Liberation from Hungary had serious ramifications for Slovakia because the region now had to integrate into a new economy. Breaking with the Austro-Hungarian Empire meant that Slovakia lost long established markets for its natural resources. Transportation networks that had led south into Hungary needed reorienting in an east-west direction to the Czech Lands. In the new state, Prague replaced Budapest as the financial center.

When Slovakia joined the Czech Lands to form Czechoslovakia in 1918, Slovakia's agrarian base reinforced an economic policy similar to what Hungary had pursued while the region was part of its kingdom. This policy can be described as colonialist, meaning a system whereby one geographic area functions as the source of raw goods for another region. Slovakia was viewed as the supplier of raw materials for Czech factories. Different degrees of economic development in Slovakia and the Czech Lands encouraged this to happen. When Czechoslovakia was created, the Czech Lands were far more industrialized than Slovakia. While more than three-fifths of Slovakia's population was engaged in farming or forestry activities, less than one-third of the Czech populace was involved in some kind of agriculture.

Financial leaders, banks, and the central government in Prague tended to favor Czech enterprises. During the 1920s, using the rationale of modernizing industry, some Slovak factories were eliminated and some new establishments were built. However, all told, the new plants actually employed fewer workers than the number who had lost jobs when the older factories were closed. Slovakia, therefore, endured a higher rate of unemployment than elsewhere in Czechoslovakia, and in industrial development it continued to lag behind the Czech Lands. Although Slovakia remained a basically agrarian region, this did not lead to expansion of commercial farming. Even in agricultural production, Slovakia could not compete because the Czech Lands had developed modern, mechanized farming techniques. At the same time, the majority of farms in Slovakia were small, and farmers consumed most of what they produced. Large estates with sufficient acreage for commercial production remained in the hands of a minority of the population.

The Great Depression of the 1930s inflicted economic hardships on all of Czechoslovakia. To sell its finished goods, Czechoslovakia depended on outside markets. As a supplier of raw materials, Slovakia therefore could not avoid the ripple effect that the decline in exports had on Czechoslovakia's economy. Not only did the demand for natural resources plummet, factories in Slovakia were shut down and the majority of sawmills closed as well. Still, by 1934, the depression began easing in Slovakia. Adolf Hitler's rise to power in nearby Germany stirred fears about Czechoslovakia's security. In this climate of growing anxiety, Slovakia, which was located farther from Germany, became strategically more important to Czechoslovakia. This situation altered traditional attitudes that had worked against promoting industrialization in Slovakia; consequently, during the 1930s, armament factories were built there.

During World War II, Slovakia experienced an economic boom. This beneficial turn of events, however, was due in large measure to the Slovak Republic's ties to the Third Reich. German investment helped modernize and expand Slovak industries, which manufactured materiel for the German war machine. Overall, by 1943 Slovak industrial production had increased approximately 30 percent over prewar levels.

After the communist takeover of Czechoslovakia in 1948, Slovakia's economic development was controlled by an anticapitalist ideology. It was a doctrine aimed at destroying both private ownership of property and free competition in an independent marketplace. Czechoslovakia adopted centralized planning, which meant that the government took over and managed the economy. The period witnessed the complete nationalization of companies, industries, and consumer-oriented shops. Owners of small businesses were forced to turn them over to the state. The government used various forms of intimidation to force farmers, who still made up nearly half of Slovakia's population, to merge their property into huge cooperatives. This collectivization of farms, which continued in the 1950s, eliminated private ownership of agricultural lands. Individuals were no longer free to cultivate their land or sell their agricultural products. By the early 1960s more than two-thirds of Slovakia's agricultural land was state owned or part of cooperatives. To supplement their incomes, most farmers took second jobs.

Communist rule led to a revamping of traditional views about Slovakia's industrial development. The intensely hostile atmosphere of the Cold War era caused Czechoslovakia's central planners to place strong emphasis on defense-related industries. Five-Year Plans, modeled after the Soviet Union's system to expand industrial output, encouraged construction projects and spurred the expansion of heavy industry. In Slovakia, factories were built to manufacture weapons and armored vehicles such as tanks. In addition, chemical plants and metal industries—including copper, iron, steel, and aluminum—sprang up.

This strong emphasis on heavy industry furthered industrialization in Slovakia, but the standard of living there still lagged behind the Czech Lands. Moreover, in the early 1960s, quality consumer goods were in short supply everywhere in Czechoslovakia, and the country's economy was stagnating. Trying to stimulate the economy and correct inequalities between the regions helped spark the short-lived 1968 reform movement commonly called the "Prague Spring." During "normalization," the period of repression that took place in the aftermath of the failed reform attempt, an ever greater stress was placed on promoting industrialization in Slovakia. The objective was also to improve the standard of living for Slovaks by bringing Slovakia economically on par with the country's western Czech region. The construction of chemical plants and emphasis on heavy industry, especially armaments, thus continued. For Slovaks, building industrial plants had the additional positive effect of creating construction jobs. This opened employment opportunities for more Slovaks and also let farmers, whose property had been merged into huge collectives, supplement their incomes. In the 1980s Slovakia enjoyed 100 percent employment, and the standard of living did reach parity with the Czechs. Rural poverty, in particular, was reduced and life in Slovakia's villages improved.

Under the heavy hand of a centrally controlled regime, then, Slovakia went from a backward agricultural region to an industrialized society. Although a brutally repressive period, the fact is that Slovakia's industrialization occurred primarily during Czechoslovakia's communist era. Centrally managed economic programs led to the modernization of farming methods, but it was in industry where the greatest transformation took place. Policies that fostered full unemployment and raised the standard of living in Slovakia, however, also encouraged inefficiency. Old factories and equipment were often not modernized; the overproduction of goods led to warehouses overstocked with surplus inventory. The strategy of emphasizing heavy industry, especially defense-related products, made Slovakia economically dependent on the Soviet Union and Eastern Bloc countries. Thus following a pattern that had historically characterized Slovakia's economic development, in the late 1980s its prosperity relied on markets outside the region. Moreover, Slovakia's economic progress was overly dependent on a limited range of manufactured goods.

When the communist regime was toppled in 1989, Czechoslovakia set out to reestablish a market economy based on competition and private ownership. In the push to transform the economy, Czechoslovakia's postcommunist government made privatization an important objective. This meant turning former state-owned companies into private properties. The country's privatization program would, ultimately, lead to the elimination of inefficient enterprises that could not compete in the market place.

The economic restructuring following the 1989 revolution hurt Slovakia far more than the Czech Republic. Ironically, the eased international tensions that accompanied the end of the Cold War greatly reduced the demand for defense weapons. The overthrow of communist regimes in Eastern Europe, therefore, resulted in the loss of markets for the types of goods manufactured in Slovakia. The ill effects of an economy too narrowly dependent on armaments and heavy industry quickly became apparent. Slovaks, who had lived under a system of guaranteed employment, were now losing their jobs. By the fall of 1991, unemployment in Slovakia had reached 12 percent; in the Czech Republic it was only 4 percent. Slovak laborers still employed lived in fear that their factories would be shut down. In Slovakia, therefore, popular sentiment favored a more gradual privatization program. Many persons wanted the government to protect their jobs by continuing to subsidize factories, including the inefficient weapons industries. Sharply conflicting views about how quickly the country should privatize industry and reinstitute a free enterprise system contributed to the breakup of the Czech and Slovak Federative Republic in 1993.

Following the Velvet Divorce, Slovakia, for the first time in its history, boasted an independent economy. Its subsequent economic development, however, followed a bumpy course. Slovakia now faced the task of creating a stable economic system that would keep unemployment low, check inflation, and let Slovak businesses participate in a competitive international market. Those advocating independence had promised to slow down the rate of economic change. It was believed that this course of action would spare Slovakia's inhabitants undue hardships and leave them economically better off. The problems that plagued Slovakia before the separation, however, persisted afterward. Slovakia still had a large number of inefficient, state-owned enterprises producing goods for a dwindling market. Workers, used to looking to the government to safeguard their jobs, wanted it to continue subsidizing these factories. Government officials also became embroiled in major controversies over whether banks and energy-producing companies should be privatized.

Although Vladimír Mečiar supported gradual privatization, during the first year of independence he pushed policies that nearly halted the process of turning state-owned assets over to private ownership. In 1993–1994 privatization moved slowly. Following the September 1994 elections the process was accelerated but still did not proceed at a rapid pace. On the eve of independence, in 1992, about 30 percent of state-owned businesses suited for privatization had been placed in private hands; by 1995, privately owned enterprises had only grown to slightly over 41 percent. Privatization did subsequently pick up speed. Based on government statistics, by the end of 1997 nearly 97 percent of the country's eligible businesses had been privatized; just over 1,600 were still publicly owned.

As it turned out, however, most state properties privatized under Mečiar's stepped-up program were sold directly to individuals and without public scrutiny. The procedure was fraught with abuses and resulted in cronyism, especially as persons with political connections were allowed to purchase prime real estate and the most lucrative enterprises. Many transactions involved selling properties at costs far below their real value and meant huge financial losses for the national treasury.

Still, during the first three years after independence, Slovakia enjoyed economic growth. During this period, government policies—and its continued intervention in the economy—helped reduce inflation and keep unemployment from worsening. Inflation fell from 23 percent in 1993 to 13 percent in 1994. With a few fluctuations, the unemployment rate dropped slightly; it went from 14 percent in 1993 to 12.5 percent in 1997.

By 1997, however, the economy had moved into a downward spiral. Even before independence, Slovakia had had a difficult time enticing foreign investment. Fears that the Mečiar government lacked a commitment to advancing democratization made foreign financiers even more leery of investing money in the Slovak Republic. Thus, during the entire period from 1989 through 1996, Slovakia reportedly attracted less than $625 million from outside investors. In addition, by 1997 Slovakia had amassed a trade deficit that, together with a rising foreign debt, turned it into a debtor nation. Its financial situation hurt plans to become part of the global economy. In 1995 the Slovak Republic had applied for membership in the European Union. At its December 1997 meeting, for both economic and political reasons, the European Union refused to accept Slovakia into membership at that time. The country was placed on a list for later consideration.

The Dzurinda government, which came into power in 1998, resolved to deal with the republic's economic problems. The new leadership was determined to put the country's financial affairs in order so that Slovakia would qualify for membership in the European Union. The government therefore adopted harsh measures to reduce the debt and increase revenues. This caused unemployment to increase from nearly 14 percent to 17.7 percent in 1999. Inflation also went up nearly eight points to 14 percent. At the same time, in that year Slovakia was able to wipe out its trade deficit. By 2002, the Slovak Republic definitely had not solved its financial problems, and its economic development remained on a bumpy course. Nevertheless, in December, the European Union extended Slovakia an invitation to become a member state as of May 2004. On 16 April 2003, Prime Minister Dzurinda, together with representatives from nine other new-member nations, signed the treaty allowing their respective countries to join. In a national referendum held in May 2003, a majority of the Slovaks who voted indicated that they agreed with the decision to make Slovakia a member state of the European Union. There is still hope that Slovakia's economic development will continue along a path that will allow the republic to participate in the global economy and maintain a decent standard of living for its citizens. Since Slovakia became independent, economic issues have often dominated domestic politics. And Slovakia's ongoing economic development no doubt will be significantly influenced by the course that the government elected in the 2002 national elections chose to follow.

CONTEMPORARY CHALLENGES

Following the Velvet Divorce in 1993, Slovakia became a sovereign nation, but with independence came immediate problems and long-term challenges. The Slovak government now became responsible for safeguarding the welfare of individuals living within its boundaries. Independence meant that, in addition to creating a stable governmental structure, the Slovak Republic had to grapple with forwarding the democratization process and establishing a market economy. These changes, together with the resurgence of ethnic divisions, fragmented Slovak society.

Coping with divisions is among Slovakia's most pressing problems. The economic transformation that took place in the 1990s created a more socially diverse population than had previously existed. In addition, varying perceptions of how well Slovakia has fared since the collapse of communism divides its citizens. A freer, more democratic climate has also allowed a large number of political parties to develop. Slovakia is divided in yet another crucial way. Although Slovaks make up slightly over 85 percent of the population, Slovakia is a multiethnic country. After independence, protecting the rights of ethnic minorities against Slovak nationalism and a potentially tyrannical majority became both a problem and a challenge. In the twenty-first century, Slovakia thus faces the challenge of trying to ensure that all its inhabitants enjoy the benefits of having brought down the communist regime as well as having achieved independence.

One of the principal problems Slovakia has had to confront in the early years of the twenty-first century is to refurbish an international image severely tarnished during the mid to late 1990s. The country still needs to overcome the fact that it was the only Central European country initially denied membership in the European Union on the grounds that it failed to meet the political criteria. Prime Minister Vladimír Mečiar's high-handed tactics and penchant for authoritarianism, together with the perceived mistreatment of ethnic minorities, led to the accusation that Slovakia had a weak commitment to democracy and human rights. Although the Slovak Republic is now a member of the European Union, the earlier rebuff, which included very public criticism of the newly independent country, damaged its standing in the world community. The Mikuláš Dzurinda government, which was inaugurated in the fall of 1998 and reelected in 2002, made strides toward fixing Slovakia's marred image.

Gaining a reputation as a solid democracy is important to Slovakia. Securing international esteem will not only make the Slovak Republic a respected voice in global affairs, it will help attract foreign investment and advance trade with outside countries. But, even though Slovakia's inhabitants might want their country to enjoy international respect, economic and social issues generally take precedence over global prestige. Like the residents of most countries, Slovak citizens typically view politics through the lens of their own self-interest. Such a perspective commonly produces cleavages within a society. In Slovakia, the move to a market economy created more hardships for some segments of the population than for others. These varied impacts have split Slovaks in several different ways.

The most obvious divisions in Slovakia are between those who believe they have benefited in the post-1989 era and those who feel they have not. The more satisfied group tends to encompass the young, the better educated, and individuals who reside in cities. Rural residents, inhabitants of single-industry towns, and the elderly, especially retired persons, belong to the less satisfied category. The ranks of the dissatisfied also can include workers of all ages who lost their jobs when unprofitable factories were closed. They face the same loss of security and reduced standard of living as do older persons whose pensions no longer provide a comfortable existence.

Socioeconomic divisions in Slovakia mirror the situation in other capitalist countries, including the United States. However, in Slovakia societal cleavages are intensified by attitudes and expectations nurtured during the communist era. For all their oppression, communist regimes did provide ordinary persons with basic economic security and social benefits. Thus Slovakia, like other former communist countries, must deal with the legacy of what is often referred to as the "cradle-to-grave" security that citizens believed they had under the old system. Elderly citizens and workers who experienced the benefits of 100 percent employment, a guaranteed pension, and free universal health care feel less secure in the new, post-1989 order. Many Slovaks want the practice of the government taking responsibility for the general welfare to continue.

In the communist era and even during the Czech and Slovak Federative Republic's short existence, assessments of living standards typically compared the Czech Lands and Slovakia. Now, comparisons of living standards are among social classes within Slovakia. These comparisons underscore differences created by the move to a market economy. Postindependence governments, therefore, have been forced to confront class-based tensions that did not previously divide the population. The fact that Slovakia is now an open society means that persons can freely express their grievances. And politicians cannot simply ignore them.

The significance of socioeconomic differences is apparent each time Slovakia holds national elections. Citizen concerns force political parties to address economic issues, which now form an important part of national campaigns. For example, in summer 2002, as Slovakia was gearing up for the fall elections, the media carried reports on nagging economic questions and problems with the country's health care system. Seeking comments from political parties, reporters highlighted the large gap between the minimum wage and the average monthly income. Commenting on economic matters, spokespersons offered their party's solutions for how the situation might be improved.

Economic concerns have contributed to the formation of numerous political parties, but this proliferation also reflects an array of divisions within Slovak society. Indeed, Slovakia's multiparty system is another indicator of just how fragmented the country is. In July 2002, for example, officials announced that twenty-six parties had registered and planned to field candidates in the upcoming fall elections. Given the large number of parties, identifying blocs of supporters is difficult; however, observers tend to agree on some basic points. Persons residing in rural areas and the elderly form pockets of conservative voters who believe that Slovakia was better off before the 1989 Velvet Revolution. Families and individuals whose living standards have been reduced or whose future security seems threatened by unemployment are also drawn to the former Communist and more nationalistic parties. In addition, there is a small hardcore segment still ideologically committed to communism and yearning for a return to the old political and economic order.

Dealing with ethnic divisions within its boundaries is another reality in Slovakia and one of the most formidable challenges confronting the young republic. Slovaks have had to contend with the fact that, although they make up the dominant group, Slovakia is clearly a multiethnic state. Except for the short interim during World War II, the period since 1989 is the first time in nearly eleven hundred years that Slovaks have enjoyed majority status. Gaining independence, which was viewed as finally fulfilling Slovak national aspirations, has intensified nationalist sentiments among the populace. Modern-day politics in Slovakia, therefore, are influenced by a strong Slovak nationalism in the face of minority groups determined to preserve their cultural identity.

Slovakia's constitution addressed the status of subject nationalities by including clauses affirming minority rights. Indeed, beginning with the Preamble, it acknowledges the multinational nature of Slovak society. For the Slovak government, therefore, the challenge is to ensure the fair treatment promised to ethnic minorities; for the Slovak people, the challenge is to avoid becoming a tyrannical majority indifferent or even hostile to the other nationalities in their midst.

Questions involving language rights present a particularly nettlesome problem for the Slovak Republic. The government and Slovaks in general see their language as an expression of national sovereignty. An official state language contributes, theoretically, to national unity. Not surprisingly, Slovaks generally accept the idea that Slovak should be the country's only official language. At the same time, for subject minorities—especially Hungarians—preserving their own language is part of their historical experience and protecting it is a steadfast objective. And they have successfully maintained their cultural identity since the end of World War I, when they involuntarily became part of Czechoslovakia.

Looking back on the decade since independence, Hungarians see a chipping away at minority rights. Even before the breakup of Czechoslovakia, debates over language rights sharply divided the populace and stirred apprehensions among Hungarians that a sovereign Slovak state would try to stamp out their language. From the Hungarian standpoint, when the Slovak National Council passed the State Language Law in 1995, which proclaimed Slovak the only official language, their fears were being confirmed. Hungarians interpreted the law as an outright violation of minority rights guaranteed by the Slovak Constitution. From their perspective, the language legislation reflected more than popular prejudice, which minorities in many countries encounter. It represented official discrimination by the government. The 1995 law thus heightened the difficulties in already strained ethnic relations.

Hungarians are probably aware that not all Slovaks support repressive measures to force the Slovak language on ethnic groups. Indeed, in some regions Slovaks reportedly reacted to language laws by continuing to use Hungarian in their dealings with Hungarians. In the 1990s some Slovaks even responded negatively to Prime Minister Mečiar's attempt to play on nationalist sentiments to shore up support for himself. For their part, Hungarians still remain uneasy about their cultural survival and fear that their legal rights will not be upheld in the Slovak Republic. As a result, in modern Slovakia Hungarians have become a visible, highly vocal minority.

A determination to promote Hungarian interests has caused several political parties to develop. In 2002 there were six such parties in Slovakia. Because Hungarians are overwhelmingly attracted to them, these parties further splinter Slovakia's population as well as the country's political process.

In the main, Hungarian political parties have platforms demanding that minority rights be protected. They seek to ensure Hungarian representation in the government and National Council. Like Slovak nationalists of the nineteenth and twentieth centuries, activists desire more cultural autonomy for Hungarians. They want more authority over local education, a power that would let Hungarians continue to foster Hungarian culture. Coexistence, a more militant political party, has called for granting territorial autonomy to Hungarian areas in southern Slovakia. Hungarian parties, though, have not directly advocated secession.

While Hungarians have been working to preserve their cultural identity, Slovakia's Roma, known as Gypsies in English-language countries, have been dealing with pervasive discrimination. In the modern Slovak Republic, unemployment, poverty, illiteracy, crime, and even disease rates are much higher among the Roma than for other citizens, including other ethnic minorities. The Roma are suffering from the effects of a history of poverty, poor education, and a lifestyle most Slovaks disdain. The period since independence has been a particularly bad time for Slovakia's Roma population. The reduction of social benefits formerly provided by the communist regime has made their already poor existence even worse.

Anti-Roma prejudices take several forms. At the national level, there has been government neglect as well as a tolerance of mistreatment and discrimination. In the 1990s Slovakia's political leaders seemed callously disinterested in safeguarding the civil rights of the country's Romany citizens. In addition to Prime Minister Vladimír Mečiar, other national officials openly expressed contempt for the Roma. Instead of helping to moderate popular bigotry, national figures thus helped intensify existing popular prejudices.

In the local arena, bigotry toward the Roma is evident in discriminatory ordinances. By employing former communist-style residency permits, some localities have limited where the Roma can live. Finally, the Roma are the victims of popular stereotypes accepted by most Slovaks. An impoverished, uneducated minority generally living in squalid conditions, they are considered responsible for their dire situation. Their plight is typically blamed on their "way of life." On a more personal level, the Roma have encountered brutal hostility in the form of sporadic attacks, especially by Slovak skinheads. In 2000 the brutal murder of a Romany woman in Žilina who was trying to protect her daughters from men who had broken into their home generated outrage not only in Europe but within Slovakia as well. Whether the publicity about such a horrific incident was a fleeting emotional response or has caused a genuine

Slovak Roma are known in English as Gypsies. All over Europe, Gypsies suffer discrimination. (Shepard Sherbell/Corbis)

reassessment of the ill effects of bigotry toward the Roma is a yet unanswered question, embodying a challenge that Slovak society faces.

Diversity in Slovakia was further enhanced by a surge in ethnic nationalism among Ruthenians (Ruthenian-Ukrainians) after 1989. A small Slavic minority in the country's eastern region, Ruthenians belong to the Greek Catholic (Byzantine) Rite. Although they use the Cyrillic alphabet, their language is similar to the dialect spoken by Slovaks who live in eastern Slovakia. While legislation designating Slovak as the official language does not affect them in the same adverse way as Hungarians, Ruthenians, nevertheless, are increasingly dedicated to preserving their ethnic identity and fighting assimilation into Slovak culture. Language training has been incorporated into school curriculums, where Slovak too is taught. This ethnic revival has also helped boost the number of political parties in Slovakia. By 2002, there were two parties dedicated to promoting Ruthenian interests.

The presence of a tiny Jewish minority presents a special challenge to the rest of the country's populace. Slovaks, in particular, are being called on to guard against a resurgence of anti-Semitism, especially as a reenergized nationalism has prompted some to take a more positive view of the World War II Slovak state and its clerical leader, Josef Tiso.

Slovakia must contend with the fact that questions surrounding minority rights have had an impact that reaches beyond its borders. Specifically, there have been foreign policy ramifications. The treatment of ethnic groups helped bring disrepute to the country in the mid-1990s and contributed to what amounted to a scolding by the European Union (EU) and NATO. Minority issues have prompted outside interference in Slovak affairs. For example, allegations of abuse brought Slovakia under the watchful eye of international groups that monitor human rights. In addition, the language laws that antagonized Hungarians in Slovakia upset the Hungarian government as well. Whether justified or not, Hungary has maintained a keen interest in Hungarian minorities residing in its neighboring countries. In the mid-1990s the Slovak Republic and Hungary negotiated a treaty that, in addition to settling boundary issues, made the Slovak government promise to guarantee human and minority rights. Meddling by Hungary has had the unfortunate effect of nurturing underlying fears that a zealous Hungarian minority could one day turn into a separatist movement. Because persistent, widespread discrimination has led many Roma to seek asylum in other countries, their situation has created an additional international embarrassment. Other countries have generally rejected asylum appeals on the basis that the Roma are economic refugees, not political refugees eligible for protection. Still, their attempt to leave Slovakia spotlights the discrimination against and overall plight of the country's Roma population.

At the beginning of the twenty-first century, Slovakia faces many of the same kinds of problems and challenges as other nations confront. It must contend with economic upswings as well as downturns, unemployment, and inflation. Slovakia cannot escape social problems stemming from an unequal distribution of wealth. Consumer-related concerns have evolved into political issues. It has to cope with environmental problems, especially restoring areas ravaged by industrial expansion during the communist era, when there was little concern about pollution or other adverse environmental impacts.

Like other former communist countries, Slovakia also has to grapple with the peculiar legacy of those years. In particular, these countries cannot escape the lingering impact of a system that, even if it denied political freedoms, provided basic economic security to ordinary citizens of all ages. The transformation to a market economy has created more social classes, and some groups have clearly fared much better than others since 1989. For Slovakia, therefore, a vital challenge is to prevent significant segments of the society from becoming disillusioned with the reformed economic structure.

Slovakia must deal with the reality that it is a divided, often polarized, society. The fact that it is a freer, more democratic country has let suppressed differences surface. The collapse of communism and subsequent Slovak independence also gave rise to a more assertive Slovak nationalism. This heightened Slovak nationalism has accentuated ethnic differences and generated a strong reaction among the country's minority groups. The fight to protect minority languages symbolizes larger, thornier issues. From a practical standpoint, it is reasonable that the Slovak government and Slovaks, who are in the majority, favor a single official language. From the perspective of national minorities, this aim represents an attempt to eradicate ethnic cultures. And from their vantage, Slovaks pose the threat of becoming a tyrannical majority. Slovakia thus faces the ongoing challenge of ensuring that ethnic groups are afforded an opportunity to have their interests heard.

The treatment of minorities has raised doubts about how strong the commitment to democratic principles is among Slovaks in general. Slovakia, though, is not the only country that has had to deal with ethnic tensions. Indeed, some countries have not treated their minorities nearly as well as Slovakia has. For example, at the time of independence, Slovakia conferred citizenship on all residents, including ethnic minorities. Former communist-dominated countries did not universally follow this course. Nevertheless, the practice of discriminatory policies by other nations does not absolve Slovakia or make minority issues any less real or problematic.

For the foreseeable future, ethnic differences will remain a reality of life in the Slovak Republic. There is little doubt that political, social, and demographic differences that fragment Slovak society will persist as well. The economic and political transformations that have taken place since the end of communism seem to ensure that they will. For modern-day Slovakia, the fundamental challenge is to address issues in a way that makes the various social, demographic, ethnic, and political groups believe that, in the long run, they are better off under the reformed economic and political system that has taken hold in this now sovereign nation.

CHRONOLOGY

ca. 450–500	Slavs first recorded as residing in modern-day Slovakia.
568	Avars invade the Danube region inhabited by Slavs.
623–658	Period of the Kingdom of Samo.
791–796	Charlemagne's forces expel Avars from the Danube region.
828	Prince Pribina builds a castle and church in Nitra.
833	Mojmír annexes Pribina's land and creates the Great Moravian Empire.
863	The missionaries Cyril and Methodius arrive in the Great Moravian Empire.
870–894	Reign of Svätopluk and height of the Great Moravian Empire.
906–907	Magyars invade the Danube region.
	Great Moravian Empire disintegrates; for the next 1,000 years Slovakia is ruled by the Magyars.
907	First recorded mention of a castle on the site of modern-day Bratislava.
ca. 1200	Germans begin settling in northern Slovakia.
1428	Czech Hussites begin moving into Slovak territory.
ca. 1520	Protestant Reformation gets under way in Slovakia.
1526	Ottoman Turks defeat Magyar forces at Mohács.
1536–1783	Bratislava (Pressburg) is the capital of Royal Hungary.
ca. 1616	Counter-Reformation gets under way in Slovakia.
1619–1711	Religious and civil wars in the Hungarian kingdom.
1635	University is established at Trnava.
1657	University is established at Košice.
1711–1713	Jánošík leads a band of outlaws in northern Slovakia and surrounding areas.
1790	Anton Bernolák publishes a Slovak grammar.
1792	Slovak Learned Society founded in Trnava.
1825	Ján Kollár publishes *Čitanka* (A Reader) in "Czechoslovak."
1843	L'udovít Štúr and followers agree to establish a Slovak literary language.
1848	Demands of the Slovak Nation manifesto are proclaimed in Liptovský Sväty Mikuláš.
	Slovak National Council is created.
	Failed attempt, led by Štúr, to foment a Slovak popular uprising against Magyars.
1849	Slovak delegation presents petition for Slovak autonomy to Emperor Franz Joseph.
1851	Supporters of Štúr and Bernolák agree on a Slovak literary language.
1852	Martin Hattala publishes *Krátka mluvnica slovenská* (A Concise Slovak Grammar).
1861	Memorandum of the Slovak Nation is drafted in Turciansky Svätý Martin.
1863	Matica slovenská is founded.
1867	Dual Monarchy is created; Slovakia falls under direct Hungarian control.
1868	Nationality Law makes Magyar the official language but promises to protect minority language rights.
1870s	Hungarian government renews Magyarization policy.
1871	Slovak National Party is organized.
1874	The government closes Slovakia's three gymnasia.
1875	The government abolishes the Matica slovenská and confiscates its property.
1896	Slovak students form the Czechoslovak Union to foster Czech and Slovak unity.
1907	Černova Massacre.
1913	Slovak People's Party is formally established.
1915	Cleveland Agreement is drafted.
1916	Czechoslovak National Council is formed in Paris.
1918	Pittsburgh Agreement is signed by Tomáš Masaryk.
	New Czech-Slovak state declares independence.
	Declaration of the Slovak Nation is announced in Turciansky Svätý Martin.
	Vavro Šrobár is charged with administering Slovakia; Bratislava is designated Slovakia's administrative capital.
	Slovak People's Party is revived under Father Andrej Hlinka's leadership.
1919	Matica slovenská is reopened.

	Comenius University is founded.
1920	Czechoslovakia's constitution is adopted; it renames the country "Czechoslovakia" and creates a centralized state.
	Treaty of Trianon establishes borders between Czechoslovakia and Hungary.
1925	The Slovak People's Party is renamed Hlinka's Slovak People's Party.
1938	Andrej Hlinka dies in August.
	Monsignor Josef Tiso assumes leadership of the Hlinka's Slovak People's Party.
	Munich Agreement: France and England allow Germany to annex the Sudetenland. In October the Žilina program calling for an autonomous Slovak state is drafted.
	On 22 November, the Prague government implements the Žilina program, and the federated state is renamed "Czecho-Slovakia."
	Josef Tiso becomes prime minister of Slovakia.
1939–1945	The Slovak Republic.
1939	On 13 March, Tiso meets with Hitler, who demands that Slovakia declare independence.
	On 14 March, the Slovak parliament proclaims independence.
	On 15 March, Germany invades Czecho-Slovakia, and the united nation ceases to exist.
	Hungary occupies Slovak territory along the Slovak-Hungarian border.
	On 23 March, Slovak government signs a treaty of "protection" with Germany.
1941	Jewish code establishes restrictive regulations for Jews in Slovakia.
1942	From March to October, Jews are deported to concentration camps.
1944	Slovak national uprising.
	Deportation of Jews resumes in the fall.
1945	Restoration of Czechoslovakia.
	Košice Program is implemented.
	Slovakia temporarily has autonomy.
1946	A centralized government is reestablished.
	Josef Tiso is charged with treason and put on trial.
1947	Josef Tiso is executed.
1948	A bloodless coup establishes a communist government in Czechoslovakia.
1950s	Private property is nationalized.
	Collectivization of agricultural lands destroys private farming.
	Political trials and purges take place.
	Supporting Slovak autonomy—bourgeois nationalism—is a crime against the state.
1960	A new constitution is proclaimed.
	The country is renamed the Czechoslovak Socialist Republic.
	Self-government in Slovakia is crippled.
1963	Slovaks imprisoned for "bourgeois nationalism" are released.
1968	Alexander Dubček is elected first secretary of the Communist Party.
	Prague Spring, a short-lived reform era, gets under way.
	Prague Spring comes to an abrupt halt when Warsaw Pact countries invade.
	Law passed turning Czechoslovakia into a federation of two republics.
1969	Law establishing the Slovak Socialist Republic goes into effect.
	Dubček is replaced by Gustáv Husák as first secretary of the Communist Party.
	"Normalization," a reassertion of Communist Party control, begins.
	Massive purges to eject persons from the Communist Party get under way.
1980s	Political opposition and dissent begin resurfacing.
1988	Police ruthlessly disperse thousands of Slovaks who gathered in Bratislava to pray for religious freedom.
1989	Public against Violence is organized in Slovakia.
	Czechoslovakia's communist government is overthrown in the Velvet Revolution.
1990	Czechoslovakia is renamed Czech and Slovak Federative Republic.
	First elections are held in June.
	Alexander Dubček becomes president of the Federal Assembly.
	Vladimír Mečiar becomes prime minister of Slovakia.
	Privatization plans get under way.
1991	Vladimír Mečiar is forced to resign as prime minister of Slovakia.
	Ján Čarnogurský becomes prime minister of Slovakia.
	Vladimír Mečiar forms a new party: the Movement for a Democratic Slovakia.
1992	In June elections Vladimír Mečiar becomes prime minister of Slovakia.
	In July the Slovak National Council issues a declaration of sovereignty for Slovakia.
	In September the Slovak National Council adopts a constitution for an independent Slovakia.
	In November the Federal Assembly votes to dissolve the federated state.
1993	On 1 January, Slovakia becomes an independent nation.
	Vladimír Mečiar remains Slovakia's prime minister.
	Michal Kováč is elected president.

1994	In March Vladimír Mečiar is ousted as prime minister but is reelected in October.
1995	National Council passes language law making Slovak the official language.
1997	NATO denies Slovakia's application for membership.
	The European Union denies Slovakia's application for membership.
1998	After fall elections, Mikuláš Dzurinda becomes prime minister.
2002	After fall elections, Mikuláš Dzurinda remains prime minister.
	In December the European Union invites Slovakia to join.
2003	In April, Mikuláš Dzurinda signs treaty allowing Slovakia to join the European Union; in May Slovaks vote to approve the decision to join the European Union.
2004	Slovakia becomes a member of NATO.
	Slovakia becomes a member of the European Union.

HUNGARY

András Boros-Kazai

LAND AND PEOPLE

Hungary lies at the heart of East Central Europe. Landlocked, it comprises a total of 93,020 square kilometers. Hungary is bordered by Austria (366 kilometers), Croatia (329 kilometers), Romania (443 kilometers), Serbia and Montenegro (151 kilometers), Slovakia (677 kilometers), Slovenia (102 kilometers), and Ukraine (103 kilometers).

Hungary's topography is seldom higher than 200 meters. Mountains reaching heights of 300 meters or more cover less than 2 percent of the country. The highest point in Hungary is Mount Kékes (1,008 meters) in the Mátra Mountains northeast of Budapest. The lowest spot is 77.6 meters above sea level, located in the Great Plain. Hungary has three main geographic regions: the Great Plain (Nagy Alföld), lying east of the Danube River; Transdanubia (Dunántúl), a hilly region lying west of the Danube and extending to the foothills of the Austrian Alps; and the Northern Hills (Északi Középhegység), a mountainous country beyond the northern boundary of the Great Plain.

The Great Plain contains the basin of the Tisza River and its branches. It encompasses more than half of the country's territory. Bordered by mountains on all sides, it has a variety of terrains, including regions of fertile soil, sandy areas, wastelands, and swampy areas. Here is found the *puszta,* an uncultivated expanse with which much Hungarian folklore is associated. With the danger of recurrent flooding largely eliminated in the nineteenth century, the land was placed under cultivation, and animal herding ceased to be major occupations.

The Transdanubia region lies in the western part of the country, bounded by the Danube River, the Dráva River, and the country's border with the former Yugoslavia. The region features rolling foothills of the Austrian Alps. However, large sections of Transdanubia are flat, most notably the Little Plain (Kis Alföld) along the lower course of the Rába River. Transdanubia is primarily an agricultural area, with flourishing crops, livestock, and viticulture. Mineral deposits and oil are found in Zala County close to the southern border.

The Northern Hills lie north-northeast of Budapest and run in a northeasterly direction south of the border with Slovakia. The higher ridges, which are mostly forested, have rich coal and iron deposits. Minerals are a major resource of the area and have long been the basis of the industrial economies of cities in the region. Viticulture is also important, producing the famous wines of the Tokaj region.

The major rivers in the country are the Danube (Duna) and the Tisza. The Danube is navigable within Hungary for 418 kilometers. The Tisza River is navigable for 444 kilometers in the country. Less important rivers include the Dráva (along the Croatian border), the Rába, the Szamos, the Sió, and the Ipoly (along the Slovak border). Hungary has three major lakes. The Balaton (the "Hungarian Sea") is 78 kilometers long

Elizabeth Bridge and cityscape, Budapest. (PhotoDisc, Inc.)

and from 3 to 14 kilometers wide, with an area of 592 square kilometers. It is Central Europe's largest freshwater lake and an important recreation area. Its shallow waters offer good summer swimming, and in winter its frozen surface provides excellent opportunities for winter sports. Smaller bodies of water are Lake Velence (26 square kilometers) in Fehér County and Lake Fertő (Neusiedlersee), with 82 square kilometers within Hungary.

The country's best natural resource is fertile land, although soil quality varies greatly. About 70 percent of the country's total territory is suitable for agriculture, with 72 percent of that being arable land.

Average temperatures in Hungary range from zero degrees Celsius in January to twenty degrees Celsius in July. Average yearly rainfall is 64 centimeters, unpredictably distributed. The western part of the country usually receives more rain than the eastern part, where severe droughts may occur. Weather conditions in the Great Plain can be harsh, with hot summers, cold winters, and scant rainfall.

Hungary's countryside is beginning to show the effects of pollution, from pesticides used in agriculture and rampant industrial pollutants. Most noticeable is the gradual contamination of the country's rivers and lakes, endangering fish and wildlife. Concern has mounted over these threats to the environment, and initial steps have been taken to counter them.

POPULATION

In its recent history, Hungary has exhibited several population trends that parallel those in other industrializing societies. In 1920 Hungary had 8 million inhabitants and by 1941 had grown to approximately 9.2 million. The country lost 5 percent of its people in World War II, and consequently in 1949 the population was only 8.8 million. Since that time, the population growth rate has fluctuated substantially. Until the mid-1950s, high fertility and declining mortality caused rapid population growth. In 1954 the highest postwar live-birthrate was reached, at 23 births per 1,000 population. Then until the mid-1960s the birthrate declined, but the mortality rate was also low. In the late 1960s and early 1970s the birthrate again rose, partly because of stimulating demographic measures introduced by the government. The mortality rate also increased during this period, but it was counterbalanced by the higher rate of live births.

Population grew slowly in the late 1970s and began to decline in 1981. By the mid-1980s, Hungary's demographic growth rate had become one of the lowest in the world. Deaths began to outnumber births. Over the 1980s, population decreased absolutely, after peaking at a post–World War II high of 10.7 million in 1980.

One reason for the overall decline of the birthrate is said to be the increasing number of educated and economically active women who, as in other countries, tend to have fewer children. In the 1980s the typical family had only two children (reflecting a dramatic decrease from the final decades of the nineteenth century, when the average family had five children).

As in many other European countries, the population is aging. A growing proportion of the population is fifty-five or older, and the proportion of the population under fifteen has decreased by 4 percent since 1949. Marriage rates fell steadily from the mid-1970s to the mid-1980s. In 1975 the marriage rate was 9.9 per 1,000. By 1986 that number had declined to 6.8 per 1,000. Moreover, in 1980, for the first time, the number of marriages that ended because of death or divorce outnumbered the number of marriages that took place. In 1980 the number of "marriages ceased" because of death and divorce was 9.2 per 1,000 in the population. That number rose to 9.3 by 1983, then fell slightly back to 9.2 by 1986.

Death rates are relatively high and rising. In 1986 the death rate was 13.8 per 1,000, as compared with 12.4 per 1,000 in 1975. In 1986 life expectancy averaged sixty-eight years, up from sixty-six years in 1975. For women in 1986, the average life span was almost seventy-two years; for men, it was just under sixty-five years.

In 1945 only 35 percent of the population lived in urban areas. After 1945, much of the population moved from the country's less developed counties to Budapest and then to its suburbs and to the industrial counties Hajdú-Bihar and Borsod-Abaúj-Zemplén. The number of urban dwellers grew by more than 50 percent from 1949 to 1984. More people (70 percent) are now living in urban centers than in rural areas. Population density climbed from 100 persons per square kilometer in 1949 to 120 persons per square kilometer in the 1990s. The smallest villages, those with fewer than 5,000 inhabitants, are losing their residents, as the number of people leaving the villages far exceeds the number of incoming residents.

A substantial number of persons of Hungarian origin live outside Hungary, many in neighboring countries. Others live in more distant lands. In the early twentieth century over 2 million ethnic Hungarian peasants fled to the United States to escape rural poverty. After the revolution of 1956, 200,000 people left the country, traveling first to Austria and Yugoslavia and eventually emigrating to Australia, Britain, Canada, France, Switzerland, the United States, and West Germany. As a result, about one-third of all persons of Hungarian descent are living outside Hungary.

Hungary is one of the most ethnically homogeneous countries in Europe. Of its population of 10,045,407 (July 2003 est.), Hungarians (or Magyars) compose 89.9 percent of the population. Over 98 percent of the population speak Hungarian.

The country's ethnic minorities include roughly 230,000 Germans; slightly more than 100,000 Slovaks; 100,000 Serbs, Croats, and Slovenes (often grouped together as South Slavs); and 30,000 Romanians. In the late 1980s the Romanian population increased significantly, as thousands of Romanians sought refuge in Hungary. In addition, 500,000 Gypsies, 150,000 Jews, and 4,000 Greeks live in Hungary. The Jewish community is a mere remnant of the Jewish population that lived in the country before World War II. During the 1940s, as many as 500,000 Jews and 60,000 Gypsies were deported to Nazi concentration camps.

Ethnic discrimination—except toward the Gypsies—is not generally practiced in Hungary. The government makes great efforts to ensure fair and equal treatment for minority nationalities. Foreign policy considerations partially explain this liberal policy: the Romanian and (to a lesser extent) the Slovak governments have subjected ethnic Hungarians in their countries to various kinds of discrimination. As an incentive to relax such pressure, Budapest pursues liberal policies toward its own national minorities and seeks to make its minority policies a model for other countries in Eastern Europe.

The constitution, as well as a sizable body of law, guarantees the cultural rights of recognized national minorities. Minorities are able to promote their national cultures through freedom of association in federations, ethnic clubs, and artistic endeavors. They can use their own language in official procedures, publish newspapers and periodicals, and broadcast radio and television programs in their own tongue.

Hungary's Jews and Gypsies are defined as a "religious community" and an "ethnic community," respectively. The country's 150,000 Jews form the third largest Jewish community on the European continent. They maintain schools, libraries, museums, shops, orphanages, a rabbinical seminary, and dozens of synagogues. Several publications, including newspapers, serve the Jewish population.

Much less favorable is the situation of the half million Gypsies (Roma), traditionally an impoverished, marginal segment of society that is subject to active as well as passive discrimination. About 60 percent of Gypsies live at or below the poverty level, even though half of them live in settled conditions, holding down jobs. Most speak Hungarian. Gypsies have a birthrate more than twice that of the rest of the population. This circumstance, and the widely held view that the Gypsy crime rate is disproportionately high, contributes to a deep-seated hostility toward Gypsies. There are growing efforts to foster a Gypsy ethnic and cultural identity and a sense of community and tradition to enhance the self-esteem of the Gypsy population. In 1986 the Cultural Association of Gypsies in Hungary was founded to help this trend. Still, Gypsies remain particularly vulnerable when the economic climate deteriorates. With minimal skills, education, and training, they are among the first to lose their jobs as unemployment increases. Their health and living standard remain well below the national average.

In traditional Hungary, the family—the basic social unit—had multiple functions, providing security and identity to individuals and reinforcing social values. In rural areas, it was also the basic economic unit; all members worked together for the material well-being of the whole family. Even before World War II, however, family cohesion began to weaken as people became increasingly mobile. But change quickened after the communist takeover. Intensive industrialization and forced collectivization prompted many

The Hungarian Language

Hungarian (Magyar) is a language spoken by nearly 16 million people worldwide. Although most speakers of the language (10.5 million) live in Hungary, another 3.5 million live in Romania (Transylvania), Slovakia, Serbia (Vojvodina), Austria (Burgenland), and Ukraine, with the remainder scattered all over the globe. Hungarian ranks fiftieth in size among the more than 3,000 languages used around the world and twelfth among the sixty-seven languages spoken in Europe.

The word "Hungarian" may have originated from the Old Turkic expression *onogur,* which means *on* (ten) *ogur* (arrows), an ancient tribal designation. Onogurs are first mentioned in the fifth century, a time when the ancestors of Hungarians dwelled between the Dnieper and Volga Rivers alongside Turkic tribes, who were therefore also called Onogurs.

The self-appellation Magyar is a composite, the first part of which may have been based on *mogy,* an ethnic designation, with the addition of *eu,* meaning "man, male." This designation first appeared in a document from around 810.

Unlike most European languages, which belong to the Indo-European family, Hungarian is a Finno-Ugric language related to Finnish, Estonian, and some other languages spoken by peoples in northwestern Siberia. Therefore, both the vocabulary and grammatical structure of Hungarian are different from the majority of European languages. Nevertheless, due to contacts with its mostly Slavic and German neighbors over time, the Hungarian language also reflects their influence.

Hungarian, like other Finno-Ugric languages, is agglutinative. Suffixes are added to the ends of words; these suffixes would be separate words in Indo-European languages. For example, the word *házamban* is translated as "in my house." The word *ház* (house) is followed by the suffixes *am* (my) and *ban* (in).

Hungarian does use the Latin alphabet and includes thirty-nine voiced letters, including sounds that are written with consonant combinations *(cs, dz, dzs, gy, ly, ny, sz, ty, zs),* each representing a single sound. The letters *q, w, x,* and *y* have no role in Hungarian, except when writing foreign terms or names. The vowels *a, e, i, o,* and *u* take diacritical marks, which change the length (and sometimes the quality) of the vowel: *a, á, e, é, i, í, o, ó, ö,ő, u, ú, ü, ű.* Written Hungarian reflects pronunciation more closely than either French or English, and in this it resembles German.

Hungarian has the same principal parts of speech as the Indo-European languages: verbs, nouns, adjectives, pronouns, adverbs, articles, and so on. In the Hungarian sentence the dominant word is the verb.

What is it that the Hungarian language does not have? Here are a few examples: There are no prepositions. Postpositions are used: for example, *a ház mögött* means "behind the house," literally "house behind." There are no genders, which complicate the grammar of many other languages. There are no pronouns indicating gender. In the third person *(ő),* there is only one gender, which in English would be "he," "she," or "it."

The Hungarian vocabulary reflects centuries of cultural exchange within the Carpathian Basin, between north and south and between east and west. Words from Pecheneg, Cuman, and Jazygian were absorbed during the early Middle Ages. Later, Hungarian was influenced primarily by Slavic, German, and Latin. There are Byzantine, Greek, Italian, French, Romanian, and Ottoman Turk influences as well. Hungarian has adopted or borrowed hundreds of foreign words but has always adjusted them to its own linguistic system and was thus able to preserve its own individuality.

peasants to leave agriculture for industrial work in the cities, some commuting long distances between home and work. Patterns of family life changed. A growing number of women worked outside the home, and children spent much of their time in school or in youth organization activities. Families came together only for important ceremonies, such as weddings or funerals.

Family members had greater independence. The role of women changed. By 1987, 75 percent of working-age women were gainfully employed. Even peasant women became wage earners on the collective farms. However, most observers agree that the male is still viewed as the head of the household, if only because of his generally higher income. Women still provide much of child rearing and housework, so they usually work longer hours than men.

Social analysts consider the Hungarian family to be an institution under considerable stress. Statistics support this contention. The divorce rate is on the increase, with every third marriage ending in separation. Almost 15 percent of all Hungarian families are headed by a single parent.

One major source of stress within families, according to many observers, is the scarcity of adequate housing, especially for young families. In many families, members face the pressures and exhaustion of trying to hold down multiple jobs. Another source of tension within families is the prevalence of commuting. A large number of villagers commute to the cities to work.

Still, the cohesive force of the family remains relatively strong. The family continues to be a source of personal comfort and reassurance in the face of worsening economic conditions. The traditional sense of family loyalty and responsibility also seems to survive.

Churches faced extensive harassment and persecution by the antireligious regime of the communist era. The clergy were suspicious of the new, stridently anti-religious system, and the secular authorities denounced such attitudes as traitorous, persecuting the churches as a source of opposition.

The Roman Catholic Church lost much of its wealth in the first postwar land reform, which occurred before the communist takeover. Fifty-nine of the sixty-three religious orders were dissolved in 1948, when religious schools were also taken over by the state. Most Catholic associations and clubs, which numbered 4,000, were forced to disband. A number of members of the clergy, most notably József Cardinal Mindszenty, were imprisoned or deported. Relations between church and state remained strained throughout the following decades.

Churches earned popularity as dissenters under an increasingly unpopular regime. But in recent times, clergymen are aging and decreasing in number, and are able to attract few followers among the young. Nominally, close to 70 percent of Hungarians are Roman Catholic, 20 percent Reformed (Calvinist), 5 percent unaffiliated, and 5 percent Lutheran. Smaller denominations are dubbed Free Churches. Hungary also has 65,000 to 100,000 practicing Jews. The remainder of the population does not subscribe to any religious creed or organization. Nor is any single church or religion associated with national identity in the popular mind, as is the Catholic Church in Poland. Religion does not provide a viable alternative value system that could compete with the predominant secularism and materialism of an increasingly modern society. Thus churches are unlikely to become a vehicle for dissent.

Hungary has faced a severe housing shortage since the late 1940s. However, unlike most other countries in Eastern Europe, since the mid-1970s the government has encouraged citizens to build their own housing. This policy has eased the shortage somewhat, but the lack of adequate housing remains a serious problem.

Although 99 percent of the population participate in the social insurance system and could receive free medical services, there has been much public discussion about serious shortcomings in health care. One topic of discussion is the country's high suicide rate: 44 per 100,000 inhabitants. This has many historical aspects, but the rate has risen noticeably since the 1960s and shows no sign of improvement.

Another source of anxiety for both health authorities and the general public is the downward trend projected for the country's population, which is declining by a rate of –0.29 percent. The postcommunist governments are struggling to devise a comprehensive population policy.

HISTORY

In 1996 Hungarians (Magyars) commemorated 1,100 years of their living in the Carpathian Basin. The land was inhabited as early as 350,000 years ago by a variety of now extinct peoples. In the first century B.C.E. Roman legions brought imperial rule to the western half of the region. With the decline of Rome, the region became a transit zone for new migrations. In the fourth century C.E. the Huns of Attila made the Carpathian Basin their wintering ground. When Attila died (453), this nomadic empire disappeared, opening the region to fresh invaders, among them the Avars. Whether the Avars were eliminated or they formed an early wave of the Magyar arrival, dated around 896, is debated.

Linguistic historians estimate that proto-Hungarians did not emerge as a distinctive entity until the first millennium B.C.E., by which time they were living in the mid- or southern Ural region, probably on the eastern, Asian side of that worn-down mountain chain.

The early Christian era found ancient Hungarians nearer to the Volga River. Threatened from the east, they dropped south toward the Azov Sea and then moved on toward the Black Sea. Peoples inhabiting the grassy, semiarid lands of Inner Eurasia adapted successfully to their harsh environment by assuming the lifestyle of horse-mounted nomadic herdsmen, resorting to farming only intermittently.

Were these proto-Hungarians Asian or European? Their "original homeland" was most likely near the Ural Mountains, which are far from impassable, so it would have been easy for them to move from east to west, from Asia to Europe, and back again.

Magyars reappeared in the eighth and ninth centuries, along the Volga, coexisting with Turkic Bulgars. In the ninth century they were part of the Khazar Empire of the Caspian region reaching into the Don, Dniepr, and Crimean steppes. During this Khazar period, the Hungarian tribes repeatedly journeyed through the steppes from east to west. One region in which they wintered was called Etelköz, meaning "between the rivers." However, since both the Volga and the Don were known at the time as Etel (Etil), it is not easy to be sure about the location of this settlement.

A late-ninth-century Arab traveler visited them somewhere "between the rivers" and described a seminomadic and opulent lifestyle. By this time no longer affiliated with the Khazar Empire, the Magyar warriors constituted a fearsome, mobile army and in their raids had ventured to the borders of the eastern Frankish kingdom.

There is also a mythical account of the journey to the new homeland, preserved in the collective memory and recorded by medieval chroniclers. According to these, Hunor and Magor (sons of Gog and Magog, kings of the Scythians), out hunting one day, saw a miraculous stag and chased it far into unknown regions. Bewitched by the beauty of the landscape, the abundance of herbs, wood, fish, and game, they decided to stay. They found their future wives, daughters of a local prince, and from these unions came the famous and all-powerful King Attila and, much later, Prince Álmos, from whom descended the kings and princes of Hungary. Legends like this fed the Hungarian imagination, merging the plausible memory of an abode near the Azov Sea and an improbable belief in a blood connection with Attila's Huns.

The final push that sent early Magyars into their present homeland was a surprise raid by the Pechenegs (Cumans). The attack must have been catastrophic, since Magyar warriors were busy fighting elsewhere. It was thus as much a flight as a conquest when the tribes crossed the Carpathian passes. Two chieftains, Árpád and Kurszán, led the seven Magyar tribes and their Turkic-Kabar allies. Historians generally give 896 as the date of these events, and by 900 the invaders had reached all parts of the Carpathian Basin.

The land of future Hungary offered numerous advantages to the steppe peoples, and its environment—continental, but relatively moderate—turned them from nomads into settlers. The plains, almost entirely covered with loess, were fertile, intermittently flooded, and richly endowed with fish-filled rivers and lakes.

Árpád and his clan took the center of the Carpathian Basin, with their primary residence probably near what is now Budapest. Other chieftains—the seven Magyars, as they are commonly called—may have maintained sway over their respective lands until central control was enforced. In addition to the chieftains and their close associates, there were the common warriors *(jobbágy),* and the poorest, downtrodden laborers, little better than slaves, who had either arrived with the conquerors or joined, perhaps captured, from the local population during raids.

Until the tenth century, the newly acquired land of the Magyars often appears in Western sources as the Avar Empire, while Byzantine sources write about the "country of the Turks." Soon, however, mentions of the Magyars become more frequent. Practically unknown before, these horsemen of the steppes found fame through their devastating raids into Moravia and Bavaria. The raiders benefitted from disarray in a Europe under attack from several sides (Arabs in the south, Vikings in the north) and torn by rival factions. The often uttered plea, asking divine protection "*de sagitis Hungarorum*" (from the Hungarian arrows), echoed Europe's fear during what some historians call the period of adventures.

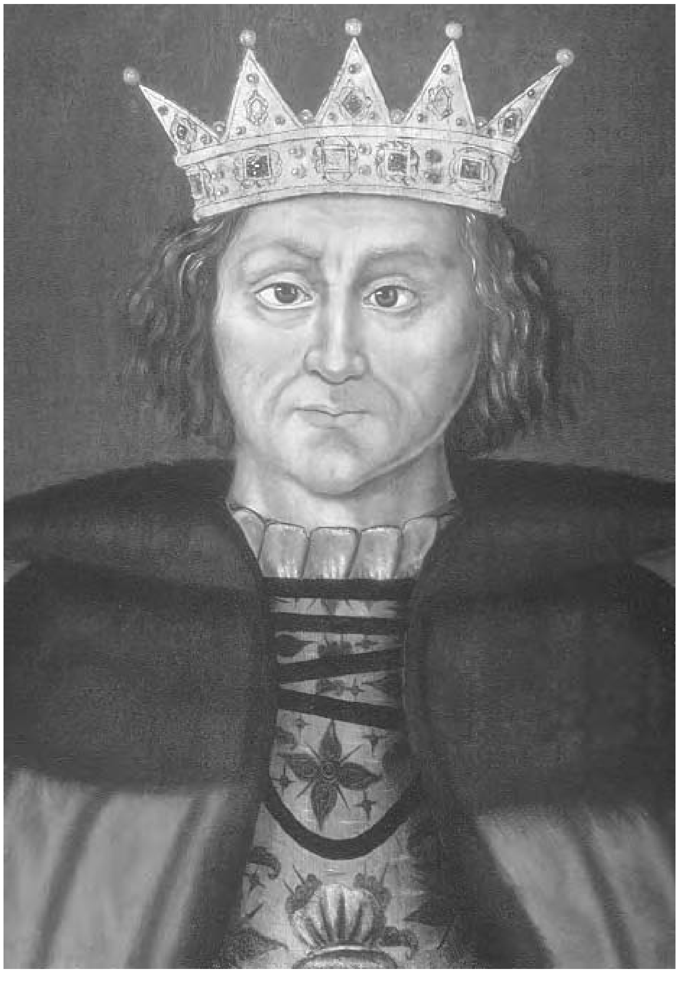
Magyar raiders were able to carry on in this manner for fifty years with relative impunity. And yet, their overall strength seems insignificant; in a Europe of some 40 million, Hungary was inhabited by less than 100,000 and could raise an army of no more than 20,000 horsemen. Their military success is all the more astonishing because these armed bands were supported by a society that had yet to be fully organized.

Raids, from wars of plunder to expeditions undertaken in the service of neighboring rulers or the Byzantine emperors, continued unabated until the Battle of Augsburg in 955. A catastrophic Hungarian defeat at the hand of the armies of the Great Moravian Empire ensued, which left no choice but to make peace with Europe. Conversion to Christianity had already begun, and it was in the interests of the Hungarians to establish good relations with both Byzantium and Rome. Prince Géza's reign (972–997) undoubtedly paved the way, even though the honor of being the founder of Hungary is generally accorded his son István, the future St. Stephen. Géza's foreign policy managed to establish stability in a region coveted by two empires. At home he was successful in centralizing power, subtly redirecting Christian conversion away from the Greek Church toward Rome and the Holy Roman Empire.

Géza's methods were more violent than pious. He forced large numbers of lords and warriors to convert whether they liked it or not and persecuted recalcitrant pagans. He was faced with numerous revolts, stemming either from attachments to old beliefs or from resistance against his authority as prince.

Géza's greatest achievement may have been the way he solved the question of succession. His son István (Stephen), born around 970 and originally named Vajk, was baptized and raised as Christian. In 996, in the first of many dynastic unions, he was married to the Bavarian princess Gizella.

Despite his father's legacy of centralization, István I did not begin his reign as the absolute master of his lands. Both before and after his coronation (1000 or 1001), he had to overcome rebels who opposed conversion to Christianity and the ruler's growing authority. Following his father's teachings, István avoided becoming vassal to either the



Painting of St. István, first king of Hungary. (Corel Corporation) neighboring powerful rulers or the pope. The new kingdom was firmly bound to Western Christianity, but its independence was preserved.

Architectural remains from this period are modest in size. Outstanding among them is the Benedictine abbey of Pannonhalma. However, the spiritual and cultural influence of the Catholic Church was crucial in what must be called a great modernization process. A handful of the first written documents, mostly donation letters, appear in Latin.

The establishment of the Catholic Church, the consolidation of royal power, and the establishment of legal order in keeping with the spirit of the times, attracted many foreigners to the land. Newly introduced laws (which were severe, but no more cruel than others of the time) protected property and provided a degree of security. Social organization was no longer based on the blood ties of the tribal system. Population distribution and settlement were now conducted along county lines (*comitatus* in Latin). The king set about creating about forty counties attached to forts belonging to him. At the head of each of these, he placed a governor, a trusted figure given charge of both the territory and its warriors. Much land was still in the hands of lords, and vast domains belonged to the Catholic Church. Bishoprics were also organized by the king, who divided the country into ten (later twelve) dioceses under the authority of the archbishop of Esztergom.

István's changes ushered in the notion of private property and social stratification according to power, status, wealth, and distribution of labor. Beneath the ruling class, a mixture of established lords, traditional chieftains, and the recently promoted, stood the free warriors, and on the lowest rung, the common people, soon reduced to servitude. The king claimed no less than two-thirds of the county's revenues, leaving one-third at the disposal of his lieutenants. This enabled the king to fulfill his three main domestic objectives: the creation of a state government, the establishment of the Catholic Church, and, finally, regulation of the rights and duties of property owners. At the head of the state, the king reigned supreme, but his power was not absolute. He was surrounded by a council that helped secure integrity and relative peace for the kingdom.

István's death in 1038 was followed by the reign of twenty-two kings from the Árpád dynasty, until the direct line died out in 1301. For nearly three centuries, Hungary held an important position on the European scene, becoming Western Christianity's easternmost bastion on the frontiers of the Orthodox and pagan worlds. At the same time, many of Hungary's problems arose from its location. In addition to being under constant pressure from two empires, the country's geographic situation rendered it isolated in a mostly Slavic environment of Czechs, Moravians, Poles, Russians, Bulgarians, Croatians, Slovenians, Serbians, and others. To establish its authority in the region, the Hungarian kingdom made expansionist moves in Dalmatia and the Balkans, but at the same time also sought alliances through marriages. Six queens came from Slav princely families, others from German, French, and Byzantine dynasties.

Under Kálmán, remarkable progress was made in both legal and literary culture. The use of writing spread. Jesters and jugglers were replaced by chroniclers, authors of *gestae,* who recounted the ancient history of Hungary and the tales of its kings through words and pictures. As well as the doings and exploits of its kings (especially the canonized monarchs István and László), charters of ennoblement and gifts formed central themes within these chronicles. The tradition continued throughout the reigns of Kálmán's successors, and chivalric culture and the poetry of the troubadours also flourished. One of the first poems in the Hungarian language, the very beautiful *Lament of Mary,* was preserved in a thirteenth-century codex.

Hungary became one of Europe's largest and most powerful kingdoms. László, the king-knight, successfully defended his country against invasion by Cumans, the Turkic-Kipchak people who had congregated on the eastern frontiers. But the most important expeditions to be undertaken by László and Kálmán were toward the Balkans. Following in the footsteps of his uncle László, a great warrior, Kálmán gained dominance over Croatia, Slavonia, and Dalmatia. The entire coast, with its splendid merchant towns, recognized his sovereignty with some relief. While siding with the pope in his quarrel with Byzantium, Hungary maintained its autonomy vis-à-vis the Holy See. Historians speak, if not of absolute royal power, of an almost unshakeable hegemony. The extent of royal wealth was a major factor, as was the well-earned prestige of the rulers. In the late twelfth century, the king to stand out was Béla III, not only by virtue of his height (1.9 meters) but also by his qualities as leader and organizer. The son of Géza II and a Russian princess, Béla was raised at the Byzantine court, where he was betrothed to the emperor's daughter and saw himself as destined for the empire's throne. He lost his chance as heir when a son was born to the emperor, but he was still given a royal title and enjoyed great prestige.

Contemporary Western travelers described Hungary as an opulent but none too civilized country. Towns were no more developed than villages, and stone houses were rare. But Hungarians seem to have had enough to eat and enjoyed common freedoms. Hungary's society was also quite diverse, as it welcomed settlers from the west, most of all from German lands, who were attracted by a land that was fertile and less densely populated. Pechenegs, Cumans, and other refugees from various steppe invasions also added to Hungary's population. The mostly rural population lived from cattle herding, agriculture, fishing, viticulture, and crafts. Social strata were numerous, depending on whether one was noble, free, semifree, native, or host.

The king was immensely wealthy due to his inherited properties, which amounted to almost two-thirds of the kingdom, with the rest belonging to the Catholic Church, to descendants of chieftains, to foreign knights, and to the free warrior-peasants. Donations by the king to various beneficiaries, monasteries, bishoprics, or individuals had always existed in some form but increased sharply under András II (1202–1235), described by many as an overly generous monarch. His reign initiated the disintegration of St. Stephen's old patrimonial order and the beginning of the manorial system.

Hungarian Cuisine

In the earliest times, Hungarians' cooking was influenced by their nomadic lifestyle: food had to be easily portable and simple to prepare. Many Hungarian stews and soups to this day reflect the tradition of the *bogrács,* the iron pot permanently simmering over an open fire. The pantry of the early Hungarians was stocked from the flocks of animals they herded, supplemented with plants found along the way, as well as other lightweight, perhaps dried ingredients. Hunting and fishing were also important activities, and archaeological evidence shows that, even though nomadic, Hungarians had some familiarity with planting and growing food. Still, meat and meat products are central in the traditional cuisine. Since most Hungarians were not wealthy enough to consume large amounts of meat exclusively, they had to be creative to feed their families, using relatively small amounts of expensive ingredients. This need explains the large presence of side dishes, stews, and soups in the daily diet of the average Hungarian. (Festive occasions and restaurant meals are quite another matter, since they are often opportunities to celebrate and demonstrate social status.)

The use of onions and other spices, especially paprika, is even more characteristic of Hungarian cooking than garlic, which is most frequently mentioned when talking about Central European food. Meats—most often pork or poultry, less often mutton, the more expensive beef, or fish—are frequently braised with onion or other spices, giving considerable taste intensity to the meal's main ingredient. This is *pörkölt* (braised meat). To counter the richness of the juicy meat, the meal is then stretched, either by turning it into soup or stew, adding large amounts of nonmeat ingredients, or creating vegetable-based side dishes called *főzelék,* which can be made out of anything from carrots to zucchini.

Goulash *(gulyás),* a Hungarian dish well known abroad, is actually a soup, not a thick stew. It is prepared with a small amount of diced and braised beef, with its volume expanded by the addition of diced potatoes or pasta and vegetables, and consumed with lots of brown bread.

Paprika, which has come to characterize Hungarian cuisine, was not known until the seventeenth century. It became a defining element of the Hungarian kitchen in the first half of the nineteenth century. Hungarian cooking includes paprika both as a spice and as a vegetable. Both can be mild or spicy and are main ingredients in many Hungarian dishes. A popular, simple dish is *paprikás krumpli,* which is a potato stew with a small amount of sausage, for taste, heavily spiced with paprika. Pepper stew *(lecsó)* is a favorite summer dish when fresh tomatoes and green-yellow peppers are plentiful. Chicken paprikash *(paprikás csirke),* a savory braised dish served with dumplings *(nokedli)* and sour cream, is a mainstay of special-occasion Hungarian meals.

A meatless meal of vegetable soup with a sweet noodle dish, covered with ground walnuts *(diós tészta)* or poppy seed *(mákos tészta),* or with thin pancakes, rolled with filling *(palacsinta),* is still Friday fare in many Hungarian homes.

In a marked departure from Western European practice, the distribution of royal property in Hungary was permanent and hereditary, not given in fief and therefore not tied to the vassal system. These donations created a new class of great barons, without reciprocal obligations to either the royal donor or to the people who became their dependents. Numerous castles and their surrounding villages, even entire counties, were bestowed on the most deserving or clever royal servants. András II also faced criticism for entrusting fiscal affairs to foreigners. Malcontents formed a league and succeeded in extracting from the court a charter of noble freedoms. The Golden Bull of 1222 (somewhat like the English Magna Carta) enshrined the right of nobles to resist royal power. András's successor, Béla IV, initially tried to backtrack in order to undertake more fundamental and considered reforms than his father. The event that changed his mind was the Mongol invasion.

After Chinghis Khan's death in 1227, his successor, Ogoday, sent Batu of the Golden Horde to conquer Russia. The immense project achieved, Batu's army invaded Poland and Hungary. In 1241 the Mongols easily defeated the Hungarians at Muhi. The following winter they crossed the Danube and pursued the king all the way to the Dalmatian islands. The next spring the Mongols suddenly withdrew (whether in response to the death of their great khan or for some unknown motive), leaving behind a destroyed Hungary. The king's reconstruction efforts opened the way to a new era. Béla IV had to start from scratch, so he first reorganized his military forces and the state administration. He proceeded to create a feudal Christian state, giving great power to loyal barons. All high governmental, legal, commanding, and administrative offices in large territorial units were entrusted to barons and bishops. The result proved positive, as Béla's reconstruction soon put the country back on its feet. In subsequent centuries, descendants of these barons would contribute to the weakening of the state, but during this crucial period of renewal, Béla's trust proved well placed. He fortified towns and built new ones, combining military defense with urbanization and the promotion of civic privileges. He laid the foundations of Buda, the castle and the town, making it into an important trade center.

The towns, with their stone churches and houses, markets, municipalities and their inhabitants—many of them foreigners in various trades—generated new wealth for the artisans and tradesmen, and became civilizing centers. Reliable currency (coins with a high silver content) stimulated economic and commercial activities and fiscal income via domestic taxes and duties. Hungary exported beef, wine, and salt and imported cloth, silk, and spices from Venice, Germany, and Moravia. Taxes were fixed according to market conditions. Royalties from the mines (silver, gold, salt) were divided between the treasury and the new entrepreneurs. The new economic activities generated more revenue than the old taxes. Some regions still paid in kind, and the country's Jews paid collectively, in silver. Few were exempt.

With 2 million inhabitants, Hungary was more populous than England, but it still had room for many more people. Béla invited a variety of new settlers. Religious institutions were strengthened. Bishops also provided civil governance over their estates and population, which included the clerical nobility, their servants, and soldiers settled on their land by the bishop. High clergy also had judiciary powers and sat on the Royal Council. The king respected tradition while maintaining control over nominations, retaining investiture for his faithful prelates. Béla's efforts however were almost entirely negated by his son, István II. A bold military leader, he turned against his father, defeated him, and proclaimed himself "king-junior" over the eastern half of the country. The reign of István's son, László IV (1272–1290), ten years old when he succeeded his father, was punctuated by intrigue and chronic instability. The lords of the realm pursued their private wars according to the rules of feudal anarchy. Twenty or so among them seized vast tracts of land, spoils, and positions. With the death of András III in 1301, the lights of the House of Árpád went out.

When Charles-Robert (1310–1342) was crowned, following brief reigns by the Bohemian Vencel (Wenceslas) and Otto Wittelsbach of Bavaria, he had already considered himself king for a number of years. His grandmother, an Árpád princess, had married Charles II of Anjou, king of Naples, and Charles-Robert was brought up at the court, destined for the throne of Hungary since birth. Crowned for the first time when he was only thirteen, he was not to enjoy undisputed kingship until after his third coronation in 1310.

While the young Angevin found his new kingdom in a state of turmoil, the international situation favored his ambitions. The Byzantine and Holy Roman Empires were preoccupied elsewhere. Hungary's immediate neighbor, Austria, had passed into the hands of the Habsburgs in 1278 and did not yet represent a threat. Western Europe was fully occupied with France's wars with the papacy and England. The Black Death (1346–1353) was soon to wipe out a third of the population in the West, and in addition, the continent was suffering a period of severe cold and rain, which brought periods of famine. Hungary was less affected by these calamities. Its population reached 3 million while the whole of Europe, excluding Russia, probably had some 50 million inhabitants before the plague epidemics, and far less than that after midcentury. Under these generally favorable conditions, the Angevins were able to consolidate their internal power and to conduct an active foreign policy.

Charles-Robert's first priority was to put his Hungarian house in order. A handful of powerful magnates ruled over much of the land. Only a smallish region in the center of the country remained under the direct authority of the king. He found that only a few of the barons sided with him. Nevertheless, Charles-Robert had the sense to attack the barons separately. Fortunately for him, neighboring countries preferred not to interfere in Hungary's affairs. Charles-Robert even succeeded in setting up a triple alliance between the Polish, Czech, and Hungarian kings—a Piast, a Luxemburg, and an Angevin—meeting at Visegrád in the 1330s.

Charles-Robert's reign of more than three decades was not particularly violent. He was not as greedy as his predecessors or other European monarchs. Still, he confiscated the possessions of deposed oligarchs, several of whom had taken refuge abroad earlier. His son Lajos pursued the same course, thus recovering much of the estates lost to disloyal magnates. In addition, the Angevins, who already had a huge personal fortune, had discovered a new source of income to be derived from the country's mineral resources. By the end of the century, Hungarian gold accounted for almost three-quarters of the output from all of Europe's mines. Gold coins minted at Körmöc circulated throughout the continent, at a time when high demand boosted the value of a solid currency. During the Angevin period, there were 59 free royal towns, 638 market towns and smaller towns that enjoyed chartered privileges, and around 21,000 villages. Most peasants were still free and enjoyed relatively comfortable living standards, with the more able and fortunate gaining access to economic and social mobility.

Among the larger and medium-size estates, freeholds were far more widespread than in the West, and these farms employed a primitive subsistence farming system. Both large estates and tenanted holdings were starting to produce marketable surpluses within a rapidly developing economic framework. The increasing exploitation of the mines was matched in the villages, as agriculture, livestock farming, forestry, and trade underwent significant growth. There was no shortage of exploitable land in the time of the Angevins. On the contrary, with 3 million inhabitants distributed over a territory of around 300,000 square kilometers (the size of Italy), population density was far lower than in Europe's more developed countries. The kingdom was therefore able to absorb large numbers of immigrants. Its borderlands (such as Transylvania) attracted Romanians, Moravians, Poles, and Ruthenians, joining the Saxons who had established themselves as early as the twelfth century.

Although urban development was under way, the towns and their level of social organization remained inferior to that of Western Europe, with urban settlers accounting for only 3 percent of the population. Medieval Hungarian towns, with the exception of the future capital, offered little more than military security. As the royal seat, Buda attracted increasing numbers of artisans and German merchants who proceeded to rise in municipal circles. Still, urban Hungary was unable to play a role comparable to that of the great Italian, French, or Dutch urban centers.

Nonetheless, it would be fair to see the Angevins' overall contribution to the development of towns, urban civilization, and commerce as substantial. Charles-Robert inherited a land in the grip of anarchy and left behind an ordered, flourishing, and well-governed state. Most people benefited from the consolidation of royal power and social order. Merchants and businessmen, as well as the simple taxpayer, profited from financial stability, safe travel by road, and a coherent household tax, which replaced an inconsistent system. Administrative reforms went hand in hand with a stable royal government, and with social change. Local *comitat*s (counties) increasingly turned into autonomous administrative units, even if managed by the nobility. Accordingly, halfway between the traditional patrimonial system based on blood ties and a partially adopted Western feudal model, a "states and orders" system developed, based on a particular concept of civil rights. According to these principles, the kingdom was the property of the Crown, an abstract moral entity, while real political power was regulated by contract between the king and the noble estates.

Charles-Robert had few expansionist tendencies. Through his fourth wife, Elisabeth Lokietek, he maintained good relations with Poland. Bohemia too was part of the triple alliance of Visegrád (1335), and Charles-Robert formed ties with Austria. In the south, he maintained Hungarian dominance over the Slav *banate*s and the Adriatic coast, in spite of Venetian ambitions.

The one long-cherished dream of the Hungarian Angevins was to regain a foothold in Naples. Following the death of his father in 1342, it fell to the future Louis the Great to lead the Hungarian side toward Naples. This Angevin's greatness was due to the unprecedented expansion of his kingdoms, which, by the end of his reign, encompassed a vast territory stretching from Poland to the Adriatic. Some of his subjects recognized his greatness: those citizens admitted to the judicial process, the prosperous bourgeois, members of the middle nobility, all felt their views were now being taken into account, as did those barons who shared his external ambitions.

Art and culture flourished at the court, which resided in three sumptuous palaces; and yet even the royal towns of Buda and Visegrád did not measure up to Charles IV's Prague. Louis founded the first Hungarian university in Pécs, as well as several churches and monasteries, but no cathedrals or grand stately castles were built during his reign. There remained a wide cultural divide between the kingdom of Hungary and the realms of Italy, France, and Flanders.

Closer to Hungarian borders, Venetian designs on Dalmatia had resulted in three long wars against Hungary. Stefan Dušan's "great Serbia" was also briefly involved, but it soon fragmented into several petty despotates and then fell to Ottoman rule after the Battle of Kosovo (1389).

The Bulgarian second empire disintegrated too. Between 1353 and 1391, a brief regional Bosnian hegemony emerged under Stephen Tvartko I. Relations between Hungary and Bosnia, several times severed and reestablished, also aimed at preserving influence from the Balkans to the Adriatic coast. Holding on to Croatia and Dalmatia in the face of both Serbian and Venetian opposition was crucial. Louis managed to profit from the situation, failing to foresee the scale of the Ottoman threat. This was in sharp contrast with his piety and proselytizing activities among the non-Catholics in his own country. Hungarian domination in Dalmatia, as well as Serbia, Bulgaria, Bosnia, Wallachia, and even for a brief moment, Moldavia, was unsustainable. In the end, it was the Ottoman Turks, in full expansion, who benefited from the Balkan conflicts.

As one of his best-known achievements, in 1370 Louis seized the Crown of Poland, succeeding his uncle Kasimir III the Great, whom he had assisted on a number of occasions against powerful and expansionist pagan Lithuania. The Hungarian-Polish interlude lasted a mere twelve years and was a personal rather than a state union.

When Louis died in 1382 without a viable heir, his daughter, Maria, was crowned in 1386 at age eleven, enabling her fiancé Sigismund (Zsigmond) of the Luxemburg house to claim, and eventually occupy, the Hungarian throne. Sigismund was a skillful ruler, an accomplished reformer, and a person of considerable talent. Yet, even though he ruled several kingdoms and the Holy Roman Empire, he was in constant financial difficulties and was detested by most of his subjects. Removed from various thrones, he was refused access to the Bohemian one, was held captive by Hungarian barons, and was so deeply in debt that he wagered everything from entire counties and towns down to the silverware from his table.

Sigismund inherited a situation dominated by the oligarchy, which had assumed all powers, including predominance in the diet and tutelage over the sovereign. When, in 1401, he refused the nobles' demand to dismiss his foreign advisers, he was thrown into prison, in the name of a symbol, the Holy Crown, a public legal entity. Nevertheless, through patience and opportunism, not to mention family connections, Sigismund became a prestigious emperor and a Hungarian king of caliber.

Faced with the Ottoman threat, Zsigmond enjoyed a reprieve thanks to Tamerlane (1370–1405), the Central Asian emir who beat the Ottomans and captured Sultan Bayezid. The pace of Turkish advance slowed down as a result, leaving Sigismund to pursue his grand German and imperial policy.

Some of his military endeavors were unprofitable; the number of battles lost far outweighed the victories. Yet he was neither incompetent nor cowardly. His defeats came in the face of formidable enemies, especially the Ottomans.

The Ottomans continued to advance in the Balkans, and Sigismund, determined to stop them, retaliated. In 1396 at Nicopolis (Bulgaria), Sigismund confronted the Turks. A catastrophe ensued, and it was not the last. The military organization of the Ottoman Empire was far more efficient than that of European armies. The king did win a few battles: Nándorfehérvár (Belgrade) was saved provisionally, as was Jajce in Bosnia, though not for long. Then, in 1428, Sigismund was again defeated, this time seriously, at Galamboc (Golubac, Serbia), thus putting a definitive end to Hungarian hegemony in the Balkans.

HUNGARY, THE OTTOMANS, AND THE HABSBURGS

The nobility's right to freely elect a "competent" sovereign (i.e., a king to their liking) was connected to an evolving concept of public life, known as the doctrine of the Holy Crown. It posited the country as belonging to the nation, embodied by the nobility, and represented by the Crown as symbol rather than physical object. The king exercised his powers purely through the latter. Both mystical and legal, the doctrine stipulated the representational nature of royal power and placed the source of sovereignty within the body of the nation's nobility.

Most nobles understood that the fight against the Ottoman threat was a priority and were looking for a sovereign who could rise to the challenge. The young king Ulászló did not disappoint them. Accompanied by János Hunyadi, his most famous general, he went on to conduct numerous campaigns.

János Hunyadi, who was one of a number of leaders in the middle of the fifteenth century who were of humble birth, was probably of Romanian or South Slav descent and settled in Transylvania. Hunyadi served his king well. He accompanied Sigismund to Italy and then Bohemia, participated in the Czech wars and led the campaign against the Turks. By the time of Sigismund's death in 1437, he had great fame but not yet fortune. Soon, however, he became one of the richest men in Hungary.

Hunyadi and Zrinyi

Reflecting the primary challenge of their times, both János Hunyadi (d. 1456) and Miklós Zrinyi (1623–1664) were military leaders who led successful campaigns against the powerful Ottoman forces invading the region. They both also demonstrate the assimilative power of the medieval Hungarian kingdom: Hunyadi (also referred to as Iancu Hunedoara) was a Transylvanian son of a Hungarian-Wallachian marriage; Zrinyi (also written as Zrinski) was a member of the Croatian aristocracy, which made him a subject of the Hungarian Crown, after the merger of the two countries in the twelfth century. They both died at the height of their power, to the great loss of Hungary's national defense.

Hunyadi was a young man of limited means and education, who made his initial fame and fortune rapidly as a small-unit commander in the service of others. His talents were recognized and rewarded, making him one of the country's richest landholders. Count Zrinyi, on the other hand, was born into wealth, acquired considerable erudition from private tutors, became an accomplished poet and writer, and was appointed *ban* (governor) of Croatia.

Hunyadi and Zrinyi embodied unselfish, heroic service to the defense of Hungary and European Christendom at a time when such dedication was becoming increasingly rare. The power struggles of the post-Anjou period led to a breakdown of royal authority and the rise of aristocratic anarchy. The mixed-house rulers of the fourteenth and fifteenth centuries, even the talented Zsigmond, were unable to unify the country's lords in the cause of presenting a strong force in the face of approaching Ottoman threat. In marked contrast with his selfish and reluctant fellow lords, Hunyadi used his leadership ability and his wealth to create and lead armies to major victories. The most important among these was the successful defense of Nándorfehérvár (today's Belgrade) against an Ottoman siege in 1456, which delayed the invasion of Hungary by almost a century. It is in honor of this victory that bells throughout the Christian world ring at noon.

Leading successful raids deep into hostile territory, Zrinyi was a bold military leader at a time when the reputation of Ottoman armies intimidated most Christian generals into avoiding battles and signing accommodating peace treaties. He recognized that Ottoman power was already declining, and called for an all-out military effort to oust the occupiers. Witnessing the reluctance of Habsburg generals, he began to question their commitment to liberating Hungary. During winter breaks from campaigning, he wrote, and he wrote in Hungarian, a pioneering practice. His most memorable work is the epic poem *The Siege of Sziget,* in which he paid homage to his grandfather of the same name, who perished heroically defending a small fortress against Suleiman's grand army. Zrinyi also wrote pamphlets on military strategy and contemporary political affairs, some of them sharply critical of Habsburg designs concerning Hungary. It is not surprising, therefore, that when he was killed in a hunting accident, there was much talk that the wild boar that killed him was in the hire of Vienna.

Hunyadi was appointed *voivode* of Transylvania in 1441 and governor of Hungary between 1446 and 1452, while László V was still under age. Hunyadi's courage as a soldier was legendary, and he was undoubtedly guided as much by his vision of himself as servant of the state as he was by personal interest. His leadership qualities took on historic dimensions in the wars against the Ottoman Empire, on behalf of Hungary and, indeed, Europe. In his "long campaign" of 1442–1444, Hunyadi won several battles, enough to reignite the hope of driving out the Ottoman invaders.

Because of troubles along his Asian borders, Sultan Murad was forced to make peace with Hungary. The young Jagiellon king Ulászló signed the agreement, but in 1444 he went back on his word and set out for war, only to be defeated at Varna on 10 November.

Hunyadi bore no blame for the defeat, but he had trouble dealing with the political infighting at the court. Even though elected as governor, his powers were restricted. Still, he was able to prepare for a new defensive war on the Turkish front. He found an ally in the Albanian hero Skanderbeg and, with encouragement from the Holy See and European promises, chances for another campaign against the Ottoman Empire seemed promising. In 1448 Hunyadi decided to go to war with Murad II, who forced him into a battle at Kosovo. The Field of Blackbirds was once more fatal to Christian armies. Skanderbeg was unable to reach his ally. Hunyadi was beaten.

The fall of Constantinople on 29 May 1453 prompted Christians to mobilize for a common defense. As a frontline nation, Hungary had to be both the initiator of and the decisive factor in the campaign. The 1454 Diet reorganized the army, and Hunyadi worked hard to create a united and efficient military structure, introducing such innovations as the use of mercenaries. To finance an army of 100,000 men, the diet voted for extremely heavy war taxes. Hunyadi's army constituted a formidable force. Allied troops made it to the rendezvous, and for once, despite everything, Europe was ready to fight. In the summer of 1456 Sultan Mohamed II besieged Nándorfehérvár (today's Belgrade) with an army estimated at 150,000 men, 300 cannons, and 200 ships on the Danube. The fortress was defended by Mihály Szilágyi (Hunyadi's brother-in-law) commanding 7,000 soldiers. The great captain himself arrived to rescue the besieged town with 40,000–45,000 men. To everyone's surprise, the

Ottoman force lost the battle. Hunyadi was keen to pursue the campaign as far as Constantinople, but he died soon after, probably taken by an epidemic.

The defeat may have shocked the Ottoman Empire but its expansion continued regardless. The invasion of Hungary was, however, postponed.

In 1458 Mátyás became the first national king of Hungary since the extinction of the House of Árpád in 1301, a Hungarian king elected according to the wishes of the nobility. Around 40,000 nobles gathered in Buda to elect Mátyás, and while they were deliberating, he was already being proclaimed king by the crowds. Intelligent, energetic, and willing, Mátyás was certainly well equipped to achieve his goals: to impose his royal authority at home and realize his vision for regional conquest. Bohemia, Austria, and even the crown of the Holy Roman Empire were in his sights. Mátyás's first concern however was to be independent, so he dismissed many of his advisers, even discharging his own uncle Szilágyi. After that, he was free to govern as he wished, because as a descendant of common nobles he enjoyed broad popularity. From the early years of his reign, he was able to assert himself within the country and carry on an imaginative foreign policy. He made peace with Austria as well as the rebellious Bohemian lands.

In the 1460s Mátyás seized Bosnia and pushed back the Turks. However, seeing the grand Christian alliance fall apart on the death of Pope Pius II, Hungary would not fight the Turks again during Mátyás's lifetime. Mátyás turned toward Bohemia, possibly in order to enlarge Hungary's resources. In the midst of succession struggles, the issue of Hussite heretics provided an opportunity for Mátyás to intervene. He eventually conquered Moravia, Silesia, and Lusatia and was crowned king of Bohemia. Czech and Austrian wars were to occupy Mátyás for two decades. During the 1470s, he faced a coalition put together by Frederick and supported by the Jagiellons, which was defeated by Mátyás's Black Army of well-paid, well-trained soldiers. The subsequent Treaty of Olomuc enabled Mátyás to intensify his struggle for the possession of Austria. In 1485 Mátyás occupied Vienna and died there in 1490.

In weighing Mátyás's reign, one can see him as a great Renaissance man, with the goal of fulfilling his desire for glory, as was the case with so many other princes of his time. In this light, Hungary's failure to become a major power is attributable to Mátyás's reluctance to pursue more active anti-Ottoman policies. Mátyás's real innovation was the professionalization of government service. Chancellery secretaries and competent graduates took over affairs of state from the barons and prelates. Tamás Bakócz, of peasant origin, is an example of these new careerists. He was personal secretary to the king and later rose to be archbishop and cardinal; he was even a serious rival of Leo II de Medici for the pontifical crown.

During the reign of Mátyás, the country enjoyed a security it has never known since. His reforms put an end to the arbitrariness and insecurity that had dominated until then. Under Mátyás, an improved legal system was put in place through the establishment of tribunals of the states general at the local level. At a higher level, an appeal court, the Royal Table, was created. Finally, individual towns gained legal autonomy.

The state was far from being a constitutional monarchy, but at least its institutions were more organized. Since he always needed more to finance his wars and sustain his sumptuous court, Mátyás imposed "exceptional subsidiary" taxes, thus adding to the burden shouldered by the Hungarian population. As for the peasantry, the majority still enjoyed the liberties they had either inherited from their status as free men or had acquired in the previous century. They were serfs *(jobbágy),* in the ancient meaning of the term. The proportion of bonded serfs was smaller than before, in some places barely 10 percent of laborers. The standard of living was reputedly decent or sufficient, according to written sources; evidence of a political commitment to protecting peasants from abuse is clear: numerous judgments were passed in favor of "fugitives," or peasants forcibly bonded to the land.

Renaissance humanism had already entered Hungary before Mátyás. The existing tradition was then given new life by his wife, Beatrice of Aragon. The royal courts, both at Buda and Visegrád, attracted scholars, historians, and celebrated artists. The king was probably quite fond of provocative minds and was receptive to the irreverence of the sophisticated scholars at his court. Combining the splendor of Italian style with contemporary wit, Mátyás's court must have been among the most brilliant in Europe. His private library, the Bibliotheca Corviniana, was certainly Renaissance Hungary's prize jewel. It contained over 2,500 illuminated manuscript volumes, and almost no incunabula, even though András Hess's printing shop produced the first printed Hungarian chronicle, *Chronica Hungarorum,* in 1473.

After the death of Mátyás, the fight for the Crown broke out once more. Mátyás did his best to pass it to János Corvin, his out-of-wedlock son, but the designated heir was not recognized. Other pretenders entered the fray, among them Maximilian of Habsburg and two Polish Jagiellons. In the end it was one of them, Vladislas (Ulászló) II, who won.

In Vladislas, the oligarchs had found the weak king they wanted. Described as a handsome young womanizer of mild temperament, the new monarch was totally indifferent to state affairs in his Czech and Hungarian kingdoms. The nickname "Dobze" (Yes, All Right) was bestowed on him, as he approved of anything suggested by the barons who had hoisted him onto the throne. Vladislas II Dobze seems to have spent twenty-six years, saying, "yes, yes" to unbelievable waste and to the impoverishment of the state, as well as to decay in his own court. Hungary was once more under the rule of "little kings," lay and ecclesiastical lords. Peasants who had enjoyed liberties in the past found themselves driven back into serfdom, into the new, or "second," servitude. Social classes that had begun to rise found themselves sinking back, and the whole country sank with them. One explanation for this state of affairs is that since power had been shared by king and nobles until then, the arrival of the weak and ineffectual Vladislas II was bound to create an imbalance. But there is also another way to see the rapid industrial and commercial development in Western Europe in the 1500s and the lack of growth in agricultural producers like Poland and Hungary: the voyages of discovery introduced new currents in world commerce, but left suppliers of basic commodities by and large unchanged. Since cattle herding was a lucrative trade for Hungary's landowners, the spirit of innovation scarcely appeared on the Magyar horizon. During the centuries that followed, this developmental gap continued to widen.

In 1514 Hungary witnessed a peasant revolt unprecedented in size. Vladislas II was still on the throne, but decisions were now more than ever being made by the barons of the Royal Council. The ordinary nobles, meanwhile, were trying, without much success, to organize themselves into a kind of national party under the very popular leader, János Szápolyai, destined to become "national king." The immediate cause for the revolt, however, was elsewhere. Pope Leo X issued an edict calling for a crusade, and Archbishop Tamás Bakócz was entrusted with organizing it. In April 1514, 40,000 peasants assembled outside Pest to take up arms against Ottoman invaders, and more were to join them in Transylvania. The complaints voiced at the camp prompted the mob to start a peasant war. A leader emerged, György Dózsa. The peasant army had some initial victories, but retaliation was not long in coming. Led by János Szápolyai, an army of 20,000 noblemen defeated Dózsa's army at Temesvár. The revenge that ensued was merciless, though the number of rebels killed did not exceed "reasonable" limits, for the simple reason that the landowners needed their labor.

The diet implemented retaliatory legal measures. The principal architect of their decisions was the lawyer István Werbőczi. He compiled a body of laws intended to encompass all political and social spheres, a code called *Tripartitum*. Though it was never fully promulgated, the impact of Tripartitum was considerable. It sealed the unity of the national community by elaborating the doctrine of the Holy Crown, merging the Crown, the sovereign's person, and the nobility into one indivisible whole. However, while it held the political nation together, it tore the population in two, erected an "iron curtain" between Hungarians and Hungarians, until 1848. Serfs were now subject to a ruthless yoke, a state of total lack of liberty.

After Vladislas II died, his son, the ten-year-old Lajos II, succeeded to the Czech and Hungarian thrones. Surrounded by two crowned tutors, the Habsburg Maximilian and King Sigismund of Poland, and the Magyar barons, the king did not have a voice in the assembly. Ottoman forces took Sabac and Belgrade. The country was open to invaders by both land and river. There were serious attempts to organize a national defense in 1526. Pál Tomori, archbishop of Kalocsa and grand commander of Lower Hungary, took charge, aided by János Szápolyai, *voivode* of Transylvania. By August, an army of 25,000 was assembled. A smaller army, led by Szápolyai, was late joining the royal army. Nevertheless, there was optimism in the Hungarian camp, even though the army of Sultan Suleiman was double that of Lajos's forces.

After a number of preliminary skirmishes, the decisive battle took place on the field of Mohács, near the Danube and close to what today is Hungary's southern border. Despite the initial successes of Hungarian charges, within two hours their army had been dislodged and then annihilated. Among the dead were scores of lords and prelates, as well as King Lajos.

The causes of defeat have been the subject of animated debate and historical controversy. Some analysts favored the social explanation, pointing at the ruthless suppression of the Dózsa revolt in 1514, along with the blind and self-serving behavior of the ruling class. There were other factors as well. The seriousness of the Ottoman threat had been realized for some time. It had given rise to the desire to place the country's destiny in the hands of a national king capable of staving off the impending attack. The Hunyadis had met this need and in effect had stabilized the southern frontier. But this had been a temporary solution. Hungary, which in the past had dominated the region, was already on the defensive against this stronger adversary that was pushing forward inexorably, having seized the Balkan buffer states. The Hungarian state, still strong after King Mátyás, had neither the size, the resources, the national leader, nor even the European aid needed to tackle the situation. Weak kings and a new unscrupulous oligarchy had only made the situation worse. By the time Mohács occurred, a conjunction of unfavorable factors had left the country more vulnerable than ever. Hungary lost more than a battle; the state lost its capacity for action.

Suleiman was in no hurry to exploit his victory at Mohács. His plans of conquest certainly included Hungary (and much more of Europe), but he was patient and flexible. Perhaps not realizing that the country was leaderless and disorganized, his armies left Hungary. In November 1526 János I Szápolyai was elected king by his loyal followers. In December, however, a handful of barons met at the Pozsony Diet and, in accordance with the dynastic agreement that the Habsburgs considered the basis of their legitimacy in Hungary, elected Ferdinand I as king of Bohemia and Hungary. With Szápolyai as a national king, and Ferdinand a "German king," there was also the Ottoman sultan; the first had wealth and popularity in his favor, the second was backed by his brother, the Holy Roman Emperor, but it was Suleiman who in fact had much of the country at his feet. In these circumstances, Turkish support given to King János and, later, to his successors in Transylvania, trumped any advantages the Habsburgs might have had.

Hungarian hopes for reunification, illusory as they might have been, were in fact kept alive by the rivalry of the two kings. Treating Szápolyai with "patience," Suleiman was able to use Hungary to threaten Vienna. His clear patronage enabled Szápolyai to take Buda in 1529. Militarily and politically, the Ottoman Empire was to remain present in Hungary for nearly two hundred years. For the moment, instead of occupying the entire country, the Ottomans protected eastern Hungary—soon to become the principality of Transylvania—against Habsburg encroachment.

In the spring of 1541 Ferdinand tried to take Buda, but Ottoman armies foiled the attempt. On 29 August, fifteen years to the day after the Battle of Mohács (the sultan liked symbolism), he occupied Buda without bloodshed. Once

the former royal seat became the first Turkish *vilayet* in Hungary, an Ottoman pasha proceeded to lay down its laws. Partition was complete: Habsburgs were to reign in the west, Ottomans in the center, and the Szápolyai child, with his mother, in the future principality of Transylvania. Between two enemies, Hungary's choices were limited. It had to adopt a survival strategy, fighting incessantly on its borders, adjusting its economy to the circumstances, and being receptive to new influences. In this situation, the developmental gap between Renaissance Europe and an increasingly marginalized Central (or Eastern) Europe grew larger. While the West was shaping modernity, in Hungary and its neighbors living conditions, trade, and urbanization were deteriorating.

The sixteenth century had a severe impact on a people laboring under constant harassment and deprivation, so that Hungary emerged from a long period of adversity with a diminished population. Most historians talk of a net loss of 1 million inhabitants, though others bring evidence that loss of human life was compensated by immigration. Even if immigration compensated for some loss, it also profoundly changed the ethnic composition of the country. Ottoman brutality prompted many Serbs to move northward, and colonization encouraged by Vienna brought large numbers of Slavs, Romanians, and others into Transylvania and Transdanubia. In some regions ethnic Magyars were becoming a minority.

The most widespread social trend during these centuries was the increasing enslavement of the peasantry. The gulf between the "nation of nobles" and the *jobbágy* was ever widening. The phenomenon later became known as the second serfdom, and the term *jobbágy* became synonymous with serf. The supremacy of the nobility manifested itself in politics and in the turbulent relationship between the estates and the king. East of the river Elbe, the society that was emerging was increasingly different from that of Western countries: from the sixteenth century onward, a kind of late feudalism was being created, a type of intermediate society, somewhere between the Western and Eastern models. A large noble class had already arisen in Hungary as early as the thirteenth century. Since then, royal authority had been in decline, and the oligarchy had acquired substantial and often dominating political, economic, and military power. The power of the great lords was further bolstered by the support of the noble's "retainers." Ties between the Hungarian baron and his retainers—based on private agreements and not the vassal ties of Western feudalism—always left the noble a free man, while increasing his economic dependency on the lords. Large estates grew, swallowing up more and more noble property. Economic decay among the lesser nobility was also caused by the accession rights of *aviticitas,* which kept ancestral land within the clan, while ensuring that the inheritance was divided among all legitimate descendants. The resulting impoverishment forced many lesser nobles to became artisans, tutors, or, increasingly, civil servants.

These "gentlemen in sandals," however, had not lost their patent of nobility or their political importance. The traditional legal principle of "one indivisible nobility" endured; though poor, the nobles proliferated. While in Western Europe the nobility was crumbling and shrinking, in Central Europe the proportion of nobles was on the increase, reaching 4–6 percent of the population in Hungary and 8 percent in Transylvania.

Titles of nobility were given by the king and the Roman Catholic Church, ennobling soldiers and peasants as a reward for services. The vast majority of this class were barely better off than the peasants, but their social status remained untouchable. A permanent state of war is one explanation for the survival of this class, as was the shared interest of all nobles opposing central (royal) power. While elsewhere in Europe royal absolutism was on the rise, in Hungary the complicated relationship between a nation of nobles and the sovereign seated in Vienna was to last for centuries. This was probably one of the key factors—if not the factor—which led to a weak middle class. So while Western societies were heading toward a nascent capitalism with a powerful middle class, Hungary was stuck in a system of estates that perpetuated the dominance of the nobility and led to late feudalism, or second serfdom. Static conditions were exacerbated by the fact that much of the very small middle class was foreign, mainly German. A class of half a million privileged dominated millions condemned to eternal servitude, according to the famous legal work, the Tripartitum of 1514.

This socially and economically backward system still proved to be a political force vis-à-vis Habsburg absolutism. The eternal disagreement between the king and the noblemen's Diet was seen as resistance against foreign domination and the defense of public rights of the Hungarian state, its uniqueness, and personality. Thus the role of Hungary's nobility could be seen more positively: by defending its own privileges, the nobility also sustained Hungarian national identity.

During the period of fragmented national existence, 1.5 million people lived in the Habsburg-ruled Kingdom of Hungary, just under a million in Transylvania, and the same number under Turkish occupation, with over 500,000 displaced people who had left their homes or found themselves under one administration and then under another.

Early Ottoman administrations were fairly well ordered, so that in the sixteenth century damage to society was still limited. The "century of Magyar decay" began in the later seventeenth century. Ottoman occupation and resistance to it meant a nearly constant state of war, accompanied by pillage, hunger, pestilence, and a deterioration of communities. Well-cultivated plots were abandoned, and families were decimated by the Ottoman practice of enslaving children from occupied lands. The depopulation of entire regions came about not only because of war but also through a number of economic adjustments. Pastureland was extended in order to accommodate cattle herding, a mobile and thus relatively safe and profitable way of life. It was not in Ottoman interests to pursue a policy based solely on plunder. Hungary, in the sultan's overall plan, was a base from which to invade Europe, fitting into a vision of a great Muslim Euro-Afro-Asiatic empire. It was a dream hindered and eventually shattered by the resistance of Central Europe's peoples, Hungarians and Transylvanians prominent among them.

The Ottomans valued the territories they conquered and set out to profit from them as much as possible. This is one explanation for their relative tolerance of religious diversity. Their administrative methods also had to be flexible to ensure cooperation from the population, yet efficient enough to exploit its economic capacity to the limit. This implied the use of taxes, tributes, and ransoms, making civilian administrators important. They governed the conquered lands, but did not overturn native habits and customs.

For the taxpayer—peasant, craftsman, tradesman, and landlord—life had to go on. Indeed, towns and market towns maintained municipal autonomy. Justice was administered by Hungarian judges in conjunction with Turkish *kadi,* and clergymen carried out their ministry with little discrimination. Indeed, the Reformation spread more easily under Turkish rule, which was indifferent to Christian denominational factions, than in the Habsburg Catholic kingdom.

For Istanbul, Hungary was simply a field of military operations and a country to fleece. The destructive effect of the Ottoman period was enormous, while Turkish contribution to Hungarian life consisted mainly of foodstuffs such as rice, maize, tobacco, perhaps paprika, and coffee. The overall balance is indisputably disastrous.

In northwestern Hungary, the most densely populated and richest part of the former kingdom, Ferdinand respected the rights of the Hungarian orders and avoided confrontation. Six rulers from his family succeeded him during the Ottoman occupation, with most of them adopting an increasingly absolutist and intolerant attitude toward Protestants. In the decades immediately after Mohács, a spirit of relative societal peace prevailed. Habsburgs ruled as kings elected according to Hungarian public law and by virtue of their succession rights—in the Habsburg interpretation—but not in any sense by absolute divine right. Hungary did not belong to them but to the Holy Crown. At the same time, Vienna bore the bulk of military expenses, maintaining 20,000 or so soldiers along the military frontiers. It was therefore in the interests of the nobility, jealous guardians of their privileges, particularly fiscal ones, to maintain the political status quo.

THE REFORMATION

As a consequence of the Protestant Reformation, Hungary witnessed a rebirth of humanism, was exposed to the teachings of the great German and Helvetic (Swiss) reformers, participated in the great debates of ideas, and, last but not least, experienced the blossoming of literature. Protestant ideas had found an audience as early as 1525, mainly among the (largely German-speaking) urban population. Among Hungarians, these ideas were often divisive. From the 1540s, Magyars from all walks of life began to follow Helvetic Protestantism, soon referred to as Calvinism. It was propagated by preachers of varying temperaments, but all of them developed their calling in the heat of religious disputes. The education of each of these men was determined by the university they attended, in Wittenberg, Geneva, or elsewhere, but with each adding his own personal touch.

The purification of the Catholic Church, corrupted by its prelates, its wealth, the sale of letters of indulgence, made a strong impression. Additional attraction was provided by the purification of places of worship, the abolition of priestly celibacy, a simpler hierarchical system, and the disappearance of submission to Rome.

The adoption of the mother tongue for prayer, the translations of the Bible and the Psalms, the theological debates and publications in Hungarian were also hugely significant. It was not only churchmen who participated enthusiastically in these debates but the lay public too. Protestants primarily targeted the sins of the "papists" but also extolled hopes for deliverance from the Turkish yoke through a purified "true Christian faith." The Protestant God had to deliver his Hungarian people, just as he had done for the Jews held captive in Babylon and Egypt.

The all-powerful, wealthy Catholic Church of the Middle Ages was becoming a thing of the past. Several rulers had divested it of properties and traditional sources of revenue, distributing them among their servants or simply expropriating the lot. The Mohács debacle and Turkish occupation had left many bishoprics empty. Ferdinand, together with a number of magnates, was quick to take advantage of the situation and appropriated them. Reformed Churches proliferated throughout towns and market centers, among diligent and industrious people. The magnates and nobles who had converted to the new denominations dragged with them their entire entourage: relatives, town dwellers, and peasants. Vast numbers thus switched religious allegiance.

Disputes and conflicts did engender violence and sometimes bloodshed. This did not bring irreparable damage, however, and the spirit of tolerance survived. People learned to live together; the absolute domination of a single state church was no longer possible. Hungary's religious freedom was indeed remarkable when compared to the zealous excesses occurring elsewhere in Europe. The Reformation eventually won over most Hungarians and forced Catholicism onto the defensive. Many schools, as well as the print works and publications of the period, were either Lutheran or Calvinist until the end of the sixteenth century. After that, the Catholic Church threw its energies into the Counter-Reformation, especially with the rise to prominence of Péter Pázmány, cardinal and archbishop of Esztergom, a master of religious polemic.

The legacy of diversity led to an extraordinary event for the period. In 1568 the Transylvanian Diet of Torda decreed religious freedom, although limited to the four recognized rites, Catholic, Evangelical Lutheran, Reformed Calvinist, and Unitarian, and excluding the large numbers of Orthodox Romanians, as well as the handful of Jews and Muslims.

The number of schools and publishing opportunities increased. Protestant colleges were set up in Transylvania, in both Saxon and Hungarian areas, as well as at Debrecen, Sárospatak, and a dozen other towns. There were two hundred elementary schools by the late sixteenth century, and dozens of outlets published Hungarian translations of the Bible (the first by the Protestant Gáspár Károlyi in 1590), prayers, psalms, and a lively literature of polemics. More promising was the fact that books were now appearing in Hungarian, either to propagate religious renewal or to instruct and entertain, representing the first buds of a truly national literature.

TRANSYLVANIA

Wars, famine, and natural calamities at the turn of the sixteenth century had caused demographic and economic disaster in the kingdom, and the situation in Transylvania was not much better. Half of the population is said to have disappeared, and 90 percent of property is thought to have been damaged. These figures may seem exaggerated, but they indicate the extreme gravity of the situation. Transylvania soon recovered, however. Indeed, the seventeenth century came to be seen as its golden age. By 1660 the population had grown to 955,000, made up of six main nationalities (and several smaller ones). Magyars and Szeklers constituted the majority (500,000), followed by Romanians or Wallachians (280,000), Saxons (90,000), Serbians, Ukrainians, and others (85,000). Five languages were spoken and six religions practiced, excluding the Jewish faith and smaller sects.

Magyar settlement in the region has its roots in the migrations, when the variously identified indigenous populations were submerged. Most of the new conquerors left Transylvania in search of pasture on the plain, but the region remained under their military control and soon was resettled by Magyars and Szeklers.

The Szeklers (Székely in Hungarian) arrived with the conquerors in 895, probably as army auxiliaries; they spoke Hungarian and are thought to have been of Magyar or Turkish origin. Deployed to guard the eastern frontiers, by the thirteenth century the Szeklers constituted a homogeneous and tightly knit community that preserved its own social and cultural characteristics. Traditionally all were free and equal; there were neither bondservants nor nobles among them, and their leaders were seen as chieftains. By the sixteenth century, the old military and social structures were eroding, but it was still a closed society, fiercely protective of its freedoms, as proved by numerous uprisings. The Szeklers allied themselves with the two other Transylvanian nations, the Magyars and the Saxons. Together, the three made up the diet of Transylvanian States, which seized its independence from the Hungarian Diet of the royal territory.

The origins of the Saxons in Transylvania date back to the early Árpád period. First invited to settle by Géza III in the twelfth century, they came from Flanders, the Rhine region, and Wallonia, rather than Saxony. They were given considerable privileges to maintain their independent administrative and judiciary system, as they introduced advanced agricultural techniques and artisanship and founded thriving urban centers. Primarily Lutheran and Melanchtonian evangelicals, their churches and Gothic buildings are among the country's most beautiful monuments. Hardworking and commercially prosperous, the Saxons provided the economic base for the golden age of the seventeenth-century princes.

The Romanians, although quite numerous, did not enjoy the same rights as the "three nations." The Orthodox religion was tolerated but not recognized to the same extent as Catholicism and Protestantism. Most Romanians, except for the village chiefs and boiars, who were assimilated into the Hungarian nobility, were serfs. Romanian communities certainly existed in Transylvania around the same time as the Szeklers and Saxons, but the issue of the origins of Romanians in the region divides Hungarian and Romanian historians, reflecting national ideological differences, and seems likely to remain disputed for some time to come.

In the middle of the sixteenth century Transylvania became a distinct and recognized state. The rise and survival of specific administrative and cultural structures culminated in a key historical turning point, a series of anti-Habsburg wars. The first of these was led by Count István Bocskai, who formed an army of free soldiers, called *hajdú,* and was then joined by Transylvania's "three nations." A great fighter of Ottomans in the Fifteen Years War, Bocskai turned against the Habsburgs in 1604 and conducted a successful campaign, reaching the gates of Vienna. Eventually he was forced to sign the Treaty of Vienna (1606), which guaranteed Transylvania's independence and religious freedom, and was followed by a twenty-year tripartite peace treaty with the sultan.

Bocskai's brief era was a historical turning point. It ushered in a century of anti-Habsburg struggles, mainly led by Transylvanian princes. Their objective was always the same: to unify the country under Hungarian sovereignty. The dilemma too was the same: how to drive both Turks and Habsburgs out of Hungary. Though weakened as a result of the Treaty of Westphalia at the end of the Thirty Years' War (1648), the Habsburgs still had an empire behind them. As for the Ottoman Empire, it numbered 30 million subjects and possessed an army that was reputedly invincible. Faced with these two giants, Transylvania, with its 1 million inhabitants and limited resources, was not up to the confrontation, even though it did succeed more than once in rallying the Habsburgs' Hungarian subjects.

Still, Transylvania had its golden age. The country found its brightest star in Gábor Bethlen (1613–1629). He had played an important role under Bocskai and in the struggles over succession. When elected prince, he had to make humiliating concessions to the Ottoman Empire, and he also made a number of internal mistakes, only later realizing that the prosperity of his subjects was better for the treasury than despoilment or irregular and unpredictable fiscal policies. His subsequent economic policy proved fruitful; regulated foreign trade brought in revenues, and everyone profited. Urban centers developed, Renaissance buildings sprang up, and public education reached unprecedented levels. This most eastern Protestant country—back to back with the Habsburgs—was soon drawn into the Thirty Years' War, beginning with a conflict between the Czechs and Ferdinand II, an implacable foe of the Reformation. Bethlen joined the Czechs and campaigned as far as the gates of Vienna. In 1620 the diet offered him the Hungarian Crown, but the Czech defeat at the Battle of the White Mountain cut him short. Nonetheless, the emperor was in a perilous position, and Bethlen was quick to take advantage of this, negotiating a very favorable compromise. Under the Treaty of Nikolsburg (1621), he renounced the royal crown but maintained control of seven counties in Upper Hungary. His sovereignty over Transylvania was never questioned.

Bethlen made several attempts to realize his anti-Habsburg plans, but never achieved national unification. The equation remained the same: the Habsburgs could only be kept out with the support of the Ottoman Empire, but in order to get rid of the latter, Bethlen would have to call on the Habsburgs. In the end, enthusiasm waned. Transylvanian lords were unwilling to mobilize in support of a policy perceived as Bethlen's personal ambition, while the kingdom's nobility wanted to curb powers conferred on him by his elevation to royal status, which Bethlen had in any case turned down.

At a time when absolutism was on the rise throughout Europe, the authority of the Transylvanian princes was of a more personal nature. They were local nobility, preceded by princes from the Báthorys, and succeeded by those of the Rákóczi family, members of which were skilled at amassing wealth. When György Rákóczi died in 1648, he left behind a country that was well governed, prosperous, and with an acquired habit of religious tolerance. His son György Rákóczi II nurtured larger ambitions, though he turned out to be far less successful, mounting a foolhardy incursion into Poland. He never recovered from the defeat, and Transylvania's star fell with him. Successors of little significance followed and Transylvania's golden age came to an end. It was invaded by the Turks and later occupied by the imperial army of Leopold I.

THE HABSBURGS

As Ottoman power weakened during the seventeenth century, Hungary's political center of gravity moved to the Habsburg-ruled kingdom. Despite its misfortunes, the country remained a bastion against the Ottoman invasion. Amid the wars and ravages, new spiritual and cultural waves swept across the entire country, and even its economy managed to survive. Vital links within this fragmented country remained intact, and a tacit contract united Magyars, born of a desire to liberate the entire country, though there was no consensus on how to go about achieving this.

Unlike the absolutist Bourbons, the Habsburgs had to adopt a measured approach toward the various states that made up their rather heterogeneous family empire. Czech resistance was easier to overcome, but the Magyar insistence on sovereignty, defended by a large and powerful nobility, was a greater challenge. Indeed, the Hungarian noble lawmakers did not yield to absolutism until the second half of the long reign of Leopold I (1657–1705), and even then only temporarily. Until that point, Vienna's interventions had been limited.

For centuries, an aristocracy of rich and powerful barons had risen from within a socially differentiated nobility. Over time, through titles and influence, they had become a superior class. The kings ruling from Vienna wanted these magnates as allies and had therefore made several of them counts, even hereditary princes, among them the Pálffy, Nádasdy, Eszterházy, Wesselényi, Forgách, and Csáky families. This new upper class later formed the upper chamber of the diet.

The Counter-Reformation changed the cultural and political landscape. Most squires returned, under duress or for convenience, to Catholicism, and the resulting alliances and quarrels with either the Turks or the Habsburgs, as well as differences in religious loyalties, had serious political repercussions and were not easily overcome. Religious tolerance remained far greater in Transylvania than in the kingdom, and the success of the Counter-Reformation was not unequivocal; Hungary was once again predominantly Catholic, but it remained a multifaith country. Cultural pluralism survived despite the Counter-Reformation's excesses. The Catholic Church regained its former preeminence in public life, with considerable influence in literature, education, and the arts.

The Habsburgs' goal was to keep the peace both at home and abroad, so they left Hungary's noblemen pretty much alone and did not interfere with their treatment of the peasantry, who were now reduced to serfdom, a fate escaped only by the most enterprising. Vienna intervened more readily in commerce than in political matters. It created trade monopolies, entrusting them to foreigners, among whom were the Oppenheimer and Wertheimer families, prosperous Viennese bankers who dealt in army supplies. Monopolies in the trade of cattle, ore, glass, and other products seriously reduced the scope for a free market and the income of the proprietors. Only a handful of rich and enterprising magnates threw themselves into "undignified" commercial activities.

Still, the Magyar lords had not forgotten that their primary duty was to prepare for the decisive war against Turkish occupation, despite the reticence of the Habsburgs. To achieve this, they were ready to cooperate with Vienna. The Treaty of Westphalia (1648) had raised hopes that Europe's Christian forces could at last unite to drive out the Ottomans. But Ferdinand III was more interested in negotiating peace with the Ottomans than in risking confrontation. Such evasion was not well received in Hungary. Particularly impatient, and effective, among Hungary's lords was the warrior-poet Count Miklós Zrinyi (1620–1664), *ban* (governor) of Croatia, whose literary work and military-political role earned him an extraordinary reputation. Zrinyi disseminated the idea of a national kingdom, asserting that under the leadership of a strong—even absolutist—national king, the Turks could be driven out and the country reunited. In contrast with the prevailing wisdom of the times, according to which waging war was essentially a matter of money, money, and more money, Zrinyi called for "weapons and the determination of valiant men" (cited in Makkai 1996, 89–90).

The war of liberation for which Zrinyi had longed finally arrived in the 1660s. After a series of setbacks, Christian forces crushed the Turks at St. Gotthard in 1664. The victory was rendered meaningless, however, by the ensuing peace treaty signed at Vasvár. Although Turkish power was by now on the decline, the short but efficient "Küprülü Renaissance" brought major reforms to the Ottoman Empire, and its rule in Hungary was still strong.

While common sense called for moderation, royal absolutism was on the rise, and Leopold I even suspended Hungary's constitution. The closing decades of the seventeenth century thus ushered in the anti-Habsburg *kuruc* movement (the name derives from the Hungarian word for "crusader"), made up of fugitives from imperial justice, and dismissed soldiers. A young baron named Imre Thököly became the first leader of the kuruc. He won battles and conquered much of Upper Hungary, so the Ottomans supported him and even referred to him as Hungary's king. But Thököly is perhaps best remembered for marrying Ilona Zrinyi, widow of a Transylvanian prince who held the fort of Munkács for three years against imperial forces and for being the stepfather to the child Ferenc Rákóczi II.

Thököly—courageous, colorful, and energetic—embodied the ambiguities and contradictions of his time. He had tried to unite the "two Hungarys" with the help, or consent, of the Ottoman occupiers. A wave of paradoxical "Turkophilia" arose throughout the kingdom.

The final attempt by the Turks to take Vienna came in 1683. Saving Vienna was a great Christian victory and was followed by the retaking of numerous Hungarian fortresses. Ottoman-occupied Buda held for another three years. Pope Innocent XI succeeded in forming a new Holy League, supported by huge monetary contributions, and in 1686 an allied army set off toward Buda, under the command of the duke of Lorraine, this time with a large Hungarian contingent.

The siege began in June and lasted seventy-eight days, with a dramatic end: eight hundred tons of gunpowder exploded under the ramparts, hastening victory for the Christians. Ottoman soldiers resisted to the last man, but on 2 September, Buda was liberated. Christian Europe celebrated, but the war of liberation dragged on for two decades. Finally, in 1699, a peace treaty at Karlóca (Karlowitz) put an end to 173 years of Ottoman presence on Hungary's soil.

THE RÁKÓCZI REBELLION

Ferenc Rákóczi II (1676–1735) grew up in Vienna and overcame his Habsburg education only on witnessing conditions in his native land. He then associated himself with the kuruc rebels. After his first attempt to establish a French alliance failed (resulting in his brief imprisonment and exile to Poland), he returned to Upper Hungary in 1703 to lead the already brewing insurrection. The cornerstone of his policies, an alliance with France, made good sense. Louis XIV welcomed the idea of an insurrection in the rear of his Austrian rival, so he granted Rákóczi a sizable annual subsidy out of the French military budget. But the French alliance always remained somewhat tentative, even after Rákóczi's loyalists forced the Ónod Diet (1707) to proclaim the House of Austria dethroned.

The kuruc cause was very popular, but Rákóczi's peasant armies were outsoldiered by the regular imperial troops. Nevertheless, Rákóczi, somewhat naively, continued to wage war until 1711. As the main cause of dissatisfaction—Leopold's harsh treatment of Magyars—was replaced by the more conciliatory approach of Joseph I, and as Louis XIV seemed ready to make peace with the Habsburgs, Rákóczi's hopes evaporated. In 1711 his commanding general signed a peace treaty at Szatmár. The terms offered by the imperial generals were quite fair. The king granted the rebels total amnesty, the restitution of their confiscated property, religious peace, respect for the constitution, and the safeguard of tax exemptions.

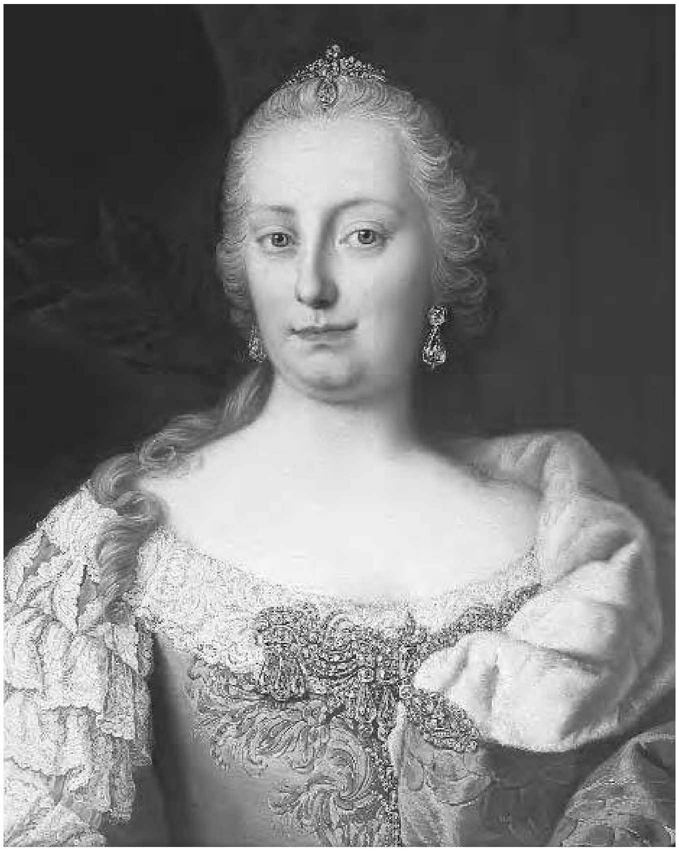
Rákóczi's insurrection may fairly be seen as a lost cause. The loyalty of Magyar nobility was divided, the peasantry was exhausted, and the prince's foreign allies had abandoned him. The long-suffering towns had now been subjected to war for two centuries, and Hungarian currency was worthless. It has also been asserted that Rákóczi was primarily obsessed with his Transylvanian principality, which by this time was firmly under Viennese administration.

COMING TO TERMS WITH VIENNA

The Szatmár peace treaty—sketched out between two opposing generals with both *kuruc* and *labanc* being Hungarian lords—was based on a tacit agreement: the Magyar nation, represented by its nobility, would cease rebelling, and the imperial winner would negotiate an honorable compromise. The king pledged his goodwill to the diet and promised to govern in keeping with its traditional laws, which ensured noble prerogatives. The legislative body was essentially dominated by nobles. Prelates and barons had sat at the table of the diet with the magnates and two noble deputies from each of the fifty-two counties, while members of the clergy and of the towns sat at the lower table. The estates formed a counterbalance to royal power, except during periods of absolutism.

Habsburg rulers of the eighteenth century were more interested in pacifying the dominant classes than in breaking them. The latter, rather than continue to chase the mirage of total national independence, were by and large ready to profit from the compromise. One example of this was the diet's acceptance of the Pragmatic Sanction, recognizing royal succession by the Habsburg female branch.

Maria Theresa was twenty-three years old when she became archduchess of Austria in 1740; she became queen of Hungary and Bohemia a year later. With her husband the prince consort, she established the Habsburg-Lorraine dynastic line. Her long reign began with serious problems: Prussia started the War of the Austrian Succession (1740–1748) and invaded Silesia, to be joined by Bavaria and France. Thus the young ruler found herself in desperate need of Hungarian military support. At the diet of 1741, Hungary's nobles offered her their "lives and their blood" (Sugar 1984, 147). This meant that more than 100,000 Hungarian soldiers fought in the wars of the coming century and became instrumental in saving the dynasty's rule.



Maria Theresa, Empress of Austria by Martin Mytens the Younger, 1744. (Archivo Iconografico, S.A./Corbis)

Maria Theresa's absolutism was moderate. She made concessions that favored the Hungarian estates, but the modus vivendi was fragile, and the compromise required constant renegotiation. For example, the territorial integrity of historical Hungary was not entirely restored. In Transylvania, Romanian and Székely territories were separated and organized into military frontier defense regions under the command of the Military Council in Vienna.

Military reforms were necessary both to ensure the kingdom's security and to support the wars with Prussia. The old system of raising armies, called "noble insurrection," was no longer effective. A permanent army of around 300,000 to 400,000 men, one-third Hungarian, was placed under the Viennese Military Council; its general officers and language of command were German. In the spirit of enlightened absolutism, such measures existed side by side with Maria

Theresa's considerable gratitude and benevolence toward the Hungarians.

Maria Theresa was devout, maternal, and marked by the contrasting traits of her age (the baroque), a mixture of mysticism, pathos, and glitter. She was both a modernizer strongly attached to traditional values, and a devout Catholic quite tolerant toward Protestants. An important element of Maria Theresa's reign was her striving to end confrontation and her search for equilibrium. Thanks to her reforms, the life of her subjects improved. It is fair to say that Maria Theresa and her son, coruler then king Joseph II, transformed the political and social landscape before a new era of national and literary revival began in Hungary.

Catholic teaching orders (Jesuits, Piarists) became active in education. After the demise of the Jesuits in 1773, Maria Theresa's reforms gave public education new impetus. The tradition of attending Protestant universities abroad in Wittenberg, Jena, and Halle continued. Alongside Latin, Hungarian literature was also coming into its own. Its flourishing began in the 1780s, due in part to the spread of rationalist ideas and also to an original initiative of Maria Theresa: she founded a Hungarian Guard unit, attracting to it Magyar cadets who served and studied in Vienna for five years before returning home and contributing to public life.

According to the first reliable census, taken in 1784–1787, the Habsburgs ruled over 23 million people, half of whom lived under the Hungarian Crown, in historical Hungary, Transylvania, and Croatia. Hungary was important for the Viennese monarchs; it was the size of their empire's population that made the Habsburgs a great power. This meant that after the breakup of Poland (1772–1795), Russia, France, and Austria (with Hungary) loomed large on the continent, in terms of both territorial mass and their respective populations, while Prussia dominated militarily and England ruled the seas. The sixth power, the Ottoman Empire, was still significant, but would soon become the "sick man" of European politics.

Hungary held an important position in the new European configuration, despite its limited sovereignty and its state of convalescence. Under the Habsburgs, abandoned or sparsely populated territories were systematically colonized by both old and new immigrants, including a million Germans who settled in various regions. These newcomers were settled by special state committees. Priority was given to skilled farmers and artisans, who received material and financial assistance. As well as Serbs, numerous Slovaks and other Slavs joined older settlers, together totaling some 3 million. Adding 1.5 million Romanians, almost half of Hungary's inhabitants were non-Magyars.

The nation's ethnic composition had been reversed. Even though this was to bring on a number of conflicts later, it was not an issue at the time; statistics did not even take ethnicity into account. The new migration wave also changed the religious makeup of the country. Along with Catholics and Protestants, there were now large numbers of Eastern Orthodox and Greek Catholics (Uniates). There were also Armenian Christians and Jews, estimated to number 10,000 at the beginning and over 50,000 by the end of the century. As for the Protestants, despite churches and schools being restored to them, the Catholic Counter-Reformation was pursued with great success. Joseph II's Edict of Tolerance in 1781 ensured religious freedom for all.

For the first time in centuries, Hungary entered a long period of relative peace and prosperity. Society was able to pick itself up, despite its cumbersome and archaic social structure, which consisted of a huge majority of landless peasants on the one hand and a dominant nobility on the other, representing almost 10 percent of the inhabitants. In between the two was a weak stratum of bourgeoisie, soldiers, and civil servants, largely of foreign birth. The magnates and prelates were at the top of the pyramid. The 200 richest families included foreigners who were integrated with the Hungarian aristocracy. They lived a cosmopolitan lifestyle and were familiar with world culture. The 400,000 nobles, on the other hand, were literally and figuratively stuck in the past. Inequality between magnates and common nobles was enormous. Inequalities among peasants were less differentiated. The luckier or more enterprising among them inhabited a tenure of around twenty hectares or more, while the poorest lived in a shack with a backyard. Some of them sold their products on the market, settled in the market towns, and escaped rural servitude. Then there were those who swelled the ranks of agricultural laborers, much in demand by landowners seeking profits from growing markets.

Grievances over this "second servitude" exploitation reached the royal court and did not pass unnoticed. But vis-à-vis the nobility, its hands were tied. In exchange for possessing the Czech and Hungarian crowns (which made Maria a powerful European monarch), she guaranteed the lords' special feudal rights, and she needed their support. The Court promulgated reforms in Austria and Bohemia, but encountered resistance from the Hungarian orders and counties, where the nobility enjoyed a system of self-rule and used it to preserve its privileges. Maria nevertheless succeeded in implementing the Urbarium, a 1767 royal decree regulating peasant-lord relations.

In all respects, a new civilization was being born. There was no lack of books: the first literary dictionary (1766) contained biographies of more than five hundred Hungarian writers. These were astounding statistics for an economically underdeveloped country. Publications in Hungarian increased in number, as did secular, literary, historical, and scientific works.

Hungary's economy remained markedly rural. Factories were rare; in 1790–1800 there were around 125 factories and small manufacturers. Thus Hungary was more closely linked to the spiritual life of Europe than to its industrial revolution. Its wealth came primarily from agriculture. Habsburg court policies discouraged industrialization: Hungary was to remain the empire's supplier of meat, cereals, potash, and wine.

Though still far from giving rise to a genuine urban class, made up of bourgeois, free laborers, and intellectuals, the education system was nonetheless transformed. The first *Ratio educationis* in 1777 subjected schools to state directives and created a uniform system. Training for public health professions was instituted. A welfare system of sorts was created, concerned with orphans, widows, and the education of the children of Gypsies. Justice was dispensed according to set laws and separate from the administration. Maria Theresa put an end to witch trials and torture.

The traditionalist Maria Theresa changed a great many things, not because she was fond of reforms but because she saw them as necessary for the dynasty's survival. All this changed with the arrival on the throne of Joseph II, a zealous and impatient reformer. He contributed toward progress in many ways, but his ten-year reign was too short and resistance too strong for any real change to take place. Maria Theresa was certainly an authoritarian and a reformer, but not to the point of imposing her will without consideration for the interested parties (and certainly not to the extent of alienating magnates and nobles). Joseph, on the other hand, seemed driven by an ardent desire for change for its own sake. The spirit in which he imposed his designs was more modern and enlightened than his mother's; he was undoubtedly more in tune with the times but certainly not with his subjects. Joseph wanted to transform society immediately, while strengthening Austria against other powers.

Upon coming to power, Joseph II immediately set about integrating Hungary into his conception of a unitary state. In so doing, he attacked the privileges of the nobility, the rights of the state, and Hungarian cultural identity. He refused coronation in order to avoid direct confrontation with that jealous guardian of Magyar particularity, the diet. Nevertheless, a number of his decrees were enacted without much resistance. A relaxation of censorship was a notable case in point, as was the Edict of Religious Toleration in 1781. The edict abolished most discrimination against Protestants, Jews, and Orthodox Christians. Joseph II also eliminated Catholic orders with the exception of teaching and care-providing ones, turning hundreds of convents into schools. Civil marriage was introduced and church offices were reorganized. Joseph II wanted to be the architect of a modern state, for the good of both his empire and his people.

In 1784 Joseph II decreed that the official language in all the states was to be German. He did this in order to govern better: German, once extended to education, could train the elite capable of managing a modern state. The decree set three years to execute the project, but nothing, or very little, was to come of it, since in addition to provoking national resistance, the decree was impossible to implement. Even the more enlightened elements in society saw Joseph's measures as unrealistic. Realizing that his reforms were detested by all, Joseph II withdrew all his decrees on his deathbed in January 1790, except for the Edict of Toleration.

His successor, Leopold II, an enlightened and efficient ruler, was able to appease his subjects, before turning back to authoritarianism. His foreign policy proved successful, but in the subsequent decades all the problems of the old regime resurfaced.

NATIONAL AWAKENING

In Francis I a reactionary brute came to the Habsburg throne, a man in sharp conflict with the spirit of Enlightenment and the French Revolution, the influence of which was felt even among tradition-bound Magyar nobles who continued to believe that sovereignty belonged to the "privileged people."

The nation's intellectual elite were even more drawn to the ideas of the Enlightenment, finding them useful to voice their own aspirations. In view of the heavy-handed absolutism of Vienna, they felt that the only path to revival was within the cultural framework. To the reformers, knowledge was the key to development, and language the key to knowledge. The leading organizer and indisputable leader of Hungary's language reform was Ferenc Kazinczy, who spent 2,387 days in a Habsburg prison for having been implicated in a Jacobin conspiracy. He withdrew to his estate and dedicated his life to writing and to guiding a revival of the Magyar language and its literature. In this effort, he became a "dictator" of cultural life, a ruthless critic, imposing an elevated classicist style, stripped of frills, on his fellow writers.

The Magyar language had to adapt to modern life and become useful for conveying new notions. Kazinczy's "neologists" set out to reform grammar and lighten and enrich the vocabulary so as to keep abreast of cultural and technical developments in Europe. They created new words based on Hungarian roots, by borrowing foreign words and then Magyarizing them, or by image association. Reaction among their opponents, called "orthologues," was fierce, but the nation at the time had genuine and complex needs, which the reform movement could meet. To complicate matters and press the urgency of language reform, there were three languages in use throughout the land: Latin was the language of the Catholic Church, the law, and politics; German was used by the Viennese administration; and Hungarian was the language of the people and the new national elite. The promotion of Hungarian, the language of the dominant Magyars, was a major objective, as well as a cultural and political necessity.

At the same time, a growing number of grievances further poisoned the relationship between the court and Hungary. The devaluation of paper money, together with mandatory payment of taxes in silver coin, arbitrary levying of recruits, and lastly, the prolonged absence of the diet, forced the Austrian court to appease the Magyars. The diet was therefore finally summoned in 1825, but the all-powerful chancellor, Metternich, remained hostile toward national grievances as well as toward social radicalism. (The Metternich era was characterized by great power in the hands of a small circle at the court, the *camarilla,* a network of informers, and heavy-handed police intervention.)

The laws voted in by the diet in 1825–1827 and sanctioned by the king restored constitutional rights, abolished arbitrary levying of taxes and recruits, and promoted the use of Hungarian as the official language, but they did not widen the debate of ideas and reforms. This task was taken on by the county diets, and by the young radical reformers whose writings appeared in newspapers and books. Reform did not mean a complete break with the past; small, gradual steps prevailed. Social transformation from one session to another was consequently slow and difficult. Any denunciation of the old regime was punished, and during the 1830s a number of young liberals received prison sentences.

Lajos Kossuth (1802–1894) and István Széchenyi (1791–1860) came to represent the two radically different approaches to reforming Hungary's public life. Széchenyi came from a family of aristocrats who had long patronized the arts and intellectual progress. He founded the Hungarian Acad-

Lajos Kossuth, nineteenth-century Hungarian nationalist and revolutionary. (Library of Congress)

emy of Sciences as well as social clubs for aristocrats, and published his ideas about banking, credit, and industry, aspects of modernization he had come to know during his travels. His projects included river regulation to facilitate navigation, the creation of a steamboat company, and the building of a permanent suspension bridge between Pest and Buda. For this English-style reformer, this kind of project was the way to progress, rather than social subversion or nationalist demagoguery. And yet Vienna considered him dangerous, seeing a threat coming from conservative magnates and nobles as well as those more radical, especially Kossuth.

There was a fierce argument between the two over the nationality issue. Széchenyi believed that assimilation would come about through the beneficial effects of general progress; Kossuth hoped that Magyarization would occur as a result of Hungarian democracy, culture, education, and administration. Public opinion sided with the latter view, inflamed by its own national demands against Austria, combined with a desire for preponderance over Slav and Romanian minorities in this multinational kingdom. Széchenyi's fear that an alliance between clamorous Magyar nationalism and the narrow-minded reactionary nobility, his worst nightmare, would become a reality, may have been exaggerated, but it was not unfounded. Still, the count, once praised for awakening the nation, lost popularity, whereas Kossuth, the first to have succeeded in conducting a policy that moved the masses, carried the day and assumed the role of the nation's leader.

Kossuth's dazzling career was due to his personal qualities; the task that was incumbent on him, through a combination of personal qualities, background, and circumstance, was no less than that of knitting together a land whose development had been curbed by external misfortune. Both progress and national freedom had to be fought for simultaneously. He became a highly respected figure in European public opinion and, after his defeat, received a hero's welcome from London to Washington.

Having recently completed a three-year prison sentence because of his seditious journalism, in early 1841 Kossuth launched a journal that was to be the focus of the entire opposition, *Pesti Hirlap* (Pest News), which became especially famous for its dazzling editorials. It was then that Kossuth's political genius really took off. He realized that the platform of the assembly could not on its own generate a sufficiently broad change in public opinion. He needed the press. He knew that the social foundation of his bold reform program was the "middle ground," the ordinary nobility, the intelligentsia, and the bourgeoisie—a middle class in the making. Among them, the subgroup requiring the most delicate handling in order to be won over to his cause consisted of the local squires. With infinite patience, Kossuth cajoled them into gradually giving up some of their privileges and very tentatively introduced the idea of a modest property tax. Even this proposal failed in the 1843–1844 county diets and the national diet, during which there were violent outbursts against the reformers.

This setback did not stop Kossuth, however, who had emerged triumphant from his arguments with Széchenyi. The aristocrat had been eclipsed by the lesser noble who was not, as he himself liked to point out, "born with a silver spoon in his mouth." Kossuth remained leader of the nationalist liberal trend throughout these prerevolutionary years.

REVOLUTION AND WAR OF INDEPENDENCE

In 1848 Hungary and Transylvania had over 14 million inhabitants, 600,000 of whom were nobles, and only 120,000 wealthy lords. But the new middle class, composed of nobles as well as the free professions and the bourgeoisie, constituted a considerable political and economic force. It was a force that operated like a kind of third estate, with the difference that the assorted city dwellers, who were neither noble nor bourgeois, and the large peasantry were mere spectators, waiting for the outcome of the reforms, especially the abolition of serfdom.

Agriculture, unmodernized save for a few experimental farms, was the dominant economic activity. Landowners and tenured peasants continued to use old-fashioned farming methods and had no money for improvements. Industry was no longer in its infancy; there were a thousand factories (and yet this was only a tenth of the number of Austrian and Czech industries).

Urban development continued, and the dusty towns grew and changed. By 1848 Pest-Buda-Óbuda had a population of 120,000, a beautiful suspension bridge designed by two English engineers, a permanent theater, new hospitals, schools, and administrative buildings.

Széchenyi and Kossuth

István Széchenyi (1791–1860) and Lajos Kossuth (1802–1894) represent the great dichotomy in nineteenth-century Hungarian public life. Each sought to move Hungarians to take—at times sharply divergent—action to reach a goal they shared: independent national progress. Much of their initiatives met with tragic failure, but their memory remains honored in Hungary, as Washington's and Lincoln's are in the United States; their images appear on currency, streets, parks, and prizes, and associations are named after them.

Their background had little in common. Count Széchenyi was the scion of a wealthy aristocratic family, was raised speaking German, and fought for Habsburg interests as a cavalry officer. Kossuth was born into a Hungarian-Slovak family of modest means, studied law, and took up journalism. During the reform period of the 1820s and 1830s, Széchenyi took his inherited seat in the Upper House of the Hungarian Diet, while Kossuth became a deputy in the Lower Chamber. Both became activists: Kossuth was inspired by reading the radical ideas of European revolutionaries, and Széchenyi by traveling abroad and witnessing the economic and social progress made in industrializing Western Europe, especially in England.

Seeing the miserable living conditions most Hungarians had to endure, they came to different conclusions. Kossuth blamed the country's dependent status and the Habsburg court's policies for Hungary's backwardness and called for radical reforms in political life, starting with far greater freedom from Vienna's increasingly authoritarian policies. Széchenyi saw Hungary's outmoded social institutions and practices as the prime causes of the country's condition, and set out to change them. Indeed, his initiatives laid the bases for modernizing the country. Among the ideas he promoted, and enthusiastically supported, were the construction of steamships and the regulation of rivers, building railroads and a permanent bridge connecting Buda and Pest, social clubs to promote the exchange of ideas, the establishment of a National Academy of Sciences, and organized horse racing in order to improve the native breeds. He was tireless in raising and providing funds for these projects, even though one of his most significant proposals—calling for doing away with the nobles' inalienable right to their lands, and thus making way for the introduction of credit so desperately needed for economic improvements—made him quite unpopular among his peers. Széchenyi took advantage of his position in public life and his family's great wealth to bolster his arguments (and even learned to make speeches in Hungarian), while Kossuth used his considerable journalistic and oratorial skills, which made him popular among young radicals, as well as earning him a term of imprisonment on sedition charges.

In public they showed great respect for each other, but the two unavoidably became political rivals. Although it was Kossuth who took the lead in turning the 1848 revolution into a yearlong war of independence (which almost brought about the fall of the Habsburg Empire), Széchenyi's ideas and actions could be seen as more radical, as they held the promise of more thorough and significant changes. While Kossuth called on Hungarians to take up arms and continue fighting even when there was no hope for military victory, Széchenyi worked to remake Hungarian society. He called on his fellow noblemen to give up many of their privileges, abandon their lives of rural indolence, and take practical steps to make Hungary economically powerful, a course that in his view would give the country a stronger bargaining position vis-à-vis Vienna, inevitably leading to independence without bloodshed and upheaval.

The choice of action offered by these two patriots set a pattern for the rest of Hungary's recent history, including the recent decades: the debate between those who, following Széchenyi's example, work for gradual, "careful" progress, and those who call for radical changes, continues.

Debate among liberal Hungarians focused on the modalities and the pace of change and not on the suitability of another policy. The issue of national minorities was now high on the political agenda; and it was not limited to languages. There were legal, economic, educational, and cultural aspects too.

About half of the population belonged to non-Magyar ethnic groups. In contrast to the past, their assimilation was seldom spontaneous. Though no one yet spoke of national identity as such, a vague national awareness, diffused and mixed in with the social and religious, had been awakened.

The nation was both multiethnic and multidenominational, strongly influenced by cultural and political nationalist awakenings. The Croats, subjects of the Crown but with their own diet and enjoying considerable state autonomy, constituted a particularly complex problem. In the 1840s the Croat nobility had severed its traditional alliance with the Hungarian lawmakers. The Croat National Party and the Illyrian movement, an outcome of Napoleon's Illyrian Provinces created between 1809 and 1813, squared off against pro-Hungarian Croats.

Equally strong cultural nationalist currents existed among the Slovaks in Upper Hungary, the Serbs in the south, and the Romanians in Transylvania. The intellectuals and patriots of these nationalities were unhappy with the introduction of Hungarian as the official language, the concept of one state, one nation, and the assimilationist policy of the Hungarian political class. As for the Viennese court, in accordance with its age-old tactic of divide and rule, it encouraged the minorities to pursue their demands.

In three-nation Transylvania (Magyar, Szekler, and Saxon), the fourth nation, the Romanian, had raised its head, influenced by its intellectuals. The vision of a Greater Serbia as an ideology was also promoted by the Serbian minister of the interior, Ilija Garasanin. As for Serbians living within the kingdom of Hungary, their most important journal, *Serbske narodne novine* (Serb National News), published in Pest, leaned more toward Hungarian reformism. In Upper Hungary, a "war of languages" raged between Magyars and Slovaks. Two intellectuals led the Slovak movement, Jan Kollár and Ľudovít Štúr, both opponents of Magyarization. Kollár's profile illustrates well the complexity of the situation; he was a Lutheran pastor living in Pest, wrote in Czech and adopted a pro-Austrian and Austro-Slav policy. Austro-Slavism, as opposed to Russian Pan-Slavism, envisaged the union of the Slavs of the Habsburg Empire, a vision dear to the great figure of Czech nationalism, František Palacký. Nevertheless, from the Hungarian perspective, Austro-Slavism and the pro-Russian Pan-Slavism were indistinguishable in that both of them threatened the integrity of the kingdom's territory.

The Jewish minority constituted a special case; in the mid-nineteenth century there were some 250,000 Jews in Hungary. Due to a massive influx of Jews from Bohemia and Moravia, followed by another from Galicia, no other ethnic group or religion underwent such a dramatic increase in numbers over a century. These immigrants were on the whole well received. Documents attest to a Jewish presence in Hungary since the ninth century. As with other Jews in Europe, they were dependent on powerful lords, the king first and foremost, from whom they received protection in exchange for services or straightforward ransoms. They were subjected to the customary discriminations: the wearing of distinctive insignia and clothes was compulsory; there were restrictions concerning property and profession; cohabitation with Christians was forbidden, although this last rule was not very strictly enforced. And yet Hungary's few thousand Jews fared far better than those living in other lands. They were spared the massacres perpetrated during the Crusades and, aside from a few isolated cases, were not subjected to violence or mass expulsions. After the reign of Mátyás, things changed. The mainly German urban bourgeoisie let loose its fury on these rival foreigners who practiced "strange rites." Thus alongside religious anti-Judaism, a modern day anti-Semitism emerged. Nonetheless, Hungary had far less persecution and offered a higher guarantee of security to Jews than other countries. In tolerant Transylvania, cases of anti-Judaism were rare except in Saxon towns.

The Habsburg era was particularly difficult for the Jews; the diet practically outlawed them, and a number of towns once again expelled them. In 1783 Joseph II promulgated the "systematic regulation" of the Jews' status, which accorded them a number of civic rights, including access to towns, participation in industry, and admission to Christian schools without having to wear any distinctive identification.

With medieval anti-Judaism fading, competitive anti-Semitism persisted. While the urban bourgeoisie remained on the whole hostile, enlightened intellectuals and nobles favored Jewish emancipation and further immigration. Legal and social integration went ahead, because, unlike most minorities, Jews were willing to modify their ways. They adopted the Magyars' language, customs, and even patriotism. Their contribution was invaluable at a time when pressure from other national minorities began to weigh on the Magyars.

In 1848 revolution broke out in Paris. As the news from Paris reached Hungary, Kossuth went on the political offensive at the Pozsony Diet with his liberal-radical program, which was soon relayed to Pest. The Opposition Circle drafted the "demands of the Hungarian nation," the famous Twelve Points constituting the essence of Kossuth's program and reflecting the ideas of the Pest radicals. The twenty-five-year-old poet Sándor Petőfi, drafted the fiery "National Song," and the next day the young revolutionaries had the poem and the Twelve Points printed without the censor's approval.

The Twelve Points expressed what the nation demanded: freedom of the press, abolition of censorship, a cabinet of responsible ministers and a National Assembly in Buda-Pest, equality of civic and religious rights, equal and universal contribution to public expenses, abolition of tax privileges, a national bank and national armed forces, freeing of political prisoners, legal reforms, and union with Transylvania. The revolution wanted to abolish restrictive and discriminatory laws, indeed, the entire political and economic system. At the Pozsony Diet, conservatives in both chambers were swept aside by Kossuth's party, a victory due partially at least to the rumor that a peasant army led by Petőfi was set to march on the city.

At the imperial capital, the March revolution succeeded because the government was weak and psychologically destabilized. After Metternich's dismissal, the feeble King Ferdinand and his court ratified the key laws of the Hungarian Diet, the "April laws." The promulgation of these laws meant that the revolutionary achievements became legalized. A government accountable to the assembly was to be installed, serfdom abolished, and the road to universal suffrage opened. The main national demands had been granted. The new Hungarian council of ministers, presided over by Count Lajos Batthyány, included Kossuth as minister of finance and Széchenyi as minister of public works and transport.

On 11 April, the ancient diet was dissolved and replaced by the National Assembly, elected by direct suffrage constituted by the nobles, the bourgeoisie, and wealthy peasants. Hungary was now a constitutional parliamentary monarchy, governed by an accountable ministry. The Habsburg emperor, however, remained king of Hungary; Hungarian sovereignty was not internationally recognized, and there was no foreign office in Pest. A national currency, the forint, was soon in circulation, and a Hungarian National Guard and army were established. Finally, following a general election, the first National Assembly of 415 deputies, mainly from the provincial nobility, opened on 5 July, with few radicals elected.

Transylvania proclaimed reunification with Hungary, and the issue of military frontiers under Austrian rule was also resolved. The demands of ethnic minorities were listened to, placated, but basically refused. Hungarian liberals of 1848 were not ready to renounce the concept of a unitary state and to concede autonomous territories to the different nationalities. They felt that liberating the serfs and ensuring equal civic rights to all citizens, regardless of ethnicity or creed, would solve the minority problem.

Croatia constituted a special case. It was part of the Hungarian Crownlands, but enjoyed considerable autonomy and its own diet, while also dependent on the authority of the civil governor designated by the king of Hungary. Neither the *ban,* General Josip Jelačić, a strong national figure, nor the more powerful section of the Croatian political class wanted to march alongside the Magyars. Vienna initially approved Hungary's position with regard to the national minorities and went as far as recalling Jelačić, but quickly restored him. The intention was to put an end to the Hungarian revolution. Victories against the rebels in Italy and in Bohemia, and news that the Paris barricades had fallen, had restored Austria's confidence.

The Habsburg government tried to reverse the political concessions it had made in its moment of weakness and set about encouraging ethnic separatism within Hungary. In the face of danger, the Buda-Pest government hastened its own preparations for war. A national army—called Honvédség, "defender of the Homeland"—was set up, armament and equipment factories bought, political and social rights broadened, and patriotic propaganda increased. "The fatherland is in danger," a slogan launched by Kossuth, reverberated throughout the land. His speech to the assembly led the deputies to vote for recruiting 200,000 men and extending a sizable military credit.

On 11 September, 1848, Jelačić's army entered Hungary. Austria was still negotiating, but clearly Jelačić's war was Vienna's. After Batthyány's resignation, Hungary came to be governed by a Defense Committee, which the assembly vested with all powers. It was Kossuth's moment—his speeches fanned the fires of patriotism and mobilized the population.

On 29 September, the Honvéd army stopped Jelačić at Pákozd. After this, the monarchy dissolved parliament and replaced Batthyány; the Hungarian Assembly declared these decisions null and void. On 6 October, the people of Vienna rebelled, forcing the court to escape to Olmütz (Olomouc) in Moravia. Two days later, the assembly in Pest nominated Kossuth to be president of the Defense Committee, with almost dictatorial powers.

By December, Austria had a new emperor, Franz Joseph. The eighteen-year-old emperor-king soon demonstrated his ambition to reestablish absolute authority at all costs and without compromise. Meanwhile, the legendary Polish general, Józef Bem, had offered his services to Hungary and taken command of the Transylvanian army. Having won several battles, the Austrian commander, General Windischgrätz, told the emperor that Hungarian resistance was over. Vienna, encouraged by the news, issued a manifesto that nullified the 1848 laws and subjected Hungary to the government in Vienna. This caused serious dissent within Kossuth's army and unrest in the Hungarian Peace Party, which was opposed to the pursuit of war. Kossuth's eloquence and his policies won over the peasantry, inspired the army, and rallied the moderates and the undecided—but not the entire political class.

Vienna's absolutist circles wanted to drown Hungarian ambitions once and for all. There was little room for negotiations. Kossuth saw only two courses of action: either to fight until victory had been achieved, which he still thought possible, or to capitulate unconditionally. He chose the former. On 13 April 1849, despite opposition from members of the legislature, Kossuth proposed a Declaration of Independence of the Hungarian state and the dethroning of the House of Habsburg-Lorraine before the National Assembly. The bill was unanimously approved the following day at a public meeting of an enlarged Assembly. Kossuth now had behind him not only the majority of parliament, but also, he claimed, the loyalty of the army and popular support. The break with Vienna and the king was now complete.

Hungary was not proclaimed a republic. The constitutional shape the Hungarian state was to take would be decided later. For the moment, Kossuth was elected president-governor, but, contrary to the wishes of a small radical left, the assembly did not confer full powers on him. Kossuth was more representative of the dominant middle nobility in the assembly than of the Left or, indeed, the opposition, which favored accommodation with Vienna. His principal objective had been achieved. Hungary had become independent.

Despite initial optimism and success, Hungary's days of independence were numbered. Responding to his imperial cousin's call, Russia's Tsar Nicholas decided to deploy his army against the Hungarians. In June the Russians invaded Hungary, and the Hungarians found themselves caught in a stranglehold. Austrian and Russian superiority of forces was overwhelming.

Kossuth's government concentrated on its military effort, while pursuing its liberal democratic policymaking. On 28 July, it emancipated the country's Jews, and an enlightened nationalities law was promulgated on the same day. This legislation gave minorities the freedom to use their mother tongue at the local administrative level, at tribunals, in primary schools, in community life, and even within the national guard of non-Magyar councils. It was the first law in Europe to recognize minority rights. These actions, however, were too late to influence events in the two weeks leading up to military defeat.

After the Russian invasion, hopes of saving the country were slim. On 9 August, General Haynau beat and dispersed the main Hungarian army. Kossuth abdicated, transferred all powers to General Artur Görgey, and sought refuge in Turkey. Three days later, the War Council decided to surrender to the Russians at Világos, near the city of Arad.

The war ended and repression began. The tsar sent his son to Vienna to persuade Franz Joseph to act with clemency, but the Austrians executed thirteen top generals along with the former president of the Council of Ministers, Count Lajos Batthyány, and several other military and civil individuals. Nicholas was able to save only the life of Görgey. Many were condemned to death by war tribunals, others were simply massacred, and thousands received long prison sentences.

The poet Petőfi died two weeks before the end, fighting with Bem's army. He was twenty-six years old. Count Széchenyi fell into a depression in September 1848. His tortured soul found a degree of tranquillity in a psychiatric establishment near Vienna, where he continued to write and to receive friends; he took his own life in 1860.

TOWARD THE COMPROMISE OF 1867

An uneasy calm was reestablished in the Habsburg kingdoms and provinces. The emperor assumed total control, to the point of presiding over the Government Council in person. Proconstitutional ministers resigned one after another. Alexander von Bach, the minister of interior, became the architect of the neoabsolutist turn that began in 1850. He replaced Hungary's counties with five districts, administered Transylvania and Croatia separately from the kingdom, applied harsh censorship, suppressed civil associations, and introduced foreign penal and civil codes.

At the same time, some important 1848 reforms came into effect under the Bach regime: the repurchase of peasant servitude, for example, accompanied by (unsuccessful) antifeudal propaganda aimed at dividing nobility and peasantry. Indeed, the population's state of mind remained surprisingly united around the memory of the lost war of independence; everyone awaited Kossuth's return.

The most original feature of this decade of oppression was passive resistance, which became a way of life and an ethical code. Thinly concealed vitriolic anti-Habsburg references appeared in the press and in literature, and when the government introduced a tobacco monopoly, many quit smoking in protest. Following a decade characterized by hatred and despair, the sense of distress and trauma was to be the basis for the conciliation constructed by the architects of the future 1867 compromise.

Several thousand chose exile, a significant number at the time. Many of these political refugees soon returned, but a thousand or so dispersed in Europe and in the Americas tried to influence public opinion abroad. Kossuth was warmly received in England and in the United States but could not translate public sympathy into action on behalf of the Hungarians. He became the heroic representative of an honorable but hopeless cause.

The notion of returning to the ancien régime was unpopular in Hungary and impossible given the European situation at the time. Austria was unlikely to concede independence around the negotiating table with the rebels. The best minds in Hungary therefore set about formulating a compromise. The compromise was nurtured by liberal moderates, among whom the jurist Ferenc Deák played the key role. The spirit of reconciliation matured in the imperial capital as well. Responding to defeat against Italy and internal rumblings of discontent, Franz Joseph reorganized the government and his states, though without giving in to true constitutionalism and even less to liberalism. The 1860 October Diploma and the 1861 February Patent were the first steps toward a constitutional regime of sorts. But, as distrustful of magnates as he was of liberals, the ruler imposed a centralizing bill which took into consideration the "individuality" of the kingdoms that constituted the monarchy without really giving them satisfaction.

The Hungarian Assembly, convened at last in 1860, responded to the royal move in a moderate petition rather than a resolution proposed by the more intransigent. The emperor rejected the petition and dissolved parliament, handing moderates a defeat. After a few years of maturing, however, political life reemerged, primarily as a result of the celebrated 1865 "Easter article," in which Deák proposed a compromise with a joint Austro-Hungarian administration for shared external and military affairs. The decisive turning point came in July 1866 when Prussia decimated Francis Joseph's imperial army. The Koniggrätz (Sadowa) defeat forced Vienna to reach an agreement with the Hungarians.

Another year passed before the *Ausgleich* (Compromise) of 1867 was put into effect, formalizing relations between Vienna and the lands of the Hungarian Crown. The compromise created a new state system composed of two constitutionally distinct entities united under a single sovereign and sharing governmental institutions—a characteristic that made it more than a personal union. Dualism was, for the moment, the optimal solution for safeguarding both the Magyar sense of identity and dynastic rule.

Aside from sporadic hostile reactions, Hungarian public opinion appeared more satisfied than frustrated, and not without reason. Compared with the 1723 Pragmatic Sanction, the 1867 law was more acceptable to the Magyars. Hungary was under the king's rule but was not directly subject to the Austrian imperial government. The Hungarian half of the empire was far better defined than its other components, and the Magyar sense of identity was respected. Still, the ingenious legal edifice of the compromise did not reflect the actual economic relationship between a rich and powerful Austria and a Hungary handicapped in several ways. In addition, Hungary was not free in foreign and military affairs. In diplomacy, war, and international law, Hungarian national sovereignty was incorporated into Austria-Hungary.

When it came to "common affairs," two equally representative delegations had to be elected by the two parliaments, to deliberate on the financing of foreign and military affairs, each managed by a common ministry. The delegations had no legislative power, and their deliberations took place separately, communication between the two conducted strictly by written notes.

In the fifty years of its existence, this system was the object of incessant controversy, particularly from the Hungarian nationalist left. Political life was dominated by the rivalry between the party of 1848 and Deák's Liberal Party. Until 1905, the latter retained a three-quarters parliamentary majority. The Dual Monarchy survived; its accomplishments pacified the people and turned a reviled emperor into an accepted and even finally well-liked sovereign.

The real losers in this solution were neither the Hungarians nor the Austrians, but Hungary's other nationalities. During the neoabsolutist 1850s, they shared the fate of the Hungarians. Under the new system, the non-Magyar nationalities, who constituted almost half the kingdom's population, were returned to the fold of the Hungarian Crown.

The dualist system and parliamentarianism worked without major hitches, and its liberalism promoted economic growth. Count Gyula Andrássy, head of the Hungarian government, then minister of Austro-Hungarian foreign affairs from 1871 to 1879, worked with Bismarck toward strengthening the Austro-German alliance, keeping Russia at arm's length and defending Austrian interests in the Balkans.

Kálmán Tisza's government ruled between 1875 and 1890. The Tisza era marked both the zenith of liberalism and the beginning of its decline. Internal stability was assured, thanks to the abilities of this prime minister and the preponderance of the Liberal Party, a combination that managed to mix a small dose of "1848" with a strong dose of "1867." It went on to win elections for thirty years, taking between two-thirds and three-quarters of parliamentary mandates.

Apart from a small conservative party and rather weak representation of non-Magyar nationalities, the opposition consisted of independents who relied for support on a nostalgic provincial nobility and on the Magyar peasantry of the Great Plain, who gained little from the development of capitalism. Nor did the new tax-based voting system work in their favor: only 24 percent of the male adults had the right to vote, and voting rights based on noble titles remained in place. National policy was now conducted in the parliament, not at the county level. Alongside magnates and nobles, the benches of parliament, of political clubs and casinos, the editorial boards of newspapers, and the management boards of banks and factories were filling with the bourgeoisie and representatives of the liberal professions, mainly lawyers. Political decisions were often made in the corridors of the National Casino, the exclusive preserve of the aristocracy, or in less exclusive clubs frequented by the nobility and bourgeoisie.

The two liberal-conservative decades corresponded to a period of unprecedented progress in terms of the economy, urbanization, and education. Even though acute problems of social injustice darkened the horizon, the state did not interfere in the citizens' private affairs, and ethnic groups were free to pursue economic activities, to practice their respective religions, and to develop their identities. The country's political class lacked the will and talent to address the new conflicts or to resolve old ones. As the end of the century loomed, Tisza's successors seemed even more inclined to consolidate the gains of the wealthy to the detriment of the less fortunate. They failed to halt either the decline of liberalism or the erosion of dualism.

INTO THE TWENTIETH CENTURY

The thousand-year anniversary of Hungary's settlement by the Magyars was celebrated during the 1896 millennial festivities. The stability of the country seemed secure, justifying the optimism and enthusiasm of the crowds, and its economic health was also promising for the time being. In 1910, when the last general census was undertaken, Hungary (without autonomous Croatia) had 18.3 million inhabitants. Ethnic Magyars, at 10 million, made up 54.5 percent of the inhabitants, compared with 51.4 percent in 1900. Other ethnic groups decreased in number slightly, although Germans still constituted 10.4 percent, Slovaks 10.5 percent, Romanians 16.1 percent, and Ruthenians, Serbs, and others combined, more than 8 percent. Nearly half the population was Roman Catholic, 22 percent Protestant. There were almost a million Jews.

The impact of voluntary assimilation, notably of large numbers of Germans, along with a policy of Magyarization, was significant, as was the assimilation process of the Jews, who practiced their faith but readily adopted Hungarian as their mother tongue. For Slav and Romanian nationals, on the other hand, the situation became more precarious, since Magyar nationalism was beginning to overshadow liberalism. With the upsurge of nationalism, the roots of cultural-political conflicts no doubt lay in the idea itself of the one and indivisible Hungarian state. The 1868 nationalities law was certainly a very liberal law that opened the way to assimilation. What the law did not recognize was the collective, corporate right of nationalities to cultural and administrative autonomy. Hungary constituted a single political nation in which all citizens were equal without distinction, but within the framework of a unitary state with Hungarian as the official language. There was, however, a lack of long-term perspective on the part of Magyar liberals. It was unrealistic to count on the assimilation of minorities living in a country in which they constituted almost half the population. Furthermore, the tactics used by over-zealous authorities in their attempt to Magyarize the minorities were counterproductive, as they created antagonism (save in the case of Jews, who assimilated and identified themselves with the Magyars).

Hungary's best thinkers had worked for a modern, industrial, and urbanized Hungarian society and for the creation of a multitude of educated individuals ever since the time of István Széchenyi. Their most vehement opponents often came from Hungary's new civil servants. This rather large body attracted the landed and landless gentry, and came to constitute a political class whose members would later call themselves the "gentlemanly Christian middle class," a specifically Hungarian self-identification. Its members had a strong tendency toward social posturing, reflecting the attitudes and lifestyles of the nobility, whether authentic or borrowed.

In 1910 agriculture employed more than 60 percent of the population; industry, 18 percent; and services, 22 percent. Social divisions were marked, especially in agriculture. Five thousand of the wealthiest families owned 27 percent of the cultivated land, 3.5 million peasants worked tiny plots, and 5 million were practically landless. Still, more of the wealth came from industry, industrialized arts and crafts, transport, and other services than had been the case. The number of factories increased, and the industrial workforce doubled in size. The state promoted and aided industrial growth, railroad building, and the regulation of rivers, as a result of which arable land increased by 4 million hectares. Infrastructure and road building had been taking place throughout the century, but railroad building was even more rapid, especially after 1890, when Hungary's rail network grew to be second only to that of France.

All of these changes had a beneficial impact on developments in education and urbanization, as well as lifestyle and material and cultural civilization. Compulsory state education caused illiteracy rates to fall dramatically. Within thirty years, two-thirds of the male population had an elementary education. A second university was established at Kolozsvár in 1872, and others were set up in Debrecen and Pozsony. In 1895 the Eötvös College was founded, modeled on the École Normale Supérieure in Paris. Education was open to all, and several thousand elementary and secondary schools used languages other than Magyar in teaching.

The economic transformation brought about by industrial and commercial activities, and the increasing contribution of factories to the national revenue, along with other indicators of development, were evidence that bourgeois society was on the rise. The value of industrial production rose from 175 million crowns in 1860 to 1,400 million in 1900, and to 2,539 million in 1913. The industrial growth index soared to 1,450, while the national revenue index climbed from 100 to 453.

These signs of a developing capitalism concealed a society split in two; modern and dynamic on the one hand, and moving at a snail's pace on the other. This contrast explains the sharply divergent views that have been formed about Hungary. Some underline its outmoded, even feudal, structures; others highlight its scientific and technical achievements, the expansion of urban centers, of civil society, the arts, and literature. Life in the villages had changed little, whereas the large towns, especially Budapest, had risen close to the same level as in other European cities.

The capital was created in 1873 out of the unification of three separate towns: Óbuda, an ancient settlement, Buda, the royal seat, and Pest, a small town of peasants, craftsmen, and merchants. Unified Budapest had 887,600 inhabitants, nearly three-quarters of them living in Pest. With all the growth, historic Buda did not lose its "old town" look. On the left bank, Pest revealed a disconcerting blend of styles: neo-Gothic, neobaroque, neoclassical, *Jugendstil* (secessionist), or simply of no particular style. The boulevards and the town center, with the Opera, the neo-Gothic Parliament, the museums, schools and theaters, the palatial banks, the stock exchange, and well-to-do middle-class apartment houses, were reminiscent of imperial Vienna, though less opulent. The capital became Hungarian at the same speed with which it became a modern urban center. In 1850 only 36 percent of its residents were Magyar, with Germans, Slovaks, and others making up the majority. Fifty years later, 85 percent were Hungarian, resulting from immigration and spontaneous assimilation.

Social divisions remained, but class barriers were crumbling in favor of the middle classes. The distinction between persons "of good birth" and commoners did not disappear, but education did have a certain equalizing effect. The growth of bourgeois society was also evidenced by the growing number and diversity of people participating in social, professional, and cultural organizations. These ranged from small clubs to large trade associations, and more and more labor unions.

In particular, the lifestyle of new urban (mostly Jewish) writers, poets, and journalists influenced Budapest entertainment and mass communication, and its practitioners became household names. The capital had half a dozen theaters, large publishing houses, and twenty newspapers representing diverse points of view. Fine arts flourished, and a certain un-definable Hungarian School, presented at the 1900 Paris World's Fair, was admired for its bold and brilliant virtuosity, having no particular characteristic but a certain exoticism. Officially, Budapest of the early 1900s cultivated a conservative national art rather than the fin de siècle art of Vienna, Berlin, Paris, or London. The educated majority, fearing the dilution of national cultural identity, remained suspicious of anything labeled "modern." Béla Bartók and Zoltán Kodály were undertaking their research into and rediscovery of Magyar folk music, which was later blended into their modernist music.

Hungary thus entered the twentieth century under the fascination of its thousand-year past and pleased with its successes. Most of its citizens were confident, had a clear conscience, and failed to notice the clouds gathering on the horizon. The nation's leaders were able to discard any proposal to move from a Dual Monarchy to a more inclusive federation, or any other notion that called into question Magyar political supremacy within the kingdom.

The first troubling incidents arose from the difficulty of managing the monarchy's "joint affairs," that is, those dealing with finances and the army. Since the joint affairs were the cornerstones of the empire, and since the army was the tool of social and supranational integration of the monarchy's peoples, where individuals could advance regardless of class or nationality, Franz Joseph took a firm stand against critics of the military. He even threatened Hungary's lawmakers with the introduction of universal suffrage, which might have led to the defeat of the Independence Party. The ploy worked. Opposition deputies accepted the emperor's conditions concerning the army and formed a coalition government including politicians of diverse hues.

In 1910 the former liberals, now the National Workers Party, led by István Tisza, came to power. Tisza's personal qualities—intelligence, steadiness, and courage—were undisputed, but he also had a strong authoritarian attitude. He put an end to the nationalist opposition that threatened the monarchy, but was also a supporter of a pro-Magyar policy at the expense of the minorities.

Non-Magyar politicians found in Archduke Franz Ferdinand, the emperor's nephew and heir to the throne, a powerful potential ally. He was above all a defender of Habsburg interests and its power, but he was also decidedly anti-Hungarian. He developed a strong aversion to the Magyars, whom he saw as obstacles to his plans to reorganize the monarchy along federal lines.

Meanwhile, the monarchy had to face even more acute crises abroad. In October 1908 Bosnia-Hercegovina, occupied since the Congress of Berlin (1878), was formally annexed by Vienna. Hungarians did not particularly want an increase in their Slav population, so Bosnia-Hercegovina was shared by the two states of the monarchy, without being made part of Hungary. After some conflicts with the local Muslims, Bosnians by and large came to accept Austro-Hungarian administration. The Bosnian Serbs, however, did not. They looked to Serbia, where the accession of the Karadjordjević dynasty gave rise to the idea of "Greater Serbia." South Slav unrest was a growing cause of concern for the Hungarian kingdom. Even among Croats the idea of separation from the Hungarian Crown was gaining popularity.

Seeing the political crises of the new century, especially in the Balkans, some of Hungary's progressive minds began to advocate a radical transformation of society and cultivated a democratic "counterculture," open to modern ideas. Their guiding light was the poet Endre Ady; the breeding ground for their ideas were journals like *Huszadik század* (Twentieth Century) and *Nyugat* (West), and associations like the Social Sciences Society. One leading mind of this movement was the sociologist Oszkár Jászi. He raised and tackled a variety of issues, including socialism, agrarian reform, and the struggle for political democracy. It was he who developed the modern democratic concept of solving the nationality problems based on cultural freedom for all minorities, but not necessarily calling for autonomy. He retained the concept of the integral and unitary Magyar state, which he hoped would evolve toward a citizens' democracy.

WORLD WAR I

No one foresaw what was to follow the events of 28 June 1914, when Gavrilo Princip, a member of the secret Serbian Black Hand Society, assassinated Franz Ferdinand, heir to the Habsburg throne, and his wife in Sarajevo. The belief that Belgrade was behind the assassination led to an Austro-Hungarian ultimatum and subsequent declaration of war. A short punitive expedition was envisioned, and even Russia's likely involvement did not unduly worry the monarchy's leaders. Only the Hungarian prime minister, István Tisza, opposed the war, fearing irreparable consequences if Serb complicity could not be proven and if military and diplomatic conditions were not optimal. When Tisza was finally pressured into agreeing with Vienna's decision, he became one of the strongest supporters of a decisive military solution.

As in all of the belligerent countries, the war was popular. Even the Social Democratic Party gave up its opposition to the war, and Hungary contributed half of the 8 million soldiers eventually fighting on the monarchy's fronts. For a while, even the ethnic minorities exhibited considerable loyalty to the emperor.

Hungarian armies first fought on the southern front against Serbia, then on the Russian front, and finally in the Alps against Italy. Despite the valiant efforts of both soldiers and officers, Hungarian units suffered more than their share of defeats. High command was partially responsible, as were organizational weaknesses and lack of equipment and provisions. The human cost was high. A total of 661,000 Hungarian soldiers lost their lives, more than 700,000 were wounded, and a similar number became prisoners of war.

The final debacle began in 1918 on the Italian front. Along the Piave River, the Austro-Hungarian army was almost annihilated. After the Germans sustained a fatal defeat near the Somme and the Bulgarians withdrew from the war, October brought the second defeat on the Piave, and the monarchy sued for peace on 3 November. Meanwhile, Franz Joseph died after a sixty-eight-year reign and was succeeded by Charles (Karl) IV. The decline of the empire had already begun with the military defeats and economic deterioration in its rural hinterland. Yet, despite military setbacks, desertions, mutinies, strikes, and agitation by the minorities, the destruction of Austria-Hungary was not a foregone conclusion. Woodrow Wilson's Fourteen Points, proclaimed in January 1918, did not envisage it, nor was it part of the Entente's war aims. Due in large part to the activities of émigré politicians representing the monarchy's nationalities, the Allied attitude changed, and by the end of May 1918, even the United States agreed to the dismantling of Austria-Hungary. The creation of Poland, Czechoslovakia, and a South Slav state became part of the war aims. Historical Hungary was finally eliminated when Transylvania was awarded to the Romanian kingdom. The Paris peace treaties, specifically the Treaty of Trianon, which was signed by Hungary on 5 June 1920, satisfied a number of peoples, while brutally carving up the historic homeland of others.

The Hungarian national leaders stuck firmly to their intransigent position, unwilling to give away an inch of their ancient prerogatives. They rejected any trialism or federal project that would have placed the monarchy's ethnic minorities on an equal footing with the Magyars. This position made Hungary the stumbling block to any reorganization of the monarchy. Without Hungary's agreement, the project could not be carried out. Austria was cobbled together through the centuries, piece by piece, into a heterogeneous empire. It was a mosaic of states and provinces with a supranational character, headed by the shared sovereign in the Hofburg. But the Hungarian "mosaic" was drawn on the canvas of a thousand-year historical Hungary. Renouncing this unity could have been seen as generous. According to Magyar public opinion, however, it would have also been something no other nation was asked to undertake—a suicide act.

Hungary now entered a Europe forged by the victors, a small, defeated country of less than 8 million inhabitants. As soon as the monarchy collapsed, successor states occupied the most coveted parts of the kingdom: to the north, Upper Hungary was claimed by the Slovaks and Czechs; to the south, Serbs joined with Croats and Slovenians and created a common kingdom; to the east, Transylvanian Romanians opted to join Romania. After Charles IV abdicated, and his former realm became the Republic of Austria, Hungary was alone to face its vengeful neighbors as well as the Entente army that had already defeated Bulgaria and was advancing to its southern borders.

Attacked on all sides, the country underwent a year of torment. On 25 October 1918, three opposition parties—the Radicals, the Social Democrats, and Count Mihály Károlyi's Independence Party—created a National Council. Károlyi proclaimed Hungary to be a republic before an enthusiastic crowd.

The new premier was a complex individual: son of a historic aristocratic family who became a leftist; a large landowner who distributed one of his domains among the peasants; a pacifist who had served as a cavalry officer. He was a pro-Entente politician, a rival of Tisza, a Wilsonian, and a patriot. Some called Károlyi a "republican royalist"; indeed, he was the last Hungarian statesman to swear allegiance to the king. His government however was too radical for the right and not radical enough for the communist left. Consequently, the "Red count" is remembered as a slightly eccentric man of the Left who represented no one.

In November 1918 the government asked for an armistice on the Balkan front. At a meeting with the Allied commander Franchet d'Esperey in Belgrade, Károlyi insisted on the territorial integrity of Hungary and wanted its frontiers guaranteed until the peace treaty.

The Hungarian leader evidently nurtured certain illusions, whereas the Allies wanted to satisfy the Czechs, Slovaks, Serbs, and Romanians (to whom the Bucharest Treaty of 1916 promised Transylvania and vast adjoining territories). The West also had military plans against Soviet Russia, which left the Hungarians with no room for maneuver. As the country's borders were pushed back, Károlyi was unable to maintain his legitimacy. His government resigned. The Social Democrats and the Communist Party—they had merged the day before—proclaimed the Hungarian Soviet Republic on 21 March 1919.

The two workers parties were very different. The Social Democratic Party, founded in 1878, had as its basis skilled workers and, unlike the Communists, had earned respectability. The Communist Party, founded in 1918, followed Russian Bolshevik orders and was composed of left-wing dissident Social Democrats, anarchist theoreticians, and communists trained in Moscow. A militant journalist, Béla Kun, gained leadership of the Party and of the Soviet Republic.

The success of the Communists' power grab can be attributed to the malaise among the unemployed, the wandering demobilized soldiers and wounded veterans, and the demoralization of millions of landless poor. Hungary's masses were in disarray and ready for a revolutionary adventure. In addition, the Communists' condemnation of the punitive Treaty of Trianon and their plans to seek an alliance with the new Soviet Russian government raised hope among many Hungarians.

The first regime formed on Russia's Bolshevik model, Hungary's Republic of Councils, lasted 133 days. It nationalized enterprises, banks, insurance companies, wholesale trade, and apartment blocks. The press, cultural activities, and the professions were subjected to government control. Hardship, rationing, and inflation soon followed. Lands confiscated from large landowners were turned over to cooperatives rather than to the landless peasants and agricultural workers.

Within weeks, the novelty and promise of the communist regime were replaced with disillusionment and resentment. In April Hungary was attacked by a Czecho-Slovak army, leading to war on the northern front, where a Hungarian counteroffensive achieved considerable success. Some among the Allies were willing to negotiate with the Hungarian Soviet regime, while others, especially the French, wanted to send in troops against "Lenin's allies." The issue soon became irrelevant, as the Hungarian Red Army suffered a decisive defeat on the Romanian front, bringing down the regime on 1 August.

INTERWAR HUNGARY

The Romanian army advanced into Budapest, pillaging and requisitioning along the way. The makeshift governments that succeeded the Communists were powerless. The Entente finally ordered the Romanians to go home in mid-November. Meanwhile, several political parties were formed, as was a national army under the command of Miklós Horthy, which entered the capital the day after the Romanians left, on 16 November 1919. Horthy's army was a nationalist force of law and order, targeting communists and their real or supposed accomplices. The victims of its paramilitary detachments included many Jews, socialists, and even democrats. An unprecedented wave of anti-Semitism swept the country, tolerated by Horthy. This "White Terror" can be seen as a reaction to the "Red Terror" of preceding months, but it had other, more disturbing aspects, paralleling developments in other parts of Europe. The brief but bloody rule of the Communist Party undeniably contributed to the upsurge of anti-Semitism and virulent anticommunism. As for the number of victims, estimates vary (as they do for the Red Terror) between a few hundred and several thousand. The Horthy regime was installed in 1920. On 1 March, a national assembly elected Horthy regent of the kingdom. The new government that took office soon after had the task of signing the Treaty of Trianon on 5 June.

Miklos Horthy, Hungary's Regent from 1921 to 1944, and somewhat reluctant ally of Germany during World War II. (Corbis)

There were no negotiations leading to the Trianon treaty. The outcome was a "diktat." The terms imposed on Hungary by the victors were more draconian than those imposed on Germany. Even Austria, also labeled as contributing to the war's start, received a part of the Hungarian kingdom. Hungary's 283,000 square kilometers were reduced to 93,000 square kilometers; its population dropped from 15.2 million to 7.6 million (growing to approximately 8 million by year's end, when Magyars from annexed territories were repatriated). In all, 3,425,000 Magyars, including sizable homogeneous communities, found themselves separated from their motherland in territories given to the monarchy's successor states. Romania received a territory that was larger than that of truncated Hungary. Newly created Czechoslovakia was given territory inhabited by more than 1 million Magyars. Another half a million Magyars found themselves in the Serb-Croat-Slovene kingdom, 60,000 in Austria, and 6,000 in Italy.

Trianon was seen as a national disaster. Though its measures may have been foreseeable since 1919, their flagrant injustice traumatized the Magyars within and beyond the new frontiers. Apart from the economic consequences, the post-Trianon shock drove many Hungarians to nationalism and isolated the country from its neighbors, the future Little Entente, who watched every move Budapest made.

Hungary between the wars has been labeled variously as semifascist, authoritarian, nationalistic, anti-Semitic, semifeudal, and archaic. Reality was more complex, but certain traits of the regime do support these summary judgments. Horthy's rise to power was accompanied by violence and an outburst of anti-Semitism, which was noted at the peace conference. After introducing a *numerus clausus* law to limit Jewish enrollment in universities, Hungary came to be seen as a champion of anti-Semitism. Later, the government of István Bethlen curbed the excesses, and Regent Horthy also distanced himself from the extremists to obliterate memory of his reliance on paramilitary detachments and of his march on Budapest, "the guilty city."

Under Bethlen, Hungary's parliamentary system and the lawful nature of the state were firmly established. However, the regime remained undemocratic, and its tradition-bound ideology was evident throughout its twenty-five-year existence. The countryside was tightly policed by the gendarmes, its rural social structures remained unchanged, and the electoral system was rigged to forestall real radical, or even democratic, changes. Still, Hungary had little in common with Mussolini's populist and corporate Italian fascism. What the two regimes shared was a sense of revisionism, which brought Budapest closer to Rome in the second half of the 1920s.

The perceived injustice of Trianon rallied the middle classes, if not under a common political banner then at least under the banner of erstwhile greatness and of lost ideals. This nostalgia for the past was not shared with equal fervor by the Hungarian masses. Nonetheless, the policies of nearly every interwar government were steered by it.

Bethlen was the most broad-minded Hungarian statesman of the interwar period. His domestic policy was a strange mixture of conservatism and liberalism. The Communist Party was banned—not surprisingly—as was freemasonry. The law came down heavily on clandestine communists as well as extreme right-wing activists. Much to the latter's displeasure, the *numerus clausus* was moderated and lost some of its anti-Semitic dimension. Newspapers of all persuasions proliferated. Censorship was abolished, and the media were able to maintain their autonomy.

The economic domination of large landowners remained intact, but without hindering the development of state-supported financial and industrial capitalism. In politics, the government tried to limit party fragmentation while exploiting splits and mergers in order to gather the center right in its Unity Party. The party was able to hold an overall majority in parliament until Bethlen's resignation in 1931. In the 1926 elections, the party secured 170 mandates (70 percent) out of 245, the National Christian Party 35, the Social Democrats 14, and the smaller groups shared the rest.

Bethlen's diplomatic efforts were entirely concentrated on seeking rectification of the Treaty of Trianon and on obtaining concessions for Magyars separated from their motherland. Thanks to persistence at the League of Nations, Magyars who opted for Hungarian citizenship received partial compensation.

The pro-British Bethlen made overtures to the Entente but in the end had to make do with Italian support, granted to him from 1927. The English expressed a degree of goodwill, but it never went further. France pursued its pro–Little Entente line, and Germany had little interest in its former Danubian ally.

With regard to economics, the Bethlen decade was modestly healthy. The introduction of the new currency, the pengő, in 1927 concluded a consolidation program. The ailing Hungarian economy was badly hit by the Depression of the early thirties, which forced Bethlen's departure. After Gyula Károlyi's brief spell as head of government, Gyula Gömbös led the country until his death in 1936, followed by two short-lived cabinets and then, in 1939, by Pál Teleki.

By 1930, the population of the dismembered Hungarian state had reached 8,688,000, of which 92 percent were ethnic Magyars. Denominational homogeneity had also increased. Catholics now constituted around 66 percent, Protestants 27 percent, Uniates and Orthodox 2.8 percent, and Jews 5.7 percent. Altogether, some 3.2 million Magyars lived in neighboring countries.

Economic adaptation to the country's reduced geography was hard. The Great Plain and Transdanubia provided the bulk of national products. Aside from a little coal, there was no source for energy or industrial raw materials. Waterways had been cut at the new frontiers, and roads and railway lines came to dead ends. There was no outlet to the Adriatic; the forests were in the now foreign Carpathians. The economic consequences of peace were as disastrous as those of war.

Admittedly, there were also some advantages, such as a more educated workforce, low rates of illiteracy, higher industrial concentration, and a slight decrease of the agrarian sector, which, in 1930, nonetheless still employed half of the workforce. The proportion of industrial workers increased to 26.7 percent. Budapest had over 1 million inhabitants, followed far behind by Szeged and Debrecen. There were more railways, more primary schools (7,000 with 30,000 teachers), high-quality secondary schools, and prestigious universities. Also growing were the numbers of newspapers, books, theaters, and physicians: of the last, 96 per 10,000 people in 1930 and 106 in 1940, one of the highest rates in the world. All in all, the composition of society became a little more bourgeois than before, and the level of modernization rose, though still below that of the developed countries.

Growth in industry and mining, however, was considerable. Coal extraction increased by 30 percent, the discovery of rich bauxite deposits gave birth to metallurgy, and electricity production quadrupled. Mechanical industry thrived in some sectors, producing notably locomotives, motorcycles, radios, and other popular consumer products. The electro-technical industry, lightbulb production, and a few chemical and optical products also flourished, even though many new trends, such as personal car manufacture, were neglected. The textile industry developed rapidly, overtaking traditional food industries. On the whole, compared with the prewar period, industrial output increased by 18 percent by 1938, the number of workers by 16 percent, and industry's share of the national revenue reached 36 percent. Still, these factors of modernization could not make up for the slump in agriculture, transport, trade, and crafts, which resulted from Hungary's diminished size, combined with the world crisis. Hungary remained an underdeveloped (though not poor) European country.

The middle classes now occupied a higher rung on the social ladder. Even faced with slow modernization, the period's richest legacy was university, intellectual, literary, and artistic life in all its diversity and richness. A growth in postsecondary education, producing 30,000 graduates annually, was a measure of this progress.

Upward mobility took place among some social strata. A section of the peasantry rose to middle-class level; civil servants were reasonably well off and enjoyed considerable prestige; the urban proletariat who could at least defend their social position acquired through work and union struggles (even though facing poverty and bad housing conditions). Still, there were almost 3 million people at the bottom of the ladder, who were, if not beggars, then at best, rural paupers, half of them living in subproletarian conditions. There were, thus, two Hungarys: one on the road to modernization and becoming a middle-class, liberal society; the other stuck in the past.

In the mid-1930s a hundred or so families and the Catholic Church still owned almost one-third of cultivated land. Beneath them, some 11,000 middle landowners worked 1.7 million hectares. Together, the two groups owned 48 percent of the cultivated land. Halfway up the ladder, some 233,000 landowners and their families shared one-third of the property, farms ranging in size between 8 and 50 hectares. This reveals an inequality of land ownership even among those who were above the poverty line. Far more serious was the condition of the 1.3 million peasants subsisting on plots of one to three hectares. Finally, at the bottom were the "penniless": 1.5 million agricultural laborers and servants, along with the equally destitute domestic servants. These added up to the 3 million beggars, one-third of the population.

The Széchenyi reformers, who wanted to modernize Hungary without resorting to radicalism, had been forgotten. In the view of reformist conservatives, apart from Trianon, a moral degeneration and social disintegration were largely responsible for this state of affairs: the selfishness of the upper classes, their contempt for the underdog, combined with the latter's deference toward those higher up, a system based on connections and nepotism, and foreign, principally Jewish, infiltration. The narrow-mindedness that prevailed in Hungary's interwar "neobaroque" society hindered the adoption of civic values and the rise of a confident middle class that would be industrious and devoted to the public good.

There were signs of change. Notions of public honesty, a work ethic, the value of education, and urbanity in relationships were evolving. Imitating the gentry was becoming a matter of cheap comedy. Despite obstacles, a civil European society was slowly taking shape, sometimes treading on conservative and nationalist sensibilities.

The capital city was the target of both conservatives and populists, for some of whom anticapitalism went hand in hand with anti-Semitism, though they failed to win over the general public. Budapest tended to favor integration rather than segregation for its 250,000 Jews—a quarter of its population. The city's Jewish writers, journalists, thespians, and liberal professionals cultivated a mocking, caustic humor, without provoking rejection by the majority of the population. Urban morality had changed, much to the regret of conservatives, the Catholic Church, and the antiliberal press.

A mindset that emerged after the war, commonly called populism, gained considerable following among young intellectuals of the period by advocating a "third way" between communism and capitalism. Engendered by writers and sociographers, it focused on Hungarian society's most pressing problem, the condition of the peasantry. Known also as village explorers, populists criticized the latifundium system and were strongly anti-German, so it is difficult to call them fascists, even though their writings contained anti-Semitic passages and a few of them associated with extreme right-wing movements.

The vast and rich domain of "pure" literature was dominated by Mihály Babits, a gifted poet and a literary authority. A host of composers, conductors, and performers became internationally renowned under the giant shadows of Béla Bartók and Zoltán Kodály. Bartók's music was not well understood in his native country, probably because its universal and cosmic dimension was disturbing, even though it was rooted in popular traditions. Despite the political turn to the right after the mid-1930s, art and literature remained animated until the eve of World War II.

In 1931 Bethlen withdrew from the political scene, replaced by individuals of far more limited vision and far less tolerance. Gyula Gömbös, who came from a family of civil servants, was a career officer and founding member of the Race Protection Party. He shared a Greater Magyar nationalism with his aristocratic predecessors, but Gömbös favored the middle class and sought dialogue with the populists and even with labor. In foreign policy, continuity meant pursuing friendship with Italy and Austria and, after Hitler's accession to power, closer ties with Germany. Internally, Gömbös had only to hold to his predecessors' anticommunist line. Gömbös proclaimed a corporatism designed to forge a national unity between work, capital, and intellectual talent. He presented a national work plan aimed at national union, revealing a determination to create a government that would play a more active role in getting out of the crisis and curbing the decline in living standards, mass bankruptcy among small farmers, and social conflict. In the same spirit, he rose up against ultraconservatives in his own party and distanced himself from the extreme right. This combination inevitably seduced intellectual reformers to some extent as well as wider public opinion; his Party for National Unity won by a landslide in 1935. (Shortly before the Berlin–Rome axis was formed, Gömbös died, and his successors continued the political slide toward Germany.)

After incorporating Austria in March 1938, Germany shared a border with Hungary and was able to exert greater influence in the latter's affairs. Despite protests not only from the Left but from several conservatives, Hungary's course—strengthening links with Germany in the hopes that, with its support, the Treaty of Trianon would be revised—was set. This called for the adoption of state anti-Semitism. The first anti-Jewish law was ratified in May 1938. Berlin made it clear that without Hungary's alignment with the German course in the treatment of Jews, there would be no question of territorial revision. In May 1939 the second anti-Jewish law, this time racially based, came into effect, and a third was introduced in 1941.

From this time on, protofascist movements organized into several parties began to grow. In 1939 they won forty or so parliamentary mandates and became a formidable extremist political force, under the leadership of the future Hungarian Führer, Ferenc Szálasi. Parliamentary plurality survived, but the number of Social Democratic deputies dropped to five, and the bourgeois parties along with the Smallholders Party—the remaining antifascist opposition—were growing weak. The press was still fairly active, although several newspapers were outlawed, censorship was introduced, and Jewish journalists had their work proscribed by the race laws.

Not satisfied with the anti-Jewish measures in effect, Hungary's protofascists increased their pressure on the government. British concessions made to Hitler in the Munich agreements of September 1938 were widely interpreted to mean that the West had abandoned the countries of Central Europe. Horthy still wanted to maintain a degree of independence: he refused to participate in the attack on Czechoslovakia.

To be sure, Hungarians saw some good news in the aftermath of Munich. The Vienna Award returned nearly 12,000 square kilometers of Czechoslovakia—with 870,000 inhabitants, 86.5 percent of whom were Magyars—to Hungary. The following year, a second arbitration took place in Vienna, this time at Romania's expense; Hungary gained northern Transylvania and other regions, in which 1.1 million Magyars made up 51.4 percent of the population. Further annexations in Yugoslavia—home to nearly 275,000 Magyars—ensued the following year. Approximately 2,300,000 Magyars from the separated territories now found themselves back on Hungarian soil. At the same time, Hungary was beginning to pay a price for these developments, first by allowing the Germans to move into Romania across its soil. And, in November 1940 Hungary added its support to the Italian-German-Japanese tripartite agreement.

In 1941 Hitler decided to invade Yugoslavia and invited Horthy to join the attack. Having to choose between a possible British alliance and a pro-German policy—both with punishing consequences—Hungarian Prime Minister Pál Teleki committed suicide. His act of despair changed nothing. In April 1941 Hungarian units entered Yugoslavia in support of a German invasion. Two months later, on 24 June 1941, two days after the German invasion of Russia, Hungary broke off diplomatic ties with Moscow, despite Molotov's assurances that the USSR's intentions toward it were not hostile.

WORLD WAR II

Budapest was waiting for Berlin to ask Hungary to enter the war, whereas the Reich was trying to get the Hungarians to volunteer. A casus belli was provided when, on 26 June, planes identified as Soviet but more likely flown by Slovak pilots, bombed the Hungarian town of Kassa (now Košice). Hungary joined the German attack on the Soviet Union.

With no other goal than further territorial gains in Yugoslavia, Romania, and a dismembered Czechoslovakia, Hungarians were reticent when Germany demanded troops and supplies. There were even tentative moves to reach a separate peace with the Allies, especially after the Allied landing in Africa (November 1942), which aroused speculation that a similar action in the Balkans might follow. For a while, Budapest even resisted German demands for "solving the Jewish problem"—mass deportation to death camps. After the loss of the entire Second Army at Voronezh on the Don and the Battle of Stalingrad, getting out of the war became more attractive. The key idea was to get Hungary into a "neutral" position, fighting Bolshevik Russia but not the English and Americans. This tactic aroused a degree of interest, as did any move likely to weaken Germany, but no more. German intelligence suspected that Hungary was trying to defect and kept a close watch on Horthy's "secret" diplomatic activities.

As far as the Germans were concerned, Hungary's bad faith was no longer in doubt, and the decision to invade the country was soon made. In March 1944 eight German divisions moved into Hungary. The handful of Hungarians who tried to organize resistance were quickly eliminated. Measures were introduced to place Hungary's economy at the service of the German war machine. In Russia, the First Hungarian Army took the place of the Second, which had been crushed at Voronezh. To hasten the Final Solution of the Jewish problem, Adolf Eichmann's team of "experts" arrived. With the collaboration of Hungarian gendarmes, Jews in the countryside were rounded up and sent to the extermination camps.

By August-September 1944, the country was on the brink of becoming a theater for Soviet army operations. Horthy, pushed by those close to him, finally decided to take action. On 15 October, he announced on the radio that he had asked for an armistice and ordered Hungarian units to cease fighting. Only a handful of generals obeyed. The others moved toward the Germans who, informed in advance, immediately occupied strategic positions, while a commando unit kidnaped the regent's only son. Cornered and broken, Horthy capitulated and placed Ferenc Szálasi, leader of the Hungary's Nazis, the Arrow Cross Party, in the post of prime minister. The Hungarians, who already had at least 40,000 dead and 70,000 prisoners of war at the front, found themselves dragged into a suicidal battle alongside a routed Wehrmacht. And as the Red Army headed toward Budapest, the Arrow Cross unleashed terror.

The war's closing months were tragic for Hungary's Jews, once numbering close to half a million and representing the single largest Jewish community in Europe. Nearly all of them were gathered into ghettos and then deported between May and July 1944. A few thousand escaped persecution, and 100,000 survived the camps. The fate of Budapest's Jews took a somewhat different course. On 8 July, Horthy halted deportations from the capital, in response to protests from abroad, but also because he was more concerned about the fate of assimilated Budapest Jews than about the rural Jews. The latter, victims of ceaseless discrimination, had a brief reprieve until the Nazi advance on 15 October. After previous losses, there were still 230,000 Jews in the capital. Thanks in part to Horthy's decision, more than half of these, 119,000, were saved.

Atrocities resumed when Szálasi and the Arrow Cross came to power and continued for the next four months. Switzerland, Sweden, and the International Red Cross were most active in saving the persecuted. Much of the credit for saving lives goes to the Swedish diplomat Raoul Wallenberg, who later disappeared (and perished) in a Soviet prison, but there were also unnamed Hungarians—peasants, workers, priests, resistance workers, or simply neighbors—who came to the rescue of the persecuted.

German resistance to the advancing Soviet armies reduced Budapest to rubble and condemned its freezing inhabitants to famine. More than 25,000 civilians perished, and a quarter of the city's dwellings were destroyed.

By 4 April 1945, resistance on Hungarian soil ceased. Meanwhile, in Debrecen, closely watched by the Soviets, a provisional national government was formed. Hungary now fell under Stalin's authority. This was decided by the Allies at the Yalta Conference in February 1945, but was also the result of earlier bargaining between Churchill and Stalin over zones of influence, FDR's informal consent, and, perhaps most importantly, the position of various armies. "Whosoever occupies a territory, imposes its system," went the cynical explanation.

In Hungary, the Allied Control Commission was controlled by Soviet Marshal Voroshilov. A national government existed under Allied control, until a peace treaty would restore full sovereignty. In reality, Hungary was a supervised democracy under Soviet occupation.

A provisional National Assembly had appointed a provisional government, dominated by the Communist, Social Democratic, Peasant, and Independent Smallholders parties. It was a delicate composition: the Smallholders, existing under the prewar regime, represented continuity, whereas the former opposition parties and the Communists stood for more or less radical change. Communists were still a distinct minority, holding only two cabinet posts out of eleven, although they could count on several fellow travelers.

This provisional government remained in office for nearly a year. It signed the armistice, declared war on Germany, set up a public administrative machinery, brought war criminals to justice, outlawed fascist organizations, and revoked anti-Jewish laws. Life began again: supplies improved, people returned to work, trains started to run again, and children went back to school.

A long-awaited agrarian reform completely abolished the old system of land ownership. Large properties were confiscated and distributed to agricultural laborers and the poorest peasants.

Hungary faced great economic problems. The Germans had blown up all the Danube bridges and seized public and private property, locomotives, wagons, carriages, and horses. War damages were the equivalent of five years of national product. The country had also had to provide for the Soviet army of occupation and was subjected to looting and rape by Red Army soldiers. To cap it all, Hungary was required to pay heavy reparations—$300 million—to the Soviet Union, Czechoslovakia, and Yugoslavia.

In November 1945 Hungarians elected a new National Assembly. These were the first and last free elections during forty-five years of Soviet domination, and the results disappointed Moscow. Although the Communists took 17 percent of the votes (as did the Social Democrats), the clear winner was the Smallholders Party, with 47 percent of the votes. Its leader, Zoltán Tildy, formed a coalition government out of the four National Independent Front parties. The Smallholders ended up with only half of the ministries, due to an arrangement imposed by Marshal Voroshilov.

THE COMMUNIST PARTY'S RISE TO POWER

After their brief period of power in 1919, members of the Hungarian Communist Party faced severe repression and twenty-five years of clandestine existence. By the time the future leader Mátyás Rákosi and his jailed comrades were handed over to the Soviets in 1940 (in exchange for Kossuth's flags carried off by Russian armies in 1849), the Hungarian Communist Party was completely marginalized and had no popular base. The Party had shrunk to a literal handful of members. But there were many Hungarian communists in Moscow.

Upon returning to Hungary, therefore, the Communist Party had to start from scratch. In no time, it was back on its feet, and with Soviet support it enjoyed a disproportionately high political profile. On Stalin's orders, it played a "moderate" game and refrained from talking about dictatorship of the proletariat on the 1919 model. Instead, it called for a "people's democracy."

The Kremlin, confident of winning in the end, decided not to rush things. Moreover, Hungary was not on the cutting edge of geopolitical struggle. All the same, the country's shaky democracy was under close watch by the Red Army and Soviet secret policemen, who stayed around long after the signing of the 1947 peace treaty.

In order to break the Smallholders Party, Rákosi and his comrades used not only intimidation, but also demonstrations, sabotage, and strikes. Initially, the Party left the Catholic Church alone. By 1948, however, church schools were brought under state control, and convents were shut down. Hundreds of priests and monks were arrested and sentenced. Two years later, the churches, worried about being able to remain alive, signed a concordat and various agreements with the state.

Capitalism on a small and medium scale was left to function alongside the nationalization of banks, mines, and the giants of heavy industry. Staggering inflation meant that Hungarians literally worked for nothing in the eighteen months preceding the introduction of a new currency, the forint, in August 1946. For the state, the moment was ripe, and a three-year reconstruction plan was launched. Meanwhile, the Soviet Union seized properties and created "joint companies," requisitioning plants, equipment, and buildings.

These actions not only resulted in a handsome profit but also constituted a leverage of power for Moscow.

Soon, "domestic enemies" and "suspects" were exposed to persecution by the state security apparatus (ÁVO, ÁVH). Fully operational from 1948, within a few years the ÁVH was able to implicate Ferenc Nagy, president of the Council of Ministers, and Béla Kovács, two leaders of the Smallholders Party, in drummed-up conspiracy plots. After Kovács was arrested and taken to the Soviet Union, Nagy resigned. Other noncommunist party leaders fled the country, resigned one after another, or found themselves imprisoned. The parliamentary facade was maintained, but from 1948 the semidemocratic pretense ceased. The 1949 elections could be seen as the beginning of complete takeover: 96.27 percent of the ballots went to an artificial Popular Front, dominated entirely by the Communist Party.

At the same time, Hungarians went to work and the reconstruction plan launched by the Communists and supported by the other parties was an undisputed success. Factories were running again; artisans and small traders ran their workshops and businesses; intellectuals participated in a lively cultural life. As has already been stated, the distribution of large estates among 642,000 agricultural laborers and destitute farm workers amounted to a revolution and entirely changed the country's profile. The optimists expected the Red Army to withdraw after the signing of the peace treaty in 1947. This did not happen, and the transition to a single-party system put an end to a relatively free and promising period.

Instead of a "people's democracy," Hungary became a single-party dictatorship on the Soviet model: state control of the economy, enforced industrialization plans, collectivization of agriculture. Churches came under attack; there were mass purges and arrests; the intellectuals were brought into line, and a campaign was launched to unmask "traitors who have infiltrated the party" (Lendvai 1988, 438).

The transition to brutality affected everyone. There were mass dismissals in the ministries, municipalities, army, and publishing houses. Imprisonment, without real trials, of Social Democratic leaders, added to the already numerous politicians and officers in prison. The old party of the workers, the Social Democratic Party, had been swallowed up by the Communist Party in 1948. Two years later, the collaborating architects of this forced merger were themselves imprisoned, to join others whom they betrayed a few years ago.

The 1949 trial and execution of the minister of interior, László Rajk, along with several other veteran Communists, ushered in a new fear of a different kind. Between 1948 and 1953, nearly 1.3 million people came before the "people's tribunals," which issued 655,623 condemnations ranging from a fine to capital punishment (all in a country of 9.5 million inhabitants). The exact number of political executions and political prisoners incarcerated, beaten, and tortured is not known.

The primary victims were the working-class people of Hungary. They were deprived of their Social Democratic Party, genuine trade unions, and decent working and living conditions. They were as badly paid and housed as under the regime of the lords, but now they were subjected to the pressures of "production norms" and daily propaganda harassment, when it was not imprisonment for "sabotage" or for stealing a piece of wire. Everyone was a potential "class enemy."

Shortage was one thing of which there was plenty. Millions queued up, physically and metaphorically. Food shortages were of course linked to collectivization. Both old and newly established peasants were forced to abandon their "capitalist" farms and to join the cooperatives. And yet the results of the collectivization campaign of 1949–1950 were poor; without producing more food, it created disruption in society.

In June 1953 Mátyás Rákosi was replaced by Imre Nagy, a little-known member of the Politburo, according to instructions from Moscow. Nagy, though a communist since his youth and an erstwhile Red Army soldier, did not belong to the core leadership of the Hungarian Party in Moscow. He had also run afoul of the Party line because of his opposition to forced collectivization. Perhaps it was precisely this that motivated his promotion, at a point when agrarian policy was failing and an economic crisis was shaking the stability of Communist power. Furthermore, unlike the other four top leaders, Nagy was not Jewish.

Nagy broadcast his program on radio, causing relief after so many years of terror and deprivation. His program included the slowing down of frenetic industrialization, the lifting of constraining measures against peasants, permission to dissolve the kolkhozes, and release of detainees from internment camps. Nagy's patriotic warmth and his speech—part professorial, part rural—made him the first popular Communist politician. Since promises were kept, he earned the trust of his compatriots and the hatred of the Party apparatus, Rákosi in particular.

The June program resulted in relentless infighting between Rákosi and Nagy. Confident of his position, Nagy relied on the power of the word and on public opinion. Until October 1954, he was able to count on Khrushchev's support, but then things changed. The Federal Republic of Germany was allowed to join NATO, and the communist bloc set up the Warsaw Pact.

REVOLUTION OF 1956

Nagy was ousted in April 1955. His refusal to subject himself to the ritual of self-criticism cost him his Party membership card. Rákosi once again held exclusive power. However, at the Twentieth Congress of the Soviet Party, 14–25 February 1956, Khrushchev delivered his celebrated speech condemning Stalin's crimes and the damaging effects of the "personality cult." Rákosi and the Party apparatchiks were now on the defensive. Hungarian intellectuals organized debate after debate on the most sensitive issues, such as the economy, historiography, Marxist philosophy, and the role of the press. The debate on the latter took place in June 1956, with people listening to speeches broadcast to the street over loudspeakers. After this, events gathered momentum.

In mid-July Rákosi was dismissed at the insistence of the Soviets and went into exile in the USSR. A reshuffle brought to power Ernő Gerő, who tried to implement a halfhearted policy change. A few ÁVH torturers went to prison; a few hundred of their victims were rehabilitated.

This halfhearted thaw did not appease the public mood. The opposition now called for a state funeral and rehabili-

Hungarian Premier Imre Nagy dances with a peasant girl at a reception of the Patriotic People's Front Congress in 1955. A year later student uprisings would call for Nagy's reappointment as premier; after the Soviet suppression of Hungary's move towards independence, Nagy was executed. (Bettmann/Corbis)

tation for Rajk and the other trial victims who had been secretly buried following their execution. For the first time under a communist regime, a crowd of 100,000 demonstrated. At the funeral, the public interrupted the speeches regularly, as Party functionaries rubbed shoulders with surviving victims.

The collective mood was clearly saying, "Enough is enough." Gerő, an unshakeable Stalinist, believed he could carry on, but the majority of Hungary's 860,000 Communists wanted change. There were reformists hoping for "communism with a human face." There were the radicals, who no longer believed in a renewal of society without a decisive break with communism. This was also the general feeling among the Hungarian people, who wanted above all to shake off Soviet domination and to achieve a better life and freedom.

On 23 October, students demonstrated in support of the striking Poles. Young people led the march, writers made speeches, and an actor recited the poem that had signaled the start of the 1848 revolution. The points formulated by students included demands for national independence, Russian withdrawal, free elections, and support for Nagy. The massive procession swelled to 300,000. The atmosphere was celebratory; popular songs were intoned, including the "Marseillaise," and sometimes the "Internationale." Significantly, the communist red star was cut out of the tricolor national flag.

Concessions would have sufficed to appease the public mood, as happened in Poland, but no such response occurred. One section of the crowd laid siege to the radio station, another, to the Party newspaper, a third set about dismantling the symbol of tyranny, the immense statue of Stalin. The night had barely begun, and the regime, armed to the teeth, collapsed like a house of cards.

Communist leaders turned to the only force that could save them, and soon two Soviet divisions stationed close by arrived in the capital. The people of Budapest resisted and retaliated; Russian tanks were blown up with Molotov cocktails. Soldiers and sometimes entire units joined the insurrection. It was the beginning of a national revolution, an uprising supported by a civil population. For five days, the skirmishes raged in Budapest and provincial towns.

The once strong Party was reduced to a handful of leaders in a state of panic. They had no choice but to call on Nagy to speak out against the insurrection. He promised

Revolutionaries and demonstrators wave a flag as they drive through the streets of Budapest on top of a tank at the height of the anticommunist demonstrations. (Hulton-Deutsch Collection/Corbis)

amnesty, not realizing that this was no longer a fight for a softer communism, but a fight for freedom. For the first time in a communist system, a revolution was taking place, an antitotalitarian revolution.

Nagy finally understood—too late for public opinion and the insurgents, far too soon in the eyes of the Stalinists. Until then, Nagy was a prisoner of his militant past and his belief in the possibility of reforming communism without abandoning it. On 28 October, however, the Hungarian side of his personality took over. He declared a unilateral ceasefire and announced the immediate abolition of the security police, the commencement of negotiations for the withdrawal of Soviet troops, and other radical measures, to bring an end to the fighting. The Communist Party disbanded; its most hated leaders fled to Moscow, and a directorium of six took over, aided by a reduced cabinet formed on 30 October. Within forty-eight hours, Nagy made two more crucial moves: he denounced the Warsaw Pact and proclaimed Hungary's neutrality. From here on, changes could not have been more radical: the multiparty system was reborn. The fighting stopped, but insurgents demanded guarantees from the government that promises would be kept.

On 30 October, the Soviet leaders publicly acknowledged their "errors" in dealing with Hungary and the other people's democracies. The text, published in *Pravda,* announced that the Soviet government was ready to negotiate "concerning the presence of Soviet troops on Hungarian soil" (Hoensch 1988, 218). It was a huge step, but significantly it did not include acceptance of Hungary's withdrawal from the Warsaw Pact, which Nagy raised as a point of negotiations the next day.

One sign of change was the spontaneous creation of self-governing bodies. Calling themselves national committees, revolutionary or workers councils, they took on administrative tasks or the management of institutions or factories. This momentum was leading toward a pluralist civil society. Of course, no one had even heard of a civil society, and yet, from the villages to the large factories, everyone seized a share of the power that belonged to them as citizens.

József Mindszenty, archbishop of Esztergom, was freed and took up a position criticizing the government, referring to its members as "heirs of a deposed regime" and articulating a conservative vision of society and of "cultural nationalism" (Molnar 2001, 317). His speech was broadcast on 3 November. At dawn the next day, Soviet tanks invaded the country.

The fate of Hungary was settled when the Soviets and visiting Chinese leaders opted for military intervention. Hungary declared its neutrality, indicating that it had no intention of moving over to NATO. Moscow gave assurances that it would not threaten Hungary. The Soviets pretended they had every intention of keeping their word. They invited Imre Nagy to negotiate the withdrawal of their troops. Soviet generals arranged to meet their Hungarian counterparts, including General Maléter, at their headquarters near Budapest, to continue negotiations. It was an ambush: the Hungarians were arrested by the KGB in the middle of talks. Meanwhile, plans were made for a dawn attack.

The events in Hungary made front-page news worldwide, but the United Nations discussed the "Hungarian affair" only after the November invasion, and a resolution was passed demanding the withdrawal of Soviet troops. It was in vain, of course. Having crushed the revolution, the Red Army stayed in Hungary for thirty-five years.

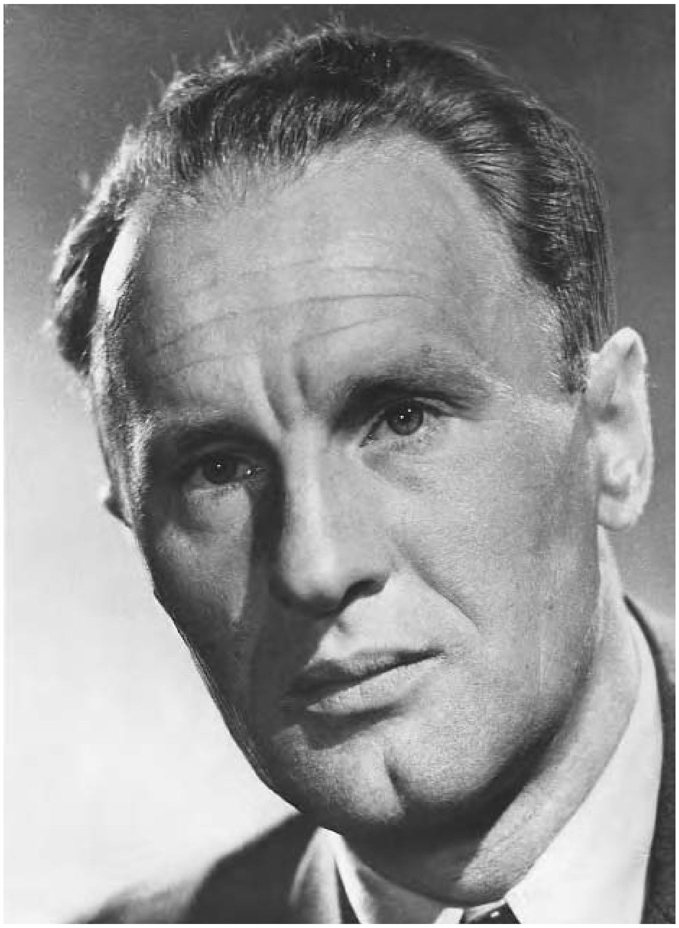
To escape arrest, Nagy went to the Yugoslav embassy. The last minister remaining in the parliament building, István Bibó, wrote a brief memo of the situation. A handful of broadcasters transmitted the final messages, while armed resistance continued in various places for weeks. The first antitotalitarian revolution had ended in a bloodbath. War with the Soviet Union was unthinkable, and no sensible Hungarian would have wanted a third world war. Still, the uprising was an affirmation of selfhood and provided Hungarians with moral capital, though with paltry dividends. National identity had been rescued. Beyond the frontiers, the 1956 revolution demonstrated for the first time that totalitarianism was not to last for a thousand years.

1956–1989

On 1 November 1956, János Kádár announced in a broadcast speech that "the uprising of the Hungarian people has achieved freedom and independence" and promptly left Budapest (Kontler 1999, 430). He went to the Soviet ambassador, Yuri Andropov, and from there, fled to Russia, returning on 7 November in a Red Army truck as the head of a Soviet-appointed government.

The new masters at first presented themselves as successors of the revolution, set only to redress its mistakes. There was no talk of a counterrevolution or of punishing the guilty. The uprising was declared just and the old regime—Rákosi and his allies—were largely blamed for having provoked it. Kádár even talked of Nagy returning to political life. This overture was nothing more than a sham. The leaders of the new Party (rebaptized the Hungarian Socialist Workers Party, MszMP) had their course firmly set. The issue of Imre Nagy was solved by the Kremlin in a customary fashion. On 22 November, as Nagy and his friends, trusting their safe conduct, left the Yugoslav embassy to board a bus for home, they were kidnapped at gunpoint by the KGB and taken to Romania. They ended up in a Hungarian prison, where the principal leaders were tried behind closed doors and executed in 1958.

Armed resistance continued for several weeks. The Workers Councils called a strike, and economic life was paralyzed. In December the government dissolved the Workers Councils and National Committees and arrested their leaders, thus cutting the last fictive tie with the revolutionary events. Dozens of Hungarian intellectuals had been executed, committed suicide, disappeared, or were imprisoned.



Hungarian politician János Kádár (1912–1989), one of the leading figures of the Communist regime. (Hulton-Deutsch Collection/Corbis)

The Kádár regime now undertook the change in direction that made the Western media describe it later as the champion of communist freedom. The general amnesty in 1963 closed the period of repression and marked a phase of consolidation. Kádár had a sharp political mind, the skill to manipulate others, and the capacity to thwart political intrigue on all fronts. With the opposition broken or at least muzzled, he found himself fighting the exiled Rákosi, as well as plots hatched within his own party's Central Committee. Supported by Khrushchev, he was able to overcome every obstacle. The removal of Khrushchev in 1964 undoubtedly shook him, but his position remained solid. His Socialist Workers Party had half a million members by 1966, and, having eliminated his rivals and opponents, Kádár held all the reins of power. The Soviet leaders no doubt appreciated his success in pacifying Hungary, even if it meant discarding several elements of the Soviet model.

In the early 1960s the regime again adopted old Stalinist methods, forcing peasants into collectives. They were more successful this time than in the Rákosi era, and only a few private farms remained. After a collectivization drive, however, cooperatives were given considerable managerial, productive, and commercial autonomy. This turned into the exception in the socialist universe—something that actually worked. Food shortages disappeared.

Rákosi and Kádár

The two men whose names are associated with lengthy periods of post–World War II Hungary's history, Mátyás Rákosi and János Kádár, did not share much beyond a lengthy membership in the Communist Party. Rákosi was born into a family of small town merchants and was educated to be a banker. Kádár was the son of urban factory workers, whose only experience with higher education was limited to ideological seminars. Rákosi became a communist in a Russian POW camp, and was groomed by Moscow to become a leader of Hungary's small communist movement. He spent many years in the Soviet Union, married there, and spoke fluent Russian. By contrast, interwar Hungary left him with nothing but failure. His role in the short-lived communist dictatorship of 1919 endeared him to few people, and later he was imprisoned for illegal political activities. Possibly the only thing Hungarian he liked was a set of flags, taken by the Russian invaders in 1849, which Stalin's government returned in exchange for his freedom. (Rákosi's Jewish background is hardly worth mentioning: he was not persecuted for it, he rejected all religious belief, and he mistreated people regardless of their religious denomination.) Kádár, by contrast, lived in Budapst as a factory worker and was active in Hungary's tiny communist underground.

After World War II, Rákosi became the uncontested leader of the Party and, after 1948, the dictator of Hungary. Even though he never won an election, he gained a certain popularity because of the Communists' role in land distribution and the rebuilding of the economy. By the 1950s, however, his one-man rule and the brutal repression of any dissent (he even had Kádár jailed and tortured), made him the most hated man in the country. It was in large part Rákosi's slavish imitation of Stalinist practices that brought about the 1956 revolution, and he was one of the first persons to disappear from Hungary's political scene, to live out his years in Krasnodar, Russia, as a total failure.

Kádár was a member of Imre Nagy's government during the few days when the 1956 revolution appeared to have succeeded. Just days later, however, he rode the tanks of the invading Red Army to power. He was genuinely hated by most Hungarians for this betrayal and for the harsh measures he introduced to eradicate dissent in Hungary. The initial years of his long rule were marked by brutality (thousands arrested and scores executed in open disregard for legality) and a dull, rigid paranoia. Kádár had to demonstrate his mastery of the country to his ideological masters in Moscow. By the mid-1960s, however, it was obvious that he had a better insight into the thinking of Hungarians than Rákosi ever had. He saw the need to make material concessions, realizing that most Hungarians, weary of resistance in the face of overwhelming force, were ready to settle for a semblance of "good living" and make peace with his regime. Hungarian policies, guided by the principle of "he who is not against us is with us" (originally uttered by Imre Nagy) must have made the Soviet leaders uneasy. The Party line they tried to enforce was more and more often ignored in Hungary, especially in such areas as private economic initiatives, a relative freedom of conscience and expression, and a commitment to raise the standards of living. From the 1970s on, Kádár's Hungary became "the happiest barracks in the Socialist camp," and the once despised Party leader was seen by most Hungarians as "Old Uncle János." By the time he faded from the scene in 1988, his countrymen thought of him as a modest, plain-living caretaker who "did the best he could for us."

The post-1989 changes in Hungary's economic, political, and social life have created problems as well as blessings. To many, the past does not look so bad. While there are few apologists for the Rákosi era, Kádár's thirty-two-year rule, somewhat like the sixty-eight years Hungarians lived under Franz Joseph's reign, is beginning to take on the appearance of the good old days.

The regime inherited a planned economy, modeled on Soviet lines. Its predecessors had built up heavy industry without the technical means, the know-how and the raw materials, and managed it by a central planning office that was in turn subject to ideology-driven directives. The brief reformist interlude under Imre Nagy was unable to eliminate altogether the negative consequences and the poverty of the population. Behind the spectacular, and often fake, statistics, real growth was minimal and purchasing power lower than before.

Food shortages dropped, thanks to agricultural productivity, but a remedy for inefficiency and reform of an almost nonexistent service sector remained. Reopening the ludicrously overnationalized small businesses soon bore fruit. Restructuring large enterprises, however, was never fully achieved in two decades of the Kádár era. Still, its beginnings were promising and showed some successes.

Economic reforms had their roots in Nagy's attempt to have experts guide some projects. Ten years went by before the experiment was renewed, inspired by the Czechoslovak example, but also due to the political will of the Hungarian leadership and the competence of several brilliant economists. It resulted in an ambitious restructuring plan, introduced in 1968, cautiously named the New Economic Mechanism (NEM). Moscow considered the Hungarian regime's survival more important than ideological conformity. The reforms were launched and pursued, though not without hitches, for four years.

NEM's aim was the creation of a profitable and competitive economy. In order to achieve this in an interventionist system, planning had to be dismantled, structures decentralized, prices freed, and enterprises enabled to manage production, administration, salaries, and marketing as close as possible to market principles. NEM continued until 1972, when the "left-wing" opposition within the Party slowed things down. This marked the end of reformist experiments, until their partial revival in 1980.

Hungary's economy continued to develop appreciably better than those of its socialist neighbors. Progress was especially notable in the private and semiprivate sector (where small contracted groups were self-employed within a state company), a unique feature of the "Hungarian model." The semiprivate sectors, a modest capitalist presence representing 7 percent of the active population, was putting out as much as 30 percent of Hungary's domestic production, contributing significantly to the country's growth. Hungary's socialist market economy was in fact neither socialist nor market, but it did produce results. National revenue doubled in twenty years, the agrarian workforce became much smaller, and real per capita income rose for years.

The economy, however, came up against insurmountable political limitations, first and foremost the single-party system, which had no intention of reforming, much less abandoning its position. The other worrying factor was the issue of debts. By the mid-1980s, the nation's debt had tripled. Hungary's political leaders chose indebtedness to compensate for the slowing down of the economy. The index of real income began a breathtaking fall in the 1980s.

THE COLLAPSE OF COMMUNISM

In Kádár's Hungary, there were no free elections or reliable opinion polls, and the press was as servile as in other communist countries. And yet, the regime, initially held in contempt, produced a relative contentment, and a leader as detested as Kádár became almost popular. His years in power can only be understood if approached through the ambiguities and contradictions involved.

It was said that Hungary was the "happiest barrack in the socialist camp." Living in the Hungarian "barrack" was not overly harsh; it provided satisfactions, material pleasures, and even the prospect of social promotion. In the 1970s Hungarian living standards seem to have been at around the 80–90 percent level of the European average. This represented considerable progress. The average Hungarian had an income that allowed the satisfaction of dreams like buying an East German Trabant car, building a cabin in the mountains or along a lake, or traveling abroad (although seldom all three). Political constraints on individuals, and their private and social lives, had relaxed, and Hungarians were fairly satisfied with their living conditions. It was not freedom, but it was far better than the social and moral bondage of the pre-1956 years.

At the same time, it has been said that Kádár's regime infantilized Hungarians, reducing them to consumers of material goods. Indeed, a consumer society (though a third-rate one) had developed under Kádárism, but who could blame the citizen for being happy to consume? Hungary was slowly becoming a middle-class society, with all of the implications of that label. Creature comforts were no substitute for freedom; they only made nonfreedom more tolerable, and the soft stupidity that had replaced harsh dictatorship was simply less suffocating.

The weakness of this fake liberalism soon became apparent. Since stability and consensus relied entirely on increasing purchasing power and the relaxation of constraints, the first signs of a downward turn evoked rumbles of discontent. Events showed that Hungarians had not completely lost their cultural identity, their desire for freedom, or their civic aspirations.

The year 1989 is remembered as the year when the entire communist system collapsed like a house of cards. The conditions for its collapse had been in place since at least 1985. Among the most immediate factors, stark economic deterioration undoubtedly played a role, if only as a spark. This explanation, however, is far from sufficient. What led to the final crisis—slowly and by process of accumulation—was a transformation in the thinking of both the leaders and the people, the authorities and society. The two parted ways to an extent that no ideology could reconcile. The Hungarian model of communism was never ideologically pure. It allowed a civil society to awaken, which changed the rules of the game. The autonomy acquired by so many individuals in various spheres of public life—in politics, the economy, the media, and in the Party itself—rendered governance within the framework of existing institutions impossible. As for Marxist ideology, it had been reduced to shreds long ago.

Miklós Németh, the last president of the defunct regime's Council of Ministers, admitted that there was nothing that could be done to "normalize" the situation. Power ended up in possession of a civil, diverse society, inarticulate but united in the desire for change.

The "second society" was no longer an underground one. Once the absence of control became evident, no one cared about the remaining taboos—Soviet occupation, Party rule, the authority of a charismatic leader, and finally even 1956, the official memory of which had crippled Hungarian thinking for decades. The failure of "scientific socialism" was no longer even a topic of debate, nor was the conclusive success of private enterprise. The arts, literature, and historiography, which all had been hijacked by a boring ideology, now calmly took up their real tasks as conscientiously as their individual practitioners found it within their powers.

In 1988, after it was already consigned to the scrap heap of history, the Communist Party tried to rescue the situation by hardening its tone and discipline. But it was too late. There was infighting even among Communist leaders, and opposition to the regime was in the open. For over a decade a group of antiestablishment intellectuals had been fighting for their ideas, publishing samizdats (underground publications) and rallying sympathizers, while braving police intimidation.

In May 1989 the government of Hungary made the historic step to dismantle the Iron Curtain, by opening the route to hundreds of East Germans on their way to West Germany via Austria. On 13 June, negotiations began between the party in power and representatives of opposition groups. The outcome of these roundtable discussions was the dissolution of the Communist Party, the introduction of a multiparty system, and the transition to democracy.

Another event signaling the beginning of a new era was the public rehabilitation of Imre Nagy and a solemn funeral honoring the victims of repression. The Committee for Historic Justice, which had been in full operation for over a year, its efforts focused on exposing the truth and extracting a recognition of guilt from the authorities, organized the funeral. It did so without letting Communists exploit the memory of the revolution to their own ends—a measure of its moral authority. The Party was not even represented at the funeral.

Moscow's hope that remnants of its empire could be salvaged by introducing "reform communism" proved to be unrealistic. There is no evidence, on the other hand, of any will to use force in order to preserve the status quo. In the case of Hungary and Poland, the Velvet Revolution was also a negotiated revolution.

SINCE 1989

The Hungarian Republic was solemnly proclaimed on 23 October 1989, the anniversary of the 1956 revolution. Miklós Németh's ministers kept showing up at their offices until spring 1990, when Hungarians decided their future at the ballot box. The election was essentially a loud and clear denunciation of communism. The two successors to Kádár's ideas, the Communist and Socialist parties, received 4 percent and 11 percent of the votes, respectively. The Socialist Party's position on the new landscape was consequently modest, with 33 deputies in the National Assembly. The Christian Democrats obtained 21 mandates, and the Smallholders Party 44 parliamentary seats.

They joined the overall winner, the Democratic Forum, with 165 mandates out of a total 386. Four years later, this balance of power was changed, but the parties who got through in 1990 still occupied the key positions, thus ensuring stability despite alternations. For the first time in a century, Hungarian liberals became significant players in politics. Thirty percent of the electorate voted liberal. Despite being unknown to most until the late 1980s, the Hungarian Democratic Forum, with its eclectic program and composition, presented a reassuring image as being national, Christian, liberal, and, above all, anticommunist. It was invited to lead the ruling coalition for four years. The government was headed by a historian, József Antall, and portfolios were distributed between the coalition parties.

The National Assembly elected as president of the Republic Árpád Göncz, a lawyer, writer, and translator who had spent five years in Kádár's prisons. He became a popular statesman and was reelected for a second term. The republic's foundations were now solid, based on the principle of a division of powers, since a very important institution was created, the Constitutional Court. Its role was to scrupulously monitor respect for the letter and the spirit of the fundamental laws. Local self-government completed the new state structure. The traditional county councils now played a less significant role compared to the past. The 3,000 or so rural councils, towns, and villages, on the other hand, were given substantial autonomy.

Árpád Göncz, president of Hungary (1990–2000). (Embassy of Hungary)

Hungarian democracy matured under Antall's government, among the first in the region to move peacefully from communism to democracy and capitalism. It delivered results as far as the consolidation of the institutional system and respect for public and individual freedoms were concerned. Its foreign policy was resolutely European in outlook. Its conduct was low profile, even if its rhetoric was at times criticized for traces of nationalism.

Antall, catapulted into his post by the leaders of the national-popular wing of the Democratic Forum, had to perform a balancing act between the different tendencies within his party and at the same time with the other components of the government majority. Thus pressed by the Smallholders, Antall worked to transform agricultural property structure in favor of a social class that had still to be invented: independent farmers. This called for two measures: issuing compensation coupons to enable former owners to buy back their land and dismantling agrarian cooperatives. Both ended in controversy. Compensation, extended, and rightly so, to other injured parties, disrupted the economy without really repairing the damage and created chaos in the villages. Coupons were often bought up by intermediaries, and few peasants were able to use them well. Moreover, cooperatives remained alive: only 200 disappeared out of 11,000. As for the net agricultural production index, it fell significantly. This can be attributed to the end of exports to the Soviet bloc, compounded by the financial burden of surplus manpower. Government action contributed to internal dissension in the Democratic Forum. Confident of its clear popular mandate, it set about aligning society to its own ideas—which included a renewed relationship with the country's religious majority, at the expense of militant secularism.

Though Antall had surrounded himself with trusted ministers, his charismatic authority did not prevail throughout his heterogeneous party. The nationalist right was far from being under his authority, and it continued to make statements that were easy to present as controversial by the media. The Forum thus came to have an embarrassing internal opposition in its own right wing, especially its guiding force, the popular-populist writer István Csurka. He professed nationalist and antiliberal ideas, deviating from the party's national liberal image and the more moderate views of its majority. The prime minister was slow to distance himself from the right, due to political necessity and probably also to personal loyalties.

Despite his weaknesses, Antall was a sincere democrat and would never have allowed his regime to be controlled by extremists. It was due to his moral steadfastness that, in the end, it was Csurka who, unable to get a hearing in the Forum, broke away in order to form his own openly nationalist movement.

The issue of punishment of those responsible for crimes committed under communism also occupied political center stage and remained unresolved, perhaps unresolvable. The process hit legalistic obstacles: the statute of limitations had expired in most cases; difficulties arose with defining crimes against humanity; or the guilty had simply died. Indeed, the incriminating facts dated back decades, and the men serving the communist regime, however responsible and morally guilty, were "just obeying legal orders." As in all postcommunist countries, justice went as far as accusing the handful of officers who gave orders to open fire on border crossers. The real criminals, if they were not dead, lived out their retirement peacefully—earthly justice would not touch them. As for the agents provocateurs and other informants of the political police, their names never became public. This aroused widespread indignation, but the desire for revenge abated with the passage of time.

The newly freed mass media criticized authorities and continued to support the opposition rather than government action. This in turn provoked lively responses from the people and parties affected, leading at times to less than civil debates. This was perhaps to be expected, but the sharp, personal, and intolerant tone damaged the political class as a whole.

Indignation over the decline in public civility failed to overshadow the more positive development, a successful shift to a legal and democratic state in four years. Even the noisy claims made by a small group of right-wing intellectuals were seen as signs of maturing diversity in the reemerging political arena.

The issue of ethnic Magyars living beyond the frontiers, apart from its diplomatic aspects, had preoccupied generations of Hungarians since the Treaty of Trianon. The concern, both legitimate and enduring, had also probably been altered by experience. When it became apparent that the old frontiers would not be restored, the rational and desirable solution seemed to be for all the region's countries to work for permeable boundaries, with cultural and, if possible, territorial autonomy for minority communities.

When the communist era came to an end, Hungary was considered the best prepared among the bloc countries for a transition toward a market economy. In reality, the glass was half full, half empty. Among other problems, there were no plans for paying back the mountainous debt (US$11 billion at the end of the communist era). The fiction of full employment was maintained; a dilapidated industry was kept afloat by subsidies, as was a productive but expensive agriculture. The situation was nonetheless manageable, with sufficient reserves of hard currency and, thanks to Hungary's reputation, an intact credit rating.

From 1990 through an economic policy resolutely geared toward the market, Hungary could have maintained its lead and come out of the transition difficulties at least as rapidly and as well as Poland. At the outset, Antall's government took the right direction, stabilizing public finances, launching privatization, and other reforms. At the same time, due to timidity and half-measures, the "classic" problems of transition arose. Antall's government added US$8 billion to the debt and operated with a huge budgetary deficit. Direct foreign investments, the highest among former communist countries, helped, but state or local council ownership remained dominant. The state spent four out of every ten forints; GNP decreased significantly; unemployment was at 12 percent; and inflation fluctuated at around 30 percent.

Living conditions were deteriorating. Enormous sacrifices were demanded of the population, with no evidence that the high price of transformation would lead to financial recovery, to structural reform, and finally to growth. The government tried to navigate between the necessary restrictions and a threatening social crisis. If it did not take draconian measures, it would soon be accused of being lax and populist. If it did, it would be seen as a lackey of the International Monetary Fund. The road from communism to capitalism had never been explored before. It would have been difficult to do better than the Antall government did.

The verdict of the 1994 election discredited the Democratic Forum and its coalition partners. The semimajority system enabled the winners, the new socialists, to gain a majority in parliament. The extreme right and left parties were literally swept aside. As in 1990, the Social Democratic Party was practically absent.

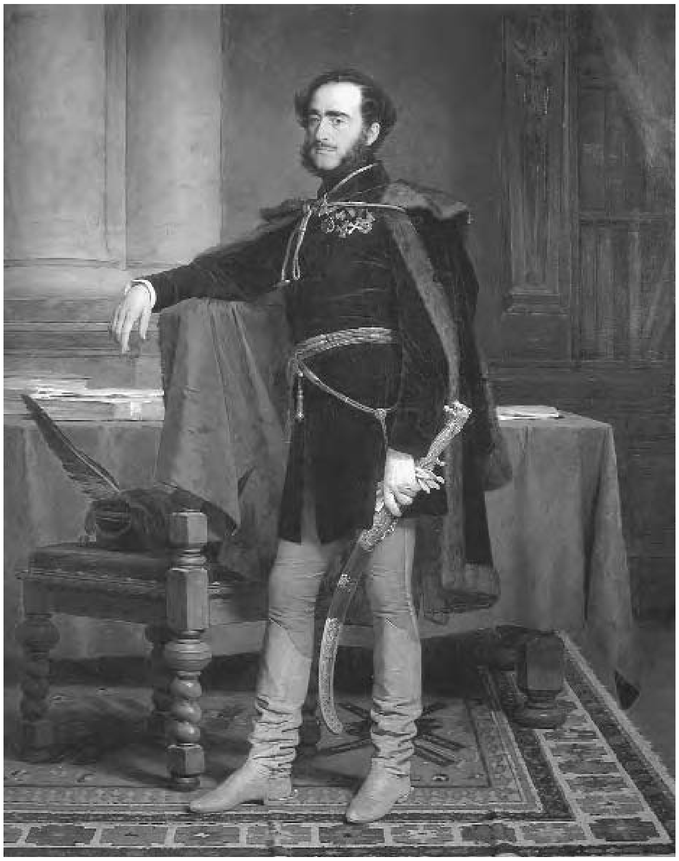
The fact that the same six parties shared most seats in the assembly demonstrated a degree of stability, and the Hungarian Socialist Party (MSzP), with its absolute majority, could have governed alone. Gyula Horn, its leader and future prime minister, decided otherwise. The Free Democrats (SzDsZ) were invited into the government, if only in order to share responsibilities. This unnatural coalition of two former opponents was created in June 1994. There was nothing innovative in the Horn government's political program, but its audacity in economic matters was, for a socialist party, astonishing. Its stabilization program was rather more liberal in tone than socialist, despite being the brainchild of the socialist finance minister László Békési. However, the Békési program remained on paper, and no serious measures were introduced. Then, the unenviable post of chancellor of the exchequer was filled by a neoliberal economist, Lajos Bokros. It was a dramatic turn of events.

In March 1995 the new finance minister presented a program of restrictions called the Bokros package. It was the first time that the question of budgetary balance had been seriously addressed. Among its many measures was the reduction in social loans from a providential state, soon provoking a general outcry, making Bokros the most hated man in Hungary. His package had nonetheless been approved by parliament, with predictable reticence on the part of several socialist deputies and the unions.

The Bokros package was duly carried out, going beyond even the monetary measures prescribed by the IMF: a rehaul of the tax and customs-duty systems, a devaluation of the forint, deregulation, reform of the health service and pensions, plans for the reform of state finances. Considerable savings were made, but the package weighed heavily on citizens; real income fell by 11 percent, along with social benefits and provisions. Dissatisfaction grew, as did nostalgia for the good old days of relative (and artificially maintained) prosperity. However, by 1997, pensioners and other underprivileged sections of society began to feel the benefits of economic growth, a growth largely due to the dynamic privatized industries, to the hundreds of billions gained from privatization, and to the influx of foreign capital. The state was able to spend the equivalent of DM8 billion on reorganizing the economy and repaying foreign debts. The foundations of growth were in place, but this did not alleviate poverty in a growing segment of the population, especially among the Gypsies. The none too rich but satisfied lower middle classes of the era were disappearing.

Adding to the problem of economic reforms, social and national problems came to the surface: anti-Semitism, corruption, public disorder. Budapest, and other Hungarian cities as well, became targets of a new criminal underworld. In four years, 140 bomb explosions (allegedly perpetrated by the "foreign Mafia") remained unsolved. Public opinion accused the police of complicity. Once known as a "safe" city, the Hungarian capital appeared on the verge of being taken over by organized crime imported from Russia, Ukraine, and the Balkans.

The socialists' four years in office were studded with corruption and scandals: obscure bank dealings, assignments of public funds, underworld connections. Leading the opposition was the League of Young Democrats (FIDESZ), who went on to win the 1998 elections. The image of FIDESZ was national and bourgeois. The league was also accused of mild anti-Semitism, but the main representatives of these tendencies was Csurka's extreme right-wing Party of Hungarian Justice and Life (MIÉP). The young, Western-educated operatives of the FIDESZ easily exploited the weaknesses of Horn's dull and old-fashioned socialist government, even turning the socialists' few merits—its ideological neutrality and economic pragmatism—to their own advantage. The already waning popularity of Hungary's postcommunist left was also severely tarnished by its involvement in major scandals.



Count István Szechényi, Kossuth's major rival in the reform movement of the 1820s and 1830s. (Archivo Iconografico, S.A./Corbis)

The Horn government fell in the 1998 elections, losing much of its base of popularity among the rising managerial class. The extremely complex, part proportional, part majority electoral system went in favor of FIDESZ. Of 388 mandates, FIDESZ gained 148, its ally, the Smallholders Party 48. The rest of the parties preferred to support FIDESZ in parliament, including 14 members of parliament from the right-wing MIÉP, led by Csurka.

POLITICAL DEVELOPMENTS

Magyars brought with them to the Carpathian Basin a political system that was shaped by the necessities of nomadic pastoralist lifestyle. Family units resided miles apart from each other, and this implied nearly unlimited freedom in the daily affairs of the individual. Whenever the entire clan, tribe, or tribal federation took to the field, however, this freedom disappeared. Since even the smallest action could mean disaster for all, discipline during these community undertakings was strict, whether they were a joint search for new pasturage, a massive hunting expedition or, especially, a military campaign. Loyalty was to the clan or the tribe and their leaders, offices to which one could rise through succession, which was often influenced by other considerations. Popularity was one such factor, based on perceived leadership qualities and achievements. Most leaders thus chosen were proven military leaders, but the pastoralists also valued other qualities, and often elected a co-ruler recognized for his wise and judicious practices during peacetime. Thus, even though ruling dynasties existed, there was no great social distance between members of these and common pastoralists, and there was a chance for nearly every male to rise to a leadership position.

This "steppe democracy" came to an end when Hungarians converted to Christianity, adopting at the same time the prevailing European social practice of centralized royal authority, along with those of county administration and an increasing stratification that was part and parcel of feudalism. Gone was the free, individualistic roaming of nomadism. Instead, people were increasingly forced to live in villages, which came more and more under the authority of the large landholding lords. As more and more commoners became impoverished, they were forced to become servants, and later serfs, in the service of barons. While the number of serfs increased, so too did the number of those who retained their titles of nobility, but lost all or almost all of their property. The nobility, composed of wealthy landholders and a growing number of common noblemen, together came to consider themselves the "one and indivisible noble Hungarian nation." They attended the diets (periodically assembled legislative meetings), and they made and enforced the laws, most of the time with royal cooperation, but at times in conflict with it. In exchange for performing these duties, and in recognition of their service as the armed defenders of the nation, they were exempt from paying taxes of any kind, a privilege they guarded jealously well into the nineteenth century.

Social injustice aside, this stratification of Hungarian society poisoned public life for much of the modern period. Unfortunately, not all noblemen were endowed with fairness in the way they treated their serfs, the wisdom to manage the nation's affairs, or a sense of patriotic unselfishness. On the contrary, more and more of them took on attitudes that proved destructive for the nation's interest. Some of the wealthiest barons did their utmost to weaken royal authority, attracting many of the lesser nobles to their causes. To be sure, they distinguished themselves in the long anti-Ottoman wars of defense. Their ranks were thinned in battles and replenished by newly created aristocrats, often imported from other lands. Not surprisingly, few of Hungary's aristocrats opposed the Habsburg-supported Catholic Counter-Reformation, and even fewer were enthusiastic supporters of Prince Rákóczi's *kuruc* war of independence.

The common nobility took a more independent position both regarding Protestantism and the anti-Habsburg struggle. They were, by and large, enthusiastic supporters of both causes, even while stubbornly safeguarding their increasingly meaningless privileges. After the defeat of the kuruc armies, this class, which represented a very large proportion of Hungarian society, became disillusioned and fatalistic. Most of its members assumed the parochial stance of passive resistance, withdrawing from national affairs into the ancient, familiar institutions of the counties. Dealing only with local affairs (and only in Latin), refusing to travel, consider, or even read about the new ideas streaming in from the west of Europe, this loudly "patriotic" nobility thus evaded its responsibility to lead Hungary out of its state of severe underdevelopment.

In general, European nobility exhibited contradictory attitudes toward the ideas of the Enlightenment, and especially toward the notions of revolutionary romanticism. In Hungary and Central Europe, however, the situation was made worse by the nearly total absence of a middle class, the stratum of society that was instrumental in bringing about much of Western Europe's modernization in the eighteenth and nineteenth centuries. In part because of the centuries-long wars in the region, and in part because of the shortsighted insistence of the nobility to preserve their countries' social institutions, the societies of Central and Eastern Europe did not encourage the rise of commercial-entrepreneurial-professional classes. This was not a matter of education alone. Noblemen were literate (though not widely read), and an increasing number of commoners attended secondary schools. But working in typically middle-class professions (e.g., merchant, manufacturer, or writer) was not seen as befitting a "real Hungarian," and especially not a Magyar nobleman. The one exception was the legal profession. A mushrooming of complicated and time-consuming lawsuits, and the intricate machinery of country administrations, provided a "gentlemanly" opportunity for lawyers. Hungary's business life and fledgling manufacturing activities, on the other hand, were largely nurtured and controlled by Germans, Serbs, Greeks, and Armenians, among others. The presence of the growing Jewish population in these activities was also noticeable. Pest and Buda, along with the few small cities of the late eighteenth century, had an increasingly large proportion of foreign-born inhabitants, and this marked the beginning of the great urban–rural alienation so characteristic of the region.

The weakness and marginalization of Hungary's middle class, combined with the common nobility's retreat from national affairs and the aristocrats' loyalty to Habsburg interests, meant that there was scarcely anyone promoting genuinely pro-Hungarian social-political reforms. There were isolated cases of a few radicals conspiring to break away from Vienna's control, but they were easily uncovered and eliminated by the increasingly efficient police organizations.

In the end, the leaders of the early-nineteenth-century reform movements still came from the two classes that showed few signs of being interested in public affairs. Without forming political parties or creating grassroots movements, a few inspired aristocrats—Count István Széchenyi and Baron Miklós Wesselényi prominent among them—began to sound the voices of reform, in politics as well as in social practice. Wesselényi called for greater independence from Vienna, while Széchenyi was needling his fellow aristocrats to make serious sacrifices in the cause of national progress. The enlightened aristocrats found allies in the ranks of the common nobility. They were first brought together by their shared interest in such nonpolitical issues as reforming the Hungarian language, promoting literature and theater in the vernacular, or founding economic and trade organizations. And, of course, there was a great deal of diversity in their methods and goals, ranging from radical republicans on the left to cautious reformers on the more conservative side. Their increasingly lively debates during the 1830s and 1840s, and the reporting of these exchanges in a burgeoning press, led to the birth of modern political life in Hungary.

The common nobleman turned journalist-activist Lajos Kossuth and the wealthy man of the world István Széchenyi, for example, remained worlds apart politically, even while paying homage to each other's greatness. Kossuth agitated for an immediate and even violent break with Vienna, while Széchenyi promoted such seemingly nonpolitical issues as river regulation, steamship transport, railroad- and bridge building, and the establishment of academies, social clubs and credit institutions, asserting that if Hungary were to become an economic power, independence would follow.

Followers of these two great personalities in fact created Hungary's first political parties, even if they formally established such organizations only after the defeat of the war of independence. The "'48ers" remained stubbornly loyal to the exiled Kossuth's ideas, while their opponents leaned toward a compromise with the Habsburg authorities. Owing to skillful and moderate negotiating by Ferenc Deák, a provincial jurist who came to be called "the sage of the nation," a compromise *(Ausgleich)* was reached in 1867, creating the Austro-Hungarian (Dual) Monarchy.

The era of dualism had several stages of development in Hungary's political life. Even though it was somewhat of an anomaly—two realms ruled by one person who was king of Hungary and emperor of the Austrian lands at the same time, governed by two independent governments, except for the common affairs of defense and foreign affairs—the system worked reasonably well for decades. The aristocracy in both halves of the monarchy retained its leadership role, the nobility preserved some of its privileges, and the numerous ethnic minorities were pacified with token concessions but denied real political power. Elections were regularly held, but the franchise was severely limited, and the formation of political parties, while permitted, was closely scrutinized. A narrow coalition of conservatives remained in power for decades, winning elections by any means and governing with a firm but legalistic and reasonably humane approach.

The unsatisfied land hunger of rural masses, combined with the growth of urban proletariat, contributed to the formation of radical parties and the mobilization of organized labor. However, their growth was hindered by the traditionalist mindset of Hungarians and their mistrust of foreign-inspired radical ideas. The left remained fragmented and weak, its ideas entertained mostly by urbanite intellectuals, until World War I brought a number of additional miseries, and ended up destroying the monarchy and breaking up "historical Hungary."

Defeat and subsequent revolutions had overthrown the bloc of Liberal magnates and bourgeoisie, and created an internal political vacuum. It was filled at first by the agrarian group of conservative landowners and gentry organizations that had formerly played secondary political roles. The leaders of the gentry organizations came from conservative landowners, civil servants, officers, and right-wing intellectuals. Their number and weight were significantly increased by the masses of unemployed former officers, unable to find lucrative employment, and refugee government officials from the detached territories.

This new right wing wanted not merely restoration, but redistribution, that is, a share in political power and positions in the top ranks of the Hungarian army. Its members also wanted leading positions in the civil service and yearned to dominate the professions. They clamored for the imposition of high taxes on the "plutocrats" of finance and industry and the supervision of laissez-faire policies by the state. They intended to implement statist, authoritarian rule in order to sustain the dominance of a gentrified elite. The extreme right wing of this new movement consisted of former leaders of officers' detachments and members of secret racist associations, including paramilitary pressure groups. They were vaguely supported by an antiliberal, anti-Semitic middle class and petit bourgeoisie.

The postwar sense of malaise and hopelessness called for astute national leadership, of which there was little. After a brief period as a bourgeois republic under the government of the naive liberal Count Mihály Károlyi, Hungary became the second country to become a communist-ruled dictatorship. Governed by a body of commissars, led by Béla Kun, who became a communist while in a Russian POW camp, Hungary's Republic of Councils lasted 133 days. It enjoyed a certain popularity at first, because it dismantled the army, nationalized the nation's industries and cultural institutions and promised a land reform. It might have lasted longer if its leaders had moderated their terror and pacified the fears of the victorious Allies. Since they failed to do either, and they managed to alienate most Hungarians, the Communists were forced out by the Allied-supported Royal Romanian Army, which invaded the country in the summer of 1919.

The interwar period was marked by the name of Miklós Horthy, formerly an admiral in the Habsburg navy and a member of Hungary's Protestant gentry. In a country that formally remained a kingdom, even though it was forbidden to have a king, Horthy was elected regent for life, and he asked a number of conservative politicians to form governments. The regularly held elections (with a still severely limited franchise) were lively and provided some room for political opposition. The communists, however, were only able to operate underground, as their party was not allowed to exist. Even if it were, it would not have attracted many supporters. The brief Red Terror of 1919 turned most Hungarians into anticommunists. At the same time, Horthy's government was not widely popular, either. It was blamed for a brief but brutal period of White Terror (in the aftermath of Béla Kun's rule), and even for signing the 1920 Trianon peace treaty, which deprived Hungary of two-thirds of its territory and over half of its population. In addition, the Horthy governments failed to address the issue of agrarian poverty through a comprehensive land reform, preserved the country's anachronistic class system, and in foreign affairs proved to be unable to remedy Hungary's diplomatic isolation.

Hungary's best political minds were, thus, in a difficult position. Feeling betrayed and rebuffed by the liberal democracies of the West, disillusioned by the unfulfilled promises of the radical Left (as it showed its true nature in

Stalin's Soviet Union as well as in Hungary's 1919 Republic of Councils), they were driven to experiment with various "native" ideologies. Most of these were based on an idea that could be called "Hungarian exceptionalism." According to this, the Magyars—having no ethnic relatives nearby and having shown a strong nation-building and maintaining ability in the face of serious threats—ought to rely on their own well-developed political instincts to guide them along a third road, an alternative to both the bourgeois liberal capitalism of the West and the Marxist-Stalinist absolutism of the East.

During the Bethlen consolidation, nationalist extremists were ousted from political positions, but their influence was by no means eliminated; they retained their press organs and a leading role in the army. The executive branch and the armed forces gained the upper hand over liberal parliamentarianism and the democratic strivings of a civil society. Thus the conservative gentry continued to thrive throughout the period of consolidation, only to add to their strength and power during the 1930s.

The economic and political power of the bourgeoisie still, however, continued to grow, and the main tendency of restoration was moving toward liberalization. Bethlen was determined to revive the prewar alliance between magnates and the bourgeoisie in government as well as in local administration. Organizations safeguarding the interests of capitalists were filled with fresh vigor and their influence over the economic ministry increased. Banks and entrepreneurs played a leading role by investing the huge loans acquired by the state. Thus the trust of Hungarian and international monied circles, and economic prosperity in general, were among the firm bases of consolidation.

The ideology and propaganda of the new regime were also modified. Efforts to end the prevailing chaos had begun under the banner of militant antiliberalism and anti-Semitism. The adjective "Christian" was not used in a religious sense, as a slogan for moral revival, but with a distinctively anti-Semitic, discriminatory edge. Furthermore, the emphasis on "national character" unambiguously implied territorial revision to prewar boundaries

The institutions, open activities, and propaganda of the White Terror were suppressed. Militant anti-Semitism was on the decline: the government moderated the *numerus clausus* quota law and even encouraged the Jewish middle class to participate in public life. Racism was also eliminated from the interpretation of national character, and the sense of the nation as a political unit was brought back into use. From the mid-1920s on, this concept came to mean the partial or total revision of the Trianon peace treaty. On this point a full national consensus was achieved. Growing professionalism in the techniques of government, authoritarian paternalism, revival of religiosity, patronage of the arts and sciences, and parliamentarianism after the European model were the features with which the system was endowed. Horthy's was a peculiar, neobaroque style of government. The adjectives fascist or semifascist, which the communists used to describe the era, are simply not applicable.

The Depression sharpened social conflicts. Strikes by industrial workers were matched by mass demonstrations in Budapest on 1 September 1930. The Communists made their first reappearance since 1919 in these struggles. The Social Democratic Party also gained strength, and the opposition to the government became more outspoken. The Smallholders, who had been integrated into the government party, began to organize separately once again, as the Independent Smallholders Party. As the left was reinvigorated, right-wing elements also began to mass their forces. Repressed after the White Terror, the extreme right was now reactivated. Frustrated by the misery and the crisis in which they found themselves, many of the lower middle class and unemployed joined these extremists.

The new extreme right could look to Italy and Hitler's emerging movement in Germany for support, especially after Gyula Gömbös, the chairman of the right-wing Hungarian National Military Association, was named prime minister by the regent in 1932. He announced a ninety-five-point "national unity program." Its points included gaining material well-being and security for the population, restricting the "harmful growth of capitalism," establishing safety in the workplace, and restructuring land ownership in a more equitable way. Gömbös's scheme envisioned a unity of labor, capital, and intellectual talent. One important organizational element in his scheme was the corporation à la Mussolini, in which workers and employers would reconcile their interests in disputed matters, with the state serving as mediator. The plan failed because of the strong resistance by capitalists and labor unions alike.

In the 1930s a new force appeared among middle-class intellectuals. The new group called itself *népiek* (the most common translation is "populist"). This group was made up of intellectuals of peasant background who sympathized with the plight of the rural poor. They were also concerned with the difficulties facing members of the middle class of peasant origin. Sociographers such as Zoltán Szabó, Géza Féja, and Ferenc Erdei, the poet Gyula Illyés, the teacher and essayist László Németh, as well as Imre Kovács and József Darvas, were the leading personalities of this progressive, literary, and sociopolitical movement. They referred to themselves as the populist writers. The Hungarian populists differed from the Russian and other Eastern European *narodniks,* as somewhat similar populists were called, in that they did not have a messianic, social-revolutionary creed; they were also different from the romantic populists of Germany, many of whom identified with fascism. The Hungarian populists were, first and foremost, antifeudal and anticapitalist in their ideology. Their primary goal was to elevate the peasantry to a higher status, because they considered it to be the backbone of the Hungarian nation. They wished to rejuvenate the national ideal advanced by the gentry, blending it with the fresh vigor of the peasantry. Their ideology was based on the notion of the "third road," a peculiar Hungarian version of socialism that was national but not fascist, socialist but not Soviet Communist, and one that would bring about "cooperative socialism."

The populists were open to the ideas coming from the democratic left. However, they were also willing to listen to the anticapitalist tendencies and anti-Semitism of the right. When Gömbös flirted with the idea of the New Intellectual Front, these tendencies were quite visible. The populist writers were quick to realize what Gömbös was up to and broke off their relations with the governing party. In the following year, part of the populists began to lean toward the left, while another segment moved over to the right.

The Hungarian fascist movement began to take shape during the first half of the 1930s. By 1935, the various racist and chauvinistic groups were drawn together by Ferenc Szálasi, a former staff officer of the army. In that year, Szálasi founded the Party of Hungarian Will, which, two years later, took the name Hungarian National Socialist Party. Its symbol became two arrows forming a cross, giving it the popular title of Arrow Cross Party. Its leading elite was composed of petit bourgeois individuals, although there were a handful of eccentric aristocrats and chauvinist gentry scions among the members. For some time, the gentry elite of Hungary did not take the Arrow Cross Party seriously. Its members were not admitted to the casinos frequented by the upper class. The elite was contemptuous of the masses even more than of the socialist workers.

Though Hungary was nominally an ally of Germany, by the end of the war Hungary and its political life ended up under German control. Germans were assisted by a newly appointed government headed by Döme Sztójay, a notoriously pro-German former diplomat. Mass arrests and internment of anti-German politicians, leaders of the opposition, and the left were immediately undertaken. In May the deportation of the over 500,000 Jews in the country began and was accomplished within three months. Only the Jews of Budapest were saved from deportation, though profascist thugs took victims there by the thousands as well. (The losses suffered by Hungarian Jewry came to 564,307 people killed, 75 percent of the Jewish citizenry of Hungary. Only 120,000 returned from the Nazi camps, and about the same number survived in Budapest.)

Was Hungarian society responsible for this genocide? Research shows that, were it not for the effective assistance of Hungarian authorities, the German machinery would have been unable to arrange for the mass deportations. As for society at large, a great range in attitudes toward the deportations existed. Apart from a racist minority, the vast majority remained passive, indifferent, or fearful, and several thousand people sympathized with the Jews and took risks to save some of them.

After the failed attempt on 15 October 1944 to disengage Hungary from the war, Horthy ceded power to the Arrow Cross Party and Ferenc Szálasi; this was followed by a five-month reign of random terror. In April 1945 the Red Army removed the last German units and their allies from Hungary. It was, indeed, considered a liberation by most Hungarians. However, liberty did not arrive immediately.

In December 1944 a provisional government was formed in Debrecen by a coalition comprised of the Hungarian Communist Party, the Independent Smallholders and Agricultural Workers Party, the Social Democrats, the National Peasant Party, and the Civic Democrats. The Communists gathered earlier and declared their readiness to cooperate with "democratic forces." Their leaders were mostly "Muscovites" following in the wake of the Red Army: Mátyás Rákosi, Ernő Gerő, József Révai, Mihály Farkas, Zoltán Vas, and Imre Nagy. The Smallholders were led by Béla Vargha, Ferenc Nagy, Zoltán Tildy, and Béla Kovács. The principal Social Democrats were Károly Peyer and Anna Kéthly. Árpád Szakasits, editor in chief of the party daily, *Népszava* (People's Voice), also belonged to the party elite. The National Peasant Party was established by left-wing populist intellectuals in 1939, with few members. The Civic Democrats drew members from the relatively ideology-free urban middle classes, who wanted simply to restore order and rebuild Hungary and, consequently, had never played a significant role in politics.

The Red Army remained master of life and death in Hungary. Stalin hesitated to include Hungary in the Soviet empire, but he had the means to do so. There were hundreds of thousands of Hungarian POWs in the Soviet Union, and their return depended on the behavior of the Hungarians at home. The amount of war reparations was not determined immediately, so Stalin could increase his demands as he pleased. For the time being, however, he settled for favorable trade deals and the establishment of joint Soviet-Hungarian companies (in air transport, shipping, and bauxite and oil production, among others). In this manner, long before Soviet political control over Hungary was established, Moscow had already achieved a stranglehold on the economy of the country.

Noncommunist politicians expected that the Red Army would leave Hungary soon, so that they could create a democratic country in the shadow of Stalin's Soviet Russia. But their plans were endangered as soon as the political police, controlled by Rákosi, was organized in 1945. It proved to be a useful instrument, as it was staffed by thugs, former members of the Arrow Cross, and vengeful radicals, who cared little about laws, human rights, or even elementary rules of decency.

Genuinely free elections took place in late 1945, with the Communists receiving 17 percent, and the Smallholders 57 percent of the vote after a clean but heated campaign. Social Democrats outpolled the Communists by 0.5 percent. A coalition government was created, in which the ministerial posts were to be distributed according to the strength of each participating party. This served Communists well, for they were able to obtain important cabinet posts. Inexperienced and naive Smallholder leaders were unable to stand up to the pressure of the Communists and their allies, which included the Red Army. In response to physical violence, expulsion of deputies, Communist-organized mass demonstrations, and strikes, the Smallholders, winners of the elections, caved in. The political police now had a free hand to arrest "enemies of the state." Social Democrats, who showed greater resistance to Rákosi, became his next target.

Lászlo Rájk was an interesting figure in the struggle for power. Not a Muscovite, he fought in the Spanish Civil War and ended up in a French detention camp. While working with the antifascist underground in Hungary, he was arrested, and his life was saved by his brother, who was a member of the Arrow Cross "cabinet" after 15 October 1944. Rájk was a convinced Marxist and an anti-Semite, for which he earned the special respect of Communists who had formerly been Arrow Cross members. By 1946, the police apparatus was under Rájk's control, who reported directly to Rákosi, not to the prime minister. The police openly participated in terror campaigns against the opponents of the leftist bloc.

By 1947, Stalin had decided that all Eastern European states would be included in the Soviet empire. By then the struggle for power was over, and Rákosi and his Muscovite collaborators were rulers of Hungary in all but name. The prime minister, Ferenc Nagy, was attacked for "harboring criminal elements." In May 1947, while vacationing in Switzerland, he was told that he was under investigation for alleged activities against the republic. Nagy agreed to resign on condition that his four-year-old son be permitted to join him in exile.

New elections were held in August 1947. This time, Communists were not leaving anything to chance: their voters received absentee ballots (the so-called blue slips) and thousands of them roamed the country—in Red Army trucks—voting at every conceivable election booth. Even after this, the Communists received only 22 percent of the total vote. But this made them the largest single party, since the rest of the votes were fragmented. Rákosi could now "legally" take power. Soviet troops were to stay "temporarily" in Hungary, ostensibly to secure communications with forces stationed in Austria. In reality they were to secure Communist control of Hungary. Opposition parties were now banned. In 1948 Rákosi forced a fusion between the Social Democrats and Communists. The takeover was completed, and the Stalinist phase of Hungarian history began.

The politics of terror did not end. The Hungarian branch of the Soviet NKVD (the AVO-AVH) became a huge and busy apparatus, the real executive organ in Hungary. In 1948 the target was the Roman Catholic Church, closely followed by Rajk himself. A show trial was ordered by Stalin, and Rákosi delivered. Rajk and several other top Communist officials were tried in September 1949, after lengthy torture. They confessed to every false charge leveled against them, to no avail. Six of them, including Rajk, were hanged on 15 October. Other show trials followed.

A new Stalinist constitution went into effect on 20 August 1949 (also, ironically, St. István's Day, honoring the nation's founder). The document named the Communist Party as the leading force in the process of building socialism in Hungary. New laws were enacted, giving the ÁVO a free hand against political opposition.

The system imposed on Hungary was a dictatorship that recognized no legality except its own. This was real Soviet-style socialism. Rákosi developed his own personality cult. He was, indeed, the "best pupil of comrade Stalin," as he liked to be called. No other Eastern European communist leader was trusted more by the Soviet dictator, and no other leader was so willing to execute and overfulfill Stalin's orders.

Rákosi and the members of his ruling circle—Ernő Gerő, József Révai, Mihály Farkas—were devoted citizens of the Soviet Union, and their rule in Hungary was based on brute force alone. Between 1949 and 1953, well over 750,000 people out of a population of 10 million were investigated, and 150,000 ended up in prison or in labor camps. Two thousand were executed on trumped-up charges, and thousands were maimed by sadistic investigators. Even high Party officials were not safe: Sándor Zöld, Rajk's successor in the interior ministry, was berated by Rákosi for having the wrong type of friends. Fearing arrest, Zöld killed his wife and children and committed suicide. János Kádár, György Marosán, and countless others were also thrown into jail.

The Hungarian educational system was ordered to create a "new socialist man." From kindergarten to the universities, Marxism became the guiding light. Compulsory Russian language study, together with the study of the falsified history of the Soviet Communist Party, was introduced. With all this, mind-killing boredom and confusion became a matter of everyday life. At the same time, education was made widely available, and illiteracy all but disappeared. Engineering and technological subjects received high priority, along with Marxist studies, while learning about Hungarian history was deemphasized. Children with the "wrong" background were excluded from the universities, while offspring of Party officials received preference in admissions, regardless of their talents. This was affirmative action, Stalinist style.

No questioning was tolerated. Listening to the broadcasts of Radio Free Europe or the BBC could land one in jail or in a labor camp. Hungarian literature consisted mainly of anti-Western propaganda. Many Soviet books were translated into Hungarian, mostly of the "socialist realist" variety. The Russian classics were neglected, but thousands of copies of Lenin's and Stalin's works were distributed to libraries and Party offices.

Communists may have won the power struggle and accomplished a cultural coup, but the ruthlessness of leaders and their openly Russifying policies left the people cynical and demoralized. During the 1940s, the peasants were forced into Soviet-style collectives. A series of Five-Year Plans intended to create a "country of steel and iron" out of Hungary, calling for the constant raising of work norms and a hidden but obvious lowering of wages. Emphasis was placed on heavy industry, with consumer needs neglected.

Only by maintaining a constant level of terror could such a system survive. But the Party, quite capable of creating fear, was unable to earn respect for itself. Similarly, there was no respect for law. Morality changed; stealing, cheating, and petty pilfering were no longer considered wrong. "The factory is yours," the simple worker said; "take home as much of it as you can." The situation was no different in the rural areas. There was a huge and widening discrepancy between ideology and reality. Living standards plummeted at a time when the Party preached prosperity.

By 1953, it became obvious that the Party and its ideology served nothing but the goals of Soviet imperialism. The pitiless servility and self-criticism it demanded were rooted in human weakness and fear. When Stalin died, he was replaced by a collective leadership dominated by Malenkov and Khrushchev. The new leaders soon expressed dissatisfaction with the Hungarian situation. In a stormy meeting in Moscow they collectively berated Rákosi and ordered the reorganization of the leadership of the Hungarian Workers Party. Subsequently, Imre Nagy became prime minister, but Rákosi retained the position of first secretary of the Hungarian Workers Party. Révai and Farkas were removed from the political committee. It seemed to all but Rákosi that his policies were repudiated. But the "best pupil of Stalin" did not give up easily. He was convinced that, given time, the new Soviet leaders would recognize his indispensability.

The new prime minister, Imre Nagy, was also a faithful Muscovite. He was not interested in airing the guilty secrets of Rákosi's rule. The major difference between him and his predecessor was that Nagy did not want power for its own sake. He wanted to use his new authority to improve the lives of Hungarians. He naively believed that good relations with Moscow could be maintained without the exploitation of Hungary.

Nagy proclaimed that the forced industrialization of Hungary could no longer be maintained. He hoped that the regime of socialism could gain public support if living standards were improved quickly. He knew he could count on at least some of the Soviet leaders for support.

But the Soviet leadership was divided. Some members supported Nagy, others still favored Rákosi. The Hungarian Party apparat, fearful for its privileges, stood solidly behind Rákosi. Nagy failed to obtain majority support in the Central Committee of his party. The government, tied to the Party apparat by thousands of threads, followed the new prime minister only reluctantly.

In June 1953 the new course proposed by Imre Nagy was reluctantly accepted by parliament. Nagy wanted to reduce support for heavy industry and ordered increased support for the consumer goods industry instead. He permitted the dissolution of collectives if their membership so desired. He closed the concentration camps and ordered the rehabilitation of the unjustly accused. But Nagy was stymied everywhere. The subcommittee of the political committee charged with supervising economic development was headed by Ernő Gerő. Rákosi was the chairman of another subcommittee charged with the rehabilitation of the unjustly accused. They did everything to sabotage Nagy's instructions.

In the meantime, the country breathed a sigh of relief. Collective farms dissolved themselves, their members taking with them their tools and animals. Soon the peasants produced more foodstuffs than before. The end of the persecution of better-off peasants, the so-called kulaks, created a more relaxed atmosphere in the villages. The service industry began to recover from the paralysis of state-imposed restrictions. But the ministry of heavy industry stymied Nagy's plans for reduced investments.

In May 1954 the third congress of the Hungarian Communist Party was held. Rákosi was the keynote speaker and he delivered a vicious attack against Imre Nagy's policies. Nagy, in order to counter the apparat, began to organize a Patriotic People's Front. He thought that this mass multiparty organization would unite the people. He proclaimed that the Party alone could not build socialism. He formulated the thesis later expropriated by his executioner, János Kádár, that "those who are not against us are with us."

In January 1955 the long simmering feud within the Soviet Politburo over policy in Hungary came to the fore. At this time a Hungarian government delegation was visiting Moscow and had to listen to criticism by every member of that august body. In February Imre Nagy suffered a mild heart attack. While he was recuperating, Rákosi made his move. On 14 April 1955, the political committee of the Hungarian Workers Party relieved Imre Nagy of all his Party functions and expelled him from the Central Committee. Rákosi had won a meaningless victory. Although Soviet leaders would not permit him to reinstitute terror, he partially revived previous economic policies and threatened the peasants with recollectivization.

Former Party members who had been jailed began to reappear. János Kádár, Géza Losonczy, Sándor Haraszti, to mention only a few, were walking the streets of Budapest once again and spoke to their friends about the horrors to which they had been subjected. The people, especially Hungary's young, committed writers, listened to their stories with feelings of betrayal. Then the question was raised: "What happened to those who disappeared forever? Why did they have to die?" By the summer of 1956, everyone in Hungary knew that the victims of the show trials were innocent of the crimes of which they were accused. Everyone recalled the announcements of Rákosi as he "discovered" ever newer "conspiracies" against socialism, and personally "unmasked Rajk and his gang." Party propagandists desperately tried to place the blame on Gábor Péter, former head of the ÁVO-ÁVH, now himself in jail. Rákosi continued to boast, but to no avail. There was a general feeling of revulsion toward the dictator.

In 1955 the Austrian State Treaty was signed, and Soviet troops were withdrawn from that fortunate country. Soon

the great powers agreed in Geneva to tone down Cold War rhetoric. Soviet leaders then decided to patch up their feud with Yugoslavia, and Tito's price was to end Rákosi's rule in Hungary.

The Hungarian Workers Party was now in shambles. Party members no longer believed their leaders. On the other hand, the Muscovites and their protégés still tried to hold onto power. Khrushchev and Bulganin visited Tito in Belgrade, but Rákosi refused to make peace with the Yugoslavs.

On 11 May 1955, leaders of Moscow's European satellites signed the Warsaw Pact treaty. This encouraged Rákosi, since the agreement's purpose was the legalization of Soviet occupation in each Eastern European state. In June 1956 the Soviet leaders finally gave in to Tito and removed Rákosi from the Hungarian Party and government. He retired to the Soviet Union, where he lived for the rest of his life. However, he was replaced by Ernő Gerő, who was closely identified with Rákosi's repudiated policies. This should not have surprised anyone: Soviet leaders counted on Gerő to keep Hungary toeing the line.

Then, in October, workers in Poland began striking for better living conditions. This left a lasting impression on the Hungarians, who had always considered the Poles as their friends. On 6 October the Hungarian Workers Party reburied a posthumously rehabilitated Lászlo Rájk. Two hundred thousand people silently marched by his coffin. On 23 October, university students and workers demonstrated on the streets of Budapest, demanding reform. They toppled Stalin's giant statue and demanded that their reform proposal be aired by Budapest radio. The ÁVO-ÁVH opened fire on the demonstrators. The revolution was on.

The Hungarian Revolution—ten days that shook the Kremlin—was one of the most written-about events of the Cold War. Shooting was initiated by the security organs, and Soviet forces, "temporarily stationed in Hungary," were already moving on Budapest. But their intervention was halfhearted and proved to be a mistake. Soviet tanks and armored vehicles were fired on by the revolutionaries, causing severe casualties. The rebels got arms from the Hungarian army whose soldiers were supposed to disperse them. Workers in the armament factories around Budapest also delivered arms. The fighting continued sporadically until 25 October. On that day, a huge crowd gathered in front of parliament, asking for Imre Nagy to address them. They were fired on by hidden ÁVH troops from across the square. Hundreds were killed, and hundreds more wounded. The next day revolutionaries, seeking revenge, besieged the headquarters of the Hungarian Workers Party and killed several of the defending ÁVH troops. Given the butchery committed by the secret police, there were remarkably few incidents of this sort during the revolution.

By 28 October, the Hungarian revolutionaries were victorious. The Soviet government withdrew its troops from

Mátyás Rákosi on trial in 1925. After becoming a communist in a World War I prisoner-of-war camp, he was sent back to Hungary to play a leading role in the short-lived Hungarian Soviet Republic of 1919. He was arrested for organizing the underground party and spent sixteen years in prison. He led the 1948 communist takeover of Hungary and ruled as a dictator. The Post-Stalin Thaw and the 1956 revolution removed him from power, and he died in the Soviet Union. (Bettmann/Corbis)

Budapest and began negotiations for the complete withdrawal of the Red Army. A government headed by Imre Nagy was formed; he was trusted by most of the population to lead the country toward democracy. His government included János Kádár and Colonel Pál Maléter, one of the rebel leaders.

On 1 November, however, some prominent Communists, including János Kádár and Ferenc Münnich, disappeared. They left Budapest in Soviet vehicles. By then, fresh Soviet divisions, 200,000 Soviet soldiers and 2,000 heavy tanks and fighting vehicles, were in Hungary. On 4 November, a Sunday, while a Hungarian delegation was negotiating with Soviet representatives about the troop withdrawal, they were treacherously arrested by NKVD operatives led by General Serov. A concerted attack was made on Budapest and other centers of revolutionary activity. In desperation, the Nagy government declared Hungary's withdrawal from the Warsaw Pact and asked for help from the United Nations.

The Soviet attack was swift and overwhelming. It was aided indirectly by the preoccupation of Western powers with the Suez crisis and by the impending U.S. election. The Nagy government eventually took asylum in the Yugoslav embassy, trusting in Tito's sympathy for Hungary's independent course. But the Yugoslav leader betrayed the Hungarians.

Nagy and his entourage were forced to leave the Yugoslav embassy and were promptly arrested by NKVD troops. They were deported to Romania. For more than a year Hungary's legal prime minister was held prisoner in a foreign country. On 16 June 1958, after a short, closed trial, he and several members of his government were executed and secretly buried in unmarked graves.

Before the end of 1956, 200,000 Hungarians had fled to the West. János Kádár's betrayal of Imre Nagy and the brutal revenge that his police force exacted from the population in his name made him the most hated person in Hungary. His counterrevolutionary terror lasted well into the early 1960s. The atrocities and judicial murders were no less brutal and vicious than those in Rákosi's time.

By the mid-1960s, however, it was obvious that the reorganized Communist Party, now renamed the Hungarian Socialist Workers Party (MszMP), attracted only the most cynical opportunists. Marxist-Leninist ideology was but a dogma in which few believed. By 1968 the regime had grown desperate for legitimacy. It introduced a set of reforms (NEM) intended to stimulate the economy. These reforms were based on modified plans originally introduced by Imre

Nagy in his first premiership in 1954. They established the rights of individual peasant proprietors to cultivate private plots of land as part of their share in their collectives. They were permitted to sell their products on the open market at uncontrolled prices. This way the peasantry's unmitigated hatred for the collectives (reestablished in 1959–1961) was somewhat eased. The prices of essential consumer goods (such as bread, sugar, flour, and meat) were still subsidized and regulated. The state retained its monopoly on foreign trade, but controls over internal trade were relaxed.

The reforms brought about unprecedented economic activity. They also brought a certain measure of prosperity for Hungary. The stores soon filled up with long-missed consumer goods, and the population began to recover from the misery to which it had been subjected since 1947. Commerce with the Soviet Union and the people's democracies, which brought in automobiles and other industrial products such as freezers and television sets, began to expand. Hungarians were increasingly permitted to visit relatives and friends abroad, and a trickle of former refugees, now citizens of their adopted countries, began visiting Hungary. The press was permitted to criticize lower Party officials for misusing their power. But there were also taboos that could not be touched: no one was permitted to question Soviet-Hungarian relations, and the revolution of 1956 could be discussed only in derogatory terms.

In August 1968 Hungary participated in the suppression of the Prague Spring, which seemed to confirm the Kádár line, namely, that no independent course was possible for the Eastern European Soviet satellites. In time, however, Kádár took a further step; he coopted many Hungarian intellectuals if they were willing to abide by his rules. These rules were determined by subjects that were supported, others that were tolerated, and again others that were forbidden. Those who refused to cooperate had to keep silent. But the Kádár regime needed experts in technical fields and had to support talented individuals in these areas regardless of their political opinions. Thus Kádár adopted the slogan, originally coined by Imre Nagy, that "those who are not against us are with us." Nevertheless, this was not a regime moving toward democracy. Kádár remained an old-fashioned dictator whose word was final.

All in all, however, Hungarians began slowly to prosper. The country was becoming, as the popular saying went, "the happiest barrack in the socialist camp." Kádár was gradually accepted as the architect of a better life. This was the basis of his own *Ausgleich* (compromise); as long as life continued to improve and forbidden subjects were left alone, his system was accepted. The populations of other Eastern European socialist countries watched Hungary with envy. Soon Western reporters were claiming that Kádár could win even in a free election, but of course their assertion was never tested.

In 1972 there was a slowdown in the reform process. Further reforms were stopped or were even reversed. It seems that Kádár went too far. There were complaints by hardliners that the peasants were too greedy and that they earned more than industrial workers in whose name socialism was being built. Instead of paying more to workers, Kádár decided to tighten the screws on the peasants. The new policy, however, backfired. Food production slowed down, and there were empty shelves in the stores, forcing Kádár to hastily reverse course. Then the oil crisis of 1973 hit Hungary hard. Although the Soviet Union continued to supply Hungary with oil and natural gas at somewhat below world market prices, the subsequent reordering of the world market created great difficulties. The opening to the West that Kádár attempted faced grave difficulties. Hungary's industry was not modern enough to compete. The volume of exports declined while production costs continued to increase. Yet Hungary was able to obtain loans from Western banks, and these loans eventually reached US$20 billion. Kádár's greatest mistake was that he did not insist on using the loans for the modernization of Hungary's industry. Instead, the loans were used for subsidizing products that otherwise could not be sold, especially for products delivered to the Soviet Union. Therefore Hungary's loans were actually helping the Brezhnev leadership postpone *their* economic reform program. The repayment and interest charges on the Western loans soon became a real burden for Hungary. Kádár tried to hide the fact from the population, but by the mid-1980s, his compromise had begun to unravel.

The ascendance of Mikhail Gorbachev to power signaled a real turning point. Eastern European communist leaders learned soon enough that they could no longer count on Soviet tanks, nor could they call in the KGB to help out in case of difficulties. At the same time, intellectuals were emboldened to demand greater freedom of expression, and dissent increased. Suddenly history became a very important subject. Its practitioners, both amateurs and professionals, increasingly resorted to underground publications to inform their readers about an alternative to "official" Marxist-Leninist history. This was particularly damaging in Kádár's Hungary, where the true history of the 1956 revolution remained a sore point in the nation's memory. The Marxist-Leninist interpretation of history, long questioned, lost its last vestiges of credibility.

Kádár was becoming old and feeble, yet he clung to power. Perhaps he believed that he alone knew how to deal with the "Soviet comrades." But younger members of his party's central committee were becoming restless. In March 1988, at a meeting of the political committee of the HSWP, János Kádár was relieved of his post as first secretary. The Kádár era was over. Károly Grósz, a gray apparatchik, became his successor, and Rezső Nyers, Imre Pozsgay, and others took the reins of the Party into their hands.

The Communist Party created by Kádár could not survive his demise. Dissenting voices could be heard even at the highest levels of the Party. Imre Pozsgay broke with his colleagues first. On the basis of a study concluded by members of the Hungarian Academy of Sciences, he proclaimed that the 1956 "events" were a popular uprising against abuses by the Party. Suddenly he was not alone, and the hardliners were in a minority. In May 1989 Kádár was retired. In June, Kádár's victims were reburied in the presence of hundreds of thousands of mourners. On the day Imre Nagy was rehabilitated, Kádár died, a lonely man, not hated but considered irrelevant.

Miklós Németh, a young member of the Party's political committee, formed a new government with dynamic young supporters. Németh soon declared the complete separation of the government from the Party. The new minister of education, Ferenc Glatz, a historian, abolished the compulsory teaching of the Russian language and Marxism in the schools. Gyula Horn, the minister of foreign affairs, began to forge an independent foreign policy for the Hungarian state. In the summer of 1989 President George Bush visited Hungary and delivered a rousing speech at the Economics University (formerly named for Karl Marx).

In October the last congress of the Hungarian Socialist Workers Party was held. It was dominated by the reformers, who beat back several attempts by hardliners demanding "administrative measures" to restore the Party to power. In the end, the Party declared itself dissolved. Two successors emerged, one led by the reformers who took the name Hungarian Socialist Party, and the other the old MszMP. Both parties proved irrelevant in the new order. By then a multiparty system was rising in Hungary.

In the first free elections held since 1945, in June 1990, a new party called the Hungarian Democratic Forum emerged as the strongest, with 24 percent of the total votes. Its closest rival, the left-of-center Association of Free Democrats (SzDSz) gained 21 percent. The revived Smallholders Party and a new Christian Democratic Party gained 11 percent and 7 percent respectively. The Socialist Party received 11 percent, and the most dynamic party, the Alliance of Young Democrats, received 10 percent of the votes.

The Németh government had already committed itself to the democratic reorganization of Hungarian society. It opened the border with Austria to a flood of East German refugees. This indirectly contributed to the collapse of the Honecker regime in East Germany. Soon Czechoslovakia followed with its "Velvet Revolution," and the Eastern European segment of the Soviet empire dissolved.

In July 1990 the freely elected Hungarian parliament approved the formation of a coalition government headed by József Antall from the Hungarian Democratic Forum. Negotiations with the Soviet government were already under way for the complete removal of Soviet troops from Hungary. An agreement signed in March 1990 stipulated that all Soviet personnel and military equipment had to leave by July 1991.

The Warsaw Pact dissolved in March 1991. The Antall government rapidly moved toward the establishment of an economic system based on the private ownership of property. The last vestiges of communist rule were being removed; the media were now completely free and often criticized the government with great enthusiasm.

During the 1990s, genuinely autonomous associations of a newly forming civil society once again began to emerge. By 1993, more than 10,000 new voluntary associations had been registered, ranging from the Chamber of Society and the Alliance of Social Associations to such special-interest bodies as the Chamber of Retired Persons, the Associations of the Virgin Mary, the Association of Friends of the Arts, or the Association of Danubian Fishermen.

Neither democracy nor civil society can exist without each other, and this is why the strengthening of civil society is such an important phenomenon in the current history of the Hungarian nation. This development promises to bring about the renewal of Hungarian culture as well as the democratization of society. The flowering of civil society is one of the best guards to block the rise of authoritarian trends. This is true even when the number of such associations appears to be excessive, or when their aims and interests are too varied or deviate too far from society's general mores. The teaching of tolerance and ethical behavior will have to be included in the curricula of all schools. Only such a nationwide effort can lead to success and provide for a favorable environment for the full development of democratic institutions.

Hungarian democracy could be an achieved fact within a very short time. If the problems of the economy created by nearly four decades of mismanagement can be solved, Hungary should enter a new era of prosperity the likes of which it has not recently experienced. This may all end in a debacle, however; as early as 1991, old "values" emerged in Hungary, among them nationalism, anti-Semitism, and impatience with dissenting opinions. Unless strong efforts are made to avoid the pitfalls represented by such trends, Hungary may find itself in a precarious position once again.

CULTURAL DEVELOPMENT

Perhaps nothing has had as great an influence on the development of Hungarian culture as its transitory, borderline nature, rooted in Hungary's location and reinforced by recurring clashes between civilizations. When Magyars first settled in the Carpathian Basin some 1,100 years ago, they brought with them a strong sense of ethnic identity and a set of cultural values. In time, their national identity and their culture were forced to evolve to accommodate (more or less successfully) the diverse coinhabiting ethnic groups. One might ask, in light of the above, how were Hungarians able to preserve their culture, unique language, and ethnic characteristics? Other peoples in the region—Huns, Avars, Yazygs, Cumans, or for that matter Romans—simply disappeared, and their cultures also disappeared or were swallowed up by latecomers.

Around the year 1000, the newly created kingdom of Hungary was accepted into the Christian community of European nation-states; thus it became a border outpost of Christianity. The freshly (and not all that easily) converted Hungarians became soldiers in the service of a militant faith. Along with peoples of the Balkan peninsula, the Bohemian Czechs, the Poles, and the Lithuanians (Christianized a few centuries later), they became guardians protecting the eastern edge of feudal Europe against the continuous incursion of aggressive newcomers from the East.

There was much to learn. Beyond the strict, often harsh discipline of Christianity, which prescribed building churches, supporting a clerical hierarchy through taxes, and abandoning old ways, the move away from nomadic pastoralism called for permanent settlements, adopting agriculture as a primary support of life, and accepting centralized authority, giving up the rough individual "freedom and equality" of their former tribal existence. Slavery, for example, was not unknown in nomadic societies, but it was by and large limited to captive outsiders or individuals punished for transgressions. The overwhelming majority of Magyars at the time of the settling were free and equal individuals, obeying their tribal chiefs out of personal loyalty, which was earned through a combination of individual virtue, leadership abilities, and success. The new ways called for the establishment of dynasties (houses), whose members succeeded to the throne in accordance with rigid rules and whose all-encompassing authority was supported not only by secular force but also by the spiritual authority of the Catholic Church. Refusing to obey a royal command was not only a severely punishable crime, it also became a sin, a transgression against the divinely sanctioned order of the world, condemning the offender to eternal damnation.

The "new ways" were introduced into newly Christianized Hungary by representatives sent from neighboring countries. These were realms in which both Christianity and the prevailing social order of Europe, feudalism, were firmly established. Clergymen, courtiers, and knights arrived from mostly German-speaking lands immediately west of Hungary.

Hungary's rulers were relentless in enforcing the new order, and they succeeded in creating a new European nation out of their reluctant subjects. Peace, stability, and order resulted from the adoption of the new ways. At the same time, there arose a sense of losing individual freedoms and ethnic identity, and this vague but persistent dissatisfaction continued to run as a thread through Hungarian history.

Two elements of this attitude are especially worth mentioning. The old ways were held to be worth preserving and in order to support this position, were presented in an unrealistic, romanticized manner. It was asserted that the pre-Christian, pre-European ways of life—pseudonomadic pastoralism, combined with a raid-and-trade attitude toward their neighbors—suited the Hungarians naturally, served them well and brought them victories, security, and success. Supporters of this view, of course, ignored the disastrous defeats suffered by Hungarian raiders in the mid-tenth century and the tightening ring of hostile alliances surrounding the Carpathian Basin. Sooner or later, these factors would have forced Hungarians to choose between retreating to the steppe lands or being militarily eliminated.

The new ways were also opposed because they were introduced and often enforced by foreigners, whom Hungarians, having extensive experience with duplicity and betrayal during their long migration through Central Eurasia, never came fully to trust. This attitude may have originated from the archetypal suspicion that the proselytizer-civilizer (or liberator) has ulterior motives, wishing to tame or even subjugate the unsuspecting object of his attention. In fact, there were to be numerous episodes throughout history when such antiforeign suspicion appeared to be justified. The territory of Hungary came to be a desirable piece of real estate and figured prominently in the expansionist designs of neighbors.

This is not to suggest that Hungary ever became inhospitable. Nor could Magyars afford to become hostile to non-Magyars. From its beginnings, the country's population was marked by ethnic and linguistic (and later denominational) diversity, which was welcomed by rulers and subjects alike. The first king, István, married a Bavarian princess, Gizella, who brought with her a retinue of "Germans." The practice was followed throughout the rule of the Árpád dynasty, and the influx of foreigners swelled when rulers invited settlers, especially Saxons from German lands, to repopulate regions devastated by the 1241 Mongol devastation. Throughout these centuries, the number of original Slavic and Romanian coinhabitants grew and was augmented by new immigrants, attracted by the wealth and hospitality of the Hungarian land.

The nation's culture was beginning to show signs of division along a different line. While the rural majority lived their lives in the traditional way, altered only superficially by the regulations imposed by the Catholic Church and their lords, the ruling elite pursued a lifestyle and accepted standards of behavior that were Western European and communicated in Latin. Until the sixteenth century, we know of only a few fragments of texts that were written in the Hungarian language. Perhaps the best known among them is a bilingual Latin-Hungarian funeral oration from the early thirteenth century.

Education was under the control of the Catholic Church and was limited to learning rudimentary Latin and a modicum of theological, rhetorical, and musical skills needed to perform Christian services. Before the eighteenth century, attempts to establish full-fledged universities on Hungarian soil proved to be short-lived. Learning beyond the middle grades had to be sought abroad, at Italian, French, or German universities, where secular, humanist approaches were beginning to make inroads. Graduates of these universities were the pioneers of literary and scientific activities in Hungarian. They were also the first secular men (less frequently women) of letters. Going beyond the limits of their religious education, many of them became wandering intellectuals in the service of lords or rulers, since there was no literate public to support their literary activities. Among these freelancers, Sebestyén Tinódi, the lutanist chronicler of the sixteenth-century anti-Ottoman struggle, stands out. The outstanding men of letters in late Renaissance Hungary, however, were of more privileged status: Janus Pannonius, the learned humanist cleric and one of King Mátyás's closest advisers, who recorded his impressions in witty Latin poetry; Bálint Balassi, the dispossessed aristocrat who used Hungarian to craft lyrical poems about his amorous attachments and his soldiering, which took him to a battlefield death; and Miklós Zrinyi, the *ban* of Croatia and daring military commander of the southern borderlands, who penned epics dedicated to the nation's defense and sharply worded prose on public affairs.

The teachings of the Protestant reformers, especially Calvin, reached Hungary in the middle of the sixteenth century and spread rapidly. There was no need to be a Roman Catholic to be distinguished from the invading Muslim Turks (who were generally tolerant of nonbelievers; nonbelievers, after all, were the *reaya* [flock] whose taxes maintained the sultan's magnificence and power). During the sixteenth and seventeenth centuries, Calvinism came to be seen as the true Hungarian religion, while Roman

Catholicism increasingly was identified with the Habsburg Empire. The majority of Hungarians became Calvinists, which meant being both a non-Muslim and an opponent of the Austrian-German Habsburgs at the same time. Protestant organizations also took over some of the culture-preserving functions of the Roman Catholic Church. Not surprisingly, successive Habsburg governments considered Calvinist Hungarians especially rebellious and independent minded.

The Protestant Reformation also energized Hungarian writing. Beginning with the translation of the Bible (first accomplished by the Calvinist Gáspár Heltai in 1551, and soon to be followed by Catholic translations) and religious texts, professional writers of hymns, homilies, and religious propaganda appeared among Catholics as well as among followers of the new denominations. The spreading practice of book printing (the first application of which was a short-lived shop set up in Buda in 1472) brought literacy to more and more commoners, though schooling was still far from universal.

The virtual state of war, imposed by the Turkish military presence as much as by the struggle between the various domestic factions, slowed Hungary's cultural progress. It was only after the Ottoman occupation ended in 1699, and decades later, when the anti-Habsburg *kuruc* struggles came to an end, that Hungarians could consider rebuilding and reorganizing their country. The independence campaigns led by Thököly and Rákóczi produced a large amount of rebellious songs, a few issues of a periodical publication, and touching philosophical memoirs by the exiled leaders.

There was, however, a new threat represented by the Habsburg court's announced aim to remake Hungarians into German-speaking, Catholic, and obedient subjects. The Catholic Counter-Reformation succeeded to a great extent, and the resources of the devastated country just as quickly came under the control of Habsburg or pro-Habsburg aristocrats. Indeed, much of seventeenth- and eighteenth-century Hungary's culture—from postsecondary education to scientific work and theater—was shaped on the baroque Austrian-German model. During the heated seventeenth-century struggle between Protestants and Catholics, many writers devoted their talent to producing religious texts, supporting their denomination and attacking the opposition. Among the best known of these writers was Péter Pázmány, who was archbishop of Esztergom, a patron of Hungarian education, and a particularly effective polemicist.

Transylvania, Hungary's easternmost province, escaped direct Ottoman occupation by virtue of its location and skillful diplomats. As a consequence, it did not suffer huge population losses, and it remained a relatively wealthy, orderly, and even powerful political entity. It preserved some "ancient freedoms" for many of its citizens, wise and enlightened government practices, a relatively peaceful coexistence among its ethnic groups, and a considerable degree of religious tolerance in an increasingly intolerant region. As a result, Transylvania became a bridge between the various neighboring cultures, a haven for refugees, and a place where such cultural activities as book printing, the funding of schools, scientific research, and even artistic, literary, and musical undertakings were favored and patronized. This golden age of Transylvania nurtured multiethnic urban centers, accomplished scientists, and a number of internationally recognized printers.

After surviving between "two pagans" (as a contemporary Hungarian writer described the Ottoman and Habsburg threats to his nation's independence), Hungarians stubbornly resisted all Habsburg attempts to turn them into German speakers. At times, during the kuruc campaigns of Thököly and Rákóczi, they even accepted Turkish alliance to frustrate Vienna's imperial plans. There was a rationale behind such an "anti-European" behavior. While the Ottoman occupation was exploitative and often brutal, turning all non-Muslims into second-class citizens, it interfered little with the Hungarians' way of community life, their religious practices, or their cultural activities. Conversion to Islam was rarely attempted by force, nor were Hungarians required to learn to speak Turkish. As for the Habsburgs, their claim to the Hungarian throne was legally sound, and the role of Habsburg-led Christian armies in the country's liberation was undeniable. It was also recognized by many Hungarians that Habsburg efforts to modernize and "civilize" Hungary had the potential to improve the everyday life of its population. In spite of this, the growing Austrian influence on Hungarian life, bolstered by the growing Habsburg military-administrative control, soon came to be considered as far more dangerous to national identity than the Ottoman threat ever was.

Recurring struggles against armed Hungarian insurgents and the stubborn legalistic obstructions raised by the Hungarian county administrations prompted the Viennese court to moderate its goal of Germanizing the country, choosing instead to enlist the aristocracy in its empire building. With the court's promise to respect the nation's "time-honored" institutions, the lords of Hungary were allowed to maintain their feudal practices (including serfdom, which kept the rural poor tied to the land and subject to harsh exploitation) in exchange for which they were expected to become loyal to the ruling house. Since many of the aristocrats, not all of whom were ethnic Magyars, benefited from the redistribution of properties after the Turks were expelled, the bargain was not difficult to make. There were even certain elements of this cooperation that ended up benefiting the Hungarian language and literature. Empress Maria Theresa gathered a number of young nobles from Hungary into a guard unit. The intent was to civilize and tame these young men by exposing them to the cosmopolitan life of the court, but a number of these former guards decided to transplant what they had learned in Vienna to their native soil. Their writings may have been imitative of baroque sentimentality, but they wrote the first novels, dramas, and scientific books in Hungarian.

The bargain prevailed until the 1780s, when the Habsburg court, motivated by a combination of rationalist governing principles and absolutist tenets of royal authority, mounted an attack against the Hungarian language and culture. This was the wrong time to irritate the already suspicious Magyars and widen the rift between them and Vienna. Nurtured by the ideas of the Enlightenment and

Mathematics and Sciences

Scholarly research and discovery have a long tradition in Hungary that began at the end of the fifteenth century and gained worldwide recognition starting in the eighteenth century. The Bolyais, Farkas Bolyai (1775–1856) and later his son, János Bolyai (1802–1860), pioneers of non-Euclidean geometry, achieved international recognition for their work. Hungarians assumed an increasingly active role in scientific and intellectual life.

Loránd Eötvös (1848–1919), after whom the University of Budapest is named, was the greatest Hungarian scientist of theoretical and experimental physics. Eötvös's research resulted in the so-called Eötvös Law (1866), which Albert Einstein considered a pillar of his theory of relativity. For many years Eötvös studied the problem of gravity and designed the world-renowned Eötvös torsion balance (pendulum), which is still used all over the world for gravity measurements and for geophysical explorations.

In the late nineteenth century two Hungarian schools of mathematics gained prominence: one group worked at the Technical University of Budapest, another at the University of Kolozsvár-Cluj (which later moved to Szeged). Perhaps the best-known representative of this generation was János (von) Neumann (1903–1957), a 1927 Budapest Ph.D. who later joined Princeton's Institute for Advanced Studies. He developed the binary code, the basic element of modern computer operations, pioneered research in quantum mechanics, and participated in work leading to the development of the atomic bomb. Others in the same field included John G. Kemény (1926–1994), a mathematician on the Manhattan Project, one of Einstein's assistants, and codeveloper of BASIC computer language, and Pál Erdős (1913–1997), whose interest was focused on the theory of numbers and the calculus of probabilities.

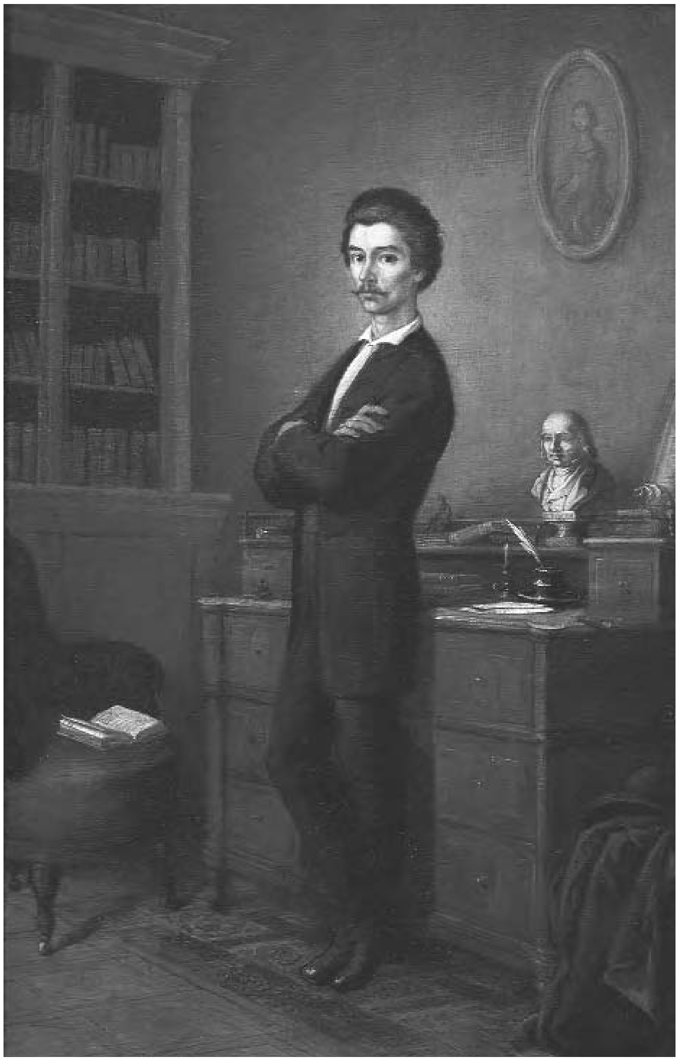
Three Hungarian-born physicists, Edward Teller, Leó Szilárd, and Eugene P. Wigner, worked closely with Enrico Fermi. The four of them persuaded Albert Einstein to write his historic letter in 1939 to President Franklin Roosevelt that led to the start of the Manhattan Project, making them the primary architects of the atomic age. Teller was later instrumental in the development of the hydrogen bomb, submarine-launched rockets, and the conceptualization of the Star Wars missile defense system, while Szilárd became an advocate for the peaceful use of atomic energy and the international control of nuclear weapons, efforts for which he received the Atoms for Peace Award in 1959.

romanticism, a new political attitude—modern political nationalism—appeared on the scene. The 1784 language ordinance of Emperor Joseph II ordered that all official business in the Habsburg Empire be conducted in the German language. There were good reasons for issuing this edict: the unification and modernization of the multilingual empire and the need to rationalize the state and municipal administrations justified such a step from the point of view of enlightened absolutism. Nevertheless, the imperial edict awakened the national pride of the nation's intellectual elite.

A broader awakening of national identity was also taking place. It was prepared by the continent-wide thirst for knowledge and self-knowledge known as the Enlightenment, combined with ideas engendered by the French Revolution and the attitude of romanticism, with its emphasis on "the spirit of peoples." The first two were applicable in the sciences and in politics, while romanticism championed the cause of cultural diversity, as expressed by the multitude of languages. It became fashionable to use Hungarian, not just at home but in writing for the public.

It was found, however, that the long underutilized and marginalized Hungarian language was not fully capable of conveying the notions of the times. A few committed intellectuals set out to remedy this by initiating an energetic language reform movement, the major cultural initiative of the 1820s, unconnected to any religion. Led by the most enlightened minds of the times, first among them Ferenc Kazinczy, the movement promoted the rediscovery of ancient Magyar words and the creation of new ones in accordance with the sense and music of the language, and the use of this renovated language in all spheres of life. The efforts of the language innovators were opposed, and their excesses often ridiculed, but their ranks were swelled by the best writers and publicists of the times, and they proved to be victorious in a few decades. One gem of the reform movement is Hungary's national anthem, written by Ferenc Kölcsey, a moving masterpiece that stood the test of time very well.

The reformed and invigorated Hungarian language was put enthusiastically to use by the great generation of poets and writers during the century's middle decades. Central among them was Sándor Petőfi, whose name still evokes the native genius of Hungarian poetry. A descendant of a lower middle-class rural family, thoroughly assimilated into Hungarian life although of Slavic descent, Petőfi was the quintessential poet of his age. Somewhat of a social misfit, he dedicated his entire short life to poetry. Folk elements provided much of his early inspiration, combined with sentimental, but always fresh, themes of love. When he joined a circle of like-minded dissidents in Pest, who came to be known as the Young Hungary movement, his lyricism took on an increasingly radical republican edge,



Sándor Petőfi *[the poet],* in His Study, *by György Vastagh. (Archivo Iconografico, S.A./Corbis)*

which fit the spirit of the 1840s. His poem "National Song" is thought to be one of the sparks that set off the bloodless revolution of 15 March 1848, and Petőfi's name is as closely connected with the subsequent war of independence as those of Kossuth or the generals. Fittingly, the "comet of the revolution" was killed on a battlefield, probably by a Russian lancer, during the final days of Hungary's anti-Habsburg struggle. His poetry, easy to recite and difficult to translate, remains central to appreciating Hungarian literature.

Hungary's men of letters supported the revolutionary cause almost without exception, even if some of them lost hope, or accepted defeat, sooner than others. Brooding over the lost cause of national independence remained the central theme of cultural life for decades. Perhaps to explore the wealth of the Magyar language, or perhaps to get away from dismal reality and boast instead with past glories, a full-blown nationalist-romantic attitude made its appearance in literature, as well as in the music and arts of Hungary. Wealthy patrons and an enthusiastic public supported the creation of oversized paintings of historical events that still decorate public buildings, and the numerous Hungarocentric musical compositions of the period. In literature, the most popular and prolific representative of this escapist trend was Mór Jókai, who produced more than one hundred volumes of fiction in his long life. His novels and stories have been widely translated and remain on every Hungarian's reading list.

To complicate matters, the Kingdom's non-Magyar coinhabitants discovered their own ethnic identities at just about the same time as the ruling Magyars did. Their demands, in such areas as language rights or local school issues, were often diametrically opposed to perceived Hungarian national interests. At times, in fact, they appeared to threaten the continued existence of historical Hungary. The stage was thus set for bitter interethnic struggle in various areas of public life. Yet, until the mid-nineteenth century, the Hungarian public remained quite tolerant toward national minorities and their cultural aspirations. After 1849, however, things changed. The nationalities, especially the Romanians and the Croats, played an active military role in defeating the Hungarian revolutionary cause, and this was long remembered. Magyar nationalists now called for an assertive program of assimilating ethnic groups into Hungarian culture. Some of the best minds called for moderation and tolerance in this regard, but their views were seldom heeded, with disastrous consequences for interethnic relations in the coming decades.

The late-nineteenth-century modernization of Hungary (now as the larger half of the Dual Monarchy created by the 1867 compromise) brought both positive and negative results. Railroads and factories were built and an excellent industrial system for cloth and food production was created. The cities, especially Budapest, developed rapidly in the demographic, economic, and cultural sense alike. At the same time, the nation's social problems remained unsolved: the rural population lived in neglect and misery, and the common nobility—traditionally considered to be the nation's patriotic backbone—became the impoverished, déclassé gentry. Some of their members were absorbed by the civil service bureaucracy as low-level officials, while others became employees in business or manufacturing firms or managers of estates owned by aristocrats and foreign, largely Jewish absentee landlords. Hungary's gentry thus came to form a perpetually discontented segment of society. Its members considered themselves the traditional nation-making elements of the population. In their frequently and loudly expressed opinion, the "alien" industrialists and financiers (many of them foreign born or Jewish) marginalized and oppressed "true Magyars," and hastened the destruction of Hungarian culture. As they saw it, that culture could be found only in the villages, whose dwellers were "bravely struggling" for survival against the "alien" cities.

Budapest was the proud capital of dualist Hungary, with its smokestacks, cafés, ever taller apartment buildings, electric streetcars, and a population that in 1910 was more than one-quarter Jewish, German, and otherwise non-Magyar. Moreover, the city's cultural and intellectual life was decisively altered. Budapest was now a metropolis, where a well-educated citizenry sought out its own kind of news and entertainment. The scores of daily newspapers and theaters, along with the clubs, cafés, and other signs of modern urban life turned the nation's capital into a separate, at times indeed contrasting, entity in the heart of the country.

Budapest's artists and intellectuals held the key to modernizing the taste and outlook of Hungarian readers, acquainting them with new styles and radically different attitudes concerning various aspects of their society. They gravitated toward newly established journals of arts and opinion, of which *Nyugat* (West) had the greatest impact. Started in 1906, it immediately attracted a talented corps of contributors, among them Endre Ady, Hungary's preeminent modern poet, who broke with all traditions in form and content alike. He and his followers broadened the scope of Hungarian literature, leaving behind the adoration of rural (populist) traditions, and often braving the extreme limits of the public's tolerance on such matters as religion or patriotism. While most of them were ethnic Magyars, of gentry background, their writings appeared in publications often financed or edited by non-Magyars. The new bourgeoisie of the capital was generous in supporting culture, but it wanted its own culture. This enabled the traditionalists to set up the dichotomy between Budapest and "real Hungary" (a depiction that is sometimes detectable even in today's attitudes).

By the twentieth century, the conservative national movement, by now fossilized into formalism, was still in official command of cultural life. The man who for decades was recognized as the leading writer of semifeudal Hungary was Ferenc Herczeg, a "gentleman writer" who began by describing the life and pastimes of the urban gentry—a devil-may-care life lived with elegant nonchalance—and he described it with the facility of a confirmed insider. He was genuinely favored by this class, which went so far as to identify itself with the nation. It is their position and problems that we see reflected and solved in Herczeg's (once widely read) historical novels and plays. Bitterly opposed to any new literary trend, Herczeg was lauded as "author laureate" of interwar Hungary. His most durable works are a number of short stories, written with a technique similar to Maupassant's, in which he gives a realistic portrayal of his environment. By this time, however, a new Hungarian culture—still fraught with contradictions—was already in the making.

The urbanizing wave of 1890 produced only initial and ambiguous results—a ferment was aroused, a restless searching for new ways; the rising Hungarian urban bourgeoisie found its voice. At the outset, the new trends found a literary organ in the review *A Hét* (The Week), started in 1890 under the editorship of József Kiss, a successful Jewish poet. Although uneven in content, it managed to rally more than one writer seeking a way out of the suffocating atmosphere of formalism that overhung the literary scene at the end of the century. Intellectually alert and lively in tone, marked by an urbanism that mocked at rigid authority, *A Hét* strove, in essence, to create a modern, big-city literature as opposed to the manorial provincialism of the traditionalist school.

Throughout Europe, a dominant trend and school of thought of the period was naturalism, calling for a more profound, unvarnished, raw representation of life, a greater emphasis on psychological analysis, a physiological and biological outlook, free thought, antireligious views, and materialism. The new poetry was characterized largely by a loosening of old forms and manners, and a freshness, lightness, and urbanism of content. Among the forerunners of modern Hungarian culture we find writers, each speaking in his own individual voice, who were representatives of critical realism, cultivating chiefly the psychological short story. The careers of nearly all of them, after promising starts in the last decade of the nineteenth or the early years of the twentieth century, were soon to be broken off as some died young, others lost interest, or their ambition spent itself.

The modern era of Hungarian literature, which began to take shape around the turn of the century, is usually regarded as dating from 1905 when Endre Ady first appeared on the scene with his entirely new intonation in poetry. A fermentation began in cultural life, inseparable from the social turmoil. The Dual Monarchy was caught in constant crisis; the heterogeneous economic and social structure raised burning questions for which there was no solution; the poor peasantry began to stir; the organized working class gathered strength and a radical group formed within the middle class, small in number but aggressive and consistently fighting for bourgeois transformation.

The pioneers of this cultural revival sprang from different strata of the bourgeoisie and middle class. They followed diverse aims but were unanimous in their opposition to the derivative flatness and chauvinism, the sentimentality and the lack of higher aspirations that characterized the dominant national literature; they were out for more advanced trends instead. They had a healthy interest in foreign works of philosophy, literature, music, and the arts. Owing to Hungary's peculiar historical and social background, many of the successive trends in the arts and literature of developed bourgeois countries made their impact felt simultaneously; Nietzsche and Bergson, Spencer and the positivists, Baudelaire and the French symbolist poets, the naturalists and their opponents, the soft-toned fin de siècle lyrics of Vienna and the slum poetry of German naturalism, all arrived and found followers at about the same time. A strong influence on the prose genres was exercised by the great critical realists—Tolstoy, Ibsen, and France; no less was the effect of Dostoevsky and Zola. Yet all this was not mere imitation; the writers of the period were consciously adhering to, and wished to carry on, the traditions of Hungarian literature. Interest revived for everything that was truly national and genuinely vernacular. From the mannerism of the end-of-century sham populism, creative intellectuals turned toward the original treasures of Hungarian peasant culture and of Hungary's past, to find those models of harmony and perfection that had ceased to exist in their own epoch.

The world outlook and political consciousness of the new literary movement was very diverse. Some of the writers were motivated by no more than a search for new tones, new flavors, new sensations, new styles. There were those who realized that the revolution in letters heralded a social transformation, and that the literary tumult was necessarily linked with ideas and was part of the fight for a new Hungary.

Some only fought for the consistent application of liberal views, for full freedom of writing; others strove for a ruthless exposure of reality. Often these conflicting aspirations would be apparent not only in the same review or within the same literary coterie, but also in the various stages of the careers of individual artists, writers, and critics. Two tendencies were distinguishable, both in the review *Nyugat* and in the new literary movement: one of a more bellicose spirit, bent on politics, readily responding to changes, influenced by bourgeois radicalism, interested in socialism and emotionally siding with plebeian trends; the other leaning rather to liberal conservatism, with a nimble sense for everything new and artistic. The first can be characterized by the names of Endre Ady and Zsigmond Móricz, the second by those of Mihály Babits and Dezső Kosztolányi.

In its critical approach, however, the movement was lacking a defined and consistent program; its partisans and critics (Ernő Osvát, Aladár Schöpflin, Lajos Hatvany) saw the essence of their mission as waging war against conservative nationalism and made a point of linking the fresh values of the movement to the mainstream of national literature, and were otherwise advocating liberal views, the free evolution and self-assertion of the individual. The main combatants of *Nyugat,* their personalities and works, with Ady as their leader, became the subject of heated and loud polemics. Some of the conservatives borrowed weapons from the political armory (with charges like "high treason" and "alien mentality") and, to a lesser degree, fought with arguments of literary aestheticism.

The central figure and star of Hungarian literature, in fact of the entire cultural scene, was Ady, the greatest creative genius of Hungarian poetry after Sándor Petőfi. He was born into a family of lesser nobility, and received a Protestant education imbued with a passion for national independence in the *kuruc* tradition. He went to Debrecen to study law, but soon took up journalism. He was introduced to the world of theatre, literature, and journalism. A turning point in his life came at the end of 1899 when he went to Nagyvárad (today Oradea, Romania). In this bustling and spirited city, whose intellectual, political, and social life went far beyond that of the provinces, the backwardness of Hungary came home to Ady as a startling realization. He became first a convinced liberal, then an increasingly militant radical. Here also he emerged as a brilliant journalist with a sharp eye and farsighted knowledge. He came to represent Hungarian political journalism waging a spirited battle against chauvinism, obscurantism, and ignorance.

At first, Ady wrote the light, cynical parlor poetry of the fin de siècle, but his second volume showed his future greatness. In the summer of 1903, after many passing affairs, he fell in love with the attractive wife of a local businessman, Léda. Theirs was a great, sensuous, tormenting love and it gave birth to hundreds of outstanding poems. It was with Léda's support that Ady went to Paris in 1904 and in 1906–1907. The trips were liberating and stimulating; he saw the justification of what he had been trying to formulate at home. Those were the years when the French radicals began their secularizing campaign and seeing this affected Ady's ongoing dispute with clericalism. He also came to see the contradictions of bourgeois democracy and the controlling role of wealth. At times this realization would make him embrace Nietzsche and plunge him into disillusion and despair; at other moments it would make him feel that social conditions (in France and Hungary alike) called for radical political changes.

After his Paris visits, Ady's verse was entirely different from anything that Hungarian poetry had produced up to that time in both tone and message. His first volume of this type of verse, *Új versek* (New Poems; 1906), was followed by a rapid succession of other innovative volumes, along with a torrent of short stories and newspaper articles. What was the striking novelty of his writing? Ady's was a great self-contained world, his language was powerful and individual; the wide range of his themes included the heroes, ideas, and movements of Hungarian national history, including the disappointing contemporary vision of the "Hungarian wasteland"; the agony of the poet in a materialist world, fighting a "Great Lord with the Boar's Head." Another group of themes included the thousand and one aspects of love, the unashamed presentation of his love for Léda, songs of all the warped complexities of love, and evocations of passing, sensual love affairs. Another strand was that of poems evoking death, fleeting time, downfall, fear, and solitude, verses that conveyed the restlessness, strain, and worries of the modern big city dweller, seeking refuge in God or quarreling with God. Two new themes of crucial importance were the proclamation of his historical mission and a repeated evocation of his own personality. Ady's poetry was at the same time modern and ancient; it was also in the mainstream of the latest European intellectual trends and rooted in the time-honored core of Magyar tradition. The richness of his verbal flow, and the multitude of his own coinages or revivals from the archaic vocabulary of the language combined into a fascinating idiom, unlike that of anybody else.

The other outstanding figure of twentieth-century Hungarian literature, also a member of the *Nyugat* circle, was Zsigmond Móricz, a master of Hungarian prose. After attending a distinguished Calvinist school, he became a divinity student and studied law, only to end up as a low-paid, conservative-minded country journalist in metropolitan surroundings. He was thirty when the *Nyugat* published his first short story "Hét krajcár" (Seven Pennies), making Móricz a celebrated writer. Ady's poetry and later friendship gave him stimulus and guidance, while his own stodgy, considerate temperament hailed the ardent self-consuming genius of the poet. From the writing of "Seven Pennies" until his death, Móricz's output was unbroken; he published one of the most voluminous and most impressive oeuvres in Hungarian literature. He attracted notice primarily as a new portrayer of peasant life, evoking the Hungarian village writhing in the stranglehold of the estate system, a world overshadowed by the figures of his peasant heroes. Yet some of Moricz's best novels and short stories portrayed the life of the Hungarian gentry at the turn of the century—a picture of decay going on behind a glittering facade. The effect thus produced was one of extraordinary authenticity.

Others from the *Nyugat* circle included Margit Kaffka, Hungary's first woman writer of note, a friend of Ady, who made her debut as a poet in the fin de siècle style. Subsequently, she took to writing short stories, intrigued by the problems that faced the modern woman—moral, social, human, and vocational problems. Endowed with great sensitivity and a gift for portraying the emotional life of her characters, she evolved an individual impressionistic staccato style and a way of creating atmosphere, introducing subjectivity into her description of objective processes, such as the decline of rural gentlefolk and the succession of generations. Hers was an impressionistic idiom, peculiarly emotional and charged with tension, attentive of details, and evocative. In November 1918 she died in the influenza pandemic that swept across Europe.

Among the poets of the period, Árpád Tóth stands out as a masterful lyricist and one of the most likable and original figures of the *Nyugat* generation. His writing speaks in the voice of a quiet, melancholy man, longing to find refuge in other, imaginary, worlds. Ady's tone found a continuation of great fidelity in the poetry of Gyula Juhász, a poet of landscapes, portraits, descriptions, and moods condensed into sonnets with strong pictorial quality, a keen sense of color and many ties with the traditions of Hungarian history and literature. His poetry of hopeless desire—the devoted pieces of the Anna Cycle addressed to the distant woman—are among the most often quoted masterpieces of Hungarian lyric poetry.

Not all *Nyugat* poets resembled Ady in tone or in lifestyle. In fact, two of his greatest contemporaries represented different trends. Mihály Babits was a great poet, novelist, essayist, and translator, the prime authority in Hungarian letters during the 1930s and an outstanding humanist. Fitting in well with the mildly conservative Hungarian intelligentsia at the turn of the century, marked by respect for classical culture and holding liberal views that had taken on a conservative complexion, the young provincial teacher believed in art for art's sake. He was a virtuoso in playing with styles, a master of verse forms displaying high artistry in his use of language, a thinking poet with a philosophical turn of mind, a master in bold and unusual verse constructions, and in the use of words. He avoided Ady's radical fervor and desire for action. In politics too, he leaned toward the conservative side; the mob scared and repulsed him. After the tragedies of World War I and the resulting Trianon treaty, he withdrew to the liberal-conservative stand of politically disinterested observer who entrenched himself behind aesthetic arguments. Babits came to the defense of all that was positive in culture and literature against challenges from the political side.

Dezső Kosztolányi's oeuvre is the most extensive and, in its influence, the strongest after that of Babits, so distant from Ady. He was born into provincial intelligentsia, the son of a teacher proud of his noble ancestry. He also took up journalism and settled in Budapest as a fashionable publicist. His poems—colorful, musical, and embodying a facility and high artistry of form—display all the requisites of the art nouveau. Kosztolányi was a sovereign artist and knew the secrets of the Hungarian language, which he loved passionately. In his novels and especially in his short stories, the best Hungarian linguistic heritage is allied with the polish and clarity of French; the pointed sentence construction of the early twentieth century is combined with sensuously colorful images. He was one of the most zealous adherents and propagators in Hungarian letters of the Freudian achievement.

Frigyes Karinthy achieved wide popularity as a humorous writer, even while he was one of the most versatile, many-sided talents of *Nyugat*. Born into a family of Budapest intellectuals and growing up as the prototype of a city dweller, the principal scenes of his life were the café, the editorial office, and the street. The meaning and essence of his work was to criticize and reassess the philosophy, social conditions, manners, and morality of his times, with an outlook that was a blend of French rationalism, Freudian interpretation, and respect for sciences. Philosophical thinking marks his short stories, reflections, and novels.

Gyula Krúdy was a truly singular figure. Born into the gentry, the impoverished provincial nobility, his life was that of the struggling Budapest journalist and author. He created a prose style of his own in which "atmosphere" overshadows plot and character development, and construction is dissolved in a web of reflections and rambling digressions, giving readers a peculiar dream world where present and past are blurred and blended together, and the characters lose their contours to dissolve into local color.

Running parallel to the *Nyugat* movement there existed, on the one hand, a more pungent, sardonic, militantly outspoken style giving utterance to the lower-middle-class outlook, as well as a neo-Catholic literary movement, and a type of Hungarian drama that attracted great popularity abroad. Ferenc Molnár was the most gifted among these playwrights. He started as a journalist, but soon became one of the best-known and most sought-after writers for the stage; his plays scored one success after another both abroad and at home. After World War I, he spent more and more time abroad, and he lived in New York until his death. Molnár was a many-sided author; his short stories and light sketches are the works of a sharp-eyed, perceptive man capable of caustic satire. His writing is stamped with some cynicism and, at the same time, a measure of often spurious sentimentalism. His most popular prose work is the much translated *A Pál-utcai fiúk* (The Paul Street Boys), a novel for adolescents that, by its unstudied and objective treatment of its subject, poignantly captures all the beauty and torment of childhood. Molnár's rise as a successful dramatist began with *Liliom* in 1909, a piece that is half drama, half mystery play, with the local color typical of Budapest in those days. (Based on this play, the musical *Carousel* was a great success on Broadway.)

Although many of Hungary's leading men of letters voiced criticism of the country's social order, few became committed leftists. This was especially true after the 133-day Republic of Councils in 1919, during which Hungarians gained their first and lasting impression of communism. One early figure of the organized socialist movement was Lajos Kassák, who roamed all over Europe, working in factories. He developed an individual style, reminiscent of those of Italian futurists and German expressionists. He became a revolutionary anarchist, a maverick both in literature and in politics, fiercely opposing both the Social Democrats and the meandering policies of the Communists.

Sports and Games

Centuries of living on the steppes of central Eurasia kept alive in Hungarians the urge to compete in physical activities, as these skills often ensured survival. This innate predisposition was encouraged throughout the centuries. During the Middle Ages, horseback riding and the use of various weapons was widely practiced. Physical education was among the earliest subjects introduced at the country's schools, and the most popular leaders of the nineteenth-century reform era, István Széchenyi, Lajos Kossuth, and Miklós Wesselényi, were themselves practicing athletes. The Physical Training Institute (later to become the College for Physical Education) was established in the nineteenth century to train coaches and athletes alike. Not surprisingly, when the Olympic games were revived in 1896, seven Hungarians competed against athletes of thirteen other nations and won two Gold, one Silver, and two Bronze Medals.

The tradition continued, even during periods of economic hardship and political oppression. In addition to seeking personal distinction (a kind of "nobility"), being a winner in sports also became a means through which young Hungarians could escape the limitations and restrictions in their lives. During the decades of Communist rule, for example, athletic skill qualified one to become a member of teams traveling to Western countries, a rare and coveted privilege.

Hungarians have been enthusiastic supporters of the modern Olympic Games, one of the few global venues in which the size or wealth of a nation does not necessarily determine the outcome of competition. During the first hundred years of the Games, Hungary won a total of 141 Gold, 123 Silver, and 151 Bronze Medals. The country's athletes have been particularly successful in water polo, soccer (although not recently), women's and men's swimming, boxing (with László Papp winning Gold Medals at three consecutive games), Greco-Roman wrestling, men's gymnastics, men's and women's fencing, the pentathlon, kayak and canoe racing, and table tennis.

The game of chess was brought to Hungary by Beatrix, queen of King Mátyás (1458–1490), who was an outstanding player of her time. In modern times, players such as József Szén and Géza Maróczy led the Hungarian team to several world championships. In recent decades, the Polgár sisters have achieved great success in world tournaments.

Several athletes of Hungarian birth or descent have become well-known in the United States, including the golfer Julius Boros, the Super Bowl champion New York Jets quarterback, "Broadway Joe" Namath, Larry Csonka of the Miami Dolphins, the place-kicking Gogolák brothers, the tennis star Monica Seles (Szeles), and the championmaking gymnastics coach Béla Károlyi.

Breeding and training dogs can be seen as a sport, even though Hungary's canines have more often been considered useful work mates than pets. The best-known Hungarian breed in the United States is the puli, a medium-sized dynamo with long black hair matted into dreadlocks, and a perpetual urge to herd something. A larger look-alike of the puli is the white komondor, also used for tending flocks as well as a formidable watchdog. The kuvasz, with retriever-like white hair of medium length, is a popular rural household dog. The vizsla, with smooth, reddish-gold hair and thoughtful eyes, is an excellent hunting companion, as is the agár, Hungary's variant of the speedy whippet, and the Transylvanian kopó, a black-and-white medium-size pointer.

Some Hungarian writers hailed the Bourgeois Revolution of 1918 and the Council Republic of 1919, looking to them for the solution to national and social problems. However, most of them became disillusioned even before those 133 days came to pass. In a way, the response to the Hungarian Council Republic became a cultural touchstone; every trend and every group took a stand for or against it.

A lost war, distorted revolutions, a harsh period of counterrevolutionary terror, and the overriding tragedy of the country's dismemberment by the Trianon peace treaty was a burdensome legacy that marked the interwar cultural life of Hungary. In 1920 a kingless kingdom of Hungary was established and consolidated, giving a strongly feudal character to the state, even though some capitalist development did take place. The establishment was conservative and proreligion; old prejudices and privileges were now mingling with chauvinism and a rising anti-Semitism.

In cultural life, as in other areas, the best minds of Hungary were seeking answers to some of the great problems of the age. Their struggle assumed various forms. Some saw the solution in improving Hungary's economic and social structure and a continuation of the bourgeois revolution; others in a land reform; yet others called for the demolition of the obsolete framework of the Hungarian state body. These trends dominated the culture of the period; they left their mark on almost all writing, whether political essay, descriptive poem, reportage, or pieces of sociography or journalism.

A host of writers, bringing a new mentality and coming from new social strata, appeared on the scene. A few self-educated writers from the poor peasantry and the working class had already entered the nation's cultural scene earlier. But it was during the interwar period when Hungary saw the rise of popular talent. A few of them came from the industrial working class, but far more from the ranks of land workers, poor peasants, and small farmers; they brought with them the gift of expressing deeply rooted emotions and representing formerly unknown domains of reality. Their emergence from the social depths did not necessarily coincide with a progressive world outlook, and certainly not with any radical ideology. But they combined their experience of life with awareness, and sometimes with progressive ideas, and gave birth to grand compositions in verse and prose.

This was also a time of striving after new forms appropriate to the demands of the times; it involved a more profound and differentiated rendering of the human frame of mind and behavior, a reshaping of literature to match the conditions of a changed world. All this led to thriving new forms in various genres such as the novel, the short story, the analytical poem, and so on.

Upon closer inspection, three main trends were distinguishable. The first was a trend toward the unsophisticated, the genuine, and the straightforward. A sincere desire was at work here to renew the means of expression in the arts and literature, to make them more creative by the addition of something that is at once new and old, simple and peculiarly intricate. This trend, which had its European counterparts, was associated in Hungary with two political drives (sometimes allied, more often divergent): a plebeian democratic movement and a right-leaning nationalist one.

The second trend ran parallel to European avant-garde movements. Its aim was to extend the expressive power of language; introducing new domains into the scope of literary representation; giving poetry a multiplicity of facets, rendered with greater passion and ardor; adding a measure of lyricism to the novel and a grain of epic to verse; setting off and giving greater prominence to the poet's ego or merging it in the community. Although the influence of the avant-garde movement on Hungarian literature was less decisive in determining its physiognomy than it was on the French or even the Czech, the results and achievements, viewed collectively from a higher angle, have left their traces with almost every writer of the age.

The third main trend was that of the analyzing intellect. It manifested itself in lyrics as a leaning toward philosophy, a strong bent for contemplation, a subtle analysis of the poet's personality, and a ready response to the slightest impulse, emotional or intellectual; partly in prose as the psychoanalytical approach and a more differentiated portrayal of milieu in the analytical novel. Scholarship was characteristic of these late *Nyugat* followers, sometimes called "a generation of essayists."

However, the greatest men of the epoch, who expressed the essential message of their times more convincingly than other contemporaries, were also receptive to many diverse trends and responsive to most new ideas. In Attila József and Béla Bartók, we find a popular simplicity of approach combined with avant-garde revolts and an analyzing intellect, all summed up and resolved in a classical harmony. Still, the official culture of Horthy's Hungary harkened back to the nationalist school of the late nineteenth century, in order to avoid the most radical aspects of the Nyugat followers. This traditional trend of Hungarian prose writing found a continuation in Ferenc Móra. He strived for a deeper and more diversified knowledge of Hungarian country life, of which he was a masterful interpreter endowed with the gifts of a fully individual style, mild irony, profound erudition, and a rare sense of humor.

The "third generation" of the *Nyugat* made its appearance in the 1930s under difficult conditions: the growing pressure of fascism and an increasingly dehumanized world bore down on its members. They arrived equipped with considerable learning in world literature and a high degree of responsiveness to foreign cultures, which suggested translation as an almost natural form of expression. By means of translations and essays, they tried to introduce into Hungarian culture and learning the assets of bourgeois literature as a quasi-defense against the cruelty of their age. Their ways branched off in many directions: some withdrew into splendid isolation, others sought refuge in irrationalism. Several eminent members of this generation were murdered by Nazism. The most gifted survivors, after periods of varying length, came perhaps grudgingly to approve of socialism.

A poet who is characteristic of this generation is Sándor Weöres. He was a boy when he first published his poems, and soon came to impress everyone by his superb mastery of form in almost every style and tone. A man of universal erudition, he translated everything from ancient Indian texts to T. S. Eliot. The basic themes of his poetry are the total senselessness of life and society, tinged with nihilism, trying to find consolation in irrationalist philosophies and pseudo-Oriental myths. World War II, and the years that have elapsed since, have confirmed his aloofness. He was a brilliant versifier and a great master of form; he has created an almost entirely new rhythmic pattern and held up bright and undreamed of possibilities inherent in Hungarian verse. Unique are his torrents of color and scene, his gift for creating myth and atmosphere, his evocative power.

A unique figure in Hungary's interwar cultural life was Dezső Szabó. Except for Marxist socialism, he advocated every major intellectual trend of his age and, as an impelling character with a keen interest in politics, he exerted considerable influence, especially on youth. Originally he prepared for a linguistic career and was an admirer of French literature. After spending a year in Paris, he became an assistant schoolmaster in the provinces, a young man bursting with energy, self-esteem, and a sense of mission. From a clerical anti-Semite, he changed into an extremist radical; after philology and politics, his interest turned to literature, and he joined the editorial staff of *Nyugat* in 1911. In his political writings, he put his finger on the crucial issues of his time. The philosophical foundation of Szabó's writings was a combination of Nietzscheanism and positivism, marked by extreme antirationalism, antidemocratic views, and a yearning for a "new unity." He was against capitalism but his response to it was a desire to turn back the clock. Eventually racialism came to dominate his thoughts, the idolization of the "Hungarian race," the cult of the Hungarian peasant as the vehicle of the vital national force. Szabó's most impressive novel after a series of remarkable, striking short stories and novelettes was *Az elsodort falu* (The Village That Was Swept Away), a three-volume saga written in an expressionist free-flowing, torrential style; in it, through the mythically magnified figures of a few heroes, he depicts the diminution of the Hungarian race, extols the primitive soundness of the Hungarian village, and shows the depraving, enervating influence of the town against a full panorama of Hungarian life before the war. This is a distorted view of Hungarian life. Everything is presented as a part of the struggle between Hungarians and Jews, and every problem is simplified into a contest between the peasantry and foreign capital. Szabó's critique is mordant, ruthless, and exterminating when his intent is to demolish, while his concepts are hazy, mystical, and undefined when he means to construct.

The impact of *The Village That Was Swept Away* was tremendous. Its pathos and expressionist-romantic style, its readily acceptable anti-Semitism and racialism, its peasant cult and its social criticism fitted the hazy discontent and increasingly reactionary temper of post-1919 youth and petit bourgeoisie. Thus it happened that the former contributor to *Nyugat,* the learned teacher who had been groomed on French culture, came to be seen as one of the ideological forerunners of Hungarian fascism. Yet, within a few years, Szabó saw German domination as threatening as he had seen the Jewish "danger" earlier. He now turned the blade of his racial theory against the "Swabians," pouring his venom on the influence of German culture that hamstrung the Hungarian intelligentsia. This new element was expressed in his articles and new novels with their verbal torrents, dimly drawn characters and hardly a trace of plot. He became more and more isolated; his quaint, unsociable nature, his self-worship and merciless criticism, which was right and wrong at the same time, alienated the literary world from him. From 1934 almost until his death, he published his own articles and booklets. With the advance of German Nazism his life took a strangely tragic turn: his assault on Nazi racial theory from a racial standpoint was doomed to failure from the start. Szabó died, most likely of starvation, during the 1945 siege in battered-down Budapest.

The group whom it is customary to call populist intellectuals (often but not always of peasant origin themselves), was a complex political and cultural entity. Basically, it was an intellectual "third force" movement, which looked to the peasantry as its mainstay. The failure of the 1919 dictatorship gave rise to the notion that only through an alliance between the peasantry and the bourgeois-nationalist intelligentsia would it be possible to settle the great social problems of rural Hungary. Beginning in the 1930s, an outlook began to manifest itself, widely called "third road" or "third force," popularized and kept alive by a political movement with an impressive cultural record. Its chief characteristic was a conception of a "special Hungarian road," the insistence on a "third course," somewhere between the extremes of capitalism and socialism. It rendered a great service by calling public attention to the social problems of rural Hungary, doing so in political writings and sociological studies as well as fiction, and in propagating its democratic concepts with much vigor. Its aspirations, however, were often thwarted by nationalist trends clinging to it.

The heyday of the populists came after 1935. This was when members of the group wrote their most significant works, and their magazine *Válasz* (Answer) came to be one of Hungary's fearlessly militant periodicals. However, external pressure from the fascist state power, as well as internal strife, soon disrupted the group. After 1938, the greater part of the movement's members withdrew into passivity; a good many drifted to the political right, while a minority joined the antifascist resistance.

Characteristic of populist artists is a focus on the life of poor peasants, portrayed with a fidelity to the facts and with the authenticity of self-confession. They demonstrated a more realistic way of seeing things, occasionally with a scrupulous care for detail and naturalistic undertones. Populists drew a vivid picture of rural Hungary, the relationship of the various strata of the peasantry to one another and to other social classes and the diversity of these relations. Those joining the movement included poets like Gyula Illyés, novelists and short story writers like Péter Veres, József Darvas, and Iván Boldizsár, historians of literature like Géza Féja, sociologists like Zoltán Szabó, political writers like Imre Kovács, as well as economists, ethnographers, demographers, and art historians. The greater part of intellectual Hungary, especially the younger generation, turned with great interest toward the populists.

Gyula Illyés, the leading figure of modern Hungarian literature, was born in a Transdanubian manor, a descendant of shepherds. His parents had made great sacrifices to give their son an education. After university studies, he lived for years in Paris, where he formed friendships with French writers, including Tzara, Aragon, Eluard, Breton, and others. His literary career too dates back to the Paris years of free verse and surrealist and expressionist experiments.

After his return home in 1926, Illyés became one of the most valued young contributors to *Nyugat.* In his first two volumes, he laments for the plight of poor villagers in sweeping, rhythmical free verse. The young poet's rebellion strikes a note of vigorous defiance, blending *Nyugat* traditions and those of the contemporary French school with an innate respect for reality, a vivid imagination, and sudden outbursts of stifled anger. With each passing year, his tone became more strident, developing into a kind of community art, expressing the destitute, oppressed peasants' troubles and sorrows with conscious self-discipline in a highly polished form. Illyés created realist lyrics marked by transparent construction of Gallic lucidity, an almost inevitably epic flavor, a thorough knowledge and skillful evocation of everyday life, a free manner and the cadence of informal speech, and a blending of rustic impulses with European civilization.

By the mid-1930s, Illyés stood at the centre of the populists, in a political as well as ideological sense, while acting as a liaison with the *Nyugat* circle. This was when he wrote his major works, among them two remarkable prose works, *Puszták népe* (People of the Puszta) and *Petőfi* (both in 1936). *People of the Puszta* is a sociological study, but its literary craftsmanship, latent irony, and the broad perspective of vision have made it into a major artistic work. *Petőfi,* at once an essay and a biography, is one of the finest books ever written on the great Hungarian poet. It is an analysis and a personal confession, an assessment of the stature of the poet-revolutionary and an appraisal of his significance.

Illyés hailed the liberation of Hungary in 1945 and the ensuing land reform; he saluted the national reconstruction efforts and the Hungarian peasant entering on a new life. During the years of Stalinist terror, his writings evinced weariness and dejection, a voice of reservation and concern about Hungary's lot. This was when he wrote *One Sentence on Tyranny,* a long, bitter outcry against communist dictatorship, published only after 1956.

A contemporary of Illyés, Béla Balázs became a disciple of communism after he had made a name as a bourgeois writer. He was one of the eminent members of the first *Nyugat* generation, a teacher and aesthete. He was most consistent in carrying out the great command of twentieth-century lyric poetry; brushing aside the outside world, he turned inward in order to probe the world of the spirit in a number of singular poetical short stories and dramas. Bartók's *Prince Bluebeard's Castle* was composed to a Balázs libretto. There formed around Balázs in the 1910s a small coterie of admirers, one of whom was György Lukács, then a fledgling writer. The Great War dislodged this sensitive, introvert author from his groove: he volunteered for the army. When the true aspect of war was brought home to him, he became a socialist, among the first to join the newly founded Communist Party of Hungary, and commissar of theatres for the Hungarian Council Republic.

Political exile took Balázs to Vienna, Berlin, and, finally, Moscow. Filmmaking attracted him, and his *Der sichtbare Mensch* (The Visible Man) and *Der Geist des Films* (The Spirit of the Screen) became fundamental works of cinema aesthetics.

The 1930s saw the rise and maturing of Attila József, the greatest and most tragic poetic genius of interwar Hungary. His father, a worker in a Budapest soap factory, emigrated when his son was three years old, leaving his mother to fend for her little family by taking in washing. During World War I, József's family sank into dire poverty. After his mother died, the talented young József obtained a scholarship to attend Szeged University. He was only seventeen when his first volume of verse, *A szépség koldusa* (Beggar of Beauty) was published to acclaim. There followed one year in Vienna, and one in Paris, a period when the young man gained his introduction into literature and politics. In 1927 he returned to Budapest and for the rest of his life tried to eke out a living by writing poetry. In the 1930s he joined the underground Communist Party but soon broke with it. The final years of his life saw his mental health worsen, even while he continued writing. On 3 December 1937, József took his life by jumping in front of a speeding train.

The most salient characteristics of József's lyrics are a profound knowledge of conditions and a fundamental realism. He speaks in the voice of a poet who had the capacity of discerning the contradictions as well as the distress and predicaments, and the greatness of mind never to varnish human conditions.

József's influence can be felt on nearly all of his contemporaries. The most prominent member of this group was the lyricist Miklós Radnóti. Although Radnóti was an erudite, highly gifted poet and translator with a teacher's diploma, he was refused employment everywhere on account of his Jewish extraction and was compelled to do odd jobs and translations for a living. Beginning in 1941 he was called up several times to do service spells in forced labor camps, and finally, in 1944, was sent to one of the most brutal German extermination camps in Bor, Yugoslavia. A few days before the end of the war, when the captives were force-marched toward Germany, the exhausted poet was shot dead by an SS guard.

Radnóti's voice soared highest in the last few years of his life, in the years of humiliation and persecution, of horror and extreme peril. In eight eclogues (the last of which was written behind the barbed-wire fences of Lager [Camp] Heidemann in Bor), he expresses in dialogue through the rigorous discipline of the classical verse form and by using delicate shades of meaning, his perturbation at the ever more savage horror of the era, and despite all that, his confidence in an idyllic peace that would come, perhaps when he was dead. Radnóti kept writing poems until the last moment; he evoked the world of concentration camps with a rare degree of perceptivity, describing each stage of his calvary with more and more perfect versification, in an exceptionally condensed and mature poetry.

Hungarian culture began to live again in the early months of 1945. The way was now clear for all trends and ambitions; only openly fascist writers were denied any opportunity of expression. The cultural scene was marked by a coexistence of diverse trends: progressive and conservative, socialist and antisocialist trends; all were thriving side by side.

The year 1948, when the Communist Party came to rule Hungary, saw the dissolution of various cultural groups and publications that represented diverse trends of political opinion. Between 1949 and 1953, the reading public expanded, and a substantial number of writers came to accept the goals of the new regime.

From 1949 onward, especially after 1950, the brutality that characterized the Stalinist period became increasingly apparent. The goal of building socialism was replaced by the efforts of a dogmatic leadership to maintain itself in power. The standard of living had ceased to rise; the pace of industrialization was forced; and unlawful and brutal acts were committed in cities as well as villages. Patient persuasion and constructive debate were supplanted by authoritarianism. The meaning of socialist realism was interpreted in a doctrinaire, narrow-minded, and inflexible manner. Artists assumed and perfected a tendency to varnish the unpalatable truth. Dissenters were silenced, imprisoned, even eliminated. These tormenting problems and the artists' crisis of conscience were reflected in a number of outspoken literary works created during the 1953–1956 period of cultural thaw. In the autumn of 1956 the Union of Hungarian Writers, along with other cultural associations, sided enthusiastically with the workers and students demanding their rights. The few days during which Hungary's press was free saw the publication of Illyés's "One Sentence on Tyranny," along with a torrent of similar expressions of pent-up anger, aroused by communist tyranny.

The Kádár regime at first repressed all signs of intellectual dissent, whether it came from writers, students, or from the general public. Thousands of artists, students, and intellectuals were imprisoned, and scores were killed. Kádár heeded Khrushchev's advice to crack down on writers who were potential dissidents. The best literary periodicals ceased publication, and the Writers Union remained disbanded until 1959.

In 1960 there was an amnesty, and most writers were released. A second amnesty in 1964 released all political prisoners. Hungary's cultural life gradually became cautiously tolerant to a relatively wide variety of trends. The Moscow-dictated dogma of socialist realism was scarcely paid even lip service. As a consequence, many artists, long silenced, returned to the cultural scene. The spirit of Helsinki, providing for the free flow of information across borders, had come to prevail. Even a variety of Western art, cinema, and foreign literature became available. The tolerant policy governing culture was derived from the political slogan "Those who are not against us are with us," voiced by the once hated Party first secretary, János Kádár. His regime gained a degree of legitimacy because of giving a "longer leash" to Hungary's citizens. The 1960s and 1970s were often referred to as the "Age of the Three T's" (the letters standing for the Hungarian words for "support, tolerate, and prohibit": *támogat, tűr,* and *tilt*). An increasing number of artists were supported or tolerated, and fewer remained in the last category.

The "year of miracles," 1989, opened the floodgates of free expression throughout East Central Europe. Hungari-

Hungarian or Hungarian-Born Winners of the Nobel Prize

The physicist Fülöp Lénárd was the recipient of the Nobel Prize in 1905 for his work on cathode rays.

Róbert Bárány received the 1914 Nobel Prize in Physiology and Medicine for his studies concerning the physiology and pathology of the human ear's vertibular apparatus and its balancing function. (He accepted the award two years later when released from a Russian prisoner of war camp.)

In 1925 the chemist Richard Zsigmondy received the Nobel Prize for elucidating the heterogeneous nature of colloidal solutions.

Albert Szent-Györgyi (1893–1986) was awarded the 1937 Nobel Prize in Physiology and Medicine for his discoveries in connection with biological combustion processes, with special reference to vitamin C.

George Charles Hevesy developed isotopes as tracers in chemical research, which earned him the 1943 Nobel Prize for Chemistry. He also discovered the new element Hafnium, and ended up receiving the Faraday, Copley, and Bohr Medals, the Enrico Fermi Prize, and the Atoms for Peace Award.

George Békésy was awarded the 1961 Nobel Prize in Physiology and Medicine for his research on the mechanism of stimulation of the human inner ear.

Eugene P. Wigner received the 1961 Nobel Prize in Physics. He clarified the mechanics and interaction of protons and neutrons in the atomic nucleus, and was instrumental in building the first atom bomb.

Dénes Gábor won the 1971 Nobel Prize in Physics for his pioneering work in the development of holography.

The writer and human rights activist Elie Wiesel, who was born in Hungary, was recognized for his fight against violence, oppression, and racism with the 1986 Nobel Peace Prize.

In the same year, John C. Polányi was awarded the Nobel Prize in Chemistry for his work in chemical reaction dynamics.

In 1994 the chemist George Oláh received the Nobel Prize for developing new ways to use hydrocarbons.

Also in 1994 John Harsányi received the Nobel Prize in Economics for his proof of equilibrium in the theory of noncooperative games.

In 1998 the Organization Against Land Mines received the Nobel Peace Prize. One of the five organizers and leaders of this organization was Judith Majláth, a 1956 refugee from Hungary.

Due perhaps to the scarcity of writings translated from their language into any of the "major" languages, Hungarian writers or poets have had few chances to compete for the Nobel Prize in Literature. Finally, in 2003, the novelist and short story writer Imre Kertész was awarded that prize in recognition of his lifetime activity recording the struggle between inhumanity and hope.

ans had been watching the deadly boredom of communist culture making a series of retreats ever since 1956, and acknowledged its final capitulation with quiet satisfaction. In tandem with political liberalization, cultural life has also rid itself of all arbitrary restrictions. Long-forgotten works of art are presented, staged, and performed. State controls have been removed, which (perhaps unfortunately) also means that cultural commodities (books, periodicals, theater tickets) have become less affordable to a public that is struggling with the negative consequences of privatization, cutbacks, and rampant competitive marketization. All in all, however, few Hungarians wish to return to the era of cheap paperback volumes of Soviet pseudo-literature and low-priced tickets to watch films glorifying fake Soviet achievements. In a free and democratic society, Hungarians once again have the opportunity to create their own truly Hungarian and at the same time open and diverse national culture.

ECONOMIC DEVELOPMENT

The past century of rapid worldwide economic development did not leave Hungary untouched, notwithstanding the country's numerous misfortunes in other regards. Hungary's economy has advanced from a nearly feudal condition to a midlevel stage of industrial development. Perhaps the most spectacular growth took place around the turn of the century, with great advances made in food processing, foundry, and transportation. Much of this progress was cut short by the Trianon peace treaty of 1920, which deprived the nation's industry of nearly all of its natural resources and much of its markets, as well as disrupting the well-developed rail network. The rampage of political extremism following World War I did not help, nor did the worldwide depression of the 1920s, during much of which Hungary remained isolated in the economic as well as political sense. By the late 1930s, however, there was a certain amount of consolidation taking place. The price for this recovery proved to be steep, though, since much of it was accomplished by developing closer ties with Nazi Germany and fascist Italy, and led to Hungary's involvement in World War II as an ally of the Axis powers. In addition to the huge human losses at the front, this also meant that some of the most desperate closing skirmishes of the Second World War were fought on Hungarian soil. As a result, in 1945 the country's capital city lay in ruins, with all of its bridges and about half of the residential dwellings destroyed, and its factories incapacitated. The decimated and undernourished population, however, accomplished the challenges of reconstruction energetically and heroically. By the 1950s, Hungary may have appeared drab and poor, but its economy was able to provide basic necessities for the population.

After 1948–1949, when the Communists established themselves as the ruling and sole political party, the government controlled by Mátyás Rákosi began to slavishly imitate the Soviet course of economic development. It used the most brutal coercion to force peasants, who had just received land for the first time in history, to join collectives, and proceeded to squeeze profits from them to finance rapid expansion of heavy industry. At first, Hungary concentrated on manufacturing the same assortment of goods it had successfully produced before the war, such as locomotives and railroad cars. Soon, however, heavy industry came to receive more than 90 percent of investment, disregarding the country's poor resource base and its favorable opportunities in other areas of production.

The Soviet Union became Hungary's principal trading partner, supplying crude oil, iron ore, and much of the capital for Hungary's iron and steel industry. Heavy Soviet demand also led Hungary to develop shipbuilding and textile industries. Soviet pressure, Western trade restrictions, and the new Hungarian practice of favoring domestic and regional autarky combined to reduce the flow of goods between Hungary and the West to a trickle.

The government's wage controls and a two-tier price system made up of producer and consumer prices (controlled separately) were used to limit domestic demand and cut relative labor costs by raising consumer prices and holding back wages. Popular dissatisfaction increased in the wake of material shortages and export difficulties. Agrarian growth also stagnated, and the area of cultivated land actually decreased.

With the onset of a relative thaw after the Soviet dictator Joseph Stalin died in 1953, Imre Nagy became Hungary's prime minister and, following the Soviet example, implemented major reforms. He halted the collectivization drive, allowed farmers to leave collective farms, eased production quotas, raised procurement prices for farm products, and increased investment in agriculture. He also shifted investment from heavy industry to consumer goods production. But the changes were too timid, and productivity actually worsened after 1953. In 1955 hard-liners regained control, and the reforms were halted.

The brutal defeat of the popular revolution of 1956 was followed by a standstill for Hungary's economy. The new Party leadership under János Kádár realized that notions of Marxism-Leninism, as dictated from Moscow, had little to do with reality, and began to consider economic policies that would actually improve the people's living conditions. This course had some immediate results: by the early 1960s, the real income of Hungarians nearly doubled, household consumption grew accordingly, and the wave of popular resentment that faced Kadar had diminished considerably. A second effort to collectivize agriculture began in 1959. Instead of coercion, however, the government this time offered incentives to those who would join cooperative or collective farms. By 1962, more than 95 percent of agricultural land had come under the state sector's control. Major investments were made in agriculture, mechanization rose by 50 percent, and farm prices were raised to make the sector viable.

Heavy controls were relaxed in other areas as well. Engineering and chemical branches received greater support, resulting in the production of buses, machine tools, precision instruments, and telecommunications equipment, as well as artificial fertilizer, plastic, and synthetic fiber. These resulted in increased imports of energy, raw materials, and semifinished goods. Hungary's economy was growing during the 1960s, and the population's living standard was improving, but continuing growth was not foreseen. In addition to the limited

Three steel workers convene on the train tracks in front of the mill's smokestacks in Dunaújváros, Hungary. Dunaújváros was an important center for iron and steel industry in Hungary, ca. 1950–1980. (Paul Almasy/Corbis)

supply of natural resources, Hungary had also exhausted its labor force reserves. By the mid-1960s, it was clear that the policies followed since 1949 were no longer viable.

Hungary's industries lagged far behind those in the West; its communication and transportation infrastructures were so weak that they stood in the way of further growth. The USSR and other socialist countries were in no position to help, so Hungary's leaders realized that they would have to seek these critical inputs from the West. The government introduced the NEM (New Economic Mechanism) in 1968. In order to improve enterprise efficiency and make its goods more competitive, the government abolished universal compulsory planning, granted enterprises greater autonomy, and unleashed some market forces. (The program stalled, or was made to stall, within four years, but a burgeoning balance of trade deficit, slumping performance, deteriorating terms of trade, and other problems prompted the leadership to start the reform process anew in the late 1970s.)

The NEM and a favorable economic environment contributed to good economic performance for a few years. The economy grew steadily; neither unemployment nor inflation was apparent, and the country's balance of payments improved as exports grew. Cooperative farms and factories provided much needed goods and services. By about 1970, Hungary had reached the status of a medium-developed country. Its industry was producing 40–50 percent of the gross domestic product, while agriculture was contributing less than 20 percent.

The energy price increases of the 1970s had a disastrous effect on Hungary's trade. In response, the country's leadership made a number of major policy errors, the worst among them being the assumption that Hungary's economy could be shielded from the world's energy crisis. Many NEM reform measures were negated or crippled, and by the late 1970s Hungary was forced to turn to the convertible currency market for loans. A partial reinstatement of the command economy and a hasty recentralization combined to exacerbate Hungary's economic woes.

The NEM was brought back into force in 1978, but it was too late to undo the damages. To avoid bankruptcy, Hungary obtained loans from the IMF (International Monetary Fund) and the World Bank, introduced a stricter stabilization program and obtained bridge financing from the Bank for International Settlements. The leadership also renewed its support for economic reforms, which creditors viewed as a positive step toward more efficient use of resources and improvement of the country's balance of payments.

Under the new stabilization program, Hungary had slashed its investment spending to about a quarter of the earlier level, and increased prices steeply, calling for greater austerity, efficiency, and profitability. It has also streamlined its ministries, dismantled some huge enterprises and trusts, stimulated the growth of small and private firms, implemented a competitive pricing system, decentralized foreign trade, created small stock and bond markets, enacted a bankruptcy law, carried out banking reform, and levied value added and personal income taxes.

In spite of all these measures, growth remained far below the expected level during the seventh, and last, Five-Year Plan (1986–1990). The country enjoyed favorable treatment from international capital markets, mainly because its reporting system was considered the most reliable in the region, it had good debt-servicing records, and there was no lack of economic and entrepreneurial talent on the scene. In the latter half of the 1980s Japanese banks even increased their loan portfolio and sought to make low-risk loans to East European countries, particularly Hungary, which took the loans to restructure its industry, renovate power stations, implement its energy rationalization program, upgrade its telecommunications system, and finance foreign trade. As a result of a deteriorating convertible currency account, Hungary's debt has continued to grow.

In addition to the standard characteristics of East Central European socialist states (central planning, budgetary policies driven by ideology, state ownership of means of production, and chronic shortages), Hungary also inherited high external indebtedness from its forty-year experiment with socialism. At the same time, some early, clumsy attempts at reprivatization were also detectable. In 1980 the public sector's share in the "official" GDP (which ignored the burgeoning "unofficial economy") was 90 percent, with 10 percent domestic, and 0 percent foreign private owned. During the final decade or so of the socialist era, the shares of these sectors in the GDP changed dramatically. In 1990 the respective percentages were 76, 23, and 1; in 1991 they were 70, 27, and 3; in 1992 they were 56, 36, and 8; and in 1993 they were 42, 45, and 13. If one was to include the unofficial "gray" sector of the economy, the actual public-private-foreign ratios were 83, 17, and 0 in 1980; and 37, 50, and 13 in 1993. These are perhaps the most telling numbers about the changes in the Hungarian economy. The corollaries of this restructuring were not entirely positive: output declined by 20 percent of the GDP between 1989 and 1994, and incomes dropped by 8–10 percent in real terms between 1990 and 1994. There was also a shift in the occupational structure: far more persons came to be employed in the service sector of the economy.

Suddenly there were three working environments available to Hungarian workers. State employment provided greater job security, better fringe benefits, and lower pay. The "competitive" private sectors, domestic or foreign, offered less job security, fewer fringe benefits, longer hours, and 24–30 percent higher pay. The third alternative was the unofficial economy in which people from both sectors traded marketable skills for unreported, untaxed incomes.

The growing number of unemployed and unemployable was the inevitable result of a budget and market driven rush of downsizing because of obsolescent skills and/or of poor physical health. Combined with demography and the high ratio of pensioners, this placed crushing burdens on the active wage earners. The ratio of economically inactive dependents to 100 active wage earners was 117 to 100 in 1987 and 167 to 100 in 1993.

Hungary is referred to as an upper-middle income country in the World Bank's world development reports, and its comparative economic performance among twenty-eight postcommunist states is generally praised. However, neither assessment takes account of the social impact of rapid economic change.

The Kádár era generated new patterns of social mobility and stratification. With the exhaustion of the economy's growth potential and the onset of political entropy, both processes came to a standstill in 1983. Upon the change of the political regime and the revival of the private economy, new patterns of social mobility and stratification surfaced after 1992.

According to one estimate, 1 million people, or 20 percent of the active labor force, were "winners," and the rest were victims of stagnant or rapidly declining incomes and deteriorated living standards. The principal winners were those with higher education (8.1 and 14.5 percent of the labor force in 1980 and 1993, respectively), those with market-convertible skills, and specific elite groups with discretionary access to incomes generated by the market and "unofficial economy" and the recipients of preferential resource allocations by government agencies.

Income inequality did not begin with the onset of economic transformation in Hungary, but it did gain momentum. Trends indicate a gradually widening gap between the lowest and the highest 20 percent of recipients. It is the lifestyle and conspicuous consumption of the upper 1 percent that is seen as unjustifiable by market criteria, as well as morally reprehensible by the public's quasi-egalitarian standards. Groups and individuals who have become vulnerable on this score are the new—partly managerial, partly "Wild East" entrepreneurial—business elites and the new kleptocracy of politically well-connected executives of industry, banking, and commerce. The wealth and power, converted into ever higher positions, splendid homes, and luxury cars tend to catalyze public skepticism about social justice in a parliamentary democracy.

Hungary's postcommunist governments have gone to great lengths to cushion the impact of economic transformation. Still, even the disbursement of 26–28 percent of the budget (arguably the highest percentage in Europe) for social welfare purposes has failed to slow down the growth in the number of those living at or below the poverty level. Their numbers were 1 million in the 1980s, 1.5 million in 1991, 2 million in 1992, and 3.0–3.5 million in 1994. (To be sure, using the yardstick of the old bankrupt welfare state is an unrealistic device with which to measure poverty. Thus World Bank and IMF numbers of around 10 percent ought to be closer to the mark. This is not to deny the severity of hardships faced by social victims of economic transformation.)

Equally essential, however, is to see the "winners" of postcommunism and efforts by the well-off intelligentsia to keep politicians on the defensive. They use the poverty issue to forestall, as long as possible, the full implementation of economic restructuring and, with it, the inevitable decline of public welfare, often in the form of state patronage of cultural activities, disbursed to intellectuals.

Challenges to the economy are more than merely structural. Rapid industrialization and the priority of plan fulfillment over environmental concerns have resulted in serious air and water pollution problems in Hungary. One-third of the country's population lives in regions where air pollution exceeds international standards. Electric plants burning high-sulfur coal and automobiles emit most of the pollutants that foul Hungary's air. (Sulfur dioxide emission is particularly great.) Prevailing winds from the west and southwest carry much of Hungary's sulfur dioxide emissions into neighboring countries, and acid rain has damaged 20–30 percent of the country's forests.

Pollutants also foul the rivers and ground water. The Tisza, Duna, Szamos, Sajó, and Zagyva are Hungary's most polluted rivers, and the water supply of many towns and villages is only marginally fit for human consumption. Hungary emits almost 2 million cubic meters of polluted water per day. Industrial waste from chemical, rubber, iron, paper, and food processing industries accounts for 70 percent of the polluting effluent, less than half of which is treated. Even an adequate residential sewage system is available only to 65 percent of the population.

Hungary produces more than 5 million tons of hazardous waste annually, and it reportedly accepts huge amounts of similar waste from Austria, Switzerland, and Germany in return for hard currency. After years of public protest, in the late 1980s Hungary constructed an incinerator in Dorog capable of burning 25,000 tons of hazardous waste per year. Hungary operated a nuclear waste dump between the villages of Kisnémedi and Püspökszilágy, but precise information on the disposal of radioactive waste from the country's nuclear power plant is unavailable. Hungary has antipollution agreements with Czechoslovakia and Austria, but has no such agreement with Romania and complains about Romania's chronic discharge of phenol, oil, and even arsenic and other hazardous pollutants into the Tisza and smaller rivers.

The future of the economy is tied in many respects to its resources. Hungary's geology is dominated by young sedimentary rock that has few minerals and raw materials except bauxite, soft coal, and small deposits of uranium, natural gas, oil, iron ore, manganese, and copper. On the other hand, Hungary has large tracts of fertile land and a favorable climate. The country's shortage of raw materials has necessitated vigorous foreign trade, especially after 1920, when Hungary lost much of its pre–World War I territory. Raw materials, semifinished products, spare parts, fuels, and electricity accounted for the bulk of imports, and their cost equals one-quarter of Hungary's gross domestic product.

Hungary's coal deposits total 4.5 billion tons and include hard coal (15 percent of the total), brown coal (30 percent), and lignite (55 percent). Hungarian coal generally has a low energy content and lies at great depths in thin seams, making mining difficult and costly. Deep mines in the Mecsek Mountains near Pécs and Komló yield some coal suitable for coking. Thick layers of higher-quality brown coal lie 200–300 meters beneath Tatabánya and Dorog, while lower-quality brown coal lies under the Carpathian foothills near Miskolc and in the central Danube Plain. The Várpalota Basin in Veszprém County and the southern slopes of the Mátra Mountains yield lignite. Hungarian experts predict that the country's coal reserves will last 400 years at the present production levels.

Hungary's natural gas and oil deposits are far smaller than its coal reserves. The country's largest natural gas deposits are located near Szeged, Hajdúszoboszló, and Miskolc. Geologists predict that natural gas reserves would be used up by the middle of the twenty-first century. Small crude oil deposits lie beneath Szeged, Zala County, and other areas. The Zala crude is highly viscous and difficult to transport. Wells at Lispeszentadorján, Lovászi, and other sites yield high-quality oil, but they are almost exhausted. In the late 1970s drillers struck oil in the mid-Danube-Tisza region (the central part of the country) and near Sárkeresztúr, Endrőd, and Ullés. However, geologists anticipate no new major oil discoveries and expect the wells to run dry soon.

Hungary began mining uranium near Pécs in the 1950s with Soviet assistance. Estimates of the actual size of the country's uranium deposits are vague, but official sources indicated that Hungary had uranium reserves sufficient to supply its domestic needs until the year 2020.

Chronic coal mining problems and shrinking domestic hydrocarbon reserves have plagued the economy since the

Paks nuclear power plant. (Serge Attal/Corbis Sygma)

mid-1970s. The reliance on imported energy increased steadily from 37.2 percent in 1970 to 51.3 percent in 1986. The Soviet Union furnished most of Hungary's energy imports, but Soviet production setbacks and demands for better trade terms complicated Hungary's energy supply problems after the mid-1980s.

Hungary slashed investment in coal mining in the late 1960s and 1970s, when Soviet oil and natural gas were less expensive alternate fuels. Consequently, coal's share of domestic energy production dropped from 62.7 percent in 1970 to 36.6 percent in 1986. Coal accounted for 26 percent of Hungary's energy consumption. In the early 1980s rising oil and natural gas prices prompted Hungary to reopen the flow of investment into coal mining but the country still suffered from a severe shortage of miners, and its mines were unable to keep pace with rising demand. The government approved substantial pay increases for miners in order to attract new workers. In 1986 Hungary's mines employed 79,566 workers who labored between sixty and seventy hours per week and produced coal worth $779 million. Total annual coal output has hovered around 24 million tons since 1975, but hard coal production actually fell by 23 percent between 1975 and 1986, and the calorific value of coal output declined by 18 percent in the same period. Coal, coke, and briquette imports totaled US$268 million in 1986.

Hydrocarbons, including oil, propane, natural gas, and gasoline, accounted for 61 percent of total energy consumption in 1986. Natural gas production has increased considerably since the mid-1960s, exceeding 7 billion cubic meters in 1986 and 1987. Domestic consumption, however, has far outstripped production since 1970, nearly doubling from 5.9 billion cubic meters in 1975 to 11.5 billion in 1986. Hungary's wells supplied 94.8 percent of its natural gas consumption in 1970 but only 66.1 percent in 1986. Natural gas imports totaled 4.8 billion cubic meters in 1986 and cost US$366 million. The Soviet Union supplied Hungary with 90 percent of its natural gas imports.

Hungarian wells have pumped 2 million tons of crude oil yearly since 1975, mostly from the Szeged region, but observers expected production to decline after 1990. Oil imports totaled US$1.1 billion in 1986, while exports added up to US$332 million. Hungary exported oil by reselling Iranian and other Middle Eastern oil acquired in various compensation schemes.

Hungary launched an energy rationalization program in the early 1980s aimed at maintaining levels of domestic oil and gas production attained in the mid-1980s, increasing exploration, and substituting natural gas and other fuels for oil. The conservation program, backed by stiff price hikes, netted positive results. Oil consumption dipped from 12.5 million tons in 1979 to 9.1 million tons in 1985, and Hungary's imports of petroleum and petroleum products dropped from US$1.3 billion in 1985 to US$1.1 billion in 1986.

Hungary's power plants had a 6.8 billion kilowatt capacity in 1986 and generated 28 billion kilowatt-hours of electricity, almost double the amount generated in 1970. The increase failed, however, to keep pace with demand as consumption rose from 17.9 billion kilowatt-hours in 1970 to 38.6 billion in 1986. Hungary overcame the 1986 shortfall by importing 11.9 billion kilowatt-hours of electricity. Transmission lines from the Soviet Union carried one-third of Hungary's imported electricity.

In the late 1980s thermal power stations generated 70 percent of Hungary's electricity and burned 65 percent of Hungary's brown coal production and nearly all of its lignite output. Hungary has constructed large thermal power stations in the last fifteen years, including a 1.9 million kilowatt heat and power plant at Százhalombatta in Pest County that generated almost 40 percent of the country's electricity.

Southern Hungary's uranium reserves supplied the 880 million kilowatt Paks nuclear power plant in Tolna County, the country's only nuclear power facility. The plant's first reactor went on line in 1983, and its second followed a year later. In 1986 the plant generated 7.4 billion kilowatt-hours, or 26.5 percent of the nation's electricity output and 19.2 percent of its consumption. Hungary and the Soviet Union agreed in 1986 to build four additional 440-megawatt reactors at Paks in the next decade. Officials hoped that the plant would supply 40 percent of Hungary's electricity by the early 2000s.

In the late 1980s Hungary's hydroelectric power stations generated less than 1 percent of the country's electricity, but Hungary has joined with Czechoslovakia to build two hydroelectric power stations on the Danube at Gabcikovo in Czechoslovakia and at Nagymaros in Hungary. The project, which was scheduled for completion by 1993, received Austrian financial assistance. However, in May 1989 the Hungarian government suspended work on the power station because of public concern over the damage it threatened to cause to the environment. The power stations' total projected capacity was 3.6 billion kilowatt-hours per year, and their estimated cost was US$1.4 billion.

The Bakony and Vértes Mountains contain 10–12 percent of the world's known bauxite reserves and deposits of manganese ore, the only alloy necessary for steel production found in Hungary. The only iron ore mine, located at Rudabánya, produces ankerite and siderite that contain only 24–27 percent iron and require lime before smelting. In the late 1980s the country's limestone and dolomite reserves satisfied the needs of its iron industry. Copper mines at Recsk remain undeveloped because of lack of financing and because of copper's low price on world commodity markets.

The aluminum industry developed rapidly after World War II and in the late 1980s employed more than 40,000 workers. The production of bauxite (used in making aluminum) more than doubled since the war, reaching more than 3 million tons in 1986, while alumina (aluminum oxide) output totaled 856,000 tons in the same year. Increased bauxite production was depleting deposits near the surface, however, and costly deep mining had become necessary. Conversion of alumina into aluminum is highly energy intensive, and a lack of inexpensive electricity prevented Hungary from converting more than 25 percent of its alumina output.

Soviet technology and raw material inputs were key factors in the development of Hungary's iron and steel industry. The large steel mills at Dunaújváros in Fehér County, Ózd, Miskolc, and Budapest have used local low-grade iron ore, but more than 80 percent of their raw material input originated in the Soviet Union. In the late 1980s the industry suffered from several major problems. First, Hungary's iron and steel mills were less cost effective than West European mills because, among other factors, Hungary had to pay to transport and process Soviet ore that had only a relatively low (45–50 percent) iron content. Second, the prices Hungary received for its iron and steel exports to convertible currency markets had fallen. These exports generated losses for the industry, but Hungary continued the trade for several reasons: the domestic market could not absorb enough output to maintain satisfactory use of the country's mill capacity, the state subsidized losses on metallurgical exports, and export income provided the industry with the grounds to increase wages. The industry underwent a sweeping reorganization as part of a 1987 restructuring program that included the elimination of 2,400 jobs. Hungary produced no iron ore in 1986, and analysts expected the country to reduce iron and steel output by up to 10 percent in 1988.

Arable land, pastures, meadows, vineyards, and gardens occupy 70 percent of the total land area. Hungary has large tracts of fertile black soil, especially in the Great Plain region. Even though the climate can be harsh, it is generally favorable for agriculture. Concentrated in mountainous areas, the forests occupy 1.5 million hectares and contain mostly deciduous trees of little value except for holding moisture. The government launched an extensive reforestation effort after World War II, but domestic timber still supplies only a small percentage of the country's needs.

The future of the Hungarian economy also depends on its workforce. Until the 1980s, many Hungarians supplemented their income by working outside jobs, tilling household plots, or operating private businesses. Most enterprises used labor inefficiently, creating underemployment and relatively low productivity. The postcommunist measures are forcing enterprises to operate more efficiently and thus threaten the loss of many jobs. Compared with Western countries, however, Hungary's unemployment problem was relatively small: a 4 percent unemployment rate is generally considered full employment in a free market economy; in Hungary this percentage would amount to 240,000 people.

Women joined the workforce in great numbers after World War II and contributed significantly to reconstruction and the government's industrialization drive. Families supported the entry of women into the workforce because they could not survive on a single income or they desired a higher living standard. In 1949 29.2 percent of active earners were women; by 1987 they accounted for 46 percent. Likewise, whereas 34.5 percent of working-age women were active earners in 1949, 75 percent were active earners by 1987. Fifty-nine percent of Hungary's working women were manual workers; the remainder worked in white-collar jobs. (About 70 percent of men were manual workers, and 30 percent had white-collar jobs.) Women dominated low-paying jobs in the textile industry, the service sector, canneries, and commerce; in the white-collar area, women dominated in education, health, and clerical office jobs.

PROSPECTS

According to most experts, the economies of East Central Europe will take a long time to catch up with those of their Western neighbors. It is estimated that if the fifteen countries of the current EU enjoy economic growth of 2 percent a year, and the countries joining in the next few years grow by 4 percent a year, then it will take the new members, on average, more than fifty years to draw level with the old ones. Of course, other factors may be at work, and growth and convergence rates will probably vary widely from country to country, but in this scheme of things, it will take thirty-four years for Hungary to "catch up" with the West.

What is clearer to most observers is that Hungary's economy can grow only if its factories and farms become more efficient and competitive. There are three complicating factors. First, except for excess workers in existing enterprises, Hungary no longer has an untapped labor pool, such as the one that existed after World War II in the female and peasant populations. Second, the country has few natural resources, and raw materials have become more costly on both Western and regional markets. Third, Hungary can pay for imports of raw materials and efficiency-improving Western technology only by exporting goods whose quality and price compete in the world market.

Joining the EU may not in itself bring an economic boom. In the event Hungary's growth rate does not meet expectations, the advantages of EU membership could be balanced by serious burdens. The country will be saddled with the rules and expenses of a club meant for the rich, while its income remains far below the average and may even decline in relative terms. Problems may also arise from adjusting to the EU's common visa and border regime. Border controls, already gone from most of the EU, will disappear from the new members in three or four years. By that time the new members are expected to have perfected tough border controls of their own against non-EU countries, including friends and trading partners. This prospect worries Poland, which would prefer a more open border with Ukraine, and Hungary, which would like to keep ties with ethnic Hungarian minorities in the neighboring countries.

There is also the possibility of tensions between the EU's older members and those newer ones that, like Hungary, have regained their freedom and, in some cases, their independence, relatively recently, after decades spent taking orders from Moscow. The forces of nationalism that helped oust the communist order in East Central Europe in 1989–1991 are still strong here, and not always far from the political mainstream. Like all Central Europeans, Hungarians would prefer to join an EU in which their country is respected, not one in which they are bossed around casually by France or Germany. Hungary's interests might be best served by opposing policies that impose new costs on industry and new regulatory burdens on government, and by insisting on the freedom to keep taxes low, public spending down, and labor cheap.

CONTEMPORARY CHALLENGES

More than a few of the 15 million Hungarians alive today worldwide may find the pace of change staggering. Many were born in a kingdom governed by a regent and saw their native land change, in rapid succession, first into a pseudo-fascist dictatorship fighting a losing war; then a devastated and occupied republic led by a weak coalition; then a satrapy of Stalin's empire; then a short-lived republic frantically led by idealistic amateurs; then a cowed and vengeful police state; then a fake socialist resort; and then, quite suddenly, a fully constitutional parliamentary democracy at the mercy of global forces.

Since 1989, when Hungary regained its national sovereignty and found itself in a position to make genuine progress toward democracy and the rule of laws, the nation was faced with a number of challenges. Some of these derived from Hungary's location, its societal makeup or from its history, while others—just as problematic—arose from the new European realities. The lessons of the past and the actualities of a new Europe made it clear for all Hungarians that their country could scarcely go its own way.

The changes of 1989, while truly revolutionary in their depth and breadth, came about as a result of relatively civil negotiations, conducted at a roundtable. Efforts were made to include or represent as many elements of society as possible, and there was a surprising degree of patience exhibited by the parties. The Communists showed unusual humility, and speakers for the incoming power did not press their obvious advantage. (Of course, the kid gloves came off during the elections of subsequent years.)

Hungary's institutional transition was essentially completed by 1994, but the country's socioeconomic transformation is still in progress. After decades of living in the stifling comfort of central planning, this is a difficult process. It is made even more complicated by two major challenges to the country's leaders: On the one hand, they are called on to democratize public life, marketize the economy, and establish a rule of law. At the same time, Hungary's citizens keep loudly reminding their government not to forget *their* priorities, which add up to a set of nearly unrealizable expectations when it comes to providing goods and services. Underlying it all is the issue of cultural and spiritual survival, as well as political and economic survival. After surviving for 1,100 years in the face of numerous invasions, occupations, and periods of oppression, many in public life sound cautious, even alarmed, seeing the multitude of new forces on the Hungarian scene.

THE PRESENCE OF THE PAST

Four decades of communist rule ended in 1989, but the communist legacy is likely to be felt for some time. The forced adaptation of the Soviet model changed practically all of Hungary's political, social, and economic institutions. This is true for the other formerly socialist countries of the region. Hungary's communist period, however, has a number of characteristics that, considered together, may distinguish it somewhat from the experience of its neighbors. As pointed out by leading observers of the Hungarian scene, these elements include (1) the exceptional harshness of the Stalinist years between 1948–1953, (2) the spontaneous popular revolution of 1956, (3) János Kádár's coercive, terroristic policies, which later turned into a sustained commitment to legitimacy building through economic reforms and seeking a national consensus, (4) an increasingly civil and self-moderating interaction between the regime and its internal opposition, and (5) the surprisingly pragmatic cooperation between the outgoing and incoming political elites during the year of change, 1989.

After the Yalta regime gave free rein to Soviet expansion into East Central Europe, the Hungarian people and their neighbors had only two available options: accommodation and survival, or resistance and inevitable repression. The second option, that is, an armed uprising against the regime and its Soviet masters in October 1956, was not a premeditated choice but a collective act of public outrage. It was rooted in two widely shared aspirations: the nation's attempt to regain its freedom, and the people's seeking to reclaim their sense of personal dignity and civic identity. With this in mind, it can thus be argued that there was an intrinsic causality between intolerable oppression and the revolution of 1956, on the one hand, and between that singular and regionally unique event and the rest of the hypothesized attributes that characterized people–regime interactions in Hungary in the next three decades, on the other.

The precedent of the 1956 revolution is not meant to be an all-purpose explanation for what came to pass in Hungary during the next thirty-three years. Other factors, such as the country's relatively minor strategic importance for the USSR, the peculiar chemistry of Kádár's personal relations with his Kremlin superiors, and many other external factors were also responsible for the relatively sheltered environment in which the people and the regime came to craft a common survival pact after the defeated revolution.

Freedom, or at least a longer leash in a cage, can be earned in many ways. Hungary's choices in October 1956 were either to fight or to submit to the tyrant. In any case, the record is clear that the Hungarian people paid dearly with blood on the streets of Budapest, with the execution of hundreds, the incarceration of thousands, the forced exodus of many tens of thousands to the West, and the relative personal autonomy that the denizens of the Soviet bloc's "jolliest barrack" came to enjoy in the 1970s and in the 1980s.

The attainment of normalcy, or at least the absence of debilitating political and economic crises, has been the East European societies' age-old aspiration. This is to be expected in the part of Europe that served as a battleground in two world wars, was the scene of the Holocaust and other acts of genocide, and was the bloody political testing ground for transplanting the Soviet model to alien soil. In any case, Kádár's Hungary in the 1970s came close to "normalcy" and managed to instill a consequent sense of public well-being that most people still consider as the benchmark against which to measure living conditions and the performance of the political incumbents in the mid-1990s.

Hungary's "homo Kadaricus" (Kadarian man) was unambiguously materialist, but with a twist. Whereas the predominantly materialistic Western European public could afford the luxury of preoccupation with consumption and the even greater luxury of pursuit of both materialist and idealistic postmaterialist goals under the solid shelter of liberal democratic political institutions, the average Hungarian was bereft of choices of this kind. The regime's repressive tolerance helped foster a new context of social interaction. It gave relatively free rein, in the Hungarian sociologists' terminology, to the realization of personal interests in the nonpolitical realm. As a result, a "survival of the fittest" (or best connected) bargain culture was born in Hungary. The upshot was the rise of an adulterated sense of civic identity and political infantilism. Corruption and misuse of power above and widespread disregard of laws and administrative rules below were two facets of a symbiotic whole of moral decay and diminished civic competence. These behaviors have remained largely unaffected by legal and institutional changes in the postcommunist period.

The task at hand is the redefinition of the ruling party's style of governance from the "vanguard" to the "system management" mode and the consequent empowerment of the state for the implementation of the party's political will.

NATIONAL SECURITY

At the end of the communist era, the Hungarian People's Army numbered around 160,000 in personnel, and military expenditure exceeded 3.5 percent of the nation's gross domestic product. In 2000 the Hungarian Defense Forces included 53,000 persons, and defense expenditure was 1.61 percent of GDP. As for alliances, in the summer of 1990 Hungary and several other member states suggested a review of the Moscow-dominated Warsaw Treaty Organization, and soon after moved for its dissolution, which took place in 1991. Simultaneously, the Budapest government succeeded in getting the Red Army to withdraw from Hungary (after forty-six years), and in the summer of 1991, the Moscow-controlled economic and trade block Comecon was disbanded as well.

The newly acquired independence raised the issue of how to guarantee national security. Hungary's foreign policy priorities proclaimed by the first freely elected government, led by the historian József Antall and his Hungarian Democratic Forum, cut across political parties and included (1) striving for Euro-Atlantic integration, (2) maintaining good neighborliness to ensure regional stability, and (3) actively supporting Hungarian minorities living abroad primarily in neighboring countries (altogether a community of 3 million ethnic Hungarians). All Hungarian governments in office since that time have considered and continue to consider these goals to be of primary importance.

EU ENTRY

In May 2004 Hungary, along with the Baltic states, Poland, the Czech Republic, Slovakia, Slovenia, Cyprus, and Malta, joined the European Union (EU). The preparations for entry gave these countries the motivation and the models they needed to entrench or restore democratic institutions and market economies, replacing the communist and socialist ones previously imposed there. Even the skeptics in the new member countries should be pleased with this. A country well equipped to join the EU is a country well equipped to make its way in the world otherwise, if it chooses to do so.

As it happens, voters in all the East Central European countries eligible to join the EU have supported entry, often by large majorities. Now they are preparing for the shocks and strains, as well as the opportunities and rewards, that lie ahead. Of course, EU entry does not in itself bring wealth. The countries of East Central Europe will take decades to catch up with their Western neighbors. Any East Central European country where the growth rate sags will suffer for it. It will be saddled with the rules and expenses of a club meant for rich people, while its income per person remains far below the average and may even decline in relative terms.

East Central Europeans also face challenges in adjusting to the EU's common visa and border regime. Border controls have already disappeared across most of the EU. They should disappear among the new members too, but only after three or four years. By that time, the new members are expected to have perfected tough border controls of their own against non-EU countries, including friends and trading partners. This prospect presents a certain concern for many Hungarians, who desire to remain in close contact with the Hungarian minorities in Romania, Serbia, and Ukraine.

The EU may yet emerge the stronger for all this, if the assertiveness of the Central Europeans emboldens them to push harder for policies that make the Union work better. As poor countries with threadbare institutions, their interests should lie in opposing policies that impose new costs on industry and new regulatory burdens on government. They should insist on the freedom to keep taxes low, public spending down, and labor cheap. Those are also good policies, as it happens, for stagnant rich countries, of which the EU has more than its share.

There is the possibility of tensions arising between the EU's older members and those newer ones that have re-

Hungarian men and women on stilts dancing with EU and Hungarian flags at the monument of the statues of Hungarian kings at the Heroes Square of Budapest on Saturday 1 May 2004. Hungary celebrated the EU enlargement as nine other European countries, Cyprus, the Czech Republic, Estonia, Latvia, Lithuania, Malta, Poland, Slovakia, and Slovenia joined the European Union. (AFP/Getty Images) gained their freedom and, in some cases, their independence, relatively recently, after decades spent taking orders from Moscow (or Belgrade, in the case of Slovenia). The currents of nationalism that helped overturn the communist order in East Central Europe in 1989 still run strong there, and not always far from the political mainstream. Central Europeans want an EU in which they and their countries are respected, not one in which they are bossed around casually by countries such as France or Germany. President Jacques Chirac's outburst that the Central Europeans should have remained silent instead of supporting U.S. policy on Iraq, betrayed the patronizing and bullying attitude that future EU members least want to encounter in Brussels. Forewarned by Chirac, they will enter the Union in a more combative mood, complicating their future relations with France and its increasingly like-minded ally, Germany.

TOLERANCE IN POLITICAL DEBATE

Hungary's sharp political debates serve a purpose, in that they decide who wins and loses elections. However, in the bitter and desperate manner in which they are more and more frequently conducted, they are also breeding attitudes that negate the very purpose of the debate. One of the approaches that tend to embitter these debates (in Hungary and elsewhere) is the attempt to forge a number of small facts, which may be statistically correct, into one all-encompassing construct of "truths," and then declare this newly forged model to be "the Truth." The manufacturing of such political truth calls for a considerable amount of commitment, even fanaticism. In the past, such fanaticism was often fueled by religious faith, and in the modern world by equally strong adherence to secular, man-made ideologies. Believers in a truth are totally dedicated to it, and are convinced that there is only one road to travel to serve the interest of their community or nation. (This practice of worshiping a single saving truth is, of course, not limited to Hungary or even East Central Europe. After all, National Socialism and fascism originated in Western Europe, and Marxism was the manufactured dream of the German Karl Marx and his mentor and ally, the German industrialist Friedrich Engels, only to be taken to its extreme conclusion by the Russo-Tatar Lenin and the Georgian Stalin.)

Political discussion in Hungary was long distorted by the fact that the various partners each believed in a single truth. Whether this meant a strict loyalty to the Holy Crown, an abiding faith in the basic goodness of the Magyar peasant, or a worshipful imitation of models concocted in the British Library, beliefs of such intensity called for intolerance of "others" who could not or would not see "the Truth." It became an accepted tenet that doubters and questioners were either stupid, in which case they could be ignored, or liars and scoundrels, in which case they were labeled not just political opponents and debating partners but enemies to be destroyed or made impotent by any and all means. On a personal level, this attitude has led to brawls, even murders, in pubs or in legislative chambers. In a more damning manner, it provided the justification for the wide variants of hatreds that dominated Hungary and the region in the past century.

Believers in a single truth simply are incapable of making compromises in politics. Therefore, politics, which in democratic societies is the art of compromise, in East Central Europe led to vendettas and prompted political figures to work for the physical destruction of their "enemies." This attitude continues to be the major reason for the slow development of genuine participatory democracy throughout East Central Europe.

Hungarian society is ready for a transformation. The country is no longer surrounded by implacable enemies, and the West is paying a lot more attention to developments in the region. This means that there is no excuse for reviving the spirit of extremist nationalism that caused so much human and civilizational harm during the past century, and which, by the way, proved to be counterproductive as regards to alleviating the nation's ills. After 1989, there were some voices calling for just such a return to the 1930s. Hungarians heard the extemists' simplistic slogans, read their overheated arguments, and saw mass demonstrations.

Nevertheless, such exclusive nationalism no longer represents a significant force in the thinking of Hungarians. Although the scarcity of true democratic traditions continues to cause problems in Hungary's efforts to become a stable democratic society, the elections since the collapse of the communist regime have shown that Hungarians have finally accepted the rules of Western-type participatory democracy. The greatest progress has been made in the explosive growth of civil society.

Society as a whole, however, is still threatened by the dominance of the idea of the single truth. This idea has penetrated Hungarian mentality to such an extent that it will be very difficult to eliminate. To discover and then to defend the one Truth "to the death" has become a matter of honor for most citizens in every sphere of life, including the family. Few political parties or educational institutions have realized that this way of thinking simply must be changed.

The attitude demanding devotion to the idea of a single truth is so pervasive that its elimination will require the cooperation of all segments of society. It will be necessary to start teaching children about its dangers at an early age, and to inculcate them with tolerance and respect for the laws, as well as for those who do not conform to social norms laid out by the single truth. The teaching of tolerance and ethical behavior will have to be included in the curricula of all schools. Only such a nationwide effort can lead to success and provide for a favorable environment for the full development of democratic institutions. As long as the political parties and all social strata do not see this need clearly, history will remain an "enemy" of Hungarian democracy, even if economic conditions of the country take a turn for the better.

It is, of course, quite possible that the question of the continuing survival of the Hungarian nation, its language, and its culture eventually will become moot, in light of globalization and the information revolution. This may be the fate of all the nations of Europe. In such a future (which, of course, is by no means inevitable), all European nations will be amalgamated into a European Union dominated by a universal culture that will not be English, German, French, or Italian but European. The Union also will bring about the Europe-wide spread of uniformly democratic institutions.

The glass appears to be more than half full: institutional changes have become irreversible; free enterprise has taken deep roots and will soon dominate the economy; and the people, however dissatisfied with inept politicians and clumsy policies, do believe in democracy and do vote for the party and the candidate of their choice. Hungary is no longer a barracks, but the half-built home of 10 million free, albeit somewhat discontented citizens. Democracy works, and it is here to stay.

CHRONOLOGY

1st millennium B.C.E.	Finno-Ugric period of the Hungarian people. Separation of the Finno-Ugric languages in western Siberia. Separation of the Ugrians, Magyar people group in the southern Ural region (Bashkiria).
5th–8th c.	Hun then Avar rule in the Carpathian Basin.
8th–9th c.	Migration of the Hungarian tribes from the Urals to the Black Sea region.
896–900	Hungarian settlement of the Carpathian Basin. Árpád is chosen chieftain; his male descendants become hereditary rulers.
899–970	Hungarian raids into Western Europe and the Balkans.
955	Hungarian raiders defeated at Lechfeld (Augsburg) by German-Moravian forces. Prince Géza is baptized into the Roman Catholic Church.
1001	Coronation of Géza's son, István I (later St. Stephen).
1046	Vata's pagan rising.
1077–1116	László I (St. Ladislas) (1077–1095) and Kálmán I (1095–1116) expand into Croatia and Dalmatia.
1142–1162	Saxon settlements in Transylvania; struggle against Byzantine expansion.
c. 1192–1195	The Pray Codex, containing the oldest Hungarian text.
1222	The Golden Bull, first charter of rights for the nobility.
1241–1242	Mongol invasion devastates the country, followed by reconstruction.
1301–1308	Struggle for the Hungarian throne between Wenceslas Przemysl, Otto von Wittelsbach, and Charles of Anjou; won by latter.

1308–1342	Dynastic marriages link Hungary to Naples and Poland.
1343–1382	Lajos I (Louis the Great) reconfirms the Golden Bull.
1349	The Black Death in Hungary.
1370–1382	Lajos becomes king of Poland.
1416–1456	Wars against Ottoman threat.
1442–1443	János Hunyadi defeats Ottomans in Transylvania and Serbia.
1444	Hunyadi is defeated at Varna (Bulgaria). Ulászló I dies in battle.
1446–1452	János Hunyadi rules Hungary as regent for infant king.
1448	Hunyadi's defeat at Kosovo Polje.
1456	Hunyadi stops Ottoman expansion at Nándorfehérvár (Belgrade).
1458–1490	Mátyás I Corvinus, Hunyadi's son, reconstructs the kingdom and introduces Renaissance culture.
1472–1477	First Hungarian printing press in Buda.
1505	Decision of Diet at Rákos to elect a king, excluding a foreign ruler.
1514	Peasant uprising led by György Dózsa. István Werbőczi's Tripartitum reduces peasants to serfdom.
29 August 1526	At Mohács, army of Suleiman I defeats the Hungarian army.
	Two rival kings, János Zápolyai (1526–1540) and Ferdinand I (1526–1564), divide the country between them.
1540–1570	Rule of János Zsigmond (Zápolyai) in eastern Hungary.
1541	Ottomans occupy Buda and central Hungary.
	Division of Hungary into three parts.
	The Reformation reaches Hungary.
1566	Suleiman's last campaign in Hungary; the fall of Szigetvár (September).
1568	Transylvanian Diet at Torda proclaims religious freedom.
1570	Treaty of Speyer: Eastern Hungary becomes Principality of Transylvania.
1571–1586	István Báthory, future king of Poland (1576–1586), Prince of Transylvania.
1581–1602	Zsigmond Báthory rules as Prince of Transylvania.
1591	Habsburgs invade Transylvania.
1598	Zsigmond Báthory hands over Transylvania to the Habsburg king.
1604–1606	Campaigns against the Habsburgs led by István Bocskai.
1606	Peace of Zsitvatorok with Ottomans.
1606–1608	Zsigmond Rákóczi rules as Prince of Transylvania.
1608–1613	Gábor Báthory rules as Prince of Transylvania.
1613–1629	Transylvania's golden age under Gábor Bethlen.
1630–1648	György Rákóczi rules as Prince of Transylvania.
1644–1645	Campaign of György Rákóczi I, in alliance with the Swedes.
	Peace of Linz: religious freedom for the serfs.
1657–1705	Leopold I introduces Habsburg absolutism in Hungary.
1664	Miklós Zrinyi's winter campaign; Battle of St. Gotthard.
	Peace of Vasvár leaves Turkish conquest intact.
1672	The beginning of the *kuruc* liberation struggle.
1683	Ottoman siege of Vienna; defeat of Ottoman forces.
1686	Recapture of Buda from Ottomans.
1687	Transylvania falls under Habsburg rule.
	Diet at Pozsony recognizes Habsburg right of succession in Hungary.
1691	*Diploma Leopoldinum:* Transylvania becomes independent principality.
1697	*Kuruc* rebellion in the Tokaj region.
	Eugene of Savoy wins a decisive victory over Ottomans at Zenta.
1699	Peace treaty of Karlowitz ends Ottoman rule in Hungary.
1687–1918	Hungary under the Habsburgs.
1703–1711	War of liberation led by Ferenc Rákóczi II.
1711	Treaty of Szatmár ends rebellion and results in compromise between Habsburg monarchy and Hungarian rebels.
1722–1723	Hungarian Diet accepts Pragmatic Sanction.
	Habsburgs agree to rule Hungary subject to constitution and laws.
1767	Urbarial Patent regulates size of serfs' land holdings and labor services.
1781	Edict of Tolerance: religious freedom to non-Catholics.
1785	Decree of Joseph II reorganizing public administration in Hungary; abolition of perpetual serfdom.
1786	Romanian peasant insurrection in Transylvania.
1790–1792	Leopold II softens Habsburg policy.
1800–1848	Movement to reform the Hungarian language.
1802	Founding of the Hungarian National Museum.
1805	Laws printed in Hungarian and Latin, first achievement in the struggle for the recognition of the Hungarian language.
1830	Publication of *Hitel* (Credit) by Count István Széchenyi.
1832–1848	Period of reforms in the Diet. Lajos Kossuth leads the liberal-radical

	opposition. Diet makes Hungarian the country's official language. Opening of the National Theater at Pest. First railway line.
1848–1849	Hungary's War of Independence against Austria. A revolution against the absolute monarchy breaks out in Pest (15 March).
	Abdication of Emperor Ferdinand.
	Franz Joseph is enthroned.
	After the victorious spring campaign the Hungarian army retreats.
	The National Assembly, transferred to Debrecen, proclaims Hungary's independence and the dethronement of the Habsburgs (14 April 1849).
	Armies of Tsar Nicholas I invade Hungary to rescue Habsburg rule.
	Hungarian army lays down its arms to the Russians at Világos (15 August).
	Franz Joseph revokes Hungarian constitution and assumes absolute power.
1849–1850	General Haynau's martial rule in Hungary.
1851	Proclamation of the Principles of Government and open absolutism.
1860	István Széchenyi commits suicide.
	October Diploma issued.
1861	February Patent issued. First, brief parliament of the neoabsolutist period.
1866	The Austrian army is defeated by the Prussians at Sadowa (Königgrätz).
1867–1918	Dual Monarchy.
1867	Austro-Hungarian Compromise *(Ausgleich)* based on mutual concessions.
1867–1871	Count Gyula Andrássy's government.
1868	Hungarian parliament adopts liberal laws regarding education and the rights of the national minorities in the kingdom.
	In Hungarian-Croatian compromise, Croatia gains autonomy and control over its domestic affairs.
1871–1879	Gyula Andrássy serves as minister of foreign affairs of Dual Monarchy.
1873	Pest, Buda, and Óbuda are united, Budapest is born.
1879	Austro-Hungarian Monarchy and Germany form the Dual Alliance.
1882	Germany, the Austro-Hungarian Monarchy, and Italy form Triple Alliance.
1894	Funeral of Lajos Kossuth.
	Libel trial of Romanian politicians (Memorandum trial).
	Sanctioning of laws on church–state relations.
1908	Annexation of Bosnia-Hercegovina by Austria-Hungary.
	Launching of the progressive literary periodical *Nyugat* (The West).
1910	Mass emigration to America (more than 1.5 million).
28 June 1914	Assassination of Archduke Franz Ferdinand, at Sarajevo; outbreak of World War I.
1915	Count Mihály Károlyi forms Independence Party.
1916	Franz Joseph dies.
1918	General political strike.
	Defeat and disintegration of Austro-Hungarian monarchy (October).
	Democratic revolution.
	Abdication of King Charles IV.
	Formation of Hungarian National Council presided over by Mihály Károlyi.
11 January 1919	Károlyi becomes president of the republic.
1919	Law on land reform published.
21 March 1919	Hungarian Soviet Republic proclaimed under Communist leader Béla Kun.
1919	Anti-Bolshevik committee formed in Vienna under Count István Bethlen.
	Romanian forces occupy Budapest.
16 November 1919	Admiral Miklós Horthy's paramilitary forces enter the capital.
1920–1945	Trianon Hungary.
1 March 1920	Horthy elected regent of the kingdom.
4 June 1920	Under the Treaty of Trianon, Hungary loses two-thirds of its territory, 60 percent of its population, and most of its natural resources.
6 November 1921	Dethronement of the House of Habsburg.
1922	Hungary joins the League of Nations.
1927	Italian-Hungarian friendship treaty.
	Monetary stabilization.
1932–1936	Under Prime Minister Gyula Gömbös, a turn to the right, toward Germany and Italy, takes place.
1934	Rome Protocol on Hungarian, Italian, and Austrian cooperation.
1938	First anti-Jewish laws.
	First Vienna Award restores southern Slovakia to Hungary.
1939	Hungary regains Magyar-inhabited region of Carpatho-Ukraine.
	Second anti-Jewish laws.
	Rise of the Hungarian Nazis, the Arrow Cross Party, at the elections.
1940	Second Vienna Award restores northern Transylvania to Hungary.
	Adherence to the tripartite pact of Berlin-Rome-Tokyo.
1941	Hungary joins German attack on Yugoslavia.
	Hungary enters the war against Soviet Union (June) and declares war against Allies (December).

1942–1943	Prime Minister Miklós Kállay attempts peace overtures toward the Allies.
1943	The Hungarian Second Army is annihilated at Voronezh on the Don.
	Secret negotiations with Britain.
1944	Germany occupies Hungary (19 March).
	Deportation of almost half a million Jews from the provinces.
	Red Army crosses Hungarian border.
1944	Horthy proclaims armistice on the radio (October 15).
	Germans occupy strategic points.
	Horthy appoints Arrow Cross leader Ferenc Szálasi as head of the Council of Ministers.
	Assassination or deportation of 105,000 Jews.
	Anti-German provisional government formed in Debrecen.
1945–1989	Postwar and Communist Hungary.
1945	Soviet troops drive all German troops out of Hungary (April 4).
	Legislative elections (November 4): Smallholders Party 57 percent, Communist Party 17 percent. Coalition government includes four Communists.
1946	Proclamation of the Republic; Zoltán Tildy becomes first president.
	Nationalization of banks and the iron and steel industry.
1947	Three-year plan of reconstruction.
	Peace treaty signed in Paris (February 10).
	Arrests and sham trials of non-Communist politicians.
	Forced resignation of Premier Ferenc Nagy.
1948	Forced fusion of the Social Democratic Party with the Communist Party; further nationalization.
	Closing of church-operated schools.
1949	Hungarian People's Republic proclaimed with Soviet-style constitution (August 20); Cardinal József Mindszenty and other Church dignitaries arrested and tried.
	Trial and execution of Communist Minister of Internal Affairs László Rajk.
1949–1953	Stalinist political, economic, and social systems are imposed.
1953	Stalin dies.
1955	Reformer Imre Nagy becomes prime minister, implements New Course.
1956	Twentieth Congress of the Soviet Communist Party (February).
	Opposition group of Hungarian intellectuals (Petőfi Circle) grows.
	Solemn funeral of Rajk and other victims of Stalinist terror (October) culminates in mass demonstrations in Budapest.
	The Hungarian Revolution erupts (23 October).
	Soviet army invades Hungary (4 November) and installs János Kádár.
	Hungarian Workers Party renamed Hungarian Socialist Workers Party.
	Exodus of 200,000 Hungarians.
1957–1963	Period of repression.
	Imre Nagy and associates tried and executed (June 1958).
	Trial of writers and freedom fighters; over 300 executions.
1961	Recollectivization of agriculture.
1963	General amnesty; relaxation of repression.
1968	Launching of economic reforms: "New Economic Mechanism."
1984	Hungary begins to establish semi-independent foreign policy.
1987	Democratic opposition spreads.
1988	Károly Grósz replaces Kádár as Communist Party leader.
	Creation of democratic political parties.
1989–	Post-Communist era.
1989	The year of changes.
26 January	Exhumation and reburial of Nagy and his associates is authorized.
	Workers are granted the right to strike.
10–11 February	Central Committee formally endorses the idea of multiparty system.
20–21 February	Central Committee approves draft of new constitution, omitting leading role of the Communist Party.
11 March	Hungarian Democratic Forum (MDF) holds its first congress.
23 March	Revived Smallholders Party holds its first congress.
6 April	Withdrawal of 10,000 (of the 62,000) Red Army troops from Hungary announced.
8–9 May	Central Committee relieves János Kádár of his party posts.
14 June	Tripartite roundtable talks begin for a democratic transition.
16 June	Reburial of Imre Nagy and associates; hundreds of thousands attend.
6 July	János Kádár dies; Imre Nagy rehabilitated by Supreme Court.
11–12 July	U.S. President George Bush visits Budapest.
September	Foreign Minister Gyula Horn announces "temporary suspension" of agreement with East Germany; East German citizens are allowed to cross into Austria.
10 October	Central Committee changes party's name to Socialist, led by Rezső Nyers.
23 October	Republic of Hungary proclaimed.

March 1990	Legislative elections: Democratic Forum forms center-right coalition government, headed by historian József Antall. Árpád Göncz, president of the republic.
1994	Legislative elections. Socialist (ex-Communist) Party gets an absolute majority. Gyula Horn forms a coalition government with Liberal Democrats.
1996	Commemoration of the eleventh centenary of the arrival of the Hungarians in the Carpathian Basin.
1997	Protocols signed for Hungary to join NATO.
2004	Hungary joins the European Union (EU).

CROATIA

MARK BIONDICH

LAND AND PEOPLE

GEOGRAPHY

The Republic of Croatia (in Croatian, Republika Hrvatska) is situated in Southeastern Europe. It is located in the northwestern part of the Balkan Peninsula, bounded by Slovenia in the northwest, Hungary in the northeast, Serbia-Montenegro in the east, Bosnia-Hercegovina in the south and east, and the Adriatic Sea in the west. Croatia is a comparatively small country with a total area of 56,538 square kilometers, with a coastline that extends 5,790 kilometers (mainland 1,778 kilometers, and the islands 4,012 kilometers).

Croatia is composed of four historic provinces: Croatia proper (with Zagreb), Slavonia, Dalmatia, and Istria. Croatia proper, which is composed of the areas known as Medjimurje, Hrvatsko Zagorje, Moslavina, Banija, Kordun, Lika, and Gorski Kotar, is the most heavily populated area and also the industrial and agricultural center of Croatia. According to the census of 31 March 2001, Croatia proper had a population of 2,571,764, or 57.9 percent of Croatia's total population. The principal towns are Karlovac, Petrinja, Sisak, and Čakovec. Slavonia is a fertile agricultural and forested lowland bounded in part by the Drava River in the north and the Sava River in the south. Wheat and corn are the primary crops; the leading industry is food processing. It also has oil and natural gas deposits. According to the 2001 census, this province had 797,870 inhabitants, or 18 percent of the total population of Croatia. The principal towns of Slavonia are Osijek, Slavonski Brod, and Vukovar. Dalmatia extends along the Adriatic Sea. In 2001 it had 861,482 inhabitants, or 19.4 percent of the total population of Croatia. Its principal towns are Split, Zadar, Šibenik, and Dubrovnik. The local economy is oriented toward the sea; the scenic location and historic monuments make Dalmatia an important tourist destination. Split is the largest town and a leading commercial center. Shipbuilding and the production of plastics, chemicals, and cement are the major industries. The town of Zadar is also a leading tourist center, in addition to having industries that produce liqueur, processed fish, textiles, and cigarettes. The city also has several Roman monuments and medieval churches and palaces. Šibenik is a seaport and naval base, with shipbuilding, metalworking, and aluminum industries. Dubrovnik is also an important tourist and cultural center. Istria is a mountainous peninsula approximately 3,900 square kilometers in size. Although the vast majority of the peninsula is part of Croatia, a smaller part of the northwestern portion belongs to Slovenia and Italy, including the city of Trieste. The area is thickly forested and predominantly agricultural. In 2001 Istria had a population of 206,344, representing about 4.7 percent of Croatia's total population. Pula is the principal town and a shipbuilding center. It is a major seaport and industrial center, with shipyards, docks, and varied manufactures.

Clock tower in Zagreb. (Tim Thompson/Corbis)

Croatia is a geographically diverse land composed of three distinct zones: the Adriatic (or Littoral), the Mountainous (or Dinaric), and the Continental (or Lowland). The Adriatic zone consists of the relatively narrow strip of territory running along the Adriatic coastline, consisting of the peninsula of Istria, the Croatian Littoral, Dalmatia, and the islands. The coastline extends 5,790 kilometers. The climate in this zone is characterized by hot and dry summers and mild and rainy winters. The Adriatic zone may be divided further into a northern part, consisting of Istria and the Kvarner, and a southern part, which includes Dalmatia.

The Croatian Adriatic has a total of 1,185 islands and islets with a total coastline of 4,012 kilometers. Of the 1,185 islands and islets, 718 are islands in the conventional sense, of which only 66 are inhabited. There are an additional 389 "rocks" and 78 reefs. There are fourteen islands with a total size of more than 50 square kilometers. Eight of these islands are larger than 100 square kilometers: Krk (409 square kilometers), Cres (405.8 square kilometers), Brač (394.6 square kilometers), Pag (299.7 square kilometers), Korčula (284.6 square kilometers), and Hvar (276 square kilometers), Dugi Otok (114.4 square kilometers), and Mljet (100.4 square kilometers). The inhabited islands are sparsely populated. According to the 1991 census, only four islands had more than 10,000 inhabitants: Korčula (17,038), Krk (16,402), Brač (13,824), and Hvar (11,459).

The Continental (or Lowland) zone is composed of Croatia proper with Slavonia. The western part of this zone lies in the Dinaric Alps; the eastern part, drained by the Sava and Drava rivers, is mostly low lying and agricultural. Slavonia is a fertile agricultural region and hence the country's chief farming region and a center of livestock breeding. The northwestern part of this zone, and especially the capital Zagreb with its environs, is industrially the most developed part of the whole country. The climate in this entire zone may be termed continental. Winters are normally cold and snowy while summers are short and humid. More than one-third of Croatia is forested and consequently lumber is a major export. There are also some natural resources like oil, bauxite, copper, and iron ore.

The Continental and Adriatic zones are separated by the Mountainous (or Dinaric) zone, which consists of low mountains and highlands. This transitional zone is a barren, rocky region lying in the Dinaric Alps and consisting of the Lika region and the Velebit range. This hilly and mountainous area is economically the least developed part of Croatia. A considerable part of Croatia lies at an altitude of over 500 meters, but there are no mountains higher than 2,000 meters. The highest mountains are found in the Mountainous zone (e.g., Risnjak at 1,528 meters, Velika Kapela at 1,533 meters, and Plješivica at 1,657 meters) or close to the sea (e.g., Velebit at 1,758 meters). The highest mountains in Dalmatia are Biokovo (1,762 meters) near the sea and Dinara (1,831 meters) in the hinterland.

Croatia has no mountains exceeding 2,000 meters, although it has twenty-one mountains with peaks exceeding 1,000 meters above sea level. The five tallest peaks (and the mountain ranges where they are located) are Dinara (in the Dinara Mountains) at 1,830 meters, Kamešnica (in the Kamešnica range) at 1,810 meters, Sveti Jure (in the Biokovo range) at 1,762 meters, Vaganski vrh (in the Velebit range) at 1,757 meters, and Ozeblin (in the Plješivica range) at 1,657 meters.

Croatia's rivers belong to the Adriatic and the Black Sea basin. The rivers in the interior are large and calmer (e.g., Sava, Drava, and Danube). The coastal rivers are shorter and have a higher gradient. The longest coastal rivers are the Mirna and the Rasa in the Istrian Peninsula and the Zrmanja, the Krka, and the Cetina in Dalmatia.

Croatia has approximately thirty small lakes. Only three of these are larger than 10 square kilometers. The largest is Lake Vrana (30.7 square kilometers) near Biograd-na-moru in Dalmatia. The second largest is the man-made Lake Peruča (13.0 square kilometers) located on the Cetina River near Sinj, also in Dalmatia. The third largest is Lake Prokljan (11.1 square kilometers) along the Krka River near Šibenik. There are also a number of artificially constructed lakes. The largest is Lake Peruča; others include Lakes Lokve and Bajer in Gorski Kotar and Trakošćan in the region of Hrvatsko Zagorje. Lake Kopačevo and the surrounding swamp forests in the Baranja region of eastern Croatia are a

Plitvice Lakes, a World Heritage site. (Corel Corporation)

major bird habitat. The most famous lakes in Croatia, and also an important tourist destination, are the Plitvice Lakes. This chain of sixteen lakes is designated as a national park with a total area of 19,479 hectares.

Croatia has eight national parks: Kornati (30,200 hectares in size), Plitvice Lakes (19,479 hectares), Krka (14,200 hectares), Paklenica (3,617 hectares), Mljet (3,100 hectares), Risnjak (3,014 hectares), Brijuni (2,700 hectares), and Northern Velebit (10,900 hectares). Additionally, there are six "nature parks" totaling 317,502 hectares in area, two "strict" reserves totaling 2,395 hectares, and sixty-nine "special" reserves totaling 30,372 hectares. There are also twenty-eight protected nature areas totaling 17,544 hectares. These state-protected nature zones amount to roughly 7.5 percent of Croatian state territory.

Croatia has a total of 3.15 million hectares of agricultural land of which roughly 2 million is cultivated. The rest consists of pastures, moors, and fishponds. The majority of cultivated land (81.5 percent) is privately owned. There is 59,000 hectares of land allotted to vineyards. In 2001 there were 1,142 companies employing 22,300 employees in the agricultural sector. Of the three geographic zones in Croatia, only the Lowland zone (i.e., Slavonia), with its fertile soil and continental climate, is favorably suited for agriculture.

POPULATION

According to the last Croatian census, conducted on 31 March 2001, the total population of Croatia was 4,437,460. Croats compose the vast majority of the population, numbering 3,977,171 persons, or 89.63 percent of the total population. Of the country's minorities, the most numerous are the Serbs, who number 201,631 or 4.54 percent of the population. Nearly a dozen other nationalities compose the remaining 258,658 inhabitants (5.83 percent). The 2001 census indicates that important changes have taken place in Croatia's population since the last census, which was conducted in March 1991. These changes can be attributed almost entirely to the breakup of Yugoslavia and the war in Croatia (1991–1995).

According to the 1991 census, which was conducted on the eve of the war in Croatia, the Republic of Croatia had 4,760,344 inhabitants, that is, 322,884 more people than it had in March 2001. In 1991 Croats composed 77.9 percent of the population while in 2001 that percentage had increased to 89.6 percent. Conversely, the Serb component of the population has declined over the same period from 12.2 to 4.5 percent. Historically, Serbs have been the largest non-Croat nationality in Croatia and were settled primarily in those regions that had formed from the sixteenth to the nineteenth centuries parts of the Habsburg "military

The Croatian Language

Croatian is the official language of the Republic of Croatia. It is the mother tongue of over 5 million persons in Croatia and other parts of former Yugoslavia. The Croatian language belongs to the South Slavic group of the Slavic branch of Indo-European languages. It is virtually identical to Serbian and closely related to Slovenian, Macedonian, and Bulgarian.

The Croatian language may be divided into three dialects, each named according to the word used for "what": Kajkavian *(kaj),* Čakavian *(ča),* and Štokavian *(što).* The Čakavian and Kajkavian dialects have a relatively limited territorial base within Croatia: the latter is spoken in Zagreb, its wider environs, and the region of Hrvatsko Zagorje, and the former in Istria, part of the Croatian Littoral, and some of the northern Adriatic islands. Štokavian is the most widely spoken dialect in Croatia. The Štokavian dialect may be further grouped into three subdialects, according to the treatment of vowels in certain words. On this basis, Štokavian may be grouped into ekavian, ikavian, and ijekavian variants. The modern Croatian literary language is based on the ijekavian variant, while the ekavian variant, which is spoken in Serbia proper, forms the basis of modern literary Serbian.

The Croatian language has a rich and long literary history. The earliest written records in Croatian date from the ninth to the eleventh centuries and are in Old Church Slavonic, a liturgical language developed by the Greek missionaries Cyril and Methodius. Old Church Slavonic was based on the Macedonian Slav vernacular of Salonika's hinterland, which Cyril and Methodius adapted to written form. The script employed to write this language was known as Glagolitic; in Christian Orthodox societies it was eventually replaced by the Cyrillic script, while in Catholic Slavic countries it was replaced by the Latin script, in the Croatian case by the fourteenth century. Thus the Croatian variant of Old Church Slavonic in the Glagolitic script represents the earliest form of literary Croatian.

The first major text written in Croatian Old Church Slavonic was the Baška Tablet (ca. 1100) recording the donation by the Croatian King Zvonimir of a property to the Benedictine convent of the island Krk. Written in the Glagolitic script, the tablet is so named because it was found in St. Lucy's church near Baška on the island of Krk. It stands as a cornerstone of Croatian literary development, although fragments of earlier inscriptions written in Glagolitic and dating from the eleventh century have been found on the islands of Krk and Cres (the Valun Tablet) and in Istria.

The Croatian language flourished during the Renaissance, particularly in Dalmatia and Dubrovnik. The most famous literary figure of the time, the humanist writer Marko Marulić (1450–1524) of Split, wrote his famous epic poem *Judita* (Judith; 1501) in Croatian and had it published in Venice in 1521. A younger contemporary, the playwright Marin Držić (1508–1567) of Dubrovnik, also distinguished himself. The first Croatian grammar, the *Institutionum linguae Illyricae* (Rome, 1604), was published by Bartol Kašić (1575–1650) in this same era. Although Kašić's native dialect was Čakavian, he urged the use of the ikavian variant of Štokavian as the basis of Croatian. It was one of the earliest attempts at standardizing the Croatian literary language. Kašić also began translating the Bible into Croatian; Matija Petar Katančić completed his project in the early nineteenth century. The city-state of Ragusa (Dubrovnik) produced a number of outstanding humanist and Renaissance writers. In addition to Marin Držić, it produced great writers like Ivan Gundulić (1589–1638) and Julije Palmotić (1605–1657). Ivan Belostenec published the first Latin-Croatian dictionary in 1740.

(continues)

frontier," that is, Kordun, Banija, Lika, and western Slavonia, although a sizable minority settled also in northern Dalmatia. In 1991 Serbs composed an absolute majority in eleven Croatian municipalities. During the war in Croatia these municipalities and some adjoining territories seized by the Yugoslav People's Army formed part of the so-called Republic of Serb Krajina. In August 1995, during the Croatian Army's Operation Storm, the Serb population of this region either fled or was expelled. The other national minorities have not witnessed major changes, although the category of "Yugoslav" has disappeared entirely; in 1991 Yugoslavs composed 2.2 percent of the population.

According to the 1991 census, Croatia had a total of 6,694 settlements: 205 urban settlements (i.e., towns, cities) and 6,489 rural settlements (villages, hamlets). In all, 57.1 percent of the Croatian population lived in urban settlements. By far the largest city is Zagreb. In 2001 it had a population of 779,145. The three largest cities after Zagreb are Split, Rijeka, and Osijek.

(continued)

Although the center of gravity of Croatian culture and literature lay in Dalmatia until the seventeenth century, after that point the center shifted north to Croatia proper. In the nineteenth century the Croat national awakeners, known as the Illyrian movement, had a critical role in the further evolution of Croatian literature and language. In the 1830s Zagreb became both the political and cultural center of the Croat lands. However, the Illyrianist awakeners first had to contend with the name of the spoken language. They initially referred to it as "Illyrian" and later as "Croatian or Serbian." For the remainder of the nineteenth century, the language was referred to as "Croatian" or "Croatian and Serbian." After the creation of the Kingdom of Serbs, Croats, and Slovenes in December 1918, the term "Serbo-Croatian" became official. The proponents of Yugoslavist unitarism believed that just as the Croat, Serb, and Slovene "tribes" would be melded into a hybrid Yugoslav nationality, so too would the "Croatian or Serbian" tongue merge into a single literary language. However, this proved problematical on many levels. As Yugoslavia's political experience soured and resistance to state centralism stiffened among the non-Serbs, resistance to linguistic unity grew also.

This raises one of the controversial aspects of the Croatian language question, namely, its relationship to the Serbian language and whether the two are really the same language. In 1850 a group of Croat, Serb, and Slovene intellectuals signed the so-called Vienna Literary Convention, calling for the creation of a common language of Croats and Serbs. Many Croat intellectuals rejected it; nevertheless it raised the whole issue of linguistic unitarism. For nineteenth century Croat intellectuals of a Yugoslavist cultural orientation, it was hoped that linguistic unity would nurture cultural and perhaps, at some distant future point, even political unification of the South Slavs.

Thus what initially began as "Croatian or Serbian" subsequently became "Croato-Serbian" or "Serbo-Croatian," first in royalist and then communist Yugoslavia. The communist authorities at first referred to Croatian and Serbian languages, but in 1954 twenty-five Serb, Croat, and Montenegrin writers and linguists met at Novi Sad to pass a new law designating "Serbo-Croatian" as the official language and passed a resolution calling for the publication of a common Serbo-Croatian/Croato-Serbian orthography and dictionary. In Croatia this decision was resisted, implicitly or explicitly, on both political and cultural grounds. Politically it was seen as a manifestation of Belgrade centralism and culturally as a degradation of Croatian to the status of a regional dialect. In March 1967 eighteen Croatian scholarly institutions published the "Declaration Concerning the Name and Position of the Croatian Literary Language," which emphasized that although Croatian and Serbian possess the same linguistic basis, they are nonetheless two separate languages. The declaration was an early indicator of the level of dissatisfaction of many Croat intellectuals with the treatment of Croatian culture, and indeed the Croat nation generally, in communist Yugoslavia. This growing dissatisfaction culminated in the Croatian reform movement known as the so-called Croatian Spring, which was crushed in 1971 but not before it renounced the Novi Sad Agreement. Following the demise of communism in Yugoslavia and the move toward Croatian independence, Croatian was proclaimed in December 1990 as the official language of the Republic of Croatia.

In 1991 Croatia had a population density of 84.2 inhabitants per square kilometer. The most densely populated areas of Croatia are the cities of Zagreb, Split, Rijeka, and Osijek, in addition to the Medjimurje region. The cities of Split and Zagreb have population densities (persons per square kilometer) of 1,386.7 and 544.5, respectively, while Osijek and Čakovec municipality (in Medjimurje region) have population densities of 249.7 and 164.1, respectively. The population density (per square kilometer) of other selected towns and municipalities is: Donja Stubica municipality (123.4), Ivanec municipality (120.3), the city of Karlovac (126.9), Rijeka (393.6), and Varaždin (250.7).

Among the twenty counties (and the city of Zagreb), the population is distributed as follows:

County	*Number*	*Percentage of Total*
Bjelovar-Bilogora	133,084	3.0
Dubrovnik-Neretva	122,870	2.8
Istria	206,344	4.7
Karlovac	141,787	3.2
Koprivnica-Križevci	124,467	2.8
Krapina-Zagorje	142,432	3.2
Lika-Senj	53,677	1.2
Medjimurje	118,426	2.7
Osijek-Baranja	330,506	7.4
Požega-Slavonia	85,831	1.9
Primorje-Gorski kotar	305,505	6.9

(continues)

(continued)

County	*Number*	*Percentage of Total*
Šibenik-Knin	112,891	2.5
Sisak-Moslavina	185,387	4.2
Slavonski Brod-Posavina	176,765	4.0
Split-Dalmatia	463,676	10.4
Varaždin	184,769	4.2
Virovitica-Podravina	93,389	2.1
Vukovar-Srijem	204,768	4.6
Zadar	162,045	3.7
Zagreb (county)	309,696	6.9
Zagreb (city)	779,145	17.6
Total	4,437,460	100.0

Among the four provinces the majority of the population is found in Croatia proper:

Province	*Population*	*Percentage of Total*
Croatia proper (with Zagreb)	2,571,764	57.9
Dalmatia	861,482	19.4
Istria	206,344	4.7
Slavonia	797,870	18.0
Total	4,437,460	100.0

From the census of 1890 until 2001, the population of Croatia has grown by close to 1.6 million people:

Evolution of the Population of Croatia, 1890–2001

	1890	*1921*	*1948*	*1991*	*2001*
Total	2,854,558	3,443,375	3,779,858	4,784,265	4,437,460

In 2001 the estimated population growth was 1.48 percent, reflecting a birthrate of 12.82 per 1,000 inhabitants (the death rate is 11.41 deaths per 1,000). The infant mortality rate is 7.21 deaths per 1,000 live births. Life expectancy is approximately 73.9 years (70.28 years for men and 77.73 years for women).

Croatia is a highly homogeneous society, with most of the population (96.12 percent) identifying Croatian as their native language. (Another 1.01 percent identify Serbian as their "mother tongue," 0.16 percent Serbo-Croatian, and 2.71 percent as "other" or "unknown.") The literacy rate for persons over ten years of age is 98.23 percent (99.33 percent for men and 97.23 percent for women).

Of the total population of 4,437,460 in the 2001 census, the single largest religious denomination is the Roman Catholic, with 3,897,332 adherents, representing 87.83 percent of the population. There are 6,219 followers of the Greek Catholic and 303 followers of the Old Catholic rites, representing 0.14 percent and 0.01 percent of the population, respectively. The largest non-Catholic denomination is the Orthodox Christian with 195,969 followers representing 4.42 percent of the population. The religious composition of the remainder of the country is as follows: Muslim 56,777 (1.28 percent); Jewish 495 (0.01 percent); Adventist 3,001 (0.07 percent); Baptist 1,981 (0.04 percent); Evangelical 3,339 (0.08 percent); Jehovah's Witness 6,094 (0.14 percent); Calvinist 4,053 (0.09 percent); Methodist 15 (0.00 percent); Pentecostal 336 (0.01 percent); other 4,764 (0.11 percent); agnostic 132,532 (2.99 percent); atheist 98,376 (2.22 percent); unknown 25,874 (0.58 percent). The statistics on religious affiliation generally reflect the country's nationality composition. For example, the Orthodox Christian population (4.42 percent) is predominantly of the Serb nationality (4.54 percent) and most Croats (89.63 percent) are Roman Catholic (87.83 percent).

The 1990 Constitution of the Republic of Croatia provides for freedom of conscience and religion and free public profession of religious conviction. Croatian governments since 1990 have in practice generally respected these rights. Although Croatia has no official state religion, the Roman Catholic Church has since the end of World War II been a powerful national symbol. Since 1990, it has enjoyed a special relationship with the state not shared by other denominations; the line separating the Roman Catholic Church and the state has occasionally appeared blurred since the first democratic elections. The then ruling Croatian Democratic Union (HDZ) periodically attempted to identify itself more closely with the Catholic Church. Under Franjo Cardinal Kuharić, the former archbishop of Zagreb, the Catholic Church identified itself with the Croat national cause. More often than not, however, the Catholic Church retained an independent role in society and was occasionally critical of the political situation in Croatia and some of the semiauthoritarian measures of the government. Since 1997, under the new head of the Catholic Church, Archbishop Josip Bozanić, the Catholic Church has publicly promoted reconciliation, dialogue, and the return of refugees.

The Croatian government requires that religious training be provided in schools, although attendance is optional. Schools filling the necessary quota of seven minority students per class offer separate religion classes for these students. In classes not meeting this quota, minority students may fulfill the religion requirement by bringing a certificate that they had received classes from their religious community. Since 1990 the Croatian government has not imposed any formal restrictions on religious groups or their ability freely to conduct public services. The Roman Catholic Church receives direct subsidies, as well as state financing for some salaries and pensions for priests and nuns through the government-managed pension and health funds. Other religious communities still do not have such an agreement with the state, nor is there yet a law that regulates these issues. Catholic marriages are recognized by the state, eliminating the need to register them in the civil registry office. The Muslim and Jewish communities have sought a similar status, but the issue has yet to be resolved to their satisfaction.

The official coat of arms of the Republic of Croatia is a historical Croatian coat of arms in the shape of a shield. The checkered pattern has twenty-five alternating red and white fields, so that the upper left corner of the shield is red. Above the shield is a crown with five peaks, which touches the left and right upper ends of the shield, bending in a slight arch.

The crown is divided into five small shields with historical Croatian coats of arms, in the following order, from left to right: the oldest known Croatian coat of arms, then coats of arms of the Dubrovnik Republic, Dalmatia, Istria, and Slavonia. The height of the smaller fields in the crown is 2.5 times the size of the fields in the main shield, while the width of both sets of fields is the same. The oldest known Croatian coat of arms has a yellow (golden) six-pointed star and a white (argent) new moon on a blue shield. A golden rim borders the entire coat of arms. The coat of arms of the Dubrovnik Republic has two red beams on a navy blue shield. The Dalmatian coat of arms has three yellow (golden) crowned leopard heads on a blue shield. The Istrian coat of arms has a yellow (golden) goat with red hoofs and horns facing left, on a navy blue shield. The Slavonian coat of arms has two horizontal white (argent) beams on a blue shield. Between the beams there is a red field with a marten in motion facing left. There is a yellow (golden) six-pointed star in the chief blue field. A red line trims the entire coat of arms.

The flag of the Republic of Croatia consists of three bands of color—red, white, and blue—with the Croatian coat of arms in the center. The length is twice the width. Its colors, in the order red, white, and blue, are laid horizontally, each one-third the width of the flag. The Croatian coat of arms is placed in the center of the flag so that the upper part of the coat of arms (the crown) overlaps the red field of the flag, and the bottom part of the coat of arms overlaps the flag's blue field. The center of the coat of arms is placed at the point where the diagonals of the flag meet. The Croatian tricolor was first used during the Revolutions of 1848–1849.

The national anthem of the Republic of Croatia is "Lijepa naša domovino" (Our Beautiful Homeland). Composed by Antun Mihanović (1796–1861), it was first published as a poem under the title "Croatian Homeland" in the 14 March 1835 issue of the journal *Danica* (The Dawn). The original poem was much longer than the official national anthem; only the first and last eight verses were adopted for the official version. In 1846 the Croatian Serb Josip (Josif) Runjanin composed the musical score. The anthem was first played as such in 1891. The text of the anthem of the Republic of Croatia is:

Lijepa naša domovino,	Our Beautiful Homeland
Oj junačka zemljo mila,	O so fearless, o so gracious.
Stare slave djedovino,	Our fathers' ancient glory,
da bi vazda sretna bila!	May God bless you, live forever!

Mila, kano si nam slavna,	You are our only glory,
Mila si nam ti jedina.	You are our only treasure,
Mila kuda si nam ravna,	Yes, we love your plains and valleys,
Mila, kuda si planina!	Yes, we love your hills and mountains.

Teci Dravo, Savo teci,	Sava, Drava, keep on flowing,
Nit' ti Dunav silu gubi,	Danube, do not lose your vigor,
Sinje more svijetu reci,	Deep blue sea, go tell the whole world,
Da svoj narod Hrvat ljubi.	That a Croat loves his homeland.

Dok mu njive sunce grije,	When his fields are kissed by sunshine,
Dok mu hrašće bura vije,	When his oaks are whipped by wild winds,
Dok mu mrtve grobak krije,	When his dear ones go to heaven,
Dok mu živo srce bije!"	Still his heart beats for Croatia!

HISTORY

SETTLEMENT AND NATIVE RULE TO 1102

Relatively little is known of the early medieval history of the lands that today compose Croatia or of the people who bear the Croat name. The name Croat (in Croatian, *Hrvat*) is of unknown origin but was apparently first mentioned in the third century C.E. in an inscription discovered near the Sea of Azov. Many scholars now believe that the original Croats were not Slavs but nomadic Sarmatians who roamed Central Asia and permanently entered Europe around the third or fourth century C.E. This theory proposes that these Croats settled in a land called White Croatia, in what is now southern Poland near Cracow, where they established a short-lived and rudimentary state. These Croats, some scholars have claimed, ruled over and were eventually assimilated by the far more numerous indigenous Slavic-speaking tribes of that region; eventually they bequeathed to these Slavs their name.

According to a tenth century Byzantine source, in the seventh century C.E. the Byzantine Emperor Heraclius enlisted the Croat tribes of White Croatia against the Avars, a people who were threatening Byzantine control of the western Balkans. At that point, around 630, the Croat tribes migrated southward and eventually settled in their present-day homeland, thereby establishing the Croat presence in the western Balkans. In their new homeland the Croats gradually displaced or assimilated the indigenous population, which consisted of Illyrian tribes, Vlachs, and a Romanized element in the towns of Dalmatia.

At the time of the Croat settlement of the Balkans, the Roman presence and culture had already permeated the region for half a millennium. In 35 B.C.E. the Roman emperor Octavian had conquered the eastern Adriatic coastal region and by 14 C.E., Rome had subjugated the indigenous Celtic and Illyrian tribes of the western and central Balkans. The Romans brought with them law and order and bequeathed many lasting monuments. In order to govern more effectively their Balkan possessions, the Romans

Diocletian's Palace

The Roman emperor Diocletian (r. 284–305 C.E.) was born in Salona, the capital of the Roman province of Dalmatia, in 245. At the end of the third century, Diocletian built a palace in what is today the city of Split, just a few kilometers from Salona. Following his abdication in 305 (the motives for which still remain unclear), he retired to the palace.

Today the palace lies in the heart of Split. The importance of Diocletian's Palace far transcends local significance because of its level of preservation and the buildings of succeeding historical periods, stretching from the Roman period onward, that form the very fabric of old Split. The palace is one of the most famous architectural and cultural constructs on the Adriatic coast and holds an outstanding place in the Mediterranean, European, and world heritage. In November 1979 UNESCO added the historic Split inner city, built around Diocletian's Palace, to its register of World Cultural Heritage sites.

Despite its obvious importance, Diocletian's Palace is hardly an archeological site. That is to say, its shape and style need to be extrapolated from its remains, which have been altered because of construction over the centuries. The ground plan of the palace is an irregular rectangle with towers projecting from the western, northern, and eastern facades. It combines the qualities of a luxurious villa with those of a military camp. Only the southern facade, which rose directly from the sea, was unfortified. The elaborate architectural composition of the arcaded gallery on its upper floor differs from the more severe treatment of the three shore facades. A monumental gate in the middle of each of these walls led to an enclosed courtyard. The southern Sea Gate has a simpler design, perhaps because it was originally intended as the emperor's private access to the sea or as a service entrance for supplies.

The dual nature of the architectural scheme is also evident in the arrangement of the interior. The transverse road linking the eastern and western gates divided the complex in two. The more luxurious structures (such as the emperor's apartment) were located in the southern half. Although for many centuries almost completely filled with refuse, most of the substructure is well preserved. A monumental court formed the northern access to the imperial apartments. It also gave access to Diocletian's Mausoleum on the east, and to three temples on the west. The northern half of the palace, which was divided in two parts by the main longitudinal street leading from the North Gate, is less well preserved. It is believed that each of these parts formed a large residential complex, housing soldiers, servants, and other facilities. The palace is built of white limestone, tufa (or porous stones) taken from the nearby river beds, and brick. One can still find along the road from Split to Salona the impressive remains of the original aqueduct, which was restored in the nineteenth century. Diocletian's Palace is one of Croatia's historical and archeological treasures.

divided their territories into separate provinces linked by roads, towns, and fortresses. Three Roman provinces encompassed what later became the Croat lands: Dalmatia (i.e., Dalmatia, most of Bosnia-Hercegovina), Pannonia (i.e., eastern Slavonia, northeastern Bosnia), and Savia (i.e., western Slavonia, Croatia proper). But perhaps the greatest legacy of Rome was the separation of the empire, in 395 C.E., into western (Roman) and eastern (Byzantine) halves. This division eventually became a cultural chasm, following the church schism of 1054, and a permanent feature of the European cultural landscape. It likewise separated the South Slavs. The Croats settled on the territorial cusp of this chasm.

By the late eighth century, two powerful empires were contesting the Croat lands: the Germanic Frankish Empire to the northwest and the Byzantine Empire to the southeast. Most of the Croat tribes lived under loose Byzantine rule, but in reality the Croats alternated between Frankish and Byzantine control in this period; the Franks dominated in the north (the Roman provinces of Savia and Pannonia) and Byzantium in the south (Dalmatia). However, the Byzantine Empire continued to exert a far greater political and cultural influence at the time.

It was in this context that an obscure figure named Ljudevit, apparently the ruler of a rudimentary principality in Pannonia, led a revolt in 818 against the Franks. The revolt was suppressed by 823, but the first steps in Croatian political development had been taken. With Ljudevit's revolt suppressed, the focus of Croatian politics moved to Dalmatia, where Croats had already established their first port towns (e.g., Šibenik, Biograd, Nin), a small navy, and a seat of government (Knin). The most notable of these early Croat rulers in Dalmatia was a tribal chief named Trpimir (r. 845–864), who gave his name to the dynasty (Trpimirovićes, r. 845–1089) that governed first the Croatian principality and then the independent kingdom. Trpimir led successful military campaigns against the Bulgarians and the Byzantine Empire in Dalmatia and issued the first charter in which he is mentioned as the prince of Croatia.

Under Branimir (r. 879–892), the Croatian principality in Dalmatia established close links with the papacy; in 879, the year of his accession, he obtained the pope's recognition of Croatia as an independent principality. The Christianization of the Croats, undoubtedly a lengthy process, began in this period. Missionaries came to Croatia in greater number during his reign. Most of them were disciples of Sts. Cyril and Methodius; they brought with them liturgical texts in the Old Slavonic language and in the Glagolitic script, which the two saints had developed. From that point, liturgical services were held in this language and church books were written in this script. This was the beginning of the written word among the Croats.

Under Tomislav (r. 910–928), Croatia became an independent kingdom and a powerful state in the western Balkans. He organized a strong military and defeated the Magyars who had recently arrived from the Russian steppe and forced them permanently across the Drava River, which today forms the border between Croatia and Hungary. As a result, he brought Slavonia under his rule, thereby unifying the two Croatian principalities. As an ally of Byzantium, Tomislav helped defeat the Bulgarians and was granted in return the right to administer the coastal towns (e.g., Zadar, Split, and Trogir), thus rounding off his state from the Adriatic Sea to the Drava River. In 925 Tomislav was crowned king, apparently by or in the presence of a papal legate.

Several able rulers succeeded Tomislav, foremost of whom were Držislav (r. 969–997) and Petar Krešimir IV (r. 1058–1074), during whose reign Croatia achieved its greatest territorial extent. Both rulers bore the title of "King of Dalmatia and Croatia," administered the relatively prosperous Dalmatian towns, and successfully resisted encroachments by Venice in the west and Byzantium in the southeast. During the reign of Dmitar Zvonimir (r. 1075–1089), a Charter containing his name and title was engraved in stone. Known as the Baška Tablet, it is the oldest artifact written in the Croatian language, in the Glagolitic script. However, the death of Dmitar Zvonimir marked the end of the native dynasty and independent statehood.

At that point a struggle ensued for the Croatian throne. A faction of nobles or tribal chiefs contested the succession and offered the Croatian throne to the King of Hungary, László I (Ladislas, r. 1077–1095), who was the late Zvonimir's brother-in-law. In 1091 László accepted, and in 1094 he founded the Zagreb bishopric, which later became the ecclesiastical center of Croatia. Another Hungarian king, Kálmán I ("the Book Lover," r. 1095–1116), crushed the opposition after the death of László and won the crown of Dalmatia and Croatia in 1102. Kálmán forged a lasting link between the Croatian and Hungarian crowns. The nature of that link has long been contested, however. Croats have maintained that the 1102 union was based on an agreement *(pacta conventa)* of equals (i.e., the Croatian nobility and the Hungarian king), whereby the two kingdoms were joined in a personal union under the Árpád dynasty. According to the terms of this union, Croatia managed for centuries to remain a sovereign state. However, Hungarians have long asserted that Hungary annexed Croatia outright in 1102. Although Hungarian influence in Croatia remained significant after 1102, the fact remains that Croatia retained its own prorex, or viceroy *(ban),* privileged landowning nobility, and an assembly of nobles, the diet *(Sabor).* This union remained in place until 1918.

CROAT LANDS (1102–1526)

One of the main trends in the political history of Croatia in this period was the political fragmentation of the Croat lands (i.e., Croatia proper, Slavonia, Dalmatia, and Istria). This trend was not immediately apparent, since the Hungarian-Croatian state was initially a significant political and military force in the area between the German (i.e., Holy Roman) and Byzantine Empires and a rival to the Venetian state in the Adriatic. Despite the devastations wrought by the Tatar invasion of 1242, the Croats and Hungarians managed to resist their more powerful neighbors. Only the internal weaknesses of the kingdom, which were caused by the strengthening of noble prerogatives at the expense of the monarchy, enabled the fragmentation of the Croat lands.

Although much of Bosnia (though not Hercegovina) had originally formed part of the Croatian principality and kingdom, from the twelfth century, Bosnia began increasingly to disassociate itself from the Hungarian-Croatian kingdom. Bosnia first became a separate principality under ban Kulin (r. 1180–1204), who managed to solidify Bosnian autonomy at the expense of its more powerful neighbors. This autonomy proved ephemeral, however. Only in the fourteenth century did Bosnia become a formidable state. The first Bosnian monarch was ban Stefan Tvrtko I (r. 1353–1391), who in 1377 became "King of Bosnia and Raška (Serbia)" and later conquered parts of Croatia and Dalmatia. However, the Ottoman Turks conquered most of Bosnia in 1463, followed by Hercegovina in 1483.

Much of Dalmatia was lost in this same period. Between 1115 and 1420, the Hungarian-Croatian kingdom and Venice waged twenty-one wars for control of the province. The Dalmatian cities repeatedly changed hands. Both Serbia and Bosnia also competed for Dalmatia; the coastal area around the Gulf of Kotor became part of the Serbian state around 1196, and the Bosnian kingdom dominated parts of Dalmatia in the fourteenth century. The only part of Dalmatia to avoid direct foreign rule was the Republic of Dubrovnik, known by its Italian name Ragusa, which became an important mercantile center, in addition to being a focal point of medieval Croat and South Slavic culture and literature. It had been founded in the seventh century by Romans fleeing Slavic incursions, but was gradually "croatized." Ragusa became a powerful merchant republic by skillfully cultivating relations with its far more powerful neighbors. It was a protectorate of the Byzantine Empire until 1205, of Venice until 1358, of Hungary-Croatia until 1440, and finally of the Ottoman Empire until 1806. It was the first Christian state to establish treaty relations with the Ottoman Turks. It remained independent throughout these centuries until it was abolished in 1806 by Napoleon and incorporated into his Illyrian Provinces.

Following the extinction in 1301 of the native Hungarian Árpád dynasty, Charles Robert of the Italian branch of the French Anjou dynasty ascended the throne. King

Charles I (Károly, r. 1308–1342) and his son Louis/Lajos ("the Great," r. 1342–1382) temporarily restored royal power, which had been undermined by the Croatian and Hungarian magnates. Louis defeated Venice, and at the Peace of Zadar (1358), he restored virtually the entire Croatian coastline to his rule and placed Dubrovnik under his protection. Following his death, however, a period of internal anarchy commenced and the enormous territorial expanse of Hungary-Croatia was reduced. In 1409 a large part of Dalmatia was lost to Venice, when Ladislas of Naples, a claimant to the Hungarian-Croatian throne, sold Venice his rights to Dalmatia. Between 1420 and 1428 all of Dalmatia was lost to Venice, with the exception of Dubrovnik. The internal weakness of the Hungarian-Croatian state prevented the kingdom from slowing or stopping the Ottoman Turks, whose advance into Europe posed the greatest danger to the Hungarian-Croatian state. In the mid-fifteenth century the Ottomans moved into the Balkan Peninsula. In 1417 the Romanian principality of Wallachia submitted to Ottoman rule, and after 1440 Dubrovnik accepted Ottoman protection against Venice. The Ottomans then conquered Constantinople (1453), Serbia (1456), Bosnia (1463), and Hercegovina (1483). Ottoman armies inflicted decisive defeats against a Croatian army at Krbava (1493) and far more importantly, a Hungarian army at Móhacs (1526). The latter defeat destroyed the independent Hungarian-Croatian state and brought the Habsburg dynasty of Austria possession of the throne.

CROAT LANDS (1526–1790)

Following the battle of Mohács, most of Croatia came under Ottoman rule. On 1 January 1527, the Croatian Landed Estates, meeting at Cetingrad, elected Ferdinand I of the House of Habsburg as King of Croatia in return for his pledge of support in defending the kingdom against further Ottoman incursions. He also pledged to respect their political rights and social privileges. During the following century, Croatia served as a Habsburg outpost in the defense of central Europe against the Ottomans. Between 1527 and 1699, much of Croatia remained under Ottoman occupation. A smaller portion, known as Royal Croatia, was under Habsburg rule while Dalmatia and much of Istria remained in Venetian hands.

By the middle of the sixteenth century, the Croat lands had, as a result of Venetian and Ottoman encroachments, become politically fragmented. For centuries to come they would remain divided into Croatia proper (Royal Croatia, centered at Zagreb), Slavonia, Dalmatia, and Istria. The region of Slavonia was after 1526 incorporated directly into the Ottoman Empire. It was recovered from the Ottomans only in 1699 by the terms of the Treaty of Karlowitz (Srijemski Karlovci). However, after 1699 Slavonia was administered as a province distinct from Croatia proper. The two provinces, Slavonia and Croatia proper, were permanently reunited only in two stages, in 1868 and 1881. Dalmatia had been contested by Venice and Hungary-Croatia ever since the twelfth century. By the 1420s, the coastal islands and most of Dalmatia, with the exception of Dubrovnik, had become Venetian possessions. Istria (in Croatian, Istra) had by the fifteenth century been absorbed by the Habsburg dynasty of Austria and Venice, which controlled its northeastern and southwestern parts, respectively.

In the Habsburg monarchy, Croatia managed to preserve its internal administration, that is, the diet (Sabor) and viceroy (ban). But the rights of the native nobility were progressively diminished to the benefit of the Habsburg dynasty. In order to enhance the prestige of his dynasty and to avoid future succession conflicts, Ferdinand I arranged for his heirs to be recognized as future kings of Bohemia (after 1549) and Hungary-Croatia (after 1563), which in practice (though not in theory) meant that these kingdoms became hereditary Habsburg possessions. Habsburg rule in Croatia never seemed secure, however, largely because of the Ottoman threat. The Habsburg rulers formed a defensive cordon, lined with fortifications, known as the military frontier (in Croatian, *Vojna krajina*). The first section of this frontier was formed in 1538, under the control of the Croatian diet and ban. However, by 1630 the military frontier had been removed from the administration of the Croatian diet and was governed directly by agents of the Habsburg dynasty. Since the ongoing warfare against the Ottoman Turks had taken such a devastating demographic toll on the native population, the Habsburg authorities settled thousands of agricultural colonists in the military frontier, who, in return for land, served in military units. These frontiersmen (in Croatian, *graničari;* in German, *Grenzer*) were composed mainly of Croats, Serbs, Germans, and others. In this way, the nationality composition of Croatia was changed and the country became an ethnically far more heterogeneous society.

Disenchantment with and resistance to the Habsburgs grew over time. The most noted incident in Croatian history, which is known to Croatian historiography as the Zrinski-Frankopan conspiracy, was in fact part of a larger anti-Habsburg conspiracy centered in Hungary, where it is remembered as the Wesselenyi conspiracy. Following the Peace of Westphalia (1648), which brought an end to the Thirty Years' War, the Habsburgs again asserted their dynastic prerogatives in Hungary-Croatia. Habsburg absolutism and the existence of the military frontier to the detriment of Croatian political autonomy fueled hostility to the dynasty. In 1663 hostilities were initiated between the Ottoman Turks and the Habsburg monarchy. In the initial stages of this war, Habsburg armies managed major gains. Many Croatian and Hungarian nobles hoped that the Habsburg monarch, Leopold I, would retake all the territory that had been lost to the Turks in the sixteenth century. However, on 10 August 1664 the Habsburgs hastily concluded peace with the Ottomans at Vasvár. That led a number of prominent Hungarian and Croatian nobles to rebellion, in the hope of restoring the independence of Hungary-Croatia. Among the conspirators were the Hungarian Palatine Ferenc Wesselenyi, the bishop of Esztergom, Gyorgy Lippay, the Croatian ban Nikola Zrinski, his brother Peter Zrinski, and their brother-in-law, Krsto Frankopan. Eventually, the Hungarian conspirators, Peter Zrinski, and Frankopan were arrested. They were condemned for high treason and executed at Wiener Neustadt on 30 April 1671. The conspiracy put an end to Croatia's two leading magnate families.

In 1699, by the terms of the Treaty of Karlowitz (Srijemski Karlovci), the Ottoman Turks were forced to cede to the Habsburgs all of their Hungarian and Croatian territories. By 1718, the Ottomans no longer posed a danger to Dalmatia. Thus, at the dawn of the eighteenth century, the Croat lands achieved "liberation" from the Turks. Liberation came at a price, however. Slavonia and other Croatian regions (e.g., Lika, Krbava) were henceforth administered separately from Royal Croatia (Croatia proper), which was also referred to as Civil Croatia. Although the Ottoman threat progressively receded in the eighteenth century, the military frontier remained a separate administrative region beyond the control of the Croatian diet; it was abolished and incorporated into Croatia only in 1881. Nevertheless, the diet continued to assert Croatian political sovereignty. In 1712 it accepted, independently of the Hungarian diet, the so-called Pragmatic Sanction, which stipulated that a female could assume the Habsburg throne; the Pragmatic Sanction enabled Maria Theresa to become empress. However, because of Maria Theresa and (her son) Joseph II's policies of absolutism, centralization, and administrative Germanization, the rights of the Croatian kingdom were gradually reduced even further. In fear of these centralizing tendencies, the Croatian nobility firmly allied itself with their far more powerful Hungarian counterparts, who were able to offer firmer opposition to the Habsburgs. Joseph II's reforms exposed latent ethnic and linguistic rivalries within the monarchy. By attempting to bring the empire under strict central control and decreeing that German replace Latin as the official language of the empire, Joseph II brought Hungary to the verge of rebellion, a fact that would have important consequences for Croatia.

THE NATIONAL AWAKENING (1790–1848)

The French Revolution (1789) and the Napoleonic era (1795–1814) introduced to Croatia and all of Eastern Europe the ideologies of nationalism and liberalism. The Napoleonic era also brought about extensive territorial changes in Europe, and the Croat lands were no exception. More importantly, this era saw the first stirrings of national awakening in the Croat lands. From the 1790s onward, the Croatian nobility was confronted by both Habsburg absolutism and growing Hungarian national assertiveness, which challenged the traditional nature of the Croato-Hungarian relationship. In addition to the traditional threat posed by Habsburg absolutism and administrative Germanization, the Hungarian nobility now posed, in the era of nationalism, a threat in the form of Magyarization (the imposition of Hungarian culture and institutions).

During this same period, French revolutionary ideas and armies established themselves in the region. As a consequence of Napoleon's military campaigns in northern Italy in 1796–1797, the Republic of Venice disappeared. According to the Treaty of Campo Formio (April 1797), signed by France and Austria, the Habsburgs acquired Venice, Istria, and Dalmatia. In this manner, Croatia-Slavonia was again united with Dalmatia under the same dynasty, although they were administered as separate provinces. However, according to the Treaty of Schönbrunn (October 1809) between Napoleon and Austria, the Habsburgs were forced to cede part of Carinthia and Croatia south of the Sava River, which together with Istria and Dalmatia formed the so-called Illyrian Provinces (1809–1813), which were attached directly to France. Napoleon's army had entered Dubrovnik in 1806 and the French proclaimed the dissolution of the Dubrovnik Republic. After the defeat of Napoleon, all of these regions were ceded to the Austrian empire. Although the Illyrian Provinces had only a brief existence and were directly under French rule, they subsequently provided Croat Romantic nationalists of the 1830s and 1840s, who adopted the Illyrian name, with political inspiration.

Under the influence of the French Revolution, and because of resistance to Germanization and Magyarization and the internal development of rich cultural and state traditions, a national revival occurred in Croatia after 1836. The Croat national awakening became known as the Illyrian movement (1836–1848) and was led by Ljudevit Gaj (1809–1872). The Illyrian movement laid the basis of a standardized Croatian literary language and alphabet; it formed the first national newspapers and national institutions. The Illyrian movement also prompted the use of Croatian in the diet, in place of Latin; from 1847 the diet began using Croatian in its deliberations. The appeal of the Illyrian movement was limited, however, almost entirely to the Croat intelligentsia of Croatia-Slavonia and much later, of Bosnia-Hercegovina, Istria, and Dalmatia. Slovene and Serb support was weak from the outset.

The most significant factor shaping modern Croat national identity and nationalism has been the concept of historical rights, that is, the belief that the medieval Croatian kingdom had never completely lost its independence, despite the union first with Hungary (1102) and then the Habsburgs (1527). Like their counterparts in Hungary, the Croatian nobility ("political nation") had defended their social privileges, identity, and political rights by associating them with the institutions of the Kingdom of Croatia-Slavonia. All Croat nationalists, even those of a South Slavic orientation, operated within a framework of historic state right. The second factor shaping Croat nationalism was the identification with other Southern Slavs, which was a reflection of Croat numerical inferiority in relation to the Habsburg monarchy's Magyars and Germans. It also stemmed from the fact that there was a numerically significant Serb minority in Croatia.

Both factors, the state-oriented, historically rooted perception of nationalism and emphasis on Slavic solidarity, were evident in the Illyrian movement. Like national awakeners everywhere in Eastern Europe at the time, Gaj and his associates had to ask themselves a basic question: what is the Croat nationality? They opted for a linguistic definition, but by doing so they ran into a peculiar problem. Of the three dialects spoken in Croatia, two (Kajkavian, Čakavian) were purely Croatian, but the third (Štokavian) was spoken not just by the majority of Croats, but all Bosnian Muslims and Serbs. They opted for the Štokavian dialect, calling it "Illyrian" in order to appeal to Croat and Serb intellectuals alike, but a dilemma persisted. If Croats were to be identified as speakers of Croatian ("Illyrian") residing in historic Great Croatia, then how were those people who regarded themselves as Serbs, spoke virtually the same language, and composed roughly 25 percent of the population of Croatia, to be identified? The problem of identity thus proved particularly problematical in the Croat case.

THE NATIONAL PROGRAM (1848–1918)

During the revolutions of 1848–1849, the two most important Croat political leaders were Gaj and ban Josip Jelačić (1801–1859), who headed the Croatian royal administration. Their political program, and that of the Illyrian movement, was the unification of all the South Slavs of the Habsburg monarchy around an autonomous Croatian kingdom, within a federalized Habsburg monarchy. The Croatian diet adopted a "national" program that abolished serfdom, expressed loyalty to the dynasty, and firmly established the idea of the unification of all Croat lands (the so-called Triune Kingdom of Croatia-Slavonia-Dalmatia) within a reformed monarchy. Because of the dangers posed by Magyar nationalists, who were led in the Hungarian revolution (War for Independence) of 1848–1849 by Lajos Kossuth, the Croat national program was based on resistance to the Hungarians, who did not recognize Croatian autonomy, and support for the Habsburg dynasty, which was viewed as an ally against Magyar nationalism. In 1848 representatives of the Illyrian movement attended the Slavic Congress in Prague and supported František Palácky's plan for a federalized Habsburg monarchy. The Illyrianists did not, it is worth pointing out, advocate the creation of a Yugoslav state encompassing Serbia and Bosnia-Hercegovina. Gaj and the Illyrianists did win some support from Serb intellectuals of the Habsburg monarchy, that is, the Serb leaders of Croatia and southern Hungary. This political cooperation reflected the greater danger posed at the time to Croat and Serb alike by the Magyars, who were intent on creating a Magyar nation-state and Magyarizing all non-Magyars.

Following the suppression of the 1848–1849 revolutions, the Habsburgs introduced a period of absolutism. Only in 1860 did the Habsburg authorities restore constitutional life and initiate a series of political experiments concerning how the monarchy should be governed. When this period of political experimentation ended in 1867, Croat national leaders would be greatly disappointed. The year 1867 represented an important turning point in the history of the monarchy. After being defeated by Sardinia-Piedmont (1859) and Prussia (1866), the Habsburg authorities realized the need to restructure the monarchy and to come to terms with the Magyars. The *Ausgleich* (Compromise) of 1867, which was negotiated by Emperor Franz Joseph and the Magyar ruling oligarchy, transformed Austria into the Dual Monarchy, or Austria-Hungary (also known as the Austro-Hungarian Empire). According to the terms of the *Ausgleich,* Hungary and the "Austrian" lands became two states joined in personal union through a common monarch (the Habsburg emperor of "Austria" and king of Hungary); the two states shared joint ministries of war, finance, and foreign affairs. Otherwise, they were independent states.

The Ausgleich perpetuated the division of the Croat lands. Croatia-Slavonia and the military frontier were regarded by the monarchy as historically belonging to Hungary. Istria and Dalmatia, however, belonged to the non-Hungarian half of the empire, which was officially referred to as "the kingdoms and crown lands represented in the Imperial Parliament." Dalmatia was designated as one of three Austrian kingdoms, while Istria had the status of a margraviate. In 1868 the Croato-Hungarian *Nagodba* (Agreement) was signed, whereby the Kingdom of Croatia-Slavonia was recognized by the Magyar ruling oligarchy as a "political nation," with autonomy within the Kingdom of Hungary. A Croatian diet dominated by pro-Hungarian deputies adopted the Nagodba. Croatia-Slavonia obtained autonomy in internal matters, retained its own Sabor (diet), administration, and education system, all of which employed the Croatian language. In 1881 the Croatian military frontier was incorporated into Croatia-Slavonia. However, Hungarians continued to wield significant influence over internal Croatian affairs. For example, the king appointed the Croatian ban on the recommendation of the Hungarian minister-president; since the ban could influence the autonomous Croatian administration, the Hungarian government was able readily to manipulate internal Croatian politics and administration. Indeed, under Károly Count Khuen-Héderváry (who was ban from 1883 to 1903), this proved to be the case, as Croatian autonomy was reduced to a bare minimum. Throughout the era of dualism (1867–1918), Hungarian leaders continued to believe that the Nagodba provided ample (indeed, too much) autonomy to Croatia, but Croat patriots always remained strongly opposed to its terms.

After 1868, there were two opposing Croat political movements in Croatia-Slavonia. One emphasized a purely Croat identity, while the other continued in the Illyrian tradition, albeit in a different form. The first movement was Ante Starčević's Party of (Croatian State) Right, formed in 1861, which adopted a program based on historical state right. Frustrated by the Croat failure to gain autonomy in 1848, and by the lack of Serb support for Illyrianism, in which he had participated as a student, Starčević advocated a purely Croat identity. Starčević claimed that the Croatian kingdom's state right had never been abolished and that it was thus de jure an independent entity. Starčević adopted a political concept of nationality, inherited from the old notion of a noble "political nation," and defined Croats simply as all people residing in Great Croatia, be they Catholic, Muslim, or Orthodox Christian. Great Croatia encompassed present-day Croatia, Bosnia-Hercegovina, and Slovenia. Although he recognized the existence of Serbs in Serbia proper, he refused to recognize the existence of "political Serbs" (or any other nationality) in those lands regarded as historically Croatian, for there could only be one nation on the territory of the Croatian state. Thus the Serbs of the Habsburg lands remained, in the minds of the Party of Right, Orthodox "Croats," just as the Bosnian Muslims were viewed as Muslim "Croats." Starčević's nationalism revealed the powerful hold of historical state right on the thinking of all of Croatia's nineteenth-century intellectuals.

The other Croat political movement was the National Party of Josip Juraj Strossmayer. Strossmayer was a leading Croatian Catholic bishop and proponent of cultural Yugoslavism. Strossmayer and his supporters continued in the Illyrian tradition; they promoted the cultural unity of all South Slavs in the Habsburg lands. They believed that cultural interaction and cooperation would eventually lead to greater political cooperation between the Croats, Serbs, and Slovenes of the monarchy. Like the Illyrianists before them, the proponents of cultural Yugoslavism in the 1870s and 1880s hoped at the very least to achieve Croatian autonomy within a federalized Habsburg monarchy. However, Strossmayer's influence, and the appeal of Yugoslavism, was limited only to the small liberal intelligentsia in Croatia, and almost entirely to Croat intellectuals. It was essentially a Croat program and reflected a continued sense of Croat weakness; as an ideology it was designed to strengthen the Croat position, together with Serbs and Slovenes, within the monarchy. Strossmayer's Yugoslavism failed to attract many Serb intellectuals, who continued on the whole to look to Serbia for leadership and saw Yugoslavist ideology as a Croat attempt to assimilate Croatian Serbs to a Yugoslav or Croat identity. It is worth remembering that Strossmayer's National Party, although recognizing the "genetic" distinctiveness of Serbs in Croatia, refused to recognize Serbs as a "political nation" in Croatia. To do so would have meant opening the door to separate Serb rights in or even demands for territorial autonomy within Croatia. The thinking of the Croat political elites thus fit the Central European pattern of "historic" and "nonhistoric" nations, with the Croats (like the Magyars, Germans, Poles, and Czechs) falling into the former and all other nationalities into the latter. Strossmayer's achievements were primarily in the cultural sphere. He founded the Yugoslav Academy of Arts and Sciences (1866) and was instrumental in the creation of the University of Zagreb (1874). Ultimately, both the Party of Right and National Party were neutralized by Khuen-Héderváry, who ignored the Nagodba and exploited Croat-Serb rivalries to promote Magyar rule in Croatia.

Croatia's Serbs established their own political party in 1881, known as the Serb Independent Party, following the incorporation of the military frontier into Croatia-Slavonia. Adopting a linguistic definition of nationality, the Serb intelligentsia initially argued that all speakers of the Štokavian dialect were Serbs. The disparities in Croat and Serb nationalist ideologies made cooperation between the two nationalities increasingly difficult in late-nineteenth-century Croatia. This was a pressing matter, given the fact that in 1881 Serbs constituted one-quarter of Croatia-Slavonia's population. The Serbs were concentrated in those parts of Croatia that had formerly been part of the military frontier (e.g., Lika, Kordun, Banija, parts of Slavonia, Srijem). Initially the Croatian Serbs hoped to defend their traditional religious autonomy, but as the Orthodox population began acquiring a Serb identity, religious demands gave way to demands for national rights, such as the use of Cyrillic script and cultural and political autonomy. Most Croatian Serbs wanted the former military frontier removed from Croatian administration; many hoped for eventual unification with Serbia. At the dawn of the twentieth century, there was little common ground between Croat and Serb in the Habsburg lands.

In the first years of the twentieth century a younger generation of Croat and Serb politicians, dissatisfied with the Croat and Serb predicament in the Austro-Hungarian Empire, forged a new cooperation. In 1905 an important alliance of the leading Croat and Serb parties in Croatia was formed, known as the Croato-Serb Coalition, consisting of Croat and Serb politicians who believed their fortunes would be best served by cooperating in Croatia against the Habsburg authorities. The greatest contribution of this coalition was to put an end (albeit temporarily) to Croat and Serb political rivalries in Croatia. By 1908, the "Croato-Serb Coalition" won a majority in the diet. The Habsburg authorities hoped to break the coalition; they brought charges of treason against Croatian Serb leaders, but the subsequent trials scandalized European opinion and strengthened the Croato-Serb Coalition. This coalition dominated Croatian politics to 1914, and during World War I some of its most prominent leaders chose political exile to advocate among the Western Allies the creation of a Yugoslav state.

Two characteristics distinguished this generation of supporters of "Yugoslavism" from Strossmayer's generation. First, they increasingly thought in terms of creating a Yugoslav state, which would encompass all the South Slavic regions of Austria-Hungary (i.e., Croatia, Dalmatia, Slovenia, southern Hungary, Bosnia-Hercegovina) and Serbia and Montenegro. This tendency reflected the intense and growing dissatisfaction with Austro-Hungarian rule. Second, they adopted an innovative but in retrospect flawed belief that the South Slavic peoples (Croats, Serbs, Bosnian Muslims, Slovenes) constituted one (a Yugoslav) nationality, and that Yugoslav identity would gradually supplant Croat, Slovene, and Serb identities. This variant of Yugoslavism is referred to as "integral" Yugoslavism or Yugoslavist "unitarism": it was the notion that Croats, Serbs, and Slovenes were simply "tribes" of a single Yugoslav nationality, just as Prussians, Bavarians, and Saxons were "tribes" of a single German nationality. Some of the more radical followers of this "integral" Yugoslavism began forming revolutionary societies in the decade before World War I and employing violence against Austrian and Hungarian officials in Bosnia-Hercegovina and Croatia. Gavrilo Princip, the Serb student who assassinated Archduke Franz Ferdinand in 1914, came from one such revolutionary organization. Thus, in the period from 1905 to 1914, the "South Slav Question" emerged as an important issue in Austro-Hungarian domestic politics, and an issue of European significance.

WORLD WAR I AND THE FORMATION OF THE YUGOSLAV STATE

What made the South Slav Question an issue of European significance was the emergence of Serbia as a regional Balkan power during the Balkan Wars of 1912–1913. During those wars, a pro-Russian Serbia had doubled in size and thus was perceived by the Austro-Hungarian government as a serious threat, especially given the growth of revolutionary societies in Croatia and Bosnia-Hercegovina. It was Vienna's perception of a Serbian threat, combined with growing radicalism in Croatia and Bosnia-Hercegovina, which prompted the Habsburg authorities to go to war against Serbia in 1914, which, in turn, sparked World War I.

Following the outbreak of the war, many Croat politicians and intellectuals left the monarchy to work for the cause of Yugoslav statehood. In April 1915 a number of these exiled politicians, led by the Croats Ante Trumbić and Frano Supilo, formed the Yugoslav Committee in London. Fearing Italian pretensions toward Dalmatia and Istria, Trumbić and the Yugoslav Committee promoted the cause of a South Slavic state, encompassing the South Slavic lands of the Habsburg monarchy and Serbia-Montenegro. Dalmatia in particular was contested by a number of powers. According to the terms of the secret Treaty of London (1915), the Allies promised Dalmatia to Italy in return for Italian support in the war against the Central Powers.

In July 1917 the Serbian premier Nikola Pašić and Trumbić signed the Corfu Declaration, which called for a common state of Serbs, Croats, and Slovenes with a single democratic, constitutional, parliamentary system, under the Karadjordjević dynasty of Serbia. The Declaration promised equality for the three national names and flags, the three predominant religions, and both scripts (Cyrillic and Latin). However, it did not indicate whether the new state would be highly centralized or a federation of historic provinces. Pašić advocated the former, Trumbić and the Yugoslav Committee the latter.

The Dual Monarchy's authority over its South Slav lands ended abruptly in October 1918. At that time, a "National Council" of Slovenes, Croats, and Serbs was formed in Zagreb and became the de facto government of the monarchy's South Slavic regions; the Slovene politician Anton Korošec headed the National Council, and its vice presidents were Svetozar Pribičević and Ante Pavelić (who was no relation to the leader of the Croatian fascist movement from 1929–1945). On 29 October, the Croatian Sabor annulled the eight-century-old union between Croatia and Hungary and authorized the "National Council" to act as the supreme political authority in a new state, called the "State of the Slovenes, Croats, and Serbs," which encompassed all of the South Slavic lands of the former Habsburg monarchy. In November 1918 Pašić, Trumbić, and Korošec met in Geneva and signed an agreement providing for a joint provisional government but recognizing the jurisdiction of Serbia and the National Council in the areas under their respective control, until a constituent assembly could convene. However, the rapid conclusion of the war, and the fact that Italy began seizing parts of Dalmatia and Istria, prompted the National Council to rush headlong into union with Serbia. It did so in spite of the objections of the Croat Peasant Party leader Stjepan Radić, who would soon become the dominant politician in Croatia, and without obtaining guarantees of autonomy. Leaders in Bosnia-Hercegovina and Vojvodina favored union; on 24 November, the Montenegrins deposed the Petrović dynasty and declared unification with Serbia. On 1 December 1918, Prince Regent Alexander Karadjordjević and delegates from the National Council, Vojvodina, and Montenegro announced the founding of the Kingdom of Serbs, Croats, and Slovenes. The Paris Peace Conference recognized the new kingdom in May 1919.

KINGDOM OF SERBS, CROATS, AND SLOVENES (YUGOSLAVIA) (1918–1941)

Formed on 1 December 1918 and proclaimed in Belgrade, the Kingdom of Serbs, Croats, and Slovenes (which was renamed the Kingdom of Yugoslavia in 1929) was from its inception plagued by numerous political, nationality, social, and other problems. The question of centralism versus federalism bitterly divided Serb and Croat; a lasting democratic solution eluded the country's leaders and led to the imposition in January 1929 of royal dictatorship. Only in 1939, on the eve of World War II, did Croat and Serb leaders manage to reach a political settlement. However, that agreement came far too late and failed to satisfy nationalists on either side.

The creation of Yugoslavia fulfilled the dreams of many Croat intellectuals of Yugoslavist persuasion but ignored some fundamental differences in national ideologies, histories, and cultures among the different nationalities. Serbs, Croats, and Slovenes had conflicting political and cultural traditions, and the Yugoslav state possessed significant non-Slav minorities (including, among others, Germans, Albanians, Magyars, Romanians, and Turks). Confessional differences were a divisive rather than integrative factor; the Orthodox, Roman Catholic, Islamic, Jewish, and Protestant faiths were well established and normally cut across territorial and nationality lines.

After 1918, many Croats would repeatedly point to the fact that the decision to join Serbia in a new kingdom was never authorized by the Croatian diet, which had broken all ties with the Habsburg monarchy on 29 October 1918. Although it had then ceded to the short-lived State of Slovenes, Croats, and Serbs, and its executive, the National Council, some of its sovereignty, it never authorized the subsequent act of unification. Had it been given the chance to do that, in all likelihood it would have authorized unification. That is because the Croat lands (like the Slovene territories) were threatened in the fall of 1918 by Italy, which as one of the victors of the war began occupying territory on the Adriatic coast. Furthermore, in the fall of 1918 massive rural disturbances swept through the Croatian countryside; the middle-class Croat politicians in Zagreb feared the social revolutionary implications of these disturbances, which prompted them, together with the Italian threat, to move even more quickly toward unification with Serbia.

However, once the rural disturbances had been quelled and the Italian threat had receded, the new state's political and other problems quickly surfaced. To Serb politicians, the new kingdom was first and foremost a state of all Serbs; it represented the unification of all Serbs within a unitary state under the scepter of the Serbian Karadjordjević dynasty. The Serbian establishment (i.e., the middle class, bureaucracy, and army) believed that the best way to safeguard the recently obtained unity of Serbs was to have a highly centralized state that ignored local historical individualities. Croats and other non-Serb nationalities were as a consequence deprived of their national rights and increasingly experienced the Yugoslav kingdom as a Great Serbian state; Serbs dominated the government, police, and military. The two leading Serb parties were the Democratic Party, which attracted the support of some non-Serb unitarists, and the National Radical Party, which was a Great Serbian Party. The national question in Yugoslavia was essentially a Croat-Serb rivalry over state organization; it was a clash between uncompromising visions of centralist rule versus historical identities and rights. The main political conflicts of the interwar era stemmed from this Croat-Serb dispute.

In the 1920s the dominant Croat party was the Croat Peasant Party (HSS, Hrvatska seljačka stranka), which had been founded in 1904 by Stjepan Radić (1871–1928) and his brother Antun (1868–1919). (The party's nomenclature changed many times. From 1904 to 1920 it was known as the Croat People's Peasant Party [or HPSS], from 1920 to 1925 as the Croat Republican Peasant Party [HRSS], and after 1925 as the Croat Peasant Party [HSS]). Its strength was rooted in Croatia's socially dominant countryside; it demanded Croatian political sovereignty and peasant social right. The HSS had been opposed to the nature of Yugoslavia's unification in 1918. In November 1920, in the elections to the Constituent Assembly, the HSS reaped the benefits of this opposition. Radić's HSS emerged as the only serious political party in Croatia. Its hold over the Croatian countryside was reaffirmed in the March 1923 elections, when it expanded for the first time to Dalmatia and Bosnia-Hercegovina. From 1920 to 1924, the HSS adopted a policy of abstention; it refused to participate in the Constituent Assembly (1920–1921) or Parliament thereafter (1921–1924). When other anticentralist groups left the assembly in 1921, the National Radicals and Democrats won by default an opportunity to adopt a centralist constitution. The 1921 constitution (the Vidovdan Constitution, so named after the date of its promulgation, 28 June, or St. Vitus Day) provided standard civil and political liberties but, far more importantly from the perspective of the new multiethnic state, allowed no room for local historical individualities and gave non-Serbs inadequate representation.

Having adopted abstention from Belgrade as a policy in itself, Radić took his Croat campaign for autonomy to the outside world. He had hoped in 1919 to send a representative to the Paris Peace Conference but was thwarted by the Yugoslav authorities. In 1922 his party issued a memorandum to the Genoa conference, but the Great Powers ignored it. In 1923 he secretly left the country for London and then, in 1924, the Soviet Union. In the meantime, the Democratic Party, the Slovene People's Party, and the Yugoslav Muslim Organization formed a political coalition that toppled the National Radical Party. In March 1924 Radić, who at the time was in Vienna, ordered the HSS to end its boycott and go to Belgrade. In July 1924 King Alexander gave Ljubomir "Ljuba" Davidović, the leader of the Democratic Party, a mandate to form a new government. Davidović hoped to bring the HSS into his government and thus ease political tensions in the country. Radić returned to Yugoslavia in August 1924, but not before visiting the Soviet Union where he enrolled the HSS in the Soviet-sponsored Peasant International. In October 1924 Alexander forced the resignation of the Davidović government for its flirtation with the now allegedly communist HSS. The National Radicals were returned to power and at the end of December 1924 banned the HSS and ordered the arrest of Radić and the entire party leadership.

Radić would remain in prison from January to July 1925. Political realities and the possible dissolution of his party forced him to make a deal with Alexander. In July 1925 he recognized the monarchy and the HSS joined a government coalition with the National Radical Party, still led by Pašić. This seemingly unnatural union lasted until January 1927, even managing to survive a major corruption scandal that forced Pašić to resign in April 1926. After leaving government early in 1927, the HSS campaigned for decentralization, tax equality for the non-Serbian regions, and political reform. In the fall of 1927 Radić formed a political alliance with his former nemesis, the Croatian Serb politician Svetozar Pribičević, leader of the Independent Democratic Party (SDS, Samostalna demokratska stranka). Their alliance, known as the Peasant-Democratic Coalition, represented a united Croatian front for political reform and decentralization, against Belgrade. On the other hand the two major Serbian political parties, the National Radicals and Democrats, were increasingly torn by factionalism. Their internal party divisions facilitated the growing political importance of King Alexander. Political tensions grew in 1928. In June 1928 a Montenegrin Serb deputy, a member of the National Radical Party, shot Radić and three other HSS deputies during a session of parliament. Two deputies died instantly and Radić died two months later. The HSS and its Croatian Serb ally, the SDS, withdrew from Belgrade and demanded sweeping political reform. On 6 January 1929, King Alexander Karadjordjević abrogated the constitution, dissolved the parliament, banned political parties, and declared a royal dictatorship.

The 6 January dictatorship, as it was known, proved more destructive than Alexander and his advisers originally believed. Civil liberties were suspended, existing institutions of local self-government were abolished, and strict laws against sedition, terrorism, and propagation of communism were imposed. The dictatorship only heightened existing differences, as non-Serbs viewed the dictatorship as an instrument of Serbian hegemony. The king named a Serb army officer, General Petar Živković, as premier and officially changed the name of the country to the Kingdom of Yugoslavia. As part of his campaign to erase "tribal" differences and identities, the king replaced traditional provinces with new territorial units, called *banovine* (sing., *banovina*), named mainly after the country's major rivers. In this way, Croatia was divided between Sava and Primorje provinces; the former was named after a river and encompassed Croatia proper and much of Slavonia, while the latter, meaning "Littoral," encompassed Dalmatia and some parts of Bosnia-Hercegovina.

In the end, Alexander's policies backfired. Not only did they further antagonize the non-Serbs, many of whom saw the dictatorship merely as a vehicle of Great Serbian interests, but Serbs too. For democratically inclined Serb politicians, the price paid for state unity was far too high; the dictatorship further diminished the already fragile unity within the Serbian political establishment. The dictatorship failed to produce an understanding of common national interests and ultimately strengthened the country's centrifugal forces. In Croatia, the royal dictatorship unified Croat opinion in its opposition to the perceived threat of Serbian hegemony. The government's policy in 1932–1933 of prosecuting Vladko Maček, successor to Radić, for terrorist activity proved disastrous; it further alienated the Croat population. The extreme nationalists of the Croat political right fled abroad in 1929; Italy granted asylum to Ante Pavelić, the leader of the Ustaša (insurgent) movement. The movement's singular objective was the liberation of Croatia and creation of an independent Great Croatian state, one that could be formed only with the destruction of Yugoslavia.

In 1931 Alexander formally ended his personal rule by promulgating a constitution that provided for the restoration of limited democracy. Political parties were legalized, but "tribal" groups (religious, ethnic, and regional) and all organizations that threatened the integrity and order of the state were banned. The Croat and Serb opposition leaders could not agree on a common platform. The HSS hoped for the restoration of democratic governance, but its primary goal was achieving Croatian sovereignty within Yugoslavia. The Serb opposition was interested in a return to parliamentary life but deeply divided on the question of Croatian autonomy, which most Serb politicians were unwilling to concede. Political developments and tensions in the early 1930s were exacerbated by the worsening economic crisis, which hit Yugoslavia particularly hard. Foreign trade slumped, unemployment rose, and the large agrarian sector stagnated. The economic crisis brought renewed accusations from Croats (and Slovenes) that Belgrade was exploiting Croatia (and Slovenia).

In October 1934 a Macedonian terrorist working with the Ustaša movement assassinated Alexander at Marseilles while he was on an official state visit to France. Prince Paul, cousin of Alexander, nominated a three-person regency that ruled for Alexander's son, Peter II, who was still a minor. Paul hoped to liberalize the regime and reconcile

Serb and Croat without amending the 1931 constitution. To that end, the Belgrade government freed Maček and in 1935 held elections that revealed significant dissatisfaction with the existing political system. Paul then called upon the Serb politician, Milan Stojadinović, to form a cabinet. His new government granted amnesty to political prisoners and permitted political parties additional leeway, but it refused to restore democracy and failed to solve the "Croat Question."

Maček realized that growing domestic and international tensions worked in favor of a positive resolution of the Croat Question and potentially even a federalist solution; he refused to compromise with the Stojadinović government. On the other hand Stojadinović alienated many Serb nationalists by signing a concordat with the Vatican; the National Assembly canceled the concordat, after the Serbian Orthodox Church denounced it. Stojadinović also initiated a rapprochement with Rome, designed in part to neutralize the Ustaša extremists who were protected by fascist Italy. Paul forced Stojadinović's resignation in February 1939 and named Dragiša Cvetković the new premier.

By this point, domestic political strife and portents of war induced Prince Paul to instruct Cvetković to reach an agreement with the HSS. For its part, the HSS managed to maintain its political stronghold in Croatia and the predominantly Croat-populated areas of Bosnia-Hercegovina. On 26 August 1939, after months of negotiation, Cvetković and Maček reached an agreement *(Sporazum)* that created an autonomous Croatia. Under the *Sporazum,* Belgrade controlled defense, internal security, foreign affairs, trade, and transport; but an elected Sabor and a Crown-appointed ban (viceroy) would decide internal matters in Croatia. Paul then appointed a new government with Cvetković as premier and Maček as vice-premier. The *Sporazum* failed to satisfy nationalists on either side. Maček was denounced by the Croat political right for renouncing Croatian independence and some supposedly historic Croatian territories (i.e., Bosnia-Hercegovina), while Serb nationalists attacked Cvetković for conceding far too much territory, abandoning Croatia's Serbs to Zagreb, and for not restoring parliamentary rule in the country. This arrangement returned autonomy and some attributes of statehood that Croats had lost after unification in 1918. This might have been a step toward the federalization of the state and a solution to the Croat Question, but World War II rendered all of this temporary.

WORLD WAR II (1941–1945)

Despite the outbreak of World War II in September 1939, Yugoslavia managed to remain neutral until 1941. When Greece repelled an Italian invasion in October 1940, Germany was forced to come to Italy's assistance. In late fall of 1940 and winter of 1940–1941, Germany pressured the Balkan states to join the Tripartite Pact; Romania and Bulgaria signed in November 1940 and March 1941, respectively. Virtually surrounded by hostile states, neutral Yugoslavia desperately sought allies. It recognized the Soviet Union in 1940 and signed a nonaggression agreement with Moscow in 1941. When Berlin pressed Yugoslavia to join the Axis, Paul and his cabinet concluded that their military situation was hopeless. On 25 March 1941, Yugoslavia joined the Tripartite Pact. In exchange, Germany promised not to violate Yugoslavia's sovereignty.

However, on 27 March, military officers overthrew the Cvetković-Maček cabinet, declared the sixteen-year-old Peter II king, and formed a new cabinet under General Dušan Simović. The new government affirmed Yugoslav loyalty to the Tripartite Pact because of the country's perilous position. Nevertheless, the putsch provided Germany with a pretext to invade. In a twelve-day lightning offensive beginning on 6 April 1941, in which Italy, Hungary, and Bulgaria also participated, the Yugoslav army was crushed. The king and government fled, and on 17 April remaining resistance forces surrendered unconditionally.

Germany and its Axis allies partitioned the country. The largest single entity emerging from this partition was the Independent State of Croatia (NDH, Nezavisna država Hrvatska), which consisted of present-day Croatia (minus Istria and much of Dalmatia), Bosnia-Hercegovina, and Srijem (part of Vojvodina). However, Italy controlled Istria (as it had since 1919), and in 1941 Rome annexed most of Dalmatia as well. The NDH was in actual fact an Italo-German condominium. Both Nazi Germany and fascist Italy had spheres of influence in the NDH and stationed their own troops there. The Croatian fascist movement, the Ustaše (sing., Ustaša), headed by Ante Pavelić, was a relatively small group that had lived in political exile since 1929. The agenda they espoused was basically a Croat nationalist program that was influenced only to a small degree by fascist and Nazi ideologies. During the war, the movement unleashed a brutal and murderous policy against those minorities deemed to be "alien" to Croatia and her national interests. As a consequence, Ustaša authorities slaughtered tens of thousands of Serbs. The Croatian authorities also collaborated with the Nazi authorities in implementing the Final Solution. As a result, approximately 32,000 Croatian and Bosnian Jews perished in the Holocaust. Most were killed at Croatian camps, like Jasenovac, although approximately 7,000 were deported to Auschwitz.

The dominant political party in Croatia, the HSS, disintegrated during the war. Although Maček refused collaboration with the Axis, he never contemplated active resistance. As a result, the HSS inner leadership withdrew into the political shadows. To ensure his quiescence, the Ustaša regime had Maček imprisoned; he spent nearly a year in the Jasenovac camp and then the remainder of the war under house arrest. One segment of the HSS right wing sided, actively or passively, with the Ustaša regime or was coopted by it, believing that statehood had at long last been achieved; the left wing gradually opted for the Popular Front led by the Communists.

Armed resistance to the Axis in wartime Croatia (and generally throughout partitioned Yugoslavia) took one of two forms. On the one hand remnants of the Serb-dominated Yugoslav army formed small guerrilla units known collectively as Četniks. They were led by Colonel Dragoljub "Draža" Mihailović, a Serb nationalist and monarchist, who hoped for a return to the status quo ante. However, following the Nazi invasion of the Soviet Union, the Communist Party of Yugoslavia (KPJ, Komunistička partija Jugoslavije) launched its own resistance to the Axis while simultaneously articulating a program opposed to that of the Četniks and government in exile. The Communist-led Partisan movement eventually became the most effective resistance movement in Croatia and Yugoslavia. Although the KPJ had been banned in 1921 and then decimated by police repression, internal Party factionalism, and, not least of all, the Stalinist purges of the 1930s, it was the only entity in 1941 to possess a "Yugoslav" political program. The KPJ/Partisan leader, Josip Broz "Tito" (1892–1980), a native of Kumrovec, Croatia, had become a communist as a POW in Russia after 1917. In 1937 he became general secretary of the KPJ, and in the years immediately preceding World War II, Tito reorganized the Party and attempted to give it a stronger organizational base. In 1937 he oversaw the creation of a Communist Party of Croatia (KPH, Komunistička partija Hrvatske), essentially an extension of the KPJ.

In wartime Croatia both the Četniks and Partisans recruited heavily from the Serb population, which was exposed to the murderous policy of the Ustaša regime. For much of 1941, the line separating Četnik and Partisan units in the field was imprecise. Both had the same pool of recruits, and in the early days of the war they were willing to collaborate for the sake of survival. However, in the winter of 1941–1942 Četnik-Partisan conflicts erupted into open warfare. Henceforth, the Četnik movement turned increasingly to collaboration with the Axis, first with the Italians in Croatia and Montenegro, and eventually with the Germans and even the Ustaša authorities. The Partisan movement in Croatia, headed by Andrija Hebrang, established itself within the framework of the broader, Yugoslav communist movement; part of their appeal in Croatia, among Croats, was that they advocated a federal system in which Croatia would become one of the constituent republics of a new Yugoslavia. As support for the Ustaša government waned in 1941–1942, because of its arbitrary policies and persecution of Serbs, Jews, and Croat opponents, the Partisans benefited. In some parts of Croatia (e.g., Dalmatia, which was annexed by Italy), the local population sided with the Communist resistance in the first days of the occupation. However, the Croat element in the resistance began substantially to grow only in the winter of 1942–1943.

In November 1942, at Bihać in northwestern Bosnia (then part of the NDH), Partisan leaders convened a meeting of the Antifascist Council for the National Liberation of Yugoslavia (AVNOJ, Antifašističko vijeće narodnog oslobodjenja Jugoslavije), a committee of Communist and noncommunist Partisan representatives from all of Yugoslavia. AVNOJ became the political umbrella organization for the people's liberation committees that the Partisans had established to administer territories under their control. AVNOJ proclaimed support for democracy and the rights of all nationalities. A second session of AVNOJ was convened in November 1943. It included representatives of various ethnic and political groups and built the basis for Yugoslavia's postwar regime. AVNOJ formed a National Committee to act as the temporary government, named Tito a marshal and prime minister of Yugoslavia, and issued a declaration forbidding King Peter from returning to the country until a popular referendum had been held on the status of the monarchy. At the Teheran Conference in December 1943, the Allied leaders (Franklin D. Roosevelt, Winston Churchill, and Joseph Stalin) decided to support the Partisans. In June 1944 the exiled King Peter appointed the Croat politician, Ivan Šubašić, who had been prewar ban of Croatia, as prime minister of the government in exile. Šubašić accepted the resolutions of the second AVNOJ conference, and Peter agreed to remain outside Yugoslavia. In September 1944 the king succumbed to Allied pressure and summoned Yugoslavs of all nationalities to back the Partisans. The following month, the Soviet Red Army helped the Partisans liberate Belgrade; from that point, the German retreat from the NDH and all of partitioned Yugoslavia intensified. The last German and Ustaša forces left Croatia in early May 1945.

World War II was devastating for Croatia and its people. It also provided a vivid new set of memories to kindle future hostility between Croat and Serb. In four years of war, approximately 1.1 million persons were killed in the different parts of partitioned Yugoslavia. Although the figures are still contested, it is now believed that roughly 60 percent of all deaths were on those territories that were part of the Independent State of Croatia. The Serbs, of whom approximately 350,000 died on the territory of the NDH, suffered the largest number of casualties. It is believed that roughly 200,000 Croats and 86,000 Bosnian Muslims died between 1941 and 1945. Many of Croatia's towns, production centers, and communications systems were either ruined or heavily damaged; malnutrition and disease were common. The formal cessation of hostilities in Europe, which occurred on 8 May 1945, did not bring immediate peace. Collaborators were hunted down and usually executed without trial. The Ustaša militia and regular Croatian army retreated to Austria in early May 1945, accompanied by thousands of civilians fearing communist rule. After surrendering to British forces, they were repatriated to the Partisans near the town of Bleiburg. Many of these soldiers and civilians were summarily executed; others were marched back to Yugoslavia where they ended up in camps or prisons.

COMMUNIST YUGOSLAVIA (1945–1990)

After 1945, the most salient feature of Croatian life was a communist dictatorship. Yugoslavia's new communist authorities suppressed all manifestations of Croat (and other) nationalism, labeling advocates of Croat national interests Ustaše, even if they had no ties to the wartime fascist regime. The political oppression and administrative centralization experienced under the KPJ (later renamed to League of Communists of Yugoslavia or SKJ, Savez komunista Jugoslavije) harkened back to the days of interwar Yugoslavia, especially the period of King Alexander's royal dictatorship (1929–1934), when Croat national rights were suppressed. Croat nationalists had long objected to Croatia's perceived exploitation, and by the 1960s even some of Croatia's Communists eventually began to feel that Croatia was again being exploited by Belgrade. This oppression was not limited to political or economic life but allegedly extended to the cultural realm. National aspirations would peak again in the late 1960s and early 1970s during the Croatian Spring. Only with the collapse of communism in 1989 was Croatia gradually able to move toward independence and democratic governance.

One of the many political changes introduced by the Communists in 1945 was a federal system; it was their attempt to resolve the national question that had plagued Yugoslavia since its creation in 1918. Croatia now became one of six federal republics. In a sense, 1945 represented the unification of the Croat lands. The new Croatian republic acquired those parts of Dalmatia that had been occupied by Italy between 1918 and 1920 and held throughout the interwar era. The Italo-Yugoslav peace treaty of 1947 gave Yugoslavia (i.e., Croatia) the islands that had been ceded to Italy in 1920. Most of the Istrian Peninsula, together with the town of Rijeka, which had in 1919 passed to Italy, was ceded in 1947 to Yugoslavia.

Despite this "national unification," democratic institutions and political parties were suppressed. The exiled King Peter had surrendered his powers to a three-person regency in late 1944. On 7 March 1945, a provisional government took office with Tito as prime minister and war minister and Šubašić in charge of foreign affairs; all the remaining cabinet posts went to Tito's followers. In November 1945 the Communist authorities organized elections for a Constituent Assembly. Alleged wartime collaborators were barred from voting. Moreover, all candidates were supposed to be nominated by the Communist-controlled People's Front, the successor to the wartime People's Liberation Front that encompassed all noncollaborationist political parties and organizations. Noncommunist politicians were harassed. Šubašić and other noncommunist ministers resigned in protest, while the HSS (whose leader Maček fled the country in May 1945), Serb Radicals, and other parties boycotted the election.

The Communist-dominated Constituent Assembly then proceeded to abolish the monarchy and on 29 November 1945 established a Federal People's Republic of Yugoslavia. In January 1946 the Constituent Assembly adopted a constitution based on the Soviet model; Yugoslavia became a federation of six people's republics held together by a strong central government. The constitution included direct KPJ control over all aspects of state activity. Tito was head of the KPJ, government, and armed forces. Only after the break with the Soviets in 1948 did Tito and the KPJ gradually move away from this rigid Stalinist model.

Between 1945 and 1948, the government ruthlessly punished wartime collaborators. Many members of the Croatian army as well as smaller numbers of Slovene and Serb collaborators (along with civilian refugees) repatriated in May 1945 to the Partisans were summarily executed. In Croatia, the Communist authorities also used allegations of collaboration to stifle legitimate political and religious opposition. The HSS leadership either fled or was suppressed. The Roman Catholic Church, which strongly opposed the new communist system although a segment of it had collaborated with the wartime Croatian fascist regime, was exposed to persecution. The archbishop of Zagreb, Alojzije Stepinac, protested government "excesses." In September 1946 he was sentenced to life imprisonment for war crimes and his alleged collaboration with the wartime Croatian fascist authorities. He served five years before the regime released him; he lived the rest of his life in his native village, under virtual house arrest. Communist oppression took a heavy toll against real and alleged collaborators. According to some estimates, after the war the Communist authorities executed over two hundred priests and nuns who allegedly collaborated with the Ustaša regime in some capacity. Consequently, Yugoslav-Vatican relations deteriorated. The Yugoslav government severed relations in 1952 when Pope Pius XII named Stepinac a Cardinal. The authorities permitted the funeral and burial of Stepinac in Zagreb in 1960, after which Yugoslav-Vatican relations gradually improved. Diplomatic relations were reestablished only in 1970.

The break with the Soviet Union in 1948 prompted a number of domestic political changes. Among them was Tito's belated decision to permit greater political rights to the six constituent republics. A greater degree of regional autonomy was now deemed necessary in order to maintain his own internal political support. A few prominent Yugoslav Communists had defected to the Soviet side in 1948, and for years thereafter the Yugoslav authorities imprisoned thousands of suspected pro-Soviet Communists. One of the more prominent victims of this anti-Stalinist purge was the Croat Communist leader Andrija Hebrang, who had led the wartime Croat Partisan movement and risen to high rank after 1945. However, in 1948 he was purged and probably murdered in prison for his alleged anti-Tito behavior. In actual fact, he was probably removed because he had established a significant power base in Croatia, which posed a potential threat to Tito.

Despite the 1948 break with Stalin, the Yugoslav Communists attempted to prove their allegiance to Marxist-Leninist theory by implementing Stalinist social and economic policies. The Stalinist course was reversed at the Sixth KPJ Congress in 1952, which proved to be a watershed in Yugoslav political change. Henceforth the KPJ (now renamed SKJ, for League of Communists of Yugoslavia, or Savez komunista Jugoslavije) attempted to articulate a path to socialism distinct from the Stalinist model. The constitution that was adopted partially separated Party and state functions and restored some political rights to Croatia and the other constituent republics. Constitutional foundations were also laid for worker control over enterprises and expanded local government power. The 1953 constitution established the Federal People's Assembly, which was composed of two houses: a Federal Chamber, representing the regions; and a Chamber of Producers, representing economic enterprises and workers groups. The executive branch, called the Federal Executive Council, included only the ministries dealing with national affairs and foreign policy.

Economic decentralization was also instituted, representing a step away from the harsh Stalinist practices of collectivization of agriculture and suppression of market. This

decentralization also led to friction among the republics, which now sought preferences in the national allocation of resources. By the 1960s, this friction generated new intrarepublican tensions. In fact, the 1963 constitution decentralized the political system even further, to the benefit of the six republics. The Federal Assembly was divided into one general chamber, the Federal Chamber, and four chambers given specific bureaucratic responsibilities. In an effort to end regional conflict and promote national representation of the peoples of Yugoslavia, the constitution directed that individual republics be represented in the Chamber of Nationalities, which was a part of the Federal Chamber.

Although the 1963 constitution reflected the "liberal" and reformist leanings of the Yugoslav leadership in those years, substantial power existed outside the institutional structures. Aleksandar Ranković, the state secretary of the federal security police, led an obstructionist bloc that opposed economic reform and advocated a return to the pre-1953 strong Party role. In the many deadlocks between the reformist and conservative groups, Tito remained the ultimate arbiter. In general, he supported economic reform while resisting those tendencies that sought the decentralization of state and Party power. Tito's decision to remove Ranković in 1966 was a victory for the SKJ reformist wing, represented by the likes of Edvard Kardelj, the chief theoretician of Yugoslav socialism, and the Croat Communist Vladimir Bakarić. His ouster removed one of the most important Party conservative elements from power. After 1966, the media were permitted to discuss more freely Party policies. Central control over some economic enterprises was loosened. The SKJ also decentralized its structure, allowing for more power at the level of the republican parties. Increasingly all major decisions required compromise. That in turn led occasionally to stalemate on some issues, in particular pertaining to economic development. In Croatia and Slovenia, the two wealthiest republics, resentment mounted in the late 1960s at what they perceived as economic exploitation by Belgrade to the benefit of Serbia and the poorer regions (Macedonia, Kosovo, and Montenegro).

The decentralization of the 1960s engendered regional reformist tendencies for political liberalization. In Croatia this movement became known as the Croatian Spring (1966–1971), which was as much a call for political liberalization as it was for greater Croat national rights within Yugoslavia. Demands were openly voiced in Croatia and even within the reform-minded wing of the League of Communists of Croatia, headed by Miko Tripalo and Savka Dabčević-Kučar, for decentralization, greater rights for Croatia and the other republics, economic reform, and political pluralism. Croat nationalists, based in powerful cultural institutions like Matica Hrvatska (Croat Literary-Cultural Foundation), urged the reformist wing of the Croatian League of Communists to adopt even tougher attitudes vis-à-vis Belgrade. Eventually they went beyond Party policy and even voiced separatist demands. In 1967 a group of Croat intellectuals, including Miroslav Krleža, the most respected literary figure in twentieth-century Croatia, signed a statement denying the validity of "Serbo-Croatian" as a historical language and promoting Croatian as a distinct language. Croat historians recalled exploitation of Croatia by the Serb-dominated interwar government, and Croat economists complained of disproportionate levies on Croatia for the federal budget and development fund. Party leaders in Zagreb won popularity by defending the economic interests of Croatia. Finally, in November 1971, university students went on strike and demonstrators marched through the streets of Zagreb demanding political reform and greater national freedoms. At that point, Tito urged the Croatian Party leadership to suppress the nationalist movement in Croatia.

When the Croatian Party failed to comply, Tito intervened personally in the winter of 1971–1972 to suppress the Croatian Spring, which by that point had taken on overtly separatist dimensions. The intervention involved an extensive purge of the reformist wing of the Croatian Party. The Croatian purge and the imposition within the Party of a more conservative wing created a more pliant Party leadership in Croatia that supported Tito's Party centralization. The new Croatian Party leaders were politically far more reliable. Eventually the purge extended well beyond Party ranks. Thousands of persons were arrested, some were killed, while many others chose political exile. The University of Zagreb's ranks were purged and the authorities temporarily disbanded Matica Hrvatska. Nationalists and liberals were purged from other Croatian institutions. The rise of nationalism halted the liberalizing tendency in the federal Party. In 1972 Tito also conducted a purge of the Serbian Party; the reformist wing (e.g., Latinka Perović, Marko Nikezić) was ousted in favor of a more conservative faction of Party veterans. After 1971–1972, Tito called for stricter adherence to democratic centralism. In 1974, at the SKJ's Tenth Congress, Tito was elected president of the Party for life. The press was muzzled, dissidents were harassed and arrested, universities were forced to remove professors deemed politically unreliable, and a renewed effort was placed on promoting Tito's cult of personality.

Despite crushing reformist tendencies in Croatia and elsewhere in 1971–1972, Tito addressed some of the concerns raised by republican leaders. Among these were the question of decentralization and the nature of the Yugoslav federation. A new constitution, promulgated in 1974, stipulated that each of the six federal republics was a state with its own borders. In doing so, the new constitution decentralized the Yugoslav political system even further; Tito believed the reform would satisfy Croat (and other non-Serb) demands for increased republican autonomy and thus dampen secessionist sentiment. In effect, the 1974 constitution enshrined many of the decentralizing tendencies of the late 1960s. It also created new representative federal institutions and a complex system of political checks and balances, designed to enhance the power of the SKJ. The most important legacy of the 1974 constitution was that it transferred numerous powers from the center to the republics. Although the Croatian Spring had been suppressed, and a new leadership imposed that stifled political creativity for the next seventeen years, some of the concerns raised by Croat reformers had been adopted.

After 1971, Tito gradually withdrew from decisionmaking. Although he continued to address Party cadres and appoint Party officials to the Presidium, by the late 1970s, he no longer presided over meetings of the SKJ Presidium or new State Presidency. The latter institution consisted of nine members, that is, Tito and one representative from each republic and autonomous province, with equal representation for each republic and province. In his last years he began paving the way for a power sharing government-by-consensus, which he believed to be the best hope of binding the federation after his death. The 1974 constitution had given substantial new powers to the republics, which obtained veto power over some federal legislation, and now both government and Party became increasingly stratified between federal and regional organizations. In 1979 the Presidium, which was chief executive body of the SKJ, began annual rotation of its chairmanship. After Tito died in May 1980, his power to name Presidium members devolved to a special commission including regional Party leaders. This was yet another step toward Party decentralization. Rotation of the Presidium chairmanship continued through the 1980s on a regular schedule, following a formula that divided the position equally among the eight federal jurisdictions. Although Tito had devised the rotational system to prevent Party domination by one individual, he had placed great importance on a strong central Party surviving him. By 1980, however, the centrifugal political forces gradually building in the previous decades had already significantly eroded the single-party structure.

FROM TITO TO DISINTEGRATION (1980–1991)

Although the causes of Yugoslavia's breakup predate Tito's death on 4 May 1980, that event serves as a symbolic turning point in the political history of the country. Henceforth, Yugoslavia was governed by a rotating Federal Presidency, consisting of one representative from each of the six republics and two autonomous provinces. Consensus politics were the order of the day. However, by 1980 the SKJ was no longer a monolithic entity. It was merely the sum of its constituent parts and represented the interests of its republican constituencies. Given the country's complex nationality composition, consensus rule proved increasingly difficult over the long run.

Thus Tito's death inaugurated a period of political uncertainty. Yugoslavia's collective presidency assumed full control in a fairly smooth transition, but the country's strongest personality and unifying force had disappeared. Yugoslavia had clearly entered a new era. The divisive issues that Tito had held in check became more pronounced; the political system that he bequeathed to the country was a structure torn by regional and nationality divisions. Tito's death undeniably weakened Yugoslavia and served to strengthen centrifugal forces. The internal breakup of Yugoslavia commenced, albeit slowly. The 1980s were a time of gradual political and economic deterioration and a period that saw intrarepublican and nationality hostilities boiling just below the surface of the Yugoslav political culture. It was also a decade singularly lacking in strong political leadership.

For example, in 1981 riots occurred in the Autonomous Province of Kosovo, where Albanians called for republican status for their autonomous province, which was part of Serbia. It was the first post-Tito crisis and revealed differences within the Yugoslav polity. The political crisis prompted radically different responses from different quarters of the SFRY. The Serbian leadership and Yugoslav People's Army (JNA, Jugoslavenska narodna armija) urged a hard line; the leadership of Slovenia urged reform. In Serbia, which had historically been the dominant political entity within Yugoslavia, the response to two decades of decentralization and fragmentation was recentralization. In 1984 the Serbian Party officially demanded repeal of the autonomy granted in 1974 to Kosovo and Vojvodina. In 1986, the Serbian Academy of Arts and Sciences composed a "Memorandum," subsequently stolen from the Academy's offices and leaked to the press, which spoke of alleged discrimination against Serbs in communist Yugoslavia. The memorandum attacked the 1974 constitution for limiting Serbia's control of its two autonomous provinces and also for further weakening Serb unity within the SFRY. The memorandum alleged that, since Serbs lived scattered across a number of republics outside Serbia (i.e., Croatia, Montenegro, and Bosnia-Hercegovina), decentralization only exposed them to cultural assimilation and political and social marginalization in these republics, to the benefit of dominant groups (Croats in Croatia, Montenegrins in Montenegro, and Bosnian Muslims in Bosnia-Hercegovina). The memorandum was not so much a blueprint for future action as it was a list of popular grievances long felt in Serbian educated society. When Slobodan Milošević became secretary of the League of Communists of Serbia in 1987, his political program spoke to the grievances articulated in the memorandum.

The Kosovo crisis of 1981 prompted the passage of a number of constitutional amendments that consolidated the principles of rotational government. However, neither the Twelfth nor the Thirteenth SKJ Congresses (1982, 1986) gave the Party a new political direction. Regional divisions were now more pronounced and resulted in stalemate between the forces of centralism and federalism (or decentralization). Serbia, historically the most outspoken exponent of strong central power, was increasingly at odds with Slovenia and Croatia, which historically had supported regional autonomy and resented the central government's policy of redistributing their relatively greater wealth to impoverished regions of the south. By the late 1980s, the resentment of exploitation turned into resistance, which was both economic (withholding revenue from the federal treasury) and political (threatening secession unless granted substantial economic and political autonomy within the federation). Intrarepublican disputes prevented the emergence of a political consensus on the Yugoslav level.

The 1989 collapse of communism in Eastern Europe undoubtedly quickened the pace of Yugoslavia's dissolution. The governing SKJ held its last Party congress, the Fourteenth Extraordinary Congress, in Belgrade in January 1990. In the course of this congress, the League of Communists split along republican lines. It could not agree on how to reform Yugoslavia politically, now that communism had disappeared in Eastern Europe, or in which general direction to proceed. There was only a vague consensus that reform was needed and that democratic elections were inevitable. But how Yugoslavia would look after these reforms were implemented or whether it would survive them at all was open to heated debate. On 22 January 1990, the delegates of the League of Communists of Slovenia, which had agreed in the fall of 1989 to permit democratic elections in Slovenia in the New Year, urged the federal Party to legalize a pluralist system. Delegates of the League of Communists of Croatia, which had in December 1990 also agreed to hold multiparty elections in Croatia, supported them. However, on 23 January 1990, the League of Communists of Yugoslavia rejected the Slovenian reform proposals. At that point, the Slovenian and Croatian delegations left the Congress and the federal Party disintegrated.

Following their withdrawal from the Belgrade Congress, the Croatian Communists moved ahead with plans for multiparty elections. These elections were conducted in two stages, on 22 April and 6 May 1990. The Croat Democratic Union (HDZ, Hrvatska demokratska zajednica) of Franjo Tudjman won a plurality of votes (41.5 percent) and secured a majority of seats (197, or 60 percent) in the Croatian parliament, known as the Sabor. The new Sabor then elected the HDZ candidate Tudjman president of Croatia; he was inaugurated on 30 May. The HDZ hold over Croatian politics remained intact until Tudjman's death in December 1999. The HDZ saw itself as the defender of Croat national rights, Croatia's territorial integrity and sovereignty, which it held to have been long suppressed within Yugoslavia. It was a Croat nationalist party and quickly moved forward with its goal of greater political rights for Croatia within a restructured, decentralized, and noncommunist Yugoslavia. On 25 July 1990, the new Croatian parliament ratified amendments to the Croatian constitution. The "socialist" adjective was dropped from Croatia's official nomenclature, and the Communist flag was replaced by traditional nationalist symbols. In December 1990 a new constitution was promulgated.

The leading Croatian Serb party, which was formed on 17 February 1990, was the Serb Democratic Party (SDS, Srpska demokratska stranka). It was the handiwork of three Croatian Serb intellectuals, Jovan Rašković, Dušan Zelenbaba, and Jovan Opačić, who served as the party's first president and vice presidents, respectively. Founded at the town of Knin, Croatia, the SDS quickly established itself as the undisputed leader of Croatia's Serbs. On 20 May 1990, the SDS withdrew its deputies from the newly elected Croatian Parliament and declared a boycott. At the same time, one of its deputies, Milan Babić, announced the establishment of an Association of Serb Municipalities in Croatia. This association was supposed to link all the predominantly Serb populated municipalities of Croatia, where the SDS has scored its major electoral gains. On 26 July, one day after the Croatian Parliament ratified a number of amendments to the Croatian Constitution, the SDS declared that the Serbs had a right to hold a referendum on autonomy within Croatia. The SDS created a Serb National Council, which ostensibly was supposed to serve as the supreme political authority of the Croatian Serbs. The Croatian government immediately rejected the idea of a Serb referendum, and in August 1990 it began trying to disarm Croatian Serb police and replacing Serbs in the police and reserve forces. At the same time, an oath of loyalty was required of all Serbs in the public sector.

The SDS had a Serb nationalist agenda, but originally it advocated only territorial and cultural autonomy for Serbs within Croatia. Only later did it move toward outright secession of the predominantly Serb-populated areas from Croatia. According to Babić, under the influence of propaganda from Belgrade, which claimed that the new Croatian authorities were preparing to commit genocide against the Croatian Serbs, the SDS shifted from a relatively moderate, autonomist position to a more radical and uncompromising position. Rašković had favored negotiations with the Croatian government, but this course was rejected by almost all other leading figures within the SDS. As a result, Rašković was gradually marginalized within the SDS, which accepted Milošević's concept of Serb unification. If the Croats had a right to break away from Yugoslavia, then the Croatian Serbs had the right to remain in what was left of Yugoslavia.

To that end the SDS organized, on 9 August and 2 September 1990, a referendum on Serb "sovereignty and autonomy" within Croatia. The vote took place in Croatian municipalities where the Serbs formed either an absolute or relative majority of the population and was limited only to Serb voters. The result was overwhelmingly in support of Serb autonomy. The Croatian government declared the Serb referendum illegal and redoubled its attempts to disarm the Serb police. On 30 September the Serb National Council, presided over by Milan Babić, declared the autonomy of the Serb people in those municipalities of Croatia where they possessed either an absolute or a relative majority. The Croatian Serb leadership would accept autonomy within Croatia as long as it remained part of Yugoslavia; if Croatia opted for independence, the Croatian Serbs indicated their readiness to secede from Croatia. Days later, on 4 October, the JNA seized possession of all territorial defense weapons stockpiles in Croatia, which would later be given to the SDS. On 21 December, the SDS announced the creation of three Serb Autonomous Districts (SAO, Srpske autonomne oblasti): SAO Krajina (encompassing the following regions of Croatia: northern Dalmatia, Lika, Kordun, Banija); SAO Western Slavonia (the municipalities of Grubišno Polje, Pakrac, Daruvar, and parts of Novska and Nova Gradiška); and SAO Slavonia, Baranja, and Western Srijem (eastern Croatia). When the SDS attempted to establish its control of local government and police in these three areas, it clashed with the Croatian authorities. Overt conflict between Serbs and Croatian police forces erupted in the spring of 1991.

In October 1990 Slovenia and Croatia had proposed to the other republics that Yugoslavia be restructured as a loose confederation of sovereign states, each with its own army and foreign policy. Based on the model of the European Community (EC), the formula included monetary union and a common economic market. In February 1991 Croatia and Slovenia passed resolutions to dissolve the Yugoslav federation into separate states as the next step after their 1990 declarations of the right to secede. The respective assemblies also passed constitutional amendments declaring republic law supreme over federal law and essentially overriding the authority of the 1974 federal constitution. The Serbian leadership dismissed these plans; the large Serb minorities of Bosnia-Hercegovina (31 percent in 1991) and Croatia (12 percent) would become citizens of foreign countries.

The Serbian leadership, which was still run in 1990 by a conventional communist regime headed by Milošević, attempted to halt Yugoslavia's fragmentation by reviving its historical tradition of geopolitical dominance in Yugoslavia. Milošević's call for the union of all Serbs in one state coincided with those outside Serbia agitating for the creation of a Great Serbian state on the ruins of Yugoslavia. The Milošević regime forged a close alliance with the new Croatian Serb leadership and intervened in the nascent conflict between the Croatian authorities and Croatian Serbs, supposedly to protect the latter from alleged oppression at the hands of the former. As a result, tensions mounted between Serbia and Croatia. The purpose of this alliance between Belgrade and Knin was to carve out a purely Serb area in Croatia that would remain part of a rump Yugoslavia (or Great Serbian state) in the event of Croatian secession. The plan forged at the time in Milošević's inner circle called also for the forcible removal of the majority of the Croat and other non-Serb population from the approximately one-third of Croatia that was supposed to become part of a new Serb-dominated state. These areas included those regions designed by the Croatian Serbs as SAO Krajina, SAO Western Slavonia, and SAO Slavonia, Baranja and Western Srijem. Following the Croatian Serb declaration of independence from Croatia on 19 December 1991, the Serb authorities collectively referred to these three SAOs as the Republic of Serb Krajina (RSK, Republika Srpska krajina).

The Croatian Serbs began receiving increasing support from the Serbian government. Before Croatia's secession from Yugoslavia in June 1991, this support was largely logistical and financial. Following secession and the outbreak of open warfare, this support included arms and personnel. Serb volunteer and police forces in Croatia were being supplied and led by officials of the Serbian Interior Ministry. Ultimately, they were able also to rely on the support of the JNA. The project to create a Great Serbian state had Milošević in a central command responsibility, in his capacity as the president of Serbia. But he worked closely with or exercised substantial influence over numerous key persons who influenced the actions of the Federal Presidency, the Serbian Interior Ministry, the JNA with affiliated Serb-run militia (known as the Territorial Defense) and Serb volunteer groups, and the Croatian Serb leadership. The objective of this combined project was the creation of a Great Serbian state on the ruins of Yugoslavia.

In 1990–1991 Milošević exercised control over four of the eight members of the Federal Presidency of Yugoslavia, thereby managing to set its agenda or neutralize its effectiveness as the need arose. The four members of the Federal Presidency who in 1991 formed the so-called Serb Bloc were Borisav Jović (Serbia), Branko Kostić (Montenegro), Jugoslav Kostić (Autonomous Province of Vojvodina), and Sejdo Bajramović (Autonomous Province of Kosovo). From May 1989 to April 1992, Jović was the representative of the Republic of Serbia and held different positions within the Federal Presidency, including vice president and president. Milošević used Jović and the others as his agents in the Federal Presidency and through them he directed the actions of the Serb Bloc. After 1 October 1991, from which point there were no longer any representatives in the Federal Presidency from Croatia, Slovenia, Macedonia, and Bosnia-Hercegovina, the four members of the Serb Bloc exercised fully the powers of the Federal Presidency, including that of collective commander in chief of the JNA.

The collaboration of the JNA, which was led in 1990–1991 by Generals Veljko Kadijević (federal secretary of national defense, 1988–1992) and Blagoje Adžić (JNA chief of staff, 1989–1992), was essential for both Milošević and the Croatian Serb leadership. During the war in Croatia, the JNA participated in the ethnic cleansing of the Croat and other non-Serb population from the Serb Krajina. It carried out the policies of the Serbian government in Croatia by directing the actions of local Croatian Serb police and security forces. They also introduced Serb volunteer groups into Croatia and supported their activities. The JNA leadership was in constant communication and consultation with Milošević, his inner circle, and the Croatian Serb leadership. The Serbian Interior Ministry was also instrumental to the Serbian war effort in Croatia. It provided arms, funds, training, and other assistance to Croatian Serb regular police units and to paramilitary organizations in Croatia.

The leading Croatian Serb figures in 1990–1991 were Jovan Rašković, Dušan Zelenbaba, Jovan Opačić, Milan Martić, Milan Babić, and Goran Hadžić. In late 1990 Rašković was marginalized within the SDS because of his decision to hold talks with the Croatian government. Al-

Two Croatian soldiers hold a Yugoslavian flag bearing a hole in the center, after fights against the Yugoslavian army and the Serbian militias, during the siege of Vukovar. (Antoine Gyori/Corbis Sygma) though his two vice presidents, Zelenbaba and Opačić, had opposed these negotiations, they were seen in Belgrade as too close to Rašković and were ultimately themselves marginalized. The new SDS triumvirate in 1991 consisted of Martić, Babić, and Hadžić. Martić served as head of internal affairs (January–May 1991) and defense minister (May–June 1991) of the SAO Krajina, and then as minister of internal affairs for the SAO Krajina (later the RSK, June 1991–January 1994). In this position he commanded the Croatian Serb police force (referred to as Martić's Police, or Martićevci). Babić served as president of the Executive Council of the SAO Krajina (January–May 1991), then as president of the SAO Krajina (May–December 1991), and finally as president of the RSK (December 1991–February 1992). In these political posts, he helped organize and administer the actions of the Croatian Serb forces. Finally, Hadžić held a number of important administrative posts in the Croatian Serb leadership from March 1991 to February 1992. From February 1992 to January 1994 he served as president of the RSK. In these posts, he helped establish, command, and direct police and militia operations. Through Serbian government and JNA channels, the Croatian Serb leadership was given logistical assistance and directions for the take-over of those areas deemed to be Serb and the subsequent forcible removal of the Croat and other non-Serb population.

In 1990–1991 the latent tensions in Croatia between the Croatian authorities and SDS prompted the Serbian government formally to demand intervention on the part of the JNA. Led by an officer corps that was predominantly of Serb and Montenegrin nationality, the JNA took a dim view of political pluralism that threatened the power of central institutions. Especially troubling were Slovene and Croat assertions of republic sovereignty, which threatened the very existence of the Yugoslav state. On 9 January 1991, the Yugoslav President Borisav Jović sought the Federal Presidency's approval for authorization of JNA force against Croatia and Slovenia; the JNA would be permitted to disarm the militias of those two republics. The Macedonian and Bosnian representatives, Vasil Tupurkovski and Bogić Bogićević, respectively, voted against the proposal, ensuring its defeat. However, the secondary proposal, ordering all paramilitary groups in Croatia and Slovenia to disarm within ten days, was passed. The following day, the JNA issued a ten-day ultimatum for the dissolution of the Slovenian and Croatian militias and all paramilitary formations in those republics. The Croatian and Slovenian governments ignored the order and on 17 January agreed to coordinate mutual defense policy. Eight days later, the JNA ordered the arrest of the Croatian defense minister, Martin Špegelj, who was forced to go into hiding. In the spring of 1991 the JNA would intervene in dozens of battles between separatist Serbs and Croatian police in Croatia, ostensibly as a peacekeeping force preventing a wider conflict. In actual fact, the JNA eventually openly supported the Croatians Serbs and actively participated in the occupation of Croatian territory.

On 21 February 1991, the Croatian Parliament declared that all federal laws not in compliance with the amended republican constitution of December 1990 were null and void. The Croatian declaration restricted any use of federal emergency measures and stated that Croatia would secede from Yugoslavia by June 30. A similar timetable was adopted by Slovenia. The Serb National Council at Knin declared that the Croatian Serbs would remain part of Yugoslavia if Croatia seceded. In March 1991 the conflict between the Croatian authorities and Croatian Serbs intensified when Croatian Serb police forces attempted to consolidate power in those areas with significant Serb populations. The Serb police, headed by Martić, took control of the police station in the town of Pakrac, and battles erupted when Croatian Special Forces attempted to retake the station and establish Croatian authority in the town and municipality. On 31 March 1991, a second and more serious armed confrontation occurred between regular police forces of the Croatian Interior Ministry and Croatian Serb paramilitaries at Plitvice National Park. One Serb and one Croat were killed. The Federal Presidency ordered the withdrawal of the Croatian police from Plitvice. The JNA then moved into Plitvice, ostensibly interposing itself between the combatants. On 1 May, another armed confrontation occurred between Croatian regular police from Osijek and Serb villagers at Borovo Selo, a suburb of Vukovar in eastern Croatia. Two Croatian policemen were wounded and two taken prisoner. When a larger detachment of Croatian police were sent to rescue the prisoners at Borovo Selo, twelve of the Croatian policemen were killed and over twenty were wounded. On 3 May, the JNA occupied Borovo Selo. The Croatian Serbs declared that they would not obey Croatian laws that were not in accordance with federal laws; on 12 May, the Croatian Serbs held a referendum to stay in Yugoslavia. A week later, Croatia held a sovereignty referendum in which 93 percent of those voting opted for Croatian independence. The Croatian Serbs boycotted the referendum. Five weeks later, on 25 June, Croatia and Slovenia declared their independence from Yugoslavia.

The Yugoslav Federal Parliament declined to recognize Slovenian and Croatian secession on the following day and authorized the JNA to occupy strategic points in Slovenia on the pretext of defending Yugoslav territorial integrity against an illegal secession. The JNA operations in Slovenia proved disastrous, however. The Slovenian militia had managed to capture roughly 2,000 JNA soldiers within days. On 18 July, the Federal Presidency authorized the withdrawal of JNA units from Slovenia, thereby acceding to its secession and the dissolution of Yugoslavia.

The cease-fire in and JNA withdrawal from Slovenia moved the conflict decisively to Croatia, where there was a noticeable intensification of the fighting. The war that was waged in Croatia from July to December 1991 between Croatian militia and police, on the one hand, and Croatian Serb forces and the JNA on the other, proved particularly brutal. Many large towns were devastated (such as Vukovar) while others suffered tremendous damage (including Dubrovnik and Karlovac). JNA and Croatian Serb forces seized roughly one-third of Croatian territory, which was organized, after 19 December 1991, into the self-styled Croatian Serb state called the Republic of Serb Krajina (RSK, Republika srpska krajina). From these territories they systematically expelled Croats and other non-Serbs. For example, on 18 August 1991 the Croatian Serb police chief, Milan Martić, issued an ultimatum to Croats to leave the village of Kijevo in the Serb-held Krajina. One week later, on 26 August, a combined JNA–Croatian Serb police attack was launched on the village and the Croat population was expelled.

On 22 August 1991 the Croatian president, Franjo Tudjman, issued an ultimatum to the JNA ordering it to withdraw from Croatia immediately or be treated as an occupying force. The ultimatum was ignored, and on 25 August the JNA began an assault on the town of Vukovar in eastern Croatia, thereby initiating the three-month long Battle of Vukovar. The JNA undertook operations against other towns in eastern Slavonia, resulting in their occupation by JNA and Serb police forces. In response, after 14 September 1991, Croatian forces began their blockade of all remaining JNA garrisons in Croatia, somewhat improving their decidedly inferior military position. On 1 October, the JNA began shelling the city of Dubrovnik.

One of the central objectives of Serbian government and Croatian Serb policy during the fighting in Croatia between July and December 1991 was ethnic cleansing, that is, the deportation or forcible transfer of the non-Serb civilian population from Serb-held territory. During that period, the JNA enabled the Croatian Serbs to carve out their own statelet (i.e., the Krajina or RSK) in Croatia. Serb forces (JNA units, militia, police contingents, paramilitary units) attacked towns and villages. (The two most prominent paramilitary leaders during the Croatian war were Željko Ražnatović, "Arkan," and Vojislav Šešelj.) In 1990 Arkan created the Serb Volunteer Guard, commonly known as the Arkanovci, "Arkan's Tigers." They were under the command of the Serb militia (Territorial Defense) in eastern Croatia. Arkan's Tigers maintained a significant military base in Erdut, near the town of Vukovar, which served as the training center of other militia units and also as a detention facility. Arkan himself functioned as the commander of the base in Erdut. Šešelj, who was president of the Serb Radical Party (SRS) and a supporter of the Great Serbian cause, recruited and provided substantial support to Serb volunteers, commonly known as Četniks (*četnici*), who perpetrated crimes in Croatia. In order to achieve a nationally homogeneous Krajina, Serb forces surrounded non-Serb settlements and demanded that their inhabitants surrender all weapons. Then the settlements were attacked.

After the takeover, these forces in cooperation with the local Serb authorities established a regime of persecutions (torture, murder, other acts of violence) intended to compel the non-Serb population to leave. Sometimes they rounded up the remaining Croat and other non-Serb civilian population and forcibly transported them to locations in Croatia controlled by the Croatian government or deported them to locations outside Croatia, in particular Serbia and Montenegro. On other occasions, the Serb forces in cooperation with the local Serb authorities imposed restrictive and discriminatory measures on the non-Serb population and engaged in a campaign of terror designed to drive them out of the territory. Almost all of the non-Serb population was eventually killed or forced from these occupied zones. According to the March 1991 census, the non-Serb population of the areas that became part of the RSK was approximately as follows: Croat, 168,026, and other non-Serb, 55,895. Virtually the whole of this non-Serb population of over 220,000 was ethnically cleansed (i.e., forcibly removed, deported, or killed) from the RSK in 1991–1992.

The most devastating example of wanton destruction and ethnic cleansing in the Croatian war took place in the town of Vukovar. The siege of Vukovar lasted from late August until 18 November 1991, when the town finally fell to combined JNA and Serb paramilitary forces. During the course of the siege, the town was largely destroyed by JNA shelling, and hundreds of persons were killed. When the JNA/Serb forces occupied the city, hundreds more Croats were killed by Serb troops; the non-Serb population of the town was expelled. Between 18 and 20 November, after the termination of the military operations in and around the town of Vukovar, the JNA deported thousands of Croat and other non-Serb inhabitants to the territory of the Republic of Serbia. In one well documented incident that occurred on 20 November, military forces under the general command of the JNA removed approximately 255 Croats and other non-Serbs from Vukovar Hospital. The victims were transported to the JNA barracks and then to the nearby Ovčara farm, where they were beaten and then executed. Their bodies were buried in a mass grave. According to the prosecutor of the International Criminal Tribunal for the former Yugoslavia (ICTY), at least 20,000 Croat and other non-Serb inhabitants were deported from Vukovar, at least 5,000 from Ilok, and at least 2,500 from Erdut near Vukovar. Homes, property, cultural institutions, and historic monuments were deliberately destroyed.

On 23 November 1991, former U.S. diplomat Cyrus Vance, who in October had been appointed U.N. special envoy to Yugoslavia, negotiated an agreement in Geneva between Milošević, General Kadijević, and Tudjman. It called for lifting the Croatian militia's blockade of JNA barracks and withdrawing JNA forces from Croatia, which began on 28 November. Both sides committed themselves to an immediate cease-fire. On 4 December 1991, the Croatian delegate on the Federal Presidency, Stjepan Mesić, resigned his post of president of Yugoslavia. On 2 January 1992, Tudjman and Milošević signed at Sarajevo a final cease-fire agreement that paved the way for the implementation of the so-called Vance Plan. On 14 January, the first U.N. cease-fire monitors arrived in Croatia. On 12 February, Vance recommended to the secretary-general of the United Nations the deployment of U.N. peacekeeping forces in Croatia. Nine days later, under Security Council Resolution 743, the United Nations established a U.N. Protection Force (UNPROFOR) in Croatia that was to be stationed in four U.N.-protected areas (UNPAs), which had been taken by Serb forces during the fighting. The JNA was to complete its withdrawal from Croatia, and displaced persons from the UNPA zones were supposed to be permitted to return to their homes. The UNPROFOR peacekeeping force numbered 14,000. Meanwhile, on 15 January 1992, most European and some non-European states recognized Croatia as an independent state, and in May 1992 Croatia became a member of the United Nations.

The six-month Croatian war wrought mass destruction, claimed over 10,000 lives, and produced nearly 500,000 refugees and displaced persons. By early 1992, overt hostilities between Croatia and rump Yugoslavia had ceased. The JNA completed its withdrawal from Croatia by spring 1992, but large portions of its weaponry and personnel were turned over to the police and militia of the so-called RSK. Displaced persons were not allowed to return to their homes, as envisaged by the Vance Plan. The UNPROFOR mission in Croatia merely froze the territorial status quo that had been established in January 1992; Croatia's Serbs, who hoped to remain part of a Yugoslav or Great Serbian state, held nearly one-third of Croatia. Their RSK remained a dependency of Milošević's Serbian regime. In 1993 the RSK authorities staged a referendum resoundingly in favor of integration with the Serbs of Bosnia-Hercegovina and Serbia. However, in 1995 the Croatian Army retook the RSK in two separate operations, code-named Flash (May 1995) and Storm (August 1995), which led to the forced exodus of much of the remaining Serb population. The only area to remain under Serb control at that time was eastern Slavonia, and on 12 November 1995, during the Dayton peace negotiations that brought an end to the war in Bosnia-Hercegovina, the Croatian and Serbian government negotiators agreed to the peaceful reintegration of eastern Slavonia into Croatia.

The "Basic Agreement" allowed for a transitional period of demilitarization and government by an international administration backed by an implementation force. In January 1996 Security Council Resolution 1037 established the UNTAES (UN Transitional Administration for Eastern Slavonia). Control of the region was handed back to Zagreb on 15 January 1998, and with the government's agreement, an OSCE mission took over some of the UNTAES tasks, including police monitoring. As of 2002, only a small U.N. contingent of fewer than thirty observers remained in Croatia's Prevlaka Peninsula, which had been occupied by the JNA in 1991.

POLITICAL DEVELOPMENTS

After 1945, the most salient feature of Croatian political life was communist dictatorship. Only with the collapse of communism in 1989 has Croatia gradually moved toward democratic governance. At the end of World War II, Croatia again became part of a reconstituted Yugoslavia after its brief wartime "independence." One of the many changes introduced by the Communists in 1945 was a federal system in an attempt to resolve the national question, which had plagued Yugoslavia since its creation in 1918. Croatia now became one of six federal republics. However, democratic institutions and political parties were suppressed in Croatia as elsewhere. The Catholic Church was persecuted and the archbishop of Zagreb (later a cardinal), Alojzije Stepinac, was sentenced to life imprisonment for his alleged collaboration with the wartime Croatian fascist authorities. Communist oppression took a heavy toll on real and alleged collaborators.

Croat nationalism was suppressed but nevertheless persisted in Communist Yugoslavia. The political oppression and administrative centralization experienced under the League of Communists of Yugoslavia harkened back to the days of interwar Yugoslavia, especially the period of King Alexander's royal dictatorship (1929–1934), when Croat national rights were suppressed. Croat nationalists had long objected to Croatia's perceived exploitation, and after 1945 even Croatia's Communists began to feel that Croatia was again being exploited by Belgrade. This oppression was not just limited to political or economic life, but allegedly extended to the cultural realm; for example, the use of the Croatian language was prohibited in favor of "Serbo-Croatian." The so-called Croatian Spring of 1966–1971 was as much a call for political liberalization as it was for greater Croat national rights within Yugoslavia. Demands were openly voiced in Croatia and even within the reform-minded wing of the League of Communists of Croatia, headed by Miko Tripalo and Savka Dabčević-Kučar, for decentralization, greater rights for the Croatian and other republics, economic reform, and political pluralism.

The Croatian Spring was forcefully crushed in late 1971, as were reform movements in other parts of Yugoslavia. In Croatia thousands of Croats were imprisoned, some were killed, and many emigrated. Despite crushing political reform tendencies in Croatia and elsewhere in 1971, the Yugoslav leader, Marshal Josip Broz Tito, decided to address some of the concerns raised by republican leaders. One of those issues was decentralization and federalism. The new constitution, promulgated in 1974, stipulated that each of the six republics was a state with its own borders. Thus the 1974 constitution decentralized the Yugoslav political system tremendously; Tito believed the reform would satisfy Croat (and other non-Serb) demands for increased republican autonomy and thus dampen secessionist sentiment.

The death of Tito in May 1980, however, weakened Yugoslavia and increased demands for secession. The internal breakup of Yugoslavia began. The country was henceforth governed by a rotating presidency, consisting of one representative from each of the six republics and two autonomous provinces. Consensus rule proved increasingly difficult. The federal Party, the League of Communists of Yugoslavia, was by this time merely the sum of its parts and not an independent force. In 1981 riots occurred in Kosovo, where Albanians called for republican status for their autonomous province, which was part of Serbia. It was the first post-Tito crisis and revealed differences within the Yugoslav polity; the Serbian leadership and Yugoslav People's Army (JNA) urged a hard line while the leadership of Slovenia urged reform. In the end, martial law was imposed. In 1986 the Serbian Academy of Arts and Sciences composed a memorandum, subsequently leaked to the press, which spoke of alleged discrimination against Serbs in Communist Yugoslavia and the need to address various contemporary threats to the Serb nation. According to many observers, the memorandum articulated a Great Serbian program that was subsequently adopted by Slobodan Milošević. When Milošević became the secretary of the League of Communists of Serbia in 1987, the implementation of this program began in earnest.

The unified League of Communists of Yugoslavia held its last Party congress in Belgrade in January 1990. Divided over the question of how to reform the country politically, now that communism had collapsed in Eastern Europe, the League of Communists disintegrated. Democratic elections now became possible. In the spring of 1990 both Slovenia and Croatia held democratic elections that brought non-communists to power. The Croat Democratic Union (HDZ) of Franjo Tudjman, which was a Croat nationalist party demanding greater political and national rights for Croats within Yugoslavia, won the Croatian elections of April and May 1990. A referendum in May 1991 resulted in over 90 percent of the population voting for Croatian independence. The Croatian Serbs boycotted. A month later, on 25 June 1991, Croatia and Slovenia seceded from the Socialist Federal Republic of Yugoslavia.

GOVERNMENT AND STATE AUTHORITY

Croatia is a parliamentary democracy with a republican form of government. State authority is divided into legislative, executive, and judicial branches. The legislative branch is represented by a unicameral parliament known as the Sabor. The judiciary is independent and includes district, constitutional, and supreme courts. The executive branch is composed of a president and a prime minister with his cabinet. The prime minister, whose cabinet implements those policies designated by the Croatian Parliament, heads the government of the Republic of Croatia. The government organizes and directs legislative issues, initiates general domestic and foreign policy, and directs the work of state administrative bodies. The cabinet, known officially as the Council of Ministers, has its members appointed by the prime minister and then approved by the parliament.

Although Croatia possessed a constitution in the communist era while it was still part of the Socialist Federal Republic of Yugoslavia, the communist authorities had drafted it without any serious input from the population. Following the collapse of communism in 1989 and the democratic elections of the following year, a new Croatian constitution was adopted on 22 December 1990. It asserted the sovereignty of the Croatian republic within Yugoslavia and affirmed that Croatia was the national state of the Croat nation. The constitution also guarantees basic civil, human, and political rights to all citizens. These include the right of free political association, equality before the law, and the same rights and freedoms for all, regardless of race, gender, language, religion, political or other belief, national or social origin, property, birth, education, social status, or other characteristics. Members of all national minorities in theory have equal rights, including the freedom to express their nationality, to use their language and script, and cultural autonomy. Freedom of conscience and religion are also guaranteed. All religious communities have equal rights before the law and are separated from the state. Religious communities are free publicly to perform religious services and to open schools and social and charitable institutions and to manage them.

The Sabor is the home of the Croatian parliament in Zagreb. (Richard Klune/Corbis)

All citizens are guaranteed the right of public assembly and peaceful protest and the right to freedom of association for the purposes of protection of their interests or the promotion of their social, economic, political, national, cultural, and other convictions and objectives. For this purpose, everyone may freely form trade unions and other associations. All citizens who have reached the age of eighteen years have universal and equal suffrage exercised through direct elections by secret ballot. Military service is the duty of every capable citizen, although conscientious objection is permitted for religious or moral reasons. Such persons are obliged to perform other duties specified by law. Primary education is compulsory and free. Secondary and higher education are equally accessible to everyone according to abilities.

A unicameral Croatian parliament, the Sabor, represents the legislative branch of government. Constitutionally it must have no fewer than 100 and no more than 160 members, elected on the basis of direct universal and equal suffrage by secret ballot. Members are elected for a term of four years. The Croatian parliament normally meets in two regular annual sessions: 15 January–15 July and 15 September–15 December.

The specific duties of the parliament are defined in Article 80 of the constitution. These include but are not limited to: enacting and amending the constitution; passing laws; adopting an annual state budget; adopting a strategy of national security; maintaining civil control over the armed forces and security services; calling referenda; carrying out elections and making administrative appointments; supervising the work of the government; granting amnesty for criminal offenses; and conducting other affairs as specified by the constitution.

The parliament may call a referendum on a proposal for an amendment of the constitution, on a bill, or for any other issue within its competence. The Sabor is obliged to call a referendum on a specific range of issues if at least 10 percent of all registered voters in the Republic of Croatia sign a petition to that effect. At such a referendum, the majority of the voters make a decision, provided that the majority of the total number of electors has taken part in the referendum. Decisions made at referenda are binding. Constitutional amendments may be proposed by at least one-fifth of the members of the Sabor, the president, or the government. The parliament decides by a majority vote of all representatives whether to start proceedings for the amendment of the constitution. The decision to amend must be made by a two-thirds majority vote of all the members of the Sabor.

The president of the Republic of Croatia represents the republic at home and abroad. According to Article 93 of the constitution, the president "shall take care of regular and harmonized functioning and stability of the state government" and is "responsible for the defense, independence and territorial integrity of the Republic of Croatia." The president is elected in direct, secret balloting, on the basis of universal and equal suffrage, for a term of five years. The president is elected by a majority vote. If none of the candidates obtains an absolute majority, new elections are held after fourteen days. The two candidates who obtained the largest number of votes in the first round have the right to run in the second and final round. No one may be elected to the post of president for more than two consecutive terms. Since declaring independence in June 1991, Croatia has had two presidents: Franjo Tudjman (1991–1999) and Stjepan Mesić (since 2000).

The duties of the president, as defined by Article 97, include but are not limited to the following: calling elections for the parliament and convening its first session; calling referenda; confiding the mandate to form a government to the person winning parliamentary elections; granting pardons; and conferring decorations and other awards specified by law. The constitution mandates that the president and the prime minister (i.e., the government) cooperate in the formulation and implementation of foreign policy. The president may, with the prior countersignature of the prime minister, establish embassies and consular offices and appoint diplomatic representatives. The president is also the commander in chief of the Armed Forces of the Republic of Croatia. He may appoint and dismiss military commanders. On the basis of the decision of the Croatian Parliament, the president may declare war and conclude peace. In case of an immediate threat to the independence and existence of the state, the president may, with the countersignature of the prime minister, order the activation of the armed forces even if a state of war has not been declared. During a state of war, the president may issue decrees with the force of law "on the grounds and within the authority obtained from the Croatian Parliament." In case of an immediate threat to the independence, unity, and existence of the state, or if governmental bodies are prevented from performing their constitutional duties, the president may, with the countersignature of the prime minister, issue decrees with the force of law. However, these must be submitted for approval to the Sabor as soon as the parliament is in a position to convene or they cease to be in force.

The president and the government jointly direct the operations of the security services. The appointment of the heads of the security services is first approved by the authorized committee of the Croatian parliament and is then countersigned by the president and the prime minister. According to Article 104, the president is impeachable for any willful violation of the constitution. Parliament may institute proceedings by a two-thirds majority vote of all representatives. The Constitutional Court of the Republic of Croatia then decides on the impeachment of the president by a two-thirds majority vote of all the judges.

The government of the Republic of Croatia, the specific role of which is defined in Articles 107 through 116 of the constitution, exercises executive powers. The government consists of a prime minister, one or more deputy prime ministers and ministers. The prime minister nominates members of his cabinet. When the government is formed, the prime minister presents his government and its program to the parliament and asks for a vote of confidence, following which the government assumes its duties. The Croatian government has a total of nineteen ministries: Defense; Internal Affairs; Foreign Affairs; Finance; Public Works, Reconstruction and Construction; Agriculture and Forestry; Culture; Economy; Education and Sports; Health; Homeland War Veterans; Justice, Administration, and Local Self-Government; Labor and Social Welfare; Maritime Affairs, Transportation, and Communications; Science and Technology; Tourism; Environmental Protection and Physical Planning; European Integration; and Crafts, Small and Medium Enterprises. In addition to these ministries, the government operates a number of offices (e.g., Office for Human Rights, Office for National Minorities, General Administration Office, etc.), Agencies (e.g., Croatian Securities Exchange Commission, etc.), directorates, and commissions.

The government proposes legislation and other acts to the Croatian parliament, drafts an annual state budget, implements laws and other decisions of the parliament, articulates both foreign and internal policies, directs the operation of the state administration, and implements an economic policy. The government is responsible to the Croatian parliament. According to Article 115 of the constitution, at the proposal of at least one-fifth of the members of the Sabor, a vote of confidence in the prime minster, in individual members of the government, or in the government as a whole, may be put in motion. The prime minister may also request a vote of confidence in the government. A no confidence decision must be accepted if the majority of all members of the Croatian parliament have voted for it. If a no-confidence vote is passed, the prime minister and government must submit their resignation.

Judicial power is exercised by courts and is autonomous and independent. The Supreme Court of the Republic of Croatia, as the highest court, ensures the uniform application of laws and equal justice to all. The president of the Supreme Court is appointed by the Croatian Parliament on the proposal of the president, following a prior opinion of the general session of the Supreme Court and of the authorized committee of the Sabor. The president of the Supreme Court is appointed for a four-year term of office. Court hearings are open to the public and judgments are pronounced publicly in the name of the Republic of Croatia.

Judges enjoy immunity and cannot be called to account for an opinion or a vote given in the process of judicial decisionmaking. A judge may not be detained in criminal proceedings initiated for a criminal offence committed in performance of his or her judicial duty without prior consent of the National Judicial Council, which decides on all matters concerning discipline. Judges are normally appointed for a five-year term. After the renewal of the appointment, the judge assumes his or her duty as permanent. Whether appointing or dismissing a judge, the National Judicial Council, which consists of eleven judges chosen by the parliament, must obtain the opinion of the relevant committee of the Sabor. Members of the National Judicial Council are elected for a four-year term and no one may be a member for more than two consecutive terms. The president of the National Judicial Council is elected by secret ballot by a majority of the members of the National Judicial Council for a two-year term of office.

The Office of Public Prosecutions is an autonomous and independent judicial body empowered to prosecute those individuals and institutions that commit criminal offenses. The Croatian parliament, on the recommendation of the government, appoints for a four-year term a chief public prosecutor. Deputy public prosecutors are appointed for five-year terms. After the renewal of the appointment they may assume their duty as permanent. Deputy public prosecutors are appointed by the National Council of Public Prosecutions, which is elected by the Sabor. The majority of members of the National Council of Public Prosecutions are drawn from the ranks of deputy public prosecutors.

The Constitutional Court of the Republic of Croatia consists of thirteen judges elected by the Croatian parliament for a term of eight years. The Constitutional Court elects its own president for a term of four years. Judges of the Constitutional Court enjoy the same immunity as members of the Croatian parliament. The Constitutional Court issues decisions on the conformity of laws and other regulations with the constitution, and on constitutional complaints against individual decisions of governmental bodies, when these decisions violate human rights and fundamental freedoms as guaranteed by the constitution. It also decides on jurisdictional disputes between the legislative, executive, and judicial branches, on the impeachment of the president, on the constitutionality of the programs and activities of political parties, and on the constitutionality and legality of elections and national referenda.

The constitution defines local and regional self-government as rights of all citizens. This right is realized through local and regional representative bodies, composed of members elected on the basis of free elections by secret ballot on the grounds of direct and equal suffrage. The two basic units of local self-government are municipalities *(općine),* of which there are over four hundred, and towns *(gradovi).* The basic unit of regional self-government is the county *(županija),* of which there are twenty-one in addition to the capital city of Zagreb. Municipalities and cities are permitted to carry out the affairs of local jurisdiction, in particular those related to housing, urban planning, public utilities, child care, social welfare, primary health services, education and elementary schools, culture, physical education and sports, customer protection, protection and improvement of the environment, fire protection, and civil defense. Counties are mandated to perform all affairs of regional significance, and in particular the affairs related to education, health service, economic development, traffic infrastructure, and the development of networks of educational, health, social, and cultural institutions. Units of local and regional self-government have a constitutional right to their own revenues.

POLITICAL LANDSCAPE (1989–2002)

The collapse of communism in 1989 brought a proliferation in the number of political parties in Croatia. The following is a brief description of the major political parties that have been active in Croatia since 1989.

The Social Democratic Party of Croatia (SDP, Socijaldemokratska partija Hrvatske) is the successor to Croatia's former Communist Party, known until 1989 as the League of Communists of Croatia. The SDP leader is Ivica Račan. Support for the SDP has grown steadily throughout the 1990s; in 1995 it became the strongest opposition party in Croatia. Since January 2000, the SDP has been the largest government party and Račan has served as prime minister. As a left-of-center party, the SDP advocates the development of a modern social welfare state based on a democratic political system with rights and freedoms for all. The SDP advocates a policy of reconciliation with Croatia's neighbors and noninterference in the internal affairs of Bosnia-Hercegovina. The SDP strives for integration in the European Union and NATO membership.

The Croat Democratic Union (HDZ, Hrvatska demokratska zajednica), as of late 2002, was the largest party in the Croatian Parliament. It was founded in 1989 by Franjo Tudjman as a Croat national party seeking to assert Croatian sovereignty within Yugoslavia. In April-May 1990 Tudjman led the HDZ to electoral victory; from that point to 1999, he and the HDZ governed Croatia. The HDZ won the 1992 general elections and was able to consolidate its dominant position in parliament again in 1995 and 1997. The HDZ was composed of diverse elements, including but not limited to former Communist officials, nationalist dissi-

President of the Croatian Democratic Union (HDZ) and new Prime Minister Ivo Sanader speaks to the press under the historic Croatian coat of arms, after receiving a mandate for the new government from Croatian President Stjepan Mesić, 9 December 2003, in Zagreb. Sanader, a Croatian nationalist leader, was formally named prime minister following his party's victory in November's legislative elections. (AFP/Getty Images)

dents, and at least initially, some liberals. When Tudjman died on 10 December 1999, the latent fissures within the HDZ surfaced, and the party was left in a shambles. Power struggles erupted between moderate reformers and nationalists. Ivo Sanader currently leads the HDZ.

The Croat Social Liberal Party (HSLS, Hrvatska socijalno liberalna stranka) is a moderate center-right party, advocating social and liberal economic policies, individual rights, and a limited state role in society. The HSLS was founded in 1989 and is headed by Dražen Budiša. From the start, the HSLS mixed liberal, democratic, and nationalistic elements in its program. Between 1992 and 1995, the HSLS was the strongest opposition party in Croatia but lost this position to the SDP in 1995. Like most other Croatian political parties, the HSLS has suffered several internal party disputes. As a result, the HSLS received only 12 percent of the vote in 1995, and in 1997 the Liberal Party (LS, Liberalna stranka) of Vlado Gotovac split from the HSLS. Internal consolidation on the one hand and cooperation with the SDP on the other hand led to a renewed popularity from 1998 onward. From January 2000 to the summer of 2002, it was a member of the coalition presently governing Croatia.

The Croat Peasant Party (HSS, Hrvatska seljačka stranka) is the successor to Croatia's largest interwar political party. It is a moderate conservative party that advocates farmers' social rights and economic protection, in addition to traditional family and nationalist values. It is currently led by Zlatko Tomčić.

The Croat Party of Right (HSP, Hrvatska stranka prava), founded in 1990, is a nationalist party with a history of internal dissension. Its paramilitary wing, the Croat Defense Forces (HOS), was founded in the early days of the war in Croatia but was eventually suppressed by the Croatian authorities. Its first party leader was Dobroslav Paraga. The current party leader is Ante Djapić.

The Croat Party of Right 1861 (HSP-1861, Hrvatska stranka prava 1861) as of 2002 had no seats in the Croatian Parliament. The party was founded in 1995 as a splinter group of the larger HSP. Much like the original HSP, it is a nationalist party and regards itself as politically conservative. It is headed by Dobroslav Paraga.

The Istrian Democratic Assembly (IDS, Istarski demokratski sabor) is a regionally organized party and defender of Istrian interests. Istria has always been one of the richer regions of Croatia. The IDS advocates a decentralization of power and is in some respects a reaction to the decade of Tudjman rule, when administrative centralization was the norm. It is a liberal and centrist party with a majority of seats in Istria's regional parliament. The IDS is led by Ivan Jakovčić.

The Liberal Party (LS, Liberalna stranka) split from the larger HSLS in 1997. It plays a marginal role in Croatian politics. Originally led by Vlado Gotovac, who died in 2000, the party is currently headed by Ivo Banac.

The Croat People's Party (HNS, Hrvatska narodna stranka) is a centrist party, similar in some respects to the HSLS. It is generally of marginal political significance and repeatedly operated in election coalitions, being too small to gain any seats on its own. The prominence of the HNS grew in 2000, however, when its candidate, Stjepan Mesić, was elected president of Croatia. The HNS leader is Vesna Pusić.

The Serb People's Party (SNS, Srpska narodna stranka), founded in May 1991, is the party of the majority of Serbs who remained in Croatia during its war of independence (1991–1995). The SNS is committed to securing cultural and political rights for the Serb minority. It is led by Milan Djukić.

The Croat Christian Democratic Union (HKDU, Hrvatska kršćansko-demokratska unija) is a conservative, Christian Democratic party with only a marginal presence in Croatian politics. Its leader, Marko Veselica, was a dissident in the communist period. It is primarily due to his charisma and history as a dissident that the party is able to maintain any presence in the Croatian political arena.

Independent Croat Democrats (HND, Hrvatski nezavisni demokrati) is a centrist party founded in April 1994 when, following a split in the ruling HDZ, Josip Manolić and Stipe Mesić left the HDZ largely because of their opposition to Croatian policy toward Bosnia-Hercegovina. The HND is an insignificant factor in Croatian politics. It is led by Manolić.

Social Democratic Action (ASH, Akcija socijaldemokrata Hrvatske) was founded in October 1994 and is led by Silvije Degen. It is a left-of-center party and only a marginal factor in Croatian politics. The party consists of former members, mainly intellectuals, of the Socialist Party of Croatia, the Social Democratic Party, and the Social Democratic Union.

From April to May 1990, when the first democratic elections since World War II were held in Croatia, to the January 2000 elections, the dominant political party in Croatia was the Croat Democratic Union (or HDZ) of Franjo Tudjman. The HDZ, which was formed by Tudjman in the spring of 1989, saw itself as the defender of Croat national rights and of Croatia's territorial integrity and sovereignty, which they held to have been long suppressed within Yugoslavia. In the 1990 elections the HDZ won 42 percent of the vote and 60 percent of the seats in the Croatian Parliament. Its hold over Croatian politics was broken only with Tudjman's death in December 1999.

Tudjman was a Croat nationalist. As a former high-ranking Communist official and retired general of the JNA, Tudjman possessed an authoritarian demeanor. Hence the transition from Communist to HDZ rule in 1989–1990 did not dramatically or immediately improve democratic institutions in Croatia. The manipulation of laws and legal harassment of the independent media were means to control political life and public political discourse. Moreover, the constitution provided Tudjman with great powers; he attempted to govern Croatia as a presidential state. The electronic media was almost completely muzzled. Press freedom was restricted. The government used the courts and the administrative bodies to restrain newspapers, radio, and independent television that were critical of the government or not under government control. Journalism fell victim to censorship and government intimidation resulted in self-censorship by journalists. Tudjman was assisted in this respect by the opposition, which was unable, at least until 1999, to overcome its own divisions and make common cause against the HDZ. Freedom of assembly was restricted under Tudjman. Freedom of association was circumscribed by a law that prohibited groups from forming or meeting unless expressly authorized to do so by means of a lengthy registration process.

Parliament was from 1991 to 2000 a bicameral institution consisting of a lower house known as the House of Representatives (Zastupnički dom) and an upper house known as the House of Counties (Županijski dom). The HDZ never managed to achieve a two-thirds majority in the Croatian parliament, which would have enabled it to ride roughshod over the opposition. Nonetheless, it was able to influence the upper house more readily than the lower house. The House of Counties had 68 deputies, 63 of whom were elected locally on the basis of proportional representation for a four-year term; each county (including the city of Zagreb) sent three deputies to the House of Counties. Tudjman appointed an additional five deputies, thus enabling him to exert influence over the upper house. The number of deputies in the House of Representatives may vary from term to term, from 100 to 160. At least 80 deputies were supposed to be elected under a system of proportional representation and 28 in one-member constituencies according to a simple majority system. Twelve parliamentary seats were originally reserved for representatives of the Croatian Diaspora, which largely voted throughout the 1990s for Tudjman's HDZ, and 8 for the national minorities.

The first parliamentary elections to be held in independent Croatia occurred in August 1992. They were for the House of Representatives. The HDZ won 44 percent of the vote and gained 85 of 138 seats. Presidential elections were held simultaneously, which were won by Tudjman. The first elections to the House of Counties were held in February 1993, and the last in April 1997. In the 1993 elections the HDZ gained 45.5 percent of the vote and 37 of 68 seats. In the next parliamentary elections, held in October 1995, the HDZ consolidated its position; it won 75 of 127 seats in the House of Representatives. The regional and municipal elections of April 1997 were also won by the HDZ, which gained a majority in 40 percent of the counties. That same year, in June 1997, Tudjman was reelected in presidential elections with 61.4 percent of the popular vote. The Social Democratic Party (SDP) candidate, Zdravko Tomac, gained 21 percent of the vote, while the Croat Social Liberal Party (HSLS) candidate, Vlado Gotovac, gained 17.6 percent. However, the Organization for Security and Cooperation in Europe (OSCE) declared the elections undemocratic, since it believed that the opposition parties had lacked access to the media.

Since Tudjman's death, the Croatian political landscape has changed dramatically. Encouraged by the divisive leadership struggle within the HDZ that accompanied Tudjman's last days, the opposition forged a coalition consisting of Ivica Račan's SDP and Dražen Budiša's HSLS. It was supported by a smaller four-party coalition consisting of the Croat People's Party (HNS), Croat Peasant Party (HSS), the Istrian Democratic Assembly (IDS), and the Liberal Party (LS); this coalition won 47 percent of the vote in the January 2000 elections to the House of Representatives. Although the HDZ remained the single largest party in the Croatian Parliament, with 46 deputies, the six-party coalition had over 90 deputies and thus formed the new government. In the concurrent two-stage presidential campaign, held January–February 2000, Stjepan Mesić of the Croat People's Party (HNS) emerged victorious; in the first round, Mesić and HSLS-SDP candidate Dražen Budiša defeated Mate Granić, Tudjman's former foreign minister who had left the HDZ in early 1999, and in the second round, held on 7 February 2000, Mesić defeated Budiša with 56 percent of the vote. Mesić was inaugurated as president on 18 February 2000.

Since then, Prime Minister Račan and President Mesić have pursued economic and political reform programs, including a restructuring of the Croatian military and state bureaucracy, and they have worked toward the creation of an independent public broadcasting service and liberalization of the media. They have also worked to develop a new approach to Croatia's ethnic minorities, particularly the Serbs. And in order to avoid a repeat of the abuses of the Tudjman era, the new SDP-HSLS government has limited the powers of the presidency. Although the president is hardly a ceremonial figure, which is what the SDP-HSLS government hoped to make him, the scope and range of his powers have definitely decreased; the president remains the head of the armed forces and the intelligence agency. Moreover, a constitutional amendment of 28 March 2001 transformed the parliament into a unicameral body, and the House of Counties was dissolved.

POLITICAL DEVELOPMENTS AND THE HOMELAND WAR

Almost all major political developments in Croatia since the collapse of communism have been affected in one way or another by the country's war of independence (1991–1995), known in Croatia as the Homeland War *(Domovinski rat).* Following the April-May 1990 multiparty elections in Croatia, then still part of the Socialist Federal Republic of Yugoslavia, the League of Communists of Croatia relinquished power to the HDZ. The HDZ quickly moved forward with its goal of greater political rights for Croatia within a reformed Yugoslavia. In 1990 the term "socialist" was dropped from Croatia's official nomenclature, a new constitution was promulgated, and a revival of nationalist sentiment was experienced. Following the failure of a series of talks with the leaders of the five other Yugoslav republics, which had been designed to reformulate the Yugoslav federation, on 25 June 1991 Croatia, together with Slovenia, declared its independence.

Even before the Croatian declaration of independence was made, fighting had erupted between the Croatian authorities and Croatian Serbs who, having rebelled against Zagreb, were aided by the Serbian regime of Slobodan Milošević and armed by the Serb-dominated Yugoslav People's Army (JNA). In 1990, as Croatia moved ever closer to independence, the Croatian Serb intellectual Jovan Rašković formed the Serb Democratic Party (SDS). In August 1990 the SDS organized a referendum on Serb autonomy within Croatia. Shortly thereafter armed Serb-Croat confrontation flared up. The referendum resulted in the Knin-based SDS declaring autonomy in October 1990 for the so-called Serb Autonomous Region of Krajina. In May 1991 this autonomous Krajina region announced its independence from Croatia. Violent clashes between Zagreb and the Croatian Serbs continued throughout this period.

When Croatia declared its independence, the fighting only intensified and became more brutal. The Serbian authorities and the JNA responded by helping the Croatian Serb leadership carve out a Serb territory in Croatia. Following intense fighting between June and December 1991, during which time the Croatian town of Vukovar was destroyed and Dubrovnik was shelled indiscriminately by the JNA, in December 1991 Croatia's Serb autonomous regions united to form the so-called Republic of Serb Krajina (RSK). On 2 January 1992, the American mediator Cyrus Vance brokered a cease-fire whereby a United Nations mandated force, called U.N. Protection Force (UNPROFOR), was to be sent to Croatia. In February 1992 the U.N. Security Council approved a 14,000-member peacekeeping force to monitor the cease-fire. Meanwhile, on 15 January 1992, most European and some non-European states recognized Croatia as an independent state, and in May 1992 Croatia became a member of the United Nations. The six-month Croatian war had claimed over 10,000 lives and wrought mass destruction. By early 1992, overt hostilities between Croatia and Yugoslavia ceased.

However, the problem of the Croatian Serb entity, the RSK, which Croatia considered an illegal Serb occupation of its sovereign territory, remained unresolved. The RSK was from its inception a satellite and dependency of Slobodan Milošević's Serbian regime. A protégé of Milošević, Milan Martić, was elected its president in 1993. The UNPROFOR mission in Croatia merely froze the territorial status quo that had been established in January 1992; Croatia's Serbs, who hoped to remain part of a Yugoslav or Great Serbian state, held nearly one-third of Croatia. In 1993 the Serb authorities in the RSK staged a referendum resoundingly in favor of integration with the Serbs of Bosnia and Serbia.

However, in two separate lightning offensives in 1995 the Croatian army recaptured all the territory controlled by the RSK. In the first in May 1995 (called "Flash") and in the second in August 1995 (called "Storm"), all of the RSK was retaken except for eastern Slavonia. On 12 November 1995, during the Dayton peace negotiations that brought an end to the war in Bosnia-Hercegovina, the Croatian government and Serbian negotiators agreed to the peaceful reintegration of eastern Slavonia into Croatia. The basic agreement allowed for a transitional period of demilitarization and government by an international administration backed by an implementation force. In January 1996 Security Council Resolution 1037 established the UNTAES (U.N. Transitional Administration for Eastern Slavonia). Control of the region was handed back to Zagreb on 15 January 1998, and with the government's agreement, an OSCE mission took over some of the UNTAES tasks, including police monitoring. As of 2002, only a small U.N. contingent of fewer than thirty observers remained in Croatia's Prevlaka Peninsula, which had been occupied by the JNA in 1991.

From its outbreak in 1992, Croatia was involved in the war in Bosnia-Hercegovina. At that time, Croats composed approximately 17 percent of the population of Bosnia-Hercegovina. When the war began, the Bosnian Croats were united with the Bosnian Muslims (44 percent of the population) in their determination for independence, while the Bosnian Serbs (31 percent), who were backed by the Serbian leadership in Belgrade, opposed independence. Although allied to the Bosnian Muslim government, the HDZ headed the Croat political leadership in Bosnia-Hercegovina. The first HDZ leader in Bosnia-Hercegovina, Mate Boban, proclaimed a Croat Community of Herceg-Bosna, which was supposed to serve as a Croat parastate in parts of Bosnia that were predominantly inhabited by Croats. It had its own military, known as the Croat Council of Defense (HVO). However, in 1993 conflict erupted between the Bosnian Croats and Bosnian Muslims for control of central Bosnia. Croatia became indirectly involved in this conflict as a financier and supplier of the HVO and Bosnian Croat leadership. Only after the American administration applied strong pressure on Zagreb did the Croatian government agree to the territorial integrity of Bosnia-Hercegovina and the formation of a loose confederation with its Bosnian neighbor. In April 1994 the Bosnian president, Alija Izetbegović, and Tudjman agreed to the so-called Washington Agreement, forming a Bosniak-Croat Federation within Bosnia-Hercegovina and a loose economic confederation between Zagreb and Sarajevo.

The presidents of Croatia, Bosnia, and Serbia signed the Dayton Accords, which ended the war in Bosnia-Hercegovina, in December 1995. In practice, however, throughout the Tudjman era, the Croat-populated parts of Bosnia were treated as an extension of Croatian territory, just as Serb-populated areas were treated as an extension of Serbia. For that reason, the international community expressed concern over Croatia's slow implementation of the Bosnian peace treaty and continued support of the nationalist Bosnian Croat leadership. Moreover, opposition to the return of Serb refugees to Croatia, alleged human rights abuses, and Tudjman's autocratic rule led eventually, by the late 1990s, to Croatia's international political isolation.

Only after the January 2000 elections did a major change occur in Croatia's relations with the international community and its neighbors, particularly Bosnia-Hercegovina. The new Croatian foreign minister, Tonino Picula, immediately pledged that the new government would respect its obligations toward Bosnia-Hercegovina under the Dayton Accords and that it considered Bosnia-Hercegovina's borders inviolable. The new government also ended Zagreb's extensive financial subsidies to the Croats of Bosnia-Hercegovina, where the dominant Croat party was still the HDZ. Cooperation has also been established with the International Criminal Tribunal for the former Yugoslavia (ICTY) at The Hague. In February 2000 Croatia was invited to join the NATO-sponsored Partnership for Peace program. Croatia has also been admitted to the World Trade Organization (WTO) and the Council of Europe. Today, more than at any other point in the past half-century, the prospects for liberal democracy in Croatia appear genuinely strong.

CULTURAL DEVELOPMENT

Although Croatia has a rich cultural history and an equally rich contemporary cultural scene, any discussion of culture must begin with the importance of language and the evolution of a literary language. In short, the literary and spoken language is perhaps the most important element of culture and the cultural heritage of a people. Language is particularly important in the context of Central and Southeastern Europe, as it has served in the era of nationalism as the main criterion in defining nationality.

The Croatian language is a Slavic language that is almost identical to Serbian and Bosnian and closely related to Slovenian, Macedonian, and Bulgarian. It may be divided into three dialects, each named for the word it uses for "what": Kajkavian *(kaj),* Čakavian *(ča),* and Štokavian *(što).* Čakavian and Kajkavian now have a relatively limited territorial base in Croatia. The Kajkavian dialect is spoken in Zagreb, its wider environs, and the region of Hrvatsko Zagorje to the north of Zagreb. Čakavian is spoken in Istria, part of the Croatian Littoral, and some of the northern Adriatic islands. Štokavian is the most widely spoken dialect in Croatia. The Štokavian dialect may be further grouped into three subdialects, according to the treatment of vowels in certain words. On this basis, Štokavian may be classified into ekavian, ikavian, and ijekavian variants. The modern Croatian literary language is based on the ijekavian variant, while the ekavian variant, which is spoken in Serbia proper, forms the basis of modern literary Serbian.

The Croatian language and literature have a rich history dating back to the medieval period. The earliest written records in Croatian date from the ninth to the eleventh centuries and are in Old Church Slavonic, a liturgical language developed by the Greek missionaries Cyril and Methodius. Croatian medieval texts were written largely in the Glagolitic script and Old Slavonic language. Almost all the texts from this period are either legal or religious documents, such as the Baška Tablet (ca. 1100) and Vinodol Law (1288). Perhaps the most important medieval text is the *Chronicle of the Priest of Dioclea* (Ljetopis popa Dukljanina), dating from the late twelfth century.

The term "Croatian Latinists" refers to writers whose works were written in Latin and who belong to the humanist and early Renaissance traditions. Most of these writers were from Dalmatia, the heart of the Renaissance in Croatia; the cities of Dubrovnik, Split, and Hvar were important cultural centers. Unlike Croatia proper, which was being laid waste from the late fifteenth century onward by Ottoman incursions, Dalmatia experienced relative peace and prosperity. Among the leading figures of the period was Marko Marulić (1450–1524), probably the greatest humanist figure in Croatia. The development of a specifically Croatian literature in Dalmatia is attributed to him; his major work was the epic poem *Judita* (Judith), written in 1501 and published in Venice in 1521. Although Marulić was the most significant Renaissance figure in Croatian literature, Marin Držić (ca. 1508–1567) of Dubrovnik and the poet Petar Hektorović (1487–1572) of Hvar were also important. Držić was a priest, literary figure, and playwright. His studies in Sienna exposed him to a rich cultural life, especially in the realm of theater and contemporary drama. He achieved his fame based on a number of farces or short comedies, the best known of which is *Novela od stanca* (A Novella in Stanzas), which was first shown in 1550. With these works he became a central figure in Dubrovnik's theater life. The philosopher and theologian Matija Vlačić Ilirik (Matthias Flacius Illyricus) (1520–1575) was another prominent Latinist. A follower of Martin Luther and the Reformation, his most significant work was *Catalogus testium veritatis* (A Catalog of Witnesses of the Truth). Ivan

The Internet and Eastern Europe

Just as Central and Southeastern Europe entered a new world with the collapse of communism in the late 1980s and early 1990s, so too has the region become more accessible for those seeking to learn more about the region, thanks to the Web. Croatia provides a model example of what will be increasingly available to those seeking to learn more about the region in the twenty-first century.

The most useful gateway to Internet resources about Croatia is the Croatian homepage, located at www.hr. In addition to a section containing basic facts about Croatia, it categorizes Web pages into more than a dozen different categories, from "Arts and Culture" to "Tourism."

Croatia

Croatia in English (http://www.croatia-in-english.com) This site is for English-speaking people who have an interest in Croatia and especially for persons of Croat descent who were born outside Croatia and Bosnia-Hercegovina and other places where the Croat population is indigeneous. The focus is primarily genealogical, with some information on customs and travel.

Inside Croatia (http://www.insidecroatia.com). This site contains a good deal of basic information about the Republic of Croatia.

Handbook for Foreign Visitors to Croatia (http://centar-cons.tripod.com). The handbook offers an overview of the Republic of Croatia. It is useful for both tourists and those merely looking for information. It offers a broad range of historical, economic, political, and tourist data.

HIDRA: Croatian Information Documentation Referral Agency (http://www.hidra.hr). HIDRA is the official service of the government of Croatia for the dissemination of information, documentation, and referral.

Additional information may be found at the Web sites of various academic institutes and centers specializing in the region (e.g., the Balkans, Eastern Europe). Among the more useful sites are the following: (1) the Russian and East European Network Information Center (or REENIC) of the University of Texas at Austin, http://reenic.utexas.edu/reenic/index.html; (2) the Center for Russian, East European, and Eurasian Studies at the University of Texas, http://reenic.utexas.edu/creees/index.html; (3) the Balkan Studies Center and Program at Columbia University in New York, http://www.columbia.edu/cu/sipa/REGIONAL/HI/balk.html; (4) the Russian and East European Studies Virtual Library of the University of Pittsburgh, http://www.ucis.pitt.edu/reesweb; (5) the Center for Russian, East European, and Eurasian Studies at Stanford University, http://www.stanford.edu/dept/CREES; (6) the Center for Russian and East European Studies at the University of Michigan, http://www.umich.edu/~iinet/crees. All of these Web sites have useful links.

Arts and Culture

An Overview of Croatian History, Culture, and Science (http://www.hr/hrvatska/Croatia-HCS.html). This text was written by Darko Žubrinić and provides an overview of Croatian culture and history.

Croatian Portal for Art, Architecture, and Design (http://www.punkt.hr). This site was conceived as a starting page for all information relating to Croatian culture, the visual arts, architecture, and design. Daily news, list of exhibitions, galleries and contests, as well as personal homepages of artists, architects, and designers can be found here.

Croatian Cultural Association (http://www.hrsk.hr). This is the official Web site of the Croatian Cultural Association, with a good deal of information about orchestras, folk and dance ensembles, and writers.

Business and Economy

Useful Internet sites dealing with the Croatian economy are (1) the Ministry of the Economy (http://www.mingo.hr); (2) the Croatian Chamber of Economy (http://www.hgk.hr), a great source for basic indicators on the Croatian economy; (3) Croatian Bureau of Statistics (http://www.dzs.hr); (4) the Croatian National Bank (http://www.hnb.hr); (5) the Ministry of Finance (http://www.mfin.hr); (6) the Business Forum (www.poslovniforum.hr), for information technology and business services; and (7) the Croatian Business Information Centre (http://www.cbic.efzg.hr), which provides the most important resources of business studies in Croatia.

(continues)

Education

Ministry of Education and Sport (http://www.mips.hr). The Ministry of Education and Sports in the Republic of Croatia is responsible for preschool, primary, and secondary education. Its duties encompass teacher training, development, textbooks, verifications of school certificates and international cooperation, inspection, and financing of schools. It carries out projects related to civic education; human rights, rights of the child, and minority rights; heritage education; and special education needs children.

For other Web sites devoted to education in general and specifically to academic institutions in Croatia, follow the links under "Education" at http://www.hr/index.en.shtml, and visit the Web sites of the Universities of Zagreb (http://www.unizg.hr), Split (www.unist.hr), Rijeka (http://www.uniri.hr), and Osijek (http://www.unios.hr). See also the Ministry of Science and Technology (www.mzt.hr).

History

On Croatian history, see the relevant links at http://www.hr/index.en.shtml. A great deal of information (e.g., book reviews, discussion logs, etc.) can be found through the Habsburg Discussion Network, http://www.h-net.msu.edu/~habsweb, and at the links found on that page. Also useful are the Web sites of the various university institutes in the United States listed under "About Croatia."

Current Events and Media (Journalism, Press, and Television)

Croatian Radio and Television (http://www.hrt.hr). The Web site of Croatian Radio and Television, known by its Croatian acronym HRT (with three stations), also contains useful links to Croatian regional radio.

Croatian Information and News Agency (http://www.hina.hr/nws-bin/ehot.cgi). Known by its Croatian acronym HINA, Croatia's official news service is a good starting point for Croatian news.

Croatian Information Center (http://www.hic.hr). A useful link providing the latest news from the Croatian press. It also contains links to audio news from HRT.

Croatian Journalists' Association (http://www.hnd.hr). Contains information about the activities of the Croatian Journalists' Association and links to various newspapers. Most of Croatia's print press, like *Vjesnik, Večernji list, Obzor, Globus, Nacional, Slobodna Dalmacija,* and *Hrvatsko slovo,* have their own Web sites, but these are still usually only in Croatian.

For Western-based and English-language sources dealing with current events, consult the Web sites of the following organizations: (1) Radio Free Europe/Radio Liberty (http://www.rferl.org), for news and an overview of political developments; (2) Institute for War and Peace Reporting (http://www.iwpr.net), which produces "Balkan Crisis Reports," as well as "Tribunal Updates," summarizing the week's developments at the International Criminal Tribunal for the former Yugoslavia (ICTY); (3) the U.S. Department of State (http://www.state.gov/p/eur/ci/); and (4) the CIA's *World Factbook* (http://www.cia.gov/cia/publications/factbook/index.html).

Museums

Those interested in Croatian museums may consult the relevant Web sites listed below, all of which have English-language pages with detailed descriptions of the histories and holdings of the museums. Among the more important museums are (1) Trakošćan Castle (http://www.mdc.hr/trakoscan), (2) the Archeological Museum of Istria (http://www.mdc.hr/pula), (3) the Archeological Museum of Split (http://www.mdc.hr/split-arheoloski), (4) the Dubrovnik Museums (http://www.mdc.hr/dubrovnik), (5) The Museum of Croatian Archeological Monuments (http://www.mhas-split.hr), (6) The Museum of Modern Art Rijeka (http://www.mgr.hr), (7) the Ethnographic Museum of Istria (http://www.emi.hr), (8) the Peasants Revolt Museum (http://www.mdc.hr/msb), (9) the Gallery of Fine Arts (Osijek) (http://www.mdc.hr/glu_osijek/), (10) Klovićevi dvori Gallery (http://www.galerijaklovic.hr), (11) the Zagreb Municipal Museum (http://www.mdc.hr/mgz), (12) the Croatian Museum of Naive Art (http://www.hmnu.org), (13) the Archeological Museum (Zagreb) (http://www.amz.hr), (14) the Ethnographic Museum (Zagreb) (http://www.mdc.hr/etno), (15) the Museum of Contemporary Art (Zagreb) (http://www.mdc.hr/msu), (16) the Museum of Arts and Crafts (Zagreb) (http://www.muo.hr), and (17) the Croatian Natural History Museum (http://www.hpm.hr).

(continues)

Politics, Law, and Administration

The official Web site of the government of Croatia (http://www.vlada.hr) offers a detailed description of Croatian political institutions and civil service, accompanied by biographical profiles of each member of government. A range of general information documents can also be accessed from the site, in particular the text of the Croatian Constitution and the government's political program. The site also features a database containing press releases, accounts of cabinet meetings, and a weekly news bulletin. A monthly newsletter is also published on the site.

The different ministries have their own Web sites, all of which have English pages. Each site offers a detailed description of the role of the ministry and features short biographical accounts of the Minister and other members of the ministry. An organizational chart detailing the structure of the Ministry is usually also contained on the site. The following is a list of Croatian government ministry Web sites: Ministry of Foreign Affairs (http://www.mvp.hr), Ministry of Finance (http://www.mfin.hr), Ministry of Defense (http://www.morh.hr), Ministry of Internal Affairs (http://www.mup.hr), Ministry of the Economy (http://www.mingo.hr), Ministry of Family, Veterans and Intergenerational Solidarity (http://www.mhbdr.hr), Ministry of Culture (http://www.min-kulture.hr), Ministry of Agriculture and Forestry (http://www.mps.hr), Ministry of the Sea, Tourism, Communications, and Development (http://www.mmtpr.hr), Ministry of Justice, Administration, and Local Autonomy (http://www.pravosudje.hr), Ministry for the Protection of the Environment (http://www.mzopu.hr), Ministry of Education and Sport (http://www.mips.hr), Ministry of Labor and Social Assistance (http://www.mrss.hr), Ministry of Tourism (http://www.mint.hr), Ministry of Health (http://www.miz.hr), Ministry of Science and Technology (http://www.mzt.hr), Ministry for European Integration (http://www.mei.hr), and the Ministry of Manual Trade, Small, and Medium Enterprise (http://www.momsp.hr).

The Croatian president maintains his own site at http://www.predsjednik.hr. The Supreme Court has a site at http://www.vsrh.hr. The Croatian parliament (the Sabor) also has its own Web site (http://www.sabor.hr). Most Croatian political parties maintain their own Web sites. The Social Democratic Party's (SDP) site is at http://www.sdp.hr, the Croatian Social Liberal Party's (HSLS) site is at http://www.hsls.hr, the Croat Democratic Union (HDZ) site is at http://www.hdz.hr, the Croat Peasant Party (HSS) site is at http://www.hss.hr, the Croat Party of Right is at http://www.hsp.hr, the Croat People's Party site is at http://www.hns.hr, and the Liberal Party is at http://www.liberali.hr.

On Croatia's twenty-one counties, see the respective county Web sites: Istria (http://www.istra-istria.hr), Littoral-Gorski kotar (Rijeka) (http://www.pgz.hr), Karlovac (http://www.karlovacka-zupanija.hr), Lika-Senj (http://www.lickosenjska.com), Zadar (not available), Šibenik-Knin (http://www.sibenik-knin.com), Split-Dalmatia (not available), Dubrovnik-Neretva (not available), Zagreb (http://www.members.tripod.com/~zagzup), city of Zagreb (not available), Sisak-Moslavina (not available), Krapina-Zagorje (http://www.kr-zag-zupanija.hr), Varaždin (http://www.varazdinska-zupanija.hr), Medjimurje (http://www.zupanija-medjimurska.hr), Koprivnica-Križevci (http://www.tz-koprivnicko-krizevacka.hr), Virovitica-Podravina (http://www.viroviticko-podravska-zupanija.hr), Bjelovar-Bilogora (not available), Požega-Slavonia (not available), Slavonski Brod-Posavina (http://www.tel.hr/zupbrps), Vukovar-Srijem (not available), Osijek-Baranja (http://www.osjecko-baranjska-zupanija.hr).

Religion

Freedom of Religion in Croatia (www.vjerska-sloboda.com). This is the Web site of the Association for Religion Freedom in the Republic of Croatia, a nongovernmental and nonprofit organization that brings together believers from twenty-four churches and religious communities in Croatia.

Bahá'í Religious Community of Croatia (Bahai) (http://www.bahai.hr). Website of the Bahá'í community of Croatia, with an introduction to the Bahá'í faith, Bahá'í writings, activities of the Bahá'í community in Croatia, and links to the worldwide Bahá'í Web pages.

Jehovah's Witnesses (http://www.watchtower.org/languages/c/library/rq/index.htm). The Jehovah's Witnesses are a Christian religious organization that actively witnesses about Jehovah God and his purpose for mankind.

Evangelical Methodist Church (http://www.metodisti.hr). Site of Evangelical Methodist Church in Split, Croatia.

Serbian Orthodox Church Borovo Naselje (http://www.spco-borovonaselje.org). This site is dedicated to the work and life of the Serbian Orthodox Church in Borovo Naselje, Vukovar.

(continues)

Croatian Catholic Press Agency (http://www.ika.hr). This is the official Croatian Catholic Press Agency, based at Zagreb, which provides daily news about the Catholic Church in Croatia.

Catholic Bishops Conference (http://www.hbk.hr). This is the official site of Croatia's Catholic bishops, and hence of the Catholic Church in Croatia.

Sport

For information on Croatian soccer, see the links at http://www.hr/index.en.shtml and the Croatian Football Association at http://www.hns-cff.hr. Most Croatian soccer clubs have their own Web sites. Tennis fans can visit the Web site of the Croatian Open, which is held every year in Umag (Istria), at http://www2.croatiaopen.hr, and the Web site of the Zagreb Open at www.zagrebopen.hr.

Tourism

A legion of Web sites is devoted to the Croatian tourist industry and its various branches. A useful starting point is the Croatian homepage under "Tourism and Traveling" at the Croatian Homepage (http://www.hr/index.en.shtml). For detailed information on Croatia's eight national (nature) parks and protected nature areas, see Kornati (http://www.archaeology.net/kornati), Plitvice Lakes (http://www.archaeology.net/plitvice), Krka (http://www.npkrka.hr), Paklenica (http://www.tel.hr/paklenica), Mljet (http://www.mljet.hr), Risnjak (http://www.archaeology.net/risnjak), Brijuni (http://www.np-brijuni.hr), and Velebit (http://http://www.pp-velebit.hr). For travel, see the Web site of Zagreb Airport at http://www.tel.hr/zagreb-airport and that of Split Airport at http://www.split-airport.tel.hr/split-airport. The Web site of Croatia Airlines is http://www.croatiaairlines.hr. The Web sites of Croatian Railways (http://www.hznet.hr), Croatia Line (http://www.croatialine.com), and Jadrolinija (http://www.jadrolinija.tel.hr/jadrolinija) are all useful for travel purposes.

War Crimes

International Criminal Tribunal for the former Yugoslavia (ICTY) (http://www.un.org/icty). This is the official Web site of the UN tribunal based in The Hague. The site contains a number of public documents, official transcipts, and indictments.

Institute for War and Peace Reporting (http://www.iwpr.net). This IWPR produces a weekly report called *Tribunal Update,* summarizing developments at the ICTY.

Women's Issues

Ona (http://www.ona-hr.com). An up-to-date Web site dealing with a range of issues for women.

The International Women's Club Zagreb (http://www.iwcz.org). Founded in 1994 to bring together women of all nationalities living in Zagreb, the International Women's Club (IWC) offers friendship and support to members, with monthly get-togethers and a varied program of visits, activities, and fundraising events.

B.a.B.e.—Be active, Be emancipated (http://www.babe.hr/eng). B.a.B.e. is a strategic lobbying and advocacy group located in Zagreb, Croatia, working for the affirmation and implementation of women's human rights. The organization lobbies for the recognition and improved status of women's human rights, such as the right to be free of violence, both at home and in the public sphere; the right to reproductive choice and reproductive health, including the right to decide when to create and how to raise children; and the right to equal and full participation in all aspects of society, especially in leadership roles and important decisionmaking. It also supports the civil scene in Croatia and cooperates with peace, human rights, and ecological groups in Croatia.

Women's Infoteka (http://www.zinfo.hr). The Web site of a women's information and documentation center founded in Zagreb in December 1992 as the first of the sort in Croatia and Eastern Europe. The basic activities are collecting and disseminating data and information, a lending service library, publishing (books and the magazine *Kruh i ruže* [Bread and Roses]), organizing training seminars and international conferences, conducting research projects, and providing help in research projects.

Center for Women's Studies, Zagreb (http://www.zenstud.hr). The Center for Women's Studies in Zagreb, founded in 1995 by feminist scholars, activists, and artists, is the first and only independent educational center in Croatia

(continues)

and acknowledged center for civil education in Southeastern Europe offering a place for academic discussion on women's and feminist issues. The main activities of the center are women's studies, public education (for women leaders, politicians, and activists), research, cultural activities, and publishing. The center provides its students with basic insights, theoretical knowledge, and critical reflection into a wide range of women's studies topics, including feminist epistemology, women in cultural theories, theories of identity, and women's awareness of the self, by providing new models of education that fulfill and complement the formal education obtained within the university sphere.

Center for Education and Counseling of Women (http://www.zamir.net/~cesi). CESI is a women's nonprofit, nongovernmental organization established on International Women's Day, 8 March 1997, in response to problems of the violation of human rights, in particular women's and minority rights, nationalism, militarization, and the deterioration of economic standards in the postwar period. It was founded by members of several women's and peace initiatives, all of whom have many years of professional experience working with women war survivors. The main goal is to empower women to gain control over their lives, to improve their psychological, economic, and physical well-being, and to promote values of gender equality.

Česmički (Janus Pannonius) (1434–1472) composed satirical epigrams, panegyrics, and elegies.

The leading figure of the baroque in Croatia was Ivan Gundulić (1589–1638), a patrician from Dubrovnik who penned dramas and epic poems. He authored numerous works, the most famous of which is *Osman.* This epic poem, although running 11,000 lines, remained unfinished at the time of his death. It was inspired by a 1621 Polish victory against the Ottoman Turks and glorified the great courage of the Slavs. Pavao Ritter Vitezović (1652–1713) is the best-known Croat writer of the late seventeenth century and in some respects is the father of Croat historicism. He authored numerous historical, literary, and lexicographical works in Latin and Croatian. Also of significance in this period were Andrija Kačić Miošić (1704–1760), Adam Baltazar Krčelić (1715–1778), and the philosopher Rudjer Bošković (1711–1787). Bošković is one of the most important Croat cultural and scientific figures of the eighteenth century. An astronomer, mathematician, and physician, he is best known for his philosophical and poetic works, of which he authored over a dozen in Latin.

Although the center of gravity of Croatian culture and literature lay in Dalmatia up to the seventeenth century, after that point it shifted north to Zagreb. In the nineteenth century national awakeners in Croatia had a critical role in the further evolution of Croatian literature and language. Indeed, modern Croatian literature began with the Illyrianist movement (1836–1848) of Ljudevit Gaj and the literary-cultural circle that the movement spawned. Illyrianism was suffused with romanticism and nationalism; the latter theme expressed itself throughout the nineteenth century partly in terms of antagonism to Habsburg and Hungarian rule. In the 1830s Zagreb became both the political and the cultural center of the Croat lands. However, the Illyrianist awakeners in Croatia first had to contend with the name of the spoken language. They initially referred to it as "Illyrian" and later "Croatian" or "Serbian." After the creation of the Kingdom of Serbs, Croats, and Slovenes in 1918, the term "Serbo-Croatian" became official. At the time it was hoped by Yugoslavist unitarists that just as the Croat, Serb, and Slovene "tribes" would be melded into a hybrid Yugoslav nationality, so too would "Croatian" and "Serbian" merge into a single literary language. This proved highly problematical on many levels, however. As Yugoslavia's political experience soured and resistance to state centralism stiffened among the non-Serbs, resistance to linguistic unity stiffened also.

The Illyrianist movement counted among its followers Ivan Mažuranić (1814–1890), who penned the epic *Smrt Smail-Age Čengića* (The Death of Smail-Aga Čengić; 1846), which tells of Christian-Muslim conflict in Turkish-ruled Hercegovina. Stanko Vraz (1810–1851) and Petar Preradović (1818–1872) were also important in the movement. The main figure in late nineteenth-century Croatian literature was August Šenoa (1838–1881), who dealt mainly with historical themes. His two main works were *Seljačka buna* (Peasant Uprising; 1877) and *Diogeneš* (Diogenes).

The rise of literary realism in the second half of the nineteenth century furthered the development of the novel. Literary realism included among its followers Silvije Strahimir Kranjčević (1865–1908), Eugen Kumičić (1850–1904), Ante Kovačić (1854–1889), Ksaver Šandor Gjalski (1854–1935), and Milan Begović (1876–1948). Particularly important in this respect were Kumičić and Šenoa. Many novelists of the period also wrote poetry and drama. The late nineteenth century also saw a growing interest in the psychology of motives and morals, a trend influenced by the writings of Russian novelists. Historical themes, which had predominated in Šenoa's work, gave way to psychology, which gradually displaced the cult of history. The best known of the psychological novelists in Croatia was Gjalski, who in a series of some twenty novels depicted the whole range of contemporary Croatian life.

During the first quarter of the twentieth century, modernists sought to assimilate literary trends imported from France and Germany. Croatian literary modernism was represented by Milivoj Dežman Ivanov (1873–1940), Milan

Marko Marulić (1450–1524)

Marko Marulić was a Croat poet, writer, and scholar from Split, which after 1420 was part of the Venetian Republic. Marulić wrote the first secular work of Croatian literature, the *Istoria svete udovice Judit* (The History of the Holy Widow Judith). This Croatian epic tells the biblical story of Judith, who killed the Assyrian general Holofernes; it is an allegory of Croatia's struggle against the Ottoman Turks. It was published in five editions in Venice between 1521 and 1627. The poem proved to be very popular with a large section of educated Dalmatian society. In the preface to the book, Marulić wrote: "In reading this history I was minded to translate it into our [Croatian] tongue, so that it might be understood by those who are not learned in Latin or clerical writing" (Croatian Information Centre). The ethical message of Judith appears to be a call to Christian faith, devotion, and unity in the struggle against the Ottoman Turkish infidel. Marulić sounded an urgent call to his people to hold firm to Christianity, which alone would give them the moral force to withstand the Turk.

Marulić also wrote in Latin a series of works of religious morality, some of which were highly regarded by contemporaries: *Evangelistarium* (Book of Gospels; 1487); *De Institutione bene vivendi per exempla Sanctorum* (Instructions for a Good Life Based on the Examples of the Saints; 1498); and *Dialogus de laudibus Herculis* (A Dialogue on the Great Deeds of Hercules; 1524). He authored other noteworthy works in the areas of poetry, history, and archaeology, most of which were published in several editions, as well as being translated into German, Italian, French, Czech, and Portuguese. Related works in Croatian concerned with the Ottoman threat include his *Molitva suprotiva Turkom* (Prayer against the Turk), and *Tuzenie grada Hjerozolima* (The Plaint of the City of Jerusalem). *Prayer against the Turk* denounces the destruction, pillage, and massacres perpetrated by Ottoman Turkish soldiers in the Croatian hinterland. Although a layman, Marulić devoted his life to religious contemplation and to the improvement of his fellow man. His religious writings were known throughout Europe.

Although his classical education and his interest in Roman monuments stamp him as a humanist, Marulić was deeply rooted in medieval Catholic theology. His books were moralistic and didactic and attracted many readers and admirers throughout Europe. His *De Institutione bene vivendi per exempla Sanctorum* was not only reprinted but translated into many languages. The main reason for its popularity was that during the whole of the Counter-Reformation it was considered an effective book for Catholics to use in the defense of their faith. Marulić shared the common belief of the Renaissance era that the Croats had been in Dalmatia from time immemorial. He translated from Croatian into Latin an old chronicle (*Ljetopis popa Dukljanina;* Chronicle of the Priest of Dioclea) under the title *Regum Dalmatiae et Croatiae gesta* (Deeds of the Kings of Dalmatia and Croatia). Concerned with the rapid advance of the Ottoman Turks in the Balkans and the disunity prevailing in Christendom, Marulić wrote the moving *Epistle to Pope Hadrian VI* (Rome, 1522), begging him humbly to intervene in favor of the poor persecuted Christians. Marulić wrote that many of his countrymen had been killed, others enslaved, their properties destroyed, villages burned, and fields either wasted or left without their cultivators. Marulić's impressive opus has earned him the reputation of being the father of Croatian literature.

Marjanović (1879–1955), Vladimir Nazor (1876–1949), and Antun Gustav Matoš (1873–1914), among others. Nazor's prose dealt with the epic world of legend and mythology. His novel *Pastir Loda* (Pastor Loda) is a panoramic description of his native island Brač; his *Zagrebačke novele* (Zagreb Novellas) provides a reconstruction of Zagreb in his last years.

The cause of Croatian literature has been greatly assisted by the Society of Croat Writers (DHK, Društvo hrvatskih književnika), which was formed in 1900. From its inception, the DHK has been a remarkably active cultural institution. It has published several periodicals, such as *Ljetopis* (Annals; 1903) and *Savremenik* (The Contemporary; 1906). In 1909 it also began publishing a major series of literary works under the rubric, Contemporary Croat Writers; between 1909 and 1938, it published sixty-four volumes. The series was resumed in 1957. In 1954 the DHK began publishing its Little Library, intended as a venue for young writers. In 1966 it began publishing *Most/The Bridge,* with translations of Croatian poetry and literary works into foreign languages. It is published to this day by the DHK.

Undoubtedly the greatest Croat writer, poet, essayist, and playwright of the twentieth century was Miroslav Krleža (1893–1981). He left behind a rich opus consisting of novels, dramas, poetry, and political essays. Born in Zagreb, which was then part of the Austro-Hungarian Empire, he received his primary schooling there but in 1908 entered a preparatory military school in Peczuj and then attended the Lucoviceum Military Academy in Budapest. In 1912, during the first Balkan War, he volunteered for service in the

Serbian army. Suspected of being an Austrian spy by the Serbs, he was forced to return to Austria-Hungary, where the authorities arrested him. He was deprived of his officer's rank; during World War I, he served on the Galician front as a common soldier.

In his early literary career, Krleža was an idealist and romanticist. But World War I shattered many of his illusions; his embittered prose reflected his strong antiwar feelings. After 1918, Krleža opposed the Great Serbian monarchist regime of Yugoslavia and in 1919 founded *Plamen* (The Flame), a left-wing review, and then in 1923 *Književna republika* (Literary Republic), among others. Deeply impressed by the Soviet revolution, he became a Marxist and was a member of the Communist Party from 1919 until 1939, when he was expelled.

Krleža's early dramas, *Legenda* (The Legend; 1914), *Kraljevo* (1918), and *Adam i Eva* (Adam and Eve; 1922) reveal his transformation from an idealist into a socially conscious and antiwar writer. Krleža's plays are characterized by straightforward dialogue and merciless revelation of social injustice. *Hrvatski bog Mars* (The Croatian God Mars; 1922) was a short story collection depicting the miserable condition of the Croat soldier in the Austro-Hungarian army and the exploitation of the peasant; it is a powerful antiwar statement. The dramatic trilogy *Gospoda Glembajevi* (The Glembays; 1928), *U agoniji* (Death Throes; 1928), and *Leda* (1932) depicts the disintegration of the Glembay family and the downfall of bourgeois society.

Krleža's significance as the leader of socially oriented writers grew steadily in the interwar era, when he produced most of his best work. Perhaps his best-known work outside Croatia is *Povratak Filipa Latinovicza* (The Return of Philip Latinovicz; 1932), which is a dissection of Croatia's aimless bourgeoisie in the aftermath of the Great War. His novel *Na rubu pameti* (On the Edge of Reason; 1938) is set in the same period and portrays bourgeois society as a form of self-deluding madness. Krleža excelled as a political commentator. In the interwar period he was Croatia's (and Yugoslavia's) leading Marxist intellectual. His best-known work of political commentary is *Deset krvavih godina* (Ten Bloody Years), which is a collection of essays from the 1920s. In the poetry collections *Knjiga lirike* (Book of Songs; 1932) and *Pjesme u tmini* (Poems in the Dark; 1937), Krleža predicted the victory of socialism. But in *Dijalektički antibarbarus* (Dialectical Antibarbarus; 1939) he mocked Stalinism, for which he was expelled from the Communist Party of Yugoslavia. The satirical novel *Banket u Blitvi* (Banquet in Blitvia; 1938–1939) dealt with the political situation in Europe in the interwar period in the imaginary country Blitvia. *Balade Petrice Kerempuha* (The Ballads of Petrica Kerempuh; 1936), a collection of poems, was written in Croatia's regional Kajkavian dialect and was a synthesis of the author's entire poetic oeuvre.

After World War II, Krleža was rehabilitated. In 1947 he was chosen vice president of the Yugoslav Academy of Sciences and Arts, and in 1951 he became director of the Croatian Institute of Lexicography, which today bears his name. He was also the editor in chief of the *Encyclopedia Yugoslavia*. From 1958 to 1961 Krleža was president of the Writers' Union. His most ambitious work is the six-volume novel *Zastave* (Banners; 1967), which paints a panoramic overview of European life in the decade after 1912. Throughout his life Krleža stood in the forefront of the struggle against reactionary social and political attitudes. He wrote with enormous creative energy and defended his views fiercely. Although a Marxist to the end, he expressed his disdain for Stalinism and totalitarian systems generally.

Dubravka Ugrešić and Slavenka Drakulić are perhaps the two most outstanding writers of Croatian posmodern literature. Both writers emigrated in the 1990s, largely because of their disillusionment with Croatia's drift to the nationalist political right. Ugrešić has written *Culture of Lies, Have a Nice Day* (the English translation of *Američki fikcionar*) and many other works. Drakulić is a noted feminist writer who began her career as a journalist and political commentator, writing for a number of Zagreb periodicals. Her better-known works include three books of journalism, *How We Survived Communism and Even Laughed, Rain Express,* and *Café Europa,* as well as the four novels *Holograms of Fear, Marble Skin, The Taste of a Man,* and *As If I Am Not Here.* Her books have been translated into more than a dozen languages. She also contributes political columns to a number of European newspapers.

MUSIC AND DANCE

The oldest preserved relics of Croatia's musical culture are of religious provenance and are related to medieval Latin liturgical manuscripts with Gregorian chants. The earliest known Croatian manuscript is the Osor Evangelistary (ca. 1080), a neumatic manuscript from the convent of St. Nikola in Osor on the Island of Cres. It is written in Beneventan, a medieval script employed chiefly in southern Italy, and contains a prayer for the pope, the Byzantine emperor, and the Croatian king Zvonimir; it is held in the Vatican Archives. Also of historic significance is the Dubrovnik Missal (twelfth century), now kept in the Bodleian Library at Oxford University. Written in Latin, in the Beneventan script, it contains prayers and chants. Glagolitic church singing holds a special place in the history of Croatian music. The earliest mention of Glagolitic singing in Croatia dates to 1177, when Pope Alexander III visited the town of Zadar in Dalmatia. In the Missal of Duke Novak (1368), which is kept at the National Library in Vienna, there are symbols above the Glagolitic text that appear to denote singing. The same holds for the Hrvoje Missal (1404) held in the Library of Turkish Sultans at Istanbul.

In Dalmatia the extant sources belong to the Beneventan script, demonstrating the close cultural connection between Dalmatia and Italy. The music of medieval northern Croatia, on the other hand, is intimately associated with the formation of the Zagreb bishopric (1094). Because the Zagreb bishopric was under the jurisdiction of Hungarian ecclesiasts until 1180, its musical codex was based on those in Hungary. The oldest liturgical and musical relic written in Zagreb is the Zagreb Missal (1230), which is kept in the Franciscan monastery at Güssing, Austria.

Croatia can boast a number of important Renaissance and baroque composers. The first is Julije Skjavetić, who from 1557 to 1573 lived in Šibenik, where he conducted the choir of Šibenik Cathedral. The Franciscan monk Ivan Lukačić (1584–1648), a Renaissance composer who was also from Šibenik, was conductor and organist in Split Cathedral. In 1620 he published a collection, *Sacrae cantiones,* containing twenty-seven motets accompanied by organ. The only extant copy is held in the Jagiellonian Library in Cracow, Poland. Another important representative of Croatian church music was Vinko Jelić (1596–1636), an early baroque composer who is noted for introducing new techniques like chromatics and sequences into his music. In 1622 he published a collection consisting of twenty-four motets, *Parnassia militia,* in Strasbourg. Canon Kristofor Ivanović of Budva published his *Memorie teatrali* (Venice, 1681), which was the first history of Venetian opera, covering the period from 1637 to 1681.

The first national operas in Croatia were composed in the middle of the nineteenth century. Vatroslav Lisinski (1819–1854) composed the Croatian opera, *Ljubav i zloba* (Love and Malice; 1846). Ivan Zajc (1832–1914) was perhaps the most productive Croat composer, however. His most important operas are *Mislav, Ban Legat,* and *Nikola Šubić Zrinski,* among others.

Folk musician in traditional clothing, Vrbovec. (Corel Corporation)

In the modern period, Croatian folk music has been the exemplar of popular musical culture. It is diverse and reflects the varied cultural influences of the Mediterranean, Central Europe, and the Balkans on Croatian culture. Traditional folk music still forms an important part of everyday life in many of Croatia's towns and villages, where local folklore societies have tried to preserve knowledge of native song and dance. The folk music of eastern Croatia is characterized by the *tambura* (or *tamburica,* its diminutive form), a lutelike instrument that is plucked to produce a sound that is similar to the mandolin. The instrument was probably brought to the Balkans by the Turks and was gradually adopted by the Slavic-speaking peoples. By the nineteenth century, the tamburica was the most common musical instrument in much of Croatia. During the nineteenth century national revival, the instrument was seen as an authentic symbol of indigenous Croat (and Slavic) popular culture. Tamburica troupes were formed in villages and regions, which played popular folk tunes. In the twentieth century this particular sound, which was especially popular in eastern Croatia (especially Slavonia), came to symbolize Croatia as a whole and has remained popular to this day. That is not to say, however, that other musical variants are not popular. For example, in the Zagorje region north of Zagreb, music and dance center on the polka and waltz, which are common to Central Europe. In southwestern Croatia (e.g., Lika) and in the Croat-populated areas of Hercegovina, *gange* are popular; this is a dissonant form of singing that is commonly heard at village festivities of one kind or another. In Istria and Dalmatia, other forms predominate.

One can hear folk music in Croatia today by attending the performances of one of any number of folklore societies. For example, Lado, the state professional ensemble, performs dances all over Croatia. There are also numerous folklore festivals in Croatia, which provide a window on Croatian popular culture. Croatia's annual International Folklore Festival, held in Zagreb, brings together an array of performers from all over the country and the world. Much of the traditional Croatian folk music has made its way into the Croatian commercial mainstream. Groups like Zlatnik dukati (Golden Ducats) and Gazde (The Bosses) have melded folk music themes with modern pop sound and have gained broad appeal in Croatia.

Like folk music and many other aspects of traditional culture, the traditional folk dance repertory in Croatia is conditioned by the specific cultural heritages of the country's diverse regions. The richness and wide variety of dance styles, including the accompanying songs, music, and instruments, resulted from the convergence of various cultures. Central European cultural influences were of crucial importance for lowland and central Croatia. The mountainous region of Croatia fell under Southeast European influences. On the other hand, Mediterranean qualities are characteristic for the Adriatic islands, its coast and hinterland.

In the 1930s folk dances began to be performed on stage with a view to preserving them as part of the nation's cultural heritage, and also in order to present regional identities at national and international festivals. The work of

Sport

Sport occupies an important position in Croatian society, not least because this country of 5 million has produced and continues to produce a large number of talented and successful athletes and teams. Croatia's success in sport has enhanced national pride, particularly in the difficult period of the War of Independence (1991–1995) and since then.

Soccer is without a doubt Croatia's national sport and by far the most popular national pastime. The Croatian football federation is one of the oldest in the country, having been formed in 1912. Two Croatian clubs have stood out, Hajduk Split and Dinamo Zagreb. They were often the best in Croatia and among the best in former Yugoslavia. In addition to many domestic titles, Dinamo Zagreb won the UEFA Cup (then known as the Fairs Cup) in 1967. At the 1998 World Cup in France, which was Croatia's first appearance at a World Cup, the Croatian National Team finished third behind France and Brazil.

Next to soccer, basketball is the most popular sport in Croatia. Croatian clubs were among the best in former Yugoslavia, in particular Cibona of Zagreb. In 1985 and 1986, Cibona won the European championship. From 1989 to 1991, this title was won by Split. The Croat contribution to the Yugoslav national team was also important and certainly helped the squad win the gold medal at the Moscow Olympic Games (1980) and at the World Championships (1970, 1978, 1990). Yugoslavia also won gold at the European Championships in 1973, 1975, 1977, 1989, and 1991. Among the best-known Croat basketball players are Dražen Petrović, Toni Kukoč, and Dino Radja. The Croatian national team was formed in 1992 and quickly distinguished itself by reaching the finals of the 1992 Olympic Games in Barcelona, where the U.S. "Dream Team" defeated them. The following year the Croatian national team won third place in the European Championship at Munich and repeated that finish at the World Championships of 1994 in Toronto and the European Championships of 1995 in Athens.

Croatia has long produced many talented tennis players. Although the names Željko Franulović and Nikola Pilić are unfamiliar to most Westerners, Goran Ivanišević is certainly not. He is undoubtedly the best Croatian player of all time. He has reached the Wimbledon finals four times, winning at his fourth appearance in 2001. Known for his remarkably powerful serve, he was also very popular with tennis fans because of his aggressive style. On the women's side, Iva Majoli has established herself as a solid performer on the women's circuit and spent some time as a member of the Top 10.

Croat players have excelled at many other sports, among them handball. Croatian clubs were among the leading teams in former Yugoslavia, and Croat players contributed to the successes of the Yugoslav national team—the gold medal at the Munich (1972) and Los Angeles (1984) Olympic Games. In independent Croatia, the national squad has won bronze at the European Championships in 1993, silver at the World Championship in 1995, and gold at the 1996 Atlantic Summer Games. The Zagreb men's club Badel 1862 was European champion for two consecutive years (1992, 1993) and lost on three other occasions in the finals. The women's club Podravka, from Koprivnica, won the 1996 European championship.

Seljačka sloga (Peasant Concord), a cultural and charitable organization founded in 1926 by the Croat Peasant Party, was particularly important in this respect. After World War II, a number of urban amateur cultural troupes and societies continued to promote this form of national culture. The most important of these, Lado, was established in 1948. Lado performs folk dances, and the Institute for Ethnology and Folklore Research in Zagreb deals in the research, documentation, and popularization of folk dancing.

ART

Croatia is especially renowned for its naive artists—generally self-taught artists who lacked or rejected formal training and who used vibrant colors, definite shapes, extreme detail, and nonscientific perspective to characterize their style. Naive art in Croatia was born in the interwar era and owes a great deal to the academically trained painter, Professor Krsto Hegedušić (1901–1975). While studying in France he became an admirer of naive artists like Henri "Le Douanier" Rousseau. When he returned to Croatia, he discovered the work of young Croat naive artists. In September 1931, Hegedušić organized an exhibition of the works of the Zemlja (Earth) group of academic painters, sculptors, and architects, which opened at Zagreb's Art Pavilion. This was the Croatian public's first opportunity to see the works of peasant-painters Ivan Generalić (1914–1992) and Franjo Mraz (1910–1981), both of whom were from the village of Hlebine in Croatia's Podravina region. The basic orientation of the Zemlja group was toward socially committed art; that

Naive Art

Naive artists are self-taught artists or artists who imitate the self-taught. Naive art may thus be defined as the work of artists in advanced or sophisticated societies who lack or reject formal training. Vibrant colors, definite shapes, and nonscientific perspective characterize their style. Naive artists should not, however, be confused with hobbyists; they create with the same passion as trained artists but without formal knowledge of methods. Naive works are often extremely detailed, with a tendency toward the use of brilliant, saturated colors and a characteristic absence of perspective, which creates the illusion of figures floating in space.

Naive art in Croatia was born in September 1931, when the third exhibition of the Zemlja (Earth) group of academic painters, sculptors, and architects opened at the Art Pavilion in central Zagreb. It was organized thanks largely to the academically trained artist, Professor Krsto Hegedušić, who acquired an interest in naive art while studying in France. In the 1930s Croatian naive art was closely associated with the works of peasant-painters Ivan Generalić and Franjo Mraz, both of whom were from the village of Hlebine, in Croatia's Podravina region. The basic orientation of the Zemlja group was toward socially committed art; that is, art that served the needs of the people, was understood by them, and that contributed to the improvement of their cultural standards. The most important artists of the group, in addition to Generalić and Mraz, were the peasant sculptor Petar Smajić and Mirko Virius. Generalić, Mraz, and Virius constituted the so-called Hlebine Group, named after their village. In 1936 the Hlebine Group held its first exhibition in Zagreb's Ulrich Gallery; organized by the painters themselves, it was one of the first exhibits of naive art anywhere. Without any financial backing or official sponsorship, the group fought for the recognition of naive art as a legitimate form of contemporary art. After World War II, naive art gradually established itself as a modern trend and gained international recognition. After 1945 a number of Croat naive artists came to prominence, among them Franjo Filipović, Dragan Gaži, Ivan Večenaj, Mijo Kovačić, and Ivan Lacković Croata. Many of the most important works of Croat naive artists are housed in the Croatian Museum of Naive Art, which has about 1,500 items in its holdings (paintings, sculptures, drawings, and prints). The focus is on artists belonging to the well-known Hlebine School of naive art and several highly regarded independent naive artists. Alongside these artists, the exhibit also includes some works by major international naive artists of other nationalities.

is, art that served the needs of the people, contributed to the betterment of their cultural standards, and was understood by them. Such an orientation supplied the setting for Croatian naive art.

Other important artists of the group were the peasant sculptor Petar Smajić (1910–1985) and Mirko Virius (1889–1943). Generalić is regarded as the first Croat naive painter to develop a personal style and to reach a high level of artistic mastery. Social themes predominated in his earliest works, from the 1930s, which gave way in the postwar period to more complex compositions. Like Generalić, Mraz and Virius presented the life of their village and the beauty of the countryside. In 1936 their so-called Hlebine Group (named after their village) held its first exhibition in Zagreb, one of the first exhibits of naive art anywhere. After World War II, naive art gradually established itself as a modern trend and gained international recognition. After 1945 a number of Croat naive artists came to prominence, among them Dragan Gaži (1930–1983), Ivan Večenaj (b. 1920), Mijo Kovačić (b. 1935), and Ivan Lacković Croata (b. 1931). In 1952 the Croatian Museum of Naive Art was established in Zagreb. It treated naive art as a legitimate orientation in its own right within contemporary art. From the outset, the museum's objective was to promote and foster Croatian naive art domestically and internationally. To that end, an exhibition of Ivan Generalić's works was held in Paris (1953), while the Hlebine School was represented at the Sao Paolo Biennale (1956). Croat naive artists were represented at other international exhibitions of naive art: Basel and Baden-Baden (1961), Rotterdam and Paris (1964), Bratislava (1966, 1969, 1972), Zagreb (1970, 1973), and Munich and Zurich (1974, 1975).

Two of Croatia's internationally renowned sculptors are Ivan Meštrović (1883–1962) and Antun Augustinčić (1900–1979). Meštrović was a famous Croat sculptor who designed several imposing buildings throughout Croatia and the former Yugoslavia, including the Croatian History Museum (Zagreb) and the Njegoš Mausoleum (Mt. Lovčen, Montenegro). From 1900 to 1905, he studied at Vienna's Academy of Art and then moved to Paris where, from 1908 to 1911, he executed more than fifty sculptures. In 1911 he moved briefly to Belgrade and then to Rome. The turning point in his career was the 1911 international exhibit at Rome, where he won first prize for sculpture. Oral epics, folk songs, and historical ballads common among the peasantry of his native Dalmatia powerfully influenced his early works. Epic heroes inspired him to carve in wood and stone. His works glorified in bronze and stone the heroes who had fought the Turks in the famous Battle of Kosovo (1389). He presented them to the European public as symbols of the patriotic aspirations of the South Slavs for political freedom and independence.

Politics and art were intimately interwoven throughout his life. During World War I he became actively involved with a group of Croat and other South Slav émigrés who formed in 1915 the Yugoslav Committee, to work for a postwar Yugoslav state that would include Croatia and his native Dalmatia. These exiles, based in London and Paris, had learned that the Allies were secretly negotiating with Italy to enter the war on their side. As its price, Italy demanded Croatian and Slovenian territory. At that point two Croat politicians, Ante Trumbić and Frano Supilo, formed the Yugoslav Committee. During the war Meštrović became well known to the British public. His works were displayed at the Victoria and Albert Museum in London; his exhibition drew the British public's attention to the cultural achievements of Croats in particular and South Slavs generally and underscored the solidarity of Croats, Slovenes, and Serbs of Austria-Hungary. During the 1919 Peace Conference, he had a series of exhibits at the Petit Palais in Paris.

Returning in 1919 to his homeland, which was now part of the new Yugoslav state, Meštrović turned his attention to numerous projects, including monuments and statues, many of which embellish public squares and museums throughout Croatia. He would become far better known in the interwar era. He received commissions in Europe and the Americas; he executed numerous monuments and held exhibits in Europe and the Americas. His first American exhibition came in 1924, when he exhibited 132 pieces at the Brooklyn Museum in New York. He became a member of the Academy of Arts and Sciences in Belgrade and Zagreb, Grand Officer of the Legion d'Honneur in France, and bearer of the Cross of St. George in England. He also became an honorary member of many art academies and universities in Europe and America.

In 1946 Meštrović was offered a professorship at Syracuse University. He arrived in New York in January 1947. Later that spring he was invited by the Academy of Arts and Letters to mount an exhibit at the Metropolitan Museum, where he displayed marble, bronze, and wood sculptures that he had crafted during the war. His sculptures now expressed the cruelty and tragedy, injustice and endurance of the human condition. His best known pieces from the period include *Job, St. Francis, Pieta,* and *Woman under the Cross,* all of which speak to supreme sacrifice and the promise of salvation. In 1954 he became an American citizen at a special ceremony conducted by President Eisenhower at the White House. Before his death, Meštrović donated fifty-nine sculptures to his homeland, which are now displayed in various museums.

Augustinčić was also an important artist, who in fact studied under Meštrović in the early 1920s. Educated in Zagreb and Paris, he became a renowned sculptor and representative of contemporary Croatian art. He is known to the wider public primarily for his outstanding public monuments, such as *Peace,* which stands in front of the United Nations Building in New York, and the *Monument to the Peasants' Rebellion and Matija Gubec* in Gornja Stubica, Croatia. He began studying sculpture in 1918 at the College

The Necktie

The necktie began as a simple garment; over the centuries it has assumed more importance, finally becoming a distinct symbol of elegance and refinement. The necktie originated as a simple handkerchief (or neckerchief), but it has achieved a remarkable position in men's fashion in light of its humble origins.

The world first discovered the tie in the seventeenth century. At the time, and probably in earlier times also, Croat soldiers and mercenaries wore the tie around their necks, probably for hygienic reasons. According to François Chaille, author of *La Grande Histoire de la Cravate* (The Book of Ties), during the Thirty Years' War (1618–1648), which was fought almost entirely in the German lands, and in which thousands of Croat troops saw action on behalf of the Habsburg dynasty of Austria, the Croat soldiers impressed the French with their costume. The traditional outfit of these Croats aroused interest because of the picturesque scarves distinctively tied about their necks. The scarves were made of various cloths, ranging from coarse material for common soldiers to fine cotton and silk for officers. This elegant Croatian style immediately enchanted the French, who adopted the tie soon thereafter. In fact, the French word for "tie," *cravate,* is derived from the Croatian word *Hrvat,* meaning "Croat." For the French officers, the advantage of the Croatian neckerchief was its enviable practicality. In contrast to the lace collar, which was then the norm and had to be kept white and carefully starched, the neckerchief was simple and loosely tied around the neck. In addition to being less awkward, it was also elegant and easier to wear, and it remained visible beneath the soldiers' long hair.

Shortly thereafter, in 1661, the French King Louis XIV instituted the position of "tie maker" for the monarch, a gentleman who was assigned to help the king arrange and knot his necktie. Nine years later, the duchess of Lavallière, one of the king's favorites, was the first woman to wear a tie. The Croatian scarf was thus accepted in France, above all at the court, where military ornaments were much admired. In the nineteenth century the duchess of Lavallière's name was given to the most graceful of masculine ties. Thus the tie (or at least something resembling the modern tie) first appeared among Croat soldiers and mercenaries in the seventeenth century.

of Arts and Crafts (Zagreb), where he briefly studied under Meštrović (1922–1924). In 1924 he received a scholarship from the French government and studied at Paris's L'Ecole des Arts décoratifs and L'Académie des Beaux-Arts. In 1925 he held an exhibition at the French Artists Showroom. He returned to Zagreb in 1926, where he staged his first exhibition. During the 1930s he focused more on public monuments and soon gained a reputation as a master of monuments, particularly equestrian monuments. In 1940 he became a corresponding member of JAZU (Yugoslav Academy) and in 1946 a professor at the Visual Arts Academy (Zagreb). Augustinčić's bronze sculpture *Peace* was struck between 1952 and 1954, commissioned by the then Yugoslav government as a gift to the United Nations. When it was completed, the 10-meter-high stand and 5.5-meter-high equestrian sculpture were shipped to New York and placed in the vicinity of the United Nations Building. In 1970 he donated all his works to his native Klanjec, where the Antun Augustinčić Gallery opened in 1976.

CULTURAL AND ACADEMIC INSTITUTIONS

There are four universities in Croatia: Osijek, Rijeka, Split, and Zagreb. The University of Zagreb is the oldest and largest. In September 1669 the Habsburg ruler Leopold I granted the Jesuit academy in Zagreb the status of a university. The Jesuit academy never became a university in the proper sense of the word, however. Only in 1861 did the Croatian diet adopt a University bill, which the Habsburg monarch Franz Joseph signed in 1869. The University of Zagreb was officially founded in October 1874. Today it has twenty-eight faculties, three art academies, and two higher institutes. In the 1991–1992 academic year the university had 47,913 undergraduate and 2,407 graduate students. The university also operates a campus at Dubrovnik. The University of Rijeka was founded in May 1973. It has ten faculties in Rijeka, Pula, and Opatija, two institutes, two libraries, and a student center. In the 1991–1992 academic year it had 10,544 students. The University of Split was founded in June 1974. It has nine faculties, two scientific institutes, two libraries, and two student centers. In addition to the main campus in Split, there are campuses in Zadar and Dubrovnik. In 1992–1993 it had 10,000 students. Finally, the Josip Juraj Strossmayer University is located at Osijek in eastern Croatia. It was founded in 1975. It has seventeen faculties, institutes, and libraries. During the 1992–1993 academic year, the university had 6,500 students. In the academic year 1998–1999, the four Croatian universities had approximately 80,000 students.

The National and University Library is the largest and by far the most significant research library in Croatia. It is also an important cultural repository. Its origins date to the seventeenth century when the Jesuits founded their own gymnasium, residence, and library in Zagreb. In 1776 the Jesuit library was transferred to the newly founded Academy of Science. In 1913 the library moved to a new building on Marulić Square in central Zagreb, where it remained until 1994. In 1914 the library's collection was enriched when it received the library of the archbishop of Zagreb. The library has in its possession books, manuscripts, and incunabula; it currently has over 2 million volumes.

The Croatian Academy of Sciences and Arts (HAZU, Hrvatska akademija znanosti i umjestnosti) is one of the leading scientific, cultural, and intellectual institutions in Croatia. Located on Strossmayer's Square in central Zagreb, HAZU was founded in 1866 by Josip Juraj Strossmayer, the bishop of Djakovo, and was originally known as the Yugoslav Academy of Sciences and Arts (JAZU). It is responsible for nurturing artistic, scientific, and humanistic research in Croatia. According to its own statutes, the three main tasks of the Croatian Academy are (1) to promote and organize scientific research and encourage the application of the findings of this research, and to develop artistic and cultural activities, and concern with Croatian cultural heritage and its affirmation throughout the world; (2) to publish the results of scientific research and artistic creation; and (3) to promote arts and sciences in fields that are of special importance to the Republic of Croatia. HAZU has nine departments to carry out its scientific and artistic activities. Additionally, it has numerous scientific councils and committees, as well as scientific and research institutes. HAZU works closely with other academies of sciences and arts, universities, scientific institutions, and cultural and other institutions, as well as with individual scholars and artists from Croatia and abroad.

Among the most important HAZU publications are *Gradja za povijest književnosti hrvatske* (Documents for the History of Croatian Literature, 34 vols.); *Diplomatički zbornik Kraljevine Hrvatske, Dalmacije i Slavonije* (The Diplomatic Codex of the Kingdom of Croatia, Dalmatia, and Slavonia, 19 vols.); *Noviji pisci hrvatski* (Modern Croatian Writers, 12 vols.); *Hrvatski latinisti* (Croatian Latinists, 11 vols.); *Gradja za gospodarsku povijest Hrvatske* (Documents for the Economic History of Croatia, 21 vols.); *Djela* (Works, 80 vols.), a series of monographs on Croatia as a country and its history and language; *Prirodoslovna istraživanja* (Natural History Studies, 107 vols.); *Pomorsko pravo* (Maritime Law, 6 vols.); and *Gradja za pomorsku povijest Dubrovnika* (Documents for the Naval History of Dubrovnik, 6 vols.). HAZU has published the following dictionaries: Ivan Mažuranić's *Prinosi za hrvatski pravno-povijesni rječnik* (Contributions for a Croatian Historical Dictionary, 11 vols.), Julije Benešić's *Rječnik hrvatskog književnog jezika od preporoda do I. G. Kovačića* (Dictionary of the Croatian Literary Language from the National Revival to I. G. Kovačić, 12 vols.); and *Rječnik hrvatskoga kajkavskog književnog jezika* (A Dictionary of Croatian Literary Kajkavian, 8 vols.). Work on the monumental *Rječnik hrvatskog ili srpskog jezika* (Dictionary of the Croatian or Serbian Language, 97 vols.) went on for almost one hundred years.

The Croatian Academy had its origins in the Croat national awakening of the early nineteenth century. At that time, Croat patriots realized that such an institution was needed to help the nation resist the threat posed by cultural Magyarization. The leader of the Illyrianist movement, Ljudevit Gaj, proposed the creation of an academy in 1836 in his weekly newspaper, *Danica* (The Dawn). His proposal was supported that same year by the Croatian diet but was not approved by the Habsburg emperor. Its creation was again raised during the revolutions of 1848–1849, but the failure of the revolutions and the introduction of an absolutist regime delayed its creation yet again.

The bishop of Djakovo, Josip Juraj Strossmayer (1815–1905), took up the cause of the Croatian Academy in 1860. His role in the development of Croatian culture in the nineteenth century was unprecedented. Originating from a Croatized German family of Osijek, he became a major philanthropist and an important political figure. Strossmayer studied theology at the Catholic seminary at Djakovo before moving to the High Seminary in Budapest, where he obtained a doctorate in philosophy. Ordained in 1838, from 1840 to 1842 he studied in Vienna, where he obtained a doctorate in theology and served briefly as a professor of canon law at the University of Vienna. In 1847 he was ordained court chaplain and director of the Augustineum in Vienna. He was named bishop of Djakovo in November 1849.

From 1860 to 1873, Strossmayer acted as the leader of the National Party. The Croatian diet adopted his proposal for an academy in April 1861, but the Habsburg emperor Franz Joseph sanctioned the academy's charter only on 4 March 1866. That date is taken to be the formal creation of the Yugoslav Academy of Sciences and Arts (JAZU), the first of its kind in Southeastern Europe. That same year, the Croatian diet appointed JAZU's first sixteen members. Bishop Strossmayer was named its patron and the historian Canon Franjo Rački its first president. Under the leadership of Strossmayer and Rački, the academy gradually developed into an important scientific institution and one of the leading centers of learning in Southeastern Europe. It had been given the name "Yugoslav" because Strossmayer hoped the academy would help in the scientific and cultural enlightenment of other South Slav peoples and nurture their cultural cooperation. Throughout its existence, however, the academy remained a Croatian institution.

In 1867 the academy began publishing its official organ, *Rad* (Work). In 1887 the first volume of *Ljetopis* (Annals), which became a regular annual publication of the Academy and its administrative herald, was published. Because the study of Croatian history was one of its central tasks, the Academy began in 1868 to publish the *Monumenta spectantia historiam Slavorum meridionalium* (Annals for the Study of the History of the South Slavs), in which were published lengthy archival documents. To date, over 52 volumes have been published. In 1869 the academy began publishing *Starine* (Antiquities), as well as to circulate shorter archival fragments from Croatian history and literature. There followed a series of related tomes, such as *Monumenta Ragusina* (Dubrovnik Annals), *Spomenici Hrvatske krajine* (Annals of the Croatian Frontier), and works of older Croatian historians under the title of *Scriptores* (Historical Writers). In the series entitled *Monumenta historico-iuridica* (Historical-Juridical Annals), the academy began publishing statutes of the Dalmatian towns and medieval laws originally issued in the Croatian language (13 vols.). In 1896 the Academy began publishing the *Zbornik za narodni život i običaje Južnih Slavena* (Anthology of National Life and Customs of the South Slavs); over fifty volumes have been published. In 1877 Bishop Strossmayer initiated the project of building a palace for the academy in central Zagreb, which would house his gallery of art works; it was completed in 1880. In 1884 the Academy received a gift of 256 art pieces from Strossmayer. During World War II, the Academy was known as the HAZU, but from 1947 to 1991 it was again known as JAZU. Following Croatia's secession from Yugoslavia in June 1991, the academy changed its name to HAZU.

Another important cultural institution is Matica Hrvatska (Croat Literary-Cultural Foundation). Founded in February 1842 as Matica Ilirska (Illyrian Literary-Cultural Foundation), during the period of the Croat national awakening, it was renamed Matica Hrvatska in 1874. At the time it served primarily as a publishing house to enable publication of books and related periodicals in Croatian. These works were deemed important for the nation's cultural revival and the promotion of its cultural heritage. Its creation was prompted by the threat posed at the time by cultural Magyarization and was modelled on existing Maticas among the Czechs and Serbs. The first president of Matica Ilirska, Count Janko Drašković, remarked in his inaugural speech that the main task "of our society is to promote science and language of our own national language and to educate our youth on a national basis" (Matica Hrvatska). In 1869 the Matica began publishing the first fiction newspaper of Croatian literature, entitled *Vijenac* (Wreath), which it publishes to this day.

Following the creation of JAZU (i.e., HAZU) in 1866, the Matica worked closely with the Academy to publish literary and scientific books. Matica soon became the largest publishing house in Croatia, with the purpose of promoting books that were deemed to have cultural merit and that promoted scientific advancement. The main literary editions in Croatia were regular editions published by Matica and its magazine *Vijenac.* The Croat writer and essayist Antun Barac, who also served as Matica's president in the late 1920s, once noted that "Matica published almost everything that was of value in Croatia or, that is to say, the history of Matica is in some way the history of Croatian culture" (Matica Hrvatska). In fact, almost every Croat writer and poet of note in the nineteenth century published his works through Matica.

After World War I, in the newly founded Kingdom of Serbs, Croats, and Slovenes (Yugoslavia), Matica's role as cultural institution and publishing house underwent important changes. It became even more politicized. Although the intellectuals who ran the organization originally welcomed the new state, the experience of political centralism bred resistance and opposition in the cultural sphere. Despite its financial problems in the 1920s, after 1928 Matica began publishing a number of new periodicals, the most important of which was *Hrvatska revija* (Croatian Review). After World War II, Matica suffered because of the political restrictions imposed by the new communist authorities. But the greatest single publishing accomplishment of Matica was launched in 1962; it was known as *Five Centuries of Croatian Literature,* and it presented the historical and artistic development of Croatian literature from the Middle Ages to the present.

However, only after the cautious political liberalization of the late 1960s was Matica again able to publish under more favorable circumstances. In fact, during the late 1960s Matica became the focal point for the reformist and nationalist movement in Croatia, which is known as the Croatian Spring (1966–1971). In 1967 Matica presented a declaration on the name and status of the Croatian literary language. The signatories to the declaration argued for the equality of all four literary languages existing in Yugoslavia at the time: Slovenian, Croatian, Serbian, and Macedonian. What they opposed in particular was the designation "Serbo-Croatian," which they claimed enabled the Serbian literary language to be imposed on Croats and Bosnian Muslims. The declaration was an attack against linguistic and literary unitarism. Most of the signatories were purged from Matica following the collapse of the Croatian Spring. In 1972 Matica was temporarily suppressed by the Communist authorities, and many of its most prominent members, like Šime Djodan, Vlado Gotovac, Franjo Tudjman, Marko Veselica, to name only a few, were imprisoned because of their political and nationalist views. Following the democratic transition in Croatia in 1989–1990, the Matica and its branch offices were fully restored. Today, Matica Hrvatska has more than 120 branches in Croatia, Bosnia-Hercegovina, and other countries.

MUSEUMS

The visitor to Croatia has the option of visiting any number of excellent museums. The Trakošćan Castle was built in the thirteenth century in what was then part of Croatia's system of defensive fortifications against the Ottoman Turks. It was a rather small observation fortress for monitoring the road from Ptuj to Bednja Valley.

The Archeological Museum of Istria is located in Pula and was founded in 1902 as the Pula Municipal Museum. The discovery of local stone, ceramic, and metal objects led to its creation. In 1925 the Municipal Museum was merged with two other regional museums to form the current institution. It is a rich repository of classical monuments and other objects. The museum was first opened to visitors in 1930, when Pula (as well as Istria) was part of Italy. The museum reopened in 1949 as the Archaeological Museum of Istria, which was now part of Croatia (Yugoslavia), with some slight changes introduced in some of the collections. Systematic work was done to restore part of the archaeological material that was returned from Italy in 1961. In 1968 a collection of stone monuments was set up in the refurbished rooms and halls on the ground floor of the museum and in 1973 followed the opening of the prehistoric collection exhibition halls on the first floor and the classical Roman and medieval collections on the second floor of the museum. The exhibition halls are constantly enriched with new finds from archaeological sites throughout Istria, including prehistoric caves, hill-forts, and necropolises, Roman commercial complexes, buildings, and cemeteries, and sacral objects dating from the early Christian and Byzantine periods.

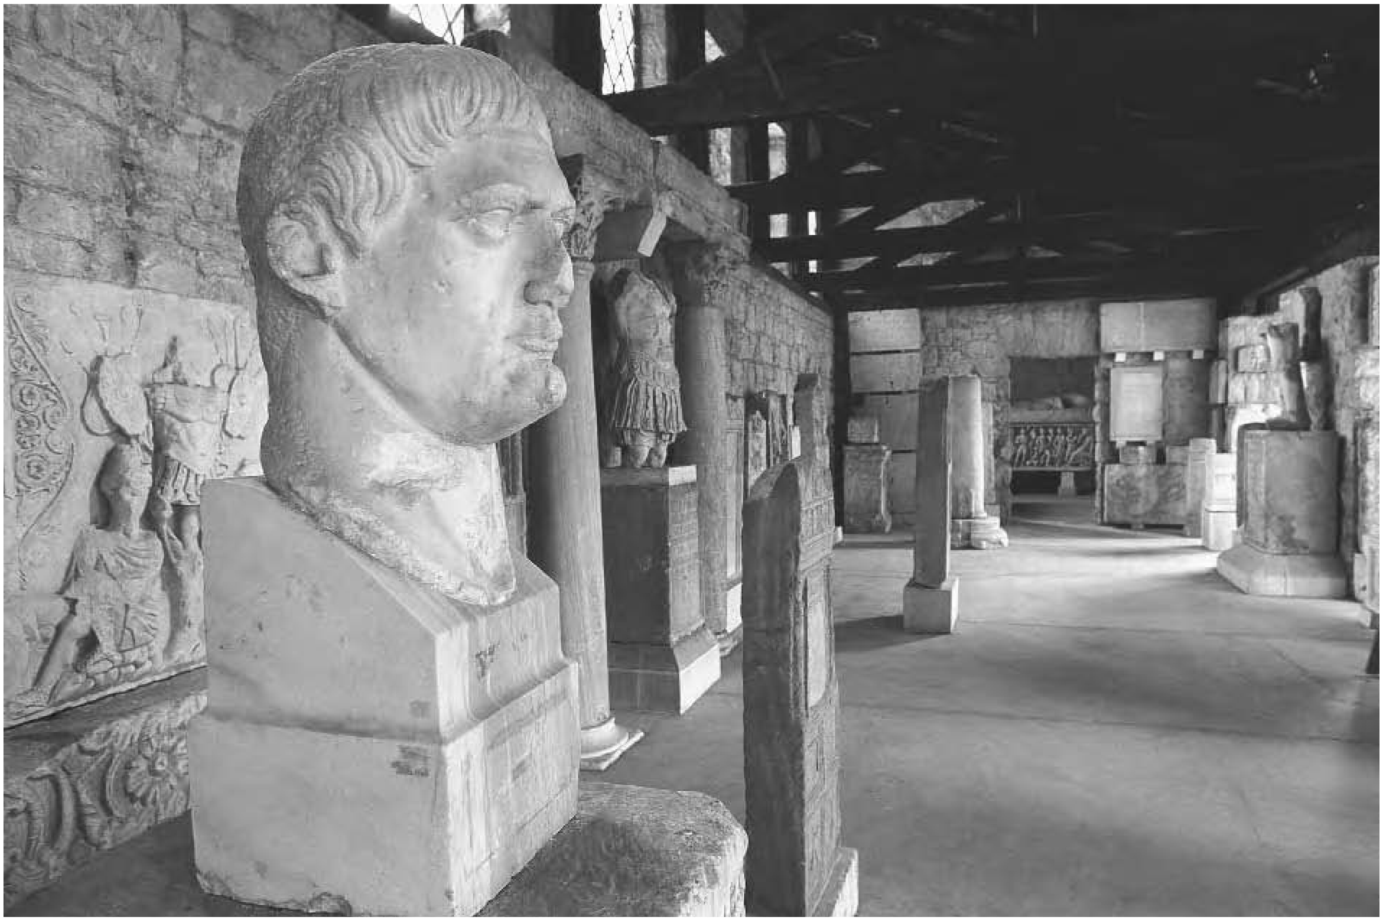
The oldest museum in Croatia, the Split Archaeological Museum was founded in 1820 by the municipal authorities of Zadar, then the capital of Dalmatia. The original museum building was erected in 1821 next to the eastern walls of Diocletian's Palace, but soon became too small to house the growing number of monuments. The present-day home of the Archaeological Museum was built in 1914 and opened to the public only in 1922. It holds some 150,000 artifacts dating from prehistoric times to the early medieval period. Of special interest is the collection of over 6,000 stone inscriptions from Salona and the collection of Hellenic ceramic objects, Roman glass, ancient clay lamps (around 1,600), and bone and metal articles, as well as the collection of gems. In addition, the museum houses an extensive collection of ancient and medieval coins (over 70,000) and a rich library with an archive. The new permanent display opened in 1999.

The Dubrovnik Museums were formed in February 1872 with the foundation of the Dubrovnik Regional Museum on the initiative of the chamber of commerce. A valuable natural history collection represented the nucleus of the museum to which a cultural, a historical, and an archaeological collection were added. In 1932 the museum collections were moved to St. John's Castle, and in 1940 the collection of stone monuments and the ethnological collection were relocated to what was formerly Rupe Granary. The cultural history collection was moved to the Rector's Palace in 1948. The Dubrovnik Museums constitute today a regional institution made up of six distinct institutions: the Archaeological Museum, the Ethnographic Museum, the Cultural-Historical Museum, the Maritime Museum, the Modern History Museum, and the Marin Držić Home. All six museums are under the unified management of the Dubrovnik Museums. The rich museum holdings are displayed in four locations: the Rector's Palace, the Rupe Granary, St. John's Castle, and the Marin Držić Home. However, neither the Archaeological nor the Modern History Museum has a permanent location where it can display its holdings.

The Museum of Modern Art was founded in Rijeka in 1948. Although it houses the works of a number of twentieth-century Croatian and foreign artists, most of its collection is composed of the works of artists who lived in Rijeka from the late nineteenth to the middle of the twentieth century. Because of the lack of space there is no permanent exhibition; the museum's five collections are exhibited occasionally.

The Gallery of Fine Arts in Osijek holds some twelve to fourteen exhibitions annually. These exhibitions are diverse and thematically range from the historical to the contemporary. The curators organize some of these exhibitions while others are on loan from Croatian museums. At least once a year the museum organizes an exhibition of a modern artist from Osijek, as well as an exhibition of an artist who worked in Osijek and contributed to the promotion of art in the city.

The Mimara Museum in Zagreb is named after Ante Topić Mimara (1898–1987), who donated his art collection of over 3,700 pieces to the museum. Based in large



Archaeology Museum in Split. (Hans Georg Roth/Corbis)

part on his donation, the museum has become one of the richest and most versatile art collections in Croatia. The museum's collections span three millennia with works of art from virtually every style, epoch, and civilization. The archaeological section consists of nearly two hundred pieces dating from prehistoric times (Egypt, Mesopotamia, Persia, Greece, pre-Columbian America, Rome, and early medieval Europe). The Far East collection consists of over 350 exhibits from China, Japan, Cambodia, Indonesia, and India. Another important collection consists of over 550 glass pieces, representing the development of glass production from ancient Egypt to the late nineteenth century. There is also a textile collection consisting of eighty carpets manufactured between the sixteenth and nineteenth centuries in Persia, Morocco, and Turkey. There is also a collection of household utensils and vessels consisting of more than a thousand pieces and made from various materials and dating from the early medieval period to the nineteenth century. There are more than two hundred sculptures from ancient Rome and Greece, over two dozen Russian, Armenian, and Greek Orthodox religious icons, eighty Italian Renaissance paintings, sixty paintings by the Dutch masters, fifty by the Flemish masters, and more than thirty by the Spanish masters, among others. Also represented are works by Belgian, Swiss, German, Austrian, Czech, Hungarian, and Russian painters.

The Klovićevi Dvori Gallery in Zagreb holds roughly fifty art collections of the broadest cultural and national importance. The gallery is among the most important Croatian institutions of its kind. The gallery is housed in the former Jesuit Collegium, which was transformed in 1982 into a gallery space. Although it holds a large variety of exhibitions, including those of contemporary art, most of its exhibitions deal with Croatian national treasures. Among the more popular exhibitions it has organized are *Treasures of the Zagreb Cathedral* (1983), *The Written Word in Croatia* (1985), *The Golden Age of Dubrovnik* (1987), and *A Thousand Years of Croatian Sculpture* (1991), among others.

The Zagreb Municipal Museum was founded in 1907 by the Družba Braće hrvatskog zmaja (The Brethren of the Croatian Dragon Society). Until World War II, it was located in the Art Pavilion, but in 1945 the museum moved into a larger building in Zagreb's Upper Town. The permanent display presents in chronological order the development of Zagreb to the beginning of the nineteenth century.

The Croatian Museum of Naive Art opened in 1952 but was known at the time as the Peasant Art Gallery. In 1956 it became the Gallery of Primitive Art and in 1994 it adopted its current name. It purports to be the first museum of naive art in the world. Today it has approximately 1,500 items in its holdings (paintings, sculptures, drawings, and prints), mostly by Croat naive artists. The focus is on artists belonging to the Hlebine School of naive art. Some works of major international naive artists are also held by the museum.

The Archaeological Museum in Zagreb has a number of permanent collections and exhibitions, among which are included stone monuments from the Greek and Roman periods. The museum also contains an Egyptian collection and a numismatic collection, one of the largest in Europe.

Zagreb's Ethnographic Museum was established in 1919 and is located in a remarkable Secession building, built around 1903, that once used to seat the Crafts Hall. It was established in 1919 upon the initiative of Salamon Berger, textile merchant and industrialist, originally from the Slovak Republic. He donated to the Museum one that is among the first and largest folk costumes and textile collections. The Berger Collection, the Croatian National Museum Collections, and the Museum of Arts and Crafts ethnographic collections constituted the museum's initial holdings, today including around 80,000 items.

The holdings include predominantly Croatian ethnographic heritage, classified in two principal groups: Croatian Folk Costumes and Selected Items of Popular Art and Handicraft.

The items associated with Croatia have been divided into three cultural zones (Pannonian, Dinaric, and Adriatic). The non-European cultures department includes traditional culture items of the peoples of Africa, Asia, Latin America, Australia, and Oceania. The materials are associated mostly with explorations conducted toward the turn of the century by Dragutin Lerman and Mirko and Stjepan Seljan.It is constantly being enriched through donations by artists, explorers, and missionaries.

Ever since its establishment, the museum employed or was managed by renowned Croatian ethnologists and museologists, such as Vladimir Tkalčić, Milovan Gavazzi, and Jelka Radauš-Ribarić. The museum's collection on permanent display dates back to 1972, including 2,750 exhibits.

The Museum of Contemporary Art in Zagreb was established in 1954 with the aim of promoting and documenting contemporary art events, styles, and phenomena. The largest part of the museum's collection consists of the works of Croat artists after 1950, although there is a smaller part dating back to the first half of the twentieth century.

The origins of the Croatian Natural History Museum in Zagreb date to 1829, when Ljudevit Gaj, the founder of the Illyrianist movement, first raised the idea of such a museum. In 1836 the Croatian diet proposed the formation of a "Friends of the National Illyrian Learned Society" and a museum within its framework. But the museum was not founded until 1846, when the Zagreb municipal authorities purchased a palace in the Upper Town, which became a National Home. It immediately housed museum objects. In 1867 the museum was formally proclaimed a national institution, on the initiative of Bishop Strossmayer of Djakovo, and placed under the care of the Yugoslav Academy. The museum contains a wealth of information on the natural history of Croatia (zoology, botany, geology, paleontology, and mineralogy) and contains many important scientific collections and exhibitions.

ECONOMIC DEVELOPMENT

For the better part of the modern era, Croatia has been an agrarian society in which a majority of the population derived its livelihood from farming and related sectors. At the beginning of the nineteenth century, most Croats were peasants and only a small number lived in towns and could be classified as professionals, artisans, merchants, or nobles. Given the agrarian nature of the Croatian economy, the dominant social institution in Croatia-Slavonia was the *zadruga,* or extended family household. Composed of two or three generations of a single family, the extended household was both a social and economic unit. It provided for joint ownership of land and the tools used to work it and a joint division of goods. This institution predominated in a society where market forces were not yet pronounced and the system of land tenure could be compared to feudalism. Generally speaking, in Croatia-Slavonia peasants were still bound to the soil and met their obligations to their lords through the *zadruga.* Serfdom was abolished only in 1848, although in the military frontier it had not formally existed at all. In Dalmatia the small middle class of the towns was culturally Italian. Since the land in Dalmatia was not as fertile as in Croatia-Slavonia, much of the population was active in fishing and the merchant marine. However, most peasants continued to farm the land under sharecropping arrangements and feudal regulations, cultivating mainly olives and grapevines.

The modernization process, measured in terms of industrialization and urbanization, was initiated in the nineteenth century but would remain sluggish and uneven to World War II. With the abolition of serfdom, the introduction of private property, and a money economy, market forces began to play a leading role in socioeconomic change. The agrarian sector of the economy began to change and a nascent industrial sector was born in the second half of the nineteenth century. The main industries were food and agricultural raw materials processing. Lumber played a particularly prominent role in this regard. However, of all the lands of the Habsburg monarchy, Croatia-Slavonia still had in 1890 the second highest (after Dalmatia) proportion of population (84.6 percent) deriving its livelihood from agriculture. The bourgeoisie and industrial proletariat were numerically and socially weak as well as politically insignificant. Urbanization had hardly advanced since the mid-nineteenth century; in 1910 only 8.5 percent of the population of Croatia-Slavonia lived in urban settlements. At the time, Zagreb was still a small provincial town with a population of roughly 75,000 inhabitants. The slow rate of economic modernization in Croatia-Slavonia in the quarter century before World War I, when combined with rural overpopulation, created a situation where emigration became endemic. In 1850 Croatia-Slavonia had a population of roughly 1.6 million; by 1914, that figure had risen to nearly 2.7 million. In roughly the same period (1840–1910), Dalmatia's population grew from 399,000 to 646,000. Between 1899 and 1913, nearly a quarter of a million persons emigrated from Croatia-Slavonia, accounting for over 6 percent of the total population. According to one estimate, between 1880 and 1914, roughly 400,000 persons emigrated from Croatia-Slavonia, Dalmatia, and Istria.

In 1918 Croatia became part of Yugoslavia. In the interwar era, Yugoslavia was one of Europe's least developed countries. This period brought little improvement in the way of either urbanization or industrialization, although the process of modernization undoubtedly intensified. A large segment of the Croatian population still lived at subsistence levels, dependent on small, inefficient peasant farms. A land reform was introduced in 1919, but it was directed mainly against the German and Hungarian landowners in eastern Croatia, Slovenia, and Vojvodina. Croatia remained a land of peasant smallholders; the country still suffered from rural overpopulation, which the land reform failed to address. Economic growth was modest. Industry advanced only slowly, given the weak internal market, few resources, and unskilled labor force. In 1938 per capita income in Yugoslavia was 30 percent below the world average.

The partition of Yugoslavia during World War II destroyed all semblance of normal economic life. In all Yugoslavia, it is estimated that over 50 percent of livestock and 80 percent of equipment were destroyed or confiscated during the occupation. The communications network was virtually destroyed; over half the railroads and rolling stock was demolished. Inflation was rampant, and barter became the prime means for transacting business. The most devastating blow to Yugoslavia fell on its peoples: approximately 1.1 million people of all nationalities were killed, 10.8 percent of the population; nearly a third of all deaths occurred in Croatia. The occupation and war had devastated both the agricultural and small industrial sectors. By the end of 1946, Yugoslav national income was restored to its 1938 level.

Only after World War II did Croatia experience a rapid industrialization and urbanization. The country's socioeconomic structure changed profoundly as a result. This change mirrored the wider social and economic changes in Yugoslavia and Eastern Europe, brought on as a result of the establishment of Communist rule. The Communist Party of Yugoslavia (KPJ, Komunistička partija Jugoslavije) was strictly Marxist-Leninist in economic outlook, fiercely loyal to Stalin, and painfully aware of its country's relative socioeconomic backwardness. To remedy this situation, that is, in order to expand the small industrial base, which was located mainly in Slovenia and Croatia, and transform the agrarian economy, the KPJ resorted to a command economy on the Soviet model for rapid industrial development. Following the example of the Soviet Constitution of 1936, the Yugoslav Constitution of 1946 initiated the process of bringing all sectors of the economy under state control. At the core of this program, encapsulated in the first Five-Year Plan (1947–1951), were the nationalization of industry, redistribution of private land, and collectivization of agriculture. All mineral wealth, power resources, means of communication, and foreign trade were nationalized. By 1948, all domestic and foreign-owned capital, excluding some retail trade and small craft industries and most of agriculture, had been nationalized and brought into the social sector. The industrialization plan relied on high taxation, fixed prices, reparations, Soviet credits, and export of foodstuffs and raw materials to generate additional capital.

The Communist authorities also instituted a land reform. In August 1945, under the new land reform law, over one million hectares of land were confiscated from private owners and institutions; most of this property formerly belonged to banks, churches, monasteries, absentee landlords, private companies, and the expelled German minority. A state-controlled land fund was established to hold and redistribute the land to peasants and state-operated farms. Local authorities set the exact amount of land peasants could retain, within the state parameters of twenty to thirty-five hectares. Forced collectivization of agriculture was instituted only in January 1949, bringing the last privately owned portion of the economy under state control. At the program's inception, 94 percent of Yugoslav agricultural land was privately owned; by the height of the collectivization drive in 1950, nearly 96 percent was under the control of the social sector. Yugoslav planners expected that rapid collectivization and mechanization of agriculture would increase food production, improve the people's standard of living, and release peasants to work in industry. The result, however, was a poorly conceived program that was abandoned three years later. Between 1949 and 1951, the Yugoslav authorities induced nearly two million peasants to join roughly 6,900 collective or state-run farms. The campaign caused a decrease in agricultural output and the use of coercion eroded peasant support for the authorities. Since Croatia, together with Slovenia and the province of Vojvodina, had the most developed agrarian sector, collectivization proved more painful than elsewhere. Peasant resistance and a 1950 drought stalled and then killed the collectivization drive, the cancellation of which was announced in 1951.

By the time the first Five-Year Plan was officially completed, Yugoslavia was burdened with an oversized balance of payments deficit, significant foreign debt, low labor productivity, and inefficient use of capital. In the short term, however, the centrally directed planning approach managed to mobilize national resources to achieve rapid postwar development. As inefficient as the system may have been, the relatively high rate of investment in the first Five-Year Plan ensured increased output during the second Five-Year Plan (1957–1960). Throughout the 1950s, industrial output rose faster in Yugoslavia, in both per capita and total output, than in almost any other European country. Because of Communist modernization, urbanization and industrialization intensified rapidly. For example, the population of the Croatian capital, Zagreb, grew from roughly 180,000 in 1931 to roughly 280,000 around 1950 to nearly 800,000 in 1991.

A movement toward greater market freedom spurred economic reforms in the 1960s. During that decade, Yugoslav Communist authorities instituted economic policies unknown in the Soviet Bloc, which contributed greatly to the economic development of Croatia and Yugoslavia. Economic reformers were able to make a case for decentralized control over investment policies and a greater role for market forces as the solution to Yugoslavia's long-term economic development problems. The 1963 constitution introduced a system of "market socialism." Decisionmaking was decentralized, the federal government further loosened its control over investment, prices, and incomes, and market forces were allowed greater play. The so-called workers' self-management system thereby received more power and responsibility in the economic development of the country. The authorities now emphasized policies that increased personal consumption, production growth, and labor productivity by loosening government controls on wages and increasing investment in the production of energy, steel, chemicals, and capital equipment. Particular attention went to investment in the less developed republics and to mechanization of agriculture. A more liberal trade policy devalued the currency (the Yugoslav dinar) and reduced tariffs and import restrictions. The authorities permitted workers to emigrate to Western Europe, especially West Germany, as guest laborers; this policy brought substantial hard currency reinvestments to Yugoslavia and relieved labor surpluses at home. By loosening border restrictions, the Yugoslav authorities opened the country's scenic beaches to Western tourists, who increasingly provided a reliable source of hard currency from the 1960s on. It was in this period that Croatia's Dalmatian coast became a popular tourist destination for many Europeans. Hard currency remittances from tourism and guest workers became important sources of relief for Yugoslavia's weak balance of payments, especially when other parts of the economy declined in the 1970s and 1980s.

The new system of market socialism was enshrined in roughly thirty laws issued in July 1965. One of the primary objectives of the new legislation was to allow economic enterprises to keep a greater share of their earned income, much of which had previously gone to the state. To achieve this goal, the government lowered taxes, limited state control of investments, removed price controls on some goods, devalued the dinar, and reduced customs duties and export subsidies. Whatever the failings of the system, growth was experienced. Between 1954 and 1965, gross industrial output increased at an annual rate of 12.2 percent; industrial employment, 6.6 percent; social sector employment, 5.9 percent; exports 11.7 percent; and fixed investments 9.2 percent. After 1965 (and well into the 1970s and 1980s), these rates steadily declined because of growing inflation, balance of payments deficits, and high unemployment.

Nonetheless, on the eve of Yugoslavia's dissolution, Croatia was, next to Slovenia, the most industrialized, urbanized, and prosperous of the Yugoslav republics. Its economy and social structure had undergone a tremendous transformation since 1945. Moreover, given the greater economic liberalism of Yugoslav communism, Croatia (like Yugoslavia) was ahead of the East Bloc countries in terms of wealth and per capita income. However, following the collapse of communism, Croatia's economic development was retarded by two closely related factors: the war in former Yugoslavia of 1991–1995 with its attendant damage to infrastructure (bridges, factories, commercial buildings, and houses), costs related to refugees and displaced persons, and disruption of old economic ties; and the troubled transition from a communist (planned) economy to a market-oriented one, affected by the still evident legacy of communist mismanagement of the economy.

In 1991 over 80 percent of Croatian economic production was in state hands while only 18 percent was generated by the nascent private sector. At that time the most significant sectors of the Croatian economy were industry (composing 32.8 percent of domestic product), trade (22.5 percent), communication (11.4 percent), and agriculture and fishing (11.4 percent). In industry, the most important areas were food processing (17 percent), textiles (8.1 percent), and machine production (8.0 percent). By 2001, Croatia's gross domestic product (GDP) was US$20.7 billion. Its per capita GDP was US$4,726.

CURRENCY AND BANKING

The legal currency of Croatia is the kuna; its domestic symbol is *Kn* but its international abbreviation is *HRK*. The kuna consists of 100 smaller units called lipa *(lp)*. The name kuna, meaning "marten," has its origin in the medieval era, when the marten's fur was used as a unit of trade. The first known use of the kuna dates from 1256. The word "lipa" means linden (tree). The kuna has been the new form of currency since 1994, when it replaced the Croatian dinar. Historical Croatian personalities are featured on one side of the kuna note, with famous Croatian landmarks on the reverse. The 5 kuna note features ban Petar Zrinski and Duke Fran Krsto Frankopan, two seventeenth-century Croat nobles, with the Varaždin Fortress on the reverse. The 10 kuna note features Juraj Dobrila, a noted Croatian bishop who promoted Croatian cultural rights and advanced the Croatian language. On the reverse is found the Roman Amphitheater at Pula. The 20 kuna note features ban Josip Jelačić, the military hero of the 1848 revolution in Croatia, and the Eltz Castle in Vukovar with the Vučedol Dove. The 50 kuna note features Ivan Gundulić, perhaps the greatest Croat poet of the seventeenth century, and the city of Dubrovnik as its landmark. The 100 kuna note features Ivan Mažuranić, the first nonnoble person to hold the title of ban, and the Church of St. Vitus in Rijeka. The 200 kuna note features Stjepan Radić, the founder of the Croat Peasant Party. On the reverse is found the Town Command in Osijek. The 500 kuna note bears the image of Marko Marulić, the greatest Croat poet of the fifteenth and sixteenth centuries, and Diocletian's Palace in Split. Finally, the 1,000 kuna note features Ante Starčević, the leader of the Party of (Croatian State) Right, with a monument to King Tomislav and the Zagreb Cathedral.

As of 2000, Croatia had forty-four banks and a National Bank, which serves as the country's central bank. In 2001 the National Bank's foreign reserve was US$4.61 billion. According to the most recent Law on Banks (1998), there are few restrictions for foreign investors who wish to form a bank or invest in the banking sector. The minimum stock capital needed to establish a bank is between 20 and 60 million HRK, depending on the nature of its operations. Furthermore, newly formed banks have a time limit imposed on them for performing certain business operations. They must operate for at least three years before being allowed to collect deposits and savings from citizens in both domestic and foreign currency. After a bank has been issued a license by the Croatian National Bank and registered with the Commercial Court, it becomes a legal business entity. A single shareholder may control more than 10 percent of the shares with voting rights only with the prior approval of the Croatian National Bank. Foreign banks are permitted to establish subsidiaries in Croatia.

Of the forty-four banks in Croatia in 2000, twenty-one were owned completely or largely by domestic shareholders, while twenty were owned completely or largely by foreign entities. A total of three banks were owned completely or largely by the state. Although most of the banks were Croatian-owned, foreign-owned banks controlled 83.7 percent of all banking assets, while the figures for Croatian and state-owned banks were 10.2 and 6.1 percent, respectively. By far the two largest and most important Croatian banks are the Zagrebačka banka (Zagreb Bank) and Privredna banka (Economic Bank) with total stock capital of 3.46 billion HRK and 2.39 billion HRK, respectively. Their total stock capital exceeds the combined total capital of the next eight largest Croatian banks. In 2000 these two banks had total assets exceeding 10 billion HRK each. The Croatian Bank for Reconstruction and Development (HBOR) is the first investment bank established by the state, which in turn guarantees its obligations. This bank provides credit financing for the reconstruction and development of the Croatian economy; rebuilding of apartments, houses, and infrastructure; exports; and insurance of exports against noncommercial risks.

The use of debit cards and automatic teller machines (ATMs) is now common, as Croatian banks have modernized many of their technologies and operations. Over 2.4 million debit and credit cards were in use in 2001. There were in the same year 848 ATMs operating in the country. The first ATM was installed in January 1996. The Croatian ATM network, linking all Croatian banks using debit and credit cards, is known as MBNET.

There are two securities markets in Croatia: the Zagreb Stock Exchange and the Varaždin Over the Counter Market. More than fifty brokerage houses perform transactions on these two markets, which are supervised and regulated by the Securities Commission of the Republic of Croatia. Total foreign investments in Croatia from 1993 until September 2001 amounted to US$5.92 billion. The three largest sources of direct foreign investment in this period were Austria with US$1.74 billion, Germany with US$1.19 billion, and the United States with US$1.18 billion. The European Bank for Reconstruction and Development (EBRD) has invested only US$101.8 million.

AGRICULTURE, FISHING, FOOD, AND TOBACCO INDUSTRIES

In 2000 Croatia had 842 companies registered in the food, beverage, and tobacoo industry; these sectors employed roughly 45,000 workers, or 17 percent, of the workforce in the manufacturing sector. A few large companies play a dominant role in the Croatian market, such as Podravka in Koprivnica and Franck and Kraš, both located in Zagreb. Despite the importance of this sector to the Croatian economy, in the 1990s production declined in most sectors (especially wheat flour, bread, canned fish, condiments, sugar, and spirits) or remained stagnant (such as pasta, canned vegetables, concentrated soups, and biscuits). Only in a few sectors (fruit juices, cheese, and cigarettes) has there been a substantial increase. Agricultural and food products compose approximately 18 percent of the total export and import market. However, the export value of this industry has declined steadily. In the period between 1997 and 2001, exports of food and tobacco products declined from US$460 million to US$366 million. In the same period, imports declined from US$636 million to US$581 million.

Croatia has a total of 3.15 million hectares of agricultural land, 63.5 percent of which is cultivated and the rest pastoral. The vast majority (81.5 percent) of the cultivated land is privately owned. Cattle raising has always played an important role in Slavonia. Over 80 percent of livestock is privately owned. Agriculture and fishing generate 8.1 percent of Croatian GDP. The production of food, beverages, and tobacco generates 20.6 percent of Croatian GDP (gross domestic product).

The Croatian food industry includes some of the most successful companies in Croatia: twelve out of the fifty Croatian companies with the highest revenues in 2000 were producers of food, beverages, and tobacco. The major export products of these companies are Vegeta (food seasoning), biscuits and wafers, chocolate, canned fish, soups, olive oil, cigarettes, beer, and alcoholic beverages. The wine-making industry is also an important sector. The total area used for vineyards amounts to 59,000 hectares. Thirty larger wine-making companies, thirty-five production cooperatives, and about 250 family businesses represent wine production. Wines made of indigenous grape varieties are becoming increasingly popular on the European and world markets.

Production of Selected Products, 1996–2000

Type	*Amount*	*1996*	*1998*	*2000*
Cereals	’000s tons	2,760	3,207	2,768
Wheat	’000s tons	741	1,020	1,032
Corn	’000s tons	1,886	1,982	1,526
Grapes	’000s tons	373	421	354
Cattle	’000s heads	461	443	427
Pigs	’000s heads	1,197	1,166	1,233
Poultry	’000s heads	10,993	9,959	11,256
Milk	Millions of liters	593	663	607
Eggs	Millions	848	818	774

During the first half of the 1990s, agricultural production witnessed a substantial decline associated with the war in Croatia (1991–1995) and the transition to a market economy. The Croatian government has throughout this period provided subsidies to most sectors of agriculture in an effort to revive production and increase incomes. Although Croatia has now achieved self-sufficiency in the production of wheat, corn, poultry, eggs, and wine, some sectors of agriculture remain well below their prewar levels.

Fishing, fish farming, and processing have traditionally been an important source of income, in particular for the population of Dalmatia and the islands. In 2000 there were fourteen factories for fish processing in Croatia, which produced 15,000 tons of various fish products; three quarters of this total is canned sardines. The 2000 output of freshwater fish amounted to about 4,800 tons, and saltwater fish and other seafood to about 24,000 tons. Large quantities of fish are exported.

Aquaculture (fish and shellfish breeding) is another important sector of the fishing industry. The breeding of freshwater fish is centered in continental Croatia, where roughly 12,000 hectares of carp ponds are allocated for such production. An additional 30,000 square meters is allocated to trout ponds.

Sea-fish, Fresh-fish, and Shellfish Breeding

Type (in tons)	*1997*	*1998*	*1999*	*2000*
Carp	2,607	2,299	1,993	2,013
Trout	453	296	471	680
Sea Bass and Gilthead	1,500	1,747	1,750	2,100
Tuna	507	906	970	1,200
Mussels	790	900	1,100	1,111
Oysters	30	53	52	37

Since the dissolution of Yugoslavia, this sector of the Croatian economy has been reoriented toward the foreign market. Tuna fish alone account for 64 percent of all fishing-related exports. The most important markets are Austria, Bosnia-Hercegovina, Macedonia, and Serbia-Montenegro.

Export of Fish and Fish Products

Type (in tons)	*1996*	*1997*	*1998*	*1999*	*2000*
Live fish	1,137	700	790	623	456
Fresh and refrigerated fish	4,642	8,615	6,134	6,260	6,076
Frozen fish	73	282	57	354	611
Fish fillets	29	37	13	6	6
Dried, salted, smoked fish	19	49	20	385	1,401
Crustaceans, mollusks	1,441	2,126	977	1,208	1,126
Canned fish	9,796	12,952	11,122	8,859	8,565

Import of Fish and Fish Products

Type (in tons)	*1996*	*1997*	*1998*	*1999*	*2000*
Live fish	16	31	151	38	341
Fresh and refrigerated fish	16	474	116	93	35
Frozen fish	3,493	4,162	4,090	5,800	14,879
Fish fillets	2,020	2,958	2,388	1,862	1,504
Dried, salted, smoked fish	312	292	247	236	179
Crustaceans, mollusks	4,507	4,233	3,795	3,727	4,474
Canned fish	2,756	1,301	2,067	2,632	3,936

INDUSTRIAL PRODUCTION

The Croatian industrial sector has been in a state of flux since the dissolution of former Yugoslavia. Although the industrial sector has undergone some privatization and a reorientation of export markets toward the countries of the EU, as a whole it has not advanced rapidly. The industrial sector currently represents about 20 percent of Croatia's GDP. In 1999 the value of industry's production level was estimated to be around 93 billion HRK (or approximately US$13.0 billion) with 293,000 employees, representing 27 percent of Croatia's workforce. Industrial goods account for 97 percent of Croatia's total exports.

TOURISM

Croatia has long been one of the most important tourist destinations on the Mediterranean and boasts a long tradition in tourism. The advantages of Croatian tourism are primarily a well-preserved natural environment (a beautiful coast, more than 1,000 islands, eight national parks, and ten nature parks), cultural and historic heritage (including numerous cultural monuments protected by UNESCO, such as Diocletian's Palace in Split, the towns of Trogir and Dubrovnik, and Euphrasian's Basilica in Poreč), a mild Mediterranean climate, and its vicinity to European markets. A variety of forms of tourism are offered in Croatia, from summer and nautical tourism (44 marinas and roughly 15,000 berths) to health tourism and hunting and fishing. The most important tourist regions are Istria, Dalmatia, and the cities of Dubrovnik and Zagreb. In 2001 Croatia had 160,000 hotel beds and beds in tourist facilities, 306,000 beds in private accommodations, and 180,000 places in campsites. That same year, Croatia had 6,544,217 foreign tourists who made 38.3 million overnight stays. The majority of these tourists were from Germany (1,299,729) and Italy (1,059,810), with Slovenia, the Czech Republic, and Austria occupying the next three spots. The average tourist stay lasted five days; foreign tourists averaged six and domestic tourists four days. The largest number of tourists and overnight stays in 2001 were recorded in Istria (37 percent), Kvarner (23 percent), Dalmatia (27 percent), Dubrovnik (7 percent), and Zagreb (2 percent). The revenue generated by international tourism is of great importance to the Croatian

The Palace of Diocletian faces the harbor in Split. (Jonathan Blair/Corbis)

economy. According to the Croatian National Bank, international tourism revenue amounted to US$3.3 billion in 2001, or 16.3 percent of GDP.

Revenue (USD mil) from International Tourism and Percentage Share of GDP, 1995–2001

	1995	*1997*	*1999*	*2001*
Revenue	1,345.9	2,529.8	2,493.4	3,335.0
Share	7.2	12.6	12.4	16.3

In 2001 there were 559 registered travel agencies and tour operators in Croatia. The travel industry employed approximately 3,300 people that year. In 2001 Zagreb hosted 148 conferences with more than 25,000 participants.

BUILDING AND CONSTRUCTION

The building and construction sector remains a significant industry in Croatia. In 2001 the sector employed 62,773 persons in 11,762 registered companies, up from 819 companies in 1990. The total value of construction contracts carried out abroad amounted to US$142.7 million. In 2000 around 12,000 apartments with a total area of approximately 1 million square meters were built. Despite the overall importance of the construction industry, whether measured as a share in the total value of GDP or the total number of persons employed, it has been steadily declining since 1990. In 1990 a total of 118,700 workers, or 7.6 percent of all employees in Croatia, were employed in construction. By 1999, the number of persons employed in construction had fallen to 71,302, or 6.7 percent of all employees in Croatia. In 1999 the value of completed construction works amounted to 10.557 million HRK. Work on road infrastructure composed 41.2 percent of the total value of the construction industry in 1999, followed by nonresidential buildings at 26.4 percent, residential buildings at 16.3 percent, pipelines and communications at 13 percent, industrial sites at 1.5 percent, and 1.6 percent on other sectors.

SHIPBUILDING

Croatia has a long history of shipbuilding and seafaring. In 2001 Croatia produced fifty-six ships, making it sixth in the world in production. According to the Global Orders Ledger, in that same year Croatia was ranked, in terms of deadweight (in tdw), fifth in the world at 2,784,930 tdw of ships contracted, behind South Korea, Japan, China, and

Poland. In 2000, the last year for which figures are available, Croatia generated 5.899 billion HRK in total income from the shipbuilding sector, which employed 13,952 persons. The shipbuilding industry has about a 10 percent share in export and about a 2 percent share in import in the commodity exchange with foreign countries. The shipbuilding industry composes a number of shipyards of varying size. The primary and largest shipyards are Uljanik (at Pula); 3. Maj, Viktor Lenac, and Kraljevica (all at Rijeka); Brodotrogir at Trogir; and Brodosplit at Split. There are eight secondary or midsized shipyards located at Pula (Tehnomont and Heli), Mali Lošinj (Lošinjska plovidba Brodogradilište), Krk (Punat), Ugljan (Wolf Lamjana), Murter (Brodogradilište Betina), Šibenik (Remontno brodogradilište Šibenik), and Vela Luka (Greben). There are also a number of tertiary shipyards and repair centers.

FOREIGN TRADE

Croatia's foreign trade is geared toward the European Union (EU). In 2001 Croatia's total exports amounted to US$4,659,286,000. Of this total, US$2,547,109,000 (or 54.7 percent) went to the countries of the EU. Another 12.1 percent (or US$565,682,000) of exports went to the seven countries of the Central European Free Trade Agreement (CEFTA), which includes Poland, the Czech Republic, Slovakia, Hungary, Slovenia, Romania, and Bulgaria. The remaining 33.2 percent of exports (US$1,546,494,000) went to other countries.

Croatia's total imports amounted to US$9,043,699,000. In all, 56.0 percent of all imports, with a value of US$5,060,711,000, originated from the EU zone. CEFTA countries accounted for 15.7 percent of all imports or US$1,420,220,000. All other countries accounted for the remaining 28.3 percent of imports (US$2,562,768,000). Croatia's ten most important trading partners in 2001 (in thousands of U.S. dollars), according to the Croatian Chamber of Commerce, were:

Country	*Exports*	*Percentage*	*Imports*	*Percentage*
Italy	1,104,447	23.7	1,524,139	16.9
Germany	688,877	14.8	1,546,726	17.1

TRANSPORTATION

The transportation sector encompasses all areas of economic activity involving the transport of people and goods, whether by road, rail, water, air, or pipeline; auxiliary activities relating to this transport; postal services and telecommunications; and renting of vehicles and equipment. The share of the transportation sector in GDP is 8 percent and in overall number of employees, 7 percent. Given Croatia's important geographic position between Central and Southeastern Europe, the transportation sector is an important one to the country's economy. Currently this sector suffers from a number of shortcomings, however. Harbors and railways are in need of modernization. Road and railway infrastructures are not equally well developed in all parts of the country. Existing and new infrastructure are in need of investments.

Croatia has a total of 27,840 kilometers of roads. Road transportation remains the most important branch of the transportation sector since the road network covers all parts of the country, and for many areas this network remains the only available connection to the rest of the country and the outside world. However, the volume of traffic has outpaced the ability of both government and the private sector to expand the capacity of this network. In 1999, the last year for which reliable information is available, 109,387 freight trucks and 9,317 combined vehicles (i.e., for passenger and freight transport) were registered in Croatia. In April 2001 two companies were established to manage, construct, and maintain the road network: Hrvatske autoceste d.o.o. (Croatian Motorways, PLC) and Hrvatske ceste d.o.o. (Croatian Roads, PLC). They are authorized to collect tolls and road taxes and finance the construction of motorways and roads; they will manage the 200 kilometers of new roads that are expected to be built in Croatia by 2011.

Croatia has 2,726 kilometers of railway lines. The railway system connects all major Croatian cities except Dubrovnik. Croatia has direct railway links with its neighbors (Slovenia, Hungary, Bosnia-Hercegovina, and Yugoslavia) and through them indirect links to the European railway network. Railway transport has suffered immensely because of the war in Croatia from 1991 to 1995. Since the Croatian Serb Krajina severed the rail link between Croatia proper and Dalmatia during those years, a number of railway lines had to be terminated; the volume of traffic decreased and the number of employees working for Croatian Railways (HŽ, Hrvatske željeznice) was halved. Half of HŽ's total income continues to come from the government's budget. In 2000, 45 percent of all transport on Croatian railways involved transit of passengers and goods, 24 percent involved internal transport of passengers, 16 percent export goods, and 15 percent import goods.

As in the case of railways, the marine sector has not experienced any major modernization in the 1990s. In the decade since 1991 there has been a reduction in the size of the Croatian merchant marine, in harbor transport, and in the transport of passengers. The main Croatian seaports are Rijeka, Split, Zadar, Šibenik, Pula, and Dubrovnik. None of these harbors has seen an improvement in infrastructure since 1991. The total length of inland waterways for ships under 150 tons is 922 kilometers in the Danube, Sava, Drava, and Kupa Rivers. The river transport sector has not been modernized since 1991. River harbors and piers are in need of reconstruction and the fleet used for river transport is outdated.

On the eve of the war in Croatia and the dissolution of Yugoslavia, Croatia's airports averaged 4–5 million passengers per year. In 1991 the number of passengers was 1.16 million, but in 1992 this number fell to 0.45 million. Passenger volume has been growing steadily since the end of the war in 1995 and is expected to reach 7.5 million passengers by 2010. The two primary Croatian airports are Zagreb and Split. There are five secondary airports (Dubrovnik, Pula, Zadar, Rijeka [Krk], and Osijek) that can accommodate aircraft of all sizes, with tertiary airports at Brač, Lošinj, Vrsar, and Osijek-Čepin. But apart from the Zagreb airport, there has been relatively little investment in airports. The Croatian national air carrier is Croatian Airlines, which flies between Zagreb and most major European cities and between Zagreb and a few select domestic destinations (such as Dubrovnik and Split). As of 1999, it had four Boeing 737–200s, 3 ATR 42-300s, one Airbus A320, and two Airbus A319s.

Croatia has 601 kilometers of oil pipeline and 1,769 kilometers of gas pipeline. Pipeline transport remains the cheapest way to transport energy products to market. However, like railway transport, the pipeline network was adversely affected by the war in Croatia. It has not been fully restored to prewar levels and is in dire need of modernization.

The transport sector remains in need of rapid modernization and investment. In 1999 road transport accounted for 73.26 percent of total passenger transport, with railways transport accounting for 19.29 percent, marine and coastal transport 7.42 percent, and air transport 1.03 percent. In the case of the transport of goods, marine and coastal transport accounted for 56.9 percent of total transport, railway transport accounted for 19.4 percent, pipeline transport 13.2 percent, road transport 9.0 percent, inland waterway transport 1.4 percent, and air transport 0.1 percent.

CONTEMPORARY CHALLENGES

Contemporary Croatia is confronted by a range of problems and challenges, which may be grouped for simplicity's sake into the following five broad categories: relations with neighbors; relations with the international community; cooperation with the ICTY (the International Criminal Tribunal for the former Yugoslavia) and prosecution of war crimes and crimes against humanity; treatment of minorities; and postcommunist transition, which encompasses a range of issues.

RELATIONS WITH NEIGHBORS

Since Croatia was born in war and in the context of the dissolution of the Yugoslav state, its relations with its immediate neighbors were bound to remain strained. Since 1991, this meant above all the rump Yugoslavia, consisting of Serbia and Montenegro. But with the outbreak of war in Bosnia-Hercegovina, and Zagreb's overt support of the Bosnian Croat leadership, relations with the Bosnian Muslim–led government also deteriorated. Relations with Slovenia remained tense, in large part because of unsettled territorial disputes.

The death of Franjo Tudjman in December 1999 and the defeat of his Croat Democratic Union in the 2000 elections brought about a dramatic improvement in relations between Zagreb and most of Croatia's neighbors. The impact of Premier Ivica Račan's and President Stjepan Mesić's policies has been greatest in Bosnia-Hercegovina. Under President Tudjman, Croatia recognized the Bosnian government in Sarajevo in 1992, but in 1993–1994, it supported the Bosnian Croats in their struggle against that same government. Although Zagreb altered course in 1994, and supported the formation of a Bosnian Muslim–Bosnian Croat alliance under pressure from Washington, the Croatian authorities failed fully to implement the spirit of the Dayton Peace Agreement, which brought an end to the war in Bosnia-Hercegovina in 1995.

After gaining office, Račan and Mesić promised an end to these policies and have moved rapidly to place Croatian support for the Bosnian Croat armed forces on a transparent footing. Indeed, President Mesić's first foreign visit was to Sarajevo, where he managed to mend fences with the Bosnian government and was welcomed as a friend of Bosnia-Hercegovina. Relations also have improved with Serbia-Montenegro, especially following the demise of the Slobodan Milošević government in late 2000. Diplomatic relations have largely been normalized with Belgrade and recipocral diplomatic visits at the highest levels have taken place. Many Croats still vividly recall the activities of the Serbian authorities during the war in Croatia; complete reconciliation may not be possible until all those accused of war crimes have been brought to trial.

Despite the improving climate, there are a number of unresolved territorial disputes between Croatia and its neighbors. Discussions continue with Bosnia-Hercegovina on sections of the Una River and villages at the base of Mount Plješevica. Relations with Slovenia are still strained because of land and maritime boundary disputes in Istria; according to the terms of a recent but unratified agreement between Zagreb and Ljubljana, Croatia would have ceded most of Pirin Bay and maritime access to Slovenia, which in turn would have ceded several villages to Croatia. In late 2002 Croatia and Serbia-Montenegro adopted an interim agreement to settle territorial claims in the disputed Prevlaka Peninsula, allowing the withdrawal of the UN monitoring mission (UNMOP). Discussions continue to be complicated by internal problems in Serbia-Montenegro, however. Croatia and Italy continue to debate bilateral property and ethnic minority rights issues stemming from border changes following World War II. Despite these lingering problems, relations between Croatia and its neighbors have improved steadily since 2000.

RELATIONS WITH THE INTERNATIONAL COMMUNITY

Croatia's primary foreign policy priority since 2000 has been improving its relationship with both the European Union and the United States. That relationship had been tested severely during the Tudjman years, especially his last years. For the most part, the center-left government elected in 2000 has made significant progress on both fronts. Croatia has since joined the Partnership for Peace (May 2000) and the World Trade Organization (June 2000). On 12 May 2001, Croatia signed the Stabilization and Association Agreement, the first step toward a closer relationship with the EU. The United States has stepped up its political, legal, and military assistance to Croatia ever since. But integration with the European Union and improved relations with

Washington continue to be plagued by issues related to the prosecution of war criminals.

ICTY AND WAR CRIMES COOPERATION

Most problematic is Croatia's relationship with the International Criminal Tribunal for the former Yugoslavia (ICTY). Nationalist elements in Croatia continue to denounce the ICTY as a politically motivated and anti-Croat court. The Croat nationalist right views the criminal indictments against Croats, issued by The Hague tribunal, as an attempt by the international community to criminalize Croatia's Homeland War of 1991–1995, which is seen as a just, legitimate, and defensive war. Conservative elements in Croatia's Catholic hierarchy have shown dissatisfaction with the policies of the Račan-led center-left coalition government. In January 2001 conservative Dalmatian Catholic bishops boycotted President Stjepan Mesić's annual reception for religious communities, apparently to register their dissatisfaction with the government's policies. In February 2001 several Dalmatian clergy publicly supported right-wing demonstrations in support of General Mirko Norac, who was indicted for war crimes by the ICTY.

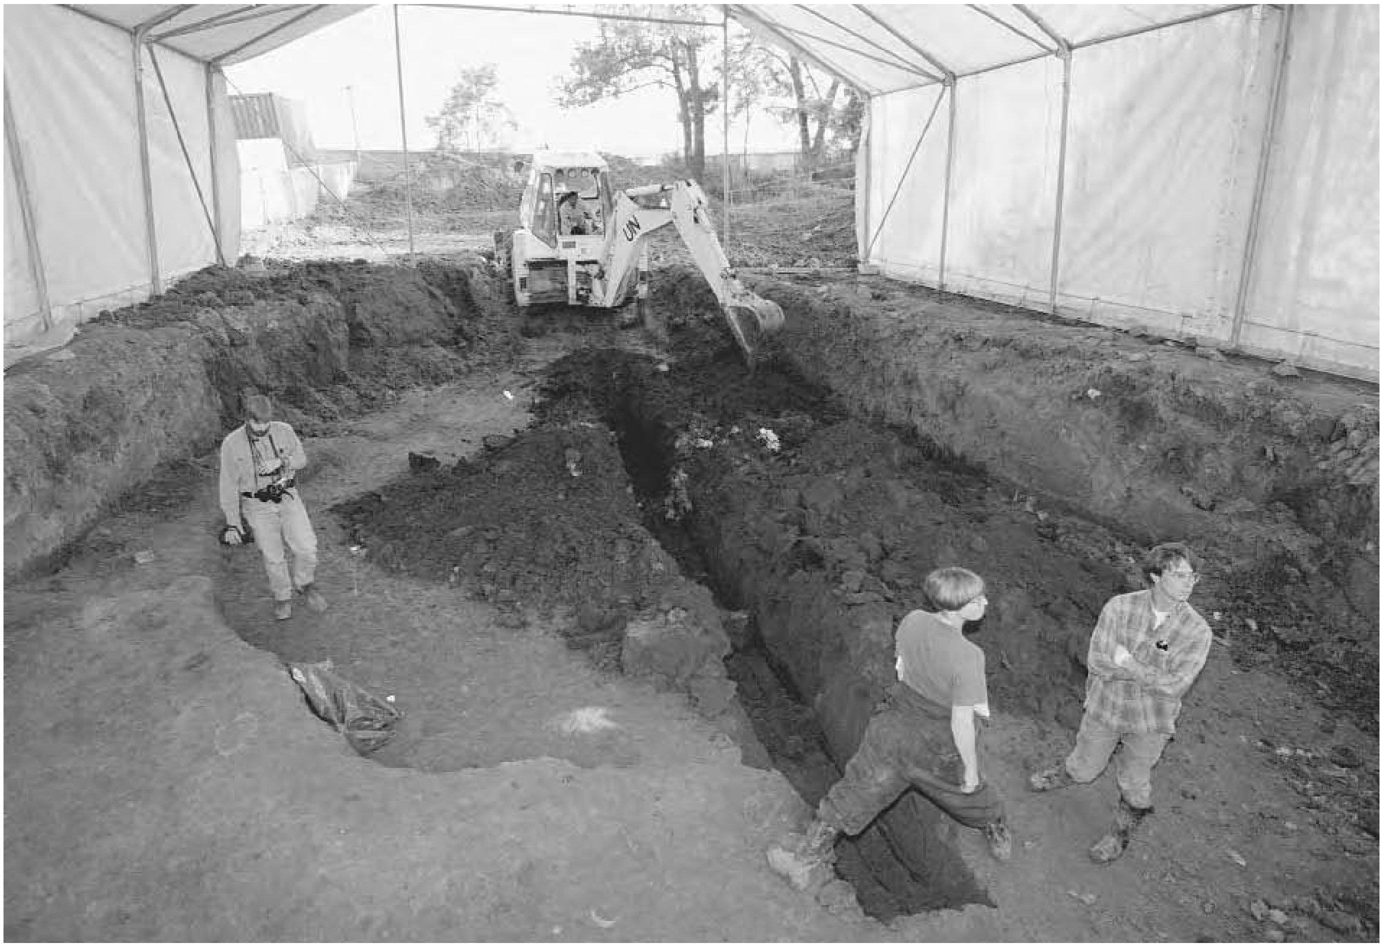
As of 2003, relations with the ICTY were strained for two reasons: General Janko Bobetko and General Ante Gotovina. General Bobetko had been indicted by the ICTY for his role, as commander in chief of the Croatian Armed Forces, in the September 1993 "Medak Pocket" incident, during which the Croatian army allegedly killed dozens of Serb citizens. The Račan government failed to turn him over to the ICTY, because such a bold step would have undoubtedly spelled the demise of the governing coalition. Although Bobetko passed away in the spring of 2003, harm had been done to Zagreb's relations with The Hague. Furthermore, the indicted General Gotovina remains at large. Most observers believe he is hiding in Croatia. Whether or not the authorities know of his whereabouts, they have not moved energetically on this front for the same reason they failed to comply with the ICTY's demands on Bobetko. They continue to pledge their commitment in principle to the ICTY's overall mission, however. The ICTY indictment of Gotovina alleges that as overall operational commander for part of "Operation Storm," the Croatian army's August 1995 campaign to capture the Croatian Serb statelet known as Krajina, he was either implicated in a range of crimes including killing and expelling local Serb civilians, or was aware of the acts committed by his men and did nothing to prevent or punish them. In June 2003 Gotovina gave an interview to the Croatian weekly *Nacional,* in which he again denied the allegation. He agreed to surrender to the ICTY if it agreed to revoke its indictment. A large segment of Croatian public opinion continues to see Gotovina as a hero, just as it saw Bobetko as a hero.

Partly in order to get around this problem, in early May 2003 the Croatian government indicated its willingness to consider the formation of a special domestic court or tribunal to try war crimes and crimes against humanity. In June 2003 Croatia's minister of justice, Ingrid Antičević-Marinović, again indicated that her cabinet was considering its own war crimes legislation. The move, if accomplished, would make Croatia the third former Yugoslav republic, along with Bosnia-Hercegovina and Serbia-Montenegro, to announce plans to establish its own war crimes court. Zagreb's announcement was welcomed by the ICTY. That is apparently because, in an effort to finish its own proceedings by 2008, the ICTY has been trying to focus only on high-level war crimes suspects. It may eventually try to turn over cases of intermediate and lower level perpetrators to national courts in Croatia and the other Yugoslav successor states.

Thus, ICTY officials have indicated that they would consider passing some of the less significant cases to the relevant national authorities. The case most likely to be handed over to Croatia is that of General Rahim Ademi, an ethnic Albanian who served in the Croatian army. Ademi was indicted along with General Bobetko for the murder of Serb civilians in the Medak Pocket in September 1993. However, few domestic war crimes trials have been conducted to date in Croatia (or elsewhere). Those that have gone forward have received generally poor reviews.

The establishment of a war crimes court is not just a reflection of Croatia's new willingness to confront atrocities committed in its name. It is also a politically expedient move by Račan. His Social Democrats have been fiercely criticized by the increasingly popular nationalist political right for being too cooperative with The Hague. Creating a local war crimes court would help his party placate nationalist opinion by obviating the need to extradite suspects to The Hague. Thus far Croatia had conducted only two significant trials arising from the war of Yugoslav dissolution. The first was the trial of the Bosnian Muslim rebel leader and Croatian citizen Fikret Abdić. However, he was prosecuted for war crimes and crimes against humanity perpetrated against other Muslims in Bosnia-Hercegovina from 1993 to 1995; a court in Karlovac sentenced him to twenty years in prison, the highest penalty under Croatian law. And in 2003, a court in Rijeka tried the Croatian General Mirko Norac for war crimes committed against Serb civilians in Gospić in 1991. Although Norac was found guilty and sentenced to twelve years in prison, Račan was able to neutralize nationalist criticism by pointing out that he had ensured that the trial was held in Croatia and not The Hague. Thus when ICTY officials indicated that they might be willing to hand some cases over to local courts, Račan's government announced its intention to form a tribunal of its own.

Since the death of Bobetko, only Ademi and one other war crimes suspect, General Gotovina, remain in Croatia. Račan's government offered a 50,000 euro reward for information leading to his arrest. However, if Račan is unable to find the fugitive general and can ensure that Ademi is tried in Croatia, he will be able to tell his critics that he has not sent anyone to The Hague. The existence of a war crimes court is also expected to aid Croatia in its bid for European Union membership, which it hopes to achieve by 2007. Croatia's ability to try war criminals is of crucial importance for achieving EU integration.



The International Criminal Tribunal for the Former Yugoslavia called on the UN operation in Eastern Slavonia for assistance in exhuming a mass grave at Ovčara. Workers inspect the site where two hundred civilians were massacred in 1994. (United Nations/DPI)

TREATMENT OF MINORITIES

Croatia has long been a multiethnic society. During the recent war of independence, that multiethnic structure was demolished. The last Croatian census was conducted on 31 March 2001. It revealed that Croatia's total population was 4,437,460, with Croats composing the vast majority (3,977,171 persons or 89.63 percent). Of the country's minorities, the most numerous are the Serbs, who number 201,631 or 4.54 percent of the population. Nearly a dozen other nationalities compose the remaining 258,658 inhabitants (5.83 percent). The 2001 census confirmed what observers had suspected for years, namely, that important demographic and ethnic changes had taken place since the last prewar census, which was conducted in March 1991. These changes can be attributed almost entirely to the breakup of Yugoslavia and the war in Croatia (1991–1995). According to the 1991 census, Croatia had 4,760,344 inhabitants, that is, 322,884 more people than in 2001. In 1991 Croats composed 77.9 percent of the population (as compared to 89.6 percent in 2001) while the Serb component of the population has declined over the same period from 12.2 to 4.5 percent. Historically, Serbs have been the largest non-Croat nationality in Croatia and were settled primarily in those regions that had formerly been part of the "military frontier" in the Habsburg era. In 1995, during the Croatian army's Operation Storm, which recaptured the Croatian Serb Krajina, tens of thousands of Serbs either fled or were chased out.

Hence, facilitating the return of refugees, especially those of Serb nationality, is one of the many challenges confronting the Croatian authorities. To be sure, since 2000 they have made important advances in a number of areas relating to returns. But many ethnic Serbs who wish to return to Croatia, including Serbian Orthodox clergy, have continued to encounter difficulties recovering their prewar property and reconstructing damaged or destroyed houses. There were no reports of specific discrimination against Serbian Orthodox clergy beyond that faced by other ethnic Serb citizen refugees. Notions of religion and ethnicity are linked closely in society, but the majority of incidents of discrimination are motivated by ethnicity rather than religion.

There have been no property restitution agreements between the government and other religious groups. The Serbian Orthodox community has filed several requests for the return of seized properties, and some cases have been resolved successfully. However, several buildings in downtown Zagreb have not been returned, nor have properties that belonged to monasteries, such as arable land and forest. This uneven progress may be the result of a slow judicial system rather than a systematic effort to deny restitution of Serbian Orthodox properties. Several Jewish properties, including some Zagreb buildings, have not been returned. No properties have been returned to the Jewish community since March 2000. The Croatian government failed to amend discriminatory clauses of the Law on Compensation for Property Taken during Yugoslav Communist Rule that were struck down by the Constitutional Court in 1999. It failed to meet a court-mandated 31 March 2001 deadline to enact the amendments. The new amendments are expected to extend compensation to Jews whose property was confiscated between 1941 and 1945, as well as to foreigners. The previous HDZ government implemented property restitution in a discriminatory manner. In 1998 the government signed a concordat with the Vatican that provided for the return of all Catholic Church property confiscated by the communist regime after 1945. This agreement stipulated that the government would return seized properties or compensate the Catholic Church where return was deemed impossible. Some progress has been made, but there has been no compensation to date for nonreturnable properties.

POSTCOMMUNIST TRANSITION: CIVIL SOCIETY AND MARKET REFORM

For the better part of the 1990s, Croatia's politics and economy faltered under the weight of war and a failed postcommunist transition. However, the parliamentary elections of 2000, which brought Ivica Račan's reformist center-left government to power, triggered signs of recovery both in the depressed economy and in political life. The Croatian economy may be poised to take off, but it has a long way to go. Since the death of Franjo Tudjman in December 1999 and the 2000 elections, the prevailing international attitude toward Croatia has changed tremendously and for the better. Foreign investors have reentered the Croatian market, although not as quickly as Zagreb would have liked.

According to a September 2003 World Bank study, Croatia's economy has undergone a profound transformation since independence and especially since the last elections. Market laws and institutions have been introduced and the enormous real output decline of the first war-torn years of independence have been virtually recuperated. These achievements have been made despite a highly unstable geopolitical environment. The current government has accelerated this transformation by opening Croatia to global markets by joining the World Trade Organization (WTO) and Central European Free Trade Association (CEFTA), cooperation with neighbors in Southeastern Europe, the signing of the Stabilization and Association Agreement (SAA) with the EU, and accelerating the implementation of key economic reforms.

Foreign investment alone will not solve all of Croatia's economic problems, however. The privatization of state industries is of central importance. As of 2000, roughly 70 percent of Croatia's major companies were still state-owned. That includes water, electricity, oil, transportation, telecommunications, and tourism. Government expenditures account for almost 60 percent of Croatia's gross domestic product (GDP). Other signs of a struggling economy include high unemployment, which is still over 20 percent, and relatively low salaries even by regional standards. Croatia also has a significant foreign debt of approximately US$9.5 billion. Privatization and deep cuts in government spending are central to market reform and economic recovery. Despite the problems, Croatia embarked in 2000 on its real transition to a market economy. To be sure, the transition started earlier but at a very slow pace. The privatization of large government-owned companies was practically halted during the war and in the years immediately following the conclusion of peace.

Another area of concern is the development of a civil society; in the most basic terms, civil society may be taken to mean those individuals and organizations in a society that are independent of the government and which are able to exercise rights of free speech and association. Where there is an active civil society citizens can freely organize and advocate for their beliefs and causes. Yet another area, related to the development of civil society, is the rule of law. The relatively inefficient Croatian justice system is one of the most significant impediments to investment, fundamental protection of human rights, and democratic development. It is under enormous pressure for systemic reform and improved performance. With the advent of the reformist government in 2000, however, a number of foreign sponsors, both American and European, helped launch legal and judicial reforms. They have also assisted the Ministry of Justice in developing an efficient and effective court case management system.

The media have also been an area of concern for reformers. In the 1990s, under the government of Franjo Tudjman's HDZ, the independent commercial media was controlled through legislation that prevented access to a national audience and placed it under central government control. Since 2000, media freedoms have improved measurably. Through foreign assistance, Croatia has developed its first independent television and radio network. As a result, as of 2003 there were 24 media outlets (13 radio, 4 print, and 7 television stations) now generating self-sustaining revenue. Croatia's only independent television network is now financially independent. The Croatian government has also adopted legal reforms that support independent media.

Thus Croatia has managed to make important advances in introducing market mechanisms and institutions, as well as in strengthening civil society. Since 2000, the Croatian government has received the active support and assistance of EU agencies and the U.S. government, a marked difference when compared to the 1990s. Many challenges still need to be overcome, however. There is still a need to deepen and accelerate those reforms that have been launched, in order to enhance Croatia's competitiveness and raise living standards. The country's laws, institutions, and policies still need to be aligned with those of the EU, if the process of integration is to succeed. The challenge for Croatia remains to create conditions that will attract investment, produce growth, enshrine the rule of law, and strengthen civil society.

CHRONOLOGY

Seventh century	Croat settlement in western Balkans.
818–823	Ljudevit, apparently the ruler of a rudimentary principality in Pannonia, leads a failed revolt against the Franks.
845–864	First notable Croat ruler in Dalmatia, a tribal chief named Trpimir who gave his name to the dynasty (i.e., Trpimirovićes, r. 845–1089) that governed Croatia. Referred to as prince of Croatia *(Dux Croatorum).*
879–892	Branimir establishes links with the papacy; in 879, the year of his accession, he obtains the pope's recognition of Croatia as an independent principality.
Ninth to eleventh centuries	Earliest written records in the Croatian language.
910–928	Croatia becomes a kingdom under her first king, Tomislav.
1058–1074	Greatest territorial extent under Petar Krešimir IV (r. 1058–1074), known as King of Dalmatia and Croatia.
1075–1089	Reign of the last Croatian king, Dmitar Zvonimir.
1094	King of Hungary, László (Ladislas) I, establishes the Zagreb bishopric.
1102	Personal union between Hungary and Croatia based on an agreement *(pacta conventa)* of equals (the Croatian nobility and the Hungarian king).
1242	Tatars invade.
1115–1420	Much of Dalmatia is progressively lost to Venice.
1493	Croatian army is defeated by Ottomans at Krbava.
1521	*Judita,* by Marko Marulić (1450–1524), is published.
1526	After the Battle of Móhacs, much of Croatia is incorporated into the Ottoman Empire.
1527	Croatian Landed Estates elect Ferdinand I of Habsburg, King of Croatia.
1538	Beginnings of the military frontier take shape.
1595	Publication of the first Croatian dictionary by Faust Vrančić (1551–1617).
1699	Treaty of Karlowitz (Srijemski Karlovci) restores Slavonia.
1797	Dalmatia is incorporated into the Austrian Empire.
1836–1849	Illyrianist movement of Ljudevit Gaj.
1836	The first Croatian weekly newspaper, *Danica* (The Dawn), is published.
1842	Matica Ilirska (or Matica Hrvatska) is founded.
1846	Ivan Mažuranić's (1814–1890) epic *Smrt smail-age Čengića* (The death of Smail-Aga Čengić) is published.
1846	First Croatian opera, *Ljubav i zloba* (Love and Malice), is composed by Vatroslav Lisinski (1819–1854).
1866	The Yugoslav Academy of Sciences and Arts (JAZU) (now the Croatian Academy, HAZU) is founded.
1867	The *Ausgleich* (Compromise) is negotiated between Emperor Franz Joseph and the Magyar ruling oligarchy, transforming Austria into the Dual Monarchy, or Austria-Hungary. Croatia-Slavonia and the military frontier remain in the Hungarian half of the empire. However, Istria and Dalmatia remain in the Austrian half.
1868	The Croato-Hungarian *Nagodba* (Agreement) is signed, whereby the Kingdom of Croatia-Slavonia is recognized by the Magyar ruling oligarchy as a "political nation," with a right to autonomy within the Kingdom of Hungary.
1861	Formation of the Party of (Croatian State) Right of Ante Starčević.
1881	The military frontier is incorporated into Croatia-Slavonia.
1905	The Croato-Serb coalition, the dominant political force in Croatia to 1918, is founded.
1914–1918	World War I.
1915	Yugoslav Committee is formed in London to promote the cause of a South Slav state encompassing the South Slav lands of the Habsburg monarchy and Serbia-Montenegro.
1917	Corfu Declaration signed by Yugoslav Committee and Serbian government, calling for a common state of Serbs, Croats, and Slovenes in one state with a single democratic, constitutional, parliamentary system, under the Karadjordjević dynasty, after the war.
29 October 1918	Croatian parliament declares Croatia's independence.
1 December 1918	The Kingdom of Serbs, Croats, and Slovenes is formed.
1920	Elections to the Constituent Assembly, in which the Croat Peasant Party (HSS, Hrvatska seljačka stranka) emerges as the leading Croat party in the country.
28 June 1921	Promulgation of centralist Vidovdan Constitution, imposing a centralist state system in Yugoslavia.
1922–1932	Publication of Miroslav Krleža's *Hrvatski bog Mars* (The Croatian God Mars, 1922) and *Povratak Filipa Latinovicza* (The Return of Philip Latinovicz, 1932).
1925	HSS dissolved by the authorities; its leader, Stjepna Radić, is jailed.

1928	Radić and four other HSS deputies are shot during a session of parliament; Radić dies two months later.
6 January 1929	King Alexander Karadjordjević abrogates the constitution, dissolves the Skupština (parliament), bans political parties, and declares a royal dictatorship.
1934	Alexander is assassinated on a state visit to France by an agent of the Croat fascist Ustaša (Insurgent) movement.
26 August 1939	An agreement (the so-called *Sporazum)* is negotiated between Belgrade and the HSS, creating an autonomous Croatian province *(banovina)* in Yugoslavia.
6 April 1941	Yugoslavia is invaded by the Axis; an "independent" Croatian state is proclaimed on 10 April under Axis auspices.
1941–1945	Partisans and Četniks fight German occupiers and each other.
1945	End of World War II; Yugoslav Communists assume power in Croatia and Yugoslavia; Federal People's Republic of Yugoslavia founded.
August 1945	Communist-dominated Provisional Assembly is convened, which organizes elections for a Constituent Assembly (November).
1945–1948	Show trial of wartime collaborators and "traitors," many real and some imagined.
1946	Trial of Croatia's archbishop of Zagreb, Alojzije Stepinac.
1948	Tito-Stalin split; purge of leading Communists, including the Croat Communist Andrija Hebrang.
1962–1971	Political liberalization in Yugoslavia.
1966–1971	Croatian Spring.
1974	New Yugoslav constitution establishes many of the decentralizing tendencies of the late 1960s.
May 1980	Tito dies.
1986	Memorandum of the Serbian Academy of Arts and Science composed, alleging discrimination against Serbs in Communist Yugoslavia.
1990	League of Communists of Yugoslavia hold their last congress, dividing along republican and nationality lines.
April and May 1990	Elections in Croatia; the Croat Democratic Union (HDZ) of Franjo Tudjman wins handily.
December 1990	Croatia adopts a new constitution.
1991	Ninety percent of the population vote for Croatian independence; Croatian Serbs boycott the election.
25 June 1991	Croatia and Slovenia secede from the Socialist Federal Republic of Yugoslavia. Open war begins between Croatia and the rump Yugoslavia (Serbia and Montenegro).
December 1991	Croatian Serbs declare the existence of their own statelet in Croatia, known as the Republic of Serb Krajina.
15 January 1992	The EU and most other countries recognize Croatia.
May 1992	Croatia joins the UN.
August 1995	Operation Storm, leading to Croatia's recapture of the Krajina; exodus of as many as 200,000 Serbs.
1997	Franjo Tudjman wins presidential elections (61.4 percent).
1999	Tudjman dies.
January 2000	The ruling Croat Democratic Union, which had governed Croatia since 1990, is defeated by a six-party coalition that wins 47 percent of the vote to the House of Representatives.
January–February 2000	Stjepan Mesić of the Croat People's Party (HNS) wins presidential vote with 56 percent of the vote.

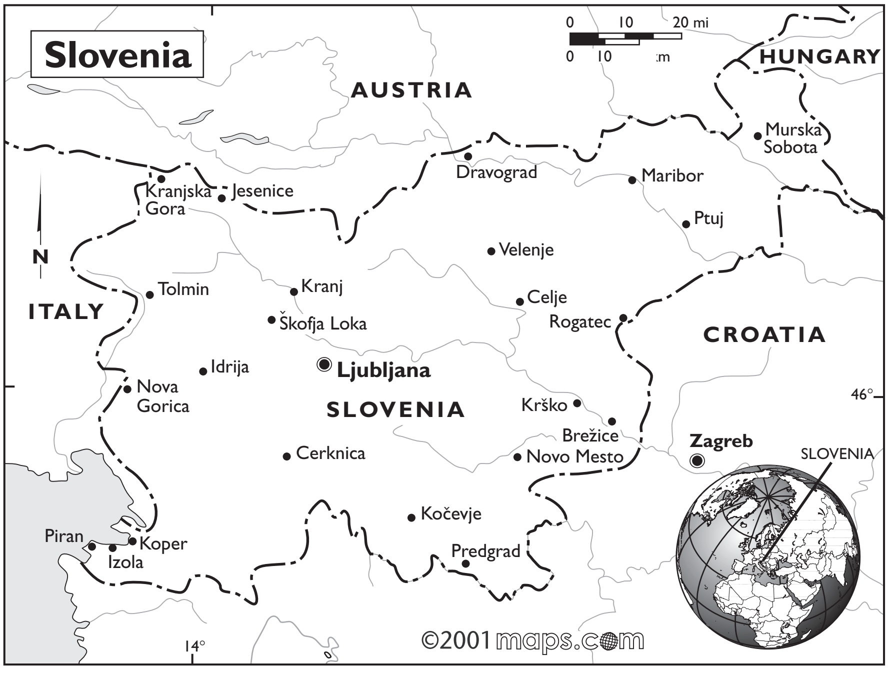
SLOVENIA

BRIGIT FARLEY

LAND AND PEOPLE

"Draw a straight line across Europe from Gibraltar to Moscow and another one from Scotland to Crete," Slovene writer Alenka Puhar told a British visitor to Ljubljana in 1991. "Voilà! At the intersection of the two diagonals lies Slovenia." Independent Slovenia indeed sits at the very center of Europe; legions of visitors and writers have described it as Europe in miniature. They are undoubtedly referring to Europe's moderate, Continental climate, its great geographic diversity, and the attractions that this diversity makes possible: spotless medieval towns in gently rolling hills, breathtaking Alpine peaks summoning skiers in winter and hikers in summer, pristine lakes and rivers, mineral springs, plunging valleys, a lovely coastline. But Europe's geography has not been an unmitigated blessing: it has left the continent vulnerable to armed conquests from the east and south, numerous internecine conflicts and two world wars. The Slovenian experience is no exception. Since 1991, the state has played host to an annual invasion of skiers and vacationers, helping to fill the state's coffers with tourist dollars. In prior years, it experienced incursions and disruptions of a less sanguine character, as the geopolitical landscape constantly attests.

Slovenia has three regions typical of the continent: its central and eastern plains, its alpine area, and its Adriatic coast. Its capital city, Ljubljana, is the center of the country at the heart of Europe, standing at the crossroads of three major regions of the country: the eastern Alps, the Pannonian plain, and the Adriatic Sea. All roads lead here. Like Slovenia itself, Ljubljana has occupied a place of importance from Roman times. Fond of strategic crossroads, the Roman legions established a regional outpost at the site and named it Emona. Ljubljana's fate after the Romans remains a subject of contention, but the Habsburg monarchy recognized the value of its location, making it a center for crafts and trade with Hungary, Croatia, and Italy. As the occupant of the highest place in the surrounding area, the Ljubljana castle had great value as a lookout tower during the many Turkish incursions into the Habsburg monarchy.



Known as Laibach under the Habsburgs, Ljubljana's fortunes began to rise after it attracted the attention of Napoleon in 1809. Napoleon made the city the capital of his Illyrian Provinces, because it offered the best chance of blocking Habsburg access to the Adriatic. Although the Illyrian Provinces went the way of Napoleon after 1815, the city maintained a higher profile in the Habsburg lands than previously. It played host to the heads of Europe's conservative courts at the 1821 Congress of Laibach, where the parties pledged to uphold the post-Napoleon status quo in Europe. When that arrangement crumbled in the revolutionary years of 1848–1849, Ljubljana became the headquarters of the Slovenian national movement. The first Slovene cultural institutions were founded here in the 1880s and 1890s,

Ljubljana City. (Janez Skok/Corbis

including the Slovenian national theater and museum; it has continued to serve as the country's cultural headquarters into the twenty-first century. In the first as well as the second Yugoslavia, Ljubljana was the natural choice to become the first city of the Slovene republic. In July 1991 it became the official capital of independent Slovenia.

Although Alpine peaks dominate Ljubljana's skyline, it is surrounded by what the authors of the *Atlas of Slovenia* term "the rolling hills and dreamy streams" of the region known as Dolenjska. Dolenjska forms part of the vast plain known as Upper Pannonia and has always enjoyed cultural as well as physical proximity with Ljubljana. Dolenjska is the Slovenian approximation of France's Loire Valley, heavily populated with castles and monasteries located along meandering rivers. Among the most famous monasteries is the Abbey at Stična, the oldest in all of Slovenia. Founded in 1136, this institution produced the Stična manuscript, one of the earliest surviving Slovene manuscripts. Nearby Bogenšperk Castle housed the library of Slovenia's legendary renaissance man, Janez Valvasor. A scientist, geographer, soldier, and writer, Valvasor enjoyed an eventful career in the Slovene lands. He authored one of the first physical descriptions of the Carniolian region, *The Glory of the Duchy of Carniola,* a sourcebook that continues to yield valuable information today. He was the first to write down the story of the Slovenian Robin Hood, Erazem Lueger, and catalog other folk tales and legends from the region. Another Valvasor discovery came in the identification of the *Proteus anguinus,* a remarkable fish that inhabits the dark, moist limestone caves of the Soča valley, where it is capable of walking as well as swimming. In his time away from scientific investigations, Valvasor traveled widely and wrote with Jeffersonian range on subjects from numismatics to beekeeping. He also managed to find time to team with the Hungarian nobleman, Miklós Zrinyi, to fight the Ottoman Turks. The Valvasor library now resides in the national museum at Ljubljana, but his legend lives on in Dolenjska.

The Dolenjska countryside is dotted with vineyards, underscoring yet another of its distinctive features. As part of the Sava/Bela Krajina area, it joins the eastern Posavje and western Primorska regions as a major producer of fine wines. Among its signature offerings are so-called blended wines, such as the appropriately named Dolenjsko belo (Dolenjska white), the product of some five different wine varieties.

The unhappier aspects of Slovenia's geopolitical past, never far from even the casual visitor, are also on display in Dolenjska, at Kočevski Rog. Here Josip Broz Tito's Partisans took shelter in the darkest days of World War II, in some of the karst caves that can be found in almost every region of Slovenia. These caves were a place of pilgrimage for true-believing Yugoslavs in the Tito years; Slovenes have modified the commemoration, but have managed to avoid controversy by dedicating them to the victims of World War II. The neighboring Posavje region also has a dark past. German forces ethnically cleansed this area, taking some Slovenes against their will to Germany and deporting others south, to occupied Croatia and Serbia.

Traveling south from Ljubljana, the British journalist Zoë Brân was struck by the dark woods around the approaches to Notranjska province. "I wonder what lies beyond those trees," she wrote. "This is a region rife with legend and folk fears. The Church pursued witches here later than anywhere else in Slovenia, and as the passenger fades into the forest, Notranjska appears much like a combined film set of *Seventh Seal* and *Deliverance.*" Notranjska might aptly be described as Slovenia's Transylvania, shrouded in thick forest and mystery and peopled by folk heroes. One of its best-known landmarks is a local variant of Castle Dracula, a structure built straight into the side of a mountain. Although Predjama Castle dates to the thirteenth century, it is most often associated with Erazem Lueger, a beloved fifteenth-century outlaw who stole from the rich and gave to the poor. Five centuries later, the castle remains a perfect redoubt, rising 37.5 meters up on a vertical cliff and boasting such classic features as a moat, drawbridge, and numerous hidden entrances and exits. It even has its own underground cave. Lueger eventually attracted the ire of the Habsburg authorities, who obliterated him with a well-timed cannonball as he sat in the castle lavatory. But his favored Predjama Castle continues to loom large in Slovene lore and legend.

Slovenia is famous for its karst, the product of the dissolution of large concentrations of limestone by water. Over half of the country has significant amounts of it, and Notranjska offers one of the best examples of karst formations in the Postojna jama (cave). Carved out some 2 million years ago by the Pivka River, Postojna Cave was discovered in the seventeenth century and has been an object of continuing fascination. The British sculptor Henry Moore deemed it "the best exhibit of nature's sculpture I have seen." The cave is indeed imposing—it measures over 20 kilometers in length and is spacious enough to be a conference hall; Slovenes and Germans flocked there for holiday dances in the nineteenth century, and it still serves as a concert hall, hosting a parade of visiting orchestras, chamber groups, and singers, and an audience of up to 10,000 people each year. Thanks to the plethora of unique flora, fauna, and animal life thriving within, Postojna became the birthplace of a special science—speleobiology—whose adherents are devoted to the study of caves and their inhabitants. The world's first speleobiological station is headquartered near the cave there.

ALPINE SLOVENIA

The Slovenia of picture postcard fame, the land of awe-inspiring mountains and deep blue lakes, begins northwest of Ljubljana, in Gorenjska province. The jewel in the crown, Bled, is located in the northeast corner of the province. A creation of the famous Bohinj glacier, Bled is known worldwide for its emerald-colored lake and small island where there has been a church continuously since the ninth century. The baroque Church of the Assumption now dominates the island. Lake Bled attracts thousands of vacationers each year with its stunning setting and thermal waters; the Karadjordjevićs, rulers of the first Yugoslavia, favored it as a summer residence. A few miles south of Bled sits a second stunning glacial lake, Bohinj. Bohinj is a pilgrimage spot for cultural tourists, because the beloved Slovene poet France Prešeren set his epic *Baptism on the Savica* at the nearby Savica waterfall, the source of the Sava River. The Sava and the nearby Soča rivers carry water from over half of Slovenia's territory to the coast.

Bled and Bohinj form the backdrop for the entire Slovene Julian Alps, dominated by the imposing Mount Triglav (Three-Heads). Like the lakes, Triglav is at once a geographical and cultural institution. It is the tallest mountain in the country, the anchor of the Slovene Alps. As such, it is perhaps the most popular peak, and the most storied. According to legend, the mountain was home to a three-headed deity—"triglav" means "three headed"—who ruled all the realms of the mortal world: the earth, the sky, and the netherworld. In more recent times, it mystified would-be explorers until one of Slovenia's leading families, the Zois clan, financed an expedition that reached the summit in 1778. Other intrepid Slovene adventurers followed, in time giving way to large numbers of German alpine enthusiasts. By the nineteenth century, Triglav became a battleground in the Slovene-German language and culture wars. In response to what they perceived as German domination of the mountain, as in so many other aspects of life in Slovene-German areas, Slovene enthusiasts organized their own Slovene Mountain Society in 1893. Initially a tourist organization, it evolved into a cultural and political association that eventually played an important role in the Slovene national movement. Members of the society publicized their expeditions to Triglav and invested the mountain with great significance, so that a pilgrimage to the mountain became a demonstration of pride in one's nationality. To this day, it is widely believed that every Slovene should climb Triglav at least once in his or her life.

THE ADRIATIC LITTORAL AND ENVIRONS

The region that links the Slovenian inland with the country's narrow coastline is called Primorska (near the sea). It comes into view on the descent from the Julian Alps, through the scenic Vrštič Pass, where visitors encounter, in the unlikeliest of sites, a Russian Orthodox chapel. Dedicated to St. Nicholas, the church commemorates the 1916 death of some four hundred Russian prisoners of war in an avalanche, as they worked on a road in the vicinity. The chapel is emblematic of both the beauty and the treachery of the descent from the Alps into the Soča Valley, which leads directly to the Slovene coast.

The Soča Valley has witnessed some of the most significant episodes in Slovene geopolitical history. Napoleon began his invasion of Austria in 1809 from the town of Bovec, an operation that culminated in the establishment of

Mount Triglav, Slovenia. (Corel Corporation)

the Illyrian Provinces, a key moment in Slovene cultural history. In World War I, Kobarid (then Caporetto) witnessed one of the few decisive battles of that four-year conflict, when Austrian and German forces punched through the Italian lines and broke the back of the Italian army. The Central Powers won that battle but went on to lose the war, paving the way for the assignment of Adriatic territory to the first Yugoslav state, the Kingdom of Serbs, Croats, and Slovenes. This did not sit well with the postwar Italian state, which ignored the verdict of the Paris peacemakers and took the region by force in the chaos attending the end of the war. Thousands of Slovenes thus became residents of Italy and endured a campaign of Italianization at the hands of Benito Mussolini's government. The second Yugoslavia regained part of the Soča valley at the conclusion of World War II, and the government of independent Slovenia took it in turn on Slovenia's exit from Yugoslavia in 1991.

The city of Nova Gorica bears especially vivid witness to the years of Italian-Slovene conflict. By the terms of the postwar Paris accord, the Italian-Slovene border split the Italian city of Gorizia in half. The new Yugoslav government responded by building up its part of Gorizia into an entity it subsequently christened Nova (New) Gorica. For more than a decade after the settlement, the border crossings were closed, but by the 1970s, the two governments had taken steps to facilitate the development of normal relations between the twin towns. In February 2004 a metal fence that had physically divided the two towns came down, thanks to the efforts of the towns' mayors. Three months later, on 1 May, residents marked the formal dissolution of barriers in Slovenia's official entry into the European Union with a public celebration and concert.

Toward the south along the brief coastline, one encounters the Karst region, which links north with south Primorska and the coast with the Vipava Valley to the east. This region got its name, not coincidentally spelled with a capital *K,* from its heavy concentration of karst—it is the primary karstic region of Slovenia. As one would expect, Karst has a surfeit of caves, nearly 6,000. The most celebrated are the Škocjan caves, which speleologists describe as the largest and most extensive system of caves on the continent. Like their Postojna counterpart, the Škocjan caves have been a mecca for biologists, mountaineers, tourists, and spelunkers since the early nineteenth century. They resemble large aboveground buildings, with anterooms, concert halls, and similar features. They are also the habitat for over 250 unique examples of both Alpine and Mediterranean flora and fauna and at least five different species of bats. In acknowledgment of their size and biodiversity, the United Nations designated the Škocjan caves a World Heritage site in 1986.

The Karst region's moderate climate ensured that caves would not remain its only attraction. In the sixteenth century, Slovenia's Habsburg rulers determined that it would be the best place for the stud farm they hoped would guarantee a steady supply of the best riding horses. In 1580 they established the farm at Lipizza and began the breeding program that produced the legendary Lipizzaner stallions of the Spanish Riding School in Vienna. The product of crossing Andalusian horses with a local breed, the Lipizzaners belonged to the Habsburgs until the collapse of the monarchy in 1918, their residence in Lipizza interrupted only by an evacuation to Hungary during the Napoleonic invasion. After World War I, their ownership was contested among Italy, Yugoslavia, and the new independent states of Hungary and Austria. The chaos surrounding the end of World War II drove the horses to Czechoslovakia, from which American soldiers herded them away from the advancing Soviet forces, to Bavaria. The postwar peace treaty assigned Lipizza to the new Yugoslavia, which promptly renamed it Lipica. At that time, fewer than twenty stallions remained and prospects looked dim for the reconstitution of the operation, since the new socialist government tended to view horsebreeding as a bourgeois pursuit. Slovenia's independence in 1991 meant a renaissance for the stud operation, even as it complicated the issue of ownership. The Slovene government now owns the territory of the farm and the horses, while the Austrian government insists that it owns the name "Lipizzaner." Lipizza, now Lipica, has become yet another symbol of Slovenia's turbulent geopolitical history during the last century.

The Slovenian coast begins just south of Karst, at the village of Ankoran. The coastline is notably short—from Ankaran to Portorož, just 40 kilometers in length—but proves long on controversy as well as historical interest. The city of Koper has always been an important part of the Adriatic economy. Known during its tenure in the Venetian republic as Capodistria, it became a major port and administrative center. Under the Habsburgs, it lost some of its importance after its northern neighbor, Trieste, became a major railway link with the mainland. In recent years, however, Capodistria/Koper has regained its former position of prominence. As Slovenia's only port, it services much of Slovenia's import-export trade and has attracted high-profile European clients such as Volkswagen, which has used Koper to get its vehicles to eastern Mediterranean countries such as Greece and Turkey. Koper is also the closest available outlet to the sea for landlocked neighbors Austria, Hungary, and the Czech Republic. In a recent year Austria accounted for nearly 30 percent of the total volume of cargo.

An Italian city until the mid-twentieth century, Koper has lost little of its past. In the 1954 settlement of the Adriatic territories, the city of Trieste and its Italian population went to Italy, but Yugoslavia retained Koper and a significant Italian minority. Now those Italian residents are citizens of Slovenia, and Koper remains a center of Italian language and culture in Adriatic Europe. A Koper municipal administrator summed up the eventful past of this key metropolis for a *Financial Times* reporter in the early 1990s. "My grandfather was born an Austrian," the official said. " My father was born Italian. I was born in Zone B (part of the disputed Trieste region administered by the allies of the Yugoslavs after the second world war). My daughter was born in Yugoslavia, and when she has children, they will be born in Slovenia. And my family has never left Koper."

Koper's neighbor to the south, Piran, has a well-deserved reputation as the region's loveliest seacoast area. A city with Roman origins that flourished under Venetian rule, Piran has retained its medieval and Italian character through the centuries, in part because of its high, thick walls erected in the 1600s to guard against Turkish invaders. Like Koper, it became part of the former Yugoslavia in 1954, after the London agreement, and so retains a large Italian population. Having had a long relationship with the Venetian republic, both Piran and Koper have played prominent roles in the drama of Yugoslav/Slovene/Italian relations in the twentieth century and house substantial Italian minority populations.

Slovenian relations with Italy appeared normalized by the 1990s, but the breakup of Yugoslavia brought fresh conflict, this time with neighboring Croatia. In the post-Yugoslav era, the Adriatic coast and waters appeared destined to be shared by the newly independent entities of Slovenia and Croatia. As it happened, the conventional method of fixing sea borders requires drawing a line equidistant from the shore of each country, which effectively denied Slovenia access to international waters. The two states attempted to remedy this obvious inequity by agreeing that Slovenia would have the lion's share of the bay of Piran, while Croatia compensated itself with Slovenian mainland territory. To date, this agreement has not proved satisfactory to either nation and has resulted in some memorable anomalies. To cite one example, patrons of one of the region's most popular restaurants, Kalin, wash their hands in Slovenian territory, order and eat their meals in Croatia, then return to Slovenia to pay their bill. Despite the obvious absurdity of this dispute, it is no laughing matter and its outcome remains in doubt.

One constant in the turbulent annals of the coastal region is its temperate climate, which has made it one of the three major wine-producing areas in the country. Primorska is a leading, even dominant, producer of red wines, of which those made from Karst Refošk grapes seem to enjoy the greatest renown among connoisseurs.

THE EASTERN PLAINS: CARINTHIA, STYRIA, PREKMURJE

In geopolitical terms, the east-central and eastern regions of Slovenia have much in common with the coast: they have been a bone of contention among Yugoslavia, Slovenia, and their often covetous neighbors. Carinthia (Koroška) has special significance for Slovenes, since the cradle of Slovene civilization, the Duchy of Karantania, was headquartered here. However, Karantania eventually fell to the first Habsburgs in the thirteenth century, and the region was intermittently attacked by Turks and Hungarians in the two centuries that followed. Carinthia remained Austrian until the fall of the Habsburg monarchy in 1918, after which it was plunged into postwar turmoil as a region disputed between the Austrian successor state and the new Kingdom of Serbs, Croats, and Slovenes. In the plebiscite

What's in a Name?

Visitors to Slovenia have much to look forward to: postcard-perfect European towns and villages, stunning mountains and lakes, pristine Adriatic beaches, fine wines. Those with an incomplete knowledge of recent political geography might get even more than they bargained for, thanks to Slovenia's shifting frontiers in the past century.

Europe-bound history enthusiasts will certainly want to visit Caporetto, site of the famous two-year Italian-Austrian stalemate that ended in the stirring Austrian victory of October 1917. Caporetto represented one of the few decisive victories of World War I. It was a fateful and fatal moment for the Italian army, which never recovered from it, and marked the beginning of Erwin Rommel's distinguished service in the German army. A young American volunteer ambulance driver named Hemingway later immortalized his experiences on the Caporetto battlefield in his novel *A Farewell to Arms.*

The Caporetto engagement took place on the Isonzo front, which belonged to Italy in 1917. History texts still refer to the area as Italian, but history itself has moved on: the area was transferred to the second Yugoslav state after World War II and passed into the hands of the new, independent Slovene state in 1991. After decades of conflict with Italy, Slovene citizens understandably wished to rename their new acquisitions. Caporetto is now Kobarid, and the valley in which it is found has become the Soča Valley. Notwithstanding the confusion over the new names, Caporetto/Kobarid will not disappoint those diligent enough to find it. In 1990 the Slovene government established the Kobarid Museum, an institution dedicated to the Caporetto battle and the ordeal of World War I. It is already famous, having received the 1993 Council of Europe award as the best museum on the Continent. Visitors can supplement their museum review with an historic walking tour, of which a notable highlight is the elaborate memorial to the Italian dead in the war. Slovene-Italian relations have been far from cordial in this century, yet Slovene citizens have always tended the memorial with attention, a rare acknowledgment of common humanity.

Another perennially popular attraction for visitors to Central Europe is Lipizza, home of the stallions favored by the famous Spanish riding school of the Habsburg monarchs in Vienna. Like Caporetto, Lipizza tends to retain its previous affiliation in print and on film, but let the visitor beware. Upon the 1918 demise of Austria's longtime rulers, the Habsburgs, Lipizza was transferred to Italy. The new regime in Italy, headed by Benito Mussolini, took possession of most of Lipizza's prized equines. World War II transformed the region's borders once again, as Tito's Yugoslavia claimed Lipizza, rechristening it "Lipica." In 1991, after Slovenia's recognition as an independent state, Lipica became a Slovene town. Since then, the stud farm has enjoyed a renaissance.

The Slovenes' repossession of Lipica did not end the controversy that has followed it and its equine residents through the twentieth century. On joining the European Union (EU), the Austrian government successfully asserted its claim to the Lipizzaner stud book, on the grounds that Austria was the historic home of the Lipizzaners. Since it now had possession of the farm, the Slovene government objected—to no avail since it was not yet a member of the EU. Undaunted, Slovene authorities turned to the World Trade Organization in 1999 in order to register the Lipizzaner name there, since EU intellectual property protections did not extend to animals. Ultimately, both the European Union and World Trade Organization demanded that the two sides settle the matter between themselves. Discussions are proceeding.

Meanwhile, visitors to Slovenia—indeed, anywhere in that neighborhood—are advised to consult the latest maps of Europe before plotting their journey. The volatile geopolitics of Central Europe can confound the savviest of travelers.

arranged to settle the dispute, the Slovene citizens of Yugoslavia lost some 90,000 of their countrymen to Austria, though they retained access to economically crucial mining areas nearby, in the Karavanke region. Relations between the Austrian state and its Slovene minority have often proved tense, occasionally erupting into open conflict even into the 1970s. In recent years Austria has mostly respected the rights of its Slovene citizens, guaranteeing them access to bilingual schools and making possible important cultural initiatives such as the publication of Slovene-language journals. However, on the eve of Slovenia's accession into the European Union, Austrian state broadcasting indicated plans to end a Slovene-language radio broadcast, which prompted staffers to make plans for a hunger strike in protest. It remains to be seen how Austrian-Slovene minority rights disputes will be arbitrated, now that the border between the two countries has disappeared with Slovenia's entry into the European Union.

A quick glance at the map reveals much about the Prekmurje region. Prekmurje's residents lived in the Hungarian half of the Habsburg monarchy from 1867 until the Habsburgs' demise in October 1918, after which its Slovene and Hungarian residents became citizens of the new Kingdom of Serbs, Croats, and Slovenes by terms of the 1920 Treaty of Trianon. As an ally of the Axis powers on the outbreak of World War II, the Hungarian state took back Prekmurje and pursued an aggressive policy of Magyarization there. At the conclusion of the war, the region returned to Yugoslav control. In the communist years the situation in Prekmurje was often tense because of Yugoslavia's volatile relations with Hungary and the rest of the Soviet Bloc. With the end of communism in both states, Hungarian-Slovene relations have improved on every level. In the constitution of independent Slovenia, the Hungarian population of Prekmurje is guaranteed special rights, including the use of the Hungarian language, bilingual classes in schools, and the use of Hungarian national symbols.

South of Prekmurje, Styria (Štajerska) has faced many of the same challenges as its neighbors. One of its regional cities, Celje, constituted one of the last bastions of independence in the Slovene lands. Having built a magnificent medieval town, Celje's celebrated dukes surrendered only to the overwhelming force and resources of the Habsburg Empire. Ptuj remains the oldest town in Slovenia, dating to the first century before Christ. It has experienced the tenure of Roman, Hungarian, Austrian, and Yugoslav rulers through the centuries. The country's second largest city, Maribor, became a regional headquarters for Nazi invaders in World War II and suffered bomb damage severe enough to require a significant reconstruction.

For all their travails through the centuries, the Slovene east and southeast enjoy geographical advantages that residents can exploit fully with the promise of long-term political stability. Prekmurje attracts thousands of European vacationers each year with its mineral and thermal waters and sulfurous mud deposits, which have transformed once sleepy border towns into popular spa resorts. Like their nineteenth-century predecessors, contemporary Europeans are fond of "taking the waters" at Moravske Toplice and Radenci. Prekmurje also boasts a share of the burgeoning Slovenian wine sector, growing a grape essential to sweet wines called Šipon.

Styria has always been home to legions of small farmers growing everything from hops to barley, but it is now best known as ground zero for Slovenian viticulture. This is headquarters of the Podravje, or Drava-region wine region, which is divided into several small subdistricts. The Ljutomer-Ormož area is widely regarded as the richest producer in the country, thanks to its exceptional location. It sits between the Mura and Drava Rivers and receives shelter from the Pannonian heat from the hills to its northwest, making its climate ideal for the cultivation of the famous whites Beli Pinot and Šipon. The Haloze district enjoys similar renown, beginning to the south of the Drava river plain and extending to the lower Pohorje hills. It produces rieslings that have recently received high marks from international wine connoisseurs, particularly Renski Rizling and Šipon. These areas have earned Slovenia a place on the international wine map and made it an attractive destination for wine and gourmet tourists.

"We have only traveled some 200 kilometres as the crow flies from the Mediterranean," writes a Slovene journalist, "and have experienced the most varied type of landscape, from the stone severity of the classical Karst and the limestone Alps to the flower of the Pannonian plain." It seems reasonable to conclude that Slovenes through the centuries have found the remarkable diversity of their landscape both a blessing and a curse. With Slovenia's accession to the European Union, it is to be hoped that blessings will predominate in the future.

HISTORY

It was once taken for granted that people living in small nations, such as the Slovene people, could not live on their own in Central Europe. They had all the liabilities associated with perennial subject peoples: they were too few in number, too lacking in natural frontiers, too dispersed geographically and politically to aspire to an independent existence. In postcommunist Europe, these assumptions have changed dramatically. Since the beginning of the Yugoslav wars of the 1990s, the Slovenes have lived in their own state in an area once dominated by empires or successor states. Their journey is compelling and perhaps instructive for other peoples emerging from turmoil, since Slovenes themselves admit they remain a work in progress more than a decade following their unlikely independence.

A South Slavic people related to the Croats, Serbs, and Bulgarians, the Slovenes arrived in South Central Europe in the middle of the sixth century. Details of their early years are sketchy. It is generally agreed that for some decades they were part of a loose organization of Slavs under the jurisdiction of the prince Samo, whose origins remain obscure. In the century following their arrival the Slovenes and their Czech, Moravian, and Slovak neighbors repulsed attacks from invading rivals, such as the Avars and Franks. Following the death of Samo in 658, the Slovenes began to live under their own local ruler in an independent duchy called Karantania, headquartered near the modern Austrian city of Klagenfurt (in Slovene, Celovec). In the eighth century the Slovenes came under the domination of the Bavarians, from whom they received the Roman Catholic Church and a cultural orientation toward the west. Both Bavarians and Slovenes eventually submitted to the rule of the Franks, who in turn fell to the perennial rulers of Central Europe, the Habsburgs. There was also a short-lived Slovene kingdom located at Lake Balaton in modern Hungary; it too eventually became part of the Habsburg lands. Having become Habsburg subjects in the year 1278, Slovenes were to be associated with them until the collapse of their empire in 1918.

Gradually, a small contingent of educated individuals emerged to explore ways in which Slovenes differed from those around them—beginning with their native tongue. Slovenes have always stood apart from their neighbors by virtue of their distinctive language, which shares a foundation with other South Slavic languages yet cannot be

The Slovene Language

The pride of the Slovene people, Slovene is the official language of independent Slovenia. It is the native language of most of the state's nearly 2 million people. An estimated 500,000 individuals of Slovene origin, mostly living in the United States, Canada, South America, and Australia, also count Slovene as their first language.

Reflecting the location of its first speakers, the Slovene language belongs to the South Slavic division of the Indo-European language family. The Slavic group includes the East Slavic languages, Russian, Ukrainian, and Belorussian. Polish, Slovak, and Czech are considered West Slavic languages, while Slovene joins Croatian, Serbian, Macedonian, and Bulgarian in the South Slavic classification. Among the latter languages, Slovene and Croatian use the Roman alphabet. Bulgarian, Macedonian, and Serbian, like Russian, Belorussian, and Ukrainian, are written in the Cyrillic alphabet, named for the Greek monk who created an alphabet for the Slavs in the ninth century.

These languages share a basic grammatical structure that differs significantly from that of English. All of them have grammatical gender, which means that each noun is classified as feminine, masculine, or neuter and requires appropriate adjectival forms and verb endings. Where English has multiple verb tenses (i.e., I am reading, I read, I was reading, I have read, I will read, I will have read), Slovene and the other Slavic languages feature only three: past, present, and future. Slavic languages express relationships between words through changes in form (pronouns) and endings (nouns and adjectives). There are six sets of forms and endings, or cases: nominative, dative, locative, accusative, genitive, and instrumental. For example, where English speakers say, "I write with a pencil," Slavic languages simply add an instrumental case ending to the word "pencil," rather than using the preposition "with." All related adjectives and pronouns either change forms altogether or use endings reflective of that "instrumental" meaning. The English language retains some evidence of cases—for example, English speakers say, "I see him," not "I see he"—but for the most part, cases have disappeared. Another characteristic of Slavic languages that often surprises nonspeakers is the absence of definite and indefinite articles. Native speakers of Slovene or related languages often give themselves away by using articles incorrectly in English or failing to use them, as in "I have house outside city."

Each Slavic language has distinctive features, and Slovene is no exception. Only Slovene retains the dual, a special set of endings used to denote two of something. One table is *miza*. The plural marker *e* denotes more than one table, *mize.* If you refer specifically to two tables, you must add the special dual marker *i,* hence *mizi,* two tables. In addition, dialects are a bigger issue in Slovene than in other Slavic languages because so many Slovenes have lived in areas where their language was heavily influenced by German, Italian, or Hungarian. Specialists have identified seven major linguistic districts in the Slovene lands—Pannonia (Hungarian border area), Primorska (Adriatic), Dolenjska (Carniola), Gorenjska (Upper Carniola), the Rovte, Styria (Štajerska), and eastern Styria (Vzhodna Štajerska)—in which forty or more dialects can be found. It is widely believed that the best Slovene is spoken in Dolenjska and Gorenjska (Carniola) provinces. Fittingly, Gorenjska province is the birthplace of France Prešeren, the father of modern Slovene.

With respect to the spoken language, Slovene consonants are pronounced basically as in English, with a few exceptions. Vowels can be tricky because their pronunciation changes depending on whether they are stressed or unstressed, and stress is not intuitive or predictable in Slovene. Vowels sometimes disappear altogether, as in words like *trg,* square, although there is a hint of a short *e* sound between the *t* and *r.*

mistaken for them. Ironically, the first man to recognize the distinctive features of the Slovene language had to abandon another pillar of Slovene culture—the Roman Catholic Church—in order to make available his native tongue in written form. During the Reformation, when the use of the vernacular was promoted over the universal Latin, the Slovene priest Primož Trubar came into contact with Protestant reformers determined to spread the gospel in local languages. He did his part to further their efforts, leaving the Catholic faith in the process, and produced the first catechism, New Testament translation, and primer in the Slovene language. Jurij Dalmatin, a native of Carniola and a disciple of Trubar's, devoted ten years of his life to translating the entire Bible into Slovene. Slovene scholars note with wonder that Dalmatin's translation served Slovene worshippers from its publication at Wittenberg in 1584 until the end of the nineteenth century. The sixteenth century also produced the Counter-Reformation, which guaranteed that Protestantism would remain a minority faith in the Slovene lands. But Slovenes could now learn about God in their own language, a key advantage for the future.

The eighteenth century was crucial for the evolving Slovene national consciousness. In the 1760s the Habsburg rulers Maria Theresa and Joseph II attempted to streamline the monarchy with a series of reforms designed to modernize state administration. Maria Theresa decreed that all Habsburg subjects should receive primary education wherever they lived. Joseph II's Edict of Tolerance permitted the reorganization of Catholic dioceses to correspond with administrative boundaries, so that Slovene Catholics were bound together for purposes of worship. This was an important step for a people whose national consciousness was almost nonexistent. But another part of Joseph's reform program seemed certain to impede the further development of that consciousness. In line with his quest for an efficient administration in his multilingual empire, the emperor subsequently decided to make German the official imperial language.

This appeared to be a rational and necessary step, but the law of unintended consequences soon took effect. The decision outraged some key groups within the empire, notably the Hungarians. Protestant Eastern Hungarians excepted, they had used mostly Latin among themselves. Surely, if anything replaced Latin as the language of administration in Hungary, it should be Hungarian. Before long, the imposition of German inspired other subject peoples to explore and promote the virtues of their own languages.

Slovene writers and linguists embraced this trend. In the late eighteenth century the monk Marco Pohlin wrote a grammar of the Slovene language, entitled *Krajnska grammatika* (Carniolan Grammar), which emphasized that Carniola was home to a large number of Slovenes as well as Germans. The linguist Jernej Kopitar, who was to become one of the most prominent men of letters in Slovene history, broadened Pohlin's focus in composing his *Gramatik der slavischen Sprache in Krain, Kärnten und Steyermark* (Grammar of Spoken Slavic in Carniola, Carinthia, and Styria). Anton Linhart published the first attempt to tell the story of the Slavic peoples in the Habsburg Empire, *Versuch einer Geschichte von Krain und der übrigen südlichen Slawen Osterreiches* (History of Carniola and Other Austrian South Slavic Peoples). For the first time, readers learned that the Slovenes had not just a distinctive language but also a record of achievements that set them apart from the Germans with whom they had long lived.

In the first years of the nineteenth century, the French Revolution helped to shape Slovenia's cultural development. Having taken Carniola, Carinthia, Istria, and parts of Croatia from Austria in the 1809 Treaty of Schönbrunn, Napoleon Bonaparte organized these areas into an administrative unit that became known as the Illyrian Provinces. This arrangement was strictly pragmatic, the main motives being the weakening of Austria and establishment of French power on the Adriatic. However, this interlude saw developments in the Slovene lands whose effects would survive the end of Napoleon. The city of Ljubljana (in German, Laibach) became the capital of the Illyrian Provinces, signaling the beginning of its rise as an important regional and national center. Even as French replaced German as the language of administration, Slovene was introduced in Slovene primary schools, to the delight of their appointed administrator, the celebrated poet Valentin Vodnik. Vodnik enthusiastically set about writing a Slovene primer and produced a brief Slovene-French-German dictionary. It should be remembered also that the French administrators grouped together South Slavic peoples into one administrative unit for the first time, a point of emphasis for proponents of a South Slavic state later in the century.

In the post-Napoleonic era, Ljubljana achieved brief notoriety when it played host to a meeting of representatives of the conservative European courts associated with the Holy Alliance: Russia, Prussia, and Austria. Known in its Habsburg incarnation as the Congress of Laibach, this meeting produced pledges to crush any challenges to the post-Napoleon status quo. Under these circumstances, political activity was out of the question; Austrian chancellor Clemens von Metternich was determined to maintain the post-Napoleon status quo on the continent. Yet Slovene writers and thinkers quietly pursued aspects of the Illyrian legacy, emphasizing as always the advancement of their language. The former inspector of schools, Vodnik, continued his work on behalf of Slovene culture, writing and publishing a newspaper in Slovene, *Lublanske novice* (Ljubljana News). As the rector of the Ljubljana gymnasium, he also continued to promote the study of Slovene and authored a longer French-Slovene dictionary as well as a text on Slovene history. Vodnik's contemporary, Fr. Anton Martin Slomšek, worked tirelessly to bring the Slovene language to as many Slovenes as possible, whether or not schooling in the language was readily available. His primer on Slovene language and culture, *Blaže and Nežica in Sunday School,* became the first Slovene encyclopedia, providing practice in Slovene language and readable lectures on a wide range of subjects for parents and children alike. The man considered the father of modern Slovenian literature, France Prešeren, worked throughout the 1830s and 1840s, producing his magnum opus, "Zdravljica" (The Toast), in 1844. He could not have known that this poem would eventually become the national anthem of the independent Slovene state in the late twentieth century.

Perhaps the most important development in this period was the outcome of a dispute between Prešeren and his fellow writer Stanko Vraz. In the 1830s the Croatian scholar Ljudevit Gaj and other linguists were searching for common features among the three South Slavic languages of the Habsburg monarchy: Serbian, Croatian, and Slovene. Greater linguistic unity, it was reasoned, would pave the way for a South Slavic political union, perhaps the best defense against assimilationist tendencies in the Habsburg monarchy. Vraz shared Gaj's vision and advocated the adoption of the *štokavian* dialect that would bring the Slovene language closer to its linguistic neighbors, Croatian and Serbian. Prešeren strongly disagreed, maintaining that abandoning the traditional *kajkavian* could endanger the existence of Slovene. "It seems as if Dr. Gaj and other Slavonic men of letters were seriously in favor of uniting Slovene and Illyrian languages in a new language or even of abolishing the

Slovene dialect as a standard language," he wrote. Language was always of critical importance for Slovenes. Unlike Croats or Serbs, who tended to live in majority Croatian and Serbian regions, only about half of Slovenes resided in areas where Slovene was a majority language. Forty percent lived in Carinthia or Styria, where the population was predominantly Italian or German and unfriendly to attempts to introduce Slovene. Prešeren believed that the cause of Slovenes' cultural unity would be best served by preserving their distinct language and insisting that it be taught anywhere they resided.

The national awakening of the Slovenes and other Habsburg subjects began with the exploration of language and literature. The next phase, more pragmatic and political, was born in the revolutions of 1848–1849. The momentous events of February 1848 in Paris caused disturbances in Vienna sufficient to drive the Habsburg court into hiding. In regional capitals such as Prague, they produced agitation about reforming the empire; in Hungary, the March Laws laid the foundation for autonomy, even independence. In Ljubljana, enthusiastic crowds gathered in the main square to celebrate the shakeup in the Austrian capital. But Slovene goals for the revolutionary year were notably modest. Acknowledging the primacy of language, the authors of the Slovene action program called for the use of the Slovene language in schools in Slovene regions. In case more ambitious schemes became possible, they also stipulated the union of all Slovene-inhabited territories within the Habsburg monarchy. Slovenes living in Carniola, Styria, Carinthia, and along the Adriatic should be grouped and administered as one territorial unit. Eventually, if the empire underwent substantial change, the Slovene lands could be joined to those of other Slavic peoples within the empire. Slovenes would pledge allegiance to Vienna in matters of national import while retaining substantial control over their own local affairs.

Habsburg military victories over breakaway Italian provinces and independence-minded Hungarians finally ended the 1848 "springtime of nations." The new emperor, eighteen-year-old Franz Joseph, began his reign with a regime of centralization and strict control from Vienna. However, this interval of calm would prove short-lived. In 1854 the Austrian government entered the Crimean War, in order to prevent Russia from toppling the Ottoman Empire and taking a commanding position near the empire's South Slavic possessions. In so doing, it damaged its relationship with the Russians, who believed that Austria was indebted to them since Tsar Nicholas I had sent the Russian army to help crush the 1849 Hungarian uprising. Emboldened by Austria's apparent isolation and inspired by the flamboyant leader Count Camillo de Cavour, the Habsburg Italian provinces of Lombardy and Venetia broke away in the wars of Italian unification in 1859–1860. In 1866 Prussian troops defeated the Austrian army at Sadowa, effectively excluding Austria from Otto von Bismarck's unified Germany. Thus ended a string of reversals that was to force fundamental changes in the monarchy after 1867.

In all of these unsuccessful campaigns, Franz Joseph had to reckon with the possibility of agitation in Hungary. The empire could not continue as a great power if it could not assume the loyalty of its second-largest national group. Accordingly, Franz Joseph agreed with Hungarian leaders on a reorganization of the monarchy. The ensuing *Ausgleich* (Compromise) of 1867 divided the monarchy into two halves, Austria and Hungary. Hungarians gained substantial control over their own domestic affairs while retaining ties with the monarchy in the person of the emperor and a common parliament and foreign policy. In acknowledgment of the changes, the Habsburg monarchy thereafter became known as Austria-Hungary.

The reorganization had a seismic effect on the non-Hungarian groups in Austria-Hungary. The other groups now began agitating for a similar arrangement. The Croats renegotiated their special relationship with the Hungarians, signing a Hungarian-Croat Ausgleich, the *Nagodba,* which ensured Croats' rights to make their own decisions on local matters. For their part, Romanians in the Hungarian lands contemplated various schemes for a formal liaison with neighboring independent Romania. The 1860s and 1870s also saw the reemergence of pro-Yugoslav polemicists such as Bishop Juraj Strossmayer, who emphasized the possibilities of South Slavic unity in attempts to combat culturally objectionable initiatives from Vienna and Budapest. Their efforts in turn galvanized nationalists, who began to form their own movements celebrating the virtues of separatism.

In the Austrian half of the monarchy, the Czechs allied with Prime Minister Eduard Taafe, who formed an "Iron Ring" with them and other Slavs in Austria as a counterbalance to his pro-German opponents in the Austrian Parliament. Working with Taafe, Czech politicians achieved noteworthy gains. Beginning in the early 1880s, the language of administration in the Czech lands became the language of the petitioner, so that if a Czech spoke to an official in Czech, the official in question would be obliged to respond in Czech rather than German. This constituted a huge advantage, since Czechs knew both Czech and German, while the Germans generally did not know Czech. Taafe also helped the Czechs obtain a Czech division in Prague University, previously an all-German institution. If the Czechs could not aspire to an arrangement like the Ausgleich, they certainly had improved their position by the turn of the century.

Slovene leaders had looked on with dismay as some 40,000 of their conationals came under Hungarian rule as part of the Ausgleich. However, they swallowed their disappointment and hastened to do what they could in Austrian politics by joining the Iron Ring. Like the Czechs, they had no hope of a special relationship with Vienna, but they could win key concessions. The Slovene language, once dismissed as "baby talk" by an Austrian government official, made headway during the Taafe years. It became the language of instruction in elementary schools in the Slovenes' unofficial capital, Ljubljana. In 1872 the Styrian regional capital, Klagenfurt, was decreed a "mixed city," mandating the use of both Slovene and German in official situations. There occurred a flowering of Slovene culture in Ljubljana. Between 1870 and 1914, the city witnessed the construction of a Slovene national museum and the establishment of a national theater and opera. In 1888 a Slovene candidate triumphed in the elections for Ljubljana mayor.

Slovene politicians took pride in these achievements. However, they knew that their gains came at the expense of Germans in the monarchy, and those Germans were certain to reassert themselves. Slovene representatives accordingly raised their profile in the Austrian Parliament, putting forth numerous plans to defend Slovenes' progress and ensure their future. The Slovene Clerical Party and its leaders, Ivan Šušteršič and Anton Korošec, strongly supported certain strategic reforms within the monarchy. In 1912 they became cosponsors of the Vienna Resolution, which urged the Austrian government to create a Slovene and Croat administrative unit in the Austrian half of the monarchy. Others argued that Slovene interests might be best served in an Austro-Slav-Hungarian federation, a three-cornered arrangement in which all three groups would function as one unit on national issues but administer their own local affairs. The National Progressive Party, home to professionals and businesspeople, advocated federalizing the Austrian half of the monarchy, while leaving the Hungarian side unchanged. They believed that this scheme would most effectively safeguard Slovenes' language and culture. A Slovene Socialist Party also came into existence at this time. In the Tivoli document of 1909, members identified as their goal the complete national unification of all Yugoslavs, irrespective of name, religion, alphabet, and dialect or language.

All these proposals for change notwithstanding, it should be stressed that no mainstream Slovene politician envisioned a future outside the Habsburg monarchy. The Slovenes were always among the strongest supporters of the Habsburgs in the nineteenth century, and life without the monarchy was unthinkable. The Habsburgs were justly regarded as the best guarantor of their smaller peoples' future.

WORLD WAR I AND THE BEGINNINGS OF A SOUTH SLAV STATE (1914–1918)

The world the Slovenes had known changed forever in the summer of 1914. In late June the heir to the Habsburg throne, Franz Ferdinand, announced that he would visit the monarchy's newest acquisition, Bosnia-Hercegovina. On 28 June, the royal party was to tour the Bosnian capital city, Sarajevo. As the archduke and his wife, Sophie, greeted cheering crowds from an open car, a young Serb affiliated with the nationalist underground shot and killed them both. The murder inspired no outpouring of grief, because the heir was widely disliked. Nonetheless, because some Serbian citizens had waged a cold war against the Habsburg monarchy since its annexation of Bosnia-Hercegovina. In 1908 Serbia was deemed complicit in the murder. In early July Franz Joseph issued an ultimatum to the Serbian leadership, a list of demands no sovereign government could accept. The German government, which counted Austria-Hungary as its only ally in Europe, assured Franz Joseph of its unconditional backing. The stage appeared set for a limited, punitive war between Austria and Serbia, until Tsar Nicholas II of Russia declared partial mobilization. In so doing, he set in motion a series of events that transformed a local conflict into a world war.

In the first months of the war, Slovenes joined other Habsburg subjects in rallying around the monarchy. Slovene troops fought loyally alongside their Slavic, Romanian, and German compatriots in the Habsburg army, especially in the long Austrian-Italian stalemate on the Isonzo front that culminated in the victory at Caporetto in October 1917. On the home front, Šušteršič and Korošec maintained an active Slovene presence in the Austrian Parliament. Inevitably, however, political consensus began to break down under the pressure of a savage continental struggle. In hopes of gaining any advantage, the leaders of both the Central Powers and the Entente tried to bring neutral Italy into the war on their side. Each side put forth territorial inducements to the imperial-minded Italian government, the Habsburg foreign ministry proffering parts of the south Tyrol and Adriatic territories—which were largely populated by Croats and Slovenes. The rumor that their government might bargain away ethnic and historic South Slavic areas outraged two Croat politicians, who decided that the South Slavs' future lay in the creation of an independent South Slav state, possibly to include Serbia. The Dalmatian-born lawyer Ante Trumbić and Franjo Supilo left Austria-Hungary in early 1915 to form the Yugoslav Committee, a two-man lobby on behalf of a "Yugo-slavia," a land by and for South Slavs from Serbia and the Habsburg monarchy.

In 1915 these plans seemed fanciful. The monarchy showed no signs of collapse, a certain prerequisite for a South Slav breakaway. The vast majority of South Slavic leaders continued to support the empire. They responded to the rumors surrounding territorial concessions to Italy in a joint declaration issued in May 1917. Read in the Austrian parliament by Korošec, the May Declaration called for a postwar arrangement that included a third administrative unit for the South Slavic peoples. The monarchy would become a "trialist" entity, consisting of an Austrian, Hungarian, and Slavic division, each enjoying local autonomy. It was felt that this arrangement would prevent future trespasses on the interests of the monarchy's Slovene, Croat, and Serb subjects. Some of the signatories believed that a unified South Slavic bloc could also join with Serbia if the future of the monarchy were to be called into question. After all, one empire—Russia—had already cracked and broken under the strain only two months earlier, in March 1917.

One month after the May declaration, the Yugoslav Committee advanced in its campaign for an independent South Slav state. The Committee's president, Trumbić, met with Serbian prime minister Nikola Pašić on the island of Corfu in June 1917 for talks regarding a possible union of Habsburg South Slavs and Serbia after the war. The Serbian government had shown little previous interest in this, because its major objective had always been the return of historic Serbian territories, especially Bosnia-Hercegovina. By 1917, with their Russian ally in the throes of revolution, Serbian leaders saw a South Slav union as an option and agreed to meet with Trumbić. Trumbić and Pašić emerged from their talks with a blueprint for a future South Slavic state. The Corfu Declaration said nothing about boundaries

King Alexander of Yugoslavia with his eldest son and heir Prince Peter, during the celebrations of the tenth anniversary of the King's accession. Prince Peter, the official head of the Yugoslav Sokols, wears the Sokol uniform. (Hulton-Deutsch Collection/Corbis)

or the organization of the future state. It did, however, stipulate the equality of the three major groups, Serbs, Croats, and Slovenes, of the Catholic and Orthodox faiths, of the Cyrillic and Roman alphabets, and of the Croat, Slovene, and Serbian flags. It put both Habsburg South Slavs and Serbian government officials on record as favoring the creation of a South Slavic entity, or "Yugo-slavia."

There followed months of stalemate on the battlefield, growing war weariness, and major changes in the balance of forces. The Russian provisional government fell in November 1917 to the revolutionary Bolsheviks, who promptly withdrew from the war. With the U.S. entry into the war, President Woodrow Wilson took an active role in bringing the conflict to a conclusion, issuing his Fourteen Points for the postwar peace in January 1918. This document appeared to dash hopes for an independent South Slav state, since it anticipated the survival of the Habsburg monarchy. No one wanted to contemplate multiple national groups cut adrift from an imperial structure in the aftermath of a world war. But the Habsburg Empire was reeling from the 1916 death of Franz Joseph, as well as battlefield losses and their economic and political consequences. The new emperor, Karl, floated several proposals for reorganizing the empire, as many of the subject groups had wished, but his efforts proved unavailing. The Czechs, Slovaks, Poles, and South Slavs now contemplated citizenship in newly independent and/or resurrected states. Acting in concert as a National Council under Korošec's direction, Habsburg Slovenes, Croats, and Serbs voted in late October to join Serbia in the creation of a new multinational entity. On 1 December 1918, the future king, Alexander, made it official in his proclamation of the Kingdom of Serbs, Croats, and Slovenes.

SLOVENES IN THE FIRST YUGOSLAVIA

High hopes attended the creation of the first independent South Slav state, despite the upheaval attending the end of the war and the difficult amalgamation of several disparate groups. The Serbs claimed the leading role by virtue of their existing state apparatus, the new capital in Belgrade, and the Serbian monarch, King Peter Karadjordjević, who would preside over the state. While the Corfu Declaration had said nothing about the organization of the future South Slav entity, Serbian politicians assumed that they would administer domestic as well as national affairs from Belgrade. In their view this arrangement only made sense. Serbia had a long history as an independent state, it had contributed significantly to the Entente victory, and its officials were experienced administrators in a dangerous neighborhood. They had recently fought three wars with neighbors large and small and prevailed in all of them.

The new citizens from the Habsburg lands could not agree to this arrangement. Prior to the collapse of the monarchy, most Croat and Slovene leaders had backed the idea of a federal state, an arrangement that would let them administer their own local affairs rather than take orders from Budapest or Vienna. Now it appeared that they would be taking orders from Belgrade. The Croats, led by Croat Peasant Party leader Stjepan Radić, were immediately and vehemently unhappy. Regardless of the political arrangements in which they lived, they had always managed to maintain their local autonomy and parliament (Sabor). For centuries prior to 1918, Croats had dealt with Croatian-speaking officials, sent their children to schools staffed by Croatian teachers, even answered to Croatian police officers. After the dreadful ordeal of the war, they hoped at least to regain what they had enjoyed previously. Life under Serbian domination certainly did not meet that standard.

Slovene leaders took a more nuanced view. True, they had failed to achieve their longstanding political goal, the union of all Slovene territories. Parts of Carinthia had elected via plebiscite to become citizens of the postwar Austrian state rather than join the new South Slavic entity. Thousands of Slovenes in the former Austrian port of Trieste (in Slovene, Trst) suddenly found themselves living in Italy, a fate forced on them by advancing Italian forces unwilling to accept the verdict of the Paris peacemakers on the status of Adriatic territories. Yet those in the kingdom saw clear advantages in the union with Serbia. They had official acknowledgment in the name of the new state, the Kingdom of Serbs, Croats, and Slovenes, a definite improvement on centuries of anonymity. Their language and flag enjoyed automatic equality with those of the Serbs and Croats. They advanced their cultural agenda in the construction of Slovene schools throughout Slovenia and the founding of the University of Ljubljana in 1919. In contrast to Croatia, where Serbs predominated at every level of government, Slovenes staffed Slovenian schools and other local administrative institutions. All of these gains came with the active support of the Belgrade government. The Slovene leader-to-be in the new state, Korošec, summed up the attitude of many when he told his disgruntled colleague, Croat Peasant Party stalwart Vladko Maček, that unlike the Croats, the Slovenes had gained in the new entity, from schools and language to administration.

Throughout the short life of the first Yugoslavia, Korošec led Slovenes in such a way as to remain on the sidelines, hoping to extract timely advantages, as the Serb-Croat dispute monopolized politics. In the voting on the state's Vidovdan Constitution, which legalized the centralist system of administration, the Slovene representatives opposed or abstained. True to his Habsburg background, Korošec wanted to see the new state divided into six provinces, each of which would have its own parliament and substantial powers to run its own local affairs. When the Serbs prevailed in the final vote, Korošec and his colleagues briefly joined the Croats in active opposition. Eventually, however, they concluded that they had little to gain by supporting the Croats in their feud with Belgrade. It helped that Slovenes received continual reminders of their relative good fortune from their compatriots in the Italian city of Trieste, where Benito Mussolini's regime had embarked on an Italianization campaign in Slovene areas.

In fact, Korošec was summoned as a mediator when the Serb-Croat conflict turned violent. In June 1928 a Montenegrin deputy to the Yugoslav Parliament became enraged at Radić, whom he viewed as an obstructionist. In full view of those attending the session, the deputy shot the Croat leader, who died of his wounds two months later. At that point, all Croatian deputies vowed unyielding opposition to the government. Hoping to defuse the crisis, King Alexander named Korošec to serve as interim prime minister and charged him with finding a way out of the impasse. The Slovene leader responded by reiterating his belief in a decentralized state. Yugoslavia, he maintained, should be reorganized into three units: Serbia, including Vojvodina and Bosnia, Croatia, and Slovenia. In this way, everybody won: Serbs would maintain control over much of their historic territory, while Croatia and Slovenia gained control over their own domestic affairs.

This solution proved unacceptable to the king, who shelved all suggestions for reform in favor of a royal dictatorship in January 1929. Alexander suspended the parliament, forbade the display of national paraphernalia, and redrew the state's administrative boundaries, hoping to obliterate, or at least blunt nationalist sentiment. The new regions, or *banovine,* were named for nearby rivers, Slovenia becoming known as Dravska Banovina. Like other residents of Yugoslavia, Slovenes also acquired new citizenship. Henceforth, Alexander declared, there were to be no national differences in his realm. His subjects would be known as Yugoslavs in a country called Yugoslavia.

Slovenes and Croats felt the impact of these changes acutely. Unlike the Serbs, who retained a tangible symbol of their nationality in King Alexander, they had lost their flags, their national regalia, and their ability to effect change in a legislature. They soon made known their discontent. The Croat cofounder of the Yugoslav state, Ante Trumbić, rallied opponents with his *Punctacije* (Declaration), in which he reiterated that a federal arrangement would be the only acceptable means of administering Yugoslavia. Korošec prepared his own version, the so-called Korošec Points, which stipulated wide autonomy for Slovenes and other Yugoslavs, a resumption of parliamentary politics, and the return of national symbols. "To achieve this," the Points read, "it is necessary for Slovenes, Croats, and Serbs to create by free agreement and on a democratic basis a state of self-ruling units, of which one would be Slovenia."

King Alexander responded to these nonviolent measures by ordering the arrest of many protesters. This was too much for some Croats, who went underground and founded the Ustaša (Uprising) movement, dedicated to the violent overthrow of the Yugoslav leadership and the creation of a Croatian state. Between 1930 and 1934, the country was periodically rocked by Ustaša bomb attacks and assassination attempts, in which there was evidence of foreign complicity. Eventually, the king's enemies found their mark. On 29 October 1934, King Alexander was murdered in Marseilles, at the beginning of an official visit to France.

The king's murder shook the country. Acting as regent for the ten-year-old king, Peter, Alexander's cousin Paul soon lifted the dictatorship, returning to Slovenia and the other republics a voice in the administration of the state. Meanwhile, the rise of revisionist powers Germany and Italy signaled danger for Yugoslavia and other small states that owed their existence to the Paris treaties. Under these circumstances, Slovene leaders allied themselves closely with the Belgrade government; the best guarantee of Slovenia's existence was in a Yugoslavia that kept covetous neighbors at bay. Nonetheless, Slovene Communists, particularly the young theoretician Edward Kardelj, joined mainstream Croat leaders in demanding a state system that guaranteed equality to all the state's nationalities. In 1939 it appeared that the looming threat of war might actually produce substantive change. After months of negotiations, the Croat Peasant Party leader, Maček, and Yugoslav Prime Minister Dragiša Cvetković announced the conclusion of a *Sporazum* (Agreement), which granted the Croats their longtime demand: formal autonomy within Yugoslavia. Since the agreement made no special provision for the 700,000 Serbs living in Croatia, or any of the other nationalities in Yugoslavia, it was bound to cause controversy. However, foreign events soon overshadowed domestic affairs. On 1 September 1939, Hitler's attack on Poland began the second major European war in two decades.

SLOVENES, PARTISANS, AND THE WAR FOR A NEW YUGOSLAVIA

A determined diplomacy of neutrality delayed the day of reckoning for Yugoslavia until the spring of 1941. On 27 March, a group of Serbian officers, disturbed by the country's apparent capitulations before the Croats at home and the Axis powers abroad, overthrew the government of Prince Paul and installed their own representatives. This act of defiance brought on an invasion by the German and Italian armies in early April and the dismemberment of the state. German forces took control of Serbia, installing the former Yugoslav general Milan Nedić as their representative. Croatia was handed over to the leaders of the Croatian revolutionary Ustaše, with Ante Pavelić installed as *poglavnik,* or leader, of the new "independent" state. Other lands were parceled out among the invaders or allied neighboring states. Hungary reclaimed parts of the Vojvodina, which it had lost in 1918; Bulgaria claimed Macedonia; and Italy much of the Dalmatian coast, Bosnia-Hercegovina, and Montenegro. The Italians and Germans divided the Slovene lands between them, Germany taking the northern two-thirds of its territory and the Italians the southern third. Hungary claimed Prekmurje, a tiny slice of eastern Slovenia it had ruled prior to 1914.

From the beginning of the occupation, the invaders took harsh measures against the local population. The Slovene lands witnessed a campaign of denationalization. On 26 April 1941, Hitler came to Maribor and exhorted those attending a rally in the main square, "Make this area German again." Nazi authorities began obliging him on 7 June 1941, deporting some 60,000 Slovene citizens and making plans to resettle the vacated areas with German citizens. Some "expellees" ended up in Germany; others made their way south to Serbia and Bosnia, while others were taken to a west Hungarian concentration camp. In the Hungarian-majority Vojvodina, Hungarians and Germans were encouraged to murder Serbs, as were Albanians in the Kosovo region. The Croatian Ustaše initiated a campaign of pogroms against Serbs and Jews as well as forced conversion to Catholicism.

These outrages led to the formation of opposition groups, long a tradition in Balkan history. In the Serbian lands, Draža Mihailović formed a group called the Četniks, after the Cheta, Serbian anti-Turkish bands of the nineteenth century. In June 1941 the Partisans, an organization founded by Yugoslav communists, raised their standard. Consistent with the international Communist Party position, this group and its leader, Josip Broz Tito, called on all Yugoslavs regardless of nationality to join the fight to expel the invaders. These two groups both opposed the invaders but soon parted ways over tactics. The Četniks had an overtly Serbian and anticommunist character, while the Communist-led Partisans appealed to all nationalities. Tito urged all-out war at all times on the invaders, while Mihailović feared the impact of massive reprisals on the Serb population, which had suffered heavy losses in three previous wars. Although no one said so explicitly, the two groups were also competing for the leadership of a postwar Yugoslavia. The Četniks represented the prewar centralist Yugoslavia, ruled primarily by Serbs; at a key organizational meeting in November 1941, Tito outlined the possibility of a new country in the Partisan motto, "brotherhood and unity."

In the Slovene lands, Kardelj and his revolutionary colleague Boris Kidrić emerged as the leaders of a broad coalition of forces known as the OF, Osvobodilna Fronta (Liberation Front). Even though some might have distrusted the overtly communist orientation of their leaders, all OF members seemed to feel that long-standing Slovene demands—territorial integrity, Slovene language in Slovene schools, autonomy—might best be realized in Tito's promises of "brotherhood and unity" for postwar Yugoslavia. They were opposed by the Domobranci (Home Defenders), an anticommunist group that formed in Italian-occupied areas and collaborated with the Germans after Mussolini's fall (in hopes of preventing a Partisan victory). They could not compete with the OF, which had apparently won the hearts and minds of most Slovenes. In November 1943, at a key Partisan organizational meeting in Jajce, the OF became formally affiliated with the Partisans, who were winning the war on the ground and in the conference rooms of the Allied Powers. By May 1945, the Partisan army had entered Ljubljana, the Slovene capital, and was poised to become the nucleus for a postwar Yugoslav government. The Partisan leadership promised the new state would be infused with the spirit of brotherhood and unity, but the remnants of the Domobranci got neither. Sent back to Yugoslavia after fleeing to Austria, some 10,000 faced summary execution by the new government.

SLOVENIA IN COMMUNIST YUGOSLAVIA (1945–1980)

The first postwar years were relatively good ones for Tito and the citizens of the new Yugoslavia, notwithstanding the devastation visited on the country by four years of total war. Unlike their neighbors, whose Communist rulers gained their positions through their connections with and wartime residence in the Soviet Union, the Yugoslav leaders had solid popular support based on their personal participation and sacrifice in the war. The major difficulty in prewar Yugoslavia, Serbian centralist rule, was resolved, at least in theory. The 1946 constitution, drafted by Kardelj, organized the country along federal lines, with each of the six constituent republics guaranteed local autonomy and the right to secede. The makeup of the country's leadership seemed to confirm that all nationalities would share in the running of the new state: Tito was part Slovene, part Croat, and Slovenia was well-represented in Kardelj and Kidrić, the principal architects of Yugoslavia's foreign and domestic policies. There was some disappointment in Slovenia over Tito's failure to secure the city of Trieste and its Slovene residents in the peace settlement. Just as in the first Yugoslavia, however, it was felt that Slovenia had improved its fortunes.

As postwar reconstruction proceeded, the country was confronted with an unanticipated crisis in foreign affairs. As a communist state, Yugoslavia naturally enjoyed close ties with the Soviet Union. Most of the leadership had spent at least some time there—though not as much as their comrades in neighboring countries—and viewed it as the model to which all states should aspire. Yugoslavia's early economic and agricultural policies mirrored those of the USSR: extensive construction of heavy industry and the elimination of private farming in favor of collectivized enterprises. But the Soviet-Yugoslav relationship had developed strains dating to the end of the war, when Soviet troops passed through Yugoslavia and indulged in a decidedly nonfraternal spree of looting and rape.

In the immediate postwar period, Yugoslav leaders came to believe that the Soviet leader, Joseph Stalin, saw his East European allies not as equal partners but as subordinates expected to take orders, cogs in a giant wheel. It was clear that Yugoslavia would be expected to serve as a supplier of raw materials for the industrial machine of the socialist countries, foregoing the necessary measures to develop a diversified economy. While the equality of socialist countries everywhere was loudly proclaimed, the Soviet leaders continually implied that their country was superior to all others. They expressed these sentiments most obviously in cultural exchange, flooding Yugoslavia with Soviet books, art, and music, while accepting virtually nothing from Yugoslavia. Perhaps most disturbing was the active and constant Soviet surveillance of Yugoslav leaders, in Belgrade and Moscow, to enforce ideological conformity and compliance with all directives. The USSR's imperiousness produced disbelief in the Yugoslav leadership. Its members did not believe that they had achieved their heroic victory to become the obedient servant of a great power.

The crisis reached a climax in early 1948. Tito had begun negotiations with the Bulgarian leader, Georgi Dimitrov, on a customs union between Yugoslavia and Bulgaria. The USSR promptly demanded that the proposal be abandoned and reserved for itself the right to rule on any future Yugoslav foreign policy initiatives. Kardelj and Djilas went to Moscow to remonstrate with Stalin, pointing out that customs unions made good sense and enumerating the numerous previous issues on which the Yugoslavs had consulted with Moscow first. Their efforts only made Stalin angrier. Tito responded by summoning Yugoslav Party leaders in March to an emergency meeting, where they announced a reevaluation of their relationship with the USSR. This decision proved fateful, as it resulted in Yugoslavia's expulsion from the Soviet orbit. Stalin attempted to frighten the Yugoslavs into submission, flooding the communist media with violent rhetoric and calling on Yugoslavia's neighbors to overthrow "Judas Tito." But the Soviet leadership stopped short of using military force, mindful of Partisan success against the German army. It was clear that the Yugoslavs would not abandon their position, so they faced the task of forging a future without the familiar economic and political structures of the Soviet Union.

Life in geopolitical limbo promised to be precarious and difficult. Yet the Yugoslav leadership, in which Slovene representatives Kidrić and Kardelj continued to play key roles, met the challenge. They combined some creative retooling of fundamental principles with timely help from former adversaries. The latter came within months after the break, in the form of diplomatic recognition and a generous financial package from the United States, whose leaders were eager to exploit this tear in the iron curtain. Henceforth, it would be a priority to "keep Tito afloat." New policies, many of which were created by Kardelj, emerged in due time. The general approach was to do the opposite of what the Soviet leaders did; if the latter existed only to issue orders to subordinates at home and abroad, the Yugoslav leaders would dramatize their willingness to share power with, and be responsive to, the citizenry. In the words of the Slovene economist Janez Stanovnik, it was not sufficient for a socialist system to "declare that it stands *for* the working people. It has to bring into being a system of management both *of* and *for* the working people." In industrial enterprises, the concept of workers' self-management, in which factory collectives were personally involved in the running of their workplaces, made its debut. On 27 June 1950, the Law on Management of State Economic Associations by Work Collectives was formally adopted, after which the Soviet-style Central Planning Commission was abolished. The unpopular policy of collectivization was eventually abandoned after the break with the USSR in favor of private agriculture, though farmers faced limits on land holdings. In relations with the Soviet Union and the other socialist countries, the concept of "separate roads" emerged. The Yugoslav leaders asserted their right to follow a course appropriate to their own circumstances rather than march in lockstep with the Soviet Union.

During the late 1950s and 1960s, it seemed that Tito, Kardelj, and their comrades had made all the right calls. After the death of Stalin, Soviet leader Nikita Khrushchev admitted that the USSR had wronged the Yugoslavs and acknowledged that there could indeed be roads to socialism that departed from the Soviet model. While this gesture did not end the Soviet-Yugoslav conflict, it signaled the end of active hostility. Afterwards, Yugoslavia enjoyed the best of all possible worlds: mostly friendly relations with both camps and formal alliance with neither. As before, Kardelj provided the theoretical basis for this policy, which eventually became known as nonalignment. Other states, notably India, Burma, Egypt, and Indonesia, adopted a similar stand refusing to ally with East or West. In March 1961 Belgrade hosted the first meeting of the non-aligned states. Yugoslavia was to be a mainstay of this movement until the end of the Cold War in 1989.

The general decentralizing trend in both domestic and foreign affairs meant that Yugoslavs enjoyed all the advantages of Soviet-style socialism—low rents, guaranteed employment, free health care, paid vacations—while retaining advantages denied their Hungarian, Romanian, and Bulgarian neighbors. Yugoslav citizens traveled abroad freely, and foreigners could visit Yugoslavia without visas, ensuring a steady stream of European tourists in search of affordable holidays. There was considerably more cultural freedom in Yugoslavia than in its neighbors, which made the country's public face an object of wonder for Western observers familiar with the dreary conformity of other socialist capitals. "Identify the country or countries which recently a) sentenced a poet to two weeks in prison for penning 'a mockery of the Holy Family and Jesus Christ;' b) promoted

Pepsi-Cola in full-page newspaper ads; c) gave away choice seashore plots of land to Sophia Loren, Gene Kelly, Kirk Douglas, Doris Day, and Frank Sinatra," *Time* magazine challenged its readers in 1971. Of course, the correct answer was "Yugoslavia." The only serious restriction, it seemed, involved discussion of incendiary, nationalist-oriented issues and pointed criticism of the leadership. Everyone remembered the example made of Milovan Djilas, a longtime Tito insider who condemned in his book *The New Class* his comrades' appetite for luxury living. Djilas was expelled from the inner circle and sentenced to prison.

For all the acclaim these innovations generated, they ultimately set in motion the law of unintended consequences. Yugoslavia had refused to become a colony of the Soviet Union, yet the decentralizing/diversification trend caused contradictions that awakened old antagonisms and violated some cherished socialist principles. It became obvious over time, for example, that Croatia and Slovenia were the most consistently prosperous republics in the country. Each had advanced industrial capabilities, historically industrious populations, and the advantages of desirable vacation spots such as the Lake Bled area and the Dalmatian coast. It came as no surprise that they contributed significantly more to the national economy than other republics, and that their citizens had a higher standard of living. Slovenia's per capita income was three times higher than that of the Kosovo region in 1960, and five times higher a decade later. At the same time, the Serbian republic always seemed to consume far more than it contributed, a perception exacerbated by the fact that Belgrade was the capital of the federal bureaucracy and home to the federal economic council and Investment Bank. Complaints began to circulate that Serbs were monopolizing economic resources and wielding administrative power disproportionate to their contributions. It was difficult to argue with statistics, which indicated that Slovenia alone accounted for some 25 percent of the country's export revenue year after year.

At the same time, the related issue of "political" factories came under scrutiny. Because the prosperity of Slovenia and Croatia was certain to cause resentment in the poorer southern parts of the country, Tito had to provide for economic initiatives that would lead to a measure of equality among the republics. In line with this goal, the federal government had financed large industrial enterprises and showcase projects such as soccer stadiums in Bosnia-Hercegovina, Macedonia, and Kosovo. Considerable sums of money from Slovenia and Croatia flowed into these projects, which often appeared at the behest of local officials regardless of need or profitability. Making use of the freedom of expression they enjoyed, Slovenian and Croat journalists questioned the viability of these enterprises. They charged that Croatia and Slovenia had become cash cows for the less industrious regions, which were only too happy to milk them. These complaints caused headaches in Belgrade. Yugoslavia's leaders had committed the country to a decentralized system of administration, yet found themselves bound to maintain the socialist ethos of brotherhood and unity, which frayed in the face of increasing inequalities of development. This problem would defy all attempts at solution, since it was the practical equivalent of squaring a circle.

In response, the authorities reflexively tried to emphasize their commitment to devolving power to the republics. In 1966 Serbian Communist leader Aleksandar Ranković, a consistent critic of decentralizing tendencies in the state, was dismissed from his post. Known as a Serbian nationalist and a consistent advocate of greater central control in Yugoslavia, Ranković was alleged to have been spying on Tito and those in the leadership who disagreed with his ideas. His dismissal was interpreted as an admission that other republics had suffered abuse at the hands of the federal government. This did not squelch the discontent, however; Croat leaders decided to take advantage of the circumstances to press for more favorable concessions. Beginning in 1967, they responded by voicing a host of complaints about what they saw as Serbia's disproportionate influence in the country. Some were cultural in nature, such as the purported Serbian dominance of a Serbo-Croatian dictionary, wherein the Serbian variant of idiomatic expressions allegedly appeared more often than the Croatian. Others pointedly addressed the difficulties of reconciling decentralized economics with "brotherhood and unity."

Croats protested against the concentration in Belgrade of key financial and administrative institutions, a sore point dating to the first Yugoslavia, when Belgrade bureaucrats made all the decisions about economic policy. Now, they claimed, bureaucrats and institutions in Belgrade took valuable Croatian-earned resources and distributed them to less industrious and less deserving individuals, including, of course, Serbs. A season of discontent became a national crisis when some began advocating measures that came close to secession.

Here was a clear illustration that the conflicting demands of regional economic autonomy and maintaining "brotherhood and unity" had no apparent solution. Thus it was incumbent on Tito to play his trump card. In the manner of a strict father, he summoned querulous Croats and reminded them where ethnic conflict could lead. "In some villages, because of nervousness, Serbs are drilling and arming themselves . . . do you want to have 1941 again?" he asked rhetorically. Then he used his authority as the leader of the Yugoslav Communists and founder of the state to purge the state apparatus of the offending individuals. It was understood that Tito had the last word in any contentious dispute.

Slovenes kept their usual low profile during these charged Serb-Croat episodes. The Slovenian republic's president in the late 1960s, Stane Kavčič, understood Croat complaints and even allowed discussion of similar issues in the journal *Perspektive.* Mostly, however, he concentrated on improving the republic's fortunes in a nonconfrontational manner, perhaps recalling Korešec's observation that "Croats debate, Slovenes work." He consistently supported the continued decentralization of the country's economic life. He explored the possibility of Slovenia's negotiating aid and development agreements individually with the less developed republics rather than leaving all such decisions to the Investment Bank and its bureaucrats in Belgrade. He was particularly interested in economic initiatives that played to Slovenia's unique strengths while appearing to benefit the rest of the country as well. To that end, Slovene representatives worked hard to promote projects involving close cooperation with neighboring European states. In 1969 they applied for, and secured, World Bank funding for extensive road improvements in the republic. Routes into and out of Slovenia were heavily used by truck traffic from Europe and free-spending vacationers in Slovenia and Croatia, so it made good sense to keep them in the best shape possible.

Unfortunately, this understated approach met the same end as the Croats' dramatic protest. As was customary, the funding for the road improvements went to the capital, Belgrade, for dispersal. When it arrived, however, Slovenia saw only a tiny fraction, as the Belgrade authorities used their prerogatives and designated most of the money for improvements in other republics. Kavčič protested vigorously, to no avail. In fact, his term as the chief executive of the Slovene republic was cut short by his refusal to endorse the leadership's decision on the funds. Slovenes in turn received an unsubtle reminder that even though they were free to work as hard at their many enterprises as they could, Tito and the federal government would decide who benefited from their hard work.

STRAINS WITHIN YUGOSLAVIA AND RISING RESENTMENT IN SLOVENIA

The difficulties of the late 1960s caused no major upheavals in Yugoslavia. All Yugoslavs received a vivid reminder of their good fortune when they witnessed the Soviet invasion of Czechoslovakia in August 1968. Their quality of life remained high by comparison to that of their neighbors. However, as one Slovene writer later noted, Yugoslavia looked good only when things were going significantly worse elsewhere. In the late 1970s and early 1980s things began to look worse in Yugoslavia, as the economy fell victim to a series of crises, causing a decline in the country's standard of living. Because the republics had the right to determine their own economic priorities, local bosses often opted for big steel and chemical plants, without regard to whether these duplicated similar enterprises next door. The workers' self-management experiment, once hailed as an attractive alternative to central planning, broke down under the strain of bad management and unrealistic expectations. Government spending began to exceed the rate of economic growth, and the country was wracked by serious inflation that cut purchasing power in half. "We used to buy clothes in Italy or travel to Vienna for a weekend at the opera," a Slovenian businessman complained to a Western reporter. "Now we can't even afford to go skiing here at home." As before, regional economic imbalances, exacerbated by unilateral federal decision making, continued to cause resentment in Slovenia and Croatia.

Tito and other members of the leadership sought to solve, or at least mitigate, these problems by drafting a new constitution in 1974. No matter what they did, however, they encountered the same difficulties, born of numerous attempts to reconcile socialist theory with the realities of Yugoslavia. In socialist countries, national distinctions were to disappear with the realization that citizens were all members of one large working class. Kardelj and others realized that this was unlikely to happen spontaneously in fractious Yugoslavia, so their solution was to allow each republic wide latitude to make its own political and economic decisions. At the same time, Tito and the leadership were obliged repeatedly to attempt to maintain some semblance of economic equality among the republics—because socialist theory permitted no inequalities in the working class, and because resentment was typically expressed in nationalist rhetoric and demonstrations. Furthermore, the Communist Party had the leading role, in fact the only role, in all key decisions in a socialist state. Thus they felt confident in retaining for themselves the right to decide how revenues would be distributed in the state. It might have behooved them to consider the introduction of market forces in certain sectors, or to negotiate more acceptable economic arrangements with Slovenia and Croatia. Instead, they decided on more of the same in the 1974 Yugoslav constitution. They offered a bit more devolution of power, in carving two autonomous republics out of the Serbian republic, while declining to make changes in federal economic policy. As always, Tito retained the right to the last word on any question.

The Western press marveled at Yugoslavia's ability to weather these storms and maintain its peculiar "socialism, of a sort." Longtime observers knew there was no secret to its longevity: the key was Tito and Kardelj, two old warriors who had founded the state and made it work despite steep odds. Tito in particular had become an iconic figure. He was the general who had led the nation to an improbable victory in 1945, the Yugoslav David who defied the Soviet Goliath, the final arbiter of and respected last word on the country's most contentious disputes. Only time would tell if Titoism, that improbable balancing act, would survive without Tito and a steadily rising standard of living.

THE SLOVENES AND YUGOSLAVIA AFTER TITO (1980–1987)

The deaths of Kardelj in 1979 and Tito in 1980 meant that Yugoslavia at last faced a real test of its long-term viability. In order to avoid the impression that some republics had more power than others, Tito's replacement would be a rotating presidency. Each republic would take turns contributing a leader, chosen by his parliament. In this way, it was hoped, the spirit of brotherhood and unity would survive the loss of its inspiration. However, early indications did not look promising. The country's deepening economic woes, which were now manifested in a ballooning federal debt, exacerbated the growing differences among the republics. In 1983 federal authorities finally recognized the emergency and took steps to try to address it, including an edict that all republics should share equally in the repayment of the debt, regardless of the percentage for which they might be responsible. This meant that Slovenia and Croatia, whose leaders already believed that their contributions kept the state viable, would have to bail out their less prosperous countrymen in the south. The citizens of both republics were already weary of this state of affairs and did not wish to see it continue.

Slovenes were at a crossroads after Tito. In the first Yugoslavia and the early decades of the second they had shown considerable satisfaction with their lot because they believed that their lives had significantly improved. In the years after Tito, though, they no longer seemed so certain. In the mid-1980s Slovenia experienced a remarkable period of cultural and political ferment that presaged a reevaluation of its status within Yugoslavia. Younger Slovenes led the way in creating this "Slovenian spring." They embraced trends seen elsewhere among European youth, advocating conscientious objection as an alternative to military service, campaigning for gay rights, and raising awareness of ecological issues. In 1986 they spearheaded a campaign to defeat a proposed increase in an environmental protection tax in Slovenia and won a promise from Slovene leaders to reevaluate ecological policy in the republic instead. But they broke some new ground as well, founding a new school of artistic expression called Neue Slowenische Kunst (New Slovenian Art). Adherents attracted much attention through their embrace of Nazi apparel and subject matter. The rock group Laibach, which eventually gained a following beyond Slovenia, devoted many of its songs to explorations of Hitler and other totalitarian leaders and concepts. It was widely supposed that these artists sought to use shock value in order to solidify support among their young followers, but many observers perceived that there was something more at work in their performances. They consistently mocked the traditions and ethos of Tito's Yugoslavia.

As a rule, officialdom in Europe viewed youth movements with skepticism. By contrast, the adults joined in the searching and probing in Slovenia. As Laibach broadcast its convictions about Slovenia's recent past, the respected cultural journal *Nova revija* urged a similar evaluation on its more mature readers. Its now famous issue 57 (1987), "Contributions to a Slovene National Program," was devoted entirely to the question of Slovenia's place in Yugoslavia. Contributors pulled no punches. As the most productive and industrious of all the republics, they argued, Slovenia should at least enjoy proportional political influence. They questioned the legal basis of Communist rule in Yugoslavia and outlined strategies that would distance Slovenia from the federal government. Far from attempting to choke off these sentiments, Slovene Communists in the post-Kardelj period often echoed them. Accordingly, younger leaders such as Milan Kučan contemplated a variety of solutions to the country's mounting economic ills, including such uncommunist measures as applying the laws of supply and demand and creating more open markets. At this point, no one was thinking about independence; the emphasis was on creating a more advantageous position for Slovenia within Yugoslavia.

Events in Serbia soon altered these assumptions. Like their fellow citizens in the other republics, Serbs were discussing changes they wished to see in post-Tito Yugoslavia. Their proposals differed in that they invoked the past rather than the future. Where Slovenia and Croatia were talking about greater pluralism and alternative solutions to pressing difficulties, Serbs seemed to be moving back toward the familiar confines of centralism and Serb dominance. In the mid-1980s some writers were proposing that Serbo-Croatian become the official language of Yugoslavia, a measure that would disenfranchise citizens who spoke Slovenian, Macedonian, and Albanian. There was more to come. In 1986 the Serbian Academy of Sciences issued a memorandum in which members outlined the numerous ways in which the Serbian republic had suffered unjust treatment in Tito's Yugoslavia. Serbs, the authors alleged, had seen the power of their republic deliberately diminished in the creation of autonomous Vojvodina and Kosovo. They had watched helplessly as Serbia became a mere supplier of raw materials to other republics, impoverishing itself in the process. They had endured the one-sided, public persecution of major representatives in the national leadership (Ranković) and the harassment and injury of their conationals at the hands of Albanians in Kosovo, once the cradle of Serbian statehood. It was strongly implied that these injustices should be remedied through an improved status for Serbs within Yugoslavia.

THE ROAD TO SLOVENE INDEPENDENCE (1987–1991)

The election of Slobodan Milošević to the presidency of the Serbian republic made the perception of a Serbian resurgence a reality. Milošević's first move as president was a personal visit to Priština, the capital of the Kosovo autonomous region. This area, site of Serbia's landmark defeat at the hands of the Turks in 1389, had a mixed Serb-Albanian population that often found itself embroiled in ethnic conflict. Once part of the Serbian republic, Kosovo had received autonomous status in Tito's 1974 revision of the Yugoslav constitution, a development that rankled in Belgrade since it meant that Albanian Yugoslavs would rule their fellow Serbs. In early 1987 Kosovo had witnessed periodic Serb-Albanian rioting, prompting Milošević to schedule a fact-finding trip for April. After one contentious meeting with local citizens on 24 April 1987, he abandoned all pretense at investigation and became a partisan. He appeared in the midst of a Serb-Albanian street fight in Priština to declare his determination that Serbs "will never be beaten again." This event, broadcast nationwide on the evening news, caused many outside Serbia to wonder whether Milošević intended to champion a Serbian ascendancy in Yugoslavia.

The Serbian president did nothing to discourage this impression. Soon after Kosovo, he began a purge of the Serbian Communist Party in order to rid himself of opposition. At the same time, he sent large crowds, later described as a Milošević "rent-a-crowd," of thugs and enforcers, to demand the reincorporation of the autonomous republics of Kosovo and Hungarian-majority Vojvodina back into Serbia. Frightened by the menacing demeanor of these crowds, the leaders of both republics had little choice but to yield to their demands. Leaders in other republics reacted strongly. Slovenia's representative to the federal presidency, the respected economist and diplomat Janez Stanovik, declared that Milošević's behavior smacked of Stalinism. His colleague Milan Kučan was more concerned with the immediate political impact. "By abolishing the autonomy of both provinces of Vojvodina and Kosovo," Kučan said later, "Serbia would directly control three of eight votes, in comparison with the other republics that had one vote each." Since Montenegro always voted with Serbia, Milošević would actually have four votes in the federal council—a commanding advantage. This could make possible the transformation of post-Tito Yugoslavia into "Serboslavia," an updated version of the type of Serbian centralist rule that had helped destroy the first Yugoslavia.

The events of the next year proved to be a chilling demonstration for Slovenes of Milošević's values. After Tito's death, the Slovene youth magazine *Mladina* had become a cutting-edge publication, enjoying ever increasing popularity among all age groups for probing the limits of self-expression in Yugoslavia. Like Slovenian rockers and artists, its journalists delighted in baiting the nation's leaders. They published caricatures of Slobodan Milošević in medieval armor in Kosovo, the Serbian avenger on a demented crusade. They helped to arrange the scheduling of a conference of homosexuals in Ljubljana on 25 May 1987, Tito's birthday, causing panicked federal authorities to ban this obvious show of disrespect on the pretext of fighting AIDS. But *Mladina* had serious investigative ambitions, too. In a particularly explosive series, their journalists were the first to expose and detail in print the execution of thousands of anticommunist Slovenes, the Domobranci, by Tito's regime in the aftermath of World War II.

Milošević and the federal authorities in Belgrade did not take such impertinence lightly. In late 1987 they began plotting a response they believed would put a stop to it altogether. In February 1988 Slovenian police arrested a young army recruit, Ivan Borstner, and three *Mladina* staffers, Janez Janša, David Tasić, and Franci Zavrl. They were imprisoned and charged with possession and copying of a classified document outlining contingency plans for the imposition of martial law in Slovenia.

It was widely believed that the Yugoslav army, whose Serb-dominated officer corps took great exception to *Mladina,* had ordered the arrest. No one believed the charges, as became abundantly clear in the spontaneous gathering of 20,000 Slovenes in Ljubljana's town square, the largest since World War II. They demanded the immediate release of the "Ljubljana Four" and condemned the army's attempts to suppress a bold, hard-hitting periodical. The Slovene Communist leaders went farther, accusing the Yugoslav military of attempting to interfere with the right of Slovenes to administer their own affairs. All Slovenes were shocked when the trial was conducted behind closed doors in Serbo-Croatian rather than Slovene, a direct assault on Slovene national identity. They were positively outraged by the convictions and prison terms that the trial produced in July 1988. If Slovenia could expect Serbian bureaucrats to continue running roughshod over Slovene sensibilities in the future, perhaps it was time to consider other options.

The *Mladina* affair convinced many Slovenes that Milošević wanted not just to promote Serbia at Slovenia's expense, but also to compel Slovenia to remain in Yugoslavia by force. Subsequent events only strengthened these convictions. On 28 June 1989, Milošević made a well-publicized return visit to Kosovo. The date he chose was no coincidence; it marked the historic six-hundredth anniversary of the battle of Kosovo, which Prince Lazar and his Serbian army lost to the Ottoman Turks. In a dramatic appearance near the site of the battle, Milošević unsheathed his rhetorical sword, proclaiming his intent to "avenge Kosovo." By this he meant that Serbs would not be defeated again. They would repel all assaults on their nation and culture and take their deserved leading role in post-Tito Yugoslavia. The Kosovo speech, and the Serb-Albanian clashes it fueled, produced great consternation in Slovenia. Both *Mladina* and *Nova revija* had devoted extensive coverage to human rights abuses around the world. A prominent Slovene politician had already resigned from the League of Communists executive council over this issue, condemning Serbian mindlessness in Kosovo. Kučan called it "the worst human rights problem in all of Europe" and condemned its corrosive impact on Yugoslavia's political life as well as its image abroad.

After Slovenia declares independence from Yugoslavia on June 25, the Slovenian territorial army takes up a defensive position in the capital, 2 July 1991. (Jacques Langevin/Corbis Sygma)

In February 1989 Slovene leaders held a public meeting to denounce Serbian ham-handedness in dealing with an Albanian miners' strike in Kosovo. As the meeting was broadcast nationwide, Serbs had the opportunity to witness this barrage of criticism. Although Slovene leaders had broken no laws, Milošević could not abide their show of disrespect and decided to send his Serb "supporters" to demonstrate in Ljubljana. The group was to set the Slovene public straight about Kosovo and rumored Slovene plans to redefine their republic's relationship with Yugoslavia. It was understood that the Milošević crowd would repeat the drill its members had perfected elsewhere: menacing the Slovene leadership to the point where they would flee for their lives. Slovenia's president, Janez Stanovnik, opted to ban the demonstration and turn back the crowd; they had nixed a chance for a town meeting, he said, and some of the prospective "truth tellers" had less than peaceful intentions since they were armed. Having failed to intimidate the Slovenian leadership, Milošević slapped economic sanctions on the rebellious republic. This was an absurd situation, comparable in American terms to Massachusetts boycotting Maine, but Milošević was adamant that the Slovenes learn they could not defy him.

In any case, it was not clear that the Slovenes cared what Milošević thought any more. Their leaders had already concluded that Slovenia could share the fate of the Kosovars and were preparing exit strategies. They began by amending the republic's constitution to alter Slovenia's relationship with the other republics of Yugoslavia. Specifically, they claimed authority to impose martial law in the republic, command Yugoslav army units in the country, regulate expenditures of Slovene revenues, and permit the formation of opposition political parties. Opposition parties in particular violated a key tenet of communist ideology, which reserved for the Communist Party a monopoly on political power. More important still, the Slovene leadership allowed for the official appearance of opposition in full awareness that many would-be candidates actively supported Slovenian sovereignty, or even outright independence.

In April 1990 the Communist leadership of Slovenia and Croatia formally separated from the League of Communists of Yugoslavia and held the first multiparty elections in Yugoslav history. The winners in both cases were mostly avowed anti-Communists. Slovenes gave the DEMOS a substantial victory, but voted in their longtime Communist Party leader, Milan Kučan, for president. As many observers noted, Kučan may have been the first Communist presidential candidate ever to prevail in a free election. Though they still talked of a future within Yugoslavia, Kučan and other Slovene leaders insisted on the reorganization of the country into a confederation of sovereign states bound together for purposes of deciding strictly national issues such as foreign and defense policy. Subsequent events showed they had the support of their constituents. In September 1990 a referendum on the country's future was announced. In December Slovene voters went to the polls to make their wishes known. An astonishing 80 percent expressed support for sovereignty. The leadership then reiterated its demands for a confederated Yugoslavia and declared Slovenia would secede in the absence of such an arrangement.

By early 1991, it was clear that Yugoslavia was headed for a breakup. In January it was disclosed that the Serbian Parliament had made an illegal midnight raid on the federal bank, withdrawing several billion dinars, with which they intended to pay wages and pensions in Serbia exclusively. Outraged by this "Great Serbian Bank Robbery," both Slovenia and Croatia promptly announced that they would no longer be bound by any federal economic laws. Milošević countered by ordering the immediate disarmament of territorial militias in Slovenia and Croatia, a process he had initiated secretly the previous fall. This move was particularly shocking, since Tito had created the militias in all six republics following the 1968 Soviet invasion of Czechoslovakia. He wanted to see "every man a soldier" so as to be able to wage Partisan-style guerrilla warfare against large invading forces, such as the Red Army. It was absolutely clear now that Milošević would hear nothing of confederation. He was preparing to send the Yugoslav army to prevent the exit of the rebellious republics and clearly hoped to decapitate any opposition in advance. Leaders of both nations drew the appropriate conclusion and indicated that they would declare formal independence in June.

As expected, Milošević and the Yugoslav army brass prepared countermeasures. In Croatia, the bid for independence ran into opposition from the republic's 700,000-strong Serbian majority, which was receiving covert armed assistance from Belgrade. Thus a small-scale civil conflict was under way in eastern Croatia by February. The Slovenes' situation was not as serious, because there were virtually no Serbs living in Slovenia, but officials knew they would face armed attempts to prevent their exit from Yugoslavia. Indeed, the federal authorities sent troops north in late June in order to bring Slovenia to heel. Those in charge of the operation did not believe that Slovenes would fight, especially since they had not yet received any formal support from abroad. No western government had recognized Slovenia, fearing that to do so would precipitate the disintegration of Yugoslavia and encourage separatist-minded groups elsewhere in Europe. A small show of force, it was reasoned, would suffice to convince Slovenia that resistance was folly.

But the Yugoslav army leadership had not reckoned with the determination of the new Slovene defense minister, an old antagonist. Newly installed in his post, former *Mladina* staffer Janez Janša organized a spirited defense based on the classic skills of the weak: speed and cunning. President Kučan did his part by proclaiming Slovene independence one day earlier than planned, 24 June, so that Slovene border guards could replace their federal counterparts and offer resistance at the frontier. Elsewhere, militia and ordinary citizens worked hard to slow and frustrate the invaders.

Ljubljana overnight became a city barricaded for its defense, with roads and railways blocked and soldiers and heavily armed forces seemingly everywhere. Electricity in the Yugoslav army barracks mysteriously shut off, and cars jammed the highways from all directions, trapping the oncoming tank convoys. It helped that federal troops did not know the terrain well and had made no provision for resupply; some units went through all their food and water in a day. The Slovenes' fortitude impressed the Yugoslav commanders, who were trained to fight back but proved mindful of their young recruits and their parents, many of whom did not want their sons involved in what they viewed as a discretionary war. "We will not yield," Janša had warned as he contemplated facing his former accusers. The Yugoslav army found the Slovene people fully deserving of his confidence.

On 2 July, a cease-fire was brokered; on 7 July, after hours and hours of negotiation, the Yugoslav federal government reached tentative consensus with Slovenian and Croatian leaders in the Brioni agreement. The declarations of independence both nations had issued were temporarily suspended in exchange for the withdrawal of Yugoslav army troops. However, to all intents and purposes Slovenia was now on its own. Milošević had decided to concentrate his fire on Croatia and Bosnia, where the presence of sizable Serb minorities guaranteed him a chance to reconquer ethnic and historic Serbian territory. At the country's first celebration of independence, President Kučan stressed that Slovenia's new status represented a major break with the past. "Probably in different conditions, we could mature further and link our destiny with that of others," he said, "but even so, we have managed by ourselves. We are a mature nation that knows what it wants. Indeed a new chapter is beginning in our life." Fourteen centuries of communal living behind them, Slovenes now contemplated an independent existence for the first time.

POLITICAL DEVELOPMENTS

Most of the former socialist states in Europe have experienced a combination of continuity and change in their political life since their independence over a decade ago. In Slovenia, the dynamic is slightly different: a high degree of continuity, and consensus, in a time of significant change. The politicians who plotted the Slovene republic's successful exit from Yugoslavia—mainly Milan Kučan, Janez Drnovšek, Janez Janša, Dmitrij Rupel—have stayed on as the leaders of the first independent Slovenia. During the state's first decade, they achieved substantial agreement in securing recognition of Slovene independence, creating essential institutions, solving problems associated with the Yugoslav wars, and determining the direction of the state in the twenty-first century.

CLEARING THE WAY FOR INDEPENDENCE

By the late 1980s, the team that would preside over the first independent Slovene state was assembling. Many of its members were avowed anticommunists, intent on bringing

Special Ks

Aficionados of historical trivia are fond of pointing out that political leaders of various nations have shared some outstanding commonality in modern history. In the United States, for example, a disproportionate number of presidents hail from the states of Virginia or Massachusetts. In Slovenia, it is all in a name, or more accurately a letter: its most celebrated politicians all seem to have family names beginning in the letter *K.*

Anton Korošec shaped Slovene politics from the turn of the century until his death on the eve of World War II in 1939. Born in the Maribor region in 1872, Korošec began his professional life as a Roman Catholic priest. During his service as a parish priest in villages in Styria, he observed the difficulties his parishioners encountered with their German neighbors, who tried to deny them the use of their native language. He wanted to become a better advocate for them and won election to the Austrian Parliament on his second try. As a leader of the Slovene Clerical Party, Korošec was a strong supporter of the Habsburg monarchy. Like virtually all of his South Slavic colleagues, he pressed for strategic changes in its administrative structure but felt that it was the best arrangement for small nations like his own.

After World War I cast a shadow over all empires, he began to prepare for other possible outcomes. He was a founding member of the Yugoslav Club, a group of South Slav representatives in the parliament. In 1917 he delivered the May Declaration, which called for a reorganization of the Habsburg monarchy, to answer rising national aspirations among its South Slavic peoples. When all looked hopeless in 1918, Korošec faced the inevitable without flinching. According to legend, it was he who broke the news to Franz Joseph's successor, Karl, that there was no hope of salvaging the centuries-old monarchy.

Upon the collapse of the Austro-Hungarian Empire in October 1918, Korošec presided over the National Council, the institution that represented the monarchy's South Slavic peoples in the immediate postwar period. In this capacity, he helped negotiate Slovenia's entry into the Kingdom of Serbs, Croats, and Slovenes, later known as Yugoslavia. Because he knew that life in Yugoslavia represented a great improvement for Slovenes, who now had language guarantees, schools, and institutions of their own, he mostly supported the Serb-dominated leadership even as the Croats vehemently opposed it. At the time of his death, which nearly coincided with that of the first Yugoslavia, Korošec could justly claim to be a politician in the truest sense of the word. He had mastered the art of the possible for his people.

Edward Kardelj succeeded Korošec as unofficial leader of the Slovenes, though he would have disputed that title since his communist orientation held that national distinctions belonged to the dustbin of history. As a young revolutionary in the first Yugoslavia, which banned the Communist Party early in its existence, Kardelj spent much of his time in clandestine agitation. Like many of his comrades elsewhere, he eventually ended up in prison, where he wrote his first book, appropriately titled *Struggle.*

Kardelj and the Yugoslav Communists suddenly became relevant when the German army invaded Yugoslavia in April and then the Soviet Union two months later. Following Moscow's exhortations to wage all-out war on fascism, Kardelj rallied representatives of prewar Slovenian political parties to fight the invaders. His fortunes rose dramatically following his affiliation with Tito and the Partisan movement, the nationwide resistance, which eventually won the war with Germany and the right to form a communist Yugoslavia in May 1945. Kardelj emerged from the war as Tito's top thinker and policymaker in the second Yugoslavia, only to have his theoretical foundation rocked in the 1948 break with the Soviet Union. Like Tito, he met the challenge of reinventing the state. Since the Soviet model was no longer tenable, Kardelj created a new theoretical framework that emphasized local control of economic and social policy, declared the national question dead, and advocated a cultivated neutrality in foreign affairs:

(continues)

democracy and independence to Slovenia in an era when communism appeared headed for the dustbin of history. Others, notably Milan Kučan and Janez Drnovšek, were high-ranking Communists unhappy with the perceived economic exploitation of Slovenia and alarmed at the resurgence of nationalist/hegemonist sentiment in the Serbian republic. Following the 1988 trial of three *Mladina* journalists who exposed a Yugoslav army plot to "destabilize" Slovenia, both Communists and anti-Communists had seen enough of Slobodan Milošević's Yugoslavia to conclude that they should join forces to try to escape. Together, they prepared the citizenry for this throughout 1990 and 1991. They

nonalignment with either the eastern or the western camps in the Cold War. In his lifetime, he was hailed for his unconventional thinking. However, following his death in 1979, it became clear that in creating a decentralized communist state, he had unwittingly made possible the resurgence of national feeling he fervently hoped would wither away. A committed socialist to the end of his life, Kardelj would undoubtedly be shocked and dismayed to discover that part of his legacy is an independent, capitalist Slovenia.

Stane Kavčič, the Communist Party leader of Slovenia in the 1970s, had a comparatively brief tenure by comparison with his compatriots. However, he had an influence well beyond his tenure in office; in a real sense, he is the author of Slovenia's successful transition from socialism to economic democracy and free markets. He consistently advocated the expansion of Slovene economic activity beyond Yugoslavia into Europe and urged Slovenian businesspeople to concentrate on areas likely to be both important and profitable in the future, such as electronics and home appliances. Firms specializing in those areas have made the most successful transitions in the period since independence and are fueling Slovenian prosperity today.

The fourth K, Milan Kučan, became the most prominent Slovene in the wake of Kardelj's departure. A native of Prekmurje, the Slovenian region closest to Hungary, he rose quickly through the Yugoslav Communist youth organization and entered the top ranks of the Slovene leadership in the 1970s. Kučan's star rose sharply in the difficult and confusing years following the deaths of Yugoslavia's founding fathers, Tito and Kardelj. Sensing that Slovenes were contemplating a different relationship with Yugoslavia, Kučan helped them decide how they wished to proceed. In the 1980s he winced at the youth culture that mocked Tito, yet read between the provocative lines and urged people to pay closer attention. When Slobodan Milošević came to power in Serbia on a platform of aggressive nationalism, Kučan saw danger ahead for Slovenes. He took the lead in distancing Slovenia from Yugoslavia, perhaps before its citizens were ready to take such a step. He was the first Communist leader to commit the heresy of allowing multiparty elections, breaking the monopoly of Communist rule in Slovenia. In 1990, when Slovene voters rewarded his leadership and elected him president, Kučan made history as perhaps the first Communist ever to triumph in a free election. Assisted ably by his deputies Dmitrij Rupel and Janez Janša, Kučan helped pave the way for Slovenia's exit from Yugoslavia. He helped deflect criticism away from Slovenia for precipitating a crisis in Yugoslavia by repeatedly stressing his willingness to remain in a confederated arrangement. When that proved to be a nonstarter, Kučan helped plan Slovenia's defense during the ten-day war with the Yugoslav army and lobbied hard for international recognition of Slovene independence, which came late in 1991.

After independence, Kučan had perhaps the most difficult task in postcommunist Europe: leading a people who had never lived independently in the creation of its own nation state. The challenges were legion: securing international recognition, creating financial, legislative, and judicial institutions from scratch, determining the size and character of national defense, and negotiating Slovenia's formal entry into organizations that would guarantee a secure future for Slovenes. Despite many difficulties, especially the unexpected rejection of Slovenia's application to enter NATO in 1997, Slovenes gave him over 55 percent of the vote in each of his two campaigns. Kučan left office in 2002, having seen the nation through the challenging first years and helping it celebrate ten years of independence and rising prosperity. Among his last achievements was Slovenia's successful application for NATO membership on its second try in November 2002.

For his leadership during the transition to independent statehood alone, Kučan may prove to be the most popular and successful Slovene statesman ever.

wrote and agitated in *Mladina* and *Nova revija,* held the country's first free elections, and carried through the referendum on sovereignty in December 1990. As conflict with Milošević sharpened, Kučan made a show of presenting various reorganization plans for Yugoslavia that would afford protection against further economic exploitation and attempts at political domination by Serbia. He doubtless knew that they would be rejected, but he hoped to inoculate Slovenia against charges that it initiated the breakup of Yugoslavia.

With their formal declaration of independence in June 1991, Kučan and his DEMOS—Demokratična Opozicija Slovenije, Democratic Opposition of Slovenia—colleagues braced for Milošević's attempt to prevent Slovenia from leaving and joined their fellow citizens in defeating a Yugoslav army force after ten days of fighting. In July 1991 they found themselves the leaders of a Slovenia in transition, an entity no longer a republic of Yugoslavia but not yet an independent state. Their first task was therefore to clear away the detritus of war and persuade the European Community and other key institutions to recognize the new state.

The process of securing recognition did not go smoothly. As then Foreign Minister Dmitrij Rupel remembers, there were no objections in principle to the idea of an independent Slovenia, but this necessarily brought with it the possibility that the Yugoslav state would collapse. The European Community (EC), which had the authority to extend recognition, was wary about the consequences of that eventuality—correctly, as subsequent events in Croatia and Bosnia demonstrated. All parties in the Brioni Agreement of 7 July agreed to delay action for three months, which would allow more time to assess the changing situation in Yugoslavia. Meanwhile, Kučan, Rupel, and others worked to secure the withdrawal of the Yugoslav army from Slovene territory. At first, they encountered resistance, even threats of renewed action from the Yugoslav government, but the problem largely solved itself with a mass exodus of Slovene soldiers from the ranks. There seemed little reason for the rest of the army to remain under those circumstances. That fall, there was lingering skepticism among EC nations as well as the United States about the wisdom of recognizing Slovenian (and Croatian) independence. By December, however, European Community representatives had decided to ratify the fait accompli and extend recognition to the two states. Recognition from the United States, which finally acknowledged the inevitable, came in April 1992.

THE FIRST CONSTITUTION

With recognition forthcoming, the architects who had made the new Slovenia could proceed with building an infrastructure for their state. As always, the first task was to draft a constitution. Ljubljana University law professor Miro Cerar chaired a commission of some one hundred experts, government officials, and interested citizens charged with studying constitutions of other European states and making appropriate recommendations to the Slovene leadership. Members of the commission looked at the Austrian, Italian, and German constitutions in order to acquire basic familiarity with a democratic document. They reviewed the constitution of Hungary, since that country had emerged from circumstances similar to Slovenia's. The Spanish and Greek constitutions also came under review, since those countries had once been dictatorships. Finally, the commission pondered the advantages and disadvantages of two prevailing models for the conduct of state business: the presidential system, anchored by a strong executive, and the parliamentary model, in which the national legislature had more power.

The inaugural Slovene constitution, ratified in December 1991, reflected the Cerar commission's findings, the experience of the recent past, and Slovenes' hopes for the future. The document had sixty-five articles, showcasing a strong belief in the rule of law, individual rights, and separation of powers, all characteristics of democratic constitutions. In a nod to European constitutional tradition, Slovene citizens were guaranteed a social safety net, to include pension benefits and health care. Slovenes' prized possession, the Slovene language, was enshrined as the country's official language. Slovenia's Italian and Hungarian minorities received the right to use their native language for official purposes in their local areas. In addition, they were each guaranteed one deputy to the Slovene legislature and the right of veto over any legislation directly affecting them. Memories of life under Tito and Milošević ruled out a strong executive, so the constitution provided for a powerful legislative branch. The president, who may serve two consecutive five-year terms, can appoint the prime minister; otherwise, his duties are largely ceremonial. Provisions for the rights of trade unions, workers' right to strike, and worker-management consultation demonstrated that the framers of the constitution did not regard their Yugoslav experience as entirely unworthy of emulation.

As political scientists have emphasized, there were only two points of serious disagreement in the writing of the constitution. One concerned the question of abortion, a contentious issue in all Catholic countries. Those on the right in the country's evolving political dynamic wanted it banned, while those leaning left campaigned for guarantees of abortion rights. Abortion rights proponents carried the day on that issue. Additionally, there was conflict regarding the nature of the National Assembly, whether it should have two houses or one. Opponents reached a compromise here. Slovenia would have a unicameral legislature, featuring a *državni zbor,* a national assembly composed of ninety representatives elected for four-year terms from throughout the country. This body was given primary responsibility for writing legislation. A *državni svet,* state council, to include regional interests and workers, managers, and cultural affairs representatives, would play an advisory role, though its forty members would have the right to introduce legislation. Taken together with the responsibilities accorded the president and the judiciary, this arrangement guaranteed a separation of powers and enfranchised citizens representing a variety of backgrounds, an important concession for a democracy in its infancy.

THE FIRST GOVERNMENT: TURMOIL AND TRANSITION

The constitution having been written and ratified, it was time to govern. The first nationwide elections, held in December 1992, saw the reelection of Milan Kučan as president. A coalition of like-minded parties, led by the perennially successful Liberal Democrats, won a majority of seats in the National Assembly and tapped Kučan's former Slovene Communist Party colleague, Janez Drnovšek, to serve as prime minister. This was an experienced team, and its members would need every ounce of that experience to meet the immediate challenges they faced. Some of these were fundamental, such as appointing members of the judiciary, assembling a Slovene foreign service, and dealing with

Janez Drnovšek. (Courtesy of the Embassy of the Republic of Slovenia)

hangover issues from Yugoslavia, such as restitution of land and property taken by the Communists from blacklisted institutions like the Catholic Church. Discussion about the structure and composition of the Slovenian army also commenced at this time.

The most pressing issue was extraordinary and dangerous. The Yugoslav-Croatian conflict had escalated into a full-scale war over Bosnia-Hercegovina. Some 30 percent of the population there were Serbs, another 30 percent were Croats, and both governments claimed these populations. But there were many Bosnian Muslims living in Serb and Croat areas. Neither Milošević nor Croatian President Franjo Tudjman wanted to see a "West Bank situation," with Muslims protesting their treatment before crowds of international journalists. Thus Serb and Croat forces began a campaign of intimidation and ethnic cleansing intended to rid the desired areas of non-Serb and non-Croat citizens.

The Bosnian war had immediate and serious consequences in Slovenia. Slovene manufacturers and businessmen had counted on continued trade with the Yugoslav republics that remained, because they had always constituted a major market for Slovene products. But war-related United Nations sanctions made this impossible, and the losses hit hard in Slovenia, with businesses struggling to retain their employees and remain viable. In the midst of this economic turmoil, thousands of desperate Bosnian Muslims, driven from their homes by ethnic cleansing, sought refuge in Slovenia.

The Drnovšek government fashioned pragmatic solutions to these twin emergencies. It attempted to mitigate the economic crisis by encouraging beleaguered businesses to take maximum advantage of established contacts abroad and initiating debate on the process of privatizing state enterprises. The National Assembly addressed the refugees' plight by allocating some $250 million to provide emergency food and shelter. Lawmakers were able to enlist the help of volunteer groups, who provided essential services and lobbied for donations from sympathetic foreign governments. In the United States, the Maryland state government paid for heating and medical care in some refugee centers.

Unfortunately, the war showed no signs of abating as 1992 wore on. Meanwhile the country's unemployment rate climbed into double digits, and Slovene citizens became anxious and fearful about the newcomers, who kept coming. Opinion polls showed rising anti-immigrant sentiment; over 90 percent of respondents in one poll favored restrictions on citizenship and organized political action among immigrants. Obliged now to take public opinion into account, the Slovene leadership toughened its stance. In January 1993 it closed the country's borders to refugees and tried to discourage those who remained from making Slovenia their permanent home. It housed them in camps away from major population centers, in dingy, makeshift buildings that reminded *Boston Globe* reporter James Carroll of a concentration camp. Residents faced restrictions on their movements, educational opportunities, and access to employment. In spite of criticism from the United Nations High Commission on Refugees, which felt that Slovenia should be more receptive to the refugees' plight, the leadership declined to open the state's borders immediately. Like other nascent democrats in Central Europe, Kučan, Drnovšek, and their allies found it necessary to take care of their own first, even if the decision did not play well abroad.

By 1995, the government's efforts had brought an improvement in the overall condition of the country. The most ambitious and successful businesses, such as Belinka chemical products, had retooled and reoriented themselves toward Western European markets after the loss of clients in Yugoslavia. After two years of contentious debate, in which individuals mistrustful of private enterprise sparred with those who saw privatization as the sine qua non of a prosperous Slovenia, a law on privatization had gained approval in the legislature in 1994. The foundation for an independent judiciary had been established, and discussions about the transformation of the Slovene military continued. The war in Bosnia was not over, but peace proposals were being floated, and the refugee tide had ebbed. The Kučan-Drnovšek government thus was able to shift out of crisis management into long-term planning.

Kučan and Drnovšek saw membership in the European Union as the major long-term goal for Slovenia. This was just the latest step in a steady progression. Far-sighted Slovene politicians had established close relationships with

EU member nations in the 1960s and 1970s, and a desire for unfettered contacts with Europe had played its role in the decision to seek separation from Yugoslavia. Now, four years after Slovene independence, the state met the basic criteria for membership. It had established a stable democracy and provided guarantees for its national minorities. It had a good, if not perfect, human rights record. Additionally, it had the beginnings of a functioning market economy and the potential to fulfill and implement the numerous European Union laws governing transport, social policy, and property rights. In 1993 the Slovene government became a member of the Council of Europe, an important first step toward EU membership.

The first government also asserted that membership in the North Atlantic Treaty Organization (NATO) would bring advantages for Slovenia. Since Slovenes had unpleasant memories of the Yugoslav army from their brief war for independence and saw few threats abroad, there was some reluctance to discuss military or defense matters. However, this changed in view of recurring friction between Slovenia and Croatia over access to the Adriatic and the volatile situation next door in the former Yugoslavia. The criteria for NATO membership were the same as for the European Union—stable democracy, human rights guarantees, and a functioning market economy. It was believed that Slovenia had an additional advantage in its position as a bridge between Italy and Hungary, another prospective NATO member, and as a buffer between the European democracies and the Balkans. Accordingly, in early 1994 the National Assembly took the first step toward membership by joining the NATO preparatory program, the Partnership for Peace. In 1995 Slovene soldiers participated in a joint exercise with the United States. Observers noted that NATO membership was not universally popular among lawmakers. Some worried about the loss of control that membership in a large military alliance would require. However, President Kučan, the leading parties in the National Assembly, and the business community actively supported NATO membership, terming it an "insurance policy for foreign investment and tourism." NATO membership represented the best guarantees of the security of small nations for the foreseeable future.

In 1996 Kučan and Drnovšek faced the voters in the second national election. They made their case for another term by citing their role in righting the state in the tumultuous first years and their promotion of Slovenia's membership in NATO and the European Union. Some of their colleagues in the National Assembly criticized what they perceived as the slow pace of economic reform and privatization, but the voters felt otherwise. They strongly endorsed the country's direction, returning Drnovšek and the Liberal Party to an advantageous position in the legislature and Kučan to the presidency with a healthy majority the following year. Consensus and continuity prevailed in a time of change.

THE SECOND NATIONAL GOVERNMENT: FOCUS ON THE FUTURE

All during the election year of 1996, the Slovene government kept its focus on the future. The country's EU application had run into unanticipated trouble in 1994–1995, when the Italian government raised the issue of compensation for property confiscated by the Tito government after World War II. The 1975 Treaty of Osimo was supposed to have made restitution a dead issue, but Italian representatives insisted that the breakup of Yugoslavia made possible a revision of that agreement. Hoping to avoid reopening a contentious issue, the Slovene side insisted that the treaty was still in force. After a few months of wrangling, in which the Slovene government demanded a review of the Slovene minority's status in Italy, the two sides agreed that Slovenia would amend its constitution to allow Italians or any other foreigners to buy property in the country. This move was, in any case, required to come into compliance with European Union property law, so it was not regarded as a surrender to Italian demands.

The resolution of this issue paved the way for Prime Minister Drnovšek to sign an Associate Membership agreement with the European Union on 10 June 1996. This implied acceptance into the EU after the completion of all the preliminary steps, including complying with the body of existing laws and regulations—the *acquis communautaire*—already in effect in EU member countries. Slovenia was considered to be on the fast track because its GDP already exceeded that of Greece and Portugal, which had already gained full membership.

NATO membership appeared to be a certainty as well by 1997. Visiting Ljubljana in the late summer of 1996, U.S. Defense Secretary William Perry sang Slovenia's praises, declaring that in areas important to NATO, "Slovenia is as advanced as any of the countries of Central and Eastern Europe." However, when the formal announcement of new NATO members came in the summer of 1997, Slovenia was not included. There were various reasons given for the exclusion, including Slovenia's alleged slow progress in adapting its military to NATO standards, disagreement among members about which new members would most benefit from membership, and reluctance to include a former Yugoslav republic while the situation in the former Yugoslavia remained unsettled. In any case, the Slovene leadership made clear its intention to press for acceptance in the next round of NATO expansion. It endeavored to make itself useful to the alliance, allowing the use of its airspace during NATO operations in Kosovo in 1999 and touting the special expertise it could offer the alliance. Foreign Minister Dmitrij Rupel frequently reminded audiences in important member nations about Slovenia's expert knowledge of the Balkans, its geographic advantage, and its ability to field units of Alpine troops.

As the national election of 2000 neared, the Kučan-Drnovšek administration appeared to be making steady progress in moving the state closer to EU membership. Formal negotiations on accession began in March 1998. Although Slovenia received some criticism regarding the pace of economic reform and adaptation of EU law, it was clear that membership would come sooner rather than later. Meanwhile, the benefits of EU membership began to come into focus with the influx of preaccession funds. Under the auspices of ISPA, the EU's Instrument for Structural Policies

Slovenia's Undead

By any standard, Slovenia is a bright star in the constellation of ex-Communist states, blessed with favorable climate, an industrious, sober citizenry, and enlightened political leadership. Like many of its former Communist neighbors, however, it has a dark past, as becomes clear with the reemergence of the *Domobranci*. They are the Slovene "undead," ghosts of World War II who haunt the country's political life even today.

The Domobranci (Home Defenders) were born in the blood-soaked crucible of the Yugoslav war-within-a war, the conflict that paralleled the wider war against the Nazis and the Italians between 1941 and 1945. Beleaguered Yugoslavs were fighting not just against the invaders, but also against each other for the future. A group with close ties to the Nazi regime, the Domobranci envisioned a Catholic, nationalist, and exclusivist future for Slovenia. Their countrymen in the rival group, the OF (Osvobodilna Fronta), considered themselves a popular front organization, hoping to join with other progressive forces on behalf of a broad-based and just postwar order. They found common cause with Tito's Partisans, whose postwar objective was a new Yugoslavia based on Communist principles and the Partisan ethos, "brotherhood and unity." The Partisans went on to expel the invaders and win the war, establishing a Communist Yugoslavia in May 1945.

Slovenes who ended the war on the Partisan side got the full benefits of victory: their own republic, language and culture guarantees, even the right to secede. They were brothers in unity with the Serbs, Croats, Bosnians, Albanians, and other constituent groups. However, brotherhood and unity were not extended to the Domobranci, who had fought against the Partisans. About 8,000 escaped to Austria, fearing the consequences of capture by the Partisans, only to be forcibly repatriated by British forces. In October 1945 they were shot without trial by Partisan forces in Slovenian territory at Kočevski Rog, their bodies buried in a mass grave.

But the Domobranci did not remain dead and buried. They have been continually disinterred and used to advantage through the years. Tito invoked them to discredit his Partisan comrade Edvard Kocbek, who offended the Partisan leadership by questioning their summary executions. How could any decent Partisan take up for Nazi collaborators and fascists? In the 1980s Slovene anti-Communists, including journalists Janez Janša and Dmitrij Rupel, exhumed them as part of a campaign to shake the foundations of Communist Yugoslavia. They used the bones in investigative exposés to beat the drums of agitation, demanding to know why Slovenes should remain in a state founded on bloody murder and lawlessness. The revelations proved explosive and effective.

After the birth of independent Slovenia, the Domobranci seemed destined to be reburied. In July 1990 Slovene politicians officially acknowledged them in a public ceremony of reconciliation. But the reburial was brief. Ambitious Slovene politicians such as Andrej Bajuk have disinterred them in attempts to break the hold of Milan Kučan and the Liberal Democrats on the country's leadership. An investment banker raised in Argentina, Bajuk promoted his family ties with the Domobranci as a leading member of the new center-right party, Nova Slovenska Zaveza (New Slovene Union). Using this forum, he has called attention to Kučan and Drnovšek's Communist Party backgrounds, implying that the heirs of those who murdered the Domobranci are still running the country, holding back the pace of economic reform, and controlling elections. Meanwhile, unofficial commemorations of the Domobranci keep the issue alive, outraging those who still consider them the embodiment of fascist evil. The Domobranci continue to cast a long shadow on the country's political life.

Kučan and Drnovšek have always maintained that the Domobranci are a dead issue, a diversion from the essential tasks of the future. Still, the leadership has recognized the emotional resonance of the issue and attempted to find some common ground between those who defend and those who condemn the Domobranci. In the summer of 2003 the National Assembly passed legislation allowing for the acknowledgment of Domobranci monuments and graves in neutral language: "Victims of war and postwar killings, Republic of Slovenia." This gesture only inflamed both sides. Defenders decried a perceived refusal to admit mass murder and detractors vehemently protested a "revaluation" of people they believe to be quislings and fascists. Realistically, therefore, the Domobranci are likely to remain Slovenia's undead, unable to rest in peace until all Communist-era politicians pass from the scene.

for Preaccession, Slovenia received some $20 million for environmental improvements and transport projects. SAPARD, the Special Accession Program for Agricultural and Rural Development, also began to function in the country at this time. Prospects for NATO membership in the next expansion looked increasingly favorable as well, after a well-publicized visit to Slovenia by U.S. President Bill Clinton in 1999.

Consensus and continuity prevailed once again in the 2000 elections, as the Liberal Democrats and their allies saw their efforts rewarded with another majority in the National Assembly. In 2002 their dream of Slovenian EU and NATO membership was finally realized in the country's formal acceptance into both organizations on 1 May 2004. The third consecutive victory for the makers of independent Slovenia did not, of course, imply an absence of conflict in Slovene political life. Indeed, there were and are vocal elements in the country demanding a greater role for religion and morality in public life, including a ban on abortion and religious instruction in public schools. Others, mostly in the center-right parties, assert that the Kučan-Drnovšek leadership has too many ties to the communist past and should yield to a new generation. It is significant, though, that none of these individuals or groups opposed the basic direction of the country. There was, and continues to be, solid support for European Union and NATO membership among all responsible political parties and individuals.

SLOVENIA IN THE TWENTY-FIRST CENTURY

In 2001 the Slovene state celebrated its first ten years. Milan Kučan and like-minded colleagues who had shepherded the independent state through its first decade had compiled an enviable record of achievement. They had negotiated the tricky passage out of a rapidly disintegrating Yugoslavia and secured recognition of Slovene independence. They had helped produce a constitution worthy of the oldest European states, laying the time-tested foundations of successful democracies: the rule of law, the separation of powers, and guarantees of minority rights. They had made adjustments and taken tough decisions in the face of economic and human fallout from the Bosnian war. Finally, they had continued to look far into the future for the best guarantees of Slovenia's security and prosperity in the new Europe, preparing the country to join the European Union and the North Atlantic Treaty Organization. Briefly put, Slovenia's first generation of leaders continually demonstrated that there is great advantage in continuity and that politics can indeed be the art of the possible.

CULTURAL DEVELOPMENT

Slovene culture, like the Slovenian state, has an image problem: it has existed independently for only twelve years. No one seems to know what or where it is, and if someone takes a guess, he is more than likely to confuse it with something that sounds like Slovakia. Now that Slovenia has finally made its formal debut as a member of the European Union (EU), the world may come to appreciate both the country's distinct identity and its remarkably rich and diversified cultural life.

The fundamental concern of the Slovenes, a small people in the center of Europe whose lands have been administered by at least five different states over the centuries, has been their language. As that is the one element that has united them across physical borders and political divisions, the influence of the written word takes first place in any review of Slovene culture. Prior to the twentieth century, the Slovene language was spoken only in the countryside. It had no official recognition, and Slovenes with aspirations to education or work beyond the farm had to learn and function in German. Nonetheless, some Slovenes recognized the value of their native language. In the sixteenth century a Slovene priest, Primož Trubar, came to agree with Protestant reformers, who believed that the gospel should be made available in local languages. Trubar joined their campaign and acted on his convictions. He wrote a catechism and translated the New Testament into Slovene, a milestone in Slovene culture, and wrote an accompanying catechism. Jurij Dalmatin furthered his friend's cause and produced the entire Bible in Slovene translation. Trubar and Dalmatin's efforts guaranteed that Slovenes could learn about God in their own language. They also raised the profile of the Slovene language, sending a signal that it was a worthwhile pursuit.

The seventeenth century saw the debut of Slovenia's most famous intellectual, Janez Vajkard Valvasor. Born into a wealthy Ljubljana family in 1641, Valvasor had many opportunities to see the world but chose to devote his life to the study of the Slovene lands, especially Carniola. A tireless and wide-ranging researcher, Valvasor drew some of the first detailed maps of the region, based on his extensive travels there. He was intrigued by the proliferation of karst and the many natural curiosities it produced, such as disappearing rivers and lakes. Valvasor delighted in the many stories and legends of the Slovene peasantry, notably those associated with the local Robin Hood, Erazem Lueger. These invariably found their way into his notebooks, as did detailed descriptions of beekeeping, one of the Slovenes' most important agricultural endeavors. He laid out his life's work in a hymn of praise to Slovenia entitled *The Glory of the Duchy of Carniola*. While this book was published in German, it was clear that Valvasor's knowledge of the Slovene language made it possible. Its publication also demonstrated that the Slovene lands and its people had unique attractions and therefore deserved further study.

In the next century, more Slovenes picked up the Valvasor standard and promoted the study of Slovenia and the Slovene language. Following in the footsteps of Trubar, the monk Marco Pohlin wrote a grammar of the Slovene language, entitled *Krajnska grammatika* (Carniolan Grammar), which had the additional benefit of emphasizing that Carniola was home not just to Germans, but to a large concentration of Slovenes as well. The linguist Jernej Kopitar, who was to become one of the most prominent men of letters in Slovene history, followed up with his *Gramatik der slavischen Sprache in Krain, Kärnten und Steyermark* (Grammar of Spoken Slavic in Carniola, Carinthia, and Styria). At the same time, Anton Linhart published the first attempt to tell the story of the Slavic peoples in the Habsburg Empire, *Versuch einer Geschichte von Krain und der übrigen südlichen Slawen Osterreiche* (History of Carniola and Other Austrian South Slavic Peoples). Trubar, Dalmatin, Pohlin, and Kopitar had established that the Slovenes had an interesting and distinctive language. Echoing Valvasor, Linhart emphasized that they had a record of achievements that distinguished them from the Germans, in whose shadow they had long lived.

The Napoleonic invasion of Central Europe further advanced the cause of Slovenia and the Slovene language. Having vanquished Austria, Napoleon took parts of the Slovene and Croatian lands and grouped them for administrative purposes in an arrangement known as the Illyrian Provinces. He naturally took these measures in his own interest, hoping to block Austrian access to the Adriatic Sea. Even so, the Illyrian interlude, which began in 1809 and ended in 1813, brought meaningful long-term benefits for Slovenes. The city of Ljubljana (in German, Laibach) became the capital of the Illyrian Provinces and thereafter an unofficial Slovene capital. Slovene language instruction was introduced in Slovene primary schools, whose administrator was the celebrated poet Valentin Vodnik. Vodnik sought to assist his students by writing a Slovene language primer and a brief Slovene-French-German dictionary, the first such reference work in Slovene history.

The French interlude ended with the defeat of Napoleon, but some of the innovations and the possibilities it showcased lived on. Even in the barren period of absolutism and censorship that followed the Napoleonic era in the Habsburg empire, Slovene writers and thinkers pursued aspects of the Illyrian legacy, again with emphasis on the Slovene language. Vodnik dabbled in publishing, launching a Slovene-language newspaper, *Lublanske novice* (Ljubljana News). As the rector of the Ljubljana gymnasium, he also continued to promote the study of Slovene and authored a longer French-Slovene dictionary, as well as a text on Slovene history. Vodnik had a dedicated collaborator in Fr. Anton Martin Slomšek, who mostly worked in the countryside as a parish priest and bishop. His primer on Slovene language and culture, *Blaže and Nežica in Sunday School,* became the first all-purpose Slovene reader, providing practice in Slovene language and readable lectures on a wide range of subjects for parents and children alike. He went on to found the Society of St. Hermagor, the Slovene lands' first publishing house. Dr. Janez Bleiweis, a veternarian from Carniola, had a similar role in the evolution of Slovene culture. He published a journal entitled *News of Manufacturing and the Countryside,* in which he and a variety of specialists published a wide range of useful and interesting materials, from agricultural news to articles on linguistics and poetry.

Monument to poet France Prešeren and the Franciscan Church in Ljubljana. The poet France Prešeren (1800–1849) was known for his lyric poems, which incorporated Slovenian folk rhythms. (Bojan Brecelj/Corbis)

He continually emphasized the vitality and relevance of Slovene endeavors, asserting that "everyone should do his part to help our people emerge from the darkness of ignorance to the light of culture."

The post-Napoleonic period is perhaps best known for the debut of the man who would eventually be considered the father of Slovene literature. France Prešeren was born to a farming family in the town of Vrba in 1800. A gifted student, Prešeren demonstrated an interest in poetry early in his life, devouring everything from Homer through the early poets. As a young man, he gravitated toward Vienna and the study of law, because poetry did not hold out the promise of a viable profession. But poetry was his true passion—poetry in the Slovene language. He did not live long, and his life was not happy personally or professionally. His contributions to the Slovene language and culture are, however, legion. He was the first to write poetry in the Slovene language, poetry that soon earned him comparisons with the great romantic poets of his generation, like Alexander Pushkin and Adam Mickiewicz. Prešeren played Pygmalion to the Slovene language, winning it an entrée into the most respected circles in Europe.

He had the gift of all great national poets: he could address issues at once common to all humans and peculiar to his own people. His longest and best-known work, the epic *Krst pri Savica* (Baptism on the Savica), is set near the fabled Savica waterfall near Bohinj in Dolenjska province. It concerns the fate of Črtomir, the pagan leader of an early Slavic warrior force. Črtomir loses in battle to an invading Christian force and in the process loses his beloved Bogomila, who has meanwhile converted to Christianity in exchange for guarantees that Črtomir's life will be spared. The vagaries of fate, regrets from the past, and hope for the future despite defeat, all universal sentiments, figure prominently in this saga. Likewise, Prešeren's brief yet eloquent wish for better times, "Zdravljica" (The Toast), expresses a universal yearning for peace and freedom from a people who had known only turmoil and subjugation at the hands of their neighbors:

> God's blessing on all nations
> Who long and work for that bright day,
> When o'er earth's habitation
> No war, no strife shall hold its sway;
> Who long to see
> That all men free
> No more shall foes, but neighbours be.

These verses became the basis for the national anthem of the independent Slovene state after 1991.

In addition to producing the first widely acclaimed poetry in Slovene, Prešeren and his close friend Matija Čop founded the first Slovene literary magazine, the *Krajnska čbelica* (Carniola Bee). This periodical provided a showcase for Prešeren's work and brought poetry and prose written in Slovene to a wider audience in the Habsburg monarchy for the first time. The *Bee* began publication in 1830, whereas the bulk of Prešeren's work did not appear until 1847 in the anthology *Poezije.*

Prešeren's most important contribution may not be his poems, as legendary as they have become since his death. He foresaw as few people did the necessity of preserving the distinctiveness of the Slovene language. In the 1830s and 1840s South Slavic linguists and historians understandably sought commonality among the three South Slavic languages of the Habsburg monarchy: Serbian, Croatian, and Slovene. It was believed that linguistic unity would become the intellectual foundation for political union, in a period when the Habsburg imperial authorities were deliberately promoting centralization and Germanization. Some felt that the Slovene language should adopt the štokavian dialect shared by Serbian and Croatian, making them virtually interchangeable, at least in spoken form (Serbian is written in the Cyrillic alphabet, the consequence of having adopted Eastern rather than Western Christianity). Prešeren strongly disagreed. He argued that while Croats and Serbs tended to live in homogeneous areas, almost half of Slovenes lived in Carinthia or Styria, where the population was predominantly Italian or German and unfriendly to attempts to introduce Slovene. If they were to have any hope of maintaining their Slovene identity and culture, Prešeren believed, they needed to keep their language as distinct as possible. That meant rejecting the concept of linguistic unity, however attractive that seemed at first glance, and keeping Slovene close to the less popular kajkavian.

In honor of Prešeren's singular contributions, the Slovene state celebrates the anniversary of his death, 8 February, as a national holiday. The day is intended to demonstrate Slovenia's gratitude to Prešeren, their greatest poet, and also Slovenes' commitment to the arts and humanities. Offices and businesses are closed nationwide, would-be poets stage impromptu recitals of Prešeren's poems near his statue at the center of the city, and there are numerous readings and events in Ljubljana bookstores. The Slovene government honors its most talented men and women of culture as part of the festivities in the annual Prešeren award and Prešeren fund awards. In 2000 Prešeren Day marked the beginning of the bicentennial of the poet's birth, a yearlong series of celebrations.

Prešeren's death at the age of forty-nine immediately followed the revolutions of 1848, in which some of his compatriots proclaimed a plan for Slovene cultural and political union in Zedinjena Slovenija (United Slovenia). Prešeren, Čop, Kopitar, and others had helped lay the intellectual foundations. The revolutions did not have any immediate effects, but they did mark a point of no return: from that time, it was clear that Slovene intellectual and political leaders would work to advance the cause of Slovene language and culture in the Habsburg monarchy. The campaign was conducted in local, then national politics, concentrating on contesting German officials over the use of the Slovene language in local administrative matters and schools. Political efforts had a cultural corollary in associations like Matica Slovenska, a literary society dedicated to the dissemination of fiction and relevant nonfiction materials in the Slovene lands, and Južni Sokol, a club for Slovene sports lovers. These organizations furthered the work done in the previous era by Prešeren and

Slomšek, making available material to help Slovenes become acquainted with their language and heritage.

Prešeren had settled the dialect debate and achieved for Slovene language and literature a place in the intellectual life of the country. It fell to the next generation of writers to augment their influence and assist Slovene politicians in their struggles against Germans and Germanization.

Ivan Cankar began his career as a poet, exploring the decadent side of the Austrian fin de siècle in a collection of poems titled *Erotika.* For this he incurred the ire of the Catholic church leadership, achieving the rare distinction of seeing his work condemned. From poetry, Cankar moved on to drama, writing several plays about life in middle-class Slovenia circa 1900 that remain an important part of the Slovene theater repertoire today. But Cankar did not concentrate exclusively on art for art's sake. He contributed to the campaign for Slovenia's political and cultural future with his novel, *Bailiff Jernej.* Jernej is a kind of Slovene everyman, who serves his employer, Sitar, with devotion for many years. When Sitar dies, change comes to the house, and Jernej is marginalized, then dismissed. Convinced that his shabby treatment must somehow be illegal, Jernej travels to Ljubljana, then all the way to Vienna in search of justice. He finds instead scorn, contempt, and even arrest in the capital, at the hands of men who address him in German, a language he does not know.

Jernej is often read as a meditation on the status of Slovenes within the Habsburg monarchy at the end of the nineteenth century: willing servants for many years who find only opposition and disrespect when they finally assert themselves. In a recent essay on Slovene culture in the volume *Independent Slovenia,* Cathie Carmichael and James Gow argued that the novel anticipated some of the key issues Slovenes would face in the future, that is "the responsibilities to be faced once rights have been attained through independence, both regarding others in the self-standing house and on questions of a further condominium that might be considered." Cankar subsequently proved to be vitally interested in these questions. He gave a lecture in 1912 in which he cautioned Slovene advocates of a Yugoslav arrangement that they should be mindful of important cultural differences between Slovenes and their fellow Slavs. In fact those differences were acknowledged in the foundation of the Kingdom of Serbs, Croats, and Slovenes, leaving the Slovene contingent perhaps the only satisfied group in that ill-fated institution.

Like Prešeren, Cankar occupies a prominent place in Slovenia's pantheon of heroes. He does not have a national holiday, but the country's largest cultural center bears his name. The Cankarjev dom (Cankar Center) is an imposing, multiuse venue housing several art galleries, stages, and auditoriums, as well as an elaborate conference center. The Center pays fitting tribute to Cankar's range of literary activities and also recalls his focus on the future. It enlists both the public and private sector in its financing, receiving about 50 percent of its support from the Slovene government and requiring directors and patrons to raise the rest of the funds needed for operations.

After World War I, the Slovenes joined the Serbs, Croats, and other South Slavs in forming a new South Slavic state, the Kingdom of Serbs, Croats, and Slovenes (later renamed Yugoslavia). This was a great triumph for the Slovene people, their language, and culture. For the first time, Slovenes had their own administrative unit, their own regional officials, their own flag. More importantly, they were able to send their children to Slovene-language elementary and high schools without a fight, the Belgrade-based federal government having made this a priority. Even higher education for Slovenes in Slovenia became possible in the foundation of the University of Ljubljana in 1919, a development that seemed inconceivable before World War I.

Now that the Slovene language and culture were the equal of others in the state, it seemed that there were no major cultural or political battles to be fought in Slovenia. That was exclusively the province of Croats, who had seen no improvement and actually experienced a decline in their political standing in the first Yugoslavia. In fact, Serb-Croat conflict plagued the new state until 1939, when the Serb-dominated Belgrade government finally granted the Croatian areas administrative autonomy. Under these circumstances, it was difficult for Slovene writers to make themselves heard above the charges, countercharges, and recriminations.

In Tito's Yugoslavia, issues of greatest importance to Slovene culture again appeared settled. Slovenes could use their own language in local administration, educate their children in Slovene-language schools, and even attend their own Slovene university. In the state's constitution, Slovenes even had the theoretical right to secede if things went badly for them. It seemed that Slovene writers, who had often used their writing as a sword with which to defend Slovene culture, would find little to defend against and much to be thankful for. This was especially true after 1948. Although the Yugoslav leadership under Tito called itself "Communist," its break with the Soviet Union moved it to reject the rigid doctrine of socialist realism that artists and writers in the other communist states had to embrace. This meant that while comrades in other states had to write about issues their governments deemed important and structure their works to showcase communist values and heroes, Slovene and other Yugoslav writers enjoyed a relatively long leash. They had only to avoid explicitly nationalist subjects or direct criticism of Tito and the regime.

Despite these advantages, Slovenia's leading writer of the communist period, Edvard Kocbek, was anything but complacent. Kocbek was a poet who had made his mark shortly before the end of the first Yugoslav state by attempting to forge a third way between what he perceived as extreme nationalism in the Yugoslav government and extreme anticommunism in the Slovene Catholic Church leadership. According to John Cox, who has written extensively about Kocbek, he was vitally interested in questions of social justice and economic democracy and advocated for both in a journal he founded, *Dejanje* (Action).

Kocbek called himself a Christian Socialist, so he gravitated toward Tito and the Partisans in the crucible of World War II because they represented the best hope for a more just postwar world. In fact, he was close enough to the inner circle to become minister for Slovenia in Tito's interim postwar government. Yet he soon alienated his wartime comrades. He wrote eloquently of his wartime experiences in his first postwar poetry collection, *Strah in pogum* (Fear and Courage), but his depictions of Partisan opponents proved too dispassionate. Neutrality was never an option in discussing World War II, since the struggle and victory represented the source of the leadership's power and credibility. For this trespass on Partisan sensibilities, Kocbek was sentenced to obscurity, forbidden to publish for more than a decade.

Even after his intellectual exile ended, Kocbek was always living on the fringes of respectability. He had a persistent contrarian streak that did not play well with a leadership that preferred applause to admonition. In *On Freedom of Mind,* for example, he celebrated his free spirit, his refusal to fall into line with the rest of society:

> Even when I am tired
> I can still say the word: no,
> and when everyone is saying: yes,
> I guffaw that little word: no.
> With this word I control the situation,
> it's my form of affirmation, it makes me clear-headed and
> cruel.

Kocbek kept his distance from political action, refusing to be a cheerleader. He preferred to explore universal values such as love and free will, commenting that he valued poetry for its ability to reveal "the means by which man becomes reconciled to the world, secures himself against it, and mystically rises above it." At the same time, he felt compelled to probe the dark side of the regime he had helped to establish. In 1974 he gave a controversial interview to a Trieste newspaper condemning the draconian treatment meted out to the Slovene Domobranci, the anticommunist resistance group that contested the Partisans for the allegiance of Slovenes during World War II. These transgressions guaranteed that the full body of Kocbek's work would never appear in Tito's Yugoslavia.

Twenty years after his death, Kocbek's writing and fate are instructive. Perhaps it was no longer sufficient for Slovenes to be able to speak, educate their children, and write in the Slovene language. Kocbek hinted that Slovenes should aim higher, for the right to say and write whatever they wished without censure.

In the 1980s Kocbek's successors did aim higher, using Slovene language and literature to agitate for change in Slovenia's relationship with the Yugoslav state. The Slovenes had many complaints about their life in Yugoslavia by the 1980s, mostly concerning the federal government's misappropriation of their hard-earned revenues. But some observers were surprised to see the language issue surface again. Many Slovenes apparently felt that their language was endangered, that Serbo-Croatian was destined to become the official language of the state. They saw confirmation of this fear in the resurgence of Serbian nationalism after the Serbian Academy of Science's Memorandum of 1986 and the rise to power of Slobodan Milošević. Then came the 1988 arrest of the *Mladina* journalists over their controversial discoveries about the Yugoslav army. Citizens of Slovenia were shocked when Yugoslav army officials insisted on conducting the proceedings in Serbo-Croatian rather than Slovene. Perhaps the demise of the Slovene language might actually come to pass in Slobodan Milošević's Yugoslavia.

Concern for the future of the language was acute in Slovenia by the mid-1980s. Slovene writers now put that language to work in presenting other issues relevant to Slovenia's future. Two journals, *Mladina* and *Nova revija,* did their part in this process. Both produced controversial and hard-hitting material beginning in the mid-1980s, slaughtering sacred cows from the past and exposing corruption and deviousness in the present. *Nova revija* answered the Serbian Academy's Memorandum with a draft of a national program, which left open the possibility of sovereignty or even an independent Slovenia. *Mladina* produced the material that might have done the most to turn Slovene opinion against remaining in Yugoslavia, exposing plans by the Yugoslav army to "destabilize" Slovenia and justify an occupation by the Yugoslav army in order to silence criticism of Milošević. If the facts of that article did not convince everyone that the federal government bore active ill will toward Slovenia, the subsequent trial of the staffers and editor left no doubt. Once again, Slovene language and writing, and those who use it to maximum advantage, played a crucial role in shaping Slovenia's destiny.

VISUALS: ARCHITECTURE, PAINTING, FOLK ART

Slovene literature and language are decidedly parochial, developed and defended in reaction to outside influences. By contrast, the country's architecture is chronologically and nationally diversified—perfectly reflective of those outside influences. Venetian Gothic is on display in formerly Italian areas of the Adriatic. Austrian baroque is a fixture of such well-known attractions as the Church of the Assumption at Lake Bled. Neoclassicism, art nouveau, and socialist realism can all be found in Ljubljana, a reliable guide to the values and sensibilities of the regimes that built the structures through the centuries.

Despite the parade of foreign architects that built its cities, Slovenia eventually made its own unique contribution to the architectural world. Born in Ljubljana in 1872, Jože Plečnik was expected to follow his father into carpentry, but the younger man had other ideas. He studied briefly at the College of Handicrafts in Graz, where he first showed aptitude for design in helping a professor there with plans to redesign the Graz Ringstrasse. Following the death of his father, Plečnik went to Vienna, where he eventually gained admission to Otto Wagner's courses at the Vienna Academy of Arts. During his tenure there, the aspiring architect assisted with the design of several suburban railway stations and rubbed shoulders with some of the leading architects and designers of his day. At the end of his studies, Plečnik received the prestigious Prix de Rome and set off for a year of work and observation in France and Italy.

Venetian House, Piran, Slovenia. (Massimo Mastrorillo/Corbis)

Following his postgraduate year, Plečnik returned to Vienna and launched his career with a commission to build a new headquarters for the Zacherl Company. The finished product won him both fame and notoriety for its spare and austere appearance in Vienna's baroque center. While the Zacherl building was under construction, Plečnik made architectural history in designing the Church of the Holy Ghost, the first church in Central Europe to be constructed entirely in reinforced concrete. Prior to the outbreak of World War I, Plečnik's increasing interest in the expression of Slavic culture and traditions in architecture led him to accept the invitation of a Czech colleague to lecture at the Prague Academy of Fine Arts.

Shortly after the end of World War I, Plečnik's colleague, Professor Thomas Masaryk—by now the president of the new state of Czechoslovakia—offered him his most important assignment to date: the restoration of the fabled Hradčany Castle, headquarters of the new Czechoslovak government. Masaryk wanted the castle to reflect the character of the new state, which combined the novelty of democracy with Czech traditions. Plečnik did his best to fulfill the new president's charge. He constructed new passages within the castle that rendered it more accessible to the world outside and overhauled the network of garden paths to highlight the oldest trees on the grounds. In a nod to the new president's disdain for ostentation and formality, Plečnik worked to make points of transition from the palace grounds into public space as smooth as possible. At all times, the architect preserved as much as he could of the old building, as a mark of respect to its Czech builders.

The Hradčany restoration took almost fifteen years, because Plečnik did much of his work in Prague on weekends and vacations. By 1921, he had gone home to begin work at Slovenia's first institution of higher education, the University of Ljubljana. From there, he trained several generations of architects in his thirty-seven-year career and managed to change the face of the capital. Plečnik did numerous individual building projects, including the University and National Library, the distinctive, arched Central Market complex, St. Michael's Church, and the elaborate network of mortuary chapels at the city's Zale cemetery. While all of these have become treasured features of the city's landscape, the Zale chapels receive particular attention from art historians because they are regarded as a synthesis of the myriad influences that inform Plečnik's work: classical, Mediterranean, Egyptian, Byzantine. It might be most accurate to term Plečnik an enthusiast of the eclectic in his work there.

Beyond buildings and complexes, Plečnik overhauled the Ljubljana city plan and gave the city its contemporary look.

In this endeavor, he favored an intriguing mix of the classical, the populist, and the pragmatic. Classical touches—pyramids, obelisks, and pillars—are numerous on Ljubljana streets. Wide stairways and broad public thoroughfares dominate major attractions. The city's major playground, the Tivoli Park, features a signature Plečnik creation, the Jakopič Promenade, where Ljubljana residents like to stroll. Plečnik pragmatism is especially evident in the Tromostoje (Three Bridges), where a pedestrian thoroughfare appears alongside two bridges serving traffic, thereby making Ljubljana a friendly city for walkers. At one end of the Tromostoje stands Prešeren trg (square), with its monument to the immortal poet. This juxtaposition forges a link across the centuries between Slovenia's principal architect and the father of Slovene culture. A visiting journalist perceptively noted that "most vistas lead back to Prešeren trg" in the Slovenian capital.

Plečnik completed his body of work with structures and complexes in several other localities in Slovenia. Guidebooks most often direct attention to the chapel he designed for the Church of St. James in the town of Kamnik and embellishments to the Sava River embankment in Kranj, both in Gorenjska province. The architect did not succeed in his most controversial undertaking, an outsize parliament building that was to crown Castle Hill in Ljubljana. Tito supposedly vetoed it on the grounds that it focused excessive attention on Slovenia in an era in which "brotherhood and unity" was paramount. However, that unrealized vision took nothing away from Plečnik, who can justly be regarded as the Christopher Wren of Slovenia, especially its capital. If one wishes to see his monument in Ljuibljana, one only has to look around.

Generally speaking, Slovene painting tended to adhere to developments elsewhere in Europe, artists becoming identified with prevailing schools and movements in the world of art, depending on the era in which they worked. Some of the most celebrated are on permanent exhibition all day, every day thanks to the efforts of the Slovene National Gallery, which has built a magnificent virtual exhibit space for Internet visitors worldwide. There those unable to visit in person can avail themselves of a guided tour through Slovene art through the centuries, from the baroque era through contemporary artists. The talent level is invariably high there, but Ivan Grohar has a place of special honor. An exhibit of his work inaugurated the Tito era in the National Gallery in 1951, after which Grohar became the anchor of the Slovene collection there. Described as a modernist, Grohar painted classic scenes of life in the Slovene countryside, such as *Snow in Škofja Loka,* a picturesque town in Gorenjska province. He is also credited with raising the profile of the *kozolec,* the elaborate double-roofed hayracks that dot the landscape in the oldest Slovene regions, having incorporated them into several paintings. Few people recognized their quintessentially Slovene character, their value as examples of unique folk art, before they became a fixture of Grohar's work.

Although she is not yet a member of the online gallery, the realist painter Ivana Kobilica is a name that everyone should know. If Grohar is the best known and loved painter in Slovenia proper, Kobilica has achieved the highest degree of international recognition among Slovene painters. During her lifetime, she worked in Florence, Berlin, and Paris, where her talents won her membership in the prestigious Société Nationale des Beaux Arts. Her works, of which *Grandmother's Chest* and *Children in the Grass* enjoy the greatest renown, mark her as Slovenia's most accomplished exponent of realism. The first independent Slovene government paid tribute to Kobilica's achievements when it put her image on the national currency, the tolar.

Every nation seems to produce an aspect of culture it can call its own. In Slovenia, that honor goes to an art form associated with a once crucial element of farm life: beekeeping. The occupation of beekeeping has been known in Slovenia at least since the sixteenth century, when buckwheat was first planted in Carniola province. Buckwheat attracts bees, on whose presence Slovene farmers quickly capitalized. Wax was an essential element in the making of candles, and honey was the only sweetener for cooks until the refinement of sugar became possible in the eighteenth century. Keeping bees thus became a necessity, as the man who became the founder of scientific beekeeping knew well. Once headed for a career as an artist, Anton Janša acquired a reputation around Vienna for his knowledge of bees, which he had tended as a child on a farm near Bled in the 1740s and 1750s. The Austrian empress, Maria Theresa, tapped him to head the Imperial Beekeeping School, where he analyzed and chronicled the relationships in the beehive. He also wrote extensively about the medicinal uses of bee-related substances such as propolis, a staple of contemporary alternative medicine. These achievements made him the father of scientific beekeeping.

While Janša conducted advanced research in Vienna, the countryside had a more practical concern: how best to confine its bees. It seemed natural to use hollowed-out logs, but removing the honeycomb from them often proved difficult. By the middle of the eighteenth century, enterprising farmers had found a better way, producing the first so-called *kranjnič* hives. These structures resembled small houses with individual "rooms," removable boxes containing individual hives. Bees were accessible from the front or the back, and keepers could remove honeycombs intact. These hives represented an invaluable innovation, a great step forward in the keeping of bees. In 1758 they acquired another dimension when someone painted a Madonna and Child on the front of a hive in Carniola Province.

That Madonna and Child represented the beginning of a folk art phenomenon known in Slovene as *panjske končnice*—the painting of beehive fronts. After 1758, beehive painting became commonplace, a typical feature of the Slovenian countryside, particularly in the regions of Carniola, Dolenjska, and Styria. There is no one explanation for its appearance. Since the first painting depicted the Virgin Mary and infant Jesus, experts believe that keepers may have sought divine protection for their bees. Janša and his successors repeatedly emphasized that bees could recognize colors, so that some farmers probably hoped to orient their bees with colorful panels. As time went on, the expanding range of subjects on the panels suggested other motives. In

an interview with *Slovenia News* in July 2003, Professor Janez Bogataj emphasized their use as a means of visual communication among people who often could not read; the panels acquainted people with folk tales and legends, told of successes and failures, and sometimes conveyed simple humor. One well-known motif has the hunted turning the tables on a hunter, animals packing away their traditional antagonist and licking their chops in anticipation of a tasty meal. By the nineteenth century, the most elaborately decorated fronts, which in one case included an intricate carving of a Turkish soldier and Napoleon, seemed intended to make a statement. The owner hoped to demonstrate to the neighbors that he had attained sufficient prosperity to indulge in something beyond life's essentials, perhaps even the luxury of hiring an artist to produce something extraordinary for his home.

By the twentieth century, further advances in beekeeping technology had consigned beehive covers to the realm of folk art. Ironically, these structures are probably more important to today's Slovenes than to their predecessors because they constitute an art form found only in Slovenia, something of transcendent value for a small people whose culture has always been influenced by its overlords. Experts have catalogued some 50,000 examples, identifying approximately 600 motifs in which festivals, religious beliefs, holidays, and human vices and virtues figure most prominently. The largest collection resides at the Beekeeping Museum in the town of Radovljica (in Gorenjska province), an institution dedicated exclusively to the history of beekeeping in Slovenia. There they represent an obligatory stop for thousands of traveling Slovene beekeeping enthusiasts, whose influence beyond Slovenia was sufficient to land the 2003 World Beekeeping Congress for the Cankarjev Center in Ljubljana.

Kozolci (singular, *kozolec*), "hayracks," represent a second uniquely Slovene contribution to world culture. Like beehive fronts, hayracks were originally a practical aid in the countryside. Slovene farmers needed a means to dry freshly cut hay, so they built simple, fencelike structures, vertical poles intersected by horizontal bars. In places where corn and wheat were cultivated, cover was essential, so roofed kozolci became a fixture there. These could be modest structures, resembling a small farmhouse. More prosperous farmers favored larger, double-roofed, intricately decorated models. According to Ljubljana University professor Dr. Borut Juvanec, who has traced the evolution of these structures, the kozolec front identifies the structure with a particular region. Those found above the Sava River are slender, while kozolci to the south of the Sava invariably are more robust. In areas such as Lake Bohinj, where many visitors have made note of these structures, the roofs have overhangs and slant patterns in order to protect more effectively against the heavy annual rainfall. In addition to communicating information about financial status and location, kozolci also speak to the passage of time. They became larger as farm implements became more numerous and complex; these required protection against the elements. As families acquired more conveniences, moreover, the kozolci saw additional duty as storage sheds. Today, the requirements of modern farming have rendered kozolci technologically obsolete, so they have joined beehive fronts in the country's ethnographic museums and gift shops.

MUSIC AND FILM

To date, music might be among the best-kept secrets of Slovene culture. Classical music has a long history in the Slovene lands, beginning in the sixteenth century with the composer Jakob Gallus. Gallus began as a tenor in the Imperial Chapel at Vienna, later becoming choirmaster to the Bishop of Olomouc in the modern-day Czech Republic. In the last years of his life, he composed a significant body of liturgical works as well, sixteen Masses, two Passions, and a cycle of music for the entire church year, some of which remains an active part of the repertory in Catholic churches in Europe and America. Of course, Gallus was considered Austrian, because there was no Slovenian political entity in the sixteenth century, but he acknowledged his Slovene roots by calling himself Jacobus Gallus Carniolus. Gallus Hall in Ljubljana's Cankarjev Center recently became the home of the Slovene Philharmonic, which debuted in 1701 as the Academica Philharmonicorum in Ljubljana. In its Austrian incarnation, it was one of the premier musical groups in the Habsburg Empire, well known for its talent and repertory, which included Schubert, Beethoven, Haydn, and Mozart. Gustav Mahler spent a memorable year as guest conductor in 1881–1882. Since its reconstitution in 1947 as the Slovene Philharmonic, the orchestra has maintained a busy recording schedule and showcased the talents of foreign and native artists, notably Slovenia's own piano virtuoso, Dubravka Tomšič and the classically trained avant-garde trombonist, Vinko Globokar. Globokar may be the only performer in Slovenia—or anywhere else—ever to incorporate into one of his compositions the playing of a trombone underwater.

In recent years, the end of the Philharmonic year has marked the beginning of two summer classics, the Summer Festival in Ljubljana and the Early Music Festival in Radovljica, whose reputation and participation grow yearly. An endangered species in some countries, classical music has retained an enthusiastic following in Slovenia.

Like their counterparts elsewhere in the former Yugoslav states, Slovene filmmakers have played mostly to home crowds since they made their debut after 1945. In the early years they focused on issues of strictly domestic interest, such as the Yugoslav experience in World War II. However, Slovenia's most prolific director, France Stiglic, has managed to do what Prešeren did for language and literature, appealing to audiences beyond Slovenia. His 1956 *Dolina miru* (The Valley of Peace), which played at the 1957 Cannes film festival, has become a minor world classic. In the film, two children, one German, one Slovene, escape from an orphanage in 1944 and encounter an African American pilot shot down in the area. Together, they search for the boy's uncle, who lives near what the children hope will be a "valley of peace," a refuge from unrelenting war. That the ending is unhappy is irrelevant; the bonds forged across racial and national divides between the children and the pilot reaffirm their common humanity in terrible circumstances. This film has found a following in America under the title, *Sergeant Jim,* spotlighting the African American airman.

In independent Slovenia, filmmaking has experienced many of the difficulties common to other ex-socialist states, namely a decline in state funding and temporary loss of audiences due to an influx of cheap offerings from Hollywood. These problems have not deterred the most talented and determined practitioners of the art, who have helped make possible new projects in the creation of the Slovene Film Fund, a joint government and private financing mechanism. In addition, Slovenia has become a member of Euroimages, a coproduction company for the continent, through which filmmakers will ideally be able to access more funding and theaters. This development coincided with Slovene collaboration on the 2001 hit film, *No Man's Land,* which augurs well for the future of the Slovene cinema.

FUSION: ART, MUSIC, ARCHITECTURE, POLITICS

In nearly all the socialist states, young journalists and artists took advantage of changing political winds in the 1980s to advance the cause of reform. In the Soviet Union, for example, Artyom Borovik went to Afghanistan in 1987 to report firsthand on Red Army troops fighting there. His searing portrait of a war gone disastrously bad, serialized in the weekly magazine *Ogonek,* created a sensation at home and helped convince Mikhail Gorbachev to declare victory and bring the troops home. In the Slovene republic, the forces driving change came not just from journalism, where *Mladina* and *Nova revija* hammered away at Milošević's Yugoslavia, but from art, rock music, drama, architecture, and art. The group known as Neue Slowenische Kunst (New Slovene Art) debuted four years after Tito's death, in 1984. Its members hoped to force their fellow citizens to think differently about the future, using outrageous images and devices. For example, its artists submitted a design of a poster commemorating Tito's birthday in the mid-1980s. Officials initially liked the design, only to recoil in horror when they discovered that the artists had deliberately copied a Nazi-era poster and put Tito in Hitler's place. The artists just laughed, because they saw communism and Nazism as sharing a common totalitarian origin.

The musical component—the rock group Laibach, the German name for the Slovene capital, Ljubljana—wore clothing reminiscent of Nazi uniforms in their concert appearances and used imagery from Nazi cinema in album covers and stage sets. Meanwhile, NSK member architects and city planners resurrected Plečnik's 1950s-era proposal for a grand Slovene parliament, rejected because it drew inordinate attention to Slovenia at the expense of other republics. The so-called Graditelji strongly implied that Slovenia deserved that building as a symbol of its contributions to Yugoslavia, which far exceeded its size and population. All NSK activities, of which the latter constitute only a small part, posed a simple question. If Slovenes constituted the most important and prosperous part of an entity that shared ideological origins with Nazism, should they not contemplate making other arrangements in an era replete with new possibilities? Politicians would be charged with determining and acting on the answer, but as usual, the question had its origins in Slovene culture.

PROSPECTS

A high-ranking Catholic Church leader once wondered aloud whether Slovene culture remained largely unknown because the Slovene people were a small group only recently constituted as a political entity, or whether the quality of cultural offerings was simply insufficient to win the attention of the wider world. As Slovenia prepares to become an official member of postmillennium Europe, that issue is about to get a hearing. Given the combination of distinctiveness and diversity so evident in Slovenia's cultural life, the verdict is likely to cheer and inspire from Ljubljana to Lipica.

ECONOMIC DEVELOPMENT

"As goes Slovenia, so goes the economy." This is perhaps the best description of the development of Slovene economic life over the past century. Slovenia's economy was born in Slovenia's tenure in the Habsburg Empire, occupying a place of disproportionate importance in the first and second Yugoslavia, and achieved independence in Slovenia's breakaway from the second Yugoslavia in 1991. It has faced daunting challenges resulting from its removal from the well-integrated Yugoslav market. Its success in overcoming these difficulties and obstacles has impressed outside observers, who describe it as one of the most dynamic economies in the new Europe. It eventually becomes apparent that the development of the Slovene economy parallels that of the Slovene state itself.

For most of its existence prior to the nineteenth century, the Slovene economy was based on agriculture. The coming of the industrial age in the Habsburg monarchy inevitably brought changes. The various Slovene regions experienced considerable diversification of economic activity during this period: Carinthia became known for mining and flax, Styria for livestock production and processing, areas near the Adriatic for silk and wine production. The contours of an Austrian general market, and Slovenia's role in it, were also becoming clear. For example, Slovene regions depended on wheat grown in the Croatian lands, Backa, and Banat. Carinthian raw materials were routinely shipped off to Croatia, Banat, and other regions.

By the dawn of the twentieth century, the expansion of railway links among Vienna, Ljubljana, and Trieste and an influx of German and French capital resulted in the development of manufacturing industries. Mining and metallurgical enterprises appeared, followed by chemical, food, and paper-processing plants and shipbuilding in the Trieste area. Imperial authorities built a large railway enterprise in Maribor that employed some twelve hundred people in its heyday. The foundations for the textile industry were established as well, a development that was to prove crucial in coming decades, Growth rates were impressive, averaging 40 percent over the period from 1890 to 1914.

Concentrated mainly in Carinthia, Styria, and Carniola, agriculture continued to employ the majority of Slovenes to 1914. The mainstays of the agricultural economy, then as now, were maize, hops, poultry, pig and dairy farming, beekeeping, and viticulture. A favorable combination of temperate climate and varied terrain—lots of heat in summer and moisture in winter, shielded from the worst excesses by its mountain ranges—has made wine a staple of the Slovene economy for many centuries. The Roman historian Tacitus spoke highly of the vintage he encountered near the modern-day city of Ptujin the first century. Viticulture was well established in Styria and Prekmurje regions in the ninth century, according to recent archeological discoveries. By the twelfth century, forests had been cleared to make way for vineyards, and would-be producers were even attempting to cultivate grapes in relatively inhospitable locales such as Ljubljana. From that time, the wine industry in the Slovenian lands underwent more or less continuous growth. By the mid-nineteenth century, some 125,000 acres were under cultivation.

The last decades of the nineteenth century were not kind to Slovenian winemakers. An invasion of the phylloxera aphid in the 1880s nearly destroyed vineyards throughout the region. Elsewhere, the countryside experienced some predictable hardships owing to industrialization. In fact, between 1850 and 1914, the Slovene lands produced an unexpected export: Slovenes themselves. About 300,000 left to seek work or a new life outside the Habsburg monarchy, many to America, where Cleveland became a permanent outpost of Slovenia abroad.

RAPID STRIDES AND FOUNDATIONS FOR THE FUTURE (1918–1941)

The Slovene economy underwent a major transformation the moment it became part of the Kingdom of Serbs, Croats, and Slovenes (later renamed Yugoslavia) in 1918. Where it had once been one of the least developed in the Habsburg monarchy, it was now by far the most diversified and industrialized in the new kingdom. This meant that while the Slovene economy faced the challenge of reorienting itself from the previous capital, Vienna, to the new one at Belgrade, it began its new life with significant advantages. For example, only Slovenia was equipped to produce the range and quantity of consumer goods that citizens of the kingdom would demand. Accordingly, great progress came quickly in key consumer industries such as construction materials, furniture manufacturing, and textiles. A milestone in the development of the latter came in the 1925 founding of two sewing shops in Murska Sobota, in southeast Slovenia. These eventually merged to become Slovenia's largest clothing maker, Mura.

Agriculture presented a more mixed picture. Producers suffered all the familiar consequences associated with the breakup of the Habsburg Empire, such as the closing of traditional markets followed by prohibitive trade barriers established in the new neighboring successor states. Their lot worsened with the economic downturn of the 1930s, as those countries, which had promoted themselves as dependable markets for export, turned inward and refused to buy surplus from the kingdom. Ironically, the only European power in a position to import foodstuffs after 1933 was Nazi Germany. Accordingly, it exercised increasing economic as well as political leverage over Yugoslavia and other Southeast European states in the late 1930s, a development that ultimately played a crucial role in the destruction of the postwar order in Europe.

Perhaps the most significant development for the future was the new accessibility of education in Slovenia. In the Habsburg monarchy, there were few schools and almost no instruction in the Slovene language. The Belgrade-based administration of the Kingdom of Serbs, Croats, and Slovenes took care to provide for education at all levels in Slovenia. The first Slovene university opened in Ljubljana in 1919; its first offerings were courses in economics. A technical high school soon began accepting students, and a system of primary schools was under way early in the 1920s. In addition, there were courses for farmers in winter, focusing on basic education as well as new techniques and machinery. The Slovene economy of the 1990s was the ultimate beneficiary of these institutions, since the citizens who made it successful had acquired their expertise in these institutions.

Despite the great hardships that the world financial crisis inflicted on Slovenia, indeed all of Yugoslavia's regions, Slovenia's economic contributions far exceeded its population and size vis-à-vis the other republics. It accounted for just 8–10 percent of the population of the state, yet it was responsible for 25 percent of the national product, a trend that would only become more pronounced in the future.

THE PRIMACY OF POLITICS: THE SLOVENIAN ECONOMY IN COMMUNIST YUGOSLAVIA

The foundation of the second Yugoslav state after 1945 initially presaged big changes in the economies of all the constituent republics. Communist theory, which Josip Broz Tito and the other founding fathers embraced with fervor, dictated that socialism be built on the foundations of heavy industry and collectivized agriculture. As it happened, the country's chief ideologue and economist—Edward Kardelj and Boris Kidrić, respectively—both hailed from Slovenia, so the campaign for industrialization seemed destined to have a major impact on the Slovenian economy.

Priorities changed abruptly after Tito's famous confrontation and break with Joseph Stalin and the Soviet Union in 1948. It had gradually become clear that the price of following Stalin faithfully would be economic and political subservience, a state of affairs that Tito was unwilling to accept. He and his comrades had not won a four-year war against internal and external enemies in order to become a colony to a great power. They intended to preside over a socialist country with a diversified economy, capable of existing on its own. Accordingly, while the central government at Belgrade retained veto power over economic planning, industrialization and collectivization were deemphasized in favor of a more rational approach to the country's capabilities. The highly touted policy of workers' self-management, in which the staff of individual enterprises helped to determine wages, priorities, and marketing strategies, debuted in the 1950 Law on the Management of State Economic Association by Work Collectives. As before, the manufacturing sector had a high priority in Slovenia, because that was an area of advantage for the whole country. Not only Slovenes required high-quality clothing, furniture, and pharmaceuticals.

In the 1960s strategic reforms opened Yugoslavia's borders and economy. Mindful of Slovenia's status as the most economically advanced of all the republics, a new generation of Slovene leaders hastened to take advantage of new opportunities. The leader of the Slovene republic, Stane Kavčič, encouraged efforts to establish economic relationships abroad and urged firms to focus on profitable, growth-oriented industries such as electronics and appliances. He believed that these priorities would be essential to Slovenia's retaining its economic viability in the future. Ambitious businesspeople responded enthusiastically to Kavčič's appeals. The home appliances giant Gorenje, once a manufacturer of heavy agricultural machinery, shifted its focus to slow cookers and then stoves, refrigerators, and other home appliances. After the change of orientation, company leaders expanded their reach within Yugoslavia and then forged contacts with neighboring European states, which produced significant sales there. Meanwhile, the Yugoslav automaker Revoz negotiated a contract with its French counterpart, Renault, in September 1972. The next year, the chemical firm Belinka negotiated joint venture investment and technology transfer agreements with similar firms in Belgium and Great Britain. These efforts helped Slovenia maintain the enviable position it had long had among the Yugoslav republics. As before, it had less than 10 percent of the population, yet contributed over 30 percent of Yugoslavia's exports, most in the areas Kavčič had identified as crucial.

As bright as the future looked in the 1960s, one non-negotiable fact of Yugoslav political life was bound to cause difficulty for the Slovene economy. Yugoslav leaders always had a delicate balance to maintain in the state; they had to allow wide latitude in the individual republics so as to avoid the familiar charge that Belgrade—with its implied Serb dominance—was dominating the country. Besides, they were committed to the concept of workers' self-management in individual enterprises, since that constituted a legitimate innovation that set them apart from other socialist leaders. Yet they also knew that there was great economic imbalance among the republics, the northern, ex-Habsburg republics of Croatia and Slovenia surging ahead while the southern republics lagged behind. Since economic grievances tended to fuel nationalist sentiment, Yugoslav leaders expropriated funds from Croatia and Slovenia to finance development projects in the southern republics. If Macedonia and Kosovo had more and better economic opportunities, the reasoning went, workers there would perceive themselves equal to their fellow citizens in Croatia and Slovenia and endorse the state's ethos of "brotherhood and unity." This strategy was codified in the establishment of the General Investment Fund in the 1950s, which was administered by a special Yugoslav Investment Bank in Belgrade beginning in 1956.

This fund inevitably created resentment in both Slovenia and Croatia, the most economically advanced among the republics. While there was acknowledgment that measures to aid the poorer regions were necessary, it often seemed that the funds taken from Slovene coffers were not well spent. It was hard to see, for example, the value in a refrigerator plant located in a remote southern region that was inaccessible most of the year, or in a large soccer stadium in one of the least populated capitals. At the same time, the federal government sometimes proved unwilling to support projects that promised improvements specific to the Slovene economy, which continued to contribute more than its share to the country. In 1969 the republic applied for, and received, financial assistance from the World Bank for an overhaul of roads connecting Slovenia to Austria and Italy. This made sense, since Slovene exports reached European markets mostly through truck traffic. But because the funds went first to the central government at Belgrade, the bureaucrats there could distribute it as they wished. They decided that the money would be better spent elsewhere.

The predominance of politics in decisions affecting the Slovene economy remained an irritant while the country remained generally prosperous. By the 1980s, however, it was becoming a crisis for Slovenia and the rest of Yugoslavia. Early in the decade, Tito and Kardelj, the men who had founded Yugoslavia and made it work, passed from the scene. At the same time, the national economy buckled under the burden of a huge federal debt, the result of poor planning, overspending, and low growth. The post-Tito arrangement for political leadership, a presidency that rotated among leaders of all six republics, attempted to remedy these difficulties in part by requiring all republics to share equally in the servicing of the debt. This meant that Slovenia, which already contributed disproportionately to the national economy, would receive the same treatment as its less prosperous neighbors. A Slovene journalist opined that, once again, Slovenes were victims of overbearing political interference combined with an utter lack of economic perspective.

Consternation about Slovenia's political and economic role in Yugoslavia only grew after a series of provocative events that culminated in the coming to power of Slobodan Milošević as president of the Serbian republic in 1987. Milošević began his tenure by staging a public intervention on behalf of Serbs in a dispute with Albanians in Kosovo, appearing in the midst of a melée to proclaim before Yugoslav television cameras that Serbs "would not be beaten again." In the next few months Milošević masterminded the incorporation of two formerly autonomous republics into Serbia, thereby increasing the Serbian republic's political influence. These demarches caused concern in Slovenia and other republics, since the perception that Milošević was creating—that Serbs wished to dominate the other groups—had already destroyed one Yugoslav state. Concern became open alarm in Slovenia when officials from the Belgrade-based federal army arrested several journalists associated with the popular Slovene weekly *Mladina* and then tried them for antistate activity behind closed doors and in the Serbo-Croatian language. This episode had a fateful effect on Slovene attitudes toward their future in Yugoslavia. If Milošević's rule in Yugoslavia meant Serb bureaucrats taking liberties with Slovene sensibilities, perhaps Slovenes would have to seek other arrangements.

In fact, they did exactly that. Between 1989 and 1991, the Slovene leadership sought various means of altering Slovenia's position within Yugoslavia, with economic issues playing a key role. On several occasions, Slovene President Milan Kučan proposed that Slovenia and Croatia make their own financial assistance arrangements with the less developed republics rather than leaving such decisions to the federal government. Slovenes amended their constitution in 1990, pointedly reserving for themselves the right to manage their own revenues. Afterward, Kučan and his advisers insisted that the future viability of Yugoslavia depended on its becoming a confederation of sovereign states, so as to prevent what he saw as the exploitation of Slovenia and Croatia. When Milošević rejected and contested all these proposals, the Slovene leadership decided to ask its constituents to rule on their future in Yugoslavia. They answered with a resounding yes to the idea of sovereignty for Slovenia in December 1990.

This decision appeared inspired early in 1991, when Serb bureaucrats staged an illegal midnight raid on the Yugoslav federal treasury in order to pay pensions for Serbs exclusively at a time of great financial hardship for everyone. This outrage, known to history as the Great Serbian Bank Robbery, led directly to Slovenia's declaration of independence from Yugoslavia a few months later. After a brief, but difficult ten-day war with the Yugoslav army in June 1991, Slovenes won their independence. They would now have the opportunity to prove that a small, well-educated, and industrious people could stand on its own in postcommunist Central Europe.

THE SLOVENE ECONOMY IN TRANSITION (1991–1997)

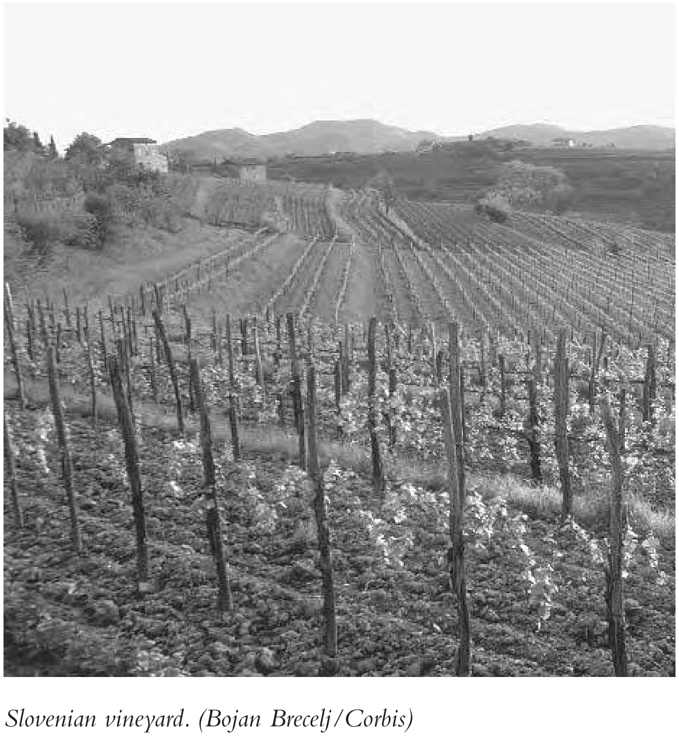
The Slovenes began their new life with some clear advantages, even though they had never had their own state. Thanks to the educational foundations laid in the first Yugoslavia, Slovenia had a well-educated, multilingual workforce. Beginning with the Kavčič era, the Slovene republic always exported far more products to Europe than its neighbors and attracted the most direct foreign investment. Newly independent Slovenia therefore had good relationships with the wealthiest nations in Europe, especially Germany. In contrast to some of their former communist neighbors, struggling to manage the transition to a market economy, the new Slovene citizens could call on their experiences with workers' self-management. Despite frequent interference from Belgrade bureaucrats, workers in all the Yugoslav republics had been responsible for making their own business plan, setting their own targets, and devising marketing strategies. The Slovenes already had these skills, and their products had competed successfully with those of other republics in a functioning market within Yugoslavia. Simply put, Slovenes knew how to do business.

Still, though, laying the foundations for the country's economy seemed a daunting task in the first months after independence. For one thing, the bill from the war for independence was quite high, well beyond the estimated $2 billion in physical damage done by the Yugoslav army during the ten-day war. This was in part because of the circumstances surrounding Slovenia's exit from Yugoslavia. If the separation had taken place amicably, if Yugoslavia had not been engulfed in conflict, Slovenia might have maintained its contacts with the Yugoslav republics. But the outbreak of war in Croatia and Bosnia-Hercegovina disrupted existing political and economic relationships, after which United Nations sanctions suspended them indefinitely by imposing sanctions on Serbia. For Slovenes, this meant the loss of 30–40 percent of their existing market. At the same time, Slovene leaders urgently sought international recognition of their new state. This did not come immediately, because of disagreements in Europe and the United States over sanctioning the breakup of Yugoslavia. Until that was achieved, there could be no question of building a new economic infrastructure or forging new agreements with European partners.

In accordance with new European Community guidelines, Slovenian independence was recognized by most European states in January 1992. Two months later, Slovenia became a member of the Council for Security and Cooperation in Europe and the United Nations. Now Slovenes could concentrate on laying the foundations for a market economy. Restructuring the banking and financial systems was an obvious priority, as demonstrated in the creation of a Bank Rehabilitation Agency in 1991. Next came the establishment of new banks, in addition to the diversification of existing institutions. Today, a number of foreign banks also have representation in Ljubljana and other major cities.

Another key task was determining ownership of existing enterprises, or privatization. This process was obligatory for all states making the transition from socialism to a market economy, since the central government had owned and controlled all essential economic activities. This was a difficult process everywhere, but especially in Slovenia, where Slovene workers themselves had owned and administered their enterprises since the implementation of workers' self-management in the 1960s. Not surprisingly, it took the new Slovene government many months, and several draft proposals, to come to an agreement on a strategy. The final Law on Ownership Transformation of 1992 required 40 percent of stock to be transferred. Beyond that, as the *Economist* magazine explained, a number of means would be possible: public sale of shares, internal distribution of shares exchanged for ownership certificates, shares sold at a discount for cash. It was hoped that this arrangement would strike a balance between the interests of workers and management and provide for a speedy transformation of the socialist economic landscape. By 1998, privatization was well under way, although critics have pointed to slow implementation in large national enterprises such as public utilities and banks.

Meanwhile, Slovene employers and employees struggled to master this and other challenges in their new universe. Accustomed to socialist-era largesse, such as subsidized meals, paid vacations at desirable destinations, and full health benefits, workers faced the reality of competition outside a protected market, which brought lower wages, cuts in services, and the previously unthinkable—unemployment. Presumably, these measures would make it easier to compete in new venues and find new clients. It was anything but easy in the first months; as production fell, unemployment—anathema in socialist Yugoslavia—exceeded 10 percent, and inflation soared on the introduction of the Slovene currency, the tolar. Gradually, however, firms with good management adjusted and held their own. The experience of the Belinka chemical enterprise, which had established a reputation in Yugoslavia as a future-oriented company, was an instructive case in point. "The transition from the ex-Yugoslavia has caused us very big problems, because Slovenia was very much oriented to the former Yugoslav market," director Marjan Cerar told a *Boston Globe* correspondent in the summer of 1993. "The Bosnian market, due to the war there, doesn't exist, and the Serbian market, due to the United Nations sanctions, doesn't exist either. So, we must export wherever possible." Drawing on past experiences in self-management, Belinka took an ag-



Slovenian vineyard. (Bojan Brecelj/Corbis) gressive approach to reinventing itself. It introduced immediate austerity measures, putting a freeze on hiring and liquidating the advantages its workers had known for decades, such as the resort hotel on the Adriatic for summer vacations. At the same time, it established joint-venture arrangements with firms in Russia and Italy and negotiated new contracts. Belinka products now were bound for Austria, labels on the packaging printed in German. Although profits initially disappointed, the company has remained viable in the new economy. Its goals for the twenty-first century, according to its Web page, include product diversification with a focus on environmentally friendly technologies.

"We know that everything won't be okay at the moment of independence," Slovene finance minister Marko Krajnec said shortly before the 1991 war. "In fact, it will be worse. But people understand that there will be a temporary lowering of living standards. After a transition period of three to five years, after we have improved the banking and economic system, we will be able to do business with the rest of Europe." Firms like Belinka made Krajnec's words a reality. By 1997, the Slovene economy had begun to recover from the first difficult years of transition, showing signs of steady, albeit slow, growth. In 1994 the Slovenian GDP registered a 3 percent rise; by 1997, it was growing at an annual rate of 5 percent. Reorientation of trade toward European markets had proceeded to the point that some 70 percent of the country's output now went to Germany, Austria, and other European states. Slovenia was also attracting foreign investment, as evidenced by the presence of Siemens, Renault, and the Austrian Creditinstalt bank in Slovenia. One sure—and ironic—indicator of this trend was the new career of Franci Zavrl, sentenced to an eighteen-month prison term by a Yugoslav military court in the infamous *Mladina* scandal of 1988. The sometime felon had founded an advertising and public relations agency—Pristop—that assisted Slovene and foreign businesspeople and government officials in learning to use the local media to their advantage. By 1997, this enterprise had made Zavrl one of independent Slovenia's wealthiest men.

By the end of 1995, Slovenia had achieved sufficient progress to begin preparations to enter the European Union, the holy grail for Central and Eastern European states emerging from communism. Its representatives were able to open negotiations by pointing out that almost three-fourths of the country's trade was conducted with European Union (EU) countries. Slovenia had met the preliminary criteria for candidate members, having established a stable political regime, restructured the economy sufficiently to permit successful competition in a larger market, and indicated its readiness to assume administrative responsibilities. In June 1996 Prime Minister Janez Drnovšek signed an agreement granting Slovenia associate membership in the

Bled Lake and Julian Alps. (Janez Skok/Corbis)

EU. This permitted the country's elected officials to begin to bring their financial and diplomatic policies in line with the numerous requirements for full members of the Union. One key task in this process was the passage of more than a thousand laws, bylaws, and sundry regulations approximating those of existing EU members. The date of Slovenia's accession to the EU was finally fixed for May 2004, following a formal vote of confidence from the citizenry, which enthusiastically voted in March 2003 for entry into the European Union. On 1 May 2004, Slovene citizens celebrated, as the nation formally joined the EU.

PREPARING TO JOIN EUROPE: THE SLOVENE ECONOMY AT THE MILLENNIUM

As Slovenia emerges from the difficulties of its first few years and contemplates the advantages and challenges of European Union membership, the contours of its independent economic life are coming into focus. Some long-established industries, such as mining, have gone into eclipse, probably not to return. Others, notably textiles, are experiencing tough times and may face radical restructuring or relocation. Employees of the well-established clothing company Mura, for example, now wonder whether their jobs will be outsourced to cheaper labor markets as their company struggles to survive in a tough market. On the other hand, the requirements of the new economy have spurred the creation of new fields of endeavor. One of the most prominent examples is Franci Zavrl's firm Pristop, whose fortunes have only risen since its establishment in the early 1990s. In 2003 Slovenia's premier advertising and public relations firm had representatives working in five countries and reported revenues of millions of euros.

One mainstay of the Slovene economy in the twentieth century, the manufacturing sector, is again proving to be a strong performer, especially in pharmaceuticals, appliances, and auto production/parts. In the first decade of independent Slovenia the drug companies Krka and Lek, the automobile manufacturer Revoz, and the Gorenje group, manufacturers of home appliances, have maintained the highest profile. Moreover, dedicated outdoors enthusiasts in Europe and North America have all come to know the ski, bike, and boat manufacturer Élan. In retail sales, another sector that has flourished in the transition period, Mercator has established itself as a major player in the competitive world of food markets. One also encounters the oil trader firm, Petrol, and the home entertainment company, BoFex, in discussions of successful new retailers in Slovenia.

As noted, Slovene manufacturers and retailers were forced to find new markets following the outbreak of war in Yugoslavia. Most concentrated on Western Europe, while Krka pharmaceuticals went east to revive old contacts in Warsaw and Moscow, successfully marketing dozens of drugs on the Russian market and making plans to open a production facility near the Russian capital. By the late 1990s, however, the Yugoslav markets were reviving, and Slovene firms were able to capitalize immediately. In a recent country profile, the *Economist* noted that by 2000, "almost every major Slovene company had either made some sort of investment in the rest of the region or was planning to do so." The Ljubljana-based Lek was among the first to take advantage of the improved circumstances, announcing plans in 1998 to build a greenfield plant in Macedonia in order to serve the emerging Balkan region. One of Slovenia's largest breweries, Pivovarna Union, expressed confidence in the recovery of Bosnia-Hercegovina by establishing a presence in Sarajevo. Meanwhile, Mercator and Petrol hastened to build markets and gas stations in Bosnia and Croatia when conditions made this possible. Mercator's CEO, Zoran Jankovič, declared his intention to become the largest retailer in Bosnia and the second largest in Croatia in the coming years. Significantly, he also mentioned plans to expand into Serbia, now generally acknowledged as the next frontier for Slovene economic activity in the post-Milošević era. Slovenia did a great volume of business with Serbia when both were republics of Yugoslavia.

Now as then, agriculture presents a mixed picture. Recent surveys indicate that even though Slovenes revere the traditions associated with rural life and highly value their homegrown agricultural products, this has not resulted in boom times for producers. About 5 percent of the country's workforce farms full-time, and Slovenia has long been an importer of foodstuffs. Slovene agriculture received a boost in the early 1990s with the outbreak of war in Yugoslavia, as farmers there were unable to market their products, and several successful cooperatives have formed in the past decade. Still, the outlook for domestic agriculture is unclear because of the uncertain impact of Slovenia's membership in the European Union, which will bring regional development funds to farmers at the same time it floods the Slovene market with competitors of all sizes.

One indisputably bright spot for the agricultural sector is wine production, which is making a remarkable comeback. While a revival was under way after the phylloxera invasion, the dislocations associated with World War I, Slovenia's entry into the Kingdom of Serbs, Croats, and Slovenes, and World War II meant that full recovery remained elusive. Most producers were able to resume their activities in Tito's Yugoslavia but were forced to accommodate the wishes of state authorities, who tended to prefer quantity to quality.

In these first years of independent Slovenia, the industry has taken full advantage of the century's territorial additions, with producers working successfully in three distinct regions. The oldest and most established of these is Podravje, which encompasses the Prekmurje and Styria regions. The area's climate and soil composition have determined the local specialty: sweet, aromatic white wines, similar to those found in the Saar and Rhine areas of Germany. In recent years wine journalists have sung the praises of the Renski riesling and the Šipon, which got its name from enthusiastic soldiers of Napoleon, who exclaimed *si bon* on sampling it for the first time. Šipon is the Slovenian equivalent of the Hungarian Tokaj, a yellowish, mellow sweet wine often served with desserts.

At the opposite end of the country, the Primorska region is chronologically the newest among Slovenia's producers, and also the most renowned in the new era. This region compares favorably to its neighbors in the production of white wines, particularly the well-balanced, mild Rebula. But it is the country's undisputed leader in the production of red wines—reds such as the Koper Refosk and the Vipava Valley Merlot account for over 50 percent of its yearly output, in contrast to the two other regions, where whites dominate. The Brda subdistrict, so named for its location amid low hills near the Italian border, has won a greater share of medals and awards in wine competitions than any other area of the country in recent years. One of its signature products is the Modri Pinot, "the noblest red of the cooler parts of Europe, the Riesling of Reds." Brda is home to two of the most celebrated among the country's wineries. One is Movia, the pride of the Kristančič family since the early nineteenth century. In the neighboring Vipava Valley, the Vipava 1894 winery is home to the popular Vipavski merlot and is now reviving two legendary Adriatic whites, Zelen and Pinela. In addition, the country's largest wine cooperative, the Dobrovo winery, processes the output of some eight hundred small vintners.

The third region, Posavje, lies between Primorje and Podravje, covering much of the territory known as Dolenjska. This is the geographical center of the country, where vineyards dot the low hills near the Krka and Sava Rivers. This region is often described as closest to central and south central France, in terms both of climate and fondness for blended wines. Most of Slovenia's wine producers are dedicated to the concept of a single grape, and many in Dolenjska devote all their efforts to producing high-quality whites such as Beli Pinot and Renski Riesling. However, Posavje's winegrowers, like their French counterparts in the Champagne and Bordeaux regions, appear to relish the challenge of marrying different varieties in order to produce something more flavorful than the sum of its parts. Accordingly, the Posavje specialties include Cvicek, a blend of at least two prominent reds and one white, and Metliška Črnina, the result of the best reds from both Posavje and Podravlje regions. The region is similarly well known for *ledeno vino,* or ice wines, the product of grapes left exposed to freezing temperatures for a period of consecutive days. Ledeno vino seems to be a Central European classic, a frequent accompaniment to the Slovenian sweet cake, potica.

The revival of the wine industry will likely further improve the fortunes of tourism in Slovenia. Already, gourmet and "slow food" tours of Slovenia can be arranged. In the early 1990s the country had understandable difficulty in attracting tourists and conventions because of lingering anxiety about the war in Croatia and Bosnia-Hercegovina. By the mid-1990s, the regional situation had improved significantly, so that it made sense to begin a formal campaign to bring visitors to Slovenia. Established in 1996, the Slovene tourist board has actively promoted tourism in the country, assisted by the global reach of the Internet. It has received assistance from wealthy companies like the oil and gas concern Istrabenz, which has invested in tourist infrastructure in attractive vacation spots like the Postojna cave area. Considerable unsolicited help has also come from foreign journalists, who have discovered Slovenia and begun singing the country's praises in magazines and newspaper travel sections. In 1997 Marie Harris of the *New York Times* hailed the "spirited, independent Slovenia" she had encountered while vacationing in Europe. A few years later, her colleague Frank Bruni found "the full beauty of Europe packed into a succinct swath of mountains, lakes, and Adriatic coastline, topped off by the gorgeous and entirely cosmopolitan capital of Ljubljana." If Americans did not immediately book tours, Europeans did, especially Italians and Germans taking advantage of cheaper Slovene Adriatic holidays. As of 2003, tourism was officially a billion-dollar yearly enterprise.

Most observers familiar with Slovenia agree that the Slovene economy has emerged from its time of trial showing strength, flexibility, and potential. Personal income is the highest of all the postcommunist states, at nearly $10,000 annually, a figure double that of neighboring Hungary and the Czech Republic and exceeding that of such well-established European nations as Greece and Portugal. This translates into a standard of living that has won Slovenes the coveted right to visit the United States without a visa—a privilege not granted to Czechs, Slovaks, Hungarians, or Poles—because it is assumed that they will return to their prosperous Alpine home. Of course, there remain areas of concern, caused by global economic phenomena as well as problems specific to emerging democracies. Foreign investment has lagged behind expectations, in part because of the slow pace of privatization. Unemployment persists at a relatively high level and may increase, since the process of liquidating unstable or unprofitable industries will continue for the foreseeable future. Ultimately, the long-term health of the economy will depend on Slovenes' ability to negotiate the tricky passage into the European Union, which holds out the promise of help for the victims of the new economy while presenting formidable challenges for its erstwhile winners. If Slovenes can manage this, then their country will certainly be viewed as a model for other small states emerging from similar circumstances. As goes the Slovene economy, so goes Slovenia in the eyes of the world.

CONTEMPORARY CHALLENGES

The citizens of Slovenia, whose numbers barely exceed 2 million, have managed a series of outsized feats in the past two decades. Convinced that they could no longer tolerate life in Yugoslavia, where they had lived for seven decades, they carefully planned an escape. A resolutely peaceful and industrious group, they gathered themselves to fight and win a war against those who would prevent their departure, using speed and cunning. Appealing to a Europe fearful of chaos, they secured recognition and launched their ship of state in the midst of a dangerous storm in Croatia and Bosnia. In May 2004, just thirteen years after their declaration of independence, they joined the most powerful nations on the continent in the European Union and North Atlantic Treaty Organization. Understated self-confidence, resourcefulness, and adaptability have undergirded these remarkable successes. These assets will continue to be essential as Slovenes face the challenges and opportunities that life in the new Europe promises to bring.

The Wine-Making Mavens of Movia

If there is a recipe for maintaining a successful enterprise in a volatile geopolitical region like Slovenia's, its major ingredients would surely include a passion for quality, visionary leadership, adaptability, and luck. No one knows this better than the Kristančičs, the mavens of the renowned Movia Vineyard, an enduring symbol of Slovenia's economic fortunes.

The Kristančič family acquired the Movia estate in Goriska Brda at the beginning of the nineteenth century, dedicating themselves to wine production. The family weathered the geopolitical storms that roiled the eastern Adriatic, beginning as French citizens, then acquiring Italian, Austrian, and finally Slovene citizenship in the twentieth century. Regardless of which country ruled them, the Kristančičs kept their focus on making the richest, highest-quality red and white wines. By 1945, in addition to multiple citizenship changes, they had managed to survive the deadly phylloxera virus and the destruction and devastation of two world wars. The coming of communist Yugoslavia and its animus toward "bourgeois" enterprises such as wine making constituted perhaps the most serious threat yet to Movia and the Slovene wine-making tradition.

But the Kristančičs got lucky. Providentially Ales Kristančič's grandfather had joined Tito's Partisan resistance during World War II and rendered distinguished service. After the war, the Partisan leadership offered the elder Kristančič a ministerial-level appointment in the new government, but he declined and returned home to his vineyards. The family was wondering how to cope with Yugoslavia's new postwar border with Italy, which had inconveniently separated the estate house and cellars from some of the vineyards, when the authorities decreed that all properties exceeding ten hectares would be nationalized. Incredibly, the new border guaranteed that Movia would remain intact—its vineyards now in Italy did not count in the total. The next shadow to fall on Movia came in the campaign for collectivized enterprises in the countryside, a development that the Kristančičs categorically rejected on the grounds that it would be fatal to Movia's tradition. There might have been a price to pay for such impertinence, had Tito not visited Movia and sampled its signature product. Apparently even future-obsessed communist leaders could appreciate the value of fine old wines. Movia not only escaped unharmed, but soon became the official vintner to the president of Yugoslavia.

Movia was not exactly prosperous in socialist Yugoslavia. Yet there were significant advantages beyond the prestige associated with its status as the court winery. Time and resources for production were virtually unlimited; the Kristančičs had only to inform the Agriculture Ministry of their needs each year. And when the Yugoslav government sanctioned economic activity beyond Yugoslavia, Movia took advantage of the new opportunities offered. As Movia's current chief, Ales Kristančič, recently recalled, they went first to Slovenia's former rulers, where people remembered what kind of wine came from Movia. After winning acclaim in Vienna and Venice, Movia products attracted the attention of famed chef Alain Ducasse, who put them on the menu of his Monaco restaurant.

(continues)

THE ECONOMY IN A NEW ERA

There is challenge and opportunity for the Slovene economy as it becomes integrated with Europe's. Manufacturers and retailers will have the chance to market their products freely throughout Europe, where they have already forged solid relationships. New strategies will be required for those who hope to succeed there. For example, winemakers aiming to compete in European markets can focus their efforts on producing wines unique to Slovenia, like zelen whites, and tailor advertising campaigns to make those products known to the broader European public. At the same time, there will a reciprocal influx of products into Slovenia from larger EU members. Slovene wine lovers will now have more choices in their supermarkets. These consumers were mostly responsible for the comeback of Slovene wine making in the 1990s, and they value Slovene products, but they will certainly be tempted by the sudden availability of inexpensive offerings from wine powerhouses like France, Germany, and Italy. Slovene winemakers who concentrate on the domestic market will have to redouble their efforts to ensure that their products are competitive, in terms of both quality and price. They might also benefit from targeted advertising campaigns extolling the virtues of Slovenian viticulture, thereby creating more jobs in a new sector. Public and media relations are undoubtedly a growth industry for Slovenia, a nation seeking to make itself known.

Slovene tourism faces a similar dynamic in the new Europe. Tourists from EU states will now enjoy seamless travel to Slovenia. On the other hand, EU regulations on gas pricing will diminish the attractions of Slovenia for legions of day tourists from Italy and Austria, who have apparently made a habit of short car trips there for a meal and cheap petrol.

(continued)

Like the Slovene economy itself, the Kristančičs and Movia were relatively well-prepared for independence. They had established contacts well beyond Yugoslavia, so the loss of that market was not catastrophic; by the mid-1990s, exports accounted for over 50 percent of Movia's output. It quickly became apparent that Slovenes valued their home-grown wines, and Movia retained its exalted status as the official wine of the Slovenian government. But the Kristančičs continued to aim higher, concentrating on producing distinctive and high-quality wines for export. This decision proved to be a combination of the personal and prophetic. Ales Kristančič obviously wanted Movia mentioned in the same breath as the finest German, French, and Italian winemakers. But he also knew that the survival of high-quality wine making in Slovenia depended on it. Slovenia's European Union accession meant that cheap imports from France, Germany, and Italy would flood the Slovene market, making sales more a function of marketing than of quality or skill. Only those vintners willing to invest the time and resources to the production of artisanal wines for the international market would be able to continue functioning on the highest level. "It is crucial that a winemaker have the ability to create a wine that has an international style, and thereby prove to customers that they can be trusted," Ales Kristančič told an interviewer in 2003. "Yet many experts also wish for our wines to reflect the unique nature of the environment they are grown in. This is where our future lies," he concluded. "Our wine is a testament to our uniqueness" (Prešeren 2003).

Movia signature wines—Rebula, a dry white, Chardonnay, Veliko Rocce, or Big Red—are now a fixture of the best restaurants and wine distributors in France, Germany, Italy, and the United States, so Movia's future seems assured. Meanwhile, Ales Kristančič has taken his passion for time and quality to an even larger stage. He has become Slovenia's unofficial representative in the Slow Food group, a worldwide movement born of outrage at the construction of a McDonald's in central Rome. This group of chefs, restaurateurs, and rank-and-file food and wine lovers has dedicated itself to combating eat-and-run meals, fast food, and the influence of corporate farming on good eating. Thus, even as Slovenia joins the world of integrated, standardized nations that is the European Union—some would say McEurope—Kristančič and Movia continue to hold high the Slovene standard of quality and distinctiveness.

Tourist industry representatives now must extend their focus to include tourists from beyond driving distance. This should not be difficult if they can negotiate arrangements with discount air carriers such as Ryanair, which delivers thousands of holidaymakers to all the European states on a weekly basis. It will also be important to promote the port of Koper as an attractive alternative for cruise ships that now stop at Trieste. Slovenia has year-round appeal, from skiing and spelunking to city adventures, sun and fun on the coast, World War I sites, and horseback riding at Lipica. It also has huge potential as a wine destination. Slovene officials would do well to enlist Ales Kristančič to tout Slovenian cuisine and vineyards to the growing ranks of food and wine tourists worldwide. They are likely to be intrigued at the idea of exploring the terra incognita of the Slovenian wine landscape.

Other sectors have challenges of a different nature in the new conditions. In the latter part of the 1990s many prominent Slovene companies, such as the supermarket giant Mercator, returned to Yugoslav markets temporarily lost because of UN sanctions during the Bosnian war. The contracts they have negotiated may run into problems, because Slovenia's interstate commerce will soon be subject to EU customs regulations. The heads of these firms can work toward a transitional agreement with the EU, perhaps emphasizing Slovenia's role in the Southeast European Stability Pact. Meanwhile, many Slovenes employed in agriculture and manufacturing will be eligible for financial and technical assistance from the EU, enabling them to modernize, diversify, and restructure their operations in order to compete successfully with their counterparts elsewhere in Europe. Others, however, will certainly find themselves victims of technological obsolescence and will have to seek retraining or employment possibilities elsewhere.

GEOPOLITICS

The Slovene government spent the early 1990s shoring up relations with its neighbors Hungary and Italy, opening a new border crossing with the former in 1992 and settling a difficult property restitution case with the latter in 1994–1995. In the mid-1990s Slovene officials looked beyond their immediate environs. They sought an active role in the United Nations, achieving election as a nonpermanent member for the year 1998–1999. There, its representatives chaired the Security Council Sanctions Committee for Libya and put forth proposals for suspending sanctions on Iraq. In addition, Slovenes participated in UN peacekeeping missions in East Timor, the Golan Heights, and Cyprus. At the same time, Slovenia made itself useful to the NATO nations in key ways before winning approval from those nations for NATO membership in 2002.

The greatest geopolitical challenges and opportunities are next door, in Southeastern Europe. Slovenia and Croatia continue to dispute the fate of Piran Bay and coastline, the two sides trading accusations and recalling ministers as recently as the summer of 2003. It is unclear how the conflict will be resolved, but Slovenia's EU membership will likely bring a favorable result since Slovene officials will have some influence on Croatia's application to the EU. Beyond that, the Slovene government is uniquely positioned—geographically and politically—to help bring peace and stability to Southeastern Europe, which has known neither since Slovenia's escape from Yugoslavia in 1991. It has already acknowledged this by taking the lead in the implementation of the EU's Southeast Europe Stability Pact, which was launched in 1999. Slovene representatives participate actively in all three of the Pact's working groups: Democratization and Human Rights, Economic Reconstruction, and Security Issues. As managers of the International Trust Fund for Demining and Mine Victims' Assistance, an initiative partially funded by the United Nations, they have helped to clear the regions of war detritus and provide over $100 million in financial assistance to local victims of land mines. The region's future depends on a steady supply of well-trained, responsible administrators. Slovenia accordingly has been instrumental in the planning for new pact-related educational institutions too, such as the Regional Center for Excellence in Public Expenditure Management and the International Postgraduate School of Economics. Reviewing ten years of Slovene foreign policy in a speech before the United Nations, Dmitrij Rupel emphasized that his country was aiming high. He expressed the hope that Slovenia's efforts in Southeastern Europe will enable the countries of the former Yugoslavia to be reunited with Slovenia in the European Union. "Our activity in this area is not only necessary," he said, "but also beneficial."

SLOVENE CULTURE AND THE PASSAGE INTO EUROPE

It is indisputable that Slovenia has achieved a lifelong objective in entering the European Union; it is now officially classified as part of Europe rather than the Balkans.

In Slovenia, the Smart Money's on Culture—and Vice Versa

Although it is usually taken for granted in numerous daily transactions, a nation's currency can be a reliable clue to its core values. In the United States, citizens revere the men who made the American political system and saw it through its greatest crises—Jefferson, Washington, Franklin, Lincoln. Their images appropriately crown the nation's banknotes. Hungary's enduring obsession through the centuries was liberation from foreign rule. The Hungarian forint features those who did the most to further that cause, such as Ferenc Deak, the author of the Austrian-Hungarian Compromise of 1867. Who appears on Slovenia's currency, and what does it reveal about Slovenes?

The basic unit of Slovene currency is the tolar, soon to be replaced by the euro. The smallest denomination is the 10 tolar note, on which is found the visage of Primož Trubar, the father of the Slovene language, the man who gave Slovenes a version of the New Testament they could read. Janez Vajkard Valvasor, perhaps the most prolific intellect in the history of the Slovene lands, greets those who examine the 20 tolar note. He traveled the world yet preferred to focus his research in his native Carniola, where he investigated everything from hidden lakes to beekeeping. The 50 tolar note features the distinguished mathematician Jurij Vega, who fought in the artillery for Austria during the Napoleonic wars and later wrote three important scholarly works on logarithms. The best student mathematicians in Slovenia now compete yearly for the Vega Prize.

The painter Rihard Jakopič, a contemporary of Ivan Grohar's and a prolific impressionist himself, is honored on 100 tolar bills. He is credited with founding the Slovene Academy of Arts in Ljubljana, which explains why the most accomplished painter in Slovenia each year receives the Jakopič Prize. Jacob Gallus Carniolus reminds citizens of their musical heritage on the 200. The author of contemporary Ljubljana, Jože Plečnik, appears on the 500 note, while the father of Slovene literature, France Prešeren, greets those conducting transactions of 1,000 tolars. Slovenia's most international painter, Ivana Kobilica, and her contemporary, the writer Ivan Cankar, animate the 5,000 and 10,000 notes, respectively.

The Slovene government could have honored the makers of Slovenia's remarkable prosperity, its hardworking businessmen and entrepreneurs. If not for a courageous and far-sighted political class, Slovenes' passage into post-communist Europe might have proved divisive and costly. Yet the stars of the country's banknotes are invariably men and women of arts, letters, and sciences, people who did the most through the centuries to educate and equip their fellow citizens to assume the responsibilities essential to making a successful nation. It is clear that culture remains the real currency of the realm in Slovenia.

The opportunities for Slovenes in this arrangement are great: they can travel more freely, make their own work arrangements at home or in another EU country, and enjoy the best of cosmopolitan Europe, while continuing to live in one of its smallest, most livable corners. On the other hand, becoming part of a large union with a formidable body of standardizing regulations implies the forfeiture of some characteristics that make individual peoples unique. Since language and culture are among Slovenes' most prized possessions, many citizens now ask the old

Anton Martin Slomšek

One of Slovenes' recurring anxieties on the eve of their entry to the European Union is how to be proud of their language and culture *and* be a good citizen of Europe. There seems to be concern in some quarters about appearing to be too parochial, too attached to everything Slovene. In 1994 an American journalist was surprised to learn of controversy over needed improvements to the nation's Ethnographic Museum. It was evidently felt that the museum's focus on things unique to Slovenia could be interpreted as overly nationalist. On the other end of the spectrum, some Slovene youth have indulged in chauvinism, loudly proclaiming the superiority of Slovene culture over others. How should Slovenes carry the Slovene standard, so to speak, when they become part of a large conglomeration of European states? For inspiration, they might look to the man who will be Slovenia's first saint, Fr. Anton Martin Slomšek.

Anton Martin Slomšek was born in Slom, Styria (Štajerska), in November 1800. Early in his life, he knew that he loved God and his native language, so he decided to become a priest. Dismayed that so many of his parishioners and fellow priests were ignorant of their heritage and sometimes even the Slovene language, he took it upon himself to teach as many of them as possible. In the 1840s he made the totality of the Slovene lands his classroom. He preached regular sermons in Slovene, making an indelible impression on his listeners with his simple, yet vigorous language. "Our mother tongue is the greatest legacy we receive from our parents," Fr. Slomšek would say. "We must conserve it scrupulously and pass it on to our children." For those he could not reach from the pulpit, he wrote numerous books and pamphlets designed to amuse as well as instruct. *Blaže and Nežica in Sunday School,* a kind of mini-encyclopedia in Slovene, is one notable example. In order to ensure that Slovenes would always have access to good books in their language, Fr. Slomšek founded the Society of St. Hermagor in 1853, Slovenia's first publishing house. The Society was responsible for the publication of hundreds of Slovene language books and pamphlets in the mid-nineteenth century. It maintains an active presence today in Slovenia proper (Celje) and in Slovene areas of Austria (Klagenfurt) and Italy (Gorizia), so that citizens there will not lose touch with their heritage.

Fr. Slomšek was an active evangelist for Slovene language and culture whose deeds matched and even exceeded his words. Even more important, perhaps, was his worldview. He spent many years as Bishop of Maribor, in modern-day Styria province—an area of mixed Slovene and German population in his day. Although he sometimes encountered anti-Slovene sentiment among Germans there, he never responded in kind. In fact, he did the opposite, actively teaching and promoting his language while taking great care to be respectful and tolerant in his dealings with non-Slovenes. To do otherwise was unbecoming to a Christian, also dangerous in a multiethnic state like Austria-Hungary. "Extreme nationalism," Fr. Slomšek once said, "will be the cause of a terrible conflict which will make people turn on one another like savages." Subsequent events demonstrated that he was prescient as well as wise.

In 1999, almost seventy-five years after supporters opened a case for sainthood, Pope John Paul II announced that he would visit Slovenia to celebrate the beatification of Fr. Slomšek. The Pope almost certainly intended to send a message to the parties then at war in Kosovo by highlighting the life of an apostle of tolerance. "I would like to show the testament of the Blessed Slomšek," John Paul said in Maribor on 19 September 1999. "His example bears witness to the fact that it is possible to be a sincere patriot, and with the same sincerity live and cooperate with people of other nationalities, cultures and faiths." But Slovenes anxious about their culture and nationality in the new Europe can follow Fr. Slomšek's example, too. His personal motto was, "speak little, work a lot, support everything" that is positive about Slovenia and Slovenes. In fact, that is the special contribution Slovenes can make in Europe: speaking little, working a lot, and promoting their culture and language proudly and enthusiastically, without a hint of superiority or pridefulness. The recent history of nationalist-inspired violence on the continent shows clearly what a unique—and valuable—gift this will be.

question: how to preserve and advance them in the wider world?

The new era has already provided equal parts opportunity and challenge for Slovene literature. As books and analyses of the Balkan wars flooded the world's book markets, American and European scholars discovered Edvard Kocbek. His poetry has won acclaim in a variety of forums and attracted the interest of talented translators such as Michael Scammell. As collections of his work are published, a new generation of students and poetry lovers gets crucial exposure to Slovene letters. Responding to recent events, Slovene scholars have successfully resurrected the works of writers from earlier periods, such as Vladimir Bartol. Bartol's 1938 novel, *Alamut,* which chronicled a holy war waged by Persian Muslims against Turkish invaders, suddenly resonated in the wake of the events of 11 September 2001 and has appeared in fifteen languages, including Arabic. *Alamut* introduced thousands of Europeans to Slovene literature and made its publisher very happy. Contemporary writers have had no such breakthrough. They have traditionally been at their best when issues of national destiny loom large in public consciousness. Since the major issues associated with Slovenia's future seem to have been solved, they will have to find new questions to answer, new windmills at which to tilt. They also must reckon with the easy availability of popular fiction from Europe and America, published in translation. Their challenge, therefore, is to find an acceptable niche in a huge, profit-driven market.

Slovene musicians, artists, and filmmakers have a wider audience now, as members of the European Union. Like their compatriots in business, their principal task is to market themselves outside Slovenia, to find a way to make themselves known to the European public and beyond. They will benefit from their ability to access Ljubljana's well-known cultural infrastructure, which includes the Cankarjev center and the Ljubljana Summer Festival, which attract many international visitors. They can also compete for EU Culture 2000 resources, which provide funding for general and specific cultural projects. The future of Slovene folk art depends on the success of Slovene tourism and museum staffers' skill at winning EU funds in various categories and negotiating successful corporate partnerships. The days of government largesse for the arts having given way to market forces and individual initiative, Slovene cultural officials will draw on their ability to adapt.

The Slovene language does not appear to be endangered by EU membership. However, efforts to promote it could make good things happen. The Slovene Ministry of Culture would do well to emulate programs like the Summer School of Hungarian Language and Culture, held several times each year in Debrecen and Budapest, Hungary. Founded to raise awareness of Hungarian culture in the unfortunate aftermath of the Trianon Treaty of 1920 (which saw Hungary lose two-thirds of its territory), these intensive language and culture courses have attracted thousands of students from Europe, Asia, and America. These individuals tend to become unofficial ambassadors for Hungary, singing its praises at home, returning to work there, and even launching Hungarian-related business ventures both in Hungary and their home countries. A similar institution, perhaps based in Ljubljana and a prominent regional city, could serve as a means of extending the reach of the Slovene language. It could also pay dividends in tourism and foreign investment as it continually introduces Slovenia to the world.

POLITICS

Slovene political leaders have their own list of challenges and opportunities for the twenty-first century. They will help shape the destiny of Europe as deliberations on the European Union constitution continue. They also stand to emerge as a regional leader within the EU because of their involvement with the Slovene populations remaining in Austria and Italy and their unique history as both a European and Balkan country. Closer to home, they are deeply invested in the successful reconstruction of the war-torn Balkan area as leaders of the Southeast European Stability pact. Domestically, their principal responsibility in the near future is managing change, especially the country's entry into the European Union. This includes a variety of official tasks, such as arranging for the euro to replace the tolar as the country's currency, proceeding with other essential economic reforms, and bringing its border crossings with Croatia and Italy up to EU standards. It also means presiding over and planning for the distribution of EU funds for the restructuring of key economic sectors. Slovenia's politicians have a lot at stake as they tackle the latter task; many citizens are likely to lose their livelihoods in the process and face the necessity of finding other employment or retraining. How well their representatives help them cope with these changes will determine the shape of the political landscape in the next few years.

There is a hint of self-congratulation in the Slovene government's Web site celebrating the country's tenth anniversary. Slovenia's successes, the authors assert, have made it the envy of all countries emerging from socialism, "a champion that cannot be ignored, for it stands out above the others in every field." As the old saying goes, however, it is not bragging if one can back it up. By any reasonable measurement, Slovenia has had an extraordinarily successful first decade of independence. The most formidable challenge for the fathers of that independence will be to follow this remarkable first act.

CHRONOLOGY

149 B.C.E.	Ptuj is mentioned in Roman chronicles, making it the oldest known Slovene town.
Seventh century	Slavic peoples arrive in the eastern Alps of Central Europe.
623	Prince Samo leads Slovenes in the overthrow of the Avars.
745	Duke of Karantania accepts Christianity.
1144	Ljubljana first appears in chronicles as Laibach.
1146	Stična Monastery founded, oldest in Slovene lands.
Thirteenth century	Slovenes come under the jurisdiction of the Habsburg monarchy.
1550	Primož Trubar's Slovene primer and translation of the New Testament become the first books published in the Slovene language.
1584	Jurij Dalmatin makes available the entire Bible in Slovene.
1701	Ljubljana Philharmonic founded.
1740–1790	Reign of Maria-Theresa and Joseph II of Austria, a crucial period of reform for Slovenes and other Habsburg subjects.
1758	First appearance of thematic painting on a beehive front—Madonna and Child on a hive in Carniola province.
1768	Marco Pohlin's *Carniolan Grammar* appears in print.
1790	Anton Linhart publishes the first history of the South Slavic peoples, including the Slovenes.
1797	Inaugural issue of first Slovene-language newspaper ever published, *Lublanske novice* (Ljubljana News).
1809	Illyrian Provinces created by Napoleon; large parts of Slovene territories included; Slovene introduced as language of instruction in primary schools.
1813	Illyrian Provinces end with Napoleon's defeat and retreat.
1844	France Prešeren's "Zdravljica" (The Toast) published; becomes the anthem of independent Slovenia 150 years later.
1848	Year of revolution in Habsburg monarchy; Slovenia's national program enunciated, including provisions for use of the Slovene language and calls for possible administrative unity for Slovene lands in the monarchy.
1864	Matica slovenska society founded.
1867	*Ausgleich* (Compromise) concluded between Austria and Hungary; divides monarchy into two halves, united only in person of the emperor and for certain national issues. Some 40,000 Slovenes assigned to Hungarian half of the empire.
28 June 1914	Archduke Franz Ferdinand assassinated in Sarajevo, Bosnia; Austria's decision to punish Serbian government backed by Germany, triggering World War I.
26 April 1915	Treaty of London concluded; part of Slovene territory promised to Italians, on condition that they enter the war on Allied side.
29 May 1917	Anton Korošec reads the May Declaration in the Austrian Parliament, calling for the reorganization of the Habsburg monarchy into three parts, one of which would be for the monarchy's Slovenes, Croats, and Serbs.
20 June 1917	Yugoslav Committee head Ante Trumbić meets Serbian prime minister Nikola Pašić. Their talks produce the Corfu Declaration, a blueprint for an independent South Slavic state composed of Serbs, Croats, and Slovenes.
October 1917	The Habsburg monarchy wins the battle of Caporetto. Caporetto subsequently passes into Italian and later Slovene hands. Known today as Kobarid.
6 October 1918	The Narodno Vijeće, the National Council of the Habsburg South Slavic peoples, is formed. It will unite with Serbia to form a South Slav state.
1 December 1918	Kingdom of Serbs, Croats, and Slovenes proclaimed.
1919	University of Ljubljana founded.
June 1920	Treaty of Trianon signed, transferring the Prekmurje area and its Hungarian and Slovene residents to the new Kingdom of Serbs, Croats, and Slovenes.
28 June 1920	The first constitution of the Kingdom of Serbs, Croats, and Slovenes is ratified in Belgrade, codifying Serb centralist rule in the state.
10 October 1920	Austria is declared the winner of the Carinthia plebiscite; thousands of Slovenes become citizens of Austria.

1921	Treaty of Rapallo signed. Former Austrian Adriatic lands transferred to Italy; some 300,000 Slovenes go with them.
6 January 1929	King Alexander suspends the parliamentary life of the Kingdom of Serbs, Croats, and Slovenes and renames the state "Yugoslavia."
30 October 1934	King Alexander assassinated in Marseilles, France; Prince Paul becomes regent and lifts the dictatorship.
1938	Slovene Academy of Sciences founded in Ljubljana.
14 December 1940	Anton Korošec, de facto Slovene leader since 1914, dies.
27 March 1941	Serbian officers overthrow the government of Prince Paul, reject Yugoslavia's participation in the Tripartite Pact, and install their own representative.
6 April 1941	The German army invades Yugoslavia; Slovene lands are expropriated by Italy, Germany, and Hungary.
April 1941	Edward Kardelj leads Slovene resistance fighters in the foundation of the Osvobodilna fronta (OF, Liberation Front).
1943	The journal *Mladina,* Slovene youth magazine, founded.
November 1943	OF formally unites with Tito's Partisan organization under the rubric of "brotherhood and unity."
May 1945	Tito, Kardelj, and the Partisans emerge victorious from both the Yugoslav and world wars and prepare for a new Yugoslavia. Slovenes become one of six republics in the new state.
Summer 1945	Thousands of Domobranci, Slovene anticommunist resistance fighters, executed by the new Yugoslav leadership.
28 June 1948	Stalin expels Yugoslavia from the Cominform. Edward Kardelj emerges as a major architect of the new theoretical foundation for the state.
June 1950	Kardelj's Law on Workers' Self-Management announced.
1954	London Agreement settles Yugoslav-Italian territorial disputes. Yugoslavia receives Adriatic littoral, including Koper (Capodistria) and Piran (Pirano); Italy is given jurisdiction over Trieste.
May 1955	Austrian state treaty signed, guaranteeing minority rights for Slovenes in Austria.
1956	Yugoslav Investment Bank founded at Belgrade, designed to help remedy economic imbalances among the Yugoslav republics.
June 1961	First meeting in Belgrade of the nonaligned movement, a gathering of states formally aligned with neither east nor west.
1962	Gorenje enterprises shift focus from agricultural machinery to home appliances, "everything for the home." Emblematic of new Slovene economic priorities.
1979	Kardelj, the leading Slovene of Communist Yugoslavia and one of its founding fathers, dies.
May 1980	Tito, founder of Yugoslavia and Kardelj's close colleague, dies.
February 1987	The Slovene journal *Nova revija* publishes issue 57, "On the Realization of a Slovene National Program."
24 April 1987	Slobodan Milošević makes incendiary appearance amid Kosovo Serb-Albanian rioting; declares Serbs "will not be beaten again."
February 1988	Staffers of provocative youth magazine *Mladina* arrested for possession and copying of a classified document; Yugoslav army presumed behind the arrest and subsequent trial in July 1988.
September 1989	Slobodan Milošević announces a Serb economic boycott of Slovenia over Kosovo criticism, amendments to Slovene constitution.
January 1990	Slovenian Communist leaders quit the Yugoslav League of Communists.
April 1990	First multiparty elections held in Slovenia; anticommunist DEMOS coalition and longtime Communist leader Milan Kučan emerge victorious.
December 1990	Slovenes vote overwhelmingly for sovereignty.
February 1991	Slovenia announces it will declare independence in June unless Yugoslav government agrees to a confederated arrangement.
25 June 1991	Milan Kučan makes formal declaration of independence.
26 June 1991	Yugoslav army troops cross into Slovenia in attempt to stop Slovenes' breakaway; ten-day war ensues, in which sixty-six people lose their lives.
7 July 1991	Brioni agreement imposes three-month delay in granting Slovene independence.
15 January 1992	European Community formally recognizes the independent Slovene state.
May 1992	Slovenia becomes a member of the United Nations.
January–December 1992	Thousands of Bosnian refugees seek refuge in Slovenia.
November 1992	First general election in independent Slovenia. Voters elect Milan Kučan as president of Slovenia and return a majority of Liberal Democrats to the legislature, making Janez Drnovšek prime minister.

May 1993	Slovenia becomes a member of the Council of Europe.
30 March 1994	Slovenia joins the Partnership for Peace, a group for states preparing for NATO membership.
1996	Slovenia accepted as an associate member of the European Union.
November 1997	Kučan elected to a second term as president with 55 percent of the vote.
March 1998	Slovenia begins negotiations leading to full EU membership.
November 2000	Liberal Democrats and likeminded parties returned to power in the country's third national elections.
25 June 2001	Slovenia marks ten years of independence.
November 2002	Kučan completes his second and final term as Slovene president. Longtime colleague Janez Drnovšek replaces him.
November 2002	Slovenia's formal acceptance in NATO and the European Union confirmed, effective mid-2004.
March 2003	Slovenes vote decisively in favor of entry into the EU.
April 2004	Slovenia enters NATO.
1 May 2004	Slovenia becomes a member of the EU.

kerchief (a *karpa za glava*), and a vest was often worn. A man wore trousers *(benevretzi),* shirt, belt, and (usually) a jacket or vest; the predominant colors were black and white. Men also usually wore a fur cap (a *kalpak*) as well. The clothes were homemade, and were usually constructed of wool, hemp, cotton, flax, and silk. Embroidery, primarily geometric but often containing small lines of birds, flowers, or even humans, elaborately adorned the sleeves, fronts, and backs of the shirts. The *soukman,* often sleeveless, was also embroidered in numerous colors and was worn with a belt (a *pafti*). The apron was, in most cases, the most decorative part of a woman's costume and made each costume distinctive.

Aside from the regional costumes, Bulgarian peasants were also skilled in decorative textiles (such as tablecloths) in floral and geometric designs. Rugs, made of goat hair, were decorated in geometric patterns and stripes. The dyes, made from plants, blended with the materials to create rich colors that did not quickly fade.

Another aspect of Bulgarian peasant culture that was preserved was music. Bulgarian music admittedly is much less well known than the music of other countries in the region. It lacks the internationally known composer that one associates with Hungary (Béla Bartók) or with the Czech and Slovak lands (Antonín Dvořák or Bedřich Smetana, to name but two). Bulgarian music may not be known within the world of classical music, but it has a rich tradition that derives from its peasant roots. Whereas many folk traditions have either died out or are merely remembered on days of celebration, this folk music tradition is an exception.

Bulgarian folk songs have always reflected the experiences in Bulgaria and within the village. They are filled with joy and sorrow, moods that reflect the difficulty of life and yet the pleasures that life brings. What is most unique about Bulgarian music is the sound of its women, and Bulgarian women folk choruses have become internationally famous during the last two decades of the twentieth century, thanks, in part, to the State Ensemble for Folk Music and Dance, founded by Philip Koutev. Although these choruses do reflect an amalgamation of the folk past with new professional training, the sound produced is still unlike that found anywhere else. Melodies have limited range, but there is a power and expressiveness in their distinctive harmonies. Songs feature sounds that seem to float in the air; they deal with aspects of village life, such as the harvest, with heroes defending the people from oppressors (the songs of the *haiduk* tradition, which glorified the bandits who resisted authority), religious celebrations, feasts and festivals, and love. The choruses are often accompanied by instruments derived from the village, such as the *kaval,* a flute-like instrument used by the shepherds, the *gadulka,* an upright fiddle that is perhaps the oldest instrument used in Bulgaria, and the *gayda,* a bagpipe that is a centerpiece of wedding music.

Thus, while perhaps not internationally known, culture in Bulgaria is deeply rooted in its past, rich in its variety, and, in a way that illustrates the vitality of the people, a synthesis of the old and new.

Traditionally dressed men and women celebrate the Rose Festival. (Michael Freeman/Corbis)

ECONOMIC DEVELOPMENT

At the beginning of the twenty-first century, Bulgaria's decade-long transition from the command economy of the past half century to capitalism had achieved at best mixed results. The average annual growth from 1995 to 2000 fell slightly over 1 percent. Adding to other economic woes was the continued high inflation rate. Although these rates had declined from the early 1990s, inflation from 1995 until the end of the decade continued to average 5.7 percent annually; in 2001 it rose again to 7.4 percent. Similarly, the rate of unemployment, already high (averaging above 14 percent from 1995 to 2000), rose to 16.3 percent in 2001 (the twelfth highest rate in the world according to *The Economist*).

Certainly the transition from communism has proved to be painful for many Bulgarians, a fact that has affected Bulgarian politics. An economy already underdeveloped during the early twentieth century, then suddenly placed under the constraints of the communist command system (1945/7–1989) in which the failure to innovate was partly responsible for the collapse of the regime in 1989, faced the daunting challenge of suddenly integrating into a world economic system. Even its former trading patterns within the Soviet bloc had been disrupted. As a result, Bulgaria found itself confronted by a competitive system for which it was little prepared. In almost all measures, from gross domestic product (GDP) to purchasing power to deficits and foreign debt (Bulgaria had the thirty-fifth highest deficit in the world in 2003 and the fortieth largest foreign debt), Bulgaria lagged behind most of the other nations in Europe and even some countries normally associated with the undeveloped Third World.

Communist leaders stressed the need for rapid industrialization. The very philosophy of Marxism itself, and certainly its form as Marxism-Leninism, diverted resources into the transformation of an agrarian state into an industrial, one with little regard for the social or environmental ramifications of the planning. Since Bulgarian indices were low in the 1950s, at first the growth rates, especially in the early 1970s, appeared to be dramatic. But the progress was illusory, and by the late 1970s the economy not only stagnated but rapidly declined. Following the collapse of the Iron Curtain in 1989, the already poor performance of the economy continued. The clearest indication of the painful legacy of communism was a negative 12.6 percent growth in annual real percentage growth in industrial output during the 1990s.

It would be myopic merely to lay the blame for Bulgaria's economic woes on the communist dictatorship, even if there were few economic positives during the period. Rather, the stagnant economy was a by-product of numerous factors that had stifled growth over the centuries.

Before the fall of communism, people in Bulgaria (as well as other countries in Southeastern Europe) often attributed their nation's economic problems to a backwardness brought on by centuries of control by the Ottoman Turks. It is human nature to seek scapegoats for problems, and the Turks provided an ideal excuse. Certainly Ottoman rule had retarded economic progress, but to blame the Turks for failures in Bulgaria a century after the fall of the Ottomans would be equally myopic. Still, some account of the economic situation under the Ottomans and after provides a necessary background for understanding the economic situation in Bulgaria today.

For centuries, Bulgaria's economy was tied to Istanbul. Turkish landlords controlled large estates *(timars)* in return for military service. These estates produced grains, such as barley, wheat, and rye, as well as vegetables and livestock. Well into the early nineteenth century the essentially feudal nature of the Bulgarian economy changed little, save for the increasing oppression of the peasant class as the Ottoman Empire became more stagnant and corrupt.

Modern economic development in Bulgaria had its infancy in the early 1800s. As the Turks confronted numerous problems, both internally and externally, reforms were enacted that greatly benefited Bulgaria economically. The loss of direct control over Greece and indirect control over the Romanian Principalities created new opportunities for Bulgarian merchants and manufacturers. In 1839 Bulgarians received the right to trade freely throughout the Ottoman Empire. As a result, Bulgaria now became one of the principal suppliers of goods and materials for the Turks. Bulgarians supplied the reformed Turkish army with both food and military uniforms. Cloth production spread, primarily in the form of small woolen handicraft industries. This in turn led to a rise in the population of towns and cities, such as Plovdiv, Gabrovo, and Sliven, which served as manufacturing and commercial centers. Bulgarian merchants traded primary products such as grain, salt, and livestock through offices in Istanbul and other regional centers. Grain exports to Western Europe began in the 1840s. Other products traded included honey and pig iron. Land reforms, especially after the beginning of the largely unsuccessful *Tanzimat* (reform) period in the Ottoman Empire in 1839, saw the establishment of some small, private farms. Tobacco became a key agricultural product for export as well as for consumption within the empire.

While this small economic boom was relatively shortlived, partly owing to foreign competition (primarily from England) following the Crimean War, and partly because of Istanbul's failure to achieve real reforms either politically or economically, a small stratum of middle-class wealthy Bulgarians did come into being. This development, however, had perhaps a greater impact on the movement toward revolution and independence than it did on the economic situation. Artisans and merchants now pushed for education in the form of primary schools (the first such school began in Gabrovo in 1835). For the bulk of the country, however, life, which revolved around a subsistence peasant agricultural system, went on relatively unchanged, and conditions within the entire economy made only sporadic improvement.

Peasants, who constituted over 80 percent of the population, for the most part used archaic equipment, such as wooden plows pulled by oxen. Modern methods of planting, as well as the use of fertilizers, were rare. Illiterate and rooted in tradition, governed by the rules and ideals of the village and the *zadruga* (the communal, extended family that formed the center of peasant society), peasants were reluctant to innovate. Moreover, their lack of income and possessions meant that they were not consumers, thus retarding economic development elsewhere in society.

National independence created both new opportunities and new problems in the economic sphere. Liberation created a euphoria that led to a doubling of land devoted to grain. But an overdependence on wheat, a rise in the peasant population that in many ways offset the increase in arable land, poor soil management, and poor weather at the turn of the century combined to produce an agricultural depression. Reliance on one crop, such as wheat, meant that if things did not go well, the resulting problems would have effects throughout the economy.

Much of Bulgaria's export trade after independence continued to flow toward the Ottoman Empire, a reflection of past trade patterns (although access to these markets became more difficult after 1878, when the country gained autonomy from the Turks), while imports came primarily from Great Britain and the Ottoman Empire. With independence came tariffs that led to a decline in the total trade with the Ottoman Empire, thus further retarding development.

Mechanization, which had revolutionized agriculture in countries with which Bulgaria now found itself in economic

A Bulgarian ethnic Turk hangs up strings of tobacco leaves to dry in the village of Fotinovo in the Rhodope Mountains in 2002. Bulgaria is a major producer of tobacco and tobacco products. Tobacco is grown heavily in southern Bulgaria. (Reuters/Corbis)

competition, proceeded slowly. Yield per acre in fact did not increase, but rather stabilized or declined. Moreover, peasants were forced to pay for the land, thus reducing the size of their holdings (most peasants owned less than twenty hectares, often in unconnected smaller strips of land) and contributing to high levels of debt. A vicious cycle thus developed, one in which peasant income was too small to buy more land and equipment, which only increased the need for land and machinery in order to combat the low income levels. This situation in turn led to peasant dissatisfaction, especially with the lack of government support for projects aimed at lifting the agricultural sector, and so to the rise of the Bulgarian Agrarian National Union (BANU, or *Bulgarski Zemedelska Naroden Soiuz* [BZNS]) led by Aleksandûr Stamboliiski. Although shut out of the political power structure before World War I, BANU nevertheless was able to create cooperatives and insurance funds, as well as gain credits through the Bulgarian Agricultural Bank (Bulgarska Zemedelska Banka).

Any hope for a rapid improvement in economic conditions in Bulgaria in the period before World War I was hindered by the difficulty in raising investment capital, as well as the unrealistic approach of governments lured by the dream of economic development and restricted by fiscal realities (conditions faced by all countries in Southeastern Europe). The government borrowed heavily to finance projects (such as railroads) that crippled state budgets by consuming a significant portion of the state's revenues (the debt service reached 20 percent of state revenues). Promoting manufacturing, although perhaps commendable, ignored the reality of the difficulty of finding markets. Bulgarian goods could not compete with the higher quality products from Western Europe. Although labor was available, much of it was unskilled, and wages remained low. As a result, industrialization remained but a small part of the overall economy for decades.

This is not to say that the economic picture was entirely bleak. The construction of a transportation network, despite its costs, was critical for future development. Tobacco remained a profitable commodity, and the foodstuff industry remained a bright spot. The expansion of education both within the country and abroad also led to new economic innovations and opportunities.

Bulgaria's defeat in the Second Balkan War (1913) and World War I cost the country valuable resources as well as the loss of land, most notably the southern Dobrudja (to Romania). Fortunately, the country had not suffered physically (only minor fighting took place on Bulgaria's soil during World War I) during the conflicts, thus reducing dislocation. This situation enabled the manufacturing sector to grow throughout the decade following World War I; even so, despite a significant rate of growth, the low levels of manufacturing in the first place make the changes seem far more important than they actually were.

Bulgaria was (and remained throughout the interwar period) an agriculturally based country, and with the loss of the rich lands of the Dobrudja and the changes in markets, the agricultural sector suffered long before anyone spoke about the Great Depression. (One of the few bright spots was the fact that Bulgaria was already a nation of small landholders and was thus able to avoid the painful land redistributions that afflicted some of its neighbors.) Critical to the underlying weakness in the economy, especially in terms of agriculture, was the fact that as the recovering nations of Europe placed high tariff barriers on imported grains in order to bolster their own agricultural sectors, Bulgaria lost potential markets for its agricultural produce. Only tobacco and rose oil (exported to France for the production of perfume) continued to be in demand.

As a defeated state in World War I, Bulgaria, like other members of its alliance, was forced to pay reparations. While not crippling, the payments placed an additional burden on already shaky budgets (until the reparations were renegotiated in 1930). State debts, a prewar problem, thus remained a burden, as it hindered the state's ability to raise capital and promote projects.

With the coming of the Great Depression, Sofia confronted a collapse in the agricultural sector. Markets, already limited, dried up. Although Bulgaria weathered the Depression better than some of its neighbors, it still faced the need for markets. That need was filled by Germany, which better than doubled its share of Bulgarian grain exports between 1929 and the outbreak of World War II a decade later. By 1939, three-fourths of Bulgarian food exports were bought by the Third Reich. Payment for these products was often made by credits or products, thereby increasingly tying Sofia to Berlin economically, a contributing (although not crucial) factor in the alliance that developed in World War II between Bulgaria and Nazi Germany.

As the forces of the Soviet Union defeated the German Wehrmacht, the advancing Red Army entered and occupied Bulgaria in 1944, providing the basis for the imposition of communist rule that was to follow the end of the hostilities. The coming to power of the Fatherland Front, a coalition of center and left parties, in September 1944, began the three-year transition to complete communist rule, which included the full direction of the economy. Symbolic of the subordination of the nation's economy to the Soviet model was the dissolution of the Bulgarian Agrarian National Union as an independent organization. For the next four decades, Bulgaria was a prisoner of a command economy, as the new system reversed past policies of decentralization in favor of central planning and state ownership.

In order to build a Soviet-style economic system based upon large-scale industrialization and collectivized agriculture, a 180-degree shift in the economy away from one driven by market forces was required. From 1944 to 1947, as the communists solidified control politically, they moved to nationalize industries. In December 1947, months after Cominform, the Communist Information Bureau that served as the propaganda organ for Moscow, announced that the pace of nationalization would quicken, all private firms in Bulgaria were seized. In addition, all independent banks, of which there were few even before the war, were incorporated into the national system. And the first steps aimed at state planning were announced with a shift in funds from agriculture to industry.

Before World War II, Bulgaria was a nation of small landholders. Nearly 80 percent of the population was engaged in agriculture. Like Stalin in the Soviet Union, the new Bulgarian leaders saw agriculture as potentially providing revenue needed for industrialization, and collectivization as the means to gain that objective. At first, collectivization was encouraged as a voluntary movement, but the policy of suasion produced limited results at best by 1947. With the consolidation of the regime in December of that year, Sofia increased pressure on peasants to join. Over the course of the next decade, either through intimidation or economic pressure, over 90 percent of Bulgaria's agricultural land was brought under the collective system.

Originally modeled after the Soviet system, over the next decade the collective farms decreased in number, while consolidation increased their size. What had been a nation of smallholders had become one of large agricultural complexes. Although these complexes were largely inefficient, as evidenced by the fact that the small plots of land granted to farmers for personal use accounted for nearly 25 percent of the overall production, Bulgaria remained an exporter of agricultural products, one of the leaders in such exports in the entire Soviet bloc. Tobacco remained the most lucrative export; Bulgarian cigarettes, high in tar and nicotine, could be found throughout Europe. In addition, Bulgarian fruits and vegetables (such as tomatoes and grapes) found markets across the continent. France continued to import rose oil for its perfume industry. Although the agricultural sector stagnated in the 1980s, in part due to a series of poor harvests that resulted in the need to import grains, agriculture, although not the primary focus of government planners, remained Bulgaria's economic bright spot.

Communist planners, however, had unflagging faith in heavy industries and central planning. With control of capital and resources, they could build sectors virtually by decree, no matter the cost in valuable resources or in damage to the environment. This freedom for the planners created inefficiency and ultimately economic stagnation.

Symbolic of the disastrous decision making that accompanied central planning was the massive Kremikovtsi Metalurgical Complex, which was built near Sofia. Constructed in the belief that huge deposits of iron ore existed in the area that would provide the needed materials for steel making, the plant in fact had to import iron ore, with much of it coming from the Soviet Union, when the supplies failed to meet initial expectations. The Kremikovtsi works failed to meet production targets, and rather than becoming a contributor to the economic health of the country, it drained it.

Inefficiency was visible throughout the industrial sector. Although industrial production rose impressively from the 1950s through the 1970s, when the industrial sector surpassed agriculture as the leading sector of the economy, fealty to the Soviet model and the five-year plans stripped away at innovation. Gains were made in the chemical and machinery sectors, and major improvements were made in electrical generation. Bulgaria exported heavy machinery, especially forklifts. Large plants were constructed throughout the country, from petrochemical plants at Pleven and Burgas, to shipbuilding at Varna, to machine tools at Gabrovo. Western investment offset the nonconvertibility of the Bulgarian monetary unit (the leva). Nevertheless, the fact that the economic sector was dependent upon the health of the Soviet bloc, since most of its industrial exports were sold to fellow members of Comecon (the Council of Mutual Economic Assistance, the Soviet Union's answer to the Common Market in the West), meant that Bulgaria was, in effect, a prisoner of a system that began to unravel in the 1980s.

Although on the surface Bulgaria had seemingly achieved "modernization" in just a short span of time, the economy stagnated, in part due to problems in the agricultural sector, as well as to an inability to generate new foreign investments. Prior to the 1980s, Western capital had masked some of the internal weaknesses, such as a poor infrastructure and the uncertainty of Zhivkov's reforms aimed at reviving the economy. Although Bulgaria had avoided the severe foreign debt burden that plagued some of the other countries in the region (notably Romania), capital generation became critical. In addition, productivity began to decline, causing a greater reliance on state subsidies. Energy production was inadequate. The economy was over-reliant on its trading partners within the Soviet bloc, which absorbed the vast majority of Bulgaria's exports. Most of that went to a Soviet Union that was experiencing its own economic malaise, the malaise that resulted in the Soviet leader Mikhail Gorbachev's calls for restructuring (perestroika). The combination of these factors fueled discontent within Bulgaria, which in turn led to the collapse of the regime in the fall of 1989.

With the fall of Zhivkov and the shift away from the command economy, the legacy of the communist economic system to Bulgaria was clear (both in visible and not so immediately apparent terms). Outwardly, the existence of large unproductive enterprises that required excessive energy resources and continued to produce substandard goods that had no market was an obvious problem. In addition, the environmental legacy of four decades of centralized planning that emphasized growth at the expense of health could be seen almost everywhere. In 1990 numerous Bulgarian cities, including Ruse (due to chlorine gas emissions from the Romanian city of Giurgiu that lies across the Danube) and Plovdiv, were declared to be environmentally damaged regions. The power grid remained dependent on a nuclear facility at Kozloduy that had been constructed along the model of Chernobyl in the Soviet Union. Even after the Chernobyl disaster in 1985, the Bulgarian reactor, which leaked radiation, still could not be closed, despite several near catastrophes in the 1970s and 1980s, because the economy was too dependent on the energy.

Cooling pond at Kozloduy Nuclear Power Plant. (Ed Kashi/Corbis)

While the communist political system crumbled throughout Eastern Europe, so too did the trading patterns that had governed the economies of the Comecon nations. Over 80 percent of Bulgarian trade prior to 1990 had taken place within the bloc. Removal of the overarching economic system in the region left Bulgaria without markets, while having to pay market prices for imports. A year later, the Gulf War destroyed Bulgaria's trade with Iraq, one of its most valuable prewar non-bloc economic partners.

Less visible, but still clear, was the psychological impact of the communist era upon the average Bulgarian. The explosion in urban growth brought on by rapid industrialization and modernization had changed the character of Bulgaria. Old ways and old ties had been broken with little to replace them. The inefficient use of labor (there were in many sectors of the economy too many workers for jobs) and the lack of pay incentives led to a diminution in the work ethic (the old joke throughout the Soviet system was "You pretend to pay me and I'll pretend to work") that is difficult to overcome. Although workers wanted more material goods (one of the dreams of many Bulgarians after the collapse of the Zhivkov regime in 1989), the psychological shift that was necessary to make that even a long-range possibility was virtually impossible for those who had toiled so long under the old system.

Thus, the post-1989 Bulgarian economy has been beset by continuous difficulties, problems that cannot be divorced from the immediate past. Integrating into the world system with outdated plants, poor quality goods, few natural resources, a weak infrastructure (such as an outdated transportation grid), little investment capital, a lack of entrepreneurial innovation, an outdated educational system that discouraged initiative and creativity in favor of ideology, technology that was years if not decades behind the nations of Western Europe, and the reemergence of independent labor unions, which demanded benefits that the state simply could not deliver, all together have constituted a daunting challenge, despite the expectations of the people that things would quickly improve.

An immediate need was to figure out how to handle property. Since the state had owned virtually everything (despite some limited privatization during the 1980s for small areas of the economy such as restaurants), the redistribution of land and other property became vexing issues. Money was unavailable for investment, especially since former high-ranking officials knew where the money was and often expropriated it for their own use.

Moreover the reversion to a market system brought severe economic dislocation, which continued throughout the 1990s. Inflation was high, and wages fell. The country continued to fail to attract foreign investment due to continued bureaucratic red tape (especially in the economic sector) and limited opportunities for a profitable return on those investments. Midway through the 1990s, Bulgaria attracted only one-fourth of the foreign investment that went to neighboring Romania, for example. Inflation remained a constant problem. And the continued power of the restructured communist party has in some respects stalled progress.

In 1992 Bulgaria's parliament passed a privatization law that legislatively paved the way for change, but the reality was that privatization proceeded slowly. By the mid-1990s only about 10 percent of agricultural land had been privatized (although on a positive note, nearly 90 percent of housing had been turned over). And while the pace of privatization quickened, beginning in the spring of 1996, most private farms remain less than ten hectares in size. State cooperatives and farms continued to predominate. Thus, those who use the land continue not to own the land. This in turn has led to a situation in which farm incomes remain low (in part due to a significant decline in production of numerous crops brought on by land degradation caused by a half-century of poor management and soil acidification), thus reducing the domestic market for all products. Lack of credit leaves all farmers short of capital needed to purchase needed equipment.

On the industrial side, the government continued to move at a slow pace away from the state-run economy to a market one. The absence of capital markets hampered stock generation. Outdated large firms continued to operate in part because there was no economic alternative. While small privately owned businesses and shops opened (a striking sight to anyone who had been in the country during the years of communism was the changes in the shop windows from the formerly drab and indistinguishable display of products to a more attractive consumer-friendliness), the legacy of years of heavy industrialization continued to cast a pall over the country.

The government in the early 1990s attempted to sell shares in the state-run industries, but found few takers. Productivity continued to decline, while unemployment increased. Most Bulgarians supported state-run economic endeavors as a means of maintaining employment and price subsidies. But Western banks and international monetary funds demanded a speed-up in privatization and fewer government subsidies to outdated enterprises.

By 1995, inflation was 122 percent, and a year later over 300 percent according to World Bank statistics. Six governments took power between 1989 and 1997, providing few substantive economic answers to the country's problems. Retirees could barely survive on their pensions. People even turned off their heat the following winter because the bills were too high. And economic output continued to decline until 1997, when a few positive signs of increasing productivity, sales, and lower inflation were seen. Still, the failure (or unwillingness) of the government to make a clean break from the past policies of state sponsorship remained a serious problem, lessening hopes for future economic vitality.

Critical for the future of the country at the turn of the century was the prospect of joining the European Union (EU). Talks with the EU began in the spring of 2000. But four years later, Bulgaria had still not met many of the requirements for membership (including administrative and judicial reforms). The government's slow pace of reforms, including barriers to foreign investment in industrial development and budget deficits, continue to hamper the country in fulfilling the requirements for membership.

The burden of ensuring Bulgaria's economic future thus ironically still lies with the government. For nearly a half-century, false hopes were placed on a command economy that shifted the country's economy from the West to the East. For over four decades, governmental decisions hampered the country. With the collapse of communism and a return to a market economy, the government has continued to make choices that have slowed economic regeneration. Despite recent hopeful signs, that failure to meet the challenges and opportunities presented by the collapse of the communist bloc has led to hardship and political dislocation and an almost Third World economic status.

CONTEMPORARY CHALLENGES

With the collapse of the Soviet empire, the greatest threat to stability and prosperity in Central and Southeastern Europe is no longer the possibility of external conflict, but rather internal. Two forces have long plagued the region, especially in the Balkans: irredentism and nationalism. Ironically, during the Cold War these forces, so potentially destabilizing, were generally held in check by the imposed communist ideology. After the fall of the Iron Curtain, the restraints fell as well.

Irredentism is the belief or perception that neighboring territory lies unjustly outside the boundaries of the nation. Such a belief may be derived from historic, ethnic, or cultural claims. Given the emotionalism engendered by the issue, irredentism often becomes an instrument of state policy, as political leaders see the opportunity to use the claims for their own political purposes, or are obliged to play to the public clamor for "justice." Irredentist sentiments and demands are tied to nationalism, which for centuries has proved to be the Achilles' heel of the Balkans. Nationalism is an emotional attachment to and identification with a group that sees itself as distinct and possibly threatened by others not part of the group. Historians have long debated the exact nature of nationalism and its variant in Eastern Europe, where ethnic homogeneity is rarely found (unlike many of the nations of Western Europe), and where ethnic divisions have led to genocidal bloodshed, most notably in Yugoslavia during World War II and again during and following the dissolution of the Yugoslav state in the 1990s. What is clear is that the appeal of nationalism has turned neighbors into enemies in the twinkling of an eye. Hot spots are not confined to Kosovo and Bosnia, the most visible problem areas of the 1990s. Transylvania, although quiet as the twentieth century came to an end, has long been a thorn in the side of relations between Romania and Hungary. And Macedonia remains a source of bitter conflict between Bulgaria, Serbia, and Greece, over a hundred years after the onset of the "Macedonian Question."

Macedonia dominated Sofia's foreign and domestic agendas for decades. Statesmen who ignored Bulgarians' emotional attachment to the region risked stirring up nationalist passions. The greatest Bulgarian interwar statesman, Aleksandûr Stamboliiski, was killed in a coup in 1923, in large measure because of his belief that the country had greater needs than a nearly obsessive, almost paralytic, preoccupation with Macedonia; instead, he focused on domestic matters, in the belief that they were far more pressing for the future welfare of the state. It made little difference that boundaries in Southeastern Europe, given the shifting movements of people and the various states that existed before the coming of the Ottoman Turks in the 1300s, were often at best ethnic approximations. Claims that were a thousand years old (or more) remain essential to the national soul. Even today, the thought of an independent Macedonia is beyond the imagination of those Bulgarians, Greeks, and Serbs who see the region as part of their historic lands.

Energies in the region thus have often been sapped by inter- and intrastate preoccupation with real and perceived grievances and injustices. Nationalism has often trumped all other needs and made progress much more difficult for a region often termed backward; nationalism has become a millstone around the neck of progress in countries that have far more pressing problems.

If there was one positive effect of the communist takeover in Bulgaria and Eastern Europe in general, it was the apparent cooling of irredentist and nationalist passions by the new ideology of communism and the dream of a socialist future mandated by the new political masters. For four decades, nationalism, at least on the surface, was ideologically anathema, utterly foreign to the rhetoric of internationalism and the socialist fraternity.

In fact, however, the replacement of the old prewar governments with a communist state apparatus could not douse the flames of nationalist aspirations; even during the heyday of communism, nationalist problems continued to arise, a reminder (albeit infrequent) that the past never lurks far beneath the surface in Southeastern Europe. As communism began to unravel in the 1980s, nationalism, as so often in the past, again became a convenient tool for regimes that had lost favor and credibility with the people. Nationalism provided a means of diverting attention away from the realities of economic decline and material shortages.

Marxist claims of a new world in which internationalism would create a new order failed to take into account the fact that nationalism in Eastern Europe was often ethnic in origin, with ethnic minorities living in countries that considered them as "outsiders" and "alien." Romania's Nicolae Ceaușescu used the ethnic divisions within Transylvania (where 30 percent of the population is Hungarian) to prop up his unpopular dictatorship in the 1980s. Likewise, Slobodan Milošević came to power in Belgrade by playing to the memory of the great Serb defeat at Kosovo in 1389.

In the 1980s nationalism also made positive contributions to the lives of the people of Eastern Europe. Poles rallied behind shipyard workers (the Solidarity movement) and a Polish pope (John Paul II) to lay bare the hollow claims that communism had led to a "workers' paradise." Their actions led to the eventual toppling of the house of cards that was the Soviet empire. Moreover, the overthrow of communism was more than merely a political change; it also represented the removal of a kind of foreign overlordship and the restoration of national sovereignty. Yet in the wake of the collapse of communism, a vacuum was created that invited a reversion to past policies. For a "new" Bulgaria, the danger that nationalist sentiments at home and irredentist claims abroad would undermine its efforts at reintegrating the state into Europe was a threat not to be overlooked.

During the 1980s, the economy of Bulgaria was flagging and public discontent was growing; political jokes, always a barometer of public opinion in countries in which the only public voice was the state-run media, became darker and more bitterly directed toward the regime. The Bulgarian government, led by Todor Zhivkov, responded by turning its attention not to the economy (the real focus of the discontent) but to the Turkish minority.

After almost five centuries of Ottoman domination, a small Turkic and Turkified population existed within Bulgaria at the time of national liberation in the nineteenth century. Some were native Bulgarians who had converted during the long period of Turkish overlordship. These Pomaks ("helpers," from a Bulgarian word [*pomagach*] that denoted a traitorous renunciation of the Bulgarian Orthodox heritage for the Muslim faith of the ruling elites) were considered to in fact be Turkish, due to the Ottoman millet system that differentiated the population on the basis of religion. In addition, Turkish settlers had colonized parts of Bulgaria in the 1400s, moving into towns and serving as administrators or irregular military forces. Others populated urban areas as part of the ruling bureaucracy.

When the Ottomans lost control of the Balkans in the nineteenth century, many Turks left, but sizable numbers of Turks and Pomaks remained in the towns and valleys they had inhabited for centuries. The two largest pockets of Muslims could be found in the northeastern part of the country between Ruse and Varna in the Dobrudja and in the valley south of the Maritsa River. Although a minority, they were not an insignificant one. By the 1980s, Turks made up approximately 10 percent of the total population (although the numbers vary depending upon the source; Amnesty International claimed that there were 900,000 ethnic Turks in Bulgaria in 1986).

After World War II, the new constitution of 1947 provided for minority rights and the protection of language and culture. For a Turkish population that numbered some 675,000 out of a total of 7 million and that had seen close to 220,000 leave during the interwar and war years, the guarantee of minority rights was critical. But, like so much written in socialist constitutions, words did not necessarily match reality.

From 1949 until 1951, 155,000 Turks either left the country or were expelled (as Ankara charged) after the new communist government announced that 250,000 Turks would be "allowed" to leave. This exodus placed enormous strains on the Turkish government, which had to absorb this population. Twice, in fact, Ankara had to close the borders with Turkey lest the exodus overwhelm Turkey's capacity to deal with the problem. The majority of the Turks who left Bulgaria came from the southern Dobrudja, the richest agricultural region in the country, which the regime hoped to collectivize. Town names in Turkish in the Dobrudja were replaced by Bulgarian ones.

In 1958 the government closed schools for the Turkish minority and began to crack down on the religious life of Muslims. Turkish schools were replaced with Bulgarian ones. The number of imams (religious leaders) began to decline. By 1965, the census did not even distinguish between ethnic groups, and six years later a new constitution dropped references to ethnic minorities altogether. In 1968 Turkish language publications had been reduced to two (one newspaper and one journal). In 1972 Turkish language classes were banned, and fines were issued for speaking Turkish in public.

In 1971 the Party began the process of assimilating the country's minority population. Pressure was placed on Pomaks (as well as the Roma [Gypsies]) to become Bulgarian. Pomaks with Turkish family names were ordered to change them to Slavic or Bulgarian (that is, Christian) ones or suffer imprisonment. Many Pomaks resisted and were sent to labor camps; they had become enemies of the state by clinging to their names. Effectively, the Pomaks had ceased to exist. By the 1970s, even the use of the word "Pomak" was banned, despite the fact that there were an estimated 170,000 Pomaks in Bulgaria.

For the moment, however, save for the language restrictions, the regime left the ethnic Turkish population alone, perhaps owing to concerns about international reaction. (Bulgaria, like the other states in Eastern Europe, was working toward gaining foreign economic credits and investments.) Instead the regime continued to "encourage" emigration. From 1968 to 1978, an agreement between Sofia and Ankara reopened the border, and another 130,000 Turks left Bulgaria.

In the early 1980s the campaign against the Turks resumed. "Historians" began to assert that the Turks were really ethnic Bulgarians (that is, Pomaks) who had lost their cultural and historic consciousness during centuries of occupation or had been forced to convert to Islam by the Turks.

In 1984–1985, after a few years of quiet, the regime initiated a new campaign designed to end the Turkish presence in Bulgaria. Whatever the motivation for the policy, the effects were catastrophic. All Turks (as well as other Muslims) were ordered to adopt Bulgarian names, as had been done earlier with the Pomaks. This action was intended to signal that they were voluntarily taking the names so as to return to their true ethnic roots. If one refused to comply, a name was assigned, and those who resisted were punished. And the campaign went far beyond names. Towns and villages were occupied. Citizenship cards (with the new names) were issued, and the cards were required for obtaining salaries and pensions. Those who resisted were imprisoned, and some (the numbers range from 500 to 1,500) were killed.

The assault was also cultural. Despite the requirements of Islamic law, circumcision was banned, as was the hajj, the pilgrimage to Mecca, one of the five pillars of the faith. Birth certificates and marriage licenses could only be issued in Bulgarian. Speaking Turkish became a criminal offense. Muslim sites were destroyed and mosques closed. Even the traditional Turkish peasant costume was forbidden. Nationalism had become both xenophobic and demagogic.

Like much of the propaganda that filled the airwaves or appeared in the newspapers (an old joke in the socialist world was that people preferred not to read the papers; the newsprint merely got their hands dirty), the reasoning issued by Sofia was stunningly brazen. Charges were made that unless something was done and done quickly, the Turkish birthrate was so much higher than the Slavic birthrate that Turks would swamp Bulgarians and the nation would cease to exist. Another angle in the propaganda campaign was that the attack on the Turkish population was really for their own good. The return to their true national culture was the end that supposedly justified the means. In fact, however, this campaign was clearly tantamount to a declaration of war upon the culture of the Muslim minority, requiring the largest single military exercise employed by Bulgaria in decades to enforce the dictates.

Zhivkov perhaps believed that if he could use the Turks to rally ethnic Bulgarians in a nationalist crusade, he could divert the public's attention from the regime's economic failures. Whatever his motivation, the plan backfired. Bulgaria, reeling under the weight of international credits it was unable to repay, and unable to secure new loans or to attract new business or investment, now felt the wrath of the international community. The United Nations, the Islamic Conference, and other organizations swiftly condemned Bulgaria's actions. Zhivkov's campaign was a clear violation of the 1975 Helsinki Accords, which prohibited such violations of human rights. International condemnation did not, however, halt the campaign or its negative effects.

Beginning in May 1989, the government began the forcible removal of Turks from their homes; they were permitted to take only what they could carry. By August, over 300,000 refugees were either in Turkey or in camps along the border waiting to be processed. Although most in the West took little notice (in the summer of 1989, much of the world was transfixed with the rapidly unfolding events in the Soviet bloc that led to the collapse of the empire), this exodus took an enormous toll on both the people and the Bulgarian and Turkish nations directly involved.

Since the Turkish inhabitants of Bulgaria were often agricultural workers or employed in low-paying construction jobs, a labor shortage quickly developed, primarily in the countryside. With the fall harvest season approaching, others had to be recruited to fill the void. The effects upon the economy, including the tobacco crop (one of the country's leading exports and thus a source of essential hard currency), were catastrophic. An already failing economy had just worsened.

Although Zhivkov could not help being pleased with his success in driving so many Turks from Bulgaria, he had clearly isolated himself politically, even within the ranks of the Party. This fact was not lost upon the Soviet leader, Mikhail Gorbachev, whose needs for glasnost and perestroika (openness and restructuring) in the Soviet Union required that international attention not be focused on the abuses of communism but rather on his attempts at reformism.

Within a matter of months, Zhivkov was toppled from power by the Party, and a new National Assembly (Subranie) moved to retreat from the policy of cultural assimilation and assault. In 1991 lawmakers decreed that those who wished to restore their names could do so (for a period of three years). Slavic endings to ethnic names could also be removed; this decree was directed not just at the Turks but at other groups, such as the Roma, who had been forced to alter their familial spellings. In addition, limited language instruction in Turkish was reinstated. At the same time, however, the Socialists, who controlled the parliament, added a measure to the new constitution that prohibited the formation of political parties on the basis of religion or ethnicity, a provision clearly directed at the Turkish minority. Thus, although some of the provisions of the campaign against the minorities were repealed, and a new friendship agreement was concluded with the Turkish government, the effects and lessons of the xenophobic exercise in nationalism have lingered.

Despite the restrictions on the formation of political parties, a political organ, the Movement for Rights and Freedom (MRF), formed to represent the voice of the Turkish population, which increased with the return of over one-half the Turks who had emigrated in 1989. Although the MRF has been courted to participate in coalition governments, criticism of the human rights record toward the Turkish minority (as well as the Roma) has continued to be a barrier toward admission to the European Union and NATO. In the late 1990s the leadership of the dominant political party in the country, the Union of Democratic Forces (UDF), made overtures to the Turkish population. It was clear that as Bulgaria moved toward full integration into the European system, the problems of aggressive nationalism would be detrimental to the greater cause of economic progress and international respect. Nevertheless, the dangers of nationalism and irredentism, as evidenced by what has occurred in the former Yugoslavia as well as in the case of the Turkish minority in Bulgaria, are always potentially sources of division and hostility that linger, influenced by the past. Whether the moves by Bulgarian leaders to deal with the problems of the Turkish minority are sincere or based solely on expediency thus remains to be seen. For Bulgaria to make progress in the third millennium, that part of its past has to stay buried.

CHRONOLOGY

Fifth century B.C.E.	Thracian kingdom established in Bulgarian lands.
352 B.C.E.	Conquest of the Bulgarian lands by Philip of Macedon.
First and second centuries B.C.E.	Conquest by the Romans.
Sixth and seventh centuries C.E.	Migration of the Bulgars and the Slavs into the region south of the Danube and settlement there.
681	Following his victory over a Byzantine army, Bulgarian khan Asparuh is recognized by Constantinople as the head of a Bulgarian state with its capital at Pliska.
681–1018	First Bulgarian Empire.

Eighth and ninth centuries	The slow assimilation of the ruling Bulgars by the larger Slavic population, who in turn adopt the term Bulgarian for themselves.
803	Bulgar forces, led by Krum, defeat a Byzantine army led by the emperor Nicephorus.
852	Boris becomes khan.
864	Conversion by Boris to Orthodox Christianity.
886	First translations of religious texts into Old Bulgarian, or Old Church Slavonic.
893–927	Height of First Bulgarian Empire under Simeon the Great, with his capital at Preslav.
917	Simeon takes title of "Tsar of the Bulgarians and Emperor of the Romans" after failed siege of Constantinople in 913.
927	Recognition of the Bulgarian Patriarchate by Constantinople.
946	Death of John of Rila; construction of Rila Monastery begins.
Tenth and eleventh centuries	Bogomil "heresy" weakens Bulgarian state.
1018	Fall of First Bulgarian Empire to Byzantine forces led by Basil II ("the Bulgar-Slayer").
1185	Creation of Second Bulgarian Empire with capital at Turnovo, after successful revolution led by Petur and Asen.
1185–1396	Second Bulgarian Empire.
1218–1241	Territorial height of empire under Asen II.
1371	Bulgarian tsar becomes a vassal of the Ottoman Turks; Bulgaria is divided into two parts, with capitals at Vidin (west) and Turnovo (east).
1393	Turnovo taken by Ottoman forces; Bulgarian Patriarchate abolished.
1396	Ottomans take Vidin, ending the Second Bulgarian Empire.
1396–1878	Ottoman rule of Bulgarian lands.
1453	Forces of Mehmed the Conqueror take Constantinople.
1762	Paisi of Hilendar publishes *A Slavonic-Bulgarian History (Istoriia Slavianobolgarskaia),* which attacks Greek influence in Bulgaria.
1774	Treaty of Kuchuk Kainardji grants Russia authority to protect Christians in the Ottoman lands.
1792–1807	Warlord Osman Pasvanoglu rules from Vidin over parts of Bulgarian lands.
1806	First work in Bulgarian published in Bucharest.
1809	Bishop Sofronii establishes a Bulgarian center in Bucharest.
1835	First Bulgarian school established at Gabrovo.
1839	Beginning of *Tanzimat* (reform) period in Ottoman Empire, aimed at revitalizing the empire. Reform period lasts until 1876.
1856	First *chitalishta* (reading rooms) are established.
1860s	*Cheti* (armed groups) form in Romania to fight for liberation. Key revolutionaries include Georgi Rakovski, Liuben Karavelov, Khristo Botev, and Vasil Levski.
1870	Ottoman sultan offers the creation of an autonomous Bulgarian church, the Exarchate.
1876	Failed April Uprising.
1877–1878	Russo-Turkish War.
March 1878	Treaty of San Stefano creates an independent "Big Bulgaria."
July 1878	Congress of Berlin revises the provisions of San Stefano. A semi-independent Bulgaria and an autonomous Eastern Rumelia (under Ottoman jurisdiction) are created.
1879	Turnovo Constitution written, which will remain in force until the "Dimitrov Constitution" of 1947.
April 1879	Alexander of Battenberg elected monarch.
1885	Union with Eastern Rumelia.
November 1885	Serbo-Bulgarian War.
8–17 August 1886	Coup led by pro-Russian officers in the Bulgarian army forces Alexander to abdicate; countercoup, led by Stefan Stambolov, invites Alexander to retake throne.
26 August 1886	Alexander formally abdicates.
June 1887	Ferdinand of Saxe-Coburg is elected as new monarch.
1891	Bulgarian Social Democratic Party founded.
1893	Formation of the Internal Macedonian Revolutionary Organization (IMRO).
1894	Resignation of Stambolov government.
1895	Assassination of Stambolov.
1899	Bulgarian Agrarian National Union (BANU) founded.
1903	Failed Ilinden Uprising in Macedonia.
1903	Formation of Bulgarian Workers' Social Democratic Party by Dimitûr Blagoev.
1908	Bulgaria gains complete independence; Ferdinand takes the title of tsar.
1912	Formation of Balkan League with Serbia and Greece.
October 1912–May 1913	First Balkan War.
May 1913	Treaty of London ends First Balkan War; Bulgaria does not feel properly compensated in Macedonia.
June–July 1913	Bulgaria attacks Macedonia, precipitating Second Balkan War.

August 1913	Treaty of Bucharest ends Second Balkan War; Bulgaria loses territory, including southern Dobrudja.
October 1915	Bulgaria enters World War I on the side of the Central Powers by declaring war on Serbia.
September 1916	Bulgaria attacks Romania.
September 1918	Salonika Front breaks, leading to armistice and Radomir Rebellion.
October 1918	Ferdinand abdicates for son Boris.
November 1919	Treaty of Neuilly signed. Bulgaria loses land to Serbia, Romania, and Greece.
1920	Aleksandûr Stamboliiski forms a government led by the Bulgarian Agrarian National Union.
June 1923	Coup overthrows and murders Stamboliiski; government led by Aleksandûr Tsankov forms.
September 1923	Failed September Uprising against rightist government.
1930s	Effects of Great Depression cause severe economic dislocation.
1934	Greece, Turkey, Romania, and Yugoslavia form Balkan Pact aimed at containing Bulgarian territorial revisionism.
May–June 1934	Boris overthrows government and bans all political parties and organizations; Turnovo Constitution is suspended.
1933–1941	Growth in economic dependence on Nazi Germany.
March 1941	Bulgaria joins the Tripartite Pact.
April 1941	Bulgarian troops occupy Yugoslav Macedonia and western Thrace.
1943	Coalition of parties, led by the Communist Party, forms the Fatherland Front.
August 1943	Boris dies.
September 1944	Soviet army crosses into Bulgaria. Bulgaria declares war on Nazi Germany.
8–9 September 1944	Coup d'état by Fatherland Front overthrows the government.
1946	Fatherland Front candidates control the National Assembly.
November 1946	Communist leader Georgi Dimitrov named prime minister.
1947	Peace treaty with Allied powers ratified; opposition leader Nikola Petkov arrested, tried, and executed; new constitution, the "Dimitrov Constitution," promulgated.
1949	Dimitrov dies; replaced by Vulko Chervenkov, a hard-liner who will purge the Party of "deviationists."
1949–1951	First campaign against the Turkish minority leads to the flight of 155,000 Turks.
1953	Death of Soviet leader Josef Stalin; Chervenkov increasingly isolated politically.
1954	Todor Zhivkov named first secretary of the Bulgarian Communist Party (BCP).
1958	Turkish schools in Bulgaria closed.
1962	Zhivkov consolidates power.
1971	Zhivkov issues new constitution.
1981	Celebration of the 1,300th anniversary of the First Bulgarian Empire.
1984–1985	Campaign against the Turkish minority intensifies.
1989	Renewed campaign against the Turkish and Muslim minority.
November 1989	Zhivkov replaced as Party secretary at plenary Party session by Petûr Mladenov; days later he is replaced as president as well.
January 1990	BCP gives up exclusive political power; in April it will rename itself the Bulgarian Socialist Party (BSP).
1990	First free elections in the postcommunist era; despite BSP victory, a coalition of opposition parties, the Union of Democratic Forces (UDF), refuses to endorse BSP program.
22 November 1990	The People's Republic of Bulgaria is renamed the Republic of Bulgaria.
1991	Zhelyu Zhelev elected president.
1992	Privatization laws adopted.
April 1997	Elections lead to UDF government headed by Ivan Kostov.
June 2001	A new party, the Simeon National Movement, headed by the former monarch Simeon II, wins elections. Simeon becomes new prime minister. Later, Georgi Parvanov, from the BSP, elected president.

GREECE

ALEXANDROS K. KYROU

LAND AND PEOPLE

At varying times in their almost 4,000-year-history, the Greeks have populated diverse areas of the larger Mediterranean world. The earliest Greek communities emerged within a geographic pale corresponding roughly to Greece's current territory and extending across the Aegean Sea to the central and southern portions of Asia Minor's western coast. At the height of their distribution of settlement in antiquity, Greeks dominated the southern Balkans and the peninsula's surrounding islands, western and northern Asia Minor, southern Italy and Sicily, and Cyprus. At the same time, Greek populations, especially in urban communities, were widely dispersed along the shores of the Black Sea, the Libyan coast in North Africa, and throughout much of the Near East; meanwhile, Greek colonies in Western Europe dotted the Mediterranean coasts of France and Spain, and networks of Greek settlement stretched as far as Iran and Afghanistan in Southwest Asia. During the Middle Ages, Greek society, and its population, consolidated through the Byzantine Empire to form a geographic and population core anchored in, first, the peninsular landmass of Asia Minor and, second, the southern Balkans, as well as the Aegean Islands and Cyprus. Greek communities continued to cling to southern Italy and Sicily, as well as other places, but these particular historic Greek centers steadily declined under the pressures of foreign conquest and assimilation.

During the early modern period, and largely as a result of the Greek world's conquest by the Ottoman Turks, a major territorial contraction of the Greek population took place. In Asia Minor, most of the region's Greek population, despite its survival in considerable numbers along the Aegean and Black Sea coastal areas, as well as places in the interior, was displaced or assimilated by the Turks. In the Balkans, although Greeks continued to dominate the south of the peninsula and even expanded northward into urban settlements throughout the region, Ottoman conquest of Southeastern Europe brought with it Turkish settlement and consequent displacement of many Greek populations, especially in large parts of Macedonia and Thrace. The contraction of Greece's geographic space and population distribution was accelerated in the modern era. Although the Greek nation-state emerged in the early nineteenth century as the first successor to the Ottoman Empire, it proved incapable of liberating and incorporating all of the Greeks' geographic patrimony. Today, in fact, the Greek world is geographically smaller than at any other time in its history. In its present form, the country's territory of 131,957 square kilometers is overwhelmingly mountainous, shaped by a complex coastline exceeding 15,000 kilometers in length, and includes as many as 2,000 islands and islets that dot the surrounding Aegean, Ionian, and Mediterranean Seas.

The Acropolis, Athens. (PhotoDisc, Inc.)

Given Greek society's exceptionally long history, it is not surprising that Greece's geographic stage, and corresponding population landscape, experienced such dramatic change. What is remarkable, however, is that the Greeks managed for over three millennia to maintain or reassert their constant, dominant position in the southernmost Balkans, their historic homeland and geographic base. Often identified as the Greek peninsula, this region, comprising the lands of the modern Greek state, are traditionally divided into nine geographic regions that are differentiated by historic frontiers but not by political administration. The six mainland regions are Epirus, Macedonia, and Thrace in the north, and Central Greece, the Peloponnesus, and Thessaly to the south. The three island regions consist of the Aegean Islands, in the Aegean Sea between mainland Greece and Turkey, the Ionian Islands, in the Ionian Sea immediately west of the mainland, and the island of Crete, straddling the Aegean and Mediterranean Seas.

Greece's most underdeveloped area, Epirus, is the Greek part of a larger territory, which extends into Albania. Dominated by a mass of complex mountain lines known as the Pindus Range, Epirus is the most mountainous region in Greece and, by virtue of its rugged topography and limited passageways, the country's historically most isolated area. Because there are no major valleys between its steep ridges, Epirus is also a poor agricultural region, suitable mainly for pasture. The chief city, Ioannina, which enjoyed considerable cultural and political influence in Ottoman times, functions today as the region's primary commercial center. Although the population of Epirus played an important role in the Greek Revolution against Ottoman rule in the 1820s, most of Epirus was not incorporated into Greece until 1913.

East of Epirus, south of the border with the former Yugoslavia and bounded by the Aegean Sea, is Macedonia, the largest region of Greece. Macedonia is the Greek portion of a geographically larger area that also includes the lands comprising southwestern Bulgaria and the Former Yugoslav Republic of Macedonia (FYROM, or the Republic of Macedonia, which until 1991 was the southernmost republic in Yugoslavia). Macedonia's terrain is defined primarily by rugged mountains interspersed with fertile river valleys and an extensive coastal plain shaped by the Axios (Vardar) River, which empties into the Aegean Sea. Western Macedonia, an area dotted with several large lakes, is the mountainous source of Greece's longest flowing river, the Aliakmonas, which meanders eastward to form a swampy delta shared with the mouth of the Axios River. The fertile Strymonas (Struma) River valley is nestled in eastern Macedonia. Central Macedonia's plain is one of the most agriculturally productive regions in the Balkans and a resource crucial to Greece's economy. Greece's second largest city, Thessaloniki, is also located in central Macedonia. Thessaloniki possesses one of the most strategic ports in Southeastern Europe and the city serves as an important commercial center, linking Balkan markets with international trade. Founded in the fourth century B.C.E., Thessaloniki was for many centuries, both in the Byzantine and the Ottoman Empires, the most important economic and cultural center in the Balkans after Constantinople. Southeast of Thessaloniki, one of Macedonia's most prominent geographic features, the Chalcidice peninsula, extends three subpeninsulas into the Aegean Sea. The rugged easternmost of these three long arms of land is home to the autonomous religious community of Mount Athos, a legendary Orthodox Christian monastic enclave that has provided seclusion to its male-only members for more than a millennium. Athos, although preserving its status as a self-governing territory, was, like the rest of Greek Macedonia, incorporated into the Greek state in 1913.

Thrace, like Epirus and Macedonia, is the Greek part of a larger geographic and historic region. Greek Thrace is sometimes distinguished as Western Thrace to differentiate it from Turkish Thrace, also known as Eastern Thrace or European Turkey. Thrace's eastern border is defined by the Evros (Maritsa) River, which separates Greece and Turkey, while the Greek border with Bulgaria serves as the region's northern frontier. To the south, Thrace meets the Aegean Sea, and to the west the Nestos River sets the regional border between Greek Macedonia and Thrace. While most of northern Thrace is dominated by the Rhodope Mountains, Thrace's southern lands encompass three alluvial plains, running along the coast of the Aegean Sea and the valley of the Evros River. Thrace became part of Greece in 1919.

The region of central Greece, known historically as Rumeli, extends from the Ionian Sea on the west to the Aegean Sea on the east, and from Epirus and Thessaly in the north to the Gulf of Corinth on the south. The main range of the Pindus Mountains extends southward into the western part of Central Greece, where it connects with another mountain system, the Parnassian Range, which extends southeastward toward the historic area of Attica and the city of Athens. Greece's capital, Athens, is surrounded by its largest metropolitan area and neighbors the country's chief port, Piraeus. Greater Athens is the hub of Greece's lucrative international trade and investing activity and the center of the country's largest industrial complex. Leaving an enormous intellectual, cultural, and political imprint on the development of civilization, the legacy of ancient Athens continues to overshadow much of the modern city, which, like its ancient ancestor, has developed a reputation for rapid growth, overcrowding, an inadequate transportation structure, a frenetic pace of public and private life, and a creative and resourceful population. Center-stage along with the Peloponnesus in the course of the Greek Revolution, fought in the 1820s for liberation from Ottoman rule, Rumeli, or Central Greece, was one of the core territories comprising the independent Greek state established in 1832.

The southernmost part of mainland Greece, as well as the Balkan Peninsula, is a mountainous landmass connected to central Greece by an isthmus only four miles wide at its narrowest point. The isthmus connecting the Peloponnesus to central Greece, is, in fact, cut by the Corinth Canal. Since the canal's completion in 1893, the Peloponnesus has been made a virtual island surrounded by the Gulf of Corinth on the north, the Ionian Sea to the west, the Mediterranean Sea on the south, and the Aegean Sea in the east. The Peloponnesus, like much of Greece, is renowned for its physical beauty, which also reflects an intensely complex concentration of diverse topographical features. The Peloponnesian networks of mountains extend southward to form three peninsulas that make up the southernmost points of the landmass. In the center of the Peloponnesus, surrounded by mountains, rests the Plateau of Arcadia. Lowlands stretch along the northern and western coasts, along inland river valleys, and in several spring-fed mountain basins, while fertile alluvial plains are found in the northeast. All the same, much of the peninsula is arid during summer, requiring irrigation in many agricultural areas. The centrally located city of Tripolis aside, most of the Peloponnesus's population is located on the periphery of the peninsula. Still home to several cities, such as Argos, Corinth, and Sparta, renowned for their importance in the ancient world, today the Peloponnesus's largest and most important city is the thriving industrial, commercial, and port city of Patras on the north coast. A major source of early nationalist revolutionaries and the first region to be liberated from Ottoman rule during the Greek War of Independence, the Peloponnesus was a core territory of the modern Greek state created in 1832.

The region of Thessaly occupies the east side of the Pindus watershed, extending south of Macedonia, north of Central Greece, and on to the Aegean Sea. Thessaly's major river, the Pinios, originating in the Pindus Range and emptying into the Aegean, flows through the region's most important topographical feature, its central plain. The fertile, and relatively large, Thessalian Plain constitutes one of Greece's most vital agricultural areas, particularly for the production of grains and livestock. Another of Thessaly's most prominent geographic features is a spur of mountains extending southeastward from Mount Olympus in Macedonia along the Aegean coast, forming and terminating in the Magnesia peninsula. The peninsula envelops the Gulf of Pagasai along which rests one of Thessaly's two major urban centers, the port city of Volos. The nearly landlocked gulf provides metropolitan Volos with a natural harbor for shipping the agricultural products from the plains just to the west. Thessaly's second large city, Larisa, makes good use of its geographic position in the center of the region's productive plain and at the nexus of major transportation corridors to function as one of Greece's largest food-processing centers. The Ottoman Empire was forced to cede to Greece most of Thessaly in 1881; the remainder of the region's territory was incorporated in 1913.

Greece's islands have long held a special place in the imagination of Greeks and foreigners alike. Like the mainland, however, the islands are geographically and topographically far more diverse than they are popularly represented. Most of the islands are geological extensions of the mountains of the Greek mainland, forming regional clusters in the Aegean Sea. In the northern Aegean the densely forested island of Thasos is part of Macedonia, dry Samothrace belongs to Thrace, and the lush chain of the Northern Sporades make up part of Thessaly.

In the western and central Aegean are a large group of some twenty-four islands comprising the Cyclades. Excluding Naxos and Siros, which benefit from fertile and well-watered valleys, most of the Cyclades Islands are dry, rocky, and infertile. A historic bed of piracy and a source of decisive opposition to the Ottomans for control of the sea during the Greek Revolution, the Cyclades were an integral part of independent Greece established in 1832. East of the Cyclades and close to the Turkish coast is another archipelago known as the Dodecanese Islands, the largest of which is Rhodes. The Dodecanese, wrested from the Ottoman Empire by Italy in 1911 and awarded to Greece in 1947, comprise the last territories added to Greece. North of the Dodecanese are the relatively large islands of Samos, Ikaria, Chios, Lesbos, and Lemnos, the first of which is remarkable for its green forests, the fourth of which is notable as one of Greece's most economically developed islands, known for its enormously profitable olive production. All of these islands were acquired by Greece in 1913.

Shielding the Aegean Islands from the Mediterranean Sea is Crete, Greece's largest island. Crete's location in the eastern Mediterranean and on the cusp of the Aegean has made it historically significant as a natural and vital link in the exchange and diffusion of cultures between Europe and the Near East. Conquered by the Ottomans in 1669, Crete had been a Venetian possession for more than four centuries. After several uprisings against the Ottomans, Crete secured autonomous status in 1897 and was incorporated into Greece in 1913.

Finally, beyond the Aegean and immediately west of the Greek mainland are the Ionian Islands, which share the name of the sea in which they are found. Corfu is the northernmost of the main Ionian Islands, as well as the archipelago's most populous, most prosperous, and most strategic island. In fact, its strategic position, which commands the strait between Italy and the Balkans where the Ionian and Adriatic seas meet, had placed it for several centuries at the mercy and occupation of several foreign powers such as Venice, Russia, France, and Britain. Corfu is the only part of Greece never to have been subject to Ottoman conquest and rule. Corfu, as well as the other Ionian Islands, was ceded by Britain to Greece in 1864. Despite their many differences, the Greek islands share a set of distinctive features that have defined the broader Greek historical experience—the geographical markers of sea and mountains.

NATURE AND ENVIRONMENT

Greece's environment is significantly influenced by its climate, which is largely Mediterranean but with considerable regional variation. There are essentially five main climatic regions in Greece: Attica and the Aegean, the continental northeast, the mainland mountainous interior, the Peloponnesus, and the west (including the Ionian Islands). Considerable local variation within these zones results from differing elevation and distance from the sea. The dominant condition of Greece's climate is the alteration between hot dry summers and cold damp winters typical of the larger Mediterranean climatic belt. Continental climatic and weather influences are, as could be expected, felt more in the north and in the center of the country than in other parts of Greece. In winter, low-pressure systems originating in the North Atlantic reach Greece, bringing rain and drawing cold winds from the eastern Balkans over Macedonia and Thrace. In summer, low-pressure systems decline, allowing for hot and dry conditions throughout most of the country. Precipitation throughout the year is influenced appreciably by elevation, with high mountain regions from Macedonia, in the north, to Crete, in the south, covered with snow for several months during the year.

The rapid modernization that swept Greece in the postwar period also produced severe pressures on Greece's natural environment. Several of the problems associated with ongoing economic development have had a deleterious effect on Greece's ecological system. The considerable expansion of industrial activity, a dramatic increase in the number and use of motor vehicles, poor controls over land use, and massive waves of regular tourism have lowered air and water quality and placed enormous strains on Greece's environment. Athens, for example, has become known for acutely poor air quality and frequent severe incidents of smog. The city's climatic conditions and topography favor formation and trapping of pollutants close to the ground, a condition created in large part because the rapid postwar urbanization of Attica has proceeded without any systematic plan for traffic and industrial expansion. The same conditions contribute to air pollution in Thessaloniki, albeit to a lesser extent. In addition, sulfur dioxide, created chiefly by industrial manufacturing, has severely damaged monuments and stone buildings in Athens and Thessaloniki and generated acid rain that has injured the health of forests in Epirus, Central Greece, and Macedonia.

Water pollution and soil conservation have likewise become serious problems. Greece has shared in the general postwar deterioration of water quality in the Mediterranean basin. Bodies of water adjacent to industrial centers, especially the Saronikos Gulf south of Athens, where virtually half of Greece's industrial complex is located, receive large amounts of untreated industrial waste and municipal sewage. Greece's soil, most of which is naturally poor in organic matter, has been degraded in recent decades by the extensive, and in some instances uncontrolled, use of fertilizers as well as by soil erosion, the latter a problem plaguing Greece since antiquity. Furthermore, together with chronic and apparently increasing droughts, erosion has caused semi-desertification in many agricultural areas. Finally, rural vegetation has been stripped by overgrazing and urban sprawl construction, further contributing to soil erosion. The major agricultural plains of Macedonia and Thessaly have, however, been largely immune to soil erosion problems.

In response to the mounting crises, which became clearly apparent in the 1970s, Greek governments have produced a mass of environmental regulations. Greece's 1975 constitution gives the state authority over the country's environment and natural resources, while the 1986 Law on the Protection of the Environment sets the basic principles of

Greece's environmental policy. However, rather than establishing an efficient, centralized apparatus for implementing and enforcing such principles, the 1986 law provides for no autonomous regulatory environmental agency. In place of such an agency, the law requires nearly one hundred implementation decisions by multiple government agencies before going into full effect. The unwieldy nature of this structure has promoted bureaucratic inaction and even obstruction as much as it has led to any tangible problem solving. Often, for example, government ministries responsible for infrastructure projects and linked construction industries oppose land-use and conservation initiatives.

Despite the state's largely failed attempts to introduce effective environmental protection policies on its own, significant progress has been made on this front in Greece since the early 1990s. This progress is largely the result of the convergence of a number of sources of pressure and activism that have compelled, or forced, government and industry in Greece to undertake measures to tackle the country's environmental problems. The Greek media have been instrumental in this area by increasing attention to escalating problems. Pressure beginning in the early 1990s from the European Community (EC), and later its successor, the European Union (EU), on Greece to uphold national and international environmental obligations were important in motivating the Greek government to act more responsibly. Likewise, major decisions made by the Council of State, the highest administrative court in Greece, overturning antienvironmental policies had a decisive impact on the advancement of environmental concerns. In addition, during the 1990s several grassroots nongovernment environmental organizations emerged, and have continued, to mobilize public opinion in support of specific environmental issues. Moreover, such activist groups have brought environment-driven legal proceedings successfully before the Council of State in Greece and relevant agencies of the EU. Despite steadily increasing successes, Greece's environmental movement remains fragmented and highly localized, beginning only recently to coordinate and coalesce its efforts on a national level comparable to the "Green" groups of Western Europe.

Agriculture, the backbone of the Greek economy since antiquity, has experienced steady proportional decline as a sector of the country's overall economy in the postwar period. This trend, of course, is representative of the transition to an increasingly more developed economy and general modernization. The shrinkage of the agricultural sector, relative to other sectors, has been accelerated especially during the last two decades. For instance, whereas agriculture (together with forestry and fishing, the so-called primary sector) contributed approximately 20 percent of gross domestic product (GDP) around 1980, by the year 2000 that figure had declined by half to about 10 percent. Nevertheless, agriculture remains comparatively more important to Greece than to most other EU countries. In the EU as a whole, the agricultural sector contributes 6–7 percent of GDP. Notwithstanding, employment in agriculture has declined as the primary sector's role in the Greek economy has receded. While in 1980 persons employed in agriculture represented 28 percent of national employment, two decades later that figure had declined by almost one-third to approximately 20 percent.

Despite the modern transformation of Greece's agricultural sector toward export crops, the millennia-old tradition of fragmented, non-contiguous, and small-scale landholdings continues to persist. This pattern of land tenure was reinforced in the nineteenth and early-twentieth centuries by state land distribution programs that divided national lands to be given to landless peasants. The state's commitment to universal land ownership for the peasantry spared Greece much of the social instability, hence the absence of a significant agrarian political movement, that was common throughout much of the rest of prewar Eastern Europe. Nonetheless, the application of these policies often sacrificed efficiency in land use for equity in land distribution.

Greece's total agricultural utilization area is 3.7 million hectares (one hectare equals approximately 2.5 acres) of land, of which roughly 60 percent is in the plains and 40 percent is in the semimountainous or mountainous areas. While two-thirds of the land under cultivation is used for crops, and about one-quarter for orchards, the remaining agricultural land is used for pasturage and vineyards. In the EU as a whole, the average area per holding is approximately fourteen hectares, while in Greece the average is below four hectares. The small size of individual landholdings is the primary cause of lower agricultural productivity in Greece compared with other EU countries. The economies of scale offered by the most recent advances in farming methods have a limited impact on small plots of land characteristic of the Greek agricultural sector.

Greece's diverse topography and climatic conditions have led to differences in agricultural practices and cultivation methods throughout the country. For example, in Macedonia and Thessaly approximately 85 percent of agricultural land was cropland, while in Crete two-thirds of the island's agricultural areas were occupied by vineyards and orchards. Meanwhile, in the Peloponnesus two-thirds of agricultural land was used as cropland and one-third was used for vineyards and orchards. The approximate shares of major crops in total agricultural production are as follows: 16 percent from cotton, tobacco, and sugar beets; 11 percent from wheat and other grains; 11 percent from fruits and vegetables; 11 percent from olive products; and 6 percent from grapes. Livestock and livestock production constitute roughly 30 percent of the total value of Greece's agricultural output. The largest components of the country's livestock population are sheep and goats, whose meat and milk, respectively, account for 6 percent and 7 percent of the agricultural total. Whereas most of the sheep, goats, pigs, and poultry are evenly distributed among the agricultural regions of the country, about half of Greece's cattle are concentrated in the plains of Macedonia. Beef and milk provide 6 percent of the country's agricultural output, while poultry and eggs account for 6 percent, and pork for 4 percent.

POPULATION

At the time of the 2001 census, the population of Greece was 10,964,020, marking an increase of approximately

700,000 since 1991. The de jure population by region was approximately as follows: 490,000 in the Aegean Islands; 4.6 million in Central Greece; 580,000 in Crete; 400,000 in Epirus; 220,000 in the Ionian Islands; 2.32 million in Macedonia; 1.18 million in the Peloponnesus; 800,000 in Thessaly; and 370,000 in Thrace. Greece's largest urban area is metropolitan, or Greater, Athens with a population of 3,761,810 in 2001. Metropolitan Thessaloniki's population exceeds 740,000, followed by Patras with a population of approximately 175,000. Only three other cities, Heraklion on Crete and Larisa and Volos in Thessaly, have populations over 100,000. According to the most recent statistics, Greece has a population density of 78 persons per square kilometer. As for most other EU countries, the Greek birthrate has been declining steadily in the postwar period from its peak of 20.3 births per 1,000 inhabitants in 1951 to an estimated 9.82 in the year 2000. At present, 18 percent of the population is 65 years and over, 67 percent is 15–64 years, and 15 percent is under 15 years of age. Females, making up 51 percent of the country's population, have an average life expectancy of seventy-nine years, three years longer than that for males. Greece has a literacy rate of 95 percent.

According to official statistics, Greece's ethnic composition consists of a 98 percent Greek population and minority populations totaling only 2 percent. The latter figure typically does not include the small Vlach population, of fewer than 80,000, concentrated primarily in the central Pindus Range area and the even smaller Macedonian Slav population, numbering less than 40,000, located in northwestern Macedonia, both of which have been viewed culturally, if not linguistically, as Greek. Greece's largest minority comprises approximately 130,000 Muslims in Thrace, half of whom are ethnic Turks, one-quarter of whom are Pomaks (ethnic Bulgarian, or Bulgarian-speaking, Muslims), and the remainder of whom are Roma (Gypsies). Greece's indigenous population is one of the most ethnically homogeneous in Europe. Notwithstanding, during the 1990s Greek society experienced increased ethnic diversification through the influx of significant numbers of foreign workers. Historically a net exporter of labor, as the Greek economy developed during the preceding decade, Greece was transformed into a net importer of labor. Whereas a million persons emigrated from Greece between 1944 and 1974 to industrialized countries such as Australia, Canada, and the United States, since 1991 the trend has been reversed, with the number of immigrants to Greece far exceeding emigrants, the latter's once substantial numbers now altogether insignificant. By 2001 there were perhaps as many as 500,000 to 600,000 foreign citizens living in Greece. Although a significant proportion of that population consists of ethnic Greeks from Albania and the former Soviet Union, the overwhelming majority was made up of laborers from the former East Bloc and developing countries.

Perhaps the most significant postwar change in Greece's demography has been the rapid urbanization of the country's population. Whereas in 1940 only 32 percent of Greece's population resided in urban areas, by 1971 only 35 percent remained in rural communities, and in 2001 only 28 percent of Greece's population was categorized as rural. This dramatic shift of the majority of Greece's population from rural to urban and semiurban life in one generation has also produced dramatic social changes. Furthermore, Greece's population has also shifted into a new geographical axis defined by Athens in the south and Thessaloniki in the north. Through a pattern of expanding chain migration, village families established lives in the city, with migrants to Athens coming mainly from southern Greece and the islands and their counterparts in Thessaloniki coming from the north of the country. The highest rates of this postwar wave of migration took place between 1950 and 1967. Although the trend slowed during the late 1960s and through the 1970s, in those two decades alone Athens grew by 37 percent and 19 percent, respectively, and Thessaloniki grew by 46 percent and 27 percent, respectively.

RELIGION

Reflecting Greece's ethnic and cultural homogeneity, an estimated 97 percent of Greece's population identifies itself as Orthodox Christian, while 1.3 percent is Muslim. The country's remaining religious communities comprise small groups of, in order of their size, Catholics, Protestants, and Jews. With Greek philosophy, language, and ideas so decisively informing the development of Christianity in Late Antiquity, with Orthodox Christianity functioning as the chief source of inspiration for cultural production and worldview among the medieval Greeks, and with the imprint of the Orthodox Church as the primary Greek institution for the organization and preservation of collective identity under Ottoman rule, it is not surprising that Orthodoxy remains closely intertwined with national identity in Greece today.

Orthodox Christianity is based on the theology of Christianity as codified in the canons passed by the first seven church councils of the Byzantine (Christian Roman) Empire, as well as by the Christian Church's patristic foundations, established by Christ, the Apostles, and the early Church Fathers. In contrast to Western Christianity, which has developed a largely legal and functional approach to theology, Orthodoxy has consistently emphasized the experiential and mystical dimensions of theology. Furthermore, unlike Western Christendom, which was by the Early Middle Ages preoccupied with conflicts over papal religious versus secular supremacy, Eastern Christendom remained committed to the principle of ecclesiastical unity, but with a decentralized administration. This principle had been realized in practice with the creation of the five patriarchal sees of (in order of their establishment) Jerusalem, Antioch, Alexandria, Rome, and Constantinople. Eastern Christendom's tradition of cultural and administrative decentralization as a basis for ecclesiastical organization led to the formation, concurrent with the creation of an independent Greek state, of the Autocephalous Orthodox Church of Greece (Church of Greece) in 1830; the autocephaly of the Church of Greece was recognized by the Ecumenical Patriarchate of Constantinople in 1850.

During much of its history, the relationship between the Church of Greece and the Greek state was characterized by simultaneous partnership and ambivalence. One of the means by which the early Greek state sought to legitimize itself and

The Greek Language

Greek is the official language of the Greek state, and the primary language spoken by virtually all of the almost 11 million inhabitants of Greece, as well as the more than a half million Greeks of Cyprus. Greek continues to be spoken in some villages of Apulia and Calabria in southern Italy, throughout much of southern Albania, and among the dwindling Greek community of Istanbul. Greek is also spoken around the world in a global diaspora of 4–6 million Greeks. In terms of native speakers, Greek ranks well down the list of world languages. However, culturally and intellectually its importance is disproportionate to its number of native speakers. As the language of classical Greek philosophy and literature and later as the language cauldron for the development of early Christianity, Greek has profoundly shaped Western thought and world civilization.

Like any other language, Greek has evolved over time, but modern Greek can trace its pedigree to the first attempts at recording ideas in writing. An Indo-European language, Greek, in its several variations, has been used to shape a continuous literary tradition stretching back almost 3,500 years, a role no other European language has played. The earliest records of written Greek, in the archaic Mycenaean dialect, are dated around 1450 B.C.E. Ancient Greek, however, is most associated with Attic Greek, the language of fifth and fourth century B.C.E. Athens, in which most of the surviving classical Greek literature was written. Later, Greek, as it was most widely spoken in the Hellenistic Near East and throughout much of the Roman Empire, became known as *Koine* (Common). This was the form of Greek in which the New Testament was written, and from this version of Greek emerged the medieval Greek that became the official language of the Byzantine Empire and finally modern Greek.

Although its inter-intelligibility with ancient Greek is a matter of debate, modern Greek retains many of the linguistic qualities of its ancient form and a high degree of unity with it. In spite of this basic continuity, until recently the chief linguistic problem for Greece has been a conflict and dichotomy between use of the vernacular language and the literary language. As Greek intellectuals became increasingly influenced by nationalist ideas in the late eighteenth and early nineteenth centuries, language emerged as an important political issue. As they envisioned an independent Greek state, populist nationalists debated the merits of standardizing the spoken vernacular, demotic Greek, to serve as the language of a future Greek state. In contrast, elitist nationalists sought to return to a form of Greek closer to classical Greek, a literary (or artificial) language, fashioned by intellectuals and known as Katharevousa (pure) Greek. Katharevousa was accepted as the official language of the newly independent Greek state in the 1830s. The adoption of Katharevousa over demotic did not resolve the tensions between the vernacular and higher literary forms. In fact, demotic Greek experienced a creative renaissance beginning in the late nineteenth century and enjoyed increasing support from intellectuals and writers who championed it as a natural expression of the Greek people's nationhood. Although Katharevousa stimulated advances in the sophistication of demotic Greek, the dual-language system tended to reinforce social and economic divisions in Greek society to such an extent that it eventually became associated with a kind of antiquated conservatism. After a long rivalry that contributed as much to its own transformation into a new literary language as to its eventual triumph, in 1976 demotic Greek replaced Katharevousa as the official language of Greece.

its nation-building agenda was by co-opting the Orthodox Church. Meanwhile, the Orthodox Church sought to safeguard its influence in Greek society by virtue of its privileged position vis-à-vis the Greek state. In short, both institutions were interested in the subordination and exploitation of the other; consequently, the Greek state recognized Orthodoxy as the official state religion in 1833. This status for the Orthodox Church ensured that it would have a decisive role in the nation-building process of the nineteenth and early-twentieth centuries, but it did not resolve the complex tensions between church and state, which continue, despite fairly recent changes in the status of the Church.

The constitution of 1975 changed the status of Orthodox Christianity and the Orthodox Church from the official "state religion and state Church" to the "prevailing religion and established Church" of Greece. This seemingly minor change, in fact, marked a major reform in church-state relations. By drafting the Orthodox Church as Greece's established but no longer official Church, the state recognized the country's religious majority while acknowledging its religious pluralism. Like several similar constitutionally "prevailing religions and established Churches" in Western Europe, the Orthodox Church of Greece enjoys certain benefits, such as financial support from the state. However, it no longer, especially following additional church-state reforms initiated in the 1980s, wields the kind of influence through the state that it was associated with in the past.

In terms of its administrative structure, the Church of Greece is divided into seventy-eight dioceses, eight dioceses comprising the semiautonomous Church of Crete, four additional dioceses in the Dodecanese Islands, and the monastic community of Mount Athos, which enjoys constitutionally guaranteed autonomy. The Church is governed by a Holy Synod made up of all the diocesan bishops, who convene annually under the chairmanship of the archbishop of Athens, the Church's primate. Twelve bishops, chosen from the Holy Synod on a yearly basis, and the Archbishop of Athens form an executive body responsible for day-to-day Church administration. The dioceses of Crete, the Dodecanese Islands, and, nominally, the monastic community of Mount Athos are officially administratively dependent on the Ecumenical Patriarchate of Constantinople in Istanbul, Turkey. Mount Athos, given its constitutional protections, is formally organized as the Monastic Republic of Mount Athos and is administered by a committee of twenty monks, each representing one of the community's monasteries.

After Greece's 130,000 Sunni Muslims in Thrace, the country's remaining religious minority groups are made up almost entirely of small Western Christian communities. Chief among these other religious populations are Catholics. Organized into four archdioceses, in 2003 approximately 52,350 Roman Catholics lived in Greece. Most of the members of this community are descendants of Venetian settlers in the islands. Two other Catholic Churches, the Byzantine Rite and the Armenian Rite, have 2,300 and 550 communicants, respectively. The largest Protestant group in the country is the Greek Evangelical Church, which has thirty parishes and approximately 5,000 members. There are also small numbers of Jehovah's Witnesses and Mormons in Greece.

Before World War II, Greece had a Jewish population of approximately 75,000. That population, however, like the Jews of every country in Eastern Europe, was devastated by the genocide of World War II. Home to the first Jewish settlement in Europe, Jews have lived in Greece since the fourth century B.C.E. The oldest Jewish communities in Greece, with roots in antiquity, were Romaniote, Greek-speaking, Jews concentrated primarily in Athens and Ioannina. The largest Jewish population in Greece, however, was made up of Sephardic, Ladino-speaking, Jews who first arrived in the Balkans as religious refugees from Spain in the fifteenth century. Before World War II, Sephardic communities of more than a thousand Jews each could be found on Corfu, Crete, and Rhodes, as well as in the towns of Kastoria and Volos. Nonetheless, the overwhelming majority of Greece's Jews resided in Thessaloniki, where they played a dynamic role in the city's rich cultural and commercial life. In 2003 the Athens-based Central Board of the Jewish Communities of Greece, the main administrative body of Judaism in the country, estimated Greece's Jewish population at about 5,000.

NATIONAL SYMBOLS

The most important official national symbol of Greece is the Greek national flag. Although there is no consensus on the exact origins of the flag, it is clear that it was in use by Greek revolutionaries within the first year of the Greek War of Independence. The newly established Greek state adopted the revolutionary flag as Greece's official flag in 1833. The flag consists of five blue and four white alternating stripes set against a canton, which occupies the upper left corner of the flag. The canton contains a white Orthodox cross over a blue background. The cross symbolizes the Orthodox Christianity of the Greeks and their struggle against the Muslim empire of the Ottoman Turks. The use of nine stripes is deliberate, each stripe representing one of the nine syllables in the revolutionary phrase, *Eleutheria e Thanatos* (Freedom or Death), which served as a motto of determination for liberation from Ottoman rule. According to convention, the flag's two colors represent the blue of Greece's seas and the white of the restless Greek waves. Another view posits that the use of white in the flag was intended by the revolutionaries to symbolize the purity of their cause for freedom.

An unofficial flag, consisting of a simple white cross on a blue background, also dates from the first year of the Greek Revolution. This flag has been used in the past as an alternative national flag but only on land, not at sea. However, from June 1975 until December 1978, this same flag was used as the only official national flag. The law of 1978 reversed this situation, making the striped flag the only official national flag, although the alternative flag can still be seen in unofficial use.

In addition to the country's flag, the Greek national anthem also enjoys official recognition. Inspired by the Greek Revolution against the Ottoman Turks begun in 1821, the Greek national anthem is based on the "Hymn to Freedom," a lengthy poem written in 1824 by the distinguished poet Dionysios Solomos, a native of the Ionian island of Zakynthos. In 1828 the eminent composer, and native of the Ionian island of Corfu, Nikolaos Mantzaros, wrote the music for Solomos' Hymn. Although the words and music were an instant sensation and enjoyed immense popularity throughout both liberated and unredeemed Greece, the work of Solomos and Mantzaros was not adopted as the country's official anthem until 1864, when their Hymn, in words and song, finally replaced an unpopular royal anthem that had been imposed on Greece by the Great Powers in 1832.

Rudyard Kipling completed the most popular English-language translation of the national anthem in 1918, as follows:

> We knew thee of old,
> Oh, divinely restored,
> By the lights of thine eyes,
> And the light of thy Sword.
>
> From the graves of our slain
> Shall thy valor prevail
> As we greet thee again—
> Hail, Liberty! Hail!
>
> Long time didst thou dwell
> Mid the peoples that mourn,

Awaiting some voice
That should bid thee return.

Ah, slow broke that day
And no man dared call,
For the shadow of tyranny
Lay over all:

And we saw thee sad-eyed,
The tears on thy cheeks
While thy raiment was dyed
In the blood of the Greeks.

Yet, behold now thy sons
With impetuous breath
Go forth to the fight
Seeking Freedom or Death.

From the graves of our slain
Shall thy valor prevail
As we greet thee again
Hail, Liberty! Hail!

HISTORY

ANCIENT GREECE

People appear to have first entered Greece as hunter-gatherers from southwest Asia about 50,000 years ago. With the development of agriculture, Neolithic settlers began to establish village life in Greece by 7000 B.C.E. By the third millennium B.C.E., these Stone Age communities were transformed by advances in metallurgy. The subsequent emergence of Bronze Age culture and technology laid the foundations for the rise of Europe's first civilization, Minoan Crete. The Minoans, named for King Minos, a legendary ruler in Greek mythology, had by 2200 B.C.E. created a sophisticated urban society. The Minoan Greeks built considerable prosperity for themselves through maritime trade in the Aegean and eastern Mediterranean and innovative agricultural methods at home. Much of their wealth, in fact, was displayed in palace structures and a dramatic architectural and artistic style. The Minoans knew how to write and mastered multiple technologies, including shipbuilding and sailing. The Minoans continued to prosper until about 1450 B.C.E., when the combined pressures of a succession of natural disasters, beginning with a huge volcanic eruption that ravaged the Aegean fifty years earlier, and attacks from neighbors north of Crete brought down Minoan society.

The vulnerable Minoans were attacked and destroyed by the Mycenaeans, probably over control of the lucrative trade routes in the Mediterranean. Greek-speaking people like the Minoans, the Mycenaeans, named for the palace at Mycenae in the Peloponnesus, were settled in the southern Greek mainland as well as most of the Aegean and Ionian islands. Mycenaean culture developed later than Minoan, but by 1400 B.C.E. it had become quite prosperous. Like the Minoans, the Mycenaeans lived in independent communities organized around palaces and ruled by kings. The Mycenaeans had a warrior culture that enabled them to conquer the Minoans, but the Mycenaeans' preoccupation with fighting also contributed to their eventual downfall. By 1200 B.C.E. they began to fight each other in a succession of civil wars that lasted until about 1000 B.C.E., a period that coincided with the arrival in the southern Balkan Peninsula of a new wave of Greek tribes known as the Dorians, who, in turn, were quick to overcome the weakened Mycenaeans and seize many of their lands.

The "invasion" by the Dorians, the Mycenaeans' internecine conflicts, and other still undetermined calamities had major repercussions for the Greek world. These events appear to have caused a major migration of the Mycenaeans across the Aegean to the western coast of Asia Minor and Cyprus. More importantly, and whatever the cause, the entire economic system, kingship and centralized bureaucracy, cities and urban life, art and craftsmanship, as well as literacy disappeared, while population plummeted. For 300 years, from roughly 1050 to 750 B.C.E., after the collapse of Mycenaean civilization, a veritable dark age descended on Greece. Recovery came slowly, with the earliest revivals in agriculture and trade occurring in a few locations by 900 B.C.E. Shortly thereafter an innovation in metallurgy helped Greece escape its Dark Age. Greeks acquired from Near Eastern traders the skills necessary for the production of iron and applied this technology to produce, among other things, highly efficient and relatively inexpensive agricultural tools. Plentiful tools helped increase food production and thus stimulated population growth and economic activity.

Technological innovation paved the way for the cultural and political revival of Greece during the eighth century B.C.E. but it was not the only factor behind the rapid redevelopment of Greek society. Other significant stimuli were, first, the restoration of trade with the advanced societies of the Near East, one of the consequences of which was the development of the Greek alphabet from the Phoenician script, and, second, the Greek colonization of much of the Mediterranean and Black Sea coasts. In response to the pressures produced by a sudden and rapid population growth in a country with relatively limited arable land, large numbers of Greeks left their homeland for livelihood elsewhere. As a result, throughout the eighth century B.C.E. and beyond, Greeks established a network of colonies on the Mediterranean coasts of France and Spain, the Libyan coast of North Africa, the southern and northern shores of the Black Sea, and especially in southern Italy and Sicily, where eventually Greek cities were so densely concentrated and the Greek population so large and dominant that the region would come to be called *Magna Graecia,* or Greater Greece, by the Romans.

The reemergence of cities, among other things, marked the transition from the Dark Age to what is commonly labeled the Archaic Period, lasting from about 750 to 500 B.C.E. The poverty and insecurity of the Dark Age had forced people to cooperate in order to defend themselves, and gradually the Greeks established political power-sharing practices. By the beginning of the Archaic Period most Greeks had organized themselves into independent

city-states *(poleis)*. Breaking the tradition of kingship, the Greeks created new kinds of political organization for their growing communities. Initially, most of the city-states were dominated by an oligarchy, a limited elite, which was often overthrown by tyrants who temporarily seized sole power on behalf of the people. By the close of the Archaic Period this process of political evolution led to a political innovation that replaced most tyrannies and remaining oligarchies. In short, driven by the goal of avoiding a strong central authority, and utilizing long-established power and decision-making practices, the Greeks created democracy, a system involving shared self-government by all of the state's citizens. The Greek city-state, or polis, was a political and social organization based on the concept of citizenship, which guaranteed shared rights and responsibilities to its free members. Citizenship made, at least in theory if not always in practice, free men, regardless of their social status or wealth, political partners who shared equal privileges and duties under the law. In Greek democracies, all free adult male citizens, including the poor, shared in government by membership and voting in a political assembly, where laws and policies were decided. Although Greek society was decidedly paternalistic, giving only men the right to participate in politics, women were citizens legally, socially, and religiously, meaning women could own property, were equal before the law, and enjoyed privileged positions in Greek religion.

It was largely within the dynamic of the democratic city-state that Greek culture, especially during the sixth, fifth, and fourth centuries B.C.E., produced a flood of intellectual and artistic creativity that established the foundation of Western civilization. This period saw the emergence of not only the principle of citizenship and the practice of democracy but philosophy and science as well. Some of the world's most influential thinkers, Aristotle, Plato, Pythagoras, to name but a few, essentially created our understanding of logic, ethics, and science during this time. Moving beyond their seminal inheritance of Homer, these critical centuries also produced great literary innovations in poetry and theatrical drama and comedy, as well as the first historical writing. In addition, Greek artistic brilliance expressed itself through unparalleled accomplishments in complex and beautiful architecture, as well as masterful sculptures. The works of this period exercised enormous influence in shaping subsequent notions of beauty and excellence in the creative arts and aesthetic concerns, making its own norms and values synonymous with classical standards and ideals. This remarkable confluence of creativity from so many quarters in such a relatively short period of time altered dramatically the trajectory of civilizational development.

Parthenon, Athens. (Corel Corporation)

At any rate, although democracy, most well-represented by the city-state of Athens, was the most common political system among the many Greek polities, by the beginning of the so-called Classical Period, lasting from 500 to 323 B.C.E., kingdoms survived in some parts of Greece, such as Macedonia in the far north, while elsewhere some states blended monarchy with democratic principles to create elite democratic monarchies, such as the militarist city-state of Sparta in the far south of the mainland. What all the Greek states shared in common, however, was a fierce commitment to their respective independence. The continual demand of each city-state for its complete autonomy, combined with Greek geography, which fragmented the country by its mountain complexes, hampered Greek political unity and impeded interstate cooperation even in the face of external threats.

The most serious challenge to Greek freedom, theretofore, arose in the beginning of the fifth century B.C.E. The huge Persian Empire, the most powerful state thus far in existence in the Near East, had conquered the large and prosperous Greek cities and territories in western Asia Minor around 550 B.C.E. Encouraged and supported by Athens, the Greeks in Asia Minor revolted against Persian rule in 499 B.C.E. The revolt was unsuccessful and served only to elicit the wrath of the Persians who now planned to destroy Athens. In 490 B.C.E. a large amphibious force was sent across the Aegean by the Persian emperor Darius to attack Athens. The Persian force did not reach its destination and was instead crushed by the much smaller Athenian citizen-army at the battle of Marathon. For the Athenians the victory was a remarkable demonstration of the superiority of their city-state, and it reinforced the people's confidence in democracy. The Persians, for their part, suffered a severe blow to their prestige that Darius's successor, Xerxes, would attempt to avenge a decade after Marathon. Toward that end, the Persians launched a massive invasion of the Greek mainland in 480 B.C.E., overrunning northern Greece and penetrating as far south as Athens, which had been evacuated before the Persians burned the city. All the same, allied Greek forces led by Sparta, the country's fierce military city-state, had successfully slowed the Persian advance, giving other Greek forces led by Athens, the country's leading naval power, time to consolidate their strength and defeat the Persian navy at the battle of Salamis. A year later, in 479 B.C.E., the Greeks completed their triumph by decisively defeating the Persian army at the battle of Plataia. This string of unexpected Greek victories against the Persians preserved Greek independence and further reinforced their confidence, especially that of the Athenians.

Before the Persian Wars, Sparta was the most powerful and feared city-state in Greece. Athenian power and influence, however, had grown enormously as a consequence of its major role in the defeat of the Persian invasion. Both Athens and Sparta were soon competing with each other for primacy among the Greek city-states. Athens used its wartime fleet to become an aggressive power rivaling Sparta, while Sparta maintained its alliance with other city-states in the Peloponnesus as a counterbalance to the growing influence of Athens. The Delian League, made up largely of the Aegean maritime city-states, brought Athens unprecedented power and wealth. Athens, having established hegemony over the Delian League gradually through the use of force and political controls, converted the alliance into an empire and the erstwhile allies into subject peoples.

As resentment grew against the Athenian misuse of power, the city-state's perhaps most dynamic political leader rose to prominence. Pericles, an Athenian from a distinguished family, and the originator of Athenian monumental public works and building projects, including the Parthenon, became the era's leading politician in the 450s B.C.E. by promoting Athenian dominance within the Delian League and expansionist goals outside the alliance. He sponsored far-flung expeditions in the Black Sea and eastern Mediterranean and engaged the Athenian navy in a confrontation with Sparta. Despite a brief stabilization of relations with Sparta, the aggressive policies of Pericles so threatened the balance of power between Athens and Sparta that any crisis soon acquired the potential to provoke a major conflict. In fact, in 431 B.C.E. tensions erupted when Athens pressured Corinth, a crucial Spartan ally, which was a rival with Athens for maritime trade. Sparta came to the defense of Corinth and the subsequent fighting led to the Peloponnesian War.

Ultimately involving virtually all of the states comprising the Greek political world, and fought in two phases between 431 and 404 B.C.E., the Peloponnesian War began well for Athens, which used its large fleet to good effect against Sparta and its allies. However, the death of Pericles and the superior Spartan army produced a military deadlock. In an effort to break the armed stalemate, the Athenians undertook increasingly bold, risky strategies. In 415 B.C.E. Athens launched an ill-conceived large-scale campaign against Sparta's allies in Sicily, which ended in a catastrophic defeat of the Athenian army outside the city of Syracuse in 413 B.C.E. Athens did not recover from this defeat, and the Spartan victory on land was followed by the destruction of the Athenian navy in 404 B.C.E. and the surrender of Athens in the same year.

Before the victorious Spartans withdrew to their home territory in the Peloponnesus, they imposed a harsh peace on the Athenians. The Athenian empire was dismantled and the Delian League ended. Moreover, Athenian democracy was abolished and replaced by a brutal puppet government made up of an autocratic group of oligarchs. However, with Spartan troops gone from Athens, the oligarchs were unable to keep their hold on power and were overthrown in 403 B.C.E., less than a year after being installed. Athens restored its democracy, rebuilt some of its strength, and entered into a new phase of competition for leadership in Greece. From 403 to 338 B.C.E., Athens, Corinth, Sparta, and Thebes competed with each other for hegemony in Greece, with Sparta wielding more power during the first half of this period followed by Thebes during the last half. None of these rivals, however, was strong enough to decisively defeat all of the other competitors and fully dominate Greece. As a result of this intense interstate rivalry, these city-states drove each other to exhaustion by constant warfare, creating instability, weakness, and a veritable power vacuum in central and southern Greece.

The Kingdom of Macedonia stepped into this competition for hegemony in Greece during the reign of Philip II, which began in 359 B.C.E. Despite its comparatively large territory and population, Macedonia had historically been underdeveloped and politically weak. As a consequence, Macedonia rarely played a significant role in Greek politics. In addition, Macedonia's geographic position as Greece's northernmost state had long forced the kingdom to devote most of its attention and resources to the defense of its porous northern frontier against the non-Greek peoples of the central Balkans, the Illyrian and Thracian tribes, who continually raided and sometimes invaded Macedonia's territory. Furthermore, although the Macedonians were ethnically, culturally, and linguistically Greek, they were viewed disparagingly by many southern Greeks as barbarous and even foreign because of their unsophisticated customs and lack of urban ways. Undaunted, the ambitious Philip was committed to asserting Macedonia's leadership in the Greek world. Macedonia emerged as a powerful force when Philip II built up a large, highly disciplined army, which he used to secure the kingdom's northern flank by neutralizing the Illyrians and Thracians and then turned south against his Greek rivals. Effectively employing diplomacy, bribery, and, when faced with resistance, his army and war, by 338 B.C.E. Philip forced the weakened city-states to acknowledge Macedonia's leadership and hegemony in Greece.

Philip's ultimate goal, to lead an allied Greek army in a war of revenge and conquest against the Persian Empire, was taken up by his son, Alexander, who succeeded his father after Philip's assassination in 336 B.C.E. Alexander the Great began the invasion of the Persian Empire in 334 B.C.E., defeating a Persian army near historic Troy, liberating the Greek cities of western Asia Minor, and overrunning Anatolia. Alexander continued his astonishing campaign and added to his growing string of victories through Syria and Egypt, before turning his advance against Mesopotamia, where he demolished the Persian emperor Darius III's final field army in 331 B.C.E., and eventually the heart of the Persian Empire in Iran. After destroying the Persian capital, Persepolis, in an act of vengeance for the Persian burning of Athens almost 150 years earlier, Alexander and his forces resumed their eastward march, conquering former Persian lands in Central Asia and beyond into India. The unity of Alexander's far-flung empire, which he colonized with Greek settlers in a string of newly established cities throughout the eastern Mediterranean and Near East, and within which he had planned to create a new global hybrid society of blended

Greek and Persian peoples and cultures, did not survive his premature death in 323 B.C.E.

The death of Alexander the Great resulted in a power struggle and division of his empire into kingdoms established by his senior generals. Antigonos formed a kingdom encompassing the historic Greek territories in the southern Balkans and Asia Minor, while Seleucus established rule over Mesopotamia, Iran, and the Central Asian provinces, and Ptolemy seized Egypt and initially Syria and Palestine. These absolutist Greek monarchies encouraged the continued Greek colonization of their cities and towns and witnessed the integration of Greek and local Near Eastern cultures to produce a new cultural environment in which the Greek language functioned as the lingua franca for culture, commerce, and administration throughout the Near East. Greek art, architecture, and thought, as well, became prevalent in the eastern Mediterranean during the three centuries following the death of Alexander the Great, a period typically known as the Hellenistic Age.

Macedonia's ongoing domination of the city-states of central and southern Greece, as well as the absolutist rule of the Hellenistic kingdoms, disturbed many Greeks, who remembered their history of political freedom and democracy. Consequently, during the second century B.C.E., when the Hellenistic kingdoms had been weakened by internecine wars, some mainland Greeks appealed for help from the western Mediterranean's emerging superpower, Rome. The Romans, who had begun their steady expansion into the Greek world by conquering the Greek states of southern Italy and Sicily and invading the Greek lands in the western Balkans a century earlier, took advantage of the new opportunity to interject themselves in Greek affairs. After defeating the Macedonians in 197 B.C.E. and declaring the rest of Greece liberated, the Romans proceeded to impose their will on Greece. The Greeks consequently rebelled, but a Roman army invaded the country, burned the city of Corinth in 146 B.C.E., and placed mainland Greece under Roman rule. The Romans continued their expansion into the Greek world, and within about a hundred years Rome conquered the last remaining Hellenistic kingdom with the fall and annexation of Queen Cleopatra's Egypt in 31 B.C.E.

The conquest of the Greek world ensured that the fortunes of the Greeks and Romans would be intertwined for the rest of the Roman Empire's existence. During the two centuries that followed Rome's conquest of Hellenistic Egypt, uninterrupted peace and security in the Mediterranean created the conditions for considerable cultural creativity and economic growth in the Greek world, as well as the emergence of Greek scholars as the empire's intellectual elite and the integration of prominent Greeks into Rome's ruling class. In addition, Greek cities became the administrative and economic centers of the eastern half of the empire. Greek cities such as Alexandria, Athens, Corinth, Ephesus, Miletus, Smyrna, and Thessaloniki flourished, producing a new urban, and often wealthy, Greek elite. At the same time, life in Greek cities incorporated certain Roman features, and new generations of Romanized Greeks emerged. Concurrently, Roman elites and even emperors embraced Greek culture, actively promoting the Hellenization of much of Roman culture and drawing from Greece to produce architecture, art, education, and literature. Meanwhile, and moreover, the Greek cultural, demographic, intellectual, and linguistic landscape, which had been grafted onto the Near East by Alexander the Great and the Hellenistic kingdoms, was only further embedded and expanded in the region under Roman rule. Greek language and thought, interacting with local religion, created the foundations for the cultural and intellectual development and spread of Christianity, leaving a lasting Greek philosophical influence on the theology and ecclesiology of the Christian Church.

BYZANTIUM AND MEDIEVAL GREECE

The peace and prosperity that the Greek world enjoyed during the first two centuries C.E. began to break down as the result of a series of Roman civil wars and foreign attacks against the empire in the third century. The responses to the growing pressures on the imperial system highlighted the disparity in strength and resilience between regions rather than the unity of the empire as a whole. Such conditions set the Latin West and the Greek East onto separate historical trajectories. When the Emperor Constantine I chose to relocate the empire's capital from Rome to the Greek city of Byzantium (later known as Constantinople) in 324 C.E., he not only advanced the growing separation of the eastern and western halves of the empire, he explicitly acknowledged the superior cultural, economic, and military resilience of the east. This move did not represent a break with Rome; the Roman Empire would continue but under a revised political structure, with a different geographic anchor, and, in time, an entirely new cultural and religious foundation. In short, Constantine established the foundations for the transition of the Roman Empire to the Eastern Roman, or Byzantine, Empire, an essentially Medieval and Christian Greek state.

Marking this transformation, in 325 Constantine proclaimed Christianity the empire's official religion and presided over the First Ecumenical Council in Nicaea. This gathering of the hierarchical leadership of the early Christian Church, as well as subsequent councils, formalized the faith's doctrines and defined the theology of Orthodox Christianity. During the next two centuries Christianity supplanted the final vestiges of pagan tradition in the Greek world, producing a culture founded on Orthodoxy and Roman identity within a Greek-speaking society. Notwithstanding the fact that the Byzantines were ethnically and linguistically Greek, they thought of themselves as Romans and their empire, quite legitimately, as the direct inheritor of classical Rome. Constantinople in time became the cultural, economic, intellectual, and political center of the Medieval Mediterranean world, and the Byzantines regarded their capital as the center of a theocratic state meant to represent God's heavenly order on earth.

For the Byzantine Greeks, their confidence in the superiority of their state was affirmed by the survival of their empire. The Greek East faced many of the same barbarian waves in the late fourth and through the fifth centuries that would also descend on the West. The Byzantines had even suffered some military losses to the barbarians, but their army succeeded in either destroying or pushing out the invaders. The Latin West, conversely, did not fare as well. By the late fifth century, the western part of the empire had been overrun by Germanic invasions and its lands had been transformed into a patchwork of barbarian successor states. Although Constantinople and the Byzantine Empire eventually triumphed over the Germanic threat and demonstrated a remarkable ability to withstand and survive serious external threats, something that would be repeated continually for many centuries, parts of mainland Greece were devastated by the barbarians. The Visigoths, who had been pushed across the Danube by the Huns, defeated an imperial army at Adrianople in 378 and marched southward wreaking havoc in peninsular Greece, sacking several cities, including Argos, Corinth, and Sparta in 395, before being driven out of the Balkans. Almost a century later, in 465, the Vandals attacked northern and central Greece but were quickly defeated. The Greek mainland recovered some prosperity and the population thrived once more during the following hundred years. However, this peaceful interlude ended with the massive Slav migrations into the Balkans beginning in 582.

Shortly before the Slav invasions took place, the Byzantine Empire launched a major series of military campaigns aimed at the reconquest, or liberation, and reunification of the Roman imperial lands lost earlier to the barbarians in the West. Emperor Justinian I, who ruled from 527 to 565, inaugurated this policy and succeeded at restoring imperial control over Italy, much of Spain, and northwest Africa. However successful Justinian's campaigns may have been in the short term, his policy of reconquest of the West left a vastly reexpanded but perilously overstretched empire, in both financial and military terms. Consequently the empire's core Greek territories in Asia Minor and the Balkans were more vulnerable to external threats after Justinian's reign than they had been before it. This fact was made evident when beginning in the late sixth, through most of the seventh, and into the eighth centuries Slavs broke through Byzantium's northern defenses, entered the Balkans, overran enormous stretches of the peninsula, and penetrated as far south as the Peloponnesus. Meanwhile, the empire's longtime nemesis in the east, Persia, occupied Byzantine Syria and pushed into Asia Minor.

Unlike the previous Germanic invaders, who had been content to raid and loot in the Balkans and Greece, the Slavs established permanent settlements. The Slav migration and occupation of the central Balkans, as well as much of western mainland Greece and parts of the country's interior, had been aided by a plague, which had depopulated and made available much of the region's territory to the Slavs.

Hagia Sophia

Considered the finest example of Byzantine architecture and perhaps the most impressive building achievement of Late Antiquity and the early medieval world, Hagia Sophia in Constantinople, a cathedral overlooking the Bosporus, was constructed on a scale unprecedented in human history. For more than a thousand years it stood as the world's largest structure, with an interior space unrivalled by any other building in both total mass and height. Although there is no available physical evidence confirming it, early accounts suggest that Hagia Sophia was built on the site of an ancient pagan temple appropriated for the service of the Eastern Roman Empire's new official religion, Christianity.

The church underwent three major phases of construction before attaining its final form. The first church on the site was built by Emperor Constantius I, son of Emperor Constantine, and was consecrated in 360. Although little is known about this structure, it is generally accepted that it was a basilica-type building with a rectangular floor plan, circular apse, and timbered roof. The structure was first named Megali Ekklesia (the Great Church) because it was the largest church in the Christian world at the time. Before Constantius's reign ended, the church became known as Hagia Sophia (Holy Wisdom), a name attributed to Christ by Greek theologians in the fourth century. In 404 the church was destroyed by rioting mobs protesting the emperor's illegitimate exiling of the patriarch of Constantinople. In 415 Emperor Theodosius I rebuilt the church, but it was destroyed by a rebellion of heretics in 532. After putting down the rebellion, Emperor Justinian I, a firm defender of Orthodoxy, ordered the construction of an entirely new church that was to surpass in magnificence all earlier churches.

Driven by his ambition to make his church the greatest structure in the world, Justinian personally supervised the construction of Hagia Sophia and made full use of the empire's resources. The finest and rarest materials from throughout the Mediterranean world were brought to Constantinople to be used in the building of the church. The two most famous architects of the Greek world at the time, Anthemius of Tralles and Isidorus of Miletus, were entrusted with the design of the church and execution of its construction. They oversaw the work of 100 master builders and 10,000 laborers. Launched in February 532, the construction of Hagia Sophia was completed in December 537. The new building was like no other structure that had been built before it. In fact, the grand basilica represented a major revolution in architecture. In grappling with how to build a circular dome atop a square base, Anthemius and Isidorus arrived at an unprecedented solution and thus created a brilliant, creative outcome. They built four massive columns, each measuring approximately 33.45 square meters, at the base, positioned at each corner of the foundation, and on top of each column they built four arches. The architects then filled the spaces between the arches with masonry to create curved triangular shapes called pendetives, which, once structurally integrated with the arches, created an incredibly strong base of support for Hagia Sophia's most remarkable feature, its huge dome with a diameter of 33.5 meters. The church measures 79.25 by 82.3 meters, and the dome rises 64 meters above the floor. Pierced by forty single-arched windows set at the dome's base, light entered the structure in a way that created the visual sensation that the dome actually floated over the church. In addition, twelve large windows in two rows flooded the building with streams of light, producing the impression of infinite space. Having been damaged by three earthquakes in the sixth century, another in the ninth, and again by one in the tenth century, the church was made progressively stronger and more resilient with each set of repairs and additional architectural buttressing.

Hagia Sophia, the mother church of all Orthodox Christians and the greatest architectural triumph of the Byzantine Empire, even survived foreign conquest. In 1204 Roman Catholic Crusaders attacked and sacked Constantinople. Hagia Sophia was not spared as the crusaders looted and defiled the church, while purposely damaging much of its interior. With the restoration of Greek control in Constantinople in 1261, Hagia Sophia was repaired and again functioned as the cathedral of the patriarch of Constantinople. After the Ottoman conquest of Constantinople in 1453, Hagia Sophia was converted into a mosque. In 1935 it was converted into a Turkish state museum. Albeit Turkey's most visited museum and the country's most famous tourism resource, Hagia Sophia has not enjoyed government support comparable to that extended to Muslim historical sites in Istanbul and elsewhere. Furthermore, the structure is aggressively marketed and increasingly subjected to the vulgarities of the tourist trade, whereas the religious sanctity and historical integrity of other sites are safeguarded. UNESCO and other international organizations have expressed serious concerns about Turkey's insufficient attention to the preservation, restoration, and management of Hagia Sophia. This crisis of indifference led World Monument Watch to include Hagia Sophia on its list of one hundred most endangered sites.

Nonetheless, this rugged part of Greece had historically been the most sparsely populated area of the country and, given its limited agricultural potential, could never sustain a large population, either Greek or Slav. All the same, most of the Greek population from these territories was displaced and pushed toward the coasts and the eastern part of the country, where imperial defenses held. Where Greek communities survived in the interior, they had been able to do so because they had withdrawn to defensive geographic positions before arriving at local understandings for coexistence with the Slav tribes. By 750, despite the fact that the Greek population in the region had remained intact and was still larger than that of the Slavs, most of northern and central Greece, and even parts of the country's south, had been overrun and occupied by Slav tribes. At the same time, the empire's territories in the Near East had been seized by a new enemy that proved to be an even more serious threat than the Persians, the Arabs, who also raided Asia Minor in depth and threatened Constantinople.

Again demonstrating its resilience, the Byzantine Empire reversed many of these losses by going on the counteroffensive against the Slavs in Greece and pushing the Arabs out of southeastern Asia Minor. Political stability internally, the beginning of a new period of economic growth and expansion in the late eighth century, and dissension among their enemies, enabled the Byzantines, by the year 800, to reestablish control over all of Asia Minor and to reassert the empire in the Greek mainland territories formerly overrun by the Slavs. Once these territories were again under imperial administration, the Byzantines implemented a resettlement policy, like that used earlier with considerable success in parts of eastern Asia Minor, to ensure that the reconquered, or liberated, lands would contain only loyal populations. Consequently, following the expulsion of considerable numbers of Slavs, the Greek communities that had been displaced by the invasions of the preceding century were returned to their original lands, while Greek refugees from southern Italy and surplus Greek populations from densely populated western Asia Minor were also settled in these areas. Pockets of Slavs remained scattered in the Greek territories, but their isolated condition and reduced numbers led in time to their assimilation and absorption by the much larger surrounding Greek populations.

Although the empire had been successful in reconquering mainland Greece and restoring, more or less, the historic Greek ethnological frontier in the south Balkans, Greek security problems in the region were far from over. The Bulgars, a Turkic people assimilated by the Slavs, settled south of the Danube and began to pose a serious threat to Byzantium by the late ninth century. In the early tenth century, under the aggressive leadership of their khans, they established a rival empire and invaded much of northern Greece and the central Balkans. The Byzantines and Bulgars were soon locked in a long series of brutal wars that culminated in 1014, when the dynamic and formidable Emperor Basil II led his army in a string of brilliant actions, decisively crushing the Bulgars (earning the nickname Bulgar Slayer) and conquering all of their lands. Before destroying the Bulgars, Basil had defeated the Arabs in a series of equally dazzling military campaigns beyond southeastern Anatolia, restoring parts of northern Mesopotamia, northern Syria, and the Syrian coast to the empire.

Basil II's reign from 963 to 1025, the longest of any Byzantine Roman emperor, marked the zenith of both the empire's power and the prestige and influence of the Medieval Greek world. All of the Balkan Peninsula south of the Danube was firmly back in Byzantium's grip; even the Croats and Serbs in the region's northwest had voluntarily submitted to vassal status rather than risk the fate that had befallen the Bulgars, total conquest and subjugation. On the eastern frontier, with the Arabs defeated and the Byzantines having established forward defense positions in Syria, Asia Minor was well protected, at peace, and prospering. In order to create an additional geographic shield for the empire's most valuable territorial base, Anatolia, Basil expanded his control of formerly independent Armenian and Georgian principalities. Although the empire under Basil was smaller than it had been under Justinian, it was more territorially cohesive and fundamentally stronger. Protected by border conquests and an innovative system of layered and territorial defense, Byzantium's core, historic, and Greek-populated lands—Asia Minor, the southern Balkans, and southern Italy—now formed a more compact, homogeneous, manageable, and powerful territorial unit than at any previous time.

Byzantium's large, professional, well-led, yet still primarily citizen-soldier army was the most efficient and feared fighting force in the Mediterranean world, but the empire's power and influence was not limited to military affairs. The empire experienced a dramatic revival of intellectual life beginning in the ninth century that continued through the tenth century. During this period, ancient manuscripts were recopied and disseminated in large quantity, reference works and encyclopedias were compiled, and astronomy, literature, mathematics, and philosophy received new attention. The revival of classical learning was accompanied by a conscious return to classic models in art and literature, which were found to complement rather than conflict with Byzantium's dominant religious aesthetic in the creative arts. The empire also experienced a remarkable, steady economic expansion during this period, fueled in large part by intensified trade in the Mediterranean and Black Seas. Byzantium so effectively dominated international trade, accumulated such incomparable wealth, and enjoyed such fiscal stability, that its coinage was for centuries accepted as the international hard currency standard for trade throughout the Mediterranean world and beyond.

Moreover, Byzantine cultural, religious, and intellectual influence radiated throughout Eastern Europe, the eastern Mediterranean, and much of Italy. It was during Basil's reign that the state of Kiev converted to Christianity and a new era of development began for Russia. Two centuries earlier, the Greek monks Cyril and Methodius had been instrumental in establishing the foundations for the conversion to Orthodoxy of the Bulgars, Serbs, and East Central European Slavs by creating a literary language, Church Slavonic, for liturgical use among all Slavs. The Medieval Greeks, from their cosmopolitan centers of Constantinople and Thessaloniki transmitted modes of art, architecture, and thought that were embraced and reproduced by the peoples newly converted to Orthodoxy. In short, these Eastern European and Russian peoples, like the historic Christian populations of the Near East earlier, were drawn into a kind of Greek cultural commonwealth that extended far beyond the empire's political borders, leaving a lasting Byzantine civilizational imprint on their societies.

By the death in 1025 of Emperor Basil II, the empire was once again the paramount economic, cultural, political, and military power in the Mediterranean world, rivaled only by the Arab caliphate in Egypt and Syria. Byzantium's accomplishments and monumental wealth created unparalleled grandeur and prestige for the empire, often articulated through a tradition of imperial statesmanship and adroit diplomacy. Notwithstanding, sometimes Byzantium's image was greater than its actual strength, and it often disguised the empire's problems, both small and large. After Basil's death, the empire enjoyed continued economic expansion and prosperity but suffered from a series of mediocre emperors who neglected the state's needs and allowed the army to deteriorate. Increasing state demands for revenue clashed with short-sighted aristocratic resistance to tax paying, while political factionalism in the imperial court led to policy failures, the dangerous overestimation of military strength, and neglect of defenses. Paradoxically, these structural problems, which rapidly sapped the empire's real power and ability to respond to serious threats, went largely unnoticed because of the universal perception of Byzantium's presumably unshakable prowess.

Byzantium's image as an invincible superpower was so great that even the magnitude and implications of the strategic disaster that befell the empire in 1071 could not be fully understood or appreciated by both belligerents in this clash, Greeks and Turks. When Seljuk raiding parties were able to defeat a major (but inadequately trained and poorly led) imperial force at the chaotic battle of Manzikert in Armenian Anatolia in 1071 and capture the emperor, Romanus IV, the empire could offer no organized counterattack. As a result, the interior of Asia Minor was open to invasion by the Seljuk Turks, and central Anatolia was lost permanently to the empire. Asia Minor, the empire's agricultural breadbasket, the source of most of its soldiers, and the core of its population base, would now be vulnerable to attack and invasion. For centuries the Byzantines had relied on the rugged, mountainous, excellent natural defense lines created by the geography of eastern Anatolia to defend the rest of Asia Minor. Other invaders had penetrated Asia Minor in the past, but the empire had always been able to respond with successful counteroffensives that forced the Arabs or Persians back across the eastern frontier defenses. Now, however, conditions changed as the Turks could not be dislodged from the central Anatolian plateau. This strategic turn began the steady multicentury transformation of Asia Minor from an entirely Christian and Greek-populated region to a predominantly Muslim and Turkish one.

Ironically, in their relations with their fellow Christians in the West, the imperial majesty, prestige, and wealth that the Byzantines enjoyed proved to be as much a liability as an asset. The Latin, and from the perspective of the Byzantines, semibarbarous, Westerners, increasingly resented the power and influence of Byzantium, while they coveted the Greek world's spectacular wealth. Furthermore, many of the petty princes and kings of Western Christendom had irritated the Byzantines since the ninth century by seizing the empire's lands in Italy and, more menacingly, by challenging the legitimacy of Constantinople's emperors as heirs of the Roman Empire and affecting the pretense themselves as inheritors of the Roman Crown, thus implicitly threatening Byzantium. The bishop of Rome, or pope, contributed to the growing tensions between Western and Eastern Christendom by aligning his see with the political ambitions of Germanic and other imperial pretenders to the Roman Crown in exchange for their political and military support to press his own objective of papal supremacy over the entire Christian Church. Although the early Christian Church reserved, among its ancient ecclesiastical sees, primacy of honor for Rome, this primacy was honorific among equals, not administrative over subordinates. Consequently the early Christian tradition of ecclesiastical autonomy, cooperation, and decision making in ecumenical councils, still vibrant in Eastern Christendom in the ninth century and beyond, necessarily required the sees, or patriarchates, of Alexandria, Antioch, Constantinople, and Jerusalem to reject the growing autocracy and imperial ambitions of the pope. More immediately for Byzantium, after centuries of growing tension, the expanding political and cultural gulf between Eastern and Western Christendom reached a crisis with a formal schism between the papacy and the patriarchate of Constantinople in 1054. This mutual excommunication would have significant political implications for Byzantium and the freedom of the Medieval Greeks.

As relations between the Latin West and the Greek East deteriorated, an atmosphere of hostility emerged that many Western adventurers, with their attention focused on Byzantium's wealth, were quite willing to exploit. Violence was initiated by the Normans, who began raiding Byzantium's western territories in 1080 from their base in Sicily. In 1146, and underscoring the serious nature of the threat posed by the Latin West, the Normans attacked mainland Greece, ravaged much of the countryside, and sacked the city of Thebes, which had been targeted because of the wealth it had acquired from the silk trade. Approximately forty years later, the Normans once more invaded Greece and sacked the great cultural and commercial center of Thessaloniki, Byzantium's second largest city. The Byzantine emperor turned to the growing naval power of Venice for help in interdicting the Normans at sea. The Venetians agreed to assist the Greeks but only in exchange for access to the lucrative trade markets of the empire. Once the Venetians penetrated the empire's economy, they ruthlessly and systematically exploited their privileges. Although the Byzantine emperors attempted to curtail predatory Venetian policies, Byzantium found its former ally a deadly threat embedded within the empire.

The Greeks' fears of the West's intentions materialized during the Fourth Crusade. The Venetians exploited Western prejudice against the Greeks and persuaded the Crusader army, mobilized earlier by the pope and organized in France, to attack Constantinople rather than go to the Holy Land. In 1204 the Fourth Crusade besieged and sacked the empire's capital, Europe's and the Mediterranean world's largest and wealthiest city. Constantinople's population was brutalized and much of the city was burned while most of its treasures and wealth were looted and carried off to Western Europe. The Crusaders then proceeded to partition many of the empire's territories into a ring of Latin kingdoms, principalities, and duchies based in Constantinople, the Greek mainland encircling the Aegean, and the Aegean islands. These occupation states imported Western feudalism and Catholic hierarchs to exploit the Greek subject populations economically and to oppress them religiously. The actions of the Crusaders ended the possibility of any ecclesiastical reconciliation or political cooperation between the Greeks and the West.

Their general incompetence at governance, coupled with the popular hatred against them that their conduct produced, ensured that most of the Latin occupation states would be short-lived. Moreover, as soon as the Crusaders began their occupation of Greece, resistance against them was organized. From their territorial bases in western and northeastern Asia Minor and Epirus in the Balkans, Greek Byzantine successor states waged a war of liberation and reconquest against the Latin occupation forces in and around Constantinople. Led by the new Paleologos dynasty, in 1261 the Greeks recovered Constantinople, much reduced in population and condition by the Latin regime's abuses, and reestablished the city as the capital of the Byzantine Empire.

Although the empire was revived, the events of 1204 had so weakened Byzantium that it was no longer a great power. The empire consolidated most of its territorial base in northern Greece and western Asia Minor during the late thirteenth century but was unable to assert itself beyond this area. Furthermore, the empire's Balkan territories remained caught in a strategic pincer during the fourteenth century, with the Bulgars and Serbs, having reasserted their independence after 1204, pressing on Byzantine Macedonia and Thrace from the north and the surviving Latin states clinging to parts of central Greece to the south. At the same time, the Byzantine position in Asia Minor was threatened by the emerging strength of the Ottoman Turks.

Under these overwhelming conditions, the much truncated and weakened empire could not have expected to survive much longer. The empire's resources after 1261 were acutely limited in terms of finances, territory, and military strength. Remarkably, despite the ongoing depredations of the West, the continual loss of territory to rival Balkan states, followed by the loss of virtually all of Byzantium's remaining lands to the expanding and powerful Ottomans, Late Medieval Greek society experienced an astonishing outburst of artistic, cultural, and intellectual creativity. The empire's waning years saw another major revival of Greek classicism as Greek scholarship and increasing numbers of Greek intellectuals found their way to Italy, where both would have a significant impact on the Renaissance. Nonetheless, by the middle of the fifteenth century, Byzantium had been reduced to little more than Constantinople and its outlying villages, the historic Spartan portion of the Peloponnesus, and a few Aegean islands, all surrounded by the Ottoman Empire. The end came in 1453 when, after a two-month siege, an Ottoman force of 200,000 overcame Constantinople's 8,000 defenders and captured the city. Although the Ottomans had conquered most of the Greek lands in Asia Minor and the Balkans years earlier, and although it was some years before all Byzantine territories were conquered, the fall of Constantinople marked the end of the Greek medieval empire and the Greeks' freedom.

MODERN GREECE

During the three centuries after the Turks first entered Southeastern Europe, the Greek world came almost entirely under the control of their Islamic and dynastic empire. Between 1354, the year the Ottomans crossed the Straits into Thrace, and 1461, the year the final Byzantine fortifications in the Peloponnesus fell to them, the Ottomans had not only conquered all of mainland Greece but virtually the entire Balkan Peninsula as well. With their own state destroyed, the Greeks now became spectators and victims in a struggle for dominance of the eastern Mediterranean between the Ottoman Empire and Venice. Although much smaller Venice lacked the military resources that the huge Ottoman Empire possessed, the apparently unequal struggle was sustained by a potent combination of the Italian republic's wealth, diplomacy, naval power, and religious fanaticism. The rivalry between the Ottoman Empire and Venice was fought out almost entirely on Greek soil, and the fate of much of the Greek population was determined for the next several centuries by the fortunes of these aggressive rivals. Control of strategic positions on the coasts of the Greek mainland and in the islands of the Aegean and Ionian Seas was fiercely contested and was regarded by both the Ottomans and Venetians as essential to their survival.

The first Turko-Venetian War broke out in 1463 and ended in 1479. The war did not produce a change in the strategic balance between the Ottomans and Venetians, but it did establish a pattern of conflict and fighting between the two protagonists, which resulted in more injury to the local Greek population than to either of the belligerents, that would be often repeated. Renewed wars were fought on the Greek islands, as well as in coastal and southern Greece, from 1499 to 1502 and again from 1537 to 1540. Between 1566 and 1669 the Ottomans and Venetians fought each other without respite. This brutal, protracted phase of the Ottoman-Venetian rivalry over Greece led to a series of Ottoman victories culminating in the Turkish conquest of Venetian-held Crete and Cyprus, as well as the Aegean islands not already under their control. Emboldened by the Ottoman failure to capture Vienna a year earlier, the Venetians launched a counteroffensive war in 1684. The Venetians successfully reoccupied the Peloponnesus and advanced into central Greece, positions they would hold onto until their final defeat in 1715. It was during this campaign that the Parthenon, largely intact since antiquity, atop the famed Acropolis, was seriously damaged by Venetian cannon fire.

The near destruction of the Parthenon, caught between Venetian cannonballs and exploding Ottoman gunpowder magazines, served as a symbolic analog for the fate of much of Greece during the Turko-Venetian Wars. For the Greeks, both the Turks and Venetians were foreign masters who denied them their freedom, exploited them and their lands, and imposed often violent and arbitrary rule. The greatest impact of the two-century-long conflict was on the physical condition of the hapless Greek population. Most of the crews, in both the Ottoman and Venetian navies, that fought each other were made up of Greeks pressed into service by their respective occupiers. Greeks also had to provide military levies to both belligerents. But the enormous loss of life among Greek sailors and soldiers paled in comparison to the level of destruction experienced by the general population. The savage intensity of these wars, the marching of armies back and forth over the same territories, and the depredations of both Turks and Venetians against local villages and towns left much of central and southern Greece depopulated, while many Aegean islands were made entirely uninhabitable.

The Greek populations in Asia Minor and those north of the fighting in the Balkans escaped the devastation that affected other parts of the Greek world during the Turko-Venetian Wars. These communities, which experienced uninterrupted Ottoman rule, may not have been exposed to fighting but they did not escape the dictates of the Ottoman state, which was, in its classic form and function, an Islamic war machine whose purpose was constant expansion. The lives of ordinary Greek people were, accordingly, structured to satisfy the interests and needs of the Ottoman system. The Greeks, as the empire's most populous and important subject peoples, were profoundly affected by this situation. Their taxes paid for the sultan's wars and their agriculture was organized to sustain the economic needs of a feudal Ottoman military caste. They built, captained, and crewed the sultan's fleet. Finally, through the *devshirme,* a human tax on the subject Christians, Greek children were taken from their families, converted to Islam, and trained to form the elite corps of the sultan's army, while others ascended the imperial system to serve as the highest officials and diplomats of the Ottoman state. The non-Muslim inhabitants of the sultan's territories were regarded by the Ottoman state as *reaya* (cattle), a resource to be tapped for manpower and material in pursuit of Islamic and imperial expansion. The customs, social structures, and religious institutions and hierarchies of the Greeks (as well as other Christians) were of no interest to the sultan, so long as they provided the resources to serve the empire's policies and did not challenge the state's total authority and Islam's supremacy.

As an Islamic polity, Ottoman society was organized into millets (nations), in effect, administrative units based on religious identity. Thus, over time, the Patriarchate of Constantinople functioned simultaneously as an ecclesiastical institution and an administrative, civil, and judicial apparatus for Orthodox Christians in the empire. The patriarch, as head of the Orthodox population, answered to the sultan, for whom he administered the Orthodox populations, and was responsible for ensuring the subject Christians' loyalty and obedience to the empire. As a result of this situation, the Orthodox Church was put in the paradoxical position of acting to advance the interests of the Ottoman Islamic theocracy while trying to preserve through limited autonomy the survival of Christian culture and Greek society. This delicate balancing act did not always work, as more than one patriarch paid with his life for his coreligionists' resistance to the sultan's rule and as significant numbers of Orthodox Christians converted to Islam in order to escape the devshirme, discriminatory taxes, abuses, and restrictive and demeaning regulations that accompanied the Ottoman separate but unequal *millet* system.

Many Greeks suffered while others benefited from this system of contemptuous tolerance. So-called Phanariot Greeks, members of a small group of families originating in the Phanar quarter of Constantinople, came to hold important administrative and diplomatic positions in the service of the sultan, forming an influential elite and, for a period, exercising considerable autonomous authority in the Ottoman Romanian provinces of Moldavia and Wallachia. In the Greek countryside local elites, especially in the Peloponnesus, enjoyed some social status and privileges in exchange for controlling their peasant counterparts. Finally, given the Muslim Turks' disdain for the usurious aspects of commerce and investment, Greeks were allowed to dominate trade and eventually banking in the empire. Their involvement in commerce within the empire led to the emergence of a prosperous Greek merchant class that was dispersed throughout the urban centers of Asia Minor and especially the Balkans. Furthermore, Greek networks of trade expanded beyond the empire to link Ottoman markets and Europe's economies, with Greeks operating as the commercial middlemen in the process. The subsequent growth of international trade activity led to the demand for a large Greek merchant marine that, by the end of the eighteenth century, dominated Mediterranean ports. These conditions eventually combined to create a Greek diaspora of wealthy business families settled throughout Europe's commercial, urban centers.

Increasingly influenced by exposure to the ideas of the Enlightenment, the French Revolution, and the radical concept of nationalism, some members of the wealthy Greek diaspora, along with an émigré intellectual community that their patronage had helped create, began to explore the idea of Greek political independence. In 1814 a secret revolutionary organization, Philike Hetairia (Friendly Society), was formed by Greek nationalists in the Russian port city of Odessa with the aim of overthrowing the Ottoman Empire and liberating the Greeks. The group enrolled members and began to collect resources and organized plans for a revolt. Alexandros Ypsilantis, a Greek general in the service of the Russian tsar Alexander I, accepted leadership of the organization, and early in 1821 launched an attack from Russia into Ottoman Moldavia. Ypsilanti's revolutionary forces, however, were defeated when the assistance the revolutionaries expected from the tsar did not materialize. Nonetheless, and almost simultaneously, another uprising broke out in the Peloponnesus and soon spread to other parts of Greece.

The Greek War of Independence, or Greek Revolution, began in March 1821 and initially went well for the Greeks. In the early stages of the revolution, the Greek insurgents achieved some striking successes against the Ottoman army while the Greek revolutionary fleet won a string of impressive naval victories. Continued Greek advances, however, were undermined by factional struggles among the insurgents that led to a veritable civil war within the liberated Greek territories in 1824. Capitalizing on the Greek internecine conflict, and the arrival of a large army from Egypt, the Ottomans launched a major counteroffensive against the Greeks in 1825 and retook most of the gains the Greeks had made. Responding to growing public support for the Greek cause in Europe, the Great Powers overcame their initial hostility to the Greek Revolution, and in July 1827 Britain, France, and Russia signed the Treaty of London, which called for the establishment of an autonomous Greek principality. However, the unplanned, spontaneous battle of Navarino in October 1827, resulting in the destruction of the Ottoman navy at the hands of a combined British-French-Russian fleet, impressed the Great Powers to move beyond mere autonomy to support Greek independence.

The Great Powers proclaimed the independence of Greece under the London Protocol of February 1830, which also placed the new kingdom under their protection. Greece's boundaries were subsequently established by the Treaty of Constantinople (July 1832). The new state contained only the Peloponnesus, Rumeli, or Central Greece, and the Cyclades in the Aegean, meaning most of the Greeks in the Balkans and none of the Greeks in Asia Minor were liberated. Also in 1833, Prince Otto of Bavaria, whom the Great Powers had chosen a year earlier, arrived in Greece to become the independent country's first king.

Otto did not prove to be a popular monarch. The Bavarian administrators he brought with him to Greece alienated most of the population. Furthermore, Otto's refusal to grant a constitution, his failure to convert to Orthodoxy from Catholicism, and his inability to produce an heir to the throne culminated in a military coup in 1843, which led to a reduction of the king's powers. In 1844 Otto was forced by military and political leaders to accept a liberal constitution, which defined the country's political system as a constitutional monarchy. Nevertheless, Otto continued to act as an autocrat, only producing more opposition to his rule. In 1862 growing dissatisfaction with King Otto led to an uprising and finally his abdication. The Great Powers offered the throne to Prince William of Denmark, who in 1863 was crowned George I King of the Hellenes.

George's title, King of the Hellenes, not merely King of Hellas, expressed the popular nationalist sentiment that all Greeks, not only those in the limited territory of the Greek kingdom, should, along with their historic lands, ultimately become part of a larger fully unified Greek nation-state. The fact that only one-fourth of the Greeks who had been under Ottoman rule were included in the territories composing independent Greece in 1832 all but guaranteed that irredentism would become Greece's chief political preoccupation for the first century of its existence. Greek elites and common people alike passionately supported the *Megali Idea* (Great Idea) of uniting the unredeemed Greeks still under Ottoman rule in the Balkans and Asia Minor within a single state. Greeks cherished this goal despite the fact that it was bound to bring the small and comparatively weak Greek kingdom into conflict with the Ottoman Empire.

Independent Greece's first territorial gain came not from the Ottomans but from the British. In order to mark the beginning of King George's reign, Britain ceded the Ionian Islands in 1864, over which they had exercised a protectorate since 1815. Following the defeat of the Ottomans in the Russo-Turkish War of 1877–1878, the sultan was forced by the July 1878 Treaty of Berlin to cede most of Thessaly and a portion of southern Epirus to Greece in 1881. As part of the same settlement, Britain acquired the right to occupy and administer the predominantly Greek-populated island of Cyprus beginning in 1878. During the last two decades of the nineteenth and the first decade of the twentieth centuries, Greece's expansionist ambitions focused on the Ottoman territories of Macedonia and Crete. In Macedonia, Greek insurgents and Bulgarian guerrillas fought each other in a complex, protracted, and savage contest for domination over the region before its liberation from the Ottomans, while in Crete, Greek nationalists expressed their fervent desire for union with Greece through repeated rebellions against Ottoman rule, eventually sparking a brief, failed Greek war against the Ottoman Empire in 1897.

Constantine I, King of Greece. (Corbis)

The lesson of the humiliating defeat of 1897 was not lost on the Cretan politician and ardent nationalist, Eleutherios Venizelos, who, as leader of the Liberal Party, became prime minister of Greece in 1910. Venizelos realized that Greece could not unilaterally challenge the still considerable power of the Ottoman Empire, and he therefore sought to develop alliances with the other Ottoman successor states in the Balkans, particularly Serbia. Consequently, in October 1912 the First Balkan War began when an alliance consisting of Bulgaria, Greece, Montenegro, and Serbia launched a coordinated attack against the Ottoman Empire, defeating the Turks and pushing their army to the outskirts of Constantinople. Unsatisfied with its territorial gains in Macedonia, in June 1913 Bulgaria attacked its former allies, Greece and Serbia, only to be defeated by them, Romania, and the Ottoman Empire one month later. This Second Balkan War ended with the August 1913 Treaty of Bucharest, which awarded southern Macedonia, most of Epirus, Crete, and the Aegean Islands to Greece. Under the leadership of Venizelos, Greece increased its territory by 70 percent and almost doubled its population.

When World War I broke out in August and September 1914, Venizelos, emboldened by the victories of the Balkan Wars, was confident that Greece was poised to achieve the *Megali Idea* at the expense of the Ottoman Empire. At the outset of the war, Venizelos advocated Greece's entry on the side of the Entente Powers, or Allies, who were arrayed against the Central Powers, which eventually included the Ottoman Empire and Bulgaria. However, King Constantine I, who had succeeded his father, George I, in 1913, favored neutrality. The differences in foreign policy perspective between the king and the prime minister led to increasingly hostile confrontations between the two leaders. Forced to resign twice in 1915, Venizelos broke with King Constantine in October 1916, and with the support of Allied forces already in Greece, he established a rival government in Thessaloniki. This serious rupture between Venizelos and the king marked the beginning of a national schism that would divide Greek politics and society into two rival camps, Liberals versus Royalists, for at least the next two decades. Intervening in Greek domestic affairs, in June 1917 British and French troops occupied Athens and forced Constantine to resign in favor of his second son, Alexander.

Eleutherios Venizelos (1864–1936)

Generally regarded as the greatest Greek statesman of modern times, Eleutherios Venizelos was born in Chania, Crete, on 23 August 1864. After studying law in Athens, Venizelos returned to his native Crete, then part of the Ottoman Empire, and became involved in the island's liberation movement. He was politically active during the Cretan revolt of 1897 in favor of union with Greece. When Crete became autonomous as a result of international intervention following the revolt and the Greek-Turkish War of 1897, Venizelos played a major role in drafting the island's constitution. As a member of Crete's assembly, he actively promoted the cause of union with Greece. After making his mark in the politics of Crete, he was projected onto the stage of national politics by the military coup of 1909 in Athens, becoming the choice of the coup leaders, or Military League, for prime minister and assuming office in October 1910. As founder and leader of the Liberal Party, Venizelos dominated Greek political life for the next quarter century, serving as prime minister for twelve of those turbulent years.

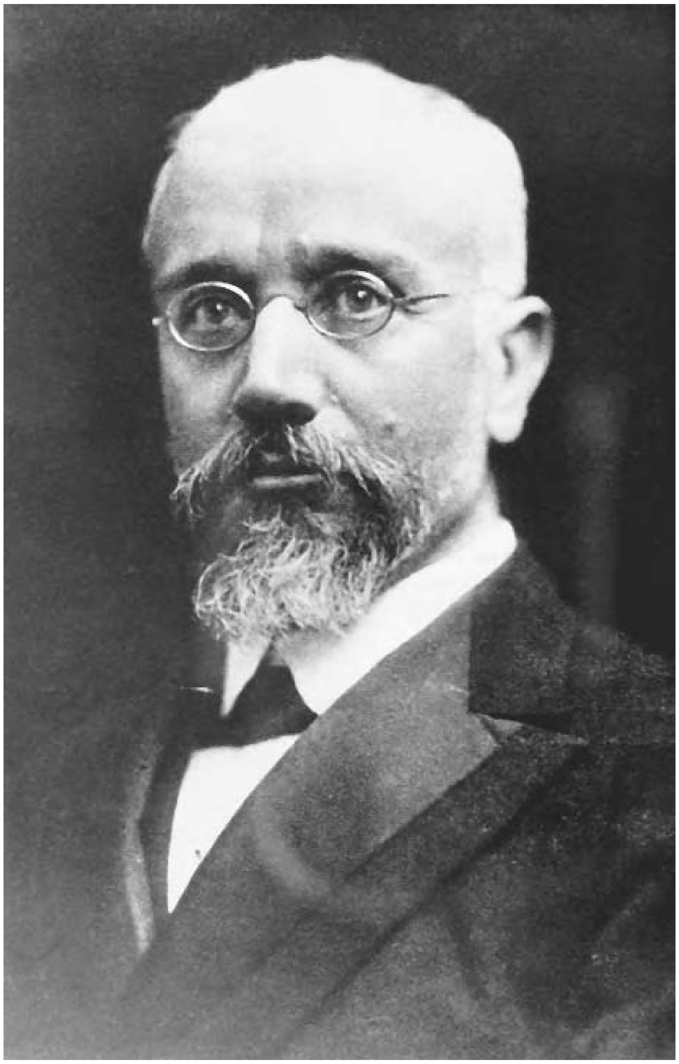
During his first two years as prime minister, Venizelos presided over a vigorous reform program that extended to the administration of the state, public education, and the national economy. Simultaneously he led Greece into an alliance network with Bulgaria, Montenegro, and Serbia aimed at wresting from the Ottoman Empire its remaining Balkan territories. Indeed, Venizelos first achieved international prominence as the architect of Greece's spectacular victories against, first, the Ottoman Empire in the First Balkan War in 1912 and, second, against Bulgaria in the Second Balkan War, fought in 1913. As a result of Greek successes in the Balkan Wars the country doubled its territory. Encouraged by these successes, Venizelos was committed to Greece's entry into World War I on the side of the Entente as a means to liberate the Greeks and their territories still under Ottoman rule. Venizelos and King Constantine, who favored neutrality in the war, soon clashed over foreign policy differences. The subsequent feud between the two leaders resulted in Venizelos's forced resignation twice in 1915 and the eruption of a crisis that divided Greek politics and society between supporters of Venizelos and supporters of the king. This division, or National Schism, became irreversible when Venizelos established a rival government in Thessaloniki in 1916. In 1917 King Constantine was forced to leave Greece under British and French pressure, and Venizelos returned to Athens to lead a reunified but bitterly divided country.

Restored to office by British and French military intervention, as prime minister, Venizelos brought Greece into World War I on the side of the Entente in June 1917. Representing Greece at the Peace Conference in Paris, he secured Allied consent to occupy the important Anatolian city of Smyrna in 1919, and a year later he obtained major territorial concessions for Greece against the Ottoman Empire in Eastern Thrace and western Asia Minor. Venizelos's apparent postwar achievements were, however, short-lived. In 1920 he was defeated in national elections and went into self-exile. By 1922, Venizelos's policy of involvement and expansion in Asia Minor ended in disaster when the Greek army was defeated by nationalist Turkish forces and over 1.3 million refugees poured into Greece.

Venizelos represented Greece at the 1923 Lausanne Conference, ending hostilities between Greece and Turkey, before returning to Greece to serve briefly as prime minister from 1923 to 1924. During his last term as prime minister, from 1928 to 1933, his regional diplomacy significantly improved Greece's bilateral relations with Romania and Yugoslavia and built a rapprochement with Turkey. Faced with the repercussions of the international economic crisis, Venizelos fell from power in 1933. An abortive March 1933 coup by pro-Venizelos army officers tarnished his controversial reputation, and his involvement in another attempted coup two years later forced him to go into self-exile once more. Fleeing to France in March 1935, he lived the last year of his life in Paris, removed from politics. Shortly before his death on March 18, 1936, Venizelos urged his followers to cooperate with King George II, who had recently returned to Greece, for the sake of stability and national unity.

That same month Venizelos returned to Athens in triumph as prime minister of a reunited Greece, declared war against the Central Powers, and began a purge of royalists from government and the state bureaucracy.

After the Allied victory in 1918 and Greece's subsequent diplomatic successes at the postwar settlements in Paris, Venizelos's policies appeared to be vindicated. The November 1919 Treaty of Neuilly required Bulgaria to transfer Western Thrace to Greece. Moreover, after long negotiations, many of Venizelos's territorial aspirations against the Ottoman Empire seemed to be obtained with the signing of the Treaty of Sevres in August 1920. According to the provisions of Sevres, Greece acquired all of Eastern Thrace, excluding Constantinople, the rest of the Aegean islands,



Eleutherios Venizelos. (Bettmann/Corbis)

excluding Rhodes, and a mandate to administer Smyrna and its hinterland in western Asia Minor, pending a plebiscite in five years to determine the area's permanent status. It now appeared that realization of the *Megali Idea* was within reach. However, Venizelos's diplomatic triumph in Paris was illusory. Overwhelmed by opportunity, Venizelos overestimated the Allied, especially the British, commitment to the postwar treaty, especially once the Turks proved unwilling to ratify Sevres. Furthermore, he underestimated the challenges facing the Greek position in Asia Minor, and he dismissed all counsel, civilian and military, that advised him that Greece did not possess the resources necessary to act unilaterally against Turkey, the fundamental principle that had guided his earlier more restrained foreign policy.

Before any treaties regarding the status of Ottoman territories had been concluded, Venizelos had involved Greece militarily in Asia Minor. At the behest of Britain, France, and the United States, who sought to use Greece as a counterweight against another ally, specifically Italy and its expanding sphere of influence in southwestern Anatolia, Venizelos landed Greek forces in Smyrna in May 1919. The presence of Greek troops in Asia Minor aroused a Turkish backlash and helped to fuel the growing armed Turkish nationalist movement led by Mustafa Kemal in the Anatolian interior. With British encouragement, in October 1920 Venizelos ordered the Greek army to advance from Smyrna in order to put down expanding Turkish nationalist resistance to the Treaty of Sevres. A month later a war weary electorate voted Venizelos out of office, returned the Royalists to power, and restored Constantine to the throne, Alexander having died only weeks before the election. Venizelos's electoral defeat proved to be a blessing for his political career. Having put Greece in an increasingly untenable diplomatic and military position, Venizelos now went abroad and did not have to preside over the disastrous outcome of his Asia Minor policy.

Locked now in an irreversible conflict, with no meaningful opportunity for negotiation, the Royalist government continued to pursue a military solution to Greece's Anatolian dilemma. In early 1921 the Greek army began a sweeping offensive deep into Anatolia with the goal of decisively defeating Kemal's illusive nationalist forces. Securing a series of victories along its advance, the Greek operation reached the outskirts of Ankara where it engaged the Turks in a fierce but indecisive battle in September. Unable to overpower the Turkish forces, the Greek army withdrew to and held defensive positions between Smyrna and Ankara during the winter and spring of 1922. Isolated and weakened by the Allies' abandonment and declaration of a policy of neutrality and now realizing that a military victory was impossible, the Greeks were left paralyzed. In August 1922 Kemal's now large and powerful nationalist army launched an enormous, well-coordinated offensive, quickly routing the Greek army, pushing a mass of Greek refugees ahead of its advance, and burning Smyrna in its wake. Meanwhile, Constantine, who was blamed for the fiasco in Anatolia, abdicated in favor of his son George II, after a military coup took place against the Royalist government.

The Treaty of Lausanne, signed in July 1923, formally ended the Greek-Turkish War and introduced a new, draconian principle to the resolution of international conflicts—forced population exchange. Along with fixing the boundary between Greece and Turkey, which required that Greece relinquish all territories awarded to it earlier by the Sevres Treaty, Lausanne dictated the exchange of minority populations between Greece and Kemal's Turkish republic, which had succeeded the Ottoman Empire. Accordingly, 1.3 million Greeks, many of whom had already been uprooted by the Turks, were expelled from Asia Minor and Eastern Thrace, in exchange for 350,000 Turks who were expelled from Greece. The only exceptions to this compulsory exchange of populations were the 80,000 Muslims, half of whom were ethnic Turks, in Western, or Greek, Thrace, and the 120,000 Greeks left in Istanbul. The Greek disaster in Asia Minor, remembered by the Greeks as the Great Catastrophe, ended the *Megali Idea* in a tumult of chaos and human suffering and shattered forever the goal of a fully restored Greece encompassing all its historic lands. Greece and the Greek people were exhausted, confused, defeated, and demoralized. Although the circumstances probably could not have been worse, the population exchanges, ironically, resulted in the unification of the Greek people, albeit in a smaller and poorer Greece than most Greeks could have foreseen a decade earlier.

A country of barely 5 million people before the population exchanges of 1923, Greece's interwar problems necessarily focused on the economic and social integration of the nation's refugees. Greek society's ability to tackle the serious issues that confronted it was, however, undermined by political instability. The leaders of the military coup that had removed Constantine from the throne yielded in January 1924 to a democratically elected government led by Venizelos, recently returned to Greece. In March of that same year the parliament declared Greece a republic, and the proclamation was confirmed by a subsequent plebiscite. Although the constitutional issue of the monarchy appeared to be resolved, the political polarization created by the wartime Constantine-Venizelos dispute continued into the 1920s and 1930s between the Liberal and Royalist parties and their supporters. Intense factionalism precluded political dialogue and led to repeated breakdowns of the parliamentary system. The interwar period was wracked by multiple military interventions in the political process, with pro-Liberal coups followed by pro-Royalist countercoups and vice versa. Practically the only thing the two major political parties could agree on was their opposition to, and fear of, the small but exceptionally well-organized and disciplined Greek Communist Party (KKE), which capitalized on the economic distress and social discontent of the interwar years. Finally, the republic's domestic problems were too great and its institutional foundations not strong enough to withstand the international turn toward authoritarianism that affected most of Europe and virtually all of Eastern Europe by the close of the 1930s. The failure of an anti-Royalist coup in 1935 led to the end of the republic with the restoration of the monarchy under King George II, whose return to Greece and exaggerated fears of a communist seizure of power paved the way for dictatorship. In August 1936 a retired general, Ioannis Metaxas, seized power, suspended parliament, and abolished all political parties.

Despite Metaxas's authoritarian governance and affinity for fascism, he maintained a foreign policy oriented toward Britain, which soon brought Greece into direct conflict with Germany and Italy. Metaxas's efforts to keep Greece out of World War II ended in October 1940, when fascist Italy attacked Greece from its bases in Albania. Against overwhelming odds, the Greek army repulsed the Italian invasion and pushed Mussolini's forces, which were saved from a complete rout by weather and poor communications, deep into Albania. Hitler intervened to rescue Mussolini from his widening fiasco and German forces invaded Greece in April 1941. The country was quickly overrun and divided into German, Italian, and Bulgarian occupation zones.

The brutality of the Axis occupiers provoked resistance. In fact, several resistance movements soon emerged in the mountains. By far the largest of these was the communist-led National Liberation Front (EAM) and its military arm, the National Popular Liberation Army (ELAS). Of the smaller armed movements, the most significant was the National Republican Greek League (EDES), a nationalist organization that supported restoration of the republic. In an effort to monopolize control of the resistance movements in anticipation of liberation, the ELAS, in the midst of the occupation, attacked its noncommunist rivals in October 1943, provoking a civil war that was halted by an uneasy truce in February 1944. In August representatives of the surviving resistance organizations joined in support of a government of national unity established in Cairo under the leadership of a Liberal Party prime minister, George Papandreou.

Despite the agreement arrived at in Cairo and the German withdrawal from Greece in October, the prospects for political reconciliation were ended shortly after liberation. A ministerial crisis between the Papandreou government and EAM over the disarmament of ELAS led to violence in December and quickly escalated into a full-fledged battle for the control of Athens fought between the small Greek government forces, police, and allied British units on one side and ELAS forces on the other side. Meanwhile, in the rest of the country the ELAS returned to the offensive against the EDES and other noncommunist resistance

Bird's-eye view of large crowd jamming University Street, off Constitution Square in Athens, Greece, as the EAM stages a protest rally on the eve of the first free Greek elections in ten years, March 1946. (Library of Congress) forces. The ELAS, however, lost the battle of Athens and signed an armistice in January 1945. Responding to the events in Athens and the brutal ELAS suppression of opponents in the countryside, all of which had the appearance, if not the substance, of an armed communist attempt to seize power, a rightist reaction descended on Greece. A cycle of retributions and counter-retributions created a state of chaos and lawlessness throughout the country. The restoration of King George II to the throne by plebiscite in September 1945 further polarized the Greek Left and Right. The KKE ultimately responded by organizing a guerrilla army and launching a civil war in March 1946. Implementing the Truman Doctrine, the United States intervened in Greece against the communists precisely one year later and provided the national government with economic aid and military supplies sufficient to turn the tide. After more than three years of intense fighting, the death of 160,000 combatants and civilians, and the dislocation of over 800,000 people, the communist insurgency was defeated in August 1949.

Although the decade-long ordeal of war, invasion, occupation, and civil war left Greece devastated, the country recovered quickly during the 1950s. In 1952 Greece became a member of NATO (the North Atlantic Treaty Organization), and with significant aid from the United States the conservative government that dominated the decade of the 1950s inaugurated a rapid economic and social modernization of the country. This period of growth was primarily associated with the policies of Prime Minister Constantine Karamanlis, leader of the National Radical Union, a conservative party despite its appellation.

Many of Karamanlis's domestic achievements, however, were overshadowed by an increasingly bitter conflict over Cyprus, a British Crown colony since 1914 with an 80 percent Greek population. During the 1950s, British colonial forces brutally suppressed the Greek Cypriots' growing struggle for self-determination expressed through demands for union, *enosis,* with Greece. The problem of Cyprus soured relations between Greece and Turkey. The British, pursuing a policy of divide and rule, encouraged Turkey, which had abandoned its interest in Cyprus since 1878, to interject itself in the Cyprus issue as the protector of the Turkish Cypriot minority, which composed 18 percent of the island's population. Moreover, in order to manufacture a rationale for a continued colonial presence, British policy deliberately created intercommunal conflict that led, for the first time, to violence between Greek and Turkish Cypriots. In 1959, as an alternative to the wishes of the majority of Cypriots, who continued to favor enosis, Britain, Greece, and Turkey, all acting as protecting powers, reached an agreement that Cyprus would become an independent republic within the British Commonwealth. In 1960 Cypriot independence was established under the leadership of the new country's president, and its Orthodox primate, Archbishop Makarios. Within a few years, the dysfunctional constitution and arcane power-sharing political system that the British had imposed on independent Cyprus led to a paralysis of government and subsequent intercommunal tensions and ultimately violence.

Portrait of Constantine Karamanlis, prime minister (1955–1963, 1974–1980) and president (1980–1985, 1990–1998) of Greece. (Embassy of Greece)

Meanwhile, events in Greece were pushing the country toward another period of instability and crisis. Karamanlis, who had clashed with King Paul and Queen Frederika, resigned in 1963 and went into self-exile. In the elections of February 1964 the Center Union Party, led by wartime leader George Papandreou, defeated the conservatives, winning a clear majority in parliament. Against a background of renewed crisis in Cyprus, Papandreou found himself embroiled in a conflict with King Constantine II, who had succeeded his father, Paul, in March 1964. In an apparent effort to protect his son, Andreas, whom some conservatives alleged had been involved in a conspiracy with radical military officers, Papandreou moved to assume control of the Ministry of Defense. The king refused to sanction the older Papandreou's attempt to take control of the ministry and thus Papandreou resigned in protest in July 1965. For almost two years, parliamentary democracy steadily broke down as a succession of weak, coalition caretaker governments failed to function effectively, while polarization between Left and Right reached a fevered pitch in countless massive demonstrations. Finally, when Panayiotis Kanellopoulos became prime minister in April 1967, he dissolved parliament and announced that elections to form a new national government would be held the following month.

Before the planned elections that would have finally replaced the string of unstable caretaker governments with an elected government could took place, a group of army officers led by Colonel George Papadopoulos seized power in a bloodless coup on 21 April 1967. The junta, whose members became collectively known as the Colonels, claimed that they had acted to thwart a communist takeover. In reality their primary motivation was to forestall the May elections, which they feared would return George Papandreou to power, who was expected, at the behest of his son, Andreas, to purge ultraconservative officers such as themselves. The junta suspended the constitution, abolished political parties, imposed censorship, and arrested thousands of opponents from across the political spectrum. The dictatorship was extremely unpopular and did not even enjoy support among the military. In December 1967 King Constantine launched a countercoup with units of the army. The attempt to topple the Colonels failed and Constantine fled into exile. In May 1973 elements of the navy tried to bring down the junta but their mutiny failed. When anti-government demonstrators headed by university students tried to end the dictatorship through a massive protest in November 1973, they were brutally suppressed with tanks and troops. When the junta finally fell, it was the result of its own bungling. In July 1974 Turkey invaded and occupied northern Cyprus following a short-lived coup against Archbishop Makarios that had been instigated by the junta. Paralyzed by incompetence and international isolation, and unable to mobilize Greece's armed forces in response to the Turkish invasion of Cyprus, the junta collapsed.

Within days of this critical juncture, Constantine Karamanlis was recalled to Greece from Paris and sworn in as prime minister. Karamanlis quickly reestablished civilian government and brought the seven-year military dictatorship to an end without bloodshed. In November 1974 the first general election in a decade resulted in an overwhelming victory for Karamanlis's conservative New Democracy Party. In December 1974 a plebiscite abolished the monarchy, ending definitively the historically vexing constitutional issue, and in June 1975 the parliament approved a republican constitution. Emphasizing economic modernization, political pluralism, and integration within the evolving framework of European cooperation as the keys to the consolidation of democracy, growth, and security in Greece, Karamanlis achieved one of his primary long-standing objectives when he helped secure agreement for Greece to enter the European Community (EC), the precursor to the European Union (EU), in 1981.

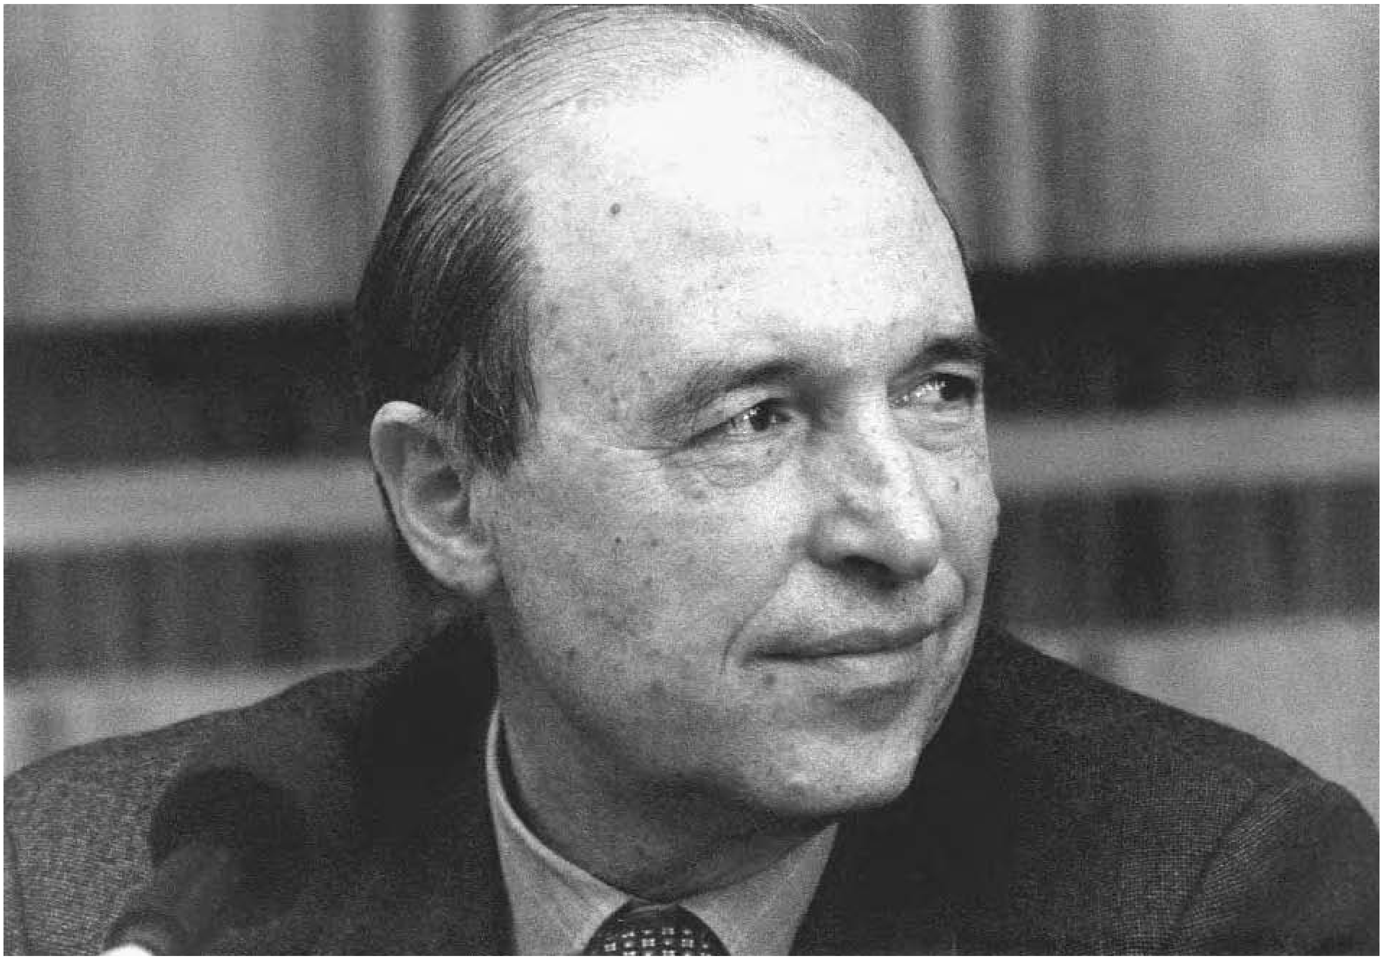
When Andreas Papandreou's Panhellenic Socialist Movement (PASOK) won the elections of 1981, the new government continued along the EC policy lines established by Karamanlis while simultaneously instituting sweeping social reforms that promoted further modernization and broadened political participation at the grassroots level. Growing economic problems, coupled with scandals in the government and in Papandreou's private life, contributed to the defeat of PASOK in the parliamentary elections of 1989, but after a brief coalition government and then a New Democracy Party interlude, Papandreou and the socialists were returned to power in 1993. Managing (not always satisfactorily) a worsening state of relations with an increasingly revisionist Turkey and struggling to maintain security in the troubled central Balkans after the dissolution of Yugoslavia, Greece's domestic development was often overshadowed by foreign policy crises during the 1990s. By the turn of the century, however, it was clear that the government of Costas Simitis, who succeeded the ailing Papandreou in 1996 and represented the modernizing, technocratic wing of PASOK, was beginning to enjoy the results of successful economic modernization policies, an improved foreign relations and security environment, and steady progress toward full integration within the European Union. Although Greece's path to its current position was difficult and it continued to face many challenges, the country's entry into the Economic and Monetary Union of the EU in January 2001 capped Greece's ultimately successful effort over two centuries, if not longer, to build a modern, stable, and democratic nation-state.

POLITICAL DEVELOPMENTS

Greece, the oldest and most stable democracy in Southeastern Europe, is a parliamentary republic whose president is the official head of state and whose prime minister is the head of government. The government and political system is based on the constitution of 1975 and the 1986 revisions to the constitution, with the former concretizing the establishment of a representative republic and the latter curtailing presidential power. The 1975 constitution marked the resolution of the so-called constitutional question, the conflict over a monarchy versus a republic, which plagued countless governments and had been at the center of political instability in the country since the establishment of an independent Greece in the 1830s.

The country's constitution was drafted by a legislature elected through popular elections held after the fall of the last military dictatorship in Greece in 1974. The document, reflecting the overwhelming vote of the national referendum of December 1974, abolished the monarchy and established the basis for a democratic republic. Based on the fundamental view that the state's legitimacy stems from the self-determination and will of the nation, the constitution notes that sovereignty rests with the people. Employing the principle of checks and balances, the constitution establishes a governmental structure, and accompanying functional responsibilities, dividing the state into three branches—executive, legislative, and judicial. The president of the republic, who is placed above the three branches of government and is intended to be above partisan politics, functions as a titular head of state, especially since the constitutional amendments of 1986.

As in most nations in the European Union (EU), but to a lesser extent than most Eastern European countries, the ethnic model, not the citizenship model, remains the chief informal norm for identity in Greece. Nonetheless, the constitution grants equal rights to all persons residing in

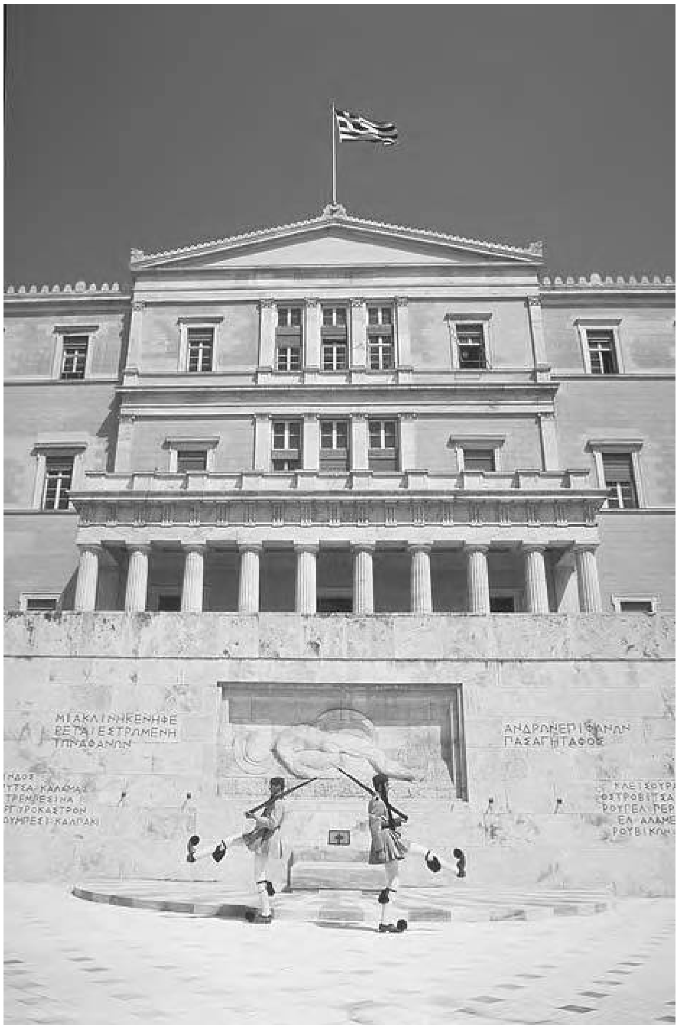


Portrait of Costas Simitis, prime minister of Greece (1996–). (Embassy of Greece)

Greece. The full range of human rights is protected under the constitution, which notes that all citizens of Greece may enjoy "full protection of their life, honor, and freedom, irrespective of nationality, race, or language and of religious or political beliefs." While every adult citizen has the right to participate in the economic, political, and social life of the country, the Greek state and all its agents are to ensure that individual rights and liberties are protected and exercised fully. The constitution specifies that basic rights and liberties include freedom of speech, of the press, of peaceful assembly and association, and of movement; furthermore, basic rights extend to economic freedom and ownership of property, the inviolability of privacy, and equality before the law, as well as legal due process. Also guaranteed by the constitution are the rights to social security and housing, to education, and to health care, as well as the right to petition the state for redress of grievances. In addition, the constitution states that work is a right, and that all workers are entitled to equal compensation for equal labor or services performed. The freedom of workers to organize (including the right to strike) is protected, but judicial functionaries and members of the state security forces are prohibited from striking.

While the basic articles of the constitution, such as those defining Greece as a parliamentary republic, those guaranteeing fundamental rights and liberties, and those establishing and distributing respective powers to the three branches of government, remain unalterable, all other parts of the constitution may be amended. In order to amend the constitution, a proposal for change must be introduced into the parliament by at least fifty of the three hundred members of the legislature. The next step in the amendment process requires that 180 (the equivalent of three-fifths) of the members of parliament vote in support of the amendment on each of two ballots held at least one month apart. Finally, the next session of parliament enacts the amendment by a majority vote of the total legislature's membership, at least 151 out of 300 representatives. At any rate, constitutional revisions cannot be made before a lapse of five years from the completion of a previous revision. These methodical, incremental, and reflective provisions are designed to ensure the stability of constitutional order in Greece and have succeeded.

Inspired by the modern systems of government in Western Europe, especially the French model of state organization, Greece is a unitary state based on a system of parliamentary democracy. In order to prevent the concentration of power in a single authority, the powers and functions of the state are separated into three branches of



Parliament, Athens, Greece. (Corel Corporation)

government. Despite constitutional provisions to strengthen local administration and the 1994 inauguration of direct local elections for provincial governors (formerly appointed by the central government), real power rests overwhelmingly with the central government in Athens.

At the head of the central, or national, government is the president. As the principal link among the executive, legislative, and judicial branches of government, the president is insulated from direct political pressure by virtue of his election by the parliament for a term of five years, and a maximum number of two terms. The presidency, especially after the constitutional amendments passed in 1986, enjoys largely ceremonial functions as a sort of representative national figurehead. The day-to-day governance of Greece is conducted by the three branches of government arranged according to the elected parliamentary system, with an independent judiciary and an executive branch that operates with the approval of the legislature.

The executive branch, or government, consists of the prime minister and his cabinet, which includes twenty-two departmental ministers, thirty-one alternate or deputy ministers, and one cabinet-rank minister to the prime minister. All major cabinet ministers are members of the parliament, while others are chosen by the prime minister and formally appointed by the president. Led by the prime minister, the executive branch is collectively responsible to the parliament for the formulation and implementation of general government policy, while each minister is also individually responsible for the work of his respective office as an agency of the national government. The cabinet must receive and maintain the confidence of the parliament. A confidence vote by the legislature is required whenever a new cabinet is established. This vote, which is determined by an absolute majority, focuses on the broad outline of the government's proposed policies and programs. If a government is forced to resign as a result of a no-confidence vote, a nonpartisan caretaker government must be formed to administer new elections. Although two attempts have been made, in 1988 and 1993, no government has been censured by a no-confidence vote since the adoption of the constitution of 1975.

The National Assembly, or Parliament, is a unicameral body of three hundred deputies elected through direct universal ballot to a term of four years. The parliament elects its own officers and a committee that organizes the body's legislative work agenda. At the beginning of each annual session, which convenes in early October, committees are formed to examine bills, with committee membership proportional to party representation in the parliament. Bills may be introduced by the government or by any member of the parliament. In practice, however, the vast majority of legislative initiatives originate with the government. Bills become laws by a majority vote in the full assembly or by a majority of a proportionally representative section of parliament that continues to meet while the remainder of the assembly is in recess.

The current legal system, with roots in ancient Greek, Roman, and Byzantine civil law, as well as modern French and German models, is administered by an independent judiciary, which is divided into civil, criminal, and administrative courts. Underscoring the independence of the judiciary, judges enjoy personal immunity and are subject only to the constitution and the law in discharging their responsibilities. Judges and other judicial personnel are appointed and promoted by presidential decree, based on the prior decisions of the Judicial Council. The Judicial Council comprises the presidents of the three highest courts in Greece—the Supreme Court for civil and criminal justice, the Council of State for administrative cases, and the Comptrollers Council for fiscal matters. All legal proceedings are public and, depending on their severity, are decided by juries, judges, or magistrates. At the top of the judicial system is the Special Supreme Tribunal, comprising the presidents of the Supreme Court, the Council of State, and the Comptroller's Council, as well as four members of the Supreme Court chosen by lot every two years, and two distinguished professors of law also chosen by lot. The Special Supreme Court Tribunal interprets and rules on the constitutional validity of laws in cases where the Supreme Court, the Council of State, and the Comptroller's Council have rendered conflicting judgments. In these instances, the ruling of the tribunal is irrevocable. Constitutional interpretation in other cases is left to the legislature, not the judiciary.

The foundational linchpin and primary legitimizing instrument of the entire Greek political system is the principle of democratic representation, which is practiced through the electoral system. Except for the period of military dictatorship between 1967 and 1974, the electoral process has provided the country's citizens a tangible (if sometimes imperfect) structure for the exercise of democratic choice in postwar Greece. Elections, which are direct, universal, and achieved through secret ballot, are held every four years for both parliamentary and municipal elections unless the dissolution of the parliament necessitates an interim election.

The three hundred members of the parliament are elected from fifty-six local districts, which are represented by from one to thirty-two seats according to their population. Candidates are elected under a so-called reinforced proportional representation system in which 288 members of the parliament are chosen directly from the fifty-six constituency districts, while the remaining twelve seats of the assembly are occupied by so-called national deputies, elected not in any of the electoral districts but at large from political party lists in proportion to the popular vote the parties receive. Thus these national deputies, who enjoy the same rights and functions as directly elected representatives, represent the entire country. In one form or another, the reinforced proportional system has been in operation since the 1920s, with virtually every successive government modifying the system to maximize its own electoral prospects. As a result, the proportional system has consistently worked to the advantage of Greece's larger, dominant political parties. The justification for such a practice is that the proportional system helps to preserve political stability and, more importantly, functional one-party governments. Reinforced proportional representation, usually expressed through the allocation of most or all national deputy seats to a plurality party, makes it possible for a parliamentary majority to be formed even if a winning party fails to secure a majority of the popular vote. This outcome is made possible by awarding extra parliamentary seats to the larger parties that obtain more than a minimum percentage of the national vote.

Despite its demonstrated capacity for promoting stability, the proportional representation system has been controversial since its implementation. The proportional system has been consistently opposed by Greece's small political parties, especially those representing the ideological left, to whom reinforcement has been an exclusionist instrument that minimized their numbers in parliament between the 1950s and 1970s. As the fear of the Left receded in the 1980s and 1990s, the country's two dominant political parties, the conservatives and socialists, reached a consensus in favor of a system that made representation more in proportion to the direct vote but still significantly favoring the largest parties. Despite its problems, the electoral system has provided remarkable political stability in Greece. Since the restoration of democracy in Greece in 1974, of the nine parliamentary elections held, only two held in 1989 failed to produce a one-party majority government.

LOCAL GOVERNMENT AND CIVIL SERVICE

Although important in traditional and historical terms, Greece's nine geographic regions have no administrative significance. They are, however, the basis for subdividing the country into fifty-two prefectures, or provinces, which are the main local administrative units and the chief links between central and local government. The prefect, or *nomarch,* operating as a provincial governor, oversees local administration and functions as the principal agent of the central government. It is the prefect's responsibility to coordinate the activities of the ministerial field offices within his jurisdiction. The office of the prefect works in concert with a provincial council. For its part, the provincial council consists of the mayor of the prefecture's administrative capital, two representatives drawn from the province's municipalities and communes, and representatives of mass organizations for farmers, workers, professionals, entrepreneurs, and public corporations. Provincial councils may also meet with senior officials of the central government ministries on matters of shared local interest.

At the lowest level of local administration, the provinces are subdivided and organized around the country's approximately 350 municipalities and 5,600 communes. Typically, a municipality is a city or town with a population exceeding 10,000 residents, while a commune is a town or village containing fewer than 10,000 persons. Municipalities and towns elect councils headed by a mayor and president, respectively. The tenure and mandate of these councils is renewed every four years through popular election. Membership in the local councils varies from five to sixty-one deputies, depending on population.

Traditionally, through the entire Ottoman experience and most of the modern Greek state's history, local government had been popularly viewed as the exclusive domain of wealthy elites. The concept, let alone prospect, of popular participation in local administration was seen as remote until fairly recently. In 1982 Greece's first socialist government, which had promised to fully democratize local decision making by enacting the conditions necessary for popular involvement in provincial administration, passed legislation that began the profound transformation of local government. A new legal framework was created that began the transfer of considerable decision-making authority from the central government to the prefectures, municipalities, and communes. Although the decentralization initiatives, which had lost momentum by the mid-1980s, stalled with the return to power of the conservatives in the early 1990s, the socialists, on returning to power in 1993, renewed the agenda for decentralization. The now continuing strides forward in this area were made especially evident in 1994, when provincial governors, formerly appointed by the central government, were for the first time determined by direct popular local elections.

With major reform goals achieved in virtually all areas of government, the state's civil service remains the most intransigent challenge to Greece's state evolution. Like other modern governments, the Greek state is entrusted to a network of public personnel within a vast civil service bureaucracy. Entry into the civil service is generally made possible by competitive state examination. However, government ministries often bypass the regular recruitment system and engage personnel, without benefit of civil service examinations, by individual contract. The logic behind this accepted practice is based on the need for governments to employ specialists to fulfill certain tasks that the existing civil service pool cannot address as effectively. Such contract specialists are hired through a noncompetitive procedure at higher salaries than the mainstream ranks of the civil service bureaucracy. Furthermore, after several years of service, contract personnel are entitled to receive civil service tenure, or guaranteed permanence of position and salary. Precisely because these contract positions depend on the discretion of each minister, the practice is highly conducive to political patronage and favoritism. Furthermore, the effective internal division of the state bureaucracy into two unequal categories of recruitment and compensation has promoted resentment and often undermined professionalism and efficiency within the ranks of the regular civil service.

Despite periodic attempts to rationalize the goals and the methods of the system, the civil service apparatus is the single most visibly inefficient sector of the Greek governmental process. Since 1974 both ruling parties, the conservatives and socialists, have offered various programs to deal with the problems endemic in the civil service, especially in the area of personnel recruitment. However, the impact of these legislative reforms has been minimal, apart from broadening the immediate political influence of the governing party. In the final analysis, continued reliance on subjective criteria and personal connections in state agencies is a (perhaps throughout the Balkan region) practice rooted in the late Ottoman experience, a norm reinforced during most of the history of the independent Greek state. This pattern has cultivated in Greek citizens a general distrust for formal criteria such as exams, inspectors, and objective qualifications. Yet, at the same time, the consequent inefficiency associated with the civil service has bred almost universal contempt for its agencies.

THE PROBLEMS OF POLITICAL EVOLUTION

Although the ancient Greeks invented democracy, their nineteenth- and twentieth-century descendants had to struggle for generations to create a viable and truly representative government, a modern version of a democratic political system. Although the current Greek political system still grapples with serious flaws, the transition to and solidification of democracy since 1974 is often cited for the effectiveness with which it has dealt with political problems lingering from the past. Political development in nineteenth-century Greece was forestalled by the continual interference of the Great Powers in the country's domestic affairs. Political evolution in the first half of the twentieth century was handicapped by war, a pervasive culture of political patronage, polarization and schism between liberals and royalists, and a collapse of constitutional order.

The chief postwar political problems in Greece were the final disposition of the monarchy and the legalization of the Communist Party. By resolving both of these issues within one year after the fall of the junta in 1974, Prime Minister Constantine Karamanlis removed two of the major issues of the postwar political environment that had made the accession of a military dictatorship possible in 1967. The immediate result of World War II had been a brutal civil war fought between communists and the national government from 1946 to 1949. The trauma of the conflict left Greece with a succession of repressive rightist governments and a stunted parliamentary system characterized by a meddling monarchy, pervasive domestic surveillance, and a Cold War–driven, paternalistic, interventionist U.S. ally throughout the 1950s and most of the 1960s.

After seven years of highly unpopular military rule and political isolation, let alone decades of parliamentary dysfunction, preparing Greece's political system for vigorous democratization and long-term stability was a formidable task. The conservative, decidedly democratic government of Karamanlis's New Democracy Party that came to power in 1974 tried to recover the economic momentum that had propelled a rapid political evolution in the late 1950s and made possible the liberal policies of the mid-1960s. The military dictatorship's pariah status and its general incompetence had separated Greece from the developmental path followed by its Western European counterparts, leaving the economic system that emerged from the early 1970s unprepared to cope with the monumental social changes and political demands of the remainder of the century.

The establishment of a republic and the legalization of the Communist Party and other leftist parties under the Karamanlis government cleared the way for the consolidation of democracy in Greece. The expanded political spectrum stimulated calls for further democratization, a goal vigorously embraced by New Democracy's chief opposition party, the Panhellenic Socialist Movement (PASOK). Founded as an anti-junta organization by the Greek diaspora intellectual and member of a prominent political family, Andreas Papandreou, PASOK was transformed into a political party in 1974. Seven years later, the new party and its charismatic leader came to power to form the first socialist government in Greece's history. PASOK's rapid rise and its electoral success in 1981 confirmed that government power could pass in orderly democratic fashion from one party to another, even between parties of quite different ideology.

The first socialist government launched a wave of jarring and controversial social and political transformations. Central features of the early 1980s were an environment of increasing openness and a concurrent sense of disorientation. PASOK's initial fiery rhetoric created high public expectations that were frustrated by deepening economic problems and by the socialists' unfocused long-term agenda. Nonetheless, PASOK's first term brought new segments of society, which until that time had been marginalized in the political life of the country, into the political mainstream. This process of expanding democracy and political participation stalled under mounting economic pressures during the socialists' second term, which ended in 1989 amid malaise and scandal. A subsequent New Democracy gov-

Portrait of Andreas Papandreou, prime minister of Greece (1981–1989, 1993–1996). (Embassy of Greece)

ernment was unsuccessful in both domestic and foreign affairs, so the electorate again turned to Papandreou's Socialist Party, which returned to power in 1993.

Following Papandreou's death in 1996, Greece's newly elected prime minister and leader of PASOK, Costas Simitis, began a restructuring of policy, which has produced considerable success in achieving his government's primary goals. Simitis's government, reelected in 2000, is committed to economic stability and modernization, monetary integration into the EU, and security through multilateral and cooperative international structures. Under Simitis's technical and sophisticated (if not charismatic) leadership, Greece has achieved most of its goals in these areas. Moreover, Simitis's approach to expanding domestic political life has been crucial in stimulating another vital evolutionary step in Greece's political development. Although the process is not entirely complete, the country's major political parties have been transformed to a considerable extent from exclusively elite organs to instruments for popular participation in the increasingly urgent process for reforming and modernizing national institutions.

CULTURAL DEVELOPMENT

FAMILY AND FOLK TRADITION

Reflecting the enduring influence of traditional culture, Greek society, for the most part, continues to prioritize collective over individual identity in assigning social status to persons. The family remains paramount in society's perception of an individual's public standing and value. Because of its patriarchal structure, Greek culture defines family membership through patrilineal descent, but bilateral kinship remains a factor in determining family relationships. Although mitigated by the growing imprint of Western culture, two basic categories of kinship exist simultaneously within the larger family system. The basic, primary category is based on notions of bloodline, or biological bonds, and is composed of the nuclear and extended family. The second category of relationships is established through sacramental sponsorship in weddings or baptisms and thus unites different families into so-called affinal, or nonbloodline, networks of kinship. The two categories of kinship—primary and affinal—are denoted in the conceptual terms *oikogenia* (family) and *koumbario* (affinal relation), respectively.

Breaking from the centuries-old pattern of multigenerational households, the nuclear family has for the last few decades constituted the basic domestic unit in Greek society. Consistent with general demographic trends among the EU countries, the average nuclear Greek family in the 1980s and 1990s consisted of four people (husband, wife, and two children) who generally occupied a common residence apart, although often close to, extended family households. Marriages arranged by parents or trusted intermediaries were typical in Greek culture as recently as the first half of the twentieth century but have been replaced by largely independent unions. Traditionally marriages functioned, at least in part, as economic mergers and alliance structures between families and thus tended to be arranged. Courtship rules, which once were appropriate only to engaged couples, have been relaxed since the 1970s but remain (at least formally) restrictive, especially as applied to girls and women in rural communities.

Underscoring the general continuity of roles and values, male heads of household are chiefly responsible for engaging the public on behalf of the family's interests, while their female partners are typically responsible for most of the family's domestic management. Mothers tend to be the primary caregivers in most Greek families, although grandparents and elder siblings are often actively involved in child rearing. Although early childhood is associated with considerable freedom, behavioral controls that are intended to protect family reputation and status are applied to children and are expanded and adjusted with age. Consistent with traditional patriarchal norms, male children generally enjoy more autonomy and privileges than do female children and are subject to less family and community scrutiny in terms of social conduct. Primary and secondary education is prized from the perspective of most traditional families as a system for inculcating children, especially boys, with competitive principles. Social elites aside, higher education is valued almost exclusively as an instrument for children's economic advancement, leading to an emphasis on professional and vocational training, often at the expense of creative and intellectual pursuits.

Although material factors such as individual wealth and education operate as the primary factors in the acquisition of status and influence in community life, intangible yet culturally significant factors can build or undermine social status regardless of personal wealth and power. The basis for this dynamic, as well as the source for the attendant mechanisms of social control, lies in the integrated principles of honor and shame. Although less openly pronounced at present than in earlier periods, these principles continue to resonate within Greek society. Honor functions as a moral commodity defining, or at least contributing to, a family's status. Family honor, and hence respectability and status, can be compromised and lost by the deviant actions of any member of the family. The collective, corporate nature of honor consequently requires that individuals conform to the interests of the family in abiding by the norms of the community. Acting otherwise brings shame not only to oneself but to one's entire family. Shame, in the form of public derision and social marginalization, thus works as an inducement for conformity and a deterrent against aberrant behavior.

THE VISUAL AND PERFORMING ARTS

Despite their enormous influence and presence in the lives of most Greeks, folk art and popular aesthetic tradition did not attract the interest of modern Greece's first artists. The post-Byzantine tradition of religious art that prevailed before the Greek Revolution was ultimately challenged by a Western influence that came to Greece with the Bavarian monarchy and administration imposed on the independent Greek state by the Great Powers in the 1830s. The majority of nineteenth-century Greece's most important artists studied or completed their training or education in Bavaria. The most prominent of these artists, Nikolaos Ghizis, became an influential professor of art at the Munich Academy and gained considerable fame abroad. Other leading artists making up the cohort of talent known eventually as the "Munich period" artists included George Iakovides, Nikiforors Lytras, and Constantine Volanakis, who returned to Greece to accept appointments at the School of Fine Arts in Athens. Heavily influenced by Western European sensibilities, the only Greek element in the work of these artists was the subject matter, which was sometimes drawn from folklore. Although less influential, a more indigenous tradition came from the local artists of the Ionian Islands, which became part of Greece in 1864.

The work of Greek artists living in Western Europe during the first half of the twentieth century was affected significantly by postimpressionism. The most accomplished among this group of artists was Constantine Parthenis, who returned to Greece to teach at the Athens School of Fine Arts, where he influenced a generation of artists that studied under him. As a symbolist and exponent of modern trends, Parthenis's work demonstrates a strong interest, emulated by his students, in Greek light and color. An equally influential but opposite artistic influence came from a refugee from Asia Minor, Photios Kontoglou. Committed to reviving the tradition of Byzantine religious art, Kontoglou rejected Western influences and urged his students to seek out creative roots in Greek culture. Eventually the cross-fertilization of Parthenis and Kontoglou produced a postwar generation of artists with a unique hybrid vision of Greece and Greek culture.

When Greece became independent in the 1830s, it enjoyed two dominant musical traditions, colored by countless regional variations. The first of these traditions was so-called demotic music, which had originated in the Ottoman period and was heavily influenced by liturgical music. The second tradition was found in the music of the Ionian Islands, which escaped Ottoman rule and was influenced by Italian forms. In the twentieth century the musical folk tradition divided into the older demotic songs of the countryside and a new type of urban song, known as *rebetika* or *rebetiko,* which appeared mostly among Asia Minor refugees and Greek immigrants in the United States.

Once Greece obtained its independence, many Greeks living in Western Europe returned home to introduce Western musical culture. Moreover, Greece's first monarch, King Otto of Bavaria, established bands, imported Western musical instruments, initiated musical education in schools, and sponsored musicians from Germany, Italy, and the Ionian Islands to perform in Athens. Opera was introduced, and by the middle of the nineteenth century, Greece was home to numerous orchestras, choirs, and musical societies. Among the most respected representatives of the Western musical tradition, expressed through the Ionian school of composers, were Nikolaos Mantzaros, who wrote the music for the Greek national anthem, Pavlos Karrer, and Napoleon Labelette and Dionysios Lavrangas, the founders of the Greek National Opera. Under the creative composition of the Asia Minor Greek, Manolis Kalomiris, Western and Greek folk traditions merged to form a new orchestral style. The most revered of Greece's operatic performers, and perhaps the most renowned twentieth-century master of classical voice, was the diaspora Greek Maria Callas, born Maria Kalogeropoulos, who enjoyed a brilliant career in Greek opera before being discovered in the West.

Regardless of its unique classical composers and unmatched operatic artists, Greece is best known abroad for its popular music. Manos Hatzidakis was the first of a generation of composers who introduced themes from *rebetika* in their work and, in the process, legitimized nonmainstream music. Hatzidakis's compositions and Greek popular music gained global recognition through international film, beginning with *Never on Sunday* (1960). This phenomenon was magnified with the film *Zorba the Greek* (1964), which showcased the music of the influential and politically controversial Mikis Theodorakis, whose compositions became widely known throughout Europe and beyond.

Greek filmmaking first drew international attention through the work of Cypriot-born Michael Cacoyannis, the director of the immensely popular *Zorba the Greek* and the critically acclaimed film *The Trojan Women* (1971), as well as other major features. Another filmmaker who has achieved recognition as one of Europe's most original cinematic artists is the director Theo Angelopoulos, the recipient of countless awards for works that entered the European canon of classic films during the 1980s and 1990s.

THE LITERARY ARTS

Of all the aspects of cultural and artistic creativity associated with modern Greece, literature and everything connected with language was the most lively and perhaps most important realm of expression. Although Greek writing in the early nineteenth century depended largely on the formal and rigid literary tradition of the Ottoman-era Constantinopolitan elites, the incorporation of the Ionian Islands into an independent Greek state in 1864 marked a critical turn in the development of a modern Greek literature. Ionian poet and author of the words of the Greek national anthem, Dionysios Solomos, and his contemporary Andreas Kalvos experimented with a largely unexplored, yet vibrant and potentially rich vernacular. In doing so, Solomos opened the way to poetic emancipation from the formal, stilted idiom. Although the formal idiom, Katharevousa, produced a large group of nineteenth-century prose writers, the only impressive and lasting craftsman of this medium was Alexandros Papadiamantis, a short story writer of considerable genius. The son of a poor priest and a native of the island of Skiathos, Papadiamantis studied briefly at the University of Athens before earning a modest living as a translator and prolific writer. He led an ascetic life, dominated by the Orthodox religious calendar, for whose traditions his writings reflected admiration and nostalgia. Papadiamantis's short stories and novels centered on historical and cultural themes. They appeared in serial form in periodicals during his lifetime and were published as books only after his death.

The late nineteenth and early twentieth centuries saw a wellspring of extraordinary poetic writing flowing from both formal and vernacular camps. The most talented of the vernacular poets during this period and a celebrated exponent of demotic was Kostis Palamas, whose approach to verse was highly original and unrestrained by convention. Palamas was one of the best known and most loved Greek poets of his time. Born in Patras and educated in Mesolonghi, he worked as a journalist and literary critic before publishing his first collection of verses, *The Songs of My Fatherland,* in 1886. After the publication of his second collection of poems in 1897, he was appointed secretary-general of the University of Athens, a position he held until his retirement in 1926. On the opposite end of the stylistic spectrum was the understated poetry of diaspora Greek Constantine Cavafy. A native of Alexandria, Egypt, Cavafy spent much of his childhood in Constantinople and England before settling permanently in Egypt in 1885. He

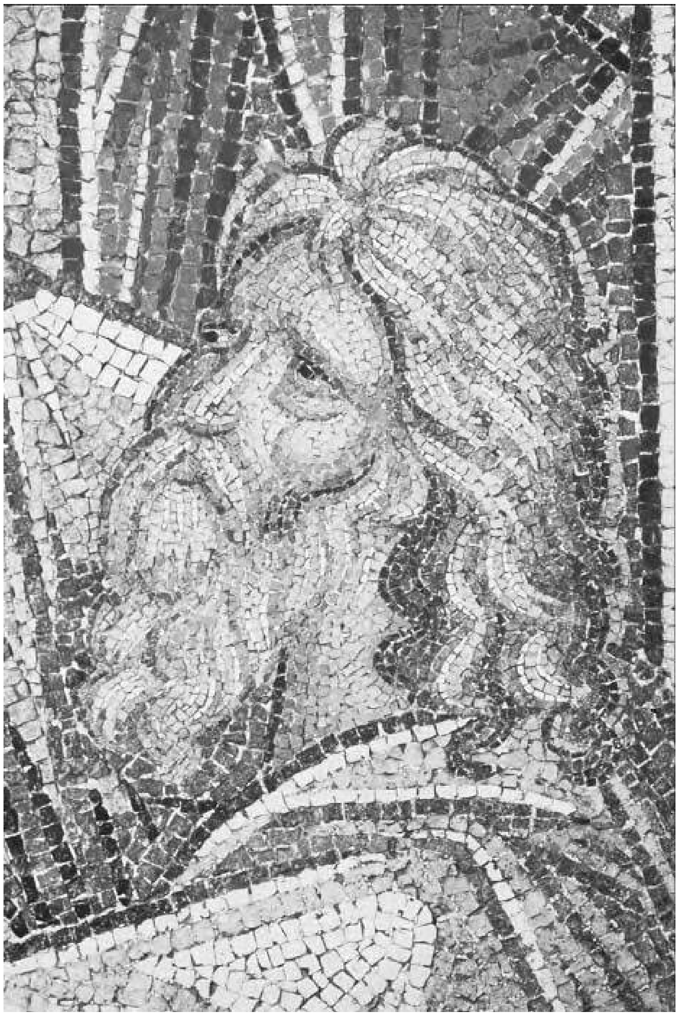
Adamantios Koraes

The leading figure of the eighteenth-century Greek Enlightenment, a Western-inspired intellectual revival, Adamantios Koraes (1748–1833) was born in Smyrna, the son of a merchant from the island of Chios. Although Koraes obsessively identified with Chios, there is no evidence that he ever visited the island from which his family originated. While a young man in Smyrna, Koraes was introduced to Latin and exposed to Western classical scholarship by Bernard Keun, a Dutch Protestant pastor. Between 1771 and 1778, Koraes attempted to pursue the family trade as a merchant in Amsterdam. His experience of freedom in Holland fueled his hatred for the Turks, whom he considered nothing more than barbaric oppressors. Not finding fulfillment in his life as a merchant, Koraes studied medicine at the University of Montpelier from 1782 to 1786. Nonetheless, his real interests lay in ancient literature, and he soon developed into one of the foremost classical scholars of his day in Europe. From 1788 until his death in 1833, Koraes lived in Paris, experiencing at close quarters the turbulent events of the French Revolution and the Napoleonic wars. Alarmed by the violent excesses of the revolution, mob rule, and Napoleonic despotism, Koraes embraced the virtues of moderation.

Koraes's passions were manifest in his private pursuit of classical scholarship and his public effort to raise the educational level of his fellow countrymen and instill in them an awareness of a glorious past that was universally admired in Europe. Toward achieving the latter, Koraes conceived the idea of publishing the *Hellenic Library,* consisting of editions of ancient Greek authors and aimed at a Greek audience. Koraes believed that the Greeks would never attain freedom from the backwardness of Ottoman bondage unless they became versed in the knowledge of their ancient heritage. As a result, he thought the outbreak of the Greek Revolution in 1821 was premature by a generation, since the Greeks had not yet reached the educational level required to make them truly free. Nonetheless, he published works in support of the revolution, as well as pieces aimed at ensuring that his fellow countrymen did not merely substitute native tyrants for their Ottoman masters. A central participant in the debates of the early Greek intelligentsia over the form of the language appropriate to an independent Greece, Koraes was one of the chief architects behind the formal language, or what became known as Katharevousa.

made a living as a bureaucrat in the British Imperial Irrigation Office of Alexandria, but his poetry was his private life and all-consuming obsession. The 154 poems that compose Cavafy's completed works fall into three categories, which the poet himself identified as philosophical, historical, or hedonistic reflections. The poems of the first category, all published before 1916, often displayed a didactic imprint. The historical poems, the first of which was published in 1906, explored the unity and continuity over time of the Greek experience, paradoxically by setting them in the Hellenistic age. In this context Cavafy drew considerable inspiration from the decline of Hellenism and the conflict between Christianity and paganism. As for the third category, Cavafy's hedonistic poems first saw publication in 1911 and by 1918 had become increasingly explicit but also expressive of a social dimension as they depicted life on the margins of society.

The period between the two world wars witnessed the emergence of Greece's most dynamic and influential crop of poets and novelists. This new wave of intellectuals and writers, who would dominate Greek letters during the rest of the twentieth century, vacillated in their outlook between the complete despair and isolation of the suicidal Kostas Karyotakis and the sophisticated resignation of George Seferis, born George Steferiadis, to the exaltation of the senses in the vision of Odysseus Elytis, born Odysseus Alepoudhelis. The poetic medium in Greek culture, an international literary form, marked a high point of achievement with the award of Nobel Prizes to Seferis and Elytis in 1963 and 1976, respectively. Seferis, a professional and senior diplomat as well as an accomplished poet, developed an international following thanks to skillful translations of his work that retained his poetry's brilliant lyrical quality. Elytis became world celebrated for his poetry's vigorous commitment to the struggle for freedom and creativeness. Closely associated with this group of poets, who all began their long careers during the interwar period, was an important cadre of intellectuals who became known as "the generation of the 1930s." Prolific and thoughtful advocates of liberal democracy and political moderation, the most prominent members of this group were Constantine Dimaras, Kosmas Politis, and George Theotocas.



Adam, Church of the Holy Apostles, Thessaloniki, Greece. (Corel Corporation)

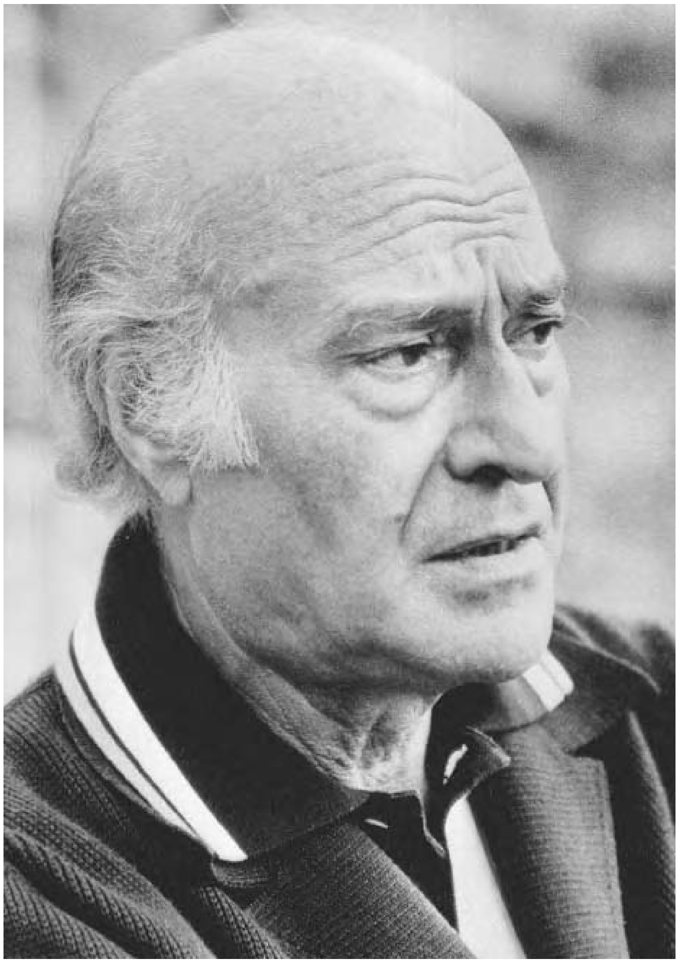
Kostas Karyotakis, born in Tripoli in the Peloponnesus, was the son of a rural engineer, whose family moved continually from one provincial town to another in pursuit of work. Karyotakis spent most of his lonely childhood in Crete, where he began to publish his writing, his first poems appearing in children's magazines when he was only sixteen years old. After completing his law degree in Athens, he was posted as clerk to the prefecture of Thessaloniki. Openly contemptuous of his superiors and unwilling to accept the conventions of bureaucratic life, Karyotakis was dismissed from his position and assigned to a series of demeaning positions, many in the countryside. These experiences added to his existing sense of misery and alienation, themes that dominated his poetry. In 1919 Karyotakis published his first book-length collection, *The Pain of Man and Things,* which was dismissed by literary critics. Two years later he published his second book of poetry, *Nepenthe,* a term denoting freedom from sorrow and grief. His last book was published in 1927; a year later, consumed by depression, he killed himself. Marking the influence of the nineteenth-century French symbolist poets on Greek writing, Karyotakis's haunting, complex verse was appreciated as a reaction against the emotionalism of romanticism only after his death.

George Seferis, the son of an accomplished university literature professor, was born in Smyrna and educated in law in Athens and Paris before studying English in London. Although his real interest was in philology, Seferis pursued a diplomatic career while writing and publishing poetry. In 1931 he published a small collection of thirteen poems. Despite the booklet's brevity, it was important in marking Seferis's desire to shed new light on the existing Greek poetic landscape and overcome the shadows of Palamas and Karyotakis. Other poems soon followed this first publication, many of them built on the intermingling of Greek history and mythology, a theme that would inspire much of Seferis's writing for decades. During World War II, when Seferis served with the Greek government in exile in Egypt, his poetry was deeply influenced, as Cavafy's was earlier, by Alexandria's climate of cosmopolitanism and diaspora Hellenism. The decade after the war was a particularly successful one for Seferis as both a poet and diplomat. In 1947 he published his most mature work, *The Thrush.* Meanwhile, Seferis's diplomatic career skyrocketed with a series of prestigious assignments, culminating in 1957 with his appointment as ambassador to London, where he would finish his career in the Greek foreign service corps. In 1963 Seferis became the first Greek author to be awarded the Nobel Prize for Literature. Seferis achieved international recognition not only because of the extraordinary quality of his poetry but also because of the creative ways that his work explored intellectual concerns. In the final analysis, Seferis was concerned with the dynamic interrelationship between the ancient and Modern Greek language, between the power of Greek civilization and its modern expression, and finally between tradition and innovation.

Greece's second Nobel laureate, Odysseus Elytis, was born in Heraklion, Crete, to a family from the island of Lesbos. During the 1930s, Elytis was influenced by French surrealist poetry and adopted surrealism's rejection of traditional modes of poetic expression. These qualities were manifest in the publication of Elytis's first collections of poetry, *Orientations* (1939) and *Sun the First* (1943), joyous celebrations of the Greek landscape as an ideal world of sensual enjoyment and moral purity. Elytis's experience of war, when he served as a junior officer on the Albanian front, where the Greek army thwarted the fascist Italian invasion in 1940, marked a departure from the sunny atmosphere of his early poetry. From this point, Elytis began to identify himself, through more sorrowful writing, with the loss and suffering of the Greek nation. This direction in his writing reached its zenith with the publication in 1957 of his most ambitious and important work, *Axion Esti*. This monumental work is a three-part composition of intricate structure, aiming to present Modern Greek consciousness through the development of a first-person narrator who is simultaneously the poet himself and the voice of his country. In this poem Elytis attempts to identify the vital elements of Greece's long history and complex tradition. In all of his poetry Elytis consistently emphasized humanity's innocence, dismissed guilt and fate, and professed the redeeming quality of light. He criticized the vulgarity and materialism of contemporary society and culture, showed the possibility of a different relation with the things of the world, and reformulated the fundamental and minimal essentials of life.

GREECE'S CHIEF CULTURAL EXPORT: NIKOS KAZANTZAKIS

Any review of modern Greek culture must include Nikos Kazantzakis, a prolific novelist, poet, essayist, and author of plays, who was arguably the most important Greek writer and philosopher of the twentieth century. Kazantzakis, the Greek author with the most translations in several languages, is more known to people outside Greece than any other writer from the world of Greek letters. Thanks to highly successful film adaptations of some of his most popular novels—including *Christ Recrucified* by French director Jules Dassin, *Zorba the Greek* by Greek director Michalis Cacoyannis, and *The Last Temptation of Christ* by American filmmaker Martin Scorsese—Kazantzakis achieved world recognition.



Odysseus Elytis. (Bettmann/Corbis)

Born in Heraklion, Crete, to an entrepreneurial couple, Kazantzakis was raised in a provincial town under Ottoman rule and teeming with revolutionary fervor. On completing his secondary education at the Gymnasium of Heraklion in 1902, Kazantzakis studied law for four years, receiving his law degree from the University of Athens in 1906, the year of his first publication, a narrative entitled *Snake and Lily,* and his first stage play. The following year he went to Paris and studied philosophy until 1909 under Henri Bergson. After his studies in France, Kazantzakis authored in 1910 a tragedy, *The Master Builder,* based on a popular Greek folktale. Returning to Greece, he began translating works of philosophy and in 1914 met and formed an influential friendship with the lyric poet and prominent playwright Angelos Sikelianos. Together with Sikelianos, whose enthusiastic nationalism served as a wanderer's guidepost among Greek communities in Europe and the Middle East, Kazantzakis traveled for two years in places where Greek culture, outside Greece, flourished. His personal knowledge of the Greek diaspora was put to practical use in 1919 when, as recently appointed director general of the Ministry of Public Welfare, Kazantzakis undertook the humanitarian relief and relocation of Greek populations from the Caucasus to Greece. By 1927, when Kazantzakis resigned from his post, he had been responsible for rescuing 150,000 ethnic Greeks from famine, revolution, and civil war in the southernmost region of the Soviet Union.

Kazantzakis's experience in the Caucasus became the beginning of a continuous global wandering. Like his hero, Odysseus, Kazantzakis lived most of his artistic life, excluding the years of World War II, outside Greece. Driven by an intense internal urge, Kazantzakis spent short periods of time in Europe, the Middle East, and East Asia until his death from leukemia in 1957 in Freiburg, Germany. His numerous journeys inspired Kazantzakis to publish the series *Travelling,* which included books on China, Egypt, England, Italy, and Japan and became known as masterpieces of Greek travel literature. Kazantzakis himself considered *The Odyssey: A Modern Sequel,* a massive book informed by his humanitarian involvement in the Caucasus, to be his most important work. Written seven times before being finally published in 1938, this immense spiritual exercise followed the structure of Homer's *Odyssey,* divided into twenty-four rhapsodies and comprising 33,333 verses. During the interwar period and through his travels, especially to Germany and later the Soviet Union, Kazantzakis was attracted to communism but never became a communist. Kazantzakis became increasingly disillusioned with revolutionary materialism and rationalism. Yet his exposure to communism tempered his earlier nationalism and replaced it with a more universal ideology. Bringing his views back to public service, as minister of state in the Greek government from 1945 to 1946, he tried in vain to reconcile the factions of left and right in Greece between the end of the Axis occupation and the outbreak of the civil war. During the 1950s, his career, especially as a novelist, reached its most creative and prolific peak, and in 1957, the year of his death, Kazantzakis came close to winning the Nobel Prize, ultimately losing by a single vote to the French writer Albert Camus.

ECONOMIC DEVELOPMENT

Like most of the countries of Eastern Europe, Greece had an economy that was dominated by agriculture until the postwar period. Throughout the first half of the twentieth century, Greece drew most of its income from the export of a few highly profitable agricultural products, such as tobacco and dried fruits, and from its expansive shipping industry. After the 1940s, the Greek economy underwent significant transformation. Driven largely by government policies, and the results of membership in the European Community (EC), later the European Union (EU), manufacturing and services emerged as the chief areas of economic activity, accounting, by the 1990s, for roughly 85 percent of the gross national product (GDP). By 2001, it was estimated that Greece's labor force of approximately 4,590,000 people was divided into a primary, or agricultural, sector employing 18 percent of workers, a secondary, or industrial and manufacturing, sector engaging 23 percent of labor, and a tertiary, or service, sector utilizing 59 percent of the country's workforce. Greece enjoys the highest proportional level of entrepreneurial self-employment and family-based small business ownership in the EU. This employment characteristic has limited, compared to most of the EU, the growth of labor unions outside the public sector. Nonetheless, approximately 600,000 members of the Greek workforce are members of private or public sector labor unions.

Reflecting the modernization and progress of the economy, per capita income in Greece has increased from $500 in 1960 to $19,100 in 2002, the highest in all of Eastern Europe. Despite the fact that the Greek economy is ranked as one of the lowest performers in the highly developed and industrialized EU, in the world it is ranked twenty-third in per capita income and is placed in the top 10 percent of the world's national economies. Furthermore, despite slowing, or, according to some analysts, stagnant trends in the early 1990s, since 1995 the overall economy produced an annual average growth rate of 3.6 percent, exceeding the average rate achieved by the EU. According to 2002 statistics, Greece's GDP had reached $203 billion, an increase of 33 percent in only four years. These comparatively impressive figures do not, however, tell the full story of recent economic development and national wealth creation. Such official statistics understate Greece's actual prosperity because an estimated 40 percent of all economic activity in the country takes place in an unofficial, unrecorded, market outside the tax and social security systems.

Despite its remarkable postwar accomplishments, the Greek economy continues to grapple with serious problems and potential threats to its long-term growth. The significant size of the unofficial, or underground, economy is an obstacle to complete economic modernization, as black market merchants rarely make improvements to their businesses or comply with commercial regulations. Another problem confronting the economy is the large size of the public sector, which, in expenditures, constitutes one-third of Greece's GDP. Although attempts were made in the 1990s to reduce the size of the public sector through privatization, these efforts were only partially successful when confronted by severe opposition from powerful public sector unions opposed to reform.

The Greek government in the late 1990s sought to tackle many of the Greek economy's impediments to long-term growth by prioritizing monetary integration, seen as a necessary building block for attacking structural problems. Consequently in 1996 the government undertook efforts to qualify Greece to share a proposed single European currency, the euro, with other EU member states. These initiatives involved the implementation of austere and unpopular measures aimed at reducing Greece's chronically high rate of inflation, at 18 percent throughout the 1980s and early 1990s, and increasing its tax revenues. By the close of 1999, Greece had effectively reduced its deficit to an acceptable EU standard and had reduced its rate of inflation to 2.6 percent, thus meeting the qualifying criteria to join the EU single currency system. In January 2001, Greece, marking an economic and political threshold in its development and

Olive grove on Euboea. (Yann Arthus-Bertrand/Corbis)

modernization, adopted the new euro currency, thereby fully integrating its economy with the EU.

During the nineteenth century, the most important developments in the Greek economy were in the agricultural sector, which employed more than three-quarters of the labor force. Prior to liberation from Ottoman rule, of the 120,000 peasant families residing in the lands that would compose independent Greece by 1832, approximately 85 percent were landless and worked as sharecroppers for Turkish large landowners. Independence, however, changed the structure of land ownership and therefore the nature of agricultural production in the newly liberated regions of Central Greece, the Peloponnesus, and the Cyclades Islands. Although it was not completed until 1871, the Greek state's distribution of the former Ottoman estates to the peasantry led to the replacement of formerly large estates by relatively small family plots. Furthermore, before the Greek Revolution the large Ottoman estates had produced wheat for export, while after independence the proliferation of small family plots, not conducive to profitable wheat farming, caused the currant (the "raisin of Corinth"), a comparatively viable commodity for small landholders, to become Greece's major export item. Thus the production of currants dominated Greece, especially in the Peloponnesus, at the expense of wheat and other grains. During the 1870s, in fact, currant exports constituted more than half of the value of all exports. Wheat, the chief export before the 1830s, had declined to 41 percent in the 1840s, to 38 percent in 1860, and plummeted, following the completion of the land distribution process, to 23 percent by 1880. The lands of independent Greece, which had been exporters of wheat at the beginning of the nineteenth century, had become dependent on the importation of wheat before the close of the same century.

Demand and price fluctuations of the currant, nineteenth-century Greece's major export item, had a significant effect on the condition of individual peasant cultivators, as well as the national economy. Single-crop cultivation in southern Greece was especially encouraged by the blight that devastated French vineyards in the 1870s and spurred Greek farmers to fill the vacuum in the international market for currants. As a result, currant production increased from 43,000 tons in 1861 to over 100,000 tons in 1878. Once the French vineyards recovered and production returned to normal, surpluses emerged that, combined in 1892 with the French imposition of high tariffs on imports from Greece, triggered a plunge of 70 percent in the price of Greek currants. Despite the efforts of the Greek state to relieve the plight of financially devastated peasants, thousands of villagers were forced to migrate, thus setting into motion the largely economically driven exodus of over 500,000 Greeks to the United States between 1891 and 1922.

Despite the disaster that befell Greece's economic sector at the end of the nineteenth century, the decades that followed independence saw significant progress in the development of other areas of the national economy, especially in a crucial sphere long ignored by the former Ottoman rulers—the country's infrastructure. The profitability of export crops such as currants depended largely on the Greek merchant marine fleet, which had expanded, thanks in large part to favorable international treaties, to dominate much of the carrying trade in the eastern Mediterranean during the last several decades before the Greek Revolution. After independence was achieved in 1832, domestic growth of Greek commerce was a further stimulus to expansion of the merchant fleet.

Expanding trade in agricultural products, chiefly currants, provided the impetus for the development of the first post-Ottoman Greek financial networks, as well as the creation of a variety of domestic economic infrastructures. The establishment of the National Bank of Greece in 1841 marked a significant development in building the country's financial system. Authorized to issue banknotes and able to deal in both domestic and foreign currency, the National Bank of Greece fostered the gradual unification of a national market by making a uniform national currency available throughout the country. This critical development greatly facilitated domestic and foreign trade, saving and investment, availability of credit, and access to capital from abroad. By the 1870s, the National Bank of Greece had emerged as the country's leading economic institutional force, and a major international financial actor.

Thanks in large part to the success of the financial and capital systems, other parts of Greece's economic infrastructure could be improved or, where they did not exist, created. In the 1880s and 1890s paved roads and modern bridges, the first network of railroads, the opening of the Corinth Canal, and the construction and rehabilitation of several port sites all contributed to Greece's growing infrastructure, as well as to the movement of Greek goods in domestic and foreign markets. The country's first manufacturing facilities also appeared during this time, in conjunction with Greece's large infrastructure projects. Nonetheless, major industrial growth was hindered by the instability of the agricultural export sector, government debt, and resulting economic crises.

Greek industry, plagued by sluggish growth in the nineteenth century, was not successful at attracting either domestic investors or foreign capital at the beginning of the twentieth century. World War I brought commerce to a halt and produced the adoption of trade barriers to protect Greek industry from foreign competition, but the end of the war revived the adverse factors that had originally impeded industrial growth. The majority of early twentieth-century industries were involved in food processing or the production of consumer goods that required neither technological nor organizational modernization. Furthermore, manufacturing enterprises typically were small-scale operations, as evidenced by 1920 statistics indicating that workshops with fewer than six workers made up 92 percent of the industrial sector, while those with more than twenty-five workers represented less than 2 percent. Although the Greek state was committed to a policy of economic modernization, its programs were interrupted by a decade-long series of wars beginning in 1912.

As a result of these conflicts, Greece experienced a rapid and dramatic transformation of its economic and social structures. Beginning in 1915 and culminating in 1923, Greece, with a population of around 5 million, was forced to absorb almost 1.5 million refugees, mainly from Asia Minor, whose displacement and resettlement acted as a catalyst for profound change. The financing of the resettling of the refugees expanded the involvement and power of the state in the country's economy, as well as increasing the importance of such institutions as the National Bank of Greece. Wartime activities and public projects generated an enormous increase in government expenditure and a corresponding rise in taxes and state borrowing. Between 1914 and 1926, the external national debt tripled and outstanding debts to foreign creditors became an obstacle to contracting new public and commercial loans. Nonetheless, and after faltering under multiple domestic and foreign pressures, the economy experienced a revival beginning in 1927. The sophisticated entrepreneurial and modern farming skills introduced to Greece by the refugees, as well as increased domestic demand for goods, combined to stimulate a period of growth and industrialization. This growth was reinforced by financial reforms that included the stabilization of Greece's currency, the drachma, and the establishment of the Agricultural Bank of Greece. All the same, these institutional changes aimed primarily at improving the allocation of resources, not the extension of the benefits of economic growth to broader segments of the population. Consequently, despite growth, widespread economic hardship persisted in interwar Greece.

In 1931 the onset of the Great Depression ended Greece's interwar growth cycle. A year later, under the weight of the international market collapse, Greece was obliged to suspend interest payments on its foreign debt. This development consequently forced the country to dedicate the remainder of the decade of the 1930s to the management of the financial crisis caused by the default. A new period of economic stagnation, together with urban poverty, stimulated social tensions, the growth of political militancy, widespread labor unrest, and finally the imposition of an authoritarian dictatorship in 1936. Responding to the international economic depression and anticipating war in Europe, the Greek dictatorship of the late 1930s was committed to the goal of national self-sufficiency. Through price-support measures and various debt moratorium policies, the state restored considerable stability to the economy, especially its agricultural sector. Furthermore, the state succeeded in promoting significant increases in the production of vital, strategic crops. The output of wheat, for example, rose from 30 percent of domestic consumption before the dictatorship to 60 percent by 1939.

Fascist Italy's attack on Greece in 1940 upset the balance of the economy, but the Nazi invasion of the country in 1941 and subsequent Axis occupation destroyed the basis of Greece's productive capacity. Given Greece's low level of industrialization and the prevalence of small-scale manufacturing, the Axis occupation authorities saw no incentive to maintain the country's production plants and enforced an extractive policy in Greece. In short, Greece's economic resources were systematically plundered between 1941 and 1944. In addition to pillaging the Greek economy, the Axis authorities exacted payment from Greece for the enormous cost of the Bulgarian, German, and Italian occupation of the country. This deliberately cruel policy had the effect of unleashing a wave of hyperinflation that destroyed the value of Greece's currency, created a destructive web of black markets, and pushed the economy down to a barter level system for goods and services.

Unlike the rest of Europe, Greece's economic recovery did not begin with the end of World War II. The postwar reconstruction efforts of the Marshall Plan in Western Europe provided no immediate benefit to Greece, which underwent a bitter civil war from 1946 to 1949. A new round of violent conflict produced yet another period of physical destruction, inflation, and economic instability. Although Greece was a major recipient of American aid under the Marshall Plan, beginning in 1947, the overwhelming majority of this support was dedicated to either military assistance or war-related economic needs. At the close of the decade of the 1940s, the country's shattered economy had not yet had a chance to recover from the combined destructive impact of world war and civil war.

Although the Greek Civil War ended in 1949, economic stabilization was not achieved until 1953. A critical threshold in the country's postwar recovery, restoration of public confidence, and economic development was a package of economic measures implemented by the Greek government in 1953, which included the devaluation of the drachma and the lifting of most controls that impeded exports. The package also included new banking regulations to counter inflation and speculation, as well as new laws for the protection of foreign investment. These monetary and trade reforms were followed by an ultimately successful policy to attract foreign investment, and by an equally ambitious program that produced significant achievements in rebuilding, modernizing, and expanding the country's infrastructure, including not only Greece's roads and seaports but its airports and electric power and telecommunications networks. The initiatives launched in 1953 began a twenty-year-long period of sustained and high growth rates, low inflation, effective industrialization, export expansion, urban growth, and significant, albeit uneven, prosperity.

The period from the late 1950s to the late 1960s is often characterized as an era of unprecedented growth, the so-called Greek economic miracle. During these years, Greece's GDP grew at the fastest rate in Western Europe, averaging almost 8 percent annually. Meanwhile, industrial production grew at an average annual rate of 10 percent, exceeded in Western Europe only by Spain. Marking a major turning point, in the 1960s manufacturing exports surpassed agricultural exports for the first time in Greece's history. Yet the dramatic changes produced by economic growth, especially those associated with rapid urbanization and inequities in the distribution of Greece's growing wealth, also caused social tensions in the 1960s. The basic weaknesses of the Greek economy, including the lack of competitiveness in the country's manufacturing sector, remained untreated. Neither the conservative government of the 1950s and early 1960s that was the architect of the economic recovery, nor the centrist government that led the country in the mid-1960s, nor the military junta that seized power in 1967 resolved these problems.

After two decades of growth, the global energy crisis of 1973 and the ensuing international monetary turmoil had a profoundly adverse effect on the Greek economy. One of the most pernicious and lasting results of the economic disruption was the unleashing of high rates of inflation. Running for more than a decade at only 3 percent, the annual rate of inflation jumped to 16 percent in 1973 and 27 percent in 1974. The negative effects of the economic recession brought on by the crisis of 1973 were magnified by the ineptitude of the military junta in managing Greece's problems. The collapse of the junta in 1974 and the restoration of democracy marked another major turn in Greece's economic development. With a civilian government returned to office, in 1981 Greece became a full member of the European Community, the tenth member in the economic alliance of European states to join the community. As a community member, Greece began to eliminate its protectionist policies, leading eventually to full liberalization of trade and the movement of capital and labor within the EC.

The democratic governments of the 1970s and 1980s inherited the accumulated economic and social problems that had been either ignored or suppressed by the junta. Issues that needed to be tackled before the structural adjustments necessary for long-term economic growth and modernization could be made possible included labor legislation, social insurance, education reform, and the provision of public health care. Furthermore, the state had to address the serious problem of a rising inflation rate that damaged business competitiveness, caused increasing energy costs, and triggered escalating pressures for higher wages. Adding to the state's challenges, the policy requirements for resolving Greece's economic and social problems were often contradictory. Modernization of social protection required increased public spending while economic stabilization and adjustment, an urgent need with the internationalization of the Greek economy through the EC, required spending restraints by government.

The conservative government that restored democracy in Greece in 1974 and secured the country's membership in the EC was unable to hold on to power in the 1980s. Reflecting the frustrations of those in the middle and lower classes who felt that they had missed out on the boom of the late 1960s and 1970s, when the annual growth rate averaged around 7 percent, the socialists were handed a major electoral victory over the conservatives in the national elections of 1981. After decades of sustained growth, it fell to the socialists to preside over the beginning of a decline in the Greek economy. The rate of growth in the 1980s fell to approximately 1.5 percent. The government under the socialists failed to restructure the economy at a time when most developed countries were moving away from labor-intensive industries toward those based on higher technology. Such readjustments caused significant increases in unemployment, which the new government was unwilling to face. Consequently, instead of taking measures to continue the modernization of the economy and make the Greek marketplace more competitive, the state sought to cushion the impact of the decline on the electorate by expanding welfare programs. The entire economic policy orientation of the socialist government in the early and mid-1980s prioritized political expediency and day-to-day survival over the interests and needs of long-term development and growth.

The mounting economic crisis, characterized in the public sector by high budget deficits, public borrowing, and an erosion of tax compliance in combination with economic stagnation, created serious problems that persisted into the early 1990s. Long overdue stabilization policies finally implemented in 1986 and 1987 began the arduous and difficult process of rebuilding the economy. From 1990 to 1993, a conservative government undertook more systematic efforts at stabilization accompanied by a government austerity agenda and a privatization program for state-owned firms, all measures aimed at increasing marketplace efficiency and competitiveness.

The socialists, back in power in late 1993, did not reverse the economic policies set into motion by the preceding conservative government. In reality, the socialist governments of the 1990s had considerably less economic policy latitude than in the 1980s. Greece, as a signatory of the Treaty on European Union, known as the Maastricht Treaty of February 1992, was now bound to a set of standards of state policy and economic performance. Indeed, EU membership imposed strict rules and disciplines on the economic behavior of the Greek state, and introduced long-term structural changes that no government could have achieved outside the larger European framework. Motivated by the new EU architecture, which promised greater integration of member states, a goal that Greece supported, both the conservative and socialist parties began to move to a common economic policy outlook.

The Maastricht Treaty had a profound effect on Greek policies and the Greek economy. In pursuit of the goal established by Maastricht for the increased integration of EU states through a monetary union, a common euro currency, the Greek government successfully implemented policies aimed at producing positive structural changes in the Greek economy. Chief among these policies were a reformed, more efficient tax structure and a pragmatic course of privatization of major segments of the public sector. The impact of this approach was positive, finally breaking Greece's perennial inflation problem and stimulating a vigorous revival of economic growth that has outpaced EU averages since the mid-1990s. Problems such as unemployment and a troubled, albeit reduced, public sector persisted, but the recent dynamism of the Greek economy reflected favorable domestic structural changes that also underscore the importance of, and are to a large extent the product of, EU membership. The changes undertaken to achieve successful integration into the supranational EU, magnified by entry into the Euro single currency system in January 2001, reflected a new and remarkable level of responsible and disciplined state-economy relations and leadership in Greece. By the late 1990s, after almost two decades of decline or stagnation and vacillating, indecisive policy directions, Greece had rebuilt the foundations for sustainable growth and, for the first time in its modern history, enjoyed a political consensus and common vision for the county's economic future.

CONTEMPORARY CHALLENGES

DOMESTIC CHALLENGES: IMMIGRATION AND ITS CONSEQUENCES

Since the 1990s, Greece has undergone a significant transformation from a land that was for centuries associated with the emigration of its own population to a country that is now a major European recipient of foreign immigrant populations. The late-twentieth-century influx into Greece of economic and political refugees from foreign countries marks a striking reversal of the historic pattern of population movement in Greece. For the first time, in at least its modern past, Greece has attracted the immigration of not only uprooted ethnic Greeks from abroad but people from Eastern Europe, Asia, and Africa.

Greece has drawn significant numbers of immigrants because of the opportunities that the country's growing economy and its free and open society offer to the destitute and oppressed. Yet the new immigration is also characterized by several problems and challenges: immigrants are mostly employed in the informal or tertiary economy, their social position is at the end of the social scale with little opportunity for advancement, they are not organized in trade unions or other collective structures, and most of them are illegal, clandestine immigrants with no documentary record. The immigrants' status depends on several factors, including whether they are in Greece as political refugees, in which case they are granted temporary residence in the country. In addition, there are many nonpolitical immigrants that come to Greece with temporary work or tourist visas. Nevertheless, the overwhelming majority of immigrants who reside in Greece are there illegally and remain undocumented.

The number of overall immigrants, legal and illegal combined, has never been determined with any accuracy. Nonetheless, Greek government estimates in 1999 indicated that there were between 500,000 and 600,000 immigrants in Greece, while some unofficial estimates suggested that the number was actually closer to 800,000 persons. In the beginning of the 1980s Greece accepted the settlement of some 200,000 ethnic Greeks who were displaced by turmoil in a host of African and Middle Eastern countries and were thus considered political refugees. During the same period, approximately 50,000 ethnic Greeks from the Soviet Union were permitted to immigrate to Greece, beginning a pattern of migration that continues to the present at an annual rate of around 10,000 ethnic Greek immigrants largely from Georgia, Russia, and Ukraine. Ethnic Greeks from Albania, especially from the country's southern region where a sizable Greek minority is concentrated, represent another large body of political immigrants who settled in Greece in the beginning of the 1990s.

Because of their status as ethnic Greeks, and often as political refugees, most of these immigrants obtained Greek citizenship. Nonetheless, the adjustment to life in Greece has not been without its difficulties for many of these immigrants. Approximately half of the ethnic Greek refugees from the former Soviet Union spoke little or no Greek, making their assimilation into a familiar culture but a forgotten language particularly challenging. Although most ethnic Greek immigrants from Albania were Greek speaking, they had fled from one of the world's most closed societies and one of its most oppressive, isolated regimes. As a result, not all Greek immigrants from Albania were equipped to cope with a modern, open society and marketplace that required initiative and creativity for success. The displaced Greeks from the former Soviet Union have been received in Greece better than the Greek immigrants from Albania. The Greek authorities, concerned by declining domestic birthrates, have generally welcomed this injection of Greeks from the former Soviet Union but have not provided adequately for their settlement. With the exception of modest language instruction programs to promote their facility in Greek, and some assistance to meet initial expenses, most of these immigrants have been left to their own devices. Working chiefly in low-wage manual labor or service positions, and settled largely in Athens and Thessaloniki, these "Russian Greeks" remain socially marginalized and are often economically exploited by unscrupulous employers. Despite these significant hardships, the problems stemming from the integration of ethnic Greeks into Greek society have been considerably less complicated than the problems confronting other immigrant groups.

Ethnic Greeks may constitute the largest group of legal immigrants in the country, but Albanians are the most prominent group of illegal migrants in Greece, probably forming a plurality of the overall immigrant (legal and illegal) population. Reliable estimates indicate that there are between 250,000 and 350,000 ethnic Albanians in Greece, most of them illegal economic immigrants and migrants. The collapse of the communist regime in Albania in the early 1990s triggered a flood of Albanian migrants who crossed the border into Greece in pursuit of economic opportunities. Most of this initial stream of destitute, desperate people found low-skilled service employment in Greece's urban areas, while much of the subsequent wave of Albanian movement into Greece has been characterized by migratory and seasonal patterns of employment related to the labor needs of Greece's agricultural and construction sectors. As a result, Albanians constantly cross the border into Greece illegally and are immediately deported by the Greek authorities, only to return to Greece as soon as they can again reach the border. This problem, although it continues into the present, reached its peak in 1993, when the Greek government reported that over 220,000 Albanian citizens were apprehended entering Greece illegally.

Never having experienced such an influx of foreign migrants, the Greek state was not prepared to cope with this unprecedented phenomenon. During most of the 1990s there was no coherent migration policy, as Greece was still considered to be a net exporter of population. Institutions such as support centers for the legal, social, and economic orientation of immigrants barely existed. Furthermore, illegal Albanian (and other) immigrants were excluded from aid by the public social service system, especially regarding the provision of housing, health care, and personal safety, which historically were provided by the Greek state only to Greek citizens and documented foreigners.

Albanians were prepared to assume the risks associated with illegal migration because of their dire economic plight. The legacy of the inefficient communist economic model, the breakdown of economic structures, the closure of 90 percent of Albania's factories during the early 1990s, and the chaotic revolts of 1990–1991 and 1997 were just a few of the many factors responsible for the exodus of hundreds of thousands of unemployed workers to Greece. The importance of economic migration for Albania is paramount because it functions as a kind of development aid through the export of labor and the import of capital. Remittances from Albanians abroad are an indispensable financial source for the development of Albania's domestic economy, especially as other sources such as export revenues and foreign investment have remained insignificant. Moreover, since 1991, the majority of Albanian families have depended on remittances for their survival. Since 1991, most of these payments have come from Greece, averaging annually 80–85 percent of the Albanian national total. In addition, technical knowledge and work experience obtained by Albanian migrants in Greece has been used to modernize the private sector as many of these workers have returned to Albania.

The employment of foreign workers in general, and Albanian workers in particular, has also had a significant impact on the Greek economy. One of the positive consequences, for the economy but not necessarily for workers, is that Albanians are employed with lower wages and without social security, thus reducing production costs and increasing the competitiveness of Greek exports. In addition, Albanian workers and their families help increase the private consumption of goods and services, thereby stimulating growth of domestic markets. Furthermore, undocumented workers form a readily available, flexible, and unorganized labor force that benefits countless small Greek enterprises, whose survival could be threatened without occasional, seasonal, and above all inexpensive employees. The majority of Albanians are employed as unskilled workers at building sites, as transient agricultural workers, and, in the case of most women, as household domestics.

Although Albanians, like most immigrants in Greece, exert a positive influence on the Greek GNP, some negative consequences have also been produced by the large and rapid influx of migrant labor. The skilled labor sector has been largely unaffected by these new conditions, but increases in unemployment among manual and unskilled Greek workers is directly linked to the growth of immigrant labor. In many cases, the low salaries paid to Albanian immigrants have pushed away Greek workers, especially those in the industrial and construction sectors. As a result, there has been a general decline in wages in these sectors, and the position of the working class has become weaker, as a consequence of the abundance of alternative and cheaper employees. In order to meet the costs associated with massive repatriations of illegal migrants and the editing of visas, Greek public spending is increasing while tax revenues are lost to Albanian workers, whose incomes are usually unreported. Finally, it is impossible to estimate the moral costs to Greek society associated with the exploitation of foreign workers, especially women and children.

Since 1991, both of Greece's conservative and socialist governments have focused on security as their primary concern in relation to the immigration question, especially regarding the country's Albanian migrants. Apart from the obvious security concerns that the routine violation of the Greek border with Albania poses, illegal Albanian immigration is linked, although much exaggerated in its scope by the Greek media, to Albanian crime cells that prey on undocumented immigrants and utilize the illegal flow of migrants to traffic in narcotics and exploited human beings. The failure of Greek authorities to deal effectively with Albanian organized crime networks, a problem confronting much of the western and southern Balkans, has contributed to the common public perception that criminality is rife within the Albanian immigrant community, thus promoting considerable mistrust and misunderstanding of Albanians in Greece. Greek feelings toward the Albanian immigrants are overwhelmingly negative. Although the 200,000 to 250,000 Arabs, Bulgarians, Filipinos, Kurds, Pakistanis, Poles, and Romanians making up the remainder of the immigrant population have not been integrated into the mainstream of Greek society, unlike the Albanians, these groups are not perceived as a threat to public security and hence have not encountered the kind of prejudice and negative stereotyping that characterizes popular views of Albanian migrants.

Greek public opinion is beginning to adjust to the growing realization that Greece has become a more heterogeneous society than it was before the 1990s. Xenophobic and even racist sentiments, although real in some quarters, are tempered by countervailing attitudes, which emphasize the need to extend legal status to immigrants, as well as the historic dynamism and resilience of Greek culture and identity often expressed through the historic assimilation of non-Greeks. Increasing economic interaction between Greeks and immigrants has also contributed to the erosion of group barriers, the growth of mutual familiarity, and declining prejudice. The Greek state, in 1999 and again in 2001, began the complex process of establishing a coherent immigration policy through new parliamentary legislation. Finally, despite many shortcomings in dealing with its immigrant question, Greek society has demonstrated a considerable capacity for tolerance and flexibility in accommodating itself to a new cultural landscape. There have been no efforts to endanger the security of immigrants, there is no anti-immigrant political movement in Greece, and there are no parties in the parliament that hold an anti-immigrant or anti-immigration stance, all phenomena that have been observed in Austria, France, Germany, and Italy, as well as in most of Greece's other EU partner states.

FOREIGN CHALLENGES: GREEK-TURKISH RELATIONS, THE EU, AND NATIONAL SECURITY

It is commonplace to argue that Greece and Turkey have been constant rivals. After Greece achieved independence from the Ottoman Empire in the 1830s, its diplomatic history in the nineteenth and early twentieth century was dominated by irredentist wars and rebellions against the declining empire. These conflicts led to the formation of Greece's borders and embedded the view that Greek and Turkish interests could only be antithetical. Nevertheless, the establishment of the nationalist Turkish republic in the early 1920s led to an interwar reconciliation and period of détente between the two countries.

Cordial relations, however, were disrupted by a massive pogrom against the Greek minority in Istanbul and the emergence of the Cyprus issue in the 1950s. The frustration of self-determination on Cyprus by the British colonial authorities, the establishment in 1960 of a nonviable state system for an independent Republic of Cyprus, and the consequent deterioration of relations among the Greek majority and Turkish minority communities on the island directly affected Greek-Turkish state relations. The process reached a critical threshold in 1974 when a botched nationalist coup instigated by the Greek junta against the Cypriot government was used as a pretext by Turkey to invade and occupy the northern part of the island.

Greece and Turkey came to the brink of war during the Cyprus crisis, and this tension had a spillover effect fueling disputes in the Aegean and beyond. The invasion of Cyprus, a fait accompli achieved with little international protest, was a watershed in Turkish foreign policy. For Ankara's military and diplomatic elites, the invasion, occupation, and partition of Cyprus established the lesson that war can accomplish foreign policy objectives and that the principles of international law should not act as a restraint on Turkish interests and actions. Thus encouraged by its experience in Cyprus, Turkey confronted Greece with a new set of contested issues, or revisionist demands, beginning in the 1970s. Ankara insisted that the international status quo regarding three issues in particular was unacceptable—control of air traffic over the Aegean, the allocation of operational responsibility for the Aegean and its airspace within the NATO framework, and, most important, the delimitation of the Aegean continental shelf, an issue that brought Greece and Turkey close to war in 1976 and 1987. Athens has viewed these demands as incremental steps aimed at the gradual dismantling of Greek sovereignty in the eastern Aegean, and has thus responded with proposals to have the growing disputes between Greece and Turkey resolved by the International Court of Justice. Turkey has consistently refused to accept the jurisprudence of any international mediation and, instead, has increased coercive pressure on Greece by inaugurating an armaments buildup and simultaneous concentration of armed forces along the border with Greece. Greece's response to the increasing military threat from Turkey has been to develop a deterrent through its own military buildup. At the same time, Greece has used diplomacy to safeguard its security.

Problems in Higher Education

Greek culture historically placed a high value on formal education. In the postwar period the public demand for education grew with the increasing modernization of Greek society, which since at least the nineteenth century has viewed education as the key to upward social mobility and status. The national educational system established shortly after Greece gained independence in the 1830s was the result of a combination of the contemporary French elementary school model, the Bavarian system of education, and the late-nineteenth-century German university system. Many elements of that original system have survived with very little change, especially in the sphere of higher education.

Greece's first modern university, known eventually as the National and Capodistrian University of Athens, was established in 1837. The University of Athens opened a new era in Greek education, producing the first modern indigenous Greek intelligentsia and professional class, as well as serving as a model for the development of other educational institutions in the other Balkan countries. At present there are nineteen Greek state universities, the largest being the University of Athens, with over 70,000 undergraduate and graduate students, followed by the Aristotle University of Thessaloniki, the University of Crete, the University of Thrace, the University of Patras, the National Polytechnic University of Athens, the University of the Aegean, and the University of Macedonia.

Several private universities and colleges, all of foreign origin, also operate in Greece but are not recognized by the state, leaving their graduates with no official credentials in the public arena. The rationale for this constitutionally mandated policy is that education should not be commercialized, not even at the level of higher education, nor should the marketplace determine access to education. Nonetheless, the state system has not provided a sufficient supply of higher education in response to increased demand. The high social status and competitive advantage associated with a university education have produced an enormous increase in the demand for the relatively small number of student positions in the university system. During the 1990s, on average, annually there were 150,000 applicants for only 40,000 state university and technical college slots.

The intense demand for higher education has had several problematic results. Secondary students with sufficient means utilize the large network of supplementary private schools throughout the country to prepare themselves for university entrance examinations. This practice undermines the official principle of equal access to higher education by producing inequities of opportunity among university applicants. Many students who are not accepted into the Greek university system go abroad to study. Underscoring the impact of this situation, in the 1980s Greece had the highest ratio of foreign to domestic university enrollment in the world. Moreover, a significant number of these students remain abroad, establishing careers outside Greece, depriving their homeland of their expertise and creating a brain drain. Furthermore, because of their very limited funding, Greek universities offer few graduate programs, and faculty have little incentive to pursue advanced research. Finally, despite efforts initiated in the 1980s to make the administration of the country's universities more professional, university and departmental administration has actually become more politicized by reforms inspired more by the governing socialists' populist agenda than the university system's practical needs.

Membership in the EU, and earlier the EC, has served as Greece's chief asset in its relations with Turkey. Turkey's persistent violation of Greek sovereign rights and disregard for international law and norms had not, until fairly recently, attracted any significant international support for Greece's positions as other states defined their policy in the region on the basis of their own interests. In that environment Greece had to rely on its own resources and options against Turkey—thus its emphasis on the EU as an instrument for the protection of its national security and sovereignty. As Turkey's main strategic objective is integration into the European political, economic, and cultural architecture, its campaign to join the EU has become critically important and this has increased Greece's leverage in using its EU membership to exert counter pressure on Turkey.

Until the late 1990s, Greece exploited Turkey's ambitions for EU membership by conditioning its consent to the improvement of EU-Turkish relations on the modification of Turkey's revisionist policies in the Aegean and a resolution of the Cyprus problem. As Turkey proved unwilling to alter its policies, EU-Turkish relations suffered a stalemate, as any decisions that could improve EU-Turkish relations were blocked by Greece's EU member veto. Nonetheless, as a gesture of goodwill, and in exchange for a commitment from the other member states to discuss Cyprus's future EU membership application, Greece lifted its objections to Turkey's entry into the EU customs union agreement in

March 1995. The Greek move, which satisfied an important demand of the Turkish government, elicited no positive response from Ankara. In fact, Greek-Turkish relations sharply deteriorated after the customs union agreement came into force at the beginning of 1996.

Having already threatened Greece with war in June 1995 if Athens were to exercise its legal right according to international law conventions to extend the country's territorial waters from 9.66 to 19.3 kilometers, Turkey renewed the threat of war by launching a provocative incident in January 1996. Executed during the first twenty-four hours of the administration of a new government in Greece, the Turkish action on the barren Greek islet of Imia ultimately led to Ankara's official claim to the islet as well as to several other islands in the Dodecanese complex and beyond, extending as far into Greece as the island of Gavdhos, south of Crete. The crisis was defused through American mediation, but a Turkish claim to actual land had now been added to the weighty list of Greek-Turkish problems. No longer able to ignore the seriousness of Greek-Turkish troubles, not only the United States but NATO too became involved in efforts to mediate between the alliance's two southeastern states, the organization proposing confidence-building measures to avoid future crises. The EU added its voice to the issue in July 1996 when its Council of Ministers issued a declaration stating that relations between Turkey and the EU should be guided by respect for international law, international agreements, and the sovereignty and territorial integrity of the EU member states.

Clearly an important factor governing Greek-Turkish relations is the perception that each side has of the other. Where the Aegean is concerned, Turkey believes that Greece is interested in transforming the area into a "Greek lake," while Greece believes that Turkey aspires to make inroads in the region at the expense of Greek sovereignty in the eastern Aegean islands. Furthermore, Turkey's political instability, its ongoing occupation of Cyprus, its poor human rights record, the systematic obliteration of its Greek minority, routine threats of war against multiple neighbor states, its blockade of Armenia, and Ankara's response to the Kurdish autonomy movement have made Greece suspicious of Turkish motives in the region. Finally, the tendency of the Western powers to view what Greece considers to be Turkish provocations as merely a dispute between two allies has been interpreted by Athens as Western tolerance of aggression. More important, given Turkey's enhanced strategic role in the region, most Greek political leaders believe that the United States has adopted a policy of appeasement vis-à-vis Ankara at the expense of the potential victim, Athens. In response, and on the whole, Greece's policy is centered on defending the territorial status quo, while Turkey appears committed to challenging certain legal aspects regulating Greek sovereignty and rights in the region.

Again, given these conditions, Greece has seen its membership in the EU as its chief asset in defending its sovereignty vis-à-vis Turkish revisionism. Adversely affecting Turkey's primary strategic goal of EU membership, in the EU Copenhagen summit of June 1993 the EU leaders agreed on a set of conditions to be met by all states aiming to accede to the European Union. These requirements, known as the Copenhagen criteria, included, among other things, the stability of institutions guaranteeing democracy, the rule of law, human rights, and respect for and protection of minorities, as well as the existence of a functioning market economy and the ability to take on the aims of political, economic, and monetary union. Despite Turkey's failure to meet any of the Copenhagen criteria, Greece had to routinely use its veto power to block Turkey's request for official EU candidacy status during most of the 1990s. Greece's EU partners, although generally unenthusiastic about the prospects of Turkish membership, were also dissatisfied by the way Greece appeared to undermine EU official policies with respect to Turkey. Although Greece was effectively depriving Turkey of any closer relations with the EU through its consistent veto policy, this objective was being achieved at increasing political cost to Greece's image within the EU.

In 1996 Greece's newly elected prime minister, Costas Simitis, began a restructuring of domestic and eventually foreign policy aimed at rebuilding Greece's position within the EU. A pivotal part of the foreign policy restructuring necessarily involved policies toward Turkey. Toward that goal, in May 1999 Athens launched a dialogue initiative with Ankara on low-profile bilateral issues, such as environmental protection, tourism, and trade. The display of mutual goodwill at both the governmental and popular levels during the earthquakes that hit Turkey and Greece in August and September 1999, respectively, contributed to a dramatic reversal of hostile attitudes in the press and public opinion of both countries.

The growing rapprochement between Greece and Turkey had a positive influence on EU-Turkish relations. Ankara had suffered a severe setback at the EU Luxemburg summit of December 1997, when Turkey was omitted from the list of states awarded candidate status. In this instance, and again as Ankara resumed its effort to achieve candidate status, Greece was decreasingly hostile toward Turkey's EU membership process, while other states such as Germany and Sweden, which could no longer conveniently take advantage of Greece's veto and simultaneously express consternation with Athens, were revealed as staunch opponents of Turkey's candidacy. Nonetheless, with active support from Greece, the EU Helsinki summit of December 1999 extended official recognition to Turkey as a candidate state for accession to the EU. The Helsinki summit also established that before the start of EU accession negotiations, Turkey should settle its disputes with Greece or, alternatively, bring the disputed issues before the International Court of Justice, while substantial progress was the least to be expected for the Cyprus problem. In short, under the Simitis government, Greece was now using the EU as a more nuanced asset, offering Turkey a set of structured incentives in exchange for corresponding changes in Ankara's behavior instead of simply imposing punishment for its unflinching policies.

Greece's position toward the prospective accession of Turkey to the EU marked a critical turn in Greek diplomacy. In 1995 Greece had abandoned its veto policy against any improvement of EU-Turkish relations and conceded to the customs union between the EU and Turkey. This did not mean, however, that Greece would support the prospect of Turkey's membership in the EU. The latter was to happen only after the December 1999 Helsinki EU summit, when active support for Turkey's efforts toward EU membership became a key component of Greek foreign policy strategy. This policy came to its culmination during the EU Copenhagen summit of December 2002, when Turkey's compliance with the 1993 Copenhagen criteria was evaluated by the EU member states. Although Turkey failed to meet the established standards, Greece, along with Italy and Spain, argued that the EU should reconsider Turkey's progress in the implementation of the Copenhagen criteria within 2003, so that Turkey's accession negotiations could start in 2004, provided that compliance with the Copenhagen criteria was achieved. In response, the European Council decided to reconsider Turkey's progress in December 2004 and to not set a date for accession discussions.

Although Greece's proposal on dealing with Turkey's candidacy was not accepted by the Council, the fact that the state that had kept EU-Turkish relations frozen for more than a decade had emerged to lead the minority of EU member states that supported acceleration of Turkey's accession process was characteristic of the change in the Greek view of EU-Turkish relations and the role of the EU in Greek-Turkish relations. By February 2004, the Simitis government could claim that its policy of support for Turkey in the EU succeeded in creating the necessary inducements for Ankara to agree to finally support a UN-sponsored plan for the reunification of Cyprus, regardless of the plan's unresolved implementation questions or actual viability. Nonetheless, although Greece under Prime Minister Simitis played a decisive role in promoting Turkey's EU vocation, a significant gesture of reciprocity regarding the basic issues of Greek sovereignty and concerns for international law in the Aegean has yet to materialize in Ankara.

CHRONOLOGY

3000 B.C.E.	Bronze Age culture replaces Neolithic culture on the Greek mainland, the Cyclades, and Crete.
2200 B.C.E.	Minoan Greek culture emerges in Crete.
1450 B.C.E.	Minoan society is destroyed by natural disaster.
1600–1150 B.C.E.	Mycenaean Greek civilization flourishes in the southern mainland. Mycenaean communities are destroyed by a wave of human and natural catastrophes (Homer's Troy destroyed in 1184).
1050 B.C.E.	An "invasion" of most of the mainland by Dorian Greek tribes begins.
	Dorian and Ionian Greek populations spread across the Aegean and Mediterranean to settle the western coast of Asia Minor and Cyprus.
1050–750 B.C.E.	A highly limited record of cultural activity characterizes this so-called Dark Age (776 traditional date for the first Olympic Games).
800–700 B.C.E.	City-states emerge throughout most of Greece.
700–500 B.C.E.	Greece's many polities are ruled by aristocratic elites during the so-called Archaic Period. In the sixth century many of these elites are overthrown and replaced by tyrannies, which in turn are overthrown and supplanted by oligarchies.
500–400 B.C.E.	The century known as the Classical Period produces Greek democracy and an unparalleled flood of intellectual and artistic creativity to form the foundation of what develops into "Western civilization," as well as a complex of foreign wars and city-state rivalries and conflicts.
490 B.C.E.	After conquering the Greeks of Asia Minor fifty years earlier, the Persians attack mainland Greece and are defeated by an Athenian force at the Battle of Marathon.
480 B.C.E.	The Persian Empire launches a massive invasion of mainland Greece, penetrating as far south as Athens. Greek forces led by Sparta slow the Persian advance, giving other Greek forces led by Athens time to consolidate and defeat the Persian navy at the Battle of Salamis and, a year later, the Persian army at Plataia.
478 B.C.E.	Athens forms the Delian League, an alliance of city-states, to pursue the war against the retreating Persians.
478–431 B.C.E.	Athens, subjugating its erstwhile allies, uses the Delian League to create an empire for itself in the Aegean. Led by Pericles, Athenian power and influence grows.
431 B.C.E.	Resentment against Athenian hegemony over other Greek states leads to the outbreak of the Peloponnesian War.
431–404 B.C.E.	The Peloponnesian War, ultimately involving most of the Greek world's city-states and kingdoms, ends with the defeat of Athens by its chief rival, Sparta.
404–371 B.C.E.	Sparta wields political and military domination over most of the Greek mainland.
371–338 B.C.E.	The city-state of Thebes defeats Sparta and establishes its own period of hegemony over Greece.
338–336 B.C.E.	Thebes and its allies are overpowered by Greece's northernmost state, the kingdom of Macedonia, which, as the Greeks' final hegemonic power, forcibly unites most of the Greek world under its leadership.
336–323 B.C.E.	Succeeding his father, Philip II, as king of Macedonia, Alexander the Great launches a Greek war of revenge against the Persian Empire, invading and conquering all of its vast territories throughout the Near East.
323–146 B.C.E.	Alexander the Great's successors establish several Greek dynastic states in the conquered lands of the former Persian Empire. Greek populations, the Greek language, and Greek culture spread into the Near East, creating the foundations for the emergence of a hybrid Hellenistic civilization, the cultural cauldron in which the emergence and spread of Christianity later takes place.

197–86 B.C.E.	The Romans defeat Macedonia and progressively annex all the remaining Greek states in Europe and Asia.
30–300 C.E.	The convergence of Greek philosophy and Jewish religious thought within the framework of a politically united Roman Mediterranean and a Greek-speaking East create the conditions for the development and expansion of Christianity.
324	The Roman emperor Constantine relocates the empire's capital from Rome and the Latin West to Byzantium, eventually known as Constantinople, and the predominantly Greek East, establishing the foundations for the transition of the Roman to the Eastern Roman, or Byzantine, Empire, a medieval Greek state.
325	Constantine, declaring Christianity the empire's official religion, presides over the First Ecumenical Council in Nicaea, which formalizes Christian doctrine. This and subsequent councils define the theology and ecclesiology of Orthodox Christianity.
325–550	Christianity supplants the final vestiges of pagan tradition in Greece (Olympic Games are suppressed in 395; Athenian pagan philosophical schools are closed in 529).
550–750	The Byzantine Empire's control over most of the northern and western Balkans collapses as Slavic raids and settlement extend into central and southern Greece, displacing much of the Greek population from the interior and pushing it toward the coasts and the eastern part of the country.
800–900	Byzantium reasserts control over the Greek lands previously lost to the Slavs. Greek populations are resettled in these territories, while most of the Slavic tribes not destroyed are either pushed northward or gradually Hellenized. Cultural differences between Eastern and Western Christendom begin to take on an increasingly political dimension.
900–1025	The Byzantine Empire reaches the zenith of its power with the destruction and conquest of the Bulgars in the Balkans and the decisive defeat of the Arabs in the Near East.
1054	After centuries of growing tension and mutual suspicion, the expanding cultural and political gulf between Eastern and Western Christendom reaches a crisis with the formal ecclesiastical rupture between the See of Rome (the emergent Roman Catholic Church), on one hand, and the Sees of Alexandria, Antioch, Constantinople, and Jerusalem (the Orthodox Church), on the other hand.
1071	The Byzantine Empire suffers a major defeat at the Battle of Manzikert in eastern Anatolia, opening the interior of Asia Minor to invasion by the Seljuk Turks. This strategic turn begins the steady multicentury transformation of Asia Minor from an entirely Christian and Greek-populated center to a predominantly Muslim and Turkish region.
1080	The Normans, from their base in Italy, begin raiding the western territories of Byzantium. These raids escalate to a series of wars fought for Byzantine land and wealth that continue until the Fourth Crusade.
1185	Underscoring the serious threat posed to the Byzantine Greeks by the Catholic West, a Norman army sacks the great cultural and commercial center of Thessaloniki, Byzantium's second largest city.
1204	The Fourth Crusade sacks Constantinople, breaks up the Byzantine Empire, divides most of its territories and spoils, and subjects most of its population to the feudal exploitation of a series of petty Western occupation states. These actions end the possibility of ecclesiastical reconciliation or political cooperation between the Greeks and the West.
1204–1261	From their territorial bases in Asia Minor and the Balkans, Byzantine Greek successor states wage a war of liberation and reconquest against the Western occupation forces in and around Constantinople.
1261	The Greeks recover Constantinople and reestablish the Byzantine Empire, which still enjoys enormous prestige and influence but in its weakened state and reduced domain is no longer a major power.
1261–1453	Despite the ongoing depredations of the West, the continual loss of Byzantine territory to rival Balkan states, and the loss of virtually all of Byzantium's remaining lands to the expanding and powerful Ottoman Turks, late medieval Greek society experiences an incredible outburst of artistic, cultural, and intellectual creativity.
1453	After a desperate siege, on 29 May Constantinople falls to the Ottoman

	Turks, who make the city the capital of their expanding Islamic empire.
1453–1821	Under Ottoman rule, the Greeks are organized according to Islamic political principles and placed under the administrative authority of their religious leaders while simultaneously subject to the absolute authority of the sultan and his government.
1463–1479	The first Turko-Venetian war takes place, ravaging the population of southern Greece and the islands.
1499–1502/ 1537–1540	The second and third Turko-Venetian wars continue to devastate Greek populations on the mainland and the islands.
1566–1669	Greek populations are further reduced by Ottoman wars in the Aegean and Mediterranean that lead to the conquest of the Aegean Islands, Crete, and Cyprus.
1684–1715	The Venetians occupy the Peloponnesus and raid Central Greece (the Parthenon, largely intact since antiquity, is seriously damaged by Venetian cannon during a siege of the Athens Acropolis in 1687).
1774	The Treaty of Kuchuk Kainardji ends the Russo-Turkish War of 1768–1774 and gives Russia considerable concessions in the Ottoman Empire, which fuel early Greek nationalist aspirations for freedom.
1774–1821	The Greek commercial diaspora throughout Europe begins to shape the intellectual foundations for a Greek nationalist revival.
1814	The secret nationalist revolutionary organization Philike Hetairia (Friendly Society) is established by Greek nationalists in Odessa with the aim of overthrowing the Ottoman Empire and liberating the Greeks.
1821	The Greek War of Independence against Ottoman rule breaks out.
1822	The first constitution for an independent Greece, a liberal and democratic document, is drafted by the revolution's leaders.
1827	The unplanned, spontaneous battle of Navarino sees the destruction of the Ottoman fleet at the hands of a combined British, French, and Russian fleet, producing Great Power support for Greek independence and a Russian invasion of the Ottoman Balkans.
1830	Britain, France, and Russia recognize the independence of Greece under the London Protocol (3 February), which also establishes the three Great Powers as protecting states over Greece.
1832	The Treaty of Constantinople (21 July) between Britain, France, Russia, and the Ottoman Empire formally establishes Greece's boundaries.
1833	Prince Otto of Bavaria arrives in Greece to become the independent country's monarch.
1834	Relocating it from Nafplion, Athens becomes Greece's capital.
1843	In a bloodless revolt, King Otto is forced by the troops of the Athens garrison and a popular demonstration by the capital's citizens to grant a constitution.
1844	Otto officially accepts the new constitution, which defines the political system as a constitutional monarchy.
1853–1857	Popular Greek support for Russia against the Ottoman Empire during the Crimean War leads to a blockade and eventual occupation of Piraeus by British and French troops, enforcing strict neutrality on Greece.
1862	Growing dissatisfaction with Otto leads to an uprising in Athens and Nafplion against his rule, and produces his abdication.
1863	Prince George of Denmark becomes "King of the Hellenes."
1864	Britain cedes the Ionian Islands to Greece through the Treaty of London (29 March). The new constitution defines the political system as a "crowned democracy."
1866–1869	An uprising in Crete fails to liberate the island from Ottoman rule.
1870	The Ottoman sultan recognizes the autonomy of the Bulgarian Exarchate Church, which inspires a Bulgarian nationalist reaction against Greek cultural and ecclesiastical dominance, as well as ethnic presence, in Macedonia.
1878	According to one of the terms of the Treaty of Berlin (13 July), Britain occupies and assumes administration of Cyprus, which officially remains part of the Ottoman Empire.
1881	As an addendum act to the 1878 Treaty of Berlin, which established Romanian and Serbian independence, along with an autonomous Bulgaria's borders, Britain forces the Ottoman Empire to cede most of the province of Thessaly and the region of Arta to Greece.
1883–1893	The reformer Charilaos Trikoupis and the expansionist Theodoros Deliyannis alternate in power during this decade, marking the heyday of the two-party system and establishing a dynamic of political rivalry that will be repeated by

	other politicians to more divisive results in the twentieth century.
1896	Cretan rebellion against Ottoman rule.
1897	Set into motion by the rebellion in Crete, a Greco-Turkish war breaks out. The Greeks are quickly defeated and Athens is forced to surrender some strategic border territories in Thessaly.
1893–1908	Local Greek armed bands, some supported by Greek officers, organize to counter the Bulgarians' guerrilla forces operating in Ottoman Macedonia. Both sides fight each other for the liberation and future control of Macedonian territory.
1909	Frustrated by the lack of effective political leadership in Athens, a group of officers organizes a Military League and coup that force the government to draft reforms.
1910	The liberal nationalist Cretan Eleutherios Venizelos, the Military League's political adviser, wins an overwhelming popular mandate in general elections and launches extensive reforms.
1911	Italy attacks the Ottoman Empire in Libya and occupies the Dodecanese Islands in the Aegean.
1912	Venizelos and his Liberal Party enjoy a landslide election victory. Greece and its allies, Bulgaria, Montenegro, and Serbia, defeat the Ottoman Empire and push its army to the outskirts of Constantinople in the First Balkan War.
1913	Dissatisfied with its territorial gains in Macedonia, Bulgaria attacks its former allies, Greece and Serbia, only to be defeated by them, Romania, and the Ottoman Empire in the Second Balkan War. Greece doubles its territory with the acquisition of the Aegean Islands, Crete, most of Epirus, and southern Macedonia in the Treaty of London (30 May) and the Peace of Bucharest (10 August).
1914	World War I begins, Britain declares war on the Ottoman Empire, an ally of the Central Powers, and annexes Cyprus.
1915	Prime Minister Venizelos and King Constantine clash over Greek foreign policy in response to the outbreak of World War I. Venizelos advocates a Greek alliance with the Entente Powers (the Allies), while Constantine remains committed to neutrality. Bulgaria joins the Central Powers. Venizelos resigns under pressure from the king.
1916	A national schism develops as Greece is divided between north and south with a revolutionary government under Venizelos backed by the Allies in Thessaloniki and the official government in Athens appointed by Constantine.
1917	Under Allied pressure, Constantine abdicates and is succeeded by his second son, Alexander. Venizelos reestablishes his government in Athens and Greece severs relations with the Central Powers who declare war on Greece.
1918	The Greek army, alongside other Allied forces, scores major successes on the Macedonian front, defeating the Bulgarian army and forcing German forces to retreat. Bulgaria and Turkey sign armistices.
1919	Venizelos takes his place among the victors of World War I and puts forward Greece's territorial claims against Bulgaria and the Ottoman Empire at the Paris peace conference. At the behest of Britain and France, Greek forces land in Smyrna. The Treaty of Neuilly (27 November) requires Bulgaria to transfer Western Thrace to Greece. Mustafa Kemal declares his independence from the Ottoman sultan and establishes a Turkish nationalist movement and army in Anatolia.
1920	Under the Treaty of Sevres (10 August) Greece acquires Eastern Thrace, the rest of the Aegean Islands, and a mandate to administer Smyrna and its hinterland in Asia Minor, pending a local plebiscite to determine the area's future status. With Allied backing, Venizelos orders the Greek army to advance from Smyrna to put down growing Turkish nationalist resistance and forcibly impose the terms of the Sevres Treaty. King Alexander dies prematurely. Venizelos is defeated in the ensuing elections, and the royalists return to power and restore Constantine to the throne.
1921	The Greek army's offensive against Kemal's nationalist forces reaches the outskirts of Ankara but is blocked from further advance. The Allies, abandoning Greece, declare a policy of strict neutrality.
1922	The Turks launch a massive offensive, routing the Greek army in Asia Minor and sacking Smyrna. Constantine abdicates in favor of his eldest son, George, after a military coup against the royalist government.
1923	The Treaty of Lausanne (24 July) fixes the boundaries between Greece and Turkey and imposes an exchange of

	populations. Almost 1.5 million destitute ethnic Greek refugees arrive in Greece, a country of barely 5 million people. Venizelos's Liberal Party wins almost all the seats in parliament after the royalists abstain from the national elections.
1924	Venizelos accepts the premiership and Greece is declared a republic.
1924–1926	The republic is destabilized by a series of pro-royalist and pro-Venizelist military coups.
1926–1928	In order to curb instability, an all-party government takes office.
1928–1932	Venizelos returns to power and initiates a Greek-Turkish diplomatic rapprochement.
1932–1936	Renewed rivalry between liberals and royalists erodes the republic's stability.
1935	The failure of an antiroyalist coup leads to the restoration of King George.
1936	Greece's leading senior politicians, including Venizelos, die in quick succession. King George suspends the constitution and enables retired General Ioannis Metaxas to assume dictatorial powers.
1936–1940	Metaxas establishes a nationalist authoritarian regime but enjoys little popular support.
1940	Greek resistance to the thwarted Italian invasion from Albania results in the first Allied victories in Europe during World War II.
1941	German forces invade and overrun Greece. A Greek government in exile is established in Egypt.
1941–1944	Greece is occupied by German, Italian, and Bulgarian forces. Armed resistance obliges the Germans to maintain a large number of forces in Greece. Internal strife and political rivalry between Communist-dominated and nationalist resistance groups erupts into a short-lived civil war.
1944	Greece is liberated but an armed rebellion of the Communist-dominated resistance leads to intense fighting in Athens and deepening political polarization.
1946–1949	A large-scale civil war is fought between the Communists' insurgent army and the national government and its armed forces.
1947	In accordance with the Treaty of Paris (10 February) Italy cedes the Dodecanese Islands to Greece. Under the Truman Doctrine, the United States grants massive aid to Greece.
1952	Greece becomes a member of NATO, and a reconstruction program of the war-ravaged country is launched with significant aid from the United States.
1955	A massive state-sponsored pogrom against the Greek community of Istanbul takes place as Turkish nationalists demand the annexation of Cyprus by Ankara.
1956	Elections are won by the newly formed conservative party, National Radical Union, led by Constantine Karamanlis. British colonial forces suppress the Greek Cypriots' growing struggle for self-determination, expressed through demands for union with Greece.
1959	Finalizing a British compromise involving Greece and Turkey, Greek and Turkish Cypriot leaders, the former under British pressure, sign the London agreement on the independence of Cyprus.
1960	Cyprus, albeit saddled with a nonviable constitution and political system, becomes an independent republic with Archbishop Makarios as president.
1963	Karamanlis and the conservatives lose the national elections to George Papandreou, leader of the Center Union, a party formed by the coalition of all of Greece's center factions. Papandreou, however, refuses to form a coalition government with the political left and resigns. As the state system begins to fail, violence breaks out between the Greek and Turkish communities in Cyprus.
1964	In new elections the Center Union wins an absolute majority. The Turkish air force bombs Cyprus after a series of violent incidents between the Greek and Turkish communities.
1965	King Constantine II, who came to the throne a year earlier following the death of his father, King Paul, clashes with Papandreou over ministerial appointments, leading Papandreou to resign in protest and demand new elections.
1965–1967	Political conditions deteriorate as the monarchy interjects itself in parliamentary affairs and tensions grow across party lines.
1967	A junta of colonels stages a coup against the civilian government and establishes a military dictatorship. King Constantine flees Greece after an abortive effort to oust the colonels.
1973	Units of the Greek navy launch an abortive coup against the military dictatorship.

1974	Turkey invades and occupies northern Cyprus following a short-lived coup against Makarios instigated by the dictatorship in Athens. On the heels of its disaster in Cyprus, the junta collapses. Democracy is restored and Karamanlis returns from self-exile in France to lead his New Democracy Party and to be elected prime minister. The monarchy is abolished and Greece becomes a republic after a national referendum.
1975–1976	Following the entrenchment of the Turkish occupation in Cyprus, Greek-Turkish relations are further strained by a series of Turkish provocations against Greek sovereignty in the Aegean.
1979	Karamanlis signs a Treaty of Accession (28 May) to the European Community (EC) with the nine EC member states.
1981	Greece officially joins the EC. The Panhellenic Socialist Movement (PASOK), led by Andreas Papandreou, the son of George Papandreou, wins the national elections. The new socialist government launches a wave of populist reforms.
1985	Papandreou and PASOK retain power following victorious parliamentary elections.
1987	Greek-Turkish relations face a crisis over renewed disputes in the Aegean.
1988	Papandreou and Turkish Premier Turgut Ozal meet in Davos, Switzerland, to defuse tension between their two countries.
1989	A deadlocked election leads to the formation of a short-term coalition government made up of the conservative New Democracy Party and the Communist Party. Papandreou faces serious financial corruption charges. Subsequent to inconclusive elections, an all-party caretaker government is formed.
1990	New Democracy, under Constantine Mitsotakis, wins the national election. Mitsotakis's government introduces an economic austerity program to overcome economic malaise.
1992	The issue of diplomatic recognition of the newly independent Former Yugoslav Republic of Macedonia (FYROM) dominates Greek foreign policy under the Mitsotakis government. General strikes over privatization and social security reforms paralyze the economy. Mitsotakis dismisses his entire cabinet after disagreements over economic policy and the Macedonian issue. Andreas Papandreou is acquitted of corruption charges.
1993	Greece accepts international arbitration to resolve state name and other disputes with FYROM, the name under which the country is admitted into the UN. Mitsotakis government falls with the defection of some New Democracy Party members. PASOK is voted back into office and Papandreou again becomes prime minister.
1994	In reaction to the FYROM policy of diplomatic intransigence, Papandreou imposes a nominal trade embargo. Although this assertive policy backfires, creating significant international antipathy for Greece, it succeeds in forcing Skopje to negotiate with Athens.
1995	Greece and FYROM resolve several disputes and agree to begin normalization of relations. Turkey threatens Greece with war over sovereignty issues in the Aegean.
1996	Failing in health, Papandreou resigns and is replaced by Costas Simitis. Greece and Turkey come close to war over disputed islets in the Aegean. Simitis and PASOK win national elections.
1997	The Simitis government pursues decisively its convergence policy, ensuring that Greece will meet criteria to qualify to participate in the EU Economic and Monetary Union.
1998	Greece's relations with its Balkan neighbors continue to improve while Greek-Turkish relations reach a new low amid tensions over Cyprus, the Aegean, and Greek complicity in the international passage of the anti-Turkish Kurdish independence movement's leader, Abdullah Ocalan.
1999	Although Greece does not take part in military operations against Yugoslavia, the Simitis government, facing strong public opposition, maintains solidarity with its NATO partners. Greece becomes the strategic linchpin for the deployment and supply of American and other forces into Kosovo. Greece and FYROM sign a series of important cooperation agreements.
2000	Simitis and PASOK remain in power after a narrow election victory.
2001	Having satisfied all criteria, Greece officially joins the Economic and Monetary Union of the EU.
2004	PASOK, now led by George Papandreou, the American-born son of

	the party's founder, Andreas Papandreou, suffers a major defeat in national elections. PASOK, which dominated the Greek political system more or less since 1981, is succeeded by the conservative New Democracy Party. Costas Karamanlis, the nephew of New Democracy's founder, Constantine Karamanlis, becomes Greece's new prime minister.
2004	Olympic games are once again held in Athens.

PREFACE

In *The Lexus and the Olive Tree* (Farrar, Straus, and Giroux, 1999) and *Longitudes and Attitudes* (Farrar, Straus, and Giroux, 2002), the award-winning reporter for the *New York Times* Thomas L. Friedman observed that the world has made a remarkable transition during the past quarter century from division to integration. What was once a world of separation, symbolized by the Cold War and "the Wall," evolved, especially with the collapse of the Soviet Union, into a world of globalization and global interconnectedness, symbolized by "the Net." That new reality has led to remarkable changes. Moreover, it is not merely a passing trend; it is a reality that affects every facet of human existence.

Regrettably, however, not everyone has become part of what amounts to a revolution; in some cases, an antimodernism has caused a lag in the developments of the critical trends of democratization and economic change. That gap, epitomized by the difference between the world of the Lexus and that of the olive tree, forms the core of Friedman's analysis of the Middle East, for example. As perceptive as he is of this clash in that region, in many ways Friedman's observations regarding the necessity of seeing the world in a more global and integrated manner are prophetic for many in the West as well. Although Friedman's emphasis is on an antimodernism that creates a gap between the world of the olive tree and the world of the Lexus, preventing interconnectedness from being fully realized, there are other barriers, more subtle perhaps, but no less real, that create gaps in the knowledge of so many areas of the world with which we are so closely linked.

Certainly in the United States, knowledge of other parts of the world is at times regrettably and, some might argue, even dangerously lacking. The events of September 2001 and the actions of a handful of al-Qaeda fanatics are but one example of an inattention to the realities of the post–Cold War world. Despite the fact that the organization of Osama Bin-Laden had long been a sworn enemy of the United States (and others) and his followers had already launched attacks on targets around the globe (including an earlier attempt on New York's World Trade Center), many, if not most, Americans knew very little (if anything) about al-Qaeda, its motives, or its objectives. What is troubling about that limited knowledge is the simple fact that if an organization with such hostile designs on those it opposed could be so overlooked or ignored, what does that say about knowledge of other momentous movements that are not so overtly hostile? In a world that is increasingly global and integrated, such a parochialism is a luxury that one cannot afford.

Although educators have at times been unduly criticized for problems and deficiencies that may be beyond their control, it is legitimate to argue that there are occasions when teaching fails to keep pace with new realities. Language training, for example, hasn't changed much in the United States for decades, even though one can argue that languages critical to the future of commerce and society, such as Japanese, Chinese, or Arabic, are less often taught than other "traditional" languages. Thus the force of tradition outweighs new realities and needs. Such myopia is born out of a curricular process that almost views change as an enemy. Similarly, "Western Civilization" courses, on both the high school and college level, for the most part remain rooted in English and French history, a tunnel-vision approach that not only avoids the developments of globalization or even a global outlook, but also ignores key changes in other parts of Europe as well. Provincialism in a rapidly changing world should only be a style of design or furniture; it cannot afford to be an outlook. In a world of rapid change, curriculum cannot afford to be stagnant.

Such a curriculum, however, especially on the high school level, is often the inevitable by-product of the materials available. When I was asked to direct the Public Education Project for the American Association for the Advancement of Slavic Studies in the early 1990s, I had the opportunity to review countless textbooks, and the regional imbalance (overwhelmingly Eurocentric in presentation, with a continued focus on England and France) present in these books was such that it could lead to a global shortsightedness on the part of students. Despite the fall of the Berlin Wall and the collapse of the Soviet Union, the books usually contained more on obscure French kings that on Kosovo. Educators recognized that, and from their input it was clear that they needed, more than anything else, resources to provide background material so that they could bring to their students some knowledge of changes that only a few years earlier had seemed unimaginable.

This need for general resource works led to the publication of *The Encyclopedia of Eastern Europe: From the Congress of Vienna to the Fall of Communism* (Garland, 2000). Its goal was to provide information on the rich histories of Albania, Bulgaria, Czechoslovakia, Hungary, Poland, Romania, and Yugoslavia. The reception the book received was gratifying, and it has led to this work, which is designed to act in tandem with the information in the *Encyclopedia of Eastern Europe* to offer the general reader a broad-based overview of the entire region running from the Baltic to the Mediterranean. In addition, this

book expands the coverage to other areas in the region not addressed in the encyclopedia.

The three volumes of this work cover three groups of countries, each marked by geographical proximity and a general commonality in historical development. The first volume covers the northern tier of states, including Poland and the Baltic states of Lithuania, Estonia, and Latvia. The second volume looks at lands that were once part of the Habsburg Empire: Slovakia, the Czech Republic, Hungary, Slovenia, and Croatia. The third volume examines the Balkan states of Serbia and Montenegro, Bulgaria, Albania, Romania, Macedonia, Bosnia-Hercegovina, and Greece, lands all once dominated by the Ottoman Empire. Each chapter looks at a single country in terms of its geography and people, history, political development, economy, and culture, as well as the challenges it now faces; each also contains short vignettes that bring out the uniqueness of each country specifically and of the area in general. This structure will allow the reader not only to look at the rich developments in each individual nation, but also to compare those developments to others in the region.

As technology makes the world smaller, and as globalization brings humankind closer together, it is critical that regions once overlooked be not only seen but viewed in a different light. The nations of East Central and Southeastern Europe, that is, "Eastern" Europe, are increasingly a vital part of a new Europe and a new world. What during the Cold War seemed incomprehensible to many, namely, the collapse of totalitarianism and the rise of democracy in these countries, is now a reality all should cherish and help nurture; first, though, it has to be understood. It is the hope that this series may bring that understanding to the general reader.

Putting together this work would have been impossible without the scholarship, dedication, professionalism, and patience of the authors. The words are theirs, but the gratitude is all mine. In addition, I would like to thank a number of students and staff at Northwest Missouri State University who helped with the mountain of work (often computer-related) that a project of this size entails. Chief among them is Patricia Headley, the department secretary, who was not only my computer guru but also someone whose consistent good cheer always kept me going. I would also like to thank Laura Pearl, a talented graduate student in English who filled the role of the "general reader" by pointing out what might make sense to a historian but would not make sense to someone without some background in the region. Other students, including Precious Sanders, Jeff Easton, Mitchell Kline, and Krista Kupfer, provided the legwork that is essential to all such projects. And finally, I would like to thank the staff at ABC-CLIO, especially Alicia Merritt, for keeping faith in the project even when delivery of the manuscript did not match initial projections; Anna Kaltenbach, the production editor, for navigating the manuscript through the various stages; the copy editors, Silvine Farnell and Chrisona Schmidt, for their thoughtful and often painstaking work; Bill Nelson, the cartographer; and the photo editor, Giulia Rossi, for creating such a diverse yet balanced presentation.

And finally there are Sue, my wife, and Kristin, my daughter. Words can never express how important they are, but they know.

Richard Frucht
September 2004

INTRODUCTION

The use of the term "Eastern Europe" to describe the geographical region covered here is standard, but it is nevertheless something of a misnomer. The problem is that it not only makes a geographical distinction between this area and "Western Europe"; it also implies a distinction in development, one that ignores the similarities between Western and Eastern Europe and instead separates the continent into two distinct entities. It even suggests that Eastern Europe is a monolithic entity, failing to distinguish the states of the Balkans from those of the Baltic region. In short, it is an artificial construct that provides a simplistic division in a continent that is far more diverse, yet at the same time more closely linked together, than such a division implies.

Western Europe evokes images of Big Ben and Parliament in London, the Eiffel Tower and the Louvre in Paris, the Coliseum and the Vatican in Rome, the bulls of Pamplona in Spain. Eastern Europe on the other hand brings to mind little more than the "Iron Curtain," war in Kosovo, ethnic cleansing in Bosnia, orphanages in Romania, and the gray, bleak images of the Cold War and the Soviet Bloc. Just as colors convey certain connotations to people, so too do the concepts of "Western" and "Eastern" Europe convey very different impressions and mental images. The former is viewed as enlightened, cultured, and progressive; the latter is seen as dark, uncivilized, and static. Western Europe is democratic; Eastern Europe is backward and totalitarian, plagued by the kind of lack of fundamental humanity that leads inevitably to the horrors of Srebrenica.

Some of these stereotypes are not without some degree of justification. Foreign domination—whether German, Habsburg, Ottoman, or Russian (later Soviet)—has left parts of the region in an arrested state of development. All the peoples of the region were for much of the last half-millennium the focus and subjects of others rather than masters of their own destinies. Accordingly, trends found in more favored areas were either delayed or stunted. Albanian nationalism, for example, did not take root until a century after the French Revolution. The economic trends of the West as well as the post-1945 democracy movements (notably capitalism and democracy) are still in their infancy.

But labels are often superficial, and they can blind individuals to reality. Certainly, Tirana would never be confused with Paris. Estonia is not England. At the same time, the Polish-Lithuanian state was at its height the largest empire in Europe. Prague stuns visitors with its beauty no less than Paris; in fact, many remark that Prague is their favorite city in Europe. Budapest strikes people in the same way that Vienna does. The Danube may not be blue, but it does run through four European capitals, not just Vienna (Bratislava, Budapest, and Belgrade being the other three). The painted monasteries in Romania are no less intriguing in their design and use of color than some of the grandiose cathedrals in "the West." The Bulgarian Women's Chorus produces a sound no less stunning than that of the Vienna Boys' Choir. In short, to judge by labels and stereotypes in the end produces little more than myopia.

To dismiss Eastern Europe as backward (or worse, barbaric) is to forget that many of the Jews of Europe were saved during the Inquisition by emigrating to Poland or the lands of the Ottoman Empire. To cite the Magna Carta as the foundation of democracy in England, even though in reality it meant little more than protection for the rights of the nobility, is to ignore the fact that first written constitution in Europe was not found in the "West" but rather in the "East" (Poland). And although backwardness and even barbarity certainly can be found in the recent past in the region, no country in Europe is immune from a past that most would rather forget (the Crusades, the Inquisition, religious wars, the gas chambers of World War II, to name but a few). Myths are comfortable, but they can also be destructive. They can ennoble a people to be sure, but they can also blind them to reality and lead to a lack of understanding.

Eastern Europe is not exotic, and an understanding of it is not an exercise in esoterica. Rather the region has been and will continue to be an integral part of Europe. In one sense Europe became a distinct entity when Christianity, the cultural unifier, spread through the last outposts of the continent. In another sense, it has again become a unified continent with the demise of the last great empire that held sway over so many.

When former president Ronald Reagan passed away in June 2004, the media repeatedly recalled perhaps his most memorable line: "Mr. Gorbachev, tear down this wall," a remark made in 1984 as the American president stood in front of the Berlin Wall. In this case the American leader was referring to the concrete and barbed wire barrier behind him erected in the 1960s by the former Soviet Union to seal off its empire from the West. Yet, in many respects, the modern history of Eastern Europe was one of a series of walls, some physical (as in the case of the Iron Curtain), others geographical (all of the nations in the region were under the domination of regional great powers), and, one could argue, even psychological (the at times destructive influence of nationalism that created disruption and violence and has been

a plague in the lands of the former Yugoslavia on numerous occasions in the past century). These walls have often determined not only the fate of the nations of the region but the lives of the inhabitants as well.

The past is the DNA that tells us who we are and who we can be. It is the owners' manual for every country and every people. Without that past there would be no nation and no nationalism. It is that past that provides the markers and lessons for nations and peoples. It gives direction to the present. It provides a bedrock upon which we build our societies. Whether it leads to myths that embody virtues or myths that cover up what we don't wish to acknowledge, it is the shadow that we can never lose. Thus, when each of the nations of East Central and Southeastern Europe was reborn in the nineteenth or twentieth centuries (in some cases twice reborn), the past was the compass directing them to the future.

Nations are a modern concept, but peoples are not. Poland, for example, once a great and influential European state in the Middle Ages, was partitioned in the late eighteenth century, only to rise again, like a phoenix, in 1918. And even when it again fell prey to the domination of outside influences following World War II, it was the people, embodied in Solidarity, the workers' union, who toppled the communist regime. Despite the fact that at one time or another all of the peoples and nations addressed in these volumes were under the rule or direction of a neighboring great power, the force of nationalism never abated.

Nothing is more powerful than an idea. It can inspire, unify, give direction and purpose; it can almost take on a life of its own, even though it may lie dormant for centuries. In his *Ideen zur Philosophie der Geschichte der Menschheit* (Ideas on the Philosophy of the History of Mankind), the eighteenth-century German philosopher Johann Herder captured the essence of nationalism in his analysis of the *Volk* (the people). Herder emphasized that a spirit of the nation (which Georg Hegel, the nineteenth-century German philosopher most noted for his development of the concept of the dialectic of history, later termed the *Volkgeist,* or "spirit of the people") existed that transcended politics. From the point of view of Herder and the other German idealist philosophers, peoples developed distinct characteristics based upon time and place (reflecting the *Zeitgeist,* the "spirit of the time"). Societies were therefore organic, and thus each had to be viewed in terms of its own culture and development. Accordingly, each culture not only was distinct but should recognize the distinctiveness of others, as characteristics of one culture would not necessarily be found in another. To ignore that uniqueness, which gives to each Volk a sense of nobility, would be to ignore reality.

For the peoples of Eastern Europe, language, culture, and a shared past (even if that past was mythologized, or in some cases even fabricated), exactly that spirit of the Volk that Herder, Hegel, and others saw as the essence of society, proved to be more powerful and more lasting than any occupying army or dynastic overlordship. And when modern nationalism spread throughout Europe and for that matter the world in the nineteenth and twentieth centuries, culture became the genesis of national revivals.

For centuries, Eastern Europe served as a crossroads, both in terms of trade and in the migrations (and in some cases invasions) of peoples. The former brought prosperity to some parts of the region, notably the northern and central parts of the belt between the Baltic and Mediterranean seas, while the latter left many areas a mosaic of peoples, who in the age of nationalism came to struggle as much with each other for national dominance as they did with their neighbors who dominated them politically. As the great medieval states in the region, from the Serbian Empire of Stefan Dušan to the First and Second Bulgarian Empires, to the Hungarian and Polish-Lithuanian states, fell to stronger neighbors or to internal difficulties, no peoples were left untouched by outsiders. Greece may have been able to remain outside the Soviet orbit in the 1940s, but for centuries it was a key possession of the Ottoman Empire. Poland may have been the largest state of its time, but it fell prey to its avaricious neighbors, the Russians, Prussians, and Austrians. Yet, despite centuries of occupation, in each case the Volk remained.

One of the dominant elements in modernization has been the establishment of modern nations. While the rise of the modern nation-state was late arriving in Eastern Europe, and some in Eastern Europe had failed to experience in the same manner some of the movements, such as the Renaissance or the rise of capitalism, that shaped Western Europe, it was no less affected by the rise of modern nationalism than its Western neighbors. Despite the divergent and, in some cases, the retarded development of the region in regard to many of the trends in the West, the nations of Eastern Europe in the early twenty-first century are again independent members of a suddenly larger Europe.

The story of Eastern Europe, while often written or at least directed by outsiders, is more than a mere tale of struggle. It is also a story of enormous human complexity, one of great achievement as well as great sorrow, one in which the spirit of the Volk has triumphed (even though, admittedly, it has at times, as in the former Yugoslavia, failed to respect the uniqueness of other peoples and cultures). It is a rich story, which will continue to unfold as Eastern Europe becomes more and more an integral part of Europe as a whole (a fact evident in the expansion of the European Union and NATO into areas of the former Soviet Empire). And in order to understand the story of that whole, one must begin with the parts.

CONTRIBUTORS

VOLUME 1

Terry D. Clark is a professor of political science and the director of the graduate program in international relations at Creighton University. He received his Ph.D. from the University of Illinois at Urbana-Champaign in 1992. A specialist in comparative politics and international relations, he was instrumental in developing Creighton University's exchange program with universities in Eastern Europe. He has published three books and numerous articles devoted to the study of postcommunist Europe. His research interests include the development of democratic institutions and the evolution of public opinion supporting such institutions in Lithuania and Russia.

Mel Huang is a freelance analyst on the Baltic states and is also a research associate with the Conflict Studies Research Centre (CSRC) at the Royal Military Academy, Sandhurst. He previously worked as the primary Baltics analyst for the analytical department of Radio Free Europe/Radio Liberty and served as the Baltics editor of the award-winning online journal Central Europe Review.

Aldis Purs received his Ph.D. in history from the University of Toronto in 1998. He has taught at Vidzeme University College, Wayne State University, and Eastern Michigan University. He is a coauthor of *Latvia: The Challenges of Change* (Routledge, 2001) and *The Baltic States: Estonia, Latvia, and Lithuania* (Routledge 2002) and a contributor to the University of Manchester research project "Population Displacement, State Building, and Social Identity in the Lands of the Former Russian Empire, 1917–1930."

Piotr Wróbel holds the Konstanty Reynert Chair of Polish Studies at the University of Toronto. He received his Ph.D. from the University of Warsaw in 1984. He has been a visiting scholar at the Institute of European History in Mainz, at Humboldt University in Berlin, at the Institute of Polish-Jewish Studies at Oxford, and at the United States Holocaust Memorial Museum in Washington, D.C. He has authored or coauthored some fifty articles and nine books, including *The Historical Dictionary of Poland, 1945–1996* (Greenwood, 1998). He currently serves on the advisory board of *Polin: A Journal of Polish-Jewish Studies,* on the board of directors of the Polish-Jewish Heritage Foundation of Canada, and on the governing council of the American Association for Polish-Jewish Studies.

VOLUME 2

June Granatir Alexander is a member of the faculty of the Russian and East European Studies Program at the University of Cincinnati. In addition to numerous scholarly articles, reviews, and encyclopedia entries, she is the author of two books: *The Immigrant Church and Community: Pittsburgh's Slovak Catholics and Lutherans, 1880–1915* (Pittsburgh, 1987) and *Ethnic Pride, American Patriotism: Slovaks and Other New Immigrants in the Interwar Era* (Temple University Press, 2004).

Mark Biondich is an analyst with the Crimes against Humanities and War Crimes Section of the Department of Justice of Canada. He received his Ph.D. in history from the University of Toronto in 1997 and is the author of *Stjepan Radić, the Croat Peasant Party and the Politics of Mass Mobilization, 1904–1928* (Toronto, 2000), as well as a number of articles and reviews concerning Croatian, Yugoslav, and Balkan history.

András A. Boros-Kazai was raised in a proletarian district in Budapest before coming to the United States, where he studied at Kent State University and the University of Pittsburgh. He earned his Ph.D. in history from Indiana University in 1982. He is currently a freelance translator, a researcher-consultant, and an adjunct member of the faculty at Beloit College.

Brigit Farley received her Ph.D. from Indiana University. She is an associate professor of history at Washington State University. A specialist on twentieth-century Russian and European cultural history, and the author of a number of articles, reviews, and encyclopedia entries, she is currently working on the life and death of a Moscow church.

Daniel Miller received his Ph.D. from the University of Pittsburgh, and is a professor of history at the University of West Florida in Pensacola. His research involves Czech and Slovak history, especially between the two world wars, and focuses largely on agrarian political history. He is the author of several chapters and articles along with *Forging Political Compromise: Antonín Švehla and the Czechoslovak Republican Party, 1918–1933* (Pittsburgh, 1999), which has been translated into Czech. He is also one of the coauthors of a volume in Czech on the history of the Slovak and Czech agrarian movement. In the preparation of his chapter, he would like to acknowledge the contributions and

suggestions of Gregory X. Ference of Salisbury University, Lenka Kocková and Pavel Kocek (on several aspects of Czech culture and history), Alex Švamberk (on Czech popular music), and Ivan Lalák (on modern architecture).

VOLUME 3

Robert Austin is a lecturer and project coordinator with the Centre for Russian and East European Studies at the University of Toronto. He is also a project manager with Intermedia Survey Institute in Washington, D.C. His current research focuses on interwar Albania and media trends in contemporary Albania. He was aided in the preparation of his chapter by Brigitte Le Normand, who received her M.A. from the University of Toronto and is currently pursuing her Ph.D. in history at UCLA.

Richard Frucht is a professor of history and chair of the Department of History, Humanities, Philosophy, and Political Science at Northwest Missouri State University. He received his Ph.D. from Indiana University in 1980. The author of a number of books and articles on Eastern Europe, most recently he was the editor of *The Encyclopedia of Eastern Europe: From the Congress of Vienna to the Fall of Communism* (Garland, 2000).

Alexandros K. Kyrou is an associate professor of History and the director of the Program in East European Studies at Salem State College. He received his Ph.D. from Indiana University and was a Hanaah Seeger Davis Visiting Research Fellow in Hellenic Studies at Princeton University, a senior research fellow of the Kokkalis Program on Southeastern and East Central Europe at the John F. Kennedy School of Government at Harvard University, and a research scholar at the Institute on Religion and World Affairs at Boston University. He is also the associate editor of the *Journal of Modern Hellenism*.

Katherine McCarthy teaches history at Bradley University and is a research associate in the Russian and East European Center at the University of Illinois, Urbana-Champaign. She completed her Ph.D. in East European history at the University of Pittsburgh in 1996 and has written on peasant issues in the former Yugoslavia.

Nicholas Miller is an associate professor at Boise State University. He has written extensively on the Serbian community in Croatia, Serbian nationalism, and Serbia since 1945, including *Between Nation and State: Serbian Politics in Croatia, 1903–1914* (Pittsburgh, 1997). He is currently completing a manuscript on an intellectual circle in Serbia during the communist era.

James P. Niessen is World History Librarian at Rutgers University in New Brunswick, New Jersey, and Vice President for Research and Publications of H-Net: Humanities and Social Sciences OnLine. He earned a Ph.D. in East European history from Indiana University and taught history at several universities before pursuing a library career since 1994. His published works include more than fifteen studies on modern Romanian and Hungarian history, libraries, and archives.

Aleksandar Panev teaches history and philosophy at Appleby College in Oakville, Canada. He received his B.A. and M.A. degrees from the University of Belgrade and his Ph.D. from the University of Toronto. He is also an associate of the Centre for Russian and East European Studies at the Munk Centre for International Studies at the University of Toronto and has served as a faculty research associate at Arizona State University and the University of Skopje.

SERBIA AND MONTENEGRO

NICHOLAS MILLER

LAND AND PEOPLE

The borders and political affiliations of Serbia and, to a much lesser extent, Montenegro have changed so often in history that one historian, Stevan Pavlowitch, recently titled his examination of the topic *Serbia: The History of an Idea.* From the eleventh to the fifteenth century, there was a Serbian kingdom. From 1453 to 1804, the lands inhabited by Serbs were controlled by the Ottoman Empire. During the nineteenth century, a Serbian state gradually emerged and grew at the expense of the Ottoman Empire. In 1918 Serbia merged with other lands from the Habsburg monarchy to form the Kingdom of Serbs, Croats, and Slovenes (known after 1929 as the Kingdom of Yugoslavia). This state allegedly reflected the commitment of its inhabitants to a supranational Yugoslav (South Slavic) identity. In 1941 Serbia became a puppet state of Nazi Germany. It reemerged as a republic within the new communist Yugoslavia in 1945. Montenegro meanwhile had enjoyed virtual independence in the Ottoman Empire until 1918, when it too was included in the Kingdom of Serbs, Croats, and Slovenes. It also became a republic in communist Yugoslavia after 1945. In 1991 Yugoslavia collapsed, and Serbia and Montenegro were reconstituted in the Federal Republic of Yugoslavia (FRY), which lasted until 2003, when Serbia and Montenegro created a new constitution, and the official name of the country became the State Community of Serbia and Montenegro. With so many changes having occurred, Pavlowitch's title seemed to have been wise.

The standard definition of a Serb would be "an Orthodox Christian speaker of Serbo-Croatian." That strict definition has not always held true on an individual basis—there are plenty of Catholics and Muslims in former Yugoslavia who have considered themselves to be Serbs (such as Ivo Andrić and Meša Selimović, two important figures in Serbian culture)—but as a general rule, it works, with the religious component of the definition being more rigid than the inherently less manageable linguistic portion. To be Serbian has meant to be Orthodox Christian since the thirteenth century, with the founding of the church by Saint Sava. During the early modern period, the church became one of the foundations of Serbian identity, thanks in part to Ottoman administrative policies during the long era of Turkish occupation. Today, Serbs are not particularly religious, but they are nonetheless culturally Orthodox Christians. The church today has 3 metropolitan sees, 28 dioceses, 2,553 parishes, 2,019 ordained priests, and 179 monasteries. Of course, not all citizens of Serbia and Montenegro are Orthodox Christians; there is a Muslim Slavic population in the Sandžak of Novi Pazar, and there are various Protestant groups, especially in the

Vojvodina, where there are also Catholics (Croatian, Hungarian). The Albanian population of southern Serbia (outside of Kosovo) is also uniformly Muslim. Official figures state the following overall: Orthodox 65 percent, Muslim 19 percent, Roman Catholic 4 percent, Protestant 1 percent, and "other" 11 percent.

The language issue is more complicated, mostly because the modern language(s) spoken by Serbs, Croats, Montenegrins, and Bosnians are concoctions based on a variety of regional dialects that have attained the status of national languages, in spite of the fact that they are geographically based. The languages that were spoken by medieval and early modern elites are no longer the languages spoken by the various peoples. There are some certainties: all Serbs speak the *štokavian* dialect. The other dialects—*kajkavian* and *čakavian*—are spoken by Croats in northern Croatia and in Dalmatia respectively. Most Croats today, however, speak štokavian. Thus, it is not a "Serbian" language, no matter what intellectual language reformers and creators such as Vuk Karadžić might have said in the nineteenth century. Štokavian has three variants, known as *ekavian, ijekavian,* and *ikavian.* Ekavian and ijekavian have been rather imprecisely considered the "Serbian" and "Croatian" variants of the language. This notion received a big boost in 1954, when Croatian and Serbian linguists and literary figures signed off on the Novi Sad Agreement, which proclaimed that the "Serbo-Croatian or Croato-Serbian Language" had those two variants, one to be considered Serbian, the other Croatian. The issue remained contentious through the communist period. Today, in Serbia, ekavian reigns supreme. Serbs, though, speak both the ekavian and ijekavian variants.

The national anthem of Serbia and Montenegro is "Hej Slaveni," composed by Samuel Tomasik (lyrics) and Michal Kleofas Oginski (music) in the nineteenth century and written as a general Slavic anthem. The country's national holiday is 28 June, St. Vitus's Day. In November 2001 a working group in the Serbian justice ministry proposed that Serbia's coat of arms inaugurated in 1882 be reestablished, that the national anthem should once again be "Božje pravde," as it was before 1918, and that the pre-1918 red, blue, and white tricolor flag once again become the national flag. Those proposals are now in limbo, as some concerns were raised about the crown in the coat of arms, which would imply that Serbia is a kingdom rather than a republic.

The population of the Federal Republic of Yugoslavia in 2000 was estimated at 10.6 million; the population growth rate in 2003 was 0.3 percent. The age structure of the Serbian and Montenegrin populations is as follows: 0–14 years: Serbia, 19.95 percent, and Montenegro, 22.05 percent;

The Serbian Language

Serbian is a Slavic language. It belongs to the South Slavic language group, along with Slovenian, Bulgarian, Macedonian, Croatian, and Bosnian. It accompanied the first Slavic migrants to the Balkan peninsula. Today's Serbian language has had a rather complicated history in which politics has played as important a role as linguistics.

The Serbian language is a rather complicated beast. It is clearly related in some way to the Croatian language, but that relationship has been defined and redefined in a variety of ways since it was (or they were) standardized in the mid-nineteenth century. Vuk Karadžić first standardized a Serbian tongue and orthography (using a Hercegovinian dialect, *štokavian,* as the basis) after years of ethnographic and linguistic work in the countryside with those who spoke a variety of dialects of what was potentially a unified language. It was his legendary view that all who spoke the Serbian language were in fact Serbs; thus, he adopted the approach that language defined nationality. Of course this approach was fundamentally flawed. The fact that Karadžić chose to define his own product as the language of Serbs and the fact that many Croats spoke the language he identified as Serbian were the primary flaws. Nonetheless, thanks to the influence of the German romantic philosopher Johann Gottfried Herder and the German ethnographers, by the late nineteenth century language and nationality were seen as united by an almost sacred bond; thus language became a subject of great contention between nationalists of various stripes.

In the aftermath of World War II, the unveiling of "brotherhood and unity" as the mantra of Titoist Yugoslavism dictated that attention be paid to the language that the Serbian and Croatian "brothers" allegedly shared. (Slovenes and Macedonians spoke languages that were not considered kin to Serbian and Croatian.) The Novi Sad Agreement of 1954, negotiated by representatives of the Croatian and Serbian linguistic and literary communities, established an acceptable approach: the language would be referred to as Serbo-Croatian or Croato-Serbian. Serbian and Croatian would be considered variants differentiated by the Croatian use of the *jat* and slightly different grammatical structures, and each variant would be used where appropriate. The language itself was the štokavian dialect of a broader language that included *kajkavian* and *čakavian* (both historically spoken by Croats).

The Novi Sad Agreement fell apart after 1967, when Croatian institutions and individuals protested the fact that in spite of the stipulations of the agreement, the Serbian variant was being used on Croatian soil. Thereafter, there was no official "guidance" on the subject. On the ground, as Yugoslavia collapsed, the situation remained as it had been since World War II: Croats primarily used the *ijekavian* form of štokavian, Serbs primarily used the *ekavian.* Nonetheless, there was plenty of crossover. Since the collapse of Yugoslavia, all of the peoples of the former Yugoslavia have been demonstrating just how powerful state intervention can be in recreating languages (the Croats are most active in this regard, as they have unsystematically been purging their press and educational systems of forms considered to be Serbian).

Today, Serbs speak štokavian in both the ijekavian and ekavian variants.

15–64 years: Serbia, 65.22 percent, and Montenegro, 66.16 percent; 65 years and over: Serbia, 14.83 percent, and Montenegro, 11.79 percent. The growth rates of the populations of the two republics are, for Serbia, 0.739 percent; for Montenegro, 12.22 percent. Their birthrates are, for Serbia, 12.20 births per one thousand inhabitants; Montenegro, 14.9 births per one thousand. Their death rates are, for Serbia, 11.08 deaths per one thousand; for Montenegro, 7.9 deaths per thousand (all 2000 estimates). The Serbian infant mortality rate is 20.13 deaths per thousand live births; the Montenegrin rate is 10.97 deaths per thousand live births. The life expectancy at birth for the total population of Serbia is 72.39 years; for Montenegro it is 75.46 years. For Serbian males, it is 69.31 years; for Serbian females, it is 75.72 years. For Montenegrin males, it is 71.45 years; for Montenegrin females it is 79.82 years (2000 est.)

Serbia encompasses 88,361 square kilometers. Serbia's border totals 2,397 kilometers. It shares borders in the east with Bulgaria, the north and east with Romania, the north with Hungary, the west with Croatia and Bosnia-Hercegovina, the southwest with Albania, and the south with Macedonia. It has a population of 10 million, of whom approximately 20 percent live in Vojvodina and 20 percent in Kosovo, two provinces of the Republic of Serbia. Its largest cities include Belgrade (population 1,602,226), Novi Sad (179,626), Niš (175,391), Kragujevac (147,305), Priština (108,083), Subotica (100,386), Čačak (71,550), Smederevo (63,884), and Leskovac (62,053). In addition, as of July 2001, there were 377,731 registered refugees in Serbia; 63 percent of those were from Croatia, and 36 percent from Bosnia-Hercegovina. Belgrade is the republican and federal capital, Priština is the capital of Kosovo, and Novi Sad is the

Arrival of the post in Cetinje, capital of Montenegro, ca. 1890. (Library of Congress)

capital of Vojvodina; Subotica is also in Vojvodina. The Republic of Serbia (including Vojvodina and Kosovo) is divided into twenty-nine counties.

Serbia's flatlands include the Pannonian Plain, Maćva, the Sava River valley, the Morava River valley, and parts of eastern Serbia. Serbia's mountainous districts are in the central and southern portions of the republic, including Kosovo. The republic is transected or bounded by several rivers: the Danube (588 kilometers), which runs through Vojvodina and divides Vojvodina from Serbia proper; the Zapadna Morava (308 kilometers) and the Južna Morava (295 kilometers) in central Serbia; the Ibar (272 kilometers) in Kosovo; the Drina (220 kilometers), bordering Bosnia; the Sava (206 kilometers), dividing western Serbia from Vojvodina; the Timok (202 kilometers) in eastern Serbia; the Velika Morava (185 kilometers) in central Serbia; the Tisa (168 kilometers) in Vojvodina; the Nišava (151 kilometers); the Tamis (118 kilometers); and the Begej (75 kilometers). Serbia has nine mountain peaks of over 2,400 meters in height: Deravica (2,656 meters), Crni vrh (2,585 meters), Gusam (2,539 meters), Bogdas (2,533 meters), Žuti kamen (2,522 meters), Ljuboten (2,498 meters), Veternik (2,461 meters), Crni krs (2,426 meters), and Hajla (2,403 meters). Serbia's land surface includes 46,746 square kilometers of arable land and 10,065 square kilometers of pasture. Fifty-five percent of Serbia is arable land, and 27 percent is forested. Those figures are further divided as follows: production of cereals, 24,534 square kilometers; meadows, 6,667 square kilometers; reed marshes and pond forage, 4,946 square kilometers; industrial herbs, 3,486 square kilometers; vegetables, 3,005 square kilometers; orchards, 2,569 square kilometers; vineyards, 858 square kilometers; uncultivated land, 647 square kilometers; forests, 869 square kilometers; and nursery gardens, 27 square kilometers. Serbia's railway network totals 3,619 kilometers, while its road network is 42,692 kilometers long (with 24,860 kilometers paved).

The Serbian industrial sector includes mining, the processing industry, the electric power industry, and the production and distribution of petroleum products and water. A breakdown of Serbian industry shows the following distribution: the processing industry (75.18 percent), production and distribution of electric power, petroleum products and water (19.69), ore and stone mining (5.31). Processing includes 23 areas: food and beverages (19.97 percent), tobacco (1.61), textiles (4.11), garment industry (3.00), tanning (1.23), wood industry (0.84), pulp and paper (2.68), printing and reproduction (0.97), production of coke and oil derivatives (1.14), chemicals (9.50), plastics and rubber

(3.63), nonmetal minerals (5.49), basic metals (5.74), metal manufacturing (3.20), machinery (3.11), office supplies (2.41), electronics (2.41), radio, television, and communications equipment (0.31), optical instruments (0.22), motor industry (3.10), transportation (0.76), furniture (0.02), recycling (0.011). There are 696,540 workers employed in industrial and mining companies, comprising 52 percent of the total active labor force in the Republic of Serbia. Small enterprises employ 82,273 workers. There are 146,972 in medium-size enterprises and 457,286 in large enterprises.

Vojvodina's area is 21,506 square kilometers. Its population was 2,013,889, according to the 1991 census, which is approximately 20 percent of Serbia's total population. The largest cities in Vojvodina are Novi Sad (estimated at 179,626 in 2001), Subotica (est. 100,386 in 2001), Zrenjanin (est. 81,316 in 2001), and Pančevo (a suburb of Belgrade, est. 72,793 in 2001). Serbs, with 1,143,723 (57 percent), make up a majority of the population of the province. Non-Serbs include Hungarians (339,491), Croats (74,808), Slovaks (63,545), Montenegrins (44,838), Romanians (38,809), Roma (24,366), Ruthenians (17,652), Macedonians (17,472), and others, including Ukrainians, Albanians, and Slovenians; furthermore, 174,225 people in Vojvodina declared themselves Yugoslavs (in other words, they chose to claim a supranationality rather than a specific one).

Kosovo's area is 10,849 square kilometers. The census of 1991 showed Kosovo with 1,956,196 inhabitants, which is, like Vojvodina, approximately 20 percent of the population of Serbia. Priština, Kosovo's capital, has an estimated 33,305 residents; other cities in Kosovo include Prizren (est. 24,617 in 2001), Kosovska Mitrovica (est. 18,595 in 2001), and Peć (est. 15,926 in 2001). Albanians are the dominant ethnic group, with approximately 90 percent of the population of the province, and (in 1991) 17 percent of the total population of Serbia. In 1991 Serbs (194,190), Muslim Slavs (66,189), Roma (45,745), Montenegrins (20,356), Turks (10,446), Croats (8,062) followed in numbers.

Montenegro's capital is Podgorica, while its cultural and historical center is Cetinje. Its area is 13,812 square kilometers, and its population as of the 1991 census was 650,575. It has 294 kilometers of coastline, and its borders (with Albania, Croatia, and Bosnia) total 614 kilometers. Montenegro is divided into twenty-one counties and has five urban areas: Podgorica (with 117,875 people); Nikšić (56,141), Pljevlja (20,187), Cetinje (15,946), and Kotor (5,620). The highest point in the republic is Mount Durmitor at 2,522 meters, and its biggest lake is Skadar, at 391 square kilometers. Montenegro has several national parks: Durmitor, Lovčen, Biogradska gora, and Lake Skadar. Montenegro has 5,227 kilometers of roads. Major roads total 1,720 kilometers; the rest are local and predominantly unsurfaced. There are 250 kilometers of railroad in the republic, and it has two airports, at Podgorica and Tivat. In Montenegro, five state holidays are celebrated (1 January, 27 April [celebrating the constitution of the Federal Republic of Yugoslavia], 1 May, 13 July [celebrating the uprising in World War II], and 29 November [Republic Day]) and three religious holidays (Christmas, Easter, and Bairam). The mean January temperature is 5 degrees Celsius; July's is 25 degrees Celsius. Montenegro's official currency is the euro.

Forests cover 54 percent of Montenegro's land surface, or 7,200 square miles. In the communist era Montenegro began to industrialize. The steel, aluminum, and energy industries dominated this development, and the building of a transportation infrastructure contributed mightily to industrial growth. Today Montenegro still produces steel, bauxite, glinice, aluminum, sea salt, and coal on a large scale. Montenegro has the capacity to produce 3 billion kilowatt-hours of energy yearly via its hydroelectric plants at Perućica and Piva and its thermoelectric plant at Pljevlja. To this industrial base, Montenegro adds the ability to produce metalworks, machinery, wood products, textiles, chemicals, clothing, and food products. Agriculture in the republic is limited to the production of meat, milk products, and some fruit. Montenegro also produces some highly sought after wines, including the famous Vranac.

Serbia and Montenegro have approximately 333 regularly occurring bird species (214 in Montenegro alone, with 379 recorded in total) and three dozen internationally recognized birding areas. One Serbian birding organization listed the following ten species as good reasons to visit the country: pygmy cormorant, ferruginous duck, great bustard, long-legged buzzard, Saker falcon, Syrian woodpecker, red-rumped swallow, wallcreeper, nutcracker, and black-headed bunting. In Montenegro, Lake Skadar, Ulcinj, and Mount Durmitor are key birding destinations. In Serbia, the Danube River is an important wintering area for wildfowl, including more than twenty species of ducks recorded in the last fourteen years. Other important mountain sites include Uvac and Milesevka Griffon Vulture Sanctuary, Ovčar-Kablar Gorge, Mt. Tara, Mt. Kopaonik, Djerdap (Iron Gates) National Park, Rešava, Sičevo, Jerma Gorge, and the Pčinja River valley; lowland areas of interest include Koviljski, Obedska, Carska Bara, Dubovac Wetland, Bečej Fishpond, Apatin-Monostor Wetlands, and Slano Kopovo. Serbia and Montenegro also are home to over 100 species of fresh-water fish, with 14 subspecies that are endemic to the region, over 150 species of amphibians and reptiles, and 96 mammals. Serbia and Montenegro have 4,300 plant species, over 400 of which are endemic to the region.

HISTORY

MEDIEVAL SERBIA

Serbs first came to the Balkan Peninsula in the seventh century C.E., a century after the Slavic migrations into the region began. The Serbs created numerous small states spotted through modern Hercegovinian, Montenegrin, and southern Serbian territory, with names like Trebinje, Konavli, Zahumlje, and Duklja (later Zeta). By the tenth century, Duklja had consolidated control over the territory that eventually constituted modern Montenegro. Raška, which was the core of the medieval Serbian kingdom that emerged in the twelfth century, split from Duklja in the eleventh century and quickly became the strongest Serbian state in the region.

In 1168 the lands of Raška, which had been divided, were united under the leadership of one man, Stefan Nemanja. The origins of Stefan Nemanja, who emerged as the strongest of four brothers, are unknown. By the time of his abdication in 1196, Zeta (as Duklja had come to be known) had been incorporated into Raška. Upon his abdication, Stefan became an Orthodox monk and moved to Mount Athos, in northern Greece, to join his son Rastko, who had joined the church a few years earlier and taken the name Sava. Together, they convinced the Orthodox patriarchate to approve a Serbian monastery on Athos. This monastery, Hilandar, became the cultural center of Serbia in the medieval period. By 1219, Sava was able to win the grant of an autocephalous Serbian Orthodox Church, which firmly established Serbia as an Orthodox kingdom and gave it a stable cultural identity.

Stefan and Sava thus established the two foundations of modern Serbia: the state itself, which later disappeared from the map of Europe but not from the memory of Serbs, and the faith that ensured the continuity of a Serbian people through the centuries that followed. At its greatest extent, under Stefan Dušan (r. 1331–1355), the Serbian kingdom extended from the Danube and Sava Rivers in the north to the Dalmatian coast in the west, through Epirus, Thessaly, and western Thrace. This kingdom became a powerful element in the fluid relations of the Balkan Peninsula, which included Bosnian, Byzantine, and Hungarian states. When Stefan Dušan died in 1355, however, the Serbian state fell into internal feuding such as had existed before Stefan Nemanja's consolidation of power. Stefan Dušan's son, Stefan Uroš V, lost to the invading Ottoman Empire in the Battle of Maritsa in 1371 and died in the same year, leaving no heirs. Between 1371 and 1389, the remaining Serbian aristocracy declared loyalty to Lazar Hrebeljanović, a Serbian notable, but they could not defeat the Ottomans at the historic Battle of Kosovo on 28 June 1389. Between 1389 and 1459, Serbia continued to exist as a vassal state of the Ottoman sultan. In the latter year, Ottoman armies finally brought Serbian statehood to an end at the Battle of Smederevo. Until the early nineteenth century, Serbia was extinguished as a state.

The Battle of Kosovo has become a key event in Serbian historical memory, thanks to two sources: the Serbian Orthodox Church and Serbian folk tradition. Modern Serbs' memory of the battle is that it was a critical defeat for Serbia, a defeat that spelled the end of medieval Serbian glory and the beginning of a centuries-long period of darkness for the Serbian people. Most historians today, however, agree that Serbia's medieval glory had already passed, that the Battle of Kosovo was neither a battle between Serbs and the Ottomans as such nor a military victory for either side. Memory, therefore, has transformed the event from a battle fought by multinational armies, which ended inconclusively, into an apocalyptic confrontation between good Serbs and evil Turks, which the good Serbs lost. That such a transformation could occur says much about what the Ottoman conquest did and did not bring to the lands of medieval Serbia.

SERBIA UNDER THE OTTOMAN EMPIRE

The Ottoman conquest socially leveled Serbia. The Serbian aristocracy did in fact disappear; Serbian aristocrats converted to Islam, lost their lands and privileges, or were killed. The result was a society consisting of peasants, which is what Serbia remained until the mid-nineteenth century. Thus one-half of the Nemanja dynasty's great achievement of statehood and political and military power disappeared from Europe. The other half, however, did not: Saint Sava's Serbian Orthodox Church remained and, with general though varying success, continued to define the Serbian population culturally. Together with a folk culture that maintained and passed on a historical understanding that was part myth, part reality, the church, ministering to its peasant flock via its peasant clergy, nourished the continued existence of a Serbia not as a state, but as an identity. Thus it was that the portion of the Nemanja inheritance that was lost (power) was defined in historical memory by the portion of that inheritance that remained (the faith). The fact that a continuous memory of "Serbianness" and Serbian medieval power remained throughout the four centuries of "darkness" testifies to just how permeable that darkness really was.

As inhabitants of the Ottoman Empire, Serbs both suffered and benefited. The classic accusation against the Ottomans is that they oppressed and discriminated against those who were not Muslim. There are various ways to evaluate the discrimination that non-Muslims suffered in the empire. One is to note that many Serbs, Bulgars, Albanians, Greeks, Romanians, and other originally non-Muslim people of the Ottoman Empire chose to convert, in which cases they instantly became members of the favored faith and thus part of the ruling class. On the other hand, those who chose not to convert became, by definition, peasants (thanks to the fact that Christians could not own land in the Ottoman Empire). Another is to note that while Orthodox Christian Serbs were subject to taxes and levies that Muslims did not pay, those burdens were balanced by the fact that Christians did not have to fight in Ottoman armies. Finally, the Orthodox Christians of the Ottoman Empire were administered via the millet system, according to which they were governed by their own church hierarchy.

The millet system reflected the Ottoman belief that one's identity is fundamentally religious. Thus, while one had the option to convert to Islam and enjoy the fruits of that conversion, one also had the right to maintain one's faith. Thus, the Ottomans administered their subjects as religious beings, and the Orthodox Church was given responsibility for the Orthodox Christians of the empire. The millet system was established in 1453 as a result of a decree by Sultan Mehmed II. For the Orthodox of the empire, the millet system meant that they were governed by the Orthodox patriarchate and its hierarchy. This hierarchy was not necessarily of the same ethnic group as those it governed: Bulgars, for instance, did not have their own church after 1394, and Serbs only had theirs from 1557 (with the reestablishment of the patriarchate at Peć) to 1766 (when its autonomy was removed as punishment for consorting with the Ottoman enemies Russia and the Habsburg monarchy.

Otherwise, the Orthodox of the Balkans were placed under the authority of the Greek patriarch in Istanbul (Constantinople). But on the local level, where contact between the believer and the church was most common, the parish priest was of the ethnicity of the flock. From the patriarch down to the parish priest, the church was made responsible for marriage, divorce, and the collection of dues to the church as well as the state. The Orthodox Church was one important face of the state for Orthodox subjects of the sultan. The millet system thus ameliorated some of the effects of the Ottoman conquest. Serbian statehood was gone, but a Serbian, Orthodox Christian identity was maintained through what many Serbs see as a dark age, thanks to a system that allowed a degree of self-administration.

Over the course of the Ottoman conquest and in subsequent centuries, many Orthodox Christians migrated northward and westward under the pressure of the Ottoman advance from the south and east. Thus, a large and important Serbian presence was established in the Habsburg monarchy from the fourteenth century onward. Population movements began in earnest after the Battle of Smederevo in 1459, and by 1483, up to two hundred thousand Orthodox Christians had moved into central Slavonia and Srijem (eastern Croatia). In the early sixteenth century Orthodox populations had also been established in western Croatia. Finally, in the 1520s and 1530s, waves of Orthodox immigrants made their way to the region known as Žumberak, which straddles the modern Croatian-Slovenian border. Thereafter, the Orthodox populations were supplemented following further Ottoman conquests, and existing Orthodox populations in Croatia and Hungary shifted with the flow of battles. The final major population shift occurred in the 1690s, following an Austro-Ottoman war, when at least 30,000 Orthodox Serbs, led by Patriarch Arsenije III Crnojević, made their way from Kosovo north to southern Hungary. This "Great Migration of the Serbs" has become legendary, due to its size and to the fact that it signified the end of a Serbian presence in Kosovo. Furthermore, the center of authority in the Serbian Orthodox Church moved with the migrants; the patriarchate at Peć, which was finally extinguished by the Ottomans in 1766, was replaced for all intents and purposes by the metropolitan see of Sremski Karlovci, in Croatia.

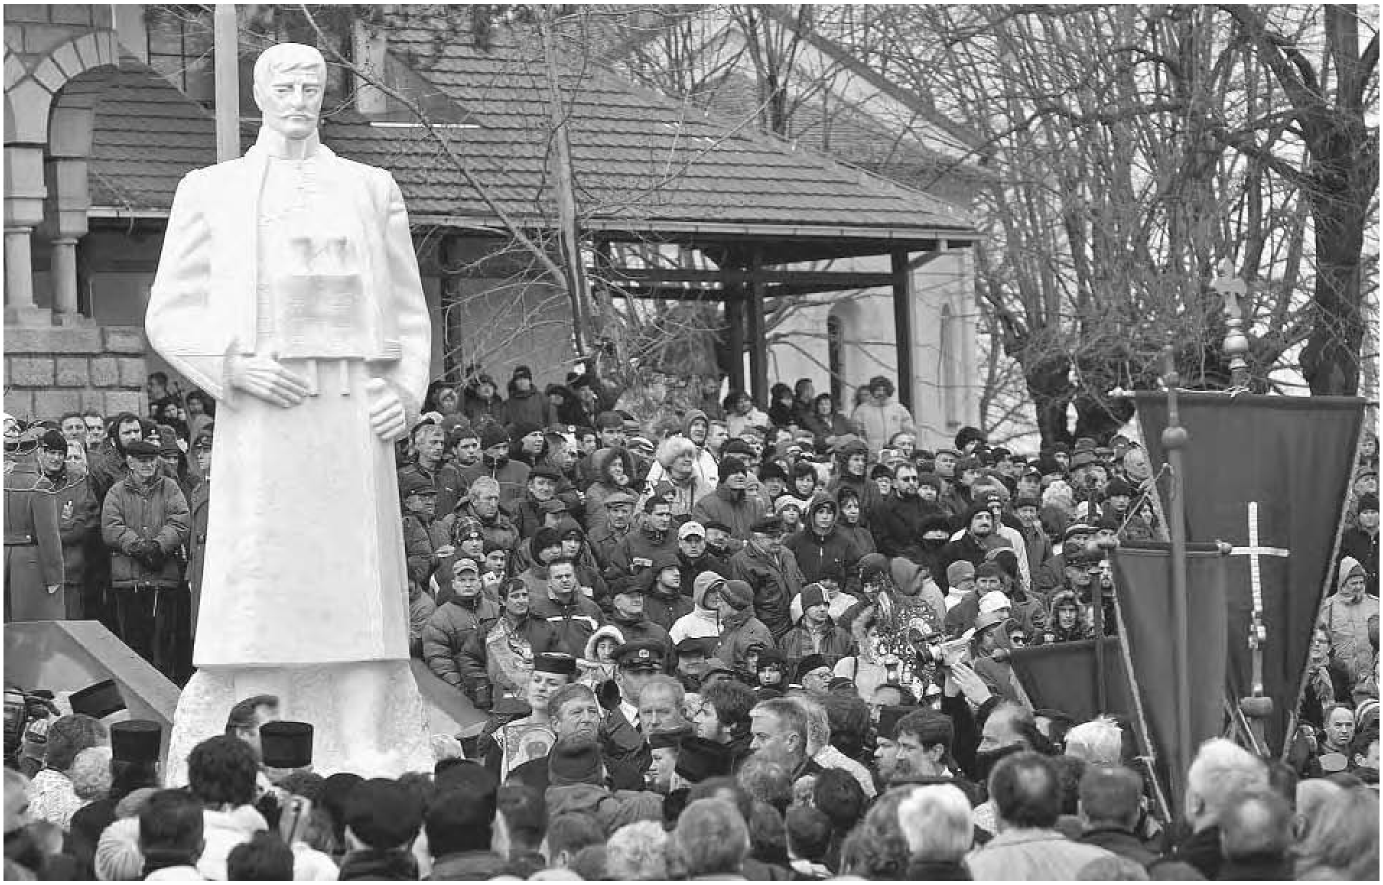
Through the late nineteenth century, two institutions, the military frontier and the metropolitan see, defined Serbian life in the Habsburg monarchy. The military frontier existed until 1881, when it was dismantled because it was no longer militarily necessary. During the centuries of its existence, however, it provided a framework for Serbian existence in the monarchy. The Orthodox Christians who had made their way from Ottoman territories to the Habsburg monarchy were given certain privileges; these tended to include a plot of land, freedom from taxation by the local aristocracy, and freedom of worship, paid for by military service in times of crisis. The most famous agreement of this kind was the Statuta Valachorum, issued in 1630 by Emperor Ferdinand II. Others were issued in the 1690s upon the arrival of the final large group of immigrants; this group of privileges included the right of the Serbian Orthodox Church to work among Serbs. Still other sets of local privileges were negotiated over the centuries. Settlement patterns, with Banija, Kordun, Lika in the west and parts of Slavonia in the east heavily populated by Serbs, were a result of these agreements.

These privileges gave the Serbian community the real sense that they were something apart from the monarchy itself, a corporate body that had negotiated its position vis-à-vis the authorities and could thus negotiate changes. The metropolitan see (the equivalent, in the Serbian Orthodox Church, of an archbishopric), a late arrival in the Habsburg lands, contributed to the sense of uniqueness that their privileges had encouraged among Serbs. The privileges themselves were negotiated by religious authorities, and when the church moved north, it inherited the authority to speak for its Orthodox flock in the Habsburg lands. By the nineteenth century, when political life began to expand under the impress of the ideology of nationalism and the striving for political democracy, Serbs in the monarchy tended to look to the strengthening of their church's position as a strengthening of their own. In other words, they remained wedded to the notion of corporate privilege, even in a time when others began to seek constitutional guarantees for democratic forms of government. The Serbian Orthodox Church offered a different sort of guarantee: its National-Church Congress acted as a pseudo-representative body for the Orthodox of the Habsburg lands and claimed to speak for the Serbs of the monarchy.

THE BIRTH OF MODERN SERBIA

The origins of a modern Serbian state can be traced to the late eighteenth century in the *pašalik* (an area governed by a *paša,* or pasha) of Belgrade. This region, south of the Danube and Sava Rivers and east of the Drina River, became the geographic core of modern Serbia. The first stirrings of rebellion among the Serbs of the region followed the Austro-Ottoman War of 1788–1791, during which Serbs had fought (as they had many times before) for the Habsburg monarchy. After the war, the Austrians, who had lost the war, left the Serbs of the region to their own devices. In spite of the Serbs' disloyalty to the sultan, both the Serbs (who had enjoyed some self-government under the Austrians earlier in the century) and the Ottomans desired peace and stability in the region. However, in the ever weaker Ottoman Empire, the borderlands had come under the sway of local janissaries (at this time only unruly remnants of the highly disciplined soldiers of earlier centuries), and the pašalik of Belgrade was no exception. The sultan and his Serbian subjects had a mutual interest in destroying the destabilizing influence of the janissaries, and the roots of the Serbian independence movement are thus paradoxically to be found in an alliance of local Serbian headmen with the Ottoman central government.

In January and February 1804, fearing a coordinated Serbian uprising, the janissary leaders in Belgrade began to systematically murder Serbian headmen throughout the pašalik. The Serbian uprising that immediately followed was the work of headmen who had escaped their death



Serbs attend the unveiling of a monument to Karadjordje, who was the leader of the first Serbian uprising against the Turks in the year 1804, in Orasac, 100 kilometers south of Belgrade, 15 February 2004. The ceremony was held on the occasion of Sretenje, the Serbian Statehood Day, marking its two hundredth anniversary. (Andrej Isakovi/AFP/Getty Images)

sentences and headed to the hills to resist the janissaries. Serbia at this point had about 400,000 people, 10 percent of whom were Muslim. Under the leadership of Djordje Petrović, known as Karadjordje ("Black George," a headman from western Serbia), the Serbs were able to overcome the warlords' forces by August of 1804 (when they captured and executed the four leading janissaries) and establish themselves as the political power in the region. What had begun as a rebellion with social and economic roots was quickly transformed into a potential national revolutionary movement, as the Serbs began to consolidate their influence in the region and to be tempted to expand their power.

Outsiders were essential to this transformation, as Russia in particular encouraged the Serbian movement as one that could benefit the Russian Empire as it fought in the Napoleonic Wars. Russia assisted the Serbian rebels sporadically through the summer of 1813, when Russia signed the Treaty of Bucharest with the Ottoman Empire, ending their hostilities as Russia made war on Napoleon's France. The Ottomans were then able to crush the Serbs, most of whose leaders fled into the Habsburg monarchy or beyond. In April 1815 those who had not fled, led by Miloš Obrenović (a headman from southwestern Serbia), rebelled anew, with the intent of negotiating a quick agreement allowing self-rule with the Ottoman authorities. Miloš accomplished this task and was able thereafter to incrementally add to his power (and that of a small Serbian principality). Miloš had Karadjordje murdered in 1817, when the latter returned to Serbia in order to attempt to link Serbs to a wider anti-Ottoman uprising.

After 1815, the core of an independent Serbia existed in the form of a tenuously autonomous principality, although that status was not formally bestowed until 1830. Miloš governed this small state as a Turkish paša might have: it was his domain, to be milked for as much personal gain as he could get. In this regard, the difference between Turks and Serbs was minimal, and in fact one could argue that over the centuries, Serbs had adapted to the ways of the Turks quite nicely. Nevertheless, this Serbia also represented the possibility of a revived, modern Serbian state, and even if Miloš tended to be venal, others invested the principality with more national content.

Miloš's actions as absolute ruler of this Serbia were generally self-interested, but they often had beneficial results. For instance, in his desire to clip the wings of rival headmen, he made it easier for peasants to own and prosper on the land. Miloš also welcomed the help of better-educated Serbs, which had the result of encouraging national goals. Both Vuk Karadžić and Dositej Obradović, for instance, worked during and after the revolution to see their vision of a Serbian culture and nation develop, Dositej as Karadjordje's advisor on education, Vuk in various posts in Miloš's bureaucracy. Miloš also welcomed in Habsburg Serbs, better educated and more experienced in modern administration. These outsiders were resented by the Serbs of Šumadija, but they were needed nonetheless.

Miloš ruled absolutely till 1838, when the Ottomans approved a sort of constitution for the pašalik of Belgrade, by which Miloš would govern along with a council of elders. The Turks wished to rein in Miloš; he could not bear the restraint, so he left Serbia in 1839.

With Miloš's departure, the office of prince was given by the council to his son Milan, who died within a month. Then it passed to Miloš's second son, Mihailo, who lasted until 1842, when he was replaced by Aleksandar Karadjordjević, son of the original Karadjordje. Karadjordjević ruled until 1858, when he was replaced by Mihailo Obrenović, in a return engagement that lasted until 1868. Mihailo was assassinated in 1868, to be replaced by his cousin Milan Obrenović, who governed as prince and then king until 1889, when his own son Aleksandar Obrenović took over until his own assassination in 1903. Between 1830 and 1878, Serbia was an autonomous principality of the Ottoman Empire. Several sets of tensions defined its existence in this period: one was the continuing struggle between the notables on the council of elders and the princes, both desirous of gaining more power. Miloš, for instance, was opposed by a council of elders; their competition simply carried on earlier competitions between Karadjordje and his elders. Until the 1860s, the tug of war between prince and notables continued; after that point, politics began to expand to represent, or at least strive to represent, the interests of the ordinary Serb. Another tension came with the importation of political ideas from outside the Balkans, which resulted in pressures for a real constitution and the democratization of political life in Serbia (reflected in the growth of political parties). The third major source of tension was the growth of Serbian nationalism, as well as Yugoslav nationalism, which placed new burdens on the young Serbian government and society.

SERBIA EXPANDS

In an era of nationalism such as that in which the Serbian state emerged, it was inevitable that Serbia would become the focus of expansionist dreams, dreams of Serbs but also of others. Yugoslavism was and remains an intellectual construct. As an active political ideology, it is a product of the nineteenth century, when the concept of the nation first entered the vocabulary of politics. "Yugoslav" means "South Slavic," which is in turn a linguistic category; thus, the Yugoslav idea would bring unity to the speakers of South Slavic languages. Yugoslavism was therefore an alternative identity formulated by intellectuals in order to bypass some of the vexing problems of other national movements that were thriving in the South Slavic regions of the Balkans, primarily Croatian and Serbian nationalism, but potentially also Slovenian, Bulgarian, Montenegrin, and Macedonian movements. In its first modern iteration, Yugoslavism took the form of "Illyrianism," in the Illyrian movement of the Croat Ljudevit Gaj. The Illyrian movement was an early, idealistic attempt to promote the unity of speakers of all of the dialects of Serbo-Croatian. It was also the most welcoming of national movements, as Gaj and his followers argued that the nation (which they called "Illyrian," from the term the Romans used for the region, because that name would help circumvent the competitiveness of Croats and Serbs) should adopt as its language the štokavian dialect of the language, which was not actually spoken by most educated, urban Croats (such as the followers of Gaj themselves), but was spoken by Serbs and a majority of Croats in general. The Illyrian movement was born in 1835 and survived until 1848, but did not succeed on its own terms. It did produce a newspaper, called *Danica* (The Dawn), which was written in the štokavian that it imagined as the new Illyrian tongue. But, in spite of Gaj's attempts to bring harmony to division, division won the day. Serbs, in particular, resented the suggestion that the extant national names (Serb and Croat) be jettisoned; they already had an identity, and it had been nurtured in fire over the Ottoman centuries.

While the Illyrian movement struggled for popularity and recognition, the development of a Serbian state south of the Danube and Sava Rivers continued. The principality had become the center of Serbian national aspirations. Until 1832, when he was expelled from the principality, Vuk Karadžić worked with Miloš Obrenović to nurture the new Serbian state as the core of a future expanded state. Karadžić was an intellectual child of the German philosopher Johann Gottfried Herder, who taught that a common language made a people a nation, and the founders of German philology, the brothers Grimm, and thus placed language at the center of his analysis. For him, as a Serb, then, all speakers of the language he spoke were by definition Serbs. In an article entitled "Serbs All and Everywhere" (1842), he developed this idea, presenting a new definition of Serbianness, which had in the past depended on religion rather than language. But it is easy enough to see what Karadžić's ideas did to the assertions of the Illyrians: metaphorically, Vuk told them that their graciousness was not appreciated; the speakers of štokavian were not Illyrians, they were Serbs. All of this is not meant to imply that national identities rose and fell with the intellectual and political capabilities of their authors; Vuk did not kill the Illyrian movement. Instead, we can say that Vuk's ideas better reflected the opinion of educated and influential Serbs than Gaj's did the opinions of educated and influential Serbs and Croats.

Croats too eventually gravitated to an exclusively Croatian national ideology, associated with Ante Starčević and his Croatian Party of Right. But the Yugoslav idea did not die; instead, it was adopted and nurtured in the 1860s by new forces, led by Bishop Josip Juraj Strossmayer. Strossmayer worked to build ties between Croatia's Croats and Serbs and the principality of Serbia to the south. He envisioned the creation of a large Yugoslav state, perhaps including Bulgaria, probably with its capital in Zagreb. Strossmayer worked with Ilija Garašanin in the late 1860s to create some sort of coalition between Serbia and Croatia.

This was an impractical goal, given the fact that Croatia was not a state at the time.

One Serbian "statement of purpose" regarding expansion and the nature of the Serbian nation has emerged from the period. It is entitled the *Načertanije* (Outline), and it was written by Garašanin, the Serbian minister of the interior, in 1844. One must be careful in assessing the importance of this document, since nobody outside of the Serbian government knew of its existence until 1906, and it is unclear how persuasive it was for any Serbian political figure other than Garašanin himself. It is probably best to consider the *Načertanije* to have been a general statement of aims that most Serbs could agree on regarding the future of the Serbian state. The *Načertanije* envisioned first the liberation of Serbs under Ottoman control in Bosnia; thereafter, Garašanin imagined the liberation of Kosovo and Macedonia. He was leery of antagonizing the Habsburg monarchy, so he described the unification of the Serbs of Croatia and Hungary with Serbia as a distant goal. The *Načertanije* has been the source of much debate over the century since it appeared: was it "Serbian" or "Yugoslav" in its orientation? On balance, however, it appears to have been a statement of Serbian aims: it never mentions unification with non-Serbs and assumes that Kosovo, Bosnia, and Macedonia are all Serbian lands (and, of course, that assertion was and remains absurd).

Garašanin composed the *Načertanije* at a time when Serbs had little interest in combining with other South Slavs. By 1860, however, when Mihailo Obrenović ascended the Serbian throne, the situation had changed. Prince Mihailo was Miloš's son and had grand plans for his Serbian state. His goal was to expel the Ottoman Empire from the Balkan Peninsula and create a large kingdom of South Slavs, including Serbs, Croats, Montenegrins, Macedonians, and Bulgars, and his method would be to bring about a grand alliance of Balkan Christians to fight the Ottomans. Although Garašanin had been Mihailo's political enemy, Mihailo kept him as an advisor after coming to the throne. Thanks to the growth of Yugoslavism in Croatia, Garašanin by 1860 had come to see the potential of cooperation with the Croats, not just as allies (as with the other Balkan Christians) but as Yugoslavs, or members of the same nation.

Thus the 1860s saw a flurry of diplomatic activity initiated by Serbia. In 1860 Mihailo sent Vuk Karadžić to Cetinje to talk about alliance with the Montenegrin prince, Nikola; in the early 1860s he provided assistance to Bulgarian nationalist revolutionaries; in 1861, Garašanin went to Novi Sad to discuss collaboration with the Serbs and Hungarians of the Habsburg monarchy, and later that same year he went to Istanbul to discuss alliance with the Greek ambassador there. The problem generally with Mihailo's plans was that neither Serbia nor its prospective allies were strong enough to defeat the Ottomans. Nonetheless, in 1866 it seemed that the moment might be at hand. The Habsburg monarchy was defeated by Prussia in the Six Weeks War, and the Cretan Uprising forced the Ottomans to abandon their garrisons in Serbia. Garašanin concluded a formal alliance with Montenegro, and he entered negotiations with Strossmayer in Croatia on cooperation with the Croats. It all came to naught, however, when Prince Mihailo was assassinated on 9 June 1868 by opponents of his authoritarian domestic system. With his death, the alliances all dissolved, which was evidence of their tenuousness in the first place. The entire episode reinforced the fact that at this early stage in its modern history, Serbia could do little to liberate its brethren, however defined, without help from one or more of the great powers (Great Britain, France, Germany, Russia, Italy, and the Habsburg monarchy).

Until the Balkan Wars (1912–1913), Serbia required outside assistance, whether intended or not, to expand territorially. Between 1875 and 1878, the so-called Eastern Crisis offered just such assistance. With a modest contribution of its own, Serbia was able to add a bit of territory and achieve independence from the Ottoman Empire. The Eastern Crisis of 1875 began, as did so many other crises, with a peasant uprising, which began in July when Orthodox leaders in Hercegovina rebelled against Ottoman tax collectors. Prince Milan hoped to avoid war, but his people had become deeply involved in a romantic nationalism that would not tolerate inaction when fellow Serbs were rebelling against the Ottomans. The crisis spread to other districts of Bosnia, and the Ottomans stationed an army on Bosnia's border with Serbia. In December the great powers got involved when Austria's foreign minister, Gyula Andrassy, issued a demand that the Ottoman Empire reform its administration in Bosnia. The Russian government wished Serbia to remain out of the crisis, but as in Serbia, the Russian populace had come under the sway of Pan-Slavists (as those were called who looked to unite Slavs under some political or cultural association), who wished to push Russia into war with the Ottoman Empire.

While this complicated situation played out, the Bulgarians rose in rebellion in April of 1876, bringing a brutal Ottoman response. Public opinion in much of Europe became violently anti-Ottoman. In the spring of 1876 Russian general Mikhail G. Cherniaev, a decorated veteran of campaigns in Central Asia, showed up in Belgrade. Cherniaev, in the service of Pan-Slavists in Russia, let the Serbs believe that he represented official Russia; the Serbs fell for his ruse. He was made a citizen of Serbia and sent off to lead Serbia's troops against the Ottomans in a war that began in July 1876.

Serbia's four armies fought horribly, and there was no general Balkan uprising. The end came in November 1876, when Serbia, supported by an ultimatum from Russia, sued for peace. At the same time, the Russian government began to put pressure on the Ottomans, with the threat of war looming. But Serbia had lost its chance at Russian patronage; its war effort had been woeful, and after Russia saved Serbia from annihilation in November, the Serbs made territorial demands on Russia (that Bosnia and the Niš district should go to Serbia in the event of victory against the Turks that were bold enough to insult Russian leaders).

The Russo-Turkish War of 1877–1878 began in June with a Russian attack south across the Danube into Ottoman territory in Bulgaria. It ended in January 1878, with an armistice signed in Edirne. Throughout this war, Russia treated the Serbs as second-rate fighters; Russia now placed Serbian interests below Bulgarian needs. The Treaty of San Stefano, which ended this conflict in March 1878, was a bracing setback to the Serbs, who gained 388 square kilometers of almost meaningless territory around Niš and recognition of independence. This treaty also created an enormous Bulgaria that swallowed nearly half of the Balkan Peninsula. It offended everyone, however, but Russia and Bulgaria, so Russia was forced to submit to a European congress at Berlin, which convened in June and July 1878. Here, Serbia gained another 129 square kilometers of territory, but Bulgaria was partitioned into three separate units. Serbia, Montenegro, and Romania were declared independent states. Perhaps the most important results of the Eastern Crisis of 1875–1878 were that Serbia was now in the Austro-Hungarian sphere of influence, and that Bosnia and Hercegovina were occupied and administered by Austria-Hungary (as the Habsburg monarchy was now known). Serbia now had to proceed without the patronage of Russia, and without the possibility of uniting with its northern and western neighbors, who were part of the now-allied Habsburg monarchy.

Between 1878 and 1903, Serbia found itself in the unlikely position of being an Austro-Hungarian client. Russia, Serbia's Orthodox Christian patron for three-quarters of a century, had chosen to view Bulgaria as its ticket to the straits for one good reason: geographically, Bulgaria was right on the road to Istanbul, whereas Serbia was oriented to the western Balkans. It is true that, for Russia, Bulgaria was an unknown quantity, and the fact that it had been divided into three separate entities at Berlin in 1878 made it more likely to be an unstable client. Nonetheless, Serbia remained uncomfortably in Austria's sphere of influence. The relationship, understood after 1878, was formalized in 1881 with a trade treaty and a secret treaty of the same year. The trade treaty made Serbia a virtual colony of Austria-Hungary and stunted its industrial growth for years. The secret treaty placed Serbia in a completely subordinate position to its northern neighbor. Serbia could not negotiate or conclude a treaty with another state without Austria's permission; in return, Prince Milan could proclaim Serbia a kingdom, and himself king, whenever he wished. He did so in March 1882.

Serbia's political spectrum began to diversify after the Russo-Turkish war and its aftermath. A new Progressive Party, representing younger Serbs, often educated abroad, emerged before the war, and with the support of Prince Milan Obrenović, became the governing party in 1880. More importantly, though, the Radical Party was formed in the mid-1870s. Its original leaders, including Pera Todorović and Nikola Pašić, had been educated abroad and were close to Svetozar Marković's Serbian socialist movement. Eventually moving more to the center of the political spectrum, the Radicals were known for their advocacy of peasant interests and the notion of local self-government, a term that became their slogan and the name of the party newspaper: *Samouprava.* The party's 1881 program called for universal male suffrage, local self-government, free public education, support for Serbian unification, and freedom of the press and association. The party became a virulent critic of the reign of Milan Obrenović and his son Aleksandar, largely because of the corruption of their regimes and their complete failure to further Serbian national interests as the Radicals understood them (the unification of Serbs, in other words).

SERBIA'S GOLDEN AGE

In June 1903 a group of officers in the Serbian army conspired to murder the king and queen of Serbia, Aleksandar Obrenović and his wife Draga. The murders of the king and queen were motivated by two factors: the conspirators' belief that Aleksandar was an incompetent and a patsy of the Austrian government, and thus unable to fulfill Serbian national goals as they understood them; and the belief that the scandalous behavior of Aleksandar and Draga (Belgrade society believed her to be a "woman of ill repute") had rendered them embarrassments to Serbia on the European stage. The murders were carried out with great brutality, the king and queen being shot to death and then hacked into pieces, behavior that actually served temporarily to worsen the reputation of Serbia abroad. But eventually, after Petar (Peter) Karadjordjević, grandson of the original Karadjordje and member of the Obrenovićes' rival dynasty, ascended the Serbian throne with the death of Aleksandar, Serbia's fortunes began to take a turn for the better.

Historians have often termed the period from 1903 to 1914 a sort of golden age for Serbia, as the state more successfully defended Serbian national interests, projected Serbian power on the Balkan Peninsula, and perhaps enjoyed a period of true democracy. On the other hand, it all happened in the shadow of World War I, which was an enormous tragedy for the country. Petar Karadjordjević proved to be an uninvolved ruler; power was in the hands of the Radical Party, which benefited from the change in dynasties and became the most powerful political party in Serbia through the interwar period. Led by Nikola Pašić, the party had been founded in 1881 as an expression of peasant interests. By the end of his career, Pašić had been alternately revered and detested: revered for the expansion of Serbia that occurred on his watch and for his stewardship of Serbia through extremely violent times, detested for his stubbornness and his party's corruption, and his own insensitivity toward non-Serbs in interwar Yugoslavia. In the earlier era, however, Serbia was plagued by the conspirators who had murdered Aleksandar Obrenović and who continued to act as an extra-constitutional force in Serbian politics. In 1911 they formed an organization called Union or Death (colloquially, the Black Hand), which played a critical role in the origins of World War I.

The obstacles facing the Radicals and King Petar after June 1903 were sizable. Serbia's image had been tarnished by the brutality of the murders of royalty, and several of the European courts (most importantly, Great Britain) required a period of waiting before they would recognize the new king. Furthermore, the Karadjordjevićs and the Radicals alike were known to be Russophile, while Serbia under the Obrenovićs had had a special relationship with

Nikola Pašić

Nikola Pašić was born in 1845 in Zaječar, Serbia, and died in Belgrade in 1926. He was one of the original members of the Radical Party in Serbia, which he, Pera Todorović, and Adam Bogosavljević founded in 1880, and which was the dominant party in Serbia and Yugoslavia from 1903 through the Great Depression. Pašić was educated in Belgrade and in Zurich, Switzerland (from 1868 to 1872), where he received his degree in engineering. In Switzerland, he was influenced mightily by the ideas of Mikhail Bakunin, the Russian anarchist. His original circle included Svetozar Marković, who later became the first influential Serbian socialist. When Pašić returned to Serbia in 1873, he took a government job. By 1875, though, he had determined to go into politics. In 1878 he succeeded in being elected to the Skupština (the Serbian legislature). He, Todorović, and others soon (1880) officially formed the Radical Party, which at that point was perhaps not as radical as its leaders' résumés would suggest. In its first program in 1881, the party demanded universal male suffrage, self-government for local communes, the usual press and speech freedoms, a more effective banking system that would make money available locally, a modernized judicial system, and an assertive foreign policy with the unification of Serbs as its goal.

Pašić's glory years were between 1903 and 1918, when he served as prime minister of Serbia and the Radical Party governed essentially unchallenged. By that time, the party's socialist roots were virtually invisible; the party no longer filled its role as representative of the peasant landholder, having shifted its focus to carrying out its aggressive foreign policy. Coming to power on the heels of the assassination of King Aleksandar Obrenović and firmly tied to the Karadjordjević house and King Petar (Peter), the Radicals pursued a policy of the unification of Serbian communities throughout the Balkans and worked closely with Russia. The key events of this era included the so-called Pig War, a customs war with Austria-Hungary that lasted from 1905 to 1911 and served to sever Serbia's close ties with that empire; the two Balkan Wars of 1912 and 1913, which expanded Serbian territory to the south; and finally, Serbia's participation in World War I. All bore the signs of Pašić's uncompromising belief that Serbs should be unified and independent, no matter the cost.

During World War I, in Entente diplomacy and in relations with the Yugoslav Committee in London, the Pašić government steadfastly refused to concede that any other entity than Serbia should be responsible for the unification of the South Slavs. When the new country was formed and its government created between late 1918 and 1921, Pašić and Serbia were able to enforce their will on an extremely disparate variety of opposition forces. For better or for worse, the Kingdom of Serbs, Croats, and Slovenes could rightly be considered Pašić's gift to the South Slav peoples.

The last years of Pašić's life were spent managing his unstable creation. The Radical Party earned a reputation less for its consistent pursuit of Serbian interests (though it certainly continued that pursuit) than for its corruption and unwillingness to adapt to circumstances, which had changed radically since the prewar period. When Pašić died in 1926, the constitutional monarchy that he had helped found was only to last another two years.

the Habsburg monarchy. Petar Karadjordjević was crowned king in September 1904. Austria and Russia were the first to recognize the new situation, given their rivalry for influence in the kingdom. By 1906, relations with Great Britain had been reestablished. However, recognition did not mean stability: in fact, the Austro-Russian rivalry was only heightened after 1903, since Serbia's subservience to Austria had been called into question by the overthrow of the Obrenović line. Serbian attempts to act independently in economic and foreign affairs prompted punitive actions by the Austrian government, which wished to retain its predominance in Belgrade. The so-called Pig War was one result. Provoked by the Serbian government, which negotiated trade and political agreements with Bulgaria in 1904 and 1905 without Austrian consent, the Pig War was a customs war, by which Austria hoped to prove that Serbia could not go it alone internationally (it lasted from 1906 to 1911). But the new Radical government in Serbia wished to demonstrate that it could in fact act without Austrian support. Serbia survived the customs war, but its relationship with Austria was now destroyed (as the Serbian government had intended). Serbia's attachment to Russia and competition with Austria were now assured.

The period between 1908 and 1914 saw Serbia aggressively pursuing perceived national interests. Since the mid-nineteenth century, Serbian governments had considered two likely avenues of expansion: one to the west and north, into Bosnia and perhaps Croatia and Hungary, the other to the south, into Ottoman territories of Macedonia ("South Serbia") and Kosovo ("Old Serbia"). All of those regions were seen by Serbs as Serbian by virtue of their populations

or histories (Bosnian, Croatian, and Hungarian territories were considered Serbian because of their demographics, Macedonia and Kosovo because of their historical ties to Serbian states of the past). The new, confident Radical government, along with an overconfident and overly influential military (parts of which had brought King Petar and the Radicals to power) saw themselves as eventual unifiers of the Serbs. Accordingly, when the Habsburg government announced the unilateral annexation of Bosnia-Hercegovina (as it had come to be known) in October 1908, the Serbian government responded hostilely. Bosnia was populated by a mix of South Slavs: in 1879, 43 percent Orthodox Serbs, 39 percent Muslim Slavs, and 18 percent Catholic Croats. Most Serbs viewed Bosnia as an incontestable Serbian inheritance from the Ottoman Empire. When the Habsburg monarchy annexed the region, a negative Serbian response was inevitable.

Between October 1908 and March 1909, Serbia, joined by its Russian patron (which had its own reasons for hostility to the annexation), threatened war against Austria. After six months of posturing, Russia backed down when Germany issued an ultimatum in support of its Austrian ally. Serbia followed suit. But Serbian anger did not subside, and the attention of the Serbian government only turned away from Bosnia for the time being. Beginning in late 1909, the Pašić government began to court the Bulgarian government, with the goal of creating a military alliance that would push the Ottoman Empire out of Europe. Over the course of the next two and a half years, with the help of local Russian representatives (who were more aggressive than their superiors back home), an alliance was formed of Serbia, Bulgaria, Greece, and Montenegro. This "Balkan Alliance" was intended to provoke war with the Ottomans, defeat the Ottoman Empire, and then divide the territorial spoils. By late summer 1912, the alliance was prepared to go to war. When it did so in October, it took its Russian patron and the rest of Europe by surprise.

The Balkan Wars were accompanied by an outpouring of support for Serbia in Croatia and Bosnia, a reflection of the growth of the popularity of the idea that Serbia should serve as the South Slavic Piedmont (in reference to the role that the Piedmont played in the unification of Italy). Strossmayer's Yugoslavism was a Croatian movement, but the idea of Yugoslavism made advances among the Serbs of the Habsburg monarchy as well. The Serbian National Church Congress spoke for Serbs as members of a church rather than as individuals, and therefore came under fire in the late nineteenth century by Serbs who viewed such an identity as stale and retrograde. In the early twentieth century, powerful opponents of this corporatist inclination had emerged. Two political parties dominated Serbian life in Croatia and Hungary: the Serbian Radical Party and the Serbian Independent Party, the first of which remained loyal to the privileges that had been granted to the Serbs who had migrated into the Habsburg monarchy to escape Ottoman rule, starting in the fifteenth century, whereas the second sought security via a constitutional order within the monarchy. Both were devoted to the security of Serbs as such, although the Independents believed that such security could only be found in agreement rather than competition with Serbs' Croatian neighbors.

The Serbian Independent Party was the more dynamic of the two, thanks to its more modern political ideology and its more aggressive leadership, which included Svetozar Pribičević, who was to lead Croatia's Serbs through the 1930s. Pribičević was responsible for two innovations in Serbian politics within the Habsburg monarchy: he advanced the cause of constitutionalism over the politics of corporate privilege, and he was an adherent of the notion that South Slavs were all members of the same nation (Yugoslavism). His (and his party's) embrace of Yugoslavism breathed life into the concept, whose popularity had waned in Croatia in the last two decades of the nineteenth century. Pribičević and the Serbian Independent Party in Croatia were largely responsible for building the Croato-Serbian Coalition, the most popular political organization in Croatia after 1905.

Until 1903, the notion that Serbia could provide the basis for an independent and unified South Slav state seemed laughable, but in the aftermath of the assassination of Aleksandar and Draga in that year, Serbia's reputation grew among South Slavs outside Serbia itself. The fact that Russia had replaced Austria-Hungary as Serbia's great power patron contributed; Russia could afford to be much more aggressive in Balkan diplomacy than the more conservative Habsburgs, who were wary of taking on new commitments to the south. The fact that Serbia had so valiantly (if futilely) opposed the annexation of Bosnia also brought some luster to the little state. But beyond those reasons, the fact was that Serbian intellectual, cultural, and political life had begun to embrace the glorious goals of the Yugoslav movement. By the time of the Balkan Wars, younger Croats and Serbs were even more militant proponents of the unity of Serbs and Croats. They viewed Serbia as the standard bearer of Yugoslavism, and the Balkan Wars as their wars.

The First Balkan War was a surprising success. Bulgarian armies were able to take Kirk Killisi by October 24 and threaten Istanbul thereafter. The Serbian military defeated the Ottomans at Kumanovo on October 24, and the Montenegrin and Greek armies besieged Skadar and Ionnina, respectively. A problem arose, however, when it came time to determine the fate of the conquered territories. Originally, the Serbs and Bulgars had agreed on a set of territorial dispositions that called for Bulgaria to receive a large portion of Macedonia and Serbia to receive Kosovo, with a contested zone in between whose fate would be decided by Russia. That agreement was wrecked by the fact that the Serbs did not gain access to the Adriatic, which had been envisioned by the original treaty of alliance; at the London Conference, which convened to negotiate an end to the war, the Habsburg monarchy had refused to allow Serbs access to the sea. The Serbs demanded compensation in Macedonia, which the Bulgars rejected. The key region, in Macedonia, had not been assigned to either state in the original treaty, instead being left to Russian mediation.

The result of the disagreement was the Second Balkan War, which began on 29 June 1913, as ally fought ally, meaning in this case all of the allies plus Romania, in for spoils, fighting Bulgaria. Of course Bulgaria lost this unequal struggle, and the result of the Treaty of Bucharest which ended the war was a radically enlarged Serbia and Greece. The territory that Serbia incorporated following the Second Balkan War included Kosovo and modern Macedonia. The demographic structure of these regions was complicated: the Sandžak, Kosovo, and Macedonia were all multiethnic regions. Serbia expanded from 48,300 square kilometers to 87,300; its population rose from 2.9 million to 4.4 million people. For the Serbian government, the annexed territories were a headache, as military and civilian authorities contested the right to administer them. This struggle, which reflected the power of the military in Serbian life and the uncertainty of constitutional authority, was not finished when World War I began, less than a year after the end of the Second Balkan War; historians often consider the two Balkan wars and World War I to be one long conflict, which makes perfect sense from the Serbian perspective.

SERBIA IN WORLD WAR I

The immediate cause of World War I could be found in Serbia, or at least among Serbs: on 28 June 1914, a young Serb named Gavrilo Princip assassinated the heir to the Austro-Hungarian throne, the Archduke Franz Ferdinand, and his wife, Sophie. Princip was one of several young conspirators who were armed in Belgrade by the organization Union or Death in order to carry out the assassination. The conspirators themselves were members of Young Bosnia, a nationalist organization that sought the creation of a Yugoslav state. In the aftermath of the assassination, the Austrian government placed an ultimatum before the Serbian government on 23 July 1914: the ultimatum made ten demands, all but one of which were deemed acceptable by the Serbian government. The rejected demand was that the Serbs allow Austrian investigators to come to Belgrade and examine government documents, which the Serbs deemed too grave a breach of Serbian sovereignty to allow. As a result, the Habsburg monarchy declared war on Serbia on 28 July 1914. This war, between Austria and Serbia, could easily have been foreseen as a result of the assassination. However, the war became a European affair quite quickly, as the Russian government jumped to the defense of Serbia, which brought Germany into the fray as well. France and then Britain followed, and a Balkan conspiracy became an extremely destructive war, in both human terms and for the damage it did to European stability in the long term.

Serbia was at war with Austria-Hungary from 28 July 1914. Most historians would probably agree that, according to the values and the logic of international affairs prevailing in 1914, Austria's war against Serbia was just. The Serbian government did not participate in the planning for the assassination, but members of the officer corps (involved in the organization Union or Death) of the Serbian army did. There is evidence that the Serbian government wished to avoid war in 1914 at all costs. At the very least, though, the crisis revealed that Serbia's constitutional order was unstable, and the persistent violence emanating from Serbia (or the work of Habsburg Serbs) had reached proportions that Austria could not and would not stand any longer.

Serbia disappeared as a state by November 1915, but not before some stunning victories. On 12 August 1914, Austro-Hungarian invaders pushed through Belgrade into northern and western Serbia, but were repulsed at the Battle of Kolubara on 15 December, which drove the Austrians out. In October 1915 the tide changed. Austrian armies were now under the command of the German general August von Mackensen, who attacked Serbia anew on 6 October. On 9 October, Bulgaria also attacked, and the result was a rout. On 28 November, the notorious "flight in winter" of Serbian troops and civilians over the Albanian mountains began; 240,000 Serbs died, while about 200,000 survivors made it to the coast and refuge on the island of Corfu, where the Serbian government set up shop for the duration of the war. From that point, Serbia's focus during the war was to be sure that its Russian, French, and British allies did not forget its sacrifices. This was essentially a diplomatic war, which only occasionally demanded a military effort.

Diplomatically, Serbia was caught between great power allies with agendas of their own, Habsburg South Slavs who were (at best) uncertain about unity with Serbia and a contingent of "Yugoslav" exiles from Croatia, Slovenia, Dalmatia, and Bosnia who united to form a "Yugoslav Committee," whose purpose was to agitate among the British and French for the creation of an independent Yugoslav state. This was a predicament for the Serbian government, which, in the person of Nikola Pašić, attempted to act pragmatically and in the interests of Serbia rather than idealistically and in the interests of a visionary Yugoslavia. Pašić the pragmatist thus reacted to events as the war progressed. Until 1917 (when the United States entered and Russia withdrew from the war), Pašić understood that his Entente allies and protectors (Britain, France, and Russia) had no interest in destroying the Habsburg monarchy; instead, they wished to convince it to sign a separate peace and to sustain it as a force for stability in Central Europe.

In such conditions, the Serbian government could gain little by agitating for the creation of a Yugoslav state; instead, it could and should work, at most, toward the aggrandizement of Serbia. The Serbian government did so in the best tradition of nineteenth-century horse-trading. For instance, the Serbs gained the agreement of the British and French to the eventual annexation of Bosnia and parts of Dalmatia when the Entente was tempting Bulgaria with a promise of Serbian territory, but that deal died with Bulgaria's adherence to the Triple Alliance in 1915. The clearest example of this sort of diplomacy came with the Treaty of London in April of 1915, by which the Entente bought the entry of Italy into the war. The price: much of the Dalmatian coast, the homeland of some of the most idealistic and aggressive "Yugoslavs" among Croats. With no apparent support for the creation of a Yugoslav state, Serbia could comfortably seek limited, Serbian goals: the reestablishment of the Serbia of July 1914 and perhaps some pieces of territory at the expense of the Habsburgs at war's end.

There was always pressure to expand those goals, however, and from mid-1917 forward, more expansive goals made a bit more sense. Nicholas II, the tsar of Russia, always Serbia's best friend, abdicated in March 1917; the United States, with the idealistic Woodrow Wilson as president, entered the war; and, perhaps most importantly, separate peace negotiations with Austria-Hungary were finally broken off, which meant that the Entente could now consider the dismemberment of the monarchy. As early as November 1914, several influential Croats had gathered in Italy to begin agitating for the creation of a Yugoslav state; with the Treaty of London in April 1915, these émigrés began to work as the Yugoslav Committee.

The Yugoslav Committee was headed by Frano Supilo, a dynamic Croat from Rijeka (Fiume) whose Yugoslavism was unquestioned. Other members included Ante Trumbić, a Croat and convinced Yugoslav, Ivan Meštrović, the great sculptor, and other Croats, Slovenes, and Serbs. The committee feared most that the war would end with Italy incorporating South Slavic territory, especially Dalmatia. It operated from a position of great weakness from the outset, since it had no legal standing and the Entente really did not need to satisfy it. It was also not clear whether the committee represented the general opinion of the Habsburg South Slav populations. Nevertheless, with the change in composition of the Entente, and with the end of separate peace negotiations with the Habsburg monarchy, the British and French governments began to consider the Yugoslav Committee a useful tool. Pašić refused to consider the Yugoslav committee an official, legal representative of the Habsburg South Slavs, and in this he exemplified Serbian opinion in general. For Pašić, Serbian interests took precedence over the interests of a committee that represented people in an enemy state, people he knew were to be found fighting loyally for the Habsburgs against Serbia. But, given the attitudes of its allies, Serbia needed to come to some sort of agreement with the committee.

The Corfu Declaration of June 1917 was signed by Ante Trumbić for the committee and Nikola Pašić for the Serbian government. The assumption of the Corfu Declaration was that the Serbs, Croats, and Slovenes were all one people, an assertion that the Serbian government had endorsed as early as December 1914 in the Niš Declaration. The declaration proclaimed the goal of the creation of a Kingdom of Serbs, Croats, and Slovenes under the Karadjordjević dynasty in a constitutional monarchy. The constitution would be promulgated by a constituent assembly to be elected at a later date. The symbols (flags, coats of arms) of each of the three named peoples of the new state would be respected by all; Orthodoxy, Catholicism, and Islam would be equal; the scripts would be equal as well. The various peoples of the state would have "the opportunity to develop their individual energies in autonomous units" (Petrovich 645). So the Corfu Declaration endorsed the creation of a unified state for Serbs, Croats, and Slovenes. It also laid out fairly clearly how that state should be constructed once the war was over. What it could not do was predict the course the war would take; nor could it make the Serbian government (in the person of Pašić) respect the Yugoslav Committee as its legal equal.

Had the war ended without contention, with Habsburg, German, and Bulgarian armies withdrawing from the lands that the Serbs, Croats, and Slovenes considered to be theirs, with a peaceful transition to power by (especially) Croats and Slovenes who wished to form a state with Serbia, the prescriptions of the Corfu Declaration might have been valid. What happened, however, was that the war ended chaotically; not all Croats and Slovenes wished to join Serbia in a Yugoslavia, and the enemies did not withdraw in an orderly fashion. A reconstituted Serbian army fought north through Macedonia via the Salonika front. There were those who did not wish for union with Serbia, and while the enemy was in no position to continue the war, Italy, an Entente ally, attempted to take territory in Dalmatia and Istria that most Croats felt to be Croatian. It was above all the fear of Italy that drove Croatia and Slovenia into the arms of Serbia, the one actor that had the military to defend South Slavic territory from Italy. In November 1918 there were numerous negotiations between various bodies and individuals representing a variety of interests. The most prominent players were the Serbian government of Nikola Pašić; the crown, in the person of Crown Prince Aleksandar; the National Council, which had proclaimed itself sovereign in Croatia and Slovenia; and the Yugoslav Committee, whose position was now in question, given the fact that the war was over.

The most concrete negotiations that took place produced the Geneva Declaration on 9 November; the Serbian government was displeased with this declaration because it placed Serbia in an equal or subordinate position to Habsburg South Slavs. On 1 December 1918, after the National Council in Zagreb, other regional bodies, and the Prince-Regent, Aleksandar, had agreed on terms for unification, the Kingdom of Serbs, Croats, and Slovenes was proclaimed in Belgrade. The act of declaring unity papered over problems that continued to plague the new state throughout its existence. The key difficulty was to determine the relationship of Serbs to Croats, Slovenes, Muslims, and others, as well as the relationship of the various newly unified regions to Belgrade.

INTERWAR SERBIA

The prewar Kingdom of Serbia became the postwar Kingdom of Serbs, Croats, and Slovenes. The monarch (now King Aleksandar, the son of King Petar), the government, the military, the currency, the bureaucracy, all were simply expanded to envelop the territories that were now incorporated with Serbia into the new state. The constitution of the new state, known as the Vidovdan Constitution for the day on which it was approved by the Yugoslav parliament (28 June 1921, St. Vitus's Day, a Serbian holy day), was a centralizing constitution that passed by a bare majority of the representatives in the parliament, many of whom (primarily Stjepan Radić's Croatian Peasant Party representatives) abstained in opposition to the document. Such a document gave some assurance to Serbian interests that they would not be ignored but left many of the other nations of Yugoslavia feeling deeply aggrieved at the outset of the new state's existence. The Vidovdan Constitution was not designed to promote harmony between the disparate nations of the Kingdom of Serbs, Croats, and Slovenes.

From 1921 to 1928, the kingdom was governed as a parliamentary monarchy. Politics in the kingdom was dominated by the Radical Party and Nikola Pašić, but that party, always a plurality but incapable of gaining a majority of seats in the Yugoslav parliament, found it impossible to create stable coalition governments. Pašić tried to collaborate with Svetozar Pribičević, the leader of Croatia's Serbs, and then even with Stjepan Radić, the mercurial head of the Croatian Republican Peasant Party, but in both cases the personalities and the overwhelming administrative and constitutional issues made it impossible to govern coherently. When Stjepan Radić was gunned down in the Yugoslav parliament on 20 June 1928 by Puniša Račić, an otherwise unremarkable Montenegrin deputy, the parliamentary experiment came to an end. Seven months later, King Aleksandar proclaimed a renamed Kingdom of Yugoslavia and abolished the Vidovdan Constitution. Yugoslavia became a royal dictatorship for five years.

King Aleksandar initiated several flashy changes in Yugoslav administration. Aside from changing the name of the state, he also abolished all existing administrative districts and established nine *banovine,* or counties, each named after geographic features, mainly rivers. Of these new banovine, the Drava banovina resembled Slovenia, but the others were largely ahistorical. Serbs inhabited four banovine, and in each they were a majority. To this clear attempt to eliminate historical national consciousness from political discourse in Yugoslavia, Aleksandar added a new constitution in 1931 that had provisions designed to further degrade regional loyalties. Candidates running for the parliament needed to get signatures from voters in each of Yugoslavia's three hundred new electoral districts in order to be on the ballot. In an upper house, or senate, members would be split between royal appointees and those appointed by councils in each banovina. These were creative and perhaps admirable attempts to overcome national rivalries such as that which had resulted in Stjepan Radić's murder, but it was too little, and much too late. By 1934, forces devoted to the destruction of Yugoslavia had grown strong, including the Macedonian revolutionaries in the Internal Macedonian Revolutionary Organization (VMRO) and Croatian nationalists in the Ustaša. The Ustaša, formed in 1929 in Italy under the leadership of Ante Pavelić, became notorious during World War II as the leaders of the Independent State of Croatia. Now, though, in the 1930s the organization was marginal and quite weak, capable only of the occasional outrage. After three years of rather futile attempts to make the new constitution work, Aleksandar was assassinated in Marseilles by a Macedonian gunman in 1934.

In the summer of 1935 a regency headed by Aleksandar's cousin Prince Paul designated Milan Stojadinović to head the government. Stojadinović remained in that position until early 1939, the longest tenure of any interwar Yugoslav prime minister. He was able to maintain power by reaching out to Croats and by putting into effect successful economic policies that relied on trade with Germany. When he fell, it was thanks to an unexpected controversy over a concordat that he negotiated with the Vatican, regulating the Catholic Church's position in Yugoslavia. Opposition from Serbs, led by the Orthodox Church, destroyed Stojadinović's power base and led to his downfall.

By the time of Stojadinović's fall from power, the question of Croatia's place in Yugoslavia had become preeminent. Prince Paul arranged the formation of a government amenable to compromise with the Croats, and the result was the Cvetković-Maček *Sporazum* (Agreement) of 20 August 1939. This agreement gave Croatia autonomy within Yugoslavia, within historical Croatian borders, with some Bosnian territory added. The new Croatian banovina comprised 30 percent of Yugoslavia's territory and included a Serbian minority of nearly 20 percent. This agreement satisfied only Croats, and not all of them. Serbs wondered where their banovina was; Slovenes had the same concern. More extreme Croats demanded that more or all of Bosnia be included in the banovina. The Sporazum was an unstable first step in a solution to the national question in Yugoslavia. Further steps in that solution did not come before World War II broke out a little over a week later.

Yugoslavia remained out of the conflict until the spring of 1941. Prime Minister Cvetković relied on the hope that Germany did not really need Yugoslavia to prosecute its war; nonetheless, by March 1941, the Germans had determined that Yugoslavia must sign on to the Tripartite Pact, which the government did on 25 March. As a result, on 27 March, Serbian military officers led by General Dušan Simović, profoundly angered by an alliance with a traditional Serbian enemy, executed a coup d'état and declared underage Prince Peter the new king of Yugoslavia. As a result, German forces invaded Yugoslavia on 6 April.

SERBIA IN WORLD WAR II

Yugoslavia disintegrated in April 1941, and the parts went in disparate directions. In Serbia, a quisling regime was established; Bosnia and Croatia constituted the Independent State of Croatia, a fascist state whose leadership attempted to kill all of its Jews and Gypsies and kill, convert to Catholicism, or expel all of its Serbs; Macedonia became part of Bulgaria; and Slovenia was split between Italy and Germany. Serbian society was more fragmented than most. Territorially, parts of Serbia, as defined by most Serbs, went to Italian-occupied Albania (Kosovo), Italy (part of Montenegro), Hungary (western Vojvodina), Bulgaria (Macedonia), and the Independent State of Croatia (Serb-populated regions of Croatia and Bosnia). Politically, the destruction of Yugoslavia in April 1941 left several groups of Serbs: Serbians loyal to the government in exile (Prince Peter), who were loosely gathered under the leadership of former Royal Army colonel Dragoljub (Draža) Mihailović, known as Četniks; members of the fascist paramilitary group Zbor, led by Dimitrije Ljotić, whose allegiance was to the puppet Serbian state headed by Milan Nedić; others loyal to Nedić; those who fought with Tito's communist Partisans; and those who chose not to choose sides.

The Serbian experience of World War II was more tragic than that of any other Yugoslav people, but unfortunately there is not enough space available to go deeply into it here. The war in Yugoslavia is best described as a civil war, with three main forces contesting the outcome: the Četniks; the Partisans; and the Ustaša, the insurgent Croatian nationalist force that stood behind the Independent State of Croatia, which in turn consisted of prewar Croatia and Bosnia-Hercegovina. Of course, the German and Italian forces that invaded and occupied various portions of Yugoslavia remained in the country, the Italians until late 1943 and the Germans until the end of the war. But while the invaders provided the excuse for the hostilities, they were rarely the focus.

It would be a mistake to view the Četniks as a unified fighting force, for there were various focal points for the movement, with different leaders and different goals and methods. Nonetheless, there was one acknowledged leader, Draža Mihailović, whose Ravna Gora movement was the best known among Četniks. Mihailović was a standard-issue Serbian nationalist, one who believed that Serbs should have a state of their own and that the interwar Yugoslav state had been a mistake, and who was rabidly anticommunist. Mihailović and his Četniks were, until late 1943, the resistance movement recognized as "official" by the British and Americans, and Mihailović himself was minister of defense in the Yugoslav government in exile. Over the course of the war, his movement came under increasing suspicion of being less interested in resistance than in awaiting the end of the war in good position to take power. Certainly one important reason for this reluctance to fight was the overwhelming retaliations of the Germans. Nevertheless, with the Italian surrender of late 1943, the British and Americans switched their own support to the Partisans, who at least appeared to be more willing to engage the Germans.

The Partisans began their war in late summer 1941, following the German invasion of the Soviet Union, which freed up all European communists to begin open resistance. For the first year or so of the war, the Partisans approached the war as a social revolution, treating "liberated" territories to the full gamut of Stalinist measures. Soon they realized, however, that they could attract more support by shifting the focus of their efforts from social revolution to opposition to nationalism. The Četniks and the Ustaša had alienated or frightened enough Yugoslavs—and especially Serbs—that it became fruitful policy for the members of the Communist Party to position themselves as seekers of "brotherhood and unity" rather than as virulent communists. As such, the Partisans became ever more powerful and popular as the war progressed, at the expense of the national resistance and collaboration movements.

The Ustaša—the third major force that affected Serbs—did so in a negative way, which is to say that they never competed for the hearts and souls of Serbs. Instead, Serbs were the focus of the collective rage of this extremist, fringe Croatian nationalist group, which only had the opportunity to act because its leader, Ante Pavelić, was put in place by the Germans as Croatia's wartime collaborationist leader. The Ustaša was a crudely violent organization, which attempted to rid wartime Croatia of Serbs. They tried all available methods: forced emigration, conversion to Catholicism, and murder, to do so. They murdered Serbs on an individual and a collective basis, by slaughtering the inhabitants of Serbian towns and villages and by creating death camps like that at Jasenovac. They only appealed to Croats, and probably can be credited with making the Partisans a more viable option for Serbs than they otherwise would have been. Ultimately, the Ustaša have been credited with killing anywhere from 10,000 to 1.7 million Serbs (obviously, both these numbers are the absurd extremes). The most reasonable, and generally accepted, estimate is that a total of something less than 500,000 Serbs were killed during the war. The Ustaša are believed to have been responsible for several tens of thousands of those. This was not the Nazi killing machine, but it was nonetheless wholesale and mindless slaughter in the name of a racist variant of Croatian nationalism. It clouded Serbo-Croatian relations thereafter, for obvious reasons.

SERBIA IN TITO'S YUGOSLAVIA

The political configuration of Serbia in the new Yugoslavia was determined by a series of wartime and postwar decisions by the Communist Party of Yugoslavia (Komunistička partija Jugoslavije, KPJ). Serbia, a republic within the federation, had two autonomous units: Vojvodina, a province, and Kosovo and Metohija, a region, of lesser status than Vojvodina. The Party also decided to add to Vojvodina some territory that had belonged to Croatia and to create republics of Montenegro, Bosnia-Hercegovina, and Macedonia, all of which could conceivably have been added to Serbia or partitioned between Serbia and some other federal unit. Serbia was thus one of six Yugoslav republics in a fictitious federal system. The republics were intended as sops to the national feelings of their namesake nations. Only Bosnia did not fit that model, as at that point there was no nation calling itself Bosnian. Bosnia's fate, however, was contested by Serbs and Croats; its establishment as a republic reflected the instrumental nature of Yugoslavia's federal organization, as it was a compromise designed (ironically) to maintain stability in an extremely fractured society. As for the decision to make Kosovo and Metohija, which most Serbs considered a Serbian territory, an autonomous region of the Republic of Serbia, it clearly came at the expense of the Serbian republic, as did the designation of Vojvodina as an autonomous province (slightly higher in status than an autonomous "region"). In both cases, the intent was twofold: to satisfy a national minority (Albanians in Kosovo, Hungarians in Vojvodina) and to weaken Serbia. The Communist Party and then the Tito regime blamed Serbs for the failure of interwar Yugoslavia; keeping Serbia institutionally weak would work against a recurrence of the interwar situation.

Serbs in communist Yugoslavia were dispersed among all of the republics, with especially high concentrations in Croatia and Bosnia-Hercegovina; Montenegro, nationally Montenegrin in the Titoist taxonomy, was nonetheless considered by many Serbs and Montenegrins alike to be a Serbian territory; and many Serbs found it difficult to acquiesce in the existence of a Macedonian republic and nationality (a Titoist construction, since Macedonia had never been a political unit but rather a geographical expression). Furthermore, Vojvodina and Kosovo-Metohija ("Kosmet" for short until 1963, when it was raised from autonomous region status to become the autonomous province of Kosovo) were now separate-from-but-part-of Serbia, which further atomized the Serbian community.

Unitl 1948, Tito and his colleagues governed Yugoslavia repressively, following the Stalinist model. In June 1948, however, Cominform (the Communist Information Bureau, the coordinating body of world communism, controlled of course by the Soviet Union) expelled Yugoslavia from its ranks. Stalin had grown weary of Tito's independence in foreign and domestic affairs, in spite of Tito's absolute adherence to the Stalinist precedent. Stalin's expectation was that the Yugoslav Communist Party would overthrow Tito and his leadership and install a more compliant one. The reverse occurred. In Yugoslavia, Tito and his regime became more popular, and loyalists to the Cominform were purged from the Party. The Tito regime survived under overwhelming pressure (both economic and military). By 1950, it had also begun its highly influential rethinking of Stalinism, which eventually resulted in the formulation of "self-management," a novel approach to the building of socialism by which workers were to control the workplace. Politically, the split with Stalin resulted in Yugoslavia moving closer to the West. In the realm of culture, the rethinking that followed the split with the Cominform resulted in the abandonment of socialist realism and a long period of relative cultural freedom.

The most important problem for the Tito regime remained the national question. New cultural norms were expected by most Serbian intellectual and cultural figures to contribute to the safety of their communities outside of Serbia proper. Titoism had to deal with certain antagonisms: non-Serbs wished to protect their cultures from assimilation, while Serbs wished to protect their diffused population. The combatants in this struggle utilized language drawn from past experience: Slovenes and Croats feared Serbian "centralism," "hegemonism," and the like, while Serbs would eventually discover words like "genocide" to characterize their fears of other nationalities. But Serbian fears were not kindled until the 1960s. During the first two decades of communism, it was the Serbs who engaged in the most substantive discussion of how to generate a new Yugoslav culture, because they needed one.

By 1961, economic performance in Yugoslavia had begun to slow noticeably. For the first time, the LCY (League of Communists of Yugoslavia, as the Yugoslav Communist Party was now called) reexamined the organization of the state, albeit from a purely economic perspective, and Serbia was in the end deeply affected. The debate on economic reform acted as a spur to camouflaged political debate. The conservative position found support among some, but not all, Serbian economists; many Serbian economists nonetheless gravitated to the conservative position out of a sense of national loyalty. Their logic held that centralization protected the Serbs of Yugoslavia, and central planning was integral to the centralized state. The fruits of this ongoing discussion included the 1963 constitution, which initiated a gradual devolution of economic decision-making power from the center to enterprises and local governments. The Eighth Congress of the League of Communists of Yugoslavia, held in December 1964 in Belgrade, placed the Party seal of approval on economic reforms supported by the liberals. The congress cleared the way for reforms of the economy that brought decentralizing political reforms with them. This decentralization came to make many Serbs doubt their own commitment to Yugoslavia and to Titoism.

An incoherent but growing Serbian opposition to Titoism began to be heard after 1966. There were a series of events that influenced and indicated the direction and character of that opposition: the demotion of Aleksandar Ranković in 1966, a language controversy in 1967, the student movement of June 1968, and the rebellion in Kosovo in November 1968. Those events were unrelated, but together they eventually provided the foundations of a relatively coherent Serbian critique of communism in Yugoslavia. That critique focused on Serbia's (and the Serbian people's) unequal position in the state. It argued that Serbs and Serbia, unfairly blamed for the failure of the interwar Yugoslav state and wrongly castigated for their na-

Aleksandar Ranković, Josip Broz "Tito," and Milovan Djilas during the Second World War. (Bettmann/Corbis) tionalist proclivities, had purposely been territorially and culturally divided by the Tito regime. That territorial and cultural division had resulted in the rewarding of the other peoples, republics, and provinces of Yugoslavia, primarily Croatia, Bosnia, Macedonia, Vojvodina, and Kosovo. The reforms of the early 1960s, according to this view, had by their decentralizing tendencies exacerbated the fragmentation of the Serbian community of Yugoslavia.

In July 1966 Aleksandar Ranković, the ethnic Serb who was vice president of Yugoslavia and, until 1964, the head of state security in Yugoslavia (UDBa; uprava državne bezbednosti), was purged from his positions and eventually kicked out of the League of Communists. The first step in this process came on 1 July 1966, when the Fourth Plenum of the Central Committee of the League of Communists of Yugoslavia met on the island of Brioni (a meeting known as the Brioni Plenum). Here Ranković and his recent replacement as head of UDBa, Svetislav Stefanović, were condemned for a limited number of infractions. They boiled down to one critical accusation: that state security answered to only one man on the Central Committee of the League of Communists, Aleksandar Ranković, instead of the committee as a whole. Thus, in the words of Krste Crvenkovski, the Macedonian who chaired the commission, "Comrade Aleksandar Ranković became synonymous with the Central Committee" (Kesar and Simić 59).

The Central Committee of the League of Communists of Serbia (CC LCS) set up its own commission to examine the evidence regarding UDBa a few days after Brioni; it presented its report on 5 September 1966 to the Central Committee; the Sixth Plenum of the CC LCS met on 14 and 15 September to hear the results. The League of Communists of Serbia moved beyond the limits set at Brioni, which had only asserted that under Ranković and Stefanović UDBa had abused its power. At the Sixth Plenum, a report of the Regional Committee of the League of Communists of Kosovo and Metohija was entered into the record. This report concluded that the security services in Kosovo actively persecuted those of Albanian nationality: "The ideological foundation of such policy under the competence of Serbia is nationalism and chauvinism" (Kesar and Simić, 92). Other than those accusations related to Kosovo, the Serbian conclusions mirrored the Yugoslav version. For a growing number of Serbs, however, the removal of Ranković came to be interpreted (especially after 1974) as an example of the latent anti-Serbianism of those in power in Yugoslavia; any Serbs who acquiesced in Ranković's removal were, from this point of view, traitors to Serbia.

If Ranković's dismissal betrayed the fact that the foundations of Titoism were changing on the party and state level, on the cultural plane Titoism's midlife crisis could be felt as well. In particular, a brouhaha regarding the nature of the Serbian and Croatian languages went public in the spring of 1967. The "Declaration on the Name and Position of the Croatian Literary Language" (*Deklaracija o nazivu i položaju hrvatskoga književnog jezika,* henceforth "the Declaration") was issued by nineteen Croatian institutions and signed by 130 people (80 of them Party members, including Miroslav Krleža, Croatia's leading writer) on 15 March 1967, and sent to the federal parliament as a petition on the same day. The Declaration made two demands of the federal government. First, in place of the usual formulation that held that in Yugoslavia there were three official literary languages ("Serbo-Croatian or Croato-Serbian," to give it its full name, Slovenian, and Macedonian), the constitution should be amended to read that there were four: Serbian, Croatian, Slovenian, and Macedonian. Second, the Declaration demanded "the consistent use of the Croatian literary language in the schools, the press, the public and political forums, on radio and the television networks whenever the broadcasts are directed to a Croatian audience." Furthermore, "officials, teachers, and public workers, irrespective of their origin, should use in their official dealings the language of the milieu in which they live." This amounted to a unilateral revocation of the Novi Sad Agreement (1954), which had given the language a name, "Serbo-Croatian or [*odnosno*] Croato-Serbian," which was designated one language "with two pronunciations, *ijekavian* and *ekavian*" (Spalatin 6–9).

The response of the League of Communists was straightforward: it proclaimed the Declaration an attempt to destroy the brotherhood and unity of the Serbs and Croats. The Declaration, however, also moved many of Serbia's leading literary lights to action. The "Proposal for Consideration" (*Predlog za razmišljanje,* henceforth "the Proposal"), drawn up during a meeting of the Serbian Writers' Association, remains somewhat mysterious, largely because it was unofficial and less widely disseminated. Of some 300 writers present at the meeting of the Serbian Writers' Association on 19 March when the Proposal was presented, 42 apparently signed (the authors were known as "a group of writers"). Of these, 21 were members of the League of Communists. The group characterized the Declaration as a "significant and epoch-making document." It also concurred that the institutions that issued the Declaration were "competent ones in matters pertaining to the Croatian literary language"; these Serbs therefore declared the Novi Sad Agreement void (Spalatin 6–9).

The Proposal responded to the assertion that the Croatian language should become official on the territory of the Socialist Republic of Croatia—in other words, the linkage of a national attribute to a piece of land. The tit-for-tat Serbian response hinted that the equation of nations with territory could establish a messy precedent. "Our Constitution guarantees to all our nationalities and minorities the right to an independent development of language and culture." Thus they demanded that the constitutions of the Socialist Republic of Serbia and the Socialist Republic of Croatia add regulations guaranteeing to all Croatians and Serbs:

> the right to a scholastic education in their own languages and scripts according to their national programs, the right to use their national languages and scripts in their dealings with all authorities, the right to found their cultural societies, local museums, publishing houses and newspapers, in short, the right to cultivate unobstructedly and freely all aspects of their national culture. (Spalatin 6–9)

The group thus argued that if Croats wished to equate language with territory, Serbs would do the same, which would result in their linguistic secession from the Croatian republic. Never mind that the Serbs of Croatia largely used the same officially designated "literary language" *(ijekavian)* as the Croats; all Croats and all Serbs, after all, spoke what amounted to the same language (štokavian). The point that the "group of writers" wished to make was that once national rights were linked with territory in this Yugoslavia, the logic of secession (whether geopolitical or cultural) would leave the state a tattered patchwork of national sectors, or as they came to be called in actual practice twenty-five years later, cantons. Under growing evidence that the noble Yugoslav dream was being allowed to wither on the vine, many Serbs began a great withdrawal, from a form of Yugoslavism to a frantic attempt to rescue that which was Serbian from the wreckage.

To this day, a small but influential segment of the Serbian intellectual community remains convinced that the student demonstrations of 1968 were the last great chance for Yugoslav communism to fulfill its promise. The student movement began innocuously on the night of 2 June 1968, at around ten o'clock, when a number of students living in dormitories in New Belgrade tried to crash a concert put on for the benefit of a local workers' brigade. Members of the brigade fought with the party crashers, and the police were called in. The police separated the two groups, but the disturbance had already brought more students into the streets, where they milled peacefully if edgily. Shouting "Jobs for All," "Workers-Students," and "Tito-Party," students made their way to an underpass near the building housing the Federal Executive Council, where they came upon a cordon of riot police, who allegedly stoned and shot at them.

The nature of the student movement changed during the day on 3 June. Two factors propelled the movement forward: the behavior of the police, which was more brutal than the occasion had demanded, and the writing of the press, which gave the impression that the students were nothing more than a self-interested rabble. From a fairly unfocused series of protests and clashes with the police in the vicinity of the underpass, the students were able to pull together a more coherent and organized movement centered on the university buildings downtown. Students, under leaders drawn from the League of Students of Belgrade University, occupied the Law, Philosophy, and Philology Faculties, the Academy of Fine Arts, and other buildings and created "Action Committees," which coordinated the protests. Here, in the occupied university buildings, a disorganized series of demonstrations was transformed into a sophisticated protest against changes in the nature of Yugoslav socialism under the pressure of the economic reforms that had begun in 1963.

One of the first "resolutions" of the student movement appeared on 3 June in the student village in New Belgrade, signed by the "Action Committee of the Demonstrators." Its demands included a call for the government to work against corruption and the enrichment of the "red bourgeoisie," the demand that the student body of universities reflect the social structure of the country, and demands for the freedom to meet and demonstrate, the democratization of political and social organizations (including the League of Communists), and better material support for universities in Yugoslavia. The slogans that the students used included "We Fight for a Better Man, Not a Better Dinar," "The Revolution Is Not Yet Finished," "Against Enrichment at the Expense of the Worker," "We've Had Enough of the Red Bourgeoisie," "Self-Management From Bottom to Top," "Tell a Bureaucrat That He Is Incapable, and He Will Show You Just What He Is Capable Of" (Arsić and Marković, 86). On balance, if we can accept slogans chanted and displayed as reflecting ideology, the students were at least as upset by corruption in the Party as they were by their own lack of jobs.

On Belgrade television on 9 June, Tito gave a speech that brought the student movement to an end, to the initial joy but eventual chagrin of many of its participants. Tito was masterful and apologetic. The Presidency and the Executive Committee of the Central Committee of the League of Communists had been meeting since March, he said, to deal with the problems facing the state. Just as they were about to make public their responses, the student demonstrations broke out. "That was our mistake" (Arsić and Marković 117–122). They had met that very day to consider the student movement, and according to Tito, they agreed that there were problems to be addressed in Yugoslavia, especially relating to the "enrichment" of undeserving people. In the most famous portion of his speech, Tito paid homage to that portion of the student demonstrators who had acted out of the most loyal and consistent motives: "Thus I must say here today that I am happy that we have such a working class. And I can also say that I am happy that we have such a youth, which has proved itself mature. . . . Our youth is good, but we need to pay more attention to it" (Arsić and Marković 117–122). Tito's speech was greeted by the students as an affirmation of their position. A week later, the Central Committee of the LCY met to approve its "Guidelines," which amounted to a further acknowledgment of the failure of the League to adequately address issues of concern to the students.

The student movement did not occur in a vacuum: there were good reasons for the students' discontent. They were influenced by critical thinkers within Yugoslavia, and they had examples to follow. Problems with the universities were well publicized before the movement began, and they went beyond the question of employment into the realm of ideology. For instance, enrollment at Belgrade University grew between 1960 and 1965, but the percentage of students with stipends fell from 25.5 to 14.2. Furthermore, the percentage of working class and peasant children in the university fell from 15.1 to 12.4 between 1962 and 1967. The satirical magazine *Jež* constantly harped on the problems of unemployment, the development of a "red bourgeoisie," and the university. Indeed, it would have been a real dereliction of duty had the central committee and the presidency *not* been discussing these problems before the student movement began. Furthermore, critical thought about the nature of self-management and Yugoslavia's path to a socialist future had erupted in the mid-1960s in response to reform plans formulated on the party level. The so-called Praxis group had made it their business to attack corruptions in the real world of the Yugoslav administration and the economy, including the emergence of a new class of privileged communists and the persistence of Stalinist forms of authoritarianism in Yugoslavia.

March 1968 saw student demonstrations in Poland; the spring and summer of 1968 witnessed the Prague Spring and the short-lived period of openness in Czechoslovakia; and, finally, May 1968 saw the grandest student rebellion of that summer, in France, where millions of workers and students went on strike, entire factories and even one city were turned into workers' communes, small children struck their classes at school, the Left Bank burned, and revolution seemed a real possibility. The student rebellion of 1968 in Belgrade achieved nothing; perhaps, however, it was yet another example of the distance that was growing between the regime and the people of Serbia.

Finally, the tumultuous sixties were capped by events relating to Kosovo. In May 1968 Dobrica Ćosić, the most famous living novelist in Serbia, as well as an important nationalist leader, gave a speech to the Central Committee of the Serbian League of Communists that blasted the League for its treatment of Kosovo and Vojvodina. To be precise, he warned that the new order in Yugoslavia—the move to more substantive federalization, christened in Ćosić's view by the fall of Ranković—offered too prominent a place to the Albanians of Kosovo and the non-Serbs of Vojvodina. For Ćosić, these were fundamentally Serbian territories, in which national minorities lived by the grace of Serbs. The Tito regime, however, was allowing, even encouraging, these two autonomous provinces of Serbia to become more autonomous than ever. Serbs were being removed from important positions in the two provinces, and local minorities were taking control. For Ćosić, this portended not merely the end of Serbia as a republic, but the eventual ruin of Yugoslavia as a state. The Serbian League

Dobrica Ćosić. (Emil Vas/Archive Photos/Reuters) of Communists distanced itself quickly from the sentiments found in Ćosić's speech, because it was obvious that they were hostile to the direction that the Tito regime had taken. Ćosić was labeled a nationalist for his efforts. However, we need to understand that although Ćosić clearly was and remains a Serbian nationalist, the sentiments he expressed in his speech were relatively moderate and, most importantly, shared by many Serbs. When, in November 1968, an Albanian rebellion took place in Kosovo, Ćosić's warnings seemed timely indeed to many Serbs. The problem of the Serbs' attitude toward Kosovo would have to be addressed constructively if stability were to be maintained in Yugoslavia.

The events of the 1960s—from the beginnings of reform, through the fall of Ranković, the language crisis, the student rebellion, and the rebellion in Kosovo—resulted in the beginnings of a consensus that Serbia was consciously, purposely, being mistreated in Tito's Yugoslavia. Each of those events awakened a different opposition constituency, two of which eventually emerged clearly. One was nationalist, and built on the perceived threat of Croatian and Albanian nationalism and the sense that Tito encouraged those movements; the other was socialist, and was founded on the belief that Titoism had parted from its own stated goals and from a pure Marxism. The former strand of opposition coalesced around Ćosić and other outsiders to the Party. The latter was embodied in the Praxis group, named for the journal that it founded, in which it expressed its critique of Titoism.

In light of the events of the late 1960s, the Serbian League of Communists entered a tempestuous phase. In the aftermath of the student demonstrations, Tito is reported to have exclaimed that "all of them should go," referring to the leaders of the Serbian Party. With the ascent of Marko Nikezić and Latinka Perović to the top of the Serbian Party hierarchy, the era of the so-called liberals in Serbian politics commenced. Until 1968, Nikezić had devoted most of his public life to diplomacy, having served as ambassador to Egypt, Czechoslovakia, and the United States, and as the minister of foreign affairs in Yugoslavia. Perović had risen through the Party ranks as a member of the presidency of the Yugoslav Youth organization and of the Ideological Commission of the LCY. Together, they attempted to fundamentally alter the way politics was done in Serbia and Yugoslavia. The liberals have become the objects of a Serbian cult of "what might have been." They are credited with having tried to modernize the Serbian Party, with having been the best and the brightest of their generation, and with having been the tragic victims of Tito's jealous desire to remain the single arbiter in Yugoslav political life. Nikezić later identified five principles that guided them: a market economy, a modern Serbia, freeing Serbia from the "ballast of Serbian Yugoslavism," creating capable and expert cadres, and cooperation rather than confrontation with other republics.

Unfortunately for Nikezić and his colleagues, their arrival came at an inopportune time—not only were the student demonstrations fresh in the minds of Serbs and of Tito, but the Croatian mass movement was gaining momentum, and an Albanian national rebellion broke out in Kosovo on the third day after Nikezić and Perović were installed. Aside from those tangible crises, it also appears in hindsight that Tito was in the process of concluding that the Party needed to reassert control of political life in Yugoslavia, undoubtedly under the impress of those same events. And finally, while the liberals attempted to navigate those events and put their stamp on a new, economically sound communism in Serbia, a non-Party Serbian opposition to Titoism began to be heard, with Dobrica Ćosić as its alleged leader (although this opposition was not a coherent or consistent one). All in all, it is difficult to say whether Serbia lost a historic opportunity when the liberals fell, because Nikezić and Perović had little chance to pursue coherent policies aggressively.

They resigned their positions in November 1972, eleven months after the Croatian leadership of Savka Dabčević-Kučar, Mika Tripalo, and Pero Pirker, who fell from power in December 1971 when the Croatian Spring movement, which they had embraced, got out of hand. The comparison with the Croatian situation disturbed Serbs: Croatian Party leaders embraced a nationalist, in the end even separatist, movement; Serbian Party leaders wished to modernize Serbia and Yugoslavia, were not nationalists *or* centralists, yet lost their positions as well. The liberals could not overcome the complexity of their position; unlike Dabčević-Kučar and Tripalo, who are still revered by Croats for their efforts, the liberals were loved neither by Tito nor Serbs in general. Mijalko Todorović, a former Partisan who was an integral part of the liberal group in Serbia after the fall of Ranković in 1966, believed that the liberals "did not have enough support in Serbia itself, i.e., that they did not express the majority mood" (Inić 166). Instead, they were caught between two forces: Tito and a Serbian intelligentsia that was growing more and more restive.

When, in 1974, a new constitution was unveiled for Yugoslavia, the political and administrative changes initiated in the early 1960s reached their logical conclusion. The constitution institutionalized all of the changes that had prompted the antagonism of many Serbs from the mid-1960s through the early 1970s: republics gained initiative, while the central government in Belgrade became virtually powerless, and the autonomous provinces of Serbia achieved something akin to the status of republics, which, given the enhancement of republican status, was a double blow to those who feared the administrative parcelization of Serbia. Beyond those geopolitical structural changes, the widely held Serbian position on the constitution of 1974 is that it made centralized decision making virtually impossible, because in the federal parliament republican and provincial delegations voted as one, and any given delegation could veto legislation. Those republican and provincial delegations were elected by their own leagues of communists. Of particular concern to Serbs was the fact that the autonomous provinces were equal actors in this drama; beyond that, of course, the political will of the Serbs of Bosnia and Croatia was subsumed by the leaders of those republics. Because those leaderships had been purged in 1971/1972 by Tito, the republican delegations that were empowered by the

1974 constitution consisted of nonentities. Because the new constitution put a premium on the republic, or province, as the source of authority in the federation, and because both the Serbian and Croatian Leagues of Communists had been thoroughly purged of experienced, somewhat independent, competent people before the constitution was proclaimed, the space available to intellectuals to influence affairs in Yugoslavia had become as small as it had ever been.

SERBIA AFTER TITO

In April 1980 Tito died. Initially, it appeared that little had changed. Yugoslavs mourned the loss of their leader, who had sustained a cult of personality throughout his period in power, but the government did its best to act as though he still lived. "After Tito—Tito!" became the operative political slogan in Yugoslavia. The rotating presidency, established in 1970, now consisted of nine people, each of whom would act as president for a one-year term, beginning in the month of May. These people were not authoritative figures in Yugoslavia; they owed their positions to the system, which in turn owed its existence to Tito. Thus "After Tito—Tito" symbolized the death of initiative and creativity in a Yugoslavia that faced many obstacles upon the leader's passing. Serbia and Slovenia became the two primary centers of change in post-Titoist Yugoslavia, as each in its own way sought an escape from the zombie-like insistence that Tito had not really died; he lived on, in the system that he created.

In Serbia, the push for reform in Yugoslavia came from intellectuals, not from within the Party. Openness became one of the issues that galvanized a Serbian opposition to Titoism after the president's death. The post-Tito period in Yugoslavia could be dated from October of 1980 and the failed attempt to create a new "independent socialist" journal, to be entitled *Javnost* (The Public), after a journal founded by Svetozar Marković a century before. Dobrica Ćosić and Ljubomir Tadić, in the name of a committee of nine, appealed to 410 intellectuals across Yugoslavia to support such a journal. They claimed to have received 120 positive responses, with only 4 outright nays. In suitably vague language, the letter addressed the problem of responsibility and succession in Yugoslavia, so compromised by Tito's egoistic establishment of a weak rotating presidency and Party leadership. The government refused *Javnost*'s application to publish in November 1980.

The cause of openness gained strength in March 1981, when protests about bad food at the University of Priština grew over the course of several weeks into demonstrations of Albanians demanding that Kosovo be granted republic status by the Yugoslav government. Some demonstrators demanded union with Albania. By April the demonstrations had encompassed many cities and towns in Kosovo. On 2 April, the federal government declared a state of emergency, and the Yugoslav People's Army took to the streets of major cities, crushing the uprising. The army killed Albanians, although there is no number that all sources can accept (the government claimed, incredibly, that only nine demonstrators and one policeman were killed). The government lifted the state of emergency in July, but the political reckoning had only just begun. Immediately, over 1,000 Party members were expelled, and the Kosovo Party president, Mahmut Bakalli, lost his position. About 350 Albanians were immediately fired from their jobs (about half as educators). One credible estimate holds that over 4,000 Albanians were arrested and jailed in the aftermath of the demonstrations. In response, in November 1981 the LCY issued its "Political Platform for Action of the LCS in the Development of Socialistic Self-Mananagement, Brotherhood and Unity, and Togetherness in Kosovo." Then, in December 1981, the Central Committee of the Serbian League of Communists met to summarize the lessons of the demonstrations and propose measures to control the situation in the future. These meetings revealed, to the shock of many Serbs, that the demonstrations were no surprise to the Kosovo Party leadership and probably should not have been a surprise to those outside of Kosovo.

The cause of openness was served by revelations about Kosovo, but it was also served by the multitude of examples of the government crushing artistic freedom. *Javnost* had failed to get off the ground, but another underground initiative had an impact. The Committee for the Protection of Artistic Freedom (CPAF) was formed on 19 May 1982 at a meeting of the Belgrade section of the Serbian Writers' Association, at the urging of Dragoslav Mihailović, a survivor of Goli Otok and author of *When the Pumpkins Blossomed, Petra's Wreath,* and other novels. The most pressing reason for its formation was that a Serbian poet named Gojko Djogo had been arrested and was being tried for a crime against the state as the result of a book of poems that attacked the Titoist personality cult (the book was entitled *Woolen Times*). The committee's members included Desanka Maksimović, Borislav Mihajlović Mihiz, Stevan Raićković, Predrag Palavestra, Milovan Danojlić, Raša Livada, and Biljana Jovanović. The CPAF drafted an outline of its goals at its meeting of 20 September 1982. That draft included the following points: the CPAF would (a) nurture the protection of artistic freedom; (b) help expand support for artistic freedom in society; and (c) take it upon itself to inform the public when artistic freedom was violated. The committee also agreed that its votes would be taken by simple majority (although Mihiz later stated that every communiqué issued by the committee was supported unanimously).

By early 1983, the CPAF had issued several protests, addressing all of the known offenses against artistic and literary production to that point, including the cancellation of Jovan Radulović's play *Golubnjaći* (Pigeon Hole) and attacks on several notable books: Dobrica Ćosić's *Stvarno i moguće* (The Real and the Possible), Antonije Isaković's *Tren II* (Flash II), and Vuk Drašković's *Nož* (The Knife). On 28 March 1983, Gojko Djogo left for prison to serve a reduced one-year sentence. That night, the Serbian Writers' Association (UKS) held its first "protest Monday," as they would come to be called. Forty writers came to the UKS that night, including Ćosić and Mihiz (neither of whom was then a member). Other meetings followed, on 11 April, 18 April, and 25 April. Francuska 7 (the address of the Serbian Writers' Association) became from that point a symbol of democratic renewal in Serbia. The nature of that renewal changed over time, but in 1983 there can be little doubt that the Serbian Writers' Association was the single institution in Serbia that had decided, collectively, to attempt to come to grips with the country's subservient past.

They challenged Tito's legacy in some ways, but not others. Djogo's poetry clearly criticized Tito ("the rat from Dedinje"), but Djogo and his supporters argued that he had been misinterpreted, claiming that poetry cannot be understood literally—it has multiple meanings *(višeznačnost).* Why did they not just acknowledge the truth and send Djogo off to prison as a martyr to a petty regime? Apparently, they believed that the *višeznačnost* argument had more potential for universal application. From the freedom of speech "flows all political freedoms," as Mihiz put it in 1991 (Krivokapić). The regime's opponents believed more good could be accomplished by arguing that the government should simply stay away from artistic speech than by creating a one-time martyr. Unfortunately, however, the free speech movement defended the right to speech, but it did not successfully establish the necessity of criticizing that speech. The result was that Serbian intellectuals discovered the euphoria of speaking truth to power but paid no attention to the ideas contained in the free speech they defended. Serbian questioning of Tito's legacy and the nature of Yugoslav statehood went deeper than that of other Yugoslavs. Ironically, while the Serbian republican government persecuted Gojko Djogo, it also harbored the most revisionist members of any republic's communist hierarchy. Most importantly, the Serbian League of Communists, whose leaders included Dragoslav (Draža) Marković, Petar Stambolić, and Ivan Stambolić, wished, as did most aware Serbs, to revise the constitutional status of Kosovo and Vojvodina. But the glazed eyes and the droning rhetoric of the Serbian leadership's mediocrities ultimately failed to inspire confidence, and as survivors of the 1972 purge and proponents of the 1974 constitution, their credibility was shot in any case.

By 1984, the Yugoslav government's dedication to its own pathetic slogan, "After Tito—Tito," had prompted it to extremes of petty harassment and persecution. While the Party shrank in fear of action that might disrupt the stagnant equilibrium following Tito's death, intellectuals embraced the opportunity to shake up that equilibrium. The jailing of Djogo, the cancellation of two plays (*Golubnjača* and *Karamazovi* [The Karamazovs]), various less publicized abuses—all betrayed a frightened government that attempted to maintain the Yugoslavia that existed when Tito died. In 1983 and 1984, though, the sheer number of arrests, trials, imprisonments, and proscriptions drove the free-speech movement to a new, more open stage in its development, out of the UKS and into society at large, as it were. But, importantly, that movement remained chained to the UKS strategy of defending speech per se, without critiquing the content of that speech.

Then, in April 1984, Dr. Vojislav Šešelj, a lawyer from Sarajevo, was arrested in Sarajevo, and twenty-eight people, including Milovan Djilas, were arrested in Belgrade. Šešelj's crime was to have written a contribution to a poll in the Party organ *Komunist* on the subject "What Is to Be Done?" That contribution was confiscated, and Šešelj was arrested before the piece could be published. The twenty-eight people arrested in Belgrade were accused of engaging in enemy propaganda over a period of seven years as part of the "flying university," an underground institution that saw different apartments hosting lectures on various topics, it goes without saying subversive ones, on a regular basis. Djilas was far and away the most notable catch in this sweep. After the initial arrests, all were set free. But then, on 30 April 1984, several days after his release, Radomir Radović, one of the original twenty-eight, was found dead in his apartment. Understandable suspicions that Radović had been killed by the police fed public outrage. On 23 May, six of the original twenty-eight were rearrested and charged with counterrevolutionary activity. The Belgrade Six, as they came to be known, together with Šešelj, became powerful symbols of the intransigence and insecurity of the regime.

Under these tense conditions, a new, and ultimately far more influential committee, the Committee for the Defense of the Freedom of Thought and Expression, was formed in November 1984. It was the brainchild of Ćosić, Taras Kermauner, and Rudi Supek, who envisioned a broadly Yugoslav forum that would take on causes similar to those embraced by the Committee for the Protection of Artistic Freedom. The presence of Ćosić, in the eyes of the government the standard-bearer of Serbian nationalism, and Supek, one of the leading leftist critics of Yugoslav socialism, made this committee a much more high-profile undertaking. Ćosić was responsible for bringing critical Serbian intellectuals into the fold, while Kermauner and Supek worked in the Slovenian and Croatian communities. Kermauner and Supek failed to convince their colleagues to join the Serbs: the Slovenes, Kermauner found, wished to create such a committee composed just of Slovenes, while the Croatian response was resounding silence.

The eventual members, all Serbs, included a cross-section of Belgrade's intelligentsia, with members of the Praxis group (Mihailo Marković, Ljubomir Tadić), historians (Radovan Samardzić, Dimitrije Bogdanović), young but established critics (Kosta Ćavoški, Ivan Janković), painters (Mića Popović, Mladen Srbinović), writers known to be hostile to the regime (Matija Bećković, Dragoslav Mihailović), veterans of the CPAF (Nikola Milošević, Predrag Palavestra, Mihiz), of course Ćosić, and five others: Neca Jovanov, Tanasije Mladenović (a writer of Ćosić's generation), Gojko Nikoliš, Andrija Gams (an economist and strong critic of the constitution of 1974), and Dragoslav Srejović.

In their initial declaration, the committee noted that "trials of human thought, . . . [which are] ever more common in our country, [are] becoming an ideologically and legally legitimate method of political reckoning for the government with those who disagree with it" ("Saopštenje Odbora," no. 361). Noting particularly the case of the Belgrade Six and Vojislav Šešelj, as well as the application of the notion of moral-political suitability in the workplace, they proclaimed that "freedom of thought and expression are not

Milovan Djilas

Milovan Djilas was born in 1911 in Montenegro and died in 1997 in Belgrade, Serbia. He joined the Communist Party of Yugoslavia in 1932, while a student at Belgrade University. He served time in prison for his activities between 1933 and 1936 and was elected a member of the politburo of the party in 1940. During World War II, Djilas was acknowledged to be one of the top four communists in the Party as it led the Partisan resistance movement. His own area of expertise was ideology and propaganda. After the war, he was one of the leaders of the new regime's agitation and propaganda division. He later (1961) published his reminiscences of his meetings with Stalin, entitled *Conversations with Stalin,* a book that is still regularly (and justifiably) used in history courses. Djilas and Edvard Kardelj were the original architects of self-management, which became the signal innovation of a regime that needed desperately to find a new source of legitimacy once it was rejected by Stalin.

Djilas is best known, though, for his own falling-out with the Tito regime, which came in January 1954, when he was purged from the leadership of the League of Communists of Yugoslavia. The cause of his fall was his growing advocacy of political pluralism in Yugoslavia, coupled with his ever more open critiques of the behavior of members of the communist leadership in the country. He probably could have passed his enforced retirement peacefully had he not chosen to publish a series of books that served collectively as a profound critique of the Yugoslav regime and its leader, Tito, and that opened the party and the state to more scrutiny than it was willing to bear. *The New Class,* which was published in 1955, was Djilas's first major post-purge work. In it, he detailed the rise of a new power class in communist systems, which had been supposed to put an end to class structures. This book earned him a nine-year prison sentence (he served time until 1961). Then *Conversations with Stalin* landed him another four-year spell in prison. His four-volume memoir, published between 1972 and 1986, is a brilliant evocation of his times. The first volume, *Land without Justice,* is of high literary quality, but it is the remaining three volumes—*Memoir of a Revolutionary, Wartime,* and *Rise and Fall*—that seem most significant, serving as wonderful excursions into the complex and deeply intriguing recent past of Yugoslavia.

Djilas was unable to publish or speak publicly in Yugoslavia until the late 1980s. His own complicated history of intellectual engagement—first as a militant communist, then as a supporter of pluralism, never as a nationalist—rendered him an outsider until his death in 1997.

the possession, gift, or privilege of any class, social group, party, or power of state; that freedom and that right belong to all human beings, and their fulfillment or endangerment are the business and conscience of all of the citizens of the social community. On that assumption, the Committee for the Freedom of Thought and Expression is organized" (Djukić 265). The committee continued to operate through 1989, but its effect was minimal, even in the view of the notoriously self-congratulatory Ćosić: "No matter how much the petitions reflected honorable democratic resistance to the autocratic and bureaucratic regime, their political meaning was small" (Djukić 265).

Again, as with the Committee for the Protection of Artistic Freedom, having denied themselves the freedom to debate the ideological and practical content of those causes they chose to adopt, members of this new committee in essence blessed any persecuted idea, regardless of its meaning. Laudably, this included the ideas of non-Serbs, some of which were contentious from a Serbian nationalist viewpoint. The committee defended the speech of, and protested the arrest of, anyone who was tried on the basis of Article 133 of the Yugoslav constitution, which enunciated a broad definition of enemy propaganda. Thus the two committees not only tackled Serbian causes, but also condemned the persecution of Bosnian Muslims like Alija Izetbegović, Albanian nationalists like Adem Demaci, and assorted others, especially in Croatia and Slovenia.

By 1984, a full-blown opposition movement existed in Yugoslavia. Founded upon the principle of free expression, which the movement's leaders presented as a means of discovering the "truth," a counterbalance to the regime's manipulative lies, this movement retained its principled purity through 1985. At that point, it underwent a transition with fateful consequences for Yugoslavia. In 1985 and 1986 several things happened that turned the principled movement for free expression into a cathartic Serbian nationalist movement over the fate of Kosovo. On 1 May 1985, a Serbian farmer named Djordje Martinović was found injured, bleeding from his rectum, a mineral water bottle by his side, on his fields near Gnjilane, Kosovo. The farmer survived, but to this day there is no agreement on what happened to him. Serbs (and Martinović) argue that he was attacked by young Albanians who forced the bottle into his anus. Albanians respond that Martinović injured himself while masturbating. The truth will probably never be known, but it did not matter. The Martinović episode fed Serbian fears that Kosovo had been lost to them, handed over to a Titoist-Albanian bureaucracy that would never allow the truth, so long as it hurt Albanian interests, to be heard. In this case, the movement for truth found a new catalyst.

The linkage of free speech and openness with Kosovo received another stimulus in October 1985, when over two thousand Serbs from Kosovo presented a petition to various governmental bodies. The designers of the petition produced an aggressive, challenging document, which they sent to the presidencies, assemblies, governments, and central committees of the Serbian and Yugoslav parties and state governments, as well as to the Serbian Academy of Arts and Sciences, the Serbian Writers' Association, four individuals, and a few other institutions in Yugoslavia. One suspects that the forcefulness of the petition might have come as a shock to the Serbian and Yugoslav public consciousness, had it not been for the Martinović episode, which was barely five months old. This petition gave more formal structure to the fears engendered by the Martinović incident:

> Exposed to violence unheard of in history . . . we the undersigned Serbs from Kosovo and Metohija undertake our final effort to protect our families' right to life using legal means. . . . The situation is in reality stunning: a part of Yugoslavia is occupied, the region of our historical and national essence, and genocide by fascists against us Serbs of Kosovo and Metohija has achieved the status of a civil right. (Zahtevi 2015 stanovnika Kosova" 3)

Two claims in this initial section of the petition became the ritualized basis for Serbian grievances regarding Kosovo: that Kosovo was the core of Serbs' historical "essence," and that the law of this Yugoslavia was—inexcusably and unjustly—on the side of the Albanians, who were committing genocide against the Serbian population. The petition finished off with fourteen demands, including the following: that Serbia be given the same status as the other republics of Yugoslavia (that is, that it be unified and the autonomous provinces eliminated); that the names of those responsible for the genocide of Serbs be publicly announced; that no more Albanians be allowed to immigrate from Albania; that all agreements to sell Serbian property to Albanians be nullified; that Serbian families be enabled to return to Kosovo; that Ballists (Albanian nationalists from World War II) be rooted out; that the ethnic key be eliminated in determining employment in the province; and that the parliament of the Federal People's Republic of Yugoslavia be convened, with the petition's signatories present, to answer this petition by 30 October 1985.

When the federal and republican governments refused to consider the demands of the petitioners in the parliament and labeled them counterrevolutionaries, the transformation of Kosovo into the central grievance of the movement for free expression was complete. In January 1986 over two hundred influential Serbs forwarded a second petition to the federal parliament, demanding nothing specific of that body but announcing their hope that the Yugoslav public would rise in opposition to the government's collaboration in genocide, by Albanians, of Serbs in Kosovo. As the work of Serbia's intellectual elite, this document included a much more florid choice of words than the October petition:

> The methods [of persecution of Serbs] have remained the same: on old stakes there are again heads. The new Deacon Avakum is named Djordje Martinović, and the Mother of the Jugovićes is Danica Milinćić. Old women and nuns are raped, the feeble are beaten, cattle are blinded, stalls are built of grave stones, the church and its historic holy places are profaned and shamed, economic sabotage is tolerated, people are forced to sell their property for nothing. (Magaš 49–52)

Aside from wildly exaggerated claims expressed in lavish prose, the petitioners pointed out the duplicity of the government. "In 1981," the petition continued, "it was publicly acknowledged that the true situation in Kosovo had been hidden and falsified; the hope was stoked that it would not happen again. For five years already we have witnessed uninterrupted anarchy and the collapse of hope that social and national relations in Kosovo and Metohija could be changed" (Magaš 49–52). For these petitioners, the competition for Kosovo became a competition between public truths and governmental deception. The refusal of the government to receive the earlier Kosovo Serb petitioners became an attack on their right to speak. By cloaking the truth, the authorities became complicit in genocide, and thus did the movement for free expression come to focus primarily on Kosovo.

This second petition was signed by representatives of virtually all possible factions within the Serbian critical intelligentsia. Signatories included Dobrica Ćosić, Borislav Mihajlović Mihiz, Mića Popović, Vera Božičković-Popović, Vojislav Djurić, Mihailo Djurić, Bata Mihajlović, and Žika Stojković; Ljubomir Tadić, Mihailo Marković, and Zagorka Golubović-Pešić of the *Praxis* group; over thirty members of the Serbian academy; a number of retired military officers; several priests; and dozens of others. Particularly surprising were the contingent from *Praxis,* who were called to answer for their signatures on what appeared to be an outlandish petition based on a romantic understanding of historical processes, rather than the dispassionate socioeconomic analysis that might have been expected of them. To one commentator's attack on them for signing on to Serbian nationalism, three signatories responded that (a) there was nothing inconsistent in their support for an oppressed minority, be it Serbian or of some other nationality, and (b) that "all three of us are members of the *Committee for the defense of freedom of public expression* in Belgrade and raise our voices against all forms of repression in our country" (Magaš 57).

Their justification for their signatures was telling: Kosovo turned into just another occasion for the defense of freedom of expression, and the fight for the freedom of expression validated any interpretation of the roots of the crisis in Kosovo. Speech repressed became, by definition, good speech. The merging of two strands of opposition: the legalistic, reasoned, cerebral support for free expression, and the mystical, cathartic, visceral support for the Serbian minority in Kosovo, was now complete; they may have been intuitively incompatible, but in the progression of Serbian thought in the 1980s they were fully complementary.

The infamous Memorandum of the Serbian Academy of Sciences and Arts completed the transformation of the free speech movement into a movement of rage. On 23 May 1985, just after the Martinović episode and several months before the petitions of the Kosovo Serbs and the Belgrade intellectual elite were sent to the Federal Parliament, the Serbian Academy of Sciences and Arts met in general session and decided to produce a document outlining the problems Yugoslavia faced. The academy apparently debated long and hard over whether it should assemble such a document in the first place, since its bylaws required it to remain out of politics. But the general assembly of the academy ultimately agreed that Yugoslavia's crisis demanded contributions from all of those resources at Yugoslavia's disposal. "No one has the right to shut his eyes to what is happening and to what might happen. And this particularly holds true for the most venerable institution of scientific and cultural achievement of this nation" (Mihailović and Krestić 94). It was intended that the document eventually be sent to the various governing bodies of the state. On 13 June 1985, the presidency of the academy appointed a committee to prepare the outline. Members of the committee wrote those sections that fell within their expertise. When a draft of a section was completed, Antonjije Isaković (the vice president of the academy and the informal chair of the committee) would convene meetings, which several additional academicians, including Dobrica Ćosić and Ljubomir Tadić, attended. By January 1986, the first full draft of the Memorandum was prepared. In late September, after several months of editing, as the document neared completion, the Belgrade newspaper *Večernje novosti* (Evening News) revealed that the academy was preparing it.

This synopsis of the origins of the Memorandum is included because it clarifies some areas of real and alleged confusion regarding the document. First, it was not prepared secretly as many critics claimed. The academy had acknowledged that it was working on such a project. Second, it was not written by Ćosić, although he has long been credited with authorship by non-Serbian commentators and he unquestionably had promoted such a project. This is not to say that his ideas did not find their way into the document. Third, it was not completed. This point, repeated ad nauseum by the academy, its members, and supporters, is accurate but ultimately beside the point, for none of the document's authors or admirers have ever disavowed its contents. In any case, the Memorandum, unfinished (and until 1989 unpublished), entered the realm of public and political discourse in September 1986. It also entered the realm of the mythology accompanying the collapse of Yugoslavia.

The Memorandum is formally divided into two parts: one on the "Crisis in the Yugoslav Economy and Society," the other on the "Status of Serbia and the Serbian Nation" (Mihailović and Krestić 94–140). That first portion can be further broken down for the sake of clarity into three subsections: one on the economy, one that considers Yugoslavia's constitutional order, and a third that treats cultural questions. Putting a strong emphasis on the economic crisis, which took up much of the Memorandum, the committee wrote that "a particular cause for anxiety is that official political circles are unwilling to acknowledge the true reasons for the economic crisis, making it impossible to take the steps necessary for economic recovery" (95). Aside from that, the Memorandum noted the Party's unwillingness to "acknowledge" the truth—as it had also failed to do in the 1981 Kosovo crisis. The Memorandum's complaints can be reduced to what the committee saw as the one fundamental problem: the confederalization of Yugoslavia, as enshrined in the 1974 constitution, whose antecedents it traced to the early 1960s. That constitution unfairly penalized Serbs. Underlying the great mistake of 1974 was an attitude that was born in the international communist movement: "The roots lie in the ideology propagated by the Comintern and in the CPY's national policy before the Second World War" (Mihailović and Krestić 137).

The second half of the Memorandum is the part that is most often quoted, for it includes the most inflammatory language and tenuous claims. Entitled "The Status of Serbia and the Serbian Nation," it foreshadowed many of the themes that dominated Serbian political and intellectual discourse in the following years, during which, among other things, "genocide" became an extremely elastic concept in Serbia. This section first identifies the three situations that the committee felt needed to be discussed: the "long-term lagging" of the Serbian economy, "unregulated legal relations with Yugoslavia and the provinces," and "the genocide in Kosovo"(Mihailović and Krestić 118).

Although much of the Memorandum retains a scholarly, or at least analytical, tone, the portions concerning Serbia's relations with its autonomous provinces, and the life of Serbs in those provinces, are quite extravagant. The Memorandum initiates its discussion of these topics by pronouncing them existential, rather than constitutional, issues.

> The relationships between Serbia and its provinces cannot be seen solely or even predominantly in terms of an interpretation of the two constitutions from a legal standpoint. The question concerns the Serbian nation and its state. A nation which after a long and bloody struggle regained its own state, which fought for and achieved a civil democracy, and which in the last two wars lost 2.5 million of its members, has lived to see the day when a Party committee of apparatchiks decrees that after four decades in the new Yugoslavia it alone is not allowed to have its own state. A worse historical defeat in peacetime cannot be imagined. (Mihailović and Krestić 126)

Serbia's relationship to its provinces was thus removed from the realm of administrative efficiency and legal consistency and raised to the level of a question of historical justice, as the Memorandum itself moved from the cerebral to the visceral. With regard to Kosovo, the Memorandum stated that "in the spring of 1981, open and total war was declared on the Serbian people." That war, which brought "the physical, political, legal, and cultural genocide of the Serbian population of Kosovo and Metohija," had now continued for five years. Fantastically, the authors of the Memorandum claimed that Kosovo was "worse than any defeat experienced in the liberation wars waged by Serbia from the First Serbian Uprising in 1804 to the uprising in 1941" (Mihailović and Krestić 126).

The Memorandum, which was never openly released (only leaked to the public), met with a predictably weak response from the Serbian Party leadership. Ivan Stambolić, the president of the Serbian Party, asserted that "we [Communist Party leaders] do not accept the Memorandum's call for Serbia to turn its back on its own future and the future of Yugoslavia, for it to arbitrarily accuse the proven leaders of the revolution and of socialist development, for Serbian communists to be seen as the illegitimate leaders of the working class and people of Serbia" ("Stambolić Criticizes Memorandum Authors"). The decline of the Party's legitimacy in the eyes of the Serbian public could only accelerate in the face of such a weak response.

Where the Party missed the point, others did not. Ćosić approved of the Memorandum and defended the integrity of the academy. The other half of the non-Party opposition consisted of members of the Praxis group. Their position outside of the Party had been long established. Yet their opposition to the Party had always been essentially Marxist. The fact that they now joined a nationalist consensus is thus intriguing and somewhat shocking. Four members of the group, Ljubomir Tadić, Zagorka Golubović, Mihailo Marković, and Milan Kangrga, had signed the January 1986 petition that first labeled Albanian behavior in Kosovo as genocidal. Their gravitation from Marxism to nationalism was abrupt. Their anti-Titoism was of long pedigree, and their democratic inclinations were well publicized. Their transition can be explained in two ways: their democracy, like that of other Serbs (and Croats, and the rest), was not rooted in a belief in individual liberties but founded on a collective conception of society and rights; and they found it easy to move from one homogenizing, collective ideology (class-based Marxism) to another (cultural-based nationalism).

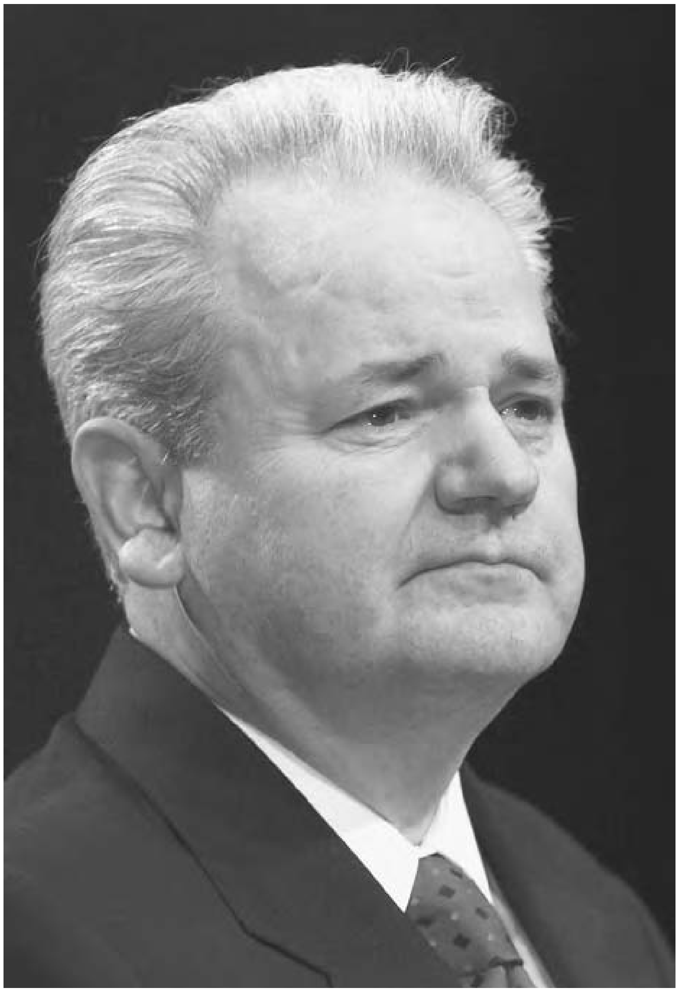
THE ARRIVAL OF SLOBODAN MILOŠEVIĆ

Both general approaches reached their fullest development in Slobodan Milošević's so-called anti-bureaucratic revolution, which began in 1988, played on Serbs' hatred of the Titoist Party, and demanded a complete turnover in the Party elite. Milošević had been a rather unremarkable Party apparatchik until 1987, when he orchestrated the purge of his mentor in the Serbian League of Communists, Ivan Stambolić. To do so, Milošević harnessed the growing power of the alleged persecution of Serbs in Kosovo as an issue dear to the Serbian people. After 1987, when he became president of the Serbian League of Communists, Milošević became ever more popular as his control of the press grew and he was able to both feed and be fed by the hysteria over Kosovo. Milošević took advantage of the general Serbian belief that the Party did not have the capability to end the "terror" in Kosovo. Instead of droning on using Titoist phraseology about the ability of "self-management" to produce solutions, he took the old Ćosić idea of anti-bureaucracy and made it his own. This anti-bureaucratic revolution, by cleansing the Party, allowed Milošević to install his own men, who supported his new nationalist proclivities, whether cynically or not. Milošević thus achieved a historic fusion of the attitudes of the Party and of the non-Party oppositionists.

From late 1987 forward, the now "revolutionary" Party incorporated more and more of the ideas of the Serbian Academy nationalists and their non-Party allies. The fusion could best be seen in the celebrations of the 600th anniversary of the Battle of Kosovo in June 1989. With the backdrop of the "field of blackbirds," on which the Battle of Kosovo was fought and which is considered by Serbs one of their sacred places, Milošević pronounced his determination to redress the balance of history. The Battle of Kosovo was lost due to "lack of unity and betrayal." "Therefore," he continued, "words devoted to unity, solidarity, and cooperation among people have no greater significance anywhere on the soil of our motherland than they have here in the field of Kosovo, which is a symbol of disunity and treason" ("Milošević Delivers Speech"). By linking the fate of a disunited Serbia in 1389 with that of the allegedly disunited Serbia of 1989, Milošević linked the subtle revisionism of the Serbian Party with the overt nationalism of the Memorandum authors.

It was an unlikely combination, and an explanation of how it came about requires more discussion of the background. The opposition movement had inflamed Serbian public opinion over Kosovo. Its goals were to push the Serbian (and potentially the Yugoslav) League of Communists to address the unequal position of Serbia in Yugoslavia. Practically, their success would have meant reincorporating Kosovo and Vojvodina into Serbia proper, a position they had not occupied in the communist era. Neither the Serbian League of Communists nor the Party organizations of the other republics of Yugoslavia were receptive to the Serbs' position. It is easy now to forget that the Serbian Party actually had been quite critical of the division of Serbia, especially in light of the 1981 Albanian rebellion. Under the leadership of Ivan Stambolić, however, it insisted on going slow, seeking incremental change in alliance with other Yugoslavs. By 1987, though, the intellectual movement had reached a point where it could not be ignored. Typically, the Party and the Party press portrayed the movement as nationalistic and destructive of the brotherhood and unity of the Yugoslav peoples. Both accusations were true, but they had become so much a part of the Titoist mantra that they were largely ignored by Serbs. Ultimately, it was probably inevitable that some person or group within the Party would try to harness the power of the opposition to their own ends.

In 1987 Slobodan Milošević did just that. In April of that year, Milošević had visited the town of Kosovo Polje to address the locals and to hear the grievances of a delegation of Serbs. Outside the building, Serbs were demonstrating and



Slobodan Milošević. (Petar Kujundzic/Reuters/Corbis)

struggling with the police, who were Albanians. When Milošević poked his head out the window and said to the Serbs, "No one dares beat you," he instantly became the hero of the Serbian movement in Kosovo. The entire episode had been scripted beforehand: Milošević understood that the Serbian movement in Kosovo was a powerful one, which he could use to gain and hold power in Serbia. Over the course of 1987, Milošević had built a strong relationship with the directors of *NIN* (*Nedeljne Informativne Novine* [Weekly Informative News], the leading Serbian newsweekly) and Radio-Television Belgrade. Using his media allies, he had been able to stoke the fears of ordinary Serbs over the fate of Serbs in Kosovo. By November of 1987, he had been able to bring about the fall of Ivan Stambolić, his best friend and political mentor, as president of Serbia. Thereafter, Milošević, feeding on the power of the Kosovo issue, was able to create and fund a massive organization (allegedy populist, but actually quite professional) of demonstrators who moved from city to city in the Serbian portions of Yugoslavia, demanding that the Parties of Montenegro, Vojvodina, and Kosovo reform, get rid of the dead wood, and embrace the anti-bureaucratic revolution of Slobodan Milošević. Frightened Party leaderships in Vojvodina and Montenegro resigned en masse in the fall of 1988. By the spring of 1989, Milošević had been able to proclaim a new constitution for Serbia, which reincorporated Vojvodina and Kosovo into the republic proper.

Milošević was now extremely popular among Serbs. He was able to portray himself as a true "people's revolutionary," one who understood that the Party had grown away from the people and needed to return to them. However, for the same reason that he became popular among Serbs, he was a frightening figure to most other Yugoslavs. Slovenes and Croats feared that Milošević would try to use the power of Serbian nationalism to take power in Yugoslavia; Albanians recognized that he had manipulated Serbian opinion to inflame racist hatred of Albanians among Serbs. The result of Milošević's takeover of power in Serbia was the growth of national movements in other republics. In Slovenia and Croatia, in particular, latent nationalism reemerged in the late 1980s.

Thus the celebration of the 600th anniversary of the Battle of Kosovo was simply Milošević's coming-out party, if you will, which he and Serbia in general celebrated at Gazi Mestan, the scene of the battle. With all of the republican leaders from around Yugoslavia in attendance, he presided over a celebration that capped the Serbian revival of the 1980s, during which he announced the readiness of Serbs once again to defend themselves militarily, if necessary.

Milošević's popularity peaked that summer of 1989. Thereafter, as Serbian society became more fully politicized, as competitors and new political parties emerged, he necessarily lost some of his luster. Virtually all of the new parties embraced a Serbian nationalist platform that differed very little from that which made him so popular in the first place. As a result, differentiation among the parties tended to be ideological and historical—in other words, nationalist parties arrayed themselves from right to left. Milošević and his now renamed Socialist Party of Serbia suffered among many Serbs for being communist. Others who had once approved of his defense of Serbian interests soon became disillusioned by his willingness to use coercive measures to defend his power (a topic discussed more fully in "Serbian Politics and Political Evolution"). Milošević's ambiguous position came into full relief in March 1991, when a rally against his control of the media turned into a days-long movement against the regime's authoritarian methods. The army was called into Belgrade to quell the movement, and two people were killed (one student demonstrator, one policeman). The rally did not achieve much in the way of its goals, but it did become a touchstone for opponents of the Milošević regime thereafter. Since it came, however, a mere three months before the outbreak of war, opponents of the regime were unable to capitalize on its momentum.

SERBIA AT WAR

The war of Yugoslav succession broke out when Croatia and Slovenia declared their secession from the state on 25 June 1991. Serbia, as such, was not at war at that point. But it was clear to all observers and participants—even when it was not openly acknowledged at the outset—that the Yugoslav

People's Army fought thereafter as a Serbian force, and it went without saying that many of the Serbian paramilitaries who were responsible for much of the Croatian fighting were being directed from Serbia. The war with Slovenia lasted a mere seventeen days; thereafter, a truce having been negotiated, the open war in Croatia began. For all intents and purposes, however, the war in Croatia had begun in the summer of 1990, when Serbian leaders in Knin and other towns openly resisted the imposition of certain new measures—largely symbolic—by the newly elected regime of Franjo Tudjman. In August 1990, under the leadership of Milan Babić, the "Autonomous Province of the Serbian Krajina" had been proclaimed, with Knin as its center in western Croatia. For another ten months, hostilities were local but often vicious. When the declared war began in July 1991, the most shocking fighting took place in eastern Croatia, around the cities of Vukovar and Osijek, which Serbs hoped to incorporate into a unified Serbian state. There, the "Serbia Autonomous Region of Slavonia, Baranja, and Western Srem" was formed and proclaimed in July 1991. By early 1992, Serbian forces controlled about 30 percent of the territory of the prewar Republic of Croatia, and they continued to do so until the summer of 1995.

In April 1992 the focus of the war shifted to Bosnia, which declared its own independence on 6 April. Sarajevo was immediately beseiged by Yugoslav People's Army forces, acting in essence as the military of the Serbian Democratic Party, the Bosnian Serb political party headed by Radovan Karadžić. Like the war in Croatia, the war in Bosnia was really several different struggles, whose nature was more local than general. Serbian forces attempted to clear eastern Bosnia (Goražde, Višegrad) and north central Bosnia (Banja Luka) of non-Serbs in order to complete an envisioned independent Serbia. As in Croatia, Serbian forces in Bosnia were quickly able to conquer and control a large part of the former republic—in Bosnia's case, well over 50 percent. And also as in Croatia, this conflict was not to end until the summer of 1995. The war in Croatia, quiet after January 1992, flared up again in the spring of 1995. Croatian forces had been upgraded—better armed (thanks to Germany), and trained by Western (especially American) advisors—and now went on the offensive to regain territory controlled by Serbs. In early May Croatian forces overran western Slavonia, centered on the town of Okučani. Then, in July and August 1995, Croatian forces overran the Krajina (western Croatia), liberating Knin and prompting a massive exodus of Serbian refugees, estimated to be as many as 200,000.

The story of the 1990s is a chronicle of wars; once Croatia and Bosnia were finished, Kosovo loomed. There, the Albanian population had hunkered down after 1990; by the mid-1990s, however, younger Albanians were no longer willing to tolerate the absence of political autonomy and any semblance of a cultural life in the region, and many of them opted for armed resistance to the Serbs. The result was that an armed insurgency began in 1996 and reached substantial proportions by late 1998. Serbian military and police forces used maximum force to put down the movement, which was led by the Kosovo Liberation Army. A NATO (North Atlantic Treaty Organization) bombing campaign in March and April 1999 effectively drove the Serbs from Kosovo. At the end of the decade of wars, Serbia had thus lost all four areas: Slovenia, Croatia, Bosnia, and Kosovo.

POLITICAL DEVELOPMENTS IN THE POSTCOMMUNIST ERA

There are a couple of factors that are critical to any understanding of how Serbia's "democratization" in the 1990s proceeded. One is that by 1990, people across virtually the entire Serbian political, cultural, and intellectual spectrum agreed that Titoism—in other words, communism in Yugoslavia—had victimized Serbia; thus, all believed that Serbia needed to assert itself by protecting Serbs' interests and projecting Serbian power. In other words, virtually all political Serbs were nationalists. However, this unity was crosscut by a source of great disunity: the legacy of the Serbian past (especially World War II) lay heavily on Serbian political parties. Regardless of their shared nationalism, these parties fell across the spectrum from left to right and were often quite hostile to each other in ideological terms. Thus, for instance, the two parties that were initially most popular in Serbia were the Socialist Party of Serbia (SPS, the party of Slobodan Milošević) and the Serbian Renewal Movement

(SRM, the party of Vuk Drašković). Both thrived on the growth of Serbian nationalism (the SPS was, arguably, not nationalist itself), but the SPS was communist and the SRM was royalist. One was the heir to the Partisans, the World War II group led by Tito; the other was the heir to the Četniks, the Serbian World War II fighters led by Colonel Dragoljub (Draža) Mihailović. The two leaders were rivals, and their constituencies loathed each other. Shared nationalism was not a guarantee of political harmony in Serbia.

The period under discussion here is often referred to as one of democratization, especially elsewhere in Eastern Europe, which began that process after the fall of the communist regimes in 1989. In Yugoslavia, though, the process followed a different logic. The year 1989 did have meaning for Yugoslavia, but not the same kind of meaning as for the rest of Eastern Europe. In Yugoslavia, 1989 was the year that Serbian nationalism reached its crescendo with the celebration of the 600th anniversary of the Battle of Kosovo. For Serbs, the celebration symbolized the unity of the Serbian people in the face of enemies far and wide. For other Yugoslavs, the celebration symbolized the fear that a unified Serbian people could provoke. The rise in Serbian nationalism actually resulted in pressure to democratize in two other Yugoslav republics, Slovenia and Croatia, each of which held democratic elections in the spring of 1990. The pressure to hold free elections in Serbia came from two parties formed in early 1990: the monarchists of the Serbian Renewal Movement (SRM) and the liberal democrats of the Democratic Party (DP), both of whom were intensely anticommunist. In June a large demonstration of the opposition parties was held in Belgrade, and soon thereafter, opposition parties were legalized. Aside from the SRM and the DP, several dozen parties registered, including the reformed and renamed League of Communists of Serbia, which called itself the Socialist Party of Serbia (SPS).

These parties were to be the three major parties in Serbia during the transition phase. The SPS retained the resources and the pedigree of the League of Communists, but it also welcomed in many of the opposition figures of the past decade whose loyalties were to the Left (including, for instance, the Praxis philosopher Mihailo Marković and the novelist Antonije Isaković). The SRM was extremely nationalistic and bitterly anticommunist. Its leader was Vuk Drašković, who earned a reputation as a demagogic speaker, one who evoked links to the Četnik past in Serbia. The Democratic Party was the party of the urban intellectual elite, and thus found it difficult to appeal across the social spectrum in Serbia. Its parliamentary principles and somewhat muted nationalism made it the favorite party of Western observers of the Serbian political scene. This party underwemt a major split within a year, but its early leadership included Zoran Djindjić and Vojislav Koštunica, the premier and president of Yugoslavia following the October 2000 fall of the Milošević regime. The constituencies of all three parties described themselves as "nationalist"; a majority of the members of the SPS actually described themselves as "authoritarian," whereas the SRM was split between "authoritarian" and "antiauthoritarian" and the DS was heavily "antiauthoritarian." Other parties ranged the political spectrum, but none would compete with the three described above, until the emergence of the Serbian Radical Party of Vojislav Šešelj in 1992.

The most important issue preceding elections in Serbia was the decision whether to promulgate a new constitution before or after the vote. On 26 June 1990, the Serbian skupština (parliament) voted that the question should be decided by a referendum to be held a week later. The regime preferred to produce a constitution before the elections, and the opposition was unable to counter the regime's influence in the one-week window it was given. The regime announced that 97 percent of voters had favored promulgating a new constitution before holding elections (Miller, "A Failed Transition" 158–159). Accordingly, the SPS had the advantage of creating a political system in its own image. The result was a presidential system with a weak parliament. The constitution was designed to assure the power of Slobodan Milošević. In the same preelection period, the Serbian skupština passed electoral laws that established single-member constituencies. In such a system, representatives are chosen by constituency rather than being allotted according to the countrywide vote. Furthermore, any organization with 100 members and a program could be registered as a party. These laws made it more difficult for the serious opposition parties to get elected.

The elections of 1990 empowered the government that was to run Serbia for a decade. In these December elections, 71 percent of the citizens of Serbia (including Vojvodina and Kosovo) voted. The SPS won 78 percent of seats in the skupština. No other party received more than 8 percent of the seats (the percentage gained by the SRM). Parties representing minorities did win a few seats: the Hungarian, Muslim, and Croatian organizations each did so, whereas the Albanians of Kosovo boycotted the election and thus gained nothing but an unimportant moral triumph. With Slobodan Milošević's victory in the presidential election (in which he received 63 percent of the vote to Drašković's 16 percent), the parliamentary elections rewarded a party and a politician who were popular, but not all that popular in Serbia. Why? One answer is that Serbs had grown comfortable with authoritarian rule, and that the SPS had taken over the nationalist issues that Serbs found so compelling in the late 1980s. So, even if Drašković was more stridently nationalist, voters did not feel compelled to opt for him; he was an unknown quantity, after all. Another explanation is also convincing, however: the Milošević regime had resources that the opposition parties simply could not match, and thus could campaign more effectively. In any case, Slobodan Milošević retained power in an era in which communist parties throughout Eastern Europe—and Yugoslavia—were falling like flies. It seems ironic that he probably had nationalism to thank for his victory.

The Milošević regime thus had the aura of power and authority in Serbia. Nonetheless, it faced great hostility, especially in Belgrade, where the core support of the Democratic Party resided, and in other urban areas of Serbia. Street demonstrations in Belgrade in March 1991 illustrated the depth of the hostility to the regime in that city, especially from supporters of the SRM and the DP. Neverthe-

Zoran Djindjić (1952–2003)

Zoran Djindjić was born in Bosanski Šamac in 1952. He was murdered in Belgrade in February 2003. He graduated with a degree in philosophy from the University of Belgrade in 1974 and was jailed soon thereafter for attempting to form an independent student union. After his release, he moved to Germany, where he earned a doctorate in philosophy from the University of Frankfurt. In 1990 he was one of the founders of the Democratic Party, one of the three leading contenders for power in the first free postwar elections held in Serbia in that year. By 1994, he had taken over leadership of that party. Throughout the wars in Croatia and Bosnia, Djindjić maintained a somewhat ambiguous position in Serbian politics; he himself was not a radical nationalist, but it was difficult to appeal to a Serbian population that was deeply nationalist itself without playing to that extreme nationalism. When the war in Bosnia was over, Djindjić remained one of Slobodan Milošević's most aggressive opponents. In late 1996 Djindjić, along with Vuk Drašković, the leader of the Serbian Renewal Movement, and the leaders of the Civic Alliance of Serbia, led demonstrations against the regime following clear election fraud in the elections of that fall. By early 1997, the demonstrations had wrested concessions from the Milošević regime and Djindjić was installed as the mayor of Belgrade. In the aftermath of this victory, he and Drašković sabotaged their own positions by fighting a bitter personal battle. As a result, the gains of early 1997 were lost soon thereafter.

During the NATO bombing campaign of 1999, Djindjić fled Belgrade for safe haven in Montenegro, whence he continued to criticize the Milošević regime. Branded a traitor for his choice of flight, he proved his political savvy by nonetheless emerging once again as one of Milošević's opponents. In 2000, recognizing that his own political baggage made him an unlikely victor in the presidential election of that year, he threw his party's support to Vojislav Koštunica, who won the election. After bitter street battles on 5 October 2000, the Milošević regime collapsed. Koštunica became president of Serbia, and in January 2001 Djindjić, as the leader of the party with the most representation in the Serbian parliament, became prime minister of Serbia.

As prime minister, Djindjić advocated doing all that was necessary to build a strong relationship with Western Europe and the United States. This necessitated his support for the handing over of those who had been indicted to the Hague, including Milošević himself. Unfortunately for Djindjić, political power in Serbia still required the support of factions within the security services, organized crime, and the extremely corrupt business community. When Djindjić made it clear he was seeking the arrest of many of those who had thrown him their support in 2000, he was assassinated in February 2003. The man responsible, Milorad Ulemek, known as "Legija," had been Djindjić's own man in the security services in October 2000—the man, in other words, who arguably assured the success of the demonstrations of 5 October.

less, the regime had little trouble ending the demonstrations with only cosmetic losses. When the wars in Croatia and Slovenia began in June 1991, Milošević was able to capitalize on the fact that virtually all Serbs, regardless of ideological persuasion, favored the aggressive defense of Serbs and projection of Serbian power in areas with large Serbian minorities (Croatia and Bosnia). The SRM and the DS could not compete with a Milošević who was aggressively prosecuting the war against (through 1991) a Croatian government that actively courted the legacy of the Ustaša, the Croatian ultranationalist organization.

Interestingly, as the war progressed, Drašković, one of the most vitriolic of Serbian nationalists before the war, began to express pacifist sentiments, which opened the door to another extreme nationalist, Vojislav Šešelj. Šešelj had been the founder of the Serbian Četnik movement. From the early 1980s, he had been a hero of the free speech movement in Serbia, as he had been persecuted by the government for the expression of the view that Yugoslavia's federation should be reorganized, with Serbia gaining territory at the expense of Bosnia and others. The Četnik movement was illegal in Serbia, but behind the scenes Šešelj and Milošević had contacts. Šešelj came in fifth in the presidential elections of 1990, and was actually elected to the skupština in a 1991 by-election in a Belgrade suburb. A latecomer to the political scene, Šešelj became one of Serbia's most important political actors in the mid-1990s, in spite of his ostentatious and even atavistic nationalism. His party, renamed the Serbian Radical Party (SRP) in memory of the Radical Party of Nikola Pašić in the early twentieth century, occupied an interesting niche in Serbian politics: its membership profile was almost identical to that of the SPS, with the exception of the fact that the SRP attracted anticommunists.

From the summer of 1991 on, Serbian political developments had a surreal air. Outsiders could note that there was a great degree of agreement in Serbia on the need to prosecute the war aggressively, while Serbs themselves undermined that apparent unanimity, as they continually fought among themselves. The key to this paradox is that while virtually all Serbian parties were nationalist, they were ideologically quite distinct from and hostile to each other. Inside Serbia, then, the years of the war saw constant attempts to combine and overthrow the Milošević regime. In May 1992, for instance, some opposition parties (SRM, an offshoot of the DP called the Democratic Party of Serbia, the Serbian Liberal Party, New Democracy, and the People's Peasant Party) formed a coalition called the Democratic Movement of Serbia (DEPOS). It pursued the overthrow of Milošević, sponsoring demonstrations during the summer of 1992. In July 1992, though, DEPOS found itself allied with a new federal prime minister, the Serbian-American Milan Panić, whose appointment Milošević had arranged in order to appease American opinion. In spite of American material and moral support for Panić, Milošević and the SPS won elections held in December 1992 with 40 percent of the seats in the skupština and 56 percent of the presidential vote. With the Radical Party of Šešelj, the SPS controlled 70 percent of the seats of the skupština. The results were demoralizing for the opposition. Elections in 1993 did not result in any real changes, except that the SRP lost support to the DP and to DEPOS. The most important change to occur during the war in Bosnia was that the Milošević regime lost its Radical allies when it allowed monitors to observe the Serbian-Bosnian border, an affront to the Radicals' nationalist sensibilities.

The Bosnian and Croatian wars ended in the summer of 1995. In the Croatian case, a motivated Croatian army, trained by the United States, overran the various Serbian communities that had achieved a level of independence in 1991. It appears that Milošević ordered the Serbian forces defending those Krajina communities to abandon the region to Croatia. The end of the Bosnian conflict came in August, after NATO bombing and an offensive by combined Croatian and Bosnian armies. Such a dismal end to a long war might have endangered the Milošević regime, which could only suffer from its failure to defend important Serbian territories. Unfortunately, it did not. With the Bosnian and Croatian wars concluded, Milošević's fate became the key issue in Serbian politics. And here there was an unpleasant fact that had to be faced by both Serbs and outsiders: many Serbs simply felt comfortable voting for Milošević. Pensioners, workers in state-owned enterprises, civil servants, people who saw themselves still on the Left, all voted for Milošević, albeit for different reasons. Furthermore, although Serbia had a democratic electoral system, the regime still possessed undeniable advantages, primarily in its control of the press, its control of the police, its ability to assure supplies of important goods like paper, and its general sophistication.

Except for one brief moment of hope in late 1996, when a coalition of the Democratic Party, the Serbian Renewal Movement, and the Civic Alliance (called *Zajedno,* or "together") won municipal elections in many of Serbia's cities, Milošević was unbeatable. In the case of Zajedno, internal squabbling ruined the coalition's victories within a year. Arguably responsible for the amazingly destructive wars of the 1990s, Milošević could not be beaten even after losing those wars.

Of course, today Milošević is out of power. The explanation cannot, however, be found in the Serbian electorate; instead, his removal from power was a result of developments in Kosovo. Beginning in 1989, with the promulgation of the new Serbian constitution, which reincorporated Kosovo into Serbia, the Kosovo Albanian community chose to respond to increased Serbian oppression in the province by withdrawing from public and political life. Albanians in Kosovo chose to create a parallel society, using the model of Solidarity and its associated organizations in Poland in the late 1970s and 1980s. Since the University of Priština had already been purged of its Albanian professors and turned into a Serbian university, and since the ethnically Albanian professionals in Kosovo's cities had been removed from their positions, the Albanian population chose to boycott Serbian elections and work as though they were free.

In December 1989 the Democratic League of Kosovo (DLK) was founded. In July 1990 approximately 90 percent of the Albanian members of the provincial parliament voted that Kosovo be proclaimed a republic in Yugoslavia. In September 1991 those deputies announced a referendum on Kosovo's independence. In October that referendum, illegal but not obstructed by the Serbs, saw an alleged 99.87 percent of those who voted choose independence. In underground elections for a parliament of this independent Kosovo, held in May 1992, the DLK won a solid victory. The DLK's leader, Ibrahim Rugova, was elected president. The Serbian authorities allowed all of this to happen, but did not allow the parliament to meet. There was a tacit understanding on both sides that the Albanians would lie low, and that Serbia, engaged elsewhere, would not react violently to the limited Albanian moves.

This truce lasted as long as the wars in Croatia and Bosnia. After the Dayton Accords ended the Bosnian conflict, however, younger, more combative Albanians began to question the tactics of the DLK. The Kosovo Liberation Army (KLA) was the result of this questioning. The first guerrilla actions of this new organization came in the spring of 1996; over the next two years, it acted sporadically, attacking police stations and provoking retaliation by the Serbs. In 1998 the KLA's activity took on greater proportions, although it was still an exceedingly small organization (perhaps 150 men in 1997). In March 1998 the first of several large-scale massacres of Albanians took place when the Serbian police encircled and destroyed the home of Adem Jashari, one of the leaders of the KLA. Fifty-eight people were killed in the compound, including twenty-eight women and children. The Serbian government had decided to attempt to wipe out the KLA at any cost. Because the cost turned out to be amazingly high, the Milošević government eventually brought on foreign intervention. The most important of these massacres came at Račak in January 1999. The administration of American president Bill Clinton decided at that point to issue an ultimatum to Milošević: pull out of Kosovo and allow a NATO occupa-

Serb soldiers display a Serbian flag as they depart Priština early on 14 June 1999 as NATO troops sought to establish control over the province of Kosovo. (Reuters/Corbis)

tion to begin, or be attacked by the NATO alliance. Milošević refused the ultimatum, and in late March 1999 NATO did in fact attack Serbia.

The DLK's authority had weakened in the mid-1990s, when many Albanians became frustrated with Rugova's pacifism. The KLA had emerged as a result of that frustration, with the ultimate result that the policies of the Milošević regime resulted in a month of heavy bombing by NATO forces in the spring of 1999. The key here, in this section of the study, is to understand how the Kosovo situation affected Milošević's ability to govern. It had in fact two opposite effects: first, in fighting NATO ultimatums and arms, he was defending a Serbia under attack by an enemy of overwhelming strength, and this was a positive role in Serbs' eyes; second, though, his policies could easily be blamed for having brought on that very bombing. In the end, the NATO bombing achieved its goal, which was to drive Serbian forces from Kosovo; however, all, inside and outside of Serbia, understood that the removal of Milošević from power and the destruction of Serbian military power were tacit goals of the bombing, and here NATO failed. When the bombing ceased, Milošević could claim to have successfully defended Serbia from aggression. This claim resonated with Serbs. However, once the enormity of the bombing's destruction was known, and once the political reality set in that Milošević had now fought and lost four wars—in Slovenia, Croatia, Bosnia, and Kosovo—the president's position became more tenuous.

In August 2000 a new coalition called the Democratic Opposition of Serbia (DOS) emerged, which united all of the parties in opposition to Milošević, save one, the Serbian Renewal Movement of Vuk Drašković. Drašković may have been motivated by his strong dislike for Djindjić, he may have feared assassination (which had been tried at least twice), or he may have wanted to avoid offending Milošević and losing his power base in Belgrade. Regardless, the absence of his party was a blow to the coalition. Still, the key element turned out to be the choice of presidential candidate: Vojislav Koštunica, the head of the Democratic Party of Serbia, was unsullied by the politics of personal rivalry that had poisoned the relations of Djindjić and Drašković, which had doomed Zajedno in 1997. Koštunica's pedigree had the right components: he was both a sincere nationalist and a sincere democrat, who believed that Serbs would be best served by a parliamentary democracy and the rule of law, but who could not be accused of ever having sold out his nation. Perhaps most importantly, Koštunica condemned U.S. involvement in the Balkans. He could compete for the vote of sincere democrats, and his nationalism could pull voters away from people like Šešelj.

In the presidential elections of September 2000, Koštunica received approximately 52 percent of the vote to Milošević's 35 percent (government figures, of course, showed a closer race). When the government refused to acknowledge Koštunica's victory, instead insisting that a second round of voting occur, Serbia rebelled. Between 2 and 5 October, Serbs took to the streets, and miners in Kolubara went on strike; Milošević finally agreed to respect the results of the election. On 7 October, Koštunica was sworn in as president.

Koštunica remained president until the fall of 2002, and until his assassination in March 2003 Djindjić, as the leader of the most popular party in the parliament, was prime minister. The two men were not friends and only barely remained political allies. The divisions between them were clearest in foreign affairs: Djindjić believed that Serbia should cooperate with the International Criminal Tribunal for Yugoslavia (ICTY) at the Hague, whereas Koštunica wished to see Serbia punish its own people for their crimes. The need for international economic support has made it very difficult for Koštunica to realize his vision. Since this problem is still very much alive at the time of this writing, it is discussed more thoroughly in "Contemporary Problems and Challenges."

No account of the political evolution of Serbia in the postcommunist period would be complete without a discussion of the troubled relationship between Serbia and Montenegro. According to the 1992 Constitution of the Federal Republic of Yugoslavia, the state was composed of two republics, Serbia and Montenegro. The constitution was promulgated after virtually no public debate, as an expedient to fill the vacuum left by the international recognition of Croatia and Slovenia and the secession of Bosnia-Hercegovina and Macedonia. For several years, there was little contention between Serbia and Montenegro, and certainly none of the sort that could be expected to lead to a Montenegrin independence movement. Nonetheless, historically the Serbo-Montenegrin relationship had not been without conflict. The best example of this came in the aftermath of World War I, when Montenegrin "greens" (supporters of independence) and "whites" (supporters of union with Serbia and Yugoslavia) had fought pitched battles. When an independence movement did arise in Montenegro, it was partly a continuation of older competitions and partly the result of the politics of personality, as Montenegro's president harnessed the strength of Montenegrin separatism to enhance his own popularity.

The crisis that has developed in recent years has its origins in the mid-1990s, after the Dayton Agreement ended the war in Bosnia. At that time, a faction of the Montenegrin leadership, led by Milo Djukanović, began to urge that Montenegro become more open to the international community, in order both to take advantage of economic development opportunities and to shed the pariah state status that Serbia had attained. Djukanović more and more openly criticized the Milošević regime in Serbia, which opened him up to criticism from the government-controlled media in Serbia and Montenegro alike. However, somewhat surprisingly, Djukanović survived the onslaught and saw his own popularity grow. In Montenegrin presidential elections in October 1997, Djukanović defeated Momir Bulatović, Milošević's ally in Montenegro, by a slim margin. In May 1998 parliamentary elections in Montenegro, Djukanović's party, the Democratic Party of Socialists, outpolled Bulatović's, the Socialist People's Party, gaining forty-two seats to the latter's twenty-nine. From that point on, Djukanović's challenge to federal authority gained strength.

The war in Kosovo exacerbated the situation. Djukanović kept Montenegro out of the conflict, assuring that NATO would not target Montenegrin territory and that Montenegro might receive favorable treatment from the West after the conflict ended in June 1999. In August the Djukanović government presented the Serbian government with a document entitled "The Basis for Defining the New Relationship between Montenegro and Serbia," in which Djukanović proposed an "asymmetric confederation," in which the republics would share only a currency and defense and foreign policy. Rebuffed by Serbia, Montenegro has begun to create a separate state, having divorced its economy from the federal economy by late 2000. With the fall of Milošević in October 2000, a pragmatic Serbian response came in the form of "the Platform," written by Vojislav Koštunica and Zoran Djindjić, president and prime minister respectively of the Republic of Serbia. The Platform suggests that Serbia and Montenegro form a commonwealth, following the German model. Djukanović responded that first Serbia and Montenegro should constitute themselves as sovereign states, and that when they joined, they should do so on the basis of confederation, retaining separate seats in the United Nations, and (as had been suggested before) sharing only defense policy, monetary policy, and foreign affairs.

In April 2001 parliamentary elections were held in Montenegro. Djukanović's "Victory for Montenegro" alliance won thirty-three seats, a plurality, but the victory was much narrower than expected, with pro-union parties receiving the same number (six seats were won by a Djukanović ally, the Liberal Alliance of Montenegro). The elections nevertheless demonstrated the strength of independence sentiment in Montenegro, which had been negligible only a few years before. It took the influence of European Union High Representative Javier Solana to push the Montenegrins to the bargaining table, where Djukanović, Djindjić, Koštunica, and others hammered out the Belgrade Agreement in March 2002. According to this agreement, a federal state called the Union of Serbia and Montenegro was to be formed. After three years the union was to become permanent. If Montenegro chose to leave the union at that time, Serbia would be the FRY's legal successor. Other than that, the agreement was extremely vague, presumably in order to allow the two republics to further work out their relationship. Since the problem of the nature of the new state, which did in fact officially come into existence on 4 February 2003, under the name State Community of Serbia and Montenegro, is an ongoing one, it is discussed more fully in "Contemporary Challenges."

CULTURAL DEVELOPMENT

Their culture sustained the Serbs as a nation through several centuries of governance by the Ottoman Empire. Without

Milo Djukanović, Montenegrin president and leader of the ruling Democratic Party of Socialists (DPS) and the pro-independence "Victory for Montenegro" coalition, casts his ballot at early parliamentary elections in Podgorica, 22 April 2001. the consolidation of a cultural identity over that time, Serbs as a people would likely have disappeared, assimilated by Ottoman Muslim culture. Furthermore, their cultural identity as Serbs developed in stark and purposeful contrast to that of the dominant empire. Thus, to be Serbian came to mean to be Orthodox Christian (not Muslim), and it came to involve opposition to the Turk as a foreign element in Europe, upon whom the Serb people had a special duty to avenge themselves. This identity developed under the special circumstances that existed in the Ottoman Empire, in which Orthodox Christians were governed on a day-to-day basis by their own church. Finally, a powerful oral folk tradition developed that eventually expressed in mythical terms what it meant to be Serbian.

In the nineteenth century, as the modern Serbian state emerged from the chaos of the collapsing Ottoman Empire, Serbs gained confidence from the achievement of renewed statehood; that achievement made them less inclined to imagine themselves anything but Serbian. Therefore, although Serbs were part of a cultural-linguistic complex that obviously included Croats, Slovenes, and Bulgarians, they nurtured a self-image of uniqueness that ultimately made it difficult for them to imagine themselves part of any larger cultural community. Ironically, others from that larger community were instead drawn to Serbian culture.

So, although one may be tempted to adopt an easy definition of Serbianness, as "Orthodox Christian, speaking Serbo-Croatian," shaped by the conditioning of centuries of oral folk culture embodied in the Kosovo cycle of songs, in fact Serbian culture has attracted people with different origins. For instance, novelist Ivo Andrić was born to Catholic parents in Bosnia, but felt himself to be a Serb.

Meša Selimović, another outstanding novelist, was a child of Muslims who chose to think of himself as a Serb. Emir Kusturica, the brilliant film director, also hails from a Muslim background but now considers himself to be a Serb. Danilo Kiš, the author of *A Tomb for Boris Davidovich* and several other stunning novels, was the son of a Hungarian Jewish father and an Orthodox mother. Today's Serbs enjoy a rich and varied cultural heritage.

Serbian culture begins with the Serbs' oral folk tradition. By the end of the seventeenth century, in patriarchal peasant villages throughout the central Balkans, *deseterci* (songs with ten-syllable lines) were being sung. These songs—poems sung to a melody, words and melody handed down orally from generation to generation—fell into two general categories: love songs and heroic historical songs. When they were collected and catalogued in the nineteenth century by Vuk Karadžić, they were being sung (or recited without melody) by male and female singers who had learned them at the feet of their predecessors. Vuk's collection, entitled *Narodna srbska pjesnarica* (Serbian People's Songbook, Leipzig, 1823–1833) includes songs from the lyrical tradition and the heroic tradition. The heroic songs in this collection include those of the Kosovo cycle (which describe and mythologize the Battle of Kosovo, the devastating loss to the Turks in 1389), which are some of the most important and impressive of the entire opus, as well as other deservedly renowned songs such as "Banović Strahinje," "The Wedding of King Vukašin," and the various songs describing the feats of Kraljević Marko (an Ottoman vassal, one of the remarkable heroes of Serbian culture). In the end, according to Michael Petrovich, the songs "preserved and transmitted from generation to generation [the Serbs'] own idealized memory of their past, a chronicle of their present, and their hopes in future freedom, all in a spirit of folk democracy." The songs also taught Serbs to oppose oppressors violently if necessary, and that the Turk was that oppressor. The legacy was both uplifting and incendiary: Serbs were raised on mythical heroes and the promise of revenge in the future. These are the foundations of modern Serbian culture and identity.

The oral culture described above competed with a high culture that was dominated by the religious hierarchy of the Serbian Orthodox Church and used a language, Old Church Slavonic, that bore little resemblance to the language of ordinary people. For an understanding of modern Serbian culture, two men, the aforementioned Vuk Karadžić and Petar Petrović Njegoš, are of critical importance, as they were the authors of the transition from an early modern culture that was divided between folk and

Yugoslavian novelist and poet Danilo Kiš (1935–1989) sits near a typewriter and a bookshelf in his writing room. (Sophie Bassouls/Corbis Sygma) high religious elements to a modern culture that became pervasively Serbian. Karadžić (1787–1864) was born in a small village in western Serbia. He took part in the Serbian revolution and become one of Prince Miloš Obrenović's civil servants in the first autonomous Serbian state. But Vuk's eminence stemmed from two other sources: his standardization of a modern Serbian language and his collection of folk songs. As discussed above, both tasks marked him as a child of Johann Gottfried Herder, a romantic, a member of the first generation of ethnographers, working in the spirit of national revival and consolidation, along with the brothers Grimm and others like them throughout Central and Southeastern Europe. Vuk's central premise was that the only true language was the language spoken by the people. His aphorism "write as you speak" *(piši kako govoriš)* became one of the most recognizable Serbian sayings. The results of Vuk's lifetime of work were a grammar (finished in 1814), a dictionary of the Serbian language (printed in 1818), a monumental collection of folk songs and proverbs (published over several decades), and a New Testament translation into Serbian.

Vuk's work brought him into conflict with more traditional authorities in Serbian life, primarily the Serbian Orthodox Church, which resisted his belief that the true language of the Serbs was that spoken by the Serbian peasant, favoring instead a Serbian more closely tied to Old Church Slavonic and thus Russian. Vuk also found himself in conflict with other national "awakeners" of his time, especially Croats, thanks to his belief that those who spoke the štokavijan dialect of the language that Serbs and Croats shared were, by definition, Serbs. This was an early example of the ideology of nationalism riding roughshod over facts on the ground; the fact in this case was that people who considered themselves Croats as well as those who considered themselves Serbs spoke this dialect of the language. Thus Vuk's gifts to nineteenth-century Serbs were a simplified orthography and a modern literary language; his gift to Serbian, and Yugoslav, posterity was his argument that all speakers of štokavijan were Serbs, an idea that competed with several other conceptions of the relationship between Serbian and Croatian and bore unpleasant fruit down the road.

The second critical figure in modern Serbian culture is Petar Petrović Njegoš, prince-bishop of Montenegro and author of *The Mountain Wreath*. Njegoš became the spiritual and political leader of Montenegro in 1830 at the age of seventeen. He had been educated in a monastery in Cetinje and then in a boarding school in Dalmatia, which was about the best a Montenegrin could hope for at that time. As the political leader of Montenegro, Njegoš was a modernizer who attempted to bring unity to the divisive Montenegrin tribes and progress to the extremely backward Montenegrin countryside. He worked to gain recognition of Montenegrin sovereignty, traveled through Central Europe and to Russia, and met and corresponded with Vuk Karadžić. Between 1833 and 1845, he wrote four books of poetry, which were modeled on Serbian folk poetry and betrayed his dedication to the goal of the liberation of Serbs from the Ottomans.

In 1845 Njegoš published *The Ray of the Microcosm,* and in 1847 *The Mountain Wreath,* his two greatest works. Called one of the greatest achievements in Serbian literature by Vasa Mihailovich (in his introduction to the 1997 edition of the work, page 15), *The Mountain Wreath* is a long, complex, and beautiful poem based loosely on a historical event. But it is not a historical analysis or interpretation at heart; instead, it is a meditation on freedom. Njegoš's final work was entitled *Stephen the Small, the Pretender* and was published in 1851. Mihailovich argues that Njegoš's importance to Serbian culture was in "his appearance at the time when Serbian literature was making its first unsure steps after centuries of dormancy. . . . Njegoš's use of the vernacular, which he patterned after folk poetry, assured the success of this all-important linguistic reform" (xxi).

After the two founding figures, the first prominent representative of modern Serbian literature was the critic Jovan Skerlić (1877–1914), who wrote in pre–World War I Belgrade and helped introduce Serbia and Serbian writers to literary modernism. He was an urbane, socially conscious presence in the small Belgrade literary scene, and his critical standards affected and informed all writing of the period. His books included *The Younger Generation and Its Literature* (1906), *Serbian Literature in the Nineteenth Century* (1909), and *The History of Modern Serbian Literature* (1914). He edited the *Srpski književni glasnik* (Serbian Literary Herald), which became the leading literary journal in Serbia and introduced Serbs to the work and criticism of other Europeans, especially the French, who thereafter became the role models and critical guides for generations of Serbian writers and artists. Skerlić was also a political Yugoslav, who helped open the eyes of his generation's educated and cultured Serbs to the vision of a Yugoslav future. He died young, in 1914, but his influence was felt for another thirty years and beyond in Serbian cultural life.

The main interwar Serbian writer whose reputation has lasted is Miloš Crnjanski, the author of *Migration* and a large body of fiction and poetry. Many Serbs would argue that Crnjanski is Serbia's most distinguished writer; the fact that other Serbs would not agree probably has something to do with politics, as Crnjanski was a monarchist who was for a time sympathetic to the fascist regimes in Italy and Germany. As a result, many of his interwar contemporaries who found a home in the communist Yugoslavia rejected him; he was unable to return to Yugoslavia until the 1970s. Nonetheless, *Migration* (1929) is regarded as one of the best novels written in the Serbian language. Its plot is rather unadorned; it concerns the movements of two Serbian brothers and soldiers as they fight for the Habsburg monarchy against France in the mid-eighteenth century. Its language, however, is beautiful, and its theme, migration, is one that is near and dear to Serbs' hearts.

After World War II, Serbia, like the rest of Yugoslavia, initially suffered under the strictures of the official Stalinist cultural orthodoxy of socialist realism. In Yugoslavia, the socialist realist period did not last long; the doctrine was discredited along with Stalinism not long after the 1948 Tito-Stalin split. Since socialist realism reflected nothing natural in Serbian culture, it left nothing of note behind.

Beneath the veneer of Stalinist orthodoxy, Serbian culture was thriving. From the late 1940s through the mid-1960s, Serbian letters were dominated by writers of the Partisan generation, men and women who did not question the Titoist order. Instead, the dominant theme in their writing was World War II, focusing on the Partisan experience in the struggle against the multiple enemies the Partisans faced during the war: Četniks, Ustaša, and Germans. In the late 1960s, for reasons developed in the history section of this article, many Serbs began to examine their place in Yugoslavia more critically. This development could be seen chiefly among playwrights, but also in a few novelists. The regime attacked critical writers effectively until the death of Tito. Thereafter, a flood of novels, plays, and stories critical of aspects of the communist era, including the Tito-Stalin split and its aftermath, poured out.

In a survey such as this, the most important figures to consider are those writers whose work is accessible to an English-speaking audience. Among these are several who are of unquestioned importance in Serbian literary history in general: Ivo Andrić, Meša Selimović, Dobrica Ćosić, and Danilo Kiš. Of the first postwar generation, Ivo Andrić (1892–1975) is unquestionably the most famous Serbian novelist. (The reader will also find him covered in "Bosnia-Hercegovina" as a Bosnian novelist.) Winner of the 1961 Nobel Prize for literature, he is best known for his historical novel *The Bridge on the Drina,* which was published in 1945. In that same year, two other novels, *The Woman from Sarajevo* and *The Bosnian Story* were also published; Andrić had written all three in Belgrade during World War II. Along with *The Devil's Yard,* published in 1954, these are Andrić's most famous works, although he also wrote short stories, essays, historical meditations, and poetry.

Andrić was born into a Catholic family in Travnik, Bosnia, in 1892; he lived for a brief time as an infant in Sarajevo and attended elementary school in Višegrad (the site of the actual bridge on the Drina). He was active in various nationalist and literary clubs and attended university in Zagreb, Vienna, and Cracow. After World War I (during which he spent some time in internment), he moved to Belgrade, where he entered the foreign service. In February 1939 he was named Yugoslav envoy to Germany, a position he occupied through the March 1941 adherence of Yugoslavia to the Tripartite Pact and the bombing of Belgrade two weeks later. He spent the war in an uncomfortable "retirement" in Belgrade, during which he wrote his best-known work. Although *The Bridge on the Drina* is occasionally cited as a novel that explains the allegedly violent history of Bosnia, it actually speaks of the binding power of place and the ability of shared lives and traditions to ameliorate conflict. The central character in this novel is actually the bridge itself. Beginning with its construction, Andrić takes the reader through four centuries of the history of Višegrad, focusing on the bridge's power to link rather than divide. With the bridge as a place where peaceful solutions are negotiated, Andrić's novel testifies to the ability of people to overcome what seem to be insurmountable cultural and political differences. It is a brilliant novel.

Another Bosnian, Meša Selimović (1910–1982), also belongs to the Serbian literary tradition, like Andrić by choice rather than by birth or religious faith. Selimović was born in Sarajevo. He would probably be considered rather run of the mill were it not for his final two novels, *Death and the Dervish* and *The Fortress. Death and the Dervish* is an examination of authoritarianism set in the distant Ottoman past in Bosnia. Its lead character, Sheikh Nuruddin, is caught in a web of deceit and uncertainty while trying to help his brother, who has disappeared into the shadows of Ottoman rule. The book is based on a personal experience for Selimović, whose brother, a Partisan, was arrested and executed by the communist regime for corruption just after World War II. *The Fortress* deals with similar themes, but in a more lighthearted manner and through a central character (Ahmet Shabo) who is more human and humorous than Naruddin.

Serbia's most celebrated living novelist is Dobrica Ćosić (b. 1921), who played such an important role in Serbian history as a nationalist. Ćosić was a Partisan during World War II and a member of the postwar Serbian Party leadership until 1968, when he resigned from the central committee of the Serbian League of Communists in protest of its policies toward Kosovo and Vojvodina. Ćosić's novels include *Far Away Is the Sun* (1951), *Roots* (1954), *Divisions* (1961), *Time of Death* (1972–1975), *Time of Evil* (1985–1990), and *Time of Power* (1996). He was self-taught as a writer, and one can sense Ćosić feeling his way through the various influences that affected him during his career. *Far Away Is the Sun* is a war novel, written in the aftermath of the Tito-Stalin split and reflecting Ćosić's (and Yugoslav society's) critical spirit toward Stalinism and the mythology of the Partisan war effort. It was not socialist realism, which was unique; but it was a formulaic and turgid first effort. *Roots* is set in a Serbian village and concerns the conflict between generations and between the village and the city in turn-of-the-century Serbia. It is clearly influenced by the writing of William Faulkner, right down to the creation of a fictional village, Prerovo, which was the center of most of the rest of Ćosić's literary output, just as Yoknapatawpha County was for Faulkner. *Divisions* is a long (three-volume) examination of the roots and dynamics of the Četnik movement in wartime Serbia; considered a critical analysis at the time it appeared, today it seems to demonize those Serbs who became Četniks more than it explains them.

Politics changed the nature of Ćosić's literature. In the early 1960s he became disillusioned with the status of Serbs in Tito's Yugoslavia. By 1968, he had withdrawn from active political life and become a spokesman for Serbian concerns in Yugoslavia. Over the next twenty-five years, he became the central figure in a Serbian opposition movement that wished to destroy the Titoist order of Yugoslavia and establish a unified Serbian community within the state. His novels reflected those commitments: *Time of Death* is a monotonous three-volume meditation on Serbia and the Serbs as the country is being overrun by Habsburg and Bulgarian armies in 1915; *Time of Evil* (also three volumes) and *Time of Power* consider the effects of Bolshevism on

Serbia. Ultimately, Ćosić's appeal—unlike that of Andrić, Selimović, or Danilo Kiš—does not extend beyond Serbs. His themes are so introspectively Serbian that they have no universal appeal. Ćosić remains popular (as a writer) in Serbia, but a provincial everywhere else. Contemporaries of Ćosić include Antonije Isaković, whose work has not been translated.

If there is a polar opposite to Ćosić to be found in Serbian letters, it is Danilo Kiš, whose themes are universal and who was only provincial when forced to be. Kiš (1935–1989) wrote some of the most impressive novels in modern Serbian letters, including *Garden, Ashes* (1965), *Early Sorrows* (1968), *Hourglass* (1972), and *A Tomb for Boris Davidovich* (1976). Never formally an exile from Yugoslavia, Kiš nonetheless spent the majority of his time after the late 1960s in France, where he did most of his writing. *A Tomb for Boris Davidovich,* the second-to-last of Kiš's novels, was really the first to gain an audience in the West, and it did so by virtue of the uproar it caused in Yugoslavia itself. The novel is a series of vignettes that address the nature and effects of Stalinism; several of the chapters incorporate the writing of others, a literary collage method that should have raised no eyebrows. Nevertheless, Kiš was attacked as a plagiarist by Serbian literary critics. The issue was complicated by the fact that a literary critic from Zagreb, Croatia, rose to Kiš's defense, which further inflamed members

Danilo Kiš (1935–1989)

Danilo Kiš was born in 1935 in Subotica, Yugoslavia, and died in Paris in 1989. His father was Hungarian and Jewish, and his mother was Montenegrin. Kiš's parents had him baptized in the Orthodox church in 1939 in order to protect him from anti-Semitism. Kiš's family fled Novi Sad for Hungary proper in 1942, following anti-Semitic violence in Novi Sad. His father perished in Auschwitz in 1944; the rest of the family returned to Montenegro in 1947. Kiš's mother, Milica, died in 1951. Danilo Kiš's first poem was published in 1953. In 1954 he enrolled in Belgrade University, where he became one of the first graduates in its new History of World Literature program in 1958. His first two novels, *The Attic* and *Psalm 44,* were published in 1962. In 1965 the first installment in a three-volume autobiographical cycle, entitled *Garden, Ashes,* was published. *Early Sorrows* and *Hourglass* followed in 1969 and 1972, respectively. In 1973 *Hourglass* won the award for fiction given by *Nedeljne Informativne Novine,* the leading Serbian newsweekly.

Garden, Ashes, Early Sorrows, and *Hourglass* are all loosely autobiographical novels (although *Early Sorrows* is rather a collection of stories) of childhood and adolescence. The first two are unencumbered narratives that deal directly with the world through the eyes of a child; *Hourglass,* on the other hand, is a quite complex story of a man (Kiš's father) caught up in the Holocaust.

In 1976 *A Tomb for Boris Davidovich* was published. It brought Kiš his greatest fame and enormous controversy. The novel, a collection of stories that examine the nature of totalitarianism, was criticized by an influential segment of the Belgrade literary community for having allegedly plagiarized other authors. In fact, Kiš used methods familiar to readers of the Argentine author Jorge Luis Borges and others when he incorporated fragments of other authors' prose in his own work. What was considered avant-garde elsewhere was ferociously attacked in Belgrade. The polemics that ensued eventually lapsed into the sort of frenzy that only Yugoslavia and its complicated ethnic situation could produce, as Croatian writers came to Kiš's defense and Serbian critics accused "outsiders" of meddling in a Serbian literary controversy. It is impossible not to conclude that Kiš was a victim of his own lack of interest in daily politics; many accused his attackers of anti-Semitism. Kiš responded to his critics with the book *The Anatomy Lesson,* in which he explained his own literary roots and influences in his typically combative way: labeling the controversy a witch-hunt, he noted that much of the so-called debate took place in literary salons and clubs, where only the officially acceptable writers were allowed to speak.

Ultimately, the controversy drove Kiš permanently out of the country of his birth. He spent the majority of his remaining years in France, where he had periodically taught and lived since the early 1960s. He published only one more book, *The Encyclopedia of the Dead,* in 1984.

Kiš is now remembered outside of Yugoslavia mostly for *A Tomb for Boris Davidovich;* in Yugoslavia, he was mourned universally after his death, as if he had not in fact been driven from the country by the provincialism that always repelled him. As Susan Sontag has written, we have an idea how he would have responded to the collapse of Yugoslavia, which came two years after his death: "An ardent foe of nationalist vanities, he would have loathed Serb ethnic fascism even more than he loathed the neo-Bolshevik official culture of the Second Yugoslavia it has replaced" (viii).

of the Serbian literary community, who believed that the Kiš affair should be the business of the Serbian milieu. So accusations of plagiarism became intertwined with a kind of nationalism that could only have reared its head in Tito's Yugoslavia, where republics were considered the possessions of nations, and the institutions of those republics were reflections of national prerogatives. Kiš defended himself admirably, and his detractors emerged as ridiculous figures. Still, the affair led many to wonder if Kiš, half Hungarian Jew, was being persecuted for his ethnic background.

The writers described above satisfy two demands: they are translated into English, and they are acknowledged literary stars in Serbia. But they certainly do not exhaust the list of outstanding Serbian writers. Aside from the experience of World War II, which produced some of the best literature of the postwar period, the most dynamic phase in modern Serbian literature undoubtedly came with the death of Tito and the outpouring of novels, short stories, and plays questioning his legacy and the events of his period in power. In particular, survivors of imprisonment on the island of Goli Otok, who were victims of the purge of "cominformists" after the Tito-Stalin split, stand out. Dragoslav Mihajlović, the author of *When the Pumpkins Blossomed, Petra's Wreath,* and other novels (several of which are devoted to Goli Otok directly), may be the best and best known of this group of writers. Antonije Isaković, otherwise a respected novelist and short story writer, wrote the pathbreaking novel *Tren II* (Flash II), though not himself a survivor of the island. Dušan Jovanović's play *Karamazovi* (The Karamazovs) questioned the nature of the split and the attack on cominformists that followed. Jovan Radulović's play *Golubnjača* (Pigeon Hole) brought up the suppressed memory of wartime slaughters in Dalmatia. Milan Martov's *Isterivanje Boga* (The Expulsion of God) dealt with the brutal nature of collectivization in Yugoslavia.

As for Serbian art, it has tended to follow trends set in Europe, with a lag of a few years. After World War II, Serbia's artistic community found itself more bound by the socialist realist faith than writers were. There were no true socialist realist painters in Serbia in 1944, although there were traditions in Serbian painting that lent themselves to the new form. The social painters of the 1930s had possessed a social conscience and chosen themes that they judged close to the people. Many of them were close to the Communist Party and became Partisan painters during the war. But those were the exceptions. Impressionism, which came late to Serbia (between approximately 1907 and 1920, in the work of Nadežda Petrović, Mališa Glišić, Kosta Miličević, and others) became the bête noire of the new communist elite in Yugoslavia. Impressionism's heirs (expressionism, abstract painting, surrealism) had also made inroads in Serbia. The new regime rejected them all. In the words of Oto Bihalji Merin, one of Yugoslavia's leading cultural figures in the early period of communism, the art of the interwar period left "a clear picture of the sickness and weakness of capitalism. It did not create a harmonious style, nor even a unified character. It is chaotic, restless, and far from its true calling: to create not an artistic work, but [one] for humanity, and that in the great, convincing, and universally understandable language of formation" (Trifunović 251).

The socialist realist critics demanded painting that reflected the unity of form, content, and the era in which it was produced. This demand for coherence and engagement led the critics to promote the painters of the Renaissance, the baroque, and the romantic eras. In Serbian painting, they reached for models beyond the impressionists to a slightly earlier period, when painters like Uroš Predić and Paja Jovanović produced their imposing testaments to romantic national revival. These paintings were complements to the romantic literary work of Njegoš. The goal of the proponents of socialist realism was not to turn painters into automatons who would replicate the work of old masters. Painters were, however, urged to replicate the synthesis of era and art that the ideologues of socialist realism believed those earlier periods reflected. Jovan Popović wrote in 1947 that "Socialist idealism must permeate the content and form of the work of art, it must be inseparable from the most intimate feelings and thoughts of the artist. . . . Thus work on ideological education is crucial" (Trifunović, 253). They sought to create a new yet authentic art for the proletariat of the new socialist society being created.

Its lofty goals aside, the new regime had to accept what it could find in Serbian art after 1944. The most likely candidates to initiate the development of Serbian socialist realism were the social artists of the 1930s, who painted the lives of the impoverished and the backward and who thus became weapons in the hands of the eft. These painters included Djordje Andrejević Kun (*Witness to Horror*) and Petar Lubarda, whom critics differentiate by noting that Kun became a true adherent of socialist realism, whereas for Lubarda it was just a passing wartime fancy. Their shortcomings magnified the need for a truly new painter, one raised, trained, and produced fully within the socialist realist school. That demand was answered with the arrival of Boža Ilić. Ilić, a Montenegrin who studied art during the war and was by 1947 a student of a leading Serbian painter, Milo Milunović, first exhibited his work in June 1947 in Belgrade, reaching his peak in late 1948 with the painting *Sounding the Terrain in New Belgrade.* His rapid rise, facilitated by the overwhelming approbation of regime critics and exhibition juries, was matched by his precipitous fall after 1950, when socialist realism was eclipsed by a *new* new order brought by the break with Stalinism.

The end of the socialist realist period came in 1950, with the death knell being sounded by Mića Popović, a young painter whose exhibition in that year featured 160 paintings that owed a clear debt to interwar painters. His catalog notes were written in consultation with representatives of the official organization, the Association of Fine Artists of Serbia (ULUS), and in them he attacked socialist realist precepts openly. From 1950 on, Serbian painting again followed the lead of French painting, going through various phases. First the dominant style was abstraction (represented by the December Group, with Miodrag Protić and Stojan Ćelić), and then, through the mid-1960s, came a particular emphasis on what was called *art informel* (art without form, unformed art), abstract expressionism inspired by the French model, which was deeply suspicious of power and order in art and society (represented by Lazar Vozarević and Mića Popović, among others). Then followed the "new figuration," a return to figural painting, which again found perhaps its most influential representative in Popović, whose *Scenes Painting* embodies a healthy critique of the Tito regime's social and economic policies (*Scenes* was inspired by the student rebellion of 1968 in Belgrade). While Popović returned to figuration in a traditional yet politicized form, others, such as Dragoš Kalajić, embraced Pop Art. Still others pursued the informal artists' use of materials in their painting. After 1970, Serbian art grew ever more experimental; by the 1980s, Serbian artists had begun to incorporate elements of the postmodern into their work.

Turning to film of the postwar period, Serbia produced the most sophisticated filmmaking in Yugoslavia during that time. The film industry went through predictable phases: the first years of Partisan films, designed to glorify the war effort and the building of the new socialist society (to 1950); a period in which the film industry broadened its horizons, treating historical, comedic, and classical themes drawn from literature (to 1960); the "new film" (also known as "black wave") period, which lasted to the early seventies and saw the emergence of a highly critical spirit with nihilistic tendencies, which came under harsh attack by the communist regime. Perhaps the most well-known films from this period were the works of Dušan Makavajev *(WR: Mysteries of the Organism, Sweet Movie, Man Is Not a Bird,* and *Love Affair)* and Zivojin Pavlović *(When I Am Dead and White, Ambush);* and finally, from the late 1970s, films from a new period of critical but less confrontational filmmaking, dominated by a new generation of filmmakers who continued to work throught the 1990s (these include Goran Paskaljević, Emir Kusturica, Srdjan Dragojević, and others). Many of the films of these incisive filmmakers are available in subtitled versions for an English-speaking audience, including Makavajev's *WR: The Mysteries of the Organism* and *Montenegro,* Paskaljević's recent *Cabaret Balkan,* Dragojević's *Pretty Village, Pretty Flame* and *Wounds,* and virtually all of Kusturica's opus.

The films of the black wave were a distinguished but very diverse lot. Makavejev made films that subtly undermined the orthodoxies of the one-party, scientifically socialist state. Pavlović's films were violent depictions of the underside of Yugoslav society. Mića Popović, better known as a painter, made two films that were part of the black wave. One was *Man from the Oak Forest,* which examined the irrational roots of communal violence, and the other was *Hoodlums,* which dealt with soldiers at the end of World War II. Živojin Pavlović's *When I Am Dead and White* and *Ambush* both aggressively question critical aspects of the Titoist myth. What united the black wave films was their irreverence toward the sacred myths of the Tito regime; they tended to use violence to make their points about the new communist order, which had promised such a peaceful future to the Yugoslav people.

Emir Kusturica, like Andrić and Selimović, is a Bosnian whose ethnic background is not Serbian (his family is Muslim) but who considers himself to be a Serb. His films are uniformly challenging, but also rewarding; they are not overtly political, which is refreshing given the heavily politicized output of Serbian writers who are Kusturica's contemporaries. Kusturica's films include *Do You Remember Dolly Bell, When Father Was Away on Business, Time of the Gypsies, Underground,* and *Black Cat, White Cat.* The first two are both set in Kusturica's native Sarajevo, and both concern events within families. *Dolly Bell* is a coming-of-age story set in a working-class family. *When Father Was Away on Business* examines the interrelationship of politics and private lives, using the effects of the Tito-Stalin split on one Sarajevo family as a prism. It is an extraordinarily rich film. *Underground* was savaged by some critics as a political apologia for Serbian aggression in the wars of the 1990s, but that is a ridiculous dismissal of this brilliant film, which, by narrating the story of a group of World War II resistance fighters who never find out the war has ended, presents a metaphor for the effects of communism on an entire society.

The wars of the 1990s led to the production of other outstanding Serbian films, including *Cabaret Balkan* and *Pretty Village, Pretty Flame.* Goran Paskaljević's *Cabaret Balkan* (1999) is a fascinating study of a society falling apart, with a series of vignettes that testify to the chaos and violence that have ripped Serbia and the rest of Yugoslavia apart (although this film is set almost entirely in Belgrade). The vignettes illustrate relationships destroyed by the mendacity of friends and lovers, petty and not so petty vengeance, and general moral breakdown, with the wars as an unmentioned backdrop. Paskaljević also made *Someone Else's America* (1996), depicting immigrants from Montenegro and their attempts to adapt to their new country. *Pretty Village, Pretty Flame* (1996), the work of Srdjan Dragojević, presents the story of two Bosnians, one Serb and the other Muslim, who grow up as friends but are divided by the war. The film has proved equally appealing to those who are interested in the destruction that the war brought to Yugoslav society and those who love a good war film (it made critics' lists on both counts). His other best-known film, *Wounds,* on the other hand, is a thoroughly chaotic but riveting account of the underbelly of Serbian society during the 1990s; it examines two teens who become leaders of Belgrade's criminal underground and the lawless amorality of their milieu.

ECONOMIC DEVELOPMENT

Until the 1880s, Serbia was typical of Balkan peasant societies, with livestock raising and agriculture as the foundation and trading centers spotted along a couple of important trade routes. Montenegro was an extremely poor mountain region. Economic development in both countries was nevertheless quite similar, involving transition from an agricultural to an industrial economy; the process began in the late nineteenth century, with accelerated change occurring only after World War II.

In the medieval era, Serbia's consolidation as an independent kingdom was helped along by the increase in royal revenues brought by exploitation of mineral wealth, thanks to an influx of German mining talent from Transylvania. Dubrovnik also provided much needed artisans and traders, as well as a center for their economic activity. The Nemanjićes, founders of the first Serbian state, also benefited from the establishment of the Byzantine system of land grants in return for military service. In other words, Serbian monarchs followed a familiar path in consolidating their power. Serbia might well have continued down that path, had it not been for the Ottoman advance, which by the middle of the fifteenth century had fully incorporated the medieval Serbian state into the Ottoman Empire.

As a part of the Ottoman Empire, the Serbian economy changed greatly. Muslims benefited from a land grant system that rewarded those who did military service (*sipahis)* with land grants known as *timars* for their military service. Christians tended to move northward ahead of the Ottoman advance or into the mountains, leaving the more fertile lowlands to the Muslims who now moved in. In this way, Kosovo became the preserve of Muslim Albanians after the fifteenth century. The mining industry withered under Ottoman administration. Trade routes were dominated by Greeks and Jews, and towns that had begun to thrive as trade centers earlier now became military outposts, populated mostly by Muslims in Ottoman service.

At the time of the first uprising, in 1804, Serbia was a province distant from Istanbul that thus had a significant degree of self-administration. Wealthier Serbs in this underpopulated region maintained ties with the Habsburg monarchy, trading mostly pigs. Under Prince Miloš Obrenović, there was rapid growth within a limited framework. Miloš demanded and received full control of the autonomous Serbia's economy, and he put that control to good use: he encouraged land-ownership with a three-year tax break and gave away lands abandoned by Muslim landowners for nothing. In general, he promoted an influx of Serbs into the Serbian lowlands. He also encouraged immigration and land clearing and arranged for all payments for lands taken from Muslims to be part of the general tribute payment. Miloš controlled trade in autonomous Serbia through the issuance of trade permits, which the state sold. These steadily increased in number (from 56 in 1820 to 1,341 in 1829). Until the 1890s, this trade was mostly in pigs and other animal products. Serbia actually had to import grain on occasion. Capital was difficult to come by in Serbia; much came from the Serbs of the Habsburg monarchy, who had expertise, money, and markets. Another impediment to Serbian economic development was that the region was overwhelmed by oak forests, with only a couple of roads that could handle horses and carriages on a good day. The principality had about 450,000 inhabitants in 1815. Of the inhabitants, 90 percent were Serbs, and 80 percent of those were recent arrivals. In 1834 the first official census showed a population of 678,192.

In the second half of the nineteenth century land under grain cultivation doubled, a growth that was matched by the decline in animal husbandry. There were "more pigs than people" in 1866, according to the historian Michael Petrovich (526). By 1900, there were 2.5 million people in Serbia and a mere 1 million pigs. This was progress, of a sort, but Serbia's real problem was the lack of investment capital and any concomitant industrial growth. Foreign banks were not interested in promoting an industrial Serbia—they were more interested in maintaining Serbia as a captive source of raw materials for their own industrial economies. Before the chartering of the national bank in 1883, the state did lend money, but it required that collateral equal two-thirds of the loan amount, which was safe but tended to reward the wealthy and perpetuate the poverty of the peasantry. And Serbia was a land of peasants: 55 percent of the land was in the hands of smallholders (units of five hectares or less).

Serbia's only heavy industrial concern was an ironworks in Kragujevac, founded in 1847 in Belgrade. Otherwise, new industries were of the light variety, including mills and breweries, but nothing that promised to grow radically or to employ a large number of people. Independence brought new opportunities. In 1878 the government agreed to the minting of 6 million new silver dinars, the first Serbian currency. The first Serbian railroad, from Belgrade to Vranje, was approved by the Serbian parliament in 1880. It was to be one section of Serbia's portion of the Orient Express. Between 1884 and 1904, 1,664 kilometers of rails were laid, resulting in a relatively complete network around Serbia. The chartering of the National Bank in 1883 finally provoked some industrial growth in Serbia. In 1898 there were 28 industrial businesses in Serbia, and by 1903 the number had risen to 105. By 1910, following the chartering of several other banks, including the Export Bank, Belgrade Cooperative, Belgrade Merchant Bank, and the Commercial Bank, there were more than 400 enterprises.

World War I affected Serbia as much as it affected any state. Serbia's population loss in the war, as a percentage of its total population, was larger than that of any other European state, or 2.5 times that of France. Even if Serbia had emerged from the war within the same borders, its economy would have been staggered by the war. But Serbia emerged as a part of the new Kingdom of Serbs, Croats, and Slovenes, with all of the attendant economic complications of bringing together a new state virtually overnight. The story of this new kingdom was similar to that of Poland; in Yugoslavia's case, Slovenia, Croatia-Slavonia, Bosnia, Serbia, Montenegro, and the Vojvodina were each a part of a different legal entity before the war (and Macedonia and Kosovo had only recently become part of Serbia). Their transportation systems were oriented differently, and their trading partners were not the same. Thus, Croatia found it easier to trade with Austria and Hungary than to supply other regions of Yugoslavia; Vojvodinian exports moved north as well. Serbian railroad tracks had been sabotaged during the war, and its power sources had been destroyed as well. The result was a difficult transition period, but one in which Serbia's dominant position in the new state's power structure guaranteed it some favorable treatment. For instance, the prewar Serbian currency was to be the basis for the new currency, and Serbs could exchange their currency at a 1:1 rate, while the Habsburg crown was exchanged at a 5:1 rate.

One pressing concern for most of Yugoslavia, but not Serbia, was land reform. Serbian holdings were already small. While a land reform law was passed by the parliament in 1919, it was inefficiently applied and indemnification was promised but not forthcoming. Furthermore, when the government established a colonization program for underpopulated or expropriated lands in Bosnia, Kosovo, Macedonia, and Vojvodina, it was limited to Serbian war veterans. Still, in the end, Serbs only received about 8 percent of the redistributed land, which totalled 10 percent of the kingdom's arable land. According to those who have looked at the situation, such as historian John Lampe, the "balance sheet" on the reform looked "surprisingly good by the end of the 1920s." In the 1920s the Serbian economy lagged behind that of Croatia, in part because Zagreb survived the war with its superior trade connections intact, in part because it had a series of wealthier investment banks on hand. Overall, according to Lampe, Yugoslav economic growth was "in the upper ranks for interwar Eastern Europe," which was a result of the growth of manufacturing in the northwest and mining in the south and east, that is, in Bosnia, Kosovo, and Macedonia (148). Serbia gained some industry at Croatia's expense, thanks to its lower wages.

World War II interrupted what, for Yugoslavia as a whole, had been a fairly successful encounter with the Great Depression. After the war, until 1948, Yugoslavia was not only a communist country, but a communist country intent on replicating Stalinist norms at home. Thus, a combination of central planning and idealistic enthusiasm were counted on to help the devastated country rebuild. The war had thoroughly ruined the country's transportation network, and 40 percent of prewar industry had been damaged or destroyed. Yugoslavia, never a fully integrated country, now had several regions in which starvation threatened. United Nations assistance contributed mightily to the fact that the country pulled through that initial postwar period. UN programs not only provided food, but also machinery and help with rebuilding the transportation system. The assistance of the United Nations was needed but not necessarily loved by the Tito regime, which preferred to think that its own efforts were responsible.

Ideology drove economic policy through the late 1940s. Upon the liberation of Belgrade in October 1944, the new regime began to implement a series of nationalization decrees. These were never all-encompassing: Yugoslavia had privately owned businesses throughout the communist era. In agriculture, Yugoslav peasants were subjected to the now notorious *otkup,* according to which peasants were required to make a certain level of deliveries to the state (all the while keeping their land). Peasants who failed were subject to arrest as enemies of the state. The otkup was an utter failure. The first and only Yugoslav five-year plan (1947–1951) was overly complex, set unachievable industrial goals, and slighted agriculture to the point of near rebellion in the countryside. Collectivization was then tried, mostly in order to answer Soviet accusations after June 1948 that the Yugoslavs were not good Stalinists. This too was a failure, one that was acknowledged only later.

The struggle to redeem themselves as true Stalinists ended within a couple years of the break with the Cominform. According to Milovan Djilas, the Yugoslav communist and dissident, Edvard Kardelj, Boris Kidrič, and Djilas himself debated the merits of transferring control of enterprises from the state central planning apparatus to the enterprises themselves sometime in early 1950 (*Rise and Fall* 268-269). Convincing themselves that such a move would be more in line with Marx's Marxism than Stalinism was, the idea gestated and eventually—by that summer of 1950—emerged as "workers' self-management." Formally inaugurated with the passage of the "Law on the Management of State Economic Associations by Work Collectives," self-management was largely fictive in its first few years. But it served the Tito regime's need for ideological self-justification and differentiation from Stalinism. After 1952, self-management meant that workers' councils for each enterprise made certain limited decisions on investments, pricing, production levels, and wages; these councils were controlled by local committees with representation from the League of Communists, which assured a high degree of central control. At this point, self-management did not have any republican attributes.

Through the early 1960s, the Yugoslav economy grew at a pace typical for European communist states: industrial output increased markedly, but productivity rates did not. Unemployment grew to 7 percent by 1962, one signal of the need for reform. By the early 1960s, the less-developed republics in Yugoslavia had grown even weaker in comparison with the developed republics, and Serbia, formally a developed republic, had lost ground to Croatia and Slovenia. Demands for reform, which came from all corners, did not agree on the proper course for a reform to take.

For the first time, the LCY (the League of Communists of Yugoslavia) reexamined the organization of the state, albeit from a purely economic perspective. At this point one begins to hear of "liberal" and "conservative" approaches to economic reform. Liberals favored increased room in the economy for entrepreneurialism, which implied expanded civil liberties; conservatives wished to retain a centrally governed economy and saw no need to reduce the Party's monopoly on power. Tito's own impulse was to favor the conservatives, which he did publicly in a May 1962 speech at Split. But in December 1962 and January 1963 two conferences of economists produced reports that called into doubt the conservative position. The result of expanded dialogue about economic change was a series of proposals, ranging from the creation of a virtually free market to the return to central planning. The debate on economic reform acted as a spur to camouflaged political debate. The conservative position found support among some, but not all, Serbian economists; it has been suggested that in spite of the economic logic of the liberal (market reform) position, many Serbian economists gravitated to the conservative position out of a sense of national loyalty.

The fruits of this ongoing discussion included the 1963 constitution, which, while not empowering the republics as such, did initiate the gradual devolution of economic decision-making power from the center to enterprises and local governments. The Eighth Congress of the League of Communists of Yugoslavia, held in December 1964 in Belgrade, placed the Party seal of approval on economic reforms supported by the liberals. In his opening speech to the congress, Tito himself attacked nationalism of the "centralist" variety, obviously referring to Serbian nationalism, which he accused of looking forward to the elimination of nationalities and the creation of an "artificial" Yugoslav nation. The rhetorical thrust of Tito's speech was meant to clear the way for reforms of the economy that would bring decentralizing political reforms with them.

From the onset of the reform period of the 1960s forward, economic development became one of the most potent political issues in Yugoslavia. This was so primarily because the various republics of Yugoslavia saw their economic interests as in competition. Broadly speaking, two blocs emerged: the more developed and less-developed republics. Montenegro was a less-developed republic, whereas Serbia was labeled a more developed republic (although Kosovo clearly belonged in the former category). Specific issues, however, transcended the more or less developed categorization. In fact, a more telling division was between those who argued for devolution of economic decision-making authority to the republics (Croats and Slovenes), and those who favored centralization (Serbs).

In 1965 the first major reform of Yugoslavia's economy after the advent of self-management was announced. It reduced the number of banks in the country from nearly 400 to about 40, which were governed by regional authorities; a fund for the development of the underdeveloped republics and provinces was established; prices, still controlled, were raised to make them more comparable to those of the world market; and peasants were given access to bank credit to modernize their operations. The goals of these reforms were increased efficiency, competitiveness, and agricultural production. Only the third goal was approached. By 1970, the percentage of rural population throughout Yugoslavia had dropped from 64 percent (1950) to 38 percent (1970). Other indicators of socioeconomic advance were similarly positive, showing improved access to doctors, a lowered infant mortality rate, and increased autombile ownership. By the mid-1960s, Serbia's industrial employment had grown by a factor of five over its prewar numbers, to 1.25 million. Illiteracy still remained a real problem: 41 percent of Kosovo's population was illiterate in 1961. Many of the advances described, however, may have been attributable to the inauguration of a thirty-year period of labor exportation in the form of "guest workers."

The guest worker became an institution in Yugoslavia by the late 1960s; there would be so many of them that Yugoslavs would refer to them as a "seventh republic." The phenomenon began in the early 1960s, accompanying the economic reforms and political liberalization of that era. Whereas, before that point, working outside of Yugoslavia had been considered officially "in contradiction to social-political norms," afterwards it came "to be identified . . . as one of the key defining features, along with market socialism and self-management, of what was distinct and positive in the Yugoslav socialist variant" (Zimmerman 76). From the point of view of those more critical of the phenomenon, open borders were being allowed, not to increase freedom, but simply to alleviate some of the economic pressure brought by market reforms, which resulted in immediate unemployment inside Yugoslavia. Of course, it was normal for the Yugoslav communists to frame an economic (or cultural, or political) necessity as an ideological innovation and justification for their own power.

Regardless of the justification, the number of Yugoslav workers abroad soared between 1960 and 1979: 18,000 in the former, 680,000 in the latter year, with a peak of 860,000 in 1973. (These figures do not include family members who accompanied the workers, which one author estimates brings the total to 1,080,000 Yugoslavs abroad in 1979.) In the early years (1960–1969), the guest workers tended to be from Croatia: 56 percent of total workers abroad in 1960, down to 37.8 percent in 1969. The Serbian numbers rose significantly in the same period: from 10.6 percent in 1960 to 27.1 percent in 1969. Considering nationality rather than republic of origin, the numbers show that in 1971 guest workers of Croatian nationality were heavily over-represented (39 percent of workers, 22.2 percent of the population of Yugoslavia) and Serbs were quite under-represented (28.5 percent of workers, 39.9 percent of the population of Yugoslavia). Members of different Yugoslav nations tended toward different destinations: the Croats and Bosnians to Germany, the Serbs to Germany but also in higher proportions to France and Austria, the Macedonians to Australia.

Yugoslavia's post-Tito political crisis was fueled by an economic decline that began in 1979, when the effects of the second oil crisis began to be felt. Unemployment and inflation grew at extraordinary rates after that year (unemployment stood at over 16 percent in 1985), and real earnings fell by 25 percent between 1979 and 1985. The economic collapse did not lead to credible action: instead, the positions of the republican leaderships hardened on the question of whether Yugoslavia had become too decentralized or not, with the Serbian answer being a resounding "yes."

CONTEMPORARY CHALLENGES

The contemporary challenges facing Serbia and Montenegro are less prosaic than those of most countries. Having engaged in an intense political and social radicalization between 1989 and 1991, followed by four years of war, several years of an Albanian insurgency in Kosovo that ended with the NATO bombardment of 1999, and the overthrow of Slobodan Milošević in 2000, the country today needs to achieve political normalcy. "Normalcy" would mean the establishment of a government that rests on constitutional principles and responds to the will of the Serbian electorate; a government that can rebuild economic and cultural ties with the rest of Europe; and a society that has come to terms with its role in the destruction of the second Yugoslavia after 1991. These goals are not easy ones to achieve. Many obstacles stand in the way, most of them associated with the troubled history of Serbia in the 1990s.

The political rivalries that plagued the opposition from the time of the advent of a postcommunist multiparty system in Serbia in 1990 have certainly left an unhappy legacy. Usually, these rivalries resulted in polarization and occasionally violence between supporters of one or the other

Hundreds of thousands of mourners line the streets and walk in a funeral procession for assassinated Serbian Prime Minister Zoran Djindjić, 15 March 2003, in Belgrade, Serbia. Djindjić was fatally shot by two sniper bullets on 12 March 2003 in downtown Belgrade as he stepped out of his armored car. Djindjić's body was laid to rest in Belgrade Cemetery's Alley of the Great Men. (Getty Images)

party; the intense rivalry between Milošević and Vuk Drašković in the early 1990s led to Drašković being beaten and jailed on occasion. Rivalries between members of individual parties weakened those parties. One thinks of the splits in the Democratic Party, which led to the ouster of Dragoljub Mićunović by Zoran Djindjić in 1991 and the defection of Vojislav Koštunica, who formed the Democratic Party of Serbia. At their worst, though, these rivalries could destroy promising opposition movements. Most critically, the opposition's gains in the 1996 elections were squandered over the course of 1997 by the antagonism between Vuk Drašković and Zoran Djindjić. Following the transition of October 2000, Djindjić was again at the center of the storm, this time as premier of Serbia, in competition with the new president of Yugoslavia, Vojislav Koštunica. Unlike the Drašković-Djindjić rivalry, which was almost entirely personal and which never had the chance to develop into a principled conflict, Djindjić and Koštunica not only did not like each other, they disagreed on some fundamental issues—*and* they both held power.

In October's aftermath, several sources of disagreement between Djindjić and Koštunica arose. Some were purely personal: Koštunica, according to many of his DOS partners, received too much credit for the transition; he was, after all, the head of a relatively minor party who had never been particularly popular until DOS made him its presidential candidate. President only by virtue of chance and the hard, decade-long spadework of others in the coalition, he should have allowed others to guide the transition to real democracy. Koštunica resisted, though. He demonstrated early on a conservative approach to change. He resisted the urge to revolutionary reckonings with members and institutions of the old regime. He insisted that in dealing with accused criminals, legal means be used. Koštunica feared that any other approach would lead to the establishment of a new criminal regime, one in which the business allies of his coalition partners would come to dominate in place of Milošević's cronies. He is also a virulent anticommunist, who believed that revolutionary justice smacked too much of Tito's violent consolidation of power after late 1944.

In practical matters, the Djindjić-Koštunica rivalry made consensus and cooperation on several vital matters virtually impossible. The most glaring example concerned the potential arrest and extradition of alleged war criminals, including most prominently Slobodan Milošević himself. After Milošević's fall from power in October 2000, his potential extradition became one of the hottest of hot topics in Serbia. Koštunica argued that the prosecution of alleged war criminals was a Serbian domestic task and that those indicted should not be turned over to The Hague. Here he probably reflected the beliefs of most Serbs, who saw the trial of Serbs as a domestic concern, not least because of their perception that Serbs had been unfairly singled out by the prosecutors of the Hague Tribunal. Djindjić, however, probably recognizing the importance of cooperation to Serbia's future, argued that the indicted should be transferred to The Hague. In June 2001 the Serbian government unilaterally issued a law mandating cooperation with The Hague, under the pressure of deadlines imposed by the international community.The difficulties in extraditing Milošević did not help with the normalization of Serbia's relationship with the rest of Europe, and the problem did not end when he was finally extradited to The Hague in June of 2001. He has been indicted for war crimes in Croatia, Bosnia-Hercegovina, and Kosovo, and his trial began in February 2002. With one break (the result of health problems), his trial has lasted since then. Milošević has acted as his own defense lawyer, which has made the trial somewhat more chaotic—and much longer—than expected originally, since Milošević has been a vigorous cross-examiner and has relied on information he gets from Belgrade sources about some of the witnesses against him.

Although Milošević is the best known among the indicted, he is not the only one by a long shot. Ratko Mladić, the commander of the Bosnian Serb army, is believed to be living in Serbia, and three Serbian military figures indicted for actions taken during and after the siege of Vukovar in 1991 are also on the list, as are several who served in government, security, and military positions before and during the bombing of Kosovo in 1999, including Milan Milutinović, Yugoslav army chief General Dragoljub Ojdanić, and Milošević's former aide for Kosovo, Nikola Šainović. Several of those, including Milutinović (former president of Serbia, who surrendered in January 2003) and also Vojislav Šešelj (indicted for crimes in Croatia and Bosnia) have gone to the Hague voluntarily. The danger and difficulty for any Serbian government in arresting an indictee of, say, Mladić's stature is that authorities would court violence. It is obvious that such problems make it difficult for Serbia to rebuild ties with the rest of Europe. Certainly, until they are resolved, Serbia will have no hope of joining the European Union.

The interrelationship of crime, business, and politics in Serbia has been of more profound real significance for ordinary Serbs and their economic and political fate. The Milošević regime was never a legitimate expression of the political desires of most Serbs; it was, from the outset, a criminal enterprise that manipulated the perceived interests of Serbs in order to remain in power and enrich its members. Thus, from its inception, it spawned a series of laughably obvious but nonetheless effective pilferings of the pocketbooks of ordinary Serbs. From Jezdimir Vasiljević and his Jugoskandik Bank, which collapsed in early 1993, to Dafina Milanović's Dafiment Bank, which failed at the same time, pyramid schemes left Serbs without long-saved hard currency. Other bank schemes included that of the brothers Karić, who founded a bank using Serbian state funds and kept it afloat by lining the pockets of the SPS. Having switched loyalties to Djindjić after October 2000, the bank still exists, the core of a brothers Karić empire that may continue to act as a conduit for the transfer of funds to offshore accounts. One of Milošević's early cronies, Mihalj Kertes, who served the Dafiment Bank as security chief, later became the director of the customs administration, from which position he stole up to 4 billion dollars for Milošević.

Milosević's wife, Mirjana Marković, founded the political party Yugoslav United Left (JUL) in 1994. That party brought together financial interests and became, after its founding, the primary link between the regime and organized crime, although there was also competition between JUL and the SPS in this regard. Infamous paramilitaries like Željko Raznatović, known as "Arkan," were less military figures or patriots than they were organized criminals who enriched themselves and their followers with a combination of war booty and special grants in return for military favors.

The variety and complexity of the relationship of crime and politics in Serbia has been staggering. The result for the present and future of Serbia is that it has become an extremely violent society where the rule of law is meaningless. Assassinations have been a constant curse since the early 1990s, but their pace has picked up since the end of the Bosnian war in November 1995. The list of victims is astounding: Željko Raznatović, Miroslav Bizić (JUL), Žika Petrović (director of JAT airline), Pavle Bulatović (Yugoslav defense minister), Boško Perošević (SPS), Radovan Stojičić (deputy interior minister of Serbia), Zoran Todorović (JUL), Vlada Kovačević (JUL), Vladimir Bokan (businessman ally of Milošević), Zoran Sokolović (former Yugoslav interior minister), and former Belgrade police chief Boško Buha have been among the well-known who have been murdered since 1997. Hundreds of smaller fish have also been murdered in that period.

When Zoran Djindjić was assassinated on 12 March 2003, he became the latest in a long line, a victim of his own ambivalent relationship to organized crime in Serbia. Police immediately ascertained that Djindjić had been murdered by members of the so-called Zemun Clan, the organized crime family headed by Miroslav Luković, known as "Legija." One possible immediate cause for the assassination was that Djindjić had in previous days applied for warrants to arrest many Serbian organized crime figures, among whom may have been Luković. There is also, however, an important deeper history between the two men. Luković worked for state security under Milošević and has been accused of crimes committed in Srebrenica, Bosnia, in 1995 and in Kosovo in 1998 and 1999.

In October 2000 Luković, recognizing that the Milošević regime was about to fall, offered his services to Djindjić in return for unknown concessions. Djindjić, then, apparently owed his position to Luković and others like him. By early 2003, however, Djindjić had come under intense pressure to rein in organized crime and was known to have begun playing the Zemun Clan off against its rival organization, the Surčin Clan. Djindjić may have simply played too closely with fire. But did Djindjić have a choice? One of the great dilemmas faced by anyone hoping to lead Serbia out of the morass created by Milošević's relationship with the military and organized crime is the existence of people like Luković, who are able to place conditions on political change thanks to their ruthlessness and to resources that cross borders between the legitimate and the illegitimate.

In the aftermath of Djindjić's assassination, there are more mundane matters than war crimes and organized crime for Serbs to be concerned with. For instance, in late 2002 Serbs tried twice to elect a new president, and both times they failed to reach the 50 percent threshold of voter turnout necessary to validate the elections. What had been a reasonably principled campaign in September 2002 between two men with serious platforms (Koštunica, who attempted to move from the presidency of Yugoslavia to the presidency of Serbia, and Miroljub Labus, an economist) turned into farce as a result of voter apathy. The turnout issue is complex and points to the continued strange legacy of the Milošević era: the voter rolls in Serbia contain up to 600,000 names of those who are somehow ineligible to vote (they are either dead or have emigrated). Thus experts argue that to achieve the 50 percent threshold, something like 65 percent of actual voters would have had to turn out. Labus refused to run in the second election in December, which suffered the same lack of turnout. The result was that until 2004 Serbia did not have a president. At that point, Boris Tadić of the Democratic Party was elected, which served as a sign that Serbs are more interested now in political and economic reform than they are in supporting overt nationalists who thumb their noses at the international community. Koštunica's position as president of the Federal Republic of Yugoslavia disappeared with the country of that name in February 2003, and then Djindjić's murder put another position of power into doubt. Since his murder, a succession of ineffective premiers has occupied the office without much effect.

The reorganization of what was the Federal Republic of Yugoslavia (FRY) now overshadows the more substantial problem of the deep involvement of organized crime in politics and political rivalries, detailed above. On 4 February 2003, the FRY disappeared, renamed the State Community of Serbia and Montenegro. Designed to head off a Montenegrin independence referendum (which was postponed for three years under the current agreement), the new arrangement gives Serbia and Montenegro some autonomy within a confederal framework. Serbia and Montenegro were supposed to adopt new constitutions by June of 2003. Serbia and Montenegro will share defense and foreign policy. They will enjoy autonomy in economic, trade, and customs spheres. The military and current government assets are to be divided between the two. A federal parliament will be appointed by the governments of Montenegro and Serbia, which means that Milo Djukanović and the Serbian premier effectively control the federal government. Critics of the plan, who are in the vast majority, believe that it will stultify economic reforms and result inevitably in independence for the two units. Djukanović does not hide the fact that independence for Montenegro is his goal.

The issue of Montenegro's potential independence from (former) Yugoslavia is only part of the Serbian geopolitical uncertainty. The status of Kosovo is still formally undetermined, although for the time being it is an international protectorate still formally under Serbian sovereignty. Where will it be in a few years? How will Serbs respond in the short, medium, and long term to the loss of Kosovo? Also, experts and pundits predict on occasion that even the Serbian portions of Bosnia-Hercegovina, known as the Republika Srpska, will (or should) someday become part of a larger Serbian state. These are speculations that will not go away.

The question that may overshadow all others is whether Serbs can individually and collectively come to terms with their recent past. This issue is broader than it might seem at first glance. It is not only that in some intangible way Serbs should feel guilty about this past; it is also that Serbs need to be able to ascertain what they should keep from that past and what is better discarded. For instance, since all of the current political parties and political leaders appeared before or during the nine years of war in the region, should some sort of litmus test be applied? Who is too tainted by activities in the 1990s, and what should constitute the test of that taint. Beyond those relatively basic questions, there is the question of how to rebuild a sense of Serbian citizenship in a society fragmented brutally by ideology and attitudes toward the war.

CHRONOLOGY

Seventh century	Serbs first arrive on the Balkan Peninsula.
Tenth century	Duklja consolidates control over territory that will eventually constitute modern Montenegro.
Eleventh century	Raška, the core of the medieval Serbian kingdom, splits from Duklja.
1168	The lands of Raška, which had been divided, are united under the leadership of one man, Stefan Nemanja.
1219	Sava (later Saint Sava) gains the grant of an autocephalous Serbian Orthodox Church.
1331–1355	Stefan Dušan governs the most powerful medieval Serbian state.
28 June 1389	The Battle of Kosovo, traditionally considered a defeat by the Turks and the end of Serbian independence.
1389–1459	Serbia continues to exist as a vassal state of the Ottoman sultan.
1459	Battle of Smederevo ends Serbian statehood.
1557	Serbian Patriarchate established in Peč.
1630	Statuta Valachorum issued by Emperor Ferdinand II.
1690s	At least 30,000 Orthodox Serbs, led by Patriarch Arsenije III Crnojević, make their way from Kosovo north to the Habsburg monarchy (the Great Migration).
1766	Serbian Patriarchate dismantled by Ottoman authorities.
1787	Vuk Karadžić (1787–1864) is born in a small village in western Serbia.
January and February 1804	Janissary leaders in Belgrade systematically murder Serbian headmen throughout the *pašalik* of Belgrade.
August 1804	Serbian insurgents under Karadjordje establish themselves as the political power in the region.
1813	Russia signs the Treaty of Bucharest with the Ottoman Empire, effectively ending the Serbian insurrection.
1814	Vuk's grammar of the Serbian language completed.
April 1815	Miloš Obrenović leads the second Serbian insurrection.
1817	Miloš has Karadjordje murdered.
1818	Vuk's dictionary of the Serbian language published.
1822–1833	Vuk's collection entitled *Narodna srbska pjesnarica* (Serbian People's Songbook) published.
1830	Serbia's autonomy proclaimed.
1830	Njegoš becomes the spiritual and political leader of Montenegro at the age of seventeen.
1838	The Ottomans approve a constitution for the pašalik of Belgrade, by which Miloš is to govern along with a council of elders.
1839	Miloš leaves Serbia.
1839	Miloš replaced by his second son, Mihailo.
1842	Publication of Vuk Karadžić's "Serbs All and Everywhere."
1842	Aleksandar (Alexander) Karadjordjević, son of the original Karadjordje, begins his period in power in Serbia.

1844	The *Načertanije* (Outline) is written by Ilija Garašanin, the Serbian minister of the interior.
1845	Njegoš's *The Ray of the Microcosm* published.
1847	Njegoš's *The Mountain Wreath* published.
1858	Aleksandar Karadjordjević is replaced by Mihailo Obrenović, in a return engagement as prince of Serbia.
1868	Prince Mihailo assassinated. Milan Obrenović becomes prince of Serbia.
1869	A second constitution proclaimed in Serbia.
1876	Russian general Mikhail G. Cherniaev arrives in Serbia to lead its troops against the Ottomans.
July 1876	War begins.
November 1876	Serbia sues for peace in its war with the Ottoman Empire.
March 1878	The Treaty of San Stefano ends the conflict.
June 1878	The Congress of Berlin meets. It revises the Treaty of San Stefano.
1881	The Radical party founded.
1889	Milan Obrenović abdicates; his son Aleksandar Obrenović becomes king of Serbia.
June 1903	A group of officers in the Serbian army murder the king and queen of Serbia.
September 1904	Petar (Peter) Karadjordjević is crowned king.
March 1905	The Croato-Serbian Coalition founded in Croatia.
1906–1911	The customs war with Austria.
October 1908	The Habsburg monarchy annexes Bosnia and Hercegovina.
1911	Union or Death (The Black Hand) founded.
1912	The First Balkan War begins in October.
29 June 1913	The Second Balkan War begins.
28 June 1914	Gavrilo Princip assassinates the Archduke Franz Ferdinand and his wife Sophie.
23 July 1914	The Habsburg government presents Serbia with an ultimatum.
28 July 1914	Austria-Hungary declares war on Serbia.
December 1914	Niš Declaration.
15 December 1914	The Battle of Kolubara.
April 1915	Treaty of London.
9 October 1915	Bulgaria attacks Serbia.
28 November 1915	The notorious flight in winter of Serbian troops and civilians over the Albanian mountains begins.
June 1917	The Corfu Declaration.
9 November 1918	The Geneva Declaration.
1 December 1918	The Kingdom of Serbs, Croats, and Slovenes is proclaimed in Belgrade.
28 June 1921	Vidovdan Constitution promulgated.
20 June 1928	Stjepan Radić gunned down in the Yugoslav parliament by Puniša Račić.
January 1929	King Aleksandar (Alexander) proclaims a renamed Kingdom of Yugoslavia and abolishes the Vidovdan Constitution.
1931	Aleksandar announces a new constitution.
1934	Aleksandar is assassinated in Marseilles by a Macedonian gunman.
20 August 1939	"Sporazum," also known as the Cvetković-Maček Agreement, signed.
25 March 1941	Yugoslavia signs the Tripartite Pact.
27 March 1941	Serbian military officers, led by General Dušan Simović, execute a coup d'état and declare underage Prince Peter the new king of Yugoslavia.
6 April 1941	German forces invade Yugoslavia.
20 October 1944	Liberation of Belgrade.
1945	Three novels by Ivo Andrić (*The Bridge on the Drina, The Woman from Sarajevo,* and *The Bosnian Story*) are published.
28 June 1948	The Cominform (Communist Information Bureau) expels Yugoslavia.
1954	The Novi Sad Agreement signed.
1 July 1966	The Fourth Plenum of the Central Committee of the League of Communists of Yugoslavia meets on the island of Brioni (the Brioni Plenum) to condemn Aleksandar Ranković.
19 March 1967	The Proposal for Consideration signed.
28–29 May 1968	Dobrica Ćosić gives a speech to the Central Committee of the Serbian League of Communists in which he blasts the League for its treatment of Kosovo and Vojvodina.
2 June 1968	The student movement at Belgrade University begins.
November 1968	Albanian rebellion takes place in Kosovo.
1974	A new constitution is unveiled for Yugoslavia.
April 1980	Tito dies.
March 1981	Rebellion in Kosovo begins.
19 May 1982	The Committee for the Protection of Artistic Freedom is formed.
April 1984	Dr. Vojislav Šešelj is arrested in Sarajevo, and twenty-eight people, including Milovan Djilas, are arrested in Belgrade for antistate activity.
November 1984	The Committee for the Defense of the Freedom of Thought and Expression is formed.
1 May 1985	A Serbian farmer named Djordje Martinović is found injured, bleeding from his rectum, a mineral water bottle by his side, on his fields near Gnjilane, Kosovo.
13 June 1985	The presidency of the Serbian Academy of Arts and Sciences appoints a committee to prepare a document that will address Serbian concerns about Yugoslavia.

October 1985	Over two thousand Serbs from Kosovo present a petition to various governmental bodies.
September 1986	After several months of editing, as the document nears completion, the Belgrade newspaper *Večernje novosti* reveals the existence of what comes to be called the Memorandum.
April 1987	Slobodan Milošević visits the town of Kosovo Polje and gives his famous declaration that the Serbs of Kosovo should not be "beaten."
November 1987	Milošević is able to bring about the fall of Ivan Stambolić as president of Serbia.
1988	Frightened party leaderships in Vojvodina and Montenegro resign en masse in the fall.
1989	Milošević is able to proclaim a new constitution for Serbia, which reincorporates Vojvodina and Kosovo into the republic proper.
28 June 1989	The 600th anniversary of the Battle of Kosovo celebrated.
December 1989	The Democratic League of Kosovo is founded.
1990	Two opposition parties are formed, the Serbian Renewal Movement and the Democratic Party.
July 1990	Approximately 90 percent of the Albanian members of the provincial parliament vote that Kosovo be proclaimed a republic in Yugoslavia.
August 1990	Under the leadership of Milan Babić, the Autonomous Province of the Serbian Krajina is proclaimed in Croatia.
December 1990	First free postwar elections in Serbia give victory to Milošević's Socialist Party of Serbia (SPS).
9 March 1991	A rally against Milošević's control of the media turns into a days-long movement against the regime's authoritarian methods.
25 June 1991	Croatia and Slovenia declare their secession from Yugoslavia.
July 1991	The Serbia Autonomous Region of Slavonia, Baranja, and Western Srem is formed and proclaimed in Croatia.
September 1991	Referendum on Kosovo's independence announced.
October 1991	The referendum results in affirmative vote.
6 April 1992	The focus of the war shifts to Bosnia, which declares its own independence on this day.
December 1992	Milošević and the SPS win elections.
1993	Elections do not result in any real changes, except that the Serbian Radical Party (SRP) loses support to the Democratic Party (DP) and to the Democratic Movement of Serbia (DEPOS).
1995	The war in Croatia, quiet after January 1992, flares up again in the spring.
December 1996	A coalition of the Democratic Party, the Serbian Renewal Movement, and the Civic Alliance (called *Zajedno,* "Together") wins municipal elections in many of Serbia's cities. Demonstrations compel the government to respect the outcome of the elections.
October 1997	In Montenegrin presidential elections, Djukanovic defeats Momir Bulatović, Milošević's ally in Montenegro.
1998	The Kosovo Liberation Army becomes active.
March 1998	The first of several large-scale massacres of Albanians by Serbian security forces.
January 1999	The Račak massacre.
March–April 1999	NATO bombing campaign in Kosovo.
August 2000	A new coalition called the Democratic Opposition of Serbia (DOS) is formed.
September 2000	Vojislav Koštunica receives approximately 52 percent of the vote to Milošević's 35 percent in the presidential election.
2–5 October 2000	Serbs take to the streets, and miners in Kolubara go on strike; Milošević finally agrees to respect the results of the election.
7 October 2000	Koštunica is sworn in as president of Serbia.
April 2001	Parliamentary elections are held in Montenegro.
March 2002	Djukanović, Djindjić, Koštunica, and others hammer out the Belgrade Agreement.
4 February 2003	The Federal Republic of Yugoslavia disappears, renamed the State Community of Serbia and Montenegro.
March 2003	Zoran Djindjić is assassinated.

MACEDONIA

ALEKSANDAR PANEV

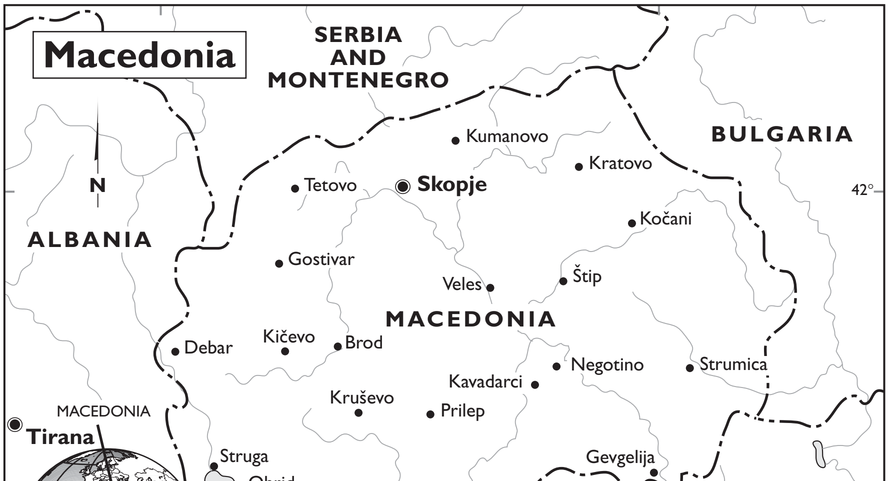
LAND AND PEOPLE

The name "Macedonia" refers to what is probably the most contested geographical entity in Southeastern Europe. The Republic of Macedonia's territorial integrity, language, name, symbols, nationality, and history are challenged either openly or covertly by its neighbors, as well as by various internal and external lobby groups and organizations.

Recent internal interethnic clashes, greatly exacerbated by the situation in Kosovo, call into question the very survival of the Macedonian state. Many in Bulgaria assert that the Macedonian language is a dialect of Bulgarian and that Macedonian nationality is only a recent communist invention. A similar and often much better-developed campaign of the Greek state challenges the validity of giving the name Macedonia to the newly established independent Macedonian republic. The inexperienced and self-centered Macedonian leaders (often accused of corruption and nepotism), together with an inefficient and untrained state bureaucracy, have produced a mixed and ambiguous impact on the internal development and external position of the country. Despite the odds, however, the new state has succeeded in surviving for more than a decade.

At present, the term "Macedonia" can refer not only to the territory of the independent Republic of Macedonia, which is in greater part positioned around the River Vardar, but also to two other adjacent regions. One of those regions is the central northern part of Greece, bounded to the south by the Aegean coast, Mount Olympus, and the Pindus Mountains; to the west by the Haliakmon (Bistritsa) River; and to the east by the lower Nestos (Mesta) River. The other is a region in southeastern Bulgaria around the Pirin Mountains. Based on the main geographic characteristics of each region, students of the region often employ the terms *Vardar, Aegean,* and *Pirin* Macedonia to distinguish these three different parts. In the early twenty-first century, however, the international community uses the name Macedonia predominantly to refer to the independent Republic of Macedonia, strongly as that usage has been challenged by Greece. Only a full account of the troubled history of the region can explain adequately the current debates over the name and status of Macedonia, but some preliminary account of the origins of the name and the various ways it has been used may be helpful.

Macedonia traces its name to an ethnic group that lived mainly on the territory situated around the Haliakmon (Bistritsa) River and its tributary Moglenitsa in present northwestern Greece. In the period between the seventh and second centuries B.C.E., the ancient Macedonians established a kingdom that at times had as its boundaries the Danube, the Black Sea, the Peloponnesus, and the Adriatic. In the centuries that followed, Macedonia was a Roman



and then a Byzantine province whose boundaries frequently and radically changed, but generally encompassed the greater part of Southeastern Europe.

At the turn of the ninth century, the Byzantine Empire lost effective control over the greater part of Southeastern Europe. It then established a province for which it used the name Macedonia on the territory of present-day southern Bulgaria and northeastern Greece, and that province harbored refugees from Macedonia proper. The Ottoman Empire, which had conquered the Balkans in the thirteenth and fourteenth centuries, did not identify either officially or unofficially any area in its holdings by the name Macedonia. For centuries, only Western geographers, certain historians and travelers, and Eastern Orthodox Church officials used this name to denote a geographical space in the Balkans. However, the interpretation of the boundaries and exact location of the geographic area called Macedonia varied greatly from author to author. That clash of interpretations has been the source of much of the friction over the region.

At the turn of the nineteenth century, the modern geographical definition of the term "Macedonia" began to emerge. This occurred as a result of Western influences, closely interwoven with the attempts of several indigenous and mutually exclusive national movements to use the aura of ancient Macedonia (and its most famous hero, Alexander the Great) in order to foster the emergence of national consciousness among the local population. By the 1890s, local inhabitants, ruling elites of the neighboring states, and the representatives of the great powers clearly understood that the present-day territories of the Republic of Macedonia, as well as the aforementioned regions in Greece and Bulgaria (Aegean and Pirin Macedonia), denoted a region called Macedonia. At the time when this name gained widespread use, these three areas represented a whole and unbroken unit of the Ottoman Empire.

Then Serbia, Greece, and Bulgaria conquered and partitioned this part of the Ottoman Empire during the Balkan Wars (1912–1913). It was at this time that the terms Vardar, Aegean, and Pirin Macedonia were introduced to designate respectively the Serbian, Greek, and Bulgarian territorial gains. The Republic of Macedonia was established mainly on the territory of Vardar Macedonia, first in 1944 as an integral part of the Yugoslav federation, and finally as an independent state in 1991.

The Republic of Macedonia, which comprises approximately 26,000 square kilometers, or 39 percent of the territory of Macedonia as it came to be defined in the nineteenth century, is a landlocked state in the heart of Southeastern Europe. It is slightly smaller than Belgium or the state of Vermont in the United States. Pastures (encompassing 6,700 square kilometers) and meadows (530 square kilometers) form approximately one-quarter of the Republic of Macedonia. Arable land (6,650 square kilometers), which includes vineyards and orchards, makes up another quarter of the territory. Forests are present on roughly 37 percent of the land, and the remainder of the territory of the Republic of Macedonia is comprised of barren terrain (8 percent), lakes (2 percent), and cities (3 percent). The average altitude of the country is 850 meters, a result of the fact that approximately 80 percent of Macedonian territory is mountainous and hilly.

Through the valleys of the Rivers Vardar and Strumitsa as well as the Pelagonia plain, Macedonia is open to the Mediterranean in the south. To the north, the low and easily passable Kumanovo-Preševo hills form the watershed between the Vardar and the Danube tributary Morava, while the Kačanik pass connects the upland basin of Kosovo with the Vardar Valley. In this way, the Republic of Macedonia provides longitudinally the shortest land connection between Central Europe and the Near East. The Skopje plain provides the key access to all the routes that interconnect Kosovo, Bosnia, Serbia, Greece, Albania, and Bulgaria. The famous ancient Roman road Via Ignatia, a main communication line between the western and eastern Balkans, passed through the Pelagonia plain in the southern part of today's Macedonian state.

The principal geographic features of the Republic of Macedonia consist of large and massive mountains with fertile basins and terraces. The Republic of Macedonia represents a transition between the Dinaro-Pindus range and the Rhodope massif. The Dinaro-Pindus massif, which is situated around the western and northern basins of the country, is wide and generally high. Its main mountains (Šar Planina, Stogovo, Baba, Nidže, Galičitsa, Korab, and Kožuv) are cut by the upper Vardar, Treska, and Crna Reka Rivers. Its highest peak is Golem Korab, which reaches 2,764 meters. Osogovo, Maleševo, Ogražden, Belasitsa, and Plačkovitsa represent the main mountains of the Rhodope massif in eastern Macedonia. They consist mainly of crystalline and granite rocks. In general, most of the republic is mountainous and hilly.

The principal basins of the Republic of Macedonia were filled with water in the Pliocene era (approximately 10 million years ago, about the same time that the North American landmass was uplifted). With the sinking of the Aegean Sea region in the geological periods that followed, these basins started to drain toward the Thermaic Gulf in present-day Greece. The result was the formation of the ravines and passes in the region that stand today. These movements created not only lakes and valleys that are mutually connected by deep, ravine-like passages and saddles, but also a number of riverbed terraces. While the Polog, Pelagonia, Ohrid, and Skopje basins developed in western and northern Macedonia, the Ovče Pole, Kočani, and Tikveš are the main valleys in eastern Macedonia.

These basins, which contain the sediment of early lakes and present-day rivers, have a variety of extremely fertile soils. Some basins are covered with black soil, while others have clays and sands of earlier lakes or volcanic deposits. The arable lands that were formed by the nearby rivers are suitable for cultivation of grain, garden plants, poppy seeds, and even rice. The edges of the basins, which were formed through accumulation of early lakes' sediments, are suitable for cultivating grapes and tobacco, and when irrigated, for various types of fruits. The existence of salty soils in certain parts of the Skopje and Ovče Pole valleys provides an opportunity for the development of pastures, as well as for cultivation of livestock plants. The higher mountain regions and terraces, which contain mainly rocky and shallow grounds of dark brown hue, are used for potatoes, rye, and barley.

Lakes Ohrid, Prespa, and Dojran represent the main standing waters of the republic. Lake Ohrid, which occupies an area of 348 square kilometers, is located in the far southwestern part of the state. Over 229.9 square kilometers is found in the Republic of Macedonia, while the rest is part of Albania. It is 30.35 kilometers long and 14.5 kilometers wide. The surface of the lake is at an elevation of 695 meters above sea level. The lake is 287 meters deep, while the transparency of the water is 21.5 meters. The lake has an average temperature of 23 degrees Celsius. Lake Ohrid, with its scenic features and clear waters, is a well-known resort, visited by thousands of local and international tourists every year.

Over half of Lake Prespa (approximately 174 square kilometers out of a total surface area of 274 square kilometers) is contained inside the boundaries of the Republic of Macedonia; it is situated west of the Vardar River, on the border with Greece and Albania. The surface of the lake is at 853 meters above sea level. It is 28.6 kilometers long, 16.9 kilometers wide, and 54 meters deep. Its average temperature in August is 24 degrees Celsius, while its transparency is 7.20 meters. Lake Dojran, situated 148 meters above sea level in the southeastern part of the republic, covers an area of 43.1 square kilometers. It is divided between the Republic of Macedonia (27.3 square kilometers) and the Republic of Greece (15.8 square kilometers). It is 9 kilometers long, 7 kilometers wide, and 10 meters deep. Because of its small size and shallowness, its water warms up to 28 degrees Celsius. Several small glacial lakes exist in the high ranges of the Šar, Pelister, Jablanitsa, Jakupitsa, Korab, and Stogovo Mountains. Mavrovo, Globočica, Debar, Tikveš, Matka, Kalimantsi, Streževo (on the river Šemnica), Glažnje, Lipkovo, and Mantovo are lakes that are artificially constructed for energy and irrigation purposes.

The Vardar River and its tributaries irrigate more than 80 percent of the territory of the Republic of Macedonia. From its spring on the edge of Šar Planina, where it flows at 1.5 cubic meters per second, the Vardar's flow increases to an average of 174 cubic meters at Gevgelija (which is situated on the border between the Republic of Macedonia and Greece). Its main tributaries from the western part of Macedonia are the Treska, Markova Reka, Topolka, Babuna, Tsrna, and Bošava, while from the eastern part come the Lepenets, Pčinja, and Bregalnitsa. Tsrn Drim and its tributary, the Radika, in southwestern Macedonia, belong to the Adriatic river-system. This river, together with Lakes Ohrid and Prespa, irrigate 13 percent of the territory of the country. Waters from the spring well of the Binečka Morava belong to the Black Sea basin.

The territory contains various minerals. Traces of gold are found in the Kratovo and Zletovo region in the eastern parts of the Republic. Silver, copper, zinc, and iron are also found in these areas. Tin is mined northeast of Ohrid at Velomej. There are chrome mines north and west of Skopje and in Pelagonia south of Prilep. Asbestos appears near Skopje and Gevgelija, while bauxite is found in eastern parts of Macedonia. Lignite is present in the vicinity of Skopje and in Pelagonia near Bitola. There are iron ores in the basins of Skopje, Kičevo, and Demir Hisar. Mica appears in Pelagonia near Prilep, while manganese ore, arsenic, and antimony are present in the Stogovo Mountains and the Mariovo-Moglena region. Serpentine, carnelian, travertine, and fine marble occur in several places throughout Macedonia. There are sulphurous mineral springs in Katlanovo and Štip in northeastern and eastern Macedonia.

The Republic of Macedonia, which is situated between 40° 51´ and 42° 30´ north latitude, is in a transitional zone between the continental and Mediterranean climates. The basin of the Vardar, which reaches the Aegean Sea, acts as a funnel, endowing the region with Mediterranean influences. The low hills between the Morava and Vardar Valleys expose Macedonia to continental climate features. As a result, this region has hot, torrid, and dry summers, as well as snowy and cold winters. The average annual temperature is 11.5 degrees Celsius. July is the warmest month with an average of 22, while January is the coldest with an average of minus 3 degrees Celsius. The precipitation in the Republic of Macedonia, which equals approximately 680 millimeters per square meter per year, is extremely low.

Moreover, it is significantly irregular: the mountainous part of western Macedonia gets over 1,000 millimeters, while the Vardar Valley receives under 500 millimeters precipitation. The most frequent winds in Macedonia, known under the names of Vardarets and Jugo, are characteristic of the Vardar Valley.

The location of the country at one of Europe's geographical crossroads and the topographic features dictate the type of flora and fauna present in Macedonia. There are over 3,500 species of plants, as well as 55 known species of fish and 78 species of mammals. Approximately 330 species of birds are also known to appear in the area. Reptile and invertebrate species are insufficiently studied. It also has a number of endemic plant species, some of which are very rare, such as *Atrolagus cerjavski, Tulipa marianae, Ferulago macedonia,* and *Sambucus deborensis.* The lynx, the rarest of the cat family in Europe, can be found in the western parts of the country.

The predominant deciduous tree types, which spread over the greater part of the wooded area, are drought-resistant oaks and beeches, while the most frequent evergreen trees are the white and the black pine. Low forests, mainly represented by the hornbeam, ash, and hazel trees, are present in the dry regions. The annual growth of wood mass is small: only 202 cubic meters per square kilometer, compared to 700–1,000 per square kilometer in the rest of Europe.

The territory of the Republic of Macedonia is subject to frequent and violent earthquakes, which result from the tectonic movements in a zone that extends from the Mediterranean and Caspian seas to the Himalayas. Within this zone, the movement of the continental landmasses produces quakes, which occur at relatively shallow depths. The impact of these tectonic disturbances is often devastating for certain parts of Macedonia, especially the Skopje valley. In 1963 more than a thousand citizens were killed in an earthquake that destroyed the city.

In 2002 the Macedonian GNP (gross national product) per capita was approximately $1,859, or approximately twenty times lower than the GNP per capita in the United States, a fact that clearly reveals that the country's economy is underdeveloped and characterized by a low industrial output. This situation is a result of a long historical development, communist management in the Yugoslav federation, and problems of transition from a planned to a free economy in the period from 1990 to 2000, as well as political instability, corruption, and the recent ethnic conflict. The unemployment rate in 2004 has soared to over 36 percent, while the average monthly salary for those who remained employed has been less than $160. Only 12 percent of the population make their living directly from agriculture (which produces over 20 percent of the GDP). The industrial sector provides employment for approximately 36 percent of the workforce.

Agriculture, which never was compelled to build large collective farms on the model of the Soviet Union, is characterized by small and barely productive landholdings, while industry is based on outdated technologies that do not comply with the European Union's standards and requirements. The backward nature of both sectors combines to hinder the country's overall economic development.
