, and appears improbable from all our knowledge of the subject. The civil suits which fell under their cognisance specially were those known as Real actions (Cic. *de Orat.* i. 38, 173), while the decemviri were more particularly concerned with questions of status (*libertas, civitas, familia:* Cic. *pro Caec.* 33, 97; *pro Domo* 29, 78). The Real actions comprise all suits claiming property or *jura in re aliena*, such as a right of way, a usufruct, &c., and those relating to inheritances; the scope of the centumviral jurisdiction is denoted by the planting of the *hasta* (the symbol of Quiritarian ownership) in the ground where the court was sitting (Suet. *Octav.* 36; Quintil. *Inst.* v. 2, 1; Gaius, iv. 16), and by the use of the *festuca* in the sacramental procedure.

The constant tendency, however, was to narrow the jurisdiction of the centumviral court. The effect of the Lex Aebutia was to establish an alternative procedure in Real actions: they might in future be tried before the centumviri by *sacramentum*, or before a single judex (instructed by formula), either by *formula petitoria* or *per sponsionem* (Gaius, iv. 91); and all the evidence goes to show that either the praetor or the parties preferred trial by a single judex. At least, under the empire, actions relating to inheritances and *causae centumvirales* are almost considered synonymous expressions (Plin. *Ep.* v. 1, 7; Quintil. *Inst.* iii. 10, 3, vii. 2, 5; Paul. *Sent. rec.* iv. 16, 2; Hieron. *Ep. ad Dom.* 50), and it is not improbable that the Lex Julia de judiciis privatis of Augustus (Gaius, iv. 30) limited the centumviri to causes of this kind. The special sphere of their activity was the *Querela inofficiosi testamenti;* a remedy which had entirely originated in the practice of their court. Cicero (*de Orat.* i. 38, 56; *pro Caec.* 18, 53) and Quintilian (*Inst.* iv. 2, 5) speak of the subtle nature of many of the questions which came before the centumviri; and the younger Pliny, who practised in their court (*Ep.* ii. 18), makes frequent allusion to it in his letters (i. 5, v. 50, ix. 23): it is also referred to in Dig. 5, 2, 13; *ib.* 17, pr.; 34, 3, 30; and in Cod. 3, 31, 12, pr.; 6, 28, 4, pr.

Fuller information on the subject will be found in Bethmann-Hollweg, *Ueber die Competenz des Centumviralgerichts* (Savigny, *Zeitschrift*, v. 11); Tigerström, *de judicibus apud Romanos;* C. A. Schneider, *de Centumviralis judicii apud Romanos origine;* Zumpt, *Ueber Ursprung, Form, und Bedeutung des Centumviralgerichts;* C. Janssen, in *Monogr. über verschied. Theile der Rechtswissenschaft.* [J. B. M.]

CENTU'RIA. [AGRIMETATIO, p. 85 *a.*]

CENTU'RIA. [COMITIA; EXERCITUS.]

CENTURIA'TA COMI'TIA. [COMITIA.]

CENTU'RIO. [EXERCITUS.]

CENTUSSIS. [AS.]

CEPOTA'PHIUM (*κηποτάφιον*), a tomb in a garden, of which Virgil's tomb on the hill of Posilipo is a well-known example. For further details on the practice of burying in gardens, see FUNUS. There is a monograph by Van Goens, *de Cepotaphiis*, 1763. [W. W.]

CERA (*κηρός*), wax. For its employment by the athletae, see CEROMA; in painting, see PICTURA; as a writing material, see TABULAE and TESTAMENTUM. [W. S.]

CERCU'RUS (*κέρκουρος, κερκοῦρος*), a light, swift-sailing vessel, used both in war and in commerce, is first mentioned in the Persian wars (Herod. vii. 97). Its invention is attributed by Pliny (*H. N.* vii. § 208) to the Cypriotes, by others to the Corcyraeans (Suid. *s. v.*), while some modern writers derive its name from its resemblance to a fish of this name (Plin. *H. N.* xxxii. § 152). This kind of ship is mentioned by several writers. (Harpocrat., Hesych. *s. v.*; Diod. *Excerpt.* 506, 61; Lucil. *ap.* Non. 533, 27; Plaut. *Merc.* i. 1, 86; *Stich.* ii. 2, 44; Liv. xxxiii. 19.) [NAVIS.] [W. S.]

CERDO (κέρδων), a name applied to slaves or lower class of workmen (Juv. iv. 153, viii. 182; Pers. iv. 51), sometimes with the additional name of the trade, as *sutor cerdo*, a cobbler (Mart. iii. 59); *cerdo faber*, a smith (Spon, *Misc. Erud. Ant.* 221). [W. S.]

CEREVI'SIA. [CERVESIA.]

CERIA'LIA, CERIA'LES LUDI (the spelling *Cereales* is incorrect: Mommsen, *Staatsr.* ii. 451, note 2), festivals celebrated at Rome in honour of Ceres. In B.C. 493 the worship of Demeter (under the name of the old Italian goddess Ceres) was introduced at Rome by the direction of the keepers of the Sibylline books, and a temple was built in her honour (*aedes Cereris Liberi Liberaeque*, usually called *aedes Cereris*) near the Circus Maximus. The ritual was entirely Greek, the priestesses were Greeks, and the prayers offered were in Greek (Cic. *pro Balb.* 24, 55; *de Leg.* ii. 9, 21; 15, 37). In connexion with this worship, games were instituted under the direction of the plebeian aediles. The festival was properly a plebeian one, but the patricians were invited to take part in it (Gell. xviii. 2, 11). At first the games were held only on extraordinary occasions (Liv. x. 23; xxx. 39), but afterwards they were celebrated annually from the 12th to the 19th of April, the last day being called especially the *Cerialia.* This spring festival was intended to commemorate the return of Proserpine to earth; hence all who took part in it were dressed in white. No bloody sacrifice was permitted, except that of a sow (Ov. *Fast.* iv. 414); the offerings consisted of cakes, honey, and incense. It was celebrated with games in the circus, but with no scenic representations before the time of Augustus (Ritschl, *Parerga*, p. 287). On the last day there was in the country a procession round the fields (Verg. *Georg.* i. 345), in the town a procession to the circus (Ov. *Fast.* iv. 389; Varro, *de Re Rust.* i. 2, 11).

A second festival, the *sacrum anniversarium Cereris*, was held in August (Liv. xxii. 56), and was a thanksgiving feast, belonging to the *sacra publica* (Cic. *de Leg.* ii. 9, 21), but observed only by women, who were dressed in white, and brought the first-fruits to the goddess. They prepared themselves for it by fasting and separating themselves from their husbands for nine days. (Ov. *Met.* x. 431 ff.) (Marquardt, *Röm. Staatsv.* iii. pp. 346-350; Preller, *Röm. Myth.* pp. 432 ff.) [A. S. W.]

CE'RNERE HEREDITA'TEM. [HERES.]

CER'NUUS. [SALTATIO.]

CERO'MA (κήρωμα), "a wax composition," with different references:—

1. A *plaster*, with wax as the principal ingredient (Hippocr. 397, 48; 398, 54; 402, 27, ed. Foesius); or, like *cerion*, an *ulcer* exuding wax-like matter (Plin. Val. i. 25 *fin.*).

2. A mixture of oil, wax, and earth, with which athletes under the Roman empire rubbed themselves before wrestling (Mart. iv. 19, vii. 32; Plin. *H. N.* xxxv. § 168; Plut. ii. 638 D): *femineum ceroma* (Juv. vi. 246). To avoid this

incerta when not. The first was the
where the claim was for an ascertain
money (Gaius, iv. 50). In all other
condemnatio would either be absolut
(or *infinita*, Gaius, iv. 51), as in a R
or *incerta cum taxatione*, e.g. "ju

duntaxat decem milia condemna:" here the judge might fix the damages below the sum named, but he could not exceed it without rendering himself liable to an action (Gaius, iv. 52). [J. B. M.]

CERU'CHI. [Navis.]

CERVE'SIA, CERVI'SIA, CEREVI'SIA (ζῦθος), ale or beer, a beverage scarcely ever drunk by the ancient Greeks and Romans, although it was very generally used by the surrounding nations, whose soil and climate were less favourable to the growth of vines ("in Gallia, aliisque provinciis," Plin. *H. N.* xxii. § 164; Theophrast. *de Caus. Plant.* vi. 11; Diod. Sic. iv. 2, v. 26; Strab. xvii. 2, 5; Tac. *Germ.* 23).

Herodotus's statement that the Egyptians drank "barley-wine" is supported by the inscriptions, in which it is called *hak*, *hank* or *hnk*, and by Strab. xvii. 1, 14, and Diod. i. 34, who describes it as a beverage almost as fragrant as wine and calls it ζῦθος: while Columella (x. 114) tells us that the *radix Assyria* and lupine entered into its composition, the former doubtless to give it fragrance, the latter to serve the same purpose as the modern hop. But the methods of its preparation varied (Strab. ii. 5). A similar drink was made by the Ethiopians from millet and barley (*ib.* xvii. 2, 2).

The beer or barley-wine of Crete was known as κόρμα or κοῦρμι (Diosc. ii. 110). A similar beverage passed under the name of βρῦτον in the North of Greece and Asia Minor, being made of barley by the Phrygians and Paeonians, of barley or of roots by the Thracians, while the Paeonians also made παραβίας or παραβίη from millet and fleabane (κόνυζα). Of the barley drink called πῖνον Aristotle tells us that those inebriated by it fall on the back and on no other part of the body (Athen. x. p. 447). We are told by Xenophon that the Armenians, instead of drinking their ale or beer out of cups, placed it before them in a large bowl (κρατήρ). This being full to the brim with the grains as well as the fermented liquor, the guests, when they pledged one another, drank together out of the same bowl by stooping down to it, although, when this token of friendship was not intended, they adopted the more refined method of sucking up the fluid through tubes of cane (Xen. *Anab.* v. 5, 26). Ζῦθος was the drink of Lusitania (Strabo, iii. 3, 7); in Spain it was known as *caelia* or *cerea* (Plin. *l. c.*; cf. Athen. i. 16 c), while *cervesia* was the name used in Gaul, where other drinks of the sort were common (Plin. *l. c.*; Jul. Afric. *Cest.* 25). Thus Posidonius, *ap.* Athen. iv. p. 152 c, says that while the richer classes in Gaul import wine from Italy and the district of Marseilles, the poor drink a beer made from wheat with or without the addition of honey, which is called κόρμα. This Gallic use of beer is illustrated by a curious circular bottle found in Gaul and preserved in the Musée Carnavalet at Paris: it bears the legend "ospita reple lagona Cervesa" (*Revue archéologique*, 1868, xviii. p. 226; cf. *Gazette archéologique*, iii. p. 176; Daremberg and Saglio, *s. v.*).

The beverage of the Germans was made from barley or wheat (Tac. *Germ.* 23). The beer of Illyria and Pannonia was called *sabaia* or *sabaium* (Hieron. *Isai.* v. 19; cf. Dio Cass. xlix. 36; Priscus, *Ecl. Hist. Goth.* p. 183 Nieb.); and at the court of Attila in Pannonia a beverage called, in the tongue of the country, μέδος (mead?), or one made from barley and called κάμον, was used (Müller, *Fragm. Hist. Gr.* iv. p. 83). The contempt felt by the Greeks and Romans for this barbarian drink is expressed in an epigram of the Emperor Julian (*Anth. Pal.* ix. 365):—Τίς; πόθεν εἷς Διόνυσε; μὰ γὰρ τὸν ἀληθέα Βάκχον οὔ σ' ἐπιγιγνώσκω· τὸν Διὸς οἶδα μόνον· κεῖνος νέκταρ ὄδωδε, σὺ δὲ τράγου, &c.

In the Edict of Diocletian (ii. 11, ed. Waddington) the maximum for *cervesia* and *camum* is fixed at 4 denarii the sextarius, for *zythum* at 2 denarii, while even *vinum rusticum* is fixed at 8 denarii. As an illustration of the low esteem in which it was held by the physicians, the following opinion of Dioscorides may serve:—(ζῦθος) διουρητικὸς καὶ νεφρῶν καὶ νευρῶν ἀπτικὸς, καὶ μάλιστα μηνίγγων κακωτικὸς, πνευματωτικός τε καὶ γεννητικὸς κακοχυμιῶν καὶ ἐλεφαντιάσεως ποιητικός. [J. Y.] [J. H. F.]

CERVI, so called from their resemblance to the horns of a stag (Varr. *L. L.* v. 117), were branches of trees interlaced with their points projecting, used in war as palisading or *chevaux-de-frise*, in front of or upon earthworks or fortifications (Caes. *B. G.* vii. 72; Liv. xliv. 11, 4; Serv. *ad* Verg. *Ecl.* ii. 29; Tib. iv. 1, 84), and sometimes, where there were no fortifications, stuck simply in the level ground (Sil. It. x. 413, 414). [W. S.]

CERVI'CAL (προσκεφάλαιον, ποτίκρανον) properly denotes a pillow or cushion to support the head or shoulder, on a bed or dining couch (Mart. xiv. 146; Suet. *Ner.* 6; Plin. *H. N.* xx. § 217, xxviii. § 47). The word is also used, like its Greek equivalents, in a less special sense to denote any cushion (Juv. vi. 353; Petron. 32, 1; 78, 5; Plato, *Rep.* i. p. 328 C; Theocr. xv. 2). [Pulvinus.] [J. H. F.]

CERYX (κῆρυξ). [Caduceus; Fetialis.]

CES'SIO BONO'RUM. [Bonorum Cessio.]

CES'SIO IN JURE. [In Jure Cessio.]

CESTICILLUS, a porter's knot, pad for carrying burdens, is known to us only through the gloss in Festus (*s. v.*). The Greek word is τύλη (Aristot. *ap.* Diog. Laërt. ix. 53, where it is said to have been invented by Protagoras), or σπεῖρα, from its being twisted into a circular shape (Apollod. ii. 5, 11, § 14). For an illustration, see Arculum. [W. W.]

CESTROSPHEN'DONE. [Funda.]

CESTRUM. [Pictura.]

CESTUS. [Caestus.]

CESTUS (κεστός). In Hom. *Il.* xiv. 214, an adj., applied to the girdle (ἱμάς) of Aphrodite, on which were embroidered all manner of enticements to love (Schol. *ap.* Ebeling). It means "perforated;" *i.e.*, with holes made by the needle—"embroidered," *acu pictus*—and is derived from the same root (viz. kas = *ferire*) as κεάζω (Fick, *Vergl. Wörterb.* i. 531), or κεντέω for κενστός (all ancient gramm., Pott, Ahrens). It is to be considered the same as the στρόφιον, ταινία, μίτρα, στηθοδεσμός, *fascia pectoralis*, *mammillare*, which is found on statues of Aphrodite worn next the skin ("ceston de Veneris sinu calentem," Mart. xiv. 206: cf. K. O. Müller, *Arch. der Kunst*, §§ 339. 3, 377. 5; and Baumeister, *Denkmäler*, &c. p. 366, fig. 393). It was accordingly made of some soft substance (Catull. 64, 65; Prop. v. 9, 48). In Mart. xiv. 66 *pellis* is probably what we should call kid. Its object was to support and sometimes compress too full bosoms, like the modern corset, but it was not used, like the latter, to pinch in the figure. The Greeks and Romans were strangers to this injurious practice (Baumeister, *l. c.*; Becker-Göll, *Charikles*, iii. 226; *Gallus*, iii. 251). Accordingly, every girl did not wear one. Winckelmann (*ap.* Müller, *l. c.*) and Saglio (*Dict.* i. 1176) consider that, owing to its splendour, the **κεστὸς** of Aphrodite was a belt worn *outside* the dress. Sometimes Aphrodite is represented as holding the **κεστὸς** in her hand (*Arch. Zeit.* 1866, 261; cf. Mart. vi. 13); sometimes Cupid wore it on his neck (Mart. xiv. 206). [L. C. P.]

CETRA or **CAETRA** (**καιτρέα, καίτρα**), a target, *i.e.* a small round shield, made from an animal's hide (Isid. *Orig.* xviii. 12; Curt. iii. 4; Varr. *ap.* Non. p. 82, 18), those of elephant's hide having the reputation of being impenetrable (Plin. *H. N.* xi. § 227). The *caetra* is compared by Livy (xxviii. 5, xxxi. 36) to the *pelta* of the Greeks and Macedonians; it was sometimes painted (*versicolor*, Sil. iii. 278), and troops advanced to battle clashing it against their weapons (*ib.* iii. 348, x. 231). It was properly a barbarian arm (see, however, Verg. *Aen.* vii. 732; Suet. *Calig.* 19), and was especially used by the Iberians (Caes. *B. C.* i. 39, 48; Luc. *Phars.* vii. 232; Diod. Sic. v. 33; Hesych.), the Mauritanians (Strabo, xvii. p. 828), and the Britons (Tac. *Agric.* 36). It is usually identified with the target of the Scottish Highlanders, and may be seen "covering the left arms" (Verg. *l. c.*) of the two accompanying figures, which are taken from a MS. of Prudentius, probably written in this country as early as the ninth century (*Cod. Cotton. Cleop.* C. 8). (Cf. Morelli, iii. n. 3; Cohen, *Monn. Cons. Caecilia.*) [PELTA.] [J. Y.] [J. H. F.]

Cetra. (From a MS. of Prudentius.)

CHALKEIA (**χαλκεῖα**), a very ancient festival celebrated at Athens, which was originally of an agrarian character; but afterwards it assumed a different type. At first it was solemnised in honour of Athena, surnamed Ergane, and by the whole people of Athens, whence it was called Ἀθήναια or Πάνδημος. (Suidas, *s. v.*; *Etym. M.*; Eustath. *ad Il.* ii. p. 284, 36.) At a later period, however, it was celebrated only by artisans, especially smiths, and in honour of Hephaestus, whence its name was changed into **Χαλκεῖα.** (Pollux, vii. 105.) It was kept

on the 30th day of the month of Pyaneps
day after the Apaturia. (Suidas, Har
Eustath. *l. c.*) Menander had written a
called **Χαλκεῖα,** a fragment of which is pr
in Athen. xi. p. 502. (Comp. Welck
Aeschyl. Trilog. p. 290; A. Mommsen, *Heo*
p. 311, 40.)

CHALCID'ICUM is defined by Fes
sort of building (*genus aedificii*, P. Dia
M.), so called from the city of Chalci
explained by Vitruvius and the Glos
Isidore as an annexe or appurtenanc
basilica. The mention in Vitruvius is
incidental: "Sin autem locus erit am
longitudine, chalcidica in extremis parti
stituantur, ut sunt in Julia Aquiliana
§ 4). The gloss in Isidore is extremely
but points to a cloister or portico outs
building, suitable for a promenade (*de*
torium), and either in front (*vestibulum*
the sides (*peribolum, peripterum*). Dio
(li. 22), describing the buildings ere
Augustus in 29 B.C., mentions **τό τε Ἀ**
καὶ τὸ Χαλκιδικὸν ὠνομασμένον καὶ τὸ
τήριον τὸ Ἰουλίειον, "the temple of
the so-called Chalcidicum and the Curia
This is according to the reading of Re
Bekker omits **καὶ** before **τὸ Χαλκιδικόν,**
τὸ Ἀθήναιον τὸ Χαλκιδικόν, "the te
Minerva called Chalcidica." The corre
the less probable, as elsewhere the te
Minerva Chalcidica is mentioned among
tian's buildings (*Catal. Viennensis* ap.
col. 243; Burn, p. 110). The *Monu*
Ancyranum agrees with the text of Dio
necting the *chalcidicum* with the *curia*
new senate-house of Augustus: "curia
Chalcidico, forum Augustum, basilicam
(*Mon. Ancyr.* tab. vi. line 34, Zumpt).
public buildings, then, besides basilicas
have a chalcidicum attached to them.

All doubt is removed by the buildin
fullonica at Pompeii, on the front of wh
name chalcidicum may still be read,
with the following inscription (Mommse
R. Neap. 2204):

EUMACHIA . L. F. SACERD. PUB.***
***** CHALCIDICAM . CRYPTAM . POR
*** SUA. PEQUNIA . FECIT . EADEMQ . DE

Other inscriptions are in Mommsen,
2423; Orelli, 1303, 3287, 3290, 3295.

The chalcidicum was an entrance-h
public building, designed for the sh
persons waiting to be admitted, or wh
transact their business under it; it was
or partially roofed, and might take t
either of a deep porch, or in some ca
cloistered court. Such a vestibule is
many Christian basilicas; the former typ
in St. John Lateran and Sta. Maria Mag
Rome, the latter in St. Ambrogio at Mil
foundations show that a chalcidicum of
once existed in front of the vast basilica
stantine at Rome (Burn, p. 167). The
of a basilica described by Procop
Aedif. Justin. i. 10) is twice design
the term **χαλκῆ.** This might sug
covering of bronze plates [cf. CHALC
and another possible derivation for the
but the received explanation is far mo
bable. "The name also occurs in co

with a building at Capua [of the year 99 B.C.; *C. I. L.* i. 659; Mommsen, *I. R. N.* 3561; Henzen, 6089]; and hence it has been conjectured by Urlichs that the name is derived from the fact that this kind of building was introduced into Italy by the Chalcidian colonists of Cumae in Campania. Urlichs further endeavours to show that the Chalcidicum of Augustus was an enclosed court with cloisters round it, standing on the left of the Curia Julia, nearly on the spot now occupied by the church of Sta. Martina." (Burn, p. 111.)

There is no reason to suppose that the word is used in any other sense than this. When Arnobius says (*adv. Gent.* iv. 33, p. 149), "scribuntur dii vestri in tricliniis caelestibus atque in *chalcidicis* aureis cenitare," it does not follow that chalcidicum could be used for a dining-room (*cenaculum*, *cenatio*). The distinction between *triclinia* and *chalcidica*, and the outdoor habits of southern countries at all times, justify the usual meaning (comp. *οἱ ἐννέα ἄρχοντες εἱστιῶντο ἐν τῇ στοᾷ*, Hyperid. *fr.* 165 ed. Turic. = 142 Blass). And when Ausonius in his *Periochae* translates Hom. *Od.* xxiii. 1,

Γρηῦς δ' εἰς ὑπερῷ' ἀνεβήσατο καγχαλόωσα,

by "*Chalcidicum* gressu nutrix superabat anili," we may regard this as an incorrect rendering of *ὑπερῷον*. (Rich, *s. v.*; Saglio, *s. v.*; Burn, *Rome and the Campagna*, pp. xli. 102, 110, 111, 129, 167.) [A. R.] [W. W.]

CHALCIOI'CIA (*χαλκιοίκια*), an annual festival, with sacrifices, celebrated at Sparta, in honour of Athena, surnamed *Χαλκίοικος*, i.e. the goddess of the brazen-house. (Paus. iii. 17, § 3, x. 5, § 5; and Goeller *ad* Thucyd. i. 128, &c.) Young men marched on the occasion in full armour to the temple of the goddess; and the ephors, though not entering the temple, but remaining within its sacred precincts, took part in the sacrifice. (Polyb. iv. 35, § 2.) [L. S.]

CHALCUS (*χαλκοῦς* or *χαλκίον*). We have spoken, under AES, of the use of bronze or copper for money, which began in most parts of the Greek world about B.C. 400. At Athens, the *chalcus*, or copper *par excellence*, is said by Pollux (ix. 65) to have been equivalent to the eighth of an obol: in some other places it was the sixth of an obol, and contained seven lepta.

The Scholiast to Aristophanes, *Ranae*, 720, says that copper coins (*χαλκία*) were first issued at Athens in the archonship of Callias, B.C. 406; and Aristophanes (*loc. cit.*) seems to be speaking of them. In the *Ecclesiazusae* (816) the same writer speaks of the demonetization of certain copper coins, and the reversion to a silver currency. It seems likely that the coins referred to in both these passages are the pieces still extant with the head of Athena on one side, and an owl with two bodies and one head on the other, which resemble the silver diobols of Athens. Coins of late period struck in Syria bear the inscription *χαλκοῦς*, which declares their value. *Δίχαλκα* and other multiples of the *chalcus* were also struck at Chios and other places. When, however, bronze coins do not bear inscriptions stating their value, the latter cannot with certainty be fixed. [P. G.]

CHA'RILA (*ἡ χαρίλα*), one of the three festivals celebrated at Delphi every ninth year, as a thanksgiving for having been delivered at one time from a famine. (Plut. *Quaest. Gr.* 55.) [L. S.]

CHARIS'TIA. [CARISTIA.]

CHARTA. [LIBER.]

CHEIRONOM'IA (*χειρονομία*). The movement of the hands was an important part of Greek and Roman dancing [SALTATIO], and had the name of *χειρονομία*. Herodotus, in the story of Hippoclides standing on his head before the guests of Clisthenes, uses the curious expression *τοῖσι σκέλεσι ἐχειρόνομησε* (vi. 129). It was also a feature of any pantomimic performance ("chironomon Ledam," Juv. vi. 63). [PANTOMIMUS.] The word is also used in the sense of *σκιαμαχία*, or sparring. (Plat. *Legg.* viii. p. 830 C; Paus. vi. 10, § 3.) [PUGILATUS.] [W. M. L.]

CHEIROTON'IA (*χειροτονία*). In the Athenian assemblies two modes of voting were practised, the one by ballot [PSEPHUS], the other by a show of hands (*χειροτονεῖν*). The latter was the usual mode of conducting business. Secret voting in general was only used when the personal interests of individuals were concerned; as when the question was the condemnation or acquittal of a person put on his trial, the remission of a punishment (especially of ATIMIA), or of a pecuniary fine payable to the state, the conferring of citizenship on strangers, or finally the banishment of a citizen by ostracism. Open voting was employed on questions of public policy, such as war or peace, in voting upon laws, and in some special kinds of trials on matters which concerned the people, as upon *προβολαὶ* and *εἰσαγγελία*. In the elections of magistrates (*ἀρχαιρεσίαι*), some were chosen by lot (*ἀρχὴ κληρωτή*); others, and these of course the more important, *e.g.* the *στρατηγοί*, by show of hands (*ἀρχὴ αἱρετὴ* or *χειροτονητή*). The grammarians attempt a distinction between *αἱρετὴ* and *χειροτονητή*, which however is rejected by modern scholars (*Arg.* ii. *ad* Dem. *Androt.* p. 588). But the undoubted distinction between *ψηφίζεσθαι* and *χειροτονεῖν* is not always observed: we find the word *ψηφίζεσθαι* used where the voting was really by show of hands (Lys. *c. Eratosth.* §§ 44, 75; Dem. *Olynth.* i. § 2).

The *χειροτονία* was taken first on the affirmative, then on the negative side of the question at issue: the number of hands was counted each time by the herald; and the president, upon the herald's report, declared whether the ayes or noes had the majority (*ἀναγορεύειν τὰς χειροτονίας*, Aeschin. *c. Ctes.* § 3).

It is important to understand clearly the compounds of this word. A vote condemning an accused person is *καταχειροτονία*: one acquitting him, *ἀποχειροτονία* (Dem. *c. Mid.* p. 518, § 6; p. 553, § 120; p. 583, § 214): *ἐπιχειροτονεῖν* is to confirm by a majority of votes (*Leges ap.* Dem. *de Cor.* pp. 235, § 9, 261, § 105): *ἐπιχειροτονία τῶν νόμων* was a revision of the laws, which took place at the beginning of the Attic year in the month of Hecatombaeon: *ἐπιχειροτονία τῶν ἀρχῶν* was a vote taken in the first assembly of each prytany on the conduct of the magistrates: in these cases, those who voted for the confirmation of the law, or the continuance in office of the magistrate, were said *ἐπιχειροτονεῖν*, those on the other side *ἀποχειροτονεῖν* (Dem. *c. Timocr.* p. 706, § 20; *c. Theocrin.* p. 1330, § 27; Harpocrat. and Suidas, *s. v.* Κυρία ἐκκλησία): *διαχειροτονία* is a vote for one of two alternatives (Dem. *c. Androt.* p. 596, § 9; *c. Timocr.* p. 707, § 25; *c. Neaer.* p. 1346, §§ 4, 5): ἀντιχειροτονεῖν to vote against a proposition: προχειροτονία is the show of hands on the previous question, *i.e.* whether the people desired further discussion or not (Dem. *c. Timocr.* p. 703, § 11). The compounds of ψηφίζεσθαι have similar meanings (Schömann, *Assemblies*, pp. 120, 125, 231, 251, 330; *Antiq.* i. p. 335, E. T.). [P. S.] [W. W.]

CHELE (χηλή), derived from χα-, "to gape" (Vaniček, 237). Thus it is used for cracks in the feet (Poll. iv. 198), for a cloven hoof (Eur. *Bacch.* 619), and thence for a hoof in general, even a solid one (Id. *Phoen.* 42). But usually χηλὴ signifies something hooked or forked: thus the claws of a crab (Plut. ii. 98 D), the talons of a bird (Soph. *Ant.* 1003), the claws of a wild beast (Eur. *Hec.* 90; Theocr. *Epigr.* vi. 4). We find it also applied to a kind of two-pronged hooked probing needle, used to pull out a polypus (Hipp. 471, 54). As regards military engines, χηλὴ was sometimes used for the notch of the arrow or other missile discharged from the catapult; also for the two "fingers" of the "hand" (*manucla*, Vitruv. x. 15), which in that engine grasped the back-drawn string. See Heron, *Belop.* 141: ἡ μὲν γὰρ τοῦ εὐθυτόνου (sc. τοξότις) στρογγύλη γίνεται ἐπείπερ εἰς τὴν τοῦ οἰστοῦ ἐμπίπτει χηλήν ("notch"). ταύτην δὲ ἡ κατάγουσα χεὶρ διπλῆ γίνεται, κεχηλωμένη ("bifurcated") πρὸς τὸ μεταξὺ τῶν χηλῶν δέξασθαι τὸ τοῦ βέλους πάχος. The figure shows a horizontal section of the "hand" of the engine and its two "fingers" (χηλαί), *a*, *a*, turning on an axis, *x*, *x*. The space between *b* must be at least as wide as the thickness of the missile. What really gripped the cord were vertical prongs running down from *a*, *a* (see a vertical section of *a* in fig. 2). For the whole explanation of military engines, from which this is taken, see Rüstow and Köchly, *Geschichte des Griechischen Kriegswesens*, Aarau, 1852, pp. 378–405. The reading χηλὴν in Vitruv. x. 17, 7, is wrong: it should be χελώνιον (see Rüstow and Köchly, *Griechische Kriegsschriftsteller*, Leipzig, 1853, i. 232).

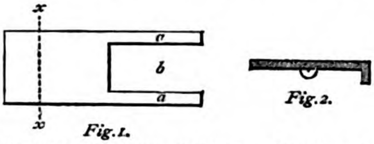

Fig. 1. *Fig. 2.*

Chele, notch of Catapult. (Rüstow and Köchly, p. 384.)

Further, χηλὴ is applied to a breakwater which curves out and presents the form of a claw (see Arnold on the χηλὴ at Potidaea in Thuc. i. 63), and to the spur of a mountain (Suidas, *s. v.* χηλὴ ὄρους).

In astronomy that part of the heavens next Virgo embraced by the arms of the Scorpion was called *Chelae* by early writers and by the poets (Verg. *Georg.* i. 33; Ov. *Met.* ii. 195), even after Geminus (80 B.C.) had separated that portion as a new sign, and called it Ζυγός (Libra). [L. C. P.]

CHELIDONIA (χελιδόνια), a custom observed in the island of Rhodes, in the month of Boëdromion, the time when the swallows returned. During that season boys,
χελιδονισταί, went from house to house
ing little gifts, ostensibly for the re
swallows (χελιδονίζειν), and singing
which is still extant. (Athen. viii.

CHERNIBON or **CHEIRONI**
(χερνιβεῖον [in Hom. *Il.* xxiv. 304 it is χ
or χειρόνιπτρον), a basin used for hol
lustral water at a sacrifice; and gen
basin for washing the hands in. Lat. *ma*
Pollux (vi. 92) says the term χειρ
embraced both jug (πρόχους) and basin
cf. Serv. *ad Aen.* iii. 466, "lebes p
capitur, in quod aqua, dum manus ab
decidit." The water, whether sacri
not, was called χέρνιψ. In the state
ceremonies, this basin was of gold (A
Alcib. § 29). The λέβης in Hom. *Od.*
is of silver. For another example of
basin, see Hermann-Blümner, p. 168, not
private dinners, before the dishes were
in, servants handed round water for was
hand: ὕδωρ κατὰ χειρός (Ar. *Vesp.* 1216)
was called ἀπονίζειν (Plat. *Symp.* 175

the end of the meal, too, water was handed round for a similar purpose (Hermann-Blümner, p. 245). The view of Ar. Byz. *ap.* Athen. 408 f, that κατὰ χειρὸς refers to the washing before dinner, and ἀπονίψασθαι to that after dinner, is disproved, not only by the passages of Homer there cited, but also by the passages from Philyllius and Menander quoted by Athenaeus a few lines previously. The water was poured over the hands of the guests in both cases (Philox. *ap.* Athen. 409 e). We must remember that the Greeks and Romans used to eat with their fingers (Hermann-Blümner, p. 242, note 4; Marquardt, *Röm. Privatl.* 308, note 3). At these dinners the jug and basin were usually of silver, both in Greece, as we have seen, and at Rome (Dig. 34, 2, 19, 12). The shape was round; both shallow and deep ones are found represented, and sometimes they had highly ornamented covers: see the pictures in Saglio, *Dict.* i. 1101. [L. C. P.]

CHEROSTAE. [HERES.]

CHILIARCHUS. [EXERCITUS.]

CHIRAMAX'IUM (χειράμαξα, χειραμάξιον), any wheeled carriage drawn by the hand. Its use may have varied between a "perambulator" for children and a "Bath chair" for invalids: the only classical passage (Petron. 28) leaves this point uncertain. [W. S.] [W. W.]

CHIRIDO'TA. [TUNICA.]

CHIRO'GRAPHUM, the Latin equivalent of the Greek word χειρόγραφον, means, in its original and widest sense, a document in the handwriting of a person interested in the truth of the facts contained in it: it is used in this general sense by Cicero without reference to legal transactions (cf. Cic. *ad Att.* ii. 20, 5; *Phil.* ii. 4, 8); it was, however, a means of securing evidence against a debtor (cf. Cic. *ad Fam.* vii. 18, "cautionem chirographi mei"), and so it came to signify specially a written acknowledgment of a debt. In Cicero's time the usual term for an instrument which contained an acknowledgment of a debt, was not *chirographum*, but *syngrapha* (συγγραφή) (Cic. *pro Rabir. Post.* 3; *de Har. Resp.* 13; *Phil.* ii. 37, 95; *ad Att.* v. 21, 11, vi. 1, 2). Syngraphae appear to have been common securities for debts in the provinces, and were of Greek origin. According to the statement of the Pseudo-Asconius (*ad* Cic. *in Verr.* ii. 1, 36), a syngrapha was a particular kind of chirographum; it differed from other chirographa in that a debt acknowledged in it was presumed to exist, whether there had been any real value received or not, whereas other chirographa were not binding unless they were acknowledgments of actual debts for money received. Hence, if Asconius is to be believed, the syngrapha was a written obligation, but the mere chirographum was not. Asconius points out as another characteristic of syngraphae, that they were executed by both parties, not simply by the debtor, and that they were taken charge of for both parties instead of creditors having the exclusive right to their custody.

The distinction made by Asconius between the legal effect of syngraphae and chirographa is shown by the superior authority of Gaius (iii. 134) not to be well founded. It is thought that Asconius—who, as Niebuhr has shown, cannot have written earlier than the fourth century—misunderstood the allusions of Cicero to syngraphae, and so attached an exceptional importance to them (Savigny, *Verm. Schr.*, vol. i. *de Litt. Obl.*). Gaius, in the passage above referred to, after describing the Roman literal contract, which was made by transcriptive entries in a family account book (*codex*), proceeds to say: "There appears to be another literal obligation created by chirographa and syngraphae, which were written acknowledgments of debts or promises to pay, unaccompanied by stipulation, a mode of contract proper to aliens." According to the ordinary interpretation of this passage, Gaius is here referring to particular forms of contract current among aliens. Gneist, however, supposes that Gaius is pointing to a general distinction between Roman and Greek law. In Roman law a written agreement was not actionable in itself, but only evidence of a stipulation having been entered into. In Greek law, on the other hand, informal written agreements were enforceable; so Gaius intends to say in this passage, that among aliens any written acknowledgment of a debt was actionable without a stipulation. This principle of Greek law, if it was one, was never adopted into Roman. In the legislation of Justinian the term *syngrapha* does not occur; and chirographum does not mean, as in the above passage of Gaius, a written contract, but is equivalent to cautio, an evidentiary document containing the terms of a stipulation or loan or a receipt on account of payment of a debt. The words *instrumentum* and *epistola* are used in a similar sense. But though a cautio or chirographum of a debt was not binding as a contract, its existence was presumptive evidence of a debt, if the debtor allowed it to remain in the creditor's hands for a certain period. Justinian in his Institutes (iii. 21) goes so far as to say, that after the prescribed period the debtor is bound by his writing; but the accuracy of this statement is much questioned. So again a chirographum of a stipulation was presumptive evidence of a stipulation having been entered into (*Inst.* iii. 19, § 12).

Precautions were taken for securing such documents as chirographa against falsification [CAUTIO; FALSUM]. The formal requisites, if any, for the validity of chirographa and syngraphae cannot be determined. According to Gneist, the word συγγραφή did not signify among the Greeks any particular form of written contract, since the words συνθήκη and συμβόλαιον are used as synonymous with it; it was usual, however, to seal obligations in writing and to entrust them to a third party. At a later time the word χειρόγραφον, especially in its Latin form, came to be used; but between syngraphae and chirographa, Gneist thinks, there was no essential difference, both being documents of an informal character, not requiring seals or the attestation of witnesses as essentials to their validity. It seems probable that at one time the syngrapha was a common act of creditor and debtor; but a chirographum might be the act of the debtor alone. If it could be supposed that a passage extracted by Heimbach from the MS. of a dictionary written in the 13th century rested on any early authority, there would be some analogy between the form of a syngrapha and an old English deed of indenture. The extract is as follows: —"Nota, quod chirographus et syngraphus saepe accipitur indifferenter. Differunt tamen proprietate, quod chirographus dicitur conscriptio manuum seu cautio, quae fit propria manu debitoris et committitur creditori; syngraphus dicitur conscriptio in duorum scilicet scripto. Antiquitus enim creditor et debitor insimul in ligno vel in charta scribebant et nomen debitoris et nomen creditoris et testes et summam pecuniae; et in medio hoc sibi syngraphum capitalibus locis et per medium dividebant. Postea si creditor plus exigeret, quam deberet, vel si debitor denegaret depositum, uterque afferebat partem, quam habebat, ut duae partes convenirent, et id propterea syngraphum dictum est. Syngraphus et dicitur nomen aliquod vel scriptura in re aliqua confirmanda scripta. Sic in cartis publicis omnino non usus tantum scribit, sed plures, ad confirmationem chartae." (Heimbach, *Creditum*, § 520.) (Gneist, *Die Formellen Verträge;* Heimbach, *Creditum*, § 498, &c.; Walter, *Gesch. des Röm. Rechts*, §§ 606-608; Puchta, *Inst.* iii. § 274; Danz, *Lehrbuch der Gesch. des Röm. Rechts*, § 60; Savigny, *Verm. Schriften*, vol. i. *de Litt. Obl.*) [E. A. W.]

CHIRONOM'IA, CHIRON'OMUS. [CHEIRONOMIA.]

CHIRU'RGIA (χειρουργία), surgery. The practice of surgery was at first considered by the ancients to be merely a part of a physician's duty; but, as in later times the two branches of the profession were to a great extent separated, it will perhaps be more convenient to treat of it under a separate head. Without touching upon the disputed questions, which is the *more ancient*, or which is the *more honourable* branch of the profession; or even trying to give such a definition of the word *chirurgia* as would be likely to satisfy both the physicians and surgeons of the present day; it will be sufficient to determine the sense in which the word was used by the *ancients:* and then to give an account of this division of the science and art of medicine, as practised among the Greeks and Romans, referring to the article MEDICINA for further particulars.

The word *chirurgia* is derived from χείρ, the hand, and ἔργον, a work, and is explained by Celsus (*de Med.* lib. vii. Praefat.) to mean that part of medicine *quae manu curat*, "which treats ailments by means of the hand;" in Diogenes Laërtius (iii. 85) it is said to cure διὰ τοῦ τέμνειν καὶ καίειν, "by cutting and burning;" nor (as far as the writer is aware) is it ever used by ancient authors in any other sense. Omitting the fabulous and mythological personages, Apollo, Aesculapius, Chiron, &c., the only certain traditions respecting the state of surgery before the establishment of the republics of Greece, and even until the time of the Peloponnesian war, are to be found in the Iliad and Odyssey. There it appears that surgery was almost entirely confined to the treatment of wounds; and the imaginary power of enchantment was joined with the use of topical applications. (*Il.* iii. 218; xi. 515, 828, 843, &c.) The Greeks received surgery, together with the other branches of medicine, from the Egyptians; and, from some observations made by the archaeologists who accompanied the French expedition to Egypt in
1798, it appears that there are documer
proving that in very remote times thi
ordinary people had reached a degree
ficiency of which few of the moderns h
conception. Upon the ceilings and wall
temples at Tentyra, Karnac, Luxor, &
rilievi are seen, representing limbs that h
cut off with instruments very similar
which are employed for amputations at the
day. The same instruments are again
in the hieroglyphics, and vestiges of ot
gical operations may be traced, whicl

that of *Carnifex*. Asclepiades, who live

beginning of the first century B.C., is said to have been the first person who proposed the operation of tracheotomy. (Cael. Aurel. *de Morb. Acut.* i. 14, § 111; iii. 4, § 39.) Ammonius of Alexandria, surnamed Λιθοτόμος, who is supposed to have lived rather later, is celebrated in the annals of surgery for having been the first to propose and to perform the operation of *lithotrity*, or breaking a calculus in the bladder, when found to be too large for safe extraction. Celsus has minutely described his mode of operating (*de Med.* vii. 26, § 3, p. 436), which in some respects resembles that of Civiale and Heurteloup, in the early part of the present century, and proves that, however much credit they may deserve for perfecting the operation and bringing it out of oblivion into public notice, the praise of having originally thought of it belongs to the ancients. "A hook or crotchet," says Celsus, "is fixed upon the stone in such a way as easily to hold it firm, even when shaken, so that it may not revolve backward; then an iron instrument is used, of moderate thickness, thin at the front end, but blunt, which, when applied to the stone and struck at the other end, cleaves it: great care must be taken that the instrument do not come into contact with the bladder itself, and that nothing fall upon it by the breaking of the stone." The next surgical writer after Hippocrates, whose works are still extant, is Celsus, who lived at the beginning of the first century A.D., and who has devoted the four last books of his work *de Medicina*, and especially the seventh and eighth, entirely to surgical matter. It appears plainly from reading Celsus, that since the time of Hippocrates surgery had made very great progress, and had, indeed, reached a high degree of perfection. We find in him the earliest mention of the use of the ligature for the arrest of haemorrhage from wounded blood-vessels (v. 26, § 21, p. 262); and the Celsian mode of amputation was continued down to comparatively modern times (vii. 33, p. 451). He is the first author who gives directions for the operation of lithotomy (*de Med.* vii. 26, § 2, p. 432), and the method described by him (called *the apparatus minor*, or *Celsus's method*) continued to be practised till the commencement of the sixteenth century. It was performed at Paris, Bordeaux, and other places in France, upon patients of all ages, even as late as the latter part of the seventeenth century; and a modern author (Allan *On Lithotomy*, p. 12) recommends it always to be preferred for boys under fourteen. (Cooper's *Dict. of Pract. Surg.*, art. "Lithotomy.") He describes (vii. 25, § 3, p. 428) the operation of *infibulatio*, which was so commonly performed by the ancients upon singers, &c., and is often alluded to in classical authors. (See Juv. *Sat.* vi. 73, 379; Seneca, in Lactant. *Divin. Instit.* i. 16; Mart. *Epigr.* vii. 82, 1, ix. 28, 12, xiv. 215, 1; Tertull. *de Corona Mil.* 11.) He also describes (vii. 25, § 1, p. 427) the operation alluded to by St. Paul (1 Cor. vii. 18), περιτετμημένος τις ἐκλήθη; μὴ ἐπισπάσθω. Compare Paulus Aegineta (*de Re Med.* vi. 53), who transcribes from Antyllus a second method of performing the operation.

The following description, given by Celsus, of the necessary qualifications of a surgeon, deserves to be quoted:—"A surgeon," says he (lib. vii. *Praefat.*), "ought to be young, or, at any rate, not very old; his hand should be firm and steady, and never shake; he should be able to use his left hand as readily as his right; his eyesight should be clear, and his mind not easily startled; he should be so far subject to pity as to make him desirous of the recovery of his patient, but not so far as to suffer himself to be moved by his cries; he should neither hurry the operation more than the case requires, nor cut less than is necessary, but do everything just as if the other's screams made no impression upon him."

Perhaps the only surgical remark worth quoting from Aretaeus, who lived in the first century A.D., is that he condemns the operation of tracheotomy, and thinks "that the heat of the inflammation becomes greater from the wound and contributes to the suffocation, and the patient coughs; and even if he escapes this danger, the lips of the wound do not unite, for both are cartilaginous and unable to grow together." (*De Morb. Acut. Cur.* i. 7, p. 227, ed. Kühn.)

Omitting Scribonius Largus, Moschion, and Soranus, the next author of importance is Caelius Aurelianus, who is supposed to have lived about the beginning of the second century A.D., and in whose works there is much surgical matter, but nothing that can be called original. He rejected as absurd the operation of tracheotomy (*de Morb. Chron.* iii. 4, § 39). He mentions a case of ascites that was cured by tapping (*ib.* iii. 8, § 128), and also a person who recovered after being shot through the lungs by an arrow (*ib.* ii. 12, § 144).

Galen, the most voluminous and at the same time the most valuable medical writer of antiquity, is less celebrated as a surgeon than as an anatomist and physician. He appears to have practised surgery at Pergamus, but, upon his removal to Rome (A.D. 165), he entirely confined himself to medicine, following, as he says himself (*de Meth. Med.* vi., *in fine*, tom. x. p. 455), the custom of the place. His writings prove, however, that he did not entirely abandon surgery. His Commentaries on the treatise of Hippocrates, *De Officina Medici*, and his treatise *De Fasciis*, show that he was well versed even in the minor details of the art. He appears also to have been a skilful operator, though no great surgical inventions are attributed to him.

Antyllus, who lived some time between Galen and Oribasius, is the earliest writer whose directions for performing tracheotomy are still extant, though the operation (as was stated above) was proposed by Asclepiades about three hundred years before. Only a few fragments of the writings of Antyllus remain, and among them the following passage is preserved by Paulus Aegineta (*de Re Med.* vi. 33):—"When we proceed to perform this operation, we must cut through some part of the windpipe, below the larynx, about the third or fourth ring; for to divide the whole would be dangerous. This place is commodious, because it is not covered with any flesh, and because it has no vessels situated near the divided part. Therefore, bending the head of the patient backward, so that the windpipe may come more forward to the view, we make a transverse section between two of the rings, so that in this case not the cartilage, but the membrane which unites the cartilages together, is divided. If the operator be a little timid, he may first stretch the skin with a hook and divide it; then, proceeding to the windpipe, and separating the vessels, if any are in the way, he may make the incision."*

Oribasius, physician to the Emperor Julian (A.D. 361), professes to be merely a compiler; and though there is in his great work, entitled Συναγωγαὶ Ἰατρικαί, *Collecta Medicinalia*, much surgical matter, there is nothing original. The same may be said of Aëtius and Alexander Trallianus, both of whom lived towards the end of the sixth century A.D. Paulus Aegineta has given up the fifth and sixth books of his work *De Re Medica* entirely to surgery, and has inserted much useful matter, derived in a great measure from his own observation and experience. Albucasis translated into Arabic great part of these two books as the basis of his work on Surgery. Paulus was particularly celebrated for his skill in midwifery and female diseases, and was called on that account, by the Arabians, *Al-Kawábeli*, "the Accoucheur" (Abulpharaj, *Hist. Dynast.*, p. 181, ed. Pococke). He lived probably towards the end of the seventh century A.D., and is the last of the ancient Greek and Latin medical writers whose surgical works remain. The names of several others are recorded, but they are not of sufficient eminence to require any notice here. For further information on the subject both of medicine and surgery, see **Medicina**; and for the legal qualifications, social rank, &c., both of physicians and surgeons, among the ancient Greeks and Romans, see **Medicus**.

The surgical instruments from which the accompanying engravings (Nos. 1 to 19) are made, were found by a physician of St. Petersburg, Dr. Savenko, in 1819, at Pompeii, in Via Consularis (*Strada Consulare*), in a house which is supposed to have belonged to a surgeon. They are now preserved in the museum at Portici. The engravings, with an account of them by Dr. Savenko, were originally published in the *Revue Médicale* for 1821, vol. iii. p. 427, &c. They were afterwards inserted in Froriep's *Notizen aus dem Gebiete der Natur- und Heilkunde*, for 1822, vol. ii. n. 26, p. 57, &c. The accompanying figures are copied from the German work, in which some of them appear to be badly drawn. Their authenticity was at first doubted by Kühn (*De Instrumentis Chirurg.*, *Veteribus cognitis, et nuper effossis*, Lips. 1823, 4to), who thought they were the same that had been described by Bayardi in his *Catal. Antiq. Monument. Herculani effos.*, Nap. 1754, fol., n. 236–294. When, however, his dissertation was afterwards republished (*Opusc. Academ. Med. et Philol.*, Lips. 1827, 8vo, vol. ii. p. 309), he acknowledged himself to be completely satisfied on this point, and has given in the tract referred to, a learned and ingenious description of the instruments and their supposed uses, from which the following account is chiefly abridged. It will, however, be seen at once, that the form of most of them is so simple, and their uses so obvious, that very little explanation is necessary. Altogether they give a very high idea of both the science
practice of surgery among the Romans.

CHITON (χιτών). [TUNICA.]

CHITO'NIA (χιτώνια), a festival celebrated in the Attic village of Chitone in honour of Artemis, surnamed Chitona or Chitonia, from her wearing as huntress the loose tunic, or from the place in which she was worshipped. (Schol. *ad* Callimach. *Hymn. in Artem.* 78.) The Syracusans also celebrated a festival of the same name, and in honour of the same deity, which was distinguished by a peculiar kind of dance, and a playing on the flute. (Athen. xiv. p. 629; Steph. Byz. *s. v.* Χιτώνη.) [L. S.]

CHLAINA (χλαῖνα). [LAENA; PALLIUM.]

CHLAMYS (χλαμύς), a short mantle. This term, being Greek, denoted an article of the AMICTUS or outer raiment, which was in general characteristic of the Greeks, and of the Oriental races with which they were connected, although both in its form and in its application it approached very near to the LACERNA and PALUDAMENTUM of the Romans, and was itself to some extent adopted by the Romans under the emperors. It was for the most part woollen; and it differed from the ἱμάτιον, the usual amictus of the male sex, in these respects, that it was much smaller; also finer, thinner, more variegated in colour, and more susceptible of ornament. It moreover differed in being oblong instead of square, its length being generally about twice its breadth. (Plut. *Alex.* 26; Plin. *H. N.* v. § 62.)

The chlamys came originally from Macedonia and Thessaly (Ammon. p. 146; Plin. *l. c.*; Poll. vii. 46, x. 124). It was the dress of hunters, of travellers, especially on horseback (Xen. *An.* vii. 4, § 4; Plaut. *Poen.* iii. 3, 6, 31), and of soldiers (Aelian, *V. H.* xiv. 10; Plaut. *Pseud.* ii. 4, 45; *Epid.* iii. 3, 55). It seems to have been part of the usual dress of a Spartan (Aristoph. *Lys.* 988; Juv. viii. 101), and was worn at Athens by the ephebi from about seventeen to twenty years of age. (Philemon, p. 367, ed. Meineke; *ephebica chlamyde*, Apuleius, *Met.* x. p. 253; Pollux, x. 164; **λαβεῖν τὸ χλαμύδιον**, Athen. vi. p. 240 c). In the frieze of the Parthenon representing the Panathenaic procession, several of the riders have the chlamys. It does not appear to have been much worn by children, although one was given with its brooch to Tiberius Caesar in his infancy (Suet. *Tib.* 6).

The chlamys as worn by youths, by soldiers, and by hunters, differed in colour and fineness, according to its destination, and the age and rank of the wearer. The **χλαμὺς ἐφηβικὴ** was probably yellow- or saffron-coloured; and the **χλαμὺς στρατιωτική**, scarlet. On the other hand, the hunter commonly went out in a mantle of a dull unconspicuous colour, as best adapted to escape the notice of wild animals (Poll. v. 18). The more ornamental mantles, being designed for females, were tastefully decorated with a border (*limbus*, Verg. *Aen.* iv. 137; *maeander*, v. 251); and those worn by Phoenicians, Trojans, Phrygians, and other Asiatics, were also embroidered, or interwoven with gold (Verg. *ll. cc.*, iii. 483–4, xi. 775; Ovid. *Met.* v. 51; Val. Flacc. vi. 228). Actors had their chlamys ornamented with gold (Poll. iv. 116).

The usual mode of wearing the mantle was to pass one of its shorter sides round the neck, and to fasten it by means of a brooch (**πόρπη**, *fibula*), either over the breast, in which case it hung down the back, reaching to the calves of the legs; or over the right shoulder, so as to cover the left arm, as is seen in the cut under CAUSIA, and in the well-known example of the Belvedere Apollo. In other instances, it was made to depend gracefully from the left shoulder, of which the bronze Apollo in the British Museum (see right-hand figure) presents an example; or it was thrown lightly behind the back, and passed over either one arm or shoulder, or over both (as in left-hand figure, taken from Hamilton's Vases, i. 2); or, lastly, it was laid upon the throat, carried behind the neck, and crossed so as to hang down the back, as in the figure of Achilles under BALTEUS, and sometimes its extremities were again brought forward over the arms or shoulders. In short, the remains of ancient art of every description show in how high a degree the mantle contributed, by its endless diversity of arrangement, to the display of the human form in its greatest beauty; and Ovid has told us how sensible the ephebi were of its advant
the account of the care bestowed upon t

AULES. [CHORUS; TIBICEN.]

E'GIA. [CHOREGUS.]

E'GUS (χορηγός). I. GREEK. The (χορηγία) was one of the ordinary ἐγκύκλιοι λειτουργίαι) at Athens, and in providing a properly-trained chorus f the festivals. It was a very heavy nvolving great trouble and expense; g the flourishing period of Greek free- was counterbalanced by the emulation which subsisted among the different choregi and the honour it brought them from their fellow-citizens.

Originally, there was a choregus elected by each tribe (Introd. to Dem. *Midias*, p. 510, line 8). The choregi used to be appointed eleven months before the festival. The ἐπιμεληταὶ of each tribe looked out for the fitting persons to fulfil the duty of choregi, and probably proposed them (προὐβάλλοντο οἱ χορηγοί, Dem. *Mid.* 519, § 13; cf. Arg. p. 510). Usually the most well-to-do were appointed choregi in turn, but sometimes public-spirited individuals voluntarily undertook the duty even when not in their turn: *e.g.* Demosthenes (*l. c.*). On the choregi being proposed, the archon used to allot them (χορὸν διδόναι) to as many as he thought deserving from among the poets who applied to him for a chorus (χορὸν αἰτεῖν). Then there was a drawing of lots among the choregi (Antiph. *de Chor.* § 11) as to who should get first choice of the διδασκάλων. The duty of the διδάσκαλος (who was sometimes the poet, and then he had a ὑποδιδάσκαλος, see Photius, *s. v.*) was with the help of musicians—generally flute-players, sometimes harpists—to teach (διδάσκειν, συγκροτεῖν) the choristers the words, songs, and dances. In an emergency we find a single individual taking the place of διδάσκαλος and αὐλητής, *e.g.* Telephanes (Dem. *Mid.* 520, § 17). The relative importance of the functions of the διδάσκαλος and the αὐλητὴς in course of time came to be reversed, the musical element becoming more and more important. The lot now decided who should have the first choice of flute-players (Dem. *Mid.* 519, § 13), and the flute-player came to be mentioned in the διδασκαλίαι (see below).

The next duty of the choregus was to collect the chorus. The members of the chorus had to be citizens. At the Lenaea metics were allowed to act as choristers and even as choregi (Schol. on Aristoph. *Plut.* 953). But at all other festivals only citizens could serve under penalty of 1000 drachmae for each foreign chorister (Plut. *Phoc.* 30). The collecting (συλλέγειν) of the chorus was effected by means of officers of the tribe called χορολέκται. This was hard in the case of boys, as parents did not like to let their children incur the moral risks of the theatre; and that these were not insignificant is evident from the law of Solon forbidding any one younger than forty years to form a chorus of boys (Aeschin. *Tim.* 33, § 12). Fines and confiscations of goods, accordingly, had often to be employed (Antiphon, *de Chor.* § 11). Meanwhile the choregus had to provide a place for training the chorus (διδασκαλεῖον, χορηγεῖον, Poll. iv. 106), which was often in his own house (Antiphon, *l. c.*), but in some demes we find public buildings for the purpose (cf. Hesych. Μελετέων οἶκος).

In the flourishing times of Athens the greatest emulation existed among the rival choregi: some spent their whole patrimony in the service (Dem. *Mid.* 534, § 61). And indeed no wonder: for it must have been a proud moment when the choregus, leading his own chorus (cf. Athen. 633 a) and in splendid array, was crowned victor before his assembled fellow-countrymen (Dem. *Mid.* 532, § 55). The prize was a bronze tripod, which became the property of the tribe (Dem. *Mid.* 516, § 5). Accordingly, owing to the emulation, the very strictest observance of the laws relating to the festivals was required. Among these laws there was one that, if a stranger was brought in as a chorister, a rival choregus might take him by the hand and lead him out (Andoc. *in Alcib.* § 20; cf. Dem. *Mid.* 534, § 60), but not interrupt him while performing. In the heat of competition, too, there were frequent violations of law, and special enactments for the laying of plaints with regard to misdeeds at the festivals (Dem. *Mid.* 517, § 8; 562, § 147). The crime of assault of a choregus during the festival appears to have been ὕβρις, though Demosthenes all through his speech against Midias tries to make out that, inasmuch as the festival was a religious ceremony, the offence he as choregus had sustained should be considered ἀσέβεια (Arg. p. 510; cf. 532, § 55).

No one was liable for the choregia nor for any of the regular services unless he had a property of at least three talents (Isaeus, *de Pyrrh. hered.* § 80; Dem. *Aphob.* i. 833, § 64): for the expenses that fell upon the choregus were great. The state certainly defrayed part of them (Introd. to *Mid.* p. 510), and the lessee of the theatre who received the entrance money must have supplied a considerable sum towards the outlay (Boeckh, *Staatshaushaltung der Athener*, i. 540, ed. 1886). But still much remained for the choregus; principally the expenses which attached to the chorus directly. For he had not merely to train the chorus or have it trained, but he had also to feed (Introd. to *Mid.* l. c.) them during the time of training, and right good cheer used to be provided (Plut. *de glor. Athen.* c. 6). At Corcyra we find the members given an equivalent in money, σιτηρέσια (*C. I. G.* 1845, line 23). The choregi used at times to give drugs to the choristers to improve their voice; and this proved fatal in one case (see the whole speech of Antiphon, *de Choreuta*). They had to provide the dresses (Aristot. *Eth. Nic.* iv. 2, 20; Athen. 103 f), which were often most expensive—*e.g.* Demosthenes once (*Mid.* 520, § 16) had golden crowns for his chorus and a gold-embroidered robe for himself—and also at times the accessories of the play; *e.g.* in Aristoph. *Pax*, 1023, the animal for sacrifice. Besides, too, they appear to have had to pay the choristers (Xen. *Resp. Ath.* i. 13). An additional chorus (παραχορήγημα) had sometimes to be provided. Each choregus provided the chorus for a whole tetralogy; but whether the actual choristers were the same in all four plays is uncertain (see Hermann-Müller, *Bühnenalterthümer*, p. 333). The choregus had not to pay the actors (Boeckh, *op. cit.* p. 542). Interesting statistics as to the expenses of the different kinds of choruses are to be found in Lysias, Ἀπολογία δωροδοκίας, § 2 fol.—a passage which should be read with the sober criticism of Boeckh, pp. 542–5. The speaker spent on a tragic chorus 30 minae; on a chorus of men at the Thargelia, 2000 drachmas; on a Pyrrhic chorus of Ephebi at the Panathenaea, 800 drachmas; on a chorus of men at the Dionysia and on the dedication of the tripod, 5000 drachmas; on a cyclic chorus at the lesser Panathenaea, 300 drachmas; on a chorus of boys, 15 minae; on a comic chorus with dedication of the dress, 16 minae; on a chorus of youthful pyrrhicists,

7 minae. Thus we see that
cost much less than a tragic

RUS. 1. GREEK. The word χορὸς in
gnifies both a place for dancing (Hom.
260; cf. εὐρύχορος and καλλίχορος) and
ction of dancers, but is more especially
to the latter. In early times we find
festivals and weddings (Hes. *Scut.* 282)
d with bands of dancers (Hom. *Il.*
7). There is a detailed picture of
en and maidens dancing on the shield of
(*Il.* xviii. 590 ff.). Another kind of
nentioned in the Iliad is the paean the
ang as they marched to the ships after
h of Hector (*Il.* xxii. 391). It is to be
l that in early times the song and the
ere assigned to different persons.

is especially in the service of the gods,
of all in that of Apollo and Dionysus (cf.
d. p. 530, § 51), that bands of dancers appear prominently. In religious ceremonies, poetry, music, and dancing were all united; and the strong impulse of the Greeks to give expression to their feelings led to the dance being, as all artistic dancing ought to be, of a more or less imitative nature. "It is the imitation of words by gestures (σχήμασιν) which has developed the whole art of dancing," says Plato (*Legg.* vii. 816 A; cf. Athen. i. 15). There were dances of the Curetes in Crete in honour of Zeus (Hes. *Fragm.* 91, ed. Didot), and in very early times dances in the worship of Apollo at Delos (Hom. *Hymn. Apoll. Del.* 249), but dance and song were first fully developed by the Apolline religion of Delphi, which was the guiding spirit and good genius of Dorian life. And the chorus was very suitable to the Doric character, according to which everything was public and collective, and which so strenuously demanded subordination of the one to the whole. But the choruses of the Dorians, performed to the music of the cithara, were most of them stately and measured, partaking much of the nature of gymnastic and military exercises (cf. Athen. xiv. 628) [GYMNOPAEDIA, PYRRHICA]; though the hyporchema, introduced into Sparta from Crete by Thaletas, was a spirited song and dance, performed to the music of the flute as well as of the cithara. [HYPORCHEMA.] The Doric chorus was quadrangular, and analogies are found between it and the divisions of infantry (Müller, *Dor.* iii. 12, 10). There were choruses of boys, men, and old men at the different Spartan festivals (Plut. *Lycurg.* 21); and the matrons and maidens danced likewise (*ib.* 14); choruses of youths and maidens combined being called ὅρμοι (Lucian. *de Salt.* § 12). We must not fail, however, to remember, as Grote (chap. 29) warns us, that the term "dance" is to be taken in a wide sense for "every variety of rhythmical accentuated conspiring movements or gesticulations or postures of the body, from the slowest to the quickest." For Sparta the Doric choral style was fixed by Alcman, and remained unaltered during three centuries. Further it is to be noticed that as the chorus was much developed at the same time in Argos, Sicyon, and other parts of Peloponnesus, the Doric dialect came to be regarded as the artistic dialect for choral song (cf. Curtius, *Hist. of Greece*, ii. 83, Eng. trans.), and was used by all choral writers, whether Aeolian or Ionian, being retained in the language of the chorus even in Attic tragedy.

But in the Apolline religion beside Apollo stood Dionysus, the god of the peasantry, to whom the dithyramb was sung by the votary "when all-ablaze in soul with wine's thunder" (οἴνῳ συγκεραυνωθεὶς φρένας), as Archilochus says (*Fragm.* 72, ed. Bergk). Originally the dithyramb was the spontaneous song, telling the tale of Dionysus and his fortunes, which the chorus, which represented itself as Satyrs and others of his faithful attendants, guided by its leader (ἔξαρχος), sang to the music of the flute, as it danced the while round the altar of the god. [DITHYRAMBUS.] The Satyrs were half goats (τράγοι), their song was the "goat-song" (τραγῳδία); and they were originally the sole performers in what afterwards became the elaborate tragedy. But there was another sort of chorus belonging to the old phallus cult which, under the guidance of its leader, sang phallic songs and danced in revel through the roads, with faces smeared with wine-lees, in the worship of Dionysus, "the jolly god," the friend of love and wine. This was the wild song of the revel (κωμῳδία), and the origin of Greek comedy. Thus the chorus was the foundation of the two main kinds of Greek drama (Aristot. *Poet.* iv. 14). But as the word "chorus" in connexion with the ancient Greeks most naturally suggests the chorus in the developed forms of the drama, it is to the antiquities of the chorus in this sense that we must confine the present article, referring the reader for information on the dithyramb to the special article on the subject; as to the manner in which the original chorus developed into the drama, to the articles COMOEDIA and TRAGOEDIA; and for the various kinds of figures (σχήματα) and special technical details of dancing, to the article SALTATIO.

It is practically to the chorus of the Attic dramatists that we have to confine our remarks; and they may be conveniently arranged under the following heads:—

1. *Number of Choreutae.*—The circular dithyrambic chorus, as systematised by Arion for public exhibition in the city, consisted of 50 members (Simonides, 147 (203), ed. Bergk). The early tragic chorus consisted of 12, and is said to have been raised by Sophocles to 15 (Suidas, Σοφοκλῆς). It has been supposed accordingly that the dithyrambic chorus of 50 was first arranged in a quadrangular form, which required only 48, and afterwards was divided into four choruses, one for each of the dramas of a tetralogy. Pollux (iv. 110) declares that up to the production of the *Eumenides* the tragic chorus consisted of 50, but that the people were so frightened at so many horrible figures that thereafter the number of the chorus was lessened. But this is a mere story, invented to account for the change of numbers. Again it was from the country dithyramb, not from the city dithyramb as organised by Arion, that the drama arose: this latter is to be regarded as the elder sister rather than as the parent of the Attic drama; and in the country dithyrambic chorus we have no evidence how many choreutae took part. At any rate, in the chorus of Attic tragedy there were originally 12 and afterwards 15; and where 14 are mentioned (*e. g.* in Tzetzes, *Prol. ad Lycophr.* 254, Müller), the coryphaeus is omitted. Whether the same choreutae took part in all four plays of a tetralogy or not, is a disputed point, and there does not appear to be sufficient evidence forthcoming to decide it (see A. Müller, *Die griechische Bühnenalterthümer*, p. 333). There were certainly 12 choreutae in the *Persae* and *Septem* (A. Müller, *op. cit.* 202, note 3), and most probably in the *Ajax* (Muff, *Die chorische Technik des Sophokles*, pp. 53, 79); but it remains an undecided question whether there were only 12 in the *Agamemnon* and *Eumenides*, as is the view of Wecklein (*Neue Jahrbücher für Philologie*, Suppl. xiii. p. 217), who holds that Aeschylus had a chorus of 12 in *all* his plays, or 15, as is attested by the Scholiasts on *Eumen.* 586 and on *Equites* 589, and is maintained by R. Arnoldt (*Der Chor im Agamemnon*, 65 ff.).

The *Satyric* chorus appears to have consisted of the same number as the tragic chorus. The
very scanty evidence on the matter p
(Tzetzes, *l. c.*; R. Arnoldt, *Die chorisc*
des Euripides, 308 ff.).

But the chorus of *comedy* consist
(Schol. on *Aves*, 297). Only half a tr
was given to the comic poet, and

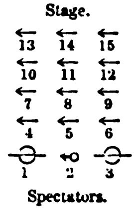
s. v.), whether the whole of the
(Muff, *op. cit.* p. 5, note 3) or only
members of it, viz. 7, 8, 9 (Sommerbr

p. 8), remains disputed. The ψιλεῖς ("exposed"), or, as they are occasionally called, κρασπεδῖται ("fringe men")—which were the same (Hesych. *s. v.* ψιλεύει)—were the two extreme ζυγά: viz. 1, 6, 11, and 5, 10, 15.

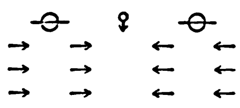
The entry of the chorus by ζυγὰ was very rare. R. Arnoldt (*Die Chorpartieen bei Aristophanes*, pp. 35, 186) considers that it was the case in the *Acharnians* and *Ranae*. Subjoined is a representation of an entry κατὰ ζυγὰ of a chorus of 15.



Here 2 is the κορυφαῖος: 1 and 3, the παράσταται: 1, 2, 3, the ἀριστεροστάται: 13, 14, 15, the δεξιοστάται: the three intervening ζυγά, the λαυροστάται. Rows 1 to 13 and 3 to 15, the ψιλεῖς or κρασπεδῖται. Either row 2 to 14, or Nos. 5, 8, 11, formed the ὑποκόλπιον τοῦ χοροῦ.

The chorus sometimes did not enter in order at all, but severally (καθ' ἕνα or σποράδην); cf. Poll. iv. 109. An obvious example is the *Oedipus Coloneus*, v. 117 foll. (Muff, *op. cit.* 272.)

When the chorus arrived in the orchestra and had to enter into a dialogue with the actors, they made an evolution, so that the ἀριστεροστάται stood facing the stage. When the stage was not occupied by actors, and specially in the parabasis (see below), the chorus turned round, or perhaps made a regular evolution round (Schol. on *Pax*, 733) and faced the audience (*Proleg. de Comoedia* vii. in *Schol. in Aristoph.* p. xvii., ed. Dübner). They appear to have mounted the stage occasionally, as in the *Oedipus Coloneus*, 856 (Muff, *op. cit.* 291); probably in the *Helena* (1627–1642), the *Aves* (353–400), &c., if we are not merely to suppose that the chorus stood sufficiently close to the actors to be able to touch them. The chorus sometimes divided into two ἡμιχόρια, each denoted in MSS. by HMIX., which stood opposite one another (χοροὶ ἀντιστοιχοῦντες ἀλλήλοις, Xen. *Anab.* v. 4, 12). This was very frequent in the strophe and antistrophe of the parabasis. In the chorus of 15 each division was led by a παραστάτης, while the κορυφαῖος superintended the whole; in the chorus of 12, the κορυφαῖος led one division and the παραστάτης the other. Subjoined is a representation of a chorus of 15 divided in two in the most usual way:—



though no doubt many of the other possible orderly arrangements were often employed. Notwithstanding the statement of Pollux (iv. 107), there seems to have been a difference between ἡμιχόρια and διχόρια or ἀντιχόρια. The latter is that permanent division of age or sex or rank which is found, for example, in the *Lysistrata* and the *Aves*, where the chorus consists of a male and female group (A. Müller, *op. cit.* p. 219). The Scholiast on the *Equites*, 589, says that in such cases the more distinguished group, *e.g.* here the male division, consisted of 13, and the less distinguished of 11; but this is very questionable. There is no certain example of such διχόρια in the extant tragedies, though it has been assumed in the *Supplices* of Aeschylus and Euripides (R. Arnoldt, *Die chorische Technik des Euripides*, pp. 72 ff.). But the chorus at times used further to divide into στοῖχοι and ζυγά, and even into individual choristers. A remarkable example of this latter is in the *Agamemnon* during the murder scene; and it has been suggested that in this and similar cases all the choristers speak each his own distich *together*, and not one after another (Mahaffy, *History of Greek Literature*, i. 267). When a chorister had to take the part of an actor, such was called παρασκήνιον, says Pollux (iv. 109), who however omits the really essential point that, as the name indicates, his part must be spoken, not *on* the stage but from the *side scenes* (παρασκήνια). A παρασκήνιον was an example of what is called παραχορήγημα—that is, anything outside what the choregus was strictly bound to supply, but it is especially applied to an additional chorus, as, for example, that of the θεράποντες in the *Hippolytus* (cf. Sommerbrodt, *Scaenica*, 173–4).

3. *The songs of the Chorus.*—As the chorus entered the orchestra, it, or as some say the coryphaeus alone, usually sang the πάροδος, a term like our "march," applied also to a species of music. Aristotle (*Poet.* 12) defines it as πρώτη λέξις ὅλη τοῦ χοροῦ. It was very frequently in anapaests. The στάσιμα were the regular choral odes which were sung after the chorus had taken up its position on the θυμέλη, and had duly arranged itself. These στάσιμα served to divide the play into acts. They generally consisted of one or more στροφαί, that portion which was sung as the chorus moved from left to right, ἀντιστροφαί as it moved from right to left, while the conclusion of the ode was sung standing and called ἐπῳδός (Schol. on Eur. *Hec.* 647). This of course can only refer to the στάσιμα which was sung by the whole chorus, and not by two half-choruses. That the strophae and antistrophae of all the stasima of Sophocles were sung by half-choruses, while the whole chorus sang the ἐπῳδός, is the view of Muff (*op. cit.* p. 24 *et passim*) and Christ (*Metrik*, 652). The introduction of the strophe, antistrophe, and epode into the original monostrophic chorus is attributed to Stesichorus, though it must be remembered that Alcman had a chorus of fourteen strophes, of which the last seven were in a different metre to the first seven (Grote, ch. 29). The ἐξόδιοι νόμοι or μέλη ἐξόδια (not ἔξοδος, which is the term for the whole of the last act: see Aristot. *Poet.* 12, and Muff, p. 45) were sung by the chorus, or the coryphaeus, as the chorus moved off the stage to the left of the spectators: like the πάροδος, it was usually in anapaests. A dirge between the chorus and the actors, as in the *Choëphoroe* (306 ff.) and the

Electra of Sophocles (121 ff.), was called **κομμός** (Aristot. *l. c.*). The dialogue which the MSS. by the heading **XOP.** seem to intimate was held between the actor and the chorus was either sustained on the part of the former by the coryphaeus, or, as seems very probable, the choral parts in **κομμοὶ** are to be assigned to individual choristers. (See the full discussion in Muff, *op. cit.* pp. 41, 42.) It is generally said that the dialogue of the coryphaeus with the actor was called **καταλογή**, while the **παρακαταλογὴ** was what was delivered by the individual choristers in opposition to **μέλος** or song of the whole chorus (see B. Arnold, p. 388). But it is more correct to assume that the **καταλογὴ** were the iambic trimeters which were *declaimed* by the actors, and the **παρακαταλογὴ** the trochaic verses which they sang in a kind of recitative with musical accompaniment (see Muff, *op. cit.* 46; Zielinski, *Die Gliederung der altattischen Komödie*, 313).

The *parabasis* is the distinctive feature of the chorus of the old comedy. In it the chorus, making an evolution and facing the audience, addressed them with remarks on personal matters or on topics of the day (cf. Schol. on *Eq.* 508; *Pax*, 733). It consisted of several parts, all of which can be seen in the *Aves*:—(1) The **κομμάτιον** (675–683), a short lyrical piece, sung while the chorus was making the evolution to face the audience. (2) The **παράβασις** proper or **ἀνάπαιστοι** (684–735), the address of the coryphaeus to the audience, generally in anapaestic tetrameters catalectic (in the *Nubes* in Eupolidean metre). The concluding portion of this was called the **μακρὸν** or **πνῖγος** (probably 722–735), as it had to be recited in one breath (Hephaest. p. 135; Poll. iv. 112). (3) **στροφὴ** or **ᾠδή** (736–751), a short lyrical hymn. (4) **ἐπίρρημα** (752–767), trochaic tetrameters catalectic, sung in recitative to a musical accompaniment by the coryphaeus. It is a sort of addition to the parabasis proper, and is an address to the people, giving advice, &c. (5) **ἀντιστροφὴ** or **ἀντῳδή** (768–782), corresponding to the **στροφή**. (6) **ἀντεπίρρημα** (784–799), corresponding to the **ἐπίρρημα**. In many MSS. of Aristophanes the **στροφὴ** and **ἀντιστροφὴ** are assigned each to a semi-chorus; but Müller (*op. cit.* 219, note 3) does not think much weight is to be attached thereto. Sometimes the separate parts of the parabasis are in different portions of the play, as in the *Pax*.

4. *The dances of the Chorus.*—As derived from the dithyramb, of course the chorus danced. The term **ὀρχήστρα**, and the old name **ὀρχησταὶ** given to poets, proves this further (Athen. i. 22). But it must be remembered that the term "dance" is to be regarded as equivalent to any "rhythmical movement." There were three kinds of dances: a special one for each of the different kinds of drama—the grave and stately **ἐμμέλεια** for tragedy, the frolicsome **σίκιννις** for the Satyric drama, and the licentious **κόρδαξ** for comedy (Lucian. *de Salt.* 26; Bekker, *Anecd.* p. 101, 16). Aristophanes (see *Nubes*, 540) does not appear to have used the **κόρδαξ**. In some cases—as, for example, in the **στάσιμα**—the dance was generally quite a secondary feature; but there can be no doubt that the chorus danced (*i.e.* moved rhythmically) while singing the **στάσιμα**. It is stated in so

many words (Aristoph. *Thesm.* 953);
term **στάσιμα** means what is sung,
the chorus remains stationary (Schol.
Phoen. 202), but what is sung after
taken up their position in rank and
longer settling themselves (Hermann, *E*
metr. § 665). That the contents of man
point to the accompaniment of danc
(*op. cit.* 33, 34) considers very likely,
example the celebrated chorus in the
Coloneus, 608 ff. Sometimes the coryph
while the chorus danced. Those entr
exits which were not regular marches
accompanied with the dance; and ther
to have been a certain amount of r
movement in the **κομμοί** (A. Müller
p. 222). The dance took a much mo
nent position, and a more lively move
adopted, in the **ὑπορχήματα**, and in th
they are distinctly contrasted with the
(Schol. on Soph. *Trach.* 216). Other
of **ὑπορχήματα** in *Ajax*, 693; *Oed.*
It appears that the coryphaeus used t
first few steps of the dance (**ἐνεδίδου τ**
τὰ τῆς ὀρχήσεως σχήματα πρῶτος,
vii. 72). To help the evolutions and
the chorus lines (**γραμμαί**) were draw
thymele to guide them (Hesych. *s. v.*
just as in the ballet at present.
Peloponnesian war the art of dancing
Carcinus had introduced a kind of v
ballet which consisted of pirouettes
twirlings of the legs, and this style o
became popular (cf. Aristoph. *Vesp.* a
Curtius, *History of Greece*, iv. 104).
steps and figures of dancing, referenc
made to Chr. Kirchhoff, *Die orchest*
rythmie der Griechen, and to th
SALTATIO.

5. *The musical accompaniment of the*
Originally the accompaniment was pl
kind of stringed instrument called **κ**
(Athen. xiv. 636; see Muff, *op. cit.* 4
wards by one flute-player (seldom by
one), playing on a double flute (A. Müll
p. 210, note 2). The flute was chos
instrument, since it best harmonised
human voice (Aristot. *Prob.* xix. 43).
in splendid garments and wearing a c
flute-player marched before the choru
entrances and their exits. During the
ance he remained on the thymele or on
of the altar (A. Müller, p. 136, note 1
times there was also the accompani
stringed instrument (Sext. Emp. 751,
both the flute-player and the **κιθαριστ**
in the great picture of the Satyric ch
the vase of Ruvo, given by Wieseler
gebaüde und Denkmäler des Bühnenw
vi.), and elaborately discussed by hi
Satyrspiel; it is also reproduced in Ba
Denkmäler, fig. 422. The **διαύλιον** a
have been a symphony by the flute-p
voices not joining in (Hesych. *s. v.*; cf.
Ran. 1264). When the chorus were
dance, the flute-player gave the signa
τὸ ἐνδόσιμον) by pressing with his
instrument called **κρούπεζα**, which
sort of a wooden rattle (**κρόταλον**): cf.
87; Hesych. *s. v.* **κρούπεζα**. The flu
paniment of the **σίκιννις** was called **σικ**
(Athen. xiv. 618 c).

The personnel of the Chorus.—They were
men, citizens, of free birth (Dem. *Mid.*
56), and generally young. Only at the
were metics allowed to serve in the
(Schol. on *Plutus*, 953). Originally the
tae served voluntarily (Aristot. *Poet.* 5),
en in later times pressure had to be put
em by the choregus or chorolectes to
them serve (Antiphon. *de Chor.* § 11).
were supported by the choregus during
ne of training (Argum. *ad* Antiph. *de*
and after the performance he gave them
ptuous meal (cf. Aristoph. *Ach.* 1155).
were also paid by the choregus (Xen.
Ath. i. 13), but we do not know the
t. The state granted the choreutae the
ge of exemption from military service
Mid. 519, § 15). As there was danger of
s often taking place between the choruses
al choregi, special ἐπιμεληταὶ were ap-
l by the state to keep order among the
ers (Suidas, *s. v.* ἐπιμεληταί), though
erbrodt (*Scaenica*, note 3) thinks their
on was to see that the choristers did not
to confusion in making their evolutions.

to the characters the chorus represented:
the actors were mostly heroes, the chorus
nted members of the people, and these
most various kinds,—old and young, men
omen, Greeks and foreigners, even Ocean
s in the *Prometheus*, and inspired
ntes in the *Bacchae*. The chorus of the
drama always represented Satyrs; and
edy we have all kinds of fantastic forms,
s clouds, frogs, birds, &c.

The dress of the Chorus.—They regularly
masks [PERSONA], in order to appear in
style to the actors (Theophr. *Char.* 6;
v. 142). The garments used in tragedy
short chiton and the himation, though
lly special choruses were dressed in
ter: thus the Eumenides wore black gar-
and black felt Arcadian hats (Ἀρκαδικοὶ
see Suidas, *s. v.* Φαιός); and the Bacchae
Bacchic costume. They also appear to
worn a tight-fitting garment (σωμάτιον)
certain amount of padding (προστερνίδιον,
τρίδιον), and the term σωμάτιον is some-
applied to this padding (A. Müller, *op. cit.*
). Sophocles (*Vit. Soph.* 128, 30) is said
e introduced κρηπῖδες, which had very
oles. But as they are said to have been
by actors as well as by the chorus, we
be sure that the statement is very
e, as we know that the actors generally
cothurni. Perhaps, as Wieseler (*op. cit.*
thinks, the subordinate actors used to
hem. Further, the chorus had all sorts
essories where necessary, such as staves,
torches, thyrsi, &c., which they used to
de before beginning the dance (Schol. on
29).

Satyrs' dress was merely an apron (περί-
of goat-skin round the loins, to which
tached the tail and the phallus, the latter
of red leather; they had besides often a
skin round their shoulders. They ap-
to be naked, but really they wore a flesh-
ed tight-fitting garment. On their feet
ad very thin shoes, though in the pictures
ppear to have had bare feet (cf. Wieseler,
. vi. 3). On the vase-painting of Ruvo
we find one chorister with a short sleeveless tunic, and the χλανὶς ἀνθινή, which is mentioned as a peculiarly Satyric dress (Poll. iv. 118).

We have no clear evidence of the costume of the older comedy. It appears to have consisted of the σωμάτιον, χιτών, and ἱμάτιον, the latter being laid aside before dancing (*Thesm.* 655). The ἱμάτια of the chorus in the *Nubes* were elaborately adorned (Schol. on *Nub.* 289). Of course the chorus wore the erect phallus, but this ceased to be worn in the new comedy (A. Müller, p. 257). On their feet they had sandals (σανδαλίσκοι): cf. Aristoph. *Ran.* 404.

8. *Gradual disappearance of the Chorus.*—The practice of introducing into tragedies choral odes which had no special relevancy to the play, as was especially done by Agathon, was a sign of the growing feeling that the chorus was not an essential part of the drama. However, we find mention of a tragic chorus in the Demosthenic age (*Mid.* 533, § 58), and of a Satyric chorus in the time of Sositheus, 284 B.C. (*Anth. Pal.* vii. 707, 3). But from Delphic inscriptions of 260 B.C. quoted by Wescher and Foucart (*Inscript. de Delphes*, Nos. 3–6), in which no choreutae appear, these scholars have supposed that the chorus of tragedy had disappeared by that date. The absence of the choral songs and of the chorus as a participator in the action is the external mark which, in a considerable measure, distinguishes the middle and new comedy from the old. The discontinuance of the comic choregia is attributed to a decree of Cinesias (Schol. on *Ranae*, 153). There were no choregi when Aristophanes produced the *Aeolosicon* (389 B.C.), and the *Plutus* (2nd edition). But we must not suppose that the discontinuance of the chorus was sudden, for the chorus sometimes appears even in the middle and new comedy (Boeckh, *Staatshaushaltung*, i.^{3} 545–6; Meineke, i. 441).

The literature on the subject of the chorus is very extensive. The most important works are: B. Arnold, art. *Chor* in Baumeister's *Denkmäler des klassischen Altertüms*, pp. 383–391; Sommerbrodt, *Scaenica;* Muff, *Die chorische Technik des Sophokles;* R. Arnoldt, *Die chorische Technik des Euripides;* F. Castets in Daremberg and Saglio, art. *Chorus;* A. Müller, *Die griechischen Bühnenalterthümer*. In the two last works full reference is made to the numerous works on the subject.

2. ROMAN.—The chorus among the Romans belonged especially to the *crepidatae*, i.e. the tragedies modelled on and derived from the Greek ones; but it also appears in the national tragedy of the Romans, the *praetextatae* (see O. Ribbeck, *Die römische Tragödie im Zeitalter der Republik*, 607, 631 ff.). Even though Diomedes (491, 29, Keil) declares that the Roman comedy had no chorus, yet this is only true generally, for there is an undoubted chorus of fishermen in the *Rudens* of Plautus. It was probably the whole company of actors (*caterva*), not a chorus, which said the "Plaudite" with which comedies end (cf. Cic. *Sest.* 55, 118). There appear to have been choruses in the pantomimus and in the pyrrhica of the empire (Friedländer, *Darstellungen*, ii.^{3} 434, 443). There was no fixed number of choreutae (Diomedes, *l. c.*). As that part of the theatre which was the Greek orchestra was given up to the spectators at Rome, the chorus had to occupy the stage (Vitruv. v. 6, 2).

The Roman chorus took more part in the action of the drama than did the Greek chorus (O. Jahn, in *Hermes*, ii. 227; cf. Hor. *Ars Poet.* 193). It was led by a *magister chori*, who had his place in the middle of the chorus, and so was called *mesochorus* (Plin. *Epist.* ii. 14, 6). The musical accompaniment was played by a choraules on a double flute (Diom. *l. c.*). Between the acts the chorus (probably in tragedy) and the tibicen (in comedy) used to sing or play (Donatus, *Arg. ad Andriam*); and Horace (*Ars Poet.* 194) especially urges that the subject of the songs should be pertinent to the action of the drama. The chorus was composed of men who were professionals (*artifices*), and who were for the most part slaves (Ribbeck, *op. cit.* 639, 657). As the chorus of the Romans sometimes represented women (*e.g.* in Ennius's *Medea*; cf. Cic. *Fam.* vii. 6), they must have worn masks. They were probably dressed after the manner of the Greeks, and the dresses appear to have been very splendid, as was the whole production of plays at the end of the republic and during imperial times; *e.g.* purple chlamydes were wanted for a chorus of soldiers, as is told in a well-known story (Hor. *Epist.* i. 6, 40).

Besides B. Arnold (*op. cit.*), O. Ribbeck (*op. cit.*), see Gaston Boissier in Daremberg and Saglio, and Friedländer in Mommsen-Marquardt, vi. 523. [L. C. P.]

CHOUS (χοεύς, χοῦς), a Greek liquid measure containing 12 κοτύλαι or 5·76 English pints. It was equal to the Roman congius of six sextarii. At first the name seems to have meant simply a pitcher or flagon (from χέω); hence the χόες or "pitcher feast" on the second day of the Anthesteria [DIONYSIA]. According to the grammarian Crates of Mallus (περὶ Ἀττικῆς διαλέκτου, *ap.* Ath. xi. 495 a, b), the χοῦς had originally a similar form to the Panathenaic amphorae, and was also called πελίκη: but afterwards took the shape of the οἰνοχόη or ὄλπη. This use of the word throws light on some statements which might otherwise surprise us. At an ἔρανος or contributory feast each guest brought his provisions in a κίστη, his wine in a χοῦς (Aristoph. *Acharn.* 1086): in the comic poet Eubulus a man orders a χοῦς of mixed wine from a καπηλεῖον, and a κάνθαρος to drink it out of (*Fragm.* 80–82, Meineke); on the day of the χόες a prize was given to the person who first emptied his χοῦς: and Milo of Croton is said to have drunk off three χόες of wine at one draught. In these cases it is not the large measure here described, but a jug or pitcher that is to be thought of. The distinction drawn by Suidas, alone among the grammarians, between a χοῦς of four κοτύλαι and a χοεὺς of twelve, has not found much favour: on the forms of the word, see L. and S. (Pollux, x. 73; Wurm, *de Pond.* &c., pp. 127, 136, 141, 198; Hussey, *Ancient Weights*, pp. 211–213; Hultsch, *Metrologie*, pp. 80, 82, 87.) [P. S.] [W. W.]

CHREOUS DIKÉ (χρέους δίκη), a simple action for debt, belongs to the class of cases arising upon an alleged breach of contract, like the actions ἀργυρίου, ἀφορμῆς, συμβολαίων, or συνθηκῶν. It must have been the usual mode of proceeding open to creditors (Caillemer, 9*me Étude*, p. 31); but there is little information as to the precise distinction between it and kindred suits. In all these cases, small debts under
ten drachmas were recoverable b
nerant magistrates, δικασταὶ

he archons originally entered upon theirs
eginning of Gamelion, and ever since the
C. 490, at the beginning of Hecatombaeon.
os time was counted according to the
f the high priestess of Hera, who held
ce for life (ἡρεσίς: Thucyd. ii. 2; Suid.
ρεσίδες); and the inhabitants of Elis
y reckoned according to the Olympic
which were celebrated every fifth year
the first full moon which followed after
mmer solstice. In this manner every
tate or city calculated time according to
peculiar or local era, and there was no
ch was used by *all* the Greeks in common
ordinary purposes of life. Historians,
e, down to the middle of the third cen-
C., frequently made use of the average
ined by men, in order to fix the time in
er intelligible to all Greeks. Herodotus
) calculates that three generations of men
ivalent to a century (*saeculum* is some-
used in Latin, but not *aetas*). Timaeus,
urished about B.C. 260, was the first
n who counted the years by Olympiads,
f which contained four years. The
ng of the Olympiads is universally fixed
year 3938 of the Julian period (a cycle
ed by Joseph Scaliger, which commences
4), or in B.C. 776. If we want to reduce
en Olympiad to years before Christ, *e.g.*
we take the number of the Olympiads
elapsed,—that is, 86,—multiply it by
educt the number obtained from 776, so
e first year of the 87th Ol. will be the
s the year 432 B.C. If the number of
ads amounts to more than 776 years,—
if the Olympiad falls after the birth of
—the process is the same as before; but
e sum obtained by multiplying the Olym-
y 4, we must deduct the number 776,
at remains is the number of the years
Christ. This calculation according to
ads, however, does not seem to have been
plied to the ordinary business of life, but
been confined to literature, and more
ly to history. Some writers also adopted
jan era, the fall of Troy being placed by
henes and those who adopted this era, in
r B.C. 1184. After the time of Alexander
at, several other eras were introduced in
gdoms that arose out of his empire. The
s the Philippic era, sometimes also called
of Alexander or the era of Edessa; it
on the 12th of November B.C. 324, the
the accession of Philip Arrhidaeus. The
was the era of the Seleucidae, beginning
1st of October B.C. 312, the date of the
of Seleucus Nicator at Gaza, and of his
uest of Babylonia. This era was used
tensively in the East. The Chaldaean
ered from it only by six months, begin-
the spring of B.C. 311. Lastly, the eras
och, of which there were three, but the
st commonly used began in November B.C.
Europe none was so generally adopted,

and as the Olympic games were celebrated
nes, we have 293 Olympic cycles, that is,
ears, 776 of which fall before and 396
hrist. But when the Greeks adopted
anity, they probably ceased to reckon by
ads, and adopted the Julian year. The
practice of dating from the birth of Christ was introduced by Dionysius Exiguus in A.D. 532. (Corsini, *Fasti Attici*, Florence, 1744–56, 4 vols. 4to; Ideler, *Handbuch der mathem. und technisch. Chronol.* Berlin, 1825, 2 vols. 8vo; Clinton, *Fasti Hellenici*, Oxford, 1830–1834, 3 vols. 4to.)

The Romans in the earliest times counted their years by their highest magistrates, and from the time of the republic according to their consuls, whose names were registered in the Fasti. This era, which may be termed the *aera consularis*, however did not begin at all times at the same point; for in the earliest times of the republic the consuls entered upon their office on the calendae of Sextilis, at the time of the decemvirate on the ides of May, afterwards on the ides of December, and at a still later time on the ides of March, until in B.C. 153 the consuls began regularly to enter upon their office on the 1st of January. This constant shifting was undoubtedly one of the causes that produced the confusion in the consular era, of which Livy (ii. 18, 21, &c.) complains. Great confusion also arose from the incompleteness or the deliberate falsification of the records, and the interruption caused by *interregna*, so that it is quite impossible to draw up satisfactory *Fasti Consulares.* (Cf. *C. I. L.* i. 403–551, with Mommsen's important commentary.) Varro, Cicero, Tacitus, and even Gaius, date events by the number of years which had elapsed since the expulsion of the kings. The earliest use of a fixed point from which to date is in the dedication of the Temple of Concord by Cn. Flavius, "cciii. annis post Capitolinam dedicatam" (Plin. xxxiii. § 19). The consular era was the one commonly used by the Romans for all practical purposes, the date of an event being marked by the names of the consuls, in whose year of office it had happened. But along with this era there existed another, which as it was never introduced into the affairs of common life, and was used only by the historians, may be termed the historical era. We have no instance of the use of this era at Rome before the time of Augustus; but in the case of other Italian towns a similar practice was employed much earlier (Plin. iii. § 114.) It reckoned the years from the foundation of the city (*ab urbe condita*); but the year of the foundation of the city was a question of uncertainty among the Romans themselves, although all agreed in the day of the month, *i.e.* April 21st, the Parilia (Dionys. i. 88). M. Terentius Varro and Atticus placed it in the third year of the 6th Olympiad, that is, B.C. 753. (Plut. *Rom.* 12; Vell. Pat. i. 8; Censorin. *de Die Nat.* 17.) This era was adopted by Velleius Paterculus, Pliny, Tacitus, A. Gellius, Dio Cassius, Eutropius, and others. Next to the Varronian era, the most celebrated was that of M. Porcius Cato, who placed the foundation of Rome in the first year of the 7th Olympiad, or in the spring of B.C. 751. (Dionys. i. 74; Syncell. *Chronog.* p. 194 a.) The date fixed upon in the *aera Capitolina* (so called from the Fasti Capitolini), by Polybius (Dionys. *l. c.*; Cic. *de Rep.* ii. 10), Diodorus, and Cornelius Nepos, was one year later; Q. Fabius Pictor placed the foundation in the first year of the 8th Olympiad, *i.e.* 747 B.C. (Dionys. *l. c.*), and Cincius Alimentus even placed it about the fourth year of the 12th Olympiad, *i.e.* B.C. 729. Ennius, on the other hand, placed the building of Rome about 700 years before his own time; that is, at least 100 years earlier than most other writers (Varro, *de Re Rust.* iii. 1); and Timaeus went so far as to regard the foundation of Rome contemporaneous with that of Carthage, placing it 38 years before the first Olympiad. But no reliance can be placed on any of these statements; as however it is necessary to have one point to start from, the Varronian era has been adopted by modern writers. [L. S.] [A. S. W.]

CHRYSELEPHANTI'NA, sc. *agalmata.* This term, though resting on no better authority than that of the Scholiast on Aristophanes (*Eq.* 1169), is now customarily used to denote those gold and ivory statues which were the highest attainments of Greek plastic art.

The use of these costly materials seems to have been originally a development of the early art of wood-carving. The first artists who produced chryselephantine statues were pupils of Dipoenus and Scyllis, the Cretan "Daedalids." Though we hear of no such works by these masters themselves, they used ivory in conjunction with ebony (Paus. ii. 22, 5); by gilding the wood, a quite common proceeding, the transition would be made. The appropriateness of the two materials would then suggest the restriction of the ivory to nude parts, of gold to drapery, &c., a core of wood still underlying the whole. Such probably were the works of Dorycleidas, Theokles, Dontas, and other artists of the earlier portion of the 6th century B.C. We do not hear of many chryselephantine works of importance during the late archaic or transitional period; but some of the "Xoana" mentioned by authors may belong to this class, the name being constantly applied even to later specimens. But the construction of colossal figures, such as the Olympian Zeus and Athene Parthenos of Phidias, or the Argive Hera of Polycletus, can have had little in common with mere wood-carving. For these, of course, a most elaborate internal framework was necessary; attempts have been made to restore by conjecture these figures and the processes by which they were constructed, as by M. Quatremère de Quincy in *Le Jupiter Olympien.* In the latter portion of the 5th century B.C. the pupils of Pheidias found many states able and willing to grant the enormous expenditure necessary for the erection of a chryselephantine colossal figure; but in later times opportunities for such enterprises could but rarely occur. Kings, however, came to arrogate to themselves a distinction formerly appropriated to the gods: thus the portrait-statues by Leochares in the Philippeum at Olympia were of gold and ivory. So late as the time of Herodes Atticus these materials seem to have been still in request for the most magnificent statues. [E. A. G.]

CHRYSEN'DETA were metal dishes (*lances*) used by the Romans for serving up food at table. Martial mentions them several times (ii. 43; ii. 53; vi. 94; xi. 30; xiv. 97) as in use by the wealthy, and specially notices mullet as being served upon them. The derivation of the word, and the epithet *flava* applied to them by Martial (ii. 43, *flava tegunt chrysendeta mulli*), render it probable that these dishes were made of silver, and were adorned (probably on the rim) with ornaments in relief, wrought in gold and attached by means of soldering or riveting.

Such ornaments (as explained under Em
were called *emblemata* and *crustae* [cf.
TURA]. In the *Origines* of Isidore of
(xx. 4, § 8) *chrysendeta* are defined sin
gilded vessels (*vasa deaurata*), but the
originally have been something more th
or they would not have acquired the
name of "gold-inlaid" (*chrysendeta*,

ERES. [FUNUS.]

GULUM (ζώνη, ζώνιον, ζωστήρ, *cinctura*,
Passing over the *cestus* [CESTUS] and
m or *fascia pectoralis*, also called ἀναδεσ-
στηθοδεσμός [STROPHIUM], which was a
orn by women inside the tunic to support the breast, and recollecting that ταινία and μίτρα [MITRA] are generic terms for ribbons or bands worn round the body, whether over or under the tunic or round the head (in Latin, *taenia* is apparently used only for the latter), we find the following meanings assigned to *cingulum* and the Greek and Latin words given above:—

1. A girdle worn by women over the tunic, just under the breast (Verg. *Aen.* i. 492).

2. A girdle worn both by men (Petr. 21, 2) and women (Varr. *L. L.* v. 114) just above the hips, also called *zona* (Ov. *Fast.* ii. 320; Mart. xiv. 151). The distinction said by Moeris (*Att.* p. 124) to subsist between ζώνη and ζώνιον—that the former is used only of men's girdles, the latter of women's—is disproved by Aesch. *Suppl.* 457; Plat. *Alc.* i. 123 B; Herod. i. 51; Eur. *Hec.* 762. The tunic was generally tucked up and made to hang in a fold (κόλπος) over the girdle (ἀναζώννυσθαι, συζώννυσθαι, *succingere*). This was especially done when any rapid motion was required; hence ζώννυσθαι, "to gird up one's loins" for battle (*Il.* xi. 15) or for labour (Hes. *Op.* 343), and compare εὔζωνος ἀνήρ, used for a fairly quick walker (Thuc. ii. 97), as is also *alte praecinctus* by Horace (*Sat.* i. 5, 6). Similarly *succinctus* (Juv. iv. 24) and *praecinctus* (Hor. *Sat.* ii. 8, 70) are used of "trim" attendants at table. Conversely, when one was in deshabille at home, he was *discinctus* (Hor. *Sat.* ii. 1, 73), a term also applied to any "loose" character (Hor. *Epod.* 1, 34; cf. Suet. *Caes.* 45). The long tunics of the Ionian women (Müller, *Arch.* 339, § 7) hung in deep folds over the girdle; hence they and other women were called βαθύκολποι or βαθύζωνοι by Homer (*Il.* xviii. 339; ix. 594). These girdles were often simple cords, and the ends had tassels affixed; but often, too, they were very splendid. An elegant golden girdle found in Ithaca has as clasp a knot of metal ornamented with garnets; from each side are suspended Silenus' heads holding each three strings, from which hang pomegranates (see fig. 1475 in Saglio's *Dict. des Antiq.* i. p. 1174). Often, too, these girdles had kinds of braces which crossed on the breast and stretched over the shoulders, as in the annexed woodcut representing Creon, taken by Saglio from an ancient vase.

Cingulum.
(From an ancient vase.)

3. The bride's girdle (ζώνη παρθενίη, Hom. *Od.* xi. 245). Among the Romans it was knotted in what was called the knot of Hercules (an amulet against *fascinatio*, Marquardt, *Privatleben*, 43, note 3; also against wounds, Plin. *H. N.* xxviii. § 63). This girdle was made of sheep's wool, and was loosed by the bridegroom on the marriage bed (Festus, s. v. *Cingulo*). It was also called *incingulum* (Non. 47, 27).

4. A soldier's belt (ζωστήρ). The term

ζωστὴρ is very rarely applied to a woman's belt (Paus. i. 31, § 1); it is nearly always applied to a man's, and only now and then to the belt of one who was not a soldier (Hom. *Od.* xiv. 72; Theocr. vii. 18). It is generally used for the military belt. In Homer it is a belt which fitted close (*Il.* iv. 134), covering the stomach (*Il.* v. 539) and lapping partly over the lower part of the cuirass (**ὅθι διπλόος ἤντετο θώρηξ**, *Il.* iv. 133). The clasps (**ὀχῆες**) were sometimes of gold, and appear to have fastened behind (*Il.* xx. 413–415). It was usually made of leather, but was often highly adorned, sometimes with silver plates (*Il.* xi. 236), sometimes with purple dye (*Il.* vi. 219); hence the epithets **δαιδάλεος** and **παναίολος** (*Il.* iv. 135, 186). This is quite different from the *ζῶμα* or apron-like piece of armour stretching from the navel, where the *θώρηξ* ended, to the knees, and which was regarded as a part of the *θώρηξ*, so much so that in one passage the latter term is applied to it (*Il.* iv. 135). It was very probably made of leather, and it shone brightly (**φαεινός**, *Od.* xiv. 482). Helbig, however (*Das homerische Epos*, p. 202), after Aristarchus, supposes that *ζῶμα* is strictly the lower projecting rim of the archaic *θώρηξ*, and then put sometimes for the *θώρηξ* itself (*Il.* iv. 187, compared with 136). He thinks the *ζῶμα* of the *Odyssey* was a kind of light girdle, something like the *μίτρη*, worn on special occasions which required great rapidity of movement, instead of the *θώρηξ*. The term *ζῶμα* is also applied to the waistcloth or drawers (*subligaculum*) worn by athletes (*Il.* xxiii. 683), though **διάζωμα** is the more usual word in this sense. Again, the *ζωστὴρ* differed from the *μίτρα* [MITRA], which in the Homeric armour was a thin pliant (cf. perhaps *αἰολομίτρης*, *Il.* v. 707) band of bronze (*Il.* iv. 187), lined probably on the inside with wool, which was immediately next the chiton under the *ζῶμα* (cf. Buchholz, *Die homerischen Realien*, ii. 1, 372–3, and Helbig, *l. c.* p. 200).

Cingulum is the proper term in Latin for a soldier's belt, which went round the waist. Therein it differed from the *balteus*, which nearly always went over the left shoulder and under the right arm, and to which the sword was attached. It is highly noticeable that the sword generally hangs on the right side, though such is not the invariable rule (Joseph. *B. J.*, iii. 5, 5). It is to the *balteus* that we are to refer *cingi* in the sense of "being a soldier" (*e.g.* Dig. 5, 4, 3), and *discingi* when used as a mark of degradation (*e.g.* Liv. xxvii. 13, 9; Val. Max. ii. 7, 9; Suet. *Oct.* 24; Herodian, ii. 13, 8, **ἀποζῶσαι**). All military duties were performed *accinctus*, i.e. with the sword on (Tac. *Ann.* xi. 18; Veget. iii. 8). It is very rarely that we find the *cingulum* supporting the sword, and that only as a rule in the case of horsemen (see figs. 1490 and 1491 in Saglio, *op. cit.*). *Cingulum* is, however, sometimes found as a generic term, embracing both the *balteus* and the *cingulum* proper (Trebell. *Salonin. Gallien.* 2); and, as such, the *cingulum* became the insignia for all military officials: and when in the later empire the civil offices too were considered as species of military service, it was regarded as a mark of their rank also (Cod. Just. xii. 8, 2, pr.; 33 (34), 5). Hence *cingulum habere*, "to have high official position" (Cod. Just. xii.
3): cf. *ζώνης τυχεῖν*, *Anth. Pal.* xi. 238
gulo exui" (Cod. Just. vii. 38, 2); "in offic

from the centre of the belt were strips of leather, studded with flat plates of metal or buttons (see the cut taken from I. Müller's *Handb. d. klass. Alterth. Wissen.* iv. Taf. ii. fig. *g*).

From the extremities of the thongs hung ornaments, examples of which are given by Saglio, figs. 1498–1500, and which are as various as the pendants on our watch-chains. On certain statues of Imperial times there appears a narrow girdle wound round that species of cuirass which ended in a *ζῶμα*. This girdle is always knotted in a kind of bow-knot, with the ends tucked in

IFLO. [CALAMISTRUM.]

PUS. 1. Originally the trunk of a tree s branches lopped off, left standing in the as a stump or sunk in it: in a wooden ation described by Caesar (*B. G.* vii. 73) pi are further sharpened to a point and s *chevaux de frise*.

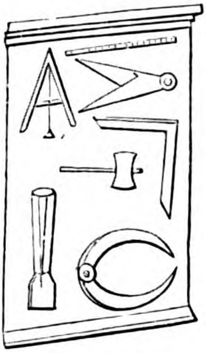
rom the similarity of form, a low column ne, sometimes round, more often rect-r. Stone cippi were set up by the Agri-es to mark the divisions of lands, and ntioned in the gromatic writers (Hygin. *de Controv.* p. 127, Lachmann; Sic. Flacc. *de Agr.* p. 138 ff.; *Lib. Coloniar.* i. pp. 211, 21, 222; cf. AGRIMENSORES, p. 83 *b*). ost frequent use of the cippus, however, a sepulchral monument. Such cippi are the commonest finds of the excavator, t be seen in the local museums of most cities, as for instance at Bath. Several ecimens are in the Townley collection at itish Museum, one of which is given in st of the following woodcuts. The in- on is to the memory of Viria Primitiva, L. Virius Helius, who died at the age of n years, one month, and twenty-four days. cond example is from a cippus preserved Vatican Museum. As features common two, and therefore probably characteristic se monuments in general, we may notice toons of fruit and flowers suspended from heads at the corners, and the sphinxes ; between the latter we see in the one e the head of Pan, in the other a Nereid upon a sea-monster. The letters D. M. in st cut are explained by the DIS MANIBUS form the sole inscription on the second. eral cippi we find the letters S. T. T. L., , *sit tibi terra levis* (cf. Pers. *Sat.* i. 37). These two uses of the cippus, as a boundary and a tombstone, were often combined; it was usual to inscribe on it the extent of the burying ground both along the road (*in fronte*) and in depth (*in agrum*), and likewise the words *hoc monumentum heredes non sequitur*; in order that it might not pass over to the heredes and be sold by them at any time. (Hor. *Sat.* i. 8, 12, 13; Orelli, *Inscr.* Nos. 4379, &c.) [W. S.] [W. W.]

Cippus. (British Museum.)

Cippus. (In the Vatican.)

CIRCENSES LUDI. [CIRCUS.]

CIR'CINUS (διαβήτης: καρκίνος, Sext. Emp. *M.* x. 54; *Anth. P.* vi. 295), a compass. The compass used by statuaries, architects, masons, and carpenters, is often represented on the tombs of such artificers, together with the other instruments of their profession or trade. The annexed woodcut is copied from a tomb found at Rome. (Gruter, *Corp. Inscript.* t. i. part ii. p. 644.) It exhibits two kinds of compasses: viz. the common kind used for drawing circles and measuring distances, and one with curved legs, probably intended to measure the thickness of columns, cylindrical pieces of wood, or similar objects. The common kind is described by the Scholiast on Aristophanes (*Nub.* 178), who compares its form to that of the letter Λ. [See cut under NORMA.] The compass was accounted an ancient invention, being attributed to Perdix, the nephew of Daedalus, who through envy threw him over the precipice of the Athenian acropolis (Ov. *Met.* viii. 241), or to Daedalus himself (Diod. Sic. iv. 76), but it must be observed that circles in early works of art are obviously traced without its aid. It is doubtful whether the



Circini, compasses. (Gruter.)

τόρνος (Theogn. 805; Herod. iv. 36; Plat. *Phileb.* 56 B; Eur. *Bacch.* 1066; Hesych.) was a pair of compasses or a more primitive device for drawing a circle, consisting of a pin at the end of a string. [J. Y.] [J. H. F.]

CIRCITO'RES, CIRCUITO'RES ("vigilias circuire"). [CASTRA, p. 337 *a.*]

CIRCUMLI'TIO. [PICTURA.]

CIRCUMLU'VIO. [ALLUVIO.]

CIRCUS, a building used by the Romans for chariot races and other amusements, the general form of which was derived from the *ἱππόδρομος* of the Greeks: see HIPPODROMUS. Its name is derived from the circuit made by the racing chariots. (Varr. *L. L.* v. 153.)

The *Circus Maximus* in Rome was for long the only building of the kind, and appears to have been the model from which all later *circi* were copied; its perfectly developed architectural form was a very slow growth, the beginning of which dates back from quite pre-historic times. Vitruvius does not mention the circus in his treatise on Roman Architecture. According to the legend, Romulus held the *Consualia* or games in honour of the Latin deity Consus, an equestrian Neptune, in the *vallis Murcia*,[*] a long narrow depression between the Palatine and Aventine hills. It was during the celebration of these games that the rape of the Sabine women is said to have taken place. (Verg. *Aen.* viii. 635, and Servius' note; Val. Max. ii. 4, § 3.) Even during the Imperial period an altar to Consus existed in the centre of this valley: it is mentioned by Tacitus (*Ann.* xii. 24) as one of the points which marked the line of the sacred *pomoerium* round the walls of the primitive *Roma Quadrata*. The long level bottom and sloping sides of the Vallis Murcia made it a naturally convenient place for races to be held and seen by a crowd of spectators, who probably stood or sat on the grassy slopes of the two hills long before any architectural structure was erected.

Wooden seats (*fori*) for the people are said to have been first constructed by Tarquinius Priscus (Liv. i. 35; cf. i. 56; Fest. p. 84; Dionys. iii. 68), and these were frequently burnt and rebuilt in the same material: restorations in 327 B.C. and 174 B.C. are mentioned by Livy (viii. 20, and xli. 27). In the time of Julius Caesar some of the seats were for the first time constructed of stone, but even then and many years later the upper tiers and galleries were still of wood: very serious accidents are recorded to have happened under many of the emperors, owing to the failure of the wooden seats when crowded with people. No less than 1000 people are said to have been killed in this way during the reign of Antoninus Pius. (See Roncalli, *Chron. Vet.* vol. ii. col. 244.) Dionysius (iii. 68), who describes the Circus Maximus as it was after Julius Caesar's improvements, says that it then held 150,000 people. A destructive fire in 31 B.C. was followed by important restorations (Dio Cass. l. 10); and Augustus added a magnificent marble *pulvinar* or imperial box, and placed in the
spina the Egyptian obelisk which

white chalk or lime (*alba linea*), and hence sometimes called *creta* (Senec. *Ep.* 108) or *calx* (Cic. *de Am.* 27) (K). A similar white line for the finish was drawn across the *arena* opposite the judges' box (*tribunal judicum*, D), at a point unequally distant from the two *metae*. Thus Cicero (*Senec.* 23) uses the metaphor "quasi decurso spatio ad carceres a calce revocari," and Horace (*Ep.* i. 16, 79) speaks of "mors ultima linea rerum" (see also Cassiod. *Var. Ep.* iii. 51). The starting line was drawn opposite the *metae* which were nearest to the *carceres*. It is
difficult to understand how the white line for
he finish could remain unobliterated by the
sh and trampling of the horses and chariots
their seven laps. There is however no reason
think that a chalked rope was used, as has
suggested.
sma se lines are both shown distinctly on a
rema mosaic of the 3rd or 4th century which

Arrangement of the Circus.
the next page, which shows th
of Maxentius, will also serve to
arrangement of the Circus Maximu
it was evidently copied, though o
scale. At the foot of the *cavea* with
seats (*gradus*, *subsellia*, CC) a marble
(*podium*) was constructed, which ran al
long sides and curved end, *i.e.* was co-ex
with the *gradus* or *subsellia*. On this p line
stood a row of marble thrones for the use o
more dignified officials of Rome, both sec s,
and religious. These resembled the ma
thrones in the great Dionysiac theatre
Athens, and, like them, were inscribed with th
title of the official who occupied each. Possibly
some of the thrones used in the circus were
actually brought with other spoils from Greece
Several marble thrones of pure Hellenic work
still exist in the churches of Rome, where they were used for episcopal *cathedrae*. The finest of these is in the apse of S. Pietro in Vincoli. At the front edge of the *podium* was a screen of bronze *cancelli*, richly decorated and gilt.

According to Livy (i. 56), the Roman senate from a very early period possessed the privilege of having special seats in the circus, but according to Suetonius (*Claud.* 21) it was not till the reign of Augustus that any reserved seats existed. (Cf. Suet. *Aug.* 44; *Ner.* 11). In any case Augustus arranged for a new and complete classification of the spectators: he reserved the *podium* for the senate and others of high rank (Juv. ii. 147), and allotted special seats for soldiers, married plebeians, boys and their tutors (*paedagogi puerorum*), women and other classes (cf. the *Mon. Ancyranum*, ed. Mommsen, 1883, p. 53). Till this classification *τόρνος* (Theogn. 805; Herod. iv. 36; Plat. *Phileb.* 56 B; Eur. *Bacch.* 1066; Hesych.) was a pair of compasses or a more primitive device for drawing a circle, consisting of a pin at the end of a string. CIRCUMLU'VIO. [ALLUVIO.]

CIRCUS, a building used by the Romans for chariot races and other amusements, the general form of which was derived from the *ἱππόδρομος* of the Greeks: see HIPPODROMUS. Its name is derived from the circuit made by the racing chariots. (Varr. *L. L.* v. 153.)

The *Circus Maximus* in Rome was for long
the only building of the kind, and appears t
have been the model from which all later *ci*
were copied; its perfectly developed architectı
form was a very slow growth, the beginnir
which dates back from quite pre-historic
Vitruvius does not mention the circu re of the

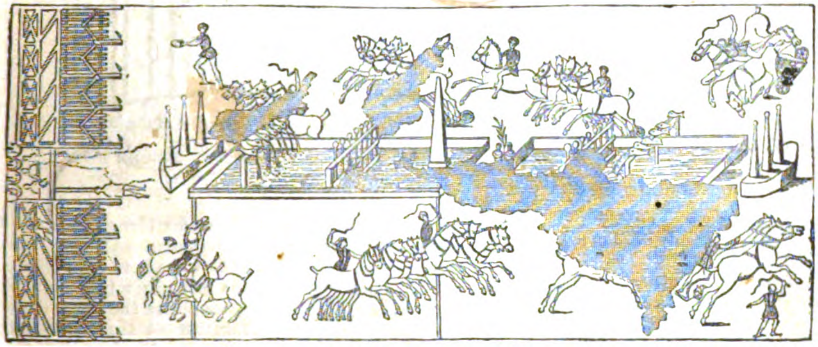
e inscriptions the form maenianus occurs

and rich *pallium*. In some cases he holds in his hand the *mappa* or napkin with which he gave the signal for the start. Under the later empire, pro-consuls and governors of provinces usually celebrated the commencement of their office by providing circus games, and hence the frequent occurrence of these subjects on consular diptychs. The starting end of the circus was formed by a row of small vaulted chambers (*carceres*, A A), each large enough to hold one chariot and its horses. At the time of its greatest splendour there appear to have been 12 *carceres* in the Circus Maximus (Cassiod. *Var. Ep.* iii. 51), but a smaller number was more usual. Each *carcer* had two doors—one behind, by which the chariot entered, and one in front opening into the *arena*. This latter doorway was closed by folding doors, with open grilles (*cancelli*) in the panels; these were thrown open at the start by slaves, two to each doorway, who flung them open simultaneously at the given signal.

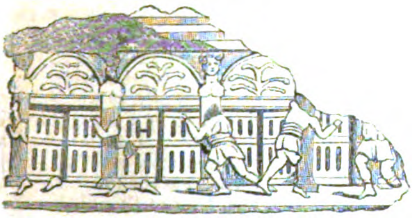
In early times the race apparently began from the *carceres*, but afterwards the actual start took place from a line marked on the *arena* in white chalk or lime (*alba linea*), and hence sometimes called *creta* (Senec. *Ep.* 108) or *calx* (Cic. *de Am.* 27) (K). A similar white line for the finish was drawn across the *arena* opposite the judges' box (*tribunal judicum*, D), at a point unequally distant from the two *metae*. Thus Cicero (*Senec.* 23) uses the metaphor "quasi decurso spatio ad carceres a calce revocari," and Horace (*Ep.* i. 16, 79) speaks of "mors ultima linea rerum" (see also Cassiod. *Var. Ep.* iii. 51). The starting line was drawn opposite the *metae* which were nearest to the *carceres*. It is difficult to understand how the white line for the finish could remain unobliterated by the rush and trampling of the horses and chariots in their seven laps. There is however no reason to think that a chalked rope was used, as has been suggested.

These lines are both shown distinctly on a large mosaic of the 3rd or 4th century which was found at Lyons (see Artaud, *Mosaïque découv. à Lyon*, 1806). Another fine mosaic found at Barcelona gives a very detailed view of a circus race of quadrigae: the *spina* is low and wide, and is covered with statues, shrines, altars, and columns, as well as having the dolphins and eggs. Each horse has its name written by it. (See *Ann. Inst.* 1863, tav. D.)



Circus. (From the mosaic at Lyons.)

The accompanying figures, fragments of ancient reliefs, show some of the *carceres* of a circus. One of these (in the Museum at Velletri) represents the slaves pulling the folding-doors open with ropes (ὕσπληγξ, Dionys. iii. 68). The ropes are not shown in the cut, though they are distinctly visible in the relief itself: these slaves are probably the *tentores*, one of the classes forming the *familia quadrigaria*. It must have been very difficult to be sure that these slaves would act with perfect uniformity of movement; and this was probably the reason why the later method of starting from a line marked on the *arena* was introduced.



Doors of Carceres opened by slaves. (Relief at Velletri.)

The other cut shows a similar set of *carceres*, but without the slaves. The doors necessarily opened outwards: it is a blunder in the perspective that makes them open inwards in the second of these reliefs. In both cases pilasters with terminal figures or *Hermae* separate the doorways. The existing remains of the *carceres* in the circus at Bovillae, near Rome, have engaged columns instead of *Hermae*.

Doors of Carceres. (British Museum.)

Each *carcer* received no light except what came in through the open grille of the doors: hence they are called *cryptae* (Sidon. *Carm.* xxiii. 319) and *claustra* (Stat. *Theb.* vi. 399; Hor. *Ep.* i. 14, 9): their narrow openings are called *fauces* (Cassiod. *Var. Ep.* iii. 51). The lofty state boxes above the *carceres* with their colonnades and arches towered to an imposing height, and the whole structure was known as the *oppidum*, from its resemblance to the gate and towers of a city (Varr. *L. L.* v. 153).

A first brass of Caracalla shows the external façade of the *oppidum*, and a sort of bird's-eye view beyond of the interior of the circus, with its *spina*, central obelisk, and *aediculae*, and statues in quadrigae set at the top of the wall surrounding the *cavea*. It will be seen from the typical plan given above that the *carceres* (A A) are slightly curved on plan, and are constructed on a segmental line, the centre of which is struck from a point midway (N) between the line of the *spina* and the side of the *cavea*. This plan was adopted in order that the chariots in all the *carceres* might have as nearly as possible a portion of equal advantage at the start. The

Games of the Circus on Roman lamp. (British Museum; from Birch, *Ancient Pottery*, p. 516.)

special *carcer* occupied by each chariot was fixed on by drawing lots.

The *spina* (back-bone, Cassiod. *Va*
51) was a long low wall or ra
form of marble (M M), set in the mi
arena to separate the going and retur
of the racers. The line of the *sp*
parallel to that of the *cavea*, but

In cut on the preceding page, from a gem, the *spina*, with the *metae*, nd other ornaments, and the four (the usual number, see p. 438 *a*) in represented. A very similar repre- f the circus is given in a gem found m (Chesters in Northumberland) in is engraved in Hodgkin's *Letters of* s, p. 231. The second cut on the pre- e, from a Roman lamp, exhibits four and the *spina*, with the *ova*, the e *metae*, the *carceres* from which the chariots have started, and the seats of the spectators.

In some ancient representations, as in the Lyons mosaic, the dolphins form fountains—water spouting from the mouth of each fish. This shows that they could not have been wholly removed. The eggs had some sacred allusion to the Dioscuri, and the dolphins to Neptune (or Consus),—deities who were the patrons of horses and racing (Tert. *de Spect.* 8). The Lyons mosaic, which no doubt represents the local circus, has what appears to have been a common form of *spina*, consisting of a long tank of water instead of the marble *podium*: statues and other ornaments stand on pedestals in the water. Two

ace in the Circus, showing the Spina, with the Dolphins, Obelisk, and Ova. (Ancient relief.)

Metae. (British Museum.)

on a semicircular plinth, at a short rom each end of the *spina*. From the time of Claudius, they were of gilt bronze decorated with bands in relief, as is shown in the annexed cut from a relief in the British Museum. These formed the turning-points for the chariots. The *primae metae* are not, as might be expected, the ones nearest to the start, but those near the semicircular end of the circus, round which the chariots made their *first* turn. Tertullian (*de Spect.* v. 8) mentions that the ancient altar of Consus in the Circus Maximus was *ad primas metas*; it appears to have been in the *spina*, and was only exposed to view during the progress of the games.

Remains of the *spina*, stripped of all its rich marble decorations, exist in the Circus of Maxentius (Nibby, *Circo detto di Caracalla*, Rome, 1825), at Vienne in France (*Bull. Inst.* 1861, p. 143), and in the circus of Carthage (Falbe, *L'emplacement de Carthage*, p. 40).

The *arena* or sandy floor of the circus, like that of the Colosseum, was on some occasions strewn with glittering particles of mica, red lead, or perfumes, by the ostentatious extravagance of some of the emperors (Suet. *Cal.* 18; Plin. *H. N.* xxxiii. § 90, xxxvi. § 162). That part of the *arena* which formed the course for the chariots was known as the *spatium* (Juv. vi. 582: cf. Verg. *Georg.* i. 513, iii. 203; Cic. *Sen.* 23, 83). The space near the *carceres* was known as the *circus primus*, while that on each side of the *spina* was the *circus interior* (Varr. *L. L.* v. 154).

45.3

Before the construction of amphitheatres in Rome, the Circus Maximus was used for gladiatorial fights with wild beasts and other scenes of butchery. The Ancyraean inscription records that Augustus had no less than 3500 wild beasts slaughtered in the circus, forum, and amphitheatre, in twenty-six exhibitions.

In order to keep the beasts from reaching the

---

a fine medallion of Gordianus III. (Grueber, *al.* 1874, xli. 4.)

spectators on the *cavea*, Julius Caesar constructed a canal (*euripus*) ten feet wide and ten feet deep all round the *arena*: this was supplied by a stream which still runs through the site of the circus, near the modern Via de' Cerchi (Suet. *Caes.* 39). After the erection of the amphitheatre of Statilius Taurus in the reign of Augustus, the Circus Maximus appears to have been no longer used for fights with beasts, and the *euripus* was therefore filled up by Nero (Plin. *H. N.* viii. § 21). 7 It was, however, again introduced in later times (Lamprid. *Heliog.* 23).

Entrances to the Circus.—The principal doorway was at B (see plan) in the middle of the *carceres*: the procession (*pompa*) before the games entered through this door, which was therefore called the *Porta Pompae*. At the opposite end of the circus (F) was the *Porta Triumphalis*, through which the winning chariots left the *arena*. This door in the curved end of the Circus Maximus, together with the *primae metae* and part of the *spina*, are shown on fragments of the marble plan of Rome (Jordan, *For. Urb. Rom.* Pl. viii.). The position of the *Porta Libitinensis*, through which the bodies of the dead were carried out, is uncertain (Lamprid. *Comm.* 16).

The other Circi of Rome.—Little or no remains now exist above ground of the other great circi of Rome. Next in importance to the Circus Maximus was the *Circus Flaminius*, which gave its name to the *Campus Flaminius*, an important and architecturally very splendid portion of the *Campus Martius*. This circus was founded by and called after the Censor C. Flaminius Nepos, who was killed at Lake Trasimenus in 217 B.C. Extensive remains of its *cavea* and *spina* were found in the 16th century on the site of the Palazzo Mattei. The tower now called *Citrangole* marks the position of the *metae* at one end of the *spina*: and hence it was formerly known as the *Torre metangole*. In early mediaeval times the long open *arena* of the *Circus Flaminius* was used as a rope-walk; and hence the neighbouring church is called *S. Catarina dei funari*. Descriptions of what was found in the 16th century are given by the contemporary antiquaries Fulvio and Ligorio: these are quoted by Nibby in his edition of Nardini's *Roma Antica*, 1819, vol. iii. p. 21.

The *Circus of Caligula and Nero* stood in the *Horti Agrippinae*, at the foot of the Vatican hill (Suet. *Claud.* 21; Plin. *H. N.* xxxvi. § 74). Its *carceres* were towards the hill: part of its site is now occupied by the great sacristy of St. Peter's. The enormous obelisk which now stands in the Piazza of St. Peter's once stood on the *spina*, and remained *in situ* till it was removed to its present position by the architect Fontana in the reign of Sixtus V. This is the only obelisk in Rome that has never been thrown down. An interesting and well-illustrated account of its removal is given by Fontana, *Trasportazione dell' Obelisco Vaticano*, Rome, 1590. No traces of this circus are now visible.

The *Circus of Hadrian* lay to the north-west of his mausoleum, in the *Campus Vaticanus*. No remains are now visible, but part of its substructures were excavated in 1743 (see *Atti della Pontif. Accad.* for 1839).

The extensive remains round the Pia
(Agonale) in the Campus Martius

re much honoured and fêted, and their society was sought after by the dissolute Roman youth. Very great skill, courage, and coolness were required to guide a chariot successfully round the sharp turns of the *metae*, among a jostling crowd of other horses and chariots, especially as each driver tried to upset his rivals. Constant accidents must have happened: almost every ancient representation of a circus race shows one or more chariots overturned: and this was specially dangerous, as the *auriga* drove with the reins looped round his waist. That he might have a chance of cutting himself free in case of accident, he wore a curved knife (*falx*) stuck in his waist-bands: this is shown in the Vatican statue here given. No doubt one of the chief attractions of the circus to the brutal Romans must have been the sight of the crushed limbs of the unfortunate drivers among the struggling hoofs of his fallen horses, or under the wheels of a luckier rival. In spite of these dangers some drivers lived to win an enormous number of victories. The monument of the *auriga* Diocles * (*circ.* A.D. 150) records that he defeated Scorpus, the winner of 2048 races; Pomp. Musclosus, the winner of 3,559; and Pomp. Epaphroditus, who had won 1467 times. Diocles himself, when he retired from his profession at the age of 42, had won 3000 races of *bigae*, and 1462 with more than two horses. The victorious *auriga* received a prize of money; or in some cases, if a slave, he won his freedom. The prize was sometimes called the *brabeum* or *bravium* (βραβεῖον, Prud. *Peristeph.* v. 538; cf. St. Paul, 1 Cor. ix. 24); and the giver of the prize was known as the *brabeuta* (Suet. *Nero*, 53). The winners of important races, on which there was heavy betting, sometimes received enormous sums of money from patrons who had backed them (Juv. vii. 113, 243; Suet. *Claud.* 21; Capitol. *Ver.* 6). Martial (x. 74, 5) mentions one named Scorpus, who, in the reign of Domitian, won no less than fifty purses of gold in one hour's racing. M. Renan in November 1878 read before the Société des Inscriptions in Paris a paper on an interesting inscription found in Rome, which recorded that a Moorish *auriga* named Crescens had during ten years (A.D. 115–124) won 1,556,346 sesterces with four horses called *Circus, Acceptus, Delicatus,* and *Cotynus.* Under the empire wealthy Roman citizens were not ashamed to act the part of *aurigae*, especially after Caligula and Nero had set the example.

purposes were mostly bred in Spain, Sicily, Mauritania, Northern Greece, and, in late times, in Cappadocia. No expense or trouble was spared in their training, and the Romans were careful not to spoil the horse (in the way the modern English racer is ruined) by using it too soon. As a rule the Roman racer was not broken in till the age of three, nor allowed to run in a race till five. Consequently some of the horses won a surprising number of victories. A horse which had won 100 races was called *centenarius:* in the inscription of Diocles a horse called Tuscus is mentioned as the winner of 429 races: a horse belonging to Diocles himself was a *ducenarius.* Like the modern Romans, the ancients seem to have disfigured their horses by branding on the flank the initial or badge of the owner: this is shown on several mosaic pavements. Entire horses were used, and apparently but few mares were trained for races. Almost all the names of racehorses which exist in mosaic pictures or in inscriptions are those of males (see Friedländer, *De nominibus equorum circensium*, Königsberg, 1875).

The public training-stables of Rome consisted of six or more groups of buildings in *Regio IX.* in the *Campus Martius*, and near the *Circus Flaminius* (see Jordan, *Topogr. der Stadt Rom*, ii. 554). In 1878, in the village of Oued-Atmenia in Algeria, some elaborate mosaic pavements were found in the Villa of Pompeianus, Proconsul of Africa under Honorius, who appears to have been a great breeder of Moorish horses for the circus. Perspective views of the training-stables are represented on these mosaics, and other pictures show the racers in their stalls, carefully clothed from head to foot. The name of each horse is placed by it, e.g. *Altus*, *Pullentianus*, *Delicatus*, *Polydoxus*, &c., and an *auriga* named *Cresconius* is also depicted. Large coloured drawings of these by M. Martin were exhibited in Paris in 1878, and afterwards published by the Soc. Archéol. de Constantine, 1879. The training-stables seem to have been centres of intrigue and villany of all kinds; bribes were given, and horses were "hocussed." Caligula, who spent much of his time in the stables of his favourite *faction*, is said to have poisoned the cleverest drivers of his rivals' horses (see Dio Cass. lix. 5 and 14).

Large sums of money were lost and won on the races (*sponsio*, "betting," Juv. xi. 202, with Mayor's note; Mart. *Ep.* xi. 1, 15). Race-cards (*libelli*) were sold with lists of the horses and names of the drivers: and these were also given in the advertisements of the games which were painted in large letters on conspicuous walls: examples of these have been found at Pompeii. In addition to the chariots and their drivers, men on horseback appear to have galloped with the racers, exciting them with shouts: after the race these *jubilatores*, as they were called, seem to have called out the name of the winner. They are shown on the great mosaic from Lyons and elsewhere (see also the cut representing the metae, p. 435): in some cases these attendants were on foot (*cursores*).

In early times only four chariots ran in each race (*missus*), one for each colour (see below): in later times eight or even ten chariots started together. The starting signal was given by the presiding magistrate, who waved a *mappa*

(Liv. viii. 40, 2, xlv. 1, 6; Mart. x

19).

(From monu-
Igel, near
eves.)

nductors of these hired gigs were called
d were subject to penalties for careless
ous driving (Dig. 19, 2, 13). In some
find them stationed on a kind of "cab rank," or at least giving their name to a locality, as at Pompeii (Orelli-Henzen, *Inscr.* 5163) and Cales (*ib.* 6983). But in Orelli 4163, *cisiarius* is, apparently, a builder of cisia; and in another inscription (*C. I. L.* 1129) the *cisiarii Praenestini* are a *collegium* of freedmen, divided into *magistri* and *ministri*, but otherwise unknown. (Marquardt, *Privatl.*, 706, 712.) [J. Y.] [W. W.]

CISSYB'IUM (κισσύβιον) was a large wooden rustic cup with one handle (Philemon and Neoptolemus *ap.* Ath. 476 f, 477 a), sometimes found mentioned as highly adorned with carvings, and having two handles (Theocr. i. 27). It is mentioned in Homer as belonging to the Cyclops (*Od.* ix. 346) and to Eumaeus (xiv. 78 = xvi. 52). In shape it was rather deep, like the *scyphus* (*Od.* xiv. 78, compared with 112; Eur. *Cycl.* 390, *Androm.* fr. 33; Clitarch. *ap.* Ath. 477 a), which was the cup of rustics (Asclep. *ap.* Ath. 477 d). It somewhat resembled the modern tea-cup (Birch, p. 451). The word is derived from κισσός, and means most probably "made of ivy-wood," as is the opinion of the Schol. on Theocr. i. 27, of Eumolp. *ap.* Ath. 477 a, of Athenaeus himself (477 d), of Serenus Sammonicus ("mollibus ex hederae tornentur pocula lignis," xxiii. 3), and most of the moderns (see Seiler, *Wörterbuch des Homeros*, s. v.); but Poll. vi. 97 and Liddell and Scott (*s. v.*), followed by Paley on Eur. *Alc.* 756, consider the name came from the ivy wreaths sometimes found carved round the cup (Theocr. *l. c.*), and compare *corymbatus*, *hederatus*, &c., applied to vessels in this latter sense in Trebell. *Claud.* 17. Birch (p. 378) leaves the question undecided. But would the rustic Eumaeus and the savage Cyclops have had cups with ornamental carving? Panofka gives a specimen (*Recherches*, &c. v. 76), which is approved by Ussing (p. 127). [L. C. P.]

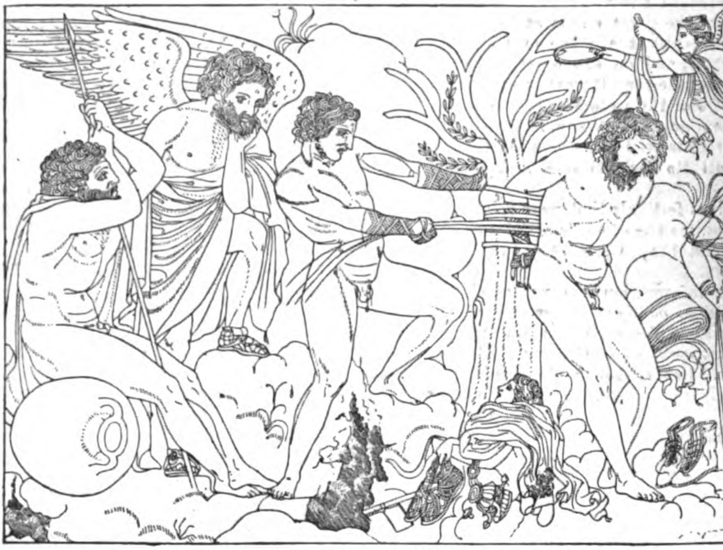
CISTA, CISTELLA (κίστη, κιστίς) was probably at first a wicker basket used for holding fruits and vegetables and for country purposes in general (Plin. *H. N.* xv. § 60; xvi. § 209). These baskets were sometimes square (Colum. xii. 54), but more usually cylindrical. Afterwards cista came to mean a box or casket used for a variety of purposes, but mostly of a small size; thus distinguished from the *arca* or chest, and rarely in the sense of *capsa*, a book-box (Juv. iii. 206). A money-box might be so called (Cic. *Verr.* iii. 85, § 197; Hor. 1 *Ep.* xvii. 54); in the former passage it is the private treasure of Verres himself, opposed to the *fiscus* of the province. In the Roman comitia the cista was the ballot-box into which the voters cast their *tabellae* (Plin. *H. N.* xxxiii. § 31; Auctor *ad Herenn.* i. 12, § 21; Pseudo-Ascon. in Cic. *Div. in Caecil.* 7, p. 108, ed. Orelli). The form and material of the voters' cista, evidently of wicker or similar work, is represented in the annexed cut from a coin of the Cassia gens. In this sense the cista has often been confounded with the *sitella*, but the latter was the urn from which the names of the tribes or centuries were drawn out by lot. (Manutius, *de Comitiis Romanis*, c. 15, p. 527, ed. Graev.; E. Wunder, *Dissertatio de discrimine verborum* cistae *et* sitellae, in his *Variae Lectiones*, p. clviii.)

Cista, voting-basket.
(From coin of Cassia Gens.)

Another class of cistae, well known from vase-paintings and from a number of specimens in metal actually preserved, are the toilet- or jewel-cases of Italian ladies. These are mentioned especially in connexion with the children's trinkets, by which recognition is so often brought about in the ancient comedies (Plaut. *Cistell.* iv. 1, 3, and *passim; Rud.* ii. 3, 60; Terent. *Eun.* iv. 6, 15). In vase-paintings such cistae are often accompanied by other requisites for the toilet, mirrors, scent-bottles, &c., and thus leave no doubt as to the use for which they were intended. The material indicated is usually basket-work, as in the following specimen from Gerhard's *Etruskische Spiegel* (pl. xiv. 4).

Cista, toilet-bas

These vases have been founc Magna Graecia, more rarely in C or in Etruria. The metal cistae, on the other hand, come almost exclusively from Praeneste, where they were produced on a large scale. The most beautiful of these and the first to be discovered (about the year 1 celebrated Ficoroni cista, now



Scene from the Ficoroni Cista.

Kircheriano at Rome. Of late years the results of excavation have been unusually fruitful: in 1866 Schoene described 70 Praenestine cistae preserved entire, besides fragments; in 1882 M. Fernique reports the number as reaching 100 (*ap.* D. and S.). Most of these are in bronze; one of silver is in the Capitoline Museum or Palace of the *Conservatori.* They are mostly covered with ornamental designs engraved upon the surface of the metal (*graffiti*); but in the few that have been found elsewhere than at Praeneste (*e.g.* at Bologna and Vulci) repoussé work occurs. The Praenestine workmanship is somewhat rough: the bronze plate was first engraved, then hammered into an oval or cylindrical shape, and finally the feet and rings or handles were put on without much regard to the pattern underneath them. They were, it is clear, turned out cheaply as manufactured articles, not finished artistic products. The Ficoroni cista is of quite exceptional beauty, and a real work of art; it has been made the subject of several monographs, the most important of which is that of Otto Jahn (*Die Ficoronische Cista*, 4to, Leipzig, 1852). It is the only cista with an inscription, NOVIOS PLAUTIOS MED ROMAI FECID; which shows that, though found at Praeneste, it was not made there. Among its c chief place is occupied by a series the Argonautic legend; one of th of Amycus king of the Bebryces after Jahn; another, the building is figured in Daremberg and Saglio.

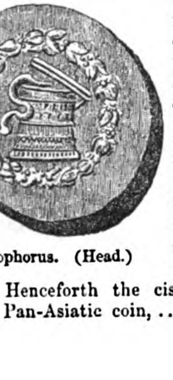
At one time these cistae were referred to the class called *cista mystica* (see below): this name originated with Visconti, but is now universally rejected as unsuitable (Marquardt, p. 657). Many articles of the toilet have been discovered in them, such as mirrors, sponges, hair-pins [ACUS], and scent-bottles [ALABASTRUM], sufficiently indicating their use in common life. They have been found mostly in the burial-ground at Praeneste, enclosed in stone coffins or cinerary urns.

CISTA MYSTICA. The name of cistae was also given to the small boxes which were carried in procession in the Greek festivals c Dionysus. These boxes, which wer ı the public processions, contained sacred connected with the worship of these Ovid, *A. Am.* ii. 609; Catull. lxiv. 259; i. 7, 48, "et *levis* occultis conscia cista where, as in the class of cistae above d, wicker-work is sufficiently indicated ıaterial). The mysterious secret is half l by numerous pictures, and by the coins

Cista. (British Museum.)

ISTOPHORUS; on these the cista is repre- s half open, with a serpent creeping out of e shape was sometimes oblong, more fre- cylindrical. A statue of Silenus sitting large drum-shaped cista, and holding a g in his hand, is figured by Darem- d Saglio. (Compare Marquardt, *Privatl.*, ff.; and for a fuller discussion of the es in which the cista played its part, Fr. ant in D. and S. i. pp. 1205–1208; IA; MYSTERIA.) [W. S.] [W. W.]

TOPH'ORUS (*κιστοφόρος*) was a term to certain silver coins issued in Western inor, in consequence of the type with they were impressed, a Dionysiac *cista* hich a serpent glides. The other side of the coin bears the name or monogram of the city of issue. "According to Dr. Imhoof (*Die Münzen der Dynastie von Pergamon*, p. 33), this coin originated in Ephesus shortly before B.C. 200, and its use rapidly extended throughout the dominions of Attalus I. of Perga- Henceforth the cistophorus became a Pan-Asiatic coin, ... and was issued in vast quantities from numerous Asiatic mints" (Head, *Historia Numorum*, p. 461). (Cf. Liv. xxxvii. 46, 58, 59, xxxix. 7; Cic. *ad Att.* ii. 6, 2, ii. 16, 4, xi. 1, 2; *pro Dom.* 20, 52.) Mommsen assigns a somewhat later date (reign of Eumenes II., B.C. 189–159), and therefore disbelieves the statement of Livy (*l. c.*), that after the defeat of Antiochus III. in B.C. 190, large numbers of *cistophori* were brought to Rome by the conquerors. They continued to be the currency of the Roman province of Asia even under the Antonines, and many bear the heads of early Roman emperors.



phorus. (Head.)

The coins or staters weigh up to 196 grains; the question of their value in exchange has been confused from the fact that the ancient writers sometimes consider them as tetradrachms and sometimes as didrachms. According to Festus (p. 359), the cistophoric stater was regarded as equivalent to three Roman denarii, which, however, it outweighed by about fifteen grains: other authorities give a still lower valuation. The cistophoric drachm, or quarter of the stater, is said by Festus to have been equal to the Rhodian drachm, and it is likely that the whole coinage was introduced by the Pergamene kings to succeed that of Rhodes at a time when the decay of Rhodes had set in. (Mommsen, *R. M.*, pp. 48, 703; *Numismatic Chronicle*, 1883, p. 196.) [P. G.]

CITH'ARA, CITHARISTA. [LYRA.]

CIVI'LE JUS. [JUS CIVILE.]

CIVI'LIS ACTIO. [ACTIO.]

CIVIS. [CIVITAS.]

CI'VITAS (*πολιτεία*), citizenship. **1. GREEK.** In the third book of the Politics, Aristotle commences his inquiry into the nature of states with the question, "What constitutes a citizen?" (*πολίτης*). He defines a citizen to be one who is a partner in the legislative and judicial power (1, 4, *μετέχειν κρίσεως καὶ ἀρχῆς*: and 8ᵇ. *ἐξουσία κοινωνεῖν ἀρχῆς βουλευτικῆς καὶ κριτικῆς*). No definition will equally apply to all the different states of Greece, or to any single state at different times; the above seems to comprehend more or less properly all those whom the common use of language entitled to the name.

In the Heroic ages the kings were the commanders in war, offered up certain sacrifices (*ὅσαι μὴ ἱερατικαί*) to the gods, and administered justice (Arist. *Pol.* iii. 9, 7 S. = 14, 12 B.); their authority was however limited by the nobles, to whom sometimes the title of *βασιλῆες* was given (*Od.* i. 394; vi. 54; viii. 41, 390) as well as to the monarch himself. Without their advice and assent no important matter was undertaken, and they shared also in the administration of justice, but to what extent cannot be defined. Gladstone (*Stud. on Hom.* iii. p. 57) thinks that the nobles acted judicially only by an actual or virtual delegation from the king. The freemen assembled only to listen (Arist. Schol. *Il.* ix. 17) and hear the intentions of the king and the nobles announced; Gladstone (p. 126 ff.), however, is of opinion that the function of the people was not so confined: the people was in part a judicial body, and took a real part in the conduct of public affairs.

In Attica the power of the chief king was especially limited by the circumstance that the people was divided into several independent communities, each under its own head (in Plut.

Thes. 32, these heads are called βασιλεῖς). Theseus is said to have united them into a single state and to have made Athens the seat of government and of the administration of justice in all important cases (Thuc. ii. 15), and to have forced the Eupatridae of the different communities to settle at Athens (Plut. *Thes.* 32; cf. Plat. *Critias*, p. 110 C, and *Etym. M.* s. v. Εὐπατρίδαι = Bekk. *Anecd.* 257, 7 ff. In Solon Fragm. 4, 5 ff., ἀστοί = Εὐπατρίδαι). Plutarch (*Thes.* 25) ascribes to Theseus the distribution of the population of Attica into εὐπατρίδαι, γεωμόροι (Poll. viii. 111; γεωργοί, Arist. in Schol. Plat. *Axioch.* p. 371 D: cf. fragm. of lexicon in *Bull. de Corresp. hell.* i. p. 152; ἄποικοι in Arist. fragm. 'Αθην. πολιτ., Berl. Papyrus, 163), and δημιουργοί (ἐπιγεώμοροι τὸ τεχνικὸν ἔθνος, *Etym. M.* l. c.; Dion. Halic. ii. 8 distinguishes εὐπατρίδαι and ἄγροικοι). There is a wide difference of opinion as to the relation existing between these three classes and the four Ionic tribes,—Αἰγικορεῖς, 'Αργαδεῖς, "Οπλητες and Γελέοντες,—each tribe comprising three phratries and each phratry containing thirty γένη. [Tribus.] Some, like Grote (iii. 72), see in the Eupatridae "the wealthy and powerful men, belonging to the most distinguished families in all the various gentes," and consider this triple distinction to be disparate and unconnected with the four tribes; others (Hermann, *Griech. Staatsalt.* § 97, 12) identify the Eupatridae with the Geleontes and Hopletes, and the Geomori and Demiurgi with the Aegicoreis and Argadeis respectively; and a third class (Philippi, *Beitr. z. e. Gesch. d. att. Bürgerrechts*, p. 208, n. 56) hold that the tribes originally comprised the Eupatridae only, and that it was Solon who first gave the mass of the people a place in the system of tribes and phratries. In the earliest times the guidance of public affairs in conjunction with the king, the administration of justice, and the priestly functions belonged exclusively to the Eupatridae (Plut. *Thes.* 25; the three ἐξηγηταὶ were always of this class, *C. I. G.* i. No. 765); out of their number the four φυλοβασιλεῖς were taken (Poll. viii. 111; hence it follows that others than nobles must have belonged to the tribes; cf. also Draco's law in Dem. *c. Macart.*, p. 1069, § 57, and *C. I. A.* i. No. 61, ἀριστίνδην), and by their side the other two classes were of little political importance, and the Demiurgi perhaps of less even than the Geomoroi (cf. Athen. xxiii. p. 660 d). The ascendency of the Eupatridae continued after the establishment of the archonship through its various changes down to Solon, who introduced a new principle of classification, the timocratic principle, by distributing all the citizens of the tribes (which he did not abolish, Phot. *s. v.* ναυκραρία), without any reference to their γένη and phratries, into four classes (Harpocr. *s. v.* ἱππάς: Plut. *Sol.* 18), according to the amount of produce from their lands (this was changed after the time of the Pisistratids: cf. Thuc. iv. 54, 5, 'Αθηναίους εἰκοστὴν μόνον πρασσόμενοι τῶν γιγνομένων: Beloch, *Herm.* 1885, p. 245).

It is true that of these four classes only the first three were eligible for public offices (Arist. *Pol.* ii. 9, 4 S. = 12, 6 B), and only the first for the archonship. (Plut. *Arist.* 1; Landwehr, *Philologus*, Suppl. v. p. 118 ff., whom Busolt, *Griech.*
Gesch. i. p. 531, n. 1, follows, ex

ython and Heracleides, who murdered
. *c. Aristocr.* p. 659, § 119). Aristonicus
was made an Athenian citizen because of his skill in ball playing (Athen. i. 34, p. 19 a). Cleisthenes, for political reasons, conferred citizenship on foreigners settled in Attica, and on manumitted slaves who had acquired the position of metoeci. (Bernays, *d. heracl. Briefe*, p. 155, thus explains **πολλοὺς γὰρ ἐφυλέτευσε ξένους καὶ δούλους μετοίκους**, Arist. *Pol.* iii. 1, 10 S.=2, 3 B.) The Plataeans were admitted to citizenship after the destruction of their town in the fifth year of the Peloponnesian war, the Athenians not forgetting that their whole force had spontaneously joined them at Marathon. When Aristophanes says that the slaves who had fought at Arginusae (Schol. Arist. *Ran.* 706; Andoc. ii. 23) became Plataeans, this must be taken to mean that they were granted land in the territory of Scione which had been handed over to the Plataeans (Thuc. v. 32; Isocr. iv. 109. Kirchhoff, *Abh. d. Berl. Akad.* 1873, pp. 9, 10.) After the defeat at Chaeroneia, Hypereides made, amongst others, the following proposal **τοὺς μετοίκους πολίτας ποιήσασθαι** (fr. 33, Blass), probably only on condition of their taking their part in the defence of the country.

Citizenship was conferred by the popular assembly in the following way: in the first assembly the people bestowed the gift, but it did not become valid (**κύριος**), unless it was confirmed by a majority in the ensuing assembly, at which at least 6000 must be present and vote (secret voting by ballot). As the second voting is not mentioned in the oldest inscription bearing on the question (soon after Eucleides, *ο* and *ε* being still used for *ου* and *ει*),* Szanto (*Rh. M.* 1885, p. 507 n.) concludes that it was not introduced before the beginning of the 4th century. The decree in *C. I. A.* i. 59 (Hicks, *Manual of Gr. Hist. Inscr.* p. 105 ff.) does not help us in this question, for, as Kirchhoff (*Ber. d. Berl. Akad.*, 1861, p. 605) shows, it is merely a former decree confirmed. It had been proposed to grant civic rights to Thrasybulus and Apollodorus (Lys. xiii. 71): a **γραφὴ παρανόμων** was brought against this proposal, and the court decided for Thrasybulus, but against Apollodorus. Even after the second vote, it was open to every Athenian who considered the candidate undeserving of the honour, to bring a **γραφὴ παρανόμων**: and instances of reversal following upon this are given by [Dem.] *c. Neaer.* p. 1375, § 91; [Plut.] *Vitt.* x. *Oratt.* p. 835; Aesch. iii. 195. Fraenkel, *Att. Geschworenengerichte*, p. 35, and Hartel, *Stud. ü. att. Staatsrecht*, p. 271, say that in every case a **δοκιμασία** before a heliastic court was required, whether a **γραφὴ παρανόμων** was brought or not. They refer to [Dem.] *c. Neaer.* p. 1381, § 105; yet that was a special occasion, when, owing to the great number of candidates and to the peculiar nature of the case, special measures were needed (*Att. Proc.* p. 255), and Buermann (*Jahrb. f. class. Philol.* Suppl. x., p. 347 ff.) has shown that a **δοκιμασία** did not become a regular institution until Olymp. 115. Up to that time the formula was (with slight variations): **εἶναι τὸν δεῖνα Ἀθηναῖον αὐτὸν καὶ**

* Ἐφημ. ἀρχαιολ. 1883, pp. 37, 38: Ἵππαρχον (and some others) Ἀθ[ηναίος ἔν]αι ἀνδραγαθ[ίας ἕνεκα] τῆς ἐς Ἀθηνα[ίος καὶ φυ]λὴν καὶ δῆμο[ν καὶ φρατ]ρίαν ἑλέσθα[ι ἧν περ ἂν] βόλωνται κα[ὶ ἀναγράψ]αι αὐτὸς ἐστ[ήληι λιθί]νηι τὸγ γραμ[ματέα τῆς] βολῆς, etc.

ἐκγόνους (2) καὶ εἶναι αὐτῷ γράψασθαι φυλῆς καὶ δήμου καὶ φρατρίας ἧς ἂν βούληται κατὰ τὸν νόμον (3) τοὺς δὲ πρυτάνεις τοὺς τὴν εἰσιοῦσαν πρυτανείαν πρυτανεύοντας δοῦναι περὶ αὐτοῦ τὴν ψῆφον τῷ δήμῳ εἰς τὴν πρώτην ἐκκλησίαν—from Olymp. 115 to Olymp. 124 we find in some instances added (4) τοὺς δὲ θεσμοθέτας εἰσαγαγεῖν αὐτῷ τὴν δοκιμασίαν τῆς δωρεᾶς εἰς τὸ δικαστήριον ὅταν πρῶτον οἷόν τ' ᾖ, and soon after the Chremonidean war it ran: δεδόσθαι δὲ αὐτῷ καὶ πολιτείαν κατὰ τὸν νόμον (2) τοὺς δὲ θεσμοθέτας, ὅταν πληρῶσιν δικαστήριον εἰς ἕνα καὶ πεντακοσίους δικαστάς, εἰσαγαγεῖν αὐτῷ τὴν δοκιμασίαν τῆς πολιτογραφίας (3) καὶ εἶναι αὐτῷ δοκιμασθέντι γράψασθαι φυλῆς καὶ δήμου καὶ φρατρίας ἧς ἂν βούληται. Since we find in all such decrees εἶναι or γράψασθαι φυλῆς καὶ δήμου καὶ φρατρίας ἧς (or ὧν) ἂν βούληται, it is clearly proved against the generally received opinion (Philippi, p. 107 ff.) that the δημοποίητοι were enrolled in the phratries as well. Buermann (*Jahrb. f. class. Phil.* Suppl. ix. p. 597 ff.) points also to other reasons leading to the same conclusion. We learn from [Dem.] *c. Neaer.* p. 1376, § 92; p. 1381, § 106, that the law expressly declares μὴ ἐξεῖναι αὐτοῖς (i.e. ὅσους ἂν ποιήσηται ὁ δῆμος πολίτας) τῶν ἐννέα ἀρχόντων γενέσθαι μηδὲ ἱερωσύνης μηδεμιᾶς μετασχεῖν, but that to their descendants μετέδωκεν ὁ δῆμος ἁπάντων, ἐὰν ὦσιν ἐξ ἀστῆς γυναικὸς καὶ ἐγγυητῆς κατὰ τὸν νόμον. Since on the occasion of the ἀρχόντων ἀνάκρισις the candidate was asked if he had a share in the worship of Apollo πατρῷος and Zeus ἑρκεῖος (Aristotle in *Lex. Rhet. Cantabr.* p. 670, 17; Poll. viii. 85; according to Sauppe, *de phratr. Att.* p. 7 ff. Ζεὺς φράτριος and Ἀθηναίη φρατρία since Cleisthenes' reform), *i.e.* in the worship of the phratries, it follows that the children of a new citizen and of an ἀστή and ἐγγυητή must necessarily belong to a phratry. The sons of a new citizen, born before citizenship was conferred on him, were excluded from the archonship for the same reason as their father: thus Gilbert (i. p. 178) explains Poll. viii. 85, εἰ Ἀθηναῖοί εἰσιν ἑκατέρωθεν ἐκ τριγονίας; whilst Meier (*de bon. damn.* p. 235) supposes that this statement of Pollux and the above of [Demosthenes] refer to different periods. With this exception, the δημοποίητοι enjoyed the same privileges with the citizens by birth. In some decrees the choice of phratries is qualified by additions such as πλὴν ὧν οἱ νόμοι ἀπαγορεύουσιν, etc., perhaps to prevent too many new citizens being in the same phratry, to the disadvantage of the old citizens: in other Greek states they were distributed by lot (Philippi, p. 113, n. 92; *Greek Inscr. of the Brit. Mus.* ii. nº. 237; cf. [Dem.] *c. Neaer.* p. 1380, § 104). The phratries in Cleisthenes' reform occupied therefore a different position from the one usually assigned to them. (Meier, *de Gentil.* p. 15: "curiae suos quaeque mores sequebantur neque plebis sed suis scitis regebantur.")

Aristotle (*Pol.* iii. 1, 9 S. = 2, 1 B.) gives, as a practical definition of a citizen, ὁ ἐξ ἀμφοτέρων πολιτῶν καὶ μὴ θατέρου μόνον, οἷον πατρὸς ἢ μητρός.* The latter class (viz. children of an Athenian father), some maintai

of wine among the phrateres; † and in
ratries and γένη the father had to declare
th that the child was ἐξ ἀστῆς καὶ
ς γυναικός (*Att. Proc.* p. 543, n. 166).‡
I. A. ii. No. 841 b, and Isaeus, vii.
nto (*Rh. M.* 1885, p. 515 ff.) concludes that the γεννῆται and φράτερες had a common register, which was kept either by the phratry or by the γένος, *e.g.* in Andoc. i. 125, the phratry being, however, responsible. Gilbert (*Jahrb. f. cl. Phil.* 1887, p. 23 ff.) on the other hand sees in the οἶκος Δεκελειῶν that portion of the phratry Δημοτιωνίδαι (whose φράτριον was at Oeon) which was settled at Deceleia; on account of frequent false entries in the φρατερικόν on their part, special measures were devised. Busolt (Müller's *Handb. d. cl. Altert.-Wiss.* iv. p. 145) suggests that the second vote in the year succeeding the entry was a general custom from 396–5 onwards; in his opinion κούρειον meant the sacrifice for boys, and μεῖον that for girls. It would seem that there was a second eisegesis to the phrateres, when the grown-up youth was received amongst the ἔφηβοι by the solemn act of cutting off his hair (Plut. *Thes.* 5; Theophr. *Char.* 21) and sacrifice: this was probably called κούρειον, for from *C. I. A.* ii. No. 841 b, it is evident that μεῖον and κούρειον cannot be two names for the same sacrifice; cf. Poll. viii. 107, καὶ εἰς ἡλικίαν προελθόντων ἐν τῇ καλουμένῃ κουρεώτιδι ἡμέρα ὑπὲρ μὲν τῶν ἀρρένων τὸ κούρειον ἔθυον. This was merely a religious ceremony, a survival of the ancient Aryan usage (cf. Leist, *Graeco-ital. Rechtsgesch.* p. 67); the civil act took place before the demotae. In the beginning of the calendar year, in the course of which the youth reached his eighteenth year, he was entered in the ληξιαρχικὸν γραμματεῖον (called κοινὸν γρ. Dem. *in Eubul.* p. 1317, § 60; cf. Bekk. *Anecd.* p. 272, 27 ff.); adopted sons were enrolled later on in the year, probably in the month of Munychion, at the time of the ἀρχαιρεσίαι (*C. I. A.* ii. No. 416; Dem. *in Leoch.* p. 1092, § 39; and Isaeus, vii. 27, 28: cf. Lipsius, *Jahrb. f. class. Phil.* 1878, p. 299 ff.); Philippi (*Rh. M.* 1879, p. 610) refers the ἀρχαιρεσίαι to the elections of the magistrates of the deme (not of the state), fixes them early in the year, and thus places the enrolment of adopted sons at the same time with that of the others. On this occasion the demotae instituted a kind of δοκιμασία: they inquired whether the candidates had attained the necessary age, then with regard to the latter class whether they were of civic descent, and whether those of the former had been legally adopted. A δημοποίητος had to prove his rights by a reference to the popular decree which conferred citizenship on him (κατὰ ψήφισμα πολίτης, Dem. *in Nicostr.* p. 1252, § 18). Hence we find δοκιμασθῆναι used instead of ἐγγραφῆναι εἰς τοὺς δημότας or εἰς τὸ ληξιαρχικὸν γρ. (Dem. *in Eubul.* p. 1318, §§ 61, 62). A special δοκιμασία ὀρφανῶν is mentioned in [Xenoph.] *de Repub. Athen.* 3, 4: Kirchhoff, *Ueb. d. Schrift v. Staate d. Ath.* p. 23, connects this passage with Aristoph. *Vesp.* 576. Orphans, it would seem, were specially examined before a δικαστήριον as to their bodily and mental fitness to administer their property (cf. *Lex. Seguer.* p. 235, 13). Wilamowitz-Möllendorff, *Philol. Unters.* i. p. 26, thinks that only the orphans of those who had been killed in war had to undergo this δοκιμασία, before they received the πανοπλία (Aesch. iii. 154). An Athenian duly enrolled was of age (αὐτοκράτωρ, Xen. *Memor.* ii. 1, 21); he could enter upon his patrimony, if an orphan or the son of an ἐπίκληρος (Hyper. fr. 194 Bl.; hence

the name *ληξιαρχικόν*: cf. Harpocr. *s. v.*) and might marry (Dem. *in Boeot. de dote*, p. 1009, § 4); he now became responsible to the laws (Aeschin. i. 18) and could bring actions (Lys. x. 31; Dem. *in Onet.* i. p. 865, § 6), and had to take his share in the public burdens (Dem. *de Cor.* p. 312, § 257; orphans were *ἀτελεῖς* the first year, Lys. xxxii. 24). It would seem that enrolment in the *φρατερικὸν γραμματεῖον* did not *ipso jure* lead to enrolment in the *ληξιαρχικὸν γρ.*, as Voemel (*Zeitschr. f. A. W.* 1846, p. 122) supposes, especially not in the case of adopted sons: cf. the case of Thrasyllus in Isaeus, vii.; and from Dem. *in Boeot. de nom.* p. 996, § 5, we learn that a person could be entered under different names in the two registers (Schaefer, *Dem. u. s. Zeit*, iii. 2, p. 26 ff.).

At the same time the names of the *ἔφηβοι* were (before the days of Aristotle) entered *εἰς λελευκωμένα γραμματεῖα*, together with the name of the archon of the year and also of the previous year, thus forming a list of all the *στρατεύσιμοι* of each year (Harpocr. *s. v. στρατεία ἐν τοῖς ἐπωνύμοις*): this list was different from the *κατάλογος* of those actually called out to serve on a particular occasion (Arist. *Eq.* 1369; *Pac.* 1179; *Lys.* xv. 5, xvi. 13: cf. Lange, *Leipz. Stud.* i. p. 164 ff.).

Whether the young citizens were at the same time entered into the *πίναξ ἐκκλησιαστικὸς* (Dem. *in Leoch.* p. 1091, § 35) and allowed to attend the popular assembly, or had to wait until they were twenty years old, is not quite clear. From instances like that of Glaucon (*οὐδέπω εἴκοσιν ἔτη γεγονώς*, Xen. *Mem.* iii. 6, 1) and Plat. *Alc.* p. 123 D, it would seem that the law did not prevent it (Schaefer, p. 36). At any rate for one year (Dittenberger, *de ephebis Att.* p. 12), if not for both (Schaefer, p. 33), they had to serve as *περίπολοι* in the country.

At the age of thirty an Athenian could become *βουλευτής* (Xen. *Mem.* i. 2, 35) and *ἡλιαστής* (Poll. viii. 122); at the age of fifty, *ἐφέτης* (Bekk. *Anecd.* 188, 30; Phot. *s. v. ἐφέται* 2) or *διαιτητής* (Bekk. *Anecd.* 186, 1; according to Poll. viii. 126, only at the age of sixty). *Ἐπιτιμία* denotes the undiminished possession of civic rights [ATIMIA]. Special privileges were *ἀτέλεια, προεδρία, σίτησις ἐν Πρυτανείῳ* [PRYTANEIUM]. (Gilbert, i. p. 188 ff.)

If we would picture to ourselves the true notion which the Greeks embodied in the word *πόλις*, we must lay aside all modern ideas respecting the nature and object of a state. With us practically, if not in theory, the object of a state hardly embraces more than the protection of life and property. The Greeks, on the other hand, had the most vivid conception of the state as a whole, every part of which was to co-operate to some great end to which all other duties were considered as subordinate. Thus the aim of democracy was said to be liberty; wealth, of oligarchy; and education, of aristocracy. In all governments the endeavour was to draw the social union as close as possible, and it seems to have been with this view that Aristotle laid down a principle which answered well enough to the accidental circumstances of the Greek states, that a *πόλις* must be of a certain size (*Pol.* iv. 4, 6 S.=vii. 4, 9 B.; *Nic. Eth.* ix. 10, *Οὐ γὰρ ἐκ δέκα μυριάδων πόλις ἔτι ἐστίν*).

This unity of purpose was nowher
carried out as in the government
and in the other Dorian governments.

.

ling class of citizens derived their name of Σπαρτιᾶται from the capital, whilst the name Λακεδαιμόνιοι is common to them with the Perioeci. Full civic rights did not depend upon birth alone; only those were full citizens (ὅμοιοι) who had fulfilled all the exigencies of the Lycurgean discipline (Xen. *de Rep. Laced.* 10, 7), and continued to contribute and to belong to the συσσίτια (Arist. *Pol.* ii. 6, 21 S.=9, 31 B.; formerly called ἀνδρεῖα, as in Crete, then φιδίτια, 7, 3 S.=10, 5 B.). Those who neglected these two duties were probably excluded from the full civic rights; *i.e.* they were not eligible to honours or public offices, but enjoyed only personal rights: these are probably the ὑπομείονες mentioned by Xenophon (*Hell.* iii. 3, 6). In legal rights all ὅμοιοι were equal, but within them, as Schoemann has it (*Griech. Alterth.* i. p. 217) there were two distinct classes: the minority of rich, influential, cultured citizens, who to a certain extent claimed a kind of superior nobility (the καλοὶ κἀγαθοὶ of Aristotle, from whom the twenty-eight members of the gerousia were taken: *Polit.* ii. 6, 15 S.=9, 22 B.), and a majority of poor and uncultured members, who, though equal to the former in the eye of the law, were in reality in an inferior position, and might be described in opposition to them as the δῆμος, or mass of the citizens (Schoemann, *Opusc.* i. p. 138 ff.). Susemihl (notes 322^b and 1264) doubts the existence of a superior nobility among the Spartans, from whom alone the γέροντες were elected, οἱ καλοὶ κἀγαθοὶ being simply the fittest, and the office being "a reward of virtue" (cf. Dem. *in Lept.* p. 489, § 107). If this be so, Aristotle cannot refer to their mode of election when he says: οἱ δὲ γέροντες τοῖς γέρουσιν, οὓς καλοῦσιν οἱ Κρῆτες βουλήν, ἴσοι (*Polit.* ii. 7, 3 S.=10, 6 B.); for the members of the Cretan βουλὴ were elected from those who had been κόσμοι, and the κόσμοι were chosen ἐκ τινῶν γενῶν. The Ἀπέλλα (Hesych. ἀπελλάζειν· ἐκκλησιάζειν Λάκωνες, etc.; Plut. *Lyc.* 6, etc.), which all Spartans of thirty years and upwards were privileged to attend, elected the Gerontes from the καλοὶ κἀγαθοὶ (those above sixty were eligible; on the mode of election, Plut. *Lyc.* 26) and the Ephors ἐξ ἁπάντων; decided (βοῇ καὶ οὐ ψήφῳ, Thuc. i. 87) upon a disputed succession to the throne (Herod. vi. 65, 66; Xen. *Hell.* iii. 3, 1), concerning peace and war (Thuc. i. 67; Xen. *Hell.* iii. 2, 23, iv. 6, 3, etc., ii. 2, 20, etc.), treaties with foreign states (Thuc. v. 77), legislative measures, etc. The right of bringing motions before the assembly, and taking part in the debates, seems to have belonged only to the kings, Gerontes, and in later times to the Ephors (see, however, the story in Aesch. i. 180, 181; and Xen. *Hell.* vi. 4, 2). The people sat, as in most Greek states (Thuc. i. 87, 3; Vischer, *Rhein. Mus.* 1873, p. 380). A μικρὰ ἐκκλησία is only once mentioned by Xen. *Hell.* iii. 3, 8. Lachmann (*d. spart. Staatsverf.* 216) sees in it a meeting of the kings, Ephors, and Gerontes; Schoemann (*Gr. Staatsalt.* i. p. 235) an assembly of the ὅμοιοι who happened to be in town, perhaps only of the more aged. (Cf. Dittenberger, *Syll. Inscr. Gr.* n°. 255, l. 41 (Gythion), ἔδοξε τῷ δάμῳ ἐν ταῖς μεγάλαις ἀπέλλαις, etc., and footnote.)

Admission into this citizen class was so rare an occurrence that Herodotus (ix. 35)

---

ei existed also at Argos; the Argives admitted
em to citizenship (Arist. *Polit.* viii. 3, 8 S.=
and note No. 1518 S.). For the ὑπήκοοι in
COSMI.

declares the naturalisation of two Eleans at the time of the second Persian war to be the only known instance of the kind; but from Plato (*Legg.* i. p. 629 A) we learn that Tyrtaeus was admitted to the citizenship, and according to Plutarch (*Dion*, 17) Dion was also made a Spartan citizen (cf. also Arist. *Polit.* ii. 6, 12 S. =9, 17 B.). Occasionally those were made citizens who had been sent to Sparta as children to share in the prescribed discipline (the *τρόφιμοι* of Xen. *Hell.* v. 3, 9; cf. Haase *ad* Xen. *de Rep. Lac.* p. 187). The number of Spartans was in historic times continually on the decrease: whilst it amounted to 8,000 in the times of the Persian wars (Herod. vii. 234), it had dwindled down in the days of Aristotle to below 1,000 (*Polit.* ii. 6, 11=9, 16 B.; cf. Plut. *Ag.* 5). In earlier times the Spartans admitted into their ranks a considerable number of non-Dorians, and a greater exclusiveness showed itself probably only after their power was consolidated. Some even think that the third Dorian tribe, **Πάμφυλοι**, was so called from the foreign elements admitted into it, a view from which Busolt (*Gr. Gesch.* i. p. 108) dissents. No distinction of privileges existed between these three tribes—**Ὑλλεῖς, Δυμᾶνες** and **Πάμφυλοι**—that are found "wherever there were Dorians" (O. Müller, *Dor.* ii. p. 76 ff. Herod. iv. 179 uses probably *φυλὴ* in a loose sense when he speaks of the Aegidae as a *φυλὴ μεγάλη ἐν Σπάρτῃ*. For the *Ὑρνάθιοι* in Argos, see an inscription of the third century B.C., published in *Bull. de Corresp. Hell.* 1885, p. 350). These three tribes were divided into twenty-seven phratries (Demetrius of Scepsis in Athen. iv. p. 141 e, f). Besides this, there was a local division of the Spartans into five *φυλαί*: **Πιτάνη, Μεσόα, Λίμναι, Κονόουρα**, and **Δύμη**, with *ὠβαί* as subdivisions (cf. the rhetra in Plut. *Lyc.* 6, *φυλὰς φυλάξαντα καὶ ὠβὰς ὠβάξαντα*, etc.). [RHETRA.] This division into *ὠβαὶ* was extended at a later period to communities of the Perioeci (*ὠβὰ τῶν Ἀμυκλαιέων*, *Mitt. d. arch. Inst.* iii. p. 165). [H. H.]

2. ROMAN. Civitas means (1) "state," in the sense of an independent political society, or the whole body of cives or members of such a society: civitates are defined by Cicero (*Somn. Scip.* 3) as "concilium coetusque hominum *jure* sociati:" cf. Dig. 1, 1, 9; *ib.* 11; 1, 2, 2, 4. (2) *κατ' ἐξοχήν*, the Roman state (e.g. *in civitate*, as distinct from *apud hostes, esse, decedere*, Dig. 28, 6, 28). (3) A *town* within a state, whether regarded as having a corporate existence (Dig. 50, 16, 15; *ib.* 17, pr.; 30, 122, pr. &c.), or merely from the geographical point of view (e.g. *theatra, loca sacra in civitate*, Dig. 1, 8, 6, 1: *in agro vel civitate rem soli possidere*, Dig. 2, 8, 15, 1). (4) The condition or status of a Roman citizen: his rights and duties, as distinguished from those of persons who are not Roman citizens; as in the common phrases *civitatem dare, civitate donare, civitatem usurpare.* In this article it is proposed briefly to examine what these rights and duties are; how they are shared in greater or less extent by different classes of persons who are members of the Roman state; how they are acquired, and how they are lost.

Under the republic, citizens of Rome seem to be divisible into "cives *optimo jure*" and "cives *non optimo jure*." The first, whether patricians

or plebeians, enjoyed the fu
which were either public or

:—Originally the Romans divided all
to *cives* and *peregrini*: apart from public
he former had *conubium* and *commer-*
e *peregrini* had neither. But it does
that the *peregrinus* was entirely desti-
ights. He had no legal capacity ac-
o the *jus civile*, and it is by the *jus civile*
as is determined; but he had a capacity
ing rights under the *jus gentium* as
d in the praetor's edict, and these rights
n tribunals, being under the praetor's
gradually recognised and protected.
following would be *peregrini*: (1)
e time of Caracalla, the inhabitants of
the Roman provinces; (2) the citizens
states who were in friendly relation
e,—in the language of modern law,
nis;" (3) Romans who had lost the
capitis deminutio minor [CAPUT]; (4)
who were *dediticiorum numero* (Ulpian,
14; Gaius, i. 13).

n these two classes of *Latini* and *pere-*
ird (*Latini*) is interposed in the course
y. Latinitas denotes originally the
ition of members of the Latin confedera-
ess their city had been raised to the
a municipium), and of the numerous
atinae: such persons had none of the
hts of civitas, nor had they the *conu-*
the *commercium* was theirs. By the
ia and Plautia Papiria, following upon
War (B.C. 90), the Roman citizenship
ded to all Italy, properly so called, and
allia Cispadana. But Latinitas did not
disappear. The practice had perhaps
een instituted by conferring Latinitas or
on allied or subject towns whom Rome
o honour or propitiate; at any rate,
natives of Latium and members of the
onies had become cives under the two
mentioned, it was common to make a
this semi-citizenship (which conveyed
mmercium) to towns in the provinces.
thus has no longer any ethnic or geographical signification; it means simply a particular legal capacity. After the Lex Junia Norbana (A.D. 19) had provided that slaves manumitted in certain informal ways, or manumitted so as not to become cives, should have Latinitas, they were called Latini Juniani, but the statute expressly withdrew from them the element of the *commercium*, which would have enabled them to make, witness, or take under a will (Gaius, i. 22–24). [LATINITAS.]

The commonest way in which civitas was acquired was birth. Children born of a *legitimum matrimonium* (*i.e.* lawful wedlock between two cives, or between a *civis Romanus* and a *Latina* or *peregrina* upon whom *conubium* had been specially conferred: Ulpian, *Reg.* v. 3, 4) were born cives. If there was not *conubium* between husband and wife, but the latter was a civis, the issue were cives unless the husband was a *peregrinus*: "non interveniente conubio [liberi] matris condicioni accedunt, excepto eo qui ex peregrino et cive Romana nascitur; nam is peregrinus nascitur, quoniam lex Minicia ex alterutro peregrino natum deterioris parentis condicionem sequi jubet" (Ulpian, *Reg.* v. 8, 9); the general rule, where there was not *conubium*, being "partus sequitur ventrem." Slaves would become cives by being manumitted in one of the statutory modes (*vindicta*, *censu*, *testamento*), unless the case was one in which the Lex Aelia Sentia restricted the *libertus* to a lower status (Gaius, i. 13, 18, 21, 27). A *Latinus* could rise to the status of civitas in a variety of ways: by filling a magistracy in his own colonia Latina (Gaius, i. 95); by marrying a *civis* or *Latina* before seven witnesses and begetting a child who lived a year, and proving these facts before a magistrate (Gaius, i. 66); by marrying a *peregrina*, believing her to be a *civis*, and proving his mistake ("erroris causae probatio," Gaius, i. 67); for other modes see the succeeding paragraphs of Gaius (*ib.* 35; Ulpian, *Reg.* iii. 1–6; Cod. 9, 24, 1, 4).

Upon *peregrini* and *Latini* (except *liberti dediticii*, Gaius, i. 26) civitas could always of course be conferred by statute: for examples, see Liv. vi. 4, xxxiv. 42; Cic. *pro Balb.* 13. Cicero (*ib.* 8, 21) remarks that many of the people of Heracleia and Neapolis made some opposition to accepting the terms offered by the Lex Julia (B.C. 90), and would have preferred their former relation to Rome as *civitates foederatae* to the Roman civitas. That statute gave the civitas not only to the natives of the Italian towns, but also to natives of towns out of Italy who had become citizens of Italian towns before it was enacted. Thus, L. Manlius (Cic. *ad Fam.* xiii. 30), a native of Catina in Sicily, obtained the Roman civitas by virtue of having been enrolled as a citizen of Neapolis (*erat enim in id municipium adscriptus*) before that date. The Lex Plautia Papiria, passed a year later, contained a provision that persons who had been enrolled as citizens of the *foederatae civitates*, and who had a domicile in Italy at that moment, should have the Roman civitas if they gave in their names to the praetor within sixty days ("apud praetorem essent professi," Cic. *pro Archia*, 4, 7). Archias claimed the benefit of this statute as having been enrolled a citizen of Heraclea, and having in the other respects satisfied its conditions. But the relation between the Leges Julia and Plautia

Papiria is differently represented by Dr. Merivale (*Fall of the Roman Republic*, chap. iii.), who thinks that the former gave the civitas only to Umbria, Etruria, and the southern extremities of the Italian peninsula, while the latter extended it to all the other Italian allies and Gallia Cispadana.

Under the empire, when the political rights of the citizen had ceased to have any value, and the personal will of the emperor had practically become the sole legislative organ, he was privileged (*inter alia*) to bestow the civitas on whomsoever he pleased, except *dediticii liberti*: though as the gift of it to a Latinus Junianus would prejudice the patron, the interests of the latter were guarded by an edict of Trajan (Gaius, iii. 72). The extent to which the earlier emperors exercised this power was dwarfed by the edict of Caracalla (A.D. 211–217), which conferred the civitas on all *Latini* and *peregrini* then living under the sway of Rome (Dig. 1, 5, 17), though these classes were at once in some measure replenished by manumission of slaves, the Leges Aelia Sentia and Junia Norbana not having been abrogated. Under the later emperors, the progressive absorption of the *jus civile* in the *jus gentium*, or the substitution of the latter in all departments of private law for the former, tended more and more to minimise the importance of the distinction between *cives* and *non cives*. Justinian speaks of *dediticia libertas* (practically the only form of *peregrinitas* in his empire) as extinct before his time (Cod. 7, 5), and the Latina libertas (of which he says few examples were to be found: *Inst.* i. 5, 3) he extinguished with the repeal of the Lex Junia Norbana (Cod. 7, 6), so that in the 6th century the last trace of the distinctions between freemen in respect of civitas had disappeared, and all subjects were either cives or slaves.

(Savigny, *Zeitschrift*, &c. vol. v. "Ueber die Entstehung, &c. der Latinität;" vol. ix., "Der römische Volksschluss der Tafel von Heraklea;" vol. xi., "Nachträge zu früheren Arbeiten: *System des heutigen römischen Rechts*," vol. ii. p. 27, &c.; Puchta, *Institutionen*, §§ 62–65, 216–218.) [J. B. M.]

CLABULA'RIS or **CLAVULA'RIS**. The *cursus clabularis* in the Theodosian Code (vi. xxix. 2, § 4, and 5, § 1; and viii. v. 23) and in Ammianus Marcellinus (xx. 4) denotes the system of military transport by means of carriages and vehicles. Johannes Lydus derives the word from *clavus* (κλαβουλάριος ὀχηματικὸς· κλάβον γὰρ τὸν οἴακα καλοῦσι, *de Mensibus*, i. 9). If we may trust the text of Cod. Theod. vi. 29, 2, § 2 ("ne quis . . . rhedam usurpet, cui birotum vel veredum postulare vel clabulare permissum est"), *clabulare* is the name of a wagon, the word here also being used in connexion with the transport service. Hence it has been derived from *clavulae* in the sense of rails. [J. H. F.]

i. 155; Polyb. vii. 16, § 5.) It must
a lock of this kind which the robber

in Apuleius (*Met.* iv. 10) opens, by passing his hand through the hole, *qua clavi immittendae foramen patebat.* Mr. Cuming observes that Roman keys, both of bronze and iron, have been found, "which were never intended to turn, the stems being square, and the webs, consisting of from one to five or six teeth, rising from a bar bent at an acute angle to the stem; which teeth would serve the purpose of elevating pegs, as in the Egyptian locks."

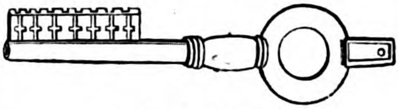
The street door was usually fastened inside by bolts (*pessuli*) and a bar (*sera*), but it also had a key which the *janitor* of the house kept. (Apul. *Met.* ix. 20; cf. iv. 18.) The cut given below represents a key found at Pompeii, and now in the Museum of Naples, the size of which indicates that it was used as a door-key. The tongue with an eye in it, which projects from the extremity of the handle, served to suspend it from the wrist of the *janitor*. The rooms of the house were also opened inside with keys; and hence in both cases we read *subdita clavi pessulos reduco* (Apul. *Met.* i. 14), *clavi pessulis subjecta repandit fores* (*ibid.* ix. 20), where *pessuli* mean the bolts of the lock. The doors often had locks both inside and outside. This is evident from Plaut. *Most.* ii. 1, 57, where a Laconian key is mentioned for locking the door from the outside, compared with verse 78—

> "Clavim cedo atque abi intro
> atque obclude ostium,
> Et ego hinc [*i.e.* foris] obcludam."

(Cf. Achill. Tat. ii. 19.)

Bronze Key found at Novum Ilium. (Schliemann.)

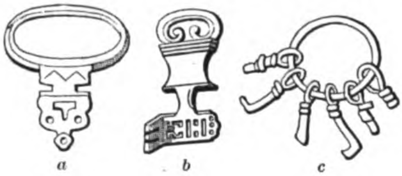
When a Roman woman first entered her husband's house, the keys of the store-rooms were handed to her. Hence the form of divorce, in the Twelve Tables, was that the husband took away the keys (*claves ademit, exegit*, Cic. *Phil.* ii. 28, 69); and the wife, when she separated from the husband, sent him back the keys (*claves remisit*, Ambros. *Ep.* 65). But the keys of the wine-cellar were not entrusted to the wife, and Fabius Pictor related a story of a married woman having been starved to death by her relatives because she picked the lock of the closet in which the keys of the wine-cellar were kept (Plin. *H. N.* xiv. § 89). The key of the



Door-key found at Pompeii.

street door was, as we have already seen, kept by the *janitor*, and the keys of the other departments of the house by slaves to whom such departments belonged (Sen. *de Ir.* ii. 25). To this Martial (v. 35) alludes.

There were false or skeleton keys, called by the Romans *adulterinae* or *adulterae*, used by robbers for entering a house (Sall. *B. J.* 12; cf. Ov. *A. A.* iii. 643). Besides locks fixed permanently on doors, the Romans also had padlocks to be removed at pleasure. Mr. Cuming (see below) gives a specimen of such a padlock, with the corresponding key. Small keys were at times attached to rings to be worn on the hand. [ANULUS, p. 131 *a*.] In the annexed cut from Guhl and Koner, figure *a* represents a ring-key, *b* a lock with wards, for which a key of a complicated form must have been necessary, and *c* a ring with several small keys attached, which probably served to open jewel-cases or other small cases.



Keys and Lock. (Guhl and Koner.)

The gates of a city were locked by keys (Liv. xxvii. 24, 8; Juv. xv. 158).

The epithet **κλειδοῦχος** or *claviger*, "key-bearer," is given to several of the gods as having charge or custody of a place. Thus it is an epithet of Janus, as the god of doors (Ov. *Fast.* i. 228; cf. Macrob. *Sat.* i. 9). Hecate, the goddess, who held the keys of Hades, is constantly thus represented in ancient works of art.

Hecate, holding a key. (Causei, *Museum Romanum*, vol. i. tav. 21.)

cessitas is armed with a nail (Hor.
35, 17, 18; iii. 24, 5, 6), wherewith to
ecrees of Fate, and is so represented in
art.

In like manner, in an Etruscan mirror found at Perugia, the winged goddess Athrpa or Atropus is represented as about to drive a nail with a hammer, to indicate the predetermined death of Meleager and Atalanta.

The Etruscan goddess Athrpa or Atropus armed with a nail. (Vermiglioli, *Inscriz. Perug.* vol. i. p. 49.)

At Volsinii, in Etruria, a nail was driven every year in the temple of Nortia, the Fortune of Etruscan mythology, in order to keep a reckoning of the years (Cincius, *ap.* Liv. vii. 3). This custom was introduced into Rome from Etruria, probably by the Tarquins, when they founded the temple of Jupiter Optimus Maximus. An ancient law enacted that a nail should be driven each year by the chief magistrate on the Ides of September into the side of the cella of Jupiter on the Capitol. As the Romans thus kept a reckoning of their years, when letters were yet scarcely in use, this nail was called *Clavus Annalis.* (Liv. *l. c.*; Fest. p. 56, M.; cf. Cic. *Att.* v. 15.) This practice fell into disuse, but was afterwards revived, not for the purpose of marking the year, but from a superstitious feeling that any great calamity, such as a pestilence, would be averted, if this ceremony was performed by the supreme magistrate. Hence we read of a dictator being appointed, more than once, for the sole purpose of driving in the nail (*clavi figendi causa*, Liv. *l. c.* vii. 3, viii. 18, ix. 28). Several superstitions were connected with fixing a nail. Thus Pliny (*H. N.* xxviii. § 63) recommends, as a remedy against epilepsy, driving a nail into the spot where the head of the patient was struck when he fell for the first time. (Blümner, *Gewerbe u. Künste bei Griech. u. Römern*, ii. pp. 230, 307; Daremberg and Saglio, s. v. *Clavus;* Dennis, *Etruria*, ii. p. 25.) [W. S.]

CLAVUS ANNA'LIS. [CLAVUS.]

CLAVUS GUBERNA'CULI. [NAVIS.]

CLAVUS LATUS, CLAVUS ANGUSTUS. It was a common usage with many nations of antiquity to adorn a garment by means of stripes of a different colour, woven in or sewn on the stuff. As instances we may quote the purple stripe down the middle of the robes worn by the priests of the Sun, instituted by Heliogabalus (Herodian, v. 5, 9); the broad white stripe down the breast of the purple garment of the Persian leader in the Pompeian mosaic of the battle of Issus; the regulations of the mysteries at Andania, which prescribe that the σημεῖα on the women's garments are to be not more than half a finger's breadth (Sauppe, *Abhandl. der kgl. Gesellsch.*, Göttingen, 1860); and among the Romans the female ornament of the *patagium*. But the Romans made a more characteristic use of these adornments by employing them as badges of office or rank (*ornamenta*), as in the case of the *trabea*, the *toga praetexta*, and the *clavi*.

It will be convenient to determine the use of both the *latus clavus* and the *angustus clavus* before discussing their form.

Usage.—The *latus clavus* was, according to tradition, introduced by Tullus Hostilius from the Etruscans (Plin. *H. N.* ix. § 136). It was the distinctive badge of the senatorian order (Hor. *Sat.* i. 6, 28; Ov. *Trist.* iv. 10, 35), and hence it is used to signify the senatorial dignity (Suet. *Tib.* 35; *Vesp.* 2, 4). In distinction to the *angustus clavus* it is called *purpura maior* (Juv. *Sat.* i. 106), and the garment it decorated *tunica potens* (Stat. *Silv.* v. 2, 29). Pliny speaks of this distinctive use as late (*H. N.* xxxiii. § 29); yet its assumption by a *praeco*, the father of L. Aelius Stilo Praeconinus (whose official dress may have included the *angustus clavus*), was, as he admits, remarkable, as also was its use by Horace's praetor of Fundi (*Sat.* i. 5, 36). But there were relaxations of the restriction: thus Augustus wore the *tunica lati clavi* before he assumed the *toga virilis*, and it was afterwards his custom to permit the sons of senators to wear it and attend the discussions of the senate, in order to train them in public affairs. If they were entering on a military career, he also made them military tribunes and prefects. These youths were called *laticlavii* (Suet. *Aug.* 38, 94, *Dom.* 10; Hor. *Sat.* i. 6, 25; Dio Cass. lix. 9, 5: on the contrary, *tribunus angusticlavius*, Suet. *Otho*, 10). Statius speaks of a youth assuming the *latus clavus* together with the *toga praetexta* (*Silv.* v. 2, 29; cf. iv. 8, 59–62). The right of wearing the *latus clavus* was also granted by the emperor as a favour to the sons of knights, as a preliminary step to their entering the senate; if they relinquished or were disappointed in their hopes, they assumed the *angustus clavus* ("clavi mensura coacta est," Ov. *Trist.* v. 10, 29–36; Suet. *Vesp.* 2), but might again assume the *latus clavus*, like Priscus in Horace (*Sat.* ii. 7, 10), who "vixit inaequalis, clavum ut mutaret in horas." In the later empire the *equites* appear to have encroached on the rights of the senate in this respect, and Alexander Severus was only able to insist that knights should be distinguished from senators by the quality of the purple employed (Lamprid. *Alex. Sev.* 27). The senate laid aside the *latus clavus* at times of mourning (Liv. ix. 7) and assumed the *angustus clavus* (Dio Cass. xxxviii. 14; xl. 46).

The *angustus clavus* was a badge of the equestrian order (Vell. Paterc. ii. 88, 2), but less distinctively so than the golden ring (*e.g.* Liv. ix. 7: "lati clavi, anuli aurei positi." Cf. Plin.
H. N. xxxiii. § 29); for, as we shall
extant works of art, it was also wor
lanistae, and others not of equestri
part of their ceremonial dress.

Form.—It is agreed by antiquari
clavi were purple stripes woven i
(Quint. viii. 5, 28; Plin. *H. N.* viii.
p. 56, 9) or sewn on it (Dig. 34,
19, § 5); that they were employ

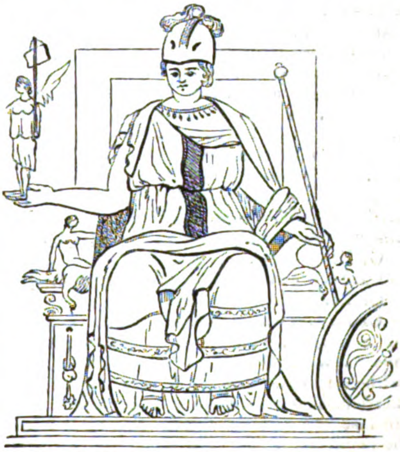
of higher rank performing some
worship. (*Annali dell' Inst. Arch.*

ustration given above is from a painting wall of the amphitheatre at Pompeii, ting the commencement of a combat two gladiators, and shows all the ts wearing this ceremonial dress. It is rly interesting, because the *clavi* are seen ck of the tunic of one of the attendants ft. (Cf. Nissen, *Pompeianische Studien*, r other instances.) The *angustus clavus* ommonly represented on the figures of tings in the Catacombs. The female the left hand, from Buonarotti (*Osser- sopra alcuni Frammenti di Vasi antichi*, tav. xxix. fig. 1), represents the Moneta. The one on the right hand, emetery on the Via Salara Nova, repre- riscilla, an early martyr. The next selected from three of a similar kind, ting Shadrach, Meshach, and Abednego, tomb of Pope Callistus on the Via

s Clavus. (From figures in the Catacombs.)

ngustus clavus probably survives in the the dalmatic, which was recognised as iastical garb in the earlier part of the entury (*Vita Sylvestri I.*, p. 266, Comhough down to A.D. 640 the *clavi* are represented as black, according to (*Vestiarium Christianum*, p. lv.). (See *Christian Ant.* s. vv. Clavus, Dalmatic.) writers maintain that the drawing on the page, representing Rome personified, n a robe called cyclas [CYCLAS], shows *clavus* falling in a broad purple stripe e breast. It is taken from a picture of the 2nd or 3rd century, belonging to the Barberini family. On the contrary, M. Heuzey finds in the paintings of the Catacombs and in the miniatures of the Vatican Virgil attempts to indicate the rank of the wearer by the breadth or narrowness of the *clavi*, which in all cases are similarly arranged, and hence argues that the *latus clavus* differed from the *angustus* only in breadth. But in the wall-paintings of the Catacombs the attempt to draw this distinction appears in some cases to lead to contradictory results in the same picture, and it seems preferable to base this view on the strong support afforded by ancient texts.

Clavus on the Dalmatic. (Mosaic in the church of St. Vitalis in Ravenna.)



Supposed *latus clavus*. (From a painting of Rome personified.)

It is true that the singular (*latus clavus*) is generally used, but this is also true of the *angustus clavus*, which confessedly consisted of two stripes; while the employment of the plural, *latis clavis*, is striking in a passage of Varro, which also insists on the resemblance of the two garments, by using as an illustration of an analogy a tunic, in which of the two pieces (front and back) one has the *lati*, the other the *angusti*, *clavi*. ("Non, si quis tunicam in usu ita [E. Schulze, *inusitate*] consuit, ut altera plagula sit angustis clavis, altera latis, utraque pars in suo genere caret analogia," *L. L.* ix. 79. Cf. for the use of the plural, Festus, p. 209 a, 23: "tunica autem palmata a latitudine clavorum dicebatur, quae nunc a genere picturae appellatur.") Again, Augustus, among other affectations of simplicity, "usus est . . . clavo nec lato nec angusto" (Suet. *Aug.* 73), which is quite intelligible if the two ornaments differed only in breadth, but inexplicable on the other hypothesis: while Herodian (v. 5, 9) speaks of the stripe down the centre of the tunic worn by the priests of the Sun, instituted by Heliogabalus, as a Phoenician custom (*ἀνεζωσμένοι οἱ μὲν χιτῶνας ποδήρεις καὶ χειριδωτοὺς νόμῳ Φοινίκων, ἐν μέσῳ φέροντες μίαν πορφύραν*).*

As the tunic was composed of a front piece and a back piece sewn together, the passage quoted above from Varro goes to show that the *lati clavi* were worn down the back, as well as down the front. In support of this may be cited Varro, *Sat. Menipp.* 313, Bücheler: "quorum vitreae togae ostentant tunicae clavos," which refers to togas made of such diaphanous material that the *clavi* could be seen through them at the back. With the same intent of displaying this mark of distinction, the wearer of the *tunica laticlavia* is to gird himself so that it may fall low ("paulum cinctis summissior," Quint. xi. 3, 139). Pliny observes that in his time it was becoming a fashion to weave the *tunica lati clavi* of a stuff resembling *gausapa* (*H. N.* viii. § 193). The false derivation quoted from Festus above for *palmata* as applied to *tunica* may possibly indicate that the breadth of the *latus clavus* was about a palm.

The equivalents used in the Greek writers are: — *clavus*, *σημεῖον*: *tunica laticlavia*, *ἡ πλατύσημος*: *tunica angusticlavia*, *ἡ στενόσημος*: *tunica asema* (Lampr. *Alex. Sev.* 33, 4), *ἡ ἄσημος*: *tunica clavata*, *ἡ σημειωτός*.

The chief authorities for the subject are Ferrarius, *de Re Vestiaria* (Patavii, 1654); Rubenius, *de Re Vestiaria Veterum, Praecipue de Lato Clavo Libri Duo* (Antwerp, 1665); Ferrarius, *Analecta de Re Vestiaria* (Patavii, 1690); Marquardt, *Röm. Privatleben* (1886), pp. 544 ff.; *Historia Equitum Rom.* pp. 77, 80; E. Schulze in *Rhein. Mus.*, 1875, pp. 120 ff. [A. R.] [J. H. F.]

tie of patron and client survived the
ration of the plebs in the state, though
s it now implied a less absolute depen-
Liv. v. 32; vi. 18); it was created by
applicatio and by the manumission of
(*clientem libertum*, Liv. xliii. 16), to
the latter of which relations the term
s was in later times so much specialised,
status of cliens was (at least in some
ereditary. The plebeians also apparently
ow have clientes no less than members
ld populus or patricians. (Hugo, *Lehr-*
l. i. p. 458.) When the Roman dominion
l itself to the provinces, the meaning of
rd *clientela* became wider. Provincial
nd civitates, and even those which were
but independent, took to placing them-
nder the *hospitium* or *clientela* of some
ished citizen (Dionys. ii. 11; Cic. *in Pi-*
pro Balbo, 8; Suet. *Octav.* 17; Serv. *ad*
20), who in this respect might be com-
o colonial agents, or persons among us
employed to look after the interests of
ny in the mother country, except that
the Romans such services were never
rated directly. (Cic. *Div. in Caecil.* 20,
. xl. 44; Tac. *Dial.* 36.)

e end of the republic and under the
empire a person might be cliens of a
s in at least three senses: (1) much in
e of our "client" in relation to a legal
protector, or advocate (Ovid, *Art. Am.*
Hor. *Sat.* i. 1, 10; *Ep.* i. 5, 31; ii. 1,
(2) through having attached himself
er a Roman citizen or a foreigner sojourn-
ome) to a distinguished or powerful civis
is relation, see Becker's *Gallus*, sc. 1,
s 4); (3) as libertus or freedman. In
s the relation was expressed by the word
(Cic. *ad Att.* xiv. 12), which also denoted
ole body of a man's clients (Tac. *Ann.*
).

doubtful whether the account of *clientela*
by Dionysius (*Antiq. Rom.* ii. 10, and
re) can be regarded as in all respects
or is it always clear to what period of
history it is intended to refer. As has
ready remarked, there was in the earliest
close analogy between the relation of
and client, and that of pater and filius
; the patron was the client's guardian
tector, as he was the guardian and pro-
of his own children: "*patrem* primum,
patronum proximum nomen habere . . .
lientes sine summa infamia deseri possunt"
v. 13). Ihering (*Geist des römischen* *Rechts*, i. p. 237) conjectures that the principal end of the relation was to enable the patron to bring suits on the client's behalf (attorneys in the conduct of actions being at that time practically unknown: "cum olim in usu fuisset alterius nomine agere non posse," *Inst.* iv. 10, pr.); and that if the client committed a wrong, the patron had (as in the case of slaves and children in power) the option of paying damages or surrendering the wrongdoer in a noxal action to the person injured. The latter assumption further necessitates the view that, like the filius familias, the client had originally in law no independent proprietary capacity: in fact, Ihering supposes that the terms *precarium* and *peculium* (of both of which the later jurists say, "magis facti sunt quam juris") both originated in *clientela;* the one in the patron's habit of allowing the client the use and occupation of a plot of land which he could resume at will (compare the English villeinage and copyhold tenure), the other in the small acquisitions of cattle (*pecus, peculium*) and other means of husbandry which the client made for himself, and which in law belonged to the patron. If this ingenious conjecture is correct, much that Dionysius tells us can be true only of the *clientes* of a later period: for instance, that the cliens must contribute to the marriage portion of his patron's daughter, to his ransom, or that of his children, if taken captive; must pay the costs and damages of suits which the patron lost in his interest, and bear a part of the patron's expenses incurred in the discharge of public duties, or in filling honourable places in the state. Dionysius adds that neither party could accuse or bear testimony against the other. But it seems certain that the relation, as at first established, was hereditary: it was the glory of illustrious families to have many clients, and to add to the number transmitted to them by their ancestors.

The attainment by the plebs of a civil and political status seems, by sweeping away the old tradition that the populus alone could enjoy rights under the aegis of Roman law, to have raised the status of *clientela.* It would not be inconsistent with Dionysius's statements to believe that from that time onward the clients were often, if not always, *cives non optimo jure* [Civitas], though there is little or no evidence, except perhaps the passage of Livy referred to below, in support of such a theory, nor is there much proof that the *clientela* in which *liberti* stood was hereditary, like that of the old clientes proper, except Suet. *Claud.* 24.

It is stated by Niebuhr that, if a client died without heirs, his patron succeeded him, and that the analogous rule in respect of *liberti cives* was derived from the original right of the *patronus* to inherit the client's property under the primitive system. Mommsen (*Abhandlung über das römische Gastrecht und die römische Clientel, römische Forschungen*, vol. i. pp. 319 *sq.*) is of opinion that the general rules of intestate succession (the property going in the first instance to *sui heredes*, in the second to the *agnates*, and in the last resort to the *gentiles*) were applied to clientes from the outset: but this is irreconcilable with Ihering's hypothesis as to the proprietary relations of patron and client, and requires us to suppose that the client had *conubium*, which in the earlier period seems incredible. Ihering himself thinks that the devolution of the cliens' property, such as it was, was at first regulated by agreement made at the time when the tie between him and his patron was created. Livy tells us (ii. 56) that the *clientes* had votes in the comitia centuriata, which implies *commercium*, so that on ordinary principles of law they could dispose of their property by will. But we can hardly believe this to be true except of the *clientes* who existed after the incorporation of the plebs in the state: and then (as has been already remarked) it is possible that they were regarded as belonging to the first group of *cives non optimo jure* (see CIVITAS), *i.e.* manumitted slaves and their children, who had *commercium* and *conubium*, and could vote in the comitia centuriata.

The whole subject of the rights and duties of *clientes* at different periods of history is in fact one of great obscurity, which it is almost impossible to remove, owing to the difficulty of fixing the precise time of which our authorities (*e.g.* Dionysius, Gellius, and Livy) are speaking when they touch upon the topic. Fuller information may be obtained from Becker, *Handbuch der römischen Alterthümer*, vol. ii.; Walter, *Geschichte des römischen Rechts*, §§ 13, 114, 247, 358; Ihering, *Geist des römischen Rechts*, vol. i. pp. 236–245; and the essay of Mommsen already referred to. [J. B. M.]

CLIENTE'LA. [CLIENS.]

CLIMA (κλίμα), literally a *slope* or *inclination*, was used in the mathematical geography of the Greeks[*] with reference to the inclination of various parts of the earth's surface to the plane of the equator. Before the globular figure of the earth was known, it was supposed that there was a general slope of its surface from south to north, and this was called κλίμα. But as the science of mathematical geography advanced, the word was applied to different belts of the earth's surface, which were determined by the different lengths of the longest day at their lines of demarcation. This division into climates was applied only to the northern hemisphere, as the geographers had no practical knowledge of the earth south of the equator.

Hipparchus (about B.C. 160) seems to have been the first who made use of this division; his system is explained at length by Strabo (ii. p. 132). Assuming the circumference of a great circle of the earth to be 252,000 stadia, Hipparchus divided this into 360 degrees, of 700 stadia to each; and then, beginning at the parallel of Meroë, and proceeding northwards, he undertook to describe the astronomical phenomena observed at each degree of latitude, or every 700 stadia: among these phenomena he observed that the length of the longest day at Meroë was 13 hours, and at Syene 13½. The observations of later astronomers and geographers — such as Geminus, Strabo, Pliny, and Ptolemy—are described in the works cited below. Ukert, in a table, shows the climates as given by Ptolemy (*Geogr.* i. 23). There are nineteen climates, the beginning and
middle of which are marked by lin
parallels, of which the first marks the

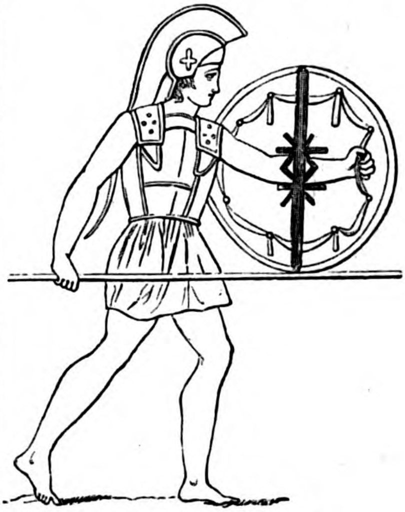
r Argive shield, we frequently find d an oval shield with a strong rim ures in the middle of each side **τα,** Eur. *Phoen.* 1386), through which the enemy. This is known as the hield, being commonly found on the e Boeotian cities (Gerhard, *Auserlesene* r, pl. cxcv.).

ield was now formed entirely of **γχαλκος**). An apron, apparently of thick stuff, was sometimes attached rotect in some measure the warrior's cially when he did not wear greaves. rnamented with patterns or figures. rnished with this appliance is given on olumn, and another under Tuba.

plest arrangement for holding the shield consisted of two metal handles, one to pass the arm through, the other to grasp with the hand; but we very frequently observe the arrangement shown below (from one of the terra-cotta vases published by Tischbein, iv. tab. 20), which may be explained thus:—

Shield furnished with an apron. (Gerhard, pl. clxv.)

A band of metal, wood, or leather, was placed across the inside from rim to rim, like the diameter of a circle, to which were affixed a number of small iron bars, crossing each other somewhat in the form of the letter X, which met the arm below the inner bend of the elbow joint, and served to steady the orb. This apparatus, which is said to have been invented by the Carians (Herod. i. 171), was termed **ὄχανον** or **ὀχάνη**. Around the inner edge ran a leather thong (**πόρπαξ**), fixed by nails at certain distances, so that it formed a succession of loops all round, which the soldier grasped with his hand (**ἐμβαλὼν πόρπακι γενναίαν χέρα,** Eur. *Hel.* 1396; **πολυρράφῳ πόρπακι,** Soph. *Aj.* 576). But it is somewhat difficult to distinguish these terms, for Plutarch tells us that when Cleomenes III. introduced among the Spartans



Greek shield. (Greek vase.)

the σάρισα, which employed both hands, in place of the spear, he also made them carry the shield by the ὀχάνη instead of the πόρπαξ (*Cleom.* 11), while others (*e.g.* the Scholiast on Aristoph. *Eq.* 849) treat them as convertible terms.

At the close of a war it was customary for the Greeks to suspend their shields in the temples, when the πόρπακες were taken off, in order to render them unserviceable in case of any sudden or popular outbreak; which custom accounts for the alarm of Demos (Aristoph. *l. c.*), when he saw them hanging up with their handles on. Sometimes shields were kept in a case (σάγμα, Aristoph. *Ach.* 574; Eur. *Andr.* 617). In Gerhard (*op. cit.* pl. cclxix.) we see a σάγμα, made of some stuff, being removed from a shield.

The ἀσπὶς was the characteristic defensive weapon (ὅπλον) of the heavy-armed infantry (ὁπλῖται) during the historical times of Greece, and is opposed to the lighter πέλτη and γέρρον: hence we find the word ἀσπὶς used to signify a body of ὁπλῖται (Xen. *Anab.* i. 7, § 10). It was only exceptionally used by cavalry (Xen. *Hell.* ii. 4, 24, iv. 4, 10; Aelian. *Tact.* ii. 12; Arrian. *Tact.* iv. 15). It was distinctively a Greek shield. Thus none of the Eastern peoples who served under Xerxes (Herod. vii. 61 ff.) were armed with it.

The Roman *clipeus* is seen in the accompanying illustration from Trajan's Column. According to Livy (i. 43), when the census was instituted by Servius Tullius, the first class only used the *clipeus*, and the second were armed with the *scutum* [SCUTUM]; but after the Roman soldier received pay, the *clipeus* was discontinued altogether for the Sabine *scutum.* (Liv. viii. 8; cf. ix. 19; Plut. *Rom.* 21; Diod. *Eclog.* xxiii. 3, who asserts that the original form of the Roman shield was square, and that it was subsequently changed for that of the Tyrrhenians, which was round.)

Clipeus, Roman shield. (Trajan's Column.)

The emblazoning of shields with devices (σήματα, σημεῖα) was said to be derived from the Carians (Herod. i. 171). The bearings on the shields of the heroes before Thebes, as described by Aeschylus in the *Seven against Thebes* and Euripides in the *Phoenissae*, exhibit the development of devices in post-Homeric times. Some shields, like Agamemnon's, bear subjects designed to strike terror (*Theb.* 488, 534: to that of Tydeus bronze bells are attached with this object, *ib.* 381); others show also the warrior's pride or boastful spirit (*ib.* 427, 461). Other subjects are purely mythological (*ib.* 382), or indicate the owner's ancestry (*ib.* 507), while
Amphiaraus is too proud of his rea
bear any device at all (*ib.* 587; Eu
1111). The σήματα already serve to d
the warriors to those at a distance

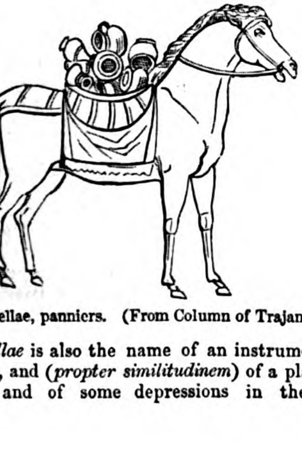
and Plautus (*ib.* 94) figuratively de-
a man upon whose shoulders a load of
d, either moral or physical, is charged,
clitellarius.



ellae, panniers. (From Column of Trajan.)

llae is also the name of an instrument of
, and (*propter similitudinem*) of a place in
and of some depressions in the Via
Flaminia (Festus, *s. v.*). **Κανθήλια** is also used for a large basket in which grapes were carried at vintages (Artem. iv. 6; *Geop.* vi. 11, Hesych.), and for the curved wooden framework sometimes erected in the stern of a man-of-war to carry an awning, which was used as a state-cabin for the **στρατηγὸς** or trierarch (Hesych.; Pollux, i. 89). [A. R.] [J. H. F.]

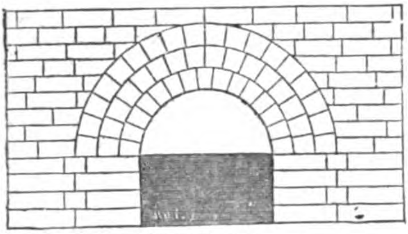
CLOA'CA (ὑπόνομος), a drain. The removal of the sewage of cities by an extensive system of drains is as old as the Assyrian civilisation, for we find it carried out at Nineveh with great completeness, the brick vaulting assuming all the known forms of the arch, while the pavement is formed of flagstones. (Layard, *Nineveh and Babylon*, p. 54; Place, *Ninive et l'Assyrie*, p. 269.)

As a specimen of the drainage of a Greek city, we may quote that of Athens, the remains of which are described by E. Ziller (*Mittheil. des deutsch. Inst. in Athen*, 1877, pp. 117–119), who has traced it from the Kolokotroni street (though he thinks that it may have started nearer the old wall on the east side of the city) to the church of Kapnikarea, and thence in a north-westerly direction on the west side of Hermes street to the Dipylon. Air-shafts, about 6 metres in depth, at various points permit an investigation of the construction, in which at some places dressed Piraeus stone, at others brick, is used. Outside the Dipylon the drain enters a reservoir, from the sides of which small square or cylindrical canals lined with brick carried the contents towards the plain and the olive woods, thus apparently pointing to an ancient system of applying the refuse of a city to fertilise sewage farms. One of these canals appears to show traces of a contrivance for regulating the amount of sewage supplied, which leads Ziller to the conjecture that the sewage supply was let out to the farmers.

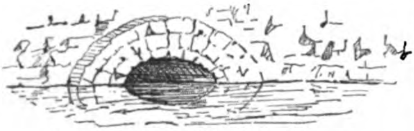
The admiration with which the *cloacae* of Rome were regarded by antiquity may be judged from the passage of Dionysius of Halicarnassus (iii. 67), in which he classes them with the aqueducts and the roads as the most magnificent works in Rome, and the best proof of the greatness of the empire. (Cf. Plin. *H. N.* xxxvi. §§ 104–8; and Cassiodorus, *Var.* iii. 30, "videas illic fluvios quasi montibus concavis clausos.") Remains of a system of *cloacae* have been found in so many of the Roman cities of North Italy and France that they may indeed be considered a mark of Roman civilisation, as characteristic as the *aquaeductus* and the *via.*

The chief of the ancient drains still existing in Rome is the famous *Cloaca Maxima*, which starts in the valley of the Subura at the foot of the Carinae, crosses the Forum under the S. end of the Basilica Julia, where it is exposed to view, thence under the Vicus Tuscus and the Velabrum, and after being again visible near the arch of Janus Quadrifrons, as is shown in the accompanying illustration, it enters the Tiber near the Temple of Hercules in the Forum Boarium, by an arch of *lapis Gabinus* or peperino, formed of three rings of voussoirs. We give an illustration showing this arch, surrounded by the more weathered tufa of the *Pulchrum Littus* or ancient quay wall. Its original dimensions were 12 ft. 4 in. in height and 10 ft. 8 in. in width, but one-third of its height is now choked up by mud.

This triple peperino arch extends for about 40 ft. from the mouth; but in the rest of its course the drain is vaulted with a single arch of tufa voussoirs 2 ft. 2 in. deep, with occasional bands of travertine. The masonry of the peperino arch especially is fine and of ancient character.



Cloaca Maxima.



Present condition of the Cloaca Maxima.

This drain was no doubt constructed to carry off not only the sewage, but also the surface water from the surrounding slopes, which made the low ground traversed by the drain a swamp. Hence the early construction of this great work, which is attributed to Tarquinius Priscus by Dion. Hal. and Pliny (*ll. cc.*), while Livy divides the honour between Tarquinius Priscus and Tarquinius Superbus (i. 38, 56). Mommsen, however, thinks that while the scheme of drainage was instituted under the kings, this vaulted cloaca must belong to the republican period, erroneously stating that the vault is throughout of travertine, a stone characteristic of post-regal times, and holding that the arch was unknown even to the Greeks until the end of the fifth century before Christ (*Hist. of Rome*, i. 117, 490, Eng. trans.; Seneca, *Ep.* 90, § 32). But in support of the earlier date, which is now generally assigned to the Cloaca Maxima, we may quote Etruscan instances, which are probably at least as early: for instance, the mouth of an ancient *cloaca* discovered at Graviscae by Dennis (*Cities of Etruria*, i. 433), consisting of an arch of 14 ft. span formed of voussoirs of uncemented tufa 5 ft. deep, and opening in a quay wall about 20 feet high.

Another *cloaca* running from the corner of the Via Paganica and the Piazza Mattei, under the Ghetto, enters the Tiber opposite to the Insula Tiberina. It is constructed of large uncemented blocks of peperino: this and other indications would assign it to the regal period. Like the Cloaca Maxima, it is still in use, having been connected with the drain *dell' Olmo* in 1600 (Narducci, *Boll. dell' Inst.* 1881, p. 209). These drains of the regal period probably follow the old lines of the streets, as they ran before the destruction of Rome by the Gauls.

In the quay wall not far from the mouth of the Cloaca Maxima may be seen two smaller arched openings, one of which is now dry; the other discharges the waters of the Aqua Crabra. These may be terminations of the *cloac* Aventine, which were not construc the year 184 B.C., when M. Porcius L. Valerius Flaccus constructed ne and repaired the existing ones. To t sion possibly may be referred the sta the contemporary C. Acilius, quoted Hal. (*l. c.*), that the mere repai drains cost 1000 talents. M. Agripp his aedileship in 36 B.C., showed great z supervision of the *cloacae*, traversing a boat and cleansing them at his ow (Plin. *l. c.*; Dio Cass. xlix. 43), and c a *cloaca* to drain the Campus Marti was connected with the Thermae of Ag the Aqua Virgo. This was discover Urban VIII., and is at present in use name of the *Chiavica della Rotonda*.

The discoveries made at various ti that the network of smaller drains cating with these main *cloacae* sti though in great part choked up. largely used in their construction; they are covered in with a barrel va times by two tiles leaning against e sometimes by a single flagstone, but cases we find the primitive arrang projecting courses of stone which was above in the drains of Athens.

The expense of cleansing and repai *cloacae* was, of course, very great, an frayed partly by the treasury, and pa assessment called *cloacarium*. (Dig. § 3; 30, 1, 39, § 5; Marquardt, *Röm* ii. p. 146.) Under the republic, the a tion of the sewers was entrusted to t and aediles; but under the empire, officers were appointed for that purp *carum curatores*, mention of whom is inscriptions (*ap.* Grut. p. cxcvii. 5, 2–5; p. cclii. 1, 2). Under the em demned criminals were employed in the *cloacae*. (Plin. *Ep.* x. 44 (41).) appointed an official to repair the striking instance of the esteem in whic barians held Roman civilisation (Cassio

On the legal obligations relatin *cloacae* at Rome, see Schmidt, *Inte cloacis*, in *Zeitschrift f. gesch. Rechtsw* pp. 51 *seq.* For further details Roman *cloacae*, see Burn, *Rome and pagna;* and Middleton, *Rome in* 1885.

Some traces of the drainage of Pom discovered by Mazois (*Ruines de Pom* ii. 36, 99). The extensive remains of t *cloacae* of Nicomedia are described and others, *Exploration Arch. de Bithynie*, i. 2; and by Texier, *Descript Mineure*, i. p. 24. [A. R.] [

CLOACA'RIUM. [Cloaca.]

KLOPES DIKÉ or **GRAPHÉ** (κλ or γραφή). The action for theft at Ath be either private or public, and in th case either before a diaetetes or a court, that of the thesmothetae (*Att. Proce* with Lipsius' note 101). The vario of procedure are enumerated by Der (*c. Androt.* p. 601, §§ 26, 27). The saf for a diffident prosecutor was the priva before an arbitrator (δικάζου κλο διαιτητὴν καὶ οὐ κινδυνεύσεις): he m proceed by way of γραφή, and, when t detected in the act, by ἀπαγωγὴ s. To these, however, a penalty of nas was attached in case he failed to th of the votes. In some cases, a had been robbed was permitted by aw to enter the house in which he is property to be concealed, and search for it (φωρᾶν, Aristoph. *Nub.* *Legg.* xii. p. 954 A). We are not w this right of search was enforced, probably on the oath of the plaintiff; above passages show, the searcher closely watched, and had to divest ll clothing in which anything could about his person (γυμνὸς ἢ χιτωνάζωστος, Plat. *l. c.*).

ds the penalties of theft, the old drew a distinction, which prevailed times, between trifling and serious sed partly on the amount stolen, but on a principle not unknown to slation, that crime for which there acilities must be repressed by severer s. (Cf. Arist. *Probl.* xxix. 14, 17.) Amounts under 10 drachmas l as "bagatelles" (Teuffel *ap.* Pauly, ράκοντα), and the Forty (? other as well) could decide them sumbably by a fine (ἐπιβολή): above as, they had to call in diaetetae ONTA, HOI]. Next came "ordinary" was limited to cases of stealing in e to an amount not exceeding 50 nd from a place not specially proaw. The criminal upon conviction to restore twofold if the property red; if it were not, twofold *plus* a for damages, called ἐπαίτια: the inflict an additional penalty (προστίμημα), and the offender be put in (ποδοκάκκη) five days and as many *ap.* Dem. *c. Timocr.* p. 733, § 105). ent in the text of this "law" that, fic thing stolen were not recovered, enalty was exacted, is inconsistent guage of the orator himself in § 114, en sufficiently disproved: see Wayte H. Lipsius, n. 748 on *Att. Process,*

aggravated" cases of stealing in the roperty of greater amount than 50 or above 10 drachmas from the public baths (λωποδυσία) or from r by night anything whatever (and he owner was permitted to wound ill the depredator in his flight), the sly directed an ἀπαγωγὴ to the , upon conviction, the death of the m. *c. Timocr.* pp. 735–6, §§ 113, 114). to some, the λωποδύτης might be nished for the smallest thefts, but the most probable explanation: the rns on the punctuation of the passage § 114, where see Wayte's note.) If were adopted, it is probable that the was fixed by the court; but both in d in that of conviction in a δίκη, the ment (ἀτιμία) of the criminal would ry incident of conviction.

ve three passages of Demosthenes er materials for explaining the law an the late grammarians: but it is to be observed that the inserted document of *Timocr.* § 105 is inferior in authority to the words of Demosthenes himself in the other two. There were separate actions τοιχωρυχίας, τυμβωρυχίας, βαλαντιοτομίας, λωποδυσίας, κλοπῆς δημοσίων or ἱερῶν χρημάτων: against the κλοπὴ δημοσίων the εἰσαγγελία, φάσις, and ἀπογραφὴ were specially directed. (*Att. Process,* p. 356 ff. with Lipsius' notes; Thalheim, *Rechtsalterth.* § 7 in Hermann-Blümner, = *Privatalt.* § 62, Hermann). [J. S. M.] [W. W.]

COA VESTIS, also **COA** (n. pl.), the Coan cloth or garments, mentioned by various authors, but most frequently by the Latin poets of the Augustan age (Tibull. ii. 3, 53, ii. 4, 29; Propert. i. 2, 2, ii. 1, v. (iv.) 2, 23; Hor. *Carm.* iv. 13, 13, *Sat.* i. 2, 101; Ovid. *Ars Am.* ii. 298; Sen. *de Ben.* vii. 9). From their expressions we learn that it had a great degree of transparency, that it was remarkably fine, that it was chiefly worn by women of loose reputation, and that it was sometimes dyed purple (Hor. *Carm.* l. c.; Prop. ii. 1, 6) and enriched with stripes of gold. It has been supposed to have been made of silk, because in Cos silk was spun and woven at an early period, so as to obtain a high celebrity (Arist. *Hist. Anim.* v. 19). (Becker-Göll, *Gallus*, iii. p. 285.) [J. Y.] [W. S.]

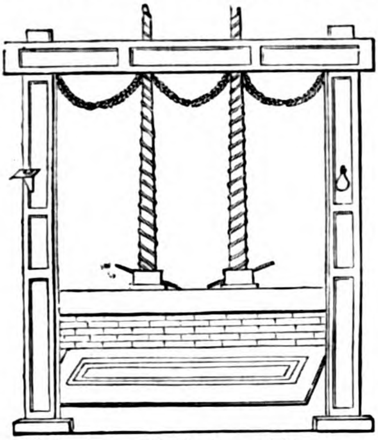
Coa Vestis. (*Mus. Borbon.* viii. 5.)

COACTOR. This name was applied to collectors of various sorts, *e.g.* to the servants of the publicani or farmers of the taxes, who collected the revenues for them (Cic. *pro Rab. Post.* 11, § 30); also to those who collected the money from the purchasers of things sold at a public auction (Id. *pro Cluent.* 64, § 180). The father of Horace was a *coactor*, but there are no means for determining to which class he belonged. (Hor. *Sat.* i. 6, 86; Suet. *Vit. Hor.*) [R. W.] [A. S. W.]

COCHLIS (κοχλίς) is an adjective used with *columna* by P. Victor (*Reg. Urb. Rom.* viii. and ix.) to denote such columns as the Trajan and Antonine [COLUMNA], probably on account of the spiral staircase (κοχλίας: COCLEA, No. 4) within the column, rather than the spiral bas-relief on the outside, as he carefully gives the number of steps in each staircase. [P. S.] [J. H. F.]

CO'CLEA or **COCH'LEA** (κοχλίας), which properly means a snail, was also used to signify other things of a spiral form.

1. A screw. The woodcut annexed represents a clothes-press, from a painting on the wall of



Clothes-press worked by two upright screws. (*Mus. Borbon.* iv. 50.)

the *fullonica* at Pompeii, which is worked by two upright screws (*cocleae*), precisely in the same manner as our own linen presses.

A screw of the same description was also used in oil and wine presses. (Vitruv. vi. 9, 3; Palladius, iv. 10, § 10, ii. 19, § 1.) The thread of the screw, for which the Latin language has no appropriate term, is called **περικόχλιον** in Greek. (Schneid. *Ecl. Phys.* i. 469.)

2. A spiral pump for raising water, invented by Archimedes (Diod. Sic. i. 34, v. 37; Strab. xvii. pp. 807, 819; Athen. v. p. 208 f), from whom it has ever since been called the Archimedean screw. It is described at length by Vitruvius (x. 11). It consists of a pipe coiled like a screw round a long cylinder, which is placed obliquely with one end in water, and made to revolve on its axis. The water then gradually rises through the spirals of the pipe. It was much used in Egypt for irrigation, as it will only raise water to a moderate height.

3. Varro refers in the following terms to a *coclea* used in the circus:—In giving directions for the construction of an aviary, he says (*R. R.* iii. 5, 3), "ostium habere humile et angustum et potissimum eius generis quod cocleam appellant, ut solet esse in cavea, in qua tauri pugnare solent." Various conjectures have been given as to the meaning of this passag

EX ACCEPTI ET EXPENSI.
oman citizen kept at least two account
(1) The *Adversaria*, a kind of waste-
day-book, in which he entered day by
cording as they occurred, the several
ions in which he took part. It is
ly noticed that the entries in the adver-
ere carelessly (*negligenter*) jotted down
) in no regular order (Cic. *pro Rosc.*
7—a most important passage) [ADVER-
yet it is most likely that the transac-
f each day were kept separate. They
cordingly to be called *ephemerides* in
. 23, 20. Such would be practically the
ay of entering these memoranda at the
jotting them down, and would certainly
convenient when posting the entries
codex.
he *Codex Accepti et Expensi* (Cic. *pro*
om. 1, 2; *Verr.* ii. 76, 186)—also called
codices (Cic. *pro Rosc. Com.* l. c.), *domes-*
tica ratio (Ascon. *in Verr.* ii. 1, 23, 60)—into which the entries of the adversaria were carefully posted each month. It undoubtedly consisted of a series of double pages (Plin. *H. N.* ii. § 22)—one debit (*acceptum*), the other credit (*expensum*); hence the book is sometimes called *codices*. The entries were made in a certain *ordo*, which is much insisted on as being of the essence of the codex, as opposed to the adversaria (Cic. *pro Rosc. Com.* 2, 6, 7; *Verr.* iii. 75, 175). Now this *ordo* was no doubt chronological, the date by year and day being given (Dig. 2, 13, 1, 2); but if it was only this, as is Schüler's view (*Die Litterarum obligatio*, p. 16), it could be regarded as little else than a fair copy of the adversaria. So we must suppose that the codex was somewhat like the Journal of modern book-keepers (except indeed that it had two pages, the line corresponding to each entry on the opposite page being left blank: see Pagenstecher, *de Litt. obligatione*, &c. p. 18), in which there are certain heads of accounts (*rationes*, Cic. *Verr.* ii. 77, 188), partly accounts with individuals and partly accounts of separate departments of business. For example, that there was a profit and loss account may be inferred from the common expressions such as *apponere lucro; lucri, damni facere*=*lucri, damni nomine facere* (cf. Cic. *Verr.* iii. 45, 107; Ascon. *in Verr.* ii. 1, 23, 60): that Atticus kept a separate head for presents may be inferred from Cic. *Att.* ii. 4, 1. So we may suppose that a paterfamilias would have one separate account (say) for each of his wards, another for his farming operations, another for household expenses, another for money invested, and so on. The arranging under such separate heads appears to have been called *digerere* (Cic. *pro Rosc. Com.* 3, 9). In the codex these accounts were then probably kept separate, the individual entries (*nomina*, Cic. *l. c.*) under each account being arranged for the month in chronological order. For the creditor to book a transaction with a person in the codex was called *nomen facere* (hence the term came to mean "to lend money," Senec. *Benef.* i. 1, 2), and constituted the ground of a literal contract [LITTERARUM OBLIGATIO]. As the accounts were usually personal, the general term for an entry was *nomen;* a term afterwards transferred, as we saw, to nominal accounts. It was expected that the greatest care would be observed in posting the codex, no erasures or corrections allowed to appear (Cic. *Verr.* ii. 76, 187 ff.; i. 36, 92), and sufficient details of each transaction given to afford knowledge of particulars and preclude any mistakes in case another person had occasion to consult the book (Cic. 2 *Verr.* i. 14, 36). If an entry had to be made subsequently to the posting of the codex (*e.g.* in the case of disputed claims legally settled only after long delay), a note had to be appended, A.F.P.R. (=*ante factum post relatum*): cf. Cic. *de Orat.* ii. 69, 280. *Extraordinariae pecuniae* were sums entered out of their proper order; that is, which were not entered under one of the usual heads of accounts in the codex, either entirely omitted or entered as "extraordinariae," like the "sundries" of careless housekeepers. (Cic. *pro Rosc. Com.* 1, 4; *Verr.* ii. 1, 39, 100, 102.) The term came to have the additional connotation of money used for or acquired by dishonourable means (*e.g.* bribery);

for either the books would not balance, or, if they did by an entry of "extraordinariae," it was only dishonourable transactions which would require to be veiled under this vague title. (Schol. on Cic. *Verr.* l. c.) Cicero (*l. c.*) speaks of such entries as severely reprehensible. The result was that with properly kept accounts the whole state of a man's income must be apparent, and no surplus or deficiency in any department fail to come under his notice (Cic. *Clu.* 30, 82).

There is specific evidence of entry on the debit side (*acceptum ferre* or *referre*, *acceptilatio*) of money paid back by debtors (Plin. *Epist.* ii. 4), interest received (Dig. 3, 5, 38), legacies received (Dig. 32, 29, 2), the rent of leased land or buildings (Dig. 33, 1, 91, 3–6), price of goods sold (Cic. *Verr.* iv. 6, 12), presents received (*ib.* i. 39, 100, 102), loans received (Liv. xxvi. 36, 11): and on the credit side (*expensum ferre*, *referre*, *expensilatio*), price of goods bought (Cic. *Verr.* i. 23, 61), presents given (Cic. *Att.* ii. 4, 1), capital lent out (Liv. vi. 20, 6), and doubtless repayment of loans and interest thereon; in fact, all money paid out (Ascon. *ad Verr.* i. 39, 102).

It must not be supposed that it was only actual cash transactions which were entered in the codex. No doubt all entries were in terms of cash: but the actual cash payments and receipts ("Dr. to Cash" and "Cash Dr. to so and so") of our modern book-keeping were called *Arcaria nomina* (Gaius, iii. 131, 132). These stand in opposition to *Transcriptitia nomina*, a term to be explained in connexion with the *Litterarum Obligatio*. It is frequently insisted on that the codex exhibits the *whole* state of a man's affairs (Cic. *Clu.* 30, 82; *Font.* 1, 3), and we cannot suppose that all his transactions would be ready-money ones.

The codex was sufficient for the ordinary householder; but of course those who had extensive business transactions—such as the state, municipalities, companies, bankers—had to keep ledgers (*rationes*, *libri rationum*), each personal or nominal account being called *ratio*. Private individuals too, who had large property, had often to keep separate books for different heads of their business; *e.g.* the *calendaria*, which were accounts of investments made and dividends received.

For other points, such as the relation of *Transcriptitia nomina* to the codex, and the importance of the latter in establishing a literal obligation, see LITTERARUM OBLIGATIO and the literature cited under that head; but more especially for the codex, H. Schüler, *Die Litterarum obligatio*, 1842, pp. 6–32; E. Pagenstecher, *De Litterarum obligatione et de rationibus tam domesticis quam argentariorum*, 1851, pp. 13–26; and, above all, W. Rein, *Das Privatrecht der Römer*, 1858, pp. 677–681. [L. C. P.]

CODEX GREGORIA'NUS, a collection of imperial Roman constitutions or enactments made by one Gregorianus, of whom nothing else is known; its date is not earlier than A.D. 295, as it contained an *exemplum edicti Diocletiani et Maximiani* of that year (*Coll. leg. Mos. et Rom.* vi. 4). It comprised enactments of the emperors between Septimius Severus (A.D. 195) and Diocletian and Maximian (A.D. 285–305), and possibly even some as far back as Hadrian (A.D. 117–138). It was divided into Books, at
least thirty in number (*Fragm. Vat*
272, 285–8), and the Books into
Rubrics, the topics being arranged
order of the perpetual Edict of Sal
anus. [

CODEX HERMOGENIA'NUS (
though without good reason, regard

X THEODOSIA'NUS. In A.D. 429,
s II., Emperor of the Eastern Empire,
ital was Constantinople, communicated
te his resolution to form a compilation
neral constitutions issued from the
onstantine (A.D. 306–337) to his own day, after the model of the Codices Gregorianus and Hermogenianus; and he appointed a commission of a lawyer and eight state officials to execute the scheme. Nothing, however, was done for six years. In A.D. 435 a new commission was appointed of sixteen *illustres* and *spectabiles*, presided over, like the earlier one, by Antiochus, and the imperial instructions were repeated; the commissioners were authorised to alter and revise the separate constitutions, to separate into two or more portions those which related to different topics, and to omit what was superfluous or unessential. The result of their labours, known as the Theodosian Code, was published in February, A.D. 438, with statutory force from January 1 in the following year, as the only authority for the *jus principale* from the reign of Constantine to that date.

The constitutions are arranged in chronological order under Titles and Rubrics, in sixteen Books. The first five, which contain most of the enactments relating to Private law, are in form modelled on the Commentaries on the Edict. The sixth to the eighth books consist principally of administrative and constitutional ordinances; the ninth is Criminal law; the tenth and eleventh relate to the financial system, and in part to procedure; the twelfth to the fifteenth, to the constitution and administration of towns and other corporations; and the sixteenth contains the constitutions which deal with the Church and the ecclesiastical system in general.

Our knowledge of this code is derived partly from incomplete MSS., partly from the Code of Justinian (in which, however, the enactments of the earlier emperors are considerably altered and mutilated), and partly from an epitome of its contents in the BREVIARIUM, in which however whole titles are sometimes omitted altogether. The valuable edition of J. Gothofredus (6 vols. fol., Lugd. 1665, re-edited by Ritter, Lips. 1736–1745) contained the Code in its complete form, except the first five books, for which it was necessary to use the epitome just referred to. This is also the case with the edition of this code contained in the *Jus Civile Antejustinianeum* of Berlin, 1815. But the discovery of a MS. of the Breviarium at Milan in 1820 by Clossius, and of a palimpsest of the Theodosian Code at Turin by Peyron, has contributed largely both to the critical knowledge of the other parts of this Code, and has added numerous genuine constitutions to the first five books, especially Book I. Haenel's discoveries have added also to our knowledge of the later books, and his edition of the Theodosian Code (1842–1844) is the latest and the best. The epitome of Books 1–5 in the Breviarium is very scanty: 262 laws or fragments of laws were omitted, which the labours of Clossius and Peyron reduced to 200. More recent discoveries by Carlo Bandi have added to the 6th, 8th, 9th, 10th, and 16th Books.

One important result of Theodosius' compilation was to secure to a large extent identity of law in the two empires. The Code was forwarded to Valentinian III., Theodosius' son-in-law and Emperor of the West, who presented it to the Roman senate and published it as law in his dominions. Precautions were also taken against subsequent divergence: the two governments agreed that constitutions which either might have occasion to make should be communicated by the one to the other, and, subject to revision by mutual consent, be published by both legislatures: in default of this procedure they should have no universal validity. In contradistinction to the Code, such single enactments were called *novellae leges* or novels; a number of them were issued in A.D. 448 by Theodosius, and confirmed by Valentinian III. for the West in the following year. The joint style of enactment was actually followed till A.D. 455, and there are several collections of Novels which belong to this period. From the last-mentioned date the tie between the two empires was greatly weakened, though Anthemius (A.D. 467–472) published in the West an enactment issued in the East by Leo; formally, however, the connexion was maintained, so that the new constitutions still bore the names of both emperors, though the place of their issue or the province of the magistrate to whom they were addressed enables one to infer to which of the two empires they more properly belong. The Novels anterior to the time of Justinian are collected in six books in the *Jus Civile Antejustinianeum*, Berlin, 1815; and in Haenel's more recent edition already referred to. Apart from all comparison between them, it is obvious that the Code of Justinian must have been largely indebted to that of Theodosius, than which it can have had no other authority for the period between A.D. 306 and A.D. 438. The Theodosian Code was also to a large extent the basis of the edict of Theodoric, king of the Ostrogoths, and of the Burgundian Lex Romana, usually termed "Papian;" the epitome of it in the Breviarium or Code of Alaric II. (A.D. 484–507) has been already referred to. [J. B. M.]

COGNA'TI. "Cognationis substantia bifariam apud Romanos intelligitur. Nam quaedam cognationes *jure civili*, quaedam *naturali* connectuntur: nonnunquam *utroque jure concurrente*, et naturali, et civili, copulatur cognatio. Et quidem *naturalis cognatio* per se sine civili cognatione intelligitur, quae *per feminam* descendit, *quae vulgo liberos peperit. Civilis* autem per se, quae etiam *legitima* dicitur, sine jure naturali cognatio consistit *per adoptionem. Utroque jure* consistit cognatio, *cum justis nuptiis contractis copulatur*" (Dig. 38, 10, 1, 4, 2). In other words, the Romans have two distinct conceptions of kinship—the relationship of the *jus civile* (*agnatio, cognatio civilis* or *legitima*), and the relationship of the *jus gentium* or *naturale* (*cognatio naturalis* or *cognatio κατ' ἐξοχήν*). Agnates are defined in Gaius, i. 156, and Just. Inst. i. 15, 1 (cf. Gaius, iii. 10; Inst. iii. 2, 1), as those who are "per virilis sexus personas cognatione juncti." But this definition must be extended so as to include all adoptive relations, *e.g.* brothers and uncles, who properly cannot be called *cognati* at all if cognates are persons related merely by the tie of blood, and women who by passing *in manum mariti* came to be *filiae loco* to their husbands, and so agnates to their own children and their husbands'

agnates in general. Conversely, it

yond those in the sixth degree could ucceed a person who died intestate, hildren of a *sobrinus* or *sobrina*, who, seen, were in the sixth degree them- . iii. 5, 5). The degree of relation- given person in this stemma to the hom kinship is being traced (*is cave*, icated by the figures attached to the several words: the Roman numerals denote the degree of *cognatio* in the canon law, and the Arabic numerals the degrees in the Roman or civil law. The latter mode of reckoning is adopted in England in ascertaining the persons who are entitled as next of kin to the personalty of an intestate. In the canon law, the number which expresses the collateral degree is always the greater of the two numbers (when they are different) which express the distance of the two parties from the common ancestor; but in the civil law the degree of relationship is ascertained by counting from either of the two persons to the other through the common ancestor. If it be asked what is the significance of *agnatio* and *cognatio* respectively in the Roman system, the answer is that under the older law the latter conferred no rights whatever; it only imposed liabilities, especially in relation to marriage. A man could not lawfully marry either a lineal cognate or marry in the collateral line (*e.g.* a sister, niece, or aunt); but he and they had absolutely no rights in relation to one another as *cognati*. For instance, if a father emancipated his child of tender years, he became his guardian; but *not* because he was his father (for the agnatic tie had been broken), but on the analogy of master and slave, because he had conferred on him the boon of independence. On the other hand, the agnates enjoyed valuable rights both of guardianship and of inheritance upon intestacy. But the whole history of Roman law is the history of the gradual substitution of cognation for agnation as a title to rights, especially in the department of inheritance [BONORUM POSSESSIO], and in Justinian's final reform of the law of Intestate Succession by Novel 118 the last trace of agnation as conferring any privileges is extinguished. Perhaps the most striking of the earlier admissions of cognatic relationship by the civil law is the *querela inofficiosi testamenti*. [J. B. M.]

COG'NITOR. [ACTIO.]

COGNO'MEN. [NOMEN.]

COHE'RES. [HERES.]

COHORS. [EXERCITUS.]

COLA'CRETAE (*κωλακρέται* or *κωλαγρέται*: the latter is the more correct form, now restored to Aristophanes by Dindorf on the authority of the Ravenna manuscript), the name of very ancient magistrates at Athens. They derived their singular name, "collectors of hams," from the circumstance that they received the hams from the animals sacrificed on certain occasions, not as a perquisite for themselves, but in aid of the meals in the Prytaneium, for which they had to provide (*ἐκ τοῦ ἀγείρειν τὰς κωλᾶς*: with these *κωλαῖ* cf. the Homeric *μηροί*, so often mentioned as the prime parts). This name is in itself a proof of their antiquity. The Colacretae were traced back to the times of the kings, when they had the control of financial matters; and in later times acted as the treasurers of the Naucrariae, out of whose funds they paid the expenses of the sacred embassies (*θεωρίαι*) sent to Delphi or elsewhere, and those of the public tables in the Prytaneium. The legislation of Solon left them untouched; but Cleisthenes deprived them of the charge of the finances, which he transferred to the APODECTAE, now first appointed. When, however, the practice of paying the dicasts was introduced by Pericles, this payment was assigned to the Colacretae; and we again find them an important magistracy in the time of Aristophanes (*Vesp.* 695, 724; *Av.* 1541: the scholia on these passages are the most important sources of our information). (*Etym. M.*, Phot., Hesych., Suid., Tim.; Ruhnken on Timaeus, *s. v.*; Boeckh, *P. E.* p. 173 ff. tr. Lewis ² = i.³ 213 ed. Fränkel, 1886; Schömann, *Antiq.* i. 327, E. T.) In his second edition Boeckh pointed out that there is no documentary evidence for the existence of the Colacretae after B.C. 403 (the archonship of Eucleides), but that this does not prove that they had ceased to exist. On this point compare Fränkel, note 302. [W. S.] [W. W.]

COLI'PHIUM. [ATHLETAE, p. 238 *a*.]

COLLA'RE (Priscian, p. 590 P., gives the form *collarium*, **δέραιον**, **κλοιός**), a band or chain attached to the neck (*collum*), a collar. Dogs with collars are frequently seen in ancient monuments, and a mosaic at Pompeii represents a watch-dog with his collar and chain attached (Reich, *s. v.*). Varro says that farm dogs should have collars with pointed nails (*cum clavulis capitatis*) attached to them, to protect them against the attacks of wolves and other beasts (*R. R.* ii. 9, § 15). Xenophon recommends that the collars (**δέραια**) of hunting dogs should be soft and wide so as not to rub the hair (*Cyneg.* 6, 1). Large wooden collars (**κλοιοί**) were sometimes put on mischievous dogs (Aristoph. *Vesp.* 897, with Schol.; Xen. *Hell.* ii. 4, § 41). Plates of bronze have been found, pierced with a hole to be suspended to the collar, containing the names of owners of dogs. (Daremberg and Saglio, *s. v.*)

Iron or bronze collars were placed round the necks of slaves who had attempted to run away. (Lucil. *ap.* Non. p. 36, 26; Plaut. *Capt.* ii. 2, 107.) Sometimes a plate was attached to the collar, containing the name and address of the master, and offering a reward for the runaway slave. (D. and S., *s. v.*) [W. S.]

COLLA'TIO BONORUM. [BONORUM COLLATIO.]

COLLECT'ARII. [ARGENTARII, p. 181 *b*.]

COLLEGATA'RIUS. [LEGATUM.]

COLLE'GIUM. A collegium is an association of at least three persons (Dig. 50, 16, 85) for some permanent and lawful purpose, recognised by the state as possessing the attributes of a corporation (Liv. x. 13, 22; Tac. *Ann.* iii. 31). The persons who for the time being were members of the collegium were called *collegae* or *sodales* (Dig. 47, 22, 4), the Greek equivalents being **ἑταῖροι** and **ἑταιρεία** (Gaius, *ib.*).

Collegia are, in fact, a subdivision of the class of artificial or "juristic" persons called *universitates personarum*. For the attributes of these in general, reference should be made to the article on UNIVERSITAS. The chief characteristics of a corporation are the perpetuity of its existence independently of the lives of the natural persons who for the time being belong to it, and its recognition, apart from them, as a subject of rights and duties. Thus, a collegium could possess common property and a common chest or *arca*, and have its suits conducted for it by a syndicus or actor (Dig. 3, 4, 1, 1): debts owed to it were not owed to its members, nor were its own debts theirs (Dig. *ib.* 7, 1); its property was liable to be sold for such debts,

COLLY'RIUM (κολλύριον, diminutive of κολλύρα, a roll; hence): 1. In medical language, a tent, pessary or suppositary, made of medicinal substances and inserted into the orifices of the body, such as the nostrils or the anus or into an ulcer. Thus Celsus (v. 28): "collyrium fieri debet altera parte tenuius, altera parte plenius; idque ea parte qua tenuius est antecedente, demitti oportet in fistulam." (Cf. Scrib. Largus, *Comp. Med.* 142; Colum. vi. 30; Cael. Aurel. *Acut.* ii. 12; Hipp. 609, 44.)

2. A liquid eye-salve (Hor. *Sat.* i. 5, 30; Cels. vii. 7, 4; Veget. iii. 16, 248, 18, 2; Arr. Epict. ii. 21, 20, iii. 21, 21). Many instructions for the composition of these medicaments may be found in Marcell. *Empir.* viii. [J. H. F.]

COLO'BIUM. [Tunica.]

COLONA'TUS, COLO'NI. Colonus originally denoted the free lessee of land under a contract of *locatio conductio*, whence it acquired the derivative signification of an agricultural class under the empire, analogous to villeins in England, of which we first definitely hear about the time of Constantine, A.D. 321. These coloni (also called *rustici*, *inquilini*, *agricolae*) were settled on the estates of the larger landowners, a portion of which each of them cultivated as tenant at a fixed rent (*annua functio*), paid usually in kind (Cod. 11, 47, 5; *ib.* 20, 2), the amount of which was settled by custom and tradition: this the landlord could not raise, and the only case, apart from crime, in which the colonus could bring an action against him was where he attempted to do so. Occasionally, however, the rent was fixed by agreement. They were inseparably attached to the soil (*glebae adscripti*) which they tilled (Cod. 11, 47, 11, 7; 11, 51, 1); they could not leave it of their own accord (Cod. 11, 47, 21), nor could the lord or patronus eject them or sell them away from it; but he could alienate them with the land (Cod. 11, 47, 2), and transfer superabundant coloni from one to another of his own estates. Thus in many respects they were like slaves, and it is said in the Code (11, 51), "licet conditione videantur ingenui, servi tamen terrae ipsius, cui nati sunt, existimentur." The analogy, indeed, may be carried further. The colonus is said (Cod. 11, 47, 21) to be in the *potestas* of his dominus; the latter had the right of inflicting corporal chastisement on him (Cod. *ib.* 24): if he ran away, he could pursue him in the same way as a *servus fugitivus* (Cod. Theod. 5, 9, 1, 2); and if he sold him away from the estate, he could recover him by a vindicatio or real action (Cod. 11, 47, 7). That the colonus could as a rule bring no action against the patronus (Cod. 11, 49, 2) has been observed already. In the eye of the law, however, the coloni were free (Cod. 11, 51); they could contract a marriage which the law recognised (Cod. 11, 47, 24), and could acquire property, which was called their *peculium* (Cod. Theod. 5, 10, 1); but if this were land, they could not alienate it (Cod. Theod. 5, 11, 1); and it is probable that they could not alienate even personal property without the consent of the patronus. It seems, too, not unlikely that they could make a will, in default of which their property went to their next of kin: for if a bishop, presbyter, deacon,

&c., died intestate and without kin, his property went to the church or religious house to which he belonged, except such as he had as a colonus, which went to his patronus, who with respect to his ownership of the land is called *dominus possessionis* (Cod. Theod. 5, 3).

Upon every colonus a poll-tax was levied (whence they are sometimes called *censiti, tributarii*): this was paid immediately by the dominus, who was left to recover the amount from the colonus himself (Cod. Theod. 11, 1; Cod. 14, 26). The burden of recruiting the army was also thrown on the great landowners, who regularly enrolled their coloni for this purpose (Vegetius, i. 7), the rule against their being separated from the soil being to this extent suspended; a colonus by becoming a soldier was released absolutely from the quasi-servile condition (*Nov. Valent.* 6).

The status of colonatus originated most frequently in birth. When both the parents were coloni, the children were coloni as well (and here they were specifically called *originarii*). If the parents had different domini, it was finally settled that they should divide the children between them; and if there was an odd one, it should go to the dominus of the mother.

If the mother were a slave or a colona, the rule *partus sequitur ventrem* was followed [CIVITAS]; but if the father was a colonus and the mother free, the children (except for a brief suspension of the rule by Justinian) became coloni as well. By *Nov.* 22, 17, Justinian declared the marriage of a colonus and a free woman void. The status could also originate in Prescription, a free man who lived for thirty years under a dominus as colonus becoming colonus in fact, though he retained his property free from the ordinary restrictions (Cod. 18, 23; 11, 47, 1); and similarly a dominus who possessed for thirty years a man who belonged to another, could defend himself against the claim of the latter by *Praescriptio longi temporis.* Again, a free man could voluntarily become a colonus by agreement, provided it were judicially ratified, or his name were registered in the poll-tax inventory of the estate (Cod. 11, 47, 22, pr.), and he married a colona (*Nov. Valentin. III.* c. 30). Sometimes, again, persons were reduced to this condition as a punishment: *e.g.* able-bodied beggars would be adjudged coloni to any dominus who informed against them (Cod. 11, 25, 1); and finally a dominus could convert a slave into a colonus at pleasure by enrolling him in the poll-tax inventory of the estate (Cod. 11, 47, 7).

As to the modes in which a man could cease to be a colonus, it has been already observed that he could not cast off this condition at pleasure, the reason being that the institution was founded in the interests of agriculture and as a convenient resource for taxation. Before Justinian a colonus could become absolutely free by living thirty years, a colona by living twenty years in another condition—in other words, complete freedom could be acquired by prescription; but this rule was repealed by Justinian (Cod. 11, 47, 23), who enabled the dominus to assert his right after any lapse of time. Nor could the dominus release his coloni, as he could his slaves, at his own discretion: in fact, in the time of Justinian the only modes in which escape from colonatus
was possible seem to have been enr
the army under the lord's sanction (s
a direct act of the state, and attain
bishopric (Cod. 1, 3, 11, 16, 37).

As to the historical origin of col

COLO'NIA. I. GREEK.—The Gree
according to Wachsmuth (*Hell. Alte*
100), may be divided into three classes
settlements founded by whole races, s

nian, and Dorian colonisation of the the Aegean Sea and of the coast of ; (2) city-colonies founded by cities, prise the trading factories which became cities; (3) cleruchies. With e are little concerned, for they are rations of races than foundations of hey did not start as a small section ger unity at home, but were rather great inner movement of the Greek ly times. Besides, it is not to them houghts turn when we speak of the ies. We think rather of the second t is of these that we shall especially But a full historical account of all e colonies would be beyond the scope ent article; for this the reader is Hermann, *Staatsalterthümer*, §§ 73– all be able here only to tell generally the different kinds of colonies, the of their foundation, the principles d according to which they were their internal relations and develop- the position in which they stood to -country.

different kinds of Colonies.—"A ys Sir G. C. Lewis (*On the Govern- pendencies*, p. 170), "properly denotes persons belonging [mainly] to one l political community, who, having that country and community [hence rm a new and separate society, inde- dependent, in some district which is nearly uninhabited, or from which the ancient inhabitants." There are ls:—(1) *Colonies of Conquest*, such as various colonies in the East. There hat are distinctly of this class in times. A subdivision of this class *y Colonies*, such as were to a great colonies planted by Pericles in Thrace ruchies. (2) *Agricultural Colonies*, alone a nation springs up. The Magna Graecia and Sicily are the les; the vast wealth of the latter agricultural produce, the home of Proserpina, is known to all. One of this class is the *Pastoral Colony*, eeks in the interior of the Cyre- i. 27; Grote, iii. 449, new ed. 1869), ch in the Cape Colony. Another is the *Plantation Colony*, of which example in Greek history, viz. that the cultivation of whose silphium e of the modern sugar plantations, fact that the labour was performed laves (Roscher, *Kolonien, Kolonial- Auswanderung*, p. 26, ed. 3). (3) *Colonies.* Nearly all colonies, says *p. cit.* p. 16), begin as commercial hatever may be the character they assume. They start from factories, generally in countries where there great natural difficulties to contend great restrictions on trade, like Nau- ypt or the modern colonies in China. account of the interesting colony of see *Quarterly Review*, Jan. 1887,) In such colonies the colonists and to the natives in the position of are bound closely together in well- corporations, for mutual protection. Such factories, a little more fully developed, become commercial colonies. Examples are the Phoenician colonies in Spain (the America of the ancients), and the Greek colonies on the Pontus, with their large trade in hides, flax, corn, wood, slaves, and fish (Curtius, *Hist. of Greece*, i. 415, Eng. trans.). The Pontic colonies deserve especial notice. The great era of colonisation inaugurated especially by Miletus and Chalcis, during the eighth century B.C., was systematically carried on as a state concern by each city. Miletus and Chalcis had the two great requirements for the foundation of commercial colonies, viz. naval supremacy and a vast amount of capital. Particular commercial routes and grooves of navigation came to be formed: thus merchants for the Pontus always started from Miletus, and for Massilia from Phocaea, as Curtius (p. 411) points out, from whom we can best derive a knowledge of the way in which a commercial colony arose: "At first temporary fairs on the coast were held; then places on the opposite shore were purchased by treaty from the inhabitants; fixed market-places with store-houses were erected, and agents of the mercantile houses established in them, who superintended the landing and sale of the goods. ...Some of these stations were subsequently relinquished. Others, the situation of which proved favourable on account of mercantile advantages, or the excellence of climate or water, were kept up and enlarged: finally, a depôt of wares grew into an independent trading-place, a Hellenic community, and an antitype of the mother-city." The colonising of the Pontus by Miletus was a most thoroughgoing work. Not only did the colonies trade with their immediate neighbours, especially with the Scythians, who showed a great adaptability to Greek culture, but several of the colonies—such as Olbia, Tanais, and Dioscurias—were the starting-points of caravan routes towards Central Russia, Siberia, and India (Curtius, *op. cit.* i. 421). And colonies themselves are readily induced to found new colonies. Sinope, itself a colony of Miletus, was the starting-point of much of the colonisation of the south coast of the Pontus, and by the middle of the eighth century she had founded Trapezus. As might be expected, the commercial colonies, to which class by far the greatest number of the Greek colonies belonged, were all founded on or near the sea: hence the remark of Cicero (*Rep.* ii. 4, 9) that they were like a Grecian border, woven on to the lands of the barbarians ("barbarorum agris quasi attexta quaedam videtur ora esse Graeciae").

2. *Causes of Colonisation among the Greeks.*—Passing over cases in which a whole state leaves its home before a conqueror,—as when the inhabitants of Teos, conquered by Harpagus, sailed away and founded Abdera (Herod. i. 168); or when, in consequence of civil dissensions, one party emigrates in anger (for such really found new states, and have no link whatever with their mother-city),—we may yet fairly ascribe the name of colony to those settlements founded in consequence of *internal dissensions*, in which the state superintended the sending out of the colony, and the colonists parted in a measure as friends from the metropolis. (An instance is the founding of Tarentum by the Partheniі, directed by Sparta; Grote, iii. 384.) Such

would come under Servius's definition (*ad Aen.* i. 12) of a colony which requires that it should be sent out *ex consensu publico.* A very fruitful cause of colonisation was *over-population,* and the consequent poverty and unevenness of wealth which arise in such a community. Then the wealthy and the upper classes urged the poor to emigrate, and the latter generally were willing enough to do so, impelled by hope of better fortunes and love of adventure. A more extensive cause was a desire to push *commerce,* especially in the case of rich communities, as we have already shown. We cannot say that any of the Greek colonies were founded, like the New England colonies, by high-souled men flying before religious persecution. Sometimes *religion* seems to have had an influence in colonisation, as when the god used to order that a tenth of the inhabitants should leave the country and found a colony, as in the case of Rhegium: this was, however, due to over-population and bad seasons (Strabo, vi. 1, 6, *init.*). A good summary of the causes of colonisation is to be found in Seneca, *Cons. ad Helviam,* 7, 4. Roscher (*op. cit.* p. 43) says that the main causes refer to the four great elements of human life,—family (over-population), property (commerce), state (political dissensions), and church (religious motives).

3. *Procedure in founding a Colony.*—Of course this can only apply to a colony regularly sent out by the order and approval of the state; otherwise the foundation depended more or less on accidents, and could not follow any fixed method. Even when a colony went forth despatched with the good wishes of the mother-city, we know but imperfectly the exact method followed. The colonists sent to Brea (*C. I. A.,* i. 30) are of the nature of cleruchi, and will be treated of later on. The leader (οἰκιστής) appears to have been appointed, and then to have been himself compelled to find out where the colony was to be led to. For this he applied to the Delphic priests; and the great assistance which these priests rendered to the Greeks in prudent advice as to the sites for their colonies was "the greatest and most permanent service rendered by the Delphic oracle" (Curtius, *History,* ii. 39). Delphi, the centre-point of the Apolline worship, was frequented by Greeks from all parts of the world, and by conversation with these the priests acquired a very considerable amount of geographical knowledge, and, sensible men that they were, used it to direct the colonists who asked their advice. Few failed to do so (Cic. *de Div.* i. 1, 3), and hence the number of colonies which considered Apollo Archegetes as their founder, and the grateful veneration for Delphi which was felt by the more prosperous colonies (Curtius, *op. cit.* ii. 38). Herodotus (v. 42) notices it as an extraordinary proceeding on the part of Dorieus that he led the Spartans on a colony, and yet "did not consult the oracle at Delphi as to the land he should go to colonise nor do anything which was customary." Participation in the colony was generally left to free choice; but sometimes the colonists were appointed by the state: thus the inhabitants of Thera, when proposing to colonise the island of Platea off Libya, picked out by lot one in every two adult brothers in a family (Herod. iv. 153), and gene-
rally, as we shall see, men from va

went they took their home with them."
itizens, according to the Greek idea, were
ity (Herod. viii. 61; Thuc. vii. 77). But
le the sphere of religion there appear to
been few ties. In case the colony proposed
nd another, according to an old custom it
a leader from the mother-city (Thuc. i.
But they do not as a rule appear to have
ed even the coinage of their mother-city
rmant, *ap.* D. and S. i. 1302); and it is
exceptional when we find any political
iority exercised over the colony. The dis-
s were generally too great, the interests
aried, and the autonomy of each community
a principle too deeply rooted in every
mind to admit of voluntary dependence.
policy, too, of commercial colonies must
sarily be of a jealous nature. Corinth
tried to found a colonial dominion by
s of her navy: but this led to colonial
as between her and Corcyra, and a disrup-
of the bonds of filial attachment (Curt. *op.*
469). The Corinthians also used to send
eir colony Potidaea annual magistrates,
l *ἐπιδημιουργοί*, though we may suppose
these had not much power, else they would
ave allowed the Potidaeans to make a
with Athens, the enemy of Corinth (Thuc.
). The tribute which Cotyora, Cerasus,
Trapezus paid to Sinope was of the nature
nt: for the land they held had been wrested
the barbarians by the inhabitants of Sinope,
o of right belonged strictly to them (Xen.
. v. 5, 7, 10). Except under special cir-
tances and conventions, the citizens of a
y were not citizens of the mother-city,
h it was not a Greek principle, as it was
nan one, that no one could be citizens of
ommunities at once. True, the Corinthians
the citizenship of Epidamnus to whosoever
go on the colony they were projecting
c. i. 27); therefore we might suppose that
tiori the Corinthians had the citizenship:
he Epidamnians were in great straits, and
put themselves entirely into the hands of
Corinthians. The assertion of Timaeus,
the Epizephyrian Locrians and the Locrians
eece had reciprocally rights of citizenship,
g many other assertions of that untrust-
hy historian, is controverted by Polybius in
etailed criticism of Timaeus's account of
Locrians (Polyb. xii. 5–12). Under stress
ternal dissensions or any other grievous
se (cf. Thuc. v. 106), the colonists often
ed for aid to the states which founded
—"as ill-used children to their parents"
. *Vat. Exc.* x. p. 39),—as the Syracusans
o the Corinthians in the time of Timoleon
. *Timol.* 23); but generally the colonists
sufficiently prosperous not to require any
ance. Conversely it was considered dis-
eful for a colony not to aid its parent state
the latter was subject to unjust attacks
c. *l. c.*), much more was it impious to bear
against her (Herod. iii. 19; viii. 22): dis-
s between colony and metropolis it was considered should be settled by arbitration; at least such are the offers of the Corcyreans to the Corinthians (Thuc. i. 28). Yet we not rarely find instances of colonies becoming violently opposed to their parent states. Notable examples are Corcyra to Corinth, and Amphipolis to Athens (Thuc. v. 11). Frequently the colonies, being more enterprising and so acquiring greater prosperity, came to despise their old-world parent state, the more so as the colonies were as a rule far more democratic than their founders, and in their pride of wealth lost all reverence for sentiment and antiquity: thus Sybaris proceeded to set up Olympic games of her own (Athen. xii. 522 a). This leads us to consider next—

5. *The political career of Colonies.*—In this connexion we must begin with a quotation from Plato (*Legg.* iv. 708), where he shows "how colonists, like a swarm of bees, if entirely of one community, similar in race, language, laws, and religion, will be intolerant of any laws and customs at all different from those of the old home, even though the injustice of these laws and customs has been the cause of their enforced expatriation; whereas a mixed population is quite ready to listen to new laws, though it may take years before the founder who is also the legislator may be able to make the different elements of the colony pull well together." Now it is to be carefully borne in mind that the population forming the Greek colonies were nearly always of different cities and races. Ionians, it is true, who had the gift of accommodating themselves to every locality, generally appear in the front; Chalcis and Miletus, as we saw, were the heads of Greek colonisation: but they only formed the centre body of a population which contained a blending of "Achaean heroism and Dorian energy and perseverance"; "they were ports which conducted emigration in certain directions." It would be folly to suppose that Miletus of herself could found eighty colonies in a few generations (Curtius, *op. cit.* i. 463, 470). The colonists then were generally of a mixed race of Hellenes; and when they had founded their colony, they mixed the race still further by intercourse and intermarrying with the natives. This is especially noticed by Grote in the case of Italy and Sicily (iii. 377), Gaul (*ib.* 397), Cyrene (*ib.* 455), and Olbia (xii. 298). In countries like Lower Italy and Sicily, which had been colonised by Phoenicians, who had also transported thither vast numbers of people of kin with the Greeks, and where there had thus grown up by successive layers a population related to the Greeks, there eventually was developed, when the great colonising of the Corinthians and the Rhodians was effected, a new vigorous *homogeneous* Greek nationality, just as in bygone times in the old country from the Pelasgian tribes arose the Hellenic nation (Curtius, *op. cit.* i. 468).

In connexion with the Greeks of Italy and Sicily, it is worthy of notice that those settled around the Tarentine gulf had Amphictyonic institutions, and a common point of religious assemblage in the festivals of the Lacinian Hera, presided over by the Crotoniates (Ath. xii. 541). Doubtless union of religious worship and union in common danger united other complexes of neighbouring towns in similar Amphictyonies:

e.g. the altar of Apollo Archegetes at Naxos appears to have united the Sicilians (Thuc. vi. 3; cf. Grote, iii. 359). And the course of development in the more prosperous colonies ran much faster than in the mother-country. We look to America now to solve many of the political and social problems which are beginning to be sorely felt; and the evidence to be derived from the Greek colonies does not prove our expectation to be unnatural. A population like that of the Greek colonies, originally mixed, mixed still further by intercourse with the natives, not tied down by any feeling of reverence for or submission to the laws and customs of priests and nobles, with wealth ever increasing, vigorous, independent, could not tolerate an aristocratic system of government; it had to yield to the timocratic: the aristocracy of birth and worth gave place to the oligarchy of wealth. This important step on the road to democracy brought with it one great advantage, viz. codification and publication of the laws. In the seventh century, besides Draco, we find Zaleucus publishing laws for the Epizephyrian Locrians, and Charondas for Catana, and doubtless for other cities also of Italy and Sicily (Aristot. *Pol.* ii. 9, 5; cf. Plat *Rep.* x. 599 E). Every one had before him the prospect of success in the race for wealth: the struggle came to be between the rich and the poor, as always in commercial communities. The aristocracy of Miletus had vanished by the middle of the seventh century; and amidst that city's great wealth, which was as ever accompanied by its shadow, great poverty, there had appeared opposite to one another the two main classes of today, the Capitalists and the Labourers (**πλουτὶς καὶ χειρομάχα**, Plut. *Quaest. Graec.* § 32=ii. 298, ed. Reiske). Where the rich, who are the few, gained the upper hand, we find oligarchies; as at Rhegium (Heracl. Pont. 25), Croton (Iamblich. *Pythag.* § 45), Locri (Polyb. xii. 16), Agrigentum (Diog. Laert. viii. 66), the power was in the hands of a Thousand (**οἱ χίλιοι**). Where the poor had the upper hand, the result was democracy. We hear of demagogues at Sybaris long before those at Athens (Diod. xii. 9). Close on demagogues follow tyrants: the President, as at Miletus (Aristot. *Pol.* viii. 5, § 8), becomes the tyrant. The line is hard to draw: Telys of Sybaris is to Diodorus (*l. c.*) a demagogue, to Herodotus (v. 44) a tyrant. "The great majority of ancient tyrants," says Aristotle (*l. c.* § 6), "had been demagogues."

In the colonies then, just as now the dollar is almighty, so "money, money was the man," as Pindar (*Isthm.* 2, 11), quoting "the Argive man" Aristodemus, reminded Xenocrates of Agrigentum. And there was plenty of it: hence more beautiful cities and a more brilliant and heightened life than in the mother-country. Without going so far as Roscher (*op. cit.* p. 69), in asserting that in every branch of higher art and science Hellas proper was indebted for her first stimulus to her colonies, yet much of early Greek philosophy came from the higher minds of Magna Graecia and Sicily,—Xenophanes, Pythagoras, Empedocles, Parmenides; and owing to the rationalistic character of colonial life generally, which mocks at everything ideal, we are not surprised to find that comedy and travesty owed their origin principally to the
same region. Poverty had all along bee
sister of Hellas (Herod. vii. 102); but th

savants à l'Académie des Inscriptions,

vol. ix. pp. 328–411) were invited to send in their names, and the lot decided who were to get the lands, which were doubtless measured out prior to the departure of the colonists. They were led by an **ἀποικιστὴς** or **στρατηγός** (Arg. to Dem. *de Chers.*), and to be such a leader was esteemed a great honour (Paus. i. 27, 5). All the prayers and sacrifices for the success of the cleruchy were made on behalf of the state and at state expense, whereas in the **ἀποικίαι** the consulting of the oracle and all religious duties were left to the initiative of the colonists and their leader (Foucart, p. 340).

As to the *relations of the cleruchs to Athens*: (1) they remained Athenian citizens, as may be seen from inscriptions from the fifth century B.C.,—*e.g.* from Melos, **Ἐπόνφης Ἀθηναῖος Πανδιονίδος φυλῆς Κυθήρριος** (*Bull. de Corr. hell.* i. 44),—down to Roman times. The Lemnian and Imbrian cleruchs were Athenian citizens (Dem. *Phil.* i. § 34). In a list of killed we have **Λημνίων ἐγ Μυρίνης**, names with the Athenian tribes they belonged to added to them (*C. I. A.* i. 443). The official titles for the cleruchs were such as **ὁ δῆμος ὁ ἐν Ἡφαιστίᾳ** (Hyperid. *pro Lycophr.* § 13; cf. *C. I. A.* ii. 284), **Ἀθηναίων οἱ ἐν Ποτιδαίᾳ κατοικοῦντες** (Dem. *de Halon.* § 10), **οἱ ἐν Μυρίνει πολῖται** (*C. I. A.* ii. 593). (2) There seems no definite proof that the state retained the supreme ownership of the lands; for in the inscription of 377 B.C. (*C. I. A.* ii. 17, l. 29, 37) which Foucart refers to, and which speaks of private and *public* possessions in the land of the allies, the *public* possessions refer to mines and other such state property. (3) That the cleruchs paid tribute, though maintained by Boeckh (*op. cit.* i. 508), has been completely disproved by Kirchhoff (*Ueber die Tributpflichtigkeit der attischen Kleruchen* in the *Abhandl. der Berliner Akad. d. Wissensch.* 1873, pp. 1–35). He divides the Athenian cleruchies into, on the one hand, those settled on lands entirely conquered, from which the inhabitants were driven out, and those acquired by capitulation; and, on the other, those acquired in an amicable manner. In the former of these (*e.g.* Histiaea, Aegina, Potidaea, Scione, Torone) he proves that the lists which set down the amount of tribute to be paid do not refer to the time when the cleruchies held the land, but to a preceding time: for example, Hestiaea pays a tribute according to two lists; but these lists belong to 454 B.C., not to 446, as Boeckh says; and the Hestiaeans never appear on the lists after 446, the time cleruchs were sent to occupy their lands. As regards the second class of cleruchies (*e.g.* the Chersonesitae, Andros, Naxos, &c.), the sudden lowerings of the tribute appear inexplicable, unless we suppose it to be a compensation for the cession of their lands to Athenian cleruchs: for example, Andros (p. 27) had its tribute lowered between 427 and 425 from 12 to 6 talents, Imbros (p. 30) from 2 to 1 talent between 444 and 442; cf. Naxos (p. 29), Lemnos (p. 34). (4) There is no evidence as to whether or not the cleruchi could alienate their lands: but their military functions render such a supposition unlikely. For a similar reason, as a general rule the cleruchi had to reside on their land. That the cleruchi of Lesbos were allowed to let the lands to the original owners for a rent and reside themselves at Athens (Thuc. iii. 50) is highly exceptional.

(5) The cleruchi certainly paid taxes for their property to their own cleruchic community (Aristot. *Oec.* ii. 6). For such property as some few may have retained in Attica, it is most likely that they had to pay *εἰσφοραὶ* when such were required; but from *munera personalia*, such as the various liturgies, they were of course exempt, as being absent from Athens on state service (Harpocr. *s. v.* *κληροῦχοι*: cf. Dem. *de Symm.* § 16). (6) As we have seen from the list of killed, the cleruchi served in the Athenian army on certain occasions (cf. Herod. viii. 46; Thuc. vii. 57); and, even when in their cleruchy, they had to obey strictly whatever orders for military service arrived from Athens (Herod. vi. 100; [Dem.] *Epist. Phil.* § 16). Beside the cleruchi, there was generally a cavalry force, commanded in the case of Lemnos by an *ἵππαρχος* (Dem. *Phil.* i. § 27), which was supported by the cleruchi, and that as it seems sometimes grudgingly (Hyperid. *pro Lycophr.* § 13). (7) There appear to have been civil magistrates, too, occasionally sent by Athens to the cleruchies. Such are the *ἄρχοντες* at Lesbos (Antiphon. *de Caed. Herodis*, § 47), which are no doubt the same as the *ἐπίσκοποι* (Boeckh, *op. cit.* i.^{3} 480; cf. Aristoph. *Av.* 1050). In later times we find *ἐπιμεληταὶ* sent from Athens, as *e.g.* to Delos (*C. I. G.* 2286), Haliartos and Paros (Boeckh, *op. cit.* i.^{3} 507, and notes). (8) As regards jurisdiction, as far as we can judge from the very fragmentary inscription in reference to the cleruchi of Hestiaea (*C. I. A.* i. 28, 29), some cases had to be tried within thirty days (*δίκαι ἔμμηνοι*) before the Nautodicae at Athens; others before judges chosen by lot out of the cleruchi themselves. The really important cases were tried at Athens: *e.g.* the murder of Herodes. (9) Touching religion, a certain portion, generally a tenth of cleruchic lands, was set apart for the gods (Thuc. iii. 50). The cleruchi appear to have worshipped Athenian gods generally, though sometimes the native gods also (Gilbert, *op. cit.* i. 422). Each cleruchy sent an ox to be sacrificed at the Panathenaea (Schol. on Aristoph. *Nub.* 386; cf. *C. I. A.* i. 31). The Athenians also associated the cleruchies in their sacrifices. (See an inscription of the second century in Foucart, p. 384.)

But the cleruchi possessed a *certain independence.* They had the right of coining money, though only copper: *e.g.* the coins of Hephaestia and Myrina in Lemnos reproduce Attic emblems (Pallas and the owl), after the Athenian cleruchi had gone there in 387, while the coins prior to this have the attributes of Hermes and the Dioscuri (Foucart, p. 372). Towards the natives, who often, as in the case of Imbros and Lemnos, were reduced to the state of metics (Foucart, p. 393), the Attic cleruchi appear to have formed a strictly closed body, neither intermarrying (such indeed was not allowed by Attic law, Dem. *Neaer.* § 17) nor having more intercourse than was absolutely necessary. The *constitution* of the cleruchic state was a miniature Athens, and Foucart (p. 373 ff.) has shown how their political procedure, and even the very names of their officers, changed with the changes at Athens.

Thus we find senate and people at Lemnos (*C. I. A.* ii. 592) and Imbros (Conze, *Reise auf den Inseln des Thrakischen Meeres*, p. 88),
and a prytaneum at Hephae
(*C. I. A.* l. c.). Ordinary pol

bject was to increase the power of Rome
reasing the population. (Liv. xxvii. 9.)
nes the immediate object of a colony was
off a number of turbulent and discon-
persons. Colonies were also established
purpose of providing for veteran soldiers,
ice which is first mentioned in B.C. 201
xi. 4), and continued under the emperors:
oloniae were called *militares* (Vell. Pat.

remarked by Strabo (p. 216, ed. Casaub.),
speaking of the Roman colonies in the
of Italy, that the ancient names of the
were retained, and that though the people
ime were all Roman, they were called by
nes of the previous occupiers of the soil.
ct is in accordance with the character
old Roman colonies, which were in the
of garrisons planted in conquered towns,
colonists had a portion of the conquered
ry (usually a third part: Dionys. ii. 35,
; Liv. x. 1) assigned to them. The inha-
retained the rest of their lands, and
lived together with the new settlers, who alone composed the proper colony. (Dionys. ii. 53.) The conquered people must at first have been quite a distinct class from, and inferior to, the colonists. They were probably regarded as *cives sine suffragio.* The definition of a colonia by Gellius (xvi. 13) will appear, from what has been said, to be sufficiently exact: "Ex civitate quasi propagatae—populi Romani quasi effigies parvae simulacraque."

No colonia was established without a lex, generally a plebiscitum, based upon a senatusconsultum; in some cases the last alone is mentioned (Liv. xxxvii. 47, 57), but it is probable that the confirmation by the people was always requisite (Madvig, *Verf. u. Verw.* ii. 29). This fact shows that a Roman colony was never a mere body of adventurers, but had a regular organisation by the parent state. According to an ancient definition quoted by Niebuhr (Serv. *ad* Verg. *Aen.* i. 12), a colony is a body of citizens, or socii, sent out to possess a commonwealth, with the approbation of their own state, or by a public act of that people to whom they belong; and it is added, those are colonies which are founded by public act, not by any secession. Many of the later laws which relate to the establishment of coloniae are leges agrariae, or laws for the division and assignment of public lands.

When a law was passed for founding a colony, persons were elected by the people to superintend its formation (*coloniam deducere*). These persons varied in number, but three was a common number (*triumviri ad colonos deducendos*, Liv. xxxvii. 46, vi. 21). We also read of duumviri, quinqueviri, vigintiviri for the same purpose. The law fixed the quantity of land that was to be distributed, and how much was to be assigned to each person. When the colony was not an inviting one, it was difficult to fill up the number of volunteers (Liv. x. 21); but as a colony was often founded as a military measure for the defence of the state, the requisite garrison might be raised by levy, or by lot (Dionys. vii. 13; Plut. *Coriol.* 13); and colonists were not allowed to withdraw from the colony at pleasure. The number of heads of families was usually in the early times, and sometimes afterwards, 300 (Dionys. ii. 35, 53; Liv. viii. 21, xxxii. 29, xxxiv. 45), but there is no reason to accept the conjecture which connects this number with the traditional 300 gentes at Rome. At a later period the number was often much larger: thus 2000 were sent to Satricum (Liv. vi. 16), to Mutina, and to Parma (Liv. xxxix. 55); 2500 to Cales (Liv. viii. 16) and to Luceria (Liv. ix. 26); 3000 *in Volscos* (Liv. v. 24); 4000 to Interamna (Liv. ix. 28) and elsewhere; and 6000 to Alba (Liv. x. 1) and to Placentia (Ascon. *ad* Cic. *in Pis.* p. 121).

Roman citizens who were willing to go out as members of a colony gave in their names at Rome (*nomina dederunt*, Liv. i. 11, an expression which is also used of soldiers enrolling, and which plainly indicates the military nature of the proceeding). Cicero (*pro Dom.* 30, 78) says that Roman citizens who chose to become members of a Latin colony must go voluntarily (*auctores facti*), for this was a *capitis deminutio;* and in another passage (*pro Caecin.* 33, 98) he alleges the fact of Roman citizens going out in

Latin colonies as a proof that loss of civitas must be a voluntary act.

The colonia proceeded to its place of destination in the form of an army (*sub vexillo*), which is indicated on the coins of some coloniae. An urbs, if one did not already exist, was a necessary part of a new colony, and its limits were marked out by a plough, which is also indicated on ancient coins. The colonia had also a territory, which, whether marked out by the plough or not (Cic. *Phil.* ii. 40, 102), was at least marked out by metes and bounds. Thus the urbs and territory of the colonia respectively corresponded to the urbs Roma and its territory. Religious ceremonies always accompanied the foundation of the colony, and the anniversary was afterwards observed. (Plut. *C. Gracchus*, 11; Serv. *ad* Verg. *Aen.* v. 755; Cic. *ad Attic.* iv. 14, *pro Sest.* 63, 131). It is stated that a colony could not be sent out to the same place to which a colony had already been sent in due form (*auspicato deducta*). This merely means that so long as the colony maintained its existence, there could be no new colony in the same place,—a doctrine that would hardly need proof, for a new colony implied a new assignment of lands; but new settlers (*novi adscripti*) might be sent to occupy colonial lands not already assigned. (Liv. vi. 30; Cic. *Phil.* ii. 40, 102.) Indeed it was not unusual for a colony to receive a *supplementum*, as in the case of Venusia (Liv. xxxi. 49), and in other cases (Tac. *Ann.* xiv. 27); and a colony might be re-established, if it seemed necessary, from any cause: under the emperors such re-establishment was sometimes entirely arbitrary, and done to gratify personal vanity, or from some similar motive. (Cf. Madvig, *Opusc.* i. 285.)

The commissioners appointed to conduct the colony had apparently a profitable office, and the establishment of a new settlement gave employment to numerous functionaries, among whom Cicero (*de Leg. Agr.* ii. 13, 32) enumerates apparitores, scribae, librarii, praecones, architecti. The foundation of a colony might then, in many cases, not only be a mere party measure, carried for the purpose of gaining popularity, but it would give those in power an opportunity of providing places for many of their friends.

The first division of the colonies was into (1) *coloniae civium Romanorum* and (2) *coloniae Latinae.*

To the former class belonged all colonies, where the colonising immigrants consisted exclusively of Roman citizens. Although there is no express testimony to this effect, it hardly admits of doubt that these retained the *civitas cum suffragio et iure bonorum* (Marquardt, *Handbuch*, iv. 36). Similarly Madvig (*Opusc.* i. 232–244) has made it very probable that the conquered prior inhabitants had the *civitas sine suffragio.* This seems to follow from the fact that they are frequently spoken of as *cives;* and that they had no other magistrates or laws than those of the colony. Thus only can we understand the gradual blending of the new comers and the old inhabitants, which appears to have been effected *de facto* long before the Lex Julia. Madvig and Mommsen have drawn up lists of thirty-two of such colonies, the date of the foundation of these lying between B.C. 338 and B.C. 100. This list excludes Ostia, which is
said to have been founded under Ancus
and Labici (B.C. 418), which is a
instance. It is confessedly incomp
according to Asconius (*in Pis.* p. 3), t

abbreviation of colonia, indicates this fact, or, as in the case of Sinope, the Greek inscription ΚΟΛΩΝΕΙΑ. Septimius Severus made Tyre a colonia Veteranorum (Rasche, *Lexicon Rei Numariae*, s. v. *Tyrus*).

Colonies were sometimes established under the late republic and the empire with circumstances of great oppression, and lands were assigned to the veterans without regard to existing rights.

Under the emperors, all legislative authority being then virtually in them, the foundation of a colony was an act of imperial grace, and often merely a title of honour conferred on some favoured spot. Thus M. Aurelius raised to the rank of colonia the small town (vicus) of Halale, at the foot of Taurus, where his wife Faustina died. (Jul. Capitol. *M. Ant. Philos.* c. 26.) The old military colonies were composed of whole legions, with their tribunes and centurions, who, being united by mutual affection, composed a political body (*respublica*); but it was a complaint in the time of Nero, that soldiers who were strangers to one another, without any head, without any bond of union, were suddenly brought together on one spot, "numerus magis quam colonia" (Tacit. *Ann.* xiv. 27). And on the occasion of the mutiny of the legions in Pannonia, upon the accession of Tiberius, it was one ground of complaint, that the soldiers, after serving thirty or forty years, were separated, and dispersed in remote parts; where they received, under the name of a grant of lands (*per nomen agrorum*), swampy tracts and barren mountains. (Tac. *Ann.* i. 17.)

It remains briefly to state what was the internal constitution of a colonia. On this subject great light has been thrown by the discovery in 1851 of the municipal laws of Salpensa and Malaca in Hispania Baetica. (Cf. *C. I. L.* ii. 1963, 1964; Bruns, *Fontes Iuris Romani*, 120–131; Mommsen, *Die Stadtrechte d. lat. Gem. Sal. u. Mal.* 1855.) The genuineness of these valuable records was for a time disputed, but is now accepted universally. They date from about A.D. 81, and therefore describe the municipal constitution under the early empire; but it is not, as a rule, difficult to draw conclusions from this as to its character at an earlier date.

In the later times of the republic, the Roman state consisted of two distinct organised parts, Italy and the Provinces. "Italy consisted of a great number of republics (in the Roman sense of the term), whose citizens, after the Italian war, became members of the sovereign people. The communities of these citizens were subjects of the Roman people, yet the internal administration of the communities belonged to themselves. This free municipal constitution was the fundamental characteristic of Italy; and the same remark will apply to both principal classes of such constitutions, municipia and coloniae. That distinction which made a place into a praefectura is mentioned afterwards; and fora, conciliabula, castella, are merely smaller communities, with an incomplete organisation." (Savigny. Cf. Marquardt, *Staatsverw.* i.^{2} 2-21.) As in Rome, so in the colonies, the popular assembly had originally the sovereign power; they chose the magistrates, and could even make laws. (Cic. *de Leg.* iii. 16, 36.) It was a natural conjecture of Savigny's that, when the popular assemblies became a mere form in Rome, and the elections were transferred by Tiberius to the senate, the same thing happened in the colonies, and that the senates then acquired whatever power had once belonged to the community. But there is abundant epigraphic evidence to show that this was by no means the case. The division of the citizens (*populus*) into *curiae*, and the electoral activity of these when assembled in their *comitia*, long continued. On the walls of Pompeii we find frequent appeals of candidates, or in favour of candidates, to the popular body; and not only does the Lex Malacitana prescribe the details of the popular election, but we actually have mention of a *nominatio populi suffragiis* in Africa as late as A.D. 326. In practice, however, the election soon became little more than a formality; for office in these country towns was often regarded as a burden quite as much as an honour. In the laws dating from the time of Domitian, the presiding magistrate is empowered to nominate candidates, in case a sufficient number do not offer themselves, a right which doubtless existed in much earlier times; and if no more were nominated than were required to fill the vacancies, the confirmation by the popular vote was a mere form. (Mommsen, *Stadtrechte*, pp. 421-427.)

The town-council or senate consisted, like the Roman senate, of a fixed number of members, holding office for life, selected by magistrates corresponding to the censors at Rome, in the first instance from those who had been elected by the people as magistrates. The number was fixed by the law constituting the colony (Lex Jul. Munic. 85), and was usually 100, though we find instances of both smaller and larger bodies. The senate was called *senatus*, *ordo decurionum*, or *curia;* or in imitation of the Roman terms, *patres et conscripti*, *decuriones conscriptique;* the members of it *decuriones*, or at a later time (very rarely in inscriptions) *curiales*. An inscription from Canusium (Mommsen, *I. R. N.* 635) shows us very clearly the composition of a municipal senate. We find the names arranged under the following heads:—(1) *patroni clarissimi viri*, thirty-one in number; these had held office at Rome, and were Roman senators, and were apparently honorary members of the local senate: (2) *patroni equites Romani*, eight in number, and similarly honorary members: (3) *quinquennalicii*, local ex-censors, seven in number (including two of the previous class): (4) *allecti inter quinq.*, four men to whom a higher rank had been conceded by a special vote: (5) *duoviralicii*, twenty-nine in number, ex-
of the place: (6) *aedilicii*, ninet
aediles: (7) *quaestoricii*, nine past

n of the terms *colonia*, *municipium*,
ra has been much discussed, and
eement has not yet been arrived at,
nsequence of the looseness with
ancient authorities use the words,
ecause their precise force seems to have differed at different periods. The word *municipium* was usually derived by ancient writers from *munus capere*, in the sense of "to undertake a duty" (Gellius, xvi. 13, 6); but the explanation now justly preferred is that of Rudorff, who interprets it as coming from the same words, in the sense of "to receive a gift." The term is then originally an abstract word denoting a relation of hospitality, and it came to be applied, as a concrete name, for towns which had entered into this relation with Rome. Festus thus defines it: "municipium id genus hominum dicitur, qui cum Romam venissent, neque cives Romani essent, participes tamen omnium rerum ad munus fungendum una cum Romanis civibus praeterquam de suffragio ferendo aut magistratu cupiendo . . . alio modo cum id genus hominum definitur, quorum civitas universa in civitatem Romanam venit." These two classes have the common feature that their inhabitants are *cives Romani sine suffragio*: but the former constitute distinct communities ("ut semper rempublicam separatim a populo Romano haberent," Fest.); the latter have no municipal authorities of their own, but are governed from Rome. Capua is an instructive example of the distinction: for in B.C. 338 it was placed in the former class; in B.C. 211, after its revolt, it was reduced to the latter. Now, as these towns by degrees attained the complete Roman franchise, they ceased to constitute *civitates*, and came under the jurisdiction of the *praetor urbanus*. As he could not discharge his duties in person, he nominated deputies (*praefecti iure dicundo*) to administer Roman law in the various municipia. It has been usually held that this was not the case with all colonies and municipia, but only with a certain number of them, to which the name *praefecturae* was specially given. But Festus (p. 233) distinctly includes the three separate classes (municipia of both kinds and colonies) under the head of *praefecturae*; and this is supported by the fact that we find even under the empire municipia and colonies passing for a time and for special reasons into the category of *praefecturae*, i.e. governed by deputies sent from Rome, and not by their own elected magistrates. This induces Marquardt (*Handbuch*, iv. p. 43) and Mommsen to hold that all colonies and municipia were originally *praefecturae*. On the other hand, as of the twenty-two examples quoted by Festus, eighteen were *municipia sine suffragio*, and only four *coloniae civium Romanorum*, it is quite possible that Festus has included the last on the strength of some authority referring to their position before they were made colonies; *e.g.* Puteoli we know to have been governed by *duoviri* in B.C. 105. Hence Willems holds with Madvig that the *praefecturae* were always *municipia sine suffragio*. In any case, as soon as a community received the full franchise, it gained therewith the right of electing its own magistrates, and ceased to be a *praefectura*. But even after the Lex Julia of B.C. 90, which raised all communities in Italy to the rank of *municipia* or *coloniae civium Romanorum*, there were certain communities which, for reasons unknown to us, still were governed by *praefecti* sent from Rome. At some time in the first century B.C. the *praefecti* sent to Campania were changed into *ivviri iure dicundo*, elected

by the *comitia tributa;* but the others were still nominated by the praetor.

Of the earlier authorities we may mention Sigonius, *de Jure Antiquo*, &c.; Niebuhr, *Roman History;* Savigny, *Ueber das Jus Italicum, Zeitschr.* vol. v.; *Tabulae Heracleenses*, ed. Mazocchi, Neap. 1754; Savigny, *Der Römische Volksschluss der Tafel von Heraclea*, and Rudorff, *Ueber die Lex Manilia de Colonius, Zeitschr.* vol. ix.; Rudorff, *Das Ackergesetz von Sp. Thorius*, and Puchta, *Ueber den Inhalt der Lex Rubria de Gallia Cisalpina, Zeitschr.* vol. x.; Beaufort, *Rep. Rom.* v. pp. 278–308. But these are to a large extent rendered obsolete by the researches of Madvig, *Opuscula, De Jure et Condicione Coloniarum Populi Romani*, Hauniae, 1834; C. G. Zumpt, *Ueber den Unterschied der Benennungen, Municipium, Colonia, Praefectura*, Berlin, 1840; Mommsen, *Die Stadtrechte von Malaca und Salpensa*, Leipzig, 1855; *Geschichte d. Röm. Münzwesens*, Berlin, 1860; A. W. Zumpt, *Comment. Epigraphica*, vol. i.; E. Kuhn, *Die städtische u. bürgerl. Verf. des R. Reichs*, vol. i., Leipzig, 1864; Marquardt, *Handbuch*, vol. iv., Leipzig, 1873. The great collections of inscriptions are here of especial value. [G. L.] [A. S. W.]

COLO'RES. The Greeks and Romans had a very extensive acquaintance with colours as pigments. Book vii. of Vitruvius and several chapters of books xxxiii. xxxiv. and xxxv. of Pliny's Natural History contain much interesting matter upon their nature and composition; and these works, together with what is contained in book v. of Dioscorides, and some remarks in Theophrastus (*de Lapidibus*), constitute the chief part of our information upon the subject of ancient pigments. From these sources, through the experiments and observations of Sir Humphry Davy (*Phil. Trans. of the Royal Society*, 1815) on some remains of ancient colours and paintings in the Golden House of Nero (wrongly called the Baths of Titus), and in other ruins of antiquity, we are enabled to collect a tolerably satisfactory account of the colouring materials employed by the Greek and Roman painters. Recent discoveries at Tiryns and other very early Greek sites have brought to light examples of painting of extreme antiquity, in which nevertheless pigments of fine quality and considerable variety of tint are used.

Brilliant blues and greens occur made of "smalto" or powdered glass, and a large number of ochre earths supply various soft harmonious tints of red and yellow.

It should be observed that both Greek and Roman writers use colour-names in a very different way from that now employed; and thus most classical names for colours are now quite untranslatable. Homer's "wine-like sea" (οἶνοψ) and Horace's "purpureus olor" (*Carm.* iv. 1, 10) refer, not so much to what we call colour, as to the chromatic strength of the various surfaces, and their more or less strong powers of reflecting light, either in motion or when at rest.

Thus, too, we have no word like Virgil's "flavus," which can be applied both to a lady's hair and to the foliage of an olive. In a similar way a meaning unlike ours is attached to Greek technical terms in painting: by *τόνος* they meant, not tone, but the gradations of light and shade; and by ἁρμογή the relations

of colours. (See Pliny, *H. N.* xx
and Ruskin, *Mod. Painters*, part iv. c

The painting of the Greeks is ver
considered to have been inferior to t
ture: this partially arises from ver
information, and a very erroneous noti
ing the resources of the Greek
colouring. The error originated
with Pliny himself, who, it should
bered, was neither a scientific archae
a practical artist. He says (xxxv. §
tuor coloribus solis immortalia illa o

Sir H. Davy also analysed the col
so-called "Aldobrandini marriage" (
Vatican library), all the reds and
which he discovered to be ochres; th
greens, to be oxides of copper; the
carbonaceous; the browns, mixture
and black, and some containing oxi
ganese; the whites were all car
lime.

The reds discovered in an earthen vase containg a variety of colours, were red oxide of lead *minium*) and two iron ochres of different tints, —a dull red, and a purplish red nearly of the same int as prussiate of copper; they were all mixed vith chalk or carbonate of lime. The yellows vere pure ochres with carbonate of lime, and chre mixed with minium and carbonate of lime. 'he blues were oxides of copper with carbonate f lime. Sir H. Davy discovered a frit made by neans of soda and coloured with oxide of copper, pproaching ultramarine in tint, which he supposed to be the frit of Alexandria; its composiion, he says, was perfect—"that of embodying he colour in a composition resembling stone, so s to prevent the escape of elastic matter from t, or the decomposing action of the elements: his is a species of artificial lapis-lazuli, the colouring matter of which is naturally inherent n a hard siliceous stone." The process of naking this vitreous pigment or "smalto" is lescribed below.

Of greens there were many shades, all, however, either carbonate or oxide of copper, mixed vith carbonate of lime. The browns consisted f ochres calcined, and oxides of iron and of nanganese, and compounds of ochres and blacks. Sir H. Davy could not ascertain whether the ake which he discovered was of animal or of egetable origin; if of animal, he supposed that t was very probably the Tyrian or marine purple. He discovered also a colour which he upposed to be black wood, or hydrated binoxide f manganese; also a black colour composed of chalk, mixed with the ink of the *Sepia officinalis* r cuttle-fish.

The following list, compiled from the different sources of our information concerning the pigments known to the ancients, will serve to convey an idea of the great resources of the Greek and Roman painters in this department of their art; and which, in the opinion of Sir H. Davy, were fully equal to the resources of the great Italian painters in the sixteenth century:—

RED. The ancient reds were very numerous. **Κιννάβαρι**, *cinnabaris*, cinnabar; **μίλτος**, vermilion, bisulphuret of mercury, called also by Pliny and Vitruvius *minium*.

The **κιννάβαρι Ἰνδικόν**, *cinnabaris Indica*, mentioned by Pliny and Dioscorides, was what is usually called dragon's-blood, the resin obtained from various species of the calamus palm.

Μίλτος seems to have had various significations; it was used for *cinnabaris*, *minium*, red lead, and *rubrica*, red ochre. There were various kinds of *rubricae*,—the Cappadocian, the Egyptian, the Spanish, and the Lemnian; all were, however, red iron oxides, of which the best were the Lemnian, from the isle of Lemnos, and the Cappadocian, called by the Romans *rubrica Sinopica*, by the Greeks **Σινωπίς**, from Sinope in Paphlagonia, whence it was first brought. There was also an African rubrica called *cicerculum*.

Minium, red oxide of lead, red lead, was called by the Romans *cerussa usta*, and, according to Vitruvius, *sandaraca*; by the Greeks, **μίλτος**, and, according to Dioscorides (v. 122), **σανδαράκη**. Pliny tells us that it was discovered through the accidental calcination of some *cerussa* (white lead) by a fire in the Peiraeeus, and was first used as a pigment by Nicias of Athens, about 330 B.C.

The Roman sandaraca seems to have had various significations, and it is evidently used differently by the Greek and Roman writers. Pliny speaks of different shades of sandaraca, the pale or massicot (yellow oxide of lead), and a mixture of the pale with minium; it apparently also signified realgar or the red sulphuret of arsenic: there was also a compound colour of equal parts of sandaraca and rubrica calcined, called sandyx, **σάνδυξ**. Sir H. Davy supposed this colour to approach our crimson in tint; in painting it was frequently glazed with purple, to give it additional lustre.

Pliny speaks of a dark ochre from the isle of Syros, which he calls Syricum; but he says also that it was made by mixing sandyx with *rubrica Sinopica*.

The fine sealing-wax-like red on the Roman Samian pottery is formed of an oxide of iron, mixed with an alkaline silicate, so as to make a sort of red enamel.

The reds used by fresco-painters were mainly varieties of ochre-earths, coloured by different oxides of iron. Native iron, in the form of haematite, was largely used by painters on fresh stucco. The very brilliant vermilion, a sulphide of mercury, was used less frequently. It occurs on some of the pottery from Magna Graecia, of the fourth century B.C., and also in some of wax encaustic paintings of Pompeii.

One of the most beautiful pigments known to the ancients was made from the *kermes* of the Arabs, or *Coccus ilicis*, a small beetle resembling cochineal, which lives on the ilex oaks of Arcadia and various parts of Asia Minor. This insect, when infused in boiling water, gives a magnificent rich red dye, and was largely used in the fine Persian carpets of the fourteenth to the sixteenth centuries. It is more splendid in colour and more durable than cochineal.

Some stuffs, found in 1886 in tombs at Ekhmîn in Middle Egypt, have woven patterns in coloured wools on a white linen warp. In some of these, which date from the third century A.D., the fine *kermes* red is still as brilliant as ever.

Like the *murex*, and other colours of animal or vegetable origin, this *kermes*, though in the first instance specially a dyer's pigment, seems also to have been made available for the painter. This was done by using it as a stain for a white earth, thus forming a solid pigment of sufficient body to be used on stucco or panel.

YELLOW. Yellow ochre, hydrated peroxide of iron, the *sil* of the Romans, the **ὤχρα** of the Greeks, formed the base of many other yellows mixed with various colours and carbonate of lime. Ochre was procured from different parts; the Attic was considered the best; it was first used in painting, according to Pliny, by Polygnotus and Micon, at Athens, about 460 B.C., but in reality ochre pigments were used many centuries earlier.

Ἀρσενικόν, *auripigmentum*, orpiment (yellow sulphuret of arsenic), found especially in the silver mines of Syria, was also an important yellow; but it has not been discovered in any of the ancient paintings. The sandaraca has been already mentioned.

Saffron, and plants such as the *Reseda luteola*, were largely used to produce yellow dyes for textiles; and the same pigments were mixed with white earths for the use of painters.

GREEN. *Chrysocolla*, χρυσόκολλα, which appears to have been green carbonate of copper or malachite (green verditer), was the green most approved of by the ancients; its depth of tint depended upon the quantity of white carbonate of lime mixed with it.

Pliny mentions various kinds of verdigris (diacetate of copper), *aerugo*, ἰός, ἰὸς χαλκοῦ, *cypria aerugo*, and *aeruca*, and a particular preparation of verdigris called *scolecia*. Sir H. Davy supposes the ancients to have used also acetate of copper as a pigment. Besides the above were several green earths, all cupreous oxides: *Theodotion* (Θεοδότιον), so called from being found upon the estate of Theodotus, near Smyrna; *Appianum;* and the *creta viridis*, common green earth of Verona.

The finest green pigment was a variety of "smalto," simply a glass coloured with some salt of copper, and then minutely powdered. This very brilliant colour could resist the action of fresh lime, and so was available for the fresco-painter.

It should be noted that the word *chrysocolla* is used in classical writings with many different meanings. Its original meaning, and the one which gave its name, was borax, used as a flux for soldering by the ancient gold-workers.

Another meaning seems to be the glittering scales of mica, which are found in large quantities among the *débris* of disintegrated granitic rocks. This appears to be the meaning of the word when Pliny, *H. N.* xxxiii. 90, speaks of Nero strewing the arena of the Circus Maximus with *chrysocolla*.

Carbonate of copper, either natural or artificial, was largely used by the ancient dyers; as, for examples, in the Ekhmîn textiles mentioned above. To receive this dye the stuff had previously to be prepared by an alum "mordant," the use of which for this and other colours was understood by the dyers of Egypt at a very early period, as is recorded by Pliny.

BLUE, *caeruleum*, κύανος. The principal blue pigment used by the Greek and Roman painters in early times seems to have been a true "smalto" or enamel colour, made of powdered blue glass, which had been coloured by some salt of copper.

Examples of this exist in the tombs of ancient Egypt, and on the paintings of Tiryns; and lumps of the smalto pigment have been found at Ephesus and at Pompeii.

One method of preparing this colour is described by Vitruvius (vii. 11): copper filings and a proportion of alkali are to be mixed with finely ground sand (*silica*), and the frit thus composed mixed with water into a paste, formed into balls, dried, and then fused in an ordinary glass furnace. The blue vitreous mass thus produced was then broken up and finely ground.

A lump of this "smalto" from Pompeii, when analysed by Sir Humphry Davy, was found to consist of *carbonate of soda*, 15 parts; *silica*, 20; and *copper*, 3.

A natural blue carbonate of copper (*verditer*) was also much used. Various tints were produced by mixing it with different proportions of carbonate of lime or white earth. This was
imported from Scythia, Alexandria

other earthy whites were used by the
d the mural painter; as, for example,
psum, and common lime. These mineral

whites were also very largely used in combination with other colours to produce tints of different degrees of strength. In many cases the painter used a pure colour for his deepest shadows, and got gradation of half tones by mixing with the pure pigment various proportions of lime or chalk-white, the pure white being finally used to touch in the high lights. This method is common among the paintings of Rome and Pompeii.

A fine mixture of chalk or pipe-clay together with powdered *silica* was used by the Attic potters to produce the beautiful creamy white of the fourth-century polychromatic *lecythi*, probably the *atticum* of Pliny, xxxv. § 50. Some of the Athenian terra-cotta statuettes are coated with a similar mixture, to which some alkaline flux has been added, so that a vitreous, white enamelled surface was produced by the heat of the kiln. This remarkable fabrique, though a different composition was used, resembles in effect the white enamel of the Della Robbias of Florence in the fifteenth century.

Another frequent use of earth-whites, to form a vehicle or body for vegetable pigments, has been more than once mentioned above.

Pliny divides the colours into *colores floridi* and *colores austeri* (xxxv. § 30). The colores floridi were those which, in his time, were supplied by the employer to the painter, on account of their expense, and to secure their being genuine; they were minium, Armenium, cinnabaris, chrysocolla, Indicum, and purpurissum: the rest were the austeri.

Both Pliny (xxxv. § 30) and Vitruvius (vii. 7) divide the colours into natural and artificial. The natural are those obtained immediately from the earth, which, according to Pliny, are Sinopis, rubrica, paraetonium, melinum, Eretria, and auripigmentum: to these Vitruvius adds ochra, sandaraca, minium (*vermilion*), and chrysocolla, being of metallic origin. The others are called artificial, on account of requiring some particular preparation to render them fit for use.

For the modes of using colours and the various *media* employed, see PICTURA.

[R. N. W.] [J. H. M.]

COLOSSUS (*κολοσσός*). For the origin of this word, cf. Curtius, *Greek Etym*. i. 176. It rarely occurs in the Attic writers. (Blomf. *Gloss. ad* Aesch. *Agam*. 406.) It is used both by the Greeks and Romans to signify a statue larger than life (Hesych. *s. v.*; Aesch. *Agam*. 406; Schol. *ad* Juv. *Sat*. viii. 230), and thence a person of extraordinary stature and beauty is termed *colosseros* (Suet. *Calig*. 35); and the architectural ornaments in the upper members of lofty buildings, which require to be of large dimensions in consequence of their remoteness, are termed *colossicotera* (κολοσσικώτερα, Vitruv. iii. 3; compare *Id.* x. 4). Statues of this kind, simply colossal, but not enormously large, were too common amongst the Greeks to excite observation merely from their size, and are, therefore, rarely referred to as such; the word being more frequently applied to designate those figures of gigantic dimensions (*moles statuarum, turribus pares*, Plin. *H. N.* xxxiv. § 39) which were first executed in Egypt, and afterwards in Greece and Italy.

Among the colossal statues of Greece the most celebrated, according to Pliny, was the bronze colossus at Rhodes by Chares of Lindus, a pupil of Lysippus. (See *Dict. of Gr. and Rom. Biog.*, art. *Chares.*) In this one island there were more than 100 colossi. Pliny mentions another Greek colossus of Apollo, the work of Calamis (Strabo, vii. p. 319), which cost 500 talents, and was thirty cubits high, in the city of Apollonia, whence it was transferred to the Capitol by M. Lucullus; and also those of Jupiter and Hercules, at Tarentum, by Lysippus. (*Dict. of Gr. and Rom. Biog.*, art. *Lysippus.*) To the list of Pliny must be added the more important colossal statues of Pheidias, the most beautiful of which were his chryselephantine statues of Zeus, at Olympia (more than 40 feet high, seated), and of Athena, in the Parthenon at Athens; the largest (more than 70 feet high, including the base) was his bronze statue commonly called Athena Promachus, on the Acropolis.

Amongst the works of this description made expressly by or for the Romans, those most frequently alluded to are the following:—1. A statue of Jupiter upon the Capitol, made by order of Sp. Carvilius, from the armour of the Samnites, which was so large that it could be seen from the Alban mount (Plin. *l. c.*). 2. A bronze statue of Apollo at the Palatine library (Plin. *l. c.*), to which the bronze head now preserved in the Capitol probably belonged. 3. A bronze statue of Augustus, in the Forum, which bore his name. (Mart. *Ep.* viii. 44, 7.) 4. The colossus of Nero, which was executed by Zenodorus, and which is quoted by Pliny as a proof that the taste for bronze statues was lost, for this was adorned with gold and silver. Its height was 110 or 120 feet. (Plin. *l. c.*; Suet. *Nero*, 31.) It was originally placed in the vestibule of the Domus Aurea (Mart. *Spect.* ii. 1, *Ep.* i. 71, 7; Dio Cass. lxvi. 15), but was afterwards removed by Vespasian to the Via Sacra, and Hadrian again moved it to a position to the north of the Coliseum, where the basement upon which it stood is still to be seen; from it the contiguous amphitheatre is supposed to have gained the name of "Colosseum." Vespasian had converted it into a statue of the sun. (Hieronym. *in Hab.* c. 3; Suet. *Vesp.* 18; Plin. *l. c.*: compare Lamprid. *Commod.* 17; Dio Cass. lxxii. 15.) Twenty-four elephants were employed by Hadrian to remove it, when he was about to build the temple of Venus at Rome. (Spart. *Hadr.* 19.) 5. An equestrian statue of Domitian, of bronze gilt, which was placed in the centre of the Forum. (Sat. *Silv.* i. 1, 1; Mart. *Ep.* i. 70, 6.) [A. R.] [A. S. W.]

significance. Merely to confront
series of achievements in stone, be-
the main to the most finished and
es, with the rude wooden cabins that
d or still exist in some parts of
no longer considered a satisfactory
of the origin of Greek columnar
e. It is now admitted that a form
been brought through centuries of
t to such variety and perfection on
nd Euphrates was scarcely likely to
nvented again by such an eminently
race as the Greeks. Hence evidence
sional occurrence of wooden columns
ing on the general question: the pil-
in the market-place at Elis (Paus. vi.
he trunks of vines in the temple of
tapontum (Plin. *H. N.* xiv. § 9), may have been relics of an older mode of construction, but can prove nothing. The verandahed huts of Xanthos described by Fellowes (*Journal*, p. 234) undoubtedly throw light upon the Lycian rock-hewn tombs and temples, which clearly exhibit a wooden type. But this is a local style; moreover, these monuments being monolithic, the change of material does not require structural accommodation.

The theory of direct imitation of wooden structures had been pushed to its logical conclusion by Vitruvius, according to whom the triglyphs cover the ends of the beams supporting the cornice, and the mutules are the representatives of the ends of rafters; but the rather lame attempt of the Roman architect to explain the details of the Doric order only accentuates more strongly the material difficulties. A like failure has hitherto attended nearly all essays to find a meaning for the symbolic and decorative elements apparent or suggested in the several orders. The story of Callimachus (Vitr. iv. 1, 9) is chronologically inconsistent; the anthropomorphic speculation (iv. 1) requires the absence of the Doric flutings; and Vitruvius' fantastic explanations are only paralleled by some of the modern theories.

Recently, however, the materials and the methods for the elucidation of the history of the Greek orders have been enlarged and improved. Fragments of temples dating from before the Persian wars, the evidence of coins and vases, and a cautious comparison of Egyptian and Assyrian styles, are all helping to throw light on this difficult subject. Thus a glimpse, however slight, has been obtained of the importation into Hellas of the elements of two orders, the Doric and the Ionic. Through the Phoenicians and the races of Asia Minor, the resources and motives of Egyptian and Assyrian art were made familiar to the Greek mind. Perhaps even a precise moment may be seized for that imposing creation the Doric temple; and we may suppose, with M. Chipiez, that the idea was first inspired in those Greeks who, serving under Psammetichus, had beheld the wonderful temples on the Nile. This would not only account for the new departure, in the use of stone, but also for that most remarkable parallel to Egyptian art, the principle of polychromy.

For a full account of the positive results hitherto attained, and for a criticism of the older Vitruvian views, the student must be referred to the literature cited below. In M Chipiez's work, the historical side is most ably illustrated, and in H. Adamy's treatise aesthetic considerations receive ample appreciation.

Doric Columns. (Fergusson.)

I. GREEK.—Before proceeding to the detailed description of the several orders, a few words may be devoted to more general matters. The members of an order from below upwards are: the foundation (**κρηπίδωμα**) of one or more steps (*κρηπῖδες*); the column (**στῦλος**), consisting of shaft (*σῶμα*, *scapus*) and capital (**ἐπίκρανον, κιόκρανον**); and the entablature, consisting of architrave (*ἐπιστύλιον* [EPISTYLIUM]), frieze (**ζωοφόρος** [ZOPHORUS]), and cornice (**γεῖσον**, *corona*). For the gable-end or pediment (**ἀετός**), see FASTI-
GIUM; for the door-posts (**παραστ**

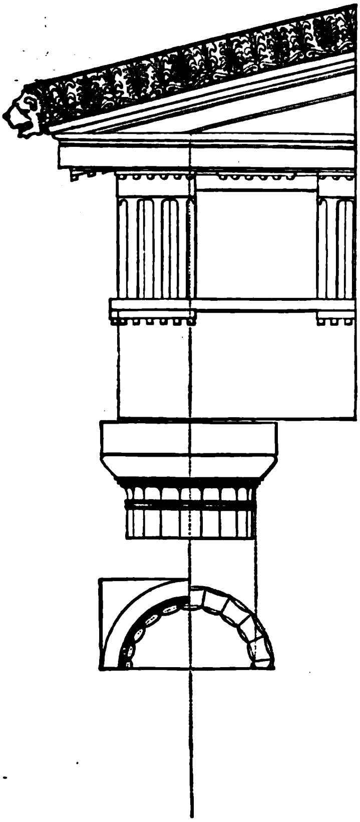
earliest examples of the order, the col
very short in proportion to their great
ness. Thus, in the temple at Corinth, t
of the columns is only $7\frac{2}{3}$ modules
meters), and in the great temple at
only $8\frac{1}{2}$; but greater lightness was a
given to the order, so that in the P

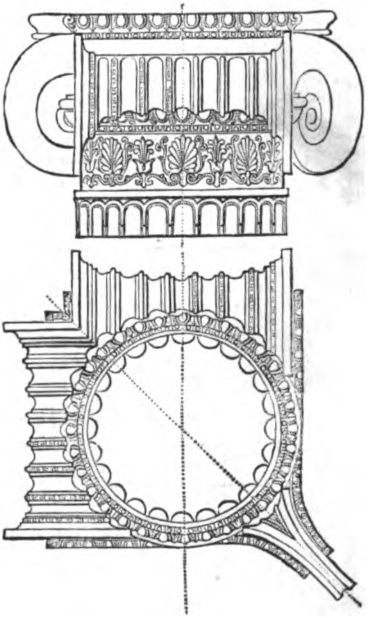
which represents the canonical proportion, the height of the columns is 11 modules. Originally the echinus moulding was full and impending (Corinth and Assos); its outline, usually parabolic or circular, became later almost flat (hyperbolic), as in the Propylaea and Parthenon. The architrave, impending the columns half as much as the abacus the shaft, is flat and plain, except at Assos, where it bears a bas-relief of bulls fighting. It is marked off by a narrow band (*taenia*) from the frieze. The latter is ornamented by equally-spaced surfaces (*τρίγλυφοι*), one over each column and each intercolumniation, with the exception of those at the extremities, whose axes do not coincide with those of the angular columns. The triglyphs are so called from the channels, two whole and two half, of triangular or curved section, which appear upon them, leaving three flat strips (*μηροί*). They are bound above and below by narrow bands: the upper of these is continuous, although here deeper, with the fascia of the frieze; from the under-surface of the lower band (*regula*) depend six cylindrical or conical drops (*guttae*). The square intervals of frieze (*μετόπαι*) are supposed to have been originally left open (Eurip. *Iph. Taur.* 113), and are so represented on vases. In extant examples they are occupied with flat plates often sculptured in high relief. The cornice consists of a flat larmier (*γεισιπόδισμα, corona*) and a group of mouldings (*κυμάτιον, ἀκρογείσιον*), comprising a square fillet and ogee. The corona is continuous and greatly projecting, with its lower surface sloped. Attached to a narrow sunk face, forming the soffit of the cornice, is a series of inclined plates (*mutuli*), one over each triglyph and metope; from their under-surfaces depend eighteen cylindrical guttae in three rows. The cymatium, so called from the form of its characteristic moulding (*κῦμα*), carries lion-heads. For the arrangement of the roof, see Fastigium; and for further details, Acroterium, Antefixa, Stelae.



Doric Order. Temple of Apollo Epicurius, Phigaleia. (Mauch, pl. 11.)

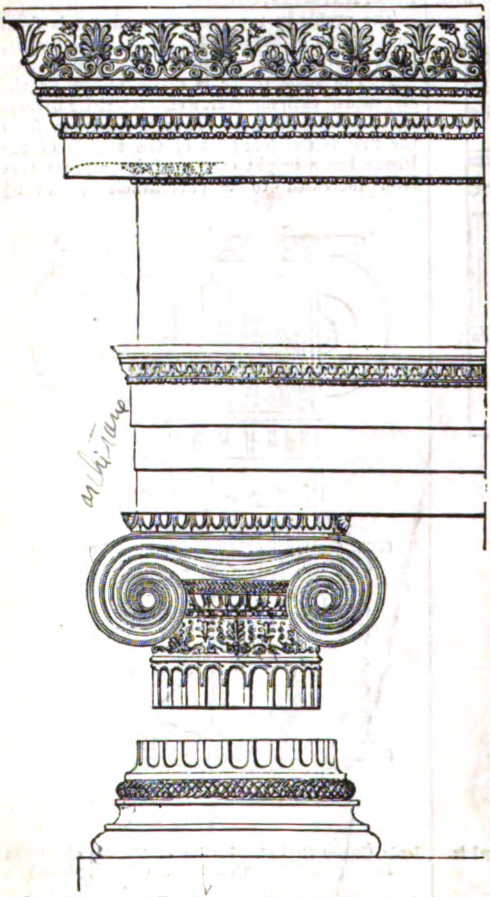
The profile in the preceding column is from the temple of Apollo Epicurius at Phigaleia, built by Ictinus, the architect of the Parthenon.

2. The *Ionic Order* is distinguished by the elegance of each member, a characteristic betraying Asiatic influence. Thus, the column from the first is slender: that of the temple of the Ilissus has a height of 8 modules, a proportion later increased to 9 (Erechtheium) and 9½ (Athena Polias, Priene). The shaft rests upon a circular base (*σπεῖρα*), towards which it gradually curves. [Spira; Atticurges.] Its surface is occupied with alternate flutes (24) and fillets. The capital consists of an astragal, an echinus with egg and tongue pattern, and, sometimes a *torus* intervening, the *canalis*, from which proceed the spirals of two lateral volutes (*ἕλικες*), whence the name for the whole *σπειροκέφαλον*. The upper and lower lines of the canalis may be either convex or horizontal. The volutes have a central disc (*oculus*), and are flat in front and behind, presenting a surface of double curvature at the sides, where they are



Ionic Corner Capital. Portico of Temple of Athena Polias (Erechtheium), Athens. (Mauch, pl. 34.)

bound together with astragals [Baltei] in the directrices. When the order had to be carried round a corner, the plane of the outer volute was sometimes given an inclination of 45° to the surfaces (see figure in preceding page). Below the astragal of the capital there is often a hypotrachelium, sometimes, as in the Erechtheium, adorned with palm-leaves (ἀνθέμιον), separated from the shaft by an astragal. Upon a narrow ornamental rectangular abacus rests the architrave of three faces, slightly overlapping. There is a small cornice between architrave and frieze; the latter sometimes exhibits bas-reliefs, and all three members are more or less ornamented with mouldings. Modillions (πρόμοχθοι) and dentils sometimes appear under the upper part of the cornice.



Ionic Column and Entablature. Portico of Temple of Athena Polias (Erechtheium), Athens. (Fergusson.)

The finest specimens of the order in its most simple form are those in the temple of the Ilissus, and that of Athena Polias at Priene. The engraving shows the portico of the temple of Athena Polias (Erechtheium) at Athens, which, while displaying a greater profusion of ornament, is equally pure in its outlines.

3. The *Corinthian Order* is more slender than the Ionic, but the chief difference is the
greater richness of the capita
basket (κάλαθος) spring two
leaves, surmounted by four vol

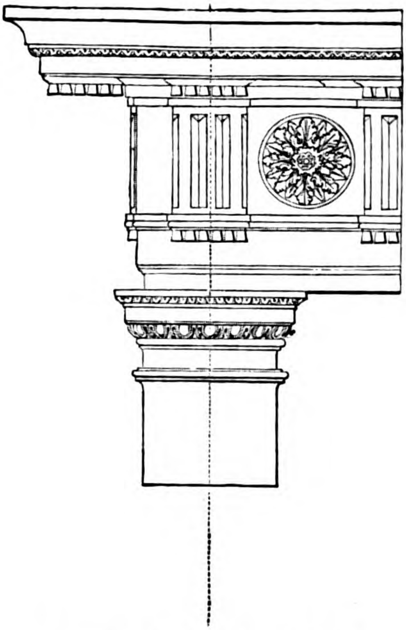
order is used in each tier, and the columns ted by an architrave have their axes on. (This arrangement is to be seen in mple of Poseidon at Paestum.)

frequently recurring want of symmetry dispositions of the Greek temple can here e noted. For details on this and other s, such as the inclination of columns and ntal surfaces, variations from canonical and surface colouring and the employ- f coloured tiles, reference must be made authorities below (see also ENTASIS).

he TUSCAN ORDER, although at one time evailing style at Rome, has left such meagre s, that we are obliged to fall back upon scription of Vitruvius (iv. 7). With this, er, the fragments of columns discovered and the bas-reliefs on Etruscan tombs do not quite agree. The order seems to have been an undeveloped or simplified Doric. (Dennis, *Cities and Cemeteries of Etruria;* Carlo Promis, *Le Antichità di Alba Fucense*, pl. iii.; Canina, *Etruria maritima*, pl. cx.; Abeken, *Mittelitalien.*)

III. ROMAN.—The *Roman* imitations of the Greek orders are chiefly notable for their inferiority in proportion and vulgarity in detail, and for their perverse misapprehension of the more characteristic features in the originals.

1. In the *Doric Order* the shaft is often smooth (Coliseum) and always slender, and it is in later work provided with a base. The proportions of the capital are disregarded, and the effect of the abacus is destroyed by a fillet. Mutules are sometimes absent from the cornice, and dentils appear instead. (The figure in the text represents the details of an example at Albano, near Rome.)

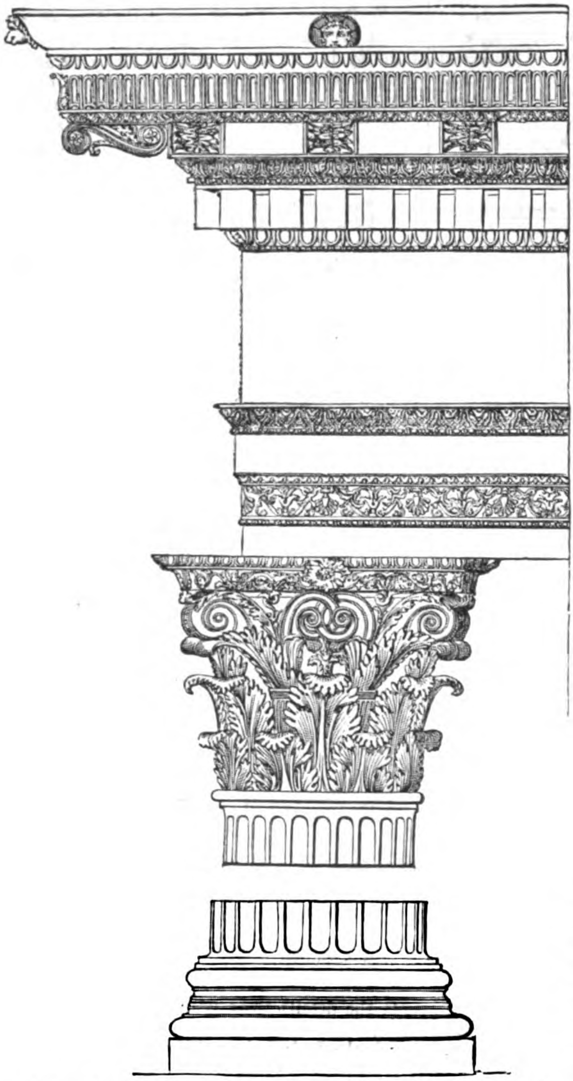


Roman Doric Order. Albano, near Rome. (Mauch, pl. 19.)

2. In the *Ionic Order*, a square plinth was added to the base, and frequently all the capitals were given corner volutes.

3. The *Corinthian Order.* "The fate of this order," says Fergusson, "was different from that of the other two. The Doric and Ionic orders had reached their acme of perfection in the hands of the Greek artists, and seem to have become incapable of further improvement. The Corinthian, on the contrary, was a recent conception; and although nothing can surpass the elegance and grace with which the Greeks adorned it, the new capital never acquired with them that fulness and strength requisite to render it an appropriate architectural ornament.

These were added to it by the Romans, or rather perhaps by Grecian artists acting under their direction, who thus, as shown in the cut below, produced an order which for richness, combined with proportion and architectural fitness, has hardly been surpassed."



Roman Corinthian Order. Temple of Jupiter Stator. (Fergusson.)

This order sometimes shows a plinth, and a base, composed of two tori, including two scotiae, separated by a double astragal.

4. The *Roman* or *Composite Order* is a mongrel of the Corinthian and Ionic; the general character being Corinthian, except that the upper part of the capital has Ionic volutes. Both capital and entablature are overloaded with ornaments. The cut on the next page is from the triumphal arch of Titus, which is considered the best example.

Structural incongruities, such as an order of columns standing free from the architrave, which is otherwise supported, and *complete* ordonnances (Doric, Ionic, and Corinthian), superimposed one on another, the upper members thus losing all significance, are of common occurrence. In the Coliseum, the three orders are further surmounted by a wall decorated with pilasters of the Composite order. (See the elevation, AMPHITHEATRUM, p. 109 *b*.)

It now remains to mention some other uses of the column or pillar, in addition to that in an architectural ordonnance. Long rows of columns were used to support aqueducts (Crates, *ap.* Athen. vi. 94); and single pillars were fixed in harbours for mooring ships (Hom. *Od.* xxii. 466). Various other structures in which the column appears are described under HOROLOGIUM and MILLIARIUM.

Single columns were erected from the earliest times to commemorate persons or events (Leon. Tarent. in Brunck, *Anal.* i. 239). Early Roman examples are those in honour of C. Maenius and P. Minucius, mentioned by Pliny (*H. N.* xxxiv. § 21); of a later date is the marble monolith to Julius Caesar, set up in the Forum after his death (Suet. *Jul.* 85). *Columnae rostratae* were employed by the Romans to record their naval victories (Verg. *Georg.* iii. 29; Serv. *ad loc.*), the most celebrated being that to C. Duilius, who gained a victory over the Carthaginians in B.C. 260, a copy of which is now in the museum of the Capitol. (See cut on the next page.)

More important, as well on account of their imposing size as of their value to the archaeologist, are the lofty and elaborate columns erected in imperial times. The finest of these monuments is that which was voted by the senate in honour of Trajan, and executed by Apollodorus in 104 A.D. The column itself is apparently of the Tuscan order, and is composed of huge drums of white marble, pierced within so as to form a spiral staircase, to which there is an entrance in the pedestal. A bas-relief of the chief episodes in the Dacian campaigns winds round the shaft. Including the bronze statue of the emperor, the total height was not less than 130 feet. (Piranesi, *Col. Traj.*; Fröhner, *La Col. Tr.* (photolithographic reprod. of castings); Percier, *La C. T. restaur. exécut. en* 1788; Chipiez, *Columna* in Daremberg and Saglio.)

COLUMNA'RIUM, a tax imposed in the time of Julius Caesar upon the pillars that supported a house. (Cic. *ad Att.* xiii. 6.) It was probably imposed by the lex sumtuaria of Julius Caesar, and was intended to check the passion for the building of palaces, which then prevailed at Rome. The *Ostiarium* was a similar tax. [Ostiarium.] The *columnarium* levied by Metellus Scipio in Syria, in B.C. 49–48, was a tax of a similar kind, but had nothing to do with the tax to which Cicero alludes in the passage quoted above. This columnarium was simply an illegal means of extorting money from the provincials. (Caes. *B. C.* iii. 32.) [W. S.]

COLUS, a distaff. [Fusus.]

COMA (**κόμη**). I. Greek.—The word **κομᾶν** in Greek signifies "to wear long hair," and the constant epithet of the Achaeans in Homer is **καρηκομόωντες**, *i.e.* with the hair all over the head being allowed to grow. They are thus distinguished from the Abantes (*Il.* ii. 542), who only allowed their back hair to grow long (**ὄπιθεν κομόωντες**), and the Thracians, who were called **ἀκρόκομοι** (*Il.* iv. 533), because they wound their hair into a knot on the top of their heads. The gods, too, are represented as having splendid hair: Zeus has "ambrosial locks;" Apollo is "unshorn" (**ἀκερσεκόμης**); and the goddesses and distinguished ladies have "beautiful plaits" (**καλλιπλόκαμοι, εὐπλόκαμοι**). By contrast, the vulgar Thersites is represented as almost bald (*Il.* ii. 219). The old scholiasts supposed, probably rightly, that **κέρᾳ ἀγλαὲ** in *Il.* xi. 385 referred to a horn-shaped lock of hair, and Helbig (*Das homerische Epos*, p. 166) gives a representation of what he considers this to be. As to the colour of the hair in early times, we hear of yellow hair (**ξανθαὶ τρίχες**) belonging to several of the characters in Homer: Menelaus (*Il.* iii. 284), Odysseus (*Od.* xiii. 399), Demeter (*Il.* v. 501), Agamede (*Il.* xi. 740); cf. Hes. *Theog.* 947. Unfortunately we have no certain illustration of the way the hair was dressed in Homeric times, and without illustrations we can seldom be very positive as to what descriptions exactly signify; though conversely a little later we must not lay too much stress on archaic statues, as the sculptors, having little command over the material, were forced to observe a greater homogeneity of treatment than was probably observed in the actual arrange
hair by the men of their day.

Turning, then, with this proviso,
statues, we find in them the hai
arrangements as stiff and symmet

Hermes.) Rich luxurious hair
ural folds, such as is seen in the
s (see annexed cut), was the ideal
reeks of this time conceived (O.
Müller, *Arch. der Kunst.* § 330, 4). Though the men of this age all wore shortened hair, yet they not unfrequently represented ever-youthful gods with long flowing hair fastened up like a woman's: a well-known example is the Apollo Sauroctonos.

Hermes. (Vatican.)

Zeus. (Vatican.)

Children still wore their hair long, the front hair being tied up in a knot (σκόλλυς) on the crown (O. Müller, *op. cit.* § 330, 1), or arranged in a long plait or plaits stretching from the forehead across the middle of the crown to the back of the head. (See Saglio, figs. 1809, 1810.) The former is supposed to be the σκορπίος alluded to by the Scholiast on Thucydides (i. 6) as the tuft peculiar to children. The hair cut off when the boy became an ephebus was called σκόλλυς by Athen. (xi. p. 494 f) and μαλλὸς by Hesychius. It was cut off on the third day of the Apaturia (κουρεῶτις ἡμέρα) [APATURIA], the ceremony being preceded by a libation to Hercules called οἰνιστήρια, and the hair being dedicated sometimes to Apollo (for Theseus went to Delphi or Delos to perform this ceremony, Plut. *Thes.* 5; cf. Ath. xiii. p. 605 a; Theophr. *Charact.* 21), but generally to some river-god (cf. *Il.* xxiii. 146, and Eustath. *ad loc.*; Aesch. *Choëph.* 6; Paus. i. 37, 2; vii. 17, 4; viii. 41, 3). Besides the ephebi, athletes wore their hair cut very short (Lucian, *Dial. Meretr.* 5, 3, and the statue of Palaestra in Philostr. *Imag.* p. 433), as did also certain Cynic and Stoic philosophers (Juv. ii. 15; Pers. iii. 54; and Jahn *ad loc.*). A ψιλὴ κεφαλὴ is also recommended to the Christians (Clem. Alex. *Paed.* iii. 11). But it must be carefully remembered that by full-grown Greek men of the Classical period, especially the Ionians, the hair was worn moderately long, and much attention seems to have been bestowed upon it, especially by dandies (Aristoph. *Eq.* 579; *Nub.* 14, &c.). Agathon (*ap.* Ath. xii. p. 528 d) says that long hair was a sign of luxury (κόμας . . . μάρτυρας τρυφῆς).

Different from this was the custom of the Lacedaemonians, among whom the boys wore their hair short (Plut. *Lycurg.* 16) and the men long, considering their hair "the cheapest of ornaments" (Plut. *Apophthegm. Lac.* 230, 15), and tradition marking it as one of the institutions of Lycurgus (Plut. *Lys.* 1: cf. Herod. vii. 208, 209; Plut. *Nic.* 19; Aristoph. *Av.* 1281; Aristot. *Rhet.* i. 9, 26, who considers the wearing of long hair a class-distinction of the Spartans), though doubtless it was an old Dorian custom (Becker-Göll, *Charikles*, iii. p. 288). There are, however, some assertions seemingly at variance with this opinion. Thus Alcibiades (Plut. *Alc.* 23; *de Adult.* 7) is said to have cut his hair close, in order to be like a Spartan; and again they are said to have worn short hair till they defeated the Argives in 550 B.C. at Thyrea (Herod. i. 82); but this latter is controverted by Plutarch (*Lys.* 1), and the former may be some mistake of Plutarch's from the fashions of his own day. The Euboeans wore their hair long at the back (ὀπισθοκόμαι, Poll. ii. 28), like the Abantes in Homer; and the Macedonians wore long hair and beard till after the battle of Arbela, when Alexander made them cut both short, so as not to allow themselves to be seized thereby in hand-to-hand conflict (Plut. *Thes.* 5).

Pollux (ii. 29) has preserved to us a number of terms signifying different kinds of tonsures, which we can fix with some degree of definiteness. Thus, the "garden" cut (**κῆπος**) was the hair cut short on the crown, but raised all round with a crisping iron (Schol. Eur. *Tro.* 1165); the reverse, the "bowl" cut (**σκάφιον**), was the hair cut short all round the head (hence called **περιτρόχαλα**), with a centre tuft probably left intact (Schol. Ar. *Av.* 806; Hesych. *ad* Phot. *s. v.*; cf. Herod. iii. 8). The latter attached only to slaves and the lower orders (Schol. Ar. *Av.* 856), and it is to be remembered that a mark of class-distinction between slave and free was established by their hair (**τὴν ἀνδραποδώδη τρίχα**, Plat. *Alcib.* 120 B). The Ἑκτόρειος was apparently the hair in front, above the forehead, puffed out, and the back hair flowing about the neck (Poll. ii. 30); and the **Θησηΐς**, the hair cut close in the front (Plut. *Thes.* 5); while what we should call a fringe appears to have been called **προκόττα**, and was said to be a peculiarity of the Dorians (Poll. ii. 29). **Μαλλός**, a lock of wool, was used for short round fleecy hair, resembling wool (μαλλοὶ πλοκάμων, Eur. *Bacch.* 113), such as is seen in some of the early Greek sculptures, particularly in the heads of Hercules.

Hercules. (British Museum.)

As to the way Greek women wore their hair, we frequently find in vase-paintings the front hair crisped in a kind of fringe, and the rest fastened back by a band in one long cue, itself tied at the extremity, often in a lump of some size. There nearly always appears to have been some band behind. Sometimes long ringlets hang down the neck underneath the band, as in the statue of Peace at Munich; sometimes the hair is all drawn back in a mass at the back of the neck, as in the Venus of Milo and the Venus de Medici. A not uncommon arrangement for young girls was to have the hair drawn up and fastened in a large bunch on the top of the head; an example is the Victory given by Stackelberg (*Gräber der Hellenen*, plate 60; cf. pl. 29 and 15). It would be endless to describe all the different forms in which women wore their hair which appear on statues. Saglio (i. p. 1361), Blümner (in Baumeister's *Denkmä*
and Guhl and Koner (fig. 222, p.

ve been made of silk (Salmas. *ad* 92), byssus (Paus. vii. 24, 7), and wool (Poll. vii. 66). Yet κεκρύφαλος was strictly applied to a net, like that in No. 1 of the accompanying cut. The σάκκοι were pouches of thicker stuff, not of net-work, which covered either the whole or part of the head, and were usually coloured (examples in Nos. 2 and 3). Bladders (πομφόλυγες, Aristoph. *Thesm.* Fr. 320, ed. Kock) appear to have been used for this purpose (Moeris, *Att.* 222; cf. Martial, vii. 33, 19). The μίτραι were originally bands which gradually became broader and broader (see No. 4), till they developed into a kind of cap with lappets hanging down over the ears and cheeks, not dissimilar to the κρήδεμνα. They were of bright colours, a non-Grecian article of apparel, and were especially (at least in later times) worn by prostitutes (Serv. *ad Aen.* iv. 216; Mayor on Juv. iii. 66).

It has been customary among most peoples to cut off some of the hair as a sign of mourning for the dead. For Grecian examples, see Hom. *Od.* iv. 198; *Il.* xxiii. 135; Eur. *Hel.* 1087; *Iph. Aul.* 1438; Lysias, *Epitaph.* § 60; Athen. xv. p. 675 a. According to Plutarch, indeed (*Quaest. Rom.* 14 = ii. 267, ed. Reiske), it was a custom among the Greeks for the women to shave off their hair in sign of mourning, while the men let the hair grow, each sex reversing its usual practice (cf. Artemid. *Oneir.* i. 19, who says that the men whose custom it was to wear long hair were philosophers, prophets, priests, kings, rulers, and actors); but these statements no doubt refer solely to Imperial times (Hermann-Blümner, *Privatalt.* p. 370, note 1). In an interesting section of his *Ceremonial Institutions* (§ 361) Mr. Herbert Spencer, with great wealth of illustration from tribes and nations in all parts of the world, shows how cutting off the hair, like most other mutilations, is a sequence of trophy-taking, and, whether used as a class-distinction or in religious ceremonial (especially in ceremonies to the dead), it betokened the subjection of the shorn man either to his fellow-man or to the gods. We still observe the practice of cutting the hair in order to mark our convicts.

II. ROMAN.—1. *Men's hair.* The Romans in early days used to wear long hair (Liv. v. 41, 9; Cic. *Cael.* 14, 33), and they often speak of their *incompti avi* (Ov. *Fast.* ii. 30): cf. also Hor. *Od.* ii. 15, 11; Juv. v. 30, and Mayor on Juv. xvi. 31. The coin representing Quirinus, struck under Augustus, represented him as having long ringlets hanging down his back (cf. Verg. *Aen.* vi. 810). In 300 B.C. we are told that Titinius Mena introduced barbers into Rome from Sicily (Varro, *R. R.* ii. 11, 10; Plin. *H. N.* vii. § 211). Whether this was the case or not may be disputed; certain it is that we have the story of Attus Navius pointing to the knowledge of the razor in most remote times: perhaps it was the scissors (*forfex*), which was introduced about 300 (Marquardt, *Privatleben*, 581). At any rate, it was from about that time that it became the custom to wear the hair cut short, and it was only in times of misfortune (*e.g.* when M. Livius was disgraced: Liv. xxvii. 34, 5), or from exceptional circumstances, as in foreign countries in order to appear more imposing to the inhabitants (*e.g.* Scipio in Africa, Liv. xxviii. 35, 6), that a Roman allowed his hair to grow. The men wore their hair cut quite short, and let it lie without making any division, either quite flat or curled (*crispus*) or waving (*capillo leniter inflexo*), according as nature willed it, using no artificial dressing whatsoever further than combing it on feast days (cf. Hor. *Od.* i. 15, 14). On statues we generally find the hair brushed forward on the head, so that the forehead was narrowed, a narrow forehead being considered by the Romans, as by the Greeks, a mark of beauty (Hor. *Epist.* i. 7, 26; *Carm.* i. 33, 5; Mart. iv. 42, 9). This is seen in the fine coin of Antonius annexed.

Coin of Antony.

The hair hanging over the forehead like a fringe was called *capronae* (Lucil. *ap.* Non. p. 22; Apul. *Flor.* iii. p. 342; Fest. p. 48, M.), while the locks which hung on each side down the temples were called *antiae* (Apul. *l. c.*; Fest. p. 17, M.). Both the *capronae* and *antiae* are seen in the annexed figure of Cupid from the British Museum.

Cupid. (Brit. Museum.)

To be sure, dandies paid elaborate attention to their hair, wearing artificially arranged curls and fringes crisped with the curling-tongs and soaked with unguents, but are spoken of with contempt for so doing (Cic. *Cat.* ii. 10, 22; *Sest.* 8, 18; *Rosc. Am.* 46, 135; *Pis.* 11, 25). The ordinary simple way of wearing the hair continued under the early empire, the statues of Augustus and his immediate family exhibiting it (Visconti, plates 18 ff.). Nero indeed (*ib.* pl. 30, 3) and Otho (31, 6) appear to have arranged their hair in tiers of curls (*comam in gradus formatam*, Suet. *Nero*, 51); but they were notorious fops, and fops always spent much time and trouble on the arranging of their hair, "preferring disorder in the state than in their curls" (Senec. *de brev. Vitae*, 12, 3, a vigorous declamation on the extravagance in this direction).

Bust of M. Vipsanius Agrippa.

We find true Romans, like Trajan (Visconti, pl. 36, 4 and 5), wearing their hair combed quite plainly, forward from the crown towards the forehead. Some of the Antonines, especially
Verus, appear with high
hair, as indeed do several statues of M. Aurelius (*ib.* pl. 41) and his son Commodus; but in the reign of M. Aurelius it became the custom to wear the hair cut quite short (ἐν χρῷ), like the austere philosophers; and as we see from coins and statues, *e.g.* Alex. Severus (*ib.* pl. 52, 1 and 2) and Trebonianus Gallus (pl. 57, 1 and 2), this practice continued, except in the case of Elagabalus and Gallienus (pl.

Plaut. *Mil.* iii. 1, 196; Prop. v. 11, 33;
The matrons also in ancient times wore a high mass of hair on the crown, which was called *tutulus*, and Varro (*L. L.* vii. 44) likens it to a boundary stone (*meta*); but it ceased to be worn in comparatively early times, though we do not know when (for *ornatrix a tutulis* in Wilmann's *Ex. Inscr.* 203 has been proved by Henzen to be not genuine), and the *vittae* came to be the special mark of the matron (Ov. *A. A.* i. 31; *Pont.* iii. 3, 51), the *tutulus* being retained only by the Flaminica (Festus, s. v. *tutulus*).

In the early empire Ovid (*A. A.* iii. 149) says that there were as many ways of ladies dressing their hair as there were bees in Hybla. But though they varied, as in our own days, according to what was considered becoming by the individual (and Ovid gives numerous precepts on that point), yet there were no very elaborately constructed arrangements. We find the hair divided in the middle by a plait stretching from the forehead across the crown to the back of the neck; sometimes instead of the plait a tuft of hair on the front of the forehead (the *tenuis frons* being in all cases aimed at), but the hair was let wave in natural folds along the temples and head. For different varieties see Livia (in Visconti, pl. 19, 1); Agrippina (pl. 24*, 1 and 2). However, as time went on, the way in which the hair was arranged became more and more artificial, with curls and ringlets in front and plaits behind, till the most wonderful structures came to be erected towards the latter end of the first century and the beginning of the second. (See cuts opposite.) The next cut, representing Julia, daughter of Titus, gives an example of them, as well as the annexed coin of Marciana, the sister of Trajan, and also the cut above (No. 3) representing Sabina, wife of Hadrian. These drawings show what Juvenal and Martial allude to in several passages (Mart. ii. 66; Juv. vi. 492, 502; Stat. *Silv.* i. 2, 114). We can understand how severe the duty must have been on the unhappy tire-women. The whole diadem-like arrangement appears to have been called *orbis*, and the single ringlet *annulus*. The hair, too, was frequently adorned with jewels (Plin. *H. N.* ix. § 117; cf. Clem. Alex. *Paed.* ii. 2 and 11). St. Paul (1 Tim. ii. 9) and St. Peter (1 Pet. iii. 3) felt bound to warn Christian women against such "braiding of the hair." During the whole of the second century there continued the most artificial arrangements of ladies' hair, but we find crisped curls in front giving way to plaits; but these latter were no less employed to build up tower-like structures on the front part of the head. Such structures, however, which must have been excessively uncomfortable, gradually (see the bust of Faustina in Saglio, fig. 1864) went out of fashion (see Lucilla in Visconti, pl. 43); and in

Julia, daughter of Titus

Coin of Marciana.

the third century waving hair (*e.g.* Crispina, pl. 45; Julia Domna, pl. 48; Plautilla, pl. 49, No. 4 above) appears to have been sought after, —though very likely the high arrangements of the preceding century continued to be worn, especially in the provinces (Tert. *de Cult. Fem.* ii. 7; and later St. Jerome, *de Virg. serv. Ep.* 8) —till we arrive at such elegant simplicity as may be seen in the bust of Soaemis (pl. 51) or Mammaea (pl. 52, 5), though the hair of the latter appears to have been fastened behind with a mass of what looks like false plaits. From the time of Alexander Severus onward the arrangement adopted was to draw the back hair up and fasten it on the crown. This was sometimes done simply, as in the accompanying cut of Helena, or it was drawn up over a chignon; sometimes it was plaited, and then fastened up, either simply as in the coin of Herennia (Saglio, fig. 1869) or wound round in circles rising one above the other on the top of the head (*ib.*, fig. 1873)—like a tower, says Prudentius (*Psych.* 183). The figure of Galla Placidia in the diptych of Monza (*ib.*, fig. 1874) shows two massive plaits of hair on the top of the head, one slightly higher and behind the other. It is noticeable that statues of the third and later centuries have often movable hair, so that it could be altered to suit the taste of each period; see Visconti, vol. iii. 181, 192.

Coin of Helena.
(British Museum.)

Women, of course, as well as men dyed their hair both black (Plin. *H. N.* xxvi. § 164) and especially auburn, often to cover grey hairs (Ov. *A. A.* iii. 163). The practice is as old as Cato's time (cf. Serv. *ad Aen.* iv. 698: "in Catone legitur de matronarum crinibus: flavo cinere unctitabant ut rutilae essent"). In later times it was effected by a kind of pomade called *spuma Batava* or *caustica* (Mart. viii. 33, 20; xiv. 26). It is noticed by Marquardt (*Privatl.* p. 764) that Galen (xv. 185, ed. Kuhn) declares that ξανθός, yellow or golden hair, is sometimes incorrectly used for πυρρός, red.

False hair was used by ladies in the time of the early empire (Ov. *A. A.* iii. 165), and later (Mart. v. 68, xii. 23); also wigs, generally yellow (*galeri*, Juv. vi. 120; *corymbia*, Petr. 110; *capillamenta*, Tert. *de Cult. Fem.* ii. 7), and chignons (*caliendra*, Hor. *Sat.* i. 8, 48). We find the hair for these was imported, especially from Germany (Mart. v. 68), and even from India (*capilli Indici*, Dig. 39, 4, 16, 7).

The hair was fastened up with hair-pins (*acus crinales*, Apul. *Met.* viii. 13; *acus comatoria*, Petron. 21) [Acus], and combs (*pectines*), which we find made of boxwood (Juv. xiv. 194), ivory (Claud. *de Nupt. Honor. et Mar.* 102), and tortoiseshell (Ov. *A. A.* iii. 147). The hair was also at times fastened with bands (*diademata*) of gold set with jewels (Isid. *Orig.* xix. 31; cf. Ov. *Am.* iii. 13, 25; Lampr. *Hel.* 23), like the Greek στεφάνη. As to nets, the women used to wear *reticula* (Nonius, p. 542), sometimes made of gold threads (Juv. ii. 96; Petr. 67). The *mitra* (Juv. iii. 66) has been explained above; while the *calautica* or *calantica* or *calvatica* (Cic. *in Clod. et Cur.* ed. Orelli, v. 2, p. 336) was a cap with lappets covering the ears
and with two strings for tying und

SA'TIO (derived from κῶμος, ac- Varr. *de Ling. Lat.* vii. 89, but ly from κωμάζειν, *comissari:* Roby, 189, ii. 3), the name of a drinking en- t, which took place after the CENA, , however, it must be distinguished. etrius says to his guests, after they n his own house, "Quin comissatum imus?" (Liv. xl. 7, 5); and when comes to Trimalchio's house after cena elsewhere, it is said that "Co- ntravit" (Petron. 65). It appears en the custom to partake of some e comissatio (Suet. *Vitell.* 13), but y as a kind of relish to the wine.

issatio was frequently prolonged to a at night (Suet. *Tit.* 7); whence the *sari* means "to revel" (Hor. *Carm.* and the substantive *comissator* a ' or "debauchee." Hence Cicero 16) calls the supporters of Catiline's *comissatores conjurationis.* (Becker- s, i. p. 203.) [W. S.] [A. S. W.]

IA, assemblies of the people at Rome, rpose of transacting business. They distinguished, on the one hand, from (=*conventio*), which was a meeting to listen to an address from a magis- incapable of passing any resolution, he *concilium*, the general term for a hence applied to meetings of sections le, especially the *concilium plebis*, or s in foreign nations, either of the le or of delegates. According to the onception in the time of the kings, ltimately rested with the assembly of s; it was only so far as it delegated he king and vowed obedience to him upreme authority of the people was nd according to the spirit of the n, every innovation in practice or he existing law required the assent of . Every proposal (*rogatio*) had to re the people by the king himself: no owed to discuss it, but those to whom ermission; and the people then gave their assent. The assembly was (*comitia calata*) regularly twice in n March 24th and May 24th, and as es as seemed good to the king. They curies [CURIAE], and apparently the be given to the king was decided by the majority of the curies.

t step towards the reform of this constitution was that which is asso- the name of Servius Tullius. The ircumstances of this change are veiled kness which covers the whole legen- y of the kings. But it is clear from implied that it was brought about the community had outgrown its its, and when its territory included at which had belonged to the neigh- ate of Alba. The primary purpose of e was to incorporate all owners of Roman territory in the ranks of the hat military service should not fall, as solely upon the citizens. Hence all f the state were classed according to rty which they possessed, and this on was made the basis of the military on of the state. But by degrees the assembly of the citizens so classified, representing, as it did, the fighting force of the state, acquired important powers, and in fact came to be regarded for many purposes as *the* representative assembly of the citizens. It has been conjectured with much probability, but it can hardly be said to be demonstrated (Mommsen, *Hist.* i. 264), that this important change was brought about at the time of the expulsion of the kings.

The plebeians were now admitted to a share in the popular assembly, but with such restrictions that the power lay entirely in the hands of the wealthier citizens (see below). The financial distress of the poorer classes necessitated further reforms: and in B.C. 495 tribunes of the commons were first created.

It was probably at this time that the division of the Roman territory into four tribes (introduced by the Servian constitution) was replaced by the creation of twenty tribes—four belonging to the city, sixteen to the country districts; but the assembly over which the tribunes presided still met in curies, in which the voting was by heads—a circumstance which gave great power to the wealthier families, inasmuch as all their clients had a right of voting. By the Publilian law of B.C. 471 a most important change was introduced. One more tribe, the Crustuminian—deriving its name from the place where first the *plebs* by secession won the right to an independent organisation—was added, in order to preclude the possibility of an equality of votes; and henceforward the assemblies of the commons were held, not by curies, but by tribes. But the basis of the tribes was the possession of land, whether in small or large amount; none voted but freeholders, and thus the clients were excluded, and the assembly of the tribes became an assembly of the independent middle classes, where there was a property qualification, but where the large landholder had no more weight in voting than his poorer neighbour. (Cf. Mommsen, *Hist.* i. 282 = *Röm. Gesch.*^{6} i. 278.)

We thus find in existence within the first half century of the Roman republic three distinct assemblies of the people, which now call for separate consideration in greater detail.

I. COMITIA CURIATA (ἐκκλησία φρατρική or φρατριακή). Under the kings, as we have seen, this was the only assembly of the people. It was always presided over by the king in person: the statement in Dionysius (iv. 71), apparently confirmed by Livy (i. 59), that the *tribunus celerum* had this right in the absence of the king, rests upon a complete misapprehension of the nature of this office. Under the republic the presiding magistrate was always a consul, praetor, or dictator (Liv. ix. 38; Cic. *de Leg. Agr.* 2, 11, 27). The citizens were summoned by a lictor (Gell. xv. 27; Dionys. ii. 7). The votes were given by curies, each citizen having one vote, and the majority of individual votes determining the vote of the curia (Gell. *l. c.*; Liv. i. 43; Dionys. ii. 14, iv. 20, 84, v. 6). We have no means of knowing what was done in the case of an equality of votes, a result not impossible with an even number of curies. The votes of the curies were all taken at the same time; but it was decided by lot in what order the votes should be announced: that first reported was called the *principium* (Liv. ix. 38). The meetings of the curies were always held in the comitium.

The functions of the comitia were limited, as has been already noticed, to giving or refusing assent to any proposal laid before them by the presiding magistrate. In theory the power of the king was as unlimited over all citizens as that of the father over all members of his family. But in practice he was bound to keep within the limits prescribed by custom, and every change in the law had to receive the previous sanction of the assembled citizens. The most important duty of the citizens was to vow allegiance to the head of the state. Normally it was the privilege of a king to nominate the successor, who was to make the solemn contract in his turn with the people. But in the case of a king dying without having done so, the supreme power (*imperium*) and right of invoking the divine protection (*auspicia*) of the state reverted to the general body of the citizens. They assembled unsummoned and named an *interrex*, a temporary holder of these rights, who could lawfully convene them, for the election of a second interrex. It was the duty of the latter then to nominate a king, who might challenge the allegiance of the citizens. Doubtless he would take means, by consulting the senate or even the assembled curies, to ascertain who would be generally acceptable; but legally nothing was necessary but a nomination by the actual holder of the supreme power. When the citizens had assented on their part to the formal compact (*lex curiata de imperio*) which bound them to allegiance to the king thus nominated, he was formally installed as the absolute head of the state. Livy's account (i. 17) of the election of Numa is misleading, as suggesting that as a main feature which was but a subordinate and unessential portion of the election, viz. the nomination by the senate. When once the reins of government had been transferred to the new king, the assembly of the people had nothing further to do with the administration. An appeal to this body from the judgment of the king was allowed as a matter of grace, but not of right. It was the custom to consult the assembly in the case of aggressive war, and in the extension of the franchise to those who were not citizens; for both of these involved a change in the circumstances of the original contract. (Liv. i. 32; Gell. xvi. 4; Dionys. viii. 91, ix. 69.) Hence a *lex curiata* was necessary for all acts of adoption (Gell. v. 19; Tac. *Hist.* i. 15), and for admission into the curies, whether of foreigners or of plebeians. Similarly the sanction of the people was required for all transfers of property, which were to take place after the death of the owner; that is, for all wills.

After the recognition of the *comitia centuriata* as the representative assembly of the people, whether this took place immediately upon their institution, as is commonly supposed, or in connexion with the expulsion of the kings, as seems more probable, the power of passing laws, of electing magistrates, and of declaring war was transferred to them. But the comitia of the curies continued to meet for various purposes, mainly formal.

In the first place, the compact by which the citizens bound themselves to obey the commands

of an elected magistrate was
the form of a *lex curiata*
this was passed, no magistrat
his office, or be regarded as
its privileges (*magistratus op*
jure). In the latter days o

the *tributum*, or war tax, he had to pay, as well as the kind of service he had to perform in the army and the armour in which he had to serve. But for the purpose of voting in the comitia, each class was subdivided into a number of centuries (*centuriae:* probably because each was conceived to contain 100 men, though the centuries may have greatly differed in the number of men they contained), one-half of which consisted of the *seniores*, and the other of the *juniores*. Each century, further, was counted as one vote, so that a class had as many votes as it contained centuries. In like manner, the equites were divided into a number of centuries or votes. The two principal authorities on these subdivisions are Livy (i. 43) and Dionysius (iv. 16–21, vii. 59), and the annexed table will show the census as well as the number of centuries or votes assigned to each class, and the order in which they voted.

According to Livy.	*According to Dionysius.*
I. Classis. Census: 100,000 asses. 40 centuriae seniorum. 40 centuriae juniorum. 2 centuriae fabrum.	I. Classis. Census: 100 minae (= 100,000 asses). 40 centuriae seniorum. 40 centuriae juniorum.
II. Classis. Census: 75,000 asses. 10 centuriae seniorum. 10 centuriae juniorum.	II. Classis. Census: 75 minae. 10 centuriae seniorum. 10 centuriae juniorum. 2 centuriae fabrum (one voting with the seniores and the other with the juniores).
III. Classis. Census: 50,000 asses. 10 centuriae seniorum. 10 centuriae juniorum.	III. Classis. Census: 50 minae. 10 centuriae seniorum. 10 centuriae juniorum.
IV. Classis. Census: 25,000 asses. 10 centuriae seniorum. 10 centuriae juniorum.	IV. Classis. Census: 25 minae. 10 centuriae seniorum. 10 centuriae juniorum. 2 centuriae cornicinum and tubicinum (one voting with the seniores, and the other with the juniores).
V. Classis. Census: 11,000 asses. 15 centuriae seniorum. 15 centuriae juniorum. 3 centuriae accensorum, cornicinum, tubicinum. 1 centuria capite censorum.	V. Classis. Census: 12½ minae. 15 centuriae seniorum. 15 centuriae juniorum.
	VI. Classis. Census: below 12½ minae. 1 centuria capite censorum.

According to both Dionysius and Livy, the equites voted in eighteen centuries before the seniores of the first class; and hence there were, according to Livy, altogether 194, and, according to Dionysius, 193 centuries or votes. Livy's even number of 194 centuries would have rendered it impossible to obtain an absolute majority in the comitia; and it has been assumed, that he made a mistake in the three centuriae accensorum, cornicinum, tubicinum, which he adds to the fifth class. The account given by Cicero (*de Rep.* ii. 22, 39) agrees with that of Dionysius, except that he assigns seventy centuries to the first class. According to him, the centuries of the knights (18) and of the first class (70), with one of *fabri tignarii*, if eight of the other centuries voted with them, made up a clear majority (97) of the whole. Cf. Madvig, *Verf.* i. p. 114 (note). The other discrepancies between Livy and Dionysius are not of great importance. They consist in the places assigned to the two centuriae fabrum, the two of the cornicines and tubicines, and in the census of the fifth class. With regard to the last point, Dionysius is at any rate more consistent in his gradation, and in so far deserves to be preferred to Livy.

In this manner all Roman citizens, whether patricians or plebeians, who had property to a certain amount, were privileged to take part and vote in the centuriata comitia, and none were excluded except slaves, peregrini, women and the aerarii. The juniores were all men from the age of seventeen to that of forty-six; and the seniores, all men from the age of forty-six upwards. The order of voting was arranged in such a manner, that if the eighteen centuries of the equites and the eighty centuries of the first class were agreed upon a measure, the question was decided at once, there being no need for calling upon the other classes to vote. Hence, although all Roman citizens appeared in these comitia on a footing of equality, yet by far the greater power was thrown into the hands of the wealthy.

All the business which had before belonged to the comitia curiata, in the early days of the republic had been transferred to the comitia centuriata; that is, they had the right of electing the higher magistrates, of making laws and of deciding upon war, and afterwards also of concluding peace with foreign nations. (Cic. *de Leg.* iii. 3, 10; *de Div.* ii. 35, 74).

(a.) *The election of magistrates.* After the presiding magistrate had consulted with the senate about the candidates who had offered themselves, he put them to the vote. The magistrates that were elected by the centuries are the consuls (whence the assembly is called *comitia consularia*, Liv. i. 60, x. 11), the praetors (hence *comitia praetoria*, Liv. vii. 1, x. 22), the military tribunes with consular power (Liv. v. 52), the censors (Liv. vii. 22, xl. 45), and the decemvirs (Liv. iii. 33, 35). There are also instances of proconsuls being elected by the centuries, but this happened only in extraordinary cases (Liv. xxxiii. 30; xxxiv. 13).

(b.) *Legislation.* The legislative power of the centuries at first consisted in their passing or rejecting a measure which was brought before them by the presiding magistrate in the form of a senatus consultum, so that the assembly had no right of originating any legislative measure, but voted only upon such as were brought before them as resolutions of the senate. (Dionys. v. 27; viii. 22, 43; x. 26. This is not explicitly stated by any Latin writer.) When a proposal was passed by the centuries, it became law (*lex*). The first law passed by the centuries of which we have any record was the Lex Valeria de provocatione (Cic. *de Rep.* ii. 31, 53), and the laws of the Twelve Tables were sanctioned by the centuries (Liv. iii. 34).

(c.) *The decision upon war*, on ground of a senatus consultum, likewise belonged to the centuries, and is often mentioned. This was from the constitutional point of view an act of legislation (Liv. iv. 30). Peace, however, was concluded by a mere senatus consultum, and without any co-operation of the people, in the early part of the republic, and perhaps down to the peace of Caudium. (Cf. Rubino, *Ueber Röm. Staatsverf.* pp. 259–289.)

(d.) *The highest judicial power.* The comitia centuriata were in the first place the highest court of appeal (Dio Cass. xxxix. 27, &c.; comp. APPELLATIO), and, in the second, they had to try all offences committed against the state: hence all cases of *perduellio* and *majestas*, and no case involving the life of a Roman citizen, could be decided by any other court. (Cic. *pro Sest.* 30, 65; 34, 73: *de Rep.* ii. 36, 61: *de Leg.* iii. 4, 11: Polyb. vi. 4, 14.) This last right was revived or introduced by the Valerian law (Plut. *Publ.* 11), and Spurius Cassius was condemned by the comitia of the centuries. There is no reason for believing that the laws of the Twelve Tables increased the power of the centuries in this respect.

All the powers which we have here mentioned as possessed by the centuries had to receive the *patrum auctoritas* before they became valid and binding. But, in the course of time, the assembly shook off this control, which became merely a formality, and, in the end, the *patres* were obliged to give their sanction beforehand to whatever the centuries might determine. This was effected by the Publilian law, in B.C. 337 (Liv. viii. 12). As thus the centuries gradually became powerful enough to dispense with the sanction of the *patres*, so they also acquired the right of discussing and deciding upon matters which were not brought before them in the form of a senatus consultum; that is, they acquired the power of originating measures. In reference to the election of magistrates, the comitia originally were not allowed to elect any other except those who were proposed by the president, who himself was entirely guided by the resolution of the senate; but in the course of time, the people asserted their right so far as to oblige the president to propose any candidate that might offer himself, without the previous sanction of the senate. This change, according to Zonaras (vii. 344), took place in B.C. 482. In legislative measures a senatus consultum was indispensable, and this senatus consultum was brought before the people by the consul or the senator who had originated the measure, after it had p

88). At the same time when this invitation was proclaimed *circum muros* or *de muris*, a horn was blown, which being the more audible signal, is mentioned by some writers alone, and without the inlicium (Gellius, xv. 27; Varro, *de L. L.* v. 91). When upon this signal the people assembled—in the earlier days armed, as for a march—there followed the second call by the accensus, or the call *ad contionem* or *conventionem;* that is, to a regular assembly, and the crowd then separated, grouping themselves according to their classes and ages (Varro, *de L. L.* vi. 88). Hereupon the consul appeared, ordering the people to come *ad comitia centuriata;* and led the whole *exercitus*—for in these comitia the Roman people are always conceived as an exercitus—out of the city, to the Campus Martius (Varro, *l. c.;* Liv. xxxix. 15). It was customary from the earliest times for an armed force to occupy the Janiculum, when the people were assembled in the Campus Martius, for the purpose of protecting the city against any sudden attack of the neighbouring people; and on the Janiculum a red flag (*vexillum*) was hoisted, during the whole time that the assembly lasted. This custom continued to be observed even at the time when Rome had no longer anything to fear from the neighbouring tribes (Liv. *l. c.*; Gell. xv. 27; Macrob. *Sat.* i. 16, 15; Dio Cass. xxxvii. 27, &c.; Serv. *ad Aen.* viii. 1). When the people were regularly assembled, the business was commenced with a solemn sacrifice, and a prayer of the president, who then took his seat on his tribunal (Dionys. vii. 59, x. 32; Liv. xxxi. 7, xxxix. 15; Cic. *pro Muren.* 1; Liv. xxvi. 2). The president then opened the business by laying before the people the subject for the decision upon which they had been convened, beginning with the formula *quod bonum, felix, faustum fortunatumque sit* (Cic. *de Div.* i. 45, 102), and concluding his exposition with the words *velitis, jubeatis Quirites*, e.g. *bellum indici*, or *ut M. Tullio aqua igni interdictum sit*, or whatever the subject might be. This formula was the standing one in all comitia, and the whole exposition of the president was called *rogatio* (Liv. iv. 5, vi. 40, xxi. 17, xxii. 10, xxx. 43; Cic. *de Fin.* ii. 16, 54; *in Pison.* 29, 72; *pro Dom.* 17, 45; Gell. v. 19). When the comitia were assembled for the purpose of an election, the presiding magistrate had to read out the names of the candidates, of which a list had been published at least a *trinundinum* previously, and might exercise his influence by recommending the one whom he thought most fit for the office in question (Liv. x. 22, xxii. 35). He was, however, not obliged to announce the names of all the candidates that offered themselves; as, for example, if a candidate had not attained the legitimate age, or when he sued for one office without having been invested with those through which he had to pass previously, or if there was any other legal obstacle; nay, the president might declare, that if a person, to whom he had any such objection, should yet be elected, he would not recognise his election as valid (Liv. iii. 21, xxiv. 7; Val. Max. iii. 8, § 3; Velleius, ii. 92). If the assembly had been convened for the purpose of passing a legislative measure, the president usually recommended the proposal, or he might grant to others, if they desired it, permission to speak about the measure, either in its favour or against it (*contionem dare*, Liv. iii. 71, xxxi. 6, &c., xlii. 34; Appian, *B. C.* i. 11; Dio Cass. xxxviii. 4; Quintil. ii. 4, § 3). In this case, however, it was customary for private persons to speak before any magistrate. When the comitia acted as a court of justice, the president stated the crime, proposed the punishment to be inflicted upon the offender, and then allowed others to speak either in defence of the accused or against him. Sometimes, however, although the consul presided, the tribunes acted as prosecutors (cf. Bouché Leclercq, *Institutions Romaines*, p. 121).

When the subject brought before the assembly was sufficiently discussed, the president called upon the people to prepare for voting by the words *ite in suffragium, bene juvantibus dis* (Liv. xxxi. 7). If the number of citizens present at the assembly was thought too small, the decision might be deferred till another day, but this was rarely done, and a question was usually put to the vote, if each century was but represented by a few citizens (Liv. vii. 18; Cic. *pro Sest.* 51, 109; *de Leg. Agr.* ii. 9; Plut. *Tib. Gracch.* 16; Dio Cass. xxxix. 30). The leges tabellariae ordained that the votes should be given in writing [LEGES TABELLARIAE]. But previous to the leges tabellariae, the rogatores, who subsequently collected the written votes, stood at the entrance of the saepta, and asked every citizen for his vote, which was taken down, and used to determine the vote of each century (Dionys. vii. 64). In legislative assemblies, the voter, probably from the earliest times, signified his disapproval by the word *antiquo*, and his approval by *uti rogas* (Liv. vi. 38, x. 8, xxx. 43, xxxi. 8, xxxiii. 25; Cic. *de Leg.* ii. 10, 24). The two tablets which were given to each person for the purpose of voting on legislative measures were marked the one with VR, and the other with A (*uti rogas* and *antiquo:* Cic. *ad Att.* i. 14). At elections, the name of the successful candidate was mentioned to the rogator, who had to mark the favourable votes by dots which he made by the side of the name: hence *puncta ferre*, to be successful (Liv. x. 13, 22; xxix. 22; Hor. *Ep.* ii. 2, 99). The custom of voting at elections by tablets with the name of the candidates written on them, was introduced in B.C. 139, by the Lex Gabinia tabellaria (Cic. *de Leg.* iii. 16, 35); two years later L. Cassius introduced the same custom, in cases of the comitia acting as a court of justice (Cic. *Brut.* 27, 106), and afterwards it was established also in legislative assemblies, and in cases where the comitia tried persons for perduellio [LEGES TABELLARIAE]. At elections, the citizens obtained blank tablets, that they might write upon them the name of the candidate for whom they voted (Cic. *Phil.* xi. 8, 19; Plut. *C. Gracch.* 5, *Cat. Min.* 46; Plin. *Epist.* iv. 25). In judicial assemblies, every citizen received two tablets marked A (*absolvo*) and C (*condemno*), and, according to Pseudo-Ascon. p. 108, a third tablet containing the letters N. L. (*non liquet*); but this last statement is probably transferred by mistake from the practice in the law-courts. There were in the Campus Martius saepta or enclosures, originally marked off only by ropes, but afterwards formed by palisades, *tabulata* (Cic. *pro Mil.* 15, 41; Ovid, *Fast.* i. 53; Serv. on Verg. *Ecl.* i. 34; Liv. xxvi. 22), and later on by marble walls (Cic. *ad Att.* iv. 16), into which one class of citizens was admitted after another for the purpose of voting. The first that entered were the eighteen centuries of the equites; then followed the first class, and so on. It very rarely happened that the lowest class was called upon to vote, as there was no necessity for it, unless the first class did not agree with the equites (Dionys. iv. 20, vii. 59, viii. 82, x. 17; Liv. i. 43). In this case, however, the *contio* was kept quite distinct from the comitia (Cic. *pro Flacc.* 7, 15), and was held not in the *ovile*, but in some neighbouring place, *e.g.* the *circus Flaminius*, before the final summons of the consul (*exercitum educere*, Liv. xxxix. 15). On entering the saepta, the citizens received their tablets (Cic. *ad Att.* i. 14; *de Leg.* iii. 17; *in Pis.* 15, 36; *pro Planc.* 6, 14); and when they had consulted within the enclosures, they passed out of them again by a *pons* or *ponticulus*, at which they threw their vote into a chest (*cista*) which was watched by *rogatores*. Hereupon the *diribitores* classified and counted the votes, and reported the result to the presiding magistrate. That there was a separate body of *custodes*, who again checked them off by points marked on a tablet, is a very doubtful inference from Cic. *in Pis.* 15, 36—"vos rogatores, vos diribitores, vos custodes tabellarum." The order in which the centuries voted was determined in the Servian constitution, in the manner described above; but after the union of the centuries and tribes, the order was determined by lot; and this was a matter of no slight importance, since it frequently happened that the vote of the first determined the manner in which subsequent ones voted. The voting, of course, was continued, until the majority was ascertained. In the case of elections, the successful candidate was proclaimed twice,—first, by the praeco, and then by the president, with a prayer that the choice might have the blessing of the gods (Cic. *pro Mur.* 1, 1), and without this renuntiatio the election was not valid. After all the business was done, the president dismissed the assembly with the word *discedite*.

Cases are frequently mentioned in which the proceedings of the assembly were disturbed, so that it was necessary to defer the business till another day. This occurred—(1) when it was discovered that the auspices had been unfavourable, or when the gods manifested their displeasure by rain, thunder, or lightning; (2) when a tribune interceded (Liv. xlv. 21; Dionys. vi. 89; Cic. *in Vat.* 2, 5); (3) when the sun set before the business was over, for it was a principle that the auspices were valid only for one day from sunrise to sunset (Varro, *de L. L.* vii. 51; Dio Cass. xxxix. 65; Liv. x. 22, xli. 17; Dionys. ix. 41); (4) when a *morbus comitialis* occurred, *i.e.* when one of the assembled citizens was seized with an epileptic fit (Dio Cass. xlvi. 33; Gellius, xix. 2; Macrob. *Sat.* ii. 8); (5) when the vexillum was taken away from the Janiculum, this being a signal which all citizens had to obey (Liv. xxxix. 15; Dio Cass. xxxvii. 27; Macrob. *Sat.* i. 16); (6) when any tumult or insurrection broke out in the city, as happened now and then during the latter period of the republic (Cic. *pro Sest.* 36, 78). In all these cases, the assembly had to continue its business on some other day, sometimes on the next. The only exception
seems to have been in the case of t
the censors, for if both could not
the same day, it was necessary
election afresh; and if one had bee
election was not valid (Liv. ix. 34)

Pantagathus (died 1567; quote
Liv. i. 43). His view has been
but with some modifications i

cepted by the best modern authorities (*e.g.* Marquardt, Lange, and Mommsen), and has been confirmed by epigraphic evidence. According to this theory, each of the 35 tribes contained 5 centuries of *seniores* and 5 of *juniores*, so that the total number was 350. Whether the equites were included in the centuries of the first class, or formed 35 distinct centuries of their own, or continued to be divided into 18 centuries, which, along with the 4 centuries *fabrum*, &c., and the century *capite censorum*, would make the total 350 + 18 + 4 + 1 (the view defended by Lange, ii. 477 ff.), it is perhaps impossible to determine. It appears from many inscriptions (cf. Mommsen, *Röm. Tribus*, p. 76 f.) that the half-tribes consisting of the *centuriae seniorum* and the *centuriae juniorum* respectively were usually considered as distinct bodies, so that we find *tribus Esquilina seniorum* or *tribus Palatina corporis junioris*, and the like. This appears to be what Livy means in the ambiguous words *duplicato earum numero* in the passage quoted above. Madvig, however (*Röm. Verf.* i. 119), still holds to the view of Niebuhr, that this must mean that the number of centuries was twice that of the tribes, and therefore assumes that the *seniores* and *juniores* of each tribe formed one century, so that the total number was 70. He confesses that it is not possible to explain how this hypothesis can be reconciled with the continued existence of the classes, which is an unquestioned fact (Cic. *Phil.* ii. 33, 82; *pro Flacc.* 7, 15; *de Leg.* iii. 3, 7, &c.: cf. Sall. *Jug.* 86; Gell. xvi. 10; Lex Agr. *C. I. L.* i. 200, v. 37), and it is quite needless to interpret the words of Livy in such a way as to create this difficulty. It is true that the term *centuria praerogativa* (Cic. *pro Planc.* 20, 49; Liv. xxvi. 22) is used always in the singular, except where there is a reference to several elections (Fest. p. 249), of the reformed comitia, as against the *centuriae praerogativae* of the equites under the earlier constitution, and that this now bears the name of the half-tribe to which it belonged: e.g. *Aniensis juniorum* (Liv. xxiv. 7), *Veturia juniorum* (Liv. xxvi. 22), *Galeria juniorum* (Liv. xxvii. 6). But it is natural to suppose that it was only the centuries of the first class in the several tribes, which drew lots for the right of voting first, and that hence the addition of the tribe-name was quite enough to distinguish them. There is no reason to suppose from the accidental circumstance that the three prerogative centuries, whose names happen to have been preserved, were all *juniores*, that these enjoyed any right of previous voting: the very fact of the addition of the term *juniorum* points in the opposite direction.

III. COMITIA TRIBUTA. The researches of Mommsen have established satisfactorily, against the views previously current and supported by Niebuhr and his followers, that the Servian tribes were a division of the land and not of the people of Rome. Hence the fact, for which there is abundant evidence (Liv. iv. 24, xxix. 37, cf. v. 30, 32; Cic. *Phil.* ix. 7, 15), that the patricians were included in the tribes, and that several of the tribes bore the names of patrician families. But as citizens possessed of no freeholds were not included in a division based upon landed property, there could be no *comitia* of the tribes in the earliest times, for it was essential to the character of *comitia* that all citizens should have a right of taking part in them. It was only after the action of the censors Appius Claudius (B.C. 312) and Q. Fabius (B.C. 304) had admitted the landless citizens into the four city-tribes, that *comitia tributa* could be held in accordance with the principles of Roman public law. The earliest extant instances of resolutions passed in the patricio-plebeian assembly of the tribes dates from the year B.C. 443; but these are at first limited to the election of quaestors under the presidency of a consul. In B.C. 367 the same procedure was adopted in the case of the curule aediles, and it was extended subsequently to the election of minor ordinary or extraordinary officials, the earliest instance of which is the election of a part of the military tribunes in B.C. 362 (cf. Cic. *de Leg. Agr.* ii. 7, 17). There is no clear case of a law passed in the *comitia tributa* before B.C. 332 (Liv. viii. 17), when the praetor L. Papirius brought before the tribes a proposal to confer the franchise on the people of Acerra. But it is probable that this procedure had been adopted immediately after the introduction of the praetorship; for the praetor had no power to summon the centuries except for criminal proceedings. The *comitia tributa* were known as *comitia leviora* (Cic. *pro Planc.* 3, 7); the auspices taken before they were held were *auspicia minora*; the magistrates elected by them were *magistratus minores*. They were presided over by patrician magistrates who had the *jus cum populo in comitiis tributis agendi*, i.e. the consuls, the praetors, and (for judicial business only) the curule aediles (Liv. x. 23, xxxv. 41: cf. Cic. *in Verr.* i. 12, 36; Gell. xiii. 15). This view appears to be inconsistent with the statements of Livy (iii. 55, 67) and Dionysius (xi. 45), that in B.C. 449 the Lex Valeria Horatia ordained *ut quod tributim plebs jussisset, populum teneret*, and of Livy that in B.C. 339 the dictator Q. Publilius proposed a law *ut plebiscita omnes Quirites tenerent*. But it is highly probable that our authorities have here simply transferred to resolutions of the *plebs* what really applied only to resolutions passed by the tribes under the presidency of the patrician magistrates (cf. Mommsen, *Röm. Forsch.* i. 164–5). The correct legal phrase would have been *quod tributim populus jussit*. If we accept this view, the two laws are brought into a natural connexion, the former with the election of quaestors, the latter with the extended powers given to the praetor by another Publilian law. The same theory accounts for a statement in Zonaras (vii. 19) that in B.C. 449 the right of taking the auspices was granted to the tribunes. This is evidently incorrect as it stands; but it may well be a perversion of the fact that from that date forwards laws could be passed *auspicato* in the assembly of the tribes, under the presidency of a magistrate who had the right of the auspices.

The *comitia tributa*, presided over by a consul or an extraordinary magistrate replacing him (Liv. x. 21; xxii. 33; xxxiv. 35), or by a praetor, elected the quaestors (Tac. *Ann.* xi. 22), the curule aediles (Liv. vi. 42, ix. 46; Gell. vi. 9), the regular and extraordinary lesser magistrates (Gell. xiii. 15; Cic. *de Leg. Agr.* ii. 7, 17), and of the tribunes of the soldiers after B.C. 362

six, after B.C. 311 sixteen (Liv. vii. 5; ix. 30), and at a later date twenty-four (Liv. xxvii. 36). These elections, like those of the *comitia centuriata*, required to receive the *patrum auctoritas*, which however, after the Lex Maenia, passed some time in the third century B.C. (Cic. *Brut.* 14, 55), was given beforehand *in incertum comitiorum eventum* (Liv. i. 17).

At the election of the *pontifex maximus*, according to Livy (xxv. 5), a pontifex presided; but if the evidence of Cicero's letters to Brutus (i. 5) may be trusted, a consul presided in his time. The college of pontiffs was first completed by co-optation, and then seventeen tribes chosen by lot (a minority of the whole number) voted for the election of one of these as the pontifex maximus (Cic. *de Leg. Agr.* ii. 7, 18; Liv. *l. c.* xxxix. 46, xl. 42; Suet. *Jul.* 13). After the Lex Domitia de Sacerdotiis (B.C. 104) the members of the three great and politically important colleges of *pontifices*, *augures*, and *x.* (*xv.*) *viri sacris faciundis* were elected in the following manner. The candidates, usually three in number, were nominated, each by not more than two of the college (Cic. *Phil.* ii. 2, 4; *Brut.* 1, 1); the election was made by the people in seventeen tribes (*comitia sacerdotum*) chosen by lot, and the elected candidate co-opted into the college, as previously.

The Lex Domitia was repealed by Sulla in B.C. 83, but its provisions were re-enacted by the Lex Atia of B.C. 63. The purpose of this curious method of election was to take the real selection out of the hands of the college, without formally resorting to election by the whole people.

For the legislative and judicial functions of the *comitia tributa*, see below.

We must keep entirely distinct from the *comitia tributa* the assemblies of the tribes under the presidency of the plebeian magistrates, *i.e.* the tribunes and the plebeian aediles, who had the *jus cum plebe agendi* (Fest. p. 293; Cic. *de Leg.* ii. 12, 31). The technical name for these was *concilium plebis;* and the term *comitia tributa*, so commonly applied to them by modern writers, is quite destitute of authority. But it will be convenient to treat of them under the present head, inasmuch as they constituted one, and in course of time one of the most important, of the assemblies of the people at Rome.

The distinguishing feature of the *concilium plebis* was that, as it was summoned and presided over by magistrates who had no right of summoning patricians (Gell. xv. 27), it could not be regarded as an assembly of the whole people, and any resolutions which it passed were not strictly speaking *leges*, but only *plebi scita*, although we find the term *lex plebive scitum* sometimes employed, and ultimately even *lex*. (Cp. Mommsen, *Röm. Forsch.* i. 195.) The two requisites which were necessary for *leges*—(1) that they should be proposed under favourable auspices, and (2) that they should receive the *auctoritas patrum*—were both absent in the case of the *concilia plebis*. From the legal point of view the assemblies of the plebs were nothing more than the meetings of any other recognised corporation under the presidency of its elected head, passing resolutions which were binding upon all its members. But doubtless there was from the first a desire to shape these *concilia* as much as possible upon the model of
as is shown by the adoption of t
calendar as regards the lawful days

president of the assembly, who, acting on his own judgment or on that of the augurs, might declare the meeting at an end; and after the laws of Aelius and Fufius (about B.C. 150) he was required to do so. Hence after this date we find *obnuntiatio* commonly employed as a means of obstruction (Cic. *Or. cum sen. gr. eg.* 5, 11; *in Vat.* 8, 20; *Phil.* v. 3, 7). The days specially reserved for the *concilia plebis* were the *nundinae* [NUNDINAE], which the Lex Hortensia seems to have made non-comitial for this purpose (Macrob. i. 16, 29–34). The commons were summoned by *praecones;* after the usual prayers, the presiding magistrate read the *rogatio* (preceded, if he thought fit, by a *contio*), and then the tribes were summoned to vote (Liv. iii. 71; vi. 37; x. 9, &c.). The functions of the *concilia plebis* may be arranged under three heads.

1. *Elections.* — After the Lex Publilia of Volero (B.C. 471) the tribunes of the commons and the plebeian aediles were elected (as noticed above) by the commons organised as tribes (Liv. ii. 56; Dionys. ix. 49).

2. *Legislation.*—Resolutions adopted by the *concilia plebis* were in theory binding only upon the commons (Liv. iii. 55; Gell. xv. 27; Gaius, i. 3). But if they received the sanction of the senate, they were valid for all citizens. We have no definite information as to when this principle was formally recognised, but Mommsen's view seems the most probable, that a *lex centuriata*, earlier than the *plebiscitum Terentilium* (B.C. 462), first formally sanctioned it. It is certain that the necessity for the sanction of the senate was removed by the Lex Hortensia in B.C. 287, and that from this time forward the *concilia plebis* formed the principal legislative organ of the Roman people (Plin. xvi. 15, 10; Gell. xv. 27; Gaius, i. 3). Here the tribunes proposed *rogationes*, to which, when passed, the term *lex* was commonly, though not strictly applied. These *leges* must be carefully distinguished from the *leges praetoriae* which were passed by the *comitia tributa* under the presidency of the praetors (see above), and from the *leges consulares*, which, especially in the later times of the republic, were frequently carried in the same body under the presidency of a consul.

3. *Judicial.*—The *concilium plebis* attempted to assert its right to pronounce a capital sentence in the case of Coriolanus (B.C. 491) (Dionys. vii. 69), on the ground of a violation of the *leges sacratae;* and in the next half-century there are several similar instances (Liv. ii. 52, 54, 61; iii. 12, 31); but the decemviral legislation expressly enacted *de capite civis nisi per maximum comitiatum ne ferunto* (Cic. *de Leg.* iii. 4, 11, 19, 44; *de Rep.* ii. 36), a provision which was not obsolete in the time of Cicero (*pro Sest.* 34, 73). Henceforward the assemblies of the plebeians could inflict no punishment more severe than a fine (*inrogare multam*); the amount imposed at the discretion of the magistrate was strictly limited by the Lex Aternia Tarpeia of B.C. 454: hence, in all graver cases, it was necessary to obtain the sanction of the tribes assembled either in the *comitia tributa* or in the *concilium plebis.* In political cases the tribunes generally presided; in questions of police, the aediles.

Sulla, according to some, abolished the *comitia tributa* altogether, or, according to others, deprived them of the right of electing the sacerdotes, and of all their legislative and judicial powers. (Cic. *in Verr.* i. 13, 15; *de Legg.* iii. 9; Liv. *Epit.* 89; Appian, *de Bell. Civ.* i. 59, 98; comp. TRIBUNUS.) But the constitution, such as it had existed before Sulla, was restored soon after his death by Pompeius and others, with the exception of the jurisdiction, which was for ever taken from the people by the legislation of Sulla. The people suffered another loss in the dictatorship of Caesar, who decided upon peace and war himself in connexion with the senate. (Dio Cass. xlii. 20.) He had also the whole of the legislation in his hands, through his influence with the magistrates and the tribunes. The people thus retained nothing but the election of magistrates; but even this power was much limited, as Caesar had the right to appoint half of the magistrates himself, with the exception of the consuls (Suet. *Caes.* 41; Cic. *Phil.* vii. 6; Dio Cass. xliii. 51), and, in addition to this, he recommended to the people those candidates whom he wished to be elected: and who would have opposed his wish? (Dio Cass. xliii. 47; Appian, *Bell. Civ.* ii. 18.) After the death of Caesar the comitia continued to be held, but were always more or less the obedient instruments in the hands of the rulers, whose unlimited powers were even recognised and sanctioned by them. (Appian, *Bell. Civ.* iv. 7; Dio Cass. xlvi. 55, xlvii. 2.) Under Augustus the comitia still sanctioned new laws and elected magistrates, but their whole proceedings were a mere farce, for they could not venture to elect any other persons than those recommended by the emperor. (Suet. *Aug.* 40, &c.; Dio Cass. liii. 2, 21, lv. 34, lvi. 40.) Tiberius deprived the people even of this shadow of their former power, and conferred the power of election upon the senate. (Tac. *Ann.* i. 15, 81, ii. 36, 51; Vell. Pat. ii. 126.) When the elections were made by the senate, the result was announced to the people assembled as comitia centuriata or tributa. (Dio Cass. lviii. 20.) Legislation was taken away from the comitia entirely, and was completely in the hands of the senate and the emperor. Caligula placed the comitia again upon the same footing on which they had been in the time of Augustus (Dio Cass. lix. 9; Suet. *Cal.* 16); but this regulation was soon abandoned, and everything was left as it had been arranged by Tiberius. (Dio Cass. lix. 20.) From this time the comitia may be said to have ceased to exist, as all the sovereign power formerly possessed by the people was conferred upon the emperor by the Lex Regia. [LEX REGIA.] The people only assembled in the Campus Martius for the purpose of receiving information as to who had been elected or appointed as its magistrates, until at last even this announcement (*renuntiatio*) appears to have ceased.

COMITIA'LIS DIES. [DIES.]

COMIT'IUM. [FORUM.]

COMMENTARIUS, COMMENTARII (ὑπομνήματα), properly notes or note-books. Hence the word acquires a variety of meanings, of which the most important are the following:—

1. *C. domestici*, or family memorials, the records of events interesting to the members of particular families. Possibly these are the *veteres* or *antiqui c.*, to which Cicero refers in *Brut.* 15, 60; 18, 72: they may have contained, but they were not limited to, the funeral panegyrics to which Cicero (*Brut.* 16, 62) and Livy (viii. 40) ascribe much of the falsification of early Roman history.

2. The "memoirs" drawn up by public men as to events in which they had taken part. Thus Cicero wrote a *commentarius* in Greek on his consulship (*ad Att.* i. 19, 10; ii. 1, 1), and Caesar *commentarii* on his Gallic and Civil Wars.

3. "Memoranda" were kept by different departments of the public service, the officials in charge of them being known as *a commentariis.* These are frequently mentioned in inscriptions.

4. In towns a register was kept of the official acts of the municipal authorities. We have interesting extracts from the *commentarii* of Caere in an inscription in the Museum at Naples (Wilmanns, 2083).

5. The unofficial record of recent events at Rome, sent by Caelius to Cicero in Cilicia, is called by him *c. rerum urbanarum* (Cic. *ad Fam.* viii. 2, 2).

6. The record of the daily occurrences at court was kept in *c. diurni* (Suet. *Aug.* 64), a kind of private diary, which must be distinguished from the formal *acta*, and also from

7. *C. principis*—the register of his official decisions (Plin. *Ep.* x. 106), and of accusations brought before him (Tac. *Ann.* xiii. 43; Suet. *Calig.* 15). In Suet. *Dom.* 20, "praeter commentarios et acta Ti. Caesaris nihil lectitabat," it is probable that *c.* refers to private memoirs written by that emperor (Mommsen, *Röm. Staatsr.* ii.[2] 869, note 1).

8. Tacitus once (*Ann.* xv. 74) speaks of *c. senatus*, by which he can hardly mean anything but the *acta senatus* (q. v.).

9. The *commentarii* of the pontiffs, the augurs, and the *xvviri* are often mentioned. These were records of their decrees, and are to be distinguished on the one hand from their *acta* or minutes of their meetings, and on the other from the books (*libri*) which contained the ritual, and the *annales maximi* or chronicle of public events. (Cf. Cic. *de Domo*, 53, 136; *de Div.* ii. 18, 42; *Brut.* 14, 55; Plin. *H. N.* xviii. § 14.)

10. Varro cites more than once
magistratuum, of the nature of whic
practically nothing (Madvig, *Verf.*
i. 324).

COMMER'CIUM. [CIVITAS.]

COMMISSO'RIA LEX is a ter
in the law of pledge and in the law
the former it meant the agreeme
pledgor and pledgee that the prope
should be vested absolutely in the l
the debt which it secured was pun
charged by the day fixed for payn
agreements, though apparently con

Thus Cicero (*ad Fam.* xiii. 56)
hypothecated thing becoming *commi*
becoming the absolute property of
for default of payment. *Commissa*
an inheritance forfeited as a penalt
i. 10, § 27).

Commissum is specially applied

such as merchandise confiscated because revenue duty had not been paid on it, or a proper return of it made to the *publicani*. A thing thus forfeited (*vectigalium nomine*) ceased to be the property of the owner and belonged to the *fiscus*. Things, the exportation of which was prohibited, such as arms and ships, might likewise be subject to forfeiture (*in causam commissi cadere*). In early times the *publicani* had the remedy of distraint on account of unpaid taxes (Gaius, iv. 28). The principle of forfeiture may have been made applicable to such cases by a *lex censoria*.

Commissum is used by mediaeval writers to signify property forfeited, as *e.g.* to the lord of whom a *fief* was held, and *commissio* is found in a corresponding sense. (Dig. 39, 4; Paul. *Sent. Recept.* v. 1; *Fragm. de jure fisci.*) [E. A. W.]

COMMIX'TIO. [CONFUSIO.]

COMMODA'TUM is one of the Roman obligations contracted *re*, by delivery. It is the gratuitous loan of a *res non fungibilis*, the loan of *res fungibiles* being called MUTUUM: in the latter not the very thing lent has to be returned, but an equivalent in quantity and quality (*e.g.* money, corn, wine, oil); in the former the borrower ("commodatarius, is qui rem commodatam accepit") has to restore to the lender (*commodator*) the very thing lent. As the Romans say, it has to be returned *in specie*, not *in genere*: whence Isidorus says (*Orig.* v. 25), "inter commodatum et mutuo datum nonnihil distat: commodamus amico pro tempore . . . . *hanc ipsam rem, quam dedimus, recepturi.*" (Cf. Agroecius, *de Orthographia*, pp. 2274, Putsch.) In *mutuum*, again, the property in the thing lent passed to the borrower (whence the name, "quia ita tibi a me datum est, ex *meo tuum* fiat," Gaius, iii. 90); but in *commodatum* the borrower acquired only detention or *naturalis possessio* (Dig. 13, 6, 8 and 9). If a thing were lent for a "consideration" instead of gratuitously, the contract was of a different nature; it was not *commodatum*, but *locatio conductio*, which was consensual, not real.

The duties of the borrower, which were enforced by *actio commodati directa*, an action which could be formulated either in *jus* or in *factum* (Gaius, iv. 47), were to return the *res commodata* (and its fruits borne while lent) at the time agreed upon, or, if there had been none, when the purpose for which it had been borrowed was satisfied; to take care of it in the fashion of a *bonus paterfamilias* (*i.e.* he was answerable for *culpa levis in abstracto;* see CULPA); and to use it only for the purpose for which it had been borrowed: to use it for any other, if the borrower thought this would not have been allowed by the lender, was theft in law (Gaius, iii. 195). If a thing was lent to two or more persons together, each was severally liable to pay the whole damages (*in solidum*) occasioned by breach of any of these duties. The obligations of the commodator (enforced by *actio commodati contraria*) were mostly only *ex post facto;* to let the borrower use the thing for the time or for the purpose agreed on (Dig. 13, 6, 17, 3), and to indemnify him for all unusual but necessary costs incurred in connexion with the object lent, and also for all damages occasioned by his own negligence (though here he was answerable only for *culpa lata*): *e.g.* if he knowingly lent rotten timber for shoring up a house, which fell in consequence, he must pay damages. The borrower's rights against the commodator could also be enforced by *retentio* or lien. (Gaius, iii. 196, 197, 206, iv. 47; Paul. *Sent. rec.* ii. 4; Dig. 13, 6; 44, 7, 1, 3 and 4; Cod. iv. 23.) [J. B. M.]

COMMU'NI DIVIDUNDO AC'TIO is one of the so-called *judicia divisoria*, or partition actions (the others being those known as *familiae erciscundae* and *finium regundorum*): they are said by Justinian (*Inst.* iv. 6, 20), "mixtam causam obtinere, tam in rem quam in personam," to be partly real, partly personal. The explanation of this lies in the structure of their formula [ACTIO], which contained two intentiones: one framed *in rem*, and followed by an adjudicatio or clause empowering the judge to award the property in severalty to the joint owners (Gaius, iv. 41); the other framed *in personam*, and followed by a condemnatio, by which the judge was enabled to charge any one of the joint owners who got more than his fair share of the *res communis* with a money payment in favour of the rest. These clauses were repeated in the formula for each of the joint owners, whence Ulpian calls these actions *mixtae* in another sense, because each of them is plaintiff in his turn, just as Gaius (iv. 160) calls some of the interdicts *judicia duplicia*. Under Justinian they are in reality *in personam* (Dig. 10, 1, 1), though distinguished from other personal actions in this, that by them disputed ownership could also be determined (Savigny, *System*, v. p. 36): the obligation upon which they are brought arising either *ex contractu* (as where the joint owners are *socii*, partners) or *quasi ex contractu* (*communio incidens*), as in the case of co-legatees and co-donees (*Inst.* iii. 27, 3).

The object of the *actio communi dividundo* was to compel a judicial partition of jointly-owned property at the suit of one or some of the joint owners only; and therefore it could not be instituted until the ratio in which it belonged to them respectively was ascertained, this being sometimes the object of a previous suit (*vindicatio partis:* Dig. 10, 2, 1, 1; cf. Gaius, iv. 54). It was maintainable whether the parties were technically owners (domini), or merely *bonâ-fide* possessors entitled to the *actio Publiciana in rem;* but where their joint title was a universal succession, civil or praetorian, this action would not lie, the proper remedy being the *actio familiae erciscundae*. The judge might take account of any damage done to the *res communis*, or any outlay upon it, or any profit received from it by any one of the joint owners in excess of the rest (*Inst.* iv. 17, 4 and 5); and though bound by any agreement which they might have entered into as to the partition (Dig. 10, 3, 3 and 21), he was otherwise free to act at his own discretion, *ex aequo et bono*, doing the best he could for them. Thus, if the *res communis* were exactly divisible, the matter was easily settled; but if it were not so, he would divide it so far as was possible, compensating those who got less than their due share with a money payment (*Inst.* iv. 17, 4 and 5), a usufruct, or other servitude (Dig. 17, 2, 6, 10; *ib.* 7, 1). If it could not be divided at all without depriving it of all value ("veluti homo forte aut mulus erit," *Inst.*

loc. cit), he might adjudge it to one and direct him to compensate the rest with a money payment, or put it up to auction, either publicly or among the joint owners alone, and divide the purchase-money. (Dig. 10, 3; Cod. 3, 37, 3; Cic. *ad Fam.* vii. 12.) [J. B. M.]

COMOE'DIA (κωμῳδία). 1. GREEK.—The early stages of the history of comedy are involved in great indistinctness, as they never formed the subject of much inquiry even when information was extant. This was the case even among the Athenians, and to a still larger extent among the Dorians. The ancient Greeks seldom showed much aptitude for antiquarian research, and for a long time comedy was scarcely thought deserving of attention; "for it was not," says Aristotle (*Poët.* 5), "seriously cultivated from the beginning. And it was only quite recently that the archon gave a chorus of comedians; before that they were 'volunteers' (ἐθελονταί). It was only when comedy had attained something like form that comic poets are mentioned. Who fixed its masks or prologues or number of actors or the like, is not known." Aristotle does not give a formal definition of comedy; though in one passage (*Poët.* 5 *init.*) he seems to define it as μίμησις τοῦ γελοίου: but perhaps we should suppose with Mahaffy (*Hist. of Greek Lit.* i. 466) that the formal definition is lost, and that it ran parallel to his definition of tragedy, describing comedy as a purification of certain affections of our nature by laughter and ridicule.

That comedy took its rise at the vintage festivals of Dionysus is certain. It originated, as Aristotle says (*Poët.* 4), with those who led off the phallic songs (ἀπὸ τῶν ἐξαρχόντων τὰ φαλλικά) of the band of revellers (κῶμος), who at the vintage festivals of Dionysus gave expression to the feelings of exuberant joy and merriment which were regarded as appropriate to the occasion, by parading about, partly on foot, partly in wagons, with the symbol of the productive powers of nature, singing a wild, jovial song in honour of Dionysus and his companions. These songs were commonly interspersed with, or followed by petulant, extemporal (αὐτοσχεδιαστική, Arist. *Poët.* 4) witticisms with which the revellers assailed the bystanders (see the description of the phallophori at Sicyon in Athen. xiv. p. 622), just as the chorus in the *Frogs* of Aristophanes, after their song to Iacchus, begin ridiculing Archedemus (417, &c.). This origin of comedy is indicated by the name κωμῳδία, which undoubtedly means "the song of the κῶμος." This appears both from the testimony of Aristotle that it arose out of the phallic songs and from Demosthenes (*c. Mid.* p. 517), where we find mentioned together ὁ κῶμος καὶ οἱ κωμῳδοί. (Comp. Müller, *Hist. of Gr. Lit.* vol. ii. p. 4, *Dor.* iv. 7, § 1; Bode, *Gesch. der Hellen. Dichtk.* vol. iii. part 2, p. 4, &c.; Kanngiesser, *Die alte komische Bühne zu Athen*, p. 32; Schömann, *Gr. Alt.* ii.^{3} 491.) Other derivations of the name were, however, given even in antiquity. The Megarians, conceiving it to be connected with the word κώμη, and to mean "village-song," appealed to the name as an evidence of the superiority of their claim to be considered as the originators of comedy over that of the Athenians (Arist. *Poët.* 3). This derivation was also adopted by several of the old grammarians (see Tzetzes, in Cramer's *Anecd. Gr.* vol. iii. pp. 335, 337; Anonym. περὶ κωμῳδίας in Meineke, *Hist. Crit. Comic. Graec.* pp. 535, 538, 558, where a very absurd account of the origin of comedy is given, but the important point that personal censure is of the essence of comedy is indicated: cf. Bekk. *Anecd. Gr.* 747, 10, κωμῳδία ἐστιν ἡ ἐν μέσῳ λάου κατηγορία ἤγουν δημοσίευσις), and has the sanction of Bentley, W. Schneider, Bernhardy (*Grundriss d. Griech. Lit.* vol. ii. pt. 2, p. 450), and Mahaffy (*Hist. of Greek Lit.* i. 398).

Passing by the Homeric *Margites*, in which Aristotle sees the origin of comedy (*Poët.* 4), and which certainly does draw a character from a ridiculous point of view, we find that it was among the Dorians that comedy first assumed anything of a regular shape. The Megarians, both in the mother country and in Sicily, claimed to be considered as its originators (Arist. *Poët.* 3); and so far as the comedy of Athens is concerned, the claim of the former appears well founded. They were always noted for their coarse humour (Aristoph. *Vesp.* 57, with the Schol.; *Anthol. Pal.* xi. 440; Suidas, *s. v.* γέλως: Bode, vol. iii. pt. 2, p. 27); and their democratical constitution, which was established at an early period, favoured the development of comedy in the proper sense of the word. In the aristocratical states the mimetic impulse, as connected with the laughable or absurd, was obliged to content itself with a less unrestrained mode of manifestation. The Lacedaemonians, who had a great fondness for mimetic and orchestic amusements, had their δεικηλικταί, whose exhibitions appear to have been burlesques of characters of common life. The favourite personages were the fruit-stealer and the foreign quack, for the representation of which they had a peculiar mimetic dance. (Athen. xiv. p. 621; Plut. *Ages.* 21, p. 607 D; Schol. *ad* Apollon. i. 746; Müller, *Dor.* iv. 6, § 9; Bernhardy, *l. c.* p. 454.) Among the forerunners of comedy must be mentioned the Phallophori and Ithyphalli at Sicyon, who, Athenaeus says (xiv. p. 621 e), are the same as the δεικηλικταί. It was here, where at an early period the dithyramb also was dramatised, that the κῶμος first assumed a more dramatic form, and Dionysus was even said to have invented comedy at Sicyon (*Anthol. Pal.* xi. 32). The Phallophori had no masks, but covered their faces with chaplets of wild thyme, acanthus, ivy, and violets, and threw skins round them. After singing a hymn to Dionysus, they flouted and jeered at any one of the bystanders whom they selected. The Ithyphalli wore masks representing drunken persons, and were equipped in other respects in a manner which, if not very decent, was appropriate to the part they had to sustain. (Athen. *l. c.*) It was the iambic improvisations of the exarchi of such choruses which gave rise to the later comedy. Antheas of Lindus is spoken of as a poet who composed pieces for such comuses of phallus-bearers, which were called comedies (Athen. x. p. 445). Such pieces have been styled lyrical comedies by many scholars (as Böckh, *Corp. Inscript.* No. 1584, note; and Müller, *Hist. of the Lit. of Greece*, vol. ii. p. 6), to distinguish them from the comedy proper. Lobeck and Hermann, however, stoutly deny that there was any such thing as lyrical tragedy or comedy distinct from dramatical tragedy and comedy and yet not the same with dithyrambs or phallic songs, and affirm that the tragedies and comedies which we hear of before the rise of the regular drama were only a species of dithyramb and phallic song. (Hermann, *de Tragoedia Comoediaque Lyrica*, in *Opusc.* vol. vii. p. 211, &c.; cf. A. Müller, *Griech. Bühnenalterthümer*, p. 388.) The dispute is more about names than about things; and there seems no great objection to applying the term *lyrical tragedy* or *comedy* to pieces intended to be performed by choruses, without any actors distinct from the chorus, and having a more dramatic cast than other purely lyrical songs. This, apparently, was the point to which comedy attained among the Megarians before Susarion introduced it into Attica. It arose out of the union of the iambic lampoon with the phallic songs of the comus, just as tragedy arose out of the union of rhapsodical recitations with the dithyramb.

Among the Athenians the first attempts at comedy, according to the almost unanimous accounts of antiquity, were made at Icaria by Susarion, a native of Tripodiscus in Megara. (Schol. *ad* Dionys. Thrac. in Meineke, i. p. 559; Aspasius, *ad* Aristot. *Eth. Nic.* iv. 2, 20, fol. 53, B.) Icaria was the oldest seat of the worship of Dionysus in Attica (Athen. ii. p. 40), and comus processions must undoubtedly have been known there long before the time of Susarion. Iambistic raillery was also an amusement already known in the festivals of Bacchus and Demeter on the bridge between Athens and Eleusis (Müller, *Hist. of Lit. of Gr.* vol. i. p. 178; Hesychius, *s. v.* Γεφυρισταί: Suidas, *s. v.* γεφυρίζων: Schol. Arist. *Acharn.* 708). From the jests and banterings directed by the Bacchic comus, as it paraded about, against the bystanders, or any others whom they selected, arose the proverb τὰ ἐξ ἁμάξης (Schol. Arist. *Nub.* 296; Suidas, *s. v.*; Ulpianus *ad* Demosth. *de Cor.* p. 268, ed. Reiske; Bode, *l. c.* p. 22; Photius, *Lex.*, s. v. τὰ ἐκ τῶν ἁμαξῶν: cf. πομπεία, meaning "abuse"). This scoffing, which was considered part of the festival, continued customary not only at the rural Dionysia, but on the second day of the Anthesteria [DIONYSIA]. It was in the third year of the 50th Olympiad (B.C. 578) that Susarion introduced at Icaria comedy in that stage of development to which it had attained among the Megarians (Marm. Par. ep. 54, 55, in Böckh's *Corpus Inscript.* vol. ii. p. 301). It is not, however, easy to decide in what his improvements consisted. Of course there were no actors besides the chorus or comus; whatever there was of drama must have been performed by the latter. The introduction of an actor separate from the chorus was an improvement not yet made in the drama. According to one grammarian, Susarion was the first to give to the iambistic performances of the comus a regular metrical form (Schol. *ad* Dionys. Thrac. *ap.* Bekker, *Anecd. Gr.* p. 748; Meineke, *l. c.* p. 559). He no doubt substituted for the more ancient improvisations of the chorus and its leader premeditated compositions, though still of the same general kind; for, as Aristotle says (*Poët.* c. 5), Crates was the first who ἦρξεν ἀφέμενος τῆς ἰαμβικῆς ἰδέας καθόλου ποιεῖν λόγους ἢ μύθους. According to Schömann (*Gr. Alt.* ii.^{3} 491), the regularity introduced into the Icarian choruses consisted of a definite number of persons uniting to form a chorus and arranging some general plan of performance, leaving a considerable amount of details to improvisation. Such choruses became frequent, and, as was to be expected, there would seem also to have been some kind of poetical contest, for we learn that the prize for the successful poet was a basket of figs and a jar of wine (Marm. Par. *l. c.*; Bentley, *Dissert. on the Ep. of Phal.* vol. i. p. 259, ed. Dyce). It was also the practice of those who took part in the comus to smear their faces with wine-lees, either to prevent their features from being recognised, or to give themselves a more grotesque appearance. Hence comedy came to be called τρυγῳδία or lee-song. Others connected the name with the circumstance of a jar of new wine (τρύξ) being the prize for the successful poet, or of the exhibition being held at the time of the vintage (τρύγη). (Athen. ii. p. 40; Anon. *ap.* Meineke, *l. c.* p. 535; *Acharn.* 851, 603, *Vesp.* 650, 1537; Schol. *ad* Arist. *Acharn.* 397, 498; Schol. *ad* Plat. *de Rep.* iii. p. 928, ed. Bait. et Orell.; Bentley, *Dissert. on the Ep. of Phal.* vol. i. p. 351, &c. ed. Dyce; Bode, *l. c.* p. 22.) An important gloss in the Sangallensis MS. edited by Usener (*Rhein. Mus.* xxviii. 418) says of these early comedies: *In fabulas primi eam contulerunt non* [om. MS.] *magnas ita ut non excederent in singulis versus trecenos* [*tricenos* MS.]. Leo in *Rhein. Mus.* xxxiii. 140, note 2, thinks that *Magnes* is concealed under *magnas*. It is to be remarked, however, that Wilamowitz in *Hermes*, ix. 319 *sqq.*, considers that the so-called Megarian comedy in Attica was not derived from Megara at all, but was a species of comedy invented by the Athenians, in which they satirised the vulgarity and stupidity of the Megarians, laying the scene at Megara just as the Romans did that of the *Atellanae* at Atella. He urges that the fragments we have purporting to be those of the ancient Attic comedians up to Cratinus (*i.e.* Chionides, Magnes, &c.) are not genuine, as may be perceived both from the style, which is more that of the age of Eupolis than that even of Cratinus, and also from the fact that Aristotle knew merely the names of these authors, but not their plays. Be that, however, as it may, there can be but little question that what are called Susarion's pieces were merely intended for the amusement of the hour, and were not committed to writing: a laugh was the sole object sought. (Bentley, *l. c.* p. 250, &c.; Anonym. *de Com.* ap. Meineke, *l. c.* p. 540; Bode, *l. c.*) They doubtless partook of that petulant, coarse, and unrestrained personality for which the Megarian comedy was noted. But for entertainments of such a character the Athenians were not yet prepared. They required the freedom of a democracy. Accordingly, comedy was discouraged, and for eighty years after the time of Susarion we hear nothing of it in Attica.

It was, however, in Sicily that comedy was earliest brought to something like perfection. The Greeks in the Sicilian colonies always exhibited a lively temperament, and the gift of working up any occurrence into a spirited, fluent dialogue. (Cic. *Verr.* iv. 43, 95; Quintil.

vi. 3, § 41.) This faculty finding its stimulus in the excitement produced by the political contests, which were so frequent in the different cities, and the opportunity for its exercise in the numerous agrarian festivals connected with the worship of Demeter and Bacchus, it was natural that comedy should early take its rise among them. Yet before the time of the Persian wars we only hear of iambic compositions, and of a single poet, Aristoxenus of Selinus, "who first introduced the ancient fashion of reciting iambics," according to Epicharmus, and who ridiculed the soothsayers (Hephaestion, p. 49, ed. Gaisf.). The performers were called **αὐτοκάβδαλοι**, i.e. improvisatores (Athen. xiv. p. 622; *Etym. Magn. s. v.* **αὐτοκάβδ.**; Hesych. *s. v.*; Aristot. *Rhet.* iii. 7, § 1; Bode, *l. c.* p. 7, &c.), and subsequently **ἴαμβοι.** There is no evidence that they belonged exclusively to Sicily. The Italians called them **φλύακες**: the Thebans, **ἐθελονταί**: and some people apparently **σοφισταί** (Athen. xiv. p. 621 e). Their entertainments being of a choral character were, doubtless, accompanied by music and dancing. Athenaeus (xiv. p. 629) mentions a dance called the **ἰαμβική**, which was quieter than the **πυρριχή**; but as he ranks it with the **Μολοσσικὴ ἐμμέλεια**, the **σίκιννις Περσικὴ**, and the **κόρδαξ**, it was probably a generic term, like our "fling." Afterwards, the comic element was developed partly into travesties of religious legends, partly into delineations of character and manners, in the comedy of Epicharmus, Phormis, and Dinolochus; and in the mimes of Sophron and Xenarchus. Epicharmus is very commonly called the inventor of comedy by the grammarians and others (Theocr. *Epig.* 17; Suidas, *s. v.* **Ἐπίχαρμος**; Solinus, 5, 13); this, however, is true only of that more artistical shape which he gave to it. (Bernhardy, *l. c.* p. 460.) "He was the first who recovered the *disjecta membra* of comedy, and effected many improvements" (**οὗτος πρῶτος τὴν κωμῳδίαν διερριμμένην ἀνεκτήσατο πολλὰ προσφιλοτεχνήσας**, Anonym. *de Com.* ap. Meineke, i. 535). His comedy was that of character and travesty. Democopus built a theatre for him at Syracuse, and the entire management of the stage was reduced to system there long before it was at Athens. His plays had not very much plot, but clever dialogue and single comic scenes were elaborately worked out, in which the myths were travestied or philosophical notions aired and parodied. His sound practical wisdom was shown in the number of wise sayings collected from his writings (O. Müller, *op. cit.* 57, note). He wrote three kinds of plays: (1) travesties of the myths, e.g. *the Marriage of Hebe*, in which the gluttony of Heracles is represented. (2) Character comedies, *e.g.* **Ἐλπὶς ἢ πλοῦτος, Ἀγρωστῖνος, Θεᾶροι.** (3) Dialectical arguments, *e.g.* **Γᾶ καὶ θάλασσα.** He is said to have first introduced the drunkard, though this is also attributed to Crates (O. Müller, p. 57), and to have invented the character of the *parasite* (in the **Ἐλπίς**): see Athen. vi. p. 236. He wrote in trochaic tetrameters and anapaests, and in the Doric dialect. His plays exhibit a close connexion, both with the Satyric drama and with such plays as the *Helena*, in which the heroes are somewhat vulgarized. Indeed, Epicharmus had probably much to say to the degradation of such characters as the Odysseus of the *Philoctetes* (Mahaffy, *op. cit.* i. 406; cf. *Hermathena*, i. 262 ff.). T

perhaps his earlier plays, the comedi

were an improvement upon those of Crates, as they united with the universality of the latter the pungent personal satire and earnest political purpose which characterised the Old Comedy. Crates and his imitator Pherecrates seem in the character of their pieces to have had more affinity with the Middle than with the Old Comedy. The latter has been described as the comedy of caricature, and such indeed it was, but it was also a great deal more. As it appeared in the hands of its great masters Cratinus, Hermippus, Eupolis, and especially Aristophanes, its main characteristic was that it was throughout *political.* Everything that bore upon the political or social interests of the Athenians furnished materials for it. It assailed everything that threatened liberty, religion, and the old established principles of social morality and taste, or tended to detract from the true nobleness of the Greek character. It performed the functions of a public censorship, and the utmost freedom was allowed the comic poets. (Isocr. *de Pace*, § 14; Cic. *de Rep.* iv. 8; Hor. *Sat.* i. 4, 1; Dion. Chrys. ii. 4, Reiske.) But it must be remembered that they attacked as party-men, not as perfectly disinterested lovers of what was right; just like the attacks of party newspapers of the present day. (Mahaffy, p. 436.) Though merely personal satire, having no higher object than the sport of the moment, was by no means excluded, yet commonly it is on political or general grounds that individuals are brought forward and satirised. A groundwork of reality usually lay at the base of the most imaginative forms which its wild licence adopted. All kinds of fantastic impersonations and mythological beings were mixed up with those of real life. With such unbounded stores of materials for the subject and form of comedies, complicated plots were of course unnecessary, and were not adopted. Though the Old Comedy could only subsist under a democracy, it deserves to be remarked that its poets were usually opposed to that democracy and its leaders. Some of the bitterest assailants even of Pericles were to be found among the comic poets, *e.g.* Teleclides and Hermippus.

But what is generally known as the Old Comedy at Athens—that is, the *political* Old Comedy—was in reality only one of the forms of comedy, which has been brought into excessive prominence for us owing to the fact that the principal plays of Aristophanes which have come down to us have this political reference. But it is a mistake to suppose that politics was the sole subject treated of by Aristophanes and his contemporaries; they handled also the various other subjects of comedy which we find in preceding and succeeding ages. Thus, besides Crates and Pherecrates, whom we have seen to be virtually writers of the New Comedy, the latter attacking innovations in music in the *Chiron*, painting the delights of the golden age in the *Agrios*, and censuring the extravagances of the better classes in the *'Αγαθοὶ ἢ ἀργύρου ἀφανισμός*, we find mythical subjects treated of by Cratinus in the *Nemesis* (*e.g.* the birth of Helen) and *Busiris*, and literary criticism in the *Seriphii* and *Archilochi*, in the latter of which Homer and Hesiod are introduced. Literature is also treated of in the *Musae* and *Tragoedi* of Phrynichus, and in the *Frogs* and *Amphiaraus* of Aristophanes. The guessing of riddles (*γρῖφοι*), a note of the New Comedy, is found in the *Cleobulinae* of Cratinus; Teleclides represents the golden age in the *Amphictyones*, as did Eupolis in the *Χρύσουν γένος*; Hermippus wrote the *Birth of Athena* (and we know *γοναὶ* were a favourite subject of the so-called Middle Comedy). Even in the *Plutus* of Aristophanes it is no longer on a political or literary subject, but on the unevenness and unjust division of wealth; it has all its characters general ones; and the slave, as in the later comedy, plays a principal part. But, above all, we actually hear of a play of Aristophanes, the *Cocalus*, which in its love-intrigue and recognition presents two of the most prominent features of the New Comedy plots.

Mahaffy (*op. cit.* i. p. 435) notices that the old comic writers could not be so prolific as the tragedians, because they had to invent their plots; but, as depending on the passing events of the day, were compelled to faster writing than the tragedians. In many points he notices analogies between the days of the Old Comedy and the Shakesperean era, such as that the authors often began as actors (Aristoph. *Eq.* 541)—thus Crates and Pherecrates, we are told, were actors (Anonym. *de Com.* ap. Meineke, i. 536); they had to work very fast, and brought out altered editions of their own plays to supply the place of new ones—thus we hear of two editions of the *Nubes* (Arg. v. to *Nub.*); they often collaborated, *e.g.* Eupolis is said to have helped Aristophanes in the *Equites* (Schol. ad *Eq.* 1291); and they brought out plays under other people's names, *e.g.* Aristophanes brought out the *Nubes* under the names of Philonides and Callistratus (Schol. on *Nub.* 531). In the year B.C. 440, a law was passed *τοῦ μὴ κωμῳδεῖν* (Schol. Arist. *Acharn.* 67), which remained in force for three years, when it was repealed. Some (*e.g.* Clinton, *F. H. s. a.*) understand the law to have been a prohibition of comedy altogether; others (Meineke, *l. c.* p. 40; Bernhardy, p. 943) a prohibition against bringing forward individuals in their proper historical personality and under their own name, in order to ridicule them (*μὴ κωμῳδεῖν ὀνομαστί*). To the same period probably belongs the law that no Areopagite should write comedies. (Plut. *de Glor. Ath.* p. 348 c.) About B.C. 415, apparently at the instigation of Alcibiades, the law of 440, or at all events a law *μὴ κωμῳδεῖν ὀνομαστί*, was again passed on the motion of one Syracosius (Schol. Arist. *Ares*, 1297). But the law only remained in force for a short time (Meineke, p. 41). The nature of the political events in the ensuing period would of itself act as a check upon the licence of the comic poets. A man named Antimachus got a law like that of Syracosius passed, but the date of it is not known (Schol. Arist. *Acharn.* 1149). With the overthrow of the democracy in 411, comedy would of course be silenced; but on the restoration of the democracy, comedy again revived. It was doubtless again restrained by the Thirty Tyrants. During the latter part of the Peloponnesian war also it became a matter of difficulty to get choregi; and hindrances were sometimes thrown in the way of the comic poets by those who had been attacked by them: *e.g.* the dithyrambic poet Cinesias, who had been attacked by the comic poets, introduced a law whereby the public expenditure on the comic drama was so much curtailed, that it had to renounce the chorus altogether. On this account, Strattis wrote a play against him called *Cinesias*, in which he styled him **χοροκτόνος** (Kock, *fr.* 15; Schol. *Ran.* 404; cf. Schol. *Ran.* 153). Agyrrhius, though when is not known, got the pay of the poets lessened. (Schol. Arist. *Eccl.* 102.) Yet even in the ruin of Athens the old Attic comedy was not quite dead. Cleophon was attacked by Aristophanes and Plato in 405 B.C. The old Attic comedy lasted from Ol. 80 to Ol. 94 (B.C. 458–404). From Cratinus to Theopompus there were forty-one poets, fourteen of whom preceded Aristophanes. The number of pieces attributed to them amounted altogether to 365. (Anon. *de Com.* ap. Meineke, p. 535; Bode, *l. c.* p. 108.) An excellent and compendious account of these poets is given by Bernhardy. (*Grundriss der Griech. Lit.* vol. ii. pp. 515–525.) A more extended account will be found in Meineke (*Hist. Crit. Comic. Graec.* forming vol. i. of his *Fragm. Com. Graec.*), and in Bode (*Gesch. der Hellen. Dichtk.* vol. iii. pt. ii. p. 108, &c. &c.). The reader is also referred to the articles Crates, Cratinus, Pherecrates, Hermippus, Eupolis, and Aristophanes in the *Dictionary of Greek and Roman Biography and Mythology*. (Comp. Rötscher, *Aristophanes und sein Zeitalter;* and Schlegel's *Lectures on Dramatic Art and Literature.*) The later pieces of Aristophanes belong to the Middle rather than to the Old Comedy. The old Megaric comedy, which was improved by Maeson by the introduction of standing characters (he is said to have invented the masks for the servant and the cook; and hence the kind of jokes made by these characters were called **μαισωνικά**: cf. Ath. xiv. p. 659 a), continued for some time to subsist by the side of the more artistically developed Attic comedy, as did the ancient Iambistic entertainments both in Syracuse and in the Dorian states of Greece (Arist. *Poët.* 4; Bode, *l. c.* p. 28), and the *Oscum ludicrum* at Rome.

It was not usual for comic poets to bring forward more than one or two comedies at a time; and there was a regulation according to which a poet could not bring forward comedies before he was of a certain age, which is variously stated at thirty or forty years. (Aristoph. *Nub.* 530, with the Schol. Ald.) But this is all a fiction (see A. Müller, *op. cit.* p. 351, note). To decide on the merits of the comedies exhibited, five judges were appointed, which was half the number of those who adjudged the prize for tragedy. (Schol. *ad* Arist. *Av.* 445; Hesych. *s. v.* **πέντε κριταί**.) For details concerning the appointment of judges and the course of procedure in the production of plays, see THEATRUM; and for the chorus of comedy, see CHORUS and SALTATIO.

As the old Attic comedy was the offspring of the political and social vigour and freedom of the age during which it flourished, it naturally declined and ceased with the decline and overthrow of the freedom and vigour which were necessary for its development. It was replaced by a comedy of a somewhat different style, which was known as the Middle Comedy, the age of which lasted from the end of the Peloponnesian war to the overthrow of liberty by Philip of Macedon (Ol. 94–110). During this period, the Athenian state had the form but none of the spirit of its earlier democratical constitution, and the energy and public spirit of earlier
years had departed. The comedy of
accordingly found its materials in
classes of people instead of individua
cising the systems and merits of p
and literary men, especially the Pla
Pythagoreans (see the *Epicrates* of
in parodies of the compositions of

The New Comedy was a further
of the last-mentioned kind. It
a certain measure to the modern

manners or character. The subjects were virtually meat, drink, and love—but in moderation: hence the detailed accounts of cookery and feasting, and the prominence of cooks, parasites, and courtesans. But we also find mythological parody in the New Comedy, especially by Diphilus, ridicule of the poets, aye, and even vigorous political attacks (cf. Meineke, vol. i. pp. 436–439, 471). Dropping for the most part personal allusions, caricature, ridicule, and parody, which in a more general form than in the Old Comedy had maintained their ground in the Middle Comedy, the poets of the New Comedy made it their business to reproduce in a generalised form a picture of the every-day life of those by whom they were surrounded. Hence the grammarian Aristophanes asked: ὦ Μένανδρε καὶ βίε, πότερος ἄρ' ὑμῶν πότερον ἀπεμιμήσατο (Meineke, *praef. Men.* p. 33). The New Comedy might be described in the words of Cicero (*de Rep.* iv. 11), as "imitationem vitae, speculum consuetudinis, imaginem veritatis." The frequent introduction of sententious maxims was a point of resemblance with the later tragic poets. There was no rhetoric in the writers of the New Comedy: they aimed at saying everything plainly and neatly. There were various standing characters which found a place in most plays, such as we find in the plays of Plautus and Terence, the *leno perjurus*, *amator fervidus*, *servulus callidus*, *amica illudens*, *sodalis opitulator*, *miles proeliator*, *parasitus edax*, *parentes tenaces*, *meretrices procaces* (Apul. *Flor.* 16; Ovid, *Amor.* i. 15, 17). In the New Comedy there was no chorus, and the dramas were commonly introduced by prologues, spoken by allegorical personages, such as Ἔλεγχος, Φόβος, Ἀήρ. The New Comedy flourished from about B.C. 340 to B.C. 260. The poets of the New Comedy amounted to 64 in number. The most distinguished was Menander. Next to him in merit came Philemon, Diphilus, Philippides, Posidippus, and Apollodorus of Carystus. (Bernhardy, p. 603 ff., &c.; Meineke, *l. c.* p. 435, &c.)

This division into Old, Middle, and New Comedy is the traditional one, and on that account it has been retained here. But the prevailing opinion now held on the point is that the division is faulty in making the Middle Comedy a special class. Kock, in his edition of the Fragments of the Attic Comedians, divides his subject into the Old and the New Comedy, and assigns (vol. ii. p. 11) the following reasons for rejecting the Middle. (1) The latter is not recognised till the age of Hadrian: for Aristotle (*Eth. N.* iv. 8, 6), the Alexandrine critics, Quintilian (x. 1, 65–72), Velleius (i. 16, 3), Plutarch (*Symp.* vii. 712 a), even the anonymous writer *de Comoedia* ap. Meineke, i. 539, only recognise the Old and the New Comedy. (In the latter τὸ δὲ μέσον is an obvious insertion, as the next sentence shows: cf. Fielitz, *de Atticorum comoedia bipartita*, 1866.) (2) The Old Comedy had been originally divided (*e.g.* by Diomedes, 488–9, Keil; and Tzetzes, *de divers. Poet.* 81, 29) into two classes, that before and that after Cratinus. But the grammarians of Hadrian's time thought, as the New Comedy was so vastly more extensive both in time and writings than the Old, that it was the New Comedy which should be divided. (3) And again, there is no really decided distinction between the so-called Middle and New Comedy as there is between the Old and the later comedy, in the fact that the parabasis and the choral odes are wanting in the latter. (4) It can be shown that in point of subjects the line cannot be drawn: all subjects which are considered notes of the Middle and New Comedy are exhibited in writings of the Old, and what is considered as belonging peculiarly to the Old (viz. political attack) is found occasionally in the New.

As to the *occasions on which comedies were produced:* (1) the original festival at which dramas were exhibited was the *Lesser Dionysia*, or the Διονύσια τὰ κατ' ἄγρους, held from the 8th to 12th of Poseideon (Nov.–Dec.). This was held principally in the Piraeus, but also in the country parts of Attica, *e.g.* Collytus (Aeschin. *Tim.* § 157), Aixone, Eleusis, Thoricus (Schömann, *Gr. Alt.* ii.^{3} 492). After the establishment of the Lenaea and the Greater Dionysia, the plays produced at the Lesser Dionysia were in all likelihood ones which had been previously performed. They were produced without a chorus. (2) At the *Lenaea* (8–12 Gamelion = Dec.–Jan.), which was probably established by Pisistratus, tragedies were originally acted, but after the establishment of the Greater Dionysia it became the festival at which comedies especially were performed. The *Acharnenses*, *Equites*, *Vespae*, and *Ranae* were all produced at it, and comedies continued to be acted at the Lenaea down to the second century (*C. I. A.* ii. 977, fr. i. *m–n*). Tragedies began to be acted again at this festival in 464 B.C. (Bergk, *Rhein. Mus.* xxxiv. 302). It is not known for how many days the contest at the Lenaea lasted — in the third century probably two days, as that would suffice for two tragic trilogies (cf. *C. I. A.* ii. 972) and the preceding comic agon (A. Müller, *op. cit.* 327). Only new pieces were produced in early times. Strangers were not allowed to be present at the dramatic performances of the Lenaea (Ar. *Ach.* 504). The administration was in the hands of the Archon Basileus (Poll. viii. 90). (3) At the *Greater Dionysia* or Διονύσια τὰ ἐν ἄστει (8–14 Elaphebolion = Feb.–Mar.) established after the Persian Wars, both comedies and tragedies were acted, but the latter were certainly the principal feature (Law of Evagoras in Dem. *Mid.* 517, § 10; Schol. on *Ran.* 406). It is disputed whether dramatic performances were held on three of the days, viz. 11, 12, 13, as Sauppe, A. Mommsen, and A. Müller hold; on two (Schneider); or on six (Geppert). See A. Müller, *op. cit.* 320, note 2. That comedies were acted is quite certain, as may be proved from the famous inscription, *C. I. A.* ii. 971, frag. *a*: Ξενοκλείδης ἐχορήγει Μάγνης ἐδίδασκεν Τραγῳδῶν Περικλῆς Χολαργεὺς ἐχορήγει Αἴσχυλος ἐδίδασκεν (467 B.C.), where the mention of tragedies points to the Greater Dionysia: cf. also Arg. v. to *Nubes* (424 B.C.), Arg. i. to *Pax* (422), Arg. i. to *Aves* (415 B.C.), Schol. to *Ran.* 404, *C. I. A.* ii. 977, frag. *d–h*, which extend over the whole of the Old and New Comedy. For Roman times see Lucian, *Piscat.* 14. In the comic agon there were mostly three competitors (Arg. v. *Nubes;* Arg. i. *Pax;* Arg. i. *Aves*). In the fourth century and afterwards the number was increased to *five* (Arg. iv. to *Plutus* (389 B.C.); cf *C. I. A.* ii. 972 (354 B.C.), 975 (second century), for the number could be increased as the chorus had disappeared. The administration was in the hands of the ἄρχων ἐπώνυμος (Poll. viii. 89). There were no comedies performed at the Anthesteria (11–13 Anthesterion=Jan.–Feb.): for the law of the orator Lycurgus, τὸν περὶ τῶν κωμῳδῶν ἀγῶνα τοῖς Χύτροις ἐπιτελεῖν ἐφάμιλλον ἐν τῷ θεάτρῳ (Plut. *Vit. X. Or.* vii. 1, 10 =ii. 841 e), refers to the agon of comic *actors*, not to the performance of comedies. At all the festivals at which there were dramatic contests the comedies came on before the tragedies (Law of Evagoras, *ap.* Dem. *Mid.* 517, § 10; *C. I. A.* ii. 971). Some refer to *Aves*, 785, 789, to prove that tragedies were played in the morning and comedies in the evening; but perhaps ἐφ' ἡμᾶς only means "to us in the theatre," for tragedy and comedy formed one single and connected entertainment (Wecklein, *Philolog.* xxxi. 457).

After the age of the great tragedians it became customary to act one of their dramas at each tragic agon. Such is noted in the didascaliae as παλαιά (opp. to καινή). In the comic agon of 354 four *new* comedies are mentioned (*C. I. A.* ii. 972, l. 16); in 352 there is a tragedy of Euripides (*ib.* 973): but not till the second century (*C. I. A.* ii. 975, col. 3) do we find produced a comedy by an old master (Menander, Posidippus or Philemon, but of course not Aristophanes, whose works would have little point if acted in a different age to that of the individuals they satirised). We may thus perhaps infer that the custom of producing a play by an old master was later in the department of comedy than in that of tragedy.

The question has been often raised whether women were allowed to be present at comedies, as they certainly were at tragedies (Plat. *Gorg.* 502 D; *Legg.* ii. 658 C, vii. 817 C). The literature on both sides of the question is collected by A. Müller, *op. cit.* pp. 289, 290. The answer to be given is that they were allowed as far as the law was concerned. That they were present is expressly stated for the Old Comedy in *Pax*, 964 foll.; for the New Comedy in Alciphr. ii. 3, 10; and for Roman times by certain seats in the Dionysiac theatre being marked as belonging to priestesses (*C. I. A.* iii. 313, 315, &c.). Further, tragedy and comedy formed a single connected entertainment, so that permission to attend at tragedies would naturally imply permission to attend at comedies (Wecklein, *l. c.*). Yet though all women were allowed to be present, as far as the law was concerned, yet we may well conceive that many especially of the young women of respectability did not attend. That *all* women did not attend may in a measure be inferred from *Aves*, 793–796. Boys were certainly present (*Nub.* 537, 765; *Pax*, 56; Eupolis, frag. 244, ed. Kock; cf. Aristot. *Pol.* iv. 17, 9, τοὺς δὲ νεωτέρους οὔτε ἰάμβων οὔτε κωμῳδίας θεατὰς θετέον, πρὶν ἢ τὴν ἡλικίαν λάβωσιν ἐν ᾗ κατακλίσεως ("seat at table") ὑπάρξει κοινωνεῖν ἤδη, where it is no doubt intended to censure a prevailing custom. For details as to the public at dramatic performances, see THEATRUM.

The *costume* worn in the *Old Comedy* can in a great measure be ascertained as well from indications in the plays as from pictures found on vases of Southern Italy representing scenes from the φλύακες or comedies of that country, which were in many ways similar to the comedy at
Athens (O. Müller, *Arch.* § 390,

The *costume* worn in the *New Comedy* is still more the dress of ordinary life than that of the Old Comedy, being much less of the nature of caricature. The *σωμάτιον* is often found, but without the excessive padding of the Old Comedy. With men the *χιτὼν* is generally found long on freemen of all ages, the parasite, and some slaves: with soldiers and the majority of slaves it is short. The *ιμάτιον* was worn by men of all ranks, the lower part of it being thrown over the left shoulder. The *χλαμὺς* was worn by soldiers (Plaut. *Pseud*. iv. 7, 40). The mysterious *κοσύμβη* (Suid., Hesych. *s. v.*) appears to have been a sort of shawl wound round the body or thrown over the shoulders; and the *ἐγκόμβωμα* (Poll. iv. 119) or *ἐπίρρημα* a white pallium worn by slaves, so fastened that it no doubt left both hands free. The legs were generally covered with tights, seldom loose trousers. The *διπλῆ* of cooks (Poll. iv. 119) was an apron. A covering for the head is rarely found in representations. The soldier has a round flat hat (Baumeister, *Denkmäler*, fig. 910). As covering for the feet the actors wore the Embas, or else shoes which left the toes bare: stockings also are sometimes found (A. Müller, *op. cit*. 264, note 2; cf. Becker-Göll, *Charikles*, iii. 284). Women wore the *χιτὼν* reaching to the feet, which was often called *συμμετρία* (Poll. vii. 54), and as an over-covering the *ἱμάτιον*. Heiresses used to wear *ἱμάτια* with fringes (Poll. iv. 120). On their feet women wore either socci or sandals with thongs. As to the additional accessories of certain characters, we are told that old men carried a curved walking stick (*καμπύλη*, Poll. iv. 119); rustics (*ib.*) a straight staff (*λαγωβόλον*), wallet (*πήρα*), and leathern tunic (*διφθέρα*); procurers a straight stick called *ἄρεσκος* (*ib.* 120); the parasite a strigil (*στλεγγίς*) and an oil-pot (*λήκυθος*, *ib.*; cf. Plaut. *Stich*. i. 3, 75); and the soldier a sword (Plaut. *Mil*. i. 1, 5).

The different *colours* of the dress of the different stock-characters are much insisted on both by Pollux and Donatus (*de Comoedia et Tragoedia*). Thus old men wore white, younger men (*νεώτεροι*) red or dark purple (*φοινικὶς ἢ μελαμπόρφυρον ἱμάτιον*, Poll. iv. 119), youths (*νεανίσκοι*) purple (*ib.*), though Donatus (11, 21) says it was party-coloured (*discolor*). Parasites had black or grey (*φαιός*) cloaks (cf. *οἱ μελάνες ἡμεῖς*, Ath. vi. p. 237 b; Cic. *Caec*. 10, 27). The soldier has a *chlamys purpurea* (Donatus, 11, 24), slaves and artisans white *ἱμάτια* (Artemid. *Oneir*. ii. 3). Old women wore apple-green (*μηλίνη*) or dark blue (*ἀερίνη*) dresses, except priestesses, who wore white. Young women had white dresses. Procuresses had a purple band round their heads (Poll. iv. 119). There was a law at Athens that hetaerae should wear bright-coloured costume (*ἄνθινα φορεῖν*, Suidas, *s. v.*), and pictures show them with red and yellow chitons and white and yellow himatia. The soubrette (*ἅβρα περίκουρος*) wore a white chiton, and the hetaera's servant (*παράψηστον θεραπαινίδιον*) a saffron-coloured chiton (Poll. iv. 154). For the masks of comedy, see Persona. The most important work on the costume of the drama is Wieseler, *Theatergebäude und Denkmäler des Bühnenwesens* (1851), the main results of which are collected and criticised in the light of more recent researches by A. Müller, *Die griechischen Bühnenalterthümer* (1886), who is chiefly followed in the above sketch.

Besides the works cited in the text, the reader is referred to the article *Lustspiel* in Baumeister's *Denkmäler des klassischen Altertums*, and that on *Comoedia* in Daremberg and Saglio, *Dict. des Antiquités*. [C. P. M.] [L. C. P.]

2. Roman.—The account which is given by Livy (vii. 2) of the introduction of comedy at Rome is to the following effect. In the year B.C. 363, on the occasion of a severe pestilence, among other ceremonies for averting the anger of the deities, scenic entertainments were introduced from Etruria, where it would seem they were a familiar amusement. Tuscan players (*ludiones*), who were fetched from Etruria, exhibited a sort of pantomimic dance to the music of a flute, without any song accompanying their dance, and without regular dramatic gesticulation. The amusement became popular, and was imitated by the young Romans, who improved upon the original entertainment by uniting with it extemporaneous mutual raillery, composed in a rude irregular measure—a species of diversion which had been long known among the Romans at their agrarian festivals under the name of *Fescennina* [Fescennina]. They regulated their dances so as to express the sense of the words. This amusement became popular, and those who had an aptitude for this sort of representation set themselves to improve its form, supplanting the old Fescennine verses by compositions called *saturae*, which were written in a more regular measure (*impletae modis*) and set to the music of the flute (*descripto jam ad tibicinem cantu*), and delivered with appropriate gestures. Those who took part in these exhibitions were called *histriones*, *ister* being the Etruscan word which answered to the Latin *ludio* [Histrio]. After some years Livius introduced dramas with a regular plot, in which he acted himself. When acting had thus developed from mere amusement to a recognised profession, the young citizens, leaving the representation of plays to actors, began to bandy jests thrown into verse, which afterwards got the name of *exodia*, and were introduced into the Atellan plays. In this account Livy seems unquestionably mistaken in describing the *saturae* as due to the imitation of Etruscan actors: there is no reason to doubt that they were, as Virgil (*Georg*. ii. 385) and Horace (*Epist*. ii. 1, 139 ff.) represent them, connected in the earliest times with the rustic festivals in honour of the deities presiding over agriculture. But under the influence of the foreign *histriones* they doubtless took a more formal shape. Nor can he be right in suggesting a connexion between the Atellan farces and the *satura* with the drama thence developed. The drama arose from the combination of the text of the *saturae* with the music and dancing of the *histriones*. (Cf. Mommsen, *Hist*. iii. 455, note.)

Livius Andronicus, a native of Magna Graecia, in B.C. 240 introduced both tragedies and comedies, which were merely adaptations of Greek dramas. His popularity increasing, a building on the Aventine hill was assigned to him for his use, which served partly as a theatre, partly as a residence for a troop of players, for whom Livius wrote his pieces. Livius, as was common at that time, was himself an actor in his own pieces. His Latin adaptations of Greek plays, though they had no chorus, were interspersed with *cantica*, which were more lyrical in their metrical form, and more impassioned in their tone than the ordinary dialogue. In the musical recitation of these Livius seems to have been very successful, and was frequently encored. The exertion being too much for his voice, he introduced in these *cantica* the practice of placing a slave beside the flute-player to recite or chant the words, while he himself went through the appropriate gesticulation. This became the usual practice from that time, so that in the cautica the histriones did nothing but gesticulate, the only parts where they used their voice being the *diverbia*. For the distinction between the *cantica* and the *diverbia*, see CANTICA.

The first imitator of the dramatic works of Livius Andronicus was Cn. Naevius, a native of Campania. He composed both tragedies and comedies, which were either translations or imitations of those of Greek writers. In comedy his models seem to have been the writers of the Old Comedy. (*Dict. Biogr.*, art. *Naevius.*) The most distinguished successors of Naevius were Plautus (*ib.*, art. *Plautus*) and Terence (*ib.*, art. *Terentius*), whose materials were drawn chiefly from Menander, Diphilus, Philemon, and Apollodorus. The comedy of the Romans was throughout but an imitation of that of the Greeks, and chiefly of the New Comedy. Where the characters were ostensibly Greek, and the scene laid in Athens or some other Greek town, the comedies were termed *palliatae*. All the comedies of Terence and Plautus belong to this class. When the story and characters were Roman, the plays were called *togatae*, because the costume was the toga. These *fabulae togatae* represented the life of the lower classes in Rome, and were coarser in tone than the *palliatae*. One kind of these, called *trabeatae*, representing the knights, was of late introduction and little importance. (Diomed, iii. p. 489, K.) In the *comoediae palliatae*, the costume of the ordinary actors was the Greek pallium. There was a species of burlesque travesty of tragic subjects, named from the poet who introduced that style *Rhinthonica*. The mimes are sometimes classed with the Latin comedies. (Hermann, *de Fabula togata:* Opusc. vol. v. p. 254, &c.) Respecting them, the reader is referred to the article MIMUS. The mimes differed from the comedies in little more than the predominance of the mimic representation over the dialogue, which was only interspersed in various parts of the representation.

Latin comedies had no chorus, any more than the dramas of the New Comedy, of which they were for the most part imitations. Like them, too, they were introduced by a prologue, which answered some of the purposes of the parabasis of the Old Comedy, bespeaking the good will of the spectators, and defending the poet against his rivals and enemies. It also communicated so much information as was necessary to understand the story of the play. The prologue was commonly spoken by one of the players (who did not appear in the first act), or by the manager of the troop. Occasionally the speaker of it assumed a separate mask and costume for the occasion (Plaut
126; Terent. *Hecyr.* prol. ii. 1).

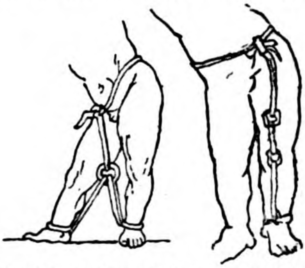
COMPERENDINA'TIO. [Judex.]

COMPES (**πέδη**), a fetter or shackle for the ankles. These were sometimes so constructed as to deprive the prisoner almost or entirely of the power of walking (Aesch. *Prom.* 6), the shackles being attached by means of a chain to a wall or post, or joined together by a small plate of metal. A variety in more common use left the fettered person free to work, but impeded his flight, as is seen in the following illustrations, the first of a Cupid from a gem, the second from a statue in the Villa Borghese (Claud. *Eutrop.* ii. prol. 3). Such fetters, the effect of which was simply to interfere with the free action of the legs, were especially worn by the slaves who cultivated so large a portion of the soil of Italy (Cato, *R. R.* 57; Colum. i. 6; Plin. *H. N.* xviii. § 21; Ov. *ex Pont.* i. 6, 31; Juv. xi. 80; cf. Athen. p. 272 e), as well as those to whom heavier tasks, such as quarrying, were assigned by way of punishment (Plaut. *Capt.* iii. 5, 76; v. 1, 24). Sometimes the fetters were worn round the calf (Plaut. *Pseud.* iv. 7, 80). Statues of Saturn were fitted with compedes, which were taken off in the month of December (Stat. *Silv.* i. 6, 4). **Πέδαι** were also used for hobbling horses (Hom. *Il.* xiii. 36).



Compes. (From ancient gem and statue.)

Compes sometimes denotes the ornamental anklet worn by women (Plin. *H. N.* xxxiii. § 152; Petron. *Sat.* 67). [Periscelis.] [J. H. F.]

COMPETI'TOR. [Ambitus.]

COM'PITA. [Compitalia.]

COMPITA'LIA, also called **LUDI COMPITALI'CII**, a festival celebrated once a year in honour of the two Lares compitales, to whom sacrifices were offered at the places where two or more ways met (*compita*, Varro, *de Ling. Lat.* vi. 25, ed. Müller; Festus, *s. v.*). Dionysius (iv. 14) similarly ascribes its origin to Servius Tullius, and describes the festival as it was celebrated in his time. He relates that the sacrifices consisted of honey-cakes (**πέλανοι**), which were presented by the inhabitants of each house, and that the persons who assisted as ministering servants at the festival were not freemen, but slaves, because the Lares took pleasure in the service of slaves: he further adds that the Compitalia were celebrated a few days after the Saturnalia with great splendour, and that the slaves on this occasion had full liberty given them to do what they pleased. We are told by Macrobius (*Saturn.* i. 7, 34) that the celebration of the Compitalia was restored by Tarquinius

Superbus, who sacrificed boys to Mania, the mother of the Lares; but this practice was changed after the expulsion of the Tarquins, and the heads of garlic and poppies offered instead of human heads.

The persons who presided over the festival were the *Magistri vicorum* (Liv. xxxiv. 7, 2; Madvig, *Em. Liv.* p. 497), who were on that occasion allowed to wear the praetexta (Ascon. *ad* Cic. *in Pis.* p. 7, ed. Orelli). They were aided by *collegia ex servitiorum faece constituta* (Asconius, *l. c.*). Public games were added at some time during the republican period to this festival, but they were suppressed by command of the senate in B.C. 64; and it was one of the charges brought forward by Cicero against L. Piso that he allowed them to be celebrated by Clodius in his consulship, B.C. 58 (Cic. *in Pis.* 4, 8; Ascon. *l. c.*). But that the festival itself still continued to be observed, though the games were abolished, is evident from Cicero (*ad Att.* iii. 3). When Julius Caesar dissolved most of the *collegia* (Mommsen, *Hist.* iv. 503), the Compitalia necessarily fell into disuse. Augustus restored the festival on an entirely new basis, not reviving the *collegia*, but assigning the charge of it to a newly constituted set of *magistri vicorum.* These were four in number, for each of the 265 *vici* included in his new division of the city. The first set entered upon office on Aug. 1, B.C. 7. To the two Lares compitales was now added the *genius Augusti* (Ovid, *Fast.* v. 145; Hor. *Carm.* iv. 5, 39, *Laribus tuum miscet numen*), and the festival was observed twice in the year, on May 1 and Aug. 1. At an earlier time the Compitalia belonged to the *feriae conceptivae;* that is, festivals which were celebrated on days appointed annually by the magistrates or priests. The day on which this festival was celebrated appears to have been always in the winter. Dionysius relates (iv. 14), as we have already said, that it was celebrated a few days after the Saturnalia, and Cicero (*in Pison.* iv.) that it fell on the Kalends of January; but in one of his letters to Atticus (vii. 7) he speaks of it as falling on the fourth before the nones of January. The exact words with which the festival was announced are preserved by Macrobius (*Saturn.* i. 4, 27) and Aulus Gellius (x. 24). [A. S. W.]

COMPLU'VIUM. [DOMUS.]

COMPROMISSUM. [JUDEX; RECEPTA ACTIO.]

COMUS (κῶμος). [CHORUS; COMOEDIA.]

CONCHA (κόγχη, κόγχος), a mussel- or cockle-shell, was the name of a vessel made in the form of such a shell. These vessels were used for various purposes, and were of different sizes. Thus they were used as salt-cellars (*concha salis puri*, Hor. *Sat.* i. 3, 14), for holding perfumes and unguents (Hor. *Carm.* ii. 7, 23; Juv. vi. 304, 419, with Schol. *ad* 419), oil (Cat. *R. R.* 13, 3; Colum. xii. 52, § 8), colours for painters (Dig. 33, tit. 7, § 17), &c. Vessels of a similar shape, but of a larger size, were used for washing, and for other purposes (Paul. *Sent.* iii. 6, 56 and 83; *conchas, in quibus pedes lavant*, Schol. *ad* Juv. iii. 277, x. 64). We find vessels in the shape of shells depicted in works of art. Two examples are given by Daremberg and Saglio (s. v. *Concha*). *Concha* or *conchula* (*concula*) was also the name of a liquid measure, of which there were two sizes. The smaller
was half the *cyathus* (=·0412 of
lish); the larger, which was the
oxybaphum, was three times the for
of a pint). (Hussey, pp. 207, 209; W
Hultsch, *Metrol.* p. 91.)

CONCILIA'BULUM. [COLON

CONCILIA'RII. [ASSESSOR.]

CON'CIO. [Contio.]

CONCLA'VE, a separate room in a house, or a series of rooms, which might be locked with the same key ("conclavia . . . quae una clave clauduntur," Fest. p. 38, 9 M.; Ter. *Heaut.* v. 1, 29; Cic. *Rosc. Am.* 23, 64, *de Orat.* ii. 86, 353; Hor. *Sat.* ii. 6, 113; Vitruv. vi. 3, 8.) [W. S.]

CONCUBI'NA (*παλλακή, παλλακίς*).

I. Greek. The *παλλακή* occupied at Athens a kind of middle rank between the wife (cf. Lys. i. 31) and the *ἑταίρα*. The distinction between the *ἑταίρα, παλλακή*, and legal wife, is accurately described in [Dem.] *c. Neaer.* § 122, p. 1386, *τὰς μὲν γὰρ ἑταίρας ἡδονῆς ἕνεκ' ἔχομεν, τὰς δὲ παλλακὰς τῆς καθ' ἡμέραν θεραπείας τοῦ σώματος, τὰς δὲ γυναῖκας τοῦ παιδοποιεῖσθαι γνησίως καὶ τῶν ἔνδον φύλακα πιστὴν ἔχειν.* Thus Antiphon (i. § 17 ff.) speaks of the *παλλακή* of Philoneos as following him to the sacrifice, and also waiting upon him and his guest at table. If her person were violated by force, the same penalty was exigible from the ravisher as if the offence had been committed upon an Attic matron; and a man surprised by the quasi-husband in the act of criminal intercourse with his *παλλακή* might be slain by him on the spot, as in the parallel case (Dem. *in Aristocr.* § 55, p. 637, *ἢ ἐπὶ δάμαρτι . . . ἢ ἐπὶ παλλακῇ ἣν ἂν ἐπ' ἐλευθέροις παισὶν ἔχῃ*, and Lys. i. 31; cf. also the decree said to have been passed during the time of the Peloponnesian War, *γαμεῖν μὲν ἀστὴν μίαν, παιδοποιεῖσθαι δὲ καὶ ἐξ ἑτέρας*, Diog. Laert. ii. 26. See Athen. xiii. 556 a, and Gell. *Noct. Attic.* xv. 20). The concubine of Philoneos was a slave woman (after his death she undergoes servile punishment, Antiph. i. 20); but from Isaeus (iii. 39) we learn that also Athenian women, probably of the poorer families, became sometimes concubines, and that their *κύριος* stipulated a sum of money to be paid to the woman in case her quasi-husband died or dismissed her. From this it would appear that a kind of *concubinatus* was recognised by law, and scarcely proscribed by public opinion (Philoneos is called *ἀνὴρ καλός τε κἀγαθός*, Antiph. i. 14: see, however, Isae. vi. 18; Dem. *c. Boeot. de Dot.* § 5, p. 1009, etc.); but Buermann (*Supplem. Jahrb. f. cl. Phil.* 1878, p. 569 ff.) goes too far in thinking that such a *παλλακή* was duly betrothed by her *κύριος* (the *δάμαρ*, in addition to being betrothed, was introduced to the phrateres of her husband [Gamelia]), and that the children of a *παλλακή* of civic birth were *γνήσιοι*. He draws these conclusions from the case of Mantias and Plangon (Dem. *in Boeot. de nom.* and *de dot.*), the case of Euctemon and the sister of Democrates (Isae. vi. 22 ff.), and the reports of Socrates' bigamy. Mantias was compelled by Plangon's oath (that he was the father of her children, *de nom.* § 4, p. 995: cf. Arist. *Rhetor.* ii. 23, 11, p. 1398 B) to introduce forthwith her two sons into his phratry. On this occasion he had to swear that the children were *ἐξ ἀστῆς καὶ ἐγγυητῆς γυναικός*: hence, B. concludes, Plangon must have been betrothed to him. Lipsius (*Att. Proc.* p. 543, n. 166; see also Gilbert in *Jahrb. f. cl. Phil.* 1887, p. 24), however, shows that this oath was not necessary in all the phratries; and Philippi (*Jahrb. f. cl. Phil.* 1879, p. 417) points out that the distinction between *ἐγγυᾶσθαι* and *γαμεῖν*, as indicated by B., is not borne out by the use made of these words by the orators (cf. Isae. vi. 24, *ἐγάμει*, in what B. considers an instance of *concubinatus; ἐπέγημε*, Andoc. i. 128, 124; and especially Isae. iii. 39, where *ἐπὶ παλλακίᾳ διδόναι* is contrasted with *ἐγγυᾶν*). The connexion of Mantias and Plangon was probably of a different nature; it would seem that Mantias married her (her son Boeotus claimed the name of the paternal grandfather as being the eldest grandchild, *de nom.* § 27, p. 1002), but divorced her (hence her sons returned with her to the *φυλὴ Ἱπποθωντίς*, *de nom.* § 23, p. 1001), before marrying the daughter of Polyaratus (*de dot.* § 6, p. 1009), without, however, breaking off intercourse with her (*de dot.* § 27, p. 1016). If one of the characteristics of the legitimate *concubinatus* had been, as B. says, that no dowry was brought, and if Plangon had been a *παλλακή*, Mantitheus would no doubt have met Boeotus' claim to his mother's dowry in a different way from what he does (*de dot.* § 20 foll., p. 1014). As regards Euctemon, he too, as Luzac suggests (*Lect. Attic.* p. 59 ff.; cf. Schoemann, *ad* Isae. p. 334), divorced his wife (for a time, § 40) and threatened to marry the sister of Democrates (§§ 22, 25). Luzac likewise exposes the fallacy of the view entertained by several writers of the Peripatetic school, that Socrates had two wives at once;* and Zeller (*Socr. and the Socr. Schools*, transl. by Reichel, p. 57 n.) accounts thus for the origin of the story: "We gather from the remains of the treatise *περὶ εὐγενείας*, that this dialogue was concerned with the question, whether nobility belonged to those whose parents were virtuous. Now none were more celebrated for their spotless virtue and their voluntary poverty than Aristeides and Socrates. Accordingly the writer brought the two into connexion. Socrates was made to marry a daughter of Aristeides; and since Xanthippe was known to be his wife, Myrto was made to be his second wife and the mother of his younger children. Others, however, remembered that Xanthippe survived her husband. They thought it unlikely that Socrates should be the son-in-law of a man dead before he was born, and they tried to surmount these difficulties in various ways. As regards the first difficulty, either it was maintained that Myrto was his second wife and that the younger children were hers, in which case it was necessary to place her side by side with Xanthippe, as Hieronymus actually did, and invented a decree of the people to make it probable; or to avoid romance, this supposition was given up, and Myrto was made to be his first wife, who then can have borne him no children, since Lamprocles, his eldest son, according to Xenophon, was a child of Xanthippe. The second difficulty might be got over either by making Myrto a grand-daughter of Aristeides, or by making her father to be Aristeides the Just. The former is the usual one; the latter is the

---

* The Spartan king Anaxandridas had two wives: cf. Herod. v. 39 foll. (*γυναῖκας ἔχων δύο διξὰς ἱστίας οἴκεε, ποιέων οὐδαμῶς Σπαρτιητικά*) and Pausan. iii. 3, 9; see also Aelian, *V. H.* 13, 10, *ἐν μιᾷ ἡμέρᾳ δύο γυναῖκας ἠγάγετο Διονύσιος.*

view of Athenaeus." Buermann interprets *ἐλεύθερος* in the law (Dem. *in Aristocr.* § 55, p. 637) to mean *γνήσιος*. This is scarcely correct when we consider [Dem.] *c. Neaer.* § 118, p. 1385; the speaker meets what might be urged in defence: "They cannot say that Neaera is a woman of civic birth, for it is in evidence that she is a *ἑταίρα*, and has been the slave of Nicarete; perhaps they will pretend that she is not his *γυνή*, but that he keeps her as a *παλλακή*. This cannot be; for her sons, who have been introduced by Stephanus to his phrateres, and her daughter, who has been given in marriage to an Athenian citizen, clearly prove that Stephanus lived with her as his wife." Hence it follows that the children of a concubine were not admitted to the phratry of the father; they were not *γνήσιοι*, for "wives are kept *τοῦ παιδοποιεῖσθαι γνησίως ἕνεκα*" (§ 122, p. 1386; cf. Luc. *Tim.* 17, *ἐπ' ἀρότῳ παίδων γνησίων*), but they were *ἐλεύθεροι*, *i.e.* possessed civic rights, and by an act of legitimation (*ποιεῖσθαι*, Andoc. i. 124; Dem. *in Boeot. de nom.* § 29, p. 1003) the father could procure for them all the rights and privileges of children born in wedlock. If the mother was not an Athenian, the father might not adopt this course (*Att. Proc.* p. 529 ff.). [J. S. M.] [H. H.]

II. Roman. According to an old definition, an unmarried woman who cohabited with a man was originally called *pellex* (Paul. Diac. p. 222; Gell. iv. 3), but afterwards by the more decent appellation of *concubina* (Dig. 50, 16, 144). *Concubinatus* is cohabitation other than marriage (*i.e.* without *affectio maritalis*) between free persons who are already unmarried, or between an unmarried free man and an *ancilla*. In the older times this was viewed as an offence deserving punishment (Livy, x. 31, xxv. 2); but when the possibility of a lasting affection between persons who had not *connubium* came to be recognised, the cohabitation of an unmarried man with his *liberta* or *ancilla* (Plautus, *Epid.* iii. 4, 29, 30; *Poen.* prol. 102) was regarded without censure. In Cicero's time (*de Orat.* i. 40, § 183) the name of *concubina* would have applied to a woman who cohabited with a man who had not divorced his wife; but this was not considered lawful concubinage in after-times. The Lex Julia de adulteriis of Augustus imposed severe penalties on *adulterium*, *incestus* (Gaius, i. 64; *Inst.* i. 10, 12), and *stuprum* (which is defined, *Inst.* iv. 18, 4, as "cum quis sine vi vel virginem vel viduam honeste viventem stupraverit:" cf. Dig. 25, 7, 1, 1; 48, 5, 12, 13); but by the Lex Julia and Papia Poppaea *concubinatus* was legalised ("per leges nomen assumpsit," Dig. 25, 3, 1) and exempted from the penal provisions of the earlier statute (Dig. 25, 7, 3, 1), though an *honesta femina* who wished to become a *concubina* was not dispensed from them unless she made an express declaration of her intention or testatio (Dig. ib. 3, pr.). But a man who already had an *uxor* could not have a *concubina* at the same time (Paul *Sent. rec.* ii. 20; Dig. 50, 16, 144), nor apparently could a man have more than one *concubina* at a time; and widowers who already had children, and did not wish to contract another legal marriage, took a *concubina*, as we see in the case of Vespasian (Suet. *Vesp.* 3), Antoninus Pius, and M. Aurelius.

Concubinatus differed from lawful
three especial respects: (1) In th

CONFARREA'TIO. [Matrim

CONFES'SIO. The ordinary
civil action was summarily interru
defendant, while the case was before
(*in jure*), made an acknowledgment (
the plaintiff's claim instead of d
(*infitiari*). From an early time a
thus made was considered to have
effect as judgment (*confessus pro ju*

the defendant, by condemning himself, dispensed with the necessity of a trial (*judicium*), and gave the plaintiff a right to execution. This rule is frequently asserted and referred to in our sources.

It was, as we are informed by Gellius (*Noct. Att.* xx. 1), a provision of the law of the XII. Tables that those who confessed money debts (*aeris confessi*) and also judgment debtors (*judicati*) should be liable to personal execution by *manus injectio* (cf. Muirhead, *Hist. Intr. to the Law of Rome*, 203–205). When a claim was of uncertain value and the defendant confessed to it, or was adjudged liable, execution could not follow at once, because an ascertained money debt (*certa pecunia*) was necessary for execution. Hence under the *legis actio* procedure such a confession or judgment was supplemented by a judicial proceeding for the assessment of damages (*litis aestimatio*).

The principle of the formulary procedure, which required that a condemnation should be pecuniary in all cases, made it difficult to give the same effect to the confession of an uncertain claim as to condemnation. So the principle that confession is equivalent to judgment seems at first only to have been applicable in this procedure, in case of the acknowledgment of a money debt. If a defendant admitted a claim of uncertain value, pressure was put upon him to make him further acknowledge a liquidated debt (Dig. 42, 2, pr. 1). But in course of time full effect was given to *confessio* in all cases by means of a *formula arbitraria*, which was called in some cases *actio confessoria* (Dig. 9, 2, 23, § 11). This change, which may have begun as a practice of procedure, was fully recognised by an *oratio divi Marci* (Dig. 42, 1, 56; 2, 6, § 2). In the *actiones quae infitiando crescunt*, such as the Aquilian action and the action on account of a *legatum per damnationem*, a defendant who did not confess was condemned to pay double damages if he lost the action. The formula for the assessment of damages may have been first introduced in respect to these actions. A *confessio* had to be made before the praetor in the presence of the plaintiff; impossibility or mistake made confession nugatory. The silence of the defendant was treated as equivalent to admission ("in jure nihil respondere," *Lex Rubria*, c. 21, 22). *Confessio* when made at a trial in a civil case before a judex (*in judicio*) or out of court did not do away with the necessity of judgment, but was only evidence against the defendant. Some writers maintain that confession in criminal cases had also, under certain circumstances, the same effect as *confessio in jure* in an action; but the better opinion seems to be that confession of a crime at whatever stage in a trial it occurred was only evidence of guilt, though such as would in most cases be conclusive. (Cic. *in Verr.* iii. 56, § 130; Sall. *Cat.* 52; Suet. *Aug.* 33.)

The main object of the inquisitorial criminal procedure which grew up under the empire was to discover either by means of torture, by interrogatories or otherwise, whether the defendant could be induced to confess the charge made against him. (*Lex Rubria*, c. 21, 22; Paul. v. 5 a, §§ 2–5; Dig. 42, 2; Cod. Just. vii. 59; Savigny, *System*, vii. §§ 303, &c.; Keller, *Civilprocess*, § 63; Bethmann-Hollweg, *Civilprocess*, § 105; G. Demelius, *Die Confessio in röm. Civilprocess;* Geib, *De Confessionis effectu*, and *Röm. Crim. Proc.* pp. 137, 328, 612.) [E. A. W.]

CONFESSO'RIA ACTIO is the remedy of a person who has a right of SERVITUS (*e.g.* a right of way or a usufruct), in the exercise or enjoyment of which he is hindered: the action is Real (Dig. 8, 5, 2, pr.), and is a *vindicatio* of the servitude, lying against any one who infringes his right, whether it be the owner of the property over which that right extends, or a third person (Dig. 7, 6, 5, 1). Its object is to establish the existence of the servitude, removal of any obstacles placed in the way of its enjoyment, damages for actual hindrance (Dig. 8, 5, 4, 2, &c.), and a *cautio de non amplius turbando*, security against further disturbance by the defendant (Dig. 7, 6, 5, 6). By means of a fiction (after the analogy of the *actio Publiciana*) the *actio confessoria* could be brought in respect of all servitudes created in the plaintiff's favour by the bonâ-fide possessor of property, and in respect of *praedial* servitudes by the bonâ-fide possessor of the *praedium dominans;* in its *utilis* form it could be employed for the establishment of praedial servitudes by the *emphyteuta*, *superficiarius*, and pledgee, no less than by the *dominus* (Dig. 8, 1, 16).

If a person claimed a servitude over property of another, the latter could take the first step, and bring a *negatoria in rem actio*, asserting the freedom of the property from the alleged right, the objects of which (*mutatis mutandis*) were much the same as those of the *actio confessoria.* (Dig. 7, 6; 8, 5; Gaius, iv. 3; *Inst.* iv. 6, 2; Vangerow, *Pandekten*, §§ 353, 354.) [J. B. M.]

CONFISCA'TIO. [PUBLICATIO; PROSCRIPTIO.]

CONFU'SIO. Under this head it will be convenient to group a number of the "naturales rerum singularum adquisitiones," or titles to property based on the *jus gentium* or *naturale*, which the Roman lawyers (e.g. *Inst.* ii. 1, 21 *sq.*; Dig. 41, 1, 7) usually treat in connexion with one another.

Confusio is the mixing together of things of the same kind, so that they become inseparable: *e.g.* by pouring together liquids (for instance, wines, *Inst.* ii. 1, 27); mixing grain (Dig. 6, 1, 5, pr.); fusing metals together (Dig. ib. 4), or combining them in the forge (*ferruminatio*, Dig. ib. 23, 5). If the things had belonged to different owners, and the mixing had been accidental or made by mutual consent, they became joint owners by the new title of *confusio*. *Commixtio* is a non-classical term derived from *commiscere*, which occurs less frequently than *confundere* in the juristic texts: by the jurists themselves the two are not clearly distinguished (Dig. 41, 1, 7, 8; 6, 1, 3, 2 and 5), but *commixtio* is used by the moderns chiefly to denote the mixture of solid things, such as grain. Where the mixture was accidental and the two portions were separable, each of the owners retained his former property, and might separate it from the mass; but where it was made by consent, and in all cases where separation was impossible, they became joint owners by a new title; and the same held good if the mixing was done in good faith by one only without the other's consent. It is a case of *commixtio*, when a man's money is paid without his knowledge or consent, and then becomes so mixed with other money of the payee that it cannot be recognised and distinguished: otherwise it remained the property of the person to whom it originally belonged (Dig. 46, 3, 78).

Confusio is also used in an altogether different sense to express the union in one and the same person of a right and its corresponding duty, and the consequent extinction of both (merger): *e.g.* when a creditor becomes his debtor's heir or *vice versâ*: "confusione perinde extinguitur obligatio ac solutione" (Dig. 34, 3, 21, 1): but if the creditor becomes heir to his debtor's surety, or *vice versâ*, the accessory obligation of suretyship is extinguished, but not the principal debt (Dig. 46, 3, 43). So too in the case of servitudes and other *jura in re aliena*; if the person who has the right becomes *dominus* of the property over which it exists, the right is extinguished: "si fructuarius proprietatem assecutus fuerit, desinit usus fructus ad eum pertinere propter confusionem" (Dig. 7, 9, 4; cf. *Inst.* ii. 4, 3). For praedial servitudes extinguished in this manner, see Dig. 8, 6, 1; 8, 2, 30, pr.

Specificatio is a non-classical term employed to denote the making of a new "species" or substance out of another man's material: *e.g.* wine out of his grapes, oil out of his olives, a ship or bench out of his timber (Gaius, ii. 29; *Inst.* ii. 1, 25). By the law as settled by Justinian the *nova species* belonged to him who made it, provided it could not be restored to its pristine character, and that he was acting on his own behalf (*suo nomine*) and (it would seem from Dig. 10, 4, 12, 3) in good faith; though of course he was bound to pay for the materials. If it could be restored to its original character, the ownership was not changed, though the *specificator*, if he had acted in good faith, had a right to retain the thing till he was paid the value of his labour. If the materials out of which the *nova species* was made belonged partly to the maker, partly to another person, the new product belonged (subject to the same conditions) to the former; but if it was made by consent of the owners of the diverse materials, or accidentally (as mead by the chance mixing of wine and honey), it belonged to them jointly (*Inst.* ii. 1, 27. Cf. Seneca, *Ep.* 65; Pliny, *H. N.* xxxiv. § 5 ff.; Ovid, *Met.* ii. 5; Martial, viii. 51, 7).

Where two things belonging to different persons became united or combined in the way of principal and accessory so as not to be separable without injury to one or both, the owner of the principal thing became owner of the accessory (*accessio*). Instances of this are the building by one man with his own bricks or timber on another man's land, for "superficies solo cedit" (Gaius, ii. 73; *Inst.* ii. 1, 29); the planting of shrubs and sowing of seed, when they have once taken root, in another's soil (Gaius, ii. 74, 75; *Inst.* ii. 1, 31, 32); the weaving by a man into his coat of another's purple (*Inst.* ii. 1, 26); writing on another man's paper or parchment (Gaius, ii. 77; *Inst.* ii. 1, 33): though by an anomalous rule if one man painted a picture on another's canvas the canvas and picture both belonged to the painter (Gaius, ii. 78; *Inst.* ii. 1, 34), and similarly, if a piece of land were torn away by a stream from one man's land and became attached to that of another, it became the property of the latter so soon as
complete (*Inst.* ii. 1, 21): but th

Cato tells us that he was wont to give to each of his slaves a congius of wine at the Saturnalia and Compitalia (*de R. R.* 57). Pliny relates, among other examples of hard drinking, that Novellius Torquatus of Mediolanum obtained a cognomen (*tricongius*, a nine-bottle man) by drinking three congii of wine at one sitting (*H. N.* xiv. § 144).

CONSENSUS. [Obligationes.]

CONSILIA'RII. [Consilium.]

CONSI'LIUM, a select assembly of official persons who *sat* together (root *sed*); thus distinguished from *concilium*, a public meeting of unofficial persons *called* together (*calare*). The principle of Roman law, especially in early times, was to entrust large powers to individuals rather than to majorities; in other words, trial by a judge was the rule, trial by jury the exception. This principle was mitigated in practice by requiring the person responsible for the decision, whether in public or private matters, to call in the aid of impartial and intelligent advisers (*consiliarii*). Family councils were in use among the Romans, as they still are in Latin countries, and the patria potestas was exercised subject to their control. According to tradition, Sp. Cassius, the agrarian reformer, was put to death by his father, *adhibito propinquorum et amicorum consilio* (Val. Max. v. 8, § 2). L. Gellius Publicola, the venerable friend of Cicero (*Brut.* 47, § 174), having to try his son on a charge nearly affecting himself, called in almost the whole senate as his consilium, and in consequence of their opinion declared him innocent (Val. Max. v. 9, § 1). The imperium of the kings and chief magistrates, in itself primarily an extension of the patria potestas, was subject to a like restraint. The tyranny of Superbus was shown in his trying capital charges *sine consiliis* (Liv. i. 49, § 4). The senate was the natural consilium of the kings and afterwards of the consuls. Cicero as consul could not think of acting in a time of public danger without his *consilium publicum*, the senate (*in Cat.* iii. 3, § 7). The senate-house burnt at the funeral of Clodius is "templum consilii publici" (*pro Mil.* 33, § 90). There are, however, examples of consuls choosing for themselves a consilium for a particular question (Ascon. *in Or. in Tog. Cand.* p. 89; Mommsen, *Staatsr.* i.^{2} p. 297 n.). Other magistrates, as for instance the aediles (Juv. iii. 161), likewise summoned a consilium at their own discretion.

2. *Consilium of Provincial Governors.* In Rome itself the right of appeal (*provocatio*) enabled the consuls and praetors to act in many cases without a consilium: in the provinces the consilium was almost the only check on the arbitrary power of the governor, and the omission to call it in, as we see from the Verrine orations, of itself afforded a strong presumption of mis-

government. It was consequently expected that every important decision of a proconsul or propraetor should be "de consilii sententia" (Cic. *de Leg. Agr.* ii. 19, § 51). [For this formula the abbreviation D. C. S. was used, Cic. *Verr.* v. 21, § 53; the rarer phrase, *ex cons. sent.*, occurs Liv. xlv. 29.] The conduct of Verres on the occasion of one of his most iniquitous judgments throws a clear light on the authority and position of the consilium of a provincial governor (Cic. *Verr.* ii. 29, § 71). In order to get rid of M. Petilius, the leading member of it, whose integrity he feared, he tells him to go and attend to his function of *judex* in a *res privata.* Petilius, who wanted his friends to act as his own consilium in this arbitration, declined to act while Verres required their services on his *consilium publicum.* Verres "kindly and liberally" says he will not detain any who wish to go and act with Petilius; they all go; and he is left with his *cohors* or "personal staff" (cf. Hor. *Sat.* i. 7, 23). He then, in spite of the protests of the defendant's counsel, pronounces a hasty decision against him, and rushes from the judgment seat in fear lest Petilius and the other members of his regular consilium should return in time to stop the iniquity. We see that the *consilium publicum*, headed by a man like Petilius, of equestrian rank, could neither be intimidated nor ignored, even by a hardened oppressor like Verres; that it could only be got out of the way by a stratagem; but that, in its absence, Verres could turn his *cohors* (which Cicero calls *nequissima*) into a consilium for the nonce, and colourably declare that he had acted on the best advice he could get. We see, further, that the office of a consilium extended to a *judicium privatum:* a *judex* in a *res privata* was often assisted by the advice of his friends, though he gave the judgment himself. Long calls this a "quasi consilium" (*ad* Cic. *l. c.*).

This consilium must be carefully distinguished from the *tres arbitri* and the *recuperatores* so often mentioned in private suits [JUDEX]; and from the *assessores* or professional experts [ASSESSOR]. To these the powers of the magistrate were delegated, and the decision of the majority was binding: the consilium, on the other hand, was designed as a safeguard against error and partiality on the part of the magistrate, but his decision was his own. As Mommsen puts it, the principle of the consilium and the principle of decision by a majority were mutually exclusive both in theory and practice (*l. c.* p. 295). This distinction is the more necessary, as the body of the judices is also sometimes loosely called consilium (*Div. in Caecil.* 4, § 13; *Act.* i. *in Verr.* 6, § 17).

The consilium of a provincial governor was formed partly from the principal persons in his suite, partly from the leading Roman citizens on the spot; and it is probable that all the latter of equestrian rank had a right to sit, and that no one was admitted who was not rated to the first class in the census (Mommsen, *l. c.* p. 303). The relation of a governor to his consilium was bound, according to Cicero, to be a friendly and confidential one; he vehemently denounces one Decianus, who had turned against Flaccus after having stood in this relation to him (*pro Flacc.* 32, § 78; 33, § 81). Here, however, Cicero is almost certainly defending a bad case; it may
be doubted whether he would have
indignant at similar conduct on the
consilium of Verres.

s of the consistorium seem to have
han those of the earlier *consilium*,
ed as a council for advising the

emperor not only in matters relating to legal administration, but in other matters of state. According to Haubold, the *consistorium principis* was the administrative council of the state, and should be distinguished from the *auditorium principis*—the emperor's supreme court of justice; but Bethmann-Hollweg has shown that this view is erroneous, more especially because we find the word *consistorium* used for the council in its judicial as well as in its administrative aspect. Thus, in *Nov.* 23, cc. 2, 3, the terms *consistorium* and *auditorium* are used interchangeably. For this and other reasons it would seem that the consistorium was not exclusively a state council, as Haubold supposes, but also a supreme court of justice—a body analogous to the Privy Council in this country, as it was once constituted. (Mommsen, *Staatsr.* ii.^{2} p. 948; Bethmann-Hollweg, *Civilprocess*, iii. 17, 94; Haubold, *De Consistorio Principum;* Rein, *ap.* Pauly *s. v.*) [CONSILIUM; AUDITORIUM.] [E. A. W.]

CONSTITU'TA PECU'NIA. [PECUNIA.]

CONSTITUTIO'NES are the enactments of the Roman emperors, in the exercise of their legislative authority, which (Gaius, i. 5) "legis vicem obtinent," have statutory force, "cum ipse imperator per legem imperium accipiat:" so, too, Justinian says (*Inst.* i. 2, 6) that they are binding because "populus ei et in eum omne imperium suum et potestatem concessit." They comprise the following varieties:—

i. *Orationes*, by which, in the earlier imperial period, the emperor submitted a "bill" to the senate (*Inst.* ii. 17, 7; Dig. 2, 12, 1, 1, &c.); they were regarded as law apart from the senatusconsulta by which, in theory, they received the character of "acts," and are often cited as such in preference to the latter.

ii. *Edicta* or *edictales constitutiones*, general rules of law made by the emperor, at any rate at first, after the analogy of the edicts of the republican magistrates (for examples, see Gaius, i. 55, 93; iii. 172; *Inst.* ii. 6, 14).

iii. *Mandata*, by which the emperor delegated his authority to other magistrates, such as *legati, praesides*, and *praefecti;* in the main they were merely administrative regulations, but may be regarded as laws proper so far as they contained general instructions as to the exercise of the delegated authority (Dig. 1, 16, 6, 3; 1, 18, 3 and 19, &c.).

iv. *Decreta* and *rescripta*, issued by the emperor in his capacity as praetor, judge, or supreme jurisconsult: up to the time of Constantine they were by far the commonest kind of constitutio. *Decreta* were determinations of suits by the emperor either as sitting in a court of first instance or on appeal (Sueton. *Octav.* 33): *rescripta* (Tac. *Ann.* vi. 9) were provisional decisions on the *legal* point at issue (as to which he had been consulted by a magistrate or a private individual, Pliny, *Ep.* x. 2), the facts being left to be inquired into, and a final judgment given, by another magistrate or judex. Technically *rescripta* were of two kinds, *epistolae* and *subscriptiones* or *adnotationes*. The first are independent replies on consultation (Dig. 1, 4, 1, 1; *Inst.* iii. 20, 4); many issued by Hadrian, Severus, and Caracalla being extant in the Digest. The second are brief opinions on cases

n cases
M 2

submitted to the emperor by petition, and written at the foot of the latter; this form being most commonly employed in answering private persons (Dig. 1, 4, 1, 1; Cod. 1, 23, 6, &c.). There has been much difference of opinion as to whether *decreta* and *rescripta* had (as precedents) the force of general law, which is denied them by Savigny (*System*, i. pp. 125–141), but the evidence seems strong the other way: *e.g.* Ulpian says (Dig. 1, 4, 1, pr.), "quodcunque imperator vel per epistolam constituit vel cognoscens decrevit legem esse constat;" cf. Cod. 1, 14, 12. In the Eastern empire a peculiar kind of rescripts acquired the name of "pragmatic sanctions:" they were drawn up in a peculiar and solemn form, and were more highly taxed than others. Zeno restricted their use to petitions preferred by corporations.

In framing constitutions of any kind the emperor was assisted by a council called *consistorium* (Cod. 1, 14, 8), of which the praefects of the city and praetorian guard and the most celebrated jurists were members, and which gradually assumed the character of a council of state. [CONSISTORIUM.] It was regularly consulted by the emperor in the exercise of his supreme appellate jurisdiction, and the chamber in which such consultations were held was, as early as M. Aurelius, called *auditorium principis*. Many of the imperial constitutions are preserved in their original form in the extant codes [CODEX THEODOSIANUS, &c.]. [J. B. M.]

CONSUA'LIA, a festival celebrated at Rome in honour of the god Consus, the protector of horses, identified by Livy (i. 9) and the Greeks (Dionys. Hal. ii. 31, and Plutarch, *Quaest. Rom.* 45) with Neptunus Equester, *i.e.* Poseidon Hippios, but to be regarded rather as a god connected with the earth and agriculture (Preller, *Röm. Myth.* p. 420). His altar, at the lower end of the Circus Maximus (Tac. *Ann.* xii. 24; Tertull. *de Spectac.* 5 and 8), was covered as a rule with earth, which was cleared away only on the three yearly festivals in his honour. On the nones of July the Pontifices sacrificed at this altar: on the 21st of August the Flamen Quirinalis and the Vestal Virgins offered the sacrifices, while the Pontifices presided at chariot and horse races in the circus. This day was observed as a holiday for all horses and mules, which had rest from work and were adorned with garlands (Dionys. i. 33; Paul. p. 148); it was probably intended to mark the end of harvest. A similar festival on the 15th of December seems to have marked the close of seed-time (cf. Mommsen, *C. I. L.* i. p. 400). It was during the festival in August that, according to the legend, the Sabine maidens were carried off by the young Romans (Varro, *L. L.* vi. 20; Liv. i. 9; Verg. *Aen.* viii. 636: cf. Schwegler, *Röm. Gesch.* i. 471 ff.). [A. S. W.]

CONSUL (ὕπατος), the highest republican magistrate at Rome. The derivation of the name is still quite uncertain. It was derived by the Romans from *consulere:* "qui recte consulat, consul cluat" (Varro, *L. L.* v. § 80: cf. Cic. *de Leg.* iii. 3, 8; *de Orat.* ii. 39, 165), and Corssen (*Ausspr.* ii. 71) admits this, connecting *consulere* itself with the root *sal* in *salire:* others, while finding in *consul* the same root, deny the connexion with *consulere.* Some, again, prefer the root *sed* (*sel*), "sit," or *sal*, "dwell." (Cf. Nettleship in *Journ*
logy, iv. 272 ff.)

were known as *praetores maxi*
ὕπατοι), the praetors strictly as *p*
though the last epithet was com

and they were known to the Greeks simply as *στρατηγοί*. Sometimes the consuls are designated by the title *judices*, especially as presiding over the centuriate assemblies. (Varro, *de L. L.* vi. 88; Liv. iii. 55.) After B.C. 449 (Zonar. vii. 19), the name consules was the established title until the final overthrow of the Roman empire. Upon the establishment of the republic, after the banishment of Tarquin, all the powers which had belonged to the king were transferred to the consuls, except that which had constituted the king high priest of the state; for this was kept distinct and transferred to a priestly dignitary, called the *rex sacrorum*, or *rex sacrificulus*.

As regards the election of the consuls, it invariably took place in the comitia centuriata, under the presidency of a consul or a dictator; and, in their absence, by an interrex. The consuls thus elected at the beginning of a year were styled *consules ordinarii*, to distinguish them from the *suffecti*, or such as were elected in the place of those who had died or abdicated, though the privileges and powers of the latter were in no way inferior to those of the former. (Liv. xxiv. 7, &c.; comp. xli. 18.) At the time when the consulship was superseded by the institution of the *tribuni militares consulari potestate*, the latter, of course, presided at elections, as the consuls did before and after, and must in general be regarded as the representatives of the consuls in every respect. It was, however, a rule that the magistrate presiding at an election should not be elected himself, though a few exceptions to this rule are recorded. (Liv. iii. 35, vii. 24, xxiv. 9, xxvii. 6.) The day of the election, which was made known by an edict three nundines beforehand (Liv. iii. 35, iv. 6, xlii. 28), naturally depended upon the day on which the magistrates entered upon their office. The latter, however, was not the same at all times, but was often changed. In general it was observed as a rule, that the magistrates should enter upon their office on the kalendae or idus, unless particular circumstances rendered it impossible; but the months themselves varied at different times, and there are no less than eight or nine dates at which the consuls are known to have entered upon their functions, and in many of these cases we know the reasons for which the change was made. The real cause appears to have been that the consuls, like other magistrates, were elected for a whole year; and if before the close of that year the magistracy became vacant either by death or abdication, their successors, of course, undertook their office on an irregular day, which then remained the *dies solennis*, until another event of a similar kind rendered another change necessary. The first consuls entered upon their office on the ides of September, the day on which in later years the praetor maximus drove the annual nail in the temple of the Capitol; or, according to others (cf. Hartmann, *Röm. Kal.* p. 228), traditionally on the kalends of March, but really on the kalends of October. (Dionys. v. 1; Liv. vii. 3.) The first change seems to have been brought about by the secession of the plebs, B.C. 493, when the consuls entered upon office on the kalends of September. (Dionys. vi. 49.) In B.C. 479, the day was thrown a whole month backward; for of the consuls of the preceding year one had fallen in battle, and the other abdicated two months before the end of his year: hence the new consuls entered on the kalends of Sextilis. (Dionys. ix. 13; Liv. iii. 6.) This day remained until B.C. 451, when the consuls abdicated to make room for the decemvirs, who entered upon their office on the ides of May. The same day remained for the two following years (Dionys. x. 56; Zonar. vii. 18; *Fast. Cap.*); but the third year of the decemvirate not having been completed, another day must have become the dies solennis. We have no information what day it was, until in B.C. 443 we find that it was the ides of December. (Dionys. xi. 63.) This change had been occasioned by the tribuni militares who had been elected the year before, and had been compelled to abdicate in the third month of office, to make room for consuls. (Liv. iv. 7; Dionys. xi. 62.) Henceforth the ides of December remained for many years the dies solennis. (Liv. iv. 37.) In B.C. 401, the military tribunes, in consequence of the defeat at Veii, abdicated, and their successors entered upon their office on the kalends of October. (Liv. v. 9.) In B.C. 391, the consuls entered upon their office on the kalends of Quintilis. (Liv. v. 32; comp. 31, vii. 25, viii. 20.) From this time no further change is mentioned, though several events are recorded which must have been accompanied by an alteration of the dies solennis, until in B.C. 223 we learn that the consuls entered upon their office on the ides of March, which custom remained unaltered for many years (Liv. xxii. 1, xxiii. 30, xxvi. 1, 26, xliv. 19), until in B.C. 154 it was decreed that in future the magistrates should enter upon their office on the 1st of January, a regulation which began to be observed the year after, and remained in force down to the end of the republic. (Liv. *Epit.* xlvii.; *Fast. Praenest. Kal. Jan.*; cf. Mommsen, *Chron.* pp. 81–98.)

The day on which the consuls entered on their office determined the day of the election, though there was no fixed rule, and in the earliest times the elections probably took place very shortly before the close of the official year, and the same was occasionally the case during the latter period of the republic. (Liv. xxxviii. 42, xlii. 28, xliii. 11.) But when the 1st of January was fixed upon as the day for entering upon the office, the consular comitia were usually held in July or even earlier, at least before the kalends of Sextilis. (Cic. *ad Att.* i. 16; *ad Fam.* viii. 4.) But even during that period the day of election depended in a great measure upon the discretion of the senate and consuls, who often delayed it. (Cic. *ad Att.* ii. 20, iv. 16; *pro Leg. Man.* 1.)

Down to the year B.C. 366, the consulship was accessible to none but patricians, but in that year L. Sextius was the first plebeian consul in consequence of the law of C. Licinius. (Liv. vi. 42; vii. 1.) The patricians, however, notwithstanding the law, repeatedly contrived to keep the plebeians out (Liv. vii. 17, 18, 19, 22, 24, 28), until in B.C. 342 the legislation of Publilius Philo secured the firm establishment of the plebeian consulship; and it is even said that at that time a plebiscitum was passed, enacting that both consuls might be plebeians. (Liv. vii. 42.) Attempts on the part of the patricians to exclude the plebeians occur as late as the year

B.C. 297 (Liv. x. 15; Cic. *Brut.* 14, 55); but they did not succeed, and it remained a principle of the Roman constitution that both consuls should not be patricians (Liv. xxvii. 34; xxxix. 42). The candidates usually were divided into two sets, the one desirous to obtain the patrician, and the other to obtain the plebeian place in the consulship (*in unum locum petebant*, Liv. xxxv. 10). In B.C. 215, the augurs indeed successfully opposed the election of two plebeians (Liv. xxiii. 31); but not long after, in B.C. 172, the fact of both consuls being plebeians actually occurred (*Fast. Capitol.*), and after this it was often repeated, the ancient distinction between patricians and plebeians falling completely into oblivion.

The consulship was throughout the republic regarded as the highest office and the greatest honour that could be conferred upon a man (Cic. *pro Planc.* 25, 60; Paul. Diac. p. 136; Dionys. iv. 76), for the dictatorship, though it had a *majus imperium*, was not a regular magistracy; and the censorship, though conferred only upon consulars, was yet far inferior to the consulship in power and influence. It was not till the end of the republic, and especially after the victories of Caesar, that the consulship lost its former dignity; for in order to honour his friends, he caused them to be elected, sometimes for a few months, and sometimes even for a few hours. (Cic. *ad Fam.* vii. 30; Sueton. *Caes.* 76, 80, *Nero*, 15; Dio Cass. xliii. 46; Macrob. *Sat.* ii. 3.)

The power of the consuls was at first equal to that of the kings into whose place they stepped, with the exception of the priestly power of the rex sacrorum, which was detached from it. Even after the Valerian laws and the institution of the tribuneship, the consuls who alone were invested with the executive retained the most extensive powers in all departments of the government. But in the gradual development of the constitution, some important functions were detached from the consulship and assigned to new magistrates. This was the case first with the censorship in B.C. 443,—an office which at first was confined to holding the census and registering the citizens according to their different classes, but afterwards acquired very extensive powers. [CENSOR.] The second function that was in this manner taken from the consuls was their judicial power, which was transferred in B.C. 366 to a distinct magistracy under the title of the praetorship [PRAETOR]; and henceforth the consuls appeared as judges only in extraordinary cases of a criminal nature, when they were called upon by a senatus consultum. (Cic. *Brut.* 34, 128; Liv. viii. 18, xxxix. 17 ff., xli. 9.) But, notwithstanding these curtailings, the consulship still continued to be regarded as the representative of regal power. (Polyb. vi. 11; Cic. *de Leg.* iii. 3, 8.)

In regard to the nature of the power of the consuls, we must in the outset divide it into two parts, inasmuch as they were the highest civil authority, and at the same time the supreme commanders of the armies. So long as they were in the city of Rome, they were at the head of the government and the administration, and all the other magistrates, with the exception of the tribunes of the people, were subordinate to them. They convened the senate, and

as presidents conducted the busin
to carry into effect the decrees
and sometimes on urgent eme
might even act on their own aut
sponsibility. They were the me

12, 5; compare EXERCITUS.) Th
indeed, under the control of the
regard to the expenses for war,
not appear to have been bound do

granted by that body, but to have availed themselves of the public money as circumstances required; the quaestors, however, kept a strict account of the expenditure (Polyb. vi. 12, 13, 15; Liv. xliv. 16). The quaestors also kept the keys of the treasury (even of the *aerarium sanctius:* cf. Mommsen, *Staatsr.* ii. 117), and their co-operation was therefore necessary for any expenditure (Polyb. xxiii. 14). The control thus exercised became a real one when the quaestors were no longer nominated by the consuls, but were elected by the people. In the early times, the consuls had the power to dispose of the booty in any way they pleased; sometimes they distributed the whole or a part of it among the soldiers, and sometimes they sold it, and deposited the produce in the public treasury, which in later times became the usual practice. The first limitation of the military command of the consuls was in B.C. 227, when Sicily was erected into a province, committed to a special governor (*praetor*), and thus removed from the consular jurisdiction. But a more important change was that introduced by Sulla, who extended to the whole of Italy the legal privileges of the city of Rome. From this time forward the consuls ceased to hold military command during their year of office, and passed at the expiration of it into the ranks of the generals in office in the provinces by virtue of a special resolution of the senate (Mommsen, *Staatsr*. ii. 90).

Abuse of the consular power was prevented, first of all, by each of the consuls being dependent on his colleague, who was invested with equal rights; for, if we except the provinces abroad where each was permitted to act with unlimited power, the two consuls could do nothing unless both were unanimous (Dionys. x. 17; Appian, *Bell. Civ.* ii. 11), and against the sentence of one consul an appeal might be brought before his colleague; nay, one consul might of his own accord put his veto on the proceedings of the other. (Liv. ii. 18, 27, iii. 34; Dionys. v. 9; Cic. *de Leg.* iii. 4.) But in order to avoid every unnecessary dispute or rivalry, arrangements had been made from the first, that the real functions of the office should be performed only by one of them every alternate month (Dionys. ix. 43); and the one who was in the actual exercise of the consular power for the month was preceded by the twelve lictors, whence he is commonly described by the words *penes quem fasces erant* (Liv. viii. 12, ix. 8). In the early times, his colleague was then not accompanied by the lictors at all, but he was preceded by an accensus. (Cic. *de Rep.* ii. 31, 55; Liv. ii. 1, iii. 33; comp. Dionys. v. 2, x. 24.) In later times, the consul, even when he did not perform the functions of the office, was also accompanied by twelve lictors (Suet. *Caes.* 20), but these followed him: when this custom arose is uncertain, and we only know that, in the time of Polybius, the dictator, as representing both consuls, had twenty-four lictors. It has been maintained that the consul who for the month being performed the functions of the office, was designated as the *consul major;* but Festus (p. 161) leaves it doubtful whether the term applied to the one who had the fasces, or to the one who had been elected first; and there seems to be good reason for believing that the word *major* really had reference only to the age of the consul, so that the elder of the two was called consul major. (Liv. xxxvii. 47; Cic. *de Rep.* ii. 31, 55; Val. Max. iv. 1, § 1; Plut. *Publ.* 12; Dionys. vi. 57.) Owing to the respect paid to the elder, he presided at the meeting of the senate which was held immediately after the election. (Liv. ix. 8; Gellius, ii. 15.) The exercise of the consular power was also checked by the knowledge that after the expiration of their office they might be called to account for the manner in which they had conducted themselves in their official capacity. Many cases are on record, in which after their abdication they were accused and condemned not only for illegal or unconstitutional acts, but also for misfortunes in war which were ascribed either to their carelessness or want of ability. (Liv. ii. 41, 52, 54, 61; iii. 31; xxii. 40, 49; xxvii. 2, 3; xxvii. 34; Cic. *de Nat. Deor.* ii. 3, 8; Val. Max. viii. 1, § 4.) The ever-increasing arrogance and power of the tribunes did not stop here, and we not unfrequently find that consuls, even during the time of their office, were not only threatened with punishment and imprisonment, but were actually subjected to them. (Liv. iv. 26, v. 9, xlii. 21; *Epit.* xlviii., lv.; Cic. *de Leg.* iii. 9, 20; *in Vat.* 9, 21; Val. Max. ix. 5, § 2; Dio Cass. xxxvii. 50, xxxviii. 6, xxxix. 39.) Sometimes the people themselves opposed the consuls in the exercise of their power. (Liv. ii. 55, 59.) Lastly, the consuls were dependent upon the senate. [SENATUS.] There occurred, however, times when the power of the consuls thus limited by republican institutions was thought inadequate to save the republic from perils into which she was thrown by circumstances; and on such occasions a senatus consultum *viderent* or *darent operam consules, ne quid respublica detrimenti caperet,* conferred upon them full dictatorial power, not restrained either by the senate, the people, or the tribunes. In the early times, such senatus consulta are rarely mentioned, as it was customary to appoint a dictator on such emergencies; but when the dictatorship had fallen into disuse, the senate by the above-mentioned formula invested the consuls, for the time, with dictatorial power. [DICTATOR.] On this senatus consultum ultimum, see Heitland's App. A to Cic. *pro C. Rabirio.*

On entering upon their office, the consuls, and afterwards the praetors also, agreed among one another as to the business which each had to look after, so that every one had his distinct sphere of action, which was termed his *provincia.* The ordinary way in which the provinces were assigned to each was by lot (*sortiri provincias*), unless the colleagues agreed among themselves, without any such means of decision (*comparare inter se provincias,* Liv. xxiv. 10, xxx. 1, xxxii. 8; Cic. *ad Fam.* i. 9). The decision by lot was resorted to for no other reason than because the two consuls had equal rights, and not, as some believe, because it was thereby intended to leave the decision to the gods. If it was thought that one of the consuls was eminently qualified for a particular province, either on account of his experience or personal character, it frequently happened that a commission was given to him *extra sortem* or *extra ordinem,* i.e. by the senate and without any drawing of lots. (Liv. iii. 2, viii. 16, xxxvii. 1;

Cic. *ad Att.* i. 19; comp. Liv. xxxv. 20, xli. 8.) In the earliest times, it seems to have been the custom for only one of the consuls to march out at the head of the army, and for the other to remain at Rome for the protection of the city, and to carry on the administration of civil affairs, unless, indeed, wars were carried on in two different quarters which rendered it necessary for both consuls to take the field. (Dionys. vi. 24, 91; comp. Liv. iii. 4, 22, vii. 38.) Nay, we find that even when Rome had to contend with one formidable enemy, the two consuls marched out together (Liv. ii. 44, iii. 8, 66, viii. 6, &c.); but the forces were equally divided between them, in such a manner that each had as a rule the command of two legions, and had the supreme command on every alternate day (Polyb. iii. 107, 110, vi. 26; Liv. iv. 46, xxii. 27, 41, xxviii. 9; comp. iii. 70).

When the Roman dominion extended beyond the natural boundaries of Italy, the two consuls were not enough to undertake the administration of the provinces, and praetors were appointed to undertake the command in some, while the more important ones were reserved for the consuls. Hence a distinction was made between *provinciae consulares* and *praetoriae*. (Liv. xli. 8.) [PROVINCIA.] It lay with the senate to determine into which provinces consuls were to be sent, and into which praetors, and this was done either before the magistrates actually entered upon their office (Liv. xxi. 17), or after it, and on the proposal of the consuls (Liv. xxv. 1, xxvi. 28, xxvii. 7, &c.). Upon this, the magistrates either agreed among themselves as to which province each was to undertake, or they drew lots; first, of course, the consuls, and after them the praetors. One of the laws of C. Gracchus (*de provinciis ordinandis*; Cic. *de Prov. Cons.* 2, 3; Sall. *Jug.* 27), however, introduced the regulation, that every year the senate, previous to the consular elections, should determine upon the two consular provinces, in order to avoid partiality, it being yet unknown who were to be the consuls. It had been customary from the earliest times for the consuls to enter their province in the year of their consulship; but in the latter period of the republic, the ordinary practice of the consuls was to remain at Rome during the year of their office, and to go into their province in the year following as pro-consuls, until at length in B.C. 53, a senatus consultum, and the year after a law of Pompeius, enacted that a consul or praetor should not go into any province till five years after the expiration of their office. (Dio Cass. xl. 46, 56.) When a consul was once in his province, his imperium was limited to it; and to exercise the same in any other province was, at all times, considered illegal. (Liv. x. 37, xxix. 19, xxxi. 48, xliii. 1.) In some few cases, a breach of this rule was pardoned after a brilliant success. (Liv. xxvii. 43, xxix. 7.) On the other hand, a consul was not allowed to quit his province before he had accomplished the purpose for which he had been sent into it, or before the arrival of his successor, unless, indeed, he obtained the special permission of the senate. (Liv. xxxvii. 47.) Other functions also were sometimes divided between the consuls by lot, if they could not agree: for example, which of them was to preside at the consular elections or those of the censors (Liv. xxiv. 10, xxxv. 6, 20, xxxix. 32, xli. 6), which of them wa
a temple (Liv. ii. 8, 27), or nomina
(Liv. iv. 26). So long as the consul
the census, they undoubtedly dre
conderet lustrum; and even when th
on a common expedition, they se
determined by lot in what directio
exert his activity. (Liv. xli. 18.)

The entering of a consul upon h
connected with great solemnities:
break each consulted the auspices
which in the early times was u
matter of great importance, thoug
period, we know it to have been
mality. (Dionys. ii. 4, 6.) It mu
be observed, that whatever the n
auspices were, the entering upon t
never either rendered impossible

was elected at first for five years,

and at length for life. (Sueton. *Jul.* 76, 80; Dio Cass. xlii. 20, xliii. 1, 46, 49; Appian, *de Bell. Civ.* ii. 106.) In the reign of Augustus the consular power was a mere shadow of what it had been before, and the consuls who were elected did not retain their office for a full year, but had usually to abdicate after a few months. (Dio Cass. xlviii. 35, xliii. 46; Lucan, v. 399.) The emperors themselves usually took the consulship at the beginning of the year, and laid it down in a month or two. (Dio Cass. liii. 32; Tac. *Hist.* i. 77.) Nero received from the senate *continui consulatus* (Tac. *Ann.* xiii. 41), and Vitellius arranged the elections for ten years in advance, with himself as *perpetuus consul* (Suet. *Vitell.* 11). Vespasian was consul eight times in ten years, Domitian seventeen times in all. The usual time for the tenure of the office came to be either four or two months (Dio Cass. xliii. 46). In A.D. 69 there were fifteen consuls. (Cf. Mommsen in *Ephem. Epigr.* 1872, p. 189.) In the reign of Commodus there were no less than twenty-five consuls in one year. (Lamprid. *Commod.* 6; Dio Cass. lxxii. 12.) In the republican time, the year had received its name from the consuls, and in all public documents their names were entered to mark the year; but from the time that there were more than two in one year, only those that entered upon their office at the beginning of the year were regarded as *consules ordinarii*, and gave their names to the year, though the suffecti were likewise entered in the Fasti. (Sueton. *Domit.* 2, *Galb.* 6, *Vitell.* 2; Senec. *de Ira*, iii. 31; Plin. *Paneg.* 38; Lamprid. *Al. Sev.* 28.) The consules ordinarii ranked higher than those who were elected afterwards. The election from the time of Tiberius was in the hands of the senate, who, of course, elected only those that were recommended by the emperor; those who were elected were then announced (*renuntiare*) to the people assembled in what were called comitia. (Dio Cass. lviii. 20; Plin. *Paneg.* 77; Tac. *Ann.* iv. 68.) In the last centuries of the empire, it was customary to create honorary consuls (*consules honorarii*), who were chosen by the senate and sanctioned by the emperor (Cassiod. i. 10; Justin. *Nov.* lxx. 80, c. 1), and consules suffecti were then scarcely heard of at all, for Constantine restored the old custom of appointing only two consuls, one for Constantinople, and the other for Rome, who were to act as supreme judges (under the emperor) for a whole year, and besides these two there were no others except honorary consuls and consulares. Although the dignity of these honorary consuls as well as of the consules ordinarii and suffecti was merely nominal, still it was regarded as the highest in the empire, and was sought after by noble and wealthy persons with the greatest eagerness, notwithstanding the great expenses connected with the office (Dio, lx. 27) on account of the public entertainments which a newly appointed consul had to give to his friends and the people. (Fronto, *Ep.* ii. 1; Lydus, *de Magistr.* ii. 8; Liban. *Orat.* 8; Symmach. ii. 64, iv. 8, x. 44; Sidon. Apollin. *Epist.* ii. 3; Cassiod. ii. 2, vi. 1; Procop. *de Bell. Pers.* i. 25.) Julius Caesar (Suet. *Jul.* 76) and Augustus (Dio Cass. xlvi. 41) conferred the *ornamenta consularia* without the actual office; and this practice became so common afterwards, that the title *consulares* was used for this class, which held rank as the most distinguished class of senators, and their honour ultimately became hereditary. After Diocletian, however, they ranked below the *viri illustres* and the *viri spectabiles*. The last consul of Rome was Decimus Theodorus Paulinus, A.D. 534, and at Constantinople Flavius Basilius Junior, in A.D. 541. After that time, the emperors of the East took the title of consul for themselves, until in the end it fell quite into oblivion.

Under the empire the consuls were regarded as the official representatives of the senate, and were even allowed by some emperors a formal precedence (Suet. *Tib.* 31). Their official functions were as follows:—1. They presided in the senate, though, of course, never without the sanction of the emperor; 2. They administered justice, partly *extra ordinem* (Tac. *Ann.* iv. 19, xiii. 4; Gell. xiii. 24) [SENATUS], and partly in ordinary cases, such as manumissions or the appointment of guardians (Dig. 1, 10, 1; Ammian. Marcell. xxii. 7; Cassiod. vi. 1; Sueton. *Claud.* 23); 3. The letting of the public revenues, a duty which had formerly been performed by the censors (Ov. *ex Pont.* iv. 5, 19), although the consuls had always possessed the right of acting as the representatives of the censors, when there were none in office at the time; 4. The conducting of the games in the Circus and of public solemnities in honour of the emperors, for which they had to defray the expenses out of their own means. (Sueton. *Nero*, 4; Juv. xi. 193, &c.; Cassiod. *l. c.*, and iii. 39, v. 42, vi. 10.) Some emperors indeed granted the money necessary for such purposes, and endeavoured to check the growing extravagance of the consuls, but these regulations were all of a transitory nature. (Lamprid. *Al. Sever.* 43; Vopisc. *Aurel.* 12; Justin. *Nov.* 105.)

Staatsverf.* p. 269, &c.; above all, Mommsen, *Staatsrecht*, ii. 70–124; and Becker, *Handbuch der Röm. Alterth.* vol. ii. part ii. pp. 87–126, and part iii. pp. 235 ff. [L. S.] [A. S. W.]

CONSULA'RIS, throughout the time of the Roman republic, signifies a person who has been invested with the consulship; but under the empire it became a mere title for the higher class of officers, who thereby obtained permission to have the insignia of a consul, without ever having actually been consuls. Hence the title was almost equivalent to that of an "honorary consul" (*consul honorarius;* Cod. Theod. vi. tit. 19, s. 1; vi. tit. 2, s. 2). The title was given especially to generals, as formerly persons after their consulship had usually undertaken the command of an army in the provinces, and in many instances they were the same as the legati principis or the magistri militum. (Veget. ii. 9; Dig. 3, tit. 2, s. 2.) It was further a common custom, established even by the first emperors, to give to governors of imperial provinces the title of consularis, irrespective of their ever having been consuls. (Suet. *Aug.* 33, *Tib.* 33, *Domit.* 6; Tac. *Agric.* 8, 14, 40.) Consularis thus gradually became the established title for those entrusted with the administration of imperial provinces. During the 2nd century A.D. the title *consularis* always denotes a governor who had actually held the office of consul, or had received the rank from the emperor *per codicillos;* but by the 4th century it had become a mere title of a particular class of provincial governors. The Emperor Hadrian divided Italy into four regions, and over each he placed an officer who likewise bore the title of consularis, and was entrusted with the administration of justice in his district, whence he is frequently called *Juridicus* (Spartian. *Hadr.* 22, with the note of Salmas.). At Constantinople the title was given to the superintendents of the aqueducts (*consulares aquarum*), who had to see that all public and private places were properly supplied with water, and who seem to have been analogous to the curatores aquarum of Rome. They are frequently mentioned in inscriptions, and also in the Codex of Justinian and Theodosius. (Cf. Marquardt, *Röm. Staatsverwaltung*, i. 408-9.) [L. S.] [A. S. W.]

CON'TIO, often erroneously spelt CONCIO, is a contraction for *conventio;* that is, a meeting, or a *conventus*. In a loose mode of speaking it denotes any popular assembly, even among non-Romans (Liv. xxiv. 22; Cic. *pro Flacc.* 7, § 15), and any speech or harangue addressed to such an assembly; hence the common phrase *contionem habere* means indifferently "to hold a meeting" and "to make a speech." Written speeches are sometimes called *contiones* (Cic. *in Vat.* 1, § 3; *ad Att.* xiv. 20). In the technical sense, however, a contio was an assembly of the Roman people convened regularly (*per praeconem*) by a magistrate or a *sacerdos publicus* (Fest. p. 66 M.). A general in the field by virtue of his imperium could summon his troops as often as he pleased to hear what he had to say to them (*in contionem vocare; contionem habere*, Liv. xxvii. 13); and what he said before the assembled army was *pro contione* (Sall. *Jug.* 8). But when L. Paullus after his triumph (with which his imperium came to an end) wished to make an explanatory statement, he had to obtain leave from a magistrate, who was said *contionem dare* (Liv. xlv. 40 *extr.;* cf. Cic. *ad Att.* iv. 2). A contio thus lawfully convened was the usual mode of initiating public discussion, *e.g.* of measures which were to be brought before the comitia, and of working upon the people either to support or oppose the measure. Contiones were also summoned for other purposes, *e.g.* of persuading the people to take part in a war (Dionys. vi. 28) or of bringing complaints against a party in the republic or an individual (id. ix. 25; Liv. xxxix. 15; Plut. *C. Gracch.* 3). But no question of any kind could be decided by a contio, and this constitutes the difference between contiones and comitia (Gell. *N. A.* xiii. 16 [in old edd. 15, §§ 8–10]; Cic. *pro Sest.* 50, § 106; 54, § 115). Contrasting Roman and Greek methods, Cicero says that the former went to the poll and voted deliberately, *summota contione;* while the Athenians in the days of their glory were governed by the hasty decisions of the assembly, *contionis temeritate* (*pro Flacc.* l. c.).

Meetings of this kind naturally were of very frequent occurrence at Rome. The earliest that is mentioned is one held immediately after the death of Romulus by Julius Proculus in the Campus Martius (Liv. i. 16; Plut. *Rom.* 27); the first after the expulsion of the kings was
held by Brutus (Liv. ii. 2 ; Dionys.
Every magistrate had the right to co
tiones, but it was most frequently ex

prominent a feature in the life of

city (cf. L. Friedlaender, *Sittengeschichte Röms*, pt. ii., p. 263 ff.). The type on one side of the piece is as a rule a head or bust; on the other, a subject: as the latter side is the more important, it may conveniently be considered as the obverse. The obverse types are either of a mythological, heroic, or historic character, or have reference to scenes in the Circus and other places of public amusement. In the opinion of M. Robert, even the mythological and heroic types relate to the public spectacles; the gods and heroes represented being merely human actors who assumed divine and heroic parts in the theatrical representations. (C. Robert, *Les Méd. contorn.* p. 6 f.: a different opinion has been maintained by Sabatier and Eckhel; cf. Lenormant, *La Monnaie*, t. i. p. 56 f.) The types of this class are derived chiefly from the adventures of Ulysses, Hercules, Theseus, Achilles, &c.: Apollo Citharoedus, the Sun-god in his chariot, Hecate, Endymion, Hero and Leander, and other personages also occur. Types of a quasi-historical character are less numerous: amongst them are the Foundation of Rome and the Rape of the Sabines. A certain number of subjects are copied from the Roman coin-types of an earlier period, such as the *carpentum* of Agrippina and the *decursio* type. But the types of the most frequent occurrence are those which relate to the games of the Circus. Sometimes the chariot-race and the Circus itself is portrayed, but more frequently we find a single chariot and its *auriga*. Representations of victorious charioteers, standing without horses or chariots, as well as of winning horses, are also very common. The men are generally represented with palms in their hands, and the horses' heads are bedecked with the same emblems of victory. Besides the sports in the Circus, the beast-hunts (*venationes*) of the Amphitheatre are introduced, though less frequently. The athletic contests of the Stadium are still rarer, though the contorniates sometimes represent foot-races and other exercises of strength and skill. In another remarkable series of scenes are depicted musicians engaged in playing an organ, and persons assembled probably to take part in competitions in singing and recitation. As reverse types of the contorniates, we find the heads and busts of various personages:—(1) Emperors, &c., among whom are J. Caesar, Augustus, Caligula, Nero, Galba, Vespasian, Trajan, Ant. Pius, Marcus Aurelius, Verus, Commodus, Caracalla, and one or two of the earlier empresses. Nero and Trajan are frequently selected, probably on account of their being regarded as patrons of the Circus. No emperors between Caracalla and Constantine are selected; the last represented is Anthemius: (2) the head of Alexander the Great; (3) busts of philosophers, writers, &c., such as Pythagoras, Apollonius of Tyana, Homer, Horace, Virgil, Sallust; (4) heads of Roma and Serapis; (5) an *auriga*. In addition to the types, various accessory devices appear in the field of either side of the contorniates. They are sometimes cast in relief (like the type itself), but more frequently are produced by engraving or by inlaying in silver. The following are among the principal devices which occur:—Palms, wreaths, leaves of heart-shaped form, cups, helmets, horses, chariots, spears, swords, bows, lions, panthers, bears, &c., and a symbol variously represented thus, , , , or .

The legends which appear upon the contorniates are nearly always descriptive of the types. Thus obverse types relating to Aeneas, Hypsipyle and Archemoros, the Rape of the Sabine women are accompanied by the words ΑΕΝΕΑS, ΥΨΙΠΥΛΗ, SABINAE: the names of charioteers and even of horses are often given, and sometimes the particular "faction" of the "blues," "greens," "reds," and "whites" is indicated in the exergue, *e.g.* IN PRASINO, IN VENETO. As reverse legends we find the names of emperors surrounding their effigies: Alexander the Great is named "Macedonicus," and the names of the philosophers and writers are also given.

The precise destination and significance of the contorniates is a difficult problem, which has given rise to much controversy, and we have not even any information as to whether these pieces were fabricated and issued by authority, or merely by private enterprise. We may, however, safely set aside the explanation that the contorniates were tickets of admission to the Circus; nor, again, do they seem of sufficient importance to induce us to adopt the view of M. Longpérier, that they were given as prizes to the victors in the games. (*Rev. Num.*, N. S., 1865, t. x. p. 414.) The theory suggested by Cavedoni and De Rossi (*Bull. d'Archéol. chrétienne*, 1869, p. 60), which has been ingeniously worked out by M. Lenormant (*La Monnaie*, t. i. p. 56 f.), that the contorniates were employed by the competitors in the games and by their supporters as talismans or amulets, is far more worthy of consideration. That effigies like those of Alexander, Apollonius, Virgil, and others would be regarded at that epoch as being of wonder-working efficacy, is extremely probable; and contorniate legends, such as "Margarita vincas," "Petroni placeas" (ejaculations for the good success of a competitor), would also seem to indicate the talismanic character of these pieces. This theory, however, does not sufficiently take into account the numerous accessory devices which appear upon the contorniates, and especially the symbol , &c., which occurs with extreme frequency upon specimens of every variety of type. Of this symbol and its varieties numerous interpretations have been offered. (Longpérier, *Rev. Num.* 2ᵉ série, t. x., pp. 415, 416; Cannegieter, *Miscell. Observ. Crit.*, p. 133; *Miscell. Nov.*, 1740, p. 7; Bruzza, *Ann. dell' Inst. di Corrisp. Arch.*, 1877, p. 58; Friedlaender, *Zeitschrift f. Numismatik*, vol. vi., p. 268; Archangeli, *Gli Studj in Italia*, 1879, p. 42; Robert, *Les Médaill. cont.* p. 29 ff.) Several writers have seen in it a monogram composed of the letters Ε Ρ or Ρ Ε, and Ρ has been supposed to stand for the word "palma." It has, however, been well shown by M. Robert, that the only constant element in the varieties of this symbol is the letter P, which he translates "praemia," or "prizes in money": the horizontal strokes, which vary in number, indicate, according to his suggestion, the actual sum of money won by the victor in the Hippic and other contests. If we adopt this interpretation, we may suggest as a probable, though not absolutely certain explanation of the purpose of the contorniates, a theory which is substantially that of M. Robert. (Cf. *Les Méd. contorn.* p. 23 foll.) The contorniates, after being cast with designs in relief, were distributed to the competitors, and perhaps to their friends, before the games, &c., took place. During the contests they were doubtless considered to confer good luck upon their possessors, and to bring confusion upon the adversary. After the games and other competitions were decided, the contorniates held by the winners were stamped (generally by means of engraving) with various additional devices, indicative of the special prizes awarded to victors, and thus became a sort of metallic certificate of their owner's achievements. We know from other sources the nature of many of the prizes distributed, especially to the *aurigae:* they consisted not only of such simple recompenses as palms and wreaths, but also of more substantial rewards, such as golden helmets and very large sums of money. (Cf. Wilmanns, *Exempl. Inscript.*, Nos. 2600, 2601.) It is the non-pecuniary prizes which are indicated by some, at any rate, of the accessory devices of the contorniates (palms, wreaths, helmets, &c.), while the prizes in money, often referred to in Inscriptions as "praemia," are alluded to in the P̲, &c.

CONTRACTUS. [Obligationes.]

CONTROVER'SIA. [Judex.]

CONTUBERNA'LES (σύσκηνοι). This word, in its original meaning, signified men who served in the same army and lived in the same tent. It is derived from *taberna* (afterwards *tabernaculum*), which, according to Festus, was the original name for a military tent, as it was made of boards (*tabulae*). Each tent was occupied by ten soldiers (*contubernales*), with a subordinate officer at their head, who was called *decanus*, and in later times *caput contubernii*. (Veget. *de Re Mil.* ii. 8, 13; compare Cic. *pro Ligar.* 7, 21; Hirt. *Bell. Alex.* 16; Drakenborch on Liv. v. 2.) [Castra, p. 381 *b*.]

Young Romans of illustrious families used to accompany a distinguished general on his expeditions, or to his province, for the purpose of gaining under his superintendence a practical training in the art of war, or in the administration of public affairs, and were, like soldiers
living in the same tent, called his *co*
(Cic. *pro Cael.* 30, 73, *pro Planc.* 11
Jul. 42; Tacit. *Agr.* 5; Frontin. *St*
11; Plutarch, *Pomp.* 3.)

In a still wider sense, the name *c*
was applied to persons connected by
mate friendship and living under th
(Cic. *ad Fam.* ix. 2; Plin. *Epist.* i
hence when a free man and a sl
slaves, who were not allowed to cont
marriage, lived together as husba
they were called *contubernales;* an
nexion, as well as their place of resi
bernium. (Colum. xii. 1, 3, i. 8;
57, 6; Tac. *Hist.* i. 43, iii. 74; Dig.
Cicero (*ad Att.* xiii. 28) calls Caesa
bernalis of Quirinus, thereby alludin
that Caesar had allowed his own s
erected in the temple of Quirinus (c

CONVENI'RE IN MANUM.
Monium.]

CONVENTIO'NES. [Obligat

CONVENTUS (σύνοδος, συνου
γωγή) is properly a name which ma
any assembly of men who meet
purpose. (Paul. Diac. p. 41, ed. M
when the Romans had reduced fore
into the form of provinces, the wo
was used also in a more definite me
meetings of the provincials in c
appointed by the praetor or proc
purpose of administering justice.
ii. 20, 48; 30, 74; iv. 29, 67; C
xv. 4; Hor. *Sat.* i. 7, 22; Caes.
21; Hirt. *Bell. Afr.* 97.) In order
the administration of justice, a
divided into a number of districts
each of which was likewise calle
forum, or *jurisdictio.* (Cic. *in Verr*
v. 11, 28: Plin. *Ep.* x. 5; *H. N.*
§ 117, v. § 105.) In Hispania Tarrac
were seven such *conventus*, in Bae
Lusitania three, in Illyria three, in
time of Pompeius eight, in Asia
(Marquardt, *Röm. Staatsverw.* i. 36
citizens living in a province were li
the jurisdiction of the proconsul, and

all that had to settle any business at a conventus had to make their appearance there. The towns which had the Jus Italicum had magistrates of their own with a jurisdictio, from whom there was no doubt an appeal to the proconsul. At certain times of the year, fixed by the proconsul, the people assembled in the chief town of the district. To hold a conventus was expressed by *conventus agere*, *peragere*, *forum agere*, *ἀγοραίους* (sc. *ἡμέρας*) *ἄγειν*, &c. (Caes. *Bell. Gall.* i. 54, v. 1, viii. 46; Act. Apost. xix. 38.) At such a conventus litigant parties applied to the proconsul, who selected a number of judges from the conventus, generally from among the Romans residing in the province, to try their causes. (Cic. *in Verr.* ii. 13, 32.) It was made a charge against Verres that he selected the *judices* from among his own suite. The proconsul himself presided at the trials, and pronounced the sentence according to the views of the judges, who were his assessors (*consiliarii*). [Consilium.] As the proconsul had to carry on all official proceedings in the Latin language (Val. Max. ii. 2, 2), he was always attended by an interpreter. (Cic. *in Verr.* iii. 37, 84; *ad Fam.* xiii. 54.) These *conventus* appear to have been generally held after the proconsul had settled the military affairs of the province; at least when Caesar was proconsul of Gaul he made it a regular practice to hold the conventus after his armies had retired to their winter-quarters. In the time of the emperors certain towns in each province were appointed as the seats of standing courts, so that the *conventus* were superseded. (Cod. Just. i. tit. 40, s. 6.) The term conventus is lastly applied to certain bodies of Roman citizens living in a province, forming a sort of corporation, and representing the Roman people in their district or town; and it was from among these that proconsuls generally took their assistants. Such corporations are repeatedly mentioned, as, for example, at Syracuse (Cic. *in Verr.* ii. 13, 32; 29, 72; iii. 13, iv. 25, 31, v. 36, &c.), Capua (Caes. *de Bell. Civ.* i. 14; Cic. *p. Sest.* 4), Salona (Caes. *de Bell. Civ.* iii. 9), Puteoli (Cic. *in Vat.* 5), and Corduba (Caes. *de Bell. Civ.* ii. 19; comp. Provincia). [L. S.] [A. S. W.]

CONVI'VIUM. [Symposium.]

COOPTA'RE. [Collegium.]

COPA, COPO. [Caupona.]

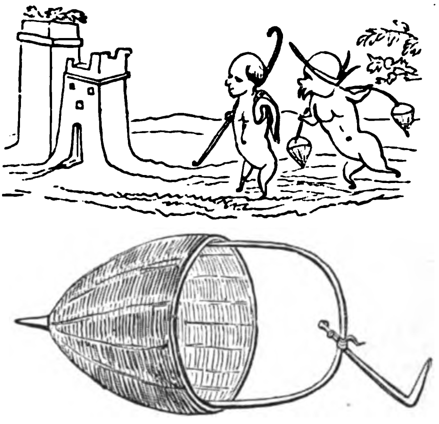
CO'PHINUS (*κόφινος*, Engl. *coffin*, *coffer*), a large kind of wicker basket, made of osier branches. (Moer. *Att.* and Hesych. *s. v.* Ἄρριχος.) From Aristophanes (*Av.* 1310) it would seem that it was used by the Greeks as a basket or cage for birds. The Romans used it for agricultural purposes, and Columella (xi. 3, § 51), in describing a method of procuring early cucumbers, says that they should be sown in well-manured soil, kept in a cophinus, so that in this case we have to consider it as a kind of portable hot-bed. Juvenal (*Sat.* iii. 14, and vi. 542), when speaking of the Jews, describes their whole furniture as consisting in *cophinus et faenum* (a truss of hay). Κόφινος is a more general term, while *σπυρίς* (*sporta*) is more properly a basket for food. Cf. Meyer on St. Matt. xvi. 10. [Corbis.] [L. S.] [A. S. W.]

COPIS (*κοπίς*), a curved sword, like a falx, and therefore a kind of scimitar (Xen. *Eq.* xii. 11: "copidas vocabant gladios leviter curvatos, falcibus similes," Curt. viii. 14, § 29). It was used by the Thessalians (Eur. *Elect.* 837) and by the eastern nations (Xen. *Cyr.* ii. 1, § 9, vi. 2, § 10; Curt. *l. c.*).

Copis was also the name of a knife used in cutting the flesh of animals in sacrifices and the kitchen (Poll. x. 104; Athen. iv. p. 169 b; Plut. *Lyc.* 2). It is used as an adjective with *μάχαιρα* by Euripides (*Cycl.* 241). [W. S.]

COQUUS. [Cena, p. 394.]

CORBIS, *dim.* **COR'BULA, CORBIC'ULA,** a basket of very peculiar form and common use among the Romans, both for agricultural and other purposes. It was made of osiers twisted together, and was of a conical or pyramidal shape. (Varr. *L. L.* v. 139; Isidor. *Orig.* xx. 9; Cic. *pro Sest.* 38, 82; Ov. *Met.* xiv. 644; Plaut. *Aul.* ii. 7, 4; Suet. *Ner.* 19; Colum. vi. 3, 5; xi. 2, 99). A basket answering precisely to this description, both in form and material, is still to be seen in everyday use among the Campanian peasantry, which is called in the language of the country "la corbella," a representation of which is introduced in the lower portion of the annexed woodcut. The hook attached to it by a string is for the purpose of suspending it to a branch of the tree into which the man climbs to pick his oranges, lemons, olives, or figs. The upper portion of the woodcut (*Antichità di Ercolano*, tom. iii. tav. 29) represents a Roman farm, in which a farming man, in the shape of a dwarfish satyr, is seen with a pole (*ἄσιλλα*) across his shoulder, to each end of which is suspended a basket resembling in every respect the Campanian *corbella*; all which coincidences of name, form, and description leave no doubt as to the identity of the term with the object represented. Like the *calathus*, which it resembles in shape, it is sometimes employed as a distinguishing emblem of Ceres (Clarac, *Mus. de Sculpt.* pl. 214, n. 33). [A. R.] [J. H. F.]



Corbis. (The upper cut from a drawing at Herculaneum; the latter a basket used by Campanian peasantry.)

CORBI'TAE, merchantmen of the larger class, so called because they hung out a *corbis* at the mast-head for a sign. (Festus; Nonius, *s. v.*) They were also termed *onerariae;* and hence Plautus, in order to designate the voracious appetites of some women, says, "Corbitam cibi comesse possunt" (*Cas.* iv. 1, 20). They were noted for their heavy build and sluggish sailing

(Lucil. *ap.* Non. s. v. *Corbitae;* Plaut. *Poen.* iii. 1, 4), and carried passengers as well as merchandise, answering to the large "felucca" of the present day. Cicero proposed to take a passage in one of these vessels, which he opposes to the smarter class of packets (*actuariola, ad Att.* xvi. 6). The name survives in the modern corvette. [A. R.] [J. H. F.]

CORDAX. [Chorus.]

CORIA'RIUS (*βυρσεύς, βυρσοδέψης, σκυτοδέψης, δερματομαλάκτης*), a tanner. Most of the names for hides or skins in Greek—*δορά, δέρμα, διφθέρα, βύρσα, σκῦτος*—are used sometimes to signify the untanned hide, but more usually the tanned one. The Romans used *corium subigere* or *perficere* for tanning, and *depsere* for tawing (see below); but it must be remembered that *corium* as well as *scortum* and *aluta* all signify prepared leather, in opposition to unprepared hide. In Wilmann's *Ex. Inscr.* 2738, 21, *corium perfectum* and *pilosum* are contrasted.

Tanners at present divide the undressed material into *hides* and *skins. Hides* are skins of oxen, horses, and larger animals; while *skins* (in the technical sense) are thinner skins: *e.g.* those of calf, sheep, goats, &c. The term *tergora* was applied to *hides* by the Romans, the tanned leather being called *corium;* and *skins* were called *pelles.* Curriers (*pelliones*) first appear among the Romans; and though their work seems to be alluded to in an obscure passage of Plautus (*Men.* ii. 3, 45), still we may be said to know nothing of the details of their manufacture as distinct from tanning. To this latter, then, we now turn.

"Leather is made," says Mr. James Paton in the *Encyclopaedia Britannica,* "by three processes or with three classes of substances. Thus we have (1) *tanned* leather, in which the hides and skins are combined with tannin or tannic acid; (2) *tawed* leather, in which skins are prepared with mineral salts, especially alum; (3) *shamoyed* leather, consisting of skins, especially those of sheep, goat, deer and antelope, combined with oils or fatty substances." All these kinds of leather existed in ancient times.

The main endeavour of *tanning* is to try and unite as closely as possible the gelatinous part of the hide with the tanning principle of astringent vegetables, so as to produce leather which is smooth, flexible, and insoluble in boiling water. The preliminary processes preparing the hide for the reception of the tanning substance are, however, of no small importance. After the horns are taken off and the hide washed, the remaining flesh on one side has to be removed. This is effected by a knife, like that in the accompanying cut of a tanner's knife found in Pompeii: the shaded part is the wooden handle. This knife also removes the cuticle, which is rendered friable and easily removable by means of lime-water, though the ancients appear to have used for this purpose mulberry leaves dipped in urine (Plin. *H. N.* xxiii. § 140), or the seeds of the *ἄμπελος λευκή* or bryony (Dioscor. iv. 184). Next the hairy side must be depilated quite clean. This is done by stretching the hide on a bench or horse (*θρᾶνος*), which process was called *θρανεύω* (Arist. *Eq.* 369, and Scholiast),

The oldest known form of preparing leather is *shamoying*, i.e. combining skins and hides with oils. It is alluded to in a simile of Homer's (*Il.* xvii. 387 ff.) and also in Cato (*R. R.* 135, 3). The chief point aimed at is to open the pores so as to admit the oil. This is done by repeated washings. Then the skins are staked out and taken to the stocks, where, after being rubbed with oil, they are hammered for about two hours to force the oil into the substance of the skin. That to this part of the process *ἡ βύρσα σοῦ θρανεύσεται* of Arist. *Eq.* 369 refers is the opinion of one of the Scholiasts: *καὶ γὰρ τὰς βύρσας ξύλοις τύπτειν εἰώθασιν ἵνα ἁπαλαὶ ὦσι· ἔνιοι δὲ ἵνα διαλάβοιεν εὐχερῶς τοῦ φαρμάκου.*

The preparation of parchment by *membranarii* (Ed. Diocl. vii. 38), *διφθεροποιοί*, did not differ essentially from that employed at present.

The substances used for colouring leather were for the most part lotus-tree (Plin. *H. N.* xvi. § 124), madder (*ἐρευθέδανον*, Herod. iv. 189; *rubia*, Plin. *H. N.* xix. § 47), scarlet (*coccum*; cf. Mart. ii. 29, 8), and for boots especially *atramentum sutorium*, or oil of vitriol (Plin. *H. N.* xxxiii. § 123); though of course there were boots of many different colours (*calcei mullei et cerei et albi et hederacii*, Vopisc. *Aurel.* 49). Parchment, we know, was often coloured yellow or purple on the side not used (cf. Pers. iii. 10; Isid. *Orig.* vi. 11, 4).

We have seen shamoying was known to Homer. In Homer, too, an untanned ox-skin (*ἀδέψητος βοέη*, *Od.* xx. 2 and 142) is used by Ulysses, but only when disguised as a beggar and for a bed covering to lie upon. In Homeric times, however, tanning appears to have been done in the household; just as among the early Germans there does not seem to have been a regular class of tanners (Riedenauer, *Handwerk und Handwerker in den homerischen Zeiten*, p. 139). But among the Romans tanners (*σκυτοδέψαι*) formed a guild distinct from shoe-makers (*σκυτοτόμοι*) in Numa's time (Plut. *Num.* 17). Yet in Greece, even in historical times, shoemaking does not appear to have been separated entirely from tanning (cf. Theophr. *Char.* 16, *ἐκδοῦναι τῷ σκυτοδέψῃ ἐπιρράψαι*; also Suidas, *βυρσοδέψης· σκυτοτόμος, ὁ τὰς βύρσας θεραπεύων*). At Rome under the later emperors, when the different classes of artisans crystallized into close guilds, we find a guild of wholesale tanners who sold boot-leather. (Orelli, 4074, *corpus corariorum magnariorum* † *salaiariorum*; perhaps *salariorum*, "the guild of wholesale tawers," for, as we have seen, salt was used as well as alum for tawing.)

Greece and Italy were rich in cattle; but for all that there was a most extensive import trade of hides to Greece, especially from the Black Sea (Strab. xi. p. 493) and from Cyrene (Hermippus Frag. 63, 4, ed. Kock); and to Rome from Sicily (Cic. *Verr.* ii. 2, 6), Asia Minor (*ib.* i. 38, 9), Germany (Tac. *Ann.* iv. 72), Britain (Strab. iv. p. 200). It is in the highest degree remarkable that Homer does not mention the skins of sheep or swine as used for leather, only those of oxen, goats, and weasels (cf. *κτιδέη κυνέη*, *Il.* x. 335; see Riedenauer, *op. cit.* note 238). In the Edict of Diocletian (chap. viii.) we find that tanning was applied to the skins of oxen, goats, sheep, kids, hyaenas, gazelles, stags, wolves, martens, beavers, bears, seals, leopards, lions. As material for wearing, leather was principally used for boots: for though in early times, both in Greece and Rome, it was used extensively for clothes by all ranks (Varr. *R. R.* ii. 11, § 11; Prop. v. 1, 12), in later times skins were only worn by rustics, mostly by rustic slaves, and were called *διφθέραι*, *σίττυβαι*, *σίσυρναι*, *ἀρνακίδες*, *βαῖται*, *σπολάδες*, *mastrucae* (Aristoph. *Nub.* 72 and Schol.; *Vesp.* 444; Poll. vii. 70; Quintil. i. 5, § 8).

(For tanners among the ancients, see Blümner, *Technol. u. Term. der Gewerbe und Künste*, i. pp. 254–267; Daremberg and Saglio, s. v. *Coriarius*; Marquardt, *Privatleben der Römer*, p. 570.) [L. C. P.]

CORNICʹINES. [Cornu.]

CORNICULAʹRIUS, the wearer of a Corniculum; hence in Roman armies an adjutant or aide-de-camp attached to the higher military commanders. In early times there was perhaps only one to each legion, under the orders of the *tribunus militum* whose turn it was to command (Frontin. *Strateg.* iii. 14, 1; Val. Max. vi. 1, 11). From the time of Marius and under the empire the legatus of each legion had one cornicularius, the tribune in command another: hence two cornicularii are usually mentioned in inscriptions (*C. I. L.* ii. 4122), though sometimes a single one occurs (*C. I. L.* 1681). Provincial governors had likewise their cornicularii,—two apiece, it would seem, as we find *officium cornicularіorum* in the plural (*C. I. L.* iii. 3543); and if the governor were of consular rank, his subordinate was *cornicularius consularis* (*ib.* 1106; cf. 3543). Other officers found with cornicularii attached to them are the *praefectus praetorio* (*C. I. L.* 3846; Orelli, 3157, 3488), perhaps the *praefectus urbi*, the tribunes of the praetorian (*C. I. L.* ii. 2610, iii. 2887) and urban cohorts (Orelli, 3462; Mommsen, *Inscr. R. Neap.* 1459), the *praefectus vigilum* (Orelli, 3456; Henzen, 6753, 7170), the *praefectus annonae* (Orelli, 3489), &c. (See fuller references to inscriptions in Marquardt, *Staatsverw.* ii. 528–9.) [W. W.]

CORNICʹULUM, a little horn, was a Roman military decoration attached to the helmet. There seems no reason to think that the word was ever applied to the ornamental part of the helmet itself (Pottier, *ap.* D. and S.): this would be *crista*, and no example of such a sense is adduced. The corniculum was distinguished not merely by its shape, but by not forming an integral part of the helmet: it was simply fastened on. It was used either as (*a*) a military reward for bravery: thus Papirius Cursor gives cornicula and silver *armillae* to all the cavalry (Liv. x. 44); Orbilius, Horace's schoolmaster, serves first as a legionary, then on obtaining this decoration is promoted to the cavalry (*corniculo, mox equo meruit*, Suet. *de Ill. Gramm.* 9). It was also used (*b*) as a badge of office, and as such was worn by the Cornicularii. 2. A small funnel of horn: Colum. vii. 5, 15 and 20. [W. W.]

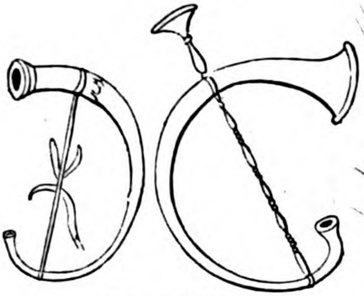
CORNU denotes various objects made of horn, especially a wind instrument, anciently made of horn, but afterwards of brass. (Varr. *L. L.* v. 117.) According to Athenaeus (iv. p. 184 a), it was an invention of the Etruscans. Like the *tuba*, it differed from the *tibia* in being a larger and more powerful instrument, and from the *tuba* itself, in being curved nearly in the shape of a C, with a cross-piece to steady the instrument for the convenience of the performer. In Greek it is called *στρογγύλη σάλπιγξ*. It had no stopples or plugs to adjust the scale to any particular mode (Burney's *Hist. of Music*, vol. i. p. 518); the entire series of notes was produced without keys or holes, by the modification of the breath and the lips at the mouthpiece (Veget. iii. 5). Probably, from the description given of it in the poets, it was, like our own horn, an octave lower than the trumpet. The *classicum*, which originally meant a signal, rather than the musical instrument which gave the signal, was usually sounded with the *cornu*.

> "Sonuit reflexo
> Classicum cornu, lituusque adunco
> Stridulos cantus elisit aere." (Sen. *Oed.* 752.)

From which lines we learn the distinction between the *cornu* and *lituus*, as from Ovid (*Met.* i. 98) we learn that between the *tuba* and *cornu*—

> "Non tuba directi, non aeris cornua flexi."

The following woodcut, taken from Bartholini (*De Tibiis*, p. 403), illustrates the above account.



Cornua. (Bartholini.)

The resemblance of the *cornu* and the *bucina* may be inferred from Vegetius' somewhat confused statements: (1) That the *cornu* was the horn of the urus bound together by silver, while the *bucina* was a circular brass instrument (iii. 5); (2) that the *cornicines* employed a curved brass instrument, the *bucinatores* a *bucina* (ii. 7); (3) that the *bucinatores* sounded the *classicum* on a *cornu* (ii. 22). The *cornu* was also used in Bacchic festivals (Catull. lxiv. 263; Pers. i. 99), at funerals (Hor. *Sat.* i. 6, 44; Petr. *Sat.* 78), and at the games in the amphitheatre (Juv. iii. 34, x. 214). (Niccolini, *Case di Pompei*, i., *Anfiteatro*, pl. iii.)

The *Cornicines* and the *Liticines*, the soldiers who blew the *cornu* and the *lituus*, in the Roman army (Liv. ii. 64, 10) are included under the general name of the *Aeneatores*. [AENEATORES.] The *Cornicines* and *Liticines* formed a collegium. In the cut in the next column, M. Julius Victor, a member of the Collegium, holds a lituus in his right hand, and touches with his left a *cornu* on the ground. See engraving under TUBA.

Cornu also signifies the end of the sailyards [NAVIS], a part of the helmet in which the crest was fixed [GALEA], the end of the stick on which books were rolled [LIBER], a
bow [ARCUS], a part of the lyre [LYRA]

Altar of Julius Victor. (Bartoli, *Pict. An*

CORNU CO'PIAE, or as one wo
NUCO'PIAE, later CORNUCOPIA (An
xxii. 9, § 1; xxv. 2, § 3), the horn o
ness and abundance, used as the
plenty. (Plaut. *Pseud.* ii. 3, 5; Gell.
Hor. *Carm.* 1, 17, 13–16; *Carm. Saec.*
12, 29; Ov. *Met.* ix. 88.) In mythol
are two different tales explaining th
this horn. One traces it to the horn
Amaltheia, which suckled Zeus. The
broken off and filled with fruits and fl
was afterwards placed by Zeus toge
the goat among the stars. (For refer
Dict. of Biogr., art. AMALTHEIA.)
legend relates that it was the horn of the river-god Achelous, which was wrenched off by Hercules, and which became forthwith a horn of plenty (*Dict. of Biogr.*, art. ACHELOUS). Later mythologists combined the two tales, and tried to explain how the horn of Amaltheia became the horn of Achelous (Apollod. ii. 7, § 5). The origin of this symbol may perhaps be traced in the use of the horns of oxen or goats as drinking-cups; hence the *ῥυτόν*, or drinking-horn, which is frequently confounded with the horn of abundance. (Athen. xi. pp. 468 d, 497 c.)

Fortuna holding
(Bronze in th
Museum.)

The cornucopia constantly appears
of art, especially of the Roman perio

symbol of abundance. It is associated with various divinities, as in the preceding statue of the goddess Fortuna. It appears on the Greek coins of the Ptolemies, kings of Egypt. The accompanying specimen is a coin of Arsinoë, daughter of Ptolemy I., the reverse of which contains a double cornucopia filled with various fruits. (Cf. Athen. xi. p. 497 c.) On the coins of the Roman emperors the cornucopia occurs still more frequently. (Böttiger. *Amalthea;* Daremberg and Saglio, *s. v.;* Roscher, *Lexik. d. Gr. u. Röm. Myth.* p. 927.) [W. S.]

Coin of Arsinoë, with cornucopia.

COROLLA. [Corona.]

CORO'NA (*στέφανος*), a crown; that is, a circular ornament of metal, leaves, or flowers, worn by the ancients round the head or neck, and used as a festive as well as funeral decoration, and as a reward of talent, military or naval prowess, and civil worth. It includes the synonyms, for which it is often used absolutely, *στεφάνη*, *στέφος*, *στεφάνωμα*, *corolla*, *sertum*, a garland or wreath.

The use of crowns on public and private occasions was so general in antiquity, that there was a special literature on the subject, of which we have remains in Theophrastus (*Hist. Pl.* vi. 6), Athenaeus (lib. xv.), Pliny (*H. N.* xxi. §§ 1-70, xxii. §§ 4-13), and Pollux (vi. 106-7). At Rome Claudius Saturninus wrote a book *De Coronis* (Tertull. *de Cor. Mil.* 7, 10, 12). We shall first briefly describe the materials of which crowns were made, and then mention the principal public and private occasions when they were used.

I. Materials of Crowns.—Crowns originally consisted of wool or the foliage of trees, especially myrtle-twigs or ivy, with which flowers of various kinds were subsequently interwoven. The makers and sellers of these garlands or crowns formed a distinct trade, and were called in Greece *στεφανηπλόκοι* or *στεφανοποιοί* (Theophr. *Hist. Pl.* vi. 1; Plut. *Quaest. Conv.* iii. 1, 2), and in Rome *coronarii* (Plin. xxi. §§ 54, 177; Fronto, *ad M. Caes.* 2, 1). In ancient works of art we find frequent representations of the making of crowns and garlands, as in the preceding drawing from a picture at Pompeii. The flowers used for making crowns and garlands were named *στεφανώματα* (Theophr. *l. c.*; Athen. xv. p. 672, a, f; Hesych.) and *coronamenta* (Cat. *R. R.* 8; Plin. xxi. § 53, xxii. § 53). The foliage and flowers were sometimes fastened together by the inner bark of the linden-tree, whence such garlands were called by the Romans *coronae sutiles*. (Plin. xvi. § 65, xxi. § 11; Ov. *Fast.* v. 335, 337; Mart. v. 65, 4, ix. 90, 6; ix. 93, 5.) Such crowns were also called *nexae* and *sertae* (Mart. xiii. 51; Lucan. x. 164). At Athens the place in the market where crowns were sold was called *αἱ μυρρίναι* (Aristoph. *Thesm.* 448, cf. 457), because the myrtle was the most common material for making them. Many of the flower-girls were celebrated in antiquity, especially Glycera of Sicyon, the mistress of Pausias (Plin. xxi. § 4; xxxv. § 125). At Rome the temple of the Lares at the head of the Sacra Via was a place much frequented for the sale of flower-garlands. (Ov. *Fast.* vi. 783; Becker-Göll, *Gallus*, iii. p. 453.) Among the Romans crowns were frequently made of the leaves of plants (without an intermixture of flowers), especially the ivy (*hedera*, Hor. *Carm.* iv. 11, 4; Plin. xvi. §§ 147, 155; xxi. §§ 52, 55), the myrtle (*myrtus*, Cat. *R. R.* 8, 2; Hor. *Carm.* i. 4, 9; ii. 7, 25; Ov. *Fast.* iv. 869), and parsley (*apium*, Hor. *Carm.* i. 36, 16; ii. 7, 24; iv. 11, 3). Pliny says (xxi. § 14), "paucissima nostri genera coronamentorum intra hortensia novere, ac paene violas rosasque tantum." Of the various flowers used for crowns the violet was a favourite at Athens, whence *ἰοστέφανος*, "violet-crowned," is an epithet of Athens (Pind. *Fragm.* 46; Aristoph. *Eq.* 1323; *Ach.* 637). The hyacinth and the lily were also used for crowns (Theocr. x. 28; Hor. *Carm.* i. 36, 16; Ov. *Am.* ii. 5, 37). But the most popular flower for crowns both in Greece and Rome was the rose, called the king of flowers (Achill. Tat. ii. 1), and the rose of the Loves (*τὸ ῥόδον τὸ τῶν Ἐρώτων*, Anacr. 5), whence Demos in Aristophanes (*Eq.* 966) is said to have been crowned with roses. They were especially used for convivial crowns (Hor. *Carm.* i. 36, 15; i. 38, 3; ii. 3, 14; ii. 11, 14; iii. 15, 15; iii. 29, 3; Ov. *Fast.* iv. 870). Garlands of roses were in so much request in Rome that they were used in winter (Sen. *Ep.* 122, 8). With this object they were grown under glass (Mart. iv. 22, 5; xiii. 127), and were imported from Egypt (Mart. vi. 80). As luxury increased the leaves of the *nardus* or spikenard, brought from India, were used for crowns, with which roses were also intertwined (Plin. xxi. § 11; Lucan. x. 164; Mart. xiii. 51).

Coronarii, or makers of garlands. (Museo Borbonico.)

Garlands were also made of dried flowers, especially of amaranth, which, when moistened, retained the appearance of fresh flowers, and were called *hibernae coronae* (Plin. xxi. § 47). The same name was given to crowns made of artificial flowers (Plin. xxi. § 5). Sometimes they were made of a thin layer of metal, covered with gold or silver, and called by the Romans *corollae* or *corollaria inaurata* or *inargentata* (Plin. xxi. § 5; cf. Varr. *L. L.* v.

178; Blümner, *Techn. u. Term. d. Gewerbe u. Künste*, i. p. 304 *seq*.). But crowns of pure gold were frequent among the Greeks as honorary distinctions. (See below.) Crowns of silver were less common, but are mentioned by Pliny (*H. N.* xxi. § 6). Crowns of gold have been found in tombs in Etruria and the Crimea, of which the following specimen found in a tomb at Armento in Southern Italy, and now preserved in the museum at Munich, is one of the most remarkable. It is composed of branches of oak, intertwined with garlands of flowers, while a statue is placed at the top, and winged figures amidst the foliage. It bears an inscription beneath the top figure. (Gerhard, *Antike Bildwerke*, i. x.) [CAELATURA, p. 326 *a*.]

Golden Crown. (Museum at Munich.)

The *Corona Etrusca* was made of pure gold in the form of leaves, sometimes set with gems, and terminating in ribbons (*lemnisci*) of the same metal. It was held by a slave over the head of a general when he entered Rome in triumph (Plin. xxxiii. § 11; xxi. § 6; Juv. x. 41; Tertull. *de Cor. Mil.* 13). Crowns adorned with such pendent ribbons were called *Coronae lemniscatae* (Serv. *ad* Verg. *Aen.* v. 269, vi. 772). The lemnisci (λημνίσκοι) were first made of wool, adorned with ribbons (from λῆνος, wool, Fest. p. 155, M.), afterwards of linden-bast, and subsequently of gold. Crowns so adorned were the highest rewards of victors (Serv. *l. c.*; Plin. xvi. § 65), whence Cicero speaks of *palma lemniscata*, where *palma* means a victory or the highest reward (*Rosc. Am.* 35, 100; cf. Aus. *Ep.* xx. 5). Such crowns were also given as a distinction to guests at banquets, and on other occasions (Plaut. *Pseud.* v. 1, 23; Liv. xxxiii. 33, 2; Suet. *Ner.* 25).

Other epithets applied to crowns require a few words of explanation.

Coronae longae (Cic. *de Leg.* ii. 24, 60) resembled what we call festoons, and were employed to decorate the doors of houses, temples, amphitheatres, &c. (Ov. *Fast.* iv. 738). Hence we read in Juvenal (vi. 51) *necte coronam postibus*, in Ovid (*Met.* iv. 759) *sertaque dependent tectis*, and in Lucan (ii. 354) *festa cor* *pendent limine serta*.

Corona pactilis (Plin. xxi. § 11), pro same as the *corona plectilis* of Plautus 1, 37), *corona torta* (Propert. iii. 20 *torta quercu*, "a twisted oak-crown *Georg.* i. 349), *plexa* (Lucr. v. 1399 lxiv. 283), and as the στέφανοι πλ κυλιστὸς στέφανος of the Greeks. It of flowers, shrubs, grass, ivy, woo flexible material twined or twisted and therefore opposed to the *cor* described above (see p. 545 *b*).

Corona tonsa was made of leaves on cut, as for instance of the olive (Ver 556; *tonsae olivae*, *Georg.* iii. 21; Ser

In ancient paintings females are represented with crowns of flowers.

Females with Crowns. (Pict. Antiq. i ***Rom.*** **tav. 8.)**

II. CROWNS AS REWARDS.—Jud Homer's silence, crowns do not appe been adopted amongst the Greeks of ages as rewards of merit, or as fest tions; for they are not mentioned a luxuries of the delicate Phaeacians, suitors. But crowns are mentio Homeric Hymns (vi. 42, xxxii. 6) and (*Theog.* 576, though this passage is spurious by many critics). The Tr transferring the customs of their o the heroic age, frequently represent wearing crowns. At what time the crowns first came into use is uncerta writers attribute their introduction a rewards to the athletic games in were bestowed as prizes upon the vi in opposition to this view is the ex mony of Pausanias (x. 7, § 3), that in Pythiad the Amphictyons enacted reward in the contests should be simp or chaplet instead of the material p had been formerly given. It is mo that crowns were of religious origin and were for this reason given to th the public games as the highest In the Olympic games the prize was wild olive (κότινος, Paus. v. 7, § Pythian a crown of laurel (δάφνη, § 4), in the Nemean a crown of parsle cf. Pind. *Nem.* vi. 71), and in the crown of pine-leaves (πίτυς), though other materials were at different p given at the Isthmian games (Plut. *S*

For details see the articles on these games, and Hermann, *Privatalterth.* § 50. Poets also were crowned both among the Greeks and Romans, and are so represented in works of art.

Homer crowned and enthroned. (Bartoli, *Admiranda*, tav. 81.)

Crowns as rewards for public services are first mentioned in the time of the Persian wars. The Lacedaemonians gave to Eurybiades an olive crown as the prize of valour, and also to Themistocles a crown of the same material as the prize of wisdom and dexterity, when he had failed to obtain the prize at Athens (Herod. viii. 124). The Athenians also refused the crown as a prize to Miltiades and Aristides (Plut. *Cim.* 8; Aeschin. *c. Ctesiph.* § 45). They first granted it to Pericles (Val. Max. ii. 6, § 5); and next to Thrasybulus and the exiles who had seized Phyle, on their return to Athens (Aeschin. *c. Ctesiph.* § 50; Corn. Nep. *Thrasyb.* 4). The inhabitants of Scione crowned Brasidas with a golden crown as the liberator of Hellas (Thuc. iv. 120). Soon after the Peloponnesian war the Athenians substituted for the olive garland a crown of gold, and granted it for every trifling feat, whether civil, naval, or military. But, though such crowns were lavished without much discrimination as far as regards the character of the receiving parties, they were still subjected to certain legal restrictions in respect of the time, place, and mode in which they were conferred. They could only be presented in the public assemblies, and with the consent, that is by the suffrage, of the people, or by the senators in their council, or by the tribes to their own members, or by the δημόται to members of their own δῆμος. According to the statement of Aeschines, the people could not lawfully present crowns in any place except in their assembly, nor the senators except in the senate-house; nor, according to the same authority, in the theatre, which is, however, denied by Demosthenes; nor at the public games, and if any crier there proclaimed the crowns he was subject to ἀτιμία. Neither could any person holding an office receive a crown whilst he was ὑπεύθυνος, that is, before he had passed his accounts. But crowns were sometimes presented by foreign cities to particular citizens, which were termed *στέφανοι ξενικοί*, *coronae hospitales.* This, however, could not be done until the ambassadors from those cities had obtained permission from the people, and the party for whom the honour was intended had undergone a public investigation, in which the whole course of his life was submitted to a strict inquiry. Crowns were also given by one state to another. Demosthenes tells us that the inhabitants of Byzantium decreed a crown to the Athenian people in token of their gratitude, and also that the Chersonesites for a similar reason bestowed upon the senate and people of Athens a crown of gold of sixty talents. (See Aeschin. *c. Ctesiph.* and Dem. *de Coron.* passim.)

Among the Romans, in particular, honorary crowns of various kinds were among the *dona militaria*, which generals bestowed upon the soldiers, and with which soldiers honoured their generals. A full account of them is given by A. Gellius (v. 6), who, as well as Festus, derived his information from Varro. (Cf. Marquardt, *Röm. Staatsverw.* ii. p. 556.)

1. *Corona obsidionalis* or *graminea.* Among the honorary crowns bestowed by the Romans for military achievements, the most difficult of attainment, and the one which conferred the highest honour, was the *corona obsidionalis*, presented by a beleaguered army after its liberation to the general who broke up the siege. It was made of grass, or weeds and wild flowers (Plin. xxii. § 14), thence called *corona graminea* (Plin. xxii. § 7), and *graminea obsidionalis* (Liv. vii. 37), gathered from the spot on which the beleaguered army had been enclosed (Plin. *l. c.*; Gell. v. 6, ii. 11; Fest. pp. 97, 190, M.); in allusion to a custom of the early ages, in which the vanquished party in a contest of strength or agility plucked a handful of grass from the meadow where the struggle took place, and gave it to his opponent as a token of victory. (Gell. *l. c.*; Plin. xxii. § 8; Fest. *l. c.*; Serv. *ad* Verg. *Aen.* viii. 128.) A list of the few Romans who gained this honour is given by Pliny (xxii. §§ 9–13), who tells us that though it was properly given by the army, yet Q. Fabius Maximus received it from the senate and people, and Augustus from the senate.

2. *Corona civica*, the second in honour and importance (Plin. xvi. §§ 7–14), was presented to the soldier who had preserved the life of a

Roman citizen in battle (Gell. v. 6; Fest. p. 42, M.), and therefore accompanied with the inscription *Ob civem servatum* (Sen. *Clem.* i. 26, 5). It was originally made of the *ilex*, afterwards of the *aesculus*, and finally of the *quercus* (Plin. *l. c.*), three different sorts of oak, the reason for which choice is explained by Plutarch (*Quaest. Rom.* 92). As the possession of this crown was so high an honour, its attainment was restricted by very severe regulations (Plin. *l. c.*), so that the following conditions must have been satisfied before a claim was allowed:—To have preserved the life of a Roman citizen in battle, slain his opponent, and maintained the ground on which the action took place. The testimony of a third party was not admissible; the person rescued must himself proclaim the fact, which increased the difficulty of attainment, as the Roman soldier was commonly unwilling to acknowledge his obligation to the prowess of a comrade, and to show him that deference which he would be compelled to pay to his preserver if the claim were established. (Cic. *pro Planc.* 30, 72.) Originally, therefore, the *corona civica* was presented by the rescued soldier (Gell. *l. c.*; Polyb. vi. 39), after the claim had been thoroughly investigated by the tribune who compelled a reluctant party to come forward and give his evidence (Polyb. *l. c.*); but under the empire, when the prince was the fountain from whence all honours emanated, the civic crown was no longer received from the hands of the person whose preservation it rewarded, but from the prince himself, or his delegate. (Tac. *Ann.* iii. 21, xii. 31, xv. 12.)

The preservation of the life of an ally, even though he were a king, would not confer a sufficient title for the civic crown. When once obtained, it might always be worn. The soldier who had acquired it had a place reserved next to the senate at all the public spectacles; and they, as well as the rest of the company, rose up upon his entrance. He was freed from all public burthens, as were also his father and his paternal grandfather; and the person who owed his life to him was bound, ever after, to cherish his preserver as a parent, and afford him all such offices as were due from a son to his father. (Polyb., Cic., Plin., Aul. Gell. *ll. cc.*)

A few of the principal persons who gained this reward are enumerated in the following passages:— Plin. vii. §§ 101–6, xvi. §§ 11–14; Liv. vi. 20, x. 46. L. Gellius Publicola proposed to confer it upon Cicero for having detected and crushed the conspiracy of Catiline (Gell. v. 6); and among the honours bestowed upon Augustus by the senate, it was decreed that a civic crown should be suspended from the top of his house (Dio Cass. liii. 16; *Mon. Ancyr.* 6, 14; Val. Max. ii. 8 *fin.*; Ovid. *Fast.* i. 614, iv. 953, *Trist.* iii. 1, 6; cf. Sen. *Clem.* i. 26, 5; Suet.

which was ornamented with the pali
used in forming an entrenchment.

6. *Corona triumphalis* was worn
head of the commander during his tr

Corona laurea, on a coin of Augustus. (British Museum.)

was first made of laurel and bay leaves, and afterwards of gold. (Gell. *l. c.*; Fest. p. 367, M.; Liv. x. 7; Cic. *in Pis.* 24, 58; Dionys. ii. 34; Zonar. vii. 21; Ov. *Pont.* ii. 2, 92; Plin. xv. § 127 *seq.*; Juv. x. 41; Suet. *Tib.* 17, *Ner.* 13.) Those who had received the laurel crown had the right of wearing it at the public games (Dio Cass. xlvi. 40, xlviii. 16). It was conferred upon Julius Caesar and Augustus, and appears on the coins of subsequent emperors as a mark of sovereignty, and was therefore not worn by any one but the reigning emperor (Eckhel, vi. p. 361). The triumphal Etruscan crown, made of gold and often enriched with jewels, was held over the head of the general during his triumph, by a public officer. (See above, p. 546 *a.*) This crown, as well as the former one, was presented to the victorious general by his army. [TRIUMPHUS.]

Crowns, likewise of gold and of great value, were sent as presents from the provinces to the commander, as soon as a triumph had been decreed to him, and were carried before him in his triumphal procession (Fest. p. 367, M.; Plut. *Aemil. Paul.* 34; Liv. xxxvii. 58). In the early ages of the republic, these were gratuitous presents, but subsequently they were exacted as a tribute under the name of *aurum coronarium*, to which none were entitled but those to whom a triumph had been decreed. [AURUM CORONARIUM.] The custom of presenting golden crowns from the provinces to victorious generals was likewise in use among the Greeks, for they were profusely lavished upon Alexander after his conquest of Dareius (Athen. xii. p. 539 a); and the Romans probably borrowed the custom from the Greeks.

7. *Corona ovalis* was another crown of less estimation, appropriated solely to commanders who merely deserved an ovation [OVATIO], on which account it was made of myrtle, the shrub sacred to Venus, "Quod non *Martius*, sed quasi *Veneris* quidam triumphus foret." (Gell. *l. c.*; Fest. p. 195, M.; Plut. *Marcell.* 22; cf. Plin. xv. §§ 125–6; Dionys. v. 47.)

8. *Corona oleagina* was likewise an honorary wreath, made of the olive leaf, and conferred upon the soldiers as well as their commanders. According to Gellius (*l. c.*), it was given to any person or persons through whose instrumentality a triumph had been obtained, but when they were not personally present in the action. It was conferred both by Augustus and the senate upon the soldiery on several occasions. (Dio Cass. xlvi. 40.)

III. RELIGIOUS CROWNS.—Crowns in general probably owed their origin to religious rites. Certain trees were from the most ancient times regarded as sacred, and it is probable that those who presented offerings to the gods carried in their hands branches of such trees, which in course of time were woven into garlands and worn upon the head. However this may be, the use of the sacrificial crown, though later than the Homeric poems, was established at least as early as the times of Sappho, who says that "the gods turn away from those who are uncrowned" (Athen. xv. p. 674 e). Certain trees were sacred to certain divinities, as the ivy to Dionysus or Bacchus, who is constantly represented with the *corona pampinea* (Hor. *Carm.* iii. 25, 20; iv. 8, 33), the oak to Zeus, the laurel to Apollo, the myrtle to Aphroditê or Venus, the olive to Athena or Minerva, &c. Garlands of leaves and flowers were worn by the worshippers, the priests and priestesses, and the victims offered in sacrifice. In like manner persons who went to consult an oracle wore crowns, which they laid aside when they returned. Crowns imparted a sanctity to the persons, and secured them inviolability. Thus they were worn by the archons at Athens (Dem. *Mid.* § 33), their office being called *στεφανηφόρος* (Aeschin. *Tim.* § 19), and by orators when addressing the assembly (Aristoph. *Thesm.* 380). For further details, see Hermann, *Griech. Antiq.* vol. i. §§ 124, 129; vol. ii. §§ 24, 35.

Among the Romans crowns were, in like manner, worn by priests and the victim, as well as the bystanders, when officiating at the sacrifice. It does not appear to have been confined to any one material, but was sometimes made of olive (Stat. *Theb.* iii. 466), sometimes of gold (Prudent. *Peristeph.* x. 1011; Tertull. *de Idol.* 18), and sometimes of the ears of corn, then termed *corona spicea*, which kind was the most ancient one amongst the Romans (Plin. xviii. § 6; Tac. *Ann.* xi. 4), and was consecrated to Ceres (Hor. *Carm. Sec.* 30; Tibull. ii. 1, 4, i. 1, 15), before whose temples it was customarily suspended (Tibull. i. 1, 16). In particular the *insigne* of the Fratres Arvales was the *corona spicea* and *infulae albae*, or white woollen fillets (Gell. vii. (vi.) 7, § 8; Plin. *l. c.*; Marquardt, *Röm. Staatsverw.* iii. p. 429). [INFULA.] The *corona spicea* was likewise regarded as an emblem of peace (Tibull. i. 10, 67), in which character it appears in the subjoined coin, which commemorates the conclusion of the civil war between Antony and D. Albinus Brutus.

Corona spicea, on coin of D. Albinus Brutus.

Corona spicea, on the head of Antonia. (British Museum.)

The *corona spicea* also appears in coins on the heads of some of the females of the imperial family, as Livia, Antonia, and Agrippina (Eckhel, vi. p. 257).

Among religious crowns may be mentioned the *corona radiata*, which was a mark of divinity. It had been originally given only to gods and deified heroes,—thus Virgil (*Aen.* xii. 162) represents the hero Latinus:

> "Cui tempora circum
> Aurati bis sex radii fulgentia cingunt,
> Solis avi specimen,"—

and it was first assumed by some of the successors of Alexander the Great, who claimed divine honours. Thus we find it on the coins of the Ptolemies, kings of Egypt.

Corona radiata, on a coin of Ptolemaeus V., king of Egypt. (British Museum.)

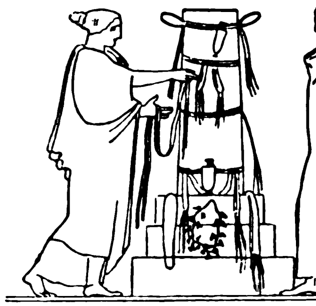
Among the Romans divine honours were decreed to Julius Caesar and Augustus, who claimed a divine descent (*corona radiata*, Suet. *Aug.* 94); but the first emperor who assumed the *corona radiata* in his lifetime was Nero, upon whose coins it appears. We find, however, Augustus thus represented on coins struck after his death, as in the accompanying coin of Caligula. The example of Nero was not followed by the subsequent emperors till Caracalla, who is represented on coins with the *corona radiata*, and it appears frequently on those of succeeding emperors. (Eckhel, vi. p. 269 ff.)

Corona radiata, on head of Augustus. (Coin of Caligula in British Museum.)

Corona radiata, on a coin of the Emperor Decius. (British Museum.)

IV. Funeral Crowns. — The practice of crowning the dead with chaplets of leaves and flowers was doubtless of religious origin. Clemens of Alexandria (*Paedag.* ii. p. 181) explains it by the crown being a symbol of freedom and deliverance from every annoyance. In any case it was regarded as a mark of honour (Eurip. *Troad.* 1143; Aristoph. *Eccl.* 538; *Lysistr.* 602–4; Cic. *pro Flacc.* 31, 75; Alciphr. i. 36; Tert. *de Cor.* 10). Thus Euripides (*Phoen.* 1632) represents Creon forbidding the crowning of the corpse of Polynices under the penalty of death. All kinds of flowers and leaves were used for this purpose (*στεφανώσαντες τοῖς ὡραίοις ἄνθεσι*, Lucian. *de Luct.* 11), but parsley (*σέλινον*) was most commonly employed among the Greeks (Plut. *Timol.* 26; Suid. *s. v.*). Although the corpse was probably crowned with only one garland, the relations and friends sent, as with us, numerous garlands to the funeral, with which they crowned both the bier and the tomb. The *taeniae* (*ταινίαι*), bands, ribbons, or fillets of leaves and flowers, not necessarily for crowning, were also sent to funerals (*τὰς ταινίας, ἃς τοῖς νεκροῖς ἔπεμπον οἱ φίλοι*, Schol. *ad* Aristoph. *Lysistr.* 603). Caecilius (*ap.* Fest. *s. v.*) speaks of a "tomb, full of *taeniae*, as usual;" and on ancient vases funeral stelae are often represented hung with chaplets or bound with taeniae. (Dennis, *Etrur.* i. p. 395; Stephani, *Compte Rendu* for 1874, p. 114.) Such chaplets or fillets were frequently deposited on tombs, not only at the time of the funeral, but also at subsequent periods. The Greeks entwined with garlands the cinerary urn of

their friends (Plut. *Demetr.* 53); Phi
urn was so covered with chaplets as



A funeral stele, with crowns and taeniae. (

be visible (Plut. *Philop.* 21), an
crowned the urn of Marcellus (Plut.

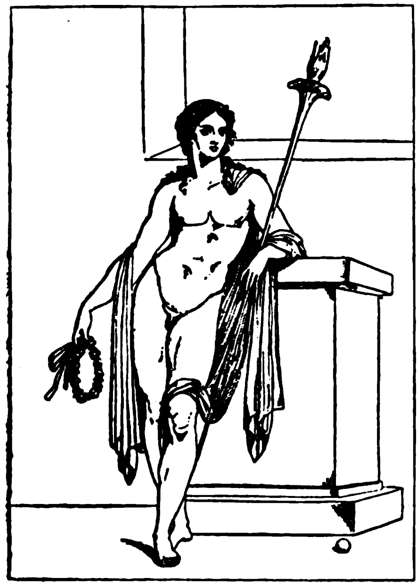
The crowning of the dead was not
among the Romans as among the G
a law of the Twelve Tables enacted th
who had obtained an honorary crown
time might have it placed upon
funeral procession. (Cic. *de Leg.*
Plin. xxi. § 7.) Garlands of flower
placed upon the bier and the funeral
xxi. § 10; Dionys. xi. 39). Pliny
says that crowns were used in honou
chres and the manes. (Cf. Ov. *Trist*
Tibull. ii. 4, 48.)

We have seen that funeral cr
usually of leaves and flowers, but gol
in the shape of leaves and flowers
been found in tombs. (See above,
(Becker-Göll, *Charikles*, i. p. 260, i
159; *Gallus*, iii. p. 491.)

V. Crowns as Signs of Rejo
Coronae conviviales. The name of
only applied to convivial garlands
period, as the word was originally r
religious crowns, and those given
(Plin. xxi. § 3). Among the G
Romans, the guests wore crowns at
quets, but they were not put on ti
course was finished, and the *symposiu*
satio began (Athen. xv. pp. 685, 669;
iii. 1, 1; Val. Max. ii. 6, 1). Gues
with flowers are frequently depic
drinking scenes on ancient vases. T
was borrowed by the Romans from
and was already usual in the second
but it was considered a mark of l
when anyone was seen in public, e
tally, crowned with flowers, he w
punished. (Plin. xxi. § 8.) At fi
fillets were only used, tied round t
prevent intoxication, but afterwards
leaves and flowers, especially the
the rose (Plin. *ib.* § 3). The Gree
lieved that crowns of flowers likewis
the effects of wine. (Athen. xv. pp
Plut. *Symp.* iii. 1.) On the vario
flowers, especially roses, used for
crowns, and the luxury attending
above, p. 545. The rose was used as s
with, or to indicate, the *comissat*
Cicero says (*de Fin.* ii. 20, 65) *in r*
and Martial (x. 19, 20), *cum regnat*

madent capilli, also (iii. 68, 5) *deposito post vina rosasque pudore*. Unguents or perfumes were introduced with the flowers (Sen. *de Ir.* ii. 33, 4; Athen. xv. p. 669; Mart. x. 19, 20), and sometimes, as a special honour, crowns were dedicated with *lemnisci* or pendent ribbons, like the triumphal crowns already mentioned (p. 546). (Plaut. *Pseud.* v. 1, 21; Capitol. *Ver.* 5.) In ancient times each guest brought his own crown (Ov. *Fast.* i. 403), but subsequently the crowns were provided by the host. The guests not only wore crowns upon their heads, but also garlands round their necks, called *ὑποθυμίδες* (Athen. xv. p. 674), so that they might enjoy the scent. Thus Verres is represented as wearing one garland on his head, and another round his neck (Cic. *Verr.* v. 11, 27). The garlands round the neck, as well as on the head, are mentioned in other passages (Hor. *Sat.* ii. 3, 256; Catull. vii. 51; Ov. *Fast.* ii. 739). Among the extravagances in the house of Trimalchio we are told that the legs, feet, and ankles of the guests were bound with flowers (Petron. 70). (On convivial crowns, see Becker-Göll, *Gallus*, iii. p. 493 *seq.*)

Guests crowned in a Symposium. (From a painting on a vase.)



The god Hymenaeus with a nuptial crown. (Baumeister.)

2. *Corona nuptialis*. Both the bride and bridegroom among the Greeks and Romans wore crowns (Schol. *ad* Aristoph. *Pac.* 869; cf. *Aves*, 159), and are often so represented on ancient vases. Those who were present at the marriage also wore crowns; and the doors of the bridegroom as well as the bridal bed were also decorated with garlands (*στέφος γαμήλιον*, Bion, *Id.* i. 88; Lucian. *Dial. Meretr.* ii. 3; Plut. *Amat.* 10, *Pomp.* 55; Catull. lxiv. 294; Juv. vi. 51, 227; Lucan. ii. 358; Stat. *Silv.* i. 2, 231; Apul. *Met.* iv. c. 26.) Among the Romans the *verbena* and other plants, of which the bridal crown was composed, were plucked by the bride herself. (Fest. p. 63, M.; cf. Catull. lxi. 7.)

3. *Corona natalicia*, the chaplet suspended over the door of the vestibule of the house in which a child was born (Juv. ix. 85). At Athens, when the infant was male, the chaplet was made of olive; when female, of wool (Hesych. *s. v.* *στέφανος*). (Paschalius, *de Coronis*, Paris, 1610; Garcke, *de Horatii Corollis*, Altenburg, 1860; the works of Becker-Göll, Hermann, Blümner, Marquardt, referred to above; Daremberg and Saglio, *s. v.*) [W. S.]

CORO'NIS (*κορωνίς*), the cornice of an entablature, is properly a Greek word signifying anything curved (Schol. *ad* Aristoph. *Plut.* 253; Hesych. *s. v.*). It is also used by Latin writers, but the genuine Latin word for a *cornice* is *corona* or *coronix*. (Vitruv. v. 2, 3.) [P. S.]

CORPORA'TI, CORPORA'TIO. [COLLEGIUM.]

CORPUS. [COLLEGIUM.]

CORPUS JURIS CIVI'LIS is the term which, since the end of the 16th century, has been used to denote Justinian's three great compilations—the Institutes, the Digest or Pandects, and the Code (together with the Novels), which form one compact body of law, and were considered as such by the glossators, or law school of Bologna, at the beginning of the 12th century, who divided it into five volumina. The Digest was distributed into the three first volumes under the respective names of "Digestum vetus," "Infortiatum," and "Digestum novum;" the fourth volume contained the first nine books of the "Codex repetitae praelectionis;" in the fifth were the Institutes, the "liber authenticorum" (Novels), and the three last books of the Code. This division into five volumes is found in the oldest editions of the Corpus Juris Civilis, but its portions are now usually arranged in the order Institutes, Digest, Code, Novels. The name "Corpus Juris Civilis" seems to have originated with Dionysius Gothofredus, who prefixed it to his edition of the Justinianean compilations towards the end of the 16th century: it is especially used in contradistinction to the "Corpus Juris Canonici" or Canon Law.

Most editions of the Corpus also contain thirteen edicts of Justinian, five constitutions of Justin the younger, and several of the younger Tiberius, and a series of constitutions of Justinian, Justin, and Tiberius; 113 Novels of Leo, a constitution of Zeno, and a number of constitutions of different emperors under the name of **Βασιλικαὶ διατάξεις**; the Canones sanctorum et venerandorum Apostolorum, Libri Feudorum, a constitution of the Emperor Frederick II., two of the Emperor Henry VII. called *extravagantes*, and a Liber de pace Constantiae. Sometimes there is also to be found an attempt to reconstruct the Twelve Tables, the Praetorian Edict, and other celebrated monuments of the older law.

The Roman Law, as received in Europe, consists only of the Corpus juris, *i.e.* the three compilations of Justinian, and the Novels by which he supplemented them; and it is only received within the limits and in the form which was given to it in the famous school of Bologna. Accordingly, all the ante-Justinianean law is now excluded from all practical application, as are the Greek texts in the Digest, for which the translations received at Bologna are substituted, and also the few unimportant restorations in the Digest, and the more important restorations in the Code. Of the three collections of Novels that only is received which is called Authenticum, and in the abbreviated form which was given to it at Bologna, called the Vulgata.

But, on the other hand, there are received the additions made to the Code in Bologna by the reception of the Authentica of the Emperors Frederick I. and Frederick II., and the still more numerous Authentica of Irnerius. The application of the matter comprised within these limits of the Corpus juris has not been determined by the school of Bologna, but by the operation of other principles, such as the customary law of different European countries, and the development of law. Various titles of the Corpus juris have little or no application in modern times; for instance, that part of the Code in particular which relates to constitutional forms and administration (Savigny, *System*, vol. i. p. 66).

Some editions of the Corpus juris are published with the *glossae* of the great Bolognese lawyers, and some without: the latest edition with them is that of J. Fehdius, Lugd. 1627, six vols. fol. Of the editions without the *glossae* the most important are those of Russardus, Lugd. 1560–61. fol., several times reprinted; Contius, Lugd. 1571 and 1581, 15 vols., 12mo; Lud. Charondae, 1575, fol.; Dionysii Gothofredi, Lugd. 1583, 4to. The best modern edition of the Corpus Juris Civilis is by Mommsen and Krueger, Berlin, 1877. [G. L.] [J. B. M.]

CO'RREUS. [OBLIGATIONES.]

CORRI'GIA. 1. A shoe-string or boot-lace (Cic. *de Div.* ii. 40; Varr. *ap.* Non. p. 448, 26), which was sometimes made of dog's skin (Plin. *H. N.* xxx. § 35). [See an illustration under CREPIDA.] 2. In the Edict of Diocletian, p. 26, it is used for a whip-lash or a horse's rein. [J. H. F.]

CORTI'NA. 1. In its primary sense, a large circular vessel for containing liquids, and used in cooking (Plin. *H. N.* xxxvi. § 191), or preparing *defrutum* (Colum. i. 6, 19), dyeing wool or preparing dye (Plin. *H. N.* xxxv. §§ 43 and 150),
and receiving oil when it first flow
the press. (Cat. *de Re Rust.* 66.)
illustration given under FULLO shows it
fullers. In Plautus, *Poen.* v. 5, 12 ("
tinam ludis per circum ferunt"), it is s
to denote a vessel in which water was
round the circus during the games for
of the horses, drivers, or attendants, v
possibly represented in the cut on p. 43
hands of two of the children thrown d
the horses. 2. The table or hollow sl
ported by a tripod, upon which the pri
Delphi sat to deliver her responses; ar
the word is used for the oracle itself.
Aen. vi. 347.) The Romans made t
marble or bronze after the pattern of
phian tripod, which they used as we
sideboards, for the purpose of displayi
plate at an entertainment, or the valuab
tained in their temples, as is still
Catholic countries upon the altars. Th
termed *cortinae Delphicae*, or *Delphicae*
(Plin. *H. N.* xxxiv. § 8; Schol. *ad* Hor.
116; Mart. xii. 66, 7; Suet. *Aug.* 52.) [
3. From the conical form of the vesse
contains the first notion of the word,
also to signify the vaulted part of a
over the stage ("*magni* cortina *theatr*
295), such as is in the Odeium of Peri
shape of which we are expressly told w
to imitate the tent of Xerxes (Paus. i.
Plut. *Pericl.* 13); and thence metap
for anything which bore the appearan
dome, as the vault of heaven (Ennius,
de Ling. Lat. vii. 48, ed. Müller); or of
as a group of listeners surrounding ar
of attraction. (Tac. *Dial.* 19.) Finall
Vulgate (Exod. xxvi.) *cortina* is used in
of a curtain. [A. R.] [J

CORVUS, a sort of crane, used by C
against the Carthaginian fleet in the batt
off Mylae, in Sicily (B.C. 260). The Ro
are told, being unused to the sea, saw t
only chance of victory was by bringing a
to resemble one on land. For this purp
invented a machine, of which Polybiu
has left a minute, although not very
cuous description. In the fore par
ship a round pole was fixed perpend
twenty-four feet in height and about ni
in diameter; at the top of this was
upon which a ladder was set, thirty
in length and four in breadth. Th
was guarded by cross-beams, fastened
upright pole by a ring of wood, whic
with the pivot above. Along the
rope was passed, one end of which t
of the *corvus* by means of a ring. Th
itself was a strong piece of iron, with a
the end, which was raised or lowered
ing in or letting out the rope. When an
ship drew near, the machine was tur
wards, by means of the pivot, in the di
the assailant. Another part of the
which Polybius has not clearly descr
breastwork, let down (as it would see
the ladder, and serving as a bridge, on
board the enemy's vessel. (Compare
iv. 2, 4.) By means of these cranes
thaginian ships were either broken o
locked with the Roman, and Duilius
complete victory.

The word *corvus* is also applied to various kinds of grappling-hooks, such as the *corvus demolitor*, mentioned by Vitruvius (x. 19) for pulling down walls, or the terrible engine spoken of by Tacitus (*Hist.* iv. 30), which being fixed on the walls of a fortified place, and suddenly let down, carried off one of the besieging party, and then by a turn of the machine put him down within the walls. The word is used by Celsus (vii. 19) for a scalpel. It is hardly necessary to remark that all these meanings have their origin in the supposed resemblance of the various instruments to the beak of a raven. [B. J.] [J. H. F.]

CORYBANTES (*κορύβαντες*). The history and explanation of the deities bearing this name, in the early mythology of Greece, cannot be given in this place, as it would lead us to enter into historical and mythological questions beyond the limits of this Dictionary. The Corybantes, of whom we have to speak here, were the ministers or priests of Rhea or Cybele, the great mother of the gods, who was worshipped in Phrygia. (See *Dict. of Biogr. and Mythol.*, art. Rhea.) In their solemn festivals they displayed the most extravagant fury in their dances in armour, as well as in the accompanying music of flutes, cymbals and drums. (Eurip. *Bacch.* 125; Hor. *Carm.* i. 16, 8; Ov. *Fast.* iv. 210; Juv. v. 25; Mart. i. 71, 10.) Hence *κορυβαντισμὸς* was the name given to a disease in which persons felt as if some great noise was rattling in their ears. (Plat. *Crit.* p. 54 D; Hermann, *Gottesdienstl. Alterth.* § 3, 8.) They were subsequently confounded with the Curetes, who are said to have brought up Zeus in Crete, and concealed him from his father Cronos. (Strab. x. p. 470; Lucr. ii. 630; Verg. *Georg.* iv. 151, *Aen.* iii. 131; Ov. *Met.* iv. 282, *Fast.* iv. 210.) In the festival of the Corybantica (*κορυβαντικά*) celebrated at Cnosus in Crete, the person to be initiated was seated on a throne, and those who initiated him formed a circle and danced around him. This part of the solemnity was called *θρόνωσις* or *θρονισμός*. (Strab. *l. c.*; Plat. *Euthydem.* p. 277 D; Dion Chrysost. *Orat.* xii. p. 387; Proclus, *Theol. Plat.* vi. 13.) The Corybantes were associated with the mysterious divinities called Cabeiri. (*Dict. of Biogr. & Myth.*, art. Cabeiri.) [W. S.]

Corybantes and Cybele, with infant Zeus. (Museo Capitolino.)

CO'RYCUS (*κώρυκος*), a large leathern sack, filled with flour, fig-grains, or sand, hung up in the gymnasium, for the athletes to swing to and fro by striking it, whence the exercise is called *κωρυκομαχία* or *κωρυκοβολία* (Hesych. *s. v.*; Pollux, x. 172; Philostr. *de Gymnast.* 57; Antyll. *ap.* Oribas. vi. 33; and the other authorities in Krause, *Gymnastik*, p. 314). The game is alluded to by Plautus (*Rud.* iii. 4, 16), "ego et follem pugilatorium faciam, et pendentem incursabo pugnis." The *corycus* is represented in works of art, as in the annexed cut from the celebrated Ficoroni cista. From this game came the proverbial expression, *πρὸς κώρυκον γυμνάζεσθαι* (Diog. vii. 54), of labour in vain. Cicero (*Phil.* xiii. 12, 26) uses the word figuratively in reference to the exercise of the voice. [W. S.]

Corycus. (From Ficoroni cista.)

COSME'TAE (*κοσμηταί*), a class of slaves among the Romans, whose duty it was to dress and adorn ladies (Juv. *Sat.* vi. 476). Some writers on antiquities, and among them Böttiger in his *Sabina* (i. 22), have supposed that the cosmetae were female slaves, but the passage of Juvenal is alone sufficient to refute this opinion · for it was not customary for female slaves to take off their tunics when a punishment was to be inflicted upon them. There was, indeed, a class of female slaves who were employed for the same purposes as the cosmetae; but they were called *cosmetriae*, a name which Naevius chose as the title for one of his comedies. This interpretation of the word is in accordance with its Greek usage, for Xenophon (*Cyr.* viii. 8, 20) explains *κοσμηταὶ* as "those who anoint and paint" the Persian nobles, "and perform the rest of their toilet." (See Heindorf, *ad* Hor. *Sat.* i. 2, 98.) [L. S.] [J. H. F.]

COSME'TES (*κοσμητής*), an officer in the Athenian Gymnasia in the time of the Romans. [Gymnasium.] [W. S.]

COSMI (*κόσμοι*), the chief magistrates of Crete. It is proposed under this head to give a brief account of the Cretan constitution.

Different opinions are held by scholars as to the time when Crete, where the Phoenicians had settlements, was first colonised by the Greeks. O. Müller (*Dorians*, i. p. 36 ff.) believes in Andron's account (Strab. x. p. 475, *fin.*; Steph. Byz. *s. v.* *Δώριον*; Diod. v. 80), according to which Dorians came to Crete, before the time of Minos, from Hestiaeotis, at that time called Doris, together with some Achaeans and Pelasgi who had remained in Thessaly, and looks upon

Cnosus (**Κνωσός** on coins and inscriptions; in MSS. mostly **Κνωσσός**) as the first Greek settlement in the island. This view is opposed by Hoeck (*Kreta*, ii. p. 15 ff.) and Grote (*Hist. of Gr.* ii. p. 311, n. 3). Duncker (*Hist. of Gr.* i. p. 321 f.) likewise considers Cnosus to have been the first settlement of the Greeks; but according to him, Dorians from Argos, under their leader Althaemenes, succeeded in reducing Karath (in Greek legend the abode of Minos), which now received the name of Cnosus (Strab. p. 479, 653; Conon, *Narr.* 47). At least a century later (p. 421 ff.) Achaeans, with Pollis as their leader, landed on the island, built Lyctus (Gortyn, according to Conon, *Narr.* 36; Plato, *Legg.* iv. p. 708 A, says, Gortyn was founded **ἐξ Ἄργους**), and subjugated many other cities (Plut. *de Mulier. Virt.* p. 247 d.; *Quaest. Gr.* p. 296 b.). Hoeck (ii. p. 445 ff.) adduces strong reasons against the opinion that Cnosus was the oldest Greek settlement in Crete, and it is now more generally believed that Argives and Lacedaemonians settled in the island subsequent to the return of the Heracleidae (Diod. v. 80), and that Lyctus (**Λύκτος** in MSS., **Λύττος** on coins and inscriptions), a colony of the Lacedaemonians (Arist. *Pol.* ii. 7, 1 S.=10, 2 B.), was the oldest Greek town there (Polyb. iv. 54). This question as to the time of the earliest settlement is closely connected with that of the relation existing between the Cretan and Spartan constitutions. The social and political institutions of Crete appeared to be so similar to the Spartan, that it was a disputed point amongst the ancients whether the Spartan constitution had its origin in Crete, or whether the Cretan constitution was transferred from Laconia thither. Ephorus argues at length that the Spartan institutions originally existed in Crete, but were perfected in Sparta; and Aristotle agrees in the general view that the Cretan institutions were older than the Spartan. Hoeck (iii. 8 ff.), however, shows that this is an untenable position (cf. Trieber, *Forschungen z. spart. Verfassungsgesch.* p. 95 ff.). In O. Müller's opinion, "at a very remote period the principles of the Doric constitution were systematised and established in Crete, so that they afterwards became the model and standard for other states of that race;" he considers Minos of Cnosus to have been a Dorian, and takes the name of Minos to indicate "a period in which the Doric invaders united a part of the island into one state, and by extending their power over the Cyclades and many maritime districts obtained, according to the expression of Herodotus, Thucydides and Aristotle, the dominion of the sea" (*Dor.* i. p. 36; cf. Curtius, *Griech. Gesch.* i.^{4} p. 157). According to Duncker, on the other hand, the tradition of the Greeks had personified and expressed in the form of Minos the dominion of the Phoenicians in the Aegean Sea, in his laws the well-ordered life of the cities of Crete which the Phoenicians had occupied (Karath = **Καίρατος**, the old name of Cnosus; Ethanath = **Ἰτανός**, Lebana=**Λεβήν**, Arvad = **Ἄραδος**, etc.). He holds (p. 371) that the Spartan laws were asserted to have come from Crete (Arist. *l. c.*; [Plat.] *Minos*, p. 318 C), "because it was supposed that the laws of the Cretan cities came from Minos, and that Minos received them from Zeus (*Odyss.* xix. 178). If Sparta's laws came from Crete, they came from Zeus." I
opinion, the similarity of institutio
and Sparta is due to their resting
foundations, viz. an armed immigr
long period of war; and Schoema
Alterth. i. p. 297) expresses a li
"This similarity may be explain
intentional imitation, by the co

Our information as regards the co
the Cretan cities (in all essential poi
for Polyb. vi. 46 speaks of **ἡ Κρητικ**
—which is derived from Ephorus a

between whose accounts there is great resemblance, and from later writers, as Dosiades, Sosicrates, who wrote Κρητικά, etc.—has been considerably increased by the discovery of the Gortyn Code (probably B.C. 450–350), of which H. J. Roby (*Law Quarterly Rev.*, April 1886) has published a translation, with notes, giving also an account of other translations and commentaries. (We shall refer especially to Joh. and Theod. Baunack (B.); Comparetti in *Mus. Ital. di Antich. Class.* i. (C.); Jac. Simon (S.); and E. Zitelmann in *Rh. M.* Suppl. vol. 40 (Z.).)

The population of the island was divided into three classes: slaves, ὑπήκοοι, and freemen. The slaves were of three kinds: (*a*) slaves of the state (ἡ κοινὴ δουλεία), called by a collective term μνοία, or μνῷται; these cultivated the land which the state had reserved to itself as domain land, whilst (*b*) the ἀφαμιῶται or κλαρῶται cultivated the estates of individuals (ἡ ἰδία δουλεία: Sosicrates in Athen. vi. 263 f.); these are the Ϝοικέες of the Gortyn Code, "householders," who had their own goods, whose marriages were recognised, and who, in default of kin, succeeded to the inheritance of their lord (Z., p. 63 f., p. 144; yet this explanation of ὁ κλᾶρος has been called in question by S. p. 85 ff., and Schaube, *Herm.* 1886, p. 222, in whose opinion ὁ κλᾶρος is the estate itself, and τὰ κρέματα went with the κλᾶρος, of which the state had to dispose). These two classes of slaves were probably the ancient inhabitants of the island conquered in war (μνῷται οἱ ἐγγενεῖς οἰκέται, Athen. vi. p. 267 c.; ἀφαμιῶται οἱ κατ' ἀγρόν, ἐγχώριοι μὲν ὄντες, δουλωθέντες δὲ κατὰ πόλεμον, p. 263 e.), and are thus distinguished from (*c*) the purchased slaves (οἱ κατὰ πόλιν οἰκέται χρυσώνητοι; perhaps ἡ ἐνδοθιδία δώλα in Gortyn Code, ii. 11). The treatment of slaves in Crete was not harsh; for "the Cretans gave them the same institutions as their own, but forbade them gymnastic exercises and the possession of arms" (Arist. *Pol.* ii. 2, 12 S.=5, 19 B.: cf. Hybrias in Athen. xv. p. 695 e.); when therefore Eustathius (*Il.* i. 321, p. 110, 9; and Dionys. Perieg. 5, 533) says that the Cretans obtained armed attendants (θεράποντες) from among their slaves, the third class (*c*) must probably be understood.

Aristotle says, "The Helots are the husbandmen of the Lacedaemonians, and the Perioeci of the Cretans" (*Pol.* ii. 7, 3 S.=10, 5 B. In iv. 9, 1^b S.=vii. 10, 1 B. he distinguishes τὸ μάχιμον and τὸ γεωργοῦν); but from this the conclusion should not be drawn (which Grote, ii. p. 365 n., draws), that there was not in Crete also another class of subject population corresponding more closely to the περίοικοι of Laconia, the name of which Sosicrates has preserved. This writer clearly distinguishes from the μνῷται and ἀφαμιῶται a third class, to whom he applies a term clearly intended to recall the Laconian institution of Perioeci: τοὺς δὲ περιοίκους (οἱ Κρῆτες καλοῦσι) ὑπηκόους (Athen. vi. p. 263 f.), whilst other writers identify the Helots with the κλαρῶται, *e.g.* Photius, *s. v.* Καλλικύριοι· . . . ὅμοιοι τοῖς παρὰ Λακεδαιμονίοις εἵλωσι καὶ παρὰ Θεσσαλοῖς πενέσταις καὶ παρὰ Κρησὶ κλαρώταις: cf. Bekk. *Anecd.* i. p. 292, 7. Aristotle, who does not mention the Lacedaemonian περίοικοι at all, must be supposed to understand by περίοικοι in Crete the ἀφαμιῶται (or κλαρῶται), who may fitly be called so as dwellers in the open country (cf. Hesych. ἀφαμιῶται· οἰκέται ἀγροῖκοι, πάροικοι); and among them the laws of Minos, he says, were still in force (cf. Plat. *Min.* 16, p. 321 B.). To the ὑπήκοοι Hoeck (iii. p. 24 ff.) refers Aristotle's remark about "the tribute which is paid by the περίοικοι" (*Pol.* ii. 7, S.=46, 10, 8 B.), and he connects with this Dosiades' statement in Athen. iv. p. 143 b: τῶν δούλων ἕκαστος Αἰγιναῖον φέρει στατῆρα κατὰ κεφαλήν, δοῦλοι being used in his opinion as a general term for those who were not free citizens; he bases this view mainly on the assumption that the μνῷται and ἀφαμιῶται had no property of their own. Since, however, we learn from the Gortyn Code, iv. 42, that with regard to the latter the contrary was the case, it seems advisable to accept O. Müller's view (ii. p. 53), according to which δοῦλοι meant the ἀφαμιῶται. These ὑπήκοοι were probably the inhabitants of non-Dorian cities, which were dependent on one or other of the autonomous Dorian cities. Z. identifies with them the ἀπέταιροι of the Gortyn Code; in his opinion the ἑταιρεῖαι were originally subdivisions of the φυλαί, and corresponded to the Attic phratries, inasmuch as the adopter had to give to his own ἑταιρεία a victim and a pitcher of wine (Gortyn Code, x. 38), and only at a later period they became "common messes" (Dosiades in Athen. iv. p. 143 b, διῄρηνται δ' οἱ πολῖται πάντες καθ' ἑταιρίας, καλοῦσι δὲ ταύτας ἀνδρεῖα). C. explains ἀφέταιροι to mean those who, as a kind of punishment, were excluded from the common mess (Poll. iii. 58 puts ἀφέταιροι together with ἀπολῖται and ἀπαθηναῖοι); Roby suggests, "they are perhaps freedmen or other unprivileged persons;" and Wachsmuth (*Nachr. d. kgl. Ges. d. W. in Göttingen*, 1885, p. 202 foll.) sees in it a name for ξένοι. So much is certain, that the ἀφέταιροι occupied a position between the freemen and the slaves, as is indicated by the scale of fines for certain offences.

The freemen, the ruling class, were probably divided into the three Dorian φυλαί: the Gortyn Code mentions φυλαί (vii. 51; viii. 6, 11, etc.), but without giving their names, yet Ὑλλεῖς (cf. Hesych. *s. v.* Ὕλεες), Δυμᾶνες, and Πάμφυλοι occur in inscriptions which will be quoted below in connexion with the κόσμοι. Whilst the Gortyn Code speaks of πολιαταί simply (x. 35; xi. 14), without any mention of privileged classes among them, we learn from Aristotle that there were such; for the κόσμοι were not chosen ἐξ ἁπάντων, but ἐκ τινῶν γενῶν (*Polit.* ii. 7, 5^b S.=10, 10 B.). The office of κόσμοι (κοσμίοντες, Gort. Code, i. 51; Cauer,^{2} No. 121; κόσμιοι, *C. I. G.* No. 3047; κόρμοι, *Bull. de Corr. Hell.* ix. No. 13 (1886, p. 19), and l. 2 ἐκόρμιον, but l. 5 κόσμοι)—ten in number (Strab. x. p. 484, ἄρχοντας δὲ δέκα αἱροῦνται)—is identified by Aristotle and Ephorus in Strab. x. p. 482 (cf. Cic. *de Rep.* ii. 33) with that of the ephors of Laconia; yet the resemblance is but slight. In the first place, at Sparta the kingly rule lasted on; and the kings being ἀΐδιοι στρατηγοί (Arist. *Pol.* ii. 6, 22 S.=9, 33 B.), the ephors never acquired the military command; whilst in Crete the kingly power, if it ever existed, had long since been abolished (only Herodotus, iv. 154, mentions

a *βασιλεὺς* Etearchus at Axus, yet it is impossible to draw any inference from this; he may have been a sacerdotal functionary, such as we find under the title of king in many places, or Herodotus may have used the term inaccurately for the Protokosmos), and command in war was so much the prime function of the *κόσμοι* that Hesychius explains *κόσμος· στρατηγὸς κεκοσμημένος*. In the second place, the number and the mode of election is different; the five ephors being chosen out of all the Spartans. With respect to the domestic government of the state, the *κόσμοι* appear to have exercised a joint authority with the members of the *βουλή*, as they are said to have consulted with them on the most important matters (Strab. x. p. 484); besides this, they had the administration of justice, for, as Aristotle says (*Pol.* ii. 7, 7 S. = 10, 14 B.), "the suspension of their office (*ἀκοσμία*) was a device to which the nobles often had recourse when they would not submit to justice." In the Gort. Code (v. 5) the phrase occurs, *ὄκ' ὁ αἰθαλεὺσταρτὸς* (*sic*) *ἐκόσμιον οἱ σὺν Κύλλοι*, *i.e.* when Cyllus was *κόσμος ἐπώνυμος* (in late inscriptions called *πρωτόκοσμος*). Hesychius explains *σταρτοί· αἱ τάξεις τοῦ πλήθους*; probably the old *γένη*, from whom according to Aristotle the *κόσμοι* were elected, were divided into a number of *τάξεις*, who in turn held the government, and out of the *τάξις* or *σταρτός* a board of ten were chosen as an executive. Two other inscriptions date by the rule of the *Αἰθαλεῖς*: Cauer,² No. 121 (Drerus), *ἐπὶ τῶν Αἰθαλέων κοσμιόντων τῶν σὺγ Κυίᾳ καὶ Κεφάλῳ*, etc., and Haussoullier, *Bull. de Corr. Hell.* ix. (1886), No. 11, p. 15, *ἐπὶ τῶν Αἰθαλέων κοσμιόντων, Τύχωνος τῶ Πειθία*, etc.; other inscriptions, which C. quotes, are headed *ἐπὶ τῶν Ἐχανορέων κοσμιόντων, [ἐπὶ τῶν . . .]σχέων κοσμιόντων* (Latus or Camara), *ἐπὶ τῶν Παμφύλων κ.* (Messeleri), *ἐπὶ τῶν Ὑλλέων κ.* (Latus or Camara), *ἐπὶ τῶν Δυμάνων κ.* (Hierapytna). The relation of the *σταρτοί* to the *φυλαί* is not clear. Haussoullier (*l. c.* p. 18) publishes an inscription from Gortyn, in which the names of six *κόσμοι* are given, and the one after the protokosmus is *ὁ ἱερεργός*. From the Gort. Code, i. 52, Z. concludes that a *κόσμος* could only be proceeded against after having resigned his office, this resignation being, however, not spoken of as a certainty, but as an eventuality, "if he resign;" but B. (p. 123), quoting Cauer,² No. 121, c. 18 (*τὸγ κόσμον...ἐμβαλεῖν ἐς τὰν βωλάν, αἴ κα ἀποστᾶντι, τοῦ μηνὸς τοῦ* K. *ἢ τοῦ* 'A.· *ἁ δὲ βωλὰ πραξάντων ἕκαστον τὸν κοσμίοντα στατῆρας πεντακοσίους*, etc.), explains the phrase correctly as referring to time, "when he resigns." The Cosmi probably held office only for a year (Polyb. vi. 46; cf. also the phrases *οἱ ἀεὶ κοσμίοντες, οἱ τόκα κοσμίοντες* in inscriptions, especially in Cauer,² No. 119 = *C. I. G.* No. 2556, v. 66, *οἱ ἐπιστάμενοι κατ' ἐνιαυτὸν κόσμοι*); they cannot have held office for life, for "the *γέροντες* were elected out of those who had been Cosmi" (Arist.; Strab., p. 484, *οἱ τῆς τῶν κόσμων ἀρχῆς ἠξιωμένοι καὶ τἄλλα δόκιμοι κρινόμενοι*). This council of the Elders, called *βουλὴ* by Aristotle (*βωλὰ* inscr.), is compared by him to the Spartan Gerousia; we are not informed what was their number (Rangabé, *Antiq. Hell.* ii. p. 1032, supposes that, all ex-Cosmi finding their way into the *βουλή*, their number was not fixed) and what was the
appointment, but we are told that
their office for life, that they were

ii. p. 407^b). All classes of freemen shared in the assembly (ἀγορά, Gort. Code, x. 34, xi. 12; Bekk. *Anecd.* i. p. 210, 9), but it could only ratify the decrees of the elders and the Cosmi (Arist. *Pol.* ii. 7, 4 S.=10, 7 B.: cf. Plat. *Legg.* i. p. 634); according to the Gortyn Code, adoption and renunciation of adoption took place before the popular assembly (in Sparta *βασιλέων ἐναντίον*, Herod. vi. 57, 3).

About the middle of the 3rd century B.C. the aristocratic character of the constitution had given way to democratic institutions (cf. Cauer,^{2} No. 181, 66 ff.: *τὰν καθεστακυῖαν δαμοκρατίαν παρὰ Ἱεραπυτνίοις*). Polybius (vi. 46) speaks of the annual election of the ἀρχαί, which, Gilbert (p. 227, n. 2) suggests, referred also to the *βουλή*, and points to this as a democratic feature in the constitution. As we learn from inscriptions, the power of the freemen in assembly (*ἁ πόλις = ὁ δᾶμος, ἐκκλησία*, *C. I. G.* 2556, 33 ff.=Cauer,^{2} No. 119, etc.) was supreme, and the name of the Cosmi is given in the heading of decrees merely to fix the year; only in case of treaties with foreign states do the Cosmi act as a kind of executive, conducting the business of their city with the foreign ambassadors. The *βουλή* continued to exist, but its constitution had necessarily undergone changes and its power must have been curtailed (Hoeck, iii. p. 75 foll.).

Public education began in Crete with the completion of the seventeenth year (in Sparta as early as the completion of the seventh). Up to that time boys were left in their parents' houses, and were called *σκότιοι* (Schol. Eurip. *Alc.* 989, and Aristoph. Byz. p. 431, in Miller, *Mélanges de la Litt. Gr.*), or *ἀπάγελοι* (Hesych. *s. v.*), from the circumstance of their not yet belonging to the *ἀγέλαι* or divisions; they were, however, taken to the common mess by their fathers (Strab. x. p. 483). With their eighteenth year they entered the *ἀγέλαι*: they were not, as in Sparta, assigned by the Paedonomus to this or that *ἀγέλη*, but banded themselves together, of their own choice, under one of the most prominent of the young men, whose father was usually the leader of the *ἀγέλη* (Heracl. Pont. iii. and Schneidewin's note on p. 57, *ὃν* (sc. the leader) *καλοῦσιν ἀγελάτην*). From that time the youths were called *ἀγελάστοι* (Hesychius, *ἀγελάστους· τοὺς ἐφήβους*, which Cohn, *de Arist. Byz.* p. 300, alters to *ἀγελάτας*, and Baunack, *Studien*, i. 1, p. 40, to *ἀγελάσταυς*; *ἀγελάοι*, Cauer,^{2} No. 121, l. 10) or *δρομεῖς* (Gort. Code), from being admitted to the gymnasia (Suid.: *δρόμοις· τοῖς γυμνασίοις, κατὰ Κρῆτας*: cf. the Spartan *σφαιρεῖς*, Pausan. iii. 14, 6; *C. I. G.* 1386, 1432). They probably remained ten years in the *ἀγέλαι* (Hesych. *s. v. δεκάδρομοι*); and it is usually supposed, on the authority of Ephorus (Strab. x. p. 482), that they were compelled by law to marry on their release from the *ἀγέλαι*; yet Gilbert (ii. p. 224, n. 1) doubts that *ἀγέλη* is used in this passage in its technical sense, and points to Gort. Code, vii. 40 ff., from which we learn that a relative, if a *δρομεύς*, lost his right to marry an heiress if he did not do so "within two months:" hence he concludes that the Cretan youth was allowed to marry, when he was admitted to the *δρόμοι*: that the wives, however, remained under the roof of their fathers or brothers for some time longer (see Gort. Code, ii. 20 ff., viii. 20 ff.), "until they were fit to manage their own households" (Strab. p. 482 c.). Girls were deemed marriageable at twelve years of age (Gort. Code, xii. 31 ff.). In Gort. Code, vii. 35, there occurs the term *ἀπόδρομος*, by which some definite age must be meant (Wachsmuth, p. 201, "the sixteenth year;" Gilbert, p. 222, "the seventeenth year"); for we find there three distinctions of age recognised: *ἄνωρος—ἀπόδρομος ἠβίων—δρομεύς*. It is very probable that those who had been united in an Agela as youths remained united as men in the *ἑταιρεῖαι*, which messed together (*ἀνδρεῖα*, Athen. iv. p. 143 b, and Strab.). According to Aristotle (*Pol.* ii. 7, 4^b S.=10, 7 B.: cf. 6, 21 S. =9, 31 B.), these common meals were better managed in Crete than in Lacedaemon, being provided at the public cost. Dosiades (Athen. iv. p. 143) gives a full description of the Syssitia of Lyctus, and his account as to the manner of raising the funds differs somewhat from that given by Aristotle. Some further details are to be found in Heracl. Pont. iii.: *e.g.* that four portions were given to the *ἄρχων*, that strangers were served first, that the Cretans continued to sit at meals, whilst the Spartans departed from the ancient custom and reclined at table (cf. O. Müller, ii. p. 290 m, and p. 291 n). [R. W.] [H. H.]

COTHURNUS (*κόθορνος*). The word *cothurnus* is chiefly associated with tragedy, and among the Romans was the name given to the tragic boot. But it is to be carefully borne in mind that among the Greeks the tragic boot was not so called. The Greek term used was occasionally *ὀκρίβας* (Philostr. *Apoll.* vi. 11; *Vit. Soph.* i. 9, 1), but more usually *ἐμβάτης* (Lucian, *Jup. Trag.* 41; *Hist. conscrib.* 22; *Necyom.* 16). A distinction is said to subsist between *ἐμβάτης*, the tragic boot, and *ἐμβάς*, the comic one (Ammon. p. 49; Thom. Mag. p. 300); and again the distinction is said to be that *ἐμβὰς* is the tragic boot and *ἐμβάτης* the comic one (Poll. iv. 115). But the latter distinction certainly cannot be sustained, for *ἐμβάδες* is often used for the comic boot (*e.g.* Arist. *Eq.* 321) and *ἐμβάτης* for the tragic one (Lucian, *Salt.* 27); and even the former is very questionable, for in Bekk. *Anecd.* 746 *ἐμβάδων* is used of the tragic buskin (cf. Sommerbrodt, *Scaenica*, p. 106, note). Among the Greeks the *κόθορνος* was a kind of closed *boot* (in distinction to *sandals*) worn by women, which could fit either foot (hence the nickname of *Κόθορνος* given to Theramenes, Xen. *Hell.* ii. 3, 31, and the proverb *εὐμεταβολώτερος κοθόρνου*), and had rectangular soles (*Etym. M.* 524, 40). In Herodotus (vi. 126) it was the kind of boot put on by Alcmaeon when he was allowed to take as much gold as he could carry out of the treasury of Croesus; and was also the kind of boot which Croesus advised Cyrus to compel the Lydians to wear, in order to make them effeminate (Herod. i. 155). The cothurnus is called by Ovid "Lydian" (*Am.* iii. 1, 14), and in this connexion it is to be remembered that *τυρρηνικὰ* were rectangular wooden shoes [CALCEUS]. In Aristophanes, too, the *κόθορνος* is a woman's boot (*Lys.* 657; *Eccl.* 346, cf. 319; and especially *Ran.* 47), apparently of such a nature that the foot could be easily slipped into it (*Eccl.* 346). The generic name for such a boot seems to have been *ἐμβάτης* or *ἐμβάς* (*ἀπὸ τοῦ ἐμβαίνειν τοὺς πόδας*, *Etym. M.* 333, 54); and this word *ἐμβάτης* is specially applied by the Greeks to a top-boot reaching up to the calf of the leg and worn by hunters (Xen. *Eq.* 12, 10; cf. Poll. v. 18). The term *κόθορνος* in Greek is not used in this sense; but *cothurnus* in Latin is often applied to the hunter's boot (Verg. *Ecl.* vii. 32; *Aen.* i. 341, and Servius *ad loc.*), the species coming to be used for the genus, both agreeing in the quality of being easily slipped on. The correct Greek term for the hunting boot is ENDROMIS.

In Roman times *cothurnus* also takes the place of *ἐμβάτης* as applied to the tragic boot (*e.g.* Ovid. *Am.* ii. 18, 15; Tert. *Spect.* 23). It was a closed boot, but its special characteristic was the great height of its soles (Ov. *Am.* iii. 1, 63; Senec. *Ep.* 76, 31), and accordingly the term is applied to the very high-soled boot of a small woman (Juv. vi. 506). The actors were perched up on painted (Ov. *Am.* ii. 18, 14; Wieseler, *Denkm. des Bühnenwesen*, plates 7 and 8) wooden (Schol. *ad* Lucian, *Saturn.* 19) blocks, which we can well believe were heavy (Lucian, *Anach.* 23), which were, as may be seen from the accompanying cut, probably six or seven inches high, and from which he had to "get down" (*καταβάς*) at the end of the performance. The object was to give the principal characters a grandiose and superhuman stature. The less important actors had lower-soled boots, and we find pictures of actors with soles of different heights to their buskins (Saglio, fig. 2032; cf. Cic. *Fin.* iii. 14, 46). The statue of Melpomene on the sarcophagus of the Muses in the Louvre (Saglio, fig. 2028) wears two cothurni of different heights. The cothurnus being such a salient point of tragic costume, it came to be used for "tragedy," or "tragic style" generally (*e.g.* Hor. *A. P.* 80; *Od.* ii. 1, 12). In the Satyric drama the heroic characters most probably wore the high-soled boot, as Wieseler (*Satyrspiel*, p. 80) supposes, though A. Müller (*Die griech. Bühn.* p. 242) thinks they adopted the hunter's boot. From analogy with the huntsman's boot, we might infer that the tragic boot came considerably up the leg; but we cannot verify this from pictures, and it is at variance with a statement of Lucian's (*Gall.* 26) that when an actor with *ἐμβάδες* on fell the *naked* legs were exposed. The boots most probably did not come above the ankle. The uppers appear to have been made of leather; the huntsman's *ἐμβάτης* undoubtedly was (Xen. *Eq.* 12, 10), and the woman's *κόθορνος* in Aristoph. *Lys.* 658 is *ἀψηκτός*, which leads us to suppose that they were usually of leather. Cothurni do not appear on some pictures of actors found at Pompeii; so that we may infer that they were not always used. For other theories based on their absence, see A. Müller, *op. cit.* 240.

COTTABOS (*κότταβος*, Ion.
game much in use at Athenian s
cially in the fifth and fourth centu
name and the sport were alike, o
tell us, of Sicilian origin. Brie
the object of the game was to
quantity of wine at a mark. Its
larity is attested by the number
it in literature, by the number of
it underwent, and, not least, by
the vocabulary connected with it.
be noticed first.

The word *κότταβος* itself is ap
(*a*) to the game, (*b*) to the wine
the sound it produced. It is fur
by adjectives describing the diffe
the game: *κότταβος ἀγκυλητός*,
ὀξυβάφων. Derivatives of it are
the vessel into which the wine wa
called *λαταγεῖον*, *χαλκεῖον*, *λεκ*
κοττάβιον, the prize for success
which consisted of cakes or sweet
βίζω, *ἀποκοτταβίζω*, *κοτταβισμό*
κοτταβικός, *κοττάβις*, referring t
the game.

The other word of main impor
(with its derivatives, *λαταγή*, *λα*
γεῖν), which signifies both the wi
the sound produced by it.

Two main forms of the game a
able in the written accounts, apa
variations; namely, that played
out special apparatus. The latte
shortly described first. It was
δι' ὀξυβάφων, for which nothing
ordinary accessories of a drinki
required. In this, a *κρατὴρ* or
filled with water, was set in the
it a number of empty saucers floa
ject here was to sink the saucers b
λάταξ into them, and he who san
number received the *κοττάβιον* (*v.*

The *κότταβος κατακτός*, on th

exactly resembling a pair of scale
πλάστιγγες, and under each of
standing immersed in a bowl
object in this case being to throw
the *πλάστιγξ* with such force
descend and hit the head of the
descent of the *πλάστιγξ* would ex
κατακτός.

Evidence, however, of a more exact and trustworthy character than the written accounts is not wanting. Vase-paintings representing one form of the game with the *πλάστιγξ* exist in considerable numbers; and some have been figured by Heydemann and O. Jahn (*v. infra*). In these we see simply an object like a candelabrum (the *ῥάβδος*), with a small saucer (the *πλάστιγξ*) balanced on the top of it, which the player is endeavouring to dislodge by throwing the *λάταξ* into it: sometimes the saucer is being replaced in position after a successful throw, by an attendant (generally a woman). The safest guide, however, to the solution of the problem has been afforded of late years by the discovery of an actual *κότταβος* apparatus in an Etruscan tomb in the Frontone, Perugia. This has been described and figured by W. Helbig (*Mittheil. des Kaiserl. Deutsch. Archäol. Inst.*, *Römisches Abth.* Band 1, 1886, pp. 222–3 and 234–42, pl. xii.^{a} xii.^{b}). The whole apparatus (now in the museum at Perugia) is of bronze. It resembles a candelabrum on a base. At a third of its height, the stem is surrounded by a basin. In a socket at the top is fitted a small bronze figure with one arm and leg raised. It stands on a small base and is easily movable, so as to be replaced on occasion by a *πλάστιγξ*, such as the vase-paintings show us. The stem of this instrument could, it seems, be raised or lowered at will.

In another specimen at Perugia, lately identified by Helbig as a *κότταβος*, the basin is gone: the *μάνης* in this is represented as holding up a vessel, and on his upraised arm a *πλάστιγξ* might be balanced. At least one more *μάνης* and several *πλάστιγγες* are known to exist in different collections. It will be seen that this form of *κότταβος* has nothing equivalent to the movable *ζυγὸς* described by several writers. The *μάνης* represents a slave being beaten, or shrinking from a blow, and its attitude is alluded to in a fragment of Eubulus *ap.* Athen. xv. p. 666 (*v.* Helbig, *l. c.*).

Two more points remain to be noticed with regard to the game. First, the action of throwing the wine was called *ἀγκύλη* (whence the epithet *ἀγκυλητός*, used by Aesch. *ap.* Ath. *l. c.*), and the acquiring of suppleness (*ὑγρότης*) in the turn of the wrist was a point of prime importance amongst players. Secondly, as is well known, the *κότταβος* was used as a method of love-augury. The name of the beloved object was pronounced or thought of by each player as he threw the wine, and the success or failure of the suit was augured according as the sound of the *λάταξ* upon the *πλάστιγξ* was sharp and clear, or dull and confused. Whether this originally formed part of the game seems a doubtful point.

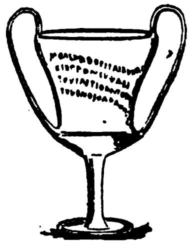
Literature and ancient authorities.—Athenaeus, *Deipnos.* xv. p. 666, &c., has a discussion on the subject, illustrated copiously by tragic and comic fragments, which form nearly all our *contemporary* evidence. Many later writers describe the game, but, as has been said, apparently without personal knowledge of it. They are: (1) Jul. Pollux, *Onom.* vi. 109; (2) Schol. in Ar. *Pac.* 1172; (3) Schol. in Luc. *Lexiph.* 3 (rather copious); (4, 5) Suidas and *Etym. Magn.* s. v.; (6) Nonnus, *Dionys.* xxxiii. 74–98, describes an impossible *κότταβος* played by Eros and Hymen, where a statue of Hebe is the *μάνης*.

Modern authorities.—Besides the older literature (see Becker-Göll, *Charikles*, ii. p. 366), the best modern discussions are to be found in (1) *Philologus*, xxvi. (1867), pp. 204–240, by O. Jahn; (2) the *Annali*, 1868, pp. 217–31, and plates; (3) the *Mittheilungen*, as referred to above. [M. R. J.]

CO'TYLA or **Co'tula** (*κοτύλη*, *κότυλος*, dim. *κοτυλίσκη*, *κοτυλίσκος*, *κοτυλίσκιον*), a kind of cup, the exact shape of which is not easy to determine. That it was of no great size is evident from the earliest use of the word in Homer (*πύρνον καὶ κοτύλην*, "a bite and a sup," of the smallest doles of food and drink, *Od.* xv. 312, xvii. 12; cf. *Il.* xxii. 494). Athenaeus, who has separate chapters on the *κότυλος* (xi. 478 b) and *κοτύλη* (*ib.* d), brings together a farrago of quotations which point to no definite conclusion. From one grammarian, Simaristus, he quotes *λεπτὸν ποτήριον*, "a small cup," as a description of *κοτύλη*: from another, Apollodorus, *ποτηρίου τι γένος ὑψηλὸν καὶ ἔγκοιλον*. Of course *ὑψηλὸν* need not imply any great height; it means "of a high and narrow shape," running to height rather than width. The other adjective, *ἔγκοιλον*, must mean "with hollow or concave sides;" even Athenaeus would hardly describe a cup as simply hollow. These two epithets, we shall see further on, are not without significance. Athenaeus' other statements are more contradictory: *κότυλοι* are at first "one-handled," then they "sometimes have handles;" *κοτυλίσκοι* are little hollows in a large dish called *κέρνος* (cf. Liddell and Scott, *s. v.*); then a *κοτύλη* has no handle at all, therein differing from a *κύλιξ*: finally both the *κότυλος* and *κοτύλη* are like a deep bath-tub (*λουτηρίῳ βαθεῖ*).

After this it is not surprising that modern authorities differ. Two of the best, Panofka and Gerhard, are at issue which of two closely resembling vessels is a scyphus and which a cotyla (Guhl and Koner, ed. 5, p. 194; the figures p. 190, Nos. 4 and 7). Fortunately two inscribed examples help us to a decision. One of these, found at Corfu, has been figured by Birch (*Anc. Pott.* ed. 2, p. 375), and is inscribed HEMIKOTTΛION, i.e. *ἡμικοτύλιον*: the other, found at Thespiae and now in the Louvre, calls itself *κότυλος* and is here given after Pottier (*ap.* D. and S.). The cup in question is about six inches in height, and its shape answers to the description quoted from Apollodorus, *ὑψηλὸν καὶ ἔγκοιλον*: it bears some resemblance to a Cantharus, but is of smaller size. These two inscribed specimens favour the conclusion that the *ἡμικοτύλιον* had one handle, the *κότυλος* or *κοτύλη* two; as had previously been conjectured (Panofka, iii. 51, iv. 50; Gerhard, *Ultime Ricerche*, 28; Birch, *l. c.*). The *κοτυλίσκος*, it is probable,

A half Cotyla. (Birch.)



Cotyla. (From the Louvre.)

might be with or without handles (Gerhard, *Berlins Ant. Bildw.* i. 368, No. 46).

Cotyla (in this sense *κοτύλη* only, not *κότυλος*) was also a measure of capacity among the Romans and Greeks: in Latin it was more commonly called *hemina;* in Greek sometimes *ἡμῖνα* or *ἡμίμνα*. It was the half of the sextarius or *ξέστης*, and contained 6 cyathi, 0·274 of a litre, or nearly half a pint English (Hultsch, *Metrol.* 80 ff. 92). Sometimes, though rarely, it is a dry measure (*κοτύλην ὕδατος καὶ δύο κοτύλας σίτου*, Thucyd. vii. 87; Hultsch, p. 83).

This measure was used by physicians with a graduated scale marked on it, like our own chemical measures, for accurately dispensing given weights of fluids, especially oil; and in this sense was also called *τρύβλιον* (Hippocr. 531, 51; Galen, *infra*). A vessel of horn, of a cubic or cylindrical shape, of the capacity of a cotyla, was divided into twelve equal parts by lines cut on its side. The whole vessel was called *litra*, and each of the parts an ounce (*uncia*). This measure held nine ounces (by weight) of oil, so that the ratio of the weight of the oil to the number of ounces it occupied in the measure would be 9 : 12 or 3 : 4. (Galen, *de Compos. Medicam. per Genera*, iii. 3; i. 16, 17; iv. 14; v. 3, 6; vi. 6, 8.) [P. S.] [W. W.]

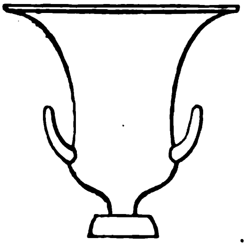
COTY'TTIA or COTTYTES (*κοτύττια, κόττυτες*), a festival which was originally celebrated by the Edonians of Thrace, in honour of a goddess called Cotys or Cotytto. (Strab. x. p. 470; Eupolis, *apud* Hesych. *s. v.;* Suidas.) It was held at night, and, according to Strabo, resembled the festivals of the Cabeiri and the Phrygian Cybele. But the worship of Cotys, together with the festival of the Cotyttia, was adopted by several Greek states, chiefly those which were induced by their commercial interest to maintain friendly relations with Thrace. Among these Corinth is expressly mentioned by Suidas, and Strabo (x. p. 471) seems to suggest that the worship of Cotys was adopted by the Athenians, who, as he observes, were as hospitable to foreign gods as they were to foreigners in general. (Compare Juven. *Sat.* ii. 92.) The priests of the goddess were formerly supposed to have borne the name of *baptae;* but Buttmann has shown that this opinion is utterly groundless. Her festivals were notorious among the ancients for the dissolute manner and the debaucheries with which they were celebrated. (Suidas, *s. v.* Κότυς: Hor. *Epod.* xvii. 56; Theocrit. vi. 40.) Another festival of the same name was celebrated in Sicily (Plut. *Proverb.*), where boughs hung with cakes and fruit were carried about, which any person had a right to pluck off if he chose; but we have no mention that this festival was polluted with any of the licentious practices which disgraced those of Thrace and Greece, unless we refer the allusion made by Theocritus to the Cotyttia, to the Sicilian festival. (Compare Buttmann's essay, *Ueber die Kotyttia und die Baptae*, in his *Mythologus*, vol. ii. p. 159; Lobeck, *Aglaoph.* pp. 627, 1007, &c.) [L. S.]

COVINA'RII. [COVINUS.]

COVI'NUS or COVINNUS (Celtic, *kowain*), a kind of car, the spokes of which were armed with long sickles, and which was used as a scythe-chariot chiefly by the ancient Belgians and Britons. (Mel. iii. 6; Lucan. i. 426; Sil. xvii. 422.) The Romans designated, by the name of covinus, a kind of travelling carriage, which seems to have been covered on all sides with the exception of the front. It had no seat for a driver, but was conducted by the traveller himself, who sat inside. (Mart. xii. 24.) There must have been a great similarity between the Belgian scythe-chariot and the Roman travelling carriage, as the name of the one was transferred to the other, and we may justly conclude that the Belgian car was likewise covered on all sides, except the front, and that it was occupied by one man, the covinarius only, who was, by the structure of his car, sufficiently protected. The *covinarii* (the word occurs only in Tacitus) seem to have constituted a regular and distinct part of a British army. (Tacit. *Agr.* 35, 36; Böttcher's *Lexicon Tacit.* s. v.; Göll-Becker, *Gallus*, iii. p. 18; Marquardt, *Privatleben*, p. 713; compare the article ESSEDUM.) [L. S.]

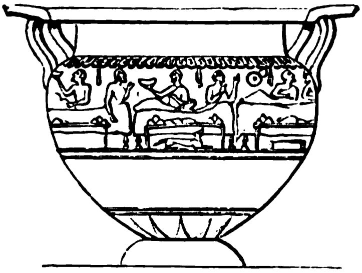
CRATER (*κρατήρ*) was the large bowl used at feasts for mixing the wine for the whole company. There can be little doubt that it is as old as communal life, with its common ceremonies and common feasts; so that we are not surprised to find it among the oldest people and in the most remote age of each nation. From Assyria (Perrot and Chipiez, ii. 410), Cyprus (the crater of Amathus), Persia (Ath. 514), we hear of colossal specimens which were used generally in religious rites, and which bear evidence that even at the time of their own construction the crater had already had a long history. But specially, among the Greeks, we find the *κρατήρ* in Hesiod (*Op.* 744) and Homer, made of silver (*Od.* ix. 203) and with a gold rim (*Od.* iv. 616), and sometimes of gold (*Il.* xxiii. 219). The prize Achilles offered for the foot-race was a silver crater, elaborately wrought, holding six measures, nor was any in the whole world able to surpass it in beauty, cunningly wrought as it was by Sidonians (*Il.* xxiii. 740). During the Homeric feasts the *κρατήρ* used to stand at the far end of the men's hall, at the left-hand side near the *ὀρσοθύρη* (*Od.* xxii. 332 *sqq.*; and Buchholz, *Hom. Real.* ii. 2, 164). The manner of its use at festivals will be found treated of under CENA.

In historical times we find it belonging to every class, rich (*e.g.* Alexis, 119, Kock; Juv. xii. 44) and poor (Ar. *Eccl.* 677; Mart. xii. 32, 12); and used also in religious cult, where it is generally mentioned in connexion with *σπονδαί* (Aesch. *Cho.* 291; Dem. *Lept.* 505, § 158), thus referring to the drinking which followed the libation. So, too, in general festivals we hear of the gods ordering *κρατῆρες* to be set up in the streets (Dem. *Mid.* 531, § 53; *Macart.* 1072, § 66); and the crater was used at funerals (Verg. *Aen.* vi. 225) and in the mysteries (*κρατηρίζων*, Dem. *de Cor.* 313, § 259). And so we find craters were a most common kind of dedication in the temples (e.g. *C. I. G.* 8; Orelli, 1541), and they are often mentioned as such by Herodotus: for example, the six golden ones dedicated by Gyges, each weighing 5 talents (i. 14); the gold one weighing 8½ talents 12 minae, and the silver one holding 600 *μετρηταὶ* which Croesus dedicated at Delphi (i. 51). The monstrous crater carried in the procession of Ptolemy Philadelphus (Ath. 199 b) held the same quantity, and was elaborately adorned with figures about the handles and base, and round the middle ran a band of gold with precious stones (cf. λιθοκόλλητον in Eratosth. *ap.* Ath. 495 a). Other highly-adorned craters are mentioned in Herod. i. 70, iv. 152; cf. also Ov. *Met.* xiii. 681 *sqq.* These great public vessels used to be employed for mixing wine in on the occasion of festivals, *e.g.* the Theophania at Delphi (Herod. i. 51), and of important state ceremonials, *e.g.* contracting peace and alliance with another state (iv. 152). In Virgil (*Aen.* ix. 346) we read of a man hiding behind a crater. These examples show the enormous size, the costly material, and the elaborate ornamentation of some of these vessels; but craters were of all sizes, from these gigantic public ones down to domestic ones holding a few pints. And as the latter were often humble in size, so too they were often humble in material. We find them of wood (the πρόαρον is a κρατὴρ ξύλινος, Ath. 495 a), horn (Mart. xii. 32, 12), clay (Ov. *Met.* viii. 669). Craters were used chiefly for wine, but also for other libations (Soph. *O. C.* 472; Verg. *Aen.* v. 68). We hear of special kinds with distinct names from places, *e.g.* Lesbian (Herod. iv. 61), Argive (Herod. iv. 152), Laconian (Ath. 198 d); and from individuals, *e.g.* Thericlean (Alexis, 119, Kock). For the latter see Calix. But archaeologists agree that we have not sufficient evidence to identify these different species with the different kinds of craters which have come down to us. The most ordinary shapes of the crater are the following. It will be seen that they had a neck of varying size, a broad body, and a base; also two handles, which were sometimes high up and vertical, and adorned with flutings, sometimes horizontal and nearer the base.



Crater. (Dennis, *Etruria*, i. p. cxi.)

Etruscan Crater. (Dennis, *Etruria*, i. p. cxii.)



Crater. (Dennis, *Etruria*, i. p. cxii.)

These are the principal kinds; but perhaps we may class under the head of κρατὴρ those large round-bottomed vessels which approached in form to the δῖνος, and which were of the shape of the old mixers of more simple times. The word crater [Cantharus] is also used of basins for catching the water discharged by fountains (Plin. *Ep.* v. 6, 23, and probably *H. N.* xxxv. § 156). It does not appear to have been ever applied to a drinking vessel; but we find κρατηρίσκος in this latter sense (Ath. 478 c).

The crater often had a support which was called ὑποκρατήριον, ὑποκρατηρίδιον, or ἐπίστατον. These are frequently mentioned in dedications; see Boeckh in *C. I. G.* 8, p. 20. In Herod. i. 25 it is of iron; and in iv. 152 three brasen kneeling Colossi, seven cubits high. A Latin inscription of 169 A.D. (Orelli, 1541) mentions a "crateram argyrocorinthiam cum basi sua et hypobasi marmorea;" and another (Henzen, 5801) tells of a crater "cum basi bicipite." Subjoined are two woodcuts to illustrate the ὑποκρατηρίδιον.

Late Crater, Orvieto. (Dennis, *Etruria*, i. p. cxi.)

Further, the word κρατὴρ is applied to chasms in the ground (Soph. *O. C.* 1593, and

Jebb *ad loc.*): *e.g.* the geysers of the Palici at Syracuse (Macrob. *Sat.* v. 19). Compare the dark mountain lake called the Devil's Punchbowl at Killarney. The name of Crater was also given to the Sinus Cumanus or Bay of Naples (Cic. *Att.* ii. 8, 2); compare Cothon at Carthage. Crater, too, was a constellation (Ov. *Fast.* ii. 226).

Late Crater, Perugia. (Dennis, *Etruria*, i. p. cxli.)

Besides the works mentioned under Calix, see Pottier in Daremberg and Saglio. [L. C. P.]

CRATES (*ταρσός, γέρρον*), a hurdle, used by the ancients in many different ways, especially, as among ourselves, for agricultural purposes. Thus *textae crates* are the wattled hurdles of which sheep-folds are made (Hor. *Epod.* ii. 45); *vimineae crates* are bush-harrows, like those now in use (Verg. *Georg.* i. 95, 104; Plin. *H. N.* xviii. §§ 180, 186; Agricultura, p. 63 *a*). The name was also applied to any wooden frame composed of bars with interstices,—our *crate*, *grate;* and the interstices might be filled up with mats of straw, rushes or fern (Colum. xii. 15). The following special senses may be noticed:—

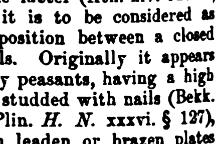
1. *Crates* were used by the country people upon which to dry figs, grapes, &c. in the rays of the sun, or to screen growing fruit from the weather (Colum. xii. 16; Cat. *R. R.* 48); or for spreading manure (Cat. *R. R.* 10; Varr. *R. R.* i. 22). 2. A rack for provisions, like that figured under Caupona; cf. Carnarium (Juv. xi. 82). 3. Among military terms we find *crates* used in forming the roadway of Caesar's bridge over the Rhine (Caes. *B. G.* iv. 17); for parapets or breastworks (*pinnae loricaeque ex cratibus*, ib. v. 40); as fascines for crossing ditches (*ib.* vii. 79, 81, 86; *B. C.* iii. 46 and 80; Tac. *Ann.* i. 68, where Orellius observes, after Walther, that the ditches were not filled up, as by modern fascines, but bridged over); as mantlets or wooden screens for sheltering the advance of troops under cover (Amm. Marc. xxi. 12). From the *plutei*, which were employed in the same way, they differed only in being without the covering of raw hides: *plutei* and *crates* are again coupled, Liv. x. 38. 4. By the besieged they were used joined together so as to form what Vegetius calls a *metella*, and filled with stones: these were then poised between two of the battlements; and, as the storming-party approached upon the ladders, overturned on their heads (Veget. *Mil.* iv. 6). 5. In poetry, the wicker-work of shields is so called (Verg. *Aen.* vii. 633; Sil. Ital. v. 522; *cratem trilicem*, Val. Flacc. iii. 199).

A capital punishment was called by this name, whence the phrase *sub crate necari.* The criminal was either thrown into a pond or well, and drowned under a hurdle (Liv. i. 51; Tacit. *Germ.* 12); or crushed by the weight of stones heaped upon it (Liv. iv. 50; Plaut. *Poen.* v. 2, 65). Cf. Humbert, *ap.* D. & S. [B. J.] [W. W.]

CRATI'CULA, the diminutive of *crates*, seems always to mean a gridiron (Mart. xiv. 221). In Petronius (*Sat.* 31 and 70) it is of silver, and brought to table by the slaves; an anticipation of the modern "silver grill." In Cato (*R. R.* 13, § 1), the true reading is probably *lucernas craticulas*, "wicker lanterns." Several ancient gridirons, found at Pompeii, are now in the Naples Museum. [W. W.]

CRATI'CULUM (*κρατευταί*, *Il.* ix. 214; *κρατευτήριον*, Poll. vi. 89; *κρατευτήρια*, id. x. 97), andirons or "dogs," rests on each side of the fire on which a spit turns. On the derivation, see Leaf *ad Il.* l. c. Festus derives the Latin word from the Greek; a not very probable etymology (Fest. p. 53, M.). [W. W.]

CRE'PIDA (*κρηπὶς*), also called *crepidula* (Plaut. *Pers.* iv. 2, 3), was a kind of shoe of the nature of sandals (Gell. xiii. 21, 5); but as it was different from the latter (Ath. xiv. 621 b; Hor. *Sat.* i. 3, 127), it is to be considered as occupying a middle position between a closed boot and plain sandals. Originally it appears to have been worn by peasants, having a high and strong sole, often studded with nails (Bekk. *Anecd.* 273, 18; cf. Plin. *H. N.* xxxvi. § 127), sometimes fitted with leaden or brazen plates called *Χῖαι κρηπῖδες* (Hippoc. *ap.* Galen, xviii. A. p. 678, ed. Kuhn; Tert. *de Pall.* 4; Ael. *V. H.* xii. 32), and we are told that Hagnon, one of the followers of Alexander, had gold or silver nails in his *crepidae* (Ath. xii. 539 c; Ael. *V. H.* ix. 3; Plut. *Alex.* 40). It sometimes had a low upper (cf. the story in Parthen. *Erot.* 8), with eyes (*ansae*) through which straps (*obstragula*, *ἱμάντες*), which were at times adorned with jewels (Plin. *H. N.* ix. § 114) or dyed with purple (Heliod. *Aethiop.* iii. 3), were passed, fastening it over the instep: often it was closed at the back (this is probably the *ὀπισθοκρηπὶς* of Poll. vii. 91): but generally the upper consisted of a series of large loops (also called *ansae*), through which the fastening thong or thongs were passed. This kind of open network covering the instep explains the epithet *πολυσχιδές* (Lucian, *Rhet. Praecept.* 15). Examples of *crepidae* are given among the Greek shoes under Calceus, 3 and 4, and in the accompanying cut of the



Crepida. (Foot of Hermes.)

foot of the Hermes of Praxiteles. There appear to have been a definite number of *ansae* in special kinds of *crepidae* (see the story which led to the proverb *ne sutor supra crepidam judicaret* in Plin. *H. N.* xxxv. § 85). In some vase-paintings of ephebi the bands fastening the *crepidae* reach half-way up the calf (see Saglio, fig. 2057). The *crepida* would fit either foot (Isid. *Orig.* xix. 34, 3). They were of course made of leather (Xen. *Eq.* 12, 10). Lamps made in the form of *crepidae* or *caligae*, with nails in the soles, have been found, and illustrations of them are given in Saglio (fig. 2059) and Baumeister (fig. 619).

The κρηπὶς was the national Greek shoe (Plut. *Aemil.* 34; Pers. i. 127; Suet. *Dom.* 4); hence at Rome a tragedy in Greek costume was called *fabula crepidata.* It is especially mentioned as a Macedonian military boot (Theocr. xv. 6), while the Roman military boot with nails was called CALIGA. We find the *crepida* frequently worn with the *pallium* (Liv. xxix. 19, 12; Suet. *Tib.* 13), and with the *chlamys* and *causia* (Cic. *Rab. Post.* 10, 27; Plut. *Ant.* 54; Herodian, iv. 8, 2): in all these passages it is spoken of in pointed contrast to Roman costume.

As κρηπὶς sometimes (Ath. xii. 522; Lucian, *l. c.*) appears as a soft shoe worn by women, we cannot suppose that this kind resembled the heavy κρηπὶς of peasants or soldiers otherwise than in shape. We are also told that Sophocles (*Vit. Soph.* p. 128, 30; ed. West.) introduced white κρηπῖδες for the *choreutae* and for actors who performed (Wieseler, *Satyrspiel*, p. 82) subordinate female parts or the parts of effeminate men. More probably, however, these κρηπῖδες were of the nature of the high-soled peasants' shoes mentioned above.

The word κρηπὶς was also used in the sense of a kind of pancake or cake made of dough with fruit inside it (Ath. xiv. 645; Poll. vi. 77; Hesych. *s. v.*).

(Hermann-Blümner, *Privatalterthümer*, p. 182; Marquardt, *Privatleben der Römer*, p. 577; Becker-Göll, *Charikles*, iii. 274–277; and Pottier, in D. & S.) [L. C. P.]

CREPITA'CULUM. [SISTRUM.]

CRETIO HEREDITA'TIS. [HERES.]

CRIMEN is a term which has two ordinary meanings: a punishable offence (e.g. *crimen admittere, confiteri; crimen alicui objicere*), and the accusation brought against the person by whom it was committed (e.g. *crimen alicui intendere, in crimen subscribere, suspecti crimen*).

In the first of these senses crimina were, in the oldest period of Roman history, regarded as wrongs against religion and the gods (Vegoia, *Röm. Feldmesser*, i. 350; Liv. i. 26; Dionys. iii. 22; Tac. *Ann.* xii. 8), and their punishment as an expiation offered to Heaven (Serv. *ad* Verg. *Aen.* i. 632; Festus, s. v. *Sacrata;* Liv. ii. 8, iii. 55; Dionys. viii. 79, x. 42). In the Twelve Tables this implication of penal law with religion and religious sanctions has become less prominent, and we find a distinction between offences which are punished by a solemn legislative act of the state (though few only with death, Cic. *de Republ.* iv. 10), and offences atoned for by a mulct paid to the injured person in satisfaction of his resentment, as to the amount of which the parties might come to terms (Festus, s. v. *talio*). From this distinction arose another, of more scientific value, between *delicta privata* and *crimina publica* (Dig. 21, 1, 17, 18), which is adhered to with tolerable consistency in the writings of the jurists and the later law. *Delicta privata*, or *delicta* simply, are civil offences, or what we call "torts;" *crimina publica* are what we call crimes, offences against the state or community, the subject of prosecution before a criminal tribunal. But occasionally a delict is spoken of as a crimen (*e.g.* "extra furti crimen videri," Gaius, iii. 197; Inst. iv. 1, 7), and in other passages (*e.g.* Dig. 48, 19, 1) a person who commits a crime is said *delinquere.*

The peculiarity of the Roman delicts seems to be that, independently of the obligation to indemnify the plaintiff for any loss or detriment which the wrongful act has occasioned him, they invariably entail on the defendant also a liability to pay a pecuniary penalty to the injured person: if his purse is stolen, he can recover in the civil courts not only the value of it with its contents, but also a penalty equivalent, under different circumstances, to twice or four times the sum awarded to him as pure compensation. In the Institutes of Gaius and Justinian delicts are discussed as one of the modes in which "obligations" originate: they comprise theft (*furtum*), robbery (*bona vi rapta*), damage to property (*damnum injuria datum*), and intentional wrongs to the person or reputation of a free man (*injuria*): Gaius, iii. 182–225; Inst. iv. tits. 1–4. Besides delicts, there are certain quasi-delicts which are treated in Inst. iv. tit. 5, and which resemble delicts proper in subjecting the defendant to a liability to pay a pecuniary penalty to the plaintiff: apparently they are *quasi*-delicts, and not delicts, partly because they did not fall within the letter of the statutes or edicts by which delicts were created or regulated, partly because the liability is vicarious, a man being penalised for wrongs done not by himself, but by his servants, slaves, filii familias, &c. Under the empire the general rule was that any one who could bring a penal action on a delict (other than *damnum injuria datum*) might, if he preferred it, prosecute the delinquent before a criminal tribunal, forfeiting thereby however his right to recover the private *poena* (Dig. 47, 1, 3; 47, 2, 56, 1); and Ulpian says (in Dig. 47, 2, 92) that in his time theft was most usually made the subject of criminal proceedings.

The notion of crime and rules of criminal procedure were of very slow development at Rome. At first, if a man committed a wrong so heinous that it seemed improper to leave it to individuals to pursue by a civil remedy, or one (*e.g.* treason) which there was no remedy for at all in the civil courts, he was solemnly tried by the people under legislative forms, analogous to the English bill of attainder. Towards the end of the republic, however, there is a series of great statutes relating to the chief classes of crimes, and establishing a permanent court (*quaestiones perpetuae*) for the trial of each, and prescribing both procedure and punishment. The earliest of these is the Lex Calpurnia de repetundis, B.C. 149: among them are the statutes of Sulla (leges Corneliae) as to forgery and murder, of Pompey on parricidium, and of Julius and Augustus Caesar as to treason, adultery, peculatus, &c. (Inst. iv. tit. 18). Crimes not falling under these statutes were still tried by a legislative act of the whole people, or by a special quaestio or commission appointed for the particular case ("extra ordinem quaerere," Cic. *de Fin.* ii. 16, § 54; *pro Milone*, 6, § 14).

Under the empire the *quaestiones perpetuae* were gradually superseded by special magistrates, but the criminal statutes by which they were established remained in full force: only prosecutions brought under them were termed *judicia publica* (Dig. 48, 1, 1). Other offences which had been constituted crimes in the course of history (by imperial rescripts or the writings of the jurists: Dig. 47, 19, 1, 2, pr.; 47, 1, 3) were still said to be pursued *extra ordinem* (e.g. *injuria* and *furtum*, Dig. 47, 2, 92; Inst. iv. 4, 10), and were called *extraordinaria crimina* (Dig. 47, 11) and sometimes *privata crimina* (Dig. 48, 19, 1, 3; 47, 11, 3, &c.). Whether the crimen was prosecuted by a *publicum judicium* or *extra ordinem*, the penalties varied considerably, though the judge's discretion seems to have been larger in the latter case (Dig. 47, 18, 1, 1, 2; 47, 20, 3, 2, &c.): among them were loss of life, of freedom, of civitas, infamia, imprisonment, and pecuniary fines. Condemnation in a *publicum judicium* always entailed *infamia;* but this was not the case in *crimina extraordinaria*, unless the wrongful act would have been punished thus had it been pursued by a civil action (Dig. 48, 1, 7). Crimes punished by death, loss of libertas, aquae et ignis interdictio, and deportatio were called *capitalia* (Inst. iv. 18, 2). [CAPUT.]

The subject of delict and crime is treated at length and well by Walter, *Geschichte des röm. Rechts*, book v. §§ 788–861: for an interesting discussion of the subject from the historical side, see chap. x. in Sir Henry Maine's *Ancient Law*. Cf. W. Rein, *Das Criminalrecht der Römer*, Leipzig, 1844. [J. B. M.]

CRINIS. [COMA.]

CRISTA. [GALEA.]

CRITAE (*κριταί*), *i.e.* judges, a name applied by the Greeks to any person who did not judge of a thing as a *δικαστής*, according to positive law, but according to his own personal sense of justice and equity. (Herod. iii. 160; Demosth. *Olynth.* i. *fin. c. Mid.* p. 520, § 17.) But at Athens a number of *κριταὶ* were chosen by ballot from a number of selected candidates at every celebration of the Dionysia, and were called *οἱ κριταὶ κατ' ἐξοχήν*. Their office was to judge of the merit of the different choruses and dramatic poems, and to award the prizes to the victors. (Isocr. *Trapez.* § 33, with Coraes' note.) Their number is stated by Suidas (*s. v.* *Ἐν πέντε κριτῶν γούνασι*) to have been five for comedies, and G. Hermann has supposed, with great probability, that there were on the whole ten *κριταί*, five for comedy and the same number for tragedy, one being taken from every tribe. The expression in Aristophanes (*Av.* 421), *νικᾶν πᾶσι τοῖς κριταῖς*, signifies to gain the victory by the unanimous consent of the five judges. For the complete literature of this subject, see K. F. Hermann, § 149, n. 13. [L. S.]

CRO'BYLUS. [COMA.]

CROCO'TA, dim. CROCOTULA (sc. *vestis; κροκωτόν*, sc. *ἱμάτιον*, or *κροκωτός*, sc. *χιτών*), a light and showy garment, so named from its saffron colour. The derivation from *crocus* is undoubted (Verg. *Aen.* ix. 614: "picta croco e fulgenti murice vestis"), and the notion [illegible] Salmasius and others that it was from [illegible] the woof or weft, or *κροκὺς*, the nap o[illegible] justly exploded. It is variously described as an under-garment (*χιτών*) or an upper one (*ἱμάτιον*): and Pottier (in D. & S.) has seen in this an indication that its real place was between the two. This is confirmed by the description of a statue of Bacchus as wearing a long-sleeved purple *χιτών*, a crocota of some gauzy texture (*κροκωτὸν διαφανῆ*) over it, and finally a mantle or *ἱμάτιον* of embroidered purple and gold (Callix. *ap.* Ath. v. 198 c). The crocota was probably sleeveless, showing the sleeves of the tunic underneath. It was worn mostly by women, especially those of light character (Aristoph. *Lys.* 44; *Thesm.* 138, 253, 945; *Eccl.* 879; Pollux, iv. 18, 117); and its use by men was a mark of effeminacy (Cratin. fr. 37, Meineke; Araros, fr. 4, M.), and hence appropriate to Bacchus (Aristoph. *Ran.* 46). In the Latin writers it is characteristic of the priests of Cybele (Verg. *l. c.*; Apul. *Met.* viii. p. 172), but was adopted by the Roman ladies (Plaut., and Naevius *ap.* Non. pp. 538, 549), and even by foppish men ([Cic.] *de Har. Resp.* 21, § 44). Yellow was a favourite colour both with Greek and Roman ladies; as we still see in the pictures discovered at Herculaneum and Pompeii. Hence in a skit at the endless names for feminine apparel we find *calthula*, "of a marigold colour," joined with *crocotula* (Plaut. *Epid.* ii. 2, 49; the whole passage is curious, though, according to some critics, interpolated). (Cf. Becker-Göll, *Charikles*, iii. pp. 223, 252.) [L. S.] [W. W.]

CRO'NIA (*κρόνια*), a festival celebrated at Athens in honour of Cronos, whose worship was said to have been introduced into Attica by Cecrops. He had a temple in common with Rhea. (Paus. i. 18, § 7; comp. vi. 20, § 1.) The festival was held on the twelfth of the month of Hecatombaeon (Demosth. *c. Timocr.* p. 708, § 26; Plut. *Thes.* 12; *Etym. M.* s. v.), which at an early period of the history of Attica, bore the name of *μὴν Κρονίων*. (Athen. xiii. p. 581; comp. A. Mommsen, *Heortologie*, p. 108, &c.)

The Rhodians also celebrated a festival in honour of Cronos — perhaps the Phoenician Moloch—to whom human sacrifices, generally consisting of criminals, were offered. The festival was held on the sixteenth of Metageitnion. (Porphyr. *de Abstinent.* ii. 54.)

Greek writers, when speaking of the Roman Saturnalia, apply to them the name *Κρόνια*, which in the early times seem to have really resembled them in their excessive merriment. (See Athen. xiv. p. 639; Appian, *Samn.* 10, § 5; Buttmann, *Mythol.* vol. ii. p. 52, &c.) [L. S.]

CRO'TALUM (*κρόταλον*, *κρέμβαλον*), a kind of castanet, rattle, or clapper used by dancers, but distinct from the CYMBALUM and the SISTRUM, with which it has sometimes been confused. All three were used by the Egyptians, and specimens of all have been found on the monuments or in the tombs (Woods, on Herod. ii. 60; Wilkinson, *Anc. Egypt.* ii. 318). The simplest form was probably a couple of shells or potsherds pierced with holes and strung together (*λεπάδας δὲ πετρῶν ἀποκόπτοντες κρεμβαλιάζουσι*, Hermipp. *fragm.* 29 Meineke; *κογχύλια καὶ ὄστρακα*, Didymus *ap.* Ath. xiv. 636 d, quoted also by the Scholiast on Aristoph. *Ran.* 1305 [1340]; *testarum crepitus*, Juv. xi. 170; *σκεῦός τι ἐξ ὀστράκου*, Eustath. *ad Il.* xi. 160). Some writers explain *ὄστρακα* as though the crotalum were actually moulded in earthenware; but this seems less likely. Brass and wood are also mentioned as materials (*κρόταλα χαλκοῦ*, Eurip. *Cycl.* 204, cf. Mart. xi. 16; *cava buxa*, Propert. v. 8, 42; Eustath. *l. c.*); and a split reed or cane (*ὁ σχιζόμενος κάλαμος*, Schol. Aristoph. *Nub.* 260; Suidas). Altogether the crotalum cannot have differed much from the castanets now so often heard as an accompaniment to certain kinds of vocal music. It was used by the Egyptians in the worship of Pasht or Artemis (Herod. ii. 60), by the Greeks in that of Cybele ([Hom.] *Hymn.* xiv. 3; Pind. *fragm.* 48 = 79 Bergk⁴; Apul. *Met.* viii. p. 170) and Dionysus (Eurip. *Hel.* 1308; *Cycl.* l. c.).

Crotala. (Borghese Vase now in the Louvre.)

Women who danced to the crotalum were called *crotalistriae* (Propert. v. 8, 39; cf. Macrob. *Sat.* iii. 14, § 7). Such was the Virgilian *Copa* (v. 2), "Crispum sub crotalo docta movere latus." The above cut exhibits both the style of dancing and the mode of holding the crotala.

The *κρέμβαλα* (Ath. xiv. 636 c; cf. [Hom.] *Hymn. Apoll. Pyth.* 162) are no doubt to be reckoned with the crotalum rather than with the cymbalum (Liddell and Scott, *s. v.*; Fernique, in D. and S.). There is no evidence that *κροῦμα* or *κροῦσμα*, "the sound produced by striking," was also the name of an instrument; and the *Baetica crusmata* of the Spaniard Martial (vi. 71) are almost certainly the clatter of Spanish castanets, not a particular kind of castanet. [W.W.]

CRUMENA (*βαλλάντιον* or *βαλάντιον*), a purse. It was a leathern bag slung round the neck (Plaut. *Asin.* iii. 3, 67; *Truc.* iii. 1, 7); and usually hung down behind, which exposed it to the attacks of the "cut-purse" (*βαλλαντιοτόμος*, *sector zonarius*, Plaut. *Trin.* iv. 2, 20). Hence we find a master walking behind the slave who carries his purse, that he may keep an eye upon it (Id. *Pseud.* i. 2, 37). Crumenae were of different shapes. A bronze lamp engraved in Rich and in D. and S. shows a flat bag not unlike a postman's, closed with a flap: we also find mention of *συσπαστὰ βαλλάντια*, round pouches with strings to draw (Plat. *Symp.* 190 E; Ath. xi. p. 783 f; cf. ARYBALLOS). [W. W.]

CRUSTA. [CAELATURA; EMBLEMA.]

CRUX (*σταυρός, σκόλοψ*), an instrument of capital punishment, used at a very early period in the East. The sacred associations of the Cross are discussed at length in the *Dict. of the Bible* and *Dict. of Christian Antiquities*; and we shall here attempt only to sketch the history of the punishment through the classical period. In most accounts, even of recent writers, distinctions of time and place are not sufficiently noticed.

The words *σταυρόω* and *σκολοπίζω* (more usually *ἀνασταυρόω, ἀνασκολοπίζω*) are applied to modes of execution which were certainly common among the Persians; and it is probable that impalement as well as actual crucifixion was thus denoted. It has been doubted whether the later or Roman method of crucifixion was practised by the Persians: *σταυρὸς* is of course originally a pole or stake, Lat. *palus* (root *στα*, "to stand;" cf. *σταύρωμα*, "a palisade"); but the case of Artayctes (Herod. ix. 120) seems to prove that nailing to a tree or plank was not unknown to them. It was the usual punishment of rebels,—at least of those who headed revolt. Darius in the Behistun inscription boasts that he had "crucified" the leader of every rebellion that he had put down, giving their names (Rawlinson's *Herodotus*, vol. ii. Appendix); and it was inflicted on Inaros, the champion of Egyptian liberty (Thucyd. i. 110). For the sake of ignominy, the bodies of those who had been otherwise executed were sometimes exposed on a cross after death, not always from humanity: Oroetes, after putting Polycrates to death in some horrible way which Herodotus refuses to describe, crucified the corpse (Herod. iii. 125). The account of the death of Histiaeus also suggests the probability that he was not crucified while alive (*τὸ μὲν αὐτοῦ σῶμα αὐτοῦ ταύτῃ ἀνεσταύρωσαν, τὴν δὲ κεφαλὴν ταριχεύσαντες ἀπήνεικαν πρὸς βασιλέα*, Herod. vi. 30). We find Xerxes thus treating the body of Leonidas, no doubt as a rebel (Herod. vii. 238); and at a later period Ptolemy Philopator does the same to Cleomenes after his suicide (Plut. *Cleom.* 38). According to a strange story in Pliny, Tarquinius Priscus adopted this form of posthumous disgrace to check the frequency of suicide among the citizens, driven to despair by the forced labour with which his gigantic building operations were carried on (*H. N.* xxxvi. § 107).

Among ancient nations, the Carthaginians were conspicuous for their cruelty, and crucifixion was horribly frequent among them: it was probably through their example that it was subsequently introduced into Sicily and Italy. It was the usual punishment of rebels, and, as is well known, was commonly inflicted on unsuccessful generals (Polyb. i. 11, 24, 79, &c.). There was a story that a father once crucified his son on a frivolous pretext, and himself afterwards underwent the same punishment as a rebel (Justin, xviii. 7). In the war with their mercenaries and African subjects which followed immediately upon the conclusion of the First Punic War, the atrocities on both sides, ghastly enough in the narrative of the matter-of-fact Polybius (i. 65–88), have been sensationally exaggerated in Flaubert's novel of *Salammbô*.

The Greeks were honourably distinguished in the ancient world for their aversion to torture and mutilation in every shape; indeed, it is only in quite recent times that Christian Europe has attained the same standard of refinement. In some ways they could be cruel enough, and the frequency of capital punishments showed a singular disregard of human life. The rage of faction led to massacres like that of Corcyra, on which Thucydides moralises in a well-known passage (iii. 81 ff.). Prisoners of war were put to death in cold blood; the Plataeans by the Spartans (Thucyd. iii. 68), the Athenian prisoners after Aegospotami to the number of 3000 (Plut. *Alcib.* 37; *Lysand.* 13). The Athenians ordered a massacre of all the adult males in Mitylene, probably as many as 6000 (Thucyd. iii. 36). On this Grote remarks: "The Athenians, on the whole the most humane people in Greece (though humanity, according to our ideas, cannot be predicated of any Greeks), became sensible that they had sanctioned a cruel and frightful decree" (ch. 50, iv. 359). Yet after they had repented, and the order countermanding the atrocity had arrived barely in time, they deliberately put to death more than 1000 Mitylenaeans who had already been brought prisoners to Athens (Thucyd. iii. 50). Not many years afterwards they massacred the Melians, who were not even rebels, but had merely refused to become their subjects (Thucyd. vi. 116). With all this, the Greeks habitually abstained from aggravating their executions, whether of criminals or prisoners of war, by insult and torture; and they especially abhorred outrages on women and children. This side of the Greek character is well brought out in Mahaffy's *Social Life in Greece;* see especially pp. 238, 262 ff., ed. 3. It was so from the earliest historical times. In B.C. 713 the cruelty of Hippomenes to his daughter and her lover brought about a revolution at Athens. [ARCHON, p. 165 *b*.] The tyrants of the seventh and sixth centuries are not charged with any atrocities like those of the Visconti and other mediaeval despots in Italy; even the bull of Phalaris is now explained as an instrument of Phoenician Moloch-worship. A few isolated acts of vengeance are recorded of this period, only however in the outlying parts of the Grecian world, and therefore probably due to the contagion of barbarian example. Thus Aristodemus, the tyrant of Cumae, contemporary with Tarquinius Superbus, is said to have given way to every excess of lust and cruelty (Dion. Hal. vii. 9), and on the overthrow of his government to have been tortured to death with all his family (*ib.* 11). This narrative has been doubted by Niebuhr (*R. H.* i. 554, iii. 178 n), but is probably in the main historical (cf. Grote, ch. 22, ii. 520). The cruelties of Pheretime were perpetrated at Cyrene, and remind us of the Carthaginians; and they were thought to have been justly expiated when she died of a loathsome disease (Herod. iv. 202, 205). During the struggles at Miletus between the wealthy citizens and the commonalty, the latter (who were called Γέργιθες) when victorious collected the children of the rich into threshing-floors, and had them trampled to death by oxen; the rich, having in turn got the upper hand, burnt in pitch (κατεπίττωσαν: cf. the *tunica molesta* of Juvenal, viii. 235; Mart. x. 25) all whom they got into their power, along with their children (Heracl. Pont. *ap.* Ath. xii. 524 a). This story belongs probably to the "two generations" of civil strife at Miletus recorded by Herodotus (Stein, on Herod. v. 28, who understands by πλούσιοι the Greek immigrants in general, and by δῆμος or Γέργιθες the subject Carian population). No such horrors are mentioned in Greece Proper, where even helots and serfs ranked as Hellenes. Peisistratus and his sons governed according to the laws of Solon; and even the proceedings which arose out of the murder of Hipparchus fall short of the cruelties inflicted on regicides in quite recent times. Thucydides tells us that Aristogeiton was "not gently handled" (οὐ ῥᾳδίως διετέθη, vi. 57); his good taste in suppressing the details of torture recalls that of Herodotus already referred to; but the accounts in general suggest only torture to extract evidence, not barbarous modes of execution (cf. Justin, ii. 9; Pausan. i. 23, §§ 1, 2). There is, in fact, no evidence that crucifixion, impalement, or burning alive were regarded as Greek punishments, at least where, as in Hellas itself, there was no contact with less civilised races. It was the same with mutilations of all kinds, such as the blinding prescribed by the laws of Locri in Italy (Dem. c. *Timocr.* p. 744, § 140), or the cutting off of hands and feet as practised by the Persians (Xen. *Anab.* i. 9, § 13). The cruelties alluded to in Aesch. *Eum.* 186–190, including impalement (ὑπὸ ῥάχιν παγέντες), are those not of Greeks, but of barbarians, and the distinction is pointedly drawn. The Greeks distinguished between reverence for the human body, for which they had a passionate admiration as shown in their athletic exercises and their works of art, and reverence for human life, which they held cheap enough. This feeling continued unimpaired as long as Greece retained her freedom. The case of Artayctes is quite exceptional; it is the punishment by a barbarian method of a barbarian who had outraged the religious feelings of the Greeks in a way that seemed to demand special expiation (Herod. ix. 120; cf. Mahaffy, p. 264). Even a Dionysius, we may well believe, would not have crucified Greek prisoners of war but for the contagion of Carthaginian example (Diod. xiv. 53). It may be positively asserted that Plato in the two well-known passages (ἀνασταυρωθῇ ἢ καταπιττωθῇ, *Gorg.* 473 C; ἀνασχινδυλευθήσεται, *Rep.* ii. 362 A) is not alluding to possible incidents of Greek, much less Athenian, executions. And when Demosthenes declares that Meidias deserved "almost to have been crucified" (μόνον οὐ προσηλῶσθαι, c. *Mid.* p. 549, § 105), he means no more than an Englishman does when he says, "Hanging is too good for him." The painless hemlock was all that Meidias had to fear, if capitally condemned. Grote—who, as has been seen, does not spare the Athenians for their swiftness to shed blood—has a good note (ch. 58, v. 175) on their freedom from other sorts of cruelty, and their unwillingness to put citizens to the torture even in times of public panic, when the temptation to do so was greatest.

In the Macedonian period Greece no longer retained this happy immunity: as a mere province in a larger Hellenism, it was influenced by lower and less humane races. Alexander himself is not free from the stain of cruelty, as is shown by his treatment of real or supposed conspiracies against his person in the cases of Philotas and Hermolaus: he is said to have either hanged or crucified 2000 Tyrians [ἐκρέμασε in Diod. xvii. 46 may bear either meaning: Grote, a severe judge where Alexander is concerned, does not press the harsher sense (viii. 364), though Q. Curtius (iv. 4) has *crucibus suffixi*; Thirlwall (vi. 202) doubts the whole story, which is not related by Arrian]; he certainly crucified Musicanus, the Indian rajah who had rebelled after being reinstated in his dominions (Arrian, vi. 17; cf. Diod. xvii. 102). His successors improved upon his example: a year after his death Perdiccas and Eumenes crucified the aged Ariarathes of Cappadocia after other tortures (*αἰκισάμενος ἀνεσταύρωσε*, Diod. xviii. 16); Lysimachus threatened to crucify the Cyrenaic philosopher Theodorus, though an ambassador, but did not carry out his threat (Cic. *Tusc.* i. 43, § 102; Sen. *de Tranq. An.* 14, § 3). Nicocreon of Cyprus, contemporary with Alexander, actually pounded the philosopher Anaxarchus to death in a mortar (Cic. *Tusc.* ii. 22, § 52; *Nat. Deor.* iii. 33, § 82). A similar story is told of an older philosopher, Zeno the Eleatic, and a tyrant of his native city (Cic. *l. c.*; Diog. Laert. ix. 26); but the accounts are contradictory (cf. *Dict. Biogr.* s. v. Zeno of Elea). Nabis, the tyrant of Sparta, used as an engine of torture a figure studded with nails resembling the *Eiserne Jungfrau* of some German cities (Polyb. xiii. 7). It is not necessary to pursue the records of this period any further. For the earlier and better time, the assertion of Westermann is abundantly justified, that crucifixion and other cruel punishments were "abhorrent to Greek manners" (*geben keinen Maasstab griechischer Sitte*, *ap.* Pauly, s. v. *Supplicium*). Saglio (s. v. *Crux*) goes too far in admitting crucifixion even as the punishment of slaves: not a single instance can be produced. This aversion of the Greeks to degrading punishments was not understood by grammarians who lived under the law of the later Roman empire, nor by scholars like Lipsius (*de Cruce*, published 1592), in whose time even worse horrors were perpetrated.

The Romans were naturally a hard-hearted people, and Livy shows considerable audacity in saying that the dismembering of Mettius Fuffetius was the only example in their history of a disregard of the laws of humanity; adding that they might boast that no nation had employed milder punishments (i. 28). From the language of Cicero (*pro Rab. Perd.* 4, § 13) it has been inferred that crucifixion was in use in the regal period. But the words of the old law point rather to simple hanging ("*infelici arbori* reste *suspendito*," Liv. i. 26), though the cross was no doubt called *arbor infelix* in later times. Cicero, who is arguing against the revival of the obsolete law of *perduellio*, and the capital punishment of citizens in any shape, is speaking rhetorically throughout: he quotes the formula without the word *reste*, a misleading and doubtless intentional omission, and talks vaguely of the cross (§§ 10, 11, 16) and of the detested Tarquin (§ 13). No historical conclusions can be drawn from a speech so obviously designed to confuse the questions at issue. It is highly probable that the Romans derived this punishment from the Carthaginians: at least no mention of it appears to occur before the Second Punic War. First we find Hannibal crucifying a guide who had misled him (Liv. xxii. 13); then the Romans practise it on slaves and deserters (Liv. xxii. 33; xxx. 43, § 13; xxxiii. 36). This last passage describes a revolt among the slaves in Etruria, B.C. 196: the ringleaders are scourged and crucified, the rest given up to their masters to be dealt with at discretion. The enormous increase in the numbers of slaves under the later republic heightened the dread of a rising among them; and the Roman system became more and more one of undisguised terrorism. Two desperate rebellions broke out in Sicily, and were only put down by regular armies; the first in B.C. 134–3, the second lasting four years, 102–99. After the pacification by the praetor M'. Aquillius in B.C. 99, a regulation was made, and strictly enforced by successive governors of the island, that no slave should be allowed to carry a weapon. A few years later, the praetor L. Domitius received a boar of remarkable size as a present; he inquired who had killed it, and, finding that it was a slave employed as a shepherd, he summoned the man before him and asked him how he had contrived to destroy it. The shepherd, who expected a reward, replied that he had killed it with a boar-spear (*venabulo*); upon which Domitius at once ordered him to be crucified. Cicero tells this story with only faint disapproval, while he dwells complacently on the fact that there were no more revolts of the slaves in Sicily (Cic. *in Verr.* v. 3, 4, §§ 7, 8). In the famous passage of the same speech (61, § 158 ff.) on the crucifixion of Gavius by Verres, it is the wrong done to a Roman citizen, rather than cruelty to a human being, that points Cicero's indignation: when he describes the atrocious treatment of the slave Strato by the infamous Sassia, he shows more sense of the detestableness of cruelty as such (*pro Cluent.* 63, § 177; 66, § 187). When the servile war of Spartacus was at last put down by Pompey, the prisoners, to the number of 6000, were crucified all along the Appian Way, between Capua and Rome (App. *B. C.* i. 120). The power of masters over their slaves was at this period, and for some time later, absolute: even the good-natured Horace treats as a joke the possibility of their being crucified for slight offences (*Sat.* i. 3, 80 ff.). The first measure passed in their favour was the LEX PETRONIA (*q. v.*): Hadrian forbade them to be executed without the sentence of a magistrate; Antoninus Pius ordered that the murder of a slave by his master should be punished as homicide [SERVUS]. Besides slaves, the provincials were liable to crucifixion for the greater crimes, such as murder, piracy (Suet. *Jul.* 4), brigandage, and especially for revolts and conspiracies. The obstinacy of the Jews was particularly exasperating to the Romans, and their repeated rebellions were followed by the wholesale infliction of this punishment: thus Varus (the same who perished in Germany) crucified 2000 at once (Jos. *Ant.* xvii. 10, § 10); Gessius Florus several hundreds, including Roman citizens of Jewish birth (Id. *B. J.* ii. 14, § 9); Titus so many that "room was wanting for the crosses and crosses for the bodies" (Id. *ib.* vi. 28); and Hadrian, after the final revolt, 500 a day for some time. Under the empire the right of the *civis Romanus* was no longer respected: the first instance, probably, of the crucifixion of a citizen in Rome itself is that, under Galba, of a guardian who poisoned his ward (Suet. *Galb.* 9). Afterwards the odious distinction between the *honestiores* and *humiliores* was introduced, and this and other tortures were freely inflicted upon the latter, especially for *majestas* or crimes against the state or the person of the emperor (Paul. *Sent.* v. 23, 1; Dig. 48, 19, tit. *de poenis*). It may, however, be pointed out that the English law of high treason until lately recognised a similar distinction between peers and the commonalty.

The mode of punishment is too well known to need much description. Scourging, as with Roman capital punishments in general, usually preceded it (Liv. xxii. 13, xxxiii. 36; Cic. *in Verr.* v. 62, § 161 ff.). Three kinds of crosses were in common use: the *crux commissa*, or T shape; the *crux immissa*, with a projection at the top to which was affixed the *titulus*, setting forth the crime of the sufferer (this was the most common); and the *crux decussata*, in the shape of an X (St. Andrew's cross). The word *crux* is also applied to the single stake used in impalement: the latter process is alluded to by Seneca in two passages, but, as he is speaking of death by torture in general, it may be doubted in the absence of direct evidence whether this was a Roman custom (*Cons. ad Marciam*, 20, § 3, where crucifixion with the head downward is mentioned; *Ep.* 14, § 5). The upright post is called *stipes*, the transverse beam *patibulum*; and it was this, rather than the entire instrument, which the criminal carried to the place of execution (Plut. *de Sera Num. Vind.* p. 554 B; Artemid. *Oneirocr.* ii. 61; Plautus, *Mostell.* i. 1, 53, and *ap.* Non. s. v. *patibulum*). It was impossible that the whole weight of the body should rest upon the nails; hence there was a piece of wood projecting from the *stipes* on which the sufferer sat, or rather rode (*κέρας ἐφ' ᾧ ἐποχοῦνται οἱ σταυρούμενοι*, Just. Mart. *Dial. c. Tryph.* 91; *sedilis excessus*, Tertull. *adv. Nat.* i. 12; cf. Iren. *adv. Haer.* i. 12). The expression *acuta si sedeam cruce*, in the famous lines of Maecenas *ap.* Sen. *Ep.* 101, probably refers to this support, and not, as Lipsius thought, to impalement (see Archd. Farrar in *Dict. of the Bible*, s. v. *Cross*). When it was wanting, the body was probably sustained by ropes: the combination of ropes with nails is mentioned by Pliny (*fragmentum clavi a cruce* and *spartum e cruce* as charms, *H. N.* xxviii. § 46) and Hilary ("colligantium funium vincula et adactorum clavorum vulnera," *de Trin.* 10). The martyrologies contain accounts of sufferers bound to the cross without the use of nails, and left to die of hunger and exhaustion; when it is added that in some instances they survived nine days, we must be allowed to disbelieve. Tying to the cross is also mentioned as an Egyptian custom by Xenophon Ephesius (iv. 2), but his romance, apart from its late date, is of no historical authority; and there does not appear to be any sufficient evidence for the practice in classical times. The criminal was stripped of his clothes,—the cloth round the loins, as to which the Christian tradition is constant, seems to have been exceptional,—and usually hoisted on to the cross after it had been set up. Sometimes he was stretched upon it on the ground, and then lifted with it; but the former method was the commoner, and hence the phrases *cruci suffigere*, *in crucem agere* or *tollere*, occur oftener than *cruci affigere*. The well-known breaking of the legs to hasten death is alluded to by Plautus (*Poen.* iv. 2, 64) and Cicero (*Phil.* xiii. 12, § 27). The dead body was generally left hanging on the cross, to be devoured by birds and beasts: the feet were but little raised above the ground (not as in most pictures), and it was not out of the reach of the latter (Hor. *Ep.* i. 16, 48; Juv. xiv. 77; Artemid. *Oneirocr.* ii. 53). Sepulture was therefore forbidden, and a soldier set to watch the corpse (Petron. 111, 112). The place for these executions was always outside the walls of cities: at Rome it was the Campus Esquilinus, to the east of the city, part of which was afterwards occupied by the gardens of Maecenas. The Sessorium and the Sestertium, sometimes mentioned in this connexion, were probably two distinct spots in the Campus Esquilinus: the former on the Lateran Hill near the basilica of Sta. Croce in Gerusalemme, where there are some remains of a building traditionally called Sessorium (Schol. Cruq. on Hor. *Epod.* 5, 100, and *Sat.* ii. 8, 8; Orell. *ad loc.*; Burn, *Rome and the Campagna*, pp. 218, 226); the latter at some place distant 2½ miles (whence the name Sestertium) from the Esquiline gate in the Servian wall, not from the later circuit of the city (Tac. *Ann.* xv. 60, with Orellius' note; Plut. *Galb.* 28, where Sintenis quite needlessly reads *Σεσσώριον* for *Σηστέρτιον*, from a conjecture of W. A. Becker; Burn, *l. c.* p. 219).

With the establishment of Christianity the associations connected with the Cross led to its abolition, not from humanity, as other cruel punishments were retained: Constantine at the beginning of his reign had sanctioned it in the case of slaves and freedmen (decree of the year 314, cited *Cod. Theod.* i. 1 in a *lex majestatis*); but later he abolished it (Sozom. *H. E.* i. 8; *Cod. Theod.* ix. 5 and 18; Gibbon, ch. 20, iii. p. 11, ed. Smith). [W. W.]

CRYPTA (*κρύπτη* parox., Ath. v. p. 205 a; *διῶρυξ κρυπτή*, Strab.; Ital. *grotta*), any long narrow vault, either dark or dimly lighted. It might be on the level of the ground, or sunk wholly or partially below it: the word did not necessarily imply, like "crypt" or "grotto," anything subterranean.

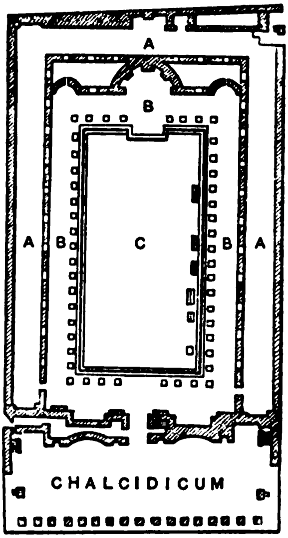
It is used in the following specific senses:—

1. A tunnel, in the excavation of which, especially for draining purposes, the ancients had attained no mean skill [EMISSARIUM]. They were also used to shorten communications; and the neighbourhood of Naples contains no less than three well-preserved antique tunnels of this description, all probably dating from the time of Augustus. The best known of these is the grotto of Posilipo, called by the Romans *Crypta Neapolitana*, forming the direct communication between Naples and Pozzuoli. This is not quite half a mile in length, at present from twenty-five to thirty feet wide, and nowhere less than twenty feet high, in some places much higher. It has, however, been more than once enlarged in modern times: it was not made practicable for carriages until the fifteenth century, and only attained its present dimensions in the middle of the 18th century. It is not mentioned by Strabo, and may perhaps not have existed in his time; but in the next generation Seneca (*Ep.* 57) describes its darkness and dust

in terms suitable to a coal mine. It was then doubtless a mere narrow passage. A second tunnel is pierced through the same ridge, but much nearer the sea, and close to the promontory now called *Punta di Coroglio.* It is about 500 feet longer than the Posilipo tunnel, and, though it has been cleared out in recent times, probably retains its original dimensions in width and height. This is easily identified as the tunnel described by Strabo (v. p. 246), passable for carriages in opposite directions and with lateral openings for ventilation (*θυρίδες*) in the side of the mountain, and its present name of *Grotta di Sejano* is evidently a mistake. The third tunnel is that known as the *Grotta della Pace*, between Cumae and the Lake Avernus, nearly of the same length as the last mentioned, *i.e.* a little over half a mile, traversed by carriages, and lighted at intervals by vertical shafts. According to Strabo (v. p. 245) it was excavated by Cocceius (probably M. Cocceius Nerva, Cos. B.C. 36), in connexion with Agrippa's artificial harbour on the Lucrine Lake.

2. A dark, vaulted passage in any building, *e.g.* under the *cavea* of an amphitheatre for the use of the spectators (see section of the Coliseum, p. 112); at the back of the *scena* of a theatre for the convenience of the performers, like the Crypta Balbi mentioned in the Regionary Catalogue (*Reg.* ix.) in connexion with the theatre of Balbus (Suet. *Aug.* 29; Dio Cass. liv. 25: cf. Burn, p. 313; Middleton, p. 299); or below the stage (*proscenium*), as in the theatre of Tauromenium (Taormina). A similar *crypta*, in the larger theatre at Pompeii, is recorded in several inscriptions (Saglio, i. 1576 a). Several such passages exist in the Palace of the Caesars on the Palatine; two of them are marked 19 and 31 on the latest plan (Middleton, *Anc. Rome*, p. 82); others are not yet cleared out (*ib.* p. 104). It was in one of these passages (probably the long straight one marked 31 on the plan) that Caligula was murdered ("in crypta, per quam transeundum erat," Suet. *Cal.* 58; *ἐν στενωπῷ τινί*, Dio Cass. lix. 29; cf. Joseph. *Ant.* xix. 1, § 14). This passage is almost wholly underground, and lighted by openings in the vaulted roof (Middleton, p. 114). Such places readily lent themselves to any secret worship, especially of a licentious character (Petron. *Sat.* xvi. 3; xvii. 8; cf. id. *fragm.* xiii.). By a slight extension of meaning, the branch of the Cloaca Maxima which drains the Subura is called *crypta* Suburae (Juv. v. 106).

3. A covered corridor above ground, dimly lighted for the sake of coolness in summer, such as was very commonly attached to the side of an open colonnade (*porticus*) both in public and private buildings. Thus Hadrian among his military reforms demolished *porticus* and *cryptas* with other appliances of luxury in the Castra Praetoria (Spart. *Hadr.* 10). The more definite term *cryptoporticus* was, it is probable, correctly applied only to this species of *crypta*, not to those above described. Thus in Pliny's charming account of his Laurentine villa (*Ep.* ii. 17) the *xystus* or open portico and the *cryptoporticus* are repeatedly contrasted (cf. ix. 36, § 3). The latter has windows on both sides, but high up, and not too many of them, and is sheltered both from wind and sun. In the description of his Tuscan villa (*Ep.* v. 6) the significant expression occurs, "cryptoporticus subterraneae similis," *i.e.* it is not really underground, but can be darkened as though it were. One of these *cryptoporticus* has two tiers of windows; when recovering from an attack of *lippitudo*, he shuts the lower ones to spare his eyes (*ib.* vii. 21). Sometimes they were lighted on one side only, as in the suburban villa of L. Arrius Diomedes at Pompeii, where there is a well-preserved *cryptoporticus* on one side of the court, and, on the other, the foundations both of the open and closed portico can be traced. In the interior of farm buildings such *cryptae* were used for the storing of grain and other produce (Vitruv. vi. 5, § 2; cf. Varro, *R. R.* i. 57).



Cryptoporticus.

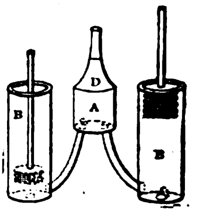
The above ground-plan of the public building presented by the priestess Eumachia to the town of Pompeii will serve to illustrate both *cryptoporticus* and *chalcidicum;* for the inscription upon it, see Chalcidicum. The *crypta* or covered passage AAA is lighted by numerous small windows opening into the *porticus* BBB, which in its turn surrounds the courtyard C.

4. *Crypta* seems to have been used in Christian times for a catacomb or subterranean cemetery: see *Dict. of Chr. Ant.* s. v. (Rich, *s. v.*; Burn, *Rome and the Campagna*, p. 313; Middleton, *Anc. Rome in* 1885, pp. 104, 114, 299.) [A. R.] [W. W.]

CRYPTEIA (*κρυπτεία*, called also *κρυπτία* or *κρυπτή*) was a system of secret police adopted by the Spartans in order to maintain their control over the Helots; perhaps, as Grote thinks, over the Perioeci also. As to the main features of this system there is no doubt. We learn that a number of active young Spartans were despatched every year by the Ephors, immediately upon their entry into office, to the different parts of the country. They were to post themselves as secretly as possible in convenient places from which to explore the neighbourhood and to make observations. If they found anything suspicious, they were either to report it or to suppress it themselves on the spot (Schömann, *Antiq.* i. 195, E. T.). The institution served not merely to break up organisation and to check the possibility of an outbreak among their oppressed subjects, but as a useful military training in habits of endurance suited to a dominant race. On the latter ground it is proposed by Plato for his ideal Cretan colony in the *Laws*, and his way of expressing himself shows that he is referring to a Spartan custom really existing (i. 633 B; vi. 763 B; cf. Grote, ii. 144, n.). The *crypteia* may thus be considered as to a certain extent a species of armed police force, and the young men who were ordered to undertake it appear also to have formed a special corps in the army; at least we read of a commander of the *crypteia* in the battle of Sellasia (Plut. *Cleom.* 28). To these undoubted facts later authors added some curious statements, which have been much criticised in recent times. According to Plutarch, who quotes Aristotle as his authority, the Ephors every year declared war formally against the Helots, in order that they might be killed without scruple; and they further, not every year as sometimes stated, but at intervals (*διὰ χρόνου*), sent young Spartans armed with daggers to assassinate such of the Helots as were thought formidable (Plut. *Lycurg.* 28). The language of Plutarch is somewhat loose. In one sentence he states that the young men went out into the roads by night and slew all whom they caught (*τοὺς ἁλισκομένους*), implying that the Helots lived under a sort of "curfew" law, which confined them to their houses at night to prevent conspiracies; in the next sentence that they often ranged over the fields (? in the daytime) and despatched the strongest and bravest of them. The latter phrase, however, agrees with the account of Heraclides Ponticus, that they killed *ὅσους ἂν ἐπιτήδειον ᾖ* (*Fragm.* ii. 4 *ap.* C. Müller, ii. 210). Otfried Müller, whose criticism habitually tends to soften the harsher features of the Spartan institutions, combats the notion that the Helots were annually hunted down and destroyed (*Dorians*, iii. 3, § 4); and Schömann calls it "an exaggeration which is really too absurd to deserve serious confutation" (*Antiq.* l. c.). Grote, no friend to Sparta, rejects the annual or periodical massacre of the Helots, and the formal declaration of war against them, which, he justly observes, "would provoke the reaction of despair rather than enforce tranquillity"; and even suggests a doubt as to the fact of Aristotle's having really made the statement ascribed to him by Plutarch, on the ground that he does not mention the subject in his *Politics*, where he speaks at some length both of the Spartan constitution and of the Helots. Grote admits, however, that the government would not be restrained by any scruples of justice or humanity. It is a well-known fact that, on at least one occasion, 2000 of the bravest of the Helots were massacred with the sanction of the Ephors, the manner of their death remaining an untold mystery (B.C. 424, Thucyd. iv. 80). And such an order would naturally be carried out with the aid of the *crypteia* or secret commission. (Müller, *Dorians*, iii. 3, § 4; Thirlwall, *Hist. Gr.* i. 311; Grote, *Hist. Gr.* ch. vi., ii. 142 ff.; Schömann, *Antiq.* i. 195, E. T.) [W. W.]

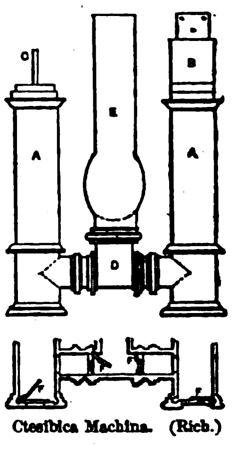
CRYPTOPO'RTICUS. [CRYPTA.]

CTESI'BICA MA'CHINA, a hydraulic engine named after its inventor, Ctesibius of Alexandria, *qui et vim spiritus naturalis pneumaticasque res invenit* (Vitruv. ix. 9 (8), § 2). In the language of modern hydraulics it is a double-actioned forcing pump. Vitruvius in his description (x. 10 (7)), speaks of it as designed to raise water, while Ctesibius' pupil Hero (*Pneumat.* p. 180) describes, under the name of *σίφων*, a machine identical in principle, but of improved construction, and says that it was used as a fire-engine (*εἰς τοὺς ἐμπρησμούς*). Indeed the same principle is employed in our modern fire-engines. The remains of such a *σίφων* were discovered at Castrum Novum, near Cività Vecchia, in 1795 (Schneider on Vitruv. *l. c.*), having probably served to supply the public baths with water.



Ctesibica Machina. (Rich.)

The following cut illustrates the construction of Ctesibius' invention as described by Vitruvius. Two cylinders (*modioli*) B B are connected by pipes with a receiver (*catinus*) A, which is closed by a cowl (*paenula*) D. In each cylinder a piston (*embolus masculus*) C is worked by means of its rod (*regula*): in the bottom of each cylinder, and at the opening of each pipe into the receiver, is a movable lid or valve (*assis*), which only opens upwards. The bottoms of the cylinders are inserted into a reservoir, or connected with it by pipes. When one of the pistons is raised, a vacuum is produced in the cylinder, and the atmospheric pressure forces a stream of water past the raised valve into the cylinder. When this stream ceases, the valve falls; and if the piston is forced down, the water is driven out of the cylinder into the pipe, and past the valve into the receiver, and retained there by the closing of the valve. If the two pistons are worked alternately, so that one descends as the other rises, a continuous stream of water is forced out of the top of the *paenula*.



Ctesibica Machina. (Rich.)

If we turn to the accompanying illustrations from the pump found at Castrum Novum and to Hero's description, we find the cylinders (*πυξίδες*) A A, with their valves (*ἀσσάρια*) F F, the pistons (*ἐμβολεῖς*), as B, the piston-rods (*κανόνια*), as C, identical with those described above; but in place of the pipes a horizontal tube D with valves F F is used, and in place of the *catinus* a vertical tube (*σωλὴν ὄρθιος*) E. It is clear, however, that these improvements in construction do not affect the principle of the machine or the mode of its working. (Plin. *Ep.*

x. 42, 2; Isid. *Or.* xx. 6, 9; Dig. 33, 7, 12, § 18.) [J. H. F.]

CUBICULA'RII were slaves who had the care of the sleeping and dwelling rooms. Faithful slaves were always selected for this office, as they had, to a certain extent, the care of their master's person. When Julius Caesar was taken by the pirates, he dismissed all his other slaves and attendants, only retaining with him a physician and two cubicularii. (Suet. *Jul.* 4.) It was the duty of the cubicularii to introduce visitors to their master (Cic. *ad Att.* vi. 2, § 5; *in Verr.* iii. 4); for which purpose they appear to have usually remained in an ante-room (Suet. *Tib.* 21, *Dom.* 16). They were commonly divided into watches (*stationes*) for day and night, and also into decuries (Orelli, 4663, 6312; Wilmanns, 178, 179, 314, 406; Suet. *Dom.* 17). Under the later emperors, the cubicularii belonging to the palace were called *praepositi sacro cubiculo*, and were persons of high rank. (Cod. 42, tit. 5.) [A. S. W.]

CUBI'CULUM usually means a sleeping and dwelling room in a Roman house [Domus], but also applied to the pavilion or box in which the Roman emperors were accustomed to witness the public games. (Suet. *Ner.* 12; Plin. *Paneg.* 51.) It appears to have been so called, because the emperors were accustomed to recline in the cubicula, instead of sitting, as was anciently the practice, in a sella curulis. (Ernesti, *ad Suet. l. c.*) [A. S. W.]

CU'BITUS (πῆχυς), a measure of length used by the Greeks, Romans, and other nations, was originally the length of the human arm from the elbow to the wrist, or to the tip of the middle finger; the latter was its signification among the Greeks and Romans. It was equal to a foot and a half; and therefore the Roman cubit was a little less, and the Greek cubit a little more, than a foot and a half English; the respective lengths of the foot being, in millimetres, Greek 308·3, English 304·7, Roman 295·7. The Greek cubit was millimetres 462·4, the Roman 443·6. The cubit was divided by the Greeks into 2 spans (σπιθαμαί), 6 handbreadths (παλαισταί), and 24 finger-breadths (δάκτυλοι), and by the Romans into 1½ feet, 6 breadths (*palmi*), and 24 thumb-breadths (*pollices*). (Hultsch, *Metrol.* pp. 29, 62, and Tables.) Respecting the Persian and other cubits, *ib.* p. 41 ff. [P. S.] [W. W.]

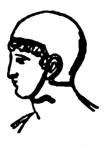
CUBUS (κύβος), a die, cube [Tessera]. A cubic foot of water was the *amphora* or *quadrantal*, the principal liquid measure. [Mensura; Quadrantal.] [P. S.]

CUCULLUS, a cowl, was intended to be used in the open air, and to be drawn over the head to protect it from the injuries of the weather, instead of a hat or cap. It was worn by travellers, shepherds, husbandmen, and hunters (Colum. i. 8; Cato, *R. R.* 2; Juv. iii. 170; Hor. *Sat.* ii. 5, 94), and even by legionaries on service in cold climates, as is seen on Trajan's Column, and also in city life even by persons of distinction who wished to go abroad without being recognised (Juv. vi. 330, viii. 145; Cic. *Phil.* ii. 31; Mart. xi. 98, 10; Lamprid. *Elagab.* 32, *cucullio mulionicus*). The cowl was sometimes a separate garment (Mart. xiv. 132), as is seen in the figures under Caupona, p. 388, representing a tavern scene. Sometimes it formed part of the *lacerna* or *paenula* or other cloak, which was then said to be *cucullatus* (Isid. *Orig.* xix. 24, 17). This is shown in the figure annexed from a relief representing a traveller leaving his inn (*Bullet. Napol.* 1848, 1; cf. Pallad. i. 43, 4). In either case the hood might be worn over the head, or thrown back on the shoulder. The monastic use of the cowl is enjoined in the Rule of S. Benedict, lv., and may have arisen from a desire to escape observation, or according to S. Jerome (*Ep.* xxii.) because the *cucullus* was much worn by children, to whose level the monks wished to humble themselves. The use of the cowl, and also of the cape [Birrus], which served the same purpose, was allowed to slaves by a law in the Codex Theodosianus. (Vossius, *Etym. Ling. Lat.* s. v. *Birrus*.) Cowls were imported into Italy from Saintonge in France (*Santonico cucullo*, Juv. viii. 145; Schol. *in loc.*), and from the country of the Bardaei in Illyria. (Jul. Cap. *Pertinax*, 8.) Those from the latter locality were probably of a peculiar fashion, which gave origin to the term *Bardocucullus*. *Liburnici cuculli* are mentioned by Martial (xiv. 139). The *cucullio* is either simply another form of the word *cucullus* or denotes a very similar garment (cf. *Dict. of Christ. Antiq.*, art. Cuculla). [J. Y.] [J. H. F.]

Cucullus. (Figure from Aesernia.)

CUDO or **CUDON**, a helmet of very simple form, fitting close like a skull-cap, made of leather or the skins of wild animals (Sil. Ital. viii. 493, xvi. 59). It is probably to be identified with the Homeric καταῖτυξ or helmet of Diomedes (*Il.* x. 258), described as ἄφαλον, "without knobs or projections" (Leaf), and ἄλοφον, "without plume or horse-hair crest:" known also from Greek representations of that hero, from one of which in bronze the annexed example is taken.

The cudo differed from the *galerus* (Verg. *Aen.* vii. 688) in being of less rough and shaggy fur: it probably answered to the λιτὸν περικεφάλαιον of the Roman *velites* (Polyb. vi. 22). In the sculptures on the Column of Trajan, some of the Roman soldiers are represented with the skin of a wild beast drawn over the head, in such a manner that the face appears between the upper and lower jaws of the animal, while the rest of the skin falls down behind over the back and shoulders, as described by Virgil (*Aen.* vii. 666). This, however, was an extra defence (Polyb. *l. c.*), and must not be taken for the cudo, which was the cap itself; that is, a particular kind of *galea* [Galea]. In the illustration the cudo is seen fastened with a strap under the chin; this is the ὀχεὺς of Homer (*Il.* iii. 372). (Rich, *s. v.*; and for the Homeric helmet, Leaf in *Journ. Hellen. Soc.* iv. 493 ff.) [A. R.] [W. W.]



Cudo. (Rich.)

CU'LCITA. [Lectus.]

CULI'NA. [Domus.]

CU'LLEUS, or **CU'LEUS**, a sack used in the punishment of parricides. [LEX CORNELIA DE SICARIIS.] [W. S.]

CU'LLEUS, or **CU'LEUS**, a Roman measure, which was used for estimating the produce of vineyards. It was the largest liquid measure used by the Romans, containing 20 *amphorae*, or 160 *congii*, that is, almost 119 gallons. (*Carm. de Pond. et Mens.* 86, 87; Plin. *H. N.* xiv. § 52; Cat. *R. R.* 148; Varr. *R. R.* i. 2, § 7; Colum. iii. 3; Hultsch, *Metrol.* p. 90.) [P. S.] [W. S.]

CULPA in the most general sense denotes any wrongful act or omission (*e.g.* Cod. 9, 4, 2; Dig. 49, 16, 14, 1) which is imputable ("quae enim in eo culpa sit, quum suae mentis non sit?" Dig. 9, 2, 30, 3; "si omnia quae oportuit observavit, caret culpa," Dig. ib. 31). Taken thus generally, it includes what the Romans term *dolus malus*, but properly the latter is distinguished from culpa when this term is used accurately; *dolus malus* being an intentional and deliberate violation, whether by act or omission, of another's rights (Dig. 4, 3, 1, 2), and culpa an unintentional violation, consisting apparently always in the omission or neglect of some legal duty. It is true that *damnum* under the Lex Aquilia (of which below) is often the consequence of some act (*e.g.* Inst. iv. 3, 4–8); but the act usually derives its culpose character rather from the omission of some duty than from the positive act which is done: the latter, in itself, does not entail legal liability, but because it is done wilfully, heedlessly, or rashly.

Deliberate breach of legal duty always entailed legal liability, whether the right infringed was a right of property, of contract, or one of the so-called "primordial" rights: "illud nulla pactione effici potest, ne dolus praestetur" (Dig. 2, 14, 27, 3); and no act would amount in law to a delict [CRIMEN] unless *dolus* were present, except in the single case of *damnum* or damage to property. Here, if culpa or negligence were once established, the amount of the defendant's liability did not depend on its degree: "in lege Aquilia etiam levissima culpa venit" (Dig. 9, 2, 44, pr.): hence the expression of the civilians, *culpa Aquiliana.*

It is, however, in the legal relations arising from contract and quasi-contract that the doctrines of *culpa* and *diligentia* are of greatest prominence. If a breach of his duty by a party to such a relation arose from a carelessness so excessive that no ordinary man would have been guilty of it, he was said to have shown *lata culpa*, and for this he was legally held as answerable as if the breach had been deliberate: "lata culpa est nimia negligentia, id est, non intelligere quod omnes intelligunt" (Dig. 50, 16, 213, 2). For passages assimilating and even identifying its legal treatment with that of *dolus*, see Dig. 11, 6, 1, 1; 17, 1, 29, pr.; 47, 4, 1, 2; 50, 16, 223, pr.; ib. 226.

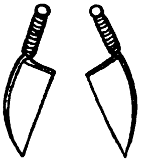
Where, however, a man's carelessness was not of this extreme degree, the question whether he could be made to pay for it was determined by reference to two distinct criteria of diligence.

As a general rule he was required to show what the Roman terms *exacta diligentia*—that of a careful, accurate, sound paterfamilias or man of business; and where this was so he was answerable for all culpa, provided it would have been avoided by one who showed that degree of care and prudence. Modern writers call this *culpa levis in abstracto;* and this higher degree of diligence was required to be shown by vendors and purchasers (Dig. 18, 6, 3), hirers and letters (Dig. 19, 2, 57; Cod. 4, 6, 28), borrowers (*commodatarii*, Inst. iii. 14, 2), depositors, pledgees (Inst. iii. 14, 4), and agents (Cod. iv. 35, 13; Inst. iii. 27, 1).

In other relations the law was satisfied if a man was as careful as he was habitually in affairs in which he himself would be the person primarily injured by carelessness—"talis diligentia qualem in suis rebus adhibere solet;" here modern writers say he is answerable only for *culpa levis in concreto*. This standard of *diligentia* only was required from guardians and curators; *socii* (partners) *inter se;* co-heirs and co-legatees; lenders (*commodatores*), and husbands in their administration of the *dos* brought them by their wives (Dig. 23, 3, 17). Perhaps the safest general rule as to the degree of *diligentia* required in contractual and quasi-contractual relations is to say that the defendant is usually required to show *exacta diligentia*, but the burden of proving his culpa is on the plaintiff: in some cases, however, the defendant is excused if *he* can prove that he has shown such as he usually displays in the conduct of his own affairs. The broad principle seems to be that when a contract is for the interest of both parties, although their interests are adverse rather than identical, each is responsible for the least negligence (Dig. 30, 108, 12), though perplexing exceptions (such as agency and partnership) make this a difficult rule to practically rely upon. (The best treatises on this subject are the following:—Von Löhr, *Theorie der Culpa*, Giessen, 1805, and *Beiträge zu der Theorie der Culpa*, Giessen and Darmstadt, 1808; Hasse, *Die Culpa des römischen Rechts*, 2nd edition by Bethmann-Hollweg, 1838; and in particular Mommsen, *Beiträge zur Lehre von der Culpa*, in his *Obligationenrecht*, vol. iii. pp. 345 ff.) [J. B. M.]

CULTER (dim. *cultellus*, Engl. *coulter;* in Southern Germany, *das Kolter;* French, *couteau;* Greek, *μάχαιρα*, *κοπὶς*, or *σφαγὶς*), a knife with only one edge, which formed a straight line. The blade was pointed and its back curved. It was used for a variety of purposes; but chiefly for killing animals either in the slaughter-house, or in hunting, or at the altars of the gods. (Liv. iii. 48; Scrib. Largus, *Comp. Med.* 13; Suet. *Aug.* 9; Plaut. *Rud.* i. 2, 45; Verg. *Georg.* iii. 492; Ovid. *Fast.* i. 321.) Hence the expressions—*bovem ad cultrum emere*, "to buy an ox for the purpose of slaughtering it" (Varro, *de Re Rust.* ii. 5); *me sub cultro linquit*, "he leaves me in a state like that of a victim dragged to the altar" (Hor. *Sat.* i. 9, 74); *se ad cultrum locare*, "to become a bestiarius" (Seneca, *Ep.* 87). From some of the passages above referred to, it would appear that the culter was carried in a kind of sheath. The priest who conducted a sacrifice never killed the victim himself; but one of his ministri, appointed for that purpose, who was called either by the general name *minister*, or the more specific *popa* or *cultrarius*. (Suet. *Calig.* 32.) A tomb-stone of a *cultrarius* is still extant, and upon it two *cultri* are represented

(Gruter, *Inscript.* vol. ii. p. 640, No. 11), which are copied in the annexed woodcut.



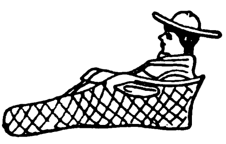
Cultri. (From tombstone of a Cultrarius.)

The name *culter* was also applied to razors (Cic. *de Off.* ii. 7, 25; Plin. *H. N.* vii. § 211; Petron. *Sat.* 108) and kitchen knives (Varro, *ap.* Non. iii. 32). That in these cases the culter was different from those above represented, and most probably smaller, is certain; since, whenever it was used for shaving or domestic purposes, it was always distinguished from the common culter by some epithet, as *culter tonsorius*, *culter coquinaris.* Fruit knives were also called *cultri;* but they were of a smaller kind (*cultelli*), and made of bone or ivory (Colum. xii. 14, 45; Plin. *H. N.* xiii. § 106; Scribon. c. 83). Columella, who gives (iv. 25) a very minute description of a *falx vinitoria*, a knife for pruning vines, says that the part of the blade nearest to the handle was called *culter* on account of its similarity to an ordinary culter, the edge of that part forming a straight line. This culter, according to him, was used when a branch was to be cut off which required a hard pressure of the hand on the knife. The name *culter*, which was also applied to the sharp and pointed iron of the plough (Plin. *H. N.* xviii. § 171), is still extant in English, in the form *coulter*, to designate the same thing. [ARATRUM.]

The expression *in cultrum* or *in cultro collocatus* (Vitruv. x. 10, 14) signifies placed in a perpendicular position. [L. S.]

CULTRA'RIUS. [CULTER.]

CUNAE, CUNA'BULA (*λίκνον, σκάφη*), a cradle. It has been thought that cradles were little used by the Greeks, at least in early times; since Plato in a passage on the putting of infants to sleep mentions only singing the lullaby and rocking in the arms (*ἐν ταῖς ἀγκάλαις σείειν*, *Legg.* vii. 790 D). But various substitutes are mentioned. Hercules according to tradition was cradled in his father's shield (Theocr. xxiv. 4); Dionysus in a winnowing-fan (*λίκνον, vannus*), which accordingly was borne in his processions (see the illustration under VANNUS); other deities in the same manner (Hom. *Hymn. Merc.* 21, &c.; Callim. *in Jov.* 48, with the Scholia). The ark or cradle in which children were exposed is *σκάφη*, Aristoph. *Lys.* 138, with the Scholia; Soph. *fr.* 574; Aristot. *Poet.* 16, § 3; Plut. *Rom.* 3 [= *alveus*, Liv. i. 4]: but it is only in quite late authors that we find *σκάφην διασείειν*, "to rock a cradle," Ael. *H. A.* xi. 14. In the Roman period cradles were regularly used (Plaut. *Truc.* v. 13 and elsewhere; Cic. *de Div.* i. 36, § 79) and were made to rock. We find a female slave called *cunaria*, apparently distinct from the *nutrix* (Grut. *Inscr.* 311, 7); or a male slave, who perhaps in time became the child's *paedagogus* (*cunarum motor*, Mart. xi. 39, 1; cf. Tac. *Dial.* 29 *init.*). The illustration, from a sculptured stone found in Burgundy, and figured by Daremberg and Saglio, shows a boat-shaped cradle with the child curiously strapped in. [W. W.]



Cradle. (From the Museum at Beaune.)

CU'NEUS. [EXERCITUS; THEATRUM.]

CUNI'CULUS (*ὑπόνομος, ὑπόρυγμα*), a mine or subterranean passage, was so called from its resemblance to the burrowing of a rabbit. Thus Martial (xiii. 60) says:

> "Gaudet in effossis habitare cuniculus antris;
> Monstravit tacitas hostibus ille vias."

The word is applied to natural passages underground, like the *katavóthra* into which some rivers disappear (Plin. *H. N.* iii. § 117; v. § 55; vi. § 128); to sulphur mines (*ib.* xxxv. § 174); to the flues of furnaces (*ib.* ix. § 133) [BALNEAE, p. 278 *a*]; to sewers (*ib.* ii. § 197); to the underground channels of aqueducts, thus distinguished from the *specus* of the exposed portions (*ib.* xxxvi. § 121). But it is most commonly used as a military technical term, denoting either the "mines" of besiegers or the "counter-mines" of defenders. The use of the former was mainly, if not exclusively, to sap the foundations of a wall and make a breach for the assailants: "cuniculo suffossa moenia," Q. Curt. vii. 6. The stories of towns entered by mines, such as Fidenae (Liv. iv. 22), Veii (id. v. 19), Chalcedon (Polyaen. vii. 11, § 5), and an Indian town in Alexander's expedition (Q. Curt. ix. 8) are now rejected as unhistorical. The want of evidence for these cases is pointed out by Niebuhr (*R. H.* ii. 483, n. 1063; *e.g.* the capture of Chalcedon by Darius is not mentioned by Herodotus). The earliest military writer, Aeneas Tacticus, gives full details as to the art of mining, including that of countermines; and most of the later writers have copied or abridged his account. Among the curious particulars given by him are the introduction of wasps, bees, and smoke into the mine, and the sounding for mines by laying the ear to the ground with a bronze shield between (*Poliorc.* 37). Another remarkable stratagem in counter-mining is described by Livy (xxxviii. 7) at the siege of Ambracia by the Romans; the Ambraciots introduced into the besiegers' mine a "stink-pot" of burning feathers. For other examples of mines and countermines, cf. Thucyd. ii. 76; Caes. *B. G.* iii. 21, vii. 22, viii. 43.

The "cunicular" drainage of Latium and Southern Etruria belongs rather to the prehistoric antiquities of Italy than to classical times: it dates, probably, from the period of Etruscan supremacy in these regions, and the Romans had utterly lost sight of it. The subject is interesting from the economical point of view, and has recently been investigated by Italians desirous of restoring to the Campagna its ancient fertility. (See Daremberg and Saglio, *s. v.*) [R. W.] [W. W.]

CUPA, a wooden cask, butt or barrel, used like the largest earthen vessel, the *dolium*, to receive the fresh must from the wine-press (*torcular*) and to contain it during the process of fermentation. The cupa was always of wood; the *dolium*, like the *amphora*, always of earthenware. Hence of the derivatives, Fr. *cuve*, *cuvier*, Eng. *cooper*, follow the original meaning; while in It. *coppa*, Fr. *coupe*, Eng. *cup*, it is modified. The inferior wines were drawn for drinking from the cupa, without being bottled in *amphorae;*

whence *vinum de cupa* (Cic. *in Pis.* 27, § 67; Varr. *ap.* Non. ii. 113; Dig. 18, 6, 1, § 4) is equivalent to our expression "from the wood." [A caution may be necessary against the rendering of the passage in Cicero by some editors, as if *cupa* were for *copa*, "a hostess;" though Charisius (p. 47 P. = 63, 11 K.) has *quamvis Vergilius librum suum* cupam *inscripserit.*] Cicero says also *de dolio haurire* for drinking new wine (*Brut.* 83, § 288; cf. Guhl and Koner, ed. 5, p. 594). The phrase in Horace (*Sat.* ii. 2, 123) may be dismissed with the remark that all good editions give with the MSS. *culpa potare magistra:* Bentley's long note is, as often with him, ingenious but not convincing.

The cupae, like our own casks, were made with staves (*tabulae*, Pallad. i. 38, § 1) and hoops (*circuli*, Petron. *Sat.* 60, § 3; Plin. *H. N.* xiv. § 132). The close resemblance is shown in the annexed illustration.

Cupae. (From Trajan's Column.)

The hoops might be of rushes or osiers, perhaps also of iron: Varro objects to rush hoops on *cupae vinariae*, as not strong enough to stand the fermentation (*ap.* Non. *l. c.*). For the staves, the pitch-pine was preferred (Plin. *H. N.* xvi. § 42); it is not stated that wooden casks received a coating of pitch, as the *dolia* and *amphorae* undoubtedly did (*H. N.* xiv. § 134; Guhl and Koner, *l. c.*). They were used for a variety of purposes, as in modern times: for preserving and transporting fruits and corn (Dig. 33, 7, 8 and 12), forming rafts and pontoons (Lucan. iv. 420; Capitol. *Maximin.* 22; cf. Vopisc. *Aurelian.* 48); containing combustibles in war (Caes. *B. G.* viii. 42; *B. C.* ii. 11); and even for a sarcophagus (Grut. *Inscr.* p. 845).

II. Part of an olive-press (Cat. *R. R.* 21); in this sense probably derived from κώπη, a handle. [TRAPETUM.] [P. S.] [W. W.]

CURA, CURATE'LA, CURA'TIO. [CURATOR.]

CURA'TOR. Curators were persons appointed either by law or by the magistrate to look after the property of certain classes of people, and to prevent its being squandered, because they were unfit or unable to properly take charge of it themselves. Those classes are mainly four: minors or *adolescentes* (*i.e.* persons who were *sui juris* and between the age of puberty—12 or 14 (Gaius, i. 196; Inst. i. 22, pr.)—and 25 years); lunatics; interdicted prodigals; and a miscellaneous class, the *cura* of which was considerably later in origin.

The *cura* of minors is to be attributed to the fact that when a young person who was *sui juris* reached puberty, and escaped from the supervision of his guardian [TUTELA], he was regarded as having attained his full stature, intellectual no less than physical: he might marry and become a paterfamilias; he was liable to military service, entitled to vote in the comitia, and competent to hold public office; and he had the complete management of his own affairs. But it soon was felt to be a matter of necessity to give him some legal protection against designing and unscrupulous persons, for it became clear that his indiscretion and ignorance of business would frequently lead to his being overreached; and this was done, without interfering with the principle that full legal capacity was attained with puberty, by the Lex Plaetoria, passed certainly before 183 B.C., for it is mentioned by Plautus (*Pseud.* i. 3, 69; *Rud.* v. 3, 26), who died in that year. This statute (which appears to have first established the distinction between minority and full age) protected minors by subjecting any one who fraudulently overreached them to a *judicium publicum* or prosecution (Cic. *de Nat. Deor.* iii. 30, § 74; *de Off.* iii. 15, § 61), entailing a pecuniary fine and infamia on conviction (Lex Julia Municip. 38); and after the introduction of *exceptiones* by the praetor, a minor who was fraudulently induced to enter into a contract could protect himself against action brought thereon by pleading the exceptio legis Plaetoriae. It being unlikely that in the face of this stringent procedure any one would have any dealings with minors whatever, the statute (Capitol. *Marc.* 10) apparently went on to provide that minors who wished to contract or deal with other persons, especially in the way of stipulation (Priscian, viii. 4, xviii. 9; Plautus, *Rud.* l. c.) and loan (Plaut. *Pseud.* l. c.), should be compellable to receive a curator on their application, by whose assent to the transaction the penal consequences of the lex should be avoided.

The principle of the Lex Plaetoria was carried still further by the praetor, who by means of *in integrum restitutio* protected minors generally against indiscretion causing them proprietary loss (*laesio*); he would set aside transactions into which they had entered, not only on the ground of fraud, but on a consideration of all the circumstances of the case, provided application were made to him within a year after the attainment of majority. The superiority of this form of redress explains the scanty references to the Lex Plaetoria to be found in the writings of the jurists. (Dig. 4, 4; Cod. 2, 22; Savigny, *System*, §§ 322–324; Vangerow, *Pandekten*, §§ 183, 184.)

The Emperor Marcus Aurelius (Capitol. *Marc.* 10; Gaius, *Epit.* 1, 8) seems to have extended the scope of the cura of minores by providing that a minor might, on application to the proper magistrate, obtain a permanent curator to look generally after his property, and aid him with advice. The principle was that he could not be compelled to have a general curator unless he pleased ("inviti adolescentes curatores non accipiunt," Inst. i. 23, 2), except where he was involved in litigation (Inst. *loc. cit.*; a judgment against an undefended minor being void, Dig. 42, 1, 45, 6); when a person who owed him money wished to discharge his debt and obtain a release (Dig. 4, 4, 7, 2); and possibly where he had disregarded the advice given to him by his guardian, on reaching puberty, to get one appointed for him. But apparently most minors were induced by the convenience of the system to have general curators to assist and advise them (Dig. *loc. cit.*; Ulpian, *Reg.* 12, 4; Dio Cass. 52, 20).

The curators of minors were always appointed by the magistrate: a testamentary appointment in itself was void, though the magistrate would usually confirm it by nominating the same person (Inst. i. 23, 1: cf. Dio Cassius, xliv. 35); and, according to rule, the minor had to apply for a curator himself: *δέον ἄλλον αὐτῷ μὴ αἰτεῖν, ἀλλὰ αὐτὸν ἑαυτῷ* (Ulpian in Dig. 26, 6, 2, 5). The munus was a public one, and could not be declined except on specific grounds, carefully enumerated in the authorities (Inst. i. tit. 25); many curators had to give security [CAUTIO], *rem salvam fore*, that they would diligently look after the interests entrusted to them; and if suspected of malversation or negligence, they could be removed by the magistrate, and in cases of fraud were liable to the *suspecti crimen*, a quasi-criminal prosecution (Inst. i. tit. 26).

A minor was fully competent to perform legal acts, such as the conveyance of property or making of contracts; but whether such legal acts had their full usual effect or not depended on whether they were sanctioned by the curator. Both alienations and contracts were *primâ facie* binding on him; but against both, if they were seriously prejudicial, or the curator's consensus has not been given, he could get himself *in integrum restitutus* by the magistrate (Cod. 2, 22, 3); and if the curator had not assented to a contract, he could not be compelled to disburse anything from the minor's property in discharge of it, or to pay costs or damages of actions brought in respect thereof by the other party. From this it will be gathered that the curator had the control and administration of his ward's property exactly as a guardian had (Dig. 23, 2, 20; 46, 3, 14, 7). But a series of imperial enactments (Cod. 5, 71, 16; 5, 37, 22) placed him and the guardian alike under very stringent regulations in respect of alienation of the ward's property, which as a general rule was not allowed without permission from a magistrate. If a minor wished to give himself in adrogation [ADOPTIO], the curator's consent was necessary.

The cura of *furiosi* (lunatics and idiots) and interdicted prodigals or spendthrifts originated with the Twelve Tables, which placed *furiosi* under the cura of their nearest agnates, or, if there were no agnates, of their gentiles, on the analogy of the rules of Intestate Succession (Cic. *de Invent.* ii. 50, § 148; Varro, *de Re Rust.* i. 2; Auctor *ad Herenn.* 1, 13; Ulpian, *Reg.* xii. 1, 2). Similarly the near relations of a *prodigus* might petition the magistrate for his interdiction from the management of his own affairs, and his subjection to the cura of his nearest agnates (Ulpian, *loc. cit.*; Cic. *de Senect.* 7, 22; Paul. *Sent. rec.* iii. 4, 7; Val. Max. iii. 5, 2), though only if his property had come to him by the intestacy of his own father (Ulpian, *Reg.* xii. 3). In default of these *legitimi curatores*, one would be appointed for such persons by the magistrate (Inst. i. 23, 3; Cod. 5, 70, 7, 6; Dig. 27, 10, 13), and in historical times the cura of *prodigi* was no longer confined to the single case of which Ulpian speaks.

In the time of Justinian other classes of persons were able to get a general curator by application to the magistrate, especially those suffering from weak health, impaired mental faculties, or bodily infirmity, *e.g.* the deaf and dumb (Inst. i. 23, 4). Similarly it would sometimes happen that an *impubes* would have a curator as well as a guardian: *e.g.* if there was litigation between himself and the latter (Inst. i. 21, 3), or if the latter was unfit or temporarily unable to discharge his duties (*ib.* 23, 5). In all these cases, the curator's activity would vary with the capacity of the ward. Lunatics and idiots were in law incapable of legal action, so that here the curator had to do everything; but with other persons he might leave the management of their property very much in their own hands, though this apparently did not diminish the responsibility which he had undertaken, especially if he had given the security *rem salvam fore*.

It will appear from what has been said that, whatever similarity there may have been between a guardian and a curator, an essential distinction lies in this, that the latter was especially intended to look after the ward's proprietary interests, whereas the former was *personae, non rei datus*.

The word *cura* has also other legal applications: (1) *cura bonorum*, as in the case of the goods of an insolvent debtor, which are secured for the benefit of his creditors; (2) *cura bonorum et ventris*, in the case of a woman being pregnant at the death of her husband; (3) *cura hereditatis*, where there is a dispute as to who is the *heres* of a person, and his supposed child is under puberty; (4) *cura hereditatis jacentis*, the charge of an inheritance of which the apparent heir has not yet declared his acceptance; (5) *cura bonorum absentis*, in the case of property of an absent person who had appointed no manager of it.

(Savigny, *Von dem Schutz der Minderjährigen im römischen Recht*, vermischte Schriften, ii. 321–395; Puchta, *Institutionen*, § 299; Walter, *Geschichte des röm. Rechts*, §§ 556–558; Vangerow, *Pandekten*, §§ 291–294.) [J. B. M.]

CURATO'RES were public officers of various kinds under the Roman empire, several of whom were first established by Augustus. (Suet. *Aug.* 37.) The most important of them were as follow:—

1. CURATORES ALVEI ET RIPARUM ET CLOACARUM, who had the charge of the navigation of the Tiber. The duties of their office may be gathered from Ulpian (Dig. 43, tit. 15). It was reckoned very honourable, the office being always held by consulars, and the persons who filled it received afterwards the title of comites. (Cf. *C. I. L.* i. p. 180; Wilmanns, *Inscr. Lat.* No. 846, 849, 850, &c.)

2. CURATORES ANNONAE, who purchased corn and oil for the state, and sold it again at a small price among the poorer citizens. They were also called *curatores emendi frumenti et olei*, and *σιτῶναι* and *ἐλαιῶναι*. (Dig. 50, tit. 5, s. 18, § 5.) Their office belonged to the *personalia munera*; that is, it did not require any expenditure of a person's private property: but the curatores received from the state a sufficient

sum of money to purchase the required amount. (Dig. 50, tit. 8, s. 9, § 5.) The title appears on incriptions either as *curator frumenti comparandi in annonam urbis* (Wilmanns, 1252), or once as *frumenti curator ex s. c.*, which appears to have been a special case (*ib.* 1113). A more common title is *praefecti frumenti dandi* (q. v.); but cp. Frontin. *de Aquaed.* 101, *curatores frumenti.*

3. Curatores Aquarum. [Aquaeductus.]

4. Curatores Kalendarii, who had the care in municipal towns of the *kalendaria;* that is, the books which contained the names of the persons to whom public money, which was not wanted for the ordinary expenses of the town, was lent on interest. The office belonged to the *personalia munera.* (Dig. 50, tit. 4, s. 18, § 2; tit. 8, s. 9, § 7; Heinecc. *Antiq. Rom.* iii. 15, § 4.) These officers are mentioned in inscriptions found in municipal towns, *e.g.* at Praeneste (Wilmanns, 1798, 1799), Corfinium (*ib.* 2062), Arretium (*ib.* 2093), &c.

5. Curatores Ludorum, who had the care of the public games as special commissioners (Mommsen, *Röm. Staatsr.* ii.^{2} 910). Marquardt thinks that the *curatores munerum* were ordinary, and not specially appointed officials (*Röm. Staatsverw.* iii. 467). Persons of rank appear to have been usually appointed to this office. (Tac. *Ann.* xi. 35, xiii. 22; Suet. *Cal.* 27.) In inscriptions, they are usually called *curatores muneris gladiatorii*, &c.

6. Curatores Operum Publicorum, who had the care of all public buildings, such as the theatres, baths, aqueducts, &c., and agreed with the contractors for all necessary repairs to them. Their duties under the republic were discharged by the aediles and censors. [Censores.] They are frequently mentioned in inscriptions. (Wilmanns, 636, 1163, 1181, 1188, 1224, &c.)

7. Curatores Regionum, who had the care of the fourteen districts into which Rome was divided, and whose duty it was to prevent all disorder and extortion in their respective districts. This office was first instituted by Augustus. (Suet. *Aug.* 30.) There were usually two officers of this kind for each district: Alexander Severus, however, appears to have appointed only one for each; but these were persons of consular rank, who were to have jurisdiction in conjunction with the praefectus urbi. (Lamprid. *Alex. Sev.* 33.) We are told that M. Aurelius, among other regulations, gave special directions that the curatores regionum should either punish, or bring before the praefectus urbi for punishment, all persons who exacted from the inhabitants more than the legal taxes. (Jul. Capitol. *M. Ant. Phil.* 11. Cf. Wilmanns, 1222, 1715.)

8. Curatores Reipublicae (with the name of the community added), also called Logistae, who administered the landed property of municipia. [Colonia, p. 483 a.] (Dig. 50, tit. 8, s. 9, § 2; 2, tit. 14, s. 37.) These were appointed by the emperors: cf. *C. I. L.* v. 4368, "curat. reip. Bergam. dat. ab imp. Traiano. curat. reip. Comens. dat. ab imp. Hadriano." Ulpian wrote a separate work, *De Officio Curatoris Reipublicae.*

9. Curatores tabularum publicarum, three magistrates appointed by Tiberius in A.D. 16, to assist in keeping the public records. (Cf. Mommsen, *Röm. Staatsr.* ii.^{2} 545.)

10. Curatores Viarum. [Viae.]

[W. S.] [A. S. W.]

CU'RIA signifies both a division of the Roman people and the place of assembly for such a division. Various etymologies of the word have been proposed. Varro (*de Ling. Lat.* v. 32) derives it from *curare*, a view defended by Mommsen (*Hist.* i. 72). Lange (*Röm. Alt.* i. p. 79), who regards *Quirites* as derived from *curia*, a theory which others again invert, wavers between this view and Corssen's earlier suggestion, that is, for *covisia*, "a dwelling together," from the root *vas*, "to dwell." But seeing that the original meaning seems to have been "house," it is better to trace it to the root *sku*, "shelter," as Corssen now does.

Each of the three ancient Romulian tribes, the Ramnes, Tities, and Luceres, was subdivided into 10 curiae, so that the whole body of the populus was divided into 30 curiae. (Liv. i. 13; Dionys. ii. 7, 23; Plut. *Rom.* 19.) It has commonly been asserted that the plebeians had no connexion whatever with the curiae, and that the clients of the patricians were members of the curiae only in a passive sense. (Fest. p. 285, ed. Müller; comp. Patricii, Gens.) But Mommsen has adduced strong reasons for denying the purely patrician character of the *curiae* (*Röm. Forsch.* i. 140–150), and accepting the view of Dionysius (iv. 12, 20) that plebeians were admitted. He points out first that, as is generally admitted, the *curiae* in their sacral character included plebeians as well as patricians. The Fornacalia was a festival celebrated by curies, but Ovid's account of it (*Fast.* ii. 511 ff.) is quite inconsistent with the notion that it was a patrician festival. Besides, in B.C. 209 we find a plebeian elected as Curio Maximus, and, according to all analogy, plebeians must have been admitted to the curies long before one of them could be found holding the highest post of dignity. Secondly, there is absolutely no proof of the purely patrician character of the *comitia curiata*, but much evidence to the contrary. Cicero's words (*de Leg. Agr.* ii. 11, 27, "curiatis comitiis quae vos non initis") refer merely to the formal meetings of lictors [cf. Comitia], which no citizens, patrician or plebeian, attended. Plebeians are represented as existing and voting side by side with patricians before the institution of any other than the *comitia curiata.* The extinction of the functions of the curies is nowhere mentioned as a result of the decay of the patriciate. By comparing Cic. *pro Planc.* 3, 8, and *de Domo* 14, 38, it is plain that the *populi comitia* of the former answers to the *comitia centuriata et curiata* of the second. The election of a magistrate and the conferring of the imperium are represented by Cicero (*de Leg. Agr.* ii. 11, 26, "maiores de singulis magistratibus bis vos sententiam ferre voluerunt") as two acts of the same body; but the former took place in the centuries, the latter in the curies. The thirty lictors who represented the curies, and therefore must have had the right of voting there, were plebeians. There is no reason whatever to believe that the right of making wills and adoptions before the curies was limited to patricians, and we have one positive instance of a plebeian adopting before the curies in the case of Clodius. Hence the common theory of the purely patrician character of the curies must be abandoned. There is no historical evidence to show when the plebeians became members of them (Mommsen, *Forsch.* i. 149), but it is a reasonable conjecture that they were admitted at the time of the expulsion of the kings, when the *comitia curiata* lost their political power by the development of the *comitia centuriata* (Mommsen, *Hist.* i. 264). All the members of the different gentes belonging to one curia were called, in respect of one another, *curiales*. Each curia as a corporation had its peculiar sacra (Fest. pp. 174, 245; Paul. Diac. p. 49, ed. Müller), and, besides the gods of the state, they worshipped other divinities and with peculiar rites and ceremonies. For such religious purposes each curia had its own place of worship, called curia, which at first may have contained nothing but an altar, afterwards a sacellum, and finally a building in which the curiales assembled for the purpose of discussing political, financial, religious, and other matters. (Paul. Diac. pp. 62, 64; Dionys. ii. 50.) The religious affairs of each curia were taken care of by a priest, *curio*, who was assisted by another called Flamen curialis. (Paul. Diac. pp. 49, 64; Varro, *de L. L.* v. 83, vi. 46; Dionys. ii. 21; comp. CURIO.) The thirty curiae had their own distinct names, which are said to have been derived from the names of the Sabine women who had been carried off by the Romans, though it is evident that some derived their names from certain districts or from ancient eponymous heroes. Few of these names only are known, such as curia Titia, Faucia, Calabra, Foriensis, Rapta, Veliensis, Tifata. (Paul. Diac. pp. 49, 366; Fest. p. 174; Liv. i. 13; Dionys. ii. 47; Cic. *de Re Publ.* ii. 8, 14.) O. Gilbert has lately (*Gesch. und Topogr. der Stadt Rom in Alterthum*, 2 vols. 1883, 1885) advocated with much ingenuity and learning a theory that the *curiae* were based originally upon the gradual occupation of the seven hills of the *Septimentium* by tribes of different origin, and their ultimate federation. The details of this view involve too many moot points to be discussed here with advantage.

Curia is also used to designate the place in which the senate held its meetings. [See following article.] From this there gradually arose the custom of calling the senate itself curia in the coloniae and municipia, but never the senate of Rome. [DECURIO.] The official residence of the Salii, which was dedicated to Mars, was likewise styled curia. (Cic. *de Div.* i. 17; Dionys. xiv. 5; Plut. *Camill.* 32; comp. Becker, *Handb. der Röm. Alterth.* vol. ii. part i. p. 31, &c.; Lange, *Röm. Alterth.* i. 244–250; Mommsen, *Röm. Forsch.* i. 140–150.) [L. S.] [A. S. W.]

CU'RIA (βουλευτήριον, γερουσία), the building in which the highest council of the state held its meetings. Scarcely anything is known of the form or dimensions of such structures. Vitruvius (v. 2) gives a curious rule for ascertaining the proportions between the height and the length and breadth: this does not, however, agree with the probable plan and elevation of the Curia of Diocletian at Rome. The same author enjoins the use of a cornice half-way up the wall to throw down the sound. The occurrence of columns down each side of the hall is attested by Pausanias (viii. 32; x. 5) at Phocis; a like arrangement has been noticed at Pompeii.

The history and site of the Senate-house at Rome have been much discussed. Built by Tullus Hostilius (Varr. *L. L.* v. 155–6), the Curia Hostilia was burnt at the funeral of Clodius (B.C. 52). Successive restorations by a son of Sulla and by Augustus are recorded in the names C. Cornelia and C. Julia. Under Domitian the C. Julia was again rebuilt. A still later building, ascribed to Diocletian, has been identified with the present church of S. Adriano on the N.E. of the Forum. It is of brick, ornamented with stucco and marble. (Franz v. Reber, *Die Lage d. C. Hostilia u. d. C. Julia*; H. Jordan, *Topogr. d. Stadt Rom*, 1 Bd., 2 Abth. p. 250 ff.; J. H. Middleton, *Anc. Rome in* 1885; Lanciani, *L'aula e gli Uffici del Senato Romano*; Du Perac, *Vestigj di Roma*, 1575.) [J. M.]

CURIA'LES. [CURIA; DECURIONES.]

CURIA'TA COMI'TIA. [COMITIA.]

CU'RIO, the person who stood at the head of a curia, and had to manage its affairs, especially those of a religious nature (Dionys. ii. 7, 65; Varro, *de L. L.* v. 15, 32, vi. 6): in their administration he was assisted by another priest, called Flamen curialis. (Paul. Diac. p. 64; Dionys. ii. 21, 64.) As there were thirty curiae, the number of curiones was likewise thirty, and they formed a college of priests, which was headed by one of them bearing the title of *curio maximus* (Paul. Diac. p. 126; Liv. xxvii. 8). In later times he was elected by the people, but originally probably by co-optation. [L. S.] [A. S. W.]

CU'RIUS (κύριος). [KYRIOS.]

CURRUS (ἅρμα), a chariot, a car. These terms are especially applied to the two-wheeled cars used in battle and in racing. They differed from the *carpentum* in being open overhead, and from the *cisium* in being closed in front. The plural ἅρματα is generally used to signify the chariot and all its appurtenances—pole, yoke, reins, &c.—excluding the horse (Buchholz, *Die homerischen Realien*, ii. 1, 219, comparing τόξον and τόξα). The words ἅρμα (*Il.* xxiv. 440), ἅρματα (*Od.* iii. 492), and δίφρος (*ib.* 481) are also employed for the light cars used on journeys. They frequently had, bound on to the body, a basket, πείρινς (*Od.* xv. 131), which must have been capacious to hold the presents Telemachus got from Menelaus (*Od.* xv. 102–105). Doubtless Telemachus and Pisistratus sat on this πείρινς, as it was unlikely that they would stand for a whole two days' journey (*Od.* iii. 487, 497; and Buchholz, *op. cit.* p. 228). The most essential parts in the construction of the *currus* were:—

1. The *antyx* (ἄντυξ) or rim. Either on three sides of the chariot or only in front there was a curved (hence ἄγκυλον, κάμπυλον ἅρμα, *Il.* v. 231, vi. 39) barrier (ἐπιδιφριάς, *Il.* x. 475; περίφραγμα, Poll. i. 142), sometimes of light wood, sometimes of leather or metal (cf. for the latter *Il.* xxiii. 503; and Helbig, *Das homerische Epos*, pp. 95, 103). It was generally a sort of trellis-work made by interlacing strips of the material used; hence probably δίφρος εὐπλεκής or εὐπλεκτός (*Il.* xxiii. 436, 335). In different chariots this barrier was of different heights: sometimes it did not come up to the knee, sometimes it rose to near the waist, but in the Greek war-chariot it was seldom, if ever, higher. Warriors in a chariot are mentioned as being wounded in the stomach (*Il.* xiii. 398). Round the top of this barrier was the

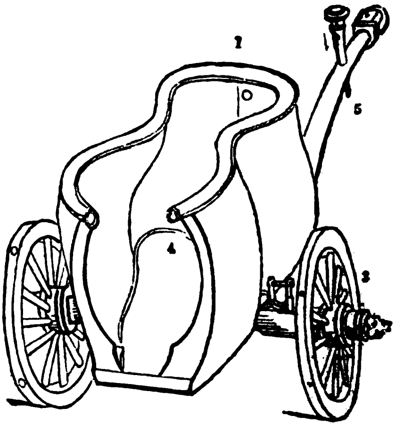
curved rim (ἄντυξ), which was generally raised above the trellis-work barrier by bars. A variety of technical names belonging to these bars are to be found in Poll. i. 143. The two ἄντυγες of Hera's chariot (δοιαὶ δὲ περίδρομοι ἄντυγές εἰσι, *Il.* v. 728) are to be explained either with Grashof (*Ueber das Fuhrwerk bei Homer und Hesiod*, p. 28) of a double rim, one rising above the other, or with Helbig (*op. cit.* p. 105) of a rim at both sides of the chariot. The former perhaps suits the sense of περι- ("all round," in opposition to ἀμφι-, "on both sides") better than the latter. The ἄντυξ often served to fasten the reins to (*Il.* v. 262). As the ἄντυξ was curved, a pliant wood was required for it; and Homer (*Il.* xxi. 37) mentions the wild fig-tree as so used. The term ἄντυξ is sometimes applied to the whole chariot (Soph. *El.* 746).

2. The *axle*, usually made of oak (φήγινος ἄξων, Hom. *Il.* v. 838, imitated by Virgil, *faginus axis*, *Georg.* iii. 172), and sometimes also of ilex, ash, or elm (Plin. *H. N.* xvi. § 229). It was of iron or brass in the chariots of the gods (*Il.* v. 723; xiii. 30). The extremities were called ἀκραξόνια (Poll. i. 145) or χνοαί (Hesych. *s. v.*), and sometimes ended in the head of an animal (Guhl and Koner, *Das Leben der Griechen und Römern*, p. 306, ed. 4). The iron plates on the axle round which the wheels revolved were called εὐραί (Poll. i. 145). The axle was about seven feet long (Guhl and Koner, p. 304).

3. The *wheels* (κυκλά, τροχοί, *rotae*) revolved upon the axle, as in modern carriages. They consisted of (*a*) *spokes* (κνῆμαι, *radii*), usually four in number, but in the chariot of Hera there were eight (ὀκτάκνημα, *Il.* v. 723). With tips of iron (ἀετοί, Poll. i. 145) at each end on the outer side, they were fixed in (*b*) a *felloe* (ἴτύς), consisting of four or more arcs, ἁψῖδες (Hesiod, *Op.* 426; σῶτρα, Poll. i. 144), which of course had to be of flexible wood (*Il.* iv. 482–486; xxi. 37), heat being used to assist in producing the curvature (Theocr. xxv. 247–251), bound on the outside by (*c*) an iron *tire* (ἐπίσσωτρον, *Il.* xxiii. 519; ἐπίσσωτρα, *Il.* v. 725; *canthus*, Pers. v. 71). In Hera's chariot the tire was of bronze and the felloe gold (*Il.* v. 725). On the inner side they were fixed in (*d*) the *nave* (πλήμνη, *Il.* v. 726; χνοή, Aesch. *Theb.* 153; *modiolus*, Plin. *H. N.* ix. § 8). There are several technical terms for the different parts of the nave (Poll. i. 145). The external ring of iron into which the spokes fitted was called θώραξ or πλημνόδετον. The internal ring round the hole through which the axle passed was γάρνον or δέστρον. What was probably a flat ring prevented the wheels slipping off, and was called παραξόνιον, ἐπίβολος, ἔμβολος: it was itself kept in its place by the linchpin (ἐμβολοδέτης). The wheels (Buchholz, *op. cit.* p. 224) were not more than thirty inches in diameter: this appears to rest on Hesiod, *Op.* 426, where Proclus and Tzetzes take ἅμαξα as the *wheel*.

4. The *body* of the chariot, δίφρος, also called ὑπερτερία by Poll. i. 144, though in Homer that word appears to mean the upper part shaped like a cart. (See Ameis on *Od.* vi. 70, who refutes Göbel's view that it is a covering to keep off sun and rain.) All efforts were made to lessen the weight of the chariot, and we have evidence that they were very light. They drive over heaps of arms and corpses (*Il.* xi. 534), and even across ditches (*Il.* viii. 179); and Diomede thinks of carrying a chariot on his shoulders (*Il.* x. 505). It consisted of some kind of interlaced straps of leather (ἱμάντωσις, τόνος, Poll. i. 142). In Hera's chariot they were of gold and silver cords (*Il.* v. 727). Doubtless this was bound around to a narrow frame of some rigid substance, wood or iron; and it is to this perhaps that the epithets πρωτοπαγής, κολλητός, which are applied to the δίφρος (*Il.* v. 193; xix. 395), refer. Possibly this framework at the back of the chariot, which was always cut straight, is what Pollux (i. 144) means by πτέρνα (τὸ δὲ πρὸ τοῦ τόνου οὗ πρῶτον ἐπιβαίνουσιν οἱ ἀναβαίνοντες, πτέρνα); though Guhl and Koner (p. 305) say it is the boards which were placed over the straps and on which the charioteers stood. If we allow a foot on each side of the axle for the wheels, the breadth of the δίφρος would be about five feet.

5. The *pole* (ῥυμός, *temo*), made of wood and polished (*Il.* xxiv. 271). From representations of chariots, we find the pole sometimes as it were a continuation of the flooring of the δίφρος, sometimes fastened into the axle, sometimes above it. It is found fastened by two forked stays (στήριγμα, ὑποστάτης, *furca*, Plut. *Cor.* 24). These were either projecting from the axle, or, as is more probable, at the inner end of the pole (Marquardt, *Privatl. der Römer*, p. 182). The pole was sometimes straight for some distance from its point of fastening, and curved rapidly upwards at its extremity (πρώτη πέζα, ἀκρορρύμιον), or else was in its whole length quite straight and inclined at an angle: in any case the top of the pole was on a level with the necks of the horses. The extremity of the pole at times ended in the head of a bird, a ram, or the like. Towards the extremity of the pole the yoke was fastened about a pin (ἕστωρ) fixed in the pole. There was frequently a fastening running from the top of the pole to the ἄντυξ, in order to divide the traction-force on two points. For details as to the yoke and its fastening, see JUGUM; and for the reins, see FRENUM.



Currus. (Vatican.)

All the parts now enumerated are seen in an ancient chariot preserved in the Vatican, a representation of which is given in the preceding woodcut.

Carriages with two or even three poles were used by the Lydians (Aesch. *Pers.* 47). The Greeks and Romans, on the other hand, appear never to have used more than one pole and one yoke, and the currus thus constructed was commonly drawn by two horses, which were attached to it by their necks, and therefore called *δίζυγες ἵπποι* (Hom. *Il.* v. 195, x. 473), *συνωρίς* (Xen. *Hell.* i. 2, § 1), *gemini jugales* (Verg. *Aen.* vii. 280), *equi bijuges* (*Georg.* iii. 91). We occasionally find in Homer that only one horse was used (*Il.* ii. 390; xxii. 22; xxiii. 517), and it must have been fastened by traces; but a pair of horses is much the most frequent. They drew the car by means of the yoke and its collars (*λέπαδνα*); for they were not, Helbig thinks (*op. cit.* 106), fastened to the chariot by traces. Thus in the Iliad, when the pole breaks (vi. 38 ff., xvi. 360), the horses simply run on with the yoke and front part of the broken pole, and the car is left behind; again, when the yoke breaks and the horses run to different sides, they do not, Helbig says, upset the chariot, as they would do if they had been fastened by traces (*Il.* xxiii. 392 ff.). In this latter passage, however, it seems most probable that the shock which could throw Eumelus out with such violence must have upset the light chariot. Besides the yoke horses, there was sometimes a *παρήορος* (*Il.* xvi. 471), *σειραῖος* (Soph. *El.* 722), *σειραφόρος* (Aesch. *Ag.* 842), *funalis equus* (Stat. *Theb.* vi. 462), *funarius* (Isid. *Orig.* xviii. 33), which was fastened by a trace affixed to the *ἄντυξ* (Guhl and Koner, *op. cit.* p. 305), if we may judge from vase-pictures and as the word *σειραφόρος* would lead us to infer. But the main work of traction was done by the yoke horses (cf. Aesch. *Ag.* 1679). Helbig (*op. cit.* p. 91) thinks that they were fastened to the yoke or to one of the yoke-horses; yet he holds (p. 106, note 6) that traces were used in the case of a team of four horses. At any rate the fastenings of the *παρήορος* were called *παρηορίαι* (*Il.* xvi. 152). These outriggers had often riders like our postilions (cf. Suet. *Tib.* 6, and Saglio, *Dict.* fig. 2223). A team of four horses is mentioned three times in Homer (*Il.* viii. 185, xi. 699; *Od.* xiii. 81), but the passages are not by any means sufficient to prove a general use of four horses, and they seem to refer to the Olympic games (see Buchholz, *op. cit.* i. 2, 177–8). In the above cut we also observe traces passing between the two *ἄντυγες*, and proceeding from the front of the chariot on each side of the middle horse. These probably assisted in attaching the third, or extra horse.

Currus, with three horses. (Ginzrot, i. p. 342.)

The Latin name for a chariot and pair was *bigae* (Verg. *Aen.* ii. 272, v. 721; Plin. *H. N.* vii. § 202, *et alibi*); in later Latin also *biga* (Tac. *Hist.* i. 86; Plin. xxxix. § 89; Stat. *Silv.* i. 2, 45, *et alibi*). When a third horse was added, it was called *triga* (Dig. 21, 1, 38, § 14) or *trigae* (Isidor. *Orig.* xviii. 36); and by the same analogy a chariot and four was called *quadrigae* (Verg. *Georg.* i. 512, *Aen.* vi. 535; Cic. *Div.* ii. 70, 144, *et alibi*), in later Latin *quadriga* (Gell. xix. 8, 17; Suet. *Vit.* 17, *et alibi*); in Greek, *τετραορία* or *τέθριππος*. Four horses were the largest number usually employed, but we also read of a chariot drawn by six horses, called *sejugis* (Orelli, *Inscr.* 2593, 6179), but more usually in the plural *sejuges* (Liv. xxxviii. 35, 4; Plin. *H. N.* xxxiv. § 19; Apul. *Flor.* p. 356, No. 16), also *sejugae* (Isid. *Orig.* xviii. 36), like bigae and quadrigae; of a chariot drawn by eight horses (*octojugis*, Orell. *Inscr.* 6179); and of one drawn by ten horses (*decemjugis*, Orell. *l. c.*), which was the number driven by Nero in the Olympic games (Suet. *Ner.* 24). In all cases the horses were driven abreast.

As the works of ancient art, especially fictile vases, abound in representations of quadrigae, numerous instances may be observed, in which the two middle horses (*ὁ μέσος δεξιὸς καὶ ὁ μέσος ἀριστερός*, Schol. *in* Aristoph. *Nub.* 122) are yoked together as in the bigae; and, as the two lateral ones (*ὁ δεξιόσειρος, ὁ ἀριστερὸς σειραῖος*, *dexterior*, *sinisterior funalis equus*, Suet. *Tib.* 6; and cf. Jebb on Soph. *El.* 721) have collars (*λέπαδνα*) equally with the yoke-horses, we may presume that from the top of these proceeded the ropes which were tied to the rim of the car, and by which the trace-horses assisted to draw it. The first figure in the following woodcut is the chariot of Aurora, as painted on a vase found at Canosa. (Gerhard, *Ueber Lichtgottheiten*, pl. iii. fig. 1.) The reins of the two middle horses pass through rings at the extremities of the yoke. All the particulars which have been mentioned are still more distinctly seen in the second figure, taken from a terra-cotta at Vienna. (Ginzrot, vol. ii. pp. 107, 108.) It represents a chariot overthrown in passing the goal at the circus. The charioteer having fallen backwards, the pole and yoke are thrown upwards into the air; the two trace-horses have fallen on their knees, and the two yoke-horses are prancing on their hind legs.

If we may rely on the evidence of numerous works of art, the currus was sometimes drawn by four horses without either yoke or pole; for we see two of them diverging to the right hand and two to the left, as in the cameo in the royal collection of Berlin, which exhibits Apollo surrounded by the signs of the zodiac. If the ancients really drove the quadrigae thus harnessed, we can only suppose the charioteer to have checked its speed by pulling up the horses, and leaning with his whole body backwards, so as to make the bottom of the car at its hindermost border scrape the ground, an act and an attitude which seem not unfrequently to be intended in antique representations.

The currus, like the cisium, was adapted to carry two persons, and on this account was called in Greek *δίφρος*. One of the two was of course the driver. He was called ἡνίοχος, because he held the reins, and his companion παραιβάτης, from going by his side or near him. Though in all respects superior, the παραιβάτης was often obliged to place himself *behind* the ἡνίοχος. He is so represented in the bigae at p. 129, and in the Iliad (xix. 397) Achilles himself stands behind his charioteer, Automedon. On the other hand, a personage of the highest rank may drive his own carriage, and then an inferior may be his παραιβάτης, as when Nestor conveys Machaon (πὰρ δὲ Μαχάων βαῖνε, *Il.* xi. 512, 517), and Hera, holding the reins and whip, conveys Athena, who is in full armour (v. 720–775). In such cases a kindness, or even a compliment, was conferred by the driver upon him whom he conveyed, as when Dionysius, tyrant of Sicily, "himself holding the reins, made Plato his παραιβάτης." (Aelian, *V. H.* iv. 18.)

Currus with four horses. (See p. 579 *b*.)

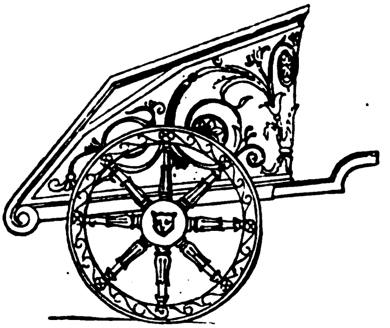
Chariots were frequently employed on the field of battle not only by the Asiatic nations, but also by the Greeks in the heroic age. The ἀριστῆες, *i.e.* the nobility, or men of rank, who wore complete suits of armour, all took their chariots with them, and in an engagement placed themselves in front. In the Homeric battles we find that the horseman, who for the purpose of using his weapons, and in consequence of the weight of his armour, is under the necessity of taking the place of παραιβάτης (see above the woodcut of the triga), often assails or challenges a distant foe from the chariot; but that, when he encounters his adversary in close combat, they both dismount, "springing from their chariots to the ground," and leaving them to the care of the ἡνίοχοι. (*Il.* iii. 29, xiii. 537, xvii. 480–483, 500–502; Hes. *Scut. Herc.* 370–372.) As soon as the hero had finished the trial of his strength with his opponent, he returned to his chariot, one of the chief uses of which was to rescue him from danger.

Chariot in Grecian public games. (Coin of Hieron II. of Syracuse. British Museum.)

In later times the chariots were chiefly employed in the public games. The usual form of those used in the Grecian public games appears on the coins of victors, as in the annexed coin of Hieron II. of Syracuse. Those used in the Roman games of the Circus are figured under CIRCUS. Their form was the same, except that they were more elegantly decorated. They had no ἄντυγες, but were raised in front. They had low wheels, quite at the back, and there was no space to stand in behind the wheels. (See cut p. 434.) Chariots were not much used by the Romans. The ancient Italians never fought from chariots. When such appear, they are either in representations of Greek events or are triumphal cars (Saglio, *Dict.* p. 1641). In a Roman triumph the general ascended to the Capitol in a chariot adorned with ivory (*currus eburnos*, Ov. *Trist.* iv. 2, 63) or gold (*aureos*, Hor. *Epod.* ix. 22), which was cylindrical, with sides very much higher than the Greek chariots. An example may be seen in the cuts under TRIUMPHUS, which in a measure exemplify what Zonaras says (vii. 21): τὸ δὲ ἅρμα ἐς πύργον περιφεροῦς τρόπον ἐξείργαστο. The utmost skill of the painter and the sculptor was employed to enhance its beauty and splendour. More particularly the extremities of the axle, of the pole, and of the yoke, were highly wrought in the form of animals' heads. Wreaths of laurel were sometimes hung round it (*currum laurigerum*, Claudian, *de Laud. Stil.* iii. 20, *Tert. Cons. Honor.* 130), and were also fixed to the heads of the four snow-white horses. (Mart. vii. 8, 8.) The car was elevated so that he who triumphed might be the most conspicuous person in the procession, and for the same reason he was obliged to stand erect (*in curru stantis eburno*, Ovid, *Pont.* iii. 4, 35). The triumphal car had in general no pole, the horses being led by men who were stationed at their heads.

Chariots executed in terra-cotta (*quadrigae fictiles*, Plin. *H. N.* xxviii. § 16), in bronze, or in marble, an example of which last is shown in the following woodcut from an ancient chariot in the Vatican, were among the most beautiful ornaments of temples and other public edifices. No pains were spared in their decoration; and Pliny informs us (e.g. *H. N.* xxxiv. § 86) that some of the most eminent artists were employed upon them. In numerous instances they were designed to perpetuate the fame of those who had conquered in the chariot-race (Paus. vi. 10, 6). As the emblem of victory, the quadriga was sometimes adopted by the Romans to grace the triumphal arch by being placed on its summit; and even in the private houses of great families, chariots were displayed as the indications of rank, or the memorials of conquest and of triumph. (Juv. viii. 3.)

The chief works on the subject of the chariot are: Grashof, *Ueber das Fuhrwerk bei Homer und Hesiod;* Buchholz, *Die homerischen Realien*, ii. 1, 217–232; Guhl and Koner, *Das Leben der Griechen und Römern*, pp. 304-308; Helbig, *Das homerische Epos*, pp. 88–110; Saglio in *Dict. des Antiq.* i. 1633–1643. The last two works give numerous illustrations. [J. Y.] [L. C. P.]



Currus. (Vatican.)

CURRUS ARCUA'TUS, mentioned by Livy (i. 21–4), is the same as the carpentum. [CARPENTUM.] [W. S.]

CURSO'RES. 1. Slaves, whose duty it was to run before the carriage of their masters, for the same purpose as our outriders. They are not mentioned under the republic, and appear to have first come into fashion in the middle of the first century of the Christian aera. The slaves employed for this purpose appear to have frequently been Numidians. (Senec. *Ep.* 37, 9, 123, 7; Mart. iii. 47, xii. 24; Suet. *Ner.* 30, *Tit.* 9; Petron. 28; Dig. 32, 1, 99, § 5; Becker-Göll, *Gallus*, ii. p. 159.)

2. Messengers or couriers (Nep. *Milt.* 4, 3; Plin. *H. N.* ii. § 181, Plin. *Ep.* vii. 12; Suet. *Nero*, 49; Mart. iii. 100; Tac. *Agric.* 43). [CURSUS PUBLICUS.]

3. Runners in the foot-race [CURSUS], or competitors in a chariot-race ("ut cupidi cursor frenat frena retentat equi" (Ov. *Pont.* iii. 9, 26). [W. S.]

CURSUS (*δρόμος, τρόχος*). Foot-racing, being one of the most natural, was also one of the most primitive of athletic sports. We often read of it in the Homeric poems (e.g. *Il.* xxiii. 759 ff.). In historic times, at the national festivals of Greece, several species of it had come into vogue. We may distinguish four sorts: (*a*) the *στάδιον* (or simply *δρόμος*), (*b*) the *δίαυλος*, (*c*) the *ἐφίππιος* or *ἵππιος δρόμος*, (*d*) the *δολιχὸς δρόμος* (or *δόλιχος*, proparox). A strange feature in these races was that they were (according to Lucian, *Anachars.* 27) run not on hard and firm ground, but over a deeply-sanded surface.

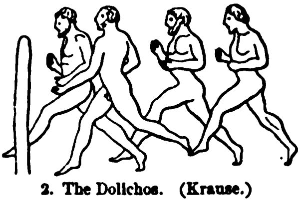
(*a.*) The *στάδιον* (see fig. 1) was a race in which the runners (*σταδιοδρόμοι*) traversed the arena in a direct line (whence it was called *εὐθύς, ἄκαμπτος*), from one extremity to the other. This distance, as measured by the Olympic stade, which became the general standard, was about 600 feet. The *στάδιον* corresponds to our "sprint," in which the runner does the whole race at his highest speed. Describing its origin, Philostratus (who lived in the 3rd century A.D.) says: "When the Eleans had slain the customary victims, and the pieces of flesh were laid upon the altar on which as yet no fire had been kindled, the runners (*οἱ δρομεῖς*) were posted at the space of a stade from the altar, just in front of which stood the priest, torch in hand, and acting as umpire. Towards him they ran, and the runner who came in first received the torch, lit the sacred fire, and was hailed as Olympionikês." (Philostr. *Gymn.* 5.) From the same writer we learn that the Olympic games up to the date of their thirteenth celebration consisted only of this contest.

1. The Stadion. (Krause.)

(*b.*) The *δίαυλος*, or double course (properly = double pipe), required that the runners (*διαυλοδρόμοι*) should, after traversing the arena as in the *στάδιον*, turn round a post (*καμπτήρ*) and run back to their starting-point. Hence it was called *δρόμος κάμπτειος* (from *καμπή* = *flexus*). Explaining the origin of this race, Philostratus says: "When the Eleans had sacrificed, and it became the duty of the deputies from the rest of Greece to perform this ceremony, that the latter might lose no time in approaching, the runners ran a stade from the altar in their direction as if to summon the Hellenic nation, and then, without stopping, ran back to the place they had started from, as if to announce that Hellas was about to come with joy to discharge the holy rite." He tells us also that the *δίαυλος* did not form part of the games until the 14th Olympiad.

(*c.*) The *ἐφίππιος* or *ἵππιος* (as it is termed Eurip. *Elect.* 825) did not, as might seem from its name, signify a horse-race, but a race of sufficient length to try the power of a horse (see Hermann-Blümner, *Privatalt.* p. 346). It was a test therefore of endurance as well as speed, being four stades in length; that is, twice as long as the *δίαυλος*.

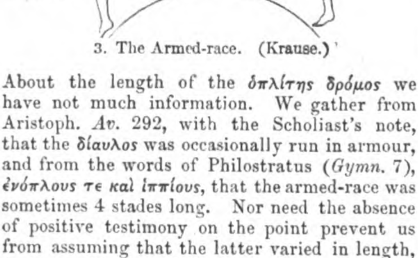
(*d.*) The true test of staying power, however, was the *δόλιχος* or long race (*vid.* fig. 2), added to the Olympic games (according to Philostratus, *Gymn.* 12) in Olymp. 15. The length of this race has been variously described as 7, 12, 20, or 24 stades. We may suppose that it



2. The Dolichos. (Krause.)

differed on different occasions. Boeckh conjectured that 7 stades was the normal length, and that, when we read of its being 24, we must suppose the δόλιχος ἵππιος to be intended. To a modern 24 stades does not appear excessively long for a race of this kind, and Plato (*Legg.* viii. p. 833, a passage in which the proposer of regulations for an ideal state seems to keep close to the limits of the actual: notice, for example, the words καθάπερ νῦν) would have his δολιχοδρόμοι, though wearing heavy armour, run 60 to 100 stades over most difficult ground. Being ignorant of important details, such as the time in which the race was run, we cannot form a decided opinion on questions as to its length.

In the more ancient times runners, like other athletes, contended at the games wearing a girdle (διάζωμα, *subligaculum*) around the waist (see Thuc. i. 6; Plat. *Rep.* p. 452 D). In historic times, however, they competed either quite naked, or more or less fully armed. As to the origin of the armed-race (ὁπλίτης δρόμος), Philostratus mentions several traditions, the most probable being that which he himself adopts as true; viz. that, since with the termination of the games the truce also terminated, prudence suggested that the competitors should wear armour in the final race. The fact of the armed-race having been generally, though not always, the last event in the games, in some measure confirms this theory of Philostratus, whose words are: παριέναι [τὸν ὁπλίτην δρόμον] ἐς τοὺς ἀγῶνας πολέμου ἀρχῆς ἕνεκα, δηλούσης τῆς ἀσπίδος ὅτι πέπαυται ἐκεχειρία, δεῖ δὲ ὅπλων. The institution of this race goes back into the mythical times, being attributed to Tydeus, and the rest of the famous seven. It was practised first at the Nemean games, and long afterwards introduced at Olympia. In it the runners bore either helmet, shield, and greaves, or helmet and shield only (as in fig. 3).



3. The Armed-race. (Krause.)

About the length of the ὁπλίτης δρόμος we have not much information. We gather from Aristoph. *Av.* 292, with the Scholiast's note, that the δίαυλος was occasionally run in armour, and from the words of Philostratus (*Gymn.* 7), ἐνόπλους τε καὶ ἱππίους, that the armed-race was sometimes 4 stades long. Nor need the absence of positive testimony on the point prevent us from assuming that the latter varied in length, just as did the other races above described. Plato, as we saw, would have his ὁπλιτοδρόμοι run 60 to 100 stades—an extravagant proposal, if it were not customary in his time to run the δόλιχος in armour.

Competition in foot-racing was open to runners of all ages, whether boys (παῖδες), striplings (ἀγένειοι), or grown men (ἄνδρες). See, for this division of ages, the passage in the *de Legg.* already referred to. Only those who belonged to the same class, as regards age (ἡλικιῶται), were permitted to compete with one another; seniors, of course, not being allowed to enter against their juniors. In Sparta even maidens competed. That boys contended even in the armed-race appears from an extant vase, representing two boys running with shields, which bear the letters ΑΘΕ, indicating in all probability the occasion of the Panathenaic festival (Grasberger, *Die leibl. Erzieh. bei den Griechen und Römern*, p. 318).

The competitors being too numerous to contend all together, were entered in successive groups (τάξεις); those who should form each group, as well as the order in which the groups should run, being determined by lot (συνταχθῆναι ὑπὸ τοῦ κλήρου). When all the τάξεις in turn had run, the victors in each were formed into one group, which ran a final heat for the prize.

If we compare figs. 1 and 2, representing men competing in the στάδιον and δόλιχος respectively, we notice that in the former case the runners wave their hands violently backwards and forwards, whereas, in the latter, they have their elbows closely pressed against their sides. This is in keeping with modern practice; but yet there are grounds for doubting whether the Greeks entertained the views inculcated by modern trainers as to the proper method of managing the hands while running. Photius has the note: παρατεῖναι τὰς χεῖρας· τὸ ἐν τῷ τρέχειν γιγνόμενον: and it is significant that in Homer (*Il.* xxiii. 772) Athenê, in answer to the prayer of Odysseus, rendered his hands as well as his lower limbs nimble (γυῖα δ' ἔθηκεν ἐλαφρά, πόδας, καὶ χεῖρας ὕπερθεν). But perhaps the words of Photius, as well as those of Homer, refer only to sprint racing. Another variation from the practice of modern runners is referred to by Cicero (*Tusc.* ii. 23, § 56), where he speaks of them as shouting: "Nisi forte ut se intendat ad firmitatem, ut in stadio cursores exclamant quam maxime possunt." But this too was, perhaps, confined to the stadium.

It is doubtless owing to their want of instruments for accurately measuring small portions of time that the Greeks have left us scarcely any means of computing the speed which foot-racers attained in the various kinds of running.

For some special forms of the foot-race, see LAMPADEDROMIA and STAPHYLODROMIA.

We have very meagre information regarding foot-racing as practised by the Romans. According to Dionysius of Halicarnassus (vii. 71, 73), it formed part of the Ludi Magni from the time of their institution. He, too, tells us that the runners wore the *subligaculum* round their loins. In the Capitoline games (according to Dio Cassius, lxvii. 8) young women, after the Spartan fashion, took part in the competition. Beyond these scanty notices and vague references to running for healthful exercise in the Campus Martius, very little has been handed down to us. This running in the Campus was not always competitive: that it was sometimes so, however, is plain from Martial, iv. 19 ("sive levem cursu vincere quaeris Athan").

For chariot-racing, see under CIRCUS and

HIPPODROMUS. (Cf. Krause, *Gymnastik u. Agonistik der Hellenen*.) [J. I. B.]

CURSUS PUBLICUS. *Origin of Cursus Publicus.*—The Persian empire under Darius, son of Hystaspes, affords the earliest instance of a national postal service. Mention is indeed made (*Liberat. Brev.* 23) of a class called *Symmaci* as existing in the most ancient times among the Egyptians for the conveyance of letters by land, but we have no grounds for thinking that a postal system was established in Egypt as a branch of the administration. In the Persian dominions, however, as we learn from Herodotus (iii. 28; vi. 105; viii. 98), horsemen stationed at intervals and relieving one another conveyed the imperial will in all directions from Susa, Ecbatana, or Babylon. The service was called ἀγγαρήϊον, and the couriers, ἄγγαροι. Messages of lesser urgency were carried by ἡμεροδρόμοι. In Greece there are no evidences of any such service, at least upon a similar scale, for the *hemerodromi* mentioned by Corn. Nepos (*Milt.* iv. 3) can scarcely have been a permanent institution. This was probably due to the geographical smallness of Greece, still more however to the utter absence of political unity among the Greeks, and the want of facilities for land traffic, in contrast with the easy communications by sea. But the vast extent of the Roman dominions, and the centralisation of imperial functions in a single hand, again constituted the conditions of a postal service, which accordingly arose and became a most important instrument of state administration. The practical wisdom of the Romans had from the beginning of their conquests taught them to make roads throughout the territories which they subdued, whence resulted a system of highways connecting the remotest parts of the empire with Rome. These not only facilitated the marching of troops, but served the general purposes of transport and the conveyance of intelligence, forming, as they did, the material *condicio sine qua non* of the future *cursus publicus*. Within the last century of the republic, also, certain practices had already been established, by which the development of the postal service was largely conditioned. We proceed to give some account of these.

Under the republic, after the conquest of Italy, government officials despatched from Rome on public business were empowered to impose arbitrary requisitions on the subject Italians (*dediticii*) to supply them with necessaries for travelling. Among the Italian allies such functionaries usually obtained food, lodging, and means of transport from their guest-friends or from the principal personages in the friendly states which they visited. But when the Roman dominions included extra-Italian provinces, the fine distinction made in Italy between subjects and allies (*socii*) was in the provinces neglected, and the provincial allies were as summarily requisitioned by a *legatus* as were the provincial subjects. Senators or citizens employed on a public mission abroad received from the senate a mandate (*diploma*) requiring subjects and allies alike to supply them with means of transport and other necessaries at all the successive stages of their journey. This in the natural course of things led to grave hardships, and complaints frequently arose. Restrictive enactments became necessary, and we read that Cato the Elder, when praetor in Sardinia, diminished or removed the expenses entailed upon the people of that island by the entertainment of the praetors officiating among them (Liv. xxxii. 27). It is questionable, however, whether Cato issued a formal edict, or whether his good example alone operated towards the relief of the sufferers. In the Lex Antonia de Termessensibus (B.C. *circ.* 71) mention is made of a Lex Porcia, which would seem to have regulated the liabilities of the provincials in such matters. But we have no definite information about this law; its date and its provisions are alike uncertain, and it may, as Humbert says, have related only to the people of the particular city of Termessus. Among the various embassies which thus became grounds of hardship to the provincials there was one which deserves especial notice. This was called *libera legatio*, being a sort of mission from which all state employment was absent, granted as a favour sometimes to distinguished men, lasting for several years, and carrying with it all the previously mentioned liabilities on the part of the provincials. The *libera legatio*, owing to the indefiniteness of the privileges it conveyed, became a fearful cause of oppression. A law was carried in B.C. 63 by Cicero (Cic. *de Legg.* iii. 8, 18) restricting abuses of the *libera legatio*, and limiting its duration to one year, but the reform thus effected was short-lived, for Julius Caesar (Cic. *ad Att.* xv. 11) again extended the term of a *libera legatio* to a possible five years.

During the last period of the republic the senate had frequent occasions for communicating in despatches with their generals, or provincial governors, as well as with allied kings and states. For the conveyance of such despatches the authorities employed freedmen, slaves, or a certain class of couriers called *stratores* (*sternere* = to saddle). A class of messengers also existed called *tabellarii*. For pressing messages a general usually employed mounted men detached from his own staff. The *publicani*, as specially interested in transmitting and receiving intelligence to and from Rome, had a special class of *tabellarii*, whose services, however, were often borrowed by the magistrates, or by the *negotiatores*, speculators in corn or money, who were in constant relations with the provincial governors and with the *publicani*. The ships of the allies also were employed for the use of magistrates engaged abroad on public business. Thus for the purposes of transport and the conveyance of intelligence the dealings of the home government with the provincials were regulated mainly by the principle that the incidental labour and expenses should be borne as far as possible by the latter, while the interests to be served were those of the government alone.

It only remained for the Principate to organise and develop the system which had been established under the republican *régime*. The immense advantages of such an organisation as a portion of the imperial administration were sufficiently obvious. Augustus accordingly appointed mounted couriers (*stratores* or *speculatores*) to be employed along the principal roads (Suet. *Aug.* 49). This implies the institution of stations (*mutationes*), at which they should relieve one another. But as this arrangement provided only for the conveyance of intelligence, it required to be supplemented by a transport system for the conveyance of money or other valuables of considerable weight. The necessity of constructing postal stations ensued. The stations were called *mansiones*, which, being intended for lodgings, as their name indicates, were furnished not only with a supply for the immediate wants of man and beast, but also with the accommodation suitable for travellers. The *mansiones* were not so numerous along a road as the *mutationes*, or changing-stages. In accordance with republican precedent the expenses of the transport and postal system generally continued to fall upon the communities through whose territories the lines of stations lay. They accordingly had to provide conductors, guards, drivers, together with beasts of burden and rolling-stock, on receipt of the emperor's order (*diploma*), or that of the head of the postal system (a functionary designated in Trajan's time as *ab vehiculis*), who was generally a freedman of the emperor. Such warrants for the use of the post were issued occasionally by the consul, by the praefect of the praetorians, or by the governor of a province, but in all cases only with the emperor's special authority. While the document entitling to the use of the *cursus*, by virtue of being stamped with the emperor's seal, was called *diploma* (and other names which will hereafter be referred to), the right of issuing postal warrants was, at least until a late period, called *evectio*. The expenses, moreover, of constructing stations and stocking them with necessaries, had to be borne by the neighbouring communities. Along the line of one day's journey there were six or eight sets of stables, each of which had to maintain a total of forty beasts, including horses, mules, asses, &c. The communities also were bound to furnish and maintain the teams, and to keep the stables in repair; they had further to secure the services of muleteers (*muliones*), muledoctors (*mulomedici*), wheelwrights (*carpentarii*), grooms (*hippocomi*), and conductors or guards (*vehicularii*). From these heavy burdens Nerva relieved the people of Italy, and to commemorate his act a medal was struck bearing the inscription *vehiculatione Italiae remissa* (where *vehiculatio* = *cursus publicus*). Trajan, however, re-authorized (Plin. *Ep.* x. 121) the issue of postal-warrants in Italy, but restricted them to cases in which he had been personally consulted. We read (Spart. *Hadr.* 7) that Hadrian "statum cursum fiscalem instituit, ne magistratus hoc onere gravarentur." According to Hirschfeld, in his note to these words, *cursus fiscalis* is in Spartianus equivalent to *cursus vehicularius*, and the emphasis lies upon the word *statum*. According to his view, therefore, the meaning of the whole sentence is that Hadrian made the postal service throughout the empire a department of the state administration, and appointed fixed stations, superintended by government officials, in order to relieve the *municipal* magistrates of all responsibility for them. Despite, however, these and other efforts in this direction, it was not until the time of Septimius Severus (Spart. *Sever.* 14) that the expenses of the post generally were made chargeable to the imperial treasury. But even when this had been done, the subjects still continued to suffer, nor did any subsequent legislation materially alleviate the burden with which the *cursus* pressed upon them. Differences of opinion exist as to the exact nature of the reforms or changes attributed respectively to Nerva, Trajan, and the others above mentioned. Humbert says we must at least suppose, as Hudemann does, that Nerva entirely remitted, though only to Italy, the expenses of the service, so that the salaries of officials engaged in it, as well as the material cost, became alike chargeable to the treasury; that Trajan contented himself with merely checking the abuse of *evectio*, while Hadrian, besides extending the organisation of the post through the whole empire, must apparently have imposed the charges of it upon the *fiscus*; that Antoninus Pius again, like Trajan, making a step backward, confined the contemplated reform to a mere restriction of expenses and of the right of issuing post-warrants; that Septimius Severus completely re-organised the *vehicularium munus*, and imposed the charges of it, in Italy and the rest of the empire alike, upon the *fiscus* alone; but that the last and radical reform was incapable of maintaining itself, owing to the burdens it entailed upon the treasury. Diocletian, Constantine, and their successors, all strove to perfect the organisation of the post, and to define exactly what the liabilities of the cities in regard to it should be, together with determining the question who should have the *evectio*, or right of granting postal permits, and under what circumstances they might be justly granted.

In the later times of the Roman empire the post became an ever increasing burden to the cities, and, as it injured them, in the same degree it prepared the way for its own ruin. Nevertheless a treaty ratified between Rome and Persia in A.D. 565 (Menander, *Prot.* p. 360, ed. Bonn) assured to the natives of the frontier provinces of the two empires the uses of the postal service to and fro between them.

Organisation of Cursus Publicus.—This portion of our subject we shall divide into an account of the *agents* and of the *instruments*—vehicles and live stock—employed in the service. Little information as to the agents of the *cursus* can be procured from the writers of the early empire. Our chief authority respecting them is found in the inscriptions, which have been turned to good account by Hirschfeld, Mommsen, Hudemann, and others. The emperor retained in his own hands the supreme direction of the post. Its importance led Augustus to place it in the hands of his own freedmen. We find a freedman of the Flavii as responsible agent for the carriage-service (*tabularius a vehiculis*), and under Trajan two freedmen, father and son, entitled respectively *ab vehiculis* and *a commentariis vehiculorum*, the former probably, according to Hirschfeld, a head of the service, the latter a secretary, whose office was to minute the proceedings of the department. When Hadrian re-organised the post, the direction of the principal branch of it was entrusted to a knight called *praefectus vehiculorum*, who managed the service along the great Flaminian way towards the north. This functionary is sometimes called *praefectus vehiculorum a copiis Augusti per viam Flaminiam* (*C. I. L.* vi. 1598), as entrusted with the duty of providing victuals, &c., for the army along this military road. Afterwards, probably under Septimius Severus, other prefects, almost always of equestrian rank, were appointed to the charge of the important routes. These prefects were placed under the surveillance of superiors called (Stat. *Sil.* iv. 9, 16–19) *curatores viarum.* They were divided into classes according to their salary, e.g. *ducenarii* (*i.e.* those receiving a salary of 200 sestertia), *centenarii*, *sexagenarii.* It is noticeable that there was a special prefect in charge of the Via Flaminia (*vid.* Hirschfeld, *Untersuch.* p. 103), independent of the chief prefect, whose office was in Rome. As regards the officers of the department, we find at Rome in the 2nd and 3rd centuries agents and secretaries (*tabellarii*, or *a commentariis vehiculorum*); while in the provinces the magistrates of the various cities, assisted by agents of their own, had the duty of making arrangements for the *cursus.*

Warrants for the use of the post (*diplomata*) were issued either by the emperor himself, or under order from him by a special officer. Under the early empire the right of issuing (*evectio*) such warrants was granted only very sparingly to provincial governors, who were responsible for their use of it to the consuls. They were also responsible to the prefect of the praetorians, at first during the emperor's absence, but afterwards more generally. The *diploma* was drafted in the imperial cabinet by a freedman of the emperor, and there it received the emperor's own seal and signature. This freedman was in the 2nd century named *a diplomatibus.* In the 3rd century he was attached to a branch of the *scrinium a memoria.* The emperor himself employed as messengers a special set of *tabellarii*, who therefore had a preferential right to the use of the post, and were known as *tabellarii diplomarii.* They were controlled by a *praepositus tabellariorum*, and were divided into companies, each under the orders of a freedman of the emperor, as *optio* or *praepositus.* The companies were severally attached to the most important departments of the government. From the 2nd century onwards the prefect of the praetorians had and long retained control over the issue of postal warrants, only, however, as acting in the emperor's name. This officer, too, issued instructions to the provincial *judices* as to the ways and means of providing for the *cursus*, as to the regulation of *diplomata*, the persons who should travel by the *cursus*, and the correction of abuses connected with the post. The praetorian prefect also issued *diplomata* to governors of provinces, to his own surveyors (called *officiales*, *frumentarii*, *stationarii*, *agentes in rebus*). He too, or in default of him his deputy, or his agents, sent out inspectors to report on the condition of the postal system. He exercised penal jurisdiction over offences committed in the management of the service. He and his agents, however, were themselves often guilty of grave offences, which was probably the reason why the *magister officiorum* at an early time obtained the *evectio*, or right of issuing *diplomata*, as well as of sending out inspectors-general (*curiosi*) from among the employés of his own bureau. From the year 353 not only were the agents of the praetorian prefect and his deputy (formerly called *frumentarii* or *stationarii*, but later *curagendarii*, *agentes in rebus*) deprived of the right of laying informations without proofs, and imprisoning arbitrarily those whom they incriminated, but further, in 357, Constantius forbade the prefect and his deputies to appoint inspectors of the post. This right was accordingly transferred to the *magister officiorum*, and reserved to him. Henceforward the *magister officiorum* selected postal inspectors from among the heads of the society or *schola* of *agentes in rebus* employed under him. Such inspectors were entitled *curiosi cursus publici*, and were appointed annually in the order of seniority. They were also selected from the *magisteriani.* The supreme control of the post remained nominally, however, in the hands of the praetorian prefect until the year 395 (J. Lydus, *de Mag.* ii. 10, 26; iii. 23, 40), when, after the fall of the prefect Rufinus, the management of the service was formally committed to the *magister officiorum.* The latter then acquired the function of countersigning all postal warrants issued by the praetorian prefect. The *curiosi* received a commission (*v.* Cod. Theod. i. 9, 1) signed by the emperor. Though purely civil officers, they were distinguished by military badges, *e.g.* the *chlamys*, and the *balteum* or *cingulum militare.* Inspectors on their mission (Cod. Theod. vi. 29, 4) had the right of obtaining for their use two *veredi*, but not, as before the reign of Constantine, *redae* or other vehicles.

The overseers of the stages (*mutationes*) or lodging-places (*mansiones*) were generally called *mancipes*, but often, also, *procuratores cursus publici*, or *praepositi*, their function being called *mancipatus cursus publici*, or *cura mancipatus.* They each in their respective localities presided over the post (*cursui praeesse*), and over the group of employés engaged at their station (*familiae praeesse*). The *familia* comprised artificers (*artifices*), such as *carpentarii*, &c. They, as well as their *praepositus*, received a salary from the treasury, paid in kind (*annona*), together with clothing and lodging. They were not allowed to demand from travellers any recompense for their services. The *muliones* and *hippocomi* were generally slaves. Seneca (*de morte Claudii*) mentions conductors called *perpetuarii*, so called because they followed with a traveller to his destination to see that the postilions, who might, if unwatched, try to break away, should bring back (*reducere*) the horses in safety to the stations whence they had started. The mass of inferior servants employed at a station were referred to as *apparitores mancipatus*, *opifices*, or *munifices.* After Diocletian *mancipes* were appointed, at first by the emperor, later by the governor of the province. Frequent changes were made in this matter by the emperors, who were impressed with the desirableness of choosing capable and honest men as *mancipes*, on whom the effectiveness of the system so largely depended. As to their degrees of rank—for there were several—nothing certain can be made out. They usually held office for five years, on the expiration of which they were rewarded for faithful service with the title of *perfectissimus* or *perfectissimatus.* They also received more substantial rewards, as, for example, exemption from certain municipal burdens.

The official couriers entitled to avail themselves of the imperial post (*veredarii*) were originally the *tabellarii diplomatici*; the emperor's equerries (*stratores*); the officers of the guard, whose duty it was to obtain and convey intelligence (*speculatores*); the force called *frumentarii*, abolished after Diocletian, and replaced by the *sagones* or *saxones*, or by knights called *singulares equites*, taken from the legionary cavalry; and, under Constantine, by the *agentes in rebus*, whom Greek writers called *φρουμεντάριοι*, doubtless as having succeeded to the functions of the *frumentarii*. These privileged travellers were all known as *veredarii*, from the name of the horses used by them, *veredi*. The name *veredarii*, however, was also improperly applied to travellers holding a *diploma*, who were more correctly designated as *commeantes* or *diplomarii*. A person who used the vehicles of the post could take with him a *socius* (Cod. Theod. viii. 5, 4, h. tit.) to look after his baggage or other valuables. Moreover, guards (*custodes* or *prosecutores*) to the number of two or three were attached to each vehicle. The service was superintended at each station by the *manceps*, in regard to certain routes by the *praefecti vehiculorum*, in the provinces or regions by the *praepositi regionibus* or *regionarii*, and in regard to the *dioeceses* by the *curiosi*. The *parochi*, who had been in republican times charged to supply Roman magistrates when travelling with victuals, forage, mattresses, and lodgings, were perhaps still employed in the case of soldiers, who had the right of demanding quarters (*metatum*) in virtue of a document called *tractoriae* (sc. *litterae*), furnished under exceptional circumstances. The *curia* or ward in which they found themselves was bound to provide travellers thus privileged with lodgings, wood, oil, and salt, all which are included under the general term *salgămum* = sustenance.

So much for the *agents* of the service. We next proceed to describe in detail the *instruments*. The road system formed the basis of the *cursus publicus*, but the post was not established on all the public roads, but only on such as led to the most important cities or ports. In the case of the latter the *cursus* was extended over sea by the *naves publicae*, which the naval boards (*navicularii*) placed at the service of imperial messages or transports. As regards this naval post we have scarcely any information, and must accordingly deal here with the land post. As has been already stated, Augustus first had stations built for the service of the post as to despatches and transports. These, as has been explained, were called by the general name of *stationes*, under which came two classes, viz. *mutationes* (changing-stages) and *mansiones* (lodging-stages), which must be carefully distinguished. The *mansiones* lay along the postal routes at distances of an average day's journey apart. In the *mansiones* changes were effected of the postilions, the vehicles, the draught-animals, &c., whereas in the *mutationes* changes of the teams alone took place. In populous districts the *mutationes* were generally in or about five Roman miles asunder, and in poorly inhabited regions the interval rose to eight or nine Roman miles. Between two *mansiones* were often as many as six or eight *mutationes*. Long journeys were estimated by the number of *mansiones* they included, particular distances being referred to as *prima mansio*, &c., just as Xenophon reckoned by *σταθμοί* (or rather *σταθμά*). The *mutationes* were more numerous, and therefore nearer to each other in older than in later times. *Mansiones* were established as far as possible in places of note, as cities, towns, and, in default of these, in villages. They were furnished with all that might be necessary for travellers. If we consider the comparative importance of these two classes of *stationes*, we may conclude that the *mansiones* were erected first, the *mutationes* having been subsequently added to relieve the long intervals between the former. The *mansiones* must have been of considerable size, for each had attached to it coach-horses, and therefore stables, granaries (*horrea*) for fodder (*capitum*) as well as victuals for travellers (*species annonariae* or *cellarienses*). The *mutationes*, on the other hand, sometimes had only sheds with stalls for the post-horses. Every *mansio* had at least forty horses, or more, in its *stabula*, and also beasts of other kinds. A fully equipped *mansio* was called *mansio instructa* or *parata*. To arrive at a *mansio* was termed *mansionem applicare*. The emperors established public palaces (*palatia* or *praetoria*) for their own sole use at first (Vopisc. *Aurelian*, 35; Cod. Theod. vii. 10, 1 and 2), though in later times they were granted for the use of provincial governors while engaged in their tour (*transitus*) of a province. The *mutationes*—differing, as has been said, from the *mansiones* in their greater frequency and smaller dimensions—contained about twenty horses, with asses and other beasts; their regulations were in general similar to those of the *mansiones*. Like the latter, they had connected with them *hippocomi*, *horrea*, &c., and were each managed by a *manceps*. Inns (*tabernae* or *stabula*) were often erected beside them to accommodate travellers of inferior condition. The innkeeper (*stabularius*) had usually a signboard over the entrance to his hostel; such signboards sometimes bore the painting of an elephant, sometimes of a cock, &c. Hadrian and other emperors caused the erection of a superior class of *tabernae* at certain points along routes, where *mansiones* were subsequently constructed.

The postal service included the *cursus velox* or *celer*, as one of its two great divisions, the other division being the *cursus clabularis*. The expression *cursus vehicularis* need not be opposed to *cursus velox*, for the two branches of the service are sometimes conjointly alluded to under the title *cursus vehicularis* or *res vehicularia*, although the latter, as its name implies, was at first used to designate that branch in which vehicles were employed. The animals employed in the postal service generally were of different kinds. They are generally described as *animalia publica*. This name included horses, mules, asses, oxen, camels, which are also summed up sometimes as *jumenta publica*. The horses of a *mansio* were called *equi publici* or *cursuales*, and by Greek writers *δημόσιοι ἵπποι*. They were not allowed to be used in the service of private individuals. Horses requisitioned outside the *mansiones* at the expense of the local exchequer were not classed as *animalia publica*. They were generally employed for routes running transversely to the great lines of road, because, the posts being established regularly only on the latter, the transverse or lateral routes had, when occasion for postal service along them arose, to depend upon extraordinary requisitions. To meet these irregular requirements some cities established stables of horses called *agminales equi*, which were liable to be employed in the ordinary *cursus*, as well as for the use of the emperor and his escort. The *agminales equi* were, according to Humbert and Hudemann, distinct from the *paraveredi*, though some writers have confounded them. The *agminales equi* had frequently to convey the baggage of troops on the march (whence the name *agminales*). There were also *agminales muli*. The *veredi*, used in the *cursus velox*, were generally procured from Spain. They were mounted by *veredarii*, or public couriers, who carried their despatches in saddle-bags placed behind them (*averta*). Each *veredarius*, if his baggage was too heavy for a single horse, was entitled to use a second horse, called *parhippus* or *avertarius*. This second horse was mounted by a postilion from the station, wearing a *sagum*, who was charged to bring both horses back to the point of departure. The horses were furnished with a cloth (*stragula vestis*), or with a pad (*ephippium*). The saddle (*sella equestris*) was in use under Theodosian, but its weight was restricted, and it had to be provided, if used, by the *veredarius* himself. There was a regulation (Cod. Theod. viii. 5, 35, 40; Cod. Just. xii. 50, 51, 8) limiting the number of horses allowed to leave a *mansio* in one day. Precautions were also taken to save the horses from being spoiled by being yoked to over-weighted vehicles, and from being taken beyond the nearest changing-stage (*superducere*). Against such abuses it was the duty of the *mancipes* or *stationarius* to provide and to see that none of the animals were driven off the highway or stolen.

The *cursus celer* employed not only *veredi* or riding-horses, but also vehicles of several sorts, *redae*, *carpenta*, *birotae*, and *carri*. The *reda* was originally two-wheeled, but subsequently had four wheels. That used for the post was called *reda fiscalis* or *consualis*. To it were yoked horses varying in number from two to ten, according to circumstances. *Redae* were sometimes large enough to contain several travellers with their luggage. Hudemann supposes that they were uncovered in summer, but roofed over in winter. This vehicle, owing to its capacity (cf. "dum tota domus reda componitur una," Juv. iii. 10), was very much used. The *carpentum*, like the *reda*, had at first two, and afterwards four, wheels. Like the *carpentum*, too, it was, at least at one time, suited for large and heavy burdens; though at a later period a species of *carpentum* came into fashion, which was of light material, elegantly shaped, and which became a favourite with high functionaries, such as provincial governors. The *carrus* was lighter than the former two, but heavier than the *birota*. Like the preceding vehicles, it also had at first two wheels, but later four. The *birota* was, as its name shows, a two-wheeled carriage. It was drawn by two horses or three mules, and generally used by those who had but little luggage, and were desirous of a rapid journey. The *cisium* was a species of *birota*. Besides the above, which were ordinarily used in the *cursus celer*, elegant four-wheeled carriages, called *carrucae*, were sometimes employed by the emperors. The *carruca* was generally drawn by four mules.

We now turn from the *cursus velox* to the *cursus clabularis*, or heavy transport service. This was chiefly intended for the conveyance of such commodities as food and baggage, especially that of soldiers. The large vehicles (*clabulae*) employed in this branch of the *cursus* could not, unless by special favour, be used by any persons save diseased or discharged soldiers returning home, or by stragglers rejoining the main body. The *clabulae* had four wheels, were uncovered, built very strongly, and drawn by mules or oxen, seldom by horses. Their maximum burden was fifteen hundred Roman pounds. This gives us a means of comparing them with the *redae* used in the *cursus celer*, whose maximum burden was one thousand pounds. The name *clabula* is said to be = *clavula*, a diminutive of *clava*, being applied to the whole vehicle on account of the wooden rails which protected its sides. *Clabulae* drawn by two oxen at first, but later all other *clabulae*, were also called *angariae*, a name derived from the Graeco-Persian ἄγγαρος, whence the verb *angariare* = ἀγγαρεύειν, denoting the obligation imposed on the provincials to support this branch of the service, but extended to signify the obligation to provide for the *cursus* in general. This verb is used even of ships pressed into the postal service. *Angarialis copia* or *angaria* was used to express the right of employing the *clabularis cursus*.

No one was allowed the use in one day of more than two *angariae*. We have already stated that private persons could only employ them by special favour. Still, a traveller who possessed the *copia angarialis* had the right of taking with him a *socius* (Cod. Theod. viii. 5, 4, *de Cursu Pub.*) to insure his safety. The words *cursus angarialis* were often applied to the *cursus clabularis* (or *tardus*) as opposed to the *cursus velox* (or *celer*).

Parangariae were cars employed on extraordinary occasions for the *cursus clabularis* along the transverse routes (*vid. supra*). These were, therefore, to the *cursus clabularis* what the *paraveredi* were to the *cursus velox*. They were used mostly for carrying men, forage, arms, &c., for the army. Like the *paraveredi*, the *parangariae* became a cause of gross abuses. The persons on whom the expenses of this service fell looked upon it not only as a *munus extraordinarium*, but further as *sordidum*. It was, however, a service provision for which was rigorously exacted from the magistrates of the different townships through which the cross roads extended.

Up to this point, as the reader will probably observe, nothing definite has been stated of the manner in which the working expenses of the post were borne. We have seen by turns the expenses falling upon the *fiscus*, and again upon the provincials or other subjects. The fact is that this question of the apportioning of expenses causes the modern inquirer some difficulties which admit of no dogmatic solution, and we cannot expect to do more than present that explanation of them which on the whole seems most probably right. Notwithstanding the reforms of Hadrian and Septimius Severus, certain expenses appear to have always rested upon the provincials, owing to the emptiness of the exchequer during the later periods of the empire. Such were those of constructing, repairing, and maintaining the *stationes*. Service, too, along the lateral routes, by *parangariae*, or *paraveredi*, continued, always and as a matter of course, a burden upon the communities. Thus the *decuriones* of each town were always responsible for the supply of agents and instruments requisite for the post, and charged the expenses thereby incurred to the account of the *possessores*, or owners of real property, in their respective districts. The question then arises, in what sense the *cursus* can have been really *fiscalis*, as it was denominated. Humbert's explanation (which we follow) is this: the precise relation established or intended by Septimius Severus between the *fiscus* and the *cursus publicus* no doubt failed to maintain itself in later times. But the *fiscus* (as the public treasury was now called) had for one of its principal resources the *tributum ex censu*, a great portion of which was exacted in kind. This was so, even in Italy, after the reign of Diocletian. Hence the service of the post diverting to itself, as it did, from the *fiscus* a portion of the *tributum*, might be correctly described as *fiscalis*. The commodities which supplied the needs of the *cursus* would otherwise have found their way to the *fiscus*. For example, the grain which would have been conveyed to Rome was detained in the *horrea* of the *stationes;* so that to all intents the postal service was a drain upon, and therefore supported by, the imperial treasury, as far as material expenses went. We now turn to the consideration of the agents employed in the *cursus*. The enactment of Septimius Severus involving not only material outlay, but also the payment of a vast number of officials, was too onerous to the *fiscus* to admit of its being permanent in the form which that emperor designed. Further, the difficulty of discovering capable and honest men to fill subordinate though important positions (e.g. *mancipes*) in the postal service of far off provinces was too great for the home administration, so that the selection and appointment of such officials unavoidably devolved upon the local authorities abroad. Accordingly it continued from the first, with scarcely an interval, to rest with the *decuriones* and the municipal magistrates generally. It was one of the so-called voluntary services expected or demanded of them, of extreme urgency indeed, but one for which the state was never able to render an adequate recompense. In respect of the personal service, as well as of the materials, required for the *cursus*, the same principle of administration is throughout all periods observable; namely, that the subjects of the empire should conform unhesitatingly to imperial demands. Among the duties thus devolved upon the *decuriones* were the following: to provide the attendants needed for the safe conveyance of commodities due by the provincials in payment of the *tributum ex censu*, a duty which was termed *prosecutio* or *portatorium onus;* to see that the *stationes* were kept in good order and repair (*vehicularis sollicitudo*, or *publici cursus exhibitio*, or *angariarum praebitio*); and also to arrange for the suitable entertainment of public envoys. While the personal service needful for this was yielded by the *decuriones*, the pecuniary charges were borne by the *possessores* of each community, even though they might not be citizens (*municipes*) or inhabitants (*incolae*) of the place. The *possessores* had to supply (Dig. *de mun. L.* 4) *agminales equi vel mulae, et angariae atque veredi.* On the whole it appears that, while the regulations of Septimius Severus were not formally abrogated, they continued to be from the outset little more than a dead letter, at least in the remoter parts of the empire, never having afforded the subjects substantial relief from the burdens entailed by the *cursus publicus*.

As to *evectio*, or the right of issuing postal permits (*diplomata*), something has been already said. The tendency was to restrict it to as few persons as possible. Each of the provincial governors under Trajan (Plin. *Ep.* x. 31, 59, 60) could issue arbitrarily a limited number of permits, but only to persons who used the post in the public service, and each governor was responsible to the emperor for the manner in which he had exercised this right. Such permits became null and void after a preappointed date, or by the death of the emperor whose seal and signature they bore (cf. Tac. *Hist.* ii. 54 and 65). Under Diocletian the vicars of *dioeceses*, the *magistri militum*, the *duces* and *comites rei militaris*, possessed the *evectio*. Under Constantine, however, it was reserved to the prefect of the praetorians and the *magister officiorum ;* the latter, as has been said, having ultimately, in the year 395, succeeded to the supreme control of *diplomata*.

Although in principle the holder of *evectio* was bound to exercise it only in the interests of the state, still as these interests were not easily or precisely definable, numerous cases occurred in which the principle was violated. Emperors often gave *diplomata* to those in whose mission they took a merely personal interest, and similar laxity in the exercise of *evectio* by subordinate officials was naturally to be expected.

The warrant itself (for military *diplomata*, *vide* article DIPLOMA), in early times called *diploma*, but afterwards by other names, consisted of folded parchment, and, as above mentioned, bore the emperor's seal and signature. According to Suetonius (*Aug.* 49), the *diplomata* of Augustus bore the impression of a sphinx. Hence the word *sigillum* is sometimes used for *diploma*. Postal warrants were sometimes called *synthemata*. The words *literae evectionis*, or simply *literae*, sometimes signified a permit for travelling by the *cursus celer*. After the reign of Constantine *evectio* came to be used improperly as equivalent to *diploma*, or *literae evectionis*. *Tractoriae* (sc. *literae*), or even *literae* alone, meant that species of *diploma* which entitled its bearer not only to use the *cursus publicus*, but also to be supplied with victuals and forage at the expense of the *mansiones*. The word *combina* signified the parchment form folded and prepared for being filled up as a postal warrant, but later on was used to mean *diploma*.

The emperor from time to time formulated ordinances (*constitutiones*) regulating the postal service. These he addressed to the praefect of the praetorians, to the *magister officiorum*, to the vicars of *dioeceses*, to provincial governors, &c., with orders to make them publicly known. All the officers of the post, so far as they exercised authority over it, were the emperor's delegates; the series of subordinated authorities, extending from him downwards, closed with the *mancipes*, or *praepositi*. The subordinate officials were responsible to their superiors, and all without exception to the emperor.

We may fitly close this article by quoting the remark with which Hirschfeld prefaces his account of *die Reichspost:* "The imperial Roman post presents, in every respect, a contrast to the postal system of our times: introduced by Augustus exclusively for political objects, despite all the particular reforms which followed, it always maintained this one-sided character; it never was, like the modern post, a source of benefit, but always a painful burden, to the subjects of the empire." (For fuller information respecting Roman posting, see the excellent article by Humbert, in Daremberg and Saglio, which has been mainly followed here; also Hirschfeld, *Untersuchungen auf dem Gebiete der röm. Verwaltungsgeschichte*, i. 98 ff.; and Hudemann, *Geschichte des römischen Postwesens während der Kaiserzeit.* [J. I. B.]

CURU'LIS SELLA. [Sella Curulis.]

CUSTO'DES. [Comitia, p. 508 *a*.]

CUSTO'DES, CUSTO'DIAE. [Castra, p. 377 *a*.]

CUSTO'DIA signifies a watching, guard or care of anything; hence it comes to mean (1) custody, confinement or restraint of a person; (2) persons set as a guard or watch; (3) the place where a guard is kept; (4) a prison or place where a person is guarded; (5) persons in confinement or subject to any restraint.

The *jus prensionis* or right of taking a person into custody belonged to all superior magistrates, as being a necessary means of maintaining their supreme executive authority, but the exercise of this right was checked under the republic by the appellatio and by custom. In respect to persons accused of a crime, it was the ordinary rule, that they were not to be committed to prison while waiting their trial, if they could find bail (*vades*, *sponsores*, *fidejussores*) for their appearance (Liv. iii. 13; Gell. vii. 19). But for open and flagrant crimes the *triumviri capitales* imprisoned offenders at once (Liv. xxix. 19, xxxix. 17; Val. Max. vi. 1, 10; Cic. *in Cat.* ii. 12; Suet. *Ner.* 26). So, too, those who confessed crimes were imprisoned before trial (Cic. *ad Att.* ii. 24; Dig. 48, 3, 5). In cases of crimes committed against the state, persons of rank were put under surveillance in their own houses or in the house of a magistrate, a form of restraint termed *libera custodia* (Liv. xxiv. 45; Sall. *Cat.* 47; Tac. *Ann.* vi. 3; Dio Cass. lviii. 3). A prisoner committed to the custody of a guard of soldiers was said to be subject to *militaris custodia* (Dig. 48, 3, 1). Only provincials and slaves could be lawfully put in chains when under arrest.

After the establishment of the empire, the security afforded by the appellatio against arbitrary imprisonment was taken away. Administrative officers of government, such as the *irenarchae*, abused their powers by keeping persons in prison for bailable offences. Hence it was provided by a rescript of the Emperor Antoninus Pius that a person should not be thrown into chains who was prepared to find sureties for his appearance, unless it was clear that he had committed some very grave crime (Dig. 48, 3, 3). The Emperor Constantine expressly provided that accused persons should in all cases be tried at once, and that those imprisoned should not be subject to various specified kinds of cruelty (Cod. 9, 4, 1). Other emperors passed laws with a similar object.

Custodia rei is a technical term for the charge which a person undertakes of a thing intrusted to him by another, on account of which he is liable for any loss due to his dolus or culpa [Culpa]. (Dig. 48, 3; Cod. ix. 3, 4; Walter, *Gesch. des röm. Rechts*, 3rd ed., Nos. 848, 856, 857; C. T. Zumpt, *Ueber die persönliche Freiheit des röm. Bürgers;* Madvig, *Verf. und Verw.* ii. p. 208; Lange, *Röm. Alterth.* ii. p. 208; G. Humbert in D. and S.) [E. A. W.]

CUSTOS URBIS. [Praefectus Urbi.]

CY'ATHUS (*κύαθος*), derived like *κύλιξ* from the root *κυ-*, which means "hollow" (Curt. *Gr. Et.* No. 79), and it is found applied to the hollow of the hand (see Liddell and Scott, *s. v.*). It was a small cup, used for transferring liquids from a larger to a smaller vessel. It had a high handle, to prevent the hand touching the liquid when the cup was dipped in the larger vessel. (See the accompanying specimen.) We hear of them as made of silver (Ath. 424 b) and brass (Poll. x. 122). Another form of the word seems to be *κυαθίς*, which Ath. 480 b calls *κοτυλῶδες ἀγγεῖον*.

Cyathus. (Dennis, *Etruria*, ii. p. 471.)

That the *κύαθος* was also used as a vessel for drinking from seems to be the opinion of competent archaeologists, *e.g.* Stephani and Jahn. (See Becker-Göll, *Charikles*, iii. 91; *Gallus*, iii. 403.) For the difficulties connected with *κυαθίζεσθαι* and drinking according to cyathi, the reader is referred to Symposium.

Cyathus. (Dennis, *Etruria*, i. p. cxx.)

It is maintained by some (*e.g.* by Ussing) that *κύαθος* should be applied to the ladle with a long perpendicular handle, as in the cut below, called *simpulum* or *trulla* in Latin.

The term is also applied to an exact measure of capacity. It varies with the *κοτύλη*, of which it is always one-sixth, while it is one-twelfth of the *sextarius*. According to most of the tables, it is ·0456 of a litre (=$\frac{2}{25}$ of a pint); but in the table headed *περὶ μέτρων καὶ σταθμῶν ἱππιατρικῶν* it is ·0547 of a litre. The Greek symbol is Κυ; the Latin TI, Κυ, Κγ. (See Hultsch, *Metrologici Scriptores*, i. 237, and Index; also *Griech. u. Röm. Metrologie*, 104 *sqq.*, 637–9, and Table x.)

The Greek word is further applied to a cupping-glass for bruises about the eyes (Ar. *Lys.* 444); and brass cups were originally used for this purpose. (See the Schol. on Ar. *Pax*, 572.) But the Latin *cyathus* is not so used, the Latin term being *cucurbita*, from its gourd-like shape (cf. *σικύα*). [L. C. P.]

Cyathus. (*Museo Borbonico*, vol. iv., pl. 12.)

CYBAEA, a merchant-ship or transport, mentioned only in Cicero's Orations against Verres (iv. 8, § 17). It is properly an adjective, as Cicero speaks of *navis cybaea maxima*, and describes it as most beautiful and richly adorned, like a trireme (v. 17, § 44). The word perhaps comes from the Greek *κύπη*, a kind of ship mentioned by Hesychius. (Zumpt, *ad* Cic. *Verr.* iv. 8, § 17.) [W. S.]

CYCLAS (*κυκλάς*), a luxurious robe, of a circular form, worn by Roman women, to the bottom of which a border was affixed, inlaid with gold. (Serv. *ad* Verg. *Aen.* i. 286; Prop. iv. (v.) 7, 40.) It was made of some thin material, perhaps muslin (*tenui in cyclade*, Juv. vi. 259). Alexander Severus, in his other attempts to restrain the luxury of his age, enacted that women should possess only one cyclas each, and that it should not be adorned with more than six unciae of gold (Lampr. *Alex. Sever.* 41). It continued to be a dress of ceremony in the fifth century (Sidon. Apoll. *Ep.* i. 5). It was not used exclusively by women. It is related, among other instances of Caligula's effeminacy, that he sometimes went into public in a garment of this description (*cycladatus*, Suet. *Cal.* 52); and Saturninus, when he determined to accept the empire, put on the cyclas of his wife as a kind of imperial garment (Vopisc. *Saturn.* 9). The statue of Rome, figured under CLAVUS LATUS (see p. 455), probably wears a robe of this kind, with the *clavus latus* down the centre, and an ornamented border at the bottom. (Daremberg and Saglio, *s. v.*) [W. S.]

CYCLOPEIA. [ARCHITECTURA.]

CYLINDRUS (*κύλινδρος*). 1. A roller, used in agriculture for levelling and consolidating the ground. (Cat. *R. R.* i. 129; Colum. xi. 3, § 34; Verg. *Georg.* i. 178; Plin. *H. N.* xix. § 158; Vitr. x. 6.) 2. A precious stone cut or ground in a cylindrical form (Juv. ii. 61; Plin. *H. N.* xxxvii. §§ 78, 113; Dig. 34, 2, 32, § 9), frequently mentioned in inscriptions (quoted by Marquardt, *Privatl. d. Römer*, p. 682). 3. A roll of a book. (Diog. Laërt. x. 26.) [W. S.]

CYLIX (*κύλιξ*). [CALIX.]

CYMA (*κῦμα*), in architecture, an *ogee*, a wave-shaped moulding, consisting of two curves, the one concave and the other convex. There were two forms, the *cyma recta*, which was concave above and convex below, thus, Ʒ, and the *cyma reversa*, which was convex above and concave below, thus, Ƹ. The diminutive *cymatium* or *cumatium* (*κυμάτιον*) is the more common name. The original form of the *cymatium* was, however, a simple hollow (the *cavetto*), thus ℷ. This was called the *cymatium Doricum*, and the other the *cymatium Lesbicum*. (Aesch. *Fr.* 70, ed. Dindorf; Böckh, *Corp. Inscr.* vol. i. p. 284; Vitruv. iii. 5, § 7, iv. 1, § 7, iv. 3, §§ 6, 8, iv. 6, § 2, v. 3, 5; Phot. 565, 18; *Etym. M.* p. 749, 38; Gruter, *Inscr.* p. ccvii.; Müller, *Archäol. d. Kunst*, § 274; Mauch, *Gr. und Röm. Bauord.* pp. 6, 7: for examples, see the profiles on pp. 492–3.) [P. S.] [J. M.]

CYMA'TIUM (*κῦμα, κυμάτιον*), in arch. (1) the volute of an Ionic capital (Vitr. iii. 5, 7; iv. 1, 7); (2) a moulding, either the *cavetto* (cy. doricum), or the *cyma recta* or *reversa* (cy. lesbium, *κ. Λέσβιον*). Vitruvius mentions the cymatium of a lintel (iv. 6, 2), of the epistyle (iii. 5, 10), and of the cornice (iii. 5, 11). The Greek term occurs: *κῦμα Λέσβιον*, Aesch. *Thalamopoei*, fr. 224 Dind., 76 Herm.; *κυμάτιον*, *C. I. G.* 160, 37; *LXX. Ex.* 25; cumatium, *Corp. Inscr. Lat.* 1. 577. [J. M.]

CYMBA (*κύμβη*), literally a hollow, was a small boat, probably made originally from the hollow of a tree, used on rivers and lakes, &c., especially by fishermen. Pliny ascribes its invention to the Phoenicians. (Plin. *H. N.* vii. 208; Afran. *in Non.* p. 535, 31; Verg. *Georg.* iv. 195; Cic. *de Off.* iii. 14, 59; *cymba adunca*, Ov. *Met.* i. 293; *concava*, *Am.* iii. 6, 4; *Fast.* vi. 777.) The poets give the name of *cymba* to Charon's boat. (Verg. *Aen.* vi. 303; *Georg.* iv. 506; Hor. *Carm.* ii. 3, 28; Prop. iii. (iv.) 18, 24.) The diminutive *cymbula* is used of a small boat attached to larger vessels. (Plin. *Ep.* viii. 20, § 7.) [W. S.]

Cymba, Charon's boat, with Hermes, conducting a soul. (From a Roman lamp.)

CY'MBALUM (*κύμβαλον*), a musical instrument consisting of two half globes, which were held one in each hand by the performer and played by being struck against each other. Like *κύμβη*, *κυμβίον*, *κύμβος*, the word is derived from the root *κυ-*, expressive of anything hollow. Several kinds of cymbals are found on ancient monuments, and not a few are preserved in museums, as at Naples, Berlin, St. Petersburg, Athens, and several places in France. They closely resemble those now used in military bands (Guhl and Koner, ed. 5, p. 274). There are, however, different degrees of convexity, varying between a hemisphere and a nearly flat disc. Some are altogether without handles, and were grasped by the fingers on the outside; others have a hole through which a cord or strap was passed, convenient for slinging them when not in use as well as for holding them when played; others, again, have a ring (see the cut opposite), or a solid knob by way of handle; for a pair furnished with regular handles, see the illustration at the end.

Cymbalum. (Rich.)

Many names for different kinds of cymbals are recorded by the grammarians and lexicographers, but their descriptions are so vague that little can be done in the way of identification; and the important distinction between cymbals and castanets is often obscured. Thus κρέμβαλα and κρούματα (or κρούσματα) will be found treated under CROTALUM. The κρούπεζαι or κρουπέζια, Lat. *scabella* or *scabilla*, can hardly be called cymbals: they were wooden shoes, used to beat time with the foot while other instruments were being played, and perhaps had rattles or bells attached to them to make a jingling, like the TYMPANUM or tambourine (Cic. *pro Cael.* 27, § 65, with Long's note; cf. Liddell and Scott, *s. v.*). The πλαταγή was simply a child's rattle, as is clearly shown by a passage of Aristotle (*Pol.* viii. 6, § 2); its diminutive is πλαταγώνιον (Pollux, Hesych., Suid.). There remain ὀξύβαφα and κοτύλαι, both probably small cup-shaped cymbals. The ὀξύβαφα were so named from their resemblance to the small cups used as vinegar cruets (see the second cut under ACETABULUM); and Suidas tells us (*s. v.*) that the two halves were made of different materials for the sake of variety of sound. The epithet χαλκόδετοι, applied to the κοτύλαι, seems to indicate that the latter also were not wholly of bronze (Aesch. *fragm.* 55).

The cymbal was a very ancient instrument, and unquestionably came from the East, where among other nations it was familiar to the Jews (see *Dict. of Bible*, s. v.). It is represented in a Phoenician bronze from Cyprus, now in the Cesnola collection at New York (D. and S. i. 1697 a). We find sacred trees depicted with cymbals hung on them as votive offerings, so as to be blown about by the wind (Guhl and Koner, p. 5, fig. 1). Among the Greeks and Romans they were especially used in orgiastic rites of Eastern origin, like those of Cybele (Pind. *fragm.* 48 = 79 Bergk^4; Lucret. ii. 618; Catull. lxiii. 29; Verg. *Georg.* iv. 64; Propert. iv. 7, 61; Ov. *Fast.* iv. 213) and Dionysus (Aesch. *fragm. cit.*; Liv. xxxix 8 *fin.*, 10), as well as in the Eleusinian mysteries of Demeter and Cora (Pind. *Isthm.* vi. 3; Clem. Alex. *Protrept.* 2, § 15, p. 14; Schol. Aristoph. *Acharn.* 708). It will be noticed how constantly, in these passages, the cymbal and the tympanum are coupled together. Art monuments tell the same tale as literature, both as to the joint use of the two instruments and the deities in whose worship they occur. A cymbal figured in Daremberg and Saglio (i. 1697 b) is a votive offering to Cora.

As with the *crotalum*, the performers represented on works of art are mostly females. The following figure of a *cymbalistria* is taken from a bas-relief in the Vatican. [B. J.] [W. W.]

Cymbala. (From a Bas-relief in the Vatican.)

CYMBIUM (κυμβίον, κύμβος, κύμβη) was a kind of small cup, according to Didymus and Nicander (*ap.* Ath. 481 e), not round but long (ἐπίμηκες, which does not mean "high" *procera*, as Macrobius, *Sat.* v. 21, translates it), and narrow (στενόν), without handles (χωρὶς ὤτων). Dorotheus (*ap.* Ath. 481 d) says it belonged to the class of cups which were deep (βαθέων), high (ὀρθῶν), without base or handles. Thus there were two very different shapes of cymbia, agreeing in not having handles; and this diversity of shape may be paralleled by that of the bowls of our wine-glasses, but of course the cymbia had not bases like the latter. They appear to have been constantly employed for drinking unmixed wine from (ἄκρατος, Philemon, 84; Anaxandrides, 3, ed. Kock), and fulfilled the functions of a cyathus in ladling out the wine from the crater into the cups; see Eratosthenes (*ap.* Ath. 482 b), who says that the κυμβίον was a κυαθῶδες ἀγγεῖον. They were much used (Ath. 481–2), but only among the wealthy (Dem. *Mid.* p. 558, § 133; 565, § 158). Though generally employed for wine, yet we find them in Virgil (*Aen.* iii. 65) holding milk. They were made of various valuable materials: chrysoprase (Plin. *H. N.* xxxii. § 113), silver with embossed work (Verg. *Aen.* v. 267), and the embossed work was sometimes of gold (Alexis, 95, ed. Kock; Dig. 34, 2, 31, 1), Saguntine clay (Mart. viii. 6, 2). The meaning is derived from κύμβη, "a boat" (Soph. *Fragm.* 129): see Didymus *ap.* Ath. 481 f, Fest. 51. 10, and compare ἄκατος

Cymbium. (Panofka.)

and *τριήρης*, and such usages as our "butter-boat," &c. For the converse we have *γαυλὸς* and *σκάφη*, and "vessel" applied to a ship. The above specimen from Panofka (*Recherches*, &c. v. 75) may possibly be an example of the first kind (cf. Birch, p. 379). The inscription is *πρόπινε μὴ κατθῇς*, "Drink; do not lay me down." [L. C. P.]

KYRBEIS (*κύρβεις*). [Axones.]

KY'RIOS (*κύριος*), lord or guardian. The early law of all countries takes notice of families only: in other words, it only takes notice of persons exercising Patria Potestas. Ancient law, therefore, subordinates a woman to her blood-relations; though relieved from her parent's authority by his death, she continues subject through life to her nearest male relations as guardians (Maine, *Ancient Law*, p. 152 ff.). During marriage, of course, her husband was her *κύριος*: but when this relation was terminated by death or divorce, she acquired no more freedom than before, but returned to the guardianship of her own family. The term *κύριος* is applied to males only during minority: the *κύριος* of such was first, of course, the father, secondly the guardian appointed by his will, thirdly the nearest male relative. In cases of adoption, the natural father remained no longer the *κύριος* of the adoptee (Dem. *c. Macart.* p. 1054, § 15).

The laws relating to the wardship of orphan children are treated of under Epitropos: we are here concerned with those more especially termed *κύριοι* in Attic law, whose business it was to protect the interests of women, whether spinsters or widows, or persons separated from their husbands. If a citizen died intestate, leaving an orphan daughter, the son or the father of the deceased was bound to supply her with a sufficient dowry, and give her in marriage; likewise to take care, both for his own sake and that of his ward, that the husband made a proper settlement in return for what his bride brought him in the way of dower. In the event of the death of the husband or a divorce, it became the duty of the *κύριος* who had betrothed her, to receive her back and recover the dowry, or at all events alimony, from the husband or his representatives. (Dem. *c. Neaer.* p. 1362, § 52.) If an orphan daughter had neither grandfather, brother, nor uncle, the next of kin, who in that case became her *κύριος*, had also the option of marrying her himself, and taking her fortune with her, whether it were great or small (Bunsen, *de Jure Hered. Ath.* p. 46). If the fortune was small, and he was unwilling to marry her, he was obliged to make up its deficiencies, according to a regulation of Solon, in proportion to his own means (Lex *ap.* Dem. *c. Macart.* p. 1067, § 54); if it was large, he sometimes put away his own wife in order to marry her (Dem. *c. Onet.* i. *Arg.*, and p. 867, § 11; *c. Eubul.* p. 1311, § 41). He could even take her away from a husband to whom she had been lawfully married in her father's lifetime (Isae. *Pyrrh.* § 64) [Epicleros]. On the laws for the protection of women, whether as orphans, wives, or widows, see Kakosis.

All women could only appear in a court of law, like married women and minors among ourselves, through their "next friend," — in other words, their *κύριος*: hence the qualifications of a *κύριος* were the male sex, years of discretion, freedom, and when citizens a sufficient share of the franchise (*ἐπιτιμία*) to enable them to appear in the law-courts as plaintiffs or defendants on behalf of their several charges. If the *κύριος* were a resident alien, the deficiency of franchise would be supplied by his Athenian patron (*προστάτης*). (*Att. Process*, p. 455, with Lipsius' notes; Thalheim, *Rechtsalterth.*, § 2, pp. 8, 12, and § 10, p. 69 n. = Hermann, *Privatalt.*, §§ 57, 65.) [J. S. M.] [W. W.]

CYZICE'NUS NUMMUS. [Electrum.]

CYZICE'NUS OECUS. [Domus, p. 671 *b*.]

D.

DACTYLIOTHE'CA (*δακτυλιοθήκη*), a case or box where rings were kept (Mart. xi. 59). Such a ring-case has been recognised in a round ivory box found at Pompeii (*Mus. Borb.* ix. pl. xiv. 8): from the centre of the lid projects a vertical stick, on which the rings might be slid when the wearer took them off at his toilet (cf. Mart. xiv. 123). The same purpose may have been served by a bronze stand which was found at Talese. It consists of a rod resting on three feet. Down the rod may be slid a ring furnished with catches to hold it steady, to one of which is attached a vertical oval ring broken at the top so as to admit of rings or other articles of jewellery being slid on it. (*Ann. dell' Inst. Rom.* 1842, p. 82.) The name was also applied to a cabinet or collection of jewels. We learn from Pliny (*H. N.* xxxvii. § 11), that Scaurus, the stepson of Sulla, was the first person at Rome who had a collection of this kind, and that his was the only one till Pompey brought to Rome the collection of Mithridates, which he placed in the Capitol. (Cf. Murat. *Inscr.* 907, 3.) The question is discussed in Dig. 32, 1, 52, §§ 8, 53, whether a legatee to whom a *dactyliotheca* was devised was to receive also the testator's ring, and the converse. [W. S.] [J. H. F.]

DA'CTYLUS (*δάκτυλος*), a Greek measure, answering to the Roman *digitus*, each signifying a *finger-breadth*, and being the sixteenth part of a foot. [Pes.] (See the Tables.) [P. S.]

DADU'CHUS. [Eleusinia.]

DAE'DALA, DAEDALEIA (*δαίδαλα, δαιδάλεια*), a term applied to the earliest iconic representations of the gods roughly hewn out of wood (*ἄγαλμα ξύλου*, Paus. ix. 3, 2; *δαίδαλον* = later *ξόανον*, ib.). From a very early period stones (*ἀργὸς λίθος, βαίτυλος*) and trees received divine honours. (Lucian, *Pseudom.* 30; C. Bötticher, *d. Baumcultus d. Hellenen*; Overbeck, *d. Cultusobj. b. d. Gr.*). Thus Artemis Soteira at Boiae was a myrtle (Paus. iii. 22, 12); the Paphian Aphrodite a conical stone. The effigy of the god, down to the latest times, was placed in a tree (in a cedar at Orchomenos, id. viii. 13, 2; Cybele on coins of Myra, Collign. p. 10). The immediate predecessor, however, of the *δαίδαλον* was a squared beam or flat board, which, like the pillar, was probably draped and decorated (cf. Callim. of Hera at Samos: *οὔπω Σμιλικὸν* *ἔργον ἐΰξοον, ἀλλ' ἐπὶ τεθμῷ | δηναιῷ γλυφάνων ἄξοος ἦσθα σανίς*, Euseb. *Praep. Ev.* iii. 8; draped stone on coin of Juliopolis (Gordium), Collignon, p. 13). Carved in shallow relief, with human form, the plank became a *δαίδαλον*; or later, with head, hands, and feet of marble adjusted, the wood hidden by the drapery, an acrolith (Paus. iii. 16, 1). The uncouth character of the most archaic type was shown in the omission or mere indication of all detail (Tzetzes, *Chil.* i. 538: *ἄχειρας, ἄποδας, ἀομμάτους*), and the stiff upright attitude. The more realistic and varied conception of the later *ξόανον* is ascribed to Daedalos (Paus. ii. 4, 5; ix. 3, 2). He separated the legs, raised the arms, and opened the eyes. Ancient writers, however, are hardly consistent in their judgments of his reputed works. Pausanias recognised high merit (*τι ἔνθεον*) in a rude art; a Heracles was so lifelike that the god himself threw a stone at it in the night (Hesych. *s. v.* *πλῆξαι*); yet his Delian Aphrodite, with arms, ended in a square block like a hermes (Paus. ix. 40, 2); and in Plato's time (*Hipp. maj.* p. 282 A) Daedalos would appear ridiculous. The author of the *χορὸς* of Ariadne [*Il.* xviii. 590; according to Paus. ix. 40, 3, a *marble* relief (a material not used before 20th Ol.)], of the Cretan Labyrinth, &c., a contemporary of Minos and Theseus, who was rather a mechanician and architect than sculptor, is separated by centuries from the beginning of Greek art (7th or 8th cent.). But Attic legend gradually evolved a quasi-historical Daedalus, patron of turners and sculptors (Daedalids), with whose name an important reform in art was conveniently associated.

Recorded *ξόανα*: a sitting Hera in pear-wood (Paus. xvii. 5); a Britomartis at Olus, Crete (id. ix. 40, 2), &c.; attributed to Daedalus, *ξ. γυμνὸν* of Herakles, Corinth (id. ii. 4, 5); a Heracles, on the frontier of Messenia and Arcadia (id. viii. 35, 2); *ξ. τὸ ἀρχαῖον*, Thebes (id. ix. 11, 9), &c. Cf. Brunn, *Gesch. gr. Künstl.* pp. 14, 15.

Archaeological evidence: archaic marble Artemis, showing wood technique, Delos (*Bullet. Corr. hell.* t. iii. pl. 1); archaic agalma of Here, frieze at Phigaleia (Overbeck, *Kunstmyth.* ii. 2, 21; and see under each god, *ib.*).

Archaic or archaistic terra-cottas and marble idols from graves (*ib.* p. 25, &c.; Gerhard, *Akad. Abh.* pl. lxi.; *Daedal. Idolen*; Heuzey, *Les Fig. ant. de terre cuite*, &c.).

Coins: see above (also Blümner, *Technol. u. Termin. d. Gew. u. Künsten*, vol. ii. pp. 2, 177, 181; Overbeck, *Gesch. d. gr. Plastik*,^{3} ch. 2; id. *Schriftquellen*; Collignon, *Myth. Fig. de la Grèce*). [J. M.]

DAE'DALA (*δαίδαλα*), a festival, celebrated in Boeotia in honour of Hera, surnamed **Νυμφευομένη** or **Τελεία** (Paus. ix. 2, § 5). Its origin and mode of celebration are thus described by Pausanias (ix. 3, § 1, &c.):—Hera was once angry with Zeus, and withdrew herself to Euboea. Zeus not being able to persuade her to return, went to Cithaeron, who then governed Plataeae, and was said to be unequalled in wisdom. He advised Zeus to get a wooden statue, to dress and place it upon a chariot, and to say that it was Plataea, the daughter of Asopus, whom he was going to marry. Zeus followed the advice of Cithaeron, and no sooner had Hera heard of her husband's projected marriage than she returned. But when, on approaching the chariot and dragging off the coverings, she saw the wooden statue, she was amused with the device, and became reconciled to Zeus. In remembrance of this reconciliation the Plataeans solemnised the festival of the daedala, which owes its name to **Δαίδαλα**, the name by which rough-hewn statues were designated. (See preceding article.) Pausanias was told that the festival was held every seventh year, but he believes that it took place at shorter intervals, though he was unable to discover the exact time.

This festival was observed by the Plataeans alone, and was called the *lesser Daedala* (*Δαίδαλα μικρά*); it was celebrated in the following manner:—In the neighbourhood of Alalcomene was the greatest oak-forest of Boeotia, and in it a number of oak trunks. Into this forest the Plataeans went, and exposed pieces of cooked meat to the ravens, attentively watching upon which tree any of the birds, after taking a piece of the meat, would settle; and the trees on which any of the ravens settled, were cut down and worked into daedala.

The *great Daedala* (*Δαίδαλα μεγάλα*), in the celebration of which the Plataeans were joined by the other Boeotians, took place every sixtieth year; because at one time, when the Plataeans were absent from their country, the festival had not been celebrated for a period of sixty years. At each of the lesser Daedala fourteen statues were made in the manner described above, and distributed by lot among the towns of Plataeae, Coroneia, Thespiae, Tanagra, Chaeroneia, Orchomenos, Lebadeia, and Thebes; the smaller towns took one statue in common. The Boeotians assembled on the banks of the Asopus; here a statue of Hera was adorned and raised on a chariot, and a young bride led the procession. The Boeotians then decided by lot in what order they were to form the procession, and drove their chariots away from the river and up mount Cithaeron, on the summit of which an altar was erected of square pieces of wood, fitted together like stones. This altar was covered with a quantity of dry wood; and the towns, persons of rank, and other wealthy individuals offered each a heifer to Hera and a bull to Zeus, with plenty of wine and incense, and at the same time placed the daedala upon the altar. For those who did not possess sufficient means, it was customary to offer small sheep, but all their offerings were burnt in the same manner as those of the wealthier persons. The fire consumed both offerings and altar, and the immense flame thus kindled was seen far and wide.

The account of the origin of the daedala given by Pausanias agrees in the main points with the story related by Plutarch (*apud* Euseb. *de Praeparat. Evang.* iii. p. 83, and *Fragm.* p. 759, &c. ed. Wyttenb.), who wrote a work on the Plataean daedala: the only difference is that Plutarch represents Zeus as receiving his advice to deceive Hera from Alalcomenes; and that he calls the wooden statue by which the goddess was to be deceived Daedala, instead of Plataea. Plutarch also adds some remarks respecting the meaning of the festival, and thinks that the dispute between Zeus and Hera had reference to the physical revolutions to which

Boeotia, at a very remote period, had been subject, and their reconciliation to the restoration of order in the elements. (See Creuzer, *Symbol. und Mythol.* ii. p. 280, and Müller's *Orchom.* p. 216, &c. 2nd edit.) [L. S.]

DALMA'TICA, or **Delmatica** (δαλματική, δελματική), a tunic furnished with long sleeves, full and flowing, introduced from Dalmatia (Isid. *Or.* xix. 22). The name does not occur till the close of the 2nd century of the empire. This use of sleeves extending to the wrists was considered effeminate during the republic [Tunica], and even under the empire attracted attention in the instance of Heliogabalus ("dalmaticatus in publico post cenam saepe visus est, Gurgitem Fabium et Scipionem se appellans, quod cum ea veste esset, cum qua Fabius et Cornelius a parentibus ad corrigendos mores adulescentes in publicum essent producti," Lamprid. *Heliog.* 26). In this use of the dalmatic Heliogabalus was following the example of Commodus (Lamprid. *Comm.* 8; Capitol. *Pertinax*, 8, "chiridotas Dalmatarum." The *singiliones Dalmatarum* in Treb. Poll. *Claud.* 17 may denote the same garment). From Diocletian's edict of A.D. 301 fixing the maximum (16–17), we learn that the dalmatic was then worn both by men and by women; that it was made both with and without purple stripes [Clavus latus, angustus]; sometimes it was woven with triple thread (τρίμιτος), sometimes of wool retaining the nap, sometimes of silk, sometimes of linen of various qualities and from various countries. In this edict and some other passages (Epiphan. *Haer.* i. 15, and later ecclesiastical writers), it appears to be identified with the colobion, which, however, was a sleeveless tunic (Serv. *ad* Verg. ix. 616; Sozomen, iii. 14), the dalmatic, on the contrary, having long sleeves. But, according to Waddington, the edict is here fixing the prices, not of the garments, but of the pieces of stuff from which they were made, and the same stuffs would naturally be used in making dalmatics and colobia.

For representations and a precise description of the garment we must turn to Christian sources. An illustration from a mosaic in the church of St. Vitalis at Ravenna has been given under Clavus (p. 455 *b*); and for a fuller account of the dalmatic as a church vestment, see Marriott (*Vestiarium Christianum*, p. lix) and *Dict. of Christ. Ant.* s. v. [J. H. F.]

DAMARETEION (Δαμαρέτειον νόμισμα), a Syracusan coin, concerning which there has been much dispute. According to Diodorus (xi. 26), after Gelon's victory over the Carthaginians at Himera, in B.C. 480, he granted them a peace at the intercession of his wife Damarete: the Carthaginians in gratitude gave her a gold wreath weighing 100 talents. In consequence, proceeds Diodorus, she struck the coin called from her Δαμαρέτειον, containing 10 Attic drachms or 50 Sicilian litrae. Other writers vary the account by making the coin the proceeds of the melting down of ornaments by Damarete and her ladies. Following the ambiguous statements of Pollux (ix. 85) and Hesychius (*s. v.*), Boeckh and other metrologists have supposed the Damareteia to be gold coins of the value of 10 Attic drachms of silver; but they are now universally recognised in the Archaic Syracusan coins of silver, of the weight of 10 Attic drachms or 50 litrae [see Litra]; that is to say, weighing about 675 grains English, of which several specimens are still extant. (See Head, *Coinage of Syracuse*, p. 8, pl. i. 10.) These pieces must from their style be long to about B.C. 480, whereas none of the gold coins of Syracuse can be given to an earlier time than B.C. 412; and their unusual size and beauty seem to indicate some special occasion of mintage. [P. G.]

Damareteion of Syracuse.

DAMIURGI. [Demiurgi.]

DAMNUM signifies loss or injury of any kind, but in its particular sense it means loss or injury which a person has sustained in his property (*damnum datum, factum*).

Damnum in this particular sense may include loss of gain which a person is prevented from realising (*lucrum cessans*) as well as loss of actually acquired property (*damnum emergens*). The causes of *damnum* are either chance, accident (*casus*), or acts or omissions of reasonable human beings, for which they are held to be responsible.

As a rule no liability arises out of loss or injury to property caused by accident (*casum nemo praestat*). A person is not liable for *damnum* which he causes to another by the just exercise of a right which belongs to him (Dig. 39, 2, 26; 47, 9, 3, § 7): such *damnum* is *sine injuria.*

Dolus malus or *culpa*, i.e. wilful or negligent misconduct on the part of the person committing *damnum*, is, as a rule, necessary in order to constitute liability; but in exceptional cases a person may be liable although neither *dolus malus* nor *culpa* can be imputed to him.

A wrongful act by which *damnum* is caused may be either an independent delict, or the breach of some special duty to which a person has become subject as a breach of contract.

The liability to make good a loss which another has suffered is *praestare damnum.*

A person liable for damages is, as a rule, bound to put the injured party in the same position as he would have been in if the act by which the damage was done had not been committed. He may also be subject to a penalty. (Dig. 9, tit. 2; Windscheid, *Pandekten*, §§ 257, 258; Mommsen, *Zur Lehre vom Interesse*; Poste, *Gaius*, § 212.) [G. L.] [E. A. W.]

DAMNUM INFECTUM is damage not done, but apprehended, on account of the dangerous condition of neighbouring property.

If proceedings were not taken before damage had been done, the injured party had no action for damages subsequently; if, *e.g.*, a ruinous house (*aedes ruinosae*) fell and damaged a neighbour before a *cautio* had been demanded, all the right that the damaged person had was to retain the materials that had fallen on his land. (Dig. 39, 2, 6. 7, § 2. 8.) Gaius states that a party who apprehended damage might have recourse to a *legis actio* in order to protect himself, but that the *stipulatio damni infecti* provided by the praetor in his edict for such cases was always sought as being the more convenient remedy. (Gaius, iv. 31.)

The praetor required a person whose land or building was likely by its dangerous state (*vitio aedium, loci, operis, arborum;* Dig. 39, 2, 24, pr. 2) to cause damage to another, to give the latter security (*cautio*) against such damage. No security was, however, required if danger from land simply arose from its natural character.

Every person who was in possession or detention of the property threatened, either as owner or in any other right, could claim this *cautio*, but it is doubtful whether a *bonae fidei* possessor was entitled to it (Dig. 39, 2, 11. 13, § 9. 18).

The complainant had to swear to his *bona fides* by taking the *jusjurandum calumniae*. The owner of the dangerous property, its *bonae fidei* possessor, and anyone who had a right in the property (*jus in re*) might be required to give this *cautio*, which for the owner and *bonae fidei* possessor consisted in a mere personal promise, but in other cases had to be undertaken by sureties also.

The complainant had no direct means of compelling the defendant to give security, but in the event of refusal he was empowered by the praetor to make entry on the property which threatened the damage, for the purpose of forcing the defendant into submission: if this produced no result, the defendant was ejected, and his right to the property was transferred by the praetor to the complainant. The defendant who had entered into a *cautio* was not liable under it to a greater amount than the value of the land or building which had caused the damage; if he surrendered the mischievous thing, he escaped all further liability. (Dig. 39, 2; Hesse, *Die Cautio damni infecti;* Vangerow, *Pandekten*, iii. § 678; Windscheid, *Pandekten*, § 458, &c.; Huschke, *Gaius*, §§ 203–242.) [E. A. W.]

DAMNUM INJU'RIA DATUM was a delict committed by a person who damaged a physical object belonging to another by a positive act, either intended by him or due to his negligence ("dolo aut culpa," Gaius, iii. 211), whereby the right of another was violated. The term *injuria* is sometimes used in this connexion to signify an act which is an infringement of a right of another, and sometimes for an act done intentionally or by reason of negligence (Gaius, iii. 211). The expressions used in early times to denote this delict were *noxia nocita, noxiam nocere, nocere;* but these included also outrage to a man's person (*membrum rumpere, os frangere*) as well as damage to property. There were provisions in the Twelve Tables directed against particular kinds of damage to property (cf. Grueber, pp. 185–196; Voigt, *Die XII. Tafeln*, ii. §§ 131–134). Thus a man who caused certain objects of property to be burnt ("urere aedes acervumve frumenti juxta tugurium positum") was liable to the *actio de aedibus incensis* (Tab. vii. 14, according to Voigt's arrangement; Dig. 2, 14, 7, § 13); the owner of farm animals (*pecora*) which damaged a crop was liable to the *actio de pastu pecoris* (Tab. vii. 10: "Si impavit in laetam segetem alterius, noxiam sarcito"); a person who cut the trees of another was liable to the *actio de arboribus succisis* (Tab. vii. 12). It is probable that the Twelve Tables gave an action on account of killing a slave, *actio de servo occelso* or *occiso*, as they certainly punished a person for the less grave offence of injuring a slave ("os servi frangere"): the same action may also have been given on account of the killing of a quadruped. Two passages of Festus (s. v. *rupitias—sarcito:* C. Sell, *Die actio de rupitiis sarciendis*) seem to suggest that the Twelve Tables recognised a more general form of action than any of the above, which may have been called *actio de rupitiis sarciendis* or *de rupitiis*; this action would have been applicable in case any property was damaged by an act of breaking ("rumpere rem"), but not where property was damaged by any other kind of act; the wide sense which Festus gives to *rupitias* ("rupitias (in) XII. significat damnum dederit") being evidently derived from the interpretation subsequently given by the jurists to the word *rumpere* in the Lex Aquilia. It has been questioned on philological grounds whether the word *rupitias* can have been used in the Twelve Tables (Mommsen, *Rhein. Mus. für Phil.*, Neue Folge, xv. 464; Voigt, *XII. Taf.* i. 121). The expression *noxiam sarcire* originally meant to repair damage done by the defendants making over to the plaintiff something exactly similar to that which was damaged. This principle of reprisals (*talio*) was used in early times in respect to damage to property as well as to personal injuries, until the principle of pecuniary damages came to be substituted for it.

The law of the Twelve Tables respecting damage to property had in the time of the Roman classical jurists only an antiquarian interest, since the existing law on the subject depended on a later enactment, which was called the Lex Aquilia. According to Ulpian (Dig. 9, 2, 1, pr.), the Lex Aquilia repealed all preexisting laws respecting *damnum injuria*, whether contained in the Twelve Tables or in any other source. This statement is not strictly accurate, for we know that some of the actions given by the Twelve Tables—viz. the *actio de incensis aedibus, de pastu pecoris*, and *de arboribus succisis*—were in use subsequent to the enactment of the Lex Aquilia; but the importance of these actions was much diminished by that law, and at the time when Ulpian wrote they were practically obsolete.

The Lex Aquilia was a plebiscitum called after Aquilius the tribune, who proposed it. The author of the law and its date are uncertain. According to Byzantine writers (Theophilus, *Par. Inst. Justinian.* 4, 3, 15; Anon. *ad Bas.* 60, 3, 1), it was passed at the time of one of the secessions of the plebs, by which the third secession 467 A.U.C. must be meant (cf. Grueber, pp. 183–185; Pernice, pp. 15–20). The Lex Aquilia, in accordance with the character of early law, did not give a general action on account of damage of property, but extended only to certain acts and objects of damage. The first chapter of the Lex Aquilia provides that, if a man has unlawfully (*injuria*) killed a slave of another or a quadruped of his cattle, he shall be bound to pay to the owner whatever within the previous year was their highest value. Thus, if the value of the slave or animal had been greater some time during the year previous to the injury than it was at the time of the injury, the owner recovered something beyond compensation for his loss. By the second chapter an adstipulator, who defrauded a principal stipulator by releasing the promissor, was made liable to the principal stipulator in damages. This part of the enactment, which is not very closely connected with the preceding and subsequent parts, was obsolete in the time of Justinian, the practice of joining accessory stipulatores having ceased to serve any legal purpose. Hence its contents are not described in his legislation; and until the MS. of Gaius was discovered, in which they are noticed, there was much speculation as to their nature. The third chapter provides that if anyone unlawfully damages the property of another by burning, crushing, or breaking ("quod usserit, fregerit, ruperit"), if the case does not come under the first chapter ("praeter hominem et pecudem occisos"), he shall be liable for the value of the property within the last thirty days. The value of the property within the last thirty days was interpreted as meaning the highest value, although the word *plurimi* was not inserted in this part of the statute. The jurists enlarged the scope of the statute by a bold interpretation of *rumpere*, which they held to be equivalent to *corrumpere*, and so to include any act causing damage.

But it was necessary that the *damnum* should be a direct consequence of the act of the delinquent ("damnum corpore datum"), in order for it to be treated as a killing under the first chapter or an injury under the third. Thus to kill a person by a direct act ("occidere"), as by striking him, and to give occasion for his death ("causam mortis praestare"), as by putting a cup of poison in his way so that he himself takes it, are distinguished, there being no liability under the statute itself in the latter case. Further, in order to maintain an action by the statute, the *damnum* must not only have been *corpore*, but also *corpori datum;* that is, there must have been injury or destruction of a thing. Depriving the owner of an object of property without damaging it was not sufficient. The lex only gave an action to the owner of the property damaged ("Legis autem actio ero competit, id est domino"), not to a person who had any other interest in a thing, and who suffered loss by damage to it. Hence it did not allow a bonae fidei possessor, a fructuarius, usuarius, or a mortgagee creditor, to maintain an action under it. In all the above cases, in which the lex did not apply, the edict of the praetor supplied an analogous remedy, as also in the case of an injury done to a freeman. The praetorian actions thus given are called *actiones utiles* or *in factum* [ACTIO]. Various attempts have been made by German jurists to reconstruct the formula of the Aquilian action. (Lenel, *Das Edictum perpetuum*, p. 1571.) The Aquilian action was regarded as penal, and so could not be brought against the heirs of the delinquent. (Inst. iv. 3; Dig. 9, 2; Cod. iii. 35; Grueber, *The Roman Law of Damage to Property*, being a commentary on Tit. of Dig. *Ad Legem Aquilium;* A. Pernice, *Zur Lehre von den Sachbescheidigungen nach Röm. Recht.*) [E. A. W.]

DAMO'SIA (*δαμοσία*, sc. *σκηνή*), the tent of the Spartan kings in the field, "head-quarters," like the Latin *praetorium;* usually in the phrase *οἱ περὶ τὴν δαμοσίαν*, the "staff" or personal suite (Xen. *Hell.* iv. 5, § 8, vi. 4, § 14; *Rep. Lac.* 13, § 7). This must be distinguished from the *σύσκηνοι* or tent-comrades, who, however, were included in it, and from the Thirty who formed the king's body-guard in action.

The *σύσκηνοι*, according to Xenophon (*Rep. Lac.* 13, § 1), were the six polemarchs, and three *ὅμοιοι* or Spartans of full civic rank: to these he adds, in a later passage of the same work (15, § 5), the two *Πύθιοι* [PYTHII] nominated by the king, who may have been included in the nine previously mentioned. The three *ὅμοιοι* were charged with the royal commissariat, in order that the king and polemarchs might give their whole attention to military matters. The *κρεοδαίτης*, or royal carver (Plut. *Lysand.* 23, *Ages.* 8), was probably one of these (Gilbert; Caillemer). We must not think of an officer of state like the *Erztruchsess* of the German imperial court: the Spartan kings, who at home shared in the ordinary public tables (*φιδίτια* or *φιλίτια*), in the field lived on terms of simple comradeship with their *σύσκηνοι*, and one of the party would naturally be appointed to carve. Besides these, the damosia comprised the heads (*οἱ τοῦ στρατοῦ ἄρχοντες*, Xen. *Rep. Lac.* 13, § 7) of the diviners, army surgeons, and flute-players; not, as sometimes stated, the whole of those bodies. The surgeon-in-chief would of course be the king's medical attendant, and the chief *μάντις* and *αὐλητὴς* would take his orders in person. There is a difficulty about the *ἐθελούσιοι* mentioned by Xenophon in this passage: the Spartan organisation left little scope for "volunteers," and it cannot be thought that anyone who chose could thrust himself upon the king in this capacity: we may suppose with Caillemer that they were chosen by him at his pleasure. That the two ephors who attended the king on military expeditions, the *λαφυροπῶλαι* and others mentioned as a matter of inference by Müller, also formed part of the damosia, is nowhere expressly stated: but he rightly insists that the Thirty about the king's person must have been a different body; they were always Spartans, which cannot be said of the *μάντεις*, *ἰατροί*, and *αὐληταί*. Megistias, the prophet at Thermopylae, was an Acarnanian (Herod. vii. 221). At the moment of action some of the dispositions, rather obscurely hinted at by Xenophon (*l. c.*), were under the orders of the senior member of the damosia: this, it must be assumed, applied to the *σύσκηνοι* only, not to the inferior members. (Müller, *Dorians*, iii. 12, § 5; Gilbert, *Staatsalterth.* i. 80; Caillemer, *ap.* D. and S.) [W. S.] [W. W.]

DANACES (*δανάκης*, which spelling is probably more correct than Danace). Some people, according to Pollux (ix. 82), held this to be a Persian coin. The word seems to be derived from the Persian *dânaka*, which means a portion, more especially the fourth or sixth part. It was probably the sixth of the Persian siglos or shekel of 86 grains, a denomination not to be found in the regular Persian coinage, but which does exist among the coins issued in Cilicia by Persian satraps. It would in this case be somewhat heavier than the Attic obol, 14·6 grains against 11·; and this is just the value assigned to it by Hesychius (*s. v.*). This writer also says that the coin was placed in the mouth of corpses as the fee of Charon (cf. Lucian, *de Luctu*, c. 10; *Mort. Dial.* i. 3, xi. 4, xxii. 1); and in modern excavations small coins have sometimes been found in that place. (Stackelberg, *Gräber der Hellenen*, p. 42; Becker-Göll, *Charikles*, iii. p. 119.) [P. G.]

Danaces of Tarsus. (British Museum.)

DANEISMA (**δάνεισμα**). [FENUS.]

DAPHNEPHO'RIA (**δαφνηφορία**), a festival celebrated every ninth year at Thebes in honour of Apollo, surnamed Ismenius or Galaxius. Its name was derived from the laurel branches (**δάφναι**) which were carried by those who took part in its celebration. A full account of the festival is given by Proclus (*Chrestomath.* p. 11). At one time all the Aeolians of Arne and the adjacent districts, at the command of an oracle, laid siege to Thebes, which was at the same time attacked by the Pelasgians, and ravaged the neighbouring country. But when the day came on which both parties had to celebrate a festival of Apollo, a truce was concluded, and on the day of the festival they went with laurel-boughs to the temple of the god. But Polematas, the general of the Boeotians, had a vision in which he saw a young man who presented to him a complete suit of armour, and who made him vow to institute a festival, to be celebrated every ninth year, in honour of Apollo, at which the Thebans, with laurel-boughs in their hands, were to go to his temple. When, on the third day after this vision, both parties again were engaged in close combat, Polematas gained the victory. He now fulfilled his promise, and walked himself to the temple of Apollo in the manner prescribed by the being he had seen in his vision. And ever since that time, continues Proclus, this custom has been strictly observed. Respecting the mode of celebration, he adds:—At the daphnephoria they adorn a piece of olive-wood with garlands of laurel and various flowers; on the top of it a brazen globe is placed, from which smaller ones are suspended; purple garlands, smaller than those at the top, are attached to the middle part of the wood, and the lowest part is covered with a crocus-coloured envelope. By the globe on the top they indicate the sun, which is identical with Apollo; the globe immediately below the first represents the moon; and the smaller suspending globes are symbols of the stars. The number of garlands being 365, indicates the course of the year. At the head of the procession walked a youth, whose father and mother must be living. Such a youth was, according to Pausanias (ix. 10, § 4), chosen priest of Apollo every year, and called **δαφνηφόρος**: he was always of a handsome figure and strong, and taken from the most distinguished families of Thebes. Immediately before this youthful priest walked his nearest kinsman, who bore the adorned piece of olive-wood, which was called **κωπώ**. The priest followed, bearing in his hand a laurel-branch, with dishevelled and floating hair, wearing a golden crown on his head, a magnificent robe which reached down to his feet (**ποδήρης**), and a kind of shoes called **Ἰφικράτιδες**, from the general Iphicrates, who had first introduced them. Behind the priest there followed a choir of maidens with boughs in their hands and singing hymns. In this manner the procession went to the temple of Apollo Ismenius or Galaxius. It would seem from Pausanias that all the boys of the town wore laurel garlands on this occasion, and that it was customary for the sons of wealthy parents to dedicate to the god brazen tripods, a considerable number of which were seen in the temple by Pausanias himself. Among them was one which was said to have been dedicated by Amphitryon, at the time when Heracles was daphnephorus. This last circumstance shows that the daphnephoria, whatever changes may have been subsequently introduced, was a very ancient festival.

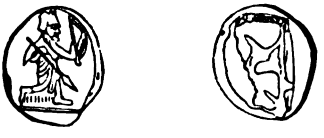
There was a great similarity between this festival and a solemn rite observed by the Delphians, who sent every ninth year a sacred boy to Tempe. This boy went on the sacred road (Plut. *Quaest. Gr.* 12), and returned home as laurel-bearer (**δαφνηφόρος**) amidst the joyful songs of choruses of maidens. This solemnity was observed in commemoration of the purification of Apollo at the altar in Tempe, whither he had fled after killing the Python, and was held in the month of Thargelion (probably on the seventh day). It is a very probable conjecture of Müller (*Dor.* ii. 8, § 4) that the Boeotian daphnephoria took place in the same month and on the same day on which the Delphian boy broke the purifying laurel-boughs in Tempe.

The Athenians seem likewise to have celebrated a festival of the same nature, but the only mention we have of it is in Proclus (*ap. Photium*, p. 987), who says that the Athenians honoured the seventh day as sacred to Apollo, that they carried laurel-boughs and adorned the basket (**κάνεον**: see CANEPHOROS) with garlands, and sang hymns to the god. Respecting the astronomical character of the daphnephoria, see Müller, *Orchom.* p. 215, 2nd edit.; and Creuzer, *Symbol. und Mythol.* ii. p. 160; A. Mommsen, *Heortologie*, p. 271 ff. [L. S.]

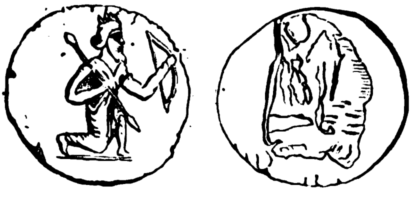
DARDANA'RII, forestallers, who purchased corn to sell at a high price, were severely punished in imperial times (Dig. 47, 11, 6; 48, 19, 37). (Plin. *H. N.* xxx. § 9; Apul. *Apol.* p. 331; Colum. x. 358; Turneb. *Adversar.* ix. 17.) [W. S.]

DARI'CUS or daric stater (**στατὴρ δαρεικός**). This was the name of the gold coin which constituted for centuries, until the time of Alexander the Great, the main part of the coinage of Asia under Persian dominion. Gold darics are to be found in all great museums: their type is on the obverse a crowned archer kneeling, on the reverse a mere rude incuse; their weight is about 130 grains [PONDERA], and their intrinsic value about twenty-two shillings of our money. In allusion to their type they were sometimes called *τόξοται*; whence the saying of Agesilaus (Plut. *Ages.* 15) that he had been driven from Asia by 30,000 archers, when his recall was the result of Persian bribery at Athens and Thebes.

The Greeks (*Etym. Mag.* s. v.; Harpocrat. *s. v.*) connected the word *δαρεικὸς* with the name of Darius Hystaspis, to whom they attributed the first issue of these coins. This derivation, however, is certainly erroneous. Not only is there small likeness in sound between the name of the coin and that of the king in their Persian forms, but we learn from the Book of Ezra (ii. 69, viii. 27) that darics were in circulation in Palestine in the time of Cyrus; and M. Bertin has found the word *dariku* on a tablet of the reign of Nabonidus, which is still earlier (*Trans. Soc. Bibl. Arch.* 1883–4, p. 87: cf. Head, *Historia Numorum*, p. 698). Of course in the cases just cited, though we have a complete proof of the great antiquity of the word *daric*, we cannot be sure whether a fixed weight of gold or a coin is intended. The probability is that the nations of the Euphrates valley did not coin money until they had conquered Lydia and Ionia in the time of Cyrus. Darius, Herodotus tells us, issued gold coin of great fineness (Herod. iv. 166); and this may have caused the Greeks to suppose that he issued the earliest Persian coins. The abundance of the darics in circulation in Asia Minor in the days of Xerxes is shown by the well-known story of Pythius the Lydian (Herod. vii. 28), who possessed four millions of them.



Gold Daric. (British Museum. Actual size.)



Silver Daric. (British Museum. Actual size.)

Beside the gold darics there circulated silver coins of the same shape and bearing the same device of the archer: these were commonly known as the *σίγλος* or shekel, but were sometimes termed silver darics (Plut. *Cimon*, 10). Their weight is about 86 grains; thus, the value of gold in relation to silver being in Asia about thirteen to one [see ARGENTUM], twenty sigli were equivalent to a gold daric. In some parts of Asia, as in Ionia, Cilicia, and Phoenicia, Greek cities and Persian satraps were allowed to issue silver money as they pleased, of any standard and any types which suited them, the mintage of gold only being reserved for the supreme government. As a corroboration of these statements may be cited Herodotus's story, that Aryandes satrap of Egypt incurred the displeasure of Darius by issuing silver coin of greater purity than his own; for it seems that Darius, though excited to jealousy, could not punish Aryandes for this, but had to find another charge against him.

It appears that in the time of Xenophon a daric was a month's pay of a Greek mercenary in Asia (*Anab.* i. 3, § 21).

With the conquest of Persia by Alexander the Great the issue of darics ceased, and their place was taken by the regal gold coins of Alexander, which were a few grains heavier. In the far East, however, there were minted for a time at the Greek cities coins of the same type as the darics, but of double weight, and sometimes bearing Greek letters in the field. These double-darics are not mentioned by extant ancient authors. [P. G.]

Double Gold Daric. (British Museum. Actual size.)

DATA'TIM LU'DERE, DATOR. [PILA.]

DATE'TAE (*δατηταί*), distributors or liquidators, were employed in the winding up of a partnership concern. If the period for which the partnership was to last had not been settled by the articles of association, and any one or more of the partners wished to retire, a division of the capital, fixed and floating, became necessary. This might be effected amicably, without the intervention of the law, even if any of those interested were minors. The guardian might act as he deemed best for his ward, subject of course to a *δίκη ἐπιτροπῆς* on the latter's attaining his majority. But if the parties could not agree, those who insisted on the winding-up might bring an action by *πρόσκλησις* or summons for the appointment of liquidators (*ἐδικάζοντο, οἱ βουλόμενοι τοῖς μὴ βουλομένοις προσκαλούμενοι εἰς δατητῶν αἵρεσιν*, Harpocrat. *s. v. δατεῖσθαι*). The award of these Datetae seems to have been binding on all parties: and Meier conjectures that, unless special circumstances required the appointment of "experts" possessed of technical knowledge, the Datetae were chosen by lot from the public Diaetetae. The similarity of the two names has led, it appears, to their being confounded in some passages of the grammarians. There is also reason to think that Datetae might be appointed in other cases not involving partnership: for instance, in disputes about the division of an inheritance. (Meier, *Att. Process*, p. 377 ff.; Caillemer, 10*me Étude, le Contrat de Société à Athènes*, p. 5.) [W. W.]

DEALBATO'RES, workmen mentioned in the Codex of Justinian (x. 64, 1; cf. *C. I. L.* iv. 222), appear to have been simply whitewashers, and not, as some have supposed, workmen employed to cover walls with a coating of white cement or stucco. *Dealbare* is covering the walls with lime-wash (*calce ex aqua liquida dealbentur*, Vitruv. vii. 4, 3). Cicero speaks of *columnae dealbatae* (*Verr.* i. 55, 145), and Palladius (i. 24, 1) of *dealbati parietes*. See also Cic.

Fam. vii. 29; Suet. *Galb.* 9. (Blümner, *Technol. u. Terminol.* ii. p. 147; iii. p. 180.) [W. S.]

DE'BITOR. [OBLIGATIONES.]

DECADA'RCHIA or **DECA'RCHIA** (*δεκαδαρχία, δεκαρχία*), a council or government of Ten. 1. In Thessaly, established by Philip on his conquest of that country and overthrow of its tyrants in B.C. 352, after a defeat in the previous year (Dem. *Phil.* ii. p. 71, § 22, *τὴν καθεστῶσαν νῦν δεκαδαρχίαν*: the date fixed by Grote, ch. 87, viii. 48). The *τετραρχίαι* of *Phil.* iii. p. 117, § 26, are only in apparent contradiction to this: they refer to four districts only (which however have been differently identified) and not to the whole country (Westermann in Pauly; Hermann, *Staatsalterth.* § 178, 18). 2. Introduced by Lysander at the close of the Peloponnesian war, and established in many Greek cities by the Lacedaemonians, who entrusted to it the whole government of the state under the direction of a Spartan harmost. It always consisted of the leading members of the aristocratical party. (Xen. *Hell.* vi. 3, § 8; Isocr. *Panath.* § 68; Plut. *Lys.* 5 and 13; Grote, ch. 72 *passim.*) The form *δεκαδαρχία* is used by Demosthenes of the Thessalian institution, *δεκαρχία* by Xenophon and Isocrates of the Lacedaemonian. [W. S.] [W. W.]

DECADU'CHI (*δεκαδοῦχοι*), the members of a council of Ten, who succeeded the Thirty in the supreme power at Athens, B.C. 403 (Harpocrat. *s. v.*). They were chosen from the ten tribes, one from each (Xen. *Hell.* ii. 4, §§ 23, 24); two of the Thirty, if not more, were among them, and, like the Thirty, they relied on Spartan assistance against Thrasybulus and the exiles. They remained masters of Athens till the party of Thrasybulus obtained possession of the city and the democracy was restored; and, like the Thirty, were excepted from the amnesty, but allowed to retire into banishment (Lys. *c. Eratosth.* § 54 ff.; Grote, ch. 65, v. 590). [W. S.] [W. W.]

DECA'NUS (Fr. *doyen*, Eng. dean), the head of ten men. The word does not seem to occur before the time of Constantine, and then, except in its ecclesiastical use, only in the Eastern empire. It perhaps took the place of the classical *decurio* at a time when the latter word had acquired its special meaning in the colonies and municipia. We may distinguish three senses.

1. A petty officer commanding a *contubernium* of ten men (Modestus, § 9; Veget. *de Re Mil.* ii. 8 and 13). The latter says that in his time (the end of the 4th century) the name *caput contubernii* had superseded decanus.

2. Officials at the court of Constantinople, but of no higher than menial rank (Cod. Theod. vi. 12; "principis famulationibus adhaerentes," Cod. Just. xii. 27, 2). St. Chrysostom instances the *ὕπαρχος* (= praefectus praetorio) and *δεκανὸς* as at opposite ends of the social scale (*Hom.* xiii. *in Ep. ad Hebr.*) Like other *officiales*, they were under the orders of the MAGISTER OFFICIORUM.

3. The members of a guild or confraternity at Constantinople, charged with the burial of the dead (Cod. Just. i. 2, 4 and 9; Just. *Novell.* xliii. praef.). The institution appears to be a distinctly Christian one, and to have organised what had been previously a matter of casual charity, the decent burial of the poor. These decani are probably identical with the *κοπιᾶται*, so called from their pious labours. (Cf. *Dict Chr. Ant.* s. vv. Copiatae, Decanus.) (Daremberg and Saglio, *s. v.*; Ducange, *s. v.*) [W. W.]

DECAPRO'TI (*δεκάπρωτοι*). In the Greek-speaking cities of the Roman empire a committee of ten, or more rarely of twenty (*εἰκοσάπρωτοι*, *icosaproti*), was chosen from among the decuriones or provincial senators, and charged with the collection of the taxes, for which they were made responsible. These *decaproti* are to be distinguished from the DECEM PRIMI in Rome and the Italian municipia, who were honorary representatives of their curia, but not magistrates. The *decaproti* were, on the contrary, officials charged with very burdensome duties, of which the following extracts from the Digest will give a sufficient idea. The *decemprimatus* is a *munus patrimonii* or "burden upon property" (Dig. 50, 4, 1, § 1); and as such might be imposed upon persons below the age of twenty-five, who were exempt from the *corporale ministerium* or "personal service" (Dig. 50, 4, 3, § 10). They were responsible not merely for the collection of the *tributum*, but for arrears owing by deceased persons (*nam decaproti et icosaproti tributa exigentes et corporale ministerium gerunt, et pro muneribus defunctorum fiscalia onera resarciunt*, Dig. 50, 4, 18, § 26). They were chosen by their fellow-decuriones for a limited term; if annually, as Waddington (on *Inscr.* 1106) and Humbert think, they must have been capable of re-election (*δεκαπρωτεύσας ἔτη ι*' at Thyatira, *C. I. G.* 3490). These officers occur in the island of Amorgos (*C. I. G.* 2264), at Cius in Bithynia (*ib.* 3732), Patara in Lycia (*ib.* 4289), Iotapa in Cilicia (*ib.* 4413, 4415), and in various cities of proconsular Asia (*ib.* Nos. 3201, 3418, 3496, 3498). (Marquardt, *Staatsverw.* i.^{2} 213 f.; Humbert in D. and S., *s. v.*) Compare DECURIONES. [W. W.]

DECASMUS (*δεκασμός*), bribery: strictly meaning a systematic bribery by division into sets of ten (Bekk. *Anecd.* p. 236, 5). There were two actions for bribery at Athens: one, called *δεκασμοῦ γραφή*, lay against the person who gave the bribe; and the other, called *δώρων* or *δωροδοκίας γραφή*, against the person who received it. (Pollux, viii. 42.) These actions applied to the bribery of citizens in the public assemblies of the people (*συνδεκάζειν τὴν ἐκκλησίαν*, Aesch. *c. Timarch.* § 86), of the Heliaea or any of the courts of justice, of the *βουλή*, and of the public advocates (*συνήγοροι*, Lex *ap.* Dem. *c. Steph.* ii. p. 1137, § 26). Demosthenes (*F. L.* p. 343, § 7), indeed, says that orators were forbidden by the law, not merely to abstain from receiving gifts for the injury of the state, but even to receive any present at all.

Actions for bribery were under the jurisdiction of the thesmothetae (Dem. *c. Steph.* l. c.). The punishment on conviction was death (Isocr. *de Pace*, § 50; Aeschin. *c. Tim.* § 87), or payment of ten times the value of the gift received (Dinarch. *c. Demosth.* § 60; *c. Aristog.* § 17). An additional punishment (*προστίμημα*) might be inflicted by the court; as in the case of Demosthenes, who was not only fined 50 talents, but thrown into prison (Plut. *Demosth.* 26; *Vit. X. Oratt.* p. 841 c; Boeckh, *P. E.* p. 384). In this instance the amount of the penalty seems to have been fivefold, not tenfold, the amount of the bribe. Atimia followed as a matter of course on conviction, and was not left, like other punishments, to the discretion of the court (Dem. c. *Mid.* p. 551, § 113; Aeschin. c. *Ctes.* § 232). On the analogy of the Roman *decuriae*, and the phrase Λύκου δεκὰς applied to bribery in Harpocration, compare Sandys on Dem. c. *Steph.* l. c.; Meier, *Att. Process*, p. 150. [W. S.] [W. W.]

DECASTY'LOS. [TEMPLUM.]

DE'CATE (δεκάτη). [DECUMAE.]

DECEMJUGIS, sc. CURRUS. [CURRUS, p. 579 *b*.]

DECE'MPEDA, a pole ten feet long, used by the agrimensores in measuring land. (Cic. *pro Mil.* 27, § 74; *Phil.* xiv. 4, § 10; Hor. *Carm.* ii. 15, 14.) Thus we find that the agrimensores were sometimes called *decempedatores* (Cic. *Phil.* xiii. 18, § 37). The decempeda was in fact the standard land-measure. [ACTUS; AGRIMENSORES.] [W. S.]

DECEM PRIMI. 1. The Ten First of the Roman Senate were originally the heads of the decuries into which the senate of one hundred was divided. They took the office of interrex by turns, and are mentioned in that capacity at the first interregnum, on the death of Romulus (Liv. i. 17; cf. Dionys. ii. 57). When subsequently the representatives of the Tities and Luceres were admitted into the senate, the Ramnes with their decem primi retained for some time their precedence over the other two tribes, and gave their votes first (Plut. *Num.* 3; Dionys. ii. 58, iii. 1). The first in rank among them was the *princeps senatus*, who was appointed by the king, and was at the same time *custos urbis* (Dionys. ii. 12; J. Lydus, *de Mens.* i. 19). In the early republican period the decem primi seem to have been the consulars of the greater houses in order of seniority, then those of the lesser houses. The Ten First, who as ambassadors from the patricians concluded the treaty with the plebs on Mons Sacer, were all consulars (Niebuhr, *Rom. Hist.* i. 305, 340, ii. 115 f., E. T.). Soon after the commencement of the republic they lost the exclusive privilege of the interregnum [INTERREX].

When the censors acquired the power of nominating the senators from among qualified persons, the decem primi were simply the first ten named by them: this choice was usually exercised according to merit, and a man who was generally acknowledged as the first Roman of his time was tolerably certain to become *princeps senatus*, and to retain the dignity for life. Valerius Corvus, the two Fabii Maximi, Rullianus and Cunctator, L. Aemilius Paullus, and the two Africani, all seem to have enjoyed this honour. The censors were often partial and passionate in the exercise of their almost irresponsible authority; but even the memorable quarrel between Livius Salinator and Claudius Nero did not prevent their giving the first place in the senate to Fabius Cunctator (Liv. xxix. 37, § 1).

2. In municipal senates we constantly find a committee, generally of ten, sometimes of a greater or less number, chosen (apparently by the decurions themselves) out of the larger body. In Italy this institution can be traced very far back: we find it in Latium as early as the great Latin war of 340 B.C. (Liv. viii. 3, § 8); in the disaffected Latin colonies at the time of the second Punic war (id. xxix. 15, § 5); at Ameria in Cicero's time (*pro Rosc. Am.* 9, § 25); Antonius, quartered in Campania, "evocavit litteris e municipiis decemprimos et IIII. viros" (*ad Att.* x. 13 *init.*). Beyond Italy we find decem primi at Centuripae (*in Verr.* ii. 67, § 162), quinque primi at Agyrium (*ib.* iii. 28, § 68), quindecim primi at Massilia (Caes. *B. C.* i. 35).

3. Wherever there was an *ordo*, Roman organisation seems to have involved the appointment of ten, or sometimes six, primi. Below the senatorian rank we find them among *apparitores*, *lictores*, and *praecones* (Mommsen, *Staatsr.* i.^{2} 328, 340, 348); in priestly colleges (*C. I. L.* vi. 2010; cf. the *seviri* under AUGUSTALES, p. 258 *b*); and among the domestici or body-guards of the later empire (Cod. Theod. vi. 24). The notion of so late a writer as J. Lydus (*de Magistr.* i. 46), that legionary officers were anciently so called, can hardly be accepted in default of better evidence. (Marquardt, *Staatsverw.* i.^{2} 213 f.; Humbert, in D. and S.) [W. W.]

DECEMRE'MIS. [NAVIS.]

DECE'MVIRI, the Ten Men, the name of various magistrates and functionaries at Rome.

1. DECEMVIRI CONSULARI IMPERIO LEGIBUS SCRIBENDIS were ten persons who were appointed to draw up a code of laws, and to whom the whole government of the state was entrusted. As early as B.C. 462, a law was proposed by C. Terentilius Arsa, that five commissioners should be appointed for drawing up a body of laws; but this was violently opposed by the patricians (Liv. iii. 9); and it was not till after a struggle of nine years that the patricians consented to send three persons to Greece, to collect such information respecting the laws and constitutions of the Greek states as might be useful to the Romans (Liv. iii. 31). They were absent a year; and on their return, after considerable dispute between the patricians and plebeians, ten commissioners were appointed with the title of "decemviri legibus scribendis," to whom the revision of the laws was committed. No other magistrates were appointed for the year: even the tribuneship was abandoned. It is clear that the legislative commissioners were to have supreme power; and the view of Mommsen (*Hist.* i. 290) is very probable, that the purpose of the whole scheme was to substitute henceforward for tribunician intercession a limitation of the consular powers by written law. There is reason to doubt Livy's statement that plebeians were admitted to be ineligible: but in fact all of the ten were patricians.

The decemviri entered upon their office at the beginning of B.C. 451. They consisted of App. Claudius and T. Genucius Augurinus, the consuls elect, as Niebuhr conjectures, of the praefectus urbi, and of the two *quaestores parricidii*, and of five others chosen by the centuries. They discharged the duties of their office with diligence, and dispensed justice with impartiality. Each administered the government day by day in succession as during an interregnum; and the fasces were only carried before the one who presided for the day. (Liv. iii. 33.) They drew up a body of laws, distributed into ten sections; which, after being approved of by the senate and the comitia centuriata, were engraven on tables of metal, and set up in the forum on the rostra in front of the senate-house.

On the expiration of their year of office, all parties were so well satisfied with the manner in which they had discharged their duties, that it was resolved to continue the same form of government for another year; more especially as some of the decemvirs said that their work was not finished. Ten new decemvirs were accordingly elected, of whom Appius Claudius alone belonged to the former body (Liv. iii. 35; Dionys. x. 53); and of his nine new colleagues, at least three, and probably five, were plebeians. (Mommsen, *Forsch.* i. 95: Dionys. x. 58 regards only three as plebeians; Livy, iv. 3, 17, carelessly speaks of all as patricians.) These magistrates framed several new laws, which were approved of by the centuries, and engraven on two additional tables. But, according to the traditional account, they used their power in a most tyrannical manner. Each was attended by twelve lictors, who carried not the rods only, but the axe, the emblem of sovereignty. They committed all kinds of outrages upon the persons and property of the plebeians and their families. When their year of office expired, they refused to resign or appoint successors. This conduct was not strictly illegal, but unquestionably it was against the spirit of the constitution, which prescribed an annual tenure of office; and they were regarded not as private citizens usurping powers, but as magistrates misusing their authority (Mommsen, *Staatsr.* ii.^{2} 696). It is a probable conjecture that the unconstitutional action was connived at, as an indirect means of suppressing the tribuneship; but there is much also to be said for Mommsen's view, that Appius was endeavouring by the help of a portion of the plebs to secure despotic power. At length, the unjust decision of App. Claudius, in the case of Virginia, which led her father to kill her with his own hands to save her from prostitution, occasioned an insurrection of the people. The decemvirs were in consequence obliged to resign their office, B.C. 449; after which the usual magistracies were reestablished. (Niebuhr, *Hist. of Rome*, vol. ii. pp. 309–356; Arnold, *Hist. of Rome*, vol. i. pp. 250–313; Becker, *Römisch. Alterthüm.* vol. ii. part ii. pp. 126–136; Mommsen, *Hist.* i. 289 ff.; Herzog, *Röm. Staatsverf.* i. 177 ff.; Schwegler, *Röm. Gesch.* iii. 1 ff.)

The ten tables of the former, and the two tables of the latter decemvirs, together form the laws of the Twelve Tables, of which an account is given in a separate article. [LEX DUODECIM TAB.]

2. DECEMVIRI LITIBUS OR STLITIBUS JUDICANDIS were magistrates forming a court of justice, which took cognizance of civil cases. Pomponius (*de Orig. Jur.* Dig. 1, tit. 2, s. 2, § 29) says that they were instituted in the year B.C. 292, the time when the *triumviri capitales* were first appointed. This statement Mommsen (*Staatsr.* ii.^{2} 592) decidedly rejects. Livy (iii. 55) mentions *iudices decemviri* as a plebeian magistracy very soon after the legislation of the Twelve Tables; and while Niebuhr (*Hist. of Rome*, vol. ii. p. 324, &c.) refers these decemvirs to the decemviral magistrates, who had shortly before been abolished, and thus abides by the account of Pomponius, Göttling (*Gesch. der Röm. Staatsv.* p. 241, &c.) believes that the decemvirs of Livy are the *decemviri litibus judicandis*, and this view is accepted by Mommsen. He shows however that the office cannot have been limited to plebeians, for we find it held by Cn. Scipio, the praetor of B.C. 140, by C. Julius Caesar, the father of the dictator, and by another patrician. This office does not appear to have been regarded as a magistracy before the middle of the seventh century of the city. After this time the decemvirs appear to have been elected in the *comitia tributa*. Their function was to decide in private suits (Cic. *de Leg.* iii. 3, 6), and especially in *causae liberales*, suits affecting personal freedom, a fact which makes it probable that they were instituted after the downfall of the decemvirs. In the time of Cicero the office still existed, and the proceedings in it took place in the ancient form of the sacramentum. (Cic. *pro Caecin.* 38, 97; *pro Dom.* 29, 78.) Augustus transferred to these decemvirs the presidency in the courts of the centumviri. (Suet. *Aug.* 36; Dio Cass. liv. 26.)

3. DECEMVIRI SACRIS FACIUNDIS, sometimes called simply DECEMVIRI SACRORUM, were the members of an ecclesiastical collegium, and were elected for life. Their chief duty was to take care of the Sibylline books, and to inspect them on all important occasions, by command of the senate. (Liv. vii. 27, xxi. 62, xxxi. 12.) Virgil (*Aen.* vi. 73) alludes to them in his address to the Sibyl—"Lectos sacrabo viros."

Under the kings the care of the Sibylline books was committed to two men (*duumviri*) of high rank (Dionys. iv. 62), one of whom, called Atilius or Tullius, was punished by Tarquinius, for being unfaithful to his trust, by being sewn up in a sack and cast into the sea. (Dionys. *l. c.*; Val. Max. i. 1, § 13.) On the expulsion of the kings, the care of these books was entrusted to the noblest of the patricians, who were exempted from all military and civil duties. Their number was increased in the year 367 B.C. to ten, of whom five were chosen from the patricians and five from the plebeians. (Liv. vi. 37, 42.) Subsequently their number was still further increased to fifteen (*quindecemviri*); but at what time is uncertain. As, however, there were decemviri in B.C. 114 (Val. Max. viii. 15, 12), in B.C. 98 (Obsequens, 47), and in B.C. 82, when the Capitol was burnt (Dionys. *l. c.*), and we read of quindecemviri in the time of Cicero (*ad Fam.* viii. 4), it appears probable that their number was increased from ten to fifteen by Sulla, especially as we know that he increased the numbers of several of the other ecclesiastical corporations. Julius Caesar added one more to their number (Dio Cass. xlii. 51); but this precedent was not followed, as the collegium appears to have consisted afterwards of only fifteen.

It was also the duty of the decemviri and quinqueviri to celebrate the games of Apollo (Liv. x. 8), and the secular games (Tac. *Ann.* xi. 11; Hor. *Carm. Saec.* 70). They were, in fact, considered priests of Apollo, whence each of them had in his house a bronze tripod dedicated to that deity. (Serv. *ad* Verg. *Aen.* iii. 332.)

So long as there were ten members of the college there were two *magistri*, one a patrician, one a plebeian; when the number was increased to fifteen, the *magistri* were five in number. (Mommsen, *Res Gestae divi Aug.* p. 64: cf. Tac. *Ann.* vi. 12; Marquardt, *Röm. Alt.* vi. 364 ff.)

4. Decemviri Agris Dividundis were sometimes appointed for distributing the public land among the citizens. (Liv. xxxi. 4; xlii. 4.)

5. Decemviri were occasionally appointed in the earlier days of the republic as commissioners to settle terms of peace. (Mommsen, *Röm. St.* ii.^{2} 624, 665, 672.) [W. S.] [A. S. W.]

DECENNA'LIA or **DECE'NNIA**, a festival celebrated with games every ten years by the Roman emperors. This festival owed its origin to the fact that Augustus refused the supreme power when offered to him for his life, and would only consent to accept it for ten years; and when these expired, for another period of ten years, and so on to the end of his life. The memory of this comedy, as Gibbon has happily called it, was preserved to the last ages of the empire by the festival of the *Decennalia*, which was solemnised by subsequent emperors every tenth year of their reign, although they had received the imperium for life, and not for the limited period of ten years. (Dio Cass. liii. 16, liv. 12, lviii. 24, lxxvi. 1; Trebell. Poll. *Salonin.* 3, *Gallien.* 7. Cf. Eichstaedt, *Opusc. Acad.* 208 ff.) [W. S.] [A. S. W.]

DECIMA'TIO was the selection, by lot, of every tenth man for capital punishment, when any number of soldiers in the Roman army had been guilty of certain military offences; usually cowardice, loss of standards in action, or mutiny. This punishment is not often mentioned in the early times of the republic; but the case of the consul App. Claudius and his mutinous army, B.C. 471, is recorded both by Livy (ii. 59) and Dionysius (ix. 50); the latter speaks of it as customary (πάτριος) for the offences named. Polybius notices it as usual when troops had given way to panic; the remainder were punished by having rations of barley instead of wheat served out to them, and by being made to lodge outside the camp (vi. 38). When however Crassus employed decimation in the servile war of Spartacus, he is described as having revived an ancient punishment which had long fallen into disuse (Plut. *Crass.* 10; cf. App. *B. C.* i. 118). In the civil wars it once more became common (Dio Cass. xli. 35, xlviii. 42, xlix. 27, 38; Suet. *Aug.* 24: cf. Cic. *pro Cluent.* 46, § 128; Frontin. *Strat.* iv. 1, § 37), and was retained under the empire (Suet. *Galb.* 12; Tac. *Hist.* i. 37). Sometimes only the twentieth man was punished (*vicesimatio*), or the hundredth (*centesimatio*). (Capitol. *Macrin.* 12; Frontin. *l. c.* § 35. Cf. Marquardt, *Staatsverw.* ii. 553.) [W. S.] [W. W.]

DECIMATRUS. [Quinquatrus.]

DECLAMA'TIO, a term which came into use first in Cicero's time (*Brut.* 90, 310: "commentabar declamitans, sic enim nunc loquuntur") for the rhetorical exercises, employed in the training of orators. These were of two kinds: (*a*) *suasoriae;* (*b*) *controversiae*. The former were based upon some historical or legendary theme, and the pupil was required to treat some problem arising thence, as, for instance, whether Sulla should have resigned his dictatorship (Juv. i. 16), or Cato have committed suicide (Pers. iii. 45). These were regarded as suitable for beginners, as not requiring any wide or minute knowledge of law (Tac. *Dial.* 35). The latter dealt with legal questions, and took the form of the discussion of an imaginary case, such as might arise in the courts. Marcus Seneca, the father of the philosopher, has left seven examples of *suasoriae*, thirty-five of *controversiae*, as well as ten books of *excerpta controversiarum*, which contain many interesting specimens of the kind of questions thus treated. The practice at first had a real value, and Cicero represents himself as continuing it for a great part of his life (*Tusc.* i. 4, 7), although in his later years he preferred philosophical topics. But with the decline of free speech, the exercise sank into a mere occasion for display (Quint. ii. 7, 1). The themes were hackneyed or extravagant, the language affected and full of strained antithesis and epigram (Quintil. viii. 3, 76; 5, 14, &c.); and what should have been a preparation for real life became an end in itself. The rage for declamation was at its height during the first century of the empire. Quintilian's sober sense did much to check it; and though the practice did not wholly die out of the schools, it seems to have been confined within more reasonable limits. (Cf. Bernhardy, *Röm. Lit.* § 53; and Mayor's notes on Juv. i. 16, vii. 150–170. Some representations from works of art of boys declaiming before their teachers are given in Daremberg and Saglio, vol. ii. pp. 34, 35.) [A. S. W.]

DECOCTOR, a bankrupt (Plin. *H. N.* xxxiii. § 133), was used in popular language to signify any spendthrift. The Romans were a frugal people, and spendthrifts were not only condemned by public opinion (Catull. xli. 4; Cic. *Cat.* ii. 3, 5; Sen. *Ep.* 36, 5; *de Ben.* iv. 26, 3), but punished by the censors with the *nota censoria*, which carried with it certain legal disabilities. [Censor, p. 401 *b*.] By the Lex Roscia (B.C. 67) a certain place in the theatre was assigned to spendthrifts (Cic. *Phil.* ii. 18, 44; Juv. iii. 153). According to Spartianus, Hadrian ordered that spendthrifts should be flogged ignominiously (*catomidiari*) in the amphitheatre and turned out (Spart. *Hadrian.* 18). The Roman law against persons who would not pay borrowed money was very severe, and is explained under Nexum. Its severity was mitigated by the Bonorum Cessio. By a constitution of the emperors Valentinian, Theodosius, and Arcadius, any decurio who had dissipated the funds of the city (*decoctor pecuniae publicae*) was to be scourged (*plumbatarum ictibus*, Cod. Just. x. 31, 40; Humbert in Daremberg and Saglio, *s. v.*). [W. S.]

DECRE'TUM seems to mean that which is determined in a particular case after examination or consideration. It is thus applied to a resolution of the senate.

A *decretum* of the senate would seem to differ from a *senatusconsultum*, in that it was limited to the special occasion and circumstances instead of being of general application. But this distinction in the use of the two words, as applied to an act of the senate, is not consistently observed.

Cicero (*ad Fam.* xiii. 56) opposes *edictum* to *decretum*, between which there is in this passage apparently the same analogy as between a *consultum* and *decretum* of the senate.

Decretum is the technical term for the decision and order which a magistrate gives in a particular case after an inquiry into its circumstances (*causae cognitio*). A *judex* is said *condemnare* not *decernere;* the latter word being appropriate in judicial proceedings to a magistrate who has *jurisdictio.* A *decretum,* as one of the kinds of imperial constitutions, was a judicial decision in a case before the emperor in his capacity of supreme magistrate; cases were brought into the imperial court (*consistorium principis*) by *supplicationes* or *provocationes* of suitors.

The interpretations of law laid down by the emperor in his *decreta* were, as a rule, binding on all courts in subsequent cases (*tuis decretis, imperator, exempla publice valitura in perpetuum sanciuntur.... Tu, ubi quid in singulos decernis, ibi universos exemplo adstringis.... Quare si hoc decretum tibi proconsulis placuerit, formam dederis omnibus omnium provinciarum magistratibus, quid in ejusmodi causis decernant,* Fronto *ad M. Caesarem,* i. 6). Thus the emperor by his *decreta* could make new laws. (Dig. 1, 4, 1, § 1.) Paulus wrote a work in six books on *decreta,* under the title "Imperiales Sententiae in cognitionibus prolatae." (Savigny, *Syst.* 1, §§ 23, 24; Puchta, *Inst.* 110–112; Mommsen, *Staatsrecht,* ii. pp. 867–873.) [E. A. W.]

DE'CUMAE (δεκάτη), tithes or tenths.

I. Greek. The Greek writers use the word δεκάτη somewhat loosely, applying it indiscriminately to a tithe of agricultural products and to any tax of 10 per cent. on incomes or commodities. In the heroic age the τεμένη or domain lands by which royalty was supported must unquestionably have paid rents in kind, but whether a fixed or a proportionate quantity of produce is not recorded. The statement that the kings also exacted a tithe (of their subjects' lands is meant, for the amount of rent was of course much higher on their own) is accepted with some qualification by Schömann (*Antiq.* i. 33, E. T.); but it rests only on a pretended letter of Pisistratus to Solon (*ap.* Diog. Laert. i. 53), which, as Grote with his strong common sense had already remarked, "ought not to be considered as proving anything" (ch. 30, iii. 92 n.). Under the Spartan constitution the subject classes paid a fixed amount of corn and other produce, calculated on an average crop, the Helots to their masters, the Perioeci to the state (Müller, *Dor.* iii. 3, § 1); so that all the risks of bad seasons fell upon the cultivators. Tithes were, however, exacted from very early times in the despotically governed East, by Persian satraps as by Turkish pashas at the present day; and in the age of the tyrants were doubtless not unusual in Greece. Cypselus vowed to dedicate the whole property of the Corinthians to Zeus if he made himself master of the city; in order to fulfil his vow without ruining them, he compelled them to make a return (ἀπογράψασθαι), and took a tithe annually for ten years ([Aristot.] *Oecon.* ii. 2). A tithe of corn at Cranon in Thessaly, of unknown date, is mentioned by Polyaenus (ii. 34). The particular instance of a tithe on the produce of the land (τῶν γιγνομένων) imposed by Pisistratus and reduced to an εἰκοστὴ by his sons is accepted by Boeckh and his recent editor Fränkel (*P. E.* p. 327 = *Sthh.*³ i. 398), as well as by historians, Grote only excepted. But, setting aside the spurious letter of Pisistratus already referred to, this statement appears to be a strained inference from the language of Thucydides (vi. 54). The latter says nothing about a δεκάτη: but the words he applies to the Pisistratids, εἰκοστὴν μόνον πρασσόμενοι τῶν γιγνομένων, have been almost uniformly explained (as by Arnold and Classen) of a halving of the tithe levied by Pisistratus himself. The tradition was, however, that the sons were more luxurious, and consequently more oppressive to the people, than their father (Grote, *l. c.*); and all probability is in favour of Caillemer's conjecture that Pisistratus had limited his exactions to the same amount. The word μόνον will then imply, not "as compared with their father," but "as compared with tyrants in general."

Republican feeling was, however, both at Athens and elsewhere, strongly against this form of taxation as applied to the lands of fully enfranchised citizens (Boeckh, *l. c.*, and his general remarks at the beginning of Book iii.; Fränkel, n. 558). Thus Demosthenes declared that the Athenians had not won their glorious renown by "tithing themselves" (*c. Androt.* p. 617, § 77); where δεκατεύοντες may contain an allusion to the doubling of the εἰκοστὴ by Androtion's exactions, but is undoubtedly used for excessive taxation in general (cf. *Class. Rev.* i. 150). Two other descriptions of tithe, among free Greeks, remain to be considered.

1. *Tithes due to temples.*—These were sometimes strictly voluntary offerings; thus the ἀπαρχαὶ or "first-fruits" might amount to a tithe, like the δεκατηφόροι ἀπαρχαὶ of Callimachus (*Hymn. in Del.* 278) paid to the Delian Apollo by the Cyclades, and even by more distant countries. Again, a proprietor might charge his land in perpetuity with the payment of tithe to a specified temple, and by so doing he imparted to the whole estate a quasi sacred character, like that of church lands in modern times. This, as Caillemer has well pointed out, might be done from prudential motives, in order to place it under the shelter of religious sanctions in times of war and insecurity. The best known instance of this kind is that of Xenophon, who built a temple of Artemis on his estate at Scillus near Olympia, established a festival, and endowed it with the tithe of all produce, including game. He not only kept up the sacrifices during his lifetime (δεκατεύων . . . θυσίας ἐποίει), but by an inscription on a stele he bound all future occupiers of the estate to do the same "on pain of the displeasure of the goddess;" the whole transaction having been carried out under the advice of the Delphic oracle. The only sanction, it is clear, was the religious sentiment (Xen. *Anab.* v. 3, §§ 9–13). An inscription found in Ithaca is identical with that given in the *Anabasis,* and shows that some reader of Xenophon in later times had followed his example in building a temple and endowing it with tithes.

But such tithes were not always voluntary, or binding on the conscience only; they were sometimes imposed as a badge of conquest. Thus at the time of the Persian war the confederate Greeks made a vow, by which all those who had joined the enemy without compulsion were condemned to pay tithes to the god of

Delphi (Herod. vii. 132); and as the Thebans were the greatest offenders, the proverb arose ἐλπὶς ἦν δεκατευθῆναι τὰς Θήβας (Xen. *Hell.* vi. 3, § 20; 5, § 35). At Athens, the δεκάται τῆς θεοῦ (Dem. *c. Timocr.* p. 738, § 120) comprised a tithe of the spoils of war (*ib.* p. 741, § 129; Lys. *c. Polystrat.* § 24); of certain fines, *e.g.* those imposed for the extirpation of olive-trees (Lex *ap.* Dem. *c. Macart.* p. 1074, § 71); and either of all or a large proportion of confiscated property, notably in cases of treason or κατάλυσις τοῦ δήμου (Lex *ap.* Andoc. *de Myst.* § 96; Xen. *Hell.* i. 7, § 10, the six generals after Arginusae; *ib.* § 20, the famous psephisma of Cannonus [cf. Grote, ch. 64, v. 524 n.]; *Vit. X. Oratt.* p. 834 a, the decree against Antiphon and Archeptolemus). Boeckh, to whom these details are due, adds that "the state of Athens owned the tithes of public demesnes, and let them in farm" (*P. E.* p. 328 = *Sthh.*^{3} i. 399): this statement, though passed without remark by his recent learned editor, we must venture to think erroneous. There is apparently a confusion between "rent" and "tithe." In the earlier chapter on the rents of the state (book iii. ch. 2) he seems to imagine, as intermediate between private property which admittedly paid no tithe, and public property which of course paid a rent to the state, certain properties which paid a tithe by way of quit-rent, "probably because they had been originally public property" (*P. E.* p. 304 = *Sthh.*^{3} i. 373). That the state should have granted away its rights on such terms seems to us contrary to the simplicity of Attic land law, which knows no "emphyteutic" or "copyhold" tenures. When we come to examine the evidence on which Boeckh relies, we find that it is limited to a single inscription (*C. I. G.* 76 = *C. I. A.* 32). This is one of those discussed in his Appendix: the words on which the question turns, καὶ τὰ ἐκ τῆς δεκάτης, ἐπειδὰν πραθῇ, he explains as "the proceeds of the tithe when *it* is sold (to the tax-farmers)." The δεκάτη on the navigation of the Hellespont and Bosporus (*Erpressungszoll von Byzanz*) cannot, he justly argues, be intended: hence he is led to assume the existence of a tithe of which we have no further account (*Sthh.*^{3} ii. 44). It appears to us that the correct rendering of the above words is "the proceeds of the tithe, when *they* are sold," and that the reference is to the tithe of confiscated property, sold by the Poletae [DEMIOPRATA].

2. *Transit dues.*—A δεκάτη or tenth of a different kind was the arbitrary exaction imposed by the Athenians on the cargoes of all ships sailing into or out of the Pontus. This is justly called by Boeckh "a mere extortion" (*P. E.* 323 = *Sthh.*^{3} i. 396); it was an incident of their maritime supremacy, with which it rose and fell. History first mentions it in B.C. 410 (Xen. *Hell.* i. 1, § 22); Caillemer infers from two inscriptions (*C. I. A.* i. 32 and 40) that it may have already existed in the early years of the Peloponnesian War: but these inscriptions most likely refer, as we have just seen, to another kind of δεκάτη. After Aegospotami this tax naturally came to an end; with the revived naval empire it was re-established by Thrasybulus about 390 (Xen. *op. cit.* iv. 8, §§ 27, 31); probably again lost by the peace of Antalcidas in 387; in the time of Demosthenes we find it again flourishing whenever Athenian commanders were strong enough to enforce it (*c. Lept.* p. 475, § 60; *c. Aristocr.* p. 679, § 177; *c. Phorm.* p. 917, § 34). A long time afterwards, B.C. 224, the Byzantines revived this claim, and so became involved in war with the Rhodians (Polyb. iv. 38 ff.). The tax was now called διαγώγιον (Polyb. iv. 52, § 5) or παραγώγιον (*ib.* 47, § 3); to compel passing ships to pay it is παραγωγιάζειν (*ib.* 44, § 4 [here Polybius mentions the Athenian practice under Alcibiades], 46, § 6). It may be observed that Xenophon speaks only of dues exacted from ships which came out of the Pontus, Polybius of those going to the Pontus; Boeckh rightly combines the two accounts, and concludes that the toll was levied in both directions.

These taxes, like many others, were farmed out by the Athenians: the contractors were called δεκατῶναι (Anaxil. *ap.* Poll. ix. 29); the δεκατηλόγοι were probably collectors under them, as Demosthenes applies this name to the *employés* of Charidemus at Sestos (*c. Aristocr.* l. c.); the title δεκατευταὶ seems to have included both (Harpocrat., *Etym. M.*, s. v.). These are to be distinguished from the πεντηκοστολόγοι and ἐλλιμενισταὶ of more legitimate import duties, though Schömann (*Antiq.* i. 450, E. T.) classes them together. The special custom-house for these tithes was δεκατευτήριον (Xen. *Hell.* i. 1, § 22): Fränkel rightly insists that there were no such places in Attica, where "tithes are scarcely mentioned" (n. 558). (Most of the above materials are in Boeckh; but in critical treatment Caillemer (*ap.* D. and S., s. v. *Dekaté*) is decidedly superior. The latter does not notice the titheable lands in Attica, inferred by Boeckh from the single inscription; and, it may be presumed, does not believe that they existed.)

II. ROMAN. The nature of the Roman state or domain land (*ager publicus*) has been fully explained under AGRARIAE LEGES (pp. 50, 51). We may here briefly repeat that these lands were the confiscated territory of conquered enemies; that they were dealt with in four different ways, either sold by the quaestor (*agri quaestorii*), granted in full (quiritarian) ownership to Roman citizens (*agri dati adsignati*), given back to their former proprietors (*agri redditi*), or lastly, retained in the ownership of the state as national property, but let to individuals in occupation (*possessio*), i.e. subject to a right of re-entry. On the three former classes of land no rent was imposed: the last paid (or were supposed to pay) a rent called *vectigal*, and hence were known as *agri vectigales*. The facts that the *ager publicus* passed almost wholly into the hands of the patricians, and that the possessory owners, in spite of agrarian laws and Licinian rogations, practically succeeded in ousting the state from its proprietary rights, belong to the civil history of Rome, and need not be treated here: the legal aspects of these questions will be found under LEX LICINIA, SEMPRONIA, and THORIA.

What was the amount of the vectigal? Many modern writers, following Niebuhr (*Hist. Rom.* ii. 138), say that it was a tenth, and consequently apply the name decumae to the (often withheld) rents of the *ager publicus* in Italy. But in fixing this amount Niebuhr seems to have been guided by the analogy of Eastern countries, especially of the Hebrews. His only direct authority is a passage of Appian (*Bell. Civ.* i. 7), already quoted at length under AGRARIAE LEGES (p. 52 *b*); and even this refers, not to the conquered lands in general, but to those which were uncultivated when taken over. Speaking of the same period, Plutarch calls the *vectigal* ἀποφορὰν οὐ πολλήν (*Tib. Gracch.* 8). Livy, in his many references to the early struggles for the enforcement of this rent, never once applies the term *decumae* to it: he only uses the word in the two senses which we shall notice further on. The same may be confidently asserted of the classical writers in general. There can be no doubt that the amount is really unknown; and Marquardt, while treating of the *ager publicus* and the *vectigal*, very judiciously passes this point over in silence (*Staatsverw.* ii. 147–156). Further questions respecting this source of revenue will be treated under its proper title, VECTIGAL: see also SCRIPTURA.

In the provinces the case was different. The Romans took over the tithes they found already existing in conquered countries; and we find the system at once applied to the earliest constituted provinces, Sicily, Sardinia (including Corsica), and the Hispaniae. In three successive years (B.C. 191–189), a double tithe (*alterae decumae*) was required from Sicily and Sardinia, and ordered to be sent to the seat of war in the East (Liv. xxxvi. 2; xxxvii. 2, 50). The second tenth was however paid for (*frumentum emptum:* see below). On the other hand, Spain as a less fertile country, after a period of oppression by its Roman governors, was let off with a *vicesima* and otherwise eased of its burdens (B.C. 171, Liv. xliii. 2). Towards the end of the republic the system was so far modified, that we find the decumae *eo nomine* existing only in two provinces, Sicily and proconsular Asia. In these it took the place of the STIPENDIUM (Marquardt, *Staatsverw.* ii. 181 ff.).

It was the legal doctrine that the *dominium* or ownership of all provincial land was in the Roman people, or, in the language of imperial times, in the Roman people or the Caesar (Gaius, *Inst.* ii. 7; cf. Long's Cicero, vol. i. [*Verrines*], p. 273; Marquardt, *Staatsverw.* ii. 177). On this was based the system of taxation concisely described by Cicero in his great speech *de Frumento* (*in Verr.* iii. 6, § 12), and elucidated by Savigny (*Verm. Schriften*, ii. 97, *ap.* Long *l. c.*). "All the provinces except Sicily," says Cicero, "pay either a fixed land-tax (*aut impositum est vectigal certum quod stipendiarium dicitur, ut Hispanis et plerisque Poenorum, quasi victoriae praemium ac poena belli*); or variable duties, that is tenths or other quotas of produce, which last are let at Rome by the censors" (*aut censoria locatio est, ut Asiae, lege Sempronia:* in other words, the decumae of Asia, on which see below). "Sicily, on the other hand, has the following constitution: two *civitates foederatae* and five others *sine foedere immunes ac liberae* are tax-free; a few which have come under the Roman dominion by conquest, lost the ownership of their land, but received it back on condition of paying certain dues, which are let (that is, they have the same terms as other provinces); all the rest of the land is subject to the payment of decumae, yet so that the law of Hiero is observed." These decumae were of wheat and barley, wine, oil, and *fruges minutae*, i.e. vegetables, among which beans are especially mentioned (Marquardt); they were paid in kind, and, like modern English tithes, were a burden on the land only, not on the person (*in Verr.* iii. 86, § 199). The law of Hiero (*lex Hieronica*) is explained a little further on (6, § 14); the tithes of each city were to be let separately, at Syracuse and nowhere else, and the citizens were to have the option of bidding for them so as to keep their affairs in their own hands; they were let according to the estimates (*professiones*, 49, § 102) by the people themselves of the cultivated area of each territory. This law was dear to the Sicilians as inherited from a popular king (§ 15): it was fair both to the *decumani*, as the farmers of the tithe were called, and to the *aratores* who paid it (8, § 20). Just before the praetorship of Verres, *i.e.* in B.C. 74, an attempt had been made to transfer the lettings to Rome; but it had been successfully resisted, and no one except Verres had violated the *lex Hieronica*. Whatever corn was wanted in addition, was paid for by the state: this was, in the first place, the *frumentum in cellam* or *frumentum aestimatum*, for the support of the praetor and his officials (*cohors*), and for which money was granted him by way of "table allowance" (81, § 188 ff.); next, a second decuma if required by the senate or Roman people, of which we have seen examples (*frumentum emptum*, 70, § 163 ff.); lastly, if still further requisitions were made by the government, *frumentum imperatum*, for which a higher price was paid than for the *emptum*. From this last burden no cities were exempt (*ibid.*). All these had been perverted by Verres into engines of extortion. A single example will suffice; he began with an edict *quantum decumanus edidisset aratorem sibi dare oportere, ut tantum orator decumano dare cogeretur* (10, § 25). These *decumani* were the most important, in this province at least, of the *publicani* or farmers of the revenue; they had been in league with Verres in his acts of oppression, and had secretly agreed to destroy all compromising records (*in Verr.* ii. 71, § 173). The temptation on both sides must be admitted to have been great, in the case of rulers less profligate than Verres. It was easier for the governor to share the illicit gains of the *publicani* than to resist them effectually at the risk of incurring their vengeance on laying down his office; and the state, under the senatorial *régime*, was powerless against the two combined. The imperial system was the only possible way to avert the ruin of the provinces.

The agrarian law of C. Gracchus, B.C. 123, the first legal provision for selling corn to the poor of Rome under cost price, had looked to the province of Asia as a main source of supply; and from that time till the year of Pharsalia (B.C. 48) that province paid decumae, with the difference however that the lettings were by the censors at Rome, not, as in Sicily, on the spot. Hence the phrase in Cicero already quoted, "censoria locatio est, ut Asiae, lege Sempronia" (*in Verr.* iii. 6, § 12). The tithes of each city were let separately, and natives ("Asiani," *ad Att.* i. 17, § 9) might be bidders as well as Romans: Greek *decumani* met Cicero at Ephesus (*ad Att.* v. 13, § 1): Falcidius, perhaps a former tribunus militum and legatus (*pro Lege Manil.* 19, § 58), bought the *fructus* of Tralles for 900,000 sesterces, and was thought to have corruptly obtained a cheap bargain (*pro Flacc.* 37, § 91). It is an argument with Cicero for the "imperium Pompeii" against the pirates, B.C. 66, that Asia, naturally the richest of the provinces, had become unable to pay its decumae and other dues (*pro Leg. Manil.* 6, §§ 14, 15). The exactions, after peace was restored, continued intolerable, and Cicero admits that the Roman taxation (*scriptura*, *decumae*, *portorium*) was hated like death (*pro Flacc.* 8, § 19; B.C. 59). At last Caesar, after his victory, "got rid of the *publicani* and changed the decumae into a *stipendium*" (*τοὺς γοῦν τελώνας πικρότατά σφισι χρωμένους ἀπαλλάξας, ἐς φόρου συντέλειαν τὸ συμβαῖνον ἐκ τῶν τελῶν κατεστήσατο*, Dio Cass. xlii. 6). A little later, probably when the conquest of Egypt had opened up another great corn country, the decumae in Sicily were likewise abolished: Pliny (*H. N.* iii. § 91) calls most of the Sicilians *stipendiarii* (Marquardt, *Staatsverw.* ii. 185; Humbert, *ap.* D. and S., s. v. *Decumae*).

At Rome, as in Greece, we find from a very early period tithes of the spoil dedicated to the gods after important victories. Camillus vowed a tenth of the spoil of Veii to the Pythian Apollo (Liv. v. 21, 23, 25). In later times ambitious men dedicated a tenth to Hercules, and spent the money in feasting the people as a means of acquiring popularity: Sulla did this after his triumph, Crassus after his consulship (Plut. *Sull.* 35; *Crass.* 2). Hence *Herculanea pars*, Hercules' share, is used as equivalent to a tenth part by Plautus (*Truc.* ii. 7, 11; cf. *Bacch.* iv. 4, 14; *Stich.* i. 3, 80). Cn. Aufidius Orestes carried his consulship in B.C. 71 by treating the people to luncheons (*prandia*) in the streets *decumae nomine*, on pretence of its being a tithe-offering (Cic. *de Off.* ii. 17, § 58, with Holden's note). The decuma of Hercules is often mentioned in inscriptions of the republican period, but in none later than Augustus (*C. I. L.* 1113, 1175, 1290, with Mommsen's remarks i. 149 ff.; *Inscr. Regn. Neap.* 3578, 5756; Varro, *L. L.* vi. 54; Macrob. *Sat.* iii. 6, § 11; Marquardt, *Staatsverw.* iii. 362). [W. W.]

DECUMA'NA PORTA. [Castra, p. 372 ff.]

DECUMA'NI. [Decumae.]

DECUNCIS, another name for the dextans or ten unciae, a division of the as. [As.] [W. S.]

DECU'RIA, from *decem*, ten, and consequently a company of ten persons (Colum. i. 9, § 7; Gell. xviii. 7).

1. A division of the curiae. Each of the three ancient Roman tribes—the Ramnes, Tities, and Luceres—was divided into ten curiae, and each curia into ten decuriae, so that there were 300 decuriae, which, according to Niebuhr, were equivalent to the gentes, but this is doubtful (Dionys. ii. 7; Plut. *Rom.* 20; Cic. *de Rep.* ii. 8). [Gens.] The constitution of the curiae is discussed under Curia.

2. A corresponding division of the senate. The original hundred members of the senate were divided into ten decuriae, the heads of each decuria forming the Decem Primi in the senate (Liv. i. 17; cf. Ov. *Fast.* iii. 127). [Senatus.] In like manner in the municipal towns the senate, usually called curia, was divided into decuriae. [Decuriones.]

3. In the same way for military purposes each of the three Roman tribes was represented by 100 equites, called centuriae. The three centuriae were divided into ten turmae, each consisting of thirty men; every turma contained ten Ramnes, ten Tities, and ten Luceres, and each of these decuriae was commanded by a decurio (Liv. i. 13; Varr. *L. L.* v. 91; Fest. p. 71, M.; Serv. *ad* Verg. *Aen.* v. 560). [Equites.]

4. The Judices were divided into three decuriae, to which Augustus added a fourth, and Caligula a fifth decuria (Plin. *H. N.* xxxiii. § 30 foll.; Suet. *Aug.* 22; *Calig.* 16). For details, see Judex.

5. Collegia or corporations were divided into decuriae. Thus we read of decuriae of scribae, lictors, viatores, &c. (Suet. *Claud.* 1; Cic. *Verr.* iii. 79, 184; Liv. xl. 29; Tac. *Ann.* xiii. 27; Schol. *ad* Juv. v. 3; Orelli, *Inscr.* 2204, 2252, 2456, 2676, 3217, &c.). The members of these decuriae were called decuriales (Cod. Theod. xiv. 1, 3; Orelli, *Inscr.* 874, 976, 2456, &c.).

6. The tribes were divided into decuriae by electioneering agents for bribery and corruption (Cic. *Planc.* 18, 45; 19, 47; *Phil.* vii. 6, 18). [W. S.]

DECURIA'LIS. [Decuria, No. 5.]

DECU'RIO, the head or representative of a decuria.

1, 2. The head of the decuriae into which the curiae and the senate were divided. [Decuria, 1, 2.]

3. The head or commander of the decuriae of the Equites. [Decuria, 3.] But decurio was in later times the name of an officer of a division of cavalry, though such division might contain any number of men (Veget. *Mil.* ii. 14: cf. Tac. *Ann.* xiii. 40; *Hist.* ii. 29).

4. The head or representative of a decuria in corporations. [Decuria, No. 5.] In like manner we find a *decurio cubiculariorum* (Suet. *Dom.* 17), a *decurio palatii* (Amm. Marc. xx. 4, § 20; Cod. Just. xii. 16), a *decurio ostiariorum* (Spon, *Misc. Erud. Ant.* vi. p. 214), a *decurio Germanorum* (Orelli, *Inscr.* 2923), and there was even a decurio of slaves in the imperial household (Orelli, 2785).

5. But the most important decuriones were those in the municipal towns, who are the subject of the following article. [W. S.]

DECURIO'NES, CURIA'LES. In the constitution of the Italian towns (*municipia*, *coloniae*, *praefecturae*), as regulated by the Lex Julia Municipalis, B.C. 45, each municipality was governed by an assembly of the *populus*, which elected magistrates and made laws, and also by a senate, which was an administrative body. Subsequently, by a change corresponding to that which took place in Rome, the power of the popular assembly was transferred to the senate, which thus became the supreme municipal body for legislative and administrative purposes.

The municipal senate is sometimes called *senatus*, but the terms commonly used to denote it are *ordo decurionum* or simply *ordo*, and in later times *curia*. *Decuriones* or *curiales* signify members of the senate, these words being used indifferently in the same sense.

As opposed to the *decuriones*, which formed a kind of patrician class in each town, other citizens were called *plebeii*.

The word *municipes* usually comprehends all citizens, but it is used in the Theodosian code so as to include only the *decuriones* or citizens of the governing class.

The number of *decuriones* of which a municipal senate consisted was fixed by the constitution (*lex municipii*) of each municipality: it was frequently a hundred, the *centumviri* of inscriptions (Orelli, Nos. 108, 3448, 3706, 3737, 3738; cf. Cic. *de Leg. agr.* ii. 35, 96), but varied according to the size and custom of communities. The office (*honor*) of *decurio* was obligatory on all citizens called on to undertake it. *Decuriones* held office for life. Places in a *curia* which became vacant by death or incapacity of members were filled up periodically, probably every five years. Persons were made *decuriones* either by right of descent or by free election; sons succeeded in the place of their fathers; any qualified citizen might be chosen to fill the place of a *decurio* who left no son.

The *ordo* or *curia* co-opted new members, when its number was not complete. (Dig. 50, 2, l. 6, § 5; Fronto, *Epist. ad amic.* ii. 10; Cod. Theod. xii. 1, l. 66: cf. J. Gothofred, *Paratit. ad Cod. Theod.* xii. 1; Niebuhr, *ad Frontonem*, p. 218.) It is, however, maintained by some writers that, from and after the passing of the Lex Julia, *decuriones* were appointed by the higher magistrates, who drew up the *album decurionum*, and who are styled in some places *quinquennales*. (Tab. Heracl. *Quicunque in municipiis, coloniis, praefecturis, foris, conciliabulis civium Romanorum iiviri, iiiiviri erunt,—ne quis eorum quem in eo municipio, colonia, praefectura—in senatum, decuriones, conscriptosve legito neve sublegito neve cooptato neve recitandos curato nisi in demortui damnative locum.* Fabretti, *Inscr. C.* 9, p. 598. Marquardt, *Röm. Staatsverw.* i. p. 502.) To be eligible as *decurio*, a person was required to be of a certain age; the limit was thirty (Tab. Heracl. 23), till reduced by Augustus to twenty-five for the municipal senate as well as for the Roman.

A property qualification, the amount of which depended on the constitution of each town, was attached to the acquisition of membership in a *curia*, but membership was not vacated by loss of property. We learn from Pliny (*Ep.* i. 19) that at Comum a person who had less than 100,000 sesterces could not become a *decurio*. Criminals, bankrupts, persons of infamous character, and persons who followed certain employments, as *praecones, designatores, libitinarii*, were incapable of holding this office (Tab. Heracl. 23 (25); cf. Dig. 50, 2, 12). Freedmen were likewise incapable, but sometimes on account of extraordinary services they were given the *ornamenta decurionalia* by decree of the *curia* as an honorary distinction (Orelli, No. 3942).

The names of *decuriones* were inscribed on an album or register in a regular order, which was based partly on rank and partly on seniority. The album of Canusium, which was discovered in the last century and is now in the principal museum at Naples (Fabretti, *Inscr. C.* 9, p. 598; Orelli, No. 3721), shows the plan on which such an album was arranged.

The album contains the names of honorary and of actual members of the *curia*, the honorary members having precedence. The honorary members are styled *patroni*, and are of two classes, consisting (1) of *decuriones*, free from active service on account of their holding high office in the state; (2) of persons to whom honorary membership was given as a distinction (Cod. Theod. viii. 5, 46). Among actual *decuriones*, those who had served as magistrates had the first rank, each ranking according to the importance of the office he had held; lastly come the actual *decuriones* who had not served any office: these rank according to seniority of service in the *curia* (Savigny, *Gesch. d. R. R.* i. § 24).

Sometimes, though not in the album of Canusium, among actual members the first ten (*decem primi* or *principes*; cf. Liv. xxix. 15), or the first six, seven, or fifteen, are distinguished from the rest: in the Theodosian Code such *decuriones* are termed *primati, primarii*. As they were subject to greater responsibility than other *decuriones*, so they were superior in rank (Cod. Theod. xvi. 2, 39; xvi. 5, 52, 54).

The first of the *principales, primus principalis*, had precedence as president of the *curia*.

Decuriones were in close connexion with the civic magistracy, since all magistrates were elected by them, and no one who was not a *decurio* could be elected magistrate (Dig. 50, 2, 7, § 2).

In the early municipal constitution magisterial offices were not thus confined to *decuriones*, but open to citizens generally, magistrates being *ex-officio* members of the senate (Tab. Heracl.; Grüter, *Inscript.* p. 408, n. 1). Magistrates on retiring from office nominated their successors for election in the *curia*. A nominating magistrate was responsible for the good conduct of his nominee.

The position of *decurio* declined under the despotic administration of the empire, so that from having been one which was sought as a distinction it came to be regarded as a most oppressive burden. This change was mainly caused by the heavy public charges which were thrown upon *decuriones*; not only were their legal liabilities increased, but claims were enforced against them which had no foundation in law. Thus *decuriones* were legally obliged to make good any deficiency in the imperial taxes of their district, if the deficiency was due to their misconduct as tax collectors; but by a practice which was declared by many imperial constitutions to be illegal, they were forced to make good unpaid taxes, even when they were not in default.

The financial and other liabilities of *decuriones* were so onerous that persons tried to escape from them by every means in their power, as by becoming soldiers or even serfs. The difficulty of getting persons to fill the office and the degraded state into which it had fallen are illustrated by the fact that culprits were condemned to serve it by way of punishment: such punishment was, however, declared to be illegal. Even Jews and heretics were admitted to the *decurionatus*; but Justinian provided that persons belonging to these classes should not be entitled to the dignity of the office, though they were to remain subject to its liabilities. The

Theodosian Code contains numerous provisions directed against those who tried to evade their duty of service in the *curia*. As an encouragement to induce people to fulfil their duty of service, privileges were attached to membership of the *curia*. Thus illegitimate children were legitimated by being made *curiales*.

According to a law of Constantine, *decuriones* could not go out of their own districts without leave.

The first mention we find of persons being compelled to become *decuriones* is in a letter of Pliny (*Ep.* x. 113). The municipal institution of the *curia* was not confined to Italy, but extended throughout the Roman empire: the statute law of the Theodosian Code respecting *decuriones* applied to municipalities everywhere. (Savigny, *Geschichte des Röm. Rechts im Mittelalter*, i. cap. 2; J. Gothofred, *Paratit. ad Cod. Th.* xii. 1; Roth, *de re municipali Romanorum*; Hegel, *Geschichte der Stadteverfassung von Italien*; Zumpt, *Commentat. epigraph.* pp. 73–158, 170, 475; Marquardt, *Röm. Staatsverw.* i. p. 501 ff.) [E. A. W.]

DECU'RSIO, DECURSUS, DECURRERE. 1. These words were used to signify the manœuvres of the Roman army, by which the soldiers were taught to make long marches in a given time, under arms and without quitting their ranks. They are frequently mentioned by Livy (xxiii. 35, 6; xxiv. 48, 11; xxvi. 51, 4; xlii. 52, 4). These manœuvres sometimes consisted of a sham fight between two divisions of the army. ("Mos erat ... exercitum *decurrere* et divisas bifariam duas acies concurrere ad simulacrum pugnae," Liv. xl. 6, 5.) With the standing armies under the empire these manœuvres assumed a more regular form, and were constantly practised. Augustus and subsequently Hadrian ordered that the infantry and cavalry were to march out three times a month ten miles from the camp and ten miles back fully armed and equipped. This is called by Vegetius *campicursio* (Veget. i. 27; iii. 4), and by Suetonius *campestris decursio* (Suet. *Galb.* 6: cf. *Ner.* 7; Tac. *Ann.* ii. 55). Maximinus ordered that these manœuvres should take place every five days (Capitol. *Maxim. duo*, 6). (Cf. Marquardt, *Röm. Staatsverw.* ii. p. 548.)

2. The same words were used to signify the military honours paid by soldiers at the funeral of distinguished generals or emperors. Such a *decursio* is first mentioned in connexion with the funeral of Sempronius Gracchus, killed in the second Punic war (Liv. xxv. 17, 4, 5). The soldiers marched three times round the funeral pyre (Verg. *Aen.* xi. 188; Tac. *Ann.* ii. 7; Suet. *Claud.* 1; Lucan. viii. 735; Herodian. iv. 2, 19). On the base of the Antonine Column this *decursio* is represented.

Decursio on coin of Nero. (British Museum.)

3. The *decursio*, which occurs on the coins of Nero, probably refers to the military manœuvres or sham fights in the circus. The preceding cut represents a horseman with a spear, and another carrying a standard. These games date from the time of the republic, and were continued under the empire. (Liv. xliv. 9, 3; Eckhel, vi. pp. 271, 503; Becq de Fouquières, *Les Jeux des Anciens*, p. 256; Saglio, *Dict.* s. v.) [W. S.]

DECUSSIS, ten asses, as a Roman coin a ten as piece, struck after the reduction of the weight of the as, but rarely found. [As.] The name occurs in the Lex Aternia Tarpeia, B.C. 454. (Varr. *L. L.* v. 170; Fest. p. 257, 20, M.; Stat. *Silv.* iv. 9, 9; Marquardt, *Röm. Staatsverw.* ii. p. 11.) [W. S.]

DEDICA'TIO. [Apotheosis; Inauguratio.]

DEDITI'CII are the lowest of the three classes of freedmen (*pessima libertas eorum est qui dediticiorum numero sunt*, Gaius, i. 26).

The Lex Aelia Sentia (A.D. 4) provided that, if a slave was put in bonds by his master as a punishment, or branded, or put to the torture on a criminal charge and convicted, or delivered to fight with men or beasts, or committed to a gladiatorial school (*ludus*) or a public prison, and was subsequently manumitted by the same or by another owner, he should acquire by manumission the status of a *peregrinus dediticius*. The *peregrini dediticii* were people who, in former times, having taken up arms and fought against the people of Rome, had surrendered themselves.

Gaius, from whom this account of the origin of *dediticii* is taken (*Inst.* i. 12–16), also informs us of the incapacities to which this class of freedmen was subject. *Dediticii* could never under any circumstances acquire Roman citizenship (cf. Suet. *Aug.* 40). They were not allowed to reside in Rome or within the hundredth milestone from it (cf. Liv. viii. 14, § 6): if they disobeyed this prohibition, they forfeited their liberty and their goods, and were made incapable of subsequent manumission. They did not participate in any of the rights of citizenship, but only had the status of *peregrini*. This class of persons, who were neither slaves nor *cives* nor *Latini*, had died out long before the time of Justinian; it was, however, formally abolished by that emperor (Cod. vii. 5, *de dediticia libertate tollenda*; cf. *Inst.* i. 5, § 3).

The civil condition of *dediticii*, as is stated above, was formed by analogy to the condition of a conquered people, who did not individually lose their freedom, but acquired no rights of citizenship. The form of *deditio* occurs in Livy (i. 38). In the case of the Volsci Livy inclines to the opinion that the four thousand who were sold were slaves, and not *dediti*. (Gaius, i. 12–16, 25 and 27; Ulpian, xx. 14; Paul. iv. 12, 3–8; Theophilus, i. 5, 3.) [G. L.] [E. A. W.]

DEDI'TIO. [Dediticii.]

DE DOLO MALO ACTIO. [Culpa.]

DEDU'CTIO, DEDUCTOR. Some technical senses of *deducere* and its derivatives may here be noticed. The verb means mostly (i.) to conduct or escort in a complimentary or ceremonious manner, or (ii.) to lead a person away, withdraw (*e.g.* a garrison), or "show the way out." In the former sense we get (1) "deductio sponsae in domum mariti" (Dig. 23, 2, 5); (2) the *deductio* of a candidate by his friends, hence called *deductores* (Q. Cic. *de Pet. Cons.* 9; Plin. *Ep.* iv. 17; AMBITUS); (3) the solemn founding of a colony [COLONIA, p. 479 *b*]. From the latter come the law-terms *deducere*, "to eject from land," *deductio*, "ejectment," with a view to try the question of ownership. The act is thus explained by Savigny (*Verm. Schriften*, i. 299, *ap.* Long, *Cicero*, ii. 148): "It was part of the form of many disputes about property in land, that both parties should meet on the land on some day on which they agreed, and that the one should put the other out,—that is, should eject him with the appearance of force; and so the whole transaction was named a conventional violence, *ex conventu vim fieri*" (Cic. *pro Caecin.* 8, § 22). This was called *deductio quae moribus fit*, as distinguished from *deductio vi solida* (Gell. xx. 10, § 10), when real force was used: "constituere quo die in rem praesentem veniretur, ut de fundo Caecina moribus deduceretur" (Cic. *ib.* 7, § 20). Gellius (*l. c.*) calls it "vis civilis et festucaria," *i.e.* controlled by the praetor's rod (*festuca*). It did not matter which of the two parties was formally ejected by the other; the ground for an action at law would be equally gained (Cic. *pro Tull.* § 20). This took the place of an earlier formula, *ex jure manum consertum* [supine] *vocare.* [ACTIO, p. 15 *a*; VINDICATIO.] [W. W.]

DEFENSOR CIVITA'TIS. The oppression of the lower orders of the people by the more powerful, which was prevalent throughout the Roman empire in the fourth century, owing to the general weakness and corruption of local government, led to the institution of a new municipal officer, called *defensor civitatis, plebis, loci*, in Greek ἔκδικος, whose function it was to defend the rights of the inhabitants of a civitas; the regio or district of a civitas including all the vici within a certain radius as well as the principal town.

An edict of the Emperor Valentinian I. issued in 364 A.D. to Probus, praefectus praetorio, first established this office, but only for the province of Illyricum. By this edict the governor of the province was directed to choose a trustworthy person, not being a curialis, qualified by high official rank or by practice as an advocate, for each city of the dioceses subject to him, in order that the plebs of all Illyricum might be protected by means of public guardians (*patroni*) from injuries at the hands of the powerful (Cod. Theod. i. 29, 1).

In the next year, 365 A.D., Valentinian extended the office of defensor to all parts of his empire, including Italy, but with some changes in its constitution. Each civitas acquired the right of choosing a defensor from its most eminent and independent citizens, who were bound to serve the office in a prescribed order. Curiales or decuriones, the class from which magistrates were taken, could not hold this office.

The election of a defensor was made by the whole civitas, and not, as in the case of magistrates, by the curia alone, the choice of the township had to be confirmed by the emperor or his deputy, the praefectus praetorio At first a defensor held office for five years, but the term was reduced by Justinian to two years. The protection of the inhabitants of his district from oppression of all kinds, and especially from that of the imperial governor and local authorities, was always considered to be the main object of a defensor civitatis ("ut imprimis parentis vicem plebi exhibeas," Cod. Just. i. 55, 5). Moreover it was his business to prevent the taxes being made too burdensome. For the purpose of prosecuting oppressors, he had free access to the court of the governor, and, if necessary, he could bring his complaints against the governor or other officials before the emperor or ministers of the imperial government. The defensor acted as judge in civil cases of minor importance; his jurisdiction was first limited by Justinian to fifty solidi, and afterwards extended by that emperor to three hundred solidi. He had the right of appointing guardians and of registering many formal proceedings: as, *e.g.*, the declaration of gifts above a certain amount (*donatio*) and the making of wills. Justinian gave him an exceptor or clerk and executive officials (*officiales*).

Not being a magistrate, he had originally no power of inflicting any punishment ("nullas infligant multas, nullas exerceant quaestiones," Cod. Theod. i. 29, 7), but subsequently a petty jurisdiction was conferred on him. In course of time, as new duties were attached to the office, the position of a defensor came to resemble that of a magistrate; in rank, however, he had precedence of magistrates.

The institution of defensor civitatis failed to effect the object for which it was established and fell into contempt. The Emperor Majorian in 458 A.D., and the Emperor Justinian in 535 A.D., tried to revive its importance by legislation, but unsuccessfully. (Cod. Theod. i. 29 (11); Cod. Justin. i. 55; Nov. Majoriani, 3; Nov. Just. 15; Bethmann-Hollweg, *Römische Civilprocess*, iii. 107; Savigny, *Geschichte des röm. Rechts*, i. 23; Schmid, *de Civit. defensore*; Desjardins, *de Civit. defensore.*) [E. A. W.]

DE'FRUTUM. [VINUM.]

DEICELISTAE (δεικελισταί). [COMOEDIA.]

DEIGMA (δεῖγμα), a particular place in the Peiraeus, as well as in the harbours of other states, where merchants exposed samples of their goods for sale. (Harpocrat., Hesych. *s. v.*; Pollux, ix. 34; Aristoph. *Eq.* 979; Dem. *c. Lacr.* p. 932, § 29; *c. Polycl.* p. 1214, § 24; Theophr. *Char.* 23.) The samples themselves were also called *deigmata.* (Plut. *Demosth.* 23; Boeckh, *P. E.* p. 58.) [W. S.]

DEJECTI EFFUSIVE ACTIO. If any person threw or poured anything from the room of a house upon a place commonly frequented by people, and thereby caused damage, the praetor's edict gave the injured party an action against the occupier of the house or part of the house from which the thing had been thrown or poured. There was the same liability on account of a thing which had been suspended from a building, and which by its fall injured people, as for a thing which had been actually thrown.

The action is said to be given against the occupier on account of the public interest in the security of traffic (Dig. 9, 3, 1, § 1). It was not necessary to show, in order to maintain the action, that the occupier was personally to blame: hence as the existence of either *dolus* or *culpa* is implied in the nature of a delict, the liability in question is not classified by Justinian in his Institutes under *obligationes ex delicto*, but under *obligationes quasi ex delicto*. A defendant who had been condemned in this action on account of the wrongful act of another had a claim to recover his damages from the wrongdoer (*regressus*). If several persons inhabited a house and any injury was caused by something thrown or poured from it, the injured party could recover from any one of them the entire damages. The action was to some extent modified by the particular character of the injury done. If a free man (*homo liber*) was killed or wounded, the action was *actio popularis*, i.e. it could be maintained by anyone. If the man was killed, a penalty of fifty aurei was recoverable; if only wounded, the amount of damages was left to the discretion of the *judex*. When the action was brought by the injured party himself, the expenses of a medical attendant, loss of time, and loss of a man's earnings during the time of his cure, or loss of future earnings by reason of his having been rendered incapable of making such earnings, were taken into account in the assessment of damages. The action was limited to the period of a year (*annus utilis*), unless it was brought by the injured party himself.

In case of injury of any other kind than that done to a free man, the plaintiff recovered double the amount of the damage which he had suffered; but in this case the action could only be brought by the injured party or by his heir.

As many of the houses in Rome were lofty, and inhabited to the top by the poor, and probably as there were very imperfect means for carrying off rubbish and other accumulations, it was necessary to provide against accidents which might happen by such things being thrown through the window (Cic. *Agr.* ii. 35, § 96; Hor. *Ep.* i. 1, 91; Juv. iii. 268, x. 17). (*Inst.* iv. 5, §§ 1, 2; Dig. 9, 3; Glück, *Pand.* x. 392; Wys, *Haftung für fremde Culpa*, p. 66.) [G. L.] [E. A. W.]

DEJECTUM EFFUSUM. [DEJECTI EFFUSIVE ACTIO.]

DEILIAS GRAPHE' (δειλίας γραφή). [ASTRATEIAS GRAPHÉ.]

DEIPNON (δεῖπνον). [CENA.]

DELA'TIO NO'MINIS. In Roman criminal procedure the first step was to apply to the praetor to allow the accusation to be made (*postulare*), the next formally to arraign the defendant (*nomen deferre*). Some writers (*e.g.* Rein in Pauly, *s. v.*) have not marked this distinction with sufficient clearness. The two steps of the process are sometimes separated by an appreciable interval; while Dolabella was prosecuting Ap. Claudius, his wife Fabia left him *inter postulationem et nominis delationem* (Caelius to Cicero, *ad Fam.* viii. 6),—a divorce which cleared the way for Dolabella's marriage with Tullia. Elsewhere we find *delationem nominis postulare* (Cic. *Div. in Caecil.* 20, § 64). The judge might himself take the initiative and declare his readiness to receive a *nominis delatio;* this, however, is mentioned among the oppressive proceedings of Verres (Cic. *in Verr.* ii. 38, § 94; iv. 19, § 40).

The postulatio and nominis delatio occur most frequently in prosecutions of magistrates and provincial governors for misconduct in office [REPETUNDAE]; especially under the Lex Servilia, passed by the tribune Glaucia (B.C. 106 or 105) in spite of the opposition of the senate, which greatly improved the chances of redress. The fragments of this law are collected by Orellius, and have been separately edited by Klenze. (Cf. Rein, *ap.* Pauly; Long, *Excursus on Repetundae* in his Cicero, i. 38–41; *Lex Servil.* ed. Klenze, pp. 5, 33 ff. For the use of the phrase in charges of murder, Cic. *pro Rosc. Am.* 3, § 8; *pro Cluent.* 8, § 23; *pro Cael.* 23, § 56: in other cases, *in Verr.* ii. 28, § 68; *ad Q. Fr.* ii. 4.) [W. W.]

DELATO'RES. This term was originally applied to those who gave notice to the officials of the treasury of moneys that had become due to the treasury. (The verb *deferre* is in classical Latin always joined with *nomen* when used in this sense; it is only later that it takes an accusative of the person charged.) It subsequently received a wider application. A *delator* was not identical with our "informer;" the term covered two classes, one consisting of those who themselves acted as prosecutors, the other of those who simply gave information. The legislature of Augustus gave the first stimulus to the habit of delation, by granting pecuniary rewards to those who secured the conviction of offenders against his laws relating to marriage (Tac. *Ann.* iii. 28). The Lex Julia de maiestate, by rewarding the successful prosecutor with a fourth part of the estate of the condemned (Tac. *Ann.* iv. 20), gave a fatal encouragement to this class; and although Tiberius appears to have endeavoured at first to check the practice (*ib.* i. 73), it became during his reign a veritable scourge; and as his suspicious temper developed, he actually encouraged them (*ib.* iv. 30, "delatores, genus hominum publico exitio refertum et ne poenis quidem satis coercitum, per praemia eliciebantur"). Caligula at the beginning of his reign *negavit se delatoribus aures habere* (Suet. *Calig.* 15), and Nero reduced the rewards of those who prosecuted offenders against the Papian law to the legal fourth part (Suet. *Nero*, 10). Titus severely punished them (Suet. *Tit.* 8); Domitian at first followed his example (Suet. *Dom.* 9), but soon proved ready to use them as the tools of his tyrannous greed. They were again banished by Trajan (Plin. *Paneg.* 34), and denounced by a rescript of Constantine (Cod. x. 11, 5). But the need of this constant repression proves what a standing evil this class must have been to the state. (Cf. Mayor's notes on Juvenal, i. 33–36, iv. 48, x. 70; Rein, *Criminalrecht*, 817–820; Geib, *Röm. Criminalprocess*, 350–2.) [A. S. W.]

DELECTUS. [EXERCITUS.]

DE'LIA (δήλια), the name of festivals and games celebrated at the great panegyris in the island of Delos, the centre of an amphictyony, to which the Cyclades and the neighbouring Ionians on the coasts belonged. (Hom. *Hymn. in Apoll.* 147, &c.) This amphictyony seems originally to have been instituted simply for the purpose of religious worship in the common sanctuary of Apollo, the θεὸς πατρῷος of the Ionians, who was believed to have been born at Delos. The Delia, as appears from the Hymn on Apollo (compare Thuc. iii. 104; Pollux, ix.

61), had existed from very early times, and were celebrated every fifth year (Pollux, viii. 104), and as Boeckh supposes, with great probability, on the sixth and seventh days of Thargelion, the birthdays of Apollo and Artemis. The members of the amphictyony assembled on these occasions (ἐθεώρουν) in Delos, in long garments, with their wives and children, to worship the god with gymnastic and musical contests, choruses, and dances. That the Athenians took part in these solemnities at a very early period, is evident from the Deliastae (afterwards called θεωροί) mentioned in the laws of Solon (Athen. vi. p. 234); the sacred vessel (θεωρίς), moreover, which they sent to Delos every year, was said to be the same which Theseus had sent after his return from Crete. (See the commentators on Plato, *Crito*, p. 43 C.) The Delians, during the celebration of these solemnities, performed the office of cooks for those who visited their island, whence they were called Ἐλεοδύται (Athen. iv. p. 173).

In the course of time the celebration of this ancient panegyris in Delos had ceased, and it was not revived until Ol. 88, 3, when the Athenians, after having purified the island in the winter of that year, restored the ancient solemnities, and added horse-races which had never before taken place at the Delia. (Thuc. *l. c.*) After this restoration, Athens being at the head of the Ionian confederacy took the most prominent part in the celebration of the Delia; and though the islanders, in common with Athens, provided the choruses and victims, the leader (ἀρχιθέωρος), who conducted the whole solemnity, was an Athenian (Plut. *Nic.* 3; Wolf, *Introd. ad* Demosth. *Lept.* p. xc.), and the Athenians had the superintendence of the common sanctuary. [AMPHICTYONES.]

From these solemnities, belonging to the great Delian panegyris, we must distinguish the *lesser Delia*, which were celebrated every year, probably on the 6th of Thargelion. The Athenians on this occasion sent the sacred vessel (θεωρίς), which the priest of Apollo adorned with laurel branches, to Delos. The embassy was called θεωρία, and those who sailed to the island, θεωροί: and before they set sail a solemn sacrifice was offered in the Delion, at Marathon, in order to obtain a happy voyage. (Müller, *Dor.* ii. 2, § 14.) During the absence of the vessel, which on one occasion lasted thirty days (Plat. *Phaed.*, p. 58 B; Xen. *Mem.* iv. 8, § 2), the city of Athens was purified, and no criminal was allowed to be executed. The lesser Delia were said to have been instituted by Theseus, though in some legends they are mentioned at a much earlier period, and Plutarch (*Thes.* 23) relates that the ancient vessel used by the founder himself, though often repaired, was preserved and used by the Athenians down to the time of Demetrius Phalereus. (Boeckh, *P. E.* p. 214, &c. 2nd edit.; Thirlwall, *Hist. of Greece*, vol. iii. p. 217; A. Mommsen, *Heortol.* pp. 84 and 402 ff.) [L. S.]

DELICTUM. [CRIMEN.]

DE'LPHICAE MENSAE. [ABACUS, p. 1 *b*.]

DELPHI'NI or DELPHI'NES, dolphins, seven in number, placed on the meta of the circus. [CIRCUS, pp. 434, 435.] [W. S.]

DELPHI'NIA (δελφίνια), a festival of the same expiatory character as the Apollonia, which was celebrated in various towns of Greece, in honour of Apollo, surnamed Delphinius, who was considered by the Ionians as their θεὸς πατρῷος. The name of the god, as well as that of his festival, must be derived from the belief of the ancients that in the beginning of the month of Munychion (probably identical with the Aeginetan Delphinius) Apollo came through the defile of Parnassus to Delphi, and began the battle with Delphyne. As he thus assumed the character of a wrathful god, it was thought necessary to appease him, and the Delphinia accordingly were celebrated at Athens, as well as at other places where his worship had been adopted, on the 6th of Munychion. At Athens seven boys and girls carried olive-branches, bound with white wool (called the ἱκετηρία), into the Delphinium. (Plut. *Thes.* 18; A. Mommsen, *Heortol.* p. 398 ff.)

The Delphinia of Aegina are mentioned by the Scholiast on Pindar (*Pyth.* viii. 88); and from his remark on another passage (*Olymp.* vii. 151), it is clear that they were celebrated with contests. (Compare Diog. Laërt. *Vit. Thal.* c. 7; Müller, *Dor.* ii. 8, § 4.) Concerning the celebration of the Delphinia in other places, nothing is known; but we have reason to suppose that the rites observed at Athens and in Aegina were common to all festivals of the same name. See Müller, *Aeginet.* p. 152. [L. S.]

DELPHIS (δελφίς), a mass of lead armed with bronze or iron, perhaps in the shape of a dolphin, used for sinking an enemy's ship. (Aristoph. *Eq.* 759; Thuc. vii. 41; Schol. *ad loc.*; Hesych. *s. v.*) In action, the delphis was hauled up from the deck to the point of a yard-arm, which was swung round by braces till over the hostile deck; the machine was then instantly let fall, after which it was again drawn up and deposited on board. The νῆες δελφινοφόροι were probably only of the transport class (ὁλκάδες), as swift (ταχεῖαι) triremes would have been impeded by the great weight. (B. Graser, *de Veter. Re Navali*, pp. 82, 83: cf. *fistucae*, Vitr. iii. 3, and x. 3; *machinationes*, Caes. *B. G.* iv. 17.) [J. M.]

DELUBRUM. [TEMPLUM.]

DEMARCHI (δήμαρχοι), the presidents of the demes (δῆμοι) in Attica, are said to have been first appointed by Cleisthenes when he abolished the ναύκραροι. [NAUCRARIA.] They were probably elected by vote and not by lot (Schömann, *Antiq.* i. 368, E. T.; cf. *C. I. A.* ii. 578). Their duties were various and important. Thus they convened meetings of the demotae, and took the votes upon all questions under consideration; they had the custody of the ληξιαρχικὸν γραμματεῖον, or book in which the members of the deme were enrolled (Dem. *c. Eubul.*, p. 1317, § 60; Schol. Aristoph. *Nub.* 37); and they made and kept a register of the landed estates (χωρία) in their districts, whether belonging to individuals or the corporate property of the deme (Schol. *l. c.*; Boeckh, *P. E.* p. 512 = *Sthh.*^{3} i. 596 f.). The existence of this register has been recently doubted by Lipsius (on *Att. Process*, p. 305, n. 308; p. 310, n. 317) and Fränkel (on Boeckh *l. c.*, notes 818, 819); see, however, in support of Boeckh's view, Gilbert (*Staatsalterth.* i. 195), and especially Thalheim's rejoinder to Lipsius (*Rechtsalterth.* p. 49 n.). Whether we are to read *χωρίων* or *χρεῶν* in the Scholiast matters less than Boeckh thought, as there is sufficient evidence that both "lands" and "debts" came within the purview of the demarchs. They undoubtedly collected rents and other monies, both sacred and profane, on behalf of the deme (Boeckh, *P. E.* p. 305 = *Sthh.*^{3} i. 374 f.); rents of temple lands (*μισθώσεις τεμενῶν*, Dem. *c. Eubul.* p. 1318, § 63); the *ἐγκτητικὸν* or tax paid by the holders of land in a deme other than their own (*C. I. A.* ii. 589; ENCTESIS); and in their financial capacity were assisted by two *ταμίαι* (*C. I. A.* ii. 570, 579, 585), or sometimes by one *ταμίας* only, as at Eleusis (*C. I. A.* ii. 574). In this capacity they had the power of distraint [ENECHYRA], to which allusion is made by Aristophanes (*Nub.* 37) and in several passages of the grammarians (Harpocrat., *Etym. M.*, s. v.; *Lex. Rhet.* p. 242; *Lex. Seguer.* p. 199, 4). That the sphere of their activity extended beyond their own deme, and that they were employed for various debts and dues claimed by the state, as Boeckh, though with some hesitation, is inclined to think (*P. E.* p. 157 = *Sthh.*^{3} i. 192), is at least not proved. The one inscription, "a perhaps obscure example," as Boeckh admits (*ἐκπραττόντων δὲ οἱ δήμαρ*[χοι], *C. I. G.* 80 = *C. I. A.* i. 79), more probably refers, like those already cited, to their power of exaction within their own deme; and the words of the decree against Antiphon (*τῷ δὲ δημάρχῳ ἀποφῆναί τε οἰκίαν, κ.τ.λ.* [Plut.] *Vitt. X. Oratt.* p. 834 A, a mutilated passage) point rather to a single locality.

In the duties which have been enumerated they supplanted the *naucrari* (*ναύκραροι*) of the old constitution; and they added others to them. As local police magistrates they could impose a fine (*ἐπιβολὴν ἐπιβάλλειν*) for disobedience to a decree of the demotae, *e.g.* for entering the Thesmophorion without leave of the priestess (*C. I. A.* ii. 573 b); they were required to bury, or cause to be buried, any dead bodies found in their district, indemnifying themselves by levying double the expense on the relations of the deceased, if their order to bury were disobeyed: for neglect of this duty they were liable to a fine of 1000 drachmas (Lex *ap.* Dem. *c. Macart.* p. 1069, § 58). They distributed the theoric fund [THEORICA] among their demotae (Dem. *c. Leochar.* p. 1091, § 37; *C. I. A.* ii. 163; Plaut. *Aulul.* i. 2, 29; Fränkel, n. 410); and conducted those honoured with *προεδρία* to their places in the theatre (*C. I. A.* ii. 589). The case of their assisting to prepare the *κατάλογος* or list for military service seems to have been exceptional: on an emergency the *βουλευταὶ* and *δήμαρχοι* were ordered by a psephisma to furnish lists of those able to serve (Dem. *c. Polycl.* p. 1208, § 6). (Pollux, viii. 118; Hermann, *Staatsalterth.* § 111; Schömann, *Assemblies*, p. 376 ff.; Thalheim, *Rechtsalterth.* pp. 49, 115; and especially Gilbert, *Staatsalterth.* p. 194 f., who gives the fullest references to inscriptions.)

Δήμαρχοι was also the name given by Greek writers to the Roman tribunes of the plebs (Dionys. vi. 89; Plut. *Cor.* 7, &c.).

[R. W.] [W. W.]

DEMENS. [CURATOR.]

DEMENSUM. [SERVUS.]

DEME'NTIA. [CURATOR.]

DEME'TRIA (*δημητρία*), an annual festival which the Athenians, in 307 B.C., instituted in honour of Demetrius Poliorcetes, who, together with his father Antigonus, were consecrated under the title of "saviour gods." It was celebrated every year in the month of Munychion, the name of which, as well as that of the day on which the festival was held, was changed into Demetrion and Demetrias. A priest ministered at their altars, and conducted the solemn procession, and the sacrifices and games with which the festival was celebrated. (Diod. Sic. xx. 46; Plut. *Demetr.* 10, 46.) To honour the new god still more, the Athenians at the same time changed the name of the festival of the Dionysia into that of Demetria, as the young prince was fond of hearing himself compared to Dionysus. The Demetria mentioned by Athenaeus (xii. p. 536) are probably the Dionysia. Respecting the other extravagant flatteries which the Athenians heaped upon Demetrius and Antigonus, see Athen. vi. p. 252; Herm. *Staatsalterth.* § 175, n. 6, 7, and 8; Thirlwall, *Hist. of Greece*, vol. vii. p. 331; Grote, *Hist. of Greece*, xii. p. 506 ff. [L. S.]

DEMINU'TIO CA'PITIS. [CAPUT.]

DEMIOPRA'TA (*δημιόπρατα*) were property confiscated at Athens and sold by public auction. The confiscation of property was one of the most common sources of revenue in many Greek states; and Aristophanes (*Vesp.* 659, *Eq.* 103, with the Scholia) mentions the *δημιόπρατα* as a separate branch of the public revenue at Athens. A chapter of Boeckh's *Public Economy* is devoted to this subject (book iii. ch. 14; cf. also ii. 8, p. 197, E. T. = *Staatshh.*^{3} i. 251). These sales were under the direction of the POLETAE (*q. v.*), who presented their reports to the people in the first assembly of each prytany (Pollux, viii. 95); they also set up lists of *δημιόπρατα* (probably after the sale) upon tablets of stone in the Acropolis, at Eleusis (where many forfeitures accrued to the temple of Demeter and Cora under the law of *ἀσέβεια*), and elsewhere. Several fragments of such lists are preserved in inscriptions; one of the most important, throwing light on the prices realised by the Poletae, is discussed in Boeckh-Fränkel (ii. 129 ff.). The danger of confiscation was constantly impending over public debtors, such as the farmers of the revenue and their sureties, and those in arrear with taxes (*ὑπερήμεροι*): and it was aggravated by the encouragement given to informers, especially when, as in the time of the Social War, the treasury was labouring under chronic deficits (cf. Boeckh, *P. E.* p. 435 = *Staatshh.*^{3} i. 511). For examples of the harshness with which the law of distraint might be carried out, and the suffering thereby caused to individuals, see Dem. *c. Androt.* p. 610, § 56 ff.; *c. Timocr.* p. 762, § 197; and the speech against Neaera, p. 1347, § 6 ff. Not only the contents of a house might be taken under an execution, but the very doors were sometimes wrenched off (Lys. *de Bon. Aristoph.* § 31; Dem. *c. Timocr.* l. c.). On *δημιόπρατα* in general, see Boeckh-Fränkel, Index, s. v. *Güter*; Meier, *de Bonis Damnatorum*, p. 160 ff. [W. S.] [W. W.]

DEMIURGI (*δημιουργοί*). 1. In the heroic age *δημιουργοὶ* are not merely "skilled artisans," but "artists," including the highest forms of professional skill in every department then practised; not only carpenters, but soothsayers, surgeons, and bards (Hom. *Od.* xvii. 383), as well as heralds (*ib.* xix. 135). Cf. Schömann, *Antiq.* i. 42 f., E. T.

2. The name of one of the inferior classes in early Attica. [Geomori.]

3. Magistrates, described by some grammarians as peculiar to Dorian states; but perhaps on no authority, except the form *δαμιουργοί*. Müller (*Dorians*, vol. ii. p. 145) observes, on the contrary, that "they were not uncommon in the Peloponnesus, but they do not occur often in the Dorian states." They existed among the Eleians and Mantineians, with whom they seem to have been the chief executive magistracy (Thuc. v. 47, § 10). A distinction may here be noted; at Mantineia it is *οἱ δημιουργοὶ καὶ ἡ βουλή*, at Elis *οἱ δ. καὶ οἱ τὰ τέλη ἔχοντες καὶ οἱ ἑξακόσιοι*. This constitution belongs to a period of moderate reform, after the fall of the Eleian oligarchy and before the rise of unmixed democracy (Schömann, *Antiq.* i. 172, E. T.). We also read of demiurgi in the Achaean league, who probably ranked next to the strategi. [Achaicum Foedus, p. 9 *b*.] Officers named *Epidemiurgi*, or upper demiurgi, were sent by the Corinthians to manage the government of their colony at Potidaea. (Thuc. i. 56.) [R. W.] [W. W.]

DE'MIUS (*ὁ δήμιος*), the public executioner at Athens, a slave, who was the servant of The Eleven. For references, see Demosii, Hendeka, Hoi, and Tormentum. [W. S.]

DEMOCRA'TIA (*δημοκρατία*), that form of constitution in which the sovereign political power is in the hands of the demus, or commonalty. In the article Aristocratia the reader will find noticed the rise and nature of the distinction between the politically privileged class of nobles and the commonalty, a class personally free, though without any constitutionally recognised political power. It was this commonalty which was properly termed the demus (*δῆμος*). The natural and inevitable effect of the progress of society being to diminish, and finally do away with, those distinctions between the two classes on which the original difference in point of political power was founded, when the demus, by their increasing numbers, wealth, and intelligence, had raised themselves to a level, or nearly so, in real power and importance with the originally privileged class, now degenerated into an oligarchy, a struggle was sure to ensue, in which the demus, unless overborne by extraneous influences, was certain to gain the mastery. The sovereign power of the demus being thus established, the government was termed a democracy. There might, however, be two modifications of the victory of the commonalty. If the struggle between the classes had been protracted and fierce, the oligarchs were commonly expelled. This was frequently the case in the smaller states. If the victory of the commonalty was achieved more by the force of moral power than by intestine warfare and force of arms, through the gradual concessions of "the few," the result (as at Athens) was simply the entire obliteration of the original distinctions. This form of the constitution was still, in the most literal sense of the term, a democracy, for as wealth and birth no longer formed the title to political power, though the wealthy and noble still remained citizens of the commonwealth, the supreme power was to all intents and purposes in the hands of the class formerly constituting the demus, by virtue of their being the more numerous. (Aristot. *Pol.* iv. 4, p. 1290 b, 17.) When the two classes were thus equalised, the term demus itself was frequently used to denote the entire body of free citizens—"the many," in contrast with "the few."

It is obvious that, consistently with the maintenance of the fundamental principle of the supreme power being in the hands of the demus, various modifications of the constitution in detail might exist, and different views might be held as to what was the perfect type of a democracy, and what was an imperfect or a diseased form of it. Aristotle (*Pol.* iv. 4) points out that a democracy cannot be defined by the mere consideration of numbers: it is rather, when every free citizen is a member of the sovereign body (*δῆμος μέν ἐστιν ὅταν οἱ ἐλεύθεροι κύριοι ὦσιν*, p. 1290 b, 1). This definition he expresses in a more accurate form thus: *ἔστι δημοκρατία μὲν ὅταν οἱ ἐλεύθεροι καὶ ἄποροι πλείους ὄντες κύριοι τῆς ἀρχῆς ὦσιν* (*ib.* 17). It would still be a democracy if a certain amount of property were requisite for filling the public offices, provided the amount were not large. A *Politeia* itself is one species of democracy (*Pol.* iv. 3, p. 1290, 18), democracy, in the full sense of the word, being a sort of *παρέκβασις* of it. But for a perfect and pure democracy it was necessary that no free citizen should be debarred on account of his inferiority in rank or wealth from aspiring to any office, or exercising any political function, and that each citizen should be allowed to follow that mode of life which he chose. (Arist. *Pol.* iv. 4, p. 1292, 1; vi. 1, p. 1317 b, 12.) In a passage of Herodotus (iii. 80), where we probably have the ideas of the writer himself, the characteristics of a democracy are specified to be—1. equality of legal rights (*ἰσονομίη*); 2. the appointment of magistrates by lot; 3. the accountability of all magistrates and officers; 4. the reference of all public matters to the decision of the community at large. Aristotle also (*Rhet.* i. 8, § 4) says: *ἔστι δὲ δημοκρατία μὲν πολιτεία ἐν ᾗ κλήρῳ διανέμονται τὰς ἀρχὰς, ὀλιγαρχία δὲ ἐν ᾗ οἱ ἀπὸ τιμημάτων*. In another passage (*Pol.* vi. 1, 1317 b, 18), after mentioning the essential principles on which a democracy is based, he goes on to say: "The following points are characteristic of a democracy: that all magistrates should be chosen out of the whole body of citizens; that all should rule each, and each in turn rule all; that either all magistracies, or those not requiring experience and professional knowledge, should be assigned by lot; that there should be no property qualification, or but a very small one, for filling any magistracy; that the same man should not fill the same office twice, or should fill offices but few times, and but few offices, except in the case of military commands; that all, or as many as possible of the magistracies, should be of brief duration; that all citizens should be qualified to serve as dicasts; that the supreme power in everything should reside in the public assembly, and that no magistrate should be entrusted with irresponsible power except in very small matters. (Comp. Plat. *Rep.* viii. pp. 558, 562, 563; *Legg.* iii. p. 690, C; vi. p. 757, E.) Aristotle (*Pol.* iv. 3, 4, 5; vi. 1, 2) describes the various modifications which a democracy may assume. It is somewhat curious that neither in practice nor in theory did the representative system attract any attention among the Greeks.

That diseased form of a democracy, in which from the practice of giving pay to the poorer citizens for their attendance in the public assembly, and from other causes, the predominant party in the state came to be in fact the lowest class of the citizens (a state of things in which the democracy in many respects resembled a tyranny: see Arist. *Pol.* iv. 4, p. 1292, 18), was by later writers (Polyb. vi. 4, 57; Plut. *de Monarch.* c. 3) termed an *Ochlocracy* (ὀχλοκρατία—the dominion of the mob); but the term is not found in Aristotle. (Wachsmuth, *Hellenische Alterthumsk.* c. 7, 8; K. F. Hermann, *Staatsalterth.* §§ 52, 66–72; Thirlwall, *History of Greece*, vol. i. c. 10; Schömann, *Antiq.* i. 335–347, E. T.; Thalheim, *Rechtsalterth.* pp. 32–38.) [C. P. M.] [W. W.]

DEMONSTRA'TIO. [ACTIO.]

DEMOPOIE'TOS (δημοποίητος). [CIVITAS (Greek), pp. 443 *a*–444 *a*.]

DEMO'SII (δημόσιοι), public slaves at Athens, bought by the state. The most numerous class were the τοξόται or Σκύθαι, a force of police (under officers called τόξαρχοι) also called Σπευσίνιοι, from the first organiser of the service. (Poll. viii. 131–2, δημοσίου ὑπηρέται, ib.; Schol. Arist. *Ach.* 54, δημόσιοι ὑπ., φύλακες τ. ἄστεος; Phot. *s. v.* τοξόται.) Their duty was to preserve order in the assembly, courts, public places, and public works. They were at first encamped in tents in the agora, and afterwards removed to the Areopagus. Certain of them were in personal attendance on officials, *e.g.* the Prytaneis (Arist. *Ach.* 54; *Thesm.* 940, 1002 ff.), Probuli (Arist. *Lysistr.* 441 ff.)—especially police-officers: Astynomi, Agoranomi (v. Plat. *Prot.* p. 319 C; Xen. *Mem.* iii. 6, § 1). The corps dated from the year of Salamis, when 300 were bought; they were later increased to 1200. (Andoc. *de Pac.* 5, 7; Aesch. *de fals. Leg.* § 173 f.; Boeckh, *P. E.* 206 ff. = *Sthh.*^{3} i. 262 ff.)

Executioners, torturers, &c., whether police or not, were also slaves (Poll. viii. 71; Harp., *Etym. M.*, δημόκοινος; Bekk. *Anecd.* 236, 8; Thalheim, *Rechtsalterth.*, p. 124; Büchsenschütz, *Bes. u. Erw.* p. 104 ff.). Demosii were also employed in the treasury, in subordinate places in the assembly and courts, as checking-clerks (ἀντιγραφεῖς); their amenability to torture making them especially serviceable for such duties. The state undertook their training. (Schol. *ad* Dem. 2, 19; as φυλακὴ τῶν χρημάτων, Dem. *de Chers.* p. 101, § 47; ἀντιγραφεῖς, Bekk. *Anecd.* 197, 24 ff.; *C. I. A.* ii. 403.)

In the mint were slave workmen (Andoc. in Schol. to Arist. *Vesp.* 1007, *fr.* 6, Blass), as also in the mines. Exceptionally, as at Arginusae, demosii rowed in the galleys. As to legal position of public slaves, see *Att. Process*, p. 559 = 751, Lips.; Becker-Göll, *Charikles*, iii. 36. (Boeckh, *op. cit.*; Gilbert, *Staatsalterth.* i. 166–7, 219, &c.; id. *Beitr. z. inn. Gesch. Ath.* p. 367.) [J. M.]

DEMUS (δῆμος: on the etymology see Liddell and Scott, ed. 7), a country district, Lat. *pagus*. In contrasting "town" (πόλις) and "country" (περιοικίς), the Dorians called the divisions of the latter κῶμαι, the Athenians δῆμοι (Aristot. *Poet.* 3, § 6). Hence in the earlier Greek poets we find δῆμος applied to the outlying country population who tilled the lands of the inhabitants of the πόλις (Hom. *Il.* iii. 50; *Od.* vi. 3, viii. 555, xi. 14, xiv. 43; Hes. *Op.* 527).

The Demes (δῆμοι), as the subdivisions of Attica were called, had existed from a remote period, though in smaller numbers than they subsequently attained. As in the rest of Greece, many of them had been originally independent cities, each with its own πρυτανεῖον and βουλή: but the revolution ascribed to Theseus had consolidated the whole of Attica under one government, all the local magistracies and councils being made to centre in the prytaneum and senate of Athens. Henceforward Athens was the one city in the land; the demes became constituent portions of Athenian territory (Thuc. ii. 15). "Of the general fact there is no reason to doubt, though the operative cause assigned by the historian, the power and sagacity of Theseus, belongs to legend and not to history." (Grote, pt. ii. ch. 10, vol. ii. p. 277). Traces of this former independence survived to later times: Eleusis, alone among Attic demes, was allowed to retain the title of πόλις, and to coin its own money (Strab. ix. p. 395; cf. Gilbert, *Staatsalterth.* i. 193; a coin of Eleusis in *Dict. Geogr.* s. v.). A standing feud between the demes of Pallene and Hagnus* dated from the mythical wars, and they refused each other the right of intermarriage (ἐπιγαμία) and the friendly greeting (Ἀκούετε λεῴ) of the herald (Plut. *Thes.* 13). The ἐγκτητικὸν moreover, or tax on the occupation of land or houses in a different deme from that to which men belonged by birth, shows a curious survival of the ancient exclusive spirit of citizenship at a time when all were, in common, citizens of Athens alone. It is from the time of Cleisthenes that the historic importance of the demes commences. His legislation abolished the four old Ionic tribes for all but ceremonial purposes [PHYLOBASILEIS], while the gentes and phratries which composed them continued to exist as family and religious associations, but without political privilege. The new political organisation consisted of ten tribes, and of demes, stated to have now amounted to one hundred. The ten new tribes were not, strictly speaking, territorial divisions of the country. The older writers, who regarded them in this light, found a difficulty in the fact that demes of the same tribe were situated at opposite extremities of Attica (Thirlwall, *Hist. Gr.* ii. 74 and App. i. to same volume). In reality the already existing demes, probably with their numbers increased by subdivision, became the political units or "primitive constituent element of the commonwealth" (Grote); and the tribes were mere groups of demes arbitrarily arranged, and in no case all adjacent to

---

* Or Agnus; the breathing is doubtful. Inscriptions, so useful in determining the true spelling of demotic names (*e.g.* Κολλυτεύς, not Κολυττεὺς as in some MSS.), do not help us here.

each other. The priority of the demes to the tribes is implied in the account of Herodotus, that Cleisthenes "distributed" the demes among the tribes by tens (*δέκα δὲ καὶ τοὺς δήμους κατένειμε ἐς τὰς φυλάς*, Herod. v. 69: on this, the right explanation of *δέκα* in this passage, cf. Stein *ad loc.*; Schömann, *Antiq.* i. 365 n., E. T.; Grote, ch. 31, iii. 115 n.). The distinction drawn by Dionysius (iv. 14) between the earlier Roman tribes and those of Servius, calling the former genealogical (*φυλαὶ γενικαί*) and the latter local (*τοπικαί*), applies also to the old-Ionic and the Cleisthenean tribes at Athens; but the ten Attic tribes were only so far local as being formed out of an aggregate of demes or parishes, not as themselves identified with a particular part of the country. The motives of this change are expressed by Aristotle as "the more complete fusion of all interests and the breaking up of old ties or associations" (*ὅπως ἂν ὅτι μάλιστα ἀναμιχθῶσι πάντες ἀλλήλοις, αἱ δὲ συνήθειαι διαζευχθῶσιν αἱ πρότερον*, *Pol.* vii. [vi.] 4, § 19). The local quarrels of the *πάραλοι*, *διάκριοι*, and *πεδιαῖοι*, so rife during the preceding century, now came to an end; the local predominance of the city, and the formation of a city interest distinct from that of the country, was obviated; which could hardly have failed to arise had the city by itself constituted either one deme or one tribe. Cleisthenes distributed the city (or found it already distributed, but this is less likely) into several demes, and these demes among several tribes; while Peiraeus and Phalerum, each constituting a separate deme, were also assigned to different tribes. On the object of this part of the Cleisthenean legislation see further in Grote (*l. c.* pp. 112–114).

The demes thus constituted bore some resemblance to an English parish, a still closer one to the German *Gemeinden* (especially in Switzerland), and the French *Communes*, having, like the latter, municipal organisation. (See these points further worked out in Haussoullier, *Vie Munic. en Attique*, pp. 207–210.) In extent, likewise, they must have varied within much the same limits as parishes in England: Attica with its 720 square miles being about equal in area to one of the smaller English counties, and the number of demes or parishes, which in both cases gradually increased, being about the same in each. The number of demes before the time of Cleisthenes is not known; but if those with patronymic names (*Βουτάδαι*, *Σκαμβωνίδαι*, *Χολλεῖδαι*, &c.) were all founded by him, it may have been under seventy, as these last amount to upwards of thirty in our lists. Schömann in his *Antiquities* (i. 365, E. T.) adheres to the opinion expressed in his earlier works, that Cleisthenes raised the number to exactly 100; and so Gilbert (*Staatsalterth.* i. 192). K. F. Hermann, while agreeing that this is what Herodotus meant to say, doubts whether the fact were really so (*Staatsalterth.* § 111). About B.C. 200 Polemon *ὁ περιηγητής* (*ap.* Strabo, ix. p. 396) reckoned 174; and some have thought that this had always been the number, and that Cleisthenes left many of them in a subject condition, to be enfranchised in later times (Niebuhr, *Hist. Rom.* ii. 308, E. T.). It is now universally admitted that this number was reached by a process of subdivision, which indeed did not stop here: 182 names of demes, or eight more than the supposed limit, have now been recovered (Gilbert, p. 193 n.); and Szanto thinks that they may have ultimately amounted to 190 (*Untersuch.* p. 34: Haussoullier demurs, but gives no reasons, p. 182). Several points connected with the legislation of Cleisthenes are confessedly obscure; but it seems certain that he introduced a uniform system (much as the French did, when at the Revolution they substituted departments for the old provinces), and that his hundred demes covered the whole soil of Attica, including the capital. If we bear in mind the ancient contrast between *πόλις* and *δῆμος*, it will seem much more probable that the city demes were now first constituted than that they existed previously, a point which Grote leaves undetermined. There is reason to think that these demes, with the Peiraeus and Phalerum, amounted to just ten, one being assigned to each tribe (compare *Dict. Geogr.* i. 325 a, with Grote, iii. 114 n.); an arrangement which must have tended to equalise the number of citizens in each tribe. There was every reason why the tribes, which contributed equal numbers to the senate and the dicasteries, and perhaps to other offices as well [ARCHON, p. 167 *a*], should be as nearly equal as possible; no reason why they should always have contained the same number of demes, or why the demes themselves should be of equal extent. The growth and movement of the population in the course of time accounts, quite naturally, for the increase in the number of the demes and the re-arrangement of their boundaries. We know that, in fact, the demes varied greatly in size: Acharnae was much the largest, supplying no less than 3000 hoplites in the time of the Peloponnesian war (*οἱ Ἀχαρνῆς μέγα μέρος ὄντες τῆς πόλεως*, Thuc. ii. 20); Halimus, the deme of Thucydides and of Euxitheus, the plaintiff in the speech against Eubulides, one of the smallest (Dem. *c. Eubul.* p. 1316, § 57; Haussoullier, p. 182). The names of the demes were derived either from natural features (*e.g.* *Ποταμὸς καθύπερθεν* and *ὑπένερθεν*), from neighbouring places (*e.g.* *Οἶον Δεκελεικόν*, *Οἶον Κεραμεικόν*), from plants which grew there (*e.g.* *Μαραθών*, *Ῥαμνοῦς*, *Μυρρινοῦς*, *Μυρρινοῦττα*), from trades carried on in them (*e.g.* *Κεραμεῖς*), or from inhabitants (*e.g.* *Ἑκάλη* and the patronymics in *-δαι* generally: *ἢ ἀπὸ τῶν τόπων, ἢ ἀπὸ τῶν παρακειμένων αὐτοῖς, ἢ ἀπὸ τῶν ἐν αὐτοῖς φυτῶν, ἢ ἀπὸ τῶν ἐν αὐτοῖς χειροτεχνῶν, ἢ ἀπὸ τῶν οἰκησάντων ἀνδρῶν καὶ γυναικῶν*, *Etym. M.* s. v. *Ἑλεεῖς*: cf. Schol. Aristoph. *Plut.* 586). Like the ten tribes, the first hundred demes all had eponymous heroes, known collectively as the *ἑκατὸν ἥρωες* (Herodian, *περὶ μονηροῦς λέξεως*, 17, 8; Schömann, *Antiq.* i. 367, E. T.); a fact which lends some plausibility to Leake's conjecture, *οἰκισάντων* for *οἰκησάντων* in the passage from the *Etym. M.* The demes with gentile or patronymic names are ascribed, as we have seen, either wholly or in part to Cleisthenes; and Schömann has pointed out that they were situated mainly in that part of the country which has been assigned to the old-Ionic tribe of the *Γελέοντες*, and where accordingly the greatest number of noble families and the most important of them lived (*l. c.* p. 366 n.). The Butadae were one of the noblest and most exclusive of these families;

and when their name became that of a deme, the distinction of the original stock was maintained by their calling themselves Eteobutadae or "genuine Butadae." Thus Lycurgus the orator was *τὸν δῆμον Βουτάδης, γένους τοῦ τῶν Ἐτεοβουταδῶν* (Plut. *Vitt. X. Oratt.* p. 841 B). If Philaïdae were really the *deme* and not the *gens* of Pisistratus (Plut. *Sol.* 10), we have an example of a patronymically named deme in the old times. But this is most likely an oversight of Plutarch's; indeed it is doubtful whether, in those days, Athenians were usually described by the name of their deme at all; and in all probability the deme Philaïdae was carved by Cleisthenes out of the territory of Brauron, one of the ancient cities of Attica, though Schömann (*l. c.*) thinks that the reverse was the case.

The municipal organisation of the demes was very complete, both from the civil and the religious point of view. They formed independent corporations, and had each their several magistrates, landed and other property, with a common treasury. They had likewise their respective assemblies convened by the demarch, in which was transacted the public business of the deme, such as the leasing of its estates, the annual elections of officers, the revision of the registers or lists of *Demotae* (*δημόται*), and the admission of new members [DEMARCHI]. Other magistrates, besides the demarch, were *ταμίαι* or treasurers, *ἀντιγραφεῖς*, controllers or checking clerks, and *ὁρισταί*, whose office was religious as well as civil: they not only settled boundaries, mostly of sacred places, but saw that the rules of exclusion were enforced (*e.g.* in the Thesmophorion at Peiraeus, *C. I. A.* ii. 573 b). Each deme appears to have kept what was called a *πίναξ ἐκκλησιαστικός*, or list of those demotae who were entitled to vote in the general assemblies of the whole people (Dem. *c. Leochar.* p. 1091, § 35). In financial matters they supplanted the old naucraries (*ναυκραρίαι*) of the four tribes, each deme being required to furnish to the state a certain quota of money and contingent of troops, whenever necessary. Each had, moreover, its peculiar temples and religious worship (*δημοτικὰ ἱερά*, Pausan. i. 31; Pollux, viii. 108), with priests chosen annually by the demotae (Dem. *c. Eubul.* p. 1313, § 46): and priests as well as magistrates had to submit to a *δοκιμασία*, in the same way as the public officers of the state. At Aexone we find for the religious establishment of this one deme four *ἱεροποιοὶ εἰς τὸ τῆς Ἥβης ἱερὸν* chosen by lot, two *σωφρονισταὶ* and a *κῆρυξ*, in this instance apparently to preserve order in a night-festival (*παννυχίς*), a *ἱερεὺς τῶν Ἡρακλειδῶν*, a *ἱέρεια τῆς Ἥβης καὶ τῆς Ἀλκμήνης*, and an *ἄρχων* attached to the service of the two goddesses (*C. I. A.* ii. 581). In Halimus a priest of Heracles, a favourite form of demotic worship in Attica, is chosen by lot from among the *εὐγενέστατοι* (Dem. *c. Eubul.* p. 1313, § 46; 1318, § 62). In Athmonon we have a decree in honour of six *μεράρχαι*, who had shown liberality in providing sacrifices (apparently as a local *λειτουργία*) for the festival of the Amarysia (*C. I. A.* ii. 580). The scamping of public works was prevented by *ἐπιτιμηταί*, as in the theatre at Peiraeus (*C. I. A.* ii. 573; cf. Boeckh, *Sthh.*³ i. 260). Further details on the *ἱερὰ δημοτικὰ* will be found in the elaborate work of Haussoullier, pp. 136–173. The *δικασταὶ κατὰ δήμους* belonged to the public, not the demotic organisation [TETTARACONTA, HOI].

Cleisthenes, like Solon before him, admitted many foreigners to the franchise, who according to his system were necessarily enrolled among the demes. The right explanation of the much-canvassed phrase in Aristotle (*πολλοὺς ἐφυλέτευσε ξένους καὶ δούλους μετοίκους*, *Pol.* iii. 2 = p. 1275 b, 37) is that he made citizens both of free-born foreigners (*ξένοι*) and slaves who by emancipation had already become *μέτοικοι* (Grote, ch. 31, iii. 110 n.; Gilbert, *Staatsalterth.* i. 144). Since a son was registered in the deme of his natural or adoptive father, non-residence must soon have become common; but this would not cause any inconvenience, as the meetings of each deme were not held within its limits, but at Athens (Dem. *c. Eubul.* p. 1302, § 10). The only difference it made was the payment of the *ἐγκτητικὸν* to the demotic treasury, which however was sometimes remitted by decree [ENCTESIS]. Those who in later times acquired the citizenship by vote of the Athenian people (the *δημοποίητοι*) were usually allowed to select at pleasure the deme, tribe, and phratry in which they would be enrolled; see the inscriptions quoted under CIVITAS, pp. 443 *b*, 444 *a*.

Two of the most important functions of the general assemblies of the demes were the admission of new members and the revision of the names of members already admitted. The register of enrolment was called *κοινὸν γραμματεῖον* (Dem. *c. Eubul.* p. 1317, § 60; Bekk. *Anecd.* 272, 27), or more usually *ληξιαρχικὸν γραμματεῖον* (Isae. *Or.* 7 [Apollod.], § 27; Dem. *c. Leoch.* p. 1094, § 35), because any person whose name was inscribed on it could enter upon an inheritance and enjoy a patrimony (*διὰ τὸ τῶν λήξεων ἄρχειν· λήξεις δ' εἰσὶν οἵ τε κλῆροι καὶ αἱ οὐσίαι*, Harpocrat. *s. v.*; Gilbert, *Staatsalterth.* i. 187); *λαγχάνειν κλῆρον* being thus equivalent to the Roman phrase *adire hereditatem*. These registers were kept by the demarchs, who, with the approbation of the members of the deme assembled in general meeting, inserted or erased names according to circumstances. Thus, when a youth was proposed for enrolment, it was competent for any demote to object to his admission on the ground of illegitimacy, or non-citizenship by the side of either parent. The demotae decided on the validity of these objections under the sanction of an oath, and the question was determined by a majority of votes (Dem. *c. Eubul.* p. 1318, § 61). The same process was observed when a citizen changed his deme in consequence of adoption (Isae. *Or.* 7 [Apollod.], §§ 28, 29). Sometimes however a demarch was bribed to place, or assist in placing, on the register of a deme, persons who had no claim to citizenship (Dem. *c. Leoch.* p. 1091, § 37). To remedy this admission of spurious citizens (*παρέγγραπτοι*) the *διαψήφισις* was instituted [DIAPSEPHISIS]. Lastly, as inscriptions abundantly show, crowns and other honorary distinctions could be awarded by the demes in the same way as by the tribes. (Grote, ch. 10, ii. 272 ff.; ch. 31, iii. 108 ff.; K. F. Hermann, *Staatsalterth.* § 111, &c.; Schömann, *Antiq.* i. 336, 366 f., E. T.; Gilbert, *Staatsalterth.* i. 142 ff., 192 ff.; Szanto, *Untersuchungen über das Attische Bürgerrecht*, Vienna, 1881;

Haussoullier, *La Vie Municipale en Attique*, &c., Paris, 1884: and for the geography of the demes, Leake, *Demi of Attica*, ed. 2, 1841; Ross, *Die Demen von Attica*, Halle, 1846; *Dict. Geogr.* i. 325–336.) [R. W.] [W. W.]

DENA'RIUS, translated by "penny" in the A. V. of the Bible, was the principal silver coin among the Romans, and was so called because it was originally equal to ten asses; but on the reduction of the weight of the as, it was made equal to sixteen asses, except in military pay, in which it was still reckoned as equal to ten asses. The denarius was first coined five years before the first Punic war, B.C. 269. An account of the introduction and the subsequent reductions of the denarius is given under As, p. 205, where its value and subdivisions are fully discussed, and the authorities given. It is sufficient to state here that its normal weight during the last two centuries of the republic was 60 grains, and its value about 8½*d.* Its chief subdivisions in silver coins was the *quinarius* or half denarius, and the *sestertius* or quarter denarius [SESTERTIUS].

Denarii. (British Museum. Actual size.)

For other divisions and for the types found upon the coins, see As. [P. G.]

DENDRO'PHORI, a collegium or corporation of carpenters, frequently mentioned in inscriptions in imperial times. They formed originally a religious corporation, carrying the sacred tree in the worship of the Magna Mater (*collegium dendrophorum Matris magnae*), and were under the Quindecimviri. (See inscriptions quoted by Marquardt, *Röm. Staatsverw.* iii. pp. 356, 380.) Some modern critics have supposed that there were two collegia of Dendrophori, one religious, and the other of artificers; but it is more probable that they were in later times a college of carpenters under the protection and in the service of the Magna Mater. In an ordinance issued by Constantine in 315 they are mentioned along with the centonarii and fabri (Cod. Theod. xiv. 8). They were suppressed by Honorius and Theodosius in 415 as a heathen collegium (Cod. Theod. xvi. 10, 20, § 2), after which time their name does not appear. (Bossieu, *Inscr. de Lyon*, p. 412; Marquardt, *Privatl. d. Römer.* p. 698.) [W. S.]

DENICA'LES FE'RIAE. [FERIAE.]

DENS or DENTALE. [ARATRUM.]

DENTIFRI'CIUM (*ὀδοντότριμμα, ὀδοντόσμηγμα*), dentifrice or tooth-powder, appears to have been skilfully prepared and generally used among the Romans. A variety of substances, such as the bones, hoofs, and horns of certain animals, crabs, egg-shells, and the shells of the oyster and the murex, constituted the basis of the preparation. Having been previously burnt, and sometimes mixed with honey, they were reduced to a fine powder. Though fancy and superstition often directed the choice of these ingredients, the addition of astringents, such as myrrh, or of nitre and of hartshorn ground in a raw state, indicates science which was the result of experience, the intention being not only to clean the teeth and to render them white, but also to fix them when loose, to strengthen the gums, and to assuage toothache. (Plin. *H. N.* xxviii. § 178–9, xxxi. § 117, xxxii. § 65, 79; Scrib. Larg. *Comp.* 59.) Pounded pumice was a more dubious article, though Pliny (xxxvi. § 156) says, "Utilissima fiunt ex his dentifricia." [J. Y.] [J. H. F.]

DEPAS (*δέπας*), a cup with two handles, frequently mentioned by Homer, seems to have been a generic term, like *ποτήριον* (Asclepiades, *ap.* Athen. xi. 24, p. 783 a, who says it is the same as the *ἄλεισον*). It was used in libations, and was usually of gold (*Il.* xxiii. 196, xxiv. 285, &c.), but later of earthenware (*Anth. Pal.* iv. 333). The term is applied to the golden bowl or boat in which the sun floated back from west to east during the night (Stesich. *fr.* 8 Bergk; Aesch. *fr.* 66 Dind.; and other quotations *ap.* Ath. xi. 469 e, f). As a specific term it was probably applied to cups of a bowl-like shape, and is therefore identified by Panofka and Dennis with the form given in the annexed cut.

Depas. (Dennis, *Etruria.*)

Depas is frequently used in Homer with the epithet *ἀμφικύπελλον* (*Il.* i. 584, vi. 220), which has given rise to much discussion. It was, however, probably a double-cup, with a bottom halfway up, like a dice-box. That this was the form of the cup is inferred from a passage of Aristotle (*Hist. An.* ix. 40), where he describes the cells of bees as having two openings divided by a floor, like the *ἀμφικύπελλα* (Buttmann's *Lexilogus*, s. v.). Cups of this kind have been found in the cemeteries of Bologna, but the Homeric cups had two handles, while these have none (Dennis, *Etruria*, ii. p. 515).

Mr. Dennis points out that the golden cups which Schliemann found at Hissarlik and Mycenae, and which are figured in his works, are probably instances of the simple depas, but not of the *ἀμφικύπελλον*, if the previous explanation of the form of the latter is correct (Dennis, *Etruria*, i. p. cxix.; Schliemann, *Troy*, p. 326, *Mycenae*, pp. 231, 234). [W. S.]

DEPENSI ACTIO. [INTERCESSIO.]

DEPONTA'NI SENES, a name given to men sixty years of age, hence called *sexagenarii*, because they were freed from the obligation of voting in the comitia; that is, of passing over the bridges (*pontes*) which led into the saepta, where the voting took place. [Comitia, p. 508 *a*.] This is the most probable explanation of the word; and it is doubtful whether men of sixty years of age were absolutely deprived of the franchise, though this was the case if we accept literally the statement that they were thrust back from voting, "de ponte dejiciebantur" (Fest. pp. 75, 334, M.). Some ancient writers supposed that the name *depontani* had reference to a barbarous custom of antiquity, that men of sixty years of age were thrown down from the *pons sublicius* into the Tiber, but this interpretation was repudiated by Varro and Verrius. (Fest. *ll. cc.*; Varr. *ap.* Non. p. 523; Cic. *Rosc. Am.* 35, 100; Ov. *Fast.* v. 623; Macrob. i. 5; Plut. *Quaest. Rom.* 32.) [W. S.]

DEPORTA'TIO. [Exsilium.]

DEPO'SITI ACTIO. [Depositum.]

DEPO'SITUM is a real contract which consists in one man entrusting a movable thing to another to keep until it is demanded back, and without any reward for the trouble of keeping it. The party who makes the *depositum* is called *deponens* or *depositor*, and he who receives the thing is called *depositarius*. The main object of *depositum* is to benefit the *deponens*, and not the *depositarius*. Accordingly the *depositarius* has, as a rule, no right to make use of the thing deposited, the contract by which one person lends a thing to another for his gratuitous use being *commodatum*, and not *depositum*. The *deponens* is benefited by the *depositum* without being obliged to give anything in return. If money is promised to a person for taking care of a thing, the contract is *locatio conductio*, and not *depositum*. If anything else except money is promised, the contract is one of the *innominati contractus*. The act of deposit may be purely voluntary; or it may be from necessity, as in the case of fire, shipwreck, or other casualty. The *depositarius* is bound on demand to restore the thing deposited to the *deponens*, or to the person to whom the *deponens* has ordered it to be restored. If he cannot restore it, or cannot restore it uninjured, he is liable, should such loss or injury be due to his wilful misconduct (*dolus*) or to gross negligence (*culpa lata*), which is equivalent to wilful misconduct; but he is not liable on account of ordinary negligence (*culpa levis*), except under special circumstances, as that he has agreed to undertake such liability, or has benefited in some way by the contract. The reason why he is not bound as a rule to take any special care of the thing is, that he has derived no benefit from the contract. With the thing itself he must restore all appurtenances and any *fructus* which the thing has produced. The remedy by which the *deponens* could enforce these obligations is the *actio depositi directa*. The *actio* is in *duplum*, if the deposit was made from necessity: if the *depositarius* lost the action, he suffered *infamia* as a consequence. The *depositarius* on his side is entitled to be secured against all damage which he may suffer from the deposit through any *dolus* or *culpa* on the part of the *deponens*, and to all costs and expenses incurred by his charge: his remedy against the *deponens* is by an *actio depositi contraria*.

Roman law recognised an irregular kind of deposit, which consists in depositing fungible things, such as money, with another person, on the understanding that an equal quantity of things of the same kind shall be restored, and not the identical things deposited, as in an ordinary deposit. In this case the *depositarius* has the use of the things deposited, the property in them passing to him: consequently he is subject to all risk of loss. This transaction is distinguished from a loan (*mutuum*) by the fact that it is entered into in the interest of the person who makes over the things, and not in that of the person who receives them.

A deposit of a *res litigiosa* with some indifferent person, until an action relating to such *res* has been decided, is called sequestration.

(Dig. 16, 3; Cod. iv. 34, *Mos. et Rom. Legum Coll.* x.; Cic. *de Off.* i. 10; Juv. xiii. 60; Asher, *Zeitsch. f. Civ. und Pr. R.* xxii. 8; Arndts in Haimerl's *Vierteljahrschrift*, xvii. 8; Windscheid, *Pandekten*, § 374, &c.) [E. A. W.]

DERMA'TIKON (δερματικόν, sc. ἀργύριον), the hide-money; that is, the money paid into the treasury at Athens from the sale of the hides of victims slain at the festivals. (Boeckh, *P. E.* p. 333 = *Sthh.* i.^{3} p. 405; App. viii., vol. ii. p. 100–102; *C. I. A.* ii. 741 A.) [W. S.]

DESERTOR is defined by Modestinus to be one "qui per prolixum tempus vagatus, reducitur," and differs from an *emansor*, "qui diu vagatus ad castra egreditur" (Dig. 49, tit. 16, s. 3). Those who deserted in time of peace were punished by reduction to the ranks (*gradus dejectio*, Val. Max. ii. 7, § 4), corporal chastisement, fines, or ignominious dismissal from the service (*missio ignominiosa*, [Caes.] *B. Afr.* 54). Those who left the standards in time of war were usually punished with death (Dionys. xi. 43; Liv. *Epit.* lvi.; Tac. *Ann.* xiii. 36; Lamprid. *Al. Sev.* 51). The *transfugae*, or deserters to the enemy, when taken, were sometimes deprived of their hands or feet (Liv. xxvi. 12; Val. Max. ii. 7, § 11), but generally were put to death. In imperial times they were exposed to wild beasts (Val. Max. *l. c.* §§ 13, 14; Dig. *l. c.* § 10). (Marquardt, *Staatsverw.* ii. 553.) [W. S.] [W. W.]

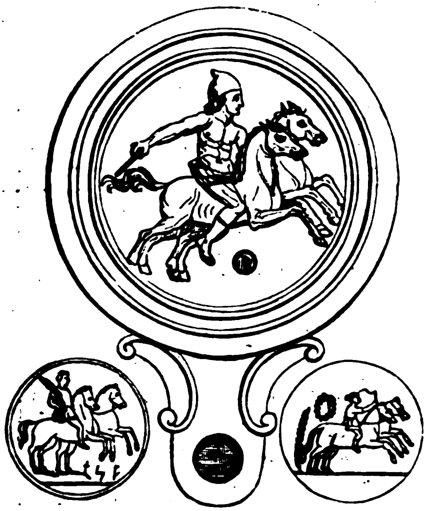
DESIGNA'TOR. [Funus.]

DESMOTE'RION (δεσμωτήριον). [Carcer.]

DESPOSIONAUTAE (δεσποσιοναῦται). [Helotae; Libertus.]

DESULTOR (ἀποβάτης, μεταβάτης), literally "one who leaps off," was applied to a person who rode several horses or chariots, leaping from one to the other. As early as the Homeric times, we find the description of a man who keeps four horses abreast at full gallop, and leaps from one to another, amidst a crowd of admiring spectators. (*Il.* xv. 679–684; Propert. v. 2, 35; Agostini, *Gemme*, 193.) In the games of the Roman circus this sport was also very popular. The Roman desultor generally rode only two horses at the same time, sitting on them without a saddle, and vaulting upon either of them at his pleasure. (Isid. *Orig.* xviii. 39.) He wore a hat or cap made of felt. The taste for these exercises was carried to so great an extent, that young men of the highest rank not only drove bigae and quadrigae in the circus, but exhibited these feats of horsemanship. (Suet. *Jul.* 39: cf. Varr. *R. R.* ii. 7; Valer. Flacc. vi. 161; Liv. xliv. 9.) Among other nations this species of equestrian dexterity was applied to the purposes of war. Livy mentions a troop of horse in the Numidian army, in which each soldier was supplied with a couple of horses, and, in the heat of battle and when clad in armour, would leap with the greatest ease and celerity from that which was wearied or disabled upon the back of the horse which was still sound and fresh (xxiii. 29). The Scythians, Armenians, and some of the Indians were skilled in the same art.

The annexed woodcut shows three figures of desultores, one from a bronze lamp, published by Bartoli (*Antiche Lucerne Sepolcrali*, i. 24), the others from coins. In all these the rider wears a pileus, or cap of felt (Hygin. *Fab.* 81), and his horse is without a saddle; but these examples prove that he had the use both of the whip and the rein. On the coins we also observe the wreath and palm-branch as ensigns of victory. [J. Y.] [J. H. F.]



Desultores. (From an ancient lamp and coins.)

DETESTA'TIO SACRO'RUM. [GENS.]

DEVERSO'RIUM. [CAUPONA.]

DEUNX, eleven ounces, eleven-twelfths of the as [AS], not represented by a coin, or eleven-twelfths of anything. (Varr. *L. L.* v. 172; Cic. *Caecin.* 6, 17.) [W. S.]

DEXTANS, ten ounces, ten-twelfths of the as [AS], not represented by a coin, or ten-twelfths of anything. (Varr. *L. L.* v. 172; Suet. *Ner.* 32.) [W. S.]

DEXTRA'LE (Cyprian. *Hab. Virg.* med.), and DEXTROCHERIUM (from *dexter* and χείρ, the hand, Capitol. *Maxim.* 6, *Maxim. Jun.* 1; *gemmata dextrocheria*, Schol. *ad* Juv. ix. 50), late Latin words, signifying a bracelet. For illustrations, see ARMILLA. [W. S.]

DIABATE'RIA (διαβατήρια), a sacrifice offered to Zeus and Athena by the Spartan kings on passing the frontier of Laconia in command of an army (Xen. *Rep. Lac.* 13, § 2 ff.). If the victims were unfavourable, they disbanded the army and returned home (Thuc. v. 54, 55, 116; cf. Xen. *Hell.* iii. 4, § 3; iv. 7, § 2; v. 3, § 14, 4, §§ 37, 47). We also find διαβατήρια offered by a Roman general in passing a swollen river (Plut. *Lucull.* 24). [W. S.] [W. W.]

DIABATHRON (διάβαθρον). [CALCEUS, p. 332 *b*, No. 4.]

DIADE'MA (διάδημα), a white band or fillet used to encircle the head. (Val. Max. vi. 2, § 7.) This ornament was of Oriental origin, and is frequently represented on the heads of Eastern monarchs. Hence the Greeks transferred it to their divinities. Its invention is ascribed by Pliny (*H. N.* vii. § 191) to "Liber pater"; and accordingly on coins and other works of art Dionysus is represented with a diadema or band on his head, as is shown in the accompanying coin of the city of Naxos in Sicily. (See also the figure of Dionysus on p. 356.) In the same way we find on the coins of Bruttii the heads of Apollo and Hercules wearing the diadema (Eckhel, i. p. 166); and Pliny (*H. N.* xxxiv. § 79) speaks of a statue of Apollo as crowned with a diadema (*diadematus*).

Diadema on head of Dionysus. (Coin of Naxos in Sicily. British Museum.)

The diadema was worn by the Assyrian kings. In the earliest monuments only one band passed round the head-dress of the monarch, but at a later period two or more were introduced, as in the accompanying figure (Layard, *Nineveh*, ii. p. 320). In the same way a blue band variegated with white spots encircled the tiara or cidaris of the Persian kings. (Xen. *Cyr.* viii. 3, § 13; Plut. *de Frat. Am.* c. 18; Lucian, *Pisc.* 15; "cidarim Persae vocabant regium capitis insigne: hoc caerulea fascia albo distincta circumibat," Curt. iii. 3, § 19; vi. 20, § 4: see drawing under TIARA.) It was adopted by Alexander after the conquest of Darius (Justin, xii. 3; Lucian, *Dial. Mort.* 12, 3), and became the recognised symbol of royalty. It appears constantly on the coins of the successors of Alexander in Syria and Egypt (see annexed cuts), and consisted of a broad white band encircling the head, with bands hanging down behind. Its white colour is frequently mentioned by ancient writers (ταινία λευκὴ περὶ τῷ μετώπῳ, Lucian, *Navig.* 39; Appian, *B. C.* ii. 108; "candida fascia," Suet. *Caes.* 79; "albentibus spumis in modum diadematis," Tac. *Ann.* vi. 37; "vitta albente," Sil. Ital. xvi. 241). The

Diadema on head-dress of the Assyrian king. (Kouyunjik.)

Diadema on heads of Seleucus II., king of Syria (left-hand figure), and of Ptolemaeus II., king of Egypt (right-hand figure). (Coins in British Museum.)

example of the Diadochi was followed by other Grecian kings, for though Agathocles did not adopt it (Diod. xxiv 5), it was worn by subsequent kings of Syracuse. Thus it appears on the coins of Hieron II., though Eckhel thinks that they were struck after his death, because it would appear from Livy (xxiv. 5), that it was first adopted by his grandson Hieronymus. (Eckhel, i. p. 253.)

Diadema on head of Hieron II. (Coin in British Museum.)

The diadema, as a symbol of royalty (*regni insigne*, Cic. *Phil.* iii. 5, 12), was hateful to the Romans, and was therefore refused by Julius Caesar, when M. Antonius offered him a laurel crown encircled by a diadem (**Διάδημα στεφάνῳ δάφνης περιπεπλεγμένον**, Plut. *Caes.* 61, *Anton.* 12; Cic. *Phil.* ii. 34, 85; Suet. *Caes.* 79). A diadem had been previously placed upon his statue, but was removed by order of the tribunes (Suet. *l. c.*; Dio Cass. xliv. 9; Appian, *B. C.* ii. 108). This diadem, like that of the Grecian kings, is expressly said to have been a white band (Suet., Appian, *ll. cc.*). It is indicative of the feeling of the Romans against the name of king and the emblem of kingly power, that succeeding emperors, though they exercised despotic power and assumed the *corona radiata* as a mark of divinity [Corona, p. 550 *a*], are never represented with the diadem on their coins till the time of Constantine. The mad Caligula thought of assuming the diadem, and turning the *principatus* into a *regnum*, but gave up the idea (Suet. *Cal.* 22. Aurel. Vict. *Epit.* 3 says that Caligula actually assumed the diadem). Elagabalus also wished to use a jewelled diadem (Lamprid. *Elagab.* 23). Aurelius Victor says (*Epit.* 35) that Aurelianus was the first emperor who wore a diadem, but this is not confirmed by coins. It first appears, as we have already said, on the coins of Constantine, sometimes in a plain form, and sometimes adorned with precious stones. (Cf. Aurel. Vict. 41 of Constantine, "caput exornans perpetuo diademate.") In the *Chronicon Alexandrinum* it is said that Constantinus was the first who wore the diadem adorned with pearls (Eckhel, vi. p. 80), and Claudian speaks (*de Nupt. Honor.* 167) of the diadem inwoven with heavy pearls gathered in the Erythrean sea. The diadem was regularly worn by the emperors succeeding Constantine. Thus Julian had a magnificent diadem adorned with precious stones ("ambitioso diademate utebatur lapidum fulgore distincto," Amm. Marc. xxi. 1, § 4). The diadem was continually increased in richness, size, and splendour, till this bandage was at length converted into the crown which has been for many centuries the badge of sovereignty in modern Europe (Eckhel, vi. p. 18; viii. pp. 79, 363, 502).

Before the diadem was worn by the Roman emperors as a symbol of sovereignty, it was used as a head-dress by Roman women. Thus Isidore (*Orig.* xix. 31) defines the diadema as "ornamentum capitis matronarum ex auro contextum." (Becker-Göll, *Gallus*, iii. p. 279; Marquardt, *Privatl.*, p. 681.) [W. S.]

DIADICA'SIA (**διαδικασία**), in its most extended sense, is almost a synonym of **δίκη**, but always includes the notion of a *dispute between* rival claimants, not an action by one *against* another. In purely political questions, we find the word applied to arguments which of two parties were to get the credit or bear the blame of what had happened (Aeschin. *Ctes.* § 146; Dem. *de Chers.* p. 103, § 57). The phrase **ἐν τοῖς φίλοις διαδικάσασθαι** is applied to a settlement out of court (Dem. *c. Onet.* i. p. 864, § 2). Technically, diadicasia denotes the proceedings in a contest for preference between two or more rival parties, either as to the possession of property or as to exemption from personal or pecuniary liabilities. To the former class (rights or privileges) belong cases of disputed inheritance (Dem. *c. Leochar.* p. 1082, § 7); of contests for priesthoods or temple property, several of which are recorded by the grammarians; the claims of private creditors upon a confiscated estate (Bekk. *Anecd.* p. 236); and the contests between informers claiming rewards offered for the discovery of crimes (Andoc. *de Myst.* § 28). The latter class (burdens) includes cases like the Antidosis; questions as to who should undertake a trierarchy or a choregia (Xen. *Rep. Ath.* 3, §§ 4, 5; Dem. *c. Aphob.* ii. p. 841, § 17), or as to who was to be held responsible for debts due to the state (Dem. *c. Timocr.* p. 704, § 13; *c. Everg. et Mnes.* p. 1147, §§ 26–32). The essential distinction between diadicasia and the ordinary **δίκαι** is, that all the claimants are similarly situated with respect to the subject of dispute, and no longer classified as plaintiffs and defendants. As far as forms are concerned, we are not told that these suits differed from others. (Meier, *Att. Process*, ed. Lipsius, p. 367 ff.; Platner, *Klagen und Process*, ii. 309 ff.; Caillemer, *Droit de Succession*, p. 161 ff.; Thalheim, *Rechsalterth.* § 11 = § 66 Hermann.) [J. S. M.] [W. W.]

DIA'DOSEIS (**διαδόσεις**). [Dianomae.]

DIAETA. [Domus, p. 672 *b*.]

DIAETETAE (**διαιτηταί**), arbitrators, umpires. The Diaetetae mentioned by the Athenian orators were of two kinds: the one public and appointed by lot (**κληρωτοί**), the other private and chosen (**αἱρετοί**) by the parties who referred to them the decision of a disputed point, instead of trying it before a court of justice; the judgments of both, according to Aristotle, being founded on equity rather than law (**ὁ γὰρ διαιτητὴς τὸ ἐπιεικὲς ὁρᾷ, ὁ δὲ δικαστὴς τὸν νόμον**, *Rhet.* i. 13, § 19).

The institution of the public Diaetetae is placed by some modern writers in the time of the orator Lysias; but they were in all probability of far higher antiquity. So natural a mode of settling disputes, it is well argued by Schömann and Perrot, could hardly fail to have been adopted in the most primitive times. In the period for which we have more particular information, a certain number of citizens, somewhat advanced in years—the minimum age being fifty (Suidas, *s. v.* **διαιτηταί**), or, as Schömann inclines to believe, sixty (Pollux, viii. 126; Hesychius)—were appointed to serve as Diaetetae in such cases as might arise. With respect to their numbers there is some difficulty. The scholiast Ulpian states it at 440, *i.e.* 44 from each tribe (**ἦσαν δὲ τέσσαρες καὶ τεσσαράκοντα** καθ' ἑκάστην φυλήν, ad Dem. *Mid.* p. 542, § 86). This number appears unnecessarily large; the orators often mention only one arbitrator in each case; and an easy correction of Ulpian's words was suggested—ἦσαν δὲ τεσσαράκοντα, τέσσαρες καθ' ἑκάστην φυλήν—making the total number 40. Of late years, however, an inscription has been discovered of about B.C. 325, naming the Diaetetae who actually served in that year, and had been rewarded with a garland for their conduct in office (first published in Ross, *Demen von Attika*, p. 22; also in Rangabé's collection, No. 1163). The numbers mentioned from the different tribes vary between 16 in the Cecropis and 3 in the Pandionis, in all 104 names. If, as is probably to be assumed, an equal number was chosen from each tribe, there must have been at least 160 of them. The fact that not all the Diaetetae of the year are commemorated in the inscription is easily explicable; those who were most in request would be summoned oftenest, some perhaps not at all (Schömann, *Antiq.* i. 472, E. T.; Perrot, *Essai*, p. 292).

The inference, alike from the scholiast and the inscription, that each tribe had its own Diaetetae, is further supported by Demosthenes (*c. Everg.* p. 1142, § 12) and Lysias (*c. Pancl.* § 2). There is, however, no ground for the conjecture that they were chosen by the members of each tribe for itself; or again, for a longer period than a year. Like the dicasts, with whom they had much in common, and other ἀρχαὶ κληρωταί, they must have been elected annually in the Ecclesia. A passage in Isaeus (δύο ἔτη τοῦ διαιτητοῦ τὴν δίαιταν ἔχοντος, *pro Euphil.* § 11, ed. Scheibe: printed as *fr.* 1 in older editions) has been thought to indicate a longer tenure; we must suppose that it was sometimes necessary or convenient to re-elect an arbitrator for the decision of a particular case. The Diaetetae unquestionably, no less than the Heliastae, gave their verdicts on oath. We read sometimes of their taking oaths previous to giving judgment in the particular cases which came before them (Isae. *Dicaeog.* § 32; Dem. *c. Callipp.* p. 1244, § 30): and from this it has been inferred that no general oath was exacted from them before they entered upon their duties. But Hudtwalcker, Schömann, and Perrot all maintain that they took an oath of office; it may have been a simpler and less solemn version of the Heliastic oath given in Demosthenes (*c. Timocr.* pp. 746-7, §§ 149-151).

The Diaetetae of the different tribes appear to have sat in different places,—as temples, halls, and courts of justice, if not wanted for other purposes. Those of the Oeneid and Erechtheid tribes met in the heliaea (Dem. *c. Everg.* p. 1142, § 12); we read of others holding a court in the Delphinium (*c. Boeot.* ii. p. 1011, § 11; Isae. *pro Euphil.* § 9), and also in the στοὰ ποικίλη (*c. Steph.* i. p. 1106, § 17). Again, we are told of slaves being examined by the Diaetetae sitting for that purpose, under the appellation of βασανισταί [TORMENTUM], in the Hephaisteion (Isocr. *Trapez.* § 15). Moreover, we are told of private arbitrators meeting in the temple of Athena on the Acropolis; and, if the amended reading of Pollux (viii. 126) is correct, we are informed by him, in general terms, that the arbitrators formerly held their courts in the temples (Διῄτων ἐν ἱεροῖς πάλαι). Harpocration also (*s. v.*) contrasts the dicasts with the arbitrators, observing that the former had regularly appointed courts of justice (ἀποδεδειγμένα).

Another point of difference was the mode of payment, inasmuch as the dicasts received a fee for each day's attendance at the public expense (the τριώβολον), whereas the only remuneration of the Diaetetae was a drachma deposited by the plaintiff on lodgment of his plaint, and one by the defendant on lodgment of his answer (ἀντωμοσία): the same sum was paid at every ὑπωμοσία or application for postponement by the party applying. This fee was called παράστασις, and is the same as the δραχμὴ τοῦ λιπομαρτυρίου mentioned by Demosthenes (*c. Timoth.* p. 1190, § 19). The defendant in this case had failed to give evidence as he ought to have done, and therefore the plaintiff commenced proceedings against him for this neglect, before the arbitrators in the principal suit, the first step of which was the payment of the παράστασις.

The public arbitrators were probably not ὑπεύθυνοι in the technical sense of having to give an account of their office before the Logistae [EUTHYNE]; but they were responsible in another way. Every one who had, or fancied he had, a cause of complaint against them for their decisions, might proceed against them by εἰσαγγελία, or information laid before the senate. For this purpose, says Ulpian, whose statement is confirmed by Demosthenes (*c. Mid.* p. 542, § 86) in the case of Straton, the public Diaetetae were towards the close of their year of office, and during the latter days of the month Thargelion, required to present themselves in some fixed place, probably near the senate-house, that they might be ready to answer any charge brought against them, of which they received a previous notice. The punishment, in case of condemnation, was *atimia*, or the loss of civic rights. According to Harpocration (*s. v.*), the εἰσαγγελία against the arbitrators was brought before the dicasts or judges of the regular courts; but this probably happened only on appeal, or in cases of great importance, inasmuch as the βουλὴ could not inflict a greater penalty than a fine of 500 drachmas with *atimia*.

As to the extent of the jurisdiction of the Diaetetae, Pollux (viii. 126) states, that in former times no suit was brought into a court before it had been investigated by the Diaetetae (πάλαι οὐδεμία δίκη πρὶν ἐπὶ διαιτητὰς ἐλθεῖν εἰσήγετο). There can be but little doubt that the word πάλαι here refers to a time which was ancient with reference to the age of the Athenian orators, and therefore that this previous investigation was no longer requisite in the days of Demosthenes and his contemporaries. Still we find the Diaetetae mentioned by them in very many cases of civil actions, and it is not unlikely that the magistrates, whose duty it was to bring actions into court (εἰσάγειν), encouraged the process before the arbitrators, as a means of saving the state the payment which would otherwise have been due to the dicasts. Hudtwalcker is accordingly of opinion that the Diaetetae were competent to act in all cases of civil actions for restitution or compensation, but not of penal or criminal indictments (γραφαί), and, moreover, that it rested with the complainant whether his cause was brought before them in the first instance, or sent at once to a higher court of judicature. (Dem. c. *Androt*. p. 601, § 26.)

But besides hearing cases of this sort the Diaetetae sat as commissioners of inquiry on matters of fact which could not be conveniently examined in a court of justice (Dem. *c. Steph.* p. 1106, § 17), just as what is called an "issue" is sometimes directed by our own Court of Chancery to an inferior court, for the purpose of trying a question of fact, to be determined by a jury. Either party in a suit could demand or challenge (προκαλεῖσθαι) an inquiry of this sort before an arbitrator, the challenge being called πρόκλησις: a term which was also applied to the "articles of agreement" by which the extent and object of the inqniry were defined. (Dem. c. *Neaer*. p. 1387, § 124.) Many instances of these προκλήσεις are found in the orators; one of the most frequent is the demand or offer to examine by torture a slave supposed to be cognisant of a matter in dispute, the damage which might result to the owner of the slave being guaranteed by the party who demanded the examination. (Harpocr. *s. v.* πρόκλησις.) See also Demosthenes (*c. Onet.* i. p. 874, § 37), who observes that the testimony of a slave, elicited by torture, was thought of more value by the Athenians than the evidence of freemen. Another instance, somewhat similar to the last, was the πρόκλησις εἰς μαρτυρίαν (Pollux, viii. 62), where a party proposed to his opponent that the decision of a disputed point should be determined by the evidence of a third party. (Antiphon, *de Choreut.* § 23.) Sometimes also we read of a πρόκλησις, by which a party was challenged to allow the examination of documents; as wills (Dem. c. *Stcph.* p. 1104, § 8), deeds, bankers' books, &c. (*c. Timoth.* p. 1197, § 43). It is manifest that the forms and objects of a πρόκλησις would vary according to the matter in dispute, and the evidence which was producible; we shall, therefore, content ourselves with adding that the term was also used when a party challenged his adversary to make his allegation under the sanction of an oath, or offered to make his own statements under the same obligation. (Dem. *c. Apat.* p. 896, § 14; *c. Con.* p. 1269, § 19.) The presumption or prepossession which might arise from a voluntary oath in the last case might be met by a similar πρόκλησις, tendered by the opposite party, to which the original challenger appears to have had the option of consenting or not as he might think proper. (Dem. *c. Timoth.* p. 1203, § 65; compare Arist. *Rhet.* i. 15, § 29.) In all cases where any of these investigations or depositions were made before the Diaetetae, we may conclude with Hudtwalcker (p. 48), that they might be called as witnesses in subsequent stages of the action, either to state the evidence they had taken, or to produce the documents they had examined, and which were deposited by them in an echinus. [APPELLATIO (Greek).]

The proceedings in the trials before the public arbitrators were of two kinds: 1st, When two parties agreed by a regular contract to refer a matter in dispute to a judge or judges *selected* from them. 2ndly, When a cause was brought before a public arbitrator, without any such previous compromise, and in the regular course of law. The chief difference seems to have been that, in case of a reference by contract between two parties, the award was final, and no appeal could be brought before another court, though the unsuccessful party might, in some instances, move for a new trial (τὴν μὴ οὖσαν ἀντιλαχεῖν, Dem. *c. Mid.* p. 542, § 86). Except in this point, of non-appeal, an arbitrator who was selected from the public Diaetetae by litigant parties seems to have been subject to the same liabilities, and to have stood in the same relation to those parties as an arbitrator appointed by lot: the course of proceeding also appears to have been the same before both (Dem. *c. Mid.* p. 541), an account of which is given below. There are strong reasons in support of Hudtwalcker's opinion, that whenever a suitor wished to bring an action before one or more of the public Diaetetae, he applied to one of the many officers called εἰσαγωγεῖς (Dem. c. *Lacrit.* p. 940, § 47; *c. Pantaen.* p. 976, § 33; Pollux, viii. 93), whose duty it was to bring the cause (εἰσάγειν) into a proper court. By some such officer, at any rate, a requisite number of arbitrators was allotted to the complainant; the statement of Harpocration that they were always taken from the same tribe as the defendant is rejected by Schömann as incapable of proof. Pollux (viii. 126) informs us that if a Diaetetes refused to hear a cause, he might be punished with *atimia*: but it appears that under extraordinary circumstances, and after hearing the case, a Diaetetes sometimes refused to decide himself, and referred the parties to a court of justice (Dem. *c. Phorm.* p. 913, § 21).

The process before the public Diaetetae was conducted in the following manner. After complaint made, and payment of the παράστασις, the plaintiff supported his averment by an oath, to the effect that his accusation was true, which the defendant met by a like oath as to the matter of his defence. When the oath (ἀντωμοσία) had been thus taken by the parties, the arbitrators entered upon the inquiry, heard witnesses, examined documents, and held as many conferences (σύνοδοι) with the parties as might be necessary for the settlement of the question. (See authorities, Hudtwalcker, p. 80.) The day of pronouncing judgment (ἡ ἀπόφασις τῆς δίκης, Dem. *c. Everg.* p. 1153, § 45) was probably fixed by law, if we may judge from the name (ἡ κυρία scil. ἡμέρα) by which it is called in the orators; it might, however, with consent of both parties, be postponed. The verdict given was countersigned by the proper authorities, perhaps by the εἰσαγωγεῖς, and thereby acquired its validity. The archons mentioned by Demosthenes (*c. Mid.* p. 542, § 85) as having signed a judgment were probably thesmothetae, as the action was a δίκη κακηγορίας, which is moreover called an ἀτίμητος δέκα μνῶν δίκη, *i.e.* an action where the plaintiff was not required to assess the damages (*aestimare litem*), the penalty, in case of a verdict for him, being determined by law: this alone is sufficient to prove that the Diaetetae sometimes decided in cases where the plaintiff sued for damages, as distinguished from those in which he sought restitution of rights or property; nor, indeed, does there seem any reason for supposing that their jurisdiction was not extended to the ἀγῶνες τιμητοί, or actions where the plaintiff was required to assess or lay his damages, provided the assessment did not exceed some fixed amount. In support of this opinion we may adduce the authority of Pollux (viii. 127), who expressly states that the plaintiff might assess his damages before the arbitrators, when the law did not do so for him.

If the defendant were not present on the proper day to make his last defence, judgment went against him by default (*ἐρήμην ὦφλε*), the arbitrator being obliged to wait till the evening (*ὀψὲ ἡμέρας*, Dem. *c. Mid.* p. 541, § 84; *c. Timoth.* p. 1190, § 19). Sometimes, however, the time of pronouncing sentence was deferred in consequence of a deposition (*ὑπωμοσία*, Pollux, viii. 60; Harpocr. *s. v.*) alleging a satisfactory cause for postponement, such as sickness, absence from town, military service, or other reasons. To substantiate these, the applicant, when possible, appeared personally; but if a party was prevented from appearing on the day of trial, by any unexpected event, the *ὑπωμοσία* might be made on oath by authorised friends. (Dem. *c. Olymp.* p. 1174, § 25; Pollux, viii. 56.) The *ὑπωμοσία* might be met by a counter-statement (*ἀνθυπωμοσία*) from the opposite party affirming his belief that the reasons alleged were fictitious or colourable. In connexion with this point, we may observe that, according to Pollux (viii. 60), the motion for a new trial could only be sustained in cases where the applicant had made a *ὑπωμοσία*, and demurred either personally or by proxy against the passing of judgment on the regular day. Moreover, it was incumbent on the party who wished for a new trial to move for it within ten days after judgment had been pronounced, and even then he was obliged to take a kind of *ὑπωμοσία*, to the effect that his absence on the proper day was involuntary. (Pollux, viii. 60.) In default of compliance with these conditions, the previous sentence was confirmed. (Dem. *c. Mid.* p. 542, § 86.) We are told also by Photius (*Lex.* s. v. *μὴ οὖσα δίκη*), that it was competent for plaintiff as well as defendant to move for a new trial on the grounds we have mentioned. When it was granted, the former verdict was set aside (*ἡ ἐρήμη ἐλύετο*), and the parties went again before an arbitrator, probably through the instrumentality of the *εἰσαγωγεῖς*, to whom application had been made in the first instance. The process itself is called *ἀντίληξις* in Greek, and does not seem to have been confined to trials before the Diaetetae: the corresponding term in Roman law is *restauratio eremodicii.*

This, however, was not the only means of setting aside a judgment, inasmuch as it might also be effected by an *ἔφεσις*, or appeal to the higher courts [Appellatio (Greek)], and, if false evidence had been tendered, by a *δίκη κακοτεχνιῶν* (Harpocr. *s. v.*; Dem. *c. Timoth.* p. 1201, § 56).

It remains to speak of the strictly private arbitrators, chosen by mutual agreement between contending parties, and therefore generally distinguished by the title *αἱρετοί*, of whom it must be understood that they were not selected from the *διαιτηταί* of the tribes. The powers with which they were invested, were, as we might suppose, not always the same; sometimes they were merely *διαλλακταί*, or chosen to effect a compromise or reconciliation: thus Isaeus (*Dicaeog.* § 32) speaks of arbitrators offering either to bring about a reconciliation if they could, without taking an oath, or to make an award (*ἀποφαίνεσθαι*) upon oath. Sometimes, on the other hand, they were purely referees, and then their powers depended upon the terms of the agreement of reference; if these powers were limited, the arbitration was a *δίαιτα ἐπὶ ῥητοῖς* (Isaeus, *l. c.*; Isocr. *Trapez.* § 19; *c. Callim.* §§ 10, 14). The agreement was not merely a verbal contract (*stipulatio*), but drawn up in writing (*ἐπιτροπὴ κατὰ συνθήκας*, Dem. *c. Phorm.* p. 912, § 18), and signed by the parties; it fixed the number of referees (generally three), determined how many unanimous votes were necessary for a valid decision, and probably reserved or prohibited, as the case might be, a right of appeal to other authorities. (Isocr. *c. Callim.* § 19; Dem. *c. Apat.* p. 897, § 15.)

If there were no limitations, these Diaetetae were then, so to speak, arbitrators proper, according to the definition of Festus (p. 15, ed. Müller):—"Arbiter dicitur judex, quod totius rei habeat arbitrium et potestatem." Moreover, no appeal could be brought against their judgment (Dem. *c. Mid.* p. 545, § 94); though we read of an instance of a party having persuaded his opponent to leave a matter to the arbitration of three persons; and afterwards, when he found they were likely to decide against himself, going before one of the public arbitrators. (Dem. *c. Aphob.* p. 862, §§ 58, 59.) We should, however, suppose that in this case there was no written *συνθήκη*. The award was frequently given under the sanction of an oath, and had the same force as the judgment which proceeded from a court of law, so that it might be followed by a *δίκη ἐξούλης*. (Dem. *c. Callipp.* p. 1240, § 16.) We may add, that these private Diaetetae are spoken of as sitting *ἐν τῷ ἱερῷ*, *ἐν τῷ Ἡφαιστείῳ*, and that in some cases it was customary to give notice of their appointment to the proper archon or magistrate (*ἀποφέρειν πρὸς τὴν ἀρχήν*), who, as Hudtwalcker suggests, may have acted as an *εἰσαγωγεὺς* in the case. (Dem. *c. Callipp.* p. 1244, § 30; *c. Mid.* p. 542, § 86.)

(The exhaustive treatise of Hudtwalcker, *Ueber die Diäteten*, 1812, is still the chief authority; corrected by Meier, *Die Privatschiedsrichter und die öffentlichen Diäteten Athens*, 1846; Westermann, *Berichten d. Sächs. Gesellschaft d. Wissensch.* 1848, p. 433 ff.; Perrot, *Essai sur le Droit Public d'Athènes*, 1869, pp. 284–309; Schömann, *Antiq.* i. pp. 471–473, E. T., 1880; Thalheim, *Rechtsalterth.* pp. 98, 99, 1884.) [R. W.] [W. W.]

DIAETE'TICA (*διαιτητική*), one of the principal branches into which the ancients divided the art and science of medicine [Medicina]. The word is derived from *δίαιτα*, which meant much the same as our word diet. It is defined by Celsus (*de Medic.* Praef. lib. i.) to signify that part of medicine *quae victu medetur*, "which cures diseases by means of regimen and diet"; and a similar explanation is given by Plato (*ap.* Diog. Laert. iii. 1, § 85). Taken strictly in this sense, it would correspond very nearly with the modern *dietetics*, and this is the meaning which it always bears in the earlier medical writers. In some of the later authors it seems to comprehend Celsus's second grand division, *Pharmaceutica*, and is used by Scribonius Largus (*de Comp. Med.* § 200) simply in opposition to *chirurgia*, so as to answer directly to the province of our *physician.*

In later times the comic poet Nicomachus (*fr.* 1, 30 M. *ap.* Ath. vii. p. 291 c) introduces a cook who, among his other qualifications, implies that he is a physician; but no attention seems to have been paid to eating as a branch of medicine before the date of Hippocrates. Homer represents Machaon, who had been wounded in the shoulder by an arrow (*Il.* xi. 507) and forced to quit the field, as taking a draught composed of wine, goat's-milk cheese, and flour (*ib.* 638), which probably no surgeon in later times would have prescribed in such a case. (See Plat. *de Rep.* iii. pp. 405, 406; Max. Tyr. *Diss.* 29; Athen. i. p. 10.) Hippocrates seems to claim for himself the credit of being the first person who had studied this subject, and says that "the ancients had written nothing on it worth mentioning" (*de Rat. Vict. in Morb. Acut.* § 1, vol. ii. p. 26, ed. Kühn). Among the works forming the Hippocratic collection, there are four that bear upon this subject, of which, however, only one (viz. that just quoted) is considered to be undoubtedly genuine. It would be out of place here to attempt anything like a complete account of the opinions of the ancients on this point; those who wish for more detailed information must be referred to the different works on medical antiquities, while in this article only such particulars are mentioned as may be supposed to have some interest for the classical reader.

In the works of Hippocrates and his successors almost all the articles of food used by the ancients are mentioned, and their real or supposed properties discussed, sometimes quite as fancifully as by Burton in his *Anatomy of Melancholy*. In some respects they appear to have been much less delicate than the moderns, as we find the flesh of the fox, the dog, the horse, and the ass spoken of as common articles of food (Pseudo-Hippocr. *de Vict. Rat.* ii. § 46, vol. i. pp. 679, 680). Beef and mutton were of course eaten, but the meat most generally esteemed was pork (see Oribas. *Coll. Med.* i. p. 585, Daremberg). A morbid taste for human flesh appears to have been secretly indulged in the time of Xenocrates (1st cent. A.D.); so that the hateful practice was forbidden by an imperial edict (*τῆς Ῥωμαϊκῆς βασιλείας ἀπηγορευκυίας ἀνθρώπους ἐσθίειν*, Galen, *de Simpl. Med. Temper. ac Facult.* xx. 1, tom. xii. p. 248). And this decree serves to illustrate the "strange and revolting anecdote," as Milman calls it (*Lat. Chr.* book ii. ch. 1, vol. i. p. 129), of the wild cry that, in a time of scarcity amounting to famine, assailed the ears of the Emperor Attalus, "Fix the tariff for human flesh" (*pone pretium carni humanae*, Zosim. vi. 11).

With regard to the strength or quality of the wine drunk by the ancients, we may arrive at something like certainty from the fact that Coelius Aurelianus mentions it as something extraordinary that Asclepiades at Rome in the 1st century B.C. sometimes ordered his patients to double and treble the quantity of wine, till at last they drank half wine and half water (*de Morb. Chron.* ii. 7, p. 386). From this it appears that wine was commonly diluted with five or six times its quantity of water. Hippocrates also in particular cases (*Aphor.* vii. 56, tom. iii. p. 763) recommends wine to be mixed with an equal quantity of water, and Galen approves of the proportion (*Comment. in Hippocr. Aph.* tom. xviii. A, p. 169). According to Hippocrates, the proportions in which wine and water should be mixed together vary according to the season of the year; for instance, in summer the wine should be most diluted, in winter the least so. In one place (Ps. Hippocr. *de Vict. Rat.* lib. iii. *in fin.*) the patient after great fatigue is recommended *μεθυσθῆναι ἅπαξ ἢ δίς*, in which passage it has been doubted whether actual *intoxication* is meant, or only the "drinking freely and to cheerfulness," in which sense the same word is used by St. John (ii. 10) and the LXX. (Gen. xliii. 34; Cant. v. 1; and perhaps Gen. ix. 21).

Exercise of various kinds, and bathing, are also much insisted on by the writers on diet and regimen; but for further particulars on these subjects the articles BALNEAE and GYMNASIUM must be consulted. It may, however, be added that the bath could not have been very common, at least in private families, in the time of Hippocrates, as he says that "there are few houses in which the necessary conveniences are to be found" (*de Rat. Vict. in Morb. Acut.* § 18, tom. ii. p. 62; cf. Galen's *Comm.*, t. xv. p. 706).

Another very favourite practice with the ancients, both as a preventive of sickness and as a remedy, was the taking of an emetic from time to time. In one of the treatises of the Hippocratic collection the unknown author recommends it two or three times a month (*de Vict. Rat.* iii. 68, tom. i. p. 710). Celsus considers it more beneficial in the winter than in the summer (*de Medic.* i. 3, p. 28), and says that those who take an emetic twice a month had better do so on two successive days than once a fortnight (*ib.* p. 29). In the 1st century B.C. this practice was so commonly abused that Asclepiades rejected the use of emetics altogether. "Offensus," says Celsus (*ib.* p. 27), "eorum consuetudine qui quotidie ejiciendo vorandi facultatem moliuntur." (See also Plin. *H. N.* xxvi. § 17.) It was the custom among the Romans to take an emetic immediately before their meals, in order to prepare themselves to eat more plentifully; and again soon after, so as to avoid any injury from repletion. Cicero, in his account of the day that Caesar spent with him at his house in the country (*ad Att.* xiii. 52), says, "Accubuit, *ἐμετικὴν* agebat (*he was meditating an emetic*), itaque et edit et bibit ἀδεῶς et jucunde;" and this has by some persons been considered a sort of compliment paid by Caesar to his host, as it intimated a resolution to pass the day cheerfully, and to eat and drink freely. He is represented as having done the same thing when he was entertained by king Deiotarus (Cic. *pro Deiot.* 7, § 21). The glutton Vitellius is said to have preserved his own life by constant emetics, while he destroyed all his companions who did not use the same precaution (Suet. *Vitell.* 13); so that one of them, who was prevented by illness from dining with him for a few days, said, "I should certainly have been dead if I had not fallen sick" (Dio Cass. lxv. 2). It might truly be said, in the strong language of Seneca, "Vomunt, ut edant; edunt, ut vomant" (*Cons. ad Helv.* 9, § 10: cf. *de Provid.* 3, § 11; *Ep.* 95, § 21). By some, the practice was thought so effectual for strengthening the constitution, that it was the constant regimen of all the athletae, or professed wrestlers, trained for the public shows, in order to make them more robust. Celsus, however (*l. c.* p. 28), warns his readers against the too frequent use of emetics without necessity and merely for luxury and gluttony, and says that no one who has any regard for his health, and wishes to live to old age, ought to make it a daily practice. [W. A. G.]

DIAGO'GION (*διαγώγιον*). [DECUMAE, p. 604 *b*.]

DIAGRAPHEIS (*διαγραφεῖς*). [EISPHORA.]

DIA'LIS FLAMEN. [FLAMEN.]

DIAMARTY'RIA (*διαμαρτυρία*). [ANAKRISIS.]

DIAMASTIGO'SIS (*διαμαστίγωσις*) was a solemnity performed at Sparta at the festival of Artemis Orthia, whose temple was called Limnaeon, from its situation in a marshy part of the town. (Paus. iii. 16, § 6.) The solemnity was this:—Spartan youths (*ἔφηβοι*) were scourged on the occasion at the altar of Artemis, by persons appointed for the purpose, until their blood gushed forth and covered the altar. The scourging itself was preceded by a preparation, by which those who intended to undergo the diamastigosis tried to harden themselves against its pains. Pausanias describes the origin of the worship of Artemis Orthia, and of the diamastigosis, in the following manner:—A wooden statue of Artemis, which Orestes had brought from Tauris, was found in a bush by Astrabacus and Alopecus, the sons of Irbus. The two men were immediately struck mad at the sight of it. The Limnaeans and the inhabitants of other neighbouring places then offered sacrifices to the goddess; but a quarrel ensued among them, in which several individuals were killed at the altar of Artemis, who now demanded atonement for the pollution of her sanctuary. From henceforth human victims were selected by lot and offered to Artemis, until Lycurgus introduced the scourging of young men at her altar as a substitute for human sacrifices.

The diamastigosis, according to this account, was a substitute for human sacrifice, and Lycurgus made it also serve his purposes of education, in so far as he made it a part of the system of hardening the Spartan youths against bodily sufferings. (Plut. *Lyc.* 18, *Instit. Laced.* p. 254; Cic. *Tusc.* v. 27, § 77.) According to another far less probable account, the diamastigosis originated in a circumstance, recorded by Plutarch (*Aristid.* 17), which happened before the battle of Plataeae.

The worship of Artemis Orthia was unquestionably very ancient, and the diamastigosis only a step from barbarism towards civilisation. Many anecdotes are related of the courage and intrepidity with which young Spartans bore the lashes of the scourge; some even died without uttering a murmur at their sufferings, for to die under the strokes was considered as honourable a death as that on the field of battle. (Cf. Müller's *Dor.* ii. 9, § 6, note k, and iv. 5, § 8, note c; Manso, *Sparta*, i. 2, p. 183.) [L. S.]

DIA'NOMAE (*διανομαί*) or **DIA'DOSEIS** (*διαδόσεις*, Dem. *c. Leoch.* p. 1091, § 37) were public doles to the Athenian people, resembling the Roman CONGIARIUM. To these belong the free distributions of corn (Aristoph. *Vesp.* 715 ff.), the cleruchiae [COLONIA, p. 477], the revenues from the mines, and the theoric fund (Dem. *l. c.*; THEORICON). (Cf. Boeckh, *P. E.* p. 216 = *Sthh.*^{3} i. 274.) [W. S.] [W. W.]

DIAPSE'PHISIS (*διαψήφισις*), a political institution at Athens, the object of which was to prevent aliens, or such as were the offspring of an unlawful marriage, from assuming the rights of citizens. As usurpations of this kind were not uncommon at Athens (Plut. *Pericl.* 37; Harpocr. *s. v.* *ποταμός*), various measures had been adopted against them (*γραφαὶ ξενίας* and *δωροξενίας*); but as none of them had the desired effect, a new method, the *διαψήφισις*, was devised, according to which the trial on spurious citizens was to be held by the demotae within whose deme intruders (*παρέγγραπτοι*, Aeschin. *F. L.* §§ 76, 177; Philochorus *ap.* Schol. Aristoph. *Vesp.* 716) were suspected to exist; for if each deme separately was kept clear of intruders, the whole body of citizens would naturally feel the benefit. Every deme therefore obtained the right or duty at certain times to revise its lexiarchic registers, and to ascertain whether any had entered their names who had no claims to the rights of citizens. The assembly of the demotae, in which these investigations took place, was held under the presidency of the demarch, or some senator belonging to the deme (Harpocr. *s. v.* *δήμαρχος*); for in the case brought forward in the oration of Demosthenes against Eubulides, we do not find that he was demarch, but it is merely stated that he was a member of the *βουλή*. When the demotae were assembled, an oath was administered to them, in which they promised to judge impartially, without favour towards, or enmity against, those persons on whom they might have to pass sentence. The president then read the names of the demotae from the register, asking the opinion of the assembly (*διαψηφίζεσθαι*) respecting each individual, whether they thought him a true and legitimate citizen or not. Any one then had the right to say what he thought or knew of the person in question; and when any one was impeached, a regular trial took place. (Dem. *c. Eubul.* p. 1301, § 9; Aeschin. *l. c.*) Pollux (viii. 18) says that the demotae on this occasion gave their votes with leaves and not with pebbles as was usual, but Demosthenes simply calls them *ψῆφοι*. If a person was found guilty of having usurped the rights of a citizen (*ἀποψηφίζεσθαι*), his name was struck from the lexiarchic register, and he himself was degraded to the rank of an alien. But if he did not acquiesce in the verdict, but appealed to the great courts of justice, at Athens, a heavier punishment awaited him, if he was found guilty there also; for he was then sold as a slave, and his property was confiscated by the state. (*Arg. ad* Demosth. *c. Eubul.*; Dion. Hal. *de Isaeo*, c. 16, and the fragment of the speech *pro Euphileto* there preserved.)

If by any accident the lexiarchic registers had been lost or destroyed, a careful scrutiny of the same nature as that described above, and likewise called *διαψήφισις*, took place, in order to prevent any spurious citizen from having his name entered in the new registers. (Dem. *l. c.* p. 1306, § 26.)

The oldest known *διαψήφισις* occurs in B.C. 445 (Plut. *Pericl.* 37; Schol. Aristoph. *Vesp.* l. c.).

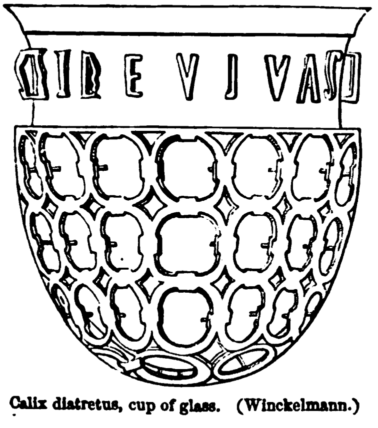
The chief sources of information are the speeches of Demosthenes and Isaeüs already referred to (compare Hermann, *Staatsalterth.* § 123; Schömann, *Assemblies*, p. 380 ff.). [L. S.] [W. W.]

DIA'RIUM. [Servus.]

DIA'SIA (διάσια), a great festival celebrated at Athens, without the walls of the city (ἔξω τῆς πόλεως), in honour of Zeus, surnamed Μειλίχιος (Thuc. i. 126). It was the greatest of the Athenian festivals of Zeus, before the time of Solon, and was of a propitiatory character. The whole people took part in it, and the wealthier citizens offered victims (ἱερεῖα), while the poorer classes burnt such incense as their country furnished (θύματα ἐπιχώρια), which the scholiast on Thucydides erroneously explains as cakes in the shape of animals. (Compare Xen. *Anab.* vii. 8, § 4; Lucian, *Tim.* 7; Aristoph. *Nub.* 402, &c.) The diasia took place on the 23rd of the month of Anthesterion (Schol. *ad* Aristoph. *l. c.*) with feasting and rejoicings, and was, like most other festivals, accompanied by a fair. (Aristoph. *Nub.* 841.) It was this festival at which Cylon was enjoined by an oracle to take possession of the acropolis of Athens; but he mistook the oracle, and made the attempt during the celebration of the Olympian games. (Compare Pollux, i. 26; Suidas, *s. v.*) The etymology of διάσια given by most of the ancient grammarians (from Διὸς and ἄση) is false; the name is a mere derivative from Διός, as Ἀπολλώνια from Ἀπόλλων. See A. Mommsen, *Heortologie*, p. 19 ff. [L. S.]

DIASTY'LUS. [Templum.]

DIATRE'TA, sc. *vasa*, mentioned only by Martial (xii. 70, 9) and Ulpian (*calices diatreti*, Dig. 9, 2, 27, § 29), were probably glass cups in the shape of an egg, which could not therefore be put down, but must be emptied at a draught. Seven such cups are still in existence. (See Marquardt, below.) The makers of such cups were called *diatretarii* (Cod. Theod. xiii. 4, 2; Cod. Just. x. 66 (64), 1). These cups are contained within a network, also of glass, to which they are attached by a series of short and very fine glass props, placed at equal distances from each other. The one figured here is described in the notes to Winckelmann (i. 2, § 21). Round the rim is an inscription, BIBE VIVAS MULTOS ANNOS; the letters being connected with the cup in the same manner as the network. The letters are green, the network is blue, and the cup itself resembles opal. Neither the letters nor the network have been soldered to the cup, but the whole has been cut out of a solid mass, after the manner of a cameo, the marks of the wheel being still visible on the little props. These cups were of great value, as we may perceive from the penalties imposed, in case of their being broken in the manufacture (Dig. *l. c.*). A passage of Pliny relating to certain glass cups may refer to these *diatreta* (*H. N.* xxxvi. § 195, where the word *petrotos* is evidently corrupt). (Marquardt, *Privatl. d. Römer*, p. 733; Becker-Göll, *Gallus*, ii. p. 384; Blümner, *Technol., &c.*, iv. p. 400.) [W. S.]



Calix diatretus, cup of glass. (Winckelmann.)

DIAULOS (δίαυλος). [Cursus, p. 581 *b.*]

DIAZO'MA (διάζωμα). [Subligaculum.]

DICASTE'RION (δικαστήριον) indicates both the aggregate judges that sat in court, and the place itself in which they held their sittings. For an account of the former, the reader is referred to the article Dicastes: with respect to the latter, our information is very imperfect. In the earlier ages there were five celebrated places at Athens set apart for the sittings of the judges, who had cognizance of the graver causes in which the loss of human life was avenged or expiated, viz. the Areiopagites and the Ephetae. These places were on the Areiopagus [Areiopagus]; in the Palladium, a sacred place in the south-eastern part of the city; in the Delphinium, a place sacred to the Delphian Apollo in the same district; in the Prytaneum, the ancient sacred hearth of the State, to the north-east of the Acropolis; and finally at Phreatto or Phreattys, in the Peiraeus, at the inlet of Zea. (Schömann, *Antiq.* i. 465, E. T.; and the great passage in Dem. *c. Aristocr.* pp. 641–646.) The antiquity of these four last is sufficiently vouched for by the archaic character of the division of the causes that were appropriated to each: in the first we are told that accidental deaths were discussed; in the second, homicides confessed, but justified; in the third there were quasi-trials of inanimate things, which, by falling and the like, had occasioned a loss of human life [Apsychos Diké]; in the fourth, homicides who had returned from exile, and committed a fresh manslaughter, were appointed to be tried. With respect to these ancient institutions, of which little more than the name remained when the historical age commenced, it will be sufficient to observe that, in accordance with the ancient Greek feeling respecting homicide, viz. that it involved ceremonial pollution in all cases, irrespective of the degree of criminality, the presiding judge was invariably the king archon, the Athenian rex sacrorum; and that the places in which the trials were held were open to the sky, to avoid the contamination which the judges might incur by being under the same roof with a murderer. (Antiph. *de Caed. Her.* § 11; Phonou Diké.) The places, however, remained after the office of the judges who originally sat there was abolished; and they appear from Demosthenes (*c. Neaer.* p. 1348, § 9) to have been occasionally used by the ordinary Heliastic judges when trying a cause of the kind to which they were originally appropriated. The Heliaea properly so called, and probably the majority of the Heliastic courts, were situated in the Agora; others in various parts of the city. The statement that there were not more than ten of these is probably erroneous, according to Schömann (*op. cit.* p. 476), and due to a confusion between the ten sections of dicasts and the localities where they held their sittings, the name *δικαστήριον* being common to both. Besides the Heliaea, the first in numbers and importance, the following are named: the Parabyston (*παράβυστον*), in which the *ἕνδεκα* presided, and which is said to have received its name from its position in a remote quarter of the city (cf. Dem. *c. Timocr.* p. 715, § 47); the Dicasterion of Metiochus or Metichus, and that of Calleas (*τὸ Κάλλειον*), probably named after their builders; the Green Court (*Βατραχιοῦν*) and the Red Court (*Φοινικιοῦν*), the Middle Court (*Μέσον*), the Greater Court (*Μεῖζον*), the New Court (*Καινόν*), the Triangular Court (*Τρίγωνον*), and the Dicasterion at the holy place of Lycus (*ἐπὶ Λύκῳ*), probably near the Lyceum without the city. Dicasteries near the walls, and in the street of the Hermoglyphi, are mentioned with no further indication of their name. The Odeum, too, a building erected by Pericles and properly destined for musical performances, was used for the sittings of Heliastic courts ([Dem.] *c. Neaer.* p. 1362, § 152); and so probably were other places of which no mention is found. (Schömann, *l. c.*) The dicasts sat upon wooden benches, which were covered with rugs or matting (*ψιαθία*), and there were elevations or tribunes (*βήματα*), upon which the antagonist advocates stood during their address to the court. The space occupied by the persons engaged in the trial was protected by a railing (*δρύφακτοι*) from the intrusion of the bystanders; but in causes which bore upon the violation of the mysteries, a further space of fifty feet all round was enclosed by a rope, and the security of this barrier guaranteed by the presence of the public slaves. (Meier, *Att. Proc.* pp. 11, 41 ff.) [J. S. M.] [W. W.]

DICASTES (*δικαστής*), in its broadest acceptation a judge, more particularly denotes the Athenian functionary of the democratic period, commonly rendered "juryman." Except, however, in the circumstance that they were sworn "well and truly" to discharge the duties intrusted to them, there was little resemblance between an Attic dicasterion and an English jury. As distinguished from the district judges (*οἱ κατὰ δήμους δικασταί*, better known by their later name of *οἱ τετταράκοντα*), and from the Nautodicae or judges in commercial cases, the Dicastae are frequently styled Heliastae, and their courts the Heliastic courts. The name comes from *ἡλιαία*, a word which, like *ἀγορά*, denotes both the assembly and the place in which it was held; and the court of the Heliaea, as the most strongly manned and the first in dignity, being taken as a representative of the rest, both names were used indiscriminately. Their jurisdiction extended to matters of every kind without exception. In private causes it is highly probable that they acted originally as judges of the second instance, *i.e.* of appeal; but in public matters they acted as the primary and sole judicial authority. The Heliastae were instituted by Solon; but what was their original number, and how they were nominated at first, we do not know. At the time when democracy was fully developed, when the causes even of the subject allies were brought before the Athenian courts, there were 6000 dicasts or heliasts, 600 for each tribe, chosen by lot. Previously the number cannot have been very small; and divisions of the whole body into sections, such as we find afterwards, may without hesitation be assumed to have existed in the earlier times also. The ballot (*κληροῦν, ἐπικληροῦν τὰ δικαστήρια*, Dem. *c. Everg.* p. 1144, § 17; *c. Pantaen.* p. 978, § 39; sometimes also *πληροῦν*, after the analogy of "manning" a ship, *c. Timocr.* p. 729, § 92) was conducted annually by the nine archons: according to some authorities their secretary (*γραμματεύς*) made the tenth [ARCHON, p. 167 *a*]. The lots were drawn, and the persons chosen were sworn, in the earlier ages at a place called Ardettos, without the city, on the banks of the Ilissus; but in after-times at some other spot, of which we are not informed (Harpocrat. *s. v.* *Ἀρδηττός*, quoting Theophrastus). The formula of the Heliastic oath, preserved in Demosthenes (*c. Timocr.* p. 746, §§ 149–151), passed until lately as genuine, and was accepted as such by Schömann in his early writings (*Att. Process*, &c.) as well as by other recent scholars. The first hint that, like most of the documents embodied in the Demosthenic speeches, it was the patchwork of a late grammarian, seems to have been given by Schömann in his *Antiquities* (1855): and the point was completely proved in a special dissertation by Westermann in 1859. Some possibly genuine clauses are mingled with inconsistencies and improbabilities, and on the whole it seems beyond the reach of criticism to sift the old from the new (Perrot, *Essai sur le Droit Public d'Athènes*, p. 240). The whole number of 6000 was divided into ten sections of 500 each, so that 1000 remained over, in order, when necessary, to serve for the filling of vacancies in the sections. These sections, as well as the places of meeting, were called Dicasteria, and in each section members of all the tribes were mingled together. Each Heliast received, as a certificate of his appointment, a bronze tablet (*πινάκιον, σύμβολον*) with his name and the number or letter of the section to which he belonged (from A to K). Three of these *σύμβολα* have been found, inscribed as follows: — B. ΑΝΤΙΧΑΡΜΟΣ ΛΑΜΠ[ΤΡΕΥΣ], Δ. ΔΙΟΔΩΡΟΣ ΦΡΕΑ[ΡΡΙΟΣ], E. ΔΕΙΝΙΑΣ ΑΛΑΙΕΥΣ: and bear besides representations of owls and Gorgon heads, and other devices symbolic of the Athenian people (Boeckh, *C. I. G.* Nos. 207–209; and the monographs mentioned under BOULÉ, p. 313 *b*). As often as courts were to be held the Heliastae assembled in the Agora, and the courts in which each section had to sit for the day were there assigned by the Thesmothetae by lot. But it did not happen always, or in every suit, that whole sections sat; on the contrary, sometimes cases were tried only by parts of a section, sometimes by several sections combined, according to the importance of the issues. Provision, however, was made that the number should be always an uneven one, in order to avoid an equality of the votes; and if we find the number of 200 or 2000 dicasts mentioned, we are to assume that the round numbers only are given instead of 201 or 2001. For examples of the actual figures, we have in Demosthenes a court of 1001 dicasts taken from two sections (*δικαστηρίοιν δυοῖν εἰς ἕνα καὶ χιλίους ἐψηφισμένων*, *c. Timocr.* p. 702, § 9); and one of 1501 from three sections in *Lex Seguer.* s. v. *ἡλιαία* (Bekker's *Anecd.* p. 262, where *ἐκ τριῶν φυλῶν* is an incorrect expression for *ἐκ τριῶν δικαστηρίων*). The usual number in the Heliaea appears to have been 501: the case mentioned by Andocides (*de Myst.* § 17) of the whole 6000 dicasts sitting at once in a *γραφὴ παρανόμων* is accepted without question by Schömann (*Antiq.* i. 474, n.), doubted by Perrot (*Essai*, p. 246). Andocides is habitually loose in his statements; and if the Athenian constitution had provided for such a monster dicastery in the most important cases, it is likely that some mention of it would occur elsewhere in the orators and grammarians.

For the trial of certain classes of cases Heliastae of a peculiar qualification were required: as, for instance, in the case of profaners of the mysteries, when the initiated only were allowed to judge; and in that of military offenders, who were left to the justice of those only whose comrades they were, or should have been at the time when the offence was alleged to have been committed. After this ballot on the day of the trial each member of the section received a staff with the colour and number of the court in which he had to sit: this might serve both as a ticket to procure admittance, and also to distinguish him from any loiterer who might endeavour clandestinely to obtain a seat after business had begun. That the dicasts were not sworn afresh before every case seems certain; the oath originally taken at the annual election sufficed. The legal age of the Heliastae was at least thirty, and of course the full franchise (*ἐπιτιμία*) was another condition of eligibility. No perquisite was ever more jealously guarded. For an atimos to attempt to earn the dicast's fee was a capital offence; and a case is mentioned in which this law was actually carried out. (Dem. *c. Mid.* p. 573, § 182.) It would appear that they were only balloted for from among those who voluntarily offered themselves: we have no information on this point, but after the custom of payment was introduced there would be no lack of candidates. We might rather expect that the lot would be modified by some system of rotation with a view of giving every one an equal number of turns; but of this also there is no trace.

This payment (*μισθὸς δικαστικός*, more usually *τὸ δικαστικόν*) is said to have been first instituted by Pericles. It is generally supposed from Aristophanes (*Nub.* 863), who makes Strepsiades say that with the first obolus he ever received as a dicast he bought a toy for his son, that it was at first only one obolus. According to the Scholiast (on *Ran.* 140) the pay was subsequently augmented to two oboli, but this seems to be merely an erroneous inference from the passage of his author. There is no sufficient proof that the pay of the dicasts was ever two oboli, but it increased rapidly under the influence of the demagogues (Aristot. *ap.* Schol. Aristoph. *Vesp.* 682; Schol. *Ran.* 140; Pollux, viii. 113; Hesych. *s. v. δικαστικόν*: Suid. *s. v. ἡλιασταί*). Three oboli or the *triobolon* (*τριώβολον*) occurs as early as B.C. 425 in the comedies of Aristophanes, and is afterwards mentioned frequently (Aristoph. *Eq.* 51, 255; *Vesp.* 300, 663, 684). The payment was made at the end of the day's work by the COLACRETAE (*q.v.*), in exchange for the staff (*βακτηρία*) and ticket (*σύμβολον*) with which, as we have seen, each dicast was already provided on entering the court. (Schol. *ad* Aristoph. *Plut.* 277; Suid. *s. v. βακτηρία*: *Etym. M.* s. v. *σύμβολον*: Pollux, viii. 16.) No doubt the staves only were given up, to be redistributed on another trial; the bronze *σύμβολα* merely shown, and retained by the dicast, as they were inscribed with his name and had to serve him throughout the year: unless we are to suppose that two different kinds of *σύμβολα* were used. Demosthenes certainly speaks of the *βακτηρία* and *σύμβολον* as delivered together to the dicast (*de Cor.* p. 298, § 210). Those who had come too late had no claim to the *triobolon* (cf. BOULÉ, p. 313 *b*). The annual amount of these fees is reckoned by Aristophanes (*Vesp.* 663, with the Schol.) at 150 talents, implying 300 days' pay for every dicast (6000 at half a drachma would require exactly half a talent a day): the sum is a high one, but it refers to a period when the total revenue of the state was as much as 2000 talents. (Boeckh, *P. E.* p. 227; *Att. Process*, p. 125 ff. = 145 ff. Lips.; Schömann, *Antiq.* i. 474 ff., E. T.; Perrot, *Essai sur le Droit Public d'Athènes*, ch. iii. §§ 4–9.) [J. S. M.] [W. W.]

DICASTICON (*δικαστικόν*). [DICASTES.]

DIKE' (*δίκη*) signifies generally any proceedings at law by one party directly or mediately against others. (Harpocrat. *s. v.*; Pollux, viii. 40, 41.) The object of all such actions is to protect the body politic, or one or more of its individual members, from injury and aggression; a distinction which has in most countries suggested the division of all causes into two great classes, the public and the private, and assigned to each its peculiar form and treatment. At Athens the first of these was implied by the terms public *δίκαι* or *ἀγῶνες*, or still more peculiarly by *γραφαί*: causes of the other class were termed private *δίκαι* or *ἀγῶνες*, or simply *δίκαι* in its limited sense (*ἐκαλοῦντο αἱ γραφαὶ καὶ δίκαι, οὐ μέντοι καὶ αἱ δίκαι γραφαί*, Pollux, viii. 41). There is a still further subdivision of *γραφαὶ* into *δημοσίαι* and *ἴδιαι*, of which the former is somewhat analogous to impeachments for offences directly against the state; the latter, to criminal prosecutions, in which the state appears as a party mediately injured in the violence or other wrong done to individual citizens. Once more, there was a distinction of *δίκαι πρός τινα* and *κατὰ τινός*, which may be defined with Meier (*Att. Process*, p. 167) as for the non-fulfilment of obligations *ex contractu* and *ex delicto* respectively: or more simply non-criminal (*πρός*) and criminal (*κατά*). (Cf. Cucheval, *Étude sur les Tribunaux Athéniens.* p. 13.) It will be observed that cases frequently arise, which, with reference to the wrong complained of, may with equal propriety be brought before a court in the form of the *γραφὴ* last mentioned, or in that of an ordinary *δίκη*, and under these circumstances the laws of Athens gave the prosecutor an ample choice of methods to vindicate his rights by private or public proceedings (Dem. *c. Androt.* p. 601, § 25), much in the same way as a plaintiff in modern times may, for the same offence, prefer an indictment for assault, or bring his civil action for trespass on the person. It will be necessary to mention some of the principal distinctions in the treatment of causes of the two great classes above mentioned, before proceeding to discuss the forms and treatment of the private lawsuit.

In a δίκη, only the person whose rights were alleged to be affected, or the legal protector (κύριος) of such person, if a minor or otherwise incapable of appearing *suo jure*, was permitted to institute an action as plaintiff; in public causes, with the exception of some few in which the person injured or his family were peculiarly bound and interested to act, any free citizen, and sometimes, when the state was directly attacked, almost any alien, was empowered to do so. In all private causes, except those of ἐξούλης, βιαίων, and ἐξαιρέσεως, the penalty or other subject of contention was exclusively recovered by the plaintiff, while in most others the state alone, or jointly with the prosecutor, profited by the pecuniary punishment of the offender. The court fees, called *prytaneia*, were paid in private but not in public causes, and a public prosecutor that compromised the action with the defendant was in most cases punished by a fine of a thousand drachmas and a modified disfranchisement, while there was no legal impediment at any period of a private lawsuit to the reconciliation of the litigant parties. (Meier, *Att. Process*, p. 163.)

The proceedings in the δίκη were commenced by a summons to the defendant (πρόσκλησις) to appear on a certain day before the proper magistrate (εἰσαγωγεύς), and there answer the charges preferred against him. (Arist. *Nub.* 1221; *Av.* 1046.) This summons was often served by the plaintiff in person, accompanied by one or two witnesses [CLETERES], whose names were endorsed upon the declaration (λῆξις or ἔγκλημα). If there were an insufficient service of the summons, the lawsuit was styled ἀπρόσκλητος, and dismissed by the magistrate. (Hesych.) From the circumstance of the same officer that conducted the anakrisis being also necessarily present at the trial, and as there were besides *dies nefasti* (ἀποφράδες) and festivals, during which none, or only some special causes could be commenced, the power of the plaintiff in selecting his time was, of course, in some degree limited; and of several causes, we know that the time for their institution was particularised by law. (Aristoph. *Nub.* 1190.) There were also occasions upon which a personal arrest of the party proceeded against took the place of, or at all events was simultaneous with, the service of the summons; as, for instance, when the plaintiff doubted whether such party would not leave the country to avoid answering the action; and accordingly we find that in such cases (Dem. *c. Zenoth.* p. 890, § 29, *c. Aristog.* i. p. 788, § 60) an Athenian plaintiff might compel a foreigner to accompany him to the polemarch's office, and there produce bail for his appearance, or, failing to do so, submit to remain in custody till the trial. The word κατεγγυᾶν is peculiarly used of this proceeding. Between the service of the summons and appearance of the parties before the magistrate, it is very probable that the law prescribed the intervention of a period of five days. (Meier, *Att. Process*, p. 580.) If both parties appeared, the proceedings commenced by the plaintiff putting in his declaration, and at the same time depositing his share of the court fees (πρυτανεῖα), the non-payment of which was a fatal objection to the further progress of a cause. (Matthiae, *de Jud. Ath.* p. 261.) These were very trifling in amount. If the subject of litigation was rated at less than 100 drachmae, nothing was paid; if at more than 100 drachmae and less than 1000 drachmae, 3 drachmae was a sufficient deposit, and so on in proportion. If the defendant neglected or refused to make his payment, it is natural to conclude that he underwent the penalties consequent upon non-appearance; in all cases the successful party was reimbursed his prytaneia by the other. (Meier, *Att. Process*, p. 613.) The παρακαταβολή was another deposit in some cases, but paid by the plaintiff only. This was not in the nature nor of the usual amount of the court fees, but a kind of penalty, as it was forfeited by the suitor in case he failed in establishing his cause. In a suit against the treasury it was fixed at a fifth; in that of a claim to the property of a deceased person by an alleged heir or devisee, at a tenth of the value sought to be recovered. (Matth. *de Jud. Ath.* p. 260.) If the action was not intended to be brought before an Heliastic court, but merely submitted to the arbitration of a diaetetes [DIAETETES], a course which was competent to the plaintiff to adopt in all private actions (Hudtwalcker, *de Diaetet.* p. 35), the drachma paid in the place of a deposit above mentioned bore the name of παράστασις. The deposits being made, it became the duty of the magistrate, if no manifest objection appeared on the face of the declaration, to cause it to be written out on a tablet, and exposed for the inspection of the public on the wall or other place that served as the cause list of his court. (Meier, *Att. Process*, p. 605.)

The magistrate then appointed a day for the further proceedings of the anakrisis [ANAKRISIS], which was done by drawing lots for the priority in case there was a plurality of causes instituted at the same time; and to this proceeding the phrase λαγχάνειν δίκην, which generally denotes to bring an action, is to be primarily attributed. If the plaintiff failed to appear at the anakrisis, the suit, of course, fell to the ground; if the defendant made default, judgment passed against him. (Meier, *Att. Process*, p. 623.) Both parties, however, received an official summons before their non-appearance was made the ground of either result. An affidavit might at this, as well as at other periods of the action, be made in behalf of a person unable to attend upon the given day, and this would, if allowed, have the effect of postponing further proceedings (ὑπωμοσία); it might, however, be combated by a counter-affidavit to the effect, that the alleged reason was unfounded or otherwise insufficient (ἀνθυπωμοσία); and a question would arise upon this point, the decision of which, when adverse to the defendant, would render him liable to the penalty of contumacy. (Dem. *c. Olymp.* p. 1174, § 25.) The plaintiff was in this case said ἐρήμην ἑλεῖν: the defendant, ἐρήμην ὀφλεῖν, δίκην being the word omitted in both phrases. If the cause were primarily brought before an umpire (διαιτητής), the anakrisis was conducted by him; in cases of appeal it was dispensed with as unnecessary. The anakrisis began with the affidavit of the plaintiff (προωμοσία), then followed the answer of the defendant (ἀντωμοσία or ἀντιγραφή [ANTIGRAPHÉ]), then the parties produced their respective witnesses, and reduced their evidence to writing, and put in originals, or authenticated copies, of all the records, deeds, and contracts that might be useful in establishing their case, as well as memoranda of offers and requisitions then made by either side (προκλήσεις). The whole of the documents were then, if the cause took a straightforward course (εὐθυδικία), enclosed on the last day of the anakrisis in a casket (ἐχῖνος), which was sealed and entrusted to the custody of the presiding magistrate, till it was produced and opened at the trial. During the interval no alteration in its contents was permitted, and accordingly evidence that had been discovered after the anakrisis was not producible at the trial. (Dem. *c. Boeot.* i. p. 999, § 18.) In some causes, the trial before the dicasts was by law appointed to come on within a given time; in such as were not provided for by such regulations, we may suppose that it would principally depend upon the leisure of the magistrate. The parties, however, might defer the day (κυρία) by mutual consent. (Dem. *c. Phaen.* p. 1042, § 12.) Upon the court being assembled, the magistrate called on the cause (Platner, *Process und Klagen*, i. 182), and the plaintiff opened his case. At the commencement of the speech, the proper officer (ὁ ἐφ' ὕδωρ) filled the clepsydra with water. As long as the water flowed from this vessel, the orator was permitted to speak; if, however, evidence was to be read by the officer of the court, or a law recited, the water was stopped till the speaker recommenced. The quantity of water, or, in other words, the length of the speeches, was not by any means the same in all causes: in the speech against Macartatus, and elsewhere, one amphora only was deemed sufficient; eleven are mentioned in the impeachment of Aeschines for misconduct in his embassy. In some few cases, as those of κάκωσις, according to Harpocration, no limit was prescribed. The speeches were sometimes interrupted by the cry κατάβα—"go down;" in effect, "cease speaking"—from the dicasts, which placed the advocate in a serious dilemma; for if after this he still persisted in his address, he could hardly fail to offend those who bade him stop; if he obeyed the order, it might be found, after the votes had been taken, that it had emanated from a minority of the dicasts. (Aristoph. *Vesp.* 980.) After the speeches of the advocates, which were in general two on each side, and the incidental reading of the documentary and other evidence, the dicasts proceeded to give their judgment by ballot. [PSEPHOS.]

When the principal point at issue was decided in favour of the plaintiff, there followed, in the case of a δίκη τιμητή, a further discussion as to the amount of damages, or penalty, which the defendant should pay. [TIMEMA.] If the penalty was already prescribed by law, the suit was described as ἀτίμητος, not requiring assessment (Dem. *c. Mid.* p. 543, § 90; *c. Aphob.* i. p. 834, § 67). The method of voting upon this question seems to have varied, in that the dicasts used a small tablet instead of a ballot-ball, upon which those that approved of the heavier penalty drew a long line, the others a short one. (Aristoph. *Vesp.* 167.) Upon judgment being given in a private suit, the Athenian law left its execution very much in the hands of the successful party, who was empowered to seize the movables of his antagonist as a pledge for the payment of the money, or institute an action of ejectment (ἐξούλης) against the refractory debtor. The judgment of a court of dicasts was in general decisive (δίκη αὐτοτελής); but upon certain occasions, as, for instance, when a gross case of perjury or conspiracy could be proved by the unsuccessful party to have operated to his disadvantage, the cause, upon the conviction of such conspirators or witnesses, might be commenced *de novo*. [APPELLATIO (Greek).] In addition to which, the party against whom judgment has passed by default had the power to revive the cause, upon proving that his non-appearance in court was inevitable (τὴν ἐρήμην ἀντιλαχεῖν, Platner, *Process und Klagen*, i. 396): this, however, was to be exercised within two months after the original judgment. If the parties were willing to refer the matter to an umpire (διαιτητής), it was in the power of the magistrate to transfer the proceedings as they stood to that officer; and in the same way, if the diaetetes considered the matter in hand too high for him, he might refer it to the εἰσαγωγεύς, to be brought by him before an Heliastic court. The whole of the proceedings before the diaetetes were analogous to those before the dicasts, and bore equally the name of δίκη: but it seems that the phrase ἀντιλαχεῖν τὴν μὴ οὖσαν is peculiarly applied to the revival of a cause before the umpire in which judgment had passed by default. [J. S. M.] [W. W.]

DICHALCON (δίχαλκον), a double chalcus [CHALCUS], a small copper Greek coin, equal to one-fourth of an obolus. (Pollux, ix. 65; *Anth. Pal.* xi. 165; Vitruv. iii. 1; cf. Plin. *H. N.* xxi. § 185.) [W. S.]

DI'CROTUM. [NAVIS.]

DICTA'TOR, an extraordinary magistrate at Rome. The origin of the name is obscure, the derivation given by Cicero (*de Rep.* i. 40, 63), "dictator ab eo appellatur quia dicitur" (cf. Varr. *L. L.* vi. 61), being impossible, though historically significant; while the derivation from *dictare*, which is evidently etymologically correct, is hard to connect with the historical use of the term. It is probable that the word was originally used with a somewhat indefinite sense, especially as we find it applied to a very different office in some of the towns of Latium, as, for instance, at Alba, Lanuvium, Cora, Tusculum, and Nomentum (Cic. *pro Mil.* 10, 27). At Rome this magistrate was originally called *magister populi* and not *dictator*, and in the sacred books he was always designated by the former name down to the latest times. (Cic. *de Rep.* i. 40, 63; *de Leg.* iii. 3, 9; *de Fin.* iii. 22, 75; Varr. *L. L.* v. 82; Festus, s. v. *optima lex*, p. 198, ed. Müller.)

On the establishment of the Roman republic the government of the state was entrusted to *two* consuls, that the citizens might be the better protected against the tyrannical exercise of the supreme power. But it was soon felt that circumstances might arise in which it was of importance for the safety of the state that the government should be vested in the hands of a single person, who should possess for a season absolute power, and from whose decision there should be no appeal to any other body. Thus it came to pass that in B.C. 501, nine years after the expulsion of the Tarquins, the dictatorship (*dictatura*) was instituted. The name of the first dictator and the immediate reason of his appointment were differently stated by the annalists. The oldest authorities mention T. Larcius, one of the consuls of the year, as the first dictator, but others ascribed this honour to M’. Valerius. (Liv. ii. 18.) Mommsen holds that the dictatorship of the latter was the first, but that it was omitted under the false belief that no one who had not been consul would be created dictator. Livy states (*l. c.*) that a formidable war with the Latins led to the appointment; and he also found mentioned in the annals that the consuls of this year were suspected of belonging to the party of the Tarquins; but in the latter case T. Larcius could not have been one of the consuls. Dionysius relates at length (v. 63–70) that the plebs, who were oppressed by the weight of their debts, took advantage of the danger of the republic to obtain some mitigation of their sufferings, and refused to serve in the army, and that thereupon recourse was had to a dictator to bring them to their duty. But as Livy makes no mention of any internal disturbances in this year, and does not speak of any commotions on account of debts till four years subsequently, we may conclude that Dionysius has in this case, as he has in many others, deserted the annalists in order to give what appeared to him a more satisfactory reason. It is true that the patricians frequently availed themselves of the dictatorship as a means of oppressing the plebs; but it is certainly unnecessary to seek the first institution of the office in any other cause than the simple one mentioned by Livy; namely, the great danger with which the state was threatened. Modern scholars have stated other reasons for the establishment of the dictatorship, which are so purely conjectural and possess such little inherent probability, that they do not require any refutation. Thus Niebuhr infers (*Hist. of Rome*, vol. i. p. 564) from the Roman dictator being appointed only for six months, that he was at the head both of Rome and of the Latin league, and that a Latin dictator possessed the supreme power for the other six months of the year; but this supposition, independent of other considerations, is contradicted by the fact, that in the year in which the dictator was first appointed, Rome and the Latins were preparing for war with one another. Mommsen, on the other hand, maintains that the inconsistent accounts as to the origin of the dictatorship indicate that it must have been from the first an integral part of the republican constitution, and that the dictator was regarded as *collega maior* of the consuls. Most recent scholars dispute this view (Herzog, i. 128; Willems, *Droit Romain*, p. 267, &c.), which is only an inference, and is not supported by any ancient authority.

By the original law respecting the appointment of a dictator (*lex dè dictatore creando*), no one was eligible for this office unless he had previously been consul (Liv. ii. 18). Madvig's notion that *consulares legere* means "the ex-consuls elected" (*Verf.* i. 487) has found little support. We find, however, a few instances in which this law was not observed, and Mommsen rejects altogether Livy's vague account of the proposal of this law. (See, *e.g.* Liv. iv. 26, 48; vii. 24.) When a dictator was considered necessary, the senate passed a senatusconsultum that one of the consuls should nominate (*dicere*) a dictator; but this decree was not formally necessary, hence Plutarch (*Marc.* 24) is right in saying that the dictator is not elected by the people nor by the senate. We find, indeed, an instance (Liv. iv. 57) in which the decree of the senate enjoining the appointment of a dictator was vetoed by the tribunes, and hence lost all legal force; but the appointment was made. In almost all cases, however, we find mention of a previous decree of the senate (see, *e.g.*, Liv. ii. 30; iv. 17, 21, 23, 26, 57; vi. 2; vii. 21; viii. 17; ix. 29; x. 11; xxii. 57). Niebuhr indeed supposes (*Hist. of Rome*, vol. i. p. 567) that the dictator was originally created by the curiae, like the kings, but this theory needs no refutation (cf. Mommsen, *Röm. Staatsr.* ii.^{2} 141; Madvig, *Verf.* i. 487, note).

The nomination or proclamation of the dictator by the consul was necessary in all cases. It was always made by the consul, probably without any witnesses, between midnight and morning, and with the observance of the auspices (*surgens* or *oriens nocte silentio*[*] *dictatorem dicebat*, Liv. viii. 23, ix. 38, xxiii. 22; Dionys. x. 11). The technical word for this nomination or proclamation was *dicere* (seldom *creare* or *facere*). So essential was the nomination of the consuls, that we find the senate on one occasion having recourse to the tribunes of the people to compel the consuls to nominate a dictator, when they had refused to do so (Liv. iv. 26). After the battle at the lake Trasimenus, all communication with the surviving consul was cut off. A difficulty thus arose, but unfortunately the text of Livy (xxii. 8) is corrupt, and it is not possible to determine exactly how it was met. The best MS. reads *nec dictatorem populo creare poterat*. This has been commonly altered into *populus*, but Weissenborn reads *praetor*, and Madvig *populo non consulto senatus*. Mommsen (*C. I. L.* i. p. 288) rejects the whole clause, and maintains that a praetor was competent to create a dictator. The reading in the next clause, *prodictatorem*, is due solely to an erroneous conjecture. (Cf. Herzog, i. 725.) It seems not improbable that a resolution of the senate empowered a praetor to take the votes of the people as to the selection of the dictator. Livy (xxii. 31) seems to regard Fabius as acting only *pro dictatore*. In the same spirit it became a question, whether the tribuni militum with consular power could nominate a dictator, and they did not venture to do so till the augurs had been consulted and declared it allowable (Liv. iv. 21), after which they frequently exercised this power. The nomination of Sulla by an interrex and of Caesar by a praetor was held to be contrary to all precedent and altogether illegal. (Comp. Cic. *ad Att.* ix. 15.) The senate seems

---

[*] Respecting the meaning of *silentium* in relation to the auspices, see AUGUR, p. 247 *b*.

to have usually mentioned in their decree the name of the person whom the consul was to nominate (Liv. iv. 17, 21, 23, 46; vi. 2; vii. 12; viii. 17; ix. 29; x. 11; xxii. 57); but that the consul was not absolutely bound to nominate the person whom the senate had named is evident from the cases in which the consuls appointed persons in opposition to the wishes of the senate (Liv. viii. 12, *Epit.* 19; Suet. *Tib.* 2). It is doubtful what rule was adopted, or whether any existed, for the purpose of determining which of the two consuls should nominate the dictator. In one case we read that the nomination was made by the consul who had the fasces (Liv. viii. 12), in another that it was decided by lot (iv. 26), and in a third that it was matter of agreement among themselves (iv. 21). In later times the senate usually entrusted the office to the consul who was nearest at hand. The nomination took place at Rome, as a general rule; and if the consuls were absent, one of them was recalled to the city, whenever it was practicable (Liv. vii. 19; xxiii. 22); but if this could not be done, a senatusconsultum authorising the appointment was sent to the consul, who thereupon made the nomination in the camp (Liv. vii. 21; viii. 23; ix. 38; xxv. 2; xxvii. 5). Nevertheless, the rule was maintained that the nomination could not take place outside of the *Ager Romanus*, though the meaning of this expression was extended so as to include the whole of *Italia*. Thus we find the senate in the second Punic war opposing the nomination of a dictator in Sicily, because it was outside of the ager Romanus (*extra agrum Romanum—eum autem Italia terminari*, Liv. xxvii. 5).

Originally the dictator was of course a patrician. The first plebeian dictator was C. Marcius Rutilus, nominated in B.C. 356 by the plebeian consul M. Popillius Laenas. (Liv. viii. 17.) The eligibility of a plebeian to this office seems to have been regarded as a necessary inference from the Licinian law, which threw open the consulship.

The reasons which led to the appointment of a dictator required that there should be only one at a time. The only exception to this rule occurred in B.C. 217, when a resolution of the people created Minucius a colleague with equal powers to Fabius Cunctator, who was at the time holding the dictatorship (Liv. xxii. 25). Polybius expressly calls Minucius a dictator, and he is described as such in an inscription (*C. I. L.* i. p. 556). In B.C. 216 after the battle of Cannae, M. Fabius Buteo was nominated dictator for the purpose of filling up the vacancies in the senate, although M. Junius Pera was discharging the regular duties of the dictator. Livy asserts that Fabius resigned on the day of his nomination on the ground that there could not be two dictators at the same time. (Liv. xxiii. 22, 23; Plut. *Fab.* 9.) He discharged, however, the duty of filling up the senate, for which he was appointed; and Mommsen regards the words put into his mo[illegible]y as invented by the annalists, as a protest against the unconstitutional procedure of the previous year. The dictators that were appointed for carrying on the business of the state were said to be nominated *rei gerundae causa*, or sometimes *seditionis sedandae causa*; and upon them, as well as upon the other magistrates, the imperium was conferred by a *Lex Curiata*. (Liv. ix. 38, 39; Dionys. v. 70.) Dictators were also frequently appointed for some special purpose, and frequently one of small importance, of whom further mention will be made below. At present we confine our remarks to the duties and powers of the *dictator rei gerundae causa*.

The dictatorship was limited to six months (Cic. *de Leg.* iii. 3; Liv. iii. 29, ix. 34, xxiii. 23; Dionys. v. 70, x. 25; Dio Cass. xxxvi. 17, xlii. 21; Zonar. vii. 13), and no instances occur in which a person held this office for a longer time, for the dictatorships of Sulla and Caesar are of course not to be taken into account. On the contrary, though a dictator was appointed for six months, he often resigned his office long previously, immediately after he had despatched the business for which he had been appointed. (Liv. iii. 29, iv. 46, vi. 29.) His powers also ceased with the expiration of the term of office of the consul who had appointed him (Mommsen, *Röm. Staatsr.* ii.^{3} 152). As soon as the dictator was nominated, a kind of suspension took place with respect to the consuls and all the other magistrates, with the exception of the tribuni plebis. It is frequently stated that the duties and functions of all the ordinary magistrates entirely ceased, and some writers have even gone so far as to say that the consuls abdicated (Polyb. iii. 87; Cic. *de Leg.* iii. 3; Dionys. v. 70, 72); but this is not a correct way of stating the facts of the case. The regular magistrates continued to discharge the duties of their various offices under the dictator, but they were no longer independent officers, but were subject to the higher imperium of the dictator, and obliged to obey his orders in everything. We often find the dictator and the consuls at the head of separate armies at the same time, and carrying on war independent of one another (Liv. ii. 30, viii. 29); we see that the soldiers levied by the dictator took the oath of allegiance to the consul (Liv. ii. 32), and that the consuls could hold the consular comitia during a dictatorship (Liv. xxiii. 23). All this shows that the consuls did not resign their functions, although they were subject to the imperium of the dictator; and accordingly, as soon as the dictator abdicated, they again entered forthwith into the full possession of the consular power. (Dionys. v. 70; Liv. iv. 27.)

The superiority of the dictator's power to that of the consuls consisted chiefly in the three following points—greater independence of the senate, more extensive power of punishment without any appeal (*provocatio*) from their sentence to the people, and irresponsibility. To these three points must of course be added that he was not fettered by a colleague. We may naturally suppose that the dictator would usually act in unison with the senate; but it is expressly stated that in many cases where the consuls required the co-operation of the senate, the dictator could act on his own responsibility. (Polyb. iii. 87.) For how long a time the dictatorship was a *magistratus sine provocatione*, is uncertain. That there was originally no appeal from the sentence of the dictator is certain, and accordingly the lictors bore the axes in the fasces before them even in the city, as a symbol of their absolute power over the lives of the citizens, although by the Valerian law the axes had disappeared from the fasces of the consuls.

(Liv. ii. 18, 29, iii. 20; Zonar. vii. 13; Dionys. v. 70, 75; Pompon. *de Orig. Jur.* § 18.) That an appeal afterwards lay from their sentence to the people, is expressly stated by Festus (s. v. *optima lex*), and it has been supposed that this privilege was granted by the Lex Valeria Horatia, passed after the abolition of the decemvirate in B.C. 449, which enacted "ne quis *ullum* magistratum sine provocatione crearet." (Liv. iii. 15.) But eleven years afterwards the dictatorship is spoken of as a *magistratus sine provocatione*; and the only instance in Livy (viii. 33, 34) in which the dictator is threatened with provocatio, certainly does not prove that this was a legal right; for L. Papirius, who was then (B.C. 325) dictator, treated the provocatio as an infringement of the rights of his office. We may therefore suppose that the Lex Valeria Horatia only applied to the regular magistracies, and that the dictatorship was regarded as exempt from it. It is more probable that the right of appeal (within the city) was granted by the third Valerian law *de provocatione* (B.C. 300), which Livy describes as *diligentius sancta* (x. 10). It is true that these words cannot in themselves denote any extension of the right of appeal, but it is not unnatural to suppose that an extension to the only case hitherto excluded accompanied the provision of more effective securities. In connexion with the *provocatio* there arises another question respecting the relation of the dictatorship to the tribunes of the plebs. We know that the tribunes continued in office during a dictatorship; but we are expressly informed that they had no control over a dictator, and could not hamper his proceedings by their *intercessio* or *auxilium* (Zonaras, vii. 15). The few instances which appear to prove the contrary are to be explained in a different manner, as Becker has shown (cf. Mommsen, *Röm. Staatsr.* ii.^{2} 157). That the tribunes continued in office as independent magistrates during a dictatorship, while all the other magistrates became simply the officers of the dictator, may perhaps be explained by the fact, that the *lex de dictatore creando* was passed before the institution of the tribuneship of the plebs, and consequently made no mention of it; and that as a dictator was appointed in virtue of a senatusconsultum, the senate had no power over the tribunes of the plebs, though they could suspend the other magistrates.

It has been already stated that the dictator was irresponsible; that is, he was not liable after his abdication to be called to account for any of his official acts. This is expressly stated by ancient writers (Zonar. vii. 13; Dionys. v. 70, vii. 56; Plut. *Fab.* 3; Appian, *B. C.* ii. 23), and, even if it had not been stated, it would follow from the very nature of the dictatorship. We find moreover no instance recorded in which a dictator after his resignation was made answerable for the misuse of his power, with the exception of Camillus, whose case however was a very peculiar one. (Compare Becker, *Römisch. Alterth.* vol. ii. part ii. p. 172.)

In was in consequence of the great and irresponsible power possessed by the dictatorship, that we find it frequently compared with the regal dignity, from which, though in theory quite different, it practically only differed in being held for a limited time. (Cic. *de Rep.* ii. 32; Zonar. vii. 13; Dionys. v. 70, 73; Appian, *B. C.* i. 99; Tac. *Ann.* i. 1.) There were, however, a few limits to the power of the dictator. 1. The most important was that the period of his office was only six months. 2. He had not power over the treasury, but could only make use of the money which was granted him by the senate. (Zonar. vii. 13.) 3. He was not allowed to leave Italy, since he might in that case easily become dangerous to the republic (Dio Cass. xxxvi. 17); though the case of Atilius Calatinus in the first Punic war forms an exception to this rule. (Liv. *Epit.* 19.) 4. He was not allowed to ride on horseback at Rome, without previously obtaining the permission of the people (Liv. xxiii. 14; Zonar. vii. 13); a regulation apparently capricious, but perhaps adopted that he might not bear too great a resemblance to the kings, who were accustomed to ride. Mommsen finds in this curious limitation an indication of his special function as commander of the infantry (*magister populi*).

The insignia of the dictator were nearly the same as those of the kings in earlier times, and of the consuls subsequently. Instead however of having only twelve lictors, as was the case with the consuls, he was preceded by twenty-four bearing the axes as well as the fasces. The *sella curulis* and *toga praetexta* also belonged to the dictator. (Polyb. iii. 87; Dionys. x. 24; Plut. *Fab.* 4; Appian, *B. C.* i. 100; Dio Cass. liv. 1.)

The preceding account of the dictatorship applies more particularly to the *dictator rei gerundae causa;* but dictators were also frequently appointed, especially when the consuls were absent from the city, to perform certain acts which could not be done by any inferior magistrate. These dictators had little more than the name; and as they were only appointed to discharge a particular duty, they had to resign immediately that duty was performed, and they were not entitled to exercise the power of their office in reference to any other matter than the one for which they were nominated. The occasions on which such dictators were appointed, were principally:—1. For the purpose of holding the comitia for the elections (*comitiorum habendorum causa*), first in B.C. 351 (Liv. vii. 22) and frequently afterwards. 2. For fixing the *clavus annalis* in the temple of Jupiter (*clavi figendi causa*) in times of pestilence or civil discord, because the law said that this ceremony was to be performed by the *praetor maximus*, and after the institution of the dictatorship the latter was regarded as the highest magistracy in the state (Liv. vii. 3). 3. For appointing holidays (*feriarum constituendarum causa*) on the appearance of prodigies (Liv. vii. 28), and for officiating at the public games (*ludorum faciendorum causa*), the presidency of which belonged to the consuls or praetors (viii. 40, ix. 34). 4. For holding trials (*quaestionibus exercendis*, ix. 36), though Mommsen doubts whether this was not an appointment *rei gerundae causa*, as it is described in the Capitoline *Fasti*. 5. And on one occasion, for filling up vacancies in the senate (*legendo senatui*, xxiii. 22).

Along with the dictator there was always a *magister equitum*, the nomination of whom was left to the choice of the dictator, unless the senatusconsultum specified, as was sometimes the case, the name of the person who was to be appointed (Liv. viii. 17; xxii. 57). The magister equitum had, like the dictator, to receive the imperium by a lex curiata (Liv. ix. 38). The dictator could not be without a magister equitum, and, consequently, if the latter died during the six months of the dictatorship, another had to be nominated in his stead. The magister equitum was subject to the imperium of the dictator, but in the absence of his superior he became his representative, and exercised the same powers as the dictator. In B.C. 217, shortly before legal dictators ceased to be appointed, we find an instance of a magister equitum being invested with an imperium equal to that of the dictator, so that there were then virtually two dictators, but this is expressly mentioned as an anomaly, which had never occurred before (Polyb. iii. 103, 106). The rank which the magister equitum held among the other Roman magistrates is doubtful. Niebuhr asserts (vol. ii. p. 390), "No one ever supposed that his office was a curule one;" and if he is right in supposing that the consular tribunate was not a curule office, his view is supported by the contention of a dictator in Livy, that the imperium of the magister equitum was not superior to that of a consular tribune (vi. 39). Cicero on the contrary places the magister equitum on a par with the praetor (*de Leg.* iii. 3, 9), and Mommsen holds that he probably had the curule chair, and certainly the *praetexta* and six lictors. After the establishment of the praetorship, it seems to have been considered necessary that the person who was to be nominated magister equitum should previously have been praetor, just as the dictator, according to the old law, had to be chosen from the consulars (Dio Cass. xlii. 21). Accordingly, we find at a later time that the magister equitum had the insignia of a praetor (Dio Cass. xlii. 27). The magister equitum was originally, as his name imports, the commander of the cavalry, while the dictator was at the head of the legions, the infantry (Liv. iii. 27), and the relation between them was in this respect similar to that which subsisted between the king and the tribunus celerum.

Dictators were only appointed so long as the Romans had to carry on wars in Italy. A solitary instance occurs in the first Punic war of the nomination of a dictator for the purpose of carrying on war out of Italy (Liv. *Epit.* 19); but this was never repeated, because, as has been already remarked, it was feared that so great a power might become dangerous at a distance from Rome. But after the battle of Trasimene in B.C. 217, when Rome itself was threatened by Hannibal, recourse was again had to a dictator, and Q. Fabius Maximus was appointed to the office. In the next year, B.C. 216, after the battle of Cannae, M. Junius Pera was also nominated dictator, but this was the last instance of the appointment of a *dictator rei gerundae causa.* From that time dictators were frequently appointed for holding the elections down to B.C. 202, but from that year the dictatorship disappears altogether. After a lapse of 120 years, Sulla caused himself to be appointed dictator in B.C. 82, *reipublicae constituendae causa* (Vell. Pat. ii. 28); but, as Niebuhr remarks, "the title was a mere name, without any ground for such a use in the ancient constitution." Neither the magistrate (*interrex*) who nominated him, nor the time for which he was appointed, nor the extent and exercise of his power, was in accordance with the ancient laws and precedents; and the same was the case with the dictatorship of Caesar. Soon after Caesar's death the dictatorship was abolished for ever by a lex proposed by the consul Antonius (Cic. *Phil.* i. 1; Liv. *Epit.* 116; Dio Cass. xliv. 51). The title indeed was offered to Augustus, but he resolutely refused it in consequence of the odium attached to it from the tyranny of Sulla when dictator (Suet. *Aug.* 52).

Sometimes a substitute was invented for the dictatorship, whenever the circumstances of the republic required the adoption of extraordinary measures, by the senate investing the consuls with dictatorial power. This was done by the formula, *Videant* or *dent operam consules, ne quid respublica detrimenti capiat.* We find instances of this in the earliest time of the republic (Liv. iii. 4, vi. 19), as well as later; as, for instance, in the case of Cicero (Sall. *Cat.* 29; Plut. *Cic.* 14). Sometimes this power was granted to other magistrates in addition to the consuls (Caes. *B. C.* i. 5; Cic. *Rabir. perd.* 7). (Becker, *Röm. Alterth.* ii. part ii. 150 foll., supplemented from recent authorities, especially Mommsen, *Röm. Staatsr.* ii. 133–172.) [W. S.] [A. S. W.]

DICTY'NNIA (*δικτύννια*), a festival with sacrifices, celebrated at Kydonia in Crete, in honour of Artemis, surnamed **Δίκτυννα** or **Δικτύνναια**, from **δίκτυον**, a hunter's net. (Diod. Sic. v. 76; compare Strabo, x. p. 479; Paus. ii. 30, § 3.) Particulars respecting its celebration are not known. Artemis **Δίκτυννα** was also worshipped at Sparta (Paus. iii. 12, § 7), and at Ambrysos in Phocis. (Paus. x. 36, § 3; compare the Schol. *ad* Aristoph. *Ran.* 1284, *Vesp.* 357; and Meursius, *Creta*, c. 3.) [L. S.]

DIDRACHMON (*δίδραχμον*). [DRACHMA.]

DIENGYESIS (*διεγγύησις*). [ENGYE.]

DIES (of the same root as *δῖος* and *deus*, Curtius, *Gr. Etym.* No. 269). The name *dies* was applied, like our word day, to the time during which, according to the notions of the ancients, the sun performed his course round the earth; and this time they called the civil day (*dies civilis*, in Greek *νυχθήμερον*, because it included both night and day. See Censorin. *de Die Nat.* 23; Plin. *H. N.* ii. § 188; Macrob. *Sat.* i. 3). The natural day (*dies naturalis*), or the time from the rising to the setting of the sun, was likewise designated by the name *dies*. The civil day began with the Athenians at the setting of the sun, and with the Romans (as with the Egyptians and Hipparchus) at midnight; with the Babylonians at the rising of the sun, and with the Umbrians at mid-day. (Macrob. *l. c.*; Gellius, iii. 2.) We have here only to consider the natural day; and as its subdivisions were different at different times, and not always the same among the Greeks as among the Romans, we shall endeavour to give a brief account of the various parts into which it was divided by the Greeks at the different periods of their history, and then proceed to consider its divisions among the Romans, to which will be subjoined a short list of remarkable days.

At the time of the Homeric poems, the natural day was divided into three parts (*Il.* xxi. 111). The first, called *ἠώς*, began with sunrise, and comprehended the whole space of time during which light seemed to be increasing, *i.e.* till mid-day. (*Il.* viii. 66, ix. 84; *Od.* ix. 56.) Some ancient grammarians have supposed that in some instances Homer used the word ἠὼς for the whole day, but Nitzsch (*Anmerkungen zur Odyssee*, i. 125) has shown the incorrectness of this opinion. The second part was called μέσον ἦμαρ or mid-day, during which the sun was thought to stand still. (Hermias, *ad* Plat. *Phaedr.* p. 342.) The third part bore the name of δείλη or δείελον ἦμαρ (*Od.* xvii. 606; compare Buttman's *Lexilog.* ii. n. 95), which derived its name from the increased warmth of the atmosphere. The last part of the δείλη was sometimes designated by the words ποτὶ ἕσπερα or βουλυτός (*Od.* xvii. 191; *Il.* xvi. 779). Besides these three great divisions, no others seem to have been known at the time when the Homeric poems were composed. (Cf. Buchholz, *Hom. Realien*, i. 39–42.) The chief information respecting the divisions of the day in the period after Homer, and more especially the divisions made by the Athenians, is to be derived from Pollux (*Onom.* i. 68). The first and last of the divisions made at the time of Homer were afterwards subdivided into two parts. The earlier part of the morning was termed πρωΐ or πρὼ τῆς ἡμέρας: the later, *i.e.* from 9 or 10 till noon, πληθούσης τῆς ἀγορᾶς, or περὶ πλήθουσαν ἀγορὰν (Herod. iv. 181; Xen. *Memorab.* i. 1, § 10, *Hellen.* i. 1, § 30; Dion Chrysost. *Orat.* lxvii.). The μέσον ἦμαρ of Homer was afterwards expressed by μεσημβρία, μέσον ἡμέρας, or μέση ἡμέρα, and comprehended, as before, the middle of the day, when the sun seemed neither to rise nor to decline. The two parts of the afternoon were called δείλη πρωΐη or πρωΐα, and δείλη ὀψίη or ὀψία (Herod. vii. 167, viii. 6; Thuc. iii. 74, viii. 26; Xen. *Anab.* i. 8, 8; compare Libanius, *Epist.* 1084). This division continued to be observed down to the latest period of Grecian history, though another more accurate division, and more adapted to the purposes of common life, was introduced at an early period; for Anaximander, or according to others, his disciple Anaximenes, is said to have made the Greeks acquainted with the use of the Babylonian chronometer or sun-dial (called πόλος or ὡρολόγιον, sometimes with the epithet σκιοθηρικὸν or ἡλιαμάνδρον), by means of which the natural day was divided into twelve equal spaces of time. (Herod. ii. 109; Diog. Laërt. ii. 1, 3; Plin. *H. N.* ii. § 187; Suidas, *s. v.* Ἀναξίμανδρος.) These spaces were, of course, longer or shorter according to the various seasons of the year. The name hours (ὧραι), however, did not come into general use till a very late period, and the difference between natural and equinoctial hours was first observed by the Alexandrine astronomers.

During the early ages of the history of Rome, when artificial means of dividing time were yet unknown, the natural phenomena of increasing light and darkness formed with the Romans, as with the Greeks, the standard of division, as we see from the vague expressions in Censorinus (*de Die Nat.* 24). Pliny states (*H. N.* vii. § 212) that in the Twelve Tables only the rising and the setting of the sun were mentioned as the two parts into which the day was then divided, but from Censorinus (*l. c.*) and Gellius (xvii. 2) we learn that mid-day (*meridies*) was also mentioned. Varro (*L. L.* vi. 4, 5) and Isidore (*Orig.* v. 30 and 31) likewise distinguished three parts of the day, viz. *mane*, *meridies*, and *suprema*, scil. *tempestas*, after which no assembly could be held in the forum (cf. *XII. Tabb.* in Censor. 24: "Solis occasus suprema tempestas esto"). The Lex Plaetoria prescribed that a herald should proclaim the *suprema* in the comitium, that the people might know that their meeting was to be adjourned (Varr. *L. L.* vi. 5). But the division of the day most generally observed by the Romans, was that into *tempus antemeridianum* and *pomeridianum*, the *meridies* itself being only considered as a point at which the one ended and the other commenced. As it was of importance that this moment should be known, an officer [ACCENSUS] of the consuls was directed to proclaim the time of mid-day, when from the Curia he saw the sun standing between the Rostra and the Graecostasis. The division of the day into twelve equal spaces, which, here as in Greece, were shorter in winter than in summer,* was adopted at the time when artificial means of measuring time were introduced among the Romans from Greece. This was about the year B.C. 293, when L. Papirius Cursor, before the war with Pyrrhus, brought to Rome an instrument called solarium horologium, or simply solarium. (Plaut. *ap. Gellium*, iii. 3, § 5; Plin. *H. N.* vii. § 212). In B.C. 263 M. Valerius Messala brought one which he had taken at the capture of Catina; and although this was incorrect, having been constructed for a place 4° further south than Rome, it was in use for 99 years, before the error was discovered. In B.C. 164 the censor Q. Marcius Philippus had a more exact sun-dial constructed; but the time was still unknown in cloudy weather (Plin. *l. c.*). Scipio Nasica, therefore, erected in B.C. 159 a public clepsydra, which indicated the hours of the night as well as of the day (Censorin. c. 23). Before the erection of a clepsydra it was customary for one of the subordinate officers of the praetor to proclaim the third, sixth, and ninth hours; which shows that the day was, like the night, divided into four parts, each consisting of three hours. In daily life numerous terms were in use to denote the different parts of the day, mostly of a general and somewhat vague character. (Cf. Varr. *L. L.* vi. 4–7; Servius on *Aen.* ii. 268, iii. 587; Isidor. *Or.* v. 31, 32.) See Dissen's treatise, *De Partibus Noctis et Diei ex Divisionibus Veterum*, in his *Kleine Lateinische und Deutsche Schriften*, pp. 130, 150. Compare the article HOROLOGIUM.

All the days of the year were, according to different points of view, divided by the Romans into different classes. For the purpose of the administration of justice, and holding assemblies of the people, all the days were divided into *dies fasti*, *dies nefasti*, and *dies* partly *fasti*, partly *nefasti*.

I. *Dies fasti* in the wider sense were days on which legal and political business could be lawfully transacted. They were divided into—

---

* The day at Rome varies from 8 hrs. 54 min. on Dec. 23, to 15 hrs. 6 min. on June 25: hence the hour varied between 45 min. and 1 hr. 15 min. (Ideler, *Chron.* ii. 13.)

1. *Dies fasti* in the narrower sense, marked with F in the calendars. On these legal business could be conducted (Ov. *Fast.* i. 48, "fastus erit per quem lege licebit agi;" Varr. *L. L.* vi. 29, "dies fasti per quos praetoribus omnia verba sine piaculo licet fari"). The word is derived by the ancients from *fari;* but although the root is undoubtedly the same, the more immediate connexion is with *fas.*

2. *Dies comitiales,* days on which meetings of the people could legally be held, and on which, if there was no meeting convened, courts could be opened. (Macrob. *Sat.* i. 16, 14, quoting Varro: "Comitiales sunt, quibus cum populo agi licet, et fastis quidem lege agi potest, cum populo non potest, comitialibus utrumque potest.") These days are marked C in the calendars. The *nundinae* belonged to this class, so far as the plebeians were concerned, from the first; but in early times they were *nefasti* for the patricians, a distinction removed in B.C. 287 by the Lex Hortensia (cf. Becker-Marquardt, ii. 3, 61). Mommsen doubts this view.

II. *Dies nefasti* were days on which no legal or political business could be done. Varro (*L. L.* vi. 30) says: "Contrarii horum (fastorum) vocantur dies nefasti, per quos dies nefas fari praetorem 'do, dico, addico,' itaque non potest agi, necesse enim aliquo eorum uti verbo, cum lege quid peragitur." These are again divided into two quite distinct classes:—

1. *Dies nefasti* or *feriati,* on which no business could be done because the day was sacred to some festival (a *dies festus*). These are marked NP in the calendars. This sign was commonly interpreted *nefastus parte* or *nefastus principio,* and was explained to mean that the day was one during the earlier part of which no business could be done. But Mommsen (*Chronol.* p. 220; *C. I. L.* i. p. 366) showed that this view was quite untenable. It is sufficiently disproved by the fact that thus there would be no difference between NP and EN, and that the former sign is prefixed to all holidays in the calendar except the *Feralia,* while it is quite impossible to believe that there was no whole holiday observed at Rome. The sign Mommsen explains to be, like M' when used as an abbreviation for Manius, a modification of the archaic M with five strokes (ꟿ); but there is little to support this view. Huschke interprets it as for *Nefastus Purus.*

2. *Dies religiosi* or *vitiosi,* sometimes called *atri,* marked in the calendars by R. These were unlucky days, which had been declared to be such by a decree of the senate in consequence of some disaster which had taken place upon them. All the *dies postriduani* were included under this head; *i.e.* the days after the calends, the nones and the ides, because these were believed to have been specially unfortunate (Ov. *Fast.* i. 59, 60, "Omen ab eventu est: illis nam Roma diebus damna sub averso tristia Marte tulit"). On these days it was not only unlawful to transact any legal or political business, but it was also unlucky to begin any affair of importance. (Cf. Gellius, iv. 9, 5: "Religiosi dies dicuntur tristi omine infames impeditique, in quibus et res divinas facere et rem quampiam novam exordiri temperandum est.")

III. Days partly *fasti* and partly not, including:—

1. *Dies intercisi,* marked in the calendars by EN, for *endotercisi* (*endo* being an archaic form of *in,* as in *endoperator*). On these days a victim was sacrificed in the morning, and the *exta* offered in the evening. Between the sacrifice and the offering the day was *fastus;* before the former and after the latter it was *nefastus.* (Varr. *L. L.* vi. 31; Ov. *Fast.* i. 49; Macrob. *Sat.* i. 16, 2, 3.)

2. *Dies fissi,* three in number. To two of these, March 24th and May 24th, are prefixed the letters Q. R. C. F., *i.e.* "quando rex (sacrorum) comitiavit, fas." These were probably the days on which the *rex* presided in the *comitia calata* for the purpose of the *testamenti factio* (Mommsen, *Röm. Staatsr.* ii.^{2} 37). These days were even in ancient times confused with the *Regifugium,* i.e. February 24th, and the letters were wrongly interpreted *quando rex comitio fugit.* To the third, June 15th, is prefixed Q. ST. D. F., i.e. *quando stercus delatum fas:* on this day the temple of Vesta was solemnly cleansed by the Vestals, and the filth carried away or thrown into the Tiber (Ov. *Fast.* vi. 707), no other business being permitted on this day.

Mommsen (*C. I. L.* i. p. 373) calculates that the year contained 45 *dies fasti,* 194 *dies comitiales,* 48 *dies nefasti* or *feriati,* 57 *dies religiosi,* 8 *dies intercisi,* and 3 *dies fissi.*

Another division of the days of the year was of a purely religious character, with which naturally the former division to a certain extent coincided, in a city so dominated by religious scruples as Rome:—

(1) *Dies festi,* on which the gods were honoured by (a) *sacrificia,* (b) *epulae,* (c) *ludi,* (d) *feriae.* The *feriae* were of three kinds: 1, *stativae,* the date of which was fixed; 2, *conceptivae,* the date of which was determined each year by the proper officials; 3, *imperativae,* special holidays, proclaimed by authority, such as *supplicationes.*

(2) *Dies profesti,* ordinary working-days.

(3) *Dies intercisi,* of a mixed character.

Macrobius (i. 16), in describing the division of the *dies profesti,* adds to the *d. fasti* and *d. comitiales, comperendini,* "quibus vadimonium licet dicere;" *stati,* "qui iudicii causa cum peregrino instituuntur;" and *proeliares,* "quibus fas est res repetere vel hostem lacessere." These were of little practical importance, and do not appear with any distinguishing mark in the calendars.

For the NUNDINAE, cf. *s. v.* (See Marquardt, *Röm. Alterth.* vi. pp. 270–287.) [A. S. W.]

DIFFARREA'TIO. [DIVORTIUM.]

DIGESTA. [PANDECTAE.]

DIGITA'LIA. [MANICA.]

DI'GITUS. [PES.]

DIIPO'LIA or **DIPO'LIA** (Διιπόλια, Διπόλια or Διπόλεια), an annual festival celebrated at Athens in honour of Zeus, the protector of the city (Πολιεύς), to whom a bull was sacrificed, whence the festival was also called Buphonia (Aristoph. *Pax,* 420; *Av.* 984–5, with the Scholia). It took place on the 14th of Skirophorion, and cannot therefore, as some have believed, be the same as the Diasia, which was held in Anthesterion. It is possible that the θυσία τῷ Διὶ σωτῆρι, mentioned in an inscription (*C. I. G.* 151), may refer to the Dipolia (Comp. Antiph. *Tetral.* i. 4, § 8; Pausan. i. 24,

§ 4, 28, § 11; Ael. *V. H.* viii. 3; Porph. *de Abst.* ii. 29; Creuzer, *Symbolik*, i. 172, iv. 122 ff.; Hermann, *Gottesd. Alterth.* § 61, n. 16, 17; A. Mommsen, *Heortol.* p. 453 ff.) [L. S.]

DI'MACHAE (διμάχαι), Macedonian horse-soldiers who also fought on foot when occasion required. Their armour was heavier than that of the ordinary horse-soldiers, and lighter than that of the regular heavy-armed foot. A servant accompanied each soldier in order to take care of his horse when he alighted to fight on foot. This species of troops is said to have been first introduced by Alexander the Great (Pollux, i. 132; Curt. v. 13, 8). They appear also among the Celtiberians (Diod. v. 33). [W. S.] [W. W.]

DIMACHAERI. [Gladiatores.]

DIMENSUM. [Servus.]

DIMINU'TIO CA'PITIS. [Caput.]

DIOBE'LIA. [Diobolon.]

DIO'BOLON (Διώβολον), a small coin of two obols [Drachma], which was given to each Athenian citizen during the festivals to pay for his seat in the theatre, whence the gift was called διωβελία. (Xen. *Hell.* i. 7, § 2; Aristot. *Pol.* ii. 7, § 19.) In Plautus the adjective *diobolaris* signifies anything very cheap or mean (*scorta*, Plaut. *Poen.* i. 2, 61; Varr. *L. L.* vii. 64; Fest. p. 74, 6, M.; *anus*, Plaut. *Pseud.* ii. 2, 64, but in this passage others read *doliaris*). [W. S.]

DIOCLEIA (διόκλεια), a festival celebrated in the beginning of spring, by the Megarians, in honour of an ancient Athenian hero, Diocles, around whose grave young men assembled on the occasion, and amused themselves with gymnastic and other contests. We read that he who gave the sweetest kiss obtained the prize, consisting of a garland of flowers. (Theocrit. *Idyll.* xii. 27, &c.) The Scholiast on Theocritus (*l. c.*) relates the origin of this festival as follows:—Diocles, an Athenian exile, fled to Megara, where he found a youth with whom he fell in love. In some battle, while protecting the object of his love with his shield, he was slain. The Megarians honoured the gallant lover with a tomb, raised him to the rank of a hero, and, in commemoration of his faithful attachment, instituted the festival of the Diocleia. See Böckh, *ad* Pind. *Olymp.* vii. 157, p. 176, and the Scholiast *ad* Aristoph. *Acharn.* 730, where a Megarian swears by Diocles, from which we may infer that he was held in great honour by the Megarians. (Compare Welcker's *Sappho*, p. 39, and *ad Theogn.* p. 79.) [L. S.]

DIOMOSIA (διωμοσία). [Anakrisis.]

DIONY'SIA (Διονύσια). Dionysus as well as Apollo had a share at Delphi as one of the chief Hellenic gods. "Dionysus was the god of the peasantry, the bestower of the fullest festive enjoyment in the free conditions of a life led according to Nature" (Curtius, *Hist. of Greece*, ii. 78). Hence we are not surprised to meet his festivals everywhere. Thebes is said to have been his birthplace (Paus. ix. 12, 3), whence his worship spread to Corinth and Sicyon (*ib.* ii. 2, 7); to Euboea, where he was educated; and Naxos, where he was united with Ariadne. In Athens his worship is said to have been introduced by Amphictyon (Ath. ii. 38); that is, that it belonged to the Ionic Amphictyony. For other legends connected with the introduction of Dionysiac worship into Attica, see Suidas, Μελαναιγίδα Διόνυσον, Ἀπατούρια: Hesych., *s. v.* Ἐλευθερος: Steph. Byz. Σημαχίδαι: Paus. i. 2, 5; 38, 8: Schol. on *Ach.* 243; and especially Ribbeck, *Anfänge und Entwickelung des Dionysuskultes in Attika.* No less old in Attica was the worship of the Icarian Dionysus (*Dict. Mythology*, s. v. *Icarius*). In historic times we find Dionysia held at Delos, Tenos, Syrus, Ceos, Amorgos, Paros, Astypalaea (Hermann, *Gottesd. Alterth.* 65, 11); at Miletus, Teos, Smyrna (*ib.* 66, 9), and at Corcyra in the west (*ib.* 68, 1): cf. Preller, *Griech. Myth.* i.^{3} 557 *sqq.*

But there had been another form of the worship of Dionysus, quite un-Hellenic, and a scandal in their eyes (*ψόγος ἐς Ἕλληνας μέγας*, Eur. *Bacch.* 778), which was wildly orgiastic. In very early times, it originated in Thrace and Macedonia, whence it spread into Asia Minor, where it united with the Oriental mysteries of Cybele, and then reacted on the Hellenic ceremonies. The mystic forms of the Bacchic worship for the most part go back to Orpheus. These, which are known as the *trieteric* festivals of Dionysus, *i.e.* occurring every other year (τριετηρίδες, Eur. *Bacch.* 133; Verg. *Aen.* iv. 302), first gained ground, in Greece proper, in Boeotia, coming perhaps across the sea by the islands; for, as Preller has shown (in Pauly, ii. 1065), such orgiastic rites are found in a vast number of the islands. And, like a fire, they soon spread all through Greece. There were revels in Parnassus (Soph. *Ant.* 1126), in Phocis (Paus. vi. 26, 1), Messenia, Arcadia, even Sparta (Ael. *V. H.* iii. 42): see Preller, *l. c.* 1066. The festivals were held on mountains, with blazing torches (Eur. *Bacch.* 133, 146), in dark winter nights (Ov. *Fast.* i. 394). The votaries were in large part women, and were known by many names,—Maenads, Thyiads, Clodones, Mimallones, Bassarides, &c. They were clothed in fawn skins [Nebris], carried thyrsi [Thyrsus], and in their ecstasies used to hunt wild animals, tear them in pieces, and sometimes eat them raw. In very early times, human sacrifice seems to have been offered to Dionysus Zagreus (Paus. ix. 8, 2), and Themistocles before the battle of Salamis sacrificed three young Persian prisoners to Dionysus Omestes (Plut. *Them.* 13). The splendours of trieteric Bacchic revelry *in excelsis* are brilliantly depicted in the choruses and messengers' speeches of the *Bacchae;* cf. also Preller in Pauly, ii. 1064–1067.

But the genuine Hellenic worship of Dionysus was of a more cheerful and less frantic nature. It was simple, if somewhat coarse, enjoyment. When the vintage was over and the must had fermented, Dionysus, the god of the grape, was honoured by the country folk with the best they could offer, with sacrifices of oxen and goats, those enemies of the god who used to eat his vines: and, in their hearty and natural revelry, they used to march about in procession, and dance and sing, and dress themselves up in odd costumes. Many writers, such as Preller, K. O. Müller, &c., tell us how the worshipper was filled with an intense desire "to fight, to conquer, and to suffer in common with the god." Such ideas did certainly arise in connexion with the cult of Dionysus; but most probably they were later additions, coming from the mysteries and partly belonging to the trieteric votaries of Dionysus as Zagreus. Of the Attic Dionysia we have most knowledge. These, which we now proceed to describe, though mainly Hellenic and natural wine-feasts, had suffered somewhat from the influence of the Thracian and Asiatic mysteries, and exhibit a strange compound of what is ridiculous and grotesque with what is solemn and serious. The country Dionysia alone remained free from the influence of the mystic Bacchic rites (August Mommsen, *Heortologie*, p. 77). But regular trieteric revels are not found in Attica (Schömann, *Alterth.* ii.^{3} 503).

The Attic festivals are generally allowed to be four in number,—the country Dionysia, the Lenaea, the Anthesteria, and the Great Dionysia; for O. Gilbert's view (*Die Festzeiten der attischen Dionysien*, 1872), that the first three are parts of the same festival, is demolished by Schömann (*op. cit.* ii.^{3} 597–599).

I. *The Lesser* or *Country Dionysia* (*τὰ μικρὰ* or *τὰ κατ' ἀγρούς*) were very ancient *wine*-feasts, celebrated in the various demes throughout Attica, from about the 8th to 11th of Poseideon (=about Dec. 19–22), under the presidency of the demarchs. As A. Mommsen (*op. cit.* 324 ff.) points out, we must not suppose with Kannegiesser, Boeckh, and Preller, that they were *vintage*-feasts: for (*a*) Poseideon is too late for the vintage, which was usually about the equinox, sometimes extending to the beginning of November, but not later (Plin. *H. N.* xviii. § 319); (*b*) the Lesser Dionysia are called *θεοίνια* (Harpocr. *s. v.*), *i.e.* festivals of *θέοινος*: cf. Aesch. *Fragm.* 397, *πάτερ θέοινε μαινάδων ζευκτήριε*, which Tzetzes (*ad* Lycophr. 1247) explains as *θεὸς οἴνου εὑρέτης*, and which may be explained as the god himself turning into wine (cf. *οὗτος θεοῖσι σπένδεται θεὸς γεγώς*, Eur. *Bacch.* 284); (*c*) intoxication is one of the marks of the Dionysiac festival, and must cannot intoxicate, it needs fermentation. The country Dionysia, then, was a *wine*-feast, and we find it celebrated with dramatic performances in Collytus, Piraeus, Salamis, Eleusis, Aixone, Phlya, Myrrhinus, &c. (see A. Müller, *Griech. Bühnenalt.* 317, 318). We have an excellent picture of the coarse sort of thing it was in the *Acharnians*, 240 ff. There is a procession: the daughter of Dicaeopolis marches in front as *κανηφόρος*, and the slave Xanthias carries behind an erect phallus, to which Dicaeopolis sings a rollicking song, &c.

II. The *Lenaea* (*Λήναια* or *τὰ ἐν Λίμναις*, Hesych., Suid.; or *Διονύσια ἐπὶ Ληναίῳ*, *C. I. G.* 157, 11) was a town-festival. Preller (*op. cit.* ii. 1060) supposes that the Lenaea and the country Dionysia were originally one feast, but were separated after the temple of the Lenaeon in Limnae got included within the city; the Lenaea was then put off a month later, to allow the country folk to celebrate their festival in their separate districts, and afterwards to bring their wine to the city and enjoy the festivity there also. Mommsen, however (*op. cit.* 338), holds that Limnae was included in the city long before Athens knew anything about Dionysia. He thinks (p. 46; cf. 73) that the Lenaea was originally a trieteric festival, held in the intercalary month as a sort of makeshift, not to let the month be entirely without a feast. A difficulty still attaches to the name *Λήναια*, which certainly points to a *vintage*-feast: but *Λῆναι* are Bacchae, votaries intoxicated by the god; accordingly the word is not derived from *ληνὸς* in the sense of "a wine-press," but in that of "a vat"; for the produce of the wine-press is not, as we have seen, intoxicating at that stage. The festival was certainly celebrated during historical times in Gamelion (Bekk. *Anecd.* 235, 6; Schol. on Hes. *Op.* 506), but there is great uncertainty as to the exact days. After a full discussion, Mommsen decides (*op. cit.* pp. 332–337) for 8th to 11th (=about Jan. 28–31), though Boeckh (*C. I. G.* 523, 21) considers the *κιττώσεις Διονύσου* of the 19th refer to the Lenaea. Another name for the festival or part of it was probably Ambrosia [AMBROSIA], though this matter is not quite decided. At the Lenaea there was a great feasting and a procession (Law of Evagoras, *ap.* Dem. *Mid.* 517, § 10), during which there was plenty of jesting *ἐξ ἁμαξῶν* (Schol. on Aristoph. *Eq.* 547), though this jesting appears to have been a feature introduced into the Lenaea from the Anthesteria (Phot. p. 565, 14). It was a cheerier and less pompous festival than the great city Dionysia, for strangers did not take part in it (Aristoph. *Ach.* 504). Dithyrambs were sung on the first day, and the victor got an ivy crown (Mommsen, *op. cit.* p. 342).

III. About the date of the *Anthesteria*, there can be no doubt. It consisted of three days, called the *Πιθοίγια*, the *Χόες*, and the *Χύτροι*. The *Πιθοίγια* was held on the 11th of Anthesterion (=about March 2nd): see Plut. *Symp.* iii. 7, 1; viii. 10, 3; the *Χόες* on the 12th, and the *Χύτροι* on the 13th (Harpocr. 184, 24, and 186, 9). The whole festival is sometimes called by one of its days, viz. the chief one, the *Χόες* (Preller, *op. cit.* ii. 1062: cf. Phot. 269; Thuc. ii. 15, 5; and Mommsen, p. 348). (1) The *Pithoigia* was the preliminary opening of the wine-casks, and general preparation for the Choes. "Among our paternal customs," says the Scholiast on Hes. *Op.* 370, "is a festival called Pithoigia, during which it is not lawful to debar either slave or hired labourer from the enjoyment of the wine; but when we (*i.e.* the masters) have sacrificed, we must give all a share of the good gifts of Dionysus." Indeed, during all the days of the Anthesteria, the rustic slaves had leisure, and a verse tells of the somewhat brusque reminder to them that the feast is over: *θύραζε, Κᾶρες· οὐκέτ' Ἀνθεστήρια* (Zenob. *Cent.* iv. 33). The schoolboys appear to have got holidays during the Anthesteria (Theophr. *Char.* 30 (17)); and some days prior to this Christmas of the Athenians, there was a regular fair at Athens, bringing a conflux of foreign traders (cf. Aristoph. *Ach.* 719 ff.; and Mommsen, p. 352). The fastening of a rope round the temple in Limnae doubtless took place on the afternoon of the Pithoigia (*περισχοινίσαι*, Poll. viii. 141), though Alciphron seems to refer it to the *Χύτροι*, to which festival it probably at first and in essence belonged, but afterwards it was effected before the first event of the Choes. During the afternoon the procession assembled, those taking part in it, especially the children, who were allowed to join from three years old upwards (for did not Eurysaces, son of Ajax, take part in the festival in times long past? Philostr. *Heroic.* 314, 11), gaily adorned with crowns and flowers. At six o'clock the next day, (2) the *Choes* began. The procession started, no doubt with torches, the common people following in waggons. It originally represented the entry of the Wine-god as the Liberator (Ἐλευθερεύς), from without the city into the little temple of the Ceramicus (Paus. i. 29, 2),—though Preller (*Gr. Myth.* i.³ 556) attributes this procession to the Greater Dionysia, considering Mommsen's reference of it to the Anthesteria "certainly erroneous,"—and his incorporation into the city, by union with the noblest woman of the land, the wife of the king. The marriage does not appear in the Orphic theology; but there were many mystic accretions. All this part of the ceremony was symbolical. It was a marriage procession, and the votaries of the god — the Horae, Nymphae, Bacchae—led him along with curious pipings and moanings, and songs which tell the deeds of Orpheus and the stories of the gods (Philostr. *Vit. Apoll.* p. 158, Kayser). Anon he is joined by the Basilinna, accompanied by fourteen venerable priestesses (γεραιραί or γεραραί), and she is solemnly betrothed to the god in secret. Within the temple in Limnae, which is opened on this day only in the year, she administers by the Sacred Herald to the priestesses a vow, which declares the most spotless purity of life, and exact scrupulousness in attending to the festivals of the Theoinia and the Iobakcheia (*i.e.* Greater Mysteries), and which the priestesses swear to, laying their hands on their baskets; afterwards she offers a mystic sacrifice, wherein she prays for all blessings for the state, and then remains for the night in the cella of the temple (see Dem. *c. Neaer.* pp. 1370–1, §§ 74–78; and Mommsen, *op. cit.* pp. 358–360). Preller (in Pauly, ii. 1062) compares this sacrifice to the Roman *Augurium Salutis* (Cic. *de Div.* i. 47, 105), and the mystic marriage with Dionysus to that of the Doge of Venice to the Adriatic. The next morning was given to rest, and in the early afternoon the drinking began. The state had given money to the poor to buy wine and provisions (Plut. *Reip. ger. praec.* 25; Boeckh, *Sthh.*³ i. 280). All salaries had been paid, even those of the poor Sophists (Ath. x. p. 437). Guests are invited, the hosts supplying all the accessories, such as tables, crowns, cushions, &c., while the guests brought their own κίσται containing food, and χόες of wine (Aristoph. *Ach.* 1085 ff.). The place of festivity was perhaps the neighbourhood of the theatre in the Lenaean region (Mommsen, p. 363). At the proclamation of the herald, contests in drinking took place, and whoever drank up his χοῦς of wine first got a prize (Aristoph. *Ach.* 999 ff. From this on to the end of the play, the scene is laid during the Χόες). The amusement of the Ascoliasmos (ἀσκωλιάζοντας πίνειν) is remarked by Alciphron (iii. 51, 3) to be un-Attic. Strangers took part in the festival, of whom there were great numbers in Athens, owing to the fair and the mysteries at Agrae, which occurred shortly after. The festival was administered by the Archon Basileus, as it had been by king Pandion originally (Schol. on *Ach.* 961). But, besides all the revelry, there is a note of solemnity. If a libation is poured out to the Jolly God, there is another to Hermes Chthonius (Schol. *Ach.* 1076). Photius (269, 21) tells us that the Choes was a μιαρὰ ἡμέρα, on which the souls of the dead used to walk on earth (cf. the *mundus patens* of the Romans, Marquardt, *Staatsverw.* iii. 352). Eustathius (ad *Il.* xxiv. 526) says that the Pithoigia also was ἀποφράς. The mythical origin of this drinking on an unlucky day was the device of king Pandion, whereby Orestes, still pursued by the Erinnyes, might yet take part in the festivity (see Schol. on *Ach.* 961). The pursuing Erinnyes are like the shades which walked this day on earth (Voigt in Roscher's *Lexikon der Myth.* i. 1072). On into the evening and night the revelry continues: but there is a touch of seriousness in the last act of the festival. The drinker winds his garland round his χοῦς, brings it to the priestess at Limnae, and, pouring out the remnants of the wine as a libation, offers the crown to the god, and in so doing makes his libation and offering to the dead (Ath. x. p. 437; cf. Aristoph. *Fragm.* 480 Meineke = 488 Kock; Plut. *Aristid.* 21; Mommsen, p. 365).

(3) We are now at the *Chytri* (Χύτροι), a feast to the dead, where everything is solemn and serious. The administration was probably in the hands of the king archon. The feast got its name because food, mostly vegetables, were brought in pots (χύτραι), as sacrifices to the Shades and to Hermes Chthonius (Schol. on *Ran.* 218); the story was that the offering was first made by the survivors to the shades of those who perished in Deucalion's flood. There is no question but that it was celebrated on the 13th of Anthesterion (Harpocr. 186, 9); and if Didymus (*ap.* Schol. on *Ach.* 1076) says that the Chytri and the Choes were celebrated on one day, the explanation is that the revelry of the Choes extended into the night of the 13th (Mommsen, 346). The first ceremony was bringing water (*Etym. M.* p. 744, ὑδροφόρια· ἑορτὴ Ἀθήνησι πένθιμος ἐπὶ τοῖς ἐν τῷ κατακλυσμῷ ἀπολομένοις); then into a pit, about a cubit deep, outside the Lenaean district but in the neighbourhood, into which legend said the waters of the Flood passed away, there was poured ground corn and honey kneaded together (Paus. i. 18, 7). Then fourteen altars were erected (Ἵδρυσιν, Alciphr. ii. 3, 11, and Meineke *ad loc.*), on which the Γεραιραί offered pots of πανσπερμία after women solemnly carrying them thither on their heads (*Etym. M.* 227; Schol. on *Plutus*, 1197, 1198; *Ach.* 1076; *Ran.* 218). None of the offerings were eaten. There were no doubt cyclic choruses at the Chytri (Aristoph. *Ran.* 212 ff.); but the χυτρινοὶ ἀγῶνες were certainly contests of actors, not dramas [Comoedia, p. 520].

On the whole the Anthesteria was in essence a feast of drinking, when the year's wine was brought into the city; Mommsen (p. 370) thinks it may have been originally celebrated to Kronos and Zeus Kronion, but certainly in historical times to Dionysus Eleuthereus. It mainly represented the introduction of the Dionysiac cult into Athens and its incorporation with the Athenian religion, and was grafted on to a festival of the dead. But all the ceremonies cannot be understood without bringing in the Orphic theology, which tells how Zeus made his son Dionysus king of all things for a day (see Lobeck, *Aglaoph.* 552), and the subsequent death of Dionysus (as the Chytri of mourning follow the Choes of joy) at the hands of the giants, who cut him into fourteen pieces (hence fourteen altars), and so on. For details, see Mommsen, pp. 371–373.

IV. *The Greater or City Dionysia* (τὰ μέγαλα or τὰ ἐν ἄστει) were probably celebrated from the 9th to 13th of Elaphebolion (= about March 28–April 2). Mommsen (pp. 58-60) thinks that these Dionysia must have been introduced either in the time of the Pisistratidae, or in that of Cimon and Pericles, probably the latter. They took the place of an earlier lyrical festival to Apollo. The 8th was the ASCLEPIEIA and the προάγων (Aeschin. *Ctesiph*. 63, § 67). At this the poets, choregi, actors, and chorus appeared before the public in festal attire, but not in theatrical costume (Schol. to Aeschin. *l. c.*), and formally announced the dramas which were going to be enacted, and solicited the kind attention and favour of the audience (hence Ulpian on Dem. *Androt*. 611, § 59, προάγωνές εἰσι λόγοι οἱ προευτρεπίζοντες ἡμῖν τῶν δικαστῶν τὴν ἀκοήν): cf. A. Müller, *Gr. Bühnenalterthümer*, pp. 363–366. On the 9th there was the procession (πομπή) and the carouse (κῶμος); on the 10th the lyrical contest of boys and men. (We should probably insert καὶ οἱ ἄνδρες in the law of Evagoras, Dem. *Mid*. 517, § 10: see Bergk in *Rhein. Mus.* xxxiv. p. 31.) From the 11th to the 13th were dramatic performances, and on the beginning of the 14th the Pandia. This is Mommsen's (pp. 387–391) arrangement as opposed to K. F. Hermann's (*Gottesdienstl. Alterth.* § 59, 5, 6), who puts the 15th as the last day of the Dionysia. Mommsen bases his order mainly on the fact that the Peace of Nicias was ratified on the 14th (Thuc. iv. 118), which can hardly have been a feast-day; also the 14th was the full moon, and the Pandia was probably a full-moon feast; festivals moreover seldom passed beyond the full moon: and besides Calidorus in Plautus (*Pseud.* i. 3, 87), on the day before the Dionysia, in asking Ballio to wait six days, virtually asks him to wait till the festival was over. The Dionysia were great holidays. During them prisoners were released on parole (Ulpian on Dem. *Androt*. 614, § 68), and no one was allowed to seize the goods of a debtor (Law *ap.* Dem. *Mid*. 518, § 10). Even Plato thought it allowable to get drunk during the festivals of the god of wine (*Legg.* vi. 775 C). As to the ceremonial, early on the 9th (*i.e.* at nightfall) the image of Dionysus by Alcamenes (Paus. i. 20, 3) was taken from its "hearth and home" (ἐσχάρα) in the Lenaeon, and brought into the theatre, by the Ephebi (according to an inscription in Mommsen, p. 392), who gave a bull for sacrifice in the temple after the πομπή. The image was set up in the orchestra (Dio Chrys. xxxi. p. 386, Dindorf). The priest of Dionysus had doubtless important functions in the setting up of it. Later on, when day had come, there was the πομπή, which was of a much more dignified and orderly nature than that of the Anthesteria or Lenaea. It was partly on foot, partly on carts, but apparently there were no waggons. (Mommsen, p. 396.) In the agora a cyclic chorus danced round the altar to the twelve gods (Xen. *Hipp.* 3, 2). The goal of the procession was the Lenaeon. Strangers took part in the festival, of whom there were considerable numbers in Athens, as the allies used to come and pay their tribute in Elaphebolion (Boeckh, *Staatshaushaltung*, i.^{3} 218; Schol. on *Ach.* 504). The State gave victims (*C. I. G.* 157), and sometimes other bodies did so likewise: *e.g.* the Ephebi, as we have seen. On the morning of the 10th the lyrical contests for choruses of boys and men began [CHOREGUS]. We have a splendid dithyramb of Pindar's composed for the Dionysia (*Fragm.* 75, ed. Bergk). A κῶμος by the victorious competitors followed. It is in relation to this part of the feast that Dionysus was honoured as μελπόμενος (Paus. i. 2, 5; 31, 6). From the 11th to 13th dramas were exhibited, a tragic trilogy in the morning and a comedy in the afternoon. The administration of the feast was in the hands of the Archon Eponymus, assisted by ἐπιμεληταί (Poll. viii. 89; cf. Dem. *Mid.* 519, § 15). For a full account of the dramatic performances held on the different festivals to Dionysus, see COMOEDIA, TRAGOEDIA, THEATRUM; and for minor festivals connected with Dionysus, see BRAURONIA, OSCHOPHORIA.

On the whole subject of the Dionysia, see Boeckh, *Vom Unterschiede der Lenäen, Anthesterien, und ländlichen Dionysien*, in the *Abhandlungen der Akad. der Wiss. zu Berlin*, 1816–1817; C. F. Hermann, *Gottesd. Alterthümer*, §§ 57–59; Preller in Pauly, ii. 1056–1067, and his *Griech. Mythologie*, i.^{3} 544–593; August Mommsen, *Heortologie der Athener*, pp. 323–373, 387–398; Schömann, *Alterth.* ii.^{3} 487–504; Voigt in Roscher's *Ausführliches Lexikon der Griechischen und Römischen Mythologie*, i. 1069–1075. Many illustrations depicting Bacchic worship are to be found in Mr. Sandys' edition of the *Bacchae*.

For the worship of Dionysus in Italy, see BACCHANALIA and LIBERALIA. [L. C. P.]

DIOSCU'RIA (διοσκούρια or διοσκούρεια, *C. I. G.* 1444), festivals celebrated in various parts of Greece in honour of the Dioscuri, the heroes Castor and Polydeuces (Pollux). The Spartan Dioscuria, mentioned by Pausanias (iv. 27, § 1; compare with iii. 16, § 3) and Spanheim (*ad* Callim. *Hymn. in Pall.* 24), were celebrated with sacrifices, rejoicings, and drinking. At Cyrene the Dioscuri were likewise honoured with a great festival. (Schol. *ad* Pind. *Pyth.* v. 629.) The Athenian festival of the Dioscuri has been described under ANAKEIA, where they were worshipped under the name of Ἄνακτες. Their worship was very generally adopted in Greece, especially in the Doric and Achaean states (Paus. x. 33, 3; 38, 3), as we conclude from the great number of temples dedicated to them; but scarcely anything is known respecting the manner in which their festivals were celebrated.

The festival of the Dioscuri was celebrated at Rome with great splendour on the Ides of Quinctilis, the 15th of July, the day on which they were believed to have assisted the Romans against the Latins in the battle of the Lake Regillus. On this occasion the Equites, who regarded the Dioscuri as their patrons, went in a magnificent procession, crowned with olive chaplets and wearing their state dress, the trabea, from the temple of Mars outside the city, through the main streets, across the forum, and by the ancient temple of the Dioscuri (Dionys. vi. 13; Liv. ix. 46). [EQUITES.] [L. S.]

DIO'TA (δίωτος), a vessel with two ears (ὦτα) or handles, is generally used as synonymous with amphora, though it may signify any two-handled vessel. (Plat. *Hipp. Maj.* p. 288 D; Athen. xi. p. 473 c; Hor. *Carm.* i. 9, 8.) Annexed is the figure of a diota of the earliest style; for its ordinary shape, see Amphora. [W. S.]

Diota of the earliest style. (Birch.)

DIPHROS (δίφρος). [Currus; Sella.]

DI'PHTHERA (διφθέρα), a cloak made of skins, characteristic of workmen and countrymen. (Aristoph. *Nub.* 72, and Schol. *Vesp.* 444; Plato, *Crit.* p. 53; Lucian, *Tim.* c. 12.) On σκυτίναι ἐσθῆτες in general, see Pollux (vii. 70), who mentions a variety with a head-gear (ἐπίκρανον) like the *cucullus* (q. v.). (Becker-Göll, *Charikles*, iii. p. 261 ff.) [W S.] [J. M.]

DIPLAX (δίπλαξ). [Pallium.]

DI'PLOIS (διπλοΐς). [Pallium.]

DIPLO'MA. This word—which, like δίπτυχα, signified two tablets fastened together, as far as mere outward form is concerned—is fully treated of under Diptycha: so here we have to set forth the various kinds of diplomata as regards their tenor They all agreed in being some kind of a governmental grant. The Greeks sometimes called them γράμματα βασιλικά, and they were analogous to our letters-patent or passports (Salmasius *ad* Suet. *Aug.* 50). During the civil war Caesar gave diplomata to such as he allowed to enter the city (Cic. *Fam.* vi. 12, 3) or to leave Italy (ib. *Att.* x. 17, 4). To some of those who were condemned for adultery with Julia, Augustus is said to have given diplomata to ensure their safety (Senec. *de Clem.* i. 10, 4). But the word is generally applied either to permissions to use the public post, or to the grants of citizenship and rights of marriage to certain veterans.

1. After the establishment of the post by Augustus, *diploma* was the regular term for the permission granted by the emperor or provincial governor to an individual to use the post (*C. I. G.* 4956, 25; Plin. *Ep.* x. 45 (54), 64 (14), 120, 121). In the early empire the Praefectus Praetorio seems to have usurped the right of issuing diplomata when there was no emperor (Plut. *Galb.* 8); but illegally, for in such a case the chief administration rested with the consuls (Herodian, ii. 12, 4; yet cf. Mommsen, *Staatsr.* ii.^{2} 1064, note 7). In the Constantinian and subsequent ages (see Godefroi, *Paratitlon* to Cod. Theod. viii. 5) the Emperor, the Praefectus Praetorio, and the Magister Officiorum issued permissions to use the post (Lyd. *de Magistr.* ii. 10, 26), but most of the other magistrates could only use it themselves, and that on state service, though certain officials were given the disposal of a limited number of permits each year: *e.g.* the Magister Militum per Orientem had twenty-five (Böcking, *Not. Dig.* i. p. xiv.). Another common name for these grants was *evectiones.* (For the strange terms *combinae* and *tractoriae*, see Salmasius on Capitol. *Pert.* 1.) They only lasted for a certain time (Plin. *ll. cc.*), and were very sparingly given, the greatest strictness being observed in requiring those who used the post to have them (Dig. 48, 10, 27, 2; Capitol. *Pert.* 1). On these diplomata the name (Plut. *Otho*, 3; Suet. *Otho*, 7; Tac. *Hist.* ii. 65) and seal (Suet. *Aug.* 50; Plut. *Galb.* 8) of the emperor were essential. After the further extension and development of the postal system under Hadrian, there were regular clerks, who were freedmen, for furnishing the various kinds of diplomata. These clerks were called *a diplomatibus* (Orelli, 2795), and perhaps formed a department of the *scrinium a memoria* (Henzen, 6328). The imperial *tabellarii* appear to have been called *diplomarii* (Mommsen, *I. R. N.* 6903). For further details see Cursus Publicus; Friedländer, ii. 14 ff.; and O. Hirschfeld, *Verwaltungsgeschichte*, i. 103–105; and for the later ages, Cod. Theod. viii. 5 and Godefroi's notes.

2. The Military Diplomata were documents granting rights of citizenship and regular marriage to soldiers who had served out their time; hence are frequently called *Privilegia Veteranorum de civitate et connubio.* Up to the date of the publication of the fifth volume of the *Ephemeris Epigraphica*, 1884, there are 80 extant, a complete index of 77 being given by Mommsen in that number (pp. 101 ff.). Previously in *C. I. L.* iii. p. 843 ff., he had given a full text and treatise on the diplomata then discovered. Five of these diplomata (21, 23, 30, 75, 76) are in the British Museum, one (21, of Trajan's time) being in good preservation. The earliest dates from the reign of Claudius, 52 A.D. (Dipl. 1); the latest from that of Diocletian, 301 A.D. (Dipl. 58). In republican times grants of citizenship were made by the people; in imperial times by the emperor (cf. Plin. *Ep.* x. 5, 6, 7; Suet. *Nero*, 12). The diplomata given to soldiers were always, like laws, cut in brass and posted up (cf. Cic. *Fam.* xiii. 36; *Phil.* ii. 36, 92) somewhere, before Domitian's time generally in the Capitol near the temple of Fides, subsequently *in muro post templum divi Augusti ad Minervam.* But if they were like laws, it was like "leges *datae*," not "*rogatae*" (see Mommsen, *ad Leges Salp. et Malac.* p. 392 ff.), and so Gaius (i. 57) rightly classes them among the *principum constitutiones.* They rest on the right granted to imperatores in the later ages of the republic, by such laws as the Lex Gellia et Cornelia (72 B.C.), a law which enacted that those who got citizenship from Cn. Pompeius with the advice of his council should be valid citizens (Cic. *Balb.* 8, 19; 14, 32: cf. Reid's introduction, p. 11); a right possessed long previously by certain *Triumviri coloniis deducendis* (*ib.* 21, 48, and Reid's note). The diplomata we are considering are *copies* of the law, and bear special reference to one individual and certain

of his relations, whose names are inserted at the end after the long preamble of the law, a space being evidently left in some diplomata (*e.g.* 6, 7, 10) for the name, which was subsequently added, perhaps in the presence of the witnesses, a reference being sometimes made to the actual place in the law where the individual in question will be found alluded to (*e.g.* in Dipl. 6 we find "Tabula I. pagina v. loco xxxxvi."). They bear the names of seven witnesses, who, after comparison of the copy and the law, affixed their seals; a practice arising from the sealing of wills, and afterwards extended to all legal documents. The names of the witnesses are nearly always in the genitive, signifying that it is their seal. These witnesses were mostly in early times friends and compatriots of the *beneficiarius*, called in by him; from Vespasian's time they were Roman citizens of the lower classes, who were perhaps called in by the brass-cutter and most likely made a business of such attestations. Hence the same name frequently occurs: *e.g.* Ti. Julius Felix (Dipl. 34, 35, 39, 41, 46): the name of Pullius occurs at least twenty-one times in these inscriptions; and they were, Mommsen supposes, freedmen of the Pullii, who for some generations seem to have had an extensive metal-working factory.

It is noticeable that among the legions the only ones to which diplomata are given are I., II. Adjutrices. These were formed for the fleet by Galba and Vespasian. Several are assigned to the praetorian and urban cohorts; but far the most to the auxiliary alae and cohorts, and to the *classici*. As to the date which is always added to the diplomata, Mommsen notices that in the third century the only dates found are "a. d. v. Kal. Jan." and "a. d. vii. Id. Jan."; the latter being the day of Augustus's establishment of the empire (*C. I. L.* i. p. 383): yet cf. Dipl. 72 (*Eph. Epigr.* iv. p. 508), which bears date "a. d. iii. Id. Aug."

As to the form in which the diplomata were couched, it is best to give a specimen of one. We take No. 16 of the year 93 A.D., now preserved at Florence (*C. I. L.* iii. p. 859).

"Imp(erator) Caesar, divi Vespasiani f. Domitianus Augustus Germanicus pontifex maximus tribunic(ia) potestat(e) xii imp(erator) xxii co(n)s(ul) xvi censor perpetuus, p(ater) p(atriae).

"Peditibus et equitibus qui militant in cohorte iii Alpinorum et in viii voluntariorum civium Romanorum, qui peregrinae condicionis probati erant, et sunt in Delmatia sub Q. Pomponio Rufo, qui quina et vicena stipendia aut plura meruerunt, item dimisso honesta missione emeritis stipendiis

"Quorum nomina subscripta sunt, ipsis liberis posterisque eorum civitatem dedit et connubium cum uxoribus quas tunc habuissent cum est civitas iis data, aut, si qui caelibes essent cum iis quas postea duxissent dumtaxat singuli singulas

"A. d. iii. Id. Julias M. Lollio Paullino Valerio Asiatico Saturnino, C. Antio Julio Quadrato co(n)s(ulibus)

"Cohort(is) iii, Alpinorum cui praeest C. Vibius Maximus, pediti, Veneto Diti f., Davers(o), et Madenae Plarentis filiae uxori eius Deramist(ae) et Gaio f. eius

"Descriptum et recognitum ex tabula aenea quae fixa est Romae in muro post templum divi Aug(usti) ad Minervam."

The names of the seven witnesses are added: A. Volumni Expectati, Q. Orfi Cupiti, &c. [As to the difficult question of the marriage of soldiers, some remarks will be found under EXERCITUS.]

The tablets were, as we said, of brass. They are generally oblong, about 6 × 4¾ inches. They have for the most part four holes, which are indicated in the accompanying figures of the four sides. The tablets were fastened together by two brass rings passed through holes 1 and 2. Accordingly, if you have the outside of *tabella prior* facing you, the fastenings are on the right side of the tablets. Also a thread (of brass in the case of the diplomata) was fastened three times through the holes 3 and 4, in accordance with the usual usage in official documents. "Amplissimus ordo decrevit," says Paulus (*Sent. Rec.* v. 25, 6), "eas tabulas quae publici vel privati contractus scripturam continent, adhibitis testibus ita signari, ut in summa marginis ad mediam partem perforatae triplici lino constringantur atque impositae

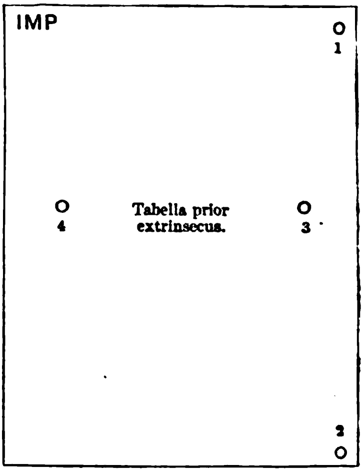


Fig. 1.

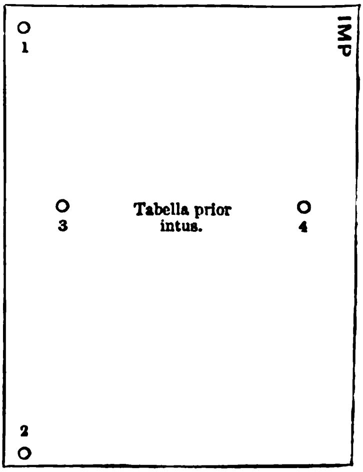

Fig. 2.

supra linum cerae signa imprimantur." (Cf. Suet. *Nero*, 17; Gaius, ii. 181; Just. *Inst.* ii. 16, 3.) But after the time of Antoninus Pius the holes 1 and 2 nearly always (*e.g.* Dipl. 51) do not appear, the only fastening being through 3 and 4 (*e.g.* Dipl. 51).

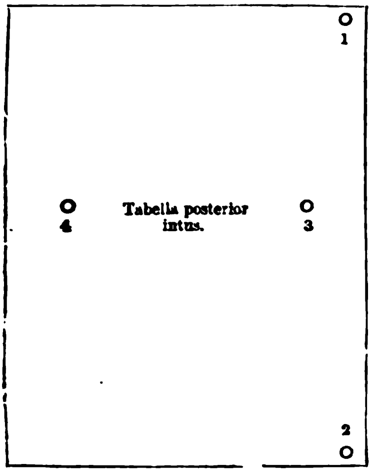

Fig. 3.

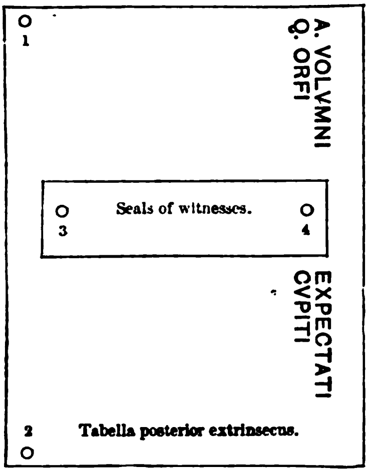

Fig. 4.

Originally an official document was written only on the inside tablets, the names of the witnesses alone being outside. But later the instrument was written on the outside as well: and such is the case with all our diplomata. The contents are written on the outside of *tabella prior* (Fig. 1), the lines running along the shorter side of the oblong. On the inside of *tabella prior* and *posterior* (Figs. 2 and 3), the diploma is again found in full in larger letters, the lines running along the longer side of the oblong and passing on from one tablet to the other. The writing here was after Trajan's time somewhat careless, with many abbreviations; also the locality where the diploma was fixed was omitted or inadequately specified. The inner side of *tabella posterior* was not used at all in the diplomata of the third century. Fig. 4 shows the outside of *tabella posterior* which contained the names of the witnesses. These names were cut at the same time as the rest of the document; and the witnesses gave their attestation by affixing their seals in the vacant space in the middle of the tablet, after comparison of the law and the copy. See Mommsen in *C. I. L.* iii. p. 902 ff.; *Ephemeris Epigraphica*, ii. 452–466; iv. 181–187, 495–515; v. 92–104, 610–617, 652–656. [L. C. P.]

DIPO'LIA. [DIIPOLIA.]

DI'PTEROS (δίπτερος). [TEMPLUM.]

DI'PTYCHA (δίπτυχα, from πτύσσω, "to fold"), two writing tablets (*tabulae* or *tabellae*,

Diptycha Consularia of Clementinus, A.D. 513. (Labarte.)

also called *pugillares*), fastened together at the back by means of wires, which answered the purposes of hinges, so that they opened and shut. The insides of such tablets were covered with wax for the purposes of writing, and with a raised margin round each to prevent the wax of one tablet rubbing against the wax of the other. The outside was made of different materials, such as wood, ivory, or parchment. [For authorities, see TABULAE.] Similar tablets were used by the Greeks. Herodotus (vii. 239) speaks of a *δέλτιον δίπτυχον*, made of wood and covered with wax; and even in Homer (*Il.* vi. 169) we read of a *πίναξ πτυκτός*.

The *Diptycha Consularia*, frequently mentioned in the later times of the empire, were made of ivory, and were presented by the consuls to the emperor and their friends on the day on which they entered upon their office. Other magistrates, such as the quaestors, also distributed diptycha on the same occasion (Symmach. *Ep.* ii. 81), but from the time of Theodosius this privilege was confined to the *Consules ordinarii*. (Claudian, *de Cons. Stilich.* iii. 346, Symmach. *Ep.* v. 56, vii. 76, ix. 119; Cod. Theod. xv. 8, 1.) These diptycha contained the portraits and names of the consuls, with other representations in bas-relief. Several of these diptycha are still extant—61 in all, according to Marquardt; the oldest bearing the date of 406 A.D., and the latest of 541. The specimen on the preceding page, figured by Labarte, represents one tablet, the other being nearly the same. On it Clementinus, consul A.D. 513, is represented seated on a curule chair, between the figures of Rome and Constantinople, holding the map of the Circus, and giving with it the sign for the beginning of the games. Above him are his signet, name, and title, surmounted by a cross and portraits of the Emperor Anastasius and the Empress Ariadne. Under him are two boys, emptying bags of presents; namely, coins, diptychs, and palm-branches. (There are several works on the Consular Diptychs, a list of which is given in Becker-Göll, *Gallus*, ii. p. 462; Marquardt, *Privatl. d. Römer*, p. 546.) [W. S.]

DIRECTA ACTIO. [ACTIO.]

DIRIBITO'RES are said by most modern writers to have been the persons who gave to the citizens the *tabella* with which they voted in the comitia; but Wunder has most distinctly proved, in the preface to his *Codex Erfurtensis* (pp. cxxvi.–clviii.), that it was the office of the *diribitores* to divide the votes when taken out of the *cistae*, so as to determine which had the majority He remarks that the etymology of *diribere* would lead us to assign to it the meaning of "separation" or "division," as it is compounded of *dis* and *habere* in the same manner as *dirimere* is of *dis* and *emere*; the *h* disappears as in *praebere* and *debere*, which come respectively from *prae* and *habere*, and *de* and *habere*. In several passages *diribitio suffragiorum* immediately precedes the *renuntiatio*, and hence the word cannot have any other signification than that given by Wunder. (Cic. *pro Planc.* 20, 49; *ad Qu. Fratr.* iii. 4, § 1; Varr. *de Re Rust.* iii. 2, § 1, iii. 5, § 18; *Lex Malac.* § 55, l. 12.)

When Cicero says (*in Pison.* 15, 36), "vos rogatores, vos diribitores, vos custodes tabellarum," we may presume that he mentions these officers in the order in which they discharged their duties in the *comitia*. It was the office of the *rogatores* to collect the *tabellae* which each century gave, as they used, before the ballot was introduced, to ask (*rogare*) each century for its votes, and report them to the magistrate who presided over the comitia. The *diribitores*, as has been already remarked, divided the votes when taken in the *cistae* to the *villa publica*, and there sorted them; the *custodes*, among whom were the agents of the candidates, checked them off by points marked on a tablet. [Compare CISTA; SITULA.] [W. S.]

DISCUS (*δίσκος*), a circular plate of stone (*λιθίνοις δίσκοις*, Pind. *Isthm.* i. 34), or metal ("splendida pondera disci," Mart. xiv. 164), made for throwing to a distance as an exercise of strength and dexterity. This gymnastic feat, like the *αἰγανέα*, formed later part of the Pentathlon, scenes from which were sometimes engraved on the discus.

The earliest form was a stone (*λίθος, λᾶς*), as employed among the mythic Phaeacians, and even down to the latest period (*v. sup.*); such a mass of granite is preserved in the Bibl. Nat. at Paris (Ménard, *Vie Priv. des Anc.* tom. iv. p. 26). In Homer, the heroes contend for a lump of iron (*σόλος αὐτοχόωνος*), perforated in the centre for the passage of a thong which served as a handle (Eratosth., ed. Bernhardy, p. 251), to be given to him who should throw it farthest. (*Il.* xxiii. 826–46, and ii. 774; *Od.* viii. 129, 186–8, xvii. 168.) In historical times the discus was of bronze and *lenticular*, 10 to 12 in. in diameter; in the Lyceum was one like a small smooth shield, with neither handle nor strap (Lucian, *Anach.* c. 27). The discus of Iphitos in the temple of Zeus at Olympia (Paus. v. 20) bore the truce (*ἐκεχειρία*) announced by the Eleians at the games spirally engraved upon it.

Of the game itself (*δισκοβολία*), a complete idea may be formed from the notices of the ancients and the remains of ancient art. The player, standing upon a slight elevation (*βαλβίς*), raised the discus to the level of his right shoulder (*κατωμαδίοιο*, *Il.* xxiii. 431), and then with a swing of the arm and a following motion of the body hurled it with all his force. (*Od.* viii. 186–200; and cf. Stat. *Theb.* vi. 703, "Vasto contorquet turbine et ipse prosequitur;" *τὰ δίσκουρα*, as a measure of length, *Il.* xxiii. 431, 523). An early example of the *δισκοβόλος* in art was the figure of Eurybotus on the chest of Cypselus. But the most celebrated representation in

Discobolus. (Osterley, *Denkm. der alt. Kunst*, vol. i. No. 139.)

antiquity is that by the sculptor Myron, whose powerful portrayal of the initial attitude of the thrower has been the theme of critics from Quintilian downwards (see Quint. *Inst. Or.* ii. 13, § 10; also Lucian, *Philops.* c. 18; Philostr. *Imag.* i. 24; Welcker, *ad loc.*). Eight copies of this statue are extant, one of which is in the British Museum.

Discus came to mean any plate-shaped object, so perhaps that of silver in the Delphic temple (Philostr. *Vit. Apoll. Tyan.* iii. 9, 57); a dish for serving food (Athen. iv. p. 128 c; Krause, *Angeiol.* p. 418 ff.). (J. H. Krause, *Gymn. u. Agon. d. Hell.*; Ersch and Grüber, *Gymn.* p. 350 ff.; Baumeister, *Denkm.* s. v.; Blümner, *Gesch. d. Kunstgew.* s. v.) [J. M.]

DISPENSA'TOR, a steward in the urbana familia, who had the charge of the accounts and made the payments. (Cic. *Att.* xi. 1; Cic. *ap.* Non. p. 193; Fest. p. 72, M.; Juv. i. 91, vii. 219; Mart. v. 42; Macrob. *Sat.* ii. 4, 31; Suet. *Aug.* 67, *Galb.* 12, *Vesp.* 22.) The dispensator was usually, perhaps always, a slave; though under the empire, Orelli maintains, he was sometimes ingenuus (Orelli, *Inscr.* 4002). If there was a procurator in the house, the dispensator was under him, and acted simply as cashier. Thus we read in Petronius (30) that the procurator *rationes accipiebat*, while the dispensator paid out the golden money in the atrium. If there was a dispensator on the country estate, he was nearly the same as the villicus (Dig. 50, 16, 166). The imperial procuratores discharged important duties not only at the court, but in Rome and the provinces (cf. Plin. *H. N.* vii. § 129). How valuable was the appointment may be seen from the fact that Otho extorted a million of sesterces from a slave whom he had recommended to Galba for the office of dispensator (Suet. *Oth.* 5). A slave of Claudius, who was dispensator in Nearer Spain, had a silver dish 500 pounds in weight, and many of his companions had similar dishes, but of less weight (Plin. xxxiii. § 145; Tertull. *de Pall.* 5). In a columbarium on the Appian way is an inscription respecting an imperial dispensator in Gallia Lugdunensis, erected by sixteen of his slaves (*vicarii*), who had accompanied him to Rome, where he died (Orelli-Henzen, *Inscr.* 6651). (Becker-Göll, *Gallus*, ii. p. 136; Friedländer, *Sittengesch. Roms*, i. p. 97; Marquardt, *Privatl. d. Römer*, p. 152.) [W. S.]

DITHYRAMBUS. [CHORUS.]

DIVERSO'RIUM. [CAUPONA.]

DIVIDI'CULUM. (AQUAEDUCTUS, p. 154 *b*.)

DIVINA'TIO is, according to Cicero (*de Divinat.* i. 1, 1), a presentiment and a knowledge of future things; or, according to Chrysippus (Cic. *de Divinat.* ii. 63, 130), a power in man which foresees and explains those signs which the gods throw in his way, and the diviner must therefore know the disposition of the gods towards men, the import of their signs, and the means whereby the indications given by these signs are to be dealt with. According to this latter definition, the meaning of the Latin word *divinatio* is narrower than that of the Greek μαντική, inasmuch as the latter signifies any means by which the decrees of the gods can be discovered, the natural as well as the artificial; that is to say, the seers and the oracles, where the will of the gods is revealed by inspiration, as well as the *divinatio* in the sense of Chrysippus. In the one, man is the passive medium through which the deity reveals the future; while, in the other, man discovers it by his own skill or experience, without any pretension to inspiration. As, however, the seer or *vates* was also frequently called *divinus*, we shall treat, under this head, of seers as well as of other kinds of *divinatio*. The subject of oracles is discussed in a separate article. [ORACULUM.]

The belief that the decrees of the divine will were occasionally revealed by the deity himself, or could be discovered by certain individuals, is one which the classical nations of antiquity had, in common with many other nations, before the attainment of a certain degree of intellectual cultivation. In early ages such a belief was natural, and perhaps founded on the feeling of a very close connexion between man, God, and nature. But in the course of time, when men became more acquainted with the laws of nature, this belief was abandoned, at least by the more enlightened minds, while the multitudes still continued to adhere to it; and the governments, seeing the advantages to be derived from it, not only countenanced, but encouraged and supported it.

The seers or μάντεις, who, under the direct influence of the gods, chiefly that of Apollo, announced the future, seem originally to have been connected with certain places where oracles were given; but in subsequent times they formed a distinct class of persons, independent of any locality; one of them is Calchas in the Homeric poems. Apollo, the god of prophecy, was generally the source from which the seers, as well as other diviners, derived their knowledge. In many families of seers the inspired knowledge of the future was considered to be hereditary, and to be transmitted from father to son. To these families belonged the Iamids (Paus. iii. 11, § 5, &c.; Boeckh, *ad* Pind. *Ol.* vi. p. 152), who from Olympia spread over a considerable part of Greece; the Branchidae, near Miletus (Conon, 33); the Eumolpids, at Athens and Eleusis; the Clytiads (Paus. vi. 17, § 4), the Telliads (Herod. viii. 27; Paus. x. 1, § 4, &c.; Herod. ix. 37), the Acarnanian seers, and others. Some of these families retained their celebrity till a very late period of Grecian history. The *manteis* made their revelations either when requested to do so on important emergencies, or they made them spontaneously whenever they thought it necessary, either to prevent some calamity or to stimulate their countrymen to something beneficial. The civil government of Athens not only tolerated, but protected and honoured them; and Cicero (*de Divinat.* i. 43, 95) says, that the *manteis* were present in all the public assemblies of the Athenians. (Compare Aristoph. *Pax*, 1025, with the Schol.; *Nub.* 325, &c. and the Schol.; Lycurg. *c. Leocrat.* p. 196.) Along with the seers we may also mention the Bacides and the Sibyllae. Both existed from a very remote time, and were distinct from the *manteis* so far as they pretended to derive their knowledge of the future from sacred books (χρησμοί) which they consulted, and which were in some places, as at Athens and Rome, kept by the government or some especial officers, in the acropolis and in the most revered sanctuary. Bacis was, according to

Pausanias (x. 12, § 6; compare with iv. 27, § 2), in Boeotia a general name for a man inspired by nymphs. The Scholiast on Aristophanes (*Pax*, 1009) and Aelian (*V. H.* xii. 35) mention three original Bacides,—one of Eleon in Boeotia, a second of Athens, and a third of Caphys in Arcadia. (Compare Aristoph. *Equit.* 123, 998; *Aves*, 963; Clem. Alex. *Strom.* i. 398.) From these three Bacides all others were said to be descended, and to have derived their name. Antichares (Herod. v. 43), Musaeus (Herod. vii. 6), Euclous of Cyprus (Paus. x. 12, § 6), and Lycus, son of Pandion (Paus. *l. c.*), probably belonged to the Bacides. The Sibyllae were prophetic women, probably of Asiatic origin, whose peculiar custom seems to have been to wander with their sacred books from place to place. (Liv. i. 7.) Aelian (*V. H.* xii. 35) states that, according to some authors, there were four Sibyllae,—the Erythraean, the Samian, the Egyptian, and the Sardinian; but that others added six more, among whom there was one called the Cumaean, and another called the Jewish Sibylla. Compare Suidas (*s. v.* Σίβυλλαι), and Pausanias (x. 12), who has devoted a whole chapter to the Sibyllae, in which, however, he does not clearly distinguish between the Sibyllae properly so called, and other women who travelled about and made the prophetic art their profession, and who seem to have been very numerous in all parts of the ancient world. (Clem. Alex. *Strom.* i. 319.) The Sibylla whose books gained so great an importance at Rome, was, according to Varro (*ap.* Lactant. i. 6), the Erythraean: the books which she was said to have sold to one of the Tarquins were carefully concealed from the public, and only accessible to the duumvirs. The early existence of the Sibyllae is not as certain as that of the Bacides; but in some legends of a late date, they occur even in the period previous to the Trojan war, and it is not improbable that at an early period every town in Greece had its prophecies by some Bacis or Sibylla. (Paus. *l. c.*) They seem to have retained their celebrity down to the time of Antiochus and Demetrius. (See Niebuhr, *Hist. of Rome*, i. p. 503, &c.)

Besides these more respectable prophets and prophetesses, there were numbers of diviners of an inferior order (χρησμολόγοι), who made it their business to explain all sorts of signs, and to tell fortunes. They were, however, more particularly popular with the lower orders, who are everywhere most ready to believe what is most marvellous and least entitled to belief. This class of diviners, however, does not seem to have existed until a comparatively late period (Thuc. ii. 21; Aristoph. *Aves*, 897; *Pax*, 986, 1034, &c.), and to have been looked upon, even by the Greeks themselves, as nuisances to the public.

The second or artistic kind of divination consisted in the interpretation of signs and phenomena. For this kind of divination no divine inspiration was thought necessary, but merely experience and a certain knowledge acquired by routine; and although in some cases priests were appointed for the purpose of observing and explaining signs [AUGUR; HARUSPEX], yet on any sudden emergency, especially in private affairs, any one who met with something extraordinary might act as his own interpreter. The principal signs by which the gods were thought to declare their will, were things connected with the offering of sacrifices, the flight and voice of birds, all kinds of natural phenomena, ordinary as well as extraordinary, and dreams.

The interpretation of signs of the first class (ἱερομαντεία or ἱεροσκοπία, *haruspicium* or *ars haruspicina*), was, according to Aeschylus (*Prometh.* 492, &c.), the invention of Prometheus. It seems to have been most cultivated by the Etruscans, among whom it was raised into a complete science, and from whom it passed to the Romans. Sacrifices were either offered for the special purpose of consulting the gods, or in the ordinary way; but in both cases the signs were observed, and, when they were propitious, the sacrifice was said καλλιερεῖν. The principal points that were generally observed were: 1. The manner in which the victim approached to the altar, whether uttering a sound or not; the former was considered a favourable omen in the sacrifice at the Panionium. (Strab. viii. p. 384, compare Paus. iv. 32, § 3.) 2. The nature of the intestines with respect to their colour and smoothness (Aeschyl. *Prometh.* 493, &c.; Eurip. *Elect.* 833); the liver and bile were of particular importance. [CAPUT EXTORUM.] 3. The nature of the flame which consumed the sacrifice (see Valckenaer, *ad* Eurip. *Phoe*[illegible]61); hence the words πυρομαντεία, ἐμπυρ[illegible]τα, φλογωπὰ σήματα. That the smoke r[illegible]om the altar, the libation, and various other [illegible]gs offered to the gods, were likewise conside[illegible]d as a means through which the will of the gods might be learned, is clear from the names καπνομαντεία, λιβανομαντεία, κριθομαντεία, and others. Especial care was also taken during a sacrifice, that no inauspicious or frivolous words were uttered by any of the bystanders: hence the admonitions of the priests, εὐφημεῖτε and εὐφημία, or σιγᾶτε, σιωπᾶτε, *favete linguis*, and others; for improper expressions were not only thought to pollute and profane the sacred act, but to be unlucky omens (δυσφημία, κληδόνες, φῆμαι, φωναὶ or ὀμφαί, Pind. *Ol.* vi. 112; Hom. *Il.* ii. 41).

The art of interpreting signs of the second class was called οἰωνιστική, *augurium* or *auspicium*. It was, like the former, common to Greeks and Romans, but was never developed into so complete a system by the former as by the latter; nor did it ever attain the same degree of importance in Greece as it did at Rome. [AUGUR.] The Greeks, when observing the flight of birds, turned their face towards the north, and then a bird appearing to the right (east), especially an eagle, a heron, or a falcon, was a favourable sign (Hom. *Il.* xiv. 274, xxiv. 310, *Od.* xv. 524); while birds appearing to the left (west) were considered as unlucky signs. (Hom. *Il.* xii. 201, 230; Festus, s. v. *Sinistrae Aves.*) Sometimes the mere appearance of a bird was thought sufficient: thus the Athenians always considered the appearance of an owl as a lucky sign; hence the proverb, γλαὺξ ἵπταται, "the owl is out," *i.e.* we have good luck. Other animals appearing unexpectedly, especially to travellers on their road (ἐνόδια σύμβολα), were also thought ominous; and at Athens it was considered a very unlucky omen, when a weasel appeared during the assembly of the people.

(Aristoph. *Eccles.* 793.) Superstitions of this kind are still met with in several European countries. Various other means were used to ascertain the will of the gods, such as the *σιδηρομαντεία*, or divination by placing straws on red-hot iron; the *μολυβδομαντεία*, by observing the figures which melted lead formed; the *βοτανομαντεία*, or divination by writing one's own name on herbs and leaves, which were then exposed to the wind, &c.

Of greater importance than the appearance of animals, at least to the Greeks, were the phenomena in the heavens, particularly during any public transaction. They were not only observed and interpreted by private individuals in their own affairs, but by the public magistrates. The Spartan ephors, as we learn from Plutarch (*Agesil.* 11), made regular observations in the heavens every ninth year during the night; and the family of the Pythaistae, of Athens, made similar observations every year before the theoris set sail for Delos. (Müller, *Dorians*, ii. 2, § 14.) Among the unlucky phenomena in the heavens (*διοσημεῖα*, *signa*, or *portenta*) were thunder and lightning (Aristoph. *Eccles.* 793; Eustath. *ad* Hom. *Od.* xx. 104), an eclipse of the sun or moon (Thucyd. vii. 50), earthquakes (Xen. *Hellen.* iv. 7, § 4), rain of blood, stones, milk, &c. (Hom. *Il.* xi. 53, &c.; Cic. *de Divinat.* i. 43). Any of these signs was sufficient at Athens, as [illegible] at Rome, to break up the assembly of [illegible]ople. (Schömann, *de Comit. Ath.* p. 14[illegible] transl.) In common life, things apparently of no importance, when occurring at a critical moment, were thought by the ancients to be signs sent by the gods, from which conclusions might be drawn respecting the future. Among these common occurrences we may mention sneezing (Hom. *Od.* xvii. 561, with the note of Eustath.; Xen. *Anab.* iii. 2, § 9; Plut. *Themist.* 13; Ovid, *Heroid.* 19, 151; Propert. ii. 2, 33), twinkling of the eyes (Theocrit. iii. 37; Plaut. *Pseud.* i. 2, 105; compare Wüstemann, *ad* Theocrit. *l. c.*), tingling of the ears, and numberless other things which we cannot here enumerate. Some of them have retained their significance with the superstitious multitude down to the present day.

The art of interpreting dreams (*ὀνειροπολία*), which had probably been introduced into Europe from Asia, where it is still a universal practice, seems in the Homeric age to have been held in high esteem; for dreams were said to be sent by Zeus. (Hom. *Il.* i. 63, ii. *init.*; *Od.* iv. 841, xix. 457.) In subsequent times, that class of diviners who occupied themselves with the interpretation of dreams, seems to have been very numerous and popular; but they never enjoyed any protection from the state, and were only resorted to by private individuals. Some persons are said to have gained their livelihood by this profession. (Plut. *Aristid.* 27.) Respecting the oracles which were obtained by passing a night and dreaming in a temple, see ORACULUM.

For further information concerning the art of divination in general, see Cicero's work *de Divinatione*. The *μαντική* of the Greeks is treated of at some length by Wachsmuth (*Hellen. Alterth.* ii. 2, p. 259, &c., vol. ii. p. 585, 2nd edit.). Compare Thirlwall's *Hist. of Greece*, i. p. 206, &c.

The word *divinatio* was used in a particular manner by the Romans as a law-term, which requires some explanation. If in any case two or more accusers came forward against one and the same individual, it was, as the phrase ran, *decided by divinatio* who should be the chief or real accuser, whom the others then joined as subscriptores; *i.e.* by putting their names to the charge brought against the offender. This transaction, by which one of several accusers was selected to conduct the accusation, was called *divinatio*, as the question here was not about facts, but about something which was to be done, and which could not be found out by witnesses or written documents; so that the judices had, as it were, to divine the course which they had to take. (Ascon. *in Argum. ad* Cic. *Divinat. in Caec.* p. 99, ed. Orelli.) Hence the oration of Cicero in which he tries to show that he, and not Q. Caecilius Niger, ought to conduct the accusation against Verres, is called *Divinatio in Caecilium*. Cf. cc. 15 and 20 of the oration, and Gellius, ii. 4. [L. S.] [A. S. W.]

DIVI'SOR. [AMBITUS.]

DIVO'RTIUM, divorce. 1. GREEK. The term for this act was *ἀπόλειψις* or *ἀπόπεμψις*, the former denoting the act of a wife leaving her husband, and the latter that of a husband dismissing his wife (Dem. *c. Onet.* i. p. 865, § 4; *c. Neaer.* p. 1362, § 52, 1365, § 59). The only Greek states respecting whose laws of divorce we have any knowledge are Athens and Sparta. In both states the law permitted either husband or wife to call for and effect a divorce, though it was much easier for a husband to get rid of his wife than for a wife to escape from her husband. At Sparta, it seems, a man might dismiss his wife if she bore him no issue; the recorded instances, however, are those of kings, and private inclination was sacrificed to state policy (Herod. v. 39, vi. 61). The law at Athens allowed a man to divorce his wife without ceremony, simply by his act of sending her out of his house (*ἐκπέμπειν*, *ἀποπέμπειν*), upon which she returned to the guardianship of her nearest male relation (Dem. *c. Onet.* i. p. 868, § 8; cf. KYRIOS). The husband was then bound to return the dowry which she had brought him, or to pay her interest at the rate of nine obols per mina per month (*ἐπ' ἐννέα ὀβολοῖς* = 18 per cent. per annum, Dem. *c. Aph.* i. p. 818, § 17, *c. Neaer.* p. 1362, § 52); and in addition to this to provide alimony (*σῖτος*). It became the duty of the *κύριος* to enforce these claims, if necessary, by a *προικὸς δίκη* or a *σίτου δίκη* (*c. Neaer.* l. c.; Isae. *Or.* 3 [*Pyrrh.*], §§ 9, 78). A husband thus dismissing his wife usually did so, as might be expected, in the presence of witnesses (Lys. *c. Alcib.* i. § 28). What became of the children in such a case is not mentioned, but it is probable that they remained with the father. Besides the various motives which naturally incline men to seek a new connexion or break off the old, the Athenian law created artificial grounds of divorce. The heiress (*ἐπίκληρος*) became the property of the next-of-kin. He, or she, or both of them might be married at the time when the inheritance devolved upon her. In such a case the man was tempted to put away his wife; the wife might be obliged to leave her husband (Isae. *l. c.* § 64; Dem. *c. Eubul.* p. 1311, § 41). Much less repulsive was the rule that proved adultery on the part of the wife compelled her husband to divorce her, or himself incur the penalty of atimia (Lex *ap.* Dem. c. *Neaer.* p. 1374, § 87). When, on the other hand, a wife wished to leave her husband, if both parties agreed upon a divorce, no further proceedings were required: mutual consent was sufficient to dissolve a marriage. If the husband objected, she was obliged to appear in person before the archon, and state in writing the grounds of her application ([Andoc.] c. *Alcib.* § 14; Plut. *Alcib.* 12). She had to conduct her case quite alone, for as she was in her husband's power until judgment was given, no one had a right to come forward as her advocate. It has been maintained that she could be represented by her *κύριος*, but the notorious case of Alcibiades and his ill-used wife Hipparete, in the passages just cited, leaves little doubt that she could not (Lipsius on *Att. Process*, p. 512 n. = 414): the expression in Demosthenes (*c. Onet.* i. p. 868, § 17, *τὴν ἀπόλειψιν οὗτοι πρὸς τὸν ἄρχοντ' ἀπεγράψαντο*, cf. 871, § 26) probably refers to the register (*ἀπογραφή*) of all divorces, whether made by consent or otherwise, which was kept by the archon. The action thus brought by a woman was called *ἀπολείψεως δίκη*. Her right to a separation would depend on the treatment she had received [KAKOSIS]; but of the nature of the archon's jurisdiction we know but little. The husband's loss of freedom (*i.e.* by becoming a prisoner of war and being sold into slavery) is mentioned as affording an absolute claim to a divorce (Thalheim, *Rechtsalterth.* p. 67 n.).

Charondas, in his legislation at Thurii, had permitted divorce, but his law was subsequently modified by the addition that, if divorced persons should wish to marry again, they should not be allowed to marry a person younger than the one from whom he (or she) had been separated (Diod. xii. 18).

(*Att. Process*, pp. 413–415 = 510–513 Lipsius; C. R. Kennedy, *Select Priv. Or. of Dem.* p. 269 f.; Schömann, *Antiq.* i. 517, E. T.; Hermann-Blümner, *Privatalterth.* pp. 252, 262; Thalheim, *Rechtsalterth.* p. 67.) [L. S.] [W. W.]

2. ROMAN. The word *divortium* signified generally a separation; and, in a special sense, a divorce or dissolution of marriage. Several authorities (Gell. iv. 3, Dionys. ii. 25; Val. Max. ii. 1–4) state that divorce was unknown at Rome in early times, and that the first instance of divorce occurred in B.C. 233, when Sp. Carvilius Ruga put away his wife on the ground of barrenness. It is said that the act of Carvilius was generally disapproved of (Val. Max. ii. 1–4). Savigny has discussed the details of this story with his usual acuteness (*Verm. Schriften*, v. 1–4). It is probable that divorce on account of the misconduct of the wife was in use from a very early period; but the case of Carvilius Ruga may have been the beginning of the lax system of divorce which prevailed towards the end of the free republic and under the empire.

The marriage by which the husband acquired *manus* over his wife, as well as the later free marriage, was dissoluble; but the marriage of a *flamen*, which was solemnised by *confarreatio*, could never under any circumstances be severed (Plut. *Romul.* 22; Gell. x. 15).

A corresponding form to that by which a marriage had been created was used for dissolving it: thus a marriage entered into by *confarreatio* was put an end to by a similar ceremony, called *diffarreatio* (Festus, s. v. *diffarr.*); if a wife had passed into the *manus* of her husband by *coemptio*, she could only be released by a *remancipatio*, which, according to Gaius, the husband could be compelled to execute (Gaius, i. 137). These formal restrictions on the right of divorce disappeared under the free form of marriage, which did not bring the wife *in manum viri*. The theory on which Roman marriage was based admits the utmost facility of divorce: the consent and conjugal affection of the parties were regarded as the essential part of a marriage, and this *affectio maritalis* was necessary for the continuance as well as for the creation of a marriage. Accordingly either party might declare his or her consent to dissolve the connexion. No judicial decree and no interference of any public authority was necessary to dissolve the marriage. A divorce which was brought about by one party renouncing the marriage and not by mutual consent was called a *repudium*. It was customary for one who renounced a marriage to send a distinct notice or declaration of intention to the other party, and it was doubted in the time of Cicero whether the simple fact of either party marrying again without any such notice having been given was sufficient to constitute a divorce (Cic. *Orat.* i. 40). The ceremony of breaking the *nuptiales tabulae* (Tacit. *Ann.* xi. 30), or of taking the keys of the house from the woman and turning her out of doors, were probably considered to be acts of themselves significant enough; but the general practice was apparently to deliver a written notice, and perhaps to assign a reason, though in the case of Paula Valeria mentioned by Cicero no reason was assigned. By the Lex Julia de adulteriis it was required that a *repudium* should be executed in the presence of seven witnesses, Roman citizens of the age of puberty (Dig. 24, 2, 9; Sueton. *Octav.* 34). This prevented an adulteress from setting up the pretence of a *repudium* as an excuse for her conduct.

Not only the wife herself, but also her father, if she was under his power, might dissolve the marriage. This right of a paterfamilias was made practically ineffectual by a decree of the Emperor Marcus. Towards the latter part of the republic and under the empire, divorces became very common. Cn. Pompeius divorced his wife Mucia for alleged adultery, and his conduct was approved (Cic. *ad Att.* i. 12, 18); and Cicero speaks (*ad Fam.* viii. 7) of Paula Valeria as being ready to serve her husband on his return from his province with notice of divorce (cf. Juv. vi. 224, and Martial, vi. 7). Cicero himself divorced his wife Terentia after living with her thirty years, and married a young woman whom he also divorced (Plut. *Cic.* 41). Cato the younger divorced his wife Marcia, that his friend Hortensius might marry her and have children by her; for this is the true meaning of the story (Plut. *Cat. Min.* 25). By the Lex Papia Poppaea a freedwoman who had married her patron was prevented from divorcing herself (Dig. 24, 2, 11) so as to be capable of marrying anyone else

From an early time penalties were imposed on those who divorced without good cause, and also on those who by their conduct made a divorce necessary.

A man was punished by *nota censoria*, a woman by loss of *dos*. There was the *retentio dotis propter mores* when the divorce was caused by the fault of the wife, and also the *retentio propter liberos* which was the right of the husband to deduct an additional amount of *dos* in case there were children of the marriage. The free right of divorce was not taken away by the early Christian emperors, but its exercise except on grounds defined by statute was severely punished. Justinian went further than his predecessors in limiting the legal grounds of divorce. He even punished divorce by mutual consent unless the object of the parties was to live a life of chastity. (Dig. 34, 2; Cod. Theod. iii. 16; Cod. v. 17; Wächter, *Ueber Ehescheidungen bei den Römern.*) [G. L.] [E. A. W.]

DO'KANA (**τὰ δόκανα**, from **δοκός**, a beam) was an ancient symbolical representation of the Dioscuri (Castor and Polydeuces), at Sparta. It consisted of two upright beams with others laid across them transversely. (Plut. *de Amor. Fratr.* 1, p. 36.) This rude symbol of fraternal unity evidently points to a very remote age, in which scarcely any attempts in sculpture can have been made. At a later time, when works of art were introduced into all the spheres of ordinary life, this rude and ancient object of worship, like many others of its kind, was not superseded by a more appropriate symbol. The Dioscuri were worshipped as gods of war, and we know that their images accompanied the Spartan kings whenever they took the field against an enemy. But when in the year 504 B.C. the two kings, during their invasion of Attica, failed in their undertaking on account of their secret enmity towards each other, it was decreed at Sparta, that in future only one king should command the army, and in consequence should only be accompanied by one of the images of the Dioscuri. (Herod. v. 75.) It is not improbable that these images, accompanying the kings into the field, were the ancient *δόκανα*, which were now disjointed, so that one-half of the symbol remained at Sparta, while the other was taken into the field by one of the kings. Suidas and the *Etymologicum Magnum* (s. v.) state that *δόκανα* was the name of the graves of the Dioscuri at Sparta, and derived from the verb *δέχομαι*. (Müller, *Dorians*, i. 5, § 12, note m, ii. 10, § 8; Zoega, *De Obeliscis*, p. 228.) [L. S.]

DOKIMA'SIA (*δοκιμασία*), the public proof or testing of qualifications at Athens, was of several kinds:—I. Of each citizen on attaining legal majority. The Athenian first entered upon the full enjoyment of the rights of citizenship after the completion of his thirtieth year, before which age he was eligible neither for public office, nor to the council, nor to serve as a juryman. But the right of attendance at the general assemblies and of participation in the voting, nay, even of speaking in them, was at least not expressly forbidden him from his twentieth year onward; although discreet and sensible young men kept away of their own accord. Full age, as regarded private legal relations, began properly at the completion of the eighteenth year [EPHEBUS]. Before young men were declared to be of full age, however, they were subjected to an examination called *δοκιμασία*, which partly had reference to their bodily maturity, in order to ascertain whether they were capable of the military services imposed on them at this age; partly, in the cases of orphans and the sons of heiresses, to their capability of managing their property for themselves. Finally, a proof might be demanded in the course of it of the genuineness of their descent as citizens. The examination with regard to the first and third point was undertaken in an assembly of the Demotae or inhabitants of their district, and as it seems by the older men, and especially those who were Heliastae. (Aristoph. *Vesp.* 578.) That relating to the second point might be instituted before the Phratria. The phrase *ἐπὶ δίετες ἡβῆσαι*, indicating both the military age and civil majority (Aeschin. *c. Ctes.* § 122; Lex *ap.* Demosth. ii. *c. Steph.* p. 1135, § 20), is now explained, after Schömann, of the completion of the eighteenth year, in accordance with the precise language of the writer in Bekk. *Anecd.* p. 255, 15: *τὸ ἐπὶ δίετες ἡβῆσαι· τὸ γενέσθαι ἐτῶν ὀκτωκαίδεκα· ἵνα ἥβη ᾖ τὸ ἑκκαίδεκα ἐτῶν γενέσθαι* (Schömann, *Assemblies*, p. 69 ff.; *Antiq.* i. 359, E. T.; Hermann, *Privatalterth.* § 56, n. 11; Blümner, *Privatalterth.* p. 322; A. Schaefer, *Demosthenes und seine Zeit*, iii. pt. 2, p. 35; Sandys on Dem. *c. Steph.* l. c.). The older scholars, following Harpocration and Pollux (viii. 105), made *ἥβη* the eighteenth, coming of age the twentieth year. In cases of immaturity of body and mind the dokimasia might, it seems, be postponed within certain limits: Schömann supposes that "among the Athenians no one particular period was appointed for being enrolled, provided that it was not done before the attainment of the eighteenth, nor after the completion of the twentieth year."

II. Of magistrates and public officers. When any citizen of Athens was either appointed by lot, or chosen by suffrage (*κληρωτὸς καὶ αἱρετός*), to hold a public office, he was obliged, before entering on its duties, to submit to a dokimasia, or scrutiny into his previous life and conduct, in which any person could object to him as unfit. This was the case with the archons, the senators, the strategi, and other magistrates. The examination, or anakrisis, for the archonship was conducted by the senators, or in the courts of the heliaea. The term for rejection was *ἀποδοκιμάζειν* (Lys. *c. Agorat.* § 10, *c. Evand.* §§ 6, 14; [Dem.] *c. Aristog.* i. p. 779, § 30, p. 790, § 67).

III. Of orators. Though not holding any office, orators are opposed to *ἰδιῶται* as *πολιτευόμενοι* or public characters ([Dem.] *Phil.* iv. p. 150, § 70; Aeschin. *c. Tim.* § 7). As such, they were liable to the denouncement of an inquiry (*ἐπαγγελία δοκιμασίας*) against those who spoke in the assembly while leading profligate lives, or after having committed flagitious crimes. This denouncement might be made in public by any one *πρὸς δοκιμασίαν τοῦ βίου*, *i.e.* to compel the party complained of to appear before a court of justice and give an account of his life and conduct. If found guilty, he was punished with atimia and excluded from the assemblies (Aeschin. *c. Timarch.* §§ 2, 28, 32, 81; Dem. *c. Androt.* p. 602, § 29). [EPANGELIA.]

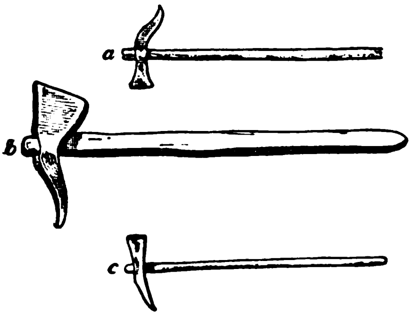
IV. Of the cavalry (*ἱππέων*), a muster before the *βουλὴ* or senate (Xenoph. *Oec.* 9, § 15; *Hipparch.*

3, § 9). The neglect of it involved expulsion from the service and atimia (Lys. c. *Alcib.* i. § 8, ii. § 5; *pro Mantith.* § 13).

V. Of invalids (Adynatoi). [R. W.] [W. W.]

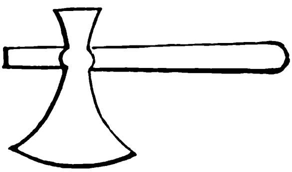
DODRANS, nine ounces, nine-twelfths or three-fourths of the as [As], or three-fourths of anything. Hence the phrase *heres ex dodrante*, the heir to three-fourths of an estate. (Cic. *Att.* i. 14; Nep. *Attic.* 5; Mart. viii. 9; Suet. *Caes.* 83.) [W. S.]

DOLABRA, dim. Dolabella, a tool consisting of a long handle and a double head, which terminated on one side in a sharp blade, the edge of which ran parallel to the handle (while the blade of the *ascia* was at right angles to the handle), and on the other side in a pick, which was usually curved (*falx*, Prop. iv. 2, 59). In this form it was used for hewing wood (Curt. viii. 4, § 11), for pruning, where the pruning-hook was not strong enough (Colum. *de Arb.* 10, 2), for making stockades (Juv. viii. 248; Veget. *de Re Mil.* ii. 25), and for breaking down ramparts and walls (Liv. ix. 37, xxi. 11; Tac. *Hist.* iii. 20 and 27; Curt. ix. 5, § 19). It was consequently a tool familiar to the Roman soldier, as may be seen in the accompanying illustration (Fig. *b*), from Trajan's Column.



Dolabra. (Blümner.)

For the purpose, however, of excavating or breaking up the earth (Pallad. ii. 1 and 3, iii. 21), a *dolabra* with a straighter pick appears to have been used, as is shown in Fig. *a*, from a relief on a tomb. Of a similar form is Fig. *c*, which represents the dolabra used by masons (Isid. *Orig.* xix. 19, 11). The hatchet used at sacrifices ("scena ab aliis, a quibusdam sacena appellatur dolabra pontificalis," Festus, p. 318, M.) and by butchers (Dig. 33, 7, 18) was also called a *dolabra*, and is figured here. The *dolabella* is to be used, according to Columella, iv. 24, for breaking up the earth round the vines and for pruning. (Blümner, *Tech. u. Term.*, &c., vol. ii. p. 206.) [J. Y.] [J. H. F.]



Dolabra. (From funeral monument.)

DO'LICHOS (δόλιχος). [Cursus.]

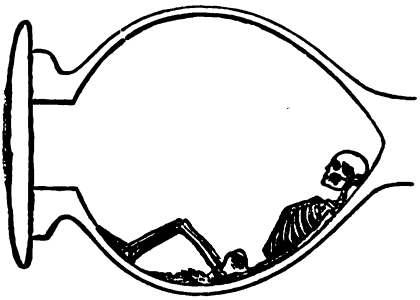
DO'LIUM (πίθος), a large earthenware jar (πίθος κεράμινος, Herod. iii. 96) into which, or into the wooden *cupae*, new wine was put to let it ferment. [Cupa.] Such jars were frequently of great size, shaped like enormous caldrons, with globular bodies and wide gaping mouths. They were formed of the best clay, and, as they could not be turned on the wheel, were difficult of construction (*Geopon.* vi. 3), so that the making of them passed into a proverb for a troublesome undertaking (Zenob. *Cent.* iii. 65, Leutsch). They were lined with a coating of pitch, while they were hot from the furnace, and were usually sunk (*demersa*, *depressa*, or *defossa*) one-half or two-thirds in the cellar. Wine which would not keep long was drunk from the dolium or *cupa*; that which improved by keeping was transferred from them to the amphorae. [Amphora.] (*Geopon.* l. c.; Cat. *R. R.* 23; Varr. *R. R.* 1, 13; Colum. xii. 18; Non. *s. v.*; Dig. 33, 6, 3, § 1; Senec. *Ep.* 36, 3.) Besides holding wine, dolia were used for keeping other things, such as oil (Cat. *R. R.* 10, 4), corn (Dig. 50, 16, 206), &c. Many of these earthenware dolia were large enough to hold a man. Diogenes took up his abode in such a πίθος or dolium (Diog. Laërt. vi. 23; Juv. xiv. 308 ff.; Sen. *Ep.* 90, 14), and in some ancient works of art he is represented stretching his body out of a πίθος, in his celebrated interview with Alexander. In the Peloponnesian war, when the country people took refuge in Athens, they are described, with some comic exaggeration, as living in such earthenware vessels (Aristoph. *Eq.* 792). The dolium into which the Danaids emptied their vessels was of a similar size (Hor. *Carm.* iii. 11, 27; cf. Lucian, *Hermot.* 61). Palladius (x. 11) speaks of dolia containing two hundred congii; and the *sesquicullaria dolia* of Columella (xii. 18, extr.) contained 1½ culleus—that is, 30 amphorae. Many of these large cullei have been found in Italy and other countries, having stamped on them the number of amphorae they contained; namely, 20, 30, and 36 amphorae. Some have leaden hoops round them. They were made of white or red clay, or of the two colours combined. On account of their great size these dolia, which were fixed in the cellar, were not allowed to be removed, and were sold along with the house (Dig. 33, 6, 3, § 1; 33, 7, 8). The *seriae* were similar vessels, and appear to

Pithos or Dolium of Diogenes.
(From fragment of lamp in British Museum. Birch.)

have been a smaller kind of dolia. The two are frequently mentioned together (Colum. xii. 18, and 50, § 14; Ter. *Heaut.* iii. 1, 51; Liv. xxiv. 18). The makers of the dolia were called *doliarii*, but the term *opus doliare* was applied to all kinds of coarse ware, such as the tiles of houses.

Dolia curta were urinals placed in the narrow streets between the houses for the convenience of those who passed by. (Lucret. iv. 1026; *dum eunt, nulla est in angiporto amphora quam non impleant*, Macrob. iii. 16, § 15; cf. *urinae vectigal*, Suet. *Vesp.* 23.)

Dolia were also used for holding corpses in graves. In the Crimea, near Sebastopol, sixteen πίθοι were discovered, 4 feet 4 inches high, and 2 feet 2 inches in diameter.



Dolium, containing body. (Birch.)

(Hermann-Blümner, *Griech. Privatalt.* pp. 162, 232; Becker-Göll, *Galius*, iii. p. 418; Marquardt, *Privatl. d. Röm.*, p. 626; Blümner, *Techn. u. Term.*, &c., ii. p. 41; Birch, *Anc. Pottery*, pp. 134, 531.) [Fictile, p. 843 *b*.] [W. S.]

DOLO (δόλων). 1. A weapon consisting of a long staff with a short iron point (Verg. *Aen.* vii. 664, and Varro, *ap.* Serv. *ib.*, "ingens contus cum ferro brevissimo;" Sil. iii. 250). 2. A secret poniard or dagger inserted in a walking-stick (Plut. *Tib. Gracch.* 10; Hesych. *s. v.*; Suet. *Claud.* 13, *Domit.* 17; Isid. *Or.* xviii. 9, 4) or a whip (Dig. 9. 2, 52). 3. A small top-sail [Navis]. [W. S.] [J. H. F.]

DOLUS MALUS. [Culpa.]

DOME'STICI. [Praetoriani.]

DOMICI'LIUM. This word signifies a man's permanent home. The following is the well-known definition of *domicilium* given in the *Corpus Juris* (Cod. x. 40, 7):—"In eo loco singulos habere domicilium non ambigitur, ubi quis larem rerumque ac fortunarum suarum summam constituit, unde rursus non sit discessurus, si nihil avocet, unde cum profectus est peregrinari videtur, quo si rediit peregrinari jam destitit." In a passage of the Digest a man's home is thus defined (Dig. 50, 16, 203): "Sed de ea re constitutum esse (respondit) eam domum unicuique nostrum debere existimari, ubi quisque sedes et tabulas haberet suarumque rerum constitutionem fecisset." A man acquired *domicilium* by making a place his residence and intending to remain in it permanently (*animus manendi*). *Domicilium* was lost by abandonment. The question of the existence of domicile was treated as one of fact to be determined by the circumstances of each case.

Thus it is determined (Dig. 50, 1, 27, § 1) that a person must be considered to have his *domicilium* in a *municipium* if he buys and sells there, attends the public spectacles, keeps the festival days there, and in fine enjoys all the advantages of the *municipium* and none of the *colonia*, where he is merely for the purpose of cultivation (*ubi colendi ruris causa versatur*). The terms *incolam esse* and *domicilium habere* are equivalent (Dig. 50, 1, 5; cf. Cod. 10, 39, 7: "Cives quidem origo, manumissio, allectio, vel adoptio, incolas vero domicilium facit").

The word *domicilium* was used in a fixed sense in the Lex Plautia Papiria, which was enacted B.C. 89: "Si qui foederatis civitatibus adscripti fuissent, si tum cum lex ferebatur in Italia domicilium habuissent et si sexaginta diebus apud praetorem essent professi" (Cic. *pro Arch.* c. 4). Cicero in the same passage indirectly describes *domicilium* in a way which partly agrees with the definition of the Code above cited: "At domicilium Romae non habuit: is qui tot annis ante civitatem datam sedem omnium rerum ac fortunarum suarum Romae collocavit."

It might be necessary for many purposes to determine where a man had his permanent abode. An *incola* was bound to obey the magistrates of the place where he was an *incola*, and also the magistrates of the place where he was a *civis*; he was not only subject to the municipal jurisdiction in both municipalities, but he was bound to perform all public functions (*publica munera*). A plaintiff was bound to bring his action in the forum of the defendant (*actor sequitur forum rei*), but the plaintiff had the choice of suing the defendant either at the place of his domicile (*forum domicilii*) or at the place of which the defendant was a citizen (*forum originis*). A man's legal relations were governed by the law of the place in which he was a citizen (*lex originis*), and not by that of the place of domicile; but if he was not a citizen of any *municipium*, he was subject to the *lex domicilii*. In the *praescriptio longi temporis decem vel viginti annorum*, it was enacted by Justinian, that the ten years' prescription should apply, if both parties had their *domicilium* in the same *provincia*; otherwise the prescription of twenty years was required.

The conception of domicile has far more important consequences in modern systems of law than in ancient; it is the foundation of a branch of what is sometimes called private International law, but more correctly the conflict of laws. (Savigny, *System*, viii. §§ 353, 354.) [G. L.] [E. A. W.]

DOMI'NIUM. *Dominium* or *rerum dominium* signifies ownership of property, and *dominus* is the owner *Proprietas* is frequently used as an equivalent to *dominium*; and when ownership is distinguished from *usus fructus*, the word *proprietas* is preferred to *dominium* as an expression for ownership. The term *dominium* or *dominium legitimum* is, strictly speaking, confined to ownership *ex jure Quiritium*, i.e. to civil ownership, and does not include ownership *in bonis*, i.e. praetorian ownership.

Ownership is not defined by Roman legal writers, but the general notion implied in the term is clear. It is a right which, subject to certain legal limitations, entitles a person to exercise full control over a corporeal thing to the exclusion of all other persons. Ownership cannot, however, be defined by enumerating all the powers which may be incidental to it, as the *jus utendi*, *fruendi*, *possidendi*, *disponendi*, since ownership may exist notwithstanding that one or more of these powers is detached from it. A thing may be considered to belong to a person whose powers over it are very much curtailed; hence arises the difficulty of defining ownership. The limitations to which ownership in Roman law is subject are either general or special. The former are imposed for the purpose of enforcing the precept *sic utere tuo ut alienum non laedas:* they prevent owners from so using their powers as to injure adjoining owners or the public generally. Special limitations on ownership arise by persons acquiring rights over property owned by someone else. For instance, the owner may be bound to allow to another person a certain use or enjoyment of the thing of which he is *dominus*, or to abstain from doing certain acts on or to his property and for the benefit of some other person. The only rights of this kind recognised by Roman law are *servitus*, *emphyteusis*, *superficies*, *pignus:* such rights are called *jure in re aliena;* they are protected, like *dominium*, by actions *in rem:* their nature is more fully explained under the head of SERVITUS. Ownership is in its nature single and entire; consequently the same thing cannot belong to several separate owners, but several persons may be joint *domini* or owners of one thing.

The subject of ownership comprehends the determination of the things which may be the objects of ownership: the power which a man may have over such objects, both as to duration of time and extent of enjoyment; the modes in which ownership may be acquired and lost; the persons who are capable of acquiring, transferring, or losing ownership. It is proposed to give some account of each of these branches of the general subject.

1. Of the things which may be the objects of ownership. *Res* is the general term for anything which is the object of a right, whether it has an actual physical existence or only an existence in thought. In this wide sense *res* are divided into *corporales* and *incorporales*. *Res corporales* are defined to be those "quae tangi possunt," *i.e.* physical objects; *incorporales* are those "quae tangi non possunt, sed in jure consistunt" — as *hereditas*, *ususfructus*, *obligationes*.

The objects of *dominium* are *res corporales*. *Res corporales* are divided into *immobiles*, or *solum et res soli*, and *mobiles*.

The ground (*solum*), and that which is attached to the ground, as buildings and other fixtures, trees, and standing crops, are *res immobiles*. *Res mobiles* are things which can be moved about from place to place or which move themselves (*res se moventes*). The distinction between land and movables is far less important in Roman law than in legal systems like our own, which have been influenced by feudalism.

Another division of *res* is that between *res quae usu consumuntur*, as food, and *res quae usu non consumuntur*, or things capable of being used again and again.

The class of *res quae pondere, numero, mensura constant*, consists of such things as wine, oil, corn, money, which are of such a nature that any of the same number, weight, and measure may be considered the same thing. The term *res fungibiles* has come to be used to denote this class of exchangeable things.

Things may be divided into simple, as an animal, a stone, and compound, *i.e.* things made up of distinct parts, as a carriage, a ship.

A number of individual things, not mechanically connected, may for legal purposes be regarded as one thing: a flock of sheep is an example of such a *universitas rerum distantium* (Dig. 41, 3, 30; 6, 1, 23, § 5).

Some things are appurtenant to others; that is, as subordinate things, they go with that which forms the principal thing (Dig. 18, 1, 49). For instance, a conveyance of a house or a ship includes by implication all its appurtenances.

Fructus are the products of a thing, as the crops of a field. *Fructus* sometimes includes profits of a thing which are not produced by it, *e.g.* minerals taken from the land.

Fructus is also used to signify profits derived from the legal use to which a thing is put, as interest from a loan (*quod non natura pervenit sed jure percipitur*, Dig. 6, tit. 1, l. 62, § pr.).

Res communes omnium, quarum usus communis est are objects of common use, which cannot be exclusively appropriated: such are the air, the sea, the seashore, running water (*Inst.* ii. 1, §§ 1–5).

Things capable in themselves of being objects of ownership might become legally incapable of belonging to anyone on account of their appropriation to some religious or quasi-religious purpose. Things which have this character are called *res divini juris:* there are three classes of such *res*, viz. *res sacrae*, *religiosae*, and *sanctae* (Gaius, ii. 2–11).

Res publicae, *res universitatis*, are things which belong to the state or to a public body; such *res* are *commercio exemptae*, i.e. they cannot be acquired by individual owners as long as they retain their public character.

Res privatae or *res singulorum* are things which are objects of individual ownership. Not even citizens could have *dominium*, i.e. Quiritarian ownership in provincial land; nor had bonitary ownership any application to land out of Italy.

The *dominium* of *provinciale solum* was considered to belong to the Roman people or to the emperor (Gaius, ii. 7). Nevertheless, individuals might enjoy rights in such land analogous to those of a *dominus*. The division of land into *ager publicus* and *privatus* is noticed as existing in the provinces (Cic. *Verr.* iii. 6); individuals could only hold *ager publicus* as lessees of the state. The terms *possessio* and *possessor* were used for the tenancy and tenant of *ager publicus*.

2. As to the powers which a man may have over objects of ownership.

An owner has, subject to general and special limitations, a right to the possession and enjoyment of his property. It is necessary to distinguish the owner's right to possess (*jus possidendi*) from the right of possession (*jus possessionis*). The right to possess belongs to the owner as such, the right of possession is attached to possession as such, *i.e.* it is inherent in anyone who has actual control of a thing. and the intention of exercising such control as owner, whether he has a title to the ownership or not. [POSSESSIO.]

The *dominus* of a thing could assert his right to the possession of it by the action called *rei vindicatio.* He could not bring this action unless he was out of possession; and in order to succeed he must prove his ownership. If the owner's rights were attached while he was in possession, he could maintain the *actio negatoria* or *negativa in rem* against the aggressor. An owner who was disturbed in his possession could also protect himself by means of the possessory interdicts. The *rei vindicatio* could only be maintained by the *dominus ex jure Quiritium*, and not by the owner *in bonis* [BONA], for the praetor could not give a civil action to one who had merely a praetorian title. An action, however, was framed, which in the hands of the bonitary owner had the same effect as the *rei vindicatio:* it was called *actio Publiciana in rem*, and was based on the fiction that the civil ownership had been already acquired by usucapion. A bonitary owner might by this action recover the thing even from the Quiritary owner, and so his position was superior to that of a *bonae fidei possessor.*

In respect to duration of interest and freedom of alienation the powers of a *dominus* were as a rule unlimited.

3. Of the modes in which ownership may be acquired and lost.

A title to property may be acquired from some one previously entitled to it, in which case it is called a succession, or a person may become owner independently of anyone else.

A succession may be either universal (*successio per universitatem*) or singular (*res singulas acquirere*). A universal succession is the succession of one person to the entire property of another: the several rights and duties of which the property is composed do not, as in singular succession, pass to the successor in a separate piecemeal manner, but are transferred with the *universitas* or entirety. A person may succeed *per universitatem* to a living person, as in the case where a person arrogates another, and so becomes entitled to all the arrogated person's property (Gaius, iii. 21); or to a deceased person, as in the succession of a *heres* to the entire estate of another.

The different modes of universal succession are explained under other heads [ADOPTIO; BONORUM EMPTIO; HERES; SUCCESSIO; UNIVERSITAS].

The following remarks apply to the acquisition of single rights of ownership, whether by way of succession or independently.

Acquisitiones were either *civiles*, i.e. distinctively Roman in form, or *naturales* (*ex jure gentium*), which were not accompanied by any particular formality.

One of the earliest civil titles of acquisition was that by which individuals acquired from the state a title to booty taken from the enemy (Gell. vii. 4; cf. Mommsen, *R. Staatsr.* ii. (ed. 2), p. 538).

From an early period of Roman history the two civil forms of conveyance called *in jure cessio* and *mancipatio* were in use. *In jure cessio* was a collusive assurance executed in the presence of the magistrate: any kind of property might be transferred in this way, but the conveyance by *mancipatio* was preferred when it was applicable, because it did not require the presence of a magistrate.

Mancipatio was a conveyance *per aes et libram*, carried out by the parties in the presence of a *libripens* and five witnesses, who were originally regarded as representing the five classes into which the Roman people was divided: like all early conveyances, it is extremely formal in its character.

Mancipation was used for conveying a certain class of *res*, called *res mancipi*. *Res mancipi* are *praedia in Italico solo*, i.e. land in Italy, *jura praediorum rusticorum* or rural servitudes, slaves, and four-footed animals, as oxen, horses, &c., *quae collo dorsove domantur* (Ulpian, xix. 1; Gaius, ii. 15–17). All other things are *res nec mancipi.*

The civil ownership of *res mancipi* could only be conveyed by *in jure cessio* or *mancipatio*, whereas *res nec mancipi* passed from one owner to another by *traditio* or delivery.

Usucapion is a civil title by which a person who has possessed a thing for a prescribed time and under particular conditions becomes owner of it [USUCAPIO].

Adjudicatio is the assignment of property to a person by the award of a *judex:* such awards were made in partition and boundary suits (*tria judicia divisoria.* See ACTIO, p. 17 *b*).

Lex is a title by which property devolves on a person by operation of a rule of law without any act of the party acquiring: a person on whom a lapsed legacy (*caducum*) devolves acquires under this title.

Traditio is a conveyance of property according to the *jus gentium;* it consists in the alienor delivering a thing to the alienee with the intention of making the latter owner of it. There must be a *justa causa* for the delivery, *i.e.* some ground suitable for transferring ownership, as *emptio*, *venditio* or *donatio.* The other natural modes of acquiring are explained under particular heads [OCCUPATIO; ACCESSIO; ALLUVIO; SPECIFICATIO; CONFUSIO].

Praetorian ownership was acquired by *traditio* of a *res mancipi*, by acquiring the property of an inheritance under the praetorian title of *bonorum possessio*, and by purchase of an insolvent debtor's property (*bonorum emptio*). Subsequent to the time of the classical jurists some important changes were made in the law as to the modes of acquiring ownership. The forms of *in jure cessio* and *mancipatio* became obsolete, and the civil ownership of all *res* was transferred by *traditio.* Justinian abolished the distinctions between *res mancipi* and *nec mancipi*, and between bonitary and Quiritary ownership. He also altered the law of usucapion, making a uniform law on the subject applicable to *solum provinciale* and *Italicum.*

Ownership is lost either with or without the consent of the owner. With the consent, when he transferred it to another, which was the general mode of acquiring and losing property; without the consent, when the thing perished, when it became the property of another by accession, specification, or usucapion, when it was judicially declared to be the property of another, or forfeited after having been pledged. It is also lost by *maxima capitis deminutio.* The *media capitis deminutio* only effected an incapacity for Quiritarian ownership; but if it was a consequence of a capital crime, the property of the person convicted was forfeited to the state.

4. As to the persons who are capable of acquiring or losing ownership.

Juristic persons (*universitates personarum*) as well as natural persons might be owners. Only persons who had the *jus commercii* could acquire Quiritary or bonitary ownership. Persons in the power of another, whether free persons or slaves, could not acquire for themselves, but what they acquired belonged to the person in whose power they were. In course of time, however, the acquisitions of *filiusfamilias* were protected from the interference of *paterfamilias*, except such acquisitions as were derived from the *paterfamilias* himself (*peculium*). If a slave was a man's *in bonis*, everything that the slave acquired belonged to the owner *in bonis*, and not to him who had the bare Quiritarian ownership [BONA]. The usufructuary of a slave only acquired the ownership of that which the slave acquired *ex operis suis*.

Pupilli could acquire property, but could not alienate without the *auctoritas* of their tutor. Property of some persons could not become the property of another by usucapion, *e.g.* the property of *pupilli* could not be acquired by usucapion; a fact which Cicero was surprised that his friend Atticus did not know (*ad Att.* i. 5). (*Inst.* ii. tit. i. 6–9; Dig. 41, 1; Ulp. *Fragm.* tit. xix.; Gesterding, *Ausführliche Darstellung der Lehre von Eigenthum;* K. Sell, *Römische Lehre der dinglichen Rechte;* Windscheid, *Pandekten*, § 167, &c.; Puchta, *Inst.* § 231, &c.) [G. L.] [E. A. W.]

DO'MINUS means master, owner [DOMINIUM]. The word was applied as a title of respect to a superior in rank or station. Thus the head of a family was sometimes called *dominus* by the free members of his family as well as by his slaves (Suet. *Aug.* 53; Dig. 24, 1, 57). The title of *dominus* came to be ascribed to the emperor. The history of this use of the word, which corresponds with changes in the character of the emperor, is briefly as follows:—Augustus refused to be called *dominus* (*domini appellationem ut maledictum et opprobrium semper exhorruit*, Suet. *Aug.* 53; Ov. *Fast.* ii. 142), as did also Tiberius (Tac. *Ann.* ii. 87; Suet. *Tib.* 27).

Caligula was the first emperor who allowed himself to be called by the title (Victor. *Caes.* 3). Domitian claimed the titles of *Deus et Dominus* (Dio Cass. lxii. 13; Martial, v. 8). Trajan only wished to be called *princeps* (Plin. *Paneg.* §§ 2, 63, 88). Pliny in his letters always addresses Trajan as *dominus*, but in doing so he does not intend to make use of an official title. *Dominus* first appears on imperial monuments in the reign of Severus. Aurelian first adopted the title *Deus et Dominus* on his coins. Diocletian allowed himself to be publicly addressed as *dominus* (Vict. *Caes.* 39). From the fourth century the emperors freely ascribe the title to themselves. (Mommsen, *Staatsrecht*, ii. 737, &c.) [E. A. W.]

DOMUS (*οἰκία, οἴκησις, οἰκητήριον*, a dwelling-house; *οἶκος*, generally a room; in Homer and the Tragedians, *δόμος*, but more usually in the plural as a dwelling-house), a house.

I. PRE-HISTORIC. One special form of hut appears to have been commonly used by many different races of men at an early stage of their development. This was a small circular structure made of branches of trees stuck into the ground in a circle, and then bent inwards till their ends met and were tied together at the top. This rude framework was then filled in by wattled work woven in and out, and the whole was daubed over with tempered mud or clay. The hut of Achilles, thatched with rushes (*Il.* xxiv. 450), was probably a dwelling of this sort, and similar huts are said to have been used in Lydia, Sardis, and other places in Western Asia Minor (Herod. v. 101): it seems probable that a reminiscence of this form of building exists in the stone domical structures of Mycenae, Orchomenos, and other early sites in Greece.

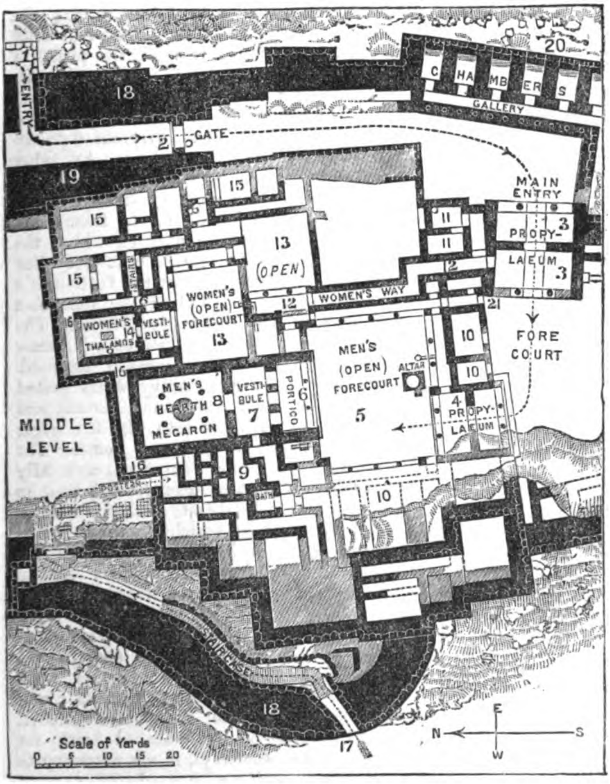
Even in historic times a survival of this ancient circular form of house existed in the form of the Prytaneum in Athens and elsewhere, and also in the Athenian *Tholus*, which was built in the newer part of Athens as an adjunct, in a more convenient position for the use of the Prytanes. The Tholus was a round building with a domical roof, and must have had some resemblance to the Roman Temple of Vesta, to which the same name was frequently applied. The original Temple of Vesta was a round hut formed with wattle-work of osiers (Ov. *Fast.* vi. 261 *seq.*; Fest. p. 250, M.). Mr. James Frazer, in a valuable article (*Journ. of Philol.* vol. xiv.), derives the form both of the Greek Tholus and the Roman Temple of Vesta, in both of which a perpetual fire was kept burning, from the pre-historic round hut of the village chief, under whose charge was the ever-burning fire, which was kept lighted for the general convenience—a very important thing at a time when a fresh fire could only be obtained by the laborious process of friction.

Even during the imperial period in Rome one or more wattled huts were preserved in memory of the primitive dwellings of its founders. One of these, which stood at the western angle of the Palatine hill, was known as the *Casa Romuli* (Dionys. i. 79; Plut. *Rom.* 20); it was twice burnt and repaired during the reign of Augustus (Dio Cass. xlviii. 43, and liv. 29. See also Ov. *Fast.* iii. 183; Val. Max. iv. 4, 11; Liv. v. 53). The Tugurium Faustuli is probably another name for the same thing. Another hut, also called after Romulus, appears to have been preserved on the Capitoline hill (Vitruv. ii. 1; Senec. *Contr.* i. 6; Macrob. *Saturn.* i. 15).

A careful representation of this early form of house, as used by the pre-historic Latin race, exists in the small sepulchral "house-urns," which are found in considerable numbers in the early cemeteries of Central Italy and elsewhere. In these the construction is less simple, the roof being evidently formed of separate branches, laid so as to form projecting eaves. These curious pieces of archaic pottery have small movable doors fixed with a wooden peg. (See Virchow, *Die italienischen und deutschen Haus-Urnen*, Berlin, 1884.)

During the many centuries which elapsed before the commencement of the historic period of Greece, a state of society existed very different from that with which Greek literature has made us familiar. Instead of the large cities with their flourishing trade and carefully constructed systems of political, religious, and social organisation, a number of small, highly-fortified towns or villages were ruled in an autocratic way by some chieftain of semi-oriental habits, who lived in a style of much luxury and splendour, surrounded by a group of followers, very much like those of a mediaeval feudal lord. At this early period wealth and splendour, which in historic times were devoted to the more public uses of the agora, the council chamber, and the temples of the gods, were lavished on the palace of the chief. It is this period which is celebrated in the Homeric poems; which, there is every reason to believe, give us a faithful, if highly coloured, picture of the magnificence which adorned the dwellings of wealthy chiefs, such as Alcinous and, in a lesser degree, Ulysses. The recent discoveries made by Dr. Schliemann and Dr. Dörpfeld, within the massive walls of Tiryns (the Τίρυνς τειχιόεσσα of Homer), have for the first time shown us that the stately and richly decorated palaces of the Odyssey were not wholly the offspring of a poet's fancy.

Plan of the Palace of Tiryns.—Some doubt has been thrown on the remote antiquity of these remains; but new discoveries of a similar pre-historic building at Mycenae have put an end to any doubt as to the antiquity of the Tirynthian palace. On the whole the evidence of the general planning of the building, its methods of construction, and the style of its ornament give overwhelming proofs that the house is one which belongs to a far-off pre-historic period of Greek architecture, prior in all probability to the Dorian invasion of the Peloponnesus. The house itself occupies more than a third of the Tirynthian Acropolis, the massive stones of which excited the wonder of Herodotus, Diodorus, and Pausanias, and led to their being associated with the fables of Heracles and Perseus, and the mysterious Cyclops, who were supposed to have been their builders. The accompanying plan shows the arrangement of the house, which is evidently carefully designed to suit its special purpose.



Plan of the Palace at Tiryns.

1. Main entrance.
2. Inner gate.
3. First propylaeum.
4. Second propylaeum.
5. Open court.
6. Portico of hall.
7. Vestibule of hall.
8. Megaron.
9. Men's rooms.
10. Thalami.
11. Guard rooms.
12. Passage to women's part.
13. Open courts.
14. Thalamus or women's hall.
15. Thalami.
16. Passage to postern.
17. Narrow postern.
18. Projecting bastion.
19. Defences at the entrance.

On entering through the main gateway of the Acropolis, the approach (as shown by the dotted line on the plan) leads through a narrow passage, strongly defended on both sides by massive walls, to a second doorway. A continuation of the passage leads to the outer porch of the palace—a propylaeum, decorated on both sides by two columns *in antis*, very similar in design to the 5th-century propylaeum built by Ictinus at Eleusis. On passing this an outer court is reached; and then a second propylaeum, smaller but of similar design to the first, leads into the main courtyard of the palace. Rooms for guards are placed at the sides of both these propylaea. The main court (αὐλή), round which the apartments of the men are grouped, was surrounded on three sides by a colonnade (αἴθουσα), forming a cloister. Near the propylaeum stands a stone altar with a rock-cut hollow beneath it, into which the ashes would fall. This was probably an altar to Zeus ἑρκεῖος, which is frequently mentioned in the Odyssey (*e.g.* xxii. 335) as being placed in the courtyard of a house. Opposite the propylaeum is the great hall (μέγαρον, *Od.* xvi. 341, xvii. 604), with an open portico of two columns, and an inner porch (πρόδομος), into which three doors open from the portico, and one into the hall. The roof of the hall was supported on four columns, which probably carried a partly open lantern to give light, and also to form an escape for the smoke of the fire below, the circular stone hearth (ἐσχάρα) of which is placed midway between the pillars. On the west side of the hall are a number of small rooms for the use of the men; among them is a small bathroom, about 12 feet by 10 feet, the construction of which is very remarkable for its ingenuity and the extreme care which has been taken in the workmanship.

The whole floor is formed of one great slab of stone, smoothed accurately so as to fall to one point, where the water made its exit through a stone pipe, and so into the main drain. The walls were lined with wooden boards, each of which had its lower end fastened to the stone floor by two wooden pegs or dowels. The edge of stone on which these boards rested is raised about an inch above the general level of the floor, so that water splashed by the bathers might not soak in under the wooden wall-lining. The bath itself, which was made of clay decorated with a red spiral pattern, much resembled in shape and size the fire-clay baths now made in large quantities at Stourbridge.

The eastern half of the house seems to have been intended for the use of the women, and probably the married members of the chief's family. This portion, like the other, contains two open courts, and a hall with a single vestibule—all on a rather smaller scale. In this hall the hearth is square, and, the span being less, the roof was not supported by pillars. On the east of the hall and court are two ranges of rooms, more in number and larger than those on the men's side of the house. There appear to have been three means of access to the women's part: one by a long passage (λαύρη) leading from a side door in the outer propylaeum, another from the north-east corner of the men's court, while a third way led by a long passage round the back of the two halls to a rock-cut stairway, at the foot of which was a small postern door in the outer fortification wall. In case of a siege this little postern would be blocked up with stones, but in times of peace the women of the household probably used this path to fetch water from some spring in the plain below. When blockaded by an enemy, the garrison appear to have depended on their stores of rain-water, large cisterns for which were formed in the thickness of the outer wall. The surface water was collected and carried to the cisterns in clay pipes and stone drains.

In addition to the rooms on the ground-floor, the walls of which still exist to a height of from two to three feet, there was also an upper story (ὑπερώϊον), which probably extended over all the rooms except the two halls. Traces of a staircase in two flights still exist on the east side of the women's hall.

Construction of the Palace of Tiryns.—The walls, about three feet thick, are built of roughly-dressed limestone bedded in clay up to a height of about two feet above the floor level: the rest of the wall was of sun-dried brick, and the whole was covered inside and out with three coats of hard stucco, made of lime mixed with sand, gravel, and broken pottery, forming a coating nearly as hard as stone, which must have completely protected the unburnt bricks from the effects of weather.

The floors, both of the roofed parts and of the open courts, were made of a thick layer of good lime concrete. In the rooms the pavement was worked to a smooth surface, on which simple patterns of squares or spirals were incised, and then painted blue and red. Pliny (*H. N.* xxxvi. § 184; see below, p. 664*a*) speaks of painted floors having been used by the Greeks before mosaic came into use: those at Tiryns are the first examples of this kind of paving that have been found.

The concrete paving of the open-air courts is laid so as to fall towards open stone gullies, through which the rain-water escaped into the drains: its upper surface is formed of a sort of rough mosaic made of pebbles; these are set more closely together in places where there was most traffic.

The various doorways have massive stone sills or thresholds (λάϊνος οὐδός), mostly provided with two large drill-holes, in which the bronze pivots of the doors revolved, showing that in most cases folding doors were used. Some of these bronze pivots were found during the excavations: they are of very neat and solid workmanship, and much resemble the pivots of the great Balawat gates of Shalmaneser II. (859–824 B.C.), which are now in the British Museum. It is probable that the construction of the doors themselves in the Tirynthian palace resembled that of the Balawat doors. A number of thick wooden planks were placed side by side, and held in their place by strong bronze bands, which were nailed on to them, and lapped round the circular post on which the door swung: each end of this post was shod with a pivot, which revolved at the bottom in a hole drilled in the sill, and at the top in a similar hole in the lintel (ὑπερθύριον). The neatly-fitted planks are spoken of by Homer (*Od.* ii. 344) as σανίδες πυκινῶς ἀραρυῖαι. This method of hanging heavy doors lasted throughout the Greek and Roman periods, and was used, as can still be seen, for the great doors in Aurelian's wall round Rome. The wide bronze bands which were constructionally necessary for this sort of door formed also in some cases a rich and elaborate method of decoration, as they could be enriched with repoussé reliefs and gilt. A beautiful little earthenware box (*pyxis*) of the 4th century B.C. in the British Museum shows that doors of similar construction were used by the Greeks of later times. The painting on it represents a toilet scene in a lady's room, and in the background is a double door covered with wide bands, attached by rows of rivets along each edge, exactly like the Balawat doors. Owing to the use of soft unbaked brick for the jambs of the doorways, it was necessary to line the whole opening with woodwork, so as to protect the angles from injury. In some cases there seems to have been a stone lining, but even then the woodwork was not omitted. Grooves cut in the stone upright of some of the door-jambs (σταθμός) show with what extreme care and neatness the wood lining was fitted into its place. It is interesting to note that this system of using wooden door-linings survived till later times, and was used in cases where it would seem needless. Even the beautifully-finished white marble doorways in the Parthenon and Propylaea at Athens had their reveals concealed by wooden casings.

The roof of the men's hall was supported by four intermediate columns (*κίονες*), which, like all the columns at Tiryns, were made of wood, resting on a carefully-levelled block of stone. The construction of the roof, of which nothing but charred fragments and ashes remains, may be guessed from an early rock-tomb in Phrygia discovered by Prof. Ramsay (see *Journ. of Hellenic Studies*, iii. p. 19). In this a copy of a wooden roof is carved in the rock: it is a simple low-pitched roof, having a principal rafter with tie-beam and king-post. These principal rafters are, according to some commentators, the *μεσόδμαι* of Homer (*Od.* xix. 37); * the small rafters or ceiling joists being the *δοκοί* (*Od.* xxii. 176), and the ceiling itself the *μέλαθρον* (*Od.* viii. 279): the whole roof is called the *ὀροφή* (*Od.* xxii. 298). A similar arrangement of hall with central hearth and pillar-supported roof was discovered by Dr. Schliemann at Hissarlik, and in both cases there was an open porch with wooden columns.

Part of a wooden column found at Khorsabad shows us what was probably a common method of decoration: the whole was sheathed with plates of bronze, beaten so as to represent the scales on a palm-tree; the metal was then thickly gilt. This system of ornament is probably a survival of an earlier time when a real palm-tree, with all its outer scales still attached, was used as a support. In some of the rooms at Tiryns, part of the wall surface was decorated in a very magnificent way. The wall was first lined with wooden planks, and on these plates of bronze were nailed, *repoussé* with reliefs and gilt. Examples of these bronze linings on doors or walls, dating from the 6th century B.C., have been found at Olympia. The designs of these plates retain a very strongly-marked Oriental influence. Nothing could exceed the splendour of effect produced by these wall-linings of what would seem to be gleaming gold, broken into half-tones and high lights by their delicate reliefs. Homer's description of the bronze walls of the palace of Alcinous (*Od.* vii. 84) may have a foundation of reality; and even such apparently fabulous details as the golden doors and silver posts and lintels probably refer to a real custom of sheathing woodwork with gilt or silvered bronze.

Another of Homer's phrases, hitherto of somewhat doubtful meaning, has been rendered intelligible by a discovery at Tiryns. This is the *θριγκὸς κυάνοιο* (*Od.* vii. 87) which ornamented the walls of the hall of Alcinous. In the porch of the Megaron at Tiryns Dr. Dörpfeld discovered a frieze of alabaster, about 22 inches deep, which was carved with delicate patterns of rosettes and spirals, very early in character, and studded at intervals with jewel-like rows of bits of deep blue glass or paste, extremely magnificent in effect. The pieces of alabaster which form this magnificent frieze are fitted together with extreme neatness, the joints being concealed by rebates. Other similar fragments of friezes set with sham jewels have been found at Mycenae, Orchomenos, and Menidi.

All the wall surfaces at Tiryns which were not lined with bronze or with bands of alabaster and marble, seem to have been ornamented with paintings on stucco, executed in simple earth colours with much decorative effect. These paintings were of several different styles: some had simple patterns of chequers and spirals which were evidently copied from the designs on woven stuffs; others were human figures or beasts with great spreading wings of purely Oriental style, treated in a very effective way by painting the feathers in alternate colours—red, yellow, and white. One very spirited painting represents a man on the back of a bull galloping at full speed. The exterior of the building seems to have been decorated with similar paintings on the stucco, which protected the unbaked clay of the upper part of the walls from the effects of weather.

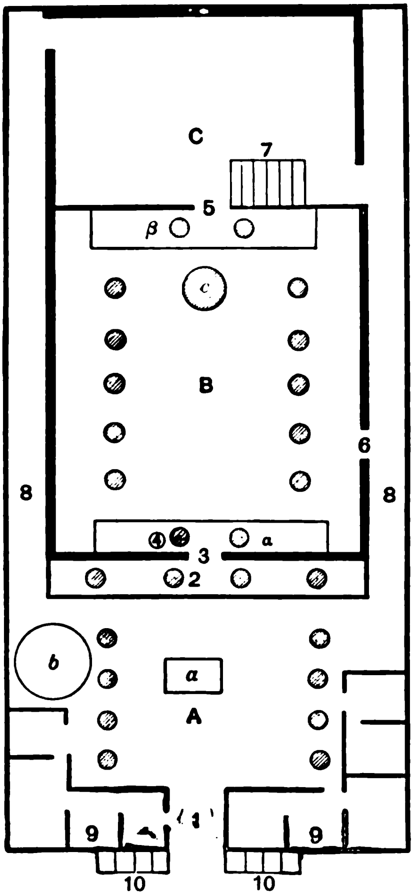
The Homeric Palace of Ulysses.—It is interesting to compare the palace of Tiryns with that of Ulysses as depicted in the Odyssey. Among the many descriptions of the latter, one of the clearest is that given by Prof. Gardner in the *Journal of Hellenic Studies* (vol. iii. p. 264 *seq.*), of which we subjoin an abstract, together with his ground-plan of the palace. But it is necessary to remember at the outset, as Prof. Gardner observes in the *Quarterly Review* (January 1886, p. 121), that there is this difference between the abode of Ulysses and the palace of Tiryns, that the former is rude and rustic, while the latter is more like "the glorious abode of Alcinous in Phaeacian fairy-land, or the splendid house of Menelaus, which glittered like the sun and moon as one drew near to it."

The Homeric house, observes Prof. Gardner, consisted of three parts: *αὐλή*, the fore-court; *δῶμα* or *μέγαρον*, the hall of the men; and *θάλαμος*, called in later times *γυναικωνῖτις*, the apartments of the women (*οἵ οἱ ἐποίησαν θάλαμον καὶ δῶμα καὶ αὐλήν*, *Il.* vi. 316). The house was entered by massive folding doors (*θύραι δικλίδες*, *Od.* xvii. 267), and on either side were stone seats (*ἕδραι*, cf. *Od.* iii. 406, xvi. 344). The doors led into the *αὐλή*, or open court-yard, which was used as a kind of farm-yard. On either side and behind were chambers (*θάλαμοι*) used for various purposes, such as grinding the corn (*Od.* xx. 105), sometimes for sleeping in (*Od.* xix. 48; *Il.* ix. 473). In one corner of the court was the *θόλος* (*Od.* xxii. 442, 459), a circular building, no trace of which is found in the palace at Tiryns. (See above, p. 654.) In the midst of the court was the altar of Zeus *ἑρκεῖος* (*Od.* xxii. 335), which, as we have already seen, existed at Tiryns. In the court were two colonnades or porticoes, each called *αἴθουσα*, one on either side right and left of the court-yard (*αἴθουσα αὐλῆς*), and the other opposite the entrance to the court-yard, and along the front of the *δῶμα* or *μέγαρον*. The latter is often considered as part of the *πρόδομος*, so that *αἴθουσα* and *πρόδομος* are often used as synonymous terms. [For references see AITHOUSA.] Crossing the *Aithousa*, the visitor passed into the *μέγαρον* or *δῶμα*, where the

---

* The meaning of *μεσόδμαι* is very doubtful, and has been variously explained by ancient and modern critics. According to the etymology, they were something built between, *i.e.* perhaps the spaces between the pillars. For the authorities see Gardner, *Journal of Hellenic Studies*, iii. p. 272; Hermann-Blümner, p. 146.

chiefs lived. At either end of the *megaron* was a door, one leading into the court-yard through the *aithousa*, and the other into the women's apartments, the θάλαμος, properly so called.



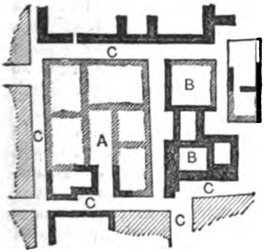
Palace of Ulysses. Ground-plan (Gardner).

A. αὐλή, fore-court.
a. Altar of Ζεὺς ἑρκεῖος.
b. θόλος.
B. δῶμα or μέγαρον, men's hall.
c. ἐσχάρα.
C. θάλαμος, women's hall.
1. θύραι δικλίδες.
2. αἴθουσα, πρόδομος.
3. θύρα.
4. δουροδόκη.
α. μέλινος οὐδός.
β. λάϊνος οὐδός.
5. θύρα.
6. ὀρσοθύρη.
7. κλίμαξ.
8. λαύρη.
9, 9. θάλαμοι.
10, 10. ἕδραι.

In front of either door was a threshold (οὐδός), probably raised. The threshold in front of the door into the *megaron* was made of ash-wood (μέλινος οὐδός, *Od.* xvii. 339), and the threshold in front of the door into the women's apartments was of stone, λάϊνος οὐδός (*Od.* xx. 258), a distinction which is most important, as Prof. Gardner points out, for understanding the combat between Ulysses and the suitors. By the ashen threshold was the δουροδόκη or spear stand, close to one of the pillars (*Od.* i. 128). The *megaron* was of great size. In the palace of Ulysses the three hundred suitors of Penelope feasted in it. Its height was that of the house itself, and its roof was supported by lofty pillars (κίονες, *Od.* xix. 38). In the upper part of the *megaron* was the ἐσχάρα, or hearth, where the food was cooked (*Od.* xx. 123), and the smoke escaped through a hole in the roof, as in the old Roman *atrium*. Such a hole, called καπνοδόκη, by Herodotus, is mentioned in an early Macedonian house, where the sun shone through it (Herod. viii. 137). Besides the two principal doors of the *megaron* already mentioned, there was a third, or postern-door, called ὀρσοθύρη (*Od.* xxii. 126, 132, 333), the position of which has given rise to much dispute. It should, however, probably be placed, for the reasons given by Gardner and Jebb, on the side of the *megaron*, as shown in the plan (Plan, 6), leading into the λαύρη (*Od.* xxii. 128, 137) or narrow passage, which gave access to the women's apartments from the outer court-yard, thus avoiding the necessity of passing through the *megaron* (Plan, 8).

The women's rooms, or θάλαμος, properly so called, also called μέγαρα γυναικῶν (*Od.* xxii. 151), were immediately behind the *megaron* on the ground-floor, directly communicating with the latter by a door. This is clear from the whole narrative in the Odyssey of the combat between Ulysses and the suitors. The passages proving this have been critically examined by Prof. Jebb in the essay quoted below. (Cf. *Od.* xvii. 506, xx. 389, &c.; see also iv. 718.) Here the women sat engaged in weaving and domestic occupations. Here was the nuptial chamber, with the marriage bed made by Ulysses with his own hands (*Od.* xxiii. 192, 295). The ordinary sleeping and other rooms of the women were in the upper story (ὑπερῷον), which was reached by a ladder, κλίμαξ (*Od.* xxi. 5; cf. *Od.* ii. 358, iv. 760; *Il.* ii. 514, xvi. 184; Eustath. *ad Od.* i. 328, p. 1420, 53). Hence we find Penelope, after sleeping with Ulysses in the nuptial chamber, ascending with her handmaids into the upper chamber (*Od.* xxiii. 364). It is therefore a mistake on the part of some modern writers to describe the women's rooms as situated only in the upper story. In the women's rooms was the armoury (θάλαμος ὅπλων, cf. *Od.* xxii. 140, 151–156), and the treasury at the further extremity (θάλαμος ἔσχατος), with a high roof (*Od.* xxi. 8). In the women's part of the house there was also an open court, in which grew an olive-tree in the palace of Ulysses (*Od.* xxiii. 190). There was a similar court in the palace of Priam, where fifty chambers were built for his fifty sons and their wives (*Il.* vi. 242). For other details of the Homeric house, the reader is referred to the works cited below. (Prof. Gardner, *Journ. of Hellenic Studies*, iii. p. 264 *seq.*; Jebb, *ibid.* vii. p. 170 *seq.*; Dörpfeld, in Schliemann's *Tiryns*, London, 1866, and a review of this work by Gardner in the *Quarterly Review* for January 1886; Winckler, *Die Wohnhäuser der Hellenen*, Berlin, 1868; Protodikos, *De Aedibus Homericis*, Leipzig, 1877; Rumpf, *De Aedibus Homericis*, Giessen, 1884, 1857. Valuable accounts of the architecture and other arts of the Homeric period are given by Helbig, *Das homerische Epos*, 1876; and by Buchholz, *Die homerischen Realien*, Leipzig, 1883–5.)

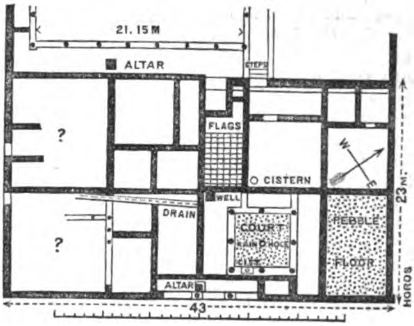
II. THE LATER GREEK HOUSE.—The discoveries of recent years have shown that bricks made of unbaked clay were very extensively used by the Greeks down to quite late times. This point is well brought out by Dr. Dörpfeld (vol. ix. of the *Mittheil. d. deutsch. archäol. Inst. in Athen*), who shows that even important structures, such as the Heraion at Olympia and the walls round Athens which were destroyed by Sulla, were mainly formed of sun-dried bricks. The same perishable material was commonly used for the private houses of the Greeks, and this is one reason why examples of Hellenic domestic architecture are so very rare. Burnt bricks were first introduced by the Romans (Blümner, *Technol. u. Terminol.*, &c. ii. p. 11). Till quite recently very few remains of Greek houses were known to exist. In the Ionian Antiquities there is figured a Greek house at Delos, of which a ground-plan is given by Guhl and Koner (p. 106, 5th ed.). The excavations, however, made in the Greek city of Naukratis in the Egyptian Delta during 1884–86 by Messrs. Petrie and Ernest Gardner have brought to light remains of a large number of Greek streets and houses, all built of sun-dried brick coated with painted stucco. The accompanying figure shows part of Mr. Petrie's discoveries:—A is a single house forming a complete *insula*, as the Romans would call it: it consists of six rooms, with what was probably a small central open court. B B appear to be shops. C C are narrow streets. In this Greek city the streets seem all to be very narrow, and the *insulae* are mostly very small; in many cases, like the figured example, consisting of one house only. Though but very scanty remains were found of the unbaked brick walls, yet in a few places patches of painted stucco on the exterior were found *in situ*. Though walls of this sort would last very well as long as they were roofed over and protected by their coating of hard stucco, yet when once they had fallen into a ruined state the process of decay would be rapid and complete, even in Egypt, and of course much more so in a more rainy climate.



Plan of a Greek house at Naukratis in Egypt.

The other most important examples of Greek domestic architecture which have yet been discovered are some houses in the Peiraeus, the foundations of which were exposed in 1884 during the laying out of a new street by the municipality. (See Dr. Dörpfeld in *Mittheil. d. deutsch. archäol. Inst. in Athen*, vol. ix., No. 3, 1884.) The figure shows a reduction made from Dr. Dörpfeld's plan.

On the S.E. and S.W. sides the block faces on to streets: it appears to be a double house, though this is not quite certain, owing to the impossibility of ascertaining the positions of all the doors. On the N.W. side remains were found of a large open peristyle, apparently derived from the αὐλή of the earlier Hellenic plan: under the covered porticus of this cloister an altar was found, probably dedicated to Zeus Herkeios.



Plan of a Greek house discovered in Peiraeus.

On the S.E. side the house was entered through a long shallow porch, with two columns, in which stood another altar, probably that of Apollo Agyieus. This porch led into a small open court, surrounded on three sides by a covered walk (στοὰ or *porticus*). The pavement of this was laid so as to drain into an open gully, through which the rain-water escaped into a drain. In one corner of the court was a well, and on the other side a stone cistern for storing water; a second cistern stood in the room adjoining the open court on the N.W. Some remains of paving were found, as is indicated on the plan. In one room it consists of stone flags; in another of a sort of rude mosaic, formed of pebbles set in concrete, as in the open courts of the palace at Tiryns. On the S.W. side are some rooms which were entered directly from the street: these may have been shops or public offices. Traces of a staircase leading to an upper floor were found at one end of the room with the flagging pavement. This block measures, without counting the large peristyle, about 140 feet by 75 feet. The clear open space of the peristyle was about 68 feet wide; its other dimension was not discovered. It is possible that this block may have been all part of the same house; one portion being the *andronitis* or men's part, and the rest the *gynaeconitis* or women's part.

During the most flourishing period of Greece the private houses appear to have been small and simple in design: splendour of materials and ornament were reserved for the temples of the gods and the public buildings, such as the Agora and the great στοαί, which in Athens especially contributed so largely to the architectural magnificence of the city. The front of the house towards the street was not large, as the apartments extended rather in the direction of its depth than of its width. In towns the houses were often built side by side, with party walls between (ὁμότοιχοι οἰκίαι, Thuc. ii. 3; Isaeus, *de Philoctem. hered.* § 39; Plut. *de Genio Socr* 33 Plaut. *Mil. Glor.* ii. 2). The exterior wall was plain, and often covered with plaster or stucco (Plut. *Comp. Arist. et Cat.* 4). Sometimes, as in Tanagra, the exterior was adorned with what was probably terra-cotta (Dicaearch. p. 245, Fuhr.). Plutarch says that

Phocion's house was ornamented with plates of bronze (Plut. *Phoc.* 18). Unbaked clay, as we have already shown, was used for the walls, with probably a good deal of timber in the upper story (Xen. *Mem.* iii. 1, § 7): thus it was easy for the Plataeans to break through the party walls of their houses, so as to communicate with each other (Thuc. *l. c.*). For the same reason the burglar was called *τοιχωρύχος*, because he found it easier to obtain an entrance into houses by breaking through the soft walls than by the door or windows (Plat. *Legg.* p. 831 E; Plut. *Dem.* 11).

Foreigners were specially struck by the mean appearance of the private houses of Athens in the time of Pericles, as strongly contrasting with the splendour of the public buildings (Thuc. ii. 14, 65). "A stranger," says Dicaearchus (p. 8), "might doubt upon a sudden view whether this were really the city of Athens," so mean were the houses and crooked and narrow the streets. It was not till the time of Demosthenes that good houses began to be built in Athens (Dem. *c. Aristocr.* p. 689, § 207 ff.; *Olynth.* iii. p. 35, § 25 ff.). Meidias built a house in Eleusis larger than any in that place (*c. Mid.* p. 565, 24; Boeckh, *Publ. Econ.* p. 65, Engl. Tr.; *Staatshaush.* i.^{2} p. 83). But after the time of Alexander the Great the decay of public spirit and the growth of private luxury led to the erection of larger and more richly decorated houses throughout the Greek cities, and especially in the chief colonies of Magna Graecia and Sicily. In cities such as Tarentum and Syracuse the costly magnificence of the private houses far surpassed those of the mother country.

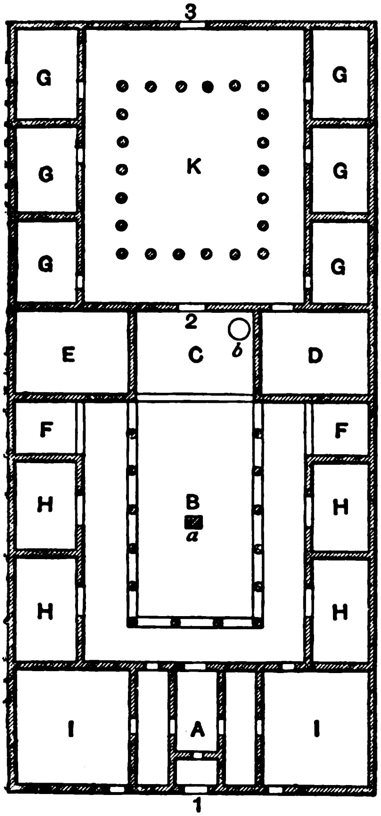
The views of Socrates as to the arrangement of a good house are given by Xenophon (*Mem.* iii. 8, §§ 9, 10). It should (he says) be cool in summer and warm in winter, with convenient accommodation for the family and their possessions. The chief rooms should be lofty, and should face the south so as to get the full rays of the sun in winter, while for the sake of shade, when the sun was high up in summer, the house was to be shaded by projecting eaves; the rooms on the north, for the sake of shelter, were to be lower. Paintings and any sort of elaborate decorations destroyed, Socrates thought, more pleasure than they gave.

In all cases the country houses must have been much finer buildings than those in the old cities, where streets were narrow and sites often very cramped (Isocr. *Areop.* § 20). Thucydides (ii. 14) speaks of the preference of the Athenians for houses in the country.

The plan and whole arrangement of town and country houses would naturally be absolutely different, and it is unreasonable to suppose that one fixed type of house was used by the Greeks. Existing remains show us that the Roman houses had as many varieties of plan as we have now, and yet many archaeologists have written as if there was one stereotyped plan of house used in classical times. The somewhat pedantic language of Vitruvius (vi. 7, 10) on the subject has tended to support the belief in the existence of one fixed type of Greek house, but at his date, in the reign of Augustus, archaeology was practically an unknown science, and it may reasonably be suggested that the so-called Greek plan of Vitruvius does not represent the domestic architecture of the bygone days when the Greeks were an independent race, but rather Vitruvius' private notion, as a practising architect, of a house to be built for some wealthy Roman in the revived pseudo-Hellenic style which began to be popular in the reigns of the early emperors of Rome.

That the domestic architecture of the Roman empire was to a great extent derived from that of the far more artistic Greeks is shown in many ways, and especially by the fact that nearly all the names used in Rome for the different parts of a house were not Latin, but Greek (see p. 667 *b*): yet it should be remembered that the luxurious and ostentatious habits of imperial Rome had little in common with the austere simplicity of private life in Greece during its period of glory, and that therefore it is almost certain that a plan and arrangement of house would be required in Rome very different from that used in Athens during the age of Pericles, or even much later. Nevertheless, with this important reservation, many of Vitruvius' statements may be of great use in illustrating difficult passages in older Greek writers, which treat of some details in the Hellenic house, especially when the description is compared with some of the existing Roman dwellings, which are evidently designed to some extent after a real or supposed Greek model.

Greek houses had three principal features in common. First, there were one or two open courts, surrounded by the various rooms. Secondly, in a Greek family the women lived in private apartments allotted to their respective use. Hence the house was always divided into two distinct portions,—the *Andronitis* (*ἀνδρωνῖτις*), or men's apartments; and the *Gynaeconitis* (*γυναικωνῖτις*), or women's apartments. Thirdly, the *Gynaeconitis* was, as a general rule, in larger houses behind the *Andronitis*, and on the same floor as the latter. Much difficulty has been occasioned in the arrangement of a Greek house by the statement of Vitruvius (vi. 7, (10)) that the principal entrance led at once into the *Gynaeconitis*, and that the *Andronitis* therefore was behind the women's rooms, or rather, if we construe his words strictly, by their side. ("Conjunguntur autem his [i.e. the *Gynaeconitis*] domus ampliores [i.e. the *Andronitis*].") But such an arrangement is alike inconsistent with the careful state of seclusion in which the Greek women were kept, and also with the positive statements of the writers of the period. It is very likely that Vitruvius misunderstood to some extent the descriptions given by his Greek authorities, and has assigned to the *Gynaeconitis* the arrangement of the *Andronitis*. In any case, as we have stated above, his account cannot be accepted as a correct representation of a Greek house in the period from the Peloponnesian war to the time of Alexander the Great. The general plan was much the same as that of the Homeric house. This is clearly brought out by Prof. Gardner in the essay already quoted. He shows that the Peristyle of the *Andronitis* is the successor of the Homeric *Aule*; the *Andron*, or eating-room, of the Homeric *Megaron*; and the peristyle of the *Gynaeconitis* of the Homeric *Thalamos*. "As the Greeks grew in culture and took to living in cities, the *Aule* would naturally become civilised, and the rooms round it part of the house, while the feeding-room of the men would lose its enormous proportions, and become a dining-room instead of a feasting hall." That this was the case is shown by the position of the altars of the deities, which were least likely to be changed in an ancient house. Thus the altar of Zeus *ἑρκεῖος* was situated alike in the Homeric *Aule* (see p. 657 *b*) and the historical court of the *Andronitis* (see p. 662 *a*), and the sacred hearth or altar of *Hestia* occupied the same position in the Homeric *Megaron* (p. 658 *b*) and the historical *Andron* (p. 662 *b*).



Plan of a Greek house. (Guhl and Koner.)

A. Entrance-hall.
B. Peristyle of the Andronitis.
  a. Altar of Zeus *ἑρκεῖος*.
C. Andron, or dining-hall.
  b. *ἑστία*.
K. Peristyle of the Gynaeconitis.
H. Rooms of the Andronitis.
F. Perhaps sanctuaries of the *θεοὶ κτήσιοι* and *θεοὶ πατρῷοι*.
D. Thalamos.
E. Amphithalamos.
G. Rooms of the Gynaeconitis, for working in wool and other purposes.
I. Rooms of the Andronitis, and in some houses perhaps shops opening to the street.
1. Πρόδομος, and further back, street-door, *αὔλειος θύρα*.
2. Door between the men and women's rooms, *μέσαυλος* or *μέταυλος θύρα*.
3. Garden-door, *κηπαία θύρα*.

The above plan of the ground-floor of a Greek house of the larger size, with two courts or peristyles, is taken, with slight alterations, from Guhl and Koner. It is of course conjectural, but it will serve for the *probable* arrangements (for further we cannot go) of the Greek house at the period we are speaking of. Other plans, differing very much from this, have been given by several modern writers; but this appears on the whole the most consistent with the ancient authorities. In smaller houses the Gynaeconitis was much more limited, having no open court, and in some cases, as we shall presently see, was restricted to the upper story.

1. *Fore-court.*—That there was, in some cases, no open space between the street and the house-door, like the Roman *vestibulum*, is plain from the law of Hippias, which laid a tax on house-doors opening outwards, because they encroached upon the street. (Aristot. *Oecon.* ii. 6, p. 1347, 5.) The *πρόθυρον*, which is sometimes mentioned (Herod. vi. 35), may be the space indicated in the cut before the passage A. We learn, however, from the same law of Hippias, that houses sometimes had projections encroaching upon the street (*προφράγματα* or *δρύφακτοι*, Aristot. *l. c.*; Heracl. Pont. *Polit.* 1). In front of the house was generally an altar of Apollo Agyieus, or a rude obelisk emblematical of the god. Sometimes there was a laurel-tree in the same position, and sometimes a terminal bust of the god Hermes or Hecate. (Thuc. vi. 27; Aristoph. *Thesm.* 489 *seq.*, *Vesp.* 804.)

2. *Entrance.*—A few steps (*ἀναβαθμοί*) led up to the house-door, which generally bore some inscription, for the sake of a good omen, or as a charm, such as Εἴσοδος Κράτητι Ἀγαθῷ Δαίμονι (Plut. *Frag. Vit. Crat.* p. 874). There was also frequently inscribed *μηδὲν εἰσίτω κακόν*, an inscription which has been found also at Pompeii and even in Kurdistan (Diog. Laërt. vi. 39, 50; *C. I. Gr.* No. 4673). The form and fastenings of the door are described under JANUA and CLAVIS. This door, as we have seen, sometimes opened outwards; but the opposite was the general rule, as is proved by the expressions used for opening, *ἐνδοῦναι*, and shutting it, *ἐπισπάσασθαι* and *ἐφελκύσασθαι*. (Plut. *Pelop.* 11; *Dion* 57.) Immediately behind the door was the sanctuary of Ἑρμῆς *στροφαῖος* (Aristoph. *Plut.* 1153).

The house-door was called *αὔλειος*, *αὐλεία*, *αὔλιος*, or *αὐλία θύρα* (Pind. *Nem.* i. 19; Menandros *ap.* Stob. *Serm.* xxxiv. 11; Harpocr. *s. v.*; Eustath. *ad Iliad.* xxii. 66, p. 1257, 17), because it led to the *αὐλή*. It gave admittance to a narrow passage called *θυρωρεῖον* by Vitruvius, and *πυλών*, *θυρών* by Pollux (i. 77), on one side of which, in a large house, according to Vitruvius, were the stables, on the other the porter's lodge. The duty of the porter (*θυρωρός*, *πυλωρός*) was to admit visitors, and to prevent anything improper from being carried into or out of the house. (Aristot. *Oecon.* i. 6, p. 1345 a.) It was also his duty to sweep the house (Pollux, x. 28). Plato (*Protag.* p. 314 D) gives a lively picture of an officious porter. The porter was attended by a dog. (Apollod. *apud* Athen. i. p. 3; Theocr. xv. 43; Aristoph.

Thesm. 416, *Equit.* 1025.) Hence the phrase **εὐλαβεῖσθαι τὴν κύνα** (Aristoph. *Lysistr.* 1215), corresponding to the Latin *Cave canem.*

At the further end of the passage Vitruvius places another door (*θυρωρεῖον* . . . locus inter duas januas), which, however, is not mentioned by other writers. Plutarch (*de Gen. Socr.* 18) mentions the house-door as being visible from the peristyle.

3. *Peristyle of the Andronitis* (Plan, B).—From the *θυρωρεῖον* we pass into the peristyle (*περιστύλιον*) of the *Andronitis.* This was the most important part of the house, corresponding to the Homeric *αὐλή*, by which name it is frequently called (Plat. *Protag.* p. 311 A, *Rep.* p. 328 C; Pollux, i. 77), though used for very different purposes. It was a court open to the sky in the centre (*ὕπαιθρον*), and surrounded on all four sides * by colonnades (*στοαί*), whence the name Peristyle. The one nearest the entrance was called *πρόστῳον* (Plat. *Protag.* p. 314 E), and the same name was also given to the colonnade *opposite* the entrance (*ἐν τῷ κατ' ἀντικρὺ προστῴῳ*, *ib.* p. 315 C). The word is also used by later writers as equivalent to *περιστύλιον* (Pollux, i. 77). These colonnades were used for exercise, and were sometimes of considerable extent, as in the house of wealthy Callias, and meals were occasionally taken in them (Plat. *l. c.*, *Symp.* p. 212; Plut. *de Gen. Socr.* 32; Dem. *in Euerg.* § 55; Pollux, i. 78). Here, as in the Homeric *aule*, was the altar of Zeus *ἑρκεῖος*, where sacrifices were offered (Harpocr. *s. v.*; Eustath. *ad Od.* xxii. 335; Plat. *Rep.* i. 328 C). The colonnades were arranged for the purpose of obtaining as much sun in winter, and as much shade and air in summer, as possible. (Xen. *Oecon.* ix. 4; *Mem.* iii. 8, § 9; Aristot. *Oecon.* i. 6.)

Round the peristyle were arranged the chambers used by the men called by the general name of *οἶκοι*, *οἰκήματα*, and *ἀνδρῶνες*, though the latter more specifically indicated a dining-room. (See below.) There were banqueting-rooms large enough to contain several sets of couches (*τρίκλινοι*, *ἑπτάκλινοι*, *τριακοντάκλινοι*), and at the same time to allow abundant room for attendants, musicians, and performers of games; parlours or sitting-rooms (*ἐξέδραι*), sleeping-rooms (*κοιτῶνες*, *οἰκήματα*), guest-chambers (*ξενῶνες*), picture-galleries and libraries, and sometimes store-rooms. The store-rooms were generally in the women's part of the house (see p. 663 *b*); but in the house of Callias a store-room (*ταμιεῖον*) in the *Andronitis* was fitted up as a guest's room (Plat. *Protag.* p. 315 D). In the arrangement of these apartments attention was paid to their aspect. (Vitruv. *l. c.*; Lys. *de caede Eratosth.* § 24, *in Eratosth.* § 10; Aristoph. *Eccles.* 8, 14; Pollux, i. 79, vii. 28, x. 32). The disposition of these rooms (Plan, H) is quite uncertain. F in plan, corresponding to the *alae* in a Roman house, may, according to Guhl and Koner, be the sanctuaries of the *θεοὶ κτήσιοι* and *πατρῷοι* (Lobeck, *Agl.* p. 1239; cf. Lycurg. *adv. Leocr.* § 25; Petersen, *Der geheime Gottesdienst bei d. Griechen*, Hamb. 1848), when these gods had sanctuaries in later times.

4. *Andron, or dining-hall* (Plan, C).—The *ἀνδρὼν* was situated in the centre of the house between the two courts opposite the entrance to the court of the *Andronitis.* It corresponds to the *μέγαρον* of Homer, but greatly reduced in size, as the court of the *Andronitis* contained the principal rooms for the men. Here stood the *ἑστία*, or sacred hearth, which is placed by Aeschylus in the centre of the house (*μεσόμφαλος ἑστία*, *Agam.* 1056); but in historical times it only stood as a symbol of domestic worship, the hearth being removed to a special kitchen (*ὀπτάνιον*). In later times it took the form of a round altar sacred to the goddess *Hestia*, the Roman *Vesta*, and was a sanctuary for suppliants. Thus it was the *Hestia* in the house of the Molossian king Admetus at which Themistocles took refuge (Thuc. i. 136; Plut. *Them.* 34), and it is mentioned as a place of refuge by Lysias in a small Greek house (*ἐπὶ τὴν ἑστίαν καταφυγών*, *de caede Eratosth.* § 27). The *Andron* is said by Xenophon to be the place where dinner was taken (*ἐπὶ τῷ ἀνδρῶνι ἔνθα τὸ δεῖπνον ἦν*, *Symp.* i. 13; cf. Aristoph. *Eccles.* 676), and Thales is represented by Plutarch as going through the porch to the banquet in the *Andron* (*εἰς τὸν ἀνδρῶνα διὰ τῆς στοᾶς*, *VII. Sap. Conv.* 3). In a Greek inscription a large dining-hall is called *ἀνδρεῖον* (*C. I. Gr.* 2554), and Pollux (i. 79) defines it generally as a place where men assemble (*ἀνδρὼν ἵνα συνίασιν οἱ ἄνδρες*). It is sometimes used as equivalent to *Andronitis*, and it is not always easy to distinguish its specific and more general meaning (cf. Herod. i. 34; Aeschyl. *Agam.* 243, *Choëph.* 712). The place occupied by the *Andron* is called by Vitruvius (*l. c.*) *προστὰς* or *παραστάς*, probably the same as the *παστὰς* of other writers, though he is clearly in error in placing it in the *Gynaeconitis*, as we have already seen. He says that on the side of the peristyle facing the south (*i.e.* opposite the entrance door) are two antae [ANTAE], at a considerable distance apart, which carry beams, and that the recess behind them is equal to one-third less than their distance from each other, and that this recess or room is called *προστὰς* or *παραστάς*. It is expressly identified by later writers with the *Andron*, and the word *παστὰς* is absurdly derived from feeding (*ἀπὸ τοῦ πάσασθαι*, Pollux, vi. 7; Schol. *ad* Apoll. Rhod. i. 789; *Etym. M.* p. 655, 46). It would seem that the word *παστὰς* or *προστὰς* did not originally signify a chamber, but simply a colonnade on the side of the peristyle opposite the entrance (Xen. *Mem.* iii. 8, 9; Herod. ii. 169), and was thus the same as the *πρόστῳον* mentioned by Plato in the passage already quoted (*Protag.* l. c.; see above, 3). We may therefore reasonably conjecture that the name was afterwards transferred from the colonnade to the dining-room lying immediately behind it; that is, to the *Andron.*

5. *Peristyle of the Gynaeconitis* (Plan, K).—The peristyle of the *Andronitis* was connected with that of the *Gynaeconitis* by a door called *μέταυλος*, *μέσαυλος*, or *μεσαύλιος*, which was in the middle of the portico of the peristyle of the *Andronitis*, or more specifically of the Andron.

---

* In Guhl's plan (p. 661) only three sides of colonnades are given, but from the passage of Plato there must have been a colonnade opposite the one at the entrance.

(See Plan, 2.) Vitruvius applies the name *μέσαυλος* to a passage between the two peristyles, in which was the *μέσαυλος θύρα*; but such a passage is not mentioned by other writers, and was probably suggested to Vitruvius by the position of the Roman *Fauces*. (See below, p. 671 *a*.) By means of this door all communication between the *Andronitis* and the *Gynaeconitis* could be shut off. Its uses are mentioned by Xenophon, who calls it *θύρα βαλανωτός* (*Oecon*. ix. 5; cf. Plut. *Arat*. 26). Its name *μέσαυλος* is evidently derived from *μέσος*, and means the door *between* the two *αὐλαὶ* or peristyles. (Suidas, *s. v.* *Μεσαύλιον*: Ael. Dion. *apud* Eustath. *ad Iliad*. xi. 547, p. 862, 17; Schol. *in* Apoll. Rhod. iii. 335.) The other name, *μέταυλος*, is taken by some writers as merely the Attic form of *μέσαυλος*. (Moer. *Att*. p. 264.) But Becker derives *μέταυλος* from *μετά*, as being the door *behind* or *beyond* the *αὐλή*, with respect to the *αὔλειος θύρα*. (Lys. *de caede Eratosth*. § 17; Plut. *Symp*. vii. 1; Ael. Dion. *apud Eustath*. l. c.)

This door gave admittance to the peristyle of the *Gynaeconitis*, which, like that of the *Andronitis*, was surrounded by colonnades. It was, as we have already said, situated in larger houses immediately behind the *Andronitis*. (Lys. *c. Simon*. § 6; Dem. *c. Euerg*. p. 1155, § 53; Xen. *Oecon*. ix. 5.) In like manner Sophocles, doubtless representing the practice of his own time, describes both sets of rooms as on the same floor (*Oed. Tyr*. 1241–1262). But in smaller houses, where there was no space for a separate court for women, the *Gynaeconitis* was in the upper story. Such was the case in the small house (*οἰκίδιον*) spoken of by Lysias (*de caede Eratosth*. § 19). There was the same arrangement in other houses (Aristoph. *Eccles*. 961, *Thesm*. 482; Babr. *Fab*. 116); and considering the small value of many houses at Athens (see below, p. 664 *b*), we may conclude that the women's rooms were often in the upper story. On the right and left of this *παστάς* (see above), according to Vitruvius, were two bed-chambers, the *θάλαμος* and *ἀμφιθάλαμος* (Plan, D, E), of which the former was the bed-chamber of the master and mistress of the house, and where also seem to have been kept the vases and other valuable articles of ornament. (Xen. *Oecon*. ix. 3.) The *Thalamus*, called by Sophocles *νυμφικὰ λέχη* (*Oed. Tyr*. 1242), is constantly described as the bridal chamber (Pind. *Pyth*. ii. 60; Soph. *Trach*. 913; Eur. *Hipp*. 940; Theocr. ii. 136), and was rebuilt or re-adorned on occasion of a marriage (*ἔθος ἦν τοῖς γήμασι θάλαμον οἰκοδομεῖσθαι*, Schol. *ad* Hom. *Il*. ii. 701; *νεόγραπτος θάλαμος*, Theocr. xviii. 3; cf. Theocr. xxvii. 36; Apoll. Rhod. iii. 36; Hesych. *s. v.* *θαλάμοιο νέοιο*). This chamber is frequently called *δωμάτιον* (Lys. *de caede Eratosth*. § 24; Aristoph. *Eccl*. 8; Theophr. *Char*. 13; Plat. *Rep*. iii. p. 390 C), and sometimes *παστὰς* or *παστός* (Theocr. xxiv. 46; *Anth. P*. ix. 245; Heliod. *Aethiop*. x. 16; Lucian, *Dial. Mort*. xxiii. 3; *Anth. P*. v. 52, vii. 711). In the *Thalamus* were placed the *θεοὶ γαμήλιοι*. The *Amphithalamus* is supposed by some to be the bed-chamber for the grown-up daughters of the family (cf. Achill. Tat. ii. 9). Beyond these rooms (for this seems to be what Vitruvius means by *in his locis introrsus*) were large apartments (*ἱστῶνες*) used for working in wool (*occi magni, in quibus matres familiarum cum lanificis habent sessionem*, Vitruv.). Round the peristyle were the eating-rooms, bed-chambers, store-rooms (*ταμιεῖα*, cf. Aristoph. *Lysistr*. 495), and other apartments in common use (*triclinia quotidiana, cubicula, et cellae familiaricae*). (Plan, G.)

Besides the *αὔλειος θύρα* and the *μέσαυλος θύρα*, there was a third door (*κηπαία θύρα*) leading to the garden. (Pollux, i. 76; Dem. *in Euerg*. p. 1155, § 53; Lys. *in Eratosth*. § 16.)

Some other matters connected with a Greek house require notice.

1. *Upper stories.*—When there was an upper story (*ὑπερῷον, διῆρες*), it seldom extended over the whole space occupied by the lower story. The principal use of the upper story was for the sleeping apartments, both of the family and of the slaves. (Cf. Dem. *in Euérg*. p. 1156, § 56, where the words *ἐν τῷ πύργῳ* seem to imply a building several stories high.) Houses rarely had more than two stories; but in later times we find in the larger towns mention of houses with three stories (as in Cyzicus, Aristid. *Or*. xvi. p. 390, Dind.; *τριστέγη*, Artemidor. iv. 46; so also in Troas, Acts xx. 8, 9). The access to the upper floor seems to have been sometimes by stairs (*ἀναβαθμοί*) on the outside of the house, leading up from the street, as was the case at Rome (see p. 665 *b*). (Aristot. *Oec*. ii. 5, p. 1347, 5; cf. Liv. xxxix. 14.) The upper story was sometimes let, or used for lodging guests. (Antiph. *de Venef*. § 14.) But in some large houses there were rooms set apart for the reception of guests (*ξενῶνες*) on the ground-floor. (Vitruv. *l. c.*; Pollux, iv. 125; Eurip. *Alcest*. 564.) In cases of emergency store-rooms were fitted up for the accommodation of guests. (Plat. *Protag*. p. 315 D; see p. 662 *a*.)

Portions of the upper story sometimes projected beyond the walls of the lower part, forming balconies or verandahs (*προβολαί, γεισιποδίσματα*, Pollux, i. 81), like the Roman *maeniana* (see cut, p. 666 *a*).

2. *Roofs.*—The roofs were generally flat, and it was customary to walk about upon them, as on the Solaria at Rome (see p. 672 *b*); (Lys. *adv. Simon*. § 11; Aristoph. *Lysistr*. 389; Plaut. *Mil*. ii. 2, 3;) or to pass from one house to another (Dem. *c. Androt*. p. 609, § 53). But high-pitched roofs were also used, covered with tiles (*κέραμος*, Galen, xviii. 1, p. 518, K.; Pollux, i. 81).

3. *Doors.*—For particulars, see JANUA and CLAVIS. In the interior of the house the place of doors was sometimes supplied by curtains (*παραπετάσματα, παρακαλύμματα*), which also hung between the pillars of the *Peristyle* (Aristoph. *Vesp*. 1215). They were either plain, or dyed, or embroidered. (Pollux, x. 32; Theophrast. 5.)

4. *Windows.*—The principal openings for the admission of light and air were in the uncovered *Peristyle* and perhaps in the roofed part of the peristyle; but it is incorrect to suppose that the houses had no windows (*θυρίδες*), or at least none overlooking the street. They appear to have been chiefly in the upper story; and in ancient works of art women are represented looking out of them. (Aristoph. *Thesm*. 797, *Eccles*. 961; Plut. *de Curios*. 13, *Dion* 56. Also called *φωταγωγοί*, Lucian. *Conv*. 20.)

5. *Privies.* — They were called ἀπόπατοι (Aristoph. *Acharn.* 81; Pollux, x. 44), ἄφοδοι (Aristoph. *Eccles.* 1059), κοπρῶνες (*Pax*, 99, *Thesm.* 485; Dem. c. *Arist y.* p. 785). Their position is nowhere expressly indicated, but they were probably, as in Roman houses (see below, p. 672 *a*), in proximity to the kitchen (Hermann-Blümner, p. 154).

6. *Heating.*—Artificial warmth was procured by little portable stoves (ἐσχάρια, ἐσχαρίδες), or chafing dishes (ἀνθράκια). (Plut. *Apophth.* i. p. 717; Aristoph. *Vesp.* 811; Pollux, vi. 89, x. 101.) [FOCUS.] It is supposed that the chimney was altogether unknown, and that the smoke escaped through an opening in the roof; but it is not easy to understand how this could be the case when there was an upper story. The καπνοδόκη mentioned by Herodotus (viii. 137) was not really a chimney, but only an opening in the roof (see above, p. 658 *b*). But the κάπνη in Aristophanes (*Vesp.* 143) seems to have been really a chimney, as it is described by the Scholiast on the passage as pipe-shaped (σωληνοειδής). In any case the chimney seems to have been only used in the kitchen (ὀπτάνιον, Alexis *ap.* Athen. ix. p. 386 b).

7. *Decoration.*—The decorations of the interior were very plain at the period to which our description refers. The floors were mere plaster. At a late period coloured stones were used. (Plin. *H. N.* xxxvi. § 184.) Mosaics are first mentioned as introduced under the kings of Pergamus.

The walls, up to the fourth century B.C., seem to have been only whitewashed. The first instance of painting them is that of Alcibiades (Andoc. *in Alcib.* § 17, Dem. *c. Mid.* § 147; Plut. *Alcib.* 16). This innovation met with considerable opposition (Xen. *Mem.* iii. 8, § 10; *Oecon.* ix. 2). Plato mentions the painting of the walls of houses as a mark of a τρυφῶσα πόλις (*Repub.* ii. p. 373 A). These allusions prove that the practice was not uncommon in the time of Plato and Xenophon. We have also mention of painted ceilings at the same period (Plat. *Repub.* vii. p. 529 B, cf. κατὰ τοίχου γράφειν, Lucian, *Hist. Conscr.* 29). At a later period this mode of decoration became general.

8. *Letting and price of houses.*—There was a great deal of speculation in the building and letting of houses at Athens (Xen. *Oecon.* iii. 1). A distinction was made at Athens between the *οἰκία*, which was a dwelling-house for a single family, and the *συνοικία*, which was adapted to hold several families—like the Roman *insula*. The distinction is thus expressed by Aeschines (*c. Timarch.* § 124): ὅπου μὲν γὰρ πολλοὶ μισθωσάμενοι μίαν οἴκησιν διελόμενοι ἔχουσι, συνοικίαν καλοῦμεν, ὅπου δ' εἷς ἐνοικεῖ, οἰκίαν. The lodging-houses were let mostly to foreigners who came to Athens on business, and especially to the μέτοικοι, whom the law did not allow to acquire real property, and who therefore could not purchase houses of their own (Dem. *pro Phorm.* p. 946, § 6). As they, with their families, formed a population of about 45,000, the number of συνοικίαι must have been considerable. Pasion, the banker, had a lodging-house valued at 100 minas (Dem. *c. Steph.* i. p. 1110, § 28). Xenophon recommended that the μέτοικοι should be encouraged to invest their money in houses, and that leave should be granted to the most respectable to build and become house proprietors (οἰκοδομησαμένοις ἐγκεκτῆσθαι, *de Vectig.* ii. 6). The ἰσοτελεῖς laboured under no such disability; for Lysias and his brother Polemarchus, who belonged to that class, were the owners of three houses. The value of houses must have varied according to the size, the build, the situation, and other circumstances. Those in the city were more valuable than those in the Peiraeus or the country, *caeteris paribus*. Two counting-houses are mentioned by Isaeus (*de Hagn. her.* § 42) as yielding a return of rather more than 8½ per cent. interest on the purchase-money. But this probably was much below the average. The summer season was the most profitable for the letting of houses, when merchants and other visitors flocked to Athens. The rent was commonly paid by the month. Lodging-houses were frequently taken on speculation by persons called ναύκληροι or σταθμοῦχοι (Ammon., Harpocrat., Phot., Hesych. *s. v.*), who made a profit by underletting them, and sometimes for not very reputable purposes (Isaeus, *de Philoct. her.* § 19). Boeckh has given an account from the ancient writers of the prices of houses at Athens, which seem to have been very small. They varied from 3 minas to 120 minas, according to their size, situation, and condition, from 30 to 50 minas being an ordinary price. (Boeckh, *Publ. Econ. of Athens*, pp. 65, 141; *Staatshaush.* i.^{3} p. 84.)

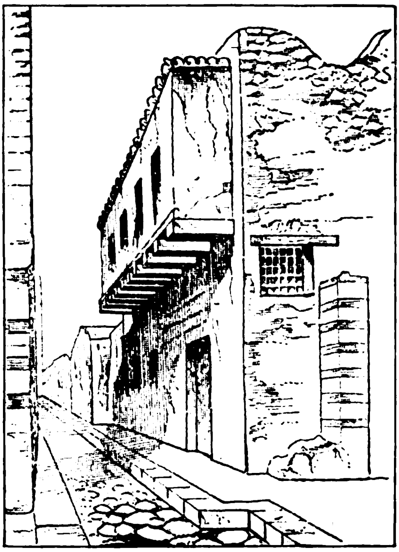
(The commentators on Vitruvius, *l. c.*; Schneider, *Epim. ad* Xen. *Mem.*; Hirt, *Die Lehre der Gebäude*, pp. 287–289; Stieglitz, *Archäol. d. Baukunst*, vol. ii. pt. 2, pp. 150–159; Krause, *Deinokrates*, p. 488 *seq.*; Winckler, *Die Wohnhäuser der Hellenen*, Berlin, 1868; Becker-Göll, *Charikles*, ii. p. 105 *seq.*; Hermann-Blümner, *Griech. Privatalt.* p. 143 *seq.*, Guhl and Koner, *Leben d. Griech. u. Röm.* p. 95 *seq.*, 5th ed.)

III. ROMAN.—The earliest dwellings of the Latins on the Palatine hill were probably mere huts of mud-daubed osiers, like the hut of Romulus, which was preserved as a sacred relic for many centuries. (See above, p. 654 *b*.) After the burning of Rome by the Gauls, the city was rebuilt in haste, with very narrow streets and on no regular plan (Liv. v. 55). Even the houses of the richest citizens were small and of inexpensive materials, such as unburnt brick, or the soft brown tufa which could be quarried in nearly all the hills of Rome. No examples of fired bricks are known in Roman buildings till the time of Julius Caesar; and the remarks of Vitruvius seem to refer wholly to crude or sun-dried bricks, of which no examples in Rome have survived to modern times. Down to the beginning of the last century of the republic, Romans of rank continued to live in small houses. In B.C. 125 the censors censured Lepidus, the augur, because he paid 6000 sesterces (about £50) for his house-rent (Vell. Pat. ii. 10); and Sulla, afterwards the dictator, when a young man, paid only 3000 sesterces for his rooms on the ground-floor, while a freedman in the upper part of the same house paid only 2000 sesterces (Plut. *Sull.* c. 1).

The earliest regulation we find respecting houses is a law of the XII. Tables, that each building should be separated from another by a space of 2½ feet, called *ambitus* (Fest. pp. 5, 11, M.; Varr. *L. L.* v. 22; Isidor. xv. 16, 12). But this enactment was disregarded, and was again enforced by Nero, when he rebuilt the city (Tac. *Ann.* xv. 43; see below, p. 666 *b*). As the city increased in population, the houses were raised in height. "The immense size and population of Rome," says Vitruvius (ii. 8, 17), "make it necessary to have a vast number of habitations; and as the area is not sufficient to contain them all on the ground-floor, the nature of the case compels us to raise them in the air." The buildings thus referred to are the *Insulae*, which must be carefully distinguished from the *Domus*. The *insula*, in which the lower and middle classes lived, was a building of several stories, let out in floors or separate rooms to different families or persons. The *domus* or *aedes privatae* (Suet. *Ner.* 44), on the contrary, was a separate house, in later times a palace, usually with only one story above the ground-floor, the abode of the rich and great, and inhabited for the most part by a single family; though, as in the case of the palazzi in modern Rome, parts of them, especially at the back or top of the *domus*, were sometimes let out (Plaut. *Trin.* i. 2, 157; Liv. xxxix. 14, 2; Suet. *Ner.* 44, *Vitell.* 7). In the general description of a Roman house our remarks apply only to the *domus*, properly so called, as the *insula* was built on an entirely different plan. But we must say a few words on the *insula*.

The *insula* is defined by Festus (p. 111, M.) to be a building not joined by common walls with neighbouring houses, and surrounded by a street, so that it stood like an island surrounded by rivers or the sea. It was thus, as has been said, very much like one of the large hotels in modern cities, with one or more courts, and bounded on all sides by streets, like the Louvre hotel at Paris. The ground-floor was usually let out in shops (*tabernae*), and the upper stories in flats or separate rooms, as in continental cities in the present day. Such an *insula*, containing various tenements and shops, is the house of Pansa at Pompeii, described below (see p. 681 *b*). The number of *insulae* at Rome naturally exceeded that of the *domus*; and accordingly we find in the "Notitia," which was compiled between A.D. 334 and 357, that there were at Rome 44,171 *insulae* and 1782 *domus* (Marquardt, *Staatsverw.* ii. p. 120). To the same effect Suetonius, in describing the fire at Rome under Nero, speaks of the "immense number" of *insulae* that were burnt, in addition to the palaces (*domus*) of the nobles (Suet. *Ner.* 38). Other writers, in like manner, distinguish between the *insulae* and *domus* (Sen. *de Benef.* vi. 5, 5; Tac. *Ann.* xv. 43; Suet. *Ner.* 16; Cic. *de Off.* iii. 16, 65). Becker and some other writers erroneously suppose that a single floor or a separate room in such a house was also called *insula*, but the proper name for such a separate lodging was *cenaculum* (Becker-Göll, *Gallus*, ii. p. 221). The *insulae* are first mentioned in B.C. 456 in connexion with the Lex Icilia *de Aventino publicando*, from which it appears that each occupier had a story in absolute ownership, and could alienate and transmit it, as is customary in modern Rome and other continental cities (Dionys. x. 32; Niebuhr, *Hist. of Rome*, ii. p. 301, Engl. Tr.). But it was apparently more usual for an *insula* to have been built on speculation, and let by the proprietor to different occupants (Plut. *Crass.* 2; Mart. iv. 37). Hence the stories or separate rooms were called *cenacula meritoria* (Suet. *Vit.* 7; Juv. iii. 234; Dig. 7, 1, 13, § 8) or *conducta* (Dig. 19, 2, 30; cf. "mutat cenacula," Hor. *Ep.* i. 1, 91). Cicero had some shops, which he let (Cic. *ad Att.* xiv. 9; "merces insularum," *ib.* xv. 17). The rent (*pensio*, Juv. ix. 63) at Rome was considerable, even for a miserable garret (Juv. iii. 166, 225; cf. Mart. iii. 30, 3). Poor persons in the time of Julius Caesar appear to have paid 2000 sesterces (£17 or £18) as the usual rent (Suet. *Caes.* 38). Caelius was said to have paid 30,000 sesterces (about £266) for the rent of a third floor in the *insula* of P. Clodius, though Cicero says the real rent was only one-third of this sum (Cic. *Cael.* 7, 17). Hence it was a profitable speculation to build or hire a whole *insula*, and to sublet the *cenacula* to different tenants (Dig. 19, 2, 30). The *insularii* were not the occupants of the *insulae*, but those who had charge of the *insulae* and collected the rents. They were also called *procuratores insularum* (Dig. 1, 15, 4; 7, 8, 16; Petron. 95, 96; Becker-Göll, *Gallus*, i. p. 17). The *insula* appears to have been named after the person to whom it belonged. Thus we find in inscriptions the *insula Arriana Polliana*, the *insula Sertoriana*, &c. (Orelli, *Inscr.* 4324, 4331).

The upper stories and the separate rooms of the *insula* were, as we have already said, called *cenacula*. This word properly signifies rooms to dine in; but after it became the fashion to dine in the upper part of the house, all the rooms above the ground-floor were called *cenacula* (Varr. *L. L.* v. 162). Hence Festus says (p. 54, M.), "cenacula dicuntur, ad quae scalis ascenditur." Jupiter humorously describes his abode, "in superiore qui habito cenaculo" (Plaut. *Amph.* iii. 1, 3); Ennius speaks of "cenacula maxima coeli" (*ap.* Tertull. *adv. Valent.* 7); and Prudentius (*c. Symm.* i. 580) of "celsa cenacula." There were different flights of stairs connecting the upper stories with the lower part of the house, as we find to be the case in houses at Pompeii. Sometimes the stairs had no connexion with the lower part of the house, but ascended at once from the street. (Liv. xxxix. 14, 2; xxi. 62, 3; "si cenaculum ex publico aditum habeat," Dig. 43, 17, 3, § 7). As the different stories could not all be lighted from openings in the roof, as in the *domus*, they had windows looking out into the street (Liv. i. 41, xxiv. 21; Prop. v. (iv.) 7, 15, *seq.*; Juv. vi. 31). (On *windows*, see p. 686 *a*.) They also had sometimes balconies, supported by brackets, projecting into the street, from which an occupant could shake hands with his next door or opposite neighbour (Mart. i. 86). These balconies were called *maeniana*, and the same name was also given to the stories which projected over those below, as we see in some old houses in England. (Fest. p. 134, 22, M.; Isidor. xv. 3, 11; Vitruv. v. 1, 2; Val. Max. ix. 12, 7; Cic. *Acad.* iv. 22, 70; Dig. 50, 16, 242.) Projecting stories were forbidden in A.D. 368 to be erected in Rome (Amm. Marc. xxvii. 9, 8) on account of the narrowness of the streets and were again forbidden by the emperors Honorius and Theodosius, unless there was an open space in some cases of ten, in others of fifteen feet, clear of any adjacent building (Cod. Just. 8, 10, 11; Becker-Göll, *Gallus*, ii. p. 287). Such a projecting story is seen in some of the Pompeian houses.



Maenianum or projecting story. (Overbeck, *Pomp.* p. 249.)

We find mention of a house three stories high in B.C. 218 (Liv. xxi. 62, 3); and Martial (i. 117, 7) considered the third story, where he lived, as very high. If we were to estimate the height of the Roman houses by the way in which they are spoken of by the ancient writers, we should probably assign to them too many stories; for the houses, as Friedländer observes, probably appeared higher than they really were in consequence of the narrowness of the streets. We have no express mention of any houses more than four stories high. In Juvenal's description of Rome (iii. 199 *seq.*) the dwellings of the poor are in the fourth story, under the roofs, where the doves lay their eggs. In the same satire he describes (iii. 269) the danger to which the passing traveller was exposed from the potsherds thrown from the lofty house-tops ("tectis sublimibus"). So frequently were persons injured in this way that the praetor gave them a right of action against the occupier. [DEJECTI EFFUSIVE ACTIO.] But from various circumstances we may infer that some of the houses at Rome had a larger number of stories than are expressly mentioned. Thus, as we shall presently see, Augustus limited the height of houses to 70 feet, which implies that they had been built still higher, and Cicero describes the houses as hoisted up and suspended in the air ("Romam cenaculis sublatam atque suspensam," *Leg. Agr.* ii. 35, 96). In like manner Tertullian (*adv. Valent.* c. 7) compares the Gnostic idea of several stages in heaven to an insula called *Felicula*, which seems to have been celebrated for its numerous stories. (On the height of Roman houses, see Friedländer, *Sittengesch. Roms*, i. p. 5 *seq.*)

The houses let for hire were in Rome, as in London at the present day, badly built by speculators. The upper stories were of wood (*tabulata, contignationes*), and frequently fell down, while their material made them more liable to fires, which were very frequent in Rome. Many of the houses were propped up, and old cracks simply plastered over (Juv. iii. 193 *seq.*). Catullus speaks ironically of the advantages of a beggar, who had nothing to fear from the fire or fall of houses ("non incendia, non graves ruinas," Catull. xxiii. 9); Strabo mentions both dangers (v. p. 235); and the fear of them drove timid persons out of Rome ("incendia, lapsus," Juv. i. 7; cf. Sen. *Ep.* 91, § 13; "tanta altitudo aedificiorum est, ut neque adversus ignem praesidium nec ex ruinis ullum ullam in partem effugium sit," *de Controv.* ii. 9; Plin. *H. N.* xxxvi. § 110). The returns from house property in Rome were large, but people feared to invest in it on account of fires (Gell. xv. 1). The inundations of the Tiber also caused the fall of houses (Tac. *Ann.* i. 76; Suet. *Aug.* 30). (For further details, see Friedländer, i. p. 26 *seq.*)

To guard against these dangers, in the reign of Augustus the height of new houses in streets was limited to seventy feet, by a "Metropolitan Building Act," as it would now be called (Strab. v. p. 235). Augustus recommended a work on this subject by Rutilius, entitled "De Modo Aedificiorum" (Suet. *Aug.* 89). Vitruvius (ii. 8, 17) gives some of the provisions of this Act, *e.g.* that houses, if several stories high, were to be built *pilis lapideis, structuris testaceis, parietibus caementitiis*; that is, on stone piers, with walls of concrete and burnt brick,—not of sun-dried clay, as had been the usual custom. It was not, however, till the reign of Nero that a complete reform was effected in the arrangement and construction of the houses and streets of Rome. Nero had a new and elaborate Building Act drawn up, which required fire-proof materials, such as *peperino*, a hard volcanic stone, to be used for the external walls of houses. He also enacted that each building should have separate walls, and a space (*ambitus*) left open all round it. As a means of escape and assistance in the case of fire, he also caused arcades or colonnades to be built at his own expense in front of the *insulae*. (See p. 672 *b.*) It is not improbable that Nero, as Tacitus and Suetonius seem to think, wilfully caused the great fire which destroyed so much of Rome, in order that his new Act might come into immediate effect, and also that he might lay out the streets on wider and straighter lines (Tac. *Ann.* xv. 43; Suet. *Ner.* 38). In Trajan's reign the limit of height for street houses was fixed at sixty feet (Aur. Victor, *Epit.* 13). The emperors Antoninus and Verus again made an ordinance about the space to be left round the *insulae* (Dig. 8, 2, 14).

We now turn to the history and construction of the *domus*, or mansion of the great and wealthy. It was not till the last century of the republic, when wealth had been acquired by conquests in the East, that houses of any splendour began to be built; but it then became the fashion, not only to build houses of an immense size, but to adorn them with marble columns, paintings, statues, and costly works of art. They covered a large space, most of the rooms being on the ground-floor. The spacious *atria* and *peristylia*, being open to the sky, did not permit an upper story, which, if it existed, must have been confined to the sides of the building, and could not have been very high, as otherwise it would have darkened the *atria* and *peristylia*. These splendid mansions were erected for the most part on the hills, and along the slopes of the Palatine, on the side near the Forum, which was the favourite quarter for the Roman nobles. In later times the various palaces of the emperors swallowed up almost the whole of this favourite site, especially the palace of Caligula, which was built over the place where Cicero, Clodius, Crassus, and other famous men once resided.

The house of the orator L. Crassus on the Palatine, built about 92 B.C., was the first which had marble columns,—namely, the six (or four) columns of the atrium, 12 feet in height, which were of Hymettian marble. For this Crassus was severely blamed; and the stern republican M. Brutus nicknamed him the "Palatine Venus" (Plin. *H. N.* xxxvi. § 7, xvii. §§ 2-6; Val. Max. ix. 1, § 4). This house was valued at 6,000,000 sesterces, about £62,000 (Val. Max. *l. c.*); but Pliny says (xvii. § 2) that it yielded in magnificence to the house of Q. Catulus on the same hill, and was much inferior to that of C. Aquilius on the Viminal. The house of Catulus had a fine colonnade (*porticus*), adorned with the spoils of the Cimbric war. It was near the house of Cicero, as a portion of the colonnade was destroyed when Clodius razed the house of Cicero (Val. Max. vi. 3, § 1; Cic. *pro Dom.* 43, 114; *ad Att.* iv. 2, 4, iv. 3, 2; *ad Q. Fr.* iii. 1, 4, § 14).

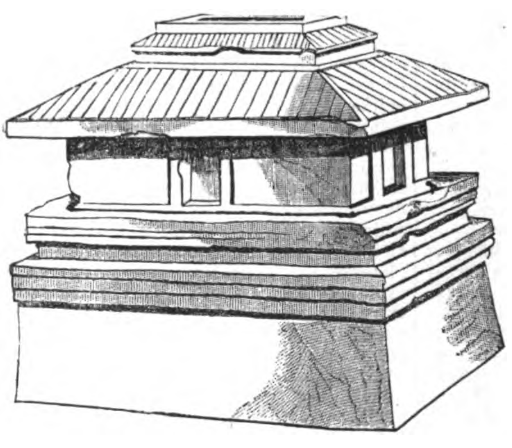
In 78 B.C. M. Lepidus, for the first time in Rome, used the rich Numidian marble (mod. *giallo antico*) not only for columns, but even for the thresholds of his doors (Plin. *H. N.* xxxvi. § 48); but the fashion of building magnificent houses increased so rapidly that the house of Lepidus, which, in his consulship, was the first in Rome, was thirty-five years later eclipsed by a hundred others (Plin. xxxvi. § 109). Lucullus was especially celebrated for the magnificence of his houses (Cic. *de Off.* i. 39, 140). The Romans were exceedingly partial to marble for the decoration of their houses. Pliny (*H. N.* xxxvi. § 48), quoting Cornelius Nepos, says that marble slabs were first used for wall-linings by a knight named Mamurra, one of Caesar's prefects in Gaul: in whose house were columns of Carystian (*cipollino*) and Luna marble. A further advance in costly magnificence was made by the aedile M. Aemilius Scaurus in the middle of the first century B.C. He purchased the above-named house of L. Crassus and greatly enlarged it. He introduced, as the supports of his atrium, columns of the black "Lucullean" marble no less than 38 feet in height, the weight of which was so great that he had to provide security for an indemnity in case of injury that might be done to the main sewers, while these immense blocks of marble were being brought along the streets (Plin. *H. N.* xxxvi. § 5 *seq.*). This house was sold to Clodius for nearly 15 million sesterces, about £132,000; a price, says Pliny, worthy of the madness of kings (Ascon. *in Mil.* p. 33, Or.; Plin. *H. N.* xxxvi. § 115). This is the highest price recorded in the time of the republic for a house. The consul Messalla bought the house of Autronius for 3,400,000 sesterces, about £29,000, and Cicero the house of Crassus (not L. Crassus, the orator) for 3,500,000 sesterces, about £30,000 (Cic. *ad Att.* i. 13, 6, with Tyrrell's note; *ad Fam.* v. 6). Cicero's house was on the lower slope of the Palatine towards the *Regia*, the official residence of Julius Caesar as Pontifex Maximus, whom Cicero calls his neighbour (*ad Fam.* v. 6; *ad Att.* xiii. 45). It was originally built by M. Livius Drusus, from whom it passed to Crassus, of whom Cicero bought it. It was destroyed by Clodius during Cicero's exile, but was rebuilt at the public expense on his return (Vell. Pat. ii. 14; Cic. *pro Dom.* 37). These houses will serve as samples of the value of the mansions of the nobles during the republic. Sallust speaks of them like cities in size (*Cat.* 12), and Seneca describes them in the same terms under the empire (*Ep.* 90, 43), when the imperial palaces, of which we shall speak further on, became still more magnificent. Many of them, like the houses of Sallust and Maecenas, described below, were surrounded by gardens. The rich noble, we are told, was not content unless he had a *rus in urbe* (Mart. xii. 57, 21; cf. viii. 68, 2), and the extensive pleasure-grounds are alluded to in other passages (cf. Mart. xii. 50; Sen. *Ep.* 114, 9). The *atria* and *peristylia*, with the baths and other public rooms described by Vitruvius, were magnificent, but the sleeping and other private rooms were small and inconvenient, so that Martial, after describing one of these mansions, adds (xii. 50, 7):

"Atria longa patent. Sed nec cenantibus usquam,
Nec somno locus est. Quam bene non habitas!"

In describing the *domus* properly so called, our chief authority is Vitruvius, whose descriptions of the various parts are elucidated by the existing remains of houses at Pompeii. There can be no doubt that the latter are constructed upon the model of the houses at Rome; and not, as some have supposed, borrowed from the Greeks. The municipal towns imitated in their buildings those of Rome, as Friedländer has pointed out (*Sittengesch. Roms*, iii. p. 114). The plan and arrangement of the Pompeian houses not only correspond in general with the description of Vitruvius, but we find in them the *atrium*, the *alae*, the *tablinum*, and the *fauces*, which are all characteristic of a Roman house, and have no counterpart in a Greek house. Moreover, the Pompeian houses resemble those in the Capitoline plan of Rome, made in the reign of Septimius Severus (see the plan below, p. 676 *a*), and the house of Livia on the Palatine (see below, p. 674) (Marquardt, *Privatl.* p. 211). Still, it should be observed that the Romans themselves derived all the later and ornamental additions to their houses from the Greeks, as the names themselves show, their *peristylia*, *triclinia*, *oeci*, *exedrae*, *diaetae*, *pinacothecae*, *bibliothecae*, &c. Moreover, in the disposition and arrangement of the rooms, it should be remembered that Vitruvius in his description of a Roman house, as of a Greek house, is giving his own private views on the subject, and not simply describing the existing methods of arrangement. His chapters on this subject are chiefly useful to the modern student for the long list of names which he gives to the various parts of the house, and his indications of the special uses of each part. Still the chief rooms in the house of a wealthy Roman appear to have been arranged in the same manner, while the others varied according to the taste and circumstances of the owner.

According to Vitruvius, the principal parts of a Roman house were—1. *Vestibulum*, 2. *Ostium*, 3. *Atrium*, 4. *Alae*, 5. *Tablinum*, 6. *Fauces*, 7. *Peristylium*. The parts of a house which were considered of less importance, and of which the arrangement differed in different houses, were — 1. *Cubicula*, 2. *Triclinia*, 3. *Oeci*, 4. *Exedrae*, 5. *Pinacotheca*, 6. *Bibliotheca*, 7. *Balineum*, 8. *Culina*, 9. *Cenacula*, 10. *Lararium* or *Sacrarium*, 11. *Diaetae*, 12. *Solaria*. We shall speak of each in order.

But before doing so, it must be observed that the old Roman house contained only one room, the *atrium*, to which all other rooms were subsequently added, and that this was probably the name of the old Roman house. Thus we find that there was in Rome a considerable number of old buildings of simple construction bearing the name of *atrium*, such as the *atrium Vestae*, in which the Vestals lived, the *atrium sutorium*, the *atrium Libertatis*, the *atria Tiberina*, *atria Licinia*, *atria auctionaria*, and others (Marquardt, *Röm. Staatsverw.* iii. p. 155). The *atrium* was probably derived from the Etruscans, though we need not accept the etymology of Varro (*L. L.* v. 161), that it came from the Etruscan town of Atria or Adria. Some ancient writers, indeed, derive it from the Latin word *ater* (Serv. *ad* Verg. *Aen.* i. 726; Isidor. *Or.* xv. 3, 4), an etymology accepted by many modern writers, and among others by Marquardt; but the Etruscan origin is the more probable. Its earliest form is represented in Etruscan cinerary urns, of which an example is given below, where we see the opening in the roof, and the entrance door leading direct into the *atrium*. This opening was intended to give light to the building, and as a vent for the smoke, but as the *atrium* became enlarged, it took the form of the *compluvium* or *impluvium* mentioned below. The roof was supported by four beams, crossing each other at right angles, and sloping towards the roof in the centre. This kind of roof, only found in later times in small houses, retained in memory of its origin the name of *Tuscan* (Vitruv. vi. 3). The development of the *atrium* is explained further on. We now follow the description of Vitruvius.



Cinerary urn, in the form of an Etruscan house, from Chiusi, the ancient Clusium. (Dennis, *Etruria*, ii. p. 315.)

1. VESTIBULUM. There has been much dispute respecting the exact signification of this word, which has arisen from the different meanings attached to it at different periods of history and in different kinds of houses. In the palaces of the nobles the *vestibulum* was a vacant space before the house, forming a courtyard or entrance-court, surrounded on three sides by the house, and open on the fourth to the street. The two wings ran out beyond the façade of the building, and the door was in the third side opposite the street. In some houses the projecting sides were occupied by shops opening into the street. In the *vestibulum* the clients assembled, till the door was opened, to pay their respects (*salutatio*) to the master of the house, so that they might not be left standing either in the street or within the house (Gell. xvi. 5, §§ 3, 8, "vestibulum, quod est ante domum," Varr. *L. L.* vii. 81; Macrob. vi. 8, § 15; Sen. *ad Marc.* 10, 1; Quintil. xi. 2, § 20; Cic. *Caec.* 12, 35; Mil. 27, 75). Hence the "vestibula regalia alta," or "magnifica vestibula," as Vitruvius calls them, were only required by the nobility on account of the *salutatio*; and the ordinary citizens ("qui communi fortuna sunt") had no occasion for a *vestibulum* (Vitruv. vi. 8, §§ 1, 2). Accordingly, in the smaller houses in Rome and the municipal towns, there was either no *vestibulum*, so that the door opened straight upon the street, as in the Capitoline plan of Rome (see cut, p. 676 *a*), or the *vestibulum* was simply indicated by the door standing back a few feet from the street, as in many of the houses at Pompeii. (See plans of house of the Tragic Poet, p. 681 *a*, and house of Pansa, p. 681 *b*.) Sometimes there were steps from the street leading up to the *vestibulum* (Sen. *Ep.* 84). In the houses of the nobility the *vestibulum* was adorned with statues, arms, and other trophies (Plin. *H. N.* xxxv. § 7; Liv. x. 7, xxii. 57; Cic. *Phil.* ii. 28, 68; Verg. *Aen.* ii. 504; Tibull. i. 1, 54; Ov. *Trist.* iii. 1, 33; Suet. *Tib.* 26, *Ner.* 38), sometimes with quadrigae (Juv. vii. 125; Sil. Ital. vi. 434); and in the *vestibulum* before the Golden House of Nero there was the colossal figure of the emperor, 120 feet in height (Suet. *Ner.* 31). [COLOSSUS.] It was for the most part uncovered (Plaut. *Most.* iii. 2, 132), but sometimes had a porticus or colonnade (Suet. *Ner.* 16; Tac. *Ann.* xv. 43), and was adorned with trees or shrubs (Verg. *Georg.* iv 20). But as the influence of the nobility declined in the first century of the Christian era, and the clients gradually disappeared, there was no longer any occasion for a *vestibulum* in the houses of the nobles; and hence the exact meaning of the word became a matter of dispute among anti-

quarians in the time of the Antonines (Gell. xvi. 5, §§ 2, 8). Moreover, as the master of the house no longer lived in the *atrium*, but in the *peristylium* and the adjoining rooms, the *atrium* became the place of waiting for visitors, and is thus sometimes apparently used as synonymous with *vestibulum* (Liv. v. 41, § 2; Ov. *Fast.* vi. 297; Suet. *Aug.* 100).

Public buildings also had *vestibula*, as the curia or senate-house (Liv. i. 48, ii. 48), and various temples (Liv. *Ep.* 86; Val. Max. i. 8, §§ 2, 11; Tac. *Hist.* i. 86: cf. Marquardt, *Privatl.* p. 219; Becker-Göll, *Gallus*, ii. p. 239).

2. OSTIUM. The *ostium* was the entrance to the house (Vitruv. *ap.* Serv. *ad* Verg. *Aen.* vi. 43; Isidor. xv. 7), and is constantly used as synonymous with *janua* and *fores*, the door. But *ostium* properly signified the small vacant space before the *janua*, whence Plautus (*Pers.* v. 1, 6) says *ante ostium et januam.* Here stood the *antae*, two posts or pillars flanking the doorway (Isidor. *l. c.*; Fest. p. 16, M.). [ANTAE.] On the threshold the word *Salve* was frequently wrought in mosaic, as we see in the Pompeian houses; and over the threshold there sometimes hung a cage containing a magpie (*pica*) or a parrot (*psittacus*), taught to greet those who entered (Petron. 28; "pica salutatrix," Mart. vii. 87, 6, xiv. 76; Pers. *prol.* 8). Over the door a few words of good omen were sometimes written, such as "nihil intret mali" (Orelli-Henz. *Inscr.* 7287), or "deprecatio incendiorum" (Plin. *H. N.* xxviii. § 20; Fest. p. 18, M.; Orelli, 1384). Sometimes the house was indicated by a sign over the door, as in mediaeval times. Thus we are told that Augustus was born "ad Capita Bubula" (Suet. *Aug.* 5), and Domitian "ad Malum Punicum" (Suet. *Dom.* 1). The street-door itself is fully described under JANUA.

Whether the street-door opened into a hall, or direct into the *atrium*, has been a subject of much dispute. Vitruvius mentions no entrance-hall in a Roman house, and he seems to speak of the Greek entrance-hall (θυρωρεῖον) placed between two doors as a peculiarity of a Greek house (Vitruv. vi. 10). But there are reasons for believing there must have been an entrance-hall in the palaces of the nobility, as behind the door there was a small room (*cella*) for the house-porter (*ostiarius* or *janitor*), and it is difficult to suppose that this was in the *atrium* (Ov. *Am.* i. 6, 1; Suet. *de Rhet.* 3, *Vitell.* 16; Colum. i. *praef.* 10; Petron. 28), especially as a dog was kept by his side, chained to the wall, with a written warning *Cave Canem* (Suet. *Vitell.* 16; Plaut. *Most.* iii. 2, 169; Sen. *de Ir.* iii. 37). Sometimes a dog was painted on the wall (Petron. 29), or wrought in mosaic on the pavement, as we find in the house of the Tragic poet at Pompeii. At the end of the hall, which seems to have been called *ostium*, there was no inner door, as Becker describes, but the entrance to the *atrium* was closed by a curtain (*velum*), which was drawn aside by the usher when he admitted strangers to an interview (Lamprid. *Alex. Sev.* 5; *Heliog.* 14; Sen. *Ep.* 20; Plin. *Ep.* ii. 17). The entrance-hall was small, so that a person in the *atrium* could look through it at persons walking in the street (Suet. *Cal.* 41). The smallness of the hall explains, as Göll says, the passages cited by Marquardt to prove that the street-door led directly into the *atrium* (Marquardt, *Privatl.* p. 222; Becker-Göll, *Gallus*, ii. p. 238).

3. ATRIUM. The first point to be determined in connexion with the *atrium*, upon which the whole disposition of a Roman house depends, is, whether the *atrium* and the *cavum aedium* (or *cavaedium*, as Pliny, *Ep.* ii. 17, 5, writes it) denote two separate courts or one and the same. Some modern writers, notably Becker in his *Gallus*, whom Burn has followed, maintain that they were distinct courts, and accordingly place three courts in a Roman house,—first the *atrium*, then the *cavum aedium* in the centre, and lastly the *peristylium* in the rear. But this view cannot be maintained; it is rejected by the best modern authorities; it is in direct opposition to the statements of Varro (*L. L.* v. 161) and Vitruvius (vi. 3 and 8), who call sometimes the chief room of the house *atrium* and sometimes *cavum aedium;* and it is contradicted by the fact, that no houses in Pompeii have yet been discovered containing more than two courts,—namely, the *atrium* and *peristylium.* We may therefore conclude that the *atrium* and the *cavum aedium* denote the same room, the only difference perhaps being that *cavum aedium* indicated originally the open part, and *atrium* the entire area; but in general the two words are used as synonymous. The *atrium* or *cavum aedium* was a large room or court roofed over, with the exception of an opening in the centre, called *compluvium*, towards which the roof sloped so as to throw the rain-water into a cistern in the floor, termed *impluvium* (Varr. *l. c.*; Fest. p. 108, M.; Liv. xliii. 13, 6; Plaut. *Amph.* v. 1, 56). The water from the *impluvium* flowed into a well (*puteus*) under ground; for before the construction of the aqueducts the Romans were dependent upon wells for their supply of water. The word *impluvium*, however, is sometimes employed in a wider sense to denote the whole uncovered space in the *atrium*, and therefore the opening in the top as well as the cistern at the bottom. (Cic. *Act. in Verr.* i. 23, 61, with the note of Pseudo-Ascon. p. 177, Or.; Serv. *ad* Verg. *Aen.* ii. 512; "per impluvium introspectant," Plaut. *Mil.* ii. 2, 3, ii. 3, 16; Ter. *Eun.* iii. 5, 40). *Compluvium* in like manner is sometimes used in the same wide signification as equivalent to *impluvium* (Suet. *Aug.* 92; Varr. *L. L.* v. 125). The *compluvium* was sometimes covered with hangings, as a protection against the sun (Ov. *Met.* x. 595; Plin. *H. N.* xix. §§ 24, 25; Dig. 33, 7, 12, § 20). The breadth of the *impluvium*, according to Vitruvius, was not less than a quarter nor greater than a third of the breadth of the *atrium;* its length was in the same proportion according to the length of the *atrium.*

Vitruvius (vi. 3) distinguishes five kinds of *atria* or *cava aedium*, which were called by the following names:—

(1.) *Tuscanicum.* In this the roof was supported by four beams, crossing each other at right angles, the included space forming the *compluvium.* This kind of *atrium* was the most ancient of all, as it is more simple than the others, and is not adapted for a very large building.

(2.) *Tetrastylum.* This was of the same form as the preceding, except that the main beams of the roof were supported by pillars, placed at the four angles of the *impluvium*. Such an arrangement would be necessary in a large *atrium*, as the roof could not otherwise be well supported.

(3.) *Corinthium* was on the same principle as the tetrastyle, only that there were a greater number of pillars around the *impluvium*, on which the beams of the roof rested.

(4.) *Displuviatum* had its roof sloping the contrary way to the *compluvium*, so that the water fell outside the house instead of being carried into the *impluvium*, and was carried off by gutters.

(5.) *Testudinatum* was constructed in the same way as the *displuviatum*, but it was roofed all over and had no *compluvium*. We are not informed, however, how light was admitted into an *atrium* of this kind. This form went out of use: we have no instances of it in the Pompeian houses.

The *atrium*, as we have already seen, was originally the only room of the house, serving as sitting-room, bed-room, and kitchen, which it probably continued to do among the lower classes even in later times (Serv. *ad* Verg. *Aen.* i. 726, ix. 648; Varr. *ap.* Non. p. 83, s. v. *cortes*). Here was the *focus*, or hearth, which served not only for cooking, but from its sacred character was used also for the receptacle of the Lares or Penates, which were sometimes kept in little cupboards near the hearth. ("Juxta focum Dii Penates positi fuerunt," Schol. *ad* Hor. *Epod.* ii. 43; Plaut. *Aul.* ii. 18, 15; Tibull. i. 10, 20; Juv. viii. 110; Petron. 29.) The Lar or tutelary god of the house stood close to the entrance behind the door leading into the *atrium* (Ov. *Fast.* i. 136 *seq.*); and we find him so placed in some of the Pompeian houses. Near the sacred flame the members of the family took the common meal (Serv. *ll. cc.*), and the same custom continued in the country even in the time of Augustus (Hor. *Sat.* ii. 6, 65 *seq.*). In the *atrium* the master of the house kept his *arca* or money-chest (Serv. *ll. cc.*), which was fastened to the floor. [ARCA.] Here stood the nuptial bed (*lectus genialis*, Fest. p. 94, M.) against the back wall, opposite the entrance to the *atrium*, whence it was also called *lectus adversus* (Prop. iv. (v.) 11, 85; Gell. xvi. 9; Ascon. *in Mil.* p. 43, Orelli). Here sat the mistress of the house, spinning and weaving with her maids (Liv. i. 57, 9; Ascon. *l. c.*; Arnob. ii. 67). Here all visits were paid, and the patron received his clients (Hor. *Ep.* i. 5, 31; "more patrio sedens in solio consulentibus responderem," Cic. *Leg.* i. 3, 10). Here the corpse was placed before it was carried out to burial. [FUNUS.] Here, in the *alae* (see below), were placed the waxen *imagines* of the ancestors of the house. [IMAGINES.]

But as wealth increased, and numerous clients came to wait upon their patron, new rooms were built, and the *atrium* ceased to be the only room for the family. A kitchen (*culina*; see p. 671 *b*) was made for cooking, the Lares were placed in a special *lararium* (see p. 672 *b*); the meals were taken in the upper story, hence called *cenaculum* (Varr. *L. L.* v. 162; see p. 665 *b*); the master and mistress slept in a separate *cubiculum*. As the *atrium* now became the reception room, it was fitted up among the wealthy with much splendour and magnificence for the reception of their clients. The opening in the roof was enlarged for the admission of more light, and was supported by pillars frequently made of costly marble (see p. 667 *a*). Between the pillars and along the walls statues and other works of art were placed (Cic. *Verr.* i. 23, 61; Apul. *Met.* ii. 4). In the middle of the *impluvium* was a marble fountain, with jets of water, frequently adorned with reliefs, of which many beautiful specimens have been found at Pompeii. Near the fountain, where the hearth formerly stood, was a marble table, called *cartibulum* (Varr. *L. L.* v. 125). [CARTIBULUM.] The *atrium*, however, still continued, as in ancient times, to be the chief room of the house, and it was not only the room for the reception of guests, but its primitive character was preserved by its retaining the symbolical nuptial couch (Hor. *Ep.* i. 1, 87), the *imagines* of the ancestors, and the instruments for weaving and spinning. The ancient writers frequently contrast the simplicity of the ancient with the splendour of the modern *atrium*.

> "Cur invidendis postibus et novo
> Sublime ritu moliar atrium?"

(Hor. *Carm.* iii. 1, 45; cf. "caret invidenda sobrius aula," Hor *Carm.* ii. 10, 7; Verg. *Georg.* ii. 461 *seq.*; Plin. *H. N.* xxxv. § 6; "atrium ex more veterum," Plin. *Ep.* v. 6, § 15.) The magnificence of the *atria* under the empire is constantly alluded to by the poets and other writers ("atria marmore tecta," Ov. *Met.* xiv. 260; "purpureis effulta columnis atria," Claud. *in Ruf.* ii. 135; "laqueata," Auson. *Id.* x. 49; "atria ampla, alta, longa," Vitruv. vi. 5, 2; Mart. xii. 50; Verg. *Aen.* i. 725).

The rooms which opened out of the *atrium* were lighted only through the *compluvium*, as there were no windows, as a general rule, upon the ground-floor.

4. ALAE, wings, were two small quadrangular apartments or recesses on the left and right sides of the *atrium* (Vitruv. vi. 4), but at its further end, and open to the *atrium*, as we see in the Pompeian houses. Here the *imagines* were kept in the houses of the nobles. But as the *alae* were really a part of the *atrium*, the *imagines* were frequently described as standing in the *atrium*. (Juv. viii. 19 *seq.*; Plin. *H. N.* xxxv. § 6; Ov. *Fast.* i. 591, *Am.* i. 8, 65; Mart. ii. 90, 6, v. 20, 5–7; Marquardt, *Privatl.* p. 235.)

5. TABLINUM was in all probability a recess or room at the further end of the *atrium* opposite the door leading into the hall, and was regarded as part of the *atrium*. It contained the family records and archives. (Vitruv. vi. 4 and 8; Fest. p. 356; Plin. *H. N.* xxxv. § 7.) It appears from the houses of Pompeii to have been separated not by a door, but simply by a curtain or *velum*, while it had a door at the back leading into the *peristylium*. Marquardt supposes that the *tablinum* was originally an alcove made of wood (whence its name) built at the back of the *atrium*, in which meals were taken during the summer, and was afterwards joined to the *atrium* by breaking through the walls of the latter (Varr. *ap.* Non. p. 83, s. v. *cortes*).

With the *tablinum*, the Roman house appears to have originally ceased; the sleeping rooms being arranged on the upper floor. But when the *atrium* and its surrounding rooms were used for the reception of clients and other public visitors, it became necessary to increase the size of the house; and the following rooms were accordingly added:—

6. FAUCES was a passage by the side of the *tablinum*, which passed from the *atrium* to the *peristylium* or open court, as we see in the Pompeian houses. We must not suppose, as Rich does, that the plural indicates two passages (Vitruv. vi. 4).

7. PERISTYLIUM was in its general form like the *atrium*, but it was one-third greater in breadth, measured transversely, than in length (Vitruv. vi. 4); but we do not find these proportions preserved in the Pompeian houses. It was a court open to the sky in the middle; the open part, which was surrounded by columns, had a fountain in the centre, and was planted with flowers, shrubs, and trees forming a *viridarium*. The *atrium* and *peristylium* were the two important parts of a Roman house; the former, during the last century of the republic and under the empire, being the public reception room, and the latter the inner or private court-yard, which gave access to the private rooms, such as the *oeci* or saloons, the *triclinia* or dining-rooms, the baths, and the other rooms described below. The *peristylium* having never been used, like the *atrium*, as a place in which the family lived, the opening to the sky was much larger than the *compluvium* in the *atrium*, and the columns which surrounded it more numerous. Thus, in the house of the Faun at Pompeii, there were forty-four Doric columns in the *peristylium*. It was ornamented in much the same way as the *atrium;* and consequently it is sometimes difficult to determine whether the description of this ornamentation applies to the *atrium* or the *peristylium*. But the large marble fountain, with the steps leading down to it, on which the waters splashed (Sen. *Ep.* 86, 6; "in peristylio saliente aqua," Suet. *Aug.* 82), and the numerous shrubs and trees, of which the ancient writers frequently speak, belong properly to the *peristylium*. Hence we may safely assign to the *peristylium* the descriptions of Horace (*Ep.* i. 10, 22): "nempe inter varias nutritur silva columnas," and (*Carm.* iii. 10, 5) "nemus inter pulchra satum tecta," and of Tibullus (iii. 3, 15), "et nemora in domibus sacros imitantia lucos." (Cf. Juv. iv. 7; Plin. *H. N.* xvii. § 4; Sen. *Controv.* v. 5.) Between the columns of the *peristylium* statues were placed ("in silva sub divo," Cic. *Verr.* i. 19, 51), and vases filled with flowers (Dig. 33, 7, 26).

The arrangement of the rooms leading out of the *peristylium*, which are next to be noticed, varied, as has been remarked, according to the taste and circumstances of the owner. It is therefore impossible to assign to them any regular place in the house.

1. CUBICULA, bed-chambers, appear to have been usually small. There were separate *cubicula* for the day and night (*cubicula diurna et nocturna*, Plin. *Ep.* i. 3); the latter were also called *dormitoria*, and were mostly on the upper floor. (*Id.* v. 6, 21; Plin. *H. N.* xxx. § 52; Sidon. Apoll. *Ep.* ii. 2.) Vitruvius (vi. 7) recommends that they should face the east for the benefit of the rising sun. They sometimes had a small ante-room, which was called by the Greek name of προκοιτών, in which the *cubicularius* or valet probably slept. (Plin. *Ep.* ii. 17, 23.) In some of the Pompeian houses we find a recess in which the bed was placed. This recess was called *zotheca* or *zothecula*, and was used by Pliny in his villa in the day-time as well as the night (Plin. *Ep.* ii. 17, 21, v. 6, 38; Sidon. Apoll. *Ep.* viii. 16, ix. 11). Statues also were placed in this recess, as we learn from inscriptions (Orelli, 1368, 2006).

2. TRICLINIA, dining-rooms, are treated of in a separate article. [TRICLINIUM.]

3. OECI, from the Greek *οἶκος*, were spacious halls or saloons borrowed from the Greeks, and were frequently used as *triclinia*. (Cf. Plin. *H. N.* xxxvi. § 184.) They were to have the same proportions as *triclinia*, but were to be more spacious on account of having columns, which *triclinia* had not. (Vitruv. vi. 5.) Vitruvius mentions four kinds of *oeci:*—

(i.) The *Tetrastyle*, which needs no further description. Four columns supported the roof.

(ii.) The *Corinthian*, which possessed only one row of columns, supporting the architrave (*epistylium*), cornice (*corona*), and a vaulted roof.

(iii.) The *Egyptian*, which was more splendid and more like a basilica than a Corinthian *triclinium*. In the Egyptian *oecus*, the pillars supported a gallery with paved floor, which formed a walk round the apartment; and upon these pillars others were placed, a fourth part less in height than the lower, which surrounded the roof. Between the upper columns windows were inserted.

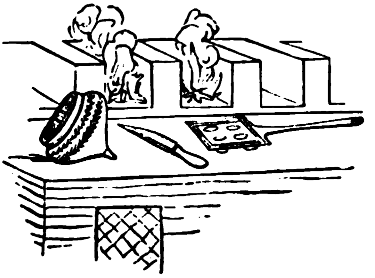
(iv.) The *Cyzicene* (Κυζικηνοί) appears in the time of Vitruvius to have been seldom used in Italy. These *oeci* were meant for summer use looking to the north, and, if possible, facing gardens, to which they opened by folding-doors. Pliny had *oeci* of this kind in his villa.

4. EXEDRAE, which appear to have been in form much the same as the *oeci*, for Vitruvius (vi. 5) speaks of the *exedrae* in connexion with *oeci quadrati*, were rooms for conversation and the other purposes of society. (Cic. *de Nat. Deor.* i. 6, 15; *de Orat.* iii. 5, 17.) They served the same purposes as the *exedrae* in the Thermae and Gymnasia, which were semicircular rooms with seats for philosophers and others to converse in. (Vitruv. v. 11, vii. 9; BALNEAE, p. 282 *a.*)

5, 6, 7. PINACOTHECA, BIBLIOTHECA, and BALINEUM [see BALNEAE], are treated of in separate articles.

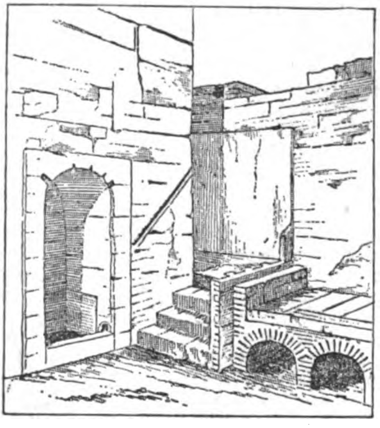
8. CULINA, the kitchen. The food was originally cooked in the *atrium*, as has been already stated (see p. 670 *a*); but the progress of refinement afterwards led to the use of another part of the house for this purpose. In the kitchen of Pansa's house, of which a drawing is given on the next page, a stove for stews and similar preparations was found, very much like the charcoal stoves used in the present day. (See woodcut.) Before it lie a knife, a strainer, and a kind of frying-pan with four spherical cavities, as if it were meant to cook eggs.

In this kitchen, as well as in many others at Pompeii, there are paintings of the Lares and Penates, to whom the hearth in the *atrium* was sacred, and under whose care the kitchen was also placed. (Serv. *ad* Verg. *Aen.* ii. 469; Arnob. ii. 67.) In the country the meals were taken in the kitchen, as they were in ancient times in the *atrium* (Colum. i. 6; Varr. *R. R.* i. 13). The kitchen was in the back part of the house, and in connexion with it was the *pistrinum* or bake-house, where bread was baked at home (Varr. *ap.* Non. p. 55, 18; Lucil. *ap.* Non. p. 217, 20); but after B.C. 171 there were public bake-houses in Rome (Plin. *H. N.* xviii. § 107). [PISTOR.] In the houses of the wealthy, as may be supposed, the kitchens were often of great size (Sen. *Ep.* 114, cf. 64). In Pompeii have been found sinks of kitchens, called *confluvia* (Varr. *ap.* Non. p. 544, 20) or *coquinae fusoria* (Pallad. *R. R.* i. 37).



Culina or kitchen, in Pansa's house.

In close and inconvenient proximity to the kitchen was the *latrina* (contraction of *lavatrina*, Varr. *L. L.* v. 118), or privy, in order that a common drain might carry off the contents of both to the *cloaca* or public sewer (Varr. *l. c.*; Colum. x. 85; cf. Plaut. *Curc.* iv. 4, 24; Suet. *Tib.* 58; Apul. *Met.* i. c. 17, p. 15; on the *Spongia* mentioned by Sen. *Ep.* 70, 20, cf. Mart. xii. 48, 7). In many of the Pompeian houses we find the *latrina* contiguous to the kitchen, as is shown in the annexed cut from the house of Sallust. On the right are two small arches, which are the kitchen stove. On the left is an arched recess, which is the *latrina*, originally closed by a wooden door, of which the marks of the hinges may still be seen; and at the bottom is the mouth of the pipe supplying the place with water.



Culina and Latrina in the house of Sallust. (Gell, *Pompeiana*, p. 107.)

9. CENACULA, or rooms in the upper stories, have been already explained (see p. 665).

10. LARARIUM or SACRARIUM. The Lares or Penates were originally placed near the hearth of the house in the *atrium* (see p. 670 *a*); but when the latter became only a reception room, they were removed to a special chapel, called *Lararium* (Lamprid. *Alex. Sev.* 29, 31; Vopisc. *Florian.* 4; Capitol. *Anton. Phil.* 3) or *Sacrarium* (Cic. *ad Fam.* xiii. 2; Cic. *Verr* iv. 2, 4), in which statues of other divinities were also placed. Such a chapel is found in the *peristylium* of many of the Pompeian houses.

11. DIAETA does not denote any particular kind of room, but is a word borrowed from the Greek (δίαιτα) to signify a room used for any of the purposes of life. (Plin. *Ep.* ii. 17, 12; vii. 5, 1; Stat. *Silv.* ii. 2, 83.) Each *diaeta* was sometimes called by a name, as the one belonging to Claudius (Suet. *Claud.* 10). Thus it denotes also a bed-chamber (Plin. *Ep.* vi. 16, 14), a dining-room (Sidon. Apoll. *Ep.* ii. 2), a summer-house or a room in a garden (Plin. *Ep.* ii. 17, 20; Dig. 7, 1, 66, § 1; Orelli, *Inscr.* 4373, &c.). It is also the collective name of a set of chambers. Thus Pliny speaks (v. 6, 31) of two *diaetae*, in one of which were four bed-chambers, and in another three.

12. SOLARIUM, literally a place for basking in the sun, denotes a terrace on the flat roof of a house, frequently used by the Romans, as is still the case in Italy and the East. (Isidor. xv. 3, 12; Dig. 8, 2, 17; Plaut. *Mil. Glor.* ii. 3, 69, ii. 4, 25; Suet. *Claud.* 10; Macrob. ii. 4, 14.) In the time of the emperors, these *solaria* on the tops of houses were turned into gardens, which contained even fruit-trees and fish-ponds (Sen. *Ep.* 122; *Contr. Exc.* v. 5). Somewhat similar were the *solaria* built by Nero on the colonnades in front of the *insulae* and *domus* (Suet. *Ner.* 16; Tac. *Ann.* xv. 43). Sometimes the *solaria* were covered by a roof ("tectum solarium," Orelli, *Inscr* 2417).

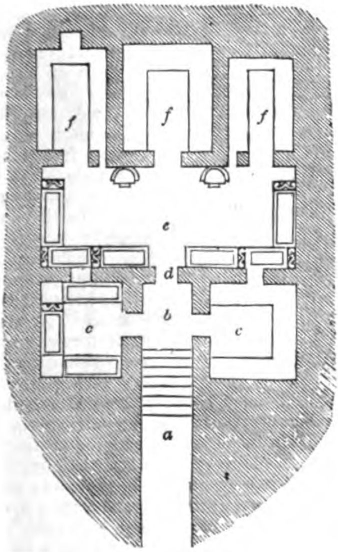
Some other parts of a Roman house require a brief mention.

1. CELLAE SERVORUM, FAMILIARES or FAMILIARICAE, the small bed-rooms of the slaves, were usually situated in the upper story, as in the house of Pansa at Pompeii, or in the back of the house, with the exception of the *cella* of the house-porter, which was naturally close to the front door (see p. 669 *a*). (Colum. i. 6; Cic. *Phil.* ii. 27, 67; Hor. *Sat.* i. 8, 8; Vitruv. vi. 7; Plin. *Ep.* ii. 17, 9).

2. CELLA also denoted the store-room, of which there were several, bearing various names, according to their contents. Of these an account is given under CELLA No. 1, where the *cella vinaria* is likewise described.

3. CELLARS underground and vaulted are rarely mentioned ("hypogea concamerationesque," Vitruv. vi. (8) 11; "constructum sub terris aedificium," Isidor. xvi. 3), though several have been found at Pompeii.

Etruscan Houses.—Though no Etruscan houses are extant, we obtain a good idea of their form and general disposition from their tombs, as there can be no doubt that their cemeteries were often intentional representations of their cities, and the separate tombs of their houses. The arrangement of the latter throws light upon that of the Roman house, the original form of which was borrowed from the Etruscans. (See above, p. 668 *a.*) Thus in the cemetery of *Cervetri*, the ancient Agylla or Caere, the tombs have a large central chamber, representing the *atrium*, with others of smaller size opening out of it, lighted by windows in the wall of the rock, as they could of course have no opening or *compluvium* in the roof. The ceilings of all the chambers have the usual beams and rafters hewn in the rock. The smaller rooms round the *atrium* were *triclinia*, for each has a bench of rock round three of its sides, on which the dead had been deposited, reclining as at a banquet. (Dennis, *Etruria*, i. p. 238.) The following plan of one of these tombs shows a clear resemblance to an ancient house.



Plan of a tomb at Cervetri. (Dennis, *Etruria*, i. 256.)

a. **Rock-hewn steps leading down to the tomb.**
b. **Entrance-hall.**
cc. **Small chambers, the *cellae* of the *janitor* or *ostiarius*.**
d. **Doorway to the tomb.**
e. **Principal chamber or *atrium*.**
fff. **Inner chambers or *triclinia*.**

We find a similar arrangement in the tombs at Chiusi, the ancient Clusium, where the passage leads into the principal chamber or *atrium*, out of which open several smaller chambers or *triclinia* (Dennis, *Etruria*, vol. ii. p. 350).

Existing remains of Roman houses.—The oldest remains of a house in Rome are those of the Regia, which, according to Dio Cassius (xliii. 42), was the residence of the Pontifex Maximus, and was on the site of the house occupied by Numa. The Regia stood at the S.E. limits of the Forum, close by the Temple of Vesta, adjoining the House of the Vestal Virgins (Dio Cass. xliv. 17; Gell. iv. 6; Cic. *ad Att.* x. 3). The existing remains are of several dates: the oldest walls are of the softest tufa, and belong probably to a structure many centuries earlier than the Christian era; next comes a part built of hard blocks of peperino (*lapis Albanus*). A later part of the house is built of concrete faced with burnt bricks, and has columns of the hard travertine thickly coated with stucco, and painted in brilliant tints of blue and red. This is probably part of the rebuilding carried out by Domitius Calvinus after his victories in Spain, *c.* 35 B.C. Another portion of the same or an adjoining building was built of solid blocks of white marble. This also may be part of Calvinus's work. There are many reasons for believing that the Consular Fasti (now in the Capitoline Museum) were engraved on the solid marble walls of one of these rooms in the Regia (see *Bull. Inst. Arch. Rom.* 1886, p. 99). This interesting building exists only in a very fragmentary state, and its complete plan cannot be made out. The rooms are small, and the *atrium* also appears to have been of very limited extent. The mosaic pavements and painted decorations belong to the alterations made in the time of Augustus.

One of the best preserved houses in Rome is also of special interest from its early date. This is the small dwelling usually known as "the House of Livia" or "of Germanicus," which is built in a hollow in the N.W. part of the Palatine hill. That it is probably not later in date than the time of Augustus is shown by the construction of its walls, which are formed of concrete faced with very neat *opus reticulatum* of tufa, no brick being used. The figure on the next page shows its plan, which, owing to the irregularity of the site, is at two different levels: the small rooms grouped round the staircase F being at a much higher level than the larger rooms by the *atrium*; the stairs D lead from the *atrium* up to the higher floor behind. The main entrance is at B, approached down a short flight of steps. C C are pedestals for a statue and an altar: E E are bedrooms; G is a narrow *crypto-porticus*, which branches out of H, another dark passage, forming hidden communications with different buildings on this part of the Palatine. A is a third vaulted passage which leads to Caligula's palace: this is possibly the path by which Caligula's murderers escaped when they hid themselves in the house of Germanicus (Joseph. *Ant. Jud.* xix. 1, 2; Suet. *Calig.* 58).

The paintings in the principal rooms of this house are among the finest examples of Roman wall decoration that still exist (see Renier, *Les Peintures du Palatin*). The most remarkable (in the *tablinum*) is a scene of the liberation of Io by Hermes, who approaches stealthily to kill Argus, who is watching her. In composition, colour, and in delicacy of touch, this is a work of much beauty. As the names of the figures were painted under each in Greek, it appears probable that it is the work of a Greek artist: only one name (ЄPMHC) is now legible. On the same wall is a street scene, with lofty houses several stories high, and fanciful balconies and porticoes. In the *triclinium* are some very clever paintings of bowls of fruit, in which grapes and apples are seen through the transparent glass of which the bowls are made.

The floors are formed of marble mosaic in simple geometrical patterns, very neatly fitted together, with much smaller *tesserae* than were used under the later empire.

On the upper floor a long passage, approached by the staircase D, divides the house into two parts. J K L M seem to be small bath-rooms. N N are shops with no communication with the house, facing a public street, O O. At P are remains of a very ancient tufa building. Q is a *piscina*, which seems partly to have supplied the house with water. A number of inscribed lead pipes were found, but these were of later date than the house itself: water was laid on to the upper as well as to the ground floors.

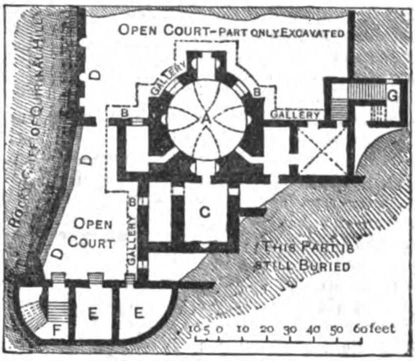
As seems to have been usually the case in Roman houses till the reign of Augustus, the only method of heating was by charcoal braziers (*foculi*). In the *tablinum* a small recess is provided for the *foculus* or *caminus*. The use of hypocausts for private houses was a later introduction, and the very complete system of heating rooms, which provided not only for hot air under the hypocaust floors, but also wall-linings of flue-tiles all over the internal wall-surface of a room, did not come into general use till about the end of the second century A.D. In the third century especially the rapidly-growing effeminacy of the Romans led them to provide in the most elaborate manner for the heating of their houses; and the contrast is very great between the shut-in, highly-heated apartments of the later empire, as compared with the half open-air life and scanty warming of the earlier houses. In the above figured plan the *tablinum* and its *alae* are open on one side to the only partially roofed *atrium;* an arrangement fitted only for a hardy race, such as the Romans once were. The later houses, with their glazed and curtained windows, hollow floors, and walls radiating heat from their whole surface, must have had an atmosphere very like that of a modern hot-house. For details of the construction of hypocausts and the arrangement of flue-lined walls, the reader is referred to the article Balneae, p. 278 *b*.

Owing to the fact that no Roman house now exists with walls perfect up to the roof, it had for long been a matter of doubt how the hot air and smoke from the hypocausts escaped after passing through the flue-tiles which lined the walls. An explanation of this has now been furnished by an extremely interesting mosaic picture found in 1878 at Oued-Atmenia in Algeria. (See Proceedings of the *Soc. Archéol. de Constantine*, vol. for 1878.) This most valuable picture is a perspective view of a very large country mansion, built by a wealthy Roman named Pompeianus, who was Proconsul of Africa under Honorius. The mosaic itself formed part of the pavement of the house which it represents. The building is one of immense extent, and varies from four to six stories in height. The ground-floor has only a few plain rectangular windows, fitted with strong iron gratings. In the upper stories the windows, partly arched and partly square-headed, are placed at frequent intervals. The long line of the main block is broken by two lofty tower-like structures. The central and most important part of the house has a low-pitched roof covered with red tiles, from the ridge of which, at four different points, chimney stacks project, just as they would in a modern house. What appears to be a conical smoke-cowl is set over each chimney. This unique mosaic gives a clear notion of the external appearance of one of the large mansions of the later empire, such as could never be gained from an examination of any of the very imperfect existing remains of Roman dwellings, numerous though they are, from which little more than the plan of the ground-floor can usually be gathered. And here it may be remarked that most writers on the subject of Roman houses appear to have ignored the fact that it was usually, if not invariably, the custom to build with an upper story, and hence it is obviously a mistake in examining the existing remains of any house to expect to find the whole accommodation of the dwelling provided on the ground-floor. It appears probable that in nearly all cases the best bedrooms were placed upstairs, where there was ample space for rooms of a good size, and yet it is usual to describe small cell-like rooms on the ground-floor as being the chief sleeping apartments of the family, in spite of their obvious drawbacks from damp and want of light. In Italy especially ground-floor bedrooms are far from being healthy.

In 1874 remains of a very interesting house of the time of Augustus were found on the Esquiline hill, not far from the Basilica of S. Maria Maggiore: from its position on the line of the Servian wall and *agger*, it has been called "the House of Maecenas," who lived in that quarter, where he converted the public burial-ground into a large park (Hor. *Sat.* i. 8, 14; "horti Maecenatiani," Suet. *Tib.* 15). This palace of Maecenas from its lofty position on the Esquiline is called by Horace (*Epod.* 9, 3) "alta domus," and is probably alluded to in another passage ("molem propinquam nubibus arduis," Hor. *Carm.* iii. 29, 10); and on account of its healthy situation Augustus slept there when he was ill (Suet. *Aug.* 72). Tiberius took up his residence there. These gardens were of great extent, and were united by Nero with his palace on the Palatine hill (Tac. *Ann.* xv. 39; Suet. *Ner.* 31), and it was from one of the towers of Maecenas, which commanded an extensive view, that he surveyed the conflagration of Rome (Suet. *Ner.* 38; cf. Burn, *Rome*, 227). One fine room of this house, still well preserved, is of especial interest; this appears to have been a sort of greenhouse for plants and flowers: it is a large vaulted chamber, with a semicircular apse at one end; all round the walls are tiers of high steps once lined with marble, intended to form stands for rows of flower-pots; arranged exactly as in a modern conservatory. Prof. Mohr (*Bull. Inst. Arch.* vol. for 1875) has pointed out that the cultivation of shrubs and flowers in this way was largely practised by the Romans. On each side of the hall are six recesses, decorated with paintings of garden scenes, with fountains among the flowers, treated in a skilfully deceptive way, so as to look as if each recess were a window opening on to a real garden. The light was admitted only through openings in the barrel vault of the hall, on which were paintings of similar floral subjects; a remarkable example of the theatrical scene-painter's style of decoration which was popular among the Romans.

The *House of Sallust*, the historian, was one of the finest houses in Rome. It had, like the house of Maecenas, extensive gardens, whence the residence was frequently called the *Horti Sallustiani.* It was built by Sallust with the riches obtained in his government of Numidia (Pseud.-Cic. *Respons. in Sall.* 17, § 19); and after the death of his heir, Sallustius Crispus, in the reign of Tiberius, it appears to have passed into the hands of the emperor, as it is subsequently mentioned as an imperial palace, and the residence of several of the emperors. So large were the gardens, that the Emperor Aurelian, who preferred living there to the Palatine, erected in them a colonnade, 1000 paces long, in which he took horse exercise. Part of this house still exists in the narrow valley between the Pincian and Quirinal hills, near the *Porta Collina* in the Servian wall. (Tac. *Ann.* xiii. 47; *Hist.* iii. 82; Plin. *H. N.* vii. § 75; Dio Cass. lxvi. 10; Vopisc. *Aurel.* 49; Procop. *Bell. Vand.* i. 2.)

The position of this house is peculiar: part of it stands on the lower ground at the foot of a cliff of the Quirinal, and part on the top of the cliff; so that the floor of the third story of the lower part was level with the ground-floor of the rest. The figure shows the plan of the existing remains, which will be soon destroyed by the filling up of the valley, where the building stands, to make new boulevards: a most serious loss. The circular part A is a lofty domed hall: B B is a balcony-like gallery, supported on corbels, which runs round the outside of the main building, at a height of about forty feet above the ground: C is a fine vaulted room, with two stories over it: D D is a retaining wall, built against the scarped face of the cliff to keep the crumbling tufa rock from decay: E E are rooms in four or five stories, some with concrete and others with wooden floors: F are winding marble-lined stairs, with mosaic landings, which led to the top of the house and the rooms on the higher level of the hill. This part is still about seventy feet high. G is another marble-lined staircase. A great part of the house is still unexcavated. The date of the existing portion is of the first century A.D., and is evidently part of additions made by the early emperors. In the sixteenth century an immense quantity of valuable marbles, including magnificent columns of Oriental alabaster and Numidian *giallo antico*, were found in the ruins of Sallust's house, and used to decorate several of the churches of Rome.

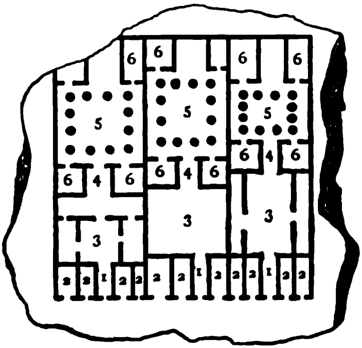


House of Sallust in Rome.

Many inscribed lead waterpipes have been found there at different times: some have the name of the estate, the reigning emperor, the plumber, and the capacity of the pipe, *e.g.* XIII. ORTORVM SALLVSTIANOR. IMP. SEV. ALEXANDRI AVG. NAEVIVS MANES FECIT. A topographical indication on a Roman lead pipe is very rare.

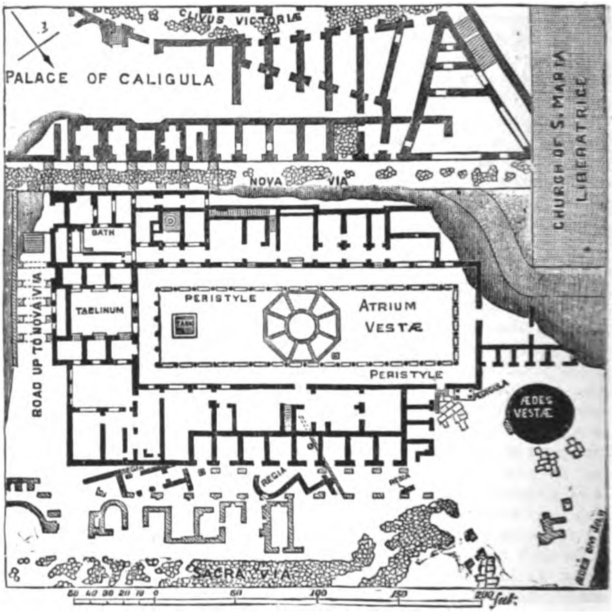
Some very splendidly decorated houses have recently, during the formation of the new Tiber embankment, been discovered and then destroyed, along the line of the Farnesina gardens, by the right bank of the river. These were very richly ornamented with paintings, and especially with stucco reliefs of extraordinary beauty, evidently dating from the middle or early part of the first century A.D. Many of these were almost of pure Greek style, free from any of the usual Roman coarseness of detail or clumsiness of form. The reliefs were executed rapidly by the artist in the quick-setting wet stucco, which he applied in lumps to the previously prepared flat surface, and then, before the stucco had time to harden, he modelled the figures into shape with his fingers and thumb, assisted by a few simple wooden modelling tools. The decision and rapid skill shown in this manipulation are very remarkable; and an amount of life and vigour appears in these hastily executed reliefs, which could hardly have been equalled by the slow process of chiselling a hard substance. Many of the scenes represented are Dionysiac, fauns playing on the double pipes, nymphs dancing with timbrels and other musical instruments, and sportive genii bearing the *thyrsus* or bunches of grapes. Some figures of winged Victories are marvels of delicate beauty, lightly poised on large wings, with drapery flowing behind them in graceful curving folds. The modelling of the nude limbs of the fauns is perfect for its skilful suggestion of the play of muscles under a supple skin, and is quite free from the anatomical exaggerations of the late Attic School of Sculpture, which the Romans seem specially to have admired.

The Tiber banks opposite the Campus Martius formed a favourite site for the houses of wealthy Romans: some of these are shown on fragments of the Capitoline marble plan of Rome; most of them have stairs leading down to the water's edge. The accompanying figure



Fragment of Capitoline Plan, showing plans of Roman houses.

shows another fragment of this celebrated plan, which was made in the reign of Severus to decorate the end wall of the Templum Sacrae Urbis by the Forum. This shows us a common type of street house in Rome, such as belonged to men of moderate means. On this fragment are engraved the plans of three houses in a row, almost identical in arrangement. (1) is the entrance passage, with two shops (2) on each side: (3) is a small Tuscan *atrium*, as Vitruvius calls it, being without columns: (4) is the passage leading into (5) the *peristylium*, round which are four small rooms (6), one at each corner.



Atrium Vestae.

Some interesting examples of houses not owned by private persons, but used by corporate bodies, have been found during the last few years. The chief of these is the Atrium Vestae or House of the Six Vestal Virgins, which was exposed to view in 1883–4.

The plan above, reproduced from Middleton's *Ancient Rome in* 1885 (p. 187), shows the position of the house, near the circular Temple of Vesta, and close to the northern angle of the Palatine, where the immense substructures of Caligula's palace still exist. The rooms are arranged round a long open *peristylium* or cloister; not unlike the plan of a mediaeval monastery. At one end is the *tablinum*, with three small chambers on each side; probably each of the six vestals had one of these. On the N.E. side of the *tablinum* is a large hall, with recesses for statues, and on the other side is a bath-room, and near it a kitchen, a baker's oven with a corn-mill, and other domestic offices. On both the long sides of the *peristylium* is a number of very handsome rooms, decorated in a very costly and elaborate manner: in all cases there was at least one upper story. On the verge of the N.E. side of the house is a row of shops: at this place the remains of the *Regia* are indicated on the plan. In the centre of the *peristylium* was what seems to have been a series of flower-beds, in the shape of a circle within an octagon: traces of the low brick kerbs which separated these beds are still easily distinguishable. On the S.W. side a great part of the upper story still exists. here, as in the previously mentioned houses of Livia and Sallust, the building is set against the side of a slope, so that in one part an upper story has its floor level with the higher ground. In this case a considerable part of the lower slopes of the Palatine has been cut away to make a site for the Vestals' house, probably at the time of its enlargement under Hadrian, to whose period most of the existing structure belongs. The upper rooms consist chiefly of bedrooms and small bath-rooms, mostly with marble wall-linings and mosaic floors. Part of this upper story was rebuilt in the reign of Severus, after a destructive fire in the time of Commodus in 191 A.D.; and these later rooms have a very luxurious system of warming, both with hypocausts and wall-linings of flue-tiles. The stairs which led to a still higher floor still partly exist, so the whole amount of accommodation must have been very large, as befitted the dignified state of a Vestal's life. The internal decorations were very magnificent; in some of the rooms both walls and floors were covered with the rich coloured marbles from Africa and Greece. In one of the six small rooms by the *tablinum* a very curious precaution has been taken to keep the floor dry. Halves of large *amphorae* are set close together all over the area of the room: over them concrete was laid, and finally the marble paving-slabs were bedded in cement on the concrete. The hollows formed by the half amphorae would prevent the damp from rising. In some cases the rooms had moulded skirtings and cornices made of very hard and brilliant marbles, such as *rosso antico*, the cost of which must have been enormous. In some rooms niches for statues and other parts of the wall-surface were encrusted with gorgeous jewel-like glass mosaics, and ceilings and vaults were richly decorated with painting of the most glowing tints. As might be expected, the dwelling of this wealthy and highly honoured corporation of Vestals far exceeded in splendour even the richest houses at Pompeii. See the separate works on the *Atrium Vestae* published by Comm. Lanciani, Rome, 1884, and by Prof. Jordan, Berlin, 1885.

A corporate dwelling of a very different class is the Barrack (*excubitoria*) of the Seventh Cohort of the Roman *Vigiles*, discovered in 1867 near the Church of S. Crisogono in Trastevere. This is a handsome house of the second century A.D.; with a large mosaic-paved *atrium* or cloister, round which are arranged rooms in two or three stories. The decorations are partly of moulded terra-cotta, painted with brilliant colours, and partly of the usual marble linings in very thin slabs. The barracks of other cohorts of these *Vigiles*, who combined the offices of policemen, firemen, and lamplighters, have been found in many other quarters of Rome, but none so well preserved as the residence of the Seventh Cohort. (See Visconti, *Coorte VII. de' Vigili*, Rome, 1867, and *Bull. Comm. Arch. Mun. Rom.* for 1873.)

Another corporate or, as it might be called, "monastic" establishment was recently excavated a short distance outside the *Porta Portuensis* of Rome: this was the residence of the *Collegium* of the *Fratres Arvales*, one of the most dignified of the priestly *Collegia* of Rome; but its remains were too scanty for the whole plan to be distinguishable.

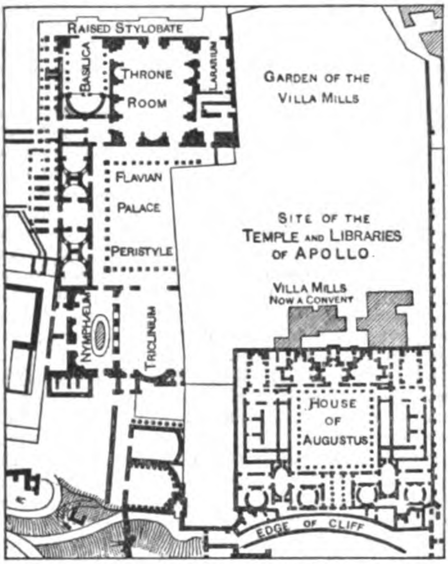
Within the last few years a number of streets and houses have been discovered at the mouth of the Tiber, at Ostia: these in plan much resembled the Pompeian houses, but were much more richly decorated with costly foreign marbles, most of which would pass Ostia on their way to Rome, where they were unladen on a long wharf called the *Marmoratum*.

Of the imperial palaces of Rome, which at last covered the whole site of the primitive Roma Quadrata, the earliest was the house of Augustus (*Domus Augustana*), which was built on the S.W. edge of the Palatine, overlooking the Circus Maximus. He at first occupied, on the Palatine, the house of Hortensius, a dwelling conspicuous neither for size nor splendour; and when it was struck by lightning, he consecrated the spot to a temple of Apollo, and bought some neighbouring buildings, where he built a house for himself. (Vell. Pat. ii. 81; Dio Cass. xlix. 15; Suet. *Aug.* 29, 72.)

The house of Tiberius (*Domus Tiberiana*) on the Palatine is mentioned as distinct from that of Augustus, though it adjoined it, the palace of Augustus being more conspicuous towards the forum, while that of Tiberius formed the back front. Its situation is indicated by the descriptions of the ancient writers, that Otho descended through the back of the palace of Tiberius into the Velabrum (Tac. *Hist.* i. 27; Suet. *Oth.* 6; Plut. *Galb.* 24), and that Vitellius surveyed from it the conflagration of the Capitol (Suet. *Vitell.* 6). During the reign of Augustus Tiberius lived first in the house of Pompey in the Carinae, and afterwards in that of Maecenas on the Esquiline (Suet. *Tib.* 15); but when he became emperor, he probably resided in this house on the Palatine till he withdrew to Capreae. In later times this palace was the residence of Antoninus Pius and Marcus Aurelius, and a library was established there (Capitol. *Ant. Pius*, 10, *Ant. Phil.* 6, *Ver.* 2; Gell. xiii. 19; Vopisc. *Prob.* 2). The palaces of Augustus and Tiberius were destroyed in the fire of Nero; but they were rebuilt, as they are mentioned as separate buildings in the *Notitia*; and Josephus tells us that the different parts of the complex of buildings forming the imperial palace were named after their respective founders (*Ant.* xix. 1, § 15).

The palace of Augustus was excavated in 1775, and drawings made of it by Guattani, who published them in his *Monumenti Antichi di Roma*, 1785; the whole was soon covered in again, and no part is now visible. That part of the woodcut on the next page, which represents the palace of Augustus, is taken from Guattani's plan.

This palace, which was of very modest size, had a number of small rooms in two stories grouped round one peristyle: its comparative simplicity must have formed a striking contrast to the stately splendour of the public halls, libraries, and temples in the adjoining *Area Apollinis*, all built by Augustus, and adorned by him with countless works of art of every kind. (Prop. iii. 29; for other authorities, see *Dict. Gr. & Rom. Geogr.* ii. p. 805.) Nevertheless, though the palace of Augustus was small, yet it appears to have been designed with great taste, and decorated with considerable richness in its mixture of white and coloured marbles. That it was a very carefully designed architectural composition is shown even by the bare plan, with its series of domed and vaulted halls,



Palace of Augustus and the Flavian Emperors.

and small apse-like recesses arranged with some complication and much ingenuity.

The *Flavian Palace*, which is shown on the same woodcut, was built by Domitian, adjoining the Area of Apollo and the Palace of Augustus on the N.W. side. (Plut. *Popl.* 15; Mart. viii. 36; Stat. *Silv.* iii. 4, 47, iv. 2.) Extensive remains of this building still exist, and are among the most conspicuous of the imperial palaces on the Palatine. It was a very different building from that of Augustus; being not so much a place of residence as a magnificent series of state apartments intended for public use. Hence Nerva had the words *Aedes publicae* inscribed on it. (Plin. *Panegyr.* 47.) At one end is a very splendid throne-room, with a *lararium* or imperial chapel on one side, and a *basilica* for judicial business on the other. At the other end of the peristyle is the *triclinium* for state banquets; and beyond it a series of stately halls, which may possibly be libraries (*bibliothecae*), and an *Academia* for recitations and other literary purposes. A sort of *Nymphaeum*, or room containing a fountain, with flowers, plants, and statues of nymphs and river-gods, was placed at one side of the *triclinium*, if not on both, so that the murmur and coolness of the water and the scent of the flowers might refresh the wine-heated guests. The whole of this magnificent palace was adorned with the greatest richness, both of design and materials, with floors, wall-linings, and columns of Oriental marbles, alabaster, and red and green porphyry. Even the rows of colossal statues, which decorated the throne-room, were made of the very refractory basalts and porphyry from the quarries of Egypt, at a cost of an almost incredible amount of labour: remains of these were found early in the last century. The position of the Flavian palace is remarkable: it is built on an immense artificial platform which bridges over a deep valley or depression in the summit of the Palatine.

Remains of a lofty building of republican date still exist deep below the floor-level of the so-called libraries; and a small house of early imperial date, richly decorated with marbles and paintings, can still be seen buried under the great peristyle. In many parts of the palace traces are distinctly visible of restorations made by Severus after the great fire in the reign of Commodus (191 A.D.), which devastated a large portion of the imperial palaces: the cracked and partly calcined marbles which suffered in the fire were broken up, and used to make concrete for the new walls of Severus; and thus, in many places, the somewhat curious sight is to be seen of concrete made of the most costly Oriental marbles and porphyries. (Dio Cass. lxxii. 24; Herodian. i. 14; Spartian. *Sept. Sev.* 19, 24.) Spartianus (*l. c.*) says that Septimius Severus made the *Septizonium* an *atrium* to the palace, so that it should be the first object to strike the eyes of those coming from Africa, his native country. Considerable remains of this *Septizonium* existed till near the end of the 16th century, when Pope Sixtus V. caused the pillars to be carried off to the Vatican. They are represented in the drawing in the *Dict. of Greek and Roman Geogr.* ii. p. 806, but the true nature of the building remains doubtful.

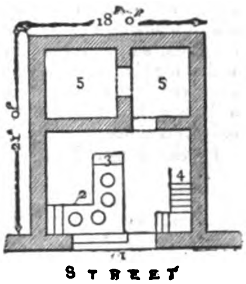
The enormous palace of Caligula (see cut, p. 676) occupied the northern corner of the Palatine hill, and the adjoining slopes as far as the Forum, covering the ground once occupied by the houses of Clodius, Cicero, and other wealthy Romans (Dio Cass. lix. 28; Suet. *Cal.* 22; Plin. *H. N.* xxxvi. § 111). The equally large palace of Severus occupied the opposite end of the Palatine. They are both remarkable for the gigantic substructures on which they stand, constructed so as to form at the foot of the hill a basement for state rooms on a level with the highest part of the ground, or, in other words, at both places the Palatine itself was enlarged by the construction of an artificial hill of massive concrete walls and vaults. On one side Severus used the very stately palace of Hadrian as a sort of platform on which to extend his new palace at the higher level; and so we see the rough concrete walls of Severus' substructure cutting through and rendering useless the richly ornamented halls of Hadrian. The enormous height of the palace of Severus must have made it one of the most imposing of all the buildings of Rome: its southern part, which stood at the foot of the Palatine hill, not only equalled the hill in height, but towered high above its summit. In costliness of material, though not in delicacy of design, this palace more than equalled the buildings of the earlier emperors, with the exception of that which Nero built. Some additions and improvements were made to the palace of Septimius Severus by Heliogabalus and Alexander Severus. (Lamprid. *Hel.* 3, 8, 24; *Alex. Sev.* 24, 25.)

The *Golden House* (*Domus Aurea*) of Nero, which covered part of the Palatine and Esquiline hills and the great valley between them, must have been a building of the most marvellous splendour and extent. It was nearly a mile in length, and included large gardens and parks for wild animals, all surrounded by a triple *porticus* or colonnade of marble. The interior was decorated in the most lavish way, with gold, ivory, and jewels. (Tac. *Ann.* xv. 42 ; Suet. *Ner.* 31 ; Mart. *Spect.* 2.) Some rooms, according to Suetonius, were entirely plated with gold, and studded with precious stones and pearls. The supper-rooms were vaulted with ivory panels (*lacunaria*), from openings in which flowers and perfumes were scattered on the guests. An enormous number of works of art of every class collected from Greek cities were brought to adorn the palace, and others were made by Nero's orders, such as the bronze colossal statue of himself, 120 feet high, the work of the Greek sculptor Zenodorus, and a painted portrait on canvas of the same ridiculous size. [COLOSSUS.] The destruction of the Golden House and the restoration of most of its site to public uses were among the most popular acts of the Flavian emperors. Both the *Colosseum* and the great *Thermae* of Titus stand on part of the site of Nero's palace, of which a small portion was used, after being stripped of its rich marble linings, to form the substructures of part of the *Thermae* of Titus. This is almost the only part which now exists: remains of a large peristyle, and the lofty rooms round it, are still fairly well preserved: the vaults are richly decorated with stucco reliefs and paintings, which are rapidly perishing. It was the discovery of these elaborate ornaments early in the sixteenth century which gave so great an impulse to the growing love for classical methods of decoration. Raphael and his pupils with great skill copied the stucco-work, and painted arabesques in the Vatican palace, in the Villa Madama, and in a large number of other buildings. Owing to these magnificent rooms having been used as the substructures of the baths of Titus, most writers on the subject have described the paintings as being part of the work of Titus: *e.g.* Mirri and Carletti, *Terme di Tito*, Rome, 1776, and De Romanis, *Terme di Tito*, Rome, 1822. Both these valuable illustrated works, which give much that is now lost, really deal with the *Golden House*, not with the *Thermae*. Though the walls of these two structures are mixed in a somewhat complicated way, it is very easy to distinguish one from the other. Titus's walls are of plain brick-faced concrete, without any stucco covering, while Nero's are in all cases either coated with painted stucco, or with the cement backing of the missing marble lining. Even where the stucco has in some places fallen off Nero's walls, clear evidence as to its former existence is given by the marble plugs with which the wall-surface was studded to form a key for the plastering.

Pompeian Houses.—Though of course less magnificent than the palaces of Rome, the houses of Pompeii, from their exceptionally perfect state of preservation, are of special value as examples of Roman domestic architecture, and have the advantage of being in most cases of known date. Few are older than the Christian era, and none of course are later than 79 A.D., when the city was overwhelmed by the eruption of Vesuvius. The existing remains show us, as a rule, only the ground-floor of each house; and it should be remembered that a number of the best rooms—especially, there is reason to believe, the bedrooms and the women's apartments—were on the upper floors. The presence of stairs in apparently all the houses proves that one-storied buildings were practically unknown in Pompeii: the few fragments of the upper story which have been found standing show that, in some cases at least, the upper part of the house was partly constructed of wood, and was arranged so as to project beyond the line of the lower story, very like the half-timbered houses of England or France in the fifteenth and sixteenth centuries. (See cut, p. 666 *a*.)

In one respect the Pompeian arrangement resembled that of mediaeval and modern Italy: that is, the street front on the ground-floor, even of large and handsome houses, was usually occupied by a row of shops. In some cases these shops have no doorway or passage communicating with the main house, and were probably rented by the owner to independent tradesmen ; in others the shops could be entered from the house, and in these cases we may suppose that the shops were managed by the slaves or clients of the house-owner, who perhaps in this way made a profit out of the produce of his country estate.

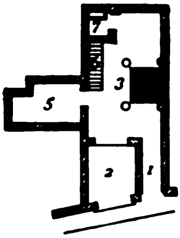
The accompanying plan shows a small shop, to which is joined the residence of its owner, forming a small block independent of the adjoining larger house. (1) An open archway, in which a wooden shop-front was fitted ; the threshold of this opening is rebated to receive the wooden partition, part of which was hinged so as to form a narrow door: the upper part would be closed at night by flap-shutters hinged at the top, an arrangement very like that of a modern Oriental bazaar. This method of constructing shop-fronts was very common, not only in Pompeii, but in Rome and elsewhere. The presence of a shop appears always to be indicated by this long grooved sill, with marks of the hinged door on one side. A large number of examples still exist in Rome. The L-shaped counter (2) is formed of concrete and brick stuccoed: in it are inserted a row of *amphorae*, apparently for the reception of hot food or drink of some kind. At one end is a charcoal stove (3); 5, 5 are the dining-room and store-room of the shopkeeper; 4 is the staircase leading to the sleeping apartments. The whole forms a complete house of the smallest type.



House with Shop.

In the next cut (p. 680 *a*) a similar shop has more extensive private accommodation connected with it. It has a separate passage from the street into the private part, which leads into a very small *atrium*, supported on four columns, two engaged in the wall; out of the *atrium* open a closet-like kitchen and a small dining-room. A very narrow staircase leads to the upper floor.

A third variety was evidently the property of a richer tradesman: in this case the front door is in the middle of the façade; the passage from the street has a small kitchen and other offices on one side and the shop on the other, forming a wider frontage. Behind is a *Tuscan atrium*, occupying the whole width of the house, and behind it are two private rooms, probably dining-room and parlour. The stairs are placed in an angle of the *atrium*.

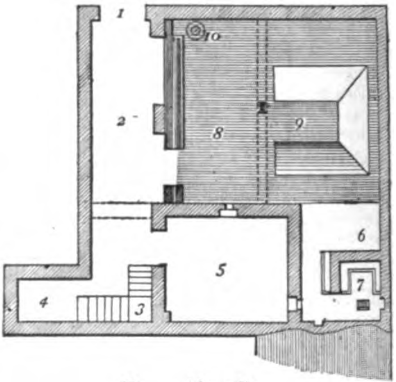


House with Shop. (See p. 679.)

1. Ostium. 2. Taberna. 3. Atrium. 4. Impluvium. 5. Cubiculum or Triclinium. 6. Scalae. 7. Culina.

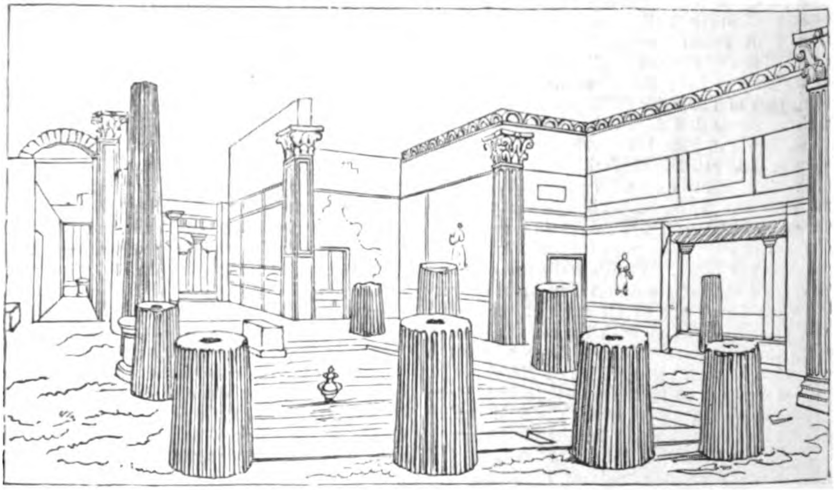
Next we come to a class of small houses with no shop attached: in one of these (see cut opposite) the whole width of the house, a space of 38 feet, is occupied by the dining-room and entrance-hall, from which it is separated by two wide open archways. Part of the dining-room was without a roof, forming a sort of *atrium*; the pavement of this open part has a long gutter to catch the rain-water, which was stored in an underground cistern, and drawn out through a well-mouth (*puteal*) at one end. The *triclinium*, or triple bench for the diners, still exists under the covered portion of the room: it is made of rubble stonework covered with stucco. Behind the dining-room are a small kitchen and a *lararium*, with an altar in front of a recess in which a goddess holding a cornucopia is painted. Next comes a small room, probably a *cella* for a slave, and by the side of it the staircase to the bedrooms above.

In the larger houses the *atrium* is a very important feature, on which the chief architectural beauty of the building depends. It is usually supported by Corinthian columns formed of concrete and brick, coated with brilliant painted stucco: marble, except in thin slabs for pavements or wall-linings, is rare in Pompeii: and even in the best houses display is made at the least possible cost,—a striking contrast to the lavish expenditure on the rich houses of Rome or even of Ostia. Shams of every kind were specially popular at Pompeii. The central paved space under the open part (*impluvium*) of the *atrium* is usually of marble, either in thin slabs or in mosaic; a fountain is a very common ornament, and flower-pots seem often to have been ranged round it.



House without Shop.

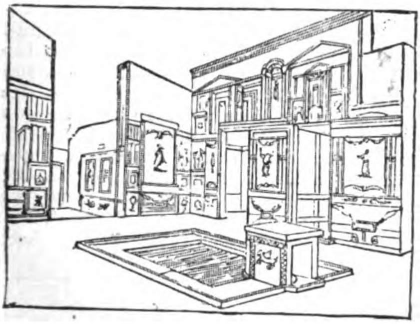
1. Door. 2. Entrance-hall. 3. Scalae. 4. Cella for slave. 5. Winter Triclinium. 6. Culina. 7. Lararium. 8. Atrium or open court. 9. Triclinium. 10. Puteal.



Atrium of the House of the Quaestor.

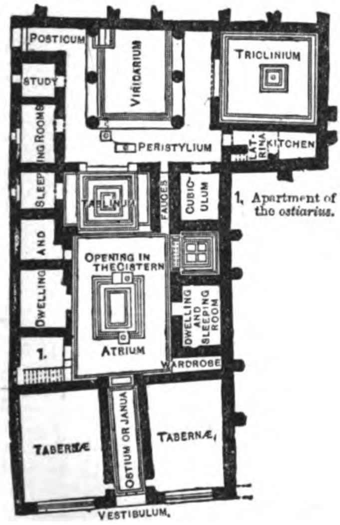
The two woodcuts annexed represent two *atria* of houses at Pompeii. The first is the *atrium* of what is usually called "the House of the Quaestor." The view is taken near the entrance-hall facing the *tablinum*, through which the columns of the peristyle and the garden are seen. This *atrium*, which is a specimen of what Vitruvius calls the Corinthian, is surrounded by various rooms, and is beautifully painted with arabesque designs upon red and yellow grounds.

The next woodcut represents the *atrium* of what is usually called "the House of Ceres." In the centre is the *impluvium*; and as there are no pillars around the *impluvium*, this *atrium* must belong to the kind called by Vitruvius "the Tuscan."



Atrium of the House of Ceres.

The three following plans are good typical examples of the best class of houses in Pompeii. The first is popularly known as "the House of the Tragic Poet."

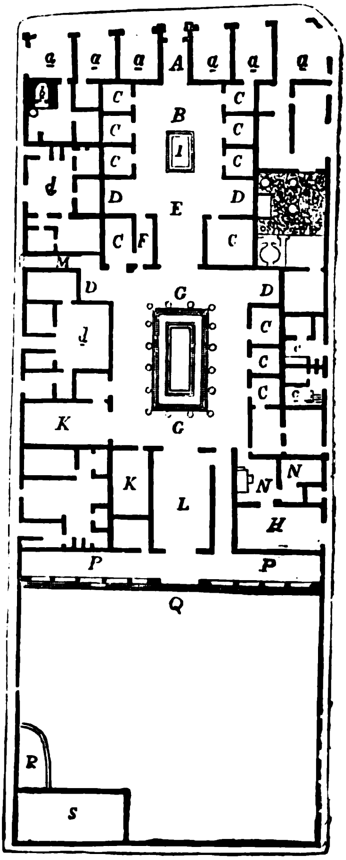


1. Apartment of the *ostiarius*.

House of the Tragic Poet.

Like most of the other houses at Pompeii, it had no *vestibulum* according to the meaning which we have attached to the word (see above, p. 668 *b*). The *ostium* or entrance-hall, which is six feet wide, is nearly thirty long,—a length occasioned by the shops on each side. Near the street door there is a figure of a large fierce dog worked in mosaic on the pavement, and beneath it is written *Cave Canem*. The two large rooms on each side of the vestibule appear from the large openings in front of them to have been shops; they communicate with the entrance-hall, and were therefore probably occupied by the master of the house. The *atrium* is about twenty-eight feet in length and twenty in breadth; its *impluvium* is near the centre of the room, and its floor is paved with white *tesserae*, spotted with black. On the left-hand corner of the *atrium* is a small room (marked 1 in plan), perhaps the *cella* of the *ostiarius*, with a staircase leading to the upper rooms. On each side of the *atrium* are chambers for the use of the family, or intended for the reception of guests, who were entitled to claim hospitality. When a house did not possess a *hospitium*, or rooms expressly for the reception of guests, they appear to have been lodged in rooms attached to the *atrium*. [HOSPITIUM.] At the further end of the *atrium* is the *tablinum*, with the *fauces* or passage at the side, leading into the *peristylium*, with Doric columns and garden (*viridarium*). The large room on the right of the peristyle is the *triclinium*; beside it is the kitchen, with a *latrina*.

The second cut contains the ground-plan of an *insula* surrounded by shops, which belonged to the owner and were let out by him. The house itself, which is usually called "the House of Pansa," evidently belonged to one of the principal men of Pompeii. Including the garden, which is a third of the whole length, it is about 300 feet long and 100 wide.

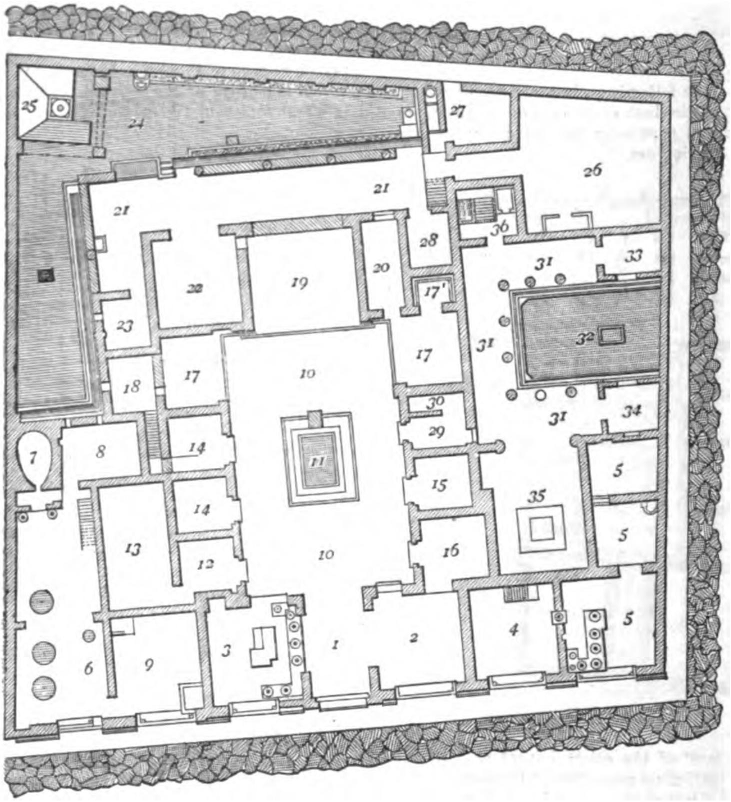


Ground-plan of an Insula, known as the House of Pansa.

A. *Ostium*, or entrance-hall, paved with mosaic. B. Tuscan *atrium*. I. *Impluvium*. C. Chambers on each side of the *atrium*, probably for the reception of guests. D. *Ala.* E. *Tablinum*, which is open to the *peristylium*, so that the whole length of the house could be seen at once; but as there is a passage (*fauces*), F, beside it, the *tablinum* might probably be closed at the pleasure of the owner. C. Chambers by the *fauces* and *tablinum*, of which the use is uncertain. G. *Peristylium*. D. Recesses in the *peristylium*. C. *Cubicula* by the side of the *peristylium*. K. *Triclinium*. L. *Oecus*, and by its side there is a passage leading from the *peristylium* to the garden. M. Back door (*posticum ostium*) to the street. N. *Culina*. H. Servants' hall, with a back door to the street. P. Portico of two stories, which proves that the house had an upper floor. The site of the staircase, however, is unknown, though it is thought there is some indication of one in the passage, M. Q. The garden. R. Reservoir for supplying a tank, S.

The preceding rooms belonged exclusively to Pansa's house; but there were a good many apartments besides in the *insula*, which were not in his occupation. *a*. Six shops let out to tenants. Those on the right and left hand corners were bakers' shops, which contained mills, ovens, &c., at *b*. The one on the right appears to have been a large establishment, as it contains many rooms. *c*. Two houses of a very mean class, having formerly an upper story. On the other side are two houses much larger, *d*.

Mr. Fergusson observes "that architectural effect has been carefully studied in the design



Plan of the House of Sallust.

A. Public Rooms.—1. Entrance. 2. Hall. 16. Probably the *cella* of the *ostiarius*, communicating with the hall and the *atrium*. 3. Shop communicating with the house. 4. Shop. 5. Shop with two rooms backwards, also marked 5, 5. Between 4 and 5 in the party-wall is a cistern common to both. 6. Bakehouse; the sites of three mills being indicated by round figures. There are remains of stairs leading to an upper story. 7. Oven. 8, 9. Rooms connected with the bakehouse. 10. *Tuscan atrium*. 11. *Impluvium*. 12. Antechamber, leading to 13. Probably a *triclinium* for winter use. 14, 15. *Cubicula* for guests (see House of Pansa, p. 681). 17, 17. *Alae*. 18. Small room leading out of the left-hand ala. 19. *Tablinum*. 20. *Fauces* leading into 21. *Porticus* or colonnade, occupying the usual site of the *peristylium*. 22. Summer *Triclinium*. 23. A small room. 24. Garden, to which there is an ascent by three steps from the *porticus* or colonnade. 25. *Triclinium*, or summer-house, covered by a trellis. 26. Kitchen and *Latrina*. 27. Back entrance. 28. Room opening from the *porticus*.

B. Private Rooms.—29. Entrance to the private apartments. 30. *Cella* of the *ostiarius* to the private apartments. 31. *Peristylium*, supported by Corinthian columns, with 32. *Impluvium* in the centre. 33, 34. Small rooms opening from the *peristylium*. 35. *Triclinium*. 36. Open space containing stove, with staircase to rooms above.

of Pansa's house, a vista nearly 300 feet in length being obtained from the outer door to the garden wall, varied by a pleasing play of light and shade, and displaying a gradually increasing degree of spaciousness and architectural richness as we advance. All these points must have been productive of the most pleasing effect when complete, and of more beauty than has been attained in almost any modern building of like dimensions" (*Hist. of Arch.* i. p. 370).

The third plan is that of one of the most elaborately decorated houses, usually (though without any real reason) called "the House of Sallust," which is remarkable for its very complete separation into two parts; one of which is carefully cut off from the more public rooms, and is supposed by many writers to be a *venereum*, or women's division of the house. But the division of a house into men's and women's apartments is quite foreign to the Romans; and though the Pompeians may have borrowed in this instance the Greek arrangement, yet it is better to conclude with Overbeck, that these were really the apartments devoted to the private use of the family. From the irregular nature of the ground, situated between two streets, as seen in the plan opposite, the private rooms could not be placed beyond the *atrium* and around the *peristylium*, which is here wanting, the usual position of the *peristylium* being occupied by the *porticus* and garden. (See plan, Nos. 21, 24.)

A row of shops occupies the main street fronts in the usual way: between two of these a wide passage leads into a large and handsome *Tuscan atrium*, round which the rooms of the more public part of the house are ranged: behind is a small garden, in one corner of which is a miniature summer-house, with three marble seats, and a fountain by it. The side of the house which fronts on to this little garden has an open loggia or *porticus* built along it. The private apartments are approached from the main *atrium* by a narrow door guarded by a small porter's cell. This, the only means of access, leads into a *Corinthian peristylium*, with a very small room cut out of each angle, and one larger apartment at one side. The bedrooms seem all to have been upstairs, and the fact that the same complete division of the two parts was kept up in the upper story is shown by the existence of a separate staircase in each portion of the house. A picture on the wall of the *peristylium* opposite the entrance, representing the fate of Actaeon when he surprised Diana, may have been intended as a warning to unauthorized visitors, supposing these apartments to be a *venereum*.

These are fairly typical examples of the arrangement of Pompeian houses, though there is an immense number of variations. In the main these first-century examples of Roman dwellings have a great deal in common with the house which Vitruvius describes, and show that his example as an architect was very largely followed for some years. In later times, however, the Roman houses were designed on a very different plan, less uniform in type, and with rooms much less open to the air.
