Attracted by generous land grants, perhaps 10,000 Acadians, or Cajuns—people of French descent who had been exiled from Nova Scotia (Acadia) during the 1740s—migrated to Louisiana after the French and Indian War. They settled in the area of Lafayette and Breaux Bridge and along Bayou Lafourche and the Mississippi River. Probably the second-largest group to migrate in the late 18th century came from the British colonies and, after the Revolution, from the United States. Between 1800 and 1870, Americans settled the area north of the Red River. Small groups of Canary Islanders and Spaniards from Malaga also settled in the south, and in 1791, a number of French people fled to Louisiana during the slave insurrection on Hispaniola.

During the 1840s and 1850s, masses of Irish and German immigrants came to New Orleans. In the late 1880s, a large number of Midwestern farmers migrated to the prairies of southwestern Louisiana to become rice farmers. Louisiana did not immediately begin losing much of its black population after the Civil War. In fact, the number of blacks who migrated to Louisiana from the poorer southeastern states during the postwar years may have equaled the number of blacks who migrated before the war or were brought into the state as slaves. In 1879, however, “Kansas fever” struck blacks from the cotton country of Louisiana and Mississippi, and many of them migrated to the Wheat State; however, many later returned to their home states.

Beginning in World War II, large numbers of both black and white farm workers left Louisiana and migrated north and west. During the 1960s, the state had a net out-migration of 15% of its black population, but the trend had slowed somewhat by 1975.

Recent migration within the state has been from north to south, and from rural to urban areas, especially to Shreveport, Baton Rouge, and the suburbs of New Orleans. From 1980 to 1990, however, the state’s urban population fell from 68.6% to 68.1%. Overall, Louisiana suffered a net loss from migration of about 368,000 from 1940 to 1990. Between 1990 and 1998, the state had a net loss of 117,000 in domestic migration and a net gain of 25,000 in international migration. In 1998, 2,193 foreign immigrants arrived in Louisiana. Between 1990 and 1998, the state’s overall population increased 3.5%. In the period 2000–05, net international migration was 20,174 and net internal migration was -89,547, for a net loss of 69,373 people.

19 INTERGOVERNMENTAL COOPERATION

Among the interstate and regional efforts in which Louisiana participates are the Central Interstate Low-Level Radioactive Waste

Compact, Interstate Oil and Gas Compact, Interstate Compact for Juveniles, Gulf States Marine Fisheries Commission, Red River Compact, Sabine River Compact, Tangipahoa River Waterway Compact, South Central Interstate Forest Fire Protection Compact, Southern Growth Policies Board, Southern Dairy Compact, Southern Rapid Rail Transit Compact, Southern States Energy Board, and Southern Regional Education Board. Federal grants to Louisiana during fiscal year 2005 amounted to \$6.6 billion; that figure rose to an estimated \$6.897 billion in fiscal year 2006 and an estimated \$6.949 billion in fiscal year 2007.

20 ECONOMY

Before the Civil War, when Louisiana was one of the most prosperous of southern states, its economy depended primarily on two then-profitable crops—cotton and sugar—and on its position as the anchor of the nation’s principal north–south trade route. But the upheaval and destruction wrought by the war, combined with severe flood damage to cotton crops, falling cotton prices, and the removal of the federal bounty on sugar, left the economy stagnant through the end of the 19th century, although New Orleans retained its commercial importance as an exporter of cotton and grain.

With the addition of two major crops, rice and soybeans, the rebirth of the timber industry as a result of reforestation, the demand for pine for paper pulp, and most dramatically, the rise of the petrochemical industry, Louisiana’s economy has regained much of its former vitality. Today, Louisiana ranks second only to Texas in the value of its mineral products.

Louisiana is primarily an industrial state, but its industries are to a large degree based on its natural resources, principally oil, natural gas, water, and timber. This reliance on a natural resource-based industrial sector has come at a price. These industries, and the state’s economy, are subject to sharp commodity price swings, leading to a boom and bust cycle, particularly in the oil and natural gas sectors, as well as in those industries that are heavily reliant upon the price of oil and natural gas. A booming oil industry in the 1970s fueled an expansion in Louisiana’s economy, but that expansion ended in the early 1980s, when the price of oil dropped from \$37 a barrel in 1981 to \$15 a barrel in 1986. Employment in oil and gas extraction consequently dropped from 100,000 to 55,000. In addition, energy-related industries such as barge building, machinery manufacturing, and rig/platform production also suffered. At the same time that oil prices dropped, natural gas prices rose, forcing a contraction in the chemical industry which uses large quantities of natural gas. Chemicals were also hurt by a leap in the exchange value of the dollar in the mid-1980s, as Louisiana exports a large part of its chemical production. A subsequent drop in the dollar’s exchange value in the late 1980s and early 1990s enabled the chemical industry not only to rebound, but to expand. A higher dollar in the late 1990s once again reversed the chemical industry’s growth. In an attempt to offset losses in employment, Louisiana built several riverboat casinos and a land-based casino in 1995 which added about 7,000 jobs. The oil and gas extraction sector, however, continued to grow in both absolute and relative terms. While Louisiana has also seen growth in the state’s various service sectors, output from manufacturing as a percent of gross state product has decreased from 16.8% in 1997 to 7.5% in 2004. During the national recession in 2001, employment gains contin-

ued in health services, lodging establishments, state services, and in the transportation and public utilities sector. In August 2005, the state, along with the city and port of New Orleans, and the oil and natural gas industries were severely affected by Hurricane Katrina, and it was expected to take years for the state to recover from the damage inflicted.

Louisiana's gross state product (GSP) in 2004 totaled \$152.944 billion, of which mining (about 99% is oil and gas production) contributed \$19.669 billion or 12.8% of GSP, followed by real estate at \$15.354 billion (10% of GSP), and manufacturing (durable and nondurable goods) at \$11.522 billion (7.5% of GSP). In that same year, there were an estimated 347,436 small businesses in Louisiana. Of the 96,084 businesses that had employees, a total of 93,742 or 97.6% were small companies. An estimated 9,875 new businesses were established in the state in 2004, up 6.2% from the year before. Business terminations that same year came to 9,668, down 20.6% from 2003. There were 622 business bankruptcies in 2004, up 24.6% from the previous year. In 2005, the state's personal bankruptcy (Chapter 7 and Chapter 13) filing rate was 649 filings per 100,000 people, ranking Louisiana as the 17th-highest in the nation.

2¹ INCOME

In 2005 Louisiana had a gross state product (GSP) of \$166 billion which accounted for 1.3% of the nation's gross domestic product and placed the state at number 24 in highest GSP among the 50 states and the District of Columbia.

According to the Bureau of Economic Analysis, in 2004 Louisiana had a per capita personal income (PCPI) of \$27,297. This ranked 43rd in the United States and was 83% of the national average of \$33,050. The 1994–2004 average annual growth rate of PCPI was 4.0%. Louisiana had a total personal income (TPI) of \$123.0 billion, which ranked 25th in the United States and reflected an increase of 5.9% from 2003. The 1994–2004 average annual growth rate of TPI was 4.4%. Earnings of persons employed in Louisiana increased from \$86.9 billion in 2003 to \$91.3 billion in 2004, an increase of 5.1%. The 2003–04 national change was 6.3%.

The US Census Bureau reports that the three-year average median household income for 2002 to 2004 in 2004 dollars was \$35,523 compared to a national average of \$44,473. During the same period an estimated 17.0% of the population was below the poverty line as compared to 12.4% nationwide.

2² LABOR

According to the Bureau of Labor Statistics (BLS), in April 2006 the seasonally adjusted civilian labor force in Louisiana was 1,872,700, with approximately 90,100 workers unemployed, yielding an unemployment rate of 4.8%, compared to the national average of 4.7% for the same period. Preliminary data for the same period placed nonfarm employment at 1,759,500. Since the beginning of the BLS data series in 1976, the highest unemployment rate recorded in Louisiana was 12.9% in September 1986. The historical low was 4.3% in February 2006. Preliminary nonfarm employment data by occupation for April 2006 showed that approximately 6% of the labor force was employed in construction; 8.1% in manufacturing; 20.5% in trade, transportation, and public utilities; 5.3% in financial activities; 9.6% in professional and business

services; 11.9% in education and health services; 9.6% in leisure and hospitality services; and 21% in government.

During the antebellum period, Louisiana had both the largest slave market in the United States—New Orleans—and the largest slave revolt in the nation's history, in St. Charles and St. John the Baptist parishes in January 1811. New Orleans also had a relatively large free black population, and many of the slaves in the city were skilled workers, some of whom were able to earn their freedom by outside employment. Major efforts to organize Louisiana workers began after the Civil War. There were strikes in the cane fields in the early 1880s, and in the mid-1880s, the Knights of Labor began to organize the cane workers. The strike they called in 1886 was ended by hired strikebreakers, who killed at least 30 blacks. Back in New Orleans, the Knights of Labor led a general strike in 1892. The Brotherhood of Timber Workers began organizing in 1910 but had little to show for their efforts except the scars of violent conflict with the lumber-mill owners.

A right-to-work law was passed in 1976, partly as a result of violent conflict between an AFL-CIO building trades union and an independent union over whose workers would build a petrochemical plant near Lake Charles. In 1979, a police strike began in New Orleans on the eve of Mardi Gras, causing the cancellation of most of the parades, but it collapsed the following month.

The BLS reported that in 2005, a total of 114,000 of Louisiana's 1,778,000 employed wage and salary workers were formal members of a union. This represented 6.4% of those so employed, down from 7.6% in 2004, and below the national average of 12%. Overall in 2005, a total of 132,000 workers (7.4%) in Louisiana were covered by a union or employee association contract, which includes those workers who reported no union affiliation. Louisiana is one of 22 states with a right-to-work law.

As of 1 March 2006, Louisiana did not have a state-mandated minimum wage law. Employees in that state however, were covered under federal minimum wage statutes. In 2004, women in the state accounted for 47.8% of the employed civilian labor force.

2³ AGRICULTURE

With a farm income of \$2.1 billion in 2005—57% from crops—Louisiana ranked 34th among the 50 states. Nearly every crop grown in North America can be raised somewhere in Louisiana. In the south are strawberries, oranges, sweet potatoes, and truck crops; in the southeast, sugarcane; and in the southwest, rice and soybeans. Soybeans—which were introduced into Louisiana after World War I—are also raised in the cotton-growing area of the northeast and in a diagonal belt running east-northwest along the Red River. Oats, alfalfa, corn, potatoes, and peaches are among the other crops grown in the north.

As of 2004, there were an estimated 27,200 farms covering 7.85 million acres (3.18 million hectares) with an average farm size of 290 acres (117 hectares). Louisiana ranked second in the United States in sugar cane production. Cash receipts for the sugar crop in 2003 amounted to \$304.2 million 10,320,000 tons. Louisiana ranked third in the value of its rice production in 2004, \$223.9 million for 28,522,000 hundredweight (a unit of measure equal to 100 lb); and eighth for upland cotton in 2004, \$200.5 million for 885,000 bales.

24 ANIMAL HUSBANDRY

In the mid-19th century, before rice production began there, southwestern Louisiana was a major cattle-raising area. Today, cattle are raised mainly in the southeast (between the Mississippi and Pearl rivers), in the north-central region, and in the west.

In 2005, there were an estimated 860,000 cattle and calves worth \$670.8 million. In 2004, Louisiana had an estimated 16,000 hogs and pigs worth around \$1.7 million. Dairy farmers had an estimated 43,000 milk cows, which produced 519 million lb (236 million kg) of milk in 2003. Also during 2003, poultry farmers produced an estimated 7.5 million lb (3.4 million kg) of chicken, which sold for \$631,000, and an estimated 487 million eggs worth around \$35.9 million.

25 FISHING

In 2004, Louisiana was second behind only Alaska in the size and value of its commercial landings, with nearly 1.1 billion lb (500 million kg) valued at \$274.4 million. Leading ports in volume were Empire-Venice (379 million lb/172 million kg, third in the nation), Intracoastal City (301.8 million lb/137.2 million kg, fifth in the nation), and Cameron (243.1 million lb/110.5 million kg, sixth in the nation). In value, Empire-Venice was sixth in the nation with \$60.2 million and Dulac-Chauvin was 11th with \$42.8 million.

The most important species caught in Louisiana are shrimp, hard blue crab, and oysters. In 2004, shrimp landings in Louisiana amounted to 134.3 million lb/61 million kg, the highest in the nation. Hard blue crab landings in the state accounted for 26% of the national total. In 2002, the state commercial fleet had 8,874 boats and 2,084 vessels. In 2003, there were 90 processing and 114 wholesale plants in the state.

Louisiana produces most of the US crawfish harvest. With demand far exceeding the natural supply, crawfish farming began about 1959. In 2004, 1,126 crawfish farms covered some 118,250 acres (47,856 hectares), producing 69.5 million lb (28.1 million kg). Spring water levels of the state's Atchafalaya Basin cause the wild crawfish harvest to vary from year to year. Catfish are also cultivated in Louisiana, on 38 farms covering some 7,600 acres (3,075 hectares) in 2005, with a 2006 inventory of about 18.4 million fingerlings and 12.2 million stocker-sized catfish. Cash receipts from sales of catfish were \$14.3 million in 2004.

The Natchitoches National Fish Hatchery focuses on paddlefish, striped bass, and pallid sturgeon, but also raises largemouth bass, bluegill, and catfish in limited quantities.

Louisiana had 639,139 sport fishing license holders in 2004.

26 FORESTRY

As of 2004, there were 14,017,000 acres (5,673,000 hectares) of forestland in Louisiana, representing over half the state's land area and 2% of all US forests. The principal forest types are loblolly and shortleaf pine in the northwest, longleaf and slash pine in the south, and hardwood in a wide area along the Mississippi River. More than 99% of Louisiana's forests are commercial timberland, over 90% of it privately owned. Lumber production totaled 1.52 billion board feet in 2004.

Louisiana has one national forest, Kisatchie, with a gross area of 1,022,373 acres (413,754 hectares) within its boundaries; gross

acreage of National Forest System lands in the state was 2,049,000 acres (829,000 hectares) in 2005. Near the boundaries of Kisatchie's Evangeline Unit is the Alexander State Forest, established in 1923.

27 MINING

According to preliminary data from the US Geological Survey (USGS), the estimated value of nonfuel mineral production by Louisiana in 2003 was \$331 million, an increase from 2002 of about 6%. The USGS data ranked Louisiana as 34th among the 50 states by the total value of its nonfuel mineral production, accounting for around 1% of total US output.

Salt was the state's leading nonfuel mineral commodity in 2003, accounting for about 41% of all nonfuel mineral production (by value) that year. It was followed by construction sand and gravel, which accounted for 32% of all nonfuel mineral output (by value), crushed stone, industrial sand and gravel (about 4% of output by value), and lime. According to preliminary data, the production of salt in 2003 totaled 12.1 million metric tons and was valued at \$135 million, while the output of construction sand and gravel totaled 19.7 million metric tons, with a value of \$107 million. Industrial sand and gravel output in 2003 totaled 529,000 metric tons and was valued at \$11.8 million, according to the preliminary data. Louisiana in 2003 was the largest salt producing state in the United States.

28 ENERGY AND POWER

As of 2003, Louisiana had 43 electrical power service providers, of which 22 were publicly owned and 13 were cooperatives. Of the remainder, five were investor owned, and three were owners of independent generators that sold directly to customers. As of that same year there were 2,131,340 retail customers. Of that total, 1,611,090 received their power from investor-owned service providers. Cooperatives accounted for 366,208 customers, while publicly owned providers had 153,740 customers. There were 302 independent generator or "facility" customers.

Total net summer generating capability by the state's electrical generating plants in 2003 stood at 25,748 million kW, with total production that same year at 94.885 billion kWh. Of the total amount generated, 45.8% came from electric utilities, with the remainder (54.2%) coming from independent producers and combined heat and power service providers. The largest portion of all electric power generated, 45.434 billion kWh (47.9%), came from natural gas fired plants, with coal-fired plants in second place at 22.888 billion kWh (24.1%) and nuclear fueled plants in third at 16.126 billion kWh (17%). Other renewable power sources accounted for 3.3% of all power generated, with petroleum fired plants at 3.1%, plants using other types of gases at 2.8%, hydroelectric at 0.9% and "other" types of generating facilities at 0.8%.

As of 2006, Louisiana had two nuclear power plants: the River Bend plant in West Feliciana, near Baton Rouge; and the Waterford plant near Taft, in St. Charles Parish.

Oil and gas production has expanded greatly since World War II, but production reached its peak in the early 1970s and proven reserves are declining. As of 2004, Louisiana had proven crude oil reserves of 427 million barrels, or 2% of all proven US reserves, while output that same year averaged 228,000 barrels per day. Including federal offshore domains, the state that year ranked eighth

(seventh excluding federal offshore) in proven reserves and fifth (fourth excluding federal offshore) in production among the 31 producing states. In 2004 Louisiana had 19,970 producing oil wells and accounted for 4% of all US production. As of 2005, the state's 17 refineries had a combined crude oil distillation capacity of 2,772,723 barrels per day.

In 2004, Louisiana had 20,734 producing natural gas and gas condensate wells. In that same year, marketed gas production (all gas produced excluding gas used for repressuring, vented and flared, and nonhydrocarbon gases removed) totaled 1,357.366 billion cu ft (38.5 billion cu m). As of 31 December 2004, proven reserves of dry or consumer-grade natural gas totaled 9,588 billion cu ft (272.2 billion cu m).

Louisiana in 2004, had two producing coal mines, both of which were surface operations. Coal production that year totaled 3,805,000 short tons, down from 4,028,000 short tons in 2003. One short ton equals 2,000 lb (0.907 metric tons).

29 INDUSTRY

According to the US Census Bureau's Annual Survey of Manufactures (ASM) for 2004, Louisiana's manufacturing sector covered some 19 product subsectors. The shipment value of all products manufactured in the state that same year was \$124.304 billion. Of that total, petroleum and coal products manufacturing accounted for the largest share at \$53.365 billion. It was followed by chemical manufacturing at \$39.911 billion; transportation equipment manufacturing at \$7.369 billion; food manufacturing at \$6.601 billion; and paper manufacturing at \$4.456 billion.

In 2004, a total of 140,985 people in Louisiana were employed in the state's manufacturing sector, according to the ASM. Of that total, 103,159 were actual production workers. In terms of total employment, the chemical manufacturing industry accounted for the largest portion of all manufacturing employees at 22,903 with 14,458 actual production workers. It was followed by fabricated metal product manufacturing at 19,992 employees (15,284 actual production workers); transportation equipment manufacturing at 19,184 employees (14,788 actual production workers); food manufacturing at 17,607 employees (12,995 actual production workers); and paper manufacturing with 8,680 employees (6,964 actual production workers).

ASM data for 2004 showed that Louisiana's manufacturing sector paid \$6.704 billion in wages. Of that amount, the chemical manufacturing sector accounted for the largest share at \$1.630 billion. It was followed by transportation equipment manufacturing at \$940.776 million; fabricated metal product manufacturing at \$793.515 million; petroleum and coal products manufacturing at \$774.905 million; and food manufacturing at \$517.504 million.

The Standard Oil Refinery (now owned by Exxon) that is today the largest in North America began operations in Louisiana in 1909, the same year construction started on the state's first long-distance oil pipeline. Since then, a huge and still-growing petrochemical industry has become a dominant force in the state's economy. Other expanding industries are wood products and, especially since World War II, shipbuilding.

The principal industrial regions extend along the Mississippi River from north of Baton Rouge to New Orleans, and also include the Monroe, Shreveport, Morgan City, and Lake Charles areas.

30 COMMERCE

According to the 2002 Census of Wholesale Trade, Louisiana's wholesale trade sector had sales that year totaling \$47.1 billion from 5,904 establishments. Wholesalers of durable goods accounted for 3,672 establishments, followed by nondurable goods wholesalers at 1,987 and electronic markets, agents, and brokers accounting for 245 establishments. Sales by durable goods wholesalers in 2002 totaled \$15.2 billion, while wholesalers of nondurable goods saw sales of \$28.9 billion. Electronic markets, agents, and brokers in the wholesale trade industry had sales of \$3.01 billion.

In the 2002 Census of Retail Trade, Louisiana was listed as having 17,613 retail establishments with sales of \$41.8 billion. The leading types of retail businesses by number of establishments were: gasoline stations (2,545); food and beverage stores (2,336); clothing and clothing accessories stores (2,299); and motor vehicle and motor vehicle parts dealers (1,998). In terms of sales, motor vehicle and motor vehicle parts stores accounted for the largest share of retail sales at \$11 billion, followed by general merchandise stores at \$7.8 billion; food and beverage stores at \$5.4 billion; gasoline stations at \$4.3 billion; and building material/garden equipment and supplies dealers at \$3.3 billion. A total of 228,290 people were employed by the retail sector in Louisiana that year.

Exporters located in Louisiana exported \$19.2 billion in merchandise during 2005.

31 CONSUMER PROTECTION

Consumer protection is the responsibility of the Consumer Protection Section, which is under the state's Office of the Attorney General. The section investigates and mediates consumer complaints, takes action against companies allegedly engaging in unfair business practices, distributes consumer publications, and registers multi-level marketing, telemarketing, and charitable organizations, as authorized by the state's Unfair and Deceptive Trade Practices Act. However, the section does not handle the areas of insurance, banking, or utilities.

When dealing with consumer protection issues, the state's Attorney General's Office can initiate civil and criminal proceedings; represent the state before state and federal regulatory agencies; administer consumer protection and education programs; handle formal consumer complaints; and exercise broad subpoena powers. However, the Attorney General's office cannot represent individual consumers. In antitrust actions, the Attorney General's Office can act on behalf of those consumers who are incapable of acting on their own; initiate damage actions on behalf of the state in state courts; and represent counties, cities, and other governmental entities in recovering civil damages under state or federal law. However, the Office cannot file for criminal proceedings for antitrust actions.

The offices of the Consumer Protection Section of the Attorney General's Office is located in Baton Rouge. A county government office is also located in the city of Gretna.

32 BANKING

As of June 2005, Louisiana had 164 insured banks, savings and loans, and saving banks, plus 53 state-chartered and 201 federally chartered credit unions (CUs). Excluding the CUs, the New Or-

leans-Metairie-Kenner market area accounted for the largest portion of the state's financial institutions and deposits in 2004, with 42 institutions and \$20.066 billion in deposits. As of June 2005, CUs accounted for 8.9% of all assets held by all financial institutions in the state, or some \$5.986 billion. Banks, savings and loans, and savings banks collectively accounted for the remaining 91.1% or \$61.010 billion in assets held.

Louisiana state-chartered banks are regulated by the Office of Financial Institutions under the Department of Economic Development. Federally chartered banks are regulated by the Office of the Comptroller of the Currency.

As of fourth quarter 2005, the median net interest margin (the difference between the lower rates offered to savers and the higher rates charged on loans), was 4.59%, up from 4.42% in 2004 and 4.40% in 2003. Prior to Hurricanes Katrina and Rita, 2005 was on track to be a record year for earnings by the financial institutions based in Louisiana. However, those insured institutions located in the most heavily impacted parishes, as of early 2006 continued to report significant decreases in profits. In fourth quarter 2005, median return on assets for those parishes was 0.46%.

33 INSURANCE

In 2004 there were over 4.6 million individual life insurance policies in force with a total value of over \$179 billion; total value for all categories of life insurance (individual, group, and credit) was over \$267 billion. The average coverage amount is \$38,500 per policy holder. Death benefits paid that year totaled at about \$910.6 million.

There were 58 life and health and 33 property and casualty insurance companies domiciled in the state at the end of 2003. In 2004, direct premiums for property and casualty insurance totaled \$7.4 billion. That year, there were 380,192 flood insurance policies in force in the state, with a total value of \$53.9 billion. About \$1.2 billion of coverage was held in Beach and Windstorm plans and another \$22.7 billion of coverage was held through FAIR plans, which are designed to offer coverage for some natural circumstances, such as wind and hail, in high risk areas.

In 2004, 48% of state residents held employment-based health insurance policies, 5% held individual policies, and 28% were covered under Medicare and Medicaid; 19% of residents were uninsured. Louisiana tied with four other states as having the fourth-highest percentage of uninsured residents in the nation. In 2003, employee contributions for employment-based health coverage averaged at 19% for single coverage. The average employee contribution for family coverage was one of the highest in the nation at 30%. The state offers a 12-month health benefits expansion program for small-firm employees in connection with the Consolidated Omnibus Budget Reconciliation Act (COBRA, 1986), a health insurance program for those who lose employment-based coverage due to termination or reduction of work hours.

In 2003, there were over 2.6 million auto insurance policies in effect for private passenger cars. Required minimum coverage includes bodily injury liability of up to \$10,000 per individual and \$20,000 for all persons injured in an accident, as well as property damage liability of \$10,000. In 2003, the average expenditure per vehicle for insurance coverage was \$1,013.93, the sixth-highest average in the nation.

The Department of Insurance administers Louisiana's laws governing the industry.

34 SECURITIES

There are no securities or commodities exchanges in Louisiana. In 2005, there were 670 personal financial advisers employed in the state and 1,340 securities, commodities, and financial services sales agents. In 2004, there were over 73 publicly traded companies within the state, with over 18 NASDAQ companies, 17 NYSE listings, and 5 AMEX listings. In 2006, the state had two Fortune 500 companies; Entergy (based in New Orleans) ranked first in the state and 218th in the nation with revenues of over \$10.7 billion, followed by Freeport-McMoRan Copper and Gold, Inc. (New Orleans) at 480th in the nation. Shaw Group (Baton Rouge), CenturyTel (Monroe), and SCP Pool (Covington) were listed in the Fortune 1,000. SCP Pool is listed on NASDAQ and the others are listed with the NYSE.

35 PUBLIC FINANCE

The budget is prepared by the state executive budget director and submitted annually by the governor to the legislature for amendment and approval. The fiscal year (FY) runs from 1 July through 30 June.

Fiscal year 2006 general funds were estimated at \$7.1 billion for resources and \$6.7 billion for expenditures. In fiscal year 2004, federal government grants to Louisiana were \$7.7 billion.

In the fiscal year 2007 federal budget, Louisiana was slated to receive: \$37.5 million in incremental funding for a \$150 million project for the construction of the 36-mile segment of I-49 between the Arkansas State line and I-220 in Shreveport; \$25 million for planning, design, and science-related efforts to restore the Louisiana coastal wetlands and barrier island ecosystem.

36 TAXATION

In 2005, Louisiana collected \$8,639 million in tax revenues or \$1,910 per capita, which placed it 36th among the 50 states in per capita tax burden. The national average was \$2,192 per capita. Property taxes accounted for 0.5% of the total, sales taxes 33.1%, selective sales taxes 20.0%, individual income taxes 27.7%, corporate income taxes 4.1%, and other taxes 14.6%.

As of 1 January 2006, Louisiana had three individual income tax brackets ranging from 2% to 6%. The state taxes corporations at rates ranging from 4% to 8% depending on tax bracket.

In 2004, state and local property taxes amounted to \$2.5 billion or \$502 per capita. The per capita amount ranks the state fifth-lowest nationally. Local governments collected \$2.2 billion of the total and the state government \$39.7 million.

Louisiana taxes retail sales at a rate of 4%. In addition to the state tax, local taxes on retail sales can reach as much as 6.25%, making for a potential total tax on retail sales of 10.25%. Food purchased for consumption off-premises is exempt from state tax, but subject to local taxes. The tax on cigarettes is 36 cents per pack, which ranks 42nd among the 50 states and the District of Columbia. Louisiana taxes gasoline at 20 cents per gallon. This is in addition to the 18.4 cents per gallon federal tax on gasoline.

According to the Tax Foundation, for every federal tax dollar sent to Washington in 2004, Louisiana citizens received \$1.45 in federal spending.

Louisiana—State Government Finances

(Dollar amounts in thousands. Per capita amounts in dollars.)

	AMOUNT	PER CAPITA
Total Revenue	23,730,239	5,265.20
General revenue	19,156,139	4,250.31

37 ECONOMIC POLICY

The Office of Commerce and Industry in the Department of Economic Development seeks to encourage investment and create jobs in the state and to expand the markets for Louisiana products. Financial assistance services for industrial development include state and local tax incentives and state “Enterprise Zone” legislation. The Louisiana Small Business Equity Corporation and the Louisiana Minority Business Development Authority offer financial assistance. Beginning in 1999, the Louisiana Economic Development Council prepared annual reports and action plans

with a view to the implementation of the state’s Master Plan for Economic Development dubbed Vision 2020. The three main goals of Vision 2020 were to, by 2020, recreate Louisiana as a place where all citizens are engaged in the pursuit of knowledge; create an economy driven by technology-intensive industries, and rank among the top 10 states in standard of living indicators. Successes in 2002 were reported in providing economic development incentives, and developing infrastructure for biosciences, information technology, research and development, and education.

With the devastation wrought by Hurricane Katrina and the breaching of the levees in New Orleans in 2005, Louisiana was faced with an entirely new economic development scenario. In September 2005, President George W. Bush announced he would create a Gulf Opportunity Zone for Louisiana, Mississippi, and Alabama. Businesses would be able to double to \$200,000 the amount they could deduct from their taxes for investments in new equipment. It would also provide a 50% bonus depreciation and make loan guarantees available. Congress passed the Gulf Opportunity Zone Act in December 2005, which provides a number of tax incentives to encourage the rebuilding of areas ravaged by Hurricanes Katrina, Rita, and Wilma.

38 HEALTH

The infant mortality rate in October 2005 was estimated at 9.5 per 1,000 live births, representing the third-highest rate in the country (following the District of Columbia and Mississippi). The birth rate in 2003 was 14.5 per 1,000 population. The abortion rate stood at 13 per 1,000 women in 2000. In 2003, about 84.1% of pregnant woman received prenatal care beginning in the first trimester. In 2004, approximately 75% of children received routine immunizations before the age of three.

The crude death rate in 2003 was 9.5 deaths per 1,000 population. As of 2002, the death rates for major causes of death (per 100,000 resident population) were: heart disease, 249.5; cancer, 210.6; cerebrovascular diseases, 57.9; chronic lower respiratory diseases, 37.8; and diabetes, 39.6. Louisiana had the second-highest diabetes death rate in the nation, following West Virginia. The state also had the second-highest homicide death rate at 13.5 per 100,000 population (following the District of Columbia at 40.1 per 100,000); the national average death rate by homicide is 6.1 per 100,000. The mortality rate from HIV infection was 8.1 per 100,000 population. In 2004, the reported AIDS case rate was at about 22.4 per 100,000 population, the fifth-highest rate in the nation. In 2002, about 58.4% of the population was considered overweight or obese. As of 2004, about 23.4% of state residents were smokers.

In 2003, Louisiana had 127 community hospitals with about 17,800 beds. There were about 690,000 patient admissions that year and 10.8 million outpatient visits. The average daily inpatient census was about 10,600 patients. The average cost per day for hospital care was \$1,177. Also in 2003, there were about 314 certified nursing facilities in the state with 38,397 beds and an overall occupancy rate of about 75.9%. In 2004, it was estimated that about 68.2% of all state residents had received some type of dental care within the year. Louisiana had 262 physicians per 100,000 resident population in 2004 and 873 nurses per 100,000 in 2005. In 2004, there were a total of 2,040 dentists in the state.

About 28% of state residents were enrolled in Medicaid and Medicare programs in 2004. Approximately 19% of the state population was uninsured in 2004. In 2003, state health care expenditures totaled \$6.3 million.

39 SOCIAL WELFARE

In 2004, about 90,000 people received unemployment benefits, with the average weekly unemployment benefit at \$195. In fiscal year 2005, the estimated average monthly participation in the food stamp program included about 807,896 persons (318,126 households); the average monthly benefit was about \$100.96 per person. That year, the total of benefits paid through the state for the food stamp program was about \$978.7 million.

Temporary Assistance for Needy Families (TANF), the system of federal welfare assistance that officially replaced Aid to Families with Dependent Children (AFDC) in 1997, was reauthorized through the Deficit Reduction Act of 2005. TANF is funded through federal block grants that are divided among the states based on an equation involving the number of recipients in each state. Louisiana's TANF cash assistance program is called the Family Independent Temporary Assistance Program (FITAP), and the work program is called FIND Work (Family Independence Work Program). In 2004, the state program had 46,000 recipients; state and federal expenditures on this TANF program totaled \$73 million fiscal year 2003.

In December 2004, Social Security benefits were paid to 739,180 Louisiana residents. This number included 377,770 retired workers, 104,640 widows and widowers, 109,910 disabled workers, 57,750 spouses, and 89,110 children. Social Security beneficiaries represented 16.4% of the total state population and 90.3% of the state's population age 65 and older. Retired workers received an average monthly payment of \$888; widows and widowers, \$826; disabled workers, \$887; and spouses, \$438. Payments for children of retired workers averaged \$420 per month; children of deceased workers, \$563; and children of disabled workers, \$253. Federal Supplemental Security Income payments in December 2004 went to 169,549 Louisiana residents, averaging \$391 a month. An additional \$38,000 of state-administered supplemental payments were distributed to 4,797 residents.

40 HOUSING

The Indians of Louisiana built huts with walls made of clay kneaded with Spanish moss and covered with cypress bark or palmetto leaves. The earliest European settlers used split cypress boards filled with clay and moss; a few early 18th-century houses with clay and moss walls remain in the Natchitoches area. Examples of later architectural styles also survive, including buildings constructed of bricks between heavy cypress posts, covered with plaster; houses in the raised cottage style, supported by brick piers and usually including a wide gallery and colonettes; the Creole dwellings of the Vieux Carre in New Orleans, built of brick and characterized by balconies and French windows; and urban and plantation houses from the Greek Revival period of antebellum Louisiana.

In 2004, Louisiana had an estimated 1,919,859 housing units, of which 1,713,680 were occupied. About 66.2% were owner-occupied. An estimated 65.7% of all units were single-family, detached homes. Nearly 39% of all housing units were built between 1970

and 1989. Most units relied on utility gas or electricity for heating. It was estimated that 121,505 units lacked telephone service, 7,424 lacked complete plumbing facilities, and 8,581 lacked complete kitchen facilities. The average household had 2.56 members.

In 2004, 23,000 privately owned units were authorized for construction. The median home value was \$95,910. The median monthly cost for mortgage owners was \$902. Renters paid a median of \$540 per month. In September 2005, the state received a grant of \$300,000 from the US Department of Housing and Urban Development (HUD) for rural housing and economic development programs. For 2006, HUD allocated to the state over \$29.3 million in community development block grants (CDBG). New Orleans received over \$15.4 million in CDBG grants the same year. Also in 2006, HUD offered an additional \$6.2 billion to the state in emergency funds to rebuild housing that was destroyed by Hurricanes Katrina, Rita, and Wilma in late 2005.

41 EDUCATION

Most education in Louisiana was provided through private (often parochial) schools until Reconstruction. Not until Huey Long's administration, when spending for education increased greatly and free textbooks were supplied, did education become a high priority of the state. As of 2004, 78.7% of Louisianians 25 years and older had completed high school, well below the national average of 84%. Some 22.4% had completed four or more years of college, below the national average of 26%.

Integration of New Orleans public schools began in 1960; two years later, the archbishop of New Orleans required that all Catholic schools under his jurisdiction be desegregated. However, it took a federal court order in 1966 to bring about integration in public schools throughout the state. By 1980, 36% of minority students in Louisiana were in schools with less than 50% minority enrollment, and 25% were in schools with 99–100% minority enrollment.

The total enrollment for fall 2002 in Louisiana's public schools stood at 730,000. Of these, 537,000 attended schools from kindergarten through grade eight, and 194,000 attended high school. Approximately 48.5% of the students were white, 47.7% were black, 1.8% were Hispanic, 1.3% were Asian/Pacific Islander, and 0.7% were American Indian/Alaskan Native. Total enrollment was estimated at 709,000 in fall 2003 and was expected to be 707,000 by fall 2014, a decline of 3.3% during the period 2002 to 2014. Expenditures for public education in 2003–04 were estimated at \$5.7 billion. In fall 2003, there were 140,492 students enrolled in 440 private schools. Since 1969, the National Assessment of Educational Progress (NAEP) has tested public school students nationwide. The resulting report, *The Nation's Report Card*, stated that in 2005 eighth graders in Louisiana scored 268 out of 500 in mathematics compared with the national average of 278.

As of fall 2002, there were 232,140 students enrolled in college or graduate school; minority students comprised 34.7% of total postsecondary enrollment. As of 2005, Louisiana had 90 degree-granting institutions. There are 16 public four-year schools, 46 public two-year institutions, and 10 private four-year non-profit institutions. The center of the state university system is Louisiana State University (LSU), founded at Baton Rouge; LSU also has campuses at Alexandria, Eunice, and Shreveport, and includes the University of New Orleans. Tulane University, founded in New

Orleans in 1834, is one of the most distinguished private universities in the South, as is Loyola University, also in New Orleans. Southern University Agricultural and Mechanical System at Baton Rouge (1881) is one of the largest predominantly black universities in the country; other campuses are in New Orleans and Shreveport. Another mainly black institution is Grambling State University (1901).

The Louisiana Student Financial Assistance Commission and the Louisiana Tuition Trust Authority administer state loan, grant, and scholarship programs managed by the Louisiana Office of Student Financial Assistance. The state Council for the Development of French in Louisiana (CODOFIL) organizes student exchanges with Quebec, Belgium, and France and aids Louisianians studying French abroad.

4² ARTS

The Louisiana Division of the Arts (LDOA; est. 1977), the largest arts grantmaker in the state, is an agency of the state Office of Cultural Development, Department of Culture, Recreation and Tourism. In the aftermath of Hurricanes Katrina and Rita of 2005, the LDOA worked with the Louisiana Partnership for the Arts to assess the impact these disasters had on the art communities. Arts projects are funded in every parish (county) in the state through the LDOA Decentralized Arts Funding Program. In 2005, Louisiana arts organizations received 24 grants totaling \$1,150,100 from the National Endowment for the Arts.

The Louisiana Endowment for the Humanities was established in 1971. As of 2006, ongoing programs included "Relic: Readings in Literature and Culture" and "Prime Time Family Reading Time." In 2005, the National Endowment for the Humanities awarded 17 grants totaling \$2,037,337 to state organizations.

New Orleans has long been one of the most important centers of artistic activity in the South. The earliest theaters were French, and the first of these was started by refugees from Hispaniola, who put on the city's first professional theatrical performance in 1791. The American Theater, which opened in 1824, attracted many of the finest actors in America, as did the nationally famous St. Charles. Showboats traveled the Mississippi and other waterways, bringing dramas, musicals, and minstrel shows to river towns and plantations as early as the 1840s, with their heyday being the 1870s and 1880s.

Principal theaters included the New Orleans Theater of the Performing Arts, the Saenger Theater in New Orleans (one of the "grand old theaters"), the Tulane Theater, and Le Petit Theatre du Vieux Carre. Le Petit Theatre was established in 1916 and has been recognized as one of the leading community theaters in the nation. During the 2004–05 season Le Petit Theatre began a construction project on the main stage providing a complete orchestra pit, a new stage, and a fly loft—the stage had been unchanged since 1922. Junebug Productions is a black touring company based in New Orleans. Louisiana State University (LSU) at Baton Rouge has theaters for both opera and drama. Baton Rouge, Shreveport, Monroe, Lake Charles, and Hammond are among the cities with little theaters, and Baton Rouge, Lafayette, and Lake Charles have ballet companies. There are symphony orchestras in most of the larger cities, the Louisiana Philharmonic Orchestra (LPO) being the best known. Although Hurricane Katrina battered the state, devastating New Orleans in 2005, the LPO returned to New Or-

leans with a spring concert season during March, April, and May 2006.

It is probably in music that Louisiana has made its most distinctive contributions to culture. Jazz was born in New Orleans around 1900; among its sources was the music played by brass bands at carnivals and at Negro funerals, and its immediate precursor was the highly syncopated music known as ragtime. Early jazz in the New Orleans style is called Dixieland; Louis Armstrong pioneered the transformation of jazz from the Dixieland ensemble style to a medium for solo improvisation. Traditional Dixieland has been played by performers associated with the Preservation Hall, Dixieland Hall, and the New Orleans Jazz Club. In 2005, many of the buildings that housed these organizations and clubs were either severely damaged or destroyed by the forces of Hurricane Katrina. Despite having to close buildings, groups like the Hall Jazz Band of the Preservation Hall continued touring; the Preservation Hall celebrated its 45th anniversary on tour in 2006. Equally distinctive is Cajun music, dominated by the sound of the fiddle and accordion.

Visual arts in the state flourish, especially in New Orleans, home to the Ogden Museum of Southern Art. Prompted by the devastation of Hurricane Katrina the museum showcased several special exhibits including, *Come Hell and High Water: Portraits of Hurricane Katrina Survivors*, *New Housing Prototypes for New Orleans*, and *Louisiana Story: A Photographic Journey*.

4³ LIBRARIES AND MUSEUMS

For the calendar year 2001, Louisiana's 64 parishes were served by 65 public library systems, with a total of 329 libraries, of which 264 were branches. In that same year, the public library system had 10,850,000 volumes of books and serial publications on its shelves, and had a total circulation of 18,376,000. The system also had 230,000 audio and 309,000 video items, 13,000 electronic format items (CD-ROMs, magnetic tapes, and disks), and 30 bookmobiles. The New Orleans Public Library, with 14 branches and 739,473 books, features a special collection on jazz and folk music, and the Tulane University Library (1,765,000 volumes) has special collections on jazz and Louisiana history. Among the libraries with special black-studies collections are those of Grambling State University, Southern University Agricultural and Mechanical System at Baton Rouge, Xavier University of Louisiana at New Orleans, and the Amistad Collection at Tulane University. The library of Northwestern State University at Natchitoches has special collections on Louisiana history, folklore, Indians, botany, and oral history. In 2001, operating income for the state's public library system was \$112,068,000, which included \$107,000 in federal funds and \$6,817,000 in state funds.

As of 2000, Louisiana had 89 museums and historic sites, as well as more than 27 art collections. Leading art museums are the New Orleans Museum of Art, the Lampe Gallery in New Orleans, and the R. W. Norton Art Gallery at Shreveport. The art museum of the Louisiana Arts and Science Center at Baton Rouge is located in the renovated Old Illinois Central Railroad Station. The oldest and largest museum in the state is the Louisiana State Museum, an eight-building historic complex in the Vieux Carre. There is a military museum in Beauregard House at Chalmette National Historical Park, on the site of the Battle of New Orleans, and a Confederate Museum in New Orleans. The Bayou Folk Muse-

um at Cloutierville is in the restored home of author Kate Chopin; the Longfellow-Evangeline State Commemorative Area has a historical museum on its site. Among the state's scientific museums are the Lafayette Natural History Museum, Planetarium, and Nature Station, and the Museum of Natural Science in Baton Rouge. Audubon Park and Zoological Gardens are in New Orleans. The "Louisiana and Lower Mississippi Valley Collection" at LSU is an extensive collection of Louisiana history, photographs, and manuscripts.

44 COMMUNICATIONS

The second rural free delivery route in the United States, and the first in Louisiana, was established on 1 November 1896 at Thibodaux. As of 2004, 90.9% of Louisiana's occupied housing units had telephones. Additionally, by June of that same year there were 2,547,153 mobile wireless telephone subscribers. In 2003, 52.3% of Louisiana households had a computer and 44.1% had Internet access. By June 2005, there were 536,339 high-speed lines in Louisiana, 475,284 residential and 610,055 for business.

In 2005, the state had 77 major radio broadcasting stations (15 AM and 62 FM) as well as 32 television stations. In 1999, New Orleans had 629,820 television households, 76% of which had cable TV.

As of 2000, a total of 46,786 Internet domain names had been registered in Louisiana.

45 PRESS

At one time, New Orleans had as many as nine daily newspapers (four English, three French, one Italian, and one German), but by 1997 there was only one, the *Times-Picayune*. In 2005, Louisiana had a total of 15 morning dailies, 11 evening dailies, and 21 Sunday papers.

The following table shows the principal dailies with their approximate 2005 circulations:

AREA	NAME	DAILY	SUNDAY
Baton Rouge	<i>Advocate</i> (m,S)	87,026	115,442
New Orleans	<i>Times-Picayune</i> (m,S)	252,799	281,374
Shreveport	<i>Times</i> (m,S)	62,551	77,090

Two influential literary magazines originated in the state. The *Southern Review* was founded at Louisiana State University in the 1930s by Robert Penn Warren and Cleanth Brooks. The *Tulane Drama Review*, founded in 1955, moved to New York University in 1967 but is still known by its original acronym, *TDR*.

46 ORGANIZATIONS

In 2006, there were over 3,076 nonprofit organizations registered within the state, of which about 2,085 were registered as charitable, educational, or religious organizations. Among business or professional organizations with headquarters in Louisiana are the American Shrimp Processors Association and the Southern Pine Council. Blue Key, a national honor society, has its headquarters in Metairie. The American Bone Marrow Donor Registry is based in Mandeville.

State and local organization for the arts include the Acadiana Arts Council, the Louisiana Division of the Arts, the Louisiana Historical Association, the Louisiana Preservation Alliance, the

New Orleans Jazz Club, the North Central Louisiana Arts Council, and the Northeast Louisiana Arts Council.

Civil rights groups represented in the state include the National Association for the Advancement of Colored People (NAACP) and the Urban League. Especially active during the 1970s were the local branches of the American Civil Liberties Union, the Louisiana Coalition on Jails and Prisons, and its legal arm, the Southern Prisoners Defense Council, and the Fishermen's and Concerned Citizens Association of Plaquemines Parish, which organized a campaign against the continued domination of the parish by the descendants of Leander Perez, a racist judge who wielded power there for 50 years until his death in 1969.

The Invisible Empire, Knights of the Ku Klux Klan, is headquartered in Denham Springs.

47 TOURISM, TRAVEL, AND RECREATION

In 2000, there were 15.4 million visitors to the state of Louisiana. Initial reports for 2001 estimated a total travel-related economic impact of \$9 billion, including support for 124,200 jobs. The two most popular activities for tourists were shopping and gambling. However, in 2005 Hurricane Katrina devastated New Orleans and surrounding areas, and tourism was virtually eliminated. Because two-thirds of New Orleans was submerged, a majority of the population was forced to relocate, either temporarily or permanently. Tulane and Loyola universities were forced to cancel at least one semester of classes. Many of those students did not return. As of 2006, only the French Quarter of New Orleans was able to support some tourism. A Mardi Gras celebration was held, but it was shortened from its usual month to a week.

New Orleans is one of the major tourist attractions in the United States. Known for its fine restaurants, serving such distinctive fare as gumbo, jambalaya, crawfish, and beignets, along with an elaborate French-inspired haute cuisine, New Orleans also offers jazz clubs, the graceful buildings of the French Quarter, and a lavish carnival called Mardi Gras ("Fat Tuesday"). Beginning on the Wednesday before Shrove Tuesday, parades and balls staged by private organizations called krewes are held almost nightly. In other towns, people celebrate Mardi Gras in their own, no less uproarious, manner. Probably the greatest attraction of Louisiana is its French heritage. Everything from French law, to the division of the state into parishes instead of counties, to the French cuisine, and to the use of the Creole language, is a major attraction to tourists.

Among the many other annual events that attract visitors to the state are the blessing of the shrimp fleet at the Louisiana Shrimp and Petroleum Festival in Morgan City on Labor Day weekend and the blessing of the cane fields during the Louisiana Sugar Cane Festival at New Iberia in September. October offers the International Rice Festival (including the Frog Derby) at Crowley, Louisiana Cotton Festival at Ville Platte (with a medieval jousting tournament), the Louisiana Yambilee Festival at Opelousas, and the Louisiana State Fair at Shreveport. Attractions of the Natchitoches Christmas Festival include 170,000 Christmas lights and spectacular fireworks displays. There are tours of plantations starting in St. Francisville. Monroe is the home of the first Coca-Cola bottler, Joseph Biedenhorn. Jean Lafitte National Historical Park has 10 miles of raised boardwalks through the Louisiana swamps

and marshes from which tourists can view wildlife (especially alligators).

Louisiana's 34 state parks and recreation sites total 39,000 acres (15,800 hectares).

48 SPORTS

Louisiana has two major professional sports teams: the Saints of the National Football League and the Hornets of the National Basketball Association. The Hornets were formerly located in Charlotte. Both the Saints and Hornets are located in New Orleans, however, due to Hurricane Katrina, both teams were forced to play in San Antonio and Oklahoma City, respectively. The Super Bowl has been held in New Orleans six times: in 1978, 1981, 1986, 1990, 1997, and 2002. It has been played in the Louisiana Superdome, the largest indoor arena in the United States.

New Orleans also has a minor league baseball team, the Zephyrs, of the Triple-A Pacific Coast League. In Shreveport, the Captains compete in the Double-A Texas League. There are several other minor league baseball and hockey teams scattered throughout the state.

During the 1850s, New Orleans was the horse-racing center of the United States, and racing is still popular in the state. The principal tracks are the Louisiana Jockey Club at the Fair Grounds in New Orleans, and Evangeline Downs at Lafayette. Gambling has long been widespread in Louisiana, particularly in the steamboat days, when races along the Mississippi drew huge wagers.

From the 1880s to World War I, New Orleans was the nation's boxing capital, and in 1893, the city was the site of the longest bout in boxing history, between Andy Bowen and Jack Burke, lasting 7 hours and 19 minutes—110 rounds—and ending in a draw. The TPC of Louisiana at Fairfield is a newly constructed championship-level golf course that became the home of the PGA's HP Classic in 2005.

In 1935, Tulane University inaugurated the Sugar Bowl (which they won that year for the first and only time), an annual New Year's Day event and one of the most prestigious bowl games in college football. Louisiana State University (LSU) won the Sugar Bowl in 1959, 1965, and 1968. They were named National Champions in 1958 and co-champions with USC in 2003. The LSU Tigers baseball team won the College World Series in 1991, 1993, 1996, and 1997. The LSU Tigers appeared in the National Collegiate Athletic Association (NCAA) Final Four in 1953, 1981, 1986, and 2006, and have had a number of famous basketball alumni, including "Pistol" Pete Maravich and Shaquille O'Neal.

Professional sports heroes Terry Bradshaw, Bill Russell, and Marshall Faulk all were born within the state's borders.

49 FAMOUS LOUISIANIANS

Zachary Taylor (b.Virginia, 1784–1850) is the only US president to whom Louisiana can lay claim. Taylor, a professional soldier who made his reputation as an Indian fighter and in the Mexican War, owned a large plantation north of Baton Rouge, which was his residence before his election to the presidency in 1848. Edward Douglass White (1845–1921) served first as associate justice of the US Supreme Court and then as chief justice.

Most other Louisianians who have held national office won more fame as state or confederate officials. John Slidell (b.New York, 1793–1871), an antebellum political leader, also played an impor-

tant role in Confederate diplomacy. Judah P. Benjamin (b.West Indies, 1811–84), of Jewish lineage, was a US senator before the Civil War; during the conflict he held three posts in the Confederate cabinet, after which he went to England and became a leading barrister. Henry Watkins Allen (b.Virginia, 1820–66) was elected governor of Confederate Louisiana in 1864, after he had been maimed in battle; perhaps the best administrator in the South, he installed a system of near-socialism in Louisiana as the fortunes of the Confederacy waned. During and after the Civil War, many Louisianians won prominence as military leaders. Leonidas Polk (b.North Carolina, 1806–64), the state's first Episcopal bishop, became a lieutenant general in the Confederate Army and died in the Atlanta campaign. Zachary Taylor's son Richard (b.Kentucky, 1826–79), a sugar planter who also became a Confederate lieutenant general, is noted for his defeat of Nathaniel P. Bank's Union forces in the Red River campaign of 1864. Pierre Gustave Toutant Beaufort (1818–93) attained the rank of full general in the Confederate Army and later served as director of the Louisiana state lottery, one of the state's major sources of revenue at that time. In the modern era, General Claire Chennault (b.Texas, 1893–1958) commanded the famous "Flying Tigers" and then the US 14th Air Force in China during World War II.

Throughout the 20th century, the Longs have been the first family of Louisiana politics. Without question, the most important state officeholder in Louisiana history was Huey P. Long (1893–1935), a latter-day Populist who was elected to the governorship in 1928 and inaugurated a period of social and economic reform. In the process, he made himself very nearly an absolute dictator within Louisiana. After his election to the US Senate, the "King Fish" became a national figure, challenging Franklin D. Roosevelt's New Deal with his "Share the Wealth" plan and flamboyant oratory. Huey's brother Earl K. Long (1895–1960) served three times as governor. Huey's son, US Senator Russell B. Long (1918–2003), was chairman of the Finance Committee—and, consequently, one of the most powerful men in Congress—from 1965 to 1980.

Also prominent in Louisiana history were Robert Cavelier, Sieur de la Salle (b.France, 1643–87), who was the first to claim the region for the French crown; Pierre le Moyne, Sieur d'Iberville (b.Canada, 1661–1706), who commanded the expedition that first established permanent settlements in the lands La Salle had claimed; his brother, Jean Baptiste le Moyne, Sieur de Bienville (b.Canada, 1680–1768), governor of the struggling colony and founder of New Orleans; and Bernardo de Galvez (b.Spain, 1746–86), who, as governor of Spanish Louisiana during the last years of the American Revolution, conquered British-held Florida in a series of brilliant campaigns. William Charles Coles Claiborne (b.Virginia, 1775–1817) was the last territorial and first state governor of Louisiana. The state's first Republican governor, Henry Clay Warmoth (b.Illinois, 1842–1932), came there as a Union officer before the end of the Civil War and was sworn in at age 26. Jean Étienne de Boré (b.France, 1741–1820) laid the foundation of the Louisiana sugar industry by developing a process for granulating sugar from cane; Norbert Rillieux (birthplace unknown, 1806–94), a free black man, developed the much more efficient vacuum pan process of refining sugar.

Andrew Victor Schally (b.Poland, 1926), a biochemist on the faculty of the Tulane University School of Medicine, shared the Nobel Prize for medicine in 1977 for his research on hormones.

Among other distinguished Louisiana professionals have been historian T. Harry Williams (1909–79), who won the Pulitzer Prize for his biography of Huey Long; architect Henry Hobson Richardson (1838–86); and four doctors of medicine: public health pioneer Joseph Jones (b.Georgia, 1833–96), surgical innovator Rudolph Matas (1860–1957), surgeon and medical editor Alton V. Ochsner (b.South Dakota, 1896–1981), and heart specialist Michael De Bakey (b.1908).

Louisiana's important writers include George Washington Cable (1844–1925), an early advocate of racial justice; Kate O'Flaherty Chopin (b.Missouri, 1851–1904); playwright and memoirist Lillian Hellman (1905–84); and novelists Walker Percy (b.Alabama, 1916–1990); Truman Capote (1924–84); Ernest Gaines (b.1933), author of *The Autobiography of Miss Jane Pittman*; Shirley Ann Grau (b.1929); and John Kennedy Toole (1937–69), the last two being winners of the Pulitzer Prize.

Louisiana has produced two important composers, Ernest Guiraud (1837–92) and Louis Gottschalk (1829–69). Jelly Roll Morton (Ferdinand Joseph La Menthe, 1885–1941), Pete Fountain (b.1930), and Sidney Bechet (1897–1959) were important jazz musicians, and Louis "Satchmo" Armstrong (1900–1971) was one of the most prolific jazz innovators and popular performers in the nation. The distinctive rhythms of pianist and singer Professor Longhair (Henry Byrd, 1918–80) were an important influence on popular music. Other prominent Louisianians in music are gospel singer Mahalia Jackson (1911–72), pianist-singer-songwriter Antoine "Fats" Domino (b.1928), and pop singer Jerry Lee Lewis (b.1935).

Louisiana baseball heroes include Hall of Famer Melvin Thomas "Mel" Ott (1909–58) and pitcher Ron Guidry (b.1950). Terry Bradshaw (b.1948), a native of Shreveport, quarterbacked the Super Bowl champion Pittsburgh Steelers during the 1970s. Player-coach William F. "Bill" Russell (b.1934) led the Boston Celtics to 10 National Basketball Association championships between 1956 and 1969. Chess master Paul Morphy (1837–84) was born in New Orleans.

MAINE

State of Maine

ORIGIN OF STATE NAME: Derived either from the French for a historical district of France, or from the early use of “main” to distinguish coast from islands. **NICKNAME:** The Pine Tree State. **CAPITAL:** Augusta. **ENTERED UNION:** 15 March 1820 (23rd). **SONG:** “State of Maine Song.” **MOTTO:** *Dirigo* (“I direct” or “I lead”). **COAT OF ARMS:** A farmer and sailor support a shield on which are depicted a pine tree, a moose, and water. Under the shield is the name of the state; above it are the state motto and the North Star. **FLAG:** The coat of arms is on a blue field, with a yellow fringed border surrounding three sides. **OFFICIAL SEAL:** Same as the coat of arms. **BIRD:** Chickadee. **FISH:** Landlocked salmon. **FLOWER:** White pine cone, tassel; wintergreen (herb). **TREE:** White pine. **LEGAL HOLIDAYS:** New Year’s Day, 1 January; Birthday of Martin Luther King Jr., 3rd Monday in January; Washington’s Birthday, 3rd Monday in February; Patriots’ Day, 3rd Monday in April; Memorial Day, last Monday in May; Independence Day, 4 July; Labor Day, 1st Monday in September; Columbus Day, 2nd Monday in October; Veterans Day, 11 November; Thanksgiving Day, 4th Thursday in November and day following; Christmas Day, 25 December. **TIME:** 7 AM EST = noon GMT.

¹ LOCATION, SIZE, AND EXTENT

Situated in the extreme northeastern corner of the United States, Maine is the nation’s most easterly state, the largest in New England, and 39th in size among the 50 states.

The total area of Maine is 33,265 sq mi (86,156 sq km), including 30,995 sq mi (80,277 sq km) of land and 2,270 sq mi (5,879 sq km) of inland water. Maine extends 207 mi (333 km) E–W; the maximum N–S extension is 322 mi (518 km).

Maine is bordered on the N by the Canadian provinces of Quebec (with the line passing through the St. Francis River) and New Brunswick (with the boundary formed by the St. John River); on the E by New Brunswick (with the lower eastern boundary formed by the Chiputneticook Lakes and the St. Croix River); on the SE and S by the Atlantic Ocean; and on the W by New Hampshire (with the line passing through the Piscataqua and Salmon Falls rivers in the SW) and Quebec.

Hundreds of islands dot Maine’s coast. The largest is Mt. Desert Island; others include Deer Isle, Vinalhaven, and Isle au Haut. The total boundary length of Maine is 883 mi (1,421 km).

The state’s geographic center is in Piscataquis County, 18 mi (29 km) N of Dover-Foxcroft. The easternmost point of the United States is West Quoddy Head, at 66°57’W.

² TOPOGRAPHY

Maine is divided into four main regions: coastal lowlands, piedmont, mountains, and uplands.

The narrow coastal lowlands extend, on average, 10–20 mi (16–32 km) inland from the irregular coastline, but occasionally disappear altogether, as at Mt. Desert Island and on the western shore of Penobscot Bay. Mt. Cadillac on Mt. Desert Island rises abruptly to 1,532 ft (467 m), the highest elevation on the Atlantic coast north of Rio de Janeiro, Brazil. The transitional hilly belt, or piedmont,

broadens from about 30 mi (48 km) wide in the southwestern part of the state to about 80 mi (129 km) in the northeast.

Maine’s mountain region, the Longfellow range, is at the northeastern end of the Appalachian Mountain system. This zone, extending into Maine from the western border for about 150 mi (250 km) and averaging about 50 mi (80 km) wide, contains nine peaks over 4,000 ft (1,200 m), including Mt. Katahdin, which at 5,267 ft (1,606 m) is the highest point in the state. The summit of Katahdin marks the northern terminus of the 2,000-mi (3,200-km) Appalachian Trail. Maine’s uplands form a high, relatively flat plateau extending northward beyond the mountains and sloping downward toward the north and east. The mean elevation of the state is approximately 600 ft (183 m). The eastern part of this zone is the Aroostook potato-farming region; the western part is heavily forested.

Of Maine’s more than 2,200 lakes and ponds, the largest are Moosehead Lake, 117 sq mi (303 sq km), and Sebago Lake, 13 mi (21 km) by 10 mi (16 km). Of the more than 5,000 rivers and streams, the Penobscot, Androscoggin, Kennebec, and Saco rivers drain historically and commercially important valleys. The longest river in Maine is the St. John, but it runs for most of its length in the Canadian province of New Brunswick. The lowest point of the state is at sea level at the Atlantic Ocean.

³ CLIMATE

Maine has three climatic regions: the northern interior zone, comprising roughly the northern half of the state, between Quebec and New Brunswick; the southern interior zone; and the coastal zone. The northern zone is both drier and cooler in all four seasons than either of the other zones, while the coastal zone is more moderate in temperature year-round than the other two.

The annual mean temperature in the northern zone is about 40°F (5°C); in the southern interior zone, 44°F (7°C); and in the coastal zone, 46°F (8°C). Record temperatures for the state are

-48°F (-44°C), registered at Van Buren on 19 January 1925, and 105°F (41°C) at North Bridgton on 10 July 1911. The mean annual precipitation increases from 40.2 in (102 cm) in the north to 41.5 in (105 cm) in the southern interior and 45.7 in (116 cm) on the coast. Average annual precipitation at Portland is about 43.6 in (110 cm); average annual snowfall is 70.5 in (179 cm).

4 FLORA AND FAUNA

Maine's forests are largely softwoods, chiefly red and white spruces, balsam fir (*Abies balsamea*), eastern hemlock, and white and red pine. Important hardwoods include beech, yellow and white birches, sugar and red maples, white oak, black willow, black and white ashes, and American elm, which has fallen victim in recent years to Dutch elm disease. Maine is home to most of the flowers and shrubs common to the north temperate zone, including an important commercial resource, the low-bush blueberry. Maine has seventeen rare orchid species. Two species, the small whorled pogonia and the eastern prairie fringed orchid, were classified by the US Fish and Wildlife Service as threatened as of April 2006; the furbish lousewort was classified as endangered that year.

About 30,000 white-tailed deer are killed by hunters in Maine each year, but the herd does not appear to diminish. Moose hunting was banned in Maine in 1935; however, in 1980, 700 moose-hunting permits were issued for a six-day season, and moose hunting has continued despite attempts by some residents to ban the practice. Other common forest animals include the bobcat, beaver, muskrat, river otter, mink, fisher, raccoon, red fox, and snowshoe hare. The woodchuck is a conspicuous inhabitant of pastures, meadows, cornfields, and vegetable gardens. Seals, porpoises, and occasionally finback whales are found in coastal waters, along with virtually every variety of North Atlantic fish and shellfish, including the famous Maine lobster. Coastal waterfowl include the osprey, herring and great black-backed gulls, great and double-crested cormorants, and various duck species. Matinicus Rock, a small uninhabited island about 20 mi (32 km) off the coast near the entrance to Penobscot Bay, is the only known North American nesting site of the common puffin, or sea parrot.

Eleven Maine animal species (vertebrates and invertebrates) were classified as threatened or endangered by the US Fish and Wildlife Service in 2006, including the bald eagle, piping plover, Atlantic Gulf of Maine salmon, two species of whale, and leather-back sea turtle.

5 ENVIRONMENTAL PROTECTION

The Department of Environmental Protection administers laws regulating the development of large residential, commercial, and industrial sites; the protection and improvement of air and water quality; the prevention and cleanup of oil spills; the control of hazardous wastes; the licensing of oil terminals; the protection of state-significant natural resources (including wetlands, rivers, streams and brooks, and fragile mountain areas); and mining. The Land Use Regulation Commission, established in 1969, extends the principles of town planning and zoning to Maine's 411 unorganized townships, 313 "plantations," and numerous coastal islands that have no local government and might otherwise be subject to ecologically unsound development. About 25% of the state

contains wetlands; these generally owned by private landowners, timber companies, or other individuals.

In 2003, 9.3 million lb of toxic chemicals were released in the state. Also in 2003, Maine had 59 hazardous waste sites listed in the US Environment Protection Agency (EPA) database, 12 of which were on the National Priorities List as of 2006, including Brunswick Naval Station, Loring Air Force Base, and Portsmouth Naval Shipyard. In 2005, the EPA spent over \$1.7 million through the Superfund program for the cleanup of hazardous waste sites in the state. The same year, the state received about \$2 million in other federal EPA grants.

6 POPULATION

Maine ranked 40th in population in the United States with an estimated total of 1,321,505 in 2005, an increase of 3.7% since 2000. Between 1990 and 2000, Maine's population grew from 1,227,928 to 1,274,923, an increase of 3.8%. The population is projected to reach 1.38 million by 2015 and 1.41 million by 2025. The population density in 2004 was 42.7 persons per sq mi.

In 2004 the median age was 40.7, the highest median in the nation. Persons under 18 years old accounted for 21.4% of the population while 14.4% was age 65 or older.

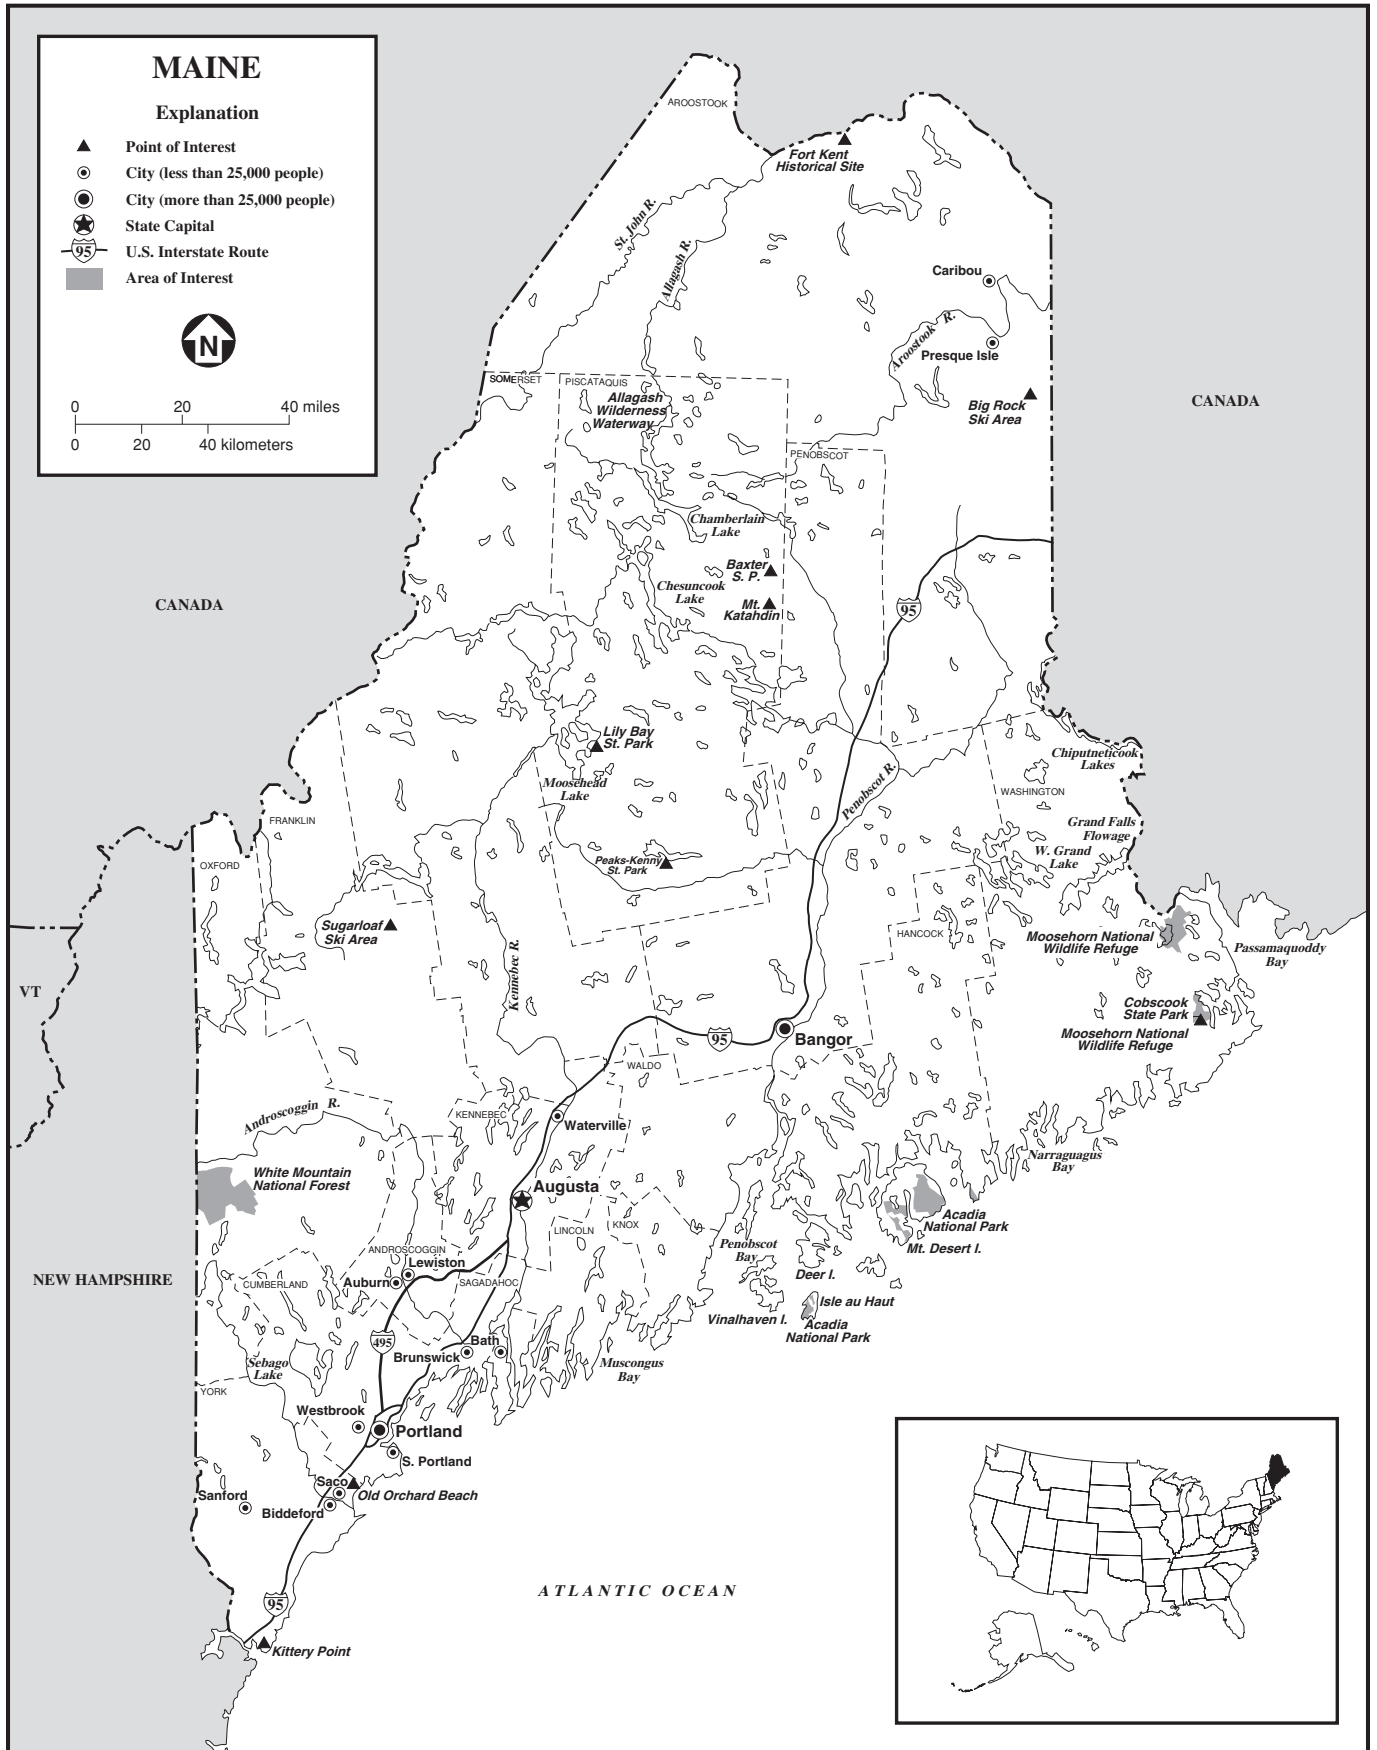

The area that now comprises the state of Maine was sparsely settled throughout the colonial period. At statehood, Maine had 298,335 residents. The population doubled by 1860, but then grew slowly until the 1970s, when its growth rate went above the national average.

More than half the population lives on less than one-seventh of the land, within 25 mi (40 km) of the Atlantic coast, and almost half of the state is virtually uninhabited. Although almost half of Maine's population is classified as urban; much of the urban population lives in towns and small cities. The state's major cities, all with populations under 100,000, are Portland, Bangor, and Lewiston-Auburn. The Portland metropolitan area had an estimated population of 510,791 in 2004. The Bangor metropolitan area had an estimated 148,196 people and the Lewiston-Auburn area had 107,022.

7 ETHNIC GROUPS

Maine's population is primarily Yankee, both in its English and Scotch-Irish origins and in its retention of many of the values and folkways of rural New England. The largest minority group consists of French-Canadians. Among those reporting at least one specific ancestry group in 2000, 274,423 claimed English ancestry; 181,663 French (not counting 110,344 who claimed Canadian or French-Canadian); and 192,901 Irish. There were 36,691 foreign-born residents. The population of Hispanics and Latinos in 2000 was 9,360, less than 1% of the state total. In 2004, 0.9% of the population was of Hispanic or Latino origin.

The most notable ethnic issue in Maine during the 1970s was the legal battle of the Penobscot and Passamaquoddy Indians—living on two reservations covering 27,546 acres (11,148 hectares)—to recover 12,500,000 acres (5,059,000 hectares) of treaty lands. A compromise settlement in 1980 awarded them \$81.5 million, two-thirds of which went into a fund enabling the Indians to purchase 300,000 acres (121,000 hectares) of timberland. In 1995, Maine's American Indian population included the following groups living on or near reservations (with population estimates): the Penob-

scot Tribe (1,206); the Aristook Band of Micmac (1,155); Pleasant Point (878); the Passamaquoddy (722); and the Houlton Band of Maliseets (331). The Indian population as a whole was reported as 7,098 in 2000. In 2004, 0.6% of the population was composed of American Indians.

As of 2000, Maine had 6,760 black residents and 9,111 Asians, including 2,034 Chinese, 1,159 Filipinos, and 1,021 Asian Indians. Pacific Islanders numbered 382. In 2004, 0.7% of the population was black and 0.8% Asian. That year, 0.9% of the population reported origin of two or more races.

8 LANGUAGES

Descendants of the Passamaquoddy and Penobscot Indians of the Algonkian family who inhabited Maine at the time that European settlers arrived still lived there in the mid-1980s. Algonkian place-names abound: Saco, Millinocket, Wiscasset, Kennebec, Skowhegan.

Maine English is celebrated as typical Yankee speech. Final /r/ is absent, a vowel sound between /ah/ and the /a/ in *cat* appears in *car* and *garden*, *aunt* and *calf*. *Coat* and *home* have a vowel that to outsiders sounds like the vowel in *cut*. Maple syrup comes from *rock* or *sugar maple* trees in a *sap* or *sugar orchard*; cottage cheese is *curd cheese*; and pancakes are *fritters*.

In 2000, 92.2% of Maine residents five years old or older report speaking only English in the home, up from 90.8% in 1990.

The decline of parochial schools and a great increase in the number of young persons attending college have begun to erode the linguistic and cultural separateness that marks the history of the Franco-American experience in Maine.

The following table gives selected statistics from the 2000 Census for language spoken at home by persons five years old and over. The category "Other Native North American languages" includes Apache, Cherokee, Choctaw, Dakota, Keres, Pima, and Yupik. The category "Other Indo-European languages" includes Albanian, Gaelic, Lithuanian, and Rumanian. The category "Scandinavian languages" includes Danish, Norwegian, and Swedish.

Polish	763	0.1

9 RELIGIONS

Maine had about 217,676 Roman Catholics in 2004 and an estimated 8,290 Jews in 2000. The leading Protestant denominations are the United Methodist Church, with 31,689 adherents (in 2000); the American Baptists USA, 26,259 (in 2000); and the

United Church of Christ, 23,086 (in 2005). The Muslim community had about 800 members. Over 800,000 people (about 63.6% of the population) were not counted as members of any religious organization.

10 TRANSPORTATION

Railroad development in Maine, which reached its peak in 1924, has declined rapidly since World War II (1939–45), and passenger service has been dropped altogether. Although Maine had no Class I railroads in 2003, seven regional and local railroads operated on 1,148 rail mi (1,848 km) of track. As of 2006, Amtrak provided service to four stations in Maine via its north–south Downeaster train from Portland to Boston.

About three-quarters of all communities and about half the population depend entirely on highway trucking for the overland transportation of freight. In 2004, Maine had 22,748 mi (36,624 km) of public roads. In that same year, there were 1.086 million registered motor vehicles and 984,829 licensed drivers in the state. The Maine Turnpike and I-95, which coincide between Portland and Kittery, are the state's major highways.

River traffic has been central to the lumber industry. Only since World War II has trucking replaced seasonal log drives downstream from timberlands to the mills, a practice that is now outlawed for environmental reasons. Maine has 10 established seaports, with Portland and Searsport being the main depots for overseas shipping. In 2004, Portland harbor handled 29.709 million tons, and Searsport handled 1.832 million tons. Crude oil, fuel oil, and gasoline were the chief commodities. In 2004, Maine had 73 mi (117 km) of navigable inland waterways. In 2003, waterborne shipments totaled 31.698 million tons.

In 2005, Maine had a total of 153 public and private-use aviation-related facilities. This included 103 airports, 13 heliports, and 37 seaplane bases. Portland International Jetport is the largest and most active airport in Maine. In 2004, Portland International had 687,344 passengers enplaned.

11 HISTORY

The first inhabitants of Maine—dating from 3000 to 1000 BC—are known to archaeologists as the Red Paint People because of the red ocher that has been found in their graves. This Paleolithic group had evidently disappeared long before the arrival of the Algonkian-speaking Abnaki (meaning "living at the sunrise"), or Wabanaki. Just at the time of European settlement, an intertribal war and a disastrous epidemic of smallpox swept away many of the Abnaki, some of whom had begun peaceful contacts with the English. After that, most Indian contacts with Europeans were with the French.

The first documented visit by a European to the Maine coast was that of Giovanni da Verrazano during his voyage of 1524, but one may infer from the record that the Abnaki he met there had encountered white men before. Sometime around 1600, English expeditions began fishing the Gulf of Maine regularly. The first recorded attempts to found permanent colonies, by the French on an island in the St. Croix River in 1604 and by the English at Sagadahoc in 1607, both failed. By 1630, however, there were permanent English settlements on several islands and at nearly a dozen spots along the coast.

The first grant of Maine lands was to Sir Ferdinando Gorges from the Council from New England, a joint-stock company that received and made royal grants of New England territory and which Gorges himself dominated. He and Captain John Mason received the territory between the Merrimack River (in present-day New Hampshire and Massachusetts) and the Kennebec River in 1622. Seven years later, the two grantees divided their land at the Piscataqua River, and Gorges became sole proprietor of the "Province of Maine." The source of the name is not quite clear. It seems likely that some connection with the historical French province of the same name was intended, but the name was also used to distinguish the mainland from the islands.

Sir Ferdinando's various schemes for governing the territory and promoting a feudal-style settlement never worked. A few years after his death in 1647, the government of the Massachusetts Bay Colony began absorbing the small Maine settlements. Massachusetts purchased the title to Maine from the Gorges heirs in 1677, and Maine became a district of Massachusetts with the issuance of a new royal charter in 1691. During the first hundred years of settlement, Maine's economy was based entirely on fishing, trading, and exploitation of the forests. The origin of the Maine shipbuilding industry, the early settlement of the interior parts of southern Maine, and the beginning of subsistence farming all date from about the time that New England's supply center of white-pine masts for the Royal Navy moved from Portsmouth, N.H., to Falmouth (now the city of Portland).

The first naval encounter of the Revolutionary War occurred in Machias Bay, when, on 12 June 1775, angry colonials captured the British armed schooner *Margaretta*. On 8 October 1775, a British naval squadron shelled and set fire to Falmouth. Wartime Maine was the scene of two anti-British campaigns, both of which ended in failure: an expedition through the Maine woods in the fall of 1775 intended to drive the British out of Quebec, and a disastrous 1779 expedition in which a Massachusetts amphibious force, failing to dislodge British troops at Castine, scuttled many of its own ships near the mouth of the Penobscot River.

The idea of separation from Massachusetts began surfacing as early as 1785, but popular pressure for such a movement did not mount until the War of 1812. The overwhelming vote for statehood in an 1819 referendum was a victory for William King, who would become the first governor, and his fellow Jeffersonian Democratic-Republicans. Admission of Maine as a free state was joined with the admission of Missouri as a slave state in the Missouri Compromise of 1820.

Textile mills and shoe factories came to Maine between 1830 and 1860 as part of the industrialization of Massachusetts. After the Civil War, the revolution in papermaking that substituted wood pulp for rags brought a vigorous new industry to Maine. By 1900, Maine was one of the leading papermaking states in the United States, and the industry continues to dominate the state as of 2005. Shipbuilding joined paper manufacturing as a leading employer in the state, enjoying a boom in government contracts in the 1980s.

In 1972, the Penobscot and Passamaquoddy Indians filed a land claims suit against the federal government for property that amounted to the northern two-thirds of Maine, claiming that a 1794 treaty, under which the Passamaquoddy handed over most of its land while receiving nothing in exchange, had not been rat-

ified by Congress, and therefore violated the Indian Non-Inter-course Act of 1790. The government settled the suit in 1980 by paying the tribes \$81.5 million, which was allocated to purchase commercial and industrial properties in Maine.

The rise of tourism and the often conflicting concerns for economic development and environmental protection have been key issues in the state since the 1940s. Tourism grew substantially in the 1980s, 1990s, and into the 2000s, especially in coastal areas, where an influx of residents changed the character of many seaside towns. Former seasonal resorts were converted to year-round communities, posing new challenges for growth management. The state's environmental concerns included sewage treatment, deforestation, overfishing, and hazardous waste disposal.

Maine's economy turned in its best performance in more than a decade in 1999, with strong job growth, continued increases in retail sales, and significant improvement in nearly all other indicators. The state's income growth topped the national average from 1998 to 1999, finishing among the five fastest growing states. According to government figures, income growth in Maine, which still had the lowest per capita income in New England, was fueled by higher wages in services, construction, finance, insurance, and real estate. At the same time, there were concerns that the gain in income was the result of Maine workers holding down more than one job in order to make ends meet. Analysts also warned that the hot state economy could be threatened by a shortage of workers, since the state's population was not growing at a commensurate rate.

Maine's economy suffered with that of the nation's in the early 2000s, coming on the back of a recession in 2001. By 2003, Maine had a \$24 million budget deficit. Governor John Baldacci had plans to implement a large-scale healthcare program for state employees, open it to private employers, and pay for it without increased taxes. This plan, *Dirigo Health*, was signed into law in June 2003. A citizen initiative set for referendum in November 2003 was to mandate a large increase in state assistance to local school systems. It was rejected.

In 2005, the state was making plans for the closing of military bases, including the Brunswick Naval Air Station. Governor Baldacci created a Maine Office of Redevelopment and Re-employment with an Advisory Council to coordinate local and statewide interests with regard to the closures.

12 STATE GOVERNMENT

The Maine constitution, based on that of Massachusetts but incorporating a number of more democratic features, was adopted in 1819 and amended 169 times by January 2005. (This figure does not include one amendment approved by the voters in 1967 that is inoperative until implemented by legislation.) The state constitution may be amended by a two-thirds vote of the legislature and a majority vote at the next general election.

The bicameral legislature, consisting of a 35-member Senate and a 151-member House of Representatives, convenes biennially (in even-numbered years) in joint session to elect the secretary of state, attorney general, and state treasurer. Legislative sessions begin in December of the general election year and run into June of the following (odd-numbered year); the second session begins in January of the next even-numbered year, runs into April, and is limited to consideration of budgetary matters, legislation in the

governor's call, emergency legislation, and legislation referred to committees for study. The presiding officers of each house may jointly call for a special session as long as they have the support of a majority of members of each political party in each house. All legislators, who serve two-year terms, must have been US citizens for at least five years, residents of the state for at least one year, and have lived in their district at least three months prior to election. The minimum age for representatives is 21, for senators it is 25. The legislative salary in 2004 was \$11,384 for the first year and \$8,302 for the second.

The governor, who serves a four-year term and is limited to two consecutive terms, is the only official elected statewide. (Rules of succession dictate that should the governor become incapacitated, he or she would be succeeded by the president of the state Senate.) A gubernatorial veto may be overridden by a two-thirds vote of members present and voting in each legislative chamber. An unsigned bill that is not vetoed becomes law after 10 days whether the legislature is in session or not. The governor must be at least 30 years old, a citizen of the United States for at least 15 years, and a state resident for 5 years. As of December 2004, the governor's salary was \$70,000, unchanged from 1999.

To vote in Maine, one must be a US citizen, a resident of the state and municipality, and at least 18 years old. Those under guardianship because of mental illness may not vote.

13 POLITICAL PARTIES

Maine's two major political parties are the Democratic and the Republican, each affiliated with the national party. An independent candidate, James B. Longley, beat the candidates of both major parties in the gubernatorial election of 1974.

During the early decades of statehood, Jeffersonian and Jacksonian Democrats remained in power quite consistently. In 1854, however, reformers rallied around the new Republican Party, which dominated Maine politics for the next hundred years. Maine's strong Republican tradition continued into the middle and late 1950s, when Margaret Chase Smith distinguished herself in the US Senate as a leader of national importance. The rise of

Democrat Edmund S. Muskie, elected governor in 1954 and 1956 and to the first of four terms in the US Senate in 1960, signaled a change in Maine's political complexion. Muskie appealed personally to many traditionally Republican voters, but his party's resurgence was also the result of demographic changes, especially an increase in the proportion of French-Canadian voters.

In the November 1994 elections, Independent Angus King was voted into the executive office, and Maine became the only state in the nation with an Independent governor. King was reelected in 1998. In 2002, Democrat John Baldacci was elected governor. In 1994 Republican Olympia Snowe won the US Senate seat vacated by retiring Democrat George J. Mitchell (she was reelected in 2000); in 1996 Republican Susan E. Collins won the seat left vacant by retiring three-term senator William S. Cohen, also a Republican (Collins was reelected in 2002). In the 2000 presidential elections Democrat Al Gore won 49% of the presidential vote, Republican George W. Bush received 44%, and Green Party candidate Ralph Nader won 6%. In 2004, Democrat John Kerry won 53.4% in his challenge to incumbent President Bush, who garnered 44.6%. In 2004 elections, Maine Democrats retained control of both US House seats. Also in 2002 there were 957,000 registered voters. In 1998, 32% of registered voters were Democratic, 29% Republican, and 39% unaffiliated or members of other parties. In mid-2005, the state House of Representatives had 76 Democrats, 73 Republicans, and 2 independents, while the state Senate had 19 Democrats and 16 Republicans. The state had four electoral votes in the 2004 presidential election.

14 LOCAL GOVERNMENT

The principal units of local government in 2005 included 16 counties, 22 municipal governments, 282 public school districts and 222 special districts. Maine's counties function primarily as judicial districts. As is customary in New England, the basic instrument of town government is the annual town meeting, with an elective board of selectmen supervising town affairs between meetings; some of the larger towns employ full-time town managers. In 2002, there were 467 townships in the state.

In 2005, local government accounted for about 54,868 full-time (or equivalent) employment positions.

15 STATE SERVICES

To address the continuing threat of terrorism and to work with the federal Department of Homeland Security, homeland security in Maine operates under the authority of the governor; the emergency management director is designated as the state homeland security advisor.

The State Board of Education and Department of Educational and Cultural Services supervise the public education system. The Department of Transportation, established in 1972, includes divisions responsible for aviation and railroads, a bureau to maintain highways and bridges, the Maine Port Authority, the State Ferry Advisory Board, and the Maine Aeronautical Advisory Board.

Various agencies responsible for health and social welfare were combined into the Department of Human Services in 1975 (now the Department of Health and Human Services). The Maine State Housing Authority, established in 1969, provides construction loans and technical assistance and conducts surveys of the state's housing needs. The Commission on Governmental Ethics and

Maine Presidential Vote by Major Political Parties, 1948–2004

YEAR	ELECTORAL VOTE	MAINE WINNER	DEMOCRAT	REPUBLICAN
1948	5	Dewey (R)	111,916	150,234
1952	5	*Eisenhower (R)	118,806	232,353
1956	5	*Eisenhower (R)	102,468	249,238
1960	5	*Eisenhower (R)	102,468	249,238
1960	5	Nixon (R)	181,159	240,608
1964	4	*Johnson (D)	262,264	118,701
1968	4	Humphrey (D)	217,312	169,254
1972	4	*Nixon (R)	160,584	256,458
1976	4	Ford (R)	232,279	236,320
1980	4	*Reagan (R)	220,974	238,522
1984	4	*Reagan (R)	214,515	336,500
1988	4	*Bush (R)	243,569	307,131
1992**	4	*Clinton (D)	263,420	206,504
1996**	4	*Clinton (D)	312,788	186,378
2000	4	Gore (D)	319,951	286,616
2004	4	Kerry (D)	396,842	330,201

*Won US presidential election.

**IND. candidate Ross Perot received 206,820 votes in 1992 and 85,970 votes in 1996.

Election Practices, an advisory and investigative body, was created in 1975 to serve as a watchdog over the legislature. Other organizations include the departments of agriculture, corrections, professional and financial legislation, and labor; and the bureaus of motor vehicles and parks and lands.

16 JUDICIAL SYSTEM

The highest state court in Maine is the Supreme Judicial Court, with a chief justice and six associate justices appointed by the governor (with the consent of the legislature) for seven-year terms (as are all other state judges). The Supreme Judicial Court has state-wide appellate jurisdiction in all civil and criminal matters. The 16-member superior court, which has original jurisdiction in cases involving trial by jury and also hears some appeals, holds court sessions in all 16 counties. The district courts hear non-felony criminal cases and small claims and juvenile cases, and have concurrent jurisdiction with the superior court in divorce and civil cases involving less than \$30,000. A probate court judge is elected in each county.

As of 31 December 2004, a total of 2,024 prisoners were held in Maine's state and federal prisons, an increase from 2,013 of 0.5% from the previous year. As of year-end 2004, a total of 125 inmates were female, up from 124 or 0.8% from the year before. Among sentenced prisoners (one year or more), Maine had an incarceration rate of 148 per 100,000 population in 2004, the lowest in the United States.

According to the Federal Bureau of Investigation, Maine in 2004, had a violent crime rate (murder/nonnegligent manslaughter; forcible rape; robbery; aggravated assault) of 103.5 reported incidents per 100,000 population (the second-lowest in the United States after North Dakota), or a total of 1,364 reported incidents. Crimes against property (burglary; larceny/theft; and motor vehicle theft) in that same year totaled 31,740 reported incidents or 2,409.6 reported incidents per 100,000 people. Maine has not had a death penalty since 1887. The state does provide for life without parole.

In 2003, Maine spent \$78,866,791 on homeland security, an average of \$61 per state resident.

17 ARMED FORCES

The largest US military installation in Maine is the Naval Air Station at Brunswick, home of a wing of anti-submarine patrol squadrons. Defense Department personnel in Maine totaled 11,051, including 4,535 active military and 5,216 civilians in 2004. State firms received over \$1.5 billion in defense contracts in 2004. General Dynamics, a major defense contractor, is one of the state's largest private employers. Its Bath Iron Works division designs and builds complex, technologically advanced naval ships; another division, the Saco Operations, produces armament systems and is a leading producer of small and medium caliber machine guns, and cannon barrels, as well as, a test facility. In addition, another \$805 million in defense payroll spending, including retired military pay, was paid out.

There were 143,726 veterans of US military service in Maine as of 2003, of whom 19,904 served in World War II; 16,954 in the Korean conflict; 45,061 during the Vietnam era; and 17,991 during the Gulf War. Expenditures on veterans amounted to some \$503 million during 2004.

As of 31 October 2004, the Maine State Police employed 311 full-time sworn officers.

18 MIGRATION

Throughout the 1600s, 1700s, and early 1800s, Maine's population grew primarily by immigration from elsewhere in New England. About 1830, after agriculture in the state had passed its peak, Maine farmers and woodsmen began moving west. Europeans and French Canadians came to the state, but not in sufficient numbers to offset this steady emigration.

Net losses from migration have continued through most of this century. Between 1940 and 1970, for example, the net loss was 163,000. However, there was a net gain of about 80,000 from 1970 to 1990. From 1980 to 1990, Maine's urban population declined from 47.5% to 44.6% of the state's total. Between 1990 and 1998, the state had a net loss of 15,000 in domestic migration and a net gain of 3,000 in international migration. In 1998, Maine admitted 709 foreign immigrants. Between 1990 and 1998, the State's overall population increased 1.3%. In the period 2000–05, net international migration was 5,004 and net internal migration was 36,804, for a net gain of 41,808 people.

19 INTERGOVERNMENTAL COOPERATION

Regional agreements in which Maine participates include the Maine-New Hampshire School Compact, which authorizes interstate public school districts. Maine also takes part in the Atlantic States Marine Fisheries Commission, Interstate Compact for Juveniles, Northeastern Forest Fire Protection Compact; and the New England Interstate Water Pollution Control, Corrections Control, Board of Higher Education, and Radiological Health Protection compacts. In fiscal year 2005, Maine received \$2.197 billion in federal grants; that figure fell to an estimated \$2.125 billion in fiscal year 2006, before rising to an estimated \$2.245 billion in fiscal year 2007.

20 ECONOMY

Maine's greatest economic strengths, as they have been since the beginning of European settlement, are its forests and waters, yielding wood products, water power, fisheries, and ocean commerce. As of 2005, paper manufacturing, for which both forests and water power are essential, was among the largest industries. However, since the 1980s manufacturing employment has dropped; and especially since 1992, services sector and trading sector employment has risen.

Maine's greatest current economic weakness is its limited access to the national transportation network that links major production and manufacturing centers with large metropolitan markets. On the other hand, this relative isolation, combined with the state's traditional natural assets, has contributed to Maine's attractiveness as a place for tourism and recreation. It also meant that the national recession in 2001 largely bypassed Maine's economy because of its limited involvement in the growth fields of information technology and equity venture capitalism. Annual growth in Maine's gross state product, which at 5.9% in both 1998 and 1999, and rising to 6.4% in 2000, did moderate to 3.2% in 2001, but employment had returned to peak levels reached before the recession by mid-2002. Tax revenue shortfalls were also less than other New

England states, all more affected by the abrupt decline in capital gains income.

Maine's gross state product in 2004 totaled \$43.336 billion, of which real estate was the largest component at \$5.821 billion or 13.4% of GSP, followed by manufacturing (durable and nondurable goods) at \$5.177 billion (11.9% of GSP), and healthcare and social assistance at \$4.554 billion (10.5% of GSP). In that same year, there were an estimated 141,936 small businesses in Maine. Of the 40,304 businesses that had employees, an estimated total of 39,288 or 97.5% were small companies. An estimated 4,300 new businesses were established in the state in 2004, up 6.6% from the year before. Business terminations that same year came to 4,987, up 5.8% from 2003. There were 138 business bankruptcies in 2004, up 31.4% from the previous year. In 2005, the state's personal bankruptcy (Chapter 7 and Chapter 13) filing rate was 352 filings per 100,000 people, ranking Maine as the 44th highest in the nation.

2¹ INCOME

In 2005 Maine had a gross state product (GSP) of \$45 billion which accounted for 0.4% of the nation's gross domestic product and placed the state at number 44 in highest GSP among the 50 states and the District of Columbia.

According to the Bureau of Economic Analysis, in 2004 Maine had a per capita personal income (PCPI) of \$30,046. This ranked 34th in the United States and was 91% of the national average of \$33,050. The 1994–2004 average annual growth rate of PCPI was 4.5%. Maine had a total personal income (TPI) of \$39,510,398,000, which ranked 41st in the United States and reflected an increase of 6.0% from 2003. The 1994–2004 average annual growth rate of TPI was 5.1%. Earnings of persons employed in Maine increased from \$26,649,983,000 in 2003 to \$28,240,580,000 in 2004, an increase of 6.0%. The 2003–04 national change was 6.3%.

The US Census Bureau reports that the three-year average median household income for 2002 to 2004 in 2004 dollars was \$39,395 compared to a national average of \$44,473. During the same period an estimated 12.2% of the population was below the poverty line as compared to 12.4% nationwide.

2² LABOR

According to the Bureau of Labor Statistics (BLS), in April 2006 the seasonally adjusted civilian labor force in Maine numbered 716,300, with approximately 30,000 workers unemployed, yielding an unemployment rate of 4.2%, compared to the national average of 4.7% for the same period. Preliminary data for the same period placed nonfarm employment at 613,300. Since the beginning of the BLS data series in 1976, the highest unemployment rate recorded in Maine was 9% in March 1977. The historical low was 3% in January 2001. Preliminary nonfarm employment data by occupation for April 2006 showed that approximately 5% of the labor force was employed in construction; 9.7% in manufacturing; 20.4% in trade, transportation, and public utilities; 5.5% in financial activities; 8.3% in professional and business services; 18.4% in education and health services; 9.7% in leisure and hospitality services; and 17.1% in government.

The US Department of Labor's Bureau of Labor Statistics reported that in 2005, a total of 69,000 of Maine's 582,000 employed wage and salary workers were formal members of a union. This

represented 11.9% of those so employed, up from 11.3% in 2004, but still below the national average of 12%. Overall in 2005, a total of 79,000 workers (13.6%) in Maine were covered by a union or employee association contract, which includes those workers who reported no union affiliation. Maine is one of 28 states that does not have a right-to-work law.

As of 1 March 2006, Maine had a state-mandated minimum wage rate of \$6.50 per hour. In 2004, women in the state accounted for 48.1% of the employed civilian labor force.

2³ AGRICULTURE

Maine's gross farm income in 2005 was \$546 million (43rd in the United States). There were 7,200 farms in 2004, with an estimated 1,370,000 acres (554,000 hectares) of land.

Maine's agriculture and food processing industries contribute over \$1 billion annually to the state's economy. Maine produces more food crops for human consumption than any other New England state. Maine ranks first in the world in the production of blueberries, producing over 25% of the total blueberry crop and over 50% of the world's wild blueberries. Maine is also home to the largest bio-agricultural firm in the world, which produces breeding stock for the broiler industry worldwide. In New England, Maine ranks first in potato production and second in the production of milk and apples. Nationally, Maine ranks third in maple syrup and seventh in potatoes with 19,220,000 hundred-weight. The greenhouse/nursery and wild blueberry sectors have also shown steady growth in total sales since 1990.

2⁴ ANIMAL HUSBANDRY

In 2005, Maine had an estimated 92,000 cattle and calves worth around \$101.2 million. Dairy farmers had an estimated 35,000 milk cows, which produced 624 million lb (283.6 million kg) of milk in 2003. Poultry farmers sold an estimated 10.2 million lb (4.6 million kg) of chickens in the same year. South-central Maine is the leading poultry region.

2⁵ FISHING

Fishing has been important to the economy of Maine since its settlement. In 2004, Maine landings brought a total of 208.4 million lb (84.3 million kg) with a value of \$315.8 million (the third highest value in the nation). Rockland and Portland were main ports.

The most valuable Maine fishery product is the lobster. In 2004, Maine led the nation in landings of American lobster for the 23rd consecutive year, with 58.5 million lb (26.6 million kg), valued at \$238.5 million. Flounder, halibut, scallops, and shrimp are also caught. Maine also was the leading state in soft clams catch, with 2.4 million lb of meats (1.1 million kg) in 2004. In 2003, there were 35 processing and 176 wholesale plants in the state, with a total of about 1,780 employees. The state commercial fleet in 2001 had 5,836 boats and 1,656 vessels.

In 2004, Maine had 15 trout farms, with sales of \$363,000. Maine has nine inland fish hatcheries and hosts two national fish hatcheries. In 2004, there were 270,698 licensed sports fishing participants in the state.

2⁶ FORESTRY

Maine's 17.7 million acres (7.2 million hectares) of forest in 2003 contained over 3.6 billion trees and covered 90% of the state's

land area, the largest percentage for any state in the United States. About 16,952,000 acres (6,860,000 hectares) are classified as commercial timberland, over 96% of it privately owned, and half of that by a dozen large paper companies and land managing corporations. Principal commercial hardwood include ash, hard maple, white and yellow birch, beech, and oak; commercially significant softwoods include white pine, hemlock, cedar, spruce, and fir. Total lumber production in 2004 was 964 million board feet, of which 86% was softwood.

27 MINING

According to preliminary data from the US Geological Survey (USGS), the estimated value of nonfuel mineral production by Maine in 2003 was \$100 million, only a marginal increase from 2002.

Construction minerals and materials accounted for the bulk of the state's nonfuel mineral output, by value, in 2003. According to the USGS, construction sand and gravel, and crushed stone collectively accounted for around 65% of the state's nonfuel mineral output, by value that year. According to the preliminary data, Maine produced 9.3 million metric tons of construction sand and gravel, with a value of \$39.1 million, while crushed stone output stood at 4.4 million metric tons and was valued at \$26 million. Portland cement and dimension granite were also important non-fuel mineral commodities produced in Maine that same year.

In 2003, Maine was ranked 12th among the 50 states in the production of gemstones by value (\$262,000), according to the USGS data.

28 ENERGY AND POWER

As of 2003, Maine had 29 electrical power service providers, of which 4 were publicly owned and 3 were cooperatives. Of the remainder, one was investor owned, two were owners of independent generators that sold directly to customers, fourteen were generation-only suppliers and five were delivery-only providers. As of that same year there were 760,859 retail customers. Of that total, energy only suppliers had 748,446 customers, while only 33 received their power from investor-owned service providers. Cooperatives accounted for 2,402 customers, and publicly owned providers had 9,976 customers. There were only two independent generator or "facility" customers. There was no customer data on delivery-only service providers.

Total net summer generating capability by the state's electrical generating plants in 2003 stood at 4.285 million kW, with total production that same year at 18.971 billion kWh. Of the total amount generated, all of it (100%) came from independent producers and combined heat and power service providers. The largest portion of all electric power generated, 9.438 billion kWh (49.8%), came from natural gas fired plants, with plants using other renewable sources in second place with 3.909 billion kWh (20.6%) and hydroelectric plants in third place at 3.172 billion kWh (16.7%). Petroleum and coal fueled power plants accounted for 10.1% and 2% of all power generated, respectively, while "other" types of generating facilities accounted for 0.8%.

Maine no longer generates electricity through nuclear power. Citing economic and regulatory concerns, the owners of Maine's only nuclear power plant, the Maine Yankee Atomic Power Com-

pany plant in Wicasset, was shut down in 1997, and as of 2003 it was being dismantled and the site restored for other uses.

With no proven reserves or production of crude oil, coal or natural gas, all these products, must be imported into the state from either abroad or from other states. Natural gas is piped into the southwest corner of the state, and is available in Portland and the Lewiston-Auburn area.

29 INDUSTRY

Manufacturing in Maine has always been dependent upon the forests. During the 18th and 19th centuries, the staples of Maine industry were shipbuilding and lumber; as of 2005, papermaking and wood products, footwear, textiles and apparel, shipbuilding, and electronic components and accessories are all important industries.

Maine has the largest paper-production capacity of any state in the nation. There are large paper mills and pulp mills in more than a dozen towns and cities. As of 2004, wood-related industries—paper, lumber, wood products—accounted for about 25% of the value of all manufactured product shipments by value.

According to the US Census Bureau's Annual Survey of Manufactures (ASM) for 2004, Maine's manufacturing sector covered some 16 product subsectors. The shipment value of all products manufactured in the state that same year was \$13.656 billion. Of that total, paper manufacturing accounted for the largest share at \$3.601 billion. It was followed by transportation equipment manufacturing at \$2.019 billion; food manufacturing at \$1.623 billion; wood and paper product manufacturing at \$1.240 billion; computer and electronic product manufacturing at \$760.719 million; and fabricated metal product manufacturing at \$710.573 million.

In 2004, a total of 57,901 people in Maine were employed in the state's manufacturing sector, according to the ASM. Of that total, 42,472 were actual production workers. In terms of total employment, the transportation equipment manufacturing industry accounted for the largest portion of all manufacturing employees at 9,005, with 6,618 actual production workers. It was followed by paper manufacturing at 8,454 employees (6,800 actual production workers); food manufacturing at 7,708 employees (5,206 actual production workers); wood product manufacturing at 5,700 employees (4,452 actual production workers); and fabricated metal product manufacturing with 3,996 employees (2,978 actual production workers).

ASM data for 2004 showed that Maine's manufacturing sector paid \$2.316 billion in wages. Of that amount, the paper manufacturing sector accounted for the largest share at \$489.690 million. It was followed by transportation equipment manufacturing at \$373.078 million; food manufacturing at \$251.645 million; wood product manufacturing at \$183.615 million; and computer and electronic product manufacturing at \$167.160 million.

30 COMMERCE

According to the 2002 Census of Wholesale Trade, Maine's wholesale trade sector had sales that year totaling \$10.3 billion from 1,669 establishments. Wholesalers of durable goods accounted for 927 establishments, followed by nondurable goods wholesalers at 662 and electronic markets, agents, and brokers accounting for 80 establishments. Sales by durable goods wholesalers in 2002 totaled \$3 billion, while wholesalers of nondurable goods saw sales of \$6.7

billion. Electronic markets, agents, and brokers in the wholesale trade industry had sales of \$584.3 million.

In the 2002 Census of Retail Trade, Maine was listed as having 7,050 retail establishments with sales of \$16.05 billion. The leading types of retail businesses by number of establishments were: miscellaneous store retailers (943); food and beverage stores (940); gasoline stations (893); clothing and clothing accessories stores (636); and building materials/garden equipment and supplies dealers (635). In terms of sales, motor vehicle and motor vehicle parts dealers accounted for the largest share of retail sales at \$3.7 billion, followed by food and beverage stores at \$2.7 billion; general merchandise stores at \$1.9 billion; gasoline stations at \$1.49 billion; and building material/garden equipment and supplies dealers at \$1.40 billion. A total of 80,251 people were employed by the retail sector in Maine that year.

Maine has shipping facilities located in Portland, Searsport, and Eastport. Exports from Maine totaled \$2.3 billion in 2005. Maine's largest trading partners are Canada, Singapore, Malaysia, Japan, and the UK.

31 CONSUMER PROTECTION

Consumer protection issues in Maine are handled by the state's Attorney General's Office and the Bureau of Financial Institutions. Under the Attorney General's Office are the Consumer Protection Division and the Office of Credit Regulation. The Consumer Protection Division is responsible for the protection of consumers through enforcement of a wide variety of laws including Maine's Unfair Trade Practices Act, and the state's merger statute, the Mini-Sherman Act. The Division also provides a consumer mediation service under its Consumer Mediation Program, which uses volunteer mediators to resolve disputes between businesses and consumers.

The second department is the Office of Consumer Credit Regulation which was established in 1974 to protect state residents from unjust and misleading consumer credit practices, particularly in relation to the federal Truth-in-Lending Act. The agency also administers state laws regulating collection agencies, credit reporting agencies, mortgage companies, loan brokers, rent-to-own companies, pawn brokers, money order issuers, check cashers, and money transmitters.

However, consumer complaints regarding credit cards and banks are the responsibility of the Bureau of Financial Institution's Consumer Outreach Program.

When dealing with consumer protection issues, the state's Attorney General's Office can initiate civil and criminal proceedings; represent the state before state and federal regulatory agencies; administer consumer protection and education programs; and exercise broad subpoena powers. In antitrust actions, the Attorney General's Office can act on behalf of those consumers who are incapable of acting on their own; initiate damage actions on behalf of the state in state courts; and initiate criminal proceedings. However, the Attorney General cannot represent counties, cities and other governmental entities in recovering civil damages under state or federal law.

The Office of Consumer Credit Regulation and the Consumer Protection Division are both located in Augusta.

32 BANKING

As of June 2005, Maine had 37 insured banks, savings and loans, and saving banks, plus 12 state-chartered and 63 federally chartered credit unions (CUs). Excluding the CUs, the Portland-South Portland-Biddeford market area accounted for the largest portion of the state's financial institutions and deposits in 2004, with 22 institutions and \$8.021 billion in deposits. As of June 2005, CUs accounted for 7.9% of all assets held by all financial institutions in the state, or some \$3.974 billion. Banks, savings and loans, and savings banks collectively accounted for the remaining 92.1% or \$46.590 billion in assets held.

Regulation of Maine's state-chartered banks is the responsibility of the Department of Professional and Financial Regulation's Bureau of Banking.

33 INSURANCE

In 2004 there were 583,000 individual life insurance policies in force with a total value of about \$43.8 billion; total value for all categories of life insurance (individual, group, and credit) was about \$81 billion. The average coverage amount is \$75,200 per policy holder. Death benefits paid that year totaled at about \$197.4 million.

In 2003, there were 2 life and health and 23 property and casualty insurance companies were domiciled in the state. In 2004, direct premiums for property and casualty insurance totaled \$1.89 billion. That year, there were 7,064 flood insurance policies in force in the state, with a total value of 1 billion.

In 2004, 51% of state residents held employment-based health insurance policies, 4% held individual policies, and 10% of residents were uninsured. In 2003, employee contributions for employment-based health coverage averaged at 18% for single coverage and 28% for family coverage. The state offers a 12-month health benefits expansion program for small-firm employees in connection with the Consolidated Omnibus Budget Reconciliation Act (COBRA, 1986), a health insurance program for those who lose employment-based coverage due to termination or reduction of work hours.

In 2003, there were 979,487 auto insurance policies in effect for private passenger cars. Required minimum coverage includes bodily injury liability of up to \$50,000 per individual and \$100,000 for all persons injured in an accident, as well as property damage liability of \$25,000. Uninsured and underinsured motorist insurance are also mandatory. In 2003, the average expenditure per vehicle for insurance coverage was \$630.79.

34 SECURITIES

There are no securities or commodities exchanges in Maine. In 2005, there were 300 personal financial advisers employed in the state and 850 securities, commodities, and financial services sales agents. In 2004, there were at least sixteen publicly traded companies within the state, with seven NASDAQ companies, two NYSE listings, and four AMEX listings. In 2006, the state had one Fortune 500 company, Energy East, locate in New Gloucester. Listed

on the NYSE, Energy East was 405 on the list of 500 largest companies in the nation, with revenues in excess of \$5.2 billion.

35 PUBLIC FINANCE

Maine's biennial budget is prepared by the Bureau of the Budget, within the Department of Administrative and Financial Services, and submitted by the governor to the Legislature for consideration. The fiscal year (FY) extends from 1 July to 30 June.

Fiscal year 2006 general funds were estimated at \$2.8 billion for resources and \$2.8 billion for expenditures. In fiscal year 2004, federal government grants to Maine were \$2.7 billion.

SOURCE: U.S. Census Bureau, Governments Division, 2004 Survey of State Government Finances, January 2006.

On 5 January 2006 the federal government released \$100 million in emergency contingency funds targeted to the areas with the greatest need, including \$1.6 million for Maine.

36 TAXATION

In 2005, Maine collected \$3,071 million in tax revenues or \$2,323 per capita, which placed it 19th among the 50 states in per capita tax burden. The national average was \$2,192 per capita. Property taxes accounted for 1.4% of the total, sales taxes 30.4%, selective sales taxes 13.9%, individual income taxes 42.3%, corporate income taxes 4.4%, and other taxes 7.5%.

As of 1 January 2006, Maine had four individual income tax brackets ranging from 2.0 to 8.5%. The state taxes corporations at rates ranging from 3.5 to 8.93% depending on tax bracket.

In 2004, state and local property taxes amounted to \$2,099,394,000 or \$1,596 per capita. The per capita amount ranks the state sixth-highest nationally. Local governments collected \$2,054,086,000 of the total and the state government \$45,308,000.

Maine taxes retail sales at a rate of 5%. Food purchased for consumption off-premises is tax exempt. The tax on cigarettes is 200 cents per pack, which ranks fourth among the 50 states and the District of Columbia. Maine taxes gasoline at 25.9 cents per gallon. This is in addition to the 18.4 cents per gallon federal tax on gasoline.

According to the Tax Foundation, for every federal tax dollar sent to Washington in 2004, Maine citizens received \$1.40 in federal spending.

37 ECONOMIC POLICY

The Finance Authority of Maine (FAME) encourages industrial and recreational projects by insuring mortgage loans, selling tax-exempt bonds to aid industrial development and natural-resource enterprises, authorizing municipalities to issue such revenue bonds, and guaranteeing loans to small businesses, veterans, and natural-resource enterprises. The Department of Economic and Community Development (DECD), created in 1987, provides technical, financial, training, and marketing assistance for existing Maine businesses and companies interested in establishing operations in the state. The DECD offers programs in the areas of business development, international trade, tourism, film, and community development. Pine Tree Development Zone (PTDZ) legislation was enacted in 2003 and amended in 2005. The initiative supports new "qualified business activity" in Maine by offering manufacturers, financial service businesses, and targeted technology companies the chance to greatly reduce, or in some cases, virtually eliminate state taxes for up to 10 years.

38 HEALTH

The infant mortality rate in October 2005 was estimated at 6.1 per 1,000 live births. The birth rate in 2003 was 10.6 per 1,000 population, the lowest rate in the country for that year. The abortion rate stood at 9.9 per 1,000 women in 2000. In 2003, about 87.5% of pregnant woman received prenatal care beginning in the first trimester. In 2004, approximately 82% of children received routine immunizations before the age of three.

The crude death rate in 2003 was 9.6 deaths per 1,000 population. As of 2002, the death rates for major causes of death (per 100,000 resident population) were: heart disease, 244.9; cancer,

247.7; cerebrovascular diseases, 63.6; chronic lower respiratory diseases, 61.1; and diabetes, 31.2. Maine had the second-highest cancer death rate in the nation, following West Virginia. The mortality rate from HIV infection was not available. In 2004, the reported AIDS case rate was at about 4.6 per 100,000 population. In 2002, about 55.9% of the population was considered overweight or obese. As of 2004, about 20.9% of state residents were smokers.

In 2003, Maine had 37 community hospitals with about 3,700 beds. There were about 149,000 patient admissions that year and 6.5 million outpatient visits. The average daily inpatient census was about 2,200 patients. The average cost per day for hospital care was \$1,416. Also in 2003, there were about 119 certified nursing facilities in the state with 7,552 beds and an overall occupancy rate of about 92.1%. In 2004, it was estimated that about 69.6% of all state residents had received some type of dental care within the year. Maine had 302 physicians per 100,000 resident population in 2004 and 1,009 nurses per 100,000 in 2005. In 2004, there were a total of 629 dentists in the state.

In 2003, Maine ranked first in the nation for the highest percentage of residents on Medicaid at 29%. In 2004, the state had the second-highest percentage of residents on Medicare at 18%. Approximately 10% of the state population was uninsured in 2004. In 2003, state health care expenditures totaled \$2.1 billion.

39 SOCIAL WELFARE

In 2004, about 33,000 people received unemployment benefits, with the average weekly unemployment benefit at \$235. In fiscal year 2005, the estimated average monthly participation in the food stamp program included about 152,910 persons (78,170 households); the average monthly benefit was about \$88.40 per person. That year, the total of benefits paid through the state for the food stamp program was about \$162.2 million.

Temporary Assistance for Needy Families (TANF), the system of federal welfare assistance that officially replaced Aid to Families with Dependent Children (AFDC) in 1997, was reauthorized through the Deficit Reduction Act of 2005. TANF is funded through federal block grants that are divided among the states based on an equation involving the number of recipients in each state. Maine's TANF work program is called Additional Support for People in Retraining and Employment (ASPIRE). In 2004, the state program had 27,000 recipients; state and federal expenditures on this TANF program totaled \$87 million in fiscal year 2003.

Despite Maine's relatively low personal income and large proportion of residents below the poverty level, welfare payments per capita generally fall short of the national norms. In December 2004, Social Security benefits were paid to 265,470 Maine residents. This number included 160,320 retired workers, 25,390 widows and widowers, 43,580 disabled workers, 13,590 spouses, and 22,590 children. Social Security beneficiaries represented 20.2% of the total state population and 95.3% of the state's population age 65 and older. Retired workers received an average monthly payment of \$882; widows and widowers, \$856; disabled workers, \$819; and spouses, \$444. Payments for children of retired workers averaged \$451 per month; children of deceased workers, \$630; and children of disabled workers, \$231. Federal Supplemental Security Income payments in December 2004 went to 31,641 Maine residents, averaging \$364 a month. An additional \$615,000 of

state-administered supplemental payments were distributed to 32,557 residents.

40 HOUSING

Housing for Maine families has improved substantially since 1960, when the federal census categorized 57,000 of Maine's 364,650 housing units as deteriorated or dilapidated. Between 1970 and 1989, over 200,000 new units were built. However, as of 2004, about 31.7% of the entire housing stock was built in 1939 or earlier.

There were an estimated 676,667 housing units in Maine in 2004. Approximately 534,412 of the total units were occupied, with 72.9% being owner-occupied. About 68.9% of all units are single-family, detached homes. Fuel oils and kerosene are the primary heating fuel for most units. It was estimated that 12,214 units lacked telephone service, 3,771 lacked complete plumbing facilities, and 3,336 lacked complete kitchen facilities. The average household had 2.39 members.

In 2004, 8,800 privately owned units were authorized for construction. The median home value is \$143,182. The median monthly cost for mortgage owners was \$1,020. Renters paid a median of \$582 per month. In September 2005, the state received grants of \$548,824 from the US Department of Housing and Urban Development (HUD) for rural housing and economic development programs. For 2006, HUD allocated to the state over \$14 million in community development block grants.

41 EDUCATION

In 2004, 87.1% of Maine residents age 25 and older were high school graduates; 24.2% had obtained a bachelor's degree or higher.

The total enrollment for fall 2002 in Maine's public schools stood at 204,000. Of these, 142,000 attended schools from kindergarten through grade eight, and 63,000 attended high school. Approximately 95.8% of the students were white, 1.7% were black, 0.8% were Hispanic, 1.2% were Asian/Pacific Islander, and 0.5% were American Indian/Alaskan Native. Total enrollment was estimated at 200,000 in fall 2003 and expected to be 178,000 by fall 2014, a decline of 12.8% during the period 2002 to 2014. In fall 2003 there were 20,696 students enrolled in 151 private schools. Expenditures for public education in 2003/04 were estimated at \$2.2 billion or \$9,534 per student. Since 1969, the National Assessment of Educational Progress (NAEP) has tested public school students nationwide. The resulting report, *The Nation's Report Card*, stated that in 2005 eighth graders in Maine scored 281 out of 500 in mathematics compared with the national average of 278.

As of fall 2002, there were 63,308 students enrolled in institutions of higher education; minority students comprised 4.9% of total postsecondary enrollment. As of 2005 Maine had 30 degree-granting institutions. Since 1968, the state's public colleges and universities have been incorporated into a single University of Maine System. The original land grant campus is at Orono; the other major campus in the system is the University of Southern Maine at Portland and Gorham. The state also operates the Maine Maritime Academy at Castine and the Maine Technical College System, comprised of seven technical colleges. Of the state's private colleges and professional schools, Bowdoin College in Bruns-

wick, Colby College in Waterville, and Bates College in Lewiston are the best known.

42 ARTS

Maine has long held an attraction for painters and artists, Winslow Homer and Andrew Wyeth among them. The state abounds in summer theaters, the oldest and most famous of which is at Ogunquit. The Ogunquit Playhouse is one of the nation's leading summer theaters and in 2006 it celebrated its 74th anniversary. The Portland Symphony (est. 1923) is Maine's leading orchestra and is recognized as one of the nation's top orchestras of its size. Augusta and Bangor also host symphonies. The Maine State Ballet Company is based in Westbrook. The Portland Ballet is also well known in the state. The Bossov Ballet Theatre in Pittsfield is part of a boarding school for high school students looking for rigorous preprofessional training in dance. In 2001, the Maine Grand Opera Company gave its first performances, at the Camden Opera House. There are many local theater groups.

The Arcady Summer Music Festival (est. 1980) specializes in chamber music performances. The annual Bowdoin Summer Music Festival (est. 1964), presented at Bowdoin College in Brunswick, provides programs for over 200 students—ranging from high school to graduate studies—annually.

In 1979, Maine became the first state to allow inheritance taxes to be paid with qualified artworks. The Maine Arts Commission is an independent state agency funded in part by the Maine State Legislature and the National Endowment for the Arts. The state Department of Educational and Cultural Services has an Arts and Humanities Bureau that provides funds to artists in residence, Maine touring artists, and community arts councils. In 2005, the Maine Arts Commission and other Maine arts organizations received 20 grants totaling \$956,826 from the National Endowment for the Arts. Additional funds are provided from the state and other private sources.

The Maine Humanities Council (MHC), founded in 1975, provides support to approximately 100 nonprofit art organizations each year. In 2004, MHC awarded 87 grants to 81 organizations throughout the state. Several ongoing reading programs sponsored in part by MHC include "Born to Read," for children and youth; "New Books, New Readers," for adult learners; and "Let's Talk About It," for adult readers. In 2005, the state received 10 grants totaling \$1,021,426 from the National Endowment for the Humanities.

43 LIBRARIES AND MUSEUMS

For the calendar year 2001, Maine had 273 public library systems, with a total of 280 libraries, of which there were seven branches. In that same year, the system had 5,891,000 volumes of books and serial publications, and a combined total circulation of 8,155,000. The system also had 126,000 audio and 135,000 video items, and 2,000 electronic format items (CD-ROMs, magnetic tapes, and disks). Leading libraries and their book holdings in 1998 included the Maine State Library at Augusta (150,000 volumes), Bowdoin College at Brunswick (901,589), and the University of Maine School of Law (300,000). In 2001, operating income for the state's

public library system was \$27,985,000, which included \$1,000 in federal grants and \$174,000 in state grants.

Maine has at least 121 museums and historic sites. The Maine State Museum in Augusta houses collections in history, natural history, anthropology, marine studies, mineralogy, science, and technology. The privately supported Maine Historical Society in Portland maintains a research library and the Wadsworth Longfellow House, the boyhood home of Henry Wadsworth Longfellow. The largest of several maritime museums is in Bath.

44 COMMUNICATIONS

In 2004, 96.6% of occupied housing units had telephones. In addition, by June of that same year there were 610,533 mobile wireless telephone subscribers. In 2003, 67.8% of Maine households had a computer and 57.9% had Internet access. By June 2005, there were 176,816 high-speed lines in Maine, 165,428 residential and 11,388 for business.

Maine had 33 major commercial radio stations (5 AM, 28 FM) in 2005, along with 11 major television stations. Educational television stations broadcast from Bangor, Calais, Lewiston, Portland, and Presque Isle. By 2000, a total of 25,583 Internet domain names had been registered in Maine.

45 PRESS

Maine had seven daily newspapers in 2005 and four papers with Sunday editions.

The most widely read newspapers with approximate 2005 circulation numbers are as follows:

AREA	NAME	DAILY	SUNDAY
Augusta	<i>Kennebec Journal</i> (m,S)	15,167	14,422
Bangor	<i>Daily News</i> (m,S)	62,462	74,754 (wknd)
Portland	<i>Press Herald/Sunday Telegram</i>	77,788	125,858

Regional interest magazines include *Maine Times* and *Down East*.

46 ORGANIZATIONS

In 2006, there were over 2,300 nonprofit organizations registered within the state, of which about 1,660 were registered as charitable, educational, or religious organizations. Among the organizations with headquarters in Maine are the Maine Potato Council (Presque Isle), the Maine Lobstermen's Association (Stonington), the Wild Blueberry Association of North America (Bar Harbor), and the Potato Association of America (Orono).

State and local organizations for arts and education include the Bluegrass Music Association of Maine, Maine Arts Commission, the Maine Folklife Center, the Maine Historical Society, the Maine Humanities Council, Maine Preservation, and the National Poetry Foundation, based at the University of Maine. There are a number of smaller local arts organizations and municipal and regional historical societies as well.

47 TOURISM, TRAVEL, AND RECREATION

In 2004, the state of Maine hosted 43 million travelers who spent \$13.6 billion. About 34 million travelers were on day trips throughout the state, with nearly 71% of tourist activity involved out-of-state travelers. There were 8.9 million overnight trips. Tourism generated 176,600 jobs and created \$3.8 billion in revenue.

Though Maine is a year-round resort destination, 59% of travelers arrive during the months of July, August, and September. Sightseeing and outdoor activities are the primary tourist attractions.

In the summer, the southern coast offers sandy beaches, icy surf, and several small harbors for sailing and saltwater fishing. Northeastward, the scenery becomes more rugged and spectacular, and sailing and hiking are the primary activities. Hundreds of lakes, ponds, rivers, and streams offer opportunities for freshwater bathing, boating, and fishing. Whitewater canoeing lures the adventurous along the Allagash Wilderness Waterway in northern Maine. Maine has always attracted hunters, especially during the fall deer season. Wintertime recreation facilities include nearly 60 ski areas and countless opportunities for cross-country skiing.

There are 12 state parks and beaches. Baxter State Park in central Maine includes Mount Katahdin. Acadia National Park is a popular attraction, along with other wildlife areas, refuges, and forests. Aroostook, Maine's largest and northernmost county, has five state parks. The state fair is held at Bangor. The Acadia area features Acadia National Park and the site of Campobello, Franklin Delano Roosevelt's summer home. The area containing the Kennebec and Moose rivers and Lake George has three state parks. Kennebunkport on the southern coast is the site of the family home of President George H. W. Bush. Route 1, between Kittery and Fort Kent, has the largest three-dimensional model of the solar system in the world.

48 SPORTS

Maine has no major professional sports teams. The Portland Pirates (a minor league hockey team) of the American Hockey League play on their home ice at the Cumberland County Civic Center in Portland. Minor league baseball's Sea Dogs of the Double-A Eastern League play their games at Hadlock Field, which opened in 1994. Harness racing is held at Scarborough Downs and other tracks and fairgrounds throughout the state. Sailing is a popular participant sport with a Windsummer Festival held each July at Boothbay Harbor and a Retired Skippers Race at Castine in August. Joan Benoit-Samuelson, famous distance runner during the 1980s, was born in Cape Elizabeth.

49 FAMOUS MAINERS

The highest federal officeholders born in Maine were Hannibal Hamlin (1809–91), the nation's first Republican vice president, under Abraham Lincoln, and Nelson A. Rockefeller (1908–79), governor of New York State from 1959 to 1973 and US vice president under Gerald Ford. James G. Blaine (b.Pennsylvania, 1830–93), a lawyer and politician, served 13 years as a US representative from Maine and a term in the Senate; on his third try, he won the Republican presidential nomination in 1884 but lost to Grover Cleveland, later serving as secretary of state (1889–92) under Benjamin Harrison. Edmund S. Muskie (1914–96), leader of the Democratic revival in Maine in the 1950s, followed two successful terms as governor with 21 years in the Senate until appointed secretary of state by President Jimmy Carter in 1980.

Other conspicuous state and national officeholders have included Rufus King (1755–1827), a member of the Continental Congress and Constitutional Convention and US minister to Great Britain; William King (1768–1852), leader of the movement for Maine statehood and the state's first governor; Joshua Lawrence

Chamberlain, (1828–1914), Civil War hero and four-term governor who established the college that eventually became the University of Maine; Thomas Brackett Reed (1839–1902), longtime speaker of the US House of Representatives; and Margaret Chase Smith (1897–1995), who served longer in the US Senate—24 years—than any other woman.

Names prominent in Maine's colonial history include those of Sir Ferdinando Gorges (b.England, 1566–1647), the founder and proprietor of the colony; Sir William Phips (1651–95), who became the first American knight for his recovery of a Spanish treasure, later serving as royal governor of Massachusetts; and Sir William Pepperrell (1696–1759), who led the successful New England expedition against Louisburg in 1745, for which he became the first American-born baronet.

Maine claims a large number of well-known reformers and humanitarians: Dorothea Lynde Dix (1802–87), who led the movement for hospitals for the insane; Elijah Parish Lovejoy (1802–37), an abolitionist killed while defending his printing press from a proslavery mob in St. Louis, Missouri; Neal Dow (1804–97), who drafted and secured passage of the Maine prohibition laws of 1846 and 1851, later served as a Civil War general, and ran for president on the Prohibition Party ticket in 1880; and Harriet Beecher Stowe (b.Connecticut, 1811–96), whose *Uncle Tom's Cabin* (1852) was written in Maine.

Other important writers include poet Henry Wadsworth Longfellow (1807–82), born in Portland while Maine was still part of Massachusetts; humorist Artemus Ward (Charles Farrar Browne, 1834–67); Sarah Orne Jewett (1849–1909), novelist and short-story writer; Kate Douglas Wiggin (1856–1923), author of *Rebecca of Sunnybrook Farm*; Kenneth Roberts (1885–1957), historical novelist; and Robert Peter Tristram Coffin (1892–1955), poet, essayist, and novelist. Edwin Arlington Robinson (1869–1935) and Edna St. Vincent Millay (1892–1950) were both Pulitzer Prize-winning poets, and novelist Marguerite Yourcenar (b.Belgium, 1903–87), a resident of Mt. Desert Island, became in 1980 the first woman ever elected to the Académie Française. Winslow Homer (b.Massachusetts, 1836–1910) had a summer home at Prouts Neck, where he painted many of his seascapes.

MARYLAND

State of Maryland

ORIGIN OF STATE NAME: Named for Henrietta Maria, queen consort of King Charles I of England. **NICK-NAME:** The Old Line State and the Free State. **CAPITAL:** Annapolis. **ENTERED UNION:** 28 April 1788 (7th). **SONG:** “Maryland, My Maryland.” **MOTTO:** *Fatti maschii, parole femine* (Manly deeds, womanly words). **FLAG:** Bears the quartered arms of the Calvert and Crossland families (the paternal and maternal families of the founders of Maryland). **OFFICIAL SEAL:** REVERSE: A shield bearing the arms of the Calverts and Crosslands is surmounted by an earl’s coronet and a helmet and supported by a farmer and fisherman. The state motto (originally that of the Calverts) appears on a scroll below. The circle is surrounded by the Latin legend *Scuto bonae voluntatis tuae; coronasti nos*, meaning “With the shield of thy favor hast thou compassed us”; and “1632,” the date of Maryland’s first charter. OBVERSE: Lord Baltimore is seen as a knight in armor on a charger. The surrounding inscription, in Latin, means “Cecilius, Absolute Lord of Maryland and Avalon New Foundland, Baron of Baltimore.” **BIRD:** Baltimore oriole. **FISH:** Rockfish. **FLOWER:** Black-eyed Susan. **TREE:** White oak. **LEGAL HOLIDAYS:** New Year’s Day, 1 January; Birthday of Martin Luther King Jr., 3rd Monday in January; Presidents’ day, 3rd Monday in February; Memorial Day, last Monday in May; Independence Day, 4 July; Labor Day, 1st Monday in September; Columbus Day, 12 October; Veterans’ Day, 11 November; Thanksgiving Day, 4th Thursday in November plus one day; Christmas Day, 25 December. **TIME:** 7 AM EST = noon GMT.

¹LOCATION, SIZE, AND EXTENT

Located on the eastern seaboard of the United States in the South Atlantic region, Maryland ranks 42d in size among the 50 states.

Maryland’s total area—10,460 sq mi (27,092 sq km)—comprises 9,837 sq mi (25,478 sq km) of land and 623 sq mi (1,614 sq km) of inland water. The state extends 199 mi (320 km) E–W and 126 mi (203 km) N–S.

Maryland is bordered on the N by Pennsylvania; on the E by Delaware and the Atlantic Ocean; on the S and SW by Virginia, the District of Columbia, and West Virginia (with the line passing through the Chesapeake Bay and Potomac River); and on the extreme W by West Virginia. Important islands in Chesapeake Bay, off Maryland’s Eastern Shore (the Maryland sector of the Delmarva Peninsula), include Kent, Bloodsworth, South Marsh, and Smith.

The total boundary length of Maryland is 842 mi (1,355 km), including a general coastline of 31 mi (50 km); the total tidal shoreline extends 3,190 mi (5,134 km). The state’s geographic center is in Prince George’s County, 4.5 mi (7.2 km) NW of Davidsonville.

²TOPOGRAPHY

Three distinct regions characterize Maryland’s topography. The first and major area, falling within the Atlantic Coastal Plain, is nearly bisected by the Chesapeake Bay, dividing Maryland into the Eastern Shore and the Western Shore. The Piedmont Plateau, west of the coastal lowlands, is broad, rolling upland with several deep gorges cut by rivers. Further west, from the Catoctin Mountains in Frederick County to the West Virginia border, is the Appalachian Mountain region, containing the state’s highest hills. Backbone Mountain, in Garrett County in westernmost Mary-

land, is the state’s highest point, at 3,360 ft (1,025 m). The mean elevation of the state is approximately 350 ft (107 m).

A few small islands lie in the Chesapeake Bay, Maryland’s dominant waterway. Extending 195 mi (314 km) inland from the Atlantic and varying in width from 3 to 20 mi (5–32 km), the bay comprises 3,237 sq mi (8,384 sq km), of which 1,726 sq km (4,470 sq km) are under Maryland’s jurisdiction. Principal rivers include the Potomac, forming much of the southern and western border; the Patapsco, which runs through Baltimore; the Patuxent, draining the Western Shore; and the Susquehanna, crossing the Pennsylvania border and emptying into the Chesapeake Bay in northeastern Maryland. The state has 23 rivers and other bays, as well as many lakes and creeks, none of any great size. The lowest point of the state is at sea level at the Atlantic Ocean.

³CLIMATE

Despite its small size, Maryland exhibits considerable climatic diversity. Temperatures vary from an annual average of 48°F (9°C) in the extreme western uplands to 59°F (15°C) in the southeast, where the climate is moderated by the Chesapeake Bay and the Atlantic Ocean. The annual average temperature for Baltimore is 56°F (13°C), ranging from 33°F (1°C) in January to 78°F (25°C) in July. The record high temperature for the state is 109°F (43°C), set on 10 July 1936 in Cumberland and Frederick counties; the record low, -40°F (-40°C), occurred on 13 January 1912 at Oakland in Garrett County.

Precipitation averages about 49 in (124 cm) annually in the southeast, but only 36 in (91 cm) in the Cumberland area west of the Appalachians; Baltimore averaged 41.9 in (106 cm) annually 1971–2000. As much as 100 in (254 cm) of snow falls in western

Garrett County, while 8–10 in (20–25 cm) is average for the Eastern Shore; and Baltimore receives about 20.8 in (52 cm).

4 FLORA AND FAUNA

Maryland's three life zones—coastal plain, piedmont, and Appalachian—mingle wildlife characteristic of both North and South. Most of the state lies within a hardwood belt in which red and white oaks, yellow poplar, beech, blackgum, hickory, and white ash are represented; shortleaf and loblolly pines are the leading softwoods. Honeysuckle, Virginia creeper, wild grape, and wild raspberry are also common. Wooded hillsides are rich with such wild flowers as Carolina cranesbill, trailing arbutus, Mayapple, early blue violet, wild rose, and goldenrod. Seven plant species were listed by the US Fish and Wildlife Service as threatened or endangered in April 2006, including Canby's dropwort, sandplain gerardia, northeastern bulrush, and harperella.

The white-tailed (Virginia) deer, eastern cottontail, raccoon, and red and gray foxes are indigenous to Maryland, although urbanization has sharply reduced their habitat. Common small mammals are the woodchuck, eastern chipmunk, and gray squirrel. The brown-headed nuthatch has been observed in the extreme south, the cardinal and tufted titmouse are common in the piedmont, and the chestnut-sided warbler and rose-breasted grosbeak are native to the Appalachians. Among saltwater species, shellfish—especially oysters, clams, and crabs—have the greatest economic importance. Eighteen Maryland animal species (vertebrates and invertebrates) were listed as threatened or endangered in 2006, including the Indiana bat, Maryland darter, bald eagle, Delmarva Peninsula fox squirrel, three species of whale, and five species of turtle.

5 ENVIRONMENTAL PROTECTION

Maryland's Department of Natural Resources manages water allocation, fish and wildlife, state parks and forests, land reclamation and open space. The Maryland Department of the Environment (MDE) serves as the state's primary environmental protection agency. MDE protects and restores the quality of Maryland's land, air, and water by assessing, preventing and controlling sources of pollution for the benefit of public health, the environment and future generations. MDE regulations control the storage, transportation, and disposal of hazardous wastes and ensure long-term, environmentally sound solid waste recycling and disposal capabilities. In 2003, 45.5 million lb of toxic chemicals were released in the state. Also in 2003, Maryland had 168 hazardous waste sites listed in the US Environment Protection Agency (EPA) database, 17 of which were on the National Priorities List as of 2006, including Andrews Air Force Base, Curtis Bay Coast Guard Yard, and Patuxent River Naval Air Station. In 2005, the EPA spent over \$962,000 through the Superfund program for the cleanup of hazardous waste sites in the state. The same year, federal EPA grants awarded to the state included \$2.3 million to support various Chesapeake Bay ecosystem protection projects.

MDE has broad regulatory, planning, and management responsibility for water quality, air quality, solid and hazardous waste management, stormwater management, sediment control, wetlands and waterways management, and water allocation. MDE also plays a pivotal role in Maryland's initiatives to protect and restore the Chesapeake Bay and has divided the state into 10 ma-

ior tributary watershed basins, each of which have specific nutrient reduction strategies designed to give the Bay added protection from the effects of stormwater run-off, airborne pollutants, and direct discharges. The Chesapeake Bay Estuarine Complex was designated as a Ramsar Wetland of International Importance in 1987. In total, Maryland has about 591,000 acres (239,169 hectares) of wetlands.

MDE operates an innovative infrastructure financing program that leverages federal, state, and local funds to upgrade wastewater treatment plants, connect residents to public sewer systems, and improve water supply facilities. In addition, the Maryland Environmental Service, a quasi-public agency, contracts with local governments to design, construct, finance, and operate wastewater treatment plants, water supply systems, and recycling facilities.

The Maryland Department of Natural Resources (DNR) is responsible for the management, enhancement, and preservation of the state's living and natural resources. Utilizing an ecosystem approach to land, waterway, and species management, DNR programs and services support the health of the Chesapeake Bay and its tributaries, sustainable populations of fishery and wildlife species, and an integrated network of public lands and open space.

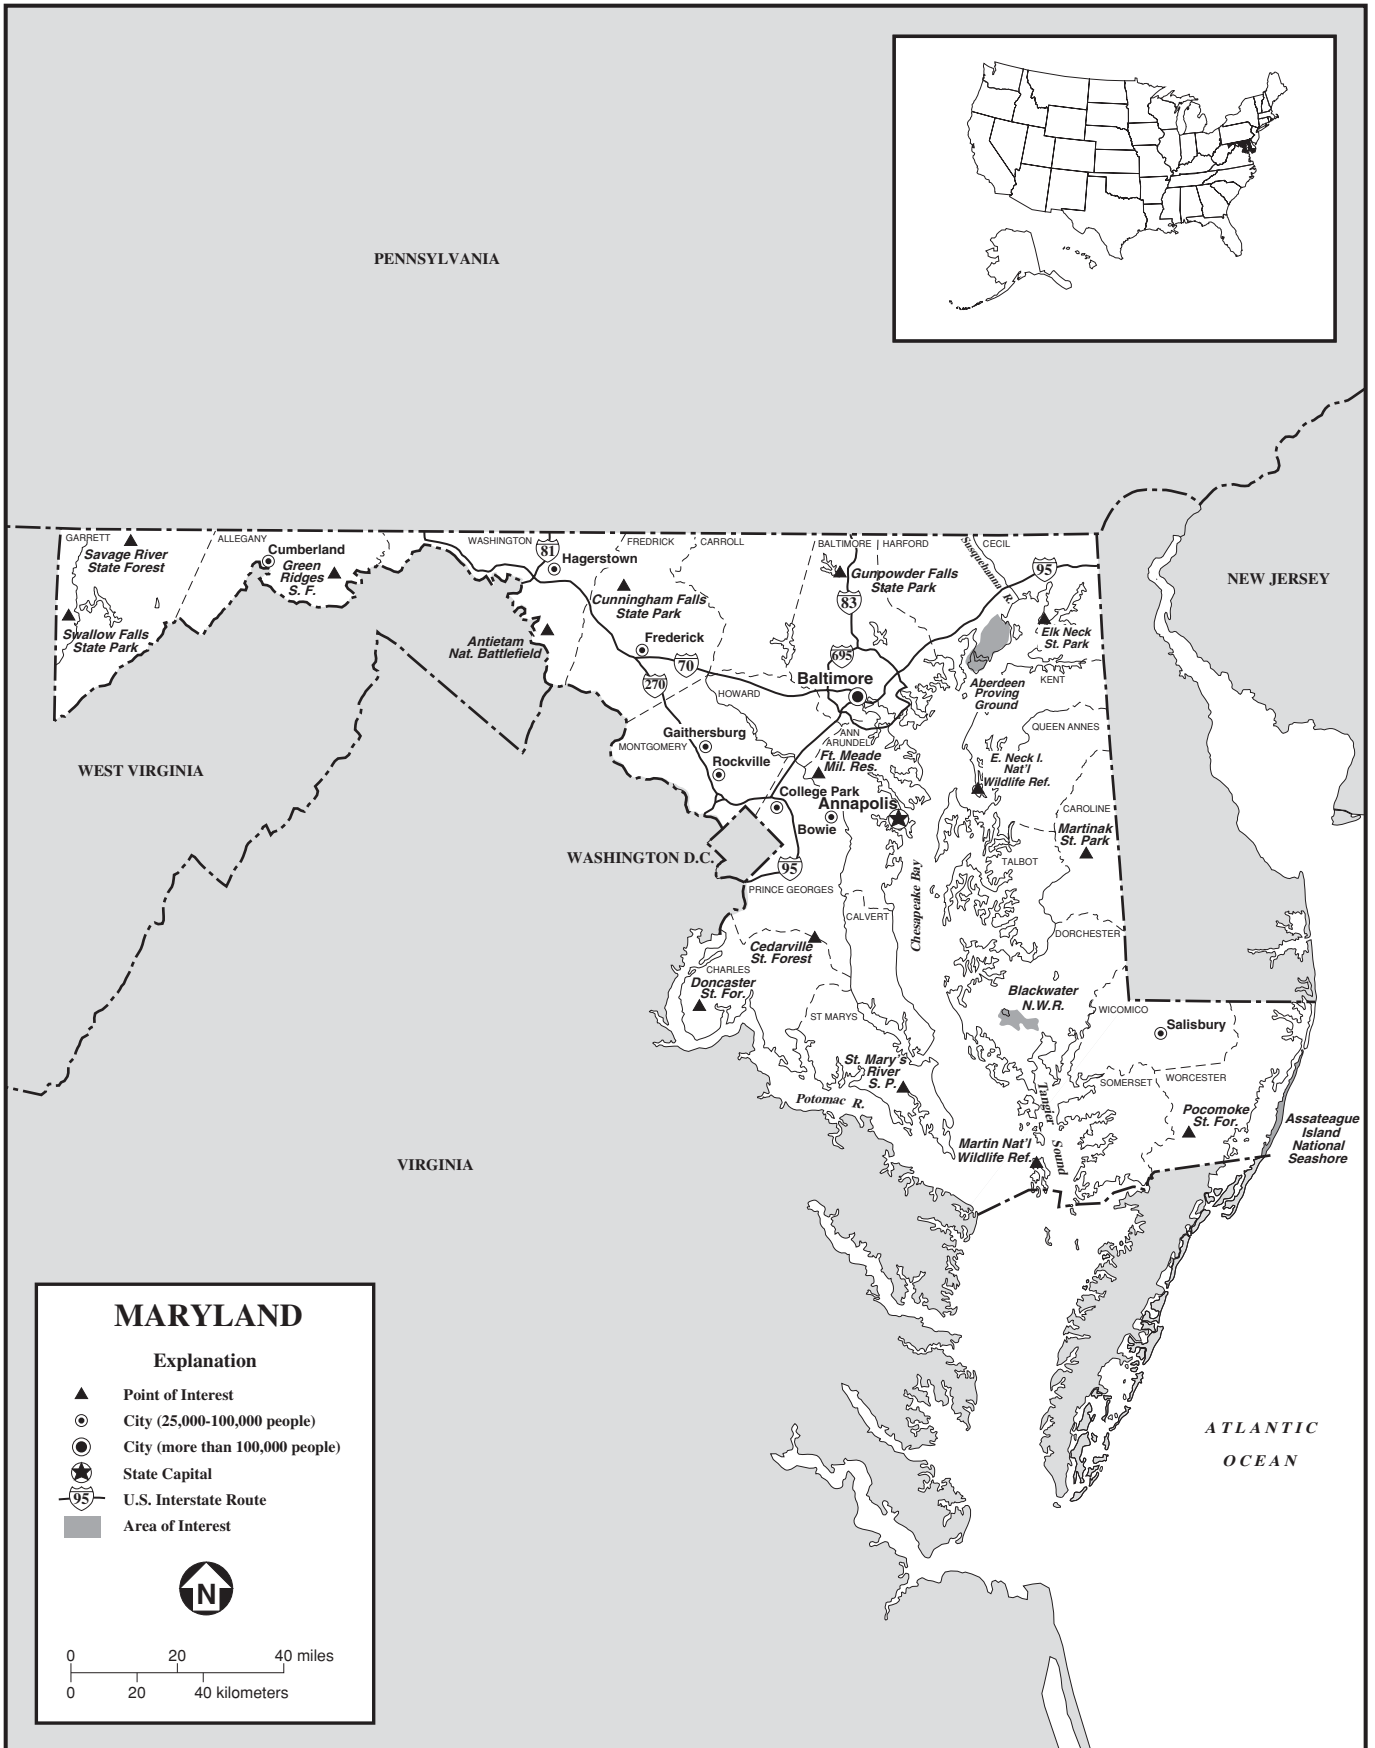

The Maryland Office of Planning's mission is to plan for the most effective development of the state and all of its resources. The Office assists state agencies and local governments to more effectively achieve environmental, agricultural, and natural resource objectives by integrating them with comprehensive planning and land use management. The state has recently embarked on a Neighborhood Conservation and Smart Growth initiative to encourage population and economic growth in priority funding areas, and to use a Rural Legacy Program to preserve agricultural, forest, and other rural lands from development.

6 POPULATION

Maryland ranked 19th in population in the United States with an estimated total of 5,600,388 in 2005, an increase of 5.7% since 2000. Between 1990 and 2000, Maryland's population grew from 4,781,468 to 5,296,486, an increase of 10.8%. The population is projected to reach 6.2 million by 2015 and 6.7 million by 2025. In 2004 the median age was 36.8. Persons under 18 years old accounted for 25.1% of the population while 11.4% was age 65 or older.

The state's population doubled between 1940 and 1970 and increased 7.5% between 1970 and 1980. The enormous expansion of the federal government and exodus of people from Washington, DC, to the surrounding suburbs contributed to the rapid growth that made Maryland the 17th most populous state in 1980, with 4,216,446 residents. There was an increase of 13.4% between 1980 and 1990, when Maryland held the 19th ranking, with 4,781,468 people. The population density in 2004 was 572.3 persons per sq mi, the fifth-highest among the 50 states.

Almost all the growth since World War II has occurred in the four suburban counties around Washington, DC, and Baltimore. Metropolitan Baltimore, embracing Carroll, Howard, Hartford, Anne Arundel, and Baltimore counties, expanded from 2,244,700 to 2,491,254 between 1984 and 2000; the city of Baltimore, on the other hand, declined from 763,570 to 736,000 during the same period, and to an estimated 638,614 in 2002. Baltimore is the state's only major city; the estimated population in 2004 for the city prop-

er was 636,251. The Baltimore metropolitan area has an estimated population of 2,639,213 in 2004. Several west-central counties belong to the Washington metropolitan area, and Cecil County, in the northeast, is part of metropolitan Wilmington, Delaware.

7 ETHNIC GROUPS

Blacks, numbering 1,477,411 in 2000, constitute the largest racial minority in Maryland. About one-third of Maryland's black population lives in the city of Baltimore. In 2004, 29.1% of the population was black.

Hispanics and Latinos, mostly from Puerto Rico and Central America, numbered 227,000 in 2000 (4.3% of the total population), up from 125,000. In 2004, 5.4% of the population was of Hispanic or Latino origin. In 2000, the Asian population was relatively large: 39,155 Koreans, 49,400 Chinese (nearly double the 1990 total of 26,479), 26,608 Filipinos, 6,620 Japanese, and 16,744 Vietnamese (up from 7,809 in 1990); the total Asian population was estimated at 210,929 in 2000. In 2004, 4.6% of the population was Asian. Pacific Islanders numbered 2,303 in 2000. In 2004, 0.1% of the population was of Pacific Island origin.

Foreign-born residents numbered 518,315, or 9.8% of the total population, in 2000, up from 313,494, or 6.5%, in 1990. Many immigrated to Maryland in the 1970s. A significant proportion of the state's German, Polish, and Russian immigrants were Jewish refugees arriving just before and after World War II. In 2000, the combined Native American population (including Eskimos and Aleuts) was estimated at 15,423. In 2004, 0.3% of the population was of American Indian or Native Alaskan origin.

8 LANGUAGES

Several Algonkian tribes originally inhabited what is now Maryland. There are some Indian place-names, such as Potomac, Susquehanna, and Allegheny.

The state's diverse topography has contributed to unusual diversity in its basic speech. Geographical isolation of the Delmarva Peninsula, proximity to the Virginia piedmont population, and access to southeastern and central Pennsylvania helped to yield a language mixture that now is dominantly Midland and yet reflects earlier ties to Southern English.

Regional features occur as well. In the northeast are found eastern Pennsylvania *pavement* (sidewalk) and *baby coach* (baby carriage). In the north and west are *poke* (bag), *quarter till*, *sick on the stomach*, *openseed peach* (freestone peach), and Pennsylvania German *ponhaws* (scrapple). In the southern portion are found *light bread* (white bread), *curtain* (shade), *carry* (escort), *crop* as /krap/, and *bulge* with the vowel of *put*. East of Chesapeake Bay are *mosquito hawk* (dragonfly), *paled fence* (picket fence), *poor* (rhyming with *mower*), and *Mary* with the vowel of *mate*. In central Maryland, an earthworm is a *baitworm*.

In 2000, some 4,322,329 residents, or 87% of the population five years old or older (down from 91.1% in 1990) spoke only English at home.

The following table gives selected statistics from the 2000 Census for language spoken at home by persons five years old and over. The category "African languages" includes Amharic, Ibo, Twi, Yoruba, Bantu, Swahili, and Somali. The category "Other Asian languages" includes Dravidian languages, Malayalam, Telugu, Tamil,

and Turkish. The category "Other Indic languages" includes Bengali, Marathi, Punjabi, and Romany.

LANGUAGE	NUMBER	PERCENT
Population 5 years and over	4,945,043	100.0
Speak only English	4,322,329	87.4
Speak a language other than English	622,714	12.6
Speak a language other than English	622,714	12.6

Arabic	10,458	0.2

9 RELIGIONS

Maryland was founded as a haven for Roman Catholics, who still make up the largest single religious group in the states although their political supremacy ended in 1692, when Anglicanism (now the Episcopal Church) became the established religion. Laws against "popery" were enacted by 1704 and Roman Catholic priests were harassed; the state constitution of 1776, however, placed all Christian faiths on an equal footing. The state's first Lutheran church was built in 1729, the first Baptist church in 1742, and the earliest Methodist church in 1760. Jews settled in Baltimore in the early 1800s, with a much larger wave of Jewish immigration in the late 19th century.

As of 2000, there were 952,389 Roman Catholics in Maryland; the Archdiocese of Baltimore reported 517,679 Catholics in 2005. Adherents of the major Protestant denominations (with 2000 data) include United Methodists, 297,729 members; Southern Baptists, 142,401 members; Evangelical Lutherans, 103,644 members; and Episcopalians, 81,061 members. In 2000, there were an estimated 216,000 Jews and about 52,867 Muslims. Though membership numbers were unavailable, reports indicate there were about 32 Buddhist congregations and 26 Hindu congregations in 2000. Over 3 million people (about 56.7% of the population) were not counted as members of any religious organization.

The Lutheran World Relief organization is based in Baltimore as is World Relief, an affiliate of the National Association of Evangelicals. The Adventist Community Services relief program is based in Silver Springs.

10 TRANSPORTATION

Some of the nation's earliest efforts toward the development of a reliable transportation system began in Maryland. In 1695, a public postal road was opened from the Potomac River through Annapolis and the Eastern Shore to Philadelphia. Construction on the National Road (now US 40) began at Cumberland in 1811; within seven years, the road was a conduit for settlers in Ohio. The first commercial steamboat service from Baltimore started in 1813, and steamboats were active all along the Chesapeake during

the 1800s. The Delaware and Chesapeake Canal, linking Chesapeake Bay and the Delaware River, opened in 1829.

Maryland's first railroad, the Baltimore and Ohio (B&O), was started in 1828. In 1835, it provided the first passenger train service to Washington, DC, and Harpers Ferry, Virginia (now West Virginia). By 1857, the line was extended to St. Louis, and its freight capacity helped build Baltimore into a major center of commerce. In the 1850s, the Pennsylvania Railroad began to buy up small Maryland lines and provide direct service to northern cities.

CSX Transportation and Norfolk Southern are the Class I railroads operating in the state, along with one regional, five local, and two switching and terminal railroads. As of 2003, total rail miles in Maryland amounted to 1,153 mi (1,856 km), including about 835 mi (1,343 km) of Class I track. The Maryland Transportation Department's Railroad Administration subsidizes four commuter lines, as well as freight lines in western Maryland and on the Eastern Shore. As of 2006, Amtrak operated four stations in Maryland, providing east–west service from Washington DC to Chicago and north–south service on the Northeast Corridor main line.

The Maryland Mass Transit Administration inaugurated Baltimore's first subway line on 21 November 1983. The combined underground-elevated line ran for 8 mi (13 km) from downtown Baltimore to Reisterstown Plaza. Later, the Baltimore Metro was extended for 6 mi (10 km) to Owings Mills, just outside the city limits. The Metro cost nearly \$1 billion to build. In 1984, the Washington, DC, mass transit system was extended to the Maryland suburbs, including Bethesda and Rockville.

About half of Maryland's roads serve metropolitan Baltimore and Washington. As of 2004, there were 30,809 mi (49,602 km) of public roadway. The major toll road is the John F. Kennedy Memorial Highway (I-95), linking Baltimore with Wilmington, Delaware, and the New Jersey Turnpike. There were 3,594,251 licensed drivers and 4.150 million motor vehicles of all types registered in Maryland as of 2004.

The Port of Baltimore handled 47.399 million tons of cargo in 2004, making it the 17th busiest port in the United States. Of that total, 24.950 million tons were imports that year. For that same year, Maryland had 532 mi (856 km) of navigable inland waterways. In 2003, waterborne shipments totaled 47.533 million tons.

In 2005, Maryland had a total of 221 public and private-use aviation-related facilities. This included 145 airports, 69 heliports, 1 STOLport (Short Take-Off and Landing), and 6 seaplane bases. Baltimore-Washington International (BWI) Airport is the state's main air terminal and also serves the Washington DC, area. In 2004, Baltimore–Washington had 10,103,563 enplanements, making it the 23rd-busiest airport in the United States.

11 HISTORY

The Indian tribes living in the region that was to become Maryland were Algonkian-speakers: the Accomac, Nanticoke, and Wicomico on the Eastern Shore, and the Susquehannock, Yacomico, and Piscataway on the Western Shore. The Susquehannock, the most powerful tribe at the time of English colonization, claimed all the land lying between the Susquehanna and Potomac rivers. Although the Algonkian Indians hunted for much of their food, many tribes (including the Susquehannock) also had permanent settlements where they cultivated corn (maize), vegetables, tobac-

co, and other crops. George Alsop, in his *Character of the Province of Maryland* (1666), noted that Susquehannock women “are the Butchers, Cooks, and Tillers of the ground but the men think it below the honour of a Masculine to stoop to any thing but that which their Gun, or Bow and Arrows can Command.” European penetration of the Chesapeake region began early in the 16th century, with the expeditions of Giovanni da Verrazano, a Florentine navigator, and the Spaniard Lucas Vázquez de Ayllón. Captain John Smith, leader of the English settlement at Jamestown, Virginia, was the first English explorer of Chesapeake Bay (1608) and produced a map of the area that was used for years.

The founding of Maryland is intimately tied to the career of another Englishman, George Calvert. A favorite of King James I, Calvert left the Church of England in 1624 to become a Roman Catholic. He announced his conversion in 1625 and—because Catholics were not allowed to hold public office in England at that time—then resigned his post as secretary of state and, against the king's wishes, retired from the royal court. As a reward for Calvert's service, the king bestowed upon him large Irish estates and a peerage with the title of Baron of Baltimore. Two years later, Calvert sailed for the New World, landing in Newfoundland, to which he had received title in 1621. After a severe winter, however, Calvert decided to seek his fortunes where the weather was warmer—in Virginia. Not well-received there because of his religion, Calvert returned to England and asked King Charles I (James's successor) for land south of Virginia; instead he received a grant north of the Potomac. Virginia's agents in England contested Calvert's right to this land strenuously but unsuccessfully, and when he died in 1632, the title passed to his son Cecilius Calvert, 2nd Baron Baltimore (usually called Lord Baltimore), who named the region Maryland after the queen consort of Charles I, Henrietta Maria. At this time, the land grant embraced not only present-day Maryland but also the present State of Delaware, a large part of Pennsylvania, and the valley between the north and south branches of the Potomac River. Not until the 1760s was the final boundary between Pennsylvania and Maryland (as surveyed by Charles Mason and Jeremiah Dixon) established by royal decree, and nearly a century passed before Maryland conceded to Virginia the land between the north and south branches of the Potomac.

The government of provincial Maryland was absolute, embodying the most extensive grant of royal powers to a colonial settlement. Lord Baltimore's main source of income as lord proprietary was the quitrents settlers paid for their land; in return for his authority, Calvert had to give the king only two Indian arrows yearly. Lord Baltimore assigned to his half-brother, Leonard Calvert, the task of organizing the settlement of the colony. On 22 November 1633, Calvert and approximately 250 settlers, including many Roman Catholics and two Jesuit priests, set sail for America on two ships, the *Ark* and the *Dove*. They landed at St. Clements Island on 25 March 1634. Two days later, Calvert purchased a site from the Indians, named it St. Marys (the first capital of Maryland), and assumed the governorship of the colony.

The early days of settlement were tumultuous. The refusal by a Virginia colonist, William Claiborne of Kent Island, to acknowledge Lord Baltimore's charter led to a small war that ended in 1638 with a temporary victory for Governor Calvert. The conflict in England during the 1640s found an echo in the struggle between Puritans and Roman Catholics in Maryland, a conflict that saw

the two-year exile of Governor Calvert to Virginia, the assumption of power by English representatives (including Claiborne and one of the Puritan leaders) in 1652, a subsequent civil war, and finally the recognition of Lord Baltimore's charter by Oliver Cromwell in 1657.

Cecilius Calvert died in 1675. His successor was Charles Calvert, 3rd Baron Baltimore and the next lord proprietary. His tenure, which lasted until 1715, saw a decisive change in the character of the province. In 1689, with Protestants ascendant in both England and Maryland, the British crown assumed direct control over the province, and in 1692, the Church of England became Maryland's established religion. When Charles Calvert died, his successor, Benedict Leonard Calvert, 4th Baron Baltimore, was granted full proprietary rights—but only because he had embraced the Protestant faith. Proprietary rule continued through his legitimate heirs until the eve of the American Revolution.

Throughout this period, the upper and lower houses of the colonial assembly—consisting, respectively, of the governor and his council and of delegates elected from the counties—quarreled over taxation and the extension of English statutes to free Marylanders. Having already secured most rights from the proprietor, the lower house was somewhat reluctant to vote for independence from the British crown, on whose authority the proprietary government now rested. After its initial hesitancy, however, Maryland cast its lot with the Revolution and sent approximately 20,000 soldiers to fight in the war. The Continental Congress met in Baltimore from December 1776 to March 1777 and in Annapolis from November 1783 to June 1784. These cities were thus among the eight that served as US capitals before the designation of a permanent seat of government in Washington, DC.

Maryland was one of the last states to sign the Articles of Confederation, not ratifying them until other states dropped their claims to what later became the Northwest Territory. On 28 April 1788, Maryland became the seventh state to ratify the federal Constitution. The state constitution, drawn up in 1776, was weighted heavily in favor of property holders and the rural counties, at the expense of the propertyless and the city of Baltimore; the legislature removed the property qualifications in 1810.

Maryland's prosperity during the colonial and early federal period waxed and waned according to the world price of tobacco, the staple crop of tidewater and southern Maryland. Planters increasingly employed slave labor on farms and plantations, and the black population grew rapidly in the 18th century. German immigrants began moving into western Maryland, where wheat became the primary crop. The cultivation of wheat also helped make Baltimore's fortune. Founded in 1729 and incorporated in 1796, the city of Baltimore was blessed with a harbor well suited to the export and import trade. As commerce developed, shipbuilding emerged as a major economic activity. By the early 19th century, Baltimore was already the state's major center of commerce and industry.

The city and harbor were the site of extensive naval and military operations during the War of 1812. It was during the bombardment of Ft. McHenry in 1814 that Francis Scott Key, detained on the British frigate, composed "The Star-Spangled Banner," which became the US national anthem in March 1931.

After the War of 1812, Maryland history was marked by the continued growth of Baltimore and increasing division over im-

migration, slavery, and secession. The chartering in 1827 of the Baltimore and Ohio (B and O) Railroad, which eventually linked Maryland with the markets of the Ohio Valley and the West, added to the city's economic vitality. But distrust of the thousands of newcomers—especially of Irish immigrants and their Roman Catholicism—and fear of the economic threat they supposedly represented spurred the rise of nativist political groups, such as the Know-Nothings, who persecuted the immigrants and dominated Maryland politics in the 1850s.

Although not many Marylanders were in favor of secession, they were hostile to the idea of using force against the secessionist states. On 19 April 1861, as the 6th Massachusetts Regiment passed through Baltimore, it was attacked by a mob of southern sympathizers in a riot that left 4 soldiers and 12 civilians dead. Ten days later, the Maryland house of delegates, following the lead of Governor Thomas Hicks, rejected a bill of secession. Throughout the Civil War, Maryland was largely occupied by Union troops because of its strategic location and the importance for the northern cause of the B and O Railroad. Marylanders fought on both sides during the war, and one major battle took place on Maryland soil—the Battle of Antietam (1862), during which a Union army thwarted a Confederate thrust toward the north, but at an enormous cost to both sides. Confederate armies invaded the state on two other occasions, when General Robert E. Lee brought his troops through the state on the way to Gettysburg in 1863 and when Lieutenant general Jubal Early ravaged the Hagerstown area and threatened Baltimore in 1864. The Maryland legislature, almost totally pro-Union by 1864, passed a new constitution, which among other things abolished slavery.

The state's economic activity increased during Reconstruction, as Maryland, and especially Baltimore, played a major role in rebuilding the South. Maryland's economic base gradually shifted from agriculture to industry, with shipbuilding, steelmaking, and the manufacture of clothing and shoes leading the way. The decades between the Civil War and World War I were also notable for the philanthropic activities of such wealthy businessmen as John Hopkins, George Peabody, and Enoch Pratt, who endowed some of the state's most prestigious cultural and educational institutions. The years after World War I saw the emergence of a political figure without equal in Maryland's more recent history: Albert C. Ritchie, a Democrat who won election to the governorship in 1919 and served in that office until 1935, just one year before his death. Stressing local issues, states' rights, and opposition to prohibition, Ritchie remained in power until Harry W. Nice, a Republican but an advocate of New Deal reforms, defeated him in 1934.

The decades after World War II were marked by significant population growth. From 1980 to 1990 alone, Maryland grew by 13.4%, well above the national rate of 9.8%. Baltimore, which, though still the hub of the state's economy, had fallen into decay and became the focus of a redevelopment project. Much of the downtown area and harbor facilities were revitalized by urban projects, begun in the late 1970s and continued into the 21st century. These featured the Charles Center development, the waterfront renovation of the Inner Harbor, Oriole Park at Camden Yards, and a \$150-million convention center at the Inner Harbor.

Although Maryland's economy declined less than those of other states during the recession of the late 1980s, the state suffered from the contraction of defense industry. Nevertheless, service indus-

try employment, primarily in the Baltimore-Washington corridor, gave Maryland the fifth-highest state income in the country as of the mid-1990s—a ranking it maintained as of 1998. Federal government and high-tech employment accounted for many of these jobs. As of 2004, Maryland had the third-highest median household income among the states, at \$57,424, which is 29% higher than the national median. Maryland in 2004 ranked fourth among the states in per capita personal income (\$39,247). Maryland had the sixth-lowest poverty rate in the nation in 2004, at 8.8%, compared with 13.1% for the nation as a whole.

Maryland's 370-year history of tobacco farming appeared to be drawing to a close in 2000. Nearly 90% of the state's tobacco farmers indicated they would accept a government buyout later that year. The crop that had settled the Chesapeake had become risky, with the tobacco industry under attack for the health hazards of its products. The state by 2003 had implemented a tobacco buyout program, whereby the state agreed to pay farmers \$1 per pound of tobacco that they would sell for the following 10 years based on the average amount of tobacco they sold between 1996 and 1998. Farmers agree to plant alternative crops instead of tobacco. As of January 2004, 785 growers were to participate in the buyout program, representing 80% of eligible growers and 7.3 million lb of tobacco.

The environmental cleanup of Chesapeake Bay, begun in the mid-1980s, continued into the 21st century. In an effort to further protect the bay's ecosystem, in 1999 Maryland Governor Parris Glendening announced a plan to protect 60,000 forested acres on the Eastern Shore from development. Nevertheless, the bay faced more immediate threats such as the April 2000 oil spill into the Patuxent River, which flows into the Chesapeake. Federal officials faulted Maryland Power Company for its efforts to clean up the spill, the worst in the company's 104-year history. Governor Rob-

ert L. Ehrlich Jr., elected in 2002, was continuing the cleanup of the Chesapeake Bay.

In 2005, Governor Ehrlich announced conservation of 828 acres near Antietam Battlefield. The plan supported Maryland's \$9.3 billion tourism industry, and provides environmental benefits for the state. Annually, 11 million visitors take advantage of Maryland's parks and natural, historic, and cultural resources.

12 STATE GOVERNMENT

Maryland's first state constitution was enacted in 1776. Subsequent constitutions were ratified in 1851, 1864, and 1867. By January 2005, it had 218 amendments.

Under the 1867 constitution, as amended, the General Assembly, Maryland's legislative body, consists of two branches: a 47-member Senate and a 141-member house of delegates. Legislative sessions begin the second Wednesday of January of each year and are limited to 90 calendar days. Special sessions, which are limited to 30 calendar days, may be called by a petition of the majority in each house. All legislators serve four-year terms and must have been citizens of the state for at least a year and of their district for at least six months prior to election. Senators must be at least 25 years old, delegates 21. The legislative salary was \$31,509 in 2004.

Executives elected statewide are the governor and lieutenant governor (who run jointly), the comptroller of the treasury, and the attorney general; all serve four-year terms. The state treasurer is elected by joint ballot of the General Assembly, while the secretary of state is appointed by the governor. The governor, who may serve no more than two four-year terms in succession, also appoints other members of the executive council (cabinet) and the heads of major boards and commissions. The chief executive must be a US citizen at least 30 years old, must have been a resident of Maryland for five years before election, and must have been a reg-

*Won US presidential election.

istered voter in the state for five years. As of December 2004, the governor's salary was \$135,000.

Bills passed by majority vote of both houses of the assembly become law when signed by the governor or if left unsigned for six days while the legislature is in session or 30 days if the legislature has adjourned. The only exception is the budget bill, which becomes effective immediately upon legislative passage. Gubernatorial vetoes may be overridden by three-fifths votes of the elected members in both houses. Proposed constitutional amendments also require approval by three-fifths of both houses of the legislature before submission to the voters at the next general election.

Eligible voters are US citizens who are at least 18 years old and are residents of the Maryland county in which they will vote. Restrictions apply to convicted felons and those declared mentally incompetent by the court.

13 POLITICAL PARTIES

The Republican and Democratic parties are the dominant political groups in Maryland. Before the Civil War, the Democrats drew much of their strength from the slaveholding Eastern Shore, while their opponents, the Whigs, were popular in Baltimore and other centers of antislavery activity. The collapse of the Whigs on both the national and local levels corresponded with the rise in Maryland of the Native American ("Know-Nothing") Party, whose anti-immigrant and anti-Catholic attitudes appealed to Marylanders who saw their livelihood threatened by Roman Catholic immigrants. The Know-Nothings swept Baltimore in 1855 and won the governorship in 1857; Maryland was the only state to cast its electoral votes for the Know-Nothing presidential candidate, Millard Fillmore, in 1856. The Native American Party declined rapidly, however, and by 1860, Maryland was back in the Democratic column, voting for the secessionist John Breckinridge.

Revelations of influence peddling and corruption afflicted both major parties during the 1970s. In 1973, Republican Spiro T. Agnew, then vice president of the United States, was accused of taking payments from people who had done business with the state government while he was Baltimore County executive and then governor of Maryland until 1969. Agnew pleaded nolo contendere to a federal charge of income tax evasion and resigned from the vice-presidency on 10 October 1973. His gubernatorial successor, Democrat Marvin Mandel, was convicted of mail fraud and racketeering in 1977; he served 20 months of a 36-month prison sentence before receiving a presidential pardon in 1981.

Maryland was one of the few states carried by President Jimmy Carter in the November 1980 presidential election, but four years later the state went for President Ronald Reagan in the national Republican landslide. In 2000, Maryland gave 57% of its vote to Democrat Al Gore, 40% to Republican George W. Bush, and 3% to Green Party candidate Ralph Nader. In 2004, Democratic challenger John Kerry won 55.7% of the vote to incumbent Bush's 44.6%.

In the 1994 governor's race, one of the closest in Maryland history, Democrat Parris N. Glendening won; he was reelected in 1998. Republican Robert L. Ehrlich Jr. was elected governor in 2002. The two senators from Maryland, Paul S. Sarbanes and Barbara Mikulski, both Democrats, were reelected in 2000 and 2004, respectively. In 2004 there were 3,105,000 registered voters. In

1998, 58% of registered voters were Democratic, 20% Republican, and 12% unaffiliated or members of other parties.

Following the November 2004 elections, Maryland's US congressional delegation consisted of six Democrats and two Republicans. In mid-2005 there were 33 Democrats and 14 Republicans in the state Senate, and 98 Democrats and 43 Republicans in the state House. The state had 10 electoral votes in the 2000 presidential election.

14 LOCAL GOVERNMENT

As of 2005, there were 24 counties, 157 municipal governments, and 85 special districts in Maryland. Most counties have charter governments, in which voters elect a county executive and council members. The other counties, which tend to be rural, are governed by boards of county commissioners. County government is highly developed in Maryland, and there are numerous appointed county officials with responsibilities ranging from civil defense to liquor licensing.

The city of Baltimore is the only one in Maryland not contained within a county. It provides the same services as a county, and shares in state aid according to the same allocation formulas. The city (not to be confused with Baltimore County, which surrounds the city of Baltimore but has its county seat at Towson) is governed by an elected mayor and city council. Other cities and towns are each governed by a mayor, with or without a council, depending on the local charter. In 2005, Maryland had 25 public school systems.

In 2005, local government accounted for about 187,955 full-time (or equivalent) employment positions.

15 STATE SERVICES

To address the continuing threat of terrorism and to work with the federal Department of Homeland Security, homeland security in Maryland operates under the authority of executive order; the homeland security director is designated as the state homeland security advisor.

The State Ethics Commission, established in 1979, monitors compliance by state officeholders and employees with the Maryland public ethics law in order to avoid conflicts of interest; the Joint Committee on Legislative Ethics, created in 1972, has similar responsibilities with respect to General Assembly members. The Fair Campaign Financing Commission provides for the public financing of elections and sets campaign spending limits.

The State Board of Education is an independent policymaking body whose 12 members are appointed by the governor; its responsibilities include selection of a superintendent of schools to run the Education Department. The growth and development of postsecondary institutions are the responsibility of the Maryland Higher Education Commission. The Department of Transportation oversees air, road, rail, bridge, and mass transit. The Department of Health and Mental Hygiene coordinates public health programs, regulates in-state medical care, and supervises the 24 local health departments. Social services and public assistance programs as well as employment security lie within the jurisdiction of the Department of Human Resources. The Department of Housing and Community Development assures the provision of low-cost housing. The Department of Business and Economic Development advances job opportunities and works to bring new

businesses into the state. It also serves in a public relations capacity at home and abroad to stimulate international trade and tourism, and also invests in the arts and promotes sports events.

Maryland's Department of Public Safety and Correctional Services has statewide responsibility for the supervision and rehabilitation of adjudicated individuals, while the Department of Labor, Licensing, and Regulation supervises employment training, job match services, unemployment insurance, and many of the state's licensing and regulatory boards for businesses and trades. The Department of State Police enforces state motor vehicle and criminal laws, preserves public peace, maintains safe traffic on public streets and highways, enforces laws relating to narcotics, and incorporates the office of the State Fire Marshal. Other organizations include the departments of agriculture, assessments and taxation, natural resources, personnel, and rehabilitation services (for those with disabilities).

16 JUDICIAL SYSTEM

The Court of Appeals is Maryland's highest court. It is comprised of a chief judge and six associate judges. Each is appointed to the court by the governor, but must be confirmed by the voters within two years of appointment. Most criminal appeals are decided by the court of special appeals, consisting of a chief judge and 12 associate judges, selected in the same manner as judges of the high court. Each case must be heard by a panel of at least three judges of the high court. All state judges serve 10-year terms.

In 1971, 12 district courts took the place of all justices of the peace, county trial judges, magistrates, people's courts, and the municipal court of Baltimore. District courts handle all criminal, civil, and traffic cases, with appeals being taken to one of eight circuit courts. Circuit court judges are appointed by the governor and stand for election to 15-year terms. District court judges are appointed by the governor and confirmed by the Senate to 10-year terms. The city of Baltimore and all counties except Montgomery and Hartford have orphans' courts composed of two judges and one chief judge, all of them elected to four-year terms.

As of 31 December 2004, a total of 23,285 prisoners were held in Maryland's state and federal prisons, a decrease from 23,791 of 2.1% from the previous year. As of year-end 2004, a total of 1,180 inmates were female, down from 1,248 or 5.4% from the year before. Among sentenced prisoners (one year or more), Maryland had an incarceration rate of 406 per 100,000 population in 2004.

According to the Federal Bureau of Investigation, Maryland in 2004, had a violent crime rate (murder/nonnegligent manslaughter; forcible rape; robbery; aggravated assault) of 700.5 reported incidents per 100,000 population (third-highest among the states in the United States after Florida and South Carolina), or a total of 38,932 reported incidents. Crimes against property (burglary; larceny/theft; and motor vehicle theft) in that same year totaled 202,326 reported incidents or 3,640.2 reported incidents per 100,000 people. Maryland has a death penalty, of which lethal injection or lethal gas are the methods of execution. However, the latter method is open only to those inmates convicted of capital offenses that were committed on or after 25 March 1994. From 1976 through 5 May 2006, the state executed five persons, including one execution in 2005. As of 1 January 2006, Maryland had eight inmates on death row.

In 2003, Maryland spent \$495,455,173 on homeland security, an average of \$91 per state resident.

17 ARMED FORCES

As of 2004, there were 35,531 active US military personnel in Maryland, 2,593 National Guard and Reserve, and 25,417 civilian personnel. Ft. Meade is located in Baltimore, and the Aberdeen Proving Ground is in Harford County. Perhaps Maryland's best-known defense installation is Andrews Air Force Base in Camp Springs, a military airlift center. Annapolis is the home of the US Naval Academy. Total military personnel at all naval facilities, including the National Naval Medical Center at Bethesda, was 7,335 in 2004. Federal defense contract awards to Maryland firms were approximately \$9.2 billion in 2004, fourth-highest in the United States for that year. In addition, there was another \$4.9 billion in defense payroll spending, including retired military pay.

There were 486,298 veterans of US military service in Maryland as of 2003, of whom 57,970 served in World War II; 46,740 in the Korean conflict; 142,266 during the Vietnam era; and 86,225 in the Gulf War. In 2004, expenditures on veterans exceeded \$1.1 billion.

As of 31 October 2004, the Maryland State Police employed 1,575 full-time sworn officers.

18 MIGRATION

Maryland's earliest white settlers were English; many of them farmed lands on the Eastern Shore. As tobacco crops wore out the soil, these early immigrants moved on to the fertile Western Shore and piedmont. During the 19th century, Baltimore ranked second only to New York as a port of entry for European immigrants. First to come were the Germans, followed by the Irish, Poles, East European Jews, and Italians; a significant number of Czechs settled in Cecil County during the 1860s. After the Civil War, many blacks migrated to Baltimore, both from rural Maryland and from southern states.

Since World War II, intrastate migration has followed the familiar urban/suburban pattern: both the Baltimore metropolitan area and the Maryland part of the metropolitan Washington, DC, area have experienced rapid growth while the inner cities have lost population. Overall, Maryland experienced a net loss from migration of about 36,000 between 1970 and 1980, much of it to Pennsylvania, Virginia, and Florida; the out-migration stopped during the 1980s, however, with a net gain of over 200,000 from 1980 to 1990. Between 1990 and 1998, Maryland had a net loss of 49,000 in domestic migration and a net gain of 118,000 in international migration. Maryland's foreign-born population totaled 412,000, or 8% of the total population, in 1996. In 1998, 15,561 foreign immigrants arrived in the state—the 10th-highest total of any state for that year. Between 1990 and 1998, the state's overall population increased 7.4%. In the period 2000–05, net international migration was 108,972 and net internal migration was 9,752, for a net gain of 118,724 people.

19 INTERGOVERNMENTAL COOPERATION

Maryland is active in several regional organizations, including the Southern Regional Education Board, Atlantic States Marine Fisheries Commission, Mid-Atlantic Fishery Management Council, Interstate Mining Compact Commission, Appalachian Regional

Commission, Susquehanna River Basin Commission (with Pennsylvania and New York), and the Potomac River Fisheries Commission (with Virginia). Representatives of Maryland, Virginia, and the District of Columbia form the Washington Metropolitan Area Transit Authority, which coordinates regional mass transit. Other cooperation focuses on the Chesapeake Bay, and on the creation of the Woodrow Wilson Bridge and Tunnel. The Delmarva Advisory Council, representing Delaware, Maryland, and Virginia, works with local organizations on the Delmarva Peninsula to develop and implement economic improvement programs. In fiscal year 2005, federal grants to Maryland totaled \$8.589 billion, an estimated \$8.892 billion in fiscal year 2006, before falling to an estimated \$8.217 billion in fiscal year 2007.

20 ECONOMY

Throughout the colonial period, Maryland's economy was based on one crop—tobacco. Not only slaves but also indentured servants worked the fields, and when they earned their freedom, they too secured plots of land and grew tobacco for the European market. By 1820, however, industry was rivaling agriculture for economic preeminence. Shipbuilding, metalworking, and commerce transformed Baltimore into a major city. Within 60 years, it was a leading manufacturer of men's clothing and had the largest steel making plant in the United States.

Although manufacturing output continues to rise, the biggest growth areas in Maryland's economy are government, construction, trade, and services. Maryland employees are the best educated in the nation, with more than one-third of those over age 25 possessing a bachelor's degree in 2000. With the expansion of federal employment in the Washington metropolitan area by 40% from 1961 to 1980, many US government workers settled in suburban Maryland, primarily Prince George's and Montgomery counties. Construction and services in those areas expanded accordingly. The growth of state government boosted employment in Anne Arundel and Baltimore counties. Also of importance to the economy are fishing and agriculture (primarily dairy and poultry farming) on the Eastern Shore and coal mining in Garrett and Allegheny counties. Manufacturing has shifted toward high technology, information, and health-related products. While manufacturing output (durable and nondurable goods) has continued to grow, its relative weight in the gross state product has fallen from 8.5% in 1997 to 6.1% in 2004. Annual growth rates averaged 6.2% 1998 to 2000, and only fell to 5.4% in the national recession and slowdown of 2001. Increased federal government spending, particularly in defense-related industries, is expected to assure Maryland's economic recovery in 2002, and into 2003.

Maryland's gross state product (GSP) was \$227.991 billion in 2004, of which the real estate sector accounted for the largest portion at \$34.763 billion or 15.2% of GSP, followed by professional and technical services at \$22.780 billion (9.9% of GSP), and health-care and social services at \$16.815 billion (7.3% of GSP). In that same year, there were an estimated 477,233 small businesses in Maryland. Of the 137,338 businesses that had employees, a total of 134,095 or 97.6% were small companies. An estimated 21,751 new businesses were established in the state in 2004, up 5.1% from the year before. Business terminations that same year came to 20,636, down 4.9% from 2003. There were 417 business bankruptcies in 2004, down 20.3% from the previous year. In 2005, the state's per-

sonal bankruptcy (Chapter 7 and Chapter 13) filing rate was 618 filings per 100,000 people, ranking Maryland as the 19th highest in the nation.

21 INCOME

In 2005 Maryland had a gross state product (GSP) of \$245 billion which accounted for 2.0% of the nation's gross domestic product and placed the state at number 15 in highest GSP among the 50 states and the District of Columbia.

According to the Bureau of Economic Analysis, in 2004 Maryland had a per capita personal income (PCPI) of \$39,631. This ranked fifth in the United States and was 120% of the national average of \$33,050. The 1994–2004 average annual growth rate of PCPI was 4.5%. Maryland had a total personal income (TPI) of \$220,402,185,000, which ranked 14th in the United States and reflected an increase of 6.8% from 2003. The 1994–2004 average annual growth rate of TPI was 5.5%. Earnings of persons employed in Maryland increased from \$145,140,178,000 in 2003 to \$155,190,491,000 in 2004, an increase of 6.9%. The 2003–04 national change was 6.3%.

The US Census Bureau reports that the three-year average median household income for 2002 to 2004 in 2004 dollars was \$56,763 compared to a national average of \$44,473. During the same period an estimated 8.6% of the population was below the poverty line as compared to 12.4% nationwide.

22 LABOR

According to the Bureau of Labor Statistics (BLS), in April 2006 the seasonally adjusted civilian labor force in Maryland numbered 2,997,700, with approximately 105,700 workers unemployed, yielding an unemployment rate of 3.5%, compared to the national average of 4.7% for the same period. Preliminary data for the same period placed nonfarm employment at 2,580,100. Since the beginning of the BLS data series in 1976, the highest unemployment rate recorded in Maryland was 8.3% in August 1982. The historical low was 3.3% in March 2000. Preliminary nonfarm employment data by occupation for April 2006 showed that approximately 7.3% of the labor force was employed in construction; 5.3% in manufacturing; 18.4% in trade, transportation, and public utilities; 6.2% in financial activities; 15% in professional and business services; 14% in education and health services; 9% in leisure and hospitality services; and 18.2% in government.

Baltimore was a leading trade union center by the early 1830s although union activity subsided after the Panic of 1837. The Baltimore Federation of Labor was formed in 1889, and by 1900, the coal mines had been organized by the United Mine Workers. In 1902, Maryland passed the first workers' compensation law in the United States. It was declared unconstitutional in 1904 but was subsequently revived.

The US Department of Labor's Bureau of Labor Statistics reported that in 2005, a total of 337,000 of Maryland's 2,530,000 employed wage and salary workers were formal members of a union. This represented 13.3% of those so employed, up from 10.9% in 2004, and above the national average of 12%. Overall in 2005, a total of 379,000 workers (15%) in Maryland were covered by a union or employee association contract, which includes those workers who reported no union affiliation. Maryland is one of 28 states that do not have a right-to-work law.

As of 1 March 2006, Maryland had a state-mandated minimum wage rate of \$6.15 per hour. In 2004, women in the state accounted for 48.1% of the employed civilian labor force.

23 AGRICULTURE

Maryland ranked 36th among the 50 states in agricultural income in 2005, with estimated receipts of \$1,666 million, about 41% of that in crops.

Until the Revolutionary War, tobacco was the state's only cash crop; in 2004, Maryland produced an estimated 1,870,000 lb of tobacco. Corn and cereal grains are grown mainly in southern Maryland. Production in 2004 included 65,025,000 bushels of corn for grain; 21,285,000 bushels of soybeans, \$112,811,000; 8,555,000 bushels of wheat, \$26,093,000, and 2,847,000 bushels of barley, \$5,409,000. Commercial vegetables, cultivated primarily on the Eastern Shore, were valued at \$36.6 million in 2004. Fruits are also cultivated.

Maryland had some 12,100 farms covering 2,050,000 acres (830,000 hectares) in 2004.

24 ANIMAL HUSBANDRY

The Eastern Shore is an important dairy and poultry region; cattle are raised in north-central and western Maryland, while the central region is notable for horse breeding. In 2003, poultry farmers produced an estimated 6.4 million lb (2.9 million kg) of chickens and 1.37 billion lb (0.63 billion kg) of broilers for around \$494.7 million. Also in 2003, Maryland farmers produced an estimated 813 million eggs worth around \$46.2 million.

An estimated 1.2 billion lb (0.6 billion kg) of milk was produced in 2003 from 78,000 dairy cows. Maryland farms and ranches had an estimated 235,000 cattle and calves worth around \$237 million in 2005. In 2004, there were an estimated 26,000 hogs and pigs, worth \$2.6 million.

25 FISHING

In 2004, Maryland had a total commercial catch of 49.5 million lb (22.5 million kg), valued at \$49.2 million. Maryland is a leading source of oysters, clams, and crabs. About 19% of the nation's supply of hard blue crabs comes from Maryland. Ocean City is the state's leading fishing port.

In 2003, the state had 17 processing and 58 wholesale plants with a total of about 1,417 employees. In 2001, the commercial fleet had at least 32 vessels.

The Fisheries Administration of the Department of Natural Resources monitors fish populations and breeds and implants oysters. It also stocks inland waterways with finfish. The state has five cold water and four warm water hatcheries. Maryland had 362,181 licensed sport anglers in 2004.

26 FORESTRY

Maryland's 2,566,000 acres (1,139,000 hectares) of forestland covers about 40% of the state's land area. More than 90% of that (2,372,000 acres/961,570 hectares) was classified as commercial forest, 90% of it privately owned. Hardwoods predominate, with red and white oaks and yellow poplar among the leading hard-

wood varieties. Lumber production in 2004 was 272 million board feet.

Forest management and improvement lie within the jurisdiction of the Maryland Department of Natural Resources Forest Service.

27 MINING

According to preliminary data from the US Geological Survey (USGS), the estimated value of nonfuel mineral production by Maryland in 2003 was \$382 million, a decrease from 2002 of about 4.5%. The USGS data ranked Maryland as 33rd among the 50 states by the total value of its nonfuel mineral production, accounting for 1% of total US output.

Portland cement, crushed stone, and construction sand and gravel were the state's leading nonfuel minerals, by value, in 2003. Collectively, these three commodities (with crushed marble, shell and taprock) accounted for over 95% of the state's output of non-fuel minerals, by value.

According to preliminary figures from the USGS for 2003, the production of portland cement in Maryland totaled 1.9 million metric tons, and was valued at \$143 million. Crushed stone output that same year stood at 21.8 million metric tons, and had a value of \$138 million, while construction sand and gravel production totaled 11.4 million metric tons and was valued at \$78.1 million). Maryland in 2003 was also a producer of dimension stone and common clays.

28 ENERGY AND POWER

As of 2003, Maryland had 24 electrical power service providers, of which 5 were publicly owned and 3 were cooperatives. Of the remainder, four were investor owned, one was an owner of an independent generator that sold directly to customers, while six were generation only suppliers and five were delivery only service providers. As of that same year there were 2,295,305 retail customers. Of that total, 2,010,338 received their power from investor-owned service providers. Cooperatives accounted for 174,291 customers, while publicly owned providers had 32,111 customers. There was only one independent generator or "facility" customer. Generation-only suppliers had 78,564 customers. There was no data on the number of customers using delivery-only providers.

Total net summer generating capability by the state's electrical generating plants in 2003 stood at 12.472 million kW, with total production that same year at 52.244 billion kWh. Of the total amount generated, only 0.1% came from electric utilities, with the remaining 99.9% coming from independent producers and combined heat and power service providers. The largest portion of all electric power generated, 29.939 billion kWh (57.3%), came from coal-fired plants, with nuclear plants in second place at 13.690 billion kWh (18.9%) and petroleum fueled plants in third at 3.572 billion kWh (6.8%). Other renewable power sources accounted for 1.7% of all power generated, with hydroelectric accounting for 5.1%, natural gas fueled plants at 2.3%, plants using other types of gases at 0.6%.

As of 2006, Maryland had one nuclear power generating facility, the Calvert Cliffs plant.

Coal, Maryland's lone fossil fuel resource, is mined in Allegheny and Garrett counties, along the Pennsylvania border. In 2004, Maryland had 19 producing coal mines, 16 of which were surface

mines and 3 were underground. Coal production that year totaled 5,225,000 short tons, up from 5,056,000 short tons in 2003. Of the total produced in 2004, the state's three underground mines accounted for the bulk at 3,339,000 short tons. Recoverable coal reserves in 2001 totaled 17 million short tons. One short ton equals 2,000 lb (0.907 metric tons).

As of 2004, Maryland had no crude oil refineries, nor any proven reserves, or production.

In 2004, Maryland had seven producing natural gas and gas condensate wells. In 2003 (the latest year for which data was available), marketed gas production (all gas produced excluding gas used for repressuring, vented and flared, and nonhydrocarbon gases removed) totaled 48 million cu ft (1.36 million cu m). There was no data available on the state's proven reserves of natural gas.

29 INDUSTRY

During the early 1800s, Maryland's first industries centered around the Baltimore shipyards. Small ironworks cast parts for sailing vessels, and many laborers worked as shipbuilders. By the 1850s, Baltimore was also producing weather-measuring instruments and fertilizers, and by the 1930s, it was a major center of metal refining. The city remains an important manufacturer of automobiles and parts, steel, and instruments. Manufacturing is led by the printing and publishing industry, the food industry, the machinery industry, and the chemical industry.

According to the US Census Bureau's Annual Survey of Manufactures (ASM) for 2004, Maryland's manufacturing sector covered some 19 product subsectors. The shipment value of all products manufactured in the state that same year was \$36.489 billion. Of that total, computer and electronic product manufacturing accounted for the largest share at \$5.839 billion. It was followed by food manufacturing at \$5.477 billion; chemical manufacturing at \$4.990 billion; transport equipment manufacturing at \$2.394 billion; and fabricated metal product manufacturing at \$2.175 billion.

In 2004, a total of 135,773 people in Maryland were employed in the state's manufacturing sector, according to the ASM. Of that total, 85,668 were actual production workers. In terms of total employment, the computer and electronic product manufacturing industry accounted for the largest portion of all manufacturing employees at 23,880, with 6,897 actual production workers. It was followed by printing and related support activities at 15,332 employees (11,195 actual production workers); food manufacturing at 14,147 employees (10,187 actual production workers); fabricated metal product manufacturing at 12,297 employees (8,699 actual production workers); chemical manufacturing at 9,626 employees (5,694 actual production workers); machinery manufacturing at 8,224 employees (5,003 actual production workers); and plastics and rubber products manufacturing with 6,851 employees (5,189 actual production workers).

ASM data for 2004 showed that Maryland's manufacturing sector paid \$6.309 billion in wages. Of that amount, the computer and electronic product manufacturing sector accounted for the largest share at \$1.653 billion. It was followed by printing and related support activities at \$556.758 million; chemical manufacturing at \$528.906 million; fabricated metal product manufacturing at \$490.015 million; and food manufacturing at \$471.262 million.

30 COMMERCE

According to the 2002 Census of Wholesale Trade, Maryland's wholesale trade sector had sales that year totaling \$60.6 billion from 6,104 establishments. Wholesalers of durable goods accounted for 3,764 establishments, followed by nondurable goods wholesalers at 1,813 and electronic markets, agents, and brokers accounting for 527 establishments. Sales by durable goods wholesalers in 2002 totaled \$30.8 billion, while wholesalers of nondurable goods saw sales of \$22.8 billion. Electronic markets, agents, and brokers in the wholesale trade industry had sales of \$6.9 billion.

In the 2002 Census of Retail Trade, Maryland was listed as having 19,394 retail establishments with sales of \$60.06 billion. The leading types of retail businesses by number of establishments were: food and beverage stores (3,332); clothing and clothing accessories stores (2,918); miscellaneous store retailers (2,075); and motor vehicle and motor vehicle parts dealers (1,746). In terms of sales, motor vehicle and motor vehicle parts dealers accounted for the largest share of retail sales at \$16.3 billion, followed by food and beverage stores at \$10.5 billion; general merchandise stores at \$7.7 billion; building material/garden equipment and supplies dealers at \$4.8 billion; and gasoline stations at \$4.1 billion. A total of 285,561 people were employed by the retail sector in Maryland that year.

Most of Maryland's retail facilities are located in the Baltimore metropolitan area and Montgomery and Prince George's counties surrounding Washington, DC. These counties are home to about 90% of Maryland's 5 million residents. The Washington-Baltimore Consolidated Metropolitan Statistical Area is among the nation's top 10 retail markets.

Exports by Maryland companies totaled \$7.1 billion in 2005. While export activities in established markets such as Europe and Canada are still predominant, strong inroads have been made in targeted trade areas of Asia and Latin America.

31 CONSUMER PROTECTION

The state agency generally responsible for controlling unfair and deceptive trade practices is the Division of Consumer Protection within the Attorney General's Office. However, consumer complaints involving state-chartered financial institutions are the responsibility of the Office of Financial Regulation, while the state's automotive "Lemon Law" is the responsibility of the Motor Vehicle Administration, which is part of the Department of Transportation, although any litigation is handled by the Attorney General's Office.

When dealing with consumer protection issues, the state's Attorney General's Office can initiate civil and criminal proceedings (the latter must be done in conjunction with the local district attorney); administer consumer protection and education programs; handle formal consumer complaints; and exercise broad subpoena powers. However, the Attorney General cannot represent the state before state and federal regulatory agencies. In antitrust actions, the Attorney General's Office cannot act on behalf of those consumers who are incapable of acting on their own, but can initiate damage actions on behalf of the state in state courts; file criminal proceedings; and represent counties, cities and other

governmental entities in recovering civil damages under state or federal law.

The Consumer Protection Division's main office is located in Baltimore, but it also has regional offices in Cumberland, Frederick, Hagerstown, Hughesville and Salisbury. County government consumer protection offices are located in Columbia and Rockville.

32 BANKING

As of June 2005, Maryland had 113 insured banks, savings and loans, and saving banks, plus 11 state-chartered and 109 federally chartered credit unions (CUs). Excluding the CUs, the Washington DC-Arlington-Alexandria market area, the Baltimore-Towson -Alexandria market area accounted for the largest portion of the state's financial institutions and deposits in 2004, at 90 and \$43.864 billion, respectively. As of June 2005, CUs accounted for 21.5% of all assets held by all financial institutions in the state, or some \$13.558 billion. Banks, savings and loans, and savings banks collectively accounted for the remaining 78.5% or \$49.420 billion in assets held.

All state-chartered banks, savings and loan associations and trusts are regulated by the state's Commissioner of Financial Regulation, within the Department of Labor, Licensing and Regulation.

In 2004, the median percentage of past-due and nonaccrual loans to total loans was 0.93%, down from 1.14% in 2003. As of fourth quarter 2005 that same rate had fallen further to 0.89%.

33 INSURANCE

In 2004 there were over 3.47 million individual life insurance policies in force with a total value of about \$275 billion; total value for all categories of life insurance (individual, group, and credit) was over \$433 billion. The average coverage amount is \$79,200 per policy holder. Death benefits paid that year totaled at over \$1.17 billion.

As of 2003, there were 46 property and casualty and 10 life and health insurance companies domiciled in the state. In 2004, direct premiums for property and casualty insurance totaled \$8.28 billion. That year, there were 54,882 flood insurance policies in force in the state, with a total value of \$8 billion.

The Maryland Automobile Insurance Fund, a quasi-independent agency created in 1972, pays claims against uninsured motorists (i.e., hit-and-run drivers, out-of-state uninsured motorists, and state residents driving in violation of Maryland's compulsory automobile insurance law), and sells policies to Maryland drivers unable to obtain insurance from private companies.

In 2004, 61% of state residents held employment-based health insurance policies, 4% held individual policies, and 19% were covered under Medicare and Medicaid; 14% of residents were uninsured. In 2003, employee contributions for employment-based health coverage averaged at 23% for single coverage and 29% for family coverage. The state offers an 18-month health benefits expansion program for small-firm employees in connection with the Consolidated Omnibus Budget Reconciliation Act (COBRA, 1986), a health insurance program for those who lose employment-based coverage due to termination or reduction of work hours.

In 2003, there were over 3.7 million auto insurance policies in effect for private passenger cars. Required minimum coverage includes bodily injury liability of up to \$20,000 per individual and \$40,000 for all persons injured in an accident, as well as property damage liability of \$15,000. Personal injury protection and uninsured motorist coverage are also mandatory. In 2003, the average expenditure per vehicle for insurance coverage was \$890.86.

The State Insurance Division of the Department of Licensing and Regulation licenses all state insurance companies, agents, and brokers, and must approve all policies for sale in the state.

34 SECURITIES

There are no securities or commodities exchanges in Maryland. In 2005, there were 2,450 personal financial advisers employed in the state and 3,600 securities, commodities, and financial services sales agents. In 2004, there were over 175 publicly traded companies within the state, with over 67 NASDAQ companies, 37 NYSE listings, and 13 AMEX listings. In 2006, the state had five Fortune 500 companies; Lockheed Martin (in Bethesda) ranked first in the state and 52nd in the nation with revenues of over \$37.2 billion, followed by Constellation Energy (Baltimore), Marriott International (Bethesda), Coventry Health Care (Bethesda), and Black and Decker (Towson). All five companies are listed on the NYSE.

35 PUBLIC FINANCE

The state budget, prepared by the Department of Budget and Management, is submitted annually by the governor to the General Assembly for amendment and approval. The fiscal year (FY) runs from 1 July to 30 June.

Fiscal year 2006 general funds were estimated at \$13.5 billion for resources and \$12.3 billion for expenditures. In fiscal year 2004, federal government grants to Maryland were \$8.8 billion.

In the fiscal year 2007 federal budget, Maryland was slated to receive: \$178.5 million for the continued consolidation of Food and Drug Administration facilities at White Oak. The request includes funding for the Building One renovation and for construction of the Office of the Commissioner and Office of Regulatory Affairs office building, and for other infrastructure needs; \$6 million for improvements at the Center for Veterinary Medicine in Laurel. These funds will support the replacement of the underground water distribution systems for a central utility plant and 13 laboratory buildings with a modern, high efficiency, high quality, and low maintenance system; \$5.8 million for improvements at the Center for Devices and Radiological Health's (CDRH) White Oak site in Silver Spring. These funds will allow for the upgrade of the major mechanical systems of an old laboratory and convert it into a machine fabrication shop and a photo science laboratory for the CDRH.

36 TAXATION

In 2005, Maryland collected \$13,497 million in tax revenues or \$2,410 per capita, which placed it 14th among the 50 states in per capita tax burden. The national average was \$2,192 per capita. Property taxes accounted for 3.9% of the total, sales taxes 21.4%,

selective sales taxes 17.7%, individual income taxes 41.9%, corporate income taxes 6.0%, and other taxes 9.0%.

As of 1 January 2006, Maryland had four individual income tax brackets ranging from 2.0 to 4.75%. The state taxes corporations at a flat rate of 7.0%.

In 2004, state and local property taxes amounted to about \$6 billion or \$1,082 per capita. The per capita amount ranks the state 17th highest nationally. Local governments collected \$5,539,833,000 of the total and the state government \$478,796,000.

Maryland taxes retail sales at a rate of 5%. Food purchased for consumption off-premises is tax exempt. The tax on cigarettes is

100 cents per pack, which ranks 19th among the 50 states and the District of Columbia. Maryland taxes gasoline at 23.5 cents per gallon. This is in addition to the 18.4 cents per gallon federal tax on gasoline.

According to the Tax Foundation, for every federal tax dollar sent to Washington in 2004, Maryland citizens received \$1.44 in federal spending.

37 ECONOMIC POLICY

The Department of Business and Economic Development (DBED), created in 1995, encourages new firms to locate in Maryland and established firms to expand their in-state facilities, promotes the tourist industry, and disseminates information about the state's history and attractions. The department helps secure industrial mortgage loans for businesses that create new jobs, and also provides small-business loans, low-interest construction loans, assistance in plant location and expansion; and supports the Division of Business Development to allow companies to maximize their use of state services. In addition, the department assists local governments in attracting federal funds for economic development and maintains programs to encourage minority businesses, the marketing of seafood, and the use of Ocean City Convention Hall. In 2006, the DBED maintained international offices in Mexico City, Monterrey (Mexico), Beijing, Shanghai, Taipei, Singapore, Bangalore (India), Shorashim (Israel), and Paris. The Department of State Planning oversees state and regional development programs and helps local governments develop planning goals.

During the 1930s, Maryland pioneered in urban design with the new town of Greenbelt, in Prince George's County. A wholly planned community, Columbia, was built in Howard County during the 1960s. More recently, redevelopment of Baltimore's decaying inner city has been aggressively promoted. Harborplace, a waterside pavilion featuring hundreds of shops and restaurants, formally opened in 1980, and an industrial park was developed in a high-unemployment section of northwest Baltimore during the early 1980s. Not far from Harborplace are the 33-story World Trade Center and the National Aquarium. Urban restoration has also been encouraged by urban homesteading: a Baltimorean willing to make a commitment to live in an old brick building and fix it up can submit a closed bid to buy it. An analogous "shopsteading" program to attract merchants has also been encouraged.

In 1982, Maryland initiated a program of state enterprise zones to encourage economic growth by focusing state and local resources on designated areas requiring economic stimulus. Five of these enterprise zones were located in western Maryland, four in the central part of the state, and one on the Eastern Shore. There were 29 state enterprise zones in 2006. With Delaware, Virginia, and Washington DC, Maryland has been recognized as part of an international life sciences hub, dubbed the BioCapital hub. Maryland companies and agencies participate in bioscience "hotbed" campaigns, concerted efforts by groups made up of government development agencies, pharmaceutical and bioscience companies, research institutes, universities, and nonprofits to attract capital, personnel and resources to develop a life sciences cluster. Over 500 foreign-based businesses have been established in Maryland, creating over 75,000 jobs. The Office of International Business (OIB) within the DBED, offers assistance to foreign companies for

location, relocation, and expansion, in addition to providing assistance to Maryland exporters.

38 HEALTH

The infant mortality rate in October 2005 was estimated at 8.2 per 1,000 live births. The birth rate in 2003 was 13.6 per 1,000 population. The abortion rate stood at 29 per 1,000 women in 2000. In 2003, about 83.7% of pregnant woman received prenatal care beginning in the first trimester. In 2004, approximately 80% of children received routine immunizations before the age of three.

The crude death rate in 2003 was 8.1 deaths per 1,000 population. As of 2002, the death rates for major causes of death (per 100,000 resident population) were: heart disease, 220; cancer, 190.4; cerebrovascular diseases, 51.5; chronic lower respiratory diseases, 35.6; and diabetes, 27.8. The mortality rate from HIV infection was 11.2 per 100,000 population, representing the second-highest rate in the country (following the District of Columbia at 40.8 per 100,000); the national HIV death rate was 4.9 per 100,000. In 2004, the reported AIDS case rate was at about 26.1 per 100,000 population, the fourth-highest rate in the country. In 2002, about 55.2% of the population was considered overweight or obese. As of 2004, about 19.5% of state residents were smokers.

In 2003, Maryland had 51 community hospitals with about 11,600 beds. There were about 645,000 patient admissions that year and 6.5 million outpatient visits. The average daily inpatient census was about 8,700 patients. The average cost per day for hospital care was \$1,571. Also in 2003, there were about 243 certified nursing facilities in the state with 29,362 beds and an overall occupancy rate of about 86.1%. In 2004, it was estimated that about 75.8% of all state residents had received some type of dental care within the year. Maryland had 389 physicians per 100,000 resident population in 2004 and 875 nurses per 100,000 in 2005. In 2004, there were a total of 4,169 dentists in the state.

About 19% of state residents were enrolled in Medicaid and Medicare programs in 2004. Approximately 14% of the state population was uninsured in 2004. In 2003, state health care expenditures totaled \$6.8 million.

Maryland's two medical schools are at Johns Hopkins University, which operates in connection with the Johns Hopkins Hospital and has superbly equipped research facilities, and at the University of Maryland—both located in Baltimore. Johns Hopkins Hospital ranked first on the Honor Roll of Best Hospitals 2005 by *U.S. News & World Report*; in the same report, it ranked third for best pediatric hospitals and best care for cancer and heart disease. Federal health centers located in Bethesda include the National Institutes of Health and the National Naval Medical Center.

39 SOCIAL WELFARE

In 2004, about 109,000 people received unemployment benefits, with the average weekly unemployment benefit at \$254. In fiscal year 2005, the estimated average monthly participation in the food stamp program included about 288,943 persons (131,556 households); the average monthly benefit was about \$92.33 per person. That year, the total of benefits paid through the state for the food stamp program was about \$320.1 million.

Temporary Assistance for Needy Families (TANF), the system of federal welfare assistance that officially replaced Aid to Families with Dependent Children (AFDC) in 1997, was reautho-

rized through the Deficit Reduction Act of 2005. TANF is funded through federal block grants that are divided among the states based on an equation involving the number of recipients in each state. Maryland's TANF program is called the Family Investment Program (FIP). In 2004, the state program had 59,000 recipients; state and federal expenditures on this TANF program totaled \$32 million in fiscal year 2003.

In December 2004, Social Security benefits were paid to 761,160 Maryland residents. This number included 499,620 retired workers, 75,210 widows and widowers, 86,860 disabled workers, 35,200 spouses, and 64,270 children. Social Security beneficiaries represented 13.7% of the total state population and 87.4% of the state's population age 65 and older. Retired workers received an average monthly payment of \$962; widows and widowers, \$923; disabled workers, \$926; and spouses, \$493. Payments for children of retired workers averaged \$511 per month; children of deceased workers, \$639; and children of disabled workers, \$287. Federal Supplemental Security Income payments in December 2004 went to 92,776 Marylanders, averaging \$408 a month. An additional \$641,000 of state-administered supplemental payments were distributed to 2,973 residents.

40 HOUSING

Maryland has sought to preserve many of its historic houses. Block upon block of two-story brick row houses, often with white stoops, fill the older parts of Baltimore, and stone cottages built to withstand rough winters are still found in the western counties. Greenbelt and Columbia exemplify changing modern concepts of community planning.

There were an estimated 2,250,339 housing units in Maryland in 2004, of which 2,077,900 were occupied; 69.5% were owner-occupied. About 51.9% of all units are single-family, detached homes. Most units rely on utility gas and electricity for heating. It was estimated that 61,901 units lacked telephone service, 6,034 lacked complete plumbing facilities, and 5,885 lacked complete kitchen facilities. The average household had 2.61 members.

In 2004, 27,400 privately owned units were authorized for construction. The median home value was \$216,529. The median monthly cost for mortgage owners was \$1,406. Renters paid a median of \$837 per month. In 2006, the state received over \$8 million in community development block grants from the US Department of Housing and Urban Development (HUD). The city of Baltimore received over \$23.9 million in community development block grants.

The Department of Housing and Community Development, formed in 1987, oversees all housing and cultural resource areas, providing neighborhood rehabilitation and revitalization, development financing, historical and cultural programs, and information technology. The Maryland Housing Fund of the Department insures qualified lending institutions against losses on home mortgage loans.

41 EDUCATION

As of 2004, 87.4% of Marylanders 25 years and older had completed high school compared the national average of 84%. Some 35.2% had at least four years of college, far surpassing the national

average of 26%. Maryland students must pass state High School Assessments (HSA) in order to graduate from high school.

The total enrollment for fall 2002 in Maryland's public schools stood at 867,000. Of these, 610,000 attended schools from kindergarten through grade eight, and 256,000 attended high school. Approximately 50.4% of the students were white, 37.9% were black, 6.4% were Hispanic, 4.9% were Asian/Pacific Islander, and 0.4% were American Indian/Alaskan Native. Total enrollment was estimated at 863,000 in fall 2003 and was expected to be 858,000 by fall 2014, a decline of 1% during the period 2002 to 2014. There were 149,253 students enrolled in 727 private schools. Expenditures for public education in 2003/04 were estimated at \$8.7 billion. Since 1969, the National Assessment of Educational Progress (NAEP) has tested public school students nationwide. The resulting report, *The Nation's Report Card*, stated that in 2005 eighth graders in Maryland scored 278 out of 500 in mathematics, matching the national average.

As of fall 2002, there were 300,269 students enrolled in college or graduate school; minority students comprised 36% of total postsecondary enrollment. In 2005 Maryland had 63 degree-granting institutions. The institutions of higher education in Maryland are organized as follows: (1) the public four-year colleges and universities, (2) the community colleges, (3) the independent colleges and universities, and (4) the private career schools.

The state's public four-year institutions include the University of Maryland System, Morgan State University, and St. Mary's College of Maryland. The University of Maryland System is comprised of 13 separate degree-granting institutions located throughout the state. Included, there are two research and public service institutions reporting to the System—the Center for Environmental and Estuarine Studies and the University of Maryland Biotechnology Institute. These institutions are governed by a single board of regents and a system administration. Morgan State University, the designated public urban teaching university, is governed by a single board of regents. Morgan is one of Maryland's four historically black institutions. St. Mary's College of Maryland, the State's public honors college, is the state's only "state-related" institution. As such, the college has more operational autonomy than the other public four-year institutions, particularly concerning procurement, budget, and personnel administration.

The 16 community colleges are two-year, open-admission institutions with courses and programs leading to certificates and associate degrees, as well as career-oriented and continuing education/community service programs. They receive their funding from three sources: 1) state funding through a funding formula; 2) local funding through a negotiated budget process; and 3) students' tuition and fees. Baltimore City Community College became a state institution in 1990/91 and receives the majority of its funding from the state. The state provides funding to independent colleges and universities in Maryland under a statutory formula. Eligible independent institutions must meet certain standards concerning the date of establishment, type of degrees conferred, accreditation, and affirmative action programs. St. John's College in Annapolis is known for its unique program that includes study of the ancient Greek and Latin classics in their original languages.

The Maryland Higher Education Commission serves as the state's agency that provides, as part of its primary mission, coordination, regulatory oversight, and program approval for Mary-

land's postsecondary education system. The State Scholarship Administration oversees state scholarship programs.

42 ARTS

Although close to the arts centers of Washington, DC, Maryland has its own cultural attractions. Baltimore, a major theatrical center in the 1800s, still has many legitimate theaters. Center Stage in Baltimore is the designated state theater of Maryland, and the Olney Theatre in Montgomery County is the official state summer theater. Arts organizations are aided by the Maryland State Arts Council, established in 1967 and led by a body of 17 appointed citizens.

The state's leading orchestra is the Baltimore Symphony; it began in 1916 and is the only major American orchestra that started as an established branch of the municipal government. In early February 2005, the Baltimore Symphony began performing in the new Music Center at Strathmore. Baltimore is also the home of the Baltimore Opera Company, and its jazz clubs were the launching pads for such musical notables as Eubie Blake, Ella Fitzgerald, and Cab Calloway. Annapolis hosts a symphony, an opera company, and the Ballet Theatre of Maryland. The National Ballet (est. 1948) is the oldest professional ballet company in the state. One of the newest additions to the arts community is the Maryland Symphony Orchestra in Hagerstown, established in 1982. The Peabody Institute of Johns Hopkins University in Baltimore is one of the nation's most distinguished music schools. As of 2006, the Peabody Institute's conservatory offered 26 major fields including opera, chamber music, composition, computer music, recording arts, and music education. Both the Maryland Ballet Company and Maryland Dance Theater are nationally known.

In 2005, the Maryland State Arts Council and other arts organizations received grants totaling 36 grants totaling \$2,507,890 from the National Endowment for the Arts (NEA). The Maryland Humanities Council (MHC) was founded in 1973. The MHC reached approximately 900,000 Marylanders through their programs in 2004. As of 2006, MHC provided programs such as "Maryland Center for the Book" and the first annual Youth Film JAM in May 2006—a festival providing free screenings of award-winning films followed by discussions with film critics and the festival advisory committee. In 2005, the state received 26 grants, totaling \$2,645,201, from the National Endowment for the Humanities.

43 LIBRARIES AND MUSEUMS

For the fiscal year ending June 2001, Maryland's 24 public library systems had 175 libraries, of which 158 were branches. In that same year, the system also operated 19 bookmobiles, had 15,323,000 volumes of books and serial publications on its shelves, and had a combined total circulation of 46,595,000. The system also had 774,000 audio and 443,000 video items, and 5,000 electronic format items (CD-ROMs, magnetic tapes, and disks). The center of the state library network is the Enoch Pratt Free Library in the city of Baltimore. Founded in 1886, it had 28 branches, over 2.8 million volumes, and a circulation of over 1.5 million in 1999. Each county also has its own library system. The largest academic libraries are those of Johns Hopkins University (2,507,232 volumes in 1999) and the University of Maryland at College Park (2.2 million). The Maryland Historical Society Library specializes in genealogy, heraldry, and state history. The Maryland State Archives

houses government records, private manuscripts, maps, and photographs. Maryland is also the site of several federal libraries, including the National Agricultural Library at Beltsville, with over 2 million volumes; the National Library of Medicine at Bethesda, 2,200,000; and the National Oceanic and Atmospheric Administration Library at Rockville, with about 1 million volumes in 1999. In 2001, operating income for the state's public library system was \$182,940,000, including \$1,854,000 in federal grants and \$24,406,000 in state grants.

Of the approximately 147 museums and historic sites in the state, the major institutions are the US Naval Academy Museum in Annapolis and Baltimore's Museum of Art, National Aquarium Seaport and Maritime Museum, Maryland Academy of Sciences, the Maryland Historical Society Museum, and Peale Museum, the oldest museum building in the United States. Important historic sites include Ft. McHenry National Monument and Shrine in Baltimore (inspiration for "The Star-Spangled Banner") and Antietam National Battlefield Site near Sharpsburg.

44 COMMUNICATIONS

In 2004, 93.4% of Maryland's occupied housing units had telephones. Additionally, by June of that same year there were 3,575,747 mobile wireless telephone subscribers. In 2003, 66.0% of Maryland households had a computer and 59.2% had Internet access. By June 2005, there were 913,068 high-speed lines in Maryland, 822,436 residential and 90,632 for business.

The state had 12 major AM and 35 major FM radio stations in 2005. Maryland has 13 major television stations, including public broadcasting stations in Annapolis, Baltimore, Frederick, Hagerstown, Oakland, and Salisbury. Maryland also receives the signals of many Washington, DC. broadcast stations. The Baltimore area had almost 1 million television households, 68% of which received cable in 1999.

45 PRESS

The *Maryland Gazette*, established at Annapolis in 1727, was the state's first newspaper. It wasn't until 1773 that Baltimore got its first paper, the *Maryland Journal and Baltimore Advertiser*, but by 1820 there were five highly partisan papers in the city. The *Baltimore Sun*, founded in 1837, reached its heyday after 1906, when H. L. Mencken became a staff writer. Mencken, who was also an important editor and critic, helped found the *American Mercury* magazine in 1924.

As of 2005, Maryland had 10 morning and 3 afternoon dailies, as well as 9 Sunday papers. The most influential newspaper published in Baltimore is the *Sun* (daily, 280,717; Sunday, 454,045). The *Washington Post* (707,690 daily; 1,007,487 Sundays) is also widely read in Maryland.

46 ORGANIZATIONS

In 2006, there were over 6,690 nonprofit organizations registered within the state, of which about 4,804 were registered as charitable, educational, or religious organizations. National medically oriented organizations with headquarters in Maryland include the National Federation of the Blind, the American Urological Association, the American Occupational Therapy Association, National Foundation for Cancer Research, the American Speech-Language-Hearing Association, the Cystic Fibrosis Foundation, the

National Association of the Deaf, and the American Music Therapy Association.

Leading commercial, professional, and trade groups include the Aircraft Owners and Pilots Association, the American Fisheries Society, the International Association of Chiefs of Police, and the Retailer's Bakery of America.

Lacrosse, a major sport in the state, is represented by the Lacrosse Foundation in Baltimore and the US Intercollegiate Lacrosse Association in Chestertown. The National Amateur Baseball Federation, the American Tennis Association, and the National 4-H Council are also based in the state.

A number of military organizations are based in Maryland, including the Air Force Historical Foundation, the American Military Society, AMVETS (American Veterans of World War II, Korea, and Vietnam), the Black Military History Institute of America, the Vietnam Veterans of America, and the Blue Star Mothers of America. The National Flag Day Foundation is based in Baltimore.

Historical and cultural organizations include the Baltimore and Ohio Railroad Historical Society, the Edgar Allan Poe Society of Baltimore, and the Folk Alliance. There are also a number of county and regional historical societies. Education and research associations on the national level include the Jane Goodall Institute for Wildlife Research, Education, and Conservation, and the Wildlife Society.

Social action and civil rights organizations based in Maryland include the National Association for the Advancement of Colored People, Catholic Relief Services, and Goodwill Industries International.

47 TOURISM, TRAVEL, AND RECREATION

In 2004, the state hosted over 21 million travelers. About 80% of all travelers were residents of one of the following states: Maryland, Pennsylvania, Virginia, New York, New Jersey, Florida, North Carolina, California, Ohio, Delaware, and West Virginia.

Attractions include parks, historical sites, and national seashore (Assateague Island). Annapolis, the state capital, is the site of the US Naval Academy. On Baltimore's waterfront are monuments to Francis Scott Key and Edgar Allan Poe, historic Ft. McHenry, and many restaurants serving the city's famed crab cakes and other seafood specialties. Ocean City is the state's major seaside resort, and there are many resort towns along Chesapeake Bay. Camp David, in Thurmont, is the home of presidential retreat. The Richard M. Nixon Presidential Library is in College Park. The state's office of tourism developed a "Star Spangled Banner Tour"—a 100-mi (160-km) scenic driving tour ending at Fort McHenry, where the national anthem was composed. Near Camden Yard (home of the Baltimore Orioles) is the childhood home of Babe Ruth, who played for the New York Yankees. Baltimore also features the National Aquarium. The Preakness Race (thoroughbred racing) is the second leg of the Triple Crown and is run at the State Fairgrounds in Baltimore. There are 19 state parks with camping facilities and 10 recreation areas. The Civil War battlefield at Antietam and other Civil War trails are located in Maryland.

48 SPORTS

Maryland has two major professional sports teams: the Baltimore Orioles of Major League Baseball and the Baltimore Ravens of

the National Football League. The Ravens (formerly the Browns) moved from Cleveland after the 1995 season, and play in a downtown stadium, built in 1998, near Oriole Park at Camden Yards. The NFL's Washington Redskins play in a new stadium, Jack Kent Cooke Stadium, in Landover, but are still considered a team of the District of Columbia. The Orioles won the World Series in 1966, 1970, and 1983, and American League titles in 1969, 1971, 1979, and 1983.

There are several minor league baseball teams in the state, including teams in Bowie, Frederick, Delmarva, Aberdeen, and Hagerstown.

Ever since 1750, when the first Arabian thoroughbred horse was imported by a Maryland breeder, horse racing has been a popular state pastime. The major tracks are Pimlico (Baltimore), Bowie, and Laurel. Pimlico is the site of the Preakness Stakes, the second leg of racing's Triple Crown. Harness racing is held at Ocean Downs in Ocean City; quarter-horse racing takes place at several tracks throughout the state; and several steeplechase events, including the prestigious Maryland Hunt Cup, are held annually.

In men's collegiate basketball, the University of Maryland won the National Collegiate Athletic Association (NCAA) Championship in 2002, the ACC Tournament title in 2004, and the National Invitation Tournament in 1972. The Maryland women's basketball team won the National Championship in 2006. Morgan State took the NCAA Division II title in 1974. Another major sport is lacrosse; Johns Hopkins, the Naval Academy, and the University of Maryland all have performed well in intercollegiate competition. In fact, Johns Hopkins has won the NCAA National Championship eight times, most recently in 2005.

Every weekend from April to October, Marylanders compete in jousting tournaments held in four classes throughout the state. In modern jousting, designated as the official state sport, horseback riders attempt to pick up small rings with long, lance-like poles. The state championship is held in October.

Babe Ruth, perhaps the greatest baseball player to ever play the game, was one of many star athletes to be born in the state.

49 FAMOUS MARYLANDERS

Politicians

Maryland's lone US vice president was Spiro Theodore Agnew (1918–96), who served as governor of Maryland before being elected as Richard Nixon's running mate in 1968. Reelected with Nixon in 1972, Agnew resigned the vice-presidency in October 1973 after a federal indictment had been filed against him. Roger Brooke Taney (1777–1864) served as attorney general and secretary of the treasury in Andrew Jackson's cabinet before being confirmed as US chief justice in 1836; his most historically significant case was the *Dred Scott* decision in 1856, in which the Supreme Court ruled that Congress could not exclude slavery from any territory.

Three associate justices of the US Supreme Court were also born in Maryland. Thomas Johnson (1732–1819), a signer of the Declaration of Independence, served as the first governor of the State of Maryland before his appointment to the Court in 1791. Samuel Chase (1741–1811) was a Revolutionary leader, another signer of the Declaration of Independence, and a local judicial and political leader before being appointed to the high court in

1797; impeached in 1804 because of his alleged hostility to the Jeffersonians, he was acquitted by the Senate the following year. As counsel for the National Association for the Advancement of Colored People, Thurgood Marshall (1908–93), argued the landmark *Brown v. Board of Education* school desegregation case before the Supreme Court in 1954; President Lyndon Johnson appointed him to the Court 13 years later.

Other major federal officeholders born in Maryland include John Hanson (1721–83), a member of the Continental Congress and first president to serve under the Articles of confederation (1781–82); Charles Carroll of Carrollton (1737–1832), a signer of the Declaration of Independence and US senator from 1789 to 1792; John Pendleton Kennedy (1795–1870), secretary of the Navy under Millard Fillmore and a popular novelist known by the pseudonym Mark Littleton; Reverdy Johnson (1796–1876), attorney general under Zachary Taylor; Charles Joseph Bonaparte (1851–1921) secretary of the Navy and attorney general in Theodore Roosevelt's cabinet; and Benjamin Civiletti (b.New York, 1935), attorney general under Jimmy Carter. Among the many important state officeholders are William Paca (1740–99), a signer of the Declaration of Independence and later governor; Luther Martin (b.New Jersey, 1748–1826), Maryland's attorney general from 1778 to 1805 and from 1818 to 1822, as well as defense counsel in the impeachment trial of Chase and in the treason trial of Aaron Burr; John Eager Howard (1752–1827), Revolutionary soldier, governor, and US senator; and Albert C. Ritchie (1876–1936), governor from 1919 to 1935. William D. Schaefer (b.1921) was mayor of Baltimore from 1971–87; he was elected governor in 1987.

Lawyer and poet Francis Scott Key (1779–1843) wrote "The Star-Spangled Banner"—now the national anthem—in 1814. The prominent abolitionists Frederick Douglass (Frederick Augustus Washington Bailey, 1817?–95) and Harriet Tubman (1820?–1913) were born in Maryland, as was John Carroll (1735–1815), the first Roman Catholic bishop in the United States and founder of Georgetown University. Elizabeth Ann Bayley Seton (b.New York, 1774–1821), canonized by the Roman Catholic Church in 1975, was the first native-born American saint. Stephen Decatur (1779–1820), a prominent naval officer, has been credited with the toast "Our country, right or wrong!"

Business Leaders

Prominent Maryland business leaders include Alexander Brown (b.Ireland, 1764–1834), a Scotch-Irish immigrant who built the firm that is now the second-oldest private investment banking house in the United States; George Peabody (b.Massachusetts, 1795–1869), founder of the world-famous Peabody Conservatory of Music (now the Peabody Institute of Johns Hopkins University); and Enoch Pratt (b.Massachusetts, (1808–96) who endowed the Enoch Pratt Free Library in Baltimore. Benjamin Banneker (1731–1806), a free black, assisted in surveying the new District of Columbia and published almanacs from 1792 to 1797. Ottmar Mergenthaler (b.Germany, 1854–99), who made his home in Baltimore, invented the linotype machine.

Educators and Physicians

Financier-philanthropist Johns Hopkins (1795–1873) was a Marylander, and educators Daniel Coit Gilman (b.Connecticut, 1831–1908) and William Osler (b.Canada, 1849–1919, also a famed phy-

sician), were prominent in the establishment of the university and medical school named in Hopkins' honor. Peyton Rous (1879–1970) won the 1966 Nobel Prize for physiology or medicine.

Writers

Maryland's best-known modern writer was H(enry) L(ouis) Mencken (1880–1956), a Baltimore newspaper reporter who was also a gifted social commentator, political wit, and student of the American language. Edgar Allan Poe (b.Massachusetts, 1809–49), known for his poems and eerie short stories, died in Baltimore, and novelist-reformer Upton Sinclair (1878–1968) was born there. Other writers associated with Maryland include James M. Cain (1892–1976), Leon Uris (1924–2003), John Barth (b.1930), and Russell Baker (b.1925). Painters John Hesselius (b.Pennsylvania, 1728–78) and Charles Willson Peale (1741–1827) are also linked with the state.

Actors and Musicians

Most notable among Maryland actors are Edwin Booth (1833–93) and his brother John Wilkes Booth (1838–65), notorious as the assassin of President Abraham Lincoln. Maryland was the birthplace of several jazz musicians, including James Hubert “Eubie” Blake (1883–1983), William Henry “Chick” Webb (1907–39), and Billie Holiday (1915–59).

Sports Figures

Probably the greatest baseball player of all time, George Herman “Babe” Ruth (1895–1948) was born in Baltimore. Other prominent ballplayers include Robert Moses “Lefty” Grove (1900–75), James Emory “Jimmy” Foxx (1907–67), and Al Kaline (b.1934). Former lightweight boxing champion Joe Gans (1874–1910) was a Maryland native.

MASSACHUSETTS

Commonwealth of Massachusetts

ORIGIN OF STATE NAME: Derived from the name of the Massachusetts Native American tribe that lived on Massachusetts Bay; the name is thought to mean “at or about the Great Hill.” **NICKNAME:** The Bay State. **CAPITAL:** Boston. **ENTERED UNION:** 6 February 1788 (6th). **SONG:** “All Hail to Massachusetts;” “Massachusetts” (folksong). **MOTTO:** *Ense petit placidam sub libertate quietem* (By the sword we seek peace, but peace only under liberty). **COAT OF ARMS:** On a blue shield, a Native American depicted in gold holds in his right hand a bow, in his left an arrow pointing downward. Above the bow is a five-pointed silver star. The crest shows a bent right arm holding a broadsword. Around the shield beneath the crest is a banner with the state motto in green. **FLAG:** The coat of arms on a white field. **OFFICIAL SEAL:** Same as the coat of arms, with the inscription *Sigillum Reipublicæ Massachusettensis* (Seal of the Republic of Massachusetts). **BIRD:** Chickadee. **FISH:** Cod. **FLOWER:** Mayflower (ground laurel). **TREE:** American elm. **GEM:** Rhodonite. **LEGAL HOLIDAYS:** New Year’s Day, 1 January; Birthday of Martin Luther King Jr., 3rd Monday in January; Washington’s Birthday, 3rd Monday in February; Patriots’ Day, 3rd Monday in April; Memorial Day, last Monday in May; Independence Day, 4 July; Labor Day, 1st Monday in September; Columbus Day, 2nd Monday in October; Veterans Day, 11 November; Thanksgiving Day, appointed by the governor, customarily the 4th Thursday in November; Christmas Day, 25 December. Legal holidays in Suffolk County include Evacuation Day, 17 March; and Bunker Hill Day, 17 June. **TIME:** 7 AM EST = noon GMT.

¹LOCATION, SIZE, AND EXTENT

Located in the northeastern United States, Massachusetts is the fourth-largest of the six New England states and ranks 45th in size among the 50 states.

The total area of Massachusetts is 8,284 sq mi (21,456 sq km), of which land comprises 7,824 sq mi (20,265 sq km) and inland water occupies 460 sq mi (1,191 sq km). Massachusetts extends about 190 mi (306 k) E–W; the maximum N–S extension is about 110 mi (177 km). Massachusetts is bordered on the N by Vermont and New Hampshire; on the E by the Atlantic Ocean; on the S by the Atlantic Ocean and by Rhode Island and Connecticut; and on the W by New York.

Two important islands lie south of the state’s fishhook-shaped Cape Cod peninsula: Martha’s Vineyard (108 sq mi or 280 sq km) and Nantucket (57 sq mi or 148 sq km). The Elizabeth Islands, SW of Cape Cod and NW of Martha’s Vineyard, consist of 16 small islands separating Buzzards Bay from Vineyard Sound. The total boundary length of Massachusetts is 515 mi (829 km), including a general coastline of 192 mi (309 km); the tidal shoreline, encompassing numerous inlets and islands, is 1,519 mi (2,444 km). The state’s geographic center is located in Worcester County, in the northern section of the city of Worcester.

²TOPOGRAPHY

Massachusetts is divided into four topographical regions: coastal lowlands, interior lowlands, dissected uplands, and residuals of ancient mountains. The coastal lowlands, located on the state’s eastern edge, extend from the Atlantic Ocean 30–50 mi (48–80 km) inland and include Cape Cod and the offshore islands. The northern shoreline of the state is characterized by rugged high

slopes, but at the southern end, along Cape Cod, the ground is flatter and covered with grassy heaths.

The Connecticut River Valley, characterized by red sandstone, curved ridges, meadows, and good soil, is the main feature of west-central Massachusetts. The Berkshire Valley to the west is filled with streams in its northern end, including the two streams that join below Pittsfield to form the Housatonic River.

East of the Connecticut River Valley are the eastern uplands, an extension of the White Mountains of New Hampshire. From elevations of 1,100 ft (335 m) in midstate, this ridge of heavily forested hills slopes down gradually toward the rocky northern coast.

In western Massachusetts, the Taconic Range and Berkshire Hills (which extend southward from the Green Mountains of Vermont) are characterized by numerous hills and valleys. Mt. Greylock, close to the New York border, is the highest point in the state, at 3,487 ft (1,064 m). Northeast of the Berkshires is the Hoosac Range, an area of plateau land. Its high point is Spruce Hill, at 1,974 ft (602 m). The mean elevation of the state is approximately 500 ft (153 m). The lowest point is at sea level on the Atlantic Ocean.

There are more than 4,230 mi (6,808 km) of rivers in the state. The Connecticut River, the longest, runs southward through west-central Massachusetts; the Deerfield, Westfield, Chicopee, and Millers rivers flow into it. Other rivers of note include the Charles and the Mystic, which flow into Boston harbor; the Taunton, which empties into Mount Hope Bay at Fall River; the Blackstone, passing through Worcester on its way to Rhode Island; the Housatonic, winding through the Berkshires; and the Merrimack, flowing from New Hampshire to the Atlantic Ocean via the state’s northeast corner. Over 1,100 lakes dot the state; the largest, the artificial Quabbin Reservoir in central Massachusetts, covers 24,704 acres

(9,997 hectares). The largest natural lake is Assawompset Pond in southern Massachusetts, occupying 2,656 acres (1,075 hectares).

Hilly Martha's Vineyard is roughly triangular in shape, as is Nantucket Island to the east. The Elizabeth Islands are characterized by broad, grassy plains.

Millions of years ago, three mountainous masses of granite rock extended northeastward across the state. The creation of the Appalachian Mountains transformed limestone into marble, mud, and gravel into slate and schist, and sandstone into quartzite. The new surfaces were worn down several times. Then, during the last Ice Age, retreating glaciers left behind the shape of Cape Cod as well as a layer of soil, rock, and boulders.

3 CLIMATE

Although Massachusetts is a relatively small state, there are significant climatic differences between its eastern and western sections. The entire state has cold winters and moderately warm summers, but the Berkshires in the west have both the coldest winters and the coolest summers. The normal January temperature in Pittsfield in the Berkshires is 21°F (-5°C), while the normal July temperature is 67°F (19°C). The interior lowlands are several degrees warmer in both winter and summer; the normal July temperature is 71°F (22°C). The coastal sections are the warmest areas of the state; the normal January temperature for Boston is 30°F (-1°C), and the normal July temperature is 74°F (23°C). The record high temperature in the state is 107°F (42°C), established at Chester and New Bedford on 2 August 1975; the record low is -35°F (-37°C), registered at Chester on 12 January 1981.

Precipitation ranges from 39 to 46 in (99 to 117 cm) annually, with an average for Boston of 42.9 in (108 cm). The average snowfall for Boston is 40.9 in (103 cm), with the range in the Berkshires considerably higher. Boston's average wind speed is 13 mph (21 km/hr).

4 FLORA AND FAUNA

Maple, birch, beech, oak, pine, hemlock, and larch cover the Massachusetts uplands. Common shrubs include rhodora, mountain laurel, and shadbush. Various ferns, maidenhair and osmund among them, grow throughout the state. Typical wildflowers include the Maryland meadow beauty and false loosestrife, as well as several varieties of orchid, lily, goldenrod, and aster. In April 2006, the US Fish and Wildlife Service listed the northeastern bulrush, sandplain gerardia, and small whorled pogonia as threatened and endangered plant species within the state.

As many as 76 species of mammals, 74 of them native species, have been counted in Massachusetts. Common native mammals include the white-tailed deer, bobcat, river otter, striped skunk, mink, ermine, fisher, raccoon, black bear, gray fox, muskrat, porcupine, beaver, red and gray squirrels, snowshoe hare, little brown bat, and masked shrew. Among the Bay State's 336 resident bird species are the mallard, ruffed grouse, bobwhite quail, ring-necked pheasant, herring gull, great horned and screech owls, downy woodpecker, blue jay, mockingbird, cardinal, and song sparrow. Native inland fish include brook trout, chain pickerel, brown bullhead, and yellow perch; brown trout, carp, and smallmouth and largemouth bass have been introduced. Native amphibians include the Jefferson salamander, red-spotted newt, eastern American toad, gray tree frog, and bullfrog. Common reptiles are the

snapping turtle, stinkpot, spotted turtle, northern water snake, and northern black racer. The venomous timber rattlesnake and northern copperhead are found mainly in Norfolk, Hampshire, and Hampden counties. The Cape Cod coasts are rich in a variety of shellfish, including clams, mussels, shrimps, and oysters. Twenty Massachusetts animal species (vertebrates and invertebrates) were classified as threatened or endangered in 2006. Among them were the American burying beetle, the bald eagle, puma, short-nose sturgeon, five species of whale, and four species of turtle.

5 ENVIRONMENTAL PROTECTION

All environmentally related programs are administered by the Executive Office of Environmental Affairs (EOEA) and its five agencies: the Department of Environmental Management (DEM); the Department of Environmental Protection (DEP); the Department of Fisheries, Wildlife and Environmental Law Enforcement (DFWELE); the Department of Food and Agriculture (DFA); and the Metropolitan District Commission (MDC).

EOEA agencies protect the state's more than 3,100 lakes and ponds covering about 150,000 acres (61,000 hectares); some 2,000 rivers and streams flowing 10,700 mi (17,200 km); 810,000 acres (about 328,000 hectares) of medium- and high-yield aquifers underlying about a sixth of the state; over a half-million acres (about 200,000 hectares) of wetlands covering about a 12% of the state; and 1,500 mi (2,400 km) of coastal capes, coves, and estuaries.

With disposal of treated sewage sludge in Boston Harbor halted in 1991 and with improved sewage treatment, the harbor as of 2005 was markedly cleaner. In 1988, 10% of the flounder caught in Boston Harbor had liver tumors caused by toxic chemicals; as of 1993, no flounder tested had tumors. In 1994, the state opened a new primary water treatment plant, and in 1996, a second new treatment facility also began operation.

Between 1978 and 1985, Massachusetts averaged 24 air pollution (i.e., ozone) violation days per year; between 1985 and 1993, the average dropped to 14. Since 1990, the state has averaged 7 violation days per year. With the adoption of Massachusetts acid rain legislation in 1985, sulfur dioxide output from Massachusetts sources has been cut by 17%. Additional decreases, particularly from out-of-state power plants, are expected to further cut sulfur dioxide emissions in half by 2000. In response to the Massachusetts Toxic Use Reduction Program and certain federal requirements, toxic air emissions were reduced by about a third between 1989 and 1996. In 2003, 9 million lb of toxic chemicals were released in the state.

The state's solid waste recycling and composting rate stood at 28% in 1994; its goal for 2000 was 46%. In the mid-1990s, 341 of the state's 351 communities had some type of recycling program, and about 49% of solid waste was incinerated. In 2003, Massachusetts had 411 hazardous waste sites listed in the US Environment Protection Agency (EPA) database, 31 of which were on the National Priorities List as of 2006, including Materials Technology Laboratory (US Army), Otis Air National Guard Base, and South Weymouth Naval Air Station. In 2005, the EPA spent over \$47.5 million through the Superfund program for the cleanup of hazardous waste sites in the state. The same year, federal EPA grants awarded to the state included \$29.6 million for the drinking water state revolving fund program. A \$771,279 grant was awarded to implement coastal beach monitoring projects and a \$74,000 grant

was awarded for a project to encourage food waste composting in the supermarket industry.

Since about 1900, the Commonwealth has protected 528,400 acres (208,730 hectares) through acquisitions or restrictions, an area equal to 10% of the total land mass of the state. In 1993/94, the state added 8,930 acres (3,614 hectares) to its stock of protected land, expending \$41 million in the effort. Federal, county, local, and private nonprofit agencies and organizations provide another 375,680 acres (152,038 hectares) of open space.

6 POPULATION

As New England's most populous state, Massachusetts has seen its population grow steadily since colonial times. However, since the early 1800s, its growth rate has often lagged behind that of the rest of the nation. Massachusetts's population, according to the 1990 federal census, was 6,016,425 (13th in the nation), an increase of 4.9% over 1980, and much better than the 0.8% growth rate of the 1970s. Reasons behind the population lag include a birthrate well below the US average, and a net out-migration of 301,000 people between 1970 and 1983, the largest drop of all New England states.

Massachusetts ranked 13th in population in the United States with an estimated total of 6,398,743 in 2005, an increase of 0.8% since 2000. Between 1990 and 2000, Massachusetts's population grew from 6,016,425 to 6,349,097, an increase of 5.5%. The population is projected to reach 6.7 million by 2015 and 6.9 million by 2025. The population density in 2004 was 818.2 persons per sq mi, the third highest in the nation. In 2004 the median age was 38.1. Persons under 18 years old accounted for 22.8% of the population while 13.3% was age 65 or older.

The state's biggest city is Boston, which ranked 24th among the largest US cities with a population of 569,165 in 2004, up from an estimated 547,725 in 1994. Other large cities (with their 2004 estimated populations) are Worcester, 175,966, and Springfield, 152,091. The Greater Boston area had an estimated metropolitan population of 4,424,649.

7 ETHNIC GROUPS

Early industrialization helped make Massachusetts a mecca for many European migrants, particularly the Irish. As late as 1990 more than half of the population identified with at least one single ancestry group. As of 2000 the largest were the Irish (22.5% of the population), Italian (13.5%), English (11.4%), French (8%), Polish (5.1%), and Portuguese (4.4%). In that year, the foreign born numbered 772,983, or 12.2% of the state's population.

Massachusetts has always had a black population, and has contributed such distinguished figures as poet Phillis Wheatley and NAACP founder W.E.B. DuBois (the first black Ph.D. from Harvard) to US cultural and public life. A sizable class of black professionals has developed, and the 20th century has seen an influx of working-class blacks from southern states. In 2000 there were 343,454 black Americans in Massachusetts, 5.4% of the population. Blacks constituted more than 25% of Boston's population. In 2004, 6.8% of Massachusetts' population was black. The state also had 428,729 Hispanics and Latinos in 2000, predominantly Puerto Rican and Dominican. In 2004, 7.7% of the population was of Hispanic or Latino origin.

Greater Boston has a small, well-organized Chinatown; in the suburbs reside many Chinese professionals and businesspeople, as well as those connected with the region's numerous educational institutions. Statewide, there were 84,392 Chinese in 2000 (up from 47,245 in 1990), 33,962 Vietnamese (up from 13,101 in 1990), 19,696 Cambodians, 17,369 Koreans, and 10,539 Japanese. In 2000, the total Asian population was estimated at 238,124, and the Native American population (including Eskimos and Aleuts) totaled an estimated 15,015. Pacific Islanders numbered 2,489. In 2004, 4.6% of the population was Asian, 0.3% American Indian or Alaskan Native, and 0.1% of Pacific Island origin. That year, 1.3% of the population reported origin of two or more races. Cape Cod has settlements of Portuguese fishermen, as has New Bedford.

8 LANGUAGES

Some general Algonkian loanwords and a few place-names—such as Massachusetts itself, Chicopee, Quebbin, and Naukeag—are the language echoes of the Massachuset, Pennacook, and Mahican Indians so historically important in the founding of Massachusetts Bay Colony and Old Colony, now Plymouth.

On the whole, Massachusetts English is classed as Northern, but early migration up the Connecticut River left that waterway a sometimes sharp, sometimes vague boundary, setting off special variations within the eastern half of the state. Two conspicuous but now receding features long held prestige because of the cultural eminence of Boston: the absence of /r/ after a vowel, as in *fear* and *port*, and the use of a vowel halfway between the short /a/ of *cat* and /ah/ in *half* and *past* as well as in *car* and *park*. Eastern Massachusetts speakers are likely to have /ah/ in *orange* and to pronounce *on* and *fog* with the same vowel as in form. In the east, a sycamore is a *buttonwood*, a tied and filled quilt is a *comforter*, a *creek* is a saltwater inlet, and pancakes may be called *fritters*.

Around Boston are heard the intrusive /r/ as in “the lawr of the land,” the /oo/ vowel in *butcher*, *tonic* for soft drink, *submarine* for a large sandwich, and *milkshake* for a concoction lacking ice cream. West of the Connecticut River are heard the /aw/ sound in *orange*, / ah/ in *on* and *fog*, and the short /a/ of *cat* in *half* and *bass*; *buttonball* is a sycamore, and *comfortable* is a tied quilt.

In 2000, 81.3% of the population five years of age or older (down from 84.8% in 1990) spoke only English at home.

The following table gives selected statistics from the 2000 Census for language spoken at home by persons five years old and over.

LANGUAGE	NUMBER	PERCENT
Population 5 years and over	5,954,249	100.0
Speak only English	4,838,679	81.3
Speak a language other than English	1,115,570	18.7
Speak a language other than English	1,115,570	18.7
Spanish or Spanish Creole	370,011	6.2
Portuguese or Portuguese Creole	159,809	2.7
French (incl. Patois, Cajun)	84,484	1.4
Chinese	71,412	1.2
Italian	59,811	1.0
French Creole	43,519	0.7
Russian	32,580	0.5
Vietnamese	30,400	0.5
Greek	28,819	0.5
Polish	27,631	0.5
Mon-Khmer, Cambodian	21,549	0.4
German	20,029	0.3
Arabic	18,742	0.3

⁹RELIGIONS

While Protestant sects have contributed greatly to the state's history and development, more than half the state's population is Roman Catholic, a fact that has had a profound effect on Massachusetts politics and policies.

Both the Pilgrims, who landed on Plymouth Rock in 1620, and the Puritans, who formed the Massachusetts Bay Company in 1629, came to the land to escape harassment by the Church of England. These early communities were based on strict religious principles and forbade the practice of differing religions. Religious tolerance was included in the Charter of 1692, to protect the Baptists, Anglicans, and Catholics who had by then arrived in the colony.

The major influx of Roman Catholics came in the 1840s with the arrival of the Irish in Boston. By the 1850s, they had migrated to other towns and cities and formed the backbone of the state's industrial workforce. Later migration by Italian Catholics, German Catholics, and Eastern European Jews turned the state, by 1900, into a melting pot of religions and nationalities, although many of these minorities did not win substantial acceptance from the Protestant elite until the World War II era.

As of 2004, there were 3,033,367 Roman Catholics in Massachusetts, representing nearly half of the total population; the archdiocese of Boston held 2,077,487 members that year. The largest Protestant denominations in 2000 were: the Episcopal Church, 98,963; the United Methodist Church, 64,028; and the American Baptists (USA), 52,716. In 2005, the United Church of Christ reported a statewide membership of 89,264. The second largest religious affiliation is Judaism, with about 275,000 adherents in 2000. The Muslim population the same year was about 41,497 people. Though membership numbers were not available, reports noted that there were about 57 Buddhist congregations and 20 Hindu congregations throughout the state. About 35% of the population did not specify a religious affiliation.

Although small, the Church of Christ, Scientist, is significant to Massachusetts's history. Its first house of worship was founded in 1879 in Boston by Mary Baker Eddy, who four years earlier had published the Christian Science textbook *Science and Health with Key to the Scriptures*. In Boston, the church continues to publish an influential newspaper, the *Christian Science Monitor*. Membership numbers are not published, but the church claims about 2,000 branch churches and societies in over 80 countries. Administrative and special group offices for the Unitarian Universalist Association are also located in Boston.

¹⁰TRANSPORTATION

The first rail line in the United States, a 3-mi (5-km) stretch from the Neponset River to the granite quarries in Quincy, was built in 1826. The first steam railroad in New England, connecting Boston and Lowell, was completed seven years later. By the late 1830s, tracks were laid from Boston to Worcester and to Providence, Rhode Island, and during the next two decades, additional railroad lines opened up new cities for industrial expansion.

As of 2003, 10 railroads transported freight through Massachusetts: CSX Transportation, the state's sole Class I railroad; the Providence & Worcester and Guilford Rail, the state's regional railroads; and seven other local and switching and terminal railroads.

In that same year, the state had 1,255 rail mi (2,020 km) of railroad. As of 2006, Boston was the northern terminus of Amtrak's Northeast Corridor route, linking New England with Washington, DC, via New York City and Philadelphia. East-west service from Boston to Chicago was also provided by Amtrak.

Commuter service is coordinated by the Massachusetts Bay Transportation Authority (MBTA), formed in 1964 to consolidate bus, commuter rail, high-speed trolley, and subway services to the 79 cities and towns in the Greater Boston area. The Boston subway, which began operation in 1897, is the oldest subway system in the United States. Boston also is one of the few cities in the United States with an operating trolley system. About 40% of all Bostonians commute to work by public transportation, the second-highest percentage in the nation, following New York City.

In 2004, there were 35,783 mi (57,610 km) of public roadways crisscrossing the state. The major highways, which extend from and through Boston like the spokes of a wheel, include I-95, which runs north-south; the Massachusetts Turnpike (I-90), which runs west to the New York State border; I-93, which leads north to New Hampshire; State Highway 3 to Cape Cod; and State Highway 24 to Fall River. The other major road in the state is I-91, which runs north-south through the Connecticut River Valley. More than \$3 billion was spent by all units of government for highways in 1997. In 2004, some 5.532 million motor vehicles registered in the state, of which about 3.486 were automobiles, approximately 1.898 million were trucks of all types, and around 11,000 were buses. There were also around 137,000 motorcycles registered with the state in that same year. There were 4,645,857 licensed driver's licenses in the state for 2004.

Because it is the major American city closest to Europe, Boston is an important shipping center for both domestic and foreign cargo. In 2004, a total of 25.796 million tons of cargo passed through the Port of Boston. All port activity is under the jurisdiction of the Massachusetts Port Authority, which also operates Logan International Airport and Hanscom Field in Bedford. Fall River was another important port with a cargo total of 3.161 million tons that same year. In 2004, Massachusetts had 90 mi (144 km) of navigable inland waterways. In 2003, waterborne shipments totaled 30.655 million tons.

In 2005, Massachusetts had a total of 232 public and private-use aviation-related facilities. This included 76 airports, 137 heliports, 1 STOLport (Short Take-Off and Landing), and 18 seaplane bases. Logan International, near Boston, is the busiest airport in the state. In 2004, the airport had 12,758,020 enplanements, making it the 18th-busiest airport in the United States.

¹¹HISTORY

Some 15,000 years ago, when the last of the glaciers receded from the land we call Massachusetts, what remained was a rocky surface scoured of most of its topsoil. In time, however, forests grew to support a rich variety of wildlife. When the first Indians arrived from the south, game abounded and fish were plentiful in streams and along the coast. These first Indians were hunter-gatherers; their successors not only foraged for food but also cleared fields for planting corn (maize) and squash. Periodically they burned away the woodland underbrush, a technique of forest management that stimulated the vegetation that supported game. When English settlers arrived, they encountered five main Algonkian

tribes: the Nauset, a fishing people on Cape Cod; the Wampanoag in the southeast; the Massachusetts in the northeast; the Nipmuc in the central hills; and the Pocumtuc in the west.

The earliest European explorers—including the Norsemen, who may have reached Cape Cod—made no apparent impact on these Algonkian groups, but in the wake of John and Sebastian Cabot's voyages (1497 and following), fishermen from England, France, Portugal, and Spain began fishing off the Massachusetts coast. By the mid-16th century, they were regularly going ashore to process and pack their catch. Within 50 years, fur trading with the Indians was established.

Permanent English settlement, which would ultimately destroy the Algonkian peoples, began in 1620 when a small band of Puritans left their haven at Leiden in the Netherlands to start a colony in the northern part of Virginia lands, near the Hudson River. Their ship, the *Mayflower*, was blown off course by an Atlantic storm, and they landed on Cape Cod before settling in an abandoned Wampanoag village they called Plymouth. Ten years later, a much larger Puritan group settled the Massachusetts Bay Colony, some miles to the north in Salem. Between 1630 and 1640, about 20,000 English people, chiefly Puritans, settled in Massachusetts with offshoots moving to Connecticut and Rhode Island.

The leaders of the Massachusetts settlement, most notably John Winthrop, a country gentleman with some legal training, intended to make their colony an exemplary Christian society. Though church and state were legally separate, they were mutually reinforcing agencies; thus, when Roger Williams and Anne Hutchinson were separately found guilty of heresy in the 1630s, they were banished by the state. All male church members had a voice in both church and state leadership, though both institutions were led by college-educated men. In order to provide for future leaders, Harvard College (now Harvard University) was founded in 1636.

After the beginning of the English revolution in 1640, migration to Massachusetts declined abruptly. Farming soon overtook fishing and fur trading in economic importance; after the trade in beaver skins was exhausted, the remaining Indian tribes were decimated in King Philip's War (1675–76). Shipbuilding and Atlantic commerce also brought prosperity to the Massachusetts Bay Colony, which was granted a new charter by King William and Queen Mary in 1692, merging Massachusetts and the colony of Plymouth. In that year, 19 people were executed for witchcraft on the gallows at Salem before Massachusetts authorities put a stop to the proceedings.

During the 18th century, settlement spread across the entire colony. Boston, the capital, had attained a population of 15,000 by 1730; it was an urbane community of brick as well as wooden buildings, with nearly a dozen church spires distinguishing its skyline by the 1750s. Religious revivals, also occurring elsewhere in America, swept Massachusetts in the 1730s and 1740s, rekindling piety and dividing the inhabitants into competing camps. Although the conflicts had ebbed by the 1750s, Massachusetts did not achieve unity again until the resistance to British imperial actions during the next two decades.

Up to this time, imperial government had rested lightly on Massachusetts, providing more advantages than drawbacks for commerce. The colony had actively supported British expeditions against French Canada, and supply contracts during the French

and Indian War had enriched the economy. But the postwar recession after 1763 was accompanied by a new imperial policy that put pressure on Massachusetts as well as other colonies. None of the crown's three objectives—tight regulation of trade, the raising of revenue, and elimination of key areas of colonial political autonomy—were popular among the merchants, tradespeople, and farmers of Massachusetts. From 1765, when Bostonians violently protested the Stamp Act, Massachusetts was in the vanguard of the resistance.

At first, opposition was largely confined to Boston and surrounding towns, although the legislature, representing the entire colony, was active in opposing British measures. By December 1773, when East India Company tea was dumped into Boston harbor to prevent its taxation, most of the colony was committed to resistance. Newspaper polemics composed by Samuel Adams and his cousin John, among others, combined with the persuasive activities of the Boston Committee of Correspondence, helped convince a majority of Massachusetts residents that the slogan “no taxation without representation” stood for the preservation of their communities. When Parliament retaliated for the Tea Party by closing the port of Boston in 1774, rescinding the colony's 1692 charter, and remaking the government to put it under London's control, Massachusetts was ready to rebel. Military preparations began immediately on both sides. After almost a year of confrontation, battle began at Lexington and Concord on 19 April 1775. By this time, Massachusetts had the backing of the Continental Congress.

For Massachusetts, the battlefield experience of the Revolution was largely confined to 1775, the climax being the Battle of Bunker Hill and the British evacuation of Boston the following year. Thereafter, Massachusetts soldiers were active throughout the colonies, but the theater of action shifted southward. A new republican constitution, adopted in 1780, was the first state constitution to be submitted to the electorate for ratification.

Social and economic conditions in post-Revolutionary Massachusetts were much like those of the colonial era. Although the Shays Rebellion, an uprising of central and western farmers led by Daniel Shays in 1786–87, challenged the political hegemony of commercially oriented eastern leaders, the latter succeeded in maintaining their hold on the state. Massachusetts, which entered the Union on 6 February 1788, was the center of Federalism from 1790 until the mid-1820s. Although Jeffersonian Republicans and Jacksonian Democrats achieved substantial followings, Federalist policies, embodied in the Whigs in the 1830s and the Republicans from the late 1850s, were dominant. This political continuity was based on the importance of national commercial and industrial development to the state.

Even before 1800, it was clear that Massachusetts could not sustain growth in agriculture. Its soil had never been excellent, and the best lands were tired, having been worked for generations with little regard for conservation. Much of the state's population departed for New York, Ohio, and beyond during the first decades of the 19th century. Those who stayed maintained productive agriculture, concentrating more and more on fruits and dairying, but they also developed commerce and industry. At Waltham, Lowell, and Lawrence the first large-scale factories in the United States were erected, and smaller textile mills throughout the state helped to make Massachusetts a leader in the cloth industry. At Spring-

field and Watertown, US armories led the way in metalworking, while shoes and leather goods brought prosperity to Lynn, and whale products and shipbuilding to New Bedford. By the 1850s, steam engines and clipper ships were both Bay State products.

The industrial development of Massachusetts was accompanied by a literary and intellectual flowering that was partly in reaction to the materialism and worldliness associated with urban and industrial growth. Concord, the home of Ralph Waldo Emerson, Henry David Thoreau, and a cluster of others, became the center of the transcendentalist movement in philosophy. Social reform also represented an assertion of moral values, whether in the field of education, health care, temperance, or penology. Abolitionism, the greatest of the moral reform efforts, found some of its chief leaders in Massachusetts, among them William Lloyd Garrison and Wendell Phillips, as well as a host of supporters.

In the years following the Civil War, Massachusetts emerged as an urban industrial state. Its population, fed by immigrants from England, Scotland, Germany, and especially Ireland, grew rapidly in the middle decades of the century. Later, between 1880 and 1920, another wave of immigrants came from French Canada, Italy, Russia, Poland, Scandinavia, Portugal, Greece, and Syria. Still later, between 1950 and 1970, black southerners and Puerto Ricans settled in the cities.

From the election of Lincoln in 1860 through the 1920s, Massachusetts was led by Protestant Yankee Republicans; most Democrats were Catholics. Class, ethnic, and religious tensions were endemic, occasionally erupting into open conflict. Three such episodes gained national attention. In 1912, immigrant textile workers in Lawrence were pitted against Yankee capitalists. A highly publicized strike of 1919 had the largely Irish-American police force rebelling against Yankees in city and state government, and brought Governor Calvin Coolidge—who suppressed the strike and refused to reinstate the striking policemen—to national prominence. In 1921, Nicola Sacco and Bartolomeo Vanzetti, Italian immigrant anarchists, were convicted for a payroll robbery and murder, though there was bitter controversy regarding the quality of the evidence against them. Before they were executed in 1927, their case and the issues it raised polarized political opinion throughout the United States. Subsequently, electoral competition between Democrats and Republicans emerged as a less divisive outlet for class and ethnic tensions. Since 1959, the Democrats have enjoyed ascendance statewide, and Republicans have won only when their candidates stood close to the Democrats on the issues. Party loyalties as such have waned, however.

The Massachusetts economy, relatively stagnant between 1920 and 1950, revived in the second half of the 20th century through a combination of an educated and skilled workforce, capital resources, and political clout. As the old industries and the mill cities declined, new high-technology manufacturing developed in Boston's suburban perimeter, centering on start-up manufacturing firms along Route 128 outside Boston. Electronics, computers, and defense-oriented industries led the way, stimulating a general prosperity in which service activities such as banking, insurance, health care, and higher education were especially prominent. As a result, white-collar employment and middle-class suburbs flourished, though run-down mill towns and Yankee dairy farms and orchards still dotted the landscape.

In this respect, as in its politics, Massachusetts resembled many other areas of the Northeast. It was a multiracial state in which the general welfare was defined by shifting coalitions of ethnic groups and special interests. From a national perspective, Massachusetts voters appeared liberal; the Bay State was the only one to choose Democrat George McGovern over President Richard M. Nixon in 1972, and, since the 1970s, has been a perennially secure base for Senator Edward M. Kennedy. Yet Boston was also the site of some of the most extreme anti-integration tension during the same era; Massachusetts was simultaneously a center of efforts in favor of the Equal Rights Amendment and against abortion.

Massachusetts's defiance of political categories continued into the 1990s. In 1990, blaming the current governor, Democrat Michael Dukakis, for the economy's decline, Massachusetts voters elected a Republican, William Weld, as governor. Yet Weld in fact espoused a blend of liberal and conservative positions. A fiscal conservative who called for cutting taxes and reducing programs such as Medicaid and state employee pension plans, Weld took a liberal stance on social issues, supporting gay rights, abortion rights, and strict protection of the environment. In August 1997, Weld resigned as governor to pursue an appointment as ambassador to Mexico.

Beginning in 1989, the Massachusetts economy declined dramatically, losing 14% of its total jobs in three years. Like other parts of New England, Massachusetts was hit hard by the recession of the early 1990s, and the state's economic woes were aggravated by the collapse in the late 1980s of speculative real estate ventures. The saturation of the real estate market forced retrenchments not only of that industry but of construction as well. By 1992, a number of indications suggested that a recovery had begun to take hold, aided in part by the privatization of highway maintenance, prison health care, and some other state-run operations.

By the mid-1990s, the Massachusetts economy was in the midst of a vigorous upturn, credited largely to the strength of its leading local industries, including software and mutual funds, and the health of the US economy as a whole. In 1996 the state's unemployment level fell to 4%, the lowest it had been since 1989. By 1999 the unemployment rate had dropped further, to 3.2%. Its 1998 per capita income of \$32,902 was the third highest in the nation and had grown at the second-fastest rate (second only to that of Wyoming). Massachusetts' per capita personal income was \$41,801 in 2004, second highest in the nation, behind Connecticut.

Despite that record, the thriving economy came to an abrupt halt in 2001, as the United States entered a recession marked by a large increase in job losses. In 2003, Massachusetts had a \$3 billion budget deficit. Issues facing the legislature that year included Medicaid spending and a prescription drug program for senior citizens. The state Senate had approved a measure calling for a ban on smoking in the workplace, which was being considered by the House of Representatives. (This ban on smoking in the workplace, including in bars and restaurants—private clubs and cigar bars excepted—came into effect in July 2004.) In addition, the state was considering the legality of same-sex marriages. Republican governor Mitt Romney, a business executive and fiscal conservative elected in 2002, took a liberal stand on some social issues, such as supporting abortion choice and gay rights, but he also advocated reinstatement of the death penalty. Romney recommended a 0.3%

reduction in the personal income tax for his 2006 budget, from 5.3% to 5.0%.

Balancing development with environmental conservation was among the issues the state grappled with at the dawn of the 21st century. In 2000 the legislature approved a statewide initiative to preserve open space through local land-acquisition funds. The funds were to come from a \$20 surcharge on all transactions at the Registry of Deeds and Land Court; communities would also be given the option to allow voters to approve a property tax increase of up to 3% to support the measure.

The state was the setting of a national controversy in April 2000: in a report condemning lax oversight of the largest public works project in US history, a federal task force charged that managers of Boston's multibillion-dollar highway project intentionally concealed cost overruns. Known as "Big Dig," the massive project includes building a 10-lane expressway under Boston and extending the Massachusetts Turnpike beneath Boston Harbor to Logan International Airport. State officials had revealed in February that the project, which began in 1991, was \$1.4 billion over its \$10.8 billion budget, making it more expensive than the Boston Harbor cleanup. The project to restore the harbor, considered the nation's filthiest in 1990, was drawing to a successful close in 2000, in spite of cost overruns. Portions of the highway project, including the extension of I-90 through the Ted Williams Tunnel to Logan Airport were completed in January 2003. During 2004, the old elevated Central Artery (formerly I-93) came down, creating 27 acres for a new tree-lined boulevard and cross streets, sidewalks, parks, and other refurbished open space. As of October 2005, 97% of the construction on the Big Dig project was complete.

Massachusetts was at the center of the sexual abuse scandals plaguing the Catholic Church in the early 2000s. Cardinal Bernard F. Law stepped down as Archbishop of Boston in December 2002 after widespread criticism of his handling of charges that priests sexually abused children, and of allegations of cover-ups. The Vatican replaced Law with Sean Patrick O'Malley as Archbishop of Boston in 2003.

In November 2003, the Massachusetts Supreme Court became the first state supreme court in the nation to rule that same-sex marriages were legal. The court ruled that denying individuals from the "protections, benefits, and obligations of civil marriage solely because that person would marry a person of the same sex violates the Massachusetts constitution." Massachusetts became the first state to legally allow gay marriages to take place on 17 May 2004. In September 2005, the Massachusetts state legislature rejected a proposed state constitutional amendment that would have banned gay marriage but allowed civil unions.

12 STATE GOVERNMENT

The first state constitution, drawn up soon after the signing of the Declaration of Independence, was rejected by the electorate. A revised draft was not approved by the state voters until 15 June 1780, following two constitutional conventions. This constitution, as amended (120 times by January 2005), governs Massachusetts and is, according to the state, the oldest written constitution in the world still in effect.

The legislature of Massachusetts, known as the General Court, is composed of a 40-member Senate and 160-member House of Representatives, all of whom are elected every two years in

even-numbered years. Annual legislative sessions begin the first Wednesday in January and must conclude by November 15 one year and by July 31 the following year. Additionally, legislators may petition to convene special sessions. Members of the Senate must have resided in Massachusetts for at least five years and must be residents of their districts; representatives must have lived in their districts for at least one year prior to election. The minimum age for all legislators is 18, and they must be qualified voters. The legislative salary was \$53,379.93 in 2004.

The governor and lieutenant governor are elected jointly every four years. The governor appoints all state and local judges, as well as the heads of the executive offices. Both the governor and lieutenant governor must have resided in the state for at least seven years; there is no minimum age specified for the offices. As of December 2004, the governor's salary was \$135,000 (Gov. Mitt Romney waives his salary). Other elected officials include the attorney general, secretary of the commonwealth, treasurer and receiver-general, and auditor of the commonwealth. All serve four-year terms.

Any Massachusetts citizen may file a bill through a state legislator, or a bill may be filed directly by a legislator or by the governor. To win passage, a bill must gain a majority vote of both houses of the legislature. After a bill is passed, the governor has 10 days in which to sign it, return it for reconsideration (usually with amendments), veto it, or hold onto it until after the legislature adjourns ("pocket veto"). A veto may be overridden by a two-thirds vote of the members present in both houses.

An amendment to the constitution may be introduced by any house or Senate member (legislative amendment); if it is approved by two successive sessions of the legislature, the amendment is then submitted to the voters at the next general election. An amendment may also be introduced by a petition signed by 3% of the total votes cast for governor in the last state election, which must be at least 25,000 qualified voters, and that is presented in a joint session of the General Court. No more than one-fourth of the signatures may come from any one county. The majority vote on the amendment must be 30% of the total ballots cast at the election.

To vote in a Massachusetts district, a person must be a US citizen, at least 18 years old, and a state resident. Convicted felons and those declared mentally incompetent by the court may not vote.

13 POLITICAL PARTIES

The Federalist Party, represented nationally by John Adams, dominated Massachusetts in the late 18th and early 19th centuries. The state turned to the Whig Party in the second quarter of the 19th century. Predominantly Yankee in character, the Whigs supported business growth, promoted protective tariffs, and favored such enterprises as railroads and factories. The new Republican Party, to which most Massachusetts Whigs gravitated when their party split in the 1850s, was a prime mover of abolitionism and played an important role in the election of Abraham Lincoln as president in 1860. Republicans held most of the major state elective offices, as well as most US congressional seats, until the early 1900s.

The Democratic Party's rise starting in the 1870s was tied directly to massive Irish immigration. Other immigrant groups also gravitated toward the Democrats, and in 1876, the state's first Democratic congressman was elected. In 1928, the state voted

for Democratic presidential candidate Alfred E. Smith, a Roman Catholic, the first time the Democrats won a majority in a Massachusetts presidential election. Democrats have subsequently, for the most part, dominated state politics. In 1960, John F. Kennedy, who had been a popular US senator from Massachusetts, became the first Roman Catholic president in US history. Since then the state has voted for all Democratic presidential candidates except Republican Ronald Reagan in 1980 and 1984; in 1972, it was the only state carried by Democrat George McGovern. Massachusetts chose its native son, Democratic governor Michael Dukakis, for president in 1988 and voted again for a Democrat in the next three elections, giving Al Gore 60% of the vote, Republican George W. Bush 33%, and Green Party candidate Ralph Nader 6% in 2000. In 2004, state voters gave native son, Democrat John Kerry, 53.4% of the vote to incumbent George W. Bush's 44.6%. In 2004 there were 3,973,000 registered voters. In 1998, 37% of registered voters were Democratic, 13% Republican, and 50% unaffiliated or members of other parties. The state had 12 electoral votes in the 2004 presidential election.

From 1990 to 1997, the governorship was held by a Republican, William Weld. Weld resigned in 1997 to pursue an appointment as ambassador to Mexico, at which time he was succeeded by lieutenant governor and fellow Republican Argeo Paul Cellucci. Cellucci was elected in his own right in November 1998. In 2002, Republican Mitt Romney was elected governor. Following the 2004 election, the US Senate seats for Massachusetts were held by Democrats Edward Kennedy (last elected in 2000) and John Kerry (last elected in 2002). In 2003, Kerry launched an unsuccessful campaign for the presidency. The 10-member US House delegation following the 2004 elections again consisted entirely of Democrats. In December 2005 the Massachusetts state Senate had 34 Democrats and 6 Republicans, while the state House of Representatives, known as the General Court, had 139 Democrats, 20 Republicans, with 1 Independent.

14 LOCAL GOVERNMENT

As of 2005, Massachusetts had 14 counties, 45 municipal governments, 349 school districts, and 403 special districts. In 2002 there were also 306 townships.

In most counties, which mostly serve judicial purposes, executive authority is vested in commissioners elected to four-year terms. Other county officials include the register of probate and family court, sheriff, clerk of courts, county treasurer, and register of deeds.

All Massachusetts cities are governed by mayors and city councils. Towns are governed by selectmen, who are usually elected to either one- or two-year terms. Town meetings—a carryover from the colonial period, when every taxpayer had an equal voice in town government—still take place. By state law, to be designated as a city, a place must have at least 12,000 residents. Towns with more than 6,000 inhabitants may hold representative town meetings limited to elected officials.

In 2005, local government accounted for about 233,729 full-time (or equivalent) employment positions.

15 STATE SERVICES

To address the continuing threat of terrorism and to work with the federal Department of Homeland Security, homeland security in Massachusetts operates under the authority of state statute; activities are overseen by the public safety director.

State services are provided through the 14 executive offices and major departments that constitute the governor's cabinet. The heads of these departments are appointed by the governor. The Ethics in Massachusetts State Government organization distributes information on state government scandals.

Educational services are administered by the Department of Education. Included under its jurisdiction are the State Board of Education and Board of Higher Education, the Massachusetts community college and state college systems, the University of

*Won US presidential election.

Massachusetts, the Council of the Arts and Humanities, and the State Library.

The Executive Office of Transportation supervises the Department of Public Works and has responsibility for the planning and development of transportation systems within the state, including the Massachusetts Port Authority, the Massachusetts Highway Department, the Massachusetts Turnpike Authority, the Massachusetts Bay Transportation Authority, the Registry of Motor Vehicles, and the Massachusetts Aeronautics Commission.

All public health, mental health, youth, and veterans' programs are administered by the Executive Office of Health and Human Services. Also under its jurisdiction is the Department of Public Health. The Executive Office of Public Safety includes the Department of Correction, Emergency Management Agency, National Guard, and State Police.

The Executive Office of Consumer Affairs and Business Regulation regulates state standards and registers professional workers. The departments of telecommunications and energy are also part of this office, as are the divisions regulating banks and insurance. Housing services are provided through the Department of Housing and Community Development.

The Executive Office of Environmental Affairs protects the state's marine and wildlife, and monitors the quality of its air, water, and food. Labor and industrial relations are monitored through the Department of Labor, which administers the minimum wage law, occupational safety laws, and child labor laws, among others. The Executive Office of Economic Development helps to improve the economic climate in the state and promotes exports and tourism.

16 JUDICIAL SYSTEM

All statewide judicial offices are filled by the governor, with the advice and consent of the executive council.

The Supreme Judicial Court, composed of a chief justice and six other justices, is the highest court in the state. It has appellate jurisdiction in matters of law and also advises the governor and legislature on legal questions. The superior courts, actually the highest level of trial court, have a chief justice and 79 other justices; these courts hear law, equity, civil, and criminal cases, and make the final determination in matters of fact. The appeals court, consisting of a chief justice and 13 other justices, hears appeals of decisions by district and municipal courts. There are also district and municipal courts and trial court judges. Other court systems in the state include the land court, probate and family court, housing court (with divisions in Boston and Hampden counties), and juvenile court (with divisions in Boston, Springfield, Worcester, and Bristol counties).

As of 31 December 2004, a total of 10,144 prisoners were held in Massachusetts' state and federal prisons, a decrease from 10,232 of 0.9% from the previous year. As of year-end 2004, a total of 741 inmates were female, up from 708 or 4.7% from the year before. Among sentenced prisoners (one year or more), Massachusetts had an incarceration rate of 232 per 100,000 population in 2004.

According to the Federal Bureau of Investigation, Massachusetts in 2004, had a violent crime rate (murder/nonnegligent manslaughter; forcible rape; robbery; aggravated assault) of 458.8 reported incidents per 100,000 population, or a total of 29,437 reported incidents. Crimes against property (burglary; larceny/theft; and motor vehicle theft) in that same year totaled 157,825

reported incidents or 2,459.7 reported incidents per 100,000 people. Massachusetts has no death penalty.

Under Massachusetts' gun control laws, all guns must be registered, and there is a mandatory one-year jail sentence for possession without a permit.

In 2003, Massachusetts spent \$299,944,420 on homeland security, an average of \$48 per state resident.

17 ARMED FORCES

The military installations located in Massachusetts in 2004 had 4,382 active-duty military personnel, 7,315 National Guard and Reserve, and 3,049 civilian personnel. The largest installation in the state is the Laurence G. Hanscom Air Force Base in Bedford. Other installations include the Army reserve and development center at Natick, Westover Air Reserve Base, one of 11 Air Force Reserve host bases, home to the 439th Airlift Wing, and, the Navy's South Weymouth Naval Air Station closed in 1997 and redeveloped for multiple uses including parks and recreation. Defense contracts awarded in 2004 totaled \$6.96 billion, eighth-highest in the United States for that year. In addition, Massachusetts received another \$1.1 billion in defense payroll spending, including retired military pay.

There were 490,882 military veterans living in the state in 2003, of which 90,933 served in World War II; 65,672 during the Korean conflict; 142,892 during the Vietnam era; and 51,292 during the Persian Gulf War. In 2004, expenditures on veterans exceeded \$1.3 billion.

As of 31 October 2004, the Massachusetts State Police employed 2,199 full-time sworn officers.

18 MIGRATION

Massachusetts was founded by the migration of English religious groups to its shores, and for over a century their descendants dominated all activity in the state. The first non-English to enter Massachusetts in significant numbers were the Irish, who migrated in vast numbers during the 1840s and 1850s. By 1860, one-third of Boston's population was Irish, while nearly one-fourth of Middlesex and Norfolk counties and one-fifth of the inhabitants of Berkshire, Bristol, Essex, and Hampden counties were Irish-born. Other ethnic groups—such as the Scottish, Welsh, Germans, and Poles—were also entering the state at this time, but their numbers were small by comparison. During the late 1880s and 1890s, another wave of immigrants—from Portugal, Spain, Italy, Russia, and Greece—arrived. Irish and Italians continued to enter the state during the 20th century.

A slow but steady migration from Massachusetts farm communities began during the mid-1700s and continued well into the 1800s. The first wave of farmers resettled in northern Connecticut, Vermont, New Hampshire, and Maine. Later farmers moved to New York's Mohawk Valley, Ohio, and points farther west. Out-migration has continued into recent times: from 1970 to 1990, Massachusetts lost nearly 400,000 residents in net migration to other states but experienced an overall net increase from migration of 59,000 due to migration from abroad. Between 1990 and 1998, the state had a net loss of 237,000 in domestic migration and a net gain of 135,000 in international migration. In 1996, Massachusetts's foreign-born population numbered 591,000, or nearly 10% of the state's total population. In 1998, 15,869 foreign immi-

grants arrived in Massachusetts, the 8th-highest total of any state for that year. Between 1990 and 1998, the state's overall population increased 2.2%. In the period 2000–05, net international migration was 162,674 and net internal migration was -236,415, for a net loss of 73,741 people.

The only significant migration from other areas of the United States to Massachusetts has been the influx of southern blacks since World War II. According to census estimates, Massachusetts gained 84,000 blacks between 1940 and 1975; between 1990 and 1998, the black population grew from 300,000 to 395,000 persons, mostly in the Boston area.

19 INTERGOVERNMENTAL COOPERATION

Massachusetts participates in numerous regional agreements, including the New England Interstate Corrections, Police, Board of Higher Education, Radiological Health Protection, and Interstate Water Pollution Control compacts. The state is also a party to the Atlantic States Marine Fisheries Commission, the Northeastern Forest Fire Protection Compact, the Connecticut River Valley Flood Control Compact, the Bay State-Ocean State Compact with Rhode Island, the Merrimack River Basin Flood Control Compact, the Thames River Flood Control Compact, and the Connecticut River Atlantic Salmon Compact.

Border agreements include the Connecticut-Massachusetts Boundary Compact (ratified by Massachusetts in 1908), the Massachusetts-New York Compact of 1853, and the Massachusetts-Rhode Island Compact of 1859. During fiscal year 2001, the state received over \$9.7 billion in federal grants. Following a national trend, that amount was decreased significantly to \$8.589 billion in fiscal year 2005, an estimated \$8.892 billion in fiscal year 2006, and an estimated \$8.217 billion in fiscal year 2007.

20 ECONOMY

From its beginnings as a farming and seafaring colony, Massachusetts became one of the most industrialized states in the country in the late 19th century and, more recently, a leader in the manufacture of high-technology products.

During the colonial and early national periods, the towns of Salem, Gloucester, Marblehead, and Boston, among others, gave the state strong fishing and shipbuilding industries. Boston was also an important commercial port and a leading center of foreign commerce. Agriculture was important, but productivity of the rocky soil was limited, and by the mid-1800s, farming could not sustain the expanding population. The opening of the Erie Canal, and subsequent competition with cheaper produce grown in the West, hastened agriculture's decline in the Bay State.

Massachusetts's rise as a center of manufacturing began in the early 1800s, when cottage industries developed in small farming communities. Large factories were then built in towns with water power. The country's first "company town," Lowell, was built in the early 1820s to accommodate the state's growing textile industry. Throughout the rest of the 19th century, the state supplied the nation with most of its shoes and woven goods.

Underbid by cheap labor in the south and in other countries, the shoe and textile industries died a slow and painful death. Manufacturing remained central to Massachusetts's economy, however. Fueled in part by a dramatic increase in the Pentagon's budget during the Reagan administration which focused on high-tech-

nology weaponry, as well as by significant advances in information technology, high-tech companies sprung up around the periphery of Boston in the 1970s and early 1980s. Wholesale and retail trade, transportation and public utilities also prospered. In the late 1980s, the boom ended. The minicomputer industry failed to innovate at the same pace as its competitors elsewhere at the same time that the market became increasingly crowded, and defense contractors suffered from cuts in military spending. Between 1988 and 1991, jobs in both high-tech and non-high tech manufacturing declined by 17%. The early 1980s also saw the rise of speculative real estate ventures which collapsed at the end of the decade when the market became saturated. Employment in construction dropped 44% between 1988 and 1991, and real estate jobs declined 23.8%. Wholesale and retail trade lost 100,000 jobs. Hurt by unsound loans, banks were forced to retrench. Unemployment rose to 9% in 1991.

The economy recovered in the 1990s, as evidenced by several banks' announcement of new lending programs as well as a reduction in the unemployment rate to 4% by 1997. Annual growth rates soared to 7.8% in 1998, 6.8% in 1999 and 9.8% in 2000 as Massachusetts benefited from information technology (IT) and stock market booms of the late 1990s. However, in the collapse of the dot.com bubble in the national recession of 2001, Massachusetts was the hardest hit among the New England economies, as growth abruptly plummeted to 1.7% in 2001. Continued weakness in national business investment and in equity markets continued to impede economic growth in Massachusetts in 2002.

Massachusetts's gross state product (GSP) in 2004 totaled \$317.798 billion, of which real estate accounted for the largest portion at \$43.439 billion or 13.6% of GSP, followed by manufacturing (durable and nondurable goods) at \$34.912 billion (10.9% of GSP), and healthcare and social assistance at \$26.353 billion (8.2% of GSP). In that same year, there were an estimated 599,389 small businesses in Massachusetts. Of the 178,752 businesses that had employees, a total of 175,217 or 98% were small companies. An estimated 18,822 new businesses were established in the state in 2004, down 0.9% from the year before. Business terminations that same year came to 20,270, down 7.3% from 2003. There were 315 business bankruptcies in 2004, down 20.5% from the previous year. In 2005, the state's personal bankruptcy (Chapter 7 and Chapter 13) filing rate was 278 filings per 100,000 people, ranking Massachusetts as the 50th highest in the nation.

21 INCOME

In 2005 Massachusetts had a gross state product (GSP) of \$329 billion which accounted for 2.6% of the nation's gross domestic product and placed the state at number 13 in highest GSP among the 50 states and the District of Columbia.

According to the Bureau of Economic Analysis, in 2004 Massachusetts had a per capita personal income (PCPI) of \$42,176. This ranked third in the United States and was 128% of the national average of \$33,050. The 1994–2004 average annual growth rate of PCPI was 4.8%. Massachusetts had a total personal income (TPI) of \$270,235,901,000, which ranked 11th in the United States and reflected an increase of 5.8% from 2003. The 1994–2004 average annual growth rate of TPI was 5.4%. Earnings of persons employed in Massachusetts increased from \$204,746,728,000 in 2003

to \$218,451,912,000 in 2004, an increase of 6.7%. The 2003–04 national change was 6.3%.

The US Census Bureau reports that the three-year average median household income for 2002 to 2004 in 2004 dollars was \$52,354 compared to a national average of \$44,473. During the same period an estimated 9.8% of the population was below the poverty line as compared to 12.4% nationwide.

2² LABOR

According to the Bureau of Labor Statistics (BLS), in April 2006 the seasonally adjusted civilian labor force in Massachusetts numbered 3,338,600, with approximately 163,900 workers unemployed, yielding an unemployment rate of 4.9%, compared to the national average of 4.7% for the same period. Preliminary data for the same period placed nonfarm employment at 3,218,000. Since the beginning of the BLS data series in 1976, the highest unemployment rate recorded in Massachusetts was 10.9% in January 1976. The historical low was 2.7% in December 2000. Preliminary nonfarm employment data by occupation for April 2006 showed that approximately 4.4% of the labor force was employed in construction; 9.4% in manufacturing; 17.7% in trade, transportation, and public utilities; 6.9% in financial activities; 14.5% in professional and business services; 18.4% in education and health services; 9.1% in leisure and hospitality services; and 12.7% in government.

Some of the earliest unionization efforts took place in Massachusetts in the early 1880s, particularly in the shipbuilding and construction trades. However, the most important trade unions to evolve were those in the state's textile and shoe industries. The workers had numerous grievances: shoebinders' salaries of \$1.60–\$2.40 a week during the 1840s, workdays of 14 to 17 hours, wages paid in scrip that could be cashed only at company stores (which charged exorbitantly high prices), and children working at dangerous machinery. In 1867, a seven-week-long shoemakers' strike at Lynn, the center of the shoe business, was at that time the longest strike in US history.

After the turn of the century, the state suffered a severe decline in manufacturing, and employers sought to cut wages to make up for lost profits. This resulted in a number of strikes by both the United Textile Workers and the Boot and Shoe Workers Union. The largest strike of the era was at Lawrence in 1912, when textile workers (led by a radical labor group, the Industrial Workers of the World) closed the mills, and the mayor called in troops in an attempt to reopen them. Although the textile and shoe businesses are no longer major employers in the state, the United Shoe Workers of America, the Brotherhood of Shoe and Allied Craftsmen, the United Textile Workers, and the Leather Workers International Union of America have their headquarters in Massachusetts.

Massachusetts was one of the first states to enact child labor laws. In 1842, it established the 10-hour day for children under 12. In 1867, it forbade employment for children under 10. The nation's first Uniform Child Labor Law, establishing an 8-hour day for children ages 14 to 16, was enacted by Massachusetts in 1913. Massachusetts was also the first state to enact minimum wage guidelines (1912).

The US Department of Labor's Bureau of Labor Statistics reported that in 2005, a total of 402,000 of Massachusetts' 2,886,000 employed wage and salary workers were formal members of a union. This represented 13.9% of those so employed, up from 13.5% in

2004, and above the national average of 12%. Overall in 2005, a total of 431,000 workers (14.9%) in Massachusetts were covered by a union or employee association contract, which includes those workers who reported no union affiliation. Massachusetts is one of 28 states that does not have a right-to-work law.

As of 1 March 2006, Massachusetts had a state-mandated minimum wage rate of \$6.75 per hour. In 2004, women in the state accounted for 48.3% of the employed civilian labor force.

2³ AGRICULTURE

As of 2004, there were 6,100 farms in Massachusetts, covering 520,000 acres (210,000 hectares). Farming was mostly limited to the western Massachusetts counties of Hampshire, Franklin, and Berkshire, and southern Bristol County. Total agricultural income for 2005 was estimated at \$390 million (47th of the 50 states), of which crops provided 76%. Although the state is not a major farming area, it is the second-largest producer of cranberries in the United States; production for 2004 was 180,400,000 lb, about 28% of the US total. Output totals for other crops in 2004 were as follows: corn for silage, 374,000 tons; hay, 181,000 tons; and tobacco, 989,000 lb. While of local economic importance, these figures are tiny fractions of US totals.

2⁴ ANIMAL HUSBANDRY

Massachusetts is not a major producer of livestock. The state had 48,000 cattle and calves worth around \$52.8 million in 2005, and an estimated 12,000 hogs and pigs worth \$1.3 million in 2004. Also during 2003, poultry farmers sold 863,000 lb (392,000 kg) of chickens, and the state produced an estimated 73 million eggs, worth around \$4.8 million. An estimated 19,000 milk cows produced 332 million lb (151 million kg) of milk in 2003. During 2003, the state produced around 1.8 million lb (0.8 million kg) of turkeys worth \$2.7 million.

2⁵ FISHING

The early settlers earned much of their income from the sea. The first shipyard in Massachusetts opened at Salem Neck in 1637 and, during the years before independence, the towns of Salem, Newburyport, Plymouth, and Boston were among the colonies' leading ports. By 1807, Massachusetts's fishing fleet made up 88% of the US total. For much of the 19th century, Nantucket and, later, New Bedford were the leading US whaling centers. But with the decline of the whaling industry came a sharp drop in the importance of fishing to the livelihood of the state. By 1978, the fishing industry ranked 13th in importance of the 15 industries monitored by the state. However, the fishing ports of New Bedford and Gloucester were still among the busiest in the United States in 2004. New Bedford ranked first in the nation in catch value at \$206.5 million and seventh in the nation for catch volume at 175.1 million lb (79.6 million kg). Gloucester was 12th in the nation in catch value (\$42.7 million) and tenth in volume (113.3 million lb/51.5 million kg).

In 2004, Massachusetts ranked second in the nation for total commercial catch value at \$326.1 million. The total catch volume that year was 336.9 million lb (153.1 million kg). The quahog catch of 14.1 million lb (6.4 million kg) was the second largest in the nation. The lobster catch was also the second largest with 11.3 million lb (5.1 million kg) valued at \$51.5 million. Massachusetts

was the leading producer of sea scallops with 28.1 million lb (12.8 million kg). In 2003, there were 232 fish processing and wholesale plants with an annual average of 4,504 employees in the state. The commercial fleet in 2001 had about 5,235 boats and vessels.

The state's long shoreline and many rivers make sport fishing a popular pastime for both deepsea and freshwater fishermen. The fishing season runs from mid-April through late October, with the season extended through February for bass, pickerel, panfish, and trout. In 2004, there were 203,139 fishing license holders.

26 FORESTRY

Forestry is a minor industry in the state. Forested lands cover about 3,126,000 acres (1,265,000 hectares), 76% of which are private lands. Wooded areas lost to urbanization in recent years have been offset by the conversion of inactive agricultural areas into forests. Red oak and white ash are found in the west; specialty products include maple syrup and Christmas trees. The wood and paper products industries require more pulp than the state currently produces. Lumber production in 2004 totaled 60 million board ft, 60% hardwood.

Massachusetts has the sixth-largest state park system in the nation, with 38 state parks and 74 state forests totaling some 273,000 acres (110,000 hectares). There are no national forests in Massachusetts.

27 MINING

According to preliminary data from the US Geological Survey (USGS), the estimated value of nonfuel mineral production by Massachusetts in 2003 was \$186 million, a decrease from 2002 of about 4%.

By value, crushed stone, construction sand and gravel, and lime were the state's top three nonfuel mineral commodities in 2003, according to USGS data. Collectively, these commodities accounted for around 94% of the state's nonfuel mineral output, by value. According to preliminary figures for 2003, a total of 13.2 million metric tons of crushed stone, valued at \$104 million, were produced, while 11.4 million metric tons of sand and gravel, worth \$70.7 million, were produced. Massachusetts in 2003 was also a producer of dimension stone and common clays. Dimension stone output that year totaled 81,000 metric tons and was valued at \$10.5 million, while output of common clays totaled 36,000 metric tons and was valued at \$321,000, according to the preliminary data. Nationally, the state ranked fifth in dimension stone in 2003.

28 ENERGY AND POWER

As of 2003, Massachusetts had 69 electrical power service providers, of which 41 were publicly owned, 7 were investor owned, 4 were owners of independent generators that sold directly to customers, 9 were generation-only suppliers, and 8 were delivery-only providers. As of that same year there were 2,927,308 retail customers. Of that total, 2,456,890 received their power from investor-owned service providers. Publically owned providers had 382,808 customers, while 132 were independent generator or "facility" customers. Generation-only suppliers had 87,478 customers. There was no data on the number of delivery-only service customers.

Total net summer generating capability by the state's electrical generating plants in 2003 stood at 13.877 million kW, with to-

tal production that same year at 48.385 billion kWh. Of the total amount generated, only 4.2% came from electric utilities, with the remaining 95.8% coming from independent producers and combined heat and power service providers. The largest portion of all electric power generated, 22.423 billion kWh (46.3%), came from natural gas fired plants, with coal-fired plants in second place at 10.896 billion kWh (22.5%) and petroleum fueled plants in third at 7.459 billion kWh (15.4%). Nuclear power accounted for 10.3% of all power generated followed by other renewable power sources and hydroelectric sources.

In 2006, the Pilgrim power plant in Plymouth was Massachusetts' only operating nuclear power plant.

Boston Edison supplies electricity to the city of Boston; the rest of the state is served by 13 other companies, although a few municipalities do generate their own power. Power companies are regulated by the Department of Public Utilities, which establishes rates and monitors complaints from customers.

As of 2004, Massachusetts had no proven reserves of crude oil or coal, although oil exploration off the coast of Cape Cod did take place 1979 following a lengthy court battle. Environmentalists and fishermen had sought to prevent development of an oil industry in the region, which is one of the richest fishing grounds in the country. The state has no refineries.

The state consumes but does not produce natural gas. In 2004 about 373 billion cu ft (10.5 billion cu m) of natural gas were delivered. Slightly more than 30% of the gas sold was for residential use, 54% for industries and electricity generation, and 15% for commercial use.

The state encourages energy conservation and the development of alternative energy systems by granting tax credits to qualifying industries. Private researchers and the state have established demonstration projects for solar energy systems and other alternatives to fossil fuels.

29 INDUSTRY

Massachusetts was the nation's first major industrial state, and during the later part of the 19th century, it was the US leader in shoemaking and textile production. By 1860, the state was a major producer of machinery and milled nearly one-fourth of the country's paper.

Massachusetts remains an important manufacturing center. Nearly all the major manufacturing sectors had plants in Massachusetts's eastern counties. Significant concentrations of industrial machinery employment are in Attleboro, Wilmington, Worcester, and the Springfield area. Much of the manufacturing industry is located along Route 128, a superhighway that circles Boston from Gloucester in the north to Quincy in the south and is unique in its concentration of high-technology enterprises. Massachusetts's future as a manufacturing center depends on its continued pre-eminence in the production of computers, optical equipment, and other sophisticated instruments.

According to the US Census Bureau's Annual Survey of Manufactures (ASM) for 2004, Massachusetts' manufacturing sector covered some 20 product subsectors. The shipment value of all products manufactured in the state that same year was \$76.538 billion. Of that total, computer and electronic product manufacturing accounted for the largest share at \$20.757 billion. It was followed by chemical manufacturing at \$9.254 billion; miscellaneous

manufacturing at \$6.437 billion; food manufacturing at \$6.053 billion; and fabricated metal product manufacturing at \$5.823 billion.

In 2004, a total of 302,263 people in Massachusetts were employed in the state's manufacturing sector, according to the ASM. Of that total, 179,747 were actual production workers. In terms of total employment, the computer and electronic product manufacturing industry accounted for the largest portion of all manufacturing employees at 58,806, with 25,353 actual production workers. It was followed by fabricated metal product manufacturing at 34,054 employees (24,028 actual production workers); miscellaneous manufacturing at 31,425 employees (19,006 actual production workers); machinery manufacturing at 23,887 employees (13,294 actual production workers); chemical manufacturing at 23,305 employees (10,354 actual production workers); and food manufacturing with 21,120 employees (13,743 actual production workers).

ASM data for 2004 showed that Massachusetts' manufacturing sector paid \$14.895 billion in wages. Of that amount, the computer and electronic product manufacturing sector accounted for the largest share at \$3.766 billion. It was followed by fabricated metal product manufacturing at \$1.528 billion; chemical manufacturing at \$1.501 billion; miscellaneous manufacturing at \$1.354 billion; and machinery manufacturing at \$1.327 billion.

30 COMMERCE

Massachusetts's machinery and electrical goods industries are important components of the state's wholesale trade, along with motor vehicle and automotive equipment, and paper and paper products. According to the 2002 Census of Wholesale Trade, Massachusetts' wholesale trade sector had sales that year totaling \$127.1 billion from 9,333 establishments. Wholesalers of durable goods accounted for 5,546 establishments, followed by nondurable goods wholesalers at 2,826 and electronic markets, agents, and brokers accounting for 961 establishments. Sales by durable goods wholesalers in 2002 totaled \$52.1 billion, while wholesalers of nondurable goods saw sales of \$55.1 billion. Electronic markets, agents, and brokers in the wholesale trade industry had sales of \$19.8 billion.

In the 2002 Census of Retail Trade, Massachusetts was listed as having 25,761 retail establishments with sales of \$73.9 billion. The leading types of retail businesses by number of establishments were: food and beverage stores (4,529); clothing and clothing accessories stores (3,764); miscellaneous store retailers (2,979); and gasoline stations (2,333). In terms of sales, motor vehicle and motor vehicle parts dealers accounted for the largest share of retail sales at \$17.6 billion, followed by food and beverage stores at \$13.7 billion; general merchandise stores at \$7.1 billion; and building material/garden equipment and supplies dealers \$6.1 billion. A total of 359,149 people were employed by the retail sector in Massachusetts that year.

Exporters located in Massachusetts exported \$22.04 billion in merchandise during 2005, ranking 10th in the nation.

31 CONSUMER PROTECTION

Consumer protection in Massachusetts is handled by two state entities: the Executive Office of Consumer Affairs and Business Regulation, which serves as an information and referral center for

consumer complaints and oversees the activities of many of the state's regulatory agencies; and the Office of the Attorney General which has a Consumer Protection and Antitrust Division that handles consumer complaints either through litigation or nine face-to-face mediation programs. The Massachusetts Consumer Council also advises the governor and legislature and there are many local consumer councils.

When dealing with consumer protection issues, the state's Attorney General's Office can initiate civil and criminal proceedings; represent the state before state and federal regulatory agencies; administer consumer protection and education programs; handle formal consumer complaints; and exercise broad subpoena powers. In antitrust actions, the Attorney General's office can act on behalf of those consumers who are incapable of acting on their own; initiate damage actions on behalf of the state in state courts; initiate criminal proceedings; and represent counties, cities and other governmental entities in recovering civil damages under state or federal law.

The Executive Office of Consumer Affairs and Business Regulation and the Attorney General Office's Consumer Protection and Antitrust Division are both located in Boston. The Attorney General's Office also has regional offices in New Bedford, Springfield and Worcester. County government consumer affairs offices are located in Greenfield, Northampton, Pittsfield, Quincy, Worcester, Boston, Cambridge, Fall River, Haverhill, Hyannis, Lawrence, Lowell, Medford, Natick, Newton, North Weymouth, Plymouth, Revere, Springfield and Waltham.

32 BANKING

By the mid-1800s, Boston had developed into a major banking center whose capital financed the state's burgeoning industries. As of 2005 banking remained an important sector of the state's economy.

As of June 2005, Massachusetts had 195 insured banks, savings and loans, and saving banks, plus 103 state-chartered and 149 federally chartered credit unions (CUs). Excluding the CUs, the Boston-Cambridge-Quincy market area accounted for the largest portion of the state's financial institutions and deposits in 2004, with 154 institutions and \$141.035 billion in deposits. As of June 2005, CUs accounted for 8.8% of all assets held by all financial institutions in the state, or some \$22.128 billion. Banks, savings and loans, and savings banks collectively accounted for the remaining 91.2% or \$230.670 billion in assets held.

State chartered savings banks, trust companies, co-operative banks, credit unions, and other financial service providers, including mortgage lenders and brokers, debt collection agencies, foreign transmittal agencies, check cashers, and credit grantors, are regulated by the state's Division of Banks, within the Office of Consumer Affairs and Business Regulation. The division administers the state's banking laws and oversees bank and financial institution practices and policies.

In 2004, the median percentage of past-due/nonaccrual loans to total loans stood at 0.60%, down from 0.70% in 2003. In that same year, the median net interest margin (the difference between the lower rates offered to savers and the higher rates charged on loans) for the state's insured institutions stood at 3.50%, down from 3.54% in 2003. Around 82% of insured institutions headquartered

in Massachusetts are savings institutions, and residential real estate loans make up some 65% of the average loan portfolio.

3³ INSURANCE

Insurance is an important business in Massachusetts, and some of the largest life and property and casualty insurance companies in the nation have their headquarters in Boston.

In 2004 there were over 3.1 million individual life insurance policies in force with a total value of over \$349 billion; total value for all categories of life insurance (individual, group, and credit) was about \$571 billion. The average coverage amount is \$111,700 per policy holder. Death benefits paid that year totaled at over \$1.2 billion.

As of 2003, there were 55 property and casualty and 19 life and health insurance companies domiciled in the state. In 2004, direct premiums for property and casualty insurance totaled \$11.8 billion. That year, there were 40,473 flood insurance policies in force in the state, with a total value of \$7.1 billion. About \$39 billion of coverage was held through FAIR plans, which are designed to offer coverage for some natural circumstances, such as wind and hail, in high risk areas.

On 4 April 2006, the Massachusetts legislature approved a bill designed to make the purchase of health insurance a requirement for all state residents by 1 July 2007. The governor accepted most of the bill into law on 13 April. Under the terms of the bill, government subsidies will be available to assist low-income residents and employers with 11 employees or more may be required to either provide coverage for their workers or to pay an annual per employee fee to the government. Beginning in January 2008, residents could be required to report information concerning their health insurance policy on their state income tax return. Those who do not provide such proof of coverage may lose their personal state tax exemption and face penalties of up to half the cost of the lowest priced insurance policy. This bill, the first such legislation in the United States, is designed to address the issue of paying for the health care for over 500,000 of uninsured and underinsured residents.

In 2004, 60% of state residents held employment-based health insurance policies, 4% held individual policies, and 25% were covered under Medicare and Medicaid; 11% of residents were uninsured. In 2003, employee contributions for employment-based health coverage averaged at 20% for single coverage and 24% for family coverage. The state offers an 18-month health benefits expansion program for small-firm employees in connection with the Consolidated Omnibus Budget Reconciliation Act (COBRA, 1986), a health insurance program for those who lose employment-based coverage due to termination or reduction of work hours.

In 2003, there were over 4.1 million auto insurance policies in effect for private passenger cars. Required minimum coverage includes bodily injury liability of up to \$20,000 per individual and \$40,000 for all persons injured in an accident, as well as property damage liability of \$5,000. Personal injury protection and uninsured motorist coverage are also mandatory. In 2003, the average expenditure per vehicle for insurance coverage was \$1,051.60, which ranked as the fourth-highest average in the nation (after New Jersey, New York, and the District of Columbia).

New England Mutual Life Insurance Co. of Boston was the first mutual company to be chartered in the United States and remains one of the largest firms in the business. John Hancock Mutual Life, also of Boston, is one of the largest life insurance companies in the United States.

All aspects of the insurance business in Massachusetts, including the licensing of agents, and brokers and the examination of all insurance companies doing business in the state, are controlled by the Division of Insurance, under the Executive Office of Consumer Affairs and Business Regulation.

3⁴ SECURITIES

The Boston Stock Exchange, founded in 1834, is the only stock exchange in Massachusetts. The BSE has approximately 200 members, handles over 2,000 stocks, and is the fastest-growing stock exchange in the United States (increasing trade volume tenfold during the 1990s). In 2005, there were 7,070 securities, commodities, and financial services sales agents employed in the state. In 2004, there were over 468 publicly traded companies within the state, with over 235 NASDAQ companies, 101 NYSE listings, and 64 AMEX listings. In 2006, the state had nine Fortune 500 companies; Massachusetts Mutual Life Insurance (based in Springfield) ranked first in the state and 92nd in the nation with revenues of over \$22.7 billion, followed by Raytheon (Waltham), Liberty Mutual Insurance Group (Boston), Staples (Framingham), and TJX Companies (Framingham). Staples is listed on NASDAQ while the other four companies are on the NYSE.

The Securities Division of the Office of the Secretary of the Commonwealth is responsible for licensing and monitoring all brokerage firms in the state.

3⁵ PUBLIC FINANCE

The Massachusetts budget is prepared by the Executive Office of Administration and Finance and is presented by the governor to the legislature for revision and approval. The fiscal year (FY) runs from 1 July to 30 June.

Fiscal year 2006 general funds were estimated at \$28.1 billion for resources and \$25.5 billion for expenditures. In fiscal year 2004, federal government grants to Massachusetts were \$13.8 billion.

In 5 January 2006 the Bush administration released \$100 million in emergency contingency funds targeted to the areas with the greatest need, including \$4.7 million for Massachusetts.

3⁶ TAXATION

In 2005, Massachusetts collected \$18,015 million in tax revenues or \$2,815 per capita, which placed it seventh among the 50 states in per capita tax burden. The national average was \$2,192 per capita. Sales taxes accounted for 21.6% of the total, selective sales taxes 10.5%, individual income taxes 53.8%, corporate income taxes 7.4%, and other taxes 6.7%.

As of 1 January 2006, Massachusetts had a single individual income tax bracket of 5.3%. The state taxes corporations at a flat rate of 9.5%.

In 2004, state and local property taxes amounted to \$9,814,315,000 or \$1,532 per capita. The per capita amount ranks the state seventh-highest nationally. Local governments collected \$9,814,264,000 of the total and the state government \$51,000.

Massachusetts taxes retail sales at a rate of 5%. Food purchased for consumption off-premises is tax exempt. The tax on cigarettes is 151 cents per pack, which ranks eighth among the 50 states and the District of Columbia. Massachusetts taxes gasoline at 21 cents per gallon. This is in addition to the 18.4 cents per gallon federal tax on gasoline.

According to the Tax Foundation, for every federal tax dollar sent to Washington in 2004, Massachusetts citizens received \$0.77 in federal spending.

37 ECONOMIC POLICY

The Executive Office of Economic Development is responsible for setting economic policy, promoting Massachusetts as a place to do business, increasing the job base, and generating economic activity in the Commonwealth.

The following agencies are within the Executive Office of Economic Development: Department of Business and Technology; Office of Consumer Affairs and Business Regulation; Department of Labor; and Department of Workforce Development. Other agencies addressing issues of economic development are: the Massachusetts Development Finance Agency (Mass Development); the Massachusetts Alliance for Economic Development; the Workforce Training Fund; the Massachusetts Office of International Trade and Investment; the Massachusetts Technology Collaborative, the Massachusetts Technology Development Corp., and the Department of Housing and Community Development.

Throughout most of the 1990's and up to 2002, the state economic development plan was guided by the 1993 report entitled "Choosing to Compete: A Statewide Strategy for Economic Growth and Job Creation." The Massachusetts Economic Development Incentive Program (EDIP), launched in 1993, was a series of initiatives geared to stimulate job creation, attract new businesses, and help firms expand. There were 34 Economic Target Areas (ETAs) throughout the state. Cities and towns, in partnership with the Commonwealth and private enterprises, also developed economic programs to attract new business. In 2002, building on what was seen as the success of the Choosing to Compete campaign, the former Department of Economic Development issued a new framework entitled "Toward a New Prosperity: Building Regional Competitiveness Across the Commonwealth." The approach divides the state economy into seven regional clusters, each with unique developmental needs and potentials. Six overall goals were stated: to improve the business climate for all business clusters; to support entrepreneurship and innovation; to prepare the workforce for the future; to build an information infrastructure for the 21st century; to ensure that economic growth is compatible with communities and the environment, and to the improve the outcome from government actions.

38 HEALTH

The infant mortality rate in October 2005 was estimated at 5 per 1,000 live births. The birth rate in 2003 was 12.5 per 1,000 population. The abortion rate stood at 21.4 per 1,000 women in 2000. In 2003, about 90% of pregnant woman received prenatal care beginning in the first trimester. In 2004, approximately 89% of children received routine immunizations before the age of three.

The crude death rate in 2003 was 8.8 deaths per 1,000 population. As of 2002, the death rates for major causes of death (per

100,000 resident population) were: heart disease, 229.3; cancer, 216.5; cerebrovascular diseases, 55.4; chronic lower respiratory diseases, 42.7; and diabetes, 22.1. The mortality rate from HIV infection was 3.6 per 100,000 population. In 2004, the reported AIDS case rate was at about 8.8 per 100,000 population. In 2002, about 51.3% of the population was considered overweight or obese, representing the lowest percentage among the 50 states. As of 2004, about 18.4% of state residents were smokers.

Programs for treatment and rehabilitation of alcoholics are administered by the Division of Alcoholism of the Department of

Health, under the Executive Office of Human Services. The Division of Communicable Disease Control operates venereal disease clinics throughout the state and provides educational material to schools and other groups. The Division of Drug Rehabilitation administers drug treatment from a statewide network of hospital agencies and self-help groups. The state also runs a lead-poisoning prevention program. In Massachusetts, all health-care facilities are registered by the Department of Public Health. The Division of Health Care Quality inspects and licenses hospitals, clinics, school infirmaries, and blood banks every two years. Licensing of nursing homes is also under its control.

In 2003, Massachusetts had 79 community hospitals with about 16,000 beds. There were about 785,000 patient admissions that year and 19.6 million outpatient visits. The average daily inpatient census was about 11,900 patients. The average cost per day for hospital care was \$1,631. Also in 2003, there were about 478 certified nursing facilities in the state with 52,323 beds and an overall occupancy rate of about 89.8%. In 2004, it was estimated that about 79.5% of all state residents had received some type of dental care within the year; this was the third-highest dental care percentage in country (after Connecticut and Minnesota). Massachusetts had 451 physicians per 100,000 resident population in 2004 and 1,201 nurses per 100,000 in 2005; these rates some of the highest health-care worker–population rates in the nation. In 2004, there were a total of 5,143 dentists in the state.

Four prominent medical schools are located in the state: Harvard Medical School, Tufts University School of Medicine, Boston University School of Medicine, and the University of Massachusetts School of Medicine. In 2005, Massachusetts General Hospital in Boston ranked third on the Honor Roll of Best Hospitals 2005 by *U.S. News & World Report*. In the same report, it ranked fifth in the nation for care of heart disease and heart surgery and twelfth for care of cancer. Brigham and Women's Hospital, Boston ranked twelfth on the Honor Roll and sixth for best care in heart disease and heart surgery. The Children's Hospital Boston was ranked as second in the nation for best pediatric care. The Dana-Farber Cancer Institute in Boston was ranked fourth in the nation for cancer care.

About 25% of state residents were enrolled in Medicaid and Medicare programs in 2004. Approximately 11% of the state population was uninsured in 2004. In 2003, state health care expenditures totaled \$7.7 million.

39 SOCIAL WELFARE

In 2004, about 239,000 people received unemployment benefits, with the average weekly unemployment benefit at \$351. In fiscal year 2005, the estimated average monthly participation in the food stamp program included about 368,122 persons (176,121 households); the average monthly benefit was about \$82.18 per person. That year, the total of benefits paid through the state for the food stamp program was about \$363 million.

Temporary Assistance for Needy Families (TANF), the system of federal welfare assistance that officially replaced Aid to Families with Dependent Children (AFDC) in 1997, was reauthorized through the Deficit Reduction Act of 2005. TANF is funded through federal block grants that are divided among the states based on an equation involving the number of recipients in each state. The Massachusetts TANF cash assistance program is called

Transitional Aid to Families with Dependent Children (TAFDC), and the work program is called the Employment Services Program (ESP). In 2004, the state program had 108,000 recipients; state and federal expenditures on this TANF program totaled \$355 million in fiscal year 2003.

In December 2004, Social Security benefits were paid to 1,066,620 Massachusetts residents. This number included 692,260 retired workers, 96,030 widows and widowers, 146,990 disabled workers, 47,430 spouses, and 83,910 children. Social Security beneficiaries represented 16.6% of the total state population and 90.7% of the state's population age 65 and older. Retired workers received an average monthly payment of \$961; widows and widowers, \$933; disabled workers, \$883; and spouses, \$483. Payments for children of retired workers averaged \$480 per month; children of deceased workers, \$677; and children of disabled workers, \$266. Federal Supplemental Security Income payments in December 2004 went to 169,205 Massachusetts residents, averaging \$438 a month.

40 HOUSING

Massachusetts's housing stock, much older than the US average, reflects the state's colonial heritage and its ties to English architectural traditions. Two major styles are common: colonial, typified by a wood frame, two stories, center hall entry, and center chimney; and Cape Cod, one-story houses built by fishermen, typified by shallow basements, shingled roofs, clapboard fronts, and unpainted shingled sides weathered gray by the salt air. Many new houses are also built in these styles.

As of 2004, there were an estimated 2,672,061 housing units in the state, of which 2,435,421 were occupied; 64.6% were owner-occupied. About 52.5% of all housing units were single-family, detached homes. About 37.1% of all units were built before or during 1939. Nearly 42% of all units rely on utility gas for heating and 33.6% use fuel oil or kerosene. It was estimated that 50,724 units lacked telephone service, 7,775 lacked complete plumbing facilities, and 10,402 lacked complete kitchen facilities. The average household had 2.55 members.

In 2004, 22,500 new housing units were authorized for construction. The median home value was \$331,200, the fourth highest in the United States. The median monthly cost for mortgage owners was \$1,645. Renters paid a median of \$852 per month. In 2006, the state received over \$34.3 million in community development block grants from the US Department of Housing and Urban Development (HUD). The city of Boston received over \$20.9 million in community development block grants.

The Executive Office of Communities and Development administers federal housing programs for the state. The Massachusetts Housing Finance Agency finances the construction and rehabilitation of housing by private and community groups.

41 EDUCATION

Massachusetts has a long history of support for education. The Boston Latin School opened in 1635 as the first public school in the colonies. Harvard College—the first college in the United States—was founded the following year. In 1647, for the first time, towns with more than 50 people were required by law to establish tax-supported school systems. More firsts followed: the country's first board of education, compulsory school attendance law, train-

ing school for teachers, state school for the retarded, and school for the blind. The drive for quality public education in the state was intensified through the efforts of educator Horace Mann, who during the 1830s and 1840s was also a leading force for the improvement of school systems throughout the United States.

In 2004, 86.9% of state residents age 25 or older were high school graduates, and 36.7% had completed four or more years of college. Total public school enrollment for fall 2002 stood at 983,000. Of these, 701,000 attended schools from kindergarten through grade eight, and 282,000 attended high school. Approximately 74.6% of the students were white, 8.8% were black, 11.5% were Hispanic, 4.7% were Asian/Pacific Islander, and 0.3% were American Indian/Alaskan Native. Total enrollment was estimated at 978,000 in fall 2003 and was expected to be 919,000 by fall 2014, a decline of 6.5% during the period 2002 to 2014. Expenditures for public education in 2003/04 were estimated at \$11.7 billion or \$10,693 per student, the sixth-highest among the 50 states. Since 1969, the National Assessment of Educational Progress (NAEP) has tested public school students nationwide. The resulting report, *The Nation's Report Card*, stated that in 2005 eighth graders in Massachusetts scored 292 out of 500 in mathematics compared with the national average of 278.

The early years of statehood saw the development of private academies, where the students could learn more than the basic reading and writing skills that were taught in the town schools at the time. Some of these private preparatory schools remain, including such prestigious institutions as Andover, Deerfield, and Groton. In fall 2003 there were 134,708 students enrolled in 688 private schools.

As of fall 2002, there were 431,224 students enrolled in college or graduate school; minority students comprised 20.4% of total postsecondary enrollment. In 2005 Massachusetts had 122 degree-granting institutions. The major public university system is the University of Massachusetts, with campuses at Amherst, Boston, Dartmouth, and Lowell, and a medical school at Worcester. The Amherst campus was established in 1863, and the Boston campus in 1965. The state has a total of 15 public colleges and universities, while the Massachusetts Board of Regional Community Colleges has 16 campuses.

Harvard University, which was established in Cambridge originally as a college for clergymen and magistrates, has grown to become one of the country's premier institutions. Also located in Cambridge are Radcliffe College (whose enrollment is included in Harvard's), founded in 1879, and the Massachusetts Institute of Technology, or MIT (1861). Mount Holyoke College, the first US college for women, was founded in 1837. Other prominent private schools and their dates of origin are Amherst College (1821); Boston College (1863); Boston University (1869); Brandeis University (1947); Clark University (1887); Hampshire College (1965); the New England Conservatory of Music (1867); Northeastern University (1898); Smith College (1871); Tufts University (1852); Wellesley College (1875); and Williams College (1793).

Among the tuition assistance programs available to state residents are the Massachusetts General Scholarships, awarded to thousands of college students annually, and Massachusetts Honor Scholarships, for outstanding performance on the Scholastic Aptitude Test (SAT). The State Board of Education establishes standards and policies for the public schools throughout the state;

its programs are administered by the Department of Education. Higher education planning and programs are under the control of the Higher Education Coordinating Council.

The landmark Education Reform Act of 1993 established new systems of financial support for public elementary and secondary schools and instituted major reforms in governance, professional development, student educational goals, curricula, and assessments.

42 ARTS

Boston is the center of artistic activity in Massachusetts, and Cape Cod and the Berkshires are areas of significant seasonal artistic activity. In 1979, Massachusetts became the first state to establish a lottery solely for funding the arts. Boston is the home of several small theaters, some of which offer previews of shows bound for Broadway. Well-known local theater companies include the American Repertory Theatre and the Huntington Theatre. The 2006/07 season marked the Huntington Theatre's 25th anniversary; productions that season included the pre-Broadway, *Radio Golf* and the world premiere, *Mauritius*. Of the regional theaters scattered throughout the state, the Williamstown Theater in the Berkshires and the Provincetown Theater on Cape Cod are especially noteworthy.

The Boston Symphony, one of the major orchestras in the United States, was founded in 1881, and its principal conductors have included Serge Koussevitzky, Charles Munch, Erich Leinsdorf, and Seiji Ozawa. Emmanuel Church in Boston's Back Bay is known for its early music concerts, and chamber music by first-rate local and internationally known performers is presented at the New England Conservatory's Jordan Hall and other venues throughout the city. During the summer, the Boston Symphony is the main attraction of the Berkshire Music Festival at Tanglewood in Lenox. An offshoot of the Boston Symphony, the Boston Pops Orchestra, gained fame under the conductorship of Arthur Fiedler. Its mixture of popular, jazz, and light symphonic music continued under the direction of Fiedler's successors, John Williams and Keith Lockhart. As of the 2006, Lockhart still presided over the Boston Pops as director and opened the season with a performance featuring Elvis Costello. Boston is also the headquarters of the Boston Lyric Opera. Prominent in the world of dance are the Boston Ballet Company and the Jacob's Pillow Dance Festival in the Berkshires. *Ploughshares*, a literary journal published through Emerson College in Boston, has become well known nationally as a showplace for new writers.

The Massachusetts Cultural Council provides grants and services to support public programs in the arts, sciences, and the humanities. Grants are made to organizations, schools, communities and artists. In 2005, the Massachusetts Cultural Council and other arts organizations received 87 grants totaling \$4,587,600 from the National Endowment for the Arts (NEA). The Massachusetts Foundation for the Humanities was founded in 1974. The foundation offers unique traveling seminars; the 2005 "Saudades de Portugal" seminar provided the opportunity to travel to Portugal. In 2005, the National Endowment for the Humanities contributed \$7,502,287 to 79 state programs.

43 LIBRARIES AND MUSEUMS

The first public library in the United States was established in Boston in 1653. Massachusetts has one of the most important university libraries in the country, and numerous museums and historical sites commemorate the state's rich colonial history. For the fiscal year ending in June 2001, Massachusetts had 371 public library systems, with a total of 490 libraries, of which 119 were branches. The system served 351 towns and cities, and had 30,465,000 volumes of books and serial publications on its shelves, with a total circulation of 45,803,000 in that same year. The system also had 858,000 audio and 742,000 video items, 39,000 electronic format items (CD-ROMs, magnetic tapes, and disks), and 10 bookmobiles. The major city libraries are in Boston, Worcester, and Springfield. In fiscal year 2001, operating income for the state's public libraries was \$220,510,000 including \$1,107,000 in federal grants and \$20,725,000 in state grants.

The Boston Athenaeum, with 650,000 volumes, is the most noteworthy private library in the state. The American Antiquarian Society in Worcester has a 690,000-volume research library of original source material dating from colonial times to 1876.

Harvard University's library system is one of the largest in the world, with 14,311,152 volumes in 1999. Other major academic libraries are those of Boston University, the University of Massachusetts (Amherst), Smith College, and Boston College.

Boston houses a number of important museums, among them the Museum of Fine Arts with vast holdings of artwork including extensive Far East and French impressionists collections and American art and furniture, the Isabella Stewart Gardner Museum, the Museum of Science, the Massachusetts Historical Society, and the Children's Museum. Harvard University's museums include the Fogg Art Museum, the Peabody Museum of Archaeology and Ethnology, the Museum of Comparative Zoology, and the Botanical Museum. Other museums of note are the Whaling Museum in New Bedford, the Essex Institute in Salem, the Worcester Art Museum, the Clark Art Institute in Williamstown, the Bunker Hill Museum near Boston, and the National Basketball Hall of Fame in Springfield. In addition, many towns have their own historical societies and museums, including Historic Deerfield, Framingham Historical and Natural History Society, Ipswich Historical Society, Lexington Historical Society, and Marblehead Historical Society. Plymouth Plantation in Plymouth is a re-creation of life in the 17th century, and Old Sturbridge Village, a working historical farm, displays 18th- and 19th-century artifacts. The state had over 344 museums in 2000.

44 COMMUNICATIONS

The first American post office was established in Boston in 1639. Alexander Graham Bell first demonstrated the telephone in 1876 in Boston. As of 2004, 93.4% of the state's occupied housing units had telephones. In addition, by June of that same year there were 3,919,139 mobile wireless telephone subscribers. In 2003, 64.1% of Massachusetts households had a computer and 58.1% had Internet access. By June 2005, there were 1,235,672 high-speed lines in Massachusetts, 1,123,606 residential and 112,066 for business.

The state had 32 major AM stations and 64 major FM stations in 2005, when 10 major television stations were also in operation. In Boston, WGBH is a major producer of programming for the

Public Broadcasting Service. In 1999, the Boston metropolitan area had 2,210,580 television-owning households, 80% of which received cable (the second-highest penetration rate for any city).

In 2000, Massachusetts had 239,358 Internet domain name registrations, ranking seventh among all the states.

45 PRESS

Milestones in US publishing history that occurred in the state include the first book printed in the English colonies (Cambridge, 1640), the first regularly issued American newspaper, the *Boston News-Letter* (1704), and the first published American novel, William Hill Brown's *The Power of Sympathy* (Worcester, 1789). During the mid-1840s, two noted literary publications made their debut, the *North American Review* and the *Dial*, the latter under the editorial direction of Ralph Waldo Emerson and Margaret Fuller. The *Atlantic*, which began publishing in 1857, *Harvard Law Review*, *Harvard Business Review*, and *New England Journal of Medicine* are other influential publications.

As of 2005 there were 32 daily newspapers in the state (including 14 morning, 18 evening) and 16 papers with Sunday editions. The *Boston Globe*, the most widely read newspaper in the state, has won numerous awards for journalistic excellence on the local and national levels. The *Christian Science Monitor* is highly respected for its coverage of national and international news.

Major daily newspapers and their average circulations in 2005 were:

AREA	NAME	DAILY	SUNDAY
Boston	<i>Christian Science Monitor</i> (m)	60,723	
	<i>Globe</i> (m,S)	451,471	707,813
	<i>Herald</i> (m,S)	240,759	152,813
Hyannis	<i>Cape Cod Times</i> (m,S)	50,896	60,004
Worcester	<i>Telegram & Gazette</i> (m,S)	103,113	121,437

Massachusetts is also a center of book publishing, with more than 100 publishing houses. Among them are Little, Brown and Co.; Houghton Mifflin; Merriam-Webster; and Harvard University Press.

46 ORGANIZATIONS

In 2006, there were over 10,485 nonprofit organizations registered within the state, of which about 7,701 were registered as charitable, educational, or religious organizations.

Headquartered in Massachusetts are the National Association of Independent Schools, the National Commission for Cooperative Education, both in Boston, and the National Bureau of Economic Research in Cambridge. The Union of Concerned Scientists in Cambridge and the International Physicians for the Prevention of Nuclear War in Boston—recipient of the 1985 Nobel Peace Prize—are major public affairs associations based in the state.

Academic and scientific organizations headquartered in Boston include the American Meteorological Society, American Society of Law and Medicine, American Surgical Association, the Visiting Nurse Associations of America and Optometric Research Institute. The American Academy of Arts and Sciences is located in Cambridge. Other education and research organizations with national scope and membership include the Albert Einstein Institution, the Albert Schweitzer Fellowship, the Bostonian Society, the Plymouth Rock Foundation, the Thoreau Society, and the Titan-

ic Historical Society. There are numerous municipal and regional historical, preservation, and arts organizations.

Among the many professional, business, and consumer organizations based in Massachusetts are the American Institute of Management and the International Brotherhood of Police Officers in Quincy; the Wood Products Manufacturers Association in Gardner; and the National Consumer Law Center, Northern Textile Association, and Wool Manufacturers Council in Boston.

The national Organic Trade Association is based in Greenfield and the Cranberry Institute is in East Wareham. Local environmental groups include the Association to Preserve Cape Cod, the Boston Harbor Association, the Nantucket Conservation Foundation, a few chapters of Trout Unlimited.

Oxfam-America, the US affiliate of the international humanitarian relief agency, is located in Boston. Students Against Destructive Decisions/Students Against Drunk Driving (SADD) is based in Marlborough. The Christian Science Publishing Society, which publishes the *Christian Science Monitor*, is located in Boston. The Unitarian Universalist Association of Congregations, a major body of the Unitarian Church, is also based in Boston.

Major sports associations in the state are the Eastern College Athletic Conference in Centerville and the American Hockey League in Springfield.

47 TOURISM, TRAVEL, AND RECREATION

In 2004, there were over 31.2 million travelers to and within the state. There were 1.4 million international visitors to the state, with Canada and the United Kingdom being the largest markets. About 20% of all tourist activity involves residents traveling within the state. The travel industry supports over 125,300 jobs with a payroll of \$3.2 billion.

A trip to Boston might include visits to such old landmarks as the Old North Church, the USS *Constitution*, and Paul Revere's House, and such newer attractions as the John Hancock Observatory, the skywalk above the Prudential Tower, Quincy Market, Faneuil Hall, and Copley Place. Boston Common, one of the oldest public parks in the country, is the most noteworthy municipal park. The well-marked Freedom Trail takes visitors on a walking and driving tour of historical sites, including the cities of Lexington and Concord.

About 19% of all trips are made to Cape Cod (Barnstable County). Among its many attractions are beaches, fishing, good dining spots, several artists' colonies with arts and crafts fairs, antique shops, and summer theaters. Beaches, fishing, and quaint villages are also the charms of Nantucket Island and Martha's Vineyard.

The Berkshires are the summer home of the Berkshire Music Festival at Tanglewood and the Jacob's Pillow Dance Festival in Lee, and during the winter also provide recreation for cross-country and downhill skiers. Essex County on the North Shore of Massachusetts Bay offers many seaside towns and the art colony of Rockport. Its main city, Salem, contains the Witch House and Museum as well as Nathaniel Hawthorne's House of Seven Gables. Middlesex County, to the west of Boston, holds the university city of Cambridge as well as the battlegrounds of Lexington and Concord. In Concord are the homes of Henry David Thoreau, Ralph Waldo Emerson, and Louisa May Alcott. Norfolk County, south of Boston, has the homes of three US presidents: John Adams and John Quincy Adams in Quincy and John F. Kennedy in Brookline.

The seaport town and former whaling center of New Bedford and the industrial town of Fall River are in Bristol County. Plymouth County offers Plymouth Rock, Plymouth Plantation, and a steam-train ride through some cranberry bogs. The town of Springfield, birthplace of basketball, hosts the Basketball Hall of Fame; in June 1985 it opened in its present location, which welcomed its one-millionth visitor in July 1988. Springfield also has the Dr. Seuss National Memorial Sculpture Garden and the Eric Carle Museum of Picture Book Arts. Plum Island has a nature preserve and a natural barrier reef. Many visitors visit Massachusetts in the fall to travel the Mohawk Trail to view the fall foliage. The John Fitzgerald Kennedy Presidential Library is in Boston.

Massachusetts has 79 operational state parks.

48 SPORTS

There are five major professional sports teams in Massachusetts: the Boston Red Sox of Major League Baseball, the New England Patriots of the National Football League, the Boston Celtics of the National Basketball Association, the Boston Bruins of the National Hockey League, and the New England Revolution of Major League Soccer.

The Red Sox won the World Series in 2005 by defeating their rivals, the New York Yankees. The Patriots have won nine division championships, five conference championships, and the Super Bowl in 2001, 2003, and 2004. The Celtics are the winningest team in NBA history; they have won the championship 16 times, including the seemingly unbeatable record of 8 consecutive titles from 1959 to 1966. They last won an NBA championship in 1986. The Bruins won the Stanley Cup in 1929, 1939, 1941, 1970, and 1972. Additionally, there are minor league hockey teams in Springfield, Worcester, and Lowell.

Suffolk Downs in East Boston features thoroughbred horse racing and harness racing takes place at the New England Harness Raceway in Foxboro. Dog racing can be seen at Raynham Park in Raynham, Taunton Dog Track in North Dighton, and Wonderland Park in Revere.

Probably the most famous amateur athletic event in the state is the Boston Marathon, a race of more than 26 mi (42 km) held every Patriots' Day (third Monday in April). It attracts many of the world's top long-distance runners. During the summer, a number of boat races are held. Rowing is also popular. Each October the traditional sport is celebrated at the Head of the Charles, a regatta held on the Charles River between collegiate rowing teams.

In collegiate sports, the University of Massachusetts has become a nationally ranked basketball powerhouse, reaching the Final Four in 1996; Boston College has appeared in 12 bowl games, highlighted by a victory in the Cotton Bowl in 1985; and the annual Harvard–Yale football game is one of the traditional rites of autumn.

49 FAMOUS BAY STATERS

Massachusetts has produced an extraordinary collection of public figures. Its four US presidents were John Adams (1735–1826), a signer of the Declaration of Independence; his son John Quincy Adams (1767–1848); John Fitzgerald Kennedy (1917–63), and George Herbert Walker Bush (b.Milton, 12 June 1924). All four served in Congress. John Adams was also the first US vice president; John Quincy Adams served as secretary of state under James

Monroe, Calvin Coolidge (b.Vermont, 1872–1933) was governor of Massachusetts before his election to the vice-presidency in 1920 and his elevation to the presidency in 1923. George Bush was elected vice president on the Republican ticket in 1980 and reelected in 1984. Bush was elected president in 1988. Two others who held the office of vice president were another signer of the Declaration of Independence, Elbridge Gerry (1744–1814), for whom the political practice of gerrymandering is named, and Henry Wilson (b.New Hampshire, 1812–75), a US senator from Massachusetts before his election with Ulysses S. Grant.

Massachusetts's great jurists include US Supreme Court Justices Joseph Story (1779–1845), Oliver Wendell Holmes Jr. (1841–1935), Louis D. Brandeis (b.Kentucky, 1856–1941), and Felix Frankfurter (b.Austria, 1882–1965). David Souter (b.1939), a Supreme Court justice appointed during the Bush administration, was born in Melrose. Stephen Breyer (b.California, 1939), another Supreme Court justice, was a Circuit Court of Appeals judge in Boston before his appointment. Important federal officeholders at the cabinet level were Henry Knox (1750–1806), the first secretary of war; Timothy Pickering (1745–1820), the first postmaster general and later secretary of war and secretary of state under George Washington and John Adams; Levi Lincoln (1749–1820), attorney general under Jefferson; William Eustis (1753–1825), secretary of war under Madison; Jacob Crowninshield (1770–1808), secretary of the navy under Jefferson, and his brother Benjamin (1772–1851), who held the same office under Madison; Daniel Webster (b.New Hampshire, 1782–1852), US senator from Massachusetts who served as secretary of state under William Henry Harrison, John Tyler, and Millard Fillmore; Edward Everett (1794–1865), a governor and ambassador who served as secretary of state under Fillmore; George Bancroft (1800–91), a historian who became secretary of the Navy under James K. Polk; Caleb Cushing (1800–79), attorney general under Franklin Pierce; Charles Devens (1820–91), attorney general under Rutherford B. Hayes; Christian Herter (1895–1966), secretary of state under Dwight Eisenhower; Elliot L. Richardson (1920–99), secretary of health, education and welfare, secretary of defense, and attorney general under Richard Nixon; Henry Kissinger (b.Germany, 1923), secretary of state under Nixon and Gerald Ford and a Nobel Peace Prize winner in 1973; and Robert F. Kennedy (1925–68), attorney general under his brother John and later US senator from New York.

Other federal officeholders include some of the most important figures in American politics. Samuel Adams (1722–1803), the Boston Revolutionary leader, served extensively in the Continental Congress and was later governor of the Bay State. John Hancock (1737–93), a Boston merchant and Revolutionary, was the Continental Congress's first president and later became the first elected governor of the state. In the 19th century, Massachusetts sent abolitionist Charles Sumner (1811–74) to the Senate. As ambassador to England during the Civil War, John Quincy Adams's son Charles Francis Adams (1807–86) played a key role in preserving US-British amity. At the end of the century, Henry Cabot Lodge (1850–1924) emerged as a leading Republican in the US Senate, where he supported regulatory legislation, protectionist tariffs, and restrictive immigration laws, and opposed women's suffrage and the League of Nations; his grandson, also Henry Cabot Lodge (1902–85), was an internationalist who held numerous federal posts and was a US senator. Massachusetts has provided two US

House speakers: John W. McCormack (1891–1980) and Thomas P. "Tip" O'Neill Jr. (1912–94). Other well-known legislators include Edward W. Brooke (b.1919), the first black US senator since Reconstruction, and Edward M. Kennedy (b.1932), President Kennedy's youngest brother and a leading Senate liberal. Paul Tsongas (1941–97), a senator and presidential candidate during the 1992 election, was born in Lowell, Massachusetts. Michael S. Dukakis (b.1933), a former governor of the state and the 1988 Democratic nominee for president, was born in Brookline.

Among other historic colonial and state leaders were John Winthrop (b.England, 1588–1649), a founder of Massachusetts and longtime governor; William Bradford (b.England, 1590–1657), a founder of Plymouth, its governor, and author of its classic history; Thomas Hutchinson (1711–80), colonial lieutenant governor and governor during the 1760s and 1770s; and Paul Revere (1735–1818), the Patriot silversmith-courier, who was later an industrial pioneer.

Literary genius has flourished in Massachusetts. In the 17th century, the colony was the home of poets Anne Bradstreet (1612–72) and Edward Taylor (1645–1729) and of the prolific historian, scientist, theologian, and essayist Cotton Mather (1663–1728). Notables of the 18th century include the theologian Jonathan Edwards (b.Connecticut, 1703–58), poet Phillis Wheatley (b.Senegal, 1753–84), and numerous political essayists and historians. During the 1800s, Massachusetts was the home of novelists Nathaniel Hawthorne (1804–64), Louisa May Alcott (b.Pennsylvania, 1832–88), Horatio Alger (1832–99), and Henry James (b.New York, 1843–1916); essayists Ralph Waldo Emerson (1803–82) and Henry David Thoreau (1817–62); and such poets as Henry Wadsworth Longfellow (b.Maine, 1807–82), John Greenleaf Whittier (1807–92), Oliver Wendell Holmes Sr. (1809–94), James Russell Lowell (1819–91), and Emily Dickinson (1830–86). Classic historical writings include the works of George Bancroft, William Hickling Prescott (1796–1859), John Lothrop Motley (1814–77), Francis Parkman (1823–93), and Henry B. Adams (1838–1918). Among 20th-century notables are novelists John P. Marquand (b.Delaware, 1893–1960) and John Cheever (1912–82); poets Elizabeth Bishop (1911–79), Robert Lowell (1917–77), Anne Sexton (1928–74), and Sylvia Plath (1932–63); and historian Samuel Eliot Morison (1887–1976). In philosophy, Charles Sanders Peirce (1839–1914) was one of the founders of pragmatism; Henry James's elder brother, William (b.New York, 1842–1910), was a pioneer in the field of psychology; and George Santayana (b.Spain, 1863–1952), philosopher and author, grew up in Boston. Mary Baker Eddy (b.New Hampshire, 1821–1910) founded the Church of Christ, Scientist, during the 1870s.

Reformers have abounded in Massachusetts, especially in the 19th century. William Lloyd Garrison (1805–79), Wendell Phillips (1811–84), and Lydia Maria Child (1802–80) were outstanding abolitionists. Lucretia Coffin Mott (1793–1880), Lucy Stone (1818–93), Abigail Kelley Foster (1810–87), Margaret Fuller (1810–50), and Susan Brownell Anthony (1820–1906) were leading advocates of women's rights. Horace Mann (1796–1859), the state secretary of education, led the fight for public education; and Mary Lyon (1797–1849) founded Mount Holyoke, the first women's college.

Efforts to improve the care and treatment of the sick, wounded, and handicapped were led by Samuel Gridley Howe (1801–76), Dorothea Lynde Dix (1802–87), and Clara Barton (1821–1912),

founder of the American Red Cross. The 20th-century reformer and NAACP leader William Edward Burghardt Du Bois (1868–1963) was born in Great Barrington.

Leonard Bernstein (1918–90) was a composer and conductor of worldwide fame. Arthur Fiedler (1894–79) was the celebrated conductor of the Boston Pops Orchestra. Composers include William Billings (1746–1800), Carl Ruggles (1876–1971), and Alan Hovhaness (1911–2000). Charles Bulfinch (1763–1844), Henry H. Richardson (b.Louisiana, 1838–86), and Louis Henri Sullivan (1856–1924) have been among the nation's important architects. Painters include John Singleton Copley (1738–1815), James Whistler (1834–1903), Winslow Homer (1836–1910), and Frank Stella (b.1936); Horatio Greenough (1805–52) was a prominent sculptor.

Among the notable scientists associated with Massachusetts are Nathaniel Bowditch (1773–1838), a mathematician and navigator; Samuel F. B. Morse (1791–1872), inventor of the telegraph; and Robert Hutchins Goddard (1882–1945), a physicist and rocketry pioneer.

Two professors at the Massachusetts Institute of Technology, in Cambridge, have won the Nobel Prize in economics—Paul A. Samuelson (b.Indiana, 1915), in 1970, and Franco Modigliani (b.Italy, 1918–2003), in 1985. Other winners of the Nobel Prize include: Merton Miller (1923–2000), in economics; William Sharpe (b.1934), in economics; Douglass C. North (b.1920), 1993 co-recipient in economics; Elias James Carey (b.1928); Henry Kendall (1926–99), 1990 co-recipient in physics; and Joseph E. Murray (b.1919), the 1990 winner in medicine or physiology.

Massachusetts's most famous journalist has been Isaiah Thomas (1750–1831). Its great industrialists include textile entrepreneurs Francis Lowell (1775–1817) and Abbott Lawrence (1792–1855). Elias Howe (1819–67) invented the sewing machine.

Massachusetts was the birthplace of television journalists Mike Wallace (b.1918) and Barbara Walters (b.1931). Massachusetts-born show business luminaries include director Cecil B. DeMille (1881–1959); actors Walter Brennan (1894–1974), Jack Haley (1901–79), Ray Bolger (1904–84), Bette Davis (1908–84), and Jack Lemmon (1925–2001); and singers Donna Summer (b.1948) and

James Taylor (b.1948). Outstanding among Massachusetts-born athletes was world heavyweight boxing champion Rocky Marciano (Rocco Francis Marchegiano, 1925–69), who retired undefeated in 1956.

MICHIGAN

State of Michigan

ORIGIN OF STATE NAME: Possibly derived from the Fox Indian word *mesikami*, meaning “large lake.”
NICKNAME: The Wolverine State. **CAPITAL:** Lansing. **ENTERED UNION:** 26 January 1837 (26th). **SONG:** “Michigan, My Michigan” (unofficial). **MOTTO:** *Si quaeris peninsulam amoenam circumspice* (If you seek a pleasant peninsula, look about you). **COAT OF ARMS:** In the center, a shield depicts a peninsula on which a man stands, at sunrise, holding a rifle. At the top of the shield is the word “Tuebor” (I will defend), beneath it the state motto. Supporting the shield are an elk on the left and a moose on the right. Over the whole, on a crest, is an American eagle beneath the US motto, *E pluribus unum*. **FLAG:** The coat of arms centered on a dark blue field, fringed on three sides. **OFFICIAL SEAL:** The coat of arms surrounded by the words “The Great Seal of the State of Michigan” and the date “A.D. MDCCCXXXV.” (1835, the year the state constitution was adopted). **BIRD:** Robin. **FISH:** Trout. **FLOWER:** Apple blossom. **TREE:** White pine. **GEM:** Chlorastrolite (Isle Royale Greenstone). **LEGAL HOLIDAYS:** New Year’s Day, 1 January; Birthday of Martin Luther King Jr., 3rd Monday in January; Presidents’ Day, 3rd Monday in February; Memorial Day, last Monday in May; Independence Day, 4 July; Labor Day, 1st Monday in September; Election Day, 1st Tuesday after the first Monday in November in even-numbered years; Veterans’ Day, 11 November; Thanksgiving Day, 4th Thursday in November plus one day; Christmas Day, 25 December. **TIME:** 7 AM EST = noon GMT; 6 AM CST = noon GMT.

¹LOCATION, SIZE, AND EXTENT

Located in the eastern north-central United States, Michigan is the third-largest state E of the Mississippi River and ranks 23rd in size among the 50 states.

The total area of Michigan (excluding Great Lakes waters) is 58,527 sq mi (151,585 sq km), of which land takes up 56,954 sq mi (147,511 sq km) and inland water 1,573 sq mi (4,074 sq km). The state consists of the upper peninsula adjoining three of the Great Lakes—Superior, Huron, and Michigan—and the lower peninsula, projecting northward between Lakes Michigan, Erie, and Huron. The upper peninsula extends 334 mi (538 km) E–W and 215 mi (346 km) N–S; the lower peninsula’s maximum E–W extension is 220 mi (354 km), and its greatest N–S length is 286 mi (460 km).

Michigan’s upper peninsula is bordered on the N and E by the Canadian province of Ontario (with the line passing through Lake Superior, the St. Mary’s River, and Lake Huron); on the S by Lake Huron, the Straits of Mackinac separating the two peninsulas, and Lake Michigan; and on the SW and W by Wisconsin (with the line passing through the Menominee, Brule, and Montreal rivers). The lower peninsula is bordered on the N by Lake Michigan, the Straits of Mackinac, and Lake Huron; on the E by Ontario (with the line passing through Lake Huron, the St. Clair River, Lake St. Clair, and the Detroit River); on the SE by Ontario and Ohio (with the line passing through Lake Erie); on the S by Ohio and Indiana; and on the W by Illinois and Wisconsin (with the line passing through Lake Michigan and Green Bay). The state’s geographic center is in Wexford County, 5 mi (8 km) NNW of Cadillac.

Among the most important islands are Isle Royale in Lake Superior; Sugar, Neebish, and Drummond islands in the St. Mary’s River; Bois Blanc, Mackinac, and Les Cheneaux islands in Lake

Huron; Beaver Island in Lake Michigan; and Belle Isle and Grosse Ile in the Detroit River.

The state’s total boundary length is 1,673 mi (2,692 km). The total freshwater shoreline is 3,121 mi (5,023 km).

²TOPOGRAPHY

Michigan’s two peninsulas are generally level land masses. Flat lowlands predominate in the eastern portion of both peninsulas and in scattered areas elsewhere. The state’s lowest point, 571 ft (174 m), is found in southeastern Michigan along Lake Erie. Higher land is found in the western area of the lower peninsula, where elevations rise to as much as 1,600 ft (500 m); the hilly uplands of the upper peninsula attain elevations of 1,800 ft (550 m). The state’s highest point, at 1,979 ft (603 m), is Mt. Arvon, in Baraga County. The mean elevation is approximately 900 ft (275 m).

Michigan’s political boundaries extend into four of the five Great Lakes, giving Michigan jurisdiction over 16,231 sq mi (42,038 sq km) of Lake Superior, 13,037 sq mi (33,766 sq km) of Lake Michigan, 8,975 sq mi (23,245 sq km) of Lake Huron, and 216 sq mi (559 sq km) of Lake Erie, for a total of 38,459 sq mi (99,608 sq km). In addition, Michigan has about 35,000 inland lakes and ponds, the largest of which is Houghton Lake, on the lower peninsula, with an area of 31 sq mi (80 sq km).

The state’s leading river is the Grand, about 260 mi (420 km) long, flowing through the lower peninsula into Lake Michigan. Other major rivers that flow into Lake Michigan include the St. Joseph, Kalamazoo, Muskegon, Pere Marquette, and Manistee. On the eastern side of the peninsula, the Saginaw River and its tributaries drain an area of some 6,000 sq mi (15,500 sq km), forming the state’s largest watershed. Other important rivers that flow into Lake Huron include the Au Sable, Thunder Bay, and Cheboygan.

In the southeast, the Huron and Raisin rivers flow into Lake Erie. Most major rivers in the upper peninsula (including the longest, the Menominee) flow southward into Lake Michigan and its various bays. Tahquamenon Falls, in the eastern part of the upper peninsula, is the largest of the state's more than 150 waterfalls. Wetlands account for about 15% of the total land area of the state.

Most of the many islands belonging to Michigan are located in northern Lake Michigan and in Lake Huron, although the largest, Isle Royale, about 44 mi (71 km) long by 8 mi (13 km) wide, is found in northern Lake Superior. In northern Lake Michigan, Beaver Island is the largest, while Drummond Island, off the eastern tip of the upper peninsula, is the largest island in the northern Lake Huron area.

Michigan's geological development resulted from its location in what was once a basin south of the Laurentian Shield, a landmass covering most of eastern and central Canada and extending southward into the upper peninsula. Successive glaciers that swept down from the north dumped soil from the shield into the basin and eroded the basin's soft sandstone, limestone, and shale. With the retreat of the last glacier from the area about 6000 BC, the two peninsulas, the Great Lakes, and the islands in these lakes began to emerge, assuming their present shapes about 2,500 years ago.

3 CLIMATE

Michigan has a temperate climate with well-defined seasons. The warmest temperatures and longest frost-free period are found most generally in the southern part of the lower peninsula; Detroit has an average temperature of 49°F (9°C), ranging from 24°F (-4°C) in January to 73°F (22°C) in July. Colder temperatures and a shorter growing season prevail in the more northerly regions; Sault Ste. Marie has an average of 40°F (4°C), ranging from 14°F (-10°C) in January to 64°F (17°C) in July. The coldest temperature ever recorded in the state is -51°F (-46°C), registered at Vanderbilt on 9 February 1934; the all-time high of 112°F (44°C) was recorded at Mio on 13 July 1936. Both sites are located in the interior of the lower peninsula, away from the moderating influence of the Great Lakes.

Detroit had an average annual precipitation of 32.3 in (82 cm). The greatest snowfall is found in the extreme northern areas, where cloud cover created by cold air blowing over the warmer Lake Superior waters causes frequent heavy snow along the northern coast; Houghton and Calumet, on the Keweenaw Peninsula, average 183 in (465 cm) of snow a year, more than any other area in the state. Similarly, Lake Michigan's water temperatures create a snow belt along the west coast of the lower peninsula.

Cloudy days are more common in Michigan than in most states, in part because of the condensation of water vapor from the Great Lakes. Detroit has sunshine, on average, only 35% of the days in December and January, and 53% year-round. The annual average relative humidity at Detroit is 81% at 7 AM, dropping to 60% at 1 PM; at Sault Ste. Marie, the comparable percentages are 85% and 67%, respectively. The southern half of the lower peninsula is an area of heavy thunderstorm activity. Late spring and early summer are the height of the tornado season.

4 FLORA AND FAUNA

Maple, birch, hemlock, aspen, spruce, and fir predominate in the upper peninsula; maple, birch, aspen, pine, and beech in the lower.

Once common in the state, elms have largely disappeared because of the ravages of disease, while the white pine (the state tree) and red pine, which dominated northern Michigan forests and were prime objects of logging operations, have been replaced in cutover lands by aspen and birch. The area south of a line from about Muskegon to Saginaw Bay formerly held the only significant patches of open prairie land (found chiefly in southwestern Michigan) and areas of widely scattered trees, called oak openings. Intensive agricultural development, followed by urban industrial growth, leveled much of this region's forests, although significant wooded acreage remains, especially in the less populated western regions.

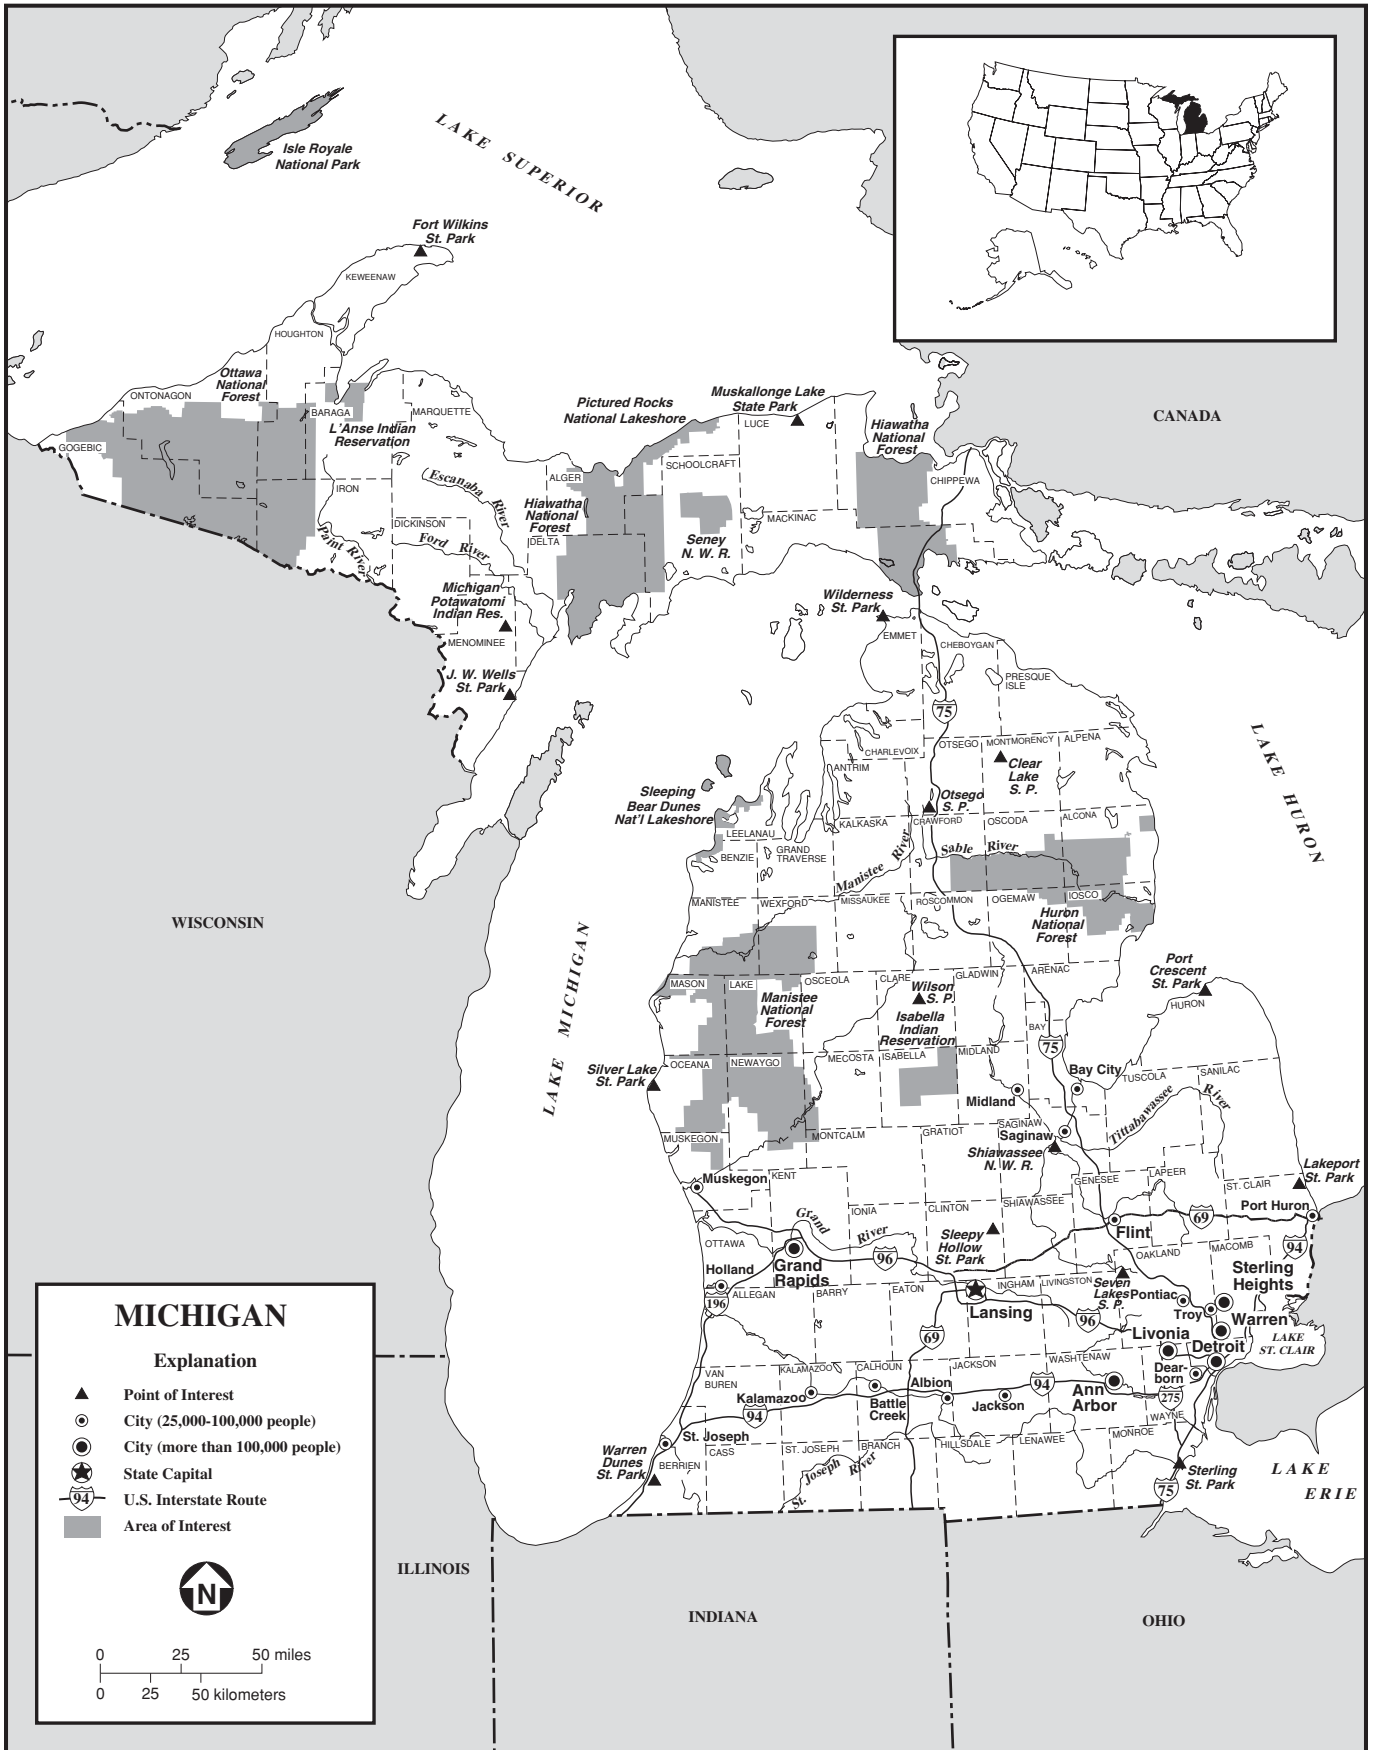

Strawberries, raspberries, gooseberries, blueberries, and cranberries are among the fruit-bearing plants and shrubs that grow wild in many areas of the state, as do mushrooms and wild asparagus. The state flower, the apple blossom, calls to mind the importance of fruit-bearing trees and shrubs in Michigan, but wild flowers also abound, with as many as 400 varieties found in a single county. Eight Michigan plant species were listed by the US Fish and Wildlife Service as threatened or endangered as of April 2006, including the American hart's-tongue fern, dwarf lake iris, Michigan Monkey-flower, and Eastern prairie fringed orchid.

Michigan's fauna, like its flora, has been greatly affected by settlement and, in a few cases, by intensive hunting and fishing. Moose are now confined to Isle Royale, as are nearly all the remaining wolves, which once roamed throughout the state. The caribou and passenger pigeon have been extirpated, but the elk and turkey have been successfully reintroduced in the 20th century. There is no evidence that the state's namesake, the wolverine, was ever found in Michigan, at least in historic times. Despite intensive hunting, the deer population remains high. Other game animals include the common cottontail, snowshoe hare, raccoon, and various squirrels. In addition to the raccoon, important native furbearers are the river otter and the beaver, once virtually exterminated but now making a strong comeback.

More than 300 types of birds have been observed. Aside from the robin (the state bird), the most notable bird is Kirtland's warbler, which nests only in a 60-sq-mi (155-sq-km) section of jack-pine forest in north-central Michigan. Ruffed grouse, bobwhite quail, American woodcock, and various ducks and geese are hunted extensively. Populations of ring-necked pheasant, introduced in 1895, have dropped at an alarming rate in recent decades. Reptiles include the painted turtle and the massasauga, the state's only poisonous snake.

Whitefish, perch, and lake trout (the state fish) are native to the Great Lakes while perch, bass, and pike are indigenous to inland waters. In 1877, the carp was introduced, with such success that it has since become a nuisance. Rainbow and brown trout have also been planted, and in the late 1960s, the state enjoyed its most spectacular success with the introduction of several species of salmon.

The first Michigan list of threatened or endangered animals in 1976 included 64 species, 15 endangered and 49 threatened. In 2006, the US Fish and Wildlife Service listed 13 Michigan animals as threatened or endangered. These included the Indiana bat, two species of beetle, two species of butterfly, gray wolf, bald eagle, piping plover, and Kirtland's warbler.

5 ENVIRONMENTAL PROTECTION

The Michigan Department of Natural Resources (DNR) is the state's 4th-largest department employing approximately 3,700 persons. It is responsible for the administration of hundreds of programs affecting every aspect of the environment. These programs are based on state and federal laws calling for the protection and management of natural resources, including: air, water, fish, wildlife, recreational activities, wetlands, forests, minerals, oil, and gas. The regulatory programs operated by the DNR conserve and manage natural resources by controlling access or limiting their use and removal. Most of these programs rely on permit or license systems such as hunting or fishing licenses, forest use permits, and air/wastewater discharge permits.

Responding to citizens' concerns and new federal legislation, Michigan enacted programs to address water and air pollution as well as waste problems. At least 10 major environmental programs were established under Michigan law during the 1970s and 1980s, directing the DNR to assume new responsibilities and authorities. These included the Wetland Protection Act of 1980, Inland Lakes and Streams Act, the Resource Recovery Act, the Solid Waste Management Act, and the Hazardous Waste Management Act. In addition, changes in administrative rules and amendments to existing statutes greatly expanded the scope of some programs such as air and water pollution control (Air Pollution Control Act and Water Resources Commission Act). These legislated changes, coupled with reorganization measures enacted by executive order, greatly expanded the state's role in environmental protection matters and substantially increased the scope of DNR's mission.

Governor William Milliken decided Michigan would be better served if all environmental programs were under one roof. Executive Order 1973-2 transferred three programs from the Department of Public Health to the DNR, including sewage system maintenance and certification; solid waste disposal; and licensing of septic tank cleaners. Further transfers were accomplished under Executive Order 1973-2a, which changed the status of the Water Resources Commission (WRC), making it subordinate to the Natural Resources Commission (NRC). Additionally, Executive Order 1973-2a transferred the Air Pollution Control Commission to the DNR under the jurisdiction of the NRC. The Executive Order divided the DNR for the first time into two branches: the natural resources branch, and the environmental protection branch. The Executive Orders of 1973 clearly consolidated and defined the DNR's environmental protection responsibilities.

As the 1970s drew to a close, Michigan enacted two major pollution control laws: the Solid Waste Management Act and the Hazardous Waste Management Act. These acts provide the legal basis for the separate management of hazardous wastes under a detailed regulatory program. The two waste management laws substantially increased the DNR's enforcement and administrative responsibilities. In addition to these two acts, several other laws were enacted or amended by the legislature in the late 1970s and 1980s which had a major impact on the Department. For example, the Environmental Response Act provides for the identification of sites of environmental contamination throughout the state and an appropriation procedure to support the cleanup of contamination sites in the state. Other programs created by statute included the Clean Michigan Fund and the Leaking Underground Storage

Tanks Act. Each of these statutes required the DNR to assume new program responsibilities and authorities in the 1980s.

As the policy body over the DNR, the NRC consists of seven members appointed by the governor, with the advice of the Senate. The NRC sets the overall direction of the department and hires the director to carry out its policies. The department is organized both programmatically and geographically. The three program areas, each headed by a deputy director, include: resource management; environmental protection; and policy, budget, and administration. The three geographical regions split the state into the north, central, and south zones, each headed by a deputy director. The deputy directors report to the director of the DNR.

The mission of the department is to conserve and develop the state's natural resources and to protect and enhance the state's environmental quality in order to provide clean air, clean water, productive land, and healthy life. Additionally, the department seeks to provide quality recreational opportunities to the people of Michigan through the effective management of state recreational lands and parks, boating facilities, and population of fish and wildlife.

In 2003, 101.6 million pounds of toxic chemicals were released in the state. In 2003, Michigan had 343 hazardous waste sites listed in the US Environment Protection Agency (EPA) database, 66 of which were on the National Priorities List as of 2006, including Shiawassee River, the Clare City Water Supply, and the Sturgis Municipal Wells. In 2006, Michigan ranked at fifth in the nation for the highest number of sites on the National Priority List. In 2005, the EPA spent over \$21.5 million through the Superfund program for the cleanup of hazardous waste sites in the state. The same year, federal EPA grants awarded to the state included \$46.3 million for the state clean water revolving fund and \$33.9 million for the drinking water revolving fund.

6 POPULATION

Michigan ranked eighth in population in the United States with an estimated total of 10,120,860 in 2005, an increase of 1.8% since 2000. Between 1990 and 2000, Michigan's population grew from 9,295,297 to 9,938,444, an increase of 6.9%. The population is projected to reach 10.59 million by 2015 and 10.71 million by 2025. The population density in 2004 was 178.5 persons per sq mi.

Michigan was never inhabited by more than a few thousand Indians. As late as 1810, the non-Indian population of Michigan Territory was only 4,762. The late 1820s marked the start of steady, often spectacular, growth. The population increased from 31,639 people in 1830 to 212,267 in 1840 and 397,654 in 1850. Subsequently, the state's population grew by about 400,000 each decade until 1910, when its population of 2,810,173 ranked eighth among the 46 states. Industrial development sparked a sharp rise in population to 4,842,325 by 1930, pushing Michigan ahead of Massachusetts into seventh place.

In 2004, the median age of Michigan's population was 36.6. In the same year, 25.1% of the on under age 18 while 12.3% was age 65 or older. Approximately half of the state's population is concentrated in the Detroit metropolitan area.

Detroit has always been Michigan's largest city since its founding in 1701, but its growth, like the state's, was slow until well into the 19th century. The city's population grew from 21,019 in 1850 to 285,704 in 1900, when it ranked as the 13th-largest city

in the country. Within the next 30 years, the booming automobile industry pushed the city up into fourth place, with a population of 1,568,662 in 1930. Since 1950, when the total reached 1,849,568, Detroit has lost population, dropping to 1,514,063 in 1970, 1,203,369 in 1980 and to 1,028,000 in 1990, when it held seventh place among US cities. The 2004 population was estimated at 900,198, putting Detroit in 11th place. As Detroit lost population, however, many of its suburban areas grew at an even greater rate. The Detroit metropolitan area totaled an estimated 4,493,165 in 2004, up from 4,320,203 in 1995 and 3,950,000 in 1960.

Other Michigan cities with estimated 2004 populations in excess of 100,000 include Grand Rapids with a population of 195,115; Warren, 136,118; Sterling Heights, 127,476; Flint, 119,716; Lansing (the capital), 116,941; and Ann Arbor, 113,567.

7 ETHNIC GROUPS

The 2000 census counted about 58,479 American Indians, including Eskimos and Aleuts. Most were scattered across the state, with a small number concentrated on the four federal reservations,

comprising 16,635 acres (6,732 hectares). In the 1990s the Ottawa, Ojibwa, and Potawatomi were the principal groups with active tribal organizations. In 2004, 0.6% of the population was American Indian.

In 2000, the black population of Michigan totaled an estimated 1,412,742. In 1980, nearly two-thirds lived in Detroit, where they made up 75.7% of the population, the highest percentage in any US city of 1 million or more. Detroit, which experienced severe race riots in 1943 and 1967, has had a black mayor since 1974. In 2004, 14.3% of the state's residents were black.

The 2000 census found that 523,589 state residents (5.3%) were foreign born, up from 355,393 (3.8%) in 1990. There were 323,877 Hispanics and Latinos living in the state in 2000, of which 220,769 were of Mexican descent. In 2004, 3.7% of the state's population was of Hispanic or Latino origin. The state's Asian population has been increasing: as of 2000, the total number of Asians was 176,510. The census reported 54,631 Asian Indians (up from 18,100 in 1990), 17,377 Filipinos, 33,189 Chinese (up from 17,100 in 1990), 20,886 Koreans, 11,288 Japanese, and 13,673 Vietnam-

ese (up from 5,229 in 1990). In 2004, 2.2% of the population was Asian. Pacific Islanders numbered 2,692 in 2000. In 2004, 1.4% of the population reported origin of two or more races.

Although state residents of first- or second-generation European descent are, almost without exception, decreasing in number and proportion, their influence remains great. Detroit continues to have numerous well-defined ethnic neighborhoods, and Hamtramck, a city surrounded by Detroit, is still dominated by its Polish population. Elsewhere in Michigan, Frankenmuth is the site of an annual German festival, and the city of Holland has an annual tulip festival that attracts about 400,000 people each spring. In the upper peninsula, the Finnish culture dominates in rural areas; in the iron and copper mining regions, descendants of immigrants from Cornwall in England, the original mining work force, and persons of Scandinavian background predominate.

⁸LANGUAGES

Before white settlement, Algonkian-language tribes occupied what is now Michigan, with the Menomini and Ojibwa in the upper peninsula and Ottawa on both sides of the Straits of Mackinac. Numerous place-names recall their presence: Michigan itself, Mackinaw City, Petoskey, Kalamazoo, Muskegon, Cheboygan, and Dowagiac.

Except for the huge industrial area in southeastern Michigan, English in the state is remarkably homogeneous in its retention of the major Northern dialect features of upper New York and western New England. Common are such Northern forms as *pail*, *wishbone*, *darning needle* (dragonfly), *mouth organ* (harmonica), *sick to the stomach*, *quarter to four* (3:45), and *dove* as past tense of *dive*. Common also are such pronunciations as the /ah/ vowel in *fog*, *frog*, and *on*; the /aw/ vowel in *horrid*, *forest*, and *orange*; *creek* as /krik/; *root* and *roof* with the vowel of *put*; and *greasy* with an /s/ sound. *Swale* (a marsh emptying into a stream) and *clock shelf* (mantel) are dying Northern words not carried west of Michigan. *Pank* (to pack down, as of snow) is confined to the upper peninsula, and *pasty* (meat-filled pastry) is borrowed from Cornish miners and heard in the upper peninsula and a few other areas. A minister is a *dominie* in the Dutch area around Holland and Zeeland.

Southern blacks have introduced into the southeastern automotive manufacturing areas a regional variety of English that, because it has class connotations in the North, has become a controversial educational concern. Three of its features are perhaps more widely accepted than others: the coalescence of /e/ and /i/ before a nasal consonant, so that *pen* and *pin* sound alike; the loss of /r/ after a vowel, so that *cart* and *cot* also sound alike; and the lengthening of the first part of the diphthong /ai/, so that *time* and *Tom* sound alike, as do *ride* and *rod*.

In 2000, 91.6% of the state's population five years old or older spoke only English at home, down from 93.4% in 1990.

The following table gives selected statistics from the 2000 Census for language spoken at home by persons five years old and over. The category "Other Indo-European languages" includes Albanian, Gaelic, Lithuanian, and Rumanian. The category "Other Slavic languages" includes Czech, Slovak, and Ukrainian. The category "Other Asian languages" includes Dravidian languages, Malayalam, Telugu, Tamil, and Turkish. The category "Other Indic languages" includes Bengali, Marathi, Punjabi, and Romany.

LANGUAGE	NUMBER	PERCENT

⁹RELIGIONS

The Roman Catholic Church was the only organized religion in Michigan until the 19th century. Detroit's St. Anne's parish, established in 1701, is the second-oldest Catholic parish in the country. In 1810, a Methodist society was organized near Detroit. After the War of 1812, as settlers poured in from the east, Presbyterian, Congregational, Baptist, Episcopal, and Quaker churches were founded. The original French Catholics, reduced to a small minority by the influx of American Protestants, were soon reinforced by the arrival of Catholic immigrants from Germany, Ireland, and, later, from eastern and southern Europe. The Lutheran religion was introduced by German and Scandinavian immigrants; Dutch settlers were affiliated with the Reformed Church in America. The first Jewish congregations were organized in Detroit by German Jews, with a much greater number of eastern European Jews arriving toward the end of the 1800s. The Orthodox Christian Church and the Islamic religion have been introduced by immigrants from the Near East during the 20th century.

Michigan had 2,265,286 Roman Catholics in 2004; with 1,481,866 in the archdiocese of Detroit. Among Protestant denominations, the largest groups are the Missouri Synod Lutherans, with about 244,231 adherents (in 2000), and the United Methodists, with about 171,916 adherents (in 2004). Evangelical Lutherans numbered about 160,836 adherents in 2000. The Christian Reformed Church had about 112,711 members that year and the Presbyterian Church USA had 104,471. The Seventh Day Adventists, who had their world headquarters in Battle Creek from 1855 to 1903, numbered 37,712 in 2000. The Jewish community had about 110,000 members. Over 5.7 million people (about 58% of the population) were not counted as members of any religious organization.

¹⁰TRANSPORTATION

Because of Michigan's location, its inhabitants have always depended heavily on the Great Lakes for transportation. Not until the 1820s did land transportation systems begin to be developed. Although extensive networks of railroads and highways now reach

into all parts of the state, the Great Lakes remain major avenues of commerce.

The first railroad company in the Midwest was chartered in Michigan in 1830, and six years later the Erie and Kalamazoo, operating between Toledo, Ohio, and Adrian, became the first railroad in service west of the Appalachians. Between 1837 and 1845, the state government sought to build three lines across southern Michigan, before abandoning the project and selling the two lines it had partially completed to private companies. The pace of railroad construction lagged behind that in other Midwestern states until after the Civil War. Only then did the combination of federal and state aid, and Michigan's booming economy lead to an enormous expansion in trackage, from fewer than 800 mi (1,300 km) in 1860 to a peak of 9,021 mi (14,518 km) in 1910. With the economic decline of northern Michigan and the resulting drop in railroad revenues, Class I trackage declined to 2,752 rail mi (4,430 km) by 2003, out of a total of 4,495 rail mi (7,236 km) in that year. A total of 23 railroads provided freight service in the state as of 2003, of which four were Class I railroads. The Michigan state government, through the Department of Transportation, has helped to revive the railroad system through its Rail Program. Most railroad passenger service is provided by Amtrak, which as of 2006, provided service to 23 stations in the state, connecting them to Chicago.

Railroads have been used only to a limited degree in the Detroit area as commuter carriers, although efforts have been made to improve this service. In the early 1900s, more than 1,000 mi (1,600 km) of inter-urban rail lines provided rapid transit service in southern Michigan, but automobiles and buses drove them out of business, and the last line shut down in 1934. Street railway service began in a number of cities in the 1860s, with Detroit taking over its street railways in 1922. Use of these public transportation systems declined sharply after World War II. By the 1950s, streetcars had been replaced by buses, but by 1960 many small communities had abandoned city bus service altogether. During the 1970s, with massive government aid, bus service was restored to many cities and was improved in others, and the number of riders generally increased.

As of 2004, the state had 122,382 mi (197,035 km) of roads. Major expressways included I-94 (Detroit to Chicago), I-96 (Detroit to Grand Rapids), and I-75 (from the Ohio border to Sault Ste. Marie). In 2004, there were some 4.632 million registered passenger cars, about 3.613 million trucks of all types, around 10,000 buses, and some 227,000 motorcycles. Licensed drivers numbered 7,103,404 during that same year.

The completion in 1957 of the Mackinac Bridge, the fourth-longest suspension span in the world, eliminated the major barrier to easy movement between the state's two peninsulas. The International Bridge at Sault Ste. Marie, the Blue-Water Bridge at Port Huron, the Ambassador Bridge at Detroit, and the Detroit–Windsor Tunnel link Michigan with Canada.

The opening of the St. Lawrence Seaway in 1959 made it possible for a large number of oceangoing vessels to dock at Michigan ports. In 2004, the port of Detroit handled 16.858 million tons of cargo making it the 42nd-busiest port in the United States. Other major ports in Michigan that same year were Presque Isle, which handled, 10.134 million tons, while Escanaba handled 6.620 million tons, and the limestone-shipping port of Calcite handled

8.949 million tons. In 2003, waterborne shipments totaled 66.387 million tons.

Michigan was a pioneer in developing air transportation service. The Ford Airport at Dearborn in the 1920s had one of the first air passenger facilities and was the base for some of the first regular airmail service. In 2005, Michigan had a total of 485 public and private-use aviation-related facilities. This included 381 airports, 95 heliports, 2 STOLports (Short Take-Off and Landing), and 7 seaplane bases. The state's major airport is Detroit Metropolitan Wayne County Airport. In 2004, the airport had 17,046,176 enplaned passengers, making it the 11th-busiest airport in the United States.

11 HISTORY

Indian hunters and fishermen inhabited the region now known as Michigan as early as 9000 BC; these peoples were making use of copper found in the upper peninsula—the first known use of a metal by peoples anywhere in the western hemisphere. Around 1000 BC, their descendants introduced agriculture into southwestern Michigan. In the latter part of the prehistoric era, the Indians appear to have declined in population.

In the early 17th century, when European penetration began, Michigan's lower peninsula was inhabited by tribes of Native Americans who may have moved west of Lake Michigan for temporary periods during periods of war. In the upper peninsula there were small bands of Ojibwa along the St. Marys River and the Lake Michigan shore; in the west, Menomini Indians lived along the present Michigan-Wisconsin border. Both tribes were of Algonkian linguistic stock, as were most Indians who later settled in the area, except for the Winnebago of the Siouan group in the Green Bay region of Lake Michigan, and the Huron of Iroquoian stock in the Georgian Bay area of Canada. In the 1640s, the Huron were nearly wiped out by other Iroquois tribes from New York, and the survivors fled westward with their neighbors to the north, the Ottawa Indians. Eventually, both tribes settled at the Straits of Mackinac before moving to the Detroit area early in the 18th century. During the same period, the Potawatomi and Miami Indians moved from Wisconsin into southern Michigan.

For two centuries after the first Europeans came to Michigan, the Indians remained a vital force in the area's development. They were the source of the furs that the whites traded for, and they also were highly respected as potential allies when war threatened between the rival colonial powers in North America. However, after the War of 1812, when the fur trade declined and the possibility of war receded, the value of the Indians to the white settlers diminished. Between 1795 and 1842, Indian lands in Michigan were ceded to the federal government, and the Huron, Miami, and many Potawatomi were removed from the area. Some Potawatomi were allowed to remain on lands reserved for them, along with most of the Ojibwa and Ottawa Indians in the north.

The first European explorer known to have reached Michigan was a Frenchman, Etienne Brulé, who explored the Sault Ste. Marie area around 1620. Fourteen years later, Jean Nicolet explored the Straits of Mackinac and the southern shore of the upper peninsula en route to Green Bay. Missionary and fur trading posts, to which were later added military forts, were established at Sault Ste. Marie by Father Jacques Marquette in 1668, and then at St. Ignace in 1671. By the 1860s, several temporary posts had been

established in the lower peninsula. In 1701, Antoine Laumet de la Mothe Cadillac founded a permanent settlement at the site of present-day Detroit.

Detroit and Michigan grew little at first, however, because the rulers of the French colony of New France were obsessed with the fur trade, which did not attract large numbers of settlers. After France's defeat in the French and Indian War, fears that the British would turn the area over to English farmers from the coastal colonies, with the consequent destruction of the Indian way of life, led the Indians at Detroit to rebel in May 1763, under the leadership of the Ottawa chief Pontiac. Other uprisings resulting from similar grievances soon spread throughout the west but ended in failure for the Indians. Pontiac gave up his siege of Detroit after six months, and by 1764 the British were in firm control. Nevertheless, the British authorities did not attempt to settle the area. The need to protect the fur trade placed the people of Michigan solidly on the British side during the American Revolution, since a rebel triumph would likely mean the migration of American farmers into the west, converting the wilderness to cropland. The British occupied Michigan and other western areas for 13 years after the Treaty of Paris in 1783 had assigned these territories to the new United States. The US finally got possession of Michigan in the summer of 1796.

Michigan became a center of action in the War of 1812. The capture of Detroit by the British on 16 August 1812 was a crushing defeat for the Americans. Although Detroit was recaptured by the Americans in September 1813, continued British occupation of the fort on Mackinac Island, which they had captured in 1812, enabled them to control most of Michigan. The territory was finally returned to American authority under the terms of the Treaty of Ghent at the end of 1814. With the opening in 1825 of the Erie Canal, which provided a cheap, all-water link between Michigan and New York City, American pioneers turned their attention to these northern areas, and during the 1820s settlers for the first time pushed into the interior of southern Michigan.

Originally part of the Northwest Territory, Michigan had been set aside in 1805 as a separate territory, but with boundaries considerably different from those of the subsequent state. On the south, the territory's boundary was a line set due east from the southernmost point of Lake Michigan; on the north, only the eastern tip of the upper peninsula was included. In 1818 and 1834, areas as far west as Iowa and the Dakotas were added to the territory for administrative purposes. By 1833, Michigan had attained a population of 60,000, qualifying it for statehood. The territorial government's request in 1834 that Michigan be admitted to the Union was rejected by Congress, however, because of a dispute over Michigan's southern boundary. When Indiana became a state in 1816, it had been given a 10-mi (16-km) strip of land in southwestern Michigan, and Michigan now refused to accede to Ohio's claim that it should be awarded lands in southeastern Michigan, including the present site of Toledo. In 1835, Michigan militia defeated the efforts of Ohio authorities to take over the disputed area during the so-called Toledo War, in which no one was killed. Nevertheless, Ohio's superior political power in Congress ultimately forced Michigan to agree to relinquish the Toledo Strip. In return, Congress approved the state government that the people of Michigan had set up in 1835. As part of the compromise that finally brought Michigan into the Union on 26 January 1837, the new

state was given land in the upper peninsula west of St. Ignace as compensation for the loss of Toledo.

Youthful Stevens T. Mason, who had led the drive for statehood, became Michigan's first elected governor, but he and the Democratic Party fell out of grace when the new state was plunged into financial difficulties during the depression of the late 1830s. The party soon returned to power and controlled the state until the mid-1850s. In Michigan, as elsewhere, it was the slavery issue that ended Democratic dominance. In July 1854, antislavery Democrats joined with members of the Whig and Free-Soil parties at a convention in Jackson to organize the Republican Party. In the elections of 1854, the Republicans swept into office in Michigan, controlling the state, with rare exceptions, until the 1930s.

Abraham Lincoln was not the first choice of Michigan Republicans for president in 1860, but when he was nominated, they gave him a solid margin of victory that fell and again in 1864. Approximately 90,000 Michigan men served in the Union army, taking part in all major actions of the Civil War. Michigan's Zachariah Chandler was one of the leaders of the Radical Republicans in the US Senate who fought for a harsh policy toward the South during Reconstruction.

Michigan grew rapidly in economic importance. Agriculture sparked the initial growth of the new state and was responsible for its rapid increase in population. By 1850, the southern half of the lower peninsula was filling up, with probably 85% of the state's population dependent in some way on agriculture for a living. Less than two decades later, exploitation of vast pine forests in northern Michigan had made the state the top lumber producer in the United States. Settlers were also attracted to the same area by the discovery of rich mineral deposits, which made Michigan for a time the nation's leading source of iron ore, copper, and salt.

Toward the end of the 19th century, as timber resources were being exhausted and as farming and mining reached their peak stages of development, new opportunities in manufacturing opened up. Such well-known Michigan companies as Kellogg, Dow Chemical, and Upjohn had their origins during this period. The furniture industry in Grand Rapids, the paper industry in Kalamazoo, and numerous other industries were in themselves sufficient to ensure the state's increasing industrial importance. But the sudden popularity of Ransom E. Olds's Oldsmobile runabout, manufactured first in Lansing, inspired a host of Michiganders to produce similar practical, relatively inexpensive automobiles. By 1904, the most successful of the new models, Detroit's Cadillac and the first Fords, together with the Oldsmobile, had made Michigan the leading automobile producer in the country—and, later, in the world. The key developments in Michigan's auto industry were the creation of General Motors by William C. Durant in 1908; Henry Ford's development of the Model T in 1908, followed by his institution of the moving assembly line in 1913–14; and Walter P. Chrysler's 1925 formation of the automobile corporation named after him.

Industrialization brought with it urbanization; the census of 1920 for the first time showed a majority of Michiganders living in towns and cities. Nearly all industrial development was concentrated in the southern third of the state, particularly the southeastern area, around Detroit. The northern two-thirds of the state, where nothing took up the slack left by the decline in lumber and mining output, steadily lost population and became increasingly troubled

economically. Meanwhile, the Republican Party, under such progressive governors as Fred Warner and Chase Osborn—and, in the 1920s, under a brilliant administrator, Alexander Groesbeck—showed itself far better able than the Democratic opposition to adjust to the complexities of a booming industrial economy.

The onset of the depression of the 1930s had devastating effects in Michigan. The market for automobiles collapsed; by 1932, half of Michigan's industrial workers were unemployed. The ineffectiveness of the Republican state and federal governments during the crisis led to a landslide victory for the Democrats. In traditionally Republican areas of rural Michigan, the defection to the Democratic Party in 1932 was only temporary, but in the urban industrial areas, the faith of the factory workers in the Republican Party was, for the great majority, permanently shaken. These workers, driven by the desire for greater job security, joined the recruiting campaign launched by the new Congress of Industrial Organizations (CIO). By 1941, with the capitulation of Ford Motor, the United Automobile Workers (UAW) had organized the entire auto industry, and Michigan had been converted to a strongly pro-union state.

Eventually, the liberal leadership of the UAW and of other CIO unions in the state allied itself with the Democratic Party to provide the funds and organization the party needed to mobilize worker support. The coalition elected G. Mennen Williams governor in 1948 and reelected him for five successive two-year terms. By the mid-1950s, the Democrats controlled virtually all statewide elective offices. Because legislative apportionment still reflected an earlier distribution of population, however, the Republicans maintained their control of the legislature and frustrated the efforts of the Williams administration to institute social reforms. In the 1960s, as a result of US Supreme Court rulings, the legislature was reapportioned on a strictly equal-population basis. This shifted a majority of legislative seats into urban areas, enabling the Democrats generally to control the legislature at that time.

In the meantime, Republican moderates, led by George Romney, gained control of their party's organization. Romney was elected governor in 1962 and served until 1969, when he was succeeded by William G. Milliken, who held the governorship for 14 years. When Milliken chose not to run in the 1982 election, the statehouse was captured by the Democrats, ending 20 years of Republican rule. The new governor, James J. Blanchard, faced the immediate tasks of saving Michigan from bankruptcy and reducing the unemployment rate, which had averaged more than 15% in 1982 (60% above the US average).

The nationwide recession of the early 1980s hit Michigan harder than most other states because of its effect on the auto industry, which had already suffered heavy losses primarily as a result of its own inability to foresee the demise of the big luxury cars and because of the increasing share of the American auto market captured by foreign, mostly Japanese, manufacturers. In 1979, Chrysler had been forced to obtain \$1.2 billion in federally guaranteed loans to stave off bankruptcy, and during the late 1970s and the first two years of the 1980s, US automakers were forced to lay off hundreds of thousands of workers, tens of thousands of whom left the state. Many smaller businesses, dependent on the auto industry, closed their doors, adding to the unemployment problem and to the state's fiscal problem; as the tax base shrank, state revenues plummeted, creating a budget deficit of nearly \$1 billion. Two

months after he took office in January 1983, Governor Blanchard was forced to institute budget cuts totaling \$225 million and lay off thousands of government workers; at his urging, the state legislature increased Michigan's income tax by 38%.

As the recession eased in 1983, Michigan's economy showed some signs of improvement. The automakers became profitable, and Chrysler was even able to repay its \$1.2 billion in loans seven years before it was due, rehire 100,000 workers, and make plans to build a \$500-million technological center in the northern Detroit suburb of Auburn Hills. By May 1984, Michigan's unemployment rate had begun to drop, but the state faced the difficult task of restructuring its economy to lessen its dependence on the auto industry.

By the late 1980s, there were signs that Michigan had succeeded in diversifying its economy. Fewer than one in four wage earners worked in factories in 1988, a drop from 30% in 1978. Despite continued layoffs and plant closings by auto manufacturers between 1982 and 1988, Michigan added half a million more jobs than it lost. Many of the new jobs were in small engineering and applied technology companies, which found opportunities in the big manufacturers' efforts to automate. The state established a \$100-million job retraining program to upgrade the skills of displaced factory workers, and contributed \$5 million to a joint job training program created by General Motors and the United Automobile Workers. In the mid-1990s, the manufacture of transportation equipment was still Michigan's most important industry, with 28% of domestic automobiles produced in the state. Employment, wages, exports, and housing starts were all on the rise.

In the late 1990s prosperity across the nation had boosted Americans' appetite for new automobiles, including gas-guzzling sports utility vehicles. Combined with sales of other light trucks, SUVs bolstered the Big Three, now leaner and more competitive than in the pre-recession era. In 1998 Chrysler Corporation merged with German-based Daimler-Benz to form DaimlerChrysler, with headquarters in Michigan and Germany. Construction in the state was boosted by numerous road improvement projects during the late 1990s, a new Northwest Airlines terminal at Detroit Metropolitan Airport, voter-approved casinos in Detroit, and demand for new housing. In 1999, the robust economy had resulted in a low unemployment rate of 3.8%. In 2000 the state led the nation in home ownership, exceeding the national average by as much as 10%.

Republican governor John Engler, first elected in 1990 and winning his third term in 1998, aggressively courted business during his administration. He was criticized by some for doing so at the expense of the state's environment. Engler had also, early on, garnered intense opposition to his plan to cut the state's welfare role. Nevertheless, he continued to be reelected. Among the state's challenges in 2000 were education reform (and the question of school vouchers), preserving farmlands in the face of development and urban sprawl, and, in conjunction with neighboring states and Canada, further cleanup and conservation of the Great Lakes system.

In 2002, Jennifer Granholm was elected Michigan's first female governor and the first Democrat to win the office since John Engler took office. In 2003, Granholm pledged to balance the state's budget (the state had a \$1.8 billion deficit for fiscal year 2003/04), planned to create a corridor to attract technology companies to

Michigan (particularly in the biotech and pharmaceutical sectors), to support education, and to purchase prescription drugs in bulk. In 2005, Granholm announced a plan (the MI Opportunity Partnership) to fill 90,000 job vacancies. The plan allows for job training to place out-of-work citizens in such needed positions as health care and the skilled trades.

Michigan was one of the states affected by the 14 August 2003 massive power blackout in Canada, the Northeast, and Midwestern states. The largest electrical outage in US history affected 9,300 square miles and a population of over 50 million.

12 STATE GOVERNMENT

Michigan has had four constitutions. The first, adopted in 1835 when Michigan was applying for statehood, was followed by constitutions adopted in 1850, 1908, and 1963. By January 2005, there were 25 amendments.

The legislature consists of a Senate of 38 members, elected for terms of four years, and a House of Representatives of 110 members, elected for two-year terms. The legislature meets annually, beginning the second Wednesday of January, for a session of indeterminate length. Special sessions may only be called by the governor. Legislation may be adopted by a majority of each house, but to override a governor's veto a two-thirds vote of the elected and serving members of each house is required. A legislator must be at least 21 years old, a US citizen, and a qualified voter of the district in which he or she resides. The legislative salary was \$79,650 in 2004.

Elected executive officials include the governor and lieutenant governor (who run jointly), secretary of state, and attorney general, all serving four-year terms. Elections are held in even-numbered years between US presidential elections. The governor and

lieutenant governor must be at least 30 years old and must have been registered voters in the state for at least four years prior to election. As of December 2004, the governor's salary was \$177,000. The governor, who is limited to serving two consecutive terms, appoints the members of the governing boards and/or directors of executive departments, with the exception of the Department of Education, whose head is appointed by the elected State Board of Education. The trustees of Michigan State University, the University of Michigan, and Wayne State University are also elected by the state's voters. Trustees serve eight-year terms.

Legislative action is completed when a bill has been passed by both houses of the legislature and signed by the governor. A bill also becomes law if not signed by the governor after a 14-day period when the legislature is in session. The governor may stop passage of a bill by vetoing it or, if the legislature adjourns before the 14-day period expires, by refusing to sign it.

The constitution may be amended by a two-thirds vote of both houses of the legislature and a majority vote at the next general election. An amendment also may be proposed by registered voters through petition and submission to the general electorate; the petition must be signed by 10% of total voters for all candidates at the last gubernatorial election. Every 16 years, the question of calling a convention to revise the constitution must be submitted to the voters; the question was first put on the ballot in 1978 and was rejected.

A voter in Michigan must be a US citizen, at least 18 years old, and must have been a resident of the state and city or township for 30 days prior to election day. Those confined to jail after conviction and sentencing are ineligible to vote, but convicted felons may vote after completing their entire sentence, including parole and probation.

Michigan Presidential Vote by Political Parties, 1948–2004

*Won US presidential election

13 POLITICAL PARTIES

From its birth in 1854 through 1932, the Republican Party dominated state politics, rarely losing statewide elections and developing strong support in all parts of the state, both rural and urban. The problems caused by the economic depression of the 1930s revitalized the Democratic Party and made Michigan a strong two-party state. Democratic strength was concentrated in metropolitan Detroit, while Republicans maintained their greatest strength in "outstate" areas, except for the mining regions of the upper peninsula, where the working class, hit hard by the depression, supported the Democrats.

Most labor organizations, led by the powerful United Automobile Workers union, have generally supported the Democratic Party since the 1930s. But in recent years, moderate Republicans have had considerable success in attracting support among previously Democratic voters.

Among minor parties, only Theodore Roosevelt's Progressive Party, which captured the state's electoral vote in 1912, has succeeded in winning a statewide contest. George Wallace captured 10% of the total vote cast for president in 1968; Ross Perot almost doubled that showing in 1992 with 19% of the vote.

Between 1948 and 1992, the Republican candidate for president carried Michigan in nine out of 13 elections, but Michiganians gave Democrat Bill Clinton 44% of the vote in 1992 and 52% in 1996. In 2000, Democrat Al Gore received 51% of the presidential vote to Republican George W. Bush's 47%. Green Party candidate Ralph Nader won 2%. In 2004, Democratic challenger John Kerry won 51% of the vote to Bush's 48%. The state had 17 electoral votes in the 2004 presidential election, a decrease of 1 over 2000.

Republican governor John Engler served three terms as governor, ending in January 2003. (Michigan limits its governors to serving two consecutive terms, but the law became effective after Engler's election, so he was grandfathered.) In November 2002, Democrat Jennifer Granholm became Michigan's first female governor. In 2004 there were 7,164,000 registered voters; there is no party registration in the state.

Four-term Democratic Senator Carl Levin was reelected in 2002. Republican Spencer Abraham was elected to the Senate in 1994, replacing retiring Democrat Donald Riegel. Abraham sought a second term in 2000, but failed to win reelection. He was named President George W. Bush's Secretary of Energy in 2001. Democrat Debbie Stabenow, Michigan's first female US senator, defeated Abraham in 2000 for the Senate seat. After the 2004 elections, the state's 15-member US House delegation consisted of six Democrats and nine Republicans. On the state level, in mid-2005 there were 22 Republicans and 16 Democrats in the state Senate, and 58 Republicans and 52 Democrats in the House.

14 LOCAL GOVERNMENT

In 2005, local government included 83 counties, 533 municipal governments, 734 public school districts, and 366 special districts. In 2002, there were also 1,242 townships. Each county is administered by a county board of commissioners whose members, ranging in number from 3 to 35 according to population, are elected for two-year terms. Executive authority is vested in officers (the sheriff, prosecuting attorney, treasurer, clerk, and register of deeds), who are generally elected for four-year terms. Some coun-

ties place overall administrative responsibility in the hands of a county manager or administrator.

Most cities are governed by home-rule legislation, adopted in 1909, enabling them to establish their own form of government under an adopted charter. Some charters provide for the election of a mayor, who usually functions as the chief executive officer of the city. Other cities have chosen the council-manager system, with a council appointing the manager to serve as chief executive and the office of mayor being largely ceremonial. Many villages are incorporated under home-rule legislation in order to provide services such as police and fire protection.

Township government, its powers strictly limited by state law, consists of a supervisor, clerk, treasurer, and up to four trustees, all elected for four-year terms and together forming the township board.

In 2005, local government accounted for about 363,776 full-time (or equivalent) employment positions.

15 STATE SERVICES

To address the continuing threat of terrorism and to work with the federal Department of Homeland Security, homeland security in Michigan operates under the authority of the executive order; the state emergency management director is designated as the state homeland security advisor.

Educational services are handled in part by the Department of Education, which distributes state school-aid funds, certifies teachers, and operates the Schools for the Deaf and Blind at Flint. The state-supported colleges and universities are independent of the department's control, each being governed by an elected or appointed board. Although most of the funds administered by the Department of Transportation go for highway construction and maintenance, some allocations support improvements of railroad, bus, ferry, air, and port services.

Health and welfare services are provided by the Department of Community Health and the Department of Civil Rights, as well as through programs administered by the Department of Labor and Economic Growth, the Office of Services to the Aging, the Department of Environmental Quality, the Michigan Women's Commission, the Spanish-Speaking Affairs Commission, and the Veterans Trust Fund. The state's Army and Air National Guard units are maintained by the Department of Military and Veterans Affairs. Civil defense is part of the Department of State Police, and state prisons and other correctional facilities are maintained by the Department of Corrections.

Housing services are provided by the State Housing Development Authority. The Department of Labor and Economic Growth establishes and enforces rules and standards relating to safety, wages, licenses, fees, and conditions of employment. The Employment Security Commission administers unemployment benefits and assists job seekers.

16 JUDICIAL SYSTEM

Michigan's highest court is the state supreme court, consisting of seven justices elected for eight-year terms. The chief justice is elected by the members of the court. The court hears cases on appeal from lower state courts and also administers the state's entire court system. The 1963 constitution provided for an 18-member court of appeals to handle most of the cases that previously had

clogged the high court's calendar. Unless the supreme court agrees to review a court of appeals ruling, the latter's decision is final. As of 1999, 28 appeals court justices are elected from each of four districts for six-year terms. The supreme court appoints a chief judge of the appeals court.

The major trial courts in the state as of 1999 were the circuit courts, encompassing 210 judicial seats, with the judges elected for six-year terms. The circuit courts have original jurisdiction in all felony criminal cases, civil cases involving sums of more than \$10,000, and divorces. As of January 1998, the circuit courts have a "family" division to better serve families and individuals. The circuit courts also hear appeals from lower courts and state administrative agencies. Probate courts have original jurisdiction in cases involving juveniles and dependents, and also handle wills and estates, adoptions, and commitments of the mentally ill. The 1963 constitution provided for the abolition of justice-of-the-peace courts and nearly all municipal courts, although the Detroit "Recorders Court" was not abolished until 1996 in a controversial move supported by the Republican governor and legislative majority but opposed by most Democratic leaders. To replace them, 101 district courts, some consisting of two or more divisions, have been established. These courts handle civil cases involving sums of less than \$10,000, minor criminal violations, and preliminary examinations in all felony cases.

As of 31 December 2004, a total of 48,883 prisoners were held in Michigan's state and federal prisons, a decrease from 49,358 of 1% from the previous year. As of year-end 2004, a total of 2,113 inmates were female, up from 2,198 or 1.5% from the year before. Among sentenced prisoners (one year or more), Michigan had an incarceration rate of 483 per 100,000 population in 2004.

According to the Federal Bureau of Investigation, Michigan in 2004, had a violent crime rate (murder/nonnegligent manslaughter; forcible rape; robbery; aggravated assault) of 490.2 reported incidents per 100,000 population, or a total of 49,577 reported incidents. Crimes against property (burglary; larceny/theft; and motor vehicle theft) in that same year totaled 309,208 reported incidents or 3,057.6 reported incidents per 100,000 people. Michigan has had no death penalty on its law books since 1846, when it became the first state in the United States to abolish capital punishment. Although there have been efforts to restore the death penalty, none of these attempts had been successful as of 2006.

In 2003, Michigan spent \$226,349,928 on homeland security, an average of \$23 per state resident.

17 ARMED FORCES

In 2004, there 4,419 active-duty military personnel, 11,373 Guard, National Guard, and Reserve, and 3,572 civilian personnel in Michigan. The Detroit Arsenal at Warren is the state's largest center for civilians, 3,009. In 2004 Michigan firms received over \$2.6 billion in defense contracts, and \$1.2 billion in defense payroll, including retired military pay.

As of 2003, there were 836,950 veterans of US military service living in Michigan. Of these, 124,006 served in World War II; 98,681 served in the Korean conflict; 264,267 served during the Vietnam era, and 110,061 served in the Gulf War. Expenditures on veterans exceeded \$1.4 billion in 2004.

As of 31 October 2004, the Michigan State Police employed 1,591 full-time sworn officers.

18 MIGRATION

The earliest European immigrants were the French and English. The successive opening of interior lands for farming, lumbering, mining, and manufacturing proved an irresistible attraction for hundreds of thousands of immigrants after the War of 1812, principally Germans, Canadians, English, Irish, and Dutch. During the second half of the 19th century, lumbering and mining opportunities in northern Michigan attracted large numbers of Cornishmen, Norwegians, Swedes, and Finns. The growth of manufacturing in southern Michigan at the end of the century brought many Poles, Italians, Russians, Belgians, and Greeks to the state. After World War II, many more Europeans immigrated to Michigan, plus smaller groups of Mexicans, other Spanish-speaking peoples from Latin America, and large numbers of Arabic-speaking peoples, particularly in Detroit, who by the late 1970s were more numerous there than in any other US city.

The first large domestic migration into Michigan came in the early 19th century after the War of 1812. Heavy immigration took place in the 1920s and 1930s, especially from northeastern states, particularly New York and Pennsylvania, and from Ohio. Beginning in 1916, the demand for labor in Michigan's factories started the second major domestic migration to Michigan, this time by southern blacks who settled mainly in Detroit, Flint, Pontiac, Grand Rapids, and Saginaw. During World War II, many southern whites migrated to the same industrial areas. Between 1940 and 1970, a net total of 518,000 migrants were drawn to Michigan. The economic problems of the auto industry in the 1970s and 1980s caused a significant reversal of this trend, with the state suffering a net loss of 496,000 by out-migration in the 1970s and over 460,000 in the 1980s. Between 1990 and 1998, Michigan had a net loss of 190,000 in domestic migration and a net gain of 87,000 in international migration. In 1996, Michigan's foreign-born population totaled 491,000, or 5% of its total population. In 1998, 13,943 foreign immigrants entered the state, the 11th-highest total for any state that year. Michigan's overall population increased 5.6% between 1990 and 1998. In the period 2000–05, net international migration was 122,901 and net internal migration was -165,084, for a net loss of 42,183 people.

Intrastate migration has been characterized since the late 19th century by a steady movement from rural to urban areas. Most parts of northern Michigan have suffered a loss of population since the early years of this century although a back-to-the-land movement, together with the growth of rural Michigan as a retirement area, appeared to reverse this trend beginning in the 1970s. Since 1950, the central cities have experienced a steady loss of population to the suburbs, in part caused by the migration of whites from areas that were becoming increasingly black. By 1998, Michigan's black population numbered 1,405,000, of whom over 1,100,000 lived in the Detroit–Ann Arbor–Flint metropolitan area.

19 INTERGOVERNMENTAL COOPERATION

The Commission on Intergovernmental Cooperation of the Michigan legislature represents the state in dealings with the Council of State Governments and its allied organizations. Since 1935, the state has joined more than 20 interstate compacts, dealing mainly with such subjects as gas and oil problems, law enforcement, pest control, civil defense, tax reciprocity, and water resources. Com-

pacts include the Boundary Compact Between Minnesota, Wisconsin, and Michigan; Interstate Compact for Juveniles, and the Great Lakes Commission. In 1985, Michigan, seven other Great Lakes states, and the Canadian provinces of Quebec and Ontario signed the Great Lakes Charter, designed to protect the lakes' water resources.

The International Bridge Authority, consisting of members from Michigan and Canada, operates a toll bridge connecting Sault Ste. Marie, Mich., and Sault Ste. Marie, Ontario. Federal grants to Michigan totaled \$10.355 billion in fiscal year 2005, an estimated \$10.078 billion in fiscal year 2006, and an estimated \$10.210 billion in fiscal year 2007.

20 ECONOMY

On the whole, Michigan benefited from its position as the center of the auto industry during the first half of the 20th century when Detroit and other south Michigan cities were the fastest-growing industrial areas in the United States. But the state's dependence on automobile production has caused grave and persistent economic problems since the 1950s. Michigan's unemployment rates in times of recession have far exceeded the national average, since auto sales are among the hardest hit in such periods. Even in times of general prosperity, the auto industry's emphasis on labor-saving techniques and its shifting of operation from the state have reduced the number of jobs available to Michigan workers. Although the state was relatively prosperous during the record automotive production years of the 1960s and 1970s, the high cost of gasoline and the encroachment of imports on domestic car sales had disastrous effects by 1980, when it became apparent that the state's future economic health required greater diversification of industry. Agriculture, still dominant in the rural areas of southern Michigan, remains an important element in the state's economy, and in northern Michigan, forestry and mining continue but generally at levels far below earlier boom periods. Output from manufactures peaked in 1999 at close to \$84 billion, about 27% of gross state product, but in 2001, after an 11.85% fall from 2000 levels, manufacturing output accounted for only 23.1% of gross state product. By contrast, services of various sorts accounted for over 70% of total output in 2001. In 2002, Michigan lagged the national economy, and was not expected to recover in the short-term, while its manufacturing sector goes through restructuring.

Michigan's gross state product (GSP) in 2004 totaled \$372.169 billion, of which manufacturing (durable and nondurable goods) accounted for the largest portion at \$76.261 billion or 20.4% of GSP, followed by the real estate sector at \$42.930 (11.5% of GSP), and professional and technical services at \$28.977 billion (7.7% of GSP). In that same year, there were an estimated 765,487 small businesses in Michigan. Of the 213,104 businesses that had employees, an estimated total of 209,751 or 98.4% were small companies. An estimated 24,625 new businesses were established in the state in 2004, up 11.8% from the year before. Business terminations that same year came to 24,584, down 0.7% from 2003. There were 681 business bankruptcies in 2004, down 0.4% from the previous year. In 2005, the state's personal bankruptcy (Chapter 7 and Chapter 13) filing rate was 618 filings per 100,000 people, ranking Michigan as the 18th highest in the nation.

21 INCOME

In 2005 Michigan had a gross state product (GSP) of \$378 billion which accounted for 3.0% of the nation's gross domestic product and placed the state at number 9 in highest GSP among the 50 states and the District of Columbia.

According to the Bureau of Economic Analysis, in 2004 Michigan had a per capita personal income (PCPI) of \$32,079. This ranked 23rd in the United States and was 97% of the national average of \$33,050. The 1994–2004 average annual growth rate of PCPI was 3.5%. Michigan had a total personal income (TPI) of \$324,134,088,000, which ranked ninth in the United States and reflected an increase of 1.8% from 2003. The 1994–2004 average annual growth rate of TPI was 4.1%. Earnings of persons employed in Michigan increased from \$251,820,728,000 in 2003 to \$254,041,008,000 in 2004, an increase of 0.9%. The 2003–04 national change was 6.3%.

The US Census Bureau reports that the three-year average median household income for 2002 to 2004 in 2004 dollars was \$44,476 compared to a national average of \$44,473. During the same period an estimated 12.1% of the population was below the poverty line as compared to 12.4% nationwide.

22 LABOR

According to the Bureau of Labor Statistics (BLS), in April 2006 the seasonally adjusted civilian labor force in Michigan numbered 5,157,600, with approximately 369,500 workers unemployed, yielding an unemployment rate of 7.2%, compared to the national average of 4.7% for the same period. Preliminary data for the same period placed nonfarm employment at 4,387,200. Since the beginning of the BLS data series in 1976, the highest unemployment rate recorded in Michigan was 16.9% in November 1982. The historical low was 3.2% in March 2000. Preliminary nonfarm employment data by occupation for April 2006 showed that approximately 4.3% of the labor force was employed in construction; 15% in manufacturing; 18.1% in trade, transportation, and public utilities; 5% in financial activities; 13.6% in professional and business services; 13% in education and health services; 9.4% in leisure and hospitality services; and 15.3% in government.

Michigan's most powerful and influential industrial union since the 1930s has been the United Automobile Workers (UAW); its national headquarters is in Detroit. Under its long-time president Walter Reuther and his successors, Leonard Woodcock, Douglas Fraser, Owen Bieber, and Stephen Yokich, the union has been a dominant force in the state Democratic Party. In recent years, as government employees and teachers have been organized, unions and associations representing these groups have become increasingly influential. Under the Michigan Public Employment Relations Act of 1965, public employees have the right to organize and to engage in collective bargaining, but are prohibited from striking. However, strikes of teachers, college faculty members, and government employees have been common since the 1960s, and little or no effort was made to enforce the law.

Certain crafts and trades were organized in Michigan in the 19th century, with one national labor union, the Brotherhood of Locomotive Engineers, having been founded at meetings in Michigan in 1863, but efforts to organize workers in the lumber and mining industries were generally unsuccessful. Michigan ac-

quired a reputation as an open-shop state, and factory workers showed little interest in unions at a time when wages were high. But the catastrophic impact of the depression of the 1930s completely changed these attitudes. With the support of sympathetic state and federal government officials, Michigan workers were in the forefront of the greatest labor-organizing drive in American history. The successful sit-down strike by the United Automobile Workers against General Motors in 1936–37 marked the first major victory of the new Congress of Industrial Organizations. Since then, a strong labor movement has provided manufacturing workers in Michigan with some of the most favorable working conditions in the country.

The US Department of Labor's Bureau of Labor Statistics reported that in 2005, a total of 880,000 of Michigan's 4,288,000 employed wage and salary workers were formal members of a union. This represented 20.5% of those so employed, down from 21.6% in 2004, but well above the national average of 12%. Overall in 2005, a total of 916,000 workers (21.4%) in Michigan were covered by a union or employee association contract, which includes those workers who reported no union affiliation. Michigan is one of only five states whose union membership rate is over 20% and is one of 28 states that does not have a right-to-work law.

As of 1 March 2006, Michigan had a state-mandated minimum wage rate of \$5.15 per hour. In 2004, women in the state accounted for 47% of the employed civilian labor force.

23 AGRICULTURE

In 2005, Michigan's agricultural income was estimated at over \$3.9 billion, placing Michigan 22nd among the 50 states. About 60% came from crops and the rest from livestock and livestock products; dairy products, nursery products, cattle, corn, and soybeans were the principal commodities. The state in 2004 ranked second in output of tart cherries, third in apples, and fourth in prunes and plums.

The growing of corn and other crops indigenous to North America was introduced in Michigan by the Indians around 100 BC, and early French settlers tried to develop European-style agriculture during the colonial era. But little progress was made until well into the 19th century, when farmers from New York and New England poured into the interior of southern Michigan. By mid-century, 34,000 farms had been established, and the number increased to a peak of about 207,000 in 1910. The major cash crop at first was wheat, until soil exhaustion, insect infestations, bad winters, and competition from huge wheat farms to the west forced a de-emphasis on wheat and a move toward agricultural diversity. Both the number of farms and the amount of farm acreage had declined by 2004 to 53,200 farms and 10,100,000 acres (4,088,000 hectares).

The southern half of the lower peninsula is the principal agricultural region, and the area along Lake Michigan is a leader in fruit growing. Potatoes are profitable in northern Michigan, while eastern Michigan (the "Thumb" area near Lake Huron) is a leading bean producer. The Saginaw Valley leads the state in sugar beets. The south-central and southeastern counties are major centers of soybean production. Leading field crops in 2004 included 257,280,000 bushels of corn for grain, valued at \$463,104,000; 75,240,000 bushels of soybeans, worth \$379,962,000; and

40,960,000 bushels of wheat, worth \$122,880,000. Output of commercial apples totaled 720,000,000 lb (327,000,000 kg).

24 ANIMAL HUSBANDRY

The same areas of southern Michigan that lead in crop production also lead in livestock and livestock products, except that the northern counties are more favorable for dairying than for crop production.

In 2005, there were an estimated 1,010,000 cattle and calves, valued at \$1.07 billion. The state had an estimated 940,000 hogs and pigs in 2004, valued at \$103.4 million.

In 2003, dairy farmers had an estimated 302,000 milk cows which produced around 6.36 million lb (2.89 million kg) of milk. Poultry farmers produced 1.89 billion eggs, valued at around \$93.7 million, in 2003.

25 FISHING

Commercial fishing, once an important factor in the state's economy, was relatively minor by the early 2000s. In 2004, the commercial catch was 8.4 million lb (3.8 million kg) valued at \$6.2 million. Principal species landed are silver salmon and alewives.

Sport fishing continues to flourish and is one of the state's major tourist attractions. A state salmon-planting program, begun in the mid-1960s, has made salmon the most popular game fish for Great Lakes sport fishermen. The state has also sought, through breeding and stocking programs, to bring back the trout, which was devastated by an invasion of lamprey. In 2004, the state issued 1,171,742 sport fishing licenses.

A bitter dispute raged during the 1970s between state officials and Ottawa and Ojibwa commercial fishermen, who claimed that Indian treaties with the federal government exempted them from state fishing regulations. The state contended that without such regulations, Indian commercial fishing would have a devastating impact on the northern Great Lakes' fish population. A federal court in 1979 upheld the Indians' contention; but in 1985, the state secured federal court approval of a compromise settlement intended to satisfy both Indian and non-Indian groups.

There are three national fisheries in Michigan. In 2005/06, \$9.5 million of federal funds were allocated for sport fish restoration projects in Michigan.

26 FORESTRY

In 2004, Michigan's forestland totaled 19.3 million acres (7.8 million hectares), or more than half the state's total land area. Approximately 96% of it is classified as timberland, about two-thirds of it privately owned. The major forested regions are in the northern two-thirds of the state, where great pine forests enabled Michigan to become the leading lumber-producing state in the last four decades of the 19th century. These cutover lands regenerated naturally or were reforested in the 20th century. Lumber production was 844 million board feet in 2004.

State and national forests covered 6.9 million acres (2.8 million hectares), or about one-fifth of the state's land area.

27 MINING

According to preliminary data from the US Geological Survey (USGS), the estimated value of nonfuel mineral production by Michigan in 2003 was \$1.35 billion, a decrease from 2002 of

about 9%. The USGS data ranked Michigan as seventh among the 50 states by the total value of its nonfuel mineral production, accounting for around 3.5% of total US output.

Although Michigan in 2003 was the second-largest iron ore producing state in the United States, portland cement was the state's top nonfuel mineral, by value, which was followed by iron ore, construction sand and gravel, crushed stone, salt and magnesium compounds. Collectively, these six commodities accounted for about 91% of all nonfuel mineral output in the state, by value.

Michigan was first nationally in magnesium chloride produced, and ranked second in the production of peat, industrial sand and gravel, bromine and of course, iron ore (after Minnesota). Michigan ranked third in construction sand and gravel, and potash, fourth in portland cement, seventh in salt and eighth in masonry cement.

According to preliminary figures for 2003, Michigan's production of construction sand and gravel totaled 70 million metric tons, which was valued at \$245 million, while output of crushed stone, that year totaled 41.2 million metric tons, and was valued at \$173 million. Salt output in 2003, according to the preliminary data totaled 1.53 million metric tons and was valued at \$105 million.

Michigan also produced small quantities of copper, silver and other mineral specimens for sale to collectors and museums.

28 ENERGY AND POWER

As of 2003, Michigan had 79 electrical power service providers, of which 41 were publicly owned and 10 were cooperatives. Of the remainder, nine were investor owned, five were owners of independent generators that sold directly to customers, twelve were generation-only suppliers, and two were delivery-only providers. As of that same year there were 4,713,966 retail customers. Of that total, 4,136,049 received their power from investor-owned service providers. Cooperatives accounted for 277,906 customers, while publicly owned providers had 299,378 customers. Generation-only suppliers had 628 customers and 5 were independent generator or "facility" customers. There was no data on the number of delivery-only customers.

Total net summer generating capability by the state's electrical generating plants in 2003 stood at 30.450 million kW, with total production that same year at 111.347 billion kWh. Of the total amount generated, 86.8% came from electric utilities, with the remainder coming from independent producers and combined heat and power service providers. The largest portion of all electric power generated, 67.777 billion kWh (60.9%), came from coal-fired plants, with nuclear power plants in second place with 27.953 billion kWh (25.1%), and natural gas fueled plants in third place at 11.374 billion kWh (10.2%). Other renewable power sources accounted for 2.5% of all power generated. Petroleum fired plants, and hydroelectric generating facilities accounted for the remainder.

The two major electric utilities are Detroit Edison, serving the Detroit area and portions of the eastern part of the lower peninsula, and Consumers Power, serving most of the remainder of the lower peninsula. Rates of the utility companies are set by the Public Service Commission.

As of 2006, Michigan had three operating nuclear power plants; the Donald C Cook plant in Berrien County; the Enrico Fermi plant near Detroit; and the Palisades plant near South Haven.

Michigan is dependent on outside sources for most of its fuel needs. As of 2004, Michigan had proven crude oil reserves of 53 million barrels, or less than 1% of all proven US reserves, while output that same year averaged 18,000 barrels per day. Including federal offshore domains, the state that year ranked 17th (16th excluding federal offshore) in proven reserves and 18th (17th excluding federal offshore) in production among the 31 producing states. In 2004 Michigan had 3,675 producing oil wells. As of 2005, the state's single refinery had a combined crude oil distillation capacity of 74,000 barrels per day.

In 2004, Michigan had 8,500 producing natural gas and gas condensate wells. In that same year, marketed gas production (all gas produced excluding gas used for repressuring, vented and flared, and nonhydrocarbon gases removed) totaled 259.681 billion cu ft (7.37 billion cu m). As of 31 December 2004, proven reserves of dry or consumer-grade natural gas totaled 3,091 billion cu ft (87.8 billion cu m).

Bituminous coal reserves (estimated at 127.7 million tons) remain in southern Michigan, but production is negligible. There was no recorded coal production in 2004.

29 INDUSTRY

Manufacturing, a minor element in Michigan's economy in the mid-19th century, grew rapidly in importance until, by 1900, an estimated 25% of the state's jobholders were factory workers. The rise of the auto industry in the early 20th century completed the transformation of Michigan into one of the most important manufacturing areas in the world.

Motor vehicles and equipment dominate the state's economy, representing almost 40% of the state's manufacturing payroll, while the value of shipments by these manufacturers was slightly more than half of the total. Production of nonelectrical machinery, primary and fabricated metal products, and metal forgings and stampings was directly related to automobile production.

The Detroit metropolitan area is the major industrial region: this area includes not only the heavy concentration of auto-related plants in Wayne, Oakland, and Macomb counties, but also major steel, chemical, and pharmaceutical industries, among others. Flint, Grand Rapids, Saginaw, Ann Arbor, Lansing, and Kalamazoo are other major industrial centers.

The auto industry's preponderance in Michigan manufacturing has come to be viewed in recent years as more of a liability than an asset. When times are good, as they were in the 1960s and early 1970s, automobile sales soar to record levels and Michigan's economy prospers. But when the national economy slumps, these sales plummet, pushing the state into a far deeper recession than is felt by the nation as a whole.

According to the US Census Bureau's Annual Survey of Manufactures (ASM) for 2004, Michigan's manufacturing sector covered some 19 product subsectors. The shipment value of all products manufactured in the state that same year was \$220.454 billion. Of that total, transportation equipment manufacturing accounted for the largest share at \$111.568 billion. It was followed by machinery manufacturing at \$17.549 billion; fabricated metal product manufacturing at \$14.024 billion; chemical manufacturing at \$11.823 billion; and food manufacturing at \$11.659 billion.

In 2004, a total of 651,947 people in Michigan were employed in the state's manufacturing sector, according to the ASM. Of

that total, 478,466 were actual production workers. In terms of total employment, the transportation equipment manufacturing industry accounted for the largest portion of all manufacturing employees at 202,998, with 167,690 actual production workers. It was followed by fabricated metal product manufacturing at 82,746 employees (60,331 actual production workers); machinery manufacturing at 75,818 employees (47,854 actual production workers); plastics and rubber products manufacturing at 60,688 employees (45,689 actual production workers); and furniture and related product manufacturing with 29,664 employees (19,086 actual production workers).

ASM data for 2004 showed that Michigan's manufacturing sector paid \$32.547 billion in wages. Of that amount, the transportation equipment manufacturing sector accounted for the largest share at \$12.753 billion. It was followed by machinery manufacturing at \$4.039 billion; fabricated metal product manufacturing at \$3.335 billion; plastics and rubber products manufacturing at \$2.119 billion; chemical manufacturing at \$1.745 billion; and primary metal manufacturing at \$1.442 billion.

30 COMMERCE

According to the 2002 Census of Wholesale Trade, Michigan's wholesale trade sector had sales that year totaling \$165.9 billion from 12,876 establishments. Wholesalers of durable goods accounted for 8,102 establishments, followed by nondurable goods wholesalers at 3,370 and electronic markets, agents, and brokers accounting for 1,404 establishments. Sales by durable goods wholesalers in 2002 totaled \$92.9 billion. Sales data was unavailable for nondurable goods and for electronic markets, agents, and brokers in the wholesale trade industry.

In the 2002 Census of Retail Trade, Michigan was listed as having 38,876 retail establishments with sales of \$109.3 billion. The leading types of retail businesses by number of establishments were: food and beverage stores (5,973); clothing and clothing accessories stores (4,792); miscellaneous store retailers (4,486); and motor vehicle and motor vehicle parts dealers (4,234). In terms of sales, motor vehicle and motor vehicle parts stores accounted for the largest share of retail sales at \$31.7 billion, followed by food and beverage stores at \$13.1 billion; building material/garden equipment and supplies dealers at \$9.4 billion; gasoline stations at \$8.7 billion; and health and personal care stores \$6.6 billion. A total of 520,958 people were employed by the retail sector in Michigan that year.

With its ports open to oceangoing vessels through the St. Lawrence Seaway, Michigan is a major exporting and importing state for foreign as well as domestic markets. Exports of Michigan's manufactured goods totaled \$37.5 billion in 2005, ranking the state fifth in the United States.

31 CONSUMER PROTECTION

Michigan's Office of the Attorney General is responsible for the enforcement of most of the state's consumer protection laws through its Consumer Protection Division. However, other departments, such as the Department of Consumer and Industry Services which has the responsibility of regulating professions,

corporations and nursing homes, may also have their own consumer protection sections.

Under the state's Consumer Protection Act of 1976, a range of specific misrepresentations in advertising and commerce are prohibited. In addition, the law also regulates down payment returns, the signing of service contracts and other agreements and mandates that sellers of business opportunities must file with the state Attorney General. The state also has an item pricing law and regulations covering the volume and availability of advertised items. Michigan also has laws that regulate motor vehicle services and repairs, as well as a so-called "Lemon Law" that is applicable to the sale of new motor vehicles.

A number of local governments have instituted consumer affairs offices, with Detroit's being especially active.

When dealing with consumer protection issues, the state's Attorney General's Office can initiate civil and criminal proceedings; represent the state before state and federal regulatory agencies; administer consumer protection and education programs; handle formal consumer complaints; and exercise broad subpoena powers. In antitrust actions, the Attorney General's Office can act on behalf of those consumers who are incapable of acting on their own; initiate damage actions on behalf of the state in state courts; and initiate criminal proceedings. However the Attorney General's Office cannot represent counties, cities or other governmental entities in recovering civil damages under state or federal law.

The state's Consumer Protection Division is located in Lansing. County and city government consumer protection offices are respectively located in Mt Clemens and Detroit.

32 BANKING

Michigan's banks in the territorial and early statehood years were generally wildcat speculative ventures. More restrained banking activities date from the 1840s when the state's oldest bank, the Detroit Bank and Trust, was founded. A crisis that developed in the early 1930s forced Governor William Comstock to close all banks in February 1933 in order to prevent collapse of the entire banking system. Federal and state authorities supervised a reorganization and reform of the state's banks that has succeeded in preventing any major problems from arising since that time.

As of June 2005, Michigan had 173 insured banks, savings and loans, and saving banks, plus 251 state-chartered and 152 federally chartered credit unions (CUs). Excluding the CUs, the Detroit-Warren-Livonia market area accounted for the largest portion of the state's financial institutions and deposits in 2004, with 58 institutions and \$77.033 billion in deposits. As of June 2005, CUs accounted for 12.8% of all assets held by all financial institutions in the state, or some \$31.221 billion. Banks, savings and loans, and savings banks collectively accounted for the remaining 87.2% or \$211.930 billion in assets held.

In 2004, banks with less than \$1 billion in assets ("community banks") accounted for about 92.5% of the state's insured institutions, but larger banks held most of the state's assets. In that same year, the median net interest margin (NIMs) (the difference between the lower rates offered to savers and the higher rates charged on loans), stood at 4.08%, down from 4.12% in 2003. The median percentage of past-due/nonaccrual loans to total loans in 2004 was 1.82%, down from 2.15% in 2003.

3³ INSURANCE

In 2004 there were over 4.9 million individual life insurance policies in force with a total value of about \$362 billion; total value for all categories of life insurance (individual, group, and credit) was over \$629.7 billion. The average coverage amount is \$72,800 per policy holder. Death benefits paid that year totaled \$1.9 billion.

As of 2003, there were 65 property and casualty and 19 life and health insurance companies domiciled in the state. In 2004, direct premiums for property and casualty insurance totaled \$16 billion. That year, there were 25,447 flood insurance policies in force in

the state, with a total value of \$3.1 billion. About \$15.3 billion of coverage was held through FAIR plans, which are designed to offer coverage for some natural circumstances, such as wind and hail, in high risk areas.

In 2004, 59% of state residents held employment-based health insurance policies, 4% held individual policies, and 26% were covered under Medicare and Medicaid; 11% of residents were uninsured. In 2003, employee contributions for employment-based health coverage averaged at 15% for single coverage and 18% for family coverage. The state does not offer a health benefits expansion program in connection with the Consolidated Omnibus Budget Reconciliation Act (COBRA, 1986), a health insurance program for those who lose employment-based coverage due to termination or reduction of work hours.

In 2003, there were over 6.4 million auto insurance policies in effect for private passenger cars. Required minimum coverage includes bodily injury liability of up to \$20,000 per individual and \$40,000 for all persons injured in an accident, as well as property damage liability of \$10,000. Personal injury protection is also mandatory. In 2003, the average expenditure per vehicle for insurance coverage was \$931.14.

3⁴ SECURITIES

There are no securities or commodity exchanges in Michigan. In 2005, there were 2,410 personal financial advisers employed in the state and 6,040 securities, commodities, and financial services sales agents. In 2004, there were over 166 publicly traded companies within the state, with over 65 NASDAQ companies, 43 NYSE listings, and 5 AMEX listings. In 2006, the state had 21 Fortune 500 companies; General Motors (based in Detroit) ranked first in the state and third in the nation with revenues of over \$192.6 billion, followed by Ford Motor (Dearborn), Dow Chemical (Midland, Delphi (Troy), and Lear (Southfield). All five companies were listed on the NYSE. Ford Motor was ranked at fifth in the nation on the Fortune 500 list with revenues of over \$177.2 billion.

3⁵ PUBLIC FINANCE

The state constitution requires the governor to submit a budget proposal to the legislature each year. This executive budget, prepared by the Department of Management and Budget, is reviewed, revised, and passed by the legislature. During the fiscal year (FY), which extends from 1 October to 30 September, if actual revenues drop below anticipated levels, the governor, in consultation with the legislative appropriations committees, must reduce expenditures to meet the constitutional requirement that the state budget be kept in balance.

In 1977, the legislature created a budget stabilization fund. A portion of tax revenues collected in good times is held in reserve to be used during periods of recession, when the funding of essential state services is threatened. In 1978, a tax limitation amendment put a lid on government spending by establishing a fixed ratio of state revenues to personal income in the state. Further efforts to limit taxes were rejected by the voters in 1980 and 1984.

F2006 general funds were estimated at \$9.0 billion for resources and \$9.0 billion for expenditures. In fiscal year 2004, federal government grants to Michigan were \$13.2 billion.

Michigan—State Government Finances

(Dollar amounts in thousands. Per capita amounts in dollars.)

	AMOUNT	PER CAPITA

SOURCE: U.S. Census Bureau, Governments Division, 2004 Survey of State Government Finances, January 2006.

In the fiscal year 2007 federal budget, Michigan was slated to receive: \$16.9 million to develop a national cemetery in Great Lakes.

3⁶TAXATION

In 2005, Michigan collected \$24,340 million in tax revenues or \$2,405 per capita, which placed it 15th among the 50 states in per capita tax burden. The national average was \$2,192 per capita. Property taxes accounted for 8.8% of the total, sales taxes 33.2%, selective sales taxes 14.2%, individual income taxes 28.4%, corporate income taxes 7.8%, and other taxes 7.5%.

As of 1 January 2006, Michigan had one individual income tax bracket of 3.9%.

In 2004, state and local property taxes amounted to \$11,978,654,000 or \$1,186 per capita, which ranks the state 15th nationally in per capita taxation. Local governments collected \$9,886,721,000 of the total and the state government \$2,091,933,000.

Michigan taxes retail sales at a rate of 6%. Food purchased for consumption off-premises is tax exempt. The tax on cigarettes is 200 cents per pack, which ranks fourth among the 50 states and the District of Columbia. Michigan taxes gasoline at 19 cents per gallon. This is in addition to the 18.4 cents per gallon federal tax on gasoline.

According to the Tax Foundation, for every federal tax dollar sent to Washington in 2004, Michigan citizens received \$0.85 in federal spending.

3⁷ECONOMIC POLICY

The Michigan Economic Development Corporation (MEDC) has a long tradition of promoting economic development. Through the Michigan CareerSite web page, economic development and job training programs are outlined. The mission of MEDC is to work with businesses, state government, and local communities to make Michigan more business-friendly. MEDC is a corporation, not a traditional government agency.

Michigan is part of the so-called Rust Belt, the region of the country dominated by steel-based industries from the 1940s to the 1980s. To focus economic development on new industries, Michigan has taken a number of steps, including cutting taxes for individuals and businesses. In the 1990s, Michigan taxpayers, both individuals and businesses, benefited from 21 tax cuts. The result has been the 13th-lowest tax burden in the country for 2000 and a robust economy with unemployment levels lower than the national average since 1995.

Michigan's Economic Growth Authority offers generous tax breaks to firms that locate a facility in Michigan, and offers substantial employment opportunities to Michigan workers. The state's Renaissance Zone program exempts companies and individuals within designated areas throughout the state from all state and local taxes as an incentive to rebuild and revitalize specific areas. Renaissance Zones include urban, rural, and former military installation sites. In 2006, Michigan also had 11 designated Smart Zones, which are collaborations between universities, industry, research organizations, government, and other community institutions to stimulate growth of technology-based businesses, particularly those focused on commercializing ideas and patents that result from R&D efforts.

3⁸HEALTH

The infant mortality rate in October 2005 was estimated at 7.7 per 1,000 live births. The birth rate in 2003 was 13 per 1,000 population. The abortion rate stood at 21.6 per 1,000 women in 2000. In 2003, about 86.1% of pregnant woman received prenatal care beginning in the first trimester. In 2004, approximately 81% of children received routine immunizations before the age of three.

The crude death rate in 2003 was 8.6 deaths per 1,000 population. As of 2002, the death rates for major causes of death (per 100,000 resident population) were: heart disease, 265.3; cancer, 198.8; cerebrovascular diseases, 57.8; chronic lower respiratory diseases, 44.1; and diabetes, 27.7. The mortality rate from HIV infection was 2.4 per 100,000 population. In 2004, the reported AIDS case rate was at about 6.5 per 100,000 population. In 2002, about 60.2% of the resident population was considered overweight or obese, representing the fourth-highest rate in the country for this category. As of 2004, about 23.2% of state residents were smokers.

In 2003, Michigan had 144 community hospitals with about 25,800 beds. There were about 1.1 million patient admissions that year and 27 million outpatient visits. The average daily inpatient census was about 17,100 patients. The average cost per day for hospital care was \$1,382. Also in 2003, there were about 431 certified nursing facilities in the state with 49,225 beds and an overall occupancy rate of about 84.4%. In 2004, it was estimated that about 76.9% of all state residents had received some type of dental care within the year. Michigan had 289 physicians per 100,000 resident population in 2004 and 804 nurses per 100,000 in 2005. In 2004, there were a total of 6,039 dentists in the state.

In 2005, the University of Michigan Medical Center in Ann Arbor ranked eleventh on the Honor Roll of Best Hospitals 2005 by *U.S. News & World Report*. In the same report, the hospital ranked ninth in the nation for best care in cancer.

About 26% of state residents were enrolled in Medicaid and Medicare programs in 2004. Approximately 11% of the state population was uninsured in 2004. In 2003, state health care expenditures totaled \$11.5 billion.

3⁹SOCIAL WELFARE

Until the 1930s, Michigan's few limited welfare programs were handled by the counties, but the relief load during the Depression shifted the burden to the state and federal levels. In 2004, about 462,000 people received unemployment benefits, with the average weekly unemployment benefit at \$289. In fiscal year 2005, the estimated average monthly participation in the food stamp program included about 1,047,594 persons (469,976 households); the average monthly benefit was about \$87.41 per person. That year, the total of benefits paid through the state for the food stamp program was over \$1 billion.

Temporary Assistance for Needy Families (TANF), the system of federal welfare assistance that officially replaced Aid to Families with Dependent Children (AFDC) in 1997, was reauthorized through the Deficit Reduction Act of 2005. TANF is funded through federal block grants that are divided among the states based on an equation involving the number of recipients in each state. Michigan's TANF program is called the Family Independence Program (FIP). In 2004, the state program had 212,000 re-

ipients; state and federal expenditures on this TANF program totaled \$416 million in fiscal year 2003.

In December 2004, Social Security benefits were paid to 1,716,290 Michigan residents. This number included 1,059,530 retired workers, 179,870 widows and widowers, 226,060 disabled workers, 99,620 spouses, and 151,210 children. Social Security beneficiaries represented 17% of the total state population and 95.6% of the state's population age 65 and older. Retired workers received an average monthly payment of \$1,029; widows and widowers, \$967; disabled workers, \$950; and spouses, \$514. Payments for children of retired workers averaged \$519 per month; children of deceased workers, \$660; and children of disabled workers, \$277. Federal Supplemental Security Income payments in December 2004 went to 219,337 Michigan residents, averaging \$424 a month.

40 HOUSING

In 2004, there were an estimated 4,433,482 housing units in Michigan, 3,923,135 of which were occupied. That year, Michigan ranked second in the nation (after Minnesota) for the highest percentage of owner-occupied housing units, at 74.7%. About 70.5% of all units were single-family, detached homes. Most homes rely on utility gas for heating. It was estimated that 218,182 units lacked telephone service, 8,787 lacked complete plumbing facilities, and 12,705 lacked complete kitchen facilities. The average household had 2.51 members.

In 2004, 54,700 privately owned units were authorized for construction. The median home value was \$145,177. The median monthly cost for mortgage owners was \$1,137. Renters paid a median of \$628 per month. In September 2005, the state received grants of \$849,997 from the US Department of Housing and Urban Development (HUD) for rural housing and economic development programs. For 2006, HUD allocated to the state over \$36.3 million in community development block grants (CDBG). The city of Detroit received over \$38.8 million in CDBG grants. A limited amount of state aid for low-income housing is available through the State Housing Development Authority.

41 EDUCATION

Historically, Michigan has strongly supported public education. In 2004, 87.9% of Michigan residents age 25 and older were high school graduates, and 24.4% had obtained a bachelor's degree or higher.

The total enrollment for fall 2002 in Michigan's public schools stood at 1,785,000. Of these, 1,254,000 attended schools from kindergarten through grade eight, and 531,000 attended high school. Approximately 72.7% of the students were white, 20.1% were black, 4.1% were Hispanic, 2.2% were Asian/Pacific Islander, and 1% were American Indian/Alaskan Native. Total enrollment was estimated at 1,786,000 in fall 2003 and was expected to be 1,728,000 by fall 2014, a decline of 3.2% during the period 2002 to 2014. Expenditures for public education in 2003/04 were estimated at \$19.2 billion. Since 1969, the National Assessment of Educational Progress (NAEP) has tested public school students nationwide. The resulting report, *The Nation's Report Card*, stated that in 2005 eighth graders in Michigan scored 277 out of 500 in mathematics compared with the national average of 278.

In fall 2003 there were 160,049 students enrolled in 983 private schools. The largest number of these students were enrolled in Catholic schools. Lutherans, Seventh-Day Adventists, and Reformed and Christian Reformed churches also have maintained schools for some time; in the 1970s, a number of new Christian schools, particularly those of fundamentalist Baptist groups, were established.

As of fall 2002, there were 605,835 students enrolled in college or graduate school; minority students comprised 18.9% of total postsecondary enrollment. In 2005 Michigan had 110 degree-granting institutions. The oldest state school is the University of Michigan, originally established in Detroit in 1817; its Ann Arbor campus was founded in 1835, and classes there began in 1841. Among the public universities are the University of Michigan, including the Dearborn and Flint campuses, Michigan State University, and Wayne State University. Among the state's private colleges and universities, the University of Detroit Mercy, a Jesuit school, is one of the largest. Kalamazoo College (founded in 1833), Albion College (1835), Hope College (1866) and Alma College (1886) are some of the oldest private liberal arts colleges in the state.

42 ARTS

Michigan's major center of arts and cultural activities is the Detroit area. The city's refurbished Orchestra Hall is the home of the Detroit Symphony Orchestra as well as chamber music concerts and other musical events. The Detroit Symphony has a long history having been founded in 1914; in the 1920s and 30s the symphony hosted several famous guest artists including Igor Stravinsky, Isadora Duncan, Richard Strauss, and Anna Pavlova. The Music Hall and the Masonic Auditorium present a variety of musical productions; the Fisher Theater and the Masonic Temple Theater are the major home for Broadway productions; and the Detroit Cultural Center supports a number of cultural programs. In 2006, the Masonic Temple Theater featured the three-time Tony Award winning *Wicked*. The new Detroit Opera House is sponsored by the Michigan Opera Theatre. Nearby Meadow Brook, in Rochester, has a summer music program. At the University of Michigan, in Ann Arbor, the Power Center for the Performing Arts and Hill Auditorium host major musical, theatrical, and dance presentations.

Programs relating to the visual arts tend to be academically centered; the University of Michigan, Michigan State, Wayne State, and Eastern Michigan University have notable art schools. The Cranbrook Academy of Arts, which was created by the architect Eliel Saarinen, is a significant art center, and the Ox-bow School at Saugatuck is also outstanding. The Ann Arbor Art Fair, established in 1960, is the largest and most prestigious summer outdoor art show in the state hosting over 500,000 annual attendees. As of 2006, the Ann Arbor Art Fair had won four awards, including being named as the number one art fair in the country by *AmericanStyle* magazine in 2004. The Waterfront Film Festival in Saugatuck and the touring Ann Arbor Film Festival promote the art of independent filmmaking.

The Meadow Brook Theater in Rochester, founded on Oakland University's campus is the largest nonprofit professional theater company in the state. In the 2004/05 season Meadow Brook won a series of local awards including a Lawrence Devine Award, an OPie, and a Wilde Award—all recognizing either outstanding performances or distinguished career achievements. Detroit features

a number of little theater groups and successful summer theaters include the Cherry County Playhouse at Traverse City and the Star Theater in Flint.

The Detroit Symphony Orchestra, founded in 1914, is nationally known. Grand Rapids and Kalamazoo have regional orchestras that perform on a part-time, seasonal basis. The National Music Camp at Interlochen is a mecca for young musicians in the summer, and a prestigious private high school for the arts year round. As of 2006 the Interlochen music camp included over 400 presentations that incorporated more than 2,000 students and 25 special guest performances, annually.

There are local ballet and opera groups in Detroit and in a few other communities. Michigan's best-known contribution to popular music was that of Berry Gordy Jr., whose Motown recording company in the 1960s popularized the "Detroit sound" and featured such artists as Diana Ross and the Supremes, Smokey Robinson and the Miracles, Aretha Franklin, the Four Tops, the Temptations, and Stevie Wonder, among many others. In the 1970s however, Gordy moved his operations to California.

The state of Michigan generates federal and state funds for its arts programs. In 2005, the Michigan Council for the Arts and other Michigan arts organizations received 33 grants totaling \$1,322,745 from the National Endowment for the Arts. Private sources also provided funding for the activities of the Council. The Michigan Humanities Council (MHC) was founded in 1974. One of its ongoing programs is the Michigan's Arts and Humanities Touring Program, which includes performing artists and cultural interpreters/educators. In 2006, the MHC awarded grants totaling \$36,847 to support the touring program that season, which then included 146 live artistic and cultural presentations. In 2005, the National Endowment for the Humanities contributed 33 grants totaling \$3,083,441 to state programs.

4³ LIBRARIES AND MUSEUMS

As of September 2001, Michigan had 381 public library systems, with a total of 654 libraries, of which 278 were branches. In that same year, the system had a total of 27,188,000 volumes of books and serial publications, and a total circulation of 51,773,000. The system also had 1,445,000 audio and 839,000 video items, 78,000 electronic format items (CD-ROMs, magnetic tapes, and disks), and 17 bookmobiles. The Library of Michigan in Lansing functions as the coordinator of library facilities in the state. The largest public library is the Detroit Public Library, which in 1999 had over 2.5 million books and print materials in its main library and 26 branches. Outstanding among its special collections are the Burton Historical Collection, a major center for genealogical research, the National Automotive History Collection, and the E. Azalia Hackley Collection, a notable source for material pertaining to African Americans in the performing arts, especially music. Grand Rapids, Kalamazoo, Lansing, Flint, and Ann Arbor are among the larger public libraries. In fiscal year 2001, operating income for the state's public library system totaled \$329,283,000 and included \$548,000 in federal grants and \$16,031,000 in state grants.

Among academic libraries, the University of Michigan at Ann Arbor, with 6,283,385 volumes and 56,663 periodical subscriptions in 1999, features the William L. Clements collection of books and manuscripts on the colonial period, the Labadie Collection

relating to the history of American radicalism, and the Bentley Library's distinctive collection of books and manuscripts, particularly the one on Michigan, the largest such collection.

In 1980, the Gerald R. Ford Presidential Library was opened on the University of Michigan's Ann Arbor campus. The Michigan State University Library at East Lansing had 4,274,375 volumes and 27,314 periodical subscriptions in 1999. At Wayne State University in Detroit, the Walter P. Reuther Library houses the largest collection of labor history records in the United States, as well as primary materials relating to social, economic, and political reform and urban affairs.

The Detroit Institute of Arts is the largest art museum in the state and has an outstanding collection of African art. It is located in the Detroit Cultural Center, along with the Public Library and the Detroit Historical Museum, one of the largest local history museums in the country. The Kalamazoo Institute of Art, the Flint Institute of Art, the Grand Rapids Art Museum, and the Hackley Art Gallery in Muskegon are important art museums. The University of Michigan and the Cranbrook Academy of Arts in Bloomfield Hills also maintain important collections.

The Detroit Historical Museum heads 229 museums in the state, including the State Historical Museum in Lansing and museums in Grand Rapids, Flint, Kalamazoo, and Dearborn. In the latter city, the privately run Henry Ford Museum and Greenfield Village are leading tourist attractions. In 1996 the world's largest museum of African American history was established in Detroit. A major Holocaust Memorial Center is located in the West Bloomfield Hills area of metropolitan Detroit.

The major historical sites open to the public include the late-18th-century fort on Mackinac Island and the reconstructed early-18th-century fort at Mackinaw City. The latter site has also been the scene of an archaeological program that has accumulated one of the largest collections of 18th-century artifacts in the country. Major investigations of prehistoric Indian sites have also been conducted in recent years.

4⁴ COMMUNICATIONS

Michigan's remote position in the interior of the continent hampered the development of adequate communications services, and the first regular postal service was not instituted until the early 19th century.

Telephone service began in Detroit in 1877. By 2004, 93.7% of the occupied housing units in the state had telephones. Additionally, by June of that same year there were 5,430,637 mobile wireless telephone subscribers. In 2003, 59.9% of Michigan households had a computer and 52.0% had Internet access. By June 2005, there were 1,359,079 high-speed lines in Michigan, 1,256,759 residential and 102,320 for business.

Michigan had 62 major AM radio stations and 110 major FM stations in 2005. Radio station WWJ, originally owned by the Detroit News, began operating in 1920 as one of the country's first commercial broadcasting stations, and the News also started Michigan's first television station in 1947. As of 2005 there were 33 major television stations in the state. In the Detroit area, 68% of 1,855,500 television households had cable, and in the Grand Rapids-Kalamazoo-Battle Creek area, 62% of 671,320 television households had cable in 1999.

By 2000, a total of 145,596 Internet domain names had been registered in Michigan.

45 PRESS

The first newspaper to appear in Michigan was Father Richard's *Michigan Essay or Impartial Observer*, published in August 1917. Continuous newspaper coverage in Michigan dates from the appearance of the weekly *Detroit Gazette*, also in 1817. The state's oldest paper still being published is the *Detroit Free Press*, founded in 1831 and the state's first daily paper since 1835.

In 2005 there were 48 daily newspapers in Michigan, with 27 Sunday editions published in the state. Two of the state's largest newspapers—Knight Ridder's *Detroit Free Press* and Gannett's *Detroit News*—entered into a joint operating agreement (JOA) in 1989. The advertising, business, delivery, and production of each paper joined forces in a company called Detroit Newspapers; the editorial and news operations remain separate and report to their respective parent companies. During the struggle, the *Detroit Journal* was published weekly by locked-out newspaper workers. The *News* had the sixth-largest daily circulation of any paper in the United States in 1994. By 2004, however, the *News* had dropped to number 46 in daily circulation among newspapers nationwide and the *Free Press* was at number 21.

The following table shows leading daily newspapers in Michigan with average daily and Sunday circulation in 1998:

AREA	NAME	DAILY	SUNDAY
Detroit	<i>News and Free Press</i> (m,S)	510,736	710,036
Flint	<i>Journal</i> (e,S)	84,313	102,154
Grand Rapids	<i>Press</i> (e,S)	138,126	189,690
Kalamazoo	<i>Gazette</i> (e,S)	62,350	72,945
Lansing	<i>State Journal</i> (m,S)	70,725	90,502
Pontiac	<i>Oakland Press</i> (m,S)	78,213	80,737
Saginaw	<i>News</i> (e,S)	46,439	55,690

46 ORGANIZATIONS

In 2006, there were over 11,310 nonprofit organizations registered within the state, of which about 7,137 were registered as charitable, educational, or religious organizations. The most important trade association headquartered in Michigan is the Motor Vehicle Manufacturers Association, with offices in Detroit. Its labor union counterpart—the United Automobile, Aerospace and Agricultural Implement Workers of America (UAW)—also has its international headquarters in that city.

Others with headquarters in the state include the American Concrete Institute, the Detroit; Society of Manufacturing Engineers, Dearborn; American Society of Agricultural Engineers, St. Joseph; the American Board of Emergency Medicine, East Lansing, and the National Association of Investment Corporations, Madison Heights.

Organizations for arts and education include the Association of College Honor Societies, the Children's Literature Association, the American Guild of Music, Interlochen Center for the Arts, and the Institute for Social Research. There are also a number of municipal and regional arts groups and historical societies. State organizations of art and culture include the Michigan Humanities Council, the Michigan Historical Society, and the Michigan Historic Preservation Network. Several organizations focus on regional environmental issues, including the Great Lakes Maritime

Institute and the Great Lakes Commission. The United Kennel Club is a hobby organization with national memberships.

Charitable organizations include the Good Fellows, based in Detroit. Founded in 1914, the organization was called the Newsboys, since its first members were newspaper carriers. Though the group participates in a number of charitable causes, its primary program is A Christmas for Every Needy Child. There are chapters of Good Fellows nationwide. The W. K. Kellogg Foundation based in Battle Creek also supports a number of community, national, and international projects. The Islamic Assembly of North America, which serves as a coordinating body for US Islamic centers and organizations, is based in Ann Arbor.

47 TOURISM, TRAVEL, AND RECREATION

Tourism has been an important source of economic activity in Michigan since the 19th century and now rivals agriculture as the second most important segment of the state's economy. About 54% of all travel is in the form of day trips for state residents or visitors from neighboring states. In 2003, Michigan had 150,000 people employed in tourism.

Michigan's tourist attractions are diverse and readily accessible to much of the country's population. The opportunities offered by Michigan's water resources are the number one attraction; no part of the state is more than 85 mi (137 km) from one of the Great Lakes, and most of the population lives only a few miles away from one of the thousands of inland lakes and streams. Southwestern Michigan's sandy beaches along Lake Michigan offer sunbathing and swimming on 8,000 mi (5,000 km) of Great Lakes coastline. Inland lakes numbering 11,000 in southern Michigan are favored by swimmers while the Metropolitan Beach on Lake St. Clair, northeast of Detroit, claims to be the largest artificial-lake beach in the world. Camping has enjoyed an enormous increase in popularity; in addition to the extensive public camping facilities, there are many private campgrounds. The beach towns of Silver Lake, Sand Dunes, Holland, South Haven, and St. Joseph receive most of their tourists in the summer months. Ann Arbor and Grand Rapids share the presidential library of Gerald R. Ford. Ann Arbor also hosts the country's oldest art fair in July.

Although the tourist and resort business has been primarily a summer activity, the rising popularity of ice fishing, skiing, and other winter sports, autumn scenic tours, hunting, and spring festivals has made tourism a year-round business in many parts of the state. Historic attractions have been heavily promoted in recent years, following the success of Dearborn's Henry Ford Museum and Greenfield Village; such as the Motown Historical Museum. Tours of Detroit automobile factories and other industrial sites, such as Battle Creek's breakfast-food plants, are also important tourist attractions. The Spirit of Ford, a 50,000 sq ft center in Dearborn, offers a "behind the scenes" look at how the automaker designs, engineers, tests, and produces cars and trucks.

Camping and recreational facilities are provided by the federal government at three national forests comprising 2.8 million acres (1.1 million hectares), three facilities operated by the National Park Service (Isle Royale National Park, the Pictured Rocks National Lakeshore, and Sleeping Bear Dunes National Lakeshore), and several wildlife sanctuaries. A wild African-style village covering 70 acres (28.3 hectares) at the Binder Park Zoo in Battle Creek features giraffes, zebras, and ostrich, plus a variety of endangered

African species roaming freely on the grassy savannah. Michigan is the only state divided into two parts—the Upper Peninsula and the Lower Peninsula—which are connected by the well-known Mackinac Bridge.

State-operated facilities include 64 parks and recreational areas with 172,343 acres (69,747 hectares), and state forests and wild-life areas totaling 4,250,000 acres (1,720,000 hectares). Holland and Warren Dunes state parks, located on Lake Michigan, have the largest annual park attendances; Ludington State Park, also on Lake Michigan, attracts the largest number of campers.

48 SPORTS

Michigan has five major professional sports teams, all of them centered in Detroit: the Tigers of Major League Baseball, the Lions of the National Football League, the Pistons of the National Basketball Association, the Shock of the Women's National Basketball Association, and the Red Wings of the National Hockey League. The Tigers won the World Series in 1935, 1945, 1968, and 1984. The Pistons won the NBA Championship in 1989, 1990, and 2004. The Red Wings, arguably the most renowned hockey club ever, won the Stanley Cup in 1936, 1937, 1943, 1950, 1952, 1954, 1955, 1997, 1998, and 2002.

The state also has minor league hockey teams in Detroit, Flint, Grand Rapids, Motor City, Muskegon, Kalamazoo, Plymouth, Port Huron, and Saginaw; and baseball teams in Grand Rapids, Battle Creek, Lansing, and Traverse City.

Horse racing, Michigan's oldest organized spectator sport, is controlled by the state racing commissioner, who regulates thoroughbred and harness-racing seasons at tracks in the Detroit area and at Jackson. Attendance and betting at these races is substantial, although the modest purses rarely attract the nation's leading horses. Auto racing is also popular in Michigan. The state hosts four major races: the Tenneco Automotive Grand Prix of Detroit, the Michigan 500 Indy car race on the CART circuit, and two NASCAR Nextel Cup races.

Interest in college sports centers on the football and basketball teams of the University of Michigan and Michigan State University, which usually are among the top-ranked teams in the country. The University of Michigan football team was named national champion in 1901 (with Harvard), 1902, 1903, 1904 (with Penn), 1918 (with Pittsburgh), 1923 (with Illinois), 1932, 1933, 1947, 1948, and 1997. The team won the Rose Bowl in 1948, 1951, 1965, 1981, 1989, 1993, and 1998, the Citrus Bowl in 1999, and the Orange Bowl in 2000. Michigan State won the Rose Bowl in 1954, 1956, and 1988, and was named national champion in 1952 (with Georgia Tech), 1965 (with Alabama), and 1966 (with Notre Dame). The University of Michigan basketball team won the National Collegiate Athletic Association (NCAA) tournament in 1989, and Michigan State won it in 1979 and 2000. Michigan also advanced to the championship game in 1965, 1976, 1992, and 1993.

Other colleges also have achieved national rankings in basketball, hockey, baseball, and track. Elaborate facilities have been built for sporting competitions in Michigan; for example the University of Michigan's football stadium, seating 107,501, is one of the largest college-owned stadiums in the country.

Other annual sporting events include the Snowmobile Poker Runs in St. Ignace and, in July, the yacht races from Chicago and Port Huron to Mackinac Island.

49 FAMOUS MICHIGANIANS

Only one Michigianian has held the offices of US president and vice president. Gerald R. Ford (Leslie King Jr., b.Nebraska, 1913), the 38th US president, was elected to the US House as a Republican in 1948 and served continuously until 1973, becoming minority leader in 1965. Upon the resignation of Vice President Spiro T. Agnew in 1973, President Richard M. Nixon appointed Ford to the vice-presidency. When Nixon resigned on 9 August 1974, Ford became president, the first to hold that post without having been elected to high national office. Ford succeeded in restoring much of the public's confidence in the presidency, but his pardoning of Nixon for all crimes he may have committed as president helped cost Ford victory in the presidential election of 1976. Ford subsequently moved his legal residence to California.

Lewis Cass (b.New Hampshire, 1782–1866), who served as governor of Michigan Territory, senator from Michigan, secretary of war and secretary of state, is the only other Michigan resident nominated by a major party for president; he lost the 1848 race as the Democratic candidate. Thomas E. Dewey (1902–72), a native of Owosso, was the Republican presidential nominee in 1944 and 1948, but from his adopted state of New York.

Two Michigianians have served as associate justices of the Supreme Court: Henry B. Brown (b.Massachusetts, 1836–1913), author of the 1896 segregationist decision in *Plessy v. Ferguson*; and Frank Murphy (1890–1949), who also served as US attorney general, mayor of Detroit, governor of Michigan, and was a notable defender of minority rights during his years on the court. Another justice, Potter Stewart (1915–85), was born in Jackson but appointed to the court from Ohio.

Other Michigianians who have held high federal office include Robert McClelland (b.Pennsylvania, 1807–80), secretary of the interior; Russell A. Alger (b.Ohio, 1836–1907), secretary of war; Edwin Denby (b.Indiana, 1870–1929), secretary of the Navy, who was forced to resign because of the Teapot Dome scandal; Roy D. Chapin (1880–1936), secretary of commerce; Charles E. Wilson (b.Ohio, 1890–1961), and Robert S. McNamara (b.California, 1916), secretaries of defense; George Romney (b.Mexico, 1907–96), secretary of housing and urban development; Donald M. Dickinson (b.New York, 1846–1917) and Arthur E. Summerfield (1899–1972), postmasters general; and W. Michael Blumenthal (b.Germany, 1926), secretary of the treasury.

Zachariah Chandler (b.New Hampshire, 1813–79) served as secretary of the interior but is best remembered as a leader of the Radical Republicans in the US Senate during the Civil War era. Other prominent US senators have included James M. Couzens (b.Canada, 1872–1936), a former Ford executive who became a maverick Republican liberal during the 1920s; Arthur W. Vandenberg (1884–1951), a leading supporter of a bipartisan internationalist foreign policy after World War II; and Philip A. Hart Jr. (b.Pennsylvania, 1912–76), one of the most influential senators of the 1960s and 1970s. Recent well-known US representatives include John Conyers Jr. (b.1929) and Martha W. Griffiths (b.Missouri, 1912–2003), a representative for 20 years who served as the state's lieutenant governor from 1983–91.

In addition to Murphy and Romney, important governors have included Stevens T. Mason (b.Virginia, 1811–43), who guided Michigan to statehood; Austin Blair (b.New York, 1818–94), Civil War governor; Hazen S. Pingree (b.Maine, 1840–1901) and Chase S. Osborn (b.Indiana, 1860–1949), reform-minded governors; Alexander Groesbeck (1873–1953); G. Mennen Williams (1911–88); and William G. Milliken (b.1922), governor from 1969 to January 1983. From 1974 to 1994, Detroit's first black mayor, Coleman A. Young (b.Alabama, 1918–97), promoted programs to revive the city's tarnished image.

The most famous figure in the early development of Michigan is Jacques Marquette (b.France, 1637–75). Other famous historical figures include Charles de Langlade (1729–1801), a leader of the Ottawa people and a French-Indian soldier in the French and Indian War and the American Revolution; the Ottawa chieftain Pontiac (1720?–69), leader of an ambitious Indian uprising; and Gabriel Richard (b.France, 1769–1832), an important pioneer in education and the first Catholic priest to serve in Congress. Laura Haviland (b.Canada, 1808–98) was a noted leader in the fight against slavery and for black rights, while Lucinda Hinsdale Stone (b.Vermont, 1814–1900) and Anna Howard Shaw (b.England, 1847–1919) were important in the women's rights movement.

Nobel laureates from Michigan include diplomat Ralph J. Bunche (1904–71), winner of the Nobel Peace Prize in 1950; Glenn T. Seaborg (1912–99), Nobel Prize winner in chemistry in 1951; and Thomas H. Weller (b.1915) and Alfred D. Hershey (1908–97), Nobel Prize winners in physiology or medicine in 1954 and 1969, respectively. Among leading educators, James B. Angell (b.Rhode Island, 1829–1916), president of the University of Michigan, led that school to the forefront among American universities while John A. Hannah (1902–91), longtime president of Michigan State University, successfully strove to expand and diversify its programs. General Motors executive Charles S. Mott (b.New Jersey, 1875–1973) contributed to the growth of continuing education programs through huge grants of money.

In the business world, William C. Durant (b.Massachusetts, 1861–1947), Henry Ford (1863–1947) and Ransom E. Olds (b.Ohio 1864–1950) are the three most important figures in making Michigan the center of the American auto industry. Ford's grandson, Henry Ford II (1917–87), was the dominant personality in the auto industry from 1945 through 1979. Two brothers, John Harvey Kellogg (1852–1943) and Will K. Kellogg (1860–1951), helped make Battle Creek the center of the breakfast-food industry. William E. Upjohn (1850–1932) and Herbert H. Dow (b.Canada, 1866–1930) founded major pharmaceutical and chemical companies that bear their names. James E. Scripps (b.England, 1835–1906), founder of the *Detroit News*, was a major innovator in the newspaper business. Pioneer aviator Charles A. Lindbergh (1902–74) was born in Detroit.

Among prominent labor leaders in Michigan were Walter Ruther (b.West Virginia, 1907–70), president of the United Automobile Workers, and his controversial contemporary, James Hoffa (b.Indiana, 1913–1975?), president of the Teamsters Union, whose disappearance and presumed murder remain a mystery.

The best-known literary figures who were either native or adopted Michiganians include Edgar Guest (b.England, 1881–1959), writer of enormously popular sentimental verses; Ring Lardner (1885–1933), master of the short story; Edna Ferber (1885–1968),

best-selling novelist; Paul de Kruif (1890–1971), popular writer on scientific topics; Steward Edward White (1873–1946), writer of adventure tales; Howard Mumford Jones (1892–1980), critic and scholar; and Bruce Catton (1899–1978), Civil War historian.

Other prominent Michiganians past and present include Frederick Stuart Church (1842–1924), painter; Liberty Hyde Bailey (1858–1954), horticulturist and botanist; Albert Kahn (b.Germany, 1869–1942), noted architect and innovator in factory design; and (Gottlieb) Eliel Saarinen (b.Finland, 1873–1950), architect and creator of the Cranbrook School of Art, and his son Eero (1910–61), designer of the General Motors Technical Center in Warren and many distinctive structures throughout the United States. Malcolm X (Malcolm Little, b.Nebraska, 1925–65) developed his black separatist beliefs while living in Lansing.

Popular entertainers born in Michigan include Danny Thomas (Amos Jacobs, 1914–91), David Wayne (1914–91), Betty Hutton (b.1921), Ed McMahon (b.1923), Julie Harris (b.1925), Ellen Burstyn (Edna Rae Gilhooley, b.1932), Della Reese (Dellareese Patricia Early, b.1932), William "Smokey" Robinson (b.1940), Diana Ross (b.1944), Bob Seger (b.1945), and Stevie Wonder (Stevland Morris, b.1950), along with film director Francis Ford Coppola (b.1939).

Among sports figures who had notable careers in the state were Fielding H. Yost (b.West Virginia, 1871–1946), University of Michigan football coach; Joe Louis (Joseph Louis Barrow, b.Alabama, 1914–81), heavyweight boxing champion from 1937 to 1949; "Sugar Ray" Robinson (1921–89), who held at various times the welterweight and middleweight boxing titles; and baseball Hall of Famers Al Kaline (b.Maryland, 1934) and Tyrus Raymond ("Ty") Cobb (b.Georgia, 1886–1961), who won 12 batting titles, were Detroit Tigers stars. Earvin "Magic" Johnson (b.1959), who broke Oscar Robertson's record for most assists, was born in Lansing, Michigan.

MINNESOTA

State of Minnesota

ORIGIN OF STATE NAME: Derived from the Sioux Indian word *minisota*, meaning “sky-tinted waters.”
NICKNAME: The North Star State. **CAPITAL:** St. Paul. **ENTERED UNION:** 11 May 1858 (32nd). **SONG:** “Hail! Minnesota.” **MOTTO:** *L’Etoile du Nord* (The North Star). **FLAG:** On a blue field bordered on three sides by a gold fringe, a version of the state seal is surrounded by a wreath with the statehood year (1858), the year of the establishment of Ft. Snelling (1819), and the year the flag was adopted (1893). Five clusters of gold stars and the word “Minnesota” fill the outer circle. **OFFICIAL SEAL:** A farmer, with a powder horn and musket nearby, plows a field in the foreground, while in the background, before a rising sun, a Native American on horseback crosses the plains; pine trees and a waterfall represent the state’s natural resources. The state motto is above, and the whole is surrounded by the words “The Great Seal of the State of Minnesota 1858.” Another version of the seal in common use shows a cowboy riding across the plains. **BIRD:** Common loon. **FISH:** Walleye. **FLOWER:** Pink and white lady slipper. **TREE:** Red (Norway) pine. **GEM:** Lake Superior agate. **LEGAL HOLIDAYS:** New Year’s Day, 1 January; Birthday of Martin Luther King Jr., 3rd Monday in January; Presidents’ Day, 3rd Monday in February; Memorial Day, last Monday in May; Independence Day, 4 July; Labor Day, 1st Monday in September; Veterans’ Day, 11 November; Thanksgiving Day, 4th Thursday in November plus one day; Christmas Day, 25 December. By statute, schools hold special observances on Susan B. Anthony Day, 15 February; Arbor Day, last Friday in April; Minnesota Day, 11 May; Frances Willard Day, 28 September; Leif Erikson Day, 9 October. **TIME:** 6 AM CST = noon GMT.

¹ LOCATION, SIZE, AND EXTENT

Situated in the western north-central United States, Minnesota is the largest of the Midwestern states and ranks 12th in size among the 50 states.

The total area of Minnesota is 84,402 sq mi (218,601 sq km), of which land accounts for 79,548 sq mi (206,029 sq km) and inland water 4,854 sq mi (12,572 sq km). Minnesota extends 406 mi (653 km) N–S; its extreme E–W extension is 358 mi (576 km).

Minnesota is bordered on the N by the Canadian provinces of Manitoba and Ontario (with the line passing through the Lake of the Woods, Rainy River, Rainy Lake, a succession of smaller lakes, the Pigeon River, and Lake Superior); on the E by Michigan and Wisconsin (with the line passing through Lake Superior and the St. Croix and Mississippi rivers); on the S by Iowa; and on the W by South Dakota and North Dakota (with the line passing through Big Stone Lake, Lake Traverse, the Bois de Sioux River, and the Red River of the North).

The length of Minnesota’s boundaries totals 1,783 mi (2,870 km). The state’s geographic center is in Crow Wing County, 10 mi (16 km) sw of Brainerd.

² TOPOGRAPHY

Minnesota, lying at the northern rim of the Central Plains region, consists mainly of flat prairie, nowhere flatter than in the Red River Valley of the west. There are rolling hills and deep river valleys in the southeast; the northeast, known as Arrowhead Country, is more rugged and includes the Vermilion Range and the Mesabi Range, with its rich iron deposits. Eagle Mountain, in the extreme northeast, rises to a height of 2,301 ft (702 m), the highest point in the state; the surface of nearby Lake Superior, 601 ft (183 m) above

sea level, is the state’s lowest elevation. The mean elevation of the state is approximately 1,200 ft (366 m).

With more than 15,000 lakes and extensive wetlands, rivers, and streams, Minnesota has more inland water than any other state except Alaska. Some of the inland lakes are quite large: Lower and Upper Red Lake, 451 sq mi (1,168 sq km); Mille Lacs, 207 sq mi (536 sq km); and Leech Lake, 176 sq mi (456 sq km). The Lake of the Woods, 1,485 sq mi (3,846 sq km), is shared with Canada, as is Rainy Lake, 345 sq mi (894 sq km). A total of 2,212 sq mi (5,729 sq km) of Lake Superior lies within Minnesota’s jurisdiction.

Lake Itasca, in the northwest, is the source of the Mississippi River, which drains about three-fifths of the state and, after meeting with the St. Croix below Minneapolis–St. Paul, forms part of the eastern boundary with Wisconsin. The Minnesota River, which flows across the southern part of the state, joins the Mississippi at the Twin Cities. The Red River of the North, which forms much of the boundary with North Dakota, is part of another large drainage system; it flows north, crosses the Canadian border above St. Vincent, and eventually empties into Lake Winnipeg in Canada. North River is the source of the St. Lawrence River.

Most of Minnesota, except for small areas in the southeast, was covered by ice during the glacial ages. When the ice melted, it left behind a body of water known as Lake Agassiz, which extended into what we now call the Dakotas and Canada and was larger than the combined Great Lakes are today; additional melting to the north caused the lake to drain away, leaving flat prairie in its wake. The glaciers also left behind large stretches of pulverized limestone, enriching Minnesota’s soil, and the numerous shallow depressions that have developed into its modern-day lakes and streams.

3 CLIMATE

Minnesota has a continental climate, with cold, often frigid winters and warm summers. The growing season is 160 days or more in the south-central and southeastern regions, but 100 days or less in the northern counties. Average temperatures range from 8°F (-13°C) in January to 66°F (18°C) in July for Duluth, and from 12°F (-11°C) in January to 74°F (23°C) in July for Minneapolis–St. Paul, often called the Twin Cities. The lowest temperature recorded in Minnesota was -60°F (-51°C), at Tower on 2 February 1996; the highest, 114°F (46°C), at Moorhead on 6 July 1936.

Annual precipitation is at about 31 in (79 cm) at Duluth and 29.4 in (75 cm) at Minneapolis–St. Paul. Precipitation is lightest in the northwest, where it averaged 19 in (48 cm) per year. Heavy snowfalls occur from November to April, averaging about 70 in (178 cm) annually in the northeast and 30 in (76 cm) in the southeast. Blizzards hit Minnesota twice each winter on the average. Tornadoes occur mostly in the south; on average there are 18 tornadoes in the state each year.

4 FLORA AND FAUNA

Minnesota is divided into three main life zones: the wooded lake regions of the north and east, the prairie lands of the west and southwest, and a transition zone in between. Oak, maple, elm, birch, pine, ash, and poplar still thrive although much of the state's woodland has been cut down since the 1850s. Common shrubs include thimbleberry, sweetfern, and several varieties of honeysuckle. Familiar among some 1,500 native flowering plants are puccoon, prairie phlox, and blazing star; the pink and white (showy) lady slipper is the state flower. White and yellow water lilies cover the pond areas, with bulrushes and cattails on the shore. Three plant species were listed as threatened by the US Fish and Wildlife Service in April 2006—Leedy's roseroot, prairie bush-clover, and western prairie fringed orchid; the Minnesota dwarf trout lily was listed as endangered that year.

Among Minnesota's common mammals are the opossum, eastern and star-nosed moles, little brown bat, raccoon, mink, river otter, badger, striped and spotted skunks, red fox, bobcat, 13-lined ground squirrel (also known as the Minnesota gopher, symbol of the University of Minnesota), beaver, porcupine, eastern cottontail, moose, and white-tailed deer. The common loon (the state bird), western meadowlark, Brewer's blackbird, Carolina wren, and Louisiana water thrush are among some 240 resident bird species; introduced birds include the English sparrow and ring-necked pheasant. Teeming in Minnesota's many lakes are such game fishes as walleye, muskellunge, northern pike, and steelhead, rainbow, and brown trouts. The two poisonous snakes in the state are the timber rattler and the massasauga.

Classification of rare, threatened, and endangered species is delegated to the Minnesota Department of Natural Resources. Among rare species noted by the department are the white pelican, short-eared owl, rock vole, pine marten, American elk, woodland caribou, lake sturgeon, and paddlefish; threatened species include the bobwhite quail and piping plover. Nine species of animals occurring within the state (vertebrates and invertebrates) were listed as threatened or endangered in 2006 by the US Fish and Wildlife Service, including the gray wolf, bald eagle, piping plover, Topeka shiner, and Higgins' eye pearl mussel.

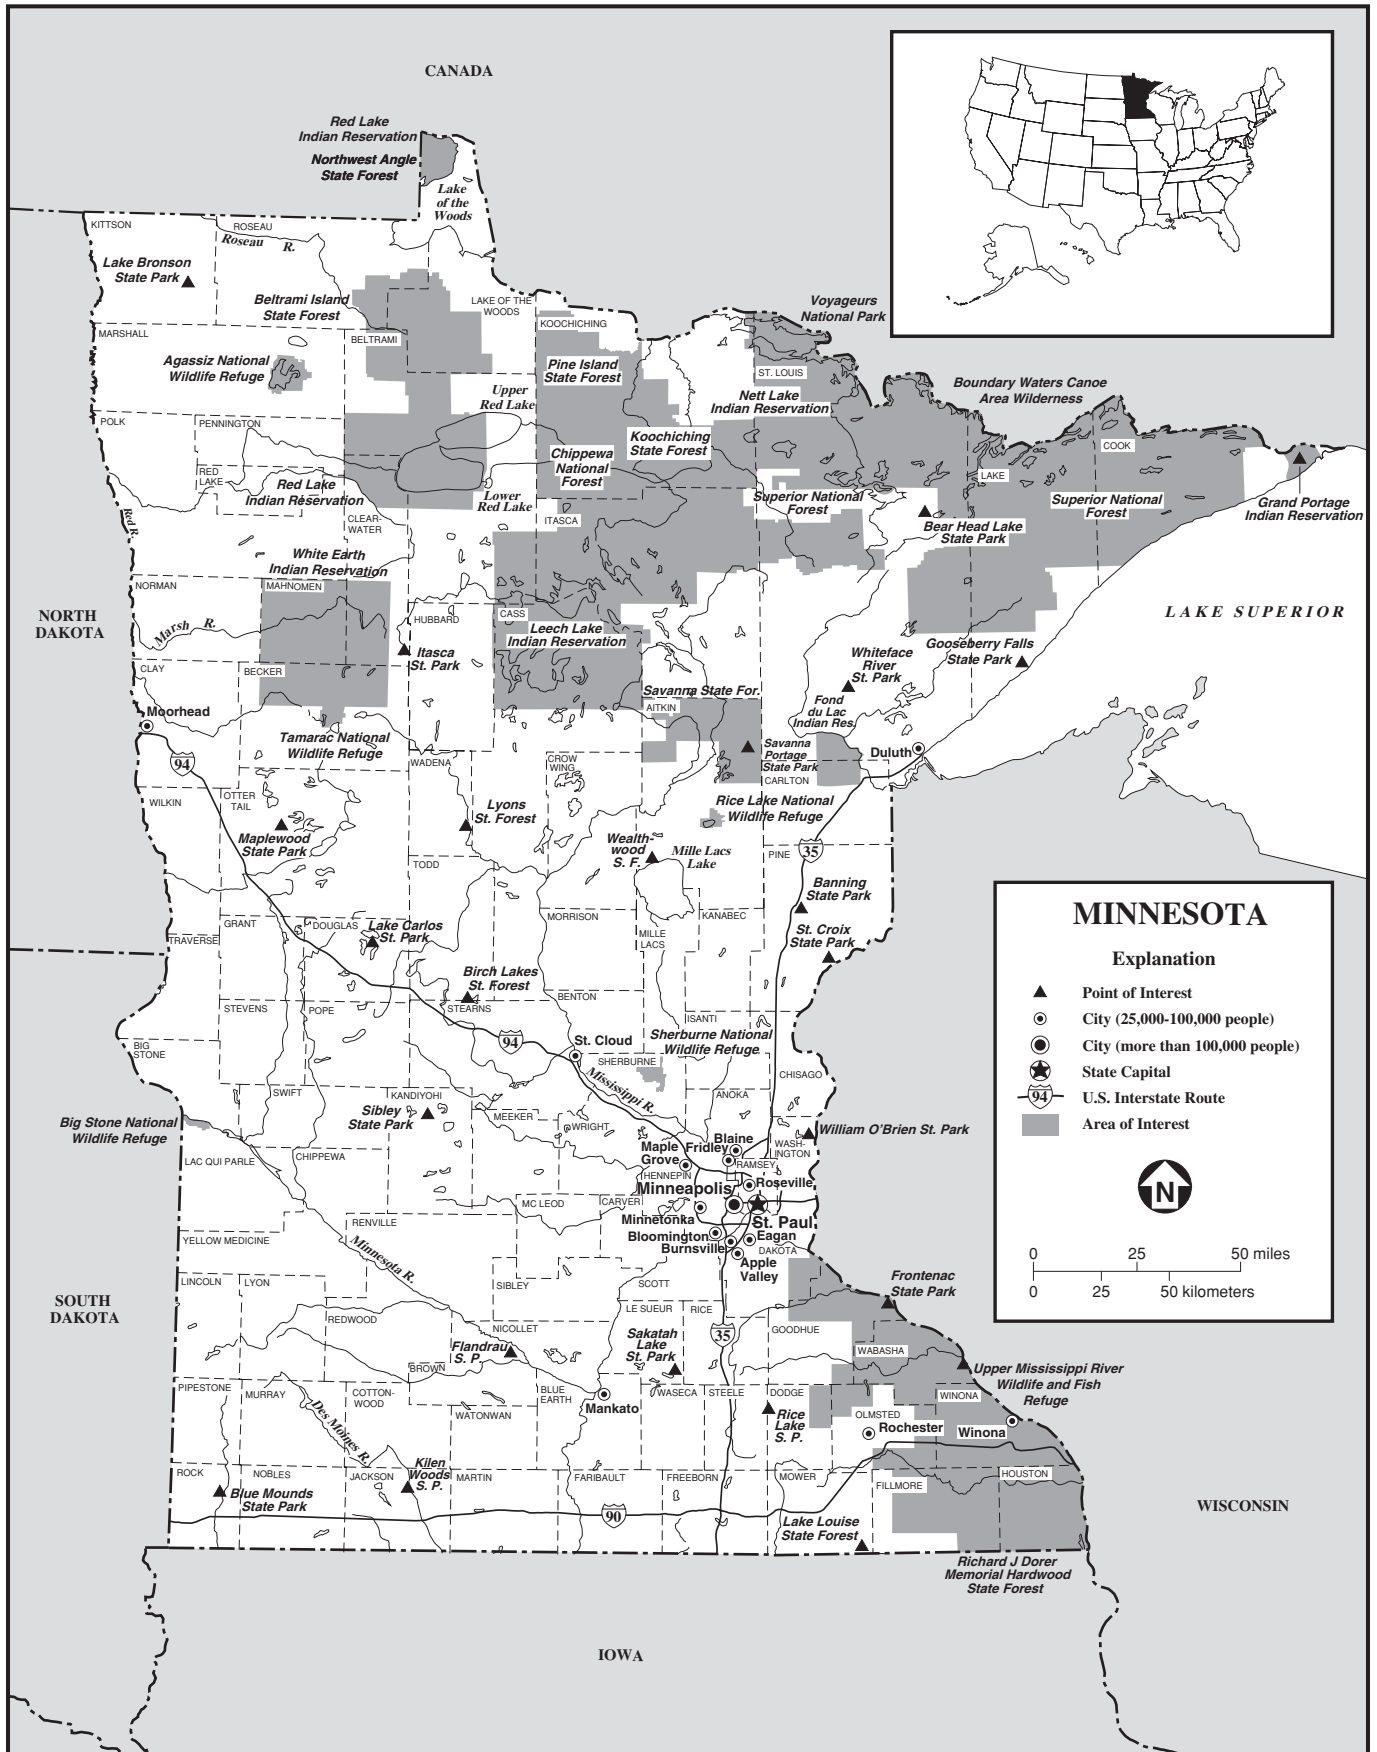

5 ENVIRONMENTAL PROTECTION

The state's northern forests have been greatly depleted by fires, lumbering, and farming, but efforts to replenish them began as early as 1876, with the formation of the state's first forestry association. In 1911, the legislature authorized a state nursery, established forest reserves and parks, and created the post of chief fire warden to oversee forestry resources and promote reforestation projects. Minnesota divides its environmental programs among three agencies: the Minnesota Pollution Control Agency, the Department of Natural Resources, and the Office of Environmental Assistance. The Conservation Department, created in 1931, evolved into the present Department of Natural Resources, which is responsible for the management of forests, fish and game, public lands, minerals, and state parks and waters. The department's Soil and Water Conservation Board has jurisdiction over the state's 92 soil and water conservation districts. A separate Pollution Control Agency enforces air and water quality standards and oversees solid waste disposal and pollution-related land-use planning. The Environmental Quality Board coordinates conservation efforts among various state agencies.

Minnesotans dump 4,400 tons of waste a year (0.99 tons per capita) into 53 municipal landfills. In 1994, the state implemented the Minnesota Landfill Cleanup Program to ensure the proper care of 106 closed or closing municipal landfills. Beginning in 1996, the state began construction on 25 new municipal landfills and instituted a planning effort to manage all existing and closed sites. In 2003, Minnesota had 81 hazardous waste sites listed in the US Environment Protection Agency (EPA) database, 24 of which were on the National Priorities List as of 2006. In 2005, the EPA spent over \$1.9 million through the Superfund program for the cleanup of hazardous waste sites in the state. The same year, federal EPA grants awarded to the state included \$19.8 million for the state clean water revolving fund and \$16.4 million for the drinking water revolving fund. To control the state's solid waste stream, Minnesotans have established 488 curbside recycling programs. The Reserve Mining Co. complied with a court order in 1980 by ending the dumping of taconite wastes, a possible carcinogen, into Lake Superior.

Other pollution problems came to light during the 1970s with the discovery of asbestos in drinking water from Lake Superior, of contaminants from inadequately buried toxic wastes at St. Louis Park, and of the killing by agricultural pesticides of an estimated 100,000 fish in two southeastern Minnesota brooks. During the early 1980s, the state's Pollution Control Agency approved plans by FMC, a munitions maker, to clean up a hazardous waste site at Fridley (near Minneapolis), which the EPA claimed was the country's most dangerous hazardous waste area. The Minnesota Mining and Manufacturing Co. in 1983 began to remove chemical wastes from three dumps in Oakdale (a suburb of St. Paul), where the company had disposed of hazardous wastes since the late 1940s. Each cleanup project was to cost the respective companies at least \$6 million. In 2003, 31.4 million lb of toxic chemicals were released in the state.

In 1997, the state had some 9.5 million acres (3.8 million hectares) of wetlands. The Wetlands Conservation Act of 1991 set the ambitious goal of no wetland loss in the future.

6 POPULATION

Minnesota ranked 21st in population in the United States with an estimated total of 5,132,799 in 2005, an increase of 4.3% since 2000. Between 1990 and 2000, Minnesota's population grew from 4,375,099 to 4,919,479, an increase of 12.4%. The population was projected to reach 5.6 million by 2015 and 6.8 million by 2025. The population density in 2004 was 64.1 persons per sq mi.

Minnesota was still mostly wilderness until a land boom in 1848 attracted the first substantial wave of settlers, mainly lumbermen from New England, farmers from the Middle Atlantic states, and tradespeople from eastern cities. The 1850 census recorded a population of 6,077 in what was then Minnesota Territory. With the signing of major Indian treaties and widespread use of the steamboat, large areas were opened to settlement, and the population exceeded 150,000 by the end of 1857. Attracted by fertile farmland and enticed by ambitious recruitment programs overseas, large numbers of European immigrants came to settle in the new state from the 1860s onward. In 1880, the state population totaled 780,733; by 1920 (when overseas immigration virtually ceased), the state had 2,387,125 residents. Population growth leveled off during the 1920s and has fallen below the national average since the 1940s. As of 2004, Minnesotans had a median age of 36.6 years. Nearly 24.3% of the population was under age 18, while 12.1% was age 65 or older.

The Minneapolis–St. Paul–Bloomington metropolitan area had an estimated population of 3,116,206 in 2004, up from an estimated 2,723,137 in 1995. The city of Minneapolis itself had an estimated 373,943 residents in 2004; St. Paul had an estimated 276,963. Other leading cities include Duluth and Rochester.

7 ETHNIC GROUPS

Minnesota was settled during the second half of the 19th century, primarily by European immigrants, chiefly Germans, Swedes, Norwegians, Danes, English, and Poles, along with the Irish and some French Canadians. The Swedish newcomers were mainly farmers; Norwegians concentrated on lumbering, while the Swiss worked for the most part in the dairy industry. In 1890, Finns and Slavs were recruited to work in the iron mines; the state's meat-packing plants brought in Balkan nationals, Mexicans, and Poles after the turn of the century. By 1930, 50% of the population was foreign-born. Among first- and second-generation Minnesotans of European origin, Germans and Scandinavians are still the largest groups. The state has more ethnic Norwegians than any other, and is second in number of ethnic Swedes, behind California. The other ethnic groups are concentrated in Minneapolis–St. Paul or in the iron country of the Mesabi Range, where ethnic enclaves still persist. As of 2000, foreign-born residents of Minnesota numbered 260,463, or 5.3% of the state total, up from 113,039 (2.5%) in 1990.

As of 2000 there were 54,967 American Indians in Minnesota, with 35,282 living on 13 of the state's 14 Indian reservations (one was unpopulated). Besides those living on reservations and in villages, a cluster of Indian urban dwellers (chiefly Ojibwa) lived in St. Paul. The reservation with the largest 2000 population was Leech Lake, with 10,205 people. Other reservations included Fond du Lac (3,728) and Mille Lacs (4,704). Indian lands totaled 764,000 acres (309,000 hectares) in 1982, of which 93% were trib-

al lands. In 2004, 1.2% of the state's population was composed of American Indians.

There were only 39 black Americans in Minnesota in 1850; by 1990, blacks numbered 95,000, or 2.1% of the total population, and as of 2000, the black population had jumped to 171,731 (3.5%). In 2004, 4.1% of the population was black. In 2000 there were 141,968 Asian and Pacific residents, including 41,800 Hmong (second-largest total in the United States), 18,824 Vietnamese, 16,887 Asian Indians, 16,060 Chinese, 12,584 Koreans, and 9,940 Laotians. In 2000, Pacific Islanders numbered 1,979. In 2000, there also were 143,382 Hispanics and Latinos, 2.9% of the state population. In 2004, 3.4% of the population was Asian, 0.1% of Pacific Island origin, and 3.5% Hispanic and Latino. That year, 1.4% of the population reported origin of two or more races.

8 LANGUAGES

Many place-names echo the languages of the Yankton and Santee Sioux Indian tribes and of the incoming Algonkian-language Ojibwa, or Chippewa, from whom most of the Sioux fled to Dakota Territory. Such place-names as Minnesota itself, Minnetonka, and Mankato are Siouan in origin; Kabetogama and Winnibigoshish, both lakes, are Ojibwan.

The following table gives selected statistics from the 2000 Census for language spoken at home by persons five years old and over. The category "African languages" includes Amharic, Ibo, Twi, Yoruba, Bantu, Swahili, and Somali. The category "Scandinavian languages" includes Danish, Norwegian, and Swedish.

LANGUAGE	NUMBER	PERCENT
Population 5 years and over	4,591,491	100.0
Speak only English	4,201,503	91.5
Speak a language other than English	389,988	8.5
Speak a language other than English	389,988	8.5
Spanish or Spanish Creole	132,066	2.9
Miao, Hmong	41,673	0.9
German	35,072	0.8
African languages	24,747	0.5
Vietnamese	16,503	0.4
French (incl. Patois, Cajun)	15,744	0.3
Scandinavian languages	12,722	0.3
Chinese	12,578	0.3
Russian	9,629	0.2
Laotian	7,987	

English in the state is essentially Northern, with minor infiltration of Midland terms because of early movement up the Mississippi River into southern Minnesota and also up the Great Lakes into and beyond Duluth. Among older residents, traces of Scandinavian intonation persist, and on the Iron Range several pronunciation features reflect the mother tongues of mine workers from eastern Europe.

Although some minor variants now compete in frequency, on the whole Minnesota speech features such dominant Northern terms as *andirons*, *pail*, *mouth organ* (harmonica), *comforter* (tied and filled bedcover), *wishbone*, *clingstone peach*, *sweet corn*, *angleworm* (earthworm), *darning needle* or *mosquito hawk* (dragonfly), and *sick to the stomach*. Minnesotans call the grass strip between street and sidewalk the *boulevard* and a rubber band a *rubber binder*, and many *cook coffee* when they brew it. Three-fourths of a sample population spoke *root* with the vowel of *put*; one third, through school influence, pronounced /ah/ in *aunt* instead of the

usual Northern short /a/, as in *pants*. Many younger speakers pronounce *caller* and *collar* alike.

9 RELIGIONS

Minnesota's first Christian church was organized by Presbyterians in Ft. Snelling in 1835; the first Roman Catholic church, the Chapel of St. Paul, was dedicated in 1841 at a town then called Pig's Eye but now known by the same name as the chapel. Immigrants arriving in subsequent decades brought their religions with them, with Lutherans and Catholics predominating.

The Roman Catholic Church reported a statewide membership of 1,185,980 in 2004; with about 730,989 members belonging to the archdiocese of St. Paul and Minneapolis. As of 2000, predominant Protestant groups included the Evangelical Lutheran Church in America, 853,448 adherents, and the Lutheran Church–Missouri Synod, 203,863 adherents. In 2004, the United Methodist Church had 83,755 members. In 2005, the United Church of Christ reported a statewide membership of 33,901. Other Lutheran, Presbyterian, and Baptist denominations were also somewhat prominent. The Episcopal Church had 30,547 adherents in 2000. The Church of Jesus Christ of Latter-Day Saints (Mormons) reported 27,524 members in 71 congregations in 2006. A Mormon temple was opened in St. Paul in 2000. In 2000, there were about 42,000 adherents to Judaism and 12,300 adherents of Islam. That year, over 1.8 million people (about 38.3% of the population) were not counted as members of any religious organization.

Minnesota is the headquarters for three national Lutheran religious groups: the American Lutheran Church, the Church of the Lutheran Brethren, and the Association of Free Lutheran Congregations. The Temple of Eckankar (est. 1990) and the Eckankar Spiritual Center (est. 2004) are located in Chanhassen, which is considered to be the spiritual home of the faith. Eckankar, called “a religion of the light and sound of God” by its followers, was introduced by Paul Twitchell, an American journalist, in 1965.

10 TRANSPORTATION

The development of an extensive railroad network after the Civil War was a key factor in the growth of lumbering, iron mining, wheat growing, and other industries. By 2003, Minnesota had a total of 5,923 rail mi (9,536 km). In that same year, metallic ores were the top commodity transported by rail that originated within the state. As of 2006, Amtrak provided east–west service from Chicago to Seattle/Portland to six stations in Minnesota, including Minneapolis–St. Paul, via its Empire Builder train.

Planning and supervision of mass transportation in the Twin Cities metropolitan area are under the jurisdiction of the Metropolitan Transit Commission, a public corporation. The national Greyhound bus line was founded in Hibbing in 1914.

Minnesota had 131,937 mi (212,418 km) of public roads and streets in 2004. Minneapolis–St. Paul is linked by I-35 to Duluth, and I-94 connects the Twin Cities with Moorhead and Fargo, North Dakota. In 2004, there were 2.490 million automobiles, 2.046 million trucks of all types, and 7,000 buses registered with the state. In that same year, the state had 3,083,007 licensed drivers.

The first settlements grew up around major river arteries, especially in the southeast; early traders and settlers arrived first by canoe or keelboat, later by steamer. The port of Duluth-Superi-

or, at the western terminus of the Great Lakes–St. Lawrence Seaway (officially opened in 1959) was the state's busiest port, handling 45.392 million tons of domestic and international cargo in 2004, making it the 19th-busiest port in the United States. The port of Two Harbors was the state's second busiest port that same year and the nation's 48th busiest, handling 13.472 million tons. The ports of Minneapolis and St. Paul handle a combined cargo greater than seven million tons each year, with agricultural products and scrap iron moving downstream and petroleum products, chemicals, and cement moving upstream. Minnesota in 2004 had 258 mi (415 km) of navigable inland waterways. In 2003, waterborne shipments totaled 47.687 million tons.

In 2005, Minnesota had a total of 520 public and private-use aviation-related facilities. This included 384 airports, 58 heliports, one STOLport (Short Take-Off and Landing), and 77 seaplane bases. Minneapolis–St. Paul International is the state's largest and busiest airport. In 2004, the airport had 17,482,627 enplanements, making it the ninth-busiest airport in the United States.

11 HISTORY

People have lived on the land that is now Minnesota for at least 10,000 years. The earliest inhabitants—belonging to what archaeologists classify as the Paleo-Indian (or Big Game) culture—hunted large animals, primarily bison, from which they obtained food, clothing, and materials for shelter. A second identifiable cultural tradition, from around 5000 BC, was the Eastern Archaic (or Old Copper) culture. These people hunted small as well as large game animals and fashioned copper implements through a cold hammering process. The more recent Woodland Tradition (1000 BC–AD 1700) was marked by the introduction of pottery and of mound burials. From the 1870s to the early 1900s, more than 11,000 burial mounds were discovered in Minnesota—the most visible remains of prehistoric life in the area. Finally, overlapping the Woodland culture in time was the Mississippian Tradition, beginning around AD 1000, in which large villages with permanent dwellings were erected near fertile river bottoms; their residents, in addition to hunting and fishing, raised corn, beans, and squash. There are many sites from this culture throughout southern Minnesota.

At the time of European penetration in the 17th and early 18th centuries, the two principal Indian nations were the Dakota, or Minnesota Sioux, and, at least after 1700, the Ojibwa, or Chippewa, who were moving from the east into northern Minnesota and the Dakota homelands. Friendly relations between the two nations were shattered in 1736, when the Dakota slew a party of French missionaries and traders (allies of the Ojibwa) and their Cree Indian guides (distant relatives of the Ojibwa) at the Lake of the Woods, an act the Ojibwa viewed as a declaration of war. There followed more than 100 years of conflict between Dakota and Ojibwa, during which the Dakota were pressed toward the south and west, with the Ojibwa establishing themselves in the north.

Few scholars accept the authenticity of the Kensington Rune Stone, found in 1898, the basis of the claim that Minnesota was visited in 1362 by the Vikings. The first white men whose travels through the region have been documented were Pierre Esprit Radisson and his brother-in-law, Médart Chouart, Sieur de Groseilliers, who probably reached the interior of northern Minne-

sota in the 1650s. In 1679, Daniel Greysolon, Sieur Duluth, held council with the Dakota near Mille Lacs and formally claimed the region for King Louis XIV of France. The following year, Duluth negotiated the release of three captives of the Dakota Indians, among them a Belgian explorer and missionary, Father Louis Hennepin, who named the falls of the Mississippi (the site of present-day Minneapolis) after his patron saint, Anthony of Padua, and returned to Europe to write an exaggerated account of his travels in the region.

Duluth was in the vanguard of the French, English, and American explorers, fur traders, and missionaries who came to Minnesota during the two centuries before statehood. Among the best known was Nicolas Perrot, who built Ft. Antoine on the east side of Lake Pepin in 1686. In 1731, Pierre Gaultier de Varennes, Sieur de la Verendrye, journeyed to the Lake of the Woods, along whose shores he erected Ft. St. Charles; subsequently, he or his men ventured farther west than any other known French explorer, reaching the Dakotas and the Saskatchewan Valley. His eldest son was among those slain by Dakota Indians at the Lake of the Woods in 1736.

Competition for control of the upper Mississippi Valley ended with the British victory in the French and Indian War, which placed the portion of Minnesota east of the Mississippi under British control; the land west of the Mississippi was ceded by France to Spain in 1762. Although the Spanish paid little attention to their northern territory, the British immediately sent in fur traders and explorers. One of the best known was Jonathan Carver, who spent the winter of 1766–67 with the Dakota on the Minnesota River. His account of his travels—a mixture of personal observations and borrowings from others—quickly became a popular success.

There was little activity in the region during the Revolutionary War, and for a few decades afterward, the British continued to pursue their interests there. The North West Company built a major fur-trading post at Grand Portage, which quickly became the center of a prosperous inland trade, and other posts dotted the countryside. The company hired David Thompson away from the Hudson's Bay Company to map the area from Lake Superior west to the Red River; his detailed and accurate work, executed in the late 1790s, is still admired today. After the War of 1812, the US Congress passed an act curbing British participation in the fur trade, and the North West Company was eventually replaced by the American Fur Company, which John Jacob Astor had incorporated in 1808.

Under the Northwest Ordinance of 1787, Minnesota east of the Mississippi became part of the Northwest Territory; most of western Minnesota was acquired by the United States as part of the Louisiana Purchase of 1803. The Red River Valley became a secure part of the United States after an agreement with England on the northern boundary was reached in 1818.

In 1805, the US War Department sent Lt. Zebulon Pike and a detachment of troops to explore the Mississippi to its source. Pike failed to locate the source, but he concluded a treaty with a band of Dakota for two parcels of land along the river. Later, additional troops were sent in to establish US control, and in 1819, a military post was established in part of Pike's land, on a bluff overlooking the junction of the Mississippi and Minnesota rivers. First called Ft. St. Anthony, it was renamed in 1825 for Col. Josiah Snelling, who supervised the construction of the permanent fort. For three

decades, Ft. Snelling served as the principal center of civilization in Minnesota and the key frontier outpost in the northwest.

In 1834, Henry H. Sibley was appointed a manager of the American Fur Company on the upper Mississippi. He settled comfortably at Mendota, a trading post across the river from Ft. Snelling, and enjoyed immediate success. The company's fortunes took a downward turn in 1837, however—partly because of a financial panic but, even more important, because the first of a series of treaties with the Dakota and Ojibwa transferred large areas of Indian land to the US government and thus curtailed the profitable relationship between fur traders and Indians. The treaties opened the land for lumbering, farming, and settlement. Lumbering spawned many of the early permanent settlements, such as Marine and Stillwater, on the St. Croix River, and St. Anthony (later Minneapolis) at the falls of the Mississippi. Another important town, St. Paul (originally Pig's Eye), developed as a trading center at the head of navigation on the Mississippi.

In 1849, Minnesota Territory was established. It included all of present-day Minnesota, along with portions of North and South Dakota east of the Missouri River. Alexander Ramsey, a Pennsylvania Whig, was appointed as the first territorial governor, and in 1851, the legislature named St. Paul the capital. Stillwater was chosen for the state prison, while St. Anthony was selected as the site for the university. As of 1850, the new territory had slightly more than 6,000 inhabitants, but as lumbering grew and subsequent Indian treaties opened up more land, the population boomed, reaching a total of more than 150,000 by 1857, with the majority concentrated in the southeast corner, close to the rivers.

On 11 May 1858, Minnesota officially became the 32nd state, with its western boundaries pruned from the Missouri to the Red River. Henry Sibley, a Democrat, narrowly defeated Alexander Ramsey, running as a Republican, to become the state's first governor. But under Ramsey's leadership, the fast-growing Republican Party soon gained control of state politics and held it firmly through the early 20th century. In the first presidential election in which Minnesota participated, Abraham Lincoln, the Republican candidate, easily carried the state, and when the Civil War broke out, Minnesota was the first state to answer Lincoln's call for troops. In all, Minnesota supplied more than 20,000 men to defend the Union.

More challenging to the defense of Minnesota was the Dakota War of 1862. Grieved by the loss of their lands, dissatisfied with reservation life, and ultimately brought to a condition of near starvation, the Dakota appealed to US Indian agencies without success. The murder of five whites by four young Dakota Indians ignited a bloody uprising in which more than 300 whites and an unknown number of Indians were killed. In the aftermath, 38 Dakota captives were hanged for "voluntary participation in murders and massacres," and the Dakota remaining in Minnesota were removed to reservations in Nebraska. (Some later returned to Minnesota.) Meanwhile, the Ojibwa were relegated to reservations on remnants of their former lands.

Also during 1862, Minnesota's first railroad joined St. Anthony (Minneapolis) and St. Paul with 10 mi (16 km) of track. By 1867, the Twin Cities were connected with Chicago by rail; in the early 1870s, tracks crossed the prairie all the way to the Red River Valley. The railroads brought settlers from the eastern states (many of them Scandinavian and German in origin) to every corner of

Minnesota; the settlers, in turn, grew produce for the trains to carry back to the cities of the east. The railroads soon ushered in an era of large-scale commercial farming. Wheat provided the biggest cash crop, as exports rose from 2 million bushels in 1860 to 95 million in 1890. Meanwhile, the falls of St. Anthony became the major US flour-milling center; by 1880, 27 Minneapolis mills were producing more than 2 million barrels of flour annually.

Despite these signs of prosperity, discontent grew among Minnesota farmers, who were plagued by high railroad rates, damaging droughts, and a deflationary economy. The first national farmers' movement, the National Grange of the Patrons of Husbandry, was founded in 1867 by a Minnesotan, Oliver H. Kelley, and spread more rapidly in Minnesota than in any other state. The Farmers' Alliance movement, joining forces with the Knights of Labor, exerted a major influence on state politics in the 1880s. In 1898, the Populist Party—in which a Minnesotan, Ignatius Donnelly, played a leading role nationwide—helped elect John Lind to the governorship on a fusion ticket.

Most immigrants during the 1860s and 1870s settled on the rich farmland of the north and west, but after 1880 the cities and industries grew more rapidly. When iron ore was discovered in the 1880s in the sparsely settled northeast, even that part of the state attracted settlers, many of them immigrants from eastern and southern Europe. Before 1900, Duluth had become a major lake port, and by the eve of World War I, Minnesota had become a national iron-mining center.

The economic picture changed after the war. As the forests were depleted, the big lumber companies turned to the Pacific Northwest. An agricultural depression hit the region, and flour mills moved to the Kansas City area and to Buffalo, New York. Minnesotans adapted to the new realities in various ways. Farmers planted corn, soybeans, and sugar beets along with wheat, and new food-processing industries developed. To these were added business machines, electronics, computers, and other high-technology industries. In 1948, for the first time, the dollar value of all manufactured products exceeded total cash farm receipts. In 1950 the state's urban population exceeded its rural population for the first time. Minnesota was becoming an urban commonwealth.

In addition to heightened demand for its agricultural products, Minnesota prospered as a result of new defense-related, high-technology, and other industries that grew up following World War II. Over \$1 billion was invested in plants to process low-grade iron ore, called taconite, after the state's supply of high-grade ore declined. By the 1970s, environmentalists were targeting the ore producers for polluting Lake Superior with mineral wastes, and in 1978 the Minnesota Supreme Court ordered Reserve Mining Company to comply with pollution-control standards.

A successful merger of Minnesota's Farmer-Labor and Democratic parties, engineered in 1943–44 by both local and national politicians, revived the state's progressivist tradition after World War II. Hubert Humphrey (later US vice president) and his colleagues Orville Freeman, Eugene McCarthy, and Eugenie Anderson emerged as leaders of this new coalition. Their political heir, Walter Mondale, was vice president in 1977–81 but, as the Democratic presidential candidate in 1984, lost the election in a Republican landslide, carrying only his native state and the District of Columbia.

In the 1990s, Minnesota continued its economic diversification as service industries, including finance, insurance, and real estate, became increasingly important. As a result, it closed the decade with a low unemployment rate of 2.8% (when the national average was just over 4%). Though Minnesota, led by the Twin Cities, enjoyed an unprecedented decade of economic prosperity, it was generally acknowledged that agriculture across the Great Plains was in crisis by the end of the 1990s.

For many farmers, their problems had been exacerbated by weather conditions. In 1988, Minnesota's agricultural producers suffered from the worst drought since the 1930s. As a result of the severe flooding of the Mississippi River in 1993, almost half of Minnesota's counties were designated as disaster areas. Again in 1997, some of the most severe flooding in the century occurred in the Red River and Minnesota River valleys.

The state legislature closed its 1999 session having passed the largest permanent tax cut and one-time rebate in the state's history, amounting to \$2.9 billion in tax relief. Though the accomplishment was hailed as a result of a bipartisan effort, discord soon befell Minnesota government. By October, activists were attempting to recall Governor Jesse Ventura, elected the previous year the Reform Party candidate, only to align himself with the Independence Party of Minnesota shortly after taking office. The following legislative session (in 2000) saw more veto overrides than in any other session of the last half century.

Republican Tim Pawlenty, elected governor in 2002, sponsored an Internet privacy bill early in his term and stressed the need for higher education standards and attracting more high-tech jobs to the state. In 2003, Minnesota faced the largest budget deficit in its history, \$4.2 billion. The legislature that year passed a \$28.3 billion budget marked by spending cuts and no new taxes. Democrats, farmers, and labor leaders feared Pawlenty's commitment to no new taxes would amount to large spending cuts in education, health care, and other areas. However, by 2005 Pawlenty had balanced the state's budget without cutting funding for K–12 education. Under Pawlenty's leadership, an overhaul of the state's education standards, welfare reform, lawsuit reform, and a large transportation package were passed.

As of 2005, the state had a \$10 billion per year tourism industry. As such, it was focusing attention on its water resources, which provide jobs, drive quality of life, and support fish and wildlife. Development, pollution, and growing demands for safe drinking water are all pressures placed on the future health of Minnesota waters.

¹² STATE GOVERNMENT

The constitutional convention that assembled at St. Paul on 13 July 1857 was marked by such bitter dissension that the Democrats and Republicans had to meet in separate chambers; the final draft was written by a committee of five Democrats and five Republicans and then adopted by a majority of each party, without amendment. Since Democrats and Republicans were also unwilling to sign the same piece of paper, two separate documents were prepared, one on blue-tinted paper, the other on white. The constitution was ratified by the electorate on 13 October and approved by the US Congress on 11 May 1858. An amendment restructuring the constitution for easy reference and simplifying its language was approved in 1974; for purposes of constitutional law,

however, the original document (incorporating numerous other amendments) remains authoritative. Through January 2005 there were 118 amendments.

As reapportioned by court order after the 1970 census, the Minnesota legislature consists of a 67-member Senate and a 134-member House of Representatives. Legislative sessions begin in January and are limited to 120 legislative days or to the first Monday after the third Saturday in May. Sessions are to be held in only odd-numbered years, but the legislature may divide and meet in even-numbered years as well. Only the governor may call for special sessions. Senators serve four years and representatives two, at annual salaries of \$31,140 as of 2004, unchanged from 1999. Representatives must be at least 18 years old and senators 21; they must be qualified voters, and must have resided in the state for one year and in the legislative district for six months preceding election.

The governor and lieutenant governor are jointly elected for four-year terms; both must be US citizens at least 25 years old, qualified voters, and must have been residents of Minnesota for a year before election. Other constitutional officers are the secretary of state, auditor, and attorney general, all serving for four years. Numerous other officials are appointed by the governor, among them the commissioners of government departments and many heads and members of independent agencies. As of December 2004, the governor's salary was \$120,311.

Once a bill is passed by a majority of both houses, the governor may sign it, veto it in whole or in part, or pocket-veto it by fail-

ing to act within 14 days of adjournment. (When the legislature is in session, however, a bill becomes law if the governor fails to act on it within three days.) A two-thirds vote of the members of both houses overrides a veto. Constitutional amendments require the approval of a majority of both houses of the legislature and are subject to ratification by the electorate. Those voting in state elections must be at least 18 years old, US citizens, and state residents for at least 20 days prior to election day. Restrictions apply to convicted felons and those declared mentally incompetent by the court.

13 POLITICAL PARTIES

The two major political parties are the Democratic-Farmer-Labor Party (DFL) and the Republican Party (until 1995 called the Independent-Republican Party). The Republican Party dominated Minnesota politics from the 1860s through the 1920s, except for a period around the turn of the century. The DFL, formed in 1944 by merger between the Democratic Party and the populist Farmer-Labor Party, rose to prominence in the 1950s under US Senator Hubert Humphrey; it functions as the state chapter of the US Democratic Party.

The DFL is the heir to a long populist tradition bred during the panic of 1857 and the early days of statehood, a tradition perpetuated by a succession of strong, though transient, third-party movements. The Grange, a farmers' movement committed to the cause of railroad regulation, took root in Minnesota in 1868; it withered in the panic of 1873, but its successors, the Anti-Monopoly Par-

*Won US presidential election.

**Minnesota has 10 electoral votes. One electoral vote was cast for John Edwards.

1 Called Democratic-Farmer-Labor Party in Minnesota.

2 IND.-Republican party called Republican Party as of 1995.

3 Appeared as Industrial Government Party on the ballot.

ty and the Greenback Party, attracted large followings for some time afterward. They were followed by a new pro-silver group, the Farmers' Alliance, which spread to Minnesota from Nebraska in 1881 and soon became associated with the Minnesota Knights of Labor. The Populist Party also won a foothold in Minnesota, in alliance with the Democratic Party in the late 1890s.

The Farmer-Labor Party, the most successful of Minnesota's third-party movements, grew out of a socialist and isolationist movement known at first as the Non-Partisan League. Founded in North Dakota with the initial aim of gaining control of the Republican Party in that state, the league moved its headquarters to St. Paul and competed in the 1918 elections under the name Farmer-Labor Party, hastily adopted to attract what party leaders hoped would be its two main constituencies. The party scored a major success in 1922 when its candidate, Henrik Shipstead, a Glenwood dentist, defeated a nationally known incumbent, Republican Senator Frank B. Kellogg; Farmer-Labor candidate Floyd B. Olson won the governorship in 1930. The decline of the party in the late 1930s was hastened by the rise of Republican Harold Stassen, an ardent internationalist, who won the governorship in 1938 and twice won reelection.

The first DFL candidate to become governor was Orville Freeman in 1954. The DFL held the governorship from 1963 to 1967 and from 1971 to 1978, when US Representative Al Quie (IR) defeated his DFL opponent, Rudy Perpich; however, Perpich regained the governorship for the DFL in 1982. Perpich served four terms. He lost to Independent-Republican Arne Carlson in 1990, and Carlson was reelected in 1994. The 1998 gubernatorial election in Minnesota made national headlines; it was won by Reform candidate and former World Wrestling Federation personality Jesse Ventura. After gaining office, Ventura switched allegiances to the Independence Party of Minnesota. Tim Pawlenty, a Republican, won the governorship in 2002.

Minnesota is famous as a breeding ground for presidential candidates. Governor Harold Stassen contended seriously for the Republican nomination in 1948 and again in 1952. Vice President Hubert Humphrey was the Democratic presidential nominee in 1968, losing by a narrow margin to Richard Nixon. During the same year, US Senator Eugene McCarthy unsuccessfully sought the Democratic presidential nomination on an antiwar platform; his surprising showings in the early primaries against the incumbent, Lyndon B. Johnson, helped persuade Johnson to withdraw his candidacy. Eight years later, McCarthy ran for the presidency as an independent, drawing 35,490 votes in Minnesota (1.8% of the total votes cast) and 756,631 votes (0.9%) nationwide. Walter Mondale, successor to Hubert Humphrey's seat when Humphrey became Johnson's vice president in 1964, was chosen in 1976 by Jimmy Carter as his vice-presidential running mate; he again ran with Carter in 1980, when the two lost their bid for reelection. In the 1984 election, Minnesota was the only state to favor the Mondale-Ferraro ticket. Minnesotans gave the Republican Party a majority in the state's House of Representatives for the first time since 1970, but the Democrats retained control of the state Senate.

In 2000, Democrat Al Gore won 48% of the presidential vote; Republican George W. Bush gained 46%; and Green Party candidate Ralph Nader received 5%. In 2004, Democratic challenger John Kerr garnered 51% of the vote to Bush's 48%. In 2004 there were 2,977,000 registered voters; there is no party registration in

the state. The state had 10 electoral votes in the 2004 presidential election.

In 2000, Democrat Mark Dayton was elected to the Senate. In 1996 Democrat Paul Wellstone successfully defended his Senate seat against a challenge by Republican Rudy Boschwitz, from whom he had won the seat in 1990. Wellstone died in a plane crash in October 2002, along with his wife and daughter, three staff members, and two pilots. Republican Norm Coleman won Wellstone's Senate seat in 2002, defeating Democrat and former vice president Walter Mondale, who stepped in to run after Wellstone's death. Following the 2004 elections, Minnesota's delegation to the US House was split between four Democrats and four Republicans. In mid-2005, there were 36 Democrats, 29 Republicans, and 1 Independent serving in the Minnesota state Senate. Party representation in the state House consisted of 66 Democrats, and 68 Republicans.

14 LOCAL GOVERNMENT

As of 2005, Minnesota was divided into 87 counties, 854 municipal governments, 415 school districts, and 403 special districts. In 2002 there were also 1,793 townships.

Each of Minnesota's counties is governed by a board of commissioners, ordinarily elected for four-year terms. Other elected officials include the auditor, treasurer, recorder, sheriff, attorney, and coroner; an assessor and engineer are customarily appointed. Besides administering welfare, highway maintenance, and other state programs, the county is responsible for planning and development and, except in large cities, for property assessment. During the 1970s, counties also assumed increased responsibility for solid waste disposal and shoreline management.

Each regional development commission, or RDC, consists of local officials (selected by counties, cities, townships, and boards of education in the region) and of representatives of public interest groups (selected by the elected officials). RDCs prepare and adopt regional development plans and review applications for loans and grants.

Cities either have home-rule charters or are statutory cities, which are restricted to the systems of government prescribed by state law. In either case, the mayor-council system is the most common. Besides providing such traditional functions as street maintenance and police and fire protection, some cities operate utilities, sell liquor, or run hospitals, among other services. Each township is governed by a board of supervisors and by other elected officials.

In 2005, local government accounted for about 194,995 full-time (or equivalent) employment positions.

15 STATE SERVICES

To address the continuing threat of terrorism and to work with the federal Department of Homeland Security, homeland security in Minnesota operates under the authority of executive order; the public safety commissioner is designated as the state homeland security advisor.

Minnesota's ombudsman for corrections investigates complaints about corrections facilities or the conduct of prison officials. The Campaign Finance and Public Disclosure Board supervises the registration of lobbyists, monitors the financing of political campaigns, and sees that elected and appointed state officials observe

regulations governing conflict of interest and disclosure of personal finances. Minnesota law also provides that legislative meetings of any kind must be open to the public.

The state-aided public school system is under the jurisdiction of the Department of Education, which carries out the policies of an 11-member Board of Teaching appointed by the governor. Responsible for higher education are the University of Minnesota Board of Regents, elected by the legislature; the boards of trustees of the Minnesota State Colleges and Universities (MNSCU), appointed by the governor; and other agencies. The Department of Transportation maintains roads and bridges, enforces public transportation rates, inspects airports, and has responsibility for railroad safety.

Minnesota's Department of Health investigates health problems, disseminates health information, regulates hospitals and nursing homes, and inspects restaurants and lodgings. Health regulations affecting farm produce are administered by the Department of Agriculture. State facilities for the developmentally disabled are operated by the Department of Human Services, which administers state welfare programs and provides social services to the aged, the handicapped, and others in need.

The Department of Public Safety registers motor vehicles, licenses drivers, enforces traffic laws, and regulates the sale of liquor. The Department of Military Affairs has jurisdiction over the Minnesota National Guard, and the Department of Corrections operates prisons, reformatories, and parole programs. The Housing Finance Agency aids the construction and rehabilitation of low- and middle-income housing. Laws governing occupational safety, wages and hours, and child labor are enforced by the Department of Labor and Industry, while the Department of Employment and Economic Development supervises public employment programs and administers unemployment insurance. Other departments focus on agriculture, commerce, employee relations, finance, natural resources, public service, and revenue.

16 JUDICIAL SYSTEM

Minnesota's highest court is the Supreme Court, consisting of a chief justice and six associate justices; all are elected without party designation for six-year terms, with vacancies being filled by gubernatorial appointment. The district court, divided into 10 judicial districts with 254 judges in 1999, is the court of original jurisdiction. Each judicial district has at least three district judges, elected to six-year terms. The governor designates a chief judge for a three-year term.

County courts, operating in all counties of the state except two—Hennepin (Minneapolis) and Ramsey (St. Paul), which have municipal courts—assume functions formerly exercised by probate, family, and local courts. They exercise civil jurisdiction in cases where the amount in contention is \$5,000 or less, and criminal jurisdiction in preliminary hearings and misdemeanors. They also hear cases involving family disputes, and have concurrent jurisdiction with the district court in divorces, adoptions, and certain other proceedings. The probate division of the county court system presides over guardianship and incompetency proceedings and all cases relating to the disposing of estates. All county judges are elected for six-year terms.

As of 31 December 2004, a total of 8,758 prisoners were held in Minnesota's state and federal prisons, an increase (from 7,865) of

11.4% over 2003. As of year-end 2004, a total of 544 inmates were female, up 25.1% (from 435) from the year before. Among sentenced prisoners (one year or more), Minnesota had an incarceration rate of 171 per 100,000 population in 2004.

According to the Federal Bureau of Investigation, in 2004 Minnesota had a violent crime rate (murder/nonnegligent manslaughter; forcible rape; robbery; aggravated assault) of 269.6 reported incidents per 100,000 population, or a total of 13,751 reported incidents. Crimes against property (burglary; larceny/theft; and motor vehicle theft) in that same year totaled 155,019 reported incidents or 3,039 reported incidents per 100,000 people. Minnesota has no death penalty. The state's Crime Victims Reparations Board offers compensation to innocent victims of crime or to their dependent survivors.

In 2003, Minnesota spent \$119,675,678 on homeland security, an average of \$24 per state resident.

17 ARMED FORCES

In 2004, there were 9,076 Defense Department personnel, 1,607 active-duty military personnel and 479 civilian personnel in Minnesota. In 2004 Minnesota firms received about \$1.33 billion in defense contracts, and Defense Department payroll amounted to \$708 million.

As of 2003, there were 426,591 veterans of US military service living in Minnesota. Of these, 59,307 served in World War II; 52,341 in the Korean conflict; 140,907 during the Vietnam era; and 51,141 in the Gulf War. Expenditures on veterans exceeded \$1.0 billion in 2004.

As of 31 October 2004, the Minnesota Highway Patrol employed 545 full-time sworn officers

18 MIGRATION

A succession of migratory waves began in the 17th and 18th centuries with the arrival of the Dakota and Ojibwa, among other Indian groups, followed during the 19th century by New England Yankees, Germans, Scandinavians, and finally southern and eastern Europeans. Especially since 1920, new arrivals from other states and countries have been relatively few, and the state experienced a net loss from migration of 80,000 between 1970 and 1980. The trend was almost halted in the 1980s when immigration nearly equaled emigration. Between 1990 and 1998, Minnesota had net gains of 71,000 in domestic migration and 47,000 in international migration. In 1998, 6,981 foreign immigrants entered the state. Minnesota's overall population increased 8% between 1990 and 1998.

Within the state, there has been a long-term movement to metropolitan areas, especially to the suburbs of major cities; from 1970 to 1983, the state's metropolitan population grew by nearly 1% annually. The urban population increased from 66.8% to 69.9% during the 1980s and, leveling off somewhat, ranged between 68.8% and 69.7% in the 1990s. From 1980 to 1990, the population of the Minneapolis–St. Paul metropolitan area grew 15.5%; it grew another 8.9% between 1990 and 1996. In the period 2000–05, net international migration was 70,800 and net internal migration was -16,768, for a net gain of 54,032 people.

19 INTERGOVERNMENTAL COOPERATION

Relations with the Council of State Governments are conducted through the Minnesota Commission on Interstate Cooperation, consisting of five members from each house of the state legislature and five administrative officers or other state employees; in addition, the governor, the president of the Senate, and the speaker of the House are nonvoting members. Minnesota also participates in the Great Lakes Charter, which it formed with seven other states in 1985 to preserve the lakes' water supply, and in other regional compacts. Minnesota is a party to the Boundary Compact Between Michigan, Wisconsin, and Minnesota; the Great Lakes Commission; the Midwest Interstate Low-Level Radioactive Waste Compact Commission; and the Midwestern Higher Education Compact. Minnesota received \$5.493 billion in federal grants in fiscal year 2005, an estimated \$5.154 billion in fiscal year 2006, and an estimated \$5.783 billion in fiscal year 2007.

20 ECONOMY

Furs, wheat, pine lumber, and high-grade iron ore were once the basis of Minnesota's economy. As these resources diminished, however, the state turned to wood pulp, dairy products, corn and soybeans, taconite, and manufacturing, often in such food-related industries as meat-packing, canning, and the processing of dairy products. The leading sources of income in Minnesota have shifted again in the late 1990s. Manufacturing as a percent of total state output fell from 18.5% in 1997 to 13.7% in 2004, although there was net growth in manufacturing output from 1997 to 2001 of 5.8% compared to an output growth of 32.5% from general services; 27.9% from the trade sector; 26.1% from financial services; and 25.8% from government services. Minnesota's economy grew robustly at the end of the 1990s—7% in 1997, 5.2% in 1999, and 8.5% in 2000, but the annual growth rate plummeted to 1% in the recession of 2001. In 2002, employment declined more rapidly than in the country as a whole because of the large share of Minnesota workers in sectors most affected by the national slowdown: manufacturing, information technology, and airline industries. Office vacancy rates in metropolitan areas increased from 12.2% in 2001 to 19.6% in 2002, above the national average of 16.5%. On the other hand, having escaped the drought conditions that afflicted many other states, corn and soybean harvests were large in 2002, and Minnesota growers were in a position to benefit from drought-induced higher prices for both crops. The dairy sector, however, faced historically low prices, increasing the number of dairy producers leaving the industry.

Minnesota's gross state product in 2005 was \$233 billion, up from \$223.822 billion in 2004, when manufacturing accounted for the largest share at \$30.670 billion (13.7% of GSP), followed by the real estate sector at \$24.875 billion (11.1% of GSP), and healthcare and social assistance at \$17.637 billion (7.8% of GSP). In that same year, there were an estimated 464,946 small businesses in Minnesota. Of the 134,438 businesses that had employees, an estimated total of 131,674 or 97.9% were small companies. An estimated 15,167 new businesses were established in the state in 2004, up 3.5% from the year before. Business terminations that same year came to 15,209, down 15.2% from 2003. There were 1,374 business bankruptcies in 2004, down 0.4% from the previous year. In 2005, the state's personal bankruptcy (Chapter 7 and Chapter 13)

filing rate was 391 filings per 100,000 people, ranking Minnesota as 40th in the nation.

21 INCOME

In 2005 Minnesota had a gross state product (GSP) of \$233 billion which accounted for 1.9% of the nation's gross domestic product and placed the state at number 17 in highest GSP among the 50 states and the District of Columbia.

According to the Bureau of Economic Analysis, in 2004 Minnesota had a per capita personal income (PCPI) of \$36,184. This ranked eighth in the United States and was 109% of the national average of \$33,050. The 1994–2004 average annual growth rate of PCPI was 4.6%. Minnesota had a total personal income (TPI) of \$184,413,901,000, which ranked 17th in the United States and reflected an increase of 6.4% from 2003. The 1994–2004 average annual growth rate of TPI was 5.7%. Earnings of persons employed in Minnesota increased from \$138,475,249,000 in 2003 to \$147,971,949,000 in 2004, an increase of 6.9%. The 2003–04 national change was 6.3%.

The US Census Bureau reports that the three-year average median household income for 2002 to 2004 in 2004 dollars was \$55,914, compared to a national average of \$44,473. During the same period an estimated 7.0% of the population was below the poverty line as compared to 12.4% nationwide.

22 LABOR

According to the Bureau of Labor Statistics (BLS), in April 2006 the seasonally adjusted civilian labor force in Minnesota numbered 2,946,100, with approximately 119,600 workers unemployed, yielding an unemployment rate of 4.1%, compared to the national average of 4.7% for the same period. Preliminary data for the same period placed nonfarm employment at 2,756,800. Since the beginning of the BLS data series in 1976, the highest unemployment rate recorded in Minnesota was 9% in November 1982. The historical low was 2.5% in April 1999. Preliminary nonfarm employment data by occupation for April 2006 showed that approximately 4.7% of the labor force was employed in construction; 12.5% in manufacturing; 19.3% in trade, transportation, and public utilities; 6.6% in financial activities; 11.3% in professional and business services; 14.2% in education and health services; 9.1% in leisure and hospitality services; and 15.2% in government.

The history of unionization in the state includes several long and bitter labor disputes, notably the Iron Range strike of 1916, the Teamsters' strike of 1934, and the Hormel strike of 1985–86. The earliest known unions—two printers' locals, established in the late 1850s—died out during the Civil War, and several later unions faded in the panic of 1873. The Knights of Labor were the dominant force of the 1880s. The next decade saw the rise of the Minnesota State Federation of Labor, whose increasing political influence bore fruit in the landmark Workmen's Compensation Act of 1913 and the subsequent ascension of the Farmer-Labor Party. The legislature enacted a fair employment practices law in 1955 and passed a measure in 1973 prescribing collective-bargaining procedures for public employees and granting them a limited right to strike.

The BLS reported that in 2005, a total of 392,000 of Minnesota's 2,494,000 employed wage and salary workers were formal members of a union. This represented 15.7% of those so employed,

down from 17.5% in 2004, but still above the national average of 12%. Overall in 2005, a total of 410,000 workers (16.4%) in Minnesota were covered by a union or employee association contract, which includes those workers who reported no union affiliation. Minnesota is one of 28 states that does not have a right-to-work law.

As of 1 March 2006, Minnesota had a state-mandated minimum wage rate of \$6.15 per hour for employers having annual receipts of \$625,000 or more, and a rate of \$5.25 per hour for employers under that total. In 2004, women in the state accounted for 47.5% of the employed civilian labor force.

23 AGRICULTURE

Cash receipts from farm marketings totaled over \$9 billion in 2005, placing Minnesota sixth among the 50 states; crops made up about 47% of the total value. For 2004, Minnesota ranked first in the production of sugar beets, sweet corn for processing, and green peas for processing; second in spring wheat, third in alfalfa hay; fourth in corn, oats, soybeans, and flaxseed; and sixth in barley and durum wheat.

The early farmers settled in the wooded hills and valleys in the southeastern quarter of the state, where they had to cut down trees and dig up stumps to make room for crops. With the coming of the railroads, farmers began planting the prairies with wheat, which by the late 1870s took up 70% of all farm acreage. In succeeding decades, wheat prices fell and railroad rates soared, fanning agrarian discontent. Farmers began to diversify, with dairy farming, oats, and corn becoming increasingly important. Improved corn yields since the 1940s have spurred the production of hogs and beef cattle and the growth of meat-packing as a major industry.

As of 2004, the state had 79,800 farms, covering 27,600,000 acres (11,200,000 hectares), or 51% of the state's total land area; the average farm had 346 acres (140 hectares). The number of people living on farms steadily declined from 624,000 in 1960 to 482,000 in 1970, and by 2002 there were only 66,996 persons residing on the farms they operated. The value of farmland rose between 2000 and 2004, from \$1,320 per acre to \$1,800. Minnesota's farmers faced acute financial troubles during the early 1980s as a result of heavy debts, high interest rates, and generally low crop prices.

The main farming areas are in southern Minnesota, where corn, soybeans, and oats are important, and in a Red River Valley along the western border, where wheat, barley, sugar beets, and potatoes are among the chief crops.

Agribusiness is Minnesota's largest basic industry, with about one-fourth of the state's labor force employed in agriculture or agriculture-related industries, most notably food processing.

24 ANIMAL HUSBANDRY

Excluding the northeast, livestock-raising is dispersed throughout the state, with cattle concentrated particularly in west-central Minnesota and in the extreme southeast, and hogs along the southern border.

In 2005, the state had an estimated 2.4 million cattle and calves, valued at nearly \$2.3 billion. The state had 6.5 million hogs and pigs, valued at \$780 million in 2004. Minnesota produced more turkey in 2003 than any other state: 1.2 billion lb (0.55 billion kg), worth \$425.3 million. Also during 2003, the state produced 13.8

million lb (6.3 million kg) of sheep and lambs, which brought in a total of nearly \$13.3 million.

The state's total of 8.3 billion lb (4 billion kg) of milk outproduced all but five states in 2003. Production of broilers in 2003 was 228.5 million lb (103.4 million kg), worth around \$77.7 million, and egg output in the same year was 2.9 billion, worth \$146.4 million.

25 FISHING

Commercial fishermen in 2004 landed 323,000 lb (146,800 kg) of fish valued at \$187,000. The catch included herring and smelts from Lake Superior, whitefish and yellow pike from large inland lakes, and carp and catfish from the Mississippi and Minnesota rivers. In 2001, the commercial fleet had about 25 boats and vessels.

Sport fishing attracts some 1.5 million anglers annually to the state's 2.6 million acres (1.1 million hectares) of fishing lakes and 7,000 mi (11,000 km) of fishing streams, which are stocked with trout, bass, pike, muskellunge, and other fish by the Division of Fish and Wildlife of the Department of Natural Resources. Federal funds allocated for sport fish restoration projects totaled \$10.8 million in 2005/06. In 2004, there were 1,467,677 sports fishing licenses issued in the state, second highest after Texas.

26 FORESTRY

Forests, which originally occupied two-thirds of Minnesota's land area, have been depleted by lumbering, farming, and forest fires. As of 2004, forestland covered 16,230,000 acres (6,568,000 hectares), or over 30% of the state's total land area. Most of the forestland is in the north, especially in Arrowhead Country in the northeast. Of the 14,723,000 acres (5,958,000 hectares) of commercial timberland, less than half is privately owned and more than one-third is under state, county, or municipal jurisdiction. In 2004, lumber production totaled 265 million board feet, 45% hardwoods and 55% softwoods. Over half of the timber that is harvested is used in paper products, and about one-third for wood products. Mills that process raw logs account for half of all forest and forest-product employment in Minnesota.

The state's two national forests are Superior (2,094,946 acres/847,825 hectares) and Chippewa (666,541 acres/269,749 hectares). The Department of Natural Resources, Division of Forestry, promotes effective management of the forest environment and seeks to restrict forest fire occurrence to 1,100 fires annually, burning no more than 30,000 acres (12,000 hectares) in all.

More than 3 million acres (1.2 million hectares) are planted each year with trees by the wood fiber industry, other private interests, and federal, state, and county forest services—more than enough to replace those harvested or destroyed by fire, insects, or disease.

27 MINING

According to preliminary data from the US Geological Survey (USGS), the estimated value of nonfuel mineral production by Minnesota in 2003 was \$1.23 billion, a decrease from 2002 of about 5%. The USGS data ranked Minnesota as 11th among the

50 states by the total value of its nonfuel mineral production, accounting for around 3% of total US output.

By value (in descending order), Minnesota's top nonfuel mineral commodities in 2003 were iron ore, construction sand and gravel, crushed stone, industrial sand and gravel, dimension stone, and lime. Minnesota in 2003 was the nation's top producer of iron ore, was third in peat, and sixth in construction sand and gravel.

According to preliminary data for 2003, production of usable iron ore totaled 34.8 million metric tons and was valued at \$969 million, while construction sand and gravel output that year stood at 47 million metric tons and was valued at \$188 million. Crushed stone output in 2003 totaled 9.8 million metric tons and was valued at \$57.3 million. Minnesota in 2003 was also a producer of common clays and dimension stone.

28 ENERGY AND POWER

As of 2003, Minnesota had 179 electrical power service providers, of which 125 were publicly owned and 47 were cooperatives. Of the remainder, five were investor owned, one was federally operated, and one was an owner of an independent generator that sold directly to customers. As of that same year there were 2,410,903 retail customers. Of that total, 1,398,351 received their power from investor-owned service providers. Cooperatives accounted for 675,996 customers, while publicly owned providers had 336,550 customers. There were five federal customers and only one independent generator or "facility" customer.

Total net summer generating capability by the state's electrical generating plants in 2003 stood at 11.486 million kW, with total production that same year at 55.050 billion kWh. Of the total amount generated, 90.1% came from electric utilities, with the remainder coming from independent producers and combined heat and power service providers. The largest portion of all electric power generated, 35.655 billion kWh (64.8%), came from coal-fired plants, with nuclear plants in second place at 13.413 billion kWh (24.4%) and other renewable power sources in third at 2.410 billion kWh (4.4%). Natural gas power plants accounted for 3.3% of all power generated, followed by petroleum fueled plants at 1.6%, hydroelectric at 1.5%, and other types of generating facilities at 0.1%.

As of 2006, Minnesota had two nuclear power plants: the Monticello plant near Monticello and the Prairie Island plant in Red Wing.

Minnesota's 7 million acres (2.8 million hectares) of peat lands, the state's only known fossil fuel resource, constitute nearly half of the US total (excluding Alaska). If burned directly, the accessible fuel-quality peat deposit could substantially supplement Minnesota's energy needs. As of 2004, the state had no proven reserves or production of crude oil and natural gas. As of 2005, Minnesota's two refineries had a capacity of 335,000 barrels per day.

29 INDUSTRY

Minnesota's vast wealth of natural resources, especially the state's extensive timberlands and fertile prairie, was the basis for Minnesota's early industrial development. In the late 19th century, Minneapolis was the nation's flour milling center. By the early 20th

century, canning and meat packing were among the state's largest industries.

While food and food products remain an important part of the state's economy, the state's economy has diversified significantly from these early beginnings. As of the early 2000s, the state looks primarily to high technology industries such as computer manufacturing, printing and publishing, scientific instrument manufacturing, and fabricated metal production, for revenues.

According to the US Census Bureau's Annual Survey of Manufactures (ASM) for 2004, Minnesota's manufacturing sector covered some 20 product subsectors. The shipment value of all products manufactured in the state that same year was \$88.472 billion. Of that total, food manufacturing accounted for the largest share at \$16.841 billion. It was followed by computer and electronic product manufacturing at \$11.898 billion; fabricated metal product manufacturing at \$7.357 billion; transportation equipment manufacturing at \$7.105 billion; and machinery manufacturing at \$7.080 billion.

In 2004, a total of 325,601 people in Minnesota were employed in the state's manufacturing sector. Of that total, 214,788 were actual production workers. In terms of total employment, the computer and electronic product manufacturing industry accounted for the largest portion of all manufacturing employees at 44,845, with 20,519 actual production workers. It was followed by food manufacturing at 42,337 employees (32,182 actual production workers); fabricated metal product manufacturing at 39,238 employees (27,531 actual production workers); machinery manufacturing at 31,238 employees (18,790 actual production workers); and printing and related support activities with 29,224 employees (19,967 actual production workers).

ASM data for 2004 showed that Minnesota's manufacturing sector paid \$14.210 billion in wages. Of that amount, the computer and electronic product manufacturing sector accounted for the largest share at \$2.631 billion. It was followed by fabricated metal product manufacturing at \$1.768 billion; food manufacturing at \$1.513 billion; machinery manufacturing at \$1.472 billion; and printing and related support activities at \$1.161 billion.

30 COMMERCE

Access to the Great Lakes, the St. Lawrence Seaway, and the Atlantic Ocean, as well as to the Mississippi River and the Gulf of Mexico, helps make Minnesota a major marketing and distribution center for the upper Midwest.

According to the 2002 Census of Wholesale Trade, Minnesota's wholesale trade sector had sales that year totaling \$108.3 billion from 8,884 establishments. Wholesalers of durable goods accounted for 5,022 establishments, followed by nondurable goods wholesalers at 2,749 and electronic markets, agents, and brokers accounting for 1,113 establishments. Sales by durable goods wholesalers in 2002 totaled \$46.7 billion, while wholesalers of nondurable goods saw sales of \$46.6 billion. Electronic markets, agents, and brokers in the wholesale trade industry had sales of \$14.9 billion.

In the 2002 Census of Retail Trade, Minnesota was listed as having 21,129 retail establishments with sales of \$60.01 billion. The leading types of retail businesses by number of establishments were: gasoline stations (2,605); food and beverage stores (2,551); motor vehicle and motor vehicle parts dealers (2,461); miscella-

neous store retailers (2,447); and clothing and clothing accessories stores (2,298). In terms of sales, motor vehicle and motor vehicle parts stores accounted for the largest share of retail sales at \$14.8 billion, followed by general merchandise stores at \$8.6 billion; food and beverage stores at \$8.5 billion; and building material/garden equipment and supplies dealers at \$6.1 billion. A total of 306,571 people were employed by the retail sector in Minnesota that year.

Exports of manufactured goods to foreign countries amounted to \$14.7 billion in 2005. Manufactured exports included computers and computer software, electronic equipment, scientific instruments, and transportation equipment. Dairy products, feed grains, soybeans, and wheat were the largest agricultural commodity exports by total value.

3¹ CONSUMER PROTECTION

The Minnesota Attorney General's Office enforces Minnesota's laws against false advertising, consumer fraud, and deceptive trade practices. The Consumer Protection Division answers consumer questions and mediates consumer complaints, attempting to resolve the complaints through a voluntary mediation program. The Attorney General's office also produces brochures and booklets on a wide variety of consumer topics, including landlords and tenants, new-car buying, home building, credit, and debt collection.

When dealing with consumer protection issues, the state's Attorney General's Office can initiate civil but not criminal proceedings; represent the state before state and federal regulatory agencies; administer consumer protection and education programs; handle formal consumer complaints; and exercise limited subpoena powers. In antitrust actions, the Attorney General's Office can act on behalf of those consumers who are incapable of acting on their own; initiate damage actions on behalf of the state in state courts; and initiate criminal proceedings. However, the Attorney General cannot represent counties, cities and other governmental entities in recovering civil damages under state or federal law.

The Consumer Protection Division is located in St. Paul. Also, the Hennepin County Attorney's Office in Minneapolis offers consumer protection services, as does the Minneapolis Division of Licenses and Consumer Services.

3² BANKING

As of June 2005, Minnesota had 470 insured banks, savings and loans, and saving banks, plus 102 state-chartered and 69 federally chartered credit unions (CUs). Excluding the CUs, the Minneapolis-St. Paul-Bloomington market area accounted for the largest portion of the state's financial institutions and deposits in 2004, with 176 institutions and \$56.362 billion in deposits. As of June 2005, CUs accounted for 16.5% of all assets held by all financial institutions in the state, or some \$12.948 billion. Banks, savings and loans, and savings banks collectively accounted for the remaining 83.5% or \$65.360 billion in assets held.

As of 2004, the median net interest margin (the difference between the lower rates offered to savers and the higher rates charged on loans) stood at 4.37%, up from 4.33% in 2003; by 2005 the rate was 4.46%. The median percentage of past-due/nonaccrual loans to total loans was 1.44% in 2005, up slightly from 1.38% in 2004 but down from 1.65% in 2003.

3³ INSURANCE

Minnesotans held over 2.8 million life insurance policies valued at about \$268 billion as of 2004; total value for all categories of life insurance (individual, group, and credit) was over \$469 billion. The average coverage amount is \$94,900 per policy holder. Death benefits paid that year totaled \$969.6 million.

As of 2003, there were 49 property and casualty and 13 life and health insurance companies incorporated or organized in the state. In 2004, direct premiums for property and casualty insurance totaled \$8.7 billion. That year, there were 8,391 flood insurance policies in force in the state, with a total value of \$1.2 billion. About \$2.79 billion of coverage was held through FAIR plans, which are designed to offer coverage for some natural circumstances, such as wind and hail, in high risk areas.

In 2004, 64% of state residents held employment-based health insurance policies, 7% held individual policies, and 19% were covered under Medicare and Medicaid; 9% of residents were uninsured. Minnesota has the lowest percentage of uninsured residents in the nation; the state also ranks as having the highest percentage of employment-based insureds. In 2003, employee contributions for employment-based health coverage averaged at 16% for single coverage and 25% for family coverage. The state offers an 18-month health benefits expansion program for small-firm employees in connection with the Consolidated Omnibus Budget Reconciliation Act (COBRA, 1986), a health insurance program for those who lose employment-based coverage due to termination or reduction of work hours.

In 2003, there were over 3.4 million auto insurance policies in effect for private passenger cars. Required minimum coverage includes bodily injury liability of up to \$30,000 per individual and \$60,000 for all persons injured in an accident, as well as property damage liability of \$10,000. Personal injury protection, underinsured, and uninsured motorist coverage are also mandatory. In 2003, the average expenditure per vehicle for insurance coverage was \$836.12.

3⁴ SECURITIES

The Minneapolis Grain Exchange, founded in 1881 as the Minneapolis Chamber of Commerce, is the state's major commodity exchange. The MGE is used primarily for the pricing of grains. Enforcement of statutes governing securities, franchises, and corporate takeovers (as well as charitable organizations, public cemeteries, collection agencies, and bingo) is the responsibility of the Securities Division of the Department of Commerce.

In 2005, there were 1,400 personal financial advisers employed in the state and 7,410 securities, commodities, and financial services sales agents. In 2004, there were over 225 publicly traded companies within the state, with over 115 NASDAQ companies, 45 NYSE listings, and 7 AMEX listings. In 2006, the state had 19 Fortune 500 companies; Target (based in Minneapolis) ranked first in the state and 29th in the nation with revenues of over \$52.6 billion, followed by UnitedHealth Group (Minnetonka), Best Buy (Richfield), St. Paul Travelers Co. (St. Paul), and 3M (St. Paul). All five companies are listed on the NYSE.

35 PUBLIC FINANCE

Minnesota spends a relatively large amount on state government and local assistance, especially on a per capita basis. The state budget is prepared by the Department of Finance and submitted biennially by the governor to the legislature for amendment and approval. The fiscal year (FY) runs from 1 July to 30 June.

Fiscal year 2006 general funds were estimated at nearly \$16.7 billion for resources and \$15.8 billion for expenditures. In fiscal year 2004, federal government grants to Minnesota were \$7.2 billion.

Minnesota—State Government Finances

(Dollar amounts in thousands. Per capita amounts in dollars.)

SOURCE: U.S. Census Bureau, Governments Division, 2004 Survey of State Government Finances, January 2006.

On 5 January 2006 the federal government released \$100 million in emergency contingency funds targeted to the areas with the greatest need, including \$4.2 million for Minnesota.

36 TAXATION

In 2005, Minnesota collected \$15,881 million in tax revenues or \$3,094 per capita, which placed it sixth among the 50 states in per capita tax burden. The national average was \$2,192 per capita. Property taxes accounted for 3.9% of the total, sales taxes 26.5%, selective sales taxes 15.3%, individual income taxes 39.9%, corporate income taxes 5.9%, and other taxes 8.5%.

As of 1 January 2006, Minnesota had three individual income tax brackets ranging from 5.35 to 7.85%. The state taxes corporations at a flat rate of 9.8%.

In 2004, state and local property taxes amounted to \$4,920,174,000 or \$965 per capita. The per capita amount ranks the state 27th nationally. Local governments collected \$4,312,311,000 of the total and the state government \$607,863,000.

Minnesota taxes retail sales at a rate of 6.50%. In addition to the state tax, local taxes on retail sales can reach as much as 1%, making for a potential total tax on retail sales of 7.50%. Food purchased for consumption off-premises is tax exempt. The tax on cigarettes is 123 cents per pack, which ranks 14th among the 50 states and the District of Columbia. Minnesota taxes gasoline at 20 cents per gallon. This is in addition to the 18.4 cents per gallon federal tax on gasoline.

According to the Tax Foundation, for every federal tax dollar sent to Washington in 2004, Minnesota citizens received \$0.69 in federal spending.

37 ECONOMIC POLICY

Minnesota's Department of Employment and Economic Development (DEED) offers a variety of programs to encourage expansion of existing industries and to attract new industry to the state. The department extends loans to small businesses for capital investments that create or retain jobs. It awards grants to new or expanding companies in rural areas and provides limited guarantees to private lenders for loans given to start-up companies. The Minnesota Trade Office assists with the financing of small business exports. The state offers grants to depressed communities to help them retain or attract business or to rebuild their infrastructure. Minnesota's corporate income tax is structured to favor companies having relatively large payrolls and property (as opposed to sales) within the state. In 2006, an initiative called Positively Minnesota was guiding economic development efforts. The primary goal was to capture a great share of business expansions. As a group, Positively Minnesota included economic developers, utilities and private firms as well as the DEED. Beginning in 2004, the Job Opportunity Building Zones (JOBZ) project was launched: it is a rural economic development stimulus program. The program provides substantial tax relief to companies that start up or expand in targeted areas of Minnesota. The program identifies 10 zones encompassing more than 300 communities in every region

of the state (except in the seven Twin Cities metropolitan counties). The program was to expire in 2015.

38 HEALTH

Shortly after the founding of Minnesota Territory, promoters attracted new settlers partly by proclaiming the tonic benefits of Minnesota's soothing landscape and cool, bracing climate; the area was trumpeted as a haven for retirees and for those afflicted with malaria or tuberculosis.

The infant mortality rate in October 2005 was estimated at 5.2 per 1,000 live births. The birth rate in 2003 was 13.9 per 1,000 population. The abortion rate stood at 13.5 per 1,000 women in 2000. In 2003, about 86.5% of pregnant woman received prenatal care beginning in the first trimester. In 2004, approximately 85% of children received routine immunizations before the age of three.

The crude death rate in 2003 was 7.1 deaths per 1,000 population. As of 2002, the death rates for major causes of death (per 100,000 resident population) were: heart disease, 171.4; cancer, 183.5; cerebrovascular diseases, 53.9; chronic lower respiratory diseases, 39.3; and diabetes, 26.2. The mortality rate from HIV infection was 1.1 per 100,000 population. In 2004, the reported AIDS case rate was at about 4.3 per 100,000 population. In 2002, about 57.6% of the population was considered overweight or obese. As of 2004, about 20.6% of state residents were smokers.

In 2003, Minnesota had 131 community hospitals with about 16,400 beds. There were about 615,000 patient admissions that year and 9.1 million outpatient visits. The average daily inpatient census was about 11,300 patients. The average cost per day for hospital care was \$1,109. Also in 2003, there were about 425 certified nursing facilities in the state with 39,336 beds and an overall occupancy rate of about 92.1%. In 2004, it was estimated that about 79.7% of all state residents had received some type of dental care within the year; this was the second-highest dental care percentage in the nation (following Connecticut). Minnesota had 283 physicians per 100,000 resident population in 2004 and 962 nurses per 100,000 in 2005. In 2004, there were a total of 3,069 dentists in the state.

About 19% of state residents were enrolled in Medicaid and Medicare programs in 2004. Approximately 9% of the state population was uninsured in 2004; representing the lowest uninsured rate in the country. In 2003, state health care expenditures totaled \$6.9 million.

The Mayo Clinic, developed by Drs. Charles H. and William J. Mayo in the 1890s and early 1900s, was the first private clinic in the United States and became a world-renowned center for surgery. In 2005, it was ranked second on the Honor Roll of Best Hospitals 2005 by *U.S. News & World Report*. In the same report, it ranked second for best care in heart disease and heart surgery and fifth for best care in cancer. The separate Mayo Foundation for Medical Education and Research, founded and endowed by the Mayo brothers in 1915, was subsequently affiliated with the University of Minnesota, which became the first US institution to offer graduate education in surgery and other branches of clinical medicine.

39 SOCIAL WELFARE

In 2004, about 147,000 people received unemployment benefits, with the average weekly unemployment benefit at \$318. In fiscal year 2005, the estimated average monthly participation in the food stamp program included about 259,937 persons (124,398 households); the average monthly benefit was about \$88.16 per person. That year, the total of benefits paid through the state for the food stamp program was about \$274.9 million.

Temporary Assistance for Needy Families (TANF), the system of federal welfare assistance that officially replaced Aid to Families with Dependent Children (AFDC) in 1997, was reauthorized through the Deficit Reduction Act of 2005. TANF is funded through federal block grants that are divided among the states based on an equation involving the number of recipients in each state. Minnesota's TANF program is called Minnesota Family Investment Program (MFIP). In 2004, the state program had 88,000 recipients; state and federal expenditures on this TANF program totaled \$193 million in fiscal year 2003.

In December 2004, Social Security benefits were paid to 775,050 Minnesota residents. This number included 517,510 retired workers, 76,260 widows and widowers, 84,830 disabled workers, 44,770 spouses, and 51,680 children. Social Security beneficiaries represented 15.2% of the total state population and 93.8% of the state's population age 65 and older. Retired workers received an average monthly payment of \$955; widows and widowers, \$925; disabled workers, \$879; and spouses, \$480. Payments for children of retired workers averaged \$505 per month; children of deceased workers, \$673; and children of disabled workers, \$260. Federal Supplemental Security Income payments in December 2004 went to 70,745 Minnesota residents, averaging \$398 a month. An additional \$7.7 million of state-administered supplemental payments were distributed to 40,320 residents.

40 HOUSING

In 2004, Minnesota had an estimated 2,212,701 housing units, of which 2,054,900 were occupied. That year, Minnesota had the highest rate of homeownership in the nation with 75.3% of all housing units being owner-occupied. About 68% of all units were single-family, detached homes. Most units rely on utility gas and electricity for heating. It was estimated that 53,332 units lacked telephone service, 9,065 lacked complete plumbing facilities, and 9,270 lacked complete kitchen facilities. The average household had 2.41 members.

In 2004, 41,800 new units were authorized for construction. The median home value was \$181,135. The median monthly cost for mortgage owners was \$1,260. Renters paid a median of \$673 per month. In September 2005, the state received a grant of \$362,500 from the US Department of Housing and Urban Development (HUD) for rural housing and economic development programs. For 2006, HUD allocated to the state over \$20.9 million in community development block grants.

41 EDUCATION

Minnesota's first public school system was authorized in 1849, but significant growth in enrollment did not occur until after the Civil War. In 2004, 92.3% of Minnesotans age 25 or older were high school graduates, far exceeding the national average of 84%. Some

32.5% had obtained a bachelor's degree or higher, compared to the national average of 26%.

The total enrollment for fall 2002 in Minnesota's public schools stood at 847,000. Of these, 568,000 attended schools from kindergarten through grade eight, and 279,000 attended high school. Approximately 80.2% of the students were white, 7.8% were black, 4.6% were Hispanic, 5.4% were Asian/Pacific Islander, and 2.1% were American Indian/Alaskan Native. Total enrollment was estimated at 836,000 in fall 2003 but was expected to be 826,000 by fall 2014, a decline of 2.5% during the period 2002 to 2014. Expenditures for public education in 2003/04 were estimated at \$8.6 billion. In fall 2003, there were 93,935 students enrolled in 568 private schools. Since 1969, the National Assessment of Educational Progress (NAEP) has tested public school students nationwide. The resulting report, *The Nation's Report Card*, stated that in 2005, eighth graders in Minnesota scored 290 out of 500 in mathematics compared with the national average of 278.

As of fall 2002, there were 323,791 students enrolled in college or graduate school; minority students comprised 11.7% of total postsecondary enrollment. In 2005 Minnesota had 113 degree-granting institutions. The state's public postsecondary education system is overseen by Minnesota State Colleges and Universities (MNSCU) and includes three areas: the state university system—with campuses at Bemidji, Mankato, Marshall, Minneapolis–St. Paul, Moorhead, St. Cloud, and Winona; the community college system, and a statewide network of area vocational-technical institutes. The University of Minnesota (founded as an academy in 1851) has campuses in the Twin Cities, Duluth, Morris, and Crookston. The state's oldest private college, Hamline University in St. Paul, was founded in 1854 and is affiliated with the United Methodist Church. There are more than 20 private colleges, many of them with ties to Lutheran or Roman Catholic religious authorities. Carleton College, at Northfield, is a notable independent institution.

Minnesota has an extensive program of student grants, work-study arrangements, and loan programs, in addition to reciprocal tuition arrangements with Wisconsin, North Dakota, and South Dakota.

42 ARTS

State and regional arts groups as well as individual artists are supported by state and federal grants administered through the Minnesota State Arts Board, an 11-member panel appointed by the governor. In 2005, the Minnesota State Arts Board and other Minnesota arts organizations received 57 grants totaling \$3,319,100 from the National Endowment for the Arts. The State Arts Board was also given funding from the state and from private sources. The Minnesota Humanities Commission (MHC) was founded in 1971. As of 2006 the MHC offered public programs such as the "Humanities Foundations," which provided family literacy programs and Teacher Institutes and "Learning in Retirement," which promoted adult learning through senior organizations. In 2005, the National Endowment for the Humanities contributed \$1,503,460 to 19 state programs.

The Ordway Music Theater in St. Paul, which has two concert halls, opened in January 1985. The Ordway is the home of the Minnesota Orchestra, the Minnesota Opera Company, and the St. Paul Chamber Orchestra. The privately owned nonprofit the-

ater was built for about \$45 million and was founded with funding from the Minnesota Mining and Manufacturing Corp. and other private sources. In 1999, the Ordway received funding from the National Endowment for the Arts to use interactive video-conferencing technology to develop an "electronic field trip" accessible to student audiences across the state.

The St. Olaf College Choir, at Northfield, has a national reputation. The Tyrone Guthrie Theater, founded in Minneapolis in 1963, is one of the nation's most prestigious repertory companies; it moved to a location overlooking the Mississippi River in 2006. The Minnesota Ballet is based in Duluth.

Literary arts are active in the state. The Loft, founded in 1974 in Minneapolis, is considered to be one of the nation's largest and most comprehensive literary centers and offers programs for readers, mentoring programs for writers, grants and awards for writers, and publications, among other services.

The Walker Art Center in Minneapolis is an innovative museum with an outstanding contemporary collection. The Minneapolis Institute of Arts exhibits more traditional works with a permanent collection of over 100,000 pieces spanning 5,000 years of world history. The Weisman Art Museum of the University of Minnesota is in Minneapolis, and the Minnesota Museum of Art is in St. Paul.

43 LIBRARIES AND MUSEUMS

In 2001, Minnesota had an estimated 140 public library systems, with a total of 359 libraries, of which 232 were branches. The total number of books and serial publications that year was 14,414,000 volumes, with audio and video items totaling 651,000 and 488,000, respectively. Library circulation reached 43,843,000. The system also operated 17 bookmobiles. The largest single public library system is the 15-library Minneapolis Public Library and Information Center (founded in 1885); its new Central Library opened in 2006. The leading academic library, with 5,747,805 volumes, is that maintained by the University of Minnesota at Minneapolis. Special libraries include the James Jerome Hill Reference Library (devoted to commerce and transportation) and the library of the Minnesota Historical Society, both located in St. Paul. Nearly all public, academic, school, and special libraries participate in one of the seven library system networks that facilitate resource sharing. In 2001, operating income for the state's public library system was estimated at \$149 million, including \$642,000 in federal grants and \$10 million in state grants.

There are more than 164 museums and historic sites. In addition to several noted museums of the visual arts, Minnesota is home to the Mayo Medical Museum at the Mayo Clinic in Rochester. The Minnesota Historical Society Museum offers rotating exhibits on varied aspects of the state's history. In May 1996, the Mille Lacs Indian Museum and Trading Post opened its doors. Historic sites include the Split Rock Lighthouse on the north shore of Lake Superior, Historic Fort Snelling in the Twin Cities, the boyhood home of Charles Lindbergh in Little Falls, and the Sauk Centre home of Sinclair Lewis.

44 COMMUNICATIONS

As of 2004, 97.1% of Minnesota's occupied housing units had telephones. Additionally, by June of that same year there were 2,832,079 mobile wireless telephone subscribers. In 2003, 67.9%

of Minnesota households had a computer and 61.6% had Internet access. By June 2005, there were 723,484 high-speed lines in Minnesota, 655,837 residential and 67,647 for business.

Commercial broadcasting began with the opening of the first radio station in 1922; as of 2005 there were 135 major radio stations—33 AM and 102 FM—and 20 major television stations. The Minneapolis–St. Paul metropolitan area had 1,481,050 television households, 54% of which received cable as of 1999.

As of 2000, a total of 116,792 Internet domain names had been registered in Minnesota.

45 PRESS

The *Minnesota Pioneer*, whose first issue was printed on a small hand press and distributed by the publisher himself on 28 April 1849 in St. Paul, vies with the *Minnesota Register* (its first issue was dated earlier but may have appeared later) for the honor of being Minnesota's first newspaper. Over the next 10 years, in any case, nearly 100 newspapers appeared at locations throughout the territory, including direct ancestors of many present-day publications. In April 1982, Minneapolis's daily newspapers were merged into the *Minneapolis Star Tribune*. As of 2005, the state had 15 morning dailies, 10 evening dailies, and 15 Sunday papers.

The following table lists the leading dailies, with their average circulations in 2005:

AREA	NAME	DAILY	SUNDAY
Duluth	<i>News Tribune</i> (m,S)	46,460	69,471
Minneapolis	<i>Star Tribune</i> (m,S)	381,094	678,650
St. Paul	<i>Pioneer Press</i> (m,S)	191,264	254,078

As of 2005, 333 weekly newspapers were being published in Minnesota. Among the most widely read magazines published in Minnesota were *Family Handyman*, appearing 11 times a year; *Catholic Digest*, a religious monthly; and *Snow Goer*, published six times a year for snowmobile enthusiasts.

46 ORGANIZATIONS

In 2006, there were over 8,805 nonprofit organizations registered within the state, of which about 5,694 were registered as charitable, educational, or religious.

The Minnesota Historical Society, founded in 1849, is the oldest educational organization in the state and the official custodian of its history. The society is partly supported by state funds, as are such other semistate organizations as the Academy of Science (which promotes interest in science among high school students), the Minnesota State Horticultural Society, and the Humane Society. The Sons of Norway and American Swedish Institute, both with headquarters in Minneapolis, seek to preserve the state's Scandinavian heritage. The Czechoslovak Genealogical Society International is based in St. Paul.

The American Board of Physical Medicine and Rehabilitation is based in Rochester. The National Scholastic Press Association is based in Minneapolis. The Organic Consumers Association, established in 1998, is based in the town of Finland.

Hobbyist and sport associations with headquarters in Minnesota include the American Coaster Enthusiasts, the North American Fishing Club, and North American Hunting Club.

The National Marrow Donor Program is based in Minneapolis, as is the National Council of the United States, International Organization of Good Templars.

47 TOURISM, TRAVEL, AND RECREATION

In 2004, the state hosted some 28.6 million travelers, with 50% of all tourist activity involving Minnesota residents touring their own state. About 11.7 million visitors were from out of state, primarily from one of the following states: Wisconsin, Iowa, North Dakota, Illinois, California, South Dakota, Michigan, Texas, Missouri, and Florida. Shopping was the most popular tourist activity for out-of-state visitors. Total travel expenditures for 2004 reached \$9.2 billion, which included support for over 233,000 jobs. More than 40% of tourists visited the twin cities of Minneapolis and St. Paul.

With its lakes and parks, ski trails and campsites, and historical and cultural attractions, Minnesota provides ample recreational opportunities for residents and visitors alike. Minnesota's attractions include the 220,000-acre (80,000-hectare) Voyageurs National Park near the Canadian border; Grand Portage National Monument, in Arrowhead Country, a former fur-trading center with a restored trading post; and Pipestone National Monument, in southwestern Minnesota, containing the red pipestone quarry used by Indians to make peace pipes. Lumbertown USA, a restored 1870s lumber community, is in Brainerd, and the US Hockey Hall of Fame is in Eveleth. The city of Ely has the International Wolf Center. Harmony features Niagara Cave with an underground waterfall. Minneapolis is famous for the Mall of America, a huge indoor commercial and entertainment center featuring stores, rides, a beach, skating rink, movies, and restaurants. The Minnesota Zoo is located about 20 mi (30 km) south of Minneapolis–St. Paul. Between Redwood Falls and Jackson, tourists can view the Jeffers Petroglyphs dating from 3000 BC.

The state maintains and operates 66 parks, 9,240 mi (14,870 km) of trails, 10 scenic and natural areas, 5 recreation areas, and 18 canoe and boating routes. Minnesota also has 288 primary wildlife refuges. Many visitors hunt deer, muskrat, squirrel, beaver, duck, pheasant, and grouse. Others enjoy boating each year on Minnesota's scenic waterways. Winter sports have gained in popularity, and many parks are now used heavily all year round. Snowmobiling, though it has declined somewhat since the mid-1970s, still attracts enthusiasts annually, and cross-country skiing has rapidly accelerated in popularity.

48 SPORTS

Five of the major professional sports currently have teams in Minnesota: the Twins of Major League Baseball, the Vikings of the National Football League, the Lynx of the Women's National Basketball Association, the Wild of the National Hockey League, and the Timberwolves of the National Basketball Association. The Twins won the World Series in 1924, 1987, and 1991. The Vikings have gone to the Super Bowl four times, losing each one. The Minnesota North Stars of the National Hockey League moved to Dallas in 1993, but a new NHL team, the Minnesota Wild, began play in 2000.

In collegiate sports, the University of Minnesota Golden Gophers compete in the Big Ten Conference. The football team won the Rose Bowl in 1962, while the basketball team won the Big Ten

title and advanced to the National Collegiate Athletic Association (NCAA) Final Four in 1997. The university is probably best known for its ice hockey team, which won the NCAA title in 1974, 1976, 1979, 2002, and 2003, and supplied the coach, Herb Brooks, and many of the players for the gold medal-winning US team in the 1980 Winter Olympics.

Other annual sporting events include the John Beargrease Sled Dog Race between Duluth and Grand Marais in January or early February, and auto racing at the Brainerd International Raceway in July and August. Alpine and cross-country skiing are popular.

Tracy Caulkins, Roger Maris, and Kevin McHale, past stars in swimming, baseball, and basketball, respectively, were all born in Minnesota.

49 FAMOUS MINNESOTANS

No Minnesotan has been elected to the US presidency, but several have sought the office, including two who served as vice president. Hubert Horatio Humphrey (b.South Dakota, 1911–78) was vice president under Lyndon Johnson and a serious contender for the presidency in 1960, 1968, and 1972. A onetime mayor of Minneapolis, the “Happy Warrior” entered the US Senate in 1949, winning recognition as a vigorous proponent of liberal causes; after he left the vice presidency, Humphrey won reelection to the Senate in 1970. Humphrey’s protégé, Walter Frederick “Fritz” Mondale (b.1928), a former state attorney general, was appointed to fill Humphrey’s Senate seat in 1964, was elected to it twice, and after an unsuccessful try for the presidency, became Jimmy Carter’s running mate in 1976; four years later, Mondale and Carter ran unsuccessfully for reelection, losing to Ronald Reagan and George Bush. Mondale won the Democratic presidential nomination in 1984 and chose US Representative Geraldine A. Ferraro of New York as his running mate, making her the first woman to be nominated by a major party for national office; they were overwhelmingly defeated by Reagan and Bush, winning only 41% of the popular vote and carrying only Minnesota and the District of Columbia. Warren Earl Burger (1907–95) of St. Paul was named chief justice of the US Supreme Court in 1969. Three other Minnesotans have served on the court: Pierce Butler (1866–1939), William O. Douglas (1898–1980), and Harry A. Blackmun (b.Illinois, 1908–97).

Senator Frank B. Kellogg (b.New York, 1856–1937), who as secretary of state helped to negotiate the Kellogg-Briand Pact renouncing war as an instrument of national policy (for which he won the 1929 Nobel Peace Prize), also served on the Permanent Court of International Justice. Other political leaders who won national attention include governors John A. Johnson (1861–1909), Floyd B. Olson (1891–1936), and Harold E. Stassen (1907–2001), a frequent presidential candidate beginning in 1948. Eugene J. McCarthy (1916–2005), who served in the US Senate, was the central figure in a national protest movement against the Vietnam war and, in that role, unsuccessfully sought the 1968 Democratic presidential nomination won by Humphrey. McCarthy also ran for the presidency as an independent in 1976.

Several Minnesotans besides Kellogg have served in cabinet posts. Minnesota’s first territorial governor, Alexander Ramsey (1815–1903), later served as a secretary of war, and Senator William Windom (1827–91) was also secretary of the treasury. Others serving in cabinet posts have included William DeWitt Mitchell

(1874–1955), attorney general; Maurice H. Stans (1908–98), secretary of commerce; James D. Hodgson (b.1915), secretary of labor; and Orville Freeman (1918–2003) and Bob Bergland (b.1928), both secretaries of agriculture. The first woman ambassador in US history was Eugenie M. Anderson (Iowa, 1909–97), like Humphrey an architect of the Democratic-Farmer-Labor Party.

Notable members of Congress include Knute Nelson (b.Norway, 1843–1923), who served in the Senate from 1895 to his death; Henrik Shipstead (1881–1960), who evolved into a leading Republican isolationist during 24 years in the Senate; Representative Andrew J. Volstead (1860–1947), who sponsored the 1919 prohibition act that bears his name; and Representative Walter Judd (1898–1994), a prominent leader of the so-called China Lobby.

The Mayo Clinic was founded in Minnesota by Dr. William W. Mayo (b.England, 1819–1911) and developed through the efforts of his sons, Drs. William H. (1861–1939) and Charles H. (1865–1939) Mayo. Oil magnate J. Paul Getty (1892–1976) was a Minnesota native, as was Richard W. Sears (1863–1914), founder of Sears, Roebuck.

Prominent literary figures, besides Sinclair Lewis, include Ignatius Donnelly (b.Pennsylvania, 1831–1901), a writer, editor, and Populist Party crusader; F. Scott Fitzgerald (1896–1940), well known for classic novels including *The Great Gatsby*; and Ole Edvart Rølvaag (b.Norway, 1876–1931), who conveyed the reality of the immigrant experience in his *Giants in the Earth*. The poet and critic Allen Tate (b.Kentucky, 1899–1979) taught for many years at the University of Minnesota.

Journalist Westbrook Pegler (1894–1969) and cartoonist Charles Schulz (1922–2000) were both born in Minnesota as was radio personality and author Garrison Keillor (b.1942), who gained nationwide fame playfully satirizing his home state through the fictitious town of Lake Wobegon. Architects LeRoy S. Buffington (1847–1937) and Cass Gilbert (b.Ohio, 1859–1934) and economist Thorstein Veblen (b.Wisconsin, 1857–1929) influenced their fields well beyond the state’s borders, as did Minnesota artists Wanda Gag (1893–1946) and Adolph Dehn (1895–1968).

Minnesota-born entertainers include Judy Garland (Frances Gumm, 1922–69) and Bob Dylan (Robert Zimmerman, b.1941). Football star William “Pudge” Heffelfinger (1867–1954) was a Minnesota native, and Bronislaw “Bronco” Nagurski (b.Canada, 1908–1990) played for the University of Minnesota.

Daniel Greysolon, Sieur Duluth (b.France, 1636–1710), Father Louis Hennepin (b.Flanders, 1640?–1701), and Jonathan Carver (b.Massachusetts, 1710–80) were among the early explorers and chroniclers of what is now the State of Minnesota. Fur trader Henry H. Sibley (b.Michigan, 1811–91) was a key political leader in the territorial period and became the state’s first governor; he also put down the Sioux uprising of 1862. Railroad magnate James J. Hill (b.Canada, 1838–1916) built one of the greatest corporate empires of his time, and Oliver H. Kelley (b.Massachusetts, 1826–1913), a Minnesota farmer, organized the first National Grange. John Ireland (b.Ireland, 1838–1918) was the first Roman Catholic archbishop of St. Paul, while Henry B. Whipple (b.New York, 1822–1901), longtime Episcopal bishop of Minnesota, achieved particular recognition for his work among Indians in the region.

The first US citizen ever to be awarded the Nobel Prize for literature was Sinclair Lewis (1885–1951), whose novel *Main Street* (1920) was modeled on life in his hometown of Sauk Centre. Phil-

ip S. Hench (b.Pennsylvania, 1896–1965) and Edward C. Kendall (b.Connecticut, 1886–1972), both of the Mayo Clinic, shared the 1950 Nobel Prize for medicine, and St. Paul native Melvin Calvin (1911–97) won the 1961 Nobel Prize for chemistry.

MISSISSIPPI

State of Mississippi

ORIGIN OF STATE NAME: Derived from the Ojibwa Indian words *misi sipi*, meaning great river. **NICK-NAME:** The Magnolia State. **CAPITAL:** Jackson. **ENTERED UNION:** 10 December 1817 (20th). **SONG:** “Go, Mississippi!” **MOTTO:** *Virtute et armis* (By valor and arms). **COAT OF ARMS:** An American eagle clutches an olive branch and a quiver of arrows in its talons. **FLAG:** Crossed blue bars, on a red field, bordered with white and emblazoned with 13 white stars—the motif of the Confederate battle flag—cover the upper left corner. The field consists of three stripes of equal width, blue, white, and red. **OFFICIAL SEAL:** The seal consists of the coat of arms surrounded by the words “The Great Seal of the State of Mississippi.” **BIRD:** Mockingbird; wood duck (waterfowl). **FISH:** Largemouth or black bass. **FLOWER:** Magnolia. **TREE:** Magnolia. **LEGAL HOLIDAYS:** New Year’s Day, 1 January; Birthdays of Robert E. Lee and Martin Luther King Jr., 3rd Monday in January; Washington’s Birthday, 3rd Monday in February; Confederate Memorial Day, last Monday in April; Memorial Day and Jefferson Davis’s Birthday, last Monday in May; Independence Day, 4 July; Labor Day, 1st Monday in September; Veterans’ Day and Armistice Day, 11 November; Thanksgiving Day, 4th Thursday in November; Christmas Day, 25 December. **TIME:** 6 AM CST = noon GMT.

¹ LOCATION, SIZE, AND EXTENT

Located in the eastern south-central United States, Mississippi ranks 32nd in size among the 50 states.

The total area of Mississippi is 47,689 sq mi (123,514 sq km), of which land takes up 47,233 sq mi (122,333 sq km) and inland water 456 sq mi (1,181 sq km). Mississippi’s maximum e–w extension is 188 mi (303 km); its greatest n–s distance is 352 mi (566 km).

Mississippi is bordered on the n by Tennessee; on the e by Alabama; on the s by the Gulf of Mexico and Louisiana; and on the w by Louisiana (with the line partially formed by the Pearl and Mississippi rivers) and Arkansas (with the line formed by the Mississippi River). Several small islands lie off the coast.

The total boundary length of Mississippi is 1,015 mi (1,634 km). The state’s geographic center is in Leake County, 9 mi (14 km) wnw of Carthage.

² TOPOGRAPHY

Mississippi lies entirely within two lowland plains. Extending eastward from the Mississippi River, the Mississippi Alluvial Plain, popularly known as the Delta, is very narrow south of Vicksburg but stretches as much as a third of the way across the state farther north. The Gulf Coastal Plain, covering the rest of the state, includes several subregions, of which the Red Clay Hills of north-central Mississippi and the Piney Woods of the south and southeast are the most extensive. Mississippi’s generally hilly landscape ascends from sea level at the Gulf of Mexico to reach its maximum elevation, 806 ft (246 m), at Woodall Mountain, in the extreme northeastern corner of the state. The mean elevation of the state is approximately 300 ft (92 m).

The state’s largest lakes—Grenada, Sardis, Enid, and Arkabutla—are all manmade. Numerous smaller lakes—called oxbow lakes because of their curved shape—extend along the western

edge of the state; once part of the Mississippi River, they were formed when the river changed its course. Mississippi’s longest inland river, the Pearl, flows about 490 mi (790 km) from the eastern center of the state to the Gulf of Mexico, its lower reaches forming part of the border with Louisiana. The Big Black River, some 330 mi (530 km) long, begins in the northeast and cuts diagonally across the state, joining the Mississippi about 20 mi (32 km) below Vicksburg. Formed by the confluence of the Tallahatchie and Yalobusha rivers at Greenwood, the Yazoo flows 189 mi (304 km) southwest to the Mississippi just above Vicksburg.

³ CLIMATE

Mississippi has short winters and long, humid summers. Summer temperatures vary little from one part of the state to another. Biloxi, on the Gulf coast, averages 82°F (28°C) in July, while Oxford, in the north-central part of the state, averages 80°F (27°C). During the winter, however, because of the temperate influence of the Gulf of Mexico, the southern coast is much warmer than the north; in January, Biloxi averages 51°F (10°C) to Oxford’s 44°F (6°C). The lowest temperature ever recorded in Mississippi was -19°F (-28°C) on 30 January 1966 in Corinth; the highest, 115°F (46°C), was set on 29 July 1930 at Holly Springs.

Precipitation in Mississippi increases from north to south. The north-central region averages 53 in (135 cm) of precipitation a year; the coastal region, 62 in (157 cm). Annual precipitation at Jackson is about 56 in (142 cm). Some snow falls in northern and central sections. Mississippi lies in the path of hurricanes moving northward from the Gulf of Mexico during the late summer and fall. On 17–18 August 1969, Hurricane Camille ripped into Biloxi and Gulfport and caused more than 100 deaths throughout the state. In August 2005, Hurricane Katrina swept through the same region causing floodwater surges of over 30 ft (9 m). Biloxi and Gulfport suffered severe damage to homes and businesses. As of late 2005, the estimated death toll for the cities and the rest of

the county was over 100 people. One month later, Hurricane Rita passed through the area, causing severe flooding inland as well as near the coastal regions of the state. Two tornado alleys cross Mississippi from the southwest to northeast, from Vicksburg to Oxford and McComb to Tupelo.

4 FLORA AND FAUNA

Post and white oaks, hickory, maple, and magnolia grow in the forests of the uplands; various willows and gums (including the tupelo) in the Delta; and longleaf pine in the Piney Woods. Characteristic wild flowers include the green Virginia creeper, black-eyed Susan, and Cherokee rose. In April 2006, the US Fish and Wildlife listed Price's potato-bean as a threatened species. The Louisiana quillwort, pondberry, and American chaffseed were listed as endangered plant species the same year.

Common among the state's mammals are the opossum, eastern mole, armadillo, coyote, mink, white-tailed deer, striped skunk, and diverse bats and mice. Birds include varieties of wren, thrush, warbler, vireo, and hawk, along with numerous waterfowl and seabirds, Franklin's gull, the common loon, and the wood stork among them. Black bass, perch, and mullet are common freshwater fish. Rare species in Mississippi include the hoary bat, American oystercatcher, mole salamander, pigmy killifish, Yazoo darker, and five species of crayfish. Listed as threatened or endangered in 2006 were 30 species of animals (vertebrates and invertebrates), including the American and Louisiana black bears, eastern indigo snake, Indiana bat, Mississippi sandhill crane, bald eagle, Mississippi gopher frog, brown pelican, red-cockaded woodpecker, five species of sea turtle, and the bayou darter.

5 ENVIRONMENTAL PROTECTION

Except for the drinking water program, housed in the State Health Department, and regulation of noncommercial oil field waste disposal activities, assigned to the State Oil and Gas Board, the Mississippi Department of Environmental Quality (MDEQ) is responsible for environmental regulatory programs in the state. MDEQ regulates surface and groundwater withdrawals through its Office of Land and Water Resources and surface mining reclamation through its Office of Geology. All other environmental regulatory programs, including those federal regulatory programs delegated to Mississippi by the US Environmental Protection Agency (EPA), are administered through MDEQ's Office of Pollution Control. The state has primacy for almost all federally delegable programs; the one notable exception is the federal hazardous waste corrective action program (under the federal Hazardous and Solid Waste Amendments of 1984). MDEQ implements one of the premier Pollution Prevention programs in the nation.

In 1996, wetlands accounted for 13% of the state's lands. The Natural Heritage Program helps manage these wetlands.

In 2003, 63.1 million lb of toxic chemicals were released in the state. In 2003, Mississippi had 83 hazardous waste sites listed in the EPA database, three of which were on the National Priorities List as of 2006, including American Creosote Works, Inc, Davis Timber Company, and Picayune Wood Treating Site. In 2005, the EPA spent over \$1.5 million through the Superfund program for the cleanup of hazardous waste sites in the state. The same year, federal EPA grants awarded to the state included \$9.7 million for

the clean water revolving loan fund, as well as over \$9 million dollars in funds for other water quality and protection projects.

6 POPULATION

Mississippi ranked 31st in population in the United States with an estimated total of 2,921,088 in 2005, an increase of 2.7% since 2000. Between 1990 and 2000, Mississippi's population grew from 2,573,216 to 2,844,658, an increase of 10.5%. The population was projected to reach 3.01 million by 2015 and 3.06 million by 2025.

After remaining virtually level for 30 years, Mississippi's population during the 1970s grew 13.7%, but increased only 2.1% from 1980 to 1990. In 2004, the median age of Mississippians was 34.9. In the same year, 25.8% of the on under the age of 18 while 12.2% was age 65 or older. The population density in 2004 was 23.9 persons per sq km (61.9 persons per sq mi).

Mississippi remains one of the most rural states in the United States, although the urban population has increased fivefold since 1920, when only 13% of state residents lived in cities. Mississippi's largest city, Jackson, had an estimated 2004 population of 179,298, down from 193,097 in 1994. Biloxi and Gulfport are other major cities with large populations. The Jackson metropolitan area had an estimated population of 517,275 in 2004.

7 ETHNIC GROUPS

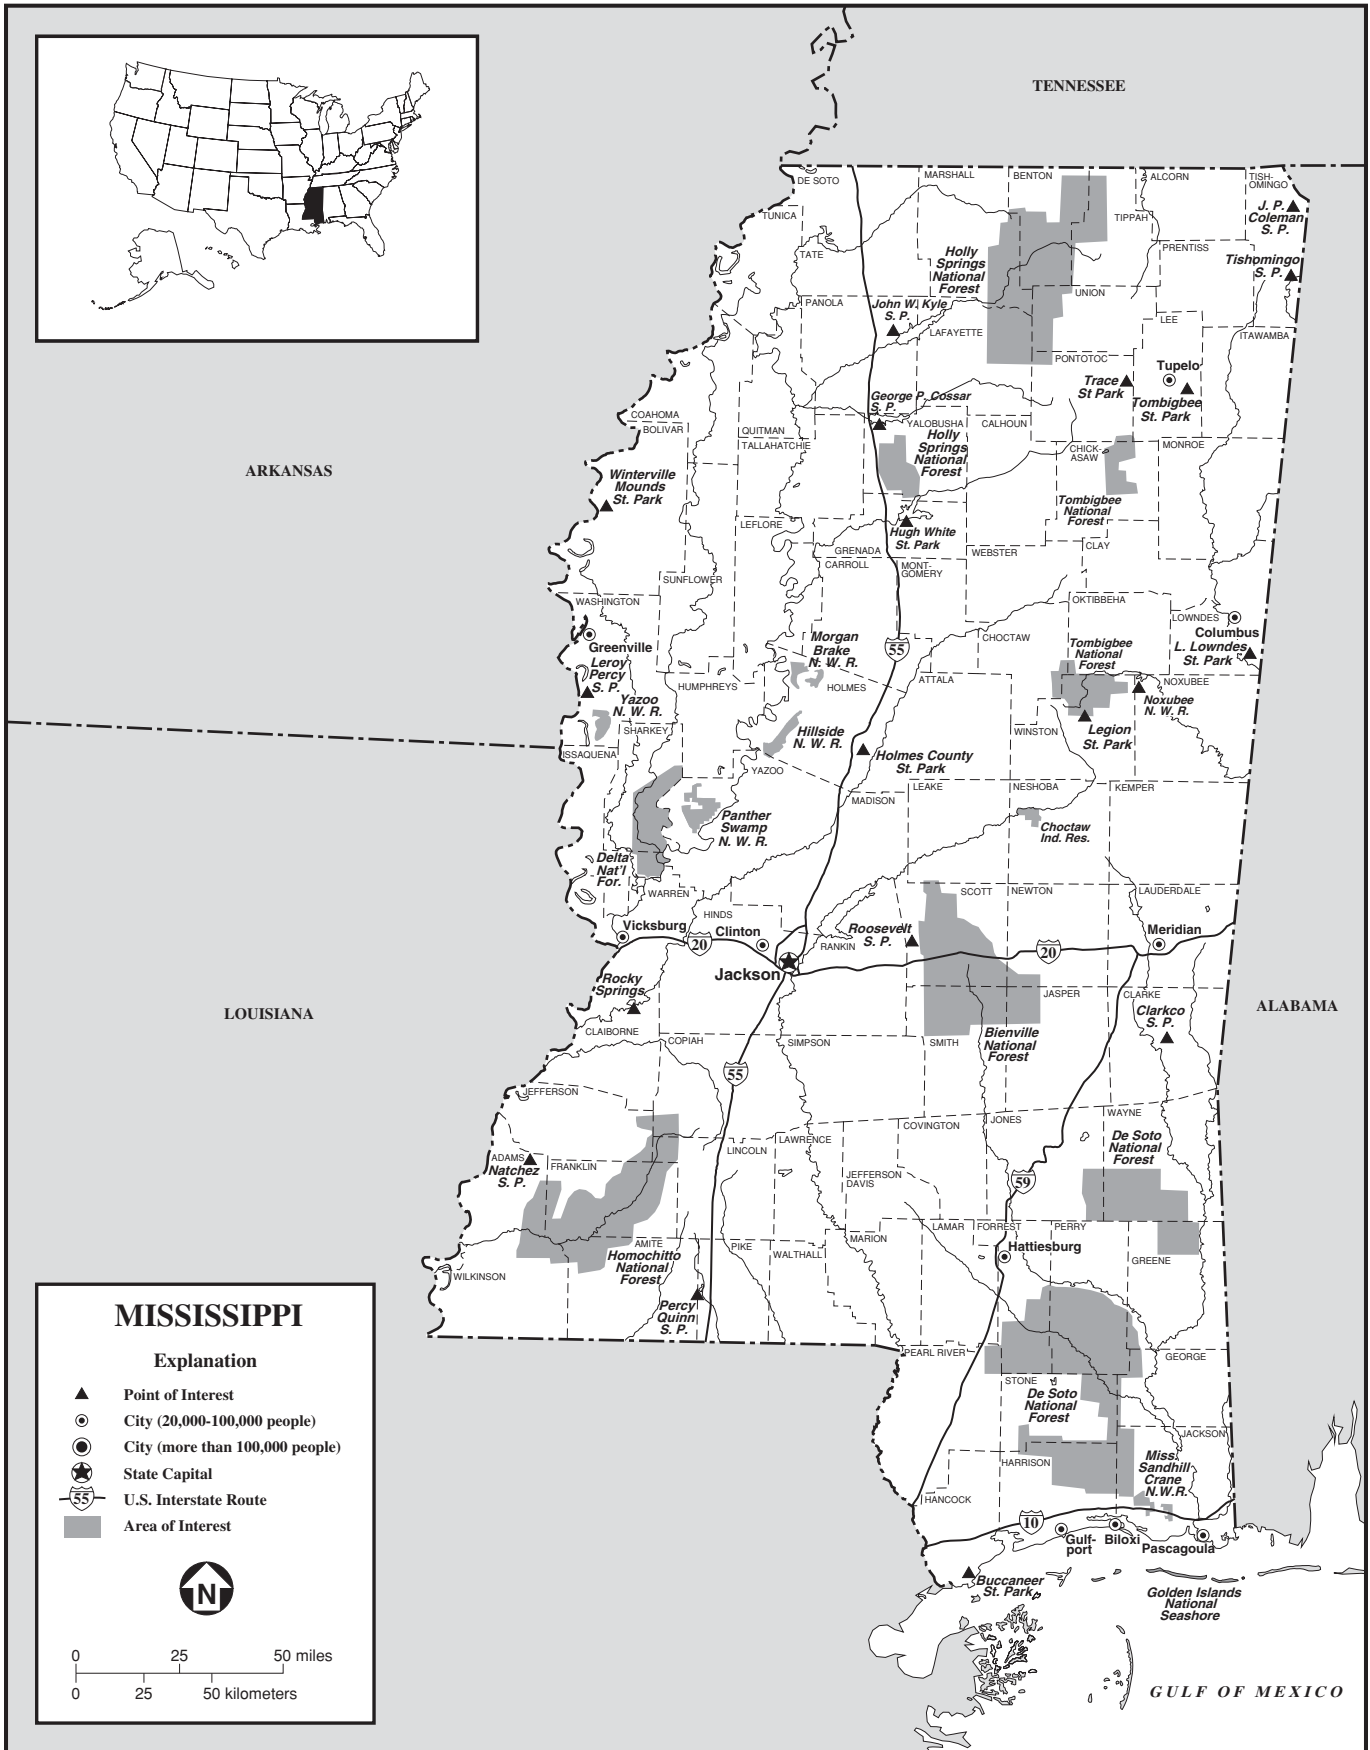

Since 1860, blacks have constituted a larger proportion of the population of Mississippi than of any other state. By the end of the 1830s, blacks outnumbered whites 52% to 48%, and from the 1860s through the early 20th century, they made up about three-fifths of the population. Because of out-migration, the proportion of black Mississippians declined to about 36% in 2000 (still the highest in the country). By 2004, 36.8% of the population was black. In 2000, the state had 1,746,099 whites, 1,033,809 blacks, 18,626 Asians, 11,652 American Indians, and 667 Pacific Islanders. In 2000, there were 39,569 (1.4%) Hispanics and Latinos. In 2004, 0.7% of the population was Asian and 1.7% Hispanic or Latino. That year, 0.6% of the population reported origin of two or more races.

Until the 1940s, the Chinese, who numbered 3,099 in 2000, were an intermediate stratum between blacks and whites in the social hierarchy of the Delta Counties. There also were 5,387 Vietnamese and 2,608 Filipinos in 2000. Although the number of foreign-born almost tripled in the 1970s, Mississippi still had the nation's smallest percentage of foreign-born residents (1.4%, or 39,908) in 2000.

Mississippi has only a small American Indian population—0.4% of the state's population in 2000 (11,652). Many of them live on the Choctaw reservation in the east-central region. In 2004, 0.5% of the population was American Indian.

8 LANGUAGES

English in the state is largely Southern, with some South Midland speech in northern and eastern Mississippi because of population drift from Tennessee. Typical are the absence of final /r/ and the lengthening and weakening of the diphthongs /ai/ and /oi/ as in *ride* and *oil*. South Midland terms in northern Mississippi include *tow sack* (burlap bag), *dog irons* (andirons), *plum peach* (clingstone peach), *snake doctor* (dragonfly), and *stone wall* (rock fence). In the eastern section are found *jew's harp* (harmonica)

and *croker sack* (burlap bag). Southern speech in the southern half features *gallery* for porch, *mosquito hawk* for dragonfly, and *press peach* for clingstone peach. Louisiana French has contributed *armoire* (wardrobe).

In 2000, 96.4% of Mississippi residents five years old and older spoke only English in the home, down from 97.2% in 1990.

The following table gives selected statistics from the 2000 Census for language spoken at home by persons five years old and over. The category "Other Native North American languages" includes Apache, Cherokee, Choctaw, Dakota, Keres, Pima, and Yupik.

LANGUAGE	NUMBER	PERCENT
Population 5 years and over	2,641,453	100.0
Speak only English	2,545,931	96.4
Speak a language other than English	95,522	3.6
Speak a language other than English	95,522	3.6
Spanish or Spanish Creole	50,515	1.9
French (incl. Patois, Cajun)	10,826	0.4
Other Native North American languages	5,654	0.2
German	5,501	0.2
Vietnamese	4,916	0.2
Chinese	2,506	0.1
Tagalog	2,005	0.1
Korean	1,485	0.1
Italian	1,336	0.1
Arabic	1,081	0.0

9 RELIGIONS

Protestants have dominated Mississippi since the late 18th century. The Baptists are the leading denomination and many adherents are fundamentalists. Partly because of the strong church influence, Mississippi was among the first states to enact prohibition and among the last to repeal it.

In 2000, the Southern Baptist Convention was the largest denomination in the state with 916,440 known adherents; there were 14,947 new members in 2002. The United Methodist Church is considered to be the second-largest denomination in the state, with 189,149 members in 2004. Also in 2004, the Roman Catholic Church reported a statewide membership of about 124,150. In 2000, there were an estimated 3,919 Muslims and about 1,400 Jews. Over 1.2 million people (about 45.4% of the population) did not claim any religious affiliation in 2000.

10 TRANSPORTATION

At the end of 2003, there were 2,658 rail mi (4,279 km) of mainline railroad track in Mississippi, including 2,016 mi (3,245 km) operated by five Class I railroads, which in 2003, were the Burlington Northern Santa Fe, CSX, Illinois Central Gulf, Kansas City Southern, and Norfolk Southern lines. As of 2006, Amtrak provided rail passenger service via its City of New Orleans train, serving the cities of Greenwood, Yazoo, Jackson, Hazlehurst, Brookhaven, and McComb on its route between Chicago and New Orleans, and the Crescent, serving Meridian, Laurel, Hattiesburg, and Picayune in Mississippi, on its route between Atlanta and New Orleans.

Mississippi had 74,129 mi (119,347 km) of public roads as of 2004. Interstate highways 55, running north-south, and 20, running east-west, intersect at Jackson. I-220 provides a loop from I-55 north of Jackson to I-20 west of Jackson. I-10 runs across the Mississippi Gulf Coast, and I-110 provides a connector from I-10 to US Highway 90 in Biloxi. I-59 runs diagonally through

the southeastern corner of Mississippi from Meridian to New Orleans.

Development of four-lane highways was financed by a "pay-as-you-go" public works program passed by the Mississippi legislature in 1987 to provide a four-lane highway within 30 minutes or 30 mi (48 km) of every citizen in the state. Originally, the \$1.6 billion, three-phase agenda called for the creation of four lanes for 1,077 mi (1,733 km) of highway as of 2001. During the 1994 regular legislative session, an additional 619 mi (996 km), known as Phase IV, were added to the program at an expected cost of \$1.3 billion. In 2004, there were 1,896,008 licensed drivers in Mississippi and 1.159 million registered motor vehicles, including some 1.113 million automobiles and 815,000 trucks of all types.

Mississippi's ports and waterways serve a surrounding 16-state market where nearly 40% of the nation's total population is located. Mississippi has two deepwater seaports, Gulfport and Pascagoula, both located on the Gulf of Mexico. In 2004, Gulfport handled 2.374 million tons of cargo, and Pascagoula handled 34.099 million tons, making it the 22nd-busiest port in the United States. Much of Pascagoula's heavy volume consists of oil and gas imports. Other ports located on the Gulf include Port Bienville in Hancock County and Biloxi in Harrison County. Biloxi handled 2.670 million tons of cargo in 2004.

The Mississippi River flows along the western border of the state, linking the Gulf of Mexico to inland river states as far away as Minneapolis, Minnesota. The Mississippi is the largest commercial river in the country and the third-largest river system in the world, and it carries the majority of the nation's inland waterway tonnage. Approximately 409 mi (658 km) of the Mississippi River flow through the state, with ports in Natchez, Vicksburg, Yazoo County, Greenville, and Rosedale. In 2004, the Port of Vicksburg handled 3.922 million tons of cargo, while the Port of Greenville handled 3.045 million tons.

To the east of Mississippi lies the Tennessee-Tombigbee (Tenn-Tom) Waterway, completed in 1984, which links the Tennessee and Ohio rivers with the Gulf of Mexico. Stretching 95 mi (153 km) through Mississippi from the northeast corner of the state down to a point just south of Columbus, the Tenn-Tom Waterway's overall length is 232 mi (373 km). Five local ports are located on the waterway: Yellow Creek, Itawamba, Amory, Aberdeen, and Columbus-Lowndes County. In 2004, Mississippi had 873 mi (1,405 km) of navigable inland waterways. In 2003, waterborne shipments totaled 47.446 million tons.

In 2005, Mississippi had a total of 243 public and private-use aviation-related facilities. This included 191 airports, 51 heliports, and 1 STOLport (Short Take-Off and Landing). Jackson-Evers International Airport is the state's main air terminal. In 2004, the airport had 639,947 enplanements.

11 HISTORY

The earliest record of human habitation in the region that is now the state of Mississippi goes back perhaps 2,000 years. The names of Mississippi's pre-Columbian inhabitants are not known. Upon the appearance of the first Spanish explorers in the early 16th century, Mississippi Indians numbered some 30,000 and were divided into 15 tribes. Soon after the French settled in 1699, however, only three large tribes remained: the Choctaw, the Chickasaw, and the Natchez. The French destroyed the Natchez in 1729-30 in re-

taliation for the massacre of a French settlement on the Natchez bluffs.

Spanish explorers, of whom Hernando de Soto in 1540–41 was the most notable, explored the area that is now Mississippi in the first half of the 16th century. De Soto found little of the mineral wealth he was looking for, and the Spanish quickly lost interest in the region. The French explorer Robert Cavelier, Sieur de la Salle, penetrated the lower Mississippi Valley from New France (Canada) in 1682. La Salle discovered the mouth of the Mississippi and named the entire area Louisiana in honor of the French king, Louis XIV.

An expedition under French-Canadian Pierre Lemoyne, Sieur d'Iberville, established a settlement at Biloxi Bay in 1699. Soon the French opened settlements at Mobile (1702), Natchez (1716), and finally New Orleans (1718), which quickly eclipsed the others in size and importance. After losing the French and Indian War, France ceded Louisiana to its Spanish ally in 1762. The following year, Spain ceded the portion of the colony that lay east of the Mississippi to England, which governed the new lands as West Florida. During the American Revolution, the Spanish, who still held New Orleans and Louisiana, marched into Natchez, Mobile, and Pensacola (the capital) and took West Florida by conquest.

Although the United States claimed the Natchez area after 1783, Spain continued to rule it. However, the Spanish were unable to change the Anglo-American character of the settlement. Spain agreed to relinquish its claim to the Natchez District by signing the Treaty of San Lorenzo on 27 October 1795, but did not evacuate its garrison there for another three years.

The US Congress organized the Mississippi Territory in 1798. Between 1798 and 1817, the territory grew enormously in population, attracting immigrants mainly from the older states of the South but also from the Middle Atlantic states and even from New England. During this period, the territory included all the land area that is today within the borders of Mississippi and Alabama. However, sectionalism and the territory's large size convinced Congress to organize the eastern half as the Alabama Territory in 1817. Congress then offered admission to the western half, which became the nation's 20th state—Mississippi on 10 December.

Until the Civil War, Mississippi exemplified the American frontier; it was bustling, violent, and aggressive. By and large, Mississippians viewed themselves as westerners, not southerners. Nor was Mississippi, except for a few plantations around Natchez, a land of large planters. Rather, Mississippi's antebellum society and government were dominated by a coalition of prosperous farmers and small landowners. At the time of statehood, the northern two-thirds of Mississippi, though nominally under US rule since 1783, remained in the hands of the Choctaw and Chickasaw and was closed to settlement. Under intense pressure from the state government and from Andrew Jackson's presidential administration, these tribes signed three treaties between 1820 and 1832, ceding their Mississippi lands and agreeing to move to what is now Oklahoma.

The opening of fertile Indian lands for sale and settlement produced a boom of speculation and growth unparalleled in Mississippi history. Cotton agriculture and slavery—introduced by the French and carried on by the British and Spanish, but hitherto limited mostly to the Natchez area—swept over the state. As the profitability and number of slaves increased, so did attempts by white

Mississippians to justify slavery morally, socially, and economically. The expansion of slavery also produced a defensive attitude, which focused the minds of white Mississippians on two dangers: that the slaves outnumbered the whites and would threaten white society unless kept down by slavery; and that any attack on slavery, whether from the abolitionists or from Free-Soilers like Abraham Lincoln, was a threat to white society. The danger, they believed, was so great that no price was too high to pay to maintain slavery, even secession and civil war.

After Lincoln's election to the US presidency, Mississippi became, on 9 January 1861, the second southern state to secede. When the war began, Mississippi occupied a central place in Union strategy. The state sat squarely astride the major Confederate east–west routes of communication in the lower South, and the Mississippi River twisted along the state's western border. Control of the river was essential to Union division of the Confederacy. The military campaign fell into three phases: the fight for northeastern Mississippi in 1862, the struggle for Vicksburg in 1862–63, and the battle for east Mississippi in 1864–65. The Union advance on Corinth began with the Battle of Shiloh (Tenn.) in April 1862. The first Union objective was the railroad that ran across the northeastern corner of Mississippi from Corinth to Iuka and linked Memphis, Tenn., to Atlanta, Ga. Losses in the ensuing battle of Shiloh, which eventually led to the occupation of Corinth by Union troops, exceeded 10,000 men on each side.

The campaign that dominated the war in Mississippi—and, indeed, along with Gettysburg provided the turning point of the Civil War—was Vicksburg. Perched atop high bluffs overlooking a bend in the Mississippi and surrounded by hills on all sides, Vicksburg provided a seemingly impregnable fortress. Union forces maneuvered before Vicksburg for more than a year before Grant besieged the city and forced its surrender on 4 July 1863. Along with Vicksburg went the western half of Mississippi. The rest of the military campaign in the state was devoted to the fight for the east, which Union forces still had not secured when the conflict ended in 1865. Of the 78,000 Mississippians who fought in the Civil War, nearly 30,000 died.

Ten years of political, social, and economic turmoil followed. Reconstruction was a tumultuous period during which the Republican Party encouraged blacks to vote and hold political office, while the native white Democrats resisted full freedom for their former slaves. The resulting confrontation lasted until 1875, when, using violence and intimidation, the Democrats recaptured control of the state from the Republicans and began a return to the racial status quo antebellum. However, reconstruction left its legacy in minds of Mississippians: to the whites it seemed proof that blacks were incapable of exercising political power; to the blacks it proved that political and social rights could not long be maintained without economic rights.

The era from the end of Reconstruction to World War II was a period of economic, political, and social stagnation for Mississippi. In many respects, white Mississippians pushed blacks back into slavery in all but name. Segregation laws and customs placed strict social controls on blacks, and a new state constitution in 1890 removed the last vestiges of their political rights. Mississippi's agricultural economy, dominated by cotton and tenant farming, provided the economic equivalent of slavery for black sharecroppers. As a continuing agricultural depression ground down the small

white farmers, many of them also were driven into the sharecropper ranks; in 1890, 63% of all Mississippi farmers were tenants. Whether former planter-aristocrats like John Sharp Williams or small-farmer advocates like James K. Vardaman (1908–12) and Theodore Bilbo (1916–20 and 1928–32) held office as governor, political life was dominated by the overriding desire to keep the blacks subservient. From Reconstruction to the 1960s, white political solidarity was of paramount importance. Otherwise, the whites reasoned, another Reconstruction would follow. According to the Tuskegee Institute, 538 blacks were lynched in Mississippi between 1883 and 1959, more than in any other state.

The Great Depression of the 1930s pushed Mississippians, predominantly poor and rural, to the point of desperation, and the state's agricultural economy to the brink of disaster. In 1932, cotton sank to five cents a pound, and one-fourth of the state's farmland was forfeited for nonpayment of taxes. World War II unleashed the forces that would later revolutionize Mississippi's economic, social, and political order, bringing the state its first prosperity in a century. By introducing outsiders to Mississippi and Mississippians to the world, the armed forces and the war began to erode the state's insularity. It also stimulated industrial growth and agricultural mechanization and encouraged an exodus of blacks to better-paying jobs in other states. By the early 1980s, according to any standard, Mississippi had become an industrial state. In the agricultural sector, cotton had been dethroned and crop diversification accomplished. Politics in Mississippi also changed considerably after World War II. Within little more than a generation, from 1945 to 1975, legal segregation was destroyed, and black people exercised their political rights for the first time since Reconstruction. The "Mississippi Summer" (also called Freedom Summer) civil rights campaign—and the violent response to it, including the abduction and murder of three civil rights activists in June 1964—helped persuade white Mississippians to accept racial equality. Charles Evers, the brother of slain civil rights leader Medgar Evers, was elected mayor of Fayette in 1969, becoming Mississippi's first black mayor since Reconstruction.

Following the 1990 redistricting that boosted the number of blacks in the Mississippi House of Representatives, the Mississippi legislature was nearly 23% black in a state in which blacks constituted 33% of the population. In 1998 African Americans accounted for 36% of the state's population.

In 1988 reformist governor Ray Mabus, elected in 1987, enacted the nation's largest teacher pay increase by that date. Nevertheless, teacher salaries in 1992 were still, on average, the second-lowest in the nation and public education remained a priority for the state in the early 2000s. Democratic Governor Ronnie Musgrove, elected in 2000, was able to win additional teacher pay increases from the legislature in 2001. Education was Musgrove's main focus in his 2003 State of the State Address, as he proposed a program that would place children in school two months before kindergarten and one that would attempt to keep top faculty members at Mississippi's state colleges and universities.

Mississippi's economy was hard hit by the 1986 decline in oil and gas prices. Unemployment in the state rose to 13%. By 1992 it had fallen to about 8%. The 1990s saw increasing industrial diversification and rising personal incomes, although many agricultural workers in the Mississippi Delta area remained jobless due to the increasing mechanization of farm work. By 1999 the jobless

rate had dropped to 5.1%, though still above the national average of 4.2%. Nevertheless, the state remained among the nation's poorest, with nearly 18% of its population living below the poverty level as of 1998, a poverty rate that persisted into the early 2000s. Only three states had higher poverty rates. In 2003, Mississippi was facing a budget shortfall of at least \$500 million.

Former chairman of the Republican National Committee, Haley Barbour, was elected governor in November 2003. Upon becoming governor, Barbour focused on job creation, job training, workplace development efforts, and tort reform. He launched "Momentum Mississippi," a long-range economic development strategy group composed of the state's business and community leaders. In 2005, he introduced comprehensive education reform legislation to reward teacher and school performance, reduce state bureaucracy, and strengthen discipline in the state's public schools. With regard to the abortion debate, Barbour introduced and passed six pro-life laws in 2004.

Southern Mississippi was devastated by Hurricane Katrina in August 2005. A 30-ft (10-m) storm surge came ashore, destroying 90% of buildings along the Biloxi-Gulfport coastline. Casino barges in the area were washed ashore. About 800,000 people suffered power outages in Mississippi in the aftermath of the storm.

12 STATE GOVERNMENT

Mississippi has had four state constitutions. The first (1817) accompanied Mississippi's admission to the Union. A second constitution (1832) was superseded by that of 1869, redrafted under Republican rule to allow Mississippi's readmission to the Union after the Civil War. The state's present constitution, as amended, dates from 1890. By January 2005 it had 123 amendments.

Mississippi's bicameral legislature includes a 52-member Senate and a 122-member House of Representatives. Annual sessions begin in January and extend 90 calendar days, except in the first year of a gubernatorial administration, when they run 125 calendar days. All state legislators are elected to four-year terms. State representatives must be at least 21 years old and senators 25. Representatives must be qualified voters and must have been Mississippi residents for four years and residents of their district for at least two years before election. Senators must have been qualified voters and state residents for at least four years and residents of their district for at least two years before election. The legislative salary was \$10,000 in 2004, unchanged from 1999.

The governor and lieutenant governor (separately elected), secretary of state, attorney general, state treasurer, state auditor, commissioner of insurance, and the commissioner of agriculture and commerce all serve four-year terms. (Voters also elect three transportation commissioners and three public service commissioners, who also serve four-year terms.) The governor and lieutenant governor must be qualified voters, at least 30 years old, US citizens for 20 years, and Mississippi residents for 5 years before election. As of December 2004, the governor's salary was \$122,160. The governor is limited to a maximum of two consecutive terms.

A bill passed by both houses is sent to the governor, who has five days to veto or sign it before it becomes law. If the legislature adjourns, the governor has 15 days after the bill was presented to him to act on it before the measure becomes law. The governor's veto can be overridden by a two-thirds vote of the elected members of both houses. Constitutional amendments must first receive

the approval of two-thirds of the members of each house of the legislature. The electorate may also initiate amendments, provided petitions are signed by 12% of total votes for all candidates for governor at the last election. A majority of voters must approve the amendment on a statewide ballot.

Every US citizen over the age of 18 may vote in Mississippi upon producing evidence of 30 days of residence in the state and county (and city, in some cases). Restrictions apply to those convicted of certain crimes and to those judged by the court as mentally incompetent to vote.

13 POLITICAL PARTIES

Mississippi's major political parties are the Democratic Party and the Republican Party, each an affiliate of the national party organization. Mississippi Democrats have often been at odds with each other and with the national Democratic Party. In the 1830s, party affiliation in the state began to divide along regional and economic lines: woodsmen and small farmers in eastern Mississippi became staunch Jacksonian Democrats, while the conservative planters in the western river counties tended to be Whigs. An early demonstration of the power of the Democrats was the movement of the state capital from Natchez in 1821 to a new city named after Andrew Jackson. During the pre-Civil War years, the secessionists were largely Democrats; the Unionists, western Whigs.

During Reconstruction, Mississippi had its first Republican governor. After the Democrats returned to power in 1875, they systematically deprived blacks of the right to vote, specifically by inserting into the constitution of 1890 a literacy clause that could be selectively interpreted to include illiterate whites but exclude blacks. A poll tax and convoluted residency requirements also restricted the electorate. Voter registration among blacks fell from 130,607 in 1880 to 16,234 by 1896.

In 1948, Mississippi Democrats seceded from the national party over the platform, which opposed racial discrimination. That November, Mississippi voters backed the States' Rights Democratic (Dixiecrat) presidential ticket. At the national Democratic convention in 1964, the black separatist Freedom Democratic Party asked to be allotted 40% of Mississippi's seats but was turned down. A further division in the party occurred during the 1960s between the (black) Loyalist Democrats and the (white) Regular Democrats, who were finally reunited in 1976. During the 1950s and early 1960s, the segregationist White Citizens' Councils were so widespread and influential in the state as to rival the major parties in political importance.

Since the passing of the federal Voting Rights Act of 1965, black Mississippians have registered and voted in substantial numbers. According to estimates by the Voter Education Project, only 5% of voting-age blacks were registered in 1960; by 1992, 23% were registered.

Mississippi was one of the most closely contested states in the South during the 1976 presidential election, and that again proved to be the case in 1980, when Ronald Reagan edged Jimmy Carter by a plurality of fewer than 12,000 votes. In 1984, however, Reagan won the state by a landslide, polling 62% of the vote. In the 2000 election, Republican George W. Bush won 57% of the vote; Democrat Al Gore received 42%; and Independent Ralph Nader garnered 1%. In 2004 Bush won 59.6% to Democrat John Kerry's 39.6%. In 2002 there were 1,754,560 registered voters; there is no party registration in the state. The state had seven electoral votes in the 2000 presidential election.

Elected in 1991, Mississippi's governor Kirk Fordice was the first Republican governor since Reconstruction. But a Democrat soon regained the office: David Ronald Musgrove was elected governor in 1999. In 2003, former chairman of the Republican

*Won US presidential election.

** unpledged electors won plurality of votes and cast Mississippi's electoral votes for Senator Harry F. Byrd of Virginia.

National Committee, Haley Barbour, was elected governor. Following the 2004 elections, the state's two US senators were Republicans Trent Lott and Thad Cochran. Lott became majority leader of the Senate in 1996 following the departure of Bob Dole (R-Kansas); he stepped down from that post in December 2002 following controversy over remarks he made praising former South Carolina senator Strom Thurmond's 1948 segregationist campaign for the presidency. Until the 1994 midterm elections all of Mississippi's US representatives were Democrats; in that election, Republican Roger Wicker won a House seat that had been in Democratic hands since Reconstruction. Following the 2004 elections, the House delegation was comprised of two Democrats and two Republicans. Following the 2004 elections, the state Senate comprised 28 Democrats and 24 Republicans; the state House had 75 Democrats and 47 Republicans.

14 LOCAL GOVERNMENT

Each of Mississippi's 82 counties is divided into 5 districts, each of which elects a member to the county board of supervisors. As of 2005, Mississippi had 296 municipal governments (incorporated as cities, towns, or villages), typically administered by a mayor and council. Some smaller municipalities were run by a commission or by a city manager, appointed by council members. There were 152 public school districts and 458 special districts in 2005.

In 2005, local government accounted for about 132,139 full-time (or equivalent) employment positions.

15 STATE SERVICES

To address the continuing threat of terrorism and to work with the federal Department of Homeland Security, homeland security in Mississippi operates under the authority of executive order; the homeland security director is designated as the state homeland security advisor.

The Mississippi Ethics Commission, established by the state legislature in 1979, is composed of eight members who administer a code of ethics requiring all state officials and elected local officials to file statements of sources of income.

The Mississippi Department of Education is primarily a planning and service organization whose role is to assist local schools from kindergarten through junior college and adult education. A separate Board of Trustees of State Institutions of Higher Learning administers Mississippi's public college and university system. The Department of Health administers a statewide system of public health services, but other bodies, including the Department of Mental Health, also have important functions in this field. The Department of Human Services provides welfare services in the areas of assistance payments, child support, food stamp distribution, and such social services as foster home care.

Public protection is afforded by the Office of the Attorney General, Military Communities Council, Bureau of Narcotics, Department of Public Safety (including the Highway Safety Patrol), and Department of Corrections.

16 JUDICIAL SYSTEM

The Mississippi Supreme Court consists of a chief justice, two presiding justices, and eight associate justices, all elected to eight-year terms. The constitution stipulates that the Supreme Court must hold two sessions a year in the state capital; one session is to com-

mence on the second Monday of September; the other on the first Monday of March. A new Court of Appeals was created in 1995. It consists of one chief judge, two presiding judges, and seven judges. Principal trial courts are the circuit courts, which try both civil and criminal cases; their 49 judges are elected to four-year terms. Municipal court judges are appointed. Small-claims courts are presided over by justices of the peace, who need not be lawyers.

As of 31 December 2004, a total of 20,983 prisoners were held in Mississippi's state and federal prisons, an increase of 1.9% (from 20,589) from the previous year. As of year-end 2004, a total of 1,796 inmates were female, up 2.3% (from 1,755) from the year before. Among sentenced prisoners (one year or more), Mississippi had an incarceration rate of 669 per 100,000 population in 2004, the third-highest in the United States.

According to the Federal Bureau of Investigation, Mississippi in 2004, had a violent crime rate (murder/nonnegligent manslaughter; forcible rape; robbery; aggravated assault) of 295.1 reported incidents per 100,000 population, or a total of 8,568 reported incidents. Crimes against property (burglary; larceny/theft; and motor vehicle theft) in that same year totaled 100,980 reported incidents or 3,478.5 reported incidents per 100,000 people. Mississippi has a death penalty, of which lethal injection is the sole method of execution. Following capital punishment's reinstatement in 1977, the state has executed seven persons (as of 5 May 2006); one execution was carried out in 2005. As of 1 January 2006, Mississippi had 65 inmates on death row.

In 2003, Mississippi spent \$217,949,581 on homeland security, an average of \$75 per state resident.

17 ARMED FORCES

In 2004, there were 17,917 active-duty military personnel and 4,514 civilian personnel stationed in Mississippi. There were two major US Air Force bases, Keesler (Biloxi) and Columbus. Among the four US naval installations were an oceanographic command at Bay St. Louis, an air station at Meridian, and a construction battalion center at Gulfport. In 2004, Mississippi received about \$1.86 billion in federal defense contracts, and \$708 million in Defense Department payroll outlays.

There were 240,109 veterans of US military service living in Mississippi as of 2003. Of those who served in wartime, 29,837 were veterans of World War II; 25,845 of the Korean conflict; 66,717 of the Vietnam era; and 44,950 during the Persian Gulf War. Expenditures on veterans amounted to some \$844 million during 2004.

As of 31 October 2004, the Mississippi Highway State Patrol employed 531 full-time sworn officers.

18 MIGRATION

In the late 18th century, most Mississippians were immigrants from the South and predominantly of Scotch-Irish descent. The opening of lands ceded by the Indians beginning in the 1820s brought tens of thousands of settlers into northern and central Mississippi, and a resulting population increase between 1830 and 1840 of 175% (including an increase of 197% in the slave population).

After the Civil War, there was little migration into the state, but much out-migration, mainly of blacks. The exodus from Mississippi was especially heavy during the 1940s and 1950s, when at least 720,000 people, nearly three-quarters of them black, left the state. During the 1960s, between 267,000 and 279,000 blacks

departed, while net white out-migration came to an end. Black out-migration slowed considerably during the 1970s, and more whites settled in the state than left. Also during the 1970s there was considerable intrastate migration to Hinds County (Jackson) and the Gulf Coast. Between 1980 and 1990, Mississippi had a net loss from migration of 144,128 (38% whites). Only 12 of the state's 82 counties recorded a net gain from migration during the 1980s, mostly in Rankin, DeSoto, Madison, and Hancock counties. Between 1990 and 1998, Mississippi had net gains of 43,000 in domestic migration and 6,000 in international migration. In 1998, the state admitted 701 foreign immigrants. Between 1990 and 1998, Mississippi's overall population increased 6.9%. In the period 2000–05, net international migration was 10,653 and net internal migration was -10,578, for a net gain of 75 people.

19 INTERGOVERNMENTAL COOPERATION

The Mississippi Commission on Interstate Cooperation oversees and encourages the state's participation in interstate bodies, especially the Council of State Governments and the National Conference of State Legislatures. Mississippi also participates in the Appalachian Regional Commission, Arkansas-Mississippi Great River Bridge Construction Compact, Highway 82 Four Lane Construction Compact, Mississippi-Alabama Railroad Authority Compact, Gulf States Marine Fisheries Commission, Southeastern Forest Fire Protection Compact, Southern Growth Policies Board, Southern States Energy Board, Southern Regional Education Board, and Tennessee-Tombigbee Waterway Development Authority. Mississippi received \$4.532 billion in federal aid in fiscal year 2005, an estimated \$4.746 billion in fiscal year 2006, and an estimated \$4.876 billion in fiscal year 2007.

20 ECONOMY

Between the Civil War and World War II, Mississippi's economy remained poor, stagnant, and highly dependent on the market for cotton—a bitter legacy from which the state took decades to recover. As in the pre-Civil War years, Mississippi exports mainly raw materials and imports mainly manufactures. In the 1930s, state leaders began to realize the necessity of diversifying the economy. By the mid-1960s, many more Mississippians recognized that political and economic inequality and racial conflict did not provide an environment attractive to the industries the state needed.

Once the turmoil of the 1950s and early 1960s had subsided, the impressive industrial growth of the immediate postwar years resumed. By the mid-1960s, manufacturing—attracted to the state, in part, because of low wage rates and a weak labor movement—surpassed farming as a source of jobs. During the following decade, the balance of industrial growth changed somewhat. The relatively low-paying garment, textile, and wood-products industries, based on cotton and timber, grew less rapidly in both value added and employment than a number of heavy industries, including transportation equipment and electric and electronic goods. The debut of casino gambling in the state in 1992 stimulated Mississippi's economy in the early and mid-1990s, and by 2002 accounted for 2.7% of total state employment (close to 31,000). In early 1995, however, the manufacturing sector began losing jobs, contributing to a deceleration in annual growth rates in the late 1990s. These losses created stress in other sectors, particularly in the retail trade and transportation and public utilities sectors. Ar-

reas of moderate growth in 2002 were business services and government. The number of personal bankruptcies in the state set a record in 2002, but the growth rate in filings moderated to 1.2%, down from 19.5% in 2001. The opening of a \$1.4 billion Nissan plant near Jackson boosted the state's economy. Southern Mississippi, where the Ship System division of Northrop Grumman, Keesler Air Force Base, and the Stennis Space Center are located, should also benefit from increased national defense spending.

Mississippi's gross state product (GSP) in 2004 was \$76.166 billion, of which manufacturing (durable and nondurable goods) accounted for the largest share at \$12.161 billion or 15.9% of GSP, followed by the real estate sector at \$7.221 billion (9.4% of GSP) and healthcare and social assistance at \$5.497 billion (7.2% of GSP). In that same year, there were an estimated 197,586 small businesses in Mississippi. Of the 54,117 businesses that had employees, an estimated total of 52,403 or 96.8% were small companies. An estimated 6,141 new businesses were established in the state in 2004, up 2% from the year before. Business terminations that same year came to 7,380, up 1.6% from 2003. There were 170 business bankruptcies in 2004, down 39.7% from the previous year. In 2005, the state's personal bankruptcy (Chapter 7 and Chapter 13) filing rate was 765 filings per 100,000 people, ranking Mississippi as the ninth-highest in the nation.

21 INCOME

In 2005 Mississippi had a gross state product (GSP) of \$80 billion, which accounted for 0.6% of the nation's gross domestic product and placed the state at number 36 in highest GSP among the 50 states and the District of Columbia.

According to the Bureau of Economic Analysis, in 2004 Mississippi had a per capita personal income (PCPI) of \$24,518. This ranked 51st in the United States and was 74% of the national average of \$33,050. The 1994–2004 average annual growth rate of PCPI was 4.2%. Mississippi had a total personal income (TPI) of \$71,122,091,000, which ranked 33rd in the United States and reflected an increase of 6.1% from 2003. The 1994–2004 average annual growth rate of TPI was 5.0%. Earnings of persons employed in Mississippi increased from \$47,031,531,000 in 2003 to \$49,796,304,000 in 2004, an increase of 5.9%. The 2003–04 national change was 6.3%.

The US Census Bureau reported that the three-year average median household income for 2002–04 in 2004 dollars was \$33,659, compared to a national average of \$44,473. During the same period an estimated 17.7% of the population was below the poverty line, as compared to 12.4% nationwide.

22 LABOR

According to the Bureau of Labor Statistics (BLS), in April 2006 the seasonally adjusted civilian labor force in Mississippi numbered 1,314,300, with approximately 101,000 workers unemployed, yielding an unemployment rate of 7.7%, compared to the national average of 4.7% for the same period. Preliminary data for the same period placed nonfarm employment at 1,133,400. Since the beginning of the BLS data series in 1976, the highest unemployment rate recorded in Mississippi was 13.7% in May 1983. The historical low was 4.9% in January 2001. Preliminary nonfarm employment data by occupation for April 2006 showed that 4.8% of the labor force was employed in construction; 15.5% in

manufacturing; 19.8% in trade, transportation, and public utilities; 7.9% in professional and business services; 10.8% in education and health services; 10.2% in leisure and hospitality services; and 21.4% in government.

The US Department of Labor's Bureau of Labor Statistics reported that in 2005, a total of 77,000 of Mississippi's 1,089,000 employed wage and salary workers were formal members of a union. This represented 7.1% of those so employed, up from 4.9% in 2004, but still below the national average of 12%. Overall in 2005, a total of 105,000 workers (9.7%) in Mississippi were covered by a union or employee association contract, which includes those workers who reported no union affiliation. Mississippi is one of 22 states with a right-to-work law.

As of 1 March 2006, Mississippi did not have a state-mandated minimum wage law. However, employees in that state were covered under federal minimum wage statutes. In 2004, women in the state accounted for 47.3% of the employed civilian labor force.

23 AGRICULTURE

In 2005, Mississippi ranked 26th among the states in income from agriculture, with marketings of over \$3.85 billion; crops accounted for \$1.24 billion and livestock and livestock products for \$2.61 billion.

The history of agriculture in the state is dominated by cotton, which from the 1830s through World War II was Mississippi's principal cash crop. During the postwar period, however, as mechanized farming replaced the sharecropper system, agriculture became more diversified. During 2000–04, Mississippi ranked third in cotton and fourth in rice production, among the 50 states. About 2,370,000 bales of cotton worth \$591 million were harvested in 2004 (second after Texas). Soybean output in 2004 totaled 62,320,000 bushels, worth \$367.7 million, and rice production was 16,146,000 hundredweight in 2004, with a value of \$117.9 million.

Federal estimates for 2004 showed some 42,200 farms with a total area of 11 million acres (4.5 million hectares). The richest soil is in the Delta, where most of the cotton is raised. Livestock has largely taken over the Black Belt, a fertile area in the northwest.

24 ANIMAL HUSBANDRY

Cattle are raised throughout the state, though principally in the Black Belt and Delta. The main chicken-raising area is in the eastern hills.

In 2005, there were around 1.07 million cattle and calves, valued at \$834.6 million. In 2004, there were around 315,000 hogs and pigs, valued at \$34.6 million. Mississippi is a leading producer of broilers, ranking fifth in 2003; some 4.3 billion lb (2 billion kg) of broilers, worth \$1.51 billion, were produced in that year.

25 FISHING

In 2004, Mississippi ranked ninth among the 50 states in size of commercial fish landings, with a total of 183.7 million lb (83.5 million kg) valued at \$43.8 million. Of this total, 162.8 million lb (74 million kg) was landed at Pascagoula-Moss Point, the nation's eighth-largest port for commercial landings. Shrimp and blue crab made up the bulk of the commercial landings. The saltwater catch also includes mullet and red snapper; the freshwater catch is dominated by buffalo fish, carp, and catfish. In 2003, the state had 35

processing and 31 wholesale plants employing about 2,706 people. In 2002, the commercial fishing fleet had 1,365 boats and vessels.

Mississippi is one of the leading states in catfish farming, mostly from ponds in the Yazoo River basin. There are 410 catfish farms in operation, covering about 101,000 acres (48,900 hectares) of water surface, with a combined 2006 inventory of 641 million fingerlings and 346 million stocker-sized catfish. Sales of catfish in 2004 totaled \$275 million. In 2004, the state issued 369,252 sport fishing licenses. The Mississippi Department of Wildlife, Fisheries, and Parks operates 21 fishing lakes. The National Fish Hatchery System stocks more than 1.5 million fish annually to support fish resources in the coastal rivers of the Gulf of Mexico.

26 FORESTRY

Mississippi had approximately 18,605,000 acres (7,529,000 hectares) of forested land in 2004, over 60% of the total land area of the state. Six national forests extend over 1.1 million acres (445,000 hectares). The state's most heavily forested region is the Piney Woods in the southeast. Of the state's total commercial timberland, 90% is privately owned. Some of this land was also used for agricultural purposes (grazing). Lumber production in 2004 totaled 2.74 billion board feet (sixth in the United States).

27 MINING

According to preliminary data from the US Geological Survey (USGS), the estimated value of nonfuel mineral production by Mississippi in 2003 was \$174 million, a decrease from 2002 of about 2%.

According to the preliminary data, Mississippi's top nonfuel mineral by value in 2003 was construction sand and gravel, which accounted for around 40% of all nonfuel mineral output by value. It was followed by fuller's earth, crushed stone, portland cement, and industrial sand and gravel. More than 65% by value of all nonfuel mineral production by Mississippi in 2003 was accounted for by construction sand and gravel, crushed stone, and portland cement.

Construction sand and gravel production in 2003 totaled 12.8 million metric tons and was valued at \$69.1 million, while fuller's earth output that year totaled 411,000 metric tons and was valued at \$29.9 million, according to the preliminary data from the USGS. The data also showed that crushed stone output in 2003 totaled 2.5 million metric tons and was worth \$26.8 million.

The data listed Mississippi as ranking second among the states in production of fuller's earth, third in bentonite, and fourth in ball clay, by volume.

28 ENERGY AND POWER

As of 2003, Mississippi had 51 electrical power service providers, of which 23 were publicly owned and 25 were cooperatives. Of the remainder, two were investor owned, and one was federally operated. As of that same year there were 1,420,571 retail customers. Of that total, 605,653 received their power from investor-owned service providers. Cooperatives accounted for 683,124 customers, while publicly owned providers had 131,787 customers. There were seven federal customers.

Total net summer generating capability by the state's electrical generating plants in 2003 stood at 17.282 million kW, with total production that same year at 40.148 billion kWh. Of the total amount generated, 78.1% came from electric utilities, with the re-

mainder coming from independent producers and combined heat and power service providers. The largest portion of all electric power generated, 17.082 billion kWh (42.5%), came from coal-fired plants, with nuclear power plants in second place at 10.902 billion kWh (27.2%) and natural gas fired plants in third place at 9.477 billion kWh (23.6%). Other renewable power sources accounted for 2.5% of all power generated, with petroleum fired plants at 4.1% and plants using other types of gases at 0.1%.

The Grand Gulf Nuclear Station boiling-water reactor, built by Mississippi Power Company in Claiborne County, continues to provide power to consumers within Mississippi. As of 2006, it was the state's sole nuclear power plant.

Mississippi is a major petroleum producer. As of 2004, the state had proven crude oil reserves of 178 million barrels, or 1% of all proven US reserves, while output that same year averaged 47,000 barrels per day. Including federal offshore domains, the state that year ranked 14th (13th excluding federal offshore) in proven reserves and 13th (12th excluding federal offshore) in production among the 31 producing states. In 2004 Mississippi had 1,412 producing oil wells. As of 2005, the state's four refineries had a combined crude oil distillation capacity of 364,800 barrels per day.

In 2004, Mississippi had 437 producing natural gas and gas condensate wells. In that same year, marketed gas production (all gas produced excluding gas used for repressuring, vented and flared, and nonhydrocarbon gases removed) totaled 145.692 billion cu ft (4.13 billion cu m). As of 31 December 2004, proven reserves of dry or consumer-grade natural gas totaled 995 billion cu ft (28.2 billion cu m). Most production comes from the south-central part of the state.

Mississippi in 2004 had one producing coal mine, a surface operation. Coal production that year totaled 3,586,000 short tons, down from 3,695,000 short tons in 2003. One short ton equals 2,000 lb (0.907 metric tons).

29 INDUSTRY

According to the US Census Bureau's Annual Survey of Manufactures (ASM) for 2004, Mississippi's manufacturing sector covered some 19 product subsectors. The shipment value of all products manufactured in the state that same year was \$43.862 billion. Of that total, transportation equipment manufacturing accounted for the largest share at \$7.694 billion. It was followed by food manufacturing at \$5.798 billion; chemical manufacturing at \$4.832 billion; furniture and related product manufacturing at \$3.678 billion; and petroleum and coal products manufacturing at \$3.412 billion.

In 2004, a total of 169,947 people in Mississippi were employed in the state's manufacturing sector, according to the ASM. Of that total, 134,189 were actual production workers. In terms of total employment, the food manufacturing industry accounted for the largest portion of all manufacturing employees at 28,815, with 25,274 actual production workers. It was followed by furniture and related product manufacturing at 26,292 employees (20,094 actual production workers); transportation equipment manufacturing at 25,689 employees (19,568 actual production workers); wood product manufacturing at 11,894 employees (9,934 actual production workers); and fabricated metal product manufacturing with 11,532 employees (9,118 actual production workers).

ASM data for 2004 showed that Mississippi's manufacturing sector paid \$5.545 billion in wages. Of that amount, the transportation equipment manufacturing sector accounted for the largest share at \$1.003 billion. It was followed by furniture and related product manufacturing at \$709.476 million; food manufacturing at \$655.124 million; fabricated metal product manufacturing at \$390.577 million; and wood product manufacturing at \$368.544 million.

30 COMMERCE

According to the 2002 Census of Wholesale Trade, Mississippi's wholesale trade sector had sales that year totaling \$19.2 billion from 2,948 establishments. Wholesalers of durable goods accounted for 1,758 establishments, followed by nondurable goods wholesalers at 1,040 and electronic markets, agents, and brokers accounting for 150 establishments. Sales by durable goods wholesalers in 2002 totaled \$5.9 billion, while wholesalers of nondurable goods saw sales of \$11.6 billion. Electronic markets, agents, and brokers in the wholesale trade industry had sales of \$1.5 billion.

In the 2002 Census of Retail Trade, Mississippi was listed as having 12,561 retail establishments with sales of \$25.01 billion. The leading types of retail businesses by number of establishments were: gasoline stations (2,009); motor vehicle and motor vehicle parts dealers (1,664); food and beverage stores (1,513); clothing and clothing accessories stores (1,476); and miscellaneous store retailers (1,220). In terms of sales, motor vehicle and motor vehicle parts dealers accounted for the largest share of retail sales at \$6.4 billion, followed by general merchandise stores at \$5.1 billion; gasoline stations at \$3.2 billion; and food and beverage stores at \$2.8 billion. A total of 135,838 people were employed by the retail sector in Mississippi that year.

Exports from Mississippi totaled \$4 billion in 2005.

31 CONSUMER PROTECTION

The Consumer Protection Division of the Office of the Attorney General, and the Bureau of Regulatory Services under the Department of Agriculture and Commerce, are each responsible for a range of consumer protection activities within the state of Mississippi. The Consumer Protection Division, established in 1974, may investigate complaints of unfair or deceptive trade practices and, in specific cases, may issue injunctions to halt them. Under 1994 amendments, a violation of the Consumer Protection Act is now a criminal misdemeanor. The Bureau of Regulatory Services consumer protection activities are centered on its Petroleum Products Inspection Division and its Weights and Measures Division, which respectively check petroleum product quality and pump calibration at the retail level, and scales and measurement equipment used in commerce and trade.

When dealing with consumer protection issues, the state's Attorney General's Office can initiate civil and criminal proceedings, but cannot represent the state before state and federal regulatory agencies. The office administers consumer protection and education programs, handle consumer complaints and has broad subpoena powers. In antitrust actions, the Attorney General's Office can act on behalf of those consumers who are incapable of acting on their own; initiate damage actions on behalf of the state in state courts; initiate criminal proceedings; and represent counties, cities and other governmental entities in recovering civil damages under state or federal law.

Offices of the Consumer Protection Division and the Bureau of Regulatory Services are each located in the state capitol of Jackson.

3² BANKING

As of June 2005, Mississippi had 100 insured banks, savings and loans, and saving banks, plus 30 state-chartered and 81 federally chartered credit unions (CUs). Excluding the CUs, the Memphis market area (which included portions of Tennessee, Mississippi, and Arkansas accounted for the largest portion of the state's financial institutions and deposits in 2004, with 52 institutions and \$26.946 billion in deposits, followed by Jackson with 24 institu-

tions and \$7.492 billion in deposits for that same year. As of June 2005, CUs accounted for 5.8% of all assets held by all financial institutions in the state, or some \$2.720 billion. Banks, savings and loans, and savings banks collectively accounted for the remaining 94.2% or \$43.960 billion in assets held.

In 2004, median past-due/nonaccrual loan levels stood at 2.38% of total loans, down from 2.79% in 2003. The median net interest margin (the difference between the lower rates offered to savers and the higher rates charged on loans) in that same year stood at 4.18%, unchanged from the previous year.

The Banking Division of the Mississippi Department of Banking and Consumer Finance is responsible for regulating state-chartered financial institutions.

3³ INSURANCE

In 2004 there were over 2.1 million individual life insurance policies in force with a total value of over \$99.8 billion; total value for all categories of life insurance (individual, group, and credit) was about \$149 billion. The average coverage amount was \$45,800 per policy holder. Death benefits paid that year totaled \$526 million.

At the end of 2003, 26 life and health and 18 property and casualty insurance companies were domiciled in Mississippi. In 2004, direct premiums for property and casualty insurance totaled \$3.6 billion. That year, there were 42,320 flood insurance policies in force in the state, with a total value of \$5.2 million. About \$1.6 billion of coverage was in force through beach and windstorm insurance.

In 2004, 47% of state residents held employment-based health insurance policies, 4% held individual policies, and 30% were covered under Medicare and Medicaid; 18% of residents were uninsured. In 2003, employee contributions for employment-based health coverage averaged 15% for single coverage and 29% for family coverage. The state offers a 12-month health benefits expansion program for small-firm employees in connection with the Consolidated Omnibus Budget Reconciliation Act (COBRA, 1986), a health insurance program for those who lose employment-based coverage due to termination or reduction of work hours.

In 2003, there were over 1.6 million auto insurance policies in effect for private passenger cars. Required minimum coverage includes bodily injury liability of up to \$25,000 per individual and \$50,000 for all persons injured in an accident, as well as property damage liability of \$25,000. In 2003, the average expenditure per vehicle for insurance coverage was \$709.45.

3⁴ SECURITIES

There are no securities exchanges in Mississippi. In 2005, there were 420 personal financial advisers employed in the state and 610 securities, commodities, and financial services sales agents. In 2004, there were over 27 publicly traded companies within the state, with over eight NASDAQ companies, eight NYSE listings, and three AMEX listings.

3⁵ PUBLIC FINANCE

Two state budgets are prepared annually—one by the State Department of Finance and Administration, for the executive branch; and one by the Joint Legislative Budget Committee, for the legis-

lative branch—and submitted to the legislature for reconciliation and approval. The fiscal year runs from 1 July through 30 June.

Fiscal year 2006 general funds were estimated at \$4.3 billion for resources and \$4.0 billion for expenditures. In fiscal year 2004, federal government grants to Mississippi were \$5.3 billion.

In the fiscal year 2007 federal budget, Mississippi was slated to receive: \$5 million to replace the air traffic control tower at Gulfport-Biloxi International Airport.

36 TAXATION

In 2005, Mississippi collected \$5,432 million in tax revenues or \$1,860 per capita, which placed it 39th among the 50 states in per capita tax burden. The national average was \$2,192 per capita. Property taxes accounted for 0.8% of the total, sales taxes, 47.6%; selective sales taxes, 17.2%; individual income taxes, 21.6%; corporate income taxes, 5.2%; and other taxes, 7.5%.

As of 1 January 2006, Mississippi had three individual income tax brackets ranging from 3.0% to 5.0%. The state taxes corporations at rates ranging from 3.0% to 5.0% depending on tax bracket.

In 2004, state and local property taxes amounted to \$1,859,756,000, or \$641 per capita. The per capita amount ranks the state 40th nationally. Local governments collected \$1,819,515,000 of the total and the state government \$40,241,000.

Mississippi taxes retail sales at a rate of 7%. In addition to the state tax, local taxes on retail sales can reach as much as 0.25%, making for a potential total tax on retail sales of 7.25%. Food purchased for consumption off-premises is taxable. The tax on cigarettes is 18 cents per pack, which ranks 49th among the 50 states and the District of Columbia. Mississippi taxes gasoline at 18.4 cents per gallon. This is in addition to the 18.4 cents per gallon federal tax on gasoline.

According to the Tax Foundation, for every federal tax dollar sent to Washington in 2004, Mississippi citizens received \$1.77 in federal spending, which ranks the state fourth nationally.

37 ECONOMIC POLICY

In 1936, the state began implementing a program called Balance Agriculture with Industry (BAWI), designed to attract manufacturing to Mississippi. The BAWI laws offered industry substantial tax concessions and permitted local governments to issue bonds to build plants that would be leased to companies for a 20-year period, after which the company would own them. Mississippi continues to offer low tax rates and numerous tax incentives to industry.

The Mississippi Development Authority is charged with encouraging economic growth in the specific fields of industrial development, marketing of state products, and development of tourism. A high-technology asset is the John C. Stennis Space Center (SSC) in Hancock County, which is NASA's largest rocket engine test facility.

In September 2005, President George W. Bush announced he would create a Gulf Opportunity Zone for Louisiana, Mississippi, and Alabama in the aftermath of the devastation wrought by Hurricane Katrina. Congress passed the Gulf Opportunity Zone Act in December 2005, which provides a number of tax incentives to encourage the rebuilding of areas ravaged by Hurricanes Katrina, Rita, and Wilma.

38 HEALTH

The infant mortality rate in October 2005 was estimated at 9.6 per 1,000 live births, representing the second-highest rate in the country that year (following the District of Columbia). The birth rate in 2003 was 14.7 per 1,000 population. The abortion rate stood at 5.9 per 1,000 women in 2000. In 2003, about 84.9% of pregnant woman received prenatal care beginning in the first trimester. In 2004, approximately 84% of children received routine immunizations before the age of three.

The crude death rate in 2003 was 9.9 deaths per 1,000 population. As of 2002, the death rates for major causes of death (per 100,000 resident population) were: heart disease, 315.5; cancer, 211.3; cerebrovascular diseases, 67.1; chronic lower respiratory diseases, 48; and diabetes, 23.4. Mississippi ranked third in the nation for the highest death rates by heart disease, following West Virginia and Oklahoma. The state also had the third-highest homicide rate at 10.6 per 100,000 (following the District of Columbia and Louisiana). The accidental death rate of 57.2 per 100,000 is also one of the highest in the country. The mortality rate from HIV infection was 6.4 per 100,000 population. In 2004, the reported AIDS case rate was at about 16.5 per 100,000 population. In 2002, about 60.8% of the population was considered overweight or obese; this represented the third-highest rate in the country, following West Virginia and Alabama. As of 2004, about 24.4% of state residents were smokers.

In 2003, Mississippi had 92 community hospitals with about 13,000 beds. There were about 416,000 patient admissions that year and 4 million outpatient visits. The average daily inpatient census was about 7,400 patients. The average cost per day for hospital care was \$882. Also in 2003, there were about 204 certified nursing facilities in the state with 18,149 beds and an overall occupancy rate of about 88.5%. In 2004, it was estimated that about 59.4% of all state residents had received some type of dental care within the year; this was the lowest percentage for dental care in the nation. Mississippi had 182 physicians per 100,000 resident population in 2004 and 889 nurses per 100,000 in 2005. In 2004, there was a total of 1,159 dentists in the state.

About 30% of state residents were enrolled in Medicaid and Medicare programs in 2004. Approximately 18% of the state population was uninsured in 2004. In 2003, state health care expenditures totaled \$4.2 million.

39 SOCIAL WELFARE

In 2004, about 60,000 people received unemployment benefits, with the average weekly unemployment benefit at \$172. In fiscal year 2005, the estimated average monthly participation in the food stamp program included about 391,485 persons (158,539 households); the average monthly benefit was about \$98.55 per person. That year, the total of benefits paid through the state for the food stamp program was about \$462.9 million.

Temporary Assistance for Needy Families (TANF), the system of federal welfare assistance that officially replaced Aid to Families with Dependent Children (AFDC) in 1997, was reauthorized through the Deficit Reduction Act of 2005. TANF is funded through federal block grants that are divided among the states based on an equation involving the number of recipients in each state. In 2004, the state TANF program had 42,000 recipients; state and federal expenditures on this TANF program totaled \$67 million in fiscal year 2003.

In December 2004, Social Security benefits were paid to 545,710 Mississippians. This number included 289,380 retired workers, 56,860 widows and widowers, 103,870 disabled workers, 25,310 spouses, and 70,290 children. Social Security beneficiaries represented 18.7% of the total state population and 92.5% of the state's population age 65 and older. Retired workers received an average monthly payment of \$875; widows and widowers, \$765; disabled workers, \$835; and spouses, \$422. Payments for children of retired workers averaged \$423 per month; children of deceased workers, \$552; and children of disabled workers, \$244. Federal Supplemental Security Income payments in December 2004 went to 125,180 Mississippi residents, averaging \$369 a month.

40 HOUSING

In 2004, Mississippi had an estimated 1,221,240 housing units, of which 1,074,503 were occupied; 69.6% were owner-occupied. About 69.4% of all units were single-family, detached homes; 13.7% were mobile homes. Utility gas and electricity were the most common energy sources to all units. It was estimated that 92,908 units lacked telephone service, 8,325 lacked complete plumbing facilities, and 9,387 lacked complete kitchen facilities. The average household had 2.61 members.

In 2004, 14,500 privately owned units were authorized for construction. The median home value was \$79,023, the second-lowest in the country (above Arkansas). The median monthly cost for mortgage owners was \$843. Renters paid a median of \$529 per month. In September 2005, the state received grants of \$949,098 from the US Department of Housing and Urban Development (HUD) for rural housing and economic development programs. For 2006, HUD allocated to the state over \$30.3 million in community development block grants. Also in 2006, HUD offered an additional \$5 billion to the state in emergency funds to rebuild housing that was destroyed by Hurricanes Katrina, Rita, and Wilma in late 2005.

41 EDUCATION

In 2004, 83% of Mississippians age 25 and older had completed high school, almost reaching the national average of 84%. Some 20.1% had obtained a bachelor's degree or higher, below the national average of 26%.

Mississippi's reaction to the US Supreme Court decision in 1954 mandating public school desegregation was to repeal the constitutional requirement for public schools and to foster the development of segregated private schools. In 1964, the state's schools did begin to integrate, and compulsory school attendance was restored 13 years later. As of 1980, 26% of minority (nonwhite) students were in schools in which minorities represented less than 50% of the student body, and 19% were in 99–100% minority schools—a considerable degree of de facto segregation, but less so than in some northern states. In 1982, the compulsory school age was raised to 14, and as of 2001, it was 17; also in 1982, a system of free public kindergartens was established for the first time.

The total enrollment for fall 2002 in Mississippi's public schools stood at 493,000. Of these, 360,000 attended schools from kindergarten through grade eight, and 132,000 attended high school. Approximately 47.3% of the students were white, 50.7% were black, 1.1% were Hispanic, 0.7% were Asian/Pacific Islander, and 0.2% were American Indian/Alaskan Native. Total enrollment was estimated at 489,000 in fall 2003 and was expected to be 469,000

by fall 2014, a decline of 4.8% during the period 2002–14. There were 49,729 students enrolled in 240 private schools in fall 2003. Expenditures for public education in 2003/04 were estimated at \$3.4 billion or \$6,237 per student, the fifth-lowest among the 50 states. Since 1969, the National Assessment of Educational Progress (NAEP) has tested public school students nationwide. The resulting report, *The Nation's Report Card*, stated that in 2005 eighth graders in Mississippi scored 262 out of 500 in mathematics compared with the national average of 278.

As of fall 2002, there were 147,077 students enrolled in college or graduate school; minority students comprised 39.1% of total postsecondary enrollment. In 2005 Mississippi had 40 degree-granting institutions including 9 public 4-year institutions, 17 public 2-year institutions, and 11 nonprofit private 4-year schools. Important institutions of higher learning in Mississippi include the University of Mississippi, established in 1844, Mississippi State University, and the University of Southern Mississippi. Predominantly black institutions include Tougaloo College, Alcorn State University, Jackson State University, and Mississippi Valley State University.

42 ARTS

The Mississippi Arts Commission was founded in 1968 and supports and promotes the arts in community life as well as education. In 2005, the Mississippi Arts Commission and other Mississippi arts organizations received seven grants totaling \$701,500 from the National Endowment for the Arts. The commission also receives significant sums from the state and private sources. In 2005, the National Endowment for the Humanities contributed \$891,547 to eight state programs.

Jackson has two ballet companies, a symphony orchestra, and two opera companies. Opera South, an integrated but predominantly black company, presents free operas during its summer tours and mounts two major productions yearly. The Mississippi Opera was incorporated in 1947 and is noted as the 11th-oldest continuously producing professional opera company in the nation. There are local symphony orchestras in Meridian, Starkville, Tupelo, and Greenville.

The established professional theaters in the state are the Sheffield Ensemble in Biloxi and the New Stage in Jackson. The Greater Gulf Coast Arts Center has been very active in bringing arts programs into the coastal area.

A distinctive contribution to US culture is the music of black sharecroppers from the Delta, known as the blues. The Delta Blues Museum in Clarksdale has an extensive collection documenting blues history. The annual Mississippi Delta Blues and Heritage Festival is held in Greenville. In September 2005 the 28th annual festival was held showcasing performances by artists such as Shirley Brown and Bobby Rush. Past performers include B.B. King, Muddy Waters, and Stevie Ray Vaughn.

43 LIBRARIES AND MUSEUMS

As of September 2001, Mississippi had 49 public library systems, with a total of 237 libraries, of which 189 were branches. In that same year, there were 5,615,000 volumes of books and serial publications in Mississippi libraries, and a total circulation of 8,898,000. The system also had 138,000 audio and 168,000 video items, 7,000 electronic format items (CD-ROMs, magnetic tapes, and disks), and two bookmobiles. The finest collection of Mississippiana is

at the Mississippi State Department of Archives and History in Jackson. In the Vicksburg-Warren County Public Library are collections on the Civil War and state history and oral history collections. Tougaloo College has special collections of African materials, civil rights papers, and oral history. The Gulf Coast Research Library of Ocean Springs has a marine biology collection. In fiscal year 2001, operating income for the state's public library system totaled \$37,393,000, including \$746,000 in federal grants and \$7,084,000 in state grants.

There are 65 museums, including the distinguished Mississippi State Historical Museum at Jackson. Pascagoula, Laurel, and Jackson all have notable art museums. The Mississippi Museum of Natural Science in Jackson has been designated the state's official natural science museum by the legislature. Also in Jackson is the Mississippi Agriculture and Forestry Museum. In Meridian is a museum devoted to country singer Jimmie Rodgers, and in Jackson one to pitcher Dizzy Dean.

Beauvoir, Jefferson Davis's home at Biloxi, is a state shrine and includes a museum. The Mississippi governor's mansion—completed in 1845, restored in 1975, and purportedly the second-oldest executive residence in the United States—is a National Historical Landmark.

44 COMMUNICATIONS

In 2004, only 89.6% of Mississippi's occupied housing units had telephones, the second-lowest rate in the United States. In addition, by June of that same year there were 1,411,277 mobile wireless telephone subscribers. In 2003, 48.3% of Mississippi households had a computer and 38.9% had Internet access, the lowest in the United States in both categories. By June 2005, there were 191,768 high-speed lines in Mississippi, 165,095 residential and 26,673 for business.

In 2005, the state had 64 major operating radio stations (7 AM, 57 FM) and 14 major television stations. A total of 17,234 Internet domain names had been registered in Mississippi as of 2000.

45 PRESS

In 2005, Mississippi had 23 daily newspapers: 8 morning dailies and 15 evening dailies. There were 18 Sunday papers in the state. The state's leading newspaper, located in Jackson and owned by the Gannett Company, is *The Clarion-Ledger*, a morning daily with a weekday circulation of 94,938 (107,865 Sunday).

Other leading dailies with approximate 2005 circulation rates are:

AREA	NAME	DAILY	SUNDAY
Biloxi-Gulfport	<i>Sun Herald</i> (m,S)	46,598	55,582
Tupelo	<i>NE Mississippi Daily Journal</i>	35,490	35,841

A monthly, *Mississippi Magazine*, is published in Jackson.

46 ORGANIZATIONS

In 2006, there were over 1,789 nonprofit organizations registered within the state, of which about 1,057 were registered as charitable, educational, or religious organizations.

The National Association for the Advancement of Colored People (NAACP), the Congress of Racial Equality, the Southern Christian Leadership Conference, and the Student Nonviolent Coordinating Committee (SNCC, later the Student National Coordinating Committee) were among the organizations that played

key roles in the civil rights struggles in Mississippi during the 1950s and 1960s.

Other organizations with headquarters in Mississippi are the American Association of Public Health Physicians (Greenwood), the Sons of Confederate Veterans (Hattiesburg), the Sacred Heart League (Wallis), the National Band Association (Hattiesburg), and the Amateur Field Trial Clubs of America (Hernando). The International Dodge Ball Federation has a base in Gulfport.

47 TOURISM, TRAVEL, AND RECREATION

In 2004, there were 30 million overnight travelers in Mississippi, with 83% of all visitors traveling from out of state. In 2002 tourists spent an estimated \$6.4 billion, which supported over 126,500 travel-related jobs. Jobs in the gaming industry represented about one-third of the total.

Among Mississippi's major tourist attractions are its floating riverboat casinos and its mansions and plantations, many of them in the Natchez area. Tunica, 30 miles south of Memphis, Tennessee, has Las Vegas-style casinos with hotels and entertainment, generating a significant source of revenue for the state. McRaven Plantation in Vicksburg was built in 1797. The Delta and Pine Land Co. plantation near Scott is one of the largest cotton plantations in the United States. At Greenwood is the Florewood River Plantation, a museum recreating 19th-century plantation life. The Mississippi State Fair is held annually in Jackson during the second week in October. Natchez Trace Parkway is a scenic route, running 444 mi (740 km) from Natchez, Mississippi, to Nashville, Tennessee. Among the tourist attractions along this route is the Emerald Mound, the second-largest Indian ceremonial earthwork. The city of Oxford was the home of William Faulkner and visitors can tour his former home, Rowan Oak. Although Memphis, Tennessee, is the site of Elvis Presley's home (Graceland), Tupelo is the site of his birthplace. As of 2006, many attractions had not yet recovered from the damage caused by Hurricane Katrina in 2005.

National parks include the Natchez Trace Parkway, Gulf Islands National Seashore, and Vicksburg National Military Park. There are also 6 national forests and 24 state parks.

48 SPORTS

There are no major professional sports teams in Mississippi. There are minor league hockey teams in Biloxi and Jackson. The University of Mississippi has long been prominent in college football. "Ole Miss" teams won the Sugar Bowl in 1958, 1960, 1961, 1963, and 1970, and the Cotton Bowl in 1956. The Rebels play in the Southeastern Conference, as do the Mississippi State Bulldogs. Southern Mississippi is a member of Conference USA.

Other annual sporting events of interest include the Dixie National Livestock Show and Rodeo, held in Jackson in February, and the Southern Farm Bureau Classic, held in Madison in October and November.

Football greats Walter Payton and Jerry Rice, along with boxing legend Archie Moore, were born and raised in Mississippi.

49 FAMOUS MISSISSIPPIANS

Mississippi's most famous political figure, Jefferson Davis (b.Kentucky, 1808–89), came to the state as a very young child, was educated at West Point, and served in the US Army from 1828 to 1835. He resigned a seat in Congress in 1846 to enter the Mexican War from which he returned home a hero after leading his

famous regiment, the 1st Mississippi Rifles, at the Battle of Buena Vista, Mexico. From 1853 to 1857, he served as secretary of war in the cabinet of President Franklin Pierce. Davis was representing Mississippi in the US Senate in 1861 when the state withdrew from the Union. In February 1861, he was chosen president of the Confederacy, an office he held until the defeat of the South in 1865. Imprisoned for two years after the Civil War (though never tried), Davis lived the last years of his life at Beauvoir, an estate on the Mississippi Gulf Coast given to him by an admirer. There he wrote *The Rise and Fall of the Confederate Government*, completed eight years before his death in New Orleans.

Lucius Quintus Cincinnatus Lamar (b.Georgia, 1825–93) settled in Oxford in 1855 and only two years later was elected to the US House of Representatives. A supporter of secession, he served as Confederate minister to Russia in 1862. After the war, Lamar was the first Mississippi Democrat returned to the House; in 1877, he entered the US Senate. President Grover Cleveland made Lamar his secretary of the interior in 1885, later appointing him to the US Supreme Court. Lamar served as associate justice from 1888 until his death.

Some of the foremost authors of 20th-century America had their origins in Mississippi. Supreme among them is William Faulkner (1897–1962), whose literary career began in 1924 with the publication of *The Marble Faun*, a book of poems. His novels included such classics as *The Sound and the Fury* (1929), *Light in August* (1932), and *Absalom, Absalom!* (1936). Faulkner received two Pulitzer Prizes (one posthumously), and in 1949 was awarded the Nobel Prize for literature.

Richard Wright (1908–60), born near Natchez, spent his childhood years in Jackson. He moved to Memphis as a young man, and from there migrated to Chicago; he lived his last years in Paris. A powerful writer and a leading spokesman for the black Americans of his generation, Wright is best remembered for his novel *Native Son* (1940) and for *Black Boy* (1945), an autobiographical account of his Mississippi childhood.

Other native Mississippians of literary renown (and Pulitzer Prize winners) are Eudora Welty (1909–2001), Tennessee Williams (Thomas Lanier Williams, 1911–83), and playwright Beth Henley (b.1952). Welty's work, like Faulkner's, is set in Mississippi; her best-known novels include *Delta Wedding* (1946), *The Ponder Heart* (1954), and *Losing Battles* (1970). Although Tennessee Williams spent most of his life outside Mississippi, some of his most famous plays are set in the state. Other Mississippi authors are Hodding Carter (b.Louisiana, 1907–72), Shelby Foote (1916–2005), Walker Percy (b.Alabama, 1916–1990), and Willie Morris (1934–99).

Among the state's numerous musicians are William Grant Still (1895–1978), a composer and conductor, and Leontyne Price (Mary Leontine Price, b.1927), a distinguished opera singer. Famous blues singers are Charlie Patton (1887–1934), William Lee Conley "Big Bill" Broonzy (1898–1958), Howlin' Wolf (Chester Arthur Burnett, 1910–1976), Muddy Waters (McKinley Morganfield, 1915–83), John Lee Hooker (1917–2001), and Riley "B. B." King (b.1925). Mississippi's contributions to country music include Jimmie Rodgers (1897–1933), Conway Twitty (1933–1994), and Charley Pride (b.1939). Elvis Presley (1935–77), born in Tupelo, was one of the most popular entertainers in US history.

MISSOURI

State of Missouri

ORIGIN OF STATE NAME: Probably derived from the Iliniwek Indian word *missouri*, meaning “owners of big canoes.” **NICKNAME:** The Show Me State. **CAPITAL:** Jefferson City. **ENTERED UNION:** 10 August 1821 (24th). **SONG:** “Missouri Waltz.” **MOTTO:** *Salus populi suprema lex esto* (The welfare of the people shall be the supreme law). **COAT OF ARMS:** Two grizzly bears stand on a scroll inscribed with the state motto and support a shield portraying an American eagle and a constellation of stars, a grizzly bear on all fours, and a crescent moon, all encircled by the words “United We Stand, Divided We Fall.” Above are a six-barred helmet and 24 stars; below is the roman numeral MDCCCXX (1820), when Missouri’s first constitution was adopted. **FLAG:** Three horizontal stripes of red, white, and blue, with the coat of arms encircled by 24 white stars on a blue band in the center. **OFFICIAL SEAL:** The coat of arms is surrounded by the words “The Great Seal of the State of Missouri.” **BIRD:** Bluebird. **FLOWER:** White Hawthorn blossom. **TREE:** Flowering dogwood. **LEGAL HOLIDAYS:** New Year’s Day, 1 January; Birthday of Martin Luther King Jr., 3rd Monday in January; Lincoln’s Birthday, 12 February; Washington’s Birthday, 3rd Monday in February; Harry S. Truman’s Birthday, 8 May; Memorial Day, last Monday in May; Independence Day, 4 July; Labor Day, 1st Monday in September; Columbus Day, 2nd Monday in October; Veterans’ Day, 11 November; Thanksgiving Day, 4th Thursday in November; Christmas Day, 25 December. Though not a legal holiday, Missouri Day, the 3rd Wednesday in October, is commemorated in schools each year. **TIME:** 6 AM CST = noon GMT.

¹ LOCATION, SIZE, AND EXTENT

Located in the western north-central United States, Missouri ranks 19th in size among the 50 states.

The total area of Missouri is 69,697 sq mi (180,516 sq km), of which land takes up 68,945 sq mi (178,568 sq km) and inland water 752 sq mi (1,948 sq km). Missouri extends 284 mi (457 km) E-W; its greatest N-S extension is 308 mi (496 km).

Missouri is bounded on the N by Iowa (with the line in the extreme NE defined by the Des Moines River); on the E by Illinois, Kentucky, and Tennessee (with the line passing through the Mississippi River); on the S by Arkansas (with a “boot heel” in the SE bounded by the Mississippi and St. Francis rivers); and on the W by Oklahoma, Kansas, and Nebraska (the line in the NW being formed by the Missouri River).

The total boundary length of Missouri is 1,438 mi (2,314 km). The state’s geographic center is in Miller County, 20 mi (32 km) SW of Jefferson City.

² TOPOGRAPHY

Missouri is divided into four major land regions. The Dissected Till Plains, lying north of the Missouri River and forming part of the Central Plains region of the United States, comprise rolling hills, open fertile flatlands, and well-watered prairie. The Osage Plains cover the western part of the state, their flat prairie monotony broken by low rounded hills. The Mississippi Alluvial Plain, in the southeastern corner, is made up of fertile black lowlands whose floodplain belts represent both the present and former

courses of the Mississippi River. The Ozark Plateau, which comprises most of southern Missouri and extends into northern Arkansas and northeastern Oklahoma, constitutes the state’s largest single region. The Ozarks contain Taum Sauk Mountain, at 1,772 ft (540 m) the highest elevation in the state. Along the St. Francis River, near Cardwell, is the state’s lowest point, 230 ft (70 m). The mean elevation is approximately 800 ft (244 m).

Including a frontage of at least 500 mi (800 km) along the Mississippi River, Missouri has more than 1,000 mi (1,600 km) of navigable waterways. The Mississippi and Missouri rivers, the two largest in the United States, respectively form the state’s eastern border and part of its western border; Kansas City is located at the point where the Missouri bends eastward to cross the state, while St. Louis developed below the junction of the two great waterways. The White, Grand, Chariton, St. Francis, Current, and Osage are among the state’s other major rivers. The largest lake is the artificial Lake of the Ozarks, covering a total of 93 sq mi (241 sq km).

Missouri’s exceptional number of caves and caverns were formed during the last 50 million years through the erosion of limestone and dolomite by melting snows bearing vegetable acids. Coal, lead, and zinc deposits date from the Pennsylvanian era, beginning some 250 million years ago. The Mississippi Valley area is geologically active: massive earthquakes during 1811 and 1812 devastated the New Madrid area of the southeast.

³ CLIMATE

Missouri has a continental climate, but with considerable local and regional variation. The average annual temperature is 50°F

(10°C) in the northwest, but about 60°F (16°C) in the southeast. Kansas City has an average temperature of 56°F (13°C), ranging from 30°F (-1°C) in January to 80°F (26°C) in July; St. Louis has an annual average of 56°F (13°C) with 30°F (-1°C) in January and 79°F (26°C) in July.

The coldest temperature ever recorded in Missouri was -40°F (-40°C), set at Warsaw on 13 February 1905; the hottest, 118°F (48°C), at Warsaw and Union on 14 July 1954. A 1980 heat wave caused 311 heat-related deaths in Missouri, the highest toll in the country; most were elderly residents of St. Louis and Kansas City. Fifty-one more heat-related deaths occurred in St. Louis during a 1983 heat wave.

The average annual precipitation for Kansas City is about 36 in (100 cm), with some rain or snow falling about 110 days a year. The heaviest precipitation is in the southeast, averaging 48 in (122 cm); the northwest usually receives 35 in (89 cm) yearly. Snowfall averages 20 in (51 cm) in the north, 10 in (25 cm) in the southeast. During the winter, northwest winds prevail; the air movement is largely from the south and southeast during the rest of the year. Springtime is the peak tornado season.

4 FLORA AND FAUNA

Representative trees of Missouri include the shortleaf pine, scarlet oak, smoke tree, pecan (*Carya illinoensis*), and peachleaf willow, along with species of tupelo, cottonwood, cypress, cedar, and dogwood (the state tree). American holly, which once flourished in the southeastern woodlands, is now considered rare; various types of wild grasses proliferate in the northern plains region. Missouri's state flower is the hawthorn blossom; other wild flowers include Queen Anne's lace, meadow rose, and white snakeroot. Showy and small white lady's slipper, green adder's-mouth, purslane, corn salad, dotted monard, and prairie white-fringed orchid are rare in Missouri. Among the eight threatened or endangered plants listed by the US Fish and Wildlife Service in 2006 were the decurrent false aster, running buffalo clover, pondberry, Missouri bladderpod, and western prairie fringed orchid.

Indigenous mammals are the common cottontail, muskrat, white-tailed deer, and gray and red foxes. The state bird is the bluebird; other common birds are the cardinal, solitary vireo, and the prothonotary warbler. Wetlands covering about 1.4% of the state are important wintering grounds for hundreds of thousands of migratory birds and waterfowl, including the endangered bald eagle. A characteristic amphibian is the plains leopard frog; native snakes include garter, ribbon, and copperhead. Bass, carp, perch, jack salmon (walleye), and crayfish abound in Missouri's waters. The chigger, a minute insect, is a notorious pest.

In 2006, 17 species of animals (vertebrates and invertebrates) were listed as threatened or endangered in Missouri, including three species of bat (Ozark big-eared, gray, and Indiana), pallid sturgeon, gray wolf, and three varieties of mussel.

5 ENVIRONMENTAL PROTECTION

Missouri's first conservation law, enacted in 1874, provided for a closed hunting season on deer and certain game birds. In 1936, the state established a Conservation Commission to protect the state's wildlife and forest resources. Missouri's Department of Conservation manages the state forests and fish hatcheries and maintains wildlife refuges and the Department of Natural Resources is re-

sponsible for state parks, energy conservation, and environmental quality programs, including air pollution control, water purification, land reclamation, soil and water conservation, and solid and hazardous waste management. The State Environmental Improvement and Energy Resources Authority, within the Department of Natural Resources, is empowered to offer financial aid to any individual, business, institution, or governmental unit seeking to meet pollution control responsibilities.

An important environmental problem is soil erosion; the state loses 71 million tons of topsoil each year. Residents approved a 0.1% sales tax in 1984 and 1988 to create a fund to address this problem. As of 1982, 42 sites in Missouri were found to have unsafe concentrations of dioxin, a highly toxic by-product of hexachlorophene, manufactured in a Verona chemical plant; in that year, an evacuation was begun (completed in 1985) of the 2,000 residents of Times Beach, a community 30 mi (48 km) west of St. Louis that was declared a federal disaster area. St. Louis ranked high among US cities for the quantities of lead and suspended particles found in the atmosphere, but conditions improved between the mid-1970s and early 1980s. In 2003, 102.5 million lb of toxic chemicals were released in the state.

In 2003, Missouri had 503 hazardous waste sites listed in the US Environment Protection Agency (EPA) database, 26 of which were on the National Priorities List as of 2006. In 1996, it had 643,000 acres (260,000 hectares) of wetlands, or about 1.4% of the state's lands. In 2005, the EPA spent over \$11.9 million through the Superfund program for the cleanup of hazardous waste sites in the state. The same year, federal EPA grants awarded to the state included \$12 million for the drinking water state revolving fund, plus an addition \$12 million grant for other safe drinking water projects.

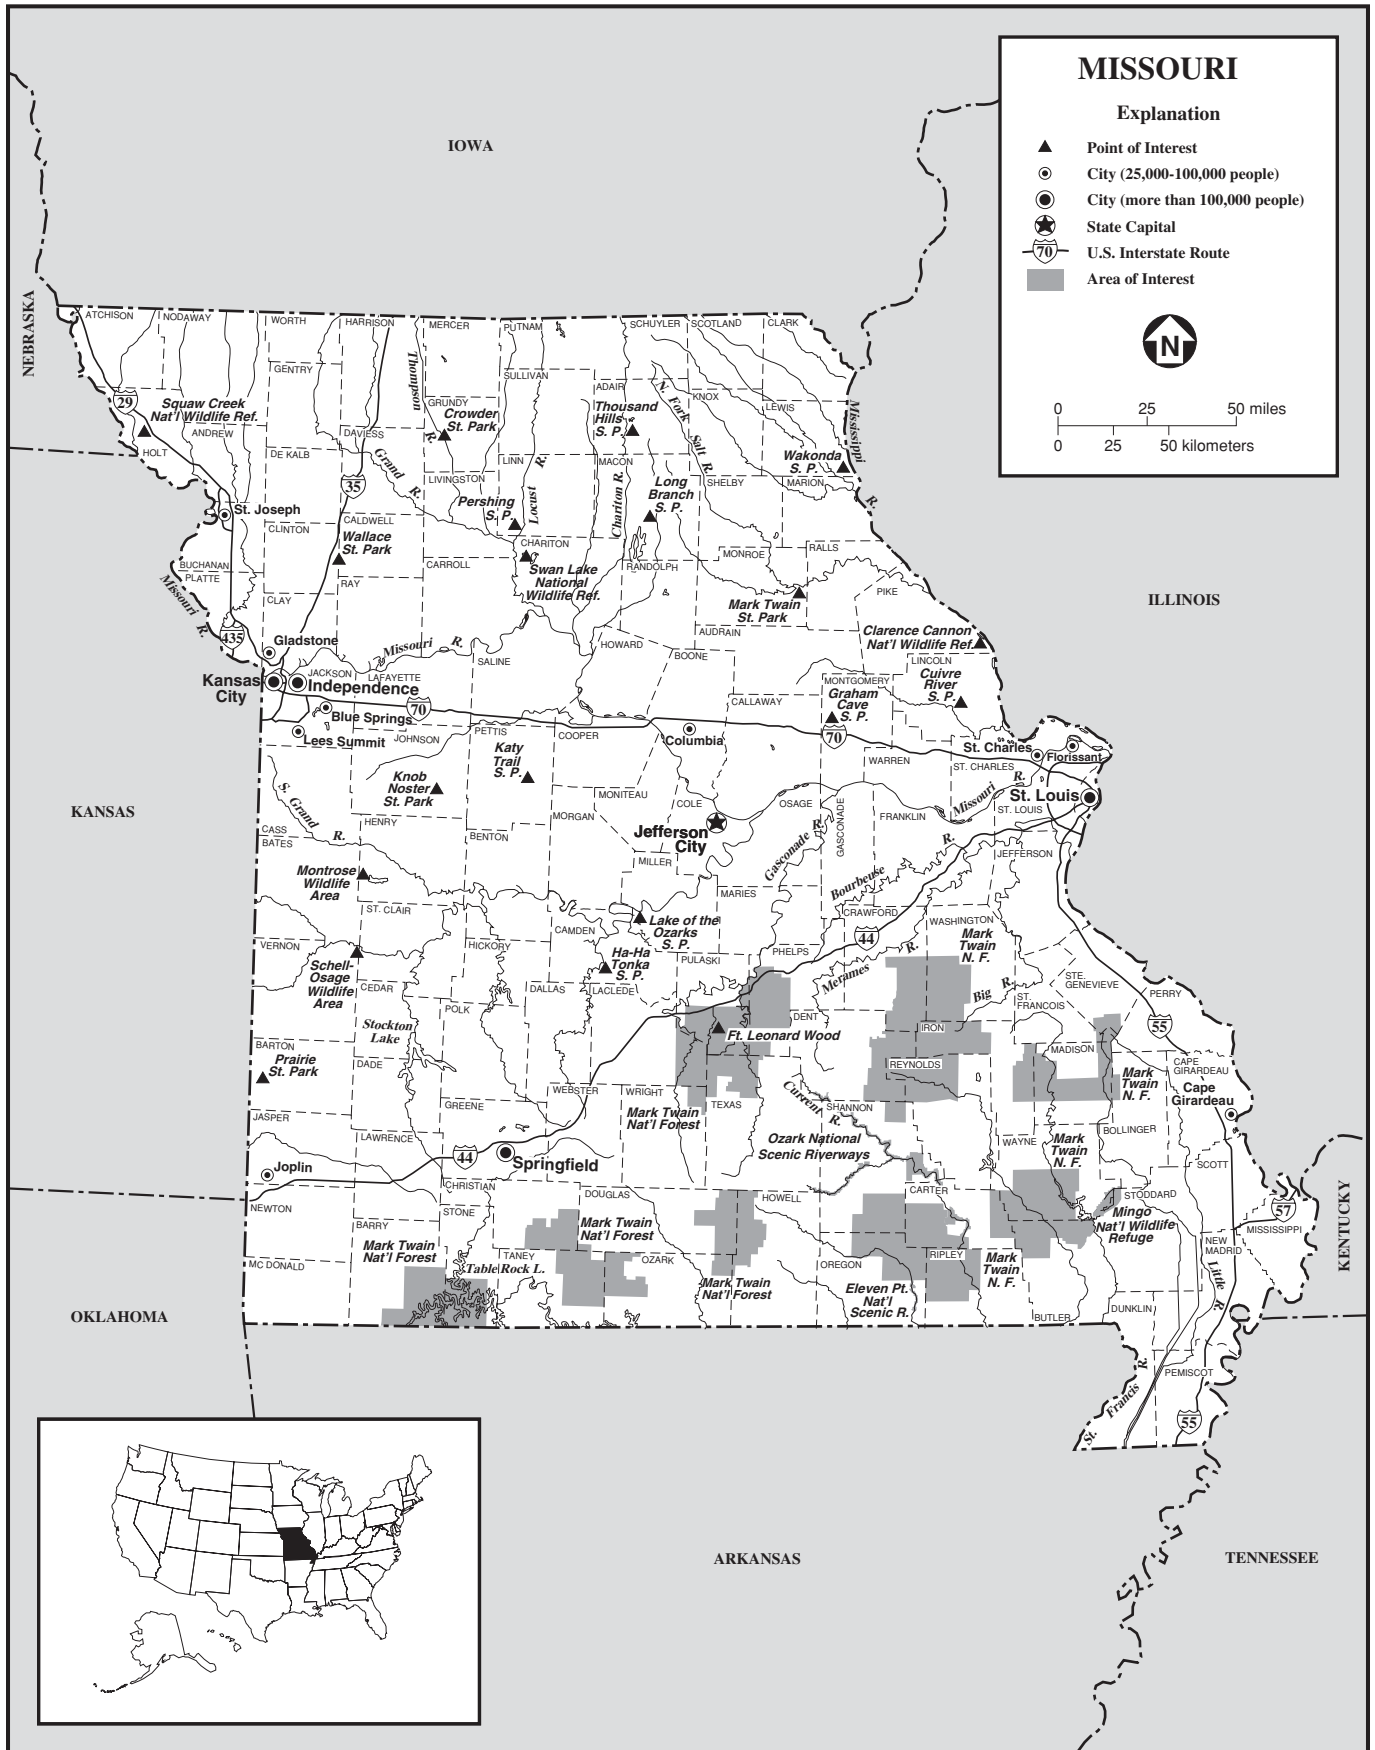

6 POPULATION

Missouri ranked 18th in population in the United States with an estimated total of 5,800,310 in 2005, an increase of 3.6% since 2000. Between 1990 and 2000, Missouri's population grew from 5,117,073 to 5,595,211, an increase of 9%. The population is projected to reach 6 million by 2015 and 6.3 million by 2025. The population density in 2004 was 83.5 persons per sq mi.

In 1830, the first year in which Missouri was enumerated as a state, the population was 140,455. Missouri's population just about doubled each decade until 1860, when the growth rate subsided; the population surpassed the 2 million mark at the 1880 census, 3 million in 1900 (when it ranked fifth in the United States), and 4 million during the early 1950s.

In 2004, the median age for Missourians was 37.3. In the same year, 24.1% of the on under age 18 while 13.3% was age 65 or older.

More than half of all Missourians live in urban areas. The largest cities and their estimated 2004 populations are Kansas City, 444,387, and St. Louis, 343,279—both well below the 1980 figures. The St. Louis metropolitan area, embracing parts of Missouri and Illinois, comprised an estimated 2,764,054 people in 2004 while metropolitan Kansas City, in Missouri and Kansas, had a population of 1,925,319.

⁷ETHNIC GROUPS

After the flatboat and French traders and settlers had made possible the earliest development of Missouri and its Mississippi shore, the river steamer, the Civil War, the Homestead Act (1862), and the railroad changed the character of the state ethnically as well as economically. Germans came in large numbers, developing small diversified industries, and they were followed by Czechs and Italians. The foreign-born numbered 151,196 in 2000, up from 83,633 in 1990.

Black Americans have represented a rising proportion of Missouri's population in recent decades: 9% in 1960, 10.3% in 1970, 10.5% in 1980, 10.7% in 1990, 11.2% in 2000, and 11.5% in 2004. Kansas City's black community supported a flourishing jazz and urban blues culture between the two world wars, while St. Louis was the home of Scott Joplin and W. C. Handy in the early years of the 20th century. Of the 629,391 black residents of Missouri in 2000, 178,266 lived in St. Louis, which was 51.2% black. In 2000 Missouri also had 118,592 Hispanics and Latinos, nearly double the 1990 figure of 62,000, and including 77,887 of Mexican ancestry. In 2004, 2.6% of the population was of Hispanic or Latino origin. The total Asian population as of 2000 was 61,595; in that year there were 13,667 Chinese, 7,735 Filipinos, 6,767 Koreans, 3,337 Japanese, and 12,169 Vietnamese (triple the 1990 figure of 4,030). Pacific Islanders numbered 3,178. In 2004, 1.3% of the population was Asian, and 0.1% of Pacific Island origin.

Only a few American Indians remained in Missouri after 1836. The 2000 census showed an Indian population of 25,076. The state has no Indian reservations. In 2004, 0.5% of the population was American Indian.

Of those claiming descent from at least one specific ancestry group in 2000, 1,313,951 named German, 528,935 English, and 711,995 Irish.

⁸LANGUAGES

White pioneers found Missouri Indians in the northern part of what is now Missouri Osage in the central portion, and Quapaw in the south. Long after these tribes' removal to Indian Territory, only a few place-names echo their heritage: Missouri itself, Kahoka, Wappapello.

Four westward-flowing language streams met and partly merged in Missouri. Northern and North Midland speakers settled north of the Missouri River and in the western border counties, bringing their Northern *pail* and *sick to the stomach* and their North Midland *fishworm* (earthworm), *gunnysack* (burlap bag), and *sick at the stomach*. But *sick in the stomach* occurs along the Missouri River from St. Louis to Kansas City and along the Mississippi south of St. Louis. South of the Missouri River, and notably in the Ozark Highlands, South Midland dominates, though with a few Southern forms, especially in the cotton-growing floodplain of the extreme southeast. *Wait on* (wait for), *light bread* (white bread), and *pullybone* (wishbone) are critical dialect markers for this area, as are *redworm* (earthworm), *towsack* (burlap bag), *snap beans* (string beans), *how* and *now* sounding like /haow/ and /naow/, and Missouri ending with the vowel of *me* rather than the final vowel of /uh/ heard north of the Missouri. In the extreme southeast are Southern *loafbread*, *grass sack* (burlap bag), and *cold*

drink as a term for a soft drink. In the eastern half of the state, a soft drink is generally *soda* or *sody*; in the western half, *pop*.

In 2000, 94.9% of state residents five years old or older spoke only English at home, down from 96% in 1990.

The following table gives selected statistics from the 2000 Census for language spoken at home by persons five years old and over. The category "African languages" includes Amharic, Ibo, Twi, Yoruba, Bantu, Swahili, and Somali. The category "Other West Germanic languages" includes Dutch, Pennsylvania Dutch, and Afrikaans.

LANGUAGE	NUMBER	PERCENT
Population 5 years and over	5,226,022	100.0
Speak only English	4,961,741	94.9
Speak a language other than English	264,281	5.1

African languages	5,117	0.1
Other West Germanic languages	4,822	0.1
Korean	4,753	0.1
Tagalog	4,645	0.1

⁹RELIGIONS

Beginning in the late 17th century, French missionaries brought Roman Catholicism to what is now Missouri; the first permanent Roman Catholic church was built about 1755 at St. Genevieve. Immigration from Germany, Ireland, Italy, and Eastern Europe swelled the Catholic population during the 19th century and Roman Catholicism remains the largest single Christian denomination, though the Evangelical Protestants collectively outnumber Catholics. Baptist preachers crossed the Mississippi River into Missouri in the late 1790s, and the state's first Methodist church was organized about 1806. Immigrants from Germany included not only Roman Catholics, but also many Lutherans, the most conservative of whom organized the Lutheran Church—Missouri Synod in 1847.

In 2004, Missouri had 844,102 Roman Catholics; with 550,000 belonging to the archdiocese of St. Louis. The next largest religious group is the Southern Baptist Convention, with 797,732 adherents in 2000 and 13,646 newly baptized members reported in 2002. The United Methodist Church had 176,022 members in 2004. In 2000, the Lutheran Church—Missouri Synod had 140,315 members and the Christian Church (Disciples of Christ) had 105,583. The same year, the estimated number of Jews was 62,315 and Muslims numbered about 19,359. About 2.7 million people (48.3% of the population) were not counted as members of any religious organization.

The administrative offices of the Baptist Bible Fellowship International, along with its affiliated Baptist Bible College and Baptist Bible School of Theology, are located in Springfield. The world headquarters for the Fellowship of Christian Athletes and the international headquarters of the Church of the Nazarene are located in Kansas City.

10 TRANSPORTATION

Centrally located, Missouri is the leading US transportation center. Both St. Louis and Kansas City are hubs of rail, truck, and airline transportation.

In 1836, delegates from 11 counties met in St. Louis to recommend construction of two railroad lines and to petition Congress for a grant of 800,000 acres (324,000 hectares) of public land on which to build them. More than a dozen companies were incorporated by the legislature, but they all collapsed with the financial panic of 1837. Interest in railroad construction revived during the following decade, and in 1849 a national railroad convention was held in St. Louis at which nearly 1,000 delegates from 13 states recommended the construction of a transcontinental railroad. By 1851, three railroad lines had been chartered, and construction by the Pacific Railroad at St. Louis was under way. The Pacific line reached Kansas City in 1865, and a bridge built over the Missouri River four years later enabled Kansas City to link up with the Hannibal and St. Joseph Railroad, providing a freight route to Chicago that did not pass through St. Louis. In 2003, there were 4,791 rail mi (7,713 km) of track within the state, including 4,087 rail mi (6,580 km) of Class I track. In 2006, Amtrak provided passenger train service running directly from Chicago to St. Louis and to Kansas City, en route to San Antonio and Los Angeles, to 11 stations in Missouri.

The first road developed in colonial Missouri was probably a trail between the lead mines and Ste. Genevieve in the early 1700s. A two-level cantilever bridge—the first in the world to have a steel superstructure—spanning the Mississippi at St. Louis was dedicated on 4 July 1874. By 1940, no place in Missouri was more than 10 mi (16 km) from a highway. In 2004, there were 125,923 mi (202,736 km) of public roads in Missouri. The main interstate highways were: I-70, linking St. Louis with Kansas City; I-44, connecting St. Louis with Springfield and Joplin; I-55, linking St. Louis with Chicago, Illinois, to the north and paralleling the course of the Mississippi between St. Louis and Memphis, Tennessee; I-35, connecting Kansas City with Des Moines, Iowa; and I-29, paralleling the Missouri River north of Kansas City. Motor vehicle registration for the state in 2004 totaled some 4.855 million vehicles of all types, including 2.690 million passenger cars, 2.084 million trucks of all types, and 4,000 buses. In that same year, there were 4,047,652 licensed drivers in the state.

The Mississippi and Missouri rivers have long been important transportation routes. Pirogues, keelboats, and flatboats plied these waterways for more than a century before the first steamboat, the *New Orleans*, traveled down the Mississippi in 1811. The Mississippi still serves considerable barge traffic, making metropolitan St. Louis an active inland port area, with 33.386 million tons of cargo handled in 2004. For that same year, Missouri had 1,033 mi (1,663 km) of navigable inland waterways. In 2003, waterborne shipments totaled 34.050 million tons.

Pioneering aviators in Missouri organized the first international balloon races in 1907 and the first US-sponsored international aviation meet in 1910. Five St. Louis pilots made up the earliest US Army air corps, and a barnstorming pilot named Charles A. Lindbergh, having spent a few years in the St. Louis area, had the backing of businessmen from that city when he flew his *Spirit of St. Louis* across the Atlantic in 1927. In 2005, Missouri had a total of 539 public and private-use aviation-related facilities. This in-

cluded 404 airports, 129 heliports, 2 STOLports (Short Take-Off and Landing), and four seaplane bases. Kansas City International Airport and Lambert-St. Louis International Airport are the state's most important airports. In 2004, Kansas City International had 5,040,595 enplanements, while Lambert-St. Louis International had 6,377,628 enplanements that same year, making them the 39th- and 34th-busiest airports in the United States, respectively.

11 HISTORY

The region we now call Missouri has been inhabited for at least 4,000 years. The prehistoric Woodland peoples left low burial mounds, rudimentary pottery, arrowheads, and grooved axes; remains of the later Mississippian Culture include more sophisticated pottery and finely chipped arrowheads. When the first Europeans arrived in the late 17th century, most of the few thousand Indians living in Missouri were relatively recent immigrants, pushed westward across the Mississippi River because of pressures from eastern tribes and European settlers along the Atlantic coast. Indians then occupying Missouri belonged to two main linguistic groups: Algonkian-speakers, mainly the Sauk, Fox, and Illiniwek (Illinois) in the northeast; and a Siouan group, including the Osage, Missouri, Iowa, Kansas, and other tribes, to the south and west. Of greatest interest to the Europeans were the Osage, among whom were warriors and runners of extraordinary ability. The flood of white settlers into Missouri after 1803 forced the Indians to move into Kansas and into what became known as Indian Territory (present-day Oklahoma). During the 1820s, the US government negotiated treaties with the Osage, Sauk, Fox, and Iowa tribes whereby they surrendered, for the most part peaceably, all their lands in Missouri. By 1836, few Indians remained.

The first white men to pass through land eventually included within Missouri's boundaries apparently were Jacques Marquette and Louis Joliet, who in 1673 passed the mouth of the Missouri River on their journey down the Mississippi; so did Robert Cavellier, Sieur de la Salle, who claimed the entire Mississippi Valley for France in 1682. Probably the first Frenchman to explore the Missouri River was Louis Armand de Lom d'Arce, Baron de Lahontan, who in 1688 claimed to have reached the junction of the Missouri and Osage rivers. The French did little to develop the Missouri region during the first half of the 18th century, although a few fur traders and priests established posts and missions among the Indians. A false report that silver had been discovered set off a brief mining boom in which no silver but some lead—available in abundance—was extracted. Missouri passed into Spanish hands with the rest of the Louisiana Territory in 1762, but development was still guided by French settlers; in 1764, the French fur trader Pierre Laclède established a trading post on the present site of St. Louis.

Although Spain fortified St. Louis and a few other outposts during the American Revolution and beat back a British-Indian attack on St. Louis in 1780, the Spanish did not attempt to settle Missouri. However, they did allow Americans to migrate freely into the territory. Spanish authorities granted free land to the new settlers, relaxed their restrictions against Protestants, and welcomed slaveholding families from southern states—especially important after 1787, when slavery was banned in the Northwest Territory. Pioneers such as Daniel Boone arrived from Kentucky, and the Chouteau fur-trading family gained a lucrative monopoly among

the Osage. Spanish rule ended abruptly in 1800 when Napoleon forced Spain to return Louisiana to France. Included in the Louisiana Purchase, Missouri then became part of the United States in 1803. After the Lewis and Clark expedition (1804–06) had successfully explored the Missouri River, Missouri in general—and St. Louis in particular—became the gateway to the West.

Missouri was part of the Louisiana Territory (with headquarters at St. Louis) until 1 October 1812, when the Missouri Territory (including present-day Arkansas, organized separately in 1819) was established. A flood of settlers between 1810 and 1820 more than tripled Missouri's population from 19,783 to 66,586, leading Missourians to petition the US Congress for statehood as early as 1818. But Congress, divided over the slavery issue, withheld permission for three years, finally approving statehood for Maine and Missouri under the terms of the Missouri Compromise (1820), which sanctioned slavery in the new state but banned it in the rest of the former Louisiana Territory north of Arkansas. Congress further required that Missouri make no effort to enforce a state constitutional ban on the immigration of free Negroes and mulattos; once the legislature complied, Missouri became the 24th state on 10 August 1821. Alexander McNair became the state's first governor and Thomas Hart Benton was one of the state's first two US senators; Benton remained an important political leader for more than three decades.

Aided by the advent of steamboat travel on the Mississippi and Missouri rivers, settlers continued to arrive in the new state, whose population surpassed 1 million by 1860. The site for a new capital, Jefferson City, was selected in 1821, and five years later the legislature met there for the first time. French fur traders settled the present site of Kansas City in 1821 and established a trading post at St. Joseph in 1827. Mormons came to Independence during the early 1830s but were expelled from the state and crossed the Mississippi back into Illinois. For much of the antebellum period, the state's economy flourished, with an emphasis on cotton, cattle, minerals (especially lead and zinc), and commerce—notably the outfitting of wagon trains for the Santa Fe and Oregon trails. On the eve of the Civil War, more than half the population consisted of Missouri natives; 15% of the white population was foreign-born, chiefly German and Irish. Black slaves represented only 9% of the total population—the lowest proportion of any slave state except Delaware—while only about 25,000 Missourians were slave holders. Nevertheless, there was a great deal of proslavery sentiment in the state, and thousands of Missourians crossed into neighboring Kansas in the mid-1850s to help elect a proslavery government in that territory. State residents were also active in the guerrilla warfare between proslavery forces and Free Staters that erupted along the border with “bleeding Kansas.” The slavery controversy was exacerbated by the US Supreme Court's 1857 decision in the case of *Dred Scott*, a slave formerly owned by a Missourian who had temporarily brought him to what is now Minnesota, where slavery was prohibited; Scott's suit to obtain his freedom was denied by the Court on the grounds that it was unconstitutional to restrict the property rights of slave holders, in a decision that voided the Missouri Compromise reached 37 years earlier.

During the Civil War, Missouri remained loyal to the Union, though not without difficulty. When the conflict began, Governor Claiborne Fox Jackson called out the state militia “to repel the invasion” of federal forces, but pro-Union leaders such as Francis

P. Blair deposed Jackson on 30 July 1861. Missouri supplied some 110,000 soldiers to the Union and 40,000 to the Confederacy. As devastating as the 1,162 battles or skirmishes fought on Missouri soil—more than in any other state except Virginia and Tennessee—was the general lawlessness that prevailed throughout the state; pro-Confederate guerrilla bands led by William Quantrill and Cole Younger, as well as Unionist freebooters, murdered and looted without hindrance. In October 1864, a Confederate army under Maj. Gen. Sterling Price was defeated at the Battle of Westport, on the outskirts of Kansas City, ending the main military action. Some 27,000 Missourians were killed during the war. At a constitutional convention held in January 1865, Missouri became the first slave state to free all blacks.

During Reconstruction, the Radical Republicans sought to disfranchise all citizens who failed to swear that they had never aided or sympathized with the Confederacy. But the harshness of this and other measures caused a backlash, and Liberal Republicans such as Benjamin Gratz Brown and Carl Schurz, allied with the Democrats, succeeded in ousting the Radicals by 1872. The subsequent decline of the Liberal Republicans inaugurated a period during which Democrats occupied the governorship uninterruptedly for more than three decades.

The 1870s saw a period of renewed lawlessness, typified by the exploits of Jesse and Frank James, which earned Missouri the epithet of the “robber state.” Of more lasting importance were the closing of the frontier in Missouri, the decline of the fur trade and steamboat traffic, and the rise of the railroads, shifting the market economy from St. Louis to Kansas City, whose population tripled during the 1880s, while St. Louis was eclipsed by Chicago as a center of finance, commerce, transportation, and population. Missouri farmers generally supported the movement for free silver coinage, along with other Populist policies such as railroad regulation. Reform Governor Joseph W. Folk (1905–09) and his immediate successors in the statehouse, Herbert S. Hadley (1909–13) and Elliott W. Major (1913–17), introduced progressive policies to Missouri. However, the ideal of honest government was soon subverted by Kansas City's corrupt political machine, under Thomas J. Pendergast, the most powerful Democrat in the state between the two world wars. Machine politics did not prevent capable politicians from rising to prominence—among them Harry S. Truman, Missouri's first and only (as of 2006) native son to serve in the nation's highest office.

The state's economy increasingly shifted from agriculture to industry, and Missouri's rural population declined from about three-fourths of the total in 1880 to less than one-third by 1970. Although the overall importance of mining declined, Missouri remained the world's top lead producer, and the state ranked as second only to Michigan in US automobile manufacturing. Postwar prosperity was threatened beginning in the 1960s by the deterioration of several cities, notably St. Louis, which lost 47% of its population between 1950 and 1980; both St. Louis and Kansas City subsequently undertook urban renewal programs to cope with the serious problems of air pollution, traffic congestion, crime, and substandard housing. During the early 1980s, millions of dollars in federal, state, and private funds were used to rehabilitate abandoned and dilapidated apartment buildings and houses.

Missouri was affected by the farm crisis of the 1980s, and many farms in the state failed. With the weakening of trade restric-

tions, the state's industries also suffered during this period. However, Missouri's economy improved in the 1990s, initially at a rate that outpaced much of the country. By 1999 the state's jobless rate had fallen below the national average to 3.4%. Due largely to the weak US economy in the early 2000s, Missouri's unemployment rate rose to 5.8% by July 2003, albeit below the national average of 6.2%. However, from September 2004 to September 2005, the state's unemployment rate declined from 5.9% to 4.8%, when it stood below the national average of 5.1%.

Times Beach and other parts of the state were found to be contaminated by high levels of dioxin in the early 1980s. The federal government purchased the homes and businesses that had to be abandoned by community residents and in 1991 began a several-year cleanup program; in 1999 a state park opened there.

In the spring and summer of 1993, Missouri was hit by devastating floods. The Illinois, Mississippi, and Missouri rivers reached record crests, rising in some areas to twice the height considered to be flood level. Over half the state was declared a disaster area, and 19,000 people were evacuated from their homes. Damage to the state was estimated at \$3 billion.

In 2000, the state's popular governor, Mel Carnahan, died in a plane crash while running for the US Senate. He was replaced by Democrat Bob Holden, who became the first governor to appoint a state head of homeland security following the 11 September 2001 terrorist attacks on the United States. In 2003, Missouri legislators adopted a measure requiring women seeking abortions to consult a doctor and comply with a 24-hour waiting period. Holden vetoed the measure, but both houses of the Missouri legislature voted to override his veto, making the measure law. Twenty-two states as of 2006 had enacted 24-hour waiting periods for abortions. (Indiana's waiting period is 18 hours.)

Republican Matt Blunt was elected governor in November 2004. He campaigned on a platform pledging to make education the state's top priority, to reform the state's social welfare programs, to

address the state's health care crisis, to improve the entrepreneurial climate, and to hold the line on taxes.

12 STATE GOVERNMENT

Missouri's first constitutional convention met in St. Louis on 12 May 1820, and on 19 July a constitution was adopted. The constitution was rewritten in 1865 and again in 1875, the latter document remaining in effect until 1945, when another new constitution was enacted and the state government reorganized. A subsequent reorganization, effective 1 July 1974, replaced some 90 independent agencies with 13 cabinet departments and the Office of Administration. The 1945 constitution is still in effect today, with a total of 105 amendments through January 2005.

The legislative branch, or General Assembly, consists of a 34-member Senate and a 163-seat House of Representatives. Annual sessions begin in early January and must conclude by 30 May. Special sessions may be called by petition of three-quarters of the members of each house; such sessions are limited to 30 calendar days. Senators are elected to staggered four-year terms, representatives for two; the minimum age for a senator is 30, for a representative 24. Legislators must have been residents of their districts for one year prior to election; senators must have been qualified voters for a minimum of three years, representatives a minimum of two years. The legislative salary was \$31,351 in 2004.

The state's elected executives are the governor and lieutenant governor (who run separately), secretary of state, auditor, treasurer, and attorney general; all serve four-year terms. The governor is limited to two terms in office, consecutive or not. The governor must be at least 30 years old and must have been a US citizen for 15 years and a Missouri resident for 10 years prior to election. As of December 2004, the governor's salary was \$120,087.

A bill becomes law when signed or not vetoed by the governor within 15 days of legislative passage. A two-thirds vote by the elected members of both houses is required to override a gu-

*Won US presidential election.

bernatorial veto. The governor has 45 days to act on a bill if the House adjourns. If he fails to do so, the bill becomes law. Except for appropriations or emergency measures, laws may not take effect until 90 days after the end of the legislative session at which they were enacted. Constitutional amendments require a majority vote of both houses or may be proposed by 8% of the legal voters for all candidates at the last election. Ratification by the voters is required.

To vote in Missouri, one must be a US citizen, at least 18 years old, and a state resident. Restrictions apply to convicted felons and those declared mentally incompetent by the court.

13 POLITICAL PARTIES

The major political groups in Missouri are the Democratic Party and the Republican Party, each affiliated with the national party organization. Before 1825, the state had no organized political parties, and candidates ran as independents; however, each of Missouri's first four governors called himself a Jeffersonian Republican, allying himself with the national group from which the modern Democratic Party traces its origins. Except for the Civil War and Reconstruction periods, the Democratic Party held the governorship from the late 1820s to the early 1900s. Ten Democrats and seven Republicans served in the statehouse from 1908 through 1985. The outstanding figures of 20th century Missouri politics were both Democrats: Thomas Pendergast, the Kansas City machine boss whose commitment to construction projects bore no small relation to his involvement with a concrete manufacturing firm, and Harry S. Truman, who began his political career as a Jackson County judge in the Kansas City area and in 1945 became 33rd president of the United States.

After voting consistently for Republican presidential candidates in the 1980s, Missouri was carried by Democrat Bill Clinton in 1996. In the 2000 presidential election, Missourians once again voted Republican, with George W. Bush receiving 51% of the vote to Democrat Al Gore's 47%. Green Party candidate Ralph Nader won 2% of the vote. In 2004, Bush garnered 53.4% to Democratic challenger John Kerry's 46.1%. In 2004 there were 4,194,000 registered voters; there is no party registration in the state. The state had 11 electoral votes in the 2004 presidential election.

Democrat Mel Carnahan was reelected to the governorship in 1996. In October 2000, Carnahan was running for the US Senate against Republican John Ashcroft when he died in a plane crash with his son and a political aide. Carnahan was elected posthumously to the Senate in November, and his wife Jean accepted an appointment to his seat. She served until 2002, when she was defeated by former US Representative and Republican Jim Talent in an extremely close race. As of 2005, Missouri's US senators were both Republicans—Talent, and Christopher Bond, reelected in 2004. In 2004, Republican Matt Blunt was elected governor. Following the 2004 elections, four of the state's US representatives were Democrats and five were Republicans. In the state Senate in mid-2005, there were 11 Democrats and 23 Republicans; in the state House, there were 66 Democrats and 97 Republicans.

14 LOCAL GOVERNMENT

As of 2005, Missouri had 115 counties, 946 municipalities, 524 public school districts, and 1,514 special districts. In 2002 there were also 312 townships. Elected county officials generally include

commissioners, a public administrator, a prosecuting attorney, a sheriff, a collector of revenue, an assessor, a treasurer, and a coroner. The city of St. Louis, which is administratively independent of any county, has an elected mayor, a comptroller, and a board of aldermen; the circuit attorney, city treasurer, sheriff, and collector of revenue, also elected, perform functions analogous to county officers. Most other cities are governed by an elected mayor and council. The state was the first in the union to grant home rule to cities.

In 2005, local government accounted for about 226,571 full-time (or equivalent) employment positions.

15 STATE SERVICES

To address the continuing threat of terrorism and to work with the federal Department of Homeland Security, homeland security in Missouri operates under executive order; a homeland security director is appointed to oversee the state's homeland security activities.

Under the 1974 reorganization plan, educational services are provided through the Department of Elementary and Secondary Education and the Department of Higher Education. Within the former's jurisdiction are the state schools for the deaf, the blind, and the severely handicapped; adult education programs; teacher certification; and the general supervision of instruction in the state. The department is headed by a board of education whose eight members are appointed by the governor to eight-year terms; the board, in turn, appoints the commissioner of education, the department's chief executive officer. The Department of Higher Education—governed by a nine-member appointive board that selects the commissioner of higher education—sets financial guidelines for state colleges and universities, authorizes the establishment of new senior colleges and residency centers, and establishes academic, admissions, residency, and transfer policies. Transportation services are under the direction of the Department of Transportation, which is responsible for aviation, railroads, mass transit, water transport, and the state highway system. The Department of Revenue licenses all road vehicles and motor vehicle operators and is responsible for the administration of all state taxes and local-option sales taxes.

Health and welfare services are provided primarily through the Department of Social Services, which oversees all state programs concerning public health (including operating a chest hospital and a cancer hospital), public assistance, youth corrections, probation and parole, veterans' affairs, and the aging. The Department of Mental Health operates state mental hospitals, community mental health centers, and other facilities throughout the state, providing care for the emotionally disturbed, the developmentally disabled, alcoholics, and drug abusers. Among the many responsibilities of the Attorney General are consumer protection, enforcement of antidiscrimination laws, and agricultural and environmental issues. In 1984, a constitutional amendment created a new Department of Economic Development, which inherited many of the responsibilities of the Attorney General.

Administered within the Department of Public Safety are the Missouri State Highway Patrol, Emergency Management Agency, and civil defense, veterans' affairs, highway and water safety, and alcoholic beverage control programs. The Department of Labor and Industrial Relations (DOLIR) administers unemployment

insurance benefits, workers' compensation, and other programs. The Department of Corrections is responsible for corrections, probation, and parole of adult offenders. The Department of Agriculture enforces state laws regarding agribusiness products, and the Department of Conservation provides environmental aid. The lieutenant governor is designated as state ombudsman and volunteer coordinator.

16 JUDICIAL SYSTEM

The Missouri Supreme Court, is the state's highest court. It consists of seven judges and three commissioners. Judges are selected by the governor from three nominees proposed by a nonpartisan judicial commission; after an interval of at least 12 months, the appointment must be ratified by the voters on a separate nonpartisan ballot. The justices, who serve 12-year terms, select one of their number to act as chief justice. The mandatory retirement age is 70 for all judges in state courts.

The Court of Appeals, consisting of 32 judges in three districts, assumed its present structure by constitutional amendment in 1970. All appellate judges are selected for 12-year terms in the same manner as the supreme court justices.

The circuit courts are the only trial courts and have original jurisdiction over all cases and matters, civil and municipal. Circuit court judges, numbering 135 in 1999, serve 6-year terms. Although many circuit court judges are still popularly elected, judges in St. Louis, Kansas City, and some other areas are selected on a nonpartisan basis. Many circuit courts have established municipal divisions, presided over by judges paid locally.

As of 31 December 2004, a total of 31,081 prisoners were held in Missouri's state and federal prisons, a decrease of 2.6% (from 30,303) from the previous year. As of year-end 2004, a total of 2,507 inmates were female, up 12% (from 2,239) from the year before. Among sentenced prisoners (one year or more), Missouri had an incarceration rate of 538 per 100,000 population in 2004.

According to the Federal Bureau of Investigation, Missouri in 2004, had a violent crime rate (murder/nonnegligent manslaughter; forcible rape; robbery; aggravated assault) of 490.5 reported incidents per 100,000 population, or a total of 28,226 reported incidents. Crimes against property (burglary; larceny/theft; and motor vehicle theft) in that same year totaled 224,629 reported incidents or 3,903.5 reported incidents per 100,000 people. Missouri has a death penalty, of which lethal injection or lethal gas are the prescribed methods. However, the state law is unclear about who shall decide which method to use: the Director of the Missouri Department of Corrections; or the inmate. From 1976 through 5 May 2006, the state has carried out 66 executions, 5 in 2005. As of 1 January 2006, Missouri had 53 inmates on death row.

In 2003, Missouri spent \$133,539,014 on homeland security, an average of \$23 per state resident.

17 ARMED FORCES

Missouri has played a key role in national defense since World War II, partly because of the influence of Missouri native Stuart Symington, first as secretary of the Air Force (1947–50) and later as an influential member of the Senate Armed Services Committee. In 2004, there were 27,520 active-duty military personnel and 2,749 civilian personnel stationed in the state. Installations include Ft. Leonard Wood, near Rolla, and Whiteman AFB, Knob

Noster. The Defense Mapping Agency Aerospace Center is in St. Louis. Defense contract awards for 2004 totaled more than \$6.5 billion, ninth-highest in the United States for that year. In addition, there was another \$2.1 billion in defense payroll outlays, including retired military pay.

There were about 554,531 veterans living in the state as of 2003. Of these, 77,373 served in World War II; 65,882 in the Korean conflict; 169,346 during the Vietnam era; and 78,798 during the Persian Gulf War. Expenditures on veterans amounted to about \$1.6 billion in 2004.

As of 31 October 2004, the Missouri State Highway Patrol employed 1,070 full-time sworn officers.

18 MIGRATION

Missouri's first European immigrants, French fur traders and missionaries, began settling in the state in the early 18th century. Under Spain, Missouri received few Spanish settlers but many immigrants from the eastern United States. During the 19th century, newcomers continued to arrive from the South and the East—slave-owning Southerners (with their black slaves) as well as New Englanders opposed to slavery. They were joined by a wave of European immigrants, notably Germans and, later, Italians. By 1850, one out of three St. Louis residents was German-born; of all foreign-born Missourians in the late 1800s, more than half came from Germany.

The state has lost population through migration—322,000 people were lost to net migration between 1940 and 1970, followed by a net gain of 22,000 during the 1970s and a net loss of nearly 100,000 during the 1980s. Between 1990 and 1998, Missouri had net gains of 94,000 in domestic migration and 34,000 in international migration. In 1998, some 3,588 foreign immigrants arrived in the state. The dominant intrastate migration pattern has been the concentration of blacks in the major cities, especially St. Louis and Kansas City, and the exodus of whites from those cities, initially to the suburbs and later to small towns and rural areas. As of 1996, 82.4% of the population lived in metropolitan areas while 17.6% lived in non-metropolitan areas, up from 17.2% in 1990. Missouri's overall population increased 6.3% between 1990 and 1998. In the period 2000–05, net international migration was 42,690 and net internal migration was 26,979, for a net gain of 69,669 people.

19 INTERGOVERNMENTAL COOPERATION

The Commission on Interstate Cooperation, established by the state legislature in 1941, represents Missouri before the Council of State Governments and its allied organizations. Regional agreements in which the state participates include boundary compacts with Arkansas, Iowa, Nebraska, and Kansas, and various accords governing bridges across the Mississippi and Missouri rivers. The state is a signatory to the Bi-State Development Agency Compact with Illinois. Representatives from both Missouri and Kansas take part in the Kansas City Area Transportation Authority, which operates public transportation in the metropolitan region, the Metropolitan Culture District Compact, and the Kansas-Missouri Waterworks Compact. Missouri also belongs to the Southern States Energy Board, Southern Growth Policies Board, Midwest Interstate Low-Level Radioactive Waste Compact Commission, and many other multistate bodies. Federal grants to state and lo-

cal governments in fiscal year 2005 amounted to \$7.045 billion, an estimated \$7.023 billion in fiscal year 2006, and an estimated \$7.581 billion in fiscal year 2007.

20 ECONOMY

Missouri's central location and access to the Mississippi River contributed to its growth as a commercial center. By the mid-1700s, the state's first permanent settlement at Ste. Genevieve was shipping lead, furs, salt, pork, lard, bacon, bear, grease, feathers, flour and grain, and other products to distant markets. The introduction of steamboat traffic on the Mississippi, western migration along the Santa Fe and Oregon trails, and the rise of the railroads spurred the growth of commerce during the 19th century. Flour mills and gristmills, breweries and whiskey distilleries, and meat-packing establishments were among the state's early industrial enterprises. Lead mining has been profitable since the early 19th century. Grain growing was well established by the mid-18th century, and tobacco was a leading crop 100 years later.

Missouri's economy remains diversified, with manufacturing, farming, trade, tourism, services, government, and mining as prime sources of income. Automobile and aerospace manufacturing are among the state's leading industries, while soybeans and meat and dairy products are the most important agricultural commodities. The state's historic past, varied topography, and modern urban attractions—notably the Gateway Arch in St. Louis—have made tourism a growth industry. Mining, employing less than 1% of the state's nonagricultural workers, is no longer as important as it once was. Missouri posted moderate growth rates in the late 1990s. Although manufacturing output has fallen, output from financial services, including insurance and real estate, have increased. In the first quarter of 2001, Missouri began losing jobs, four months ahead of the United States as a whole, with manufacturing accounting for 62% of the loss that year. Unemployment peaked at 5.4% in June 2002, but manufacturing unemployment has continued above 6%. Office vacancy rates in St. Louis and Kansas City in 2002 stood at 17.7% and 18.6%, respectively, above the national average of 16.5%. Missouri's farm sector was also afflicted by drought in 2002, which contributed to a 22% decrease in corn production and a 17% decrease in soybean production compared to 2001. Cattle production was also disrupted by the drought-induced shortages of hay and pasture. Stress on the farming sector persisted into the winter of 2002–03 as drought conditions continued.

Missouri's gross state product (GSP) was \$203.294 billion in 2004, of which manufacturing (durable and nondurable goods) accounted for the largest share at \$31.481 billion, or 15.4% of GSP, followed by the real estate sector at \$19.529 billion (9.6% of GSP), and health care and social assistance at \$15.149 billion (7.4% of GSP). In that same year, there were an estimated 461,259 small businesses in Missouri. Of the 134,448 businesses that had employees, an estimated total of 131,405 or 97.7% were small companies. An estimated 16,155 new businesses were established in the state in 2004, up 1.3% from the year before. Business terminations that same year came to 17,924, down 11.2% from 2003. There were 354 business bankruptcies in 2004, down 6.3% from the previous year. In 2005, the state's personal bankruptcy (Chapter 7 and Chapter 13) filing rate was 660 filings per 100,000 people, ranking Missouri 15th in the nation.

21 INCOME

In 2005, Missouri had a gross state product (GSP) of \$216 billion, which accounted for 1.7% of the nation's gross domestic product and placed the state 20th among the 50 states and the District of Columbia.

According to the Bureau of Economic Analysis, in 2004 Missouri had a per capita personal income (PCPI) of \$30,475. This ranked Missouri 31st in the United States and was 92% of the national average of \$33,050. The 1994–2004 average annual growth rate of PCPI was 3.9%. Missouri had a total personal income (TPI) of \$175,524,474,000, which ranked 20th in the United States and reflected an increase of 5.1% from 2003. The 1994–2004 average annual growth rate of TPI was 4.7%. Earnings of persons employed in Missouri increased from \$128,893,590,000 in 2003 to \$135,403,221,000 in 2004, an increase of 5.1% compared with 6.3% for the nation as a whole.

The US Census Bureau reported that the three-year average median household income for 2002–04 in 2004 dollars was \$43,988 compared to a national average of \$44,473. During the same period an estimated 10.9% of the population was below the poverty line as compared to 12.4% nationwide.

22 LABOR

According to the Bureau of Labor Statistics (BLS), in April 2006 the seasonally adjusted civilian labor force in Missouri numbered 3,057,200, with approximately 141,700 workers unemployed, yielding an unemployment rate of 4.6%, compared to the national average of 4.7% for the same period. Preliminary data for the same period placed nonfarm employment at 2,757,500. Since the beginning of the BLS data series in 1976, the highest unemployment rate recorded in Missouri was 10.5% in April 1983. The historical low was 2.6% in January 2000. Preliminary nonfarm employment data by occupation for April 2006 showed that approximately 5.2% of the labor force was employed in construction; 11% in manufacturing; 19.8% in trade, transportation, and public utilities; 6% in financial activities; 11.7% in professional and business services; 13.5% in education and health services; 10% in leisure and hospitality services; and 15.6% in government.

As early as the 1830s, journeyman laborers and mechanics in St. Louis, seeking higher wages and shorter hours, banded together to form trade unions and achieved some of their demands. Attempts to establish a workingman's party were unsuccessful, however, and immigration during subsequent decades ensured a plentiful supply of cheap labor. Union activity increased in the 1870s, partly because of the influence of German socialists. The Knights of Labor took a leading role in the labor movement from 1879 to 1887, the year that saw the birth of the St. Louis Trades and Labor Assembly; one year later, the American Federation of Labor came to St. Louis for its third annual convention, with Samuel Gompers presiding. The Missouri State Federation of Labor was formed in 1891, at a convention in Kansas City. By 1916, the state had 915 unions. Union activity in Missouri declined in the 1990s and early 2000s.

The US Department of Labor's Bureau of Labor Statistics reported that in 2005, a total of 290,000 of Missouri's 2,532,000 employed wage and salary workers were formal members of a union. This represented 11.5% of those so employed, down from 12.4%

in 2004, and below the national average of 12%. Overall in 2005, a total of 319,000 workers (12.6%) in Missouri were covered by a union or employee association contract, which includes those workers who reported no union affiliation. Missouri was among the 28 states that did not have a right-to-work law.

As of 1 March 2006, Missouri had a state-mandated minimum wage rate of \$5.15 per hour. In 2004, women in the state accounted for 47.9% of the employed civilian labor force.

23 AGRICULTURE

Missouri had 106,000 farms (second in the United States) covering 30.1 million acres (12.2 million hectares) in 2004. About 12.4 million acres (5 million hectares) were actually harvested that year. Missouri's agricultural income reached \$5.57 billion in 2005, 15th among the 50 states.

In 2004, Missouri was fourth among the states in grain sorghum production, fifth in soybean, and sixth in rice production. Soybean production is concentrated mainly in the northern counties and in the extreme southeast, with Mississippi County a leading producer. Stoddard County is a major source for corn and wheat production, as is New Madrid for grain sorghum.

The cash value of all crops totaled \$2.5 billion in 2005, including \$1.1 billion from soybeans, \$510 million from hay, \$887 million from corn, \$155 million from wheat, \$27 million from grain sorghum, and \$161.4 million from cotton. The value of rice production in 2004 was \$92.8 million. Farmers harvested 223.2 million bushels of soybeans, 466 million bushels of corn, 48.4 million bushels of wheat, 15.7 million bushels of grain sorghum, 820,000 bales of cotton, and 9.4 million tons of hay in 2004. That year, 13.2 million hundredweight (494.9 million kg) of rice was harvested. Tobacco, oats, rye, apples, peaches, grapes, watermelons, and various seed crops are also grown in commercial quantities.

24 ANIMAL HUSBANDRY

In Missouri, hog raising is concentrated north of the Missouri River, cattle raising in the western counties, and dairy farming in the southwest.

In 2005, Missouri farms and ranches had an estimated 4.5 million cattle and calves, valued at \$3.8 billion. In 2004, there were around 2.9 million hogs and pigs, valued at \$246.5 million. During 2003, Missouri farmers produced 816.2 million lb (371 million kg) of turkey (ranked third in the nation), valued at around \$285.7 million. Also in 2003, poultry farmers produced 1.9 million eggs, valued at \$100 million. The state's 129,000 milk cows yielded nearly 1.9 million lb (0.86 million kg) of milk in 2003.

25 FISHING

Commercial fishing takes place mainly on the Mississippi, Missouri, and St. Francis rivers. In 2005, there were 24 catfish farms covering 1,320 acres (534 hectares), with sales of \$1.4 million in 2004. Sport fishing is enjoyed throughout the state, but especially in the Ozarks, whose waters harbor walleye, rainbow trout, bluegill, and largemouth bass. In 2004, Missouri issued 844,318 sport fishing licenses. The Neosho National Fish Hatchery stocks rainbow trout to Lake Taneycomo, as well as sites in Kansas and

Iowa. There are eleven state hatcheries, four of which include trout parks.

26 FORESTRY

At one time, Missouri's forests covered 30 million acres (12 million hectares), more than two-thirds of the state. As of 2004, Missouri had 15,010,000 acres (6,075,000 hectares) of forestland (about one-third of the land area in the state), of which more than 95% was commercial forest, 82% of it privately owned. Most of Missouri's forestland is in the southeastern third of the state. Of the commercial forests, approximately three-fourths are of the oak/hickory type; shortleaf pine and oak/pine forests comprise about 5%, while the remainder consists of cedar and bottomland hardwoods.

According to the Forestry Division of the Department of Conservation, Missouri leads the United States in the production of charcoal, red cedar novelties, gunstocks, and walnut bowls and nutmeats; railroad ties, hardwood veneer and lumber, wine and bourbon casks, and other forest-related items are also produced. Lumber production in 2004 totaled 575 million board feet, 97% of it hardwoods.

Conservation areas managed by the Forestry Division are used for timber production, wildlife and watershed protection, hunting, fishing, and other recreational purposes. A state-run nursery sells seedling trees and shrubs to Missouri landowners. Missouri's one national forest, Mark Twain in the southeast, encompassed 1,489,000 acres (603,000 hectares) of National Forest System lands as of 2005.

27 MINING

According to preliminary data from the US Geological Survey (USGS), the estimated value of nonfuel mineral production by Missouri in 2003 was \$1.29 billion, an increase from 2002 of about 2%. The USGS data ranked Missouri as eighth among the 50 states by the total value of its nonfuel mineral production, accounting for almost 3.5% of total US output.

According to the preliminary data for 2003, by value and in descending order, crushed stone, portland cement, lead, and lime were the state's top nonfuel minerals. Collectively, these commodities accounted for almost 90% of all nonfuel mineral output, by value. However, while lead ranked third among the state's top nonfuel minerals, by value of production, Missouri was the top lead-producing state in the United States, accounting for over 50% of the nation's output. The state was also ranked (by value) in 2003 as first in the production of lime and in fire clay, third in zinc and fuller's earth, fifth in crushed stone and portland cement, and sixth in silver.

According to the preliminary data, crushed stone production in 2003 totaled 73.3 million metric tons and was valued at \$381 million, while portland cement output that year totaled 5 million metric tons and was valued at \$350 million. Construction sand and gravel production in 2003 totaled 10.2 million metric tons and was valued at \$43.4 million, while fire clay output stood at 340,000 metric tons, and had a value of \$7.36 million, according to the USGS data.

In 2003, Missouri was also an important producer of construction and industrial sand and gravel, common clays, masonry cement, and by value, gemstones.

28 ENERGY AND POWER

As of 2003, Missouri had 137 electrical power service providers, of which 88 were publicly owned and 44 were cooperatives. Of the remainder, four were investor owned, and one was an owner of an independent generator that sold directly to customers. As of that same year there were 2,918,563 retail customers. Of that total, 1,858,353 received their power from investor-owned service providers. Cooperatives accounted for 665,489 customers, while publicly owned providers had 394,720 customers. There was only one independent generator or "facility" customer.

Total net summer generating capability by the state's electrical generating plants in 2003 stood at 19,976 million kW, with total production that same year at 87.225 billion kWh. Of the total amount generated, 98.7% came from electric utilities, with the remainder coming from independent producers and combined heat and power service providers. The largest portion of all electric power generated, 74.211 billion kWh (85.1%), came from coal-fired plants, with nuclear plants in second place at 9.699 billion kWh (11.1%) and natural gas fueled plants in third at 2.624 billion kWh (3%). Other renewable power sources, hydroelectric and petroleum fueled plants accounting for the remainder.

As of 2006, Missouri had one operating nuclear power facility, the Callaway plant located in Callaway County.

Fossil fuel resources are limited. Reserves of bituminous coal totaled 6 billion short tons in 1998, but only a small portion (3 million short tons) was considered recoverable. In 2004, the state had three producing coal mines, all of them surface operations. Coal production that year totaled 578,000 short tons, up from 533,000 short tons in 2003. One short ton equals 2,000 lb (0.907 metric tons).

Small quantities of crude petroleum are also produced commercially. As of 2004, Missouri had proven crude oil reserves of less than 1% of all proven US reserves, while output that same year averaged 241 barrels per day. Including federal offshore domains, the state that year ranked 30th (29th excluding federal offshore) in production among the 31 producing states. In 2004 Missouri had 271 producing oil wells. There are no refineries in Missouri.

As of 2004, Missouri had no proven reserves or production of natural gas.

29 INDUSTRY

According to the US Census Bureau's Annual Survey of Manufactures (ASM) for 2004, Missouri's manufacturing sector covered some 20 product subsectors. The shipment value of all products manufactured in the state that same year was \$102.803 billion. Of that total, transportation equipment manufacturing accounted for the largest share at \$33.158 billion. It was followed by food manufacturing at \$14.572 billion; chemical manufacturing at \$13.137 billion; machinery manufacturing at \$6.219 billion; and fabricated metal product manufacturing at \$5.226 billion.

In 2004, a total of 302,906 people in Missouri were employed in the state's manufacturing sector, according to the ASM. Of that total, 228,857 were actual production workers. In terms of total employment, the transportation equipment manufacturing industry accounted for the largest portion of all manufacturing employees with 55,659 (46,554 actual production workers). It was followed by food manufacturing, with 37,306 (29,642 actual production

workers); machinery manufacturing, with 32,513 (21,676 actual production workers); fabricated metal product manufacturing, with 31,053 (22,690 actual production workers); and plastics and rubber products manufacturing, with 20,539 (15,510 actual production workers).

ASM data for 2004 showed that Missouri's manufacturing sector paid \$12.706 billion in wages. Of that amount, the transportation equipment manufacturing sector accounted for the largest share at \$3.453 billion. It was followed by machinery manufacturing at \$1.307 billion; food manufacturing at \$1.190 billion; fabricated metal product manufacturing at \$1.183 billion; and chemical manufacturing at \$798.137 billion.

30 COMMERCE

Missouri has been one of the nation's leading trade centers ever since merchants in Independence (now part of the Kansas City metropolitan area) began provisioning wagon trains for the Santa Fe Trail.

According to the 2002 Census of Wholesale Trade, Missouri's wholesale trade sector had sales that year totaling \$95.6 billion from 8,491 establishments. Wholesalers of durable goods accounted for 5,019 establishments, followed by nondurable goods wholesalers at 2,697 and electronic markets, agents, and brokers accounting for 775 establishments. Sales by durable goods wholesalers in 2002 totaled \$37.8 billion, while wholesalers of nondurable goods saw sales of \$47.1 billion. Electronic markets, agents, and brokers in the wholesale trade industry had sales of \$10.6 billion.

In the 2002 Census of Retail Trade, Missouri was listed as having 23,837 retail establishments with sales of \$61.8 billion. The leading types of retail businesses by number of establishments were: motor vehicle and motor vehicle parts dealers (3,160); gasoline stations (3,136); miscellaneous store retailers (2,825); and clothing and clothing accessories stores (2,665). In terms of sales, motor vehicle and motor vehicle parts stores accounted for the largest share of retail sales at \$16.6 billion, followed by general merchandise stores at \$10.3 billion; food and beverage stores at \$7.1 billion; gasoline stations at \$6.8 billion; and building material/garden equipment and supplies dealers at \$5.3 billion. A total of 311,593 people were employed by the retail sector in Missouri that year.

Foreign exports of Missouri products exceeded \$10.4 billion in 2005.

31 CONSUMER PROTECTION

The Missouri Department of Insurance handles consumer complaints related to insurance matters. The office has a consumer services division that accepts complaints regarding violations of state insurance laws and regulations, unfair claim practices, advertising, and mandated benefits, policy language, and offers. The Attorney General's office has a Consumer Protection Division which investigates and prosecutes allegations of fraud in connection with the sale or offer for sale (advertising) of goods and services. The Office of the Public Counsel represents utility consumers in proceedings before and appeals from the Missouri Public Service Commission (PSC), which regulates the rates and services of utilities.

When dealing with consumer protection issues, the state Attorney General's Office can initiate civil and criminal proceedings;

represent the state before state and federal regulatory agencies; administer consumer protection and education programs; handle consumer complaints; and exercise broad subpoena powers. In antitrust actions, the Attorney General's Office can act on behalf of those consumers who are incapable of acting on their own; initiate damage actions on behalf of the state in state courts; and initiate criminal proceedings. However, the office cannot represent counties, cities and other governmental entities in recovering civil damages under state or federal law.

3² BANKING

The first banks in Missouri, the Bank of St. Louis (established in 1816) and the Bank of Missouri (1817), had both failed by the time Missouri became a state, and the paper notes they had distributed proved worthless. Not until 1837 did the Missouri state government again permit a bank within its borders, and then only after filling its charter with elaborate restrictions. The Bank of Missouri, chartered for 20 years, kept its reputation for sound banking by issuing notes bearing the portrait of US Senator Thomas Hart Benton, nicknamed "Old Bullion" because of his extreme fiscal conservatism.

As of June 2005, Missouri had 372 insured banks, savings and loans, and saving banks, plus 157 state-chartered and 14 federally chartered credit unions (CUs). Excluding the CUs, the St. Louis market area accounted for the largest portion of the state's bank deposits in 2004 at \$48.005 billion, while it ranked second in the number of financial institutions at 138. The Kansas City market area had the most financial institutions at 152, but ranked second in deposits at \$32.593 billion. As of June 2005, CUs accounted for 8.2% of all assets held by all financial institutions in the state, or some \$8.372 billion. Banks, savings and loans, and savings banks collectively accounted for the remaining 91.8% or \$94.030 billion in assets held.

In 2004, the median past-due/nonaccrual loan level as a percentage of total loans stood at 1.37%, down from 1.66% in 2003, although in the fourth quarter 2005, the level rose to 1.59%. For the year 2004, the median net interest margin (the difference between the lower rates offered to savers and the higher rates charged on loans) stood at 4.01%, up from 3.93% in 2003. In fourth quarter 2005, the median NIM rate was 4.07%.

Regulation of state-chartered financial institutions is the responsibility of the Department of Development's Division of Finance.

3³ INSURANCE

In 2004, there were over 3.5 million individual life insurance policies in force with a total value of over \$242.9 billion; total value for all categories of life insurance (individual, group, and credit) was about \$420 billion. The average coverage amount is \$67,600 per policy holder. Death benefits paid that year totaled \$1.2 billion.

In 2003, 36 life and insurance companies were domiciled in Missouri, as were 49 property and casualty insurance companies. Direct premiums for property and casualty insurance in Missouri totaled \$8.7 billion in 2001. That year, there were 22,397 flood insurance policies in force in the state, with a total value of \$2.6 billion. About \$484 million of coverage was held through FAIR plans, which are designed to offer coverage for some natural circumstances, such as wind and hail, in high risk areas.

In 2004, 56% of state residents held employment-based health insurance policies, 5% held individual policies, and 26% were covered under Medicare and Medicaid; 12% of residents were uninsured. In 2003, employee contributions for employment-based health coverage averaged at 17% for single coverage and 25% for family coverage. The state offers a nine-month health benefits expansion program for small-firm employees in connection with the Consolidated Omnibus Budget Reconciliation Act (COBRA, 1986), a health insurance program for those who lose employment-based coverage due to termination or reduction of work hours.

In 2003, there were over 3.8 million auto insurance policies in effect for private passenger cars. Required minimum coverage includes bodily injury liability of up to \$25,000 per individual and \$50,000 for all persons injured in an accident, as well as property damage liability of \$10,000. Uninsured motorist coverage is also mandatory. In 2003, the average expenditure per vehicle for insurance coverage was \$701.67.

3⁴ SECURITIES

The Missouri Uniform Securities Act, also known as the "Blue Sky Law" and administered by the Securities Division of the Office of Secretary of State, requires the registration of stocks, bonds, debentures, notes, investment contracts, and oil, gas, and mining interests intended for sale in the state. In cases of fraud, misrepresentation, or other failure to comply with the act, the Missouri investor has the right to sue to recover the investment, plus interest, costs, and attorney fees. Government securities, mutual funds, stocks listed on the principal national exchanges, and securities sold under specific transactional agreements are exempt from registration.

In 2005, there were 1,580 personal financial advisers employed in the state and 5,130 securities, commodities, and financial services sales agents. In 2004, there were over 117 publicly traded companies within the state, with over 40 NASDAQ companies, 50 NYSE listings, and 5 AMEX listings. In 2006, the state had ten Fortune 500 companies; Emerson Electric (based in St. Louis) ranked first in the state and 126th in the nation with revenues of over \$17.3 billion, followed by Express Scripts in Maryland Hts. and Anheuser-Busch, Ameren, and Monsanto in St. Louis. Express Scripts is listed with NASDAQ; the other four companies are listed on the NYSE.

3⁵ PUBLIC FINANCE

The Missouri state budget is prepared by the Office of Administration's Division of Budget and Planning and submitted annually by the governor to the General Assembly for amendment and approval. The fiscal year runs from 1 July to 30 June. Missouri's constitutional revenue and spending limit provides that over time, the growth in state revenues and spending cannot exceed the growth in Missouri personal income.

Fiscal year 2006 general funds were estimated at \$7.5 billion for resources and \$7.1 billion for expenditures. In fiscal year 2004, federal government grants to Missouri were \$8.7 billion

In the fiscal year 2007 federal budget, Missouri was slated to receive \$96.6 million for exterior repairs, hazardous material abatement, and modernization efforts at the Richard Bolling Federal

Building in Kansas City; \$25.8 million to replace an operating suite at a veterans' hospital in Columbia; and \$7 million for a veterans' medical care center renovation and national cemetery expansion in St. Louis.

3⁶TAXATION

In 2005, Missouri collected \$9,544 million in tax revenues or \$1,645 per capita, which placed it 46th among the 50 states in per capita tax burden. The national average was \$2,192 per capita. Property taxes accounted for 0.2% of the total, sales taxes 31.8%,

selective sales taxes 16.4%, individual income taxes 42.1%, corporate income taxes 2.3%, and other taxes 7.2%.

As of 1 January 2006, Missouri had 10 individual income tax brackets ranging from 1.5% to 6.0%. The state taxes corporations at a flat rate of 6.25%.

In 2004, state and local property taxes amounted to \$4,304,387,000 or \$747 per capita. The per capita amount ranks the state 37th highest nationally. Local governments collected \$4,281,624,000 of the total and the state government \$22,763,000.

Missouri taxes retail sales at a rate of 4.225%. In addition to the state tax, local taxes on retail sales can reach as much as 4.5%, making for a potential total tax on retail sales of 8.725%. Food purchased for consumption off-premises is taxable, but at lower rate. The tax on cigarettes is 17 cents per pack, which ranks 50th among the 50 states and the District of Columbia. Missouri taxes gasoline at 17.55 cents per gallon. This is in addition to the 18.4 cents per gallon federal tax on gasoline.

According to the Tax Foundation, for every federal tax dollar sent to Washington in 2004, Missouri citizens received \$1.29 in federal spending.

3⁷ECONOMIC POLICY

Primary responsibility for economic development is vested in the Department of Economic Development (DED). Its Enterprise Zone Program provides a variety of tax credits, exemptions, and other incentives to businesses that locate in designated areas. The division also offers grants, information, technical aid, and other public resources to foster local and regional development. Special programs are provided for the Ozarks region and to rehabilitate urban neighborhoods. Agencies affiliated with the DED include: the Division of Business and Community Services; the Division of Credit Unions; the Division of Finance; the Division of Tourism; the Missouri Arts Council; the Missouri Housing Development Commission; the Missouri Development Finance Board; and the Division of Workforce Development.

3⁸HEALTH

The infant mortality rate in October 2005 was estimated at 7.6 per 1,000 live births. The birth rate in 2003 was 13.5 per 1,000 population. The abortion rate stood at 6.6 per 1,000 women in 2000. In 2003, about 88.4% of pregnant woman received prenatal care beginning in the first trimester. In 2004, approximately 82% of children received routine immunizations before the age of three.

The crude death rate in 2003 was 9.7 deaths per 1,000 population. As of 2002, the death rates for major causes of death (per 100,000 resident population) were: heart disease, 294.5; cancer, 217.2; cerebrovascular diseases, 68.5; chronic lower respiratory diseases, 50.5; and diabetes, 28.6. The mortality rate from HIV infection was 2.2 per 100,000 population. In 2004, the reported AIDS case rate was at about 6.8 per 100,000 population. In 2002, about 58.4% of the population was considered overweight or obese. As of 2004, about 24.1% of state residents were smokers.

In 2003, Missouri had 119 community hospitals with about 19,300 beds. There were about 831,000 patient admissions that year and 15.7 million outpatient visits. The average daily inpatient census was about 11,900 patients. The average cost per day for hospital care was \$1,403. Also in 2003, there were about 534 certified nursing facilities in the state with 54,415 beds and an over-

SOURCE: U.S. Census Bureau, Governments Division, 2004 Survey of State Government Finances, January 2006.

all occupancy rate of about 68.6%. In 2004, it was estimated that about 64% of all state residents had received some type of dental care within the year. Missouri had 241 physicians per 100,000 resident population in 2003 and 940 nurses per 100,000 in 2004.

In 2005, the Barnes-Jewish Hospital of Washington University ranked sixth on the Honor Roll of Best Hospitals 2005 by *U.S. News & World Report*. In the same report, it ranked ninth for best care in heart disease and heart surgery.

About 26% of state residents were enrolled in Medicaid and Medicare programs in 2004. Approximately 12% of the state population was uninsured in 2004. In 2003, state health care expenditures totaled \$7.7 million.

3⁹ SOCIAL WELFARE

In 2004, about 166,000 people received unemployment benefits, with the average weekly unemployment benefit at \$205. In fiscal year 2005, the estimated average monthly participation in the food stamp program included about 766,425 persons (298,380 households); the average monthly benefit was about \$80 per person, the second-lowest average payment in the nation (above Wisconsin). That year, the total of benefits paid through the state for the food stamp program was about \$735.7 million.

Temporary Assistance for Needy Families (TANF), the system of federal welfare assistance that officially replaced Aid to Families with Dependent Children (AFDC) in 1997, was reauthorized through the Deficit Reduction Act of 2005. TANF is funded through federal block grants that are divided among the states based on an equation involving the number of recipients in each state. Missouri's TANF program is called Beyond Welfare. In 2004, the state program had 100,000 recipients; state and federal expenditures on this TANF program totaled \$130 million in fiscal year 2003.

In December 2004, Social Security benefits were paid to 1,046,110 Missouri residents. This number included 642,970 retired workers, 102,730 widows and widowers, 153,570 disabled workers, 54,680 spouses, and 92,160 children. Social Security beneficiaries represented 18.2% of the total state population and 93.9% of the state's population age 65 and older. Retired workers received an average monthly payment of \$944; widows and widowers, \$891; disabled workers, \$872; and spouses, \$469. Payments for children of retired workers averaged \$477 per month; children of deceased workers, \$619; and children of disabled workers, \$254. Federal Supplemental Security Income payments in December 2004 went to 116,131 Missouri residents, averaging \$386 a month. An additional \$2.2 million of state-administered supplemental payments were distributed to 8,865 residents.

4⁰ HOUSING

In 2004, Missouri had an estimated 2,564,340 housing units, of which 2,309,205 were occupied; 70.8% were owner-occupied. About 69.3% of all units were single-family, detached homes. Utility gas and electricity were the most common energy sources for heating. It was estimated that 89,522 units lacked telephone services, 11,971 lacked complete plumbing facilities, and 12,264 lacked complete kitchen facilities. The average household had 2.42 members.

In 2004, 32,800 new privately owned units were authorized for construction. The median home value was \$117,033. The median

monthly cost for mortgage owners was \$954. Renters paid a median of \$567 per month. In September 2005, the state received a grant of \$360,898 from the US Department of Housing and Urban Development (HUD) for rural housing and economic development programs. For 2006, HUD allocated to the state over \$24.2 million in community development block grants.

The Missouri Housing Development Commission of the Department of Economic Development is empowered to make and insure loans to encourage the construction of residential housing for persons of low or moderate income; funds for mortgage financing are provided through the sale of tax-exempt notes and bonds issued by the commission. Construction of multi-unit public housing stagnated during the 1970s. In 1972, municipal authorities ordered the demolition of two apartment buildings in St. Louis's Pruitt-Igoe public housing complex, built 18 years earlier and regarded by many commentators as a classic case of the failure of such high-rise projects to offer a livable environment; the site remained vacant in the early 1980s. Only 5.5% of St. Louis's housing units in 1990 had been built during the 1980s; during the 1970s, many units were abandoned.

4¹ EDUCATION

Although the constitution of 1820 provided for the establishment of public schools, it was not until 1839 that the state's public school system became a reality through legislation creating the office of state superintendent of common schools and establishing a permanent school fund. Missouri schools were officially segregated from 1875 to 1954, when the US Supreme Court issued its landmark ruling in *Brown v. Board of Education*; the state's school segregation law was not taken off the books until 1976. In that year, nearly 37% of all black students were in schools that were 99–100% black, a condition fostered by the high concentration of black Missourians in the state's two largest cities. In 1983, a desegregation plan was adopted for St. Louis-area public schools that called for 3,000 black students to be transferred from city to county schools.

In 2004, 87.9% of all Missourians 25 years of age or older were high school graduates, and 28.1% had obtained bachelor's degrees or higher. The total enrollment for fall 2002 in Missouri's public schools stood at 924,000. Of these, 653,000 attended schools from kindergarten through grade eight, and 272,000 attended high school. Approximately 77.7% of the students were white, 18% were black, 2.6% were Hispanic, 1.4% were Asian/Pacific Islander, and 0.4% were American Indian/Alaskan Native. Total enrollment was estimated at 917,000 in fall 2003 and expected to be 910,000 by fall 2014, a decline of 1.6% during the period 2002–14. In fall 2003, there were 119,812 students enrolled in private schools. Expenditures for public education in 2003/04 were estimated at \$7.8 billion. Since 1969, the National Assessment of Educational Progress (NAEP) has tested public school students nationwide. The resulting report, *The Nation's Report Card*, stated that in 2005, eighth graders in Missouri scored 276 out of 500 in mathematics, compared with the national average of 278.

As of fall 2002, there were 348,146 students enrolled in college or graduate school; minority students comprised 16.5% of total postsecondary enrollment. As of 2005, Missouri had 123 degree-granting institutions including, 14 public 4-year schools, 20 public 2-year schools, and 54 nonprofit private 4-year schools. The Uni-

versity of Missouri, established in 1839, was the first state-supported university west of the Mississippi River. It has four campuses: Columbia (site of the world's oldest and one of the best-known journalism schools), Kansas City, Rolla, and St. Louis. The Rolla campus, originally founded in 1870 as a mining and engineering school, is still one of the nation's leading universities specializing in technology.

Lincoln University, a public university for blacks until segregation ended in 1954, is located in Jefferson City. There are five regional state universities, at Warrensburg, Maryville, Cape Girardeau, Springfield, and Kirksville, and three state colleges, at St. Louis, St. Joseph, and Joplin. Two leading independent universities, Washington and St. Louis, are located in St. Louis, as is the Concordia Seminary, an affiliate of the Lutheran Church–Missouri Synod and the center of much theological and political controversy during the 1970s. The Department of Higher Education offers grants and guaranteed loans to Missouri students.

42 ARTS

The Missouri Arts Council is a state agency consisting of 15 citizens directly appointed by the director of the Department of Economic Development. In 2005, Missouri arts organizations received 34 grants totaling \$2,251,800 from the National Endowment for the Arts. In 1994, the Missouri General Assembly established the Missouri Cultural Trust, a state endowment for the arts, with the goal of building it into a \$200 million operational endowment in 10 years. The Trust was one of only a few such trusts in the nation, and the only one that received dedicated annual tax revenues. In 2006, the Missouri Arts Council canceled its Capital Incentive Program associated with the Cultural Trust due to insufficient funding. In effect, it was projected that the trust fund would hold only \$35,000 by June 2007.

The Missouri Humanities Council (MHC) was founded to provide opportunities for families and communities to broaden their appreciation for subjects such as history and literature. The MHC sponsors "Chautauqua" an annual weeklong summer history festival on various themes and in 2006 the council launched its "Young Chautauqua" program. The festival is generally in a different community each year. In 2005, the National Endowment for the Humanities contributed \$1,947,100 for 15 state programs.

Theatrical performances are offered throughout the state, mostly during the summer. In Kansas City, productions of Broadway musicals and light opera are staged at the Starlight Theater, which seats 7,860 in an open-air setting. The Missouri Repertory Theater or Kansas City Repertory Theater, on the University of Missouri campus in Kansas City, also has a summer season. As of 2006, construction of a new downtown theater was still in process. The new theater was expected to house about 320 people, creating a smaller and more intimate performance space option. In 2006, the Kansas City Repertory Theater announced that their new downtown theater would be named Copaken Stage; the first performance was scheduled to take place in winter 2007. In St. Louis, the 12,000-seat Municipal Opera puts on outdoor musicals, while the Goldenrod, built in 1909 and said to be the largest showboat ever constructed (seating capacity 289), is used today for vaudeville, melodrama, and ragtime shows. Other notable playhouses are the 8,000-seat Riverfront Amphitheater in Hannibal, and the 344-seat Lyceum Theater in Arrow Rock (population 89).

Leading orchestras are the St. Louis Symphony and Kansas City Symphony; Independence, Liberty, Columbia, Kirksville, St. Joseph, and Springfield also have orchestras. The Opera Theatre of St. Louis and the Lyric Opera of Kansas City are distinguished musical organizations. In 2000, the Opera Theatre of St. Louis was one of only two US opera companies to receive a grant from the Ford Foundation. The Ford Foundation grant totaled \$1.5 million, to be matched 4 to 1 over the next five years. Springfield has a regional opera company.

Between World Wars I and II, Kansas City was the home of a thriving jazz community that included Charlie Parker and Lester Young; leading bandleaders of that time were Benny Moten, Walter Page, and, later, Count Basie. Country music predominates in rural Missouri in places like the Ozark Opry at Osage Beach. The city of Branson is center to numerous live music and performance shows. As of 2006 there were 40 performing venues in Branson, with over 100 shows.

43 LIBRARIES AND MUSEUMS

For the fiscal year ending in June 2001, Missouri had 150 public library systems, with a total of 363 libraries, of which 216 were branches. In that same year, the state's public libraries had 18,716,000 volumes of books and serial publications on their shelves, with a combined total circulation of 38,767,000. The system also had 674,000 audio and 413,000 video items, 17,000 electronic format items (CD-ROMs, magnetic tapes, and disks), and 30 bookmobiles. The Missouri State Library, in Jefferson City, is the center of the state's interlibrary loan network. It also serves as the only public library for the population who live in areas without public libraries; it has 79,761 books. The largest public library systems, those of Kansas City and St. Louis County, had 1,204,992 and 2,777,056 volumes, respectively; the public library system of the city of St. Louis had 2,505,182 in 15 branches. The University of Missouri-Columbia has the leading academic library, with 2,850,747 volumes in 1998. The State Historical Society of Missouri Library in Columbia contains 453,000 volumes. The federally-administered Harry S. Truman Library and Museum is at Independence. In fiscal year 2001, operating income for the state's public libraries came to \$153,728,000 and included \$1,888,000 in federal grants and \$3,954,000 in state grants.

Missouri has well over 162 museums and historic sites. The William Rockhill Nelson Gallery/Atkins Museum of Fine Arts in Kansas City and the St. Louis Art Museum each house distinguished general collections, while the Springfield Art Museum specializes in American sculpture, paintings, and relics of the westward movement. The Mark Twain Home and Museum in Hannibal has a collection of manuscripts and other memorabilia. Also notable are the Museum of Art and Archaeology, Columbia; the Kansas City Museum of History and Science; the Pony Express Stables Museum, St. Joseph; and the Jefferson National Expansion Memorial, Missouri Botanical Garden, St. Louis Center Museum of Science and Natural History and McDonnell Planetarium, National Museum of Transport, and a zoo, all in St. Louis. Kansas City, Springfield, and Eldon also have zoos.

44 COMMUNICATIONS

In 1858, John Hockaday began weekly mail service by stagecoach between Independence and Salt Lake City, and John Butterfield,

with a \$600,000 annual appropriation from Congress, established semi-monthly mail transportation by coach and rail from St. Louis to San Francisco. On 3 April 1860, the Pony Express was launched, picking up mail arriving by train at St. Joseph and racing it westward on horseback; the system ceased in October 1861, when the Pacific Telegraph Co. began operations. The first experiment in airmail service took place at St. Louis in 1911; Charles Lindbergh was an airmail pilot on the St. Louis-Chicago route in 1926.

As of 2004, Missouri had approximately 93.7% of all state residences had telephone service. Additionally, by June of that same year there were 2,859,953 mobile wireless telephone subscribers. In 2003, 60.7% of Missouri households had a computer and 53.0% had Internet access. By June 2005, there were 710,812 high-speed lines in Missouri, 653,590 residential and 57,222 for business.

Radio broadcasting in Missouri dates from 1921, when a station at St. Louis University began experimental programming. On Christmas Eve 1922, the first midnight Mass ever to be put on the air was broadcast from the Old Cathedral in St. Louis. The voice of a US president was heard over the air for the first time on 21 June 1923, when Warren G. Harding gave a speech in St. Louis. FM broadcasting began in Missouri during 1948. As of 2005 there were 36 major commercial AM stations and 97 major FM stations in service. Missouri's first television station, KSD-TV in St. Louis, began in 1947, with WDAF-TV in Kansas City following in 1949. As of 2005, Missouri had 25 major television stations. The St. Louis area had 1,114,370 television households, and only 56% of those received cable (one of the lowest penetration rates of all cities) in 1999. Kansas City had a 65% penetration rate in 802,580 television households in that same year.

A total of 84,512 Internet domain names had been registered in Missouri as of 2000.

45 PRESS

The *Missouri Gazette*, published in St. Louis in 1808 by the politically independent and controversial Joseph Charless, was the state's first newspaper; issued to 174 subscribers, the paper was partly in French. In 1815, a group of Charless's enemies raised funds to establish a rival paper, the *Western Journal*, and brought in Joshua Norvell from Nashville to edit it. By 1820 there were five newspapers in Missouri.

Since that time, many Missouri newspapermen have achieved national recognition. The best known is Samuel Clemens (later Mark Twain), who started out as a "printer's devil" in Hannibal at the age of 13. Hungarian-born Joseph Pulitzer began his journalistic career in 1868 as a reporter for a German-language daily in St. Louis. Pulitzer created the *St. Louis Post-Dispatch* from the merger of two defunct newspapers in 1878, endowed the Columbia University School of Journalism in New York City, and established by bequest the Pulitzer Prizes, which annually honor journalistic and artistic achievement.

The following table shows Missouri's leading dailies with their approximate 2005 circulations:

AREA	NAME	DAILY	SUNDAY
Kansas City	<i>Kansas City Star</i> (m,S)	275,747	388,425
St. Louis	<i>St. Louis Post-Dispatch</i> (m,S)	286,310	449,845

Periodicals include the St. Louis-based *Sporting News*, the bi-monthly "bible" of baseball fans; *VFW Magazine*, put out month-

ly in Kansas City by the Veterans of Foreign Wars; and the *Missouri Historical View*, a quarterly with offices in Columbia. As of 2005 there were 13 morning newspapers, 29 evening dailies, and 23 Sunday papers.

46 ORGANIZATIONS

In 2006, there were over 7,460 nonprofit organizations registered within the state, of which about 4,647 were registered as charitable, educational, or religious organizations.

Among the national and international organizations with headquarters in Kansas City are the Veterans of Foreign Wars of the USA, the American Gulf War Veterans Association, Camp Fire USA., People-to-People International, the American Academy of Family Physicians, the American Business Women's Association, the American Nurses Association, the Fellowship of Christian Athletes, the National Association of Intercollegiate Athletics, the American Humor Studies Association, and Professional Secretaries International.

Headquartered in St. Louis are the American Association of Orthodontists, the American Optometric Association, the Catholic Health Association of the United States, the Danforth Foundation, the International Consumer Credit Association, National Garden Clubs, and the National Hairdressers and Cosmetologists Association. Children International and DeMolay International are based in Kansas City. Two major religious organizations based in the state are the Baptist Bible Fellowship International and the Gospel Missionary Union. The General Society, Sons of the Revolution is based in Independence.

State culture is represented in part by the Kansas City Barbeque Society and the Scott Joplin International Ragtime Foundation, both of which have national memberships. The Negro Leagues Baseball Museum is located in Kansas City. The Missouri Arts Council is based in St. Louis.

Other organizations include the Accrediting Council on Education in Journalism and Mass Communications (Columbia), the National Christmas Tree Association (St. Louis), and the American Cat Fanciers Association (Branson).

47 TOURISM, TRAVEL, AND RECREATION

In 2004, the state hosted some 37.7 million domestic travelers, an all-time high, with 69% of all visitors coming from out-of-state. About 42% of all visitors came to visit family or friends. Of those traveling strictly for leisure activities, shopping was the major attraction. Total travel revenues were \$8.3 billion and the industry supported over 284,916 jobs. The most popular vacation areas are the St. Louis region (40% of all visits) and the Kansas City area (23%).

The principal attraction in St. Louis is the Gateway Arch, at 630 feet (192 meters) the tallest man-made national monument in the United States. Designed by Eero Saarinen in 1948 but not constructed until three years after his death in 1964, the arch and the Museum of Westward Expansion form part of the Jefferson National Expansion Memorial on the western shore of the Mississippi River.

In the Kansas City area are the modern Crown Center hotels and shopping plaza, Country Club Plaza, the Truman Sports Complex, Ft. Osage near Sibley, Jesse James's birthplace near Excelsior Springs, and Harry Truman's hometown of Independence, where

his presidential library and museum are housed. Memorabilia of Mark Twain are housed in and around Hannibal in the northeast, and the birthplace and childhood home of George Washington Carver, a national monument, is in Diamond.

The Lake of the Ozarks, with 1,375 mi (2,213 km) of shoreline, is one of the most popular vacation spots in mid-America. Other attractions are the Silver Dollar City handicrafts center near Branson; the Pony Express Stables and Museum at St. Joseph; Wilson's Creek National Battlefield at Republic, site of a Confederate victory in the Civil War; and the "Big Springs Country" of the Ozarks, in the southeast. The state fair is held in Sedalia each August. The city of Gallatin contains the history of the famous outlaw Jesse James and his gang. Walt Disney modeled his rendition of Main Street, Disneyland, after his hometown of Marcelline.

Missouri has 27 state parks. Operated by the Department of Natural Resources, they offer camping, picnicking, swimming, boating, fishing, and hiking facilities. Lake of the Ozarks State Park is the largest, covering 16,872 acres (6,828 hectares). Branson hosts a musical resort and theater which attracts many visitors. There are also 27 historic sites; state parks and historic sites cover 105,000 acres (43,050 hectares). Hunting and fishing are popular recreational activities in state parks.

48 SPORTS

There are six major professional sports teams in Missouri: the Kansas City Royals and St. Louis Cardinals of Major League Baseball; the Kansas City Chiefs and St. Louis Rams of the National Football League; the St. Louis Blues of the National Hockey League; and the Kansas City Wizards of Major League Soccer.

The Cardinals won the World Series in 1926, 1931, 1934, 1942, 1944, 1946, 1964, 1967, and 1982. The Royals have won the World Series once, in 1985, against their cross-state rivals, the St. Louis Cardinals. The Chiefs appeared in Super Bowl I in 1967, losing to the Green Bay Packers. They won the Super Bowl in their next appearance, in 1970. The Rams moved to St. Louis from Los Angeles after the 1994 season and now play in the 66,000-seat Edward Jones Dome, which opened in 1995. They won the Super Bowl in 2000 with a dramatic 23–16 victory over the Tennessee Titans.

Horse racing has a long history in Missouri. In 1812, St. Charles County sportsmen held two-day horse races; by the 1820s, racetracks were laid out in nearly every city and in crossroads villages.

In collegiate sports, the University of Missouri competes in the Big Twelve Conference.

49 FAMOUS MISSOURIANS

Harry S Truman (1884–1972) has been the only native-born Missourian to serve as US president or vice president. Elected US senator in 1932, Truman became Franklin D. Roosevelt's vice-presidential running mate in 1944 and succeeded to the presidency upon Roosevelt's death on 12 April 1945. The "man from Independence"—whose tenure in office spanned the end of World War II, the inauguration of the Marshall Plan to aid European economic recovery, and the beginning of the Korean conflict—was elected to the presidency in his own right in 1948, defeating Republican Thomas E. Dewey in one of the most surprising upsets in US political history. Charles Evans Whittaker (b.Kansas, 1901–73) was a federal district and appeals court judge in Missouri before his ap-

pointment as Supreme Court associate justice in 1957. Among the state's outstanding US military leaders are Generals John J. Pershing (1860–1948) and Omar Bradley (1893–1981).

Other notable federal officeholders from Missouri include Edward Bates (b.Virginia, 1793–1869), Abraham Lincoln's attorney general and the first cabinet official to be chosen from a state west of the Mississippi River; Montgomery Blair (b.Kentucky, 1813–83), postmaster general in Lincoln's cabinet; and Norman Jay Colman (b.New York, 1827–1911), the first secretary of agriculture. Missouri's best-known senator was Thomas Hart Benton (b.North Carolina, 1782–1858), who championed the interests of Missouri and the West for 30 years. Other well-known federal legislators include Francis P. Blair Jr. (b.Kentucky, 1821–75), antislavery congressman, pro-Union leader during the Civil War, and Democratic vice-presidential nominee in 1868; Benjamin Gratz Brown (b.Kentucky, 1826–85), senator from 1863 to 1867 and later governor of the state and Republican vice-presidential nominee (1872); Carl Schurz (b.Germany, 1829–1906), senator from 1869 to 1875 and subsequently US secretary of the interior, as well as a journalist and Union military leader; William H. Hatch (b.Kentucky, 1833–96), sponsor of much agricultural legislation as a US representative from 1879 to 1895; Richard P. Bland (b.Kentucky, 1835–99), leader of the free-silver bloc in the US House of Representatives; James Beauchamp "Champ" Clark (b.Kentucky, 1850–1921), speaker of the House from 1911 to 1919; W. Stuart Symington (b.Massachusetts, 1901–88), senator from 1953 to 1977 and earlier the nation's first secretary of the Air Force; and Thomas F. Eagleton (b.1929), senator since 1969 and, briefly, the Democratic vice-presidential nominee in 1972, until publicity about his having received electroshock treatment for depression forced him off the ticket. (Eagleton announced in 1984 that he would not seek reelection to the Senate in 1986.)

Outstanding figures in Missouri history included two pioneering fur traders: William Henry Ashley (b.Virginia, 1778–1838), who later became a US representative, and Manuel Lisa (b.Louisiana, 1772–1820), who helped establish trade relations with the Indians. Meriwether Lewis (b.Virginia, 1774–1809) and William Clark (b.Virginia, 1770–1838) explored Missouri and the West during 1804–6; Lewis later served as governor of Louisiana Territory, with headquarters at St. Louis, and Clark was governor of Missouri Territory from 1813 to 1821. Dred Scott (b.Virginia, 1795–1858), a slave owned by a Missourian, figured in a Supreme Court decision that set the stage for the Civil War. Missourians with unsavory reputations include such desperadoes as Jesse James (1847–82), his brother Frank (1843–1915), and Cole Younger (1844–1916), also a member of the James gang. Another well-known native was Kansas City's political boss, Thomas Joseph Pendergast (1872–1945), a power among Missouri Democrats until convicted of income tax evasion in 1939 and sent to Leavenworth prison.

Among notable Missouri educators were William Torrey Harris (b.Connecticut, 1835–1909), superintendent of St. Louis public schools, US commissioner of education, and an authority on Hegelian philosophy; James Milton Turney (1840–1915), who helped establish Lincoln University for blacks at Jefferson City; and Susan Elizabeth Blow (1843–1916), cofounder with Harris of the first US public kindergarten at St. Louis in 1873. Distinguished scientists include agricultural chemist George Washington Carver

(1864–1943), astronomers Harlow Shapley (1885–1972) and Edwin P. Hubble (1889–1953), Nobel Prize-winning nuclear physicist Arthur Holly Compton (b. Ohio, 1892–1962), and mathematician-cyberneticist Norbert Wiener (1894–1964). Engineer and inventor James Buchanan Eads (b. Indiana, 1820–87) supervised construction during 1867–74 of the St. Louis bridge that bears his name. Charles A. Lindbergh (b. Michigan 1902–74) was a pilot and aviation instructor in the St. Louis area during the 1920s before winning worldwide acclaim for his solo New York–Paris flight.

Prominent Missouri businessmen include brewer Adolphus Busch (b. Germany, 1839–1913); William Rockhill Nelson (b. Indiana, 1847–1915), who founded the *Kansas City Star* (1880); Joseph Pulitzer (b. Hungary, 1847–1911), who merged two failed newspapers to establish the *St. Louis Post-Dispatch* (1878) and later endowed the journalism and literary prizes that bear his name; and James Cash Penney (1875–1971), founder of the J. C. Penney Co. Noteworthy journalists from Missouri include newspaper and magazine editor William M. Reedy (1862–1920), newspaper reporter Herbert Bayard Swope (1882–1958), and television newscaster Walter Cronkite (b. 1916). Other distinguished Missourians include theologian Reinhold Niebuhr (1892–1971), civil rights leader Roy Wilkins (1901–81), and medical missionary Thomas Dooley (1927–61).

Missouri's most popular author is Mark Twain (Samuel Langhorne Clemens, 1835–1910), whose *Adventures of Tom Sawyer* (1876) and *Adventures of Huckleberry Finn* (1884) evoke his boyhood in Hannibal. Novelist Harold Bell Wright (b. New York, 1872–1944) wrote about the people of the Ozarks; Robert Heinlein (1907–88) is a noted writer of science fiction, and William S. Burroughs (1914–97) an experimental novelist. Poet-critic T(homas) S(tearns) Eliot (1888–1965), awarded the Nobel Prize for literature in 1948, was born in St. Louis but became a British subject in 1927. Other Missouri-born poets include Sara Teasdale (1884–1933), Marianne Moore (1887–1972), and Langston Hughes (1902–67). Popular novelist and playwright Rupert Hughes (1872–1956) was a Missouri native, as was Zoe Akins (1886–1958), a Pulitzer Prize-winning playwright.

Distinguished painters who lived in Missouri include George Caleb Bingham (b. Virginia, 1811–79), who also served in several state offices; James Carroll Beckwith (1852–1917); and Thomas Hart Benton (1889–1975), the grandnephew and namesake of the state's famous political leader. Among the state's important musicians are ragtime pianist-composers Scott Joplin (b. Texas, 1868–1917) and John William “Blind” Boone (1864–1927); W(illiam) C(hristopher) Handy (b. Alabama, 1873–1958), composer of “St. Louis Blues,” “Beale Street Blues,” and other classics; composer-critic Virgil Thomson (1896–1989), known for his operatic collaborations with Gertrude Stein; jazzman Coleman Hawkins (1907–69); and popular songwriter Burt Bacharach (b. 1929). Photographer Walker Evans (1903–75) was a St. Louis native.

Missouri-born entertainers include actors Wallace Beery, (1889–1949), Vincent Price (1911–93), and Edward Asner (b. 1929); actresses Jean Harlow (Harlean Carpenter, 1911–37), Jane Wyman (b. 1914), Betty Grable (1916–73), and Shelley Winters (1922–2006); dancers Sally Rand (1904–79) and Josephine Baker (1906–75); actress-dancer Ginger Rogers (1911–95); film director John Huston (1906–84); and opera stars Helen Traubel (1903–72), Gladys Swarthout (1904–69), and Grace Bumbry (b. 1937). In popular music, the state's most widely known singer-songwriter is Charles “Chuck” Berry (b. California, 1926), whose works had a powerful influence on the development of rock and roll.

St. Louis Cardinals stars who became Hall of Famers include Jerome Herman “Dizzy” Dean (b. Arkansas, 1911–74), Stanley Frank “Stan the Man” Musial (b. Pennsylvania, 1920), Robert “Bob” Gibson (b. Nebraska, 1935), and Louis “Lou” Brock (b. Arkansas, 1939). Among the native Missourians who achieved stardom in the sports world are baseball manager Charles Dillon “Casey” Stengel (1890–1975), catcher Lawrence Peter “Yogi” Berra (b. 1925), sportscaster Joe Garagiola (b. 1926), and golfer Tom Watson (b. 1949).

MONTANA

State of Montana

ORIGIN OF STATE NAME: Derived from the Latin word meaning “mountainous.” **NICKNAME:** The Treasure State. **CAPITAL:** Helena. **ENTERED UNION:** 8 November 1889 (41st). **SONG:** “Montana;” “Montana Melody.” **MOTTO:** *Oro y Plata* (Gold and silver). **FLAG:** A blue field, fringed in gold on the top and bottom borders, surrounds the center portion of the official seal, with “Montana” in gold letters above the coat of arms. **OFFICIAL SEAL:** In the lower center are a plow and a miner’s pick and shovel; mountains appear above them on the left, the Great Falls of the Missouri River on the right, and the state motto on a banner below. The words “The Great Seal of the State of Montana” surround the whole. **BIRD:** Western meadowlark. **FISH:** Black-spotted (cutthroat) trout. **FLOWER:** Bitterroot. **TREE:** Ponderosa pine. **GEM:** Yogo sapphire and Montana agate. **LEGAL HOLIDAYS:** New Year’s Day, 1 January; Birthday of Martin Luther King Jr., 3rd Monday in January; Presidents’ Day, 3rd Monday in February; Memorial Day, last Monday in May; Independence Day, 4 July; Labor Day, 1st Monday in September; Columbus Day, 2nd Monday in October; State Election Day, 1st Tuesday after the 1st Monday in November in even-numbered years; Veterans’ Day, 11 November; Thanksgiving Day, 4th Thursday in November; Christmas Day, 25 December. **TIME:** 5 AM MST = noon GMT.

¹ LOCATION, SIZE, AND EXTENT

Located in the northwestern United States, Montana is the largest of the 8 Rocky Mountain states and ranks fourth in size among the 50 states.

The total area of Montana is 147,046 sq mi (380,849 sq km), of which land takes up 145,388 sq mi (376,555 sq km) and inland water 1,658 sq mi (4,294 sq km). The state’s maximum e–w extension is 570 mi (917 km); its extreme n–s distance is 315 mi (507 km).

Montana is bordered on the n by the Canadian provinces of British Columbia, Alberta, and Saskatchewan; on the e by North Dakota and South Dakota; on the s by Wyoming and Idaho; and on the w by Idaho. The total boundary length of Montana is 1,947 mi (3,133 km). The state’s geographic center is in Fergus County, 12 mi (19 km) w of Lewistown. Nearly 30% of the state’s land belongs to the federal government.

² TOPOGRAPHY

Montana, as mountainous in parts as its name implies, has an approximate mean elevation of 3,400 ft (1,037 m). The Rocky Mountains cover the western two-fifths of the state, with the Bitterroot Range along the Idaho border; the high, gently rolling Great Plains occupy most of central and eastern Montana. The highest point in the state is Granite Peak, at an elevation of 12,799 ft (3,904 m), located in south-central Montana, near the Wyoming border. The lowest point, at 1,800 ft (549 m), is in the northwest, where the Kootenai River leaves the state at the Idaho border. The Continental Divide passes in a jagged pattern through the western part of the state, from the Lewis to the Bitterroot ranges.

Ft. Peck Reservoir is Montana’s largest body of inland water, covering 375 sq mi (971 sq km); Flathead Lake is the largest natural lake. The state’s most important rivers are the Missouri, rising in southwest Montana and Red Rock Creek and flowing north

and then east across the state, and the Yellowstone, which crosses southeastern Montana to join the Missouri in North Dakota near the Montana border. Located in Glacier National Park is the Triple Divide, from which Montana waters begin their journey to the Arctic and Pacific oceans and the Gulf of Mexico. The total length of the Missouri River is 2,540 mi (4,088 km); it is the longest river in the country.

³ CLIMATE

The Continental Divide separates the state into two distinct climatic regions: the west generally has a milder climate than the east, where winters can be especially harsh. Montana’s maximum daytime temperature averages 27°F (-2°C) in January and 85°F (29°C) in July. Great Falls has an average temperature of 45°F (7°C), ranging from 21°F (-6°C) in January to 69°F (21°C) in July. The all-time low temperature in the state, -70°F (-57°C), registered at Rogers Pass on 20 January 1954, is the lowest ever recorded in the conterminous US; the all-time high, 117°F (47°C), was set at Medicine Lake on 5 July 1937. During the winter, Chinook winds from the eastern Rocky Mountains can bring rapid temperature increases of 40–50°F within a few minutes. Great Falls receives an average annual precipitation of 15.3 in (38 cm), but much of north-central Montana is arid. About 59.1 in (150 cm) of snow descends on Great Falls each year.

⁴ FLORA AND FAUNA

Montana has three major life zones: subalpine, montane, and plains. The subalpine region, in the northern Rocky Mountains, is rich in wild flowers during a short midsummer growing season. The montane flora consists largely of coniferous forests, principally alpine fir, and a variety of shrubs. The plains are characterized by an abundance of grasses, cacti, and sagebrush species. Three

plant species were threatened as of April 2006: Ute ladies'-tresses, Spalding's catchfly, and water howellia.

Game animals of the state include elk, moose, white-tailed and mule deer, pronghorn antelope, bighorn sheep, and mountain goat. Notable among the amphibians is the axolotl; rattlesnakes and other reptiles occur in most of the state. Eleven species of animals (vertebrates and invertebrates) were listed as threatened or endangered in 2006 by the US Fish and Wildlife Service, including the grizzly bear, black-footed ferret, Eskimo curlew, two species of sturgeon, gray wolf, and whooping crane.

5 ENVIRONMENTAL PROTECTION

Montana's major environmental concerns are management of mineral and water resources and reclamation of strip-mined land. The 1973 Montana Resource Indemnity Trust Act, by 1975 amendment, imposes a coal severance tax of 30% on the contract sales price, with the proceeds placed in a permanent tax trust fund. This tax, in conjunction with the Montana Environmental Policy Act (1971) and the Major Facilities Siting Act (1973) reflects the determination of Montanans to protect the beauty of the Big Sky Country while maintaining economic momentum. The Water Quality Bureau of the Montana Department of Health and Environmental Sciences is responsible for managing the small number of state wetlands. In 2005, federal EPA grants awarded to the state included \$50,000 for wetland protection projects.

In 2003, 45.2 million lb of toxic chemicals were released in the state. In 2003, Montana had 71 hazardous waste sites listed in the US Environment Protection Agency (EPA) database, 14 of which were on the National Priorities List as of 2006. In 2005, the EPA spent over \$26.4 million through the Superfund program for the cleanup of hazardous waste sites in the state. The same year, the state received a federal EPA grant of \$10 million for projects to establish and maintain safe drinking water supplies.

6 POPULATION

Montana ranked 44th in population in the United States, with an estimated total of 935,670 in 2005, an increase of 3.7% since 2000. Between 1990 and 2000, Montana's population grew from 799,065 to 902,195, an increase of 12.9%. The population is projected to reach 999,489 by 2015 and 1.03 million by 2025. The population density in 2004 was 6.4 persons per sq mi, the third-lowest in the country (after Alaska and Wyoming). In 2004, the median age of all Montana residents was 39.6. In the same year, 22.5% of the populace was under the age of 18 while 13.7% was age 65 or older.

In 2004, the largest metropolitan area was Billings, with an estimated population of 144,472. The Missoula metropolitan area had an estimated population of 99,018 and the Great Falls area had a population of about 79,849.

7 ETHNIC GROUPS

According to the 2000 census, there were approximately 56,068 American Indians in Montana, of whom the Blackfeet and Crow are the most numerous. The Blackfeet and Crow reservations had populations of, respectively, 10,100 and 6,894 in 2000. In 2004, 6.4% of the population was American Indian.

The foreign born, numbering 16,396, made up 1.8% of Montana's 2000 Census population, a decrease of 24% since 1980. Canada, Germany, the United Kingdom, and Mexico were the lead-

ing places of origin. As of 2000, the black and Asian populations were just 2,692 and 4,691, respectively. In 2000, 18,081 residents were Hispanic or Latino, representing 2% of the total population. In 2004, 0.4% of the population was black, 0.5% Asian, 0.1% Pacific Islander, and 2.4% Hispanic or Latino. That year, 1.5% of the population reported origin of two or more races.

8 LANGUAGES

English in Montana fuses Northern and Midland features, the Northern proportion declining from east to west. Topography has given new meaning to *basin*, *hollow*, *meadow*, and *park* as kinds of clear spaces in the mountains.

In 2000, the number of Montanans who spoke only English at was 803,031, representing about 95% of the resident population five years of age or older. There was no change in the overall percentage of English speakers from 1990 to 2000.

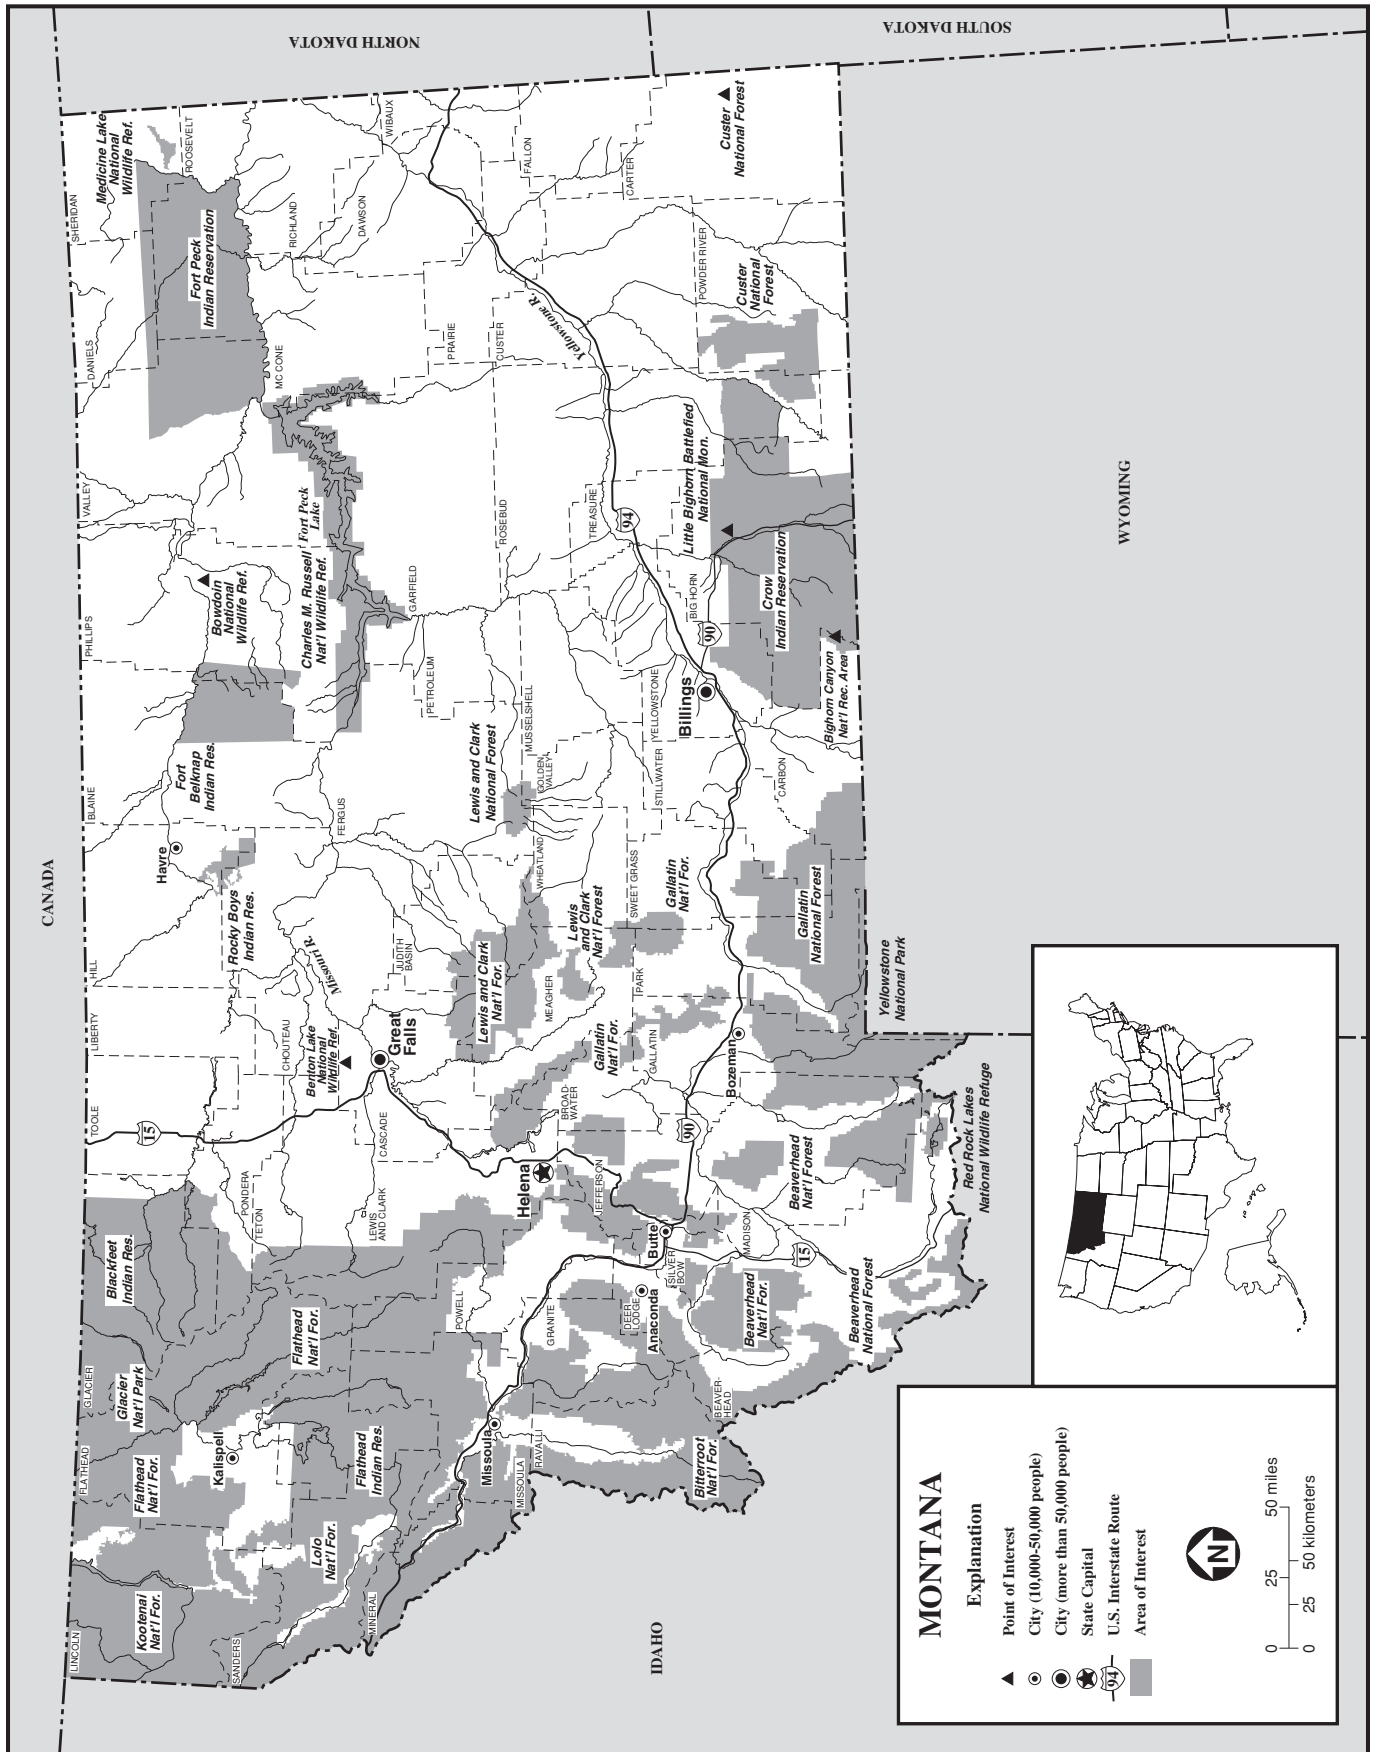

The following table gives selected statistics from the 2000 Census for language spoken at home by persons five years old and over. The category "Other Native North American languages" includes Apache, Cherokee, Choctaw, Dakota, Keres, Pima, and Yupik. The category "Scandinavian languages" includes Danish, Norwegian, and Swedish. The category "Other Slavic languages" includes Czech, Slovak, and Ukrainian.

LANGUAGE	NUMBER	PERCENT
Population 5 years and over	847,362	100.0
Speak only English	803,031	94.8
Speak a language other than English	44,331	5.2
Speak a language other than English	44,331	5.2
Spanish or Spanish Creole	12,953	1.5
German	9,416	1.1
Other Native North American languages	9,234	1.1
French (incl. Patois, Cajun)	3,298	0.4
Scandinavian languages	1,335	0.2
Italian	759	0.1
Japanese	711	0.1
Russian	610	0.1
Other Slavic languages	570	0.1
Chinese	528	0.1

9 RELIGIONS

In 2000, there was a nearly equal number of Protestants versus Catholics within the state. The Roman Catholic Church is the largest single Christian denomination with about 103,351 adherents in 2004. Leading Protestant denominations (with 2000 data) were the Evangelical Lutheran Church in America, 50,287; the United Methodist Church, 17,993; Assemblies of God, 16,385; the Lutheran Church—Missouri Synod, 15,441; and the Southern Baptist Convention, 15,318. In 2006, the Church of Jesus Christ of the Latter-day Saints (Mormons) reported a statewide membership of 13,384 in 116 congregations; there is a Mormon temple in Billings (est. 1999). There were about 850 Jews and 614 Muslims in the state in 2000.

Though relatively small in terms of membership, several religious groups within the state experienced significant growth throughout 1990–2000. Friends–USA (Quakers) reported a membership growth from 77 in 1990 to 160 in 2000. The Free Lutheran Congregations grew from 75 members to 427 members and the Salvation Army reported a total of 1,414 members in 2000, up from 551 in 1990. About 493,703 people (55% of the population) did not report affiliation with any religious organization in 2000.

10 TRANSPORTATION

Montana's first railroad, the Utah and Northern, entered the state in 1880. Today, Montana is served by two Class I railroads (the Burlington Northern Santa Fe, and the Union Pacific), plus two regional railroads, and two local railroads, operating on 3,291 rail mi (5,298 km) of track. As of 2006, Amtrak operated one long-distance route (Chicago–Seattle/Portland) through the state, which served 12 stations.

Because of its large size, small population, and difficult terrain, Montana was slow to develop a highway system. In 2004, the state had 69,452 mi (111,817 km) of public roads, streets, and highways. There were around 1.031 million registered motor vehicles in that same year, including some 427,000 automobiles, approximately 555,000 trucks of all types, and some 1,000 buses. There were 712,880 licensed drivers in 2004.

In 2005, Montana had a total of 276 public and private-use aviation-related facilities. This included 241 airports, 31 heliports, 2 STOLports (Short Take-Off and Landing), and two seaplane bases. The state's leading airport is at Billings. In 2004, Billings–Logan International airport had 395,086 passenger enplanements.

11 HISTORY

Much of Montana's prehistory has only recently been unearthed. The abundance of fossils of large and small dinosaurs, marine reptiles, miniature horses, and giant cave bears indicates that, from 100 million to 60 million years ago, the region had a tropical climate. Beginning some 2 million years ago, however, dramatic temperature changes profoundly altered what we now call Montana. At four different times, great sheets of glacial ice moved south through Canada to cover much of the north. The last glacial retreat, about 10,000 years ago, did much to carve the state's present topographic feature. Montana's first humans probably came from across the Bering Strait; their fragmentary remains indicate a presence dating between 10,000 and 4000 BC.

The Indians encountered by Montana's first white explorers—probably French traders and trappers from Canada—arrived from the east during the 17th and 18th centuries, pushed westward into Montana by the pressure of European colonization. In January 1743, two traders, Louis-Joseph and Francois Vérendrye, crossed the Dakota plains and saw before them what they called the “shining mountains,” the eastern flank of the northern Rockies. However, it was not until 1803 that the written history of Montana begins. In that year, the Louisiana Purchase gave the United States most of Montana, and the Lewis and Clark expedition, dispatched by President Thomas Jefferson in 1804 to explore the upper reaches of the Missouri River, added the rest. On 25 April 1805, accompanied by a French trapper named Toussaint Charbonneau and his Shoshoni wife, Sacagawea, Meriwether Lewis and William Clark reached the mouth of the Yellowstone River near the present-day boundary with North Dakota. Shortly thereafter, the first American trappers, traders, and settlers entered Montana.

The fur trade dominated Montana's economy until 1858, when gold was discovered near the present community of Drummond. By mid-1862, a rush of miners from the gold fields of California, Nevada, Colorado, and Idaho had descended on the state. The temporary gold boom brought not only the state's first substantial white population but also an increased demand for government.

In 1863, the eastern and western sectors of Montana were joined as part of Idaho Territory, which, in turn, was divided along the Bitterroot Mountains to form the present boundary between the two states. On 26 May 1864, President Abraham Lincoln signed the Organic Act, which created Montana Territory.

The territorial period was one of rapid and profound change. By the time Montana became a state on 8 November 1889, the remnants of Montana's Indian culture had been largely confined to federal reservations. A key event in this transformation was the Battle of the Little Big Horn River on 25 June 1876, when Lieutenant Colonel George Custer and his 7th US Cavalry regiment of fewer than 700 men were overwhelmed as they attacked an encampment of 15,000 Sioux and Northern Cheyenne led by Crazy Horse and Chief Gall. The following year, after a four-month running battle that traversed most of the state of Montana, Chief Joseph of the Nez Percé tribe surrendered to federal forces, signaling the end of organized Indian resistance.

As the Indian threat subsided, stockmen wasted little time in putting the seemingly limitless open range to use. By 1866, Nelson Story had driven the first longhorns up from Texas, and by the mid-1870s, sheep had also made a significant appearance on the open range. In 1886, at the peak of the open-range boom, approximately 664,000 head of cattle and nearly a million sheep grazed Montana's rangeland. Disaster struck during the “hard winter” of 1886/87, however, when perhaps as many as 362,000 head of cattle starved trying to find the scant forage covered by snow and ice. That winter marked the end of a cattle frontier based on the “free grass” of the open range and taught the stockmen the value of a secure winter feed supply.

Construction of Montana's railroad system between 1880 and 1909 breathed new life into mining as well as the livestock industry. Moreover, the railroads created a new network of market centers at Great Falls, Billings, Bozeman, Missoula, and Havre. By 1890, the Butte copper pits were producing more than 40% of the nation's copper requirements. The struggle to gain financial control of the enormous mineral wealth of Butte Hill led to the “War of the Copper Kings,” in which the Amalgamated Copper Co., in conjunction with Standard Oil gave up its copper holdings. The new company, Anaconda Copper Mining, virtually controlled the press, politics, and governmental processes of Montana until changes in the structure of the international copper market and the diversification of Montana's economy in the 1940s and 1950s reduced the company's power. Anaconda Copper was absorbed by the Atlantic Richfield Co. in 1976, and the name was changed to Anaconda Minerals in 1982.

The railroads also brought an invasion of agricultural homesteaders. Montana's population surged from 243,329 in 1900 to 548,889 by 1920, while the number of farms and ranches increased from 13,000 to 57,000. Drought and a sharp drop in wheat prices after World War I brought an end to the homestead boom. By 1926, half of Montana's commercial banks had failed. Conditions worsened with the drought and depression of the early 1930s, until the New Deal—enormously popular in Montana—helped revive farming and silver mining and financed irrigation and other public works projects.

The decades after World War II saw moderate growth in Montana's population, economy, and social services. Although manufacturing developed slowly, the state's fossil fuels industry grew

rapidly during the national energy crisis of the 1970s. However, production of coal, crude oil, and natural gas leveled off after the crisis and even declined in the early 1980s.

In 1983 the Anaconda Copper Mining Company shut down its mining operations in Butte. Farm income also suffered in the 1980s as a result of falling prices, drought, and insect damage. Growth in manufacturing and construction and recovery in the agricultural sector, improved Montana's economy in the 1990s. However, even in the midst of a sustained economic boom, the state had the eighth highest unemployment rate in the nation, 5.2% as of 1999. Other indicators also showed the state was not benefiting from the sustained national economic expansion of recent years. Montana faced a \$230 million budget deficit in 2003, but lawmakers were able to balance the budget with a series of program reductions, new taxes, and budget transfers. Montana's unemployment rate in September 2005 was 4.5%, below the national average of 5.1%. However, in 2004 the poverty rate was 14.3% (measured as a three-year average estimate from 2002–04) above the national average of 12.7%.

Tourism, air quality, and wildlife in parts of Montana were affected by the 1988 forest fires that burned for almost three months in Yellowstone National Park. Some Montana residents had to be evacuated from their homes. The state was among those afflicted by raging wildfires the summer of 2000, the worst fire season in more than a decade. In the summer of 2002, wildfires burned over 7.1 million acres of public and private land in the United States, most of it in the west. By August 2003, 36 wildfires had destroyed over 400,000 acres in Montana, equivalent to half the state of Rhode Island. Both Yellowstone and Glacier National Parks had to close sections of the parks due to fires.

In 1992 Montana's delegation to the US House of Representatives was reduced from two members to one, based on the results of the 1990 Census. The state remains one of the least populated in the nation, with an estimated 902,195 residents in 2000—or about six people per square mile. In 2004, there were an estimated 926,865 residents in Montana.

In November 2004, Brian Schweitzer was elected the state's first Democratic governor since 1988.

12 STATE GOVERNMENT

Montana's original constitution, dating from 1889, was substantially revised by a 1972 constitutional convention, effective 1 July 1973. Under the present document, which had been amended 30 times by January 2005, the state legislature consists of 50 senators, elected to staggered four-year terms, and 99 representatives, who serve for two years. Legislators must be at least 18 years old and have lived in the state for a year and in their district for six months prior to election. In 2004 legislators received \$78.60 per diem during regular sessions. Sessions are held only in odd-numbered years, beginning the first Monday of January and lasting no more than 90 legislative days. An amendment passed by voters in 2002 requires the governor to give advance notice of special sessions, which have no time limit and may be called by petition of a majority in each house.

The only elected officers of the executive branch are the governor and lieutenant governor (who run jointly), secretary of state, attorney general, superintendent of public instruction, and auditor; each serves a four-year term. Without exception, the governor

is limited to serving eight out of every 16 years. A candidate for governor must be at least 25 years old and a citizen and resident of both the United States and Montana. As of December 2004, the governor's salary was \$93,089.

To become law, a bill must pass both houses by a simple majority and be signed by the governor, remain unsigned for 10 days (25 days if the legislature adjourns), or be passed over the governor's veto by a two-thirds vote of the members present in both houses. The state constitution may be amended by constitutional convention, by legislative referendum (a two-thirds vote of both houses), or by voter initiative (10% of qualified electors, as determined by number of votes cast for governor at the last election). To be adopted, each proposed amendment must be ratified at the next general election.

To vote in Montana, one must be a US citizen, at least 18 years old, and a state and county resident for 30 days prior to election day. Restrictions apply to convicted felons and those declared of unsound mind.

13 POLITICAL PARTIES

Since statehood, Democrats generally dominated in contests for the US House and Senate, and Republicans in elections for state and local offices and in national presidential campaigns (except during the New Deal years). Although the erosion of Montana's rural population since the 1920s diluted the Republicans' agrarian base, the party has gained increasing financial and organizational backing from corporate interests, particularly from the mining and energy-related industries.

The strength of the Democratic Party, on the other hand, lies in the strong union movement centered in Butte and its surrounding counties, augmented by smaller family farms throughout the state. Urbanization also benefited the Democrats. Montanans voted overwhelmingly for Republican President Ronald Reagan in November 1984 and for Republican George Bush in 1988, but Democrat Bill Clinton carried the state in 1992. However, in 1996 Clinton lost the state to Republican Bob Dole. In 2000, Republican George W. Bush won an overwhelming victory over Democrat Al Gore, 58% to 34%. Green Party candidate Ralph Nader

Montana Presidential Vote by Major Political Parties, 1948–2004

YEAR	ELECTORAL VOTE	MONTANA WINNER	DEMOCRAT	REPUBLICAN
1948	4	*Truman (D)	119,071	96,770
1952	4	*Eisenhower (R)	106,213	157,394
1956	4	*Eisenhower (R)	116,238	154,933
1960	4	Nixon (R)	134,891	141,841
1964	4	*Johnson (D)	164,246	113,032
1968	4	*Nixon (R)	114,117	138,835
1972	4	*Nixon (R)	120,197	183,976
1976	4	Ford (R)	149,259	173,703
1980	4	*Reagan (R)	118,032	206,814
1984	4	*Reagan (R)	146,742	232,450
1988	4	*Bush (R)	168,936	190,412
1992**	3	*Clinton (D)	154,507	144,207
1996**	3	Dole (R)	167,922	179,652
2000	3	*Bush, G. W. (R)	137,126	240,178
2004	3	*Bush, G. W. (R)	173,710	266,063

*Won US presidential election.

**IND. candidate Ross Perot received 107,225 votes in 1992 and 55,229 votes in 1996.

won 6% of the vote. In 2004, Bush again won a decisive victory over Democratic challenger John Kerry, 59% to 39%. In 2004 there were 638,000 registered voters; there is no party registration in the state. The state had three electoral votes in the 2004 presidential election.

Montana Governor Marc Racicot, Republican, was elected in 1992 and reelected in 1996. Republican Judy Martz was elected Montana's first female governor in 2000. In 2004, Democrat Brian Schweitzer won the governorship, becoming the first Democrat since 1988 to win the office. Republican Conrad Burns was elected to the Senate in 1988 and reelected in 1994 and 2000, and Democrat Max Baucus won reelection in 2002. The state's sole seat in the US House was retained by a Republican in the 2004 election. In mid-2005, there were 23 Republicans and 27 Democrats in the state Senate. The state House was split, with 50 seats held by Republicans and 50 by Democrats.

14 LOCAL GOVERNMENT

As of 2005, Montana had 56 counties, 129 municipalities, 592 special districts, and 453 public school districts. Typical elected county officials are three county commissioners (or a city manager), attorney, sheriff, clerk and recorder, school superintendent, treasurer, assessor, and coroner. Unified city-county governments include Anaconda-Deer Lodge and Butte-Silver Bow.

In 2005, local government accounted for about 35,946 full-time (or equivalent) employment positions.

15 STATE SERVICES

To address the continuing threat of terrorism and to work with the federal Department of Homeland Security, homeland security in Montana operates under state statute; the emergency management director is designated as the state homeland security advisor.

The Citizens' Advocate Office, established in 1973, serves as a clearinghouse for problems, complaints, and questions concerning state government. The commissioner of higher education administers the state university system, while the superintendent of public instruction is responsible for the public schools. The Department of Transportation is the main transportation agency. Health and welfare programs are the province of the Department of Public Health and Human Services. Other departments deal with agriculture, commerce, justice, labor and industry, livestock, and natural resources and conservation.

16 JUDICIAL SYSTEM

Montana's highest court, the Montana Supreme Court, consists of a chief justice and six associate justices. District courts are the courts of general jurisdiction. Justice of the peace courts are essentially county courts whose jurisdiction is limited to minor civil cases, misdemeanors, and traffic violations. Montana has seven supreme court justices elected on nonpartisan ballots for eight-year terms and 37 district court judges elected for six years.

As of 31 December 2004, a total of 3,877 prisoners were held in Montana's state and federal prisons, an increase from 3,620 of 7.1% from the previous year. As of year-end 2004, a total of 473 inmates were female, up from 419 or 12.9% from the year before. Among sentenced prisoners (one year or more), Montana had an incarceration rate of 416 per 100,000 population in 2004.

According to the Federal Bureau of Investigation, Montana in 2004, had a violent crime rate (murder/nonnegligent manslaughter; forcible rape; robbery; aggravated assault) of 293.8 reported incidents per 100,000 population, or a total of 2,723 reported incidents. Crimes against property (burglary; larceny/theft; and motor vehicle theft) in that same year totaled 27,215 reported incidents or 2,936.2 reported incidents per 100,000 people. Montana has a death penalty, of which lethal injection is the sole method of execution. From 1976 through 5 May 2006, the state has executed only two persons. The most recent execution was carried out in February 1998. As of 1 January 2006, Montana had four inmates on death row.

In 2003, Montana spent \$37,553,219 on homeland security, an average of \$37 per state resident.

17 ARMED FORCES

In 2004, there were 3,789 active-duty military personnel and 1,274 civilian personnel stationed in Montana. The principal military facility in Montana is Malmstrom Air Force Base (Great Falls), a Strategic Air Command facility. Total defense contracts in 2004 amounted to \$206.8 million, and total Defense Department payroll outlays were \$403 million.

An estimated 102,605 veterans of US military service were living in Montana in 2003. Of these, 13,746 served in World War II; 11,049 in the Korean conflict; 33,814 during the Vietnam era; and 14,703 in the Gulf War. For the fiscal year 2004, total Veterans Affairs expenditures in Montana exceeded to \$291 million.

As of 31 October 2004, the Montana Highway Patrol employed 206 full-time sworn officers.

18 MIGRATION

Montana's first great migratory wave brought Indians from the east during the 17th and 18th centuries. The gold rush of the 1860s and a land boom between 1900 and 1920 resulted in surges of white settlement. The economically troubled 1920s and 1930s produced a severe wave of out-migration that continued through the 1960s. The trend reversed between 1970 and 1980, however, when Montana's net gain from migration was 16,000; from 1980 to 1989, the state had a net loss of 43,000 residents from migration. Between 1990 and 1998, Montana had net gains of 48,000 in domestic migration and 3,000 in international migration. In 1998, the state admitted 299 foreign immigrants. Between 1990 and 1998, the state's overall population increased 10.2%. In the period 2000-05, net international migration was 2,141 and net internal migration was 18,933, for a net gain of 21,074 people.

19 INTERGOVERNMENTAL COOPERATION

Among the interstate agreements in which Montana participates are the Interstate Oil and Gas Compact, Western Interstate Corrections Compact, Western Interstate Energy Compact, Western Interstate Commission for Higher Education, Interstate Compact for Juveniles, Northwest Power and Conservation Council (with Idaho, Oregon, and Washington), and Yellowstone River Compact (with North Dakota and Wyoming). Federal grants to the state and local governments in fiscal year 2005 totaled \$1.263 billion,

an estimated \$1.269 billion in fiscal year 2006, and an estimated \$1.289 billion in fiscal year 2007.

20 ECONOMY

Resource industries—agriculture, mining, lumbering—traditionally dominated Montana's economy, although they have declined during the past decade. A lawsuit with the federal government over the federal lands which supplied much of the state's timber placed the timber industry's future in question, as did the selling by Champion International of its two mills and of its timber lands. While Stimson Lumber purchased the mills from Champion, it rehired only two-thirds of the employees. The mining industry in western Montana was hurt by low international price levels. The closure of Troy Mine, which produced silver, lead and zinc, resulted in the idling of 300 workers. Employment in the services industries overtook manufacturing and mining during the 1990s. Diversification into business, engineering, health, and tourism services has stimulated the economy. Annual growth rates averaged 4.67% from 1998 to 2000, and the state economy was little affected by the national recession and slowdown in 2001, posting a growth rate of 4.3%. In November 2002, Montana's nonagricultural employment was up 1.1% above the year before, above the national rate. Employment increased in construction, financial and general services, and fell slightly in the manufacturing and transportation and utilities sectors. The announced closing of Stimson Lumber in Libby is expected to cost 300 mill jobs, and another 410 related jobs. Montana's farm sector, contributing directly less than 3% to gross state product, has been severely stressed by a four-year drought. Wheat crop yields in 2002 were the lowest since 1988. Government subsidy payments to Montana farmers, the fourth highest in the country, amounted to 157% of their net income (that is, net income would have been negative without the subsidies).

Montana's gross state product (GSP) in 2004 was \$27.482 billion, of which the real estate sector accounted for the largest share at \$3.229 billion or 11.7% of GSP, followed by healthcare and social assistance, at \$2.491 billion (9% of GSP), and construction, at \$1.627 billion (5.9% of GSP). In that same year, there were an estimated 106,789 small businesses in Montana. Of the 34,570 businesses that had employees, an estimated total of 33,801 or 97.8% were small companies. An estimated 4,588 new businesses were established in the state in 2004, up 0.9% from the year before. Business terminations that same year came to 4,896, up 4.6% from 2003. There were 109 business bankruptcies in 2004, up 11.2% from the previous year. In 2005, the state's personal bankruptcy (Chapter 7 and Chapter 13) filing rate was 471 filings per 100,000 people, ranking Montana as the 32nd highest in the nation.

21 INCOME

In 2005 Montana had a gross state product (GSP) of \$30 billion which accounted for 0.2% of the nation's gross domestic product and placed the state at number 48 in highest GSP among the 50 states and the District of Columbia.

According to the Bureau of Economic Analysis, in 2004 Montana had a per capita personal income (PCPI) of \$27,657. This ranked 42nd in the United States and was 84% of the national average of \$33,050. The 1994–2004 average annual growth rate of PCPI was 4.5%. Montana had a total personal income (TPI) of

\$25,635,394,000, which ranked 46th in the United States and reflected an increase of 6.7% from 2003. The 1994–2004 average annual growth rate of TPI was 5.2%. Earnings of persons employed in Montana increased from \$17,162,093,000 in 2003 to \$18,423,659,000 in 2004, an increase of 7.4%. The 2003–04 national change was 6.3%.

The US Census Bureau reports that the three-year average median household income for 2002 to 2004 in 2004 dollars was \$35,201, compared to a national average of \$44,473. During the same period an estimated 14.3% of the population was below the poverty line, as compared to 12.4% nationwide.

22 LABOR

According to the Bureau of Labor Statistics (BLS), in April 2006 the seasonally adjusted civilian labor force in Montana numbered 502,800 with approximately 18,300 workers unemployed, yielding an unemployment rate of 3.6%, compared to the national average of 4.7% for the same period. Preliminary data for the same period placed nonfarm employment at 428,600. Since the beginning of the BLS data series in 1976, the highest unemployment rate recorded in Montana was 8.7% in May 1983. The historical low was 3.4% in March 2006. Preliminary nonfarm employment data by occupation for April 2006 showed that approximately 6.9% of the labor force was employed in construction; 4.5% in manufacturing; 4.5% in trade, transportation, and public utilities; 5% in financial activities; 8.4% in professional and business services; 13% in leisure and hospitality services; and 20.2% in government. Data were unavailable for education and healthcare services.

The US Department of Labor's Bureau of Labor Statistics reported that in 2005, a total of 42,000 of Montana's 391,000 employed wage and salary workers were formal members of a union. This represented 10.7% of those so employed, down from 11.7% in 2004, and below the national average of 12%. Overall in 2005, a total of 48,000 workers (12.2%) in Montana were covered by a union or employee association contract, which includes those workers who reported no union affiliation. Montana is one of 28 states that does not have a right-to-work law.

As of 1 March 2006, Montana had a two-tiered state-mandated minimum wage rate. Businesses with gross annual sales of \$110,000 or less were subject to a \$4.00 per hour rate. All others were subject to a \$5.15 per hour rate. In 2004, women in the state accounted for 47.6% of the employed civilian labor force.

23 AGRICULTURE

Montana's farms numbered 28,000 in 2004, with average acreage of 2,146 (869 hectares). Farm income totaled nearly \$2.38 billion in 2005. In 2004, Montana was the nation's third-leading wheat producer, with an output of 173.2 million bu, valued at \$612 million. Other major crops were barley (third in the United States) with 48.9 million bu, valued at \$139.6 million; sugar beets (sixth) with 1.1 million bu, valued at \$56.2 million; and hay with 4.7 million tons, valued at \$362.1 million.

24 ANIMAL HUSBANDRY

In 2005, Montana's farms and ranches had around 2.4 million cattle and calves, valued at \$2.5 million. There were an estimated 165,000 hogs and pigs, valued at \$18.2 million in 2004. During 2003, Montana farmers produced around 24.6 million lb

(11.2 million kg) of sheep and lambs that grossed \$22.6 million in income.

2⁵ FISHING

Montana's designated fishing streams offer some 10,000 mi (16,000 km) of good to excellent freshwater fishing. In 2004, the state issued 379,252 sport fishing licenses.

Montana is home to the Creston and Ennis National Fish Hatcheries as well as the Bozeman Fish Technology Center and the Bozeman Fish Health Center. Creston specializes in rainbow trout, westslope cutthroat trout, kokanee salmon, and bull trout. Ennis works as part of the National Broodstock Program, producing about 20 million rainbow trout eggs annually for research facilities, universities and federal, state and tribal hatcheries in 23 states.

2⁶ FORESTRY

As of 2004, 23,500,000 acres (9,510,000 hectares) in Montana were classified as forestland. There were 11 national forests, comprising 16,932,447 acres (6,852,561 hectares) in 2005. The lumbering industry produced 1.09 billion board feet in 2004.

2⁷ MINING

According to preliminary data from the US Geological Survey (USGS), the estimated value of nonfuel mineral production by Montana in 2003 was \$492 million, an increase from 2002 of about 4%. The USGS data ranked Montana 26th among the 50 states by the total value of its nonfuel mineral production, accounting for over 1% of total US output.

According to the preliminary data for 2003, metallic minerals accounted for almost 63% of Montana's nonfuel mineral production, by value. Higher average prices and a two-fold increase in production, made gold the state's top nonfuel mineral by value, overtaking palladium. Following gold were platinum, construction sand and gravel, cement (portland and masonry), and bentonite. Montana in that same year was the only state to have primary platinum and palladium mine production and ranked fourth in the output of gold, according to the preliminary data. In 2003 Montana was first in the production of talc, second in bentonite, fourth in zinc and lead, and seventh in silver. The state was also ranked eighth in the production of gemstones (by value).

Preliminary data for 2003, showed palladium output at 14,600 kg, with a value of \$98.3 million, while platinum output that year totaled 4,100 kg, with a value of \$86.5 million. Construction sand and gravel production in 2003 totaled 18 million metric tons, with a value of \$81.9 million, while bentonite clay output totaled 181,000 metric tons, with a value of \$14.9 million. Crushed stone output in that same year stood at 2.5 million metric tons, with a value of \$10.8 million.

Montana was also a producer of dimension stone in 2003.

2⁸ ENERGY AND POWER

As of 2003, Montana had 44 electrical power service providers, of which one was publicly owned and 30 were cooperatives. Of the remainder, five were investor owned, three were federally operated, four were generation-only suppliers and one was a delivery-only provider. As of that same year there were 518,380 retail customers. Of that total, 325,008 received their power from inves-

tor-owned service providers. Cooperatives accounted for 172,439 customers, while publicly owned providers had 923 customers. There were 18,652 federal customers and there were 1,358 generation-only customers. There was no data on the number of delivery-only customers.

Total net summer generating capability by the state's electrical generating plants in 2003 stood at 5.210 million kW, with total production that same year at 26.268 billion kWh. Of the total amount generated, 22.9% came from electric utilities, with the remainder (77.1%) coming from independent producers and combined heat and power service providers. The largest portion of all electric power generated, 17.048 billion kWh (64.9%), came from coal-fired plants, with hydroelectric plants in second place at 8.701 billion kWh (33.1%) and petroleum fueled plants in third at 402.164 million kWh (1.5%). Other renewable power sources accounted for 0.3% of all power generated, with natural gas fueled plants and those using other types of gases at 0.1% each.

As of 2004, Montana had proven crude oil reserves of 364 million barrels, or 1% of all proven US reserves, while output that same year averaged 68,000 barrels per day. Including federal offshore domains, the state that year ranked tenth (ninth excluding federal offshore) in proven reserves and 11th (10th excluding federal offshore) in production among the 31 producing states. In 2004 Montana had 3,627 producing oil wells, accounting for 1% of US production. As of 2005, the state's four refineries had a combined crude oil distillation capacity of 181,200 barrels per day.

In 2004, Montana had 4,971 producing natural gas and gas condensate wells. In that same year, marketed gas production (all gas produced excluding gas used for repressuring, vented and flared, and nonhydrocarbon gases removed) totaled 96.762 billion cu ft (2.74 billion cu m). As of 31 December 2004, proven reserves of dry or consumer-grade natural gas totaled 995 billion cu ft (28.2 billion cu m).

In 2004, Montana had six producing coal mines, five surface operations and one underground. Coal production that year totaled 39,989,000 short tons, up from 36,994,000 short tons in 2003. Of the total produced in 2004, the surface mines accounted for 39,831,000 short tons. Recoverable coal reserves in 2004 totaled 1.14 billion short tons. One short ton equals 2,000 lb (0.907 metric tons).

2⁹ INDUSTRY

According to the US Census Bureau's Annual Survey of Manufactures (ASM) for 2004, Montana's manufacturing sector covered some six product subsectors. The shipment value of all products manufactured in the state that same year was \$6.468 billion. Of that total, wood product manufacturing accounted for the largest share at \$960.445 million. It was followed by food manufacturing at \$666.718 million; nonmetallic mineral product manufacturing at \$216.365 million; and fabricated metal product manufacturing at \$196.782 billion.

In 2004, a total of 17,311 people in Montana were employed in the state's manufacturing sector, according to the ASM. Of that total, 12,709 were actual production workers. In terms of total employment, the wood product manufacturing industry accounted for the largest portion of all manufacturing employees, with 4,109 (3,568 actual production workers). It was followed by food manufacturing, with 2,464 employees (1,547 actual production

workers); miscellaneous manufacturing, with 1,447 (976 actual production workers); and nonmetallic mineral product manufacturing, with 1,405 (1,093 actual production workers).

ASM data for 2004 showed that Montana's manufacturing sector paid \$664.859 million in wages. Of that amount, the wood product manufacturing sector accounted for the largest share at \$147.640 million. It was followed by food manufacturing at \$81.157 million; fabricated metal product manufacturing at \$48.872 million; machinery manufacturing at \$48.438 million; and miscellaneous manufacturing at \$44.878 million.

30 COMMERCE

According to the 2002 Census of Wholesale Trade, Montana's wholesale trade sector had sales that year totaling \$7.2 billion from 1,485 establishments. Wholesalers of durable goods accounted for 839 establishments, followed by nondurable goods wholesalers at 571 and electronic markets, agents, and brokers accounting for 75 establishments. Sales by durable goods wholesalers in 2002 totaled \$2.4 billion, while wholesalers of nondurable goods saw sales of \$3.9 billion. Electronic markets, agents, and brokers in the wholesale trade industry had sales of \$833.7 million.

In the 2002 Census of Retail Trade, Montana was listed as having 5,145 retail establishments with sales of \$10.1 billion. The leading types of retail businesses by number of establishments were: motor vehicle and motor vehicle parts dealers (743); miscellaneous store retailers (679); building material/garden equipment and supplies dealers (612); gasoline stations (597); and food and beverage stores (496). In terms of sales, motor vehicle and motor vehicle parts dealers accounted for the largest share of retail sales at \$2.7 billion, followed by general merchandise stores at \$1.6 billion; food and beverage stores at \$1.3 billion; and gasoline stations at \$1.2 billion. A total of 52,891 people were employed by the retail sector in Montana that year.

Montana's foreign exports in 2005 totaled \$710 million, second to last in the nation above only Wyoming.

31 CONSUMER PROTECTION

Montana's consumer protection laws are administered by the state's Department of Justice's Office of Consumer Protection. The office enforces Montana's consumer protection laws and regulations relating to telemarketing, the sales and repair of automobiles and trucks, credit management services, deceptive and misleading advertising, door-to-door sales, gasoline pricing, online commerce, and unfair business acts under the state's Telemarketing Registration and Fraud Act, the New Vehicle Warranty Act, the Consumer Protection Act, the Personal Solicitation Sales Act, and the Unfair Trade Practices Act.

When dealing with consumer protection issues, the state's attorney general (who heads the state's Department of Justice) is extremely limited in terms of what it is authorized to do, and can only exercise its authority regarding consumer protection in cooperation with the state's Department of Administration. The attorney general cannot initiate civil or criminal proceedings; represent the state before state and federal regulatory agencies; administer consumer protection and education programs; handle formal consumer complaints; or exercise subpoena powers. In antitrust actions, the attorney general can only act on behalf of those consumers who are incapable of acting on their own and initiate

damage actions on behalf of the state in state courts. It cannot initiate criminal proceedings or represent counties, cities and other governmental entities in recovering civil damages under state or federal law.

The offices of the state's Department of Justice's Office of Consumer Protection are located in the state capital, Helena.

32 BANKING

As of June 2005, Montana had 82 insured banks, savings and loans, and saving banks, plus 12 state-chartered and 56 federally chartered credit unions (CUs). Excluding the CUs, the Billings market area accounted for the largest portion of the state's bank deposits at \$1.966 billion and was second in the number of financial institutions at 12 in 2004, while the Missoula market area that same year, ranked first in the number of institutions, with 13 and was second in bank deposits at \$1.278 billion. As of June 2005, CUs accounted for 14.3% of all assets held by all financial institutions in the state, or some \$2.511 billion. Banks, savings and loans, and savings banks collectively accounted for the remaining 85.7% or \$15.090 billion in assets held.

As of fourth quarter 2005, median percentage of past-due/non-accrual loans to total loans stood at 1.99%, down from 2.21% in 2004 and 2.26% in 2003. The median net interest margin (the difference between the lower rates given to savers and the higher rates charged on loans) was 4.95% in fourth quarter 2005, up from 4.63% in 2004 and 4.57% in 2003.

Regulation of Montana's state-chartered banks, savings and loans, credit unions, trust companies, consumer finance and escrow companies, deferred deposit loan companies, title loan lenders, mortgage brokers and loan originators, is the responsibility of the state's Division of Banking and Financial Institutions.

33 INSURANCE

In 2004 there were 373,000 individual life insurance policies in force with a total value of about \$35.9 billion; total value for all categories of life insurance (individual, group, and credit) was about \$50 billion. The average coverage amount is \$96,300 per policy holder. Death benefits paid that year totaled \$127.7 million.

As of 2003, there were four property and casualty and three life and health insurance companies domiciled in the state. Direct premiums for property and casualty insurance totaled \$1.4 billion in 2004. That year, there were 3,364 flood insurance policies in force in the state, with a total value of \$413 million.

In 2004, 45% of state residents held employment-based health insurance policies, 8% held individual policies, and 26% were covered under Medicare and Medicaid; 19% of residents were uninsured. Montana ties with four other states as having the fourth-highest percentage of uninsured residents in the nation. In 2003, employee contributions for employment-based health coverage averaged at 14% for single coverage and 28% for family coverage. The state does not offer a health benefits expansion program in connection with the Consolidated Omnibus Budget Reconciliation Act (COBRA, 1986), a health insurance program for those who lose employment-based coverage due to termination or reduction of work hours.

In 2003, there were 696,263 auto insurance policies in effect for private passenger cars. Required minimum coverage includes bodily injury liability of up to \$25,000 per individual and \$50,000

for all persons injured in an accident, as well as property damage liability of \$10,000. In 2003, the average expenditure per vehicle for insurance coverage was \$674.22.

3⁴ SECURITIES

There are no securities exchanges in Montana. In 2005, there were 390 personal financial advisers employed in the state and 390 securities, commodities, and financial services sales agents. In 2004, there were at least 11 publicly traded companies within the state, with at least 2 companies listed on the NASDAQ (Semitool, Inc. and United Financial Corp.) and at least 1 listed on the NYSE (Touch America Holdings).

3⁵ PUBLIC FINANCE

The Montana state budget is prepared biennially by the Office of Budget and Program Planning and submitted by the governor to the legislature for amendment and approval. The fiscal year runs from 1 July to 30 June. Effective fiscal year 1995, certain public school revenues were to be deposited in a general fund, increasing general fund revenues and public school appropriations.

Fiscal year 2006 general funds were estimated at \$1.8 billion for resources and \$1.6 billion for expenditures. In fiscal year 2004, federal government grants to Montana were nearly \$2 billion

In the fiscal year 2007 federal budget, Montana was slated to receive: \$15.5 million in State Children's Health Insurance Program (SCHIP) funds to help the state provide health coverage to low-income, uninsured children who do not qualify for Medicaid. This funding is a 23% increase over fiscal year 2006; and \$6.6 million for the HOME Investment Partnership Program to help Montana fund a wide range of activities that build, buy, or rehabilitate affordable housing for rent or homeownership, or provide direct rental assistance to low-income people. This funding was an 11% increase over fiscal year 2006.

3⁶ TAXATION

In 2005, Montana collected \$1,788 million in tax revenues or \$1,910 per capita, which placed it 35th among the 50 states in per capita tax burden. The national average was \$2,192 per capita. Property taxes accounted for 10.4% of the total, selective sales taxes 25.5%, individual income taxes 39.9%, corporate income taxes 5.5%, and other taxes 18.8%.

As of 1 January 2006, Montana had seven individual income tax brackets ranging from 1.0% to 6.9%. The state taxes corporations at a flat rate of 6.75%.

In 2004, state and local property taxes amounted to \$958,779,000 or \$1034 per capita. The per capita amount ranks the state 20th nationally. Local governments collected \$774,842,000 of the total and the state government \$183,937,000.

Montana taxes gasoline at 27 cents per gallon. This is in addition to the 18.4 cents per gallon federal tax on gasoline.

According to the Tax Foundation, for every federal tax dollar sent to Washington in 2004, Montana citizens received \$1.58 in federal spending.

3⁷ ECONOMIC POLICY

The Economic Development Advisory Council of the state's Department of Commerce offers a variety of programs aimed at improving and enhancing Montana's economic and business climate.

Montana—State Government Finances

(Dollar amounts in thousands. Per capita amounts in dollars.)

	AMOUNT	PER CAPITA
Total Revenue	5,451,685	5,881.00
General revenue	4,245,305	4,579.62
Intergovernmental revenue	1,705,088	1,839.36
Taxes	1,625,692	1,753.71
General sales	—	—
Selective sales	437,051	471.47
License taxes	233,372	251.75
Individual income tax	605,582	653.27

Working closely with other state agencies and federal and private programs, the department's aim is to assist start-up and existing businesses with the technical and financial assistance necessary for their success. Relationships with local development groups, chambers of commerce, and similar organizations help Montana communities develop their full potential. Montana microbusiness companies with fewer than 10 full-time equivalent employees and annual gross revenues under \$500,000 can receive loans of up to \$35,000. Other qualifying businesses can borrow under several other state and federal development loan programs. The Economic Development Advisory Council's trade program assists businesses

in pursuing domestic and worldwide trade. The Small Business Development Center (SBDC) program and the State Data Center program both operate statewide networks of service centers.

38 HEALTH

The infant mortality rate in October 2005 was estimated at 6.7 per 1,000 live births. The birth rate in 2003 was 12.4 per 1,000 population. The abortion rate stood at 13.5 per 1,000 women in 2000. In 2003, about 84.4% of pregnant woman received prenatal care beginning in the first trimester. In 2004, approximately 78% of children received routine immunizations before the age of three.

The crude death rate in 2003 was 9.2 deaths per 1,000 population. As of 2002, the death rates for major causes of death (per 100,000 resident population) were: heart disease, 213.8; cancer, 210.1; cerebrovascular diseases, 70.3; chronic lower respiratory diseases, 63.3; and diabetes, 23.1. The accidental death rate of 57.6 per 100,000 was one of the highest in the nation. The mortality rate from HIV infection was not available. In 2004, the reported AIDS case rate was at about 0.8 per 100,000 population, the lowest rate in the country. In 2002, about 54.1% of the population was considered overweight or obese. As of 2004, about 20.3% of state residents were smokers.

In 2003, Montana had 53 community hospitals with about 4,300 beds. There were about 107,000 patient admissions that year and 2.7 million outpatient visits. The average daily inpatient census was about 2,900 patients. The average cost per day for hospital care was \$733. Also in 2003, there were about 101 certified nursing facilities in the state with 7,489 beds and an overall occupancy rate of about 76.6%. In 2004, it was estimated that about 65.9% of all state residents had received some type of dental care within the year. Montana had 224 physicians per 100,000 resident population in 2004 and 800 nurses per 100,000 in 2005. In 2004, there was a total of 513 dentists in the state.

About 26% of state residents were enrolled in Medicaid programs and Medicare programs in 2004. Approximately 19% of the state population was uninsured in 2004. In 2003, state health care expenditures totaled \$941,000.

39 SOCIAL WELFARE

Montana played an important role in the development of social welfare. It was one of the first states to experiment with workers' compensation, enacting a compulsory compensation law in 1915. Eight years later, Montana and Nevada became the first states to provide for old age pensions.

In 2004, about 22,000 people received unemployment benefits, with the average weekly unemployment benefit at \$197. In fiscal year 2005, the estimated average monthly participation in the food stamp program included about 80,870 persons (34,573 households); the average monthly benefit was about \$91.95 per person. That year, the total of benefits paid through the state for the food stamp program was about \$89.2 million.

Temporary Assistance for Needy Families (TANF), the system of federal welfare assistance that officially replaced Aid to Families with Dependent Children (AFDC) in 1997, was reauthorized through the Deficit Reduction Act of 2005. TANF is funded through federal block grants that are divided among the states based on an equation involving the number of recipients in each state. Montana's TANF program is called Families Achieving In-

dependence in Montana (FAIM). In 2004, the state program had 14,000 recipients; state and federal expenditures on this TANF program totaled \$35 million in fiscal year 2003.

In December 2004, Social Security benefits were paid to 165,910 Montana residents. This number included 106,970 retired workers, 16,770 widows and widowers, 19,070 disabled workers, 10,780 spouses, and 12,320 children. Social Security beneficiaries represented 17.9% of the total state population and 93.9% of the state's population age 65 and older. Retired workers received an average monthly payment of \$916; widows and widowers, \$883; disabled workers, \$863; and spouses, \$459. Payments for children of retired workers averaged \$430 per month; children of deceased workers, \$605; and children of disabled workers, \$249. Federal Supplemental Security Income payments in December 2004 went to 14,558 Montana residents, averaging \$377 a month.

40 HOUSING

In 2004, Montana had an estimated 423,262 housing units, of which 368,530 were occupied; 68.5% were owner-occupied. About 69.8% of all units were single-family, detached homes; about 12.8% were mobile homes. Utility gas and electricity were the most common energy sources for heating. It was estimated that 18,156 units lacked telephone service, 1,780 lacked complete plumbing facilities, and 2,143 lacked complete kitchen facilities. The average household had 2.45 members.

In 2004, 5,000 new privately owned units were authorized for construction. The median home value was \$119,319. The median monthly cost for mortgage owners was \$974. Renters paid a median of \$520 per month. In September 2005, the state received grants of \$1.15 million from the US Department of Housing and Urban Development (HUD) for rural housing and economic development programs. For 2006, HUD allocated to the state over \$6.8 million in community development block grants.

41 EDUCATION

In 2004, 91.9% of Montana residents age 25 and older were high school graduates, far above the national average of 84%. Some 25.5% had obtained a bachelor's degree or higher, slightly below the national average of 26%.

The total enrollment for fall 2002 in Montana's public schools stood at 150,000. Of these, 101,000 attended schools from kindergarten through grade eight, and 49,000 attended high school. Approximately 85.1% of the students were white, 0.7% were black, 2.1% were Hispanic, 1% were Asian/Pacific Islander, and 11% were American Indian/Alaskan Native. Total enrollment was estimated at 147,000 fall 2003 and expected to reach 141,000 by fall 2014, a decline of 5.9% during the period 2002 to 2014. In fall 2003 there were 8,924 students enrolled in 104 private schools. Expenditures for public education in 2003/04 were estimated at \$1.2 billion. Since 1969, the National Assessment of Educational Progress (NAEP) has tested public school students nationwide. The resulting report, *The Nation's Report Card*, stated that in 2005, eighth graders in Montana scored 286 out of 500 in mathematics compared with the national average of 278.

As of fall 2002, there were 45,111 students enrolled in college or graduate school; minority students comprised 11.7% of total postsecondary enrollment. In 2005 Montana had 23 degree-granting institutions. The University of Montana has campuses at Mis-

soula, Montana Tech, and Western Montana College. Montana State University encompasses the Bozeman, Billings, and Northern campuses.

42 ARTS

The Montana Arts Council was established in 1967 to promote and expand the significance of arts and culture in the lives of Montanans. In 2005, the Montana Arts Council and other Montana arts organizations received 12 grants totaling \$812,900 from the National Endowment for the Arts (NEA). The Council has also received funding from state and private sources.

The Montana Committee for the Humanities (MCH) was founded in 1972. In 2000, the MCH sponsored its first annual Montana Festival of the Book in downtown Missoula, bringing together writers, readers, and entertainers from across the state. In 2005, the National Endowment for the Humanities contributed \$662,437 to 11 state programs.

The C. M. Russell Museum in Great Falls honors the work of Charles Russell, whose mural *Lewis and Clark Meeting the Flathead Indians* adorns the capitol in Helena. Other fine art museums include the Museum of the Rockies in Bozeman, Yellowstone Art Center at Billings, and the Missoula Art Museum. The Missoula Art Museum emphasizes artwork relevant to the American West culture, especially contemporary pieces by Montana artists. Orchestras are based in Billings and Bozeman and the Equinox Theater Company is also a popular attraction in Bozeman.

43 LIBRARIES AND MUSEUMS

In 2001, Montana had 79 public library systems, with a total of 107 libraries, of which there were 28 branches. The combined book and serial publication stock of all Montana public libraries that same year was 2,625,000 volumes, and their combined total circulation was 4,812,000. The system also had 62,000 audio and video items, each, and 3,000 electronic format items (CD-ROMs, magnetic tapes, and disks), and four bookmobiles. Distinguished collections include: those of the University of Montana (Missoula), with over 850,000 volumes; Montana State University (Bozeman), 597,609; and the Montana State Library and Montana Historical Society Library, both in Helena. In fiscal year 2001, operating income for the state's public library system was \$15,425,000, including \$49,000 in federal grants and \$344,000 in state grants.

Among the state's 74 museums are the Montana Historical Society Museum, Helena; World Museum of Mining, Butte; Western Heritage Center, Billings; and Museum of the Plains Indian, Browning. National historic sites include Big Hole and Little Big Horn battlefields and the Grant-Kohrs Ranch at Deer Lodge, west of Helena.

44 COMMUNICATIONS

In 2004, 93.5% of the state's households had telephone service. In addition, by December 2003 there were 373,947 mobile wireless telephone subscribers. In 2003, 59.5% of Montana households had a computer and 50.4% had Internet access. By June 2005, there were 90,563 high-speed lines in Montana, 79,658 residential and 10,905 for business. There were 43 major commercial radio stations (14 AM, 29 FM) in 2005, and 16 major television stations.

A total of 15,300 Internet domain names were registered in Montana in 2000.

45 PRESS

As of 2005, Montana had eight morning dailies, three evening dailies, and seven Sunday newspapers. The leading papers were the *Billings Gazette* (47,105 mornings, 52,434 Sundays), *Great Falls Tribune* (33,434 mornings, 36,763 Sundays), and the *Missoulian* (30,466 mornings, 34,855 Sundays).

46 ORGANIZATIONS

In 2006, there were over 1,495 nonprofit organizations registered within the state, of which about 1,075 were registered as charitable, educational, or religious organizations. National professional and business organizations and associations based in Montana include the American Indian Business Leaders and the American Simmental Association.

Regional arts, history, and culture are represented in part through the Boone and Crockett Club, the Butte Jazz Society, the Custer Battlefield Historical and Museum Association, and the Lewis and Clark Trail Heritage Foundation. Conservation and outdoors recreation organizations include the Greater Yellowstone Coalition, Montana Outfitters and Guides Association, the National Forest Foundation, the Greater Yellowstone Coalition, Our Montana (Billings), and the Great Bear Foundation (Missoula). The national Adventure Cycling Association is based in Missoula.

The Indian Law Resource Center, founded in 1978 and based in Helena, serves as a legal, environmental, and human rights organization promoting the welfare of Indian tribes and other indigenous peoples in North America.

47 TOURISM, TRAVEL, AND RECREATION

Many tourists seek out the former gold rush camps, ghost towns, and dude ranches. Scenic wonders include all of Glacier National Park, covering 1,013,595 acres (410,202 hectares), which is the US portion of Waterton-Glacier International Peace Park; part of Yellowstone National Park, which also extends into Idaho and Wyoming; and Bighorn Canyon National Recreation Area. Bozeman, the gateway to Yellowstone Park also is a research area for dinosaurs. The Museum of the Rockies sponsors a dig in Choteau near Glacier National Park.

Montana is home to several Indian tribes; the Crow, the Sioux, and the Plains Indians reside here. Montana is the site of Custer's Last Stand, the Battle of Little Bighorn. There is a national monument to Custer there. Bighorn Canyon National Recreation Area is one of the largest outdoor recreation area in the United States. Glacier County has the Ninepipes Museum and the Flathead Indian Reservation. The Rocky Mountain Elk Wildlife Foundation is the newest of the conservation education facilities. In June 2005, Montana opened the Northeastern Plains Birding Trail. This trail links 12 birding sites and is populated by large numbers of migratory birds.

In 2002, some 10 million nonresident travelers spent \$1.8 billion on visits to the state. The tourist industry sponsors over 33,500 jobs. Tourism promotion and development were funded primarily through a 4% lodging tax, which generated \$11 million per year. Tourism payroll generated \$358 million in tax revenue. Montana

was observing the bicentennial of the Lewis and Clark expedition during 2003–06, with festivities scheduled throughout the state.

48 SPORTS

There are no major professional sports teams in Montana, although there are minor league baseball teams in Billings, Great Falls, Helena, and Missoula. The University of Montana Grizzlies and Montana State University Bobcats both compete in the Big Sky Conference. Skiing is a very popular sport. The state has world-class ski resorts in Big Sky. Other annual sporting events include the Seeley-Lincoln 100/200 Dog Sled Race between Seely Lake and Lincoln in January and many rodeos statewide.

49 FAMOUS MONTANANS

Prominent national officeholders from Montana include US Senator Thomas Walsh (b.Wisconsin, 1859–1933), who directed the investigation that uncovered the Teapot Dome scandal; Jeannette Rankin (1880–1973), the first woman member of Congress and the only US representative to vote against American participation in both world wars; Burton K. Wheeler (b.Massachusetts, 1882–1975), US senator from 1923 to 1947 and one of the most powerful politicians in Montana history; and Michael Joseph “Mike” Mansfield (b.New York, 1903–2001), who held the office of majority leader of the US Senate longer than anyone else.

Chief Joseph (b.Oregon, 1840?–1904), a Nez Percé Indian, repeatedly outwitted the US Army during the late 1870s; Crazy Horse (1849?–77) led a Sioux-Cheyenne army in battle at Little Big Horn. The town of Bozeman is named for explorer and prospector John M. Bozeman (b.Georgia, 1835–67).

Creative artists from Montana include Alfred Bertram Guthrie Jr. (b.Indiana, 1901–91), author of *The Big Sky* and the Pulitzer Prize-winning *The Way West*; Dorothy Johnson (b.Iowa, 1905–84), whose stories have been made into such notable Western movies as *The Hanging Tree*, *The Man Who Shot Liberty Valance*, and *A Man Called Horse*; and Charles Russell (b.Missouri, 1864–1926), Montana’s foremost painter and sculptor. Hollywood stars Gary Cooper (Frank James Cooper, 1901–61) and Myrna Loy (1905–

93) were born in Helena. Newscaster Chet Huntley (1911–74) was born in Cardwell.

NEBRASKA

State of Nebraska

ORIGIN OF STATE NAME: Derived from the Oto Indian word *nebrathka*, meaning “flat water” (for the Platte River). **NICKNAME:** The Cornhusker State. **CAPITAL:** Lincoln. **ENTERED UNION:** 1 March 1867 (37th). **SONG:** “Beautiful Nebraska.” **MOTTO:** Equality Before the Law. **FLAG:** The great seal appears in the center, in gold and silver, on a field of blue. **OFFICIAL SEAL:** Agriculture is represented by a farmer’s cabin, sheaves of wheat, and growing corn; the mechanic arts, by a blacksmith. Above is the state motto; in the background, a steamboat plies the Missouri River and a train heads toward the Rockies. The scene is surrounded by the words “Great Seal of the State of Nebraska, March 1st 1867.” **BIRD:** Western meadowlark. **FLOWER:** Goldenrod. **TREE:** Western cottonwood. **GEM:** Blue agate. **LEGAL HOLIDAYS:** New Year’s Day, 1 January; Birthday of Martin Luther King Jr., 3rd Monday in January; Presidents’ Day, 3rd Monday in February; Arbor Day, last Friday in April; Memorial Day, last Monday in May; Independence Day, 4 July; Labor Day, 1st Monday in September; Columbus Day, 2nd Monday in October; Veterans’ Day, 11 November; Thanksgiving, 4th Thursday in November and following Friday; Christmas Day, 25 December. Other days for special observances include Pioneers’ Memorial Day, 2nd Sunday in June; Nebraska Czech Day, 1st Sunday in August; and American Indian Day, 4th Monday in September. **TIME:** 6 AM CST = noon GMT; 5 AM MST = noon GMT.

¹ LOCATION, SIZE, AND EXTENT

Located in the western north-central United States, Nebraska ranks 15th in size among the 50 states. The total area of the state is 77,355 sq mi (200,349 sq km), of which land takes up 76,644 sq mi (198,508 sq km) and inland water 711 sq mi (1,841 sq km). Nebraska extends about 415 mi (668 km) E–W and 205 mi (330 km) N–S.

Nebraska is bordered on the N by South Dakota (with the line formed in part by the Missouri River), on the E by Iowa and Missouri (the line being defined by the Missouri River), on the S by Kansas and Colorado, and on the W by Colorado and Wyoming. The boundary length of Nebraska totals 1,332 mi (2,143 km). The state’s geographic center is in Custer County, 10 mi (16 km) NW of Broken Bow.

² TOPOGRAPHY

Most of Nebraska is prairie; more than two-thirds of the state lies within the Great Plains proper. The elevation slopes upward gradually from east to west, from a low of 840 ft (256 m) in the southeast along the Missouri River to 5,424 ft (1,654 m) in Johnson Twp. of Kimball County. The mean elevation of the state is approximately 2,600 ft (793 m). Rolling alluvial lowlands in the eastern portion of the state give way to the flat, treeless plain of central Nebraska, which in turn rises to a tableland in the west. The Sand Hills of the north-central plain is an unusual region of sand dunes anchored by grasses that cover about 18,000 sq mi (47,000 sq km).

The Sand Hills region is dotted with small natural lakes; in the rest of the state, the main lakes are artificial. The Missouri River—which, with its tributaries, drains the entire state—forms the eastern part of the northern boundary of Nebraska. Three rivers cross the state from west to east: the wide, shallow Platte River flows through the heart of the state for 310 mi (499 km), the Niobrara River traverses the state’s northern region, and the Republican River flows through southern Nebraska.

brara River traverses the state’s northern region, and the Republican River flows through southern Nebraska.

³ CLIMATE

Nebraska has a continental climate, with highly variable temperatures from season to season and year to year. The central region has an annual normal temperature of 50°F (10°C), with a normal monthly maximum of 76°F (24°C) in July and a normal monthly minimum of 22°F (-6°C) in January. The record low for the state is -47°F (-44°C), registered in Morrill County on 12 February 1899; the record high of 118°F (48°C) was recorded at Minden on 24 July 1936.

Average yearly precipitation in Omaha is about 30 in (76 cm); in the semiarid panhandle in the west, 17 in (43 cm); and in the southeast, 30 in (76 cm). Snowfall in the state varies from about 21 in (53 cm) in the southeast to about 45 in (114 cm) in the north-west corner. Blizzards, droughts, and windstorms have plagued Nebraskans throughout their history.

⁴ FLORA AND FAUNA

Nebraska’s deciduous forests are generally oak and hickory; conifer forests are dominated by western yellow (ponderosa) pine. The tallgrass prairie may include various slough grasses and needlegrasses, along with big bluestem and prairie dropseed. Mixed prairie regions abound with western wheatgrass and buffalo grass. The prairie region of the Sand Hills supports a variety of blue-stems, grammas, and other grasses. Common Nebraska wildflowers are wild rose, phlox, petunia, columbine, goldenrod, and sunflower. Rare species of Nebraska’s flora include the Hayden penstemon, yellow lady’s slipper, pawpaw, and snow trillium. Three species were threatened as of 2006: Ute ladies’ tresses, western prairie fringed orchid, and Colorado butterfly plant. The blowout penstemon was listed as endangered that year.

Common mammals native to the state are the pronghorn sheep, white-tailed and mule deer, badger, kit fox, coyote, striped ground squirrel, prairie vole, and several skunk species. There are more than 400 kinds of birds, the mourning dove, barn swallow, and western meadowlark (the state bird) among them. Three main wetland areas (Rainwater Basin wetlands, Big Bend reach of the Platte River, and the Sandhills wetlands) serve as important migrating and breeding grounds for waterfowl and nongame birds. Carp, catfish, trout, and perch are fished for sport. Rare animal species include the least shrew, least weasel, and bobcat. The US Fish and Wildlife Service listed nine animal species (vertebrates and invertebrates) as threatened or endangered in 2006, including the American burying beetle, bald eagle, whooping crane, black-footed ferret, Topeka shiner, pallid sturgeon, and Eskimo curlew.

5 ENVIRONMENTAL PROTECTION

The Department of Environmental Quality was established in 1971 to protect and improve the quality of the state's water, air, and land resources. The Agricultural Pollution Control Division of the Department regulates disposal of feedlot wastes and other sources of water pollution by agriculture. The Water and Waste Management Division is responsible for administering the Federal Clean Water Act, the Federal Resources Conservation and Recovery Act, portions of the Federal Safe Drinking Water Act, and the Nebraska Environmental Protection Act as it relates to water, solid waste, and hazardous materials. In 2003, Nebraska had 255 hazardous waste sites listed in the US Environment Protection Agency (EPA) database, 12 of which were on the National Priorities List as of 2006. In 2005, the EPA spent over \$15 million through the Superfund program for the cleanup of hazardous waste sites in the state. The same year, federal EPA grants awarded to the state included \$8.2 million for its drinking water state revolving fund and \$5.4 million for the clean water revolving fund.

A program to protect groundwater from such pollutants as nitrates, synthetic organic compounds, hydrocarbons, pesticides, and other sources was outlined in 1985. In 1996, the state spent \$3.2 million on its Soil and Water Conservation Program. In 1994, the state imposed a tax on commercial fertilizers to create the Natural Resources Enhancement Fund, which distributes funds to local natural resource districts for water quality improvement programs. The Engineering Division regulates wastewater treatment standards and assists municipalities in securing federal construction grants for wastewater facilities. The Air Quality Division is responsible for monitoring and securing compliance with national ambient air quality standards. In 2003, 51.5 million lb of toxic chemicals were released in the state.

The state has three main wetland areas: Rainwater Basin wetlands, Big Bend reach of the Platte River, and the Sandhills wetlands. While these areas are protected, the state has lost about 1 million acres (405,000 hectares) of wetlands since pre-European settlement times.

6 POPULATION

Nebraska ranked 38th in population in the United States with an estimated total of 1,758,787 in 2005, an increase of 2.8% since 2000. Between 1990 and 2000, Nebraska's population grew from 1,578,385 to 1,711,263, an increase of 8.4%. The population was projected to reach 1.78 million by 2015 and 1.81 million by 2025.

The population density in 2004 was 22.7 persons per sq mi. In 2004, the median age of all Nebraskans was 36. In the same year, 24.9% of the populace were under age 18 while 13.3% was age 65 or older. The largest cities in 2004 were Omaha, which ranked 43rd among the nation's cities with an estimated population of 409,416, and Lincoln, with 236,146 residents.

7 ETHNIC GROUPS

Among Nebraskans reporting at least one specific ancestry in the 2000 census, 661,133 identified their ancestry as German, 163,651 as English, 229,805 as Irish, 93,286 as Czech, and 84,294 as Swedish. The 2000 population also included 68,541 black Americans, 21,931 Asians, and 836 Pacific Islanders. There were 94,425 Hispanics and Latinos in 2000, representing 5.5% of the total population. In 2004, 4.3% of the population was black, 1.5% Asian, 0.1% Pacific Islander, 6.9% Hispanic or Latino, and 1.1% of the population claimed origin of two or more races. Foreign-born residents numbered 74,638, or 4.4% of the total population, in 2000.

There were 14,896 American Indians in Nebraska as of 2000, down from around 16,000 in 1990. The three Indian reservations maintained for the Omaha, Winnebago, and Santee Sioux tribes had the following populations as of 2000: Omaha, 5,194, and Winnebago, 2,588, and Santee Sioux, 603. In 2004, 0.9% of the population was American Indian.

8 LANGUAGES

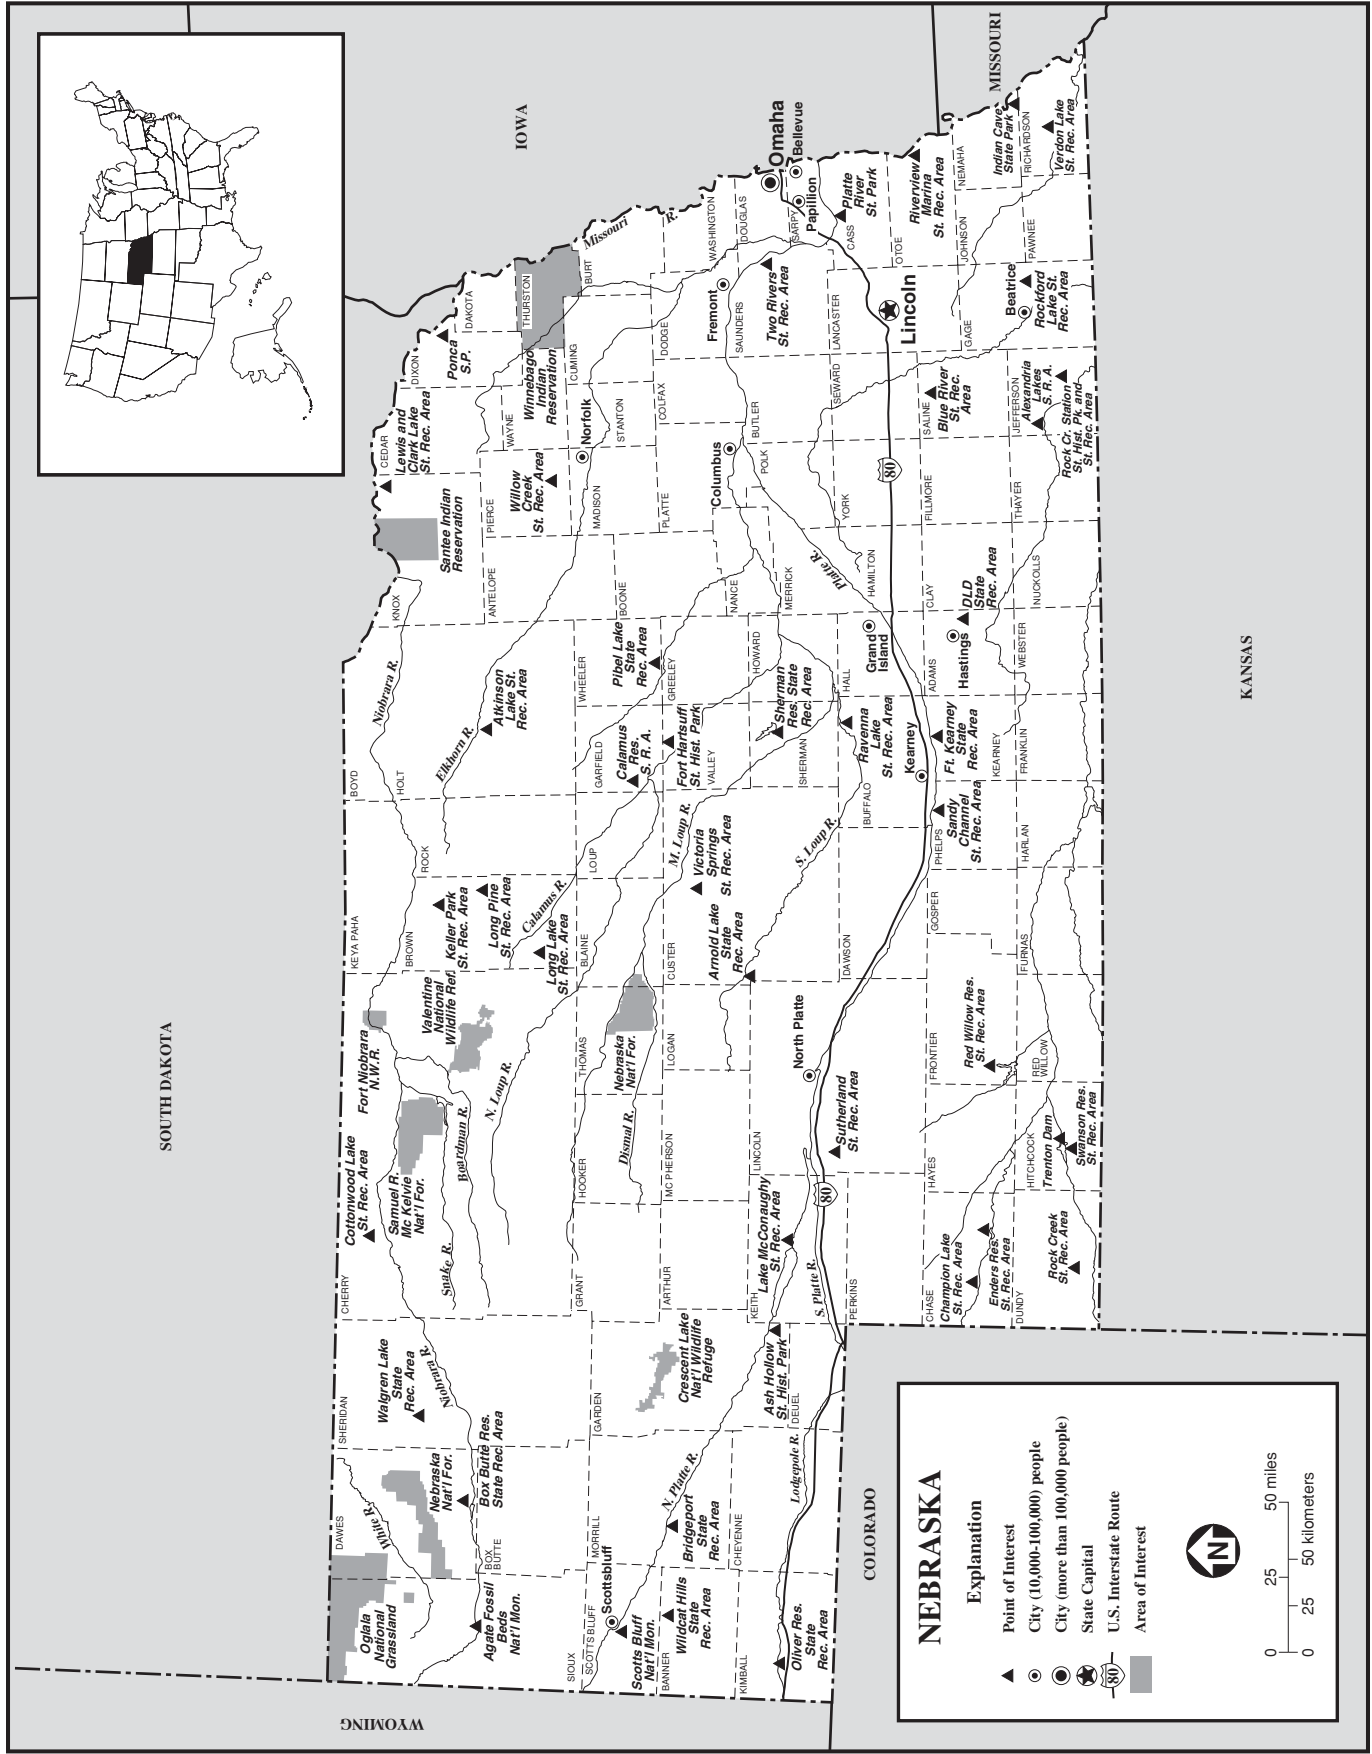

Many Plains Indians of the Macro-Siouan family once roamed widely over what is now Nebraska. Place names derived from the Siouan language include Omaha, Ogallala, Niobrara, and Keya Paha. In 1990, about 1,300 Nebraskans claimed Indian tongues as their first languages.

In 2000, 1,469,046 Nebraskans—92.1% of the resident population five years old or older—spoke only English at home, down from 95.2% in 1990.

The following table gives selected statistics from the 2000 Census for language spoken at home by persons five years old and over. The category "Other Slavic languages" includes Czech, Slovak, and Ukrainian. The category "African languages" includes Amharic, Ibo, Twi, Yoruba, Bantu, Swahili, and Somali.

LANGUAGE	NUMBER	PERCENT
Population 5 years and over	1,594,700	100.0
English	1,469,046	92.1
Speak a language other than English	125,654	7.9
Speak a language other than English	125,654	7.9
Spanish or Spanish Creole	77,655	4.9
German	8,865	0.6
Vietnamese	5,958	0.4
Other Slavic languages	4,236	0.3
French (incl. Patois, Cajun)	3,631	0.2
Chinese	2,409	0.2
Arabic	1,628	0.1
Russian	1,559	0.1
African languages	1,472	0.1
Polish	1,420	0.1
Italian	1,419	0.1
Tagalog	1,311	0.1
Japanese	1,274	0.1

Nebraska English, except for a slight South Midland influence in the southwest and some Northern influence from Wisconsin and New York settlers in the Platte River Valley, is almost pure

North Midland. A few words, mostly food terms like *kolaches* (fruit-filled pastries), are derived from the language of the large Czech population. Usual pronunciation features are *on* and *hog* with the /o/, *cow* and *now* as /kaow/ and /naow/, because with the /ah/ vowel, *cot* and *caught* as sound-alikes, and a strong final /r/. *Fire* sounds almost like *far*, and *our* like *are*; *greasy* is pronounced /greezy/.

⁹RELIGIONS

Nebraska's religious history derives from its patterns of immigration. German and Scandinavian settlers tended to be Lutheran; Irish, Polish, and Czech immigrants were mainly Roman Catholic. Methodism and other Protestant religions were spread by settlers from other Midwestern states.

Though Protestants collectively outnumber Catholics, the Roman Catholic Church is the largest single Christian denomination within the state with about 376,843 adherents in 2004; of which 229,952 belong to the archdiocese of Omaha. As of a 2000 general survey, Lutherans constituted the largest Protestant group with 117,419 adherents of the Missouri Synod, 128,570 of the Evangelical Lutheran Church in America, and 5,829 of the Wisconsin Evangelical Lutheran Synod. In 2004, there were 84,337 members of the United Methodist Church. In 2000, there were 39,420 Presbyterians-USA. In 2006, there were 20,910 members of the Church of Jesus Christ of Latter-day Saints (Mormons); a Mormon temple was opened in Winter Quarters in 2001. As of 2005, there were 18,119 members of the United Church of Christ. The Jewish population was estimated at 7,100 in 2000 and Muslims numbered about 3,115. That year, there were 704,403 people (about 41% of the population) who were not counted as members of any religious organization.

¹⁰TRANSPORTATION

Nebraska's development was profoundly influenced by two major railroads, the Union Pacific and the Chicago Burlington and Quincy (later merged along with the Great Northern and Northern Pacific railroads into the Burlington Northern in 1970), both of which were major landowners in the state in the late 1800s. As of 2003, the Union Pacific and the former railroads that make up the Burlington Northern (now the Burlington Northern Santa Fe) still operated in Nebraska, and constitute the state's two Class I railroads. Altogether, in that year, there were 11 railroads in the state with 3,548 rail mi (5,712 km) of track. As of 2006, Amtrak provided east-west service to five stations in Nebraska via its Chicago to Emreyville/San Francisco California Zephyr train

Nebraska's road system which totaled 93,245 mi (150,124 km) in 2004, is dominated by Interstate 80, the major east-west route and the largest public investment project in the state's history. Some 1.678 million motor vehicles were registered in 2004, of which around 829,000 were automobiles and about 820,000 were trucks of all types. There were 1,315,819 licensed drivers in the state that same year.

In 2005, Nebraska had a total of 303 public and private-use aviation-related facilities. This included 266 airports, 36 heliports, and one seaplane base. Eppley Airfield, Omaha's airport, is by far the busiest in the state. In 2004, Epply had 1,892,379 passengers enplaned.

Nebraska in 2004 had 318 mi (512 km) of navigable waterways. In 2003, waterborne shipments totaled only 50,000 tons.

¹¹HISTORY

Nebraska's first inhabitants, from about 10,000 BC, were nomadic Paleo-Indians. Successive groups were more sedentary, cultivating corn and beans. Archaeological excavations indicate that prolonged drought and dust storms before the 16th century caused these inhabitants to vacate the area. In the 16th and 17th centuries, other Indian tribes came from the East, some pushed by enemy tribes, others seeking new hunting grounds. By 1800, semisedentary Pawnee, Ponca, Omaha, and Oto, along with several nomadic groups, were in the region.

The Indians developed amiable relations with the first white explorers, French and Spanish fur trappers and traders who traveled through Nebraska in the 18th century using the Missouri River as a route to the West. The area was claimed by both Spain and France and was French territory at the time of the Louisiana Purchase, when it came under US jurisdiction. It was explored during the first half of the 19th century by Lewis and Clark, Zebulon Pike, Stephen H. Long, and John C. Frémont.

The Indian Intercourse Act of 1834 forbade white settlement west of the Mississippi River, reserving the Great Plains as Indian Territory. Nothing prevented whites from traversing Nebraska, however, and from 1840 to 1866, some 350,000 persons crossed the area on the Oregon, California, and Mormon trails, following the Platte River Valley, which was a natural highway to the West. Military forts were established in the 1840s to protect travelers from Indian attack.

The Kansas-Nebraska Act of 1854 established Nebraska Territory, which stretched from Kansas to Canada and from the Missouri River to the Rockies. The territory assumed its present shape in 1861. Still sparsely populated, Nebraska escaped the violence over the slavery issue that afflicted Kansas. The creation of Nebraska Territory heightened conflict between Indians and white settlers, however, as Indians were forced to cede more and more of their land. From mid-1860 to the late 1870s, western Nebraska was a battleground for Indians and US soldiers. By 1890, the Indians were defeated and moved onto reservations in Nebraska, South Dakota, and Oklahoma.

Settlement of Nebraska Territory was rapid, accelerated by the Homestead Act of 1862, under which the US government provided 160 acres (65 hectares) to a settler for a nominal fee, and the construction of the Union Pacific, the first transcontinental railroad. The Burlington Railroad, which came to Nebraska in the late 1860s, used its vast land grants from Congress to promote immigration, selling the land to potential settlers from the East and from Europe. The end of the Civil War brought an influx of Union veterans, bolstering the Republican administration, which began pushing for statehood. On 1 March 1867, Nebraska became the 37th state to join the Union. Farming and ranching developed as the state's two main enterprises. Facing for the first time the harsh elements of the Great Plains, homesteaders in central and western Nebraska evolved what came to be known as the sod-house culture, using grassy soil to construct sturdy insulated homes. They harnessed the wind with windmills to pump water, constructed fences of barbed wire, and developed dry-land farming techniques.

Ranching existed in Nebraska as early as 1859, and by the 1870s it was well established in the western part of the state. Some foreign investors controlled hundreds of thousands of acres of the free range. The cruel winter of 1886–87 killed thousands of cattle and bankrupted many of these large ranches.

By 1890, depressed farm prices, high railroad shipping charges, and rising interest rates were hurting the state's farmers, and a drought in the 1890s exacerbated their plight. These problems contributed to the rise of populism, a pro-agrarian movement. Many Nebraska legislators embraced populism, helping to bring about the first initiative and referendum laws in the United States, providing for the regulation of stockyards and telephone and telegraph companies, and instituting compulsory education.

World War I created a rift among Nebraskans as excessive patriotic zeal was directed against residents of German descent. German-language newspapers were censored, ministers were ordered to preach only in English (often to congregations that understood only German), and three university professors of German origin were fired. A Nebraska law (1919) that prohibited the teaching of any foreign language until high school was later declared unconstitutional by the US Supreme Court.

Tilling of marginal land to take advantage of farm prices that had been inflated during World War I caused economic distress during the 1920s. Nebraska's farm economy was already in peril when the dust storms of the 1930s began, and conditions worsened as drought, heat, and grasshopper invasions plagued the state. Thousands of people, particularly from the southwest counties in which dust-bowl conditions were most severe, fled Nebraska for the west coast. Some farmers joined protest movements—dumping milk, for example, rather than selling at depressed prices—while others marched on the state capital to demand a moratorium on farm debts, which they received. In the end, federal aid saved the farmers.

The onset of World War II brought prosperity to other sectors. Military airfields and war industries were placed in the state because of its safe inland location, bringing industrial growth that extended into the postwar years. Much of the new industry that developed during the postwar era was agriculture-related, including the manufacture of mechanized implements and irrigation equipment.

Farm output and income increased dramatically into the 1970s through wider use of hybrid seed, pesticides, fungicides, chemical fertilizers, close-row planting, and irrigation, but contaminated runoff adversely affected water quality and greater water use drastically lowered water-table levels. Many farmers took on large debt burdens to finance expanded output, their credit buoyed by strong farm-product prices and exports. When prices began to fall in the early 1980s, many found themselves overextended. By spring 1985, an estimated 10% of all farmers were reportedly close to bankruptcy. In the early 1990s farm prices rose; the average farm income in Nebraska rose more than 10% between 1989 and the mid-1990s. Increasingly, the state had fewer, larger, and more-mechanized farms. The growth of small industries and tourism also bolstered Nebraska's economy in the 1990s. By 1999 the state enjoyed one of the lowest unemployment rates in the nation—2.9%. But farmers were struggling again. A wildfire in the Sandhills of Nebraska's panhandle in 1999 scorched 74,840 acres and claimed 25,000 trees; it was the largest fire in the state's his-

tory. In the summer of 2000, areas of the state had had no substantial rain in a year. The previous autumn and winter were the driest on record. Drought conditions prevailed. Even with mitigation efforts, much of the state's corn crop was lost.

Challenges still facing the state have included a loss of population in rural areas, urban decay, and tension among various ethnic groups. In 1998 there were more Hispanics, accounting for 4.4% of the population, in the state than there were African Americans; Nebraska also has a small Native American population. Water conservation to avoid depletion of the state's aquifers for irrigation purposes remains a major priority. Nebraska was facing its worst recession since the 1980s in 2003. By 2004, the state was in its fifth straight year of severe drought conditions.

Lt. Governor Dave Heineman became Nebraska's governor in January 2005 when former Governor Mike Johanns resigned to serve as US Secretary of Agriculture. Heineman upon coming to office focused on four priorities: education, economic vitality, efficiency in government, and protecting families.

12 STATE GOVERNMENT

The first state constitution was adopted in 1866; a second, adopted in 1875, is still in effect. A 1919–20 constitutional convention proposed—and voters passed—41 amendments; by January 2005, the document had been revised an additional 222 times.

Nebraska's legislature is unique among the states; since 1934, it has been a unicameral body of 49 members elected on a nonpartisan basis. Members, who go by the title of senator, are chosen in even-numbered years for four-year terms. Legislative sessions begin in early January each year and are limited to 90 legislative days in odd-numbered years and to 60 legislative days in even-numbered years. Special sessions, not formally limited in duration, may be called by petition of two-thirds of the legislators. Legislators must be qualified voters, at least 21 years old, and should have lived in their district for a year prior to election. The legislative salary was \$12,000 in 2004, unchanged from 1999.

Elected executives are the governor, lieutenant governor, secretary of state, auditor, treasurer, and attorney general, all of whom serve four-year terms. The governor and lieutenant governor are jointly elected; each must be a US citizen for at least five years, at least 30 years old, and have been a resident and citizen of Nebraska for at least five years. After serving two consecutive terms, the governor is ineligible for the office for four years. As of December 2004, the governor's salary was \$85,000.

A bill becomes law when passed by a majority of the legislature and signed by the governor. If the governor does not approve, the bill is returned with objections, and a three-fifths vote of the members of the legislature is required to override the veto. A bill automatically becomes law if the governor does not take action within five days of receiving it.

A three-fifths majority of the legislature is required to propose an amendment to the state constitution. The people may propose an amendment by presenting a petition signed by 10% of total votes for governor at last election. The amendments are then submitted for approval at the next regular election or at a special election in which a majority of the votes tallied must be at least 30% of the total number of registered voters.

Nebraska Presidential Vote by Major Political Parties, 1948–2004

YEAR	ELECTORAL VOTE	NEBRASKA WINNER	DEMOCRAT	REPUBLICAN
1948	6	Dewey (R)	224,165	264,774
1952	6	*Eisenhower (R)	188,057	421,603
1956	6	*Eisenhower (R)	199,029	378,108
1960	6	Nixon (R)	232,542	380,553
1964	5	*Johnson (D)	307,307	276,847
1968	5	*Nixon (R)	170,784	321,163
1972	5	*Nixon (R)	169,991	406,298
1976	5	Ford (R)	233,692	359,705
1980	5	*Reagan (R)	166,424	419,214
1984	5	*Reagan (R)	187,866	460,054
1988	5	*Bush (R)	259,235	397,956
1992**	5	Bush (R)	217,344	344,346
1996**	5	Dole (R)	236,761	363,467
2000	5	*Bush, G. W. (R)	231,780	433,862
2004	5	*Bush, G. W. (R)	254,328	512,814

*Won US presidential election.

**IND. candidate Ross Perot received 174,687 votes in 1992 and 71,278 votes in 1996.

Voters in Nebraska must be US citizens, at least 18 years old, and state residents. Restrictions apply to convicted felons and those officially found mentally incompetent.

¹³ POLITICAL PARTIES

In the 2000 presidential elections, Republican candidate George W. Bush secured 63% of the vote; Democrat Al Gore, 33%; and Green Party candidate Ralph Nader, 3%. In 2004, Bush again dominated, with 66% of the vote to Democratic challenger John Kerry's 33%. In 2004 there were 1,160,000 registered voters. In 1998, 37% of registered voters were Democratic, 49% Republican, and 14% unaffiliated or members of other parties. The state had five electoral votes in the 2004 presidential election.

In the 2000 elections, Democrat Ben Nelson was elected to the Senate; Republican Chuck Hagel won election to the Senate in 1996 and was reelected in 2002. In 1998 Republican Mike Johanns was elected to succeed Nelson as governor; Johanns was reelected in 2002, but resigned before completing his term to become the US secretary of agriculture. Johanns was succeeded by Lieutenant Governor Dave Heineman in January 2005. Republicans won all three of the state's seats in the US House of Representatives in 1994, 1996, 1998, 2000, 2002, and 2004. Nebraska's unicameral state legislature is nonpartisan.

¹⁴ LOCAL GOVERNMENT

In 2005, Nebraska had 93 counties, 531 municipalities, and 576 public school districts. Some 1,146 special districts covered such services as fire protection, housing, irrigation, and sewage treatment. In 2002, there were 446 townships. Boards of supervisors or commissioners, elected by voters, administer at the county level. Municipalities are generally governed by a mayor (or city manager) and council. Villages elect trustees to governing boards.

In 2005, local government accounted for about 79,114 full-time (or equivalent) employment positions.

¹⁵ STATE SERVICES

To address the continuing threat of terrorism and to work with the federal Department of Homeland Security, homeland security in Nebraska operates under executive order; the lieutenant governor is designated as the state homeland security advisor.

As of 1 June 1971, the Office of Public Counsel (Ombudsman) was empowered to investigate complaints from citizens in relation to the state government. The Accountability and Disclosure Commission, established in 1977, regulates the organization and financing of political campaigns and investigates reports of conflicts of interest involving state officials.

The eight-member state Board of Education, elected on a non-partisan basis, oversees elementary and secondary public schools and vocational education. The Board of Regents, which also consists of eight elected members, governs the University of Nebraska system. Special examining boards license architects, engineers, psychologists, and land surveyors. The Coordinating Commission for Postsecondary Education works to develop a statewide plan for an educationally and economically sound, progressive, and coordinated system of postsecondary education.

The Department of Roads maintains and builds highways, and the Department of Aeronautics regulates aviation, licenses airports, and registers aviators. The Department of Motor Vehicles provides vehicle and driver services. Natural resources are protected by the Forest Service, Energy Office, Game and Parks Commission, and the Natural Resources Department.

Public assistance, child welfare, medical care for the indigent, and a special program of services for children with disabilities are the responsibility of the Health and Human Service System, which also operates community health services, provides nutritional services, and is responsible for disease control.

The state's huge agricultural industry is aided and monitored by the Department of Agriculture, which is empowered to protect livestock, inspect food-processing areas, conduct research into crop development, and encourage product marketing. The Nebraska Corn Board works to enhance the profitability of the corn producer.

¹⁶ JUDICIAL SYSTEM

The Nebraska Supreme Court is the state's highest court, which consists of a chief justice and six other justices, all of whom are initially appointed by the governor. They must be elected after serving three years, and every six years thereafter, running unopposed on their own record. Below the Supreme Court are the district courts of which 53 judges serve 21 districts in the state. These are trial courts of general jurisdiction. County courts handle criminal misdemeanors and civil cases involving less than \$5,000. In addition, there are a court of industrial relations, a worker's compensation court, two conciliation courts (family courts), two municipal courts (in Omaha and Lincoln), and juvenile courts in three counties.

As of 31 December 2004, a total of 4,130 prisoners were held in Nebraska's state and federal prisons, an increase from 4,040 of 2.2% from the previous year. As of year-end 2004, a total of 369 inmates were female, up from 323 or 14.2% from the year before. Among sentenced prisoners (one year or more), Nebraska had an incarceration rate of 230 per 100,000 population in 2004.

According to the Federal Bureau of Investigation, Nebraska in 2004 had a violent crime rate (murder/nonnegligent manslaughter, forcible rape, robbery, aggravated assault) of 308.7 reported incidents per 100,000 population, or a total of 5,393 reported incidents. Crimes against property (burglary, larceny/theft, and motor vehicle theft) in that same year totaled 61,512 reported incidents or 3,520.6 reported incidents per 100,000 people. Nebraska has a death penalty, of which electrocution is the sole method of execution. From 1976 through 5 May 2006, the state had executed only three people, the most recent of which was in December 1997. As of 1 January 2006, Nebraska had 10 inmates on death row.

In 2003, Nebraska spent \$42,004,625 on homeland security, an average of \$24 per state resident.

17 ARMED FORCES

The US military presence in the state is concentrated near Omaha, where Offutt Air Force Base serves as the headquarters of the US Strategic Air Command. In 2004, Nebraska firms were awarded \$401.2 million in defense contracts, and defense payroll outlays were \$925 million. In the same year, there were 7,332 active-duty military personnel and 3,769 civilian personnel stationed in Nebraska.

A total of 159,487 veterans of US military service resided in Nebraska as of 2003. Of these, 22,241 served in World War II, 20,282 in the Korean conflict, 48,499 in the Vietnam era, and 25,391 during the Persian Gulf War. For the fiscal year 2004, total Veterans Affairs expenditures in Nebraska amounted to \$538 million.

As of 31 October 2004, the Nebraska State Patrol employed 498 full-time sworn officers.

18 MIGRATION

The pioneers who settled Nebraska in the 1860s consisted mainly of Civil War veterans from the North and foreign-born immigrants. Some of the settlers migrated from the East and easterly parts of the Midwest, but many came directly from Europe to farm the land. The Union Pacific and Burlington Northern railroads, which sold land to the settlers, actively recruited immigrants in Europe. Germans were the largest group to settle in Nebraska (in 1900, 65,506 residents were German-born), then Czechs from Bohemia, and Scandinavians from Sweden, Denmark, and Norway. The Irish came to work on the railroads in the 1860s and stayed to help build the cities. Another wave of Irish immigrants in the 1880s went to work in the packinghouses of Omaha. The city's stockyards also attracted Polish workers. The 1900 census showed that over one-half of all Nebraskans were either foreign-born or the children of foreign-born parents. For much of the 20th century, Nebraska was in a period of out-migration. From 1930 to 1960, the state suffered a net loss of nearly 500,000 people through migration, with more than one third of the total leaving during the dust-bowl decade, 1930–40. This trend continued, with Nebraska experiencing a net out-migration of 27,400 for the period 1985–90. Between 1990 and 1998, the state had net gains of 2,000 in domestic migration and 14,000 in international migration. In 1998, 1,267 foreign immigrants arrived in Nebraska. The state's overall population increased 5.3% between 1990 and 1998. In the period 2000–05, net international migration was 22,199 and net internal migration was -26,206, for a net loss of 4,007 people.

19 INTERGOVERNMENTAL COOPERATION

Nebraska's Commission on Intergovernmental Cooperation represents the state in the Council of State Governments. As an oil-producing state, Nebraska is a member of the Interstate Compact to Conserve Oil and Gas. In addition, the state belongs to several regional commissions. Of particular importance are the Republican River Compact with Colorado and Kansas, the Big Blue River Compact with Kansas, the South Platte River Compact with Colorado, the Ponca Creek Nebraska-South Dakota-Wyoming Water Compact, and the Upper Niobrara River Compact with Wyoming. The Nebraska Boundary Commission was authorized in 1982 to enter into negotiations to more precisely demarcate Nebraska's boundaries with Iowa, South Dakota, and Missouri. Nebraska is also a member of the Central Interstate Low-Level Radioactive Waste Compact, under which Nebraska, Kansas, Oklahoma, Louisiana, and Arkansas have located a suitable disposal site for such waste. Boundary pacts are in effect with Iowa, Missouri, and South Dakota. In fiscal year 2005, the state received \$1.893 billion in federal grants, an estimated \$1.927 billion in fiscal year 2006, and an estimated \$1.994 billion in fiscal year 2007.

20 ECONOMY

Agriculture has historically been the backbone of Nebraska's economy, with cattle, corn, hogs, and soybeans leading the state's list of farm products. However, Nebraska is attempting to diversify its economy and has been successful in attracting new business, in large part because of its location near western coal and oil deposits.

The largest portion of the state's labor force is employed in agriculture, either directly or indirectly—as farm workers, as factory workers in the food-processing and farm-equipment industries, or as providers of related services. The service sector, which includes not only the servicing of equipment but also the high growth areas of health and business services and telemarketing, expanded at an annual rate of 4.4% during the 1980s. The trend intensified in the late 1990s, as general services grew at an average annual rate of 7.7% from 1998 to 2001, and financial services grew at an average rate of 5.7%. Nebraska was not deeply involved in the information technology (IT) boom of the 1990s, and therefore was not deeply affected by its bust in 2001. Coming into the 21st century, the state economy grew a moderate average rate of about 4.1% (1998 to 2000), which fell to 2.4% in 2001. In 2001, declines in manufacturing employment were off-set by increases in the services and government sectors. The job losses became more severe in 2002, by the fourth quarter, the unemployment rate had eased to 3.3%, down from 3.9% in April 2002.

With technological advances in farming and transportation, and consolidation in the agricultural sector, Nebraska's rural counties have been losing population since the 1970s. In 2002, sixty six of Nebraska's 93 counties had lower populations than in the 1970s, and population loss accelerated during the 1990s. Drought conditions in 2002 disrupted cattle production because of shortages of hay and pasture. Drought persisted into the winter of 2002–03, and the state is likely to face long-term water shortages.

Nebraska's gross state product (GSP) in 2004 was \$68.183 billion, of which manufacturing (durable and nondurable goods) accounted for the largest share at \$8.305 billion or 12.1% of GSP, fol-

lowed by the real estate sector at \$5.872 billion (8.6% of GSP), and health care and social assistance at \$4.919 billion (7.2% of GSP). In that same year, there were an estimated 151,088 small businesses in Nebraska. Of the 46,161 businesses that had employees, an estimated total of 44,703 or 96.8% were small companies. An estimated 4,849 new businesses were established in the state in 2004, up 12.5% from the year before. Business terminations that same year came to 5,051, unchanged from 2003. There were 207 business bankruptcies in 2004, down 13% from the previous year. In 2005, the state's personal bankruptcy (Chapter 7 and Chapter 13) filing rate was 485 filings per 100,000 people, ranking Nebraska as the 28th highest in the nation.

2¹ INCOME

In 2005 Nebraska had a gross state product (GSP) of \$70 billion which accounted for 0.6% of the nation's gross domestic product and placed the state at number 37 in highest GSP among the 50 states and the District of Columbia.

According to the Bureau of Economic Analysis, in 2004 Nebraska had a per capita personal income (PCPI) of \$32,341. This ranked 21st in the United States and was 98% of the national average of \$33,050. The 1994–2004 average annual growth rate of PCPI was 4.5%. Nebraska had a total personal income (TPI) of \$56,523,179,000, which ranked 36th in the United States and reflected an increase of 5.8% from 2003. The 1994–2004 average annual growth rate of TPI was 5.2%. Earnings of persons employed in Nebraska increased from \$41,452,474,000 in 2003 to \$43,923,337,000 in 2004, an increase of 6.0%. The 2003–04 national change was 6.3%.

The US Census Bureau reports that the three-year average median household income for 2002 to 2004 in 2004 dollars was \$44,623 compared to a national average of \$44,473. During the same period an estimated 9.9% of the population was below the poverty line as compared to 12.4% nationwide.

2² LABOR

According to the US Department of Labor's Bureau of Labor Statistics (BLS), in April 2006 the seasonally adjusted civilian labor force in Nebraska numbered 988,200, with approximately 33,700 workers unemployed, yielding an unemployment rate of 3.4%, compared to the national average of 4.7% for the same period. Preliminary data for the same period placed nonfarm employment at 947,100. Since the beginning of the BLS data series in 1976, the highest unemployment rate recorded in Nebraska was 6.8% in February 1983. The historical low was 2.2% in February 1998. Preliminary nonfarm employment data by occupation for April 2006 showed that approximately 4.9% of the labor force was employed in construction; 10.9% in manufacturing; 21.2% in trade, transportation, and public utilities; 6.9% in financial activities; 10.4% in professional and business services; 13.7% in education and health services; 8.5% in leisure and hospitality services; and 17.1% in government.

The BLS reported that in 2005, a total of 69,000 of Nebraska's 830,000 employed wage and salary workers were formal members of a union. This represented 8.3% of those so employed, which was unchanged from 2004, and below the national average of 12%. Overall in 2005, a total of 79,000 workers (9.5%) in Nebraska were covered by a union or employee association contract, which in-

cludes those workers who reported no union affiliation. Nebraska is one of 22 states with a right-to-work law.

As of 1 March 2006, Nebraska had a state-mandated minimum wage rate of \$5.15 per hour. In 2004, women in the state accounted for 47.1% of the employed civilian labor force.

2³ AGRICULTURE

Territorial Nebraska was settled by homesteaders. Farmers easily adapted to the land and the relatively rainy eastern region, and corn soon became their major crop. In the drier central and western prairie regions, settlers were forced to learn new farming methods to conserve moisture in the ground. Droughts in the 1890s provided impetus for water conservation. Initially, oats and spring wheat were grown along with corn, but by the end of the 19th century, winter wheat became the main wheat crop. The drought and dust storms of the 1930s, which devastated the state's agricultural economy, once again drove home the need for water and soil conservation. In 2002, a total of 7.5 million acres (3 million hectares) were irrigated, a 21% increase from 1992. In 2004, there were 48,300 farms covering 45.9 million acres (18.6 million hectares).

With total cash receipts from farm marketings at over \$11.2 billion in 2005, Nebraska ranked fourth among the 50 states. About \$7.3 billion of all farm marketings came from livestock production, and \$3.9 billion from cash crops (9.9% of US total). In 2004, corn accounted for 22% of farm receipts.

Crop production in 2004 (in bushels) included: corn, 1.3 billion; sorghum grain, 33.6 million; wheat, 61 million; oats, 3.7 million; and barley, 162,000. Hay production was 6.1 million tons and potato production, 9.3 million hundredweight (422 million kg). During 2000–04, Nebraska ranked third among the states in production of corn for grain and sorghum for grain, and fifth in sorghum for beans.

Farms in Nebraska are major businesses requiring large land holdings to justify investments. The average value of an acre of cropland in 2004 was \$1,750. Nebraska farms still tend to be owned by individuals or families rather than by large corporations. The strength of state support for the family farm was reflected in the passage of a 1982 constitutional amendment, initiated by petition, prohibiting the purchase of Nebraska farm and ranch lands by other than a Nebraska family farm corporation.

2⁴ ANIMAL HUSBANDRY

In 2005, Nebraska ranked third behind Texas and Kansas in the total number of cattle on farms (6.35 million), including 61,000 milk cows. Nebraska farmers had around 2.85 million hogs and pigs, valued at \$313.5 million in 2004. During 2003, the state produced an estimated 10.3 million lb (4.7 million kg) of sheep and lambs, which grossed \$10.8 million in income for Nebraska farmers. Dairy products included 1.13 billion lb (0.51 billion kg) of milk produced.

2⁵ FISHING

Commercial fishing is negligible in Nebraska. The US Fish and Wildlife Service maintains 87 public fishing areas. In 2004, the state had 176,619 fishing license holders. There are five state hatcheries producing a variety of stock fish that includes large-

mouth bass, bluegill, black crappie, channel catfish, yellow perch, walleye, trout, and tiger musky.

26 FORESTRY

Arbor Day, now observed throughout the United States, originated in Nebraska in 1872 as a way of encouraging tree planting in the sparsely forested state. Forestland occupies 1,275,000 acres (516,000 hectares), or 2.6% of all Nebraska. Ash, boxelder, hackberry, cottonwood, honey locust, red and bur oaks, walnut, elm, and willow trees are common to eastern and central Nebraska, while ponderosa pine, cottonwood, eastern red cedar, and Rocky Mountain juniper prevail in the west. Lumber production amounted to only 15 million board ft in 2004. The state's two national forests—Nebraska and Samuel R. McKelvie—are primarily grassland and are managed for livestock grazing. In 2005, the National Forest Service maintained 257,628 acres (104,262 hectares) of forestland.

27 MINING

According to preliminary data from the US Geological Survey (USGS), the estimated value of nonfuel mineral production by Nebraska in 2003 was \$94.2 million, a decrease from 2002 of about 4%.

According to the preliminary data for 2003, by value and in descending order, cement (portland and masonry), crushed stone, and construction sand and gravel were the state's top nonfuel minerals.

Preliminary data for 2003 showed crushed stone production totaling 6.9 million metric tons, with a value of \$51.1 million, while construction sand and gravel output stood at 12.2 million metric tons, with a value of \$42.1 million.

Most clay mining occurs in the southeast region, but sand and gravel mining takes place throughout the state. Industrial sand was used in the production of glass and had some applications outside of construction activities. Nebraska in 2003 was also a producer of common clays and lime.

28 ENERGY AND POWER

Nebraska is the only state with an electric power system owned by the public through regional, cooperative, and municipal systems. As of 2003, Nebraska had 162 electrical power service providers, of which 151 were publicly owned, 23 were cooperatives and one was federally operated. As of that same year there were 930,822 retail customers. Of that total, 909,089 received their power from publicly owned service providers. Cooperatives accounted for 21,721 customers and 12 were 48 federal customers.

Total net summer generating capability by the state's electrical generating plants in 2003 stood at 6.685 million kW, with total production that same year at 30.455 billion kWh. Of the total amount generated, 99.7% came from electric utilities, with the remainder coming from independent producers and combined heat and power service providers. The largest portion of all electric power generated, 20.954 billion kWh (68.8%), came from coal-fired plants, with nuclear plants in second place at 7.996 billion kWh (26.3%) and hydroelectric plants in third at 980.110 million kWh (3.2%). Other renewable power sources, natural gas fueled plants, and petroleum fired plants accounted for the remainder.

As of 2006, Nebraska had two operating nuclear power plants: the Cooper plant in Brownville and the Fort Calhoun Station near Omaha.

As of 2004, Nebraska had proven crude oil reserves of 15 million barrels, or less than 1% of all proven US reserves, while output that same year averaged 8,000 barrels per day. Including federal offshore domains, the state that year ranked 22nd (21st excluding federal offshore) in proven reserves and 23rd (22nd excluding federal offshore) in production among the 31 producing states. In 2004, Nebraska had 1,639 producing oil wells and accounted for under 1% of all US production. The state has no refineries.

In 2004, Nebraska had 111 producing natural gas and gas condensate wells. In that same year, marketed gas production (all gas produced excluding gas used for repressuring, vented and flared, and nonhydrocarbon gases removed) totaled 1.454 billion cu ft (0.041 billion cu m). There was no data available on the state's proven reserves of natural gas.

Nebraska has no commercial coal industry.

29 INDUSTRY

According to the US Census Bureau's Annual Survey of Manufactures (ASM) for 2004, Nebraska's manufacturing sector covered some 15 product subsectors. The shipment value of all products manufactured in the state that same year was \$34.433 billion. Of that total, food manufacturing accounted for the largest share at \$19.037 billion. It was followed by machinery manufacturing at \$2.061 billion, transportation equipment manufacturing at \$2.034 billion, chemical manufacturing at \$1.904 billion, and miscellaneous manufacturing at \$1.623 billion.

In 2004, a total of 99,706 people in Nebraska were employed in the state's manufacturing sector, according to the ASM. Of that total, 76,578 were actual production workers. In terms of total employment, the food manufacturing industry accounted for the largest portion of all manufacturing employees at 36,190, with 29,537 actual production workers. It was followed by machinery manufacturing at 8,590 employees (5,617 actual production workers), fabricated metal product manufacturing at 8,306 employees (6,112 actual production workers), transportation equipment manufacturing at 7,841 employees (6,508 actual production workers), plastics and rubber products manufacturing at 5,159 employees (4,078 actual production workers), and miscellaneous manufacturing with 5,025 employees (4,070 actual production workers).

ASM data for 2004 showed that Nebraska's manufacturing sector paid \$3.532 billion in wages. Of that amount, the food manufacturing sector accounted for the largest share at \$1.131 billion. It was followed by machinery manufacturing at \$350.037 million, fabricated metal product manufacturing at \$307.681 million, transport equipment manufacturing at \$291.760 million, and plastics and rubber products manufacturing at \$184.551 million.

Nebraska has a small but growing manufacturing sector, the largest portion of which is in the Omaha metropolitan area. Other manufacturing centers are located in Lincoln and the Sioux City, Iowa, metropolitan area that is located in Nebraska.

30 COMMERCE

According to the 2002 Census of Wholesale Trade, Nebraska's wholesale trade sector had sales that year totaling \$26.1 billion

from 2,907 establishments. Wholesalers of durable goods accounted for 1,542 establishments, followed by nondurable goods wholesalers at 1,193 and electronic markets, agents, and brokers accounting for 172 establishments. Sales by durable goods wholesalers in 2002 totaled \$6.2 billion, while wholesalers of nondurable goods saw sales of \$16.5 billion. Electronic markets, agents, and brokers in the wholesale trade industry had sales of \$3.3 billion.

In the 2002 Census of Retail Trade, Nebraska was listed as having 8,157 retail establishments with sales of \$20.2 billion. The leading types of retail businesses by number of establishments were: motor vehicle and motor vehicle parts dealers (1,126), gasoline stations (1,116), building material/garden equipment and supplies dealers (1,022), and food and beverage stores (892). In terms of sales, motor vehicle and motor vehicle parts dealers accounted for the largest share of retail sales at \$5.07 billion, followed by general merchandise stores at \$2.8 billion, food and beverage stores at \$2.4 billion, and building material/garden equipment and supplies dealers at \$2.1 billion. A total of 105,634 people were employed by the retail sector in Nebraska that year.

Nebraska's exports of goods produced within the state totaled \$3 billion in 2005. Major export items included: food, electronic equipment, agricultural crops, transport equipment, and chemicals. The majority of exports went to Japan, Canada, and Mexico.

31 CONSUMER PROTECTION

Nebraska's consumer protection activities are generally the responsibility of the Office of the Attorney General's Consumers Protection Division. The Division also operates a mediation service to help the state's consumers to resolve complaints against business. Consumer protection involving railroads, telephone companies motor transport and other common carriers within the state is the responsibility of the Nebraska Public Service Commission.

When dealing with consumer protection issues, the state's attorney general's office can initiate civil and criminal proceedings, represent the state before state and federal regulatory agencies, administer consumer protection and education programs, handle formal consumer complaints, and exercise broad subpoena powers. In antitrust actions, the attorney general's office can act on behalf of those consumers who are incapable of acting on their own; initiate damage actions on behalf of the state in state courts; initiate criminal proceedings; and represent counties, cities and other governmental entities in recovering civil damages under state or federal law. However, the state's attorney general's office cannot provide private legal advice.

The offices of the Consumer Protection Division are located in Lincoln, the state capital.

32 BANKING

As of June 2005, Nebraska had 262 insured banks, savings and loans, and saving banks, plus 25 state-chartered and 53 federally chartered credit unions (CUs). Excluding the CUs, the Omaha-Council Bluffs market area accounted for the largest portion of the state's financial institutions and deposits in 2004, with 74 institutions and \$14.442 billion in deposits. As of June 2005, CUs accounted for 5.3% of all assets held by all financial institutions in the state, or some \$2.577 billion. Banks, savings and loans, and savings banks collectively accounted for the remaining 94.7% or \$46.120 billion in assets held.

In 2004, the median net interest margin (NIM)—the difference between the lower rates offered to savers and the higher rates charged on loans—was 4.18%, down from 4.19% in 2003. In fourth quarter 2005, the median NIM was 4.15%. The median percentage of past-due/nonaccrual loans to total loans in 2004 was 1.68%, down from 1.85% in 2003 and was 1.47% in fourth quarter 2005.

Regulation of Nebraska's state-chartered banks and other financial institutions is the responsibility of the Nebraska Department of Banking and Finance.

33 INSURANCE

The insurance industry is important in Nebraska's economy. The major company in the state is Mutual of Omaha. In 2004, there were about 1.2 million individual life insurance policies in force with a total value of over \$91.9 billion; total value for all categories of life insurance (individual, group, and credit) was over \$145 billion. The average coverage amount is \$76,500 per policy holder. Death benefits paid that year totaled at over \$399 million.

In 2003, there were 29 life and health and 38 property and casualty insurance companies domiciled in the state. Direct premiums for property and casualty insurance totaled \$3 billion in 2004. That year, there were 13,617 flood insurance policies in force in the state, with a total value of \$1.49 billion.

In 2004, 57% of state residents held employment-based health insurance policies, 8% held individual policies, and 22% were covered under Medicare and Medicaid; 11% of residents were uninsured. In 2003, employee contributions for employment-based health coverage averaged at 29% for family coverage. The employee contribution for single coverage averaged at 25%, the highest rate in the nation. The state offers a six-month health benefits expansion program for small-firm employees in connection with the Consolidated Omnibus Budget Reconciliation Act (COBRA, 1986), a health insurance program for those who lose employment-based coverage due to termination or reduction of work hours.

In 2003, there were over 1.3 million auto insurance policies in effect for private passenger cars. Required minimum coverage includes bodily injury liability of up to \$25,000 per individual and \$50,000 for all persons injured in an accident, as well as property damage liability of \$25,000. In 2003, the average expenditure per vehicle for insurance coverage was \$624.26.

34 SECURITIES

The Bureau of Securities within the Department of Banking and Finance regulates the sale of securities. There are no stock exchanges in the state. In 2005, there were 410 personal financial advisers employed in the state and 1,440 securities, commodities, and financial services sales agents. In 2004, there were over 29 publicly traded companies within the state, with over 11 NASDAQ companies, 9 NYSE listings, and 1 AMEX listing. In 2006, the state had five Fortune 500 companies; Berkshire Hathaway ranked first in the state and 13th in the nation with revenues of over \$81.6 billion, followed by ConAgra Foods, Union Pacific, Peter Kiewit Sons', Inc, and Mutual of Omaha Insurance. Peter Kiewit Sons', Inc. is an employee-owned company that does not trade in public stock. The other four companies listed are on the NYSE.

35 PUBLIC FINANCE

Nebraska's constitution prohibits the state from incurring debt in excess of \$100,000. However, there is a provision in the constitution that permits the issuance of revenue bonds for highway and water conservation and management structure construction. There are \$10 million of bonds payable by a separate legal entity that has been blended into the financial activity of the state. These bonds do not represent a general obligation of the state and are secured by revenues from the equipment that the debt was incurred to purchase.

Nebraska—State Government Finances

(Dollar amounts in thousands. Per capita amounts in dollars.)

The constitution also authorizes the Board of Regents of the University of Nebraska, the Board of Trustees of the Nebraska State Colleges, and the State Board of Education to issue revenue bonds to construct, purchase, or remodel educational buildings and facilities. The payment of these bonds is generally made from revenue collected from use of the buildings and facilities. The legislature has authorized the creation of two financing authorities that are not subject to state constitutional restrictions on the incurrence of debt. These financing authorities were organized to assist in providing funds for the construction of capital improvement projects at the colleges and the University. Although the state has no legal responsibility for the debt of these financing authorities, they are considered part of the reporting entity.

The Nebraska state budget is prepared by the Budget Division of the Department of Administrative Services and is submitted annually by the governor to the legislature. The fiscal year runs from 1 July to 30 June.

Fiscal year 2006 general funds were estimated at \$3.3 billion for resources and \$2.9 billion for expenditures. In fiscal year 2004, federal government grants to Nebraska were \$2.5 billion.

In the fiscal year 2007 federal budget, Nebraska was slated to receive \$5 million to co-locate the Terminal Radar Approach Control (TRACON) in Lincoln with the TRACON in Omaha.

36 TAXATION

In 2005, Nebraska collected \$3,797 million in tax revenues or \$2,158 per capita, which placed it 24th among the 50 states in per capita tax burden. The national average was \$2,192 per capita. Property taxes accounted for 0.1% of the total, sales taxes 39.9%, selective sales taxes 12.0%, individual income taxes 36.7%, corporate income taxes 5.2%, and other taxes 6.0%.

As of 1 January 2006, Nebraska had four individual income tax brackets ranging from 2.56 to 6.84%. The state taxes corporations at rates ranging from 5.58 to 7.81% depending on tax bracket.

In 2004, state and local property taxes amounted to \$2,007,118,000 or \$1,148 per capita. The per capita amount ranks the state 16th highest nationally. Local governments collected \$2,004,782,000 of the total and the state government \$2,336,000.

Nebraska taxes retail sales at a rate of 5.5%. In addition to the state tax, local taxes on retail sales can reach as much as 1.5%, making for a potential total tax on retail sales of 7%. Food purchased for consumption off-premises is tax exempt. The tax on cigarettes is 64 cents per pack, which ranks 30th among the 50 states and the District of Columbia. Nebraska taxes gasoline at 27 cents per gallon. This is in addition to the 18.4 cents per gallon federal tax on gasoline.

According to the Tax Foundation, for every federal tax dollar sent to Washington in 2004, Nebraska citizens received \$1.07 in federal spending.

37 ECONOMIC POLICY

The Department of Economic Development (DED) was created in 1967 to plan, promote, and develop the economy of the state. Nebraska offers loans for businesses which create or maintain employment for persons of low and moderate income. It provides tax credits to companies which increase investment and add jobs. The Bio Nebraska Life Sciences Association was formed in 2005 to coordinate and expand life sciences in the state. Grow Nebras-

ka is a nonprofit marketing program whose mission is to expand the state's arts and craft industry. The Nebraska "Edge" programs are rural entrepreneurial training programs that are hosted by local communities, organizations and associations. The Nebraska Investment Finance Authority provides tax-exempt bond financing and technical assistance for agriculture, business, housing, and community development. In 2006, the US Chamber of Commerce ranked all 50 states on legal fairness towards business. The chamber found Nebraska to be one of five states with the best legal environment for business. The other four were Iowa, Virginia, Connecticut, and Delaware.

38 HEALTH

The infant mortality rate in October 2005 was estimated at 5.7 per 1,000 live births. The birth rate in 2003 was 14.9 per 1,000 population. The abortion rate stood at 11.6 per 1,000 women in 2000. In 2003, about 83.4% of pregnant woman received prenatal care beginning in the first trimester. In 2004, approximately 82% of children received routine immunizations before the age of three.

The crude death rate in 2003 was 8.9 deaths per 1,000 population. As of 2002, the death rates for major causes of death (per 100,000 resident population) were: heart disease, 245.3; cancer, 189.5; cerebrovascular diseases, 63.8; chronic lower respiratory diseases, 54; and diabetes, 22.7. The mortality rate from HIV infection was 1.2 per 100,000 population. In 2004, the reported AIDS case rate was at about 3.9 per 100,000 population. In 2002, about 57% of the population was considered overweight or obese. As of 2004, about 20.2% of state residents were smokers.

University Hospital and University of Nebraska Medical Center are in Omaha. In 2003, Nebraska had 85 community hospitals with about 7,500 beds. There were about 212,000 patient admissions that year and 3.7 million outpatient visits. The average daily inpatient census was about 4,400 patients. The average cost per day for hospital care was \$1,043. Also in 2003, there were about 228 certified nursing facilities in the state with 16,378 beds and an overall occupancy rate of about 83%. In 2004, it was estimated that about 75.3% of all state residents had received some type of dental care within the year. Nebraska had 243 physicians per 100,000 resident population in 2004 and 936 nurses per 100,000 in 2005. In 2004, there were a total of 1,114 dentists in the state.

About 15% of state residents were enrolled in Medicaid programs in 2003; 15% were enrolled in Medicare programs in 2004. Approximately 11% of the state population was uninsured in 2004. In 2003, state health care expenditures totaled \$2.1 million.

39 SOCIAL WELFARE

In 2004, about 43,000 people received unemployment benefits, with the average weekly unemployment benefit at \$220. In fiscal year 2005, the estimated average monthly participation in the food stamp program included about 117,415 persons (46,948 households); the average monthly benefit was about \$84.83 per person. That year, the total of benefits paid through the state for the food stamp program was about \$119.5 million.

Temporary Assistance for Needy Families (TANF), the system of federal welfare assistance that officially replaced Aid to Families with Dependent Children (AFDC) in 1997, was reauthorized through the Deficit Reduction Act of 2005. TANF is funded through federal block grants that are divided among the states

based on an equation involving the number of recipients in each state. Nebraska's TANF program is called Employment First. In 2004, the state program had 27,000 recipients; state and federal expenditures on this TANF program totaled \$59 million in fiscal year 2003.

In December 2004, Social Security benefits were paid to 290,580 Nebraska residents. This number included 190,650 retired workers, 29,720 widows and widowers, 31,910 disabled workers, 18,070 spouses, and 20,230 children. Social Security beneficiaries represented 16.6% of the total state population and 94.3% of the state's population age 65 and older. Retired workers received an average monthly payment of \$937; widows and widowers, \$927; disabled workers, \$847; and spouses, \$475. Payments for children of retired workers averaged \$510 per month; children of deceased workers, \$648; and children of disabled workers, \$240. Federal Supplemental Security Income payments in December 2004 went to 22,100 Nebraska residents, averaging \$368 a month. An additional \$519,000 of state-administered supplemental payments were distributed to 5,574 residents.

40 HOUSING

In 2004, there were an estimated 757,743 housing units in Nebraska, 687,456 of which were occupied; 68.4% were owner-occupied. About 73.8% of all units were single-family, detached homes. Utility gas and electricity were the most common heating energy sources. It was estimated that 35,566 units lacked telephone service, 1,426 lacked complete plumbing facilities, and 3,513 lacked complete kitchen facilities. The average household had 2.47 members.

In 2004, 10,900 new privately owned units were authorized for construction. The median home value was \$106,656. The median monthly cost for mortgage owners was \$1,051. Renters paid a median of \$547 per month. In 2006, the state received over \$12.3 million in community development block grants from the US Department of Housing and Urban Development (HUD).

41 EDUCATION

In 2004, 91.3% of Nebraskans age 25 and older were high school graduates, exceeding the national average of 84%. Some 24.8% had obtained a bachelor's degree or higher, lower than the national average of 26%.

The total enrollment for fall 2002 in Nebraska's public schools stood at 285,000. Of these, 195,000 attended schools from kindergarten through grade eight, and 90,000 attended high school. Approximately 79.5% of the students were white, 7.1% were black, 10.1% were Hispanic, 1.7% were Asian/Pacific Islander, and 1.6% were American Indian/Alaskan Native. Total enrollment was estimated at 282,000 in fall 2003 and expected to be 285,000 by fall 2014, a decline of 0.2% during the period 2002 to 2014. There were 39,454 students enrolled in 242 private schools in fall 2003. Expenditures for public education in 2003/04 were estimated at \$2.6 billion. Since 1969, the National Assessment of Educational Progress (NAEP) has tested public school students nationwide. The resulting report, *The Nation's Report Card*, stated that in 2005 eighth graders in Nebraska scored 284 out of 500 in mathematics compared with the national average of 278.

As of fall 2002, there were 116,737 students enrolled in college or graduate school; minority students comprised 9.8% of total post-

secondary enrollment. In 2005, Nebraska had 39 degree-granting institutions, including 7 public four-year schools, 8 public two-year schools, and 16 nonprofit, private four-year institutions. The University of Nebraska is the state's largest postsecondary institution, with campuses in Kearney, Lincoln, and Omaha.

4² ARTS

The 15-member Nebraska Arts Council (NAC), appointed by the governor, is empowered to receive federal and state funds and to plan and administer statewide and special programs in all the arts. Funds are available for arts education, organizational support, multicultural arts projects, special arts-related programs, touring, and fellowships. Affiliation with the Mid-America Arts Alliance allows the council to help sponsor national and regional events. In 2005, the NAC and other Nebraska arts organizations received nine grants totaling \$747,800 from the National Endowment for the Arts.

The Nebraska Humanities Council, founded in 1972, sponsors two annual festivals: The Great Plains Chautauqua and the Nebraska Book Festival. The Nebraska Book Festival celebrates local writers and books, but also emphasizes the importance of reading and writing worldwide; the 2005 theme "Local Wonders" featured US Poet Laureate and 2005 Pulitzer Prize winner, Ted Kooser, and his title, *Local Wonders: Seasons in the Bohemian Alps*. In 2005, the National Endowment for the Humanities contributed \$782,580 to seven programs in the state.

The Omaha Theater Company for Young People sponsors a number of theatrical performances as well as the Omaha Theater Ballet Company. The Omaha Symphony was founded in 1921, and Opera Omaha was founded in 1958. In their 2006/07 season, the Omaha Symphony hosted special guest performances by pop and Christian music artist, Amy Grant, and Tony-Award winning actress, Bernadette Peters.

The Lied Center for Performing Arts in Lincoln was created in 1990 and sponsors a wide variety of dance, theater, and musical programs. The facility brings major regional, national, and international events to the state and works with the University of Nebraska-Lincoln, providing opportunities in teaching and training in the performing arts departments. Offering a wide variety of events, in 2006, performances included Cuban-American recording artist, Maria Del Rey and the musical *Sweeney Todd* performed by local musical company, TADA.

4³ LIBRARIES AND MUSEUMS

For the fiscal year ending in December 2001, Nebraska had 272 public library systems, with 289 libraries, of which 17 were branches. In that same year, there was a total of 6,004,000 volumes of books and serial publications in the public library system, while total circulation was 11,366,000. The system also had 209,000 audio and 175,000 video items, 15,000 electronic format items (CD-ROMs, magnetic tapes, and disks), and nine bookmobiles. In fiscal year 2001, operating income for the state's public library system came to \$37,036,000 and included \$289,000 in federal grants and \$511,000 in state grants. The Omaha public library system had 916,560 books and 2,471 periodical subscriptions in nine branches.

The Joslyn Art Museum in Omaha is the state's leading museum. Other important museums include the Nebraska State Museum

of History, the University of Nebraska State Museum (natural history), and the Sheldon Memorial Art Gallery, all in Lincoln; the Western Heritage Museum in Omaha; the Stuhr Museum of the Prairie Pioneer in Grand Island; and the Hastings Museum in Hastings. In all, the state had 107 museums in 2000. The Agate Fossil Beds National Monument in northwestern Nebraska features mammal fossils from the Miocene era and a library of paleontological and geologic material.

4⁴ COMMUNICATIONS

Telephone service is regulated by the Public Service Commission. About 95.7% of the state's occupied housing units had telephones in 2004. Additionally, by June of that same year there were 984,355 mobile wireless telephone subscribers. In 2003, 66.1% of Nebraska households had a computer and 55.4% had Internet access. By June 2005, there were 253,974 high-speed lines in Nebraska, 228,965 residential and 25,009 for business. In 2005, 52 major FM stations and 19 major AM stations were operating. There were 8 major network TV stations. A total of 23,752 Internet domain names were registered in the state in 2000.

4⁵ PRESS

In 2005, Nebraska had 6 morning dailies, 12 evening dailies, and 6 Sunday newspapers. The leading newspaper is the *Omaha World-Herald*, with a daily circulation in 2005 of 192,607 and a Sunday circulation of 242,964. The *Lincoln Journal-Star* had a daily circulation of 74,893 and a Sunday circulation of 84,149.

4⁶ ORGANIZATIONS

In 2006, there were over 2,835 nonprofit organizations registered within the state, of which about 1,874 were registered as charitable, educational, or religious organizations. Among the national organizations based in Nebraska are the Great Plains Council at the University of Nebraska (Lincoln), the American Shorthorn Society (Omaha), the Morse Telegraph Club (Lincoln), Girls and Boys Town (Boys Town), Wellness Councils of America (Omaha), USA Roller Sports (Lincoln), and the National Arbor Day Foundation (Nebraska City). The state's arts, culture, and history are represented in part by the Nebraska Humanities Council and the Nebraska State Historical Society. Special interest and hobbyist associations include the Antique Barbed Wire Society based in Kearney and the Centennial Model T Club of Omaha.

4⁷ TOURISM, TRAVEL, AND RECREATION

Tourism is Nebraska's third-largest source of outside revenue (after agriculture and manufacturing). In 2004, the state hosted some 19.6 million travelers. Out-of-state visitors were primarily from Kansas, Iowa, Colorado, Missouri, South Dakota, Illinois, and Minnesota. Total travel expenditures were at \$2.9 billion. The industry supports nearly 43,000 jobs.

The 8 state parks, 9 state historical parks, 12 federal areas, and 55 recreational areas are main tourist attractions; fishing, swimming, picnicking, and sightseeing are the principal activities. The most attended Nebraska attractions in 2002 were: Omaha's Henry Doorly Zoo (1,420,556 visitors), Cabela's in Sidney (1,025,000), Eugene T. Mahoney State Park (1,100,000), Lake McConaughy State Recreation Area (859,624), Fort Robinson State Park (357,932), Joslyn Art Museum (186,646), Strategic Air and Space

Museum (173,889), the Great Platte River Road Archway Monument (163,000), University of Nebraska State Museum (133,343), and Scotts Bluff National Monument (111,293). There is a Lewis and Clark Discovery Center in Crofton. An unusual exhibit, called Carhenge is a re-creation of Stonehenge made with wrecked cars.

48 SPORTS

There are no major professional sports teams in Nebraska. Minor league baseball's Omaha Royals play in the Triple-A Pacific Coast League. The most popular spectator sport is college football. Equestrian activities, including racing and rodeos, are popular. Major annual sporting events are the National Collegiate Athletic Association (NCAA) College Baseball World Series at Rosenblatt Stadium and the River City Roundup and Rodeo, both held in Omaha. Pari-mutuel racing is licensed by the state.

The University of Nebraska Cornhuskers compete in the Big Twelve Conference. The football team often places high in national rankings and was named National Champion in 1970 (with Texas), 1971, 1994, 1995, and 1997. The Cornhuskers won the Orange Bowl in 1964, 1971, 1972, 1973, 1983, 1995, 1997, and 1998; the Cotton Bowl in 1974 (January); the Sugar Bowl in 1974 (December), 1985, and 1987; the Alamo Bowl in 2001; and the Fiesta Bowl in 1996 and 2000. The basketball team won the National Invitational Tournament in 1996.

49 FAMOUS NEBRASKANS

Nebraska was the birthplace of only one US president, Gerald R. Ford (Leslie King Jr., b.1913). When Spiro Agnew resigned the vice presidency in October 1973, President Richard M. Nixon appointed Ford, then a US representative from Michigan, to the post. Upon Nixon's resignation on 9 August 1974, Ford became the first nonelected president in US history.

Four native and adoptive Nebraskans have served in the presidential cabinet. J. Sterling Morton (b.New York, 1832–1902), who originated Arbor Day, was secretary of agriculture under Grover Cleveland. William Jennings Bryan (b.Illinois, 1860–1925), a US representative from Nebraska, served as secretary of state and was three times the unsuccessful Democratic candidate for president. Frederick A. Seaton (b.Washington, 1909–74) was Dwight Eisenhower's secretary of the interior, and Melvin Laird (b.1922) was Richard Nixon's secretary of defense.

George W. Norris (b.Ohio, 1861–1944), the "fighting liberal," served 10 years in the US House of Representatives and 30 years in the Senate. Norris's greatest contributions were in rural electrification (his efforts led to the creation of the Tennessee Valley Authority), farm relief, and labor reform; he also promoted the unicameral form of government in Nebraska. Theodore C. Sorensen (b.1928) was an adviser to President John F. Kennedy.

Indian leaders important in Nebraska history include Oglala Sioux chiefs Red Cloud (1822–1909) and Crazy Horse (1849?–77). Moses Kinkaid (b.West Virginia, 1854–1920) served in the US House and was the author of the Kinkaid Act, which encouraged homesteading in Nebraska. Educator and legal scholar Roscoe Pound (1870–1964) was also a Nebraskan. In agricultural science, Samuel Aughey (b.Pennsylvania, 1831–1912) and Hardy W. Campbell (b.Vermont, 1850–1937) developed dry-land farming techniques. Botanist Charles E. Bessey (b.Ohio, 1845–1915) encouraged forestation. Father Edward Joseph Flanagan (b.Ireland,

1886–1948) was the founder of Boys Town, a home for underprivileged youth. Two native Nebraskans became Nobel laureates in 1980: Lawrence R. Klein (b.1920) in economics and Val L. Fitch (b.1923) in physics.

Writers associated with Nebraska include Willa Cather (b.Virginia, 1873–1947), who used the Nebraska frontier setting of her childhood in many of her writings and won a Pulitzer Prize in 1922; author and poet John G. Neihardt (b.Illinois, 1881–1973), who incorporated Indian mythology and history in his work; Mari Sandoz (1901–66), who wrote of her native Great Plains; writer-photographer Wright Morris (1910–98); and author Tillie Olsen (b.1912). Rollin Kirby (1875–1952) won three Pulitzer Prizes for political cartooning. Composer-conductor Howard Hanson (1896–1982), born in Wahoo, won a Pulitzer Prize in 1944.

Nebraskans important in entertainment include actor-dancer Fred Astaire (Fred Austerlitz, 1899–1984); actors Harold Lloyd (1894–1971), Henry Fonda (1905–82), Robert Taylor (Spangler Arlington Brugh, 1911–69), Marlon Brando (1924–2004), and Sandy Dennis (1937–93); television stars Johnny Carson (b.Iowa, 1925–2005) and Dick Cavett (b.1936); and motion-picture producer Darryl F. Zanuck (1902–79).

NEVADA

State of Nevada

ORIGIN OF STATE NAME: Named for the Sierra Nevada mountain range, *nevada* meaning “snow-covered” in Spanish. **NICKNAME:** The Silver State; the Sagebrush State; the Battle-born State. **CAPITAL:** Carson City. **ENTERED UNION:** 31 October 1864 (36th). **SONG:** “Home Means Nevada.” **MOTTO:** All for Our Country. **FLAG:** On a blue field, two sprays of sagebrush and a golden scroll in the upper lefthand corner frame a silver star with the word “Nevada,” below the star and above the sprays; the scroll, reading “Battle Born,” recalls that Nevada was admitted to the Union during the Civil War. **OFFICIAL SEAL:** A quartz mill, ore cart, and mine tunnel symbolize Nevada’s mining industry. A plow, sickle, and sheaf of wheat represent its agricultural resources. In the background are a railroad, a telegraph line, and a sun rising over the snow-covered mountains. Encircling this scene are 36 stars and the state motto. The words “The Great Seal of the State of Nevada” surround the whole. **BIRD:** Mountain bluebird. **FISH:** Lahontan cutthroat trout. **FLOWER:** Sagebrush. **TREE:** Single-leaf piñon; Bristlecone pine. **LEGAL HOLIDAYS:** New Year’s Day, 1 January; Birthday of Martin Luther King Jr., 3rd Monday in January; Washington’s Birthday, 3rd Monday in February; Memorial Day, last Monday in May; Independence Day, 4 July; Labor Day, 1st Monday in September; Nevada Day, last Friday in October; Veterans’ Day, 11 November; Thanksgiving Day, 4th Thursday in November; Family Day, Friday after Thanksgiving; Christmas Day, 25 December. **TIME:** 4 AM PST = noon GMT.

¹ LOCATION, SIZE, AND EXTENT

Situated between the Rocky Mountains and the Sierra Nevada in the western United States, Nevada ranks seventh in size among the 50 states.

The total area of Nevada is 110,561 sq mi (286,352 sq km), with land comprising 109,894 sq mi (284,624 sq km) and inland water covering 667 sq mi (1,728 sq km). Nevada extends 320 mi (515 km) E–W; the maximum N–S extension is 483 mi (777 km).

Nevada is bordered on the N by Oregon and Idaho; on the E by Utah and Arizona (with the line in the SE formed by the Colorado River); and on the S and W by California (with part of the line passing through Lake Tahoe). The total boundary length of Nevada is 1,480 mi (2,382 km). The state’s geographic center is in Lander County, 26 mi (42 km) SE of Austin.

² TOPOGRAPHY

Almost all of Nevada belongs physiographically to the Great Basin, a plateau characterized by isolated mountain ranges separated by arid basins. These ranges generally trend north–south; most are short, up to 75 mi (121 km) long and 15 mi (24 km) wide, and rise to altitudes of 7,000–10,000 ft (2,100–3,000 m). Chief among them are the Schell Creek, Ruby, Toiyabe, and Carson (within the Sierra Nevada). Nevada’s highest point is Boundary Peak, 13,140 ft (4,007 m), in the southwest. The mean elevation of the state is approximately 5,500 ft (1,678 m).

Nevada has a number of large lakes and several large saline marshes known as sinks. The largest lake is Pyramid, with an area of 188 sq mi (487 sq km), in the west. Nevada shares Lake Tahoe with California, and Lake Mead, created by Hoover Dam on the Colorado River, with Arizona. The streams of the Great Basin frequently disappear during dry spells; many of them flow into local

lakes or sinks without reaching the sea. The state’s longest river, the Humboldt, flows for 290 mi (467 km) through the northern half of the state into the Humboldt Sink. The Walker, Truckee, and Carson rivers drain the western part of Nevada. The canyon carved by the mighty Colorado, the river that forms the extreme southeastern boundary of the state, is the site of Nevada’s lowest elevation, 479 ft (146 m).

³ CLIMATE

Nevada’s climate is sunny and dry, with wide variation in daily temperatures. The normal daily temperature at Reno is 50°F (10°C), ranging from 32°F (0°C) in January to 70°F (21°C) in July. The all-time high, 125°F (52°C), was set at Laughlin on 29 June 1994; the record low, -50°F (-46°C), at San Jacinto on 8 January 1937.

Nevada is the driest state in the United States, with overall average annual precipitation of about 7.3 in (18 cm) at Reno. Snowfall is abundant in the mountains, however, reaching 60 in (152 cm) a year on the highest peaks.

⁴ FLORA AND FAUNA

Various species of pine—among them the single-leaf piñon, the state tree—dominate Nevada’s woodlands. Creosote bush is common in southern Nevada, as are many kinds of sagebrush throughout the state. Wildflowers include shooting star and white and yellow violets. Eight plant species were listed as threatened or endangered in 2006. Endangered species that year were Amargosa niterwort and steamboat buckwheat.

Native mammals include the black bear, white-tailed and mule deer, pronghorn antelope, Rocky Mountain elk, cottontail rabbit, and river otter. Grouse, partridge, pheasant, and quail are the leading game birds, and a diversity of trout, char, salmon, and whitefish

thrive in Nevada waters. Rare and protected reptiles are the Gila monster and desert tortoise.

Ash Meadows National Wildlife Refuge, an oasis ecosystem in the Mojave Desert, is home to at least 25 species of rare and endangered plants and animals. These include the Devil's Hole pupfish, which is found only in one single limestone cave, and the Ash Meadows naucorid, an insect found only by one spring. Six plant species are unique to the site.

The US Fish and Wildlife Service listed 25 Nevada animal species (vertebrates and invertebrates) as threatened or endangered in April 2006, including the desert tortoise, six species of dace, three species of pupfish, woundfin, and three species of chub.

5 ENVIRONMENTAL PROTECTION

Preservation of the state's clean air, scarce water resources, and no longer abundant wildlife are the major environmental challenges facing Nevada. The Department of Fish and Game sets quotas on the hunting of deer, antelope, bighorn sheep, and other game animals. The Department of Conservation and Natural Resources has broad responsibility for environmental protection, state lands, forests, and water and mineral resources. The Division of Environmental Protection within the department has primary responsibility for the control of air pollution, water pollution, waste management, and groundwater protection. In 2003, 409.1 million lb of toxic chemicals were released in the state; Nevada ranked second in the country (after Alaska) for the highest level of toxic chemicals released. In 2003, Nevada had 33 hazardous waste sites listed in the US Environment Protection Agency (EPA) database; only one, Carson River Mercury Site, was on the National Priorities List as of 2006. In 2005, the EPA spent over \$400,000 through the Superfund program for the cleanup of hazardous waste sites in the state. The same year, federal EPA grants awarded to the state included \$16.5 million for the safe drinking water state revolving fund and \$6.4 million for the water pollution control revolving fund.

Although wetlands cover only about 1% of the mainly barren state, they are some of the most valuable lands in the state. Ash Meadows National Wildlife Refuge, an oasis ecosystem in the Mojave Desert, was established in 1984 and designated as a Ramsar Wetland of International Importance in 1986.

6 POPULATION

Nevada ranked 35th in the United States with an estimated total population of 2,414,807 in 2005, an increase of 20.8% since 2000. Between 1990 and 2000, Nevada's population grew from 1,201,833 to 1,998,257, an increase of 66.3%, the decade's largest increase by far among the 50 states (followed by 40% for Arizona). It was also the fourth consecutive decade in which Nevada was the country's fastest-growing state and had a population growth rate over 50%. The population was projected to reach 3 million by 2015 and 3.8 million by 2025. In 2004, the median age of Nevada residents was 35.1. In the same year, nearly 25.9% of the populace was under the age of 18 while 11.2% was age 65 or older.

With a population density of 21.3 persons per sq mi in 2004 (up from 15.9 in 1998), Nevada remains one of the most sparsely populated states. Approximately 90% of Nevada residents live in cities, the largest of which, Las Vegas, had an estimated 534,847 residents in 2004. Henderson had an estimated population of 224,829, and

Reno had 197,963. The Greater Las Vegas metropolitan area had an estimated 1,650,671 residents in 2004; the Reno metropolitan area had an estimated 384,491.

7 ETHNIC GROUPS

Some 135,477 black Americans made up about 6.8% of Nevada's population, up sharply from 79,000 in 1990, although the percentage at that time remained about the same. By 2004, however, the percentage of the state's population that was black was 7.5%. The American Indian population was 26,420 in 2000, down from 31,000 in 1990. In 1990, tribal landholdings totaled 1,138,462 acres (460,721 hectares). Major tribes are the Washo, Northern Paiute, Southern Paiute, and Shoshoni. In 2004, 1.4% of the population was American Indian.

Both the number and percentage of foreign-born residents rose sharply in the 1990s, from 104,828 persons (8.7%) in 1990 to 316,593 state residents (15.8%) in 2000—the sixth-highest percentage of foreign born in the 50 states. In 2000, Hispanics and Latinos numbered 393,970 (19.7% of the state total), and 285,764 reported Mexican ancestry, up sharply from 72,281 in 1990. In 2004, 22.8% of the population was of Hispanic or Latino origin, 5.5% of the population was Asian, and 0.5% Pacific Islander. That year, 2.5% of the population reported origin of two or more races.

8 LANGUAGES

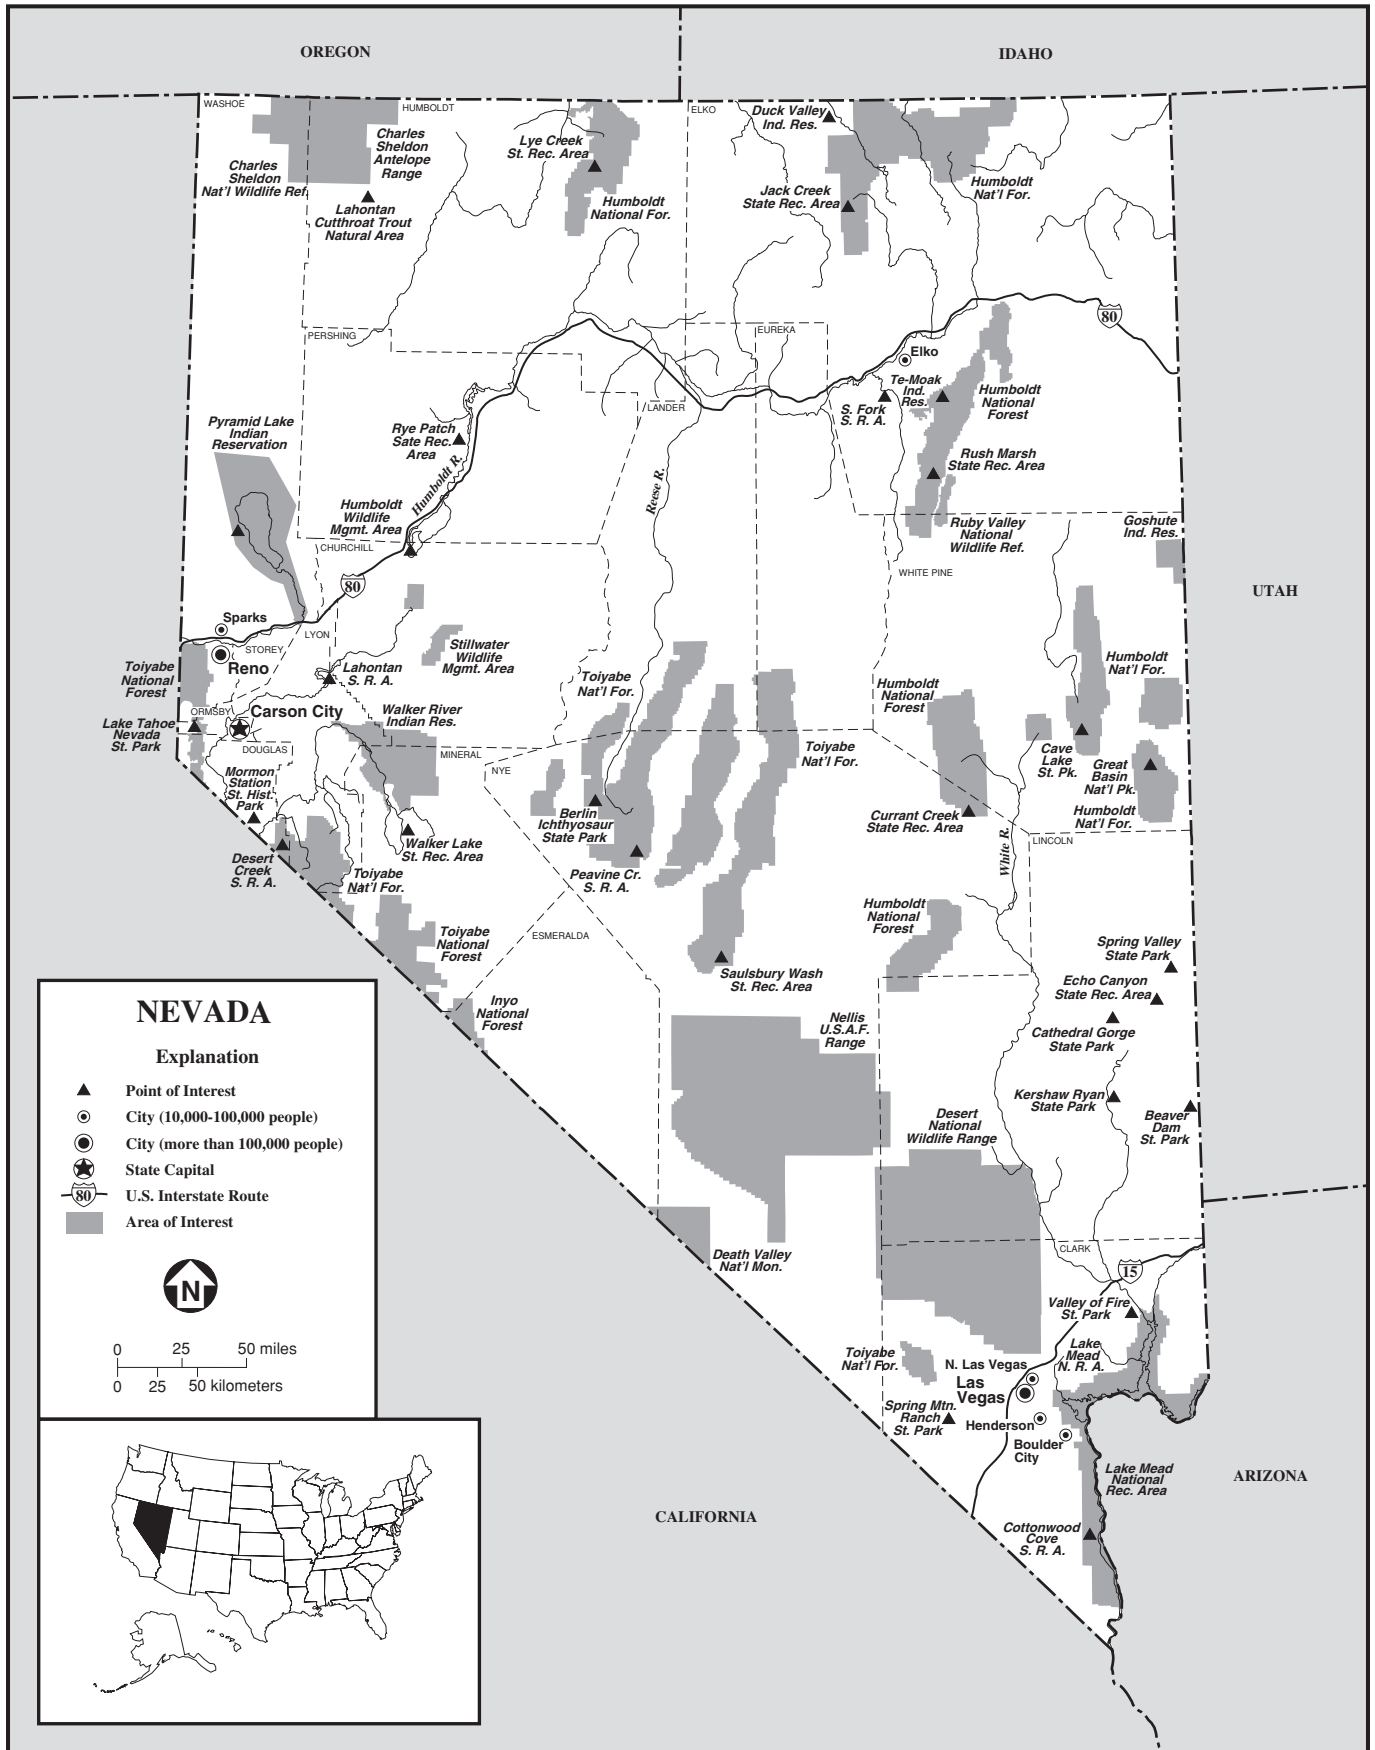

Midland and Northern English dialects are so intermixed in Nevada that no clear regional division appears; an example of this is the scattered use of both Midland *dived* (instead of *dove*) as the past tense of *dive* and the Northern /krik/ for *creek*. In 2000, 1,425,748 Nevadans—76.9% of the resident population five years old or older—spoke only English at home, down from 86.8% in 1990.

The following table gives selected statistics from the 2000 Census for language spoken at home by persons five years old and over. The category "Other Pacific Island languages" includes Chamorro, Hawaiian, Ilocano, Indonesian, and Samoan.

LANGUAGE	NUMBER	PERCENT
Population 5 years and over	1,853,720	100.0
Speak only English	1,425,748	76.9
Speak a language other than English	427,972	23.1
Speak a language other than English	427,972	23.1
Spanish or Spanish Creole	299,947	16.2
Tagalog	29,476	1.6
Chinese	11,787	0.6
German	10,318	0.6
French (incl. Patois, Cajun)	7,912	0.4
Korean	6,634	0.4
Italian	6,169	0.3
Japanese	5,678	0.3
Other Pacific Island languages	4,552	0.2
Vietnamese	3,808	0.2
Thai	3,615	0.2

9 RELIGIONS

In 2004, Nevada had 607,926 Roman Catholics, a significant increase from 331,844 members in 2000. The second-largest single denomination is the Church of Jesus Christ of Latter-day Saints (Mormons), which reported a statewide membership of 165,498 members in 298 congregations in 2006. There are two Mormon temples in the state, at Las Vegas (opened in 1989) and Reno (2000). Other major Protestant groups (with 2000 membership

data) include Southern Baptists, 40,233 (with 1,373 newly baptized members reported in 2002); Assemblies of God, 22,699 (an increase of 220% from 1990); Evangelical Lutherans, 10,663; and United Methodists, 10,452. The Salvation Army, though still relatively small, experienced membership growth of 145% from 1990 to report a total of 1,239 adherents in 2000. Also in 2000, there were an estimated 77,100 Jews living in Nevada, representing an increase of 277% from 1990. Muslims numbered about 2,291 and there were about 1,124 adherents to the Baha'i faith. About 1.3 million people (about 65.7% of the population) did not claim any religious affiliation.

¹⁰TRANSPORTATION

As of 2003, Nevada had 2,009 mi (3,234 km) of railroad trackage, all of which is Class I right-of-way. As of 2006, Amtrak provided passenger service to four stations across northern Nevada en route from Chicago to Oakland via its California Zephyr train.

In 2003, there were 33,977 mi (54,702 km) of public roads and streets in Nevada. In 2004, there were some 1.301 million registered vehicles in the state, of which about 633,000 were automobiles, around 622,000 were trucks of all types, and some 2,000 were buses. Licensed drivers in that same year numbered 1,548,097. The major highways, I-80 and I-15, link Salt Lake City with Reno and Las Vegas, respectively.

In 2005, Nevada had a total of 132 public and private-use aviation-related facilities. This included 99 airports, 32 heliports, and 1 STOLport (Short Take-Off and Landing). The leading commercial air terminals are McCarran International Airport in Las Vegas and Reno-Tahoe International Airport. In 2004, McCarran International Airport had 19,943,025 enplanements, making it the sixth-busiest airport in the United States. Reno-Tahoe International in that same year had 2,478,179 enplanements.

¹¹HISTORY

The first inhabitants of what is now Nevada arrived about 12,000 years ago. They were fishermen, as well as hunters and food gatherers, for the glacial lakes of the ancient Great Basin were then only beginning to recede. Numerous sites of early human habitation have been found, the most famous being Pueblo Grande de Nevada (also known as Lost City). In modern times, four principal Indian groups have inhabited Nevada: Southern Paiute, Northern Paiute, Shoshoni, and Washo.

Probably the first white explorer to enter the state was the Spanish priest Francisco Garces, who apparently penetrated extreme southern Nevada in 1776. The year 1826 saw Peter Skene Ogden of the British Hudson's Bay Company enter the northeast in a prelude to his later exploration of the Humboldt River; the rival American trapper Jedediah Smith traversed the state in 1826–27. During 1843–44, John C. Frémont led the first of his several expeditions into Nevada.

Nevada's first permanent white settlement, Mormon Station (later Genoa), was founded in 1850 in what is now western Nevada, a region that became part of Utah Territory the same year. (The southeastern tip of Nevada was assigned to the Territory of New Mexico.) Soon other Mormon settlements were started there and in Las Vegas Valley. The Las Vegas mission failed, but the farming communities to the northwest succeeded, even though friction between Mormons and placer miners in that area caused

political unrest. Most of the Mormons in western Nevada departed in 1857, when Salt Lake City was threatened by an invasion of federal troops.

A separate Nevada Territory was established in 1861; only three years later, on 31 October 1864, Nevada achieved statehood, although the present boundaries were not established until 18 January 1867. Two factors accelerated the creation of Nevada: the secession of the southern states, whose congressmen had been blocking the creation of new free states, and the discovery, in 1859, of the Comstock Lode, an immense concentration of silver and gold which attracted thousands of fortune seekers and established the region as a thriving mining center.

Nevada's development during the rest of the century was determined by the economic fortunes of the Comstock, whose affairs were dominated, first, by the Bank of California (in alliance with the Central Pacific Railroad) and then by the "Bonanza Firm" of John W. Mackay and his partners. The lode's rich ores were exhausted in the late 1870s and Nevada slipped into a 20-year depression. A number of efforts were made to revive the economy, one being an attempt to encourage mining by increasing the value of silver. To this end, Nevadans wholeheartedly supported the movement for free silver coinage during the 1890s and the Silver Party reigned supreme in state politics for most of the decade.

Nevada's economy revived following new discoveries of silver at Tonopah and gold at Goldfield early in the 20th century. A second great mining boom ensued, bolstered and extended by major copper discoveries in eastern Nevada. Progressive political ferment in this pre-World War I period added recall, referendum, and initiative amendments to the state constitution and brought about the adoption of women's suffrage (1914).

The 1920s was a time of subdued economic activity; mining fell off, and not even the celebrated divorce trade, centered in Reno, was able to compensate for its decline. Politically, the decade was conservative and Republican, with millionaire George Wingfield dominating state politics through a so-called bipartisan machine. Nevada went Democratic during the 1930s, when the hard times of the Depression were alleviated by federal public-works projects, most notably the construction of the Hoover (Boulder) Dam, and by state laws aiding the divorce business and legalizing gambling.

Gaming grew rapidly after World War II, becoming by the mid-1950s not only the mainstay of Nevada tourism but also the state's leading industry. Revelations during the 1950s and 1960s that organized crime had infiltrated the casino industry and that casino income was being used to finance narcotics and other rackets in major East Coast cities led to a state and federal crackdown and the imposition of new state controls.

From 1960 to 1980, Nevada was the fastest-growing of the 50 states, increasing its population by 70% in the 1960s and 64% in the 1970s. In the mid-1980s the state's population growth continued to outpace that of the nation, reaching 14% in the first half of the 1980s in contrast to the national average of 4%. Much of this growth was associated with expansion of the gambling industry—centered in the casinos of Las Vegas and Reno—and of the military. In the 1980s, Nevada began to try to reduce its dependence on gambling by diversifying its economy. In an attempt to attract new businesses, particularly in the high-tech industry, the state promoted such features as its absence of state, corporate, or

personal income taxes, inexpensive real estate, low wages, and its ready access by air or land to California.

In the first half of the 1990s, Nevada was once again the nation's fastest growing state, increasing its population by nearly 25%; by 2001 the state's population exceeded 2.1 million. Efforts to diversify the state's economy yielded results as its industrial base expanded. In the early 1990s, Nevada was the only state reporting an increase in manufacturing jobs. Meanwhile Las Vegas continued to prosper, expanding its offerings to attract new visitors. During the decade, several extravagant new hotel and casino complexes opened, many of them featuring amusement parks and other family-oriented entertainment. The booming Las Vegas economy helped push Nevada unemployment to an all-time low of 3.1% in December 1999, one-half a percentage point below the prior record of 3.6% set in 1962. Due in large measure to the 2001 US recession and its aftermath, however, Nevada faced a \$704 million budget deficit in 2003, and the unemployment rate stood at 5.4% in July 2003, albeit below the national average of 6.2%. In September 2005, Nevada's unemployment rate had dropped to 4.2%, below the national average of 5.1%. In 2005, the state had a budget surplus, and decided to return a portion of it to taxpayers in the form of a one-time \$300 million tax rebate. The 2005 state budget approved by Nevada's legislature was \$5.9 billion. Nevada had the fastest growing state budget in the nation that year.

Nevadans' opposition to the Yucca Mountain nuclear waste disposal site, first proposed by Congress in 1987, has been a continuing issue. In 2002, US Energy Secretary Spencer Abraham recommended the Yucca Mountain site to President George W. Bush as a nuclear waste repository, which Bush approved. Nevada Governor Kenny Guinn vetoed the project, but the US Congress overrode his veto. President Bush signed Congress's joint resolution into law, and Yucca Mountain became the nation's nuclear waste repository site. Nevada filed major lawsuits against the US Department of Energy, the Nuclear Regulatory Commission, President Bush, and Secretary Abraham, which were consolidated into four major cases and heard before the District of Columbia Court of Appeals on 14 January 2004. The judges dismissed most of Nevada's claims, but they did rule in favor of the state's complaint against radiation standards for the nuclear waste repository.

12 STATE GOVERNMENT

Nevada's 1864 constitution, as amended (132 times by January 2005), continues to govern the state. In 2002 voters gave final approval to an amendment defining marriage as a union between a man and a woman. The state legislature consists of a Senate with 21 members, each elected to a four-year term, and a House of Representatives with 42 members, each serving two years. Legislative sessions are held in odd-numbered years only, beginning on the first Monday in February and lasting no more than 120 calendar days. Only the governor may call special sessions, which have no limit, but legislators are only paid for up to 20 calendar days during a special session. Legislators must be qualified voters, at least 21 years old, should have lived in the state for at least a year, and should have lived in the district for at least 30 days prior to the close of filing for declaration of candidacy. The legislative salary was \$130 per diem during regular sessions in 2004, unchanged from 1999.

Executive officials elected statewide include the governor and lieutenant governor (who run separately), secretary of state, attorney general, treasurer, and comptroller, all of whom serve for four years. The governor is limited to a maximum of two consecutive terms. Candidates for governor must be at least 25 years old, a qualified voter, and must have been a citizen and resident of the state for at least two years prior to election. As of December 2004, the governor's salary was \$117,000, unchanged from 1999.

Bills approved by the legislature are sent to the governor, who has five days when the legislature is in session (or 10 days if adjourned) to sign or veto it. If the governor does not act within the required time period, the bill automatically becomes law. A two-thirds vote of the elected members of each house is required to override a gubernatorial veto.

Constitutional amendments may be submitted to the voters for ratification if the proposed amendments have received majority votes in each house in two successive sessions or under an initiative procedure calling for petitions signed by 10% of those who voted in the last general election. Legislative amendments need a majority vote; initiative amendments require majorities in two consecutive elections. Voters must be US citizens, at least 18 years old, continuous state and county residents for at least 30 days and precinct residents for at least 10 days prior to election day. Restrictions apply to convicted felons and those declared mentally incompetent by the court.

13 POLITICAL PARTIES

Since World War II neither the Democrats nor the Republicans have dominated state politics, which are basically conservative. As of 2004, there were 1,094,000 registered voters. In the 2000 presidential election, Republican George W. Bush received 49% of the vote to Democrat Al Gore's 46%. In 2004, Bush garnered 50.5% to Democratic challenger John Kerry's 47.9%. Republican Kenny Guinn, first elected governor in 1998, was reelected in 2002. Democrat Harry Reid was elected US Senator in 1986; he was reelected in 1992, 1998, and 2004. Republican Senator John Ensign was elected in 2000. Following the 2004 elections, Nevada sent one Democrat and two Republicans to the US House of Representa-

Nevada Presidential Vote by Major Political Parties, 1948–2004

YEAR	ELECTORAL VOTE	NEVADA WINNER	DEMOCRAT	REPUBLICAN
1948	3	*Truman (D)	31,290	29,357
1952	3	*Eisenhower (R)	31,688	50,502
1956	3	*Eisenhower (R)	40,640	56,049
1960	3	*Kennedy (D)	54,880	52,387
1964	3	*Johnson (D)	79,339	56,094
1968	3	*Nixon (R)	60,598	73,188
1972	3	*Nixon (R)	66,016	115,750
1976	3	Ford (R)	92,479	101,273
1980	3	*Reagan (R)	66,666	155,017
1984	4	*Reagan (R)	91,655	188,770
1988	4	*Bush (R)	132,738	206,040
1992**	4	*Clinton (D)	189,148	175,828
1996**	4	*Clinton (D)	203,974	199,244
2000	4	*Bush, G. W. (R)	279,978	301,575
2004	5	*Bush, G. W. (R)	397,190	418,690

*Won US presidential election.

**IND. candidate Ross Perot received 132,580 votes in 1992 and 43,986 votes in 1996.

tives. As of mid-2005, there were 12 Republicans and 9 Democrats in the state Senate, and 16 Republicans and 26 Democrats in the state House. The state had five electoral votes in the 2004 presidential election.

14 LOCAL GOVERNMENT

As of 2005, Nevada was subdivided into 17 counties and 19 municipal governments, most of them county seats. The state had 17 public school districts and 158 special districts that year. The county is the primary form of local government. Elected county officials include commissioners, public administrator, district attorney, and sheriff. Most municipalities use the mayor-council system of government.

In 2005, local government accounted for about 74,642 full-time (or equivalent) employment positions.

15 STATE SERVICES

To address the continuing threat of terrorism and to work with the federal Department of Homeland Security, homeland security in Nevada operates under the authority of the governor; the adjutant general is appointed to oversee the state's homeland security activities.

The Commission on Ethics oversees financial disclosure by state officials. The Department of Education and the Nevada System of Higher Education are the main state educational agencies. The Department of Health and Human Services has divisions covering public health, rehabilitation, mental health and developmental disabilities, welfare, youth services, and programs for the elderly. Regulatory functions are exercised by the Business and Industry Department (insurance, banking, consumer affairs, real estate), the Public Utilities Commission, the Gaming Control Board, and other state agencies. Other organizations include the Division of Minerals, the Commission on Tourism, the Division of Wildlife, and the Department of Information Technology.

16 JUDICIAL SYSTEM

Nevada's Supreme Court consists of a chief justice and six other justices. There are 51 district court judges organized into nine judicial districts. All judges are elected by nonpartisan ballot to six-year terms.

As of 31 December 2004, a total of 11,365 prisoners were held in Nevada's state and federal prisons, an increase from 10,543 of 7.8% from the previous year. As of year-end 2004, a total of 878 inmates were female, down from 880 or 0.2% from the year before. Among sentenced prisoners (one year or more), Nevada had an incarceration rate of 474 per 100,000 population in 2004.

According to the Federal Bureau of Investigation, Nevada in 2004 had a violent crime rate (murder/nonnegligent manslaughter; forcible rape; robbery; aggravated assault) of 615.9 reported incidents per 100,000 population, or a total of 14,379 reported incidents. Crimes against property (burglary; larceny/theft; and motor vehicle theft) in that same year totaled 98,215 reported incidents or 4,206.6 reported incidents per 100,000 people. Nevada has a death penalty, of which lethal injection is the sole method of execution. For the period 1976 through 5 May 2006, the state has executed 12 people, including one execution carried out in 2006, prior to 5 May. As of 1 January 2006, Nevada had 83 inmates on death row.

In 2003, Nevada spent \$63,105,669 on homeland security, an average of \$30 per state resident.

17 ARMED FORCES

In 2004, there were 9,251 active-duty military personnel and 2,089 civilian personnel stationed in Nevada. The largest installations are the Hawthorne Army Depot near Reno and the Nellis Air Force Base near Las Vegas. The state has been the site of both ballistic missile and atomic weapons testing. In 2004, Nevada firms received about \$439 million in federal defense contracts and defense payroll outlays were more than \$1.1 billion.

As of 2003, 243,716 military veterans were living in the state, including 27,496 of World War II; 26,015 of the Korean conflict; 75,775 from the Vietnam era; and 36,607 in the Gulf War. For the fiscal year 2004, total Veterans Affairs expenditures in Nevada amounted to more than \$642 million.

As of 31 October 2004, the Nevada Highway Patrol employed 367 full-time sworn officers.

18 MIGRATION

In 1870, about half of Nevada's population consisted of foreign immigrants, among them Chinese, Italians, Swiss, British, Irish, Germans, and French Canadians. Though their origins were diverse, their numbers were few—no more than 21,000 in all. Not until the 1940s did migrants come in large volume. Between 1940 and 1980, Nevada gained a total of 507,000 residents through migration, equal to 63% of the 1980 population; there was an additional net gain from migration of 233,000 during the 1980s, accounting for 75% of the net population increase. Between 1990 and 1998, Nevada had net gains of 397,000 in domestic migration and 45,000 in international migration. In 1998, the state admitted 6,106 foreign immigrants, of whom 2,881 were from Mexico. Between 1990 and 1998, the state's overall population grew 45.4%, making it the fastest growing state in the nation. In the period 2000–05, net international migration was 66,098 and net internal migration was 270,945, for a net gain of 337,043 people.

19 INTERGOVERNMENTAL COOPERATION

Nevada takes part in the Colorado River Compact, the Tahoe Regional Planning Authority, and the California-Nevada Interstate Compact, under which the two states administer water rights involving Lake Tahoe and the Carson, Truckee, and Walker rivers. Other river compacts influence use of the Upper Niobrara river and the boundary between Arizona and Nevada on the Colorado River. The state also is a signatory to the Interstate Oil and Gas Compact, the Western Interstate Commission for Higher Education, and the Western Interstate Energy Compact. Federal grants in fiscal year 2005 totaled \$1.652 billion, an estimated \$1.714 billion in fiscal year 2006, and an estimated \$1.759 billion in fiscal year 2007.

20 ECONOMY

Nevada is disadvantaged by a lack of water and a shortage of arable land, but blessed with a wealth of mineral resources—gold, silver, copper, and other metals. Mining remains important, though overshadowed since World War II by tourism and gambling, which generate more than 50% of the state's income. Legalized gaming alone produces nearly half of Nevada's tax revenues.

Throughout the 1990s, employment growth averaged 5.2% annually. The state economy roared into the 21st century, posting annual growth rates of 7.7% in 1998, 9% in 1999, and 8.6% in 2000. The national recession and slowdown in 2001 caused the pace of job growth to fall to 2.4% and the overall growth rate to fall to 4.9%, but these remain well above national averages. Job growth in Nevada has been centered on growth in services, the retail trade, government and the construction sector.

Nevada's gross state product (GSP) in 2004 was \$100.317 billion, of which the lodging and food service industries accounted for the largest share at \$14.196 billion or 14.1% of GSP, followed by the real estate sector at \$12.722 billion (12.6% of GSP) and the construction industry at \$10.313 billion (10.2% of GSP). In that same year, there were an estimated 177,282 small businesses in Nevada. Of the 51,424 businesses that had employees, an estimated total of 49,209 or 95.7% were small companies. An estimated 10,483 new businesses were established in the state in 2004, up 7.5% from the year before. Business terminations that same year came to 9,012, up 0.8% from 2003. There were 257 business bankruptcies in 2004, down 19.9% from the previous year. In 2005, the state's personal bankruptcy (Chapter 7 and Chapter 13) filing rate was 931 filings per 100,000 people, ranking Nevada as the third-highest in the nation.

2¹ INCOME

In 2005 Nevada had a gross state product (GSP) of \$111 billion which accounted for 0.9% of the nation's gross domestic product and placed the state at number 31 in highest GSP among the 50 states and the District of Columbia.

According to the Bureau of Economic Analysis, in 2004 Nevada had a per capita personal income (PCPI) of \$33,787. This ranked 18th in the United States and was 102% of the national average of \$33,050. The 1994–2004 average annual growth rate of PCPI was 3.6%. Nevada had a total personal income (TPI) of \$78,822,134,000, which ranked 32nd in the United States and reflected an increase of 10.1% from 2003. The 1994–2004 average annual growth rate of TPI was 8.3%. Earnings of persons employed in Nevada increased from \$55,064,306,000 in 2003 to \$61,541,717,000 in 2004, an increase of 11.8%. The 2003–04 national change was 6.3%.

The US Census Bureau reports that the three-year average median household income for 2002–04 in 2004 dollars was \$46,984 compared to a national average of \$44,473. During the same period an estimated 10.2% of the population was below the poverty line as compared to 12.4% nationwide.

2² LABOR

According to the Bureau of Labor Statistics (BLS), in April 2006 the seasonally adjusted civilian labor force in Nevada numbered 1,264,900, with approximately 52,300 workers unemployed, yielding an unemployment rate of 4.1%, compared to the national average of 4.7% for the same period. Preliminary data for the same period placed nonfarm employment at 1,279,200. Since the beginning of the BLS data series in 1976, the highest unemployment rate recorded in Nevada was 10.7% in December 1982. The historical low was 3.6% in January 2006. Preliminary nonfarm employment data by occupation for April 2006 showed that approximately 11.5% of the labor force was employed in construction;

3.8% in manufacturing; 17.6% in trade, transportation, and public utilities; 5.2% in financial activities; 12.2% in professional and business services; 6.8% in education and health services; 26.2% in leisure and hospitality services; and 11.5% in government.

The US Department of Labor's Bureau of Labor Statistics reported that in 2005, a total of 145,000 of Nevada's 1,051,000 employed wage and salary workers were formal members of a union. This represented 13.8% of those so employed, up from 12.5% in 2004 and above the national average of 12%. Overall in 2005, a total of 158,000 workers (15.1%) in Nevada were covered by a union or employee association contract, which includes those workers who reported no union affiliation. Nevada is one of 22 states with a right-to-work law.

As of 1 March 2006, Nevada had a state-mandated minimum wage rate of \$5.15 per hour. In 2004, women in the state accounted for 44% of the employed civilian labor force.

2³ AGRICULTURE

Agricultural income in 2005 totaled \$478 million (45th in the United States), of which \$172 million was from crops and \$306 million from livestock and animal products. Chief crops in 2004 included 960,000 bushels of wheat, 1.48 million tons of hay, and 2,881,000 hundredweight of potatoes. Nevada's barley crop in 2004 was 210,000 bushels, down from 2,700,000 in 1983. Virtually all of the state's cropland requires irrigation.

2⁴ ANIMAL HUSBANDRY

In 2005, Nevada ranches and farms had 500,000 cattle and calves, valued at \$450 million. In 2003, the state produced 2.5 million lb (1.1 million kg) of sheep and lambs which brought in around \$4 million in gross income. In 2004, the shorn wool production was an estimated 510,000 lb (231,800 kg) of wool. Nevada's total milk yield in 2003 was 485 million lb (220 million kg) from 26,000 milk cows.

2⁵ FISHING

There is no commercial fishing industry in Nevada. The state has four fish culture facilities that produce about 430,000 lb of trout annually. The Lahontan National Fish Hatchery also distributes cutthroat trout within the state. In 2004, Nevada issued 124,408 sport fishing licenses.

2⁶ FORESTRY

Nevada in 2004 had 9,767,000 acres (3,953,000 hectares) of forestland. In 2005, four national forests had 5,841,209 acres (2,363,937 hectares) in the National Forest System. Less than 2% of all forested land in Nevada was classified as commercial timberland.

2⁷ MINING

According to preliminary data from the US Geological Survey (USGS), the estimated value of nonfuel mineral production by Nevada in 2003 was over \$2.9 billion, an increase from 2002 of about 1%. The USGS data ranked Nevada as second among the 50 states by the total value of its nonfuel mineral production, accounting for over 7.5% of total US output.

According to the preliminary data for 2003, gold, construction sand and gravel, crushed stone and silver were the state's top non-fuel minerals. These commodities accounted for 83%, 6%, 1.5%,

and 1.5%, respectively, of all nonfuel mineral production in the state. In that same year, Nevada provided 81% of the gold mined in the United States and 24% of the silver, making the state first in gold and second in silver production. Nevada in 2003 was also the only state to produce magnesite and lithium carbonate minerals. In addition, Nevada ranked first in the production of barite, brucite, and diatomite, third in gypsum, fifth in perlite, sixth in gemstones, and seventh in lime.

Preliminary data for 2003 showed gold production at 216,000 kg, with a value of \$2.440 billion, with silver output at 292,000 kg and a value of \$43.700 million. Construction sand and gravel output totaled 38 million metric tons for a value of \$173 million, while crushed stone output stood at 8.7 million metric tons with a value of \$46.1 million, according to the USGS data for 2003.

In 2003, Nevada was also a producer of fuller's earth and industrial sand and gravel.

28 ENERGY AND POWER

As of 2003, Nevada had 19 electrical power service providers, of which eight were publicly owned and eight were cooperatives. Of the remainder, two were investor owned and one was federally operated. As of that same year there were 1,019,075 retail customers. Of that total, 964,923 received their power from investor-owned service providers. Cooperatives accounted for 29,792 customers, while publicly owned providers had 24,358 customers. There were only two federal customers.

Total net summer generating capability by the state's electrical generating plants in 2003 stood at 7.508 million kW, with total production that same year at 33.194 billion kWh. Of the total amount generated, 74.2% came from electric utilities, with the remainder coming from independent producers and combined heat and power service providers. The largest portion of all electric power generated, 17.085 billion kWh (51.5%), came from coal-fired plants, with natural gas fueled plants in second place at 13.252 billion kWh (39.9%) and hydroelectric plants in third at 1.756 billion kWh (5.3%). Other renewable power sources accounted for 3.2% of all power generated, with plants using other types of gases and petroleum fired plants at 0.1% each.

Because Nevada produces more electricity than it consumes, the remainder is exported, principally to California. Hoover Dam, anchored in the bedrock of Black Canyon east of Las Vegas, is the state's largest hydroelectric installation, with an installed capacity of 1,039,000 kW in 2003. The first six of the dam's eight turbines came onstream during 1936–38, while the other two were added in 1944 and 1961.

As of 2004, Nevada had proven crude oil reserves of less than 1% of all proven US reserves, while output that same year averaged 1,000 barrels per day. Including federal offshore domains, the state that year ranked 27th (26th excluding federal offshore) in production among the 31 producing states. In 2004 Nevada had 57 producing oil wells and accounted for under 1% of all US production. In 2005, the state's single refinery had a combined crude oil distillation capacity of 1,707 barrels per day.

In 2004, Nevada had four producing natural gas and gas condensate wells. In 2003 (the latest year for which data was available), marketed gas production (all gas produced excluding gas used for repressuring, vented and flared, and nonhydrocarbon

gases removed) totaled 6 million cu ft (170,400 cu m). There was no data available on the state's proven reserves of natural gas.

29 INDUSTRY

Industry in Nevada is limited but diversified, producing communications equipment, pet food, chemicals, and sprinkler systems, among other products.

According to the US Census Bureau's Annual Survey of Manufactures (ASM) for 2004, Nevada's manufacturing sector covered some 13 product subsectors. The shipment value of all products manufactured in the state that same year was \$9.551 billion. Of that total, miscellaneous manufacturing accounted for the largest share at \$1.680 billion. It was followed by food manufacturing at \$1.172 billion, nonmetallic mineral product manufacturing at \$1.045 billion, and fabricated metal product manufacturing at \$846.723 million.

In 2004, a total of 43,967 people in Nevada were employed in the state's manufacturing sector, according to the ASM. Of that total, 28,876 were actual production workers. In terms of total employment, the miscellaneous manufacturing industry accounted for the largest portion of all manufacturing employees at 8,147, with 3,546 actual production workers. It was followed by fabricated metal product manufacturing at 5,368 employees (3,894 actual production workers); nonmetallic mineral product manufacturing at 3,820 employees (3,215 actual production workers); food manufacturing at 3,428 employees (2,272 actual production workers); and computer and electronic product manufacturing with 3,426 employees (1,477 actual production workers).

ASM data for 2004 showed that Nevada's manufacturing sector paid \$1.849 billion in wages. Of that amount, the miscellaneous manufacturing sector accounted for the largest share at \$466.410 million. It was followed by fabricated metal product manufacturing at \$201.834 million; computer and electronic product manufacturing at \$171.943 million; and nonmetallic mineral product manufacturing at \$166.519 million.

30 COMMERCE

According to the 2002 Census of Wholesale Trade, Nevada's wholesale trade sector had sales that year totaling \$16.5 billion from 2,612 establishments. Wholesalers of durable goods accounted for 1,658 establishments, followed by nondurable goods wholesalers at 850 and electronic markets, agents, and brokers accounting for 104 establishments. Sales by durable goods wholesalers in 2002 totaled \$8.4 billion, while wholesalers of nondurable goods saw sales of \$5.8 billion. Electronic markets, agents, and brokers in the wholesale trade industry had sales of \$2.2 billion.

In the 2002 Census of Retail Trade, Nevada was listed as having 7,214 retail establishments with sales of \$26.9 billion. The leading types of retail businesses by number of establishments were clothing and clothing accessories stores (1,195); miscellaneous store retailers (1,062); food and beverage stores (769), motor vehicle and motor vehicle parts dealers (681), and gasoline stations (671). In terms of sales, motor vehicle and motor vehicle parts dealers accounted for the largest share of retail sales, at \$6.6 billion, followed by general merchandise stores, at \$3.8 billion; food and beverage stores, at \$3.6 billion; and nonstore retailers, at \$3.4 billion. A total of 112,339 people were employed by the retail sector in Nevada that year.

Exporters located in Nevada exported \$3.9 billion in merchandise during 2005.

3¹ CONSUMER PROTECTION

The state of Nevada has two entities dedicated to consumer protection: the Bureau of Consumer Protection (BCP) at the Office of the Attorney General, and the Nevada Consumer Affairs Division.

The BCP was created in 1997 by the Nevada Legislature to protect consumers from deceptive or fraudulent sales practices and represent consumers' interests in government. The BCP has the authority to file lawsuits on behalf of the public and the state of Nevada. It operates consumer education and awareness programs, reviews consumer complaints and can act as an advocate for consumers over utilities related issues before the Public Utilities Commission of Nevada, as well as federal utility regulatory agencies and courts. The BCP can also pursue civil and criminal enforcement of the state's antitrust law. It is also authorized to file civil actions under federal antitrust laws.

The Nevada Consumer Affairs Division regulates deceptive trade practices through its investigatory powers and through its authority to require the registration and bonding of buying clubs, charitable solicitors, credit repair organizations, dance and martial arts studios, health clubs, magazine sales, recovery rooms, sports betting information services, telemarketers, travel agents and tour operators/brokers, and weight loss clinics.

When dealing with consumer protection issues, the state's Attorney General's Office can initiate civil and criminal proceedings; represent the state before state and federal regulatory agencies; administer consumer protection and education programs; and exercise broad subpoena powers. However, the Attorney General's Office has only limited power to handle formal consumer complaints due to the state having a separate consumer affairs department (the Consumer Affairs Division). In antitrust actions, the Attorney General's Office can act on behalf of those consumers who are incapable of acting on their own; initiate damage actions on behalf of the state in state courts; initiate criminal proceedings; and represent counties, cities and other governmental entities in recovering civil damages under state or federal law.

Offices of the Bureau of Consumer Protection are located in Las Vegas. The state's Consumer Affairs Division has offices in Las Vegas and Reno.

3² BANKING

As of June 2005, Nevada had 38 insured banks, savings and loans, and saving banks, plus 12 state-chartered and 17 federally chartered credit unions (CUs). Excluding the CUs, the Las Vegas-Paradise market area accounted for the largest portion of the state's financial institutions and deposits in 2004, with 42 institutions and \$33.605 billion in deposits. As of June 2005, CUs accounted for 7.2% of all assets held by all financial institutions in the state, or some \$4.562 billion. Banks, savings and loans, and savings banks collectively accounted for the remaining 92.8% or \$58.650 billion in assets held.

In 2004, the median net interest margin (the difference between the lower rates offered to savers and the higher rates charged on loans) stood at 4.85%, up from 4.77% in 2003. As of fourth quarter 2005, the rate stood at 5.40%. Regulation of Nevada's state-char-

tered banks and financial institutions is the responsibility of the Division of Financial Institutions.

3³ INSURANCE

Nevadans held 639,000 individual life insurance policies in 2004 with a total value of over \$83 billion; total value for all categories of life insurance (individual, group, and credit) was about \$121 billion. The average coverage amount is \$130,600 per policy holder. Death benefits paid that year totaled \$422.5 million.

As of 2003, there were nine property and casualty and three life and health insurance companies domiciled in the state. Direct premiums for property and casualty insurance totaled \$3.8 billion in 2004. That year, there were 15,525 flood insurance policies in force in the state, with a total value of \$3 billion.

In 2004, 57% of state residents held employment-based health insurance policies, 4% held individual policies, and 18% were covered under Medicare and Medicaid; 19% of residents were uninsured. Nevada ties with four other states as having the fourth-highest percentage of uninsured residents in the nation. In 2003, employee contributions for employment-based health coverage averaged at 13% for single coverage and 24% for family coverage. The state offers an 18-month health benefits expansion program for small-firm employees in connection with the Consolidated Omnibus Budget Reconciliation Act (COBRA, 1986), a health insurance program for those who lose employment-based coverage due to termination or reduction of work hours.

In 2003, there were over 1.4 million auto insurance policies in effect for private passenger cars. Required minimum coverage includes bodily injury liability of up to \$15,000 per individual and \$30,000 for all persons injured in an accident, as well as property damage liability of \$10,000. In 2003, the average expenditure per vehicle for insurance coverage was \$913.05.

3⁴ SECURITIES

There are no securities exchanges in Nevada. In 2005, there were 1,350 personal financial advisers employed in the state and 1,210 securities, commodities, and financial services sales agents. In 2004, there were over 116 publicly traded companies within the state, with over 22 NASDAQ companies, 11 NYSE listings, and 3 AMEX listings. In 2006, the state had two Fortune 500 companies; Harrah's Entertainment ranked first in the state and 309th in the nation with revenues of over \$4.4 billion, followed by MGM Mirage at 334th in the nation and \$6.4 billion in revenues.

3⁵ PUBLIC FINANCE

The budget is prepared biennially by the Budget Division of the Department of Administration and submitted by the governor to the legislature, which has unlimited power to change it.

Fiscal year 2006 general funds were estimated at \$3.0 billion for resources and \$2.9 billion for expenditures. In fiscal year 2004, federal government grants to Nevada were \$2.3 billion.

In the fiscal year 2007 federal budget, Nevada was slated to receive \$51.7 million in State Children's Health Insurance Program (SCHIP) funds to help the state provide health coverage to low-income, uninsured children who do not qualify for Medicaid. This funding is a 23% increase over fiscal year 2006. Nevada was also to receive \$12.9 million in federal funds for the HOME Investment Partnership Program to help Nevada fund a wide range of

activities that build, buy, or rehabilitate affordable housing for rent or homeownership, or provide direct rental assistance to low-income people. This funding is a 12% increase over fiscal year 2006. Another \$55 million in federal funds was allocated to replace the air traffic control tower at McCarran International Airport in Las Vegas.

36 TAXATION

In 2005, Nevada collected \$5,010 million in tax revenues or \$2,075 per capita, which placed it 28th among the 50 states in per capita

tax burden. The national average was \$2,192 per capita. Property taxes accounted for 3.0% of the total, sales taxes 45.0%, selective sales taxes 33.6%, and other taxes 18.4%.

As of 1 January 2006, Nevada had no state income tax, a distinction it shared with Wyoming, Washington, Alaska, Florida, Texas, and South Dakota.

In 2004, state and local property taxes amounted to \$2,147,294,000 or \$920 per capita. The per capita amount ranks the state 30th highest nationally. Local governments collected \$2,014,826,000 of the total and the state government \$132,468,000.

Nevada taxes retail sales at a rate of 6.5%. In addition to the state tax, local taxes on retail sales can reach as much as 1%, making for a potential total tax on retail sales of 7.5%. Food purchased for consumption off-premises is tax exempt. The tax on cigarettes is 80 cents per pack, which ranks 25th among the 50 states and the District of Columbia. Nevada taxes gasoline at 24.805 cents per gallon. This is in addition to the 18.4 cents per gallon federal tax on gasoline.

According to the Tax Foundation, for every federal tax dollar sent to Washington in 2004, Nevada citizens received \$0.73 in federal spending.

37 ECONOMIC POLICY

Federal projects have played an especially large role in Nevada's development. During the depression of the 1930s, Hoover (Boulder) Dam was constructed to provide needed jobs, water, and hydroelectric power for the state. Other public works—Davis Dam (Lake Mohave) and the Southern Nevada Water Project—serve similar purposes. The fact that some 87% of Nevada land is owned by the US government further increases the federal impact on the economy. Gaming supplies a large proportion of state revenues.

The Nevada Commission on Economic Development (NCED) offers a number of incentives to encourage the growth of primary businesses in Nevada and to promote economic diversification. There is no corporate or personal income tax and other state taxes are low. The Department of Business and Industry issues tax-exempt industrial development bonds which provide low-interest financing of new construction or improvement of manufacturing facilities and other projects. The State Development Corporation, a private financial corporation certified by the US Small Business Administration, offers long-term loans for expanding or new businesses. Rural small businesses can obtain loans from the Rural Nevada Development Corporation and the Nevada Revolving Loan Fund Program. Almost 30% of foreign-based companies in Nevada are Japanese.

38 HEALTH

The infant mortality rate in October 2005 was estimated at 5.3 per 1,000 live births. The birth rate in 2003 was 15 per 1,000 population. The abortion rate stood at 32.2 per 1,000 women in 2000. In 2003, about 75.8% of pregnant woman received prenatal care beginning in the first trimester. In 2004, approximately 68% of children received routine immunizations before the age of three; this was the lowest immunization rate in the country.

The crude death rate in 2003 was 8 deaths per 1,000 population. As of 2002, the death rates for major causes of death (per 100,000 resident population) were: heart disease, 203.4; cancer, 181.1; cerebrovascular diseases, 44.9; chronic lower respiratory diseases,

54; and diabetes, 15.8. The mortality rate from HIV infection was 3.5 per 100,000 population. In 2004, the reported AIDS case rate was at about 13.1 per 100,000 population. In 2002, about 54.8% of the population was considered overweight or obese. As of 2004, about 23.2% of state residents were smokers.

In 2003, Nevada had 24 community hospitals with about 4,300 beds. There were about 213,000 patient admissions that year and 2.3 million outpatient visits. The average daily inpatient census was about 3,000 patients. The average cost per day for hospital care was \$1,608. Also in 2003, there were about 44 certified nursing facilities in the state with 5,197 beds and an overall occupancy rate of about 82.9%. In 2004, it was estimated that about 64.5% of all state residents had received some type of dental care within the year. Nevada had 196 physicians per 100,000 resident population in 2004 and 579 nurses per 100,000 in 2005. In 2004, there was a total of 1,123 dentists in the state.

About 11% of state residents were enrolled in Medicaid programs in 2003; 12% were enrolled in Medicare programs in 2004. Approximately 19% of the state population was uninsured in 2004. In 2003, state health care expenditures totaled \$1.6 million.

3⁹ SOCIAL WELFARE

In 2004, about 66,000 people received unemployment benefits, with the average weekly unemployment benefit at \$245. In fiscal year 2005, the estimated average monthly participation in the food stamp program included about 121,707 persons (54,877 households); the average monthly benefit was about \$88.26 per person. That year, the total of benefits paid through the state for the food stamp program was about \$128.9 million.

Temporary Assistance for Needy Families (TANF), the system of federal welfare assistance that officially replaced Aid to Families with Dependent Children (AFDC) in 1997, was reauthorized through the Deficit Reduction Act of 2005. TANF is funded through federal block grants that are divided among the states based on an equation involving the number of recipients in each state. In 2004, the state TANF program had 21,000 recipients; state and federal expenditures on this TANF program totaled \$54 million in fiscal year 2003.

In December 2004, Social Security benefits were paid to 340,680 Nevada residents. This number included 230,990 retired workers, 26,440 widows and widowers, 43,030 disabled workers, 15,120 spouses, and 25,100 children. Social Security beneficiaries represented 14.5% of the total state population and 91% of the state's population age 65 and older. Retired workers received an average monthly payment of \$962; widows and widowers, \$939; disabled workers, \$960; and spouses, \$473. Payments for children of retired workers averaged \$471 per month; children of deceased workers, \$671; and children of disabled workers, \$271. Federal Supplemental Security Income payments in December 2004 went to 32,129 Nevada residents, averaging \$396 a month.

4⁰ HOUSING

In 2004, there were an estimated 976,446 housing units, of which 871,915 were occupied; 61.2% were owner-occupied. About 54.6% of all units were single-family, detached dwellings; 18.6% were in buildings containing three to nine units. Over 1,700 units were listed in a category of boats, RVs, vans, etc. Utility gas and electricity were the most common heating energy sources. It was es-

timated that 41,658 units lacked telephone service, 3,041 lacked complete plumbing facilities, and 3,683 lacked complete kitchen facilities. The average household had 2.64 members.

In 2004, 44,600 new privately owned units were authorized for construction. The median home value was \$202,937. The median monthly cost for mortgage owners was \$1,274. Renters paid a median of \$787 per month. In 2006, the state received over \$2.7 million in community development block grants from the US Department of Housing and Urban Development (HUD).

4¹ EDUCATION

In 2004, 86.3% of Nevada residents age 25 and older were high school graduates; 24.5% had obtained a bachelor's degree or higher.

The total enrollment for fall 2002 in Nevada's public schools stood at 369,000. Of these, 271,000 attended schools from kindergarten through grade eight, and 99,000 attended high school. Approximately 50.8% of the students were white, 10.7% were black, 30.2% were Hispanic, 6.7% were Asian/Pacific Islander, and 1.7% were American Indian/Alaskan Native. Total enrollment was estimated at 385,000 in fall 2003 and expected to be 474,000 by fall 2014, an increase of 28.4% during the period 2002–14. In fall 2003 there were 18,219 students enrolled in 111 private schools. Expenditures for public education in 2003/04 were estimated at \$3.2 billion or \$6,399 per student, the sixth-lowest among the 50 states. Since 1969, the National Assessment of Educational Progress (NAEP) has tested public school students nationwide. The resulting report, *The Nation's Report Card*, stated that in 2005, eighth graders in Nevada scored 270 out of 500 in mathematics compared with the national average of 278.

As of fall 2002, there were 95,671 students enrolled in college or graduate school; minority students comprised 30.1% of total post-secondary enrollment. Nearly all students enroll in the University of Nevada system, which has campuses in Las Vegas and Reno. In 2005 Nevada had 15 degree-granting institutions, including Sierra Nevada College.

4² ARTS

The Nevada Arts Council (NAC), a division of the Department of Cultural Affairs, consists of a 10-member staff and a 9-member board appointed by the governor. In 2005, the NAC and other Nevada arts organizations received six grants totaling \$673,300 from the National Endowment for the Arts (NEA). The state also provided significant funding to the Arts Council. The Nevada Humanities Council sponsors annual programs that include a Chautauqua in Reno, Boulder City and Lake Tahoe, and the Vegas Valley Book Festival. In 2005, the National Endowment for the Humanities contributed \$532,792 to four state programs.

Major exhibits are mounted by the Las Vegas Art Museum, formally the Las Vegas Art League, and the Sierra Arts Foundation in Reno. Upon becoming the Las Vegas Art Museum in 1974, it became the first fine-arts museum in southern Nevada. The Nevada Opera, Reno Chamber Orchestra, and the Nevada Festival Ballet are all based in Reno. The Las Vegas Philharmonic was founded in 1998 and as of 2005 had become the third-largest arts organizations in the state. The Western Folklife Center in Elko, founded in 1980, promotes public awareness of the American West culture

and traditions. Every year, the Western Folklife Center presents a National Cowboy Poetry Gathering in the last week of January.

43 LIBRARIES AND MUSEUMS

In 2001, Nevada had 23 public library systems, with a total of 87 libraries, of which 67 were branches. The system, that same year, had a combined book and serial publication stock of 4,382,000 volumes, and a total circulation of 10,206,000. The system also had 209,000 audio and 148,000 video items, 27,000 electronic format items (CD-ROMs, magnetic tapes, and disks), and four bookmobiles. The University of Nevada had 956,282 books in its Reno campus library system and 861,362 at Las Vegas. The Nevada State Library in Carson City had 76,445. In fiscal year 2001, operating income for the state's public library system amounted to \$62,888,000 and included \$782,000 in federal grants and \$520,000 in state grants.

There are some 29 museums and historic sites. Notable are the Nevada State Museum in Carson City and Las Vegas; the museum of the Nevada Historical Society and the Fleischmann Planetarium, University of Nevada, in Reno; and the Museum of Natural History, University of Nevada, at Las Vegas.

44 COMMUNICATIONS

In 2004, 92.2% of Nevada's occupied housing units had telephones. In addition, by June of that same year there were 1,319,684 mobile wireless telephone subscribers. In 2003, 61.3% of Nevada households had a computer and 55.2% had Internet access. By June 2005, there were 402,030 high-speed lines in Nevada, 360,627 residential and 41,403 for business. In 2005, broadcast facilities comprised 27 major radio stations (7 AM, 20 FM) and 12 network television stations. In 2000, at least two large cable television systems served the Las Vegas and Reno areas. A total of 72,183 Internet domain names were registered in the state in that same year.

45 PRESS

In 2005, the state had four morning newspapers, four evening papers, and four Sunday papers. The leading newspaper was the *Las Vegas Review-Journal*, with a daily circulation of 159,507 and a Sunday circulation of 218,624. The *Reno Gazette-Journal*, with a daily circulation of 66,409 and Sunday circulation of 82,745, is the most influential newspaper in the northern half of the state. The regional interest *Nevada* magazine is published six times a year.

46 ORGANIZATIONS

In 2006, there were over 900 nonprofit organizations registered within the state, of which about 626 were registered as charitable, educational, or religious organizations. Notable national organizations with headquarters in Nevada include the Western History Association, the American Chess Association, the American Gem Society, the Gaming Standards Association, and the North American Boxing Federation.

Local arts and history are represented in part by the Central Nevada Historical Society, the Lake Tahoe Arts Council, the Sierra Contra Dance Society, the National Association for Outlaw and Lawman History, and the Nevada Opera Association.

47 TOURISM, TRAVEL, AND RECREATION

Tourism remained Nevada's most important industry, employing over 228,000 people. In 2005, approximately 51.1 million travelers visited the state. About 25 million people visited state and national parks. A majority of all tourists flock to "Vegas" for gambling and for the top-flight entertainers who perform there. In 2005, there were 180,000 hotel rooms of which 133,186 were in Las Vegas. The gaming industry had total revenues of \$11.6 billion in 2005. Las Vegas is one the most used cities for conventions. The Nevada Commission on Tourism has branch offices in Japan, the United Kingdom, and Seoul, Korea.

Nevada attractions include Pyramid Lake, Lake Tahoe, Lake Mead, and Lehman Caves National Monument. In Las Vegas, there is the Atomic Testing Museum, the Fremont Street Experience (outdoor sound and light show), the Guggenheim Hermitage Museum at the Venetian Hotel, and Red Rock scenic adventure tours. The city of Laughlin has Colorado River tours. For motorsports enthusiasts, there are 14 raceways in Nevada. Hoover Dam, built on the Nevada-Arizona border, is a marvel of engineering; visitors can view films and take tours to view the construction. There are 21 state parks and recreation areas, and the Great Basin National Park. Lake Mead National Recreation Area attracts 43% of all park visitors (totaling over 24 million people in 1999). Grand Canyon National Park is the second most popular parks destination, with 18% of all parks visitors.

48 SPORTS

There are no major professional sports teams in Nevada. Las Vegas has a minor league baseball team, the 51s, in the Triple-A Pacific Coast League. The Las Vegas Wranglers are a minor league hockey team that play in the West Division of the ECHL. Las Vegas and Reno have hosted many professional boxing title bouts. Golfing and rodeo are also popular.

The basketball team at the University of Nevada-Las Vegas emerged as a national powerhouse in the late 1980s and early 1990s. The Runnin' Rebels won the national championship in 1990.

Other annual sporting events include the Greens.com Open at Reno-Tahoe in Reno in August, the Invensys Classic at Las Vegas in October, the Nationals Finals Rodeo staged in Las Vegas each December, and the UAW-DaimlerChrysler 400 at the Las Vegas Motor Speedway.

49 FAMOUS NEVADANS

Nevadans who have held important federal offices include Raymond T. Baker (1877-1935) and Eva B. Adams (1908-91), both directors of the US Mint, and Charles B. Henderson (b.California, 1873-1954), head of the Reconstruction Finance Corporation. Prominent US senators have been James W. Nye (b.New York, 1815-76), also the only governor of Nevada Territory; William M. Stewart (b.New York, 1827-1909), author of the final form of the 15th Amendment to the US Constitution, father of federal mining legislation, and a leader of the free-silver-coinage movement in the 1890s; and Francis G. Newlands (b.Mississippi, 1848-1917), author of the federal Reclamation Act of 1902.

Probably the most significant state historical figure is George Wingfield (b.Arkansas, 1876-1959), a mining millionaire who

exerted great influence over Nevada's economic and political life in the early 20th century. Among the nationally recognized personalities associated with Nevada is Howard R. Hughes (b.Texas, 1905–76), an aviation entrepreneur who became a casino and hotel owner and wealthy recluse in his later years.

Leading creative and performing artists have included operatic singer Emma Nevada (Emma Wixon, 1862–1940); painter Robert Caples (1908–79); and, among writers, Dan DeQuille (William Wright, b.Ohio, 1829–98); Lucius Beebe (b.Massachusetts, 1902–66); and Walter Van Tilburg Clark (b.Maine, 1909–71).

NEW HAMPSHIRE

State of Hampshire

ORIGIN OF STATE NAME: Named for the English county of Hampshire. **NICKNAME:** The Granite State. **CAPITAL:** Concord. **ENTERED UNION:** 21 June 1788 (9th). **SONG:** “Old New Hampshire.” **MOTTO:** Live Free or Die. **FLAG:** The state seal, surrounded by laurel leaves with nine stars interspersed, is centered on a blue field. **OFFICIAL SEAL:** In the center is a broadside view of the frigate *Raleigh*; in the left foreground is a granite boulder; in the background is a rising sun. A laurel wreath and the words “Seal of the State of New Hampshire 1776” surround the whole. **BIRD:** Purple finch. **FLOWER:** Purple lilac. **TREE:** White birch. **GEM:** Smoky quartz. **LEGAL HOLIDAYS:** New Year’s Day, 1 January; Civil Rights Day and Birthday of Martin Luther King Jr., 3rd Monday in January; Presidents’ Day, 3rd Monday in February; Memorial Day, last Monday in May; Independence Day, 4 July; Labor Day, 1st Monday in September; Columbus Day, 2nd Monday in October; Election Day, Tuesday following 1st Monday in November in even-numbered years; Veterans’ Day, 11 November; Thanksgiving Day, 4th Thursday in November plus the day after; Christmas Day, 25 December. **TIME:** 7 AM EST = noon GMT.

1 LOCATION, SIZE, AND EXTENT

Situated in New England in the northeastern United States, New Hampshire ranks 44th in size among the 50 states. The total area of New Hampshire is 9,279 sq mi (24,033 sq km), comprising 8,993 sq mi (23,292 sq km) of land and 286 sq mi (741 sq km) of inland water. The state has a maximum extension of 93 mi (150 km) E–W and 180 mi (290 km) N–S. New Hampshire is shaped roughly like a right triangle, with the line from the far N to the extreme SW forming the hypotenuse.

New Hampshire is bordered on the N by the Canadian province of Quebec; on the E by Maine (with part of the line formed by the Piscataqua and Salmon Falls rivers) and the Atlantic Ocean; on the S by Massachusetts; and on the W by Vermont (following the west bank of the Connecticut River) and Quebec (with the line formed by Halls Stream).

The three southernmost Isles of Shoals lying in the Atlantic belong to New Hampshire. The state’s total boundary line is 555 mi (893 km). Its geographic center lies in Belknap County, 3 mi (5 km) E of Ashland.

2 TOPOGRAPHY

The major regions of New Hampshire are the coastal lowland in the southeast; the New England Uplands, covering most of the south and west; and the White Mountains (part of the Appalachian chain) in the north, including Mt. Washington, at 6,288 ft (1,918 m), the highest peak in the northeastern United States. With a mean elevation of about 1,000 ft (305 m), New Hampshire is generally hilly, rocky, and in many areas densely wooded.

There are some 1,300 lakes and ponds, of which the largest is Lake Winnepesaukee, covering 70 sq mi (181 sq km). The principal rivers are the Connecticut (forming the border with Vermont), Merrimack, Salmon Falls, Piscataqua, Saco, and Androscoggin. Near the coast are the nine rocky Isles of Shoals, three of which belong to New Hampshire. About 10% of the state land area is

covered by wetlands. Sea level at the Atlantic Ocean is the lowest elevation of the state.

3 CLIMATE

New Hampshire has a changeable climate, with wide variations in daily and seasonal temperatures. Summers are short and cool, winters long and cold. Concord has an average yearly temperature of 46°F (7°C), ranging from 20°F (-6°C) in January to 70°F (21°C) in July. The record low temperature, -47°F (-44°C), was set at Mt. Washington on 29 January 1934; the all-time high, 106°F (41°C) at Nashua, 4 July 1911. Annual precipitation at Concord averages 36.7 in (93 cm); the average snowfall in Concord is 63.2 in (160 cm) a year, with more than 100 in (254 cm) yearly in the mountains. The strongest wind ever recorded, other than during a tornado—231 mi/h (372 km/h)—occurred on Mt. Washington on 12 April 1934.

4 FLORA AND FAUNA

Well forested, New Hampshire supports an abundance of elm, maple, beech, oak, pine, hemlock, and fir trees. Among wild flowers, several orchids are considered rare. Three New Hampshire plant species were listed as threatened or endangered in 2006; the small whorled pogonia was threatened and Jesup’s milk-vetch and Northeastern bulrush were endangered.

Among native New Hampshire mammals are the white-tailed deer, muskrat, beaver, porcupine, and snowshoe hare. Nine animal species (vertebrates and invertebrates) were listed by the US Fish and Wildlife Service as threatened or endangered in 2006, including the Karner blue butterfly, bald eagle, dwarf wedgemussel, finback whale, and leatherback sea turtle.

5 ENVIRONMENTAL PROTECTION

State agencies concerned with environmental protection include the Fish and Game Department, the Department of Resources and

Economic Development (DRED), and the Department of Environmental Services (DES). DRED oversees the state's forests, lands and parks and, in the late 1980s, DRED was the lead state agency in the acquisition and long-term protection of open space. DES was created in 1987, consolidating several preexisting commissions and boards into four divisions which protect the environmental quality of air, groundwater, the state's surface waters, and solid waste. In the 1990s, DES focused on such issues as ground-level ozone, landfill closures, groundwater remediation and protection of lakes, rivers, and other wetlands in New Hampshire. In 2003, 5.9 million lb of toxic chemicals were released in the state. Also in 2003, New Hampshire had 91 hazardous waste sites listed in the US Environment Protection Agency (EPA) database, 20 of which were on the National Priorities List as of 2006, including Pease Air Force Base and the Mottolo Pig Farm in Raymond. In 2005, the EPA spent over \$10 million through the Superfund program for the cleanup of hazardous waste sites in the state. The same year, federal EPA grants awarded to the state included \$13 million for the clean water state revolving fund and \$8.2 million for the drinking water state revolving fund.

6 POPULATION

New Hampshire ranked 41st in population in the United States with an estimated total of 1,309,940 in 2005, an increase of 6% since 2000. Between 1990 and 2000, New Hampshire's population grew from 1,109,252 to 1,235,786, an increase of 11.4%. The population is projected to reach 1.45 million by 2015 and 1.58 million by 2025. The population density in 2004 was 144.9 persons per sq mi. In 2004, the median age was 39.1. Persons under 18 years old accounted for 23.5% of the population while 12.1% was age 65 or older.

In 2004, Manchester, the largest city, had an estimated population of 109,310. The Manchester-Nashua metropolitan area had an estimated population of 398,574. In 2003, the capital city of Concord had a population of 41,823

7 ETHNIC GROUPS

In 2000, a total of 223,026 New Hampshireites claimed English ancestry. Those claiming French ancestry numbered 180,947, and Irish 240,804. There are also about 127,153 French Canadians. In 2000, there were 9,035 black Americans, 15,931 Asians, 371 Pacific Islanders, and 2,964 Native Americans living in New Hampshire. In the same year, there were 20,489 residents of Hispanic origin, or 1.7% of the total population. The foreign-born population numbered 54,154, or 4.4% of the total population, in 2000.

In 2004, 2.1% of the population was Hispanic or Latino, 1.7% Asian, 0.9% black, and 0.2% American Indian or Alaskan Native; 0.9% of the population reported origin of two or more races.

8 LANGUAGES

Some place-names, such as Ossipee, Mascoma, and Chocorua, preserve the memory of the Pennacook and Abnaki Algonkian tribes living in the area before white settlement.

New Hampshire speech is essentially Northern, with the special features marking eastern New England, especially the loss of the final /r/, as in *park* and *father*, and /yu/ in *tube* and *new*. *Raspberries* sounds like /rawzberries/, a wishbone is a *luckybone*, gut-

ters are *eavespouts*, and cows are summoned by "Loo!" Canadian French is heard in the northern region.

In 2000, 91.7% of all state residents aged five and above—a total of 935,825—spoke only English at home.

The following table gives selected statistics from the 2000 Census for language spoken at home by persons five years old and over. The category "Other Indo-European languages" includes Albanian, Gaelic, Lithuanian, and Rumanian. The category "Other Asian languages" includes Dravidian languages, Malayalam, Telugu, Tamil, and Turkish.

LANGUAGE	NUMBER	PERCENT
Population 5 years and over	1,160,340	100.0
Speak only English	1,064,252	91.7
Speak a language other than English	96,088	8.3
Speak a language other than English	96,088	8.3
French (incl. Patois, Cajun)	39,551	3.4
Spanish or Spanish Creole	18,647	1.6
German	4,788	0.4
Greek	3,411	0.3
Chinese	3,268	0.3
Italian	2,649	0.2
Portuguese or Portuguese Creole	2,394	0.2
Polish	2,094	0.2
Other Indo-European languages	1,468	0.1
Arabic	1,462	0.1
Vietnamese	1,449	0.1
Other Asian languages	1,240	0.1
Korean	1,228	0.1
Serbo-Croatian	1,182	0.1
Russian	1,009	0.1

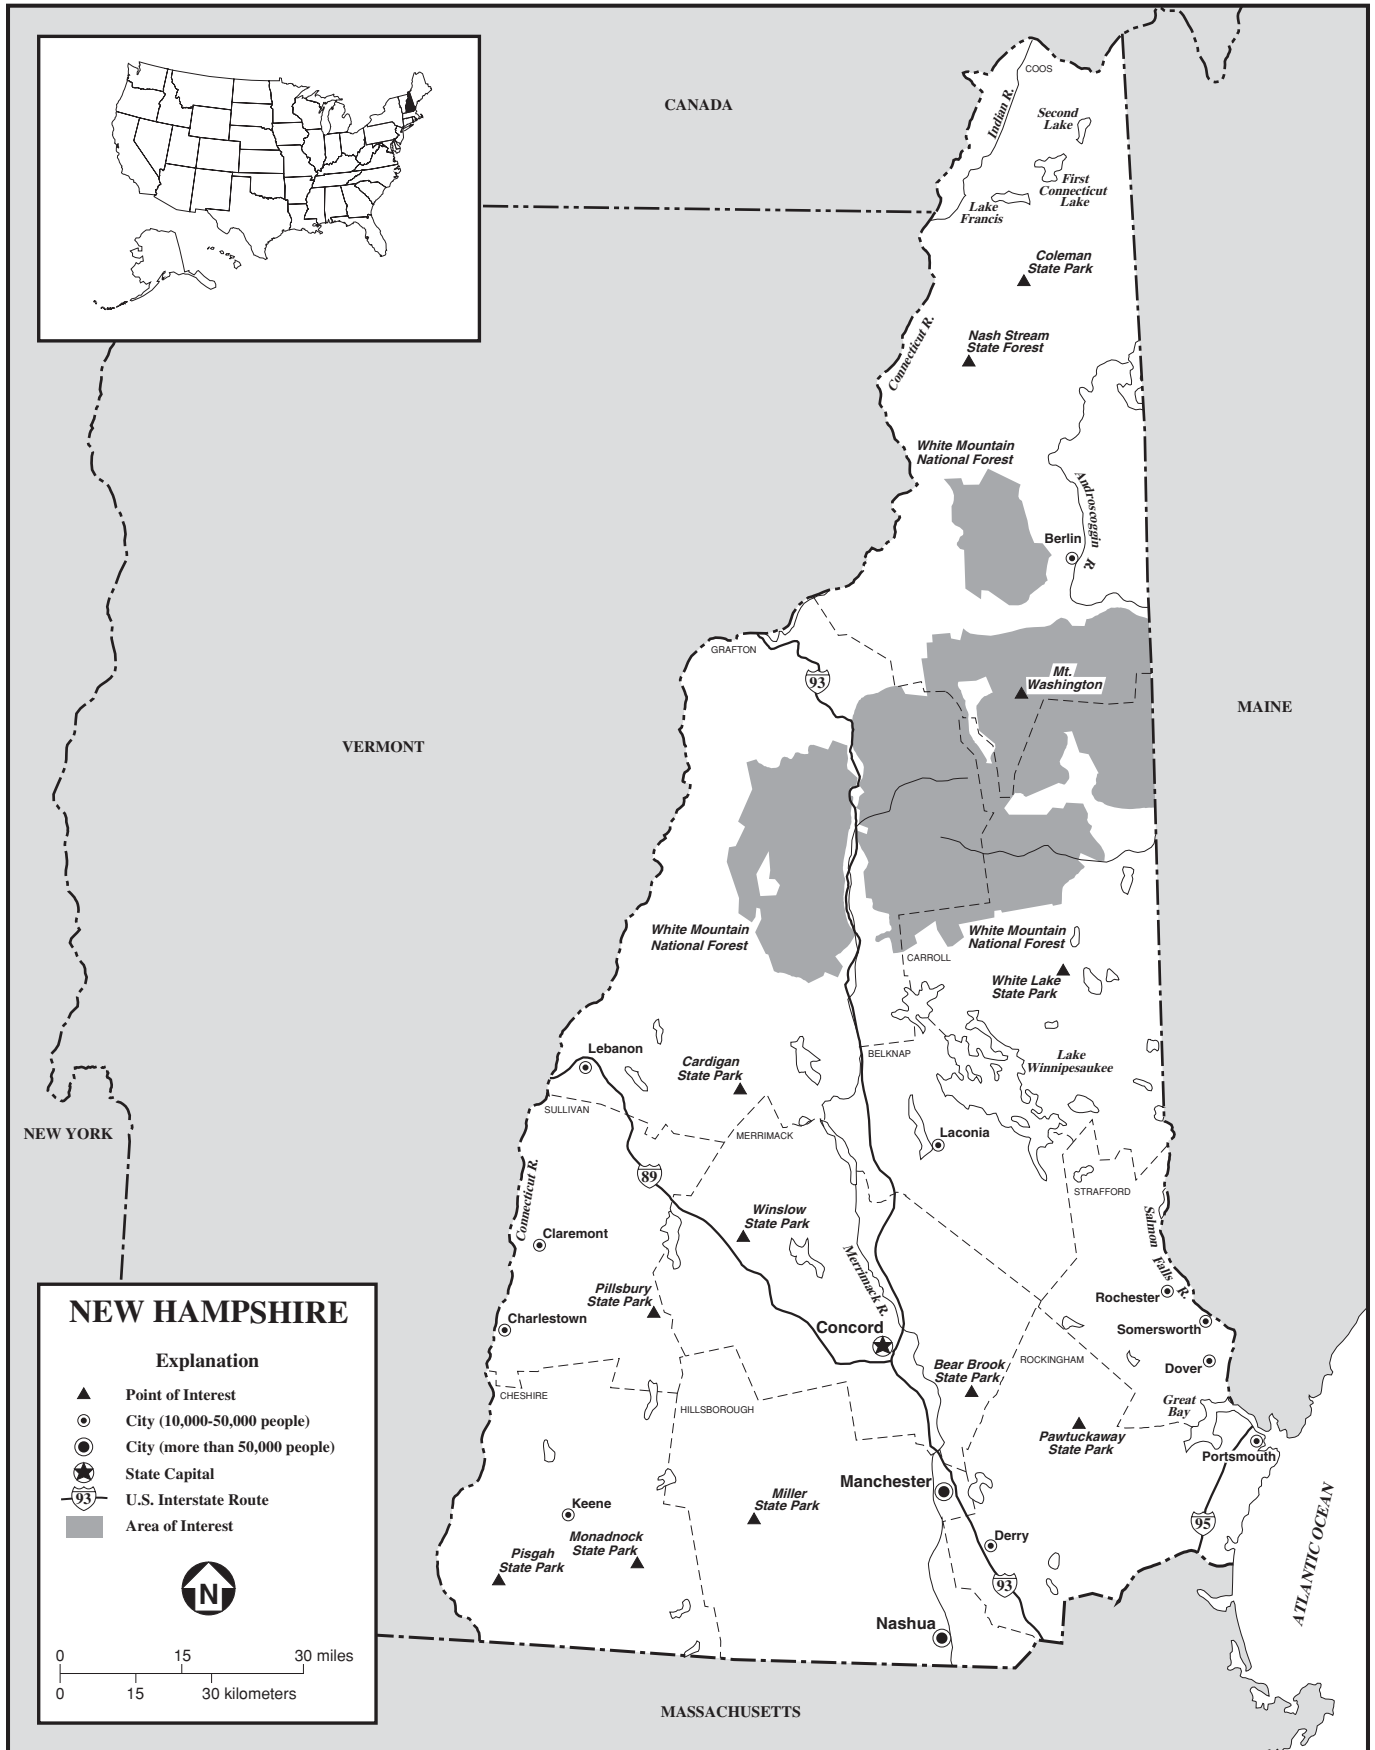

9 RELIGIONS

The first settlers of New Hampshire were Separatists, precursors of the modern Congregationalists (United Church of Christ) and their first church was probably built around 1633. The first Episcopal church was built in 1638 and the first Quaker meetinghouse in 1701; Presbyterians, Baptists, and Methodists built churches later in the 18th century. The state remained almost entirely Protestant until the second half of the 19th century, when Roman Catholics (French Canadian, Irish, and Italian) began arriving in significant numbers, along with some Greek and Russian Orthodox Christians.

In 2004, Roman Catholics numbered at about 327,353 adherents. In 2005, there were 25,794 members of the United Church of Christ. Other leading Protestant denominations (with 2000 membership data) are the United Methodist Church, 18,927; the American Baptist Churches—USA, 16,359; and the Episcopal Church, 16,148. There were about 10,020 Jews and 3,782 Muslims throughout the state in 2000. A few small groups have reported considerable growth since 1990. These include the Salvation Army, which went from 763 members in 1990 to 2,651 members in 2000. The International Church of the Foursquare Gospel grew from 51 adherents in 1990 to 1,203 in 2000 and the Christian Churches and Churches of Christ reported a membership of 1,503 in 2000, up from 396 in 1990.

10 TRANSPORTATION

New Hampshire's first railroad, between Nashua and Lowell, Massachusetts, was chartered in 1835 and opened in 1838. Two years later, Exeter and Boston were linked by rail. The state had more than 1,200 mi (1,900 km) of track in 1920, but by 2003, the total route mileage in New Hampshire shrunk to 473 mi (761 km).

There were no Class I railroads operating in the state as of that year. As of 2006, Amtrak provided service to three stations in New Hampshire via its Boston to Portland Downeaster train.

In 2003, the state had a total of 15,628 mi (25,161 km) of roads. The main north–south highway is I-93. As of 2004, there were some 668,000 automobiles, around 491,000 trucks of all types, about 66,000 motorcycles, and some 1,000 buses registered in the state, along with 985,775 licensed drivers. In 2005, New Hampshire had a total of 127 public and private-use aviation-related facilities. This included 51 airports, 67 heliports, and nine seaplane bases. The state's main airport is Manchester Municipal Airport. In 2004, the airport had 1,973,142 enplanements.

Portsmouth is the state's primary port. In 2004, the Portsmouth handled 4.794 million tons of cargo. For that same year, New Hampshire had only eight mi (12 km) of navigable inland waterways. In 2003, total waterborne shipments totaled 4.971 million tons.

11 HISTORY

The land called New Hampshire has supported a human population for at least 10,000 years. Prior to European settlement, Indian tribes of the Algonkian language group lived in the region. During the 17th century, most of New Hampshire's Indians, called Pennacook, were organized in a loose confederation centered along the Merrimack Valley.

The coast of New England was explored by Dutch, English, and French navigators throughout the 16th century. Samuel de Champlain prepared the first accurate map of the New England coast in 1604, and Captain John Smith explored the Isles of Shoals in 1614. By this time, numerous English fishermen were summering on New England's coastal banks, using the Isles of Shoals for temporary shelter and to dry their catch.

The first English settlement was established along the Piscataqua River in 1623. From 1643 to 1680, New Hampshire was a province of Massachusetts, and the boundary between them was not settled until 1740. During the 18th century, as settlers moved up the Merrimack and Connecticut river valleys, they came into conflict with the Indians. By 1760, however, the Pennacook had been expelled from the region.

Throughout the provincial period, people in New Hampshire made their living through fishing, farming, cutting and sawing timber, shipbuilding, and coastal and overseas trade. By the first quarter of the 18th century, Portsmouth, the provincial capital, had become a thriving commercial port. New Hampshire's terrain worked against Portsmouth's commercial interests, however, by dictating that roads (and later railroads) run in a north–south direction—making Boston, and not Portsmouth, New England's primary trading center. During the Revolutionary War, extensive preparations were made to protect the harbor from a British attack that never came. Although nearly 18,500 New Hampshire men enlisted in the war, no battle was fought within its boundaries. New Hampshire was the first of the original 13 colonies to establish an independent government—on 5 January 1776, six months before the Declaration of Independence.

During the 19th century, as overseas trade became less important to the New Hampshire economy, textile mills were built, principally along the Merrimack River. By midcentury, the Merrimack Valley had become the social, political, and economic center of

the state. So great was the demand for workers in these mills that immigrant labor was imported during the 1850s; a decade later, French Canadian workers began pouring south from Quebec.

Although industry thrived, agriculture did not; New Hampshire hill farms could not compete against Midwestern farms. The population in farm towns dropped, leaving a maze of stone walls, cellar holes, and new forests on the hillsides. The people who remained began to cluster in small village centers.

World War I, however, marked a turning point for New Hampshire industry. As wartime demand fell off, the state's old textile mills were unable to compete with newer cotton mills in the South, and New Hampshire's mill towns became as depressed as its farm towns; only in the north, the center for logging and paper manufacturing, did state residents continue to enjoy moderate prosperity. Industrial towns in the southern counties responded to the decline in textile manufacture by making other items, particularly shoes, but the collapse of the state's railroad network spelled further trouble for the slumping economy. The growth of tourism aided the rural areas primarily, as old farms became spacious vacation homes for "summer people," who in some cases paid the bulk of local property taxes.

During the 1960s, New Hampshire's economic decline began to reverse, except in agriculture. In the 1970s and early 1980s, growth in the state's northern counties remained modest, but the combination of Boston's urban sprawl, interstate highway construction, and low state taxes encouraged people and industry—notably high-technology businesses—to move into southern New Hampshire. The state's population doubled between 1960 and 1988, from 606,921 to 1.1 million. Most of the arrivals were younger, more affluent, and better educated than the natives. The newcomers shared the fiscally conservative views of those born in New Hampshire but tended to be more liberal on social questions such as gun control and abortion. The rise in population strained government services, prompted an increase in local taxes, and provoked concern over the state's vanishing open spaces. The state's population has held fairly steady since 1988, with an estimated 1.3 million people in 2004.

Like other New England states, New Hampshire was hard hit by the recession of the early 1990s, with the unemployment rate rising to 10% by 1992. But by the mid-1990s a recovery was underway, and about 30,000 of the more than 60,000 jobs lost during the recession had been regained. By 1999 the state enjoyed the second-lowest unemployment rate in the nation—just 2.7%. Population growth in the state threatened to do away with the annual town meeting. A study released in 2000 showed that more towns had replaced the celebrated tradition with the official ballot form of governance.

In 2000, New Hampshire Chief Justice David Brock faced an unprecedented trial on charges he influenced a lower-court judge about a powerful state senator's case, allowed a Supreme Court colleague to have a say in the handling of his own divorce, permitted disqualified justices to participate in cases, and lied to a house committee investigating the court. Brock was the first New Hampshire official impeached in 210 years and his trial was to be the first in the state's history. The last impeachment of a New Hampshire official was in 1790; Supreme Court Justice Woodbury Langdon resigned before he was tried. Brock was acquitted by the New Hampshire Senate in October 2000.

Like other New England states in the early 2000s, New Hampshire faced record-breaking budget deficits. Republican Governor Craig Benson vetoed a 2003 two-year budget passed by the state legislature, saying it would increase the deficit and raise taxes. Democrat John Lynch, who was inaugurated as New Hampshire's governor in January 2005 after defeating Benson in the November 2004 election, put his attention to improving education, reducing health care costs, protecting the environment, and creating good jobs. In his first few months in office he worked with the legislature to pass legislation stabilizing health care costs for small businesses; eliminating a projected \$300 million budget deficit; and making progress on education funding.

12 STATE GOVERNMENT

New Hampshire's constitution, adopted in 1784 and extensively revised in 1792, is the second-oldest state-governing document still in effect. Every 10 years, the people vote on the question of calling a convention to revise it; proposed revisions must then be approved by two-thirds of the voters at a referendum. Amendments may also be placed on the ballot by a three-fifths vote of both houses of the state legislature. If placed on the ballot, an amendment must be approved by two-thirds of the voters on the amendment in order to be ratified. The constitution was amended 143 times by January 2005.

The state legislature, called the General Court, consists of a 24-member Senate and a 400-seat House of Representatives, larger than that of any other state. Legislative sessions begin each January and are limited to 45 legislative days. Special sessions, indirectly limited to 15 legislative days, may be called by a two-thirds vote of the members of each house. Senators must be at least 30 years old, representatives 18. The state residency requirement for senators is a minimum of seven years and for representatives a minimum of two. Legislators, who must reside in their districts, serve two-year terms, for which they were paid \$200 (\$100 per year) as of 2004, unchanged from 1999.

The only executive elected statewide is the governor, who serves a two-year term and is assisted by a five-member executive council, elected for two years by district. As of 2006, New Hampshire and Vermont were the only two states whose governors served two-year terms. The council must approve all administrative and judicial appointments. The secretary of state and state treasurer are elected by the legislature. The governor must be at least 30 years old and must have been a state resident for seven years before election. As of December 2004, the governor's salary was \$96,060.

A bill becomes law if signed by the governor, if passed by the legislature and left unsigned by the governor for five days whether or not the legislature is in or out of session, or if passed over a gubernatorial veto by two-thirds of the legislators present in each house. A voter must be at least 18 years old, a US citizen, and must have a permanent established domicile in the state of New Hampshire. Restrictions apply to convicted felons.

13 POLITICAL PARTIES

New Hampshire has almost always gone with the Republican presidential nominee in recent decades, but the Democratic and Republican parties were much more evenly balanced in local and state elections. New Hampshire's quadrennial presidential preference primary, the second state primary of the campaign season

YEAR	ELECTORAL VOTE	NEW HAMPSHIRE WINNER	DEMOCRAT	REPUBLICAN
1948	4	Dewey (R)	107,995	121,299
1952	4	*Eisenhower (R)	106,663	166,287
1956	4	*Eisenhower (R)	90,364	176,519
1960	4	Nixon (R)	137,772	157,989
1964	4	*Johnson (D)	182,065	104,029
1968	4	*Nixon (R)	130,589	154,903
1972	4	*Nixon (R)	116,435	213,724
1976	4	Ford (R)	147,635	185,935
1980	4	*Reagan (R)	108,864	221,705
1984	4	*Reagan (R)	120,347	267,050
1988	4	*Bush (R)	163,696	281,537
1992**	4	*Clinton (D)	209,040	202,484
1996**	4	*Clinton (D)	246,214	196,532
2000	4	*Bush, G. W. (R)	266,348	273,559
2004	4	Kerry (D)	340,511	331,237

*Won US presidential election.
 **IND. candidate Ross Perot received 121,337 votes in 1992 and 48,390 votes in 1996.

after Iowa, accords to New Hampshire a degree of national political influence and a claim on media attention far out of proportion to their numbers. In the 1992 presidential election, New Hampshire voters defied their tradition and chose Democrat Bill Clinton over Republican incumbent George Bush by a scant 6,556 votes. Clinton won the state again in 1996. In the 2000 presidential election, Republican George W. Bush received 48% of the vote to Democrat Al Gore's 47%; Green Party candidate Ralph Nader garnered 4% of the vote. In 2004, Bush won 40.3% to Democratic challenger John Kerry's 49.0%. In 2004, there were 690,000 registered voters. In 1998, 27% of registered voters were Democratic, 36% Republican, and 36% unaffiliated or members of other parties. The state had four electoral votes in the 2004 presidential election.

As of 2005, both of New Hampshire's senators, John Sununu (elected in 2002) and Judd Gregg (reelected in 2004), were Republicans. Following the 2004 election, both House seats were held by Republicans. In 2002, Republican Craig Benson was elected governor; he was defeated by Democrat John Lynch in 2004. The New Hampshire state Senate in mid-2005 had 16 Republicans and 8 Democrats, and the state House had 253 Republicans and 147 Democrats.

14 LOCAL GOVERNMENT

As of 2005, New Hampshire has 10 counties, each governed by three commissioners. Other elected county officials include the sheriff, attorney, treasurer, registrar of deeds, and registrar of probate.

New Hampshire also had 13 municipal governments in 2005, as well as 178 public school districts, and 148 special districts. In 2002, there were 221 townships. Most municipalities have elected mayors and councils. Some municipal charters provide for the council-manager or commission system of government. The basic unit of town government is the traditional town meeting, held once a year, when selectmen and other local officials are chosen.

In 2005, local government accounted for about 49,709 full-time (or equivalent) employment positions.

1⁵ STATE SERVICES

To address the continuing threat of terrorism and to work with the federal Department of Homeland Security, homeland security in New Hampshire operates under the authority of the governor; the emergency management director is designated as the state homeland security advisor.

The Department of Education, governed by the seven-member State Board of Education (which appoints an education commissioner), has primary responsibility for public instruction. The Department of Transportation and the Division of Ports and Harbors share transport responsibilities, while the Department of Health and Human Services oversees public health and mental health and welfare. Executive branch departments include the departments of agriculture, markets, and food; cultural resources; fish and game; justice; revenue administration; and parks and recreation. Authorities, boards, and commissions include the Liquor Commission and the Sweepstakes Commission.

1⁶ JUDICIAL SYSTEM

All judges in New Hampshire are appointed by the governor, subject to confirmation by the executive council. Appointments are to age 70, with retirement compulsory at that time. The state's highest court, the Supreme Court, consists of a chief justice and four associate justices. The main trial court is the Superior Court for which there were 28 judges in 1999.

As of 31 December 2004, a total of 2,448 prisoners were held in New Hampshire's state and federal prisons, an increase from 2,434 of 0.6% from the previous year. As of year-end 2004, a total of 119 inmates were female, up from 117 or 1.7% from the year before. Among sentenced prisoners (one year or more), New Hampshire had an incarceration rate of 187 per 100,000 population in 2004.

According to the Federal Bureau of Investigation, New Hampshire in 2004, had a violent crime rate (murder/nonnegligent manslaughter; forcible rape; robbery; aggravated assault) of 167 reported incidents per 100,000 population, or a total of 2,170 reported incidents. Crimes against property (burglary; larceny/theft; and motor vehicle theft) in that same year totaled 26,511 reported incidents or 2,040.1 reported incidents per 100,000 people. New Hampshire has a death penalty, which consists of lethal injection or hanging, the latter of which is used only if lethal injection cannot be used. Since 1930, New Hampshire has executed only one person and as of 1 January 2006 no prisoners were under sentence of death in the state. For the period 1976 through 5 May 2006, there have been no executions carried out by the state.

In 2003, New Hampshire spent \$45,536,983 on homeland security, an average of \$36 per state resident.

1⁷ ARMED FORCES

In 2004, there were 218 active-duty military personnel and 1,059 civilian personnel stationed in New Hampshire. The principal military installation is the Portsmouth Naval Shipyard. Firms in the state received nearly \$715 million in defense contract awards in 2004, and defense payroll outlays were \$384 million.

As of 2003, veterans living in New Hampshire numbered 131,074, of whom 16,623 were veterans of World War II; 14,381, the Korean conflict; 41,627, the Vietnam era; and 16,940 served during the Gulf War. For the fiscal year 2004, total Veterans Af-

fairs expenditures in New Hampshire amounted to more than \$325 million.

As of 31 October 2004, the New Hampshire State Police employed 267 full-time sworn officers.

1⁸ MIGRATION

From the time of the first European settlement until the middle of the 19th century, the population of New Hampshire was primarily of British origin. Subsequently, immigrants from Quebec and from Ireland, Italy, and other countries began arriving in significant numbers. New Hampshire's population growth since 1960 has been fueled by migrants from other states. The net gain from migration was 74,000 from 1985 to 1990. Between 1990 and 1998, New Hampshire had net gains of 19,000 in domestic migration and 6,000 in international migration. In 1998, the state admitted 1,010 foreign immigrants. Between 1990 and 1998, the state's overall population increased 6.8%. In the period 2000-05, net international migration was 11,107 and net internal migration was 40,861, for a net gain of 51,968 people.

1⁹ INTERGOVERNMENTAL COOPERATION

New Hampshire participates in the American and Canadian French Cultural Exchange Commission, Atlantic States Marine Fisheries Commission, Connecticut River Valley Flood Control Compact, Maine-New Hampshire Interstate School Compact, Northeastern Forest Fire Protection Compact, and various New England regional compacts (including compacts on radiological health protection, higher education, corrections, police, trucking fees and permits, water pollution control, sewage and garbage disposal, fire protection, and the lotto). Federal grants to New Hampshire totaled \$1.243 billion in fiscal year 2005, an estimated \$1.253 billion in fiscal year 2006, and an estimated \$1.271 billion in fiscal year 2007.

2⁰ ECONOMY

New Hampshire is one of the most industrialized states in the United States, ranking well above the national median in proportion of labor force employed in manufacturing and in value added by manufacture. Between 1977 and 1982, manufacturing employment rose 13%, to 107,500, as many high-technology firms moved into the southern portion of the state. Since World War II, tourism has been one of the state's fastest-growing sources of income. Coming into the 21st century, the state's economy was booming, posting annual growth rates of 8.2% in 1998, 7% in 1999, and 9.3% in 2000. It was clearly headed for a correction, and in the national recession and slowdown of 2001 it was one of the few states that experienced a contraction for the year, albeit a small 0.4% contraction. Due to the large growth of information technology (IT) related jobs in southern New Hampshire in the 1990s, this was the region of New England that saw the greatest fall in personal income between mid-2000 and mid-2002.

New Hampshire's gross state product (GSP) in 2004 was \$51.871 billion of which the real estate sector accounted for the largest share at \$7.232 billion or 13.9% of GSP, followed by manufacturing (durable and nondurable goods) at \$6.47 billion (12.4% of GSP), and healthcare and social assistance at \$4.195 billion (8% of GSP). In that same year, there were an estimated 133,052 small businesses in New Hampshire. Of the 40,151 businesses that had

employees, an estimated total of 38,820 or 96.7% were small companies. An estimated 4,865 new businesses were established in the state in 2004, up 4.6% from the year before. Business terminations that same year came to 5,401, up 17.5% from 2003. There were 158 business bankruptcies in 2004, down 11.2% from the previous year. In 2005, the state's personal bankruptcy (Chapter 7 and Chapter 13) filing rate was 333 filings per 100,000 people, ranking New Hampshire as the 47th highest in the nation.

21 INCOME

In 2005, New Hampshire had a gross state product (GSP) of \$56 billion which accounted for 0.4% of the nation's gross domestic product and placed the state at number 39 in highest GSP among the 50 states and the District of Columbia.

According to the Bureau of Economic Analysis, in 2004 New Hampshire had a per capita personal income (PCPI) of \$36,616. This ranked seventh in the United States and was 111% of the national average of \$33,050. The 1994–2004 average annual growth rate of PCPI was 4.5%. New Hampshire had a total personal income (TPI) of \$47,569,847,000, which ranked 38th in the United States and reflected an increase of 7.1% from 2003. The 1994–2004 average annual growth rate of TPI was 5.8%. Earnings of persons employed in New Hampshire increased from \$32,481,694,000 in 2003 to \$34,921,009,000 in 2004, an increase of 7.5%. The 2003–04 national change was 6.3%.

The US Census Bureau reports that the three-year average median household income for 2002–04 in 2004 dollars was \$57,352 compared to a national average of \$44,473. During the same period an estimated 5.7% of the population was below the poverty line as compared to 12.4% nationwide.

22 LABOR

According to the Bureau of Labor Statistics (BLS), in April 2006 the seasonally adjusted civilian labor force in New Hampshire numbered 735,300 with approximately 24,700 workers unemployed, yielding an unemployment rate of 3.4%, compared to the national average of 4.7% for the same period. Preliminary data for the same period placed nonfarm employment at 642,500. Since the beginning of the BLS data series in 1976, the highest unemployment rate recorded in New Hampshire was 7.7% in June 1982. The historical low was 1.9% in April 1987. Preliminary nonfarm employment data by occupation for April 2006 showed that approximately 4.8% of the labor force was employed in construction; 12% in manufacturing; 22.1% in trade, transportation, and public utilities; 6.3% in financial activities; 9.5% in professional and business services; 15.7% in education and health services; 9.9% in leisure and hospitality services; and 13.9% in government.

The US Department of Labor's Bureau of Labor Statistics reported that in 2005, a total of 65,000 of New Hampshire's 627,000 employed wage and salary workers were formal members of a union. This represented 10.4% of those so employed, up from 9.9% in 2004, but still below the national average of 12%. Overall in 2005, a total of 72,000 workers (11.5%) in New Hampshire were covered by a union or employee association contract, which includes those workers who reported no union affiliation. New Hampshire is one of 28 states that does not have a right-to-work law.

As of 1 March 2006, New Hampshire had a state-mandated minimum wage rate of \$5.15 per hour. In 2004, women in the state accounted for 46.7% of the employed civilian labor force.

23 AGRICULTURE

Only Rhode Island and Alaska generate less income from farming than New Hampshire. Farm income in 2005 was \$168 million, 56% of which was in crops.

In 2004, there were about 3,400 farms occupying about 450,000 acres (182,000 hectares). Leading crops and their output in 2004 were hay, 105,000 tons, and commercial apples, 31 million lb (14 million kg).

24 ANIMAL HUSBANDRY

Dairy and poultry products are the mainstays of New Hampshire's agriculture. In 2003, the state had 16,000 milk cows, with a total milk yield of 305 million lb (139 million kg). Poultry items included 1,183,000 lb (538,000 kg) of chickens, sold for \$28,000; 132,000 lb (60,000 kg) of turkey, valued at \$224,000, and 43 million eggs, valued at \$3.2 million.

25 FISHING

New Hampshire's commercial catch in 2004 consisted of 21.9 million lb (10 million kg), worth \$8.8 million. Most of the catch includes cod and lobster. In 2003, the state had 3 processing and 20 wholesale plants with about 497 employees. The commercial fleet in 2001 had about 580 boats and vessels. The state sponsors six hatcheries. The Nashua National Fish Hatchery is also located in the state. In 2004, the state issued 143,835 sport fishing licenses.

26 FORESTRY

New Hampshire had 4,824,000 acres (1,952,000 hectares) of forestland in 2004, of which 4,503,000 acres (1,822,000 hectares) were considered suitable for commercial use. Of that total, 83% was privately owned. Forests cover about 84% of New Hampshire. Lumber production in 2004 was 232 million board feet, 72% softwood.

27 MINING

According to preliminary data from the US Geological Survey (USGS), the estimated value of nonfuel mineral production by New Hampshire in 2003 was \$63.9 million, a decrease from 2002 of about 3%.

By value, according to the preliminary data for 2003, construction sand and gravel was the state's leading nonfuel mineral commodity, accounting for around 69% of all nonfuel mineral production. In second place was crushed stone.

Preliminary data for 2003 showed production of construction sand and gravel totaling 9.1 million metric tons, with a value of \$44.1 million, while crushed stone output that year totaled 3.89 million metric tons, and a value of \$19.8 million. New Hampshire in 2003 was also a producer of dimension granite, and gem stones which were collected by hobbyists. Sand and gravel are mined in every county, and dimension granite is quarried in Hillsborough, Merrimack, and Coos counties.

28 ENERGY AND POWER

As of 2003, new Hampshire had 20 electrical power service providers, of which five were publicly owned and one was a cooperative. Of the remainder, four were investor owned, four were owners of independent generators that sold directly to customers, four were generation-only suppliers and two were delivery-only providers. As of that same year there were 661,773 retail customers. Of that total, 576,788 received their power from investor-owned service providers. The state's lone cooperative accounted for 73,727 customers, while publicly owned providers had 11,147 customers. There were five independent generator or "facility" customers, while generation-only suppliers had 106 customers. There was no data on the number of delivery-only customers.

Total net summer generating capability by the state's electrical generating plants in 2003 stood at 4.244 million kW, with total production that same year at 21.597 billion kWh. Of the total amount generated, 28.9% came from electric utilities, with the remaining 71.1% coming from independent producers and combined heat and power service providers. The largest portion of all electric power generated, 9.276 billion kWh (43%), came from nuclear power, with natural gas fired plants in second place at 4.165 billion kWh (19.3%) and coal-fired plants in third at 3.923 billion kWh (18.2%). Other renewable power sources accounted for 4% of all power generated, with hydroelectric at 6.2% and petroleum fired plants at 9.5%.

In 1990, the controversial nuclear power plant at Seabrook, built by Public Service Co. of New Hampshire, began operating. Originally planned as a two-reactor, 2,300-Mw facility, Seabrook was scaled back to one 1,150 MW reactor whose cost was about five times the original \$1 billion two-reactor estimate. As of 2003, the plant had a generating capability of 1,159 MW and was the largest reactor in New England.

New Hampshire has no refineries, nor any proven reserves or production of crude oil and natural gas.

29 INDUSTRY

During the provincial era, shipbuilding was New Hampshire's major industry. By 1870, cotton and woolen mills, concentrated in the southeast, employed about one-third of the labor force and accounted for roughly half the value of all manufactures.

According to the US Census Bureau's Annual Survey of Manufactures (ASM) for 2004, New Hampshire's manufacturing sector covered some 16 product subsectors. The shipment value of all products manufactured in the state that same year was \$15.439 billion. Of that total, computer and electronic product manufacturing accounted for the largest share at \$3.982 billion. It was followed by machinery manufacturing at \$1.867 billion; fabricated metal product manufacturing at \$1.627 billion; miscellaneous manufacturing at \$1.017 billion; and electrical equipment, appliance and component manufacturing at \$983.270 million.

In 2004, a total of 72,498 people in New Hampshire were employed in the state's manufacturing sector, according to the ASM. Of that total, 452,589 were actual production workers. In terms of total employment, the computer and electronic product manufacturing industry accounted for the largest portion of all manufacturing employees at 14,068, with 6,127 actual production workers. It was followed by fabricated metal product manufacturing

at 10,776 employees (8,023 actual production workers); machinery manufacturing at 8,534 employees (4,497 actual production workers); miscellaneous manufacturing at 5,307 employees (2,997 actual production workers); and plastics and rubber products manufacturing with 4,555 employees (3,543 actual production workers).

ASM data for 2004 showed that New Hampshire's manufacturing sector paid \$3.332 billion in wages. Of that amount, the computer and electronic product manufacturing sector accounted for the largest share at \$863.134 million. It was followed by fabricated metal product manufacturing at \$436.288 million; machinery manufacturing at \$430.462 million; miscellaneous manufacturing at \$255.064 million; and electrical equipment, appliance and component manufacturing at \$175.557 million.

30 COMMERCE

According to the 2002 Census of Wholesale Trade, New Hampshire's wholesale trade sector had sales that year totaling \$13.7 billion from 2,004 establishments. Wholesalers of durable goods accounted for 1,326 establishments, followed by nondurable goods wholesalers at 508 and electronic markets, agents, and brokers accounting for 170 establishments. Sales by durable goods wholesalers in 2002 totaled \$6.6 billion, while wholesalers of nondurable goods saw sales of \$5.4 billion. Electronic markets, agents, and brokers in the wholesale trade industry had sales of \$1.5 billion.

In the 2002 Census of Retail Trade, New Hampshire was listed as having 6,702 retail establishments with sales of \$20.8 billion. The leading types of retail businesses by number of establishments were: miscellaneous store retailers (839); motor vehicle and motor vehicle parts dealers (822); clothing and clothing accessories stores (806); and food and beverage stores (752). In terms of sales, motor vehicle and motor vehicle parts dealers accounted for the largest share of retail sales at \$5.3 billion, followed by food and beverage stores at \$3.3 billion; general merchandise stores at \$2.8 billion; nonstore retailers at \$1.85 billion; and building material/garden equipment and supplies dealers \$1.80 billion. A total of 93,804 people were employed by the retail sector in New Hampshire that year.

Foreign exports of goods originating in New Hampshire totaled \$2.5 billion in 2005.

31 CONSUMER PROTECTION

Consumer protection issues are handled by the Consumer Protection and Antitrust Bureau, which is under the jurisdiction of the state of New Hampshire's Department of Justice. Specific legal action however, is handled by the state's Attorney General's Office, which is also under the state's Department of Justice.

When dealing with consumer protection issues, the state's Attorney General's Office can initiate civil and criminal proceedings; represent the state before state and federal regulatory agencies; administer consumer protection and education programs; handle formal consumer complaints; and exercise broad subpoena powers. In antitrust actions, the Attorney General's Office can act on behalf of those consumers who are incapable of acting on their own; initiate damage actions on behalf of the state in state courts; and initiate criminal proceedings. However, the Attorney General's Office cannot represent counties, cities and other governmental entities in recovering civil damages under state or federal law.

The offices of the Consumer Protection and Antitrust Bureau are located in Concord.

3² BANKING

As of June 2005, New Hampshire had 30 insured banks, savings and loans, and saving banks, plus 21 state-chartered and six federally chartered credit unions (CUs). Excluding the CUs, the Manchester-Nashua market area accounted for the largest portion of the state's financial institutions and deposits in 2004, with 15 institutions and \$6.435 billion in deposits. As of June 2005, CUs accounted for 9.6% of all assets held by all financial institutions in the state, or some \$3.349 billion. Banks, savings and loans, and savings banks collectively accounted for the remaining 90.4% or \$31.670 billion in assets held.

Twenty percent of New Hampshire's banks have long-term asset concentrations greater than 30% of earnings assets. This is due in large measure to the large percentage of thrifts and residential lenders in the state. Over one-half of all insured banks in New Hampshire are savings institutions.

Regulation of state-chartered banks and other financial institutions is the responsibility of the Banking Department.

3³ INSURANCE

In 2004, there were 631,000 individual life insurance policies in force in New Hampshire, with a total value of about \$59.5 billion; total value for all categories of life insurance (individual, group, and credit) was \$90 billion. The average coverage amount is \$94,400 per policy holder. Death benefits paid that year totaled \$209.2 million.

As of 2003, there were 33 property and casualty and 3 life and health insurance companies domiciled in the state. Direct premiums for property and casualty insurance totaled \$2.1 billion in 2004. That year, there were 5,211 flood insurance policies in force in the state, with a total value of \$758 million.

In 2004, 67% of state residents held employment-based health insurance policies, 3% held individual policies, and 18% were covered under Medicare and Medicaid; 11% of residents were uninsured. New Hampshire has the highest percentage of employment-based insurance in the country. In 2003, employee contributions for employment-based health coverage averaged at 21% for single coverage and 25% for family coverage. The state offers an 18-month health benefits expansion program for small-firm employees in connection with the Consolidated Omnibus Budget Reconciliation Act (COBRA, 1986), a health insurance program for those who lose employment-based coverage due to termination or reduction of work hours.

In 2003, there were 862,145 auto insurance policies in effect for private passenger cars. Insurance coverage is not mandatory but motorists are expected to take financial responsibility and uninsured motorist coverage is available. In 2003, the average expenditure per vehicle for insurance coverage was \$776.47.

3⁴ SECURITIES

New Hampshire has no securities exchanges. In 2005, there were 490 personal financial advisers employed in the state and 1,950 securities, commodities, and financial services sales agents. In 2004, there were over 36 publicly traded companies within the state, with over 14 NASDAQ companies, 8 NYSE listings, and 4 AMEX

listings. In 2006, the state had one Fortune 500 company; Fisher Scientific Intl, based in Hampton and listed on the NYSE, ranked 389th in the nation with revenues of over \$5.5 billion. Timberland in Stratham (NYSE) and PC Connection in Merrimack (NASDAQ) made the Fortune 1,000 list.

3⁵ PUBLIC FINANCE

The New Hampshire state budget is drawn up biennially by the Department of Administrative Services and then submitted by the governor to the legislature for amendment and approval. The fiscal year (FY) runs from 1 July to 30 June.

SOURCE: U.S. Census Bureau, Governments Division, 2004 Survey of State Government Finances, January 2006.

Fiscal year 2006 general funds were estimated at \$1.37 billion for resources and \$1.34 billion for expenditures. In fiscal year 2004, federal government grants to New Hampshire were \$1.8 billion.

On 5 January 2006 the federal government released \$100 million in emergency contingency funds targeted to the areas with the greatest need, including \$900,000 for New Hampshire.

36 TAXATION

In 2005, New Hampshire collected \$2,022 million in tax revenues or \$1,544 per capita, which placed it 48th among the 50 states in per capita tax burden. The national average was \$2,192 per capita. Property taxes accounted for 19.4% of the total, selective sales taxes 34.9%, individual income taxes 3.3%, corporate income taxes 23.6%, and other taxes 18.8%.

As of 1 January 2006, state income tax was limited to dividends and interest income only. The state taxes corporations at a flat rate of 8.5%.

In 2004, state and local property taxes amounted to \$2.5 billion or \$1,940 per capita. The per capita amount ranks the state third-highest nationally. Local governments collected \$2,026,125,000 of the total and the state government \$493,589,000.

New Hampshire taxes gasoline at 19.625 cents per gallon. This is in addition to the 18.4 cents per gallon federal tax on gasoline.

According to the Tax Foundation, for every federal tax dollar sent to Washington in 2004, New Hampshire citizens received \$0.67 in federal spending, which ranks the state third-lowest among all states.

37 ECONOMIC POLICY

Business incentives in New Hampshire include a generally favorable tax climate (which includes the absence of sales, personal income, and capital gains taxes), specific tax incentives and exemptions, and relatively low wage rates. The state has offered loan programs through the New Hampshire Business Finance Authority since 1992, aimed at encouraging economic development and job creation and at assisting small businesses. The state also participates in a joint venture with Maine and Vermont which provides loans to export companies. Foreign Trade Zone No. 81 provides economic incentives to companies doing business in the international markets. New Hampshire's Division of Economic Development (DED), within the Department of Resources and Economic Development, has the main responsibility for state support of programs to increase jobs and revenues in the state. Major operational units within the DED have been focused on assistance for business relocations and expansions; New Economy Ventures; community development; Internet development; exports of state products, imports of state products and tourism. Under the program NH Works, employers were offered free assistance on all facets of hiring the right employees.

38 HEALTH

The infant mortality rate in October 2005 was estimated at 5.4 per 1,000 live births. The birth rate in 2003 was 11.2 per 1,000 population. The abortion rate stood at 11.2 per 1,000 women in 2000. In 2003, about 92.8% of pregnant woman received prenatal care beginning in the first trimester; this was the highest rate for pre-

natal care in the nation. In 2004, approximately 86% of children received routine immunizations before the age of three.

The crude death rate in 2003 was 7.5 deaths per 1,000 population. As of 2002, the death rates for major causes of death (per 100,000 resident population) were: heart disease, 217.7; cancer, 198.3; cerebrovascular diseases, 49.2; chronic lower respiratory diseases, 45.3; and diabetes, 24.4. The mortality rate from HIV infection was not available. In 2004, the reported AIDS case rate was at about 3.2 per 100,000 population. In 2002, about 53.5% of the population was considered overweight or obese. As of 2004, about 21.6% of state residents were smokers.

In 2003, New Hampshire had 28 community hospitals with about 2,800 beds. There were about 118,000 patient admissions that year and 3.1 million outpatient visits. The average daily inpatient census was about 1,700 patients. The average cost per day for hospital care was \$1,389. Also in 2003, there were about 81 certified nursing facilities in the state with 7,811 beds and an overall occupancy rate of about 91.5%. New In 2004, it was estimated that about 77.5% of all state residents had received some type of dental care within the year. Hampshire had 267 physicians per 100,000 resident population in 2004 and 932 nurses per 100,000 in 2005. In 2004, there were a total of 795 dentists in the state.

About 10% of state residents were enrolled in Medicaid programs in 2003; 14% were enrolled in Medicare programs in 2004. Approximately 11% of the state population was uninsured in 2004. In 2003, state health care expenditures totaled \$1.3 billion.

39 SOCIAL WELFARE

In 2004, about 21,000 people received unemployment benefits, with the average weekly unemployment benefit at \$251. In fiscal year 2005, the estimated average monthly participation in the food stamp program included about 52,310 persons (25,198 households); the average monthly benefit was about \$80.56 per person. That year, the total of benefits paid through the state for the food stamp program was about \$50.5 million, the lowest total in the nation.

Temporary Assistance for Needy Families (TANF), the system of federal welfare assistance that officially replaced Aid to Families with Dependent Children (AFDC) in 1997, was reauthorized through the Deficit Reduction Act of 2005. TANF is funded through federal block grants that are divided among the states based on an equation involving the number of recipients in each state. New Hampshire's TANF program for work-exempt families is called the Family Assistance Program (FAP), while aid to work-mandated families under TANF is called the New Hampshire Employment Program (NHEP). In 2004, the state program had 14,000 recipients; state and federal expenditures on this TANF program totaled \$37 million in fiscal year 2003.

In December 2004, Social Security benefits were paid to 219,080 New Hampshire residents. This number included 143,580 retired workers, 18,050 widows and widowers, 30,090 disabled workers, 8,850 spouses, and 18,510 children. Social Security beneficiaries represented 16.6% of the total state population and 96.9% of the state's population age 65 and older. Retired workers received an average monthly payment of \$978; widows and widowers, \$948; disabled workers, \$897; and spouses, \$505. Payments for children of retired workers averaged \$513 per month; children of deceased workers, \$681; and children of disabled workers, \$282. Federal

Supplemental Security Income payments in December 2004 went to 13,029 New Hampshire residents, averaging \$377 a month. An additional \$873,000 of state-administered supplemental payments were distributed to 16,784 residents.

40 HOUSING

In 2004, there were 575,671 housing units in New Hampshire, 491,589 of which were occupied; 72.6% were owner-occupied. About 62.8% of all units were single-family, detached homes. Fuel oil and kerosene were the most common heating energy sources. It was estimated that 8,724 units lacked telephone service, 2,770 lacked complete plumbing facilities, and 2,725 lacked complete kitchen facilities. The average household had 2.57 members.

In 2004, 8,700 new privately owned units were authorized for construction. The median home value was \$216,639. The median monthly cost for mortgage owners was \$1,472. Renters paid a median of \$810. In 2006, the state received over \$9.2 million in community development block grants from the US Department of Housing and Urban Development (HUD).

41 EDUCATION

In 2004, 90.8% of New Hampshire residents age 25 and older were high school graduates, significantly higher than the national average of 84%. Some 35.4% had obtained a bachelor's degree or higher, surpassing the national average of 26%.

The total enrollment for fall 2002 in New Hampshire's public schools stood at 208,000. Of these, 144,000 attended schools from kindergarten through grade eight, and 64,000 attended high school. Approximately 94.2% of the students were white, 1.4% were black, 2.4% were Hispanic, 1.7% were Asian/Pacific Islander, and 0.3% were American Indian/Alaskan Native. Total enrollment was estimated at 205,000 in fall 2003 but expected to be 193,000 by fall 2014, a decline of 7.1% during the period 2002–14. Expenditures for public education in 2003/04 were estimated at \$2.1 billion. In fall 2003 there were 23,692 students enrolled in 165 private schools. Since 1969, the National Assessment of Educational Progress (NAEP) has tested public school students nationwide. The resulting report, *The Nation's Report Card*, stated that in 2005 eighth graders in New Hampshire scored 285 out of 500 in mathematics compared with the national average of 278.

As of fall 2002, there were 68,523 students enrolled in college or graduate school; minority students comprised 7.2% of total post-secondary enrollment. In 2005, New Hampshire had 25 degree-granting institutions. The best-known institution of higher education is Dartmouth College, which originated in Connecticut in 1754 as Moor's Indian Charity School and was established at Hanover in 1769. When the state of New Hampshire attempted to amend Dartmouth's charter to make the institution public in the early 19th century, the US Supreme Court handed down a precedent-setting ruling prohibiting state violation of contract rights. The University of New Hampshire, the leading public institution, was founded at Hanover in 1866 and relocated at Durham in 1891. The university also has a campus in Manchester. Other colleges include Franklin Pierce College, Keene State College, and Southern New Hampshire University.

42 ARTS

The New Hampshire State Council on the Arts was established in 1965 with the mission of making the arts more prevalent in the community and education. In 2005, the New Hampshire State Council on the Arts and other New Hampshire arts organizations received 7 grants totaling \$682,100 from the National Endowment for the Arts. State and private sources also contributed substantial funding to the state's arts programs.

As of 2006, the New Hampshire Humanities Council sponsored a number of ongoing programs including What Is New Hampshire Reading?, a statewide reading and discussion program; a Literature and Medicine series that hosts discussions on what matters in health care and why, and an annual summer Chautauqua. In 2005, the National Endowment for the Humanities contributed \$743,861 to eight state programs.

Hopkins Center at Dartmouth College features musical events throughout the year. Ballet groups include Ballet New England in Portsmouth, City Center Ballet in Lebanon, and Petit Papillon in Concord. Opera groups include the Granite State Opera in Temple, and Opera North in Hanover. Classical music groups include the Nashua Chamber Orchestra, the Nashua Symphony Orchestra, the Granite State Symphony in Concord, the New England Wind Ensemble in Franklin, and the New Hampshire Philharmonic Orchestra and New Hampshire Symphony Orchestra (both in Manchester). The Lakes Region Symphony Orchestra based in Meredith, celebrated its 30th anniversary during the 2005/06 season.

The New Hampshire Music Festival in Center Harbor serves as a year-round educational institute and performing arts center and sponsors an annual summer festival featuring the New Hampshire Music Festival Orchestra. The festival began in 1952 and as of 2006 it hosted more than 160 events per year, over 50 presented during the summer festival. Monadnock Music in Peterborough is an organization sponsoring a variety of musical programs, including "Lend an Ear!"—a program geared towards educating young people, primarily elementary school children, about chamber music. This program in particular served over 1600 students from 18 different schools during the 2004/05 school year.

Patricia Fargnoli, of Walpole, New Hampshire was named the state's poet laureate for the January 2006–March 2009 term. She has published works that include *Necessary Light* and *Duties of the Spirit* (2005) and has won several awards such as the May Swenson Poetry Prize and the Jane Kenyon Poetry Book Award. The artist laureate as of 2006 was James Aponovich, an internationally acclaimed still life painter and teacher at the New Hampshire Institute of Art.

Principal galleries include the Currier Gallery of Art in Manchester, the University Art Gallery at the University of New Hampshire in Durham, Hood Museum—the Dartmouth College Art Museum at Hanover, and the Lamont Gallery at Phillips Exeter Academy in Exeter.

43 LIBRARIES AND MUSEUMS

As of December 2001, New Hampshire had 229 public library systems, with a total of 238 libraries, of which there were nine branches. The system, that same year, had a total book and serial publication stock of 5,572,000 volumes and a total combined circulation of 8,647,000. The system also had 172,000 audio and 158,000 video

items, 18,000 electronic format items (CD-ROMs, magnetic tapes, and disks), and two bookmobiles. Leading academic and historical collections include Dartmouth College's Baker Memorial Library in Hanover (2,309,626 volumes); the New Hampshire State Library (519,319) and New Hampshire Historical Society Library (50,000), both in Concord; and the University of New Hampshire's Ezekiel W. Diamond Library (1,151,203) in Durham. In fiscal year 2001, operating income for the state's public library system was \$35,575,000 and included \$50,000 in federal grants and \$35,000 in state grants.

Among the more than 76 museums and historic sites are the Museum of New Hampshire History in Concord and the Franklin Pierce Homestead in Hillsboro.

44 COMMUNICATIONS

In 2004, 96.4% of New Hampshire's occupied housing units had telephones. Additionally, by June of that same year there were 686,746 mobile wireless telephone subscribers. In 2003, 71.5% of New Hampshire households had a computer and 65.2% had Internet access. By June 2005, there were 238,502 high-speed lines in New Hampshire, 223,102 residential and 15,400 for business. In 2005, the state had 32 major radio stations (7 AM, 25 FM), and 5 television stations. State residents also receive broadcasts from neighboring Massachusetts, Vermont, and Maine. A total of 38,887 Internet domain names were registered in the state in 2000.

45 PRESS

In 2005, New Hampshire had eight morning newspapers, four evening newspapers, and eight Sunday papers. The best-known newspaper in the state is Manchester's *The Union Leader* (59,384 daily and 81,144 Sunday), published by conservative William Loeb until his death in 1981. In the capital, the *Concord Monitor* circulates 20,107 papers daily and 22,747 on Sundays. The *Dover Foster's Daily Democrat* has a circulation of 22,720 for its weekday evening edition and 27,728 for the Sunday edition. The *Nashua Telegraph* has a circulation of 25,566 daily and 32,672 Sundays.

46 ORGANIZATIONS

In 2006, there were over 2,015 nonprofit organizations registered within the state, of which about 1,469 were registered as charitable, educational, or religious organizations. National organizations with headquarters in New Hampshire include the Student Conservation Association (Charlestown), Interhostel (Durham), the International Association of Reiki Professionals (Nashua), and the Academy of Applied Science (Concord). The regional Atlantic Offshore Lobstermen's Association is based in Bedford. The New Hampshire Historical Society is based in Concord. There are a number of municipal and county historical societies.

47 TOURISM, TRAVEL, AND RECREATION

Tourism is a major part of the economy of New Hampshire. It has been estimated that the industry brings in revenues of \$8.6 billion per year and sponsors over 65,000 jobs.

Skiing, camping, hiking, and boating are the main outdoor attractions. Other attractions include Strawberry Banke, a restored village in Portsmouth; Daniel Webster's birthplace near Franklin; and the Mt. Washington Cog Railway. Merrimack Valley is the

most visited area, generating 36% of all tourism revenue. There are over 72 state parks and recreation areas. Many tourists come to New Hampshire for skiing. One of the most famous natural attractions, "The Old Man on the Mountain," collapsed in May 2003. Motorsports enthusiasts can visit the New Hampshire Speedway. In 2006, Squam Lake celebrated the 25th anniversary of the filming of the feature film, *On Golden Pond*.

48 SPORTS

There are no major professional sports teams in New Hampshire, although there are minor league baseball teams in Nashua and Manchester. Major national and international skiing events are frequently held in the state, as are such other winter competitions as snowmobile races and the Annual World Championship Sled Dog Derby in Laconia. Thoroughbred, harness, and greyhound racing are the warm-weather spectator sports. The annual Whale-back Yacht Race is held in early August.

Dartmouth College competes in the Ivy League, and the University of New Hampshire belongs to the America East Conference, both Division I-AA Conferences.

The New Hampshire International Speedway, which opened in Loudon in 1994, plays host to a NASCAR Busch Series and Nextel Cup races in July and September.

49 FAMOUS NEW HAMPSHIRITES

Born in Hillsboro, Franklin Pierce (1804–69), the nation's 14th president, serving from 1853 to 1857, was the only US chief executive to come from New Hampshire. Henry Wilson (Jeremiah Jones Colbath, 1812–75), US vice president from 1873 to 1875, was a native of Farmington.

US Supreme Court chief justices Salmon P. Chase (1808–73), Harlan Fiske Stone (1872–1946), and David Souter (b.1939) were New Hampshire natives, and Levi Woodbury (1789–1851) was a distinguished associate justice. John Langdon (1741–1819) was the first president pro tempore of the US Senate; two other US senators from New Hampshire, George Higgins Moses (b.Maine, 1869–1944) and Henry Styles Bridges (b.Maine, 1898–1961), also held this position. US cabinet members from New Hampshire included Henry Dearborn (1751–1829), secretary of war; Daniel Webster (1782–1852), secretary of state; and William E. Chandler (1835–1917), secretary of the Navy. Other political leaders of note were Benning Wentworth (1696–1770), royal governor Meshech Weare (1713–86), the state's leader during the American Revolution; Josiah Bartlett (b.Massachusetts, 1729–95), a physician, governor, and signer of the Declaration of Independence; Isaac Hill (b.Massachusetts, 1789–1851), a publisher, governor, and US senator; and John Parker Hale (1806–73), senator, antislavery agitator, minister to Spain, and presidential candidate of the Free Soil Party. John Sununu, a former Governor of New Hampshire (b.1939, Cuba) was chief of staff during the Bush administration.

Military leaders associated with New Hampshire during the colonial and Revolutionary periods include John Stark (1728–1822), Robert Rogers (b.Massachusetts, 1731–95), and John Sullivan (1710–95). Among other figures of note are educator Eleazar Wheelock (b.Connecticut, 1711–79), the founder of Dartmouth College; physicians Lyman Spaulding (1775–1821), Reuben D. Mussey (1780–1866), and Amos Twitchell (1781–1850), as well as Samuel Thomson (1769–1843), a leading advocate of herbal

medicine; religious leaders Hosea Ballou (1771–1852), his grand-nephew of the same name (1796–1861), and Mary Baker Eddy (1821–1910), founder of Christian Science; George Whipple (1878–1976), winner of the 1934 Nobel Prize for physiology or medicine; and labor organizer and US Communist Party leader Elizabeth Gurley Flynn (1890–1964).

Sarah Josepha Hale (1788–1879), Horace Greeley (1811–72), Charles Dana (1819–97), Thomas Bailey Aldrich (1836–1907), Bradford Torrey (b.Massachusetts, 1843–1912), Alice Brown (1857–1948), and J(erome) D(avid) Salinger (b.New York, 1919) are among the writers and editors who have lived in New Hampshire, along with poets Edna Dean Proctor (1829–1923), Celia Loughton Thaxter (1826–94), Edward Arlington Robinson (b.Maine, 1869–1935), and Robert Frost (b.California, 1874–1963), one of whose poetry volumes is entitled *New Hampshire* (1923). Painter Benjamin Champney (1817–1907) and sculptor Daniel Chester French (1850–1931) were born in New Hampshire, while Augustus Saint-Gaudens (b.Ireland, 1848–1907) created much of his sculpture in the state.

Vaudevillian Will Cressey (1863–1930) was a New Hampshire man. More recent celebrities include newspaper publisher William Loeb (b.New York, 1905–81) and astronaut Alan B. Shepard Jr. (1923–98).

NEW JERSEY

State of New Jersey

ORIGIN OF STATE NAME: Named for the British Channel Island of Jersey. **NICKNAME:** The Garden State. **CAPITAL:** Trenton. **ENTERED UNION:** 18 December 1787 (3rd). **SONG:** “I’m from New Jersey” (unofficial). **MOTTO:** Liberty and Prosperity. **COAT OF ARMS:** In the center is a shield with three plows, symbolic of agriculture. A helmet above indicates sovereignty, and a horse’s head atop the helmet signifies speed and prosperity. The state motto and the date “1776” are displayed on a banner below. **FLAG:** The coat of arms on a buff field. **OFFICIAL SEAL:** The coat of arms surrounded by the words “The Great Seal of the State of New Jersey.” **BIRD:** Eastern goldfinch. **FLOWER:** Violet. **TREE:** Red oak; dogwood (memorial tree). **LEGAL HOLIDAYS:** New Year’s Day, 1 January; Birthday of Martin Luther King Jr. 3rd Monday in January; Lincoln’s Birthday, 12 February (sometimes observed on a Friday or Monday closest to this date); Washington’s Birthday, 3rd Monday in February; Good Friday, Friday before Easter, March or April; Memorial Day, last Monday in May; Independence Day, 4 July; Labor Day, 1st Monday in September; Columbus Day, 2nd Monday in October; Election Day, 1st Tuesday after 1st Monday in November; Veterans’ Day, 11 November; Thanksgiving Day, 4th Thursday in November; Christmas Day, 25 December. **TIME:** 7 AM EST = noon GMT.

¹ LOCATION, SIZE, AND EXTENT

Situated in the northeastern United States, New Jersey is the smallest of the Middle Atlantic states and ranks 46th among the 50 states.

The total area of New Jersey is 7,787 sq mi (20,168 sq km), of which 7,468 sq mi (19,342 sq km) constitute land and 319 sq mi (826 sq km) are inland water. New Jersey extends 166 mi (267 km) N–S; the extreme width E–W is 57 mi (92 km).

New Jersey is bordered on the N and NE by New York State (with the boundary formed partly by the Hudson River, New York Bay, and Arthur Kill, and passing through Raritan Bay); on the E by the Atlantic Ocean; on the S and SW by Delaware (with the line passing through Delaware Bay); and on the W by Pennsylvania (separated by the Delaware River). Numerous barrier islands lie off the Atlantic coast.

New Jersey’s total boundary length is 480 mi (773 km), including a general coastline of 130 mi (209 km); the tidal shoreline is 1,792 mi (2,884 km). The state’s geographic center is in Mercer County, near Trenton.

² TOPOGRAPHY

Although small, New Jersey has considerable topographic variety. In the extreme northwest corner of the state are the Appalachian Valley and the Kittatinny Ridge and Valley. This area contains High Point, the state’s peak elevation, at 1,803 ft (550 m) above sea level. To the east and south is the highlands region, an area of many natural lakes and steep ridges, including the Ramapo Mountains, part of the Appalachian chain. East of the highlands is a flat area broken by the high ridges of the Watchungs and Sourlands and—most spectacularly—by the Palisades, a column of traprock rising some 500 ft (150 m) above the Hudson River. The mean elevation of the state is approximately 250 ft (76 m). T

he Atlantic Coastal Plain, a flat area with swamps and sandy beaches, claims the remaining two-thirds of the state. Its most notable feature is the Pine Barrens, 760 sq mi (1,968 sq km) of pitch pines and white oaks. Sandy Hook, a peninsula more than 5 mi (8 km) long, extending northward into the Atlantic from Monmouth County, is part of the Gateway National Recreation Area. Sea level at the Atlantic Ocean is the lowest elevation in the state.

Major rivers include the Delaware, forming the border with Pennsylvania, and the Passaic, Hackensack, and Raritan. The largest natural lake is Lake Hopatcong, about 8 mi (13 km) long. Some 550 to 600 million years ago, New Jersey’s topography was the opposite of what it is now, with mountains to the east and a shallow sea to the west. Volcanic eruptions about 225 million years ago caused these eastern mountains to sink and new peaks to rise in the northwest; the lava flow formed the Watchung Mountains and the Palisades. The shoreline settled into its present shape at least 10,000 years ago.

³ CLIMATE

Bounded by the Atlantic Ocean and the Delaware River, most of New Jersey has a moderate climate with cold winters and warm, humid summers. Winter temperatures are slightly colder and summer temperatures slightly milder in the northwestern hills than in the rest of the state.

In Atlantic City, the yearly average temperature is 54°F (12°C), ranging from 32°F (0°C) in January to 75°F (23°C) in July. Precipitation is plentiful, averaging 46 in (117 cm) annually; snowfall totals about 16 in (41 cm). At Atlantic City, annual precipitation is about 40.3 cm (102 cm). The annual average humidity is 81% at 7 AM, reaching a normal high of 87% in September.

Statewide, the record high temperature is 110°F (43°C), set in Runyon on 10 July 1936; the record low is -34°F (-37°C), set in River Vale on 5 January 1904. A 29.7-in. (75.4-cm) accumulation on Long Beach Island in 1947 was the greatest 24-hour snowfall

in the state's recorded history. Occasional hurricanes and violent spring storms have damaged beachfront property over the years, and floods along northern New Jersey rivers especially in the Passaic River basin, are not uncommon. A serious drought occurs, on average, about once every 15 years.

4 FLORA AND FAUNA

Although highly urbanized, New Jersey still provides a diversity of natural regions, including a shady coastal zone, the hilly and wooded Allegheny zone, and the Pine Barrens in the south. Birch, beech, hickory, and elm all grow in the state, along with black locust, red maple, and 20 varieties of oak; common shrubs include the spicebush, staggerbush, and mountain laurel. Vast stretches beneath pine trees are covered with pyxie, a small creeping evergreen shrub. Common wild flowers include meadow rue, butterflyweed, black-eyed Susan, and the ubiquitous eastern (common) dandelion. Among rare plants are Candy's lobelia, floating heart, and pennywort. Six plant species were listed as threatened or endangered in 2006, including the American chaffseed and small whorled pogonia.

Among mammals indigenous to New Jersey are the white-tailed deer, black bear, gray and red foxes, raccoon, woodchuck, opossum, striped skunk, eastern gray squirrel, eastern chipmunk, and common cottontail. The herring gull, sandpiper, and little green and night herons are common shore birds, while the red-eyed vireo, hermit thrush, English sparrow, robin, cardinal, and Baltimore oriole are frequently sighted inland. The Edwin B. Forsythe National Wildlife Refuge, a Ramsar Wetland of International Importance, serves as an important breeding and wintering site for over 70,000 birds each year. The site also supports 38 mammal species, 8 amphibian species, and 11 types of reptiles.

Anglers in the state prize the northern pike, chain pickerel, and various species of bass, trout, and perch. Declining or rare animals include the whippoorwill, hooded warbler, eastern hognose snake, northern red salamander, and northern kingfish. Sixteen animal species (vertebrates and invertebrates) were listed by the US Fish and Wildlife Service as threatened or endangered in April 2006, including four species of turtle, the Indiana bat, bald eagle, shortnose sturgeon, roseate tern, and three species of whale.

5 ENVIRONMENTAL PROTECTION

Laws and policies regulating the management and protection of New Jersey's environment and natural resources are administered by the Department of Environmental Protection (DEP). The state devoted 1.4% of its total budget appropriations, or \$225.1 million, to environmental protection in 1996–97.

The proximity of the populace to industrial plants and to the state's expansive highway system makes air pollution control a special concern in the state. New Jersey had one of the most comprehensive air pollution control programs in the United States, maintaining a network of 105 air pollution monitoring stations, as well as 60 stations that monitor just for particulates and 10 that monitor for radiation. New Jersey was the first state to begin a statewide search for sites contaminated by dioxin, a toxic by-product in the manufacture of herbicides.

The DEP reported that a 1984 review of water quality in the state showed that water quality degradation had been halted and that the quality of streams had been stabilized or improved. The

greatest improvements had been made in certain bays and estuaries along the Atlantic coast, where the elimination of discharges from older municipal sewage treatment plants resulted in the reopening of shellfish-harvesting grounds for the first time in 20 years. However, some rivers in highly urbanized areas were still severely polluted.

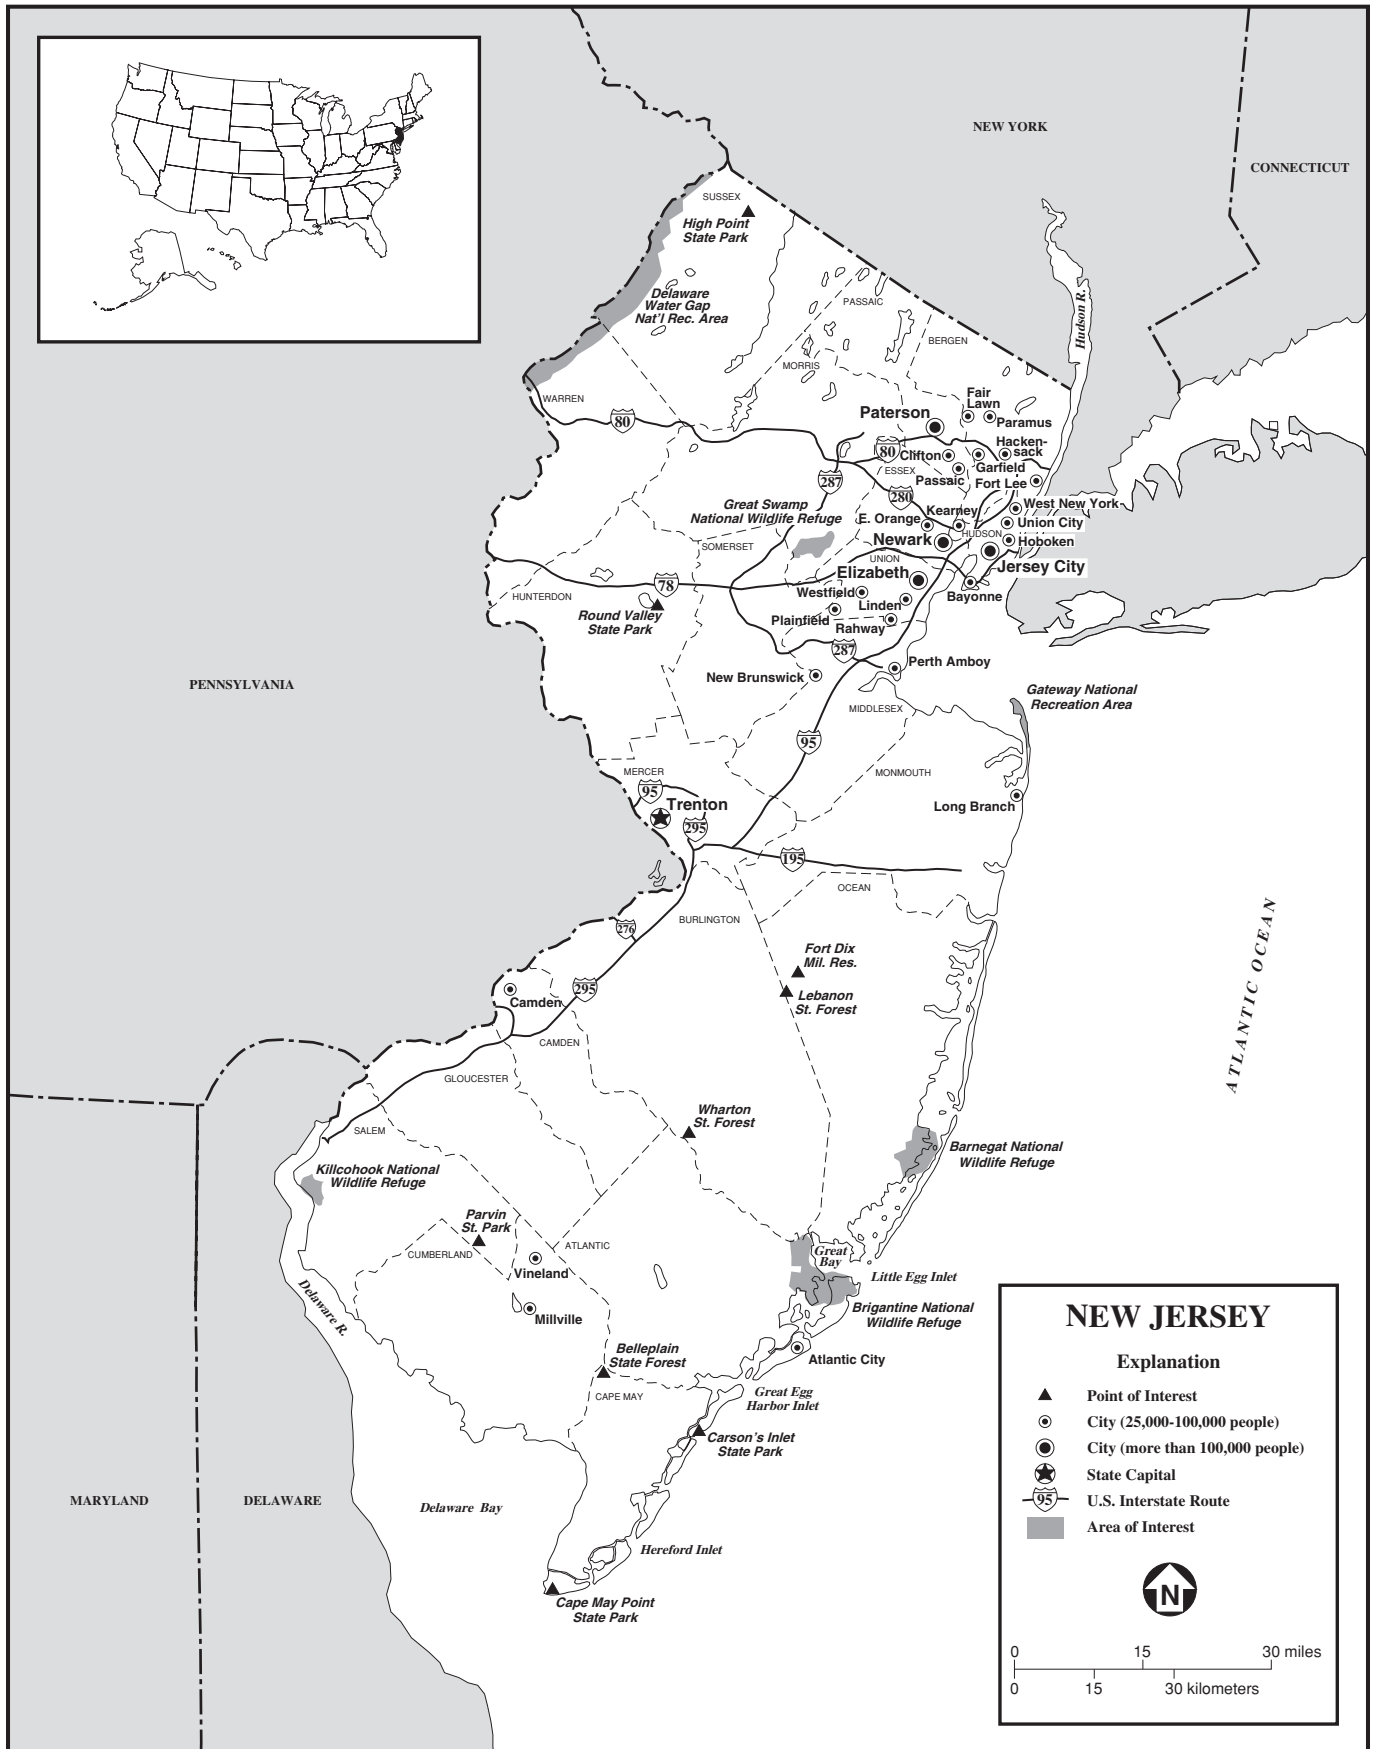

Approximately 1,500 treatment facilities discharge waste water into New Jersey's surface and groundwaters. Nearly 80% of these facilities comply with the requirements of federal and state clean water laws. Solid waste disposal in New Jersey became critical as major landfills reached capacity. In 1977, the state had more than 300 operating landfills; in 1991 there were about 50 landfills. The state's solid waste stream is 1,100 tons per capita. Some counties and municipalities were implementing recycling programs in 1985, and the state legislature was considering a bill to make recycling mandatory. By the mid-1990s the state of New Jersey had about 30 curbside recycling programs.

New Jersey's toxic waste cleanup program is among the most serious in the United States. In 2003, 23.1 million lb of toxic chemicals were released in the state. In 2003, New Jersey had 551 hazardous waste sites listed in the US Environment Protection Agency (EPA) database, 113 of which were on the National Priorities List as of 2006, including the Federal Aviation Administration Technical Center, the Middlesex Sampling Plant (of the US Department of Energy), and the US Radium Corp., as well as several farm sites. In 2004, New Jersey ranked first in the nation for the highest number of sites on the National Priorities List. In 2005, the EPA spent over \$85 million through the Superfund program for the cleanup of hazardous waste sites in the state. The same year, federal EPA grants awarded to the state included \$44 million for the clean water state revolving fund and \$19 million for the drinking water revolving fund.

The New Jersey Spill Compensation Fund was established by the state legislature in 1977 and amended in 1980. A tax based on the transfer of hazardous substances and petroleum products is paid into the fund and used for the cleanup of spills.

New Jersey first acquired land for preservation purposes in 1907. Since 1961, the state has bought more than 240,000 acres (97,000 hectares) under a "Green Acres" program for conservation and recreation. In 1984, an \$83-million Green Trust Fund was established to expand land acquisition. The Green Acres Program has assisted county and municipal governments in acquiring over 70,000 acres (28,000 hectares). Additionally, Green Acres is assisting nonprofit conservation groups in acquiring over 20,000 acres (8,000 hectares) in a 50% matching grant program established in 1989. The US Congress designated 1.1 million acres (445,000 hectares) in the southern part of the state as the Pinelands National Reserve in 1978. Since then, the state has purchased more than 60,000 acres (24,000 hectares) in the region, bringing the state open-space holding in the Pinelands to more than 270,000 acres (109,000 hectares). As of 1 July 1993, there were approximately 790,000 acres (319,000 hectares) of preserved public open space and recreation land in New Jersey.

There are about 916,000 acres (370,692 hectares) of wetlands in the state. The Edwin B. Forsythe National Wildlife Refuge on the Atlantic coast was established in 1984 through the merger of the Brigantine and Barnegat National Wildlife Refuges. The site was designated as a Ramsar Wetland of International Importance in

1986, primarily for its role as a habitat for breeding and wintering waterbirds. Part of the Delaware Bay Estuary wetlands lie within New Jersey, but jurisdiction of this Ramsar site (designated 1992) lies with the state of Delaware.

6 POPULATION

New Jersey ranked 10th in population in the United States with an estimated total of 8,717,925 in 2005, an increase of 3.6% since 2000. Between 1990 and 2000, New Jersey's population grew from 7,730,188 to 8,414,350, an increase of 8.9%. In 2004, New Jersey had the highest population density among the 50 states: 1,175.60 persons per sq mi. The population is projected to reach 9.2 million by 2015 and 9.6 million by 2025.

In 2004, the median age was 37.8. Persons under 18 years old accounted for 24.8% of the population while 12.9% was age 65 or older.

Sparingly populated at the time of the Revolutionary War, New Jersey did not pass the one million mark until the 1880 census. Most of the state's subsequent growth came through migration, especially from New York during the period after 1950 when the New Jersey population stood at 4,835,329. The most significant population growth came in older cities in northern New Jersey and in commuter towns near New York and Philadelphia. The average annual population growth declined from 2.3% in the 1950s to 1.7% in the 1960s, and the state actually experienced a net loss from migration of 275,000 during the 1970s. Total growth rose to 5% during the 1980s.

New Jersey's major population centers, with estimated 2004 population figures, are Newark, 280,451; Jersey City, 239,079; Paterson, 150,869; and Elizabeth, 124,724.

7 ETHNIC GROUPS

New Jersey is one of the most ethnically heterogeneous states. As of 2000, 1,476,327 New Jerseyites (17.5% of the state's population) were of foreign birth. The leading countries of origin were Italy, 7.3%; Cuba, 6.5%; India, 5.4%; and Germany, 4.4%. As of 2001, New Jersey had the third-highest percentage of foreign-born residents among the 50 states, surpassed only by California and New York.

Blacks first came to New Jersey as slaves in the 1600s; the state abolished slavery in 1804, one of the last of the northern states to do so. Today black people constitute the state's largest (13.6%) ethnic minority, 1,141,821 as of 2000. Newark elected its first black mayor, Kenneth Gibson, in 1970, three years after the city was torn by racial disorders that killed 26 people and injured some 1,500 others. In 2004, 14.5% of the state's population was black.

The estimated Hispanic and Latino population in 2000 was 1,117,191 (up from 868,000 in 1996), or 13.3% of the total. The Puerto Rican population, which increased from 55,361 in 1960 to 366,788 in 2000, lived mostly in Newark, Jersey City, Elizabeth, Paterson, and Passaic. There were 77,337 Cubans in 2000, many of them in Union City and Elizabeth; their numbers were augmented by the migration of Cuban refugees in 1980. Smaller Spanish-speaking groups included Colombians and Dominicans. In 2004, 14.9% of the state's population was Hispanic or Latino.

The estimated number of Asians living in New Jersey in 2000 was 480,276, the fifth-largest total among the 50 states. Pacific Islanders numbered 273,000. The largest group of Asians reported

was from India (169,180 in 2000, up from 54,039 in 1990); there were 85,245 Filipinos, 100,355 Chinese (more than double the 1990 figure of 47,068), 65,349 Koreans, and 14,672 Japanese. In 2004, 7% of the state's population was Asian.

The state's total Native American population, including Eskimos and Aleuts, numbered 19,492 in 2000. Among the state's American Indians is a group claiming to be descended from Dutch settlers, black slaves, British and German soldiers, and Leni-Lenape and Tuscarora Indians; incorporated as the Ramapough Mountain Indians in 1978, they live in the Ramapo hills near Ringwood and Mahwah. In 2004, 0.3% of the state's population was American Indian.

In 2004, 1.2% of the state's population reported origin of two or more races.

8 LANGUAGES

European settlers found New Jersey inhabited largely by the Leni-Lenape Indians, whose legacy can still be found in such place-names as Passaic, Totowa, Hopatcong, Kittatinny, and Piscataway.

In 2000, 5,854,578 New Jerseyites—74.5% of the resident population five years old or older—spoke only English at home, down from 80.5% in 1990.

The following table gives selected statistics from the 2000 Census for language spoken at home by persons five years old and over. The category "Other Asian languages" includes Dravidian languages, Malayalam, Telugu, Tamil, and Turkish. The category "Other Indic languages" includes Bengali, Marathi, Punjabi, and Romany. The category "African languages" includes Amharic, Ibo, Twi, Yoruba, Bantu, Swahili, and Somali.

LANGUAGE	NUMBER	PERCENT
Population 5 years and over	7,856,268	100.0
Speak only English	5,854,578	74.5
Speak a language other than English	2,001,690	25.5
Speak a language other than English	2,001,690	25.5
Spanish or Spanish Creole	967,741	12.3
Italian	116,365	1.5
Chinese	84,345	1.1
Polish	74,663	1.0
Portuguese or Portuguese Creole	72,870	0.9
Tagalog	66,851	0.9
Korean	55,340	0.7

French Creole	28,783	0.4
Greek	26,566	0.3
African languages	21,514	0.3

English in New Jersey is rather evenly divided north and south between Northern and Midland dialects. Special characteristics of some New York metropolitan area speech occur in the northeast portion, such as the absence of /r/ after a vowel, a consonant like /d/ or /t/ instead of the /th/ sounds in *this* or *thin*, and pronunciations as *coop* rhyming with *stoop*, *food* with *good*, and *goal* and *fool*; *faucet* has the vowel of *father*. Dominant in the southern half are *run* (small stream), *baby coach* (baby carriage) in the Philadelphia trading area, *winning owl* (screech owl), and *eel worm*

(earthworm). Heard also are *out* as /aot/, *muskmelon* as /muskmilon/, and *keg* rhyming with *bag*, *scarce* with *fierce*, *spook* with *book*, and *haunted* with *panted*.

9 RELIGIONS

With a history of religious tolerance, New Jersey has welcomed many denominations to its shores. Dutch immigrants founded a Reformed Church in 1662, the first in the state. After the English took control, Puritans came from New England and Long Island, Congregationalists from Connecticut, and Baptists from Rhode Island. Quaker settlements in Shrewsbury and western New Jersey during the early 1670s predated the better-known Quaker colony in Pennsylvania. Episcopalians, Presbyterians, German Lutherans, and Methodists arrived during the 18th century. The state's first synagogue was established in 1848, in Newark.

About the only religion not tolerated by New Jerseyites was Catholicism; the first Catholic parish was not organized until 1814 and laws excluding Catholics from holding office were on the books until 1844. The Catholic numbers swelled as a result of Irish immigration after 1845, and even more with the arrival of Italians after 1880. Today, Roman Catholics constitute the state's single largest religious group. Passaic is the headquarters of the Byzantine-Ruthenian Rite in the Byzantine Catholic Church.

In 2004, the number of Roman Catholics within the state was at about 3,479,158. The next largest group is Jewish, with about 468,000 members in 2000. The largest Protestant denomination (with 2000 data) is the United Methodist Church, with 140,133 adherents, followed by the Presbyterian Church USA, with 119,735; the Episcopal Church, 91,964; and the Evangelical Lutheran Church in America, 79,264. There were about 120,724 Muslims in the state. Nearly 3.5 million people (about 42.3% of the population) were not counted as members of any religious organization.

American Atheists, a national organization founded by Madalyn Murray O'Hair in 1958, is based in Parsippany.

10 TRANSPORTATION

Ever since the first traders sought the fastest way to get from New York to Philadelphia, transportation has been of central importance to New Jersey and has greatly shaped its growth. In the mid-1820s, Hoboken engineer John Stevens built the first steam locomotive operated in the United States. Over the protests of the dominant stagecoach operators, his son Robert obtained a charter in 1830 for the Camden and Amboy Railroad. The line opened in 1834, and six years later it held a monopoly on the lucrative New York–Philadelphia run. Other lines, such as the Elizabeth and Somerville, the Morris and Essex, the Paterson and Hudson, and the Jersey Central, were limited to shorter runs, largely because the Camden and Amboy's influence with the legislature gave it a huge competitive advantage. Camden and Amboy stock was leased to the Pennsylvania Railroad in 1871, and the ensuing controversy over whether New Jersey transit should be entrusted to an "alien" company led to the passage of a law opening up the state to rail competition. Industry grew around the rail lines, and the railroads became a vital link in the shipment of products from New York and northern New Jersey.

As of 2003, the major freight operations were run by CSX and Norfolk Southern. In that same year, there were 2,798 route mi (4,504 km) of track in the state, of which 1,581 mi (2,545 km) was

Class I track. In addition, there were one regional, one Canadian, six local, and six switching and terminal railroads operating in the state. As of 2006, daily Amtrak service linked Newark, Trenton, and four other New Jersey cities along the main eastern rail corridor. But the bulk of interstate passenger traffic consists of commuters to New York and Philadelphia on trains operated by the Port Authority of New York and New Jersey (PA) and the Port Authority Transit Corp. (PATCO), a subsidiary of the Delaware River Port Authority.

The New Jersey Transit Corporation, called NJ TRANSIT, is a public corporation created under the Public Transportation Act of 1979. The corporation is charged with coordinating and improving bus and rail services throughout the state. It is the nation's third largest public transit agency, providing 223 million passenger trips annually. It operates 711 daily trains on 11 rail lines, and 2,027 buses on 236 routes throughout the state. It also owns and operates the Newark City Subway, a 4.3-mile light rail system providing service through downtown Newark.

Although associated more with the West, the first stagecoach service began in New Jersey, as part of a New York–Philadelphia trek that took some five days in 1723. For a time, colonial law required towns along the way to provide taverns for the passengers, and it was not uncommon for coach operators who were also tavern owners to find some way to prolong the journey an extra night. They traveled on roads that were barely more passable than the Leni-Lenape trails from which they originated. Improvement was slow, but by 1828, the legislature had granted 54 turnpike charters.

Road building has continued ever since. In 2004, there were 38,122 mi (61,376 km) of public roads in the state. The major highways are the New Jersey Turnpike, opened in 1952 and extending 133 mi (214 km) between Bergen and Salem counties, and the Garden State Parkway, completed in 1955 and stretching 173 mi (278 km) from the New York State line to Cape May. There were some 6.218 million registered vehicles in the state in 2004, including about 3.974 million automobiles, approximately 2.076 million trucks of all types, and around 19,000 buses. There were 5,799,532 licensed New Jersey drivers in that same year.

Many bridges and tunnels link New Jersey with New York State, Pennsylvania, and Delaware. Twenty-seven bridges cross the Delaware River, connecting New Jersey with Pennsylvania and Delaware.

At the gateway to New York Harbor, ports at Elizabeth and Newark have overtaken New York City ports in cargo volume, and contribute greatly to the local economy. Operated by the Port Authority of New York and New Jersey, Port Newark has almost 4 mi (6.4 km) of berthing space along Newark Bay, while nearby Port Elizabeth, with better than 3 mi (4.8 km) of berths, is a major handler of containerized cargo. In 2004, ports under the jurisdiction of the Port Authority of New York and New Jersey handled 152.377 million tons of cargo. Private piers in Jersey City and Bayonne handle both containerized and bulk cargoes. The tonnage handled by northern New Jersey port facilities, taken as a whole, make it the largest port on the east coast, and second largest overall in the United States. The Ports of Philadelphia and Camden, Inc., headquartered in Philadelphia, operate facilities along the Delaware River, including the Beckett Street and Broadway Terminals in Camden, that were formerly operated by the South Jer-

sey Port Corporation. The port facility at Paulsboro is the most active in the state, with 30.485 million tons of cargo handled in 2004. The port of Camden-Gloucester handled 7.189 million tons that same year. New Jersey in 2004 had 360 mi (579 km) of navigable inland waterways. In 2003, waterborne shipments totaled 111.661 million tons.

In 2005, New Jersey had a total of 389 public and private-use aviation-related facilities. This included 119 airports, 256 heliports, and 13 seaplane bases. Newark Liberty International Airport is the state's busiest airport, with 15,827,675 passengers enplaned in 2004, making it the 12th-busiest airport in the United States.

11 HISTORY

The first known inhabitants of what is now New Jersey were the Leni-Lenape (meaning "Original People"), who arrived in the land between the Hudson and Delaware rivers about 6,000 years ago. Members of the Algonkian language group, the Leni-Lenape were an agricultural people supplementing their diet with freshwater fish and shellfish. The peace-loving Leni-Lenape believed in monogamy, educated their children in the simple skills needed for wilderness survival, and clung rigidly to a tradition that a pot of food must always be warm on the fire to welcome all strangers.

The first European explorer to reach New Jersey was Giovanni da Verrazano, who sailed into what is now Newark Bay in 1524. Henry Hudson, an English captain sailing under a Dutch flag, piloted the *Half Moon* along the New Jersey shore and into Sandy Hook Bay in the late summer of 1609, a voyage that established a Dutch claim to the New World. Hollanders came to trade in what is now Hudson County as early as 1618, and in 1660, they founded New Jersey's first town, called Bergen (now part of Jersey City). Meanwhile, across the state, Swedish settlers began moving east of the Delaware River in 1639. Their colony of New Sweden had only one brief spurt of glory, from 1643 to 1653, under Governor Johan Printz.

The Leni-Lenape lost out to the newcomers, whether Dutch, Swedish, or English, despite a series of treaties that the Europeans thought fair. State and local records describe these agreements: huge tracts of land exchanged for trinkets, guns, and alcohol. The guns and alcohol, combined with smallpox (another European import), doomed the "Original People." In 1758, when a treaty established an Indian reservation at Brotherton (now the town of Indian Mills), only a few hundred Indians remained.

England assumed control in March 1664, when King Charles II granted a region from the Connecticut River to the Delaware River to his brother James, the Duke of York. The duke, in turn, deeded the land between the Hudson and Delaware rivers, which he named New Jersey, to his court friends John Berkeley, 1st Baron Berkeley of Stratton, and Sir George Carteret, on 23 June 1664. Lord Berkeley and Sir George became proprietors, owning the land and having the right to govern its people. Subsequently, the land passed into the hands of two boards of proprietors in two provinces called East Jersey and West Jersey, with their capitals in Perth Amboy and Burlington, respectively. East Jersey was settled mainly by Puritans from Long Island and New England, West Jersey by Quakers from England. The split cost the colony dearly in 1702, when Queen Anne united East and West Jersey but placed them under New York rule. The colony did not get its own "home

rule" until 1738, when Lewis Morris was named the first royal governor.

By this time, New Jersey's divided character was already established. Eastern New Jersey looked toward New York, western New Jersey toward Philadelphia. The level plain connecting those two major colonial towns made it certain that New Jersey would serve as a pathway. Along the makeshift roads that soon crossed the region—more roads than in any other colony—travelers brought conflicting news and ideas. During the American Revolution, the colony was about equally divided between Revolutionists and Loyalists. William Franklin (illegitimate son of Benjamin Franklin), royal governor from 1763 until 1776, strove valiantly to keep New Jersey sympathetic to England, but failed and was arrested. Throughout the Revolutionary period, he remained a leading Loyalist; after the war, he left for England.

Franklin's influence caused New Jersey to dally at first over independence, but in June 1776, the colony sent five new delegates to the Continental Congress—Abraham Clark, John Hart, Frances Hopkinson, Richard Stockton, and the Reverend John Witherspoon—all of whom voted for the Declaration of Independence. Two days before the Declaration was proclaimed, New Jersey adopted its first state constitution. William Livingston, a fiery anti-British propagandist, was the first elected governor of the state.

New Jersey played a pivotal role in the Revolutionary War, for the side that controlled both New York and Philadelphia would almost certainly win. George Washington and his battered troops made their winter headquarters in the state three times during the first four years of the war, twice in Morristown and once in Somerville. Five major battles were fought in New Jersey, the most important being the Battle of Trenton on 26 December 1776 and the Battle of Monmouth on 28 June 1778. At war's end, Princeton became the temporary capital of the United States from 26 June 1783 to 4 November 1783.

The state languished after the Revolution, with many of its pathway towns ravaged by the passing of competing armies, its trade dependent on New York City, and its ironworks (first established in 1676) shut down because of decreased demand. The state's leaders vigorously supported a federation of the 13 states, in which all states, regardless of size, would be represented equally in one national legislative body. This so-called New Jersey Plan led to the establishment of the US Senate.

Railroads and canals brought life to the state in the 1830s and set it on a course of urbanization and industrialization. The 90-mi (145-km) Morris Canal linked northern New Jersey with the coal fields of Pennsylvania. Considered one of the engineering marvels of the 19th century, the canal rose to 914 feet (279 meters) from sea level at Newark Bay to Lake Hopatcong, then fell 760 feet (232 meters) to a point on the Delaware River opposite Easton, Pa. Old iron mines beside the canal found markets, the dyeing and weaving mills of Paterson prospered, and Newark, most affected by the emerging industries, became the state's first incorporated city in 1836. Another canal, the Delaware and Raritan, crossed the relatively flat land from Bordentown, Trenton, and New Brunswick boomed. Princeton, whose leaders fought to keep the canal away from the town, settled into a long existence as a college community built around the College of New Jersey, founded in Elizabeth in 1746 and transferred to Princeton in 1756.

The canals were doomed by railroad competition almost from the start. The Morris Canal was insolvent long before World War I, and the Delaware Canal, although operative until 1934, went into a long, slow decline after the Civil War. The first railroad, from Bordentown to South Amboy, closely paralleled the Delaware and Raritan Canal and in 1871 became an important part of the Pennsylvania Railroad. The coal brought in on railroad cars freed industry from waterpower; factories sprang up wherever the rails went. The Hudson County waterfront, eastern terminus for most of the nation's railway systems, became the most important railroad area in the United States. Rail lines also carried vacationers to the Jersey shore, building an important source of income for the state.

The Civil War split New Jersey bitterly. Leaders in the Democratic Party opposed the war as a "Black Republican" affair. Prosperous industrialists in Newark and Trenton feared that their vigorous trade with the South would be impaired, Cape May innkeepers fretted about the loss of tourists from Virginia, and even Princeton students were divided. As late as the summer of 1863, after the Battle of Gettysburg, many state "peace Democrats" were urging the North to make peace with the Confederacy. Draft calls were vigorously opposed in 1863, yet the state sent its full quota of troops into service throughout the conflict. Most important, New Jersey factories poured forth streams of munitions and other equipment for the Union army. At war's end, political leaders stubbornly opposed the 13th, 14th, and 15th Amendments to the US Constitution, and blacks were not permitted to vote in the state until 1870.

During the last decades of the 19th century, New Jersey developed a reputation for factories capable of making the components necessary for thousands of other manufacturing enterprises. Few factories were large, although in 1873, Isaac M. Singer opened a huge sewing machine plant at Elizabeth that employed 3,000 persons. Oil refineries on the Hudson County waterfront had ever-expanding payrolls, pottery firms in Trenton thrived, and Newark gained strength from many diversified manufacturers and also saw its insurance companies become nationally powerful.

Twentieth-century wars stimulated New Jersey's industries. During World War I, giant shipyards at Newark, Kearny, and Camden made New Jersey the nation's leading shipbuilding state. The Middlesex County area refined 75% of the nation's copper, and nearly 75% of US shells were loaded in the state. World War II revived the shipbuilding and munitions industries, while chemical and pharmaceutical manufacturing, spawned by the World War I cutoff of German chemicals, showed further growth during the second world conflict. Paterson, preeminent in locomotive building during the 19th century, became the nation's foremost airplane engine manufacturing center. Training and mobilization centers at Ft. Dix and Camp Kilmer moved millions of soldiers into the front lines.

The US Census Bureau termed New Jersey officially "urban" in 1880, when the state population rose above 1 million for the first time. Urbanization intensified throughout the 20th century and especially after World War II, as people left the old cities in New Jersey and other northeastern states to buy homes in developments on former farmlands. Places like Cherry Hill, Woodbridge, Clifton, and Middletown Township boomed after 1945, increasing their population as much as sixfold in the decades that followed.

New Jersey also experienced many of the problems of urbanization. Its cities have declined; traffic congestion is intense in the morning, when commuters stream into urban areas to work, and again in the evening, when they return home to what once was called "the country." That country now knows the problems of urban growth: increased needs for schools, sewers, police and fire protection, and road maintenance, along with rising taxes.

The state has not surrendered to its problems, however. In 1947, voters overwhelmingly approved a new state constitution, a terse, comprehensive document that streamlined state government, reformed the state's chaotic court system, and mandated equal rights for all. Governor Alfred E. Driscoll promptly integrated the New Jersey National Guard, despite strong federal objections; integration of all US armed forces soon followed. After 1950 voters passed a wide variety of multi-million-dollar bond issues to establish or rebuild state colleges. Funds were allocated for the purchase and development of new park and forest lands. Large bond issues have financed the construction of highways, reservoirs, and rapid transit systems. In 2000, the state legislature approved the largest construction program in New Jersey history. Settling a long-running battle over how to rebuild the state's deteriorating and overcrowded schools, lawmakers agreed to spend \$12 billion system-wide, with benefits to be seen in inner cities as well as in suburbs.

In the 1970s and early 1980s, New Jersey experienced a recession. The unemployment rate climbed to almost 10%. Over 270,000 people left the state. The state's cities were hit particularly hard, suffering both from the loss of manufacturing jobs and from a flight of retailing to suburban malls. The economy of New Jersey in these decades also underwent a dramatic restructuring. While the state lost over 200,000 manufacturing jobs it gained 670,000 jobs in service industries. The economy rebounded during the 1980s, but began to contract again at the end of the decade, declining further during the recession of early 1990s. In 1996 the state's unemployment rate fell below 6% for the first time in six years. By 1999 it had dropped to 4.6%. Observers credited the recovery of the 1990s in part to a skilled workforce that attracted pharmaceutical, biotechnology, electronics, and other high-tech firms to the state. Tax and economic incentives also helped bring business to the state. The state ranked second in the nation in both per capita personal income (\$33,953) and low poverty rate (8.6%) in 1998. However, the state faced a severe budget crisis from 2002–05. Nevertheless, the state's per capita personal income in 2004 was \$41,332, third in the nation behind Connecticut and Massachusetts.

In September 1999 New Jersey experienced one of the worst natural disasters in its history; Hurricane Floyd damaged more than 8,000 homes and destroyed several hundred more. A federal aid package approved in 2000 promised victims some relief.

During the second half of the 1900s New Jersey had no predictable political pattern. It gave huge presidential majorities to Republican Dwight D. Eisenhower and Democrat Lyndon B. Johnson, narrowly supported Democrat John F. Kennedy, favored Republican Gerald Ford over Democrat Jimmy Carter by a small margin, gave two big majorities to Republican Ronald Reagan, favored Democrat Bill Clinton in the 1990s, and favored Democrat Al Gore over George W. Bush in 2000. New Jersey gave its 15 electoral votes to Democrat John Kerry in 2004, in a 53% to 46% margin over George W. Bush. For more than 20 years, the state's two

US senators, Clifford B. Case (R) and Harrison A. Williams (D), were recognized as like-minded liberals. Democrat Bill Bradley, former Princeton University and New York Knickerbockers basketball star, was elected to Case's seat in 1978. (In 1999 Bradley made a run for the presidency. Though gaining considerable support from the electorate, he dropped his bid for the Democratic nomination in the face of competition from Vice President Al Gore.) In 2006, New Jersey was represented by US Senators Frank R. Lautenberg and Robert Menendez, both Democrats.

Republican Governor Thomas Kean, who served from 1983–89, helped improve the public image of New Jersey, long perceived as dominated by smoke-belching factories and troubled cities. Kean was succeeded by Democrat Jim Florio who sought to redistribute wealth throughout the state by doubling the income tax of those in the top bracket, raising the sales tax, lowering property taxes for middle- and low-income homeowners and renters, and shifting state aid from public schools in affluent areas to schools in poor and moderate income communities. In 1992, Florio lost his bid for reelection to Republican Christine Todd Whitman, who promised to lower income taxes by 30%. As soon as she took office, Whitman implemented a 5% cut and pushed through another 10% cut as part of her budget package in 1993. Whitman won a second term in the 1996 election. Whitman was named President George W. Bush's head of the Environmental Protection Agency; she took office in January 2001 and resigned in May 2003.

Democrat Richard J. Codey, former state Senate president, became acting governor in November 2004 after Governor James E. McGreevey resigned before his term expired. McGreevey announced his resignation in August 2004 after revealing that he is gay and that he had an adulterous affair with a man.

12 STATE GOVERNMENT

New Jersey's first state constitution took effect in 1776. A second constitution was written in 1844, and a third in 1947. This last document, as amended (36 times as of January 2005), continues to govern the state today.

The state legislature consists of a 40-member Senate and an 80-member General Assembly. Annual legislative sessions begin in early January and are not limited in length. Special sessions, also of unlimited duration, may be called by petition of a majority of the members in each house. Senators, elected to four-year terms, must be at least 30 years old, and have been New Jersey residents for four years and district residents for a year. Assembly members, elected to two-year terms, must be at least 21 years old, and have been New Jersey residents for two years and district residents for a year. All legislators must be qualified voters prior to election. Both houses of the legislature meet in unlimited annual sessions. The legislative salary was \$49,000 as of 2004.

New Jersey is one of only four states—the others are Maine, New Hampshire, and Tennessee—in which the governor is the only statewide elected administrative official. Given broad powers by the state constitution, the governor appoints the heads or commissioners of the major state departments with the advice and consent of the Senate; not subject to Senate approval are more than 500 patronage positions. The governor is also commander-in-chief of the state's armed forces, submits the budget to the legislature each January, presents an annual message on the condition of the state, and may grant pardons and, with the aid of the Pa-

role Board, grant executive clemency. Elected to a four-year term in the odd-numbered year following the presidential election, the governor may run for a second term but not for a third until four years have passed. A candidate for governor must be at least 30 years old and must have been a US citizen for 20 years and a New Jersey resident for seven years in order to qualify for the ballot. As of December 2004, the governor's salary was \$157,000.

A bill may be introduced in either house of the legislature. Once passed, it goes to the governor, who may sign it, return it to the legislature with recommendations for change, or veto it in its entirety. A two-thirds vote by the members in each house is needed to override a veto. If the governor neither signs nor vetoes a bill, it becomes law after 45 days as long as the legislature is in session.

Amendments to the state constitution may originate in either house. If, after public hearings, both houses pass the proposal by a three-fifths vote, the amendment is placed on the ballot at the next general election. If approved by a majority, but by less than a three-fifths vote in both houses, the amendment is referred to the next session of the legislature, at which time, if again approved by a majority, it is placed on the ballot. The amendment goes into effect 30 days after ratification by the electorate.

To vote in New Jersey, one must be at least 18 years old, a US citizen, and a New Jersey and county resident for at least 30 days prior to election day. Restrictions apply to those convicted of crimes in New Jersey or another state.

13 POLITICAL PARTIES

From the 1830s through the early 1850s, Democrats and Whigs dominated the political life of New Jersey. Exercising considerable, though subtle, influence in the decade before the Civil War was the Native American (Know-Nothing) Party, an anti-immigrant, anti-Catholic group that won several assembly and Senate seats. Wary of breaking ties with the South and ambivalent about the slavery issue, New Jerseyites, especially those in Essex and Bergen counties, did not lend much support to the abolitionist cause. Early Republicans thus found it advantageous to call themselves simply "Opposition;" the state's first Opposition governor was elected in 1856. Republicans controlled the state for most of the 1860s; but with heavy support from business leaders, the Democrats regained control in 1869 and held the governorship through 1896. They were succeeded by a series of Progressive Republican governors whose efforts were largely thwarted by a conservative legislature. Sweeping reforms— including a corrupt-practices act, a primary election law, and increased support for public education— were implemented during the two years that Woodrow Wilson, a Democrat, served as governor before being elected to the presidency. Between 1913 and 1985, Democrats held the statehouse almost two-thirds of the time.

New Jersey's unenviable reputation for corruption in government dates back at least to 1838, when ballot tampering resulted in the disputed election of five Whigs to the US House of Representatives. (After a House investigation, the Whigs were barred and their Democratic opponents given the seats.) Throughout the rest of the century, corruption was rampant in local elections: Philadelphians, for example, were regularly imported to vote in Atlantic City elections, and vote buying was a standard election-day procedure in Essex and Hudson counties. Wilson's 1911 reform bill eliminated some of these practices, but not the bossism

that had come to dominate big-city politics. Frank Hague of Jersey City controlled patronage and political leaders on the local, state, and national level from 1919 to 1947; during the 1960s and 1970s, Hague's successor John V. Kenny, Jersey City mayor Thomas Whelan, and Newark mayor Hugh Addonizio, along with numerous other state and local officials, were convicted of corrupt political dealings. From 1969 to mid-1975, federal prosecutors indicted 148 public officials, securing 72 convictions. Brendan Byrne, who had never before held elective office, won the governorship in 1973, mainly on the strength of a campaign that portrayed him as the "judge who couldn't be bought." On the national level, New Jersey Representative Peter Rodino gained a reputation for honesty and fairness when he chaired the House Judiciary Committee's impeachment hearings against Richard Nixon. However, the state's image suffered a further blow in 1980, when, as a result of the FBI's "ABSCAM" investigation, charges of influence peddling were brought against several state officials, including members of the Casino Control Commission, whose function was to prevent corruption and crime in Atlantic City's gambling establishments.

Later in the year, New Jersey Democrat Harrison Williams became the nation's first US senator to be indicted, on charges of bribery and conspiracy, as a result of the ABSCAM probe. He was convicted in 1981 and sentenced to prison. As a result of the same investigation, US Representative Frank Thompson Jr., was convicted in 1980 on bribery and conspiracy charges. A New Jerseyite, Raymond Donovan, was named secretary of labor by President Ronald Reagan in 1981, but he resigned in 1985 after being

indicted late in 1984 for allegedly seeking to defraud the New York City Transit Authority while serving as vice president of the Schiavone Construction Company in Secaucus.

In the 2000 presidential voting, Democrat Al Gore defeated Republican George W. Bush, picking up 56% of the vote to Bush's 41%. Independent Ralph Nader garnered 3%. In 2004, Democratic challenger John Kerry won 52.7% of the vote to incumbent George W. Bush's 46.5%. In 2004, there were 5,009,000 registered voters. In 1998, 25% of registered voters were Democratic, 19% Republican, and 56% unaffiliated or members of other parties. The state had 15 electoral votes in the 2004 presidential election.

In 1993, New Jersey elected its first woman as governor, Republican Christine Todd Whitman; she was reelected in 1997. In late 2000 she was named by President George W. Bush to head the Environmental Protection Agency, a post she resigned in June 2003. Democrat James McGreevey was elected New Jersey's governor in 2001; he resigned in August 2004 and was succeeded by state Senate president Richard Codey. In fall 2005 elections, Democratic US senator Jon Corzine was elected governor. Democrat Frank Lautenberg, first elected to the Senate in 1982, and reelected in 1988 and 1994, returned to the Senate in 2002 after having retired in 2000. Following 2004 national elections, the state's delegation to the US House consisted of seven Democrats and six Republicans. Following the 2005 statewide elections, the state Senate contained 22 Democrats and 18 Republicans, while the General Assembly consisted of 48 Democrats and 32 Republicans.

New Jersey Presidential Vote by Political Parties, 1948-2004									
YEAR	ELECTORAL VOTES	NEW JERSEY WINNER	DEMOCRAT	REPUBLICAN	PROGRESSIVE	SOCIALIST	PROHIBITION	SOCIALIST LABOR	SOCIALIST WORKERS
1948	16	Dewey (R)	895,455	981,124	42,683	10,521	10,593	3,354	5,825

*Won US presidential election.

14 LOCAL GOVERNMENT

As of 2005, New Jersey had 21 counties, 324 municipal governments, 604 public school districts, and 276 special districts. In 2002, there were 242 townships. Counties are classed by population and whether or not they border the Atlantic Ocean. Cities, boroughs, and towns may employ the mayor-council system, council-manager system, commission system, or other forms of their own devising. Most townships and villages are governed by committee or by a council and a mayor with limited powers. Cities, like counties, are classed by population and location: first-class cities are those over 150,000 in population; second-class, 12,000–150,000; third-class, all others except ocean resorts; and fourth-class, ocean resorts.

The budgets of all local units are supervised by the New Jersey Department of Community Affairs, which also offers municipal aid programs.

In 2005, local government accounted for about 347,538 full-time (or equivalent) employment positions.

15 STATE SERVICES

To address the continuing threat of terrorism and to work with the federal Department of Homeland Security, homeland security in New Jersey operates under executive order and state statute; a counterterrorism office director is named to oversee the state's homeland security activities.

The constitution of 1947 limited the number of state government departments to 20. New Jersey in 1974 became the first state to establish a Public Advocate Department (as of 2006 the Office of the Public Defender), empowered to provide legal assistance for indigent criminal defendants, mental patients, and any citizen with a grievance against a government agency or regulated industry. A Code of Ethics, adopted by the legislature in 1976, seeks to prevent state employees from using their positions for personal gain. By executive order, more than 500 state executive officials must file financial disclosure statements.

The Education Department administers state and federal aid to all elementary and secondary schools, oversees pupil transportation, and has jurisdiction over the state library, museum, and historical commission. State-run colleges and universities and higher education policy are the province of the Commission on Higher Education. All state-maintained highways and bus and rail transportation are the responsibility of the Department of Transportation, which also operates New Jersey Transit, whose function is to acquire and operate public transportation services.

The Human Services Department administers welfare, Medicaid, mental health, and developmentally disabled programs, as well as veterans' institutions and programs and other state-supported social services. Alcohol, drug abuse, and many other health-related programs are monitored by the Health and Senior Services Department, which also oversees hospitals and compiles statewide health statistics.

The Office of the Attorney General, officially titled the Department of Law and Public Safety, is the statewide law enforcement agency. Its functions include criminal justice, consumer affairs, civil rights, alcoholic beverage control, and gaming enforcement; also within this department are the State Police, State Racing Commission, Violent Crimes Compensation Board, and a number of

regulatory boards. The Department of Military and Veterans Affairs controls the Army and Air National Guard. Correctional institutions, training schools, treatment centers, and parole offices are administered by the Corrections Department.

The Division of Energy monitors the supply and use of fuel and administers the state master plan for energy use and conservation; it forms part of the Board of Public Utilities, which has broad regulatory jurisdiction, ranging from garbage collection to public broadcasting. Other agencies are the departments of agriculture, banking and insurance, commerce, community affairs, environmental protection, labor and workforce development, state, and treasury.

16 JUDICIAL SYSTEM

All judges in New Jersey, except municipal court judges, are appointed by the governor with the consent of the Senate. Initial terms for supreme and superior court judges are seven years; after reappointment, judges may serve indefinitely.

The supreme court, the state's highest, consists of six associate justices and a chief justice, who is also the administrative head of the state court system. As the court of highest authority, the supreme court hears appeals on constitutional questions and on certain cases from the superior court, which comprises three divisions: chancery, law, and appellate. The chancery division has original jurisdiction over general equity cases, most probate cases, and divorce actions. All other original cases are tried within the law division. The appellate division hears appeals from the chancery and law divisions, from lower courts, and from most state administrative agencies. A state tax court, empowered to review local property tax assessments, equalization tables, and state tax determinations, has been in operation since 1979; by statute, it may have from 6 to 12 judges. Municipal court judges, appointed by local governing bodies for three-year terms, hear minor criminal matters, motor vehicle cases, and violations of municipal ordinances.

The legislature approved a sweeping reform of the state's criminal law code in 1978. Strict sentencing standards were established, and one result was an overcrowding of the state's prison system. Governor Brendan Byrne signed a law in 1981 imposing a minimum three-year sentence on anyone committing a crime with a gun.

As of 31 December 2004, a total of 26,757 prisoners were held in New Jersey's state and federal prisons, a decrease from 27,246 of 1.6% from the previous year. As of year-end 2004, a total of 1,470 inmates were female, down from 1,517 or 3.1% from the year before. Among sentenced prisoners (one year or more), New Jersey had an incarceration rate of 306 per 100,000 population in 2004.

According to the Federal Bureau of Investigation, New Jersey in 2004, had a violent crime rate (murder/nonnegligent manslaughter; forcible rape; robbery; aggravated assault) of 355.7 reported incidents per 100,000 population, or a total of 30,943 reported incidents. Crimes against property (burglary; larceny/theft; and motor vehicle theft) in that same year totaled 211,313 reported incidents or 2,429.2 reported incidents per 100,000 people. As of 1982, New Jersey has had a death penalty, of which lethal injection is the sole method of execution. However, as of that year through 5 May 2006, the state has yet to carry out an execution. As of 1 January 2006, New Jersey had 13 inmates on death row.

In 2003, New Jersey spent \$272,195,275 on homeland security, an average of \$32 per state resident.

17 ARMED FORCES

In 2004, there were 6,392 active-duty military personnel and 13,628 civilian personnel stationed in New Jersey. The largest installation in the state is McGuire Air Force Base in Wrightstown. The US Coast Guard operates a training center in Cape May. New Jersey firms received over \$4.1 billion in defense contracts awards in 2004, defense payroll outlays were \$1.8 billion.

Of the 582,917 veterans living in New Jersey in 2003, World War II veterans numbered 110,844; Korean conflict, 80,677; Vietnam era, 167,895; and 58,244 served in the Persian Gulf War. For the fiscal year 2004, total Veterans Affairs expenditures in New Hampshire exceeded \$1.0 billion.

As of 31 October 2004, the New Jersey State Police employed 2,684 full-time sworn officers.

18 MIGRATION

New Jersey's first white settlers were inter-colonial migrants: Dutch from New Amsterdam, Swedes from west of the Delaware River, and Puritans from New England and Long Island. By 1776, New Jersey's population was about 138,000, of whom perhaps 7% were black slaves.

Population growth lagged during the early 19th century, as discouraged farmers left their worn-out plots for more fertile western soil; farmers in Salem County, for example, went off to found new Salems in Ohio, Indiana, Iowa, and Oregon. Not until the rapid industrial growth of the mid-1800s did New Jersey attract great waves of immigrants. Germans and Irish were the first to arrive, the latter comprising 37% of Jersey City's population by 1870. The late 1800s and early 1900s brought newcomers from Eastern Europe, including many Jews, and a much larger number of Italians to the cities. By 1900, 43% of all Hudson County residents were foreign-born. More recently, migration from Puerto Rico and Cuba has been substantial. In 1990, 143,974 New Jersey residents age 5 and older had lived in Puerto Rico in 1985. In 1996, 1,152,000 New Jersey residents, or 14%, were foreign born. In 1998, 35,091 foreign immigrants entered the state, the fifth-highest total for any state that year.

From World War I on, there has been a steady migration of blacks from southern states; Newark's black population grew by 130,000 between 1950 and 1970. Black as well as Hispanic newcomers settled in major cities just as whites were departing for the suburbs. New Jersey's suburbs were also attractive to residents of New York City, Philadelphia, and other adjacent areas, who began a massive move to the state just after World War II; nearly all of these suburbanites were white. From 1940 to 1970, New Jersey gained a net total of 1,360,000 residents. Between 1970 and 1990, however, the state lost about 250,000 residents through migration. Between 1990 and 1998, New Jersey had a net loss of 350,000 in domestic migration and a net gain of 360,000 in international migration. While the black, Hispanic, and Asian populations were still rising, whites were departing from New Jersey in increasing numbers. As of 1998, New Jersey's black population numbered 1,188,000; Hispanic, 866,000; and Asian, 453,000. Between 1990 and 1998, the state's overall population increased 4.7%. In the pe-

riod 2000–05, net international migration was 290,194 and net internal migration was -194,901, for a net gain of 95,293 people.

19 INTERGOVERNMENTAL COOPERATION

New Jersey participates in such regional bodies as the Interstate Sanitation Commission, Atlantic States Marine Fisheries Commission, and Mid-Atlantic Fishery Management Council. Of primary importance to the state are its relations with neighboring Pennsylvania and New York. With Pennsylvania, New Jersey takes part in the Delaware Valley Regional Planning Commission, Delaware River Joint Toll Bridge Commission, and Delaware River Port Authority; with New York, the Port Authority of New York and New Jersey, the Palisades Interstate Park Commission, and the Waterfront Commission, established to eliminate corruption and stabilize employment at the Hudson River ports. The Delaware River Basin Commission manages the water resources of the 12,750-sq mi (33,000-sq km) basin under the jurisdiction of Delaware, New Jersey, New York, and Pennsylvania. The Delaware River and Bay Authority operates a bridge and ferry between New Jersey and Delaware. In fiscal year 2005, the state received \$8.694 billion in federal grants, an estimated \$9.086 billion in fiscal year 2006, and an estimated \$9.509 billion in fiscal year 2007.

20 ECONOMY

New Jersey was predominantly agricultural until the mid-1800s, when the rise of the railroads stimulated manufacturing in northern New Jersey and opened the Jersey shore to resort development. The steady growth of population in the 1900s fostered the growth of service-related industries, construction, and trade, for which the state's proximity to New York and Philadelphia had long been advantageous.

During the 1970s, New Jersey's economy followed national trends, except that the mid-decade recession was especially severe. Conditions in most areas improved in the latter part of the decade, particularly in Atlantic City, with the construction of gambling casinos and other entertainment facilities. Manufacturing in the central cities declined, however, as industries moved to suburban locations.

Although petroleum refining, chemicals and pharmaceuticals, food processing, apparel, fabricated metals, electric and electronic equipment, and other machinery are all important, the state is more noteworthy for the diversity of its manufacturers than for any dominant company or product. The service sector of the economy, led by wholesale and retail trade, continued to grow rapidly during the 1990s. The heaviest concentrations of jobs are in and near metropolitan New York and Philadelphia, but employment opportunities in the central and north-central counties have been increasing. Fresh market vegetables are the leading source of farm income. Overall growth in the state economy was robust coming into the 21st century, with annual growth rates averaging over 6% 1998 to 2000. The national recession and slowdown of 2001 slowed annual growth to 2.2%, but in 2002 the state economy was showing resiliency. Employment losses for the state as a whole started later and were milder than for the nation as a whole.

New Jersey's gross state product (GSP) in 2004 was \$416.053 billion of which the real estate sector accounted for the largest share at \$65.656 billion or 15.7% of GSP, followed by manufacturing (durable and non durable goods) at \$45.357 billion (10.9% of

GSP), and professional and technical services at \$33.652 billion (8% of GSP). In that same year, there were an estimated 766,323 small businesses in New Jersey. Of the 256,863 businesses that had employees, an estimated total of 252,831 or 98.4% were small companies. An estimated 35,895 new businesses were established in the state in 2004, up 22.8% from the year before. Business terminations that same year came to 50,034, up 35.9% from 2003. There were 684 business bankruptcies in 2004, down 6.8% from the previous year. In 2005, the state's personal bankruptcy (Chapter 7 and Chapter 13) filing rate was 485 filings per 100,000 people, ranking New Jersey as the 29th highest in the nation.

2¹ INCOME

In 2005, New Jersey had a gross state product (GSP) of \$431 billion which accounted for 3.5% of the nation's gross domestic product and placed the state at number 8 in highest GSP among the 50 states and the District of Columbia.

According to the Bureau of Economic Analysis, in 2004 New Jersey had a per capita personal income (PCPI) of \$41,626. This ranked fourth in the United States and was 126% of the national average of \$33,050. The 1994–2004 average annual growth rate of PCPI was 4.2%. New Jersey had a total personal income (TPI) of \$361,524,402,000, which ranked seventh in the United States and reflected an increase of 5.6% from 2003. The 1994–2004 average annual growth rate of TPI was 5.1%. Earnings of persons employed in New Jersey increased from \$252,207,195,000 in 2003 to \$265,438,128,000 in 2004, an increase of 5.2%. The 2003–04 national change was 6.3%.

The US Census Bureau reports that the three-year average median household income for 2002–04 in 2004 dollars was \$56,772 compared to a national average of \$44,473. During the same period an estimated 8.2% of the population was below the poverty line as compared to 12.4% nationwide.

2² LABOR

According to the Bureau of Labor Statistics (BLS), in April 2006 the seasonally adjusted civilian labor force in New Jersey numbered 4,501,800, with approximately 231,300 workers unemployed, yielding an unemployment rate of 5.1%, compared to the national average of 4.7% for the same period. Preliminary data for the same period placed nonfarm employment at 4,074,900. Since the beginning of the BLS data series in 1976, the highest unemployment rate recorded in New Jersey was 10.6% in February 1977. The historical low was 3.5% in June 2000. Preliminary nonfarm employment data by occupation for April 2006 showed that approximately 4.2% of the labor force was employed in construction; 7.8% in manufacturing; 21.5% in trade, transportation, and public utilities; 6.9% in financial activities; 14.6% in professional and business services; 13.9% in education and health services; 8.4% in leisure and hospitality services; and 15.8% in government.

Although migrant workers are still employed at south Jersey tomato farms and fruit orchards, the number of farm workers coming into the state is declining with the increased use of mechanical harvesters.

The state's first child labor law was passed in 1851, and in 1886, workers were given the right to organize. Labor's gains were slow and painful, however. In Paterson, no fewer than 137 strikes were called between 1881 and 1900, every one of them a failure. A 1913

strike of Paterson silkworkers drew nationwide headlines but, again, few results. Other notable strikes were a walkout at a Carteret fertilizer factory in 1915, during which six picketers were killed by guards; a yearlong work stoppage by Passaic textile workers in 1926; and another Paterson silkworkers' strike in 1933, this one finally leading to union recognition and significant wage increases. That year, the state enacted a law setting minimum wages and maximum hours for women. This measure was repealed in 1971, in line with the trend toward nonpreferential labor standards.

The BLS reported that in 2005, a total of 791,000 of New Jersey's 3,868,000 employed wage and salary workers were formal members of a union. This represented 20.5% of those so employed, up from 19.8% in 2004, well above the national average of 12%. New Jersey is one of only five states whose union membership rate exceeds 20%. Overall in 2005, a total of 838,000 workers (21.7%) in New Jersey were covered by a union or employee association contract, which includes those workers who reported no union affiliation. New Jersey is also one of 28 states that does not have a right-to-work law.

As of 1 March 2006, New Jersey had a state-mandated minimum wage rate of \$6.15 per hour, which will increase on October 1, 2006 to \$7.15 per hour. In 2004, women in the state accounted for 46.2% of the employed civilian labor force.

2³ AGRICULTURE

New Jersey is a leading producer of fresh fruits and vegetables. Its total farm income was \$862 million in 2005. In 2004, it ranked fourth in cranberries, spinach, and lettuce, and eighth in fresh market tomatoes.

Some 820,000 acres (about 332,000 hectares) were in 9,900 farms in 2004. The major farm counties are: Warren for grain and milk production, Gloucester and Cumberland for fruits and vegetables, Atlantic for blueberries, Burlington for nursery production and berries, Salem for processing vegetables, and Monmouth for nursery and equine.

In 2004, New Jersey produced 265,140 tons of fresh market vegetables. Leading crops (in hundredweight units) were: bell peppers, 962,000; cabbage, 928,000; sweet corn, 525,000; tomatoes, 690,000; and head lettuce, 164,000. New Jersey farmers also produced 56,440 tons of vegetables for processing. Fruit crops in 2004 (in pound units) included apples, 40,000,000, and peaches, 32,500,000. In 2004, cranberry production was 40 million lb. The expansion of housing and industry has increased the value of farm acreage and buildings in New Jersey to over \$9,750 per acre, fourth highest in the nation after Connecticut, Rhode Island, and Massachusetts.

2⁴ ANIMAL HUSBANDRY

In 2005, New Jersey had an estimated 44,000 cattle and calves, valued at \$48.8 million. During 2004, New Jersey farmers had an estimated 11,000 hogs and pigs valued at \$1.3 million. In 2003, poultry farmers produced 686,000 million lb (312 million kg) of turkey, 3 million lb (1.4 million kg) of chickens, and 556 million eggs. The state's total milk yield was 216 million lb (98.1 million kg) in 2003.

25 FISHING

In 2004, New Jersey had a commercial fish catch of 185.6 million lb (84.3 million kg) worth \$139.4 million, the eighth highest catch volume in the nation. Cape May–Wildwood had the 15th-highest value and 13th-largest volume of all US ports, bringing in 97.5 million lb (44.3 million kg) of fish, worth \$68.1 million. Clams, scallops, swordfish, tuna, squid, lobster, and flounder are the most valuable species. The state ranked second in the nation for volume of Atlantic mackerel landings, at 35.5 million lb (16.1 million kg). The state also led the nation in landings of surf clams (43.5 million lb/19.8 million kg) and quahogs (17.6 million lb/8 million kg). In 2003, there were 15 processing and 83 wholesale plants in the state with about 2,050 employees. The commercial fleet in 2001 had 397 vessels.

The US Fish and Wildlife Service of the Department of the Interior maintains a total of 190,000 acres (76,900 hectares) on 12 different sites with boating access. The state stocks over 1.8 million fish per year to lakes, ponds, rivers, and streams. The Hackensack State Fish Hatchery and the Pequest Trout Hatchery are major suppliers.

Recreational fishermen catch finfish and shellfish along the Atlantic coast and in the rivers and lakes of northern New Jersey. In 2004, the state issued 169,418 sport fishing licenses.

26 FORESTRY

Over 42% of New Jersey's land area, or 1,876,000 acres (759,000 hectares), was forested in 2003. Of that total, 1,288,000 acres (521,000 hectares) were private commercial timberland. The forests of New Jersey are important for their function in conservation and recreation. Wood that is harvested contributes to specialty markets and quality veneer products. State forests cover 382,000 acres (155,000 hectares).

27 MINING

According to preliminary data from the US Geological Survey (USGS), the estimated value of nonfuel mineral production by New Jersey in 2003 was \$272 million, an increase from 2002 of about 5%.

According to the preliminary data for 2003, crushed stone, and construction sand and gravel were the state's top nonfuel minerals, by value. These were followed by industrial sand and gravel, and greens and marl.

According to preliminary figures for 2003, a total of 22.5 million metric tons of crushed stone were produced, for a total value of \$142 million, while construction sand and gravel output totaled 15.2 million metric tons, with a value of \$92 million. Industrial sand and gravel production in 2003 totaled 1.51 million metric tons, for a value of \$33.8 million. New Jersey in 2003 continued to be the only state that produced greensand marl, also known as the mineral glauconite, which is processed and sold mainly as a water-softening filtration medium to remove soluble iron and manganese from well water. A secondary use is as an organic conditioner for soils.

28 ENERGY AND POWER

As of 2003, New Jersey had 37 electrical power service providers, of which nine were publicly owned and one was a coopera-

tive. Of the remainder, four were investor owned, six were owners of independent generators that sold directly to customers, 12 were generation-only suppliers and five were delivery-only providers. As of that same year there were 3,737,697 retail customers. Of that total, 3,624,915 received their power from investor-owned service providers. Cooperatives accounted for 11,267 customers, while publicly owned providers had 56,447 customers. There were seven independent generator or "facility" customers, 12 generation-only customers. There was no data on the number of delivery-only customers.

Total net summer generating capability by the state's electrical generating plants in 2003 stood at 18.647 million kW, with total production that same year at 57.399 billion kWh. Of the total amount generated, only 3.3% came from electric utilities, with the remaining 96.7% coming from independent producers and combined heat and power service providers. The largest portion of all electric power generated, 29.709 billion kWh (51.8%), came from nuclear generating plants, with natural gas fired plants in second place at 14.775 billion kWh (25.7%) and coal fueled plants in third at 9.789 billion kWh (17.1%). Other renewable power sources accounted for 2.4% of all power generated, with petroleum fired plants at 2.7%. Pumped storage and hydroelectric generation, and plants using other types of gases made up the remainder.

As of 2006, New Jersey had three operating nuclear power stations: the Hope Creek in Lower Alloways Township; the Oyster Creek plant at Forked River; and the Salem Creek plant near Salem.

New Jersey has no known proven reserves or production of crude oil and natural gas. However, the state has six crude oil refineries, some of which are the largest in the United States. As of 2005, the state's refineries had a distillation capacity of 615,000 barrels per day. New Jersey produces little of its own energy, importing much of its electric power and virtually all of its fossil fuels.

29 INDUSTRY

New Jersey's earliest industries were glassmaking and iron working. In 1791, Alexander Hamilton proposed the development of a planned industrial town at the Passaic Falls. The Society for Establishing Useful Manufactures, an agency charged with developing the town, tried but failed to set up a cotton mill at the site, called Paterson, in 1797. By the early 1800s, however, Paterson had become the country's largest silk manufacturing center and by 1850, it was producing locomotives as well. On the eve of the Civil War, industry already had a strong foothold in the state. Newark had breweries, hat factories, and paper plants; Trenton, iron and paper; Jersey City, steel and soap; and Middlesex, clays and ceramics. The late 1800s saw the birth of the electrical industry, the growth of oil refineries on Bayonne's shores, and emerging chemical, drug, paint, and telephone manufacturing centers. All these products retain their places among the state's diverse manufactures.

According to the US Census Bureau's Annual Survey of Manufactures (ASM) for 2004, New Jersey's manufacturing sector covered some 20 product subsectors. The shipment value of all products manufactured in the state that same year was \$94.125 billion. Of that total, chemical manufacturing accounted for the largest share at \$26.911 billion. It was followed by petroleum and coal products manufacturing at \$12.222 billion; food manufacturing

at \$9.481 billion; computer and electronic product manufacturing at \$6.115 billion; and fabricated metal product manufacturing at \$5.241 billion.

In 2004, a total of 308,566 people in New Jersey were employed in the state's manufacturing sector, according to the ASM. Of that total, 201,419 were actual production workers. In terms of total employment, the chemical manufacturing industry accounted for the largest portion of all manufacturing employees at 50,881 with 25,643 actual production workers. It was followed by fabricated metal product manufacturing at 30,235 employees (21,120 actual production workers); food manufacturing at 28,958 employees (18,783 actual production workers); computer and electronic product manufacturing at 28,710 employees (14,868 actual production workers); and plastics and rubber products manufacturing with 25,186 employees (18,778 actual production workers).

ASM data for 2004 showed that New Jersey's manufacturing sector paid \$14.447 billion in wages. Of that amount, the chemical manufacturing sector accounted for the largest share at \$3.084 billion. It was followed by computer and electronic product manufacturing at \$1.603 billion; fabricated metal product manufacturing at \$1.241 billion; printing and related support activities at \$1.111 billion; and miscellaneous manufacturing at \$1.078 billion.

30 COMMERCE

With one of the nation's busiest ports, one of the busiest airports (Newark), the largest length of highways and railroads per state area, and many regional distribution centers, New Jersey is an important commercial state.

According to the 2002 Census of Wholesale Trade, New Jersey's wholesale trade sector had sales that year totaling \$256.9 billion from 16,803 establishments. Wholesalers of durable goods accounted for 9,293 establishments, followed by nondurable goods wholesalers at 6,281 and electronic markets, agents, and brokers accounting for 1,229 establishments. Sales by durable goods wholesalers in 2002 totaled \$125.9 billion, while wholesalers of nondurable goods saw sales of \$107.06 billion. Electronic markets, agents, and brokers in the wholesale trade industry had sales of \$23.9 billion. The state's wholesale trade is largely concentrated near manufacturing centers and along the New Jersey Turnpike. Bergen, Union, and Essex counties accounted for most of the state's wholesale trade.

In the 2002 Census of Retail Trade, New Jersey was listed as having 34,741 retail establishments with sales of \$102.1 billion. The leading types of retail businesses by number of establishments were: food and beverage stores (6,824); clothing and clothing accessories stores (5,782); miscellaneous store retailers (3,423); and health and personal care stores (2,866). In terms of sales, motor vehicle and motor vehicle parts stores accounted for the largest share of retail sales at \$26.3 billion, followed by food and beverage stores at \$19.1 billion; general merchandise stores at \$10.3 billion; nonstore retailers at \$8.01 billion; and building material/garden equipment and supplies dealers at \$7.4 billion. A total of 434,574 people were employed by the retail sector in New Jersey that year.

Port Newark and the Elizabeth Marine Terminal, foreign-trade zones operated by the Port Authority of New York and New Jersey, have been modernized and enlarged in recent years, and together account for most of the cargo unloaded in New York Harbor. In 2005, New Jersey exported \$21.08 billion to foreign coun-

tries. Leading exports were chemicals, electronics, and industrial machinery. Most exports went to Canada, Japan, the UK, and Mexico.

31 CONSUMER PROTECTION

Consumer fraud cases are handled by the Division of Consumer Affairs and the Office of the Attorney General, both of which are under the Department of Law and Public Safety. The Division of Consumer Affairs also supervises the activities of 41 boards and committees, which are responsible for regulating over 80 occupations and professions.

When dealing with consumer protection issues, the state's Attorney General's Office can initiate civil and criminal proceedings; represent the state before state and federal regulatory agencies; administer consumer protection and education programs; handle formal consumer complaints; and exercise broad subpoena powers. In antitrust actions, the Attorney General's Office can act on behalf of those consumers who are incapable of acting on their own; initiate damage actions on behalf of the state in state courts; initiate criminal proceedings; and represent counties, cities and other governmental entities in recovering civil damages under state or federal law.

The offices of the Division of Consumer Affairs are located in Newark. County government consumer affairs offices are located in Atlantic City, Blackwood, Bridgeton, Cape May Court House, East Orange, Flemington, Freehold, Hackensack, Jersey City, Mount Holly, New Brunswick, Somerville, Toms River, Trenton, Wayne, Westfield and Woodbury. City government consumer affairs offices are located in Middlesex, Nutley, Perth Amboy, Plainfield, Secaucus, Union and Woodbridge.

32 BANKING

The colonies' first bank of issue opened in Gloucester in 1682. New Jersey's first chartered bank, the Newark Banking and Insurance Co., was the first of many banks to open in that city. By the mid-1800s, Newark was indisputably the financial center of the state. For the most part, commercial banking in New Jersey is overshadowed by the great financial centers of New York City and Philadelphia.

As of June 2005, New Jersey had 136 insured banks, savings and loans, and saving banks, plus 20 state-chartered and 226 federally chartered credit unions (CUs). Excluding the CUs, the New York-Northern New Jersey-Long Island market area accounted for the largest portion of the state's financial institutions and deposits in 2004, with 233 institutions and \$770.488 billion in deposits, followed by the Trenton-Ewing market area with 25 institutions and \$9.302 billion in deposits. As of June 2005, CUs accounted for 5.1% of all assets held by all financial institutions in the state, or some \$9.559 billion. Banks, savings and loans, and savings banks collectively accounted for the remaining 94.9% or \$178.820 billion in assets held.

Regulation of all state-chartered banks, savings banks, savings and loan associations and limited purpose trust companies is the responsibility of the Department of Banking and Insurance. National or federally chartered banks are regulated by the Office of Comptroller of the Currency. The principal regulator of federally chartered savings and loan associations is the Office of Thrift Supervision.

In 2004, the median net interest margin (the difference between the lower rates offered to savers and the higher rates charged on loans) was 3.54%, down slightly from 3.55% in 2003. A large number of New Jersey's banks are residential lenders, and the widespread use of long-term mortgages in results in higher concentrations of long-term assets in New Jersey, around twice that reported by other banks elsewhere in the nation.

In 2004, the median percentage of past-due/nonaccrual loans to total loans was 0.88%, up from 0.85% in 2003.

3³INSURANCE

In 2004, there were over 4.4 million individual life insurance policies in force in New Jersey, with a total value of over \$540.6 billion; total value for all categories of life insurance (individual, group, and credit) was \$902.4 billion. The average coverage amount is \$120,600 per policy holder. Death benefits paid that year totaled \$2.1 billion.

As of 2003, there were 81 property and casualty and 7 life and health insurers domiciled in the state. In 2004, direct premiums for property and casualty insurance totaled \$16.9 billion. That year, there were 189,830 flood insurance policies in force in the state, with a total value of \$33.1 billion. About \$6 billion of coverage was held through FAIR plans, which are designed to offer coverage for some natural circumstances, such as wind and hail, in high risk areas.

In 2004, 62% of state residents held employment-based health insurance policies, 3% held individual policies, and 20% were covered under Medicare and Medicaid; 15% of residents were uninsured. New Jersey ranks as having the third-highest percentage of employment-based insureds among the fifty states. In 2003, employee contributions for employment-based health coverage averaged at 16% for single coverage and 20% for family coverage. The state offers a 12-month health benefits expansion program for small-firm employees in connection with the Consolidated Omnibus Budget Reconciliation Act (COBRA, 1986), a health insurance program for those who lose employment-based coverage due to termination or reduction of work hours.

In 2003, there were over 5.1 million auto insurance policies in effect for private passenger cars. Required minimum coverage includes bodily injury liability of up to \$15,000 per individual and \$30,000 for all persons injured in an accident, as well as property damage liability of \$5,000. Personal injury protection is also required. In 2003, the average expenditure per vehicle for insurance coverage was \$1,188.42, which ranked as the highest average in the nation.

All insurance agents, brokers, and companies in the state are licensed and regulated by the Department of Banking and Insurance.

3⁴SECURITIES

There are no stock or commodity exchanges in New Jersey. Regulation of securities trading in the state is under the control of the Bureau of Securities of the Division of Consumer Affairs, within the Department of Law and Public Safety.

In 2005, there were 5,310 personal financial advisers employed in the state and 12,690 securities, commodities, and financial services sales agents. In 2004, there were over 517 publicly traded companies within the state, with over 167 NASDAQ companies,

112 NYSE listings, and 45 AMEX listings. In 2006, the state had 22 Fortune 500 companies; Johnson and Johnson (based in New Brunswick) ranked first in the state and 32nd in the nation with revenues of over \$50.5 billion, followed by Medco Health Solutions (Franklin Lakes), Prudential Financial (Newark), Honeywell Intl., (Morristown), and Merck (Whitehouse Station). All five of these companies are listed on the NYSE.

3⁵PUBLIC FINANCE

The annual budget, prepared by the Treasury Department's Division of Budget and Accounting, is submitted by the governor to the legislature for approval. The fiscal year (FY) runs from 1 July through 30 June.

Fiscal year 2006 general funds were estimated at \$28.4 billion for resources and \$27.5 billion for expenditures. In fiscal year 2004, federal government grants to New Jersey were \$11.3 billion.

In the fiscal year 2007 federal budget, New Jersey was slated to receive: \$110.5 million in State Children's Health Insurance Program (SCHIP) funds to help the state provide health coverage to low-income, uninsured children who do not qualify for Medicaid. This funding is a 23% increase over fiscal year 2006; and \$52 million for the HOME Investment Partnership Program to help New Jersey fund a wide range of activities that build, buy, or rehabilitate affordable housing for rent or homeownership, or provide direct rental assistance to low-income people. This funding is a 12% increase over fiscal year 2006.

3⁶TAXATION

In 2005, New Jersey collected \$22,934 million in tax revenues or \$2,631 per capita, which placed it 10th among the 50 states in per capita tax burden. The national average was \$2,192 per capita. Sales taxes accounted for 28.6% of the total, selective sales taxes 15.8%, individual income taxes 35.9%, corporate income taxes 9.7%, and other taxes 10.1%.

As of 1 January 2006, New Jersey had six individual income tax brackets ranging from 1.4 to 8.97%. The state taxes corporations at a flat rate of 9.0%.

In 2004, state and local property taxes amounted to \$18,229,254,000 or \$2,099 per capita. The per capita amount ranks the state as having the highest property taxes in the nation. Local governments collected \$18,225,594,000 of the total and the state government \$3,660,000.

New Jersey taxes retail sales at a rate of 6%. Food purchased for consumption off-premises is tax exempt. The tax on cigarettes is 240 cents per pack, which ranks second among the 50 states and the District of Columbia. New Jersey taxes gasoline at 14.50 cents per gallon. This is in addition to the 18.4 cents per gallon federal tax on gasoline.

Per dollar of federal tax paid in 2004, New Jersey citizens received only \$0.55 in federal spending, the lowest amount in the nation and down from 1922 when it received \$0.66 per dollar sent to Washington.

3⁷ECONOMIC POLICY

New Jersey's controlled budget and relatively low business tax burden have helped encourage new businesses to enter the state. The New Jersey Commerce, Economic Growth and Tourism Commission is the state's lead agency in coordinating efforts between gov-

ernment and the private sector to provide access to a broad range of technical, financial and other assistance that helps businesses grow and contribute to economic development. The commission administers a number of development programs designed to retain and attract business and jobs. The state's Economic Development Authority (EDA) is an independent authority established to provide financing programs, including loans, loan guarantees, and tax-free and taxable bond packages.

The Urban Enterprise Zone Program seeks to revitalize urban areas by granting tax incentives and relaxing some government

regulations. The Office of Business Services was established as a clearinghouse to help, support, and promote the development of small, women- and minority-owned enterprises. The Office of International Trade and Protocol seeks to boost the state's exports and bring more foreign companies into the state. Other offices within the department promote tourism and motion picture production. Besides financing, EDA offers a full range of real estate development services, training for entrepreneurs, and technical support. Specific categories targeted for assistance are small and mid-size businesses, high-tech businesses, nonprofits, and brown-fields. There are also separate divisions for advocating Smart Growth principles and for trade adjustment assistance.

38 HEALTH

The infant mortality rate in October 2005 was estimated at 4.9 per 1,000 live births. The birth rate in 2003 was 13.5 per 1,000 population. The abortion rate stood at 36.3 per 1,000 women in 2000, representing the third-highest rate in the country (after the District of Columbia and New York). In 2003, about 80.2% of pregnant woman received prenatal care beginning in the first trimester. In 2004, approximately 83% of children received routine immunizations before the age of three.

The crude death rate in 2003 was 8.5 deaths per 1,000 population. As of 2002, the death rates for major causes of death (per 100,000 resident population) were: heart disease, 262; cancer, 207.5; cerebrovascular diseases, 46.8; chronic lower respiratory diseases, 33.6; and diabetes, 29.5. The mortality rate from HIV infection was 8.9 per 100,000 population. In 2004, the reported AIDS case rate was at about 21.2 per 100,000 population. In 2002, about 52.9% of the population was considered overweight or obese. As of 2004, about 18.8% of state residents were smokers.

In 2003, New Jersey had 78 community hospitals with about 22,800 beds. There were about 1.1 million patient admissions that year and 14.7 million outpatient visits. The average daily inpatient census was about 16,900 patients. The average cost per day for hospital care was \$1,411. Also in 2003, there were about 356 certified nursing facilities in the state with 50,551 beds and an overall occupancy rate of about 87.7%. In 2004, it was estimated that about 75.8% of all state residents had received some type of dental care within the year. New Jersey had 333 physicians per 100,000 resident population in 2004 and 928 nurses per 100,000 in 2005. In 2004, there were a total of 7,045 dentists in the state.

About 11% of state residents were enrolled in Medicaid programs in 2003; 14% were enrolled in Medicare programs in 2004. Approximately 15% of the state population was uninsured in 2004. In 2003, state health care expenditures totaled \$12.7 million.

The state's only medical school, the University of Medicine and Dentistry of New Jersey, is a public institution that combines three medical schools, one dental school, a school of allied professions, and a graduate school of biomedical sciences.

39 SOCIAL WELFARE

Through the Department of Human Services, New Jersey administers the major federal welfare programs, as well as several programs specifically designed to meet the needs of New Jersey minority groups. Among the latter in the 1990s was the Cuban-Haitian Entrant Program. Additional assistance went to refugees from such areas as Southeast Asia and Eastern Europe.

In 2004, about 332,000 people received unemployment benefits, with the average weekly unemployment benefit at \$331. In fiscal year 2005, the estimated average monthly participation in the food stamp program included about 392,416 persons (186,661 households); the average monthly benefit was about \$92.89 per person. That year, the total of benefits paid through the state for the food stamp program was about \$437.4 million.

Temporary Assistance for Needy Families (TANF), the system of federal welfare assistance that officially replaced Aid to Families with Dependent Children (AFDC) in 1997, was reauthorized through the Deficit Reduction Act of 2005. TANF is funded through federal block grants that are divided among the states based on an equation involving the number of recipients in each state. New Jersey's TANF program is called Work First New Jersey (WFNJ). In 2004, the state program had 108,000 recipients; state and federal expenditures on this TANF program totaled \$274 million in fiscal year 2003.

In December 2004, Social Security benefits were paid to 1,370,440 New Jersey residents. This number included 939,010 retired workers, 123,960 widows and widowers, 148,650 disabled workers, 57,990 spouses, and 100,810 children. Social Security beneficiaries represented 15.7% of the total state population and 91.3% of the state's population age 65 and older. Retired workers received an average monthly payment of \$1,054; widows and widowers, \$993; disabled workers, \$976; and spouses, \$509. Payments for children of retired workers averaged \$516 per month; children of deceased workers, \$705; and children of disabled workers, \$310. Federal Supplemental Security Income payments in December 2004 went to 150,151 New Jersey residents, averaging \$415 a month.

40 HOUSING

Before 1967, New Jersey took a laissez-faire attitude toward housing. With each locality free to fashion its own zoning ordinances, large tracts of rural land succumbed to "suburban sprawl"—single-family housing developments spread out in two huge arcs from New York City and Philadelphia. Meanwhile, the tenement housing of New Jersey's central cities was left to deteriorate. Because poor housing was at least one of the causes of the Newark riot in 1967, the state established the Department of Community Affairs to coordinate existing housing aid programs and establish new ones. The state legislature also created the Mortgage Finance Agency and Housing Finance Agency to stimulate home buying and residential construction. In an effort to halt suburban sprawl, local and county planning boards were encouraged during the 1970s to adopt master plans for controlled growth. Court decisions in the late 1970s and early 1980s challenged the constitutionality of zoning laws that precluded the development of low-income housing in suburban areas.

In 2004, the state had an estimated 3,414,739 housing units, of which 3,134,481 were occupied; 68.1% were owner-occupied. About 54.6% of all units were single-family, detached homes. Nearly 60% of the entire housing stock was built before 1969. Utility gas is the most common heating energy source, followed by fuel oil and kerosene. It was estimated that 98,620 units lacked telephone service, 10,054 lacked complete plumbing facilities, and 16,364 lacked complete kitchen facilities. The average household had 2.71 members.

In 2004, 36,900 new privately owned units were authorized for construction. The median home value was \$291,294, the fifth highest in the country. The median monthly cost for mortgage owners was \$1,847, the highest rate in the country. Renters paid a median of \$877, the second-highest rate in the country, after California. In 2006, the state received over \$8.3 million in community development block grants from the US Department of Housing and Urban Development (HUD).

41 EDUCATION

Public education in New Jersey dates from 1828, when the legislature first allocated funds to support education; by 1871, a public school system was established statewide. In 2004, 87.6% of persons 25 years and older were high school graduates. Some 34.6% of persons obtained a bachelor's degree or higher.

The total enrollment for fall 2002 in New Jersey's public schools stood at 1,367,000. Of these, 979,000 attended schools from kindergarten through grade eight, and 389,000 attended high school. Approximately 57.9% of the students were white, 17.7% were black, 17.2% were Hispanic, 7% were Asian/Pacific Islander, and 0.2% were American Indian/Alaskan Native. Total enrollment was estimated at 1,386,000 in fall 2003 and was expected to be 1,415,000 by fall 2014, an increase of 3.5% during the period 2002–14. Expenditures for public education in 2003–04 were estimated at \$20.8 billion or \$12,981 per student, the highest among the 50 states. There were 204,732 students enrolled in 964 private schools. Since 1969, the National Assessment of Educational Progress (NAEP) has tested public school students nationwide. The resulting report, *The Nation's Report Card*, stated that in 2005 eighth graders in New Jersey scored 284 out of 500 in mathematics compared with the national average of 278.

As of fall 2002, there were 361,733 students enrolled in institutions of higher education; minority students comprised 34.3% of total postsecondary enrollment. In 2005, New Jersey had 58 degree-granting institutions including, 14 public four-year schools, 19 public two-year schools, and 21 nonprofit, private four-year schools. Rutgers, the state university, began operations as Queen's College in 1766 and was placed under state control in 1956, encompassing the separate colleges of Rutgers, Douglass, Livingston, and Cook, among others. As of 2005, the university had campuses at New Brunswick/Piscataway, Camden, and Newark. The major private university in the state and one of the nation's leading institutions is Princeton University, founded in 1746. Other major private universities are Seton Hall (1856); Stevens Institute of Technology (1870); and Fairleigh Dickinson (1942), with three main campuses.

The New Jersey Commission on Higher Education offers tuition aid grants and scholarships to state residents who attend colleges and universities in the state. Guaranteed loans for any qualified resident are available through the New Jersey Higher Education Assistance Authority.

42 ARTS

During the late 1800s and early 1900s, New Jersey towns, especially Atlantic City and Newark, were tryout centers for shows bound for Broadway. The New Jersey Theater Group, a service organization for nonprofit professional theaters, was established in 1978; several theaters—including the Tony Award-winning McCarter

Theater at Princeton and Paper Mill Playhouse in Millburn—are members of the Theater Group.

Around the turn of the century, Ft. Lee was the motion picture capital of the world. Most of the best-known “silents”—including the first, *The Great Train Robbery*, and episodes of *The Perils of Pauline*—were shot there, and in its heyday the state film industry supported 21 companies and 7 studios. New Jersey’s early preeminence in cinema, an era that ended with the rise of Hollywood, stemmed partly from the fact that the first motion picture system was developed by Thomas Edison at Menlo Park in the late 1880s. The state created the New Jersey Motion Picture and Television Commission in 1977; in the next six years, production companies spent \$57 million in the state. Notable productions during this period included two Woody Allen pictures, *Broadway Danny Rose* and *The Purple Rose of Cairo*.

The New Jersey State Council of the Arts consists of 17 members appointed by the governor. In 2005, the New Jersey State Council of the Arts and other New Jersey arts organizations received 29 grants totaling \$1,186,200 from the National Endowment for the Arts. State and private sources also contributed funding to New Jersey’s arts programs. The New Jersey Council for the Humanities (NJCH) was founded in 1973 and consists of a 25-member board of trustees. As of 2006 ongoing programs associated with the NJCH included the annual Humanities Festival Week, a week of programs adhering to a particular humanities theme chosen each year; Ideas at Work, promoting forums for thoughts on humanity topics in the work place; and the Horizons Speakers Bureau, providing lectures in humanities across the state. In 2005, the National Endowment for the Humanities contributed \$2.6 million to 36 state programs.

The state’s long history of support for classical music dates at least to 1796, when William Dunlap of Perth Amboy wrote the libretto for *The Archers*, the first American opera to be commercially produced. The state’s leading orchestra is the New Jersey Symphony, which makes its home in the new New Jersey Performing Arts Center in Newark; there are other symphony orchestras in Plainfield and Trenton. As of 2006 the New Jersey Symphony of Newark was noted for providing educational and community programs that included the Newark Early Strings Program, which provides free string instruction to second, third and fourth grade students in the Newark Public School District, and REACH (Resources for Education and Community Harmony,) which presents a variety of musical programs that allow for personal interaction with the artists. The New Jersey State Opera performs in Newark’s Symphony Hall, while the Opera Festival of New Jersey makes its home in Lawrenceville. Noteworthy dance companies include the American Repertory Ballet, New Jersey Ballet, and the Nai-Ni Chen Dance Company, described as a “cross-cultural contemporary dance company.”

The jazz clubs of northern New Jersey and the seaside rock clubs in Asbury Park have helped launch the careers of many local performers. The city of Asbury Park was scheduled to host its 18th annual Jazz Festival in June 2006. Famous rock music star Bruce Springsteen grew up in southern New Jersey and titled his first album with Columbia Records, *Greetings From Asbury Park, NJ* (1973). Atlantic City’s hotels and casinos host numerous star performances every year.

43 LIBRARIES AND MUSEUMS

For calendar year 2001, New Jersey had 309 public library systems, with a total of 458 libraries, 149 of which were branches. The state’s public library systems that same year housed 31,035,000 volumes of books and serial publications, and had a total circulation of 49,171,000. The system also had 1,076,000 audio and 789,000 video items, 43,000 electronic format items (CD-ROMs, magnetic tapes, and disks), and 15 bookmobiles. The Newark Public Library was the largest municipal system with 1,452,336 volumes and 10 branches. Distinguished by special collections on African-American studies, art and archaeology, economics, and international affairs, among many others, Princeton University’s library is the largest in the state, with 4,973,619 volumes and 34,182 periodical subscriptions in 1998; Rutgers University ranked second with 3,238,416. The New Jersey State Library in Trenton contained 470,000 volumes, mostly on the state’s history and government. One of the largest business libraries, emphasizing scientific and technical data, is the AT&T Bell Laboratories’ library system, based in Murray Hill. In 2001, operating income for the state’s public library system was \$315,890,000 and included \$1,509,000 in federal grants and \$9,730,000 in state grants.

New Jersey has more than 177 museums, historic sites, botanical gardens and arboretums. Among the most noteworthy museums are the New Jersey Historical Society in Newark and New Jersey State Museum in Trenton; the Newark Museum, containing both art and science exhibits; Princeton University’s Art Museum and Museum of Natural History; and the Jersey City Museum. Also of interest are the early waterfront homes and vessels of Historic Gardner’s Basin in Atlantic City, as well as Grover Cleveland’s birthplace in Caldwell; the Campbell Museum in Camden (featuring the soup company’s collection of bowls and utensils); Cape May County Historical Museum; Clinton Historical Museum Village; US Army Communications-Electronics Museum at Ft. Monmouth; Batsto Village, near Hammonton; Morristown National Historic Park (where George Washington headquartered during the Revolutionary War); Sandy Hook Museum; and one of the most popular attractions, the Edison National Historic Site, formerly the home and workshop of Thomas Edison, in West Orange. In 1984, the grounds at the Skylands section of Ringwood State Park were designated as the official state botanical garden.

44 COMMUNICATIONS

Many communications breakthroughs—including Telstar, the first communications satellite—have been achieved by researchers at Bell Labs in Holmdel, Whippany, and Murray Hill. Three Bell Labs researchers shared the Nobel Prize in physics (1956) for developing the transistor, a device that has revolutionized communications and many other fields. In 1876, at Menlo Park, Thomas Edison invented the carbon telephone transmitter, a device that made the telephone commercially feasible.

The first mail carriers to come to New Jersey were, typically enough, on their way between New York and Philadelphia. Express mail between the two cities began in 1737, and by 1764, carriers could speed through the state in 24 hours. In colonial times, tavern keepers generally served as the local mailmen. The nation’s largest bulk-mail facility is in Jersey City. In 2004, 95.1% of the state’s occupied housing units had telephones. Additionally, by

June of that same year there were 6,326,459 mobile wireless telephone subscribers. In 2003, 65.5% of New Jersey households had a computer and 60.5% had Internet access. By June 2005, there were 1,654,477 high-speed lines in New Jersey, 1,479,635 residential and 174,842 for business.

Because the state lacks a major television broadcasting outlet, New Jerseyites receive more news about events in New York City and Philadelphia than in their own towns and cities. In 2005, there were 60 major radio stations (8 AM, 52 FM) and 7 television stations, none of which commanded anything like the audiences and influence of the stations across the Hudson and Delaware rivers. In 1978, in cooperation with public television's WNET (licensed in Newark but operated in New York), New Jersey's public stations began producing New Jersey's first nightly newscast.

A total of 251,401 Internet domain names were registered in New Jersey in the year 2000.

45 PRESS

New Jersey has not been known for having a very powerful press. In 1702, Queen Anne banned printers from the colony. The state's first periodical, founded in 1758, died two years later. New Jersey's first daily paper, the *Newark Daily Advertiser*, did not arrive until 1832.

Many present-day newspapers, most notably the *Newark Star-Ledger*, have amassed considerable circulation. However, no newspaper has been able to muster statewide influence or match the quality and prestige of the nearby *New York Times* or *Philadelphia Inquirer*, both of which are read widely in the state, along with other New York City and Philadelphia papers. In 2005, there were 18 morning dailies, 1 evening, and 15 Sunday papers. Most of the largest papers are owned by either Gannett Co., Inc (of Virginia) or Advance Publications (of New York).

The following table shows leading New Jersey dailies with their approximate 2005 circulation:

AREA	NAME	DAILY	SUNDAY
Atlantic City	<i>Press</i> (m,S)	74,655	93,129
Camden-Cherry Hill	<i>Courier-Post*</i> (m,S)	75,408	89,922
Hackensack (Bergen County)	<i>Record</i> (m,S)	176,177	212,333
Neptune-Asbury Park	<i>Asbury Park Press*</i> (m,S)	160,399	212,471
Newark	<i>Star-Ledger+</i> (m,S)	400,042	608,257
Trenton	<i>Times+</i> (m,S)	67,600	73,006

*owned by Gannett Co., Inc. +owned by Advance Publications.

Numerous scholarly and historical works have been published by the university presses of Princeton and Rutgers. The offices of Pearson Education and its division, Prentice-Hall, are located in Upper Saddle River. Several New York City publishing houses maintain their production and warehousing facilities in the state. Periodicals published in New Jersey include *Home*, *Medical Economics*, *New Jersey Monthly*, and *Personal Computing*.

46 ORGANIZATIONS

In 2006, there were over 10,065 nonprofit organizations registered within the state, of which about 6,826 were registered as charitable, educational, or religious organizations.

Princeton is the headquarters of several education-related groups, including the Educational Testing Service, Graduate Record Examinations Board, the International Mathematical Union,

Independent Educational Services, and Woodrow Wilson National Fellowship Foundation.

Seeing Eye of Morristown was one of the first organizations to provide seeing-eye dogs for the blind. Other medical and health-related organizations are National Industries for the Blind (Wayne), the American Council for Headache Education (Mount Royal), the Multiple Sclerosis Association of America (Cherry Hill), and the American Association of Veterinary State Boards (Teaneck). Birthright USA, an anti-abortion counseling service, has its headquarters in Woodbury; the National Council on Crime and Delinquency is in Ft. Lee. The Institute of Electrical and Electronics Engineers in Piscataway is a professional organization with national membership. There are statewide professional organizations representing most professions.

Hobby and sports groups include the US Golf Association, the International Golf Federation, and the World Amateur Golf Council in Far Hills; US Equestrian Team in Gladstone; Babe Ruth Baseball/Softball in Trenton; the International Boxing Federation in East Orange; the American Double Dutch League in Cherry Hill; and National Intercollegiate Women's Fencing Association in Upper Montclair. The Miss America Organization, established in 1921, sponsors the annual Miss America competition in Atlantic City. The American Vegan Society is based in Malaga.

Several religious organizations have base offices in New Jersey, including the American Coptic Association, the Blue Army of Our Lady of Fatima, USA, the National Interfaith Hospitality Network, and the Xaverian Missionaries of the United States. The American Atheists organization is also based in the state.

There are numerous arts and cultural organizations. Some of national interest include the Music Critics Association of North America, the Musical Heritage Society, the National Music Council, the Royal Academy of Dance, and the World Congress of Teachers of Dancing. The American Accordionist's Associations and an American Accordion Musicological Society are both based in New Jersey. There are a number of local historical societies. The Heritage Institute of Ellis Island is located in Jersey City.

47 TOURISM, TRAVEL, AND RECREATION

Tourism is a leading industry in New Jersey, accounting for a sizeable part of the state's revenues. One out of nine New Jersey workers has a job in tourism, which was the fastest growing economic sector in 2005, with \$36.6 billion in revenue. In 2005, there were 72.2 million visitors to the state, 57% of which were day-trip travelers. About 34% of all trips are made by residents within the state. Nearly 25% of all visitors are from New York and 19% are from Pennsylvania. The Jersey shore has been a popular attraction since 1801, when Cape May began advertising itself as a summer resort. Dining, entertainment, and gambling are also popular.

Of all the shore resorts, the largest has long been Atlantic City, which by the 1890s was the nation's most popular resort city and by 1905 was the first major city with an economy almost totally dependent on tourism. That proved to be its downfall, as improvements in road and air transportation made more modern resorts in other states easily accessible to easterners. By the early 1970s, the city's only claims to fame were the Miss America pageant and the game of Monopoly, whose standard version uses its street names. In an effort to restore Atlantic City to its former luster and revive its economy, New Jersey voters approved a constitutional

amendment in 1976 to allow casinos in the resort. Some 33 million people visit Atlantic City annually. New Jersey has 127 miles of beaches from Sandy Hook to Cape May and Ocean City. Casino taxes were earmarked to reduce property taxes of senior citizens. New Jersey's close proximity to New York also makes it attractive to visitors. New Jersey hosts the Liberty Science Center with ferry rides to the Statue of Liberty. Camden has a Six Flags amusement park and Columbia features the Lakota Wolf Preserve.

State attractions include 10 ski areas in northwestern New Jersey (on Hamburg Mountain alone, more than 50 slopes are available), canoeing and camping at the Delaware Water Gap National Recreation Area, 3 national wildlife refuges, 31 public golf courses, and 30 amusement parks, including Great Adventure in central Jersey. Dutch Neck Village, created in 1976, includes a living museum and the Old Hickory Arboretum. Jersey Greens, the largest outlet mall in New Jersey, opened in 1999, anticipating revenues of \$5.6 million annually.

48 SPORTS

New Jersey did not have a major league professional team until 1976, when the New York Giants of the National Football League moved across the Hudson River into the newly completed Giants Stadium in the Meadowlands Sports Complex at East Rutherford. The NFL's New York Jets began playing their home games at the Meadowlands in 1984. The Continental Airlines Arena, located at the same site, is the home of the New Jersey Nets of the National Basketball Association and the New Jersey Devils of the National Hockey League. As New York teams that no longer play in their home state, the Giants and the Jets are scorned by some New York sports purists. When the Giants won the Super Bowl in 1987, New York's then mayor, Ed Koch, refused them the ticker-tape parade traditionally given to local sports champions on the grounds that since they play in New Jersey they are not a New York team.

The state did celebrate a championship it could call its own, however, when the Devils won the Stanley Cup in 1995. The Devils repeated their success with two more Stanley Cup victories in 2000 and 2003.

The New Jersey Nets have made a surge in the recent past, becoming one of the most successful teams in the NBA. They captured berths in consecutive NBA Finals in 2002 and 2003, falling short on both occasions, however.

The Meadowlands is also the home of a dual thoroughbred-harness-racing track. Other racetracks are Garden State Park (Cherry Hill), Monmouth Park (Oceanport), and Atlantic City Race Course for thoroughbreds, and Freehold Raceway for harness racing. Auto racing is featured at speedways in Bridgeport, East Windsor, and New Egypt. Trenton has a minor league baseball team, the Thunder, in the Eastern League. New Jersey has several world-class golf courses, including Baltusrol, the site of seven US Opens and the 2005 PGA Championship. Numerous championship boxing matches have been held in Atlantic City.

New Jersey is historically significant for the births of two major national sports. Princeton and Rutgers played what is claimed to be the first intercollegiate football game on 6 November 1869 at New Brunswick. (Princeton was named national champion several times around the turn of the century, for the last time in 1911). The first game of what is known today as baseball was played in New Jersey at the Elyson Field in Hoboken between the Knicker-

bockers and the New York Nine on 19 June 1846. Several important college games are held at Giants Stadium each fall. In college basketball, Seton Hall placed high in the rankings repeatedly in the late 1980s and early 1990s, winning the National Invitational Tournament in 1953. In 1989 they made it to the finals, losing to Michigan by one point in overtime. Rutgers had a formidable men's basketball team in the 1970s, making it to the Final Four in 1976.

Other annual sporting events include the New Jersey Offshore Grand Prix Ocean Races held at Point Pleasant Beach in July and the National Marbles Tournament in Wildwood.

49 FAMOUS NEW JERSEYITES

While only one native New Jerseyite, (Stephen) Grover Cleveland (1837–1908), has been elected president of the United States, the state can also properly claim (Thomas) Woodrow Wilson (b.Virginia, 1856–1924), who spent most of his adult life there. Cleveland left his birthplace in Caldwell as a little boy, winning his fame and two terms in the White House (1885–89, 1893–97) as a resident of New York State. After serving as president, he retired to Princeton, where he died and is buried. Wilson, a member of Princeton's class of 1879, returned to the university in 1908 as a professor and became its president in 1902. Elected governor of New Jersey in 1910, Wilson pushed through a series of sweeping reforms before entering the White House in 1913. Wilson's two presidential terms were marked by his controversial decision to declare war on Germany and his unsuccessful crusade for US membership in the League of Nations after World War I.

Two vice presidents hail from New Jersey: Aaron Burr (1756–1836) and Garret A. Hobart (1844–99). Burr, born in Newark and educated at what is now Princeton University, is best remembered for killing Alexander Hamilton in a duel at Weehawken in 1804. Hobart was born in Long Branch, graduated from Rutgers College, and served as a lawyer in Paterson until elected vice president in 1896; he died in office.

Four New Jerseyites have become associate justices of the US Supreme Court: William Paterson (b.Ireland, 1745–1806), Joseph P. Bradley (1813–92), Mahlon Pitney (1858–1924), and William J. Brennan Jr. (1906–1997). Among the relatively few New Jerseyites to serve in the US cabinet was William E. Simon (1927), secretary of the treasury under Gerald Ford.

Few New Jerseyites won important political status in colonial years because the colony was so long under New York's political and social domination. Lewis Morris (b.New York, 1671–1746) was named the first royal governor of New Jersey when severance from New York came in 1738. Governors who made important contributions to the state included William Livingston (b.New York, 1723–90), first governor after New Jersey became a state in 1776; Marcus L. Ward (1812–84), a strong Union supporter; and Alfred E. Driscoll (1902–75), who persevered in getting New Jersey a new state constitution in 1947 despite intense opposition from the Democratic Party leadership. Other important historical figures are Molly Pitcher (Mary Ludwig Hays McCauley, 1754?–1832), a heroine of the American Revolution, and Zebulon Pike (1779–1813), the noted explorer.

Two New Jersey persons have won the Nobel Peace Prize: Woodrow Wilson in 1919, and Nicholas Murray Butler (1862–1947) in 1931. A three-man team at Bell Laboratories in Mur-

ray Hill won the 1956 physics award for their invention of the transistor: Walter Brattain (b.China, 1902–87), John Bardeen (b.Wisconsin, 1908–91), and William Shockley (b.England, 1910). Dr. Selman Waksman (b.Russia, 1888–1973), a Rutgers University professor, won the 1952 prize in medicine and physiology for the discovery of streptomycin. Dickinson Woodruff (1895–1973) won the medicine and physiology prize in 1956, and Joshua Lederberg (b.1925) was a co-winner in 1958. Theoretical physicist Albert Einstein (b.Germany, 1879–1955), winner of a Nobel Prize in 1921, spent his last decades in Princeton. One of the world's most prolific inventors, Thomas Alva Edison (b.Ohio, 1847–1931) patented over 1,000 devices from workshops at Menlo Park and West Orange. David Dinkins (b.1927), first African-American mayor of New York was born in Trenton, New Jersey. Norman Schwarzkopf (b.1934), commander of US forces in Desert Storm (Gulf War), was born August 22, 1934 in Trenton, New Jersey. Michael Chang (b.1972), 1989 French Open tennis champion, was born in Hoboken.

The state's traditions in the arts began in colonial times. Patience Lovell Wright (1725–86) of Bordentown was America's first recognized sculptor. Jonathan Odell (1737–1818) was an anti-Revolutionary satirist, while Francis Hopkinson (b.Pennsylvania, 1737–91), lawyer, artist, and musician, lampooned the British. Authors of note after the Revolution included William Dunlap (1766–1839), who compiled the first history of the stage in America; James Fenimore Cooper (1789–1851), one of the nation's first novelists; Mary Mapes Dodge (b.New York, 1838–1905), noted author of children's books; Stephen Crane (1871–1900), famed for *The Red Badge of Courage* (1895); and Albert Payson Terhune (1872–1942), beloved for his collie stories.

Quite a number of prominent 20th-century writers were born in or associated with New Jersey. They include poets William Carlos Williams (1883–1963) and Allen Ginsberg (1926–1997); satirist Dorothy Parker (1893–1967); journalist-critic Alexander Woollcott (1887–1943); Edmund Wilson (1895–1972), influential critic, editor, and literary historian; Norman Cousins (1912–90); Norman Mailer (b.1923); Thomas Fleming (b.1927); John McPhee (b.1931); Philip Roth (b.1933); Imamu Amiri Baraka (LeRoi Jones, b.1934); and Peter Benchley (b.New York, 1940–2006).

Notable 19th-century artists were Asher B. Durand (1796–1886) and George Inness (b.New York, 1825–94). The best-known 20th-century artist associated with New Jersey was Ben Shahn (1898–1969); cartoonist Charles Addams (1912–88) was born in Westfield. Noted photographers born in New Jersey include Alfred Stieglitz (1864–1946) and Dorothea Lange (1895–1965). Important New Jersey composers were Lowell Mason (b.Massachusetts, 1792–1872), called the “father of American church music,” and Milton Babbitt (b.Pennsylvania, 1916), long active at Princeton. The state's many concert singers include Anna Case (1889–1984), Paul Robeson (1898–1976), and Richard Crooks (1900–72). Popular singers include Francis Albert “Frank” Sinatra (1915–98),

Sarah Vaughan (1924–1990), Dionne Warwick (b.1941), Paul Simon (b.1942), and Bruce Springsteen (b.1949). Jazz musician William “Count” Basie (1904–84) was born in Red Bank.

Other celebrities native to New Jersey are actors Jack Nicholson (b.1937), Michael Douglas (b.1944), Meryl Streep (b.1948), and John Travolta (b.1954). Comedians Lou Costello (1906–59), Ernie Kovacs (1919–62), Jerry Lewis (b.1926), and Clerow “Flip” Wilson (1933–98) were also born in the state. New Jersey-born athletes include figure skater Richard “Dick” Button (b.1929), winner of two Olympic gold medals.

NEW MEXICO

State of New Mexico

ORIGIN OF STATE NAME: Spanish explorers in 1540 called the area “the new Mexico.” **NICKNAME:** Land of Enchantment. **CAPITAL:** Santa Fe. **ENTERED UNION:** 6 January 1912 (47th). **SONG:** “O Fair New Mexico;” “Así es Nuevo México.” **MOTTO:** *Crescit eundo* (It grows as it goes). **FLAG:** The sun symbol of the Zia Indians appears in red on a yellow field. **OFFICIAL SEAL:** An American bald eagle with extended wings grasps three arrows in its talons and shields a smaller eagle grasping a snake in its beak and a cactus in its talons (the emblem of Mexico, and thus symbolic of the change in sovereignty over the state). Below the scene is the state motto. The words “Great Seal of the State of New Mexico 1912” surround the whole. **BIRD:** Roadrunner (chaparral bird). **FISH:** Cutthroat trout. **FLOWER:** Yucca (Our Lords Candles). **TREE:** Piñon pine. **GEM:** Turquoise. **LEGAL HOLIDAYS:** New Year’s Day, 1 January; Birthday of Martin Luther King Jr., 3rd Monday in January; Memorial Day, last Monday in May; Independence Day, 4 July; Labor Day, 1st Monday in September; Columbus Day, 2nd Monday in October; Veterans’ Day, 11 November; Thanksgiving Day, 4th Thursday in November; President’s Day, day after Thanksgiving; Christmas Day, 25 December. **TIME:** 5 AM MST = noon GMT.

¹ LOCATION, SIZE, AND EXTENT

New Mexico is located in the southwestern United States. Smaller only than Montana of the eight Rocky Mountain states, it ranks fifth in size among the 50 states. The area of New Mexico is 121,593 sq mi (314,926 sq km), of which land comprises 121,335 sq mi (314,258 sq km) and inland water 258 sq mi (668 sq km). Almost square in shape except for its jagged southern border, New Mexico extends about 352 mi (566 km) E–W and 391 mi (629 km) N–S.

New Mexico is bordered on the N by Colorado; on the E by Oklahoma and Texas; on the S by Texas and the Mexican state of Chihuahua (with a small portion of the south-central border formed by the Rio Grande); and on the W by Arizona. The total boundary length of New Mexico is 1,434 mi (2,308 km).

The geographic center of the state is in Torrance County, 12 mi (19 km) ssw of Willard.

² TOPOGRAPHY

The Continental Divide extends from north to south through central New Mexico. The north-central part of the state lies within the Southern Rocky Mountains, and the northwest forms part of the Colorado Plateau. The eastern two-fifths of the state fall on the western fringes of the Great Plains.

Major mountain ranges include the Southern Rockies, the Chuska Mountains in the northwest, and the Caballo, San Andres, San Mateo, Sacramento, and Guadalupe ranges in the south and southwest. The highest point in the state is Wheeler Peak, at 13,161 ft (4,014 m); the lowest point, 2,842 ft (867 m), is at Red Bluff Reservoir. The mean elevation of the state is approximately 5,700 ft (1,739 m).

The Rio Grande traverses New Mexico from north to south and forms a small part of the state’s southern border with Texas. Other major rivers include the Pecos, San Juan, Canadian, and Gila. The

largest bodies of inland water are the Elephant Butte Reservoir and Conchas Reservoir, both created by dams.

The Carlsbad Caverns, the largest known subterranean labyrinth in the world, penetrate the foothills of the Guadalupe in the southeast. The caverns embrace more than 37 mi (60 km) of connecting chambers and corridors and are famed for their stalactite and stalagmite formations.

³ CLIMATE

New Mexico’s climate ranges from arid to semiarid, with a wide range of temperatures. Average January temperatures vary from about 35°F (2°C) in the north to about 55°F (13°C) in the southern and central regions. July temperatures range from about 78°F (26°C) at high elevations to around 92°F (33°C) at lower elevations. The record high temperature for the state is 122°F (50°C), set most recently on 27 July 1994 at Lakewood; the record low, -50°F (-46°C), was set on 1 February 1951 at Gavilan.

Average annual precipitation is about 8.5 in (21 cm) in Albuquerque in the desert; at high elevations, annual precipitation averaged over 20 in (50 cm). Nearly one-half the annual rainfall comes during July and August, and thunderstorms are common in the summer. Snow is much more frequent in the north than in the south; Albuquerque gets about 11 in (28 cm) of snow per year, and the northern mountains receive up to 100 in (254 cm).

⁴ FLORA AND FAUNA

New Mexico is divided into the following six life zones: lower Sonoran, upper Sonoran, transition, Canadian, Hudsonian, and arctic-alpine.

Characteristic vegetation in each zone includes, respectively, desert shrubs and grasses; piñon/juniper woodland, sagebrush,

and chaparral; ponderosa pine and oak woodlands; mixed conifer and aspen forests; spruce/fir forests and meadows; tundra wild flowers and riparian shrubs. The yucca has three varieties in New Mexico and is the state flower. Thirteen plant species were listed as threatened or endangered in 2006, including Sacramento prickly poppy, Moncos milk-vetch, and two species of cacti.

Indigenous animals include pronghorn antelope, javelina, and black-throated sparrow in the lower Sonoran zone; mule and white-tailed deer, ringtail, and brown towhee in the upper Sonoran zone; elk and wild turkey in the transition zone; black bear and hairy woodpecker in the Canadian zone; pine marten and blue grouse in the Hudsonian zone; and bighorn sheep, pika, ermine, and white-tailed ptarmigan in the arctic-alpine zone. Among notable desert insects are the tarantula, centipede, and vinegarroon. The coatimundi, Baird's sparrow, and brook stickleback are among rare animals. Twenty-eight New Mexican animal species (vertebrates and invertebrates) were classified as threatened or endangered by the US Fish and Wildlife Service in April 2006, including two species of bat, whooping crane, bald eagle, southwestern willow flycatcher, Mexican spotted owl, three species of shiner, and razorback sucker.

5 ENVIRONMENTAL PROTECTION

Agencies concerned with the environment include the New Mexico Environment Department (NMED), the Environmental Improvement Board, the Water Quality Control Commission, and the Energy, Minerals and Natural Resources Department. As the state's leading environmental agency, the NMED's mission is to preserve, protect, and perpetuate New Mexico's environment for present and future generations. The Department is comprised of four divisions, 14 bureaus, four districts, and 17 field offices. Each entity is responsible for different areas and functions of environmental protection (or administrative support) concerning air, water, and land resources. Under the authority of state/federal laws and regulations, the NMED fulfills its mission through the judicious application of statewide regulatory, technical assistance, planning, enforcement, educational, and related functions in the service of its citizens.

Wetlands cover about 482,000 acres (195,058 hectares) of the state and include such diverse areas as forested wetlands, marshes, alpine snow glades, and salt meadows. Conversion of land for agricultural and urban development are the primary threats to these lands, which lie primarily in the eastern and northern areas of the state.

In 2003, 17.9 million lb of toxic chemicals were released in the state. Also in 2003, New Mexico had 120 hazardous waste sites listed in the US Environment Protection Agency (EPA) database, 12 of which were on the National Priorities List as of 2006. In 2005, the EPA spent over \$3.2 million through the Superfund program for the cleanup of hazardous waste sites in the state. The same year, federal EPA grants awarded to the state included \$8.3 million for the drinking water state revolving fund and \$6.8 million for improvements in municipal wastewater treatment programs.

6 POPULATION

New Mexico ranked 36th in population in the United States with an estimated total of 1,928,384 in 2005, an increase of 6% since 2000. Between 1990 and 2000, New Mexico's population grew from 1,515,069 to 1,819,046, an increase of 20.1%. The population is projected to reach 2 million by 2015 and 2.1 million by 2025. The population density in 2004 was 15.7 persons per sq mi. In 2004 the median age was 35.8. Persons under 18 years old accounted for 25.9% of the population while 12.1% was age 65 or older.

In 2004, an estimated 484,246 people lived in Albuquerque. An estimated 781,447 lived in the Albuquerque metropolitan area. The Santa Fe metropolitan area had 138,705 inhabitants.

7 ETHNIC GROUPS

New Mexico has two large minorities: Indians and Hispanics. In 2000, the estimated American Indian population was 173,483 (9.5% of the total population—the second-highest percentage of any state). In 2004, 10.1% of the population was American Indian. Part of Arizona's great Navaho reservation extends across the border into New Mexico. New Mexico's Navaho population was recorded as 67,397 in 2000. There are 2 Apache reservations, 19 Pueblo villages (including one for the Zia in Sandoval County), and lands allotted to other tribes. Altogether, Indian lands cover 8,152,895 acres (3,299,477 hectares), 10.5% of New Mexico's area (second only to Arizona in proportion of Indian lands). In 2000 the Zuni lands had a population of 7,758, and the Acoma reservation had 2,802 residents.

The Hispanic population is an old one, descending from Spanish-speaking peoples who lived there before the territory was annexed by the United States. In 2000, Hispanics and Latinos (including a small number of immigrants from modern Mexico) numbered 765,386 or 42.1% of the total state population. That percentage had increased to 43.3% of the state population in 2004.

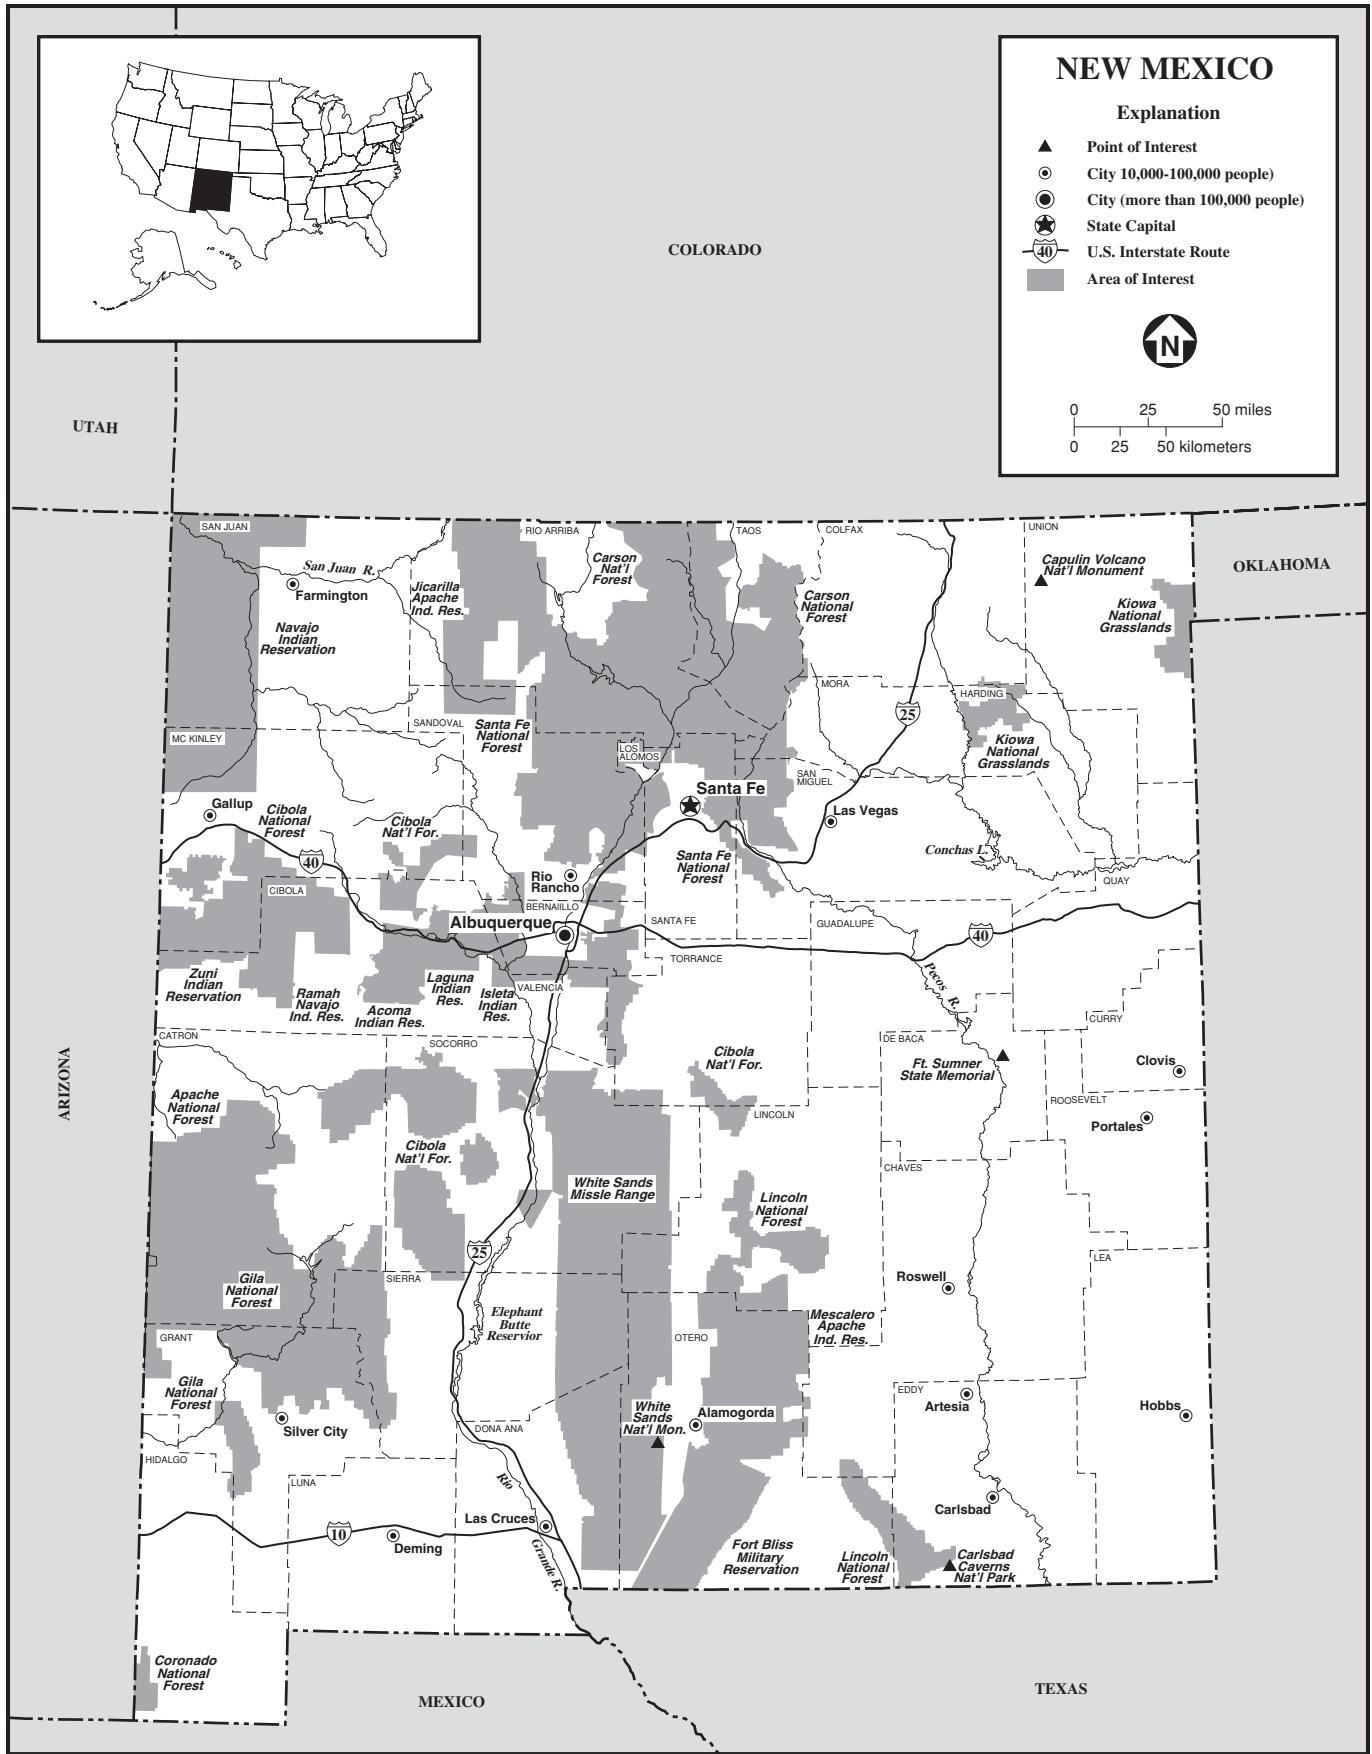

As of 2000, an estimated 19,255 Asians, 1,503 Pacific Islanders, and 34,343 black Americans lived in the state. In 2004, 2.4% of the state's population was black, 1.3% Asian, and 0.1% Pacific Islander. That year, 1.5% of the population reported origin of two or more races.

8 LANGUAGES

New Mexico has large Indian and Spanish-speaking populations. But just a few place-names, like Tucumcari and Mescalero, echo in English the presence of the Apache, Zuni, Navaho, and other tribes living there. Numerous Spanish borrowings include *vigas* (rafters) in the northern half, and *canales* (gutters) and *acequia* (irrigation ditch) in the Rio Grande Valley. New Mexico English is a mixture of dominant Midland, with some Northern features (such as *sick to the stomach*) in the northeast, and Southern and South Midland features such as *spoonbread* and *carry* (escort) in the eastern agricultural fringe.

In 2000, 1,072,947 New Mexicans—63.5% of the resident population five years of age and older—spoke only English at home, down slightly from 64.5% in 1990.

The following table gives selected statistics from the 2000 Census for language spoken at home by persons five years old and over.

9 RELIGIONS

The first religions in New Mexico were practiced by Pueblo and Navaho Indians. Franciscan missionaries arrived at the time of Coronado's conquest in 1540, and the first Roman Catholic church in the state was built in 1598. Roman Catholicism has long been the dominant religion, though from the mid-1800s there has also been a steady increase in the number of Protestants. The first Baptist missionaries arrived in 1849, the Methodists in 1850, and the Mormons in 1877.

The state's Roman Catholic churches had about 435,244 members in 2004. The next largest denomination is the Southern Baptist Convention, with 132,675 in 2000; 2,856 newly baptized members reported in 2002. In 2004, there were 39,865 United Methodists statewide. In 2000, there were 22,070 members of Assemblies of God, 18,985 members of Churches of Christ, and 13,224 Presbyterians (USA). The Church of Jesus Christ of Latter-day Saints reported about 61,862 members in 123 congregations in 2006; the state's first Mormon temple was dedicated in Albuquerque in 2000. The Jewish population was estimated at 10,500 in 2000 and the Muslim congregations had 2,604 adherents. The same year, about 761,218 people (about 41.8% of the population) were not counted as members of any religious organization.

10 TRANSPORTATION

Important early roads included El Camino Real, extending from Mexico City, Mexico, up to Santa Fe and the Santa Fe Trail, leading westward from Independence, Missouri. By 2004, New Mexico had 64,004 mi (103,046 km) of public roads and streets.

In 2004, some 1.539 million motor vehicles were registered in the state, of which around 681,000 were automobiles, approximately 820,000 were trucks of all types, some 36,000 were motorcycles, and about 2,000 were buses. In that same year, there were 1,271,365 licensed drivers in the state.

Rail service did not begin in New Mexico until 1879. New Mexico had 2,388 mi (3,844 km) of track in 2003, with Class I roads making up close to 94% of that total. The main rail lines serving the state are the Union Pacific and the Burlington Northern Santa Fe. As of 2006, Amtrak provided passenger service to five stations in New Mexico via its Chicago to Los Angeles Southwest

Chief train and via its New Orleans to Los Angeles train the Sunset Limited.

In 2005, New Mexico had a total of 176 public and private-use aviation-related facilities. This included 150 airports, 25 heliports, and one seaplane base. Albuquerque International is the state's main airport. In 2004, the airport had 3,079,172 enplanements.

11 HISTORY

The earliest evidence of human occupation in what is now New Mexico, dating from about 20,000 years ago, has been found in Sandia Cave near Albuquerque. This so-called Sandia man was later joined by other nomadic hunters—the Clovis and Folsom people from the northern and eastern portions of the state, and the Cochise culture, which flourished in southwestern New Mexico from about 10,000 to 500 BC. The Mogollon people tilled small farms in the southwest from 300 BC to about 100 years before Columbus came to the New World. Also among the state's early inhabitants were the Basket Makers, a seminomadic people who eventually evolved into the Anasazi, or Cliff Dwellers. The Anasazi, who made their home in the Four Corners region (where present-day New Mexico meets Colorado, Arizona, and Utah), were the predecessors of the modern Pueblo Indians.

The Pueblo people lived along the upper Rio Grande, except for a desert group east of Albuquerque, who lived in the same kind of apartment-like villages as the river Pueblos. During the 13th century, the Navajo settled in the Four Corners area to become farmers, shepherders, and occasional enemies of the Pueblos. The Apache, a more nomadic and warlike group who came at about the same time, later posed a threat to all the non-Indians who arrived in New Mexico during the Spanish, Mexican, and American periods.

Francisco Vásquez de Coronado led the earliest major expedition to New Mexico, beginning in 1540, 80 years before the Pilgrims landed at Plymouth Rock. In 1598, Don Juan de Onate led an expedition up the Rio Grande, where, one year later, he established the settlement of San Gabriel, near present-day Espanola; in 1610, the Spanish moved their center of activity to Santa Fe. For more than two centuries, the Spaniards, who concentrated their settlements, farms, and ranches in the upper Rio Grande Valley, dominated New Mexico, except for a period from 1680 to about 1693, when the Pueblo Indians temporarily regained control of the region.

In 1821, Mexico gained its independence from Spain, and New Mexico came under the Mexican flag for 25 years. The unpopularity of government officials sent from Mexico City and the inability of the new republic to control the Apache led to the revolt of 1837, which was put down by a force from Albuquerque led by General Manuel Armijo. In 1841, as governor of the Mexican territory, Armijo defeated an invading force from the Republic of Texas, but he later made a highly controversial decision not to defend Apache Pass east of Santa Fe during the Mexican-American War, instead retreating and allowing US forces under the command of General Stephen Watts Kearny to enter the capital city unopposed on 18 August 1846.

Kearny, without authorization from Congress, immediately attempted to make New Mexico a US territory. He appointed the respected Indian trader Charles Bent, a founder of Bent's Fort on the Santa Fe Trail, as civil governor, and then led his army on to

California. After Kearny's departure, a Mexican and Indian revolt in Taos resulted in Bent's death; the suppression of the Taos uprising by another US Army contingent secured American control over New Mexico, although the area did not officially become a part of the United States until the Treaty of Guadalupe-Hidalgo ended the Mexican-American War in 1848.

New Mexico became a US territory as part of the Compromise of 1850, which also brought California into the Union as a free state. Territorial status did not bring about rapid or dramatic changes in the lives of those who were already in New Mexico. However, an increasing number of people traveling on the Santa Fe Trail—which had been used since the early 1820s to carry goods between Independence, Mo., and Santa Fe—were Americans seeking a new home in the Southwest. One issue that divided many of these new settlers from the original Spanish-speaking inhabitants was land. Native New Mexicans resisted, sometimes violently, the efforts of new Anglo residents and outside capital to take over lands that had been allocated during the earlier Spanish and Mexican periods. Anglo lawyers such as Thomas Benton Catron acquired unprecedented amounts of land from native grantees as payment of legal fees in the prolonged litigation that often accompanied these disputes. Eventually, a court of private land claims, established by the federal government, legally processed 33 million acres (13 million hectares) of disputed land from 1891 to 1904.

Land disputes were not the only cause of violence during the territorial period. In 1862, Confederate General Henry Hopkins Sibley led an army of Texans up the Rio Grande and occupied Santa Fe; he was defeated at Glorieta Pass in northern New Mexico by a hastily assembled army that included volunteers from Colorado and New Mexico and Union regulars, in a battle that has been labeled the Gettysburg of the West. The so-called Lincoln County War of 1878–81, a range war pitting cattlemen against merchants and involving, among other partisans, William H. Bonney (Billy the Kid), helped give the territory the image of a lawless region unfit for statehood.

Despite the tumult, New Mexico began to make substantial economic progress. In 1879, the Atchison, Topeka and Santa Fe Railroad entered the territory. General Lew Wallace, who was appointed by President Rutherford B. Hayes to settle the Lincoln County War, was the last territorial governor to enter New Mexico by stagecoach and the first to leave it by train.

By the end of the 19th century, the Indian threat that had plagued the Anglos, like the Spanish-speaking New Mexicans before them, had finally been resolved. New Mexicans won the respect of Theodore Roosevelt by enlisting in his Rough Riders during the Spanish-American War, and when he became president, he returned the favor by working for statehood. New Mexico finally became a state on 6 January 1912, under President William H. Taft.

In March 1916, irregulars of the Mexican revolutionary Pancho Villa crossed the international boundary into New Mexico, killing, robbing, and burning homes in Columbus. US troops under the command of General John J. Pershing were sent into Mexico on a long and unsuccessful expedition to capture Villa, while National Guardsmen remained on the alert in the Columbus area for almost a year.

The decade of the 1920s was characterized by the discovery and development of new resources. Potash salts were found near Carlsbad, and important petroleum reserves in the south-

east and northwest were discovered and exploited. Oil development made possible another important industry, tourism, which began to flourish as gasoline became increasingly available. This period of prosperity ended, however, with the onset of the Great Depression.

World War II revived the economy, but at a price. In 1942, hundreds of New Mexicans stationed in the Philippines were among the US troops forced to make the cruel "Bataan march" to Japanese prison camps. Scientists working at Los Alamos ushered in the Atomic Age with the explosion of the first atomic bomb at White Sands Proving Ground in June 1945.

The remarkable growth that characterized the Sunbelt during the postwar era has been noticeable in New Mexico. Newcomers from many parts of the country moved to the state, a demographic shift with profound social, cultural, and political consequences. Spanish-speaking New Mexicans, once an overwhelming majority, became a minority. As of the 2000 census, Hispanics accounted for 42% of the state's population, and Native Americans accounted for 9.5% of the population.

Defense-related industries have been a mainstay of New Mexico's economy in the postwar period. Income from this sector declined in the early 1990s due to reductions in military spending following the end of the Cold War. However, this decline was offset by New Mexico's diversification into nonmilitary production, including such high-tech projects as Intel's Rio Rancho plant, which, in the mid-1990s, was the world's largest computer-chip factory. Tourism also played a major role in New Mexico's economy through the 1990s, and the state remains a leading center of space and nuclear research.

Today New Mexico's leaders struggle with two persistent problems—poverty and crime. In 1998, with 20.4% of its residents living below the poverty level (the highest percentage in the nation), the state's children were found to be suffering. More than one in four children in New Mexico was poor, posing the immediate problems of hunger and malnutrition, lack of education, and a strain on the public health system as well as the long-term challenge to the juvenile justice system. Government figures in 1998 showed the state ranked as the most violent in the nation, with 961 crimes per 100,000 residents. New Mexico was one of four states (Louisiana, Mississippi, and Arkansas were the other three) with a poverty rate for 2002–04 (based on a three-year average) of over 17%. (New Mexico's rate was 17.5%.)

The state's public education system also posed a major issue in 2000, with the debate centering on proposed voucher legislation that would help parents pay for private schools. Opponents, including New Mexico's Democratic Party, argued in favor of legislation that would boost public schools instead—increasing teacher pay, reducing class sizes, and improving early childhood education.

Democratic Governor Bill Richardson, elected in 2002 by the largest margin of any candidate since 1964, came to the job with a long list of political credentials: former US Representative, UN ambassador, and Energy Secretary. He has been nominated several times for the Nobel Peace Prize. By 2005 he had made progress on such target issues as tax cuts, school reform, job creation, water projects, and efforts to combat drunk driving.

1² STATE GOVERNMENT

The constitution of New Mexico was drafted in 1910, approved by the voters in 1911, and came into effect when statehood was achieved in 1912. A new constitution drawn up by a convention of elected delegates was rejected by the voters in 1969. By January 2005, the 1912 document had been amended 151 times.

The legislature consists of a 42-member Senate and a 70-member House of Representatives. Senators must be at least 25 years old, qualified voters, and residents of their districts; they serve four-year terms. House members must be 21 years old, qualified voters, and residents of their districts; they serve two-year terms. The legislature meets every year, for 60 calendar days in odd-numbered years and 30 calendar days in even-numbered years. The legislature may call special sessions, limited to 30 calendar days, by petition of three-fifths of the members of each house. Legislators do not receive a salary from the state.

The executive branch consists of the governor and lieutenant governor (elected jointly), secretary of state, auditor, treasurer, attorney general, and commissioner of public lands. They are elected for four-year terms; none may serve more than two successive terms. Candidates for governor must be 30 years old, US citizens, qualified voters, and residents of New Mexico for at least five years prior to election. As of December 2004, the governor's salary was \$110,000. Three elected members of the Corporation Commission, which has various regulatory and revenue-raising responsibilities, serve six-year terms.

A bill passed by the legislature becomes law if signed by the governor, if left unsigned by the governor for three days while the legislature is in session, or if passed over the governor's veto by two-thirds of the members present in each house. If the governor does not act on a bill after the legislature adjourns, the bill dies after 20 days.

In general, constitutional amendments must be approved by majority vote in each house and by a majority of the electorate. Amendments dealing with voting rights, school lands, and linguistic requirements for education can be proposed only by three-fourths of each house, and subsequently must be approved by three-fourths of the total electorate and two-thirds of the electorate in each county.

In order to vote in state elections, a person must be 18 years old, a US citizen, and a state resident. Restrictions apply to convicted felons and those declared mentally incompetent by the court.

1³ POLITICAL PARTIES

Although Democrats hold a very substantial edge in voter registration—53% of registered voters to the Republicans' 33% as of 1998—New Mexico has been a "swing state" in US presidential elections since it entered the Union. Between 1948 and 1992, New Mexicans voted for Democratic presidential candidates four times and Republican presidential candidates eight times, choosing in every election except 1976 and 1992 the candidate who was also the presidential choice of voters nationwide. In the 2000 presidential election, Democrat Al Gore beat Republican candidate George W. Bush by a mere 366 votes, out of approximately 615,000 cast statewide. In 2004, Bush won the state, with 50% of votes cast to 49% for Democratic challenger John Kerry. In 2004 there were 1,105,000 registered voters. The state had five electoral votes in the 2004 presidential election.

New Mexico's US senators in 2003 were Democrat Jeff Bingaman, elected in 2000 to his fourth term, and Republican Peter V. Domenici, who was elected to his sixth term in 2002. Following the 2004 elections, New Mexico's US House delegation consisted of two Republicans and one Democrat. As of mid-2005 there were 23 Democrats and 19 Republicans in the state Senate and 42 Democrats and 28 Republicans in the state House. Governor Bill

2004***	5	*Bush, G. W. (R)	376,930	370,942	2,382

*Won US presidential election.

**IND. candidate Ross Perot received 91,895 votes in 1992 and 32,257 votes in 1996.

***IND. candidate Ralph Nader received 4,053 votes in 2004.

Richardson, Democrat, was first elected in 2002. He had previously served as a US Representative, UN ambassador, and Energy Secretary under President Bill Clinton.

14 LOCAL GOVERNMENT

There were 33 counties in New Mexico as of 2005. Each is governed by commissioners elected for two-year terms. Other county officers include the clerk, assessor, treasurer, surveyor, sheriff, and probate judge. Municipalities are incorporated as cities, towns, or villages. As of 2005, there were 101 municipalities, 89 public school districts, and 628 special districts.

The Indian Reorganization Act of 1934 reaffirmed the right of Indians to govern themselves, adopt constitutions, and form corporations to do business under federal law. Indians also retain the right to vote in state and federal elections. Pueblo Indians elect governors from each pueblo to form a coalition called the All-Indian Pueblo Council. The Apache elect a tribal council headed by a president and vice-president. The Navajo—one-third of whom live in New Mexico—elect a chairman, vice-chairman, and council members from their reservation in New Mexico and Arizona.

In 2005, local government accounted for about 77,894 full-time (or equivalent) employment positions.

15 STATE SERVICES

To address the continuing threat of terrorism and to work with the federal Department of Homeland Security, homeland security in New Mexico operates under executive order; a special assistant to the governor is designated as the state homeland security advisor.

The Department of Transportation (until 2003 the State Highway Commission) supervises the state transportation system; with it is included the Division of Aviation.

Welfare services are provided through the Human Services Department. A related service agency is the Department of Indian Affairs. Health services are provided by the Department of Health. The various public protection agencies include the divisions of consumer protection, criminal appeals, civil, litigation, prosecutions and investigations, violence against women, and Medicaid fraud—all within the purview of the Attorney General's Office; the Department of Public Safety; the Department of Corrections; and the New Mexico State Police. Education is regulated by the Department of Education.

The state's natural resources are protected by the Department of Game and Fish, the Environment Department, the Energy Minerals and Natural Resources Department, and the Tourism Department.

16 JUDICIAL SYSTEM

New Mexico's judicial branch consists of a supreme court, an appeals court, district courts, probate courts, magistrate courts, and other lesser courts as created by law.

The New Mexico Supreme Court is composed of a chief justice and four associate justices. The Appeals Court, created to take over some of the Supreme Court's caseload, is composed of 10 judges. All are elected for eight-year terms.

The state's 33 counties are divided into 13 judicial districts, served by 72 district judges, each elected for a six-year term. District courts have unlimited general jurisdiction and are commonly referred to as trial courts. They also serve as courts of review for

decisions of lower courts and administrative agencies. Each county has a probate court, served by a probate judge who is elected from within the county for a two-year term.

As of 31 December 2004, a total of 6,379 prisoners were held in New Mexico's state and federal prisons, an increase from 6,223 of 2.5% from the previous year. As of year-end 2004, a total of 581 inmates were female, up from 576 or 0.9% from the year before. Among sentenced prisoners (one year or more), New Mexico had an incarceration rate of 318 per 100,000 population in 2004.

According to the Federal Bureau of Investigation, New Mexico in 2004, had a violent crime rate (murder/nonnegligent manslaughter; forcible rape; robbery; aggravated assault) of 687.3 reported incidents per 100,000 population, or a total of 13,081 reported incidents. Crimes against property (burglary; larceny/theft; and motor vehicle theft) in that same year totaled 79,895 reported incidents or 4,197.7 reported incidents per 100,000 people. New Mexico has a death penalty, of which lethal injection is the sole method of execution. From 1976 through 5 May 2006, the state has carried out only one execution, on November 6, 2001. As of 1 January 2006, New Mexico had only two inmates on death row.

In 2003, New Mexico spent \$71,574,810 on homeland security, an average of \$36 per state resident.

17 ARMED FORCES

In 2004, there were 11,994 active-duty military personnel and 6,805 civilian personnel stationed in New Mexico, 6,523 of whom were in the Air Force. The major installations are Kirtland Air Force Base in the Albuquerque area, Holloman Air Force Base at Alamogordo, and White Sands Missile Range north of Las Cruces. Defense contract awards totaled more than \$1.07 billion in 2004, and payroll outlays were \$1.4 billion.

There were 180,172 veterans living in New Mexico in 2003. Of these, 22,349 served in World War II; 18,976 in the Korean conflict; 56,308 during the Vietnam era; and 28,154 served in the Persian Gulf War. For the fiscal year 2004, total Veterans Affairs expenditures in New Mexico amounted to \$686 million.

As of 31 October 2004, the New Mexico State Police employed 565 full-time sworn officers.

18 MIGRATION

Prior to statehood, the major influx of migrants came from Texas and Mexico; many of these immigrants spoke Spanish as their primary language.

Wartime prosperity during the 1940s brought a wave of Anglos into the state. New Mexico experienced a net gain through migration of 78,000 people during 1940–60, a net loss of 130,000 during the economic slump of the 1960s, and another net gain of 154,000 between 1970 and 1983. In the 1980s, New Mexico had a net gain from migration of 63,000 residents, accounting for 28% of the state's population increase during those years. Between 1990 and 1998, the state had net gains of 55,000 in domestic migration and 36,000 in international migration. In 1998, 2,199 foreign immigrants entered New Mexico. The state's overall population increased 14.6% between 1990 and 1998. In the period 2000–05, net international migration was 27,974 and net internal migration was 9,527, for a net gain of 37,501 people.

19 INTERGOVERNMENTAL COOPERATION

New Mexico participates in the Interstate Oil and Gas Compact; Interstate Compact for Juveniles; Western Interstate Commission for Higher Education; Western Interstate Corrections Compact; Western Interstate Nuclear Compact; compacts governing use of the Rio Grande and the Canadian, Costilla, Colorado, La Plata, and Pecos rivers; and other interstate agreements including the Cumbres and Toltec Scenic Railroad Compact. It is an associate member of the Interstate Mining Compact. In fiscal year 2005, New Mexico received \$3.018 billion in federal grants, an estimated \$3.070 billion in fiscal year 2006, and an estimated \$3.142 billion in fiscal year 2007.

20 ECONOMY

New Mexico was primarily an agricultural state until the 1940s, when military activities assumed major economic importance. Currently, major industries include manufacturing, petroleum, and food. Tourism also continues to flourish. Major employers range from Wal-Mart, Intel, Kirtland Air Force Base, to Los Alamos National Laboratory, and Honeywell Inc. New Mexico's economy had an unusually large public sector, accounting for over 18% of total state product in 2001, compared to the state average of 12%. The state was relatively unaffected by both the boom of the late 1990s and the bust of 2001. In 1998 and 1999, the state posted anemic growth rates of 1.4% and 1.5%, and although this picked up to a strong 6.8% in 2000, growth continued at 5.4% in the recession year of 2001. The basis for the improvement—growth in general services, the government, transportation and utilities sector, and financial services offsetting steady losses in mining, manufacturing and construction—continued into 2002. As was true with the previous national recession in the early 1990s, New Mexico has not experienced net job losses.

New Mexico's gross state product (GSP) in 2004 was \$61.012 billion, of which the real estate sector accounted for the largest share at \$7.105 billion or 11.6% of GSP, followed by manufacturing (durable and nondurable goods) at \$5.446 billion (8.9% of GSP), and health care and social assistance services at \$4.107 billion (6.7% of GSP). In that same year, there were an estimated 143,909 small businesses in New Mexico. Of the 42,241 businesses that had employees, an estimated total of 40,611 or 96.1% were small companies. An estimated 5,683 new businesses were established in the state in 2004, up 3.2% from the year before. Business terminations that same year came to 5,592, down 3.1% from 2003. There were 727 business bankruptcies in 2004, down by 6.1% from the previous year. In 2005, the state's personal bankruptcy (Chapter 7 and Chapter 13) filing rate was 485 filings per 100,000 people, ranking New Mexico as the 27th highest in the nation.

21 INCOME

In 2005 New Mexico had a gross state product (GSP) of \$69 billion which accounted for 0.6% of the nation's gross domestic product and placed the state at number 38 in highest GSP among the 50 states and the District of Columbia.

According to the Bureau of Economic Analysis, in 2004 New Mexico had a per capita personal income (PCPI) of \$26,184. This ranked 48th in the United States and was 79% of the national average of \$33,050. The 1994–2004 average annual growth rate of

PCPI was 4.0%. New Mexico had a total personal income (TPI) of \$49,827,505,000, which ranked 37th in the United States and reflected an increase of 6.5% from 2003. The 1994–2004 average annual growth rate of TPI was 5.3%. Earnings of persons employed in New Mexico increased from \$34,637,098,000 in 2003 to \$37,209,628,000 in 2004, an increase of 7.4%. The 2003–04 national change was 6.3%.

The US Census Bureau reports that the three-year average median household income for 2002–04 in 2004 dollars was \$37,587 compared to a national average of \$44,473. During the same period an estimated 17.5% of the population was below the poverty line as compared to 12.4% nationwide.

22 LABOR

According to the Bureau of Labor Statistics (BLS), in April 2006 the seasonally adjusted civilian labor force in New Mexico numbered 958,000, with approximately 41,100 workers unemployed, yielding an unemployment rate of 4.3%, compared to the national average of 4.7% for the same period. Preliminary data for the same period placed nonfarm employment at 824,800. Since the beginning of the BLS data series in 1976, the highest unemployment rate recorded in New Mexico was 9.9% in April 1983. The historical low was 4% in March 2006. Preliminary nonfarm employment data by occupation for April 2006 showed that approximately 6.9% of the labor force was employed in construction; 4.5% in manufacturing; 17.1% in trade, transportation, and public utilities; 4.2% in financial activities; 11.4% in professional and business services; 13% in education and health services; 10.2% in leisure and hospitality services; and 24.7% in government.

The US Department of Labor's Bureau of Labor Statistics reported that in 2005, a total of 63,000 of New Mexico's 777,000 employed wage and salary workers were formal members of a union. This represented 8.1% of those so employed, up from 6.7% in 2004, but still below the national average of 12%. Overall in 2005, a total of 83,000 workers (10.7%) in New Mexico were covered by a union or employee association contract, which includes those workers who reported no union affiliation. New Mexico is one of 28 states that does not have a right-to-work law.

As of 1 March 2006, New Mexico had a state-mandated minimum wage rate of \$5.15 per hour. In 2004, women in the state accounted for 46.8% of the employed civilian labor force.

23 AGRICULTURE

The first farmers of New Mexico were the Pueblo Indians, who raised corn, beans, and squash. Wheat and barley were introduced from Europe, and indigo and chiles came from Mexico.

In 2005, New Mexico's total farm marketings were \$2.67 billion. About 25% came from crops and 75% from livestock products. Leading crops included hay and wheat. In 2004, hay production was 1,365,000 tons, valued at \$163,900,000, and wheat production was 7,800,000 bushels, valued at \$24,570,000. The state also produced 10,440,000 bushels of corn for grain, and 594,000 hundred-weight of potatoes in 2004.

24 ANIMAL HUSBANDRY

Meat animals, especially cattle, represent the bulk of New Mexico's agricultural income. In 2005, there were nearly 1.5 million cattle and calves, valued at \$1.64 billion. In 2004, there were an estimat-

ed 2,500 hogs and pigs, valued at \$275,000 on New Mexico farms. During 2003, New Mexico farms and ranches produced around 7.6 million lb (3.4 million kg) of sheep and lambs which brought in a gross income of some \$7.7 million. The main stock-raising regions are in the east, northeast, and northwest.

25 FISHING

There is no commercial fishing in New Mexico. In 2004, the state issued 205,291 sport fishing licenses. The native cutthroat trout is prized by sport fishermen, however, and numerous species have been introduced into state lakes and reservoirs. The federal government sponsors two fish hatcheries and technology centers in New Mexico: in Dexter and Mora. The Dexter center is the only facility in the nation dedicated to studying and distributing endangered fish for restocking in waters where they naturally occur. The center works with 14 imperiled fish species including the razorback sucker, Colorado squawfish, Guzman beautiful shiner, bonytail chub, and the Yaqui catfish.

26 FORESTRY

Lumber production was 111 million board feet in 2002. Although lumbering ranks low as a source of state income, the forests of New Mexico are of crucial importance because of the role they play in water conservation and recreation.

In 2004, 16,680,000 acres (670,000 hectares), or more than 20% of New Mexico's land area, was forestland. Of the state total, 9,522,000 acres (3,854,000 hectares) were federally owned or managed, and 825,000 acres (334,000 hectares) were owned by the state. Privately owned lands accounted for 6,331,000 acres (2,562,000 hectares). Seven national forests covered 9 million acres (3.7 million hectares) in 2005, the largest of which was Gila National Forest, at 2.7 million acres (1.1 million hectares).

27 MINING

According to preliminary data from the US Geological Survey (USGS), the estimated value of nonfuel mineral production by New Mexico in 2003 was \$533 million, a decrease from 2002 of about 5%. The USGS data ranked New Mexico as 25th among the 50 states by the total value of its nonfuel mineral production, accounting for almost 1.5% of total US output.

According to the preliminary data for 2003, potash and copper, followed by construction sand and gravel, cement (portland and masonry), and crushed stone were the state's top nonfuel minerals by value. Collectively, these five commodities accounted for around 90% of all nonfuel mineral output, by value. By volume, New Mexico in 2003, was the nation's leading producer of perlite, potash, and zeolites. The state also ranked third in copper, mica, and pumice output and fifth in molybdenum.

In 2003, preliminary data showed that New Mexico produced 85,000 metric tons of copper ore, valued at \$153 million, and 14 million metric tons of construction sand and gravel valued at \$68.6 million. Crushed stone output that same year totaled 3.9 million metric tons, with a value of \$25.2 million.

According to the state, the vast majority of the potash finds its way as a soil amendment in agriculture; the remainder is used in industry for such things as manufacturing television tubes, chinaware, soaps, and synthetic rubber.

28 ENERGY AND POWER

As of 2003, New Mexico had 34 electrical power service providers, of which eight were publicly owned and 21 were cooperatives. Of the remainder, four were investor owned, and one was federally operated. As of that same year there were 894,309 retail customers. Of that total, 624,777 received their power from investor-owned service providers. Cooperatives accounted for 189,781 customers, while publicly owned providers had 79,747 customers. There were four federal customers.

Total net summer generating capability by the state's electrical generating plants in 2003 stood at 6.289 million kW, with total production that same year at 32.735 billion kWh. Of the total amount generated, 97.1% came from electric utilities, with the remainder coming from independent producers and combined heat and power service providers. The largest portion of all electric power generated, 28.812 billion kWh (88%), came from coal-fired plants, with natural gas fueled plants in second place at 3.518 billion kWh (10.7%). Other renewable power sources accounted for 0.6% of all power generated, with hydroelectric generation and petroleum fired plants accounting for 0.5% and 0.2%, respectively.

New Mexico is a major producer of oil and natural gas, and has significant reserves of low-sulfur bituminous coal.

Most of New Mexico's natural gas and oil fields are located in the southeastern counties of Eddy, Lea, and Chaves, and in the northwestern counties of McKinley and San Juan. As of 2004, New Mexico had proven crude oil reserves of 669 million barrels, or 3% of all proven US reserves, while output that same year averaged 176,000 barrels per day. Including federal offshore domains, the state that year ranked fifth (fourth excluding federal offshore) in proven reserves and sixth (fifth excluding federal offshore) in production among the 31 producing states. In 2004 New Mexico had 27,389 producing oil wells and accounted for 3% of all US production. As of 2005, the state's Three refineries had a combined crude oil distillation capacity of 112,600 barrels per day.

In 2004, New Mexico had 38,574 producing natural gas and gas condensate wells. In that same year, marketed gas production (all gas produced excluding gas used for repressuring, vented and flared, and nonhydrocarbon gases removed) totaled 1,632.539 billion cu ft (46.36 billion cu m). As of 31 December 2004, proven reserves of dry or consumer-grade natural gas totaled 18,512 billion cu ft (525.7 billion cu m).

New Mexico in 2004, had four producing coal mines, three of which were surface operations. Coal production that year totaled 27,250,000 short tons, up from 26,389,000 short tons in 2003. Of the total produced in 2004, surface mines accounted for 19,565,000 short tons. Recoverable coal reserves in 2004 totaled 1.3 billion short tons. One short ton equals 2,000 lb (0.907 metric tons).

29 INDUSTRY

More than 50% of the manufacturing jobs in the state are located in and around Albuquerque, in Bernalillo County. Other counties with substantial manufacturing activity include Santa Fe, San Juan, Otero, McKinley, and Dona Ana.

According to the US Census Bureau's Annual Survey of Manufactures (ASM) for 2004, New Mexico's manufacturing sector covered some 12 product subsectors. The shipment value of all products manufactured in the state that same year was \$17.392 billion.

Of that total, computer and electronic product manufacturing accounted for the largest share at \$9.714 billion. It was followed by food manufacturing at \$1.669 billion; miscellaneous manufacturing at \$796.981 million; nonmetallic mineral product manufacturing at \$437.260 million; and transportation equipment manufacturing at \$416.578 million.

In 2004, a total of 32,927 people in New Mexico were employed in the state's manufacturing sector, according to the ASM. Of that total, 22,821 were actual production workers. In terms of total employment, the computer and electronic product manufacturing industry accounted for the largest portion of all manufacturing employees at 9,352 with 5,410 actual production workers. It was followed by food manufacturing at 3,875 employees (3,011 actual production workers); miscellaneous manufacturing at 3,248 employees (2,229 actual production workers); and fabricated metal product manufacturing with 2,519 employees (1,825 actual production workers).

ASM data for 2004 showed that New Mexico's manufacturing sector paid \$1.343 billion in wages. Of that amount, the computer and electronic product manufacturing sector accounted for the largest share at \$512.917 million. It was followed by food manufacturing at \$128.635 million; miscellaneous manufacturing at \$90.758 million; fabricated metal product manufacturing at \$83.089 million; and transportation equipment manufacturing at \$79.082 million.

3⁰ COMMERCE

According to the 2002 Census of Wholesale Trade, New Mexico's wholesale trade sector had sales that year totaling \$8.9 billion from 2,046 establishments. Wholesalers of durable goods accounted for 1,295 establishments, followed by nondurable goods wholesalers at 650 and electronic markets, agents, and brokers accounting for 101 establishments. Sales by durable goods wholesalers in 2002 totaled \$3.7 billion, while wholesalers of nondurable goods saw sales of \$4.3 billion. Electronic markets, agents, and brokers in the wholesale trade industry had sales of \$903.6 million.

In the 2002 Census of Retail Trade, New Mexico was listed as having 7,227 retail establishments with sales of \$18.3 billion. The leading types of retail businesses by number of establishments were: miscellaneous store retailers (1,085); gasoline stations tied with clothing and clothing accessories stores (958 each); motor vehicle and motor vehicle parts dealers (851); and food and beverage stores (639). In terms of sales, motor vehicle and motor vehicle parts dealers accounted for the largest share of retail sales at \$4.7 billion, followed by general merchandise stores at \$3.3 billion; gasoline stations at \$2.09 billion; and food and beverage stores at \$2.02 billion. A total of 89,413 people were employed by the retail sector in New Mexico that year.

New Mexico's foreign exports totaled \$2.5 billion in 2005.

3¹ CONSUMER PROTECTION

Consumer protection in New Mexico is the responsibility of the Office of the Attorney General's Consumer Protection Division, which is authorized by the state's primary consumer law, the Unfair Practices Act, to provide a range of services designed to protect consumers and to resolve disputes between business and consumers. These services can involve the mediation of a dispute, educating the public on consumer issues, investigating suspicious

business activities, the proposing of legislation, and through the Attorney General's Office, the initiation of litigation.

When dealing with consumer protection issues, the state's Attorney General's Office can initiate civil and criminal proceedings; represent the state before state and federal regulatory agencies; administer consumer protection and education programs; handle formal consumer complaints; and exercise broad subpoena powers. In antitrust actions, the Attorney General's Office can act on behalf of those consumers who are incapable of acting on their own; initiate damage actions on behalf of the state in state courts; initiate criminal proceedings; and representing other governmental entities in recovering civil damages under state or federal law. However, neither the Attorney General's office nor the Consumer Protection Division are authorized to act in a private capacity for an individual citizen.

The offices of the Consumer Protection Division are located in Santa Fe.

3² BANKING

New Mexico's first bank, the First National Bank of Santa Fe, was organized in 1870. After the turn of the century, banking establishments expanded rapidly in the state, mainly because of growth in the livestock industry.

As of June 2005, New Mexico had 57 insured banks, savings and loans, and saving banks, plus 25 state-chartered and 28 federally chartered credit unions (CUs). Excluding the CUs, the Albuquerque market area accounted for the largest portion of the state's financial institutions and deposits in 2004, with 24 institutions and \$8.645 billion in deposits. As of June 2005, CUs accounted for 21.8% of all assets held by all financial institutions in the state, or some \$4.516 billion. Banks, savings and loans, and savings banks collectively accounted for the remaining 78.2% or \$16.230 billion in assets held.

In 2004, the median percentage of past-due/nonaccrual loans to total loans was 1.23%, down from 1.58% in 2003. The median net interest margin (the difference between the lower rates offered savers and the higher rates charged on loans) was 4.65% in 2004, up from 4.50% in 2003.

Regulation of state-chartered banks and other financial institutions is the responsibility of the Financial Institutions Division.

3³ INSURANCE

In 2004, 679,000 individual life insurance policies were in force in the state, and their total value was about \$52.7 billion; total value for all categories of life insurance (individual, group, and credit) was about \$91.5 billion. The average coverage amount is \$77,700 per policy holder. Death benefits paid that year totaled \$297.2 million.

As of 2003, there were seven property and casualty and one life and health insurance company domiciled in the state. In 2004, direct premiums for property and casualty insurance totaled over \$2.3 billion. That year, there were 12,655 flood insurance policies in force in the state, with a total value of \$.4 billion. About \$654 million of coverage was held through FAIR plans, which are designed to offer coverage for some natural circumstances, such as wind and hail, in high risk areas.

In 2004, 42% of state residents held employment-based health insurance policies, 4% held individual policies, and 30% were

covered under Medicare and Medicaid; 22% of residents were uninsured. New Mexico has the lowest percentage of employment-based insureds among the 50 states and the second-highest percentage of uninsured residents (following Texas). In 2003, employee contributions for employment-based health coverage averaged at 18% for single coverage and 27% for family coverage. The state offers a six-month health benefits expansion program for small-firm employees in connection with the Consolidated Omnibus Budget Reconciliation Act (COBRA, 1986), a health insurance program for those who lose employment-based coverage due to termination or reduction of work hours.

In 2003, there were over 1.2 million auto insurance policies in effect for private passenger cars. Required minimum coverage includes bodily injury liability of up to \$25,000 per individual and \$50,000 for all persons injured in an accident, as well as property damage liability of \$10,000. In 2003, the average expenditure per vehicle for insurance coverage was \$730.46.

The insurance industry is regulated by the State Insurance Board.

34 SECURITIES

There are no securities exchanges in New Mexico. In 2005, there were 290 personal financial advisers employed in the state and 490 securities, commodities, and financial services sales agents. In 2004, there were over 23 publicly traded companies within the state, with over five NASDAQ companies and two NYSE listings. In 2006, the state had two Fortune 1,000 companies; PNM Resources (Albuquerque) ranked 785th in the nation with revenues of over \$2 billion, followed by Thornburg Mortgage (Santa Fe) at 951st in the nations with \$1.5 billion in revenues. Both companies are listed on the NYSE.

35 PUBLIC FINANCE

The governor of New Mexico submits a budget annually to the legislature for approval. The fiscal year (FY) runs 1 July–30 June.

Fiscal year 2006 general funds were estimated at \$5.9 billion for resources and \$5.3 billion for expenditures. In fiscal year 2004, federal government grants to New Mexico were \$4.6 billion.

In the fiscal year 2007 federal budget, New Mexico was slated to receive: \$52 million in State Children's Health Insurance Program (SCHIP) funds to help New Mexico provide health coverage to low-income, uninsured children who do not qualify for Medicaid. This funding is a 23% increase over fiscal year 2006; \$11.7 million for the HOME Investment Partnership Program to help New Mexico fund a wide range of activities that build, buy, or rehabilitate affordable housing for rent or homeownership, or provide direct rental assistance to low-income people. This funding is an 11% increase over fiscal year 2006; and \$2.6 million for the site acquisition and design of a new replacement border station in Columbus.

36 TAXATION

In 2005, New Mexico collected \$4,471 million in tax revenues or \$2,319 per capita, which placed it 20th among the 50 states in per capita tax burden. The national average was \$2,192 per capita. Property taxes accounted for 0.9% of the total, sales taxes 34.8%, selective sales taxes 13.7%, individual income taxes 24.3%, corporate income taxes 5.4%, and other taxes 20.8%.

As of 1 January 2006, New Mexico had four individual income tax brackets ranging from 1.7% to 5.3%. The state taxes corporations at rates ranging from 4.8% to 7.6% depending on tax bracket.

In 2004, state and local property taxes amounted to \$840,068,000 or \$441 per capita. The per capita amount ranks the state third-lowest nationally. Local governments collected \$786,994,000 of the total and the state government \$52,779,000.

New Mexico taxes retail sales at a rate of 5%. In addition to the state tax, local taxes on retail sales can reach as much as 2.25%,

making for a potential total tax on retail sales of 7.25%. Food purchased for consumption off-premises is taxable. The tax on cigarettes is 91 cents per pack, which ranks 22nd among the 50 states and the District of Columbia. New Mexico taxes gasoline at 18.9 cents per gallon. This is in addition to the 18.4 cents per gallon federal tax on gasoline.

According to the Tax Foundation, for every federal tax dollar sent to Washington in 2004, New Mexico citizens received \$2.00 in federal spending, one of the highest rates in the nation.

37 ECONOMIC POLICY

The Economic Development Department (EDD) promotes industrial and community development through such measures as tax-free bonds for manufacturing facilities; tax credits for investment and for job training, venture capital funds; and community development block grants. The state also seeks export markets for New Mexico's products and encourages use of the state by the film industry. Total incentives to employ 100 workers in a rural area, exporting most of the product, and investing at least \$15 million amounted to almost \$4 billion in 2000. The Economic Development Partnership, the biggest part of the Economic Development Department, focuses on business and community development. Separate divisions include International Trade, the Film Office, the Office of Science and Technology, and the New Mexico Office for Space Commercialization (NMOSC). In 2006, New Mexico targeted the following areas for economic development: aerospace, biotechnology, film, food processing, manufacturing, maquila suppliers, renewable energy, and technology.

38 HEALTH

The infant mortality rate in October 2005 was estimated at 5.8 per 1,000 live births. The birth rate in 2003 was 14.9 per 1,000 population. The abortion rate stood at 14.7 per 1,000 women in 2000. In 2003, about 68.9% of pregnant woman received prenatal care beginning in the first trimester, this was the lowest rate for prenatal care in the nation. In 2004, approximately 84% of children received routine immunizations before the age of three.

The crude death rate in 2003 was 7.9 deaths per 1,000 population. As of 2002, the death rates for major causes of death (per 100,000 resident population) were: heart disease, 181.1; cancer, 165.3; cerebrovascular diseases, 38.5; chronic lower respiratory diseases, 46.2; and diabetes, 31.4. The mortality rate from HIV infection was 1.9 per 100,000 population. In 2004, the reported AIDS case rate was at about 9.6 per 100,000 population. In 2002, about 54.4% of the population was considered overweight or obese. As of 2004, about 20.3% of state residents were smokers.

In 2003, New Mexico had 37 community hospitals with about 3,700 beds. There were about 166,000 patient admissions that year and 4.5 million outpatient visits. The average daily inpatient census was about 2,100 patients. The average cost per day for hospital care was \$1,563. Also in 2003, there were about 81 certified nursing facilities in the state with 7,443 beds and an overall occupancy rate of about 84.4%. In 2004, it was estimated that about 67.9% of all state residents had received some type of dental care within the year. New Mexico had 238 physicians per 100,000 resident population in 2004 and 579 nurses per 100,000 in 2005. In 2004, there were a total of 832 dentists in the state.

About 26% of state residents were enrolled in Medicaid programs in 2003; 13% were enrolled in Medicare programs in 2004. Approximately 22% of the state population was uninsured in 2004; this percentage ranked the state as second in the nation for uninsured residents, following Texas. In 2003, state health care expenditures totaled \$2.4 million.

39 SOCIAL WELFARE

In 2004, about 32,000 people received unemployment benefits, with the average weekly unemployment benefit at \$220. For 2005, the estimated average monthly participation in the food stamp program included about 240,637 persons (93,094 households); the average monthly benefit was about \$87.07 per person. That year, the total of benefits paid through the state for the food stamp program was about \$251.4 million.

Temporary Assistance for Needy Families (TANF), the system of federal welfare assistance that officially replaced Aid to Families with Dependent Children (AFDC) in 1997, was reauthorized through the Deficit Reduction Act of 2005. TANF is funded through federal block grants that are divided among the states based on an equation involving the number of recipients in each state. New Mexico's TANF program is called NM Works. In 2004, the state program had 46,000 recipients; state and federal expenditures on this TANF program totaled \$79 million in fiscal year 2003.

In December 2004, Social Security benefits were paid to 303,610 New Mexico residents. This number included 180,860 retired workers, 29,700 widows and widowers, 42,150 disabled workers, 21,530 spouses, and 29,370 children. Social Security beneficiaries represented 15.9% of the total state population and 89.6% of the state's population age 65 and older. Retired workers received an average monthly payment of \$892; widows and widowers, \$825; disabled workers, \$861; and spouses, \$421. Payments for children of retired workers averaged \$408 per month; children of deceased workers, \$520; and children of disabled workers, \$249. Federal Supplemental Security Income payments in December 2004 went to 51,656 New Mexico residents, averaging \$377 a month. An additional \$18,000 of state-administered supplemental payments were distributed to 177 residents.

The state maintains the Carrie Tingley Crippled Children's Hospital in Truth or Consequences, the Miners' Hospital of New Mexico in Raton, and the New Mexico School for the Visually Handicapped in Alamogordo.

40 HOUSING

In 2004, New Mexico had an estimated 825,540 housing units, 711,827 of which were occupied; 69.3% were owner-occupied. About 37.6% of all housing units in New Mexico were built from 1970 to 1989. About 62.5% of all units were single-family, detached homes; about 16% were mobile homes. Utility gas and electricity were the most common heating energy sources. It was estimated that 40,178 units lacked telephone service, 9,673 lacked complete plumbing facilities, and 10,186 lacked complete kitchen facilities. The average household had 2.62 members.

In 2004, 12,600 new privately owned units were authorized for construction. The median home value was \$110,788. The median monthly cost for mortgage owners was \$935. Renters paid a median of \$546 per month. In September 2005, the state received

grants of over \$1.5 million from the US Department of Housing and Urban Development (HUD) for rural housing and economic development programs. For 2006, HUD allocated to the state over \$14.2 million in community development block grants.

41 EDUCATION

In 2004, 82.9% of New Mexicans age 25 and older were high school graduates. Some 25.1% had obtained a bachelor's degree or higher.

The total enrollment for fall 2002 in New Mexico's public schools stood at 320,000. Of these, 224,000 attended schools from kindergarten through grade eight, and 96,000 attended high school. Approximately 32.8% of the students were white, 2.4% were black, 52.5% were Hispanic, 1.2% were Asian/Pacific Islander, and 11.2% were American Indian/Alaskan Native. Total enrollment was estimated at 318,000 in fall 2003 and expected to be 338,000 by fall 2014, an increase of 5.7% during the period 2002–14. Expenditures for public education in 2003/04 were estimated at \$2.8 billion. There were 22,416 students enrolled in 176 private schools in fall 2003. Since 1969, the National Assessment of Educational Progress (NAEP) has tested public school students nationwide. The resulting report, *The Nation's Report Card*, stated that in 2005 eighth graders in New Mexico scored 263 out of 500 in mathematics compared with the national average of 278.

As of fall 2002, there were 120,997 students enrolled in institutions of higher education; minority students comprised 53.4% of total postsecondary enrollment. In 2005 New Mexico had 42 degree-granting institutions including, 7 public four-year institutions, 20 public two-year institutions, and 6 nonprofit, private four-year institutions. The leading public schools are the University of New Mexico, with its main campus at Albuquerque, and New Mexico State University in Las Cruces.

42 ARTS

New Mexico Arts, the state arts commission, consists of 15 governor-appointed members and provides financial support for statewide art programs. In 2005, New Mexico Arts and other New Mexico arts organizations received 29 grants totaling \$1,194,567 from the National Endowment for the Arts (NEA). State and private sources also contribute funding to the state's arts programs. New Mexico Arts has contributed funding to promote multicultural arts programs that reflect the Spanish and American Indian cultural influences of the area. The New Mexico Humanities Council was founded in 1972. In 2005, the National Endowment for the Humanities contributed \$1,640,966 for 13 state programs.

New Mexico is a state rich in Indian, Spanish, Mexican, and contemporary art. Major exhibits can be seen at the University of New Mexico Art Museum in Albuquerque, which as of 2006, holding close to 30,000 pieces was considered the largest fine art collection in the state. The city of Taos is an artists' colony of renown and is home to the Hardwood Museum of Art, established in 1923. The Hardwood Museum of Art's permanent collection focuses both on the multicultural heritage of the state as well as the city's influence on the development of American art.

The Santa Fe Opera, established in 1957, has become one of the nation's most distinguished regional opera companies. In 2006, the Santa Fe Opera celebrated its 50th anniversary with a Golden Anniversary Gala Weekend. The New Mexico Symphony Orches-

tra (also called the Albuquerque Symphony Orchestra, established in 1932) and the Orchestra Chorus present a variety of musical programs from classical to pops.

The Santa Fe Chamber Music Festival began in 1972. After the 2005 season the Open Arts Foundation decided to end its annual Santa Fe Jazz and International Music Festival.

43 LIBRARIES AND MUSEUMS

In June 2001, New Mexico had 80 public library systems, with a total of 101 libraries, of which 21 were branches. The systems in that same year, had a combined total of 4,132,000 volumes of books and serial publications, and a circulation of 7,716,000. The system also had 91,000 audio and 64,000 video items, 4,000 electronic format items (CD-ROMs, magnetic tapes, and disks), and three bookmobiles. The largest municipal library is the Albuquerque Public Library, with over 1,235,211 volumes. The largest university library is that of the University of New Mexico, with 1,882,136 volumes. There is a scientific library at Los Alamos and a law library at Santa Fe. In fiscal year 2001, operating income for the state's public library system totaled \$28,885,000 and included \$219,000 in federal grants and \$506,000 in state grants.

New Mexico has 109 museums. Especially noteworthy are the Maxwell Museum of Anthropology at Albuquerque; the Museum of New Mexico, Museum of International Folk Art, and Institute of American Indian Arts Museum, all in Santa Fe; and several art galleries and museums in Taos. Historic sites include the Palace of the Governors (1610), the oldest US capitol and probably the nation's oldest public building, in Santa Fe; Aztec Ruins National Monument, near Aztec; and Gila Cliff Dwellings National Monument, 44 mi (71 km) north of Silver City. A state natural history museum, in Albuquerque, opened in 1985.

44 COMMUNICATIONS

The first regular monthly mail service between New Mexico and the other US states began in 1849. In 2004, 91.4% of the state's occupied housing units had telephones. In addition, by June of that same year there were 939,091 mobile wireless telephone subscribers. In 2003, 53.9% of New Mexico households had a computer and 44.5% had Internet access. By June 2005, there were 175,303 high-speed lines in New Mexico, 155,493 residential and 19,810 for business. In 2005 there were 5 major AM radio stations and 37 major FM stations. There were 9 major network television stations in 2005. The Albuquerque-Santa Fe area had 568,650 television households, 57% of which had cable in 1999. A total of 29,730 Internet domain names were registered in the state in 2000.

45 PRESS

The first newspaper published in New Mexico was *El Crepúsculo de la Libertad* (Dawn of Liberty), a Spanish-language paper established at Santa Fe in 1834. The *Santa Fe Republican*, established in 1847, was the first English-language newspaper.

In 2005, there were 9 morning, 9 evening, and 13 Sunday newspapers in the state. The leading dailies include the *Albuquerque Journal*, with a morning circulation of 107,306 (151,146 on Sundays); and the *Santa Fe New Mexican*, with a morning circulation of 24,667 (26,812 on Sundays).

La Herencia, (est. 1994) and *Tradición Revista* are magazines devoted to regional Hispanic history, art, and culture.

46 ORGANIZATIONS

In 2006, there were over 1,570 nonprofit organizations registered within the state, of which about 1,121 were registered as charitable, educational, or religious organizations. National organizations with headquarters in New Mexico include the National Association of Consumer Credit Administrators (Santa Fe), the American Indian Law Students Association, the American Holistic Medical Association, and Futures for Children, all located in Albuquerque.

The state is home to several organizations focusing on the rights and welfare of Native Americans. These include the National Indian Youth Council, the All Indian Pueblo Council, Gathering of Nations, the Inter-Tribal Indian Ceremonial Association, and the National Tribal Environmental Council.

Art and cultural organizations include the El Paso Symphony Orchestra Association, the Indian Arts and Crafts Association, the Institute of American Indian Arts, the New Mexico Art League, the New Mexico Ballet Company, the Wordcraft Circle of Native Writers and Storytellers, and Spanish Colonial Arts Society. Special interest and hobbyist organizations based in New Mexico include the 3HO Foundation (yoga) and the American Amateur Baseball Congress.

47 TOURISM, TRAVEL, AND RECREATION

The development of New Mexico's natural recreational resources has made tourism a leading economic activity. In May 2006, the governor declared a national tourism week to celebrate the achievement of \$5 billion in tourism revenue. An estimated 80,000 people employed in tourism. In 2002, the state hosted some 11.5 million travelers. About 28.6% of all trips were instate travel by residents, with 53% of visitors traveling from five states: Texas, Colorado, California, Arizona, and Oklahoma. The most popular vacation area was the Albuquerque-Sante Fe region (with 22.9% of all visitors), followed by Taos. Shopping, outdoor activities, and historical sites were the most popular attractions.

Hunting, fishing, camping, boating, and skiing are among the many outdoor attractions. Sandia Mountain is a popular ski destination. The state has a national park—Carlsbad Caverns—and 13 national monuments, among them Aztec Ruins, Bandelier, Capulin Mountain, Chaco Canyon, El Morro (Inscription Rock), Fort Union, Gila Cliff Dwellings, Gran Quivira, Pecos, and White Sands. In 1984, the US House of Representatives designated 27,840 acres (11,266 hectares) of new wilderness preserves in New Mexico's San Juan basin, including a 2,720-acre (1,100-hectare) "fossil forest." New Mexico has an annual hot air balloon festival, a summer opera season, and the famous Indian Corn Mart outdoor art festival. Santa Fe is known for its many art galleries. Taos has skiing and also Indian sacred sites.

48 SPORTS

New Mexico has no major professional sports teams, though Albuquerque does have a minor league baseball team, the Isotopes, in the Class-AAA Pacific Coast League. Thoroughbred and quarter-horse racing with pari-mutuel betting is an important spectator sport. Sunland Park, south of Las Cruces, has a winterlong

schedule. From May to August there is racing and betting at Ruidoso Downs, Sun Ray Park, and the Downs at Albuquerque.

The Lobos of the University of New Mexico compete in the Mountain West Conference, while the Aggies of New Mexico State University belong to the Big West Conference. New Mexico State finished third in the 1970 National Collegiate Athletic Association (NCAA) basketball tournament.

Other annual sporting events include the Great Overland Windsail Race in Lordsburg in June, the Silver City RPCA Wild, Wild West Rodeo Week in Gila in June, and the International Balloon Fiesta in Albuquerque in October.

49 FAMOUS NEW MEXICANS

Among the earliest Europeans to explore New Mexico were Francisco Vasquez de Coronado (b.Spain, 1510–54) and Juan de Oñate (b.Mexico, 1549?–1624?), the founder of New Mexico. Diego de Vargas (b.Spain, 1643–1704) reconquered New Mexico for the Spanish after the Pueblo Revolt of 1680, which was led by Popé (d.1685?), a San Juan Pueblo medicine man. Later Indian leaders include Mangas Coloradas (1795?–1863) and Victorio (1809?–80), both of the Mimbrenño Apache. Two prominent native New Mexicans during the brief period of Mexican rule were Manuel Armijo (1792?–1853), governor at the time of the American conquest, and the Taos priest José Antonio Martínez (1793–1867).

Army scout and trapper Christopher Houston "Kit" Carson (b.Kentucky, 1809–68) made his home in Taos, as did Charles Bent (b.Virginia, 1799–1847), one of the builders of Bent's Fort, a famous landmark on the Santa Fe Trail. A pioneer of a different kind was Jean Baptiste Lamy (b.France, 1814–88), the first Roman Catholic bishop in the Southwest; his life inspired Willa Cather's novel *Death Comes for the Archbishop*. Among the more notorious of the frontier figures in New Mexico was Billy the Kid (William H. Bonney, b.New York, 1859–81); his killer was New Mexico lawman Patrick Floyd "Pat" Garrett (b.Alabama, 1850–1908).

Notable US senators from New Mexico were Thomas Benton Catron (b.Missouri, 1840–1921), a Republican who dominated New Mexico politics during the territorial period; Albert Bacon Fall (b.Kentucky, 1861–1944), who later, as secretary of the interior, gained notoriety for his role in the Teapot Dome scandal; Dennis Chavez (1888–1962), the most prominent and influential native New Mexican to serve in Washington; Carl A. Hatch (b.Kansas, 1889–1963), best known for the Hatch Act of 1939, which limited partisan political activities by federal employees; and Clinton P. Anderson (b.South Dakota, 1895–1975) who was also secretary of agriculture.

New Mexico has attracted many artists and writers. Painters Bert G. Phillips (b.New York, 1868–1956) and Ernest Leonard Blumenschein (b.Ohio 1874–1960) started the famous Taos art colony in 1898. Mabel Dodge Luhan (b.New York, 1879–1962) did much to lure the creative community to Taos through her writings; the most famous person to take up residence there was English novelist D. H. Lawrence (1885–1930). Peter Hurd (1940–84) was a muralist, portraitist, and book illustrator. New Mexico's best-known artist is Georgia O'Keeffe (b.Wisconsin, 1887–1986). Maria Povera Martínez (1887?–1980) was known for her black-on-black pottery.

Other prominent persons who have made New Mexico their home include rocketry pioneer Robert H. Goddard

(b.Massachusetts, 1882–1945), Pulitzer Prize-winning editorial cartoonist Bill Mauldin (1921–2003), novelist and popular historian Paul Horgan (b.New York, 1903–95), novelist N. Scott Momaday (b.Oklahoma, 1934), and golfer Nancy Lopez-Melton (b.California, 1957). Al Unser Sr., four-time winner of the Indianapolis 500, was born in Albuquerque, New Mexico, 29 May 1939.

NEW YORK

State of New York

ORIGIN OF STATE NAME: Named for the Duke of York (later King James II) in 1664. **NICKNAME:** The Empire State. **CAPITAL:** Albany. **ENTERED UNION:** 26 July 1788 (11th). **SONG:** "I Love New York". **MOTTO:** *Excelsior* (Ever upward). **COAT OF ARMS:** Liberty and Justice stand on either side of a shield showing a mountain sunrise. Above the shield is an eagle on a globe. In the foreground are a three-masted ship and a Hudson River sloop, both representing commerce. Liberty's left foot has kicked aside a royal crown. Beneath the shield is the state motto. **FLAG:** Dark blue with the coat of arms in the center. **OFFICIAL SEAL:** The coat of arms surrounded by the words "The Great Seal of the State of New York." **BIRD:** Bluebird. **FISH:** Brook or speckled trout. **FLOWER:** Rose. **TREE:** Sugar maple. **GEM:** Garnet. **LEGAL HOLIDAYS:** New Year's Day, 1 January; Birthday of Martin Luther King Jr., 3rd Monday in January; Lincoln's Birthday, 12 February, sometimes observed on the Friday closest to this date; Washington's Birthday, 3rd Monday in February; Memorial Day, last Monday in May; Independence Day, 4 July; Labor Day, 1st Monday in September; Columbus Day, 2nd Monday in October; General Election Day, 1st Tuesday after the 1st Monday in November; Veterans' Day, 11 November; Thanksgiving Day, 4th Thursday in November; Christmas Day, 25 December. **TIME:** 7 AM EST = noon GMT.

¹LOCATION, SIZE, AND EXTENT

Located in the northeastern United States, New York State is the largest of the three Middle Atlantic states and ranks 30th in size among the 50 states.

The total area of New York is 49,108 sq mi (127,190 sq km), of which land takes up 47,377 sq mi (122,707 sq km) and the remaining 1,731 sq mi (4,483 sq km) consist of inland water. New York's width is about 320 mi (515 km) E–W, not including Long Island, which extends an additional 118 mi (190 km) SW–NE; the state's maximum N–S extension is about 310 mi (499 km). New York State is shaped roughly like a right triangle: the line from the extreme NE to the extreme SW forms the hypotenuse, with New York City as the right angle.

Mainland New York is bordered on the NW and N by the Canadian provinces of Ontario (with the boundary line passing through Lake Ontario and the St. Lawrence River) and Quebec; on the E by Vermont (with part of the line passing through Lake Champlain and the Poultney River), Massachusetts, and Connecticut; on the S by the Atlantic Ocean, New Jersey (part of the line passes through the Hudson River), and Pennsylvania (partly through the Delaware River); and on the W by Pennsylvania (with the line extending into Lake Erie) and Ontario (through Lake Erie and the Niagara River).

Two large islands lie off the state's SE corner. Long Island is bounded by Connecticut (through Long Island Sound) to the N, Rhode Island (through the Atlantic Ocean) to the NE, the Atlantic to the S, and the East River and the Narrows to the W. Staten Island (a borough of New York City) is separated from New Jersey by Newark Bay in the N, Raritan Bay in the S, and Arthur Kill channel in the W, and from Long Island by the Narrows to the E. Including these two islands, the total boundary length of New York State is 1,430 mi (2,301 km). Long Island, with an area of 1,396 sq

mi (3,616 sq km), is the largest island belonging to one of the 48 coterminous states.

The state's geographic center is in Madison County, 12 mi (19 km) S of Oneida.

²TOPOGRAPHY

Two upland regions—the Adirondack Mountains and the Appalachian Highlands—dominate the topography of New York State.

The Adirondacks cover most of the northeast and occupy about one-fourth of the state's total area. The Appalachian Highlands, including the Catskill Mountains and Kittatinny Mountain Ridge (or Shawangunk Mountains), extend across the southern half of the state, from the Hudson River Valley to the basin of Lake Erie. Between these two upland regions, and also along the state's northern and eastern borders, lies a network of lowlands, including the Great Lakes Plain; the Hudson, Mohawk, Lake Champlain, and St. Lawrence valleys; and the coastal areas of New York City and Long Island.

The state's highest peaks are found in the Adirondacks: Mt. Marcy, 5,344 feet (1,629 meters), and Algonquin Peak, 5,114 feet (1,559 meters). The mean elevation of the state is approximately 1,000 ft (305 m). Nestled among the Adirondacks are many scenic lakes, including Lake Placid, Saranac Lake, and Lake George. The region is also the source of the Hudson and Ausable rivers. The Adirondack Forest Preserve covers much of this terrain, and both public and private lakes are mainly for recreational use.

The highest peak in the Catskills is Slide Mountain, at 4,204 feet (1,281 meters). Lesser upland regions of New York include the Hudson Highlands, projecting into the Hudson Valley; the Taconic Range, along the state's eastern border; and Tug Hill Plateau, set amid the lowlands just west of the Adirondacks.

Three lakes—Erie, Ontario, and Champlain—form part of the state's borders. The state has jurisdiction over 594 sq mi (1,538 sq km) of Lake Erie and 3,033 sq mi (7,855 sq km) of Lake On-

tario. New York contains some 8,000 lakes; the largest lake wholly within the state is Oneida, about 22 mi (35 km) long, with a maximum width of 6 mi (10 km) and an area of 80 sq mi (207 sq km). Many smaller lakes are found in the Adirondacks and in the Finger Lakes region in west-central New York, renowned for its vineyards and great natural beauty. The 11 Finger Lakes themselves (including Owasco, Cayuga, Seneca, Keuka, Canadaigua, and Skaneateles) are long and narrow, fanning southward from a line that runs roughly from Syracuse westward to Geneseo. Sea level at the Atlantic Ocean is the lowest elevation of the state.

New York's longest river is the Hudson, extending from the Adirondacks to New York Bay for a distance of 306 mi (492 km). The Mohawk River flows into the Hudson north of Albany. The major rivers of central and western New York State—the Black, Genesee, and Oswego—all flow into Lake Ontario. Rivers defining the state's borders are the St. Lawrence in the north, the Poughkeepsie in the east, the Delaware in the southeast, and the Niagara in the west. Along the Niagara River, Niagara Falls forms New York's most spectacular natural feature. The falls, with an estimated mean flow rate of more than 1,585,000 gallons (60,000 hectoliters) per second, are both a leading tourist attraction and a major source of hydroelectric power.

About 2 billion years ago, New York State was entirely covered by a body of water that periodically rose and fell. The Adirondacks and Hudson River Palisades were produced by undersea volcanic action during this Grenville period. At about the same time, the schist and other crystalline rock that lie beneath Manhattan were formed. The Catskills were worn down by erosion from what was once a high, level plain. Glaciers from the last Ice Age carved out the inland lakes and valleys and determined the surface features of Staten Island and Long Island.

3 CLIMATE

Although New York lies entirely within the humid continental zone, there is much variation from region to region. The three main climatic regions are the southeastern lowlands, which have the warmest temperatures and the longest season between frosts; the uplands of the Catskills and Adirondacks, where winters are cold and summers cool; and the snow belt along the Great Lakes Plain, one of the snowiest areas of the United States. The growing (frost-free) season ranges from 100 to 120 days in the Adirondacks, Catskills, and higher elevations of the hills of southwestern New York to 180–200 days on Long Island.

Among the major population centers, New York City has an annual average temperature of 55°F (12°C), with a normal maximum of 63°F (17°C) and a normal minimum of 47°F (8°C). Albany has an annual average of 48°F (8°C), with a normal maximum of 58°F (14°C) and a normal minimum of 37°F (2°C). The average in Buffalo is 48°F (8°C), the normal maximum 57°F (13°C), and the normal minimum 40°F (4°C). The record low temperature for the state is -52°F (-47°C), recorded at Stillwater Reservoir in the Adirondacks on 9 February 1934 and at Old Forge on 18 February 1979; the record high is 108°F (42°C), registered at Troy on 22 July 1926.

Annual precipitation ranges from over 50 in (127 cm) in the higher elevations to about 30 in (76 cm) in the areas near Lake Ontario and Lake Champlain, and in the lower half of the Genesee River Valley. New York City has an average annual precipitation of 46.7 in (118 cm), with an average annual snowfall of 28 in

(71 cm); Albany receives an average annual precipitation of 35.7 in (90 cm); and Buffalo, 38.3 in (97 cm). In the snow belt, Buffalo receives 91 in (231 cm) of snow. Rochester averages 89 in (218 cm), and Syracuse 114 in (289 cm). New York City has fewer days of precipitation than other major populated areas (120 days annually, compared with 168 for Buffalo). Buffalo is the windiest city in the state, with a mean hourly wind speed of about 12 mph (19 km/hr). Tornadoes are rare, but hurricanes and tropical storms sometimes cause heavy damage to Long Island.

4 FLORA AND FAUNA

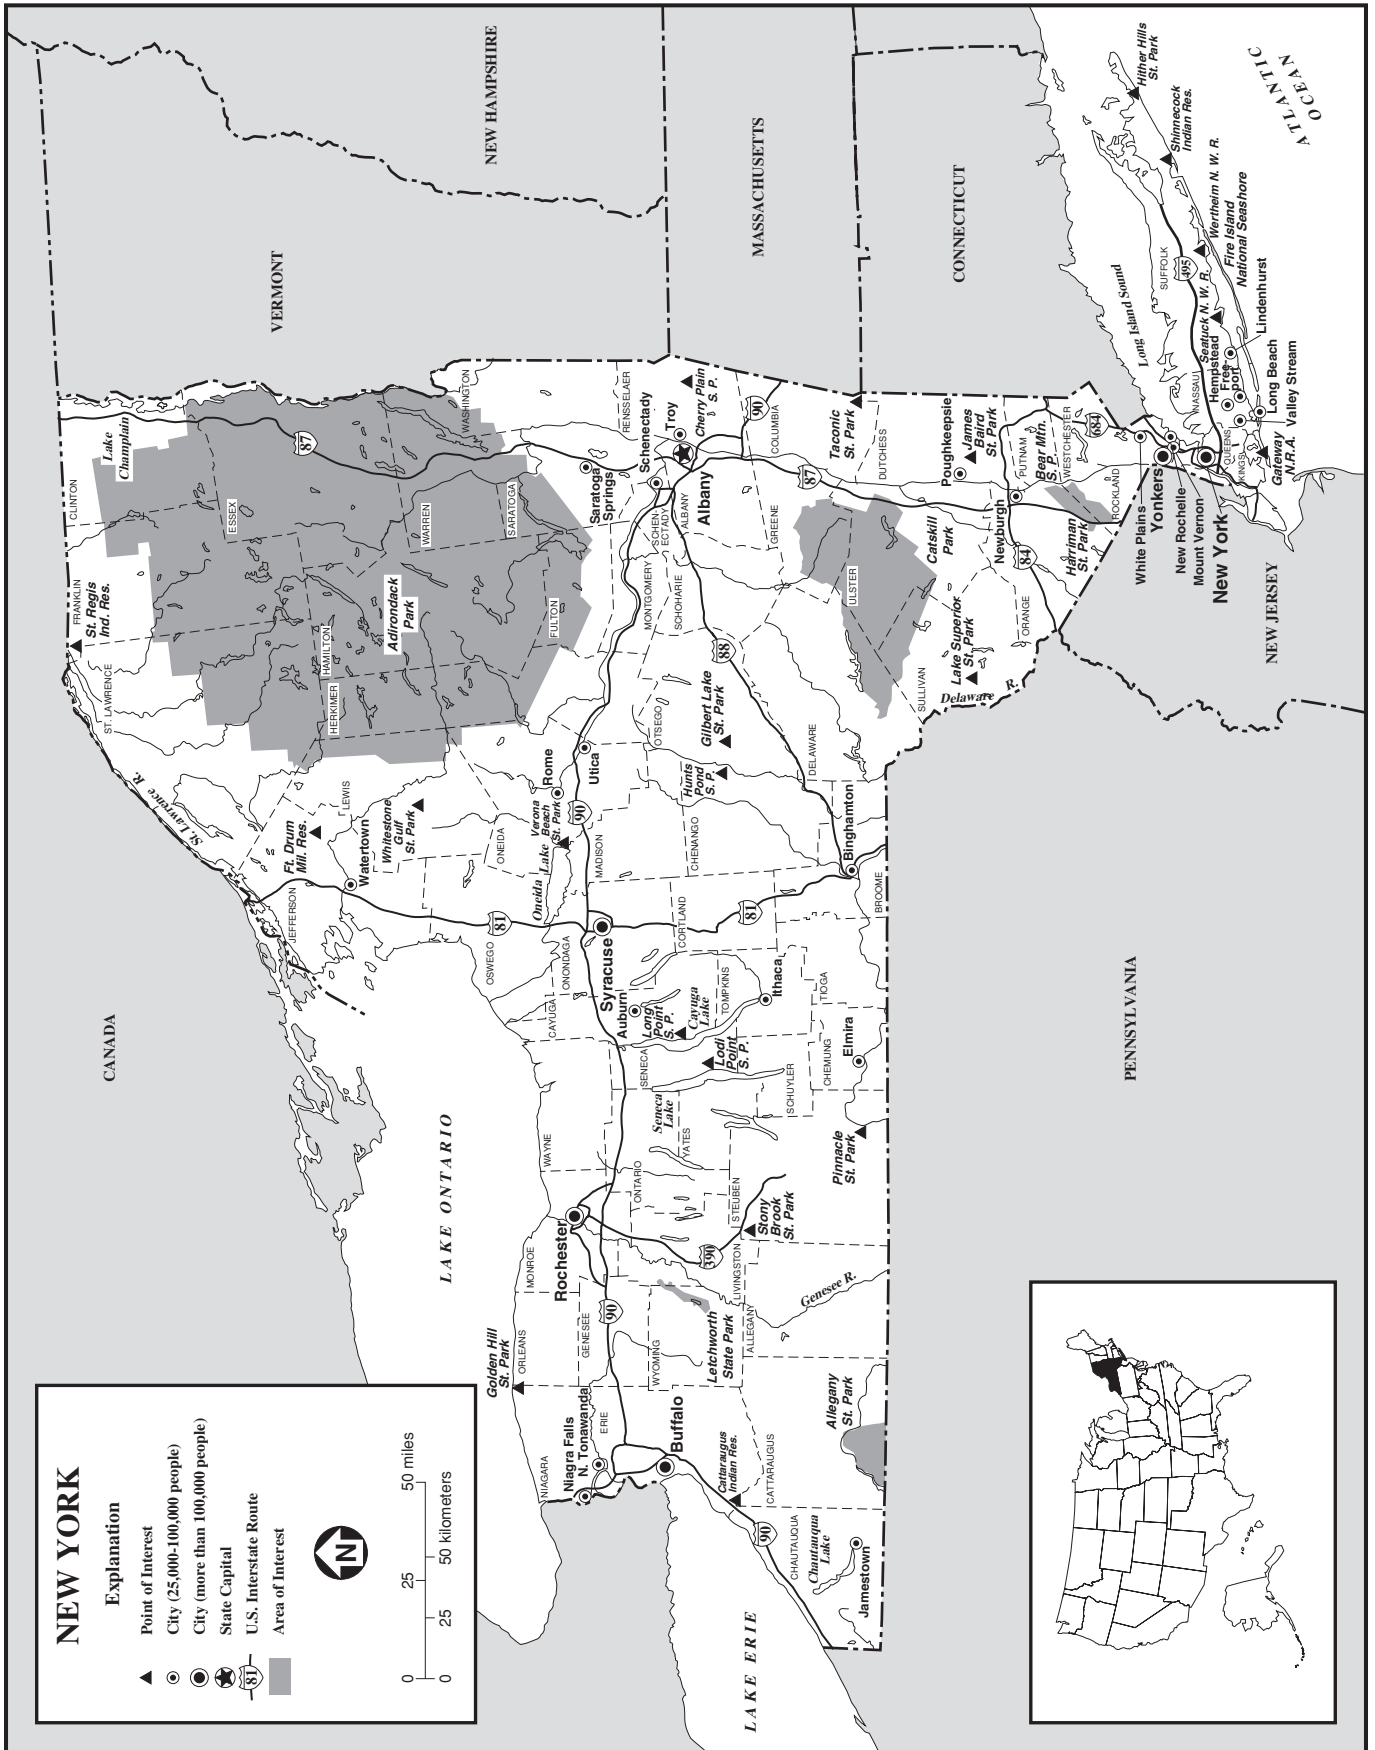

New York has some 150 species of trees. Post and willow oak, laurel magnolia, sweet gum, and hop trees dominate the Atlantic shore areas, while oak, hickory, and chestnut thrive in the Hudson and Mohawk valleys and the Great Lakes Plain. Birch, beech, basswood, white oak, and commercially valuable maple are found on the Appalachian Plateau and in the foothills of the Adirondack Mountains. The bulk of the Adirondacks and Catskills is covered with red and black spruce, balsam fir, and mountain ash, as well as white pine and maple. Spruce, balsam fir, paper birch, and mountain ash rise to the timberline while only the hardiest plant species grow above it. Larch, mulberry, locust, and several kinds of willow are among the many varieties that have been introduced throughout the state. Apple trees and other fruit-bearing species are important in western New York and the Hudson Valley.

Common meadow flowers include several types of rose (the state flower), along with dandelion, Queen Anne's lace, goldenrod, and black-eyed Susan. Wild sarsaparilla, Solomon's seal, Indian pipe, bunchberry, and goldthread flourish amid the forests. Cattails grow in profusion along the Hudson, and rushes cover the Finger Lakes shallows. Among protected plants are all species of fern, bayberry, lotus, all native orchids, five species of rhododendron (including azalea), and trillium. Five plant species were listed as threatened or endangered in 2006, including the sandplain gerardia, American hart's tongue fern, and Leedy's roseroot.

Some 600 species of mammals, birds, amphibians, and reptiles are found in New York, of which more than 450 species are common. Mammals in abundance include many mouse species, the snowshoe hare, common and New England cottontails, woodchuck, squirrel, muskrat, and raccoon. The deer population has been estimated at as many as 500,000, making them a pest causing millions of dollars annually in crop damage. The wolverine, elk, and moose were all wiped out during the 19th century, and the otter, mink, marten, and fisher populations were drastically reduced; but the beaver, nearly eliminated by fur trappers, had come back strongly by 1940.

More than 260 bird species have been observed. The most common year-round residents are the crow, hawk, and several types of woodpecker. Summer visitors are many, and include the bluebird (the state bird). The wild turkey, which disappeared during the 19th century, was successfully reestablished in the 1970s. The house (or English) sparrow has been in New York since its introduction in the 1800s.

The common toad, newt, and several species of frog and salamander inhabit New York waters. Garter snakes, water snakes, grass snakes, and milk snakes are common; rattlesnakes formerly thrived in the Adirondacks. There are 210 known species of fish; 130 species are found in the Hudson, 120 in the Lake Ontario wa-

tershed. Freshwater fish include species of perch, bass, pike, and trout (the state fish). Oysters, clams, and several saltwater fish species are found in Long Island Sound. Of insect varieties, the praying mantis is looked upon as a friend (since it eats insects that prey on crops and trees) while the gypsy moth has been singled out as an enemy in periodic state-run pest-control programs.

In April 2006, twenty animal species (vertebrates and invertebrates) were classified by the US Fish and Wildlife Service as threatened or endangered, including the Indiana bat, Karner blue butterfly, piping plover, bald eagle, shortnose sturgeon, three species of whale, and five species of turtle.

5 ENVIRONMENTAL PROTECTION

New York was one of the first states to mount a major conservation effort. In the 1970s, well over \$1 billion was spent to reclaim the state from the ravages of pollution. State conservation efforts date back at least to 1885, when a forest preserve was legally established in the Adirondacks and Catskills. Adirondack Park was created in 1892, Catskill Park in 1904. Then, as now, the issue was how much if any state forestland would be put to commercial use. Timber cutting in the forest preserve was legalized in 1893, but the constitution of 1895 forbade the practice. By the late 1930s, the state had spent more than \$16 million on land purchases and controlled 2,159,795 acres (874,041 hectares) in the Adirondacks and some 230,000 acres (more than 93,000 hectares) in the Catskills. The constitutional revision of 1894 expressly outlawed the sale, removal, or destruction of timber on forestlands. That requirement was modified by constitutional amendment in 1957 and 1973, however, and the state is now permitted to sell forest products from the preserves in limited amounts.

All state environmental programs are run by the Department of Environmental Conservation (DEC), established in 1970. The department oversees pollution control programs, monitors environmental quality, manages the forest preserves, and administers fish and wildlife laws (including the issuance of hunting and fishing licenses). The state's national parks totaled 35,914 acres (14,534 hectares). State parks and recreational areas totaled 258,000 acres (104,000 hectares). Wetlands covered 2.5 million acres of the state as of 2000. About one-half of the 160 species identified as endangered or threatened by the Department of Environmental Conservation are wetlands-dependent.

The chief air-quality problem areas are Buffalo, where levels of particles (especially from the use of coke in steelmaking) are high, and New York City, where little progress has been made in cutting carbon monoxide emissions from motor vehicles. Despite air-quality efforts, acid rain has been blamed for killing fish and trees in the Adirondacks, Catskills, and other areas. In 1984, the legislature passed the first measure in the nation designed to reduce acid rain, calling for a cut of 12% in sulfur dioxide emissions by 1988 and further reductions after that. In 2000, the state legislature passed the Air Pollution Mitigation Law, which penalized New York utilities for selling sulfur dioxide allowances other states; the law was overturned in April 2002, when a federal district court ruled that the law both restricted interstate commerce and was preempted by the federal Clean Air Act. In 2003, 44 million lb of toxic chemicals were released in the state.

Before the 1960s, the condition of New York's waters was a national scandal. Raw sewage, arsenic, cyanide, and heavy metals

were regularly dumped into the state's lakes and rivers, and fish were rapidly dying off. Two Pure Waters Bond Acts during the 1960s, the Environmental Quality Bond Act of 1972, and a state fishery program have helped reverse the damage. The state has also taken action against corporate polluters, including a \$7-million settlement with General Electric over that company's discharge of toxic polychlorinated biphenyls (PCBs) into the Hudson. In addition, the state and federal government spent perhaps \$45 million between 1978 and 1982 on the cleanup of the Love Canal area of Niagara Falls, which was contaminated by the improper disposal of toxic wastes, and on the relocation of some 400 families that had lived there. Remaining problems include continued dumping of sewage and industrial wastes into New York Bay and Long Island Sound, sewage overflows into the Lower Hudson, industrial dumping in the Hudson Valley, nuclear wastes in West Valley in Cattaraugus County, and contamination of fish in Lake Erie. Toxic pollutants, such as organic chemicals and heavy metals, appear in surface and groundwater to an extent not yet fully assessed.

In 2003, New York had 485 hazardous waste sites listed in the US Environment Protection Agency (EPA) database, 86 of which were on the National Priorities List in 2006, including Brookhaven National Laboratory and General Motors Central Foundry Division in Massena. In 2006, New York ranked fourth in the nation for the highest number of sites on the National Priorities List, following New Jersey, Pennsylvania, and California. In 2005, the EPA spent over \$32 million through the Superfund program for the cleanup of hazardous waste sites in the state. The same year, federal EPA grants awarded to the state included \$64.2 million for the drinking water state revolving fund and over \$4.8 million for projects to implement air pollution controls. Other EPA grants received that year included \$2.4 million for projects involved with the Long Island Sound Restoration Act and \$330,152 for the Lake Champlain Basin Program.

A 1982 law requires a deposit on beer and soft-drink containers sold in the state, to encourage return and recycling of bottles and cans.

6 POPULATION

New York is no longer the most populous state, having lost that position to California in the 1970 census. However, New York City remains the most populous US city, as it has been since at least 1790. New York state ranked third in population in the United States with an estimated total of 19,254,630 in 2005, an increase of 1.5% since 2000. Between 1990 and 2000, New York's population grew from 17,990,455 to 18,976,457, an increase of 5.5%. The population is projected to reach 19.5 million by 2015. New York's population density in 2004 was 407.2 persons per sq mi, the seventh-highest in the nation. In 2004, the median age for New Yorkers was 37.3, with nearly 23.8% of the populace under age 18 and 13% over 65.

First in the state as well as the nation in population was New York City, with 8,104,079 residents in 2004 (up from 7,323,000 in 1990). The growth of New York City has been remarkable. In 1790, when the first national census was taken, the city had 49,401 residents. By 1850, its population had boomed to 696,115; by 1900, to 3,437,202, double that of Chicago, the city's closest rival. Manhattan alone housed more people in 1900 than any city outside New York. In 1990, if Brooklyn, Queens, Manhattan, and the Bronx

had each been a separate city, they would still have ranked third, fourth, sixth, and seventh in the nation, respectively.

Other leading cities, with their estimated 2004 populations were Buffalo, 282,864; Rochester, 212,481; Yonkers, 197,126; and Syracuse, 143,101. All these cities have lost population since the 1970s. With 18,709,802 people in 2004 (down from 20,196,649 in 1999), the tri-state New York City metropolitan area remained the nation's largest; other major metropolitan areas included those of Buffalo-Niagara Falls, with an estimated 1,154,378 people, and Rochester, with 1,041,499. Albany, the state capital, had an estimated metropolitan population of 845,269 in 2004.

7 ETHNIC GROUPS

During the 19th and 20th centuries, New York was the principal gateway for European immigrants. In the great northern migration that began after World War I, large numbers of blacks also settled there; more recently there has been an influx of Hispanics and Latinos and, to a lesser extent, of Asians. As of 2000, New York had the largest black and second-largest Asian population among the 50 states, and the second-highest percentage of foreign-born residents.

According to the US Bureau of the Census, New York had 82,461 Indians in 2000. In 1996, there were an estimated 16,014 Indians living on or adjacent to the reservations of the following seven tribes: the Cayuga, Oneida, Onondaga, Seneca, and Tuscarora nations, the St. Regis Mohawk Tribe, and the Tonawanda Band of

Senecas. In 2004, 0.5% of the state's population was American Indian or Alaskan Native.

Blacks have been in New York since 1624. All black slaves were freed by a state law in 1827. Rochester was a major center of the antislavery movement; Frederick Douglass, a former slave, settled and published his newspaper *North Star* there, while helping to run the Underground Railroad. After World War I, blacks moving into New York City displaced the Jews, Italians, Germans, and Irish then living in Harlem, which went on to become the cultural capital of black America. The black population of New York State was 3,014,385 as of 2000—15.9% of the state's population. That percentage had increased to 17.5% by 2004. In 2000, the black population of New York City alone was 2,129,762, larger than the black populations of all but four of the 50 states, and representing 26.6% of all city residents.

The population of Hispanics and Latinos as of 2000 was 2,867,583, or 15% of the state population. Of this total, New York City accounted for roughly 75%. Puerto Ricans in New York state numbered 1,050,293. Cubans, Dominicans, Colombians, Central Americans, and Mexicans are also present in growing numbers, including a large but undetermined number of illegal immigrants. In 2004, 16% of the state's population was Hispanic or Latino.

New York's Asian population is surpassed only by that of California. In 2000 it was estimated at 1,044,976, up from 694,000 in 1990. Pacific Islanders numbered 8,818. In 2000, state residents included 424,774 Chinese, 251,724 Asian Indians (up from 80,430

a decade earlier), 119,846 Koreans, 81,681 Filipinos, 37,279 Japanese, and 23,818 Vietnamese (up from 12,116 in 1990). New York City has the second-largest Chinatown in the United States. In 2004, 6.5% of the state's population was Asian.

In 2000 there were 3,868,133 foreign-born New Yorkers (20.4% of the total state population), a million more than there had been in 1990 (2,851,861, or 15.8%) and more than any other state except California. Among persons who reported at least one specific ancestry group, 2,122,620 named German; 2,737,146 Italian; 2,454,469 Irish; 1,140,036 English; 986,141 Polish; and 460,261 Russian. These figures do not distinguish the large numbers of European Jewish immigrants who would identify themselves as Jews rather than by their country of origin.

The ethnic diversity of the state is reflected in such Manhattan neighborhoods as Harlem, Chinatown, Little Italy, and "Spanish," or East, Harlem, with its large Puerto Rican concentration. Many of the more successful ethnics have moved to the suburbs; on the other hand, new immigrants still tend to form ethnic communities, often in the outer boroughs, such as Asians and South Americans in certain parts of Queens and Russian Jews in south Brooklyn. Outside New York City there are also important ethnic enclaves in the Buffalo metropolitan area, with its large populations of Polish and Italian origin.

⁸LANGUAGES

Just as New York for three centuries has channeled immigrant speakers of other languages into the English-speaking population, so it has helped to channel some of their words into English, with much more rapid dissemination because of the concentration of publishing and communications industries in New York City.

Little word-borrowing followed contacts by European settlers with the unfriendly Iroquois, who between the 14th and 17th centuries had dispersed the several Algonkian tribes of Montauk, Delaware, and Mahican Indians. In New York State, the effect on English has been almost entirely the adoption of such place-names as Manhattan, Adirondack, Chautauqua, and Skaneateles.

Although the speech of metropolitan New York has its own characteristics, in the state as a whole the Northern dialect predominates. New York State residents generally say /hahg/ and /fahg/ for *hog* and *fog*, /krik/ for *creek*, *greasy* with an /s/ sound, and *half* and *path* with the vowel of *cat*. They keep the /r/ after a vowel, as in *far* and *cord*; sharply differentiate *horse* and *hoarse* by pronouncing the former with the vowel of *haw* and the latter with the vowel of *hoe*; and call a clump of hard maples a *sugarbush*.

There are many regional variations. In the Hudson Valley, *horse* and *hoarse* tend to be pronounced alike, and a sugarbush is called a *sap bush*. In the eastern sector, New England *piazza* for porch and *buttonball* for sycamore are found, as is the Hudson Valley term *nightwalker* for a large earthworm. In the Niagara peninsula, Midland *eavespout* (gutter) and *bawl* (how a calf sounds) have successfully moved north from Pennsylvania to invade Northern speech. In the North Country, some Canadian influence survives in *stook* (shock), *boodan* (liver sausage), and *shivaree* (wedding celebration). In the New York City area, many speakers pronounce *bird* almost as if it were /boyd/, do not sound the /h/ in *whip* or the /r/ after a vowel—although the trend now is toward the /r/ pronunciation—may pronounce initial /th/ almost like /t/ or /d/, *stand on line* (instead of in a line) while waiting to buy a huge sandwich

they call a *hero* and may even pronounce *Long Island* with an inserted /g/ as /long giland/. From the high proportion of New York Yiddish speakers (nearly 40% of all those in the United States in 1990) have come such terms as *schlock*, *schmaltz*, and *chutzpah*.

Serious communication problems have arisen in New York City, especially in the schools, because of the major influx since World War II of Spanish speakers from the Caribbean region, speakers of so-called black English from the South, and, more recently, Asians, in addition to the ever-present large numbers of speakers of other languages. As a result, schools in some areas have emphasized teaching English as a second language.

According to the 2000 census, 72% of all New Yorkers five years of age or older spoke only English at home, down from 76.7% in 1990.

The following table gives selected statistics from the 2000 Census for language spoken at home by persons five years old and over. The category "Other Indic languages" includes Bengali, Marathi, Punjabi, and Romany. The category "Other Indo-European languages" includes Albanian, Gaelic, Lithuanian, and Rumanian. The category "African languages" includes Amharic, Ibo, Twi, Yoruba, Bantu, Swahili, and Somali. The category "Other Asian languages" includes Dravidian languages, Malayalam, Telugu, Tamil, and Turkish. The category "Other Slavic languages" includes Czech, Slovak, and Ukrainian. The category "Other West Germanic languages" includes Dutch, Pennsylvania Dutch, and Afrikaans. The category "Scandinavian languages" includes Danish, Norwegian, and Swedish.

9 RELIGIONS

Before the 1800s, Protestant sects dominated the religious life of New York, although religion did not play as large a role in the public life of New Netherland as it did in New England, with its Puritan population. The first Jews were permitted by the Dutch to settle in New Amsterdam in 1654, but their numbers remained small for the next 200 years. Both the Dutch and later the English forbade the practice of Roman Catholicism. Full religious freedom was not permitted until the constitution of 1777, and there was no Roman Catholic church in upstate New York until 1797. During the early 19th century, Presbyterian, Methodist, Universalist, Baptist, and Quaker pioneers carried their faith westward across the state. Many Protestant churches took part enthusiastically in the abolitionist movement, and the blacks who fled northward out of slavery formed their own Protestant churches and church organizations.

For Roman Catholics and Jews, the history of the 19th century is the story of successive waves of immigration: Roman Catholics first from Ireland and Germany, later from Italy and Poland, Jews first from Germany, Austria, and England, later (in vast numbers) from Russia and other Eastern European nations. The Jews who settled in New York City tended to remain there, the Roman Catholic immigrants were more dispersed throughout the state, with a large German and Eastern European group settling in Buffalo. Irish Catholics were the first group to win great political influence, but since World War II, Jews and Italian Catholics have played a leading role, especially in New York City.

As of 2004, New York had 7,761,801 Roman Catholics, representing about 41% of the total population. About 2,521,087 Roman Catholics were members of the New York Archdiocese. In 2000, there were 1,653,870 adherents of Jewish congregations. Membership of leading Protestant denominations in 2000 included United Methodists, 403,362; Episcopalians, 201,797; Presbyterians (USA), 162,227; and Evangelical Lutherans, 169,329. About 39.6% of the population did not specify a religious affiliation.

The Church of Jesus Christ of Latter-day Saints has reported a fairly strong and steady growth in membership over the past decade. In 1990, membership was reported at 29,997; in 2000 membership grew to 44,987. In 2006, statewide membership was reported at 69,682 in 151 congregations. Three Mormon temples have been established in the state: Harrison (est. 1995), Palmyra (est. 2000), and Manhattan (est. 2004).

Because of diversified immigration, New York City has small percentages but significant numbers of Buddhists, Muslims, Hindus, and Orthodox Christians. There were about 223,968 members of Muslim congregations. Though exact membership numbers were not available, there were about 121 Buddhist congregations and 83 Hindu congregations statewide. There is also a wide variety of religious-nationalist sects and cults, including the World Community of Islam in the West, also called the Nation of Islam (Black Muslims), the Hare Krishna group, and the Unification Church of the Reverend Sun Myung Moon.

The National Council of Churches, founded in 1950 and based in New York City, is one of the leading Christian ecumenical organizations in the country, representing over 45 million people in over 100,000 local congregations. The World Council of Churches, the largest international Christian ecumenical organization, has its US offices in New York City. New York City also serves as the

home base for a number of national Jewish organizations, including the American Board of Rabbis—Vaad Harabonim of America, the American Jewish Congress, the Rabbinical Council of America, and the American Sephardi Federation. Opus Dei, a conservative Catholic organization with about 87,000 members worldwide, has its US headquarters in New York City; the organization gained controversial attention in 2006 based on its mention in *The Da Vinci Code*, a movie and best-selling novel by Dan Brown.

10 TRANSPORTATION

New York City is a major transit point for both domestic and international passenger and freight traffic. The Port of New York and New Jersey is among the nation's busiest harbors; New York City hosts two major airports, Kennedy International and La Guardia, both in Queens. New York City is connected with the rest of the state by an extensive network of good roads, although road and rail transport within the metropolitan region is sagging with age.

The first railroad in New York State was the Mohawk and Hudson, which made its initial trip from Albany to Schenectady on 9 August 1831. A series of short inter-city rail lines, built during the 1830s and 1840s, were united into the New York Central in 1853. Cornelius Vanderbilt gained control of the New York Central in 1867 and by 1873 had connected New York with Chicago. Under Vanderbilt and his son William, rail links were also forged between New York and Boston, Buffalo, Montreal, and western Pennsylvania.

The height of the railroads' power and commercial importance came during the last decades of the 19th century. After World War I, road vehicles gradually replaced the railroads as freight carriers. In 2003, New York had 4,879 mi (7,855 km) of track. In the same year, there were two Class I lines, in addition to two Canadian lines, four regional, 20 local, and seven switching and terminal railroads operating within the state.

The decline in freight business, and the railroads' inability to make up the loss of passenger traffic, led to a series of reorganizations and failures, of which the best known is the merger of the New York Central with the Pennsylvania Railroad, and the subsequent bankruptcy of the Penn Central. Today, much of New York's rail network is operated by either CSX or the Norfolk Southern. The National Railroad Passenger Corporation (Amtrak) owns and operates lines along the eastern corridor from Boston through New York City to Washington, DC. Regularly scheduled daily trains are operated through New York State, stopping at 25 stations. New York City's Penn Station is the busiest station in the entire Amtrak system. The Long Island Railroad, an important commuter carrier, is run by the Metropolitan Transportation Authority (MTA), which also operates the New York City subways. Construction of the New York City subway system began in 1900, with service starting on 27 October 1904. The route network is about 230 mi (370 km) long, of which 137 mi (220 km) are underground.

The only other mass-transit rail line in the state is Buffalo's 6.4 mi (10.3 km) light rail system, of which 5.2 mi (8.4 km) is underground. In 1984, regular trolley service resumed in Buffalo for the first time since 1950 on the other 1.2 mi (1.9 km) of track, running through the downtown shopping district. Among cities served by municipal, county, or metropolitan-area bus systems are Albany, Binghamton, Buffalo, Elmira, and Syracuse.

In 2004, there were some 11.048 million motor vehicles registered in New York State, including around 8.468 million automobiles, some 25,000 buses, and about 2.386 million trucks of all types. In addition, around 169,000 motorcycles were also registered as of that same year. The state in 2004, had 113,341 mi (182,479 km) of public roads and highways. The major toll road, and the nation's longest toll superhighway, is the Thomas E. Dewey Thruway, operated by the New York State Thruway Authority, which extends 559 mi (900 km) from just outside New York City to Buffalo and the Pennsylvania border in southwestern New York. Toll-free expressways include the Adirondack Northway (I-87), from Albany to the Canadian border, and the North-South Expressway (I-81), from the Canadian to the Pennsylvania border.

A number of famous bridges and tunnels connect the five boroughs of New York City with each other and with New Jersey. The Verrazano-Narrows Bridge, opened to traffic in 1964, spans New York Harbor between Brooklyn and Staten Island. Equally famous, and especially renowned for their beauty, are the Brooklyn Bridge (1883), the city's first suspension bridge, and the George Washington Bridge (1931). The Holland (1927) and Lincoln (1937-57) tunnels under the Hudson River link Manhattan with New Jersey. Important links among the five boroughs include the Triborough Bridge, Manhattan Bridge, Williamsburg Bridge, Queensboro Bridge, Bronx-Whitestone Bridge, Throgs Neck Bridge, Brooklyn-Battery Tunnel, and Queens-Midtown Tunnel. The Staten Island Ferry conveys passengers and autos between the borough and lower Manhattan.

Until the early 1800s, almost all the state's trade moved on the Atlantic Ocean, Hudson River, and New York Bay. This waterway transportation system was expanded starting in the 1820s. Off the Hudson, one of the country's major arteries, branched the main elements of the New York Barge Canal System: the Erie Canal, linking the Atlantic with Lake Erie, and New York City with Buffalo; the Oswego Canal, connecting the Erie Canal with Lake Ontario; the Cayuga and Seneca Canal, connecting the Erie Canal with Cayuga and Seneca lakes; and the Champlain Canal, extending the state's navigable waterways from the Hudson to Lake Champlain, and so to Vermont and Quebec Province. By 1872, New York's canal system was carrying over 6 million tons of cargo per year; however, an absolute decline in freight tonnage began after 1890 (the relative decline had begun 40 years earlier, with the rise of the railroads). By the mid-1980s, the canals carried less than 10% of the tonnage for 1880.

Buffalo, on Lake Erie, is the most important inland port. In 2004, it handled 1.592 million tons of cargo. Albany, the major port on the Hudson, handled 7.450 million tons of cargo, and Port Jefferson, on Long Island Sound, handled 2.398 million tons in 2004. In that same year, New York had 394 mi (634 km) of navigable inland waterways. Waterborne shipments in 2003 totaled 99.406 million tons.

It would be difficult to exaggerate the historic and economic importance of New York Harbor—haven for explorers, point of entry for millions of refugees and immigrants, and the nation's greatest seaport until recent years, when it was surpassed by Greater New Orleans and Houston in terms of cargo tonnage. Harbor facilities, including those of Bayonne, Jersey City, and Newark, New Jersey, add up to 755 mi (1,215 km) of frontage, with some 700 piers and wharves. The entire port is under the jurisdiction of the Port Au-

thority of New York and New Jersey. In 2004, it handled 152.377 million tons of cargo. In the mid-1990s, the port was served by 1,000 trucking companies, 80 steamship lines, and 12 intermodal rail terminals.

In 2005, the state of New York had a total of 582 public and private-use aviation-related facilities. This included 397 airports, 167 heliports, and 18 seaplane bases. By far the busiest airports in the state are John F. Kennedy International (18,586,863 passengers enplaned in 2004) and La Guardia (12,312,561 passengers enplaned in 2004), both in New York City, and making them the 8th- and 20th-busiest airports in the United States, respectively. Buffalo Niagara International Airport was the state's largest airport outside of New York City, with 2,206,385 passengers enplaned in 2004.

11 HISTORY

The region now known as New York State has been inhabited for about 10,000 years. The first Indians probably came across the Bering Strait and most likely reached New York via the Niagara Peninsula. Remains have been found in southwestern New York of the Indians called Mound Builders (for their practice of burying their dead in large mounds), who cultivated food crops and tobacco. The Mound Builders were still living in the state well after AD 1000, although by that time most of New York was controlled by later migrants of the Algonkian linguistic group. These Algonkian tribes included the Mahican in the northeast, the Wappinger in the Hudson Valley and on Long Island, and the Leni-Lenape (or Delaware) of the Delaware Valley.

Indians of the Iroquoian language group invaded the state from the north and west during the early 14th century. In 1570, after European explorers had discovered New York but before the establishment of any permanent European settlements, the main Iroquois tribes—the Onondaga, Oneida, Seneca, Cayuga, and Mohawk—established the League of the Five Nations. For the next 200 years, members of the League generally kept peace among themselves but made war on other tribes, using not only traditional weapons but also the guns they were able to get from the French, Dutch, and English. In 1715, a sixth nation joined the League—the Tuscarora, who had fled the British in North Carolina. For much of the 18th century, the Iroquois played a skillful role in balancing competing French and British interests.

The first European known to have entered New York Harbor was the Florentine navigator Giovanni da Verrazano, on 17 April 1524. The Frenchman Samuel de Champlain began exploring the St. Lawrence River in 1603. While Champlain was aiding the Huron Indians in their fight against the League in 1609, the English mariner Henry Hudson, in the service of the Dutch East India Company, entered New York Bay and sailed up the river that would later bear his name, reaching about as far as Albany. To the Dutch the area did not look especially promising, and there was no permanent Dutch settlement until 1624, three years after the Dutch West India Company had been founded. The area near Albany was first to be settled. The Dutch were mainly interested in fur trading and agriculture in the colony—named New Netherland—was slow to develop. New Amsterdam was founded in 1626, when Director-General Peter Minuit bought Manhattan (from the Indian word *manahatin*, “hill island”) from the Indians for goods worth—as tradition has it—about \$24.

New Amsterdam grew slowly, and by 1650 had no more than 1,000 people. When the British took over New Netherland in 1664, only 8,000 residents lived in the colony. Already, however, the population was remarkably diverse: there were the Dutch and English, of course, but also French, Germans, Finns, Swedes, and Jews, as well as black slaves from Angola. The Swedes lived in what had been New Sweden, a territory along the Delaware River ceded to the Netherlands during the administration of Peter Stuyvesant. Equally famed for his wooden leg and his hot temper, Stuyvesant had become director general of the New Netherland colony in 1647. Three years later, after skirmishes with the English settlers of New England, the colony gave up all claims to the Connecticut Valley in the Treaty of Hartford.

Though small and weak, New Netherland was an annoyance to the English. The presence of Dutch traders in New York Bay made it difficult for England to enforce its monopolies under the Navigation Acts. Moreover, the Dutch colony was a political barrier between New England and two other English colonies, Maryland and Virginia. So, in 1664, King Charles II awarded "all the land from the west side of the Connecticut River to the East Side of De La Ware Bay" to his brother, the Duke of York and Albany, the future King James II. The British fleet arrived in New York Bay on 18 August 1664. Stuyvesant wanted to fight, but his subjects refused, and the governor had no choice but to surrender. The English agreed to preserve the Dutch rights of property and inheritance, and to guarantee complete liberty of conscience. Thus New Netherland became New York. It remained an English colony for the next 112 years, except for a period in 1673 when Dutch rule was briefly restored.

The first decades under the English were stormy. After repeated demands from the colonists, a General Assembly was called in 1683. The assembly adopted a Charter of Liberties and Privileges, but the document, approved by James before his coronation, was revoked after he became king in 1685. The assembly itself was dissolved in 1686, and James II acted to place New York under the dominion of New England. The plan was aborted by the Glorious Revolution of 1688, when James was forced to abdicate. Power in New York fell to Jacob Leisler, a German merchant with local backing. Leisler ruled until 1691, when a new royal governor arrived and had Leisler hanged for treason.

The succeeding decades were marked by conflict between the English and French and by the rising power of the provincial assembly in relations with the British crown. As early as 1690, a band of 150 Frenchmen and 100 Indians attacked and burned Schenectady. New York contributed men and money to campaign against the French in Canada in 1709 and 1711 (during Queen Anne's War) and in 1746 (during King George's War). In 1756, the English determined to drive the French out of the region once and for all. After some early reverses, the English defeated the French in 1760. The Treaty of Paris (1763), ending the French and Indian War, ceded all territory east of the Mississippi to England, except for New Orleans and two islands in the mouth of the St. Lawrence River. The Iroquois, their power weakened during the course of the war, signed treaties giving large areas of their land to the New York colony.

The signing of the Treaty of Paris was followed by English attempts to tighten control over the colonies, in New York as elsewhere. New York merchants vehemently protested the Sugar Act

and Stamp Act, and the radical Sons of Liberty made their first appearance in the colony in October 1765. Later, in 1774, after Paul Revere brought news of the Boston Tea Party to New York City, British tea was also dumped into that city's harbor. Nevertheless, New York hesitated before committing itself to independence. The colony's delegates to the Continental Congress in Philadelphia were not permitted by the Third Provincial Congress in New York to vote either for or against the Declaration of Independence on 4 July 1776. The Fourth Provincial Congress, meeting at White Plains, did ratify the Declaration five days later. On 6 February 1778, New York became the second state to ratify the Articles of Confederation.

Nearly one-third of all battles during the Revolutionary War took place on New York soil. The action there began when troops under Ethan Allen captured Fort Ticonderoga in May 1775, and Seth Warner and his New England forces took Crown Point. Reverses came in 1776, however, when George Washington's forces were driven from Long Island and Manhattan by the British; New York City was to remain in British hands for the rest of the war. Troops commanded by British General John Burgoyne recaptured Ticonderoga in July 1777, but were defeated in October at Saratoga, in a battle that is often considered the turning point of the war. In 1778, General Washington made his headquarters at West Point, which General Benedict Arnold tried unsuccessfully to betray to the British in 1780. Washington moved his forces to Newburgh in 1782, and marched into New York City on 25 November 1785, the day the British evacuated their forces. On 4 December, he said farewell to his officers at Fraunces Tavern in lower Manhattan, a landmark that still stands.

Even as war raged, New York State adopted its first constitution on 20 April 1777. The constitution provided for an elected governor and house of assembly, but the franchise was limited to property holders. The first state capital was Kingston, but the capital was moved to Albany in January 1797. After much debate, in which the Federalist Alexander Hamilton played a leading role, the state ratified the US Constitution (with amendments) on 26 July 1788. New York City served as the seat of the US government from 11 January 1785 to 12 August 1790, and the first US president, George Washington, was inaugurated in the city on 30 April 1789.

George Clinton was the state's first elected governor, serving from 1777 to 1795 and again from 1801 to 1804. The achievements under his governorship were considerable. Commerce and agriculture expanded, partly because of Clinton's protectionist policies and partly because of the state's extremely favorable geographical situation.

The end of the War of 1812 signaled the opening of an era of unprecedented economic expansion for the state. By this time, the Iroquois were no longer a threat (most had sided with the British during the Revolutionary War, and many later fled to Canada). Migrants from New England were flocking to the state, which the census of 1810 showed was the most populous in the country. Small wonder that New York was the site of the early 19th century's most ambitious engineering project: construction of the Erie Canal. Ground was broken for the canal in 1817, during the first term of Governor De Witt Clinton, the nephew of George Clinton; the first vessels passed through the completed canal in 1825.

Actually, New York had emerged as the nation's leading commercial center before the canal was even started. The textile industry had established itself by the mid-1820s, and the dairy industry was thriving. The effects of the canal were felt most strongly in foreign trade—by 1831, 50% of US imports and 27% of US exports passed through the state—and in the canal towns of Utica, Syracuse, Rochester, and Buffalo, where business boomed.

Commercial progress during this period was matched by social and cultural advancement. New York City became a center of literary activity during the 1820s, and by the 1840s was already the nation's theatrical capital. A new state constitution drafted in 1821 established universal white male suffrage, but retained the property qualifications for blacks. Slavery was abolished as of 4 July 1827 (few slaves actually remained in the state by this time), and New Yorkers soon took the lead in the growing antislavery movement. The first women's rights convention in the United States was held in Seneca Falls in 1848—though women would have to wait until 1917 before winning the right to vote in state elections. Also during the 1840s, the state saw the first of several great waves of European immigration. The Irish and Germans were the earliest major arrivals during the 19th century, but before World War I they would be joined—not always amicably—by Italians and European Jews.

New Yorkers voted for Abraham Lincoln in the presidential election of 1860 and were among the readiest recruits to the Union side. Enthusiasm for the conflict diminished during the next two years, however. When the military draft reached New York City on 11 July 1863, the result was three days of rioting in which blacks were lynched and the homes of prominent abolitionists were burned. But New York was not a wartime battleground, and overall the war and Reconstruction were very good for business.

The decades after the Civil War ushered in an era of extraordinary commercial growth and political corruption. This was the Gilded Age, during which entrepreneurs became multimillionaires and New York was transformed from an agricultural state to an industrial giant. In 1860, the leading manufactures in the state were flour and meal, men's clothing, refined sugar, leather goods, liquor, and lumber; 90 years later, apparel, printing and publishing, food, machinery, chemicals, fabricated metal products, electrical machinery, textiles, instruments, and transportation equipment had become the dominant industries.

The key to this transformation was the development of the railroads. The boom period for railroad construction started in the 1850s and reached its high point after 1867, when "Commodore" Cornelius Vanderbilt, who had been a steamboat captain in 1818, took over the New York Central. During the 1860s, native New Yorkers like Jay Gould and Russell Sage made their fortunes through investment and speculation. Especially during the century's last two decades, corporate names that became household words began to emerge: Westinghouse Electric in 1886, General Electric (as Edison Electric) in 1889, Eastman Kodak in 1892. In 1882, another native New Yorker, John D. Rockefeller, formed the Standard Oil Trust; although the trust would eventually be broken up, the Rockefeller family would help shape New York politics for many decades to come.

The period immediately following the Civil War also marked a new high in political influence for the Tammany Society (or "Tammany Hall"), founded in 1789 as an anti-Federalist organi-

zation. From 1857 until his exposure by the press in 1871, Democrat William March "Boss" Tweed ruled Tammany and effectively dominated New York City by dispersing patronage, buying votes, and bribing legislators and judges. Tammany went into temporary eclipse after the Tweed Ring was broken up, and Republicans swept the state in 1872. The first result was a series of constitutional changes, including one abolishing the requirement that blacks hold property in order to vote. A new constitution approved in 1894, and effective in 1895, remains the basic law of New York State today.

During the Union's first 100 years, New York's political life had projected into national prominence such men as Alexander Hamilton, John Jay, George and De Witt Clinton, Martin Van Buren, and Millard Fillmore. The state's vast population—New York held more electoral votes than any other state between 1812 and 1972—coupled with its growing industrial and financial power, enhanced the prestige of state leaders during the nation's second century. Grover Cleveland, though born in New Jersey, became mayor of Buffalo, then governor of New York, and finally the 22d US president in 1885. Theodore Roosevelt was governor of New York, then became vice president and finally president of the United States in 1901. In 1910, Charles Evans Hughes resigned the governorship to become an associate justice of the US Supreme Court; he also served as secretary of state, and in 1930 was appointed chief justice of the United States. By the 1920s, Tammany had rebounded from the Tweed Ring breakup and from another scandal during the 1890s to reach its peak of prestige: Alfred E. Smith, a longtime member of Tammany, as well as an able and popular official, was four times elected governor and in 1928 became the first Roman Catholic candidate to be nominated by a major party for the presidency of the United States. That year saw the election of Franklin D. Roosevelt as governor of New York.

The 1930s, a period of depression, ushered in a new wave of progressive government. From 1933 until 1945, FDR was in the White House. Roosevelt's successor in the statehouse was Herbert H. Lehman, whose Little New Deal established the basic pattern of present state social welfare policies that had begun on a much more modest scale during Smith's administration. The Fusion mayor of New York City at this time—propelled into office by yet another wave of exposure of Tammany corruption—was the colorful and popular Fiorello H. La Guardia.

The decades following World War II saw extraordinary expansion of New York social services, including construction of the state university system, but also an erosion of the state's industrial base. Fiscal crises were not new to the state—reformers in the 1920s railed against New York City's "spendthrift" policies—but the greatly increased scale of government in the 1970s made the fiscal crisis of 1975 unprecedented in its scope and implications. The city's short-term debt grew from virtually zero to about \$6 billion between 1970 and 1975, although its government reported consistently balanced budgets. Eventually a package totaling \$4.5 billion in aid was needed to avoid bankruptcy. The decreasing pace of population and industrial growth during the 1950s and 1960s, and the decline during the 1970s, also led to a dimming of New York's political fortunes. The single dominant political figure in New York after World War II, Nelson A. Rockefeller (governor, 1958–73), tried and failed three times to win the Republican presidential nomination before his appointment to the vice-presidency

in 1974. Unable to overcome the hostility of his party's conservative wing, he was not renominated for the vice-presidency in 1976. In 1984, however, US Representative Geraldine Ferraro of Queens was the Democratic Party's vice-presidential standard-bearer, and Governor Mario M. Cuomo emerged as an influential Democratic spokesman. After serving for 12 years, Cuomo was replaced in 1995 by State Senator George Pataki, the first Republican elected New York governor since 1970.

From the late 1970s through the late 1980s, New York enjoyed an economic boom, particularly in finance, insurance, real estate and construction. The state budget increased in constant dollars by 20%. While much of that increase compensated for cuts in federal aid to states and was directed at education, municipalities, schools and prisons, some went to meet new needs such as homelessness and AIDS victims. Prosperity did not reach all sectors of the economy or the population, however. In 1984, 25% of the residents of New York City lived below the poverty line. The collapse of the stock market in October of 1987, in which the market plunged 36% in two months, not only forced a retrenchment on Wall Street but also signaled the end of the boom and the beginning of a recession that was quite severe in New York, exacerbated by the curtailment of federal funding by the Reagan and Bush administrations. Unemployment peaked in 1992, and by 1994 a recovery was under way.

The boom economy of the late 1990s boosted Wall Street, with the bulls dominating the stock market despite some historic losses, particularly in the technology sector, which analysts later categorized as "market corrections." In 1998 New York had the fourth-highest per capita income in the nation (\$31,679) but it also had more people living below the poverty level than 45 other states, again indicating prosperity had not reached into all sectors.

The 1990s witnessed the settlement of the lawsuits surrounding Love Canal in Buffalo, where leaking chemical wastes in the 1970s and early 1980s had prompted the state and federal governments to pay to move families from the area. In the largest legal settlement in New York's history, in 1994 Occidental Petroleum Corp. agreed to pay \$98 million in damages for the dumping of hazardous wastes at Love Canal, ending 16 years of litigation.

The state, which dropped from the nation's second to third most populous in 1994, retained the ranking in 2005. According to Census Bureau estimates, the state had over 19 million people in 2005—surpassed only by California and Texas. New York's Hispanic population in 2003 was estimated to be roughly the same in number as its African American population (African Americans 15.9%; Hispanics 15.1%).

In mid-1999, in the midst of a budget impasse in the state legislature, the government determined it would sell state facilities. A resulting deal, reached in 2000, saw the state selling two nuclear plants for a total asking price of \$967 million. It was the largest privatization of state assets in New York history.

Transportation in and around New York City was the focus of the statehouse and legislature in 2000. Governor George Pataki and New Jersey Governor Christine Todd Whitman, a fellow Republican, had squared off over issues surrounding the Port Authority, which the states jointly control. The governors resolved their differences in June 2000. They cleared the way for the construction of a \$200-million cargo hub for the world's largest ocean carrier (Maersk Sealand) and reopened the possibility that the World

Trade Center, which the Port Authority still controlled, could be turned over to a private developer. Meanwhile, lawmakers heard arguments for and against a proposed \$17-billion project to be undertaken by the Metropolitan Transit Authority (MTA). Advocates argued the public works plan, which would result in the largest sale of municipal bonds in US history, was necessary to build a new generation of subways, buses, and trains to serve the greater New York area. Opponents believed the project would pose disaster for the MTA, burying the agency under a mountain of debt and rendering it unable to maintain the existing transportation systems.

New York City was one site of the nation's terrorist attacks on 11 September 2001, when hijackers from the al-Qaeda terrorist organization flew two passenger airliners into the North and South Towers of the World Trade Center, destroying them. Another aircraft hit the Pentagon building in Washington, DC, and a fourth crashed into a field in Stony Creek Township, Pennsylvania. Approximately 3,000 people had died, were missing, or presumed dead as a result of the attacks. The city and the nation went into a long period of mourning. New York City Mayor Rudolph Giuliani was praised for his effective handling of the crisis.

Berlin-based architect Daniel Libeskind's design for rebuilding "Ground Zero" (the site of the demolished World Trade Center) was accepted in 2003; New Yorkers had expressed dissatisfaction with the original designs, which were thought to be uninspiring. Libeskind's design features a complex of angular towers and a spire that would be among the world's tallest structures.

New York was one of the states affected by the 14 August 2003 massive power blackout in Canada, the Northeast and Midwestern states. The largest electrical outage in US history affected 9,300 square miles and a population of over 50 million.

Following the decline of the stock market on Wall Street and the US recession in the early 2000s, New York in 2003 was plagued with economic woes. The state faced a budget deficit of \$10 billion that year. Although the economy began to improve in 2004 and 2005, the state still faced a budget gap of \$4.2 billion in 2005–06. In 2004, New York had the fifth-highest per capita personal income in the nation, at \$38,228, behind Connecticut, Maryland, Massachusetts, and New Jersey. The poverty rate for New York in 2003–04 was 14.6%, above the national rate of 12.6% (measured as a two-year average).

12 STATE GOVERNMENT

New York has had four constitutions, adopted in 1777, 1822, 1846, and 1895. The 1895 constitution was extensively revised in 1938, and the basic structure of state government has not changed since then, although the document had been amended 216 times by January 2005. In 1993 the Temporary State Commission on Constitutional Revision was created in anticipation of a referendum on a constitutional convention in 1997.

The legislature consists of a 62-member Senate and 150-member assembly. Senators and assembly members serve two-year terms and are elected in even-numbered years. Each house holds regular annual sessions, which begin in January and are not formally limited in length; special sessions may be called by the governor or initiated by petition of two-thirds of the membership of each body. All legislators must be at least 18 years old, US citizens, and must have been residents of the state for at least five years and

residents of their districts for at least one year prior to election. The legislative salary was \$79,500 in 2004, unchanged from 1999.

Either senators or assembly members may introduce or amend a bill; the governor may introduce a budget bill. To pass, a bill requires a majority vote in both houses; a two-thirds majority (of the elected members in each house) is required to override the governor's veto. If the governor neither signs nor vetoes a bill, it becomes law after 10 days, as long as the legislature is in session.

The state's only elected executives are the governor, lieutenant governor, comptroller, and attorney general. Each serves a four-year term. The governor and lieutenant governor are jointly elected; there is no limit to the number of terms they may serve. The governor must be at least 25 years old, a US citizen, and a resident of the state for at least one year prior to the date of election. The lieutenant governor is next in line for the governorship (should the governor be unable to complete his term in office) and presides over the Senate. As of December 2004, the governor's salary was \$179,000, unchanged from 1999.

The governor appoints the heads of most of the major executive departments, with some of the appointments requiring the advice and consent of the Senate. The exceptions are the comptroller and attorney general, who are elected by the voters; the commissioner of education, who is named by the Regents of the University of the State of New York; the commissioner of social services, elected by the Board of Social Services; and the chief of the Executive Department, which the governor heads ex officio.

A bill becomes law when passed by both houses of the legislature and signed by the governor. While the legislature is in session,

a bill may also become law if the governor fails to act on it within 10 days of its receipt. The governor may veto a bill or, if the legislature has adjourned, may kill a bill simply by taking no action on it for 30 days.

A proposed amendment to the state constitution must receive majority votes in both houses of the legislature during two successive sessions. Amendments so approved are put on the ballot in November and adopted or rejected by majority vote. The constitution also provides that the voters must be permitted every 20 years to decide whether a convention should be called to amend the present constitution. Voters in New York must be US citizens, at least 18 years old, residents of the county (or New York City) for 30 days prior to election day, and unable to claim the right to vote elsewhere. Restrictions apply to convicted felons and those declared mentally incompetent by the court.

13 POLITICAL PARTIES

In addition to the Democratic and Republican parties, the major political groups, there has always been a profusion of minor parties in New York, some of which have significantly influenced the outcomes of national and state elections.

Party politics in the state crystallized into their present form around 1855. Up to that time, a welter of parties and factions—including such short-lived groups as the Anti-Masons, Bucktails, Clintonians, Hunkers, and Barnburners (split into Hardshell and Softshell Democrats), Know-Nothings (Native American Party),

New York Presidential Vote by Political Parties, 1948–2004

*Won US presidential election.

1 Supported Democratic candidate except in 1980, when John Anderson ran on the Liberal line.

2 Ran in the state as the American Labor Party.

3 Appeared on the state ballot as the Courage Party.

4 Supported Republican candidate.

5 **IND.** candidate Ross Perot received 1,090,721 votes in 1992 and 503,458 votes in 1996.

Woolly Heads and Silver-Grays (factions of the Whigs), and the Liberty Party—jockeyed for power in New York State.

Roughly speaking, the Democratic Party evolved out of the Democratic Republican factions of the old Republican Party and had become a unified party by the 1850s. The Democratic power base was—and has remained—the big cities, especially New York City. The most important big-city political machine from the 1860s through the 1950s, except for a few brief periods, was the Tammany Society (“Tammany Hall”). Tammany controlled the Democratic Party in New York City and, through that party, the city itself.

The Republican Party in New York State emerged in 1855 as the heir of the Whigs, the Liberty Party, and the Softshell Democratic faction. The Republican Party’s power base includes the state’s rural counties, the smaller cities and towns, and (though not so much in the 1970s and early 1980s as in earlier decades) the New York City suburbs. Although New York Republicans stand to the right of the Democrats on social issues, they have usually been well to the left of the national Republican Party. The liberal “internationalist” strain of Republicanism was personified during the 1960s by Governor Nelson Rockefeller, US Senator Jacob Javits, and New York City Mayor John V. Lindsay (who later became a Democrat).

The disaffection of more conservative Republicans and Democrats within the state led to the formation of the Conservative Party in 1963. At first intended as a device to exert pressure on the state Republican establishment, the Conservative Party soon became a power in its own right, electing a US senator, James Buckley, in 1970. Its power decreased in the late 1970s as the Republican Party embraced some of its positions. The Conservative Party has its left-wing counterpart in the Liberal Party, which was formed in 1944 by dissidents in the American Labor Party who claimed the ALP was Communist-influenced. Tied strongly to labor interests, the Liberals have normally supported the national Democratic ticket. Their power, however, has waned considerably in recent years.

Minor parties have sometimes meant the difference between victory and defeat for major party candidates in state and national elections. The Liberal Party line provided the victory margin in the state, and therefore the nation, for Democratic presidential candidate John F. Kennedy in 1960. Other significant, though not victorious, minor-party presidential candidates have included the American Labor Party with Henry Wallace in 1948 (8% of the vote), the Courage Party with George Wallace in 1968 (5%), and the Liberal Party with John Anderson in 1980 (7%). Among radical parties, the Socialists qualified for the presidential ballot continuously between 1900 and 1952, reaching a peak of 203,201 votes (7% of the total) in 1920.

Democrat Mario M. Cuomo was defeated in his run for a fourth term as governor in November 1994 by Republican George Pataki; Pataki was elected to a third term in 2002. In 2003 New York’s US senators were Democrat Charles Schumer, elected to his first term in 1998 to succeed three-term Republican Alphonse D’Amato was reelected in 2004, and Democrat Hillary Rodham Clinton, first elected in 2000. Following the 2004 elections, New York’s US representatives included 20 Democrats and 9 Republicans. Republicans held 35 seats in the state Senate while Democrats held 27. In the State Assembly there were 105 Democrats and 45 Republicans.

In the November 1980 presidential elections, Republican nominee Ronald Reagan (with Conservative Party backing) won the state’s then-41 electoral votes, apparently because John Anderson, running in New York State on the Liberal Party line, siphoned enough votes from the Democratic incumbent, Jimmy Carter, to give Reagan a plurality. Reagan carried the state again in 1984, despite the presence on the Democratic ticket of US Representative Geraldine Ferraro of Queens as the running mate of Walter Mondale; Ferraro was the first woman candidate for president or vice president on a major party ticket. New Yorkers chose Democratic nominees Michael Dukakis and Bill Clinton in 1988 and 1992, respectively, and Clinton again won the state in 1996. In the 2000 presidential election, Democrat Al Gore won 60% of the vote to Republican George W. Bush’s 35%; Green Party candidate Ralph Nader garnered 4% of the vote. In 2004, Democratic challenger John Kerry won 57.8% to incumbent George W. Bush’s 40.5%. In 2004 there were 11,837,000 registered voters. In 1998, 47% of registered voters were Democratic, 29% Republican, and 24% unaffiliated or members of other parties. The state had 31 electoral votes in the 2004 presidential election, a loss of 2 votes over the 2000 election.

In November 1993, New York City mayor David Dinkins, a Democrat and New York’s first black mayor, who had served since 1990, was defeated by Republican Rudolph Giuliani. Giuliani was legally barred from seeking a third term, and billionaire media tycoon Michael Bloomberg won the mayoral contest in 2001; Bloomberg was reelected in 2005.

¹⁴ LOCAL GOVERNMENT

The state constitution, endorsing the principle of home rule, recognizes many different levels of local government. In 2005, New York had 62 counties, 616 municipal governments, 703 public school districts, and 1,135 special districts. In 2002, there were 929 townships.

Cities are contained within counties, with one outstanding exception: New York City is made up of five counties, one for each of its five boroughs. Traditionally, counties are run by an elected board of supervisors or county legislature; however, a growing number of counties have vested increased powers in a single elected county executive. With the exception of some counties within New York City, each county has a county attorney and district attorney, sheriff, fiscal officer (treasurer), county clerk, and commissioner of social services.

Towns are run by a town board; the town supervisor is the board’s presiding officer and acts as town treasurer. A group of people within a town or towns may also incorporate themselves into a village, with their own elected mayor and elected board of trustees. Some villages have administrators or managers. Members of the village remain members of the town, and must pay taxes to both jurisdictions. The constitution grants the state legislature the power to decide which taxes the local governments may levy and how much debt they may incur.

New York City is governed by a mayor and city council, but much practical power resides in the Board of Estimate. On this board sit the city’s three top elected officials—the mayor, comptroller, and city council president. The board also includes the five borough presidents, elected officials who represent (and, to a limited extent, govern) each of the five boroughs. New York City gov-

ernment is further complicated by the fact that certain essential services are provided not by the city itself but by independent "authorities." The special district of the Port Authority of New York and New Jersey, for example, operates New York Harbor, sets interstate bridge and tunnel tolls, and supervises the city's bus and air terminals; it is responsible not to the mayor but to the governors of New York and New Jersey. Similarly, the Metropolitan Transportation Authority, which controls the city's subways and some of its commuter rail lines, is an independent agency responsible to the state rather than the city.

In 2005, local government accounted for about 938,753 full-time (or equivalent) employment positions.

15 STATE SERVICES

To address the continuing threat of terrorism and to work with the federal Department of Homeland Security, homeland security in New York operates under state statute; the homeland security director is designated as the state homeland security advisor.

Educational services are provided through the Education Department. Under this department's jurisdiction are the State Library, the State Museum, the State Archives, the New York State School for the Blind at Batavia, and the New York State School for the Deaf at Rome. The Education Department also issues licenses for 38 professions, including architecture, engineering and land surveying, massage, pharmacy, public accountancy, social work, and various medical specialties. The state university system is administered by a separate agency headed by a chancellor.

Transportation services are under the direction of the Department of Transportation, which has responsibility for highways, aviation, mass transit, railroads, water transport, transportation safety, and intrastate rate regulation. The Department of Motor Vehicles licenses all road vehicles, motor vehicle dealers, motor vehicle operators, and driving schools.

Human services are provided through several state departments. Among the programs and facilities operated by the Department of Health are three research and treatment facilities; the New York State Veterans' Home at Oxford, Roswell Park Memorial Institute at Buffalo, and Helen Hayes Hospital at West Haverstraw. The state provides care for the mentally ill, retarded, and alcoholics and other substance-dependent persons through the Office of Mental Health, the Office of Mental Retardation and Development Disabilities, and the Office of Alcoholism and Substance Abuse Services. The Office of Mental Health maintains psychiatric centers and developmental centers for developmental disabilities. The Office of Temporary and Disability Assistance within the Department of Family Assistance supervises and sets standards for locally administered public and private welfare and health programs, including Food Stamps and TANF (Temporary Assistance to Needy Families). The Office of Children and Family Services, also within the Department of Family Assistance, has special responsibilities for the blind and visually handicapped and over Indian affairs. Other human services are provided through the Division of Veterans' Affairs, the Division of Human Rights, and the Office for the Aging, all within the Executive Department.

Public protection services include state armed forces, corrections, and consumer protection. Included within the Division of Military and Naval Affairs, in the Executive Department, are the Army National Guard, Air National Guard, Naval Militia, and

New York Guard. The Division of State Police operates within the Executive Department, while prisons are administered by the separate Department of Correctional Services. The State Consumer Protection Board (Executive Department) coordinates the consumer protection activities of the various agencies and departments. The major legal role in consumer protection is played by the attorney general.

Housing services are provided through the Division of Housing and Community Renewal of the Executive Department, and through the quasi-independent New York State Housing Finance Agency/State of New York Mortgage Agency. The Department of State serves as a keeper of records and licensing agency, as well as serving the financial, corporate, and legal community. The Governor's office has a Women's Advisory.

Natural resources protection services are centralized in the Department of Environmental Conservation. The administration of the state park and recreation system is carried out by the Office of Parks, Recreation and Historic Preservation, in the Executive Department. The Department of Agriculture and Markets serves the interests of farmers and also administers the state's Pure Food Law. Energy is the province of the Department of Public Service. The quasi-independent Power Authority of the State of New York finances, builds, and operates electricity-generating and transmission facilities.

The Department of Labor provides most labor services for the state. Its responsibilities include occupational health and safety, human resource development and allocation, administration of unemployment insurance and other benefit programs, and maintenance of labor standards, including enforcement of minimum wage and other labor laws. The Employment Relations Board tries to settle labor disputes and prevent work stoppages.

16 JUDICIAL SYSTEM

New York's highest court is the Court of Appeals in Albany, with appellate jurisdiction only. The Court of Appeals consists of a chief judge and six associate judges, appointed by the governor and approved by the Senate for 14-year terms. Below the Court of Appeals is the state's Supreme Court, with nearly 570 justices in 12 judicial districts. The Supreme Court of New York State does not sit as one body, instead most supreme court justices are assigned original jurisdiction in civil and criminal matters, while 56 justices are assigned to the appellate division of supreme court and 15 to appellate terms of supreme court. Supreme Court justices are elected by district and serve 14-year terms.

The New York Court of Claims sits in Albany, with judges appointed by the governor to nine-year terms, along with judges sitting as acting Supreme Court justices in felony trials. This special trial court hears civil cases involving claims by or against the state.

Outside New York City, each county has its own county court to handle criminal cases, although some are delegated to be handled by lower courts. County court judges are elected to 10-year terms. Many counties have a surrogate's court to handle such matters as wills and estates; surrogates are elected to 10-year terms except in New York City counties, where they are elected to 14-year terms. Each county has its own family court. In New York City, judges are appointed by the mayor for 10-year terms; elsewhere they are elected for 10 years. A county's district attorney has authority in

criminal matters. Most cities (including New York City) have their own court systems; in New York City, the mayor appoints judges of city criminal and family courts. Village police justices and town justices of the peace handle minor violations and other routine matters.

The Department of Correctional Services maintains correctional facilities throughout the state, as well as regional parole offices. As of 31 December 2004, a total of 63,751 prisoners were held in New York's state and federal prisons, a decrease from 65,198 of 2.2% from the previous year. As of year-end 2004, a total of 2,789 inmates were female, down from 2,914 or 4.3% from the year before. Among sentenced prisoners (one year or more), New York had an incarceration rate of 331 per 100,000 population in 2004.

According to the Federal Bureau of Investigation, New York in 2004, had a violent crime rate (murder/nonnegligent manslaughter; forcible rape; robbery; aggravated assault) of 441.6 reported incidents per 100,000 population, or a total of 84,914 reported incidents. Crimes against property (burglary; larceny/theft; and motor vehicle theft) in that same year totaled 422,734 reported incidents or 2,198.6 reported incidents per 100,000 people. In 1995, the state instituted a new death penalty statute, of which lethal injection was the sole method of execution. However, on 24 June, 2004 New York's death penalty statute was declared unconstitutional. The last execution in the state took place in 1963. As of 1 January 2006, only one inmate remained on the state's death row.

In 2003, New York spent \$4,309,416,130 on homeland security, an average of \$236 per state resident.

17 ARMED FORCES

The US Military Academy at West Point was founded in 1802. In 2004, there were 22,714 active-duty military personnel and 11,409 civilian personnel stationed in New York, more than half of whom were at Fort Drum. In 2004, New York firms received more than \$5.2 billion in defense contracts. In addition, defense spending outlays, including retirees military pay, were \$2.4 billion.

In 2003, there were 1,711,900 veterans of US military service in the state. The statistics for living veterans of wartime service were as follows: World War II, 212,726; Korea, 159,501; Vietnam era, 337,162; and 129,275 from the Persian Gulf War. For the fiscal year 2004, total Veterans Affairs expenditures in New York exceeded \$3.1 billion.

As of 31 October 2004, the New York State Police employed 4,659 sworn officers.

18 MIGRATION

Since the early 1800s, New York has been the primary port of entry for Europeans coming to the United States. The Statue of Liberty—dedicated in 1886 and beckoning “your tired, your poor, / Your huddled masses yearning to breathe free” to the shores of America—was often the immigrants' first glimpse of America. The first stop for some 20 million immigrants in the late 19th and early 20th centuries was Ellis Island, where they were processed, often given Americanized names, and sent onward to an uncertain future.

The first great wave of European immigrants arrived in the 1840s, impelled by the potato famine in Ireland. By 1850, New York City had 133,730 Irish-born inhabitants, and by 1890, 409,224. Although smaller in number, German immigration dur-

ing this period was more widespread; during the 1850s, German-speaking people were the largest foreign-born group in Rochester and Buffalo, and by 1855 about 30,000 of Buffalo's 74,000 residents were German.

The next two great waves of European immigration—Eastern European Jews and Italians—overlapped. Vast numbers of Jews began arriving from Eastern Europe during the 1880s, by which time some 80,000 German-speaking Jews were already living in New York City. By 1910, the Jewish population of the city was about 1,250,000, growing to nearly 2,000,000 by the mid-1920s. The flood of Italians began during the 1800s, when the Italian population of New York City increased from 75,000 to more than 200,000; in 1950, nearly 500,000 Italian-born immigrants were living in the state. Migration from the 1840s onward followed a cyclical pattern: as one group dispersed from New York City throughout the state and the nation, it was replaced by a new wave of immigrants.

Yankees from New England made up the first great wave of domestic migration. Most of the migrants who came to New York between 1790 and 1840 were Yankees; it has been estimated that by 1850, 52,000 natives of Vermont (20% of that state's population) had become residents of New York. There was a slow, steady migration of African Americans from slave states to New York before the Civil War, but massive black migration to New York, and especially to New York City, began during World War I and continued well into the 1960s. The third great wave of domestic migration came after World War II, from Puerto Rico. Nearly 40,000 Puerto Ricans settled in New York City in 1946, and 58,500 in 1952–53. By 1960, the census showed well over 600,000 New Yorkers of Puerto Rican birth or parentage. As of 1990, Puerto Rican-born New Yorkers numbered 143,974. Nearly 41,800 state residents in 1990 had lived in Puerto Rico in 1985. Many other Caribbean natives—especially Dominicans, Jamaicans, and Haitians—followed. In 1996, there were a reported 3,232,000 state residents who were foreign-born (about 17% of the state's population). In 1998, 96,559 foreign immigrants entered New York, the second-highest total of any state (surpassed only by California) and over 15% of the total immigration for that year.

The fourth and most recent domestic migratory trend is unique in New York history—the net outward migration from New York to other states. During the 1960s, New York suffered a net loss of more than 100,000 residents through migration; between 1970 and 1980, the estimated net loss was probably in excess of 1,500,000, far greater than that in any other state: probably 80% of the migration was from New York City. From 1980 to 1990, net loss from migration exceeded 340,000. Between 1990 and 1998, New York had a net loss of 1,722,000 in domestic migration. These general estimates hide a racial movement of historic proportions: during the 1960s, while an estimated net total of 638,000 whites were moving out of the state, 396,000 blacks were moving in; during 1970–75, according to Census Bureau estimates, 701,000 whites left New York, while 60,000 blacks were arriving. According to a private study, a net total of 700,000 whites and 50,000 blacks left the state during 1975–80. It appears that many of the white emigrants went to suburban areas of New Jersey and Connecticut, but many also went to two Sunbelt states, Florida and California. Overwhelmingly, the black arrivals came from the South. During the 1980s, the black population of the New York City area in-

creased by 16.4%. By 1997, blacks comprised 19.4% of the New York City area's total population.

Intrastate migration has followed the familiar pattern of rural to urban, urban to suburban. In 1790, the state was 88% rural; the rural population grew in absolute terms (though not as a percentage of the total state population) until the 1880s when the long period of decline began. New York's farm population decreased by 21% during the 1940s, 33% during the 1950s, 38% during the 1960s, and 49% during the 1970s. By 1990, 84% of all New Yorkers lived in urban areas; by 1996, 91.8%. Meanwhile, the suburban population has grown steadily. In 1950, 3,538,620 New Yorkers (24% of the state total) lived in suburbs; by 1980, this figure had grown to 7,461,161 (42% of all state residents). It should be remembered, of course, that this more than doubling of the suburban population reflects natural increase and direct migration from other states and regions, as well as the intrastate migratory movement from central cities to suburbs. Between 1990 and 1998, New York's overall population only increased by 1%.

In the period 2000–05, net international migration was 667,007 and net internal migration was -1,001,100, for a net loss of 334,093 people.

19 INTERGOVERNMENTAL COOPERATION

New York State is a member of the Council of State Governments and its allied organizations. The state participates in many interstate regional commissions (and in commissions with the Canadian provinces of Ontario and Quebec). Among the more active interstate commissions are the Appalachian Regional Commission, Atlantic States Marine Fisheries Commission, Delaware River Basin Commission, Great Lakes Commission, Interstate Oil and Gas Compact Commission, Mid-Atlantic Fishery Management Council, New England Interstate Water Pollution Control Commission, Northeastern Forest Fire Protection Commission, and the Ohio River Valley Water Sanitation Commission. In 1985, New York joined seven other Great Lakes states and two Canadian provinces in the Great Lakes Charter, for the purpose of protecting the lakes' water reserves.

The three most important interstate bodies for the New York metropolitan area are the Palisades Interstate Park Commission, Interstate Sanitation Commission, and Port Authority of New York and New Jersey. The Palisades Interstate Park Commission was founded in 1900 (with New Jersey) in order to preserve the natural beauty of the Palisades region. The Interstate Sanitation Commission (with New Jersey and Connecticut; established in 1961) monitors and seeks to control pollution within the tri-state Interstate Sanitation District. The Port Authority of New York and New Jersey, created in 1921 and the most powerful of the three, is a public corporation with the power to issue its own bonds. Its vast holdings include 4 bridges, 2 tunnels, 5 airports and heliports, 2 motor vehicle terminals, 6 marine terminals, the trans-Hudson rapid transit system, an industrial park in the Bronx, and the 110-story twin-towered World Trade Center in lower Manhattan, until it was destroyed in 2001. Bridge compacts include those on the Buffalo and Fort Erie bridge, the Ogdensburg bridge and port, and the Canada and New York International bridge. Other compacts include the New York-Connecticut Railroad Service, and the Susquehanna River Basin Compact (with Maryland and Pennsylvania). Federal grants to New York state and local governments

totaled \$38.313 billion in fiscal year 2005, higher than any other state except California. In fiscal year 2006, New York received an estimated \$40.606 billion in federal grants, and an estimated \$41.817 billion in fiscal year 2007.

20 ECONOMY

From the Civil War through the 1950s, New York State led the nation in just about every category by which an economy can be measured. In the colonial and early national periods, New York was a leading wheat-growing state. When the wheat crop declined, dairying and lumbering became the state's mainstays. New York then emerged as the national leader in wholesaling, retailing, and manufacturing—and remained so well into the 1960s.

By 1973, however, the state was running neck and neck with California by most output measures, or had already been surpassed. The total labor force, the number of workers in manufacturing, and the number of factories all declined during the 1960s and 1970s. New York City's manufacturing base and its skilled laborers have been emigrating to the suburbs and to other states since World War II. Between 1969 and 1976, the city lost 600,000 jobs. With the departure of much of the middle class, the city's tax base shrank, a factor that contributed to the fiscal crisis of 1975, when a package of short-term aid from Congress, the state government, and the labor union pension funds saved the city from default.

The 1980s saw the state's fortunes on the rise. A shift in dependence from manufacturing to services, and particularly to finance, helped the state and New York City weather the 1981–82 recession. In 1983, the state's three largest industrial and commercial employers (excluding public utilities) were all banks based in New York City. From 1980 to 1990, the state's economy acquired approximately one million jobs, in contrast to 50,000 the previous decade. Financial services led the city's economic expansion, adding 100,000 jobs from 1980 to 1987. Long Island also experienced growth in the first half of the decade, benefiting from the defense build-up by the federal government in the early and mid-eighties.

New York's economy not only grew during the eighties but also underwent a restructuring. Manufacturing witnessed a decline in its share of total employment from 20% in 1980 to 14% in 1990. Apparel, industrial machinery and equipment, and primary metals accounted for 40% of the total loss of jobs. Industrial output, however, increased 10.1% between 1980 and 1987. Productivity gains produced both the rise in output and the decline in employment. Construction boomed from 1982–89, increasing its share of employment from 2.9% to 3.8%. The service sector, particularly business-related, health care, education and social services grew 52% in the decade, increasing services' share of employment from 24% in 1980 to 29% in 1990. Finance, insurance, and the real estate industry expanded 64%. The surge in financial services employment ended with the crash of the stock market in October of 1987, in which stock prices dropped 36% in two months. The crash prompted the layoff of 9,000 employees on Wall Street and a downsizing of the banking and securities industries. More than \$1 trillion in financial transactions took place per day on the NYSE in 2000.

About one in 11 New York City residents received some form of public assistance (including Medicaid and Supplemental Security Income benefits) in 1994. The high number of people on welfare

prompted the New York State government to turn the welfare program into a “workfare” program that put the able-bodied to work. By 1998, the welfare roles had been reduced by over 600,000 from 1995 numbers, a 35% decrease. Job growth rose steadily through the 1990s. Coming into the 21st century, the state economy was growing briskly, with annual growth rates of 8.3% in 1998, 3.5% in 1999, and 7.3% in 2000. Even in the national recession of 2001, and with the events of 9/11, the state economy posted 3.5% annual growth. Employment growth in the state lagged the nation as a whole during 2001 and 2002, but was close to the national average by the end of 2002. New York City’s rate of job losses, however, continued to exceed the state and the nation. However, office vacancy rates in New York City in the fourth quarter 2002, at 8% for midtown, and 12% for downtown (where the twin World Trade Center towers had been located), were well below the national average of 16.5%. The state’s manufacturing sector, which had been contracting for decades, fell from 10.8% of gross state product in 1997 to 9.4% of the total in 2001. In 2002, the highest percentages of manufacturing job losses were in the cities of Buffalo, Rochester and Syracuse.

New York’s gross state product (GSP) in 2004 was \$896.739 billion, of which the real estate sector accounted for the largest share at \$114.056 billion or 12.7% of GSP, followed by professional and technical services at \$75.337 billion (8.4% of GSP), and health care and social assistance services at 70.059 billion (7.8% of GSP). In that same year, there were an estimated 1,779,932 small businesses in New York. Of the 481,858 businesses that had employees, an estimated total of 477,260 or 99% were small companies. An estimated 62,854 new businesses were established in the state in 2004, up 3.8% from the year before. Business terminations that same year came to 64,013, up 4.6% from 2003. There were 4,070 business bankruptcies in 2004, up 104.8% from the previous year. In 2005, the state’s personal bankruptcy (Chapter 7 and Chapter 13) filing rate was 385 filings per 100,000 people, ranking New York as the 42nd highest in the nation.

21 INCOME

In 2005 New York had a gross state product (GSP) of \$963 billion which accounted for 7.8% of the nation’s gross domestic product and placed the state at number 3 in highest GSP among the 50 states and the District of Columbia.

According to the Bureau of Economic Analysis, in 2004 New York had a per capita personal income (PCPI) of \$38,264. This ranked sixth in the United States and was 116% of the national average of \$33,050. The 1994–2004 average annual growth rate of PCPI was 4.0%. New York had a total personal income (TPI) of \$737,755,932,000, which ranked second in the United States and reflected an increase of 6.7% from 2003. The 1994–2004 average annual growth rate of TPI was 4.5%. Earnings of persons employed in New York increased from \$558,688,257,000 in 2003 to \$596,716,261,000 in 2004, an increase of 6.8%. The 2003–04 national change was 6.3%.

The US Census Bureau reports that the three-year average median household income for 2002–04 in 2004 dollars was \$44,228 compared to a national average of \$44,473. During the same period an estimated 14.4% of the population was below the poverty line as compared to 12.4% nationwide.

22 LABOR

According to the Bureau of Labor Statistics (BLS), in April 2006 the seasonally adjusted civilian labor force in New York numbered 9,516,800, with approximately 467,000 workers unemployed, yielding an unemployment rate of 4.9%, compared to the national average of 4.7% for the same period. Preliminary data for the same period placed nonfarm employment at 8,583,500. Since the beginning of the BLS data series in 1976, the highest unemployment rate recorded in New York was 10.5% in July 1976. The historical low was 4% in April 1988. Preliminary nonfarm employment data by occupation for April 2006 showed that approximately 3.8% of the labor force was employed in construction; 6.5% in manufacturing; 17.5% in trade, transportation, and public utilities; 8.4% in financial activities; 12.7% in professional and business services; 18.2% in education and health services; 7.8% in leisure and hospitality services; and 17.3% in government.

The labor force participation rate of women increased from 42.0% in 1974 to 55.8% in 1998. Over the same period, participation rates for men declined from 75.9% to 71.4%. Among minority groups, the unemployment rate in 1998 was 11.4% for blacks and 8.9% for Hispanics.

At the turn of the century, working conditions in New York were among the worst in the country. The flood of immigrants into the labor market and the absence of labor laws to protect them led to the development in New York City of cramped, ill-lit, poorly ventilated, and unhealthy factories—the sweatshops for which the garment industry became notorious. Since that time working conditions in the garment factories have improved, primarily through the efforts of the International Ladies’ Garment Workers Union and, later, its sister organization, the Amalgamated Clothing and Textiles Workers Union.

Under the state’s Taylor Law, public employees do not have the right to strike. Penalties for striking may be exacted against both the unions and their leaders.

The BLS reported that in 2005, a total of 2,090,000 of New York’s 8,008,000 employed wage and salary workers were formal members of a union. This represented 26.1% of those so employed, up from 25.3% in 2004, and well above the national average of 12%. Overall in 2005, a total of 2,201,000 workers (27.5%) in New York were covered by a union or employee association contract, which includes those workers who reported no union affiliation. New York is one of five states whose union membership rate is greater than 20%. The New York is also one of 28 states that does not have a right-to-work law.

As of 1 March 2006, New York had a state-mandated minimum wage rate of \$6.75 per hour, which will increase to \$7.15 per hour on 1 January 2007. In 2004, women in the state accounted for 47% of the employed civilian labor force.

23 AGRICULTURE

New York ranked 28th in farm income in 2005, with cash receipts from farming at over \$3.5 billion. About 62% came from livestock products, mostly dairy goods. In 2004, the state ranked second in apples, third in the production of corn for silage, third in cauliflower, fourth in tart cherries and snap beans, and ninth in oats.

Corn was the leading crop for the Indians and for the European settlers of the early colonial period. During the early 1800s, how-

ever, wheat was the major crop grown in eastern New York. With the opening of the Erie Canal, western New York (especially the Genesee Valley) became a major wheat-growing center as well. By the late 1850s, when the state's wheat crop began to decline, New York still led the nation in barley, flax, hops, and potato production and was a significant grower of corn and oats. The opening of the railroads took away the state's competitive advantage, but as grain production shifted to the Midwest, the state emerged as a leading supplier of meat and dairy products.

New York remains an important dairy state, but urbanization has reduced its overall agricultural potential. In 2004, 14% of the state's land area was devoted to crop growing; in 2004, there were only 36,000 farms, with 7.6 million acres (3.1 million hectares).

The west-central part of the state is the most intensively farmed. Chautauqua County, in the extreme southwest, leads the state in grape production, while Wayne County, along Lake Ontario, leads in apples and cherries. The dairy industry is concentrated in the St. Lawrence Valley; grain growing dominates the plains between Syracuse and Buffalo. Potatoes are grown mostly in Suffolk County, on eastern Long Island.

Leading filed crops in 2004 included hay, of which 2.9 million tons were produced, worth \$327 million; corn, 61 million bushels worth \$146.4 million; oats, 3.3 million bushels worth \$5.5 million; and wheat, 5.3 million bushels, worth \$13.8 million.

Farms in 2004 also produced 941,010 tons of commercial vegetables. Leading vegetable crops were cabbage, onions, sweet corn, and snap beans. State vineyards produced 145,000 tons of grapes for wine and juice in 2004, while the apple crop totaled 1.1 billion lb.

24 ANIMAL HUSBANDRY

The St. Lawrence Valley is the state's leading cattle-raising region, followed by the Mohawk Valley and Wyoming County, in western New York. The poultry industry is more widely dispersed. In 2005, an estimated 1.41 million cattle and calves were worth around \$1.73 billion. There were an estimated 84,000 hogs and pigs, worth \$8.4 million in 2004. During 2003, around 14.6 million lb (6.6 million kg) of broilers were produced, worth \$5.1 million, and 13.3 million lb (6 million kg) of turkey, worth \$4.8 million.

New York is a leading dairy state. In 2003, New York was third in the United States in milk production with 11.9 million lb (5.4 million kg) of milk from 671,000 milk cows.

Also during 2003, New York farmers produced around 3 million lb (1.4 million kg) of sheep and lambs, which brought in around \$2.7 million in gross income. The state produced around 1.05 billion eggs, valued at \$56.3 million in 2003. Duck raising is an industry of local importance on Long Island.

25 FISHING

Fishing, though an attraction for tourists and sportsmen, plays only a marginal role in the economic life of the state. In 2004, the Atlantic commercial catch by New York fishers was 33.7 million lb (15.3 million kg), valued at \$46.4 million. The Great Lakes commercial catch the same year was 10,000 lb (4,500 kg) valued at \$11,000. Important species for commercial use are clams and oysters. In 2004, the state ranked second in the nation (after New Jersey) in volume of surf clams (6.8 million lb/3.1 million kg) and third for soft clams (234,000 lb/106,000 kg). Virtually all of New

York's commercial fishing takes place in the Atlantic waters off Long Island. Montauk, on the eastern end of Long Island, is the state's leading fishing port. In 2003, there were 6 processing and 271 wholesale plants in the state with about 2,154 employees.

Pollution and poor wildlife management have seriously endangered the state's commercial and sport fishing in the ocean, rivers, and lakes. Commercial fishing for striped bass in the Hudson River was banned in 1976 because of contamination by polychlorinated biphenyls (PCBs). Commercial fishing in the river for five other species—black crappie, brown bullhead, carp, goldfish, and pumpkinseed—was banned in 1985. Also banned in 1985 was commercial fishing for striped bass in New York Harbor and along both shores of western Long Island.

In recent decades, however, the Department of Environmental Conservation has taken an active role in restocking New York's inland waters. The US Fish and Wildlife Service distributes large numbers of lake trout and Atlantic salmon fingerlings and rainbow and brook trout fry throughout the state. There are 12 state hatcheries producing over 1 million lb (over 453,000 kg) of fish per year, including brook trout, brown trout, rainbow trout, lake trout, steelhead, chinook salmon, coho salmon, landlocked salmon, walleye, muskellunge, and tiger muskellunge.

In 2004, the state issued 983,812 sport fishing licenses.

26 FORESTRY

About 61% of New York's surface area is forestland. The most densely forested counties are Hamilton, Essex, and Warren in the Adirondacks, and Delaware, Greene, and Ulster in the Catskills. The total forested area was about 18,432,000 acres (7,459,000 hectares) in 2004, of which 15,389,000 acres (6,228,000 hectares) were classified as commercial forest, meaning they were available for the harvest of wood products such as sawlogs, veneer, and pulpwood or firewood. In 2004, lumber production totaled 480 million board feet.

Finger Lakes National Forest, the only national forest within the state, covered 16,211 acres (6,560 hectares) in 2005. The state Department of Environmental Conservation manages about 3,000,000 acres (1,200,000 hectares) in the Catskills and Adirondacks as Forest Preserves, and an additional 800,000 acres in State Forests and Wildlife Management Areas (where timber harvesting is allowed as part of their management plans).

27 MINING

According to preliminary data from the US Geological Survey (USGS), the estimated value of nonfuel mineral production by New York in 2003 was \$978 million, a decrease from \$991 million in 2002. The USGS data ranked New York as 14th among the 50 states by the total value of its nonfuel mineral production, accounting for over 2.5% of total US output.

According to the preliminary data for 2003, crushed stone, followed by cement (portland and masonry), salt, construction sand and gravel, and wollastonite were the state's top nonfuel minerals by value. Collectively, these five commodities accounted for around 98% of all nonfuel mineral output, by value. About 75% of the state's nonfuel minerals, by value, were major construction material commodities: cement, common clays, construction sand and gravel, and crushed stone. New York in 2003 was the nation's

only producer of wollastonite. The state also ranked third in salt, fourth in talc, and tenth in portland and masonry cement. New York was the leading state (out of two) in the production of industrial grade garnets and eighth in the production of dimension stone.

Preliminary data for 2003 showed that New York's production of crushed stone totaled 51.5 million metric tons, with a value of \$358 million, while output of salt totaled 4.9 million metric tons, valued at \$190 million. Construction sand and gravel production in that same year came to 32 million metric tons, and was valued at \$171 million. Common clays output totaled 641,000 metric tons and was valued at \$7.99 million.

Other commodities produced in New York included gypsum and peat. Major uses of wollastonite (a type of calcium silicate) are as a filler in ceramic tile, marine wallboard, paint, plastics, and refractory liners in steel mills.

28 ENERGY AND POWER

As of 2003, New York had 96 electrical power service providers, of which 48 were publicly owned and four were cooperatives. Of the remainder, nine were investor owned, three were owners of independent generators that sold directly to customers, 25 were generation-only suppliers and seven were delivery-only providers. As of that same year there were 7,876,995 retail customers. Of that total, 6,245,232 received their power from investor-owned service providers. Cooperatives accounted for 16,816 customers, while publicly owned providers had 1,243,176 customers. There were 1,867 independent generator or "facility" customers, and 369,904 generation-only customers. There was no data on the number of delivery-only customers.

Total net summer generating capability by the state's electrical generating plants in 2003 stood at 36.696 million kW, with total production that same year at 137.643 billion kWh. Of the total amount generated, 30.2% came from electric utilities, with the remaining 69.8% coming from independent producers and combined heat and power service providers. The largest portion of all electric power generated, 40.697 billion kWh (29.6%), came from nuclear power generation, with natural gas fueled plants in second place at 28.156 billion kWh (20.5%) and hydroelectric plants in third at 24.268 billion kWh (17.6%). Other renewable power sources, coal and petroleum fired plants (17.1% and 14%, respectively) and pumped storage facilities accounted for the remaining power generated.

Electric bills for New York City are the highest in the nation, and customers in Buffalo and Rochester also pay above the national median. Sales of public and private electric power totaled 144.045 billion kWh in 2003, of which 50.3% went to commercial users, 15.1% to industrial purchasers, 32.7% to residential users, and 1.9% for transportation.

As of 2006, New York had four operating nuclear power stations: the James A. Fitzpatrick and the Nile Mile Point plants, both near Oswego; the Indian Point plant in Westchester County; and the Robert E. Ginna plant near Rochester.

As of 2004, New York had proven crude oil reserves of less than 1% of all proven US reserves, while output that same year averaged 464 barrels per day. Including federal offshore domains, the state that year ranked 29th (28th excluding federal offshore) in production among the 31 producing states. In 2004 New York had

3,095 producing oil wells and accounted for under 1% of all US production. There are no refineries in the state of New York.

In 2004, New York had 5,781 producing natural gas and gas condensate wells. In that same year, marketed gas production (all gas produced excluding gas used for repressuring, vented and flared, and nonhydrocarbon gases removed) totaled 36.137 billion cu ft (1.02 billion cu m). As of 31 December 2004, proven reserves of dry or consumer-grade natural gas totaled 324 billion cu ft (9.2 billion cu m).

29 INDUSTRY

Until the 1970s, New York was the nation's foremost industrial state, ranking first in virtually every general category. However, US Commerce Department data show that by 1975 the state had slipped in manufacturing to second in number of employees, payroll, and value added, fourth in value of shipments of manufactured goods, and sixth in new capital spending. Important sectors are instruments and related products, industrial machinery and equipment, electronic and electric equipment, printing and publishing, and textiles.

The Buffalo region, with its excellent transport facilities and abundant power supply, is the main center for heavy industry in the state, while light industry is dispersed throughout the state. Rochester is especially well known for its photographic (Kodak) and optical equipment and office machines. The state's leadership in electronic equipment is in large part attributable to the International Business Machines Corp. (IBM), which was founded in 1911 at Endicott, near Binghamton. The presence of two large General Electric plants has long made Schenectady a leader in the manufacture of electric machinery.

New York City excels not only in the apparel and publishing trades but also in food processing, meat packing, chemicals, leather goods, metal products, and many other manufactures. In addition, the city serves as headquarters for many large industrial corporations whose manufacturing activities often take place entirely outside New York.

According to the US Census Bureau's Annual Survey of Manufactures (ASM) for 2004, New York's manufacturing sector covered some 21 product subsectors. The shipment value of all products manufactured in the state that same year was \$146.691 billion. Of that total, chemical manufacturing accounted for the largest share at \$35.291 billion. It was followed by computer and electronic product manufacturing at \$14.565 billion; food manufacturing at \$14.090 billion; transport equipment manufacturing at \$11.717 billion; machinery manufacturing at \$10.449 billion; and miscellaneous manufacturing at \$9.031 billion.

In 2004, a total of 569,641 people in New York were employed in the state's manufacturing sector, according to the ASM. Of that total, 370,674 were actual production workers. In terms of total employment, the computer and electronic product manufacturing industry accounted for the largest portion of all manufacturing employees at 65,291, with 29,738 actual production workers. It was followed by chemical manufacturing at 57,004 employees (28,401 actual production workers); fabricated metal product manufacturing at 55,711 employees (39,809 actual production workers); miscellaneous manufacturing at 47,587 employees (31,212 actual production workers); and food manufacturing with 46,847 employees (31,160 actual production workers).

ASM data for 2004 showed that New York's manufacturing sector paid \$24.145 billion in wages. Of that amount, the computer and electronic product manufacturing sector accounted for the largest share at \$3.713 billion. It was followed by chemical manufacturing at \$2.874 billion; fabricated metal product manufacturing at \$2.193 billion; machinery manufacturing at \$2030 billion; transport equipment manufacturing at \$1.989 billion; and miscellaneous manufacturing at \$1.708 billion.

3⁰ COMMERCE

According to the 2002 Census of Wholesale Trade, New York's wholesale trade sector had sales that year totaling \$343.6 billion from 35,845 establishments. Wholesalers of durable goods accounted for 18,400 establishments, followed by nondurable goods wholesalers at 15,236 and electronic markets, agents, and brokers accounting for 2,209 establishments. Sales by durable goods wholesalers in 2002 totaled \$127.7 billion, while wholesalers of nondurable goods saw sales of \$184.6 billion. Electronic markets, agents, and brokers in the wholesale trade industry had sales of \$31.2 billion.

In the 2002 Census of Retail Trade, New York was listed as having 76,425 retail establishments with sales of \$178.06 billion. The leading types of retail businesses by number of establishments were: food and beverage stores (15,210); clothing and clothing accessories stores (12,531); miscellaneous store retailers (8,346); and health and personal care stores (6,648). In terms of sales, motor vehicle and motor vehicle parts stores accounted for the largest share of retail sales at \$37.3 billion, followed by food and beverage stores at \$29.6 billion; general merchandise stores at \$19.7 billion; clothing and clothing accessories stores at \$17.2 billion; and health and personal care stores at \$16.2 billion. A total of 837,806 people were employed by the retail sector in New York that year.

The state's long border with Canada, its important ports on Lakes Erie and Ontario, and its vast harbor on New York Bay ensure it a major role in US foreign trade. About one-quarter of US waterborne imports and exports pass through the New York Customs District (including New York City, Albany, and Newark and Perth Amboy, N.J.). Exports of goods from New York totaled \$50.4 billion in 2005, third among the states.

3¹ CONSUMER PROTECTION

The New York State Consumer Protection Board (CPB) was created in 1970, and is headed by an executive director appointed by the governor with the advice and consent of the Senate. The CPB is divided into three organizations: the Consumer Assistance Unit; the Law and Investigations Unit; and the Office of Strategic Programs (which in turn is composed of an Outreach and Education Unit, and a Utility Intervention Unit). The Board coordinates the activities of all state agencies performing consumer protection functions, represents consumer interests before federal, state, and local bodies (including the Public Service Commission), and encourages consumer education and research, but it has no enforcement powers. These are vested in the Bureau of Consumer Frauds and Protection within the Department of Law, under the direction of the Attorney General. The Department of Public Service has regulatory authority over several areas of key interest to consumers, including gas, electric, and telephone rates.

State law outlaws unfair or deceptive trade practices and provides for small-claims courts, where consumers can take action at little cost to themselves. New York licenses and regulates automobile repair services, permits advertising of prescription drug prices, and requires unit pricing. A "cooling-off" period for home purchase contracts is mandated, and standards have been established for mobile-home construction. New York also has no-fault automobile insurance. In 1974, the legislature outlawed sex discrimination in banking, credit, and insurance policy transactions. The state's fair-trade law, which allowed price fixing on certain items, was repealed in 1975. The Fair Credit Reporting Act passed in 1977, allows consumers access to their credit bureau files. A 1984 "Lemon Law" entitles purchasers of defective new cars to repairs, a refund, or a replacement under specified circumstances. A similar law for used cars requires a written warranty for most essential mechanical components.

When dealing with consumer protection issues, New York's Attorney General can initiate civil and criminal proceedings; represent the state before state and federal regulatory agencies; administer consumer protection and education programs; handle formal consumer complaints; and exercise broad subpoena powers. In antitrust actions, the Attorney General can act on behalf of those consumers who are incapable of acting on their own; initiate damage actions on behalf of the state in state courts; initiate criminal proceedings; and represent counties, cities and other governmental entities in recovering civil damages under state or federal law.

The offices of the New York State Consumer Protection Board are located in Albany. The offices of the Bureau of Consumer Frauds and Protection are located in Albany and in New York City. The Office of the Attorney General has regional offices in Binghamton, Brooklyn, Buffalo, Hauppauge, Mineola, Harlem (New York City), Plattsburgh, Rochester, Syracuse, Utica, Watertown and in White Plains. County government consumer affairs offices are located in Albany, Buffalo, Carmel, Goshen, Kingston, Mineola, Monticello, New York City, Poughkeepsie, Schenectady, and White Plains. City government consumer affairs offices are located in Mount Vernon, New York City, Newtonville, Schenectady, and in Yonkers.

3² BANKING

New York City is the major US banking center. Banking is one of the state's leading industries, ranking first in the United States. As of June 2005, the state of New York had 209 insured banks, savings and loans, and saving banks, plus 32 state-chartered and 519 federally chartered credit unions (CUs). Excluding the CUs, the New York-Northern New Jersey-Long Island market area accounted for the largest portion of the state's financial institutions and deposits in 2004, with 233 institutions and \$770.488 billion in deposits. As of June 2005, CUs accounted for 2.9% of all assets held by all financial institutions in the state, or some \$36.484 billion. Banks, savings and loans, and savings banks collectively accounted for the remaining 97.1% or \$1,202.550 billion in assets held.

In 2004, the state's insured banks reported a median past-due/nonaccrual loan to total loans percentage of 1.20%, down from 1.46% in 2003. The median net interest margin (the difference between the lower rates offered to savers and the higher rates charged on loans) in 2004 was 3.77%, down slightly from 3.78% in 2003.

New York has a higher percentage of residential mortgage lenders than the rest of the nation, and its median ratio of long-term assets-to-average earning assets remains above that of the nation.

Regulation of state-chartered banks and other financial institutions is the responsibility of the New York State Banking Department. It was established in 1851 and is the oldest bank regulatory body in the United States.

3³ INSURANCE

Like banking, insurance is big business in New York. Three of the ten top US life insurance companies—Metropolitan Life, New York Life, and Equitable Life Assurance—had their headquarters in New York.

As of 2003, there were 195 property and casualty and 186 life and health insurance companies domiciled in the state. Direct premiums for property and casualty insurance totaled over \$33.3 billion in 2004. That year, there were 100,121 flood insurance policies in force in the state, with a total value of \$17.5 billion. About \$11 billion of coverage was held through FAIR plans, which are designed to offer coverage for some natural circumstances, such as wind and hail, in high risk areas.

In 2004, New Yorkers held over 9 million individual life insurance policies with a value of about \$999 billion; total value for all categories of life insurance (individual, group, and credit) was \$1.6 trillion. The average coverage amount is \$110,100 per policy holder. Death benefits paid that year totaled \$3.8 billion.

In 2004, 53% of state residents held employment-based health insurance policies, 3% held individual policies, and 28% were covered under Medicare and Medicaid; 15% of residents were uninsured. In 2003, employee contributions for employment-based health coverage averaged at 17% for single coverage and 19% for family coverage. The state offers an 18-month health benefits expansion program for small-firm employees in connection with the Consolidated Omnibus Budget Reconciliation Act (COBRA, 1986), a health insurance program for those who lose employment-based coverage due to termination or reduction of work hours.

In 2003, there were over 9 million auto insurance policies in effect for private passenger cars. Required minimum coverage includes bodily injury liability of up to \$25,000 per individual and \$50,000 for all persons injured in an accident, as well as property damage liability of \$10,000. Personal injury protection is also required. In 2003, the average expenditure per vehicle for insurance coverage was \$1,160.80, which ranked as the second-highest average in the nation (following New Jersey).

3⁴ SECURITIES

The New York Stock Exchange (NYSE) is by far the largest organized securities market in the nation and the world. The exchange began as an agreement among 24 brokers, known as the Buttonwood Agreement, in 1792; the exchange adopted its first constitution in 1817 and took on its present name in 1863. A clear sign of the growth of the NYSE is the development of its communications system. Stock tickers were first introduced in 1867; a faster ticker, installed in 1930, was capable of printing 500 characters a minute. By 1964, this was no longer fast enough, and a 900-character-a-minute ticker was introduced. Annual registered share volume increased from 1.8 billion in 1965 to 7.6 billion in 1978 following the

introduction in 1976 of a new data line capable of handling 36,000 characters a minute. In August 2000, the NYSE switched to a decimal system. The New York Futures Exchange was incorporated in 1979 as a wholly owned subsidiary of the NYSE and began trading in 1980. It also deals in options on futures. In 2006, The NYSE merged with Archipelago Holdings (ArcaEx and the Pacific Exchange) to form the for-profit NYSE Group, Inc. As of 2005, there were about 2,672 issuers listed on the NYSE, including about 453 foreign companies. NYSE listed companies represent a total global market value of \$21 trillion.

The American Stock Exchange (AMEX) is the second-leading US securities floor-based market, but the AMEX ranks far below the NYSE in both volume and value of securities. The AMEX traces its origins to the outdoor trading in unlisted securities that began on Wall and Hanover streets in the 1840s, the exchange was organized as the New York Curb Agency in 1908; the exchange moved indoors, but continued to use the hand signals developed by outdoor traders. The AMEX adopted its current name in 1953. Constitutional changes in 1976 for the first time permitted qualified issues to be traded on both the AMEX and the NYSE as well as on other exchanges. This Intermarket Trading System (ITS) began in 1978. In 1996, the hand signals used in trading on the AMEX for over 100 years were replaced by a computerized communication system. AMEX has about 661 regular trading members, and 203 options members.

The National Association of Securities Dealers Automated Quotations (NASDAQ), created in 1971, is a highly active exchange for over-the-counter securities. New York City is also a major center for trading in commodity futures. Leading commodity exchanges are the New York Coffee and Sugar Exchange; the New York Cocoa Exchange; the New York Cotton Exchange; the Commodity Exchange, Inc. (COMEX), specializing in gold, silver, and copper futures; and the New York Mercantile Exchange, which trades in futures for potatoes, platinum, palladium, silver coins, beef, and gold, among other items. Bonds may be issued in New York by cities, counties, towns, villages, school districts, and fire districts, as well as by quasi-independent authorities.

In 2005, there were 16,530 personal financial advisers employed in the state and 34,860 securities, commodities, and financial services sales agents. In 2004, there were over 1,097 publicly traded companies within the state, with over 280 XX NASDAQ companies, 378 NYSE listings, and 114 AMEX listings. In 2006, the state had 55 Fortune 500 companies, including 20 companies in the Fortune 100; Citigroup ranked first in the state and eighth in the nation with revenues of over \$131 billion, followed by American Intl. Group (ninth), Intl. Business Machines (10th), J.P. Morgan Chase and Co. (17th), and Verizon Communications (18th). All five if these companies are listed on the NYSE.

3⁵ PUBLIC FINANCE

New York State has the second largest budget (behind California), of all states in the United States.

The New York State budget is prepared by the Division of the Budget and submitted annually by the governor to the legislature for amendment and approval. The fiscal year (FY) runs from 1 April to 31 March.

New York—State Government Finances

(Dollar amounts in thousands. Per capita amounts in dollars.)

	AMOUNT	PER CAPITA
Total Revenue	136,520,762	7,080.59

SOURCE: U.S. Census Bureau, Governments Division, 2004 Survey of State Government Finances, January 2006.

Fiscal year 2006 general funds were estimated at \$50.2 billion for resources and \$47.2 billion for expenditures. In fiscal year 2004, federal government grants to New York were \$50.0 billion.

In the fiscal year 2007 federal budget, New York state was slated to receive: \$2 billion in tax credits for transportation infrastructure to replace underutilized provisions of the Liberty Zone tax package; \$628.5 million for major cities throughout the state to fund buses, railcars, and maintenance facilities essential to sustaining public transportation systems that serve their communities; \$300 million to begin construction of the Long Island Rail Road East Side commuter rail extension on Manhattan's East Side.

This extension will carry an estimated 166,000 daily passengers when complete in 2012; \$46 million for the modernization of the Thurgood Marshall US Courthouse in New York City, including safety and accessibility upgrades; \$24 million to improve public transportation in New York for the elderly, persons with disabilities, and persons with lower-incomes, providing access to job and health care facilities; \$15.3 million to provide transportation in rural areas statewide meeting the needs of individuals that may have no other means of transportation; and \$7.6 million to expand a national cemetery in Saratoga.

On 5 January 2006 the federal government also released \$100 million in emergency contingency funds targeted to the areas with the greatest need, including \$15 million for New York.

36 TAXATION

In 2005, New York collected \$50,190 million in tax revenues or \$2,607 per capita, which placed it 11th among the 50 states in per capita tax burden. The national average was \$2,192 per capita. Sales taxes accounted for 21.9% of the total; selective sales taxes, 10.3%; individual income taxes, 56.0%; corporate income taxes, 5.5%; and other taxes, 6.3%.

As of 1 January 2006, New York had five individual income tax brackets ranging from 4.0% to 6.85%. The state taxes corporations at a flat rate of 7.5%.

In 2004, local property taxes amounted to \$32,333,564,000 or \$1,677 per capita. The per capita amount ranks the state fourth-highest nationally. New York does not have property taxes at the state level.

New York taxes retail sales at a rate of 4.25%. In addition to the state tax, local taxes on retail sales can reach as much as 4.50%, making for a potential total tax on retail sales of 8.75%. Food purchased for consumption off-premises is tax exempt. The tax on cigarettes is 150 cents per pack, which ranks 10th among the 50 states and the District of Columbia. New York taxes gasoline at 23.9 cents per gallon. This is in addition to the 18.4 cents per gallon federal tax on gasoline.

According to the Tax Foundation, for every federal tax dollar sent to Washington in 2004, New York citizens received \$0.79 in federal spending.

37 ECONOMIC POLICY

New York has created a number of incentives for business to foster new jobs and encourage economic prosperity. Among these are government-owned industrial park sites, state aid in the creation of county and city master plans, state recruitment and screening of industrial employees, programs for the promotion of research and development, and state help in bidding on federal procurement contracts. Through Empire State Development (ESD), New York State provides a full range of technical assistance. Representatives of the ESD call on firms in Canada, Asia, Latin America, and Europe; the division maintains offices in London, Tokyo, Montreal, Toronto, Jerusalem, and Mexico City. The ESD, through its ten regional offices, encourages the retention and expansion of existing facilities and the attraction of new job-creating investments. Other divisions aid small business and minority and women's business.

The state administers a number of financial programs to attract or retain businesses. Among these are low interest loans and grants

for small businesses or for firms that create substantial numbers of jobs; grants and low cost loans for the development of industrial parks; and working capital loans to help companies at risk of downsizing. The state awards both grants and loans to manufacturing companies to encourage productivity improvements and modernization. It also seeks to encourage economic development in distressed rural communities with low interest loans for small businesses located in such areas. To promote technological innovation, the state provides debt and equity financing for technology based start-up companies.

In 2002, the ESD announced that to assist businesses affected by the World Trade Center (WTC) tragedy, it was implementing a \$700 million Community Development Block Grant (CDBG) provided by the federal government. The funds were to be made available in the form of loans and grants to affected businesses that committed to job retention, job creation and investment in New York City, with priority on Lower Manhattan. Other WTC assistance programs of the ESD include a Disaster Assistance Program for Individuals, Disaster Recovery Resources for Small Businesses, Liberty Zone Tax Benefits, a New York Liberty Bond Program, and the World Trade Center Relief Fund. The Lower Manhattan Development Corporation (LMDC), created after the terrorist attacks of 11 September 2001, was charged with planning and coordinating the rebuilding and revitalization of lower Manhattan.

38 HEALTH

Health presents a mixed picture in New York State. The state has some of the finest hospital and medical education facilities in the United States, but it also has large numbers of the needy with serious health problems.

The infant mortality rate in October 2005 was estimated at 5.8 per 1,000 live births. The birth rate in 2003 was 13.2 per 1,000 population. The abortion rate stood at 39.1 per 1,000 women in 2000, representing the second-highest rate in the country (following the District of Columbia). In 2003, about 82.4% of pregnant woman received prenatal care beginning in the first trimester. In 2004, approximately 82% of children received routine immunizations before the age of three.

The crude death rate in 2003 was 8.1 deaths per 1,000 population. As of 2002, the death rates for major causes of death (per 100,000 resident population) were: heart disease, 295.8; cancer, 191.4; cerebrovascular diseases, 39.8; chronic lower respiratory diseases, 36.4; and diabetes, 20.5. The mortality rate from HIV infection was 10.3 per 100,000 population, representing the third-highest rate in the country (following the District of Columbia and Maryland). In 2004, the reported AIDS case rate was at about 39.7 per 100,000 population, the second-highest rate in the country (following the District of Columbia). In 2002, about 54.4% of the population was considered overweight or obese. As of 2004, about 19.9% of state residents were smokers.

In 2003, New York had 207 community hospitals with about 64,700 beds. There were about 2.49 million patient admissions that year and 48 million outpatient visits. The average daily inpatient census was about 50,600 patients. The average cost per day for hospital care was \$1,402. Also in 2003, there were about 671 certified nursing facilities in the state with 122,633 beds and an overall occupancy rate of about 92.5%. In 2004, it was estimated that about 71.7% of all state residents had received some type

of dental care within the year. New York had 401 physicians per 100,000 resident population in 2004 and 854 nurses per 100,000 in 2005. In 2004, there were a total of 14,498 dentists in the state.

In 2005, the New York–Presbyterian University Hospital of Columbia and Cornell ranked seventh on the Honor Roll of Best Hospitals 2005 by *U.S. News & World Report*. In the same report, it also ranked fifth for best pediatric care and seventh for best care in heart disease and heart surgery. The Memorial Sloan-Kettering Cancer Center ranked first in the nation for cancer care.

About 24% of state residents were enrolled in Medicaid programs in 2003; 14% were enrolled in Medicare programs in 2004. Approximately 15% of the state population was uninsured in 2004. In 2003, state health care expenditures totaled \$44.5 million.

39 SOCIAL WELFARE

A 1938 New York constitutional provision mandated that the care and support of the needy shall be a state concern. Social welfare is a major public enterprise in the state; the growth of poverty relief programs has been enormous. In 2004, about 513,000 people received unemployment benefits, with the average weekly unemployment benefit at \$271. For 2005, the estimated average monthly participation in the food stamp program included about 1,754,861 persons (915,703 households); the average monthly benefit was about \$101.43 per person. That year, the total of benefits paid through the state for the food stamp program was over \$2.1 billion.

Temporary Assistance for Needy Families (TANF), the system of federal welfare assistance that officially replaced Aid to Families with Dependent Children (AFDC) in 1997, was reauthorized through the Deficit Reduction Act of 2005. TANF is funded through federal block grants that are divided among the states based on an equation involving the number of recipients in each state. New York's TANF program is called the Family Assistance Program (FA). In 2004, the state program had 336,000 recipients; state and federal expenditures on this TANF program totaled \$2 billion in fiscal year 2003.

In December 2004, Social Security benefits were paid to 3,045,290 New York residents. This number included 1,985,530 retired workers, 277,600 widows and widowers, 383,800 disabled workers, 149,780 spouses, and 248,580 children. Social Security beneficiaries represented 15.8% of the total state population and 87.7% of the state's population age 65 and older. Retired workers received an average monthly payment of \$1,011; widows and widowers, \$947; disabled workers, \$943; and spouses, \$480. Payments for children of retired workers averaged \$490 per month; children of deceased workers, \$666; and children of disabled workers, \$273. Federal Supplemental Security Income payments in December 2004 went to 626,593 New York residents, averaging \$461 a month.

40 HOUSING

In 2004, the state had an estimated 7,819,359 housing units, of which 7,087,566 were occupied. That year, the state ranked fourth in the nation for the highest number of housing units (following California, Texas, and Florida). An estimated 3,259,092 units, or 41.6%, are located in New York City (NYC). The housing stock in New York is relatively old. About 33.7% of all units in the state were built before or during 1939; 49.7% were built between 1940

and 1979. In NYC, 83% of all housing units were built before 1960; in Buffalo, 73% of all units were built before 1939.

Statewide in 2004, 42.3% of all units were single-family, detached homes. In NYC, however, only 9% were single, detached units; 46.9% of the city's housing units are located in buildings of 20 units or more. The average household had 2.63 members. Housing differences in New York City offer far greater contrasts than units per structure: the posh apartment houses of Manhattan and the hovels of the South Bronx both count as multi-unit dwellings. In 2004, New York State had the second-lowest percentage of owner-occupied housing in the nation, at 55.6% (only the District of Columbia was lower). In 2004, it was estimated that 140,133 units in NYC lacked telephone service, 19,137 lacked complete plumbing facilities, and 20,630 lacked complete kitchen facilities. Statewide, about 247,421 units lacked telephone service, 32,130 lacked complete plumbing facilities, and 211,862 lacked complete kitchen facilities. Characteristic of housing in New York is a system of rent controls that began in 1943.

The tight housing market—which may have contributed to the exodus of New Yorkers from the state—was not helped by the slump in housing construction from the mid-1970s to the mid-1980s. In New York City, more units were demolished than built every year from 1974 to 1981. The drop in construction of multi-unit dwellings was even more noticeable: from 64,959 units in 1972 to 11,740 units in 1982. In 1993, only 7,723 multi-unit dwellings were authorized. The overall decline in construction was coupled with a drastic drop in new public housing. In 1972, permits were issued for 111,282 units valued at \$2.1 billion. By 1975, however, only 32,623 units worth \$756 million were authorized; in 1982 there were only 25,280 units worth \$1.1 billion, and in 1996, 34,895 units valued at \$3.1 billion were authorized. In 1998, numbers were on the rebound with 38,400 new privately owned housing units.

In 2004, 53,500 new privately owned housing units were authorized for construction. The median home value for the state was \$220,981. The median home value in NYC was \$373,176. The median monthly cost for mortgage owners statewide was \$1,525; renters paid a median of \$796 per month. In NYC, the median monthly cost for mortgage owners was \$1,920; renters paid a median of \$856 per month.

Direct state aid for housing is limited. Governmental and quasi-independent agencies dealing with housing include the following: the Division of Housing and Community Renewal of the Executive Department, which makes loans and grants to municipalities for slum clearance and construction of low-income housing, supervises the operation of more than 400 housing developments, and administers rent-control and rent-stabilization laws; the New York State Housing Finance Agency, which is empowered to issue notes and bonds for various construction projects, not limited to housing; the State of New York Mortgage Agency, which may purchase existing mortgage loans from banks in order to make funds available for the banks to make new mortgage loans, and which also offers mortgage insurance; and the New York State Urban Development Corporation (UDC), a multibillion dollar agency designed to raise capital for all types of construction, including low-income housing. In 2006, the state received over \$48.5 million in community development block grants (CDBG) from the US Department of Housing and Urban Development (HUD). New

York City received \$185.5 million in CDBGs and Buffalo received \$16.5 million.

41 EDUCATION

The Board of Regents and the State Education Department govern education from pre-kindergarten to graduate school. They are constitutionally responsible for setting educational policy, standards, and rules and legally required to ensure that the entities they oversee carry them out. The board and department also provide vocational and educational services to people with disabilities.

In 2004, 85.4% of New Yorkers age 25 and older were high school graduates. Some 30.6% had obtained a bachelor's degree or higher.

The total enrollment for fall 2002 in New York's public schools stood at 2,888,000. Of these, 2,017,000 attended schools from kindergarten through grade eight, and 871,000 attended high school. Approximately 53.9% of the students were white, 19.7% were black, 19.4% were Hispanic, 6.6% were Asian/Pacific Islander, and 0.5% were American Indian/Alaskan Native. Total enrollment was estimated at 2,872,000 in fall 2003 and expected to be 2,715,000 by fall 2014, a decline of 6% during the period 2002–14. Expenditures for public education in 2003/04 were estimated at \$42.5 billion or \$12,930 per student, the second-highest among the 50 states. In fall 2003 there were 458,079 students enrolled in 1,959 private schools. Since 1969, the National Assessment of Educational Progress (NAEP) has tested public school students nationwide. The resulting report, *The Nation's Report Card*, stated that in 2005 eighth graders in New York scored 280 out of 500 in mathematics compared with the national average of 278.

As of fall 2002, there were 1,107,270 students enrolled in institutions of higher education; minority students comprised 32.4% of total postsecondary enrollment. In 2005 New York had 309 degree-granting institutions including, 45 public four-year schools, 35 public two-year schools, and 163 nonprofit, private four-year schools.

There are two massive public university systems: the State University of New York (SUNY) and the City University of New York (CUNY). Established in 1948, SUNY is one of the largest university systems in the country and encompasses university colleges of arts and sciences, specialized colleges, agricultural and technical colleges, statutory colleges (allied with private universities), health sciences centers, and locally sponsored community colleges. University centers include Buffalo, Albany, and Binghamton. The City University of New York was created in 1961, although many of its component institutions (including 12 four-year institutions) were founded much earlier. Under an open-enrollment policy adopted in 1970, every New York City resident with a high school diploma is guaranteed the chance to earn a college degree within the CUNY system (which CUNY campus the student attends is determined by grade point average).

The oldest private university in the state is Columbia University, founded in New York City as Kings College in 1754. Also part of Columbia are Barnard College (all women) and Columbia University Teachers College. Other major private institutions are Cornell University in Ithaca (1865); Fordham University in Manhattan and the Bronx (1841); New York University in Manhattan (1831); Rensselaer Polytechnic Institute in Troy (1824); St. John's University in Queens (1870); Syracuse University (1870); and the

University of Rochester (1850). Among the state's many smaller but highly distinguished institutions are Hamilton College, the Juilliard School, the New School for Social Research, Rockefeller University, Sarah Lawrence College, Vassar College, and Yeshiva University.

Unique features of education in New York are the "Regents exams," uniform subject examinations administered to all high school students, and the Regents Scholarships Tuition Assistance Program (TAP), a higher-education aid program. The state passed a "truth in testing" law in 1979, giving students the right to see their graded college and graduate school entrance examinations, as well as information on how the test results were validated.

42 ARTS

New York City is the cultural capital of the state, and leads the nation in both the creative and the performing arts. The state's foremost arts center is Lincoln Center for the Performing Arts, in Manhattan. Facilities at Lincoln Center include Avery Fisher Hall (which opened as Philharmonic Hall in 1962), the home of the New York Philharmonic; the Metropolitan Opera House (1966), where the Metropolitan Opera Company performs; and the New York State Theater, which presents both the New York City Opera and the New York City Ballet. Also at Lincoln Center are the Juilliard School and the Library and Museum of the Performing Arts. The best-known arts center outside New York City is the Saratoga Performing Arts Center at Saratoga Springs. During the summer, the Saratoga Center presents performances by the New York City Ballet and the Philadelphia Orchestra. Artpark, a state park at Lewiston, has a 2,324-seat theater for operas and musicals, and offers art exhibits during the summer.

The New York State Council on the Arts (NYSCA) consists of 20 governor-appointed members. In 2005, the NYSCA and other New York arts organizations received 440 grants totaling over \$16,204,450 from the National Endowment for the Arts. The Council on the Arts also receives funding from the state as well as contributions from private sources. The New York State Council on the Arts contributed to the Arts Connection of New York City—a program dedicated to providing the New York City public schools with interactive programming associated with the various arts—and to the National Book Foundation—centered in New York city and created to promote literacy as well as the appreciation of great American writing.

The New York Council for the Humanities was established in 1975; as of 2006 the state's Council for the Humanities had provided programs to over 4,000 institutions reaching over 250,000 New Yorkers annually. In 2005, the National Endowment for the Humanities contributed \$13,421,970 to 124 state programs.

The city's most famous artists' district is Greenwich Village, which still holds an annual outdoor art fair. In 2005, the 57th Greenwich Village Art Fair featured over 100 artists, working in numerous different mediums. After the 1950s many artists moved to SoHo (Manhattan on the West Side between Canal and Houston Streets), NoHo (immediately north of Houston Street), the East Village, and Tribeca (between Canal Street and the World Trade Center). By the early 1980s, artists seeking space at reasonable prices were moving to Long Island City in Queens, to areas of Brooklyn, or out of the city entirely, to places such as Hoboken and Paterson in New Jersey. During the late 1940s and early 1950s,

abstract painters—including Jackson Pollock, Mark Rothko, and Willem de Kooning—helped make the city a center of the avant garde.

At the same time, poets such as Frank O'Hara and John Ashbery sought verbal analogues to developments in the visual arts, and an urbane, improvisatory literature was created. New York has enjoyed a vigorous poetic tradition throughout its history, most notably with the works of Walt Whitman (who served as editor of the *Brooklyn Eagle* from 1846 to 1848) and through Hart Crane's mythic vision of the city in his long poem, *The Bridge*. The emergence of New York as the center of the US publishing and communications industries fostered the growth of a literary marketplace, attracting writers from across the country and the world. Early New York novelists included Washington Irving, Edgar Allan Poe, and Herman Melville; among the many who made their home in the city in the 20th century were Thomas Wolfe and Norman Mailer. The simultaneous growth of the Broadway stage made New York City a vital forum for playwriting, songwriting, and theatrical production. New York City is also a major link in the US songwriting, music publishing, and recording industries.

There are more than 35 Broadway theaters—large theaters in midtown Manhattan presenting full-scale, sometimes lavish productions with top-rank performers. "Off Broadway" productions are often of high professional quality, though typically in smaller theaters, outside the midtown district, often with smaller casts and less costly settings. "Off-Off Broadway" productions range from small experimental theaters on the fringes of the city to performances in nightclubs and cabarets. The New York metropolitan area has hundreds of motion picture theaters—more than 65 in Manhattan alone, not counting special series at the Museum of Modern Art and other cultural institutions. In the 1970s, New York City made a determined and successful effort to attract motion picture production companies.

New York's leading symphony orchestra, the New York Philharmonic, is the oldest symphony orchestra in the United States with a history that dates back to the founding of the Philharmonic Society of New York in 1842. Among the principal conductors of the orchestra have been Gustav Mahler, Josef Willem Mengelberg, Wilhelm Furtwangler, Arturo Toscanini, Leonard Bernstein, Pierre Boulez, and Zubin Mehta. As of its 2004/05 season the orchestra had performed in over 416 cities and 57 countries. Leading US and foreign orchestras and soloists appear at both Avery Fisher Hall and Carnegie Hall, built in 1892 and famed for its acoustics. Important orchestras outside New York City include the Buffalo Philharmonic, which performs at Kleinhans Music Hall, the Rochester Philharmonic, and the Eastman Philharmonic, the orchestra of the Eastman School of Music (University of Rochester).

New York City is one of the world centers of ballet. Of special renown is the New York City Ballet; the company consisted of approximately 90 dancers—the largest in America. The New York City Ballet's principal choreographer until his death in 1983 was George Balanchine. Many other ballet companies, including the American Ballet Theatre and the Alvin Ailey American Dance Theater, make regular appearances in New York. Rochester, Syracuse, Cooperstown, Chautauqua, and Binghamton have opera companies, and Lake George has an opera festival. The Lake George Opera marked its 45th summer season in 2006. The North

Fork Theatre at Westbury presents wide-ranging musical and comedic programs.

4³ LIBRARIES AND MUSEUMS

In 2001, the state of New York had 750 public library systems, with a total of 1,089 libraries, of which 340 were branches. In that same year, the state's public library system had 78,546,000 volumes of books and serial publications on its shelves, and a total circulation of 126,796,000. The system also had 4,371,000 audio and 2,115,000 video items, 665,000 electronic format items (CD-ROMs, magnetic tapes, and disks), and 10 bookmobiles. The state also had three of the world's largest libraries, and New York City has several of the world's most famous museums. In fiscal year 2001, operating income for the public library system totaled \$902,746,000 and included \$3,981,000 from the federal government, \$51,055,000 from the state government, and the rest from local sources.

The leading public library systems and their operating statistics as of 1999 were the New York Public Library, 17,762,034 volumes in 127 branches; Brooklyn Public Library, 6,800,000 volumes and 10,077,559 circulation; Queens Borough Public Library, 8,668,948 volumes and 14,829,837 circulation; and Buffalo and Erie County system, 5,240,965 volumes and 8,734,854 circulation.

Chartered in 1895, the New York Public Library (NYPL) is the most complete municipal library system in the world. The library's main building, at 5th Avenue and 42d St., is one of the city's best-known landmarks; serving the needs of Manhattan, the Bronx, and Staten Island. The NYPL is a repository for every book published in the United States. The NYPL also operates the Library and Museum of the Performing Arts at Lincoln Center; the Schomburg Center for Research in Black Culture; and the Science, Industry, and Business Library that opened in May 1996.

Two private university libraries—at Columbia University (7,018,408 volumes in 1999) and Cornell University (6,617,242)—rank among the world's major libraries. Other major university libraries in the state, with their 1999 book holdings, are Syracuse University, 2,650,995; New York University, 2,987,062; the State University of New York at Buffalo, 2,534,500; and the University of Rochester, 2,446,729.

There are about 671 museums in New York State; about 150 are major museums, of which perhaps 80% are in New York City. In addition, some 579 sites of historic importance are maintained by local historical societies. Major art museums in New York City include the Metropolitan Museum of Art, with more than one million art objects and paintings from virtually every period and culture; the Cloisters, a branch of the Metropolitan Museum devoted entirely to medieval art and architecture; the Frick collection; the Whitney Museum of American Art; the Brooklyn Museum; and two large modern collections, the Museum of Modern Art and the Solomon R. Guggenheim Museum (the latter designed by Frank Lloyd Wright in a distinctive spiral pattern). The Jewish Museum, the Museum of the American Indian, and the museum and reference library of the Hispanic Society of America specialize in cultural history.

The sciences are represented by the American Museum of Natural History, famed for its dioramas of humans and animals in natural settings and for its massive dinosaur skeletons; the Hayden Planetarium; the New York Botanical Garden and New York Zoological Society Park (Bronx Zoo), both in the Bronx. Also of inter-

est are the Museum of the City of New York, the Museum of the New-York Historical Society, the South Street Seaport Museum, and the New York Aquarium.

The New York State Museum in Albany contains natural history collections and historical artifacts. Buffalo has several museums of note, including the Albright-Knox Art Gallery (for contemporary art), the Buffalo Museum of Science, and the Buffalo and Erie County Historical Society museum.

Among the state's many other fine museums, the Everson Museum of Art (Syracuse), the Rochester Museum and Science Center, the National Baseball Hall of Fame and Museum (Cooperstown), and the Corning Museum of Glass deserve special mention. Buffalo, New Rochelle, Rochester, Syracuse, and Utica have zoos.

4⁴ COMMUNICATIONS

New York City is the hub of the entire US communications network. Postal service was established in New York State in 1692; at the same time, the first General Letter Office was begun in New York City. By the mid-19th century, postal receipts in the state accounted for more than 20% of the US total. "Fast mail" service by train started in the 1870s, with the main routes leading from New York City to either Chicago or St. Louis via Indianapolis and Cincinnati. Mail was carried by air experimentally from Garden City to Mineola, Long Island, in 1911; the first regular airmail service in the United States started in 1917, between New York City and Washington, DC, via Philadelphia.

Telephone service in New York is provided primarily by the New York Telephone Co., but also by more than 40 smaller companies throughout the state. As of 2004, 94.5% of New York's occupied housing units had telephones. Additionally, by June of that same year there were 9,939,759 mobile wireless telephone subscribers. In 2003, 60.0% of New York households had a computer and 53.3% had Internet access. By June 2005, there were 3,188,033 high-speed lines in New York, 2,833,478 residential and 354,555 for business.

Until 31 December 1983, New York Telephone was part of the Bell System, whose parent organization was the American Telephone and Telegraph Co. (AT&T). Effective 1 January 1984, as the result of a US Justice Department antitrust suit, AT&T divested itself of 22 Bell operating companies, which regrouped into seven independent regional telephone companies to provide local telephone service in the United States. One of these companies, NYNEX, is the parent company of New York Telephone. AT&T, which continued to supply long-distance telephone services to New Yorkers (along with competitive carriers such as MCI, ITT, and GTE), is headquartered in New York City.

Domestic telegraph service is provided by the Western Union Telegraph Co., ITT World Communications, RCA Global Communications, and Western Union International. All four companies have their headquarters in New York City. New York State had 58 major AM stations and 181 major FM stations operating in 2005. New York City operates its own radio stations, WNYC-AM and FM, devoted largely to classical music and educational programming. There were 46 major television stations in the state in 2005. The city is the headquarters for most of the major US television networks, including the American Broadcasting Co. (now part of Walt Disney Corp.), Columbia Broadcasting System (owned by the Westinghouse Corp.), National Broadcasting Co.

(owned by General Electric), Westinghouse Broadcasting (Group W), Metromedia, and the Public Broadcasting Service (PBS). The metropolitan area's PBS affiliate, WNET (licensed in Newark, N.J.), is a leading producer of programs for the PBS network. As of 1999, the New York metropolitan area had 6,874,990 television households, 74% of which received cable. The Buffalo region had 621,460 television homes, with a 77% penetration rate.

A total of 589,963 Internet domain names were registered in the state in the year 2000; the second highest number of all states.

45 PRESS

A pioneer in the establishment of freedom of the press, New York is the leader of the US newspaper, magazine, and book-publishing industries. The first major test of press freedom in the colonies came in 1734, when a German-American printer, John Peter Zenger, was arrested on charges of sedition and libel. In his newspaper, the *New-York Weekly Journal*, Zenger had published articles criticizing the colonial governor of New York. Zenger's lawyer, Andrew Hamilton, argued that because the charges in the article were true, they could not be libelous. The jury's acceptance of this argument freed Zenger and established the right of the press to criticize those in power. Two late decisions involving a New York newspaper also struck blows for press freedom. In *New York Times v. Sullivan* (1964), the US Supreme Court ruled that a public official could not win a libel suit against a newspaper unless he could show that its statements about him were not only false but also malicious or in reckless disregard of the truth. In 1971, the *New York Times* was again involved in a landmark case when the federal government tried—and failed—to prevent the newspaper from publishing the Pentagon Papers, a collection of secret documents concerning the war in Vietnam.

In 2005, New York had 37 morning newspapers, 23 evening papers, and 38 Sunday editions.

The following table shows leading papers in New York, with their average daily and Sunday circulations in 2005:

AREA	NAME	DAILY	SUNDAY
Albany	<i>Times-Union</i> (m,S)	100,628	146,464
Buffalo	<i>News</i> (all day,S)	196,429	282,618
Long Island	<i>Newsday</i> (m,S)	481,816	574,081
New York City	<i>Daily News</i> (m,S)	715,052	786,952
	<i>Post</i> (m,S)	481,860	455,511
	<i>Times</i> (m,S)	1,121,057	1,680,583
	<i>Wall Street Journal</i> (m)	1,780,605	
Rochester	<i>Democrat and Chronicle</i> (m,S)	166,727	224,408
Syracuse	<i>Post-Standard</i> (m,S)	118,926	175,020

All of New York City's major newspapers have claims to fame. The *Times* is the nation's "newspaper of record," excelling in the publication of speeches, press conferences, and government reports. It is widely circulated to US libraries and is often cited in research. In 2005, the *Times* Sunday edition was the number one Sunday newspaper in the nation, based on circulation figures. The *New York Post*, founded in 1801, is the oldest US newspaper published continuously without change of name. The *Wall Street Journal*, published Monday through Friday, is a truly national paper, presenting mostly business news in four regional editions. In 2005, the *Wall Street Journal*, the *Times*, the *New York Daily News*, the *Long Island Newsday*, and the *Post* were among the top thirteen largest daily newspapers in the nation. Many historic New

York papers first merged and then—bearing compound names like the *Herald-Tribune*, *Journal-American*, and *World-Telegram & Sun Newspaper*—died in the 1950s and 1960s. In 2001, the Syracuse *Herald-American* and *Herald-Journal* merged to form the *Post-Standard*.

There are two Spanish dailies published in New York City: *El Diario La Prensa*, with a circulation of 50,019 daily and 34,636 Sundays; and *Hoy*, with a circulation of 49,681 daily and 25,465 Sundays.

The leading newspaper chain is the Gannett Co., Inc. (headquarters in Virginia). Other groups include Ogden Newspapers, Inc. (West Virginia), Hearst Newspapers (New York), and Johnson Newspaper Corp. (New York). All the major news agencies have offices in New York City, and the Associated Press has its headquarters there.

In 2005, there were 354 weekly publications in New York. Of these there are 208 paid weeklies, 53 free weeklies, and 93 combined weeklies. The total circulation of paid weeklies (1,635,143) and free weeklies (2,420,539) is 4,055,682. Two of New York City's paid weeklies, *People's Weekly World* and *Observer* ranked first and sixth, respectively, in the United States based on circulations of 67,700 and 52,000. Based on circulation in the United States in 2005, among free weeklies the Suffolk County *Life Newspapers* ranked second in the United States with a circulation of 548,657. The Nassau County *This Week/Pennysaver* (circulation 993,913) ranked seventh in the United States among shopping publications.

Many leading US magazines are published in New York City, including the newsmagazines *Time* and *Newsweek*, business journals like *Fortune*, *Forbes*, and *Business Week*, and hundreds of consumer and trade publications. *Reader's Digest* is published in Pleasantville. Two weeklies closely identified with New York are of more than local interest. While the *New Yorker* carries up-to-date listings of cultural events and exhibitions in New York City, the excellence of its journalism, criticism, fiction, and cartoons has long made it a literary standard-bearer for the entire nation. *New York* magazine influenced the writing style and graphic design of the 1960s and set the pattern for a new wave of state and local magazines that avoided boosterism in favor of independent reporting and commentary. Another weekly, the *Village Voice* (actually a tabloid newspaper), became the prototype for a host of alternative or "underground" journals during the 1960s.

New York City is also the center of the nation's book-publishing industry. New York publishers include McGraw-Hill, Macmillan, Simon & Schuster, and Random House; many book publishers are subsidiaries of other companies.

46 ORGANIZATIONS

In 2006, there were over 25,673 nonprofit organizations registered within the state, of which about 19,427 were registered as charitable, educational, or religious organizations.

The United Nations is the best-known organization to have its headquarters in New York. The UN Secretariat, completed in 1951, remains one of the most familiar landmarks of New York City. Hundreds of US nonprofit organizations also have their national headquarters in New York City. General and service organizations operating out of New York City include the American Field Service, Boys Clubs of America, Girls Clubs of America, Girl

Scouts of the USA, Young Women's Christian Associations of the USA (YWCA), and Associated YM-YWHAs of Greater New York (the Jewish equivalent of the YMCA and YWCA).

Among the cultural and educational groups of national interest are the American Academy of Arts and Letters, Authors League of America, Children's Book Council, Modern Language Association of America, and PEN American Center. State organizations include the Folk Music Society of New York, the New York Center for Books and Reading, the New York Academy of Sciences, the New York Drama Critics Circle, and the New York State Historical. The Statue of Liberty–Ellis Island Foundation sponsors educational programs as well as maintaining the monument and museum. There are numerous local musical and theater groups. There are also several regional historical societies.

Among the national environmental and animal welfare organizations with headquarters in the city are the American Society for the Prevention of Cruelty to Animals (ASPCA), Friends of Animals, Fund for Animals, National Audubon Society, Bide-A-Wee Home Association, Environmental Defense Fund, and American Kennel Club. State groups include the New York City Community Garden Coalition, the New York Conservation Foundation, and the New York State Conservation Council.

Many medical, health, and charitable organizations have their national offices in New York City, including Alcoholics Anonymous, American Foundation for the Blind, National Society to Prevent Blindness, CARE, American Cancer Society, United Cerebral Palsy Associations, Child Welfare League of America, American Diabetes Association, National Multiple Sclerosis Society, Muscular Dystrophy Association, and Planned Parenthood Federation of America.

Leading ethnic and religious organizations based in the city include the American Bible Society, National Conference of Christians and Jews, Hadassah, United Jewish Appeal, American Jewish Committee, American Jewish Congress, United Negro College Fund, Congress of Racial Equality, and National Urban League.

There are many commercial, trade, and professional organizations headquartered in New York City. Among the better known are the Actors' Equity Association, American Arbitration Association, American Booksellers Association, American Federation of Musicians, American Institute of Chemical Engineers, American Society of Civil Engineers, American Society of Composers, Authors, and Publishers (ASCAP), American Society of Journalists and Authors, American Insurance Association, Magazine Publishers Association, American Management Associations, American Society of Mechanical Engineers, and American Institute of Physics.

Sports organizations centered in New York City include the National Football League, the American and the National Leagues of Professional Baseball Clubs, the National Thoroughbred Racing Association, National Basketball Association, the Polar Bear Club–USA, and the US Tennis Association.

Influential political and international affairs groups include the American Civil Liberties Union, Council on Foreign Relations, Trilateral Commission, United Nations Association of the USA, and US Committee for UNICEF.

Virtually every other major US organization has one or more chapters within the state.

47 TOURISM, TRAVEL, AND RECREATION

New York City is the primary travel destination in the state. In 2001, there were 35.2 million visitors to New York City, including 5.7 million international visitors. The projection for 2006 was 43.3 million visitors to New York City. New York City alone brings in \$39 billion in revenue. New York City also supported 291,977 jobs in tourism in 2004. A typical visit to New York City might include a boat ride to the Statue of Liberty; a three-hour boat ride around Manhattan; the Empire State Building, the United Nations, Rockefeller Center, and the New York Stock Exchange; walking tours of the Bronx Zoo, Chinatown, and the theater district; and a sampling of the city's many museums, restaurants, shops, and shows.

Second to New York City as a magnet for tourists comes Long Island, with its beaches, racetracks, and other recreational facilities. Attractions of the Hudson Valley include the US Military Academy (West Point), the Franklin D. Roosevelt home at Hyde Park, Bear Mountain State Park, and several wineries. North of Hudson Valley is Albany, with its massive government center, Governor Nelson A. Rockefeller Plaza, often called the Albany Mall; Saratoga Springs, home of an arts center, racetrack, and spa; and the Adirondack region, with its forest preserve, summer and winter resorts, and abundant hunting and fishing. Northwest of the Adirondacks, in the St. Lawrence River, are the Thousand Islands—actually some 1,800 small islands extending over some 50 mi (80 km) and popular among freshwater fishermen and summer vacationers.

Scenic sites in central New York include the summer resorts and ski areas of the Catskills and the scenic marvels and wineries of the Finger Lakes region, including Taughannock Falls in Trumansburg, the highest waterfall east of the Rockies. Further west lie Buffalo and Niagara Falls. Niagara Falls alone attracts over 12 million visitors annually. Charter boat fishing is available on Lake Ontario. Chautauqua Lake and Allegany State Park, the state's largest, lie south of Buffalo and Niagara Falls. Elmont is the home of the Belmont race track, the third leg in the Triple Crown of thoroughbred horse racing. Motorsports fans can visit the Adirondacks International Speedway.

48 SPORTS

New York has eleven major league professional sports teams: the New York Yankees and the New York Mets of Major League Baseball; the New York Giants, the New York Jets (although the Giants' and Jets' stadiums are located in New Jersey), and the Buffalo Bills of the National Football League; the New York Knickerbockers (usually called the Knicks) of the National Basketball Association; the New York Islanders, the New York Rangers, and the Buffalo Sabres of the National Hockey League; the New York Liberty of the Women's National Basketball Association, and Red Bull New York of Major League Soccer.

The Yankees have a record of excellence spanning most of the twentieth century. They won the American League Pennant 39 times and the World Series 26 times, most recently in 2000, when they defeated the New York Mets in five games. The series was coined the "Subway Series" because both teams were from New York City. Other championship streaks include the American League Pennant in 1927 and 1928; 1936–39; 1941–43; 1949–53; 1955–58; 1960–64; 1998–2001. In the 28 years between 1936 and

1964, the Yankees competed in 23 World Series, winning 16. The Mets have played in four World Series, winning in 1969 and 1986. The Giants won Super Bowls in 1987 and 1991, and the Jets did so in 1969 in a memorable upset victory over the Baltimore Colts. The Buffalo Bills won the American Football Conference Championship in 1991, 1992, 1993, and 1994, losing the Super Bowl each time. The Knicks won the NBA championship in 1970 and 1973, and lost in the NBA finals in 1951, 1952, 1953, 1972, 1994, and 1999. The Islanders won the Stanley Cup in 1980, 1981, 1982, and 1983. The Rangers won it in 1928, 1933, 1940, and 1994.

Three New York teams, the Nets, Giants, and Jets, moved to New Jersey during the 1970s and 1980s. The Giants and Jets remained, in name, New York teams (unlike the Nets, who are now the New Jersey Nets), although the move remains controversial. In 1987, when the Giants won the Super Bowl, then mayor of New York Ed Koch refused them the ticker-tape parade through the city traditionally given in honor of championship teams on the grounds that, their name notwithstanding, they are a New Jersey team.

The state also has 13 minor league baseball teams and six minor league hockey teams.

Horse racing is important to New York State, both as a sports attraction and because of the tax revenues that betting generates. The main thoroughbred racetracks are Aqueduct in Queens, Belmont in Nassau County, and the Saratoga Race Course in Saratoga Springs. Belmont is the home of the Belmont Stakes, one of the three jewels in the Triple Crown of US racing. Saratoga Springs also has a longer harness-racing season at its Saratoga Equine Sports Center facility. Thoroughbred racing is also offered at the Finger Lakes track in Canandaigua. The top track for harness racing is Monticello Raceway (in the Catskills).

The New York City Off-Track Betting Corporation (OTB), which began operations in April 1971, takes bets on races at the state's major tracks, as well as on some out-of-state races. Off-track betting services operate on a smaller scale on Long Island and in upstate New York.

New York City hosts several major professional tennis tournaments every year, including the US Open in Flushing Meadows; the Last Minute Travel.com Masters (men) in Central Park, and the Chase Championships of the WTA Tour (women) at Madison Square Garden.

Among other professional sports facilities, the Watkins Glen International automobile racetrack was, until 1980, the site of a Grand Prix race every October. It now hosts a NASCAR Nextel Cup race in August. Lake Placid, an important winter-sports region, hosted the 1932 and 1980 Winter Olympics, and continues to host amateur winter sports competitions, such as bobsled racing and ski jumping. New York City's Madison Square Garden is a leading venue for professional boxing and hosts many other sporting events.

In collegiate sports, basketball is perhaps most popular. Historically, the City College of New York produced many nationally ranked teams including the National Collegiate Athletic Association (NCAA) champions of 1950; in that year, they also won the National Invitational Basketball Tournament (NIT). St. John's and Syracuse have produced nationally prominent teams, including the 1989 St. John's team that won the NIT. The Syracuse Orangemen won the 2003 National Championship.

The US Military Academy at West Point (Army) won college football national championships in 1944 and 1945, and, as of 1997, ranked 12th all-time among Division I-A teams with more than 600 victories.

Hockey and lacrosse are popular sports at the collegiate level and have been well represented by New York colleges and universities. Both the Syracuse Orangemen and Cornell Big Red have captured multiple national championships on the Division-I level. Cornell has been equally successful on the ice, advancing to the Frozen Four on a number of occasions (most recently in 2003). The Big Red captured the national championship in both 1967 and 1970.

In 1978, New York became the first state to sponsor a statewide amateur athletic event, the Empire State Games. More than 50,000 athletes now compete for a place in the finals, held each summer; the Winter Games, held each February in Lake Placid, host more than 1,000.

The New York City marathon, which is held in late October or early November, has become one of the largest, most prestigious marathons in the world.

Other annual sporting events include the Adirondack Hot Air Balloon Festival in Glens Falls in September and the Westminster Kennel Club Dog Show in New York City in February. The Baseball Hall of Fame is located in Cooperstown.

49 FAMOUS NEW YORKERS

New York State has been the home of five US presidents, eight US vice presidents (three of whom also became president), many statesmen of national and international repute, and a large corps of writers and entertainers.

Martin Van Buren (1782–1862), the eighth US president, became governor of New York in 1828. He was elected to the vice presidency as a Democrat under Andrew Jackson in 1832, and succeeded Jackson in the election of 1836. An unpopular president, Van Buren ran for reelection in 1840 but was defeated, losing even his home state. The 13th US president, Millard Fillmore (1800–74), was elected vice president under Zachary Taylor in 1848. He became president in 1850 when Taylor died. Fillmore's party, the Whigs, did not renominate him in 1852; four years later, he unsuccessfully ran for president as the candidate of the Native American (or Know-Nothing) Party.

Chester Alan Arthur (1829–86), a transplanted New Yorker born in Vermont, became the 21st US president when James Garfield was assassinated. New York's other US presidents had more distinguished careers. Although he was born in New Jersey, Grover Cleveland (1837–1908) served as mayor of Buffalo and as governor of New York before his election to his first presidential term in 1884; he was again elected president in 1892. Theodore Roosevelt (1858–1919), a Republican, was elected governor in 1898. He won election as vice president under William McKinley in 1900, and became the nation's 26th president after McKinley was murdered in 1901. Roosevelt pursued an aggressive foreign policy, but also won renown as a conservationist and trustbuster. Reelected in 1904, he was awarded the Nobel Peace Prize in 1906 for helping to settle a war between Russia and Japan. Roosevelt declined to run again in 1908. However, he sought the Republican nomination in 1912 and, when defeated, became the candidate of the

Progressive (or Bull Moose) Party, losing the general election to Woodrow Wilson.

Franklin Delano Roosevelt (1882–1945), a fifth cousin of Theodore Roosevelt, first ran for national office in 1920, when he was the Democratic vice-presidential choice. A year after losing that election, FDR was crippled by poliomyelitis. He then made an amazing political comeback: he was elected governor of New York in 1928 and served until 1932, when US voters chose him as their 32d president. Reelected in 1936, 1940, and 1944, FDR is the only president ever to have served more than two full terms in office. Roosevelt guided the United States through the Great Depression and World War II, and his New Deal programs greatly enlarged the federal role in promoting social welfare.

In addition to Van Buren, Fillmore, and Theodore Roosevelt, five US vice presidents were born in New York: George Clinton (1739–1812), who was also New York State's first elected governor; Daniel D. Tompkins (1774–1825); William A. Wheeler (1819–87); Schuyler Colfax (1823–85); and James S. Sherman (1855–1912). Two other US vice presidents, though not born in New York, were New Yorkers by the time they became vice president. The first was Aaron Burr (1756–1836), perhaps best known for killing Alexander Hamilton in a duel in 1804; Hamilton (b.Nevis, West Indies, 1757–1804) was a leading Federalist, George Washington's treasury secretary, and the only New York delegate to sign the US Constitution in 1787. The second transplanted New Yorker to become vice president was Nelson Aldrich Rockefeller (1908–79). Born in Maine, Rockefeller served as governor of New York State from 1959 to 1973, was for two decades a major force in national Republican politics, and was appointed vice president by Gerald Ford in 1974, serving in that office through January 1977. Alan Greenspan (b.1926), a chairman of the Federal Reserve, was born in New York City.

Two native New Yorkers have become chief justices of the United States: John Jay (1745–1829) and Charles Evans Hughes (1862–1948). A third chief justice, Harlan Fiske Stone (1872–1946), born in New Hampshire, spent most of his legal career in New York City and served as dean of Columbia University's School of Law. Among New Yorkers who became associate justices of the US Supreme Court, Benjamin Nathan Cardozo (1870–1938) is noteworthy. Ruth Bader Ginsberg (b.1933) was President Bill Clinton's first appointment to the Supreme Court.

Other federal officeholders born in New York include US secretaries of state William Henry Seward (1801–72), Hamilton Fish (1808–93), Elihu Root (1845–1937), Frank B. Kellogg (1856–1937), and Henry L. Stimson (1867–1950). Prominent US senators have included Robert F. Wagner (1877–1953), who sponsored many New Deal laws; Robert F. Kennedy (1925–68), who though born in Massachusetts was elected to represent New York in 1964; Jacob K. Javits (1904–86), who served continuously in the Senate from 1957 through 1980; and Daniel Patrick Moynihan (1927–2003), a scholar, author, and former federal bureaucrat who has represented New York since 1977. Colin Powell (b.1937), first African American to lead the Armed Forces, attended the City University of New York.

The most important—and most colorful—figure in colonial New York was Peter Stuyvesant (b.Netherlands, 1592–1672); as director general of New Netherland, he won the hearty dislike of the Dutch settlers. Signers of the Declaration of Independence in

1776 from New York were Francis Lewis (1713–1803); Philip Livingston (1716–78); Lewis Morris (1726–98), the half-brother of the colonial patriot Gouverneur Morris (1752–1816); and William Floyd (1734–1821).

Other governors who made important contributions to the history of the state include DeWitt Clinton (1769–1828); Alfred E. Smith (1873–1944); Herbert H. Lehman (1878–1963); W. Averell Harriman (1891–1986), who has also held many US diplomatic posts; and Thomas E. Dewey (1902–71). Mario M. Cuomo (b.1932) served three terms as governor from 1982–94. Robert Moses (b.Connecticut, 1888–1981) led in the development of New York's parks and highway transportation system. One of the best-known and best-loved mayors in New York City history was Fiorello H. La Guardia (1882–1947), a reformer who held the office from 1934 to 1945. Edward I. Koch (b.1924) was first elected to the mayoralty in 1977.

Native New Yorkers have won Nobel prizes in every category. Winners of the Nobel Peace Prize besides Theodore Roosevelt were Elihu Root in 1912 and Frank B. Kellogg in 1929. The lone winner of the Nobel Prize for literature was Eugene O'Neill (1888–1953) in 1936. The chemistry prize was awarded to Irving Langmuir (1881–1957) in 1932, John H. Northrop (1891–1987) in 1946, and William Howard Stein (1911–80) in 1972. Winners in physics include Carl D. Anderson (b.1905–1991) in 1936, Robert Hofstadter (1915–90) in 1961, Richard Phillips Feynman (1918–88) and Julian Seymour Schwinger (1918–94) in 1965, Murray Gell-Mann (b.1929) in 1969, Leon N. Cooper (b.1930) in 1972, Burton Richter (b.1931) in 1976, and Steven Weinberg (b.1933) and Sheldon L. Glashow (b.1923) in 1979.

The following New Yorkers have been awarded the Nobel Prize for physiology or medicine: Hermann Joseph Muller (1890–1967) in 1946, Arthur Kornberg (b.1918) in 1959, George Wald (1906–97) in 1967, Marshall Warren Nirenberg (b.1927) in 1968, Julius Axelrod (1912–2004) in 1970, Gerald Maurice Edelman (b.1929) in 1972, David Baltimore (b.1938) in 1975, Baruch Samuel Blumberg (b.1925) and Daniel Carlton Gajdusek (b.1923) in 1976, Rosalyn Sussman Yalow (b.1921) in 1977, and Hamilton O. Smith (b.1931) in 1978.

The Nobel Prize for economic science was won by Kenneth J. Arrow (b.1921) in 1972, Milton Friedman (b.1912) in 1976, Richard Stone (1928–91) in 1984, and Robert Fogel (b.1926) in 1993. New York is also the birthplace of national labor leader George Meany (1894–1980) and economist Walter Heller (1915–87). Other distinguished state residents were physicist Joseph Henry (1797–1878), Mormon leader Brigham Young (b.Vermont, 1801–77), botanist Asa Gray (1810–88), inventor-businessman George Westinghouse (1846–1914), and Jonas E. Salk (1914–95), developer of a poliomyelitis vaccine. Melvin Schwartz (b.New York City, 1932) was a co-recipient of the 1988 Nobel prize in physics. Gertrude Belle Elion (1918–99), Nobel Prize winner in medicine 1988, was born in New York City. Leon Max Lederman (b.1922) was a co-recipient of the 1988 Nobel Prize in physics.

Writers born in New York include the storyteller and satirist Washington Irving (1783–1859); poets Walt Whitman (1819–92) and Ogden Nash (1902–71); and playwrights Eugene O'Neill (1888–1953), Arthur Miller (1915–2005), Paddy Chayefsky (1923–81), and Neil Simon (b.1927). Two of America's greatest novelists were New Yorkers: Herman Melville (1819–91), who was also an

important poet, and Henry James (1843–1916), whose short stories are equally well known. Other novelists include James Fenimore Cooper (b.New Jersey, 1789–1851), Henry Miller (1891–1980), James Michener (1907–97), J(erome) D(avid) Salinger (b.1919), Joseph Heller (1923–99), James Baldwin (1924–87), and Gore Vidal (b.1925). Lionel Trilling (1905–75) was a well-known literary critic; Barbara Tuchman (1912–89), a historian, has won both scholarly praise and popular favor. New York City has produced two famous journalist-commentators, Walter Lippmann (1889–1974) and William F. Buckley Jr. (b.1925), and a famous journalist-broadcaster Walter Winchell (1897–1972).

Broadway is the showcase of American drama and the birthplace of the American musical theater. New Yorkers linked with the growth of the musical include Jerome Kern (1885–1945), Lorenz Hart (1895–1943), Oscar Hammerstein II (1895–1960), Richard Rodgers (1902–79), Alan Jay Lerner (1918–86), and Stephen Sondheim (b.1930). George Gershwin (1898–1937), whose *Porgy and Bess* raised the musical to its highest artistic form, also composed piano and orchestral works. Other important US composers from New York include Irving Berlin (b.Russia, 1888–1989), Aaron Copland (1900–90), Elliott Carter (b.1908), and William Schuman (1910–92). New York was the adopted home of ballet director and choreographer George Balanchine (b.Russia, 1904–83); his associate Jerome Robbins (1918–98) was born in New York City, as was choreographer Agnes De Mille (1905–93). Leaders in the visual arts include Frederic Remington (1861–1909), the popular illustrator Norman Rockwell (1894–1978), Willem de Kooning (b.Netherlands, 1904–97), and the photographer Margaret Bourke-White (1906–71).

Many of America's best-loved entertainers come from the state. A small sampling would include comedians Groucho Marx (Julius Marx, 1890–1977), Mae West (1892–1980), Eddie Cantor (Edward Israel Iskowit, 1892–1964), James "Jimmy" Durante (1893–1980), Bert Lahr (Irving Lahrheim, 1895–1967), George Burns (1896–1996), Milton Berle (Berlinger, b.1908), Lucille Ball (1911–1989), Danny Kaye (David Daniel Kominsky, 1913–87), and Sid Caesar (b.1922); comedian-film directors Mel Brooks (Melvin Kaminsky, b.1926) and Woody Allen (Allen Konigsberg, b.1935); stage and screen stars Humphrey Bogart (1899–1957), James Cagney (1904–86), Zero Mostel (Samuel Joel Mostel, 1915–77), and Lauren Bacall (Betty Joan Perske, b.1924); pop, jazz, and folk singers Cab Calloway (1907–90), Lena Horne (b.1917), Pete Seeger (b.1919), Sammy Davis Jr. (1925–90), Harry Belafonte (b.1927), Joan Baez (b.1941), Barbra Streisand (b.1942), Carly Simon (b.1945), Arlo Guthrie (b.1947), Billy Joel (b.1951), and Mariah Carey, Grammy Award-winning pop singer, (b.1969); and opera stars Robert Merrill (1919–2004), Maria Callas (Kalogeropoulos, 1923–77), and Beverly Sills (Belle Silverman, b.1929). Also noteworthy are producers Irving Thalberg (1899–1936), David Susskind (1920–87), Joseph Papp (1921–91), and Harold Prince (b.1928) and directors George Cukor (1899–1983), Stanley Kubrick (1928–99), John

Frankenheimer (1930–2002), Peter Bogdanovich (b.1939), and actor Tom Cruise (b.1962 in Syracuse, New York).

Among many prominent sports figures born in New York are first-baseman Lou Gehrig (1903–41), football coach Vince Lombardi (1913–70), pitcher Sanford "Sandy" Koufax (b.1935), and basketball stars Kareem Abdul-Jabbar (Lew Alcindor, b.1947) and Julius Erving (b.1950). Orel Leonard Hershey IV (b.1958), who set the record for most consecutive scoreless innings pitched, was born in Buffalo, New York.

NORTH CAROLINA

State of North Carolina

ORIGIN OF STATE NAME: Named in honor of King Charles I of England. **NICKNAME:** The Tarheel State; Old North State. **CAPITAL:** Raleigh. **ENTERED UNION:** 21 November 1789 (12th). **SONG:** “The Old North State.” **MOTTO:** *Esse quam videri* (To be rather than to seem). **FLAG:** Adjacent to the fly of two equally sized bars, red above and white below, is a blue union containing a white star in the center, flanked by the letters N and C in gold. Above and below the star are two gold scrolls, the upper one reading “May 20th 1775,” the lower one “April 12th 1776.” **OFFICIAL SEAL:** Liberty, clasping a constitution and holding aloft on a pole a liberty cap, stands on the left, while Plenty sits beside a cornucopia on the right; behind them, mountains run to the sea, on which a three-masted ship appears. “May 20, 1775” appears above the figures; the words “The Great Seal of the State of North Carolina” and the state motto surround the whole. **BIRD:** Cardinal. **FISH:** Channel bass. **FLOWER:** Dogwood. **TREE:** Long leaf pine. **GEM:** Emerald. **LEGAL HOLIDAYS:** New Year’s Day, 1 January; Birthday of Martin Luther King Jr., 3rd Monday in January; Good Friday, Friday before Easter, March or April; Memorial Day, last Monday in May; Independence Day, 4 July; Labor Day, 1st Monday in September; Veterans’ Day, 11 November; Thanksgiving Day, 4th Thursday in November and the day following; Christmas Day, 25 December and the day following. **TIME:** 7 AM EST = noon GMT.

¹LOCATION, SIZE, AND EXTENT

Located in the southeastern United States, North Carolina ranks 28th in size among the 50 states.

The total area of North Carolina is 52,669 sq mi (136,413 sq km), of which land accounts for 48,843 sq mi (126,504 sq km) and inland water 3,826 sq mi (9,909 sq km). North Carolina extends 503 mi (810 km) E–W; the state’s maximum N–S extension is 187 mi (301 km).

North Carolina is bordered on the N by Virginia; on the E by the Atlantic Ocean; on the S by South Carolina and Georgia; and on the W by Tennessee. A long chain of islands or sand banks, called the Outer Banks, lies off the state’s Atlantic coast. The total boundary line of North Carolina is 1,270 mi (2,044 km), including a general coastline of 301 mi (484 km); the tidal shoreline extends 3,375 mi (5,432 km). The state’s geographic center is in Chatham County, 10 mi (16 km) NW of Sanford.

²TOPOGRAPHY

North Carolina’s three major topographic regions belong to the Atlantic Coastal Plain, the Piedmont Plateau, and the Appalachian Mountains.

The Outer Banks, narrow islands of shifting sandbars, screen most of the coastal plain from the ocean. Treacherous navigation conditions and numerous shipwrecks have earned the name of “Graveyard of the Atlantic” for the shoal waters off Cape Hatteras, which, like Cape Lookout and Cape Fear, juts out from the banks into the Atlantic. Cape Hatteras Lighthouse is the tallest in the United States, rising 208 ft (63 m). The shallow Pamlico and Albemarle sounds and broad salt marshes lying behind the Outer Banks serve not only as valuable habitats for marine life but as further hindrances to water transportation. Sea level at the Atlantic Ocean is the lowest elevation of the state.

On the mainland, the coastal plain extends westward from the sounds for 100 to 140 mi (160–225 km) and upward from sea level to nearly 500 ft (150 m). Near the ocean, the outer coastal plain is very flat and often swampy; this region contains all the natural lakes in North Carolina, the largest being Lake Mattamuskeet (67 sq mi/174 sq km), followed by lakes Phelps and Waccamaw. The inner coastal plain is more elevated and better drained. Infertile sand hills mark its southwestern section, but the rest of the region constitutes the state’s principal farming country.

The Piedmont is a rolling plateau of red clay soil roughly 150 mi (240 km) wide, rising from 30 to 600 ft (90–180 m) in the east to 1,500 ft (460 m) in the west. The fall line, a sudden change in elevation, separates the piedmont from the coastal plain and produces numerous rapids in the rivers that flow between the regions.

The Blue Ridge, a steep escarpment that parallels the Tennessee border, divides the piedmont from North Carolina’s westernmost region, containing the highest and most rugged portion of the Appalachian chain. The two major ranges are the Blue Ridge itself, which averages 3,000–4,000 ft high (900–1,200 m), and the Great Smoky Mountains, which have 43 peaks higher than 6,000 ft (1,800 m). Several smaller chains intersect these two ranges; one of them, the Black Mountains, contains Mt. Mitchell, at 6,684 ft (2,039 m) the tallest peak east of the Mississippi River. The mean elevation of the state is approximately 700 ft (214 m).

No single river basin dominates North Carolina. The Hiwassee, Little Tennessee, French Broad, Watauga, and New rivers flow from the mountains westward to the Mississippi River system. East of the Blue Ridge, the Chowan, Roanoke, Tar, Neuse, Cape Fear, Yadkin, and Catawba drain the piedmont and coastal plain. The largest artificial lakes are Lake Norman on the Catawba, Lake Gaston on the Roanoke, and High Rock Lake on the Yadkin.

3 CLIMATE

North Carolina has a humid, subtropical climate. Winters are short and mild, while summers are usually very sultry; spring and fall are distinct and refreshing periods of transition. In most of North Carolina, temperatures rarely go above 100°F (38°C) or fall below 10°F (-12°C), but differences in altitude and proximity to the ocean create significant local variations. Average January temperatures range from 36°F (2°C) to 48°F (9°C), with an average daily maximum January temperature of 51°F (11°C) and minimum of 29°F (-2°C). Average July temperatures range from 68°F (20°C) to 80°F (27°C), with an average daily high of 87°F (31°C) and a low of 66°F (19°C). The coldest temperature ever recorded in North Carolina was -34°F (-37°C), registered on 21 January 1985 on Mt. Mitchell; the hottest, 110°F (43°C), occurred on 21 August 1983 at Fayetteville.

In the southwestern section of the Blue Ridge, moist southerly winds rising over the mountains drop more than 80 in (203 cm) of precipitation per year, making this region the wettest in the eastern states; the other side of the mountains receives less than half that amount. Average annual precipitation at Charlotte is about 43 in (109 cm). The piedmont gets between 44 and 48 in (112 to 122 cm) of precipitation per year, while 44 to 56 in (112 to 142 cm) annually fall on the coastal plain. Average winter snowfalls vary from 50 in (127 cm) on Mt. Mitchell to only a trace amount at Cape Hatteras. In the summer, North Carolina weather responds to the Bermuda High, a pressure system centered in the mid-Atlantic. Winds from the southwest bring masses of hot humid air over the state; anticyclones connected with this system frequently lead to upper-level thermal inversions, producing a stagnant air mass that cannot disperse pollutants until cooler, drier air from Canada moves in. During late summer and early autumn, the eastern region is vulnerable to high winds and flooding from hurricanes. Hurricane Diana struck the Carolina coast in September 1984, causing \$36 million in damage. A series of tornadoes in March of that year killed 61 people, injured over 1,000, and caused damage exceeding \$120 million. Hurricanes Hugo (1989) and Fran (1996) caused major damage.

4 FLORA AND FAUNA

North Carolina has approximately 300 species and subspecies of trees and almost 3,000 varieties of flowering plants. Coastal plant life begins with sea oats predominating on the dunes and salt meadow and cordgrass in the marshes, then gives way to wax myrtle, yaupon, red cedar, and live oak further inland. Blackwater swamps support dense stands of cypress and gum trees. Pond pine favors the peat soils of the Carolina bays, while longleaf pine and turkey oak cover the sand hills and other well-drained areas. Weeds take root when a field is abandoned in the piedmont, followed soon by loblolly, shortleaf, and Virginia pine; sweet gum and tulip poplars spring up beneath the pines, later giving way to an oak-hickory climax forest. Dogwood decorates the understory, but kudzu—a rank, weedy vine introduced from Japan as an antierosion measure in the 1930s—is a less attractive feature of the landscape. The profusion of plants reaches extraordinary proportions in the mountains. The deciduous forests on the lower slopes contain Carolina hemlock, silver bell, yellow buckeye, white basswood, sugar maple, yellow birch, tulip poplar, and beech, in addi-

tion to the common trees of the piedmont. Spruce and fir dominate the high mountain peaks. There is no true treeline in the North Carolina mountains, but unexplained treeless areas called “balds” appear on certain summits. Twenty-seven plant species were listed as threatened or endangered in 2006, including Blue Ridge goldenrod, bunched arrowhead, Heller’s blazingstar, Virginia spiraea, seabeach amaranth, and rough-leaved loosestrife.

The white-tailed deer is the principal big-game animal of North Carolina, and the black bear is a tourist attraction in the Great Smoky Mountains National Park. The wild boar was introduced to the mountains during the 19th century; beavers have been reintroduced and are now the state’s principal furbearers. The largest native carnivore is the bobcat.

North Carolina game birds include the bobwhite quail, mourning dove, wild turkey, and many varieties of duck and goose. Trout and smallmouth bass flourish in North Carolina’s clear mountain streams, while catfish, pickerel, perch, crappie, and largemouth bass thrive in fresh water elsewhere. The sounds and surf of the coast yield channel bass, striped bass, flounder, and bluefish to anglers. Among insect pests, the pine bark beetle is a threat to the state’s forests and forest industries.

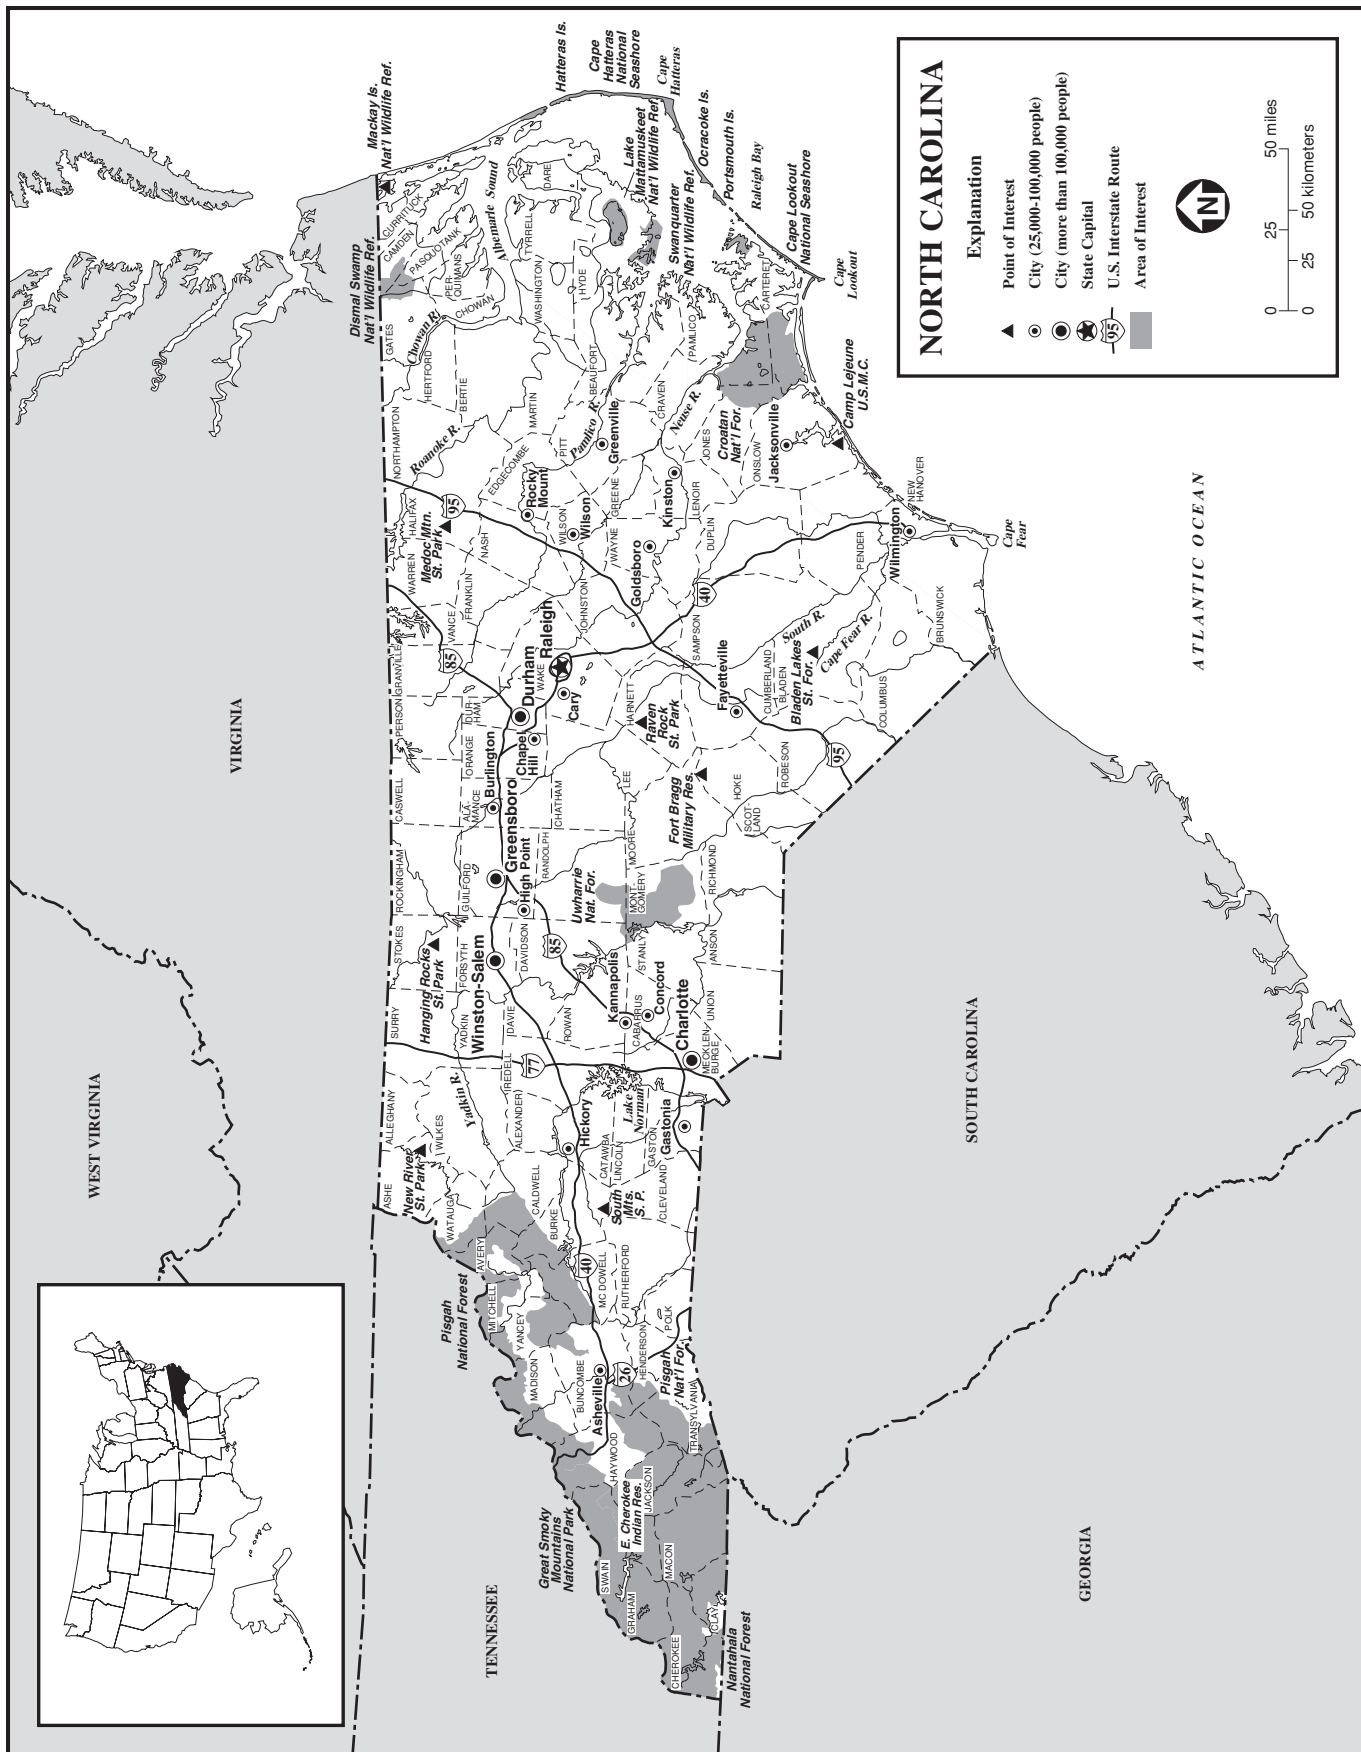

The gray wolf, elk, eastern cougar, and bison are extinct in North Carolina; the American alligator, protected by the state, has returned in large numbers to eastern swamps and lakeshores. Thirty animal species (vertebrates and invertebrates) were listed by the US Fish and Wildlife Service as threatened or endangered in April 2006, including Indiana and Virginia big-eared bats, bald eagle, red-cockaded woodpecker, four species of whale, and five species of sea turtle.

5 ENVIRONMENTAL PROTECTION

State actions to safeguard the environment began in 1915 with the purchase of the summit of Mt. Mitchell as North Carolina’s first state park. North Carolina’s citizens and officials worked actively (along with those in Tennessee) to establish the Great Smoky Mountains National Park during the 1920s, the same decade that saw the establishment of the first state agency for wildlife conservation. In 1937, a state and local program of soil and water conservation districts began to halt erosion and waste of natural resources.

Interest in environmental protection intensified during the 1970s. In 1971, the state required its own agencies to submit environmental impact statements in connection with all major project proposals; it also empowered local governments to require such statements from major private developers. Voters approved a \$150 million bond issue in 1972 to assist in the construction of wastewater treatment facilities by local governments. The Coastal Management Act of 1974 mandated comprehensive land-use planning for estuaries, wetlands, beaches, and adjacent areas of environmental concern. The most controversial environmental action occurred mid-decade, when a coalition of state officials, local residents, and national environmental groups fought the proposed construction of a dam that would have flooded the New River Valley in northwestern North Carolina. Congress quashed the project when it designated the stream as a national scenic river in 1976.

Air quality in most of North Carolina’s eight air-quality-control regions is good, although the industrialized areas of the piedmont and mountains experience pollution from vehicle exhausts and

coal-fired electric generating plants. Water quality ranges from extraordinary purity in numerous mountain trout streams to serious pollution in major rivers and coastal waters. Soil erosion and municipal and industrial waste discharges have drastically increased the level of dissolved solids in some piedmont streams, while runoffs from livestock pastures and nitrates leached from fertilized farmland have over stimulated the growth of algae in slow-moving eastern rivers. Pollution also has made certain areas of the coast unsafe for commercial shellfishing.

About 5.7 million acres (2.3 million hectares) of the state are wetlands; since 1997 the North Carolina Wetlands Partnership has overseen wetlands conservation. About 70% of North Car-

olina's rare and endangered plants and animals are considered wetland-dependent.

The Department of Environment, Health and Natural Resources, the state's main environmental agency, issues licenses to industries and municipalities and seeks to enforce clean air and water regulations. In 2003, 129.1 million lb of toxic chemicals were released in the state. In 2003, North Carolina had 311 hazardous waste sites listed in the US Environment Protection Agency (EPA) database, 31 of which were on the National Priorities List as of 2006, including the Barber Orchard in Waynesville and ABC One Hour Cleaners in Jacksonville. In 2005, the EPA spent over \$461,000 through the Superfund program for the cleanup of haz-

ardous waste sites in the state. The same year, federal EPA grants awarded to the state included \$19.4 million for the water pollution control revolving fund and \$14.5 million for the drinking water revolving fund.

6 POPULATION

North Carolina ranked 11th in population in the United States with an estimated total of 8,683,342 in 2005, an increase of 7.9% since 2000. Between 1990 and 2000, North Carolina's population grew from 6,628,637 to 8,049,313, an increase of 21.4%, making North Carolina the sixth-fastest-growing state of the decade. The population is projected to reach 10 million by 2015 and 11.4 million by 2025. The population density in 2004 was 175.4 persons per sq mi (67.7 persons per sq km). As of 2004, the state's population had a median age of 36. In the same year, 24.8% of the populace were under the age of 18 while 12.1% was age 65 or older.

At the time of the first census in 1790, North Carolina ranked third among the 13 states, with a population of 393,751, but it slipped to tenth by 1850. In the decades that followed, North Carolina grew slowly by natural increase and suffered from net out-migration, while the rest of the nation expanded rapidly. Out-migration abated after 1890, however, and North Carolina's overall growth rate in the 20th century was slightly greater than that of the nation as a whole.

Most North Carolinians live in and around a relatively large number of small and medium-sized cities and towns, many of which are concentrated in the Piedmont Crescent, between Charlotte, Greensboro, and Raleigh. Leading cities in 2004 were Charlotte, 594,359; Raleigh, 326,653; Greensboro, 231,543; Durham, 201,726; and Winston-Salem, 191,523. The Charlotte metropolitan area had an estimated 1,474,734 people in 2004.

7 ETHNIC GROUPS

North Carolina's white population is descended mostly from English settlers who arrived in the east in the 17th and early 18th centuries and from Scottish, Scots-Irish, and German immigrants who poured into the piedmont in the middle of the 18th century. Originally very distinct, these groups assimilated with one another in the first half of the 19th century to form a relatively homogeneous body of native-born white Protestants. By 1860, North Carolina had the lowest proportion of foreign-born whites of any state; more than a century later, in 1990, only 1.7% (115,077) of North Carolina residents were foreign born, mostly from Germany, the United Kingdom, and Mexico. Within the following decade, however, the foreign-born population increased dramatically, to 430,000 (5.3%) in 2000. In the same year, the estimated Hispanic and Latino population was 378,963 (4.7% of the state total), up from 161,000 (2.1%) in 1990. In 2004, 6.1% of the population was of Hispanic or Latino origin.

According to the 2000 federal census there were some 99,551 Native Americans (including Eskimos and Aleuts) living in North Carolina, the sixth-largest number in any state, and the largest number in any state east of the Mississippi. In 2004, 1.3% of the state's population was American Indian or Alaskan Native. The Lumbee of Robeson County and the surrounding area are the major Indian group. The total population of their lands in 2000, including non-Indians, was 474,100. Their origins are mysterious, but they are probably descended from many small tribes, deci-

mated by war and disease, that banded together in the Lumber River swamps in the 18th century. The Lumbee have no language other than English, have no traditional tribal culture, and are not recognized by the Bureau of Indian Affairs.

The Haliwa, Waccamaw Siouan, Coharie, and Person County Indians are smaller groups in eastern North Carolina who share the Lumbee's predicament. The only North Carolina Indians with a reservation, a tribal language and culture, and federal recognition are the Cherokee, whose ancestors hid in the Smokies when the majority of their tribe was removed to Indian Territory (now Oklahoma) in 1838. The North Carolina Cherokee have remained in the mountains ever since, living in a community that now centers on the Qualla Boundary Reservation near Great Smoky Mountains National Park.

The 1,737,545 blacks in North Carolina made up 21.6% of its total population in 2000. In 2004, 21.8% of the state's population was black. Black slaves came to North Carolina from the 17th century through the early 19th; like most white immigrants, they usually arrived in North Carolina after previous residence in other colonies. Although black slaves performed a wide variety of tasks and lived in every county of the state, they were most often field laborers on the large farms in the eastern region. The distribution of black population today still reflects the patterns of plantation agriculture: the coastal plain contains a much higher than average concentration of black inhabitants. The overall proportion of blacks in North Carolina rose throughout the 19th century but fell steadily in the 20th, until about 1970, as hundreds of thousands migrated to northern and western states. Some of the earliest demonstrations of the civil rights movement, most notably a 1960 lunch counter sit-in at Greensboro, took place in the state.

In 2000 North Carolina's Asian population numbered 113,689, including 26,197 Asian Indians, 18,984 Chinese, 15,596 Vietnamese, 12,600 Koreans, 9,592 Filipinos, and 7,093 Hmong. Pacific Islanders numbered 3,983. In 2004, 1.7% of the state's population was Asian, and 0.1% Pacific Islander. That year, 1% of the population reported origin of two or more races.

8 LANGUAGES

Although most of the original Cherokee Indians were removed to Indian Territory around 1838, descendants of those who resisted and remained have formed a strong Indian community in the Appalachian foothills. Among Indian place-names are Pamlico, Nantahala, and Cullasaja.

Many regional language features are widespread, but others sharply distinguish two subregions: the western half, including the piedmont and the Appalachian Highlands, and the eastern coastal plain. Terms common to South Midland and Southern speech occur throughout the state: both *dog irons* and *fire dogs* (andirons), *bucket* (pail), *spicket* (spigot), *seesaw*, *comfort* (tied and filled bed-cover), *pullybone* (wishbone), *ground squirrel* (chipmunk), *branch* (small stream), *light bread* (white bread), *polecat* (skunk), and *carry* (escort). Also common are *greasy* with the /z/ sound, *new* as /nyoo/ and *due* as /dyoo/, *swallow it* as /swaller it/, *can't* rhyming with *paint*, *poor* with the vowel sound /aw/, and *horse* and *hoarse* with different vowels.

Distinct to the western region are *snake feeder* (dragonfly), *blinds* (roller shades), *poke* (paper bag), *redworm* (earthworm), a *little piece* (a short distance), *plum peach* (clingstone peach), *sick*

on the stomach (also found in the Pee Dee River Valley), *boiled* as /bawrlɪd/, *fog* as /fawg/, *Mary* sounding like *merry* and *bulge* with the vowel of *good*. Setting off eastern North Carolina are *lightwood* (kindling), *mosquito hawk* (dragonfly), *earthworm*, *press peach* (instead of plum peach), *you-all* as second-person plural, and *sick in the stomach*. Distinctive eastern pronunciations include the loss of /r/ after a vowel, *fog* as /fagh/, *scarce* and *Mary* with the vowel of *gate*, *bulge* with the vowel sound /ah/. Along the coast, peanuts are *goobers* and a screech owl is a *shivering owl*.

In 2000, 6,909,648 North Carolinians—92% of the population five years of age and older—spoke only English at home, down from 96.1% in 1990.

The following table gives selected statistics from the 2000 Census for language spoken at home by persons five years old and over. The category “African languages” includes Amharic, Ibo, Twi, Yoruba, Bantu, Swahili, and Somali.

LANGUAGE	NUMBER	PERCENT
Population 5 years and over	7,513,165	100.0
Speak only English	6,909,648	92.0
Speak a language other than English	603,517	8.0
Speak a language other than English	603,517	8.0
Spanish or Spanish Creole	378,942	5.0
French (incl. Patois, Cajun)	33,201	0.4
German	28,520	0.4
Chinese	15,698	0.2
Vietnamese	13,594	0.2
Korean	11,386	0.2
Arabic	10,834	0.1
African languages	9,181	0.1
Miao, Hmong	7,493	0.1
Tagalog	6,521	0.1
Greek	6,404	0.1
Japanese	6,317	0.1
Italian	6,233	0.1

⁹RELIGIONS

The Church of England was the established church of colonial North Carolina but was never a dominant force among the early immigrants. Scottish Presbyterians settled in the upper Cape Fear Valley, and Scots-Irish Presbyterians occupied the piedmont after 1757. Lutheran Evangelical Reformed Germans later moved into the Yadkin and Catawba valleys of the same region. The Moravians, a German sect, founded the town of Salem (later merging with Winston to become Winston-Salem) in 1766 as the center of their utopian community at Wachovia. Methodist circuit riders and Separate Baptists missionaries won thousands of converts among blacks and whites, strengthening their appeal in the Great Revival of 1801. In the subsequent generation, a powerful evangelical consensus dominated popular culture. After the Civil War, blacks left the white congregations to found their own churches, but the overall strength of Protestantism persisted. When many North Carolinians left their farms at the end of the 19th century, they moved to mill villages that were well supplied with churches, often at the mill owners' expense.

The majority of North Carolinians are Protestant. The largest denomination in 2000 was the Southern Baptist Convention which reported 1,512,058 adherents; there were 28,169 newly baptized members reported in 2002. The United Methodist Church claimed 529,272 members in 2004 and the Presbyterian Church USA had 203,647 in 2000. The next largest Protestant denominations in 2000 were the Evangelical Lutheran Church in Ameri-

ca, 88,830 adherents; the Church of God (Cleveland, Tennessee), 81,037; the Episcopal Church, 80,068; the United Church of Christ, 50,088; the International Pentecostal Holiness Church, 50,265; the Original Free Will Baptists, 46,020; Independent Charismatic Churches, 42,559. In 2006, the Church of Jesus Christ of Latter-day Saints (Mormons) reported a statewide membership of 66,497 in 135 congregations; a Mormon temple was built in Raleigh-Durham in 1999. In 2000, the state had an estimated 25,545 Jews, and about 20,137 Muslims. There are still about 18,180 Moravians in the state. Over 4.3 million people (about 54.6% of the population) were not counted as members of any religious organization. In 2004, there were 319,492 Roman Catholics in the state.

The Advent Christian Church General Conference of America, representing 306 local Advent Christian churches in the United States and Canada, is based in Charlotte. The Billy Graham Evangelistic Association has its headquarters in Charlotte as well.

¹⁰TRANSPORTATION

The history of North Carolina's growth and prosperity has been inextricably linked to the history of transportation in the state, especially the history of highway development. North Carolina has the largest state-maintained highway system in the nation. To provide and maintain this system, North Carolina relies strictly on user-related sources of funds, such as motor fuel taxes and state license and registration fees.

The early settlers widened and improved the Indian trails into bridle trails and then dirt roads. In colonial times, waterways were the avenues of commerce. Almost all products moved on rivers and streams within the state, and most manufactured goods arrived by sea. When it became necessary to transport goods farther inland, local laws were passed which directed that a road be built to the nearest landing. By this piecemeal process, the state slowly acquired a system of dirt roads.

As the population of the state grew, so did the demand for roads. From 1830 onward, a new element was introduced into the picture—railroads, representing the newest and most efficient means of travel. In the 1850s, transportation took yet another turn when the state invested in plank roads, which did not prove financially practical.

With the coming of the Civil War, transportation improvements in North Carolina ground to a halt. During the war, the existing railroads were used heavily for military purposes. Renovations and improvements were delayed during the early years of the Reconstruction period because of poor economic conditions in the state. By 1870, the state gave up on assistance to railroads and left their further development to private companies. In 1895, the Southern Railway acquired a 99-year lease on the piedmont section of the North Carolina Railroad while eastern routes fell to the Atlantic Coast Line and the Seaboard Air Line Railway.

In the early years of the 20th century, the principal emphasis was on the further development of the investor-owned railroads. In 1911, there was 4,608 mi (7,414 km) of railroad right-of-way in the state, and by 1937 this figure had increased, if only slightly, to a total of 4,763 (7,663 km). By 2003, railroad track in North Carolina had fallen to 3,344 route mi (5,383 km). Two Class I railroads operate in the state, along with 13 local and eight switching and terminal lines. As of 2006, Amtrak provided service to 12 stations

in the state via its New York to Charlotte Carolinian and its daily Charlotte to Raleigh Piedmont trains.

By the second decade of the century, the building of roads received new emphasis. It was during this period that North Carolina earned the label “the Good Roads State.” In 1915, the Highway Commission was created, and in 1921 the General Assembly approved a \$40 million state highway bond to construct a system of hard-surface roads connecting each of the 100 county seats with all of the others. The new hard-surface roads soon proved ideal for automobiles and trucks. More highway bonds were approved to pay for a statewide system of paved highways, giving the state more roads by the end of the decade than any other southern state except Texas. The state government took over the county roads in 1931.

In 2004, North Carolina had 102,666 mi (165,529 km) of public roads. There were some 6.195 million motor vehicles registered in the state that same year, including around 3.627 million automobiles, approximately 2,458 million trucks, and some 10,000 buses. Licensed drivers numbered 6,122,137 in 2004. The major interstate highways are I-95, which stretches north–south across the coastal plain, and I-85, which parallels it across the piedmont. I-40 leads from the mountains to the coast at Wilmington, and I-26 and I-77 handle north–south traffic in the western section. I-73 and I-74 add 325 mi (523 km) of interstate highway and will handle north–south traffic in the eastern section of the state.

Transportation 2001, a plan to speed up highway construction and complete key corridors, eliminate the road maintenance backlog, and develop a master plan for public transportation, was unveiled in 1994. A \$950 million highway bond was approved by North Carolina voters in 1996 to accelerate construction of urban loops and intrastates and to pave secondary roads. Transit 2001, the master plan to improve public transportation was unveiled in February 1997. A major incentive has been placed on high-speed rail service from Raleigh to Charlotte, reducing travel time to two hours by 2000.

There are nine types of public transportation currently operating in North Carolina: human service transportation, rural general public transportation, urban transit, regional transit, vanpool and carpool programs, inter-city buses, inter-city rail passenger service, pupil transportation, and passenger ferry service. There are 17 publicly owned urban transit systems operating in North Carolina. More than three million North Carolinians have access to rural public transportation services operating in approximately 45 counties and towns.

The Atlantic Intracoastal Waterway follows sounds, rivers, and canals down the entire length of eastern North Carolina. The North Carolina ferry system, the second largest in the nation, transports more than 23 million passengers and 820,000 vehicles each year. Twenty-four ferry vessels move passengers and vehicles between the state’s coastal communities. Seventeen of the vessels feature the colors and seals of North Carolina’s public and private colleges and universities to promote the ferry system. There are major ports at Morehead City and Wilmington. In 2004, Morehead City handled 3.407 million tons of cargo, while Wilmington handled 7.888 million tons. In 2003, waterborne shipments totaled 10.231 million tons. In 2004, North Carolina had 1,152 mi (1,854 km) of navigable inland waterways.

In 2005, North Carolina had a total of 382 public and private-use aviation-related facilities. This included 305 airports, 74 heliports, and 3 STOLports (Short Take-Off and Landing). The state’s two busiest airports are Charlotte-Douglas International and Raleigh-Durham International. In 2004, Charlotte–Douglas had 12,499,476 passengers enplaned, making it the 19th-busiest airport in the United States, while Raleigh–Durham had 4,371,883 enplanements that same year, making it the 43rd-busiest airport in the United States. Other major airports were at Asheville, Fayetteville, Greensboro, Kinston, Wilmington, and Winston-Salem.

11 HISTORY

Paleo-Indian peoples came to North Carolina about 10,000 years ago. These early inhabitants hunted game with spears and gathered nuts, roots, berries, and freshwater mollusks. Around 500 BC, with the invention of pottery and the development of agriculture, the Woodland Culture began to emerge. The Woodland way of life—growing corn, beans, and squash, and hunting game with bows and arrows—prevailed on the North Carolina coast until the Europeans arrived.

Living in North Carolina by this time were Indians of the Algonkian-, Siouan-, and Iroquoian-language families. The Roanoke, Chowanoc, Hatteras, Meherrin, and other Algonkian-speaking tribes of the coast had probably lived in the area the longest; some of them belonged to the Powhatan Confederacy of Virginia. The Siouan groups were related to larger tribes of the Great Plains. Of the Iroquoian-speakers, the Cherokee probably had lived in the mountains since before the beginning of the Christian era, while the Tuscarora had entered the upper coastal plain somewhat later. After their defeat by the colonists in the Tuscarora War of 1711–13, the tribe fled to what is now upper New York State to become the sixth member of the Iroquois Confederacy.

Contact with whites brought war, disease, and enslavement of the Algonkian and Siouan tribes. Banding together, the survivors probably gave rise to the present-day Lumbee and to the other Indian groups of eastern North Carolina. The Cherokee tried to avoid the fate of the coastal tribes by selectively adopting aspects of white culture. In 1838, however, the federal government responded to the demands of land-hungry whites by expelling most of the Cherokee to Indian Territory along the so-called Trail of Tears.

European penetration began when Giovanni da Verrazano, a Florentine navigator in French service, discovered the North Carolina coast in 1524. Don Lucas Vázquez de Ayllón led an unsuccessful Spanish attempt to settle near the mouth of the Cape Fear River two years later. Hernando de Soto tramped over the North Carolina mountains in 1540 in an unsuccessful search for gold, but the Spanish made no permanent contribution to the colonization of North Carolina.

Sixty years after Verrazano’s voyage, North Carolina became the scene of England’s first experiment in American empire. Sir Walter Raleigh, a courtier of Queen Elizabeth I, gained the queen’s permission to send out explorers to the New World. They landed on the Outer Banks in 1584 and returned with reports so enthusiastic that Raleigh decided to sponsor a colony on Roanoke Island between Albemarle and Pamlico sounds. After a second expedition returned without founding a permanent settlement, Raleigh sent out a third group in 1587 under John White as governor. The

passengers included White's daughter Eleanor and her husband, Ananias Dare. Shortly after landfall, Eleanor gave birth to Virginia Dare, the first child born of English parents in the New World. Several weeks later, White returned to England for supplies, but the threat of the Spanish Armada prevented his prompt return. By the time White got back to Roanoke in 1590, he found no trace of the settlers—only the word “Croatoan” carved on a tree. The fate of this “Lost Colony” has never been satisfactorily explained.

The next English venture focused on the more accessible Jamestown colony in the Chesapeake Bay area of Virginia. England tended to ignore the southern region until 1629, when Charles I laid out the territory between 30° and 36°N, named it Carolana for himself, and granted it to his attorney general, Sir Robert Heath. Heath made no attempt to people his domain, however, and Carolana remained empty of whites until stragglers drifted in from the mid-17th century onward. Events in England transformed Virginia's outpost into a separate colony. After the execution of Charles I in 1649, England had no ruling monarch until a party of noblemen invited Charles II back to England in 1660. Charles thanked eight of his benefactors three years later by making them lord proprietors of the province, now called Carolina. The vast new region eventually stretched from northern Florida to the modern boundary between North Carolina and Virginia, and from the Atlantic to the Pacific Ocean.

The proprietors divided Carolina into three counties and appointed a governor for each one. Albemarle County embraced the existing settlements in northeastern North Carolina near the waters of Albemarle Sound; it was the only one that developed a government within the present state boundaries. From the beginning, relations between the older pioneers and their newly imposed government were stormy. The English philosopher John Locke drew up the Fundamental Constitutions of Carolina, but his political blueprints proved unworkable. The proprietors' arbitrary efforts to collect royal customs touched off factional violence, culminating in Culpepper's Rebellion of 1677, one of the first American uprisings against a corrupt regime.

For a few years afterward, local residents had a more representative government, until the proprietors attempted to strengthen the establishment of the Anglican Church in the colony. In 1711, Cary's Rebellion was touched off by laws passed against the colony's Quakers. During the confusion, Tuscarora Indians launched a war against the white intruders on their lands. The whites won the Tuscarora War in 1713 with assistance from South Carolina, but political weakness in the north persisted. Proprietary officials openly consorted with pirates—including the notorious Edward Teach, alias Blackbeard—and royal inspectors questioned the fitness of proprietary government. South Carolina officially split off in 1719 and received a royal governor in 1721. Ten years later, all but one of the proprietors relinquished their rights for £2,500 each, and North Carolina became a royal colony. The remaining proprietor, Lord Granville, gave up his governing rights but retained ownership of one-eighth of the original grant; the Granville District thus included more than half of the unsettled territory in the North Carolina colony.

In the decades that followed, thousands of new settlers poured into North Carolina; by 1775 the population had swollen to 345,000, making North Carolina the fourth—most populous colony. Germans and Scots-Irish trekked down the Great Wagon Road

from Pennsylvania to the Piedmont. Scottish Highlanders spread over the upper Cape Fear Valley as more Englishmen filled up the coastal plain. Backcountry settlers practiced self-sufficient farming, but eastern North Carolinians used slave labor to carve out rice and tobacco plantations. The westerners were often exploited by an eastern-dominated colonial assembly that sent corrupt and overbearing officials to govern them. Organizing in 1768 and calling themselves Regulators, unhappy westerners first petitioned for redress and then took up arms. Royal Governor William Tryon used eastern militia to crush the Regulators in a two-hour pitched battle at Alamance Creek in 1771.

The eastern leaders who dominated the assembly opposed all challenges to their authority, whether from the Regulators or from the British ministry. When England tightened its colonial administration, North Carolinians joined their fellow colonists in protests against the Stamp Act and similar impositions by Parliament. Meeting at Halifax in April 1776, the North Carolina provincial congress resolved in favor of American independence, the first colonial representative body to do so. Years later, citizens of Mecklenburg County recalled a gathering in 1775 during which their region declared independence, but subsequent historians have not verified their claim. The two dates on the North Carolina state flag nevertheless commemorate the Halifax Resolves and the “Mecklenburg Declaration of Independence.”

Support for Britain appeared among recent Scottish immigrants, who answered the call to aid the royal governor but were ambushed by patriot militia at Moore's Creek Bridge on 27 February 1776. The incident effectively prevented a planned British invasion of the South. There was little further military action in North Carolina until late in the War for Independence, when Gen. Charles Cornwallis invaded the state from South Carolina in the fall of 1780. Guerrilla bands harassed his troops, and North Carolina militia wiped out a Loyalist detachment at King's Mountain. Pursuing the elusive American army under Gen. Nathanael Greene, Cornwallis won a costly victory at Guilford Courthouse in March 1781 but could neither eliminate his rival nor pacify the countryside. For the rest of 1781, Cornwallis wearied his men in marches and countermarches across North Carolina and Virginia before he finally succumbed to a trap set at Yorktown, Va., by an American army and a French fleet.

Numerous problems beset the new state. The government had a dire need of money, but when the victors sought to pay debts by selling land confiscated from the Loyalists, conservative lawyers objected strenuously, and a bitter political controversy ensued. Suspicious of outside control, North Carolina leaders hesitated before joining the Union. The state waited until November 1789 to ratify the US Constitution—a delay that helped stimulate the movement for adoption of a Bill of Rights. North Carolina relinquished its lands beyond the Great Smokies in 1789 (after an unsuccessful attempt by settlers to create a new state called Franklin), and thousands of North Carolinians migrated to the new western territories. The state did not share in the general prosperity of the early federal period. Poor transportation facilities hampered all efforts to expand commercial agriculture, and illiteracy remained widespread. North Carolina society came to appear so backward that some observers nicknamed it the “Rip Van Winkle state.”

In 1815, state senator Archibald D. Murphey of Orange County began to press for public schools and for improved transporta-

tion to open up the Piedmont. Most eastern planters resisted Murphey's suggestions, partly because they refused to be taxed for the benefit of the westerners and partly because they feared the destabilizing social effects of reform. As long as the east controlled the General Assembly, the ideas of Murphey and his sympathizers had little practical impact, but in 1835, as a result of reforms in the state constitution, the west obtained reapportionment and the political climate changed. North Carolina initiated a program of state aid to railroads and other public works, and established the first state—supported system of common schools in the South.

Like other southern whites, North Carolina's white majority feared for the security of slavery under a national Republican administration, but North Carolinians reacted to the election of Abraham Lincoln with caution. When South Carolina and six other states seceded and formed the Confederate States of America in 1861, North Carolina refused to join, instead making a futile attempt to work for a peaceful settlement of the issue. However, after the outbreak of hostilities at Ft. Sumter, S.C., and Lincoln's call for troops in April 1861, neutrality disappeared and public opinion swung to the Confederate side. North Carolina became the last state to withdraw from the Union, joining the Confederacy on 20 May 1861.

North Carolina provided more troops to the Confederacy than any other state, and its losses added up to more than one-fourth of the total for the entire South, but support for the war was mixed. State leaders resisted the centralizing tendencies of the Richmond government, and even Governor Zebulon B. Vance opposed the Confederacy's conscription policies. North Carolina became a haven for deserters from the front lines in Virginia. William W. Holden, a popular Raleigh editor, organized a peace movement when defeat appeared inevitable, and Unionist sentiment flourished in the mountain counties; nevertheless, most white North Carolinians stood by Vance and the dying Confederate cause. At the war's end, Gen. Joseph E. Johnston surrendered the last major Confederate army to Gen. William T. Sherman at Bennett House near Hillsborough on 26 April 1865.

Reconstruction was marked by a bitter political and social struggle in North Carolina. United in the Conservative Party, most of the prewar slaveholding elite fought to preserve as much as possible of the former system, but a Republican coalition of blacks and nonslaveholding white Unionists defended freedmen's rights and instituted democratic reforms for the benefit of both races. After writing a new constitution in 1868, Republicans elected Holden as governor, but native whites fought back with violence and intimidation under the robes of the Ku Klux Klan. Holden's efforts to restore order were ineffectual, and when the Conservatives recaptured the General Assembly in 1870, they impeached him and removed him from office. Election of a Conservative governor in 1876 signaled the end of the Reconstruction era.

Once in power, the Conservatives—or Democrats, as they renamed themselves—slashed public services and enacted legislation to guarantee the power of landlords over tenants and sharecroppers. They cooperated with the consolidation of railroads under northern ownership, and they supported a massive drive to build cotton mills on the swiftly flowing streams of the Piedmont. By 1880, industry had surpassed its prewar level. But it was not until 1900 that blacks and their white allies were entirely eliminated as contenders for political power.

As the Industrial Revolution gained ground in North Carolina, small farmers protested their steadily worsening condition. The Populist Party expressed their demands for reform, and for a brief period in the 1890s shared power with the Republican Party in the Fusion movement. Under the leadership of Charles Brantley Aycock, conservative Democrats fought back with virulent denunciations of "Negro rule" and a call for white supremacy. In 1900, voters elected Aycock governor and approved a constitutional amendment that barred all illiterates from voting, except for those whose ancestors had voted before 1867. This literacy test and "grandfather clause" effectively disenfranchised blacks, while providing a temporary loophole for uneducated whites. To safeguard white rights after 1908 (the constitutional limit for registration under the grandfather clause), Aycock promised substantial improvements in the school system to put an end to white illiteracy.

In the decades after Aycock's election, an alliance of business interests and moderate-to-conservative Democrats dominated North Carolina politics. The industrial triumvirate of textile, tobacco, and furniture manufacturers, joined by banks and insurance companies, controlled the state's economy. The Republican Party shrank to a small remnant among mountain whites as blacks were forced out of the electorate.

In the years after World War II, North Carolina took its place in the booming Sunbelt economy. The development of Research Triangle Park—equidistant from the educational facilities of Duke University, North Carolina State University, and the University of North Carolina at Chapel Hill—provided a home for dozens of scientific and technology laboratories for government and business. New industries, some of them financed by foreign capital, appeared in formerly rural areas, and a prolonged population drain was effectively reversed.

The process of development has not been smooth or uniform, however. The late 1980s and early 1990s saw a shift in employment patterns as financial and high-technology industries boomed while jobs in the state's traditional industries, notably textiles and tobacco, declined. North Carolina possessed both the largest percentage of manufacturing jobs in the country and the lowest manufacturing wages. In 1990, 30% of all jobs paid annual wages below the poverty line for a family of four, resulting in 13% of North Carolinians living below the nationally established poverty line. Despite widespread prosperity in the 1990s, North Carolina was one of only 15 states where poverty—and child poverty—were on the rise. The rate had climbed to 14% by 1998, and to 15.1% by 2003–04 (measured as a two-year average). The national poverty rate in 2003–04 was 12.6%.

The excellence of many of North Carolina's universities contrasted with the inferior education provided by its primary and secondary public schools. North Carolina students' SAT scores placed them last nationally in 1989. In the ongoing effort to improve the public school system, in 2000 Democratic Governor Jim Hunt's top two priorities were raising teacher pay by 6.5% and funding the Smart Start (early childhood education) program. But Hunt's stance was not popular with the state's workers, who were lobbying the governor and the General Assembly for pay raises.

Racial tensions have created divisions within the state, which has one of the highest levels of Ku Klux Klan activity in the country. While Charlotte integrated its schools peacefully in 1971

through court-ordered busing, the militancy of black activists in the late 1960s and early 1970s provoked a white backlash. That backlash, along with the identification of the Democratic party in the early 1970s with liberal causes and with opposition to the Vietnam War, helped the conservative wing of the Republican party gain popularity in a state whose six military bases had given it a hawkish tradition. In 1972, North Carolina elected its first Republican US senator (Jesse A. Helms) and governor (James E. Holshouser Jr.) since Fusion days, and Republican strength continued to build into the mid-1990s. But after 1998 elections, the state was leaning toward a more bipartisan representation: Democratic candidate John Edwards took the state's second Senate seat while conservative Republican Helms retained the other; and voters sent seven Republicans and five Democrats to represent them in the US House. In 2004, John Edwards was the Democratic Party's vice-presidential nominee; he and Democratic presidential candidate John Kerry were defeated by President George W. Bush and Vice-President Richard B. Cheney by a margin of 3 million popular votes. As of 2005, North Carolina was represented by two Republican senators, Elizabeth Dole and Richard Burr, but Democrat Michael Easley remained governor.

Rising crime rates were among the leading public policy issues in the 1990s. The state legislature enacted laws imposing tough penalties on adults who supply guns to minors, and mandating life imprisonment without parole for three-time violent offenders.

Mother Nature has posed serious problems for North Carolinians in recent times. In September 1999, successive hurricanes moved onshore, water logging the low-lying eastern part of the state. The worst flooding in North Carolina history was intensified by more rainfall in the weeks that followed. The death toll climbed to 40 while property damages and agricultural losses rose. Clean-up of the state's waterways, which were polluted by waste from pigs and other livestock as well as from flooded sewage plants, remained a major health concern. In January 2000 the same region was blanketed in record snowfalls, adding further hardships to those who were struggling to recover. A month earlier, in an emergency legislative session, the General Assembly approved Governor Jim Hunt's plan to send \$836 million to flood victims. By July 2000 the federal government had approved more than \$1 billion in aid to the state. But it was estimated that the conditions had put thousands of farmers permanently out of business. North Carolina experienced a harsh winter in 2002–03, with some of the heaviest snowfalls since 1989.

The state's agricultural producers were also facing the declining demand for tobacco. The documented health hazards of smoking, state and federal excise taxes, ongoing lawsuits, and declining exports combined to cut cigarette production (also hurting the state's manufacturing sector in the process). With Kentucky, North Carolina farmers produced more than 65% of the total US crop. The state's historical dependency on the cash crop caused lawmakers to allocate half the funds from the national tobacco settlement to tobacco communities—to support educational and job training programs, provide employment assistance for farmers and displaced laborers, fund rural health care and social service programs, and invest in local public works and economic development projects to attract new businesses to areas that had been dependent on tobacco. The other half of the settlement was evenly

divided between statewide health care and a trust fund for (former) tobacco growers and farm laborers.

Governor Mike Easley set his 2003 executive agenda on education, proposing a state lottery to fund education. In August 2005, Easley signed into law the North Carolina State Lottery Act, which enacted the North Carolina Education Lottery. One hundred percent of the net lottery proceeds will go to educational expenses, including reduced class sizes in early grades, academic pre-kindergarten programs, school construction, and scholarships for needy college and university students.

In 2005, Easley also focused on bringing more highly-skilled and high-tech jobs to the state, providing a quality transportation system for all of North Carolina, enacting strong Patients Bill of Rights legislation, helping seniors cope with the high costs of prescription drugs, promoting land and water conservation, and providing a strong environmental enforcement program.

¹²STATE GOVERNMENT

North Carolina has operated under three constitutions, adopted in 1776, 1868, and 1971, respectively. The first was drafted hurriedly under wartime pressures and contained several inconsistencies and undemocratic features. The second, a product of Reconstruction, was written by native white Republicans and a sprinkling of blacks and northern-born Republicans. When conservative whites regained power, they left the basic framework of this constitution intact, though they added the literacy test, poll tax, and grandfather clause to it.

A century after the Civil War, the document had become unwieldy and partially obsolete. A constitutional study commission submitted to the General Assembly in 1969 a rewritten constitution, which the electorate ratified, as amended, in 1971. As of January 2005, the document had been amended a total of 34 times. One amendment permits the governor and lieutenant governor to serve a maximum of two successive four-year terms.

Under the 1971 constitution, the General Assembly consists of a 50-member Senate and a 120-member House of Representatives. Regular sessions are held in odd-numbered years, with the provision that the legislature may (and in practice, does) divide to meet in even-numbered years. Sessions begin in January and are not formally limited in length. Special sessions may be called by three-fifths petition of each house. Senators must be at least 25 years old and must have been residents of the state for at least two years and residents of their districts for at least one year prior to election. Representatives must have lived in their district for at least a year; the constitution establishes 21 as the minimum age for elective office. All members of the General Assembly serve two-year terms. The legislative salary was \$13,951 in 2004, unchanged from 1999.

The governor and lieutenant governor (who run separately) must be 30 years old and a qualified voter; each must have been a US citizen for five years and a state resident for two. As of December 2004, the governor's salary was \$121,391. North Carolina's chief executive has powers of appointment, supervision, veto, and budgetary recommendation. The voters also elect a secretary of state, treasurer, auditor, superintendent of public instruction, attorney general, and commissioners of agriculture, insurance, and labor; all serve four-year terms. These officials preside over their respective departments and sit with the governor and lieutenant

governor as the council of state. The governor appoints the heads of the other executive departments.

Bills become law when they have passed three readings in each house of the General Assembly, and take effect 60 days after adjournment. Bills that are not signed or vetoed by the governor become law after 10 days when the legislature is in session and after 30 days if the legislature adjourns. A three-fifths vote of the elected members in each house is required to override a gubernatorial veto. Constitutional amendments may be proposed by a convention called by a two-thirds vote of both houses and a majority of the voters, or may be submitted directly to the voters by a three-fifths consent of each house. In either case, the proposed amendments must be ratified by a popular majority before becoming part of the constitution.

To vote in North Carolina a person must be a US citizen, at least 18 years old, a resident of the state and county for at least 30 days prior to election day, and not registered to vote in another state. Restrictions apply to convicted felons.

13 POLITICAL PARTIES

Prior to the Civil War, Whigs and Democrats were the two major political groups in North Carolina. The Republican Party emerged during Reconstruction as a coalition of newly enfranchised blacks, northern immigrants, and disaffected native whites, especially from non-slaveholding areas in the mountains. The opposing Conservative Party, representing a coalition of antebellum Democrats and former Whigs, became the Democratic Party after winning the governorship in 1876; from that time and for most of the 20th century, North Carolina was practically a one-party state.

Beginning in the 1930s, however, as blacks reentered the electorate as supporters of the New Deal and the liberal measures associated with Democratic presidents, the Republican Party at-

tracted new white members who objected to national Democratic policies. Republican presidential candidates picked up strength in the 1950s and 1960s, and Richard Nixon carried North Carolina in 1968 and 1972, when Republicans also succeeded in electing Governor James E. Holshouser Jr., and US Senator Jesse A. Helms. The Watergate scandal cut short this movement toward a revitalized two-party system, and in 1976, Jimmy Carter became the first Democratic presidential candidate to carry the state since 1964.

Republican presidential candidate Ronald Reagan narrowly carried North Carolina in 1980, and a second Republican senator, John P. East, was elected that year. In 1984, the Republican Party had its best election year in North Carolina. Reagan won the state by a landslide, Helms won a third term—defeating two-term Governor James B. Hunt in the most expensive race to date in Senate history (more than \$26 million was spent)—and Republican James G. Martin, a US representative, was elected governor, succeeding Hunt. In 1990, Helms was reelected to the Senate, defeating black mayor Harvey Gantt in a bitterly contested race. In 1996 Gantt challenged Helms again, and once again Helms was the victor. Helms subsequently announced he would not run for reelection in 2002, and Republican Elizabeth H. Dole won his seat. In 2000 and 2004, Republican George W. Bush won 56% of the presidential vote, to Democrat Al Gore's 43% (2000) and Democrat John Kerry's 44% (2004).

But by the mid-1990s the states' Democrats were influential again. In 1993 Democrat James B. Hunt returned to the governor's office after a hiatus of eight years. He was elected to his third term (having served the first two between 1977 and 1985) in the 1992 election, and went on to a fourth term following the 1996 elections. Having served the limit, Hunt was leaving the gubernatorial race open for 2000, and Democrat Mike Easley won the governorship in 2000. In 1998 elections the second US Senate seat, which had been won by Republican Lauch Faircloth in 1992, was won by

*Won US presidential election.

Democrat John Edwards. In 2003 Edwards was running for president and had announced he would not seek reelection in 2004; the seat he vacated was won by Republican Richard Burr.

In 2004 there were 5,537,000 registered voters. In 1998, 53% of registered voters were Democratic, 34% Republican, and 14% unaffiliated or members of other parties. The state had 15 electoral votes in the 2005 presidential election, an increase of 1 vote over 2000.

Following the 2004 elections, 6 of North Carolina's 13 US Representatives were Democrats and 7 were Republicans. In mid-2005 the State Assembly had 63 Democrats and 57 Republicans, and there were 21 Republicans and 29 Democrats in the state Senate.

Minor parties have had a marked influence on the state. George Wallace's American Independent Party won 496,188 votes in 1968, placing second with more than 31% of the total vote. In 1992, Independent Ross Perot captured 14% of the vote.

14 LOCAL GOVERNMENT

As of 2005, North Carolina had 100 counties, 541 municipalities, and 319 special districts. That year the state has 120 public school systems.

Counties have been the basis of local government in North Carolina for more than 300 years, and are still the primary governmental units for most citizens. All counties are led by boards of commissioners; commissioners serve either two- or four-year terms, and most are elected at large rather than by district. Most boards elect their own chairman from among their members, but voters in some counties choose a chairman separately. More than half the counties employ a county manager to supervise day-to-day operations of county government. Other elected officials are the sheriff, register of deeds, and the school board. Counties are subdivided into townships, but these are for administrative convenience only; they do not exercise any independent government functions.

County and municipal governments share many functions, but the precise allocation of authority varies in each case. Although the city of Charlotte and Mecklenburg County share a common school system, most often schools, streets, sewers, garbage collection, police and fire protection, and other services are handled separately. Most cities use the council-manager form of government, with council members elected from the city at large. Proliferation of suburban governments was hampered by a 1972 constitutional amendment that forbids the incorporation of a new town or city within 1 mi (1.6 km) of a city of 5,000–9,999 people, within 3 mi (4.8 km) of a city of 10,000–24,999, within 4 mi (6.4 km) of a city of 25,000–49,999, and within 5 mi (8 km) of a city of 50,000 or more unless the General Assembly acts to do so by a three-fifths vote of all members of each house.

In 2005, local government accounted for about 348,179 full-time (or equivalent) employment positions.

15 STATE SERVICES

To address the continuing threat of terrorism and to work with the federal Department of Homeland Security, homeland security in North Carolina operates under executive order; the public safety director/secretary is designated as the state homeland security advisor.

The Department of Public Instruction administers state aid to local public school systems, a board of governors directs the 16 state-supported institutions of higher education, and the Department of Community Colleges administers the 58 community colleges. The Department of Cultural Resources offers a variety of educational and enrichment services to the public, maintaining historical sites, operating two major state museums, funding the North Carolina Symphony, and providing for the State Library. The Department of Transportation plans, builds, and maintains state highways; registers motor vehicles; develops airport facilities; administers public transportation activities; and operates 24 ferries.

Within the Department of Health and Human Resources, the Division of Mental Health, Developmental Disabilities, and Substance Abuse Services operates psychiatric hospitals, mental retardation centers, and alcoholic rehabilitation centers; it also coordinates mental health programs that include community mental health centers, group homes for the developmentally disabled and emotionally disturbed, shelter workshops, halfway houses, a special-care facility, and reeducation programs for emotionally disturbed children and adolescents. The Division of Social Services administers public assistance programs, and other divisions license medical facilities, promote public health, administer programs for juvenile delinquents and the vocationally handicapped, and operate a school for the blind and visually impaired and schools for the deaf. The Department of Agriculture and Consumer Services protects the consumer.

The Department of Crime Control and Public Safety includes the Highway Patrol and the National Guard, while the Department of Correction manages the prison system. Local law enforcement agencies receive assistance from the Department of Justice's State Bureau of Investigation. The Department of Environment and Natural Resources addresses the issues of air and water quality, coastal management, environmental health, forest and land resources, marine fisheries, wildlife resources, waste management, and the Museum of Natural Sciences. The Department of Labor administers the state Occupational Safety and Health Act; inspects boilers, elevators, amusement rides, mines, and quarries; offers conciliation, mediation, and arbitration services to settle labor disputes; and enforces state laws governing child labor, minimum wages, maximum working hours, and uniform wage payment.

16 JUDICIAL SYSTEM

North Carolina's general court of justice is a unified judicial system that includes appellate courts (Court of Appeals) and trial courts (Superior Court). District court judges are elected to four-year terms. Judges above that level are elected for eight years.

The state's highest court is the North Carolina Supreme Court, which consists of a chief justice and six associate justices. It hears cases from the Court of Appeals as well as certain cases from lower courts. The Court of Appeals comprises 12 judges who hear cases in 3-judge panels. Superior courts, in 44 districts, have original jurisdiction in most major civil and criminal cases. There are 99 superior court judges appointed by the governor to eight-year terms. All Superior Court justices rotate between the districts within their divisions. District courts try misdemeanors, civil cases involving less than \$5,000, and all domestic cases. They have no juries in criminal cases, but these cases may be appealed to Super-

rior Court and be given a jury trial *de novo*; in civil cases, jury trial is provided on demand.

As of 31 December 2004, a total of 35,434 prisoners were held in North Carolina's state and federal prisons, an increase from 33,560 of 5.6% from the previous year. As of year-end 2004, a total of 2,430 inmates were female, up from 2,256 or 7.7% from the year before. Among sentenced prisoners (one year or more), North Carolina had an incarceration rate of 357 per 100,000 population in 2004.

According to the Federal Bureau of Investigation, North Carolina in 2004, had a violent crime rate (murder/nonnegligent manslaughter; forcible rape; robbery; aggravated assault) of 447.8 reported incidents per 100,000 population, or a total of 38,244 reported incidents. Crimes against property (burglary; larceny/theft; and motor vehicle theft) in that same year totaled 355,328 reported incidents or 4,160.2 reported incidents per 100,000 people. North Carolina has a death penalty, of which lethal injection is the sole method of execution. From 1976 through 5 May 2006, the state has carried out 42 executions, of which five were carried out in 2005 and three in 2006 (as of 5 May 2006). As of 1 January 2006, North Carolina had 190 inmates on death row.

In 1976, the US Supreme Court invalidated North Carolina's death penalty statute and the sentences of all inmates then on death row reverted to life imprisonment. However, the state passed a new capital punishment statute in 1977 which apparently assuaged the Court's objections. Two persons were executed in 1984—the state's first executions since 1961. One of the prisoners executed that year, Velma Barfield, was the first woman executed in the United States since 1962 and the first in North Carolina since 1944.

In 2003, North Carolina spent \$354,328,968 on homeland security, an average of \$43 per state resident.

17 ARMED FORCES

North Carolina holds the headquarters of the 3rd Army at Ft. Bragg in Fayetteville. By population, Fort Bragg is the largest Army installation in the world, providing a home to almost 10% of the Army's active component forces. Approximately 43,000 military and 8,000 civilian personnel work at Fort Bragg. Fort Bragg hosts America's only airborne corps and airborne division, the "Green Berets" of the Special Operations Command, and the Army's largest support command. The 82nd Airborne Division soldiers and others make 100,000 parachute jumps each year at Fort Bragg. The Marine Corps Camp Lejeune in Jacksonville is home base for the II Marine Expeditionary Force, 2nd Marine Division, 2nd Force Service Support Group and other combat units and support commands with a population of more than 41,000 Marine and Sailors. The Marine Corps air stations at Cherry Point and New River and Seymour Johnson Air Force Base in Goldsboro are the state's other important military installations. North Carolina firms received more than \$2.2 billion in defense contract awards in 2004. Additionally, defense payroll outlays, including retired military pay, were \$6.5 billion. In 2002, there were 94,296 active duty military personnel and 16,444 civilian personnel stationed in North Carolina, most of whom were at Ft. Bragg.

There were 767,051 veterans living in North Carolina in 2003. Of these, 90,599 saw service in World War II; 77,617 in the Korean conflict; 225,498 during the Vietnam era; and 140,170 in the

Persian Gulf War. For the fiscal year 2004, total Veterans Affairs expenditures in New Carolina exceeded \$2.0 billion.

As of 31 October 2004, the North Carolina State Highway Patrol employed 1,686 full-time sworn officers.

18 MIGRATION

For most of the state's history, more people have moved away every decade than have moved into the state, and population growth has come only from net natural increase. In 1850, one-third of all free, native-born North Carolinians lived outside the state, chiefly in Tennessee, Georgia, Indiana, and Alabama. The state suffered a net loss of population from migration in every decade from 1870 to 1970.

Before 1890, the emigration rate was higher among whites than among blacks; since then, the reverse has been true, but the number of whites moving into North Carolina did not exceed the number of white emigrants until the 1960s. Between 1940 and 1970, 539,000 more blacks left North Carolina than moved into the state; most of these emigrants sought homes in the North and West. After 1970, however, black out-migration abruptly slackened as economic conditions in eastern North Carolina improved. Net migration to North Carolina was estimated at 278,000 (sixth among the states) from 1970 to 1980, at 83,000 (ninth among the states) from 1980 to 1983; and 347,000 (fifth among the states) from 1985 to 1990. Between 1990 and 1998, the state had net gains of 501,000 in domestic migration and 49,000 in international migration. In 1998, 6,415 foreign immigrants arrived in North Carolina. The state's overall population increased 13.8% between 1990 and 1998. In the period 2000–05, net international migration was 158,224 and net internal migration was 232,448, for a net gain of 390,672 people.

19 INTERGOVERNMENTAL COOPERATION

North Carolina adheres to at least 23 interstate compacts, including 4 that promote regional planning and development. The oldest of the 4, establishing the Board of Control for Southern Regional Education, pools the resources of southern states for the support of graduate and professional schools. The Southeastern Forest Fire Protection Compact promotes regional forest conservation, while the Southern States Energy Board fosters cooperation in nuclear power development. The Southern Growth Policies Board, formed in 1971 at the suggestion of former North Carolina Governor Terry Sanford, collects and publishes data for planning purposes from its headquarters in Research Triangle Park. The Tennessee Valley Authority operates four dams in western North Carolina to aid in flood control, generate hydroelectric power, and assist navigation downstream on the Tennessee River; most of the electricity generated is exported to Tennessee. North Carolina also belongs to the Mid-Atlantic Fishery Management Council, the Atlantic States Marine Fisheries Commission, the Ohio River Basin Commission, and the Appalachian Regional Commission. Total federal grants in fiscal year 2005 were \$9.657 billion, an estimated \$10.285 billion in fiscal year 2006, and an estimated \$10.8 billion in fiscal year 2007.

20 ECONOMY

North Carolina's economy was dominated by agriculture until the closing decades of the 19th century, with tobacco the major cash

crop. Today, tobacco is still the central factor in the economy of the coastal plain. In the piedmont, industrialization accelerated after 1880 when falling crop prices made farming less attractive. During the "cotton mill crusade" of the late 19th and early 20th centuries, local capitalists put spinning or weaving mills on swift streams throughout the region, until nearly every hamlet had its own factory. Under the leadership of James B. Duke, the American Tobacco Co. (now American Brands, with headquarters in New York City) expanded from its Durham headquarters during this same period to control, for a time, virtually the entire US market for smoking products. After native businessmen had established a successful textile boom, New England firms moved south in an effort to cut costs, and the piedmont became a center of southern industrial development.

As more and more Tar Heels left agriculture for the factory, their per capita income rose from 47% of the national average in 1930 to slightly less than 100% of the national average in 2000. The biggest employers are the textile and furniture industries. State government has made a vigorous effort to recruit outside investment and to improve the state's industrial mix. Major new firms now produce electrical equipment, processed foods, technical instruments, fabricated metals, plastics, and chemicals. The greatest industrial growth, however, has come not from wholly new industries, but from fields related to industries that were firmly established. Apparel manufacture spread across eastern North Carolina as an obvious extension of the textile industry, while other new firms produced chemicals and machinery for the textile and furniture business. Manufacturing remains the dominant sector in the state's economy, peaking at an output of nearly \$62 billion (23.8% of total output) in 1999, as the overall state economy grew at a rate of 8.8% in 1998 and 8% in 1999. A decline in manufacturing output of 4.9% by 2001 was accompanied by declining overall growth rates, of 4.7% in 2000, and 0.98% in the national recession of 2001. While the nation's unemployment rose 1.4 percentage points between the third quarter 1999 and third quarter 2002, the rise in North Carolina over this period was 6.4%, reflecting mainly layoffs in its manufacturing sector.

North Carolina's gross state product (GSP) in 2004 totaled \$336.398 billion, of which manufacturing (durable and nondurable goods) accounted for \$72.295 billion or 21.4% of GSP, followed by the real estate sector, at \$32.848 billion (9.7% of GSP), and healthcare and social assistance services, at \$19.862 billion (5.9% of GSP). In that same year, there were an estimated 671,810 small businesses in North Carolina. Of the 182,598 businesses that had employees, an estimated total of 179,008 or 98% were small companies. An estimated 23,387 new businesses were established in the state in 2004, up 4.1% from the year before. Business terminations that same year came to 22,055, down 5.1% from 2003. There were 486 business bankruptcies in 2004, down 8% from the previous year. In 2005, the state's personal bankruptcy (Chapter 7 and Chapter 13) filing rate was 464 filings per 100,000 people, ranking North Carolina 33rd in the nation.

21 INCOME

In 2005 North Carolina had a gross state product (GSP) of \$345 billion which accounted for 2.8% of the nation's gross domestic product and placed the state at number 12 in highest GSP among the 50 states and the District of Columbia.

According to the Bureau of Economic Analysis, in 2004 North Carolina had a per capita personal income (PCPI) of \$29,322. This ranked 38th in the United States and was 89% of the national average of \$33,050. The 1994–2004 average annual growth rate of PCPI was 3.7%. North Carolina had a total personal income (TPI) of \$250,426,537,000, which ranked 13th in the United States and reflected an increase of 6.7% from 2003. The 1994–2004 average annual growth rate of TPI was 5.5%. Earnings of persons employed in North Carolina increased from \$181,840,239,000 in 2003 to \$193,812,229,000 in 2004, an increase of 6.6%. The 2003–04 national change was 6.3%.

The US Census Bureau reports that the three-year average median household income for 2002–04 in 2004 dollars was \$39,000 compared to a national average of \$44,473. During the same period an estimated 14.8% of the population was below the poverty line as compared to 12.4% nationwide.

22 LABOR

According to the Bureau of Labor Statistics (BLS), in April 2006 the seasonally adjusted civilian labor force in North Carolina numbered 4,396,000, with approximately 189,800 workers unemployed, yielding an unemployment rate of 4.3%, compared to the national average of 4.7% for the same period. Preliminary data for the same period placed nonfarm employment at 3,962,200. Since the beginning of the BLS data series in 1976, the highest unemployment rate recorded in North Carolina was 10.2% in February 1983. The historical low was 3.1% in April 1999. Preliminary nonfarm employment data by occupation for April 2006 showed that approximately 6% of the labor force was employed in construction; 14.1% in manufacturing; 18.4% in trade, transportation, and public utilities; 5.1% in financial activities; 11.3% in professional and business services; 11.9% in education and health services; 9.1% in leisure and hospitality services; and 17% in government.

North Carolina working conditions have brought the state considerable notoriety over the years. North Carolina is one of 22 states with a right-to-work law, and public officials are legally barred from negotiating a collective bargaining agreement.

The US Department of Labor's Bureau of Labor Statistics reported that in 2005, a total of 107,000 of North Carolina's 3,631,000 employed wage and salary workers were formal members of a union. This represented 2.9% of those so employed, up from 2.7% in 2004, well below the national average of 12% and the second-lowest in the United States. Overall in 2005, a total of 143,000 workers (3.9%) in North Carolina were covered by a union or employee association contract, which includes those workers who reported no union affiliation. North Carolina is one of 22 states with a right-to-work law.

As of 1 March 2006, North Carolina had a state-mandated minimum wage rate of \$5.15 per hour. In 2004, women in the state accounted for 46.3% of the employed civilian labor force.

23 AGRICULTURE

Farm marketings in North Carolina totaled \$7.7 billion in 2005, eighth among the 50 states, with 34% from crop marketings. North Carolina led the nation in the production of tobacco and sweet potatoes, ranked fifth in peanuts, and was also a leading producer of corn, grapes, pecans, apples, tomatoes, and soybeans. Farm life plays an important role in the culture of the state.

The number of farms fell from 301,000 in 1950 to 52,000 in 2004, while the number of acres in farms declined from 17,800,000 to 9,000,000 (7,203,000 to 3,642,000 hectares). At 173 acres (70 hectares), the average North Carolina farm was only 39% the size of the average US farm—a statistic that in part reflects the smaller acreage requirements of tobacco, the state's principal crop. The relatively large number of family farm owner-operators who depend on a modest tobacco allotment to make their small acreages profitable is the basis for North Carolina's opposition to the US government's antismoking campaign and its fight to preserve tobacco price supports.

Although farm employment continues to decline, a significant share of North Carolina jobs—perhaps more than one-third—are still linked to agriculture either directly or indirectly. North Carolina's most heavily agricultural counties are massed in the coastal plain, the center of tobacco, corn, and soybean production, along with a bank of northern piedmont counties on the Virginia border. Virtually all peanut production is in the eastern part of the state, while tobacco, corn, and soybean production spills over into the piedmont. Cotton is grown in scattered counties along the South Carolina border and in a band leading northward across the coastal plain. Beans, tomatoes, cucumbers, strawberries, and blueberries are commercial crops in selected mountain and coastal plain locations. Apples are important to the economy of the mountains, and the sand hills are a center of peach cultivation.

In 2004, tobacco production was 351,630,000 lb (159,496,685 kg), 40% of US production. Production and value data for North Carolina's other principal crops were as follows: corn, 86,580,000 bushels, \$203,463,000; soybeans, 51,000,000 bushels, \$257,550,000; peanuts, 357,000,000 lb, \$77,112,000; and sweet potatoes, 6,880,000 hundredweight, \$92,880,000.

24 ANIMAL HUSBANDRY

North Carolina farms and ranches had an estimated 870,000 cattle and calves in 2005, valued at \$661.2 million. In 2004, the state had around 9.8 million hogs and pigs, valued at \$823.2 million. During 2003, North Carolina led the nation in turkey production with 1.1 billion lb (0.5 billion kg) of turkey, worth \$397.8 million; the state was fourth in broiler production with 4.3 billion lb (2 billion kg), worth \$1.51 billion; egg production totaled 2.52 billion eggs, worth \$241.8 million. Milk cows numbered 61,000 in 2003 and they produced 1.04 million lb (0.48 million kg) of milk.

25 FISHING

In 2004, the commercial catch in North Carolina totaled over 136.4 million lb (62 million kg) valued at \$77.1 million. The record landing for the state was in 1981, with a total of 432 million lb. Flounder, menhaden, and sea trout are the most valuable finfish; shrimp, crabs, and clams are the most sought-after shellfish. In 2004, the state catch for hard blue crab accounted for 20% of the total national supply, the second-highest percentage in the nation (after Louisiana). The port at Beaufort-Morehead City ranked 19th in the nation for volume, with a catch of 63.5 million lb (28.9 million kg).

In 2003, there were 31 processing and 78 wholesale plants in the state with about 1,471 employees. In 2001, the commercial fleet had 773 vessels.

North Carolina lakes and streams are stocked in part by three state fish hatcheries and two national hatcheries within the state (Edenton and KcKinney Lake). In 2004, the state issued 692,497 sport fishing licenses.

26 FORESTRY

As of 2004, forests covered 18,269,000 acres (6,179,000 hectares) in North Carolina, or about 59% of the state's land area. North Carolina's forests constitute 2.5% of all US forestland, and 97% of the state's wooded areas have commercial value. The largest tracts are found along the coast and in the Western Mountains, where most counties are more than 70% tree-covered. Hardwoods make up 53% of the state's forests. Mixed stands of oak and pine account for an additional 14%. The remaining 33% is pine and other conifers. More than 90% of the acreage harvested for timber is reforested.

National forests cover 6% of North Carolina's timberlands, and state and local governments own another 2%. The remainder is privately owned. In the days of wooden sailing vessels, North Carolina pine trees supplied large quantities of "naval stores"—tar, pitch, and turpentine for waterproofing and other nautical purposes. Today, the state produces mainly saw logs, pulpwood, veneer logs, and Christmas trees.

In 2004, lumber production totaled 2.62 billion board feet, eighth in the United States and 5.3% of national production.

27 MINING

According to data from the US Geological Survey (USGS), the value of nonfuel mineral production by North Carolina in 2004 was \$805 million, an increase from 2003 of about 9.7%. The USGS data ranked North Carolina as 21st among the 50 states by the total value of its nonfuel mineral production, accounting for about 2% of total US output.

According to the data for 2004, crushed stone was the state's top nonfuel mineral produced, accounting for 68% by value of all nonfuel mineral output that year. It was followed by phosphate rock, construction sand and gravel, industrial sand and gravel, feldspar, dimension stone, common clays and mica. By volume, North Carolina was the leading state in the production of feldspar, common clays, mica, olivine, and pyrophyllite, of which the state was the sole producer. The state also ranked third in phosphate rock output, seventh in the production of industrial sand and gravel, and eighth in crushed stone.

Crushed stone production in 2004 totaled 72.3 million metric tons and was valued at \$548 million, while construction sand and gravel output that year totaled 11.5 million metric tons, with a value of \$59.7 million. Industrial sand and gravel production in 2004 totaled 1.630 million metric tons and was valued at \$29 million. Feldspar output totaled 351,000 metric tons and was valued at \$20.5 million. Dimension stone production in 2004 came to 43,000 metric tons and was valued at \$18.2 million.

North Carolina in 2004 was ranked 11th in the production (by value) of gemstones.

28 ENERGY AND POWER

As of 2003, North Carolina had 111 electrical power service providers, of which 72 were publicly owned and 32 were cooperatives. Of the remainder, three were investor owned, one was fed-

erally operated and three were owners of independent generators that sold directly to customers. As of that same year there were 4,365,692 retail customers. Of that total, 2,934,296 received their power from investor-owned service providers. Cooperatives accounted for 892,553 customers, while publicly owned providers had 538,836 customers. There were four federal customers and three were independent generator or "facility" customers.

Total net summer generating capability by the state's electrical generating plants in 2003 stood at 27.263 million kW, with total production that same year at 127.582 billion kWh. Of the total amount generated, 92.8% came from electric utilities, with the remainder coming from independent producers and combined heat and power service providers. The largest portion of all electric power generated, 74.776 billion kWh (58.6%), came from natural gas fired plants, with nuclear power generation in second place at 40.906 billion kWh (32.1%) and hydroelectric plants in third at 7.200 billion kWh (5.6%). Other renewable power sources, pumped storage facilities, petroleum and natural gas fired plants, and other types of generation accounted for the remainder.

As of 2006, North Carolina had three operating nuclear power stations: the Brunswick plant in Brunswick County; the McGuire plant near Charlotte; and the Shearon-Harris plant near Raleigh.

No petroleum or natural gas has been found in North Carolina, but major companies have expressed interest in offshore drilling. The state has no refineries. There is also no coal mining, and proven coal reserves are minor, at only 10.7 million short tons. One short ton equals 2,000 lb (0.907 metric tons).

2⁹ INDUSTRY

North Carolina has had a predominantly industrial economy for most of the 20th century. Today, the state is a major manufacturer of textiles, cigarettes, and furniture, as well as of chemicals and allied products, industrial machinery, food products, electronics/electrical equipment, and rubber and plastics products.

The industrial regions of North Carolina spread out from the piedmont cities. Roughly speaking, each movement outward represents a step down in the predominant level of skills and wages and a step closer to the primary processing of raw materials.

According to the US Census Bureau's Annual Survey of Manufactures (ASM) for 2004, North Carolina's manufacturing sector covered some 20 product subsectors. The shipment value of all products manufactured in the state that same year was \$163.838 billion. Of that total, chemical manufacturing accounted for the largest share at \$26.387 billion. It was followed by beverage and tobacco product manufacturing at \$24.029 billion; food manufacturing at \$15.294 billion; transportation equipment manufacturing at \$14.360 billion; and machinery manufacturing at \$9.664 billion.

In 2004, a total of 550,217 people in North Carolina were employed in the state's manufacturing sector, according to the ASM. Of that total, 411,087 were actual production workers. In terms of total employment, the furniture and related product manufacturing industry accounted for the largest portion of all manufacturing employees at 59,457, with 48,753 actual production workers. It was followed by food manufacturing at 54,848 employees (41,503 actual production workers); textile mills at 52,459 employees (44,442 actual production workers); plastics and rubber products manufacturing at 39,711 employees (30,816 actual produc-

tion workers); and fabricated metal product manufacturing with 38,355 employees (29,699 actual production workers).

ASM data for 2004 showed that North Carolina's manufacturing sector paid \$19.861 billion in wages. Of that amount, the chemical manufacturing sector accounted for the largest share at \$1.882 billion. It was followed by furniture and related product manufacturing at \$1.632 billion; food manufacturing at \$1.558 billion; textile mills at \$1.509 billion; and computer and electronic product manufacturing at \$1.488 billion.

3⁰ COMMERCE

According to the 2002 Census of Wholesale Trade, North Carolina's wholesale trade sector had sales that year totaling \$104.3 billion from 11,913 establishments. Wholesalers of durable goods accounted for 7,300 establishments, followed by nondurable goods wholesalers at 3,535 and electronic markets, agents, and brokers accounting for 1,078 establishments. Sales by durable goods wholesalers in 2002 totaled \$45.1 billion, while wholesalers of nondurable goods saw sales of \$43.3 billion. Electronic markets, agents, and brokers in the wholesale trade industry had sales of \$15.8 billion.

In the 2002 Census of Retail Trade, North Carolina was listed as having 35,851 retail establishments with sales of \$88.8 billion. The leading types of retail businesses by number of establishments were: gasoline stations (4,818); motor vehicle and motor vehicle parts dealers (4,589); clothing and clothing accessories stores (4,508); miscellaneous store retailers (4,044); and food and beverage stores (3,814). In terms of sales, motor vehicle and motor vehicle parts dealers accounted for the largest share of retail sales at \$24.1 billion, followed by food and beverage stores at \$12.7 billion; general merchandise stores at \$12.2 billion; and gasoline stations at \$8.3 billion. A total of 435,421 people were employed by the retail sector in North Carolina that year.

The state ports at Wilmington and Morehead City handle a growing volume of international trade. In 2005, North Carolina exported \$19.4 billion worth of its goods to foreign markets (14th in the United States).

3¹ CONSUMER PROTECTION

Consumer protection issues in North Carolina are the responsibility of the Consumer Protection Division, which is a function of the state's Attorney General, both of which are part of the North Carolina Department of Justice. The Division has as its function the protection of North Carolina consumers from unfair and deceptive trade practices and from dishonest and unethical business competition. Although it assists in the resolution of disputes, investigates cases of consumer fraud, and initiates action to halt proscribed trade practices, it does not represent individual consumers in court. It also represents the public before the North Carolina Utilities Commission.

When dealing with consumer protection issues, the state's Attorney General can initiate civil and to a limited extent, criminal proceedings; represent the state before state and federal regulatory agencies; administer consumer protection and education programs; handle formal consumer complaints; and exercise broad subpoena powers. In antitrust actions, the Attorney General's Office can act on behalf of those consumers who are incapable of acting on their own; initiate damage actions on behalf of the state in

state courts; initiate criminal proceedings; and represent counties, cities and other governmental entities in recovering civil damages under state or federal law.

The offices of the Consumer Protection Division are located in Raleigh.

3²BANKING

As of June 2005, North Carolina had 108 insured banks, savings and loans, and saving banks, plus 84 state-chartered and 48 federally chartered credit unions (CUs). Excluding the CUs, the Charlotte-Gastonia-Concord market area accounted for the largest portion of the state's financial institutions and deposits in 2004, with 43 institutions and \$90.216 billion in deposits. As of June 2005, CUs accounted for 3.5% of all assets held by all financial institutions in the state, or some \$21.984 billion. Banks, savings and loans, and savings banks collectively accounted for the remaining 96.5% or \$607.160 billion in assets held.

In 2004, the median net interest margin (the difference between the lower rates offered to savers and the higher rates charged on loans) was 3.67%, up from 3.65% in 2003. The median percentage of past-due/nonaccrual loans to total loans in 2004 was 1.23%, down from 1.58% in 2003.

Regulation of state-chartered banks and other state-chartered financial institutions is the responsibility of the Office of the Commissioner of Banks and the North Carolina Banking Commission.

3³INSURANCE

In 2004, there were over 6.5 million individual life insurance policies in force, with a total value of over \$390 billion; total value for all categories of life insurance (individual, group, and credit) was over \$604 billion. The average coverage amount is \$59,300 per policy holder. Death benefits paid that year totaled \$1.66 billion.

As of 2003, there were 70 property and casualty and 6 life and health insurance companies domiciled in the state. In 2004, direct premiums for property and casualty insurance totaled over \$10.6 billion. That year, there were 109,097 flood insurance policies in force in the state, with a total value of \$19.4 billion.

In 2004, 52% of state residents held employment-based health insurance policies, 5% held individual policies, and 24% were covered under Medicare and Medicaid; 17% of residents were uninsured. In 2003, employee contributions for employment-based health coverage averaged at 16% for single coverage and 28% for family coverage. The state offers an 18-month health benefits expansion program for small-firm employees in connection with the Consolidated Omnibus Budget Reconciliation Act (COBRA, 1986), a health insurance program for those who lose employment-based coverage due to termination or reduction of work hours.

In 2003, there were over 6.2 million auto insurance policies in effect for private passenger cars. Of those, 23% (over 1.4 million) were issued through the shared market, a system of insurance companies assigned by the state to offer coverage to high risk drivers. Of the 50 states and the District of Columbia, North Carolina has the highest percentage of insureds in the shared market. Required minimum coverage includes bodily injury liability of up to \$30,000 per individual and \$60,000 for all persons injured in an accident, as well as property damage liability of \$25,000. In 2003,

the average expenditure per vehicle for insurance coverage was \$604.75.

3⁴SECURITIES

There are no securities exchanges in North Carolina. The Securities Division of the Office of Secretary of State is authorized to protect the public against fraudulent issues and sellers of securities. In 2005, there were 3,240 personal financial advisers employed in the state and 4,720 securities, commodities, and financial services sales agents. In 2004, there were over 167 publicly traded companies within the state, with over 65 NASDAQ companies, 39 NYSE listings, and 6 AMEX listings. In 2006, the state had 14 Fortune 500 companies; Bank of America Corp. (based in Charlotte) ranked first in the state and 12th in the nation with revenues of over \$83.9 billion, followed by Lowe's, based in Mooresville, and Wachovia Corp., Duke Energy, and Nucor, all based in Charlotte. All five of these companies are listed on the NYSE.

3⁵PUBLIC FINANCE

The North Carolina budget is prepared biennially by the governor and reviewed annually by the Office of State Budget and Management, in consultation with the Advisory Budget Commission, an independent agency composed of five gubernatorial appointees, five members from the Senate, and five from the House of Representatives. It is then submitted to the General Assembly for amendment and approval. The fiscal year (FY) runs from 1 July to 30 June.

Fiscal year 2006 general funds were estimated at \$17.4 billion for resources and \$17.3 billion for expenditures. In fiscal year 2004, federal government grants to North Carolina were \$12.6 billion.

3⁶TAXATION

In 2005, North Carolina collected \$18,640 million in tax revenues or \$2,147 per capita, which placed it 25th among the 50 states in per capita tax burden. The national average was \$2,192 per capita. Sales taxes accounted for 24.7% of the total; selective sales taxes, 16.2%; individual income taxes, 45.2%; corporate income taxes, 6.8%; and other taxes, 7.1%.

As of 1 January 2006, North Carolina had four individual income tax brackets ranging from 6.0 to 8.25%. The state taxes corporations at a flat rate of 6.9%.

In 2004, local property taxes amounted to \$6,093,170,000 or \$713 per capita. The per capita amount ranks the state 38th highest nationally. North Carolina does not collect property taxes at the state level.

North Carolina taxes retail sales at a rate of 4.50%. In addition to the state tax, local taxes on retail sales can reach as much as 3%, making for a potential total tax on retail sales of 7.50%. Food purchased for consumption off-premises is exempt from state tax, but subject to local taxes. The tax on cigarettes is 30 cents per pack, which ranks 45th among the 50 states and the District of Columbia. North Carolina taxes gasoline at 30.15 cents per gallon. This is in addition to the 18.4 cents per gallon federal tax on gasoline.

According to the Tax Foundation, for every federal tax dollar sent to Washington in 2004, North Carolina citizens received \$1.10 in federal spending.

lower and unemployment is higher than elsewhere in the state. In 1996, under the administration of Governor James B. Hunt, the General Assembly adopted the William S. Lee Quality Jobs and Business Expansion Act. The act groups North Carolina's counties into Enterprise Tiers, and provides for graduated tax credit amounts, depending upon Enterprise Tier location, for specific company activities including job creation, machinery and equipment investment, worker training, and research and development. The North Carolina Economic Development Board's goal has been to help the transformation of the economy from manufacturing to more high-technology enterprises.

The state also actively participates in programs involving industrial revenue bonds, state and federally assisted loan and grant programs, business energy loans, and assistance to local communities with shell buildings that can be customized to meet the needs of a company in a shorter period of time. The Business and Industry ServiCenter is a one-stop information and resource center for businesses.

38 HEALTH

Health conditions and health care facilities in North Carolina vary widely from region to region. In the larger cities-and especially in proximity to the excellent medical schools at Duke University and the University of North Carolina at Chapel Hill, quality health care is as readily available as anywhere in the United States.

The infant mortality rate in October 2005 was estimated at 8.4 per 1,000 live births. The birth rate in 2003 was 14.1 per 1,000 population. The abortion rate stood at 21 per 1,000 women in 2000. In 2003, about 84.5% of pregnant woman received prenatal care beginning in the first trimester. In 2004, approximately 82% of children received routine immunizations before the age of three.

The crude death rate in 2003 was 8.7 deaths per 1,000 population. As of 2002, the death rates for major causes of death (per 100,000 resident population) were: heart disease, 222.6; cancer, 194.8; cerebrovascular diseases, 63.2; chronic lower respiratory diseases, 44.2; and diabetes, 26.5. The mortality rate from HIV infection was 5.8 per 100,000 population. In 2004, the reported AIDS case rate was at about 13.3 per 100,000 population. In 2002, about 54.5% of the population was considered overweight or obese. As of 2004, about 23.1% of state residents were smokers.

In 2003, North Carolina had 113 community hospitals with about 23,300 beds. There were about 987,000 patient admissions that year and 14.5 million outpatient visits. The average daily inpatient census was about 16,600 patients. The average cost per day for hospital care was \$1,020. Also in 2003, there were about 423 certified nursing facilities in the state with 43,022 beds and an overall occupancy rate of about 88.2%. In 2004, it was estimated that about 69.4% of all state residents had received some type of dental care within the year. North Carolina had 252 physicians per 100,000 resident population in 2004 and 831 nurses per 100,000 in 2005. In 2004, there was a total of 3,903 dentists in the state.

The state acted to increase the supply of doctors in eastern North Carolina in the 1970s by the establishment of a new medical school at East Carolina University in Greenville. Medical schools and superior medical research facilities are also located at Duke University Medical Center in Durham, UNC Hospitals at the University of North Carolina in Chapel Hill, and the Bowman

37 ECONOMIC POLICY

North Carolina's government has actively stimulated economic growth ever since the beginning of the 19th century. During the administration of Governor Luther H. Hodges (1954–61), the state began to recruit outside investment directly, developing such forward-looking facilities as Research Triangle Park. Since the 1970s, other policies and legislation have been aimed at the fostering of development in rural areas, where per capita income is

Gray School of Medicine at Wake Forest University in Winston-Salem. In 2005, Duke University Medical Center ranked eighth on the Honor Roll of Best Hospitals 2005 by *U.S. News & World Report*. In the same report, the hospital ranked fourth in the nation for best care in heart disease and heart surgery, sixth for best care in cancer, and in the top 20 for pediatric care.

About 17% of state residents were enrolled in Medicaid programs in 2003; 14% were enrolled in Medicare programs in 2004. Approximately 17% of the state population was uninsured in 2004. In 2003, state health care expenditures totaled \$10.5 million.

39 SOCIAL WELFARE

In 2004, about 273,000 people received unemployment benefits, with the average weekly unemployment benefit at \$256. For 2005, the estimated average monthly participation in the food stamp program included about 799,747 persons (343,397 households); the average monthly benefit was about \$89.21 per person. That year, the total of benefits paid through the state for the food stamp program was about \$856 million.

Temporary Assistance for Needy Families (TANF), the system of federal welfare assistance that officially replaced Aid to Families with Dependent Children (AFDC) in 1997, was reauthorized through the Deficit Reduction Act of 2005. TANF is funded through federal block grants that are divided among the states based on an equation involving the number of recipients in each state. North Carolina's TANF program is called Work First. In 2004, the state program had 77,000 recipients; state and federal expenditures on this TANF program totaled \$136 million in fiscal year 2003.

In December 2004, Social Security benefits were paid to 1,467,400 North Carolina residents. This number included 910,400 retired workers, 131,150 widows and widowers, 236,680 disabled workers, 59,010 spouses, and 130,160 children. Social Security beneficiaries represented 17.2% of the total state population and 94.7% of the state's population age 65 and older. Retired workers received an average monthly payment of \$934; widows and widowers, \$828; disabled workers, \$877; and spouses, \$464. Payments for children of retired workers averaged \$480 per month; children of deceased workers, \$606; and children of disabled workers, \$263. Federal Supplemental Security Income payments in December 2004 went to 195,654 North Carolinians, averaging \$359 a month. An additional \$10.8 of state-administered supplemental payments were distributed to 24,056 residents.

40 HOUSING

In 2004, there were an estimated 3,860,078 units of housing in North Carolina, of which 3,340,330 were occupied; 69% were owner-occupied. About 64.7% of all housing units were single-family, detached homes. The state had one of the highest percentages of mobile home units in the nation at 16.8%. Nearly 36% of the entire housing stock was built between 1970 and 1989. The most common energy source for heating was electricity. It was estimated that 183,095 units lacked telephone service, 11,661 lacked complete plumbing facilities, and 11,745 lacked complete kitchen facilities. The average household had 2.48 members.

Also in 2004, 93,100 new privately owned units were authorized for construction. The median home value was \$117,771. The me-

dian monthly cost for mortgage owners was \$1,028. Renters paid a median of \$610 per month. In September 2005, the state received grants of \$679,942 from the US Department of Housing and Urban Development (HUD) for rural housing and economic development programs. For 2006, HUD allocated to the state over \$45 million in community development block grants.

41 EDUCATION

North Carolina's commitment to education was strengthened with legislative and financial support for improving student achievement through high standards; teacher accountability; an emphasis on teaching the basics of reading, writing and mathematics; and moving state control of schools to the local, community level. Legislation passed in 1996 allowed for the state's first public charter schools, up to 100 of them, and the first ones approved began operating in 1997. In 2004, 80.9% of North Carolinians age 25 and older were high school graduates, lower than the national average of 84%. Some 23.4% had obtained a bachelor's degree or higher; the national average was 26%.

North Carolina has a rich educational history, having started the first state university in the United States, in 1795, and the first free system of common schools in the South in 1839. North Carolina led the nation in the construction of rural schools in the 1920s. In 1957, Charlotte, Greensboro, and Winston-Salem were the first cities in the South to admit black students voluntarily to formerly all-white schools. But, as was the case throughout the South, widespread desegregation took much longer. In 1971, the US Supreme Court, in the landmark decision *Swann v. Charlotte-Mecklenburg Board of Education*, upheld the use of busing to desegregate that school system. The remainder of the state soon followed suit.

North Carolina established a statewide testing program in 1977 and increased high school graduation requirements in 1983, becoming the first state to require that students pass Algebra I in order to earn a diploma. North Carolina has been active in providing special programs for gifted students. Governor's School, a summer residential program for the gifted, was founded in 1963. Other talented students are served by the highly regarded North Carolina School of the Arts in Winston-Salem, which began operating in 1965, and the North Carolina School of Science and Mathematics, located in Durham, which opened in 1980.

The total enrollment for fall 2002 in North Carolina's public schools stood at 1,336,000. Of these, 964,000 attended schools from kindergarten through grade eight, and 372,000 attended high school. Approximately 58.3% of the students were white, 31.6% were black, 6.7% were Hispanic, 2% were Asian/Pacific Islander, and 1.5% were American Indian/Alaskan Native. Total enrollment was estimated at 1,355,000 in fall 2003 and was expected to be 1,381,000 by fall 2014, an increase of 3.3% during the period 2002-14. Expenditures for public education in 2003/04 were estimated at \$10.2 billion. In fall 2003, there were 102,642 students enrolled in 661 private schools. Since 1969, the National Assessment of Educational Progress (NAEP) has tested public school students nationwide. The resulting report, *The Nation's Report Card*, stated that in 2005, eighth graders in North Carolina scored 282 out of 500 in mathematics compared with the national average of 278.

As of fall 2002, there were 447,335 students enrolled in college or graduate school; minority students comprised 28.5% of total

postsecondary enrollment. In 2005 North Carolina had 130 degree-granting institutions. The University of North Carolina (UNC) was chartered in 1789 and opened at Chapel Hill in 1795. The state university system now embraces 16 campuses under a common board of governors. The three oldest and largest campuses, all of which offer research and graduate as well as undergraduate programs, are UNC-Chapel Hill, North Carolina State University in Raleigh (the first land-grant college for the study of agriculture and engineering), and UNC-Greensboro. North Carolina had 58 community colleges and 1 specialized technology center as of 2005.

Duke University in Durham is North Carolina's premier private institution and takes its place with the Chapel Hill and Raleigh public campuses as the third key facility in the Research Triangle. In addition to the public institutions and community colleges, there are also 49 private, four-year schools, of which Wake Forest University in Winston-Salem and Davidson College in Davidson are most noteworthy.

42 ARTS

North Carolina has been a pioneer in exploring new channels for state support of the arts. It was the first state to fund its own symphony, to endow its own art museum, to found a state school of the arts, to create a statewide arts council, and to establish a cabinet-level Department of Cultural Resources. The North Carolina Arts Council was established in 1964 and as of 2006 it was providing 1,000 grants annually to nonprofit organizations and artists. The council was instrumental in funding two of the first arts-based curriculum experiments in the state. The Arts Council's Grassroots Arts Program, established in 1977, was the nation's first per capita funding program for the local arts initiatives in which decision-making remained at the local level.

In 2005, North Carolina arts organizations received 41 grants totaling \$1,535,926 from the National Endowment for the Arts. The North Carolina Humanities Council (NCHC), founded in 1972, is active in a number of programs. In 2005, the National Endowment for the Humanities contributed \$2,475,754 to 29 state programs.

The North Carolina Symphony, based in Raleigh, is noted for having one of the most extensive educational programs of any orchestra nationwide. As of the 2006/07 season, its 75th anniversary, the North Carolina Symphony performed approximately 55 free concerts for more than 100,000 children annually. The North Carolina Museum of Art features one of the finest collections of early European master paintings in the country. The museum's collection spans 5,000 years and includes work by Dutch masters, Renaissance masterpieces, Egyptian artifacts, classical statues, and tribal and contemporary art. In 2005, the museum received a gift of 23 works by French sculptor Auguste Rodin, including 22 bronze sculptures. The gift made the museum one of the top Rodin repositories worldwide; the works of art were to be on display in new galleries that were part of a \$75 million expansion project, scheduled to be completed in 2008.

Summer dance and music festivals, as well as professional theaters and historical outdoor dramas, galleries and museums, and the crafts community all serve as anchors for the state's tourism industry. North Carolina's Pulitzer Prize-winning playwright Paul

Green created the genre of historical drama with the 1937 production of *The Lost Colony*.

Based for 20 years in Durham, the American Dance Festival (ADF) has commissioned new dance works, preserved dance history, trained dancers, and presented the best in contemporary dance. The African American Dance Ensemble, established in 1984 and based in North Carolina, performs for people across the United States promoting the preservation of African and African American dance. In 1961 Flat Rock Playhouse was officially designated the state theater of North Carolina.

Folk and traditional arts thrive across North Carolina in all disciplines. The North Carolina Folk Heritage Awards are given to recognize the state's leading folk artists. Penland School of Crafts, the John C. Campbell Folk School, the Southern Highland Craft Guild, Qualla Arts and Crafts Mutual, Inc., the Core Sound Waterfowl Museum, and the North Carolina Pottery Center are but a few of the organizations in North Carolina that help to keep the craft traditions alive.

43 LIBRARIES AND MUSEUMS

For the fiscal year ending in June 2001, North Carolina had 76 public library systems, with 379 libraries, of which 314 were branches. Libraries, in nearly every North Carolina community, are linked together through the State Library, ensuring that users in all parts of the state can have access to printed, filmed, and recorded materials. In that same year, the state's 76 public library systems had 15,916,000 volumes of books and serial publications on their shelves, and a total circulation of 43,313,000. The system also had 521,000 audio and 438,000 video items, 68,000 electronic format items (CD-ROMs, magnetic tapes, and disks), and 47 bookmobiles. Major university research libraries are located at the Chapel Hill, Raleigh, and Greensboro campuses of the University of North Carolina and at Duke University in Durham. The North Carolina Collection and Southern Historical Collection at the Chapel Hill campus are especially noteworthy. In fiscal year 2001, operating income for the public system totaled \$156,375,000 and included \$1,334,000 in federal grants and \$17,910,000 in state grants.

North Carolina had 188 museums and historical sites in 2000. Established in 1956, the North Carolina Museum of Art, in Raleigh, is one of only two state-supported art museums in the United States (the other is in Virginia); the museum had an attendance of 233,893 in 1999. The North Carolina Museum of History is in Raleigh, with an annual attendance of 239,642. The Department of Cultural Resources administers 20 state historical sites and Tryon Place Restoration in New Bern. The Museum of Natural History in Raleigh is maintained by the state Department of Agriculture; smaller science museums exist in Charlotte, Greensboro, and Durham.

44 COMMUNICATIONS

Government postal service in North Carolina began in 1755 but did not become regular until 1771, with the establishment of a central post office for the southern colonies. Mails were slow and erratic, and many North Carolinians continued to entrust their letters to private travelers until well into the 19th century. Rural free delivery in the state began on 23 October 1896 in Rowan County.

Telephone service began in Wilmington and Raleigh in October 1879, and long distance connections between Wilmington and Petersburg, Va., began later that same year. In 2004, 93.3% of the state's occupied housing units had telephones. In addition, by June of that same year there were 4,875,916 mobile wireless telephone subscribers. In 2003, 57.7% of North Carolina households had a computer and 51.1% had Internet access. By June 2005, there were 1,237,877 high-speed lines in North Carolina, 1,124,284 residential and 113,593 for business.

There were 50 major AM radio stations in North Carolina in 2005, and 106 major FM stations. Major television stations numbered 33. In 1999, the Greenville-Spartanburg-Asheville-Anderson area had 732,490 television households, 61% of which received cable. The Raleigh-Durham area had 858,490 television-viewing households, 62% of which had cable. Finally, the Greensboro-High Point-Winston Salem viewing area boasted 64% of all television households with cable.

A total of 120,858 Internet domain names were registered in the state in the year 2000.

45 PRESS

As of 2005, North Carolina had 34 morning newspapers, 13 evening dailies, and 39 Sunday papers.

The following table shows the circulation of the largest dailies as of 2005:

AREA	NAME	DAILY	SUNDAY
Charlotte	<i>Observer</i> (m,S)	226,082	278,573
Greensboro	<i>News & Record</i> (m,S)	90,436	111,257
Raleigh	<i>News & Observer</i> (m,S)	176,550	211,735
Winston-Salem	<i>Journal</i> (m,S)	84,459	95,179

The *Charlotte Observer* won a 1981 Pulitzer Prize for its series on brown lung disease. The (Raleigh) *News & Observer* won a 1996 Pulitzer Prize for its series on the hog industry in North Carolina.

North Carolina has been the home of several nationally recognized "little reviews" of literature, poetry, and criticism, including *The Rebel*, *Crucible*, *Southern Poetry Review*, *The Carolina Quarterly*, *St. Andrews Review*, *The Sun*, *Pembroke Magazine*, and *Miscellany*. The *North Carolina Historical Review* is a quarterly scholarly publication of the Division of Archives and History.

46 ORGANIZATIONS

In 2006, there were 8,500 nonprofit organizations registered within the state, of which about 6,404 were registered as charitable, educational, or religious organizations.

The North Carolina Citizens Association serves as the voice of the state's business community. A teachers' organization, the North Carolina Association of Educators, is widely acknowledged as one of the most effective political pressure groups in the state, as is the North Carolina State Employees Association. Every major branch of industry has its own trade association; most are highly effective lobbying bodies. Carolina Action, the North Carolina Public Interest Research Group, the Kudzu Alliance, and the Brown Lung Association represent related consumer, environmental, antinuclear power, and public health concerns.

National organizations headquartered in the state include the American Board of Pediatrics, Association of Professors of Medi-

cine, the American Senior Citizens Association, the Institute for Southern Studies, the Tobacco Association of the United States, the US Power Squadrons, the Improved Benevolent Protective Order of Elks of the World, the Independent Order of Odd Fellows, the World Methodist Council, and the Center for Creative Leadership. The Billy Graham Evangelistic Association is based in Charlotte.

Cultural and educational organizations at the local and national levels include the American Dance Festival, the Appalachian Consortium, the Moravian Music Foundation, Art in the Public Interest, the Center for Urban and Regional Studies, the National Humanities Center, the National Institute of Statistical Sciences, the North Carolina Humanities Council, and Preservation North Carolina. There are several clan associations for those of Scottish heritage.

47 TOURISM, TRAVEL, AND RECREATION

North Carolina promotes itself as "the heart of motorsports." Raleigh and Charlotte are right in the heart of NASCAR racing. In 2002, there were 44.4 million visitors to North Carolina, with total travel expenditures reaching \$11.9 billion. About 30% of all trips are made by residents traveling within the state. About 53% of visitors travel from the following states: Virginia, South Carolina, Georgia, Florida, Pennsylvania, Tennessee, New York, Maryland, and Ohio.

Tourists are attracted by North Carolina's coastal beaches (301 miles of coastline); by golf and tennis opportunities; and by parks and scenery in the North Carolina mountains. Sites of special interest are the Revolutionary War battlegrounds at Guilford Courthouse and Moore's Creek Bridge; Bennett Place, near Hillsborough, where the last major Confederate army surrendered; Ft. Raleigh, the site of the Lost Colony's misadventures; and the Wright Brothers National Memorial at Kitty Hawk. With more than 600 golf courses across the state, North Carolina is often nicknamed the "Golf Capital of the World." North Carolina is the home of three United States presidents; Andrew Jackson, James K. Polk, and Andrew Johnson.

Cape Hatteras and Cape Lookout national seashores, which protect the beauty of the Outer Banks, together cover 58,563 acres (23,700 hectares). The Blue Ridge Parkway, a scenic motor route operated by the National Park Service that winds over the crest of the Blue Ridge in Virginia, North Carolina, and Georgia, attracts millions of visitors to North Carolina yearly. There are 300 mi (500 km) of the Appalachian Trail in North Carolina. Another popular attraction, Great Smoky Mountains National Park, straddles the North Carolina-Tennessee border. There are more than 1.2 million acres of national forest land located in North Carolina, 1,500 lakes of 10 acres or more, and 37,000 miles of freshwater streams. North Carolina was first settled by residents of Scotland and still maintains its Scottish heritage with festivals and crafts.

48 SPORTS

There are four major professional sports teams in North Carolina: the Charlotte Bobcats of the National Basketball Association, the Charlotte Sting of the Women's National Basketball Association, the Carolina Panthers of the National Football League, and the Carolina Hurricanes of the National Hockey League, who relocated to Raleigh from Hartford, Connecticut, in 1997. The Charlotte

Hornets, now located in New Orleans, left North Carolina in 2002. Minor league baseball's Carolina League is based in North Carolina, and 14 minor league teams call the state home. Additionally, there is minor league hockey in Charlotte, Fayetteville, and Winston-Salem. Two other professional sports that figure prominently in the state are golf and stock-car racing. The Greater Greensboro Chrysler Classic in April is a major tournament on the Professional Golfers' Association tour. The Lowe's Motor Speedway in Charlotte is the home of the Nextel All-Star Challenge, the Coca-Cola 600, and the Bank of America 500 on the NASCAR Nextel Cup circuit.

College basketball is the ruling passion of amateur sports fans in North Carolina. Organized in the Atlantic Coast Conference, the University of North Carolina at Chapel Hill, North Carolina State University, Wake Forest University, and Duke University consistently field nationally ranked basketball teams. North Carolina won the National Collegiate Athletic Association (NCAA) Championship in 1957, 1982, 1993, and 2005, North Carolina State captured the title in 1974 and 1983, and Duke won back-to-back championships in 1991 and 1992, and in 2001.

Other annual sporting events include the Stoneybrook Steeplechase in Southern Pines in April and the National Hollerin' Contest in Spivey's Corner, which tests farmers' ability to call livestock.

Track and field star Marion Jones and boxing great Sugar Ray Leonard were born in North Carolina.

49 FAMOUS NORTH CAROLINIANS

Three US presidents had North Carolina roots, but all three reached the White House from Tennessee. Andrew Jackson (1767–1845), the seventh president, was born in an unsurveyed border region, probably in South Carolina, but studied law and was admitted to the bar in North Carolina before moving to frontier Tennessee in 1788. James K. Polk (1795–1849), the 11th president, was born in Mecklenburg County but grew up in Tennessee. Another native North Carolinian, Andrew Johnson (1808–75), was a tailor's apprentice in Raleigh before moving to Tennessee at the age of 18. Johnson served as Abraham Lincoln's vice president for six weeks in 1865 before becoming the nation's 17th president when Lincoln was assassinated. William Rufus King (1786–1853), the other US vice president from North Carolina, also served for only six weeks, dying before he could exercise his duties.

Three native North Carolinians have served as speaker of the US House of Representatives. The first, Nathaniel Macon (1758–1837), occupied the speaker's chair from 1801 to 1807 and served as president pro tem of the US Senate in 1826–27. The other two were James K. Polk and Joseph G. "Uncle Joe" Cannon (1836–1926), who served as speaker of the House from 1903 to 1911, but as a representative from Illinois.

Sir Walter Raleigh (or Ralegh, b.England, 1552?–1618) never came to North Carolina, but his efforts to found a colony there led state lawmakers to give his name to the new state capital in 1792. Raleigh's "Lost Colony" on Roanoke Island was the home of Virginia Dare (1587–?), the first child of English parents to be born in America. More than a century later, the infamous Edward Teach (or Thatch, b.England, ?–1716) made his headquarters at Bath and terrorized coastal waters as the pirate known as Blackbeard.

Principal leaders of the early national period included Richard Caswell (b.Maryland, 1729–89), Revolutionary War governor;

William Richardson Davie (b.England, 1756–1820), governor of the state and founder of the University of North Carolina; and Archibald De Bow Murphey (1777–1832), reform advocate, legislator, and judge. Prominent black Americans of the 19th century who were born or who lived in North Carolina were John Chavis (1763–1838), teacher and minister; David Walker (1785–1830), abolitionist; and Hiram Revels (1827–1901), first black member of the US Senate.

North Carolinians prominent in the era of the Civil War and Reconstruction included antislavery author Hinton Rowan Helper (1829–1909), Civil War governor Zebulon B. Vance (1830–94), Reconstruction governor William W. Holden (1818–92), and "carpetbagger" judge Albion Winegar Tourgee (b. Ohio, 1838–1905). Among major politicians of the 20th century are Furnifold McLendell Simmons (1854–1940), US senator from 1901 to 1931; Charles Brantley Aycock (1859–1912), governor from 1901 to 1905; Frank Porter Graham (1886–1972), University of North Carolina president, New Deal adviser, and US senator, 1949–50; Luther H. Hodges (b. Virginia, 1898–1974), governor from 1954 to 1960, US secretary of commerce from 1961 to 1965, and founder of Research Triangle Park; Samuel J. Ervin Jr. (1896–1985), US senator from 1954 to 1974 and chairman of the Senate Watergate investigation; Terry Sanford (1917–98), governor from 1961 to 1965, US presidential aspirant, and president of Duke University; and Jesse Helms (b. 1921), senator from 1973 to 2003. Civil rights leader Jesse Jackson (b. 1941) began his career as a student activist in Greensboro. The most famous North Carolinian living today is probably evangelist Billy Graham (b. 1918).

James Buchanan Duke (1856–1925) founded the American Tobacco Co. and provided the endowment that transformed Trinity College into Duke University. The most outstanding North Carolina-born inventor was Richard J. Gatling (1818–1903), creator of the "Gatling gun," the first machine gun. The Wright brothers, Wilbur (b. Indiana, 1867–1912) and Orville (b. Ohio, 1871–1948), achieved the first successful powered airplane flight at Kitty Hawk, on the Outer Banks, on 17 December 1903. Psychologist Joseph Banks Rhine (b. Pennsylvania, 1895–1980) was known for his research on extrasensory perception. Kary Mullis, 1993 winner of the Nobel Prize for chemistry, was born in Lenoir, North Carolina.

A number of North Carolinians have won fame as literary figures. They include Walter Hines Page (1855–1918), editor and diplomat; William Sydney Porter (1862–1910), a short-story writer who used the pseudonym O. Henry; playwright Paul Green (1894–1984); and novelists Thomas Wolfe (1900–38) and Reynolds Price (b. 1933). Major scholars associated with the state have included sociologist Howard W. Odum (b. Georgia, 1884–1954) and historians W. J. Cash (1901–41) and John Hope Franklin (b. Oklahoma, 1915). Journalists Edward R. Murrow (1908–65), Tom Wicker (b. 1926), and Charles Kuralt (1934–97) were all North Carolina natives. Harry Golden (Harry L. Goldhurst, b. New York, 1903–81), a Jewish humorist, founded the *Carolina Israelite*.

Jazz artists Thelonious Monk (1918–82), John Coltrane (1926–67), and Nina Simone (1933–2003) were born in the state, as were pop singer Roberta Flack (b. 1939), folksinger Arthel "Doc" Watson (b. 1923), bluegrass banjo artist Earl Scruggs (b. 1924), and actor Andy Griffith (b. 1926). North Carolina athletes include former heavyweight champion Floyd Patterson (1935–2006), NASCAR

driver Richard Petty (1937–2000), football quarterbacks Sonny Jurgenson (b.1934) and Roman Gabriel (b.1940), baseball pitchers Gaylord Perry (b.1938) and Jim “Catfish” Hunter (1946–99), and basketball player Meadowlark Lemon (b.1932), long a star with the Harlem Globetrotters. Michael Jordan (b.New York, 1963) played college basketball at the University of North Carolina, and went on to fame as a National Basketball Association star.

NORTH DAKOTA

State of North Dakota

ORIGIN OF STATE NAME: The state was formerly the northern section of Dakota Territory; *dakota* is a Siouan word meaning “allies.” **NICKNAME:** Peace Garden State; Flickertail State. **CAPITAL:** Bismarck. **ENTERED UNION:** 2 November 1889 (39th). **SONG:** “North Dakota Hymn;” “Flickertail March.” (march). **MOTTO:** Liberty and Union, Now and Forever, One and Inseparable. **FLAG:** The flag consists of a blue field with yellow fringes; on each side is depicted an eagle with outstretched wings, holding in one talon a sheaf of arrows, in the other an olive branch, and in his beak a banner inscribed with the words “*E Pluribus Unum.*” Below the eagle are the words “North Dakota”; above it are 13 stars surmounted by a sunburst. **OFFICIAL SEAL:** In the center is an elm tree; beneath it are a sheaf of wheat, a plow, an anvil, and a bow and three arrows, and in the background a Native American chases a buffalo toward a setting sun. The depiction is surrounded by the state motto, and the words “Great Seal State of North Dakota October 1st 1889” encircle the whole. **BIRD:** Western meadowlark. **FISH:** Northern pike. **FLOWER:** Wild prairie rose. **TREE:** American elm. **LEGAL HOLIDAYS:** New Year’s Day, 1 January; Birthday of Martin Luther King Jr., 3rd Monday in January; Presidents’ Day, 3rd Monday in February; Good Friday, Friday before Easter, March or April; Memorial Day, last Monday in May; Independence Day, 4 July; Labor Day, 1st Monday in September; Veterans’ Day, 11 November; Thanksgiving Day, 4th Thursday in November; Christmas Day, 25 December. **TIME:** 6 AM CST = noon GMT; 5 AM MST = noon GMT.

¹ LOCATION, SIZE, AND EXTENT

Located in the western north-central United States, North Dakota ranks 17th in size among the 50 states.

The total area of North Dakota is 70,703 sq mi (183,121 sq km), comprising 69,300 sq mi (179,487 sq km) of land and 1,403 sq mi (3,634 sq km) of inland water. Shaped roughly like a rectangle, North Dakota has three straight sides and one irregular border on the E. Its maximum length E–W is about 360 mi (580 km), its extreme width N–S about 210 mi (340 km).

North Dakota is bordered on the N by the Canadian provinces of Saskatchewan and Manitoba; on the E by Minnesota (with the line formed by the Red River of the North); on the S by South Dakota; and on the W by Montana. The total boundary length is 1,312 mi (2,111 km). The state’s geographic center is in Sheridan County, 5 mi (8 km) sw of McClusky.

² TOPOGRAPHY

North Dakota straddles two major US physiographic regions: the Central Plains in the east and the Great Plains in the west. Along the eastern border is the generally flat Red River Valley, with the state’s lowest point, 750 ft (229 m); this valley was once covered by the waters of a glacial lake. Most of the eastern half of North Dakota consists of the Drift Prairie, at 1,300–1,600 ft (400–500 m) above sea level. The Missouri Plateau occupies the western half of the state and has the highest point in North Dakota—White Butte, 3,506 ft (1,069 m)—in Slope County in the southwest. Separating the Missouri Plateau from the Drift Prairie is the Missouri Escarpment, which rises 400 ft (122 m) above the prairie and extends diagonally from northwest to southeast. The mean elevation of the state is approximately 1,900 ft (580 m).

North Dakota has two major rivers: the Red River of the North, flowing northward into Canada; and the Missouri River, which enters in the northwest and then flows east and, joined by the Yellowstone River, southeast into South Dakota.

³ CLIMATE

North Dakota lies in the northwestern continental interior of the United States. Characteristically, summers are hot, winters very cold, and rainfall sparse to moderate, with periods of drought. The average annual temperature is 40°F (4°C), ranging from 7°F (-14°C) in January to 69°F (21°C) in July. The record low temperature, -60°F (-51°C), was set at Parshall on 15 February 1936; the record high, 121°F (49°C), at Steele on 6 July 1936.

The average yearly precipitation was about 15.8 in (40 cm) at Bismarck. The total annual snowfall averages 41.9 in (106 cm) at Bismarck.

⁴ FLORA AND FAUNA

North Dakota is predominantly a region of prairie and plains, although the American elm, green ash, box elder, and cottonwood grow there. Cranberries, juneberries, and wild grapes are also common. Indian, blue, grama, and buffalo grasses grow on the plains; the wild prairie rose is the state flower. The western prairie fringed orchid was the only plant species classified by the US Fish and Wildlife Service as threatened in 2006; no plant species were listed as endangered that year.

Once on the verge of extinction, the white-tailed and mule deer and pronghorn antelope have been restored. The elk and grizzly bear, both common until about 1880, had disappeared by 1900; bighorn sheep, reintroduced in 1956, are beginning to flourish.

North Dakota claims more wild ducks than any other state except Alaska, and it has the largest sharptailed grouse population in the United States. Six animal species (vertebrates and invertebrates) were listed as threatened or endangered in North Dakota in April 2006, including the bald eagle, Eskimo curlew, pallid sturgeon, least tern, and whooping crane.

5 ENVIRONMENTAL PROTECTION

North Dakota has little urban or industrial pollution. An environmental issue confronting the state in the mid-1980s and early 1990s was how to use its coal resources without damaging the land through strip mining or polluting the air with coal-fired industrial plants. Major environmental issues confronting the state are importation of non-hazardous and hazardous solid wastes for treatment or disposal, non-point surface water pollution from agricultural and native land, groundwater contamination by fuel storage tanks and by irrigation, and air pollution by energy conversion plants.

The Environmental Health Section of the North Dakota Department of Health oversees programs to ensure water and air quality. North Dakota has little urban air pollution with one exception: motor vehicle traffic is causing excess ambient carbon monoxide in an area within the city of Fargo. The major industrial sources of air contaminants within the state are seven coal-fired electrical generating plants, a coal gasification plant, a refinery, and agricultural commodity processing facilities. The ambient air quality has been in compliance with federal standards, although an epidemiological study has associated certain air contaminants with a higher incidence of respiratory illness among persons living in the vicinity of coal-burning plants. In 2003, 23.6 million lb of toxic chemicals were released in the state.

To conserve water and provide irrigation, nearly 700 dams have been built, including Garrison Dam, completed in 1960. The Garrison Diversion Project, authorized by the US Congress in 1965, was intended to draw water from Lake Sakakawea, the impoundment behind Garrison Dam. As of the 1980s, there were about 2.7 million acres of wetlands in the state. This total has been diminishing, however, by agricultural development.

Diversion of household waste to recycling grew to about nearly 15% of the waste stream. Yard wastes, household appliances, and scrap tires are also diverted for compost, recycling, or fuel, respectively. In 2003, North Dakota had 17 hazardous waste sites listed in the US Environment Protection Agency (EPA) database, but none were on the National Priorities List as of 2006. In 2005, the EPA spent over \$2.6 million through the Superfund program for the cleanup of hazardous waste sites in the state. The same year, federal EPA grants awarded to the state included \$11.7 million for the water pollution control state revolving fund and \$8.2 for the safe drinking water revolving fund.

6 POPULATION

North Dakota ranked 48th in population in the United States with an estimated total of 636,677 in 2005 a decrease of 0.9% from 2000. Between 1990 and 2000, North Dakota's population grew from 638,800 to 642,200, an increase of 0.5%. The population is projected to decrease to 620,777 by 2025. The population density in 2004 was 9.2 persons per sq mi, the fourth-lowest in the nation (after Alaska, Wyoming, and Montana). In 2004, the median age

in North Dakota was 38.8; 21.9% of the populace were under age 18 while 14.7% was age 65 or older.

North Dakota is one of the most rural states in the United States, with over half of its population living outside metropolitan areas. The Fargo metropolitan area had an estimated population of 181,520 in 2004. The Bismarck metropolitan area had a population of about 97,924 and the Grand Forks area had a population of about 96,046.

7 ETHNIC GROUPS

As of 2000, about 92.4% of the state's population was white. The American Indian population was 31,329, or about 4.9% of the total; that percentage had increased to 5.2% by 2004. In 2000, there were some 3,916 blacks, representing 0.6% of the population. That percentage had increased to 0.7% by 2004. Among Americans of European origin, the leading groups were Germans, who made up 44% of the total population, and Norwegians, who made up 30%. Only about 1.9% of the state's population (12,114) was foreign born as of 2000, predominantly from neighboring Canada. In the same year, the Asian population totaled 3,606, with 230 Pacific Islanders. In 2000, 7,786 North Dakotans were Hispanic or Latino, representing 1.2% of the state's total population. In 2004, 1.5% of the population was Hispanic or Latino, 0.7% Asian, 0.9% of the population reported origin of two or more races.

8 LANGUAGES

Although a few Indian words are used in the English spoken near the reservations where Ojibwa and Sioux live in North Dakota, the only general impact of Indian speech on English is in such place-names as Pembina, Mandan, Wabek, and Anamoose.

A few Norwegian food terms like *lefse* and *lutefisk* have entered the Northern dialect that is characteristic of North Dakota, and some Midland terms have intruded from the south.

In 2000, 93.7% of the population five years old or older spoke only English at home, down slightly from 92.1% in 1990.

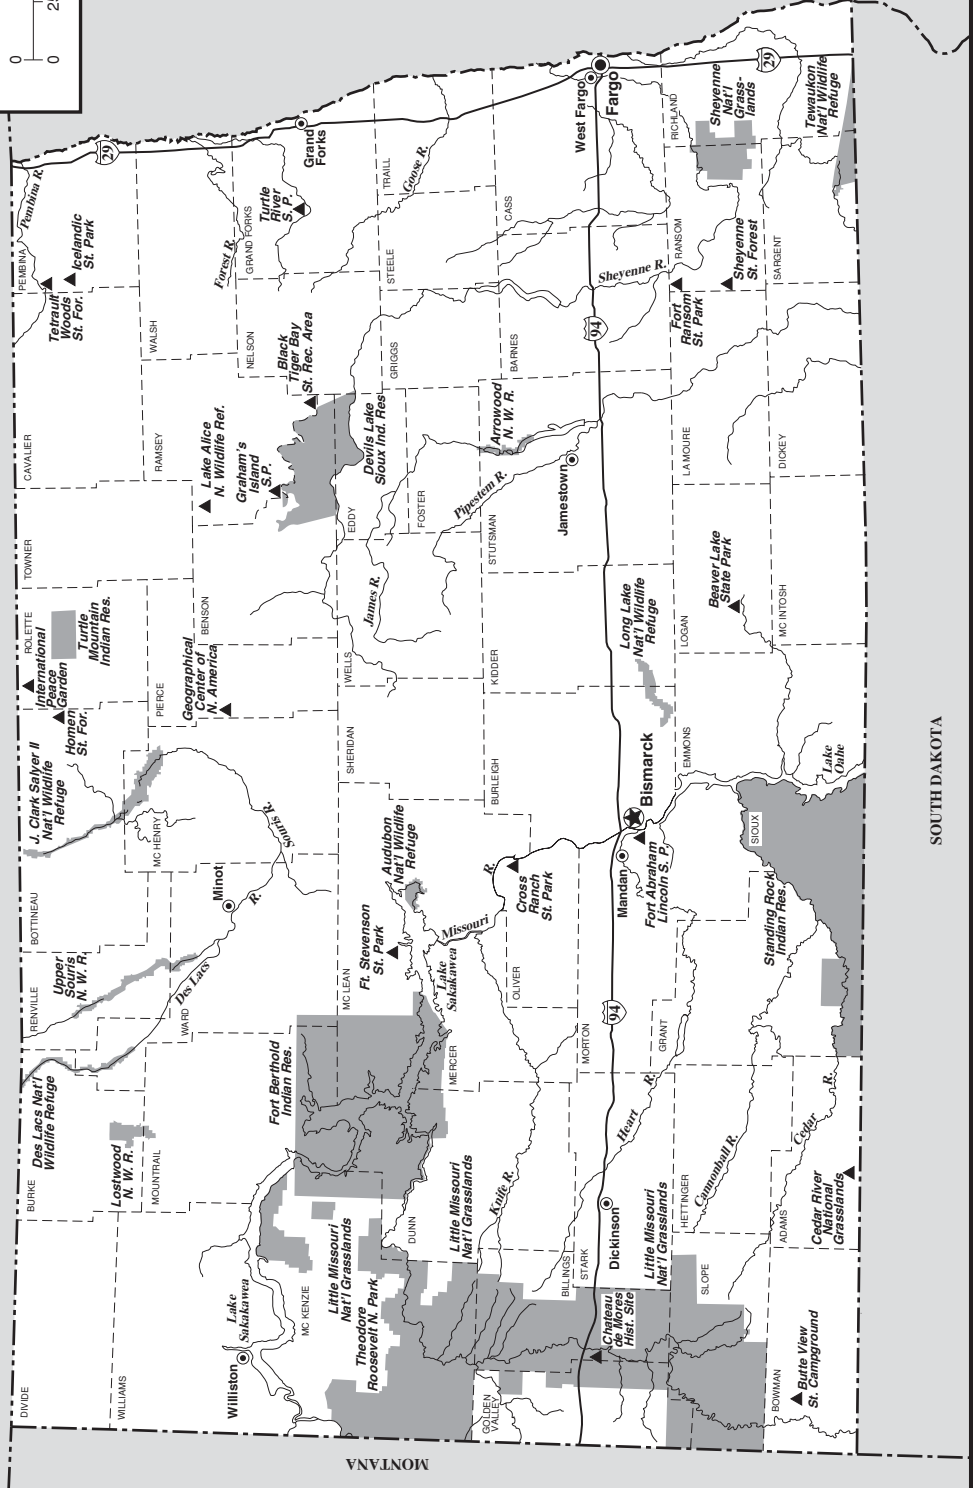

The following table gives selected statistics from the 2000 Census for language spoken at home by persons five years old and over. The category "Scandinavian languages" includes Danish, Norwegian, and Swedish. The category "Other Native North American languages" includes Apache, Cherokee, Choctaw, Dakota, Keres, Pima, and Yupik. The category "African languages" includes Amharic, Ibo, Twi, Yoruba, Bantu, Swahili, and Somali.

LANGUAGE	NUMBER	PERCENT
Population 5 years and over	603,106	100.0
Speak only English	565,130	93.7
Speak a language other than English	37,976	6.3
Speak a language other than English	37,976	6.3
German	14,931	2.5
Spanish or Spanish Creole	8,263	1.4
Scandinavian languages	3,193	0.5
Other Native North American languages	2,536	0.4
French (incl. Patois, Cajun)	1,597	0.3
Other Slavic languages	1,350	0.2
Serbo-Croatian	825	0.1
African languages	459	0.1
Polish	452	0.1
Chinese	437	0.1
Russian	331	0.1
Tagalog	330	0.1

⁹RELIGIONS

Most of the state population is mainline Protestant, with the leading denominations being the Evangelical Lutheran Church in America with 174,554 adherents (in 2000) and the United Methodist Church with 20,159 adherents. The Lutheran Church—Missouri Synod had about 23,720 members. The Roman Catholic Church had about 148,435 members in 2004. There were an estimate 920 Muslims and 730 Jews in the state in 2000. About 26.8% of the population did not specify a religious affiliation.

¹⁰TRANSPORTATION

In 2003, there was 3,727 mi (6,000 km) of rail trackage in North Dakota. The largest railroad lines are the Burlington Northern Santa Fe (BNSF) and the Soo Line. Farm products and coal accounted for most of the state originated tonnage carried by the railroads. As of 2006, Amtrak passenger service was provided to seven stations in the state via its Chicago–Seattle/Portland Empire Builder train.

There were 86,782 mi (139,719 km) of public roads, streets, and highways in North Dakota in 2004. There were also some 707,000 registered motor vehicles of all types and 461,780 licensed drivers in the state for that same year.

In 2005, North Dakota had a total of 308 public and private-use aviation-related facilities. This included 292 airports, 15 heliports, and 1 seaplane base. Hector International Airport at Fargo is the state's main airport, with 261,872 passengers enplaned in 2004.

¹¹HISTORY

Human occupation of what is now North Dakota began about 13,000 BC in the southwestern corner of the state, which at that time was covered with lush vegetation. Drought drove away the aboriginal hunter-gatherers, and it was not until about 2,000 years ago that Indians from the more humid regions to the east moved into the easternmost third of the Dakotas. About AD 1300 the Mandan Indians brought an advanced agricultural economy up the Missouri River. They were joined by the Hidatsa and Arikara about three or four centuries later. Moving from the Minnesota forests during the 17th century, the Yanktonai Sioux occupied the southeastern quarter of the state. Their cousins west of the Missouri River, the Teton Sioux, led a nomadic life as hunters and mounted warriors. The Ojibwa, who had driven the Sioux out of Minnesota, settled in the northeast.

European penetration of the Dakotas began in 1738, when Pierre Gaultier de Varennes, Sieur de la Vérendrye, of Trois Rivières in New France, traded for furs in the Red River region. Later the fur trade spread farther into the Red and Missouri river valleys, especially around Pembina, where the North West Company and the Hudson's Bay Company had their posts. After the Lewis and Clark expedition (1804–06) explored the Missouri, the American Fur Company traded there, with buffalo hides the leading commodity.

In 1812, Scottish settlers from Canada moved up the Red River to Pembina. This first white farming settlement in North Dakota also attracted numerous métis, half-breeds of mixed Indian and European ancestry. An extensive trade in furs and buffalo hides, which were transported first by heavy carts and later by steam-

boats, sprang up between Pembina, Ft. Garry (Winnipeg, Canada), and St. Paul, Minn.

Army movements against the Sioux during and after the Civil War brought white men into central North Dakota, which in 1861 was organized as part of the Dakota Territory, including the present-day Dakotas, Montana, and Wyoming. The signing of treaties confining the agricultural Indians to reservations, the arrival of the Northern Pacific Railroad at Fargo in 1872, and its extension to the Missouri the following year led to the rise of homesteading on giant "bonanza farms." Settlers poured in, especially from Canada. This short-lived "Great Dakota boom" ended in the mid-1880s with drought and depressed farm prices. As many of the original American and Canadian settlers left in disgust, they were replaced by Norwegians, Germans, and other Europeans. By 1910, North Dakota, which had entered the Union in 1889, was among the leading states in percentage of foreign-born residents.

From the time of statehood onward, Republicans dominated politics in North Dakota. Their leader was Alexander McKenzie, a Canadian immigrant who built a reputation as an agent of the railroads, protecting them from regulation. Between 1898 and 1915, the "Second Boom" brought an upsurge in population and railroad construction. In politics, Republican Progressives enacted reforms, but left unsolved the basic problem of how North Dakota farmers could stand up to the powerful grain traders of Minneapolis-St. Paul. Agrarian revolt flared in 1915, when Arthur C. Townley organized the Farmers' Nonpartisan Political League. Operating through Republican Party machinery, Townley succeeded in having his gubernatorial candidate, Lynn J. Frazier, elected in 1916. State-owned enterprises were established, including the Bank of North Dakota, the Home Building Association, the Hail Insurance Department, and a mill and grain elevator. However, the league was hurt by charges of "socialism" and, after 1917, by allegations of pro-German sympathies in World War I, as well as of mismanagement. In 1921, Frazier and Attorney General William Lemke were removed from office in the nation's first recall election.

The 1920s, a period of bank failures, low farm prices, drought, and political disunity, saw the beginnings of an exodus from the state. Matters grew worse during the Great Depression. Elected governor by hard-pressed farmers in 1932, William Langer took spectacular steps to save farms from foreclosure and to raise grain prices, until a conflict with the Roosevelt administration led to his removal from office on charges that he had illegally solicited political contributions.

World War II brought a quiet prosperity to North Dakota that lasted into the following decades. The Arab oil embargo of 1973 and the rise of oil prices throughout the decade spurred drilling for oil, encouraged the mining of lignite for electrical generation, and led to the construction of the nation's first coal gasification plant, at a cost of \$2 billion, in a lignite mining area near Beulah. In the 1980s, however, North Dakota's economy suffered a setback when oil prices dropped. In addition, a drought that began in 1987 damaged over 5.3 million acres of land by 1988 and persisted into the 1990s and early 2000s. Agricultural production was strong in early 1990s. However, severe storms and flooding in 1994 damaged about \$600 million in crops. The state continues to experience extreme weather conditions.

The state's economy was boosted by the 1991 repeal of the "blue laws" enforcing the closing of all retail businesses on Sundays. Republican Governor Ed Schafer, elected in 1992 and reelected in 1996, set an aggressive plan for the state's economic development, resulting in an estimated 10% increase in the number of jobs and record-low unemployment. By 2000 Fargo boasted one of the lowest unemployment rates in the nation. Nevertheless, poverty was on the rise in the 1990s. With 15.1% of its residents living below the nationally established poverty line, North Dakota ranked as the ninth-poorest in the United States in 1998. The state had begun the decade ranked nineteenth, with a 13.7% rate. It was also one of just 15 states where child poverty was on the rise—one in five children lived in poverty in 1998. However, by 2003–04, North Dakota had turned its poverty statistics around: the poverty rate during that two-year average was 9.7%, well below the national average of 12.6%. Per capita personal income in 2004 was \$31,398, just below the US average of \$32,937. In 2003, North Dakota led the nation in personal income and wage growth.

Census Bureau figures in 2000 showed the state (population 642,200) continued to be one of the least populated in the nation—only Alaska, Vermont, and Wyoming had fewer residents. Stemming the tide of North Dakotans moving out of state was a top priority. The state enjoyed the rank of safest in the nation in 1999, with only 89 crimes per 100,000 people.

As of 2005, it was illegal for unmarried couples to cohabit in North Dakota, one of seven states to have such laws. Republican governor John Hoeven, during his second term in office, was committed to enhancing the state's business climate. In 2005, the state had a budget surplus and the budget called for tax relief through higher state funding for K–12 education, additional revenue sharing with cities and counties, tax credits for farms and businesses, and a property tax break for seniors and people with disabilities.

12 STATE GOVERNMENT

North Dakota is governed by the constitution of 1889, as amended (145 times by January 2005). The constitution may be amended by a majority vote in the legislature; a majority vote of the state electorate is required for ratification. Amendments may also be proposed by initiative (by petition of 4% of the state's population).

State elected officials are the governor and lieutenant governor (elected jointly), secretary of state, auditor, treasurer, attorney general, superintendent of public instruction, three public service commissioners, and the commissioners of insurance, taxation, and agriculture. With the exception of the public service commissioners, who serve six-year terms, all terms are four years. Candidates for governor must be 30 years old, US citizens, qualified voters, and state residents for at least five years prior to election. As of December 2004, the governor's salary was \$85,506.

The legislature, which convenes every two years (in odd-numbered years) beginning in early January, is bicameral, with a 47-member Senate and a 94-member House of Representatives. Regular sessions are limited to 80 legislative days. The governor or a legislative council may call for a special session. All legislators must be at least 18 years old, state residents for at least one year, and qualified voters in their districts prior to election; they serve four-year terms. In 2004 legislators received a per diem salary during regular sessions of \$125 per calendar day. A two-thirds vote of the elected members of each house is required to override

a gubernatorial veto. Bills that are not vetoed or signed by the governor become law after three days (or after 15 days if the legislature adjourns).

Voters in North Dakota must be US citizens, at least 18 years old, and a precinct resident for at least 30 days prior to election. The state does not require voters to register. Restrictions apply to convicted felons and those declared mentally incompetent by the court.

13 POLITICAL PARTIES

Between 1889 and 1960, Republicans held the governorship for 58 years. North Dakota politics were not monolithic, however, for aside from the Populist and Democratic opposition, the Republican Party was itself torn by factionalism, with Progressive and Nonpartisan League challenges to the conservative, probusiness party establishment. Between 1960 and 1980, the statehouse was in Democratic hands. In the early and mid-nineties, the Republican party increased its influence at the state level, gaining dominance in both houses of the state legislature, having wrestled control of the Senate away from the Democrats in the November 1994 election. The state had 481,351 registered voters in 2002, 49% of whom turned out to vote. Following the 2004 election, the state Senate had 32 Republicans and 15 Democrats. The state House was dominated by the Republicans, who held 67 seats, while the Democrats had 27.

In the 2000 presidential election, Republican George W. Bush won 61% of the vote to Democrat Al Gore's 33%. Independent candidate Ralph Nader and Reform Party candidate Pat Buchanan each received 3% of the vote. In 2004, Bush won 66% of the vote to Democratic challenger John Kerry's 33%. North Dakota had three electoral votes in the 2004 presidential election.

Republican John Hoeven was elected governor in 2000. North Dakota's US senators in 2003 were Kent Conrad, a Democrat elected in 1992 to fill a seat vacated by the death of Quentin D. Burdick and reelected to full terms in 1994 and 2000, and Democrat Byron Dorgan, who was also reelected for second and third terms in 1998 and 2004. Following the 2004 elections, North Dakota's sole representative to the US House was a Democrat.

North Dakota Presidential Vote by Major Political Parties, 1948–2004

YEAR	ELECTORAL VOTE	N. DAKOTA WINNER	DEMOCRAT	REPUBLICAN
1948	4	Dewey (R)	95,812	115,139
1952	4	*Eisenhower (R)	76,694	191,712
1956	4	*Eisenhower (R)	96,742	156,766
1960	4	Nixon (R)	123,963	154,310
1964	4	*Johnson (D)	149,784	108,207
1968	4	*Nixon (R)	94,769	138,669
1972	3	*Nixon (R)	100,384	174,109
1976	3	Ford (R)	136,078	153,470
1980	3	*Reagan (R)	79,189	193,695
1984	3	*Reagan (R)	104,429	200,336
1988	3	*Bush (R)	127,739	166,559
1992**	3	Bush (R)	99,168	136,244
1996**	3	Dole (R)	106,905	125,050
2000	3	*Bush, G. W. (R)	95,284	174,852
2004	3	*Bush, G. W. (R)	111,052	196,651

*Won US presidential election.

**IND. candidate Ross Perot received 71,084 votes in 1992 and 32,515 votes in 1996.

14 LOCAL GOVERNMENT

In 2005, North Dakota had 53 counties, 360 municipalities (all designated as cities regardless of size), 230 public school districts, and 764 special districts. In 2002, there were 1,332 special districts. Typical elected county officials are commissioners, a sheriff, a court clerk, a county judge, a county justice, and a state's attorney. Counties are divided into townships, each with its own elected administrative officers. Most municipalities operate by the mayor-council system of government.

In 2005, local government accounted for about 23,093 full-time (or equivalent) employment positions.

15 STATE SERVICES

To address the continuing threat of terrorism and to work with the federal Department of Homeland Security, homeland security in North Dakota operates under the authority of the governor; the emergency management director was designated as the state homeland security advisor.

Educational services are under the jurisdiction of the Department of Public Instruction and the Board of Higher Education; there are state schools for the deaf, blind, handicapped, and developmentally disabled. Health and welfare agencies include the State Health Department, Department of Agriculture, Department of Economic Development and Finance, Council on the Arts, Veterans Affairs Department, Department of Human Services, and Indian Affairs Commission. Agricultural services include an extensive program of experiment and extension stations.

16 JUDICIAL SYSTEM

North Dakota has a supreme court of five justices, seven district courts with 43 justices, and a system of local (county) courts. Supreme court justices are elected for 10-year terms, district court judges for 6-year terms.

As of 31 December 2004, a total of 1,327 prisoners were held in North Dakota's state and federal prisons, an increase from 1,239 of 7.1% from the previous year. As of year-end 2004, a total of 129 inmates were female, up from 113 or 14.2% from the year before. Among sentenced prisoners (one year or more), North Dakota had an incarceration rate of 195 per 100,000 population in 2004.

According to the Federal Bureau of Investigation, North Dakota in 2004, had a violent crime rate (murder/nonnegligent manslaughter; forcible rape; robbery; aggravated assault) of 79.4 reported incidents per 100,000 population (the lowest in the United States), or a total of 504 reported incidents. Crimes against property (burglary; larceny/theft; and motor vehicle theft) in that same year totaled 12,158 reported incidents or 1,916.6 reported incidents per 100,000 people. North Dakota does not have a death penalty. It was abolished in 1973, with the last execution in that state taking place in 1930. North Dakota does provide for life without parole.

In 2003, North Dakota spent \$26,679,568 on homeland security, an average of \$39 per state resident.

17 ARMED FORCES

In 2004, there were 7,840 active-duty military personnel and 1,706 civilian personnel stationed in North Dakota, the majority of whom were stationed at the Strategic Air Command bases at

Minot and Grand Forks. North Dakota firms received more than \$309 million in defense contract awards in 2004. Defense Department payroll outlays in that same year were \$498 million.

In 2003, 55,374 veterans were living in North Dakota, including 7,558 from World War II; 6,787 from the Korean conflict; 17,850 from the Vietnam era; and 8,680 in the Persian Gulf War. A total of more than \$156 million was spent on major veterans' benefit programs in the state in 2004.

As of 31 October 2004, the North Dakota Highway Patrol employed 134 full-time sworn officers.

18 MIGRATION

During the late 19th century, North Dakota was largely settled by immigrants of German and Scandinavian stock. The state reached a peak population in 1930, but then suffered steady losses until well into the 1970s because of out-migration. This trend has shown some signs of abating, however. From 1980 to 1983, the state's population grew 4.3%, in part because of a net gain in migration of about 5,000 people. Also during the 1980s, the urban population grew to outnumber the rural population, rising from 48.8% to 53.3% of the total populace. From 1985 to 1990, North Dakota had a net loss of 44,142 from migration. Between 1990 and 1998, the state had a net loss of 30,000 in domestic migration but a net gain of 4,000 in international migration. In 1998, the state admitted 472 foreign immigrants. North Dakota's overall population decreased by 0.1% between 1990 and 1998. In the period 2000–05, net international migration was 3,687 and net internal migration was -18,568, for a net loss of 14,881 people.

19 INTERGOVERNMENTAL COOPERATION

North Dakota participates in such interstate agreements as the Yellowstone River Compact, Western Interstate Commission for Higher Education, Interstate Compact for Juveniles, and Interstate Oil and Gas Compact. A Minnesota–North Dakota Boundary Compact was ratified in 1961. Federal grants in fiscal year 2001 totaled almost \$1.3 billion. Mirroring a national trend, that figure declined significantly by fiscal year 2005, to \$935 million. Federal grants were estimated at \$908 million in fiscal year 2006, and an estimated \$921 million in fiscal year 2007.

20 ECONOMY

North Dakota has been and still is an important agricultural state, especially as a producer of wheat, much of which finds its way onto the world market. Many segments of the economy are affected by agriculture; for example, a substantial wholesale trade is involved in moving grain and livestock to market. Like other Midwestern farmers, North Dakotans suffered from high interest rates and a federal embargo on grain shipments to the Soviet Union in the early 1980s. Farm numbers have continued to decline, posing a threat to the vitality of the state's rural lifestyle. From 1970, 43 of North Dakota's 53 counties have lost population, and for 23 of these the population decline accelerated in the 1990s. The exodus has been aggravated by prolonged drought conditions, which in 2002 helped reduce wheat production (representing a quarter of the state's total agricultural revenues) by 24% and disrupted cattle production. Not being deeply involved in the dot.com frenzy of the 1990s, North Dakota was only slightly affected by the national recession and slowdown of 2001 and 2002. By December 2002,

state unemployment which had risen to 3.6% in October, had fallen back to 3%.

Growth industries for the state include petroleum and the mining of coal, chiefly lignite. North Dakota has more coal resources than any other state. Manufacturing is concentrated to a great extent on farm products and machinery.

North Dakota's gross state product (GSP) in 2004 was \$22.687 billion, of which manufacturing accounted for the largest share at \$2.366 billion or 10.4% of GSP, followed by health care and social assistance services at \$2.069 billion (9.1% of GSP), and the real estate sector at \$1.840 billion (8.1% of GSP). In that same year, there were an estimated 59,158 small businesses in North Dakota. Of the 19,177 businesses that had employees, an estimated total of 18,522 or 96.6% were small companies. An estimated 1,747 new businesses were established in the state in 2004, up 20% from the year before. Business terminations that same year came to 2,621, up 27.9% from 2003. There were 85 business bankruptcies in 2004, down 19% from the previous year. In 2005, the state's personal bankruptcy (Chapter 7 and Chapter 13) filing rate was 345 filings per 100,000 people, ranking North Dakota as the 46th highest in the nation.

2¹ INCOME

In 2005 North Dakota had a gross state product (GSP) of \$24 billion which accounted for 0.2% of the nation's gross domestic product and placed the state at number 50 in highest GSP among the 50 states and the District of Columbia.

According to the Bureau of Economic Analysis, in 2004 North Dakota had a per capita personal income (PCPI) of \$29,494. This ranked 37th in the United States and was 89% of the national average of \$33,050. The 1994–2004 average annual growth rate of PCPI was 4.5%. North Dakota had a total personal income (TPI) of \$18,767,503,000, which ranked 50th in the United States and reflected an increase of 2.8% from 2003. The 1994–2004 average annual growth rate of TPI was 4.4%. Earnings of persons employed in North Dakota increased from \$14,513,974,000 in 2003 to \$14,966,009,000 in 2004, an increase of 3.1%. The 2003–04 national change was 6.3%.

The US Census Bureau reports that the three-year average median household income for 2002 to 2004 in 2004 dollars was \$39,594 compared to a national average of \$44,473. During the same period an estimated 10.3% of the population was below the poverty line as compared to 12.4% nationwide.

2² LABOR

According to the Bureau of Labor Statistics (BLS), in April 2006 the seasonally adjusted civilian labor force in North Dakota numbered 363,900, with approximately 12,000 workers unemployed, yielding an unemployment rate of 3.3%, compared to the national average of 4.7% for the same period. Preliminary data for the same period placed nonfarm employment at 349,800. Since the beginning of the BLS data series in 1976, the highest unemployment rate recorded in North Dakota was 6.9% in March 1983. The historical low was 2.5% in January 1998. Preliminary nonfarm employment data by occupation for April 2006 showed that approximately 5.6% of the labor force was employed in construction; 10.4% in manufacturing; 21.5% in trade, transportation, and public utilities; 5.4% in financial activities; 7.7% in professional and

business services; 14% in education and health services; 9.2% in leisure and hospitality services; and 21.5% in government.

The US Department of Labor's Bureau of Labor Statistics reported that in 2005, a total of 21,000 of North Dakota's 289,000 employed wage and salary workers were formal members of a union. This represented 7.3% of those so employed, down from 7.7% in 2004, and below the national average of 12%. Overall in 2005, a total of 26,000 workers (9.2%) in North Dakota were covered by a union or employee association contract, which includes those workers who reported no union affiliation. North Dakota is one of 22 states with a right-to-work law.

As of 1 March 2006, North Dakota had a state-mandated minimum wage rate of \$5.15 per hour. In 2004, women in the state accounted for 47.8% of the employed civilian labor force.

2³ AGRICULTURE

North Dakota's farm marketings totaled \$3.96 billion in 2005. Typically, North Dakota is the number one producer of hard spring wheat, durum wheat, sunflowers, barley, oats, flax, all dry edible beans, and pinto beans. In 2004, North Dakota led the nation in spring wheat, drum wheat, barley, dry edible beans, sunflowers, and was second in the nation in overall wheat production.

The total number of farms has declined over the years as the average size of farming operations has increased. In 2004, the state had approximately 30,300 farms and ranches occupying 39.4 million acres (16 million hectares) and producing 306.5 million bushels of wheat (second after Kansas), 91.7 million bushels of barley (1st), 791.7 million lb of sunflowers, 14.1 million bushels of oats, 4.75 hundredweight of dry edible beans (1st), 120.8 million bushels of corn, 4.8 million tons of sugar beets (third), and 26.7 million hundredweight of potatoes. The average farm is 1,300 acres (526 hectares).

2⁴ ANIMAL HUSBANDRY

North Dakota farms and ranches had an estimated 1.7 million cattle and calves, valued at \$1.83 billion in 2005. During 2004, there were around 169,000 hogs and pigs, worth \$18.6 million. North Dakota farmers produced nearly 7 million lb (3.2 million kg) of sheep and lambs, which brought in \$7.5 million in gross income in 2003, and nearly 29.4 million lb (13.4 million kg) of turkey were produced in that same year. North Dakota was the leading producer of honey in 2004, with 9.1 million lb (4.1 million kg), worth \$31.9 million.

2⁵ FISHING

There is little commercial fishing in North Dakota. The Garrison Dam National Fish Hatchery produces up to 3 million northern pike and nearly 10 million walleye each year. Other species produced there and at the Valley City National Fish Hatchery include smallmouth bass, crappie, rainbow trout, lake trout, brown trout, cutthroat trout, chinook salmon, paddlefish, and pallid sturgeon. In 2004, the state issued 168,497 sport fishing licenses.

2⁶ FORESTRY

The dispersed forests on the rolling prairie are not a dominant feature of the landscape; North Dakota's climate is more favorable to grassland ecosystems. At the time of settlement, native forests cov-

ered about 700,000 acres (283,000 hectares). In 2004, there were 673,000 acres (272,000 hectares) of forestland, with 441,000 acres (178,000 hectares) classified as viable timberland. Agricultural clearing, inundation by reservoirs, and other land use changes have resulted in a 9% reduction in total forestland since 1954.

27 MINING

According to preliminary data from the US Geological Survey (USGS), the estimated value of nonfuel mineral production by North Dakota in 2003 was \$37.7 million, an increase from 2002 of about 3%.

According to the preliminary data for 2003, construction sand and gravel was the state's leading nonfuel mineral by value and accounted for around 75% of all nonfuel minerals produced, by value. In second place was lime, which was followed by crushed stone.

The preliminary data for 2003 showed that a total of 10.6 million metric tons of construction sand and gravel were produced, having a value of \$8.1 million. Lapidary and collectible materials such as petrified wood, agates, jasper, and flint are also found in North Dakota. The state is also a producer of leonardite, an oxidized lignite that is used for viscosity control in oil well drilling muds, as a dispersant, a soil conditioner, and as a stabilizer for ion-exchange resins.

28 ENERGY AND POWER

As of 2003, North Dakota had 39 electrical power service providers, of which 12 were publicly owned and 23 were cooperatives. Of the remainder, three were investor owned and one was federally operated. As of that same year there were 354,323 retail customers. Of that total, 213,027 received their power from investor-owned service providers. Cooperatives accounted for 130,081 customers, while publicly owned providers had 11,197 customers. There were 18 federal customers.

Total net summer generating capability by the state's electrical generating plants in 2003 stood at 4.644 million kW, with total production that same year at 31.322 billion kWh. Of the total amount generated, 99.2% came from electric utilities, with the remainder coming from independent producers and combined heat and power service providers. The largest portion of all electric power generated, 29.427 billion kWh (94%), came from coal-fired plants, with hydroelectric plants in second place at 1.723 billion kWh (5.5%). Other renewable power sources, petroleum fired plants, and plants using other types of gases each accounted for 0.2%.

North Dakota in 2004, had four producing coal mines, all of which were surface operations. Coal production that year totaled 29,943,000 short tons, down from 30,775,000 short tons in 2003. Recoverable coal reserves in 2004 totaled 1.19 billion short tons. One short ton equals 2,000 lb (0.907 metric tons).

As of 2004, North Dakota had proven crude oil reserves of 389 million barrels, or over 2% of all proven US reserves, while output that same year averaged 85,000 barrels per day. Including federal offshore domains, the state that year ranked ninth (eighth excluding federal offshore) in proven reserves and tenth (ninth excluding federal offshore) in production among the 31 producing states. In 2004 North Dakota had 3,072 producing oil wells and account-

ed for 2% of all US production. As of 2005, the state's sole refinery had a crude oil distillation capacity of 58,000 barrels per day.

In 2004, North Dakota had 117 producing natural gas and gas condensate wells. In that same year, marketed gas production (all gas produced excluding gas used for repressuring, vented and flared, and nonhydrocarbon gases removed) totaled 55.009 billion cu ft (1.56 billion cu m). As of 31 December 2004, proven reserves of dry or consumer-grade natural gas totaled 417 billion cu ft (11.8 billion cu m).

29 INDUSTRY

According to the US Census Bureau's Annual Survey of Manufactures (ASM) for 2004, North Dakota's manufacturing sector covered some seven product subsectors. The shipment value of all products manufactured in the state that same year was \$7.371 billion. Of that total, food manufacturing accounted for the largest share at \$2.370 billion. It was followed by machinery manufacturing at \$1.874 billion; computer and electronic product manufacturing at \$454.510 million; wood product manufacturing at \$305.188 million; and fabricated metal product manufacturing at \$261.463 million.

In 2004, a total of 22,027 people in North Dakota were employed in the state's manufacturing sector, according to the ASM. Of that total, 16,485 were actual production workers. In terms of total employment, the food manufacturing industry accounted for the largest portion of all manufacturing employees at 4,902 with 3,808 actual production workers. It was followed by machinery manufacturing at 4,707 employees (3,331 actual production workers); wood product manufacturing at 1,908 employees (1,745 actual production workers); computer and electronic product manufacturing at 1,785 employees (1,192 actual production workers); transportation equipment manufacturing at 1,573 employees (1,208 actual production workers); and fabricated metal product manufacturing with 1,417 employees (1,132 actual production workers).

ASM data for 2004 showed that North Dakota's manufacturing sector paid \$764.390 million in wages. Of that amount, the machinery manufacturing sector accounted for the largest share at \$182.480 million. It was followed by food manufacturing at \$159.059 million; wood product manufacturing at \$68.594 million; computer and electronic product manufacturing at \$66.649 million; and fabricated metal product manufacturing at \$55.437 million.

30 COMMERCE

According to the 2002 Census of Wholesale Trade, North Dakota's wholesale trade sector had sales that year totaling \$8.8 billion from 1,485 establishments. Wholesalers of durable goods accounted for 751 establishments, followed by nondurable goods wholesalers at 691 and electronic markets, agents, and brokers accounting for 43 establishments. Sales by durable goods wholesalers in 2002 totaled \$2.7 billion, while wholesalers of nondurable goods saw sales of \$5.4 billion. Electronic markets, agents, and brokers in the wholesale trade industry had sales of \$627.3 million.

In the 2002 Census of Retail Trade, North Dakota was listed as having 3,433 retail establishments with sales of \$7.7 billion. The leading types of retail businesses by number of establishments were: gasoline stations (496); motor vehicle and motor vehicle

parts dealers (471); building material/garden equipment and supplies dealers (432); food and beverage stores (368); and miscellaneous store retailers (353). In terms of sales, motor vehicle and motor vehicle parts dealers accounted for the largest share of retail sales at \$2.08 billion, followed by general merchandise stores at \$1.1 billion; gasoline stations at \$1.01 billion; and food and beverage stores at \$902.4 million. A total of 41,342 people were employed by the retail sector in North Dakota that year.

Exports of North Dakota origin totaled nearly \$1.2 billion in 2005, ranking the state 46th in the nation.

31 CONSUMER PROTECTION

Allegations of consumer fraud and other illegal business practices are handled by the Consumer Protection and Antitrust Division (CPAT) of the state's Attorney General's Office. The CPAT can investigate and prosecute instances of consumer fraud, as well as mediate consumer-business disputes and educates the public on how to avoid consumer fraud.

When dealing with consumer protection issues, the state's Attorney General's Office can initiate civil (but not criminal) proceedings; represent the state before state and federal regulatory agencies; administer consumer protection and education programs; handle formal consumer complaints; and exercise broad subpoena powers. In antitrust actions, the Attorney General's Office can act on behalf of those consumers who are incapable of acting on their own; initiate damage actions on behalf of the state in state courts; and represent counties, cities and other governmental entities in recovering civil damages under state or federal law. However the Office cannot initiate criminal proceedings in antitrust cases.

The offices of the Consumer Protection and Antitrust Division are located in Bismarck.

32 BANKING

As of June 2005, North Dakota had 100 insured banks, savings and loans, and saving banks, plus 38 state-chartered and 20 federally chartered credit unions (CUs). Excluding the CUs, the Fargo market area accounted for the largest portion of the state's financial institutions and deposits in 2004, with 25 institutions and \$3.412 billion in deposits. As of June 2005, CUs accounted for 8.3% of all assets held by all financial institutions in the state, or some \$1.458 billion. Banks, savings and loans, and savings banks collectively accounted for the remaining 91.7% or \$16.180 billion in assets held.

Regulation of state-chartered banks and other state-chartered financial institutions is the responsibility of the North Dakota Department of Financial Institutions and its three divisions: the Banking Division; the Credit Union Division; and the Consumer Division.

In 2004, the median net interest margin (the difference between the lower rates offered to savers and the higher rates charged on loans) stood at 4.15%, down from 4.17% in 2003.

33 INSURANCE

In 2004, North Dakota had 416,000 life insurance policies in force, worth over \$38.8 billion; total value for all categories of life insurance (individual, group, and credit) was about \$56 billion. The

average coverage amount is \$93,500 per policy holder. Death benefits paid that year totaled over \$138.3 million.

As of 2003, there were 19 property and casualty and 4 life and health insurance companies domiciled in the state. In 2004, direct premiums for property and casualty insurance totaled over \$1.2 billion. That year, there were 5,136 flood insurance policies in force in the state, with a total value of \$685 million.

In 2004, 55% of state residents held employment-based health insurance policies, 10% held individual policies, and 21% were covered under Medicare and Medicaid; 11% of residents were uninsured. North Dakota has the highest percentage of individual (non employment-based) policy holders among the fifty states. In 2003, employee contributions for employment-based health coverage averaged at 19% for single coverage and 27% for family coverage. The state offers a 39-week health benefits expansion program for small-firm employees in connection with the Consolidated Omnibus Budget Reconciliation Act (COBRA, 1986), a health insurance program for those who lose employment-based coverage due to termination or reduction of work hours.

In 2003, there were 554,234 auto insurance policies in effect for private passenger cars. Required minimum coverage includes bodily injury liability of up to \$25,000 per individual and \$50,000 for all persons injured in an accident, as well as property damage liability of \$25,000. In 2003, the average expenditure per vehicle for insurance coverage was \$565.30, which is the lowest average of the 50 states and the District of Columbia.

34 SECURITIES

North Dakota has no securities exchanges. In 2005, there were 170 personal financial advisers employed in the state and 480 securities, commodities, and financial services sales agents. In 2004, there were over six publicly traded companies within the state, with over four NASDAQ companies and two NYSE listings. In 2006, the state had one Fortune 1,000 company; MDU Resources Group, listed on the NYSE and based in Bismarck, ranked 546th in the nation with revenues of over \$3.4 billion.

35 PUBLIC FINANCE

Total expenditures for fiscal years 1995–97 (including federal and special funds) totaled approximately \$3.6 billion, including \$500 million for transportation, a total of \$1.1 billion for health and human services, and a total of \$1.3 billion for education. North Dakota has the only state-owned bank and state-owned mill, contributing \$50 million and \$3 million, respectively, to the general fund during the fiscal year 1999–01 biennium.

Fiscal year 2006 general funds were estimated at \$1.1 billion for resources and \$975 million for expenditures. In fiscal year 2004, federal government grants to North Dakota were \$1.5 billion.

In the fiscal year 2007 federal budget, North Dakota was slated to receive: \$7.8 million in State Children's Health Insurance Program (SCHIP) funds to help the state provide health coverage to low-income, uninsured children who do not qualify for Medicaid. This funding is a 23% increase over fiscal year 2006; \$4 million for the HOME Investment Partnership Program to help North Dakota fund a wide range of activities that build, buy, or rehabilitate affordable housing for rent or homeownership, or provide direct rental assistance to low-income people. This funding is a 13% increase over fiscal year 2006; and \$12 million to complete the

36 TAXATION

In 2005, North Dakota collected \$1,403 million in tax revenues or \$2,203 per capita, which placed it 21st among the 50 states in per capita tax burden. The national average was \$2,192 per capita. Property taxes accounted for 0.1% of the total; sales taxes, 29.2%; selective sales taxes, 21.3%; individual income taxes, 17.2%; corporate income taxes, 5.4%; and other taxes, 26.7%.

As of 1 January 2006, North Dakota had five individual income tax brackets ranging from 2.1 to 5.54%. The state taxes corporations at rates ranging from 2.6 to 7.0% depending on tax bracket.

In 2004, state and local property taxes amounted to \$584,622,000 or \$919 per capita. The per capita amount ranks the state 31st nationally. Local governments collected \$583,144,000 of the total and the state government \$1,478,000.

North Dakota taxes retail sales at a rate of 5%. In addition to the state tax, local taxes on retail sales can reach as much as 2.50%, making for a potential total tax on retail sales of 7.50%. Food purchased for consumption off-premises is tax exempt. The tax on cigarettes is 44 cents per pack, which ranks 38th among the 50 states and the District of Columbia. North Dakota taxes gasoline at 23 cents per gallon. This is in addition to the 18.4 cents per gallon federal tax on gasoline.

According to the Tax Foundation, for every federal tax dollar sent to Washington in 2004, North Dakota citizens received \$1.73 in federal spending, which ranks the state fifth-highest nationally.

37 ECONOMIC POLICY

The North Dakota Economic Development and Finance Division of the Department of Commerce seeks to attract new industry, retain and expand existing industry, promote start-up businesses, and develop markets for state products. The state uses a local approach to provide business incentives, including job training, financing, and tax-abatement programs. The main operating units within the division include the Rural Development Council, Research, Marketing, and Business Development. Other divisions within the Department of Commerce focus on Community Services, Tourism and Workforce Development.

38 HEALTH

The infant mortality rate in October 2005 was estimated at 5.8 per 1,000 live births. The birth rate in 2003 was 12.6 per 1,000 population. The abortion rate stood at 9.9 per 1,000 women in 2000. In 2003, about 87.3% of pregnant woman received prenatal care beginning in the first trimester. In 2004, approximately 82% of children received routine immunizations before the age of three.

The crude death rate in 2003 was 9.6 deaths per 1,000 population. As of 2002, the death rates for major causes of death (per 100,000 resident population) were: heart disease, 255.9; cancer, 203.9; cerebrovascular diseases, 74; chronic lower respiratory diseases, 50.8; and diabetes, 33.7. North Dakota and Ohio share the distinction of having the third-highest diabetes mortality rate in the nation (following West Virginia and Louisiana). The mortality rate from HIV infection was not available in 2002. In 2004, the reported AIDS case rate was at about 2.7 per 100,000 population, one of the lowest in the nation. In 2002, about 59.3% of the population was considered overweight or obese. As of 2004, about 19.8% of state residents were smokers.

In 2003, North Dakota had 40 community hospitals with about 3,600 beds. There were about 88,000 patient admissions that year and 1.8 million outpatient visits. The average daily inpatient census was about 2,100 patients. The average cost per day for hospital care was \$859. Also in 2003, there were about 84 certified nursing facilities in the state with 6,582 beds and an overall occupancy rate of about 93.2%. In 2004, it was estimated that about 69.6% of all state residents had received some type of dental care within the

year. North Dakota had 244 physicians per 100,000 resident population in 2004 and 1,059 nurses per 100,000 in 2005. In 2004, there were a total of 319 dentists in the state.

About 12% of state residents were enrolled in Medicaid programs in 2003; 16% were enrolled in Medicare programs in 2004. Approximately 11% of the state population was uninsured in 2004. In 2003, state health care expenditures totaled \$767,000.

3⁹ SOCIAL WELFARE

In 2004, about 13,000 people received unemployment benefits, with the average weekly unemployment benefit at \$226. For 2005, the estimated average monthly participation in the food stamp program included about 42,204 persons (18,927 households); the average monthly benefit was about \$88.21 per person. That year, the total of benefits paid through the state for the food stamp program was about \$44.6 million.

Temporary Assistance for Needy Families (TANF), the system of federal welfare assistance that officially replaced Aid to Families with Dependent Children (AFDC) in 1997, was reauthorized through the Deficit Reduction Act of 2005. TANF is funded through federal block grants that are divided among the states based on an equation involving the number of recipients in each state. North Dakota's TANF program is called Training, Employment, Education Management (TEEM). In 2004, the state program had 8,000 recipients; state and federal expenditures on this TANF program totaled \$29 million in fiscal year 2003.

In December 2004, Social Security benefits were paid to 114,720 North Dakota residents. This number included 71,820 retired workers, 15,650 widows and widowers, 10,820 disabled workers, 9,330 spouses, and 7,100 children. Social Security beneficiaries represented 18% of the total state population and 94.9% of the state's population age 65 and older. Retired workers received an average monthly payment of \$891; widows and widowers, \$869; disabled workers, \$840; and spouses, \$447. Payments for children of retired workers averaged \$489 per month; children of deceased workers, \$582; and children of disabled workers, \$274. Federal Supplemental Security Income payments in December 2004 went to 7,966 North Dakota residents, averaging \$337 a month. An additional \$160,000 of state-administered supplemental payments were distributed to 355 residents.

4⁰ HOUSING

In 2004, North Dakota had 300,815 housing units, 262,585 of which were occupied; 68.1% were owner-occupied. About 63.2% of all housing units were single-family, detached homes. Utility gas and electricity were the most common energy sources for heating. It was estimated that 10,860 units lacked telephone services, 1,161 lacked complete plumbing facilities, and 1,825 lacked complete kitchen facilities. The average household had 2.32 members.

In 2004, 4,000 new privately owned units were authorized for construction. The median home value was \$84,354, one of the lowest in the nation. The median monthly cost for mortgage owners was \$902. Renters paid a median of \$466 per month, representing the second-lowest rate in the nation (above West Virginia). In 2006, the state received over \$4.9 million in community development block grants from the US Department of Housing and Urban Development (HUD).

4¹ EDUCATION

In 2004, 89.5% of North Dakota residents age 25 and older were high school graduates; 25.2% had obtained a bachelor's degree or higher.

The total enrollment for fall 2002 in North Dakota's public schools stood at 104,000. Of these, 69,000 attended schools from kindergarten through grade eight, and 35,000 attended high school. Approximately 88% of the students were white, 1.2% were black, 1.4% were Hispanic, 0.8% were Asian/Pacific Islander, and 8.5% were American Indian/Alaskan Native. Total enrollment was estimated at 102,000 in fall 2003 and expected to be 94,000 by 2014, a decline of 10.2% during the period 2002–14. Expenditures for public education in 2003/04 were estimated at \$901 million. There were 6,209 students enrolled in 52 private schools. Since 1969, the National Assessment of Educational Progress (NAEP) has tested public school students nationwide. The resulting report, *The Nation's Report Card*, stated that in 2005, eighth graders in North Dakota scored 287 out of 500 in mathematics compared with the national average of 278.

As of fall 2002, there were 45,800 students enrolled in college or graduate school; minority students comprised 9.4% of total postsecondary enrollment. In 2005 North Dakota had 21 degree-granting institutions. The chief universities are the University of North Dakota in Grand Forks and North Dakota State University in Fargo. The North Dakota Student Financial Assistance Program offers scholarships for North Dakota college students, and the state Indian Scholarship Board provides aid to Native Americans attending college in the state.

4² ARTS

The North Dakota Council on the Arts (NDCA) was established in 1967 and is a branch of the North Dakota state government. NDCA provides grants to local artists and groups such as the Trollwood Performing Arts School and the Annual United Tribes Indian Art Expo; encourages visits by out-of-state artists and exhibitions; and provides information and other services to the general public.

In 2005, the North Dakota Council of the Arts and other North Dakota arts organizations received 9 grants totaling \$647,800 from the National Endowment for the Arts. The state also provided the council with funding. In 2006, the North Dakota Humanities Council, established in 1973, provided programs that included Read North Dakota, to promote literature from and about the state, and the Great Plains Chautauqua Society. In 2005, the National Endowment for the Humanities contributed \$778,772 to six state programs.

The historic Fargo Theater presents live theatrical performances as well as films and sponsors the annual Fargo Film Festival. Fargo is also the center for the Fargo-Moorhead Opera and the Fargo-Moorhead Symphony. The Northern Plains Ballet is based in Bismarck but tours to Sioux Falls, Fargo, Billings, and Grand Forks.

Two popular musical events are the Old Time Fiddlers Contest (at Dunseith in June) and the Medora Musical (Medora, June through Labor Day); the latter features Western songs and dance.

The North Dakota Museum of Art is the official state art museum. Founded in the mid-1970s, its permanent collection focuses on, but is not exclusive to, contemporary Native American Art.

43 LIBRARIES AND MUSEUMS

In 2001, North Dakota had 82 public library systems, with a total of 89 libraries, of which eight were branches. In that same year, North Dakota public libraries had 2,158,000 volumes of books and serial publications on their shelves, and a total circulation of 3,937,000. The system also had 61,000 audio and 51,000 video items, 7,000 electronic format items (CD-ROMs, magnetic tapes, and disks), and 14 bookmobiles. The leading academic library was that of the University of North Dakota (Grand Forks), with 1,221,953 items. In 2001, operating income for the state's public library system totaled \$8,837,000 and included \$75,000 in federal funding and \$565,000 in state funding. Operating expenditures that year totaled \$8,185,000, of which 60.5% was spent on staff, and 19.6% on the collection.

Among the most notable of the state's 50 museums are the Art Galleries and Zoology Museum of the University of North Dakota and the North Dakota Heritage Center at Bismarck, which has an outstanding collection of Indian artifacts. Theodore Roosevelt National Park contains relics from the Elkhorn ranch where Roosevelt lived in the 1880s.

44 COMMUNICATIONS

In 2004, 95.0% of North Dakota's occupied housing units had telephones. Additionally, by June 2002 there were 245,578 mobile wireless telephone subscribers. In 2003, 61.2% of North Dakota households had a computer and 53.2% had Internet access. By June 2005, there were 56,057 high-speed lines in North Dakota, 47,278 residential and 8,799 for business. There were 28 major radio stations (10 AM, 18 FM) in 2005. As of 2005, 9 major network television stations were in operation. A total of 15,091 Internet domain names were registered in North Dakota in 2000.

45 PRESS

As of 2005, there were six morning dailies and four evening dailies. There were also seven Sunday papers in the state. The leading dailies were the *Fargo Forum*, with a daily circulation of 51,106, Sunday, 62,097; the *Grand Forks Herald*, 31,524 morning, 34,763 Sunday; the *Minot Daily News*, 20,974 morning, 21,848 Sunday; and the *Bismarck Tribune*, 27,620 morning, 31,081 Sunday. In addition, there were about 15 periodicals. The leading historical journal is *North Dakota Horizons*, a quarterly founded in 1971.

46 ORGANIZATIONS

In 2006, there were over 1,276 nonprofit organizations registered within the state, of which about 770 were registered as charitable, educational, or religious organizations. Two of the state's largest organizations are the Friends (Service Club) and the Northwest Farm Managers Association, both headquartered in Fargo.

State organizations focusing on arts, culture, history, and the environment include Arts on the Prairie, ArtWise, the Bluegrass and Old Time Music Association of North Dakota, the Crazy Horse Memorial Foundation, Fargo Garden Society, the North Dakota Council on Arts, the Badlands Conservation Alliance, and the North Dakota Wildlife Federation. The North Dakota Academy of Science is located in Grand Forks. There are at least three chapters of the Sons of Norway active in the state.

The National Sunflower Association is in Bismarck.

47 TOURISM, TRAVEL, AND RECREATION

North Dakota's 17 state parks received 922,434 visitors in 2003, a 5% decline over 2002. Visitors to Theodore Roosevelt National Park and other national historic sites in the state in 2003 numbered 517,356, representing a 15% increase over 2002. Some 40% of all park users come from other states and countries.

A \$1.8-million tourism campaign in 2005 brought \$88 million in tourism revenue to the state. Tourism is North Dakota's second-largest industry, accounting for \$3 billion of economic impact.

Among the leading tourist attractions is the International Peace Garden, covering 2,200 acres (890 hectares) in North Dakota and Manitoba; it commemorates friendly relations between the United States and Canada. Ft. Abraham Lincoln State Park, south of Mandan, has been restored to evoke the 1870s, when General Custer left the area for his "last stand" against the Sioux. The most spectacular scenery in North Dakota is found in the Theodore Roosevelt National Park. The so-called "badlands," an integral part of the park, consist of strangely colored and intricately eroded buttes and other rock formations. Hunting and fishing are major recreational activities in North Dakota.

48 SPORTS

There are no major professional sports teams in North Dakota. In collegiate football, the University of North Dakota Fighting Sioux and the North Dakota State University Bison compete in the North Central Conference. The University of North Dakota competes in collegiate ice hockey, winning National Collegiate Athletic Association (NCAA) championships in 1959, 1963, 1980, 1982, 1987, 1997, and 2000.

Other annual sporting events include the PWT Championship (a walleye fishing tournament) in Bismarck in September, and several rodeos throughout the state. Former New York Yankee slugger Roger Maris grew up in Fargo, North Dakota.

49 FAMOUS NORTH DAKOTANS

Preeminent among North Dakota politicians known to the nation was Gerald P. Nye (b. Wisconsin, 1892–1971), a US senator and a leading isolationist opponent of President Franklin D. Roosevelt's foreign policy, as was Senator William Langer (1886–1959). Another prominent senator, Porter J. McCumber (1858–1933), supported President Woodrow Wilson in the League of Nations battle. US Representative William Lemke (1878–1950) sponsored farm-relief legislation and in 1936 ran for US president on the Union Party ticket. Usher L. Burdick (1879–1960), a maverick isolationist and champion of the American Indian, served 18 years in the US House of Representatives.

Vilhjalmur Stefansson (b. Canada, 1879–1962) recorded in numerous books his explorations and experiments in the high Arctic. Orin G. Libby (1864–1952) made a significant contribution to the study of American history. Other North Dakota-nurtured writers and commentators include Maxwell Anderson (b. Pennsylvania, 1888–1959), a Pulitzer Prize-winning playwright; Edward K. Thompson (Minnesota, 1907–96), editor of *Life* magazine and founder-editor of *Smithsonian*; radio and television commentator Eric Severeid (1912–1992); and novelist Larry Woiwode (b. 1941).

To the entertainment world North Dakota has contributed band leaders Harold Bachman (1892–1972), Lawrence Welk (1903–92),

and Tommy Tucker (Gerald Duppler, 1908–89); jazz vocalist Peggy Lee (Norma Delores Egstrom, b.1920) and country singer Lynn Anderson (b.1947); and actresses Dorothy Stickney (1900–98) and Angie Dickinson (Angeline Brown, b.1931).

Sports personalities associated with the state include outfielder Roger Maris (1934–85), who in 1961 broke Babe Ruth's record for home runs in one season.

OHIO

State of Ohio

ORIGIN OF STATE NAME: From the Iroquois Indian word *oheo*, meaning “beautiful.” **NICKNAME:** The Buckeye State. **CAPITAL:** Columbus. **ENTERED UNION:** 1 March 1803 (17th). **SONG:** “Beautiful Ohio.” **MOTTO:** With God All Things Are Possible. **FLAG:** The flag is a burgee, with three red and two white lateral stripes. At the staff is a blue triangular field covered with 17 stars (signifying Ohio’s order of entry into the Union), which is grouped around a red disk superimposed on a white circular “O.” **OFFICIAL SEAL:** In the foreground are a sheaf of wheat and a sheaf of 17 arrows; behind, a sun rises over a mountain range, indicating that Ohio is the first state west of the Alleghenies. Surrounding the scene are the words “The Great Seal of the State of Ohio.” **BIRD:** Cardinal. **FLOWER:** Scarlet carnation. **TREE:** Buckeye. **LEGAL HOLIDAYS:** New Year’s Day, 1 January; Birthday of Martin Luther King Jr., 3rd Monday in January; Presidents’ Day, 3rd Monday in February; Memorial Day, last Monday in May; Independence Day, 4 July; Labor Day, 1st Monday in September; Columbus Day, 2nd Monday in October; Veterans’ Day, 11 November; Thanksgiving Day, 4th Thursday in November; Christmas Day, 25 December. **TIME:** 7 AM EST = noon GMT.

¹LOCATION, SIZE, AND EXTENT

Located in the eastern north-central United States, Ohio is the 11th largest of the 12 Midwestern states and ranks 35th in size among the 50 states.

The state’s total area is 41,330 sq mi (107,044 sq km), of which land comprises 41,004 sq mi (106,201 sq km) and inland water 326 sq mi (823 sq km). Ohio extends about 210 mi (338 km) E–W; its maximum N–S extension is 230 mi (370 km).

Ohio is bordered on the N by Michigan and the Canadian province of Ontario (with the line passing through Lake Erie); on the E by Pennsylvania and West Virginia (with the Ohio River forming part of the boundary); on the S by West Virginia and Kentucky (with the entire line defined by the Ohio River); and on the W by Indiana.

Five important islands lie off the state’s northern shore, in Lake Erie: the three Bass Islands, Kelleys Island, and Catawba Island. Ohio’s total boundary length is 997 mi (1,605 km).

The state’s geographic center is in Delaware County, 25 mi (40 km) NNE of Columbus.

²TOPOGRAPHY

Ohio has three distinct topographical regions: the foothills of the Allegheny Mountains in the eastern half of the state; the Erie lakeshore, extending for nearly three-fourths of the northern boundary; and the central plains in the western half of the state.

The Allegheny Plateau in eastern Ohio consists of rugged hills and steep valleys that recede gradually as the terrain sweeps westward toward the central plains. The highest point in the state is Campbell Hill (1,549 ft/472 m), located in Logan County about 50 mi (80 km) northwest of Columbus. The mean elevation of the state is approximately 850 ft (259 m).

The Erie lakeshore, a band of level lowland that runs across the state to the northwestern corner on the Michigan boundary, is

distinguished by sandy beaches. The central plains extend to the western boundary with Indiana. In the south, undulating hills decline in altitude as they reach the serpentine Ohio River, which forms the state’s southern boundary with Kentucky and West Virginia. The state’s lowest point is on the banks of the Ohio River in the southwest, where the altitude drops to 455 ft (139 m) above sea level.

Most of Ohio’s 2,500 lakes are situated in the east, and nearly all are reservoirs backed up by river dams. The largest, Pymatuning Reservoir, on the Pennsylvania border, has an area of 14,650 acres (5,929 hectares). Grand Lake (St. Mary’s), located near the western border, covering 12,500 acres (5,059 hectares), is the largest lake wholly within Ohio.

Ohio has two drainage basins separated by a low ridge extending from the northeast corner to about the middle of the western border with Indiana. North of the ridge, more than one-third of Ohio’s area is drained by the Maumee, Portage, Sandusky, Cuyahoga, and Grand rivers into Lake Erie. South of the ridge, the remaining two-thirds of the state is drained mainly by the Muskingum, Hocking, Raccoon, Scioto, Little Miami, and Miami rivers into the Ohio River, which winds for about 450 mi (725 km) along the eastern and southern borders.

Ohio’s bedrock of sandstone, shale, and limestone was formed during the Paleozoic era some 300–600 million years ago. The oldest limestone rocks are found in the Cincinnati anticline, a ridge of sedimentary rock layers about 3,000 ft (900 m) thick that extends from north to south in west-central Ohio. Inland seas filled and receded periodically to form salt and gypsum, also creating peat bogs that later were pressurized into the coal beds of southeastern Ohio. At the end of the Paleozoic era, the land in the eastern region uplifted to form a plateau that was later eroded by wind and water into hills and gorges.

About two million years ago, glaciers covering two-thirds of the state leveled the western region into plains and deposited fertile

limestone topsoil. As the glaciers retreated, the melting ice formed a vast lake, which overflowed southward into the channels that became the Ohio River. Perhaps 15,000 years ago, during the last Ice Age, the glacial waters ran off and reduced Lake Erie to its present size. Limestone rocks in Glacier Grooves State Park on Kelley's Island bear the marks of the glaciers' movements.

3 CLIMATE

Lying in the humid continental zone, Ohio has a generally temperate climate. Winters are cold and summers mild in the eastern highlands. The southern region has the warmest temperatures and longest growing season—198 days on the average, compared with 150 to 178 days in the remainder of the state. More than half of the annual rainfall occurs during the growing season, from May to October.

Among the major cities, Columbus, in the central region, has an annual average temperature of 52°F (11°C), with a normal maximum of 62°F (16°C) and a normal minimum of 42°F (5°C). Cleveland, in the north, has an annual average of 51°F (10°C), with a normal maximum of 59°F (15°C) and minimum of 41°F (5°C). The average temperature in Cincinnati, in the south, is 54.5°F (12°C), the normal maximum 64.6°F (18°C), and the normal minimum 44.3°F (6°C). Cleveland has an average of 122 days per year in which the temperature drops to 32° (0°C) or lower, Columbus 117 days, and Cincinnati 90 days. The record low temperature for the state is -39°F (-39°C), set at Milligan on 10 February 1899. The record high is 113°F (45°C), registered near Gallipolis on 21 July 1934.

Cleveland has an average annual snowfall of 55.4 in (140 cm), while Columbus receives 27.6 in (70 cm), and Cincinnati 14.2 in (36 cm). The average annual precipitation in Cincinnati is about 40.7 in (103 cm), compared with 37.8 in (96 cm) for Columbus and 37.2 in (94 cm) for Cleveland. Because of its proximity to Lake Erie, Cleveland is the windiest city, with winds that average 11 mph (18 km/hr).

4 FLORA AND FAUNA

More than 2,500 plant species have been found in Ohio. The southeastern hill and valley region supports pitch pine, bigleaf magnolia, and sourwood, with undergrowths of sassafras, witch-hazel, pawpaw, hornbeam, and various dogwoods. At least 14 species of oak, 10 of maple, 9 of poplar, 9 of pine, 7 of ash, 7 of elm, 6 of hickory, 5 of birch, and 2 of beech grow in the state, along with butternut, eastern black walnut, wild black cherry, black locust, and sycamore. A relative of the horse chestnut (introduced to Ohio from Asia), the distinctive buckeye—first called the Ohio buckeye and now the official state tree—is characterized by its clusters of cream-colored flowers that bloom in spring and later form large, brown, thick-hulled nuts. Five Ohio plant species were listed as threatened in 2006, including eastern prairie fringed orchid, northern wild monkshood, and lakeside daisy; the running buffalo clover was listed as endangered that year by the US Fish and Wildlife Service.

The Buckeye State is rich in mammals. White-tailed deer, badger, mink, raccoon, red and gray foxes, coyote, beaver, eastern cottontail, woodchuck, least shrew, and opossum are found throughout the state's five wildlife districts; the bobcat, woodland jumping mouse, and red-backed mole are among many species with more

restricted habitats. Common birds include the eastern great blue heron, green-winged teal, mourning dove, eastern belted kingfisher, eastern horned lark, blue-gray gnatcatcher, eastern cowbird, and a great variety of ducks, woodpeckers, and warblers; the cardinal is the state bird, and the ruffed grouse, mostly confined to the Allegheny Plateau, is a favorite game species. Bass, pickerel, perch, carp, pike, trout, catfish, sucker, and darter thrive in Ohio's lakes and streams. The snapping, midland painted, and spiny soft-shelled turtles, five-lined skink, northern water snake, midland brown snake, eastern hognose, and eastern milk snake appear throughout Ohio. The northern copperhead, eastern massasauga (swamp rattler), and timber rattlesnake are Ohio's only poisonous reptiles. Fowler's toad, bullfrog, green pickerel frog, and marbled and red-backed salamanders are common native amphibians.

Acting on the premise that the largest problem facing wildlife is the destruction of their habitat, the Division of Wildlife of the Department of Natural Resources has instituted an ambitious endangered species program. The US Fish and Wildlife Service listed 17 Ohio animal species (vertebrates and invertebrates) as threatened or endangered in April 2006, including the bald eagle, Indiana bat, Scioto madtom, and piping plover.

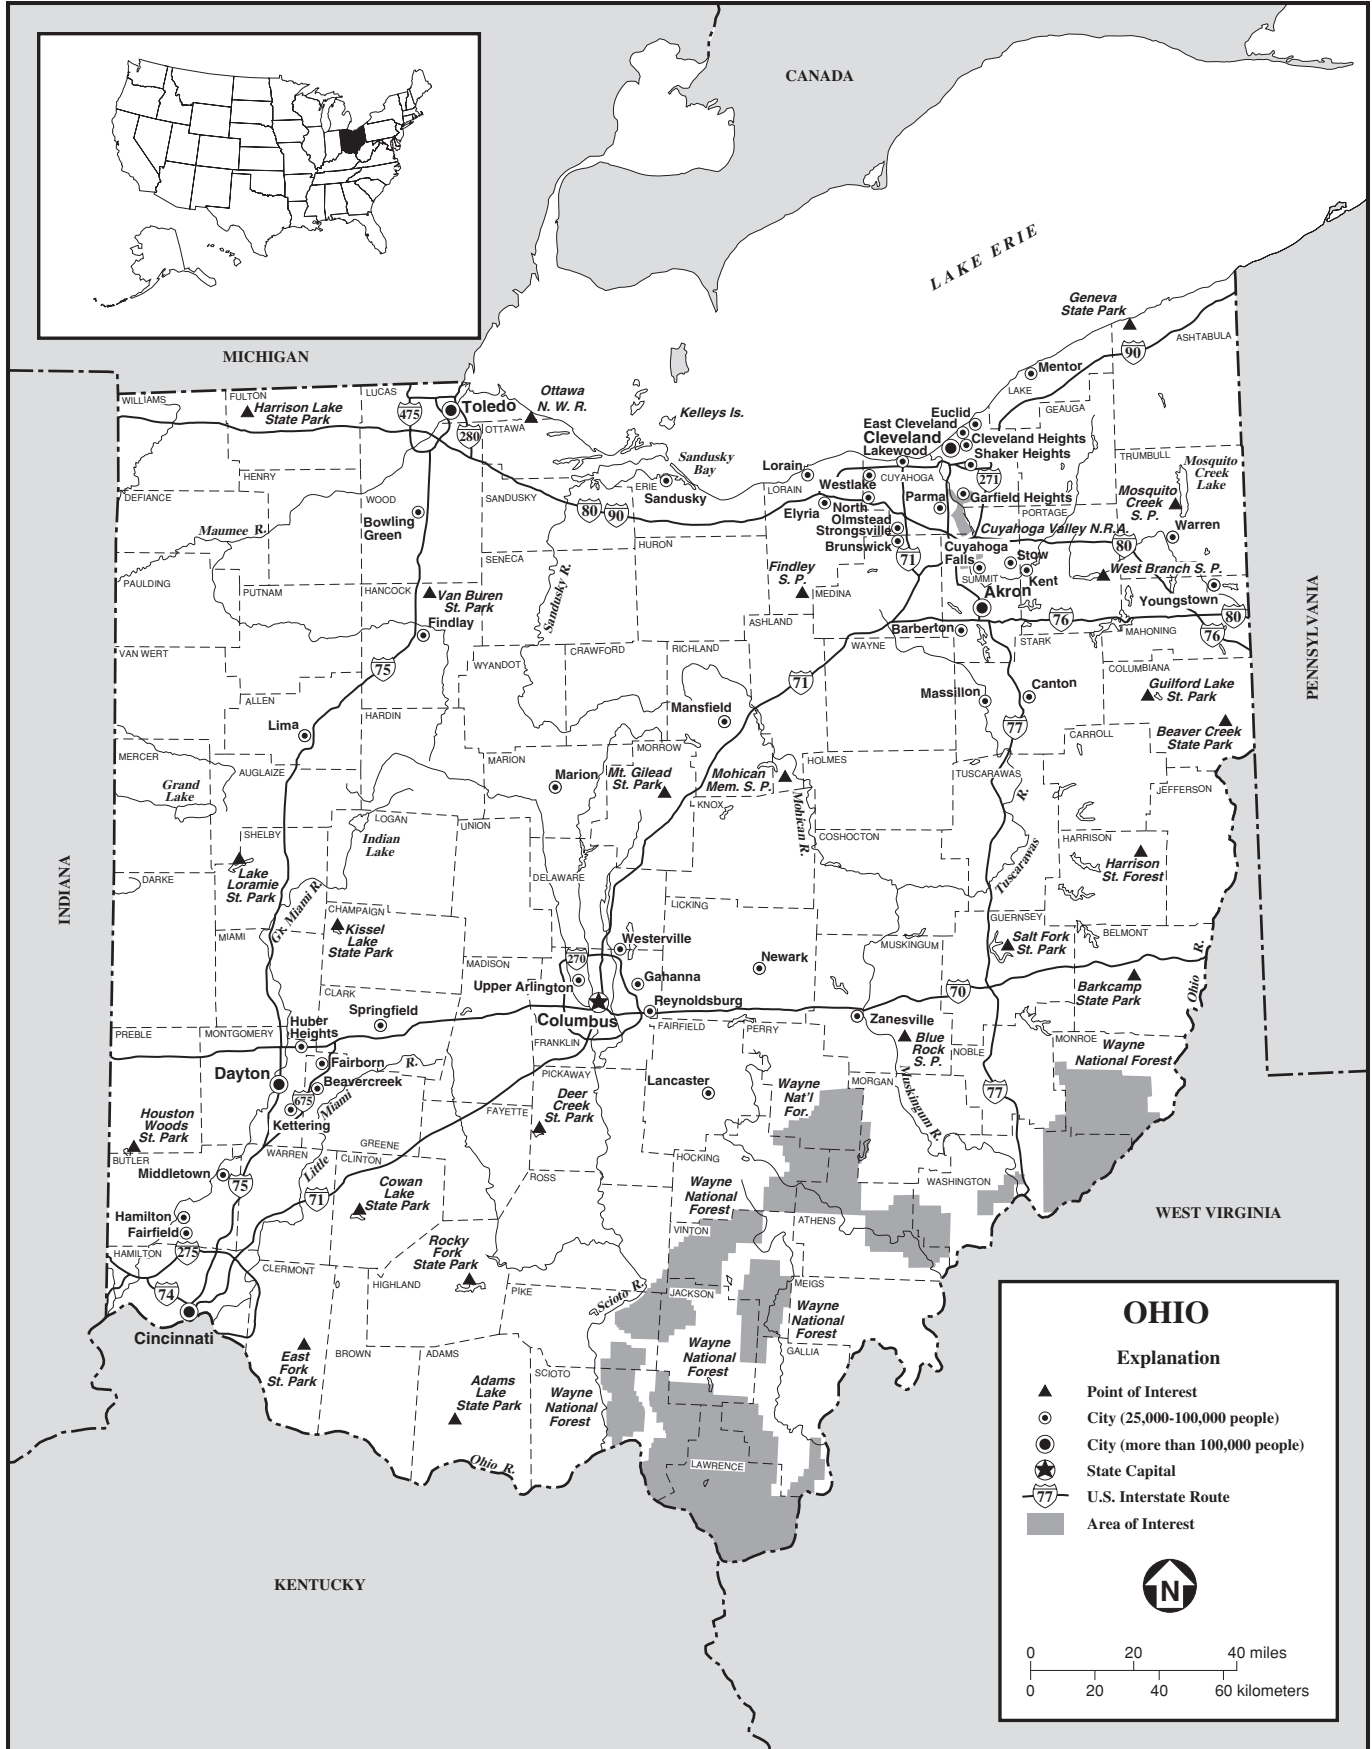

5 ENVIRONMENTAL PROTECTION

Early conservation efforts in Ohio were aimed at controlling the ravages of spring floods and preventing soil erosion. After the Miami River floods of March 1913, which took 361 lives and resulted in property losses of more than \$100 million in Dayton alone, the Miami Conservancy District was formed; five earth dams and 60 mi (97 km) of river levees were completed by 1922, at a cost of \$40 million, to hold back cresting water. In the Muskingum Conservancy District in eastern Ohio, construction of flood-control dams has prevented spring flooding and the washing away of valuable topsoil into the Ohio River.

In recent years, the state's major environmental concerns have been to reverse the pollution of Lake Erie, control the air pollution attributable to industries and automobiles, clean up dumps for solid and hazardous wastes, improve water quality, and prevent pollution. Of recent concern is the problem with so-called "brownfields"—polluted industrial sites whose cleanup costs present barriers to development. In November 2000, voters approved the Clean Ohio Fund; it will provide \$200 million to help revitalize abandoned commercial and industrial sites, promoting reuse of existing infrastructure, and helping to reduce sprawl. The Clean Ohio Revitalization Fund awarded nearly \$40 million to 17 projects in its first round of funding.

The state's regulatory agency for environmental matters is the Ohio Environmental Protection Agency (EPA), established in 1972. The agency has long-range programs to deal with pollution of air, water, and land resources. Ohio EPA also coordinates state, local, and federal funding of environmental programs.

Since 1972, antipollution efforts in Lake Erie have focused on reducing the discharge of phosphorus into the lake from sewage and agricultural wastes; sewage treatment facilities have been upgraded with the aid of more than \$750 million in federal grants, and efforts have been made to promote reduced-tillage farming to control runoff. By the early 1980s, numerous beaches had been reopened, and sport fishing was once again on the increase. Since 1972, Ohio industries spent billions of dollars on efforts to control

air pollution. Peak ozone levels have dropped by 25% overall and by up to 50% in some urban areas. Lead levels in the outdoor air have dropped 98% since 1978 and particulate levels have dropped 80%. From 1967 to 1983, through the efforts of local health departments and with the eventual help of the EPA, over 1,300 open garbage dumps were closed down and more than 200 sanitary landfills constructed to replace them. In 2003, 251.6 million lb of toxic chemicals were released in the state; Ohio ranks fourth in the nation for highest levels of toxic chemicals released (following Alaska, Nevada, and Texas).

In 1980, Ohio passed its first legislation aimed at controlling hazardous wastes, and by the mid-1980s, with the aid of more than \$11 million in federal Superfund grants, cleanup had been completed or begun at 16 major sites. In 2003, Ohio had 318 hazardous waste sites listed in the US Environment Protection Agency (EPA) database. In 2006, 30 of these sites were on the National Priorities List, including Wright-Patterson Air Force Base. Rickenbacker Air National Guard base has been proposed as a National Priority List Site. In 2005, the EPA spent over \$5.1 million through the Superfund program for the cleanup of hazardous waste sites in the state. The same year, federal EPA grants awarded to the state included \$25.2 million for its safe drinking water revolving fund. An addition grant of \$60.6 million was awarded to provide assistance for water resource protection and improvement projects in small and hardship communities.

Another agency, the Ohio Department of Natural Resources, is responsible for the development and use of the state's natural resources. The state's parks and recreational areas totaled 208,000 acres (84,000 hectares). The department also assists in soil conservation, issues permits for dams, promotes conservation of oil and gas, and allocates strip-mining licenses.

6 POPULATION

Ohio ranked seventh in population in the United States with an estimated total of 11,464,042 in 2005, an increase of 1% since 2000. Between 1990 and 2000, Ohio's population grew from 10,847,115 to 11,353,140, an increase of 4.7%. The population is projected to reach 11.63 million by 2015, but a decline to 11.6 is projected by 2025. The population density in 2004 was 280.1 persons per sq mi.

Ohio's population grew slowly during the colonial period and totaled 45,365 persons in 1800. Once the territory became a state in 1803, settlers flocked to Ohio and the population quintupled to 230,760 by 1810. The state's population doubled again by 1820, approached 2,000,000 in 1850, and totaled 3,198,062 by 1880. Ohio's annual rate of population increase slowed considerably after 1900, when its population was 4,157,545; nevertheless, in the period between 1900 and 1960, the total population more than doubled to 9,706,397. A slow rate of population increase during the 1970s, and a population decline during 1980–85, resulted from a net migration loss and a declining birthrate.

In 2004, the median age in Ohio was 37.5. In the same year, more than 24.3% of the populace were under age 18 while 13.3% was age 65 or older.

As of the 1990 census, Columbus became Ohio's largest city, with a population of 632,910, trading second place with Cleveland, which had 505,616 residents. Whereas Columbus increased its population by 12% during the 1980s, Cleveland's population de-

creased by 11.9%. The 2004 estimated populations of the two cities were Columbus, 730,008, and Cleveland, 458,684. The Columbus metropolitan area had an estimated population of 1,693,906. The Cleveland metropolitan area (including Elyria and Mentor) had a population of about 2,137,073. Cincinnati and other large cities also lost population during this period, largely because of the shift of the middle class from the inner cities to the suburbs or to other states. In 2004, Cincinnati's estimated population was 314,154, followed by Toledo, 304,973; Akron, 212,179; and Dayton, 160,293. The Cincinnati metropolitan area had an estimated population of 2,058,221.

7 ETHNIC GROUPS

Ohio was first settled by migrants from the eastern states and from the British Isles and northern Europe, especially Germany. Cincinnati had such a large German population that its public schools were bilingual until World War I. With the coming of the railroads and the development of industry, Slavic and other south Europeans were recruited in large numbers.

By 2000, however, only about 3% of Ohioans were foreign born, the major places of origin being Germany, Italy, and the United Kingdom. Ethnic clusters persist in the large cities, and some small communities retain a specific ethnic flavor, such as Fairport Harbor on Lake Erie, with its large Finnish population.

As of 2000 there were 1,301,307 blacks, representing 11.5% of the population. That percentage increased to 11.9% by 2004. Most live in the larger cities, especially Cleveland, which in 2000 had a black population of 243,939, or 51.0% of the city total. Historically, Ohio was very active in the antislavery movement. Oberlin College, established in 1833 by dissident theological students, admitted blacks from its founding and maintained a "station" on the Underground Railroad. Cleveland elected its first black mayor, Carl B. Stokes, in 1967.

Some 217,123 people in Ohio (1.9% of the total population) were Hispanic or Latino in 2000, up from 140,000 in 1990. The largest number (90,663) were of Mexican descent, but there were also many Puerto Ricans. In 2004, 2.2% of the population was Hispanic or Latino. In 2000, American Indians numbered about 24,486. In 2004, 0.2% of the population was American Indian. In 2000, Asians were estimated to number 132,633, including 30,425 Chinese (up from 16,829 in 1990), 12,393 Filipinos, 10,732 Japanese, and 13,376 Koreans. Pacific Islanders numbered 2,749. In 2004, Asians accounted for 1.4% of the population. In 2004, 1.2% of the population reported origin of two or more races.

Except for small Iroquoian groups like the Erie and Seneca, most of the Indian population before white settlement comprised four Algonkian tribes: Delaware, Miami, Wyandot, and Shawnee. Indian place-names include Ohio, Coshocton, Cuyahoga, and Wapakoneta.

8 LANGUAGES

Ohio English reflects three post-Revolutionary migration paths. Into the Western Reserve south of Lake Erie came Northern speech from New York and Connecticut. Still common there are the Northern pronunciation of the *ow* diphthong, as in *cow*, with a beginning like the /ah/ vowel in *father*, and the use of the /ah/ in *fog* and *college*; /krik/ is more common than /kreek/ for *creek*. A dragonfly is a *devil's darnin' needle*; doughnuts may be *fried cakes*;

a boy throws himself face down on a sled in a *bellyflop* (*per*); and a tied and filled bedcover is a *comforter*.

Most of nonurban Ohio has North Midland speech from Pennsylvania. Generally, except in the northern strip, *cot* and *caught* are sound-alikes, and *now* is /naow/, south of Columbus, because of the influence of South Midland patterns from Kentucky and extreme southern Pennsylvania, corn bread may be *corn pone*, lima beans are *butter beans*, and a tied quilt is a *comforter*. *Spouting*, yielding to *gutters*, barely reaches across to Indiana; and *sick at the stomach*, *dived*, and *wait on me* are competing with expanding Northern *to the stomach*, *dove*, and *wait for me*. A new Midland term, *bellybuster*, originated around Wheeling and has spread north to compete with *bellyflop*. Northern and Midland merge in the mixed dialect west of Toledo.

From Kentucky, South Midland speakers took *you-all* into Ohio River towns, and in the southwestern tip of the state can be heard their *evening* for *afternoon*, *terrapin* for *tortoise*, and *frogstool* for

toadstool. Recent northward migration has introduced South Midland speech and black English, a southern dialect, into such industrial centers as Cleveland, Toledo, and Akron.

Localisms have developed. For the grass strip between sidewalk and street, Akron has *devil-strip* and Cleveland has *treelawn*. Foreign-language influence appears in such Pennsylvania Germanisms as *clook* (hatching hen), *snits* (dried apples), *smearcase* (cottage cheese), and *got awake*.

Of Ohioans aged five years or older 93.9% spoke only English at home in 2000, down from 94.6% in 1990.

The following table gives selected statistics from the 2000 Census for language spoken at home by persons five years old and over. The category "Other West Germanic languages" includes Dutch, Pennsylvania Dutch, and Afrikaans. The category "Other Slavic languages" includes Czech, Slovak, and Ukrainian. The category "African languages" includes Amharic, Ibo, Twi, Yoruba, Bantu,

9 RELIGIONS

The first religious settlement in Ohio territory was founded among Huron Indians in 1751 by a Roman Catholic priest near what is now Sandusky. Shortly afterward, Moravian missionaries converted some Delaware Indians to Christianity; the first Protestant church was founded by Congregationalist ministers at Marietta in 1788. Dissident religious sects such as the Shakers, Amish, and Quakers moved into Ohio from the early 18th century onward, but the majority of settlers in the early 19th century were Presbyterians, Methodists, Baptists, Disciples of Christ, and Episcopalians.

The first Roman Catholic priest to be stationed permanently in Ohio was Father Edward Fenwick, who settled in Cincinnati in 1817. When the Protestant settlers there did not allow him to build a Catholic church in the town, he founded Christ Church (now St. Francis Church) just outside Cincinnati. In 1821, Father Fenwick became the first Catholic bishop in Ohio. The large influx of Irish and German immigrants after 1830 greatly increased the Catholic constituency in Cleveland, Cincinnati, Columbus, and Toledo. Among the German immigrants were many Lutherans and large number of Jews, who made Cincinnati a center of Reform Judaism. In the mid-19th century, Cincinnati had the nation's third-largest Jewish community; the Union of American Hebrew Congregations, the most important Reform body, was founded there in 1873, and Hebrew Union College, a rabbinical training school and center of Jewish learning, was founded two years later.

The Church of Jesus Christ of Latter-day Saints (Mormons), founded in 1930 by Joseph Smith Jr. of New York, built its first permanent place of worship in Kirtland, Ohio, in 1933. The Kirtland Temple, as it has been called, is still open today as a museum and educational center. A functioning temple was opened in Columbus in 1999. In 2006, the Latter-day Saints reported a statewide membership of 54,297 in 124 congregations.

In 2004, Ohio had a Roman Catholic population of about 2,139,524, with about 512,146 members belonging to the archdiocese of Cincinnati and 812,675 members within the Cleveland diocese. In 2000, the state's Jewish population was estimated at 142,255. Leading Jewish communities were in Cleveland, Cincinnati, and Columbus. The Muslim population was at about 41,281

people. Ohio communities of Amish and Mennonites are among the largest in the nation with over 24,000 Amish and over 20,000 Mennonites in the state (primarily central Ohio).

In the United Methodist Church is one of the largest Protestant denominations, with a membership of about 420,142 statewide in 2004. In 2000, the Evangelical Lutheran Church in America reported 301,749 members; the Southern Baptist Convention had 187,227 (with 5,251 newly baptized members in 2002); the Presbyterian Church USA, 160,800, Christian Churches and Churches of Christ, 142,571; and the American Baptist Churches USA, 117,757. In 2000, about 6.2 million people (55.1% of the population) were not counted as members of any religious organization. The national Office of General Ministries of the United Church of Christ is located in Cleveland. The Ohio conference of the United Church of Christ had about 118,449 members in 2005.

10 TRANSPORTATION

Sandwiched between two of the country's largest inland water systems, Lake Erie and the Ohio River, Ohio has long been a leader in water transport. With its numerous terminals on the Ohio River and deepwater ports on Lake Erie, Ohio ranks as one of the major US states for shipping.

The building of railroads in the mid-19th century greatly improved transportation within the state by connecting inland counties with Lake Erie and the Ohio River. The Mad River and Lake Erie Railroad, between Dayton and Sandusky, was completed in 1844, and two years later, it was joined with the Little Miami Railroad, to provide through service to Cincinnati. By 1856, Cleveland was connected by rail with Columbus and Pittsburgh. Railroad building in the state reached a peak in the 1850s. At the outbreak of the Civil War, Ohio had more miles of track than any other state. By 1900, railroads were by far the most important system of transport.

In 2003, Class I railroads operated 4,510 rail mi (7,261 km) of track in the state, out of a total of 6,519 mi (10,495 km) of track in service. In that same year, Ohio had 19 railroads within its borders, including three Class I railroads. Freight service on branch lines to counties has been maintained through a state subsidy program.

Mass transit in Ohio's cities began in 1859 with horse-drawn carriages carrying paying passengers in Cleveland and Cincinnati, which added a cable car on rails about 1880. The electric trolley car, introduced to Cleveland in 1884, soon became the most popular mass transit system for the large cities. Inter-urban electric railways carried passengers to and from rural towns that had been bypassed by the railroads. There were 2,809 mi (4,521 km) of interurban track in the state by 1907. The use of electric railways declined with the development of the motor car in the 1920s, and by 1939, for example, the seven interurban lines serving Columbus had been abandoned. Today, suburbanites mostly commute to their workplaces in Columbus and other cities by automobile and bus lines. However, Cleveland continues to operate a light rail system, that as of 2004, had around 40 mi (64 km) of track, which stretched from the city's east side and eastern suburbs to the downtown lakefront and out to Cleveland Hopkins Airport on the city's southwestern side. In 2006, Amtrak operated three regularly scheduled trains through Ohio, connecting six cities.

Rough roads were used by settlers in the early 19th century. The National Road was built from Wheeling, West Virginia, to Zanes-

ville in 1826, and was extended to Columbus by 1833. The increasing use of the automobile in the 1930s led to massive state and federal road-building programs in Ohio as elsewhere. The major interstate highways across Ohio connect Cleveland and the Toledo area in the north (I-80, I-90); link Columbus with Dayton, Zanesville, and Wheeling (I-70) and with Cincinnati and Cleveland (I-71); and extend north-south from Cleveland and Akron to Marietta in the east (I-77), and from Toledo to Dayton and Cincinnati in the west (I-75).

In 2004, Ohio had 124,752 mi (200,850 km) of roads. In that same year, there were some 6.395 million automobiles, about 4.061 million trucks of all types, some 298,000 motorcycles, and around 18,000 buses registered in the state, along with 7,675,007 licensed drivers.

Inland waterways have long been important for transport and commerce in Ohio. The first settlers traveled into Ohio by flatboat down the Ohio River to establish such towns as Marietta and Cincinnati. Lake Erie schooners brought the founders of Cleveland and Sandusky. Steamboat service began on the Ohio River in 1811, and at Lake Erie ports in 1818. The public demand for water transportation in the interior of the state, where few rivers were navigable, led to construction of the Ohio and Erie Canal from Portsmouth on the Ohio River to Cleveland, and the Miami and Erie Canal from Cincinnati to Toledo. Both canals were opened to traffic in 1827 but not completed for another 14 years. The canals gave Ohio's farmers better access to eastern and southern markets. Water transportation is still a principal means of shipping Ohio's products through the St. Lawrence Seaway to foreign countries, and the method by which millions of tons of cargo, particularly coal, are moved via the Ohio River to domestic markets.

Ohio's ports rank among the busiest of the 50 states in volume. In 2004, the state's most active ports were: Cleveland, with 15.774 million tons of cargo handled; Cincinnati with 13.898 million tons; Ashtabula with 10.938 million tons; and Toledo with 9.861 million tons. In 2003, waterborne shipments totaled 113.743 million tons. In 2004, Ohio had 444 mi (714 km) of navigable inland waterways.

Ohioans consider Dayton to be the birthplace of aviation because it was there that Wilbur and Orville Wright built the first motor-powered airplane in 1903. In 2005, Ohio had a total of 734 public and private-use aviation-related facilities. This included 519 airports, 209 heliports, 4 STOLports (Short Take-Off and Landing), and 2 seaplane bases. The state's major air terminals are the Greater Cincinnati airport (actually located across the Ohio River in Kentucky) and Hopkins International in Cleveland. In 2004, Cincinnati/Northern Kentucky International Airport had 10,864,547 passenger enplanements, while Cleveland Hopkins had 5,389,196 enplanements in that same year, making them the 22nd- and 35th-busiest airports in the United States, respectively.

11 HISTORY

The first people in Ohio, some 11,000 years ago, were hunters. Their stone tools have been found with skeletal remains of long-extinct mammoths and mastodons. Centuries later, Ohio was inhabited by the Adena people, the earliest mound builders. Their descendants, the Hopewell Indians, built burial mounds, fortifications, and ceremonial earthworks, some of which are now preserved in state parks.

The first European travelers in Ohio, during the 17th century, found four Indian tribes: Wyandot and Delaware in northern Ohio, Miami and Shawnee in the south. All were hunters who followed game trails that threaded the dense Ohio forest. All together, these four tribes numbered about 15,000 people. European exploration was begun by a French nobleman, Robert Cavelier, Sieur de la Salle, who, with Indian guides and paddlers, voyaged from the St. Lawrence River to the Ohio, which he explored in 1669-70. In the early 1700s, French and English traders brought knives, hatchets, guns, blankets, tobacco, rum, and brandy to exchange for the Indians' deer and beaver skins.

Both the French and the English claimed possession of Ohio, the French claim resting on La Salle's exploration, while the British claimed all territory extending westward from their coastal colonies. To reinforce the French claim, Celeron de Bienville led an expedition from Canada to Ohio in 1749 to warn off English traders, win over the Indians, and assert French possession of the land. Traveling by canoe, with marches overland, he found the Indians better disposed at that time to the English than to the French. The following year, a company of Virginia merchants sent Christopher Gist to map Ohio trade routes and to make friendship and trade agreements with the tribes. The clash of ambitions brought on the French and Indian War—during which the Indians fought on both sides—ending in 1763 with French defeat and the ceding of the vast western territory to the British. During the Revolutionary War, the American militiaman George Rogers Clark, with a small company of woodsmen-soldiers, seized British posts and trading stations in Ohio, and, in the Battle of Piqua, defeated Indian warriors allied with the British. It was largely Clark's campaigns that won the Northwest Territory for the United States.

The new nation had a huge public domain, extending from the Allegheny Mountains to the Mississippi River. To provide future government and development of the territory northwest of the Ohio River, the US Congress enacted the Land Ordinance of 1785 and the Northwest Ordinance of 1787. The Land Ordinance created a survey system of rectangular sections and townships, a system begun in Ohio and extended to all new areas in the expanding nation. The farsighted Northwest Ordinance provided a system of government under which territories could achieve statehood on a basis equal with that of the original colonies. When a specified area had a population of 60,000 free adult males, it could seek admission to the Union as a state.

The first permanent settlement in Ohio was made in 1788 by an organization of Revolutionary War veterans who had received land warrants as a reward for their military service. They trekked by ox-drawn wagons over the mountains and by flatboat down the Ohio River to the mouth of the Muskingum, where they built the historic town of Marietta. John Cleves Symes, a New Jersey official, brought pioneer settlers to his Miami Purchase in southwestern Ohio; their first settlement, in 1789, eventually became the city of Cincinnati. Access to the fertile Ohio Valley was provided by the westward-flowing Ohio River, which carried pioneer settlers and frontier commerce. Flatboats made a one-way journey, as families floated toward what they hoped would be new settlements. Keelboats traveled both downstream and upstream—an easy journey followed by a hard one. The keelboat trade, carrying military supplies and frontier produce, created an enduring river lore. Its legendary hero is burly, blustering Mike Fink, "half horse

and half alligator,” always ready for a fight or a frolic, for riot or rampage.

Increasing settlement of the Ohio Valley aroused Indian resistance. War parties raided outlying villages, burned houses, and drove families away. Two military expeditions against the Indians were shattered by Chief Little Turtle and his Miami warriors. Then, in 1793, Maj. Gen. “Mad Anthony” Wayne took command in the west. He built roads and forts in the Miami Valley, and trained a force of riflemen. On a summer morning in 1794, Wayne routed allied tribesmen, mostly Miami and Shawnee, in the decisive Battle of Fallen Timbers. In the ensuing Treaty of Greenville, Indian leaders surrendered claim to the southern half of Ohio, opening that large domain to uncontested American occupation.

When, in 1800, Connecticut ceded to the United States a strip of land along Lake Erie claimed by its colonial charter and called the Western Reserve, that region became a part of the Northwest Territory. Now the future seemed unclouded, and from the older colonies came a great migration to the promised land. By 1802, Ohio had enough population to seek statehood, and in November, a constitutional convention assembled at Chillicothe. In 25 days and at a total cost of \$5,000, the 35 delegates framed a constitution that vested most authority in the state legislature and gave the vote to all white male taxpayers. On 1 March 1803, Ohio joined the Union as the 17th state.

Beyond Ohio’s western border, Indians still roamed free. In 1811, the powerful Shawnee chief Tecumseh led a tribal resistance movement (supported by the British) seeking to halt the white man’s advance into the new territory and to regain lands already lost to the Americans. Ohio militia regiments led by Gen. William Henry Harrison repulsed an Indian invasion near Toledo in the battle of Tippecanoe on 7 November 1811. Control of Lake Erie and of Great Lakes commerce was at stake when Commodore Oliver Hazard Perry won a decisive naval victory over a British fleet in western Lake Erie during the War of 1812. Tecumseh was slain in the Battle of Thames in Canada on 5 October 1813.

With peace restored in 1815, “Ohio fever” spread through New England. In a great migration, people streamed over the mountains and the lakes to a land of rich soil, mild climate, and beckoning opportunities. Across the Atlantic, especially in England, Ireland, and Germany, thousands of immigrants boarded ship for America. At newly opened land offices, public land was sold at \$1.25 an acre. Forest became fields, fields became villages and towns, towns became cities. By 1850, Ohio was the third-most populous state in the Union.

Having cleared millions of acres of forest, Ohioans turned to economic development. Producing more than its people consumed, the state needed transportation routes to eastern markets. The National Road extended across the central counties in the 1830s, carrying stagecoach passengers and wagon commerce from Pennsylvania and Maryland. The Ohio canal system, created between 1825 and 1841, linked the Ohio River and Lake Erie, providing a waterway to the Atlantic via New York’s Erie Canal. In 1826, state lands were valued at \$16 million; 15 years later, their value exceeded \$100 million. The chief products were wheat, corn, pork, beef, salt, wool, and leather. By 1850, when farm and factory production outstripped the capacity of mule teams and canal barges, railroad building had begun. In the next decade, railroads crisscrossed the state.

In 1861, Ohio, like the rest of the nation, was divided. The northern counties, teeming with former New Englanders, were imbued with abolitionist zeal. But Ohio’s southern counties had close ties with Virginia and Kentucky across the river. From southeastern Ohio came Clement L. Vallandigham, leader of the Peace Democrats—called Copperheads by their opponents—who defended states’ rights, opposed all of President Lincoln’s policies, and urged compromise with the Confederacy. While Ohio surpassed its quota by providing a total of 320,000 Union Army volunteers, the Copperhead movement grew strong enough to nominate Vallandigham for state governor in 1863. Responding to the news of Vallandigham’s defeat by the rugged Unionist John Brough, Lincoln telegraphed: “Ohio has saved the nation.” Ohio became directly involved in the war for two weeks in 1863, when Confederate Gen. John Hunt Morgan led a Kentucky cavalry force on a daring but ineffectual raid through the southern counties.

Ohio gave the Union its greatest generals—Ulysses S. Grant, William Tecumseh Sherman, and Philip H. Sheridan—each of whom won decisive victories at crucial times. Also essential to the Union cause was the service of Ohio men in Lincoln’s cabinet, including Treasury Secretary Salmon P. Chase and War Secretary Edwin M. Stanton.

Mid-19th-century Ohio was primarily an agricultural state, but war demands stimulated Ohio manufacturing, and in the decade following the war, the state’s industrial products surpassed the value of its rich farm production. The greatest commercial development came in northern Ohio, where heavy industry grew dramatically. To Toledo, Cleveland, and Youngstown via Lake Superior came iron ore that was converted into iron and steel with coal from the Ohio Valley. In the 1870s, John D. Rockefeller of Cleveland organized the Standard Oil Co., which soon controlled oil refining and distribution throughout the nation. At the same time, B. F. Goodrich of Akron began making fire hose, the first rubber product in an industry whose prodigious growth would make Akron the “rubber capital of the world.” In the middle of the state, the capital city, Columbus, became a center of the brewing, railroad equipment, and farm implement industries. Cincinnati factories made steamboat boilers, machine tools, meat products, railroad cars, and soap. Dayton became known for its paper products, refrigerators, and cash registers. With industrial growth came political power. In the next half century, Ohio virtually took possession of the White House. Presidents Grant, Rutherford B. Hayes, James A. Garfield, Benjamin Harrison, William McKinley, William Howard Taft, and Warren G. Harding were all Ohioans.

The four great business pursuits—agriculture, commerce, mining, and manufacturing—were remarkably balanced in Ohio. Its ethnic strains were various. Following the earlier English, Irish, and German influx came Italian, Czech, Dutch, Finnish, Greek, Hungarian, Polish, Russian, Serbian, and Ukrainian immigrants, along with a growing number of blacks from the rural South. Thus Ohio provided an advantageous background for a president; to any segment of the nation, an Ohio candidate did not seem alien. In the 1920 campaign, both the Republican and Democratic nominees—Harding and James M. Cox—were Ohio men. Norman Thomas, a perennial Socialist candidate, was likewise an Ohioan.

During World War I, Ohio’s heavy industry expanded and its cities grew. Progressivism developed in Toledo and Cleveland, under their respective mayors, Samuel M. “Golden Rule” Jones and

Tom L. Johnson, whose reforms resulted in the city-manager form of government that spread to other Ohio cities. In the postwar 1920s, Ohio's oil, rubber, and glass industries kept pace with accelerating automobile production. Yet none of these industries was immune to the prolonged depression of the 1930s. Widespread unemployment and a stagnant economy were not relieved until the outbreak of World War II. The war swept 641,000 Ohioans into military service and gave Ohio industry military contracts totaling \$18 billion.

The state's economy prospered after World War II, with highway building, truck and tractor production, aircraft manufacture, and airport construction leading the field. The completion of the St. Lawrence Seaway in 1959 made active international ports of Toledo and Cleveland. Major problems during this period involved pollution created by the dumping of industrial wastes (especially in Lake Erie) and urban decay resulting from the departure of middle-class families to the suburbs, an exodus that left the central cities to growing numbers of the poor and underprivileged. Related to these problems were troubles in the Ohio school system. Deteriorating neighborhoods produced inadequate revenues for schools and public services, and attempts at racial integration brought controversy and disturbance. When political offices were won by minority leaders—in 1967, for example, Carl Stokes of Cleveland became the first black mayor of any major US city—friction and tension continued. A further shock to Ohioans was the May 1970 shooting of 13 Kent State University students, four of whom died, by national guardsmen who had been sent to the campus to preserve order during a series of demonstrations against US involvement in Vietnam.

During the early 1980s, Ohio was still beset by serious social and economic problems. While the state's population remained static, the unemployment rate in 1982 and 1983 reached 14%. A decline in manufacturing jobs was only partly offset by the employment brought by a growing service sector. In 1983, the state established the Thomas Edison Program to provide start-up companies with venture capital funds. The legislation helped jumpstart the state's economy. But by the end of the 1980s, economic progress slowed again. Unemployment rose in the recession of the early 1990s, reaching 6.9% in 1992. Within two years, as part of a national recovery, it had rebounded to 4.9%. In March 1995, Ohio was the site of the largest work stoppage in the auto industry in a quarter century, when almost 178,000 employees were laid off in response to a 17-day strike by auto workers at two General Motors plants in Dayton. In 1999 the economy was holding steady with an unemployment rate of 4.3%, in line with the national average. In July 2003, the unemployment rate stood at 6.2%, again on par with the national average. Ohio's unemployment rate stood at 5.8% in September 2005, above the national average of 5.1%. Ohio continued to experience job losses in a national economy that had just begun to recover from the 2001 recession.

Hunger and homelessness were on the rise in the late 1990s and early 2000s. A 1999 report by the Ohio Hunger Task Force found that nearly one million children in low-income families faced hunger, while the Coalition on Homelessness and Housing reported that need for emergency shelters for families had grown, stretching resources in the state's 10 largest counties.

In January 1999, newly elected Governor Robert Taft, the great grandson of President William Howard Taft, took office. His ad-

ministration moved quickly to address the problem highlighted in a 1996 federal study that revealed the state had the worst school facilities in the nation. His plan to spend \$23 billion on school repairs over 12 years was boosted in November 1999 by voters who approved Issue 1, a ballot initiative allowing Ohio to borrow money less expensively for school construction. The governor was also pushing for tougher gun control.

Conservancy programs at the state level encompassed the watersheds of the Muskingum and Miami rivers, which became models for such undertakings in other states in the 1980s. Pollution in Lake Erie, where poor water conditions had made national headlines, was successfully reversed through a coalition of government efforts. By the end of the 1990s, the state was viewed as a national leader in improving waterways. But, as the Environmental Protection Agency lined up partners to clean up the Cuyahoga River, Ohio still faced serious environmental threats. A study released in 2000 indicated air pollution in the Ohio River Valley was worse than that on the nation's East Coast. It was reported earlier that rain contaminated with mercury from coal-fired electric plants was polluting Midwest lakes and rivers. In 2000 the EPA released a study citing the state for failing to meet tighter federal ozone limits. Illegal dumping also posed a persistent problem, with an estimated 30 to 40 million tires having been unlawfully deposited at nearly 100 sites around the state.

In 2000 the state remained among the most populous in the nation, with its more than 11.3 million people giving it a rank of seventh among the states.

Ohio was one of the states affected by the 14 August 2003 massive power blackout in Canada, the Northeast and Midwestern states. The largest electrical outage in US history affected 9,300 square miles and a population of over 50 million. An initial power failure in Ohio was later found to be the trigger for the outage. Many areas of Cleveland were without safe drinking water for a number of days.

Ohio remained at the center of the nation's presidential politics in 2004: President George W. Bush narrowly defeated John Kerry in Ohio by less than 120,000 votes, which swung the election for him. Ohio politics in 2005 were also the subject of controversy. Beginning in April 2005, the Toledo Blade newspaper began publishing a series of stories revealing that Toledo coin dealer Tom Noe, chair of the Bush-Cheney campaign for Lucas County, was investing \$50 million for the state through coin speculation: buying and selling rare coins to turn a profit. Noe could not account for \$10–13 million in the fund. Noe had also been placed under federal investigation for money laundering—perhaps state money—to the Bush campaign. The “coingate” scandal was complicated further by the fact that a Blade reporter with close ties to the Republican Party reportedly knew about Noe's campaign violations in early 2004, but suppressed the information. The publisher and editor-in-chief of the Blade held that if the “coingate” scandal had become public knowledge before the November election, Kerry would have won Ohio and won the presidency. Republican governor Bob Taft was the subject of a scandal in 2005 in which he pleaded no contest to accepting certain gifts—including from Noe—without reporting them, as required by law.

In the November 2004 election, Ohio voters approved by initiative petition an amendment to the Ohio constitution that adopted

a section declaring a valid and recognized marriage to be between one man and one woman only.

12 STATE GOVERNMENT

The Ohio constitution of 1803 was replaced by a second constitution in 1851. Amendments proposed by a constitutional convention in 1912 and subsequently approved by the voters so heavily revised the 1851 constitution as to make it virtually a new document. This modified constitution, with subsequent amendments (a total of 161 by January 2005), provides for county and municipal home rule, direct primary elections, recall of elected officials, and constitutional amendments by initiative and referendum.

Ohio's General Assembly consists of a 99-member House of Representatives, elected for two years, and a Senate of 33 members serving four-year terms (half the members are chosen every two years). Regular sessions of the legislature convene the first Monday in January of each year and are not formally limited in length. The presiding officers of both houses may issue a joint call to convene a special session. Legislators must be at least 18 years old, have lived in their districts for at least one year, and be qualified voters. The legislative salary was \$54,942 in 2004. Each house may introduce legislation, and both houses must approve a bill before it can be signed into law by the governor. The governor's veto of a bill can be overridden by three-fifths majority votes of the elected members of each houses. Bills not signed or vetoed by the governor become law after 10 days.

Officials elected statewide are the governor and lieutenant governor (elected jointly), secretary of state, attorney general, auditor, and treasurer, all of whom serve four-year terms. (Eleven members of the state Board of Education are elected; six are appointed: all serve four-year terms.) Effective in 1959, a constitutional

amendment changed the governor's term from two to four years and forbade a governor from serving more than two successive terms. The governor appoints the heads of executive departments, as well as the adjutant general and members of most statutory boards. Candidates for governor must be 18 years old, US citizens, qualified voters, and state residents. As of December 2004, the governor's salary was \$126,485.

The constitution may be amended legislatively by a three-fifths vote of each house; the proposed amendment must then receive majority approval by the voters at the next general election. Amendments may also be proposed by petition of 10% of the electors who voted for governor in the last general election; a majority vote in a subsequent referendum is required for passage.

The constitution provides that every 20 years (from 1932 onward), the voters must be given the chance to choose whether a constitutional convention should be held. Voters rejected this option in 1932, 1952, 1972, and again in 1992.

To vote in Ohio, one must be a US citizen, at least 18 years old, and have been a state resident for at least 30 days prior to election day. Restrictions apply to convicted felons and those declared mentally incompetent by the court.

13 POLITICAL PARTIES

Ohio has sent seven native sons and one other state resident to the White House—equaling Virginia as the “mother of presidents.” The state's two major political parties, Democratic and Republican, have dominated the political scene since 1856.

Ohioans scattered their votes among various political factions until 1836, when they rallied behind state resident William Henry Harrison and the Whig Party; they again supported Harrison in 1840, helping him win his second bid for the presidency. Whigs

Ohio Presidential Vote by Political Parties, 1948–2004

YEAR	ELECTORAL VOTE	OHIO WINNER	DEMOCRAT	REPUBLICAN	PROGRESSIVE	SOCIALIST LABOR	COMMUNIST	LIBERTARIAN

*Won US presidential election.

and Democrats divided the votes in 1844, 1848, and 1852; in 1856, however, Ohio supported the newly formed Republican Party, and after the Civil War, seven of the country's next 12 presidents were Ohio-born Republicans, beginning with Grant and ending with Harding. From 1856 to 1996, Ohioans voted for the Republican candidate in all presidential elections except those in which the following six Democrats were elected: Woodrow Wilson (twice), Franklin D. Roosevelt (three times), Harry S. Truman, Lyndon B. Johnson, Jimmy Carter, and Bill Clinton (twice). In 1920, when the presidential candidates of both major parties were Ohioans, the Republican, Warren G. Harding, carried Ohio as well as the nation.

Political bossism flourished in Ohio during the last quarter of the 19th century, when the state government was controlled by Republicans Mark Hanna in Cleveland and George B. Cox in Cincinnati. Hanna played an influential role in Republican national politics; in 1896, his handpicked candidate, William McKinley, was elected to the presidency. But the despotism of the bosses and the widespread corruption in city governments led to public demands for reform. In Toledo, a reform mayor, Samuel "Golden Rule" Jones, began to clean house in 1897. Four years later, another group of reformers, led by Mayor Tom L. Johnson, ousted the Hanna machine and instituted honest government in Cleveland. At the time, journalist Lincoln Steffens called Cleveland "the best-governed city in the United States" and Cincinnati "the worst." The era of bossism ended for Cincinnati in 1905, when the voters overthrew the Cox machine, elected a reform mayor on a fusion ticket, and instituted reforms that in 1925 made Cincinnati the first major US city with a nonpartisan city-manager form of government.

With the decline of big-city political machines, ticket splitting has become a regular practice among Ohio voters in state and local contests. Governor Frank J. Lausche, a Democrat, was elected to an unprecedented five two-year terms (1945–47, 1949–57), and Republican James A. Rhodes served four four-year terms (1963–71, 1975–83). In 1982, Ohioans elected a Democratic governor, Richard F. Celeste, and Democrats swept all state offices and won control of both houses of the state legislature. Republican George Voinovich won the governorship in 1990 and again in 1994. In 1998 elections, Republican candidate Bob Taft won the governor's office; he was reelected in 2002. In 2005 the Republicans also dominated the state Senate (22 seats as opposed to the Democrats' 11), and the state House, which had 61 Republicans and 38 Democrats.

Following November 2004 elections, there were 6 Democrats and 12 Republicans serving as US Representatives. In 1992 both Ohio senators—John Glenn, elected to a fourth term in 1992, and Howard Metzenbaum, elected to a third term in 1988—were Democrats. However, in 1994 Metzenbaum retired and a Republican, Mike DeWine, took the seat (he was reelected in 2000). In 1998, the seat held by retiring Senator John Glenn was won by former Ohio governor, Republican George Voinovich.

In general, third parties have fared poorly in Ohio since 1856. Exceptions were the 1968 presidential election, in which American Independent Party candidate George Wallace garnered nearly 12% of Ohio's popular vote, and the 1992 presidential election, when Independent Ross Perot captured 21% of the vote. A more typical voting pattern was displayed in the 1976 presidential election when the two major parties together received 97.7% of the

total votes cast, and only 2.3% of the votes were split among minor parties and independents. In 2000, independent candidate Ralph Nader took 3% of the vote, and independent candidate Pat Buchanan won 1%.

The result was not nearly so close in 1980, when Ronald Reagan, the Republican presidential nominee, won 51% of the popular vote to 41% for Jimmy Carter (with 6% going to John Anderson and 2% to minor party candidates), or in 1984, when Reagan won 59% of the popular vote to defeat Walter Mondale in the state. Republican George Bush won 55% of the vote in 1988. In 1992, however, Bush lost the state to Democratic nominee Bill Clinton, who captured 40% of the vote to Bush's 38%. In 1996, Clinton won 47% of the vote, Republican Bob Dole won 41%, and Independent Ross Perot received 11%. In 2000, Republican George W. Bush won 50% of the vote to Democrat Al Gore's 46%. In 2004, Bush increased his support slightly, to take 51% of the vote to John Kerry's 48.5%. In 2002 there were 7,973,000 registered voters. In 1998, 17% of registered voters were Democratic, 18% Republican, and 65% unaffiliated or members of other parties. The state had 20 electoral votes in the 2004 presidential election, a loss of 1 vote over 2000.

14 LOCAL GOVERNMENT

As of 2005, local government in Ohio is exercised by 88 counties, 942 municipal governments, 662 public school districts, and 631 special districts. In 2002, there were 1,308 townships.

Each county is administered by a board of commissioners, elected to four-year terms, whose authority is limited by state law. The county government is run by officials elected to four-year terms: auditor or financial officer, clerk of courts, coroner, engineer, prosecuting attorney, recorder, sheriff, and treasurer.

Within each county are incorporated areas with limited authority to govern their own affairs. Thirty voters in an area may request incorporation of the community as a village. A village reaching the population of 5,000 automatically becomes a city, which by law must establish executive and legislative bodies. There are three types of city government: the mayor-council plan, which is the form adopted by a majority of the state's cities; the city-manager form, under which the city council appoints a professional manager to conduct nonpartisan government operations; and the commission type, in which a board of elected commissioners administers the city government. In practice, most large cities have adopted a home-rule charter that permits them to select the form of government best suited to their requirements.

Cleveland experimented with the city-manager form of government from 1924 to 1932, at which time public disclosures of municipal corruption led the city's voters to return to the mayor-council plan. In 1967, Cleveland became the first major US city to elect a black mayor; Carl Stokes served two two-year terms but retired from politics in 1971. Cleveland again attracted national attention in 1978 when its 31-year-old mayor, Dennis J. Kucinich, publicly disputed the city's financial policies with members of the city council, and the city defaulted on \$15 million in bank loans. Mayor Kucinich narrowly survived a recall election; in 1979, he was defeated for reelection.

Cincinnati has retained the city-manager form of government since 1925. The mayor, elected by the city council from among its members, has no administrative duties. Instead, the council ap-

points a city manager to a term as chief executive. Columbus, the state capital since 1816, has a mayor-council form of government.

Townships are governed by three trustees and a clerk, all elected to staggered four-year terms. These elected officials oversee zoning ordinances, parks, road maintenance, fire protection, and other matters within their jurisdiction.

In 2005, local government accounted for about 484,096 full-time (or equivalent) employment positions.

15 STATE SERVICES

To address the continuing threat of terrorism and to work with the federal Department of Homeland Security, homeland security in Ohio operates under the authority of the governor; the state police superintendent is designated as the state homeland security advisor.

The State Department of Education administers every phase of public school operations, including counseling and testing services, the federal school lunch program, and teacher education and certification. The department also oversees special schools for the blind and deaf. The department's chief administrator is the superintendent of public instruction.

Health and welfare services are provided by several departments. The Department of Health issues and enforces health and sanitary regulations. Violations of health rules are reviewed by a Public Health Council of seven members, including three physicians and a pharmacist. The Department of Mental Health administers mental health institutions; develops diagnostic, prevention, and rehabilitation programs; and trains mental health professionals. The Department of Job and Family Services helps the poor through TANF (temporary assistance to needy families), food stamps, and Medicaid. The Bureau of Workers' Compensation and the Division of Labor and Worker Safety administer labor benefit programs.

Public protection services include those of the State Highway Patrol and the Bureau of Motor Vehicles, both within the Department of Public Safety; the Department of Rehabilitation and Correction, which operates penal institutions; the Department of Youth Services, which administers juvenile correction centers; and the Environmental Protection Agency.

16 JUDICIAL SYSTEM

The Supreme Court of Ohio, the highest court in the state, reviews proceedings of the lower courts and of state agencies. The high court has a chief justice and six associate justices elected to six-year terms. Below the Supreme Court are 12 courts of appeals, which exercise jurisdiction over their respective judicial districts. Each court has at least three judges elected to six-year terms. The district that includes Cleveland has nine appeals court judges, while the Cincinnati district has six.

Trial courts include 88 courts of common pleas, one in each county. Judges are elected to six-year terms. Probate courts, domestic relations courts, and juvenile courts often function as divisions of the common pleas courts. In 1957, a system of county courts was established by the legislature to replace justices of the peace and mayor's courts at the local level. Large cities have their own municipal, juvenile, and police courts.

As of 31 December 2004, a total of 44,806 prisoners were held in Ohio's state and federal prisons, an increase from 44,778 of 0.1%

from the previous year. As of year-end 2004, a total of 3,185 inmates were female, up from 2,897 or 9.9% from the year before. Among sentenced prisoners (one year or more), Ohio had an incarceration rate of 391 per 100,000 population in 2004.

According to the Federal Bureau of Investigation, Ohio in 2004, had a violent crime rate (murder/nonnegligent manslaughter; forcible rape; robbery; aggravated assault) of 341.8 reported incidents per 100,000 population, or a total of 39,163 reported incidents. Crimes against property (burglary; larceny/theft; and motor vehicle theft) in that same year totaled 420,910 reported incidents or 3,673.2 reported incidents per 100,000 people. Ohio has a death penalty, of which lethal injection is the sole method of execution. From 1976 through 5 May 2006, the state has carried out 21 executions, including four in 2005 and two in 2006 (as of 5 May). As of 1 January 2006, Ohio had 196 inmates on death row.

In 2003, Ohio spent \$278,109,346 on homeland security, an average of \$24 per state resident.

17 ARMED FORCES

In 2004, there were 7,211 active-duty military personnel and 21,704 civilian personnel stationed in Ohio, the vast majority of whom were at Wright-Patterson Air Force Base near Dayton. Wright-Patterson AFB is one of the largest and most important bases in the United States Air Force and houses the National Museum of the United States Air Force. In 2004, it had a workforce numbering approximately 17,000 people including nearly 10,000 civilians, making it the one of the largest employers in the state of Ohio and the largest employer at a single location. In 2004, the Defense Department awarded over \$4.6 billion in defense contracts to Ohio companies. Additionally, defense payroll outlays were \$2.89 billion.

In 2003, Ohio had 1,051,007 living veterans, of whom 158,697 had served in World War II; 121,342 during the Korean conflict; 320,046 during the Vietnam era; and 145,893 during the Persian Gulf War. In 2004, the Veterans Administration expended more than \$2.1 billion in pensions, medical assistance, and other major veterans' benefits.

As of 31 October 2004, the Ohio State Highway Patrol employed 1,481 full-time sworn officers.

18 MIGRATION

After the Ohio country became a US territory in 1785, Virginians, Connecticut Yankees, and New Jerseyites began arriving in significant numbers; tens of thousands of settlers from New England, Pennsylvania, and some southern states thronged into Ohio in subsequent decades. The great migration from the eastern states continued throughout most of the 19th century, and was bolstered by new arrivals from Europe. The Irish came in the 1830s, and many Germans began arriving in the 1840s. Another wave of European immigration brought about 500,000 people a year to Ohio during the 1880s, many of them from southern and eastern Europe. Former slaves left the South for Ohio following the Civil War, and a larger migratory wave brought blacks to Ohio after World War II to work in the industrial cities. In the 1910s, many emigrants from Greece, Albania, and Latvia settled in Akron to work in the rubber industry.

The industrialization of Ohio in the late 19th and the 20th centuries encouraged the migration of Ohioans from the farms to the

cities. The large number of Ohioans who lived in rural areas and worked on farms declined steadily after 1900, with the farm population decreasing to under 1,000,000 during World War II and then to fewer than 400,000 by 1979. A more recent development has been the exodus of urbanites from Ohio's largest cities. From 1970 to 1990, Cleveland lost 245,000 residents, Cincinnati 90,000, Dayton 61,000, Akron 52,000, and Toledo 50,000. Columbus was the only major city to gain residents—93,000—during this period. Ohio lost more than one million people through migration during the period 1970–83. Net migration loss for the state from 1985 to 1990 came to 72,000. Between 1990 and 1998, Ohio had a net loss of 144,000 in domestic migration and a net gain of 48,000 in international migration. In 1998, 7,697 foreign immigrants arrived in Ohio; of these, the greatest number, 900, came from India. The state's overall population increased 3.3% between 1990 and 1998. In the period 2000–05, net international migration was 75,142 and net internal migration was -177,150, for a net loss of 102,008 people.

19 INTERGOVERNMENTAL COOPERATION

The Ohio Commission on Interstate Cooperation represents the state in dealings with the Council of State Governments and its allied organizations. Ohio is a signatory to interstate compacts covering the Ohio River Valley, Pymatuning Reservoir, and the Great Lakes Basin, including the Great Lakes Charter signed in February 1985. The state also participates in the Interstate Mining Compact Commission, the Appalachian Regional Commission, the Midwest Interstate Low-Level Radioactive Waste Compact Commission, the Interstate Oil and Gas Compact, and other compacts. Federal grants to Ohio exceeded \$13.734 billion in fiscal year 2005, an estimated \$14.011 billion in fiscal year 2006, and an estimated \$14.301 billion in fiscal year 2007.

20 ECONOMY

Ohio's economy has shown remarkable balance over the years. In the mid-19th century, Ohio became a leader in agriculture, ranking first among the states in wheat production in 1840, and first in corn and wool by 1850. With industrialization, Ohio ranked fourth in value added by manufacturing in 1900.

Coal mining in the southeastern part of the state and easy access to Minnesota's iron ore via the Great Lakes contributed to the growth of the iron and steel industry in the Cleveland-Youngstown area. Ohio led the nation in the manufacture of machine tools and placed second among the states in steel production in the early 1900s. Automobile manufacturing and other new industries developed after World War I. Hit hard by the depression of the 1930s, the state diversified its industrial foundation and enjoyed prosperity during and after World War II, as its population increased and its income grew.

In the 1970s, however, growth began to lag. By 1980, per capita income in Ohio had fallen well behind the national average. While the gross national product in constant dollars grew 99% from 1960 to 1980, the gross state product expanded only 66%. Manufacturing, which traditionally accounted for more than one-third of the gross state product, was shrinking, as demand for durable goods declined. Manufacturing employment peaked at 1.4 million in 1969; by 1982, the total was down to 1.1 million, and it was believed that many of these jobs would be permanently lost because

of a reorientation of Ohio's economy from manufacturing toward services. With unemployment reaching peak levels, the state was forced to borrow from the federal government to fund the soaring cost of unemployment benefits.

Steel was produced primarily in Youngstown, automotive and aircraft parts in Cleveland, automobile tires and other rubber products in Akron, and office equipment in Dayton. Recessionary trends in 1980 led to the closing of a US Steel plant in Youngstown and of two Firestone tire and rubber factories in the Akron area, and to widespread layoffs in the auto parts industry. This bad economic news was partially offset when in 1983 the Honda Motor Co. opened Japan's first US automobile assembly plant at Marysville near Columbus, where Honda had already been manufacturing motorcycles. Honda suppliers also began establishing plants in the state.

Despite its shrinking size, manufacturing remains dominant in Ohio's economy. The sector centers on durable goods. Among manufacturers, transportation equipment and industrial machinery are the largest employers. Both durable and nondurable goods (instruments, chemicals, printing and lumber) enjoyed the greatest gains in employment between 1987 and 1993. However, durable goods' share of the gross state product, particularly primary metals, motor vehicles, and industrial machinery, fell 4.5% between 1977 and 1990 while nondurable goods industries' share of the gross state product remained constant and services, particularly business services, increased their share by 2.5%. In 2002, durable goods made up two-thirds of Ohio's manufacturing output. Output from Ohio's manufacturing sector peaked in 1998 at approximately \$90.4 billion (about 26.1% of gross state product), and had fallen 11.9% by 2001, including a 7.1% dip in the national recession of 2001. Output from manufacturing in 2001 constituted only 21.3% of gross state product. The fall in manufacturing output helped bring down the state's annual growth rates down from 6.5% in 1998 to an average of 3.3% 1999-2000, and then to 0.83% in 2001. In 2002, Ohio lagged the rest of the nation in employment performance because of significant losses in manufacturing, employing 18% of the state's labor force. Employment losses were sharpest among manufacturers of durable goods (which make up two-thirds of Ohio's manufactures), falling 8.4% between the fourth quarter of 2000 and the fourth quarter of 2002. Ohio's recovery hinges on recovery in its durable manufacturing sector.

In 2004, Ohio's gross state product (GSP) was \$419.866 billion, of which manufacturing (durable and nondurable goods) contributed \$84.597 billion or 20.1% of GSP, followed by the real estate sector at \$44.588 billion (10.6% of GSP), and health care and social assistance services at \$33.201 billion (7.9% of GSP). In that same year, there were an estimated 850,961 small businesses in Ohio. Of the 231,374 businesses that had employees, an estimated total of 227,339 or 98.3% were small companies. An estimated 22,725 new businesses were established in the state in 2004, up 2.2% from the year before. Business terminations that same year came to 21,328, down 9.4% from 2003. There were 1,432 business bankruptcies in 2004, up 0.4% from the previous year. In 2005, the state's personal bankruptcy (Chapter 7 and Chapter 13) filing rate was 774 filings per 100,000 people, ranking Ohio as the eighth-highest in the nation.

2¹ INCOME

In 2005 Ohio had a gross state product (GSP) of \$442 billion which accounted for 3.6% of the nation's gross domestic product and placed the state at number 7 in highest GSP among the 50 states and the District of Columbia.

According to the Bureau of Economic Analysis, in 2004 Ohio had a per capita personal income (PCPI) of \$31,161. This ranked 26th in the United States and was 94% of the national average of \$33,050. The 1994–2004 average annual growth rate of PCPI was 3.7%. Ohio had a total personal income (TPI) of \$356,795,912,000, which ranked eighth in the United States and reflected an increase of 4.2% from 2003. The 1994–2004 average annual growth rate of TPI was 4.0%. Earnings of persons employed in Ohio increased from \$263,241,162,000 in 2003 to \$274,175,471,000 in 2004, an increase of 4.2%. The 2003–04 national change was 6.3%.

The US Census Bureau reports that the three-year average median household income for 2002–04 in 2004 dollars was \$44,160 compared to a national average of \$44,473. During the same period an estimated 10.8% of the population was below the poverty line as compared to 12.4% nationwide.

2² LABOR

According to the Bureau of Labor Statistics (BLS), in April 2006 the seasonally adjusted civilian labor force in Ohio numbered 5,927,300, with approximately 326,900 workers unemployed, yielding an unemployment rate of 5.5%, compared to the national average of 4.7% for the same period. Preliminary data for the same period placed nonfarm employment at 5,460,800. Since the beginning of the BLS data series in 1976, the highest unemployment rate recorded in Ohio was 13.8% in January 1983. The historical low was 3.9% in March 2001. Preliminary nonfarm employment data by occupation for April 2006 showed that approximately 4.3% of the labor force was employed in construction; 14.8 in manufacturing; 19.1% in trade, transportation, and public utilities; 5.7% in financial activities; 11.9% in professional and business services; 14.1% in education and health services; 9.3% in leisure and hospitality services; and 14.5% in government.

The first workers' organization in Ohio was formed by Dayton mechanics in 1811. The Ohio Federation of Labor was founded in 1884; the American Federation of Labor (AFL) was founded in Columbus in 1886, and Ohio native William Green became president of the AFL in 1924. But it was not until the 1930s that labor unions in Ohio were formed on a large scale. In 1934, the United Rubber Workers began to organize workers in Akron; through a successful series of sit-down strikes at the city's rubber plants, the union grew to about 70,000 members by 1937. In that year, the United Steelworkers struck seven steel plants in the Youngstown area and won the right to bargain collectively for 50,000 steelworkers. The number of union members increased from about 25% of the state's non-farm employees in 1939 to 32% in 1980 when about 1.4 million workers belonged to labor organizations.

Progressive labor legislation in the state began in 1852 with laws regulating working hours for women and children and limiting men to a 10-hour workday. In 1890, Ohio became the first state to establish a public employment service. Subsequent labor legislation included a workers' compensation act in 1911 and child labor

and minimum wage measures in the 1930s. In 1983, a law was passed giving public employees, other than police officers and fire fighters, a limited right to strike.

The US Department of Labor's Bureau of Labor Statistics reported that in 2005, a total of 804,000 of Ohio's 5,039,000 employed wage and salary workers were formal members of a union. This represented 16% of those so employed, up from 15.2% in 2004, and above the national average of 12%. Overall in 2005, a total of 866,000 workers (17.2%) in Ohio were covered by a union or employee association contract, which includes those workers who reported no union affiliation. Ohio is one of 28 states that do not have a right-to-work law.

As of 1 March 2006, Ohio had a state-mandated minimum wage rate of \$5.15 per hour. In 2004, women in the state accounted for 40.1% of the employed civilian labor force.

2³ AGRICULTURE

Despite increasing urbanization and industrialization, agriculture retains its economic importance. Ohio ranked 17th in net farm income among the 50 states in 2005. In that year, the state's production of crops, dairy products, and livestock was valued at nearly \$5.1 billion.

The number of farms in 2004 was 77,300, down from 234,000 in 1940. The average size of farms increased from 94 acres (38 hectares) in 1940 to 189 acres (76 hectares) in 2004.

Grain is grown and cattle and hogs are raised on large farms in the north-central and western parts of the state, while smaller farms predominate in the hilly southeastern region. Truck farming has continued to expand near the large cities.

Ohio was the third-leading producer of tomatoes for processing in 2004 with 177,320 tons. Field crops in 2004 (in bushels) included corn for grain, 491,380,000; soybeans, 207,740,000; wheat, 55,180,000; and oats, 3,150,000. The most valuable crops included soybeans, with sales of \$1.2 billion, and corn, \$1.0 billion. These two crops accounted for 41% of Ohio's farm receipts in 2004. Ohio farmers also produced 3,232,000 tons of hay and 34,000 tons of sugar beets in 2004.

2⁴ ANIMAL HUSBANDRY

Cattle and hogs are raised in the central and western regions. In 2005, Ohio had 1.3 million cattle and calves, worth over \$1.2 billion. In 2004, Ohio farmers had 1.5 million hogs and pigs, valued at \$159.5 million. During 2003, Ohio farmers produced nearly 12.9 million lb (5.8 million kg) of sheep and lambs.

Dairying is common in most regions of the state, but especially in the east and southeast. In 2003, Ohio's 260,000 milk cows produced 4.5 billion lb (2 billion kg) of milk. The poultry industry is dispersed throughout the state. Ohio ranked second among the states in production of eggs with 7.6 billion eggs in 2003. Poultry farmers in Ohio also produced 212.3 million lb (96.5 million kg) of turkey and sold 225.5 million lb (102.3 million kg) of broilers worth \$78.9 million in 2003.

2⁵ FISHING

Commercial fishing, which once flourished in Lake Erie, has declined during the 20th century. In 2004, commercial fish landings brought about 3.9 million lb (1.8 million kg) valued at \$2.9 mil-

lion. The primary Lake Erie fish species are walleye, perch, lake trout, and small mouth bass. In 2001, the commercial fleet had 31 vessels and 19 boats.

A statewide fish hatchery system (of six locations) annually produces and stocks up to 30 million fry and yearling size fish—mostly walleye, saugeye, trout, catfish, bass, sunfish, muskellunge, and pike. In 2004, the state issued 917,902 sport fishing licenses.

26 FORESTRY

In 2003, Ohio had 7,855,000 acres (3,179,000 hectares) of forestland, representing 30% of the state's total land area, but only 1% of all US forests. Although scattered throughout the state, hardwood forests are concentrated in the hilly region of the southeast. Lawrence and Vinton counties are more than 70% forested. Commercial timberlands in 2002 totaled 7,568,000 acres (3,063,000 hectares), of which over 90% was privately owned.

The state's lumber and wood products industry supplies building materials, household furniture, and paper products. In 2004, total lumber production was 379 million board feet. In 2002 there were about 690,000 acres (279,000 hectares) of federal, state, county, and municipal forestland in Ohio.

27 MINING

According to preliminary data from the US Geological Survey (USGS), the estimated value of nonfuel mineral production by Ohio in 2003 was \$968 million, down slightly from 2002. The USGS data ranked Ohio as 15th among the 50 states by the total value of its nonfuel mineral production, accounting for around 2.5% of total US output.

According to the preliminary data for 2003, crushed stone, followed by construction sand and gravel, salt, lime, cement (portland and masonry), and industrial sand and gravel were the state's top nonfuel minerals by value. Crushed stone and construction sand and gravel accounted for around 57% of all nonfuel mineral output, by value. Ohio in 2003 was the nation's third leading producer by volume of fire clay, fourth in the production of salt and lime, fifth in construction sand and gravel and common clays, and tenth in industrial sand and gravel.

Preliminary data for 2003 showed that a total of 68.8 million metric tons of crushed stone were produced, with a value of \$310 million, while construction sand and gravel output totaled 47 million metric tons, and was valued at \$242 million. Lime production that same year was 1.7 million metric tons, and was worth \$110 million.

Ohio's mines produced only coal and industrial minerals. Metals production came from materials received from other states or foreign sources. Ohio ranked second in 2003 in the production of raw steel, for which output that year totaled 11.9 million metric tons.

28 ENERGY AND POWER

Ohio has abundant energy resources. The state government estimates that Ohio's coal reserves are sufficient to meet demand for 500 years and that oil and natural gas reserves are also ample.

As of 2003, Ohio had 136 electrical power service providers, of which 85 were publicly owned and 25 were cooperatives. Of the remainder, nine were investor owned, one was the owner of an in-

dependent generator that sold directly to customers, 10 were generation-only suppliers and six were delivery-only providers. As of that same year there were 5,397,308 retail customers. Of that total, 3,751,772 received their power from investor-owned service providers. Cooperatives accounted for 358,050 customers, while publicly owned providers had 370,524 customers. There was one independent generator or "facility" customer, and 916,961 generation-only customers. There was no data on the number of delivery-only customers.

Total net summer generating capability by the state's electrical generating plants in 2003 stood at 34.060 million kW, with total production that same year at 146.638 billion kWh. Of the total amount generated, 94.8% came from electric utilities, with the remainder coming from independent producers and combined heat and power service providers. The largest portion of all electric power generated, 134.769 billion kWh (91.9%), came from coal-fired plants, with nuclear power generation plants in second place at 8.475 billion kWh (5.8%) and natural gas fueled plants in third at 1.793 billion kWh (1.2%). Other renewable power sources accounted for 0.3% of all power generated. Petroleum fired plants, hydroelectric generation and plants using other types of gases accounted for the remainder.

As of 2006, Ohio had two operating nuclear power plants: the Davis-Besse plant in Oak Harbor; and the Perry plant in Lake County, near Cleveland.

In the 1880s, petroleum was discovered near Lima and natural gas near Toledo, both in the northwest. These fossil fuels have since been found and exploited in the central and eastern regions. As of 2004, Ohio had proven crude oil reserves of 49 million barrels, or less than 1% of all proven US reserves, while output that same year averaged 16,000 barrels per day. Including federal offshore domains, the state that year ranked 20th (19th excluding federal offshore) in proven reserves and 19th (20th excluding federal offshore) in production among the 31 producing states. In 2004 Ohio had 28,941 producing oil wells and accounted for under 1% of all US production. As of 2005, the state's four refineries had a combined crude oil distillation capacity of 551,400 barrels per day.

In 2004, Ohio had 33,828 producing natural gas and gas condensate wells. In that same year, marketed gas production (all gas produced excluding gas used for repressuring, vented and flared, and nonhydrocarbon gases removed) totaled 93.641 billion cu ft (2.65 billion cu m). As of 31 December 2004, proven reserves of dry or consumer-grade natural gas totaled 974 billion cu ft (27.66 billion cu m). A potential energy source is the rich bed of shale rock, underlying more than half of Ohio, which was estimated to contain more than 200 trillion cu ft (5.7 trillion cu m) of natural gas. But much research is needed before the gas can be extracted economically.

Coalfields lie beneath southeastern Ohio, particularly in Hocking, Athens, and Perry counties. In 2004, Ohio had 52 producing coal mines, 44 of which were surface operations and eight were underground. Coal production that year totaled 23,222,000 short tons, up from 22,009,000 short tons in 2003. Of the total produced in 2004, underground mines accounted for 14,270,000 short tons. Recoverable coal reserves in 2004 totaled 318 million short tons. One short ton equals 2,000 lb (0.907 metric tons).

29 INDUSTRY

Ohio has been a leading manufacturing state since the mid-1800s. During the last two decades of the 20th century, Ohio became the nation's leader in machine-tool manufacturing, the second-leading steel producer, and a pioneer in oil refining and in the production of automobiles and automotive parts, such as rubber tires.

In recent decades, Ohio has also become important as a manufacturer of glassware, soap, matches, paint, business machines, refrigerators—and even comic books and Chinese food products.

According to the US Census Bureau's Annual Survey of Manufactures (ASM) for 2004, Ohio's manufacturing sector covered some 21 product subsectors. The shipment value of all products manufactured in the state that same year was \$258.799 billion. Of that total, transportation equipment manufacturing accounted for the largest share at \$77.937 billion. It was followed by fabricated metal product manufacturing at \$24.634 billion; chemical manufacturing at \$22.736 billion; food manufacturing at \$21.156 billion; and primary metal manufacturing at \$20.363 billion.

In 2004, a total of 782,617 people in Ohio were employed in the state's manufacturing sector, according to the ASM. Of that total, 570,149 were actual production workers. In terms of total employment, the transportation equipment manufacturing industry accounted for the largest portion of all manufacturing employees at 138,306, with 108,070 actual production workers. It was followed by fabricated metal product manufacturing at 120,011 employees (90,874 actual production workers); plastics and rubber products manufacturing at 80,830 employees (62,397 actual production workers); machinery manufacturing at 75,954 employees (46,117 actual production workers); and food manufacturing with 51,607 employees (37,247 actual production workers).

ASM data for 2004 showed that Ohio's manufacturing sector paid \$34.503 billion in wages. Of that amount, the transportation equipment manufacturing sector accounted for the largest share at \$8.042 billion. It was followed by fabricated metal product manufacturing at \$4.868 billion; machinery manufacturing at \$3.392 billion; plastics and rubber products manufacturing at \$2.924 billion; and primary metal manufacturing at \$2.580 billion.

30 COMMERCE

Ohio is a major commercial state. According to the 2002 Census of Wholesale Trade, Ohio's wholesale trade sector had sales that year totaling \$166.4 billion from 16,000 establishments. Wholesalers of durable goods accounted for 10,149 establishments, followed by nondurable goods wholesalers at 4,316 and electronic markets, agents, and brokers accounting for 1,535 establishments. Sales by durable goods wholesalers in 2002 totaled \$78.5 billion, while wholesalers of nondurable goods saw sales of \$70.04 billion. Electronic markets, agents, and brokers in the wholesale trade industry had sales of \$17.8 billion.

In the 2002 Census of Retail Trade, Ohio was listed as having 42,280 retail establishments with sales of \$119.7 billion. The leading types of retail businesses by number of establishments were: food and beverage stores (5,757); clothing and clothing accessories stores (5,139); motor vehicle and motor vehicle parts dealers (4,909); miscellaneous store retailers (4,863); and gasoline stations

(4,460). In terms of sales, motor vehicle and motor vehicle parts stores accounted for the largest share of retail sales at \$30.7 billion, followed by general merchandise stores at \$17.9 billion; food and beverage stores at \$17.4 billion; gasoline stations at \$10.4 billion; and building material/garden equipment and supplies dealers at \$9.1 billion. A total of 611,814 people were employed by the retail sector in Ohio that year.

In 2005, Ohio ranked seventh in the United States as an exporter of goods, with exports worth \$34 billion. Transportation equipment, nonelectric machinery, chemicals, electric and electronic equipment, primary metals, fabricated metal products, stone, clay, and glass products, and rubber and plastic products account for most of the export value.

31 CONSUMER PROTECTION

Although Ohio has some of the toughest consumer protection laws in the United States, the state does not have a single, dedicated agency or department responsible for consumer protection. Instead, the state relies upon a range of state offices to provide consumer protection activities that are specific to that agency or department. Agencies involved in consumer protection include the Agriculture Department's Division of Food Safety, which operates inspection programs to protect consumers, and the Commerce Department's Office of Consumer Affairs (created in 2002), which protects consumers from abusive lending practices through education, fielding complaints, referring borrowers to organizations that can assist them, and initiating enforcement action if lending laws are violated. The Ohio Consumers' Counsel acts to protect the interests of residential consumers of public utilities and works to educate consumers about utility issues and resolve consumer complaints. The Attorney General's Office via its Consumer Protection Section, resolves consumer complaints and enforces consumer protection laws.

When dealing with consumer protection issues, the state's Attorney General's Office can initiate civil and criminal proceedings; represent the state before state and federal regulatory agencies; administer consumer protection and education programs; handle formal consumer complaints; and exercise broad subpoena powers. In antitrust actions, the Attorney General's Office can act on behalf of those consumers who are incapable of acting on their own; initiate damage actions on behalf of the state in state courts; initiate criminal proceedings; and represent counties, cities and other governmental entities in recovering civil damages under state or federal law.

The offices of the Ohio Consumer's Council and the Consumer Protection Section of the Attorney General's Office are located in Columbus. There is also a county government consumer affairs office in Akron.

32 BANKING

Ohio's first banks, in Marietta and Chillicothe, were incorporated in 1808, and a state bank was authorized in 1845. As of June 2005, Ohio had 281 insured banks, savings and loans, and saving banks, plus 223 state-chartered and 272 federally chartered credit unions (CUs). Excluding the CUs, the Cleveland-Elyria-Mentor market area accounted for the largest portion of the state's depos-

its in 2004, at \$64.472 billion, but ranked third in the number of institutions at 44. The Cincinnati-Middletown market area (which includes a portion of Kentucky) ranks second in deposits with \$37.080 billion, and first in the number of institutions at 87. The Columbus market area ranks second in the number of institutions at 57, and third in deposits at \$28.762 billion. As of June 2005, CUs accounted for 1% of all assets held by all financial institutions in the state, or some \$16.575 billion. Banks, savings and loans, and savings banks collectively accounted for the remaining 99% or \$1,580.100 billion in assets held.

The median percentage of past-due/nonaccrual loans to total loans as of fourth quarter 2005 stood at 1.74%, down from 1.79% in 2004 and 1.89% in 2003. The median net interest margin (the difference between the lower rates offered savers and the higher rates charged on loans) for the state's insured institutions was 3.82% as of fourth quarter 2005, down from 3.83% in 2004 but up from 2003's rate of 3.80%.

State chartered banks and other state-chartered financial institutions are the responsibility of the Ohio Department of Commerce's Division of Financial Institutions. Federally chartered institutions are regulated by the US government.

33 INSURANCE

In 2004, there were over 7.1 million individual life insurance policies in force, with a total value of over \$480 billion; total value for all categories of life insurance (individual, group, and credit) was over \$780.8 billion. The average coverage amount is \$66,700 per policy holder. Death benefits paid that year totaled \$2.4 billion. In 2000, 46 life and health insurance companies had headquarters in Ohio.

At the end of 2003, 134 property and casualty and 41 life and health insurance companies were domiciled in Ohio. In 2004, direct premiums for property and casualty insurance totaled over \$13.8 billion. That year, there were 36,166 flood insurance policies in force in the state, with a total value of \$3.9 billion. About \$14.7 billion of coverage was held through FAIR plans, which are designed to offer coverage for some natural circumstances, such as wind and hail, in high risk areas.

In 2004, 61% of state residents held employment-based health insurance policies, 3% held individual policies, and 23% were covered under Medicare and Medicaid; 12% of residents were uninsured. In 2003, employee contributions for employment-based health coverage averaged at 17% for single coverage and 21% for family coverage. The state offers a six-month health benefits expansion program for small-firm employees in connection with the Consolidated Omnibus Budget Reconciliation Act (COBRA, 1986), a health insurance program for those who lose employment-based coverage due to termination or reduction of work hours.

In 2003, there were over 7.9 million auto insurance policies in effect for private passenger cars. Required minimum coverage includes bodily injury liability of up to \$12,500 per individual and \$25,000 for all persons injured in an accident, as well as property damage liability of \$7,500. In 2003, the average expenditure per vehicle for insurance coverage was \$671.23.

34 SECURITIES

The Cincinnati Stock Exchange (CSE) was organized on 11 March 1885 by 12 stockbrokers who agreed to meet regularly to buy and sell securities. In the mid-1990s, the Cincinnati Stock Exchange moved to Chicago and ceased operations in Ohio.

The Ohio securities marketplace is overseen by the Ohio Division of Securities of the Ohio Department of Commerce. The division provides investor protection, enhances capital formation, and protects the integrity of the securities marketplace by administering and enforcing the Ohio Securities Act, which was enacted in 1913. It requires that all securities sold in Ohio be registered with the division or properly exempted from registration and requires that each person transacting business in securities in Ohio be licensed by the division. It also imposes anti-fraud standards in connection with the sale of securities.

In 2005, there were 2,710 personal financial advisers employed in the state and 10,940 securities, commodities, and financial services sales agents. In 2004, there were over 279 publicly traded companies within the state, with over 93 NASDAQ companies, 93 NYSE listings, and 13 AMEX listings. In 2006, the state had 28 Fortune 500 companies; Cardinal Health (based in Dublin) ranked first in the state and ninth in the nation with revenues of over \$74.9 billion, followed by Kroger, Procter and Gamble, and Federated Department Stores, all based in Cincinnati, and Nationwide Financial Services, based in Columbus. These five NYSE-listed companies are also part of the Fortune 100.

35 PUBLIC FINANCE

The state budget is prepared on a biennial basis by the Office of Budget and Management. It is submitted by the governor to the state legislature, which must act on it by the close of the current fiscal year (FY). The state's fiscal year runs from 1 July through 30 June.

The General Assembly has nearly total discretion in allocating general revenues, which are used primarily to support education, welfare, mental health facilities, law enforcement, property tax relief, and government operations. The assembly also allocates money from special revenue funds by means of specific legislative acts. More than one-half of all state expenditures come from the general fund.

Fiscal year 2006 general funds were estimated at \$25.7 billion for resources and \$25.3 billion for expenditures. In fiscal year 2004, federal government grants to Ohio totaled \$16.5 billion.

36 TAXATION

In 2005, Ohio collected \$24,007 million in tax revenues or \$2,094 per capita, which placed it 27th among the 50 states in per capita tax burden. The national average was \$2,192 per capita. Property taxes accounted for 0.2% of the total; sales taxes, 34.1%; selective sales taxes, 12.3%; individual income taxes, 39.3%; corporate income taxes, 5.5%; and other taxes, 8.6%.

As of 1 January 2006, Ohio had nine individual income tax brackets ranging from 0.712% to 7.185%. The state taxes corporations at rates ranging from 5.1% to 8.5% depending on tax bracket.

Ohio—State Government Finances

SOURCE: U.S. Census Bureau, Governments Division, 2004 Survey of State Government Finances, January 2006.

In 2004, state and local property taxes amounted to \$11,232,828,000 or \$981 per capita. The per capita amount ranks the state 25th nationally. Local governments collected \$11,192,192,000 of the total and the state government \$40,636,000.

Ohio taxes retail sales at a rate of 6%. In addition to the state tax, local taxes on retail sales can reach as much as 2%, making for a potential total tax on retail sales of 8%. Food purchased for consumption off-premises is tax exempt. The tax on cigarettes is 125 cents per pack, which ranks 13th among the 50 states and the District of Columbia. Ohio taxes gasoline at 28 cents per gallon. This is in addition to the 18.4 cents per gallon federal tax on gasoline.

According to the Tax Foundation, for every federal tax dollar sent to Washington in 2004, Ohio citizens received \$1.01 in federal spending.

37 ECONOMIC POLICY

Although Ohio seeks to attract new industries, a substantial portion of the state's annual economic growth stems from the expansion of existing businesses.

Ohio offers numerous business incentives to spur industrial development. The state encourages capital investment by offering private developers property tax abatements for commercial redevelopment. A 1976 state law permits municipal corporations to exempt certain property improvements from real property taxes for periods of up to 30 years. The state's guaranteed-loan program for industrial developers provides repayment guarantees on 90% of loans up to \$1 million. The state also offers revenue bonds to finance a developer's land, buildings, and equipment at interest rates below the going mortgage interest rates.

The Ohio Department of Development (ODOD) consists of several divisions, including the: Economic Development Division, Office of Business Development, Office of Tax Incentives, Office of Financial Incentives, Office of Industrial Training, and Office of Small and Developing Business. These organizations administer plans for economic growth in cooperation with city and county governments. They inform companies about opportunities and advantages in the state and promote the sale of Ohio's exports abroad. In the 1990s, the departments instituted research and development programs at state universities in such fields as biotechnology, clean coal technologies, welding and joining technologies, robotics, polymers, and artificial intelligence. Special attention has been paid to the development of Ohio's growing life science industry. The Third Frontier Internship Program is designed to keep Ohio's college graduates in the state by connecting them with Ohio businesses through student internships.

38 HEALTH

The infant mortality rate in October 2005 was estimated at 8.2 per 1,000 live births. The birth rate in 2003 was 13.3 per 1,000 population. The abortion rate stood at 16.5 per 1,000 women in 2000. In 2003, about 87.7% of pregnant woman received prenatal care beginning in the first trimester. In 2004, approximately 80% of children received routine immunizations before the age of three.

The crude death rate in 2003 was 9.5 deaths per 1,000 population. As of 2002, the death rates for major causes of death (per 100,000 resident population) were: heart disease, 274.8; cancer, 220.4; cerebrovascular diseases, 63.5; chronic lower respiratory diseases, 53.1; and diabetes, 33.7. Ohio and North Dakota share the distinction of having the third-highest diabetes mortality rate in the nation (following West Virginia and Louisiana). The mortality rate from HIV infection was 2.1 per 100,000 population. In 2004, the reported AIDS case rate was at about 5.8 per 100,000 population. In 2002, about 55.6% of the population was considered overweight or obese. As of 2004, about 25.8% of state residents were smokers, representing the fifth-highest rate in the country.

In 2003, Ohio had 163 community hospitals with about 33,000 beds. There were about 1.4 million patient admissions that year and 30 million outpatient visits. The average daily inpatient census was about 20,600 patients. The average cost per day for hos-

pital care was \$1,504. Also in 2003, there were about 989 certified nursing facilities in the state with 106,426 beds and an overall occupancy rate of about 75%. In 2004, it was estimated that about 72.2% of all state residents had received some type of dental care within the year. Ohio had 289 physicians per 100,000 resident population in 2004 and 930 nurses per 100,000 in 2005. In 2004, there was a total of 5,981 dentists in the state.

In 2005, the Cleveland Clinic ranked fourth on the Honor Roll of Best Hospitals 2005 by *U.S. News & World Report*. In the same report, it ranked first in the nation for care of heart disease and heart surgery. Rainbow Babies and Children's Hospital in Cleveland ranked sixth in the nation for best pediatric care. University Hospitals of Cleveland, Akron General Medical Center, Christ Hospital in Cincinnati, and Ohio State University Hospital in Columbus all ranked within the top 40 best hospitals in care for heart disease and heart surgery.

About 17% of state residents were enrolled in Medicaid programs in 2003; 15% were enrolled in Medicare programs in 2004. Approximately 12% of the state population was uninsured in 2004. In 2003, state health care expenditures totaled \$13.3 billion.

3⁹ SOCIAL WELFARE

The growth of welfare programs in the state was remarkably rapid during the 1970s and early 1980s. From 1970 to 1978, for example, Aid to Families with Dependent Children (AFDC) nearly tripled, to \$446 million; by 1996, there were 552,000 AFDC recipients; the average payment per family was \$421.

In 2004, about 306,000 people received unemployment benefits, with the average weekly unemployment benefit at \$252. For 2005, the estimated average monthly participation in the food stamp program included about 1,007,172 persons (448,524 households); the average monthly benefit was about \$95.72 per person. That year, the total of benefits paid through the state for the food stamp program was about \$1.15 billion.

Temporary Assistance for Needy Families (TANF), the system of federal welfare assistance that officially replaced Aid to Families with Dependent Children (AFDC) in 1997, was reauthorized through the Deficit Reduction Act of 2005. TANF is funded through federal block grants that are divided among the states based on an equation involving the number of recipients in each state. Ohio's TANF program is called Ohio Works First (OWF). In 2004, the state program had 186,000 recipients; state and federal expenditures on this TANF program totaled \$310 million in fiscal year 2003.

In December 2004, Social Security benefits were paid to 1,950,740 Ohio residents. This number included 1,199,320 retired workers, 236,870 widows and widowers, 230,860 disabled workers, 134,780 spouses, and 148,910 children. Social Security beneficiaries represented 17% of the total state population and 92.6% of the state's population age 65 and older. Retired workers received an average monthly payment of \$970; widows and widowers, \$933; disabled workers, \$876; and spouses, \$489. Payments for children of retired workers averaged \$501 per month; children of deceased workers, \$636; and children of disabled workers, \$263. Federal Supplemental Security Income payments in December 2004 went to 245,401 Ohio residents, averaging \$418 a month.

4⁰ HOUSING

In 2004, Ohio had an estimated 4,966,746 housing units, 4,514,723 of which were occupied; 69.8% were owner-occupied. About 68% of all units were single-family, detached homes. About 22.4% of the housing units were built in 1939 or earlier; 43.7% were built between 1950 and 1979. It was estimated that 173,724 units lacked telephone service, 16,483 lacked complete plumbing facilities, and 19,901 lacked complete kitchen facilities. Utility gas was the most common energy source for heating. The average household had 2.47 members.

In 2004, 51,700 new privately owned units were authorized for construction. The median home value was \$122,384. The median monthly cost for mortgage owners was \$1,090. Renters paid a median of \$587 per month. In September 2005, the state received grants of \$255,000 from the US Department of Housing and Urban Development (HUD) for rural housing and economic development programs. For 2006, HUD allocated to the state over \$48.9 million in community development block grants (CDBG). The city of Cleveland received over \$24.5 million in CDBGs.

4¹ EDUCATION

In 2004, 88.1% of Ohio residents age 25 and older were high school graduates, surpassing the national average of 84%. Some 24.6% had obtained a bachelor's degree or higher.

Ohio claims a number of "firsts" in US education: the first kindergarten, established by German settlers in Columbus in 1838; the first junior high school, also at Columbus, in 1909; the first municipal university, the University of Cincinnati, founded in 1870; and the first college to grant degrees to women, Oberlin, in 1837. The state's earliest school system was organized in Akron in 1847.

The total enrollment in Ohio's public schools for fall 2002 stood at 1,838,000. Of these, 1,284,000 attended schools from kindergarten through grade eight, and 554,000 attended high school. Approximately 79.4% of the students were white, 17% were black, 2.1% were Hispanic, 1.3% were Asian/Pacific Islander, and 0.1% were American Indian/Alaskan Native. Total enrollment was estimated at 1,825,000 in fall 2003 and expected to be 1,752,000 by fall 2014, a decline of 4.7% during the period 2002–14. Expenditures for public education in 2003/04 were estimated at \$19.2 billion or \$8,963 per student. In fall 2003, there were 239,323 students enrolled in 987 private schools. Since 1969, the National Assessment of Educational Progress (NAEP) has tested public school students nationwide. The resulting report, *The Nation's Report Card*, stated that in 2005, eighth graders in Ohio scored 283 out of 500 in mathematics compared with the national average of 278.

As of fall 2002, there were 587,996 students enrolled in college or graduate school; minority students comprised 15.1% of total postsecondary enrollment. In 2005 Ohio had 187 degree-granting institutions. State universities include Ohio State University (Columbus), Ohio University (Athens), Miami University (Oxford), and other state universities at Akron, Bowling Green, Cincinnati, Cleveland, Dayton, Kent, Toledo, Wilberforce, and Youngstown. The largest, Ohio State, was chartered in 1870 and also has campuses at Lima, Mansfield, Marion, Newark, and Wooster. Ohio has 36 public two-year colleges. Well-known private colleges and universities include Antioch (Yellow Springs), Case Western Reserve (Cleveland), Kenyon (Gambier), Muskingum (New Concord),

Oberlin, Wittenberg (Springfield), and Wooster. The conservatories at both Oberlin and the Cleveland Institute of Music have national reputations.

Ohio residents enrolled as full-time students at an eligible institution within the state may apply for instructional grants from the Student Assistance Office of the Ohio Board of Regents. Guaranteed loans are provided through the Ohio Student Loan Commission.

42 ARTS

The Ohio Arts Council was founded in 1965 with the mission of developing and preserving the state's cultural heritage. The council consists of a Board with 15 governor-appointed, voting members and 4 non-voting members 2 from the Ohio Senate and 2 from the House of Representatives. In 2005, the Ohio Arts Council and other Ohio arts organizations received 52 grants totaling \$1,740,300 from the National Endowment for the Arts. State and private sources contributed funds to arts programming as well. As of 2006, the Ohio Humanities Council presented a number of historical and literary programs, including "Booked for the Day: Literary Retreats for Working Professionals" and the Ohio Chautauqua. In 2005, the National Endowment for the Humanities contributed \$2,270,470 to 27 state programs.

The earliest center of artistic activities in Ohio was Cincinnati, where a group of young painters did landscapes and portraits as early as 1840. The state's first art gallery was established there in 1854; the Cincinnati Art Academy was founded in 1869, and the Art Museum in 1886. Famous American artists who worked in Cincinnati during part of their careers include Thomas Cole, a founder of the "Hudson River School" of landscape painting, and Columbus-born George Bellows, whose realistic *Stag at Sharkey's* is displayed at the Cleveland Museum of Art (founded in 1913). Other notable centers for the visual arts include the Akron Art Institute, Columbus Museum of Art, Dayton Art Institute, Toledo Museum of Art, and museums or galleries in Marion, Oberlin, Springfield, Youngstown, and Zanesville.

Cincinnati also was an early center for the theater; the Eagle Theater opened there in 1839, and shortly afterward, the first showboat on the Ohio River began making regular stops at the city. The first US minstrel show appeared in Ohio in 1842. Ohio has three professional theatrical companies: the Cincinnati Playhouse, the Cleveland Play House, and the Great Lakes Theatre Festival. Celebrating its 90th anniversary during the 2005/06 season, The Cleveland Play House is the nation's oldest permanent repertory theater. As of 2006, The Ohio Community Theater Association included groups in Akron, Canton, Columbus, Mansfield, Toledo, and Youngstown, among many other locations.

The Cincinnati Symphony was founded in 1895 and reorganized in 1909 with Leopold Stokowski as conductor. The Cincinnati Pops Orchestra acquired a new summer home in 1984 at the newly opened Riverbend Music Center. The Cincinnati Opera Association, founded in 1920, is the second-oldest opera company in the United States. Cincinnati is also the host of the annual Cincinnati May Festival, a classical music event that is considered to be the oldest continuous choral festival in the Western Hemisphere.

The Cleveland Orchestra, founded in 1918, has risen to world-class stature since 1946, when George Szell began his 24-year ten-

ure as conductor and music director. Blossom Music Center, the Cleveland Orchestra's summer home located between Cleveland and Akron, has been a center for both classical and popular music in Northeast Ohio since opening in 1968. In 2002/2003 Blossom underwent major improvements to its structures and landscaping. A \$36.7 million renovation and expansion of the orchestra's main home, Severance Hall, had been completed three years earlier.

Smaller professional musical groups in Cleveland include Apollo's Fire (the Cleveland Baroque Orchestra), the Cleveland Chamber Orchestra, and the Cleveland Pops Orchestra. The Cleveland Opera finds its home at the State Theatre and the Lyric Opera Cleveland is a resident of Playhouse Square.

There are civic symphony orchestras in Columbus, Dayton, Toledo, and Youngstown. Ballet companies are based in Cincinnati, Dayton, and Toledo. E. J. Thomas Hall in Akron is the home of the Ohio Ballet and the Akron Symphony. Operas are performed by resident companies in Cleveland, Columbus, Cincinnati, Toledo, and Dayton. There are numerous local arts festivals and craft shows. In 2005, Cleveland introduced the first ever Ingenuity Festival, a four-day event celebrating and promoting the awareness of the relationship between art and technology.

The nation's first college music department was established at Oberlin College in 1865; the Cincinnati Conservatory of Music was established in 1867, the Baldwin-Wallace College Conservatory in 1899, and the Cleveland Institute of Music in 1920. The Baldwin-Wallace Bach Festival, begun in 1932, is the oldest collegiate Bach festival in the country, celebrating its 75th Anniversary in 2007. Bach's four major choral works are performed at the festival in four-year cycles (one per year). Baldwin-Wallace is also home to the Riemenschneider Bach Institute, guardian of priceless Bach-related first editions and manuscripts.

The Cleveland International Piano Competition, held biennially at the Cleveland Institute of Music since 1975, has become one of the foremost events of its type, drawing contestants from 19 countries throughout the world. In 2005, the competition awarded a record cash prize of \$50,000 to the winner.

43 LIBRARIES AND MUSEUMS

Ever since early settlers traded coonskins for books and established, in 1804, the Coonskin Library (now on display at the Ohio Historical Center in Columbus), Ohioans have stressed the importance of the public library system. In calendar year 2001, Ohio had 250 public library systems, with a total of 716 libraries, of which 482 were branches. For that same year, the state's public library system had 47,088,000 volumes of books and serial publications on its shelves, and a total circulation of 156,527,000. The system also had 3,418,000 audio and 2,716,000 video items, 127,000 electronic format items (CD-ROMs, magnetic tapes, and disks), and 66 bookmobiles.

Major public library systems include those of Cincinnati, with 4,721,766 volumes in 1998; Cleveland, 3,782,419; Cuyahoga County, 3,085,123; Dayton, 1,782,419; and Columbus, 2,433,636. Leading academic libraries include those of Ohio State University, over seven million books; Case Western Reserve University, 1,304,852 books; and the University of Cincinnati, over three million books. The State Library of Ohio in Columbus, founded in 1817, provides research and information services for Ohio's state

government and agencies with more than two million books and periodicals. In 2001, operating income for the state's public library system came to \$682,412,000 and included \$1,085,000 in federal grants and \$499,124,000 in state grants.

Among the state's more than 284 museums are the Museum of Art, Natural History Museum, and Western Reserve Historical Society Museum in Cleveland; the Museum of Natural History, Art Museum, and Taft Museum in Cincinnati; the Dayton Art Institute; and the Center of Science and Industry and Ohio Historical Center in Columbus. The Zanesville Art Center has collections of ceramics and glass made in the Zanesville area. Also noteworthy are the US Air Force Museum near Dayton, the Neil Armstrong Air and Space Museum at Wapakoneta, and the Ohio River Museum in Marietta. Cincinnati has a conservatory of rare plants, while Cleveland has botanical gardens and an aquarium; both cities have zoos. The National First Ladies' Library in Canton features the artwork and artifacts of First Lady Caroline Harrison.

Historical sites in Ohio include the Schoenbrunn Village State Memorial, a reconstruction of the state's first settlement by Moravian missionaries, near New Philadelphia; the early-19th-century Piqua Historical Area, with exhibits of Indian culture; and the Fort Meigs reconstruction at Perrysburg. Archaeological sites include the "great circle" mounds, built by the Hopewell Indians at present-day Newark, and Inscription Rock, marked by prehistoric Indians, on Kelley's Island.

44 COMMUNICATIONS

In 2004, 94.9% of Ohio's occupied housing units had telephones. In addition, by June of that same year there were 6,188,081 mobile wireless telephone subscribers. In 2003, 58.8% of Ohio households had a computer and 52.5% had Internet access. By June 2005, there were 1,505,272 high-speed lines in Ohio, 1,395,062 residential and 110,210 for business.

Many of the state's radio stations were established in the early 1920s, when the growth of radio broadcasting was fostered by the availability of low-priced sets manufactured by Crosley Radio of Cincinnati. In 2005, there were 46 major AM stations, 159 major FM stations, and 31 commercial and 11 noncommercial television stations. In 1999, the Cleveland area had 1,479,020 television households, 72% of which received cable. In that same year the Cincinnati area had 820,000 television households, 64% receiving cable. Finally, of the Columbus area's 757,860 television-viewing families, 66% watched cable. A total of 168,083 Internet domain names were registered in Ohio in 2000.

45 PRESS

The first newspaper published in the region north and west of the Ohio River was the *Centinel of the North-Western Territory*, which was written, typeset, and printed in Cincinnati by William Maxwell in 1793. The oldest newspaper in the state still published under its original name is the *Scioto Gazette*, which appeared in 1800. The oldest extant weekly, the *Lebanon Western Star*, began publication in 1807, and the first daily, the *Cincinnati Commercial Register*, appeared in 1826. By 1840 there were 145 newspapers in Ohio.

Two of the state's most influential newspapers, the *Cleveland Plain Dealer* and the *Cincinnati Enquirer*, were founded in 1841.

In 2005, the *Cleveland Plain Dealer* was the twentieth-largest daily newspaper in the country. In 1878, Edward W. Scripps established the *Cleveland Penny Press* (later called the *Press*), the first newspaper in what would become the extensive Scripps-Howard chain (though the *Press* folded in 1982). He later added to his newspaper empire the *Cincinnati Post* (1881) and the *Columbus Citizen* (1899), as well as papers in Akron, Toledo, and Youngstown.

In 2005, the state had 30 mornings dailies, 54 evening editions, and 41 Sunday editions. With a total of 84 daily newspapers, Ohio has the third-largest number of daily papers in the country (following California and Texas).

The following table lists leading Ohio newspapers with their approximate daily circulation in 2005:

AREA	NAME	DAILY	SUNDAY
Akron	<i>Beacon Journal</i> (m,S)	173,975	185,963
Cincinnati	<i>Enquirer</i> (m,S)	183,051	192,240
	<i>Post</i> (e)	43,398	68,910 (Sat.)
Cleveland	<i>Plain Dealer</i> (m,S)	354,309	479,131
Columbus	<i>Dispatch</i> (m,S)	251,045	361,304
Dayton	<i>Daily News</i> (m,S)	178,099	185,122
Toledo	<i>Blade</i> (m,S)	139,398	183,632
Youngstown	<i>Vindicator</i> (e,S)	66,487	94,710

Sun Newspapers, a weekly newspaper, founded in 1969, produces 25 regional editions to serve 82 communities in the greater Cleveland and Akron areas, with a weekly circulation of 270,000. It is the largest chain of fully paid weekly newspapers in the United States. *Crain's Cleveland Business* has reported a readership of about 90,000 per week. Regional interest periodicals include *Cleveland Magazine*, *Cincinnati Magazine*, *Ohio Magazine*, and *Northern Ohio Live*.

46 ORGANIZATIONS

In 2006, there were over 15,895 nonprofit organizations registered within the state, of which about 10,308 were registered as charitable, educational, or religious organizations. Service organizations with headquarters in Ohio include Disabled American Veterans and the National Exchange Club.

Commercial and professional organizations include the American Ceramic Society, the Order of United Commercial Travelers of America, Music Teachers National Association, ASM International, the United States Police Canine Association, the Association for Systems Management, and the Brotherhood of Locomotive Engineers.

Sports associations operating out of Ohio are the Lighter-Than-Air Society and Professional Bowlers Association, American Motorcyclist Association, the Amateur Trapshooting Association, the International Soap Box Derby, the Freethrowers Boomerang Association, US Flag and Touch Football League, US Speedskating, and Indoor Sports Club. Special interest and hobbyist groups include the Etch-A-Sketch Club, the National Quilting Association, and the American Bonsai Society.

Arts, culture, and history are promoted in the state through such organizations as the Botanical Society of America, the American Guild of English Handbell Ringers, the American-Slovenian Polka Foundation, the Ohio and Erie Canal Association, the Ohio Art League, the Ohio Arts Council, and the Ohio Valley

Art League. There are also numerous local arts groups and historical societies.

47 TOURISM, TRAVEL, AND RECREATION

Ohio visitors spend more than \$30.7 billion annually on travel and tourism and the industry supports nearly 529,100 travel-related positions. Ohio has a \$162 million dollar travel market. Visitors spend more than one billion annually in Ashtabula County alone. It is known as the Covered Bridge Capital (16) and the Wine Capital (11) of Ohio, and offers more campsites than any other county in Ohio (18).

Cleveland, Columbus, and Cincinnati all offer major attractions of museums, restaurants, shopping, parks, and concerts. The Rock and Roll Hall of Fame and Museum and the Great Lakes Science Center, both in Cleveland, are major attractions. Major league sports (Indians baseball, Cavaliers basketball, Browns football) also draw visitors to Cleveland. The semiannual Cleveland International Piano Competition, with its \$50,000 first prize, draws crowds to see performances with the Cleveland Orchestra. The NFL Hall of Fame is located in Canton. Popular amusement parks include Cedar Point in Sandusky, King's Island in Cincinnati, and Six Flags Worlds of Adventure in Aurora. Sandusky is also the launching point for visiting the Lake Erie Islands of Put-in-Bay and Middle Bass Island. There visitors can see the monument to William Hazard Perry (naval hero of the War of 1812) and visit wineries.

Beaches and parks in the Lake Erie region are especially popular with tourists during the summer, including the Mentor Headlands State Park. The Cuyahoga Valley National Park is also a popular attraction, linking the urban centers of Cleveland and Akron. The Cleveland Metroparks system creates an "Emerald Necklace" around the greater Cleveland area.

Ohio state parks comprise 204,274 acres (84,000 hectares). Among the most visited state parks are Alum Creek, East Harbor and Kelleys Island (both on Lake Erie), Grand Lake, St. Mary's, Hocking Hills, Hueston Woods, Mohican, Pymatuning (on the Pennsylvania border), Rocky Fork, Salt Fork, Scioto Trail, and West Branch. Ohio is the home of many Indian communities and archaeological sites such as the Great Circle Earthworks and the Miamisburg Mound and the Serpent Mound are popular visitor sites.

The most popular sport fish are bass, catfish, bullhead, carp, perch, and rainbow trout. The deer-hunting season varies for shotgun, primitive arms, and bows.

The eastern Allegheny region has several ski resorts for winter sports enthusiasts. Popular tourist attractions here include the Amish settlement around Millersburg, the National Road-Zane Grey Museum near Zanesville, and the restored Roscoe Village on the Ohio-Erie Canal. The southern region offers scenic hill country and the showboat *Majestic*, the last of the original floating theaters, in Cincinnati.

In the western region, tourist sites include the Wright brothers' early flying machines in Dayton's Carillon Park, the Ohio Caverns at West Liberty, and the Zane Caverns near Bellefontaine. The central region is "Johnny Appleseed" country; the folk hero (a frontiersman whose real name was John Chapman) is commemorated in Mansfield by the blockhouse to which he directed settlers in order to save them from an Indian raid. In Columbus are the

reconstructed Ohio Village and the Exposition Center, site of the annual Ohio State Fair, held for 13 days in mid-August.

Other leading tourist attractions include Ohio's presidential memorials and homes: the William Henry Harrison Memorial at North Bend, Ulysses S. Grant's birthplace at Point Pleasant, the James A. Garfield home at Mentor, the Rutherford B. Hayes home at Fremont, the William McKinley Memorial at Canton, the Taft National Historic Site in Cincinnati, and the Warren G. Harding home in Marion. Also of interest are the Thomas A. Edison birthplace at Milan, and Malabar Farm, in Richland County, home of author and conservationist Louis Bromfield.

48 SPORTS

There are seven major professional sports teams in Ohio: the Cleveland Indians and the Cincinnati Reds of Major League Baseball, the Columbus Crew of Major League Soccer, the Cincinnati Bengals and the Cleveland Browns of the National Football League, the Columbus Blue Jackets of the National Hockey League, and the Cleveland Cavaliers of the National Basketball Association.

The state is also home to Triple-A minor league baseball teams in Columbus and Toledo, a Double-A team in Akron, and Single-A teams in Eastlake, Niles, and Dayton. In addition, there are minor league hockey teams in Cleveland, Columbus, Dayton, and Toledo.

The Cincinnati Reds (traditionally short for Redstockings) were the first professionally organized baseball team, playing their first season in 1869. Their record was 64–0. The Reds won the World Series in 1919, 1940, 1975, 1976, and 1990. The Indians won the World Series in 1920 and 1948. In 1995, the Indians won their first American League pennant since 1954, but lost to the Atlanta Braves in the World Series. They returned to the Series in 1997, this time losing to the Florida Marlins. The original Cleveland Browns, who moved to Baltimore in 1995, won four NFL titles, football's championship prior to the Super Bowl, the last in 1964. An expansion or relocation NFL team began play as the Browns in a new stadium in Cleveland beginning in 1999. The Bengals won the American Football Conference Championship in both 1981 and 1988, but lost each year's Super Bowl.

Akron has been headquarters for the Professional Bowlers Association (PBA) since its founding in 1958. The PBA's top tournament is played there each year, and the PBA Hall of Fame is also located in Akron. The NEC Invitational is played annually in Akron, and the Memorial Golf Tournament in Dublin.

Major horse-racing tracks include Cleveland's Thistledown, Cincinnati's River Downs, Columbus's Scioto Downs, and other tracks at Toledo, Lebanon, Grove City, and Northfield. The Cleveland Gold Cup race is held annually at Thistledown, as is the Ohio Derby. The Little Brown Jug classic for three-year-old pacers takes place every year at the Delaware Fairgrounds, and the Ohio State race for two-year-old trotters is held during the state fair at Columbus.

Several new facilities have been constructed, including the new Cleveland Browns Stadium in 1999, Jacobs Field in 1994 (home of the Indians), Columbus Crew Stadium, and most recently, the Great American Ballpark in Cincinnati (2003). The Cincinnati Reds make it their home park.

In collegiate sports, Ohio State University has long been a football powerhouse, winning over 25 Big Ten titles. Ohio State won

the Rose Bowl in 1950, 1955, 1958, 1969, 1974, and 1997. The Buckeyes were named national champions in 1942, 1954 (with UCLA), 1957 (with Auburn), 1968, and in 2003 after upsetting Miami (FL) in the Fiesta Bowl. Ohio State also has won National Collegiate Athletic Association (NCAA) championships in baseball, basketball, fencing, golf, gymnastics, and swimming, while Cincinnati and Dayton universities have had highly successful basketball teams. The Pro Football Hall of Fame is located in Canton, where the sport was first organized professionally in 1920.

Other annual sporting events include the grand tournament of the American Trapshooting Association in Vandalia, the Grand Prix or Cleveland Indy car race, and the All-American Soap Box Derby in Akron, a nationally covered event in which 9- to 15-year-olds compete.

49 FAMOUS OHIOANS

Ohio has been the native state of seven US presidents and the residence of another. Inventions by Ohioans include the incandescent light, the arc light, and the airplane.

William Henry Harrison (b. Virginia, 1773–1841), the ninth US president, came to Ohio as a US Army ensign in territorial times. After serving in the Indian wars under Gen. Anthony Wayne, he became secretary of the Northwest Territory. As the territorial delegate to Congress, he fostered the Harrison Land Act, which stimulated settlement of the public domain. Named territorial governor in 1800, Harrison conducted both warfare and peace negotiations with the Indians. After the defeat of British and Indian forces in 1813, he became known as the “Washington of the West.” After settling at North Bend on the Ohio River, he began a political career that carried him to the White House in 1841. Harrison caught a chill from a cold March wind and died of pneumonia exactly one month after his inauguration.

From 1869 to 1881, the White House was occupied by three Ohioans. All were Republicans who had served with distinction as Union Army generals. The first, Ulysses Simpson Grant (Hiram Ulysses Grant, 1822–85), the 18th US president, was an Ohio farm boy educated at West Point. After service in the Mexican War, he left the US Army, having been charged with intemperance. He emerged from obscurity in 1861, when he was assigned to an Illinois regiment. Grant rose quickly in command; after victories at Shiloh and Vicksburg, he was commissioned major general. In 1864, he directed the Virginia campaign that ended with Confederate surrender, and this rump, slouching, laconic man became the nation’s hero. In 1868, he was elected president, and he was reelected in 1872. His second term was rocked with financial scandals, though none were directly connected to Grant. After leaving the presidency in 1877, he went bankrupt, and to discharge his debts, he wrote his memoirs. That extraordinary book was completed four days before his death from throat cancer in 1885. Grant is buried in a monumental tomb in New York City.

Rutherford B. Hayes (1822–93), the 19th US president, was born in Delaware, Ohio, and educated at Kenyon College and Harvard Law School. Following Army service, he was elected to Congress, and in 1876 became the Republican presidential nominee. In a close and disputed election, he defeated New York’s Governor Samuel J. Tilden. Hayes chose not to run for re-election, returning instead to Ohio to work on behalf of humanitarian causes.

In 1893, Hayes died in Fremont, where the Hayes Memorial was created—the first presidential museum and library in the nation.

James A. Garfield (1831–81), 20th US president, was born in a log cabin in northern Ohio. Between school terms, he worked as a farmhand and a mule driver on the Ohio Canal. After holding several Civil War commands, he served in Congress for 18 years. Elected president in 1880, he held office but a few months; he was shot by a disappointed office seeker in the Washington, DC, railroad station on 2 July and died 11 weeks later.

Benjamin Harrison (1833–1901), 23rd US president and grandson of William Henry Harrison, was born in North Bend. After graduation from Miami University, he studied law and began to practice in Indianapolis. Military command in the Civil War was followed by service in the US Senate and the Republican presidential nomination in 1888. As president, Harrison gave impetus to westward expansion, moved toward annexation of Hawaii, and enlarged the civil-service system.

US presidents in the 20th century include three more native Ohioans. William McKinley (1843–1901) was born in Niles. Elected in 1896 as the 25th president, he established the gold standard and maintained tariff protection for US manufactures. Early in his second term, while greeting a throng of people, he was shot to death by a young anarchist. William Howard Taft (1857–1930), of Cincinnati, was the 27th US president. He gained a national reputation in 1904 as President Theodore Roosevelt’s secretary of war; five years later, he succeeded Roosevelt in the White House. Defeated in 1912, Taft then left Washington for a law professorship at Yale. In 1921, under President Warren G. Harding (1865–1923), he became US chief justice, serving in that office until a month before his death. Harding, the last Ohioan to win the White House, was born in Blooming Grove. He went into politics from journalism, after serving as editor of the *Marion Star*. After eight years in the US Senate, he was a dark-horse candidate for the Republican presidential nomination in 1920. He won the election from James M. Cox (1870–1957), another Ohio journalist-politician, and became the 29th US president. Harding, who died in office, was surrounded by graft and corruption in his own cabinet.

Three US vice presidents were natives of Ohio. Thomas A. Hendricks (1819–85) was elected on the Democratic ticket with Grover Cleveland in 1884. Charles W. Fairbanks (1852–1918) served from 1905 to 1909 under Theodore Roosevelt. Charles Gates Dawes (1865–1951) became vice president under Calvin Coolidge in 1925, the same year the Dawes Plan for reorganizing German finances brought him the Nobel Peace Prize; from 1929 to 1932, he served as US ambassador to Great Britain.

Three Ohioans served as chief justice on the Supreme Court: Salmon P. Chase (b. New Hampshire, 1808–73), Morrison R. Waite (b. Connecticut, 1816–88), and Taft. Most notable among nearly 40 cabinet officers from Ohio were Secretary of State Lewis Cass (b. New Hampshire, 1783–1866), Treasury Secretaries Chase and John Sherman (1823–1900), and Secretary of War Edwin M. Stanton (1814–69). William Tecumseh Sherman (1820–91) was a Union general in the Civil War whose Georgia campaign in 1864 helped effect the surrender of the Confederacy. Although disappointed in his quest for the presidency, US Senator Robert A. Taft (1889–1953) was an enduring figure, best remembered for his authorship of the Taft-Hartley Labor Management Relations Act of 1947.

Nobel Prize winners from Ohio include Dawes and physicists Arthur Compton (1892–1962) and Donald Glaser (b.1926). Notable Pulitzer Prize winners include novelist Louis Bromfield (1896–1956), dramatist Russell Crouse (1893–1966), historian Paul Herman Buck (1899–1979), and historian and biographer Arthur Schlesinger Jr. (b.1917). Ohio writers of enduring fame are novelists William Dean Howells (1837–1920), Zane Grey (1875–1939), and Sherwood Anderson (1876–1941), whose short story collection *Winesburg, Ohio* was set in his hometown of Clyde; poets Paul Laurence Dunbar (1872–1906) and Hart Crane (1899–1932); and humorist James Thurber (1894–1961). Toni Morrison (b.1931), winner of the 1988 Pulitzer Prize for literature and the 1993 Nobel Prize for literature, was born in Lorain, Ohio. Among Ohio's eminent journalists are Whitelaw Reid (1837–1912), satirists David R. Locke (1833–88) and Ambrose Bierce (1842–1914), columnist O. O. McIntyre (1884–1938), newsletter publisher W. M. Kiplinger (1891–1967), and James Reston (b.Scotland, 1909–95), an editor and columnist for the *New York Times* along with author-commentator Lowell Thomas (1892–1981). Important in the art world were painters Thomas Cole (b.England, 1801–48), Frank Duveneck (b.Kentucky, 1848–1919), and George Bellows (1882–1925), as well as architects Cass Gilbert (1859–1934) and Philip Johnson (1906–2005). Defense lawyer Clarence Darrow (1857–1938) was also an Ohioan.

Ohio educators whose books taught reading, writing, and arithmetic to the nation's schoolchildren were William Holmes McGuffey (b.Pennsylvania, 1800–73), Platt R. Spencer (1800–64), and Joseph Ray (1807–65). In higher education, Horace Mann (b.Massachusetts, 1796–1859) was the first president of innovative Antioch College, and William Rainey Harper (1856–1906) founded the University of Chicago.

Several Ohio-born inventor-scientists have furthered the nation's industrial progress. Thomas A. Edison (1847–1931) produced the incandescent lamp, the phonograph, and the movie camera. Charles Brush (1849–1929) invented the arc light. John H. Patterson (1844–1922) helped develop the cash register. The Wright brothers, Orville (1871–1948) and Wilbur (b.Indiana, 1867–1912), made the first flight in a powered aircraft. Charles F. Kettering (1876–1958) invented the automobile self-starter. Ohio's leading industrialist was John D. Rockefeller (b.New York, 1839–1937), founder of Standard Oil of Ohio. Harvey S. Firestone (1868–1938) started the tire company that bears his name. Edward "Eddie" Rickenbacker (1890–1973), an ace pilot in World War I, was president of Eastern Airlines.

The most notable Ohioans in the entertainment field are marks-woman Annie Oakley (Phoebe Anne Oakley Mozee, 1860–1926);

movie actors Clark Gable (1901–60) and Roy Rogers (Leonard Slye, 1912–98); movie director Stephen Spielberg (b.1947); comedian Bob Hope (Leslie Townes Hope, b.England, 1903); actors Paul Newman (b.1925), Hal Holbrook (b.1925), and Joel Grey (b.1932); jazz pianist Art Tatum (1910–56); and composer Henry Mancini (1924–94).

Leading sports figures from Ohio are boxing champion Jim Jeffries (1875–1953), racing driver Barney Oldfield (1878–1946), baseball pitcher Cy Young (1867–1955), baseball executive Branch Rickey (1881–1965), baseball star Peter "Pete" Rose (b.1941), who broke Ty Cobb's record for the most hits, track star Jesse Owens (b.Alabama, 1912–80), jockey George Edward "Eddie" Arcaro (1916–97), and golfer Jack Nicklaus (b.1940).

Astronauts from Ohio include John Glenn (b.1921), the first American to orbit Earth, who was elected US senator from Ohio in 1974; and Neil Armstrong (b.1930), the first man to walk on the moon.

OKLAHOMA

State of Oklahoma

ORIGIN OF STATE NAME: Derived from the Choctaw Indian words *okla humma*, meaning “land of the red people.” **NICKNAME:** The Sooner State. **CAPITAL:** Oklahoma City. **ENTERED UNION:** 16 November 1907 (46th). **SONG:** “Oklahoma!” **MOTTO:** *Labor omnia vincit* (Labor conquers all things). **FLAG:** On a blue field, a peace pipe and an olive branch cross an Osage warrior’s shield, which is decorated with small crosses and from which seven eagle feathers descend. The word “Oklahoma” appears below. **OFFICIAL SEAL:** Each point of a five-pointed star incorporates the emblem of a Native American nation: (clockwise from top) Chickasaw, Choctaw, Seminole, Creek, and Cherokee. In the center, a frontiersman and Native American shake hands before the goddess of justice; behind them are symbols of progress, including a farm, train, and mill. Surrounding the large star are 45 small ones and the words “Great Seal of the State of Oklahoma 1907.” **BIRD:** Scissor-tailed flycatcher. **FISH:** White bass (sand bass). **FLOWER:** Mistletoe. **TREE:** Redbud. **LEGAL HOLIDAYS:** New Year’s Day, 1 January; Birthday of Martin Luther King Jr., 3rd Monday in January; Presidents’ Day, 3rd Monday in February; Confederate Memorial Day, May 10; National Memorial Day, last Monday in May; Independence Day, 4 July; Labor Day, 1st Monday in September; Veterans’ Day, 11 November; Thanksgiving Day, 4th Thursday in November and the following day; Christmas Day, 25 December and the day following. **TIME:** 6 AM CST = noon GMT.

¹ LOCATION, SIZE, AND EXTENT

Situated in the western south-central United States, Oklahoma ranks 18th in size among the 50 states.

The total area of Oklahoma is 69,956 sq mi (181,186 sq km), of which land takes up 68,655 sq mi (177,817 sq km) and inland water 1,301 sq mi (3,369 sq km). Oklahoma extends 464 mi (747 km) E–W including the panhandle in the NW, which is about 165 mi (266 km) long. The maximum N–S extension is 230 mi (370 km).

Oklahoma is bordered on the N by Colorado and Kansas; on the E by Missouri and Arkansas; on the S and SW by Texas (with part of the line formed by the Red River); and on the extreme W by New Mexico. The total estimated boundary length of Oklahoma is 1,581 mi (2,544 km). The state’s geographic center is in Oklahoma County, 8 mi (13 km) N of Oklahoma City.

² TOPOGRAPHY

The land of Oklahoma rises gently to the west from an altitude of 289 ft (88 m) at Little River in the southeastern corner (the lowest point in the state) to a height of 4,973 ft (1,517 m) at Black Mesa, the highest elevation, on the tip of the panhandle. The mean elevation of the state is approximately 1,300 ft (397 m). Four mountain ranges cross this Great Plains state: the Boston Mountains (part of the Ozark Plateau) in the northeast, the Quachitas in the southeast, the Arbuckles in the south-central region, and the Wichitas in the southwest. Much of the northwest belongs to the High Plains, while northeastern Oklahoma is mainly a region of buttes and valleys.

Not quite two-thirds of the state is drained by the Arkansas River, and the remainder by the Red River. Within Oklahoma, the Arkansas is joined by the Verdigris, Grand (Neosho), and Illinois rivers from the north and northeast, and by the Cimarron and Canadian rivers from the northwest and west. The Red River,

which marks most of the state’s southern boundary, is joined by the Washita, Salt Fork, Blue, Kiamichi, and many smaller rivers. There are few natural lakes but many artificial ones, of which the largest is Lake Eufaula, covering 102,500 acres (41,500 hectares).

³ CLIMATE

Oklahoma has a continental climate with cold winters and hot summers. Normal daily average temperatures in Oklahoma City range from 37°F (2°C) in January to 82°F (27°C) in July. The record low temperature of -27°F (-33°C) was set at Watts on 18 January 1930; the record high, 120°F (49°C), occurred at Tipton on 27 June 1994.

Dry, sunny weather generally prevails throughout the state. Precipitation varies from an average of 15 in (38 cm) annually in the panhandle to over 50 in (127 cm) in the southeast. Average annual precipitation in Oklahoma City is about 33.3 in (84 cm). Snowfall averages 9 in (23 cm) a year in Oklahoma City, which is also one of the windiest cities in the United States, with an average annual wind speed of 13 mph (20 km/hr).

Oklahoma is tornado-prone. One of the most destructive windstorms was the tornado that tore through Ellis, Woods, and Woodward counties on 9 April 1947, killing 101 people and injuring 782 others.

⁴ FLORA AND FAUNA

Grasses grow in abundance in Oklahoma. Bluestem, buffalo, sand lovegrass, and grama grasses are native, with the bluestem found mostly in the eastern and central regions, and buffalo grass most common in the western counties, known as the “short grass country.” Deciduous hardwoods stand in eastern Oklahoma, and red and yellow cactus blossoms brighten the Black Mesa area in the northwest. The eastern prairie fringed orchid was listed as threat-

ened in 2006; there were no plant species listed as endangered that year in Oklahoma.

The white-tailed deer is found in all counties, and Rio Grande wild turkeys are hunted across much of the state. Pronghorn antelope inhabit the panhandle area, and elk survive in the Wichita Mountains Wildlife Refuge, where a few herds of American buffalo (bison) are also preserved. The bobwhite quail, ring-necked pheasant, and prairie chicken are common game birds. Native sport fish include largemouth, smallmouth, white, and spotted bass; catfish; crappie; and sunfish.

In April 2006, the US Fish and Wildlife Service listed 18 species of animals (vertebrates and invertebrates) as threatened or endangered. These included three species of bat (Ozark big-eared, Indiana, and gray), bald eagle, whooping crane, black-capped vireo, red-cockaded woodpecker, Eskimo curlew, and Neosho madtom.

5 ENVIRONMENTAL PROTECTION

The Oklahoma Department of Environment Quality has overall responsibility for coordinating all pollution control activities by other state agencies and for developing a comprehensive water quality management program for Oklahoma. The Oklahoma Conservation Commission is responsible for conservation of renewable natural resources through land use planning, small watershed upstream flood control, reclamation of abandoned mine land, water quality monitoring and soil and water conservation, as well as environmental education and wetlands conservation. The Department of Wildlife Conservation manages wildlife resources and habitat specifically for hunters, anglers, and others who appreciate wildlife.

The Department of Health is responsible for the monitoring of air quality standards; the enforcement of regulations covering control of industrial and solid waste; the enforcement of regulations covering radioactive materials at the Kerr-McGee processing facility at Gore and elsewhere; and the maintenance of standards at all public waterworks and sewer systems. The Water Resources Board has broad statutory authority to protect the state's waters.

Toxic industrial wastes remain an environmental concern, and old mines in the Tar Creek area of northeastern Oklahoma still exude groundwater contaminated by zinc, iron, and cadmium. In 2003, 30 million lb of toxic chemicals were released in the state. Also in 2003, Oklahoma had 165 hazardous waste sites listed in the US Environment Protection Agency (EPA) database, 10 of which were on the National Priorities List as of 2006; among these were Tar Creek in Ottawa County and Tinker Air Force Base. In 2005, the EPA spent over \$8.8 million through the Superfund program for the cleanup of hazardous waste sites in the state. The same year, federal EPA grants awarded to the state included \$10.7 million for wastewater system improvements. A special grant of \$4.96 million was awarded for the Oklahoma Plan Demonstration Project in Tar Creek, Ottawa County, which is designed to offer demonstration programs for land restoration and environmental management.

Lands devastated by erosion during the droughts of the 1930s were purchased by the federal government and turned over to the Soil Conservation Service for restoration. When grasses were firmly established in the mid-1950s, the land was turned over to the US Forest Service and is now leased for grazing. In 2003, the state had about 890,000 acres of wetlands—about 2% of the land.

6 POPULATION

Oklahoma ranked 28th in population in the United States with an estimated total of 3,547,884 in 2005, an increase of 2.8% since 2000. Between 1990 and 2000, Oklahoma's population grew from 3,145,585 to 3,450,654, an increase of 9.7%. The population is projected to reach 3.6 million by 2015 and 3.8 million by 2025. The population density in 2004 was 51.3 persons per sq mi. In 2004 the median age in Oklahoma was 36.5; 24.4% of the on under age 18 while 13.2% was age 65 or older.

The largest city is Oklahoma City, which in 2004 had an estimated 528,042 inhabitants in the city proper and an estimated population of 1,144,327 in the metropolitan statistical area. Tulsa, the second-largest city, had an estimated population of 383,764 in the city proper and a 881,815 in the metropolitan area. Norman ranked third with a population of 100,923 in 2004. The Lawton metropolitan area had a population of about 110,514.

7 ETHNIC GROUPS

According to the 1990 Census, Oklahoma had more American Indians—252,420—than any other state, but by 1998 its estimated American Indian population of 281,000 had been surpassed by California's (292,000), and it remained in second place in 2000, with an Indian population of 273,230, or 7.9% of the state's total population—the fourth-highest percentage ranking in the United States. Oklahoma was also home to some of the nation's largest Indian reservations, including those of the Creek, Cherokee, Chickasaw, and Choctaw Indians. By 2004, the state's American Indian population had increased to 8.1% of the total population.

Black slaves came to Oklahoma (then known as Indian Territory) with their Indian masters after Congress forced the resettlement of Indians from the southeast to lands west of the Mississippi River in 1830. By the time of the Civil War, there were 7,000 free Negroes in Oklahoma. After the depression of the 1930s, blacks left the farms and small towns and concentrated in Oklahoma City and Tulsa. In 2000, the black population of 260,968 was smaller than the American Indian population. It remained thus in 2004, when the black population accounted for 7.7% of the state's total population.

Mexicans came to Oklahoma during the 19th century as laborers on railroads and ranches, and in coal mines. Later they worked in the cotton fields until the depression of the 1930s and subsequent mechanization reduced the need for seasonal labor. Today, most first- and second-generation Mexicans live in Oklahoma City, Tulsa, and Lawton. In 2000, Oklahomans who were classified as Hispanics or Latinos numbered 179,304 and represented 5.2% of the state's total population. Of this total, 132,813 were Mexican. In 2004, 6.3% of the state's population was Hispanic or Latino.

Italians, Czechs, Germans, Poles, Britons, Irish, and others of European stock also came to Oklahoma during the 19th century. Foreign immigration has been small since that time, however, and in 2000, less than 4% of the population consisted of the foreign born (who numbered 131,747). Persons claiming at least one specific ancestry group in 2000 included English, 291,553; German, 435,245; and Irish, 354,802. In 2000, the Asian population numbered 46,767 and there were 2,372 Pacific Islanders. In 2004, 1.5% of the population was Asian, and 0.1% of the population was Pa-

cific Islander. A full 4% of the population reported origin of two or more races that year.

⁸LANGUAGES

Once the open hunting ground of the Osage, Comanche, and Apache Indians, what is now Oklahoma later welcomed the deported Cherokee and other transferred eastern tribes. The diversity of tribal and linguistic backgrounds is reflected in numerous place-names such as Oklahoma itself, Kiamichi, and Muskogee. Almost equally diverse is Oklahoma English, with its uneven blending of features of North Midland, South Midland, and Southern dialects.

In 2000, 2,977,187 Oklahomans—92.6% of the resident population five years or older—spoke only English at home, down from 95% in 1990.

The following table gives selected statistics from the 2000 Census for language spoken at home by persons five years old and over. The category “Other Native North American languages” includes Apache, Cherokee, Choctaw, Dakota, Keres, Pima, and Yupik. The category “Other Asian languages” includes Dravidian languages, Malayalam, Telugu, Tamil, and Turkish. The category “African languages” includes Amharic, Ibo, Twi, Yoruba, Bantu, Swahili, and Somali.

LANGUAGE	NUMBER	PERCENT
Population 5 years and over	3,215,719	100.0
Speak only English	2,977,187	92.6
Speak a language other than English	238,532	7.4
Speak a language other than English	238,532	7.4
Spanish or Spanish Creole	141,060	4.4
Other Native North American languages	18,871	0.6
German	13,445	0.4
Vietnamese	11,330	0.4
French (incl. Patois, Cajun)	8,258	0.3
Chinese	6,413	0.2
Korean	3,948	0.1
Arabic	3,265	0.1
Other Asian languages	3,134	0.1
Tagalog	2,888	0.1
Japanese	2,546	0.1
African languages	2,546	0.1

⁹RELIGIONS

Evangelical Protestant groups predominate in Oklahoma with adherents representing about 41.4% of the total population in 2000. This group was influential in keeping the state “dry”—that is, banning the sale of all alcoholic beverages—until 1959 and resisting legalization of public drinking until 29 counties voted to permit the sale of liquor by the drink in 1985.

The leading Protestant group in 2000 was the Southern Baptist Convention with 967,223 adherents; in 2002 there were 16,563 new baptized members. Other leading Evangelical Protestant denominations in 2000 included the Assemblies of God, 88,301 adherents; the Churches of Christ, 83,047; the Christian Church (Disciples of Christ), 53,729; and the Christian Churches, 42,708. Free Will Baptists, Nazarenes, Missouri Synod Lutherans, and those of various other Pentecostal traditions are also fairly well represented. The largest Mainline Protestant denominations are the United Methodist Church, with 253,375 adherents (in 2004), and the Presbyterian Church USA, with 35,211 adherents (in 2000) In 2006, there were 38,011 members of the Church of Jesus Christ of Latter-day Saints (Mormons) in 75 congregations.

In 2004, there were about 169,045 Roman Catholics in the state, of which 112,951 reside in the archdiocese of Oklahoma City. In 2000, there were 6,145 Muslims and about 5,050 Jews throughout the state. About 39.2% of the population did not claim any religious affiliation.

Oral Roberts, a popular minister, has established a college and faith-healing hospital in Tulsa, and his “Tower of Faith” broadcasts by radio and television have made him a well-known preacher throughout the United States. A Mormon temple was built in Oklahoma City in 2000. The offices of the Unitarian Universalist Christian Fellowship are in Turley.

¹⁰TRANSPORTATION

In 1930, the high point for railroad transportation in Oklahoma, there were 6,678 mi (10,747 km) of railroad track in the state. In 2003, there were 3,853 rail mi (6,201 km) of track. As of that same year, there were three Class I railroads operating in Oklahoma: the Burlington Northern Santa Fe; the Union Pacific; and the Kansas City Southern. Together, they operated 2,536 mi (4,82 km) of right-of-way in the state as of 2003. As of 2006, Amtrak provided passenger service to five stations in Oklahoma via its Oklahoma City to Fort Worth Heartland Flyer train. Inter-urban transit needs, formerly served by streetcars (one of the most popular routes operated between Oklahoma City and Norman), are now supplied by buses.

The Department of Transportation is responsible for construction and maintenance of the state road system, which in 2004 included state roads and highways, and interstate highways. The main east–west highways are I-44, connecting Tulsa and Oklahoma City, and I-40; the major north–south route is I-35, which links Oklahoma City with Topeka, Kansas and Dallas–Ft. Worth, Texas. Overall in 2004, Oklahoma had 112,713 mi (181,467 km) of roadway. A total of some 3.156 million motor vehicles were registered in the state that same year, including 1.622 million automobiles and 1.448 million trucks of all types. There were 2,369,621 licensed drivers in 2004.

The opening of the McClellan–Kerr Arkansas River Navigation System in 1971 linked Oklahoma with the Mississippi River and thus to Gulf coast ports. Tulsa, Port of Catoosa, is the chief port on the system, handling 2.159 million tons of cargo in 2004. In 2003, waterborne shipments totaled 4.895 million tons. In 2004, Oklahoma had 150 mi (241 km) of navigable inland waterways.

In 2005, Oklahoma had a total of 439 public and private-use aviation-related facilities. This included 346 airports, 91 heliports, 1 STOLport (Short Take-Off and Landing), and 1 seaplane base. Will Rogers World Airport in Oklahoma City and Tulsa International Airport are the state’s largest airports. In 2004, Will Rogers had 1,695,096 passengers enplaned, while Tulsa International had 1,462,799 enplanements.

¹¹HISTORY

There is evidence—chiefly from the Spiro Mound in eastern Oklahoma, excavated in 1930—that an advanced Indian civilization inhabited the region around AD 900–1100. By the time the Spanish conquistadores, led by Hernando de Soto and Francisco Vasquez de Coronado, arrived there in the 16th century, however, only a few scattered tribes remained. Two centuries later, French trappers moved up the rivers of Oklahoma.

Except for the panhandle, which remained a no-man's-land until 1890, all of present-day Oklahoma became part of US territory with the Louisiana Purchase in 1803. Under the Indian Removal Act of 1830, Indian tribes from the southeastern United States were resettled in what was then known as Indian Country. Although 4,000 Indians died along the "Trail of Tears" (from Georgia to Oklahoma) between the time of removal and the Civil War, the Five Civilized Tribes—Cherokees, Chickasaw, Choctaw, Creek, and Seminole—prospered in the new land. The eastern region that they settled, comprising not quite half of modern Oklahoma and known as Indian Territory since the early 19th century (although not formally organized under that name until 1890), offered rich soil and luxurious vegetation. White settlers also came to farm the land, but their methods depleted the soil, preparing the way for the dust bowl of the 1930s. Meanwhile, the increasing movement of people and goods between Santa Fe and New Orleans spurred further growth in the region. Military posts such as Ft. Gibson, Ft. Supply, and Ft. Towson were established between 1824 and the 1880s, with settlements growing up around them.

During the early Civil War period, the Five Civilized Tribes—some of whose members were slaveholders—allied with the Confederacy. After Union troops captured Ft. Gibson in 1863, the Union Army controlled one-half of Indian Territory. From the end of the Civil War to the 1880s, the federal government removed the eastern tribes from certain lands that were especially attractive to the railroads and to interested white settlers. Skirmishes between the Indians and the federal troops occurred, culminating in a massacre of Cheyenne Indians on 27 November 1868 by Colonel George Custer and his 7th Cavalry at the Battle of the Washita.

Amid a clamor for Indian lands, Congress opened western Oklahoma—formerly reserved for the Cherokee, Cheyenne, Fox, and other tribes—to homesteaders in 1889. Present-day Oklahoma City, Norman, Guthrie, Edmond, and Stillwater represent the eastern boundary for the 1889 "run" on Oklahoma lands; eight more runs were to follow. The greatest was in 1893, when about 100,000 people stormed onto the newly opened Cherokee outlet. The drive to get a land claim was fierce, and thousands of "Sooners" staked their claims before the land was officially opened. The western region became Oklahoma Territory, governed by a territorial legislature and a federally appointed governor in 1890; Guthrie was named the capital. Most of eastern Oklahoma continued to be governed by the Five Civilized Tribes.

Although an Oklahoma statehood bill was introduced in Congress as early as 1892, the Five Civilized Tribes resisted all efforts to unite Indian Territory until their attempt to form their own state was defeated in 1905. Congress passed an enabling act in June 1906, and Oklahoma became the 46th state on 16 November 1907 after a vote of the residents of both territories. Oklahoma City was named the state capital in 1910.

When President Theodore Roosevelt signed the statehood proclamation, Oklahoma's population was about 1,500,000—75% rural, 25% urban—most of them drawn by the state's agricultural and mineral resources. The McAlester coal mines had opened in 1871, and lead and zinc were being mined in Ottawa County. But it was oil that made the state prosperous. Prospecting began in 1882, and the first commercial well was drilled at Bartlesville in 1897. The famous Glenn Pool gusher, near Tulsa, was struck in 1905. Oil wells were producing more than 40 million barrels an-

nually when Oklahoma entered the Union, and the state led all others in oil production until 1928.

Generally, the decade of the 1920s was a tumultuous period for Oklahoma. A race riot in Tulsa in 1921 was put down by the National Guard. (In February 2001, a state commission recommended that the surviving victims be compensated for what has been called the nation's most violent instance of racial oppression. The recommendation launched an intense debate over whether today's taxpayers should have to pay restitution for yesterday's crimes.) Also in 1921, the Ku Klux Klan claimed close to 100,000 Oklahomans. The Klan was outlawed when Governor John C. Walton declared martial law in 1923, during a period of turmoil and violence that culminated in Walton's impeachment and conviction on charges of incompetence, corruption, and abuse of power. The 1930s brought a destructive drought, dust storms, and an exodus of "Okies," many of them to California. Colorful Governor William "Alfalfa Bill" Murray led the call for federal relief for the distressed dust bowl region—though he insisted on his right to administer the funds. When Oklahoma oil fields were glutting the market at 15 cents a barrel, Murray placed 3,106 producing wells under martial law from August 1931 to April 1933. Kansas, New Mexico, and Texas also agreed to control their oil production and under the leadership of Governor E. W. Marland, the Interstate Oil Compact was created in 1936 to conserve petroleum and stabilize prices.

Oklahoma's first native-born governor, Robert Kerr (later a senator for 14 years) held the statehouse during World War II and brought the state national recognition by promoting Oklahoma as a site for military, industrial, and conservation projects. Under early postwar governors Roy Turner, Johnston Murray, and Raymond Gary, tax reductions attracted industry, major highways were built, a loyalty oath for state employees was declared unconstitutional, and Oklahoma's higher educational facilities were integrated. The term of Governor Howard Edmondson saw the repeal of prohibition in 1959, the establishment of merit and central purchasing systems, and the introduction of a state income tax withholding plan.

Oil and gas again brought increased wealth to the state in the 1960s, 1970s, and early 1980s, as state revenues from oil and gas increased from \$72 million in 1972 to \$745 million in 1982. Nearly \$1 billion was spent for new highways, schools, and state offices; new police were hired; and teacher salaries were raised to nationally competitive levels. Unemployment fell to 3.6% in 1981 while an influx of job seekers from other states made Oklahoma one of the fastest-growing states in the nation in the early 1980s.

In 1983, as oil prices fell in the face of a growing worldwide oil glut, the oil boom suddenly ended. Between 1982 and 1986, jobs in the extraction of oil and gas dropped by 50%. The failure of 24 banks, home mortgage foreclosures, and mounting distress among the state's farmers added to Oklahoma's financial woes. Falling state revenues and a balanced budget requirement in the state constitution compelled Governor George Nigh in 1983 to cut appropriations and to preside over a series of tax increases that lost for Oklahoma its claim to one of the lowest tax burdens in the nation.

The oil bust did not entirely devastate the Oklahoma economy. Those industries with a national rather than a regional base, such as distribution, transportation, food processing, and light man-

ufacturing, continued to prosper, and the state's leaders made a concerted effort to diversify Oklahoma's industries even further by attracting both private enterprise and defense contracts. By the end of the decade, the economy had begun to recover, and recovery continued into the 1990s. By 1999 the unemployment rate had dropped to 3.4%, below the national average. Poverty was on the decline in the state: 15.6% of Oklahomans lived below the federal poverty level in 1990; in 1998 the rate dipped to 14.1%. But with the tenth-lowest median income in the nation, the state's income levels lagged behind, causing some analysts to predict that Oklahoma might have problems competing in a strong economy.

On 19 April 1995, the Alfred P. Murrah Federal Building in Oklahoma City was destroyed in a bomb blast that claimed 168 lives and constituted the most serious act of terrorism in the history of the United States until the events of 11 September 2001. Governor Frank Keating was commended for his strong leadership during the crisis. A memorial to the victims was unveiled in April 2000, the five-year anniversary of the tragedy. Timothy McVeigh was executed in 2001 for his part in the Oklahoma bombing.

In 2003 Oklahoma faced its largest budget deficit in state history (\$600 million). Democratic Governor Brad Henry pledged to eliminate taxes on retirement income for senior citizens, provide access to affordable prescription drugs, retain jobs in the state, improve Oklahoma schools, and increase teachers' salaries. Henry proposed a state lottery to fund education; voters overwhelmingly passed the lottery in November 2004. He secured a state vote to fund healthcare initiatives through an increase in the tobacco tax. Henry promoted tort reform, Medicaid screening for breast and cervical cancer, voluntary relocation assistance for the troubled Tar Creek region, and expansion of pre-school programs. He secured a workers' compensation reform package that business groups applauded, worked on funding for road and bridge repair, created a successful anti-methamphetamine program, and ensured that assistance went to Oklahoma National Guard members and their families. The projected 2005 fiscal year budget gap in Oklahoma was \$5.3 billion.

12 STATE GOVERNMENT

Oklahoma's first and only constitution became effective on 16 November 1907. By January 2005, that document had been amended 171 times (including five amendments that were subsequently nullified by the courts).

The Oklahoma legislature consists of two chambers, a 48-member Senate and a 101-member House of Representatives. To serve in the legislature one must be a qualified voter, US citizen, and district resident; also, senators must be at least 25 years old and representatives at least 21. Senators hold office for four years, representatives for two. The legislature meets annually, beginning on the first Monday in February; the regular session ends on the last Friday in May. Special sessions may be called by a vote of two-thirds of the members of each house. The legislative salary in 2004 was \$38,400, unchanged from 1999.

State elected officials are the governor, lieutenant governor, attorney general, auditor, state treasurer, superintendent of public instruction, commissioner of labor, and commissioner of insurance, all of whom serve four-year terms, and three corporation commissioners, who serve staggered six-year terms. The governor is limited to serving two consecutive terms. A candidate for gov-

ernor must be at least 31 years old and a qualified voter in Oklahoma. As of December 2004, the governor's salary was \$110,298.

Any member of either house may introduce legislation. A bill passed by the legislature becomes law if signed by the governor, if left unsigned by the governor for five days while the legislature is in session, or if passed over the governor's veto by two-thirds of the elected members of each house (three-fourths in the case of emergency bills). A bill dies after 15 days if the governor takes no action and the legislature has adjourned. Constitutional amendments may be placed on the ballot by majority vote in both houses, by initiative petition of 15% of the electorate, or by constitutional convention. To be ratified, proposed amendments must receive a majority vote of the electorate.

To vote in Oklahoma, one must be a US citizen, at least 18 years old, and a state resident. Restrictions apply to convicted felons and those declared mentally incapacitated by the court.

13 POLITICAL PARTIES

The history of the two major political groups in Oklahoma, the Democratic and Republican parties, dates back to 1890, when Indian Territory and Oklahoma Territory were separately organized. Indian Territory was dominated by Democrats, reflecting the influence of southern immigrants, while Oklahoma Territory was primarily Republican because of immigration from the northern states. When the two territories joined for admission to the Union in 1907, Democrats outnumbered Republicans, as they have ever since. Democrats have continued to dominate the lesser state offices, but the Republicans won the governorship three times between 1962 and 1990, and the Republican presidential nominee out-pollied his Democratic counterpart in ten of twelve presidential elections between 1948 and 1992. The best showing by a minor party in a recent presidential race was 25% garnered by Independent Ross Perot in 1992.

Oklahomans cast 60% of their popular vote for Republican George W. Bush in the 2000 presidential election, and 38% for Al Gore. In 2004, 65.6% of the vote went for the incumbent President Bush, with 32.4% to the challenger, Democrat John Kerry. In 2004 there were 2,143,000 registered voters. In 1998, 57% of registered

Oklahoma Presidential Vote by Political Parties, 1948–2004

YEAR	ELECTORAL VOTE	OKLAHOMA WINNER	DEMOCRAT	REPUBLICAN

2004	7	*Bush, G. W. (R)	503,966	959,792

*Won US presidential election.

**IND. candidate Ross Perot received 319,878 votes in 1992 and 130,788 votes in 1996.

voters were Democratic, 35% Republican, and 8% unaffiliated or members of other parties. The state had seven electoral votes in the 2000 presidential election, a loss of one vote over 2000.

Democrat Brad Henry was elected governor in 2002. Republican senator James Inhofe, first elected in a special election in 1994, was reelected to full terms in 1996 and 2002. Republican senator Don Nickles, first elected in 1980, was reelected in 1998 to a fourth term; in 2004, Republican Tom Coburn won a seat in the US Senate. In 2004, Oklahoma sent four Republicans and one Democrat to the US House of Representatives. In 2005, there were 26 Democrats and 20 Republicans in the state House, and 44 Democrats and 57 Republicans in the state Senate.

¹⁴LOCAL GOVERNMENT

As of 2005, local governmental units in Oklahoma included 77 counties, 590 municipal governments, 544 public school districts and 560 special districts.

County government consists of three commissioners elected by districts, a county clerk, assessor, treasurer, sheriff, surveyor, and (in most counties) superintendent of schools. Towns of 1,000 residents or more may incorporate as cities. Any city of 2,000 or more people may vote to become a home-rule city, determining its own form of government, by adopting a home-rule charter. Cities electing not to adopt a home-rule charter operate under aldermanic, mayor-council, or council-manager systems. A large majority of home-rule cities have council-manager systems.

In 2005, local government accounted for about 140,324 full-time (or equivalent) employment positions.

¹⁵STATE SERVICES

To address the continuing threat of terrorism and to work with the federal Department of Homeland Security, homeland security in Oklahoma operates under state statute and executive order; the homeland security director is designated as the state homeland security advisor.

The Oklahoma Department of Education, functioning under a six-member appointed Board of Education and an elected superintendent of public instruction, has responsibility for all phases of education through the first 12 grades. Postsecondary study is under the general authority of the Oklahoma State Regents for Higher Education and other separate boards of regents associated with one or more institutions. Vocational and technical education, a federal-state cooperative program, is administered in Oklahoma under the Department of Career and Technology Education. The Department of Transportation has authority over the planning, construction, and maintenance of the state highway system. The Oklahoma Corporation Commission regulates transportation and transmission companies, public utilities, motor carriers, and the oil and gas industry, while the Oklahoma Aeronautics Commission participates in financing airports.

The Department of Health has as a major function the control and prevention of communicable diseases; it administers community health program funds and licenses most health-related facilities. The Department of Human Services oversees the care of neglected children, delinquent youths, and the developmentally disabled and operates various facilities and programs for the handicapped, the elderly, and the infirm.

Protective services are supplied through the Oklahoma Military Department, which administers the Army and Air National Guard; the Department of Corrections, overseeing the state penitentiary and reformatory, adult correctional centers, and community treatment centers; and the Department of Public Safety, with general safety and law enforcement responsibilities, among which are licensing drivers and patrolling the highways. Natural resource protection services are centered principally in the Oklahoma Conservation Commission. The Department of Wildlife Conservation administers the game and fish laws.

¹⁶JUDICIAL SYSTEM

In 1967, following some of the worst judicial scandals in the history of the state, in which one supreme court justice was imprisoned for income tax evasion and another impeached on charges of bribery and corruption, Oklahoma approved a constitutional amendment to reform the state's judicial system. Under the new provisions, the Supreme Court, the state's highest court, consists of nine justices initially elected to six-year terms, but with additional terms pursuant to nonpartisan, noncompetitive elections. If a justice is rejected by the voters, the vacancy is filled by gubernatorial appointment, subject to confirmation by the electorate. The court's appellate jurisdiction includes all civil cases (except those which it assigns to the courts of appeals), while its original jurisdiction extends to general supervisory control over all lesser courts and agencies created by law.

The highest appellate court for criminal cases is the Court of Criminal Appeals, a five-member body filled in the same manner as the Supreme Court. Courts of Civil Appeals, created by the legislature in 1968, are located in Tulsa and Oklahoma City. Each has six elective judges with powers to hear civil cases assigned to them by the Supreme Court. When final, their decisions are not appealable to any other state court, a system unique to Oklahoma.

District courts have original jurisdiction over all judicial matters and some review powers over administrative actions. There are 26 districts with 131 district judges who are elected to four-year terms. Municipal courts hear cases arising from local ordinances.

As of 31 December 2004, a total of 23,319 prisoners were held in Oklahoma's state and federal prisons, an increase from 22,821 of 2.2% from the previous year. As of year-end 2004, a total of 2,361 inmates were female, up from 2,320 or 1.8% from the year before. Among sentenced prisoners (one year or more), Oklahoma had an incarceration rate of 649 per 100,000 population in 2004.

According to the Federal Bureau of Investigation, Oklahoma in 2004, had a violent crime rate (murder/nonnegligent manslaughter; forcible rape; robbery; aggravated assault) of 500.5 reported incidents per 100,000 population, or a total of 17,635 reported incidents. Crimes against property (burglary; larceny/theft; and motor vehicle theft) in that same year totaled 149,472 reported incidents or 4,242.1 reported incidents per 100,000 people. Oklahoma has a death penalty, of which lethal injection is the sole method of execution. However, should lethal injection be declared unconstitutional, electrocution would be authorized, and if electrocution was found to be unconstitutional, the law authorizes the use of a firing squad. From 1976 through 5 May 2006, the state has carried out 80 executions, of which four were carried out in 2005 and one in 2006 (as of 5 May). As of 1 January 2006, Oklahoma had 91 inmates on death row.

In 2003, Oklahoma spent \$75,847,874 on homeland security, an average of \$22 per state resident.

17 ARMED FORCES

In 2004, there were 23,476 active-duty military personnel and 21,860 civilian personnel stationed in Oklahoma, the majority of whom were at Ft. Sill, near Lawton, the training facility for the Artillery Branch. A total of nearly \$1.5 billion in prime military contracts was received by local businesses in 2004. Defense Department payroll outlays were \$2.97 billion.

In 2003, 355,312 veterans were living in Oklahoma, of whom 45,491 saw service in World War II; 36,837 in the Korean conflict; 113,616 during the Vietnam era; and 59,264 during the Gulf War. In 2004, the Veterans Administration expended more than \$1.2 billion in pensions, medical assistance, and other major veterans' benefits.

As of 31 October 2004, the Oklahoma Department of Public Safety employed 808 full-time sworn officers.

18 MIGRATION

Early immigrants to what is now Oklahoma included explorers, adventurers, and traders who made the country conscious of the new territory, and Indian tribes forcibly removed from the East and Midwest. The interior plains of Oklahoma remained basically unchanged until white settlers came in the late 1880s.

Coal mining brought miners from Italy to the McAlester and Krebs area in the 1870s, and Poles migrated to Bartlesville to work in the lead and zinc smelters. British and Irish coal miners came to Indian Territory because they could earn higher wages there than in their native countries, and Czechs and Slovaks arrived from Nebraska, Kansas, Iowa, and Texas when railroad construction began. Mexicans also worked as railroad laborers, ranch hands, and coal miners before statehood. The oil boom of the early 20th century brought an influx of workers from the eastern and Midwestern industrial regions. In 1907, the population of Oklahoma was 75% rural and 25% urban; by 1990, however, 67.7% of all inhabitants resided in urban areas. Oklahoma lost population during the 1930s because of dust bowl and drought conditions, and the trend toward out-migration continued after World War II; from 1940 through 1960, the net loss from migration was 653,000. Migration patterns were reversed, however, after 1960. From 1960 to 1970 nearly 21,000 more people moved into the state than out of it. In the period 1970–80, a total of 293,500 more people came than left, the migration accounting for nearly two-thirds of Oklahoma's total increase of 466,000 persons in that decade. From 1980 to 1983, Oklahoma ranked fourth among the states with a total net gain from migration of 186,000 people. From 1985 to 1990, a net migration loss of about 95,500 was reported. Between 1990 and 1998, the state had net gains of 48,000 in domestic migration and 26,000 in international migration. In 1998, 2,273 foreign immigrants arrived in Oklahoma. The state's overall population increased 6.4% between 1990 and 1998. In the period 2000–05, net international migration was 36,546 and net internal migration was -15,418, for a net gain of 21,128 people.

19 INTERGOVERNMENTAL COOPERATION

Oklahoma participates in a number of regional intergovernmental agreements, among them the Arkansas River Compact, Arkan-

sas River Basin Compact, Canadian River Compact, Interstate Oil and Gas Compact, Red River Compact, South Central Interstate Forest Fire Protection Compact, Southern Growth Policies Board, Southern States Energy Board, Southern Regional Education Board, Interstate Mining Compact Commission, and the Central Interstate Low-Level Radioactive Waste Compact. Federal grants in fiscal year 2005 totaled \$4.047 billion, an estimated \$4.197 billion in fiscal year 2006, and an estimated \$4.424 billion in fiscal year 2007.

20 ECONOMY

Primarily an agricultural state through the first half of the 20th century, Oklahoma has assumed a broader economic structure since the 1950s. Manufacturing heads the list of growth sectors, followed by wholesale and retail trade, services, finance, insurance, and real estate. Oil and gas extraction continues to play a major role. The oil industry boomed from the mid-1970s through the mid-1980s. In 1985, however, the boom ended. Prices dropped from \$27 a barrel to \$13 a barrel within a month in 1985. In 1998, gas and oil production was valued at only \$3.4 billion; one-third of what it was worth in the mid-1980s. Oklahoma's unemployment rate, which averaged about 3% in the early 1980s, jumped to 9% in 1983, and then fell to 7% in 1985, and rose again, to 8%, in 1986. Since then, the economy has undergone a slow but steady recovery. Unemployment was at 3.4% in 1999. Gains in manufacturing made up for the losses in mining. Manufacturing output, however, peaked in 1999, and by 2001 had fallen 9.2%. The state's overall growth rate, which accelerated from 3.5% in 1998 to 3.9% in 1999 to 6.5% in 2000, fell back to 3.2% in the national recession and slowdown of 2001. The main growth sectors in terms of output coming into the 21st century (1997 to 2001) were general services (up 26.8%), government (up 24.2%), financial services (up 2.5%) and trade (up 21.3%). Oklahoma's military installations, Fort Sill and Tinker Air Force Base, are two of the state's top five employers and with rising defense spending, and oil and gas prices, the state's economy is seen as heading upward.

In 2004, Oklahoma's gross state product (GSP) was \$107.600 billion, of which manufacturing (durable and nondurable goods) accounted for the largest share at \$11.981 billion or 11.1% of GSP, followed by the real estate sector at \$10.494 billion (9.7% of GSP), and healthcare and social assistance services at \$7.518 billion (6.9% of GSP). In that same year, there were an estimated 303,135 small businesses in Oklahoma. Of the 77,027 businesses that had employees, an estimated total of 75,058 or 97.4% were small companies. An estimated 9,263 new businesses were established in the state in 2004, up 5.2% from the year before. Business terminations that same year came to 8,018, down 4.9% from 2003. There were 659 business bankruptcies in 2004, up 7.7% from the previous year. In 2005, the state's personal bankruptcy (Chapter 7 and Chapter 13) filing rate was 761 filings per 100,000 people, ranking Oklahoma as the 10th highest in the nation.

21 INCOME

In 2005 Oklahoma had a gross state product (GSP) of \$121 billion which accounted for 1.0% of the nation's gross domestic product and placed the state at number 29 in highest GSP among the 50 states and the District of Columbia.

According to the Bureau of Economic Analysis, in 2004 Oklahoma had a per capita personal income (PCPI) of \$27,840. This ranked 40th in the United States and was 84% of the national average of \$33,050. The 1994–2004 average annual growth rate of PCPI was 4.2%. Oklahoma had a total personal income (TPI) of \$98,095,384,000, which ranked 29th in the United States and reflected an increase of 5.4% from 2003. The 1994–2004 average annual growth rate of TPI was 5.0%. Earnings of persons employed in Oklahoma increased from \$68,758,304,000 in 2003 to \$73,134,429,000 in 2004, an increase of 6.4%. The 2003–04 national change was 6.3%.

The US Census Bureau reports that the three-year average median household income for 2002 to 2004 in 2004 dollars was \$38,281 compared to a national average of \$44,473. During the same period an estimated 12.6% of the population was below the poverty line as compared to 12.4% nationwide.

22 LABOR

According to the Bureau of Labor Statistics (BLS), in April 2006 the seasonally adjusted civilian labor force in Oklahoma numbered 1,757,900, with approximately 69,000 workers unemployed, yielding an unemployment rate of 3.9%, compared to the national average of 4.7% for the same period. Preliminary data for the same period placed nonfarm employment at 1,537,100. Since the beginning of the BLS data series in 1976, the highest unemployment rate recorded in Oklahoma was 9.4% in August 1986. The historical low was 2.7% in January 2001. Preliminary nonfarm employment data by occupation for April 2006 showed that approximately 4.4% of the labor force was employed in construction; 18.3% in trade, transportation, and public utilities; 5.5% in financial activities; 11.3% in professional and business services; 12.1% in education and health services; 8.7% in leisure and hospitality services; and 20.5% in government. Data was unavailable for manufacturing.

The US Department of Labor's Bureau of Labor Statistics reported that in 2005, a total of 77,000 of Oklahoma's 1,432,000 employed wage and salary workers were formal members of a union. This represented 5.4% of those so employed, down from 6.1% in 2004, well below the national average of 12%. Overall in 2005, a total of 91,000 workers (6.4%) in Oklahoma were covered by a union or employee association contract, which includes those workers who reported no union affiliation. Oklahoma is one of 22 states with a right-to-work law.

As of 1 March 2006, Oklahoma had a two-tiered state-mandated minimum wage rate. Employers with annual sales of more than \$100,000 came under the \$5.15 per hour rate, while all others came under a \$2.00 per hour rate. In 2004, women in the state accounted for 46.3% of the employed civilian labor force.

23 AGRICULTURE

Agriculture remains an important economic activity in Oklahoma, even though its relative share of personal income and employment has declined since 1950. Total farm income, estimated at \$5.04 billion, ranked 18th in the United States in 2005. Crop marketings contributed \$1.03 billion; livestock, \$4.01 billion.

As of 2004, Oklahoma had 83,500 farms and ranches covering 33,700,000 acres (13,640,000 hectares). The state ranked fifth in the United States for wheat production in 2004, with 164,500,000

bushels worth \$542.8 million. Peanut production ranked seventh in 2004, with 102,300,000 lb, valued at \$19,232,000. Other 2004 crop figures include sorghum for grain, 14,400,000 bushels, \$25,402,000; soybeans, 8,700,000 bushels, \$43,500,000; corn for grain, 30,000,000 bushels, \$75,000,000; and oats, 555,000 bushels, \$944,000.

Virtually all of Oklahoma's wheat production is located in the western half of the state; cotton (310,000 bales in 2004) is grown in the southwest corner. Sorghum-producing regions include the panhandle, central to southwestern Oklahoma, and the northeast corner of the state.

24 ANIMAL HUSBANDRY

In 2005, there were 5.4 million cattle and calves, worth \$4.4 billion. During 2004, Oklahoma farmers had 2.4 million hogs and pigs, valued at \$194.4 million. In 2003, the state produced around 4 million lb (1.8 million kg) of sheep and lambs which brought in nearly \$3.8 million in gross income. Also during 2003, poultry farmers produced 1.11 billion lb (0.5 billion kg) of broilers valued at \$379.1 million, and 933 million eggs valued at \$72 million. Oklahoma's 82,000 dairy cows produced an estimated 1.31 billion lb (0.59 billion kg) of milk in 2003.

25 FISHING

Commercial fishing is of minor importance in Oklahoma. The prolific white bass (sand bass), Oklahoma's state fish, is abundant in most large reservoirs. Smallmouth and spotted bass, bluegill, and channel catfish have won favor with fishermen. Rainbow trout are stocked year round in the Illinois River, and walleye and sauger are stocked in most reservoirs. The Tishomingo National Fish Hatchery produces primarily smallmouth bass for distribution to federal wildlife areas in Oklahoma and Texas. In 2004, the state issued 668,924 sport fishing licenses.

26 FORESTRY

While Oklahoma is not generally known as a forested state, a significant amount of forest is found there. Oklahoma's forests cover approximately 7,665,000 acres (3,102,000 hectares) or nearly 17% of the state's land area. Approximately 65% of this is commercially productive forestland. These forests are about 95% privately owned. They are intensively utilized for lumber, plywood, paper, fuelwood, and other products. They also provide high quality drinking water for the state's two largest cities, excellent wildlife habitat, substantial protection against soil erosion, and numerous recreational opportunities.

Oklahoma's forests play a vital role in the economy in the eastern half of the state. Much of the timber harvested in Oklahoma is shipped to processing plants in western Arkansas. Nearly two million acres of the loblolly-shortleaf pine and shortleaf pine-oak forests support several major wood processing plants in the southeastern corner of the state. Hardwood processing is scattered over the entire forested area in smaller sawmills. In the late 1980s and early 1990s, Oklahoma's eastern red cedar forests and woodlands supported a surge in processing plants.

In 2004 lumber output from Oklahoma's forests totaled 355 million board ft, 97% softwood.

27 MINING

According to preliminary data from the US Geological Survey (USGS), the estimated value of nonfuel mineral production by Oklahoma in 2003 was \$479 million, an increase from 2002 of about 1%. The USGS data ranked Oklahoma as 28th among the 50 states by the total value of its nonfuel mineral production, accounting for over 1% of total US output.

According to the preliminary data for 2003, crushed stone was the leading nonfuel mineral produced by Oklahoma, accounting for over 40% of all nonfuel mineral output, by value. It was followed by cement (portland and masonry), construction sand and gravel, industrial sand and gravel, iodine, and gypsum, by value. By volume, Oklahoma in 2003, was the nation's leading producer of gypsum and ranked second in tripoli output. It ranked fifth in feldspar, seventh in common clays, and eighth in industrial sand and gravel. Oklahoma was the only state to produce iodine.

Preliminary data for 2003 showed that a total of 45.8 million metric tons of crushed stone were produced, with a value of \$202 million, while construction sand and gravel output came to 9.8 million metric tons, with a value of \$39.7 million. Industrial sand and gravel production that same year totaled 1.32 million metric tons, and had a value of \$28.4 million. Crude iodine output totaled 1,750 metric tons and was valued at \$19.7 million. Crude gypsum production in 2003 stood at 2.41 million metric tons, with a value of \$18.7 million.

According to the Oklahoma Department of Mines in 2003, the state had 233 mine operators and 307 operating mines. A total of 26,702 people were directly employed by the state's mining industry, excluding those employed by helium and iodine mine operators.

28 ENERGY AND POWER

As of 2003, Oklahoma had 98 electrical power service providers, of which 62 were publicly owned and 30 were cooperatives. Of the remainder, four were investor owned, one was federally operated and one was the owner of an independent generator that sold directly to customers. As of that same year there were 1,805,442 retail customers. Of that total, 1,179,570 received their power from investor-owned service providers. Cooperatives accounted for 436,446 customers, while publicly owned providers had 189,346 customers. There was one federal customer and 79 were independent generator or "facility" customers.

Total net summer generating capability by the state's electrical generating plants in 2003 stood at 18,239 million kW, with total production that same year at 60.626 billion kWh. Of the total amount generated, 82.1% came from electric utilities, with the remainder coming from independent producers and combined heat and power service providers. The largest portion of all electric power generated, 36.676 billion kWh (60.5%), came from coal-fired plants, with natural gas fueled plants in second place at 21.822 billion kWh (36%) and hydroelectric facilities in third at 1.798 billion kWh (3%). Other renewable power sources, pumped storage facilities, petroleum fired plants and plants using other types of gases accounted for the remainder.

Oklahoma is rich in fossil fuel resources, producing oil, natural gas, and coal. Crude oil production declined from 223.6 million barrels in 1968, to 150.5 million barrels in 1978, to 70.6 mil-

lion barrels in 1999. As of 2004, Oklahoma had proven crude oil reserves of 570 million barrels, or 3% of all proven US reserves, while output that same year averaged 171,000 barrels per day. Including federal offshore domains, the state that year ranked seventh (sixth excluding federal offshore) in both proven reserves and production among the 31 producing states. In 2004 Oklahoma had 83,750 producing oil wells and accounted for 3% of all US production. As of 2005, the state's five refineries had a combined crude oil distillation capacity of 484,961 barrels per day.

In 2004, Oklahoma had 35,612 producing natural gas and gas condensate wells. In that same year, marketed gas production (all gas produced excluding gas used for repressuring, vented and flared, and nonhydrocarbon gases removed) totaled 1,663.148 billion cu ft (47.23 billion cu m). As of 31 December 2004, proven reserves of dry or consumer-grade natural gas totaled 16,238 billion cu ft (461.15 billion cu m).

Oklahoma in 2004, had eight producing coal mines, seven of which were surface operations. Coal production that year totaled 1,792,000 short tons, up from 1,565,000 short tons in 2003. Of the total produced in 2004, the surface mines accounted for 1,383,000 short tons. Recoverable coal reserves in 2004 totaled 17 million short tons. One short ton equals 2,000 lb (0.907 metric tons).

29 INDUSTRY

Oklahoma's earliest manufactures were based on agricultural and petroleum production. As late as 1939, the food-processing and petroleum-refining industries together accounted for one-third of the total value added by manufacture. Although resource-related industries continue to predominate, manufacturing has become much more diversified.

According to the US Census Bureau's Annual Survey of Manufactures (ASM) for 2004, Oklahoma's manufacturing sector covered some 17 product subsectors. The shipment value of all products manufactured in the state that same year was \$45.710 billion. Of that total, petroleum and coal products manufacturing accounted for the largest share at \$8.904 billion. It was followed by transportation equipment manufacturing at \$7.902 billion; machinery manufacturing at \$5.378 billion; food manufacturing at \$5.035 billion; and fabricated metal product manufacturing at \$3.891 billion.

In 2004, a total of 132,540 people in Oklahoma were employed in the state's manufacturing sector, according to the ASM. Of that total, 98,281 were actual production workers. In terms of total employment, the fabricated metal product manufacturing industry accounted for the largest portion of all manufacturing employees at 22,319, with 16,497 actual production workers. It was followed by machinery manufacturing at 20,438 employees (12,935 actual production workers); transportation equipment manufacturing at 17,071 employees (13,166 actual production workers); food manufacturing at 14,277 employees (10,905 actual production workers); and plastics and rubber products manufacturing with 12,104 employees (9,765 actual production workers).

ASM data for 2004 showed that Oklahoma's manufacturing sector paid \$5.241 billion in wages. Of that amount, the machinery manufacturing sector accounted for the largest share at \$900.746 million. It was followed by fabricated metal product manufacturing at \$799.199 million; transport equipment manufacturing at

\$714.183 million; plastics and rubber products manufacturing at \$528.999 million; and food manufacturing at \$480.609 million.

30 COMMERCE

According to the 2002 Census of Wholesale Trade, Oklahoma's wholesale trade sector had sales that year totaling \$30.7 billion from 4,770 establishments. Wholesalers of durable goods accounted for 2,993 establishments, followed by nondurable goods wholesalers at 1,489 and electronic markets, agents, and brokers accounting for 288 establishments. Sales by durable goods wholesalers in 2002 totaled \$11.1 billion, while wholesalers of nondurable goods saw sales of \$15.9 billion. Electronic markets, agents, and brokers in the wholesale trade industry had sales of \$3.6 billion.

In the 2002 Census of Retail Trade, Oklahoma was listed as having 13,922 retail establishments with sales of \$32.1 billion. The leading types of retail businesses by number of establishments were: gasoline stations (2,020); motor vehicle and motor vehicle parts dealers (1,830); miscellaneous store retailers (1,652); and food and beverage stores (1,558). In terms of sales, motor vehicle and motor vehicle parts dealers accounted for the largest share of retail sales at \$9.4 billion, followed by general merchandise stores at \$6.2 billion; gasoline stations at \$3.7 billion; and food and beverage stores at \$3.3 billion. A total of 167,949 people were employed by the retail sector in Oklahoma that year.

Exporters located in Oklahoma exported \$4.3 billion in merchandise during 2005. Major exports included industrial machinery and transportation equipment.

31 CONSUMER PROTECTION

Consumer protection issues in Oklahoma are generally the responsibility of the Consumer Protection Division of the Attorney General's Office. Among the Division's duties are the resolution of complaints against businesses, the provision of information on those complaints and of publications to consumers to help educate the public and the enforcement of the state's laws regarding unfair and deceptive practices. However, consumer protection issues involving "Supervised Lenders," such as finance companies, and non-lender extenders of credit is the responsibility of the Commission on Consumer Credit, which also maintains a program of consumer education and has the power to require lawful and businesslike procedures by lending agencies under the state's Uniform Credit Code.

When dealing with consumer protection issues, the state's Attorney General's Office can initiate civil and criminal proceedings; represent the state before state and federal regulatory agencies; administer consumer protection and education programs; handle formal consumer complaints; and exercise broad subpoena powers. In antitrust actions, the Attorney General's Office can act on behalf of those consumers who are incapable of acting on their own; initiate damage actions on behalf of the state in state courts; initiate criminal proceedings; and represent counties, cities and other governmental entities in recovering civil damages under state or federal law.

The offices of the Commission on Consumer Credit and of the Consumer Protection Division are located in Oklahoma City.

32 BANKING
