Preface

More than 1800 cosmetic and toiletry formulations are detailed in this book, based on information received from numerous industrial companies and other organizations. The data represent selections from manufacturers' descriptions made at no cost to, nor influence from, the makers or distributors of these materials.

Only the most recent formulas have been included. It is believed that all of the trademarked raw materials listed are currently available, which will be of utmost interest to readers concerned with raw material discontinuances.

Spurred by a strong economy, sales for the cosmetics and toiletry industry have been increasing at 6-7% annually, thus making the information in the book particularly interesting to anyone considering new products or process variations.

Each formulation in the book is identified by a description of end use. The formulations include the following: a listing of each raw material contained; the percent by weight of each raw material; suggested formulation procedure; and the formula source, which is the company or organization that supplied the formula.

The formulations in the book are divided into the following 14 sections:

- I. Antiperspirants and Deodorants
- II. Baby Products
- III. Bath and Shower Products
- IV. Beauty Aids
- V. Creams
- VI. Fragrances and Perfumes
- VII. Hair Care Products
- VIII. Insect Repellents
- IX. Lotions
- X. Shampoos
- XI. Shaving Products
- XII. Soaps
- XIII. Sun Care Products
- XIV. Miscellaneous

Each formula is indexed in the section which is most applicable. The reader seeking a formula for a specific end use should check each section which could possibly apply.

In addition to the above, there are two other sections that will be helpful to the reader:

XV. Trade-Named and Other Raw Materials Descriptions.

Each raw material is listed with a brief chemical description and the name of the raw material supplier.

XVI. Suppliers' Addresses. Addresses of suppliers of trade-named raw materials and/or formulations, some of which are not available in the usual reference books.

The table of contents of the book is organized in such a way as to serve as a subject index.

My fullest appreciation is expressed to the companies and organizations which supplied the information included in this book.

October, 1989

Ernest W. Flick

NOTICE

To the best of our knowledge the information in this publication is accurate; however the Publisher does not assume any responsibility or liability for the accuracy or completeness of, or consequences arising from, such information. This industrial guide does not purport to contain detailed user instructions, and by its range and scope could not possibly do so. Mention of trade names or commercial products does not constitute endorsement or recommendation for use by the Author or Publisher.

Cosmetic and toiletry raw materials could be toxic in some circumstances, and therefore due caution should always be exercised in the use of potentially hazardous materials. Final determination of the suitability of any information or product for use contemplated by any user, and the manner of that use, is the sole responsibility of the user. We strongly recommend that users seek and adhere to a manufacturer's or supplier's current instructions for handling each material they use.

The Author and Publisher have used their best efforts to include only the most recent data available. The reader is cautioned to consult the supplier in case of questions regarding current availability.

Contents and Subject Index

PREFACE	v
SECTION I: ANTIPERSPIRANTS AND DEODORANTS	1
Aerosol Antiperspirants	2
Antiperspirant Creams	3
Antiperspirant Gel	4
Antiperspirant Emulsion Roll-On	4
Antiperspirant Lotions	5
Antiperspirant Pump-Spray	6
Antiperspirant Roll-On Lotion	7
Antiperspirant Stick	7
Antiperspirant Solid	8
Antiperspirant Suspension Roll-On Formulation	8
Antiperspirant Sticks	9
Clear Hydro-Alcoholic Roll-Ons	12
Clear Microemulsion Roll-On Antiperspirant Lotions	13
Deo Spray	14
Deodorant Stick	14
Quick Drying Roll-On Antiperspirant	15
Talc Spray Antiperspirant	15
Roll-On Antiperspirant Lotions	16
Pressed Powder Dry Antiperspirant	18
Soft Stick Antiperspirant	19
Solid Antiperspirant	19
Stick Deodorant	20
Water-in-Oil Stay Dry Stick	20
Suspension Roll-Ons	21
Suspensoid Stick Formulation	22
Suspensoid Type Antiperspirant Stick	22

SECTION II: BABY PRODUCTS	23
Baby Bath	24
Child/Baby Foam Bath	24
Baby Bubble Baths	25
Baby Creams	26
Baby Oils	28
Baby-Cream	29
Babymilk	29
Baby-Cream	30
Baby Shampoo	30
Baby Lotion	31
Baby Cream	31
Baby Lotions	32
Baby Oil	34
Bath Oil For Children	35
Baby Shampoos	36
Baby Bath	43
Babyshampoos	44
Clear Liquid Baby Shampoos	46
Pearlescent Baby Shampoo	46
Conditioning Baby Shampoo	47
Economical Baby Shampoo	47
Hand and Face Cream for Babies	48
Baby Powder	48
Mild Baby Shampoo with Protein	49
Baby Suntan Lotion	49
Opacified Baby Shampoo	50
Pearlescent Baby Shampoo	50
 SECTION III: BATH AND SHOWER PRODUCTS	 51
Aerosol Skin-Cleanser Gel	52
Bath Gelee	52
After Bath Splash	53
Bath Splash	53
Bath Bubbles	54
Bubble Bath with Glycerine	54
Bathcream-Oil	55
Bath Oil with Ethereal Oils	55
Bath Foam	56
Shower Gel	56
Bath Gels	57
Luxury Foam Bath and Shower Gelee	58
Bath Gels	59
Body Gel	60
Bath and Shower Gels	61
Bathing-Gel	62
Bubble-Bath	62

Section I
Antiperspirants and
Deodorants

AEROSOL ANTIPERSPIRANT

RAW MATERIALS	% By Weight
REACH	10.0
Isopropyl Myristate	13.4
Bentone 38	0.8
Alcohol SDA-40	0.8
Propellant A-46	75.0
(80% Isobutane/20% Propane)	100.0

Procedure for Formulation A:

1. Disperse Bentone in IPM using a homomixer or other suitable high-shear mixing apparatus. Mix 15 minutes.
2. Add SDA-40 and continue mixing at high speed for 30 minutes or until a thick gel forms.
3. Using low-shear overhead mixing, gradually blend in the REACH in small increments, making sure each addition is blended into the batch before making another addition. After all the active is in, continue mixing for 30 minutes.
4. Pass the concentrate through a 60 mesh screen to remove any large agglomerates, then homogenize at 6000 psi.
5. Fill epoxy-lined aerosol cans with suitable amount of concentrate, evacuate air from the can and charge with either A-46 or A-31 propellant.

AEROSOL ANTIPERSPIRANT

RAW MATERIALS	% By Weight
REACH	3.5
Dimethicone	5.9
Bentone 34	0.3
Alcohol SDA-40	0.3
Propellant 11	45.0
Propellant 12	45.0
	100.0

Procedure for Formulation B:

1. Disperse Bentone in Dimethicone using a homomixer or other suitable high-shear mixing apparatus. Mix 15 minutes.
2. Add SDA-40 and continue mixing at high speed for 30 minutes or until a thick gel forms.
3. Gradually blend in the REACH using low-shear overhead mixing. Add REACH in small increments, making sure each addition is blended into the batch before making another addition. After all of the active is in, continue mixing for 30 minutes.

Table IV A, B

ANTIPERSPIRANT CREAM

RAW MATERIALS	% By Weight
A REZAL 36G REZAL 67 (soln.)	55.0
B PEG-8 Distearate	15.0
C Cetyl Alcohol	5.0
D Sorbitol 70% Solution	3.0
E Deionized Water	22.0

Procedure:

1. Combine B and C and heat to 75C.
2. Combine D and E and heat to 75C. Add to step 1 and cool to 35C while mixing with an overhead stirrer.
3. Add A and mix thoroughly.
4. Homogenize at 3000 psi.

SOURCE: Reheis Inc.: REZAL Aluminum Zirconium Chlorohydrate Complexes Super Dry Actives: Formulation

ANTIPERSPIRANT CREAM

RAW MATERIALS	% W/W
A. Mineral Oil 65/75	23.0
Calcium Stearoyl-2-Lactylate (1)	3.2
PEG-8 Dioleate (2)	0.8
B. Glycerine	3.0
Deionized Water	20.0
Sodium Lactate (60%) (3)	10.0
C. Aluminum Chlorohydrate (50%) (4)	40.0
D. Perfume	q.s.
pH	5.1
Viscosity (Brookfield @ 75F)	1,000,000 cps

Procedure:

Combine ingredients of Part A, Part B, and Part C in respective vessels at 70C. Add Part B to Part C and immediately add mixture B/C to Part A. Stir with moderate agitation to 40C and add Part D. Continue stirring to room temperature.

ANTIPERSPIRANT GEL

RAW MATERIALS	Parts by Weight
Part A:	
SF-1228	10.00
SF-1204	14.00
Part B:	
Polysorbate 80	0.25
Aluminum Zirconium Tetrachlorohydrate-Gly (ZAG)	20.00
Water	55.75

Procedure:

- 1) Mix SF-1228 and SF-1204 (Part A).
- 2) Dissolve polysorbate 80 into warm water.
- 3) Add ZAG to the water and polysorbate 80 solution and mix (Part B).
- 4) Add Part B to Part A in a high shear mixer with constant agitation.
- 5) Homogenize this mixture with a high speed and high shear mixer (such as an Eppenbach mixer).

Formulation AP-102

ANTIPERSPIRANT EMULSION ROLL-ON

RAW MATERIALS	Parts by Weight
Part A:	
SF-1204	20.50
SF-1228	7.50
Part B:	
Polysorbate 80	0.11
Aluminum Zirconium Tetrachlorohydrate-Gly (ZAG)	20.00
Water	51.89

Procedure:

- 1) Mix SF-1228 and SF-1204 (Part A).
- 2) Dissolve polysorbate 80 into warm water.
- 3) Add ZAG to the water and polysorbate 80 solution and mix (Part B).
- 4) Add Part B to Part A in a high shear mixer with constant agitation.
- 5) Homogenize this mixture with a high speed and high shear mixer (such as an Eppenbach mixer).

Formulation AP-103

ANTIPERSPIRANT LOTION

FORMULA:	% By Weight
MAZER MAZOL GMS	2.0
MAZER MACOL CSA 20	1.0
MAZER MACOL P-500	7.0
EMCOL E-607L (Lapyrium Chloride)	0.2
Chlorhydrol 50% Solution	40.0
Water	49.8
Perfume	q.s.

Procedure:

Dissolve EMCOL E-607L and MACOL P-500 in water, add Chlorohydrol 50% Solution and heat to 70C-75C.

Add MACOL CSA 20 and MAZOL GMS; stir until completely melted and uniformly dispersed.

Maintain agitation while cooling to below 30C. Add perfume and package.

SOURCE: Mazer Chemicals, Inc.: Cosmetic Formularies T-20D:
Formula 1

ANTI-PERSPIRANT LOTION

PHASE A	% By Weight
TAGAT R1	10.6
Isopropyl myristate	3.2
Perfume	0.5
Water	52.3
Aluminum chlorhydroxide solution (50%)	21.2
PHASE B	
Irgasan DP 300	0.1
Ethanol (96%)	10.6
ABIL B 8851	1.0
Citric acid	0.5

Preparation:

Mix A and B in the given order at room temperature. Stir B into A. Adjust pH-value to 3-3,5.

SOURCE: Goldschmidt Chemical Corp.: TEGO Surfactants: Formula
E 3.3

ANTIPERSPIRANT LOTION

RAW MATERIALS	Parts By Weight
WITCONOL MST (Glyceryl Stearate)	2.0
Cetareth 20	1.0
WITCONOL PPG-400 (PPG-9)	7.0
EMCOL E-607L (Lapyrium Chloride)	0.2
Chlorhydrol 50% Solution	40.0
Water	49.8
Perfume	q.s.

Dissolve EMCOL E-607L and WITCONOL PPG-400 in water, add Chlorhydrol 50% Solution and heat to 70 to 75C.

Add Cetareth 20 and WITCONOL MST; stir until completely melted and uniformly dispersed.

Maintain agitation while cooling to below 30C. Add fragrance and package.

SOURCE: Witco: Surfactants for Cosmetics and Toiletries:
Formula 105A

ANTIPERSPIRANT PUMP-SPRAY

RAW MATERIALS	Parts by Weight
WITCONOL APM (PPG-3 Myristyl Ether)	1.0
WITCONOL APS (PPG-11 Stearyl Ether)	3.0
SDA Alcohol	72.5
Silicone 344 Fluid	8.0
Carnation White Mineral Oil	0.5
Chlorhydrol 50% solution	15.0

Since all components are mutually compatible, simple cold blending is sufficient. WITCONOL APM, WITCONOL APS and Carnation White Mineral oil add emolliency to this formulation. WITCONOL APM and WITCONOL APS allow the coupling of mineral oil, which helps prevent valve clogging.

SOURCE: Witco: Surfactants for Cosmetics and Toiletries:
Formula 110A

ANTIPERSPIRANT ROLL-ON LOTION

FORMULA:	% By Weight
Part A:	
MAZER MAPEG S-40	4.0
MAZER T-MAZ 80	1.5
Cetyl Alcohol	2.5
Mineral Oil (70 Vis.)	2.0
Glycerin, USP	2.0
Propyl Paraben	0.1
Part B:	
Magnesium Aluminum Silicate	1.0
Glydant DM Hydantoin	0.2-0.4
Water, Deionized	49.9-50.1
Methyl Paraben	0.1
Part C:	
Aluminum Chlorohydrate (50%)	36.0
Part D:	
Perfume	q.s.

Procedure:

Dispense the Magnesium Aluminum Silicate thoroughly in the water using high speed agitation. Add the Glydant and paraben; heat to 75C. Weigh and heat Part A to 75C. Add Part A to Part B with good mixing. Mix and cool to 40C. Slowly add Part C, then Part D. Continue mixing and cool to 30C.

Formula 3

ANTIPERSPIRANT STICK

RAW MATERIALS	% By Weight
WITCAMIDE 70 (Stearamide MEA)	28.0
WITCONOL APM (PPG-3 Myristyl Ether)	27.0
Silicone 344 Fluid	20.0
Micro Dry	25.0
Fragrance	q.s.

Disperse Micro Dry in Witconol APM and Silicone 344 Fluid; stir while heating to 85 to 90C and slowly add WITCAMIDE 70 at 85 to 90C until mixture is uniform. Add fragrance and package at 85 to 88C.

SOURCE: Witco: Surfactants for Cosmetics and Toiletries:
Formula 103A

ANTIPERSPIRANT SOLID

RAW MATERIALS	Parts by Weight
SF-1202	50.0
Stearyl Alcohol	19.0
Castor Wax 70	3.0
Talc	4.0
Arlacel 165	2.0
Aluminum Zirconium Tetrachlorohydrate-Gly (ZAG)	22.0

Procedure:

- 1) Mix SF-1202 and stearyl alcohol.
- 2) Add ZAG, talc and Arlacel 165.
- 3) Heat to 75C and stir with moderate agitation until all wax is melted.
- 4) Pre-melt castor wax and add to mixture as a liquid and stir for 15 min.
- 5) Cool mixture to 55C with continued mixing and pour into container. Cool (avoid air entrapment due to excessive mixing speeds).

Formulation AP-100

ANTIPERSPIRANT SUSPENSION ROLL-ON FORMULATION

RAW MATERIALS	Parts by Weight
SF-1173	45.7
SF-1202	19.5
SF-96 (50)	5.0
Quaternium 18 Hectorite	2.5
Ethanol	2.0
Aluminum Zirconium Tetrachlorohydrate-Gly (ZAG)	25.0
Cabosil M-5	0.3

Procedure:

- 1) Mix SF-1173, SF-1202 and quaternium 18 Hectorite in a high-speed mixer.
- 2) Add SF-96 (50) and ethanol and continue mixing.
- 3) Add Cabosil M-5 and ZAG, and mix for an additional 15 minutes.
- 4) Transfer the material to a homogenizer (Eppenbach Homomixer) and homogenize for 3 minutes at high speed.
- 5) Check the viscosity; it should be approximately 3000 cps.

Formulation AP-101

SOURCE: GE Silicones: Personal Care Formulary: Suggested Formulations

ANTIPERSPIRANT STICK

FORMULA:	% By Weight
MAZER MASIL SF-V	46
Aluminum Chlorhydrate	26
Stearyl Alcohol	24
MAZER MAPEG 6000 DS	6
MAZER MACOL E-1000	2
MAZER MACOL E-1450	2

Procedure:

1. Heat the stearyl alcohol, MACOL E-1000, MACOL E-1450 and MAPEG 6000 DS to 80C.
2. When melted, add the aluminum chlorohydrate and mix thoroughly.
3. Cool to 70C, and rapidly mix in the MASIL SF-V.
4. When mixing is complete (15 to 30 seconds), pour mixture into a stick container.
5. Allow the mixture to cool undisturbed for 24 hours.

If an ultra fine grade of aluminum chlorohydrate is used, it may be necessary to change the order of mixing as follows:

1. Heat the MASIL SF-V to 65C.
2. Add the MACOL E-1000 and MACOL E-1450 to the hot MASIL SF-V with mixing.
3. Add the MAPEG 6000 DS and stearyl alcohol.
4. Add the aluminum chlorohydrate last.

SOURCE: Mazer Chemicals, Inc.: Cosmetic Formularies T-20D:
Formula 4

ANTIPERSPIRANT STICK

RAW MATERIALS	% By Weight
WITCAMIDE 70	28.5
WITCONOL APM	15.0
Propylene Glycol	30.0
Rehydrol	20.0
Water, Perfume	q.s.

Dissolve Rehydrol in water and propylene glycol at 25 to 30C; with good agitation. Add WITCONOL APM and heat to 80C.

Add WITCAMIDE 70 at 80 to 95C and stir until solution is clear. Cool to 77C with moderate agitation and add perfume.

Package at 72 to 74C.

SOURCE: Witco: Surfactants for Cosmetics and Toiletries:
Formula 104A

ANTIPERSPIRANT STICK

RAW MATERIALS	Parts By Weight
WITCAMIDE 70 (Stearamide MEA)	26.5
Carnation White Mineral Oil	5.0
WITCONOL APM (PPG-3 Myristyl Ether)	25.5
Silicone 344 Fluid	19.0
Micro Dry	24.0
Fragrance	q.s.

Disperse Micro Dry in WITCONOL APM, Carnation White Mineral Oil and silicone fluid; heat to 85 to 90C with agitation.

Slowly add WITCAMIDE 70 while maintaining temperature at 85 to 90C. When all WITCAMIDE 70 is thoroughly melted and mixture is uniform, add fragrance while maintaining agitation.

Cool to approximately 75C and pour into molds

ANTIPERSPIRANT STICK

RAW MATERIALS	% By Weight
Rehydrol II Aluminum Chlorohydrate	20.0
Stearamide MEA	15.0
Propylene glycol	30.0
EMEREST 2486 Pentaerythrityl Tetrapelargonate	15.0
ETHOXYOL 1707 Emulsifying Acetate Ester	8.0
Deionized water	10.4
Cab-O-Sil Fumed Silica	1.0
EMERESSENCE 1150 Ethylene Brassylate	0.6

EMEREST 2486 reduces the dragging effect of the stick across the skin to make application smooth but not greasy.

Procedure:

Combine Rehydrol, propylene glycol, EMEREST 2486 and Cab-O-Sil with high speed stirring. Continue stirring and heat to 80C. Slowly add stearamide MEA at 80C and stir until dissolved. Heat water to 80C and add slowly to the mixture. Continue stirring for 30 minutes. Add ETHOXYOL 1707 and EMERESSENCE 1150, stirring until homogeneous. Pour into sticks at 60C.

WITCONOL PPG-400 (PPG-9)	10.0
WITCONOL APM (PPG-3 Myristyl Ether)	5.0
Rehydrol, 50% aqueous solution	40.0
Water	32.0

Heat all ingredients with agitation to 75 to 80C until uniform; cool with agitation (In some cases phase inversion temperature (PIT) is exceeded. When this occurs, a milky emulsion occurs which clears as the formulation cools below it's PIT.)

Viscosities from 500 cps to 5000 cps can be obtained easily by slight formula variations. Viscosity stability and clarity are excellent at elevated temperatures, room temperature and at refrigerated temperatures (4C). Any hazing or clouding effect that occurs at lower temperatures disappears as the formulation returns to room temperature.

Since "Shake before using" need not appear on the label, Witco believes that this factor, coupled with the more aesthetic appearance, offers a more commercially attractive approach to roll-on formulating.

DEODORANT STICK

RAW MATERIALS	Parts By Weight
WITCONOL APM (PPG-3 Myristyl Ether)	79.0
Propylene Glycol	10.0
Witco Sodium Stearate C-1	8.0
Water	3.0
Antimicrobial	q.s. for desired effect

Dissolve Witco Sodium Stearate C-1 in WITCONOL APM, propylene glycol and water at 80 to 85C; stir until clear. Cool with stirring to 77C and add fragrance, if desired. Package at 73C.

This gel stick is clear to translucent. Various phenolic-type anti-microbials can be incorporated into this formulation. The high solvency characteristics of WITCONOL APM enhance the overall solubilizing properties of this formulation as well as impart desirable emollient properties.

PRESSED POWDER DRY ANTIPERSPIRANT

RAW MATERIALS	% By Weight
SCHERCOMID AME-70	4.75
Zinc Ricinoleate	0.90
Aluminum Chlorohydrate	19.0
Avicel PH 105	75.35
Perfume	qs

Pre-mix all powders and then add the SCHERCOMID AME-70 and perfume with spinbar of PK blender. Then press.

SOURCE: Scher Chemicals, Inc.: Formulation SG-0209

SOFT STICK ANTIPERSPIRANT

INGREDIENTS	% By Weight
Stearic acid (Triple press)	15.0
Cetyl alcohol	15.0
Aluminum chlorohydrate	20.0
Dow 345 fluid (Polydimethylcyclosiloxane)	44.5
VELSAN P8-16 (Cetyl C12-15 Pareth-9-Carboxylate)	2.0
SANDOPAN KST (Sodium Ceteth-13-Carboxylate)	3.0
Orgasol 2002D (Nylon)	0.5

Soft, smooth non-greasy payoff of this stick is due to the property of VELSAN P8-16 to reduce the oily feel of silicone. Non-crystallizing SANDOPAN KST replaces the traditional sodium stearate.

Procedure:

Charge to vessel Stearic acid, Cetyl alcohol, VELSAN P816, SANDOPAN KST to 65-70C. Mix until homogeneous. Discontinue heating. Add Orgasol. Cool to 55C. Add Dow 345 fluid slowly; at 45-50C pour into containers. Allow to cool undisturbed.

BABY-CREAM
One-vessel-method

RECIPE:	% By Weight
A.	
HOSTACERIN WO	10.00
Microwax	3.00
Lanolin Superfine	5.00
Petrolatum	20.00
Castor Oil	5.00
Water, preserving agent	36.80
Zincoxide	20.00
B.	
Perfume	0.20

Procedure:

- I. Melt A at 80C.
- II. Stir until cool.
- III. Add B at 40C to II.
- IV. Homogenize if necessary.

Formulation No. A VI/5803

BABY SHAMPOO
10% active detergent

RECIPE:	% By Weight
A.	
GENAPOL AMS	25.00
B.	
Perfume	0.30
Water	71.60
Extrapon Chanomile Special	2.00
Preserving agent	q.s.
C.	
TYLOSE H 10,000	1.10

Procedure:

- I One after another the components of B are added to A.
- II C, which is added in small portions by continuing stirring, should swell until a homogeneous shampoo free of lumps have been obtained. The swelling of C can be accelerated by frequent or intensive stirring.

Formulation No. B I/4021

OPACIFIED BABY SHAMPOO

RAW MATERIALS	% By Weight
MIRANOL 2MCAS MODIFIED	30.0
Cedemide AX	2.0
Cerasynt IP	0.5
Methocel 4EM Premium, 3% Solution	35.0
Water	32.5

Procedure:

- (A) To prepare the Methocel solution add three parts of Methocel E4M to 30 parts of water at 80C. Mix until uniformly suspended. Add 67 parts of cold water with mixing and stir until uniform.
- (B) Combine the MIRANOL 2MCAS MODIFIED, Cedemide AX and Cerasynt IP and heat to 80C. Add the 3% Methocel solution slowly with good mixing, then the remaining water. Mix until uniform. Adjust pH to 7.0 with hydrochloric acid.
- Solids: 17.0%, viscosity: 4,000 cps.

PEARLESCENT BABY SHAMPOO

INGREDIENTS	%W/W
Water	q.s. to 100.00
TEXAPON ASV (Sodium Laureth Sulfate	25.00
(and) Magnesium Laureth Sulfate	
(and) Sodium Laureth-8 Sulfate	
(and) Magnesium Laureth-8 Sulfate	
(and) Sodium Oleth Sulfate	
(and) Magnesium Oleth Sulfate	
VELVETEX AB-45 (Coco Betaine)	6.50
EUPERLAN PK-850 (Mixture of fatty alcohol	3.00
ether sulfates with pearlizing agent)	
Sodium Chloride	3.00
BRONIDOX L (Propylene Glycol (and)	0.20
5-Bromo-5-Nitro-1,3 dioxane)	
Fragrance	q.s.
	100.00

Procedure:

Charge kettle with water. Add ingredients individually in the order listed, under agitation. Adjust the pH to 7.0 +/- 0.5 with 50% citric acid. Continue mixing until homogeneous. Fill off.

Comments:

This relatively low solid formula provides good performance without sacrificing mildness.

Section III

Bath and Shower Products

AEROSOL SKIN-CLEANSER GEL

RAW MATERIALS	% By Weight
Concentrate:	
WITCAMIDE 5195 (Lauramide DEA)	38.20
Potassium Laurate, 40%	9.55
Water	30.20
Propylene Glycol	9.55
WITCAMIDE 511C (Oleamide DEA)	7.50
Carnation White Mineral Oil	5.00
Aerosol:	
Concentrate	95.00
Pentane	3.00
Isobutane	2.00

Heat concentrate until clear. Pour while hot into aerosol containers, cool to room temperature and pressurize. Shake containers until contents are well mixed.

This formulation is dispersed as a clear gel, which changes to a rich lather when spread and rubbed onto the skin. The combination of emulsifiers, humectants and oil provides cleansing, moisturizing and lubricity for thorough skin conditioning.

BATH SPLASH

RAW MATERIALS	% By Weight
Perfume oil	2.0
GLUCAM P-20	1.0
PPG-36 Oleate	0.6
SOLULAN PB-20	0.6
Specially Denatured Alcohol No. 40	78.8
Water	17.0
Color	q.s.

Description:

Afterbath splash. Used liberally all over body. Fragrance oils light in character, benefit from GLUCAM P-20's ability to increase lasting power. GLUCAM P-20, PPG-36 Oleate and SOLULAN PB-20 impart humectant and emollient properties, leaving silky, nonoily feel on skin.

Procedure:

Dissolve all ingredients (except water) in alcohol with stirring. Add water in thin stream with stirring. Age, chill.

Variations:

If mixture has heavy cloud or precipitate, increase alcohol and decrease water.

For increased lubricity, add AMERLATE P.

BATH GEL

RAW MATERIALS	% By Weight
MIRATAINE COB	15.0
MIRANOL 2MCA-ESF	30.0
Sodium Lauroyl Sarcosinate	10.0
Water	45.0

Procedure:

Mix all ingredients together and agitate until uniform. Adjust the pH to 6.2 with hydrochloric acid while warm. Allow to cool. Viscosity without fragrance is 41,500 cps. Solids: 22.6%.

Note:

Using Cocamidopropyl Betaine on an equivalent solids basis gives a viscosity of 20,000 cps. The formulation will accept a high percentages of perfume (up to 2.0% for most fragrances).

BATH GEL

RAW MATERIALS	% By Weight
MIRATAINE CBS	29.0
Cedepal SN 303	29.0
Witconate AOS	18.0
Ethyl Alcohol	3.0
Water	21.0

Procedure:

Mix all ingredients together and adjust pH to 7.0 with citric acid.

Solids: 30.1%, viscosity: 60,000 cps.

HIGHLY PERFUMED BATH GEL

RAW MATERIALS	% By Weight

BATH GEL B-5010

RAW MATERIALS	% By Weight
Monamid 150 LW	43.5
Standapol ES-40	44.0
Standamul 1414E	4.0
AMEROXOL OE-2	0.5
Methocel 65HG, 2% aqueous dispersion	4.0
SOLULAN 16	2.0
GLUCAM E-20	2.0
Perfume, preservative and color	q.s.

Description:

Popular bath gel for overall body use. Stringy pearlescence, medium to high viscosity. GLUCAM E-20 provides humectancy without tack.

Procedure:

Melt MONAMID 150LW. Add remaining ingredients in order listed, mixing thoroughly after each addition. SOLULAN 16 should be melted before adding.

Variations:

To reduce stripping of natural body oils, replace part of STANDAPOL ES-40 with SOLULAN L-575.

To vary viscosity, vary concentration of Methocel 65HG.

BATH GEL B-5011

RAW MATERIALS	% By Weight
Standapol ES-2	46.5
Emcol 4300	25.0
Monamid 150LW	23.0
GLUCAM E-10	2.5
SOLULAN 16	3.0
Perfume, preservative and color	q.s.

Description:

Popular bath gel for overall body use. Medium viscosity, stringy gum-free system. Can also be used as shampoo. SOLULAN 16 and GLUCAM E-10 provide luster and ease of combing.

Procedure:

Premelt solid materials. Add ingredients one at a time, mixing thoroughly after each addition. Stir until uniform.

Variations:

For more smoothness and slip, add SOLULAN PB-20.

SOURCE: Amerchol Corp.: Bath and Fragrance Products:
Suggested Formulations

BATH GEL B-5012

RAW MATERIALS	% By Weight
Standapol T	45.0
Standapol AB-45	10.0
GLUCAM E-10	2.0
Citric acid, 10% in water	3.0
SOLULAN 75	3.5
Monamid 150 LW	6.0
Water	30.5
Perfume, preservative, color	q.s.

Description:

Clear medium viscosity flowing gel for shower or tub use. Serves also as bubble bath. GLUCAM E-10 and SOLULAN 75 provide bodying effect.

Procedure:

Warm water to 45-50C. Add Standapol T with gentle agitation. Premix remaining ingredients and warm until clear. Add with gentle agitation to water.

Variations:

To opacify, add GLUCATE SS.

To impart residual silky effect, add SOLULAN PB-20.

BODY GEL B-5013

RAW MATERIALS	% By Weight
GLUCAM E-10	3.0
SOLULAN L-575	4.0
Monamid R31-42	20.0
Standapol ES-2	59.0
Water	6.0
Citric acid, 40% solution q.s. to pH 5.0-5.5	
Specially Denatured Alcohol No. 40	4.0
Perfume oil	4.0
Preservative and color	q.s.

Description:

Highly fragranced body shampoo designed to impart overall fresh, fragrant feeling. SOLULAN L-575 and GLUCAM E-10 provide body and reduce oil-stripping effect.

Procedure:

With slow agitation, combine GLUCAM E-10, SOLULAN L-575, Monamid R31-42, Standapol ES-2 and water. Add citric acid solution to adjust pH to 5.0 to 5.5. Add alcohol and perfume oil slowly, mix until clear.

Variations:

For increased fragrance, increase perfume oil to total up to 8%.

To increase fragrance duration, add GLUCAM P-20.

Isostearyl alcohol	20.0
ACETULAN	5.0
GLUCAM P-20	10.0
Perfume and color	q.s.

Description:

Thin film floating bath oil with humectant. Film formation promoted by isostearyl alcohol, oiliness sharply reduced by ACETULAN. GLUCAM P-20 increases fragrance duration and imparts humectant to bath water.

Procedure:

Blend all ingredients. Stir until uniform.

Variations:

For added skin treatment, add small amount of MODULAN in place of part of mineral oil.

For added body and silky feel, replace part of isostearyl alcohol with PPG-36 oleate.

SOURCE: Amerchol Corp.: Bath & Fragrance Products: Suggested Formulas

BATH OIL B-5003

RAW MATERIALS	% By Weight
Mineral oil, 70 wt.	62.0
ACETULAN	7.0
Isostearyl alcohol	12.0
AMERLATE P	5.0
PROMYR	14.0
Perfume oil	q.s.

Description:

Elegant mineral oil-based floating bath oil. Oily effect reduced by ACETULAN, lubricity imparted by AMERLATE P.

Procedure:

Blend all ingredients except perfume. Stir with warming until uniform. Add perfume, stir until uniform.

Variations:

To lighten feel, replace part of mineral oil with Witconol APEM.

To add blooming effect, add AMEROXOL OE-2.

BATH OIL B-5004

RAW MATERIALS	% By Weight
PROPAL	25.0
ACETULAN	10.0
SOLULAN PB-20	10.0
Specially Denatured Alcohol No. 40	55.0
Perfume and color	q.s.

Description:

Light, floating alcohol-bearing bath oil with velvety feel due to ACETULAN and spreading properties due to SOLULAN PB-20.

Procedure:

Blend all ingredients, stir until uniform.

Variations:

For "natural" labeling, replace part of PROPAL with vegetable oil.

SOURCE: Amerchol Corp.: Bath & Fragrance Products: Suggested Formulations

BATH OIL B-5005

RAW MATERIALS	% By Weight
Mineral oil, 70 wt.	60.0
PROMYR	20.0
ACETULAN	10.0
AMEROXOL OE-2	10.0
Perfume and color	q.s.

Description:

Instant blooming bath oil that leaves part of emollient in water and part floating. ACETULAN reduces oiliness and adds velvety feel. AMEROXOL OE-2 effects partial dispersion.

Procedure:

Blend all ingredients; stir until uniform.

Variations:

For additional skin treatment, replace part of PROMYR with MODULAN.

For lubricity, replace part of PROMYR with AMERLATE P.

BATH OIL B-5006

RAW MATERIALS	% By Weight
Sesame oil	28.0
Corn oil	8.0
Mineral oil, 70 wt.	19.0
Decyl Oleate	16.0
Standamul 1414-E	15.0
AMEROXOL OE-2	10.0
SOLULAN PB-20	2.0
ACETULAN	2.0
Perfume and antioxidant	q.s.

Description:

Combination blooming dispersible and floating bath oil with high concentration of vegetable oil. AMEROXOL OE-2 offers dispersion. ACETULAN reduces oily feel and imparts velvety character. Popular skin treatment type.

Procedure:

Blend all ingredients; stir until uniform.

Variations:

For silky feel, replace part of oil system with PPG-36 Oleate.

For added lubricity, replace part of decyl oleate with AMERLATE P.

SOURCE: Amerchol Corp.: Bath and Fragrance Products: Suggested Formulations

BATH OIL B-5007

RAW MATERIALS	% By Weight
AMERCHOL L-101	10.0
Mineral oil, 70 wt.	60.0
ACETULAN	2.0
MODULAN	1.0
Kessco PEG-100 Dilaurate	20.0
SOLULAN PB-20	5.0
AMEROXOL OE-2	2.0
Perfume and color	q.s.

Description:

Semidispersible popular mineral oil-based bath oil type, recommended for skin treatment. ACETULAN sharply reduces oily character and AMERCHOL L-101 and MODULAN provide treatment.

Procedure:

Blend all ingredients together with slight warming. Stir until uniform.

Variations:

For increased water soluble emollient character, replace part of mineral oil with GLUCAM P-20.

BATH OIL B-5008

RAW MATERIALS	% By Weight
Mineral oil, 70 wt.	77.0
ARLAMOL E	15.0
AMEROXOL OE-2	1.0
Igepal CO-520	1.0
SOLULAN PB-20	6.0
Perfume and color	q.s.

Description:

Semidispersible bath oil with good spread on skin due to SOLULAN PB-20.

Procedure:

Blend all ingredients, mix until uniform.

Variations:

For greater dispersibility, increase concentration of Igepal CO-520.

For greater lubricity, replace part of mineral oil with AMERLATE P.

SOURCE: Amerchol Corp.: Bath and Fragrance Products: Suggested Formulations

BATH OIL B-5009

RAW MATERIALS	% By Weight
Diol 400	30.0
PROPAL	30.0
Mineral oil, 70 wt.	20.0
Monamid 716	4.0
GLUCAMATE SSE-20	3.0
ACETULAN	10.0
Water	3.0
Perfume and colors	q.s.

Description:

Two layer, partially dispersible treatment bath oil. Use of different dye shades in Diol-400 and oil phase can provide greater visual contrast in product prior to shaking.

Procedure:

Blend all ingredients with minimum warming, stir sufficiently to mix thoroughly. Product will settle into two layers.

Variations:

For increased humectancy, add GLUCAM E-20.

For increased body, add PPG-36 Oleate.

SOURCE: Amerchol Corp.: Bath and Fragrance Products: Formula

BATH OIL

RAW MATERIALS	% By Weight
ACTRASOL MY	75
White Oil	24
Perfume	1

Sulfated oils are used in the toilet goods field primarily in bath oils and shampoos of the non-lathering type. Their very low levels of toxicity or irritation make them ideal for this use. For example, the bath oil formulation gives excellent skin feeling, and at the same time disperses limesoap curds, thus preventing bathtub ring.

BATH SALTS B-5017

RAW MATERIALS	% By Weight
Newport Bathing Salt	90.0
Sodium sesquicarbonate	7.0
GLUCAM P-20	1.5
Perfume oil	1.5
Color	q.s.

Description:

Attractive large sodium chloride crystals. Sodium sesquicarbonate serves as water softener and GLUCAM P-20 as water-soluble emollient and fragrance duration extender. Intended as extension of bath fragrance line.

Procedure:

Premix perfume oil and GLUCAM P-20. Load half of the salt into a hopper above a twin shell blender, then add the sodium sesquicarbonate. Spray in the perfume and color solutions. Drop into blender and add remainder of salt. Blend 5 minutes only to avoid destroying crystal structure of salt.

Variations:

For improved emollient and foaming effects, add SOLULAN L-575 to color solution.

BATH BEADS B-5018

RAW MATERIALS	% By Weight
Pentasodium triphosphate	50.0
Sodium sesquicarbonate	46.0
Perfume oil	0.5
GLUCAM P-20	1.5
GLUCAMATE SSE-20	1.0
SOLULAN PB-20	1.0
Color	q.s.

Description:

Water-softening emollient small bead tub water treatment with dispersible and lipophilic emollients provided by GLUCAM P-20, GLUCAMATE SSE-20 and SOLULAN PB-20.

Procedure:

Premix perfume oil, GLUCAM P-20, GLUCAMATE SSE-20 and SOLULAN PB-20.

Variations:

- For lightness, add Cab-O-Sil M-5.
- For "relaxing" label claim, add magnesium sulfate.
- For foaming effect, add sodium olefin sulfonate.

BATH SPLASH F-4005

RAW MATERIALS	% By Weight
Phase A:	
Carbopol 941	0.1
Water	25.9
GLUCAM P-20	3.0
GLUCAM E-10	2.0
Phase B:	
GLUCAMATE SSE-20	4.0
Perfume oil	2.5
Diisopropyl adipate	1.5
Specially Denatured Alcohol No. 40	60.0
Phase C:	
Diisopropanolamine, 10% in water	1.0
Color	q.s.

Description:

Hydroalcoholic moisturizing afterbath body splash. GLUCAM E-10 provides dry humectant, GLUCAM P-20 fragrance fixation and water-soluble emollient.

Procedure:

Phase A: Completely disperse Carbopol 941 in water. Add GLUCAMS with stirring.

Phase B: Combine all ingredients except alcohol with stirring and just enough heat to clarify. Add slowly with stirring to alcohol. Stir until clear. Add Phase B to Phase A slowly with stirring until clear. With good mixing, add Phase C in thin stream. Mix until homogeneous.

Variations:

To opacify, add small amount of GLUCATE SS to Phase B.

BUBBLE BATH B-5014

RAW MATERIALS	% By Weight
Water	47.5
Standapol ES-40	38.0
Monamid 716	7.0
GLUCAM E-20	3.5
SOLULAN L-575	4.0
Perfume, preservative, color	q.s.

Description:

Medium viscosity liquid bubble bath. Good foamer. GLUCAM E-20 contributes to body and foam stability. SOLULAN L-575 reduces stripping effect of surfactant system.

Procedure:

Blend all ingredients; stir until uniform.

Variations:

For increased fragrance duration, add GLUCAM P-20.

For increased body, add SOLULAN 16.

BUBBLE BATH B-5015

RAW MATERIALS	% By Weight
Water	51.0
GLUCAM E-10	4.0
Ammonyx LO	15.0
Maprofix WAC	25.0
Sodium chloride, 10% in water	5.0
Perfume, preservative, color	q.s.

Description:

Clear viscous bubble bath.

AMMONYX LO contributes to foam, GLUCAM E-10 to body and feel.

Procedure:

Add ingredients in order listed with thorough agitation, avoiding excess aeration.

Variations:

Viscosity can be controlled by varying sodium chloride concentration.

To opacify for "creamy" appearance, add GLUCATE SS.

CONDITIONING BUBBLE BATH

RAW MATERIALS	% By Weight
Water, D.I.	70.5-73.5
DESONIC CE-12 (Glycereth-12)	1.0
Varamide MA-1 (Cocamide DEA)	1.8
DESONATE AOS (Sodium C14-16 Olefin Sulfonate)	8.2
DESONOL SE-2 (Sodium Laureth Sulfate)	12.5
Citric Acid	to pH 6.5-7.0
Sodium Chloride	3.0-6.0
Perfume, Dye and Preservative	q.s.

Blending Procedure:

Add surfactants, in order, to D.I. Water with moderate agitation. Adjust pH with Citric Acid; then, add Sodium Chloride to obtain the desired viscosity before adding Perfume, Dye and Preservative.

Comment:

DESONIC CE-12 exhibits excellent emollient and humectant properties and imparts a soft, conditioned effect to the skin without residual oiliness. It is compatible with anionic, cationic and nonionic surfactants and does not inhibit cleansing and foam performance.

SOURCE: DeSoto, Inc.: Formulation L-3093

EMOLLIENT BUBBLE BATH

INGREDIENTS	% W/W
Water	29.0
STANDAPOL ES-2 (Sodium Laureth Sulfate)	60.0
CETIOL HE (PEG-7 Glyceryl Cocoate)	5.0
STANDAMID LDS (Lauramide DEA)	3.0
Perfume Oil	q.s.
Dyes and Preservatives	q.s.

Procedure:

The recommended order of addition is given above. Add all materials singularly under adequate agitation. Continue stirring until product is homogeneous.

Note:

The ethoxylated cocoate provides emollient and substantive dermal effects. This high foaming formula can also be used as a body shampoo.

Formulation H-4855

LIQUID BUBBLE BATH

INGREDIENTS	%W/W
Water	68.5
Sodium Chloride	1.0
STANDAPOL ES-40 CONC. (Sodium Myreth Sulfate)	20.0
STANDAMID LD (Pre-melted at 45C) (Lauramide DEA)	5.0
CETIOL HE (PEG-7 Glyceryl Cocoate)	2.5
STANDAMOX CAW (Cocamidopropylamine Oxide)	3.0
Perfume Oil	q.s.
Dyes and Preservatives	q.s.

Procedure:

The order of addition is given above. Add all materials singularly under adequate agitation. Continue stirring until product is homogeneous.

Note:

The ethoxylated cocoate provides emolliency. The blend of amide and amine oxide provides a high level of detergency with minimum irritation potential not possible in a strictly high amide blend. To increase creaminess of lather, replace all of alkanolamide with STANDAMOX CAW.

Formulation 4856

FOAMING BATH OIL

INGREDIENTS	% W/W
Water	26.25
STANDAPOL ES-1 (Sodium Laureth Sulfate)	60.00
STANDAMOX CAW (Cocamidopropylamine Oxide)	3.50
STANDAMOX O1 (Oleamine Oxide)	1.50
AETHOXAL B (PPG-5-Laureth-5)	2.50
SEDAPLANT RICHTER (Urea (and) Fennel Extract (and) Hops Extract (and) Balm Mint Extract (and) Mistletoe Extract (and) Matricaria Extract (and) Yarrow Extract (and) Allantoin)	1.00
Glucamate DOE-120	5.00
Kathon CG	0.05
Fragrance	0.20
Citric Acid (50% solution)	q.s.

Procedure:

1. Mix all ingredients and heat to 65C until homogeneous.
2. Cool to room temperature and adjust pH to 6.0-6.2 with the citric acid solution.
3. Fill off.

Comments:

The use of amine oxides, which create a creamy "lather", and AETHOXAL B results in an economical yet high performance foam bath.

SOURCE: Henkel Corp.: Personal Care Products Formulary: Formula HOB-220-30B

FOAMING BATH OIL

INGREDIENTS	% W/W
Part A:	
STANDAPOL ES-2 (Sodium Laureth Sulfate)	50.0
Water	20.0
Part B:	
CETIOL HE (PEG-7 Glyceryl Cocoate)	20.0
Isopropyl Myristate	10.0
Perfume Oil	q.s.
Dyes and Preservative	q.s.

Procedure:

Blend Part A. Blend Part B. Add Part B to Part A with stirring until solution is clear.

Comments:

This formula based on the mild 2 mole ether sulfate exhibits good foaming characteristics coupled with the skin softening effects of the emollient esters.

SOURCE: Henkel Corp.: Personal Care Products Formulary: H-4854

FOAMING BATH OIL

INGREDIENTS	% W/W
Water	30.00
STANDAPOL ES-1 (Sodium Laureth Sulfate)	60.00

Polysorbate 20	1.00
Perfume oil (floral)	0.10
D&C Red 40	q.s.

Easy to apply, this bracer incorporates uncommonly high levels of non-aqueous ingredients.

Procedure:

1. Add deionized water and alcohol to a vessel and begin mixing.
2. Dissolve methylparaben in warm propylene glycol - add to batch.
3. Add remaining ingredients one at a time mixing well between each addition.
4. Add perfume oil to the Polysorbate 20 and warm while mixing to dissolve perfume--add to batch.
5. Add color and mix well.

NON-ALCOHOLIC SPLASH TONER

INGREDIENTS	% By Weight
Deionized water	81.55
Propylene glycol	2.00
Methylparaben	0.15
Ginseng extract	2.00
Horse chestnut extract	2.00
Na PCA	1.00

ALOE JELLY

INGREDIENTS:	% By Weight
A.	
ALOE VERAGEL Liquid 1:1	96.9
Sodium Hexametaphosphate	0.1
B.	
Xanthan Gum	2.0
Irish Moss	1.0

Procedure:

Heat aloe gel to 55C. Dry blend Phase B. In a homomixer add B to A. Let mix until thick and all of B is hydrated. Fill warm, because this product sets to a thick gel.

ALOE VERA JELLY

INGREDIENTS:	% By Weight
A.	
Water	91.94
Citric Acid (granular)	0.2
Glydant	0.3
Germall 115	0.25
Versene-220	0.05
Propyl Gallate	0.05
B.	
Propyl Glycol	4.5
Xanthan Gum	0.75
Aubygel x-125	1.5
C.	
ALOE VERA 200 powder	.46

Procedure:

Heat phase A to 80C. Pre mix phase B with good agitation and add phase B to A. Mix slowly and cool to 55C. Add phase C, and mix until uniform. Package at between 35-45C.

SOURCE: Dr. Madis Laboratories Inc.: Suggested Formulations

ALOE JELLY (90%)

INGREDIENTS:	% By Weight
A.	
Water	55.65
2% Carbopol-940 (Sol.)	40.00
Citric Acid (granular)	0.2
Glydant	0.2
Germaan II	0.3
B.	
ALOE VERAGEL Liquid Concentrate 1:40	2.25
C.	
Triethanolamine-99	1.6

Procedure:

Mix and heat phase A to 55C. Add ALOE VERAGEL 1:40. Mix until uniform. Neutralize with TEA. Mix until clear and smooth.

TONER (30% ALOE)

INGREDIENTS:	% By Weight
A.	
Water	93.39
Glycerin	5.0
Methylparaben	0.15
Propylparaben	0.01
B.	
Sodium Hexametaphosphate	0.2
Allantoin	0.5
C.	
ALOE VERAGEL Liquid Concentrate 1:40	0.75
D.	
Color and Fragrance	Q.S.

Procedure:

Heat phase A to 80C. When the parabens are dissolved add phase B. Mix and cool to 55C and add Aloe concentrate. Add color and fragrance as desired.

Note:

The fragrance may need to be pre stabilized with a suitable co solvent such as a Tween.

SOURCE: Dr. Madis Laboratories Inc.: Suggested Formulations

ALOE PEEL-OFF MASK

INGREDIENTS:	% By Weight
A.	
PVA 35/45 cps (15% solution)	35.0
PVA 20/25 cps (20% solution)	35.0
B.	
ALOE VERAGEL Liquid 1:10	2.0
Alcohol	20.0
Methylparaben	0.2
Carbowax 1540	2.0
Glycerin	0.6
Propylene glycol	3.0
C.	
Tween 60	2.0
Perfume oil	0.2

Procedure:

Make PVA solutions separately heating up to 85C-90C while stirring to be certain of complete solution. Mix ingredients in B; when solution is clear add the mixture of C and B and stir well. Add the mixture of B and C to A and stir well. Let stand overnight to let air rise to surface and escape.

F.	
Perfume oil	0.10
G.	
Deionized water	1.00
DOWICIL 200 antimicrobial	0.10
H.	
Polyethylene 9A	10.00

Procedure:

1. Meter water (Phase A) into a compounding vessel, add aloe vera mix and begin heating to 80C.
2. In a separate vessel, prepare Phase B by heating propylene glycol. Add parabens and, when dissolved, add to water phase (Phase A). Water must be above 60C.
3. Prepare Phase C by combining all ingredients in a separate vessel and heating to 80C. Methocel polymer can be added with no prewetting. At 80C combine with batch and mix for 5 minutes
4. Add Phase D to batch and begin to cool.
5. Add color (Phase E).
6. Add perfume oil (Phase F) when batch is below 45C.
7. Add Phase G (dissolved DOWICIL 200 antimicrobial) when batch is below 45C.
8. Sprinkle in polyethylene beads and mix well.

CATIONIC CREAM MAKEUP

INGREDIENTS	%W/W
Phase A:	
CERASYNT SD (Glyceryl Stearate)	9.00
CERAPHYL 847 (Octyldodecyl Stearoyl Stearate)	6.50
EMULSYNT GDL (Glyceryl Dilaurate)	6.50
Cetyl Alcohol	1.00
Dow Corning 200 Fluid (100 cs) (Dimethicone)	1.00
Phase B:	
Water, deionized	51.40
Cellosize QP 30,000 (Hydroxyethyl Cellulose)	0.30
Phase C:	
CERASYNT 303 (Diethylaminoethyl Stearate)	1.00
Phosphoric Acid (85%)	0.30
Glycerin	5.00
Phase D:	
Pigment Blend #F112-9	15.00
Phase E:	
CERAPHYL 65 (Quaternium-26)	2.00
Phase F:	
Germaben II (Propylene Glycol (and) Diazolidinyl Urea (and) Methylparaben (and) Propylparaben)	1.00

Procedure:

Combine Phase A and heat to 80C. Disperse Cellosize in water and heat to 80C. Combine Phase C and warm to keep liquid. Add Phase C and warm to keep liquid. Add Phase C to Phase B. Sprinkle Pigment Blend into water phase and mix until well dispersed. Add Phase E, followed immediately by Phase A, to minimize aeration and foaming. Cool to 50C and add Phase D. Cool to room temperature with mixing.

CATIONIC CREAM MAKE-UPRAW MATERIALS Parts

Phase A:	
CERASYNT SD	10.50
CERAPHYL 847	7.50
EMULSYNT GDL	7.50
Cetyl Alcohol	1.00
Dow Corning 200 Fluid (100 cs.)	1.00
PRESERVATOL	0.20

Phase B1:	
Water, deionized	63.70
Cellosize QP 30,000	0.30

Phase B2:	
CERASYNT 303	1.00
Phosphoric Acid (85% Ortho)	0.30
Glycerine	5.00

Phase B3:	
Pigment Blend #A63-46-1	15.00

Phase B4:	
CERAPHYL 65	2.00

Procedure:

In a vessel equipped for heating and mixing, add ingredients of Phase A. Heat and stir to 80C and hold at 80C for addition to Phase B.

In a separate vessel large enough to hold the entire batch and equipped for proper mixing, (scraper blades included), heating and cooling, prepare Phase B-1 by slowly dispersing the Cellosize in the water. When Phase B-1 is "smooth", add ingredients of Phase B-2. Start heating to 80C and sprinkle in Phase B-3. When all of Phase B-3 is added and temperature is at 80C, continue to mix fifteen minutes. Keeping all at 80C, next add Phase B-4 followed immediately by the addition of Phase A to minimize any foaming or aeration. Mix five minutes, holding the temperature at 80C then cool and continue to mix to 30C.

Phase B-4:	
Quaternium-26 (Ceraphyl 65)	1.50

Phase C:	
Germaben II	1.00

Procedure:

Heat Phase A to 80C and hold at 80C for addition to Phase B. Predisperse the Natrosol in water and heat Phase B-1 to 80C. Then add the ingredients of Phase B-2, one at a time in the order written, to Phase B-1. Mix until smooth and sprinkle in Phase B-3, then mix for fifteen minutes. Keeping all at 80C, add Phase B-4 followed immediately by the addition of Phase A to minimize any foaming or aeration. Mix five minutes, holding the temperature at 80C, then cool and continue to mix to 25-28C.

CREAM MATTE MAKEUP

RAW MATERIALS	% By Weight
A.	
VEEGUM	2.60
CMC 7LF	0.40
Water	42.70
B.	
Propylene glycol	5.00
Water	12.30
C.	
Talc	18.50
VANCLAY Kaolin	1.30
Titanium dioxide	3.70
Iron oxides	1.50
D.	
Isopropyl myristate	5.00
Arlacel 20	0.75
Tween 20	2.25
Stearyl alcohol	2.00
Amerchol L-101	2.00
Preservative	q.s.

Procedure:

Blend VEEGUM and CMC. Slowly add to the water, while agitating at maximum available shear. Continue mixing until smooth. Micropulverize C. Add to B and grind to a smooth paste. Add to A and heat to 65C. Heat D to 70C and add to A/B/C. Mix until cool.

Consistency: Medium viscosity cream

Suggested Packaging: Jar or tube

Comments:

VEEGUM stabilizes the emulsion and provides uniform pigment suspension. This nonionic makeup spreads smoothly and evenly with a light greaseless feel. It can be applied with a wet sponge if desired. With slight modifications, this formula can be used as a cream eye shadow.

25% pigment dispersion in ETHOXYOL 1707 Emulsifying Acetate Ester	10.0

This creamy make-up contains less oil than regular make-ups, plus oil blotters to help keep you shine-free for hours. It has a more even coverage than oil free make-ups and provides light moisture protection. ETHOXYOL 1707 is utilized as a pigment wetting agent in this formula.

Procedure:

Heat A and B to 80C and add C. Agitate until homogenized. Preheat B to 60C and add to the AC mixture. Subject the ABC mix to a #3 Roller mill, then add D.

DUSTING POWDER B-5019

RAW MATERIALS	% By Weight
Talc	97.7
Perfume oil	0.8
GLUCAM P-20	1.5
Preservative	q.s.

Description:

Basic dusting powder with talc for lubrication and absorbency and GLUCAM P-20 to increase stability and duration of fragrance.

Procedure:

Premix a dry master batch of perfume oil, GLUCAM P-20 and 5% of the talc. Add master batch to remainder of talc. Mix until uniform.

Variations:

For deodorant labeling, add sodium bicarbonate.

To flesh-tint for aftershave, add iron oxide pigments.

DUSTING POWDER B-5020

RAW MATERIALS	% By Weight
Talc	91.6
Magnesium carbonate	3.0
Zinc stearate	3.0
Triclosan	0.2
Perfume oil	0.7
GLUCAM P-20	1.5
Preservative	q.s.

Description:

Deodorant dusting powder with Triclosan antibacterial and increased coverage due to zinc stearate. GLUCAM P-20 protects and extends the fragrance.

Procedure:

Premix a dry master batch of Triclosan, perfume oil, GLUCAM P-20 and 5% of the talc. Mix with remaining talc and other ingredients until uniform.

Variations:

For greater coverage, add zinc oxide or titanium dioxide.

For light emollient effect, add ACETULAN to the master batch mix.

Veegum R (5% Soln.) (Magnesium Aluminum Silicate)	3.50
Glycerin	4.40
Solulan 98 (Laneth-10 Acetate)	1.00
Phase C:	
141 Talc	10.58
LUSTRA-PEARL SATIN (Mica (and) Titanium Dioxide)	11.20
SPECTRA-PEARL RDG (Mica (and) Iron Oxide (and) Titanium Dioxide)	2.15
SPECTRA-PEARL BNG (Mica (and) Iron Oxide (and) Titanium Dioxide)	1.07
Phase D:	
Triethanolamine (85%)	0.90
Phase E:	
Carbopol 941 (2% soln.) (Carbomer-941)	4.40
Phase F:	
Germaben IIE (Propylene Glycol (and) Diazolidinyl Urea (and) Methylparaben (and) Propylparaben)	1.00

Procedure:

Combine Phase A and heat to 80C. Combine Phase B and heat to 80C. Preblend Phase C, slowly sprinkle into Phase B and allow to mix 5-10 minutes. Add Phase A to water Phase and allow to mix 5-10 minutes. Add Carbopol and allow to mix 10-15 minutes. Cool to 50C and add Germaben. Cool to room temperature.

Note: Viscosity takes approximately one week to develop.

ENRICHED EMOLLIENT LIQUID MAKE-UP

INGREDIENT	% By Weight
A.	
VEEGUM	0.70
Cellulose Gum	0.25
Water	42.28
Triethanolamine	0.75
PEG-26 Glyceryl Ether	10.50
Methylparaben	0.30
B.	
Titanium Dioxide	10.00
Talc	3.15
Iron Oxides	1.97
C.	
Isopropyl Isostearate	10.00
Mineral Oil (and) Lanolin Alcohol	6.50
Isopropyl Palmitate	4.00
Isopropyl Myristate	2.50
Hydrogenated Animal Glyceride	2.10
Stearic Acid	1.60
Diocetyl Adipate (and) Octyl Stearate (and) Octyl Palmitate	2.10
VANSEAL CS	1.00
Lithium Stearate	0.10
Propylparaben	0.10
Butylparaben	0.10

Preparation:

Heat the water to 70 to 75F. Add the VEEGUM and mix at maximum available shear until smooth. Slowly mix in remaining A ingredients. Mix B ingredients thoroughly into A until uniform. Maintain temperature at 70 to 75C. Heat C to 70 to 75C and add to A and B. Mix while cooling.

Consistency: Medium Viscosity Lotion, 2,000 to 2,500 cps.

Suggested Packaging: Cosmetic Jars, Tubes or Plastic Squeeze Bottles.

Comments:

This prototype formula is designed to serve as a guide for the development of new products or improvement of existing ones. This formula was originally presented by Mitchell L. Schlossman, Tevco Inc., at a Society of Cosmetics Chemists Meeting in 1984; it has been tested in the Vanderbilt Laboratories solely for physical stability.

EYE GEL

RAW MATERIALS	% By Weight
A)	
Butylene Glycol	5.00
Methylparaben (TRISEPT M)	0.20
Propylparaben (TRISEPT P)	0.05
B)	
Polyglucane (AMIGEL)	0.80
C)	
Deionized Water	QS to 100
D)	
Imidazolidinyl Urea (TRISTAT IU)	0.30
E)	
Lactic Acid (TRI-K)	QS to pH 5.5
F)	
Witch Hazel Extract HS (TRI-K)	2.00
Cornflower Extract HS (TRI-K)	1.50
Sambucus Extract (ELDER EXTRACT HS)	1.00
Euphrasia Extract (EYEBRIGHT EXTRACT HS)	1.00
G)	
Methylsilanol Hydroxyproline (HYDROXYPROLISILANE)	4.00
Sodium Hyaluronate Dimethylsilanol (DSH)	2.00
Hydrolyzed Animal Elastin (EXSYPROTEINS 2%)	2.00

This premium eye gel contains botanical extracts and organic silicon derivatives to help firm, tone and soothe the area around the eye.

Procedure:

Weigh and mix A until clear and uniform. Then add B and mix. Heat C to 80C. Add AB to C while mixing with side sweep agitator. Start cooling. At 50C. add D. Then adjust pH to 5.5 with Lactic Acid. At 45C add F while mixing. Add G at 35C and mix until uniform.

EYE SHADOW CC-102

RAW MATERIALS	% By Weight
Timica MIC Bronze Golden	40.5
Talc BC	32.4
SF-1214	13.6
Oleyl Erucate	13.5

Comments:

- SF-1214 can be replaced by SF-1236.
- Replace 2% oleyl erucate with apple pectin for more firmness

SOURCE: GE Silicones: Personal Care Formulary: Formulation CC-102

EYE LINER

RAW MATERIALS	% By Weight
A:	
VEEGUM	2.5
Water	75.5
B:	
PVP K-30	2.0
Water	10.0
C:	
Pigments	10.0
Preservative	q.s.

Procedure:

Slowly add VEEGUM to the water, while agitating at maximum available shear. Continue mixing until smooth. Dissolve the PVP in water using a little heat. Add B to A and mix until uniform. Add C and mix until smooth and uniform.

Consistency: Soft cream

Suggested Packaging: Small jar

Comments:

VEEGUM provides thickening and pigment suspension in this formula while insuring smooth application properties. This product can be applied to the eyelid with a brush.

ELFACOS C26	10
Candelilla wax	5
Carnauba wax	2
Micro wax	5
Castor oil	59,85
ELFACOS ST 9	3
Isopropyl lanolate	5
p-Hydroxy benzoic acid propylester	0,15
Pigments	5
Iriodin WR 70	5

A solid mass is obtained which can be easily applied to the lips.

LIP-GLOSS

RAW MATERIALS	% By Weight
ELFACOS ST 37	74,5
Liquid paraffin	15
Candelilla	4
Vaseline	5,5
Pigments	1

This is a high-gloss high-quality lip-gloss. This really expensive formulation contains 75% ELFACOS ST 37 as a basis. The appearance of the product and the application on the lips as well as the storage stability are considered to be very good.

Formulation No. 555

Manufacturing of lipsticks and lip-gloss.

The fat-phase is heated to the melting temperature. All products, except pigments, are mixed at 80C until homogeneous, then the pigments are added whilst stirring. The melt is passed through a three-roll mill and reheated. Iriodin is added and the melt is poured into the moulds. Lipsticks produced in this way do not normally require flame finishing.

EMEREST 2314 Isopropyl Myristate	7.0
Titanium dioxide	3.0
Pigments, lakes & dyes	4.1
EMEREST 2452 Polyglyceryl-3 Diisotearate	40.9

In this formula the EMEREST 2452 is used to form a smooth, homogeneous pigment dispersion. The stability of the product against rancidity even at the relatively high temperatures used in lipstick manufacturing has been shown in long term stability studies of this formula.

LIQUID LIP GLOSSER FOR ROLL-ON APPLICATOR (2239-114A)

RAW MATERIALS	% By Weight
Polybutene	30.0
EMEREST 2452 Polyglyceryl-3 Diisostearate	42.8
Mineral oil	25.0
Propyl paraben	0.1
Amyl dimethyl PABA	0.1
Flavor-Strawberry 1297	2.0

EMEREST 2452 is used in this formulation as a vehicle and base for the flavor. It provides the correct viscosity needed for such a formula without contributing any fatty taste.

Procedure:

Mix and heat all ingredients except flavor to 82-85C. Cool to 52C and add flavor. Cool to 25C and package.

Note: If different flavor compounds are desired that are not completely soluble, EMEREST 2384 may be added to solubilize the flavor in this formula.

LIQUID MAKEUP (2244-151)

RAW MATERIALS	% By Weight
A.	
EMERY 1787 Cetyl Alcohol Flakes, NF	2.0
Butylene glycol	3.5
EMEREST 2314 Isopropyl Myristate	3.0
NIMLESTEROL 1732 Liquid Absorption Base	5.0
EMSORB 2500 Sorbitan Oleate	1.5
EMERSOL 233 Oleic Acid	2.5
Isostearyl alcohol	2.0
Propyl paraben	0.1
B.	
Methocel K4M Premium	0.4
Demineralized water	57.8
Propylene glycol	10.0
Methyl paraben	0.2
CMC-7HF	0.5
EMSORB 2728 Polysorbate 60	1.0
Veegum	0.5
Iron oxide pigments	10.0

NIMLESTEROL 1732 aids in pigment wetting and suspension in this nonionic pigmented lotion. It also aids in emulsion stability and long term rheology control to prevent separation. Application on the skin is very smooth and even. There is no oily after-feel.

Procedure:

Predisperse Methocel, CMC and Veegum in the water and propylene glycol. Homogenize with fast agitation at elevated temperatures until a homogeneous solution is achieved. Add the remaining ingredients of B and heat to 90C with continued fast agitation. Heat and mix A in a separate vessel, add to B and allow to cool to 35C while homogenizing.

EMEREST 2486 Pentaerythrityl Tetrapelargonate	3.5
LANTROL AWS 1692 PPG-12-PEG-65 Lanolin Oil	2.5
Methyl paraben	0.2

EMEREST 2486 increases the ease of spreading, without increasing the drying time or the oiliness of the product.

SOURCE: Emery Chemicals: EMEREST 2486: Formulation 2743-002

MAKEUP

RAW MATERIALS	% By Weight
ELFACOS ST	10
PEG 1000 monostearate	6
Liquid paraffin	18,5
Vaseline	15
Paraffin wax	10
Pigments	40
Perfume oil	0,5

Manufacturing Procedure:

ELFACOS ST, PEG 1000 monostearate, liquid paraffin, vaseline and paraffin wax are homogeneously mixed at 75-80C. The pigments are added to the molten mass, dispersing them by means of a Silverson. Then the dispersion is passed through a triple roll mill, melted again at 75C, perfumed and then packed.

This make-up is soft, storage-stable and is easily spreadable on the skin with a good colourstain.

OIL FREE EYE MAKEUP REMOVER

RAW MATERIALS	% By Weight
GLUCAM P-10	2.7
GLUCAMATE SSE-20 (PEG-20 Methyl Glucose Sesquistearate)	2.0
Boric Acid	0.3
Cocoamphocarboxyglycinate (and) Sodium Trideceth Sulfate (and) Hexylene Glycol	5.0
Deionized Water	90.0
Preservatives	q.s.

Procedure:

Dissolve GLUCAMATE SSE-20 and boric acid in water by gentle heating to 60C. Add the rest of the ingredients. Mix until clear.

Description:

Crystal clear solution designed to remove eye makeup without leaving an oily residue. GLUCAMATE SSE-20 serves as a mild surfactant that is used along with the amphoteric to gently dissolve makeup. GLUCAM P-10 offers water soluble emolliency to delicate tissue around the eye. Suitable for use with pads.

Hydrogenated Polyisobutene	2.00
Oleyl Alcohol	2.00
Stearyl Alcohol (and) Steareth-20 (and) Steareth-10 (Cosmowax)	2.00
Polysorbate 85	0.50

Procedure:

Blend the Veegum with the Xanthan gum. Homomix the water at high sheer and sprinkle the gums to obtain a uniform smooth slurry. Stop mixing and add the glycerin, citric acid and GERMABEN II-E. Mix until uniform. Blend B and add A at low speed. Heat A/B and C to 65C. Add C to A/B and cool.

ROLL-ON LIP GLOSS (14D)

RAW MATERIALS	% By Weight
LANTROL 1673 Lanolin Oil	55.0-65.0
Indopol H-100	25.0
Fragrance	5.0-10.0
EMEREST 2384 Propylene Glycol Isostearate	0.0-10.0

This formulation yields an excellent moisturizing lip product which is easy to apply in roll-on form. By varying the amounts as shown, an optimum formulation can be achieved for the desired results.

Procedure:

Add all ingredients in order with mixing until homogeneous. The use of EMEREST 2384 is recommended only for fragrances which are not soluble.

SUPER GLOSS LIP POT (2244-114-01)

RAW MATERIALS	% By Weight
LANTROL 1673 Lanolin Oil	20.0
PROPOXYOL 1695 PPG-5 Lanolin Wax	47.5
Bentone Gel LANTROL	20.0
Multiwax 180M	3.5
Super Pearl	2.5
20% D&C Red #6 Barium Lake milled in EMEREST 2452	
Polyglyceryl-3 Diisostearate	5.0
Perfume	1.5

This lip pot preparation features a smooth and creamy consistency, thus providing excellent coverage.

Procedure:

Weigh all ingredients except perfume and heat to 85-90C. Mix thoroughly to cool to 65-70C. Perfume and package.

LIP POMADE (2244-105-01)

RAW MATERIALS	% By Weight
LANTROL 1673 Lanolin Oil	10.0

SKIN MOISTURIZING BASE SP-104

RAW MATERIALS	% By Weight
Part A:	
PEG-8 Stearate	1.31
SF-96 (100)	6.50
Myristyl Alcohol	3.80
Arlacel 165	4.00
Monawet M085P	0.17
Myristyl Lactate	2.70
Lanaetex 75	2.70
Methyl Paraben	0.17
Part B:	
Disodium EDTA	0.05
Tenox-6	q.s.
Water	78.60

Procedure:

- 1) Heat Part A and Part B to 80C.
- 2) Add Part A to Part B with agitation.
- 3) Continue to mix until product is cooled to 25C. Force cool if needed.

Comments:

- Methylparaben may be added to Part B or it may be substituted with 0.8% GERMABEN II-E5.
- Greater viscosity may be achieved by replacing the myristyl alcohol with cetyl, cetearyl, stearyl or behenyl alcohol.
- Greater elegance may be achieved by replacing SF-96 (100) with SF-1214.

VITAMIN F SKIN MOISTURIZER

INGREDIENTS	%W/W
Part A:	
Stearic Acid	4.0
CETIOL MM (Myristyl Myristate)	5.0
Mineral Oil	10.0
LANETTE O (Cetearyl Alcohol)	1.5
VITAMIN F FORTE CLR (Linoleic Acid (and) Linolenic Acid (and) Arachidonic Acid)	1.0
Part B:	
Water	76.8
Carbopol 941 (Carbomer 941)	0.2
Part C:	
Triethanolamine	1.0
Part D:	
Dowicil 200 (Quaternium-15)	0.1
D & C Yellow #5 (0.1% aq.)	0.2
Fragrance	0.2

Procedure:

1. Mix and heat Part A 65-70C.
2. Disperse Carbopol 941 into water and mix Part B.
3. Add Part C to Part B and heat 65-70C.
4. Add Part (B + C) to Part A and mix until cooled to 40C.
5. Add Part D when cooled to 35-40C.
6. Adjust pH to 7.5+/-0.2.

Comments:

This simple TEA-stearate emulsion is enhanced by the special feel CETIOL MM contributes. CETIOL MM refines the effect of plain mineral oil by making the lotion feel like it is melting into the skin. It leaves the skin feeling talc-like and velvety smooth.

Aristowax 143	5.5
Phase B:	
Methylparaben	0.15
Propylparaben	0.10
Fragrance, Color	q.s.
Water	q.s. to 100

Heat Phase A to 90 to 95C. Stir at this temperature until uniform (about 15 minutes).

Add Phase B, preheated to 90 to 95C, to oil Phase A with moderate agitation. Maintain agitation for 15 minutes at 90C and during cooling. Pour at or below 35C.

These emulsions are recommended for use as night creams, moisturizing creams or cleansers. They are characterized by excellent emulsion viscosity stability on extended storage. Unlike most water-in-oil emulsions prepared as above, these exhibit none of the characteristic greasiness, and they spread quite easily and rapidly on the skin. Since water is the internal phase in these emulsions, they do not evaporate as readily as oil-in-water types on application. Thus small amounts should be applied and spread over a wide skin area.

WATER-IN-OIL LUXURIOUS MAKEUP

RAW MATERIALS	% By Weight
A.	
VEEGUM	1.2
Water	37.9
Magnesium sulfate	0.4
B.	
Talc	5.5
VANCLAY Kaolin	1.5
Titanium dioxide	5.0
Iron oxides	3.0
C.	
Carnation White Mineral Oil	15.0
Polysynlane	8.0
Ritachol	8.0
Lanapene	7.0
Sorbitol 70%	5.0
Witcamide 511C	2.5
Preservative	q.s.

Procedure:

Slowly add VEEGUM to the water, while agitating at maximum available shear. Continue mixing until smooth. Add the magnesium sulfate and mix until smooth. Grind B and add to A, mixing until uniform. Add A/B to C. Mix until smooth and uniform.

Consistency: Fluid lotion

Suggested Packaging: Liquid makeup container.

Comments:

This formula is a cold process water-in-oil emulsion stabilized by VEEGUM. VEEGUM also controls the viscosity and insures uniform color throughout the product. It is a moisturizing makeup for dry skin.

ALL PURPOSE CREAM, HAND & BODY A-47

INGREDIENTS	% By Weight
Part A:	
U.S.P. White Mineral Oil	6.0
Cetyl Alcohol	10.0
AVANEL S-150	4.0
Part B:	
Propylene Glycol	5.0
Methyl Paraben	0.25
Deionized Water	74.75
Color & Perfume	As Desired

This emulsion is similar to the A-28, but is less lipophilic (more hydrophylic). It leaves a smooth, non-sticky feel to the skin and is extremely mild.

Preparation Method:

Heat Part A to 70C, Part B to 75C. Add Part A to Part B with moderate to high agitation, including side-scraping motion. Mix for a few minutes, then cool rapidly to 30C. Emulsion will invert to give a viscous water-in-oil emulsion.

The product is a non-pourable viscous cream with a pH about 6.8.

EMSORB 2728 Polysorbate 60	1.0
Borax	0.2
Methyl paraben	0.2
C.	
Demineralized water (preheated to 65C)	76.5

This smooth textured cleansing cream is an ideal cosmetic in that it liquefies upon skin "rub out", it removes makeup and mascara, and leaves a smooth non-oily feel when wiped off with a warm, damp face cloth.

SOURCE: Emary Chemicals: LANTROL Lanolin Oil: Formula 2244-93-1

CLEANSING CREAM

RAW MATERIALS	% By Weight
Oil phase:	
Stearic acid	10
Paraffin oil	6
Vaseline	4
ELFACOS ST9	1,5
Castor oil	1
Cetyl alcohol	1
ARMOTAN MS (Sorbitan Stearate)	2
ARMOTAN PMS 20 (Polysorbate 60)	1
Glycerine	1
Water phase:	
Triethanolamine	0,6
Water	71,4
Dowicil 200	0,2
Perfume oil	0,3

The resulting emulsion is very solid and dry, easily foaming with water and therefore gives a good washing effect.

This recipe is a basis for face-cleaning formulations. ELFACOS ST9 acts as a co-emulsifier for the emulsifier ARMOTAN PMS20, while ARMOTAN MS in this formula acts as a consistency regulator.

CLEANSING CREAM - OIL TYPE

RAW MATERIALS	% By Weight
SONOJELL No. 9 Mineral Jelly	100
Perfume and color (optional)	q.s.

CLEANSING CREAM - EMULSIFIABLE TYPE

RAW MATERIALS	% By Weight
SONOJELL No. 9 Mineral Jelly	71
Cetyl Alcohol	3
Sodium Cetyl Sulfate	3
Water	23
Perfume and color (optional)	q.s.

Melt mineral jelly, alcohol and sulfate to 70C. Heat water to 75C and add to oil phase with good agitation. Allow to cool to 40C and fill.

There are two principal types of cleansing creams available. These are the emulsifiable and the straight oil type. Both of these general categories can be adapted to specialty creams as for example, detergent type or anti-bacterial type, by the simple addition of small amounts of active agent such as Borax and potassium hydroxide for the detergent cream, and hexachlorophene for the anti-bacterial cream.

COLD CREAM

RAW MATERIALS	% By Weight
CARNATION White Mineral Oil	50.00
Beeswax	16.67
Borax	0.83
Water	32.50

One of the most common cosmetic emollients used by women is a cold cream.

Bring beeswax and oil to 70C. Dissolve Borax in water and bring to 70C. Add water to oil phase with rapid stirring. Agitate slowly while cooling. Add perfume as desired at 45C and fill into jars at 40C.

Perfume and Preservative	q.s.

Description:

Hand cream. Firm texture. Glossy.

Variations:

To reduce tackiness, replace propylene glycol with GLUCAM E-10

To impart satiny feel, replace silicone fluid with PPG-36 Oleate

For softer texture, replace stearyl alcohol with myristyl alcohol and replace stearic acid with AMERLATE LFA.

CREAM C-1025

RAW MATERIALS	% By Weight
Oil Phase:	
AMERCHOL 400	3.00
SOLULAN 25	1.00
Mineral oil, 70 vis.	16.50
Petrolatum, USP white	3.00
Water Phase:	
Carbopol 934	0.75
Water	68.25
Triethanolamine, 10% aq.	7.50
Perfume and Preservative	q.s.

Description:

All purpose cream. Good peaking. Soft texture. Can be used for cleansing and for dry skin areas.

Procedure:

Disperse the Carbopol in the water using high speed mixing. Heat to 65C. Add to the oil phase at 65C while mixing. When emulsion has formed, add the triethanolamine solution. Continue mixing and cool to 45C. Add perfume. Stir to 30C.

Variations:

To reduce oiliness, replace part of mineral oil with ACETULAN

For satiny feel, replace part of mineral oil with PPG-36

Oleate.

For better emulsification, replace petrolatum with AMERCHOL 400.

CREAM C-1026

RAW MATERIALS	% By Weight
Oil Phase:	
AMERCHOL L-101	5.0
MODULAN	2.0
Glyceryl monostearate, neut.	7.0
Myristyl myristate	2.0
Mineral oil, 70 vis.	4.0
Silicone 200 fluid, 350 cstks.	0.5
Water Phase:	
Sorbitol, 70%	5.0
Albagel	1.5
Triton X-400	1.0
Water	72.0
Perfume and Preservative	q.s.

Description:

All purpose, cationic cream. Light, fluffy texture.

Variations:

To reduce tackiness, replace sorbitol with GLUCAM E-20

SOURCE: Amerchol Corp.: Creams: Suggested Formulations

CREAM C-1027

RAW MATERIALS	% By Weight
Oil Phase:	
OHLAN	3.0
AMERLATE P	2.0
Beeswax, USP	10.0
Mineral oil, 80-90 vis.	44.0
Glyceryl monostearate, neut.	2.0
Ozokerite	5.0
Water Phase:	
Borax, USP	0.6
Water	33.4
Perfume and Preservative	q.s.

Description:

Heavy duty cleansing cream, W/O. Liquefies readily. Soft texture. Use overnight on problem dry areas.

Variations:

To reduce oiliness, replace 5% of mineral oil with ACETULAN and an additional 10% of the mineral oil with isopropyl myristate
 For satiny feel, replace part of Beeswax with PPG-36 Oleate.
 For dry film feel, add 2-5% GLUCAM P-20 to water phase.

CREAM C-1029

RAW MATERIALS	% By Weight
Oil Phase:	
AMERLATE P	3.0
Standamul 1414E	5.0
Isopropyl myristate	8.0
Cetyl alcohol	8.0
Ceraphyl 140-a	3.0
Cerasynt SD	4.5
Water Phase:	
GLUCAM E-20	5.0
Water	58.5
Propylene glycol	2.0
Standapol SHC 101	3.0
Perfume and Preservative	q.s.

Description:

Rinse-off Cleansing Cream. Soft, white, glossy cream with good makeup and soil removal. Can be rinsed off with water or tissue off. Leaves good emollient residue on skin.

Variations:

For softer consistency, replace part of cetyl alcohol with myristyl alcohol.

For firmer consistency, replace part of cetyl alcohol with stearyl alcohol.

SOURCE: Amerchol Corp.: Creams: Suggested Formulations

CREAM C-1021

RAW MATERIALS	% By Weight
Oil Phase:	
AMERCHOL C	4.0
AMERLATE P	1.5
Stearic acid, xxx	3.0
Mineral oil, 70 vis.	3.5
Glyceryl monostearate, s.e.	6.0
Cetyl alcohol	3.0
Beeswax, USP	2.5
Water Phase:	
Triethanolamine	1.0
Propylene glycol	2.5
Water	73.0
Perfume and Preservative	q.s.

Description:

Night cream. Glossy, medium consistency.

Procedure:

Add water phase to oil phase at 85C with good stirring.

Cool and stir to 50C. Add perfume and stir to 37C.

Variations:

For satiny feel, replace beeswax with PPG-36 Oleate.

For reduced tackiness, replace propylene glycol with GLUCAM

E-10.

For reduced viscosity, replace part of cetyl alcohol with myristyl alcohol.

For improved texture, replace stearic acid with AMERLATE LFA.

SOURCE: Amerchol Corp.: Creams: Suggested Formulation

EMOLLIENT NIGHT CREAM

RAW MATERIALS	% By Weight
A.	
EMERSOL 132 Stearic Acid	5.00
EMEREST 2380 Propylene Glycol Stearate	4.00
NIMCOLAN 1747 Solid Absorption Base	7.50
EMSORB 2505 Sorbitan Stearate	1.50
Methyl paraben	0.10
B.	
Propylene glycol	3.50
EMSORB 2728 Polysorbate 60	1.00
Triethanolamine	0.75
Propyl paraben	0.20
Deminerlized water	76.45

In this formulation NIMCOLAN 1747 provides an excellent emollient feel and rich moisturizing effect.

This rich moisture night cream is for overnight body skin care. Massage over body at night, after shower, or whenever skin is dry and flaky to give skin a new added softness. Never feels greasy.

GENERAL PURPOSE W/O CREAM

RAW MATERIALS	% By Weight
Oil Phase:	
ELFACOS C26	10
ARMOTAN MO (Sorbitan Oleate)	1
ELFACOS ST37	2
Paraffin oil	50
p-Hydroxybenzoicacid methylester	0,2
Water Phase:	
Sorbitol 70%	4
Water	32,3
Dowicil 200	0,1
Perfume oil	0,4

This cream has a fatty character which is ideal for a cleansing cream or as a base for a pharmaceutical preparation.

Formulation No. 2121

GENERAL PURPOSE W/O CREAM

RAW MATERIALS	% By Weight
Oil phase:	
ARMOTAN MO (Sorbitan Oleate)	3
ELFACOS ST 37	5
ELFACOS C 26	7
12 Hydroxystearic acid	1
Isocetyl stearate	12
Isopropyl myristate	8
Nipasteril 30K	0,3
Water phase:	
Sorbitol 70%	5
Water	58,3
Perfume oil	0,4

This stable product has a very good, rapidly absorbing feeling with semisolid consistency.

Formulation No. 1034.

Manufacturing:

The oil and water phase are heated to 75C separately. The water phase is added to the oil phase with rapid stirring and then cooled down.

SOURCE: Akzo Chemicals, Inc.: ELFACOS ST9, ST37, C26, E200:
Suggested Formulations

GENERAL PURPOSE W/O CREAM

Oil Phase:	
ELFACOS C26	5
ELFACOS ST37	3
ARMOTAN MO (Sorbitan Oleate)	3
Isopropyl stearate	5
Paraffin oil	15
Nipasteril 30K	0,2
Water Phase:	
Sorbitol 70%	5
Water	63,4
Perfume oil	0,4

The result is a soft cream which does not lose its consistency at 45C.

Formulation No. 3120

GENERAL PURPOSE W/O BASE

RAW MATERIALS	% By Weight
Oil Phase:	
ELFACOS ST9	8,6
ELFACOS C26	4
Paraffin oil	8
ELFACOS E200	5
Water Phase:	
Water	68,8
Glycerin	5
Dowicil 200	0,2
Perfume oil	0,4

A stable, soft cream results: ELFACOS E200 acts as an emulsifier, ELFACOS ST9 as a stabiliser. This very simple recipe has optimal water content and is relatively cheap qua raw material costs; the emulsion is suitable for dry parts of the face, feet and body.

Formulation No. 1794

Manufacturing:

The oil and water phase are heated to 75C separately. The water phase is added to the oil phase with rapid stirring and then cooled down.

Water	77.25
Sodium hydroxide, 10% aq.	2.25
Ethomeen C-25, 10% aq.	3.75
Perfume and Preservative	q.s.

Description:

Soft hand cream. Suitable for tube dispensing. Protective emollient system.

Variations:

To reduce tackiness, add 2% GLUCAM P-10 to water phase.

For added emollience and emulsion stabilization, replace petrolatum with AMERCHOL CAB.

SOURCE: Amerchol Corp.: Creams: Suggested Formulations

HAND CREAM BASE
(no. 154 (ST9) or no. 558 (ST37))

RAW MATERIALS	% By Weight
Oil phase:	
ELFACOS ST	4
PEG 1000 monostearate	1
Liquid paraffin	7
Amphisol	3
Stearic acid	2
Glycerol monostearate, pure	7,5
Preservative	0,2
Silicone oil AK 350	0,5
Water phase:	
Triethanolamine	0,4
Water	74,1
Perfume oil	0,4

This stable emulsion is a basis for handcream development.

HAND CREAM BASE
(No. 1972 (ST9) or No. 1973 (ST37))

RAW MATERIALS	% By Weight
Oil phase:	
ELFACOS C36	15
ELFACOS ST	1
ARMOTAN MS	1
ARMOTAN PMS 20	3
Kathon CG	0,1
Glycerine	3
Water phase:	
Water	75,4
Perfume oil	0,5

With this formulation a so called "mix" emulsion, is obtained. This stable, dry, quickly absorbing handcream shows no staining when working e.g. on typewriter paper

Manufacturing:

The oil and water phase are heated to 75C separately. The water phase is added to the oil phase with rapid stirring and then cooled down.

At 45C the perfume oil is added.

It is recommended that the finished emulsion be homogenized using a stator-rator homogenizer.

MOISTURIZING CREAM

INGREDIENTS:	%W/W
Part A:	
LANETTE O (Cetearyl Alcohol)	6.0
EUTANOL G (Octyldodecanol)	4.0
CETIOL HE (PEG-7 Glyceryl Cocoate)	3.5
Part B:	
Water	85.4
LANETTE E (Sodium Cetearyl Sulfate)	1.0
Part C:	
Preservative	q.s.
Fragrance	q.s.

Procedure:

- A. Mix and melt Part A to 60-65C.
- B. Add LANETTE E to heated water (65C).
- C. Add Part B to Part A and mix.
- D. Add Part C at 45C.

Comments:

LANETTE E is an anionic emulsifier which is efficient at low levels. This emulsion is a cream which spreads easily and provides an emollient non-greasy feel.

Formula HOB-151-22-A

MOISTURIZING CREAM WITH COLLAGEN

INGREDIENTS:	%W/W
Part A:	
EMULGADE 1000 NI (Cetearyl Alcohol (and) Ceteareth-20)	7.00
CETIOL 1414-E (Myreth-3 Myristate)	5.00
Part B:	
Water	83.85
Part C:	
COLLAGEN CLR	3.00
Germaben II	1.00
Fragrance	0.15

Procedure:

Heat Part A to 70-75C. Heat Part B to 70-75C. While agitating, add Part B to Part A. Remove heat and continue mixing during cooling step. When the batch temperature has reached 40-45C, add the individual components of Part C. Continue stirring for 15-20 minutes. Fill off.

Comments:

This economical moisturizing cream features rapid rub-in combined with a pleasant after-feel.

Formula HOB-176-15

MOISTURIZING CREAM

RAW MATERIALS	% By Weight
A.	
VEEGUM PRO	1.5
Water	74.5
B.	
Triethanolamine	1.0
Glycerin	4.0
C.	
Stearic Acid XXX	2.0
Cetyl alcohol	2.0
Isopropyl myristate	2.0
Atmul 124	3.0
Marcol 130	10.0
Preservative	q.s.

Procedure:

Heat the water to 70 to 75C, then slowly add the VEEGUM PRO while agitating at maximum available shear. Mix until smooth. Add B to A with slow mixing until smooth. Maintain A/B at 70 to 75C; heat C to 70 to 75C. Add C to A/B and mix until cool.

Consistency: Medium viscosity cream.

Suggested Packaging: Wide mouth jar.

Comments: VEEGUM PRO contributes to viscosity and emulsion stability of this greaseless cream formula. The cream can serve as the basis for a number of skin treatment products.

Deionized water	63.2
Triethanolamine	0.6
EMERY 916 Glycerine	2.0
EMEREST 2701 PEG-12 Isostearate	3.0
Methyl paraben	0.2

EMEREST 2410 and EMEREST 2701 are used in this formula as auxiliary emulsifiers. Their presence in this system enhances the pearlescent appearance and helps to a smoother more emollient feel.

SOURCE: Emery Chemicals: EMERY Isostearate Esters: Formulation 13E

PROTECTIVE CREAM FOR INDUSTRY

RAW MATERIALS	% By Weight
Emulsifiable:	
WHITE PROTOPET 1S	4.5
Beeswax	2.0
Stearic acid	10.0
Triethanolamine	1.5
Glycerine	8.0
Water	54.0
Magnesium stearate	20.0

Melt the wax and petrolatum to 60C. Heat other components except the magnesium stearate to same temperature, mix and thoroughly emulsify. Stir until cold. Grind solid barrier material with the cream at room temperature.

It is often necessary for workers handling corrosive, allergenic or greasy products to prevent burns, allergic reaction or dermatitis. These creams can be readily formulated.

7. At 30C add Part F.
8. Continue mixing until product reaches room temperature.
9. Fill off.

Comments:

The projected SPF values of the above systems are 2,4 and 8 respectively.

A + B are soft white creams which rub in easily when applied to the skin and are non-oily. In addition to moisturizing the skin, these systems provide some protection to the sun's harmful rays. Formula C is an opaque off-white cream which is non-whitening when applied to the skin and provides more sun protection.

Carnation White Mineral Oil	1-7.50
Water Phase:	
Methylparaben	0.15
Propylparaben	0.10
Germall 115	0.25
Water, deionized	q.s. to 100
Perfume, Color	q.s.

Heat Oil Phase to 90C. Stir at this temperature until uniform (about 15 minutes).

Add Water Phase, preheated to 90-95C, to Oil Phase with moderate agitation. Maintain agitation for 15 minutes at 90C and during cooling. Pour at or below 35C.

These emulsions are recommended for use as night creams, moisturizing creams or cleansers. They are characterized by excellent emulsion viscosity stability on extended storage. Unlike most water-in-oil emulsions prepared as above, these exhibit no characteristic greasiness and spread quite easily and rapidly on the skin. Since water is the internal phase in these emulsions, they do not evaporate as readily as oil-in-water types on application. Thus small amounts should be applied and spread over a wide skin area.

CLEAR PERFUME EMOLLIENT STICK

RAW MATERIALS	% By Weight
WITCONOL APM (PPG-3 Myristyl Ether)	73.0
Propylene Glycol	10.0
Water	3.0
Witco Sodium Stearate C-1	8.0
Perfume Oil	6.0

Dissolve WITCO Sodium Stearate C-1 in WITCONOL APM, propylene glycol and water at 80 to 90C. Stir until clear. Add perfume oil at 77C. Cool to 73C and package.

Perfume level can be varied to suit final application. Fragrance oils may have an effect on overall clarity.

This formulation yields a "nonshrinking" gel which exhibits good clarity and an excellent feel. This formulation may be modified to produce a solid hand-lotion, deodorant, blusher or floating bath-oil bar.

Atlas G-2162	2.0
GLUCAM P-20	3.0
Water	56.0
Phase C:	
Perfume oil	10.0
Perfume	q.s.

Description:

Cream sachet with high fragrance concentration. AMERLATE P provides lubricity. GLUCAM P-20 provides emollience and fragrance fixation.

Variations:

For softer consistency, replace all or part of STEARAL with CETAL.

For creamier texture, replace G-2162 with PROMULGEN D.

SOURCE: Amerchol Corp.: Bath & Fragrance Products: Formulation

COLOGNE F-4003

RAW MATERIALS	% By Weight
Citrus or modified citrus perfume oil	5.0
GLUCAM P-20	1.5
SOLULAN 16	1.0
Specially Denatured Alcohol No. 40	72.5
Water	20.0
Color	q.s.

Description:

Cologne (citrus toilet water) based on original prototype from Cologne, Germany. GLUCAM P-20 particularly effective in increasing lasting power in such fragrances and it also adds body. SOLULAN 16 contributes an emollient feel.

Procedure:

Stir all ingredients except water until homogeneous. Add water in thin stream with stirring. Age, chill and filter.

Variations:

For perfume oils requiring further clarification, mix with GLUCAMATE SSE-20.

COLOGNE STICK F-4015

RAW MATERIALS	% By Weight
LANOGENE	3.0
AMERLATE P	11.0
PROMYR	10.0
CETAL	15.0
AMERCHOL L-101	10.0
MODULAN	5.0
OHLAN	8.0
Ozokerite	18.0
Hydrogenated vegetable oil	5.0
Cocoa butter	5.0
Lanolin, anhydrous deodorized USP	5.0
Perfume oil	5.0
Color and antioxidant	q.s.

Description:

Fragrant, firm cologne stick with excellent emollient properties provided by AMERLATE P, AMERCHOL L-101 and MODULAN.

Procedure:

Heat all ingredients except perfume oil to 80-90C. Add perfume oil with stirring at 70C. Mold into sticks.

Variations:

For firmer stick, replace part of CETAL with STEARAL.

For humectant properties, replace PROMYR with GLUCAM P-20.

SOURCE: Amerchol Corp.: Bath & Fragrance Products: Suggested Formulations

FRAGRANCE VEIL F-4006

RAW MATERIALS	% By Weight
Klucel HF	1.0
Specially Denatured Alcohol No. 40	74.6
Natural Pearl Essence	0.1
Perfume oil	1.5
Water	18.8
GLUCAM P-20	4.0
Color	q.s.

Description:

Pearlescent fragrance veil. Hydroalcoholic bodied toilet water with non-oily emollient and humectant effects provided by GLUCAM P-20 which also extends lasting power of fragrance.

Procedure:

Sprinkle Klucel HF into alcohol with stirring until no particles remain. With stirring add natural pearl essence and remaining ingredients in order listed. Stir until homogeneous.

Variations:

Mica based synthetic pearls may be substituted for the natural pearl after checking for possibility of excessive settling.

Increased perfume oil concentrations can be accomplished with the addition also of GLUCAMATE SSE-20.

FRAGRANCE VEIL F-4007

RAW MATERIALS	% By Weight
Phase A:	
Carbopol 940, 3% aqueous dispersion in water	6.5
Water	51.3
Ethomeen C/25	0.2
Phase B:	
Perfume oil	1.5
Isostearyl alcohol	2.5
AMEROXOL OE-10	3.0
GLUCAM P-20	3.0
Specially Denatured Alcohol No. 40	32.0

Description:

Hydroalcoholic fragrance veil emulsion with emollient properties due to isostearyl alcohol and oil-free GLUCAM P-20 which also extends fragrance duration.

Variations:

For increased lubricity, replace part of isostearyl alcohol with AMERLATE P.

SOURCE: Amerchol Corp.: Bath & Fragrance Products: Suggested Formulations

PERFUME F-4001

RAW MATERIALS	% By Weight
Perfume oil	18.0
GLUCAM P-20	3.0
Specially Denatured Alcohol No. 39C	79.0
Color	q.s.

Description:

Traditional prestigious top-of-the line fragrance extract. Used sparingly, GLUCAM P-20 increases lasting power of lighter odor types.

Procedure:

Add ingredients to alcohol. Stir until completely dissolved. Age, chill and filter.

Variations:

For maximum duration, adjust concentration of GLUCAM P-20 to individual perfume oil.

For varying intensity, adjust perfume oil concentration between 10 and 25%.

PERFUME STICK F-4013

RAW MATERIALS	% By Weight
Coconut oil 110	30.0
Microcrystalline wax	5.5
Ozokerite	14.0
GLUCATE SS	7.5
Magnesium carbonate	2.0
AMERCHOL L-101	26.0
Perfume oil	15.0
Preservative, color and antioxidant	q.s.

Description:

Highly fragrant, firm perfume stick with good payout at body temperature. Nongreasy.

Description:

Heat all ingredients except perfume oil to 85-90C. Add fragrance at 75C. Warm slightly, mixing until uniform. Mold into sticks.

Variations:

For greater lubricity, add AMERLATE P.

For velvety feel, add ACETULAN.

SOURCE: Amerchol Corp.: Bath & Fragrance Products: Suggested Formulations

POMADE PERFUME F-4014

RAW MATERIALS	% By Weight
LANOCERIN	10.0
GLUCATE SS	8.0
Hydrogenated coconut oil	25.0
Petrolatum	10.0
Glyceryl monostearate pure	7.0
ACETULAN	3.0
Microcrystalline wax	15.0
Ozokerite	5.0
Cab-O-Sil M-5	2.0
Perfume oil	15.0
Color and antioxidant	q.s.

Description:

Highly fragrant solid perfume designed for dispensing from compacts in metal godets. Finger dispensed, used sparingly.

Procedure:

Melt all ingredients except Cab-O-Sil M-5 and perfume oil to 80-90C. With good stirring, add Cab-O-Sil M-5 until completely taken up. At 70-75C, stir in perfume oil, cool to just above solidification point and pour into godets.

Variations:

For improved slip, replace part of microcrystalline wax with cetyl alcohol.

For softer consistency, replace part of petrolatum with AMERCHOL L-101.

TOILET WATER F-4002

RAW MATERIALS	% By Weight
Perfume oil	8.0
GLUCAM P-20	2.0
Specially Denatured Alcohol No. 40	84.0
Water	6.0
Color	q.s.

Description:

Typical toilet water (eau de toilette) usually based on prestige fragrance. Usually sales volume leader for such fragrances. GLUCAM P-20 valuable in increasing lasting power in many odor types and contributes to humectant and emollient feel.

Procedure:

Dissolve perfume oil and GLUCAM P-20 in alcohol. Add water in thin stream with stirring. Age, chill and filter.

Variations:

For smooth, emollient feel, add 0.4 to 0.8% SOLULAN PB-20.

For perfume oils requiring further clarification, mix with small amount of GLUCAMATE SSE-20.

AMP-95	0.84
Ethanol, 190 proof	66.16
Fragrance	Q.S.
Hydrocarbon Propellant	25.00
Cloud Point(C):	<-30

Procedure:

1. Charge the mixing vessel with the required amount of anhydrous SDA-40.
2. Start agitation.
3. Add RESYN 28-2913 slowly - so that no accumulation of pearls occurs on the surface.
4. After all the pearls are added, slowly add AMP.
5. Continue mixing until all the pearls are in solution.
6. Add the rest of the ingredients in the formulation.
7. Pass the concentrate through 5-10 micron cartridge filters before filling aerosol containers.

AEROSOL STYLING SPRAY
5659-72C

INGREDIENTS:	Parts by Weight
VERSACRYL-40	4.50
Potassium Hydroxide	0.56
Purcellin Oil 2/066210	0.10
Dow Corning 190 Surfactant	0.10
Monamid 716	0.10
Fragrance	0.10
Ethanol, SDA-40	49.54
Propellant A-46	45.00

Description:

5659-72C is formulated to give a very quick drying spray which gives a firm but unusually natural hold. The fast drying feature allows instant setting of curls. The spray also affords easy comb-out and washability.

Preparation:

Charge mixing vessel with SDA-40. While mixing, add potassium hydroxide. Sift VERSACRYL-40 into solution with continued mixing. When solution is complete, add remaining ingredients. Filter solution and fill aerosol containers. Charge propellant.

Can: Continental

Valve: Precision, 0.018" stem

ALCOHOL FREE CLEAR CREME RINSE #A64-41-3

RAW MATERIALS % By Weight

Phase A:	
CERAPHYL 65	3.00
CERAPHYL 60	1.50
FOAMOLE B	1.00
Standapol OLB-50	1.00

Phase B:	
Water, deionized	91.65
Cellosize QP 30,000	1.00
Lactic Acid 88%	0.70
BTC 2125M	0.15

Procedure:

In a suitable vessel weigh ingredients of Phase A. Heat to 80C with agitation and mix until uniform. In a second suitable vessel, large enough to contain the entire batch, weigh water and completely disperse Cellosize. Heat to 80C and add the rest of Phase B. Add Phase A to Phase B with agitation, cool to 25-28C, pass through finishing filter.

pH: 4.0

CLEAR CREME RINSE #A59-3-5

RAW MATERIALS % By Weight

Phase A:	
Ethyl Alcohol (SD 40, Anhyd.)	25.00
CERAPHYL 70 (liquefied at 35C)	3.00
FOAMOLE B	0.80

HAIR SPRAY

RAW MATERIALS	% By Weight
AMERCHOL L-101	0.3
SOLULAN PB-20	0.3
PVP, K-30	3.0
Ethanol, anhydrous	96.4
Above concentrate	50.4
Propellant 11/12 (58/42)	49.6

Moisture resistant, flexible film with exceptional gloss.

Procedure:

Mix ingredients well until uniform.

SOURCE: Amerchol Corp.: AMERCHOL: Suggested Formulation

HAIR SPRAY

RAW MATERIALS	% By Weight
ACETULAN	0.75
PVP K-30	3.00
Ethanol, anhydrous	26.25
Propellant 12/11 (40/60)	70.00

Forms a flexible, glossy film.

Procedure:

Add the ingredients in the order given, mixing well after each addition. If necessary, heat gently to clear.

Pressure fill.

ARIANOR HAIR COLOR GEL

INGREDIENT	% By Weight
A)	
Propylene Glycol	2.0000
Acetamide MEA 70	2.0000
Methylparaben	0.1500
B)	
AMIGEL	0.7500
C)	
Deionized Water	70.5000
Triethanolamine 99%	0.1000
dl-Panthenol	0.5000
Ammonyx Cetac	4.0000
Color Concentrate:	
D)	
Arianor Dye*	1.0000
Propylene Glycol	5.0000
Demineralized Water	14.0000
* Steel Blue	0.8800
Straw Yellow	-----
Mahogany	-----
Sienna Brown	-----
Madder Red	0.1200
Colorless Base	-----

Procedure:

1. Maserate the AMIGEL in Propylene Glycol, add Acetamide AMEA and Me Paraben.
2. Add the mascerate to stirring water at room temperature and heat to 70C.
3. Mix at 70C. until all dissolved, lump free and uniform.
4. Add the Panthenol, TEA and Cetac. Mix and cool to room temperature.
5. Prepare color concentrate by blending dye in glycol and adding water. Heat to a maximum of 50C while mixing. When dye is fully dissolved, add to batch.
6. Mix until fully dissolved and uniform.

Product Form: Gel

CATIONIC CREME HAIR RINSE - PEARLESCENT

RAW MATERIALS	Parts by Weight
EMCOL E-607S (Steapyrium Chloride)	2.0
Cetyl Alcohol	1.0
Sodium Chloride	0.5
Water	96.5

Add EMCOL E-607S to 30 percent of the water and heat to 60C. Melt cetyl alcohol and add to aqueous dispersion of EMCOL E-607S at elevated temperature.

Cool; add balance of water containing salt. Add perfume and preservative as desired.

Mix one tablespoon in one-half cup of water and comb through clean, wet hair.

Formulation 104D

PROTEIN CREME RINSE

RAW MATERIALS	Parts By Weight
Phase A:	
Solulan 25	1.0
Liquid Lanolin	0.5
EMCOL E-607S (Steapyrium Chloride)	1.5
Cerasynt 1000D	2.0
Cetyl Alcohol	0.5
Phase B:	
Water	91.3
Maypon 4CT	1.0
Polypeptide AAS, 20%	2.0
Phase C:	
Fragrance (Claudina M-1995)	0.2
D & C Yellow No. 10, 5%	3 drops

Add Phase B to Phase A, both at 70C, while stirring. Continue stirring; cool to 40C and add fregrance.

Product increases in wiscosity over 48 hours. Agitation after this time will prevent future viscosity changes.

Formulation 103D

CLEAR GEL

RAW MATERIALS	% By Weight
Part A:	
CARNATION White Mineral Oil	16
Alkanolamide (EMCOL 5160)	3
Polyethylene glycol 400 mono-oleate (EMCOL H-31A)	3
Oleic Acid Amide (EMCOL 511)	4
Hexadecyl alcohol	4
Part B:	
Phosphate ester (EMCOL CS-1361)	10
Diethanolamine	1.8
Propylene glycol	1
Water, perfume, color & preservative to	100

Among the most popular new developments in hair preparations are the clear "ringing" hair gels.

Combine all ingredients but water and heat to 90C. Heat water to 90C in separate container. Add water to oil-surfactant phase slowly with good agitation avoiding excessive air entrapment. Maintain 90C temperature during entire addition. Maintaining agitation, allow to cool. Perfume and color at lowest temperature allowing tube fill.

Notes on Clear Gels:

- 1) Only water soluble colors can be added after emulsion is formed. If oil soluble colors are used, then it must be added to the oil phase at the start prior to water addition.
- 2) Certain perfumes will cause a clouding of the gel, but this can be cleared by maintaining agitation for several minutes after perfume addition. A permanent cloud can be eliminated by adding the perfume with approximately 1-2% polyethylene glycol 400 mono-oleate and all the propylene glycol. Thus the propylene glycol is not added in step 1 with the perfume.
- 3) Increasing propylene glycol up to 3% improves freeze thaw stability.
- 4) Increasing phosphate ester to 12% aids the relative ease of gel formation and decreases its sensitivity to most variations that may occur in the raw materials used.

CLEAR HAIR RINSE

INGREDIENTS:	%W/W
Water	q.s. to 100.0
3 A Alcohol	6.0
COSMEDIA HSP-1180 (Polyacrylamido methylpropane Sulfonic Acid)	3.5
Polyquart H (PEG-15 Tallow Polyamine)	2.0
Fragrance, Dye and Preservative	q.s.

Procedure:

Combine ingredients in the above order under adequate agitation.

Comments:

This simple, effective formula can be used as either an after-shampoo rinse or as a Pre-Blow Dry Spray.

Formulation HOB-83-30

CLEAR HAIR RINSE WITH PROTEIN

INGREDIENTS:	%W/W
Part A:	
Water	q.s. to 100.0
Natrosol 250 HHR	0.5
Citric Acid, Anhydrous	0.5
VELVETEX AB-45 (Coco-Betaine)	5.0
DEHYQUART A (Cetrimonium Chloride)	5.0
Nutrilan L (Hydrolyzed Animal Protein)	1.0

Part B:

Perfume Oil	q.s.
Dyes and Preservatives	q.s.

Procedure:

Heat water to 70-75C. Sprinkle in Natrosol under adequate agitation and continue blending until completely hydrated. Add remaining ingredients, one at a time, with stirring. Cool and at 40C add individual ingredients of Part B under agitation. Continue stirring until product reaches room temperature.

Comment:

The blend of quaternary and betaine provides emolliency and enhanced substantivity to the hair shaft. For further conditioning, substitute VELVETEX OLB-50 (Oleyl Betine) for the AB-45.

PROFESSIONAL CONDITIONER

RAW MATERIALS	% By Weight
Part A:	
Polysorbate 20	1.0
INCROQUAT S-85 (stearalkonium chloride)	2.0
Cetyl Alcohol	2.5
Stearyl Alcohol	2.5
CRODAMOL W (stearyl heptanoate)	1.0
GERMABEN II	1.0
Part B:	
Water + NATROSOL 250HHR	77.5
Part C:	
KERASOL (soluble animal keratin)	3.0
Water	6.0
Part D:	
SM-2101 (trimethylsilylamodimethicone)	2.0
Part E:	
SF-2136 (dimethicone)	1.5

This conditioner is formulated for permed or otherwise damaged hair. SM-2101, an amine emulsion, provides improved shine and softness. SF-1236, a silicone gum/SF-96 (5) blend, coats the hair, giving it extra fullness and disguising damaged ends without weighing down the hair.

CONDITIONER FOR DULL, LIMP HAIR

RAW MATERIALS	% By Weight
Part A:	
Ceteareth 20	1.0
Stearyl Alcohol	2.0
INCROMINE SB (stearamidopropyl dimethylamine)	.8
ARQUAD 2HT-75 (quaternium 18)	1.4
SF-1042 (cyclomethicone)	3.0
Part B:	
Water	90.2
Part C:	
SM-2101 (trimethylsilyl-amodimethicone)	1.5
KATHON	.1

Beautiful shine, softness, and body accompany this rinse-off conditioner.

Procedure:

1. Preheat Part A and Part B to 75C.
2. Add Part B to Part A with agitation.
3. Cool with mixing to 40-50C.
4. Blend in SM-2101 and then the preservative.
5. Cool to room temperature.

Formulation HP-101

HAIR CONDITIONER FOR SUPERIOR BODY

RAW MATERIALS	% By Weight
Part A:	
INCROPAL CS-20 (ceteareth 20)	.5
VOLPO S-20 (steareth 20)	.5
Stearyl Alcohol	2.0
INCROMINE SB (stearamidopropyl dimethylamine)	.8
ADOGEN 432 (decetyldimonium chloride)	1.5
Part B:	
Water	92.6
Natrosol 250 HHR (hydroxyethyl cellulose)	.5
Part C:	
SF-1214 Silicone (dimethicone (and) cyclomethicone)	1.5
KATHON	.1

The silicone fluid SF-1214 in this conditioner makes this hair fluffy, imparts softness and shine, and hides damaged, split ends.

CONDITIONER FOR PERMANENT WAVED HAIR

RAW MATERIALS	% By Weight
Stearyl Dimethyl Benzyl Ammonium Chloride (Incroquat S-85)	1.00
Acetamide MEA (Incromectant AMEA 70)	0.50
Cocamidopropyl Betaine (Incronam 30)	10.00
Stearamidopropyl Dimethylamine Lactate (Incromate SDL)	3.70
Propylene Glycol	2.00
Cocodimonium Hydrolyzed Collagen (Croquat M)	1.00
Keratin Amino Acids (Crotein HKP/S.F.)	0.50
GERMABEN II	1.00
Water, Distilled	76.80
Guar-Hydroxypropyl Trimonium Chloride (Jaguar C13SD)	0.50
Cetearyl Alcohol (Crodacol CS-50)	3.00

Procedure:

Mix water and gum, add to that the propylene glycol, GERMABEN II, Croquat, AMEA and Crotein. Start heating to 75-80C. While heating add the remaining ingredients except the Crodacol. When well blended add Crodacol and heat to 80C. Cool with mixing to room temperature. Adjust pH to 4.8 with citric acid.

HAIR CONDITIONER

RAW MATERIALS	% By Weight
Phase A:	
Cyclomethicone (and) Dimethicone Copolyol (Silsoft Beauty Aid MG)	10.00
Myristyl Myristate (Ceraphyl 424)	0.50
Stearamidopropyl Dimethylamine (Lexamine S-13)	0.50

CREME RINSE

RAW MATERIALS	% By Weight
Phase A:	
Water, D.I.	46.6
DESONIC CE-12 (Glycereth-12)	1.5
Methylparaben	0.1
Phase B:	
Maquat SC18-25 (Stearalkonium Chloride)	3.0
Adol 52 NF (Cetyl Alcohol)	1.0
Propylparaben	0.1
Phase C:	
Water, D.I.	46.9
Natrosol 250 HHR (Hydroxyethylcellulose)	0.8
Phase D:	
Perfume and Dye:	q.s.

Blending Procedure:

Combine Phases A and B separately and heat to 70-75C. Add Phase B to Phase A with high speed agitation. Prepare Phase C by dispersing Natrosol in D.I. Water, then add to above mixture. Continue agitation and cool to 40C before adding Phase D.

Comment:

DESONIC CE-12 is a colorless, odorless conditioner for the hair and scalp which exhibits excellent humectant and emollient properties. It softens and lubricates the hair for ease of combing.

LANOQUAT 1756 Lanolin Quaternary	3.5
Propyl paraben	0.2
Demineralized water	78.7
Fragrance	q.s.

In this "super" conditioning cream rinse, NIMLESTEROL 1732 provides excellent lubricity for ease of wet combing. NIMLESTEROL 1732 has been shown to penetrate into the hair shaft to provide good sheen without an overly greasy feel. It is advisable that this conditioner be allowed to stay on the hair at least five to ten minutes before rinsing out.

CREME HAIR RELAXER

INGREDIENTS:	%W/W
Part A:	
Mineral Oil	5.0
Petrolatum	10.0
EMULGADE 1000NI (Cetearyl Alcohol (and) Ceteareth-20)	20.0
Part B:	
Water	62.0
Sodium Hydroxide (50% aqueous)	3.0
Part C:	
Preservative	q.s.
Fragrance	q.s.

Comments:

EMULGADE 1000NI is an extremely versatile product. It forms elegant skin care products which are easy to prepare. In addition, as the above formula shows, it has excellent stability characteristics in products with extreme acidic and alkaline requirements as well as in standard skin care products.

Formula H-4872

PHYTOSTEROL HAIR RELAXER

INGREDIENTS:	%W/W
Part A:	
LANETTE O (Cetearyl Alcohol)	15.0
EUTANOL G (Octyldodecanol)	3.0
Petrolatum	10.0
GENEROL 122 (Soya Sterol)	2.0
Part B:	
Water	64.0
Sodium Hydroxide (50% aqueous)	3.0
LANETTE E (Sodium Cetearyl Sulfate)	3.0
Part C:	
Preservative	q.s.
Fragrance	q.s.

Creamy smooth emulsion with a glossy appearance.

GENEROL 122 is very similar in chemical structure to cholesterol and enhances the emulsion's quality.

Formula H-4836

DETANGLING SPRITZ

MATERIALS	% By Weight
CELQUAT L-200	0.60
Brij 58	0.50
Germaben II	0.50
Fragrance	0.04
Deionized Water	98.36

Formulated to improve the combability of unmanageable, tangled hair. The non-alcoholic formulation imparts excellent wet and dry combing characteristics to the hair while giving dry hair body and softness.

Preparation:

Combine water, Brij 58 and Germaben II. Mix until solution is complete. With continued mixing, sift CELQUAT into solution.

Mix until completely dissolved. Add fragrance; filter and fill.

Valve: Calmar Mark II

Formulation 5415-143

SETTING LOTION

FIXATIVE HF-3001

RAW MATERIALS	% By Weight
Mineral oil, 70 wt.	92.0
ACETULAN	8.0
Perfume and color	q.s.

Description:

Liquid brilliantine. Moisturizing dressing, treats dry scalp, controls dry scalp, controls hair. ACETULAN sharply reduces "greasy" feel, improves emollient qualities.

Procedure:

Mix all ingredients; stir until uniform.

Variations:

For higher viscosity, use higher weight mineral oil.

For better spreading, add AMERXOL OE-2.

FIXATIVE HF-3002

RAW MATERIALS	% By Weight
Mineral oil, 80/90 wt.	30.0
OHLAN	27.0
Petrolatum	28.0
Kessco PEG 400 Dilaurate	8.0
Paraffin	6.0
Isopropyl myristate	1.0
Perfume and color	q.s.

Description:

Soft pomade. Excellent for dry hair. Retains moisture, conditions, imparts sheen. OHLAN controls consistency, blends with, rather than repels, moisture.

Procedure:

Combine all ingredients, heat with stirring until clear and uniform (approx. 80C). Cool with stirring to 40C.

Variations:

To reduce oily character, add ACETULAN.

To improve lubricity, add AMERLATE P.

SOURCE: Amerchol Corp.: Hair Care: Suggested Formulations

FIXATIVE HF-3003

RAW MATERIALS	% By Weight
GLUCAM P-20	10.0
SOLULAN PB-2	3.0
Japan wax	6.0
Candelilla wax	2.0
Castor oil	79.0
Perfume, color, antioxidant	q.s.

Description:

Soft, translucent dressing. Spreads to a thin film with high gloss. SOLULAN PB-2 contributes gloss; GLUCAM P-20 aids combing and increases lasting power of fragrance.

Procedure:

Heat all ingredients with stirring until clear and uniform. Fill while warm.

Variations:

To harden, replace part of castor oil with OHLAN.

To gel, add GLUCAMATE SSE-20.

For reduced tack and greater slip, replace part of castor oil with cetyl alcohol.

FIXATIVE HF-3004

RAW MATERIALS	% By Weight
AMEROXOL OE-2	5.0
MODULAN	10.0
Mineral oil, 70 wt.	25.0
Petrolatum	55.0
Ozokerite	5.0
Perfume and color	q.s.

Description:

Soft pomade that spreads to thin, glossy film. AMEROXOL OE-2 permits easy spreading. MODULAN provides body, moisturization and plasticity.

Procedure:

Melt all ingredients and stir until uniform. Fill while warm.

Variations:

To reduce greasy character, add ACETULAN.

For improved moisturization, replace part of petrolatum with AMERCHOL CAB.

SOURCE: Amerchol Corp.: Hair Care: Suggested Formulations

FIXATIVE HF-3005

RAW MATERIALS	% By Weight
Specially denatured alcohol #40	79.5
Ucon LB-1715	13.0
SOLULAN PB-2	2.0
GLUCAM P-20	0.5
OHLAN	0.5
Water	4.5
Perfume, color	q.s.

Description:

Greaseless hair groom. Dressing achieved by combination of Ucon LB-1715, SOLULAN PB-2 and OHLAN. GLUCAM P-20 aids in combing.

Procedure:

Combine Ucon LB-1715, SOLULAN PB-2, GLUCAM P-20 and OHLAN with stirring and gentle heat. Add to alcohol, stir until uniform. Add water slowly with stirring. Chill and filter.

Variations:

To increase lasting power of fragrance, increase concentration of GLUCAM P-20.

For increased body, add myristyl alcohol.

For velvety feel, add ACETULAN.

FIXATIVE HF-3006

RAW MATERIALS	% By Weight
Specially denatured alcohol #40	66.0
SOLULAN PB-20	4.0
GLUCAM P-20	4.0
Water	26.0
Perfume, color	q.s.

Description:

Greaseless hair dressing. Good light control exerted by SOLULAN PB-20 and GLUCAM P-20. GLUCAM P-20 also increases fragrance duration.

Procedure:

Mix all ingredients except water until uniform. Add water slowly with stirring. Chill and filter.

Variations:

For increased body, add OHLAN.

To aid clarity, add GLUCAMATE SSE-20.

Description:

Cream emulsion that provides desnarling, easy combing, firm fixation for dry or damaged hair. AMERCHOL CAB lends gloss and helps hold moisture.

Procedure:

Heat both phases to 75C. Add oil to water with good stirring. Cool and stir to 38C.

Variations:

To cut greasy feel, add ACETULAN and use lighter weight of mineral oil.

For added moisture retention, add GLUCAM E-20.

FIXATIVE HF-3008

RAW MATERIALS	% By Weight
Oil Phase:	
AMERCHOL CAB	13.0
Mineral oil, 350 wt.	20.0
Beeswax, USP	5.0
Petrolatum	25.0
GLUCATE SS	3.0
GLUCAMATE SSE-20	3.0
Water Phase:	
Borax	0.5
Water	30.5
Perfume, preservative	q.s.

Description:

Flowing lotion hair dressing for dry hair. Provides good combing and fixation. AMERCHOL CAB provides gloss and moisture retention. GLUCATE SS/GLUCAMATE SSE-20 provides elegant emulsion system.

Procedure:

Heat both phases to 75C. Add oil to water with good stirring. Stir and cool to 30C.

Variations:

To reduce tack, add ACETULAN.

To increase lubricity, add AMERLATE P.

For improved slip, replace part of petrolatum with myristyl alcohol.

SOURCE: Amerchol Corp.: Hair Care: Suggested Formulations

FIXATIVE HF-3009

RAW MATERIALS	% By Weight
Oil Phase:	
AMERCHOL L-101	5.00
AMERLATE P	1.00
GLUCAM P-10	15.00
Kessco PEG-1000 Monostearate	3.00
Water Phase:	
Carbopol 934	0.75
Triethanolamine	0.75
Water	74.50
Perfume, preservative	q.s.

Description:

Soft, white cream dressing that liquefies to a transparent film. AMERCHOL L-101 provides gloss and auxiliary emulsification. AMERLATE P provides lubricity. GLUCAM P-10 provides combing ease and luster.

Variations:

For additional conditioning effect, add SOLULAN 16.

FIXATIVE HF-3010

RAW MATERIALS	% By Weight
Oil Phase:	
Petrolatum	40.0
AMERCHOL CAB	29.0
Multiwax W-180	10.0
Arlacel 83	6.0
Water Phase:	
Water	14.0
Tween 81	1.0
Perfume, preservative	q.s.

Description:

Stiff cream dressing for crew-cut and other very short hair styles. AMERCHOL CAB provides luster and conditioning.

Procedure:

Heat both phases to 60C with stirring. Add water to oil with stirring. Stir and cool to 40C.

Variations:

To improve slip, add AMERLATE P and replace part of MULTIWAX W-180 with cetyl alcohol.

For increased luster, add GLUCAM E-10.

SOURCE: Amerchol Corp.: Hair Care: Suggested Formulations

FIXATIVE HF-3012

RAW MATERIALS	% By Weight
Carbopol 940, 3% slurry in water	25.0
Triethanolamine, 10% in water	7.5
GLUCAM P-10	3.0
Sorbitol, 70%	2.0
PVP K-30	3.0
Water	59.5
Perfume, preservative, color	q.s.

Description:

Soft, clear styling gel that sets. Works well with blow-drying. PVP K-30 and Carbopol 940 serve to set and hold GLUCAM P-10 and Sorbitol, 70% plasticize the polymers and serve to retain moisture.

Procedure:

Prepare Carbopol 940 slurry (lump free), add triethanolamine solution with stirring. Combine remaining ingredients in separate vessel, stirring until completely dissolved and add to Carbopol 940 solution. Avoid incorporating excess air.

Variations:

For improved spreading, add SOLULAN L-575.

For greater body, add GLUCAMATE SSE-20.

FIXATIVE HF-3013

RAW MATERIALS	% By Weight
Dicrylan 325-50	4.0
AMEROXOL OE-10	0.5
Lexein X-250	0.5
Specially denatured alcohol #40	10.0
Water	85.0
Perfume, preservative, color	q.s.

Description:

Thin setting lotion for pump spray application. Setting effected by acrylate/acrylamide copolymer, plasticized by protein hydrolyzate and AMEROXOL OE-10, which also serves as a perfume solubilizer.

Procedure:

Mix all ingredients until clear and uniform.

Variations:

For improved comb-out and luster, add GLUCAM E-10.

For increased body, add GLUCAMATE SSE-20.

SOURCE: Amerchol Corp.: Hair Care: Suggested Formulations

FIXATIVE HF-3014

RAW MATERIALS	% By Weight
Aminomethyl propanol	0.2
Isopropyl alcohol	6.0
Specially denatured alcohol #40	81.6
Gantrez ES-225	5.0
SOLULAN L-575	1.5
Diisopropyl adipate	0.5
dl-Panthenol	0.2
Water	5.0
Perfume, color	q.s.

Description:

Pump spray synthetic resin fixative. Provides all the properties of previous alcohol-based hair sprays except for evenness of spray possible only with pressurized systems used prior to chlorfluorocarbon ban. Fixation due to resin, plasticized by SOLULAN L-575, diisopropyl adipate and panthenol.

Procedure:

Combine alcohols and aminomethyl propanol. Add GANTREZ ES-225, stir until completely dissolved. Add remaining ingredients in order listed. Stir until clear and uniform.

Variations:

For variations in quality of deposited film, replace diisopropyl adipate in whole or in part with ACETULAN, AMERLATE P, SOLULAN PB-20 or SOLULAN 5.

For greater water resistance, replace GANTREZ ES-225 with GANTREZ ES-425 or Amphomer.

HAIR CONDITIONING CREAM

RAW MATERIALS	Parts by Weight
Phase A:	
EMCOL E-607S (Steapyrium Chloride)	1.0
Water, Perfume, Preservative	86.3
Phase B:	
WITCONOL MST (Glyceryl Stearate)	8.0
Lanolin Alcohols	1.5
Carnation White Mineral Oil	3.0
Stearic Acid	0.2

Dissolve EMCOL E-607S in water at 85C. Melt ingredients of Phase B together and add to Phase A slowly with agitation.

Cool to 40C; add preservative and perfume and pour into containers.

Formulation 102D

HAIR SET AND CONDITIONER

RAW MATERIALS	Parts by Weight
EMCOL E-607S (Steapyrium Chloride)	0.15
Water	61.88
Polypeptide AAS	3.00
Solulan 25	2.00
PVP/VA E-735	2.50
Alcohol SD-40	30.00
Antifoam 60	0.01
D & C Yellow No.10, 5%	0.05
D & C Blue No. 1, 5%	0.01

Combine water and EMCOL E-607S. Heat with agitation until dissolved, and add Polypeptide AAS.

Melt Solulan 25 and dissolve in alcohol. Add perfume and the PVP/VA E-735, agitating to dissolve.

Add water phase to alcohol phase with stirring. Add color and Antifoam 60. Cool and filter, if necessary, using Celite as a filter aid.

This quality hair-set/conditioner provides, on drying, a medium hold. About one-half to one ounce should be combed through wet or dry hair which is then set and styled.

HAIRDRESSING CREAM - NO. 150 (ST9) OR NO. 554 (ST37)

RAW MATERIALS	% By Weight
Oil Phase:	
ELFACOS ST	3
PEG 1000 monostearate	3
Liquid paraffin	10
Vaseline	4
Preservative	0,2
Water Phase:	
Triethanolamine	0,75
Water	78
Carbomer 934	0,75
Perfume oil	0,3

This O/W cream is a basis for non fatty hairdressing creams.

Manufacturing:

The oil and water phase are heated to 75C separately. The water phase is added to the oil phase with rapid stirring and then cooled down.

At 45C the perfume oil is added.

It is recommended that the finished emulsion be homogenized using a stator-rator homogenizer.

HAIR DRESSING CREAM

RAW MATERIALS	% By Weight
AMEROXOL OE-2	5.00
AMEROXOL OE-20	1.00
Petrolatum, USP white	5.00
Carbopol 934	0.75
Water	82.25
Sodium hydroxide (10% aq.)	2.25
Ethomeen C-25 (10% aq.)	3.75
Perfume and Preservative	q.s.

Soft, white liquid cream for gloss and grooming.

Procedure:

Disperse the Carbopol in the water using high speed mixing. Heat to 70C and continue mixing while adding the sodium hydroxide solution, then the Ethomeen solution. Add the oil phase at 70C and continue mixing while cooling to 30C.

TOP DRESSING

RAW MATERIALS	% By Weight
AMEROXOL OE-2	5.0
MODULAN	10.0
Mineral oil, 70 vis.	25.0
Ozokerite	5.0
Petrolatum, USP white	55.0
Perfume and Preservative	q.s.

Procedure:

Weigh ingredients together, heat where necessary, and mix until uniform.

HAIR PREPARATION: CONDITIONER

The constant search for cleaner and softer hair has resulted in a variety of hair conditioners both solid and liquid. The following are some suggested formulas for both solid and liquid conditioners.

LIQUID

RAW MATERIALS	% By Weight
KLEAROL White Mineral Oil	70
Isopropylan (lanolin derivative)	30
Perfume	q.s.
Color	q.s.

All the above are miscible at room temperature.

SOLID

RAW MATERIALS	% By Weight
CARNATION White Mineral Oil	16.8
WHITE PROTOPET No. 1S Petrolatum	11.2
Stearic Acid, double pressed	11.2
Lanolin	1.4
Cetyl Alcohol	0.3
Span 60	1.4
Tween 60	1.4
Water	56.2
Preservative	0.1
Perfume	q.s.

Heat water phase (water, preservative, Tween 60) to 65C. Blend other ingredients except perfume. Add water phase to oil phase with stirring and allow to cool to 40C. Add perfume, continue stirring and pour into jars at about 35C.

HAIR SHAMPOO, CREAM

INGREDIENTS	% By Weight
TRITON X-200 Surfactant (28%)	50.00
Clindrol Superamide 100L	5.00
Isopropyl Myristate	0.50
KATHON CG Microbiocide	0.06
Trisodium Ethylenediaminetetraacetate (Versene 100)	0.05
Water	44.39

Mixing Instructions:

Combine and mix all ingredients, except water, for five minutes. Add a solution of the KATHON CG Microbiocide in the water at 135F and stir the batch for 30 minutes at 135F. Let cool to ambient temperature.

Directions for Use:

Apply 1-2 capsful to hair. Gives heavy soapy lather. Rinses easily.

Lit. Ref: CS-420 CS-465

HAIR SHAMPOO, CREAM

INGREDIENTS	% By Weight
TRITON X-200 Surfactant (28%)	36.0
Sodium Lauryl Sulfate (30%) a	32.0
TRITON X-15 Surfactant	2.0
Water	30.0

a Duponol WAQ: E. I. Dupont

Mixing Instructions:

Add TRITON X-15 Surfactant to TRITON X-200 Surfactant with slow stirring. Add SLS and water in order with thorough mixing to prevent separation of the shampoo during storage.

Use Dilution:

1-2 capsful/application. Particularly effective in washing oily hair.

HAIR SPRAY*

INGREDIENTS	% By Weight
Luviset CA 66	2.00
AMP-Regular	0.16
Dichloromethane	35.00
Ethanol, anhydrous or isopropyl alcohol	32.84
Propane/butane or isobutane	30.00
CO2 (to saturation)	
Essential Oil	as desired

The degree of neutralization of Luviset CA 66 for normal hair is 75%.

Formulation PF-0119

* Formulation suggested by BASF Wyandotte Corp.

PUMP SPRAY HAIR FIXATIVE*

INGREDIENTS	% By Weight
AMP-95	0.2
Isopropyl alcohol	6.0
SDA 40 alcohol	81.6
Gantrez ES-225	5.0
Solulan L-575	1.5
Diisopropyl adipate	0.5
di-Panthenol	0.2
Water	5.0
Perfume, color	q.s.

Combine alcohols and AMP-95. Add Gantrez ES-225, stir until completely dissolved. Add remaining ingredients in the order listed. Stir until clear and uniform.

For variations in quality of deposited film, replace diisopropyl adipate, in whole or in part, with ACETULAN, AMERLATE P, SOLULAN PB-20 or SOLULAN 5.

For greater water resistance, replace Gantrez ES-225 with Gantrez ES-425 or Amphomer.

HAIR STRAIGHTENER WITH LITHIUM HYDROXIDE NO. 363

RAW MATERIALS	Sequence	% By Weight
LIPOWAX NI	1	16.0
LIPOCOL C	1	1.0
LIPOCOL S-2	1	0.5
Britol 7	1	11.0
Perlatum 410	1	11.0
Water	2	50.0
LIPOCOL S-20	2	1.5
LIPOLAN 31	2	2.0
Propylene Glycol	2	2.0
Sipon 201-10	2	0.25
Lithium Hydroxide Monohydrate	3	3.5
Water	4	1.25

Manufacturing Procedure:

1. In main kettle, combine Sequence 1 ingredients and heat to 75C with good mixing.
2. In a side kettle, combine Sequence 2 ingredients and heat to 75C with mixing.
3. Add combined Sequence 2 to Sequence 1 at 75C with constant agitation.
4. Cool to 65C with mixing and sprinkle in Sequence 3.
5. Cool to 50C and add cold Sequence 4. Cool to 42C and fill.

Note: Reducing LIPOWAX NI level to 12% results in a softer cream.

LEAVE-ON HAIR TREATMENT SPRAY WITH SUNSCREEN NO. 357

RAW MATERIALS	Sequence	% By Weight
LIPONIC EG-1	1	3.00
LIPOPHOS TA	1	5.00
Water	2	3.00
UNIPABOL U-17	2	7.50

HAIR STYLING GEL

MATERIALS	% By Weight
Water	89.0
Natrosol 250 HHR (hydroxyethylcellulose)	1.0
Sodium Hydroxide (20%)	1.4
GAFFIX VC713	7.5
SF-1188 (dimethicone copolyol)	.5
SM-2101 (trimethylsilyl-amodimethicone)	.5
Kathon	.1

Procedure:

- 1) Disperse the Natrosol into the water.
- 2) Add the sodium hydroxide, the resin, and the two silicones, mixing between each.
- 3) Add the preservative.

Comments:

- Carbomer 940 can be used in place of the Natrosol.
- SM-2059, a curable amine emulsion can be used in place of SM-2101.

Formulation HP-300

PUMP SUPER-HOLD HAIR SPRAY

MATERIALS	% By Weight
Aminomethylpropanol (AMP)	.25
Ethanol SDA40	86.25
Gantrez ES225 (ethyl ester of PVM/MA copolymer)	11.00
SF-1202 (cyclomethicone)	2.00
SF-1188 (dimethicone copolyol)	.50

Procedure:

- 1) Mix the AMP into the alcohol.
- 2) While mixing, add the Gantrez ES225 resin.
- 3) Add SF-1202, then SF-1188 (If desired, formulation can be aerosolized.)

Comments:

- For a softer hold use .35% AMP.
- For greater conditioning, use more SF-1188.

- 1 GANTREZ ES-225 is the monomethyl ester and ES-425, the monobutyl ester, respectively, of poly(methyl vinyl ether/maleic acid). These GAF resins are supplied as 50% solutions in alcohol.
- 2 The selection of the perfume can be critical in formulating with GANTREZ ES resins. ES-425 has an inherent butyl odor which can be overcome easily by the proper fragrance. However, since perfumes tend to modify film properties, complete systems (including perfume) should be tested when evaluating end product properties. Most fragrance suppliers are familiar with GANTREZ ES resins and can make recommendations.

Procedure:

For both formulations, first dissolve the neutralizer (AMP) in the ethanol. Add the GANTREZ ES resin. When the resin is thoroughly mixed, add the other ingredients in the order listed.

NEW GENERATION-TYPE HAIR RESTORER

INGREDIENT	% By Weight
Demineralized Water	96.0000
Cellose QP 4400 H	0.5000
Dowicil 200	0.1000
Maquat B-50	0.1000
Tween 60	3.3000

Product Form: Lotion
Code: 029

POLYSORBATE-TYPE HAIR RESTORER WITH VASODILATOR

INGREDIENT	% By Weight
Demineralized Water	93.7000
Cellose QP 4400 H	0.5000
Abiol	0.2000
TRI-K HMP	2.0000
Tween 60 **	3.3000
KALLIKREIN (1000 U/ml)*	0.1000
Methylparaben	0.2000

Procedure:

1. Dissolve the Cellose in water, heating to 50C.
2. Add the polysorbate and blend until uniform.
3. Add the methylparaben and mix until fully dissolved.
4. Cool to room temperature and adjust pH to 5.5-6.0 with anything appropriate.
5. Add the Abiol, TRI-K HMP, and KALLIKREIN...mix until uniform.
6. Add fragrance of choice if required.

*Note: The level of KALLIKREIN has been adjusted to yield approximately 10 international units per ounce of finished product, considering the above.

** Increase polysorbate as you see fit.

Functionalities:

KALLIKREIN...Potent vasodilator and moderator of cell membrane permeability...Increases peripheral blood flow and nutrient transport across cell membrane.

TRI-K HMP...Nutrient medium and hair substantive protein. Increases nutrient value of product as determined by cell culture studies. Part of glycosaminoglycan structure of protein matrix.

Polysorbate-60...Sebum solvent and agent able to remove dehydrotestosterone from scalp. "DHT" causes follicular atrophy and is directly attributable to levels of testosterone in blood. This is the association between male hormone levels and baldness.

Code: 088

PEPTEIN TEAC	2.0

This Soft Hold formula is designed for excellent style retention, leaving the hair natural and manageable.

Formula: 614-48

NON-AEROSOL HAIR SPRAY WITH PROTEIN--STRONG HOLD

INGREDIENTS	% By Weight
A.	
SD Alcohol 40	63.9
Ethyl Ester of PVM/MA Copolymer	7.0
B.	
AMP-95	0.2
Dimethicone Copolyol	0.5
PEG 75 Lanolin Oil	0.3
Fragrance	0.1
C.	
PROLAGEN MP-1	3.0
Deionized Water	25.0

This Strong Hold formula is designed for excellent style retention, leaving the hair natural and manageable.

Formula: 614-49

SOURCE: Geo. A. Hormel & Co.: Formulation Guides

NON-AEROSOL MOUSSE WITH PROTEIN

INGREDIENTS	% By Weight
A.	
Deionized Water	79.4
Polyquaternium 11	3.0
B.	
Acetamide MEA	4.0
Polymethoxy Bicyclic Oxazolidine	0.5
Propylene Glycol	1.0
C.	
PEPTEIN TEAC	10.0
Fragrance	0.1
PEPTEIN 2000	2.0

This non-aerosol styling formula is designed to be used with the new Calmar Cosvell Foamer.

Procedure:

Add Polyquaternium 11 to water slowly; mix until uniform. Add Part B ingredients in order; mix well. Premix fragrance and PEPTEIN TEAC, add to batch slowly; watch foam! Add PEPTEIN 2000; mix until clear and homogeneous.

Formula: DG 614-23

PRE-BLOW DRY HAIR PROTECTANT

INGREDIENTS	% By Weight
A.	
SD Alcohol 40	49.9
Fragrance	0.1
B.	
Deionized Water	45.0
Propylene Glycol	1.0
Aloe Vera	1.0
C.	
PROLAGEN MP-1	2.0
PEPTEIN TEAC	1.0

This non-aerosol formula is designed to protect hair from the damaging effects of blow drying and styling.

Procedure:

Add Fragrance to Alcohol; mix until clear. Combine Part B ingredients in separate vessel; mix until clear. Add PROLAGEN MP-1 and PEPTEIN TEAC to Part B slowly; mix until uniform. Add Parts B/C to Part A. Mix until homogeneous.

Formula: 614-46C

SOURCE: Geo. A. Hormel & Co.: Formulation Guides

NON-ALCOHOL STYLING MOUSSE CONCENTRATE

RAW MATERIALS	% By Weight
Water	93.0
Gafquat 755N (polyquaternium 11)	5.8
Emulphor ON870 (oleth 20)	.6
SM-2101 (trimethylsilyl-amodimethicone)	.6

Procedure:

- 1) Heat the water to 45C.
- 2) Add Gafquat and mix.
- 3) Add the Emulphor and stir until dissolved.
- 4) Add SM-2101.
- 5) Cool.
- 6) Charge into containers and pressurize with suitable propellant

Comments:

- For enhanced conditioning, use amine fluid SM-2059 in place of SM-2101.
- For aerosol formulation, use 85 parts above concentrate and 15 parts A-46 propellant.

STYLING GEL

RECIPE	% By Weight
Ethanol	32.00
Water, preserving agent	65.20
Luviskol VA 37 I	1.20
Hostacerin PN 73	1.30
Perfume	0.30

Procedure:

- I Mix A and B.
- II C is dissolved in 10% of I, then the rest of I is added.
- III Under stirring D is added to II and the product stirring continues until a clear gel has been obtained.
- IV E is added to III.

"OIL FREE" CREME RINSE #A63-6-7

RAW MATERIALS	% By Weight
Phase A:	
Water, deionized	87.40
Cellosize QP 30,000	0.30
CERAPHYL 70 (liquefied at 35C)	2.50
Arguad 2HT-75	1.50
Promulgen D	2.50
Phase B:	
Perfume	0.15
Phase C:	
Formaldehyde 37%	0.15
Phase D:	
Sodium Chloride	0.30
Water, deionized	5.20

Procedure:

Completely pre-disperse Cellosize in water, then add the rest of ingredients of Phase A. Heat to 80C, making sure all is melted and completely dispersed, then cool with constant agitation to 45-50C. Add Phase B. Mix and continue to cool to 40C, and add Phase C. Stir well and cool with continuous mixing to 25-28C. Then slowly add Phase D into the batch with constant agitation. Continue mixing until the consistency of the product is uniform.

pH: 3.0

PERMANENT WAVE LOTION

INGREDIENTS	% By Weight
A.	
Deionized Water	71.9
Steareth-21	2.0
Steareth-2	3.0
Stearyl Alcohol	1.0
Jojoba Oil	3.0
B.	
Ammonium Thioglycolate, 60%	12.0
Ammonium Hydroxide, 28%	2.0
C.	
PEPTEIN CAA	4.0
D.	
Propylene Glycol and Diazolidinyl Urea and Methylparaben and Propylparaben	1.0
Fragrance	0.1

During permanent waving hair is weakened. PEPTEIN CAA, unaffected by the high pH, strengthens hair. Actually becoming a part of the hair, PEPTEIN CAA penetrates into the hair restoring moisture and elasticity.

Formula: 621-04

PERMANENT WAVE NEUTRALIZER

INGREDIENTS	% By Weight
A.	
Deionized Water	85.7
Laureth-23	1.2
Sodium Bromate	9.0
B.	
PEPTEIN CAA	3.0
C.	
Propylene Glycol and Diazolidinyl Urea and Methylparaben and Propylparaben	1.0
Fragrance	0.1

Permanent waving damages hair. PEPTEIN CAA, unaffected by the low pH of the neutralizer, helps restructure and strengthen hair. Actually becoming a part of the hair, PEPTEIN CAA penetrates into the hair restoring moisture and elasticity.

Formula: 621-05

SOURCE: Geo. A. Hormel & Co.: Formulation Guides

PERMANENT WAVE LOTION NO. 285

RAW MATERIALS	% By Weight
A.	
VEEGUM HS	1
Water	69
B.	
Cetyl alcohol	1
Carnation white mineral oil	5
Amerchol L-101	5
Solulan 98	2
Arlacel 165	3
C.	
Ammonium thioglycolate 60%	12
Ammonium hydroxide	2
Preservative	q.s.

Procedure:

Slowly add VEEGUM HS to the water, while agitating at maximum available shear. Continue mixing until smooth. Heat A to 80C. Heat B to 75C. Add B to A and mix until 35C. Add C and mix until smooth and uniform.

Consistency: Viscous lotion.

Suggested Packaging: Opaque plastic bottle.

SCALP CONDITIONER W/ETHYL NICOTINATE & KALLIKREIN

INGREDIENT	% By Weight
Demineralized Water	86.4999
TRI-K HMP	1.5000
WATERCRESS EXTRACT HS	0.5000
Methylparaben	0.2000
ABIOL	0.2000
Ethyl Alcohol SD 40 Anh	10.0000
Ethyl Nicotinate	0.0250*
Tween 60	0.5000
Fragrance #M-5574	0.0250
Biotin	0.0001
KALLIKREIN	0.0500
Sodium Hydroxide	QS--->pH
dl-Panthenol	0.5000

Procedure:

1. Add HMP, Abiol, Biotin, Panthenol, Watercress to Water... mix until dissolved.
2. Dissolve the methylparaben in alcohol, add to batch & mix until clear.
3. Dissolve the fragrance and ethyl nicotinate in polysorbate 60 & add to batch.
4. Mix until uniform and adjust pH to 5-6 with NaOH if necessary.

* Note: The level of ethyl nicotinate yields the desired level of scalp stimulation...it is solubilized by the ethyl alcohol and polysorbate-60, but may require use of additional solubilizer if higher levels of scalp stimulation are desired. Adequate safety testing is necessary to insure safety.

Kallikrein stimulates peripheral circulation via vasodilation with only a moderate sensation compared to the nicotinates.

SOURCE: TRI-K Industries, Inc.: Code 0086002

SCALP CONDITIONER WITH VASODILATOR & RUBIFACIENT

INGREDIENT	% By Weight
Demineralized Water	QS
HMP	1.5000
ABIOL	0.2000
Methylparaben	0.2000
Watercress HS	0.5000
Alcohol SD 40 Anh.	10.0000
Ethyl Nicotinate	0.0250
Sodium Hydroxide	QS pH 5-6
Tween 60	0.5000
Tween 20	0.2000
Biotin	0.0001
KALLIKREIN 1000ku/ml	0.1000
dl-Panthenol	0.5000

Procedure:

1. Add HMP, ABIOL, biotin, panthenol, watercress to water... mix until dissolved.
2. Dissolve the methyl paraben in alcohol, add to batch and mix until clear.
3. Dissolve the fragrance and ethyl nicotinate in mixture of both polysorbates and add to batch.
4. Mix until uniform and adjust pH to 5-6 with NaOH if necessary
5. Add the KALLIKREIN...mix until clear.

Note:

The level of ethyl nicotinate yields the desired level of scalp stimulation...it is solubilized by the ethanol and polysorbates, but may require use of additional solubilizer to produce a clear solution if higher levels of scalp stimulation are desired. Adequate safety testing is necessary to insure safety.

KALLIKREIN stimulates periperal circulation via vasodilation with only a moderate sensation compared to the nicotinates.

INSECT REPELLENT/SUNSCREEN LOTION

INGREDIENTS	% By Weight
Water, deionized	50.56
ESCALOL 507 (Sunscreen)	6.00
Carbomer 934 (2% Soln.)	15.00
N,N-diethyltoluamide	12.00
NaOH (10%)	2.50
Cetyl Alcohol	3.00
CERAPHYL 368	5.00
Kathon CG	0.04
Fragrance V-3514	0.50
CERASYNT Q	2.00
Myrj 52	1.00
Liqua Par	0.40
EMULSYNT GDL	2.00

Procedure:

Combine Carbomer solution and water. Stir while heating to 75C. Add--all other materials except--NaOH, and fragrance. When uniform add NaOH. Cool to 40C--add fragrance. Package at 30C.

SOURCE: Van Dyk & Co., Inc.: The Preparation of a Sunscreen Product: Formulation #K-77-3A

REPELLENT CREAM

RAW MATERIALS	% By Weight
Part A:	
DEET	17.50
MGK 264	5.00
MGK Repellent 326	2.50
Brij 700	1.50
Brij 72	3.80
Stearyl alcohol	2.00
Part B:	
Deionized Water	67.20
Sodium benzoate	.20
Carbopol 934	.20
Part C:	
NaOH (10% solution in water)	(solution) .20

To make a cream, first dissolve the sodium benzoate in the water in Part B and then completely dissolve the Carbopol at room temperature. Next heat Part B to approximately 65C and add to Part A, which also has been heated to approximately 65C, under agitation. When completely blended and the emulsion has formed, add Part C and blend in. When cream is completely uniform, pour into containers and allow to cool.

This recipe will make thick creamy lotion that is pleasant to apply to the skin and will work well in plastic squeeze bottles.

REPELLENT GEL

RAW MATERIALS	% By Weight
MGK Intermediate 5734	10.00-15.00
Isopropanol	50.00
Water	31.00-36.00
Carbopol 940	2.00
Ethomeen C-25	2.00

1% of Solulan 98 may be included in the recipe to increase clarity. This also serves as an emollient.

If the gel is marketed in a clear plastic tube or a clear glass jar, it is suggested that 0.1% Escalol 106 or other sunscreen agent be added to prevent adverse effects on the formula from ultra-violet light.

The viscosity of the gel can be varied by changing the Carbopol and Ethomeen content, but the ratio of these two ingredients should be maintained at 1:1.

SOURCE: McLaughlin Gormley King: Suggested Formulations

REPELLENT ROLL ON

RAW MATERIALS	% By Weight
MGK Intermediate 5734	20.00
Isopropyl alcohol	51.00
Deionized Water	28.45
Carbopol 940	0.25
Ethomeen C-25	0.25
BHT (Butylated hydroxy toluene)	0.05

The roll-on applicator is a convenient way to apply a repellent to exposed skin--particularly the arms.

The levels of Carbopol 940 and Ethomeen C-25 can be varied to change the viscosity of the formulation.

REPELLENT TOWELETTE

RAW MATERIALS	% By Weight
PYROCIDE Intermediate 5734	10 -25
Isopropanol	56- 50
Water	34.95-24.95
BHT (butylated hydroxy toluene)	0.05

Repellent-saturated paper towelettes, for applying repellent preparations, have become increasingly popular. An all-day supply of inexpensive towelettes to treat the whole family can be conveniently carried in one's pocket or purse.

Individual paper towelettes, saturated with Intermediate 5734, are sealed in small, non-porous envelopes. Normally, several envelopes are sold in a conveniently-priced package. The consumer tears open an individual envelope and wipes his face, hands and other exposed skin with the towelette to obtain protection against mosquitoes, flies, chiggers, etc.

In production, enough of the above solution is injected into the unsealed envelope to saturate the dry towelette - then the envelope is sealed. The filling and sealing operation is best done on specialized, high-speed equipment.

SOURCE: McLaughlin Gormley King: Suggested Formulations

REPELLENT STICK

RAW MATERIALS	% By Weight
Part A:	
Intermediate 6561	20.00
Ethanol, SDA-40	64.50
Glycerin	5.00
Sorbo	4.00
Part B:	
Sodium stearate	6.00
Stearyl alcohol	.50

Experience has shown that Repellent 326 decomposes rapidly in sticks made with a soap base. Therefore, the stick was developed without R-326. It remains firm at elevated temperatures and is semi-clear.

To make a stick, blend Parts A and B separately. Heat and stir Part A to uniformity at 55-65C. Add Part B to A and heat (65-70C) with agitation or stirring until clear. Immediately pour into stick container and cool to room temperature.

Sticks made in this manner have held up well, both physically and chemically after one year's storage at ambient temperature and 100F.

REPELLENT STICK

RAW MATERIALS	% By Weight
Intermediate 2364	20
Isopropyl alcohol	55
Glycerin	4
Beeswax *	20
Stearyl alcohol	1

* Synthetic Beeswax Beads: WAXENOL 820

For those who wish to produce a stick without using a soap base.

Blend all liquid ingredients together, heat to ca 45C, then add solids. Agitate until all ingredients are dissolved.

Immediately pour into stick container and cool to room temperature.

Sticks of this type have held up physically and chemically after one year's storage at 100F.

These emulsions have a glossy texture with quick rub-in characteristics. They have an elegant after-feel with some similarity to the feel of cationic lotions.

Viscosity and emulsion stability have been found to be excellent, and the emulsions exhibited no signs of separation after storage at 45C for 30 days and after freeze-thaw recycling.

WITCONOL H-35A (PEG-8 Stearate)	2.0
EMPHOS D70-30C (Sodium Glyceryl Oleate Phosphate)	0.5
Cetyl Alcohol	1.0
Isopropyl Palmitate	3.5

Water Phase:

Glycerine USP	5.0
EMCOL 4072 (Disodium Hydrogenated Cottonseed Glyceride Sulfosuccinate)	3.0
Fragrance, Preservative	q.s.
Water	q.s. to 100

ACID-PH OIL-IN-WATER LOTION-B

RAW MATERIALS Parts by Weight

Oil Phase:

WITCONOL MST (Glyceryl Stearate)	3.0
WITCONOL H-35A (PEG-8 Stearate)	2.0
EMPHOS D70-30C (Sodium Glyceryl Oleate Phosphate)	0.5
Cetyl Alcohol	1.0
Isopropyl Palmitate	3.5
Carnation White Mineral Oil	3.0

Water Phase:

Glycerine USP	5.0
EMCOL 4072 (Disodium Hydrogenated Cottonseed Glyceride Sulfosuccinate)	3.0
Fragrance, Preservative	q.s.
Water	q.s. to 100

Heat each phase to 70-75C and stir until uniform. Add the Water Phase to the Oil Phase at 70 to 75C with moderate agitation, and maintain agitation and temperature for 15 minutes. Let cool, with slow stirring; avoid air entrainment during the cooling cycle. Pour at or below 28C.

These lotions have a glossy texture, nongreasy feel with nontacky, quick rub-in characteristics.

Emulsion A is a heavy lotion, whereas Emulsion B is a thin lotion suitable as a "milk"-type moisturizing formulation. Laboratory preparations of these emulsions exhibited no signs of separation after storage at 45C for 30 days and after freeze-thaw recycling. After 30 months, Emulsion A exhibited a very slight increase in viscosity, whereas Emulsion B had the same low viscosity. Both emulsions retained their excellent emulsion stability.

ALL-PURPOSE SKIN CONDITIONING LOTION

RAW MATERIALS	% By Weight
Oil Phase:	
PROMULGEN G (Stearyl Alcohol and Ceteareth-20)	5.0
GLUCATE SS (Methyl Glucose Sesquistearate)	2.0
GLUCAMATE SSE-20 (PEG-20 Methyl Glucose Sesquisterate)	2.0
SOLULAN 5 (Laneth-5 and Ceteth-5 and Oleth-5 and Steareth-5)	0.5
Mineral Oil, 70 vis.	2.0
Water Phase:	
BIOCARE Polymer HA-24 (2.6%)	3.8
GLUCAM E-10 (Methyl Gluceth-10)	3.5
Water	80.2
Germaben IIE	1.0

Description:

White, glossy, medium viscosity, nonionic o/w lotion. BIOCARE Polymer HA-24 is substantive to the skin and forms a uniform viscoelastic matrix which moisturizes the skin. Stable and mild system.

SOURCE: Amerchol Corp.: BIOCARE Polymer HA-24: Formulation T56-28-3

DRY SKIN BEAUTY LOTION

RAW MATERIALS	% By Weight
Oil Phase:	
Propylene Glycol Monostearate	3.0
CETAL (Cetyl Alcohol)	1.0
Stearic Acid	2.5
PROMYR (Isopropyl Myristate)	1.0
Water Phase:	
GLUCAM E-10	5.0
Triethanolamine	0.8
Water	86.7
Perfume and Preservative	q.s.

Description:

High viscosity, flowing, glossy lotion for daily skin care. GLUCAM E-10 provides an emollient afterfeel and humectancy as well as enhancing stability over an extended temperature range. Procedure:

Heat the oil and water phases to 80C. Add water phase to the oil phase with moderate agitation. Mix while cooling to room temperature. Add perfume below 40C and pack.

SOURCE: Amerchol Corp.: GLUCAM: Formulation T49-62-1

ALL PURPOSE W/O LOTION

RAW MATERIALS	% By Weight
A.	
NIMCO 1795 Lanolin Alcohol	2.0
Mineral oil (70 visc.)	53.0
EMERSOL 132 Stearic Acid	3.0
B.	
Triethanolamine	1.5
Demineralized water	40.3
Methyl paraben	0.2

Rather simple, but effective, pourable lotion for persistently dry skin. In addition, it provides for a more pleasing emollient feel.

Procedure:

Heat A to 62C and B to 65C. Add B to A and mix while cooling to room temperature. Thoroughly homogenize the batch before packaging.

Formulation 2235-1071-1

SKIN CARE LOTION

RAW MATERIALS	% By Weight
A.	
Propylene glycol	5.0
EMSORB 2728 Polysorbate 60	1.0
Demineralized water	56.7
Methyl paraben	0.2
B.	
NIMCOLAN 1740 Solid Absorption Base	10.0
Silicone fluid, 350 cSt	2.5

TRISOLAN 1720 Lanolin Oil Blend	3.0
Propyl paraben	0.1
C.	
Methocel K4M Premium (2% aqueous solution)	18.0

Thick, creamy appearance of this super emollient lotion. Rub-out is accomplished very quickly leaving a noticeable, but non-greasy, after-feel. This formula is recommended for use on chronically dry skin.

Procedure:

Heat A and B separately to 78C. Add A to B with moderately fast agitation. Then add C to AB and continue mixing while cooling to room temperature. Add fragrance and package.

This emulsion has a glossy texture with quick rub-in characteristics. It has an elegant after-feel with some similarity to the feel of cationic lotions.

Viscosity and emulsion stability have been found to be excellent, and the emulsion exhibited no signs of separation after storage at 45C for 30 days and after freeze-thaw recycling.

DOWICIL 200	0.20

A smooth, inexpensive cleansing soap with moisturizing lotion.

This skin cleansing soap contains a lotion that provides excellent penetration. This simple, inexpensive liquid soap is easy to formulate yet it has the feel of expensive lotions.

Variations:

1. Add unique characteristics to the formula by adding collagen, elastin, or other popular protein complexes.
2. Try substituting vegetable oils for mineral oil for an even lighter feel.
3. For health oriented products, add herbal extracts.
4. Increase the oil phase for dry skin or decrease the oil phase and add esters for oily skin.

Ceraphyl 424	3.00
Stearic Acid XXX	0.79
Isopropyl Lanolate Distilled	1.00
Pluronic F-127	1.00
Glyceryl Monostearate	2.00
Propyl Paraben	0.10
Part C:	
Fragrance	0.20

Manufacturing Directions:

1. Part A - In a stainless steel steam jacketed kettle, add item 1 to 4 and heat to 60C. Using a homomixer, add item 5 slowly to avoid lumps and mix for 20 minutes or until homogeneous. Heat to 80C.
2. Part B - In a separate vessel, add items 6 to 11 and heat to 80C. Mix until completely melted and homogeneous.
3. Mix Part B slowly in Part A at 80C using sweep blades.
4. Cool to 50C. Add Part C, mix and cool to room temperature.

Cream-like lotion increases the sensation of moisturizing.

Procedure:

1. Meter water (Phase A) into a compounding vessel and heat to 75-80C.
2. Combine Phase B ingredients and warm to dissolve. Add to water phase (Phase A) at 75-80C.
3. Combine Phase C ingredients and mix well to prewet xanthan. Allow the mixture to set for 15 minutes, then add to Phase A batch at 75-80C.
4. Weigh Phase D ingredients into a steam-jacketed kettle. Heat to 80C while mixing. Then add to water phase (at 75-80C) with good agitation. Turn heat off and mix emulsion down to 45C.
5. Prepare Phase E by dissolving DOWICIL 200 antimicrobial in water. Then add to batch at 45C (or lower).
6. Add Phase F at 45C or lower.
7. Add fragrance (Phase G) to the emulsion at 45C (or lower).

Dimethicone	0.5
CARBOPOL 1342	0.2
Part C:	
Triethanolamine (99%)	0.2
PEG-15-Cocamine	0.2
Fragrance	Q.S.

This rich, creamy emulsion breaks rapidly on the skin to release oils and emollients essential for moisturization. Yet the feel on the skin is light and non-greasy.

Quick Break CARBOPOL Resin Formulation #1

SOURCE: BF Goodrich Co.: CARBOPOL: Suggested Formulations

IN-SHOWER MOISTURIZING LOTION

INGREDIENTS:	%W/W
Part A:	
CETIOL LC (Coco Caprylate/Caprata)	1.50
MYRITOL 318 (Caprylic/Capric Triglyceride)	4.00
Mineral Oil	7.50
EMULGADE F (Cetearyl Alcohol (and) PEG-40 Castor Oil (and) Sodium Cetearyl Sulfate)	6.00
Part B:	
Water	77.70
COSMEDIA POLYMER HSP-1180 (Polyacrylamidomethylpropane Sulfonic Acid)	3.00
Part C:	
Triethanolamine	0.30
Dyes, Fragrance & Preservatives	q.s.

Procedure:

Mix and heat Part A to 75C. Mix and heat Part B to 75C and add to Part A. Cool to 45C and add individual components of Part C. Continue stirring until product reaches room temperature. Fill off.

Comments:

After showering apply In-Shower Moisturizing Lotion. When the lotion is rinsed off, the skin feels smooth and conditioned. The COSMEDIA POLYMER HSP-1180 contributes lubricity and a talc-like residual feel.

Suggested Formula H-4812

LOTION WITH NATURAL MOISTURIZING FACTOR

INGREDIENTS:	%W/W
Part A:	
Stearic Acid XXX	2.00
LANETTE O (Cetearyl Alcohol)	1.00
EUTANOL G-16 (Isocetyl Alcohol)	5.00
Part B:	
Water	72.45
Carbopol 934 (2% soln) (Carbomer 934)	15.00
Triethanolamine (99%)	1.25
Part C:	
Dowicil 200 (Quaternium-15)	0.10
Hygroplex HHG	3.00
Fragrance	0.20

Comments:

EUTANOL G-16 is a mild non-greasy liquid fatty alcohol which can easily be emulsified. This light lotion rubs in easily without whitening and leaves a non-oily feel on the skin.

Suggested Formula H-4818

LOTION L-1001

RAW MATERIALS	% By Weight
Oil Phase:	
GLUCATE SS	1.0
GLUCAMATE SSE-20	1.5
MODULAN	2.0
Stearic acid, xxx	2.0
Mineral oil, 70 vis.	6.0
Water Phase:	
GLUCAM E-20	5.0
Water	82.5
Perfume and Preservative	q.s.

Description:

Low viscosity, hand and body lotion. Basic model for GLUCATE SS/GLUCAMATE SSE-20. System recovers initial viscosity after "work".

Variations:

Formula is well balanced and modifications of oil phase will require adjustment of the emulsifier ratio and concentrations. For example--replacement of mineral oil with vegetable oils.

LOTION L-1002

RAW MATERIALS	% By Weight
Oil Phase:	
GLUCATE SS	1.5
GLUCAMATE SSE-20	1.5
MODULAN	1.0
Mineral oil, 70 vis.	4.0
Glyceryl monostearate, neut.	2.0
Water Phase:	
Emcol E-607S	1.0
Glycerine	5.0
Methocel 65HG	0.2
Water	83.8
Perfume and Preservative	q.s.

Description:

Rich, nongreasy high viscosity lotion for all skin types. Suitable for dispensing from plastic package. Unique emulsifying system provides viscosity recovery after working.

Variations:

To reduce viscosity, replace mineral oil with a mixture of AMERLATE P and isopropyl myristate. Replace glycerine with GLUCAM E-10.

SOURCE: Amerchol Corp.: Lotions: Suggested Formulations

LOTION L-1003

Water Phase:	
Water	76.8
Carbopol 941	0.2
GLUCAM E-20	5.0
Triethanolamine, 10% in water	2.0

Description:

Medium viscosity lotion for hands. Dries to light film. Protective, easily rinsed off.

Variations:

To increase viscosity, replace part of cetyl alcohol with stearyl alcohol. To decrease viscosity, replace part of cetyl alcohol with myristyl alcohol.

To improve lubricity, replace part of mineral oil with AMERLATE P.

To add body replace part of mineral oil with PPG-36 oleate.

SOURCE: Amerchol Corp.: Lotions: Suggested Formulations

LOTION L-1005

Mineral oil, 70 vis.	4.5
Water Phase:	
Triethanolamine	1.0
Propylene glycol	4.5
Water	73.0
Perfume and Preservative	q.s.

Description:

Rich, emollient lotion. High gloss, non-greasy. Medium viscosity. Recommended for dry skin without excessive oiliness.

Variations:

For more complete rub-in, replace part of mineral oil with isopropyl palmitate and propylene glycol with GLUCAM E-10.

For greater skin treatment increase MODULAN.

LOTION L-1018

RAW MATERIALS	% By Weight
Oil Phase:	
GLUCATE SS	1.0
ACETULAN	2.0
Cetyl alcohol	2.0
Glyceryl monostearate, neut.	0.5
Sesame oil	10.0
Water Phase:	
GLUCAMATE SSE-20	3.0
GLUCAM E-20	5.0
Water	76.5
Perfume and Preservative	q.s.

Description:

Moderately heavy hand lotion with recovery of viscosity after work.

Major emollient is a natural vegetable oil modified by ACETULAN to cut greasiness and by GLUCAM E-20 for nontacky, residual effect.

Variations:

To reduce viscosity, replace part of cetyl alcohol with myristyl alcohol.

Other natural oils such as peanut, avocado, corn, etc. can replace sesame oil in whole or in part, but may require emulsifier rebalancing.

Water	71.1
Collasol	10.0
Perfume, Preservative, Antioxidant	q.s.

Heat oil and water phases separately to 65C. Add water to oil phase with high speed agitation. When uniform, cool to 30C and add Collasol. Stir until uniform.

For additional smoothness, emulsions can be homogenized. The viscosity of these emulsions can be varied from liquid to solid by relatively minor variations in the sugar ester concentrations.

DOWICIL 200	0.100

A smooth, inexpensive lotion with a rich, luxuriant feel.

This lotion applies smoothly and provides excellent penetration. While simple and inexpensive to create, this formula gives the feel of more expensive lotions. The METHOCEL cellulose ether helps leave skin with a silky feel. It gives the sensation of moisturizing and protection but with no greasy afterfeel.

Variations:

1. Add unique characteristics to the formula by adding collagen, elastin, or other popular protein complexes.
2. Try substituting vegetable oils for mineral oil for an even lighter feel.
3. For health oriented products, add herbal extracts.
4. Increase the oil phase for dry skin or decrease the oil phase and add esters for oily skin.

MOISTURE LOTION

RAW MATERIALS	% By Weight
SCHERCOMID AME-70	6.5
SCHERCEMOL MM	1.5
Glyceryl Stearate, pure	4.5
Stearic Acid (TPSA)	2.0
Lanolin Alcohols	0.8
Triethanolamine	0.5
Carbowax 400	5.0
Water	79.0
Methyl Paraben	.1
Fragrance	.1

Procedure:

Heat SCHERCOMID AME-70, SCHERCEMOL MM, GMS, Stearic Acid, and Lanolin Alcohols to 70-75C. Heat TEA, Carbowax 400, Methyl Paraben, and water to 70-75C. Add water phase to oil phase with agitation. Cool to 40C and add perfume. Cool and allow to set overnight.

The resulting lotion has a velvety skin feel and leaves the skin moist, but not tacky.

MOISTURIZING HAND LOTION WITH ELASTIN

INGREDIENTS:	%W/W
Part A:	
LANETTE SX (Cetearyl Alcohol (and) Sodium Lauryl Sulfate)	5.00
CETIOL 868 (Octyl Stearate)	5.00
Part B:	
Water	81.00
Glycerine	3.00
Part C:	
Germaben II-E	1.00
Fragrance and Dyes	q.s.
Part D:	
ELASTIN CLR	5.00

Comments:

CETIOL 868 is an inexpensive non-oily emollient (IPM substitute) with good spreading power. The combination of CETIOL 868 and ELASTIN provides a lotion that rubs in easily and leaves the skin feeling and looking nice.

Formula H-4843

MOISTURIZING LOTION

INGREDIENTS:	%W/W
Part A:	
CUTINA GMS (Glyceryl Stearate)	5.00
EUMULGIN B-1 (Cetareth-12)	1.00
EUMULGIN B-2 (Cetareth-20)	1.00
CETIOL 868 (Octyl Stearate)	10.00

Formulation SK-106

Manufacturing Procedure(Formulation SK-104, SK-105, SK-106):

1. Prepare Phase "A" by heating the ingredients to 75C to dissolve the solids.
2. Prepare the Carbopol solution by dispersing Carbopol 941 into water using high speed agitation until a smooth slurry is obtained. Then heat the dispersion at about 80C until a smooth viscous solution is formed.
3. Dissolve the Parabens in Propylene Glycol by warming solution to 55C. Add phase "C" to "B".
4. Add phase "B & C" to "A" with mixing.
5. When base is at 55C, add in phase "D" stirring until the base is completely mixed in.
6. Add Germall solution and perfume when cool.

A light natural lotion that protects dry skin.

This very light lotion provides excellent penetration and leaves no greasy afterfeel. The skin is left feeling dry but with a light barrier due to the dimethicone. Because there are no animal oils or petroleum distillates such as mineral oil in this formulation, it's perfect for the health-oriented market.

Variations:

1. Make unique formulations for specific market segments by adding proteins or herbal extracts.
2. Increase the wax phase to create an oil free cream.

SKIN MOISTURIZING LOTION

RAW MATERIALS	% By Weight
Phase A:	
Polypentaerythrityl Tetralaurate (Miranol Ester PO-LM4)	4.00
Glyceryl Stearate (and) PEG 100 Stearate (Arlacel 165)	5.00
Mineral Oil	3.50
Isopropyl Myristate	2.00
Propylene Glycol Dipelargonate (Emerest 2388)	1.00
Beeswax	2.00
Stearic Acid	1.00
Stearyl Alcohol	0.50
Cyclomethicone (Dow Corning Fluid 344)	0.50
Phase B:	
Water	67.70
Carbomer 934, 3% solution (Carbopol 934)	7.50
Propylene Glycol	3.50
Phase C:	
Triethanolamine	0.80
Phase D:	
GERMABEN II-E	1.00

Procedure:

Heat Phase A & Phase B separately to 75C and add B to A with agitation. Then add Phase C. Cool to 40C and add Phase D.

SOURCE: Sutton Chemical Co.: Sutton Cosmetic Formulary

SKIN FRESHENING LOTION

RAW MATERIALS	Parts by Weight
Phase A:	
EMCOL E-607L (Lapyrium Chloride)	1.0
EMCOL CC-42 (PPG-40 Diethylmonium Chloride)	4.0
Water	69.5
Phase B:	
WITCONOL F26-46 (PPG-36 Oleate)	12.0
WITCONOL MST (Glyceryl Stearate)	12.0
WITCONOL 14 (Polyglyceryl-4 Oleate)	1.5

Heat Phase A and Phase B separately to 85C. Add Phase B to Phase A and mix until cool.

Shampoos

ACID-PH CONDITIONING SHAMPOO

RAW MATERIALS	Parts by Weight
WITCONATE AOS (Sodium C14-16 Olefin Sulfonate)	21.2
WITCAMIDE 5133 (Cocamide DEA)	2.0
WITCAMIDE 61 (Oleamide MIPA)	1.0
EMCOL CC37-18 (Coco-Betaine)	2.0
Neo-Fat 12	0.5
Preservative	q.s.
Ammonium Chloride, 25% aqueous solution:	q.s to desired viscosity
Perfume, Color	q.s.
Water	q.s. to 100

Charge WITCONATE AOS, WITCAMIDE 5133, WITCAMIDE 61, EMCOL CC37-18, Neo-Fat 12 and water. Heat with stirring to 70 to 80C until dissolved. At 45C add preservative.

Adjust batch to pH 6.5 with dilute phosphoric, citric, lactic or hydrochloric acid. Add ammonium chloride solution for desired viscosity. Add perfume and color. Cool and package.

Formulation 130D

CATIONIC CONDITIONING SHAMPOO

RAW MATERIALS	Parts by Weight
EMCOL CC37-18 (Coco-Betaine)	20.0
EMCOL E-607S (Steapyrium Chloride)	1.0
WITCAMIDE 5195 (Lauramide DEA)	4.0
Ammonium Chloride, 25% aqueous solution:	q.s. to desired viscosity
Fragrance, Preservative	q.s.
Water	q.s. to 100

Heat all ingredients except fragrance and preservative to 70C. Add ammonium chloride solution to obtain desired viscosity. Cool to 40C. Add preservative and fragrance; package.

This shampoo has excellent foaming and lathering properties and typically leaves the hair in a glossy and well-conditioned state normally characterized by cationic conditioners.

Formulation 129D

ACID PH MILD SHAMPOO

RAW MATERIALS	% By Weight
Standopol ES-40	6.0
Maprofix NH	20.0
SCHERCOMID AME-70	7.5
SCHERCOTERIC MS-SF-2 75% Super Conc.	8.6
Dowicil-200	0.2
Glycolic Acid 70% Tech	2.2
Water (Deionized)	55.5
Sodium Chloride	qs

Procedure:

Heat water to 40-50C and add Dowicil 200 and glycolic acid. Next, add SCHERCOMID AME-70 and Maprofix NH. Add Standapol ES-40 very slowly to avoid gel body formation. Finally add, very slowly, SCHERCOTERIC MS-SF-2 Super Conc. Sodium Chloride may be added to adjust viscosity.

Typical pH: 5.4
 Typical viscosity: 1200 cps @ 25C

SOURCE: Scher Chemicals, Inc.: SCHERCOMID AME-70: Formulation SG-0200

LOW PH MILD SHAMPOO

RAW MATERIALS	% By Weight
Water (Deionized)	55.5
Dowicil 200	0.2
Glycolic Acid (70% Tech.)	2.2
SCHERCOMID AME-70	7.5
Maprofix NH* (30%)	20.0
Standopol ES-40** (60%)	6.0
SCHERCOTERIC MS-SF-2 Super Conc. (75%)	8.6

Viscosity @ 25C 1200 cps

* Ammonium Lauryl Sulfate 30%

** Sodium Myristoyl Ether (3.0 EO) Sulfate 60%

Manufacturing Procedure:

1. Heat Water to 40-50C with stirring add Dowicil 200 and Glycolic Acid.
2. Now add SCHERCOMID AME-70, Maprofix NH. Each of these goes in quite readily.
3. Add Standopol ES-40 very slowly to avoid gel body formation.
4. Finally add, very slowly, SCHERCOTERIC MS-SF-2 Super Conc.

SOURCE: Scher Chemicals, Inc.: Formulation SG-0200

ALL PURPOSE SHAMPOO

INGREDIENTS:	%W/W
Part A:	
Water	q.s. to 100.00
STANDAPOL ES-2 (Sodium Laureth Sulfate)	40.00
VELVETEX BA-35 (Cocamidopropyl Betaine)	5.00
STANDAMID SD (Cocamide DEA)	3.00
NaCl	0.75
Part B:	
Kathon CG	0.05
Fragrance	q.s.

Procedure:

Add ingredients in Part A individually, under agitation. When homogeneous, add individual ingredients of Part B to Part A. Adjust pH to 6.3 with 50% citric acid solution.

Comments:

This solution exhibits good cleansing coupled with a degree of conditioning due to the presence of the VELVETEX BA-35.

Formula H-4867

AMPHOTERIC GEL SHAMPOO

INGREDIENTS:	%W/W
Water	36.8
STANDAPOL ES-2 (Sodium Laureth Sulfate)	50.0
VELVETEX AB-45 (Coco-Betaine)	13.2
Perfume Oil	q.s.
Dyes and Preservatives	q.s.

Procedure:

Blend ingredients in order listed at 55C, until uniform. Cool to 50C with sweep-type agitation to prevent air entrapment.

Comment:

The betaine provides emolliency and unique reduction of irritation effects of the anionic in this low actives (18%) system, while also aiding in building gel structure.

- III Adjust the pH with C.
- IV Cease stirring to allow for maximum crystallisation.

Formulation B I/6113

SOURCE: Hoechst: Kosmetik Guide Formulations: Suggested Formulas

ANTI-DANDRUFF SHAMPOO

INGREDIENT	% Wt/Wt
Sodium Lauryl Sulfate (29% active)	60.0
Lauric diethanolamide	4.0
Ethylene Glycol Distearate	2.0
Magnesium Aluminum Silicate (suspending aid)	1.0
Zinc Pyrithione (48% dispersion)	2.1
Sodium Chloride	To desired viscosity
Citric Acid	To pH 7.0 + 0.5
Deionized Water	Balance

Basic Characteristics

1. Contains an approved (OTC Panel) active ingredient (e.g. Zinc Pyrithione)
2. Usually based on an alcohol sulfate (e.g. Sodium Lauryl Sulfate).
3. High surfactant concentration.

ANTI-DANDRUFF LOTION SHAMPOO

INGREDIENTS:	%W/W
Water	49.10
Veegum Regular	1.00
Zinc Omadine, 48%	2.10
NITRENE L-90 (Lauramide DEA)	4.50
STANDAPOL WAQ-LC (Sodium Lauryl Sulfate)	40.00
FD & C, Blue #1 (0.2%)	1.50
FD & Yellow #5 (0.1%)	0.40
Sodium Chloride	1.40

Procedure:

1. Heat water to 70C. Begin rapid stirring.
2. Add Veegum and stir for 15 minutes.
3. Add Zinc Omadine and stir for 15 minutes.
4. Reduce speed and add NITRENE L-90 (Pre-melted).
5. Take heat off and while cooling, add STANDAPOL WAQ-LC.
6. While cooling, add remaining ingredients, (except fragrance) one at a time, under agitation.
7. At 35C add fragrance.
8. Continue stirring until product reaches room temperature. Fill off.

Comments:

This is a high performance shampoo containing an FDA approved active ingredient for the control of scalp dandruff.

CLEAR LIQUID CONDITIONING SHAMPOO

INGREDIENTS:	% W/W
Water	55.00
STANDAPOL ES-1 (Sodium Laureth Sulfate)	30.00
VELVETEX BK-35 (Cocamidopropyl Betaine)	6.50
STANDAMOX CAW (Cocamidopropylamine Oxide)	3.00
STANDAMID SD (Cocamide DEA)	1.50
CETIOL HE (PEG-7 Glyceryl Cocoate)	2.00
POLYQUART H (PEG-15 Tallow Polyamine)	2.00
Fragrance, Dyes and Preservatives	q.s.

Procedure:

Charge kettle with water. Add remaining ingredients, one at a time, in the order given, under agitation. Continue stirring and adjust pH to 6.5 + 0.5 with 50% citric acid.

Note: Small additions of sodium chloride can be used to adjust viscosity.

Comments:

This medium foaming shampoo provides a creamy, lather type foam with excellent hair conditioning properties.

Formula H-4832

PEARLESCENT CONDITIONING SHAMPOO

INGREDIENTS:	%W/W
Water	q.s.
STANDAPOL ES-2 (Sodium Laureth Sulfate)	56.00
STANDAMOX CAW (Cocamidopropylamine Oxide)	3.00
CETIOL HE (PEG-7 Glyceryl Cocoate)	1.50
COSMEDIA GUAR C-261 (Guar Hydroxylpropyl Trimonium Chloride)	1.00
STANDAPOL PEARL CONC. 7130	4.00
Fragrance	q.s.
Preservative	q.s.
Citric Acid (50% soln)	q.s. to 6.0-6.5

Procedure:

Charge kettle with water. Pre-wet Guar Gum in CETIOL HE and add to water under agitation. When completely hydrated, add remaining ingredients individually in the order listed. Continue mixing until homogeneous. Adjust pH to 6.0-6.5 with a 50% solution of citric acid. Fill off.

Comments:

This is a truly high performance shampoo in terms of both foaming and conditioning. The combination of CETIOL HE and GUAR C-261 provides highly beneficial effects on even difficult to manage hair.

Formula H-4863

SOURCE: Henkel Corp.: Personal Care Products Formulary: Formulas

CLEAR LIQUID SHAMPOO

INGREDIENTS:	%W/W
Water	q.s. to 100.00
DERIPHAT 151-C (Lauraminopropionic Acid)	7.00
STANDAPOL T (TEA Lauryl Sulfate)	28.00
STANDAMID LD (Lauramide DEA)	4.00
Fragrance	0.25
Sodium Chloride	0.25
Kathon CG	0.05

Procedure:

Add ingredients in the order given under adequate agitation; pre-mixing the fragrance in the LD in a separate vessel before adding. Adjust to pH 6.5 with 50% citric acid solution.

pH:	6.5
Viscosity at 25C:	1,300 cps

Comments:

The addition of DERIPHAT 151-C to shampoo systems results in an elegant feel to the hair after rinsing. Furthermore, it provides a richer, smaller-bubbled foam.

Formula H-4866

CLEAR LIQUID SHAMPOO

INGREDIENTS:	%W/W
Water	50.00
Sodium Chloride	0.50
Lantox 55 (PEG-75 Lanolin)	0.50
STANDAPOL T (TEA Lauryl Sulfate)	30.00
STANDAMID SD (Cocamide DEA)	4.00
STANDAPOL ES-2 (Sodium Laureth Sulfate)	15.00
Fragrance, Dyes and Preservatives	q.s.

Procedure:

The order of addition is given above. Add all materials singularly under adequate agitation. Adjust the pH to 6.5 + 0.5 with 50% citric acid aqueous solution. Continue stirring until product is homogeneous.

Comment:

This high foaming shampoo formula is excellent for normal to slightly dry hair.

Formula H-4830

SOURCE: Henkel Corp.: Personal Care Products Formulary:
Suggested Formulation

CLEAR LIQUID SHAMPOO

INGREDIENTS:	%W/W
Water	49.0
Sodium Chloride	0.5
Lantox 55 (PEG-75 Lanolin)	0.5
STANDAPOL T (TEA Lauryl Sulfate)	30.0
STANDAMID SD (Cocamide DEA)	5.0
STANDAPOL ES-40 (Sodium Myreth Sulfate)	15.0
Fragrance	q.s.
Dyes and Preservatives	q.s.

Procedure:

Heat water to 50C. Add remaining ingredients in order listed one at a time, under agitation. Continue stirring until product is homogeneous. Adjust pH to 6.5-7.0 with citric acid.

Comments:

This high actives (26%) anionic blend is an efficient foamer and cleanser particularly for oily hair.

Formulation H-4122

CREAM SHAMPOO

INGREDIENTS:	%W/W
STANDAPOL WAQ-SPEC (Sodium Lauryl Sulfate)	45.0
Stearic Acid, USP	7.5
GENEROL 122 E-5 (PEG-5 Soya Sterol)	1.0
Part B:	
Water	43.5
Sodium Hydroxide	1.0
Sodium Chloride	2.0
Part C:	
Perfume Oil	q.s.
Dyes and Preservatives	q.s.

Procedure:

Heat Part A to 70C with agitation. Heat Part B to 70C with agitation and add Part A to Part B. Cool, continue stirring and at 45C add individual components of Part C.

Comments:

The addition of an ethoxylated Soya Sterol to this simple, yet elegant, shampoo provides a desirable after shampoo sheen to the hair coupled with somewhat of an emollient effect.

Formula H-4764

Formulation CS-03-29

Use of CELQUAT conditioning shampoos results in wet hair that combs through and blow dries easily; finished styles that are lush, healthy in appearance and feel, much longer lasting, and free of buildup or oiliness.

SOURCE: National Starch and Chemical Corp.: CELQUAT H-100, L-200
Polymers: Suggested Formulations

CONDITIONING SHAMPOO

INGREDIENT	%wt/wt
Ammonium Lauryl Ether Sulfate (2 E.O.; 25% active)	40.0
Imidazoline Amphoteric (40% active)	8.0
Polymeric Quaternary	1.0
Citric Acid	to pH 5.5-6.0
NaCl (if needed)	to desired viscosity
Quaternium-15 (Preservative)	0.2
Deionized Water	Balance

Basic Characteristics:

1. Contain low to medium concentration of anionic surfactants.
2. Conditioning can be several "types".
 - a) Super-fattening effects
 - b) Enhanced wet and/or dry combing
 - c) Enhanced gloss/luster
 - d) Reduced fly-away (i.e. anti-static effect)
3. In order to "condition" something must be adhered to the hair. Therefore, a "conditioning shampoo" must represent a compromise situation.

CONDITIONING SHAMPOO

INGREDIENTS:	%W/W
Part A:	
Water	61.0
STANDAPOL ES-2 (Sodium Laureth Sulfate)	30.0
CETIOL HE (PEG-7 Glyceryl Cocoate)	5.0
STANDAMID LD (Pre-melted at 45C) (Lauramide DEA)	4.0
Citric Acid	to pH 6.5
Part B:	
Fragrance	q.s.
Dyes and Preservatives	q.s.

Procedure:

Heat water to 50C. Add other ingredients of Part A in above listed order of addition. Cool with sweep-type agitation and at 45C, add individual components of Part B. Continue low agitation until product is uniform. Adjust pH and fill off.

Comment:

The blend of ethoxylated lauryl sulfate and ethoxylated cocoate contributes to the mildness of the preparation. The cocoate in particular provides emollient effects to the hair shaft.

Formula H-4418

SOURCE: Henkel Corp.: Personal Care Products Formulary:
Suggested Formulation

CONDITIONING SHAMPOO

INGREDIENTS:	%W/W
Water	46.0
Sodium Chloride	0.5
Lantox 55 (PEG-75 Lanolin)	0.5
STANDAPOL T (TEA-Lauryl Sulfate)	30.0
STANDAMID SD (Cocamide DEA)	5.0
STANDAPOL ES-40 Conc. (Sodium Myreth Sulfate)	15.0
VELVETEX BA-35 (Cocamidopropyl Betaine)	3.0
Fragrance, Preservatives and Dyes	q.s.

Procedure:

Heat water to 50C. Add remaining ingredients in the order given, one at a time under agitation. Continue stirring until product is homogeneous. Adjust pH to 6.5-7.0 with 50% citric acid. Fill off.

Comment:

This high foaming shampoo leaves the hair in a manageable, easy-to-comb condition. For increased conditioning, decrease STANDAPOL T to 28% while increasing VELVETEX BA-35 to 5.0%.
Formula H-4835

CONDITIONING SHAMPOO
(Non-Stripping)

INGREDIENTS:	%W/W
Water	42.0
Sodium Chloride	1.0
STANDAPOL T (TEA Lauryl Sulfate)	40.0
STANDAMID SD (Cocamide DEA)	5.0
CETIOL HE (PEG-7 Glyceryl Cocoate)	5.0
NUTRILAN L (Hydrolized Animal Protein)	1.0
Lantox 55 (PEG-75 Lanolin)	0.5
Perfume Oil	q.s.
Dyes and Preservatives	q.s.

Procedure:

The order of addition is given above. Add all materials singularly under adequate agitation. Adjust the pH to 6.0+-0.5 with 50% citric acid aqueous solution. Continue low speed agitation until product is homogeneous.

Comments:

The blend of anionic, ethoxylated cocoate and high protein level contributes to the mildness of this preparation. The cocoate and protein in particular are both substantive to the hair shaft.

Formula 4437

SOURCE: Henkel Corp.: Personal Care Products Formulary: Formulas

CONDITIONING SHAMPOO

INGREDIENTS:	%W/W
Water	54.8
Sodium Chloride	2.0
STANDAPOL T (TEA Lauryl Sulfate)	25.0
STANDAPOL EA-40 Conc. (Ammonium Myreth Sulfate)	10.0
STANDAMID KD (Cocamide DEA)	3.0
POLYQUART H (PEG-15 Tallow Polyamine)	5.0

EMTHOX softens and lubricates the hair for ease in combing, without detracting from the aesthetics or the cleansing performance of the shampoo. These formulations yield crystal clear products that differ mainly in viscosity. Each exhibits good cleaning and foaming properties.

Procedure:

Combine (A) and heat to 60C with stirring. Heat (B) to 60C and slowly add it to (A) with agitation. The product should gel. Adjust the pH with citric acid and the viscosity with sodium chloride.

CONDITIONING SHAMPOO
5628-147A

INGREDIENTS	Parts by Weight
CELQUAT SC-240	0.70
Monateric 805	18.80
Stepanol WAT	18.50
Monamid 1034	4.00
Propylene Glycol	2.00
Citric Acid	0.50
GERMABEN II	0.50
Fragrance, Chemia #4014	0.20
Distilled Water	54.80

Description:

This combination shampoo/conditioner thoroughly cleans the hair while adding softness and body. Continued use gives clean, shiny hair without build-up.

pH	6.1
Brookfield Viscosity	2600 cPs

Preparation:

Dissolve CELQUAT in half of water by sifting into water while mixing. In a separate vessel, combine all remaining ingredients except citric acid. When both solutions are complete, add the solution of CELQUAT to the surfactant solution while mixing. When homogeneous, add citric acid and mix until dissolved.

CONDITIONING SHAMPOO GEL
4637-144A

MATERIALS	Parts by Weight
CELQUAT L-200	0.30
Distilled Water	40.45

Germaben II	0.50

pH: 5.7

Brookfield Viscosity: 1100 cps.

Preparation:

Prepare A by sifting CELQUAT into water while mixing. Combine ingredients of B in a separate vessel. Heat both solutions to 60C. When A and B are each homogeneous, add A to B with mixing. Add C. When cool, mix in D.

SOURCE: National Starch and Chemical Corp.: CELQUAT SC-240

CONDITIONING SHAMPOO

RAW MATERIALS: % By Weight

Phase A:
 Polyquaternium-10 (Celquat SC-240) 0.70
 Water 27.50

Phase B:
 Cocoamphodiacetate (and) Disodium Cocamido MIPA-
 Sulfosuccinate (Monateric 805) 18.80
 TEA Lauryl Sulfate 18.50
 Lauramide DEA 4.00
 Propylene Glycol 2.00
 GERMABEN II 0.20
 Water 27.50

Phase C:
 Citric Acid 0.50

Procedure:

Sift the Celquat into water with mixing. Combine all ingredients in Part B and add A to B with mixing. When homogeneous, add C and mix. pH 6.1, viscosity 2600 cps.

HIGH VISCOSITY SHAMPOO

RAW MATERIALS: % By Weight

Phase A:
 Polyquaternium-24 (Quatrisoft Polymer LM-200) 1.0
 Water 46.25

Phase B:
 Sodium Myreth Sulfate (58% active) 38.0
 Lauramide DEA 7.0
 Methyl Gluceth-20 3.5
 PEG-75 Lanolin 4.0
 GERMABEN II 0.25

Procedure:

Disperse the Polyquaternium-24 in the water with good agitation at room temperature. Heat to 45C and when clear add each ingredient in Phase B in the order listed. Avoid air entrapment.

HP-200 CONDITIONING SHAMPOO

MATERIALS	% By Weight
Part A:	
Standapol ES-2	40.00
Varion CADG-HS	5.00
Water	23.95
Part B:	
Incromide LR	5.00
SM-2101	2.00
Part C:	
Water	23.95
Kathon	.10
Citric Acid	q.s.

Improved comb-out and shine are achieved with this shampoo.

Procedure:

1. Pre-mix Part A and Part B.
2. Slowly add Part A to Part B and mix until homogeneous.
3. Add the remaining water and stir.
4. Add preservative.
5. Adjust pH to 6.5 to 7.0 with citric acid.

HP-201 CONDITIONING SHAMPOO

MATERIALS	% By Weight
Part A:	
Carbopol 1342	.4
Water	41.0
Part B:	
Standapol ES-2	40.0
Water	13.0
Part C:	
Incromide LR	4.0
VISCASIL 60M	1.5
Kathon	.1
NaOH, perfume	q.s.

Improved softness and shine with easier comb-out are obtained with this conditioning shampoo, due to mechanical deposition of the VISCASIL 60M, a 60,000 cps dimethyl silicone fluid, onto the hair.

Procedure:

1. Disperse the Carbopol into the water.
2. Add Part B, pre-mixed, to Part A.
3. Add the lauramide DEA and mix until homogeneous.
4. Slowly disperse into the VISCASIL 60M.
5. Adjust viscosity with NaOH to pH of 6 to 6.5.

L-200 Polymers: Suggested Formulations

CREAM SHAMPOO

INGREDIENTS:	%W/W
Water	26.5
POLYQUART H (PEG-15 Tallow Polyamine)	10.0
STANDAPOL S (Fatty Alcohol Sulfate...Alkanolamide Blend)	30.0
STANDAPOL A (Ammonium Lauryl Sulfate)	30.0
STANDAMID SD (Cocamide DEA)	1.5
CETIOL HE (PEG-7 Glyceryl Cocoate)	1.0
HAIR COMPLEX AQUOSUM	1.0
Perfume Oil	q.s.
Dyes and Preservatives	q.s.

Procedure:

The order of addition is given above. Add all materials singularly under adequate agitation. Adjust the pH to 6.5 + 0.5 with 50% citric acid aqueous solution. Continue stirring until product is homogeneous.

Comment:

The blend of anionics, polyamine, CLR material and low level of amides in the system yields an elegant system with excellent lathering qualities. The ethoxylated cocoate and polyamine provide both emolliency and substantivity to the hair shaft. Formula H-4584

LOW IRRITATION SHAMPOO

INGREDIENTS:	%W/W
Part A:	
Water	q.s. to 100.0
PEG-6000 Distearate	0.75
VELVETEX CDC (Cocoamphodiacetate)	8.00
STANDAPOL ES-3 (Sodium Laureth Sulfate)	12.00
STANDAMID SD (Cocamide DEA)	2.00

Part B:

Fragrance, Dye and Preservative q.s.

Procedure:

Heat water to 65C. Add the remaining ingredients of Part A with agitation. Maintain temperature until clear, homogeneous product results. Cool to 40C with stirring. Add Part B. Adjust to pH 7.0 + 0.3 with 50% citric acid solution.

pH: 7.0
 Viscosity: Approx. 1,000 cps

Comment:

This formulation illustrates a shampoo that is effective yet inexpensive.

CRYSTAL CLEAR CONDITIONING SHAMPOO

INGREDIENTS:	% By Weight
SANDOZ Sulfate A (Ammonium Lauryl Sulfate)	33.00
SANDOPAN DTC (Sodium Trideceth-7-Carboxylate)	10.00
SANDOZ Amide PE (Lauramide-DEA)	3.00
Polymer JR 400	.50
Trisodium EDTA	.10
Glydant (DM, DM Hydantoin)	.50
Deionized Water	52.85
Fragrance	.05
Lactic Acid to pH 5.5	q.s.

Formulation No. CHS-41

Water white clarity with easily manipulated viscosity and conditioning levels make this multipurpose group of formulas an excellent choice for "CLEAR" product lines.

Procedure:

Hydrate the Polymer JR in about 2/3 of the water by slowly sifting in with moderate stirring. In a separate vessel, warm SANDOZ Amide PE until melted, about 60C. Add remaining ingredients, including the aforementioned polymer gel. Use the remaining water to rinse any residual gel into main batch. Adjust pH to 5.5. Stir until homogeneous.

DRY HAIR SHAMPOO

INGREDIENTS:	%W/W
Water	58.70
STANDAPOL ES-2 (Sodium Laureth Sulfate)	28.00
VELVETEX BK-35 (Cocamidopropyl Betaine)	7.00
STANDAMID LD (Lauramide DEA) (Pre-melted at 45C)	3.00
CETIOL HE (PEG-7 Glyceryl Cocoate)	3.00
SEDAPLANT RICHTER	0.15
CETIOL J600 (Oleyl Erucate)	0.15
Fragrance, Dyes and Preservatives	

Procedure:

Add the ingredients in the order listed above, pre-mixing the Jojoba Oil in CETIOL HE. Stir under adequate agitation until a homogeneous product results. Adjust to pH 6.5 - 7.0 with 50% citric acid aqueous solution.

Comment:

This is an elegant conditioning shampoo suitable for everyday washing of "dry" hair. The CETIOL J600 is a synthetic jojoba oil.

Formula H-4833

HAIR AND BODY SHAMPOO

INGREDIENTS:	%W/W
Water	q.s. to 100.00
TEXAPON K-14S Special (Sodium Myreth Sulfate)	57.00
STANDAMID LDS (Lauramide DEA)	3.00
Sodium Chloride	0.50
AETHOXAL B (PPG-5-Laureth-5)	2.00
Kathon CG	0.05
Fragrance	0.15

Procedure:

Charge kettle with water. Add remaining ingredients, one at a time, under agitation. Adjust pH to 6.5 + 0.3 with 50% citric acid. Continue stirring until product is homogeneous. Fill off.

Comments:

This shampoo provides a combination of good foam characteristics with a conditioning/re-fatting effect due to the AETHOXAL B.

ETHNIC CONDITIONING SHAMPOO

RAW MATERIALS	% By Weight
Water, D.I.	49.3
DESONIC CE-12	3.5
Varamide MA-1	1.0
DESONOL SE-2	35.7
Monateric CAB	8.5
Citric Acid	to pH 5.5
Sodium Chloride	2.0
Perfume, Dye and Preservative	q.s.

Blending Procedure:

Add surfactants, in order, to D.I. Water with moderate agitation. Adjust pH with Citric Acid; then add Sodium Chloride to the desired viscosity, followed by the Perfume, Dye and Preservative.

Viscosity = 1775 cps

Comment:

DESONIC CE-12 imparts a conditioned effect to the hair and scalp. Its' excellent humectant and emollient properties provide sheen enhancement and moisturizing for ease of combing without residual oiliness. DESONIC CE-12 is compatible with anionics, cationics and nonionics and do not inhibit cleansing and foam performance.

EXTRA MILD SHAMPOO WITH ALOE NO. 428

INGREDIENT	**% By Weight
Deionized Water	37.50
Aloe Vera Gel	25.00
Lauramide DEA	12.00
VANSEAL CS	5.50
TEA Lauryl Sulfate	20.00
Preservative, color, fragrance	q.s.

** As Received Basis

Features:

VANSEAL CS is used as a substantive hair conditioner and foam booster for this extra mild (pH 5.5) shampoo. Thickening the shampoo is achieved by optimization of surfactant levels. The lauramide DEA/TEA lauryl sulfate surfactant combination provides mildness and, with the addition of the cocoyl sarcosine, yields abundant rich and creamy lather. The aloe vera gel adds a final conditioning touch. As prepared, this formula is clear and colorless and may easily be adjusted to any desired color by use of a dye.

Consistency: Pourable liquid.

Suggested Packaging: Squeeze bottle.

FAMILY SHAMPOO

INGREDIENT:	%wt/Wt
SLES (3 E.O., 28% active)	40.0
Coco Betaine (30% active)	5.0
Coco diethanolamide	2.5
Citric Acid	0.1
Fragrance	0.2
Methyl Paraben	0.2
Sodium Chloride	To desired viscosity (if needed)
Deionized Water	Balance

Basic Characteristics:

1. Usually based on alcohol ether sulfates (e.g. Sodium Laureth (3) Sulfate).
2. Contain only small quantities, if any, of conditioning agent.
3. Mild enough for children.
4. Medium surfactant concentration.

INEXPENSIVE SHAMPOO

INGREDIENTS:	%W/W
Water	68.70-67.70
Ammonium Chloride	1.00- 2.00
Lantox 55 (PEG-75 Lanolin)	0.30
Standapol EA-K (Ammonium Myreth Sulfate (and) Cocamide DEA)	30.00
Dyes, Fragrance and Preservatives	q.s.

Procedure:

Place water in a container. Add remaining ingredients one at a time in the order given under agitation. Adjust pH to 5.5-6.5 with 50% citric acid. Continue stirring until product is homogeneous. Fill off.

Comment:

This easy to prepare shampoo contains STANDAPOL EA-K a high active (60%) blend of Ammonium Myreth Sulfate and Cocamide DEA. Formulation H-4842

PEARLESCENT SHAMPOO FOR PERMED HAIR

INGREDIENTS:	%W/W
Water	q.s. to 100.0
STANDAPOL T (TEA-Lauryl Sulfate)	30.0
STANDAPOL ES-1 (Sodium Laureth Sulfate)	10.0
VELVETEX BA-35 (Cocamidopropyl Betaine)	4.0
STANDAMOX CAW (Cocamidopropylamine Oxide)	3.0
STANDAMID LDO (Lauramide DEA)	1.5
EUPERLAN PK-810 (Glycol Distearate (and) Sodium Laureth Sulfate (and) Cocamide MEA (and) Laureth-9)	4.0
Sodium Chloride	1.5
Fragrance	q.s.
Dyes and Preservative	q.s.

Procedure:

Charge kettle with water. Add remaining ingredients, one at a time, in the order given, under agitation. Continue stirring and adjust pH to 6.0-6.5 with 50% citric acid. Continue stirring until product is homogeneous. Fill off.

Comments:

The combination of amine oxide and betaine provides the "right" kind of conditioning for permed hair. The EUPERLAN PK-810 is an easy-to-use pearllizing agent. Formulation H-4847

LOW IRRITATION SHAMPOO

INGREDIENTS: %W/W

Part A:

Water	q.s. to 100.0
PEG-6000 Distearate	0.5
VELVETEX CDC (Cocoamphodiacetate)	15.0
STANDAPOL ES-3 (Sodium Laureth Sulfate)	21.0
STANDAMID SD (Cocamide DEA)	3.0
Polysorbate 20	3.0

Part B:

Fragrance, Dye and Preservatives	q.s.
----------------------------------	------

Procedure:

Heat water to 65C. Add the remaining ingredients of Part A with agitation. Maintain temperature until clear, homogeneous product results. Cool to 40C with stirring. Add Part B. Adjust to pH 7.0+/-0.3 with 50% citric acid solution.

pH	7.0
Viscosity	Approx. 800 cps.

Comments:

The combination of amphoteric and ether sulfate surfactants exhibits good cleansing and mildness properties in a shampoo that can be used daily.

Formula H-4865

LOW IRRITATION SHAMPOO

INGREDIENTS: %W/W

Part A:

Water	56.0
VELVETEX AB-45 (Coco Betaine)	20.0
STANDAPOL ES-2 (Sodium Laureth Sulfate)	20.0
STANDAMID SD (Cocamide DEA)	2.0
CETIOL HE (PEG-7 Glyceryl Cocoate)	2.0
Perfume Oil	q.s.
Dyes and Preservatives	q.s.

Procedure:

The order of addition is given above. Add all materials singly under adequate agitation. Adjust the pH to 7.0+/-0.5 with 50% citric acid aqueous solution. Continue stirring until product is homogeneous.

Comment:

The blend of betaine, anionic and ethoxylated cocoate contributes to low irritation potential while also providing effective detergency.

MILD AND CREAMY SHAMPOO(1C)

RAW MATERIALS	% By Weight
EMERSAL 6434 TEA Lauryl Sulfate	15.0
EMERY 5320 Laureth Sulfosuccinate	15.0
EMID 6511 Lauramide DEA	5.0
LANOQUAT 1756 Lanolin Quaternary	2.0
EMEREST 2350 Glycol Stearate	1.0
EMERESSENCE 1160 ROSE ETHER Phenoxyethanol	1.0
Deionized Water	61.0

Procedure:

Combine all ingredients and heat with mixing to 75-80C, until a clear, homogeneous system is obtained. Cool to 40C and add fragrance and/or color. The viscosity can be modified (increased) by the addition of small increments of sodium chloride.

SHAMPOO FOR DRY HAIR(2576-068-03)

RAW MATERIALS	% By Weight
EMERSAL 6431 Ammonium Lauryl Sulfate	20.0
EMERY 5315 Coconut Sulfosuccinate	10.0
EMID 6511 Lauramide DEA	4.0
EMID 6548 Soyamide DEA	1.0
LANOQUAT 1756 Lanolin Quaternary	2.0
EMERY 5430 Cocamidopropyl Betaine	2.0
EMERESSENCE 1160 ROSE ETHER Phenoxyethanol	1.0
Deionized Water	60.0

Procedure:

Combine all ingredients and heat to 70C with agitation. Once all is melted, cool the mixture to 40C and adjust the pH to 5.6 with citric acid. Add color, fragrance and package.

CONDITIONING SHAMPOO(19B)

RAW MATERIALS	% By Weight

MILD AND GENTLE SHAMPOO FORMULA(2244-88)

RAW MATERIALS	% By Weight
A.	
EMERSAL 6452 Sodium Laureth Sulfate	25.0
Amphoteric 2	10.0
EMEREST 2701 PEG-12 Isostearate	3.5
EMERSAL 6434 TEA Lauryl Sulfate	3.5
EMERY 6731 Foam Booster	2.5
B.	
DeminerIALIZED water	48.3
Citric acid	0.2
LANOQUAT 1756 Lanolin Quaternary	5.0
EMERCIDE 1199 Liquid Preservative System	0.5
Perfume	1.5

This mild and gentle shampoo provides for a very easy wet comb-out, and after blow-drying leaves the hair soft and shiny. EMEREST 2701 contributes lubricity to the hair and acts as a thickener for the detergent system.

Procedure:

Heat A slowly to 75C. Add B in order with constant agitation. Continue stirring to cool to 35C. Add perfume and package.

MULTI-PURPOSE SHAMPOO WITH PROTEIN

INGREDIENTS:	% By Weight
A.	
Deionized Water	50.3
Hydroxyethylcellulose	0.5
Propylene Glycol	1.0
B.	
Sodium Lauryl Ether Sulfate	15.0
TEA Lauryl Sulfate	15.0
Cocoamidopropylbetaine	10.0
Lauramide DEA	4.0
C.	
PEPTEIN 2000	3.0
D.	
Propylene Glycol and Diazolidinyl Urea and Methylparaben and Propylparaben	1.0
Fragrance	0.1
F, D & C Green No. 3(0.01%)	0.1

This is a clear, high viscosity shampoo with high foaming characteristics and light conditioning benefits attributed to the highly substantive effects of HORMEL PEPTEIN 2000. This product may be used as a hair or body shampoo or as a liquid soap. Hydrolyzed Animal Protein conditions the hair and moisturizes the skin.

Formula: 614-28

NO-TANGLES SHAMPOO WITH PROTEIN

INGREDIENTS:	% By Weight
A.	
Deionized Water	43.8
Propylene Glycol	1.0
B.	
Cocoamphocarboxyglycinate	20.0
Disodium Cocamido MIPA Sulfosuccinate	10.0
Cocoamidopropylhydroxysultaine	20.0
C.	
PEPTEIN 2000	3.0
D.

This rich protective shampoo is formulated specifically to restore life and curl to dry hair and make it easier to comb. It is especially effective for hair that has been styled to give it "soft curls." It is also recommended as the first step in a "patching" program for badly damaged hair, in which shampooing is followed by a hot oil treatment and a good conditioner.

SHAMPOO CONCENTRATE

INGREDIENTS:	%W/W
Part A:	
Water	19.25
Sodium Chloride	7.50
Propylene Glycol	8.00
STANDAPOL T (TEA-Lauryl Sulfate)	20.00
STANDAMID SD (Cocamide DEA)	12.50
STANDAMID LD (Lauramide DEA) (Pre-melted at 45C)	12.50
Citric Acid, Anhydrous	0.75
STANDAPOL EA-40 Conc. (Ammonium Myreth Sulfate)	19.50
Part B:	
Perfume Oil	q.s.
Dyes and Preservatives	q.s.

Procedure:

Heat water to 50-55C. Keep temperature constant. Add remaining ingredients of part A, one at a time, in order listed under agitation. Cool and at 40-45C add individual components of Part B under agitation. Adjust the pH to 6.5 + 0.5 with 50% citric acid aqueous solution. Continue sweep-type agitation until product reaches room temperature. Finished shampoo can be made by diluting 1 part concentrate with 7-15 parts water.

Comments:

This liquid high actives (60%) blend provides excellent detergency even after dilution.

Formula H-4611

Charge kettle with water. Add remaining ingredients, one at a time, in the order given. Adjust pH to 6.0 - 6.5 with 50% citric acid. Continue stirring until product is homogeneous.

Comments:

High lathering conditioning shampoo that doesn't overly strip the hair. For increased mildness substitute STANDAPOL ES-3 for the ES-2.

Formula H-4834

SOURCE: Henkel Corp.: Personal Care Products Formulary: Formulas

SHAMPOO HS-1001

RAW MATERIALS	% By Weight
Water	23.4
Polyox WSR-205	0.1
Standapol A	47.7
Monamid 716	8.5
Maprosyl C	5.6
Lexein X-250	5.6
Triton X-100	3.4
SOLULAN 98	3.4
GLUCAM E-20	2.3
Preservative, perfume, color, sequestrant	q.s.

Description:

Provides above average properties of wet and dry comb, appearance and feel, good flyaway control. SOLULAN 98, GLUCAM E-20, Polyox WSR 205 major conditioning agents. LEXEIN X-250 contributes to split ends control.

Procedure:

Heat water to 50C, sift Polyox WSR-205 into water with stirring to complete dispersion. Add each other ingredient in order, stirring until homogeneous between additions and at end.

Variations:

- To impart gloss, add SOLULAN PB-5.
- To build foam, increase LAURAMIDE DEA.

SHAMPOO HS-1002

RAW MATERIALS	% By Weight
Methocel 65HG, 2% aqueous slurry	40.0
GLUCAM E-10	4.0
Triethanolamine	1.0
Standapol T	45.0
Monamid CMA	5.0
Specially denatured alcohol #40	5.0
Preservative, color, perfume, sequestrant	q.s.

Description:

Thorough cleanser, leaves hair fluffy.

Procedure:

Prepare Methocel slurry. Mix all remaining ingredients except alcohol, heat to 80C; cool to 60C. and add mixture slowly to slurry with good agitation until no particles remain. Add alcohol, stir until uniform.

Variations:

- To reduce flyaway, add SOLULAN 16.
- For dry hair, add SOLULAN PB-20.

SHAMPOO HS-1003

RAW MATERIALS	% By Weight
Water	22.1
Methocel 65HG	0.4
Phase A:	
SOLULAN PB-5	5.0
Specially denatured alcohol #40	5.0
Phase B:	
Standapol T	60.0
Monamid CMA	4.0
GLUCAM P-20	2.5
Triethanolamine	1.0
Preservative, color, perfume, sequestrant	q.s.

Description:

Free-flowing thorough cleanser. SOLULAN PB-5 adds gloss. GLUCAM P-20 provides fragrance retention and viscosity control.

Variations:

To increase viscosity, increase Methocel 65 HG.

To add luster, add SOLULAN 16.

For dry hair, replace part of STANDAPOL T with SOLULAN L-575.

SHAMPOO HS-1004

RAW MATERIALS	% By Weight
Sodium chloride	1.0
Water	5.0
Standapol WAQ Special	50.0
Standapol A	35.0
Monamid 150-ADD	5.0
Ammonyx LO	1.0
SOLULAN 16	3.0

Description:

Rich, foaming cleanser with SOLULAN 16 for flyaway control and improved combing properties.

Variations:

For damaged hair, replace portion of lauryl sulfates with SOLULAN L-575 and add hydrolyzed animal protein.

For lubricity, add 0.5-1% of ACETULAN.

To stabilize foam, add GLUCAM E-20.

Phase B:	
SOLULAN 16	3.0
SOLULAN 98	3.0
GLUCAM P-20	2.0
Preservative, color, perfume, sequestrant	q.s.

Description:

Free-flowing, good cleanser, good foamer with SOLULAN 98 as bodying agent, SOLULAN 16 for combing and flyaway control and GLUCAM P-20 for fragrance retention and viscosity control.

Variations:

For gloss, add SOLULAN PB-5.

To increase viscosity, increase sodium chloride.

SHAMPOO HS-1006

RAW MATERIALS	% By Weight
Phase A:	
SOLULAN 16	3.0
SOLULAN PB-5	2.0
Kessco PEG 6000 Distearate	3.0
Phase B:	
Water	62.6
Miranol 2MCA Modified	15.0
Tween 20	13.5
Arlacel 20	0.9
Preservative, perfume, color	q.s.

Description:

Low eye irritation, low skin irritation. Recommended for children. Good combing properties, moderate foaming, good feel, reduced flyaway. SOLULAN PB-5 contributes gloss. SOLULAN 16 adds luster.

Variations:

To reduce viscosity and increase fragrance duration, add GLUCAM P-20.

To gel, add GLUCATE SS and GLUCAMATE SSE-20 at 1:15 ratio of SS to SSE-20.

SHAMPOO HS-1007

RAW MATERIALS	% By Weight
Water	21.0
Monateric CSH-32	58.0
Monateric ISA-35	17.0
GLUCAM P-10	2.0
SOLULAN 16	2.0
Preservative, perfume, color	q.s.

Description:

Low eye and skin irritation, cleansing shampoo. Recommended for daily use. SOLULAN 16 provides luster and reduced flyaway. Procedure:

Heat water to 50C. Add Monateric CSH-32 with good stirring, then the Monateric ISA-35, the GLUCAM P-10 and the SOLULAN 16. Stir and cool to 30C. Adjust pH to 6.8 to 6.9 with phosphoric acid solution.

Variations:

For improved wet and dry comb, add GLUCAM E-20.

For improved cleansing, add SOLULAN 98.

SHAMPOO HS-1008

RAW MATERIALS	% By Weight
Phase A:	
SOLULAN 16	3.0
SOLULAN PB-5	2.0
Kessco PEG 6000 Distearate	2.5

Water	63.0
Rewopon AM-CA	15.0
Tween 20	12.5
GLUCAMATE SSE-20	1.0
Arlacel 20	1.0
Perfume, preservative, color	q.s.

Description:

Daily use, mild shampoo, free flowing, stable foam, low irritation. SOLULAN 16 reduces flyaway. SOLULAN PB-5 provides gloss.

Procedure:

Phase A: Melt all ingredients at 45C.

Phase B: To water, add REWOPON AM-CA, Tween 20, GLUCAMATE SSE-20 and Arlacel 20. With stirring, add Phase A to Phase B with gentle heat. Stir until uniform.

Variations:

To increase viscosity, increase PEG 6000 distearate.

To increase fragrance duration, add GLUCAM P-20.

SOURCE: Amerchol Corp.: Hair Care: Suggested Formulations

SHAMPOO HS-1009

RAW MATERIALS	% By Weight
Phase A:	
SOLULAN 16	3.0
SOLULAN PB-5	2.0
Kessco PEG 6000 Distearate	2.5
Phase B:	
Water	65.0
Miranol 2 MCA Modified	27.5
Perfume, preservative, color	q.s.

Description:

Daily use shampoo with excellent viscosity, low eye and skin irritation, moderate foaming. Superior desnarling and conditioning. SOLULAN 16 provides good wet comb and SOLULAN PB-5 provides gloss.

Variations:

To vary viscosity up or down, increase or decrease PEG 6000 distearate.

To gel, add GLUCATE SS.

For improved feel, add GLUCAM E-20.

SHAMPOO HS-1010

RAW MATERIALS	% By Weight
Phase A:	
Biaterge AS-40	18.8
Hamosyl C-30	25.0
Phase B:	
Pationic ISL, 75% in propylene glycol	5.0
Monamid 716	3.0
Kessco PEG 6000 Distearate	2.0
GLUCAM E-10	3.0
Phase C:	
Water	43.2
Lactic acid, 44% in water, q.s. to pH 5.1-5.5	
Perfume, preservative, color	q.s.

Description:

Conditioning shampoo. Excellent desnag, wet and dry comb. Very good foam, low flyaway. GLUCAM E-10 contributes to foam stability and wet and dry comb properties. Pationic ISL is major conditioning agent.

Variations:

To opacify, add GLUCATE SS.

For thinner viscosity, adjust pH to 6.0-6.3.

For increased luster, add SOLULAN 16

SOURCE: Amerchol Corp.: Hair Care: Suggested Formulations

SHAMPOO HS-1011

RAW MATERIALS	% By Weight
Standapol WAQ Special	48.0
Standapol SH-100	31.0
Monamid 716	3.0
SOLULAN 98	3.0
GLUCAM P-20	3.0
Ucon 50-HB-660	1.0
Sorbitol, 70% solution	5.0
Sodium chloride	1.0
Monateric ISA-35	5.0
Perfume, preservative, color, sequestrant	q.s.

Description:

Thorough cleansing shampoo. SOLULAN 98 improves manageability. GLUCAM P-20 adds luster and body, improves fragrance retention.

Procedure:

Mix both Standapols at 40C until uniform. Add Monamid 716, SOLULAN 98, GLUCAM P-20, Ucon 50-HB-660, Sorbitol and Monateric ISA-35 one at a time. Mix each until uniform at maximum of 50C. Add sodium chloride, stir until completely dissolved. Avoid air entrapment at all times.

Variations:

For higher viscosity, increase sodium chloride concentration.

SHAMPOO HS-1012

RAW MATERIALS	% By Weight
STANDAPOL ES-2	25.0
Monamid 716	8.0
Brij 35 SP	3.0
GLUCAM E-20	3.0
SOLULAN 16	2.5
Lexein X-250	0.2
Water	58.3
Citric acid, 40% solution, q.s. to pH 5-6	
Perfume, preservative, color, sequestrant	q.s.

Description:

Cleansing, foaming shampoo, usually associated with light green fragrances. GLUCAM E-20 stabilizes foam, SOLULAN 16 provides manageability and luster. Contains protein hydrolysate.

Procedure:

With gentle heat, combine and stir all ingredients except citric acid. When homogeneous, cool to room temperature and add citric acid to adjust pH.

Variations:

To increase fragrance duration, add GLUCAM P-20.

To add gloss, add SOLULAN PB-20.

SOURCE: Amerchol Corp.: Hair Care: Suggested Formulations

SHAMPOO HS-1013

RAW MATERIALS	% By Weight
Standapol A	89.0
Sodium chloride	5.0
Amidox C-5	2.0
SOLULAN 16	2.5
SOLULAN C-24	1.5
Citric acid, 40% solution, q.s. to pH 3.8-4.0	
Perfume, preservative, color, sequestrant	q.s.

Description:

Cleansing and bodying shampoo. Amidox C-5 provides body; SOLULAN 16 provides luster and manageability; SOLULAN C-24 contributes to surfactant activity.

Procedure:

Heat Standapol A TO 50C, add sodium chloride and Amidox C-5, with stirring. Heat SOLULANS 16 and C-24 to 50C. Add with stirring to remainder of batch. Add citric acid to adjust pH.

Variations:

For increased foaming, replace part of Standapol A with LAURAMIDE DEA.

For increased fragrance duration, add GLUCAM P-20.

SHAMPOO HS-1014

RAW MATERIALS	% By Weight
Water	9.6
SOLULAN 16	5.0
Sodium chloride	5.0
Amidox C-5	7.5
Standapol A	69.8
Monateric ISA-35	2.5
Citric acid, 40% solution	0.6
Perfume, preservative, color, sequestrant	q.s.

Description:

Low pH, thorough cleansing shampoo. Amidox C-5 provides body. SOLULAN 16 provides manageability and luster.

Procedure:

With gentle heat and stirring, dissolve SOLULAN 16 in water. Add remaining ingredients in order (except citric acid) with stirring. Add citric acid solution in small portions until pH of 3.8-3.9 is reached.

Variations:

For "natural" ingredient labeling, replace citric acid with fruit juice.

To stabilize foam, add GLUCAM E-10.

Shaving Products

AEROSOL SHAVE-CREAM

RAW MATERIALS	Parts By Weight
Concentrate:	
Stearic Acid	6.80
Triethanolamine	3.70
WITCONOL CD-17 (PPG-34)	0.50
WITCAMIDE 5195 (Lauramide DEA)	0.50
WITCONOL L32-45 (PEG-150 Distearate)	0.25
WITCONOL RHT (Glyceryl Stearate SE)	1.00
Glycerine	2.00
Water	84.95
Perfume	30.30
Aerosol:	
Concentrate	96.50
Propellant	3.50

Mix all ingredients except perfume and propellant at 70C until a uniform emulsion is formed. Cool to 45C; add perfume and preservative. Transfer to aerosol containers. Cool, crimp valve and pressurize.

The use of WITCONOL L32-45 allows the use of a lower percentage of soap while maintaining a high concentrate viscosity. This unique balance allows for the preparation of a luxurious, thick shave cream at a significantly low raw material cost.

Formulation 101E

AEROSOL CLEAR SHAVE-CREAM GEL

RAW MATERIALS	Parts by Weight
WITCAMIDE 5195 (Lauramide DEA)	20.25
Potassium Laurate, 40% aqueous solution	5.625
Water	63.625
Propylene Glycol	5.00
Cetyl Alcohol	0.50
Pentane	4.00
Isobutane	1.00

Mix the first five ingredients together and heat until clear. Pour into aerosol containers, add hydrocarbons and pressurize with 25 psi nitrogen. Shake contents until clear.

This formulation emerges from the container as a clear gel. As the gel is rubbed onto the skin, it expands and becomes a rich creamy lather.

AFTERSHAVE F-4008

RAW MATERIALS	% By Weight
Perfume oil	0.7
Specially Denatured Alcohol No. 40	60.0
GLUCAM E-10	4.0
GLUCAM P-20	3.0
Water	32.3
Color	q.s.

Description:

Stimulating, cooling hydroalcoholic clear aftershave lotion. Humectant properties provided by GLUCAM E-10 and GLUCAM P-20. GLUCAM P-20 also increases fragrance duration and reduces sting.

Procedure:

Dissolve the perfume oil in the alcohol and add each ingredient in the order listed, stirring thoroughly after each addition. Age, chill and filter.

Variations:

For added stimulation and cooling, add 0.1% menthol.

To add astringent properties, add small amount of aluminum chlorhydrate solution.

AFTERSHAVE F-4009

RAW MATERIALS	% By Weight
Phase A:	
Water	42.2
Carbopol 941	1.0
GLUCAM P-20	5.0
Phase B:	
SOLULAN 98	3.0
Specially Denatured Alcohol No. 40	45.0
Perfume oil	0.8
Phase C:	
Triethanolamine, 10% in water	3.0

Description:

Clear, viscous aftershave conditioning lotion. GLUCAM P-20 serves to increase lasting power of fragrance and as a water-soluble emollient.

Variations:

To opacify, add small amount of GLUCATE SS to Phase B.

For greater slip, replace part of Carbopol 941 with Polyox WSR N-80.

Lemon juice, clarified	30.0
Witch Hazel	12.5
Phase B:	
Perfume oil	1.5
GLUCAMATE SSE-20	2.5
Specially Denatured Alcohol No. 40	30.0
Color and preservative	q.s.

Description:

Stimulating, fragrant aftershave treatment lotion with humectant and emollient properties due to GLUCAMS E-10 and P-20 which also improves fragrance duration.

Procedure:

Phase A:

Warm SOLULANS C-24 and L-575 together until liquid, mix with all other ingredients of Phase A.

Phase B:

Warm perfume oil and GLUCAMATE SSE-20 until liquid and dissolve in alcohol. Add Phase B to Phase A with good stirring until homogeneous. Allow to stand overnight and filter to clarify.

Variations:

Lemon juice can be replaced by citric acid solution.

Triethanolamine, 10% in water	4.0
Phase D:	
Menthol crystals	0.1
Perfume oil	1.5
Specially Denatured Alcohol No. 40	15.0
Preservative	q.s.

Description:

Fragrant aftershave bracer-conditioner. Emollient conditioning properties due to AMERLATE P, PROPAL, MODULAN, OHLAN and PROMULGEN D. Humectant properties due to GLUCAM E-20. Menthol provides stimulating effect.

Procedure:

Phase A:

Disperse Carbopol 934 thoroughly in water at 80C; add GLUCAM E-20.

Phase B:

Heat all ingredients to 80C. Add Phase A to Phase B with good stirring. Continue stirring to 50C, add Phase C, triethanolamine. At 45C slowly add premixed Phase D with good stirring. Stir with cooling to 30C.

Variations:

For greater fragrance duration and emollience, add GLUCAM P-20 to Phase A.

For greater stimulation, increase alcohol concentration.

Formulation 38

SHAVING CREAM

RAW MATERIALS	% By Weight
Sodium C14-16 Olefin Sulfonate (40%)	23.0
Sodium Lauryl Sulfate	20.0
MAZER MAFO CAB	5.0
MAZER MAZAMIDE O-20	1.5
MAZER MAZAMIDE CS 148	2.0
MAZER MAPHOS L-13	2.5
Diethanolamine	q.s.
Citric Acid	q.s.
Sodium Chloride	.1-.5
Perfume, Dye, Preservative	q.s.
Water	q.s. to 100

Procedure:

Charge water into mixing vessel and with rapid but smooth agitation, disperse MAPHOS L-13. Adjust pH to 7.0-7.2 with diethanolamine as needed. Warm solution to 45-50C with smooth agitation and blend in the first five ingredients. Once the system is uniform, cool to 30-35C with moderate agitation and adjust pH to 6.5-6.8 with citric acid as needed. Blend in perfume, dye and preservative and then adjust formulation viscosity to 5,000-7,000 cps with sodium chloride as needed.

Product Characteristics:

Transparent viscous liquid that lathers readily on the skin or hair. The emollient ingredients, in this formulation, form a protective barrier on the skin which facilitates shaving and eliminates razor drag. This formulation is ideal as an emollient body shampoo, for the bath or shower, and as a liquid shaving foam for face and body.

SHAVE GEL

INGREDIENTS:	%W/W
Part A:	
Water	32.05
STANDAPOL ES-2	50.00
VELVETEX BK-35	15.60
CETIOL HE	2.00
Part B:	
Fragrance	0.15
Sodium Chloride	0.20

Procedure:

Add ingredients in Part A, mixing after each addition. Add Part B and mix until homogeneous. Adjust pH to 6.0-7.0 with 50% citric acid.

Comments:

This clear shave gel is mild to the skin. Self emulsifying CETIOL HE provides emolliency and improves skin softness and feel. If less viscosity and increased mildness is desired, substitute STANDAPOL ES-3 for STANDAPOL ES-2.

EMERSOL 233 Oleic Acid	1.00
EMERESSENCE 1160 ROSE ETHER Phenoxyethanol	1.00
Triethanolamine	0.53
Deionized water	61.47

In this formulation, the detergency of EMERSAL 6400 Sodium Lauryl Sulfate is enhanced by the sulfosuccinate which also helps to decrease the irritation potential generally associated with sulfates. The ETHOXYOL 1707 reduces any excess drying effect generated by heavy detergent washing and helps keep skin soft and supple.

Procedure:

Combine all ingredients and heat with agitation to 75C until a homogeneous blend is obtained. Cool to 40C and adjust viscosity with small increments of sodium chloride. Add fragrance, color and package.

BAR SOAP B-5021

RAW MATERIALS	% By Weight
Soap Base 80/20	95.68
Water	1.00
Antioxidant	0.07
Perfume oil	0.75
Titanium dioxide	0.50
GLUCAM E-20	2.00

Description:

Rich lather, excellent afterfeel. No cracking, ease of bar formation. Humectancy and other attributes provided by use of GLUCAM E-20.

Procedure:

Gently melt and warm additives to 60C. Mix thoroughly with perfume oil. Combine and mix all other ingredients in suitable equipment until uniform. Place in soap plodder and extrude mass through heated extrusion plate. Press in usual manner to obtain finished bar.

Variations:

Properties of anticracking, ease of bar formation and molding, emollience, lather, humectancy and fragrance duration can readily be imparted by the use of other additives.

COLD-BLEND LIQUID HAND-SOAP

RAW MATERIALS	Parts by Weight
WITCONATE AOS (Sodium C14-16 Olefin Sulfonate)	19.0
WITCAMIDE 5133 (Cocamide DEA)	4.0
Oleic Acid	0.4
Lexaine C	2.2
Preservative	0.2
Ammonium Chloride, 25% aqueous solution	4-7
Perfume, Dye	q.s.
Water	q.s. to 100

Dissolve all raw materials in water with stirring. Adjust to pH 6.0 to 6.5 with dilute phosphoric, citric, lactic or hydrochloric acid. Add ammonium chloride solution for desired viscosity.

Currently available "liquid soap" formulations are based on mild detergents and additives to yield high-lathering, mild cleansers that leave the skin soft and smooth with a pronounced after-feel. Alpha-olefin sulfonates have been demonstrated to leave the skin smoother than alkyl sulfates and coconut-based soaps. The above formulation, which is prepared without use of heat, is an economical, effective skin cleanser meeting current market requirements.

Opacification or pearlescence can be added by the use of appropriate latex or liquid pearling agent.

HAND CLEANER
Gel Type Cleaner

RAW MATERIALS	% By Weight
CARNATION White Mineral Oil	10.0
Water	43.2
Carboxymethyl Cellulose	1.0
Potash (100%)	1.8
Oleic Acid	9.0
Deodorized Kerosene	35.0
Perfume	as required

Carboxymethyl cellulose is dispersed in water with the aid of heat. Use warm water for the preparation. The resulting gel should be free from lumps. After the gel has cooled add potash (as a 45% solution) with agitation.

The oleic acid, deodorized kerosene and CARNATION White Mineral Oil are mixed together in a separate container and the blend is then added slowly to the potash-carboxymethyl cellulose-water mixture with slow agitation. High speed agitation should be avoided.

The consistency of the above emulsion can be varied, if desired, by either increasing or decreasing the amount of carboxymethyl cellulose.

Preservative	q.s.
C.	
Sodium chloride	1.30

*If GENAPOL LRO paste is being used instead of GENAPOL LRO liquid, 0.4 times the quantity of GENAPOL LRO liquid is required.

Procedure:

- I Melt A at 70C, then stir until cool.
- II At 40C add, the components of B to I.
- III Finally, adjust the viscosity with C at room temperature.

Formulation A II/1018

SOURCE: Hoechst: Kosmetik Guide Formulations: Suggested Formulas

LIQUID SOAP*

INGREDIENTS	% By Weight
Ammonium laureth sulfate, 60%	24.00
Cocamidopropyl betaine	6.00
Stearamidopropyl dimethylamine	1.50
Sodium chloride	1.30
Glycol distearate	1.00
Citric acid	0.25
Methylparaben	0.15
Propylparaben	0.05
Bronopol	0.05
Water, color, fragrance	q.s. to 100.00

Procedure:

Heat water to 70-75C. Add all ingredients except fragrance and bronopol. Mix until homogeneous. Cool and add bronopol and fragrance and fill.

LIQUID SOAP

RAW MATERIALS	% By Weight
A.	
VEEGUM HS	1.0
Water	42.0
B.	
Potassium hydroxide	2.0
Water	37.5
Propylene glycol	2.5
Sodium lauryl sulfate 30%	6.0
C.	
Oleic acid	9.0
Preservative	q.s.

Procedure:

Slowly add VEEGUM HS to the water, while agitating at maximum available shear. Continue mixing until smooth. Heat A to 75C. Dissolve potassium hydroxide in water and mix in additional B ingredients. Heat B to 75C. Add B to A and mix until uniform. Heat C to 90C and add to A/B. Mix until cool.

Consistency: Thin lotion.

Suggested Packaging: Liquid soap dispenser.

Comments:

VEEGUM HS adds viscosity to this liquid soap helping to prevent dripping. VEEGUM HS is used in this formula for its optimum electrolyte stability.

LIQUID HAND SOAP--EXTRA RICH FOAM
PREMIUM QUALITY

RAW MATERIALS	% By Weight
NEODOL 25-3S (60%)	16.7
Alcohol sulfate (28-30%)	34.0
FAMEA	5.0
Cocoamidopropylbetaine (30%)	5.0
Sodium chloride	1.5
EDTA salt (see note 4)	0.2-0.5
Glycerin	1.0
Water	to 100

Properties:

Viscosity, 73F, cps 7000
Adjust pH to 7 with citric acid.

LIQUID HAND SOAP--EXTRA RICH FOAM
GOOD QUALITY

RAW MATERIALS	% By Weight
NEODOL 25-3S (60%)	16.7
Alcohol sulfate (28-30%)	34.0
FAMEA	2.0
Sodium chloride	2.0
EDTA salt (see note 4)	0.2-0.5
Glycerin	1.0
Water	to 100

Properties:

Viscosity, 73F, cps 2200
Adjust pH to 7 with citric acid

Notes:

- Alcohol ethoxysulfate can be either NEODOL 25-3A or NEODOL 25-3S if the pH of the formulation is 7 or lower. If pH is not adjusted to 7 or below, NEODOL 25-3S must be used.
- The pH can be adjusted to a value lower than 7 (e.g., 5.5-6.5), if desired, with little effect on physical properties.
- Opacifier is glycol distearate.
- The EDTA salt may be either disodium or tetrasodium ethylene-diamine tetraacetate.
- Glycerin (1-2%w) is added to improve "feel" on hands.
- The amount of sodium chloride needed to achieve a given viscosity may vary with the exact nature and source of the surfactant raw materials.

pH - 7.8

Mixing Procedure:

Add the ingredients in the listed order. High-shear mixing is necessary to disperse the kerosene and mineral oil

Lit. Ref.: CS-408, CS-504

WATERLESS HAND CLEANER

INGREDIENTS	% As Supplied
Water	28.45
ACRYSOL ASE-108 Stabilizer	7.05
TRITON X-100 Surfactant	10.00
Deodorized Kerosene	40.00
Mineral Oil	10.00
Sodium Hydroxide (10%)	4.50

Mixing Instructions:

Add components in listed order. Dispersion of kerosene requires high-shear mixing. Moderate subsurface agitation is sufficient for the other ingredients.

This formulation produces a flowable paste that removes grease, ink, and other solvent-removable soils. The viscosity can be adjusted by reducing the level of ACRYSOL ASE-108 polymer while correspondingly lowering the amount of sodium hydroxide. A concentration of 2.5% ACRYSOL ASE-108 polymer produces a lotion. If emollient characteristics are desired, 0.5 to 2.5 percent water-soluble lanolin can be added. The addition of lanolin raises the original viscosity two to three fold.

Lit. Ref.: CS-427
CS-500

SOURCE: Rohm and Haas Co.: Suggested Formulations

WATERLESS HAND CLEANER - A

RAW MATERIALS	Parts by Weight
Kerosene	37.0
Oleic Acid	11.4
Triethanolamine	2.8
Monoethanolamine	1.2
SURFONIC N-95	4.5
Propylene Glycol, U.S.P.	4.5
Powdered "Versene"	1.9
Water	36.7

WATERLESS HAND CLEANER - B

RAW MATERIALS	Parts By Weight
White Oil	34.5
Oleic Acid	10.7
Triethanolamine	2.6
Monoethanolamine	1.1
SURFONIC N-95	4.3
Propylene Glycol, U.S.P.	4.3
Water	42.5

Preparation:

1. Mix the kerosene or oil and oleic acid.
2. Dissolve the amines in the water and stir in SURFONIC surface-active agent and propylene glycol, U.S.P. In Formula A, add "Versene" and stir until it is dissolved.
3. Add (1) to (2) or (2) to (1), depending on convenience and stir until a smooth cream is obtained. No heating is required.

Lanolin may be added to the kerosene to reduce the defatting action of the kerosene on the skin and the surfactant content can be increased to make the cleaner easier to remove with water.

WATERLESS HAND CLEANER-A

INGREDIENTS	% By Weight
Part A:	
CARBOPOL 1342	0.3
Odorless Mineral Spirits	29.0
Lanolin USP	0.5
Petrolatum	0.5
Part B:	
Deionized Water	59.1
Part C:	
Pumice	10.0
Part D:	
Triethanolamine (99%)	0.3
PEG-15 Cocamine	0.3

WATERLESS HAND CLEANER-B

RAW MATERIALS	% By Weight
Part A:	
CARBOPOL 1342	0.3
Odorless Mineral Spirits	29.0
Lanolin USP	0.5
Petrolatum	0.5
Part B:	
Deionized Water	69.1
Part D:	
Triethanolamine (99%)	0.3
PEG-15 Cocamine	0.3

Procedure:

1. Combine ingredients in Part A using moderate agitation, heating to 40-50C.
2. Add Deionized Water using high agitation, mix for 15 minutes.
3. Add Pumice.
4. Neutralize with Part D using rapid agitation.

Hand cleaners made with CARBOPOL 1342 are simple to formulate, stable in the bottle, yet begin removing greasy residues rapidly due to the quick breaking action of the emulsion on the skin.

pH = 6.4

Brookfield Viscosity = 13,500 cPs

CATIONIC SUNTAN CREAM LOTION

RAW MATERIALS	% By Weight
Phase A:	
CERASYNT SD	3.50
CERASYNT 303	1.00
CERAPHYL 847	4.00
ESCALOL 507	5.00
Cetyl Alcohol	1.00
Silicone 200 Fluid (100 cs)	1.00
Propylparaben	0.10
Phase B:	
Water, deionized	79.30
Natrosol 250 HR	0.50
Lactic Acid 88%	0.40
Glycerine	3.00
CERAPHYL 70	1.00
Methylparaben	0.20

Procedure:

Completely pre-disperse Natrosol in water, then add the rest of the ingredients of Phase B. Heat Phases A and B at 80C. Add Phase A slowly to Phase B with constant agitation at 80C and cool with continuous stirring to 25-28C.

Notes:

- A thinner viscosity can be obtained by replacing the CERASYNT 303 with FOAMOLE B.
 - Viscosity goes from 5,000 cps initially to 40,000 cps after three months. The emulsion stability is excellent and the suntan evaluation curve is favorable.
 - The expected SPF for this formulation should be 5-6.
- Formulation #A66-12-4A

CHAP STICK OR LIP BALM

RAW MATERIALS	Parts by Weight
Hoechst Wax S	13.0
Hydrogenated Castor Wax	7.0
Protopet Petrolatum	10.0
Carnation White Mineral Oil	50.0
WITCONOL APM (PPG-3 Myristyl Ether)	20.0

Heat all ingredients to approximately 70C with mild agitation until clear. Pour solution into molds and allow to cool. Start cooling at ambient temperatures or forced cooling with refrigeration can be used without materially affecting hardness or payout.

To increase payout, wax content can be decreased by several percent and the difference made up with petrolatum.

CLEAR LIQUID SUNBLOCK 15
SPF 20-25
 CL 9-145-03

INGREDIENTS	% By Weight
VELSAN D8P-3 (isopropyl PPG-2 Isodeceth-7-carboxylate)	10.0
Spectrasorb UV 9 (Benzophenone-3)	6.0
SD Alcohol 40	24.1
Neobee M-20 (Propylene Glycol Dicaprylate/Dicaprate)	4.6
Escalol 507 (octyldimethyl PABA)	7.0
Dow 344 Fluid (cyclomethicone)	48.3

Hard-to-dissolve benzophenone-3 instantly solubilizes in VELSAN D8P-3 to produce these cold mix sunblocks similar to the popular Pre Sun Product. VELSAN D8P-3 imparts an excellent non-greasy afterfeel to this formula.

Procedure:

Dissolve benzophenone-3 into the VELSAN D8P-3. Add rest of the ingredients in any convenient order and mix to homogeneity.

Acetulan	4.0
Giv-Tan F	2.0
Triethanolamine	0.5
Preservative	q.s.

Consistency: Flowable lotion.

Suggested Packaging: Opaque squeeze or pump bottle.

Comments: Greaseless, silky feeling lotion. Good water resistance. The sunscreen is estimated to provide a SPF in the 2-4 range. The base would be suitable for use with other sunscreen agents.

WATER-IN-OIL SUNTAN STICK NO. 330

RAW MATERIALS	% By Weight
A.	
VEEGUM	1.0
Water	40.0
Glycerin	3.0
B.	
Mineral Oil	12.5
Acetulan	5.0
Dow Corning 200 Fluid (350 cs)	5.0
Petrolatum	4.0
Paraffin	20.0
Stearic acid xxx	4.0
Giv-Tan F	2.0
Pationic CSL	3.0
Witcamide 511C	0.5
Preservative	q.s.

Consistency: Firm stick.

Suggested Packaging: Opaque push or twist action dispenser.

Comments: Incorporation of a high water level. This provides lower cost compared to conventional anhydrous sticks. The stick applies smoothly, leaving an emollient, water repellent film. The approximate SPF should be in the 2-4 range.

Formulary: Suggested Formulations

FACE BRONZER WITH SUN SCREEN CC-101

RAW MATERIALS	% By Weight
Part A:	
Water	52.9
Carbomer 940	0.5
Glydant	0.4
Dehydroacetic Acid	0.1
Sodium Hydroxide (40%)	0.4
Glycerin	5.0
Part B:	
Promulgen G	2.2
Arlacel 165	5.0
Cetyl Alcohol	0.6
Isopropyl Isostearate	3.9
Mineral Oil	7.5
Myristyl Lactate	0.5
Octyl Methoxy Cinnamate	7.0
Benzophenone-3	4.0
Part C:	
Timica Gold Sparkle	5.0
Part D:	
SS-4267	3.0
SS-1214	2.0

Comments:

- Reduce greasiness by replacing isopropyl isostearate with SF-1202.
- Increase water resistance by increasing the SS-4267.
- Increase viscosity by decreasing the glycerine.

GEL S-1015

RAW MATERIALS:	% By Weight
Phase A:	
AMERCHOL L-101	5.0
AMERLATE P	1.0
Carbowax 1540	3.0
AMERSCREEN P	3.0
Phase B:	
Carbopol 934, 3% slurry in water	16.0
Water	41.5
Triethanolamine	0.5
Specially denatured alcohol #40	30.0
Perfume	q.s.

Description:

Very soft, hydroalcoholic cream gel with Carbopol suspending system and AMERCHOL L-101 and AMERLATE P emollient. Pleasant rub-in, good residual feel.

Estimated SPF: 4-6

Variations:

For firmer consistency, replace part of AMERCHOL L-101 with AMERCHOL CAB.

For more nonoily residual feel, add GLUCAM P-20 to Phase B.

GEL S-1016

RAW MATERIALS	% By Weight
Phase A:	
Carbopol 940, 3% slurry in water	25.0
Water	22.5
Triethanolamine, 10% in water	7.5
Phase B:	
AMERSCREEN P	5.0
Propylene glycol	20.0
Specially denatured alcohol #40	20.0
Perfume and preservative	q.s.

Description:

Clear, transparent, hydroalcoholic, mobile gel. Pleasant feel, dry rub-in.

Estimated SPF: 8-10

Variations:

For SPF of 5-6, use 3% AMERSCREEN P.

For dry film residue, replace part of propylene glycol with GLUCAM P-10.

GELLED ALOE VERA WITH SUNSCREEN

INGREDIENTS:	% By Weight
A.	
DI Water	81.18
Carbopol 940	0.92
ALOE VERAGEL Liquid 1:10	2.3
B.	
Triethanolamine	
C.	
DI Water	10.0
Phenylbenzenimidazole Sulfonic Acid	2.0
Triethanolamine	7.0
	to pH
D.	
DMDM Hydantoin	0.3
E.	
Disodium EDTA	0.1

Procedure:

Disperse Carbopol resin into water (under high agitation). Add ALOE VERAGEL extract. Neutralize with triethanolamine. Combine C, add triethanolamine to adjust pH to 7.0. Add C to neutralized A (moderate agitation). Add preservative and chelating agent.

AFTER SUN GEL WITH ALOE

INGREDIENTS:	% By Weight
A.	
Deionized Water	87.95
Carbomer 940	0.80
LEXGARD M	0.15
LEXGARD P	0.05
B.	
LEXOL PG 900	4.00
LEXEIN X250	2.00
Glycerin	1.00
Citric Acid (Granular)	0.20
C.	
ALOE VERA Liquid 40:1	2.25
D.	
TEA (99%)	1.60

Procedure:

Disperse Carbomer 940 in water. Heat to 70-75C, add and dissolve LEXGARD M and LEXGARD P with agitation. Cool down and maintain temperature at 55C, add Part B and Part C with mixing and neutralize with TEA to pH 7.0.

SOURCE: Dr. Madis Laboratories Inc.: Suggested Formulations

LIGHT OIL SUN SCREEN SS-102

RAW MATERIALS	% By Weight
Part A:	
SF-1202	50.0
SD Alcohol 40B (200 proof)	40.7
Octyl Dimethyl PABA	3.3
Part B:	
SS-4230	6.0

Procedure:

- 1) Mix Part A at room temperature.
- 2) Add Part B with continued mixing until completely dissolved.

Comments:

- For more rapid evaporation, all or part of the SF-1202 can be replaced with SF-1173.
- For increased SPF, add 3% benzophenone-3.

MOISTURIZER WITH SUN SCREEN SP-103

RAW MATERIALS	% By Weight
Part A:	
Petrolatum	0.88
Cetyl Alcohol	0.88
Stearic Acid	0.88
PEG-8 Stearate	0.88
Arlacel 165	0.44
SF-96 (100)	0.29
Finesolv TN	1.54
Lecithin	0.88
Tenox-6	q.s.
Part B:	
Water	82.42
Carbopol 940	0.23
Disodium EDTA	0.05
Methyl Paraben	0.22
Part C:	
Octyl Dimethyl PABA	3.60
SS-4267	2.22
SF-1204	4.50
Part D:	
Sodium Hydroxide	0.09

Comments:

- Part D may be added at 60C or below before the addition of Part C.
- If the SPF is increased with benzophenone-3, slurry it separately with SS-4267. This procedure increases the water resistance of the sunscreen in the formulation.
- Preservative effect may be increased by using 0.8% Germaben II-E (and target pH at 4.9).

LIP BALM S-1026

RAW MATERIALS	% By Weight
AMERSCREEN P	1.0
Castor oil	49.0
ACETULAN	4.0
PROPAL	11.0
AMERLATE P	10.0
Beeswax	9.0
Ozokerite	5.0
Candelilla wax	7.0
Carnauba wax	4.0
Perfume	q.s.

Description:

Firm lip balm stick. Nonpigmented protection for lips.

ACETULAN offers velvety feel. AMERLATE P provides lubricity.

Estimated SPF: 2

Variations:

For SPF of 4, use 2% AMERSCREEN P.

LIPSTICK T32-68-1M

RAW MATERIALS	% By Weight
Pigment Concentrate:	
OHLAN	5.2
AMERLATE P	5.0
PROPAL	14.8
Pigment	3.2
Base:	
AMERSCREEN P	1.0
Beeswax, USP	6.8
Candelilla wax	7.3
Carnauba wax	3.1
Ozokerite	5.7
Castor oil	37.5
Myristyl lactate	10.4
Perfume and preservative	q.s.

Description:

Modern bright red stick deposits a glossy, transparent, protective film. OHLAN and AMERLATE P wet and disperse the pigments for optimum shade development and contribute emollience.

Estimated SPF: 2

Variations:

For SPF of 4, use 2% AMERSCREEN P.

SOURCE: Amerchol Corp.: Sunscreens: Suggested Formulations

LOTION S-1012

RAW MATERIALS	% By Weight
Oil Phase:	
AMERSCREEN P	3.0
AMERCHOL L-101	4.2
Mineral oil, 70 wt.	10.2
ACETULAN	2.5
PROMYR	8.5
Glyceryl stearate	4.2
AMEROXOL LE-23	4.2
CETAL	0.5
Stearic acid, xxx	2.5
Water Phase:	
Water	40.8
Tween 20	1.7
Carbopol 934, 3% slurry in water	8.5
Triethanolamine, 10% in water	9.2
Perfume and preservative	q.s.

High viscosity, flowing lotion. Good moisturizer, leaves residual oil on skin. ACETULAN reduces oily feel.

Estimated SPF: 6

For greater lubricity, replace part of mineral oil with AMERLATE P.

For longer lasting skin treatment, replace part of mineral oil with MODULAN.

LOTION S-1013

RAW MATERIALS	% By Weight
Oil Phase:	
MODULAN	2.0
Glyceryl stearate	4.0
Stearic acid, xxx	2.5
AMERSCREEN P	1.5

SOLUTION S-1017

RAW MATERIALS	% By Weight
AMERSCREEN P	2.0
Specially denatured alcohol #40	49.0
GLUCAM P-10	10.0
Propylene glycol	10.0
Water	29.0
Perfume	q.s.

Description:

Clear, thin hydroalcoholic solution. GLUCAM P-10 provides pleasant dry film.

Estimated 2-4

Procedure:

Dissolve AMERSCREEN P in propylene glycol with gentle warming. At room temperature, add GLUCAM P-10, alcohol and perfume. Stir until homogeneous. Add water with stirring; mix until homogeneous.

Variations:

For high SPF, increase AMERSCREEN P and add Benzophenone-3.

SOLUTION S-1018

RAW MATERIALS	% By Weight
AMERSCREEN P	2.0
Propylene glycol	20.0
AMEROXOL OE-20	4.7
SOLULAN 16	4.7
Water	68.6
Perfume and preservative	q.s.

Description:

Clear, mobile, water-based solubilized lotion. AMEROXOL OE-20 and SOLULAN 16 serve to solubilize AMERSCREEN P and perfume.

Estimated SPF: 4

Procedure:

Dissolve AMERSCREEN P in propylene glycol with gentle warming. Add AMEROXOL OE-20 and SOLULAN 16 with gentle warming and stirring. Add perfume oil. Add entire mixture to water slowly with stirring. Stir until homogeneous.

Variations:

To solubilize more hydrophobic perfume oils, replace AMEROXOL OE-20 by AMEROXOL OE-10.

For more residual feel and fragrance retention, add GLUCAM P-20.

Phosphoric acid, Disodium salt	0,58
Phosphoric acid, Monopotassium salt	0,12
Water dist. or demineralised	10,00
D.	
Perfume H&R	0,50

Preparations:

Part A:

Mix the ingredients and heat to 75C.

Part B:

Disperse the Carbopol well in the water using high speed agitation. Mix to form a uniform dispersion free from lumps. Stir into the dispersion Solbrol M, Euxyl K 200 and the sodium hydroxide solution. Then add the neutralised solution of 30% NEO HELIOPAN HYDRO and heat to 85C. Add part B slowly with thorough agitation to part A. Then cool with stirring to 60C.

SUNBLOCK LOTION-WATERPROOF SPF-15

RAW MATERIALS	% By Weight
Sequence 1:	
UVATONE 2-6	8.00
Spectra-Sorb UV-9	3.00
LIPOSORB SQO	4.25
Anhydrous Lanolin	3.50
LIPO GMS-470	3.00
Cocoa Butter	2.00
Bentone Gel IPM	4.00
Stearic Acid	2.00
Silicone 200 Fluid (300 cts)	0.50
LIPOVOL J	0.50
Vitamin E Acetate	0.05
Propylparaben	0.10
Sequence 2:	
Deionized Water	51.60
Sorbitol Solution 70%	3.25
ALOE EXTRACT	0.50
Methylparaben	0.30
UNICIDE U-13	0.25
Carbopol 941 (2% Aq. disp)	10.00
Disodium EDTA	0.05
Sequence 3:	
Triethanolamine, 99%	0.70
Deionized Water	2.00
Sequence 4:	
Benzyl Alcohol	0.15
Fragrance	0.30

Manufacturing Procedure:

1. In a side kettle, blend the Sequence 1 ingredients and heat to 78C under Lightnin' mixing.
2. In the main kettle equipped with variable speed Lightnin' mixing and variable speed side-wiping mixing, blend Sequence 2 ingredients. Heat to 75C under Lightnin' mixing. When the phase is at temperature, add premixed Sequence 3 ingredients and stir until uniform.
3. Add Sequence 1 to combined Sequences 2 and 3 under Silverson, Homorod or Arde Baranco mixing. Mix for 15 minutes or until emulsification is complete and smooth. Remove mixer and insert Lightnin' mixer and cool slowly.
4. At 60C or below (when batch begins to thicken), remove Lightnin' mixer; insert variable speed side-wiper mixing.
5. Cool to 40C. Add combined Sequence 4 and disperse thoroughly. Cool to 28C.

SUN LOTION (SPF 4) SS-100-1

RAW MATERIALS	% By Weight
Part A:	
PEG-8 Stearate	1.13
SF-96 (100)	6.95
Myristyl Alcohol	4.00
Arlacel 165	4.35
Myristyl Lactate	2.90
Lanaetex 75	3.36
Stearyl Alcohol	3.30
Tenox-6	q.s.
Part B:	
Monawet MO 70S	0.17
Methyl Paraben	0.17
Disodium EDTA	0.05
Water	64.32
Part C:	
Octyl Dimethyl PABA	4.00
SF-1202	5.30

SUN LOTION (SPF 4) - SS-100 - 2

RAW MATERIALS	% By Weight
Part A:	
PEG-8 Stearate	0.67
SF-96 (100)	4.10
Myristyl Alcohol	2.40
Arlacel 165	2.60
Myristyl Lactate	1.70
Lanaetex 75	2.00
Stearyl Alcohol	1.90
Tenox-6	q.s.
Part B:	
Monawet MO 70S	0.17
Methyl Paraben	0.17
Disodium EDTA	0.05
Water	77.24
Part C:	
Octyl Dimethyl PABA	4.00
SF-1214	1.00
SF-4267	2.00

Comments:

The SPF may be increased to 8 by adding 2.5% benzophenone-3. It could be mixed as a separate slurry in the SS-4267 or SF-1202.

More water resistance can be obtained by replacing 1% of the Lanaetex 75 with SS-4267.

Greater tolerance to freeze-thaw cycles may be achieved by increasing the PEG-8 stearate by 30%.

An oil-rich lotion with a silky feel and improved salt water tolerance.

This formula provides an estimated Sun Protection Factor of 4. A smooth spreadable product. Leaves a light silky afterfeel on the skin.

Variations:

1. Substitute a vegetable oil or some other lighter oil for the mineral oil in Phase D for a "lighter" feel.
2. Try adding an ingredient that could be helpful in product marketing such as Vitamin E or aloe vera.

Fragrance	0.30

Manufacturing Procedure:

1. In a side kettle, blend the Sequence 1 ingredients and heat to 78C under Lightnin' mixing.
2. In the main kettle equipped with variable speed Lightnin' mixing and variable speed side-wiping mixing, blend Sequence 2 ingredients. Heat to 75C under Lightnin' mixing. When the phase is at temperature, add premixed Sequence 3 ingredients and stir until uniform.
3. Add Sequence 1 to combined Sequences 2 and 3 under Silverson, Homorod or Arde Baranco mixing. Mix for 15 minutes or until emulsification is complete and smooth. Remove mixer and insert Lightnin' Mixer and cool slowly.
4. At 60C or below (when batch begins to thicken), remove Lightnin' Mixer; insert variable speed side-wiper mixing.
5. Cool to 40C. Add combined Sequence 4 and disperse thoroughly. Cool to 28C.

WATER-IN-SILICONE SUNSCREENING LOTION WITH VITAMIN E (W/O)
(expected SPF 4)

RAW MATERIALS	%w/w
a)	
PARSOL MCX (CTFA: Octyl Methoxycinnamate)	4.0
PARSOL 1789 (CTFA: Butyl Methoxydibenzoylmethane)	1.0
Silicone Q2-3225 C (CTFA: Cyclomethicone (and) Dimethicone Copolyol)	10.0
Cetiol LC (CTFA: Coco-caprylate/caprate)	5.0
Silicone 344 fluid (CTFA: Cyclomethicone)	5.0
Silicone 556 fluid (CTFA: Phenyl Dimethicone)	2.0
Vitamin E Acetate (CTFA: Tocopheryl Acetate)	2.0
b)	
Deionized water	60.0
Sodium Chloride	2.0
Urea (CTFA: Urea)	3.0
PANTHENOL (CTFA: Panthenol)	2.0
c)	
Perfume, preservatives, Silicone 344 fluid	q.s. to 100

Procedure:

Heat mildly part a) to dissolve all ingredients. Once homogeneous, the emulsification process is carried out at ambient temperature. Slowly add 1/3 of part b) to part a) while mixing at moderate turbine speed in order to perform the emulsion, then add the last increment of part b) while rising the speed of agitation, taking care to avoid air entrapment. Finally add part c), mix until homogeneous. Pack in suitable plastic containers

Note: the viscosity of the emulsion increases with an increase of the energy used to emulsify. A cream is obtained when passing the emulsion through the homogenizer.

SUNSCREENING STICK(UV-A/UV-B)
(expected SPF 11+)

RAW MATERIALS	%w/w
PARSOL MCX (CTFA: Octyl Methoxycinnamate)	7.50
PARSOL 1789 (CTFA: Butyl Methoxydibenzoylmethane)	2.00
SATOL (Oleyl Alcohol purified, stabilized)	14.50
CORHYDROL 1/35 (Hydrogenated Castor Oil)	19.00

Miscellaneous

ACNE LATHER SCRUB GEL
with 10% Benzoyl Peroxide

RAW MATERIALS	% By Weight
HAMPOSYL L-30	30.0
Oleth-10	15.0
Benzoyl Peroxide, 70%	14.3
Magnesium Aluminum Silicate (Veegum)	1.0
Disodium EDTA (HAMP-ENE NA2)	0.2
Water	q.s.

Disperse Veegum in hot water with high shear mixing and allow to stand overnight. Mill benzoyl peroxide with VEEGUM suspension. Mix remaining ingredients, heat to 50C and mill to uniform texture. Fill warm into containers. A stiffer gel may be obtained by increasing the Oleth-10 to 20.0%.

SARCOSINATE-CATIONIC MOUTHWASH FORMULATION

RAW MATERIALS	% By Weight
Methylbenzethonium Chloride	0.03
HAMPOSYL L-30	0.67
Oloxamer 188	0.50
Glycerine	10.0
Ethanol	5.0
Water, Flavor, Color	q.s. 100.0

The low level of taste and toxicity exhibited by HAMPOSYL L-30 makes it especially suitable for mouthwash products.

An example of a mouthwash formulation containing a sarcosinate and cationic bactericide.

AEROSOL TALC--QUICK BREAKING FOAM
Cationic

RAW MATERIALS	Parts by Weight
Fine Talc	20.0
SDA Ethanol	40.0
Water	28.2
Cetyl Alcohol	0.4
EMCOL E-607S (Steapyrium Chloride)	1.2
Perfume	0.2
Propellant	10.0

Dissolve cetyl alcohol and emulsifier in SDA ethanol. Gentle warming may be necessary. Add water; stir in talc and perfume. Transfer slurry to aerosol containers and pressurize.

Formulation 141C

BARRIER SPRAY

RAW MATERIALS	Parts by Weight
EMPHOS D70-30C (Sodium Glyceryl Oleate Phosphate)	2.1
Propellant	97.0

When sprayed onto the skin, EMPHOS D70-30C surfactant will produce a water-repellent, protective coating which is resistant to household detergents, shampoos and other such materials.

Formulation 130C

BASIC MOUTHWASH

RAW MATERIALS	% By Weight
EMSORB 2726 PEG-40 Sorbitan Diisosteate	1.00
Flavor (Spearmint V-30, 356)	0.25
Absolute ethyl alcohol	20.00
EMERY 916 Glycerine	15.00
Deionized water	63.75

EMSORB 2726 solubilizes the flavoring compound without contributing any harsh fatty taste itself. The efficiency of its solubilization properties allows this formula to be manufactured without any filtration steps.

Procedure:

Dissolve flavor in the EMSORB 2726. Add to the remaining ingredients which have been pre-blended in a separate vessel.

CLEAR, EMOLLIENT GEL(2252-18-03, 2252-17-02)

RAW MATERIALS	% By Weight
A.	
Laneth-16	30.0
EMEREST 2314 Isopropyl Myristate	7.0
NIMLESTEROL 1730 Absorption Base Concentrate	5.0
Mineral oil (70 visc.)	14.0
B.	
PEG-200	5.0
C.	
Demineralized water	39.0

This formula yields a crystal clear gel with good spreading qualities. The addition of Emery distilled lanolin alcohols contributes to the long term stability of this formula and aids in the emollient, non-tacky feel.

Procedure:

Melt the ingredients of A together and mix until homogeneous. Add B, and heat to 82C. Heat C to 85C and add to AB with gentle mixing until thoroughly dispersed.

HIGH INTERNAL PHASE OIL-IN-WATER EMULSIONRAW MATERIALS Parts By Weight

Oil Phase:

Carnation White Mineral Oil	64.0
WITCONOL MST (Glyceryl Stearate)	2.0
Cetyl Alcohol	1.0
WITCONOL H-35A (PEG-8 Stearate)	1.0
WHITE PROTOPET Petrolatum	6.0
Ozokerite	6.0

Water Phase:

EMCOL 4161L (Disodium Oleamido-MIPA-Sulfosuccinate)	6.0
Methylparaben	0.15
Propylparaben	0.1
Water, Perfume, Color	q.s.

Heat both phases to 80 to 85C, using moderate agitation. Slowly add Oil Phase to Water Phase. Mix at 80-85C for 15 to 30 minutes. Cool to 28-32C with mixing. A high internal oil phase makes this product uniquely suitable for water-rinseable cleansing creams and makeup removers.

MINERAL OIL GEL

INGREDIENTS	% By Weight
Mineral oil 70-80 vis	20.0
VELSAN P8-3 (Isopropyl C12-15 Pareth-9 Carboxylate)	10.0
Tween 60 (Polysorbate 60)	7.5
Arlacel 60 (Sorbitan monostearate 60)	2.5
Cetyl alcohol	5.0
Water, deionized	55.0

An excellent petrolatum substitute, mineral oil gel is cost effective way to produce a soft occlusive film while containing 55% water. The appearance of this translucent gel is quite petrolatum-like, but is much more comfortable to the skin.

SOURCE: Sandoz Chemicals: VELSAN: Formulation No. CSC-07

OINTMENT BASES

Petrolatum USP and NF serve as the carrier for the active ingredients of various USP And NF pharmaceutical ointments. Often the petrolatum is used alone but equally as often the petrolatum is a part of an ointment base whose formulation is also given in the USP and NF. These bases can be formulated as follows:

YELLOW OINTMENT NF

RAW MATERIALS	Grams
YELLOW FONOLINE	950
Yellow wax	50

Melt petrolatum and wax, blend and allow to cool.

WHITE OINTMENT USP

RAW MATERIALS	Grams
WHITE FONOLINE	950
White wax	50

HYDROPHILIC OINTMENT USP

RAW MATERIALS	Grams
WHITE PROTOPET 1S	250.00
Stearyl alcohol	250.00
Propylene alcohol	120.00
Purified water	369.00
Sodium lauryl sulfate	10.00
Methylparaben	0.25
Propylparaben	0.15

Melt solid ingredients, add balance, stir and allow to cool.

HYDROPHILIC PETROLATUM USP

RAW MATERIALS	% By Weight
WHITE PROTOPET 1S	860
White Wax	80
Stearyl Alcohol	30
Cholesterol	30

Melt stearyl alcohol, white wax and petrolatum and add cholesterol; stir until blend congeals.

DICALCIUM PHOSPHATE TOOTHPASTE

INGREDIENTS	% By Weight
Dicalcium phosphate	51.75
Glycerine	21.94
Water	21.38
Sodium lauryl sulfate (SLS)	1.50
VISCARIN TP 348 carrageenan	0.85
Flavor oil	0.80
Fluoride	0.76
Sodium benzoate	0.50
Tetrasodium pyrophosphate (TSPP)	0.25
Sodium saccharin	0.20

Procedure:

- Disperse VISCARIN TP 348 carrageenan in glycerine and mix 5 minutes.
- Add water and mix additional 5 minutes.
- Dry blend sodium saccharin, sodium benzoate, TSPP and fluoride. Add the blend to the glycerine, carrageenan and water mixture and mix for 5 minutes.
- Warm to 35-40C and mix for 20 minutes.
- Add SLS and mix for 2-4 minutes.
- Add the mixture, dicalcium phosphate and flavor oil to a Ross Mixing bowl, and mix for 5 minutes at 3.5 mixer speed under vacuum.

CALCIUM CARBONATE TOOTHPASTE

INGREDIENTS	% By Weight
Calcium carbonate	48.00

DICALCIUM PHOSPHATE TOOTHPASTE

INGREDIENTS	% By Weight
Dicalcium phosphate	51.75
Glycerine	21.94
Water	21.30
Sodium lauryl sulfate (SLS)	1.50
VISCARIN TP 348 carrageenan	0.77
Flavor oil	0.80
Fluoride (MFP)	0.76
Sodium benzoate	0.50
Tetrasodium pyrophosphate (TSPP)	0.25
Sodium saccharin	0.20

Procedure:

- Dry blend VISCARIN TP 348 carrageenan, sodium saccharin, sodium benzoate, TSPP and MFP.
- Disperse the dry blend in water/glycerine and mix 5 minutes
- Heat the mixture to 71C (160F) and hold for 20 minutes with agitation.
- Transfer the heated mixture to a Ross Mixer and mix.
- Add dicalcium phosphate and flavor oil to the elixer and mix
- Add SLS and mix an additional 5 minutes.

CALCIUM CARBONATE TOOTHPASTE

INGREDIENTS	% By Weight
Calcium carbonate	48.00
Water	25.50
Glycerine	22.00
Sodium lauryl sulfate (SLS)	2.00
VISCARIN TP 389 carrageenan	0.90
Flavor oil	0.80
Sodium benzoate	0.50
Sodium saccharin	0.20

Procedure:

- Dry blend VISCARIN TP 389 carrageenan, sodium benzoate and sodium saccharin.
- Add the dry blend to glycerine/water and mix for 10 minutes
- Heat the slurry to 65-70C (149-158F) and mix for 15 minutes
- Add the elixer and calcium carbonate to a Ross mixer and mix
- Add SLS and flavor oil and continue mixing.

Flavor oil	0.80
Sodium benzoate	0.50
Disodium phosphate	0.40
Sodium saccharin	0.20
Sodium fluoride	0.18
*VISCARIN TP 389 carrageenan	0.90%
VISCARIN TP 206 carrageenan	0.60%
VISCARIN TP 305B carrageenan	0.60%

Procedure:

- Dry blend VISCARIN TP carrageenan, sodium benzoate, disodium phosphate, sodium saccharin and sodium fluoride.
- Disperse the dry blend into glycerine/sorbitol mixture and mix for 10-15 minutes.
- Add water and heat to 65-70C (149-158F) and mix for 10 minutes.
- Add SLS and mix for 2-4 minutes.
- Transfer above mixture and silica powder to Ross Mixer and mix under vacuum for 5 minutes at 3.5 speed.
- Add flavor oil and mix additional 15 minutes.

TRANSPARENT TOILETRY STICK

RAW MATERIALS	Parts by Weight
Propylene Glycol	66.0
Water	21.0
WITCAMIDE 82 (Cocamide DEA)	5.0
WITCO Sodium Stearate C-7	8.0
Perfume, Color	q.s.

Mix ingredients except perfume and color; heat to 82C. Maintain mixing and temperature until clear solution results. Cool to 70C; add color and perfume. Pour into containers at 65C.

This general formulation as well as 102C can form the basis for a series of toiletry products such as analgesics, blushers, deodorants, solid lotions and solid fragrances.

Formulation 101C

CLEAR PERFUME EMOLLIENT STICK

RAW MATERIALS	Parts by Weight
WITCONOL APM (PPG-3 Myristyl Ether)	73.0
Propylene Glycol	10.0
Water	3.0
Witco Sodium Stearate C-1	8.0
Perfume Oil	6.0

Dissolve WITCO Sodium Stearate C-1 in WITCONOL APM, propylene glycol and water at 80 to 90C. Stir until clear. Add perfume oil at 77C. Cool to 73C and package.

Perfume level can be varied to suit final application. Fragrance oils may have an effect on overall clarity.

This formulation yields a "nonshrinking" gel which exhibits good clarity and an excellent feel. This formulation may be modified to produce a solid hand-lotion, deodorant, blusher or floating bath-oil bar.

Cetiol 1414-E	Myreth-3 Myristate	Henkel

RAW MATERIALS	CHEMICAL DESCRIPTION	SOURCE
Cetyl Alcohol	Cetyl Alcohol	Many
Cetyl Alcohol Extra	Cetyl Alcohol	Givaudan
Cetyl Palmitate	Cetyl Palmitate	Akzo
Chamomile Extract	Chamomile Extract	Haarman
Chembase 6532	Stearamidoethyl Diethylamine	Sandoz
Chemical 39 Base	Stearamidoethyl Ethanolamine	Sandoz
Ches 500	Nonfat Dry Milk (and) Xanthan Gum (and) Propylene Glycol Alginate (and) Glyceryl Stearate (and) Sodium Glyceryl Oleate Phosphate	CasChem
Chlorhexidine Digluconate	Chlorhexidine Digluconate	ICI
Chlorhydrol (50%)	Aluminum Chlorohydrate (50%)	Reheis
Chroma-Lite Green	Mica (and) Bismuth Oxychloride (and) Chromium Oxide Greens	Mallinckrodt
Chroma-Lite Light Blue	Mica (and) Bismuth Oxychloride (and) Ferric Ammonium Ferrocyanide	Mallinckrodt
Cirami	Beeswax (and) Candelilla Wax (and) Shea Butter	Tri-K
Cirami No. 1 AMI	Beeswax-Candelilla Wax and Shea Butter	Tri-K
Citric Acid, USP-FCC (Code 69941)	Citric Acid	Roche
Claudina M-1995		Stepan
Clearlan	Lanolin	Quantum
Clearlan 1650	Lanolin	Quantum
Clindrol 100C	Cocamide DEA	Clintwood

RAW MATERIALS	CHEMICAL DESCRIPTION	SOURCE
Clindrol Superamide 100L	Diethanolamide of Lauric Acid	Clintwood
CMC 7HF	Cellulose Gum	Hercules
CMC 7LF	Cellulose Gum	Hercules
CMC 7M	Cellulose Gum	Hercules
CMC 7MF	Cellulose Gum	Hercules
Coconut Oil 76	Coconut Oil 76 Degree	Humko
Cocoyl Sarcosine	Cocoyl Sarcosine	Grace
Collagen	Collagen	Many
Collamino Complex L/O	Lauryloleylemethylamine	Brooks
Collasol	Soluble Collagen	Croda
Colorona Red Brown 17322	Mica (and) Iron Oxides (and) Titanium Dioxide	E.Merck
Colorona Red Gold 17320	Mica (and) Titanium Dioxide (and) Iron Oxides	E.Merck
Colourant Brilliant Blue FCF 308001	Acid Blue 9. FD&C Blue No. 1	Williams
Comperlan KD		Henkel
Comperlan OD		Henkel
Compound MS-1	Solution of 6 surfactants, plus a preservative	Miranol
Compound MS-2	Solution of 6 surfactants, plus a preservative	Miranol
Corhydrol 1/35	Hydrogenated Castor Oil	Givaudan
Cornflower Extract HS	Cornflower Herbal Extract	Tri-K
Cosmedia Guar C-261	Guar Hydroxylpropyl Trimonium Chloride	Henkel

RAW MATERIALS	CHEMICAL DESCRIPTION	SOURCE
Cosmedia HSP-1180	Polyacrylamido Methylpropane Sulfonic Acid	Henkel
Cosmetic Black J C33-5198	Iron Oxides	Whittaker

Cosmetic and toiletry formulations.

1. Cosmetics. 2. Toilet preparations. I. Title.

TP983.F55 1989 668'.55 89-39099

ISBN 0-8155-1218-X (v. 1)

ISBN 0-8155-1306-2 (v. 2)

Preface

More than 1900 cosmetic and toiletry formulations are detailed in this volume, based on information received from numerous industrial companies and other organizations. This is Volume 2 of the Second Edition of this work; Volume 1 was published in 1989. The formulations in Volume 2 do not duplicate any of those in Volume 1.

The data represent selections from manufacturers' descriptions made at no cost to, nor influence from, the makers or distributors of these materials. Only the most recent formulas have been included. It is believed that all of the trademarked raw materials listed are currently available, which will be of interest to readers concerned with raw material discontinuances.

The 1989 market for cosmetic and toiletry raw materials was \$1.6 billion. That market is projected to increase to about \$1.8 billion by 1994, thus making the information in the book particularly interesting to anyone considering new products or process variations.

Each formulation in the book is identified by a description of end use. The formulations include the following as available, in the manufacturer's own words: a listing of each raw material contained; the percent by weight of each raw material; suggested formulation procedure; and the formula source, which is the company or organization that supplied the formula. The book is divided into the following 15 sections:

- I. Antiperspirants and Deodorants
- II. Baby Products
- III. Bath and Shower Products
- IV. Beauty Aids
- V. Creams
- VI. Fragrances and Perfumes
- VII. Hair Care Products
- VIII. Lipsticks
- IX. Lotions
- X. Shampoos
- XI. Shaving Products
- XII. Soaps
- XIII. Sun Care Products
- XIV. Toothpastes
- XV. Miscellaneous

Each formula is indexed in the section which is most applicable. The reader seeking a formula for a specific end use should check each section which could possibly apply.

In addition to the above, there are two other sections that will be helpful to the reader:

XVI. Trade-Named and Other Raw Materials Descriptions.

Each raw material is listed with a brief chemical description and the name of the raw material supplier.

XVII. Suppliers' Addresses. Addresses of suppliers of trade-named raw materials and/or formulations, some of which are not available in the usual reference books.

It should be noted that some formulations in the book are translations. The manufacturer's exact wording has been used in these cases. Occasionally different companies have listed the same raw material differently; it is hoped that the reader will be able to identify the same or similar raw materials by consulting the Trade-Named and Other Raw Materials Descriptions section.

The table of contents of the book is organized in such a way as to serve as a subject index.

My fullest appreciation is expressed to the companies and organizations which supplied the information included in this book.

March, 1992

Ernest W. Flick

NOTICE

To the best of our knowledge the information in this publication is accurate; however, the Publisher does not assume any responsibility or liability for the accuracy or completeness of, or consequences arising from, such information. This book does not purport to contain detailed user instructions, and by its range and scope could not possibly do so. Mention of trade names or commercial products does not constitute endorsement or recommendation for use by the Author or Publisher.

Cosmetic and toiletry raw materials could be toxic or cause allergies in some circumstances, and, therefore, due caution should always be exercised in the use of potentially hazardous materials and the manufacturing processes involved. Final determination of the suitability of any information or product for use contemplated by any user, and the manner of that use, is the sole responsibility of the user. We strongly recommend that users seek and adhere to a manufacturer's or supplier's current instructions for handling each material they use.

The Author and Publisher have used their best efforts to include only the most recent data available. The reader is cautioned to consult the supplier in case of questions regarding current availability.

Contents and Subject Index

SECTION I: ANTIPERSPIRANTS AND DEODORANTS	1
Alcohol-Free Roll-On Deodorant	2
Antiperspirant Stick	2
Antiperspirant(s)	3
Quick Drying Aerosol Antiperspirant	3
Anti-Perspirant Cream(s)	4
Antiperspirant Pump	5
Antiperspirant Suspension Roll-On(s)	5
Deodorant Stick(s)	10
Deodorant/Antiperspirant Spray	13
Deodorant Pump Spray(s)	13
Dry Roll-On Antiperspirant(s)	15
Enhanced Clear Hydro-Alcoholic Roll-On	17
Soft Stick Antiperspirant(s)	18
Spray Deodorant	18
Solid Antiperspirant	19
Transparent Deodorant Stick(s)	21
Underarm Roll-On Deodorant Lotion	22
SECTION II: BABY PRODUCTS	23
Baby Bath(s)	24
Baby Care Cream W/O	25
Baby's Skin Smoothing Cream	25
Baby Cream(s)	26
Baby Foam Bath, with Herbs, Re-Fatting	27
Baby Protective Cream, Type W/O	27
Baby Lotion(s)	28

Babymilk Without Perfume	30
Baby Powder	30
Baby Oil(s)	31
Baby Oil Spray, Herb/Vitamin Content	31
Baby Shampoo(s)	32
W/O-Babycreme	40
Conditioning Baby Shampoo	41
Mild Baby Bubble Bath	43
Baby Wash	43
Baby Milk	43
Mild Baby Shampoo(s)	44
Pearlescent Baby Shampoo	45
SECTION III: BATH AND SHOWER PRODUCTS	46
After Shower Rinse Off Body Mousse	47
Body Mousse	47
Alcoholic After Bath Splash	48
Pearl Body Cleanser	48
Liquid Bath Lather	48
All Over the Body: Shampoos, Shower Baths, Foam Baths	49

SECTION XVII: SUPPLIERS' ADDRESSES	980

Section I
Antiperspirants and
Deodorants

ALCOHOL-FREE ROLL-ON DEODORANT

RAW MATERIALS	% By Weight
A. IMWITOR 960	6.0
Cetyl Alcohol	2.0
MIGLYOL 840	5.0
Hostaphat KL 340 N	5.0
Raluben TL	0.5
Aluminum Acetate	0.5
B. Sorbitol 70%	5.0
Carbopol 940 (Carbomer 940-Gel 1%)*	12.0
Alcohol	1.0
Water	up to 100.0
C. Perfume Oil	q.s.
* Carbomer 940-Gel: Carbomer 940 1.0%	
	Triethanolamine 0.6%
	Water up to 100.0%

Preparation:

The Carbomer-Gel is prepared, and Phase A is melted at ca. 60C. Phase B is stirred together and heated up to the same temperature. B is emulsified into A and at ca. 40C, the mass is perfumed.

Characteristics:

The deodorant is a free-flowing emulsion which is mild to the skin and is quickly absorbed without leaving behind a greasy feeling.

ANTI-PERSPIRANT CREAM

RAW MATERIALS	% By Weight
A Cetyl Alcohol	2,50
Stearyl Alcohol	2,50
Locron P	15,00
Eumulgin M8	3,00
Eutanol G	6,00
B Belsil CM 040	9,00
Water	62,00
Pigments, fragrances	q.s.

Mix A and heat to 70C, form a solid phase with warm water, work in Belsil CM 040 and dilute with water.

Temperature stability: at 45C 4 weeks.

Soft white cream. Leaves no visible traces of aluminum chlorohydrate on the skin.

Formulation 216 AH

ANTI-PERSPIRANT CREAM

RAW MATERIALS	% By Weight
A Cetyl Alcohol	2,50
Stearyl Alcohol	2,50
Locron P	10,00
Eumulgin M8	3,00
Eutanol G	6,60
B Belsil CM 040	9,00
Belsil PDM 20	3,00
Water	63,40
Pigments, fragrances	q.s.

Mix A and heat to 70C, mix in hot water, add B and mix well.

Temperature stability: at 45C over 10 weeks.

Soft white cream. Leaves no visible traces of aluminum chlorohydrate on the skin.

Formulation 217 AH

ANTIPERSPIRANT PUMP

INGREDIENTS	% By Weight
REACH 501 Solution	36.1
Alcohol SDA-40	30.0
Propylene Glycol	5.0
Deionized Water	28.5
Cremophor RH40	.2
Fragrance	q.s.

Procedure:

1. Add together ingredients B and D, mix using overhead stirring.
2. Add C, mix 10 minutes.
3. Add A slowly to batch, continue mixing until uniform.
4. Pre-mix F into E, disperse pre-mix into batch while using rapid stirring, mix for 5 minutes.

A consumer accepted hydro-alcoholic formula incorporating an enhanced chlorohydrate system that is proven clinically more effective than aluminum chlorohydrate.

DEODORANT STICK

RAW MATERIALS	% By Weight
Sodium Stearate	7.0
IMWITOR 780K	3.0
SOFTIGEN 767	12.0
1,2-Propylene Glycol	8.0
Glycerine	5.0
Water	20.0
Raluben TL	0.5
Ethanol 96%	43.5
Perfume Oil Deosafe 75 428N/II	1.0

Preparation:

All components are melted together at 50C. The mass is then cooled while stirring to about 35C and poured into molds. Before packaging, it is advantageous to store the sticks for a short time.

Characteristics:

The stick is light transparent white, has a very good rub off and a nice cooling effect on the skin.

SOURCE: Huls America Inc.: Formula 1.5N

DEODORANT STICK

RAW MATERIALS	% By Weight
a) Stearin	5.0
1,2-Propylene glycol	46.0
b) Water, distilled	40.0
Sodium hydroxide	1.0
c) Ethyl alcohol 96 vol. %	7.5
Deodorant Richter/K	0.5

Manufacture:

- dissolve while stirring at about 60C;
- heat to about 60C and stir into a). Continue stirring until the solution has cooled to about 50C;
- stir in.
Perfume, and immediately fill into the holders.

In contrast to sticks with a high content of ethyl alcohol, this stick with propylene glycol also keeps well in holders which are not completely airtight, since propylene glycol does not evaporate, and actually inhibits the evaporation of water.

DRY ROLL-ON ANTIPERSPIRANT-A

RAW MATERIALS	% By Weight
A. ABIL Wax 9801	0.50
Isopropyl Myristate	5.00
Cyclomethicone (ABIL B8839/DC 344)	40.00
Quaternium 18 Hectorite (Bentone 38 powder)	2.00
Ethanol - 200 proof or	
Ethanol - 190 proof	2.00
B. Isopropyl Myristate	5.00
Cyclomethicone (ABIL B8839/DC 344)	20.50
C. Aluminum Chlorohydrate	25.00
D. Perfume	QS

DRY ROLL-ON ANTIPERSIRANT-B

RAW MATERIALS	% By Weight
A. ABIL Wax 9801	0.50
Isopropyl Myristate	5.00
Cyclomethicone (ABIL B8839/DC 344)	40.00
Quaternium 18 Hectorite (Bentone 38 powder)	2.00
Ethanol - 200 proof or	
Ethanol - 190 proof	2.00
B. Hexyl Laurate (Standamul CTA or Cetrol A)	3.00
Cyclomethicone (ABIL B8839/DC 344)	22.50
C. Aluminum Chlorohydrate	25.00
Perfume	QS

Procedure:

- Blend ABIL Wax 9801, ABIL B8839 and Isopropyl Myristate. Sprinkle in Bentone 38 powder, avoiding lumps, while using a high speed mixer.
- Add Ethanol. 190 is preferred. Mix. Process through homogenizer with shear until a clear soft gel or clear medium viscosity liquid is formed.
- Mix phase B. Add Aluminum Chlorohydrate. Mix until uniform. Add to phase A gel. Mix/homogenize until well dispersed.
- Add Perfume. Mix.

ENHANCED ANTIPERSPIRANT STICK

INGREDIENTS	% By Weight
A. REACH AZP-501	20.0
B. Siloxane F-222	50.5
C. Stearyl Alcohol	20.0
D. Promyristyl PM-3	5.0
E. PEG-8 Distearate	2.0
F. Talc, 325 mesh	1.0
G. Silica	1.5
H. Fragrance	q.s.

Procedure:

1. Add B to reaction vessel and heat to 65C.
2. Add D and E with moderate stirring.
3. Add C slowly, maintain 65C. Increase agitation and add A. Mix for 5 minutes.
4. Add F, mix 5 minutes.
5. Add G, mix 5 minutes.
6. Add H. Using slow to moderate stirring, cool to 55C. and pour into stick casings.

A smooth feeling, high payout stick incorporating a cost effective enhanced efficacy aluminum-zirconium active demonstrating optimal antiperspirant efficacy.

SOURCE: Reheis Inc.: Formula

ENHANCED ANTIPERSPIRANT CREAM

INGREDIENTS	% By Weight
A. REACH 501 Soln.	40.0
B. Arlacel 165	15.0
C. Cetyl Alcohol	5.0
D. Sorbitol 70% Soln.	3.0
E. Deionized Water	37.0
F. Fragrance	q.s.

Procedure:

1. Combine B and C and heat to 75C.
2. Combine D and E and heat to 75C.
3. Add slowly to B/C combination and cool to 55C. while agitating with overhead mixer.
4. Add A and mix thoroughly.
5. Add F and cool to 35C. Homogenize at 3000 psi.

An aesthetically elegant cream incorporating an enhanced efficacy aluminum chlorohydrate that is stable in aqueous formulations.

SOURCE: Reheis Inc.: Formula

ENHANCED CLEAR HYDRO-ALCOHOLIC ROLL-ON

INGREDIENTS	% By Weight
A. REACH 501 Solution	40.0
B. Procetyl AWS	2.0
C. Natrosol 250MR CS	0.2
D. Deionized Water	15.7
E. SD Alcohol 40	42.1
F. Fragrance	q.s.

Procedure:

1. Disperse C in D. Mix until clear, about 2 hours.
2. Add A gradually. Mix rapidly using overhead stirring to dissolve.
3. In a separate container combine B and E, then add slowly with constant agitation to the rest of the batch.
4. Add fragrance, mix thoroughly and pour into clear roll-on containers

A fast drying, hydro-alcoholic roll-on incorporating an activated aluminum chlorohydrate system that is proven clinically more effective than aluminum chlorohydrate.

SOURCE: Reheis Inc.: Formula

ROLL-ON ANTIPERSPIRANT

INGREDIENT	% By Weight
A. VEEGUM HV, Magnesium Aluminum Silicate	1.00
Deionized Water	29.00
B. Glyceryl Stearate (and) PEG-100 Stearate	8.00
C. Aluminum Zirconium Tetrachlorohydrate GLY, 30% Soln.	33.00
Aluminum Chloride, 32 Baume Soln.	5.50
Aluminum Chlorhydrate, 50% Soln.	16.50
D. Cyclomethicone	7.00
E. Fragrance, Dye, Preservative	q.s.

Features:

This low viscosity emulsion is stabilized with VEEGUM HV which also provides moderate thickening and excellent, dry after-feel. The Aluminum/Zirconium Complex has higher anti-perspirant efficacy than aluminum chlorohydrate.

Preparation:

Add VEEGUM HV to water at 75C and mix with maximum available shear until smooth, uniform and completely free of undispersed particles. In another container, heat B to 75C. Heat C to 55C in a third container. Add B to A with slow mixing and cool to 50C. Add C to A & B. Mix at slow speed until the temperature reaches 25C. Add D and homogenize for 5 minutes. Add E. Mix until uniform and package.

SOURCE: R.T. Vanderbilt Co., Inc.: Formula No. 443

SOFT STICK ANTIPERSPIRANT

INGREDIENTS	% By Weight
Stearic Acid (Triple Press)	15.0
Cetyl Alcohol	15.0
Aluminum Chlorohydrate	20.0
Dow 345 Fluid	44.5
Velsan P816	2.0
Sandopan KST	3.0
Orgasol 2002 D	0.5

Procedure:

Charge to vessel stearic acid, cetyl alcohol, Velsan P816, Sandopan KST to 65-70C. Mix until homogeneous. Discontinue heating. Add Orgasol & Aluminum chlorohydrate. Cool to 55C. Add Dow 345 Fluid slowly; at 45-50C pour into containers. Allow to cool undisturbed.

Soft, smooth non-greasy payoff of this stick is due to the property of Velsan P8-16 to reduce the oily feel of silicone. Non Sandopan KST replaces the traditional crystallizing sodium stearate.

Properties:

Appearance: White stick
 Congealing point: 34.5C

SOLID ANTIPERSPIRANT

RAW MATERIAL DESCRIPTION	Sequence	% By Weight
Propylene Glycol	1	25.50
Carbowax 400	1	3.50
Rehydrol 11	2	15.00
Lipamide SM	3	27.00
Witconol APS	4	12.00
D.C. Silicone Fluid 556	4	1.00
Liponate IPP	4	3.50
Liponate PC	4	1.50
SD 40 Alcohol Anhydrous (200 Proof)	5	10.00
Fragrance	6	1.00

Manufacturing Procedure:

1. Weigh out and add Sequence 1 materials into a suitable steam-jacketed kettle equipped with variable or two-speed side-wiping agitator and begin moderate speed agitation.
2. Slowly add Sequence 2 to Sequence 1 with moderate speed side-wiping agitation. When the addition is completed, begin to heat combined Sequence 1 and 2 to 83C; maintain temperature and mix until Sequence 2 is completely dissolved.
3. Slowly add Sequence 3 to batch using slow speed side-wiping agitation. Continue maintaining temperature at 83C and mix until Sequence 3 is completely dissolved.
4. In a separate container, combine Sequence 4 ingredients and heat to 83C with moderate mixing.
5. Maintain 83C temperature and slowly add combined Sequence 4 at 83C to batch using continuous slow speed side-wiping agitation. Mix until Sequence 4 is completely dissolved.
6. Turn off heat; drain steam from kettle and allow batch to cool to 78C, using slow speed side-wiping agitation.
7. At 78C, slowly add Sequence 5 to batch using continuous slow speed side-wiping agitation. Mix until batch is clear (approximately 3-5 minutes).

Fragrance	0.50

SOLID STICK ANTIPERSPIRANT-C

INGREDIENT	% By Weight
Lanette 18 DEO	15.00
Castorwax MP-80	4.00
Fluid AP	1.50
Cyclomethicone	51.50
ABIL Wax 9801	0.25
ABIL Wax 2434	0.25
Talc	5.00
Aluminum Zirconium Tetrachlorohydrate-Gly	22.00
Fragrance	0.50

Manufacturing Directions:

1. Add the cyclomethicone to a covered mixing tank equipped with a turbine propeller. Begin heating.
2. Add the Fluid AP, Lanette, Castorwax and ABIL Waxes. Bring temperature to 85-87C. Hold for 30 minutes at temperature while mixing.
3. Add the Talc. Do not allow the temperature to drop below 75C during addition. Maintain temperature at 80-85C while mixing for 10-15 minutes.
4. Add the Aluminum-Zirconium Complex. Do not allow the temperature to drop below 70C during addition. Mix for 15-20 minutes at 175-180C.
5. Cool while mixing to 60-62C. Add fragrance.
6. Dispense into containers at 58-61C.

UNDERARM ROLL-ON DEODORANT LOTION

INGREDIENTS	% By Weight
Propylene glycol	35.00
Witch hazel	32.70
Water	30.00
Oat Pro oat flour	2.00
KELTROL T xanthan gum	0.30
Preservative and fragrance	to suit

Procedure:

1. Combine KELTROL T and propylene glycol to form a slurry.
2. With good agitation, using a Lightnin'-type mixer, add gum slurry to water. Continue mixing until KELTROL T is hydrated (about 10 minutes). Add preservative.
3. Add oat flour and stir to form a uniform solution. Add fragrance.
4. Package.

The addition of KELTROL T xanthan gum provides ease of application and good cling when the lotion is applied.

ANTI-PERSPIRANT ROLL-ON

RAW MATERIALS	% By Weight
Water	51,20
Alcohol (Cosmetic grade)	12,00
Belsil DMC 6031	5,00
Wacker HDK H15	1,50
Tylose H 4000 P	0,30
Locron L	30,00

Pigments, fragrances

q.s.

Mix the water and cosmetic alcohol, dissolve Belsil DMC 6031. Add HDK H 15 and Tylose H 4000 P to the solution whilst stirring. Stir in the aluminum chlorhydrate.

Temperature stability: at 45C over 10 weeks.

Cloudy, low viscosity

Formulation 242 AH

ANTI-PERSPIRANT ROLL-ON

RAW MATERIALS	% By Weight
A Belsil DMC 6032	2,00
Water	52,00
B Alcohol (Cosmetic grade)	25,00
C Locron L	20,00
Tylose H 4000 P	0,5-1,0

Pigments, fragrances

q.s.

Mix A, stir B into A, mix in C. The desired viscosity can be regulated with Tylose H 4000 P (add Tylose H 4000 P either mixed with water to A or mix at the end in the finished formulation).

Slightly cloudy, high viscosity.

Formulation 516 AH

BABY LOTION

INGREDIENTS	% By Weight
Part A:	
Deionized water	79.8
Glucam E-20 methyl gluceth-20	5.0
Glucamate SSE-20 methyl gluceth-20 sesquistearate	1.2
KELTROL T xanthan gum	0.5
Magnesium aluminum silicate	0.5
Methyl paraben	0.2
Part B:	
Light mineral oil	7.0
Cetal cetyl alcohol	3.0
Cosmetic AA lanolin, USP	2.0
Glucate SS methyl glucose sequistearate	0.8

Procedure:

1. Pre-mix KELTROL T and magnesium aluminum silicate.
2. With vigorous agitation, hydrate the gums in deionized water that has been preheated to 170F. Mix 10-15 minutes.
3. After the gums are fully hydrated, add the rest of Part A maintaining heat at 77C (170F).
4. Combine Part B ingredients and heat to 77C (170F) until melted.
5. Combine both parts at 77C (170F).
6. Allow to cool under medium agitation.
7. Add fragrance to suit.

Velsan P8-16	1.0

Procedure:

Charge to vessel, Sandoz Amide PE, Sandoz Sulfate 218, Sandoteric TFL and Sandopan LS-24. Heat to 62C with stirring. Mix until homogeneous. Add water, stir. Cool to room temperature. While stirring add Germaben II and Velsan D8P-3. Mix well, adjust pH to 5.5 with Citric Acid.

Formulated for mildness and low eye sting, this formula has the additional benefit of a long shelf due to the ability of Sandopan LS-24 to eliminate latent clouding. Formula B includes Velsan P8-16 for body, control and conditioning.

Properties:

pH: 5.5-6.0

Appearance: Clear light yellow

Solids: A. 16% B. 18%

Viscosity: 1100 cps

Ross-Miles: A. 245/245 B.: 240/240

Shake Foam: A. 485/27 B.: <500/17

MILD BABY BUBBLE BATH

RAW MATERIALS	% By Weight
MONATERIC 951A	30.0
MONATERIC LMAB	25.0
MONAMATE LNT-40	30.0
Preservative	0.3
Water	14.7

Procedure:

Combine ingredients. Adjust pH to 6.0-6.5.

Properties:

Appearance: Clear liquid

Nominal activity: 27%

Viscosity: 500 cps

The combination of MONATERICS and MONAMATE LNT-40 provides large and voluminous bubbles at low concentrations which are long lasting even in the presence of soap and hard water. The mild properties of the ingredients in this formula indicate low irritation potential.

BATH LOTION

RAW MATERIALS % By Weight

Part A:

1. MACKAM CAP	5.00
2. Sodium Laureth Sulfate (60% Active)	5.00
3. Propylene Glycol	1.00
4. Methyl Salicylate	0.50
5. Peppermint Oil (Redistilled)	1.00
6. Menthol Crystals	0.20

Part B:

7. Hydroxyethyl Cellulose (Cellosize qp 4400)	1.00
8. Deionized Water	51.60

Part C:

9. Deionized Water	22.00
10. Tetrasodium EDTA (Chelon 40% Active)	0.40
11. Sodium Hexametaphosphate	1.00

Part D:

12. Sodium Styrene/Acrylates DivinylBenzene Copolymer (and) Ammonium Nonoxynol-4 Sulfate	1.00
13. Deionized Water	10.00

Part E:

14. MACKSTAT DM	q.s.
-----------------	------

Manufacturing Procedure:

Part A: Prepare in mixing tank #1, #2, #3. And add (at room temperature) items #4, #5, #6, thoroughly blend together. Keep tank covered.

Part B: In separate container prepare part B by dissolving Hydroxyethyl Cellulose (Cellosize qp 4400) 1.00% in 51.60% Deionized Cold Water. And mix until solution is completely clear and free of lumps. Add the clear thick solution to Part A and blend together.

Part C: In a separate container prepare the solution of #9, #10 and #11. Add to above solution.

Part D: In separate vessel dilute #12 with #13 and mix until all particles are completely dissolved. Slowly add to above solution.

Part E: Mix in part E into batch. Blend together well and filter through nylon gauze if necessary. Check pH.

Water	Balance

A formulation containing decyl oleate which gives an emollient feel, combined with a degree of detergency, is given.

The method of manufacture is to warm all ingredients except the perfume, dye and preservative, with gentle stirring, until homogeneous. The formulation is cooled to less than 35C prior to adding the perfume, dye and preservative.

Formula EBO2

BATH SALT WITH PEARL PIGMENTS

COMPOSITION

Salt (NaCl) coarse crystalline	990 g
Pearl or color lustre pigment	10 g
Vinylpyrrolidon-Vinylacetate-Copolymer as film forming substance (e.g. Luviskol VA 64, 10% solution in isopropanol + fragrance oil)	40 ml

SOURCE: EM Pigments Division: Formula

SILKY BUBBLE BATH

RAW MATERIALS	% By Weight
Phase A:	
INCROSUL OTS	35.00
INCROMINE Oxide C	3.50
INCROMIDE LR	2.00
CROVOL PK-70	5.00
Sodium Chloride	1.25
Deionized Water	48.75
Phase B:	
CRODAPEARL Liquid	3.00
CROSILK Liquid	.50
Germaben II	1.00

Procedure:

Combine Phase A with slight heating to 65C. When clear, stop heating, continue mixing, and cool to 45C. At 45C add Phase B. Continue cooling and mixing to room temperature and adjust the pH. pH 6.0+-.0.5 with citric acid.

This elegant bubble bath incorporates INCROSUL OTS as the primary surfactant giving long lasting and copious bubbles. Its pearly elegance is enhanced by the addition of CROSILK Liquid. BP-39-1 leaves a conditioned skin afterfeel due to CROVOL PK-70, Croda's ethoxylated modified triglyceride. CROVOL PK-70, is a palm kernel oil derivative, and an effective, mild, super fattening agent.

SOURCE: Croda Inc.: INCROSUL OTS: Formula BP-39-1

BLOOMING BATH LOTION

INGREDIENTS	% By Weight
Part A:	
CUTINA GMS	4.0
EUMULGIN B-1	4.0
CETIOL G-20S	15.0
CETIOL LC	15.0
Part B:	
Water	60.5
Propylene Glycol	1.5
Part C:	
Fragrance	q.s.
Preservative	q.s.

Procedure:

1. Mix and heat Part A 60-65C.
2. Mix and heat Part B 60-65C and add to Part A.
3. Mix until cooled to 40C and add Part C.

This emulsion will "bloom" as it disperses into warm bath water. It is a unique bath lotion due to its stability at a very low viscosity. It contains two emollient oils - CETIOL G-20S and CETIOL LC - both of which are very gentle to delicate skin.

SOURCE: Henkel: Formula H-4821

PEARLESCENT BATH LOTION

RAW MATERIALS	% By Weight
Sodium Lauryl Sulfate	40.0
MACKANATE EL	30.0
MACKAM 35 HP	5.0
MACKESTER SP	1.5
Sodium Chloride	1.0
MACKSTAT DM	9.5
Water, Dye, Fragrance qs to	100.0

Procedure:

1. Add first four components to water and heat to 70 degrees C.
2. Blend until EGMS is completely dispersed.
3. Add sodium chloride and cool to 45 degrees C.
4. Add preservative, fragrance and dye.
5. Cool to room temperature and fill.

BUBBLE BATH

FORMULA	% By Weight
Phase A:	
QUATRISOFT Polymer LM-200	1.0
Water	46.5
Phase B:	
Sodium Myreth Sulfate (58% Active)	38.0
Lauramide DEA	7.0
GLUCAM E-20	3.5
SOLULAN L-575	4.0
Perfume and Preservative	q.s.

Procedure:

Disperse the QUATRISOFT Polymer LM-200 with good agitation in water at room temperature. When thoroughly dispersed, heat to 45C with continued mixing. When a clear, uniform solution has developed, begin to add the ingredients of phase B in which they are listed, mixing moderately after each addition. Avoid air entrapment.

Description:

Crystal clear, viscous, pourable bubble bath. QUATRISOFT Polymer LM-200 provides conditioning by virtue of its cationic nature and inherent substantivity to the skin. GLUCAM E-20 contributes to the overall emollient afterfeel. SOLULAN L-575, along with GLUCAM E-20, helps overcome defatting from the anionic surfactant.

FOAM BATH

INGREDIENTS	% By Weight
Water	32.45
STANDAPOL ES-2	45.00
LAMEPON S	8.00
VELVETEX BA-35	5.00
STANDAMID LDO	3.00
CETIOL HE	3.00
EUPERLAN PK-810	3.00
SEDAPLANT RICHTER	0.50
Kathon CG	0.05

Procedure:

Charge kettle with water. Add remaining ingredients, one at a time, under agitation. Adjust pH to 6.5+-0.3 with 50% citric acid. Continue stirring until product is homogeneous. Fill off.

Comments:

By combining LAMEPON S with ether sulfates and then betaine, a high performance, low irritation product results. The addition of SEDAPLANT RICHTER furthers the formula's image with its blend of herbal extracts and anti-irritants.

FOAMING BATH LIQUID CREME

RAW MATERIALS	% By Weight
Part A:	
1. Sodium Laureth Sulfate (60% active)	15.0
2. MACKAM 35	6.0
3. MACKAMIDE LLM	1.5
4. Emulvis	1.5
5. MACKANATE EL	0.6
6. MACKESTER EGMS	2.0
7. Tetrasodium EDTA (Chelon 40% Active)	0.15
8. Deionized Water	25.0
Part B:	
9. 2% Solution of Hydroxyethyl Cellulose in Deionized Water (Cellosize qp 4400)	42.0
10. Sodium Hexametaphosphate	2.0
Part C:	
11. Peppermint Oil (Redistilled)	1.0
12. Methyl Salicylate	0.5
13. Menthol Crystals	0.2
14. Polysorbate 20	2.0
Part D:	
15. MACKSTAT DM	q.s.

Manufacturing Procedure:

1. Heat all ingredients of part A in a stainless steel vessel to 75 degrees C. (170 degrees F.) Blend together.
2. In separate container prepare part B by dissolving Hydroxyethyl Cellulose (Cellosize qp 4400) 0.84% in 41.16% Deionized Cold Water. And mix until solution is completely clear and free of lumps.
3. Dissolve item 10 in solution B and heat slowly to 40 degrees C. (104 degrees F.) and add whole mixture to part A, and continue mixing.
4. Prepare the blend of ingredients in part C at room temperature and add to the above mixture.
5. Mix in part D into batch. Check pH. Filter the liquid cream through nylon gauze if necessary.

pH: 6.2-6.8

HIGH FOAMING SHOWER GEL

RAW MATERIALS	% By Weight
Standapol ES-3	20.0
INCRODET TD-7C	7.0
CROSULTAINE C-50	20.0
CROTHIX	1.0
CROVOL A-70	2.0
BHT	0.1
Disodium EDTA	0.1
Perfume	0.5
Germaben II	1.0
Deionized Water	48.3
pH-6.3 w/NaOH	

Procedure:

Combine the Standapol ES-3, Incrodet TD-7C, Crosultaine C-50, Disodium EDTA, Germaben II and deionized water with mixing. Combine the Crothix, Crovol A-70 and BHT with mixing and heat to 65-70C with mixing. Continue mixing the Crothix premix and cool to 50C. Add the perfume to Crothix phase and mix until uniform. When clear, add Crothix phase to the surfactant phase with mixing. Adjust pH to specification with NaOH solution.

pH:6.3. pH specification 6.0 to 6.5

Viscosity: 8,000 cps

This formula uses an optimized combination of CROSULTAINE C-50, INCRODET TD-7C and SLES to produce a clear, high foaming, low color, and low odor bath and shower gel. CROTHIX is used to provide the body and viscosity seen in the formula, and CROVOL A-70 is used to solubilize the fragrance and maintain the clarity of the product.

ABSORBANT FACIAL MASK FOR OILY SKIN

INGREDIENTS		% By Weight
A. Deionized Water		60.7
Magnesium Aluminum Silicate		1.5
Hydroxypropylmethylcellulose		1.5
Sorbitol		4.0
Methylparaben		0.2
Polysorbate 80		2.0
B. Stearic Acid		3.0
Glyceryl Stearate and PEG 100 Stearate	5.0	
Ceresine Wax		5.0
Stearyl Alcohol		2.0
Kaolin		8.0
C. Titanium Dioxide		1.0
Iron Oxides		0.2
Polyethylene		1.5
D. ELASTEIN 5000		4.0
E. Diazolidinyl Urea		0.3
Fragrance		0.1

Procedure:

Begin heating water to 80 degrees C, slowly sift in magnesium aluminum silicate. At 80 degrees C, sift in hydroxypropylmethylcellulose, add rest of Part A. Mix until uniform. Add Part B ingredients in order, mix until homogeneous. Premix iron oxides with titanium dioxide and polyethylene beads and sift into mixture. Blend until color is uniform. Slowly add ELASTEIN 5000, mix well, cool to room temperature. Add part E ingredients. Mix until homogeneous.

Description:

This astringent mask absorbs facial oils and exfoliates dead skin cells. ELASTEIN 5000 helps restore skin elasticity by binding needed moisture.

ACNE LOTION WITH MICROENCAPSULATED SALICYLIC ACID

RAW MATERIALS	Sequence	% By Weight
Keltrol F, 1% Sol'n	1	81.75
Liponic EG-1	1	5.00
Microencapsulated Salicylic Acid	1	4.00
Unicide U-13	1	0.25
Lipomulse 165	2	2.50
Unitrienol T-27	2	1.50
Liponate 2-DH	2	5.00

Procedure:

1. In main kettle, combine Sequence 1 ingredients under Lightnin' mixing and heat to 75C.
2. In auxiliary kettle, combine Sequence 2 ingredients under Lightnin' mixing and heat to 78C.
3. At proper temperature, add Sequence 2 to Sequence 1 under Lightnin' mixing and maintain temperature for 5-10 minutes. Begin cooling.
4. Cool to 25C.

Formula No. 479

BODY MOISTURIZER BALM

RAW MATERIAL	Sequence	% By Weight
Deionized Water	1	63.75
Triethanolamine 99%	1	0.60
Uniphen P-23	1	0.50
Hypan SA100H	2	0.30
Liponate NPGC-2	3	32.50
Lipo Lecithin	3	1.15
Orgasol 2002D Ex. Nat. Cos.	4	1.00
Fragrance	5	0.20

Procedure:

1. Combine Sequence 1 ingredients under Lightnin' mixing. Heat to 65C.
2. Slowly sprinkle in Sequence 2 ingredient under Lightnin' mixing. Maintain heat until a clear gel is obtained.
3. In a separate vessel, combine Sequence 3 ingredients and heat to 75C.
4. At proper temperature, add Sequence 3 to combined Sequence 1 and 2. Begin to cool.
5. At approximately 60C, run product through colloid mill with recirculation for a minimum of five minutes.
6. Switch to sweep mixing and continue cooling.
7. Slowly add Sequence 4 to batch.
8. At 40C, add Sequence 5.

AIRY SKIN CONDITIONING MOUSSE

CONCENTRATE FORMULA	% By Weight
QUATRISOFT POLYMER LM-200	1.0
Propylene Glycol	2.0
Ethanol SD-40	15.0
Deionized Water	82.0
Preservative and Perfume	q.s.

Concentrate Procedure:

Mix ethanol with water at room temperature. Add QUATRISOFT POLYMER LM-200 and other ingredients with water/ethanol mixture using rapid stirring at room temperature until polymer is completely dissolved.

Aerosol Fill Procedure:

Fill Aluminum mousse can and charge with A-46 Propellant using a weight ratio of 100 parts of product to 20 parts of propellant.

Description:

The light airy and stable foam in this formula is produced solely by QUATRISOFT POLYMER LM-200. When applied to the skin, it breaks quickly, leaving a soft, velvety feel attributed to the cellulosic cationic QUATRISOFT POLYMER LM-200

Formula T-55-9-1

SKIN CONDITIONING MOUSSE

CONCENTRATE FORMULA	% By Weight
Phase A:	
SOLULAN 16	1.5
GLUCAM P-10	1.5
SOLULAN 98	2.0
Phase B:	
Deionized Water	78.5
QUATRISOFT POLYMER LM-200	0.5
Preservatives	1.0
Phase C:	
SD Alcohol 40	15.0

Concentrate Procedure:

Add QUATRISOFT POLYMER LM-200 to agitating water at 25C. Heat to 70C and mix until dissolved. Add preservatives to complete phase B. In a separate container add Phase A ingredients and heat to 70C with agitation. Add phase B to A and mix until uniform. Cool to 40C and add phase C. Cool to 25C when uniform.

Aerosol Fill Procedure:

Fill aluminum mousse can and charge with A-46 Propellant using 90% product and 10% propellant.

Description:

Aerosol skin conditioner with emollient feel during and after application.

ALOE VERA GEL MASK

RAW MATERIALS	Sequence	% By Weight
Deionized Water	1	57.55
Uniphen P-23	1	0.50
Triethanolamine 99%	1	0.10
Hypan SA100H	2	0.05
Witch Hazel	3	2.00
Carbopol 940 (2% Disp'n)	3	27.50
Aloe Vera Gel	3	5.00
Triethanolamine 99%	4	0.50
Deionized Water	4	1.00
Trisodium EDTA	5	0.10
Phenoxyethanol	5	0.70
Deionized Water	5	5.00

Procedure:

1. In main kettle, combine Sequence 1 ingredients and heat to 65C under Lightnin' mixing.
2. Slowly sprinkle Sequence 2 ingredient into batch and maintain temperature until a clear, uniform gel is obtained. Begin cooling.
3. In a separate vessel, combine Sequence 3 ingredients at room temperature and add to combined Sequence 1 and 2 after they have cooled to 55-60C. Switch to sweep when batch thickens.
4. Add premixed Sequence 4 to batch under slow sweep to minimize aeration.
5. In a separate vessel, combine Sequence 5 ingredients at room temperature and mix until all powder is dissolved. Slowly add Sequence 5 to batch when batch has cooled to 40C.
6. Continue cooling to 25C.

SOURCE: Lipo Chemicals Inc.: Formula No. 459

SYNDET BEAUTY BAR

RAW MATERIALS	% By Weight
MONAMATE LA-100	40.0
PEG-8	20.0
PEG-75	30.0
MONAMID S	10.0

Procedure:

Add all ingredients and mix while heating gradually, being careful not to scorch, until melted and uniform. (approx. 95C). Pour into mold while hot. Allow to set.

Properties:

Appearance: Pale cream colored solid

pH (10% sol'n): 6.8

This formulation is easily prepared and forms a hard bar. Copious lather with a soap-like feel and a talc-like after-feel.

SOURCE: Mona Industries, Inc.: MONAMATES: Formula

ANHYDROUS CREAM MAKEUP

RAW MATERIALS	% By Weight
AMERCHOL RC	5.0
MODULAN	5.0
SOLULAN PB-2	5.0
Petrolatum	40.0
Mineral Oil, 70 vis.	22.0
Microcrystalline Wax (190-195F m.p.)	8.0
Pigments, micronized	15.0
Perfume and Preservative	q.s.

Procedure:

Heat all ingredients except the pigment blend to 85C. Add the pigment blend to melted wax phase at 85C. Mix until uniform. Cool to 60C and pour.

Description:

In this glossy cream, AMERCHOL RC aids in pigment dispersion while also working to give color definition and shade uniformity. The combination of AMERCHOL RC with SOLULAN PB-2 and MODULAN gives excellent feel while helping to reduce the greasiness associated with the mineral oil and petrolatum. They also add emollience and the necessary tack to ensure good finger pickup while keeping the product in place during and after application.

EMULSION MAKEUP

RAW MATERIALS	% By Weight
Oil Phase:	
AMERCHOL L-101	4.5
AMERLATE P	0.9
Stearic Acid, XXX	2.7
Glyceryl Monostearate, neut.	1.8
Mineral Oil, 70 vis.	4.5
Water Phase:	
Propylene Glycol	4.5
Triethanolamine	0.9
Water	70.2
Titanium Dioxide, Talc & Pigments	10.0
Perfume and Preservative	q.s.

Procedure:

Add the water phase at 85C to the oil phase at 95C while stirring. Continue mixing, and cool to 30C. Add to the micronized powder blend in increments, mixing well after each addition.

Description:

Glossy emulsion makeup with rich creamy feel. Spreads and blends easily. A heavy-viscosity fluid that gives light coverage.

SOURCE: Amerchol Corp.: AMERCHOL Series: T33-21-4/4R

ANHYDROUS MAKE-UP BASE

RAW MATERIALS	% By Weight
A. MIGLYOL 812	80.0
DYNASAN 118	20.0
B. Pigment:	
Titanium Dioxide	3.0
Talc	3.0
Zinc Oxide	3.0
Sicomet-Brown 70	0.3
Sicomet-Brown 75	0.3

Preparation:

MIGLYOL 812 is heated up to ca. 69C., in a container having good temperature control. Dynasan 118 is stirred into the Miglyol 812. The mass is then stirred until cooled. Important: Dynasan 118 cannot be completely dissolved, but rather partially dissolved (note temperature).

90.4g of this mass is worked very well into the finely ground pigment little by little.

It is advantageous to homogenize the make-up before filling.
Formula 2.1E

MAKE-UP FOUNDATION CREAM WITH SILICONE OIL 1

RAW MATERIALS	% By Weight
A. IMWITOR 960	5.0

Alcohol (Cosmetic grade)	15,00
Preservatives, fragrances, pigments	q.s.

Mix Polyviol W 25/140 and the cosmetic alcohol and stir into B. Heat to approx. 85C in water bath (whilst stirring), until a clear lump-free solution is produced. Cool to at least 40C and add to C whilst stirring.

Temperature stability: at 45C over 10 weeks.

Clear yellow, high viscosity. Produces a film on the skin which can be pulled or rubbed off after approx. 10 minutes.

Formulation 313 AH

BOTANICAL NAIL STRENGTHENER

INGREDIENT	% By Weight
Nail Bioregenerator	100.0

A botanical nail treatment containing Myrrh extract and Panthenol. Daily application via massage onto the nail, the cuticle, and the nail matrix will not only help increase the strength and flexibility of the nails but also aids the healing of wounds around the nail.

CLEANSER FOR AROUND THE EYES AND FACE

INGREDIENT	% By Weight
Demineralized Water	56.8650
Carbopol 940	0.2000
Tensami 1/05 AMI	1.0000
Amigel, 2%	25.0000
Tri-Sept M	0.2000
Tristat IU	0.2000
Tensami 8/09	10.0000
687 Demaquillant LS	3.0000
Jjoba Oil	3.0000
Vitamin E Acetate	0.0150
Tri-Sept P	0.1000
Perfume	0.2000
TEA 99%	0.2200

Procedure:

1. Disperse the Carbopol in water in main tank while heating to 75C.
2. Add the Tensami 1/05, Amigel Solution, and methylparaben with prop agitation.
3. Mix the Tensami 8/09, 687 Blend, Jjoba, Vitamin E, and propylparaben at 75C.
4. Add the oil phase to the main tank with prop agitation and mix until uniform.
5. Switch to sweep agitation and begin cooling to 50C.
6. Add the TEA and Tristat IU while cooling to 50C.
7. Continue cooling to RT and add perfume.

Keltrol	0.20
B3 Triethanolamine	0.50
B4 Schercomid AME-100	1.50
C- Germaben II	1.00
D- Fragrance	0.30
E- Cucumber Extract	q.s.

Procedure:

Phase B:

In the main beaker disperse B1 at 75C.

Disperse B2 in a separate beaker at ambient temperature.

Add B2 to B1.

Add B3 to the main beaker at 75C.

Add B4 to the main beaker at 75C.

Phase A:

Blend A together at 75C.

Add Phase A to Phase B at 75C with continuous mixing until a homogenous emulsion is formed (at least 15 minutes at 75C).

Cool batch to 60C and add Phase C.

Continue to cool batch to 30C and add fragrance.

Formula L-213-1

FACIAL GEL CLEANER

CLEAR EYE GEL

RAW MATERIALS	% By Weight
Deionized water	57.75
Carbomer 940 (3% aqueous slurry)	25.00
Triethanolamine (10% aqueous solution)	11.25
GLUCAM E-10	5.00
BIOCARE SA	1.00
Perfume and preservative	q.s.

Procedure:

Add Carbomer 940 slurry to water with gentle agitation; when fully dissolved mix in remaining ingredients, triethanolamine last. Slowly mix to avoid air entrapment until gel is formed.

Description:

Soft gel for easy application near eye area. Facial stress lines and wrinkles are effectively lifted and masked by BIOCARE SA, a "skin-activated" complex, resulting in a soft smooth appearance. GLUCAM E-10 helps maintain moisture necessary for this delicate area.

SOURCE: Amerchol Corp.: BIOCARE SA: Formula T61-133-8

CLEANSING GEL

RAW MATERIALS	% By Weight
UCARE Polymer SR-10	0.30
POLYOX WSR N-3000 (1% Aq. Solution)	5.00
GLUCAM E-20	1.00
Cocobetaine (43%)	4.45
Citric Acid	0.29
Cocamide DEA	5.00
Ammonium Lauryl Sulfate (28%)	53.57
Glycol Distearate	0.75
Deionized water	29.64
Perfume and preservative	q.s.

Description:

Off-white, slightly pearlescent, flowing cleansing gel. Can be used for all conditioning, cleansing applications. UCARE Polymer SR-10 imparts a substantive film on the skin which reduces the irritation potential of the surfactant while conditioning as well. GLUCAM E-20 improves foam properties. Formula can also be used as a shave gel where POLYOX WSR N-3000 adds slip to ensure a smooth shave by reducing razor drag.

CREAMY FROSTED EYESHADOW, CREASE RESISTANT

INGREDIENTS	% By Weight
Part A:	
Sandopan KST	10.70
Stearic Acid	5.30
Velsan P8-3	5.30
Part B:	
Water, preservatives, fragrance	Q.S.
Part C:	
Cloisonne Copper	25.00

Procedure:

Heat and melt Part A. Heat Part B. Add A to B. Cool and add Part C.

An emollient, but crease-resistant eye shadow emulsion. Silky feel and moisturizing properties.

SOURCE: Sandoz Chemicals Corp.: Formulation No. CPP-01

LONG WEARING PRESSED EYESHADOW

RAW MATERIALS	% By Weight
A. Talc, USP	48.50
Mica	15.00
Sericite	15.00
Zinc Stearate	1.50
Pigments (FD&C, D&C, Iron Oxides, Ultramarines, Titanium Dioxide)	15.00
B. TEGOSOFT 189	0.40
ABIL Wax 9801	0.30
ABIL WAX 2434	0.30
Mineral Oil	4.00
Fragrance, Preservatives	QS

Procedure:

Mix all ingredients of part A in a blender. Combine the ingredients of B part and spray or slowly add to part A using a blender. Pulverize through a screen. Press into godets.

The long wearing properties of this eyeshadow are enhanced by the pigment dispersion. The pigment dispersion is optimized by the use of Cetyl Dimethicone and Stearoxy Dimethicone. The Isostearyl Isononanoate contributes to the creamy application.

ENRICHED MAKEUP FOUNDATION

RAW MATERIALS	% By Weight
Part A.	
PHOSPHOLIPID EFA	3.00
Steareth-20	3.25
0.5% Kelzan AR in 0.1% NaCl	67.50
Pigment	15.00
Methyl Paraben	0.25
Part B.	
Steareth-2	1.75
Cetearyl Alcohol	2.50
Myristyl Myristate	3.00
Isopropyl Myristate	2.50
Dow Fluid 200/100 cs.	1.00
Propyl Paraben	0.25

Procedure:

Combine ingredients in phases A and B as shown and heat to 55C. Blend phase B into phase A with sufficient homogenization to ensure good emulsification. Stir cool to 40C., add fragrance, and package.

Comments:

This liquid foundation is enhanced by the presence of PHOSPHOLIPID EFA which may help bind pigment to skin for a longer lasting application. Further benefits include a non drying afterfeel and a reduction in epidermal water loss through the use of PHOSPHOLIPID EFA.

Formula F-571

REPLENISHING CREME RINSE

RAW MATERIALS	% By Weight
Water	87.80
Natrosol 250 HHR	0.70
Kessco Ethylene Glycol Distearate	2.00
Lanette O	2.50
MONAQUAT TG	6.70
PHOSPHOLIPID EFA	0.30

Procedure:

Charge water, carefully add Natrosol 250 HHR with good agitation. Heat to 50-60C and add remaining ingredients and continue heating to 70C. Cool to 45C and adjust pH to 4.5-5.0. Add color, fragrance and preservative as required. Continue agitation and cooling until pearl develops.

ESSENTIAL SKIN MOISTURIZER

RAW MATERIALS	% By Weight
Deionized water	94.5
CELLOSIZÉ POLYMER PCG-10	0.5
GLUCAM E-10	2.0
Glycerin	2.0
BioCare SA	1.0
Preservative and perfume	q.s.

Procedure:

Disperse CELLOSIZÉ POLYMER PCG-10 in water; facilitate mixing with gentle heating. When solution is clear, add GLUCAM E-10 and glycerin and cool to room temperature. Add BioCare SA and perfume below 35C.

Description:

Clear flowing gel. BIOCARE SA, a "skin-activated" complex, effectively lifts and masks wrinkles and facial lines, and provides an emollient afterfeel. This simple system provides excellent slip during rub-in, spreading to a thin, nongreasy film. GLUCAM E-10 enhances the exceptional humectant properties of the Hyaluronic Acid in BIOCARE SA. Effective as an all-day moisturizer or overnight replenisher.

Formula T61-140-1

HYDROALCOHOLIC FACIAL TONER

RAW MATERIALS	% By Weight
Deionized water	48.35
Alcohol-SD 40	48.35
Witch Hazel	2.00
Menthol, USP	0.30
BIOCARE SA	1.00
Color and preservative	q.s.

Procedure:

Dissolve menthol in water with mixing. Add remaining ingredients. Mix until clear.

Description:

Clear, cooling formula suitable for skin cleansing and freshening. BIOCARE SA, a "skin-activated" complex, effectively improves appearance and feel of skin by tightening and lifting wrinkles and facial lines resulting in a non-tacky, smooth surface.

Formula T61-127-1

Procedure:

1. Mix and melt Part A (60C).
2. Heat Part B and add to Part A.
3. Cool to 35C and add Part C.

Creamy white emulsion. PLACENTA LIQUID water-soluble is recommended for revitalization and regenerating aging skin.

SOURCE: Henkel: Formula HOB-154-47

FACIAL CLEANSER

INGREDIENT	% By Weight
Part A:	
Deionized Water	89.55
Cocoamphodiacetate (Miranol C2M Conc. NP)	1.00
Quaternium-15 (Dowicil 200)	0.10
Methylparaben	0.10
Propylparaben	0.05
Part B:	
Isostearyl Benzoate (Finsolv SB)	4.00
Diocetyl Maleate (Bernel Ester DOM)	2.00
Caprylic/Capric Triglyceride	1.00
Octyl Hydroxystearate (Wickenol 171)	1.00
Permulen TR-2	0.20
Carbopol 980	0.60
Part C:	
Aminomethyl Propanol (95%) (AMP-95)	0.40

This cleansing formulation is light, non-greasy and water-rinsable. It provides thorough cleansing without drying the skin.

SOURCE: Angus Chemical Co.: Formula PF-0164: Suggested by B.F. Goodrich Chemical

FACIAL CLEANSER

RAW MATERIALS	% By Weight
Water	78.0
MONAMATE LA-100	12.0
PHOSPHOTERIC QL-38	10.0

Procedure:

Add ingredients in order listed while warming to 50C. Adjust to level desired with 50% citric acid while warm. The product may require 24 hours or more to set up to a soft paste or cream consistency.

This bright white non-greasy cleanser has the consistency of whipped cream. Its very mild, high foaming lather cleans completely and leaves the skin with a soft talc feel. It can be used as is or enhanced by addition of emollients.

SOURCE: Mona Industries, Inc.: Formula C-259

FACIAL GEL

RAW MATERIALS	% By Weight
Water	50.0
Sipon ES-2	30.0
PHOSPHOTERIC QL-38	20.0

Procedure:

Add ingredients in order listed with agitation. Adjust pH to 6.0. Add color, fragrance and preservative as required.

This formulation gently cleanses while leaving a soft talc like after feel to skin.

Formula F-483

NIGHT TIME MOISTURIZER

RAW MATERIALS	% By Weight
I. PHOSPHOLIPID EFA	4.00
Carbowax 1450	2.00
Glycerine	2.00
Water	73.00
II. Brij 72	2.50
Lanette O	4.00
Myristyl Myristate	4.00
Cutina CP	4.00
Isopropyl Palmitate	3.00
Dimethicone 100 c.s.	1.50

Procedure:

Combine ingredients for (I) and (II) separately and heat to 65C. Homogenize (II) into (I) with continued heating until sufficiently mixed. Stir-cool to 45C. Add fragrance, color, preservative and pack.

This creme is designed specifically for use in the facial area after washing or bathing. The combination of humectants and emollients together with the skin conditioning of the PHOSPHOLIPID EFA provides a powerful barrier to drying while enhancing skin feel.

Formula F-495

FACIAL MOISTURIZER

INGREDIENTS	% By Weight
A. Deionized Water	77.9
Carbomer 940	0.5
Sorbitol	1.0
Methylparaben	0.2
B. Polysorbate 80	1.5
Glyceryl Stearate and PEG 100 Stearate	3.0
Cottonseed Oil	8.0
Stearyl Alcohol	1.0
Triethanolamine	0.5
C. DERMATEIN GSL	5.0
D. Dimethicone	1.0
Diazolidinyl Urea	0.3
Fragrance	0.1

Procedure:

Begin heating water to 80C; sift Carbomer into water with constant agitation; mix until clear. Add rest of Part A. Mix well. Add part B ingredients in order. Mix until homogeneous. Begin cooling to room temperature. Slowly add DERMATEIN GSL; mix until smooth. Add rest of Part D ingredients. Mix until uniform.

Description:

This light, facial lotion demonstrates how DERMATEIN GSL replenishes the lipid lost from dry skin. DERMATEIN GSL rejuvenates skin by increasing the skin's ability to bind moisture.

FACIAL TONER FOR OILY SKIN

INGREDIENTS	% By Weight
A Ethylalcohol (96Vol.%) denatured	10,000
Perfume Oil	0,100
Cremophor RH 455	0,500
B Demineralized Water	78,600
Potassium sorbate	0,300
Cremogen M-82 730 337	5,000
1,2-Propylene glycol	5,000
D-Panthenol	0,500

Manufacturing Process:

Part A: Dissolve perfume oil and Cremophor RH 455 in the ethyl alcohol.

Part B: Dissolve all ingredients in water and add to part A while stirring.

Allow to store the facial toner for 2-4 weeks at low temperatures (approx. 5-10C). Then filter the facial lotion with fine clarifying sheets at this temperature.

Remark: Without any colour dye:

the yellow-brownish colouring of the facial toner depends on the native colouring of the plant extract.

FOUNDATION MAKE-UP

INGREDIENTS	% By Weight
Part A:	
CARNATION light mineral oil	12.28
PROMYR isopropyl myristate	3.93
EMEREST 2400 glyceryl stearate	3.93
NEO-FAT 18-55 stearic acid	3.93
Propyl PARASEPT propylparaben	0.10
Part B:	
Water, deionized	63.85
Propylene glycol	4.91
Triethanolamine (TEA)	1.47
KELTROL T xanthan gum	0.49
Methyl PARASEPT methylparaben	0.20
Part C:	
Pigment blend	4.91

Procedure:

- Mix together all ingredients of Part A and heat to 70-75C (160-170F).
- Using a high-shear mixer, hydrate KELTROL T in the water. This requires at least 10 minutes of mixing. While mixing, add the remaining Part B ingredients.
- Heat to 70-75C (160-170F).
- Add Part B to Part A while mixing.
- Add Part C and continue mixing until homogeneous.

In this formulation, KELTROL T xanthan gum exhibits the excellent suspending and emulsion stabilizing properties.

GEL FACIAL CLEANSER

RAW MATERIALS	% By Weight
Water	52.1
Methyl Paraben	0.2
MONAMATE OPA-30	16.7
MONATERIC CSH-32	16.7
MONATERIC ISA-35	14.3

15.6% active

Mixing Procedure:

Add ingredients in the order listed while warming to 50C, using slow agitation. Adjust pH while hot with phosphoric acid and pack warm. At pH 6.0 viscosity is approximately 35,000 cps.

This is non-irritating to eyes and skin, offers excellent rinseability and leaves skin soft and smooth.

MILD CONDITIONING FACIAL CLEANSER

RAW MATERIALS	% By Weight
Sodium Laureth Sulfate (1 mole EO) (25% active)	28.0
MONAMATE C-1142	12.5
MONAMID 1089	3.0
MONAQUAT P-TC	2.5
Cerasynt IP	1.5
Preservative	0.3
Water	52.2

Procedure:

Mix all ingredients into water stirring between additions. Heat while mixing to melt the solid materials (approx. 70C). Cool with stirring. At <40C add perfume and colors. Adjust pH to 5.0-6.0.

Properties:

Appearance (25C): Pearled liquid

Nominal Activity: 17%

In this formulation, MONAMATE C-1142 provides mild, effective cleansing while MONAQUAT P-TC softens and conditions the skin.

GENTLE MAKEUP REMOVER WITH NATURAL INGREDIENTS

INGREDIENT	% By Weight
Deionized Water	56.8650
Carbomer 940	0.2000
Tensami 1/05 AMI	1.0000
Amigel, 2% Aq. Soln.	25.0000
Tri-Sept M	0.2000
Tristat IU	0.2000
Tensami 8/09	10.0000
Demaquillant 687 LS	3.0000
Jojoba Oil	3.0000
Vitamin E Acetate	0.0150
Tri-Sept P	0.1000
Allerderm No. M-3012	0.2000
Triethanolamine 99%	0.2200

Procedure:

Disperse the Carbomer in water in main tank while heating to 75C.

Add the Tensami 1/05, Amigel Solution, and Methylparaben with prop agitation.

Mix the Tensami 8/09, Jojoba, Vitamin E, and Propylparaben at 75C.

Add the oil phase to the main tank with prop agitation and mix until uniform.

Switch to sweep agitation and begin cooling to 50C.

Add the TEA and Tristat IU while cooling to 50C.

Continue cooling; add perfume and Blend 687 LS at 45C.

Cool to room temperature.

A gentle makeup remover based on plant extracts, natural emulsifiers and natural oils.

LONG WEARING CREAMY LIPSTICK

RAW MATERIALS	% By Weight
A. Castor Oil	50.05
TEGOSOFT 189	3.00
ABIL Wax 9801	1.00
Mineral Oil	9.00
Candelilla Wax	4.35
Carnauba Wax	3.00
Ozokerite	3.00
ABIL Wax 9810	3.15
ABIL Wax 2440	2.00
Lanolin Alcohol	3.00
BHA	0.05
B. Pigments	3.00
ABIL Wax 9801	0.40
Castor Oil	4.00
C. Titanium Dioxide (and) Mica	11.00
D. Fragrance	QS

Procedure:

Melt part A together at 80C. Mix. Grind the pigments of part B into the oils and waxes of part B using a triple roll mill. Add to part A. Mix at 80C. Add part C. Cool to 55C. Add fragrance. Mold.

The long wearing characteristics of this lipstick are enhanced by the use of Cetyl Dimethicone in the pigment grind. The Behen-oxy Dimethicone contributes both to gloss and to the creamy texture. The C24-28 Alkyl Dimethicone contributes gloss and structure to the stick. The Isostearyl Isononanoate provides slip and emolliency.

ABRASIVE FACIAL SCRUB LOTION

RAW MATERIALS	% By Weight
Part A:	
MIRATAINE ODMB-35	7.0
MIRANOL MHT	30.0
Propylene Glycol	2.0
Citric Acid	0.65
Water	47.2
Part B:	
Cetyl Alcohol	3.0
Polytex 10	3.0
Part C:	
Microthene MN-772	7.15

Procedure:

Heat Part A and Part B to 60C. While stirring, add Part B to Part A. Continue stirring and allow to cool. At 45-50C, add Part C. Continue agitation until product reaches room temperature.

Solids: 28.8%

SOURCE: Miranol Inc.: MIRANOL Products: Formula

LOW IRRITATION FACIAL CLEANSER/MAKE-UP REMOVER

INGREDIENTS	% By Weight
Water	69.85
TEXAPON ASV	15.00
APG-600	8.00
VELVETEX CDC	5.00
Sodium Chloride	2.00
Kathon CG	0.05
Fragrance V-5439	0.10

Procedure:

Charge kettle with water. Add the other ingredients, in the order listed, under agitation. (Note: Pre-heat APG-600 to 40-45C under agitation). Adjust pH to 6.0±0.3 with 50% citric acid. Continue stirring until product is homogeneous. Fill off.

Comments:

APG-600 boosts performance of extra mild surfactants while maintaining or decreasing irritation potential.

SOURCE: Henkel: Product Information APG: Formula H-4978

LOW IRRITATION FACIAL CLEANSER/MAKE-UP REMOVER

INGREDIENT	% By Weight
Texapon ASV	15.0
APG-600 SP	8.0
Velvetex CDC	5.0
Citric Acid	to pH 5.5-6.0
Water	Balance

Comment:

APG-600 SP boosts performance of extra-mild surfactants while maintaining or decreasing irritation potential.

A 12% total actives mixture (50:50) of Texapon ASV and APG-600 SP exhibited a 24 hour Draize Eye Score of only 3.3.

CLEANSING TOWELETTE

INGREDIENT	% By Weight
Standapol SH-124-3	5.0
APG-600 SP	3.0
Cetiol HE	0.5
Citric Acid	to pH 6.0-6.5
Water	Balance

Comment:

An easy to formulate product that can be applied to towelettes via dipping or spraying.

LUXURIOUS MAKEUP (W/O)

RAW MATERIALS	% By Weight
A Veegum	1.2
Water	37.9
Magnesium Sulfate	0.4
B Talc	5.5
Kaolin	1.5
Titanium Dioxide	5.0
Iron Oxides	3.0
C. Mineral Oil Light	15.0
POLYSYNLANE	8.0
Ritachol	8.0
Lanapene	7.0
70% Sorbitol Solution	5.0
Witcamide 511	1.5
Preservatives	q.s.

Procedure:

Add the Veegum to the water slowly, agitating continually until smooth. Grind B and add to A, mixing until uniform. Add A and B to C and mix until smooth and uniform.

An economical, cold process W/O emulsion. An elegant moisturizing makeup for dry skin. No color streaking or settling. The makeup spreads smoothly with a rich, non-greasy feel, leaving a uniform pigment film plus the effective emollients and moisturizers of the external phase. This formula would be a suitable base for a line of luxurious makeups for the mature woman with dry skin problems.

Propylene Glycol	4.00
DRY FLO-C	4.00
Phase C:	
Germaben II E	1.00
Phase D:	
Fragrance Q-4698	0.20

Procedure:

Heat water, Monaquat and Allantoin to 50C. Add CELQUAT SC-240, disperse thoroughly and heat to 80C. Prepare Propylene Glycol and DRY FLO-C slurry and add to water phase. Mix Phase B and heat to 80C. Add Phase B to Phase A at 80C and mix for 15 minutes. Cool to 35C and add Phase C and Phase D to it. Cool to room temperature and homogenize.

pH: 5.8

This is a soft elegant cationic lotion with fast rub-in resulting in a non-greasy, moisture barrier film leaving the skin with a luxurious feel. The lotion provides conditioning, moisturizing, and protecting effects to the skin. This formula has compatibility with the skin's pH resulting in a more comfortable feeling after its use.

* Sequence 4 add as dry mix.

Procedure:

1. Disperse Sequence 1 with homogenizing mixer.
2. Predisperse Sequence 2 in a separate kettle.
3. Add Sequence 2 to Sequence 1. Mix well.
4. Add Sequence 3 to combined Sequence 1 and 2 and mix well.
5. Add Sequence 4 as dry mix to combined Sequence 1, 2 and 3.
6. Begin heating to 75C with continuous homogenization.
7. Heat Sequence 5 to 75C-80C and mix well.
8. Add Sequence 5 to combined Sequence 1, 2, 3 and 4. Homomix for 15 minutes.
9. Remove homomixer. Change to Lightnin' mixer.
10. Start cooling batch under continuous Lightnin' mixing.
11. Cool to 25C and package.

OILY SKIN MASK

RAW MATERIALS	% By Weight
I. TEFOSE 2000	12,00
GELEOL	2,00
M.O.D. WL 2949	4,00
VEGETOL Huileux Calendula WL 1072	3,00
Antioxygen	Q.S.
II. Demineralized Water	58,80
Zinc Oxyde	10,00
Kaolin Speswhite	5,00
Preservative	Q.S.
VEGETOL Hydro Bardane MCF 777	3,00
ATELOGLYCANE	2,00
Perfume	0,20

Preparation:

Disperse the powders in the water (part II).

Under stirring pour II heated up to 75C into I heated up to 75C.

Cool down while stirring and around 30C, add the other components.

Homogenize if necessary.

SOURCE: Gattefosse: Formula MM 2966

PEELABLE LIQUID FACE MASK

INGREDIENTS	% By Weight
Part A:	
Water, deionized	61.5
VINOL polyvinyl alcohol resin	8.0
Propylene glycol	6.0
KELTROL T xanthan gum	0.5
Color	to suit
Part B:	
SDA alcohol (40-2)	20.0
AMEROXOL DE-20 oleth-20	4.0
Preservatives	to suit

Procedure:

Part A:

1. Hydrate KELTROL T in the deionized water using a high-shear mixer for 10-15 minutes.
2. Heat to 93C (200F).
3. Add the polyvinyl resin and mix until dissolved.
4. When fully dissolved, add the propylene glycol.
5. Cool to 38C (100F).

Note: If color is used, add it after hydrating the gum and before adding the resin.

Part B:

1. Dissolve the oleth-20 in the alcohol.
2. When Part A has cooled to 38C (100F), add Part B.
3. Mix thoroughly.

PEARLESCENT BODY/FACIAL CLEANSER AND SHAMPOO

RAW MATERIALS	% By Weight
Ammonium Lauryl Sulfate (28%)	45.0
MACKALENE 426	5.0
MACKERNIUM 007	0.6
MACKAMIDE PKM	3.8
EGDS	1.0
MACKSTAT DM	Q.S.
Water, Dye, Fragrance q.s. to	100.0

Procedure:

1. Dilute MACKERNIUM 007 in water and blend until dispersed.
2. Add remaining component except MACKSTAT DM and heat to 70 degrees C.
3. Blend until homogenous and cool to 50 degrees C.
4. Add remaining components and adjust pH to 5.0-6.0 with citric acid.

pH: 5.5

Viscosity (cps): 11,000

Formula BP-4A

PEARLESCENT BODY/FACIAL CLEANER AND SHAMPOO

RAW MATERIALS	% By Weight
1. Ammonium Lauryl Sulfate 28%	45.00
2. Mackalene 426	5.00
3. Mackernium 007	0.60
4. Mackamide PKM	3.00
5. Ethylene Glycol Distearate	1.00
6. Mackstat DM	QS
7. Deionized Water	100.00
8. Color, Fragrance	QS

pH: 5.00-6.00

Viscosity: 1400-3000 cps

Procedure:

Into main stainless steel mixing tank weigh in #1, #2, #4, #5, and start heating to 70C (160F), (and do not go above this temperature). Start mixing and keep temperature at 70C (160F) until everything is fully dissolved. In a separate container dissolve #3 in the DI water #7 and heat to 70C (160F) and add this hot blend to the main mixing tank and keep mixing till solution is completely homogenous and no undissolved particles are noticeable.

Start cooling while agitating well. At 50C (120F) add item #6 then item #8, cool to room temperature while mixing. Adjust pH if too high with a little citric acid.

STYLING MOUSSE
WITH PEARL PIGMENTS

COMPOSITION	% By Weight
Luviskol VA 64	2.0
Dehyquart SP	0.6
Gafquat 755 N	1.4
Cetiol HE	1.0
Ethanol	3.0
Pearl pigment	1.0
e.g. TIMIRON Super Violet or DICHRONA YG	
Water, demineralized	ad 100.0

Manufacturing process:

The different ingredients have to be solved or suspended in warm water by stirring. Then the suspension is to be filled in cans under addition of propellant gas.

As propellant a mixture of Propan/Butan can be recommended in ratio of 25:75.

Proportion suspension/propellant about 92:8.

Valve: ST-10 (Aluminum plate, without microflex lacquer)

4-slit-box, stem-hole 1X.018, without suction pipe.

Foam head: ST 500

Shake well before use!

TRANSPARENT MASCARA
NO COLOR MASCARA

RAW MATERIALS	% By Weight
Propandiol (1,2)	2.0
Water, demineralized	75.0
Germall 115	0.2
Pearlpigment (e.g. TIMIRON Starlight Colors)	0.03-0.05
Carbopol 940	0.2
Ethanol (95%)	3.0
Triethanolamine	0.2
Water, demineralized	18.4
Luviskol K30	1.0

Preparation of the Gel:

The pigment is dispersed in the Propandiol-Water solution containing Germall. Carbopol 940 is added and dissolved under stirring, and stirring is continued until a clear solution is obtained. Then Ethanol and the TEA/water mixture are added successively. Finally Luviskol K30 can be added to soften the gel.

TRANSLUCENT FACE POWDER WITH HUMECTANT PROTEIN

INGREDIENTS	% By Weight
A. Talc	74.0
Magnesium Stearate	6.0
Cyclomethicone	12.0
Acrylates Copolymer	3.0
B. POLYPRO 15000	2.0
C. Methylparaben	0.2
Imidazolidinyl Urea	0.2
D. Talc	1.9
Iron Oxides	0.7

Procedure:

Combine Part A in a suitable vessel, blend until uniform. Slowly add Hydrolyzed Collagen, mix well. Add Part C ingredients in order, mix until homogeneous. Mill premix D to a uniform particle size, add to mixture and blend until the product has a homogeneous consistency.

Description:

This fine powder absorbs facial oils and keeps makeup looking fresh. The addition of Hydrolyzed Collagen helps bind moisture to the skin and add durability to foundation makeup.

W/O CREAMY FOUNDATION

RAW MATERIALS	% By Weight
A CRODAMOL PMP	1.00
CRILL 6	2.00
SYNCROWAX HR-C	3.20
Squalene	3.50
Silicone L-45	3.00
Di-Octyl Adipate	2.00
B Pigments:	
A1160 Brown Iron Oxide	1.00
A1301 Yellow Iron Oxide	0.50
A1249 Red Iron Oxide	0.50
Talc 1003	12.00
574 Titanox 1000	1.00
C Water deionized	66.80
Glycerin	2.00
Magnesium Sulphate	0.70
Methyl paraben	0.20
Propyl paraben	0.10
Biopure 100	0.50

Procedure:

Heat Phase A to 75-80C. Heat Phase C to same temperature respectively. Add the aqueous phase to oils under very slow agitation to ensure maximum stability of the w/o phase. Pulverize Phase B until homogeneous and no streaking of colors is evident. Allow the emulsion to cool to 55C, then add pigments. Continue stirring and fill off at room temperature.

A low solids w/o makeup base designed for normal to dry skin. CRILL 6, Sorbitan Isostearate, imparts water resistant properties as well as emulsification, so the make-up is not displaced by perspiration. SYNCROWAX HR-C, Glyceryl Tribehenate, adds a cushioned feel and stabilization needed in a water-in-oil system. CRODAMOL PMP, a light non-greasy ester, gives good spreadability and play time.

W/O LIQUID MAKEUP - OIL FREE

RAW MATERIALS	% By Weight
Phase A:	
ABIL WE-09	4.50
ABIL B 8839	10.50
ABIL Wax 9801	1.00
Synthetic Wax	0.45
Hydrogenated Castor Oil	0.45
Phase B:	
Talc, USP	5.00
Titanium Dioxide	5.00
Iron Oxides	3.70
Phase C:	
Water	68.90
Sodium Chloride	0.50
Preservatives, Fragrance	QS

Mix the ingredients of Phase A together, heat to 70C. When uniform, cool to 50C. Add Phase B. Mill. Heat water to 50C. Add the sodium chloride. Mix. Gently stream into Phase A/B with lightning mixer. Cool to 35C, add preservatives and fragrance. Homogenize. A very stable soft creamy lotion results with a good pigment dispersion.

A W/O emulsion based liquid makeup with improved pigment grinds. Superior application and wear due to the emulsification system.

W/O LIQUID MAKEUP: COLD MIX FORMULA

RAW MATERIALS	% By Weight
Phase A:	
ABIL WE-09	5.0
ABIL Wax 2434	3.0
ABIL B 8839	9.0
Caprylic/Capric Triglyceride	6.0

AEROSOL HAND CREAM MOUSSE

RAW MATERIALS	% By Weight
Oil Phase:	
CRODAMOL PMP	1.5
SUPER CORONA LANOLIN	2.5
CRILLET 3	3.0
Stearic Acid XXX	5.35
Water Phase:	
Deionized water	85.15
Glycerin	2.5
Perfume, preservatives	qs

Procedure:

Combine oil phase and heat to 70C with mixing. Heat water phase to 70C. Add water phase to oil phase. Cool. At 45C add fragrance. Cool to room temperature and fill.

Fill: 90% Concentrate, 10% Propellant A46

This hand cream mousse is appropriate for family or industrial use, where the hygiene of an aerosol dispenser is important. CRODAMOL PMP helps to modify and improve the otherwise heavy emollience of the other components.

Formula SC-152

NON-STRIPPING CLEANSING CREAM

RAW MATERIALS	% By Weight
Oil Phase:	
POLAWAX	15.00
CRODACOL C-95	1.00
SUPER REFINED Sesame Oil	7.50
SUPER REFINED Apricot Kernel Oil	7.00
CRILL 6	3.00
Water Phase:	
AMINOFOAM C	.50
Germaben II	1.00
Silicone F754	2.00
Water, deionized	63.00

Procedure:

Heat the oil phase to 75C, heat the water phase to 75C. Add the water phase to the oils. Continue stirring to room temperature. pH 6.80

An effective cleansing cream that exhibits good oil solubilizing without stripping the skin. CRILL 6 is the auxiliary emulsifier and solubilizer. SUPER REFINED vegetable oils act as oil solubilizers. AMINOFOAM C provides exceptionally good rinse-off.

Formula SC-139

ALL-PURPOSE DRY SKIN CREAM

FORMULA	% By Weight
Water Phase:	
GLUCQUAT 100	1.0
Deionized water	83.0
Oil Phase:	
GLUCAM P-20 Distearate	2.0
GLUCATE DO	0.5
PROMULGEN D	4.5
ACETULAN	2.0
CETAL	1.0
Mineral oil, 70 vis.	5.0
Cetyl Palmitate	1.0
Perfume and preservative	q.s.

Procedure:

Dissolve GLUCQUAT 100 into deionized water, and heat to 80C with adequate agitation. Combine oil phase ingredients, and heat to 80C with propeller mixing. Slowly add water phase to oil phase, and mix until uniform. When material starts to thicken during cooling, change to slow sweep agitation.

Description:

GLUCQUAT 100 provides skin conditioning while acting together with the GLUCAM P-20 Distearate to maintain moisture in the skin. GLUCATE DO (w/o) and PROMULGEN D (o/w) act as a nonionic emulsifier pair. ACETULAN imparts a smooth, velvety afterfeel while improving rub-in.

BARRIER CREAM
COLD MIX FORMULA

RAW MATERIALS	% By Weight
Phase A:	
ABIL WE-09	5.0
Decyl Oleate	5.0
Caprylic/Capric Triglyceride	5.0
Isopropyl Myristate	5.0
Silica	0.5
Phase B:	
Sodium Citrate (solution)*	20.0
Water	58.7
Hydroxyethylcellulose	0.8
Phase C:	
Fragrance	Q.S.
Preservatives	Q.S.
* 100 G Sodium Citrate/1 liter water. pH adjusted to 5.0 with Citric Acid.	

Procedure:

1. In a vessel, blend together the ingredients of Phase A until uniform.
2. In a separate vessel, disperse the Hydroxyethylcellulose into the water.
3. Add Phase B slowly to Phase A with agitation.
4. Add Phase C, mix until dispersed.

MOISTURIZING CREAM
COLD PROCESS W/O

RAW MATERIALS	% By Weight
Phase A:	
ABIL WE-09	5.0
Mineral Oil	5.0
Caprylic/Capric Triglycerides	5.0
Isopropyl Myristate	5.0

CHAMOMILE CREAM W/O

SUBSTANCE	% By Weight
A. Neo-PCL self-emulsifying W/O 2/066255	23.0
Miglyol 812	7.2
Nipasteril 30 K	0.3
Extrapone VC Special 2/032431	1.0
B. Water	62.5
Magnesium sulfate	0.5
Karion F	5.0
Neo-Extrapone Chamomile 2/060350	0.2
C. Perfume oil	0.3

Suggestions on preparation:

During manufacture the phases should be emulsified with a stirrer at about 400 to 500 rpm. Stirring speed must be maintained throughout the process. The cream must be homogenized.

Suggested Formulation No. VKC 424/54

HAND CREAM

SUBSTANCE	% By Weight
A. Tegin M	8.0
PCL-solid 2/066210	5.0
Isopropyl myristate 2/044111	5.5
Beeswax DAB 7	2.0
Nipasteril 30 K	0.3
Cetyl alcohol	1.0
Calendula oil 2/383530	0.5
Silicone oil AK 100	0.5
B. Dragophos 2/918500	2.0
Water	69.8
Propylene glycol	3.0
Glycerin	2.0
C. Perfume oil	0.4

Suggested method of preparation:

Heat phases A and B separately to about 80C and emulsify phase B into phase A with a stirrer. For optimal emulsification the emulsifier Dragophos 2/918500 should be suspended in the water phase.

Suggested Formulation No. VKH 488/50

SOURCE: Dragoco, Inc.: Formulas

CLEANSING CREAM

RAW MATERIALS	% By Weight
Phase I:	
Myvaplex 600P concentrated glyceryl monostearate	6.00
Emersol 132 USP/NF Lily stearic acid	4.00
Petroleum jelly, USP	10.00
Drakeoil #9	10.00
Isopropyl myristate	10.00
SF18 (350 cP) silicone fluid	2.00
Phase II:	
Demineralized water	49.60
Propylene glycol USP	5.50
Triethanolamine 98%	0.70
Germaben II E preservative	1.50
Methyl paraben USP	0.20
Phase III:	
EASTMAN Vitamin E 6-81	0.30
Phase IV:	
Perfume	0.20

Procedure:

1. Heat Phase I and Phase II separately to 80C with propeller mixing until all chemicals are dissolved and uniform.
2. At 80C while propeller mixing, add Phase II to Phase I, w/o.
3. Continue mixing while cooling slowly to 50C. Adjust mixing to 50C due to viscosity change (thickening occurs).
4. At 50C add Phase III while mixing. Once uniform, add Phase IV with mixing.
5. Continue to adjust mixing as needed. Force cool, if needed, until emulsion reaches 32C. The product will look somewhat unstable at this stage. Inversion will occur at 32C and the cream will become very smooth and white. Continue to force cool to room temperature.

Typical Properties:

pH: 7.71

Oven Stability: Four months at 45C--No separation

Freezer Stability: No separation after three thaws

Room Temperature Stability: Six months at 25 to 27C--No separation

Cycle Stability: No separation

Centrifugation: 7 hours at 3000 rpm--No separation

Ozokerite	5.0
Water Phase:	
Borax	0.6
Water	28.6
BioCare Polymer HA-24	3.8
Germaben IIE	1.0

Description:

Glossy, w/o cleansing cream with the properties of a night cream. BioCare Polymer HA-24 is designed to deliver Hyaluronic Acid as a substantive molecular complex to the skin. Enhanced softening and lubricating properties without greasiness or tackiness. This formulation is very effective on dry areas, such as heels and elbows. Water-retaining function holds moisture yet allows skin to breathe. OHLAN contributes to the stability of the w/o cream. AMERLATE P is an excellent emollient.

DAY CREAM

INGREDIENTS	% By Weight
A Arlatone 983 S	1,200
Brij 76	1,200
Cutina MD	4,000
Neo Heliopan, Type E 1000 656083	2,500
Neo Heliopan, Type BB 116210	0,700
Isopropyl myristate	2,000
Baysilone Fluid M 10	0,800
Finsolv TN	6,000
Solbrol P	0,050
B Demineralized Water	48,400
Solbrol M	0,150
Glycerin 86%	4,000
Germall 115	0,200
C Demineralized Water	25,000
Carbopol 954	0,400
Sodium hydroxide (10% aq. solution)	1,200
Perfume Oil	0,200
Cremogen Camomile forte 728 790	2,000

Manufacturing Process:

Part A: Heat up to 75C.

Part B: Heat up to 85C.

Add part B to part A slowly while stirring. Cool while stirring to 55C.

Part C: Disperse the Carbopol in the water using high speed agitation. Mix to form a uniform dispersion free from lumps. Add sodium hydroxide solution while stirring to form a high viscid gel. Add part C to part A/B while stirring. At 35C add the fragrance, the cremogen and cool down while stirring to room temperature.

The pH value of the finished cream should be at 6.5-7.0.

Remark: Without any colour dye:

the yellow-brownish colouring of the cream depends on the native colouring of the plant extract.

Instruction:

In EEC countries the use of more than 0.5% Benzophenone-3 in sunscreen products is liable to declare: contains Oxybenzone.

URBAN PROTECTION DAY CREAM

INGREDIENT	% By Weight
Demineralized Water	65.000
Carbopol 1342, 2%	15.000
Glycerine	2.000
Brookswax D	1.000
Finsolv TN	2.000
DC 200 Fluid, 350 cs	0.500
Germaben II-E	1.000
Biomin Se/P/C	0.300
Dermasome SOD	10.000
Dermasome E	3.000
AMP	0.200

Procedure:

1. Disperse the Carbopol in Water while heating to 75C.
2. Add the Glycerin and mix well.
3. Blend the Finsolv TN, Brookswax D, and Silicone Fluid at 70C until uniform and add to Water Phase. Mix until uniform.
4. Add the AMP and mix until uniform with fast propellor agitation.
5. Cool to 50C and add the Biomin Se/P/C and Germaben with sweep agitation.
6. Cool to 35C and add the Dermasomes.
7. Fragrance as desired and mix well.
8. Adjust pH to 5.0 with Citric Acid if required.

This light textured day cream contains an effective level of natural antioxidants to provide protection from urban environmental influences. The antioxidants are in the form of Liposomes as Dermasome SOD and Dermasome E to provide enhanced penetration and efficacy and the Protein-bound Biomin Se/P/C.

DEPILATORY CREAM

COMPOSITION	% By Weight
Phase A:	
Lanette O	10.0
Emulgin B 1	2.0
Cetiol V	3.0
Phase B:	
Urea	4.0
Water	ad 100.0
Phase C:	
Calcium thioglycolate	7.5
Calcium hydroxide	1.5
Phase D:	
Pearl pigment (silver or interference types)	+5.0

Manufacturing process:

The ingredients of phase A and B are separately heated to 75C. Under stirring phase B is added to phase A. The mixture is homogenized. At appr. 40C. the ingredients of C are added under stirring and if necessary the mixture is homogenized once more. Finally the pearl pigment is added and stirring is continued until a homogeneous cream is obtained.

PEELING CREAM WITH PEARL PIGMENTS

RAW MATERIALS	% By Weight
Lanette N	8.0
Eutanol G	5.0
Cetyl alcohol	2.0
Sorbitol	5.0
Preservatives	0.2
Allatoin	0.1
Texapon N 25	5.0
Polymist B6	1.0
Timiron MP-115	5.0

Manufacturing Process:

Oily phase and water phase are heated separately to 70-74C. Then water phase will be stirred into the oil phase, slowly cooled and homogenized at about 60C. Finally, fragrance, pearl pigment and polyethylene powder are to be stirred into carefully at 40C.

DRY SKIN CREAM

FORMULA	% By Weight
Phase A:	
QUATRISOFT POLYMER LM-200	0.2
Water	36.1
Phase B:	
Carbomer 940	0.2
Water	39.8
Triethanolamine (99%)	0.2
Phase C:	
Propylene Glycol	3.0
GLUCAMATE SSE-20	3.5
Phase D:	
AMERCHOL L-101	8.0
MODULAN	1.0
Glyceryl Monostearate, Neutral	2.0
GLUCATE SS	1.5
Mineral Oil	4.5
Perfume and Preservative	q.s.

Procedure:

Disperse QUATRISOFT POLYMER LM-200 in water at room temperature with good agitation. When thoroughly dispersed, heat to 75C until uniform. Mix phase B separately until uniform at room temperature. Add phase A to phase B, minus triethanolamine with mixing. When thoroughly mixed, add the triethanolamine with mixing until gel-like. Heat AB and phase C to 75C. Add phase C to AB. Heat phase D to 75C and add to ABC. Cool to room temperature with mixing.

Description:

Soft, white, glossy cream for use on dry skin. QUATRISOFT POLYMER LM-200 (cationic cellulosic polymer) is substantive to the skin, imparting a smooth, silky afterfeel. The nonionic emulsifying pair of GLUCATE SS (w/o) and GLUCAMATE SSE-20 (o/w) produces a stable emulsion over a wide temperature range. AMERCHOL L-101 acts as a w/o stabilizer in this o/w cream, and along with MODULAN, also provides emolliency.

GLUCATE DO	0.5
ACETULAN	2.0
Cetyl Alcohol (CETAL)	1.0
Stearic Acid, xxx	4.0
Mineral Oil, 70 vis.	5.0
Cetyl Palmitate	1.0
Water Phase:	
Carbomer 934	0.3
Triethanolamine (10% aqueous)	17.0
Water	66.5
Perfume and Preservative	q.s.

Procedure:

Disperse the carbomer 934 in water with vigorous agitation. Heat the oil and water phases, minus the triethanolamine, to 85C. Add water phase to oil phase with moderate agitation. Immediately add the triethanolamine. Mix while cooling to room temperature. Add perfume at 40C.

Soft, glossy cream for dry skin. Good temperature stability and auxiliary emulsification are provided by Promulgen D and Glucate DO. Glucam P-20 Distearate functions as the moisturizer. The combination of Acetulan and Glucam P-20 Distearate impart the velvety emollient afterfeel and excellent rub-in.

C. Perfume	q.s.

Preparation:

(A) is melted and brought to 75-80C. (B) is mixed and heated to the same temperature. (B) is slowly emulsified into (A). (C) is stirred in at about 40C. Before filling, it is beneficial to homogenize the cream.

PLACENTA SKIN TREATMENT CREAM

INGREDIENTS	% By Weight
Part A:	
LANETTE N	7.00
EUTANOL G	5.00
CETIOL S	2.00
Part B:	
Water	78.00
Glycerine	3.00
Part C:	
PLACENTALIQUID Water-Soluble	4.00
Germaben II-E	1.00

Procedure:

Heat Part A to 60C. Heat Part B to 60C. Add Part B to Part A under agitation. Continue stirring while cooling. At 35C, add individual components of Part C. Continue stirring until product reaches room temperature.

Comments:

Lanette N produces a creamy white emulsion. PLACENTALIQUID water-soluble is recommended for revitalizing and regenerating aging skin.

SOURCE: Henkel: Cream Bases: Formula H-4888

FACIAL CLEANSING CREAM

INGREDIENTS	% By Weight
Part A:	
LANETTE SX	10.00
EUTANOL G	10.00
Mineral Oil	15.00
White Petrolatum	2.00
Part B:	
Water	62.00
Part C:	
Germaben II-E	1.00
Fragrance & Dyes	q.s.

Procedure:

Mix and heat Part A to 70C. Heat Part B to 70C and add to Part A under agitation. Continue mixing until product reaches 40C. At this temperature, add individual ingredients of Part C. Continue mixing until product reaches room temperature. Fill off.

Comments:

This cream spreads easily and is an efficient cleanser. This branched chain alcohol leaves the skin feeling non-greasy and non-tacky.

SOURCE: Henkel: Cream Bases: Formula H-4882

CLEANSING CREAM

RAW MATERIALS	% By Weight
A Lanette N	12,00
Petrolatum	9,00
Paraffin	2,00
Mineral oil, low viscosity	5,00
Isopropyl Myristate	2,00
B Belsil DMC 6035	3,00
Glycerine	4,00
Water	63,00
Preservatives, fragrances, pigments	q.s.

Heat A and B each to 70C, mix B well into A.
Temperature stability: at 45C over 10 weeks.
White firm cream.

MINERAL OIL CREAM-W/O

RAW MATERIALS	% By Weight
1. A-C 617	3.0
2. A-C 540	1.0
3. Beeswax	2.0
4. Mineral Oil, 70 vis.	25.0
5. Isopropyl Stearate	3.0
6. 2-Ethyl Hexyl Stearate	9.4
7. Triglycerol Diisostearate	3.5
8. Propyl-P-Hydroxybenzoate	0.2
9. Sorbitol (70%)	7.0
10. Sodium Borate, Anhydrous	0.3
11. Methyl-P-Hydroxybenzoate	0.3
12. Magnesium Sulfate	0.3
13. Water	45.0

Procedure:

Weigh 1-8 and heat to 85C with slow agitation. The blend has a cloud point of approximately 80C. Above the cloud point all waxes will eventually dissolve in the blend. If a higher solvating temperature is used, solvation can be much faster. Hold the wax blend at 85C. Heat 9-13 to 85-90C and stir gently until all has dissolved. Hold at 85C.

Place wax blend in mixing container, add aqueous phase to it and shear with homomixer or colloid mill. At 77C the crude dispersion inverts and a thick creamy emulsion forms. Continue shearing while scraping the sides of the container to make sure the whole content is properly sheared. Add perfume, de-aerate and package.

MOISTURE REPLENISHING CREME

RAW MATERIALS % By Weight

Part I:

Water	81.6
MONAQUAT P-TS	3.0

Part II:

Cetyl Alcohol (95%)	5.0
Myristyl Myristate	5.0
Isopropyl Myristate	4.0
Lanolin Alcohol	0.4
Dimethicone (350 C.S.)	1.0

Procedure:

Heat Part I to 65C. Mix until uniform. Heat Part II to 65C. Mix until uniform. Add Part II to Part I with stirring. Cool slowly to 40C and add fragrance, coloring, or preservative as required. Cool with stirring to 35C, fill.

This formulation is recommended as a moisturizing replenishing creme. Its skin penetrating performance coupled with its high moisturizing effect and low pH (6) are ideally suited for everyday skin care.

THERAPEUTIC HUMECTANT CREME

RAW MATERIALS % By Weight

Part I:

Deionized Water	66.8
MONAQUAT P-TS	3.0
Glycerin (99%)	15.0

Part II:

Cetyl Alcohol (95%)	5.0
Myristyl Myristate	5.0
C12-C15 Alcohols Benzoate	3.0
Propylene Glycol Monostearate (Pure)	2.2

Procedure:

Heat Part I to 65C, with mixing, until clear. Heat Part II to 65C, with mixing. Slowly add Part II to Part I with efficient mixing. Remove heat after 5 minutes. Cool slowly. Product will start to thicken at about 50C. If propeller slows down, increase speed to ensure efficient mixing. Add fragrance, coloring or preservative as required. Cool to 40C, fill.

This high-powered moisturizer is designed to help heal chapped or cracked skin rapidly. It contains a high concentration of glycerin and it is easily prepared at the skin compatible pH of 6. Monaquat P-TS helps create the smoothing properties which are readily perceived when this creme is applied and also eliminates the tackiness normally associated with high levels of glycerin.

MOISTURIZING CREAM

INGREDIENT	% By Weight
Part A:	
GENEROL 122	1.00
CUTINA GMS	1.75
EUTANOL G-16	7.00
MYRITOL 318	4.00
LANETTE 18	1.00
White Protopet	6.00
Stearic Acid	4.00
D.C. Silicon Fluid 200 (350 CS)	0.50
Propylparaben	0.10
Butylparaben	0.05
Part B:	
Propylene Glycol	4.00
Triethanolamine	1.80
Methylparaben	0.25
Deionized Water	q.s. to 100
Part C:	
SEDAPLANT RICHTER	3.00
Fragrance	0.10

Procedure:

- 1) Melt Part A, stir until uniform, while heating to 75-80C.
- 2) Mix and stir Part B to 75-80C.
- 3) Add Part A to Part B at 75-80C, using moderate agitation.
- 4) Stir down to 40-45C and add Part C.
- 5) Cool with stirring to 25-30C and package.

Comments:

This moisturizing cream contains Sedaplant Richter, a combination of herb extracts which are soothing to the skin. In addition, the presence of Urea and a Urea derivative in the Sedaplant provide an anti-inflammatory property to this cream.

C. Perfume Oil	q.s.

Preparation:

(A) is heated to 75-80C. (B) is brought to the same temperature and is emulsified into (A). At about 30C, the perfume is added.

Formula 1.1.10

SOURCE: Huls America Inc.: Formulas

MOISTURIZING FACIAL CREAM

INGREDIENT	% By Weight
A. Triple Pressed Stearic Acid	4.5
Hexadecanol	1.0
Sunflower Seed Oil	5.0
Squalane	1.0
B. Ethoxylated Lanolin Oil	1.0
Glycerol	1.0
Triethanolamine (85%)	0.15
Sodium Hydroxide (50%)	0.75
BHT	0.0375
Methylparahydroxybenzoate	0.0375
Imidazolidinyl Urea	0.0375
Distilled Water	80.3875
C. GlycoCer.HA or GlycoCer.HALA	5.0
D. Perfume, qs	0.1

Procedure:

1. Gently heat A and B separately to 80 degrees C.
2. Add A to B under agitation avoiding incorporation of air.
3. Cool to 40 degrees C. under agitation and ambient conditions.
4. Add C and D and continue agitation to about 35 degrees C.
5. Homogenize and fill into containers.

Facial cream capable in leaving skin soft and refreshed.

Propylparaben	1	0.05
Butylparaben	1	0.05
Ascorbyl Palmitate NF	1	0.01
Deionized Water	2	57.44
1,3 Butylene Glycol	2	6.00
Methylparaben	2	0.25
Propylparaben	2	0.05
Sodium Dehydroacetate	2	0.30
Trisodium EDTA	2	0.05
Phosphoric Acid (10% Sol'n)	2	0.55
Hydrocoll EN-55	2	5.00
Sodium Phosphate Dibasic (Anhydrous)	2	0.05
Lipoquat R	2	0.50
Fragrance V-8409 SM&CO	3	0.10

Procedure:

1. Combine all Sequence 1 materials into a suitable stainless steel steam jacketed kettle and heat to 80C with slow Lightnin' mixing application.
2. Combine all Sequence 2 materials into a suitable stainless steel steam jacketed kettle with a variable speed side wiping agitator. Attach a variable Lightnin' mixer and begin heating to 78C with moderate Lightnin' agitation.
3. When Sequence 1 reaches 80C, slowly add to Sequence 2 at 78C with moderate speed Lightnin' agitation.
4. When the addition of Sequence 1 is completed, turn off heat and drain steam from the jacket. Continue mixing for 30 minutes, then begin very slow cooling of the batch to 58C.
5. At 65C, begin to cool rapidly to 58C.
6. At 58C, stop cooling. Remove Lightnin' mixer and insert side-wiper. Begin slow mixing with slow cooling.
7. At 45-48C, stop cooling and add Sequence 3.
8. Continue cooling to packaging viscosity and package.

PIGMENTED COVER CREME

RAW MATERIALS	% By Weight
Oil Phase:	
CRODAMOL PMP	3.00
CRILL 6	2.00
COSMOWAX J	3.50
SUPER REFINED Babassu Oil	3.00
CRODAMOL PTIS	1.00
SUPER HARTOLAN	1.50
SYNCROWAX BB4	2.00
PROVOL 50	1.00
Silicone Fluid SF96-50	.50
Water Phase:	
CRODALAN AWS	2.00
Veegum HV	0.75
Ganex V216	3.00
Methyl Paraben	.20
Propyl Paraben	.10
Germall 115	.30
Water deionized	62.45
Protein Phase:	
COLLASOL	.50
CROMOIST HYA	.50
Pigment Phase:	
Talc	5.00
Titanium Dioxide	4.00
Lo Micron Pink Extender	1.20
Lo Micron Brown	2.50

Procedure:

Charge a vessel with water and disperse the Veegum. Continue mixing until smooth. Heat to 75C while adding in the rest of the water phase. Combine and heat oil phase to 75C. Blend the pigment phase together until no pigment streaks appear on drawdown. Add the pigments to the water until well blended. Then add the water to the oil phase under good agitation. At 40C add in the protein phase. Continue mixing to room temperature. pH 6.7. (Pigment level can be adjusted for desired coverage).

MU-53 is a light nonionic cover cream designed to even out skin tone. A combination of SUPER REFINED Babassu Oil, CRODAMOL PMP and CRODAMOL PTIS moisturizes without a greasy afterfeel, and allows the skin to breathe. PROVOL 50 is an excellent pigment dispersant. COLLASOL and CROMOIST HYA put a moisture film on the skin to help maintain a smooth surface.

PROTECTIVE HAND CREAM

INGREDIENTS	% By Weight
Part A:	
ULTRA ANHYDROUS LANOLIN HP-2060	3.0
EMERSOL 132	5.0
LANETTE 16	3.0
CUTINA GMS	2.0
CETIOL SN	2.0
White Perfecta	2.0
SF-1202 Silicone Fluid	1.0
Propylparaben	0.1
Part B:	
Deionized Water	76.2
Propylene Glycol	5.0
Sodium Hydroxide	0.5
Methylparaben	0.2

Procedure:

- 1) Blend Part A and heat to 70-75C.
- 2) Blend Part B and heat to 70-75C.
- 3) Add Part B to Part A and agitate.
4. Cool to 30C and package.

Comments:

This protective hand cream is a light cream which provides a high degree of emolliency and imparts a greaseless moisture barrier.

SOURCE: Henkel: High Purity Lanolins: Formula H-4988

HAND CREAM

RAW MATERIALS	% By Weight
A Hostacerin CG	15,00
Mineral oil	15,00
Belsil DM 350	1,00
B Glycerine	3,00
Water	66,00
Preservatives, perfume	q.s.

Melt A at approx. 70C, heat B to 75C. Add B to A whilst stirring (do not allow a foam to form). Stir cold slowly.

Temperature stability: at 45C over 10 weeks.

White, creamy. Easily spread, quickly absorbed.

SOURCE: Wacker Silicone: Formulation 148 AH

PROTECTIVE HAND CREAM

FORMULA	% By Weight
Oil Phase:	
AMERCHOL CAB	5.0
AMERLATE LFA	3.5
PROMULGEN D	2.0
Glyceryl Stearate	5.0
Dimethicone	20.0
Water Phase:	
Water	64.0
Triethanolamine	0.5
Perfume and Preservative	q.s.

Procedure:

Heat both phases to 75C. Add water phase to oil phase at 75C and mix while cooling. Pour at 35C.

Description:

Protective hand cream containing AMERCHOL CAB, a multisterol extract of lanolin alcohols in petrolatum. AMERCHOL CAB is effective in moisturizing dry skin and works very well in conjunction with the dimethicone in protecting the skin from environmental insult. AMERCHOL CAB and PROMULGEN D help stabilize the emulsion formed by the triethanolamine lanolate soap system.

SKIN CONDITIONING CREAM

FORMULA	% By Weight
Water Phase:	
KYTAMER PC	0.5
GLUCAM E-10	5.0
GLUCAMATE SSE-20	1.0
Deionized Water	65.5
Oil Phase:	
PROMULGEN G	5.0
AMERCHOL L-101	4.0
AMERLATE P	3.0
GLUCATE SS	1.0
Mineral Oil	15.0
Perfume and Preservative	q.s.
Procedure:	

Disperse KYTAMER PC in water with high speed agitation. When completely dispersed heat to 75C with continuous mixing until clear and uniform. Add GLUTAMATE SSE-20 while maintaining temperature of water phase at 75C. Heat oil phase to 75C. Add water phase at 75C to oil phase at 75C with good agitation. Continue mixing while slowly cooling to room temperature. Add perfume below 50C.

Description:

White, glossy, heavy viscosity cream. Humectancy and smooth, silky, afterfeel attributed to KYTAMER PC and GLUCAM E-10. AMERLATE P helps rub-in of cream onto skin by providing lubricity properties. Primary emulsification of system due to highly efficient, mild, nonionic emulsifier pair of GLUCAMATE SSE-20 (o/w) and GLUCATE SS (w/o). Auxiliary emulsification achieved with use of PROMULGEN G and AMERCHOL L-101.

SOURCE: Amerchol Corp.: KYTAMER PC: Formula T60-28-1

FACIAL CLEANSING CREAM

INGREDIENTS	% By Weight
Part A:	
LANETTE SX	10.0
EUTANOL G	12.0
Mineral Oil, NF	15.0
Part B:	
Water	62.0
Part C:	
Germaben II	1.0
Fragrance	q.s.
Procedure:	

Mix and heat Part A to 70C. Heat Part B to 70C and add to Part A. Mix until cooled to 40C and add Part C.

Comments:

This cream spreads easily and is an efficient cleanser. The branched chain alcohol leaves the skin feeling non-greasy and non-tacky.

OILY SKIN CREAM

INGREDIENT	% By Weight
Demineralized Water	75.1850
Tensami 3/06	0.4000
Antiacne #315 HS	3.0000
Yeast Extract AMI	2.0000
Tri-Sept M	0.2000
Cirami No. 1 AMI	3.0000
Arlacel 165	5.0000
Brookswax D	1.5000
Cetyl Alcohol	2.0000
Carnation Oil	4.0000
Antiacne #650 LS	3.0000
Vitamin E Acetate	0.0150
Tri-Sept P	0.1000
Tristat IU	0.2000
Perfume	0.2000
Tea Tree Oil	0.2000

Procedure:

Charge Cirami, Arlacel, Brookswax, Cetyl, Mineral Oil, #650 LS, Vitamin E and Propyl Paraben to main tank and heat to 75C.

Heat water to 75C. and add to main tank with prop agitation. Switch to sweep agitation and begin cooling to 50C.

Add Tensami 3/06 while cooling.

At 50C., add the Tristat IU, Yeast Extract and #315 HS and mix well.

Continue cooling and mixing to RT, then add the fragrance and Tea Tree Oil.

Blend until uniform

Eutanol G	4,00
Texapon N 40	5,00
Mineral oil, low viscosity	5,00
B Propylene Glycol	12,00
Water	46,50
Belsil DMC 6032	4,50
Preservatives, fragrances, pigments	q.s.

Heat A and B each to 65C, mix B into A, stir cold.

Temperature stability: at 45C over 10 weeks.

White firm cream. Good cleansing effect and soft feeling on the skin.

Formulation 397 AH

SOURCE: Wacker Silicone: Standard Formulations

W/O CLEANSING CREAM

RAW MATERIALS	% By Weight
A ABIL B 8839	4.0
ABIL 350	1.0
Synthetic Beeswax	2.0
Ozokerite	2.0
Glyceryl Oleate (and) Propylene Glycol	2.0
Light Mineral Oil	15.0
B Water	55.8
Glycerine	18.0
Methylparaben	0.2
Perfume	QS

Procedure:

Mix together the ingredients for Phase A and Phase B in separate containers. Heat each phase to approximately 70C, and be certain all the solids have melted and dispersed in the oil phase. Slowly add B to A while mixing on a high-shear mixer. Continue mixing for 5-10 min. Cool, with occasional stirring, to approximately 40C and mix in the perfume.

Comments:

This formulation is designed to remove makeup as well as to soften and moisturize the skin. For a less oily formulation, the proportions of Mineral Oil and Cyclomethicone can be reversed. If Paraffin is substituted for Ozokerite, a much stiffer cream will result.

Fragrances and Perfumes

AEROSOL FRAGRANCE MOUSSE

INGREDIENTS	% By Weight
Phase 1:	
Sandoxylate SX424	0.60
Perfume	0.20
Phase 2:	
Water	85.00
Velsan P8-3	0.60
SDA-40	11.20
Silicone 193	0.20
Phase 3:	
Cartaretin F-4	2.20
Typical Ratio: Propellant A-46: 4%	
Concentrate: 96%	

Formula CL9-201

AEROSOL FRAGRANCE MOUSSE

INGREDIENTS	% By Weight
Phase 1:	
Sandoxylate SX424	0.60
Perfume	0.20
Phase 2:	
Water	85.30
Velsan P8-3	2.50
SDA-40	11.20
Silicone 193	0.20
Typical Ratio: Propellant A-46: 10%	
Concentrate: 90%	

Formula CL9-267

Procedure:

In a separate vessel, premix phase 1. In primary container add ingredients of phase 2, mixing well after each addition. Add phase 1 next, then phase 3. Adjust pH to 7 with citric acid. Fill cans and charge with propellant.

A quick breaking foam which elegantly delivers fragrance with a nice after feel due to the emolliency of Velsan P8-3 and in 901A, the comfortable substantive film of Cartaretin F-4. Sandoxylate SX 424 is an excellent fragrance solubilizer.

SOURCE: Sandoz Chemicals Corp.: Ethnic Hair Care: Formulation No. CMP-04

AEROSOL FRAGRANCE MOUSSE

INGREDIENTS	% By Weight
Phase 1:	
Sandoxylate SX424	1.00
Perfume 573075	.50
Phase 2:	
Water	81.80
Velsan P8-3	5.00
SDA-40	11.20
Phase 3:	
Cartaretin F-4	.50

Procedure:

In a separate vessel, premix phase 1. In primary container add ingredients of phase 2, mixing well after each addition. Add phase 1 next, then phase 3. Fill cans and charge with propellant.

Appearance: Clear liquid

pH: 6-8

Typical Ratio: Propellant A-46: 4%
Concentrate: 96%

A quick breaking foam which elegantly delivers fragrance with a smooth after feel due to the emolliency of Velsan P8-3 and the comfortable substantive film of Cartaretin F-4. Sandoxylate SX 424 is an excellent fragrance solubilizer and foam stabilizer that is non irriatant.

SOURCE: Sandoz Chemicals Corp.: Formulation CMP-07

MEN'S FINISHING FRAGRANCE MOUSSE

INGREDIENTS	% By Weight
Phase 1:	
Sandoxylate SX424	1.00
Perfume 573075	1.00

PERFUME GEL

RAW MATERIALS	% By Weight
PCL-liquid 2/066210	64.4
Beeswax	18.4
Antisettle CVP	9.2
Perfume oil	8.0

Suggested Method of Preparation:

Dissolve beeswax in PCL-liquid. Incorporate Antisettle CVP at about 45C with stirring at about 1500 rpm and stir until cold. Add perfume just before gelling.

Suggested Formulation No. VKP 571/60

PARFUM COMPACT

RAW MATERIALS	% By Weight
PCL-liquid 2/066210	50.0
PCL-solid 2/066220	10.0
Bleached beeswax DAB VII	32.0
Perfume oil	8.0

Perfume oil dosage can be increased to 15% without impairing consistency.

Suggested Formulation No. VKP 85/40

PERFUME STICK

RAW MATERIALS	% By Weight
PCL-liquid 2/066210	50.00
PCL-solid 2/066220	10.00
Lunacera C44	31.97
Perfume oil	8.00
Colorant, powdered, fat-soluble	0.03

Suggested Formulation No. VKP 594/60

Hair Care Products

ACID PERMANENT WAVE

INGREDIENTS	% By Weight
Part A:	
Glyceryl Thioglycolate	80.00
Part B:	
Hamp-ex 80	0.25
Emulsifier K-700	2.00
Brij-35	0.60
Fragrance	0.20
Aqueous Ammonia, 28%	*
Water	q.s.

* The pH of Part B should be adjusted so that the mixture of Part A with Part B has a final pH in the range of 6.8-7.2

Since glycerol monothioglycolate is not hydrolytically stable, it must be packed separately. Part A and Part B are mixed just prior to application. The ratio of Part A to Part B is as follows:

Part A:	20-25 grams
Part B:	60-80 ml
Resultant pH:	6.8-7.2

To increase the strength of the formula, use a larger amount of Part A and/or a smaller amount of Part B.

ACID-WAVE-SOLUTION

RAW MATERIALS	% By Weight
A Glycerolmonothioglycollate (75%)	24,75
Glycerine	7,25
B Urea	4,10
Potassium sorbate	0,35
Olamín K	1,35
Antara 430	0,20
Ammonium carbonate	0,20
Triethanolamine	0,80
Water, demineralized	61,00

Procedure:

Blend phase A (waving-solution) and phase B (pH-balancing-solution) separately. Mix phases A and B shortly before application.

Formula 34-1/90

COLD-WAVE-EMULSION
(7% Thioglycollic Acid)

RAW MATERIALS	% By Weight
A Thioglycollic acid (99%)	7,00
Ammonia solution (25%)	7,80
Water, demineralized	55,20
B Emulgade 1000 Ni	5,00
Turpinal SL	0,20
Water, demineralized	24,80

Procedure:

Dilute Thioglycollic acid with the water of phase A. Add alkalizing agent while cooling (the temperature of the solution should not exceed 30C) and stirring. Adjust pH to 8,8. Heat phase B to 70C, stir to cool. At 25C add phase A to phase B while stirring, homogenize. Add perfume as required.

pH 22C = 8,8

Part C:	
MACKSTAT DM	qs
Fragrance & Color	qs

Procedure:

1. Melt Part A in a separate container to 75 degrees C.
2. Into the mixing tank, add the water and add the Part B ingredients, while starting the heating and mixing. Heat the contents to 75 degrees C.
3. Then start adding the contents of container Part A slowly to the solution of Part B and using strong agitation, keep mixing for 10-20 minutes at 75 degrees C, then start cooling with agitation to 45 degrees C. Slow down agitation and add ingredients of Part C, mix very slowly, and cool to room temperature.
4. The product will develop the viscosity of standing overnight without agitation.

pH: 4.8-5.4

Viscosity overnight: 2500-3200

Experimental Formulation #CR-5-322

ANIONIC CREME RINSE

RAW MATERIALS	% By Weight
Part A:	
Cetyl Alcohol	2.20
Lanolin Anhydrous	0.25
Glycerin	1.00
Petrplatum	0.25
Part B:	
Sodium Sulfate Anhydrous	0.50
MACKAMIDE AME-75	0.66
Sodium Lauryl Ether Sulfate 60%	1.00
Animal Hydrolyzed Protein 55%	1.00
MACKANATE DC-30	1.50
Part C:	
MACKSTAT DM	qs
Fragrance & Color & Deionized Water	qs

Procedure:

1. Heat Part A in a separate container to 75 degrees C.
2. Into the mixing tank put the water and then dissolve the other Part B ingredients while slowly mixing and heating the contents to 75 degrees C.
3. Start adding the contents of container of Part A slowly to the solution of Part B, using strong agitation and keep mixing at the 75 degrees C. temperature for 10-20 minutes then start cooling with good agitation to 45 degrees C then slow agitation down and add the ingredients from Part C, mix slowly and cool to room temperature using only very slow agitation.
4. The product will develop the viscosity overnight on standing without agitation.

pH: 4.8-5.4

Viscosity Overnight: 1300-1600 cps

Experimental Formulation #CR4-1-124

PUMP TYPE HAIR SPRAY

RAW MATERIALS	% By Weight
Resyn 26-1314	6.0
MACKPRO NLP	1.0
Deionized Water	7.6
Ethanol, Fragrance qs to	100.0

Procedure:

1. Dissolve Resyn 26-1314 in alcohol.
2. Add remaining components and blend until clear.

BALSAM CONDITIONER

RAW MATERIALS	% By Weight
MACKINE 301	1.6
MACKOL 16	1.8
Phosphoric Acid (85%)	0.9
Sodium Chloride	0.3
MACKSTAT DM	qs
Balsam of Peru	qs
Water, Dye qs to	100.0

Procedure:

1. Add the first four components to water and heat to 70 degrees C.
2. Blend until homogenous.
3. Cool to 45 degrees C. and add MACKSTAT DM and Balsam of Peru.
4. Cool to room temperature and fill.

COMB OUT AND CONDITIONER SPRAY

RAW MATERIALS	% By Weight
Glycerin	18.0
Propylene Glycol	18.0
PEG 75 Lanolin	0.7
MACKAM CAP	0.3
MACKANATE DC-30	0.2
Disodium EDTA	0.1
MACKSTAT DM	qs
Deionized Water, Fragrance qs to	100.0

Procedure:

1. Add components to water and heat to 40 degrees C.
2. Blend until clear.
3. Adjust pH to 4.5-5.5 with citric acid.

CONDITIONER AND SETTING LOTION

RAW MATERIALS	% By Weight
MACKALENE 316	4.0
Gafquat 755	8.0
MACKOL 16	0.5
MACKSTAT DM	qs
Water, Dye, Fragrance qs to	100.0

Procedure:

1. Completely disperse Gafquat 755 in water.
2. Add MACKALENE 316 and MACKOL 16 and heat to 70 degrees C.
3. Blend until completely homogenous.
4. Cool to 45 degrees C. and add remaining components.
5. Cool and fill.

BODIFYING HAIR DRESSING

INGREDIENTS	% By Weight
Mineral Oil	40.0
Petrolatum	20.0
Sandopan KST	5.0
Velsan D8P-3	10.0
Ozokerite 170	17.0
Lanolin AC	8.0
Dye, Fragrance	Q.S.

Procedure:

Heat Mineral Oil and Petrolatum. Add remaining ingredients, stirring each until completely in solution. Cool with stirring.

Soft anhydrous pomade, excellent for dry hair. Retains moisture, conditions and imparts sheen. SANDOPAN KST helps in removal of product at future shampooing.

Formulation CHC-27A

HIGH GLOSS BRILLIANTINE

INGREDIENTS	% By Weight
Amererlate P	30.0
Velsan D8P-3	17.5
Petrolatum	47.0
Sandopan KST	5.0
Dye, Fragrance	Q.S.

Procedure:

Combine and heat to 80C with agitation. Cool with stirring to 65C, then package.

Excellent soft paste preparation for making hair glossy. This formulation also treats dry scalp, controls and moisturizes hair. Sandopan KST provides easier removal at future shampooing.

Formulation CHC-28A

CHOLESTEROL TYPE HAIR TREATMENT

RAW MATERIALS	% By Weight
1. MACKADET CBC	7.0
2. Paraffin Wax	3.0
3. MACKAMIDE PKM	1.0
4. MACKERNIUM 007	1.5
5. MACKSTAT-DM	qs
6. Cholesterol Powder	0.01
7. Mineral Oil	1.0
8. Fragrance, Color	qs
9. Deionized Water qs to	100.0

Procedure:

- Heat #1, #2, #3, #6 and #7 in the mixing kettle to 170 degrees C.
- Separately heat #9 to 170 degrees F (77 degrees C.)
- Start the agitation at slow, then high speed and slowly add the #9 water, keep mixing at medium speed for 15 minutes then very slowly start the cooling while mixing.
- At 125 degrees F (45 degrees C.) add #4 rinsing out the container with a little water and slow down the mixing and add #4, then #8 and mix till everything is completely uniform.
- At approximately 105 degrees F (41 degrees C) slow mixing to the lowest possible speed and when product thickens stop mixing. Check pH and apparent viscosity adjust with either a few drops of Citric acid solution or with a few drops of Triethanolamine: mix in slowly. Recheck pH.
pH: 5.5-6.3
Appearance: White creamy smooth paste
Viscosity: After 24 hours 16,000-26,000 cps
Formula No. BP-1-6

HAIR TONIC

RAW MATERIALS	% By Weight
1. MACKPRO NLP	20.00
2. AY-166 (10 component concentrate)	10.70
3. Peg-8	4.00
4. Isopropyl or Ethyl Alcohol	14.00
5. Menthol Crystals	0.20
6. Fragrance	Q.S.
7. MACKSTAT DM	Q.S.
8. D.I. Water Q.S. to	100.0

Procedure:

- Dissolve #1 in #8. Add #2 and mix to dissolve.
- Add #3 and mix in.
- Dissolve #5 in #4 and add very slowly with mixing to the batch.
- Add fragrance #6 and blend in. Add #7.
pH: 5.5-6.0 Clear Solution
Formula AY-187

SOURCE: McIntyre Group Ltd.: Personal Care Formulary: Formulas

CLEAR CLEAN CONDITIONER

RAW MATERIALS	% By Weight
MACKALENE 426	6.0
MACKPRO KLP	0.5
Natrosol 250 HHR	1.2
MACKSTAT DM	q.s.
Water, Fragrance q.s. to	100.0

Procedure:

1. Completely disperse Natrosol in cold water.
2. Heat to 40 degrees C. and add remaining components.
3. Blend until clear.
4. Cool and fill.

SPRAY-ON CONDITIONER FOR EXTRA CURLY HAIR

RAW MATERIALS	% By Weight
MACKINE 301	1.00
MACKESTER EGMS	1.50
Cetearyl Alcohol	1.50
C12-16 Alcohols (Alfol 1216)	1.50
Lactic Acid Natural	QS to pH approx 0.40
Fragrance, Color	Q.S.
MACKSTAT DM	Q.S.
MACKERNIUM 007 <u>Optional</u>	0.50
Deionized Water	Q.S. to 100.0

pH: 3.6-4.00

Procedure:

Into the manufacturing stainless steel tank meter water, #9 and start heating.

Add #2, #3, #4 and heat to 160F (71C) add #1, and start mixing well to dissolve all ingredients completely.

Once the emulsion forms add #5 at about 140F (60C) and mix strongly and take a sample. Cool it and check pH and add #5 in small amounts till proper pH level is obtained.

Then add Item #6, #7 and if desired #8, dissolved in a small amount of #9. Mix to room temperature.

A sprayable lotion will form upon overnight standing.

Formula #BP-30-301-L

CLEAR CONDITIONING GEL

INGREDIENTS	% By Weight
Carbopol 941, 2% aq. soln. (pH adjusted to 5.0)	75.20
Schercoquat IAS-LC, 1% aq. soln.	22.55
Schercotaine CAB-G (35%)	2.25

Procedure:

1. Prepare 1% aq. solution of Schercoquat IAS-LC by dissolving it in hot water, approx. 80C.
2. Mix IAS-LC solution and CAB-G into Beaker A.
3. In a separate Beaker B, heat Carbopol 941 solution, to 70-75C, while mixing.
4. Slowly add A to B while mixing. Mix until solution is homogeneous, maintaining temperature of 70-75C.
5. Cool to room temperature with stirring.

Formulary 213-25

WHEAT GERM HAIR CONDITIONER

INGREDIENTS	% By Weight
Schercoquat WOAS (90%)	1.0
Schercemol PEG 400 D.S.	4.0
Cetyl Alcohol	2.0
Schercomid AME (70%)	6.0
Glycerol Monostearate	4.0
Herbasol Extract Wheat Germ	0.5
Preservative	0.2
Color, Fragrance	q.s.
Water	82.3

Procedure:

1. Blend and heat to 70C Schercoquat WOAS, PEG 400 D.S., Cetyl Alcohol, Schercomid AME and Glycerol Monostearate.
2. Slowly add water at 70C to the blend and mix until uniform.
3. Add extract, preservative & fragrance & mix until uniform.

CLEAR CONDITIONING RINSE

RAW MATERIALS	% By Weight
Part A:	
Deionized Water	90.5
Germaben II	1.0
Methocel F4M	1.5
Part B:	
CRODAFOS SG	1.0
INCROMECTANT LAMEA	3.0
INCROQUAT BA-85	1.0
Part C:	
CROSILKQUAT	2.0

Procedure:

Add Germaben II to 1/3 of the water and heat to 85C. Disperse Methocel F4M in the hot water. Add the remaining cold water. Mix until hydrated. Add ingredients from Part B, mixing each addition until clear. Cool batch to 40C and add Crosilkquat. Mix until clear.

This conditioning rinse takes advantage of CROSILKQUAT's moisturizing and substantivity for hair. Due to its small size, it can penetrate the hair cuticle far more effectively than high molecular weight proteins.

SOURCE: Croda Inc.: CROSILKQUAT: Formula HP-153

DETANGLING CREAM RINSE

RAW MATERIALS	% By Weight
I. SUPERPOLYSTATE	
Cetyl Alcohol	4,00

CLEAR CONDITIONING RINSE

RAW MATERIALS	% By Weight
KYTAMER PC	1.00
Olealkonium Chloride (55% Aqueous)	3.64
Water	95.36
Perfume and Preservative	q.s.

Procedure:

Disperse KYTAMER PC in water with high speed agitation. When completely dispersed, heat to 75C with continued mixing until solution is clear and uniform. Add Olealkonium Chloride and mix until uniform. Dissolve preservative into batch. Cool to room temperature.

Description:

Clear, conditioning hair rinse which can be used after shampooing. KYTAMER PC is a substantive humectant which helps retain moisture in hair leaving it soft and full in appearance. KYTAMER PC's film forming properties give the hair shine.

SOURCE: Amerchol Corp.: KYTAMER PC: Formula T54-272-1

HAIR CONDITIONER

RAW MATERIALS	% By Weight
Water Phase:	
QUATRISOFT POLYMER LM-200	1.0
Water	94.0
Oil Phase:	
PROMULGEN D	4.5
Glyceryl Monostearate, Neutral	0.5
Perfume and Preservative	q.s.

Procedure:

Add QUATRISOFT POLYMER LM-200 to water at room temperature with good mixing. When thoroughly dispersed, heat to 75C. Add oil phase at 75C to water phase at 75C with mixing. Cool while mixing to room temperature.

Description:

White, glossy, medium viscosity cream rinse hair conditioner. QUATRISOFT POLYMER LM-200 uniformly adheres to each hair shaft by virtue of its cationic nature, thus imparting superb wet and dry combing, shine and conditioning properties. PROMULGEN D functions as the primary o/w emulsifier in this stable system.

SOURCE: Amerchol Corp.: QUATRISOFT POLYMER LM-200: Formula T53-164-1

CLEAR HAIR RINSE

INGREDIENTS	% By Weight
Natrosol 250HHR	1.0
Water	73.5
Ninol CA	5.1
Ninol L	10.2
Variquat E228	10.2
Perfume, preservative	q.s.

Procedure:

1. Disperse Natrosol in water. Mix until fully dissolved.
2. Add the remaining ingredients in the order listed, mixing well between additions.

Brookfield viscosity, cps: 3,360

Natrosol viscosifies this crystal-clear hair rinse, which promotes manageability. Control formulas made without a water-soluble polymer have viscosities less than 100 cps.

PEARLESCENT CREAM RINSE

INGREDIENTS	% By Weight
A. Natrosol 250HHR	1.3
Water	82.3
B. Varisoft SDC	10.1
Propylene glycol	1.5
Glycol stearate	1.5
Emulphor ON-870	1.5
Mirapol AD-1	1.8
Perfume, preservative	q.s.

Procedure:

1. Disperse Natrosol in water. Mix until fully dissolved.
2. In a separate vessel, mix the Varisoft SDC and propylene glycol. Heat to 80C.
3. Add the other ingredients listed in Section B, in the order listed, to the mixture of Varisoft and propylene glycol. Mix well between each addition.
4. Add the surfactant mixture to the water-soluble polymer solution. Mix well, Cool to 35C.
5. Add perfume and preservative.

Brookfield viscosity, cps = 8,600

Natrosol viscosifies this product and prevents phase separation.

COLD WAVE EMULSION

RAW MATERIALS	% By Weight
Luviquat Mono CP	1.50
Thioglycolic Acid 80%	12.50
Ammonia 25%	18.80
Water	67.20

Preparation:

Weigh out and mix.

Properties:

Clear solution. In combination with oxidizing solution No. 09/12, it causes a permanent wave in the hair.

Application:

Apply to curled, wet hair, rinse out. Then treat with oxidizing solution No. 09/12.

OXIDIZING SOLUTION

RAW MATERIALS	% By Weight
Luviquat Mono CP	3.00
Hydrogen Peroxide 30%	10.00
Water	87.00
Perfume	q.s.

Preparation:

Weigh out and mix.

Properties:

Clear solution. When used in combination with cold wave emulsion No. 09/011, causes permanent wave in hair.

Application:

After cold wave emulsion No. 09/011 has been rinsed off, apply and leave for 10 minutes. Wash out thoroughly. Continue treatment as normal.

COLOR SPRAYS

1. Composition of the Basic Solution:

RAW MATERIALS	% By Weight
Ethanol/isopropanol mixture	40.0
Pentane	31.6
Paraffin liquid	10.0
Pearl pigments from Rona/Merck (see below)	12.0
Luviskol VA 37	6.0
Dow Corning 200 fluid/350 cs.	0.2
Eutanol G	0.2

2. Proportion basic solution to propellant gas about 20:80. As propellant EM Pigments recommends a Propane/Butane 25/75 or such one of Dimethylether or Butane.
3. Using pigments of small or medium particle size standard valves are recommendable (about 0.5 mm). In case of sparkle pigments EM Pigments recommends the same valves as used for dry shampoo aerosols (about 0.7 mm).
4. Basically all Rona pigments are suitable. Particularly attractive lustre effects can be obtained by the following pigments:
Soloron Silver, Colorona Red Gold, - Sienna, - Bronze, - Light Blue, - Majestic Green and - Imperial Red and the Timiron Super interference types.

CONDITIONING CREME HAIRDRESS

INGREDIENTS	% By Weight
Phase A:	
Water	30.0
Cartaretin F-23	4.0
Velsan P8-3	3.0
Phase B:	
Carnation	41.4
Polyethylene 617A	4.6
Phase C:	
Petrolatum, White USP	10.0
Arlacel 186	3.0
Tween 80	1.0
Promulgen D	3.0

Procedure:

Mix Part B together and heat to 70C with stirring until clear. Place in cooling bath (10-15C) and apply agitation. Scrape off thick gel as it forms on beaker wall, cool to approximately 45C. Separately mix and heat Part C to 65C. Add Part B. When homogenous, add pre-mixed Part A and stir in completely. Package.

Properties:

Appearance: Soft glossy white cream
 pH: 7.2
 Viscosity: <20,000 cps

Applied as a hairdressing, this w/o cream conditioner provides sheen, manageability and conditioning simultaneously. Cartaretin F-23, a cationic copolymer gives conditioning and light hold. Velsan P8-3 adds to the gloss, lessens the oily heavy feel of the petroleum base, and also improves the stability of the system.

CONDITIONING CREME RINSE

RAW MATERIALS	% By Weight
Water	94.2
MONATERIC 1202	2.8
Stearalkonium Chloride (85%)	1.0
Cetyl Alcohol	2.0

Procedure:

Mix water and MONATERIC 1202 until homogeneous. Add remaining ingredients with agitation and heat to approximately 60C. until homogeneous. Continue stirring while cooling to 25C. Adjust pH to 4.5-5.5.

Formulation Properties:

Appearance: Opaque Lotion
Nominal Activity: 4.0%

This creme rinse removes tangles for excellent wet combing and additionally provides a substantive, non-oily, non-greasy conditioning effect which leaves hair soft, shiny and vibrant,

SOURCE: Mona Industries, Inc.: MONATERIC 1202: Formula

NATURAL CONDITIONING CREME RINSE
(For Extra Conditioning and Wet Combability)

INGREDIENTS	% By Weight
Water	95.0
Glyceryl Stearate	1.5
Stearalkonium Chloride	1.0
AVAMID 150	1.5
Hydroxyethylcellulose	1.0

This Conditioning Creme Rinse imparts the detangling and wet combability that longer hair usually requires and at the same time provides the natural avocado oil "instant" conditioning to the hair.

Procedure:

Mix all ingredients. Heat to melt while mixing until uniform. (60C). Cool with stirring. Adjust pH to 5.5-6.0. Add preservative, color and perfume as required.

Formulation Properties:

Physical Appearance: Creamy lotion
Activity: 4.5%
Viscosity: Thixotropic pourable liquid

SOURCE: Mona Industries, Inc.: AVAMID 150: Formula

CONDITIONING HAIR SETTING GEL

CONDITIONING RINSE

RAW MATERIALS	% By Weight
EMPIGEN CM	3.0
LAUREX CS	4.0
Citric acid (to pH 2.5-3.0)	1.0
Perfume, dye, preservative	qs
Water	Balance

High-quality product.

Formula CR1

CONDITIONING RINSE

RAW MATERIALS	% By Weight
EMPIGEN BCM75	1.5
LAUREX CS	4.0
Citric acid (to pH 2.5-3.0)	1.0
Perfume, dye, preservative	qs
Water	Balance

High-quality product

Formula CR2

The EMPIGEN CM or EMPIGEN BCM75 and the LAUREX CS should be stirred with the water at 70C until a uniform mixture is obtained. The product is then cooled with continuous stirring, before incorporation of the citric acid, perfume, dye and preservative. Incorporation of 1.0-2.0% EMPILAN CME gives an attractive pearl effect.

CLEAR CONDITIONING RINSE

RAW MATERIALS	% By Weight
EMPIGEN CSC	6.0
METHOCEL E4M Premium	1.5
Citric acid	qs to adjust pH to 3.0-4.0
Perfume, dye, preservative	qs
Water	Balance

The METHOCEL E4M Premium is dispersed in warm water, and, when homogeneous, the EMPIGEN CSC is incorporated. The formulation is completed by adding the required dye, perfume and preservative and adjusting the pH as stipulated.

Formula CR3

CONDITIONING AND STYLING MOUSSE

RAW MATERIALS	% By Weight
Phase A:	
PROMULGEN D	0.5
Water	77.0
AMEROXOL OE-20	0.5
GLUCAM P-10	1.0
SOLULAN 98	2.0
Phase B:	
Alcohol-SDA 40	15.0
AMERSETTE	4.0
Perfume and Preservative	q.s.

Procedure:

Combine phase A and heat to 75C until uniform. Cool to 45C and add premixed phase B. Phase B can be premixed at room temperature to avoid solvent loss. Add perfume below 40C. Cool to room temperature and fill.

Fill: 95% Concentrate; 5% Propellant A-46

A quick-breaking conditioning and styling mousse. A balance of PROMULGEN D and AMEROXOL OE-20 insures a good dispersion of propellant in the concentrate with good foam formation and stability with valve actuation while still allowing for a "quick-break" upon massaging into the hair. SOLULAN 98 and GLUCAM P-10 contribute to wet and dry comb, lustre, feel, and also reduce flyaway. GLUCAM P-10 enhances foam stability, moisture retention and foam wetting. AMERSETTE provides anti-static, conditioning and styling properties.

SOURCE: Amerchol Corp.: PROMULGEN D: Formula T51-51-6A

CONDITIONING HAIR SPRAY

RAW MATERIALS	% By Weight
GLUCQUAT 100	0.25
AMERSETTE	5.00
SD Alcohol 40	74.75
A-46 Hydrocarbon Propellant	20.00

Procedure:

Dissolve AMERSETTE and GLUCQUAT 100 in SD Alcohol 40. Fill into aerosol hair spray cans and charge with propellant.

Description:

Besides the styling properties of this product, the hair is also left conditioned by the addition of GLUCQUAT 100. The cationic functionality makes GLUCQUAT 100 substantive to hair, where it adds shine and moisturization. It also helps plasticize the fixative resin, AMERSETTE.

SOURCE: Amerchol Corp.: GLUCQUAT 100: Formula T62-69-2M

CONVENTIONAL PACKAGE HAIR GROOM

COMPONENT	% By Weight
Polymer JR-400	1.00
TERGITOL Nonionic Surfactant 15-S-12	0.05
Triethylene Glycol	0.05
Methyl p-Hydroxybenzoate	0.05
SD-40 Alcohol, anhydrous	25.00
Deionized water, perfume	73.85

Preparation:

Dissolve the TERGITOL Surfactant 15-S-12 and preservative in the water. Add the Polymer JR while stirring, and continue mixing until the resin is dissolved. Introduce the alcohol into the formula. Finally, add perfume as desired. The use of hot water (60C) will increase the rate of solution for Polymer JR.

Polymer JR makes a "different" type of hair groom, being non-oily and non-sticky. It can be applied to wet or dry hair, it provides good combing and holds the hair in place, and has the advantage of renewed grooming action simply by combing with a wet comb. It is excellent as an after shampoo-hair groom.

AEROSOL HAIR GROOM

COMPONENT	% By Weight
Polymer JR	0.4
Water	22.2
UCON Propellant 12	22.5
SDA-40	54.9

Valve Orifices = 0.062" x 0.013"

Container = Organosol-lined

Preparation:

Dissolve Polymer JR in the usual manner, and add the SDA-40. Package with UCON Propellant 12.

Since Polymer JR is insoluble in ethanol, hydroalcoholic systems have to be used to package it in aerosol form. Based on solubility studies, basic formulation around which to develop Polymer JR aerosol products.

CREME RINSE

RAW MATERIALS	% By Weight
Stearalkonium Chloride	1.5
CETAL	3.0
Glyceryl Monostearate	0.5
Polysorbate 80	0.5
CELLOSIZ E QP-52,000H	1.0
Preservative, Perfume	q.s.
Water	q.s.

Procedure:

Add the CELLOSIZ E QP-5200H to the available water at room temperature while stirring. When hydration is complete, heat to 70-75C. Add the Stearalkonium Chloride and the Polysorbate 80. Heat the Glycerol Monostearate and the CETAL to 70-75C. Add this mixture to the solution while stirring vigorously. Remove the heat, and continue stirring until temperature reaches 35-40C. Add Preservative and Perfume.

Description:

A basic formula with excellent body and conditioning properties. Easy to pour because of the pseudoplastic property of CELLOSIZ E HEC, yet thick and concentrated in appearance. Opalescent.

Formula T55-45-1

CURLING GEL WITH CONDITIONER

RAW MATERIALS	% By Weight
Ammonium Thioglycolate (60%)	15.0
Ammonium Hydroxide (28%)	2.0
Triethanolamine (99%)	12.0
Pentasodium Pentetate	0.1
CELLOSIZ E Polymer PCG-10	1.0
UCARE Polymer JR-30M	0.5
Propylene Glycol	4.0
Preservative, Fragrance, Color	q.s.
Water	q.s.

Procedure:

Add Ammonium Thioglycolate, Ammonium Hydroxide, Triethanolamine, Pentasodium Pentetate and Preservative to rapidly stirring water in sequence so that the preceding ingredient is dissolved before adding the next. In a separate container, add CELLOSIZ E Polymer PCG-10 and UCARE Polymer to Propylene Glycol and mix to form a slurry. Add slurry to batch and mix until a uniform clear gel forms.

This formula provides conditioning to the hair during the permanent wave process. Clear and stable gel in the chemically active system. Substantive to hair providing conditioning properties.

Heat the Glycerol Monostearate and the CETAL to 70-75C. Add this mixture to the solution while stirring vigorously. Remove the heat, and continue stirring until temperature reaches 35-40C. Add Preservative and Perfume.

Description:

A basic formula with excellent body and conditioning properties. Easy to pour because of the pseudoplastic property of CELLOSIZE HEC, yet thick and concentrated in appearance. Opalescent.

FINISHING RINSE

RAW MATERIALS	% By Weight
1. Propylene Glycol	10.00
2. Glycerin	8.00
3. MACKERNIUM SDC-25	8.00
4. Cetyl Alcohol	2.00
5. MACKAMIDE AME-100	0.50
6. Masil S F V	0.50
7. MACKSTAT DM	qs
8. Fragrance	qs
9. Deionized Water	qs
pH specs.: 5.00-7.2	

Procedure:

1. Into the manufacturing tank add #9, 1, 2, 3, 4, 5 and start heating.
2. Once the temperature is warm enough to dissolve the wax start mixing and keep heating to 75 degrees C (170F.).
3. Mix well for 10 minutes, then start slow cooling and reduce mixing speed to avoid aeration.
4. At 40 degrees C. (105F.) add #6, then #7 and use very slow mixing.
5. Let product cool slowly and add #8 and mix in.

CREAMY HYDROGEN PEROXIDE PERM NEUTRALIZER

Each 1000 ml of finished product contains:

INGREDIENTS	Grams/Liters
Deionized Water	800.00
Methylparaben	1.00
Disodium Phosphate	1.00
Sodium Lauryl Sulfate	28.00
Mineral Oil	10.00
Cetyl Alcohol	5.00
Ceteth-2	5.00
Hydrogen Peroxide, 35%	68.00
Phosphoric Acid, 85% (to pH 4.0)	0.80
Deionized Water	9.5 to 1 liter

Heat first part of water to 75C, add methylparaben, phosphoric acid and sodium lauryl sulfate with moderate mixing after each addition. Hold at 75C for five minutes.

Heat mineral oil, cetyl alcohol and ceteth-2 in separate kettle to 70C with stirring. Add this mixture in small increments to the aqueous phase with moderate stirring. Hold temperature at 70C for 15 minutes during agitation.

Carefully cool to 25C or room temperature. This cooling step is crucial and the optimum rate of temperature drop is 1C per 90 seconds.

When mixture is cool, add the hydrogen peroxide and stir for 5 minutes. Adjust pH to 4.0 with phosphoric acid and make up to final volume with deionized water.

Finished Formula Properties:

Appearance: White creamy emulsion
 pH at 25C: 3.9-4.1
 Specific Gravity at 25/25C: 0.995-1.05
 Hydrogen Peroxide: 2.38+-0.2%
 Max. loss after 20 hr. boil: 7%

HYDROGEN PEROXIDE PERM NEUTRALIZER

INGREDIENTS	% By Weight
Deionized Water	80.00

SCALP TREATMENT

INGREDIENTS	% By Weight
Deionized Water	92.98
Propylene Glycol	2.0
HEXAPLANT RICHTER	3.0
COSMEDIA GUAR C-261	1.0
Kathon CG	.02
NUTRILAN I	1.0

Procedure:

- 1) After dissolving propylene glycol and HEXAPLANT in the water, use vigorous agitation to disperse and dissolve the Guar in system.
- 2) Using vigorous agitation, slowly sprinkle in NUTRILAN I and stir until dispersed uniformly.

Comments:

In herbal medicine, HEXAPLANT RICHTER has application of sensitive and easily irritated scalps and the maintenance for healthy hair.

SOURCE: Henkel: CLR Herbal Extracts: Formula H-4962

EXOTHERMIC PERMANENT WAVE LOTION
NORMAL HAIR FORMULA

INGREDIENTS	% By Weight
Water	60.00
Ammonium Thioglycolate, 60%	27.60
Hamp-ol 120	0.28
Aqueous Ammonia, 28%	3.43
Brij 35	0.78
Fragrance	0.18
Water	10.00
Emulsifier K-700	1.10
Sulfuric Acid	*
Aqueous Ammonia	*
Water	q.s.
* As needed to adjust pH	

Finished Formula Properties:

pH: 8.8-9.2

Free Ammonia: 0.86-1.06 gms NH₃ per 100 ml

Fill Weight: 95.0-98.1 gms

Thioglycolic Acid Content: 16.56+/-0.1%

HEAT ACTIVATOR

INGREDIENT	% By Weight
Deionized Water	87.19
Hydrogen Peroxide, 35%	12.63
Disodium Phosphate	0.10
Phosphoric Acid	0.80

Finished Formula Properties:

pH: 3.9-4.1

Hydrogen Peroxide Content: 4.42+/-0.10%

Maximum Peroxide Loss: 7% loss after 20 hour boil

Fill Weight: 19.8-20.8 gms

After mixing 91.0 ml of the Exothermic Wave Lotion with 20.0 ml of the Heat Activator, the following should be observed:

Regular Formula:

pH: 8.8-9.2

Free Ammonia: 0.70-0.90 gms NH₃ per 100 ml

Thioglycolic Acid Content: 9.2%

Temperature Rise: 18-20C

Unlike normal permanent waves, the fill weights and the strengths of the lotions and the peroxide heat activator require very close tolerances. Too little or too much, either as fill weight or concentration of active, for either component, will cause variations in final activity or temperature.

HAIR COLORANT SHAMPOO BASE..PROFESSIONAL FORM

INGREDIENT	% By Weight
Demineralized Water	9.3500
Methyl Paraben	0.2000
Propyl Paraben	0.1000
Jaguar C-14-S	0.5000
Miranol C2MSF Conc	4.0000
Ammonyx CDO	7.0000
Ammonyx CTAC	2.0000
Standamid SD	1.5000
Abiol	0.2000
Citric Acid	0.1500
Demineralized Water	24.0000
Arianor Dye	>1.0000
Demineralized Water	47.0000
Standamid SM	3.0000

Procedure:

1. Disperse the Parabens and Jaguar in cold water.
2. Begin heating to 75C. with agitation adjusted to avoid aeration.
3. Mix at 75C. until all Jaguar has dissolved and batch is lump free.
4. Remove heat.
5. Add Miranol, Ammonyx CDO, Ammonyx CTAC, and Standamid in order, mixing well between each addition.
6. Force cool to room temperature.
7. Add Abiol and adjust pH to 8.5 if necessary with citric acid.

Prepare Color Solution by dissolving appropriate dye composition in formula amount of water.

Prepare Cocamide MEA Solution by dissolving amide in water (heating if necessary).

Combine Shampoo Base, Color Solution and Amide Solution together and mix until uniform.

HAIR CONDITIONER-WAVE SET

COMPONENT	% By Weight
Polymer JR-400	1.0
TERGITOL Nonionic Surfactant 15-S-12	0.1
"Hyamine" 1622	0.006
Deionized water, perfume	98.894

Preparation:

Dissolve the TERGITOL Nonionic Surfactant 15-S-12 and "Hyamine" 1622 in the water. Add the Polymer JR while stirring, and continue mixing until the resin is dissolved (approximately 40 minutes to 1 hour). The rate of hydration of the resin can be increased by heating (60C). Finally, add the perfume as desired.

HAIR CONDITIONER-WAVE SET WITH ALCOHOL

COMPONENT	% By Weight
Polymer JR-400	1.0
TERGITOL Nonionic Surfactant 15-S-12	0.05
Triethylene Glycol	0.05
Methyl p-Hydroxybenzoate	0.05
SDA-40	25.0
Deionized water, perfume	73.85

Preparation:

Dissolve the TERGITOL Surfactant 15-S-12 and preservative in the water. Add the Polymer JR while stirring, and continue mixing until the resin is dissolved. Introduce the alcohol into the formula. Finally, add perfume as desired. The use of hot water (60C) will increase the rate of solution for Polymer JR.

HAIR SETTING LOTION

COMPONENT	% By Weight
Polymer JR-30M	2.0
TERGITOL Nonionic Surfactant 15-S-12	0.1
Wilson's Protein WSP X-250	0.1
"Hyamine" 1622	0.006
Water	97.694

Preparation:

Dissolve TERGITOL Surfactant 15-S-12 and "Hyamine" 1622 in the available water. Add the Polymer JR-30M while stirring, and continue mixing until the polymer is dissolved. Stir in the protein WSP X-250, and continue agitation until solution is complete.

HAIR CONDITIONER WITH MOISTURIZERS

RAW MATERIALS	% By Weight
MACKOL 1618	3.0
MACKERNIUM SDC-85	3.0
Propylene Glycol	1.0
Glycerin	1.0
MACKAMIDE AME-100	1.0
Mineral Oil	1.0
MACKPRO NLP	2.0
MACKSTAT DM	qs
Deionized Water, Fragrance, Dye qs to	100.0

pH: 3.5-4.5

Viscosity: 1500-3000

Procedure:

1. Melt waxes and oils to 70 degrees C.
2. Separately heat water plus MACKPRO NLP to 70 degrees C. and add hot water solution to hot oils and waxes.
3. Start stirring vigorously for 10 minutes and then start slow cooling while mixing and at 40 degrees C. add MACKSTAT DM, then fragrance and dye and slow mixing down close to room temperature.
4. Stop mixing at 30 degrees C.
5. Adjust pH with citric acid.

HAIR CONDITIONER CONCENTRATE

RAW MATERIALS	% By Weight
MACKERNIUM SDC-85	3.0
Brij 58	3.2
MACKOL 16	8.8
Peg 600 Distearate	3.0
MACKPRO NLP	2.0
MACKSTAT DM	qs
Water, Dye, Fragrance qs to	100.0

Procedure:

1. Melt first four components to 70 degrees C. and blend until clear.
2. Add MACKPRO NLP to water and heat to 70 degrees C.
3. Add oil phase to water and blend until homogenous.
4. Adjust pH to 5.0 with lactic acid.
5. Cool to 45 degrees C. and add remaining components.

HAIR CONDITIONING CREME RINSE

RAW MATERIALS	% By Weight
GLUCQUAT 100	3.0
CELLOSIZÉ Polymer PCG-10	0.6
PROMULGEN D	4.5
CETAL	1.2
Hydolyzed Animal Protein	0.3
Deionized Water	90.4
Perfume and preservative	q.s.

Procedure:

Add CELLOSIZÉ Polymer PCG-10 to room temperature water with propeller agitation. Heat to 75C. When polymer is fully hydrated, dissolve GLUCQUAT 100, hydrolyzed animal protein and preservative, in that order, waiting for each ingredient to dissolve before adding the next. In a separate container, heat PROMULGEN D and CETAL to 75C, mix, and add to batch. Mix until uniform, and cool to room temperature with adequate mixing.

Description:

GLUCQUAT 100, the cationic substantive conditioning agent in this formula, provides good wet combing, manageability, shine and feel properties. PROMULGEN D acts as an o/w emulsifier. CELLOSIZÉ Polymer PCG-10 helps build viscosity.

SOURCE: Amerchol Corp.: GLUCQUAT 100: Formula T60-150-1M

STYLING AND CONDITIONING MOUSSE

CONCENTRATE FORMULA	% By Weight
AMERSIL DMC-357	2.0
AMERSETTE	2.0
SD Alcohol 40	15.0
Deionized Water	81.0
Preservative	qs

Concentrate Procedure:

Dissolve AMERSETTE in SD Alcohol 40. Once clear and uniform, add AMERSIL DMC-357, deionized water, and preservative in the order listed while waiting for each ingredient to dissolve before adding the next.

Aerosol Fill Procedure:

Fill aluminum mousse can and charge with A-46 propellant using a 90% concentrate to 10% propellant ratio.

Description:

AMERSIL DMC-357 is the sole ingredient in the formation of the mousse "foam" in the aerosol system. In addition, it contributes to the plasticization of the AMERSETTE styling resin while conditioning and adding shine to the hair.

HAIR MOISTURIZER

INGREDIENTS	% By Weight
A. Deionized Water	78.8
Hydroxyethylcellulose	0.5
Sorbitol	1.0
B. Stearic Acid	3.0
Glyceryl Stearate and PEG 100 Stearate	2.0
Acetamide MEA	2.0
C12-15 Alcohols Benzoate	1.0
Dimethicone	0.5
C. LIPITEIN P	1.0
D. PEPTTEIN CAA	3.0
SOLLAGEN	5.0
E. Dimethicone	1.0
Propylene Glycol and Diazolidinyl Urea and Methylparaben and Propylparaben	1.0
Fragrance	0.2

Procedure:

Begin heating water to 80C; sift Hydroxyethylcellulose into water with constant agitation. Add rest of Part A. Mix until clear. Add Part B ingredients in order. Mix until homogeneous. Cool to room temperature. Slowly add LIPTEIN P, mix well. Add PEPTTEIN CAA and SOLLAGEN; mix until smooth. Add Part D ingredients. Mix until uniform.

Description:

This product is designed to moisturize and soften the hair, to increase manageability, and to reduce static fly-away. Apply to wet hair after shampooing; comb through hair and style as normal.

Formula: 614-09

HOT OIL TREATMENT

INGREDIENTS	% By Weight
A. Cottonseed Oil	86.9
Jojoba Oil	1.0
C12-15 Alcohols Benzoate	2.0
B. LIPITEIN P	10.0
C. Fragrance	0.1

Procedure:

In a suitable vessel, combine Part A ingredients. Mix until clear. Add Part B slowly. Add fragrance; mix until uniform.

Description:

This golden, liquid hair treatment should be warmed under hot, running water before using to activate the lipid. After shampooing, apply to wet hair; massage or comb through; let stand for 5 minutes; rinse. Hair will have more shine, softness, better combability and manageability as a result of LIPITEIN P.

HAIR SPRITZING SPRAY

RAW MATERIALS	% By Weight
CROVOL A-70	0.50
Aminomethyl propanol	0.45
Gantrez ES-225	9.00
Deionized Water	11.36
Ethanol SDA-40	78.19
CROSILKQUAT	0.50

Procedure:

Dissolve the neutralizer (AMP) in the alcohol. Add the Gantrez ES resin with mixing. Mix in Crovol A-70, followed by the water. When clear, add CROSILKQUAT and mix well.

The combination of CROVOL A-70 and CROSILKQUAT give good curl retention even under humid conditions. CROSILKQUAT helps prevent flaking of the resin.

Formula HP-152

HAIR REPAIR AND CONDITIONER

RAW MATERIALS	% By Weight
A. Water	88.10
TEGIN	4.00
Mineral Oil	1.00
Cetyl Alcohol	2.00
ABIL AV-20	0.50
Ceteth-2	1.00
B. Glycerin	1.00
ABIL S 201	1.00
Sodium Poly PG-Propyl Dimethicone Thiosulfate	1.00
ABIL Quat 3272	0.40
C. Color	Q.S.
Preservatives	Q.S.
Fragrance	Q.S.
Citric Acid (25% Solution)	to pH 6.5

Procedure:

1. Heat the ingredients of A together with mixing to 70C.
2. Cool to 45-50C. Switch to sweep mixer.
3. Blend B. Add to A. Sweep mix. Cool to 35-40C.
4. Adjust pH. Add Color, Fragrance and Preservatives

CREAM HAIR CONDITIONER

RAW MATERIALS	% By Weight
Water	90.8
TEGIN	3.0
ABIL Wax 2440	0.3
Cetyl Alcohol	2.0
Propylene Glycol	3.0
ABIL Quat 3272	0.5
ABIL B 8851	0.4
Color, Preservatives, Fragrance	QS

Procedure:

1. Heat the water to 70-75C. Disperse the TEGIN, ABIL Wax 2440 and Cetyl Alcohol. Mix well.
2. Begin cooling. Cool to 45-50C while mixing. Mix the Propylene Glycol and the ABIL Quat 3272 together and add to the batch. Mix.
3. Switch to sweep mixer. Cool to 35-40C. Add the ABIL B 8851, Color, Preservatives and Fragrance. Mix.
4. Continue cooling. Fill.

HAIR/SCALP STIMULANT

RAW MATERIALS	Sequence	% By Weight
Water	1	q.s.
Liponic EG-1	1	5.00
Methylparaben	1	0.20
Propylparaben	1	0.05
Vivaderm	2	5.00
Hair mucopolysaccharides	2	2.00
Crotein CAA-SF	2	0.50
Panthenol	2	0.05
Kathon CG or	2	0.05*
Phenoxyethanol		0.10*

*Note: Either Kathon CG or Phenoxyethanol may be used as part of the preservative system.

Manufacturing Procedure:

1. Combine Sequence 1 ingredients in kettle equipped with Lightnin' mixer. Warm to 60C and mix until the parabens are dissolved.
2. Cool to room temperature and add Sequence 2 ingredients under Lightnin' mixer.
3. Package.
Formula No. 318

HAIR STYLING GEL

RAW MATERIALS	Sequence	% By Weight
Deionized Water	1	66.08
PVP/VA W-735	1	7.00
Kathon CG	1	0.02
Tetrasodium EDTA	1	0.05
Triethanolamine 99%	1	0.75
Hypan SA100H	2	0.10
Carbopol 940 (2% Disp'n)	3	25.00
Liponic EG-1	3	1.00

Procedure:

1. Combine Sequence 1 ingredints under Lightnin' mixing at room temperature.
2. Sprinkle Sequence 2 ingredient into Sequence 1 slowly, and continue mixing until combined Sequences 1 and 2 are uniform.
3. Add premixed Sequence 3 ingredients to batch slowly. Switch to slow sweep agitation as batch thickens to prevent aeration of powder.
4. Continue to mix until batch is uniform.

14. Deionized Water	35.00
15. Carbomer 940	0.56
16. Fragrance	Q.S.
17. MACKSTAT DM	Q.S.

Procedure:

1. Into a separate stainless steel vessel put #1-#11 and start very slowly heating to 40-45C. (104-113F) and mix gently to obtain a clear uniform mixture.
2. Into the main stainless steel mixing tank meter the water #14 add #13 and slowly add #15 mix thoroughly but avoid aeration.
3. Warm the solution gently to 40-45C. (104-113F.) with good mixing.
4. When all the #15 is completely dissolved add the blend #1-#11 very slowly to the main tank and mix until the product is uniform without lumps.
5. Blend in fragrance and MACKSTAT DM at about 35C. (95F.).
6. Check the pH and adjust either with #6 if too low or with a small amount of Oleic Acid.

HIGH VISCOSITY SELECTIVE CREME RINSE CONDITIONER

INGREDIENTS	% By Weight
A Carsquat SDQ-85	1.900
Ethospense CA-2	2.500
Barlene 18S	1.500
Aldo MSA	0.500
Stearyl Alcohol	0.100
Phenoxyethanol	0.300
B Citric Acid	1.750
Sodium Chloride	0.200
Water, deionized	91.215
Sodium Hydroxide (10% solution)	.035
pH: 3.2+-0.1	
Viscosity: approx. 10,500 cps	

Procedure:

Heat all components in Phase A to approximately 60-65C with mixing. With continuous agitation, heat Phase B to approximately 65-70C. Add Phase A slowly to Phase B. When blend is uniform, discontinue heating and add sodium hydroxide. Continue mixing the batch until temperature has cooled below approximately 35C.

Make up any water, dye and fragrance lost in processing; note the choice and amount of fragrance may alter the viscosity.

Formulation U-15-8

CREME RINSE CONDITIONER

INGREDIENTS	% By Weight
Carsquat SDQ-85	1.3
HYSTAR CG	3.0
Glycomul O	1.9
Aldo USA	2.4
Cetyl Alcohol	1.8
Water, deionized	89.6
pH: 3.5-4.0	
Viscosity: approximately 2500-4000 cps	

Procedure:

Add the HYSTAR CG to the water and heat to 80C. In a separate container, combine the Carsquat SDQ-85, Lonzest SMO, Aldo USA and cetyl alcohol and heat to 75C. With stirring, pour the oil phase into the polyol/water solution. Stir at slow to moderate for about 30 minutes. Then cool to approximately 45C and package.

HAIR CREAM

RAW MATERIALS	% By Weight
A. Cetyl Alcohol	6.0
Luvitol EHO	10.0
Mineral Oil	5.0
B. Luviquat Mono CP	10.0
1,2-Propylene glycol	2.0
Water	67.0
Preservative	q.s.
C. Perfume	q.s.

Preparation:

Heat phases A and B separately to ca. 75C. Stir phase B into phase A and continue stirring until cold. At ca. 35 add phase C.

Properties:

White, softish cream that can be worked well into the hair. Improves wet-combability, imparts sheen to hair and prevents dry hair from charging electrostatically.

Application:

Work uniformly into the damp hair, leave and then wash out with water.

pH: 5.0 approx. unneutralized

* Vary glycerin to achieve desired activation

HKP CONDITIONING SPRAY MOISTURIZER

INGREDIENT	% By Weight
Deionized Water	89.00(+)
Tri-K HKP	1.000
Acetamide MEA	2.500
dl-Panthenol	1.000
Propylene Glycol	5.000
Methyl Paraben	0.200
Tri-Stat I.U.	0.250
Fragrance	0.100
Lactic Acid	QS to pH
DC 193 Surfactant	1.000

HKP PERMANENT WAVE-IN PROCESS CONDITIONING TREATMENT

INGREDIENT	% By Weight
Deionized Water	94.00(+)
Tri-K HKP	1.000
Acetamide MEA	2.000
dl-Panthenol	0.500
Delsette 101	1.500
Methyl Paraben	0.200
Tri-Stat I.U.	0.250
Fragrance	0.250
Kelate 220	0.200

Use: After waving and before neutralization, the hair is very receptive to conditioning treatments, therefore just before neutralization, run treatment over rods, but do not oversaturate. Allow to stand on hair one minute and blot. Neutralize.

HOT OIL CONDITIONER

RAW MATERIALS	% By Weight
MACKALENE 426	5.00
MACKAMIDE AME-75	7.00
Polyglycol 600	5.00
Polysorbate 80	2.00
Benzyl Alcohol	0.30
DC 193	0.25
Natrosol 250 HHR	0.50
MACKSTAT DM	qs
Water, Dye, Fragrance qs to	100.00

Procedures:

1. Disperse Natrosol 250 HHR in water.
2. Heat to 50 degrees C. and add remaining components.
3. Blend until clear and cool.

Appearance: Clear Liquid

pH: 4.4-4.8

Viscosity: 50-200 cps

This type of product is frequently used prior the application of a shampoo so the final cleansing removes the excess materials and leave the hair clean feeling and conditioned.

Formula AY-143-3R

WHEAT GERM FOAMING CONDITIONER

RAW MATERIALS	% By Weight
MACKAM 35	10.0
MACKALENE 116	8.0
MACKALENE 716	1.0
Natrosol 250 HHR	0.7
MACKSTAT DM	qs
Water, Dye, Fragrance qs to	100.0

Procedure:

1. Completely hydrate Natrosol.
2. Add first three components and heat to 40 degrees C.
3. Blend until clear.
4. Add remaining components and cool.

LIGHT MOISTURIZING 525 HAIR CREME

RAW MATERIALS	% By Weight
1. Mineral Oil (SG .850)	15.00
2. Castor Oil	3.00
3. Lanolin Anhydrous	3.50
4. Petrolatum White	3.50
5. Cetearyl Alcohol	2.00
6. Polysorbate 20	2.00
7. Triethanolamine	0.60
8. Carbomer 940	0.60
9. Disodium EDTA	0.10
10. MACKSTAT DM	QS
11. Deionized Water qs to	100.00
12. Fragrance	QS
pH: 5.3-6.0	

Procedure:

1. Melt together #1, #2, #3, #4, #5, #6, #7 and heat to 170 degrees F. (77 degrees C).
2. Separately prepare a solution of #8 and #9 in the water by dispersing the carbomer with good agitation by slowly adding to the water and mixing until all lumps have dissolved. Some heating will help accelerating the process. Then heat the water phase also to 170 degrees F (77 degrees C).
3. Slowly pour the oil phase into the water phase with thorough agitation to avoid formation of lumps. Mix thoroughly until everything is uniform. Add #10 and finally the fragrance #12. Check pH value, adjust upwards with #7.

7. MACKSTAT DM	q.s.
8. Fragrance	q.s.
9. Deionized Water q.s. to	100.00

pH: 4.4-5.5

Procedure:

1. Into stainless steel creme kettle put #1, #2, #3, #4 and start heating to 75 degrees C. (167 degrees F.).
2. Separately heat #9 to the same temperature, add it slowly with good mixing to the hot waxes in the creme kettle and increase mixing speed.
3. Keep mixing for 15 minutes at the same temperature and speed.
4. Start the cooling process slowly and begin to slow down mixing speed.
5. At 45 degrees C. (113 degrees F.) add #5 then #6, #7, #8.
6. Check pH and adjust downward with Citric Acid solution or upwards with a few drops of diluted Sodium Hydroxide solution.
7. Continue mixing very slowly until cool.
8. The product will set up on standing to a soft creme.

NATURAL CONDITIONING MOUSSE

INGREDIENTS	% By Weight
Water	91.0
AVAMID 150	2.0
GAFFIX VC-713	3.0
MONAQUAT ISIES	2.0
Dimethicone Copolyol	2.0

Procedure:

Mix MONAQUAT ISIES and water until uniform. Add Gaffix VC-713 and mix until dissolved. Add AVAMID 150 and stir until completely blended. Add Dimethicone Copolyol and stir until homogeneous. No heat is required. Add preservative, color and perfume as required.

(For natural conditioning as well as setting properties after or between shampoos)

This Mousse imparts cationic and natural avocado oil conditioning, while providing a moderate, non-tacky hold.

To Aerosolize Charge:

81.0%	Mousse
19.0%	Isobutane

Formulation Properties:

Physical Appearance: Stable foam
Activity: 7%

SOURCE: Mona Industries Inc.: AVAMID 150: Formula

SOFT HOLD CONDITIONING MOUSSE

RAW MATERIALS	% By Weight
Part I. Water	82.85
MONAQUAT P-TS	3.00
Part II. Isopropyl Alcohol	10.00
AMP 95%	0.15
Gantrez ES-435	1.00
Part III. Dow Corning Surfactant 193	3.00

Procedure:

Add MONAQUAT P-TS to water. Heat to 65C with agitation until P-TS dissolves. Cool to 40C. Separately mix Part II. Heat to 65C to melt. Cool Part II to 40C, then add to Part I with continued agitation. Add Part III. Add perfume and cool as desired.

To Aerosolize:

Mousse F-229A	83.00
Isobutane (A-31 Aeropress)	17.00

Provides a soft, long lasting hold and minimizes the tackiness on both hands and hair.

NO BASE HAIR RELAXER

INGREDIENTS	% By Weight
A) T-Wax	10.00
Brox OL10	1.50
Carnation	15.00
ProtoPET	10.00
B) Ivarlan 3401	2.00
Propylene Glycol USP	7.00
Foam-Coll C	0.30
Water	36.20
C) Sodium Hydroxide (100%)	2.00
Water	6.00

Procedure:

Heat Phase A (Emulsifying Wax, Oleth 10, Mineral Oil and Petrolatum) to 70 Deg. C. A clear solution should result. Heat Phase B (Water, Ivarlan, Propylene Glycol and Foam-Coll 4C) to 50 deg. C. Carefully prepare Phase C. Mix Phase C until clear and uniform and set aside. Add Phase B to Phase A - a thin milky emulsion forms. Cool to around 45 deg. C - the emulsion will now start to thicken - it is important not to add the sodium hydroxide solution until this happens. After the thickening starts add Phase C (the Sodium Hydroxide solution) slowly. The emulsion will thicken drastically. Improved agitation is necessary. After all the sodium hydroxide solution has been added, agitation should be stopped as soon as the cream is homogeneous. Overstirring at this stage will result in a cream with poor stability.

PROTEIN PAK FOR HAIR

INGREDIENTS	% By Weight
A. Deionized Water	80.8
Hydroxyethylcellulose	1.0
Propylene Glycol	1.0
B. Stearic Acid	3.0
Glyceryl Stearate and PEG 100 Stearate	2.0
C. PROTECTEIN	10.0
D. Propylene Glycol and Diazolidinyl Urea and Methylparaben and Propylparaben	1.0
Dimethicone	1.0
Fragrance	0.1
F, D & C Yellow No. 5 (0.01%)	0.1

Procedure:

Begin heating water to 80C; sift Hydroxyethylcellulose into water with constant agitation. Add rest of Part A. Mix until clear. Add Part B ingredients in order. Mix until homogeneous. Add PROTECTEIN slowly. Cool to room temperature. Add Part D ingredients. Mix until uniform.

Description:

This lotion, after-shampoo treatment is designed to provide highly substantive, durable protein treatment to the hair. It will improve the tensile strength and integrity of the hair for high fashion styling. After shampooing, smooth through wet hair; let stand 1-2 minutes; rinse with warm water as this will enhance the protein substantivity.

Formula: 614-11

ROOT STIMULATOR

INGREDIENTS	% By Weight

PROTOTYPE AEROSOL HAIR SPRAY (FIRM HOLD)

RAW MATERIALS	% By Weight
---------------	-------------

Phase I:

Demineralized water	84.59
Eastman AQ 38S polymer	15.00

Phase II:

Fragrance (Novarome KE-99)	0.40
Dow Corning 190 silicon	0.01

Procedure:

1. Heat Phase I to 80-85C and hold until the polymer is well dispersed.
2. Cool to 50C after dispersion is complete; add Phase II and mix until well dispersed.
3. Continue mixing to 25C; weigh and compensate for water loss.
4. Filter product to remove any solids before weighing material into aerosol container.
5. At 25C charge Dymel A (dimethyl ether) at 30 weight percent.
6. Agitate aerosol container to insure solution of propellant. Concentration of Eastman AQ 38S polymer = 10.5%.

PROTOTYPE PUMP HAIR SPRAY (REGULAR HOLD)

RAW MATERIALS	% By Weight
---------------	-------------

Phase I:

Demineralized water	92.99
Eastman AQ 55S polymer	6.00

Phase II:

Germall II preservative	0.30
Methyl paraben USP	0.30

Phase III:

Fragrance (Novarome KE-99)	0.40
Dow Corning 190 silicon	0.01

Procedure:

1. Heat Phase I to 80-85C and hold at that temperature for 15 minutes or until the polymer is well dispersed.
2. Remove the heat and continue mixing after the Eastman AQ polymer is dispersed until the product temperature reaches 60C.
3. Add Phase II and continue mixing until dissolved.
4. Cool to 40C and add Phase III.
5. Cool to room temperature, weigh, and compensate for any water loss.
6. Filter and package.

PUMP SPRAY CONDITONER #2
(Thick, clear, light duty)

INGREDIENTS	% By Weight
Water, Deionized	91.90
Hydroxyethyl Cellulose	1.00
Sodium Hydroxide (50%)	qs
Glycerine	2.00
ARQUAD 16-29	5.00
Citric Acid	qs to pH 3.0-3.5
Preservative	0.10

Procedure:

Heat water to 60C, sprinkle in hydroxyethyl cellulose with agitation, and add sodium hydroxide (50%) until system clears. Agitate until no lumps are present and system is clear. Add Glycerine and ARQUAD 16-29. Adjust pH and then add preservative.

pH: 3.0-3.5

Viscosity: 2,800 cps

Appearance: Clear

CONDITIONER

RAW MATERIALS	% By Weight
Tylose H 4000 P	1,80
Water	91,20
Cetyl Alcohol	2,00
Belsil ADM 6057 E	5,00
Preservatives, fragrances	q.s.

Mix Tylose H 4000 P into the water and whilst stirring bring to a temperature of 70C. Melt the cetyl alcohol and stir into the clear Tylose slime. Cool and add Belsil ADM 6057 E.

Temperature stability: at 45C over 10 weeks.

White, high viscosity

Formulation 231 AH

CONDITIONER

RAW MATERIALS	% By Weight
Belsil CM 040	5,00
Lamecreme KSM	3,00
Cetyl Alcohol	1,00
Water	91,00
Preservatives, fragrances	q.s.

Heat Lamecreme KSM and the cetyl alcohol to 70C, work in the water stirring well. Leave to cool somewhat, mix in Belsil CM 040.

Temperature stability: at 45C over 10 weeks.

Creamy, easy to comb, reduces drying time.

Formulation 311 AH

LIPSTICKS WITH VOLATILE SILICONES

RAW MATERIALS	% By Weight
1. Castor-oil	11.5-23.5
2. Color grind (D&C colors in castor oil)	3.0-15.0
3. Dow Corning 345 fluid	15.0
4. Miglyol 812	17.5
5. Isopropyl myristate	8.0
6. Mineral Oil Light	3.0
7. Aerosil 200	1.0
8. Bees wax	14.0
9. Carnauba wax	8.0
10. Ozokerite 145	2.0
11. Lanolin	5.0
12. Pearl pigments	10.0-15.0

Manufacturing Process:

The ingredients of the color grind are mixed with castor oil, the mixture is heated to 60C and passed twice over a three-roll mill.

Components 1-7 are mixed and homogenized (e.g. with an Ultra Turrax). After items 8-11 are added and the mass is heated to about 80C until melting.

Finally 10-15% pearl pigments (item 12) are added to the melted mixture and stirred until the mass is homogeneous.

When pouring the sticks, the casting machine and the mixture should have a temperature of about 70C and the mold should be preheated to 60C.

LIP REPAIR

RAW MATERIALS	Sequence	% By Weight
Water	1	79.20
Keltrol	1	0.90
Methylparaben	1	0.30
Sodium Dehydroacetate	1	0.10
Unicide U-13	1	0.30
Lipo GMS 450	2	5.00
Liponate SPS	2	0.50
Lipocol C	2	0.50
Liponate CRM	2	10.00
Propylparaben	2	0.20
Amphisol	2	2.00
Indopol H-1900	3	1.00

Procedure:

1. In main vessel, heat Sequence 1 materials under slow agitation to 78C.
2. In an auxiliary vessel, heat Sequence 2 materials to 80C under slow agitation.
3. Add Sequence 2 materials at 80C to Sequence 1 at 78C while mixing with a Lightnin' mixer.
4. Cool slowly to 60C while mixing. Add Sequence 3 and disperse thoroughly. Cool and package.

Formulation developed by Precision Cosmetic of Mount Vernon, NY, in conjunction with the Frank B. Ross Co.

HIGH SHINE LIPSTICK

RAW MATERIALS	% By Weight
Castor Oil	59.4
Candelilla Wax	8.0
Acetulan	7.5
Ross Wax 1275W	5.0
Propylene Glycol Monolaureate	5.0
Lanogene	5.0
Carnauba Wax	2.0
Propylparaben	0.1
Timiron MP-10	7.0
D & C Red #7 CA Lake (3107)	0.9
Pur. Navy Blue #7110	0.1
Fragrance	q.s.

Procedures:

Grind the pigments in part of the Castor Oil using either a 3-roll mill or mortar/pestle. Add all other ingredients (except for pearlescent pigment and fragrance) and heat gently on steam bath to 80-85C. Add pearl, mix until homogeneous. Fragrance should be added at lowest possible temperature. Cast into molds.

High gloss, firm lipstick with good moisturizing qualities. Liquifies instantly to an oil, slippery film while depositing very little sheer color and high pearlescence.

Section IX

Lotions

ACNE TREATMENT LOTION

INGREDIENT	% By Weight
A VEEGUM	0.90
RHODIGEL	0.40
Deionized Water	80.70
B Propylene Glycol	6.00
C LIPACIDE CCO	2.00
Laureth-4	5.00
Acetylated Lanolin Alcohol	5.00
D Preservative	q.s.
Citric Acid to pH 5.0	q.s.

Preparation:

Dry blend VEEGUM and RHODIGEL and add to water, mixing with maximum available shear until smooth and uniform. Add B to A and mix until uniform. Blend C ingredients and heat to 50C with mixing. Add C to (A+B) with high speed mixing until a uniform emulsion is formed. Cool to 30C and add D.

Consistency: Low Viscosity Lotion (Viscosity 700-900 cps)
Suggested Packaging: Plastic or Glass Bottles.

Features:

This lotion contains LIPACIDE CCO, Capryloyl Collagenic Acid, which has been shown to be an effective bactericide against propionibacterium acnes, staphylococcus aureus and staphylococcus epidermis, strains normally associated with the skin disease acne. This emulsion has been stabilized and thickened by the synergistic combination of VEEGUM and RHODIGEL and contains no occlusive oils or benzoyl peroxide.

ALL-PURPOSE SKIN CONDITIONING LOTION

RAW MATERIALS	% By Weight
Oil Phase:	
PROMULGEN G	5.0
GLUCATE SS	2.0
GLUCAMATE SSE-20	2.0
SOLULAN 5	0.5
Mineral Oil, 70 vis.	
Water Phase:	
BIOCARE Polymer HA-24	3.8
GLUCAM E-10	3.5
Water	80.2
Germaben IIE	1.0

Procedure:

Add the water phase (minus the BIOCARE Polymer HA-24 and Germaben IIE) at 85C to the oil phase at 85C with mixing. Add the Germaben IIE at 75C. Continue to mix to 40C. Add the BIOCARE Polymer HA-24 with mixing while cooling to 30C.

Description:

White, glossy, medium viscosity, nonionic o/w lotion. BIOCARE Polymer HA-24 is substantive to the skin and forms a uniform viscoelastic matrix which moisturizes the skin. The combination of o/w GLUCAMATE SSE-20 and w/o GLUCATE SS nonionic emulsifiers gives a stable and mild system. PROMULGEN G and SOLULAN 5 give body to the system while also acting as auxiliary emulsifiers. GLUCAM E-10 serves as a humectant and emollient contributing to the positive afterfeel.

SOURCE: Amerchol Corp.: BIOCARE Polymer HA-24: Formula T51-155-1

BODY LOTION

RAW MATERIALS	% By Weight
Oil Phase:	
AMERSIL ME-358	6.0
Cyclomethicone Pentamer	3.0
AMERCHOL L-101	3.0
Polyglycerol Methacrylate	10.0
Water Phase:	
Glycerin	5.0
Deionized water	73.0
Preservative and perfume	q.s.

Description:

Fluffy, white, glossy cream. AMERSIL ME-358 allows emulsification of the cyclomethicone pentamer, and together they provide an elegant, velvety feel on the skin. AMERCHOL L-101 adds to the emolliency and smooth appearance while providing good stability to the overall product, especially in freeze-thaw evaluations.

BASIC BODY LOTION WITH COCOA BUTTER

INGREDIENT	% By Weight
Demineralized Water	74.7000
1,3 Butylene Glycol	2.0000
Amigel	0.1000
Tri-Sept M	0.2000
Tri-Sept P	0.0500
Cocoa Butter	5.0000
Isopropyl Myristate	2.0000
Lexemul EGDS	3.5000
Emulgin B-1	3.0000
Stearalkonium CL 25%	3.0000
White Petrolatum	2.0000
Carnation 70	2.5000
Stearic Acid XXX	1.0000
TEA 99%	0.8000
Floral Fragrance T8201	0.1500
Abiol	0.2000

Procedure:

Pre-blend the Parabens with the Butylene Glycol heat if necessary to dissolve.

Cool to near room temp, disperse the Amigel completely and set aside.

Heat water to 75C., and add the glycol blend w/prop agitation.

Mix until fully dissolved and lump-free.

Combine the oils and waxes and heat to 75C. to dissolve.

Add the oil phase to the water phase with prop agitation and mix thoroughly.

Add the TEA and mix until creamy. Switch to sweep agitation and begin cooling.

Add the Abiol at 50C. Continue cooling to room temp.

Add fragrance at 45C. Continue mixing until uniform and R.T.

Adjust pH to 7.5 approx. with TEA.

BENZOYL PEROXIDE LOTION

INGREDIENTS	% By Weight
Part A:	
Water, deionized	79.30
KELTROL T xanthan gum	0.50
Methyl Parasept methylparaben	0.20
Part B:	
SOLULAN 98 laneth-10 acetate	7.00
Benzoyl peroxide 70%, wet	6.50
Promulgen G stearyl alcohol and ceteareth 20	3.00
Dehydag Wax 16 cetyl alcohol	2.00
Emerest 2314 isopropyl myristate	1.50

Part A:

1. With good agitation, hydrate the KELTROL T in the deionized water (10-15 minutes using a high-shear mixer).
2. When fully hydrated, add the methyl paraben.
3. Heat to 77C (170F).

Part B:

1. Melt the Promulgen G and Dehydag Wax 16 by heating to about 77C (170F).
2. Add to Part A at 77C (170F) and mix until homogeneous.
3. Remove from heat and start cooling.
4. Blend the rest of the ingredients.
5. Add to the liquid mix cooled to about 38C (100F) and mix again.
6. Homogenize or pass through a colloid mill.

Triethanolamine	0.6%
Water	up to 100.0%

Carbopol is homogeneously mixed with water, then triethanolamine is added. It has to be stirred until the gel is smooth.

Preparation of the lotion:

(A) is heated to 75-80C. (B) is mixed and brought to the same temperature. (B) is emulsified into (A). At 30C., (C) is added.

BODY AND HAND LOTION

INGREDIENTS	% By Weight
Oil Phase:	
Di(2-Ethylhexyl) Adipate	4.80
Stearic Acid	2.90
"Nimcolan T"	0.50
Cetyl Alcohol	0.40
Glycerol Monostearate	1.00
Propyl p-Hydroxybenzoate	0.05
Water Phase:	
Triethanolamine, 99%	0.95
Propylene Glycol	4.80
Polymer JR-400	0.20
Methyl p-Hydroxybenzoate	0.10
Water	83.90
Fragrance--Alpine Aromatics No. 8-911	0.40

Preparation Procedures:

1. Heat the oil phase to 70C.
2. In a separate container, add the Polymer JR-400 to 10 per cent of the water and stir until hydrated.
3. In a third container, heat the remaining water, triethanolamine, propylene glycol, and methyl p-hydroxybenzoate to 70C.
4. Add the water phase and then the Polymer JR-400 solution to the oil phase while stirring vigorously.
5. Continue the stirring at a moderate rate until the temperature reaches 40C., when the perfume is added.
6. Stirring is ceased when the temperature reaches 35C or lower. Viscosity--1,800 to 2,200 cps. at 25C.

Features:

- * Positive after-feel
- * Smoothness
- * Improvement in ease of rub-in
- * Assistance in retention of emollients
- * Viscosity building effects

Formula

CATIONIC HAND LOTION

RAW MATERIALS	% By Weight
Oil Phase:	
AMERCHOL L-101	5.0
SOLULAN 98	2.0
CETAL	1.0
Glyceryl Stearate (and) PEG-100 Stearate	4.0
Water Phase:	
Part A:	
QUATRISOFT POLYMER LM-200	0.5
Water	19.5
Part B:	
Steapyrium Chloride	0.1
Glycerin	2.0
Water	65.9
Preservative and Perfume	q.s.

Description:

A medium viscosity, white, glossy lotion. QUATRISOFT POLYMER LM-200 contributes to the overall emollient afterfeel by virtue of its substantive cationic nature. AMERCHOL L-101 (w/o) and SOLULAN 98 (o/w) act as a nonionic emulsifier pair to ensure emulsion stability.

Procedure:

Add QUATRISOFT POLYMER LM-200 to the water (water phase, part A). Mix until thoroughly dispersed, then heat to 45-50C. Mix until clear and uniform. Add water phase, part A to water phase, part B while mixing while heating to 70C. Heat oil phase to 70C. Add water phase at 70C to oil phase at 70C while mixing. Cool to 35C.

SOURCE: Amerchol Corp.: QUATRISOFT POLYMER LM-200: Formula T53-190-1

Part B:	
MACKPRO NLP	2.0
TEA	0.3
Propylene Glycol	6.0
MACKSTAT DM	qs
Water, Dye, Fragrance qs to	100.0

Procedure:

1. Heat parts A and B separately to 70 degrees C.
2. Add part A to part B.
3. Cool and fill at 30 degrees C.

SOURCE: McIntyre Group Ltd.: Personal Care Formulary: Formula

CATIONIC LOTION

INGREDIENTS	% By Weight
Part A:	
EMULGADE F Special	8.0
MYRITOL 318	5.0
Silicon 200 Fluid (350 cs)	0.5
Part B:	
Deionized Water	81.4
Glycerin	3.0
Dehyquart SP	1.0
Part C:	
Fragrance	0.1
Germaben II-E	1.0

Procedure:

- 1) Heat Part A and Part B to 70-75C.
- 2) Add Part A to Part B at 70-75C, with moderate agitation and stir at temperature for 15 minutes.
- 3) Let cool, while stirring, to 40-45C and add Part C.
- 4) Stir down to 25-30C and package.

Comments:

Emulgade F Special is a self-emulsifying base used for the preparation of oil-in-water emulsions. Because it is nonionic, cationic substances can be easily formulated into creams and lotions.

This formulation is a light cream and is characterized by a non greasy rubout, quick penetration and a soft, non-drying after-feel.

Propyl Paraben	0.10
Germall 115	0.20
D. Water, Deionized	4.50
Potassium Hydroxide (40%)	0.75
E. Fragrance	0.25

Procedure:

1. Prepare Part A. Heat ingredients to 75C with slow agitation.
2. Prepare Part B by dispersing Carbopol 941 in water using high speed agitation until a smooth slurry is obtained. Then heat the dispersion to about 80C until a smooth, viscous solution is formed.
3. Dissolve preservatives in propylene glycol by warming solution to 50C. Add Part C to Part B.
4. Add Part B & C to Part A with good mixing.
5. When batch is cooled to 55C, add Part D. Q.S. with fragrance at room temperature.

SOURCE: Scher Chemicals, Inc.: Formula

ASTRINGENT LOTION

INGREDIENTS	% By Weight
Part A:	
Water	54.50
COSMEDIA POLYMER HSP-1180	5.00
Part B:	
3A Ethyl Alcohol	40.00
Allantoin	0.50
Part C:	
Dyes and Fragrance	q.s.

Procedure:

Pre-mix Part A. Pre-mix Part B. Add Part B to Part A, under agitation. Add individual components of Part C. Continue stirring until product is homogeneous. Fill off.

Comments:

This relatively simple astringent formula provides a nice feeling to the skin due to the presence of COSMEDIA POLYMER HSP-1180. As such, it can even function as an after-bath splash.

SOURCE: Henkel: Formula H-4827

SOURCE: Huls America Inc.: Formulas

CLEAR BODY LOTION

RAW MATERIALS	% By Weight
ABIL B 8863	1.00
Carbomer 940	0.33
SD Alcohol 40	33.00
Water	64.95
Triethanolamine (99%)	0.22
Polysorbate 80	0.50
Perfume	QS

Procedure:

Disperse the carbomer in the alcohol, and mix until it goes into solution. Load the Polysorbate 80 and approximately 3/4 of the water; mix until uniform. Stir the Dimethicone Copolyol and the Triethanolamine into the remaining 1/4 water. Slowly stir the Triethanolamine solution into the carbomer solution. The lotion will gel and turn clear as the triethanolamine is added. The perfume either can be added with the alcohol or stirred into the finished formulation.

Comments:

This product is designed for use after a shower or bath to deliver fragrance and a light emollient effect to the skin. As given, the formulation is a thick gel. Lower viscosity can be achieved if the amount of Carbopol/TEA is cut back or if the final lotion is diluted with water.

COLD MIX - W/O EMULSION: DIHYDROXYACETONE LOTION

RAW MATERIALS	% By Weight
A. ABIL WE-09	5.0
Mineral Oil	6.0
Isopropyl Myristate	6.0
Caprylic/Capric Triglycerides	4.0

ABIL WAX 9800	3.0
B. Sorbitol 70%	3.0
Glycerin	2.0
Sodium Chloride	2.0
Water	58.0
Dihydroxyacetone	5.0

Procedure:

1. Blend Phase A
2. Mix Phase B
3. With slow lightening mix - slowly stream B into A. A milky dispersion will form.
4. Homogenize.

SOURCE: Goldschmidt Chemical Corp.: Formulas

CONDITIONING FACIAL LOTION

INGREDIENTS	% By Weight
Part A:	
LANTROL HP-2073	2.5
ACETOL 1706	5.0
CUTINA GMS	2.0
PEG-100 Stearate	2.0
LANETTE 16	1.0
EUMULGIN B-1	0.5
Propylparaben	0.1
Part B:	
Deionized Water	81.0
Propylene Glycol	5.0
Methylparaben	0.2
Part C:	
Emeressence 1160	0.7

Procedure:

- 1) Heat Part A to 75-80C.
- 2) Heat Part B to 75-80C.
- 3) Add Part A to Part B at 75-80C and stir 15 minutes at temperature.
- 4) While stirring, cool to 40C and add Part C.
- 5) Cool to 30C and package.

Comments:

This facial lotion has very good gloss, is non-greasy on application and leaves the face with an elegant after-feel.

SOURCE: Henkel: High Purity Lanolins: Formula H-4986

DEEP MOISTURIZING LOTION

INGREDIENTS	% By Weight
Part A:	
ULTRA LANTROL HP-2074	10.0
CETIOL S	13.0
LANETTE 16	4.0
EMERSOL 132	3.0
CUTINA GMS	3.0
GENEROL 122 E-10	1.0
Part B:	
Deionized Water	55.0
Propylene Glycol	5.0
Carbopol 940* (3% solution)	5.0
Part C:	
Germaben II	1.0
Procedure:	
1) Heat Part A to 75-80C.	
2) Heat Part B to 75-80C.	
3) Add Part A to Part B at 75-80C and stir 15 minutes at temperature.	
4) At 60C, homogenize for 15 minutes.	
5) While stirring, cool to 40C and add Part C.	
6) Cool to 30C and package.	

Note: *Carbopol 940 is being used here as a slip agent, not as a viscosity agent so no TEA is used.

Comments:

This formulation is a high gloss lotion with good lubricity and rub-in properties. Even with 10% Lanolin Oil, this is a non-greasy product that leaves the skin with a soft protective feeling.

SOURCE: Henkel: High Purity Lanolins: Formula H-4985

BODY LOTION

DEEP MOISTURIZING LOTION

RAW MATERIALS	% By Weight
Part A:	
PHOSPHOLIPID EFA	4.00
Steareth-21	0.40
Water	82.00
Part B:	
Steareth-2	1.60
Anhydrous Lanolin	1.50
Petrolatum	3.00
Octyldodecyl Myristate	2.00
Cetearyl Alcohol	4.00
Dimethicone (100 cS)	1.50

Combine ingredients in both phases separately and heat to 65C. Homogenize (B) into (A) with continued heating until sufficiently mixed. Stir-cool to 40C, then add fragrance, color and preservative as needed before filling.

This after-bath lotion gives the benefits of potent skin conditioners while eliminating the tackiness associated with lanolin and petrolatum through the unique emolliency provided by PHOSPHOLIPID EFA.

HAND AND BODY LOTION

RAW MATERIALS	% By Weight
Part A:	
PHOSPHOLIPID EFA	4.00
Water	83.00
Part B:	
Steareth-2	2.00
Light Mineral Oil	4.00
Cetearyl Alcohol	3.00
Octyldodecyl Myristate	2.50
Dimethicone (100 cS)	1.50

Combine ingredients in both phases separately and heat to 65C. Homogenize (B) into (A) with continued heating until sufficiently mixed. Stir-cool to 40C. Add fragrance, color, and preservative as needed and fill.

A superior product designed for after-bath use on traditionally dry areas such as hands, elbows and heels. PHOSPHOLIPID EFA is strongly substantiative towards skin providing non-greasy moisturizing and a pleasant after feel.

DRY SKIN LOTION

INGREDIENTS	% By Weight
Part A:	
Water, deionized	72.70
Glycerine	4.00
KELTROL T xanthan gum	0.55
Magnesium aluminum silicate, high viscosity	0.45
Methyl Parasept methylparaben	0.20
SORBISTAT-K potassium sorbate	0.05
Sodium benzoate	0.05
Part B:	
White Protopet #1S petrolatum, USP	6.00
Arlacel 165 glyceryl stearate and PEG 100 stearate	5.00
Finsolv TN C12-C15 alcohol benzoate	4.50
Acetulan acetylated lanolin alcohol	4.00
POLYSYNLANE squalane substitute	2.50
Perfume	to suit
Color	to suit

Procedure:

1. Dry blend KELTROL T and magnesium aluminum silicate together, and add to 82C (180F) water with medium agitation. Mix for 20 minutes using a Lightnin'-type mixer.
2. Add the remainder of Part A ingredients and mix for 5 minutes.
3. Blend Part B ingredients together and heat to 71C (160F) until dissolved.
4. Add Part B to Part A and mix for 5 minutes. Mix slowly to avoid bubble formation.

KELTROL T xanthan gum modifies the rheological properties of this lotion. The shear thinning property conferred by KELTROL T provides ease of application and results in a smooth skin feel when the highly emollient lotion is applied. KELTROL T also provides excellent stability to the lotion.

EMOLLIENT LOTION

RAW MATERIALS	% By Weight
A VEEGUM PRO	1.5
Water	83.8
B Triethanolamine	0.1
Glycerin	3.5
C Marcol 130	3.6
Petrolatum	0.4
Stearic acid XXX	1.6
Cetyl alcohol	1.5
Kessco Glycerol Monostearate SE	1.4
Acetulan	2.0
Dow Corning 200 Fluid	0.6
Preservative	q.s.

Procedure:

Heat the water to 70-75C, then slowly add the VEEGUM PRO while agitating at maximum available shear. Mix until smooth. Add B to A with slow agitation until smooth. Maintain A/B at 70 to 75C, heat C to 75 to 80C. Add C to A/B and mix until cool. Consistency: Medium viscosity lotion.

Suggested Packaging: Squeeze or pump bottle.

Comments:

VEEGUM PRO effectively thickens and stabilizes the lotion, even at elevated temperatures. This lotion is absorbed rapidly, leaving the skin smooth and greaseless.

SOURCE: R.T. Vanderbilt Co., Inc.: Formula No. 417

ALL PURPOSE LOTION (NON-OILY)

INGREDIENTS	% By Weight
Part A:	
CUTINA E-24	4.00
CUTINA GMS	6.00
LANETTE O	1.50
CETIOL LC	8.00
Part B:	
Glycerine	5.00
Deionized Water	74.00
Part C:	
Germaben II	1.00
Fragrance	0.10
Comments:	

The use of CUTINA E-24 allows the formation of nonionic emulsions that are non-whitening when compared to anionic systems, in addition to being very mild to the skin. As a nonionic, it allows the incorporation of a myriad of additives regardless of ionic species. Furthermore, this can be accomplished at virtually all feasible (cosmetically) pHs.

SOURCE: Henkel: Formula H-4880

ENRICHED MOISTURIZING LOTION (BEFORE & AFTER TANNING)

RAW MATERIALS	% By Weight
Sesame Oil U.S.P.	15.0
POLYSYNLANE	20.0
Glyceryl Monostearate	3.0
Isopropyl Myristate	10.0

RAW MATERIALS	% By Weight
A VEEGUM	1.3
Water	55.7
Magnesium Sulphate	0.5
B Mineral Oil, Light	9.0
POLYSYNLANE	10.0
Nimlesterol D	7.5
Amerchol L101	9.0
70% Sorbitol Solution	5.0
Witcamide 511	2.0
Preservative	q.s.

Procedure:

Add the Veegum to the water slowly, agitating continually until smooth. Add the magnesium sulphate and mix until smooth. Blend B well and add A to B; mix until smooth and uniform.

Packaging:

This formula is a rich, pourable or pumpable lotion and may be dispensed from a suitable glass or plastic bottle.

Comments:

This formula is an elegant, economical, and easily prepared water-in-oil lotion for softening and moisturizing dry skin.

The use of Veegum as an emulsion stabilizer allows a relatively large internal phase without sacrificing product stability. The amount of Veegum used controls the viscosity. In addition, Veegum contributes to the rich, nongreasy feel imparted by the highly emollient oil phase. The high water increased economy over typical water-in-oil products.

This formula would make an elegant addition to a treatment line as a super moisturizer for dry skin.

FACIAL BEAUTY LOTION

RAW MATERIALS	% By Weight
Oil Phase:	
PROMULGEN D	4.5
AMERCHOL L-101	5.0
OHLAN	0.5
ACETULAN	2.0
Cetyl Palmitate	1.0
Water Phase:	
Water	87.0
Perfume and Preservative	q.s.

Procedure:

Heat both phases to 80C. Add water phase to oil phase at 80C and continue to mix until 40C. Add perfume at 40C. Continue to mix until room temperature.

Description:

A heavy viscosity, flowing lotion for daily facial use. The w/o emulsifies AMERCHOL L-101 and OHLAN, in combination with the nonionic o/w emulsifier PROMULGEN D, gives this lotion excellent stability. An elegant, nongreasy, velvety feel is attributable to ACETULAN.

SOURCE: Amerchol Corp.: AMERCHOL: Formula T53-192-1

PROTECTIVE BARRIER LOTION

RAW MATERIALS	% By Weight
Oil Phase:	
GLUCAM E-20 Distearate	1.0
GLUCATE SS	0.5
AMERLATE P	1.5
Stearic Acid, xxx	10.0
Dimethicone	5.0
Water Phase:	
Deionized Water	76.0
Glycerin	5.0
Triethanolamine (99%)	1.0
Perfume and Preservative	q.s.

Procedure:

Heat both phases to 80C. Add water to oil at 80C. Add perfume at 40C. Continue to mix with moderate agitation while cooling to room temperature.

Description:

Light, fluffy, pearlescent lotion. The combination of GLUCAM E-20 Distearate and AMERLATE P provides emolliency and lubricity. GLUCATE SS enhances high temperature stability. This quick-vanishing lotion leaves a nontacky, nongreasy, highly protective barrier. Recommended for use during work, sports and hobby activities.

SOURCE: Amerchol Corp.: GLUCAM E-20: Formula T49-198-2

FACIAL LOTION

INGREDIENTS	% By Weight
Part A:	
Water, deionized	85.20
Mineral oil	6.00
GLUCAM E-20 methyl gluceth 20	1.00
KELTROL T xanthan gum	0.20
Part B:	
EMEREST 2400 glyceryl stearate	2.80
NEO-FAT 18-55 stearic acid	2.00
CETAL cetyl alcohol	1.80
Triethanolamine (TEA)	1.00
Fragrance	to suit

Procedure:

Part A:

1. Slurry KELTROL T in mineral oil.
2. Add slurry to other Part A ingredients using a Lightnin'-type mixer with good agitation. Heat to 82C (180F).

Part B:

1. In another container, combine Part B ingredients (except triethanolamine and fragrance) and heat to 82C (180F).
2. Add Part A to Part B.
3. Allow to cool to 49C (120F), then add triethanolamine.
4. Continue mixing until cooled to 27C (80F).
5. Add fragrance.
6. Package.

The addition of KELTROL T xanthan gum ensures emulsion stability and also provides a rich, smooth skinfeel.

CONDITIONING/STYLING LOTION

RAW MATERIALS	% By Weight
Water	Q.S.
PVP K-90 (20% aqueous solution)	5.0
MONATERIC 1202	4.5
Hydrolyzed Animal Protein (50%)	0.5
SD-3A Alcohol	25.0
Propellant (optional)	5.0-25.0

Appearance: Clear Liquid

Nominal Activity: 3.0%

This formulation imparts both conditioning and controlled setting properties. As an aerosol mousse or a pump-on soft setting lotion the formulation can be spot applied, used as an after shampoo conditioner, or as a between shampoo revitalizing conditioner.

SOURCE: Mona Industries Inc.: MONATERIC 1202: Formulation

HYDROCORTISONE LOTION

INGREDIENTS	% By Weight
Part A:	
Arlacel 165 glyceryl stearate and PEG 100 stearate	4.0
Promulgen G stearyl alcohol and ceteareth-20	3.0
Amerchol CAB petroleum and lanolin alcohol	2.0
Myrj 52 PEG-40 stearate	1.5
Hydrocortisone acetate	0.5
Part B:	
Water, deionized	82.4
Neo-Fat 18-55 stearic acid	4.0
Glucam E-20 methyl gluceth-20	2.0
KELTROL T xanthan gum	0.4
Preservative	0.2

Procedure:

1. Hydrate Keltrol T in the deionized water for at least 15 minutes using a Lightnin' type mixer.
2. Add the rest of Part B ingredients and heat to 71C (160F) while mixing.
3. In another container, blend and melt at 71C (160F) the Part A ingredients except the hydrocortisone acetate.
4. Add Part A to Part B while continuing to mix.
5. When fully mixed, add the hydrocortisone acetate and mix until cool.

The addition of KELTROL T xanthan gum stabilizes this anti-itch lotion and suspends the active ingredient, hydrocortisone acetate. KELTROL T also provides improved skin feel on application.

LIGHT CONDITIONING HAND LOTION

RAW MATERIALS	% By Weight
Water Phase:	
Glucquat 100	1.0
Deionized water	84.0
Oil Phase:	
GLUCATE SS	0.8
GLUCAMATE SSE-20	1.2
ACETULAN	2.0
PROMULGEN D	3.0
Glyceryl Monostearate (neutral)	0.5
Mineral oil, 70 vis.	7.5
Perfume and preservative	q.s.

Procedure:

Dissolve GLUCQUAT 100 in deionized water, and heat to 70C. Combine oil phase ingredients, and heat to 70C with propeller agitation. Slowly add water phase to oil phase, and mix until uniform. Cool to room temperature with mixing.

Description:

Flowable lotion with a light, emollient feel. GLUCQUAT 100 provides moisturizing and conditioning properties to the skin. ACETULAN reduces greasiness associated with the mineral oil. Excellent stability is due to the primary nonionic emulsifier package of GLUCATE SS (w/o) and GLUCAMATE SSE-20 (o/w) and the auxiliary emulsifier, PROMULGEN D (o/w).

SOURCE: Amerchol Corp.: GLUCQUAT 100: Formula T62-101-2

MOISTURIZING LOTION

RAW MATERIALS	% By Weight
Water Phase:	
KYTAMER PC	1.0
GLUCAMATE SSE-20	1.5
Deionized Water	82.0
Oil Phase:	
GLUCATE SS	1.5
PROMULGEN G	4.0
Mineral Oil	10.0
Perfume and Preservative	q.s.

Description:

Soft, white, glossy lotion. Contains KYTAMER PC, a substantive humectant which contributes to the lasting moisturization of the skin. The mild, nonionic emulsifying pair of GLUCAMATE SSE-20 (o/w) and GLUCATE SS (w/o) gives the lotion long-term stability. PROMULGEN G serves as an auxiliary emulsifier to this o/w lotion.

Procedure:

Disperse KYTAMER PC in water at room temperature with high speed agitation. When completely dispersed heat to 75C with continuous mixing until clear and uniform. Maintain temperature at 75C and add GLUCAMATE SSE-20. Heat oil phase to 75C. Add the water phase to 75C to oil phase at 75C with good agitation. Continue mixing while slowly cooling to room temperature. Add perfume below 50C.

SOURCE: Amerchol Corp.: KYTAMER PC: Formula T57-130-1

LIGHT MOISTURIZING LOTION

RAW MATERIALS	Sequence	% By Weight
Water	1	69.80
Triethanolamine 99%	1	0.20
Methylparaben	1	0.25
Unicide U-13	1	0.25
Trisodium EDTA	1	0.05
Unitriolenol T-7	2	2.00

Propylparaben	2	0.10
Butylparaben	2	0.05
Carbopol 934 (2% Disp'n)	3	10.00
Water	3	10.00

Procedure:

1. Heat Sequence 1 to 75C.
2. Heat Sequence 2 to 78C.
3. Add Sequence 2 to Sequence 1 under homomixer and mix 15 minutes. Switch to Lightnin' mixing.
4. Add premixed Sequence 3 at 65-70C. Switch to sweep mixing as batch thickens to prevent aeration.
5. Cool to 25C.

Light weight moisturizing lotion for oily skin. NPCG-2 yields a dry silky feel and is a co-solvent for silicone and Unitriolenol T-27.

MOISTURE LOTION

INGREDIENT	% By Weight
A) Rice Bran Oil	2.70
Canola Oil	4.00
Sunflower Oil	4.00
Squalane	2.70
Siltech F-350	0.50
Delta Rich Tocopherols Concentrate	0.05
Trisept P	0.05
Carbopol 934	0.20
Pemulen TR-1	0.20
B) Glycerin	3.00
Phenoxyethanol	0.70
Trisept M	0.20
C) Deionized Water	74.65
Kelate 220	0.05
D) Deionized Water	1.50
Triethanolamine (99%)	0.35
E) Fragrance, #891118--Modern Floral Bouquet	0.15
F) GlycoCer HA	5.00

Procedure:

1. Combine Phase A ingredients. Mix well using propeller agitation to disperse powders.
2. Combine Phase B and mix to disperse.
3. Add Phase B to Phase C and mix well until paraben dissolves. (Note *)
4. Add A to BC and mix for 30 minutes or until smooth dispersion is formed. Then add Phase D and mix well until lotion is smooth and opaque.
5. Add Phase E and then Phase F and mix until homogeneous.

* Note: This is a cold process emulsion. However, it may be necessary to heat Phase BC slightly to hasten dissolution of Methylparaben. If so, either heat Phase A to the same temperature as Phase BC or cool Phase BC to room temperature before combining the two phases.

MOISTURIZING LOTION

RAW MATERIALS	% By Weight
Oil Phase:	
PROMULGEN D	5.0
Mineral oil	4.0
CETAL	2.0
AMEROXOL OE-2	1.0
GLUCAMATE SSE-20	2.0
Dimethicone	1.0
GLUCAM E-20 Distearate	1.0
Water Phase:	
GLUCATE SS	2.0
Deionized water	81.0
BIOCARE SA	1.0
Perfume and preservative	q.s.
Procedure:	

Heat the oil phase to 80C; heat water phase minus the BIOCARE SA to 80C. Add water to oil at 80C; add perfume and BIOCARE SA below 35C. Continue mixing with moderate agitation while cooling to room temperature.

Description:

A glossy nonionic lotion of medium consistency with wrinkle masking properties. BIOCARE SA, a "skin-activated" complex, lifts facial lines restoring a smoother surface and enhancing afterfeel. GLUCATE SS and GLUCAMATE SSE-20 act together to emulsify and stabilize the viscosity of this elegant lotion. AMEROXOL OE-2 and GLUCAM E-20 Distearate offer auxiliary emulsification and lubricity. PROMULGEN D imparts a good consistency and texture to the lotion.

"NON-OILY" HAND AND BODY LOTION

INGREDIENTS % By Weight

Part A:

Deionized water	84.0
Magnesium aluminum silicate, high viscosity	0.4
KELTROL T xanthan gum	0.3

Part B:

Mineral oil, light purified	3.0
NEO-FAT 18-55 stearic acid	2.5
CETAL cetyl alcohol	2.0
ACETULAN acetylated lanolin alcohol	1.2
SOLULAN PB-2, PPG-2 lanolin ether	1.0
TEGIN 515 glyceryl stearate	0.7
Silicone 200 fluid, dimethicone	0.4

Part C:

Glucam E-20 methyl gluceth 20	3.5
Triethanolamine (TEA)	1.0

Procedure:

- Hydrate premixed KELTROL T and magnesium aluminum silicate in deionized water at 77C (170F) (10-15 minutes using a high shear mixer).
- In another container, mix Part B ingredients and heat to 77C (170F) until melted.
- Combine ingredients in Part C and heat to 77C (170F).
- Combine A, B and C while maintaining temperature at 77C (170F).
- Mix slowly while cooling until temperature reaches 38C (100F).
- Add fragrance.
- Package.

The addition of KELTROL T xanthan gum stabilizes this oil-in-water emulsion and improves skin feel of the lotion. Also, the pseudoplastic property conferred by KELTROL T allows ease of application.

FD&C Yellow 5 0.10% Aq. Sln.	0.20

Phase B:

In the main beaker, disperse B1 at 75C.

Add Glycerin.

Add Triethanolamine to neutralize the Carbopol gel.

Mix until a smooth gel is obtained.

Phase A:

Blend A1 and A2 together at 75-80C until homogeneous.

Add Phase A to Phase B with continuous mixing at 75-80C for fifteen minutes.

Cool batch to 60C and add Phase C.

Continue to cool with mixing to 37C then add Phase D, E, F, G in sequence.

Continue mixing while cooling batch to 25-28C.

Manufacturing Procedure:

1. In a separate kettle, mix the Sequence 1 ingredients and heat to 78C under Lightnin' mixer agitation.
2. In the main kettle, combine Sequence 2 ingredients. Heat to 75C under Lightnin' mixer agitation.
3. Combine Sequence 3 ingredients in an auxiliary vessel and mix until homogeneous. Add combined Sequence 3 to Sequence 2.
4. When Sequence 1 and combined Sequence 2 and 3 reach proper temperature, slowly add Sequence 1 (oil phase) at 78C into combined Sequence 2 and 3 (aqueous phase) at 75C under Lightnin' mixer agitation.
5. Mix for 15 minutes or until emulsion is complete. Begin cooling to 65C. At 65C, switch to side-wiping agitation.
6. Continue cooling with side-wiping agitation to 42C.
7. Add Sequence 4. When completely mixed, cool to 25-30C.
8. At 25-30C, add Sequence 5. Mix. Add Sequence 6 when product is homogeneous, package.

PHOSPHOLIPID EFA REMEDIAL SKINCARE LOTION

RAW MATERIALS	% By Weight
Part A.	
PHOSPHOLIPID EFA	3.20
Water	3.20
MONATERIC 1188M	1.60
Part B.	
0.5% Carbopol 941	67.80
Glycerin	5.00
Methyl Paraben	0.10
Part C.	
Isopropyl Myristate	6.00
Cetyl Palmitate	3.00
Myristyl Myristate	4.00
Isocetyl Stearate	3.00
Stearyl Stearate	2.00
Dow Fluid 200/100 cs.	1.00
Propyl Paraben	0.10

Procedure:

Preblend phases A and B, then combine and heat with stirring to 55C. Blend phase C with heat to 55C and combine the first two phases using sufficient homogenization to ensure good emulsification. Stir cool to 45C, add fragrance, and package.

Comments:

The synergistic emulsifying properties of Phospholipid EFA and Carbopol resins allows for a very mild product free of any additional nonionic surfactants, thereby reducing the need for excess preservatives. The high emollient phase provides a coherent barrier for water retention in the skin while the PHOSPHOLIPID EFA delivers a substantive, luxurious afterfeel.

C12-C15 Alcohol Benzoates	2.50
Hexyl Laurate	2.00
Dow Fluid 200/100 cs.	1.00
Propyl Paraben	0.25

Procedure:

Combine phases A and B separately with heating to 65C. Homogenize B into A for a sufficient time to ensure good emulsification. Stir cool to 45C, add fragrance, and package.

Comments:

This smooth, creamy lotion provides instant relief of dry, chapped skin with a quick breaking formula. A generous amount of emollients and glycerin are delivered to the afflicted areas while the PHOSPHOLIPID SV eliminates any greasiness and leaves the skin with an elegant afterfeel.

POURABLE MOISTURIZING LOTION

RAW MATERIALS % By Weight

Part A.

Monaquat P-TS (as is)	2.0
Germaben II	0.2
Glycerol (99%)	3.0
PEG 12	2.0
Deionized Water	84.1

Part B.

Carnation Mineral Oil	3.0
Isopropyl Isostearate	2.0
Cetyl Alcohol	2.0
Dow Corning 200 Silicone (100 C.S.)	0.2
Propylene Glycol Monostearate (Pure)	1.5

Procedure:

1. Melt Monaquat P-TS at 45C in closed container (to avoid loss of alcohol). Charge Part A ingredients and heat to 60C in a stainless steel or glass lined vessel fitted with a suitable stirrer and a stainless steel propeller and mix until clear and uniform.
2. Heat part B to 62-65C with mixing to ensure uniformity. Add slowly to part A with good mixing.
3. After 5 minutes remove heat and cool slowly (0.5 to 1.0C per minute).
4. When the temperature drops to the 45-40C range the product will thicken somewhat and the propeller rotational speed will slow down. Increase the speed to ensure thorough mixing.
5. Cool to 27C or below.

Formula F-255, when made according to the above procedures will withstand at least 5 freeze/thaw cycles and will exhibit no oil or bottom water separation at 50C for at least 3 months.

POURABLE MOISTURIZING LOTION

RAW MATERIALS	% By Weight
Part I:	
Deionized Water	84.3
MONAQUAT P-TS	2.0
Glycerin (99%)	3.0
PEG 12	2.0
Part II:	
Light Mineral Oil	3.0
Isopropyl Isostearate	2.0
Cetyl Alcohol (95%)	2.0
Dimethicone (100 C.S.)	0.2
Propylene Glycol Monostearate (Pure)	1.5

Procedure:

Heat Part I to 65C, with mixing, until clear. Heat Part II to 65C, with mixing. Slowly add Part II to Part I with efficient mixing. Remove heat after 5 minutes. Cool slowly. When the temperature drops to the 45-40C range the product will thicken somewhat and the propeller rotational speed will slow down. Increase the speed to ensure thorough mixing. Add fragrance, coloring or preservative as required. Cool to 27C or below and fill.

This formula, when made according to above procedures, will withstand multiple freeze/thaw cycles, remains stable at 50C for at least 3 months and maintains at least 1-year stability at room temperature.

This light-bodied pourable moisturizing lotion provides excellent lubricity when applied and worked into skin. The after-feel is smooth and silky. Skin is left moisturized without feeling oily. MONAQUAT P-TS provides primary emulsification and skin conditioning.

SUPER MOISTURIZING LOTION

INGREDIENT	% By Weight
A VEEGUM	1.0
RHODIGEL	0.5
Deionized Water	74.5
B Sodium PCA (Ajidew N-50)	3.0
Glycerine	5.0
C Hydrogenated Polyisobutene (Polysynlane)	4.0
Mineral Oil (and) Lanolin Alcohol (Amerchol L-101)	3.0
Cetyl Alcohol	2.0
Isopropyl Myristate	2.0
Sorbitan Palmitate	1.2
Polysorbate 40	3.8
D Citric Acid to pH 5.5	q.s.
Preservative, Dye, Fragrance	q.s.

Preparation:

Dry blend VEEGUM and RHODIGEL and add to the water, mixing with maximum available shear until smooth and uniform. Add B ingredients and mix until dissolved. Add C ingredients and heat to 50C until a uniform clear mixture is obtained. Add C to (A + B) with high speed mixing. Avoid incorporating air. Cool with continuous stirring to 30C and add D.

Consistency: Medium Viscosity Lotion (Viscosity - 1900-2400 cps)

Suggested Packaging: Plastic squeeze bottle or pump.

Features:

This silky-feeling emulsion is stabilized and thickened using a synergistic combination of VEEGUM Magnesium Aluminum Silicate and RHODIGEL Xanthan Gum. It also contains the sodium salt of pyrrolidone carboxylic acid as a natural moisturizing factor along with the well known humectant, glycerine. This lotion spreads easily and is quickly absorbed leaving the skin moist and supple.

A VEEGUM PRO	2.00
Water	70.75
Glycerin	6.00
B Marcol 130	10.00
Petrolatum	4.00
Arlacel 165	5.00
Synchrowax AW1-C	1.25
C Allantoin	1.00
Preservative	q.s.

Procedure:

Heat the water to 70 to 75C, then slowly add the VEEGUM PRO while agitating at maximum available shear. Mix until smooth. Add glycerine and mix until uniform. Heat B to 75 to 80C. Add B to A and mix until cool. Add C and mix until uniform.

Consistency: Medium viscosity lotion.

Suggested Packaging: Squeeze or pump bottle.

Comments: VEEGUM PRO effectively thickens and stabilizes the emulsion even at elevated temperatures. Glycerin helps to rapidly hydrate dry skin and the selection of oils and waxes produces a smooth and non-greasy feel. The allantoin provides soothing relief for wounds, burns, and skin problems.

ULTRA MOISTURIZING LOTION

INGREDIENT	% By Weight
A VEEGUM Ultra	0.15
Carbomer 980	0.15
Deionized Water	73.70
B Glycerin	5.00
C Mineral Oil (and) Lanolin Alcohol (Amerchol L-101)	4.00
Cetyl Alcohol	2.00
Isopropyl Palmitate	2.00
Hydrogenated Polyisobutene (Polysynlane)	5.00
Isopropyl Myristate	3.00
Sorbitan Palmitate	1.20
Polysorbate 40	3.80
D Preservative, Fragrance	q.s.
Triethanolamine to pH 6.0	q.s.

Procedure:

Dry blend VEEGUM Ultra and Carbomer and add them slowly to the water while stirring with a propeller mixer at 700 rpm. Increase the mixer speed to 1500-1700 rpm and continue mixing for 30 minutes. Add B and mix 5 minutes. Mix C ingredients and heat to 50C. Heat A and B mixture to 50C. Add C to A and B and mix at 50C and 1500-1700 rpm for 10 minutes. Slow the mixer to 1000 rpm while cooling to 30C. Add D and mix until uniform.

Product Characteristics: Viscosity: 2200-2800 cps
 pH: 6.0+-0.2
 Color: White, Bright

Features:

This creamy oil-in-water emulsion is thickened and stabilized with a combination of VEEGUM Ultra and Carbomer. The well known humectant glycerin provides the moisturizing function. VEEGUM Ultra also enhances the whiteness and brightness of the emulsion and helps adjust the pH to approximate that of the skin. The lotion spreads easily and is rapidly absorbed leaving the skin moist and supple.

ANTI-DANDRUFF SHAMPOO

INGREDIENTS	% By Weight
Part A:	
Water, deionized	61.3
KELTROL T xanthan gum	0.5
Color	to suit
Part B:	
Stepanol WAT TEA lauryl sulfate	25.0
Maprosyl 30 sodium lauryl sarcosinate	10.0
Zinc Omadine zinc pyrithione, 48% dispersion	3.0
Methyl Parasept methylparaben	0.2
Perfume	to suit

Procedure:

Part A:

1. Hydrate KELTROL T in the water thoroughly. Mix for at least 10 minutes at moderate to high shear using a Lightnin'-type mixer.
2. Add the color and continue mixing.

Part B:

3. In a separate container, mix ingredients slowly to avoid bubble formation.
4. Add Part B to Part A while mixing slowly.

In this anti-dandruff shampoo, KELTROL T xanthan gum provides suspension stability to the active ingredient, zinc pyrithione.

2 IN 1 ANTIDANDRUFF SHAMPOO WITH Z.P.

RAW MATERIALS	% By Weight
1. Ammonium Lauryl Sulfate	64.00
2. Mackalene 426	10.00
3. Mackanate DC30	4.00
4. Ethylene Glycol Distearate	2.00
5. Mackamide C	1.00
6. Zinc Pyrithione 50% Suspension	2.00
7. 2% water solution of Hydroxyethyl Cellulose	9.00
8. 5% Dispersion of Magnesium Aluminum Silicate	9.00
9. Mackernium 007	0.50
10. Mackstat DM	QS
11. Fragrance	QS
12. Color	QS
13. Deionized Water qs to	100.00

pH: 5.5-6.0

Viscosity: 4000-5500 cps

Procedure:

1. Into a stainless steel tank place #1, #2, #3, #4 and start heating and slow mixing and heat to 80C (176F).
2. In a separate small stainless vessel, blend #6, and #5 and mix until a smooth uniform paste is formed. Do not add.
3. In a separate container prepare the 2% solution of #7 and mix till solution is completely clear.
4. In another container prepare a 5% suspension of #8 and blend well until the material has formed a completely smooth dispersion free of any particles.
5. Finally blend both, suspension #8 and solution #7, together and then add this blend to the hot batch with good mixing and continue agitation and keep temperature at 70C (160F).
6. Once this addition is completed, start addition of blend of #6 in #5 slowly. Keep mixing for 10 minutes then start slow cooling while mixing at 50C (120F) then adding #10.
7. Cool further to 35C (95F) while mixing and add #11, #12 and enough of #13 to compensate for evaporation.
8. Check pH and adjust with small amounts of diluted sodium hydroxide solution.

DO NOT ADD SALT to this preparation to increase viscosity. Try only small amounts of additional #5. Adding one half % of Lauryl Alcohol will help.

As color you could use very small amounts of FDC Blue #1 solution or FDC Green #3.

To prepare #8, McIntyre used Magnabrite HV made by American Colloid Co.

Sodium Chloride	1.5
MACKSTAT DM	qs
Water, Dye, Fragrance	qs to 100.0

Procedure:

1. Add first two components to water and heat to 40 degrees C.
2. Blend until clear.
3. Adjust viscosity with Sodium Chloride.
4. Add remaining components and cool.

CONDITIONING SHAMPOO

RAW MATERIALS	% By Weight
MACKAM 35	35.0
MACKALENE 116	10.0
Polymer JR30M	1.2
MACKSTAT DM	qs
Water, Dye, Fragrance	qs to 100.0

Procedure:

1. Disperse Polymer JR30M in cold water.
2. Heat to 60 degrees C. with agitation.
3. Stir until lumps are dissolved.
4. Add MACKAM 35 and MACKALENE 116.
5. Cool to 45 degrees C. and add remaining components.

WHEAT GERM CONDITIONING SHAMPOO

RAW MATERIALS	% By Weight
MACKANATE OP	20.0
Sodium Laureth Sulfate (30%)	24.0
MACKANATE WGD	8.0
MACKAM WGB	5.0
Citric Acid to pH = 5.5	
Sodium Chloride	qs to viscosity = 20000 cps
MACKSTAT DM	qs
Water, Dye, Fragrance	qs to 100.0

Procedure:

1. Add surfactants to water and heat to 40 degrees C.
2. Adjust pH to 5.5.
3. Add remaining components and adjust viscosity with sodium chloride.

CLEAN SCALP TYPE SHAMPOO

RAW MATERIALS	% By Weight
1. Mackam 2C	28.00
2. Sodium Laureth Sulfate 28%	36.00
3. Mackamide LLM	4.00
4. Laneth 15 or Laneth 16	1.00
5. Propylene Glycol	3.00
6. Disodium EDTA	0.20
7. Polypro 5000	1.00
8. Methyl Paraben	0.14
9. Propyl Paraben	0.07
10. Germall 2	0.40
11. Botanical Extract Blend	QS
12. Color, Fragrance (if required)	QS
13. Deionized Water (qs to)	100.00

pH: 7.9-8.2

Solids: 35%

Viscosity: 600-800 cps

Procedure:

1. Place a major portion of water #13, into manufacturing tank and start heating to 160 degrees F (70 degrees C). Add #6. Start the mixing. Then add #1, #2, #3, #4 slowly.
2. In a separate container heat the remainder of the water #13 to 160 degrees F (70 degrees C) and dissolve in it #8, #9 and add the hot solution to the heated main batch in the tank. Start cooling and at 120 degrees F (50 degrees C) add #7, then #10. Keep mixing and add at 105 degrees F (40 degrees C) #11 and finally #12 (if required). Mix till cool.
3. Check pH and adjust if needed downward with citric acid or upward with diluted Sodium Hydroxide solution in small increments.

Formula No. BP-43 #2

CLEAR CONDITIONING SHAMPOO

INGREDIENTS	% By Weight
Standapol AEI	45.0
Standamox CAW	6.0
Nutrilan I	6.0
Dehyquart E	3.0
Fragrance	0.25
Kathon CG	0.05
Deionized Water	q.s. to 100
Citric Acid to pH 6-6.5	

Procedure:

Using moderate stirring at room temperature, add the Standapol AEI to the water. Then add, in order, remaining ingredients making sure the blend is clear after each addition. Adjust blend to pH 5.8-6.4 with citric acid and package.

Comments:

Dehyquart E is a special quaternary that improves the wet and dry combability without causing any loss in effectiveness of anionic surfactant systems. In addition, the Dehyquart E, unlike other conditioning polymers, does not lead to build-up with continued use.

SOURCE: Henkel: Formula HOB-270-35-4A

CONDITIONING SHAMPOO

Comperlan KD	4,00
Sodium Chloride	1,00
Texapon SG	10,00
Belsil DMC 6031	0,50
Preservatives, fragrances	q.s.

Mix all components in the given order.

Temperature stability: at 45C over 10 weeks.

High-viscosity product with a silky shine. Very mild.

SOURCE: Wacker Silicone: Formulation 201 AH

CLEAR LIQUID BABY SHAMPOO

RAW MATERIALS	% By Weight
MIRANOL 2MCA Modified	30.0
Hexylene Glycol	2.0
Tween 20	1.0
Water	67.0

Procedure:

Mix together all ingredients at 50-55C and adjust pH to 6.8-7.0 with hydrochloric acid. Cool. A slightly higher viscosity can be achieved with the addition of 1-2% of high active Lauramide DEA.

Solids: 18.0%

CLEAR LIQUID BABY SHAMPOO

RAW MATERIALS	% By Weight
MIRANOL 2MCAS Modified	35.0
Tween 20	1.0
Cedemide AX	1.0
Kessco PEG 6000 Distearate	1.0
Water	62.0

Procedure:

Blend the ingredients together at 70C and, when uniform, adjust pH to 6.8-7.0 with hydrochloric acid.

Solids: 19.5%

Viscosity: 600 cps.

PEARLESCENT BABY SHAMPOO

RAW MATERIALS	% By Weight
MIRANOL 2MCAS Modified	35.0
Cedemide AX	2.0
Cerasynt IP	0.5
Methocel E4M Premium, 3% solution	50.0
Water	12.5

Procedure:

Combine MIRANOL 2MCAS Modified, Cedemide AX and Cerasynt IP and heat to 80C. Add 3% Methocel solution and mix until uniform, then add the remaining water. Adjust pH to 6.8-7.0 with hydrochloric acid.

Solids: 20.8%

Viscosity: 17,000 cps.

SOURCE: Miranol Inc.: MIRANOL Products for Cosmetics and Toiletries: Formulas

CLEAR MILD SHAMPOO

RAW MATERIALS	% By Weight
Water and preservative	61.0
MONAMATE LNT-40	15.0
MONATERIC LMAB	20.0
MONAMID 1089	4.0

Procedure:

Add ingredients in order listed and blend thoroughly. No heat is necessary. Adjust pH with 50% citric acid to level desired. At pH 6.5 viscosity is approximately 3000 cps.

Formula F-166

COLORLESS SHAMPOO

RAW MATERIALS	% By Weight
Water	47.0
MONATERIC CAB-LC	10.0
Sodium Laureth (2) Sulfate (25%)	40.0
MONAMID 716	3.0

pH adjusted to 6.7

Procedure:

Add ingredients in the order listed with agitation. Add preservative, color and fragrance as required.

This formulation is interesting for its water-white clarity. It is very mild with excellent lathering properties.

Formula F-488

BABY & FAMILY SHAMPOO

RAW MATERIALS	% By Weight
Water	12.0
MONAMATE OPA-30	46.3
MONATERIC CSH-32	41.7

Mixing Procedure:

Add ingredients in the order listed and blend with slow agitation. No heat is required. Adjust pH with phosphoric acid to 6.0. Viscosity = approximately 600 cps.

25.8% active

For an all "family shampoo" that is non-irritating and offers improved foam, lather and conditioning properties.

Lauroamphodiacetate	2.80
Sodium Chloride	1.40
Quaternium-15	0.20
Polyquaternium-7	2.20
Tetrasodium EDTA	0.26
Water	26.14

Compounding Procedure:

To 50 parts of Compound SBC, q.s. to 100 parts with fragrance, Quaternium-15, color and water. Adjust pH to 6.8 with citric acid. Finished shampoo will be approximately 16.5% solids and have viscosity of 1,000-1,200 cps.

SOURCE: Miranol Inc.: MIRANOL Products for Cosmetics and Toiletries: Formulas

CLEAR SHAMPOO

RAW MATERIALS	% By Weight
MIRATAINE BB	14.5
CEDEPAL TD 404M	14.5
Sodium Chloride	0.5
Water	70.5

Procedure:

Dissolve the sodium chloride in water. Add the MIRATAINE BB and CEDEPAL TD404M and stir until uniform. Adjust the pH to 7.0 with hydrochloric acid.

Solids: 10.6%, viscosity: 4500 cps

SHAMPOO

RAW MATERIALS	% By Weight
MIRATAINE CB	20.0
MIRAPOL A-15	2.4
Cedepon TL 40	15.0
Tween 20	4.0
Cedemide CX	3.0
Water	55.6

Procedure:

Dissolve MIRAPOL A-15 in water. Add MIRATAINE CB and Tween 20. Stir until uniform. Add Cedemide CX. Stir. Add Cedepon TL 40 and stir until uniform. Adjust pH to 7.1 with hydrochloric acid.

Solids: 20.5%, viscosity: 3800 cps.

NON-ALKALINE SHAMPOO

RAW MATERIALS	% By Weight
MIRATAINE TM	6.0
Ammonium Lauryl Sulfate, 28%	25.0
Cedemide AX	2.0
Sodium Lauroyl Sarcosinate	7.0
Water	60.0

Procedure:

Mix all ingredients together and heat to dissolve the Cedemide AX. Adjust pH to 5.7 with hydrochloric acid.

Solids: 13.5%, viscosity: 1200 cps.

CLEAR SHAMPOO/CONDITIONER

INGREDIENTS	% By Weight
Water	41.90
Texapon ASV	45.00
Velvetex BK-35	6.00
Standamid SD	2.00
Lamequat L	5.00
Kathon CG	0.10

Procedure:

Charge kettle with water. Add remaining ingredients, one at a time, under agitation. Adjust pH to 6.0-6.5 with a 50% citric acid. Continue stirring until product is homogeneous. Fill off.

Comments:

This product contains a very effective conditioner, Lamequat L. Using Lamequat L with the above very mild ingredients, will produce a good baby/children's shampoo that leaves hair manageable. The product has a thick, but easy-flowing consistency with a typical viscosity of 3500-4000 cps (at room temperature).

CONCENTRATED CONDITIONING CREME SHAMPOO

RAW MATERIALS	% By Weight
1. MACKADET CA	60.0
2. Stearic Acid Triple Pressed	7.5
3. MACKERNIUM 007	7.0
4. Sodium Hydroxide 20% Solution	5.0-5.5
5. MACKSTAT DM	q.s.
6. Deionized Water	q.s.
7. Fragrance	q.s.

pH: 7.2-7.8

Procedure:

1. Add #1 into stainless steel creme kettle and start mixing.
2. In separate container separately add #4 to 2/3 of #6 and mix together carefully avoid splashing-PROTECT EYES.
3. Add this solution to creme kettle and start heating to 180 degrees F. (82 degrees C.) with mixing, keep tank well covered.
4. After mixing for 20 min. start cooling, continuing mixing, and at 130 degrees F. (55 degrees C.) add #3 and remainder of #6, keep slowly mixing and cooling.
5. Take sample of warm mixture from tank and take pH reading of cooled sample.
6. Adjust batch if necessary by adding small quantities of solution of #4 to tank if pH is too low or a little diluted citric acid solution if pH is too high.
7. Finally add #5 to tank and then #7 mix for 15 min. and recheck pH and fill at 86 degrees F. (30 degrees C) into jars.

CONDITIONER SHAMPOO

RAW MATERIALS	% By Weight
Water and Preservative	32.95
MONATERIC 951A	50.00
MONATERIC LMAB	13.30
MONAQUAT P-TC	2.50
MONAMID 1007	1.25

Procedure:

Add ingredients in order above and blend. Adjust pH to level desired.

In this amphoteric/nonionic formula, MONATERIC 951A produces very high foaming without the need for an amphoteric surfactant. (SLS or AOS). Thus, the cationic conditioner, MONAQUAT P-TC, can deposit substantively on the hair without anionic interference. MONATERIC LMAB contributes additional conditioning and boosts viscosity.

SOURCE: Mona Industries, Inc.: MONATERIC 951A: Formula

NATURAL CONDITIONING SHAMPOO

Water	57.6

Procedure:

Blend all ingredients together and heat to 60C. Mix until uniform. Adjust pH to 7.0 with citric acid.

Solids: 19.5%, viscosity: 1400 cps.

CONDITIONING SHAMPOO

RAW MATERIALS	% By Weight
MIRATAINE CBS	10.0
MIRANOL C2M Conc. N.P.	10.0
MIRAPOL A-15	1.6
CEDEPAL TD 404M	7.0
Cedepal SN303	10.0
Water	61.4

Procedure:

Add MIRAPOL A-15 to water and stir. Add with stirring MIRATAINE CBS, MIRANOL C2M CONC. N.P., Cedepal SN303 and CEDEPAL TD404M. Mix until uniform and adjust pH to 7.0 with hydrochloric acid.

Solids: 15.7%, viscosity: 5800 cps.

LIQUID CONDITIONING SHAMPOO

RAW MATERIALS	% By Weight
MIRATAINE ODMB-35	7.0
MIRANOL C2M Conc. N.P.	12.0
Cedepal SN 303	25.0
Cedemide CX	1.0
Water	55.0

Procedure:

Mix the MIRATAINE ODMB-35 with water and heat to dissolve. Add MIRANOL C2M Conc. N.P., Cedepal SN 303, and Cedemide CX. Adjust the pH to 7.0 with hydrochloric acid.

Solids: 16.8%, viscosity: 1150 cps.

CONDITIONING SHAMPOO

RAW MATERIALS	% By Weight
Phase A:	
QUATRISOFT Polymer LM-200	0.5
Water	54.0
Phase B:	
GLUCAM E-20	3.0
SOLULAN 16	2.5
Phase C:	
Sodium Laureth-2 Sulfate (25% active)	35.0
Lauramide DEA	5.0
Citric Acid	q.s. to pH 7.0
Perfume and Preservative	q.s.

Procedure:

Add QUATRISOFT Polymer LM-200 to water with good mixing at room temperature. When thoroughly dispersed, begin heating to 45C until completely hydrated. Add GLUCAM E-20. When uniform add SOLULAN 16 and heat with moderate mixing to 45C. Avoid air entrapment. When clear and uniform add phase C. Mix until uniform. Adjust to pH 7.0 with citric acid.

Description:

Clear, medium viscosity, mild, conditioning shampoo. The cationic cellulosic QUATRISOFT Polymer LM-200 is substantive to hair and is uniformly deposited along the hair shaft to improve combing, manageability and overall appearance. QUATRISOFT Polymer LM-200 acts synergistically with Lauramide DEA to dramatically boost viscosity. The combination of GLUCAM E-20 and SOLULAN 16 conditions the hair and helps to maintain its moisture.

BRIPHOS 03D gives outstanding gloss and manageability to the hair. Shampoos designed for normal hair and include BRIPHOS 03D at approximately 1.5%. For dry hair this level should be increased to about 2.0% and for greasy hair reduced to about 1.0%.

These shampoos leave the hair with excellent overall manageability and high gloss.

CONDITIONING SHAMPOO

INGREDIENTS	% By Weight
Water	47.80
STANDAPOL ES-2	36.00
APG-625	6.00
VELVETEX BA-35	3.00
DEHYQUART E	2.00
AETHOXAL B	1.00
EUPERLAN PK-810	3.00
Sodium Chloride	1.00
Kathon CG	0.05
Fragrance U-8210	.15

Procedure:

Charge kettle with water. Add remaining ingredients, one at a time, under agitation. Adjust pH to 6.5+-.0.3 with 50% citric acid. Continue stirring until product is homogeneous. Fill off.

Comments:

By combining APG-625 with an ether sulfate and a betaine, a lower irritation product is obtained. Conditioning effects are enhanced by the utilization of Dehyquart E and the glycoside resulting in a high performance shampoo.

CONDITIONING NEUTRALIZING SHAMPOO

RAW MATERIALS	% By Weight
Part A:	
Deionized Water	60.6
TEALS	25.0
Disodium EDTA	0.3
Part B:	
INCROMIDE LR	3.0
INCROMIDE CAC	1.1
INCROMINE OXIDE BA	2.0
INCRODET TD-7C	6.0
Part C:	
HYDROTRITICUM 2000	0.5
CRODACEL QS	0.5
Geramaben II	1.0

Procedure:

Combine ingredients of Part A with mixing and heat to 65-70C. Add Part B ingredients individually with good mixing and cool to 45C. Add Part C with mixing and cool to desired fill temperature.

This formula contains a blend of Croda surfactants which yields a product with gentle cleansing and good foam characteristics. HYDROTRITICUM 2000 and CRODACEL QS provide good manageability to hair.

Formula SH-69-2

WHEAT SHAMPOO

RAW MATERIALS	% By Weight
Part A:	
Deionized Water	48.0
TEALS	30.0
INCROMINE OXIDE WG	5.0
INCRONAM WG-30	5.0
Part B:	
INCROMIDE CAC	10.0
Part C:	
HYDROTRITICUM 2000	1.0
Germaben II	1.0

Citric Acid to pH 6.5

Brookfield Viscosity: 1580 cps

Procedure:

Combine ingredients of Part A with mixing and heat to 60C. When clear, add Part B with mixing and cool to 40C. Add Part C with mixing and cool to desired fill temperature. Adjust pH with a 10% citric acid solution.

Croda's surfactants derived from wheat germ oil, INCROMINE OXIDE WG and INCRONAM WG-30, help build viscosity and foam in this formula. HYDROTRITICUM 2000, a protein from wheat, helps add conditioning and moisture retention.

DAILY USE CONDITIONING SHAMPOO FOR OILY HAIR

RAW MATERIALS	% By Weight
UCARE Polymer JR-400	0.5
SOLULAN 16	2.0
SOLULAN 98	1.0
Ammonium Lauryl Sulfate (28%)	60.0
Cocamidopropylamine Oxide (30%)	5.0
Citric Acid (40% Aq. Solution)	q.s. to pH 5-6
Deionized water	31.5
Perfume and preservative	q.s.

Procedure:

Disperse UCARE Polymer JR-400 in water at room temperature. When well dispersed, heat to 65C. When clear, add ammonium lauryl sulfate, cocamidopropylamine oxide and SOLULAN 98, in this order, mixing until clear and uniform after addition of each material. Separately, heat SOLULAN 16 to 50C to rest of formula, mix with stirring until clear. Cool to room temperature and adjust pH with citric acid solution to pH 5-6.

Description:

Clear, medium viscosity, daily conditioning shampoo. UCARE Polymer JR-400 conditions and mends split-ends due to frequent shampooing and blow drying. SOLULAN 16 and SOLULAN 98 provide added manageability and luster.

DAMAGED HAIR SHAMPOO

RAW MATERIALS	% By Weight
UCARE Polymer LR-400	0.40
UCARE Polymer LR-30M	0.40
GLUCAMATE SSE-20	3.00
Triethanolamine Lauryl Sulfate (40%)	17.50
Sodium Laureth Sulfate (28%)	17.86
Disodium Laurethsulfosuccinate (40%)	7.50
Lauramide DEA	2.00
Tetrasodium EDTA	0.10
Deionized water	51.24
Perfume and preservative	q.s.

Procedure:

Add UCARE Polymers to water at room temperature with good agitation. Once hydrated add the disodium laureth-sulfosuccinate. Begin heating and add TEALS and SLES. When at 60-65C, add the melted GLUCAMATE SSE-20 and lauramide DEA. Upon complete solution, cool to room temperature and add the tetrasodium EDTA.

Description:

Clear, medium viscosity shampoo. UCARE Polymer LR-400 and UCARE Polymer LR-30M are used in combination to get the desired viscosity and conditioning properties attributed to this formula. The substantive UCARE Polymers leave the hair soft and manageable. GLUCAMATE SSE-20 contributes to the mildness of the system, as well as the solubilization of the perfume oil.

SOURCE: Amerchol Corp.: UCARE Polymers: Formula T55-63-3

BIO-INTENSIVE SHAMPOO

INGREDIENT	% By Weight
A:	
Deionized Water	38.65
Polyquaternium-10 (Polymer JR-125)	0.10
Sodium Laureth Sulfate (Sipon ES-2)	36.90
Lauramide DEA (Monamid 716)	1.70
VANSEAL NALS-30	8.80
LIPROPROTEL LCO	9.79
LIPACIDE UCO	1.70
Sodium Chloride	2.35
Citric Acid to pH 6	q.s.
B: Preservative, Fragrance	q.s.

Preparation:

Mix Polyquaternium-10 in available water until a clear uniform solution is obtained. Add the other ingredients in the order listed, mixing each until clear and uniform. Heating is not required.

Consistency: Pourable clear liquid (Viscosity-1400 to 1800 cps)

Features: This crystal clear shampoo features LIPACIDE UCO, which has been found effective against pityrosporomovale bacteria found in excessive amounts in the scalp of those suffering from dandruff and/or seborrhea. Hair conditioning properties. Excellent lathering characteristics.

MACKANATE DC-30	1.0
2% Solution of Polyquaternium 10 in deionized water	60.0
MACKSTAT DM	qs
Deionized Water, Fragrance, Dye qs to	100.0

pH: 5-6

Viscosity (cps): 600-2000

Procedure:

1. Heat water to 60 degrees C. and add surfactants and start mixing, until solution is uniform and completely clear.
2. Add Polyquaternium 10 solution and blend in then add MACKANATE DC-30.
3. Start cooling while mixing and add remaining components at 30 degrees C. and mix, and cool to room temperature.
4. Adjust pH with Citric Acid and adjust viscosity with Sodium Chloride 1% - 1.5%.

DETANGLING SHAMPOO
(Salt-Free)

RAW MATERIALS	% By Weight
MACKAM CAP	20.0
Sodium Laureth Sulfate (60%)	10.0
MACKAMIDE LLM	3.5
Polymer JR	1.4
Disodium EDTA	0.1
MACKSTAT DM	qs

pH: 5.5-6.5

Viscosity (cps): 10,000-20,000

Procedure:

1. Hydrate Polymer JR in water and blend until clear.
2. Slowly add MACKAM CAP and blend until clear.
3. Add Disodium EDTA.
4. Add the remaining components and heat to 45 degrees C.
5. Adjust pH with citric acid if needed.

DETANGLING SHAMPOO

RAW MATERIALS	% By Weight
1. Sodium Lauryl Ether Sulfate 60%	25.00
2. MACKAM J	5.00
3. MACKAMIDE S	3.00
4. Glycerin	2.00
5. Hydrolyzed Animal Protein 55%	1.00
6. MACKERNIUM 007	3.50
7. Polysorbate 20	1.00
8. Tetrasodium EDTA (40% solution)	0.10
9. MACKSTAT DM	Q.S.
10. Hydrochloric Acid (1 part acid plus 4 parts of water)	0.5-1.0
11. Fragrance	Q.S.
12. Color	Q.S.
13. Sodium Chloride to adjust viscosity	0.1-0.5
14. Deionized Water	100.0

Procedure:

1. Into the stainless steel manufacturing tank meter #14. Start heating.
2. Add #8 then #1, #2, #3, #4 with mixing and mix until everything is completely dissolved and the solution clear at 120F. Stop heating and add #5 and #6.
3. Separately blend #7 and #11 together well. Start cooling while mixing and at about 90F. add fragrance blend #7 and #11 then check and adjust pH.
4. By adding the diluted hydrochloric acid solution (slowly add the concentrated acid 1 part to 4 parts of deionized water, protecting your eyes and face) in small amount until correct pH is obtained (6.5 -7.00) after mixing in.
5. Add #9 and finally small quantities of salt dissolved in a little water until upon mixing the desired viscosity is obtained.
6. Addition of too much salt will thin out the product.
pH: 6.5-7.0
Viscosity: 500-1500 cps
Formula AY-176-1

EVERYDAY CONDITIONING SHAMPOO
(FOR HAIR'S EVERYDAY NEEDS)

RAW MATERIALS	% By Weight
Water	42.1
MONATERIC L-30	40.0
MONATERIC LMAB	13.3
MONATERIC 1203	3.3
MONAMID 1007	1.3

Procedure:

Add ingredients as listed (no heat required). Mix until uniform. Adjust pH to 6.5-7.5. Add preservative as required.

Formulation Properties:

Appearance: Clear viscous liquid
Nominal Activity: 18.5%

The above formula contains no polymers and therefore results in an everyday conditioning shampoo without build-up and oily feel. The gentle cleaning action produces clean, healthy-looking hair.

SOURCE: Mona Industries, Inc.: MONATERIC 1203: Formula

SELF ADJUSTING CONDITIONING SHAMPOO

RAW MATERIALS	% By Weight
Water	38.5
NaCl	1.0
MONATERIC 1202	7.5
MONAMID 1089	3.0
TEA-Lauryl Sulfate (40%)	50.0

Procedure:

Add ingredients in order listed.
Adjust pH to 6.0-7.0 with citric acid.
Add preservative as required.

Formulation Properties:

Appearance: Clear Liquid
Nominal Activity: 25.6%

This formulation blends the efficient cleaning of a high concentration of anionic tempered by the conditioning effects of MONATERIC 1202. The result is clean, shiny hair without the build-up or greasy feel usually associated with traditional conditioning agents. Additionally, the MONATERIC 1202 will selectively be more substantive at those sites on the hair where chemical or physical damage has occurred.

SOURCE: Mona Industries, Inc.: MONATERIC 1202: Formula

EVERY DAY SHAMPOO

INGREDIENTS	% By Weight
A Texapon K 14 S special	45,000
Lamepon S	5,000
Dehydol LS 3 deo	1,500
Perfume Oil	0,500
Cremogen Sage 739 016	0,500
Cremogen Camomile forte 728 790	0,100
Cremogen Melissa (Balm) 739 013	0,500
Cremogen Rosemary forte 758 302	0,100
B Demineralized Water	44,100
Phenonip	0,500
Polymer JR 400	0,200
Sodium chloride	2,000

Approx. 14% active surfactant

Manufacturing Process:

Part A: Mix all the ingredients.

Part B: Dissolve Phenonip in water, add Polymer while stirring and continue stirring until material is completely dispersed.

Add part B to part A and stir.

Final pH-value should be 6,5 and can be adjusted with the help of citric acid (aq. solution).

Remark: Without any colour dye:

the yellow-brownish colouring of the shampoo depends on the native colouring of the plant extracts.

Recommendation for colouring:

To receive a green colour add the following colour solution:
0,60% Sicomet Green Z 6120 (0,1% aq. solution/C.I. 19140 + 42051)

FAMILY SHAMPOO

RAW MATERIALS	% By Weight
Water and preservative	33.08
Sodium lauryl sulfate, 28%	23.60
MONATERIC 951A	24.50
MONAMATE LNT-40	11.80
Ethylene glycol monostearate	0.59
Polysorbate 20	0.11
Methocel (E4M prem, 3%)	6.00
Sodium Chloride	0.12
Fragrance and color	0.20

Adjust pH to 7.8 with 50% citric acid
 Viscosity approximately 6000 cps

Procedure:

Add ingredients in order listed. Warm to 70C. and maintain until EGMS has dissolved. Cool. Adjust pH, add fragrance and color.

Formula F-179

FAMILY SHAMPOO

RAW MATERIALS	% By Weight
Water	14.1
MONAMATE LNT-40	25.0
MONAMID 1089	5.0
Sipon LSB Alcolac	55.0
Cerasynt IP	0.5
Phosphoric Acid (85%)	0.4

Procedure:

Mix Sodium Lauryl Sulfate, water and preservative. Add Phosphoric Acid (85%). Stir and add MONAMID 1089. Stir until homogeneous and add MONAMATE LNT-40. Add Cerasynt IP. Stir and heat to completely melt the solid material (approx. 60C). Cool with stirring. At <40C add any perfume or colors. Continue stirring and cooling to 25C. Adjust pH to 6.0-7.0.

Formulation Properties:

Physical Appearance: Pearly liquid

Nominal Activity: 31%

Viscosity: 4000-5000 cps

MONAMATE LNT-40 in this formulation provides an immediate luxurious lather which gently cleanses without stripping and is easily rinsed off leaving manageable hair. MONAMATE LNT-40 provides mildness, lathering properties and a soft, full feeling to the hair.

SOURCE: Mona Industries, Inc.: Formulas

GEL CONDITIONING SHAMPOO

INGREDIENTS	% By Weight
A:	
Sandobet SC	5.0
Sandoz Sulfate TL	35.0
Sandoteric TFL Double Str.	20.0
Sandoz Amide PE	3.0
Dye, Fragrance	
B:	
Polymer JR-400	0.25
Water	36.75

Procedure:

Disperse Polymer JR-400 into the water with agitation and heat to 60C. Mix well so all of the polymer is completely in solution. In a separate vessel mix (A) ingredients together and heat to 60C.

Add (A) to (B), stir until well mixed. Add fragrance, dye and preservative.

Allow to cool without stirring. Adjust pH to 6.5 with citric acid.

Properties:

Appearance: Clear light yellow gel

Foam Height: 140/140 (Ross Miles, .1% Sol @ 50C)

pH: 6.5+-.2

A clear yellow conditioning gel shampoo that exhibits excellent foaming characteristics. Sandopan TFL provides the properties of mildness, foaming and wetting. The Sandobet SC performs as a conditioning agent as well as a cleansing agent.

Lathers richly even on oily hair. A creamy, flowable thick liquid.

RICH LATHER OILY HAIR SHAMPOO

RAW MATERIALS	% By Weight
Hamosyl L-30	25.0
Sodium Lauryl Sulfate, 38%	15.0
Sodium Laureth (1) Sulfate, 27%	15.0
Sodium Chloride	4.0
Cocamide NMEA	2.0
Hamp-ene Na ₂	0.2
Water, fragrance, preservative	q.s.

Heat to 70C and mix until cocamide MEA is dissolved. Adjust pH to 6-6.5, cool to 40C, add fragrance, and package.

A viscous shampoo which provides rich lather on oily hair with only one application, yet does not strip the hair. The sarcosinate surfactant provides the superior lathering in the presence of sebum while also serving to lightly condition the hair. Ideal as an oily hair formulation or as a single application shampoo, especially for salons.

HIGH FOAMING SHAMPOO

RAW MATERIALS	% By Weight
ALS	25.0
CROSULTAINE C-50	10.0
INCROMIDE CAC	5.0
Perfume	0.5
BHT	0.1
Disodium EDTA	0.1
Deionized Water	57.3
Germaben II	1.0
CROQUAT WKP	0.5
KERASOL	0.5

pH to 6.5 w/citric acid - 10%
 Viscosity 11,900 cps

Procedure:

Combine the Disodium EDTA and water and mix until uniform. Add the ALS, Crosultaine C-50 and Germaben II. Mix until uniform. Separately combine the Incromide CAC, perfume and BHT and mix until uniform (heat slightly, no more than 50C, if needed to dissolve the BHT). Add this mixture to the water and surfactants, blend with mixing and mix until uniform. Add the Croquat WKP and Kerasol and adjust the pH. Continue mixing until uniform.

This shampoo combines the high foaming and cleansing properties of ALS with the superior foam boosting aspect of CROSULTAINE C-50 to produce a rich high lather. The INCROMIDE CAC provides additional foam boosting, foam stabilizaton, and fragrance solubilization. Finally, the CROQUAT WKP and KERASOL provide conditioning and manageability for the hair without over-conditioning or buildup.

3. Mackanate DC30	3.70
4. Ethylene Glycol Distearate	1.85
5. Mackamide S	1.50
6. Selenium Disulfide Powder	1.00
7. 5% solution of Hydroxyethyl Cellulose in water	10.00
8. 5% suspension of Magnesium Aluminum Silicate	10.00
9. Dry pure silica (Aerosil)	1.50
10. Lauryl Alcohol	0.50
11. Diethanolamine to pH of 5 to 6	QS
12. Mackstat DM	QS
13. Fragrance	QS
14. Color solution Blue *	QS

pH: 5.2-6.4

Viscosity: 5000-10000 cps

Procedure:

Into stainless steel mixing tank measure #1, #2, #3, #4. Start heating and slow mixing and heat to 70C (160F). In a separate stainless or glass container blend #6 and #5 at room temperature until a smooth uniform paste is formed which will eventually be added later on.

In another container prepare the 5% suspension #8 and mix the suspension till it is completely uniform and viscous and shows no undissolved particles. Preserve suspension if not used immediately with some #12.

In another container prepare the % solution of #7 using heat and mix well until a perfectly sparkling clear viscous solution results. Preserve if not used immediately with a little of #12.

When the temperature in the main mixing tank has reached 70C (160F) mix the suspension #8 and solution #7 together and heat to 70C (160F) and add to the main tank while continuously mixing well. Be sure that there are no undissolved particles in the #1, #2, #3, #4 before the addition of the suspension #8 and the solution #7. Add #10.

After everything is well blended together add slowly the blend of #6 and #5 to the main tank.

After the blending of all ingredients at the high temperature has proceeded well start sprinkling the very fine flakes of #3. At 50C (120F) add #12 and finally 13. Cool a sample out of the batch and check pH and if necessary add #11 to adjust.

As color a solution of DC Blue #12 seems to be stable.

HIGHLY CONCENTRATED DETANGLING SHAMPOO

RAW MATERIALS	% By Weight
1. MACKADET CA (Mild Blend)	81.50
2. Tetrasodium EDTA (40% Solution)	0.20
3. Glycerin	4.00
4. Hydrolyzed Animal Protein 55% Liquid	2.00
5. MACKERNIUM 007 (Polyquaternium 7)	7.00
6. Polysorbate 20	2.00
7. Fragrance	Q.S.
8. MACKSTAT DM (DMDM Hydantoin)	Q.S.
9. Diluted Hydrochloric Acid Solution 1:4	Q.S. to pH spec.
10. Color	Q.S.
11. Sodium Chloride to adjust viscosity	Q.S.
12. Deionized Water	Q.S. to 100.00

Procedure:

- In a stainless steel mixing kettle blend #1, #2, #3 with mixing. Then add #4 and #5. Slowly mix until all is dissolved, if necessary use a little heating.
- Adjust pH with the diluted Hydrochloric Acid solution (made by adding 1 part of acid carefully to 4 parts of water Protecting the Eyes and Face) until correct pH is obtained (6.5-7.0).
- Add color, if required, add #8 slowly and mix in.
- If the product is to be sold as concentrate then the quantity of #8 must be increased, fragrance and color also properly increased.
- If the product is sold diluted then 1 part of the above formula is mixed with 2 parts of deionized water the increased fragrance added then the preservative #8 added at the corrected amount the pH adjusted and finally the salt addition done to obtain the desired viscosity.

pH: 6.5-7.0

Viscosity larger than 1000 cps

Formula AY-176-2

SUPER DETANGLING SHAMPOO CLEAR

RAW MATERIALS	% By Weight
Sodium Laureth Sulfate (60%)	10.0
MACKAM CAP	20.0
MACKAMIDE LLM	3.5
Tetrasodium EDTA	0.1
Polymer JR	1.5
MACKSTAT DM	qs
Deionized Water, Fragrance qs to	100

Procedure:

- Disperse Polymer JR in water and blend until clear.
- Add MACKAM CAP, Sodium Laureth Sulfate, MACKAMIDE LLM and Tetrasodium EDTA.
- Heat to 40 degrees C. and add remaining components.
- Blend until clear and adjust pH if necessary.
- Cool and fill.

MILD CONDITIONING SHAMPOO

RAW MATERIALS	% By Weight
MIRATAINE TM	4.0
MIRANOL C2M Conc. N.P.	20.0
Cedepal SN 303	20.0
Tween 20	1.0
Cedemide AX	1.0
Water	54.0

Procedure:

Mix all ingredients together and heat to melt Cedemide AX. Adjust pH to 7.2 with citric acid.

Solids: 19.6%, viscosity: 4500 cps.

CONDITIONING SHAMPOO

RAW MATERIALS	% By Weight
MIRATAINE TM	3.7
MIRATAINE CB	3.3
Cedepon LA30HV	27.0
Maprofix LES-60A	3.5
Cocamide MEA	2.5
Methocel E4M Premium, 3% solution	10.0
Water	50.0

Procedure:

Mix MIRATAINE CB, MAPROFIX LES-60A, Cedepon LA30HV and Cocamide MEA. Heat to dissolve the Cocamide MEA. Add water, MIRATAINE TM and, when cool, add the Methocel solution.

Adjust pH to 5.5 with citric acid.

Solids: 13.0%, viscosity: 9000 cps.

PEARLESCENT CONDITIONING SHAMPOO

RAW MATERIALS	% By Weight
MIRATAINE CBS	10.0
MIRANOL C2M Conc. N.P.	10.0
CEDEPAL TD 404M	7.0
Cedepal SN303	10.0
UCARE Polymer JR 400, 2% solution	50.0
Cerasynt IP	0.5
Water	12.5

Procedure:

Prepare a 2% stock solution of UCARE Polymer JR 400 by dispersing 2.0 parts of UCARE Polymer JR 400 in 98 parts of mildly agitated water at 20-25C. When the polymer is completely wetted, heat to 60-70C and agitate for approximately one hour until the solubilization is complete. Allow to cool with stirring.

Mix together while stirring; the UCARE Polymer JR 400 solution, MIRATAINE CBS, and MIRANOL C2M Conc. N.P. Add the water, Cedepal SN 303, CEDEPAL TD 404M and Cerasynt IP. Heat and mix until uniform making sure that the Cerasynt IP has dissolved. Cool with stirring. Adjust the pH to 6.7 with hydrochloric acid.

Solids: 15.7%, viscosity: 5500 cps.

MILD PROTEIN SHAMPOO

INGREDIENT	% By Weight
Demineralized Water	
Primal ICS	1.1500
Texapon SBN	22.0000
Velvetex AB 45	9.0000
Texapon ST 40	5.0000
Capilotonique #245 HS	1.0000
Gafquat 755 N	0.5000
Tri-Sept M	0.2000
Tri-Sept P	0.1000
Tristat Iuabiol	0.2000
Tween 20	1.5000
Perfume	0.5000
TEA 99%	0.5000
Certified Color	QS

Procedure:

1. In main tank, blend the Primal ICS in water as RT with prop agitation.
2. Pre blend the fragrance with Tween and set aside.
3. Add to main tank: Texapon(s), Velvetex, Capilotonique, Gafquat, Methylparaben, Propylparaben, and Tristat IU in order listed mixing well between each add'n.
4. Add Fragrance Blend and TEA.

Formula: Code AMI.020.

NATURAL SHAMPOO

INGREDIENT	% By Weight
Natural Shampoo Base AMI	88.7500
Guar C-261	0.7500
Lavender AMI	10.0000
Tri-Sept M	0.2000
Tri-Sept P	0.1000
Tristat IU	0.2000

Procedure:

1. Charge Panama Wood/Soapwort Extract to main tank.
2. Slowly add Cosmedia Guar to batch and mix until fully dissolved.
3. Add Parabens and Tristat IU to batch and mix until fully dissolved.
4. Add Lavender Extract to batch and mix until fully dissolved.

Formulations containing EMPICOL MD do not readily respond to viscosity adjustment using sodium chloride. For those, Albright & Wilson recommends the use of Natrosol 250 HHR at a level of 0.25-0.5% as thickening agent. The Natrosol should be dissolved in the water prior to the addition of the surfactants and other additives.

MOISTURIZING SHAMPOO

RAW MATERIALS	% By Weight
MACKANATE NLD	20.0
Sodium Laureth Sulfate (25%)	18.0
MACKAM NLP	4.0
MACKALENE NLC	1.5
Sodium Chloride	Q.S.
MACKSTAT DM	Q.S.
Water, Fragrance, Dye qs to	100.0
Citric Acid to pH = 5.5-6.0	

Procedure:

1. Add components to water and heat to 40 degrees C.
2. Blend until clear.
3. Adjust viscosity to 3,00 cps with sodium chloride,.
4. Cool and fill.

SHAMPOO WITH CONDITIONING AND EASY COMBING ACTION

RAW MATERIALS	% By Weight
Sodium Lauryl Ether Sulfate (60%)	18.0
MACKAMIDE C	3.0
MACKAMIDE S	2.0
MACKAM 35	5.0
Glycerin	2.0
Disodium EDTA	0.1
Polysorbate 20	1.0
MACKANATE DC-30	1.0
Polyquaternium 10 (2% solution)	20.0
MACKSTAT DM	qs
Deionized Water, Fragrance, Dye qs to	100.0

pH: 5.5-6.5

Viscosity (cps): 1000-3000

Procedure:

1. Heat water to 50 degrees C.
2. Start adding the surfactants, Disodium EDTA, Glycerin then the Polyquaternium solution, mix until everything is homogeneous and clear.
3. Then add the Mackanate DC-30 and finally dissolve fragrance in Polysorbate 20.
4. At 30 degrees C. add MACKSTAT DM, mix to room temperature.
5. Adjust pH if necessary with Citric Acid.
6. Adjust viscosity with Sodium Chloride.

MOISTURIZING SHAMPOO FOR OILY HAIR

RAW MATERIALS	% By Weight
Deionized Water	35.08
SLES	47.00
Germaben II	1.00
INCROMIDE LR	2.50
CROSULTAINE E-30	12.50
INCROMECTANT AQ	0.50
INCROMECTANT LQ	0.50
CROQUAT L	0.25
Citric Acid (10% Soln)	0.67

pH: 6.75

Viscosity: 1100 cps

Procedure:

Charge water into mixing kettle. Start mixing and heating to 65-70C. Add Germaben II and SLES. When the batch reaches 65-70C, add Incromide LR and Crosultaine E-30, one at a time, with agitation. When the batch is uniform and clear, start cooling. At 50C add Incromectants. At 40C add Croquat L. Continue mixing and cool to room temperature. Adjust pH with citric acid.

This formula combines CROSULTAINE E-30, INCROMIDE LR and SLES to provide a quality gentle cleanser. The INCROMECTANTS are incorporated to help maintain the moisture balance of hair while CROQUAT L provides light conditioning to hair.

MOUSSE SHAMPOO

INGREDIENTS	% By Weight
Part A:	
Water, deionized	63.21
KELTROL T xanthan gum	0.20
Methylparaben	0.20
Part B:	
Stepanol WAT, TEA lauryl sulfate	9.18
Bio Terge AS-40 sodium C14-C16 olefin sulfonate	9.18
Ninol 4821 lauramide DEA	4.59
Emid 6515 cocamide DEA	2.75
Merquat S polyquaternium 7	2.00
Amphosol CA cocamidopropyl betaine	1.38
Emerest 2400 glyceryl stearate	1.38
Tween 20 polysorbate 20	0.47
Neo-Fat 18-55 stearic acid	0.46
Fragrance	to suit
Part C:	
Propellant	5.00

Procedure:

Part A:

1. Using a Lightnin'-type mixer, hydrate KELTROL T in deionized water. Mix for 10-15 minutes.
2. When fully hydrated, add methylparaben and continue mixing.
3. Heat to 77C (170F) with continuous mixing.

Part B:

1. Mix Part B ingredients (except fragrance) in another container.
2. Heat to 77C (170F) with slow agitation until all ingredients are melted.
3. Blend Parts A and B together thoroughly with slow agitation.
4. Cool to 38C (100F) and add fragrance.

KELTROL T xanthan gum provides this mousse shampoo with shelf stability and rich, long-lasting lather.

CLEAR CONDITIONING SHAMPOO

RAW MATERIALS	% By Weight
GLUCQUAT 100	1.0
GLUCAMATE DOE-120	3.5
TEA-Lauryl Sulfate (40% active)	25.0
Lauramide DEA	5.0
Deionized water	65.0
Citric Acid	0.5
Perfume and preservative	q.s.

Procedure:

Heat deionized water to 60C with propeller agitation. Add TEA-lauryl sulfate, lauramide DEA, preservative, GLUCAMATE DOE-120 and citric acid to batch, in that order, waiting for each ingredient to dissolve before adding the next. When clear add GLUCQUAT 100. Cool to room temperature.

Description:

In this clear shampoo, GLUCQUAT 100 provides conditioning properties and shine to hair. GLUCAMATE DOE-120 works synergistically with lauramide DEA in the surfactant system to build viscosity.

NON-IRRITATING AND MILDLY CONDITIONING SHAMPOO

RAW MATERIALS	% By Weight
MONATERIC 985A	40.00
MONAMATE OPA-30	30.00
Cerasynt IP	2.00
Preservative	0.30
H3PO4 (85%)	0.75
Water	26.95

Procedure:

Mix MONATERIC 985A, MONAMATE OPA-30, water, Preservative and Cerasynt IP. Heat with stirring to completely melt the solid materials (approx. 60C). Add H3PO4. Cool with stirring. At 40C add any perfume or colors. Continue stirring and cooling to 25C. Adjust pH to 6.5-7.0.

Properties:

Appearance: Pearly viscous liquid
Nominal Activity: 26%

MONAMATE OPA-30 in this formulation imparts a high, dense foam which leaves hair mildly conditioned and especially shiny. This formulation without Cerasynt IP or preservative exhibited zero eye and skin irritation when tested at 10% active.

SOURCE: Mona Industries: MONAMATES: Formulation

NON-ALKALINE SHAMPOO HIGH VISCOSITY (25% active)

RAW MATERIALS	% By Weight
Water	13.1
Sipon L22	60.7
MONAMATE OPA-30	14.8
MONATERIC ISA-35	11.4

Mixing Procedure:

Add components in order listed with sufficient agitation and heat (about 50C). Adjust pH to desired level with phosphoric or citric acid. Viscosity at pH 6.5 is approximately 15,000 cps. and at pH 4.5-5.0; it is over 35,000 cps. Lower viscosities will result if lower amounts of MONATERIC ISA-35 are used.

PEARLESCENT LIQUID SHAMPOO

INGREDIENTS	% By Weight
Water	41.45
STANDAPOL ES-3	40.00
VELVETEX BA-35	5.00
STANDAMOX LAO-30	3.00
STANDAMID SD	3.00
POLYQUART H	3.00
NUTRILAN I	1.50
EUPERLAN PK-810	3.00
Kathon CG	0.05

Procedure:

Charge kettle with water. Add remaining ingredients, one at a time. Adjust pH to 6.5+-0.3 with 50% citric acid. Continue stirring until product is homogeneous. Fill off.

Comments:

The combination of amine oxide, betaine and protein contributes to the mildness and conditioning properties of the formulas. The inclusion of the polyamine quaternary also provides for good wet and dry combing.

Formula H-4952

CLEAR SHAMPOO WITH PROTEIN

INGREDIENTS	% By Weight
Water	52.45
STANDAPOL WAQ-LC	37.00
LAMEPON 4SK	5.50
STANDAMID LDO	3.50
GENEROL 122E-16	0.50
Sodium Chloride	1.00
Part B:	
Kathon CG	0.05
Fragrance & Dyes	q.s.

Procedure:

Charge kettle with water. Heat water to 50-55C. Keeping temperature constant, add remaining ingredients of Part A, under agitation. Once uniform, take heat off and continue stirring while product cools. At 40C, add individual components of Part B, under agitation. Adjust pH to 6.5+-0.3 reaches room temperature. Fill off.

Comments:

The addition of the ethoxylated Soya Sterol provides a desirable after shampoo sheen to the hair coupled with somewhat of an emollient effect. Milder formula with improved conditioning properties.

PEARLIZED CONDITIONING SHAMPOO

INGREDIENTS	% By Weight
Standapol AEI	35.00
Velvetex CDC	5.00
Standamox CAW	3.00
Cosmedia Guar C-261N	0.75
Aethoxal B	1.50
Euperlan PK-810	3.00
Kathon CG	0.05
Fragrance	0.25
Deionized Water	q.s. to 100
Citric Acid to pH 6-6.5	

Preparative Procedure:

- 1) Maintain moderate stirring while blending ingredients at room temperature. Add the Standapol AEI to the water, then stir in Velvetex CDC and Standamox CAW.
- 2) Slurry Guar C-261N with Aethoxal B, then add to main batch. Stir until Guar is hydrated. Batch will be slightly hazy.
- 3) Stir in Euperlan PK-810. Adjust to pH 6-6.5 than add Kathon CG and fragrance.
- 4) Package.

Comments:

Cosmedia Guar C-261N is a cationic gum that is compatible with anionic surfactants and adds conditioning and antistatic properties to these shampoo systems.

PEARLY SHAMPOO

RAW MATERIALS	% By Weight
1. Ammonium Laureth Sulfate 27%	40.00
2. MACKALENE 426	4.00
3. MACKAMIDE PKM	3.00
4. Ethylene Glycol Di-Stearate	1.50
5. MACKERNIUM 007	0.60
6. MACKSTAT DM	Q.S.
7. Color, Fragrance	Q.S.
8. Magnesium Sulfate (Epsom Salt)	1.00
9. Sodium Chloride	0.30
10. Deionized Water Q.S. to	100.00

Procedure:

1. Place #1, #2, #3 and #4 into stainless steel mixing tank, equipped with a slow speed mixing agitator.
2. Start heating the contents to 170 degrees F.
3. Start slow speed mixing and add D.I. Water 170 degrees hot.
4. In a part of the hot water dissolve #8 and #9 and add to the blend in the batch tank and mix in for 10-15 minutes.
5. Then start fast cooling, mix in #5 at 113 degrees F. and #6 and #7 at 105 degrees F.
6. Let the product stay for a few hours (or over night) without mixing then fill.

pH: 5.5-6.5

Addition of more of #9 will thin out solution if it is too viscous.

Formula No. BP-4C

Procedure:

1. Disperse MACKERNIUM 007 in water and Aloe Vera Liquid.
2. Add MACKADET SBC-8 and heat to 45 degrees C.
3. Blend until homogenous.
4. Adjust viscosity with sodium chloride.
5. Add remaining components and blend until clear.
6. Cool and fill.

SHAMPOO

RAW MATERIALS	% By Weight
Deionized water	51.35
TEALS	30.00
Germaben II	1.00
INCROMIDE LR	3.50
INCROMIDE CAC	2.00
CROSULTAINE T-30	8.00
CROQUAT L	0.25
CRODAFOS SG	1.00
Citric Acid (10% Soln)	2.90

pH: 6.55

Viscosity: 3,300 cps

Procedure:

Charge vessel with water, add TEALS and Germaben with agitation. Start heating batch to 65-70C. When the batch reaches temperature, add CAC, LR and Crosultaine T-30 one at a time with agitation. Mix until uniform and clear. Cool to batch to 40C and add Croquat L and then Crodafos SG. Cool to room temperature and add citric acid to adjust product to desired pH.

The combination of CROSULTAINE T-30, TEALS and amides have been optimized to yield a gentle cleansing; medium viscosity shampoo with good foam characteristics. The incorporation of CROQUAT L and CRODAFOS SG provide conditioning benefits to hair.

Formula SH-75

CONDITIONING SHAMPOO

RAW MATERIALS	% By Weight
INCRONAM 30	5.0
Standapol ES-3	20.0
INCROMIDE LR	5.0
CRODAFOS SG	3.0
CROVOL PK-70	1.0
Germaben II	1.0
Deionized Water	64.0
CROSILKQUAT	1.0

Procedure:

Combine all ingredients except Crosilkquat and heat with mixing to 75C. Cool batch with mixing. At 40C add Crosilkquat. Mix well.

CROSILKQUAT is an elegant way to enhance wet comb, moisturizing, and conditioning in shampoos. This shampoo features CRO-ILKQUAT in a mild blend of surfactants.

RAW MATERIALS	% As Is
Ammonium Lauryl Sulfate	60.7
MONAMATE CPA-40%	15.0
MONATERIC ISA-35%	5.7
Water (deionized)	18.6

Manufacturing Procedure:

1. Weigh out ammonium lauryl sulfate and heat to 50-55C with slow agitation.
2. Add MONAMATE CPA-40%.
3. Add molten MONATERIC ISA-35% (pumpable at 45-50C).
4. Add water and allow batch to cool to 40-50C depending on viscosity.
5. Add perfume, preservative (e.g. methyl paraben) and color as desired.
6. Depending on viscosity, bottle between 25C and 45C.
pH (as is): 5.8-6.0
Viscosity (cps): 4100-4300

SHAMPOO FOR OILY HAIR

INGREDIENTS	% By Weight
A Texapon NSO	23,000
Texapon K 14 S special	23,000
Lamepon S	4,000
Cremogen M-82 730 337	5,000
Perfume Oil	0,500
B Demineralized Water	39,800
Phenonip	0,500
Sodium chloride	4,000
Sodium hydroxide (10% aq. solution)	0,200
(approx. 14% active surfact.)	

Manufacturing Process:

Part A: Mix all the ingredients well under stirring.

Part B: Solve all the ingredients in water.

Add part B to part A under stirring.

Final pH should be 6,5 and should be controlled.

Remarks: without any colour dye:

the yellow-brownish colouring of the shampoo depends on the native colouring of the plant extract.

Recommendation for colouring:

To receive a green color add the following colour solution:
0,50% Sicomet Blue S 74180 (0,1% aq solution)/C.I. 74180

SHAMPOO FOR NORMAL/DRY HAIR

RAW MATERIALS	% By Weight
Part A:	
Deionized Water	56.02
TEALS	25.00
Germaben II	1.00
INCROMIDE LR	3.00
INCROMIDE CAC	1.00
CROSULTAINE E-30	3.50
Disodium EDTA	0.30
Part B:	
INCRODET TD-7C	6.00
INCROQUAT MINK-85	0.50
CRODACEL QS	0.50
Part C:	
HYDROTRITICUM	0.50
TEA (10% Soln)	2.68
pH: 6.58	
Viscosity: 850 cps	

Procedure:

Add water, Disodium EDTA and Germaben II to mixing vessel. Start mixing and heat to 65-70C. Add remaining Part A ingredients one at a time with agitation. Mix until uniform. Cool to 50C and add Part B ingredients in given order with mixing. Cool to 40C and add Hydrotriticum. Cool to room temperature and adjust pH with TEA.

The blend of CROSULTANE E-30, INCRODET TD-7C, TEALS and the amides have been balanced to provide a low viscosity cleanser appropriate for normal to dry hair. The addition of INCROQUAT MINK-85, CRODACEL QS, and HYDROTRITICUM enhance the conditioning benefits of this shampoo.

ULTRA PEARLESCENT CONDITIONING SHAMPOO

INGREDIENT	% By Weight
A VEEGUM Ultra	2.00
Deionized Water	61.25
B Mica (and) Titanium Dioxide (Timiron MP-1001)	0.50
C Sodium Laureth Sulfate	25.00
Lauramide DEA (Monamid 716)	7.50
VANSEAL CS	3.75
Preservative, Fragrance	q.s.

Procedure:

Sift VEEGUM Ultra into the water while mixing at 700 rpm with a propeller stirrer. Adjust the propeller speed to 1500-1700 rpm and mix for 30 minutes. Add the B ingredients and mix for 5 minutes. Adjust the speed to 200 to 500 rpm and add the C ingredients in the order shown, mixing after each addition until smooth and uniform.

Product Characteristics:

Viscosity: 7000-9000 cps

pH: 5.0+-0.2

Color: Pearlescent, white

Features:

This luxurious shampoo formula is thickened using VEEGUM Ultra which also suspends the mica pigment that provides pearlescence. VANSEAL CS (cocoyl sarcosine) provides mildness and hair conditioning while combining with lauramide DEA to markedly enhance the quality and stability of the lather produced during shampooing.

AEROSOL SHAVE CREAM

RAW MATERIALS	% By Weight
Concentrate:	
Oil Phase:	
GLUCAM E-20 Distearate	5.0
Stripped Coconut Fatty Acids	2.0
Stearic Acid, xxx	5.5
AMERLATE LFA	0.8
Lauramide DEA	0.5
Water Phase:	
Carbomer 941 (3% aqueous)	3.0
Deionized Water	79.6
Triethanolamine (99%)	3.6
Perfume and Preservative	q.s.

Procedure:

Heat oil to 70C. Heat water phase minus the triethanolamine to 70C. Add water to oil at 70C and immediately add the triethanolamine. Cool while mixing to 35C and add the perfume.

Fill: 97% Concentrate: 3% Propellant A-46

Description:

Highly emollient aerosol shave cream. GLUCAM E-20 Distearate gives excellent spreading properties while imparting slip and lubricity to improve razor glide. The triethanolamine soap of AMERLATE LFA is a powerful emulsifier for the propellants and gives long-term stability to the aerosol pack.

Deionized water	88.38
Perfume and preservative	q.s.

Description:

This aerosol shave cream has a rich, lathery foam with good spreadability. GLUCQUAT 100 provides lasting conditioning effects such as emolliency and moisturization. SOLULAN 5 (w/o) and SOLULAN 25 (o/w) help to stabilize the aerosol foam.

AEROSOL SHAVE CREAM

RAW MATERIALS	% By Weight
Phase A:	
Pristerene 4904	6.00
Prifac 5901	1.00
Tween 20	1.00
Estol 1526	1.00
Phase B:	
Deionized Water	76.40
Pricerine 9083	3.00
Witcolate SL-1	5.00
Triethanolamine 99%	4.00
Potassium Hydroxide 85%	0.50
DERMACRYL-79	1.00
Phase C:	
Germaben IIE	1.00
Phase D:	
Fragrance	0.10
Procedure:	

Mix ingredients of Phase A and heat to 75C. In a separate vessel, mix water, triethanolamine and potassium hydroxide. Slowly sprinkle in the DERMACRYL-79 and heat to 75C. When completely dissolved, add remaining ingredients. Add Phase A to Phase B and mix thoroughly. Cool to room temperature and add Phases C and D. Final pH should be approximately 8.4.

Fill: 96.5% Concentrate

AFTER SHAVE BALM

INGREDIENTS	% By Weight
A Demineralized Water	89,150
Phenonip	0,500
D-Panthenol	1,000
Trilon B liquid	0,100
Allantoin	0,100
Carbopol 940	0,400
B Sodium hydroxide (10% aq. solution)	1,750
C Frescolat, Type ML 620105	1,000
Perfume Oil	1,000
Neo Heliopan, Type AV 660523	2,000
Abil B 8839	3,000

Manufacturing Process:

Part A: Dissolve the ingredients (without Carbopol 940) in water. Then slowly add under stirring Carbopol 940 and continue until completely dispersed.

Part B: Add slowly the sodium hydroxide solution to part A for neutralisation. A transparent high viscid gel will be formed.

Part C: Blend perfume oil, Neo Heliopan, Type AV and Abil B 8839, dissolve Frescolat in this mixture (if necessary heat to max. 35C). Add part C while stirring to the gel.

After complete mixing it is necessary to pass the dispersion through a homogenizer (colloid mill).

AFTER SHAVE BALM

INGREDIENTS	% By Weight
A. Deionized Water	69.7
Carbomer 940	0.2
Propylene Glycol	1.0
Allantoin	0.2
Methylparaben	0.2
Triethanolamine	0.2
B. Polysorbate 80	2.0
Glyceryl Stearate and PEG 100 Stearate	3.0
PEG-75 Lanolin Oil	2.0
Cocoa Butter	5.0
Ethylene Glycol Monostearate	2.0
C. DERMATEIN GSL	3.0
D. Dimethicone	1.0
Diazolidinyl Urea	0.3
SD Alcohol-40	10.0
Menthol	0.1
Fragrance	0.1

Procedure:

Begin heating water to 80C; sift Carbomer into water with constant agitation; mix until clear. Add rest of Part A ingredients. Mix well. Add Part B ingredients in order. Mix until homogenous. Begin cooling to room temperature. Slowly add DERMATEIN GSL, mix until smooth. Add Part D ingredients in order; mix until uniform.

Description:

This men's light facial lotion demonstrates how Dermatein GSL helps skin recover from nicks and cuts caused by shaving. DERMATEIN GSL works to replace the lipid lost from dry, damaged skin. DERMATEIN GSL rejuvenates skin by increasing the skin's ability to bind moisture.

AFTER SHAVE SOOTHER

RAW MATERIALS	% By Weight
Phase A:	
KYTAMER PC	0.5
Deionized Water	54.5
Phase B:	
GLUCAM P-20	5.0
SD Alcohol 40 (Anhydrous)	40.0
Perfume and Preservative	q.s.

Procedure:

Disperse KYTAMER PC in water at room temperature using high speed agitation. When completely dispersed begin heating to 75C with mixing. Mix at 75C until clear. Allow solution to cool to room temperature. Dissolve GLUCAM P-20, perfume and preservative in the SD Alcohol 40 at room temperature. Mix until clear. Slowly add to the KYTAMER PC aqueous solution at room temperature and mix until clear and uniform.

Description:

After shave soothing hydroalcoholic lotion, KYTAMER PC imparts a polymeric film on the face leaving the skin feeling smooth and conditioned. The combination of KYTAMER PC and GLUCAM P-20 help to reduce facial stinging typical of such hydroalcoholic systems while also acting as fragrance fixatives.

BRUSHLESS SHAVE CREAM

INGREDIENT	% By Weight
A VANSEAL NACS-30	15.00
VANSEAL CS	2.50
Deionized Water	25.75
Potassium Cocoate	35.00
Sorbitol, 70%	5.00
PVP-K-30	0.75
B AGI Talc	5.00
C Stearic Acid	7.00
Propylene Glycol Stearate (Cerasynt PA)	2.50
Cetyl Alcohol	1.50
D Preservative, Dye, Fragrance	q.s.

Preparation:

Mix A ingredients together and heat to 55C with gentle stirring until clear. Add B to A with adequate agitation. Heat C to 60C. Add C to (A + B), mixing until uniform and homogeneous. Cool to 30C and add D.

Consistency: Flowable gel (Viscosity: 2500-3500 cps)

Suggested Packaging: Plastic bottle or pump.

Features:

This formulation features VANSEAL NACS-30, sodium cocoylsarcosinate, VANSEAL CS, cocoylsarcosine and potassium cocoate as high foaming yet mild surfactants. Sorbitol adds humectancy while PVP and talc provide lubricity. Stearic acid, propylene glycol stearate, and cetyl alcohol are included as thickeners and to provide pleasant after-feel.

Formula No. 434

ULTRA AEROSOL SHAVE CREAM FOR SENSITIVE SKIN

INGREDIENT	% By Weight
A VEEGUM Ultra	1.00
Deionized Water	75.80
B Glycerin	3.00
Triethanolamine	4.00
C Stearic Acid XXX	6.00
Coconut Acid (Emery 622)	1.30
Mineral Oil	2.50
Cetyl Alcohol	1.00
VANOX PCX (BHT)	0.20
D VANSEAL NACS-30	5.00
Methylparaben	0.20
Fragrance	q.s.

Product Characteristics:

Viscosity: 500-700 cps

pH: 8.0+-0.2

Features:

VEEGUM Ultra is used in this emulsion formula to enhance the stability of the luxurious lather produced by combining VANSEAL NACS-30 (sodium cocoyl sarcosinate) with stearic and coconut acid soaps. VANOX PCX acts as an antioxidant in this formulation.

Formula No. 451

HYDROALCOHOLIC AFTERSHAVE BALM

RAW MATERIALS	% By Weight
Phase A:	
Carbomer 934 (3% aqueous sol'n)	6.6
Deionized Water	70.4
Phase B:	
GLUCAM E-20 Distearate	2.0
PROMULGEN D	2.5
PROPAL	1.5
Triethanolamine (10% aqueous sol'n)	2.0
Phase C:	
Specially Denatured Alcohol #40	15.0
Perfume and preservative	q.s.

Procedure:

Heat phase A to 80C. Heat phase B minus the triethanolamine to 80C. Add phase A to phase B at 80C. Mix while cooling to 50C at which point add the triethanolamine. When uniform add phase C and then the perfume. Stir with cooling to 30C and pour.

Description:

An opaque, soothing, low alcohol aftershave lotion with medium viscosity. GLUCAM E-20 Distearate, in combination with PROPAL, leaves a smooth, emollient afterfeel on the skin. This pair of emollients protects the skin from the drying effects of the alcohol. PROMULGEN D enhances the stability and controls viscosity drift.

SHAVING-CREAM

RECIPE	Parts by Weight
A Stearic acid	11.20
Myristic acid	5.60
Coconut fatty acid	6.40
B Water	50.84
Potassium hydroxide	7.52
Sodium hydroxide	0.39
Triethanolamine	1.05
PEG 400	6.00
C Stearic acid	11.20
Myristic acid	5.60
D GENAPOL LRO paste	3.00
E Menthol	0.20
Perfume	1.00
Procedure:	
I Melt A at 90C.	
II Heat the solution of B to 90C.	
III Slowly stir II into I, continue stirring at temperature 70-80C for 30 minutes.	
IV Melt C at 90C.	
V Stir IV into III.	
VI Stir until cool (avoid foam formation).	
VII Stir D into VI at 50C, and at 40C add the solution of E.	
VIII At room temperataure allow to homogenize and one day later homogenize again.

11. Solulan C-24	0.30	0.29
12. Perfume	0.30	0.29
13. Isobutane	----	3.40

Procedures:

- A. Clean and dry a stainless steel tank of suitable capacity. Meter #1 into the tank. Start agitation and disperse #2 at room temperature (Do Not Dump! Use Eductor). When thoroughly dispersed, begin heating the batch and continue agitation. Add #3, #4, #5, #6 and #7. Continue agitation (Avoid Aeration).
- B. In a separate container mix #8, #9, and #10. Start heating this tank to 75C. (167F). Agitate well and add this phase B to phase A. Continue agitation at this temperature, i.e. 167F for 45 minutes (AVOID AERATION). Continue agitation and cool the batch to 45C. (113F).
- C. In a separate container add #11 and heat to 45C. (113F). Add #12 and mix well. Now, add this phase to main batch at 45C. (113F.). Continue slow agitation and cool the batch to room temperature. Withdraw a sample at room temperature and send to Quality Control Lab. Filter through 100 mesh Triclove before filling. (If aerated, do not fill the same day).

SHAVING GEL

RAW MATERIALS	% By Weight
Water	q.s.
CELLOSIZÉ Polymer PCG-10	1.25
POLYOX WSR-205	0.10
Water	3.23
Palmitic Acid	6.00
Triethanolamine (99%)	5.00
AMEROXOL OE-20	2.00
Glycerin	2.00
Isopentane	6.00
Fragrance, Preservative, Color	q.s.

Procedure:

Add CELLOSIZÉ Polymer PCG-10 to water at room temperature with rapid stirring. When well dispersed heat to 75C. Make a 3% solution using 0.1% of POLYOX added to 3.23% water. Add to the CELLOSIZÉ dispersion as it is heating to 75C. When batch is 75C and a clear gel has formed, add Palmitic Acid, Triethanolamine, AMEROXOL OE-20, Glycerin and the Preservative system to the batch individually waiting for each ingredient to dissolve before adding the next one. When the batch is uniform, cool to room temperature and add Fragrance and Color. Allow air to escape from the mixture. Cool Isopentane and shave gel to 15C. Add Isopentane slowly to batch with gentle stirring to avoid introducing foam. Package in sepro-type aerosol cans with A-40 propellant.

Description:

This shaving gel is thickened to its gel consistency with CELLOSIZÉ Polymer PCG-10. It contains TEA-Palmitate soap for foaming and AMEROXOL OE-20 for foam stability. POLYOX WSR-205 is added to provide lubrication between the skin and the razor blade.

TUBE CREAM SHAVE

RAW MATERIALS	Sequence	% By Weight
Stearic Acid	1	17.50
Lipolan R	1	1.00
Perfecta 239A	1	2.00
Lipo PGMS	1	3.20
Propylparaben	1	0.10
Liponate IPP	1	0.80
Liponate MM	1	1.00
DC 200 Fluid (200 cts.)	1	0.25
OP-2000	1	1.50
Water	2	45.85
Hamp-ene Na3T	2	0.05
Propylene Glycol	2	4.50
Cellosize QP-3000	2	0.05
Triethanolamine, 99%	2	0.70
Unicide U-13	2	0.30
Methylparaben	2	0.25
Sodium Dehydroacetate	2	0.25
Kelgin HV (2% Dispersion)	2	20.00
Propylene Glycol	3	0.50
Menthol	3	0.20

Manufacturing Procedure:

1. In a side kettle, combine Sequence 1 ingredients and heat to 83C with Lightnin' mixing.
2. In the main kettle, combine all Sequence 2 ingredients and heat to 80C with Lightnin' mixing.
3. Add Sequence 1 to Sequence 2 with continuous Lightnin' mixing. Maintain temperature at 80C during the addition.
4. Cool with stirring to 72C.
5. At 72C begin to cool the batch. Continue agitation.
6. At approximately 58-60C or when the product becomes too thick for Lightnin' mixer, change to variable speed side-wiping agitator. Continue cooling the batch.
7. At 45C, add premixed (be sure Menthol is completely dissolved) Sequence 3 and disperse thoroughly.
8. Continue mixing and cooling to 30C. Package.

Soaps

CREAM HAND CLEANSER

RAW MATERIALS	% By Weight
MACKANATE LO-Special	83.0
MACKAMIDE PKM	4.0
MACKERNIUM 007	0.8
MACKSTAT DM	q.s.
Water, Fragrance qs to	100.0

Procedure:

1. Add MACKAMIDE PKM to MACKANATE LO-Special and heat to 70 degrees C.
2. Blend until homogenous.
3. Dissolve MACKERNIUM 007 in water and add to product.
4. Blend until completely homogenous.
5. Cool to 50 degrees C. with mild agitation.
6. Add MACKSTAT DM and fragrance and cool with continuous agitation.

HANDSOAP WITH SALICYLIC ACID

RAW MATERIALS	% By Weight
1. MACKADET CA	30.0
2. Salicylic Acid **	0.5-2.0
3. MACKSTAT DM	q.s.
4. Fragrance, Color	q.s.
5. Deionized Water q.s. to	100.0
6. Salt	q.s.
7. Tetra Sodium EDTA 40%	0.4

Procedure:

1. Into a stainless steel mixing tank add #5, #1 and #7.
2. Start heating to 120 degrees F. with slow mixing.
3. Add carefully #2 and dissolve. When everything is clearly dissolved start cooling to 110 degrees F.
4. Add #4, then #3 and dissolve, check pH and adjust upwards with diluted iron free sodium hydroxide solution to pH 6.6-7.4.
5. Finally add small amounts of salt to bring viscosity to specification. Viscosity 800-2000 cps.

** Please Note: Federal Register Part IV, Vol 51 Department of Health and Human Resources 21 CFR Part 348 & 358. States drug status of salicylic acid.

DETERGENT FREE HAND SOAP

RAW MATERIALS	% By Weight
MACKADET 40K	50.0
MACKAMIDE LLM	10.0
Sodium Chloride	2.0
Tetrasodium EDTA (40%)	1.0
MACKSTAT DM	Q.S.
Deionized Water	Q.S. to 100.0

Procedure:

1. Add MACKADET 40K, MACKAMIDE LLM, and EDTA to 90 percent of the water.
2. Blend until clear.
3. Dissolve Sodium Chloride in remaining water and slowly add to batch.
4. Add MACKSTAT DM and blend until clear.
5. If needed, sodium chloride can be increased to increase viscosity.

HEAVY DUTY LIQUID HANDSOAP

RAW MATERIALS	% By Weight
Dodecylbenzene Sulfonic Acid	21.5
Caustic Soda (50%)	5.4
Sodium Laureth Sulfate (60%)	4.0
MACKAM 35	5.5
Propylene Glycol	8.0
Water, Dye, Fragrance	qs to 100.0

Solids, %: 30+-1.0

pH: 6.5-7.0

Procedure:

1. Add caustic soda to water and adjust pH to 7.0-8.0 with DBSA.
2. Add remaining components and adjust pH to 6.5-7.0 with citric acid.
3. If necessary, lower viscosity with Propylene Glycol, or raise viscosity with sodium chloride.
4. Latex opacifier may be added if needed.

HAND CLEANER/SHOWER SOAP

RAW MATERIALS	% By Weight
Water and Preservative	29.3
MONATERIC 951A	20.8
MONAMATE LNT-40	25.0
Sipon LSB	17.9
MONAMID 1089	5.0
Ethylene Glycol Monostearate	2.0

Procedure:

Add ingredients in order listed above and heat slowly to 70C with stirring until completely melted. Cool to 40C and adjust pH. At pH 6.8 viscosity is approximately 3000 cps.

This pearled formulation combines the high foaming properties of MONATERIC 951A with the extra mild skin-softening effect of the MONAMATE. The MONAMID 1089 and EGMS build viscosity and add a soapy feel to the lather.

OPAQUE LIQUID SOAP

INGREDIENTS	% By Weight
Water	75.88
Sodium C14-C16 olefin sulfonate, 40% active	7.50
Sodium lauroyl sarcosinate, 30% active	6.66
Cocamidopropyl betaine, 35% active	6.66
Glycol stearate	1.00
NATROSOL 250HHR hydroxyethylcellulose	0.80
Propylene glycol	0.50
Glycerin	0.50
Tetrasodium EDTA	0.30
Stearalkonium chloride	0.10
Methylparaben	0.10

Procedure:

1. Dissolve the NATROSOL in water. Add the methylparaben to the finished solution.
2. While slowly stirring the water-soluble polymer solution, add the stearalkonium chloride, olefin sulfonate, and glycol stearate. Heat the mixture to 80C until all of the glycol stearate has melted and the solution has turned opaque.
3. Add the remaining ingredients while cooling the solution slowly to room temperature.
4. Add color and fragrance.

TRANSPARENT TOILET SOAP

INGREDIENTS	% By Weight
Water	65.70
Sodium C14-C16 olefin sulfonate	20.00
Sodium lauroyl sarcosinate	10.00
Cocamide MEA	3.00
NATROSOL 250HR	1.00
Disodium EDTA	0.20
Methylparaben	0.10

Procedure:

1. Dissolve the NATROSOL in water. Add the methylparaben to the finished solution.
2. In a separate vessel, combine the surfactants, heat to 80C, and mix until homogeneous.
3. Add the surfactant solution to the water-soluble polymer solution and mix until well blended.
4. Add the disodium EDTA and cool to room temperature.

NATROSOL 250HR gives emolliency to this transparent hand soap. The excellent lathering properties of the formula are attributed to the combination of olefin sulfonate, sodium lauroyl sarcosinate, and cocamide MEA.

AFTER SUN CARE LOTION

RAW MATERIALS	% By Weight
I TEFOSE 1500	7,00
Cetyl Alcohol	1,00
Sweet Almonds Oil	4,00
VEGETOL HUILEUX CALENDULA WL 1072	2,00
Antioxygen	Q.S.
II Demineralized Water	79,40
Allantoin	0,10
Carbopol 941	0,10
Triethanolamine 99% (50% Sol.)	0,20
IIIDemineralized Water	5,00
PANCOGENE S	1,00
Preservative	Q.S.
Perfume	0,20

Preparation:

Disperse the Carbopol. Let stand.

Under moderate agitation, pour II heated up to 75C into I heated up to 75C.

Add the triethanolamine solution.

Cool down while stirring and around 30C add III and the other components.

SUN PROTECTION GEL

Composition	% By Weight
Carbopol 934	1.0
Triethanolamine (TEA)	1.35
Water, demineralized	83.45
Germall 115	0.2
Eusolex 232	4.0
Sorbitol	5.0
Pearl lustre pigments	5.0
e.g. COLORONA Bronze or COLORONA Oriental Beige	

Preparation:

The pearl pigment is dispersed in a solution containing water, GERMALL 115 and Sorbitol. Carbopol 934 is added and dissolved under stirring and stirring is continued until a clear solution is obtained. Then successively the TEA (mixed with a small amount of water) are added.

SOURCE: EM Pigments Division: Formula

AFTER SUN GEL

INGREDIENTS	% By Weight
A Demineralized Water	66,800
1,2-Propylene glycol	3,000
Allantoin	0,100
D-Panthenol	1,000
Creragen Camomile Special 739027	3,000
Glycerin 86%	3,000
Carbopol 940	0,500
B Demineralized Water	5,000
Triethanolamine	0,900
C Ethylalcohol (96Vol.%) denatured	15,000
Mulsifan RT 203/80	1,200
Perfume Oil	0,200
Phenonip	0,300

Manufacturing Process:

- Part A: Dissolve propylene glycol, Panthenol, Allantoin, Creragen Camomile and glycerin in water. Then disperse the Carbopol using high speed agitation. Mix to form a uniform dispersion free from lumps.
- Part B: Dilute triethanolamine with water and add slowly into Part A for neutralisation. A transparent high viscous gel will be formed.
- Part C: Dissolve fragrance, Phenonip and Mulsifan in ethyl alcohol and add slowly under stirring into the gel part A/B.

The pH-value of the finished gel should be approx. 6,5-7.

AFTER SUN SKIN REPAIR

INGREDIENTS	% By Weight
A. Deionized Water	81.7
Hydroxyethylcellulose	1.0
Sorbitol	1.0
Allantoin	0.2
B. Stearic Acid	3.0
Glyceryl Stearate and PEG 100 Stearate	2.5
Cetyl Alcohol	0.5
PEG 75 Lanolin Oil	1.0
C. DERMATEIN MPS	1.0
DERMATEIN GSL	5.0
D. Dimethicone	1.0
Propylene Glycol and Diazolidinyl Urea and Methylparaben and Propylparaben	1.0
Aloe Vera	1.0
Fragrance	0.1

Procedure:

Begin heating water to 80C; sift Hydroxyethylcellulose into water with constant agitation. Add rest of part A. Mix until clear. Add Part B ingredients in order. Mix until homogeneous. Cool to room temperature. Slowly add DERMATEIN MPS and DERMATEIN GSL; mix until uniform. Add Part D ingredients. Mix until homogeneous.

Description:

After a day in the sun, skin needs repair! DERMATEIN MPS, Hydrolyzed Mucopolysaccharides, replenishes the moisture lost from the skin. DERMATEIN MPS adds a luxurious skin feel to the product. DERMATEIN GSL, Glycosphingolipids, replaces the lost lipid and increases the skin's ability to bind moisture!

Silicone 200 fluid (200 cts)	2	0.75
Vitamin E Acetate	2	0.10
Propylparaben	2	0.15
PA-18 Polyanhydride	3	2.00
Benzyl Alcohol	4	0.05
Fragrance SMCO HQ-115	4	0.10

Manufacturing Procedure:

1. Combine all Sequence 1 ingredients into main kettle. Heat to 78C with Lightnin' mixing. Thoroughly disperse Veegum.
2. Combine all Sequence 2 ingredients in side kettle. Heat to 78C with Lightnin' mixing. When all solids are dissolved, slowly sprinkle in Sequence 3 under continuous mixing. Heat to 80C to insure that all materials are dissolved.
3. When both phases are at proper temperatures, stop Lightnin' mixing and insert homogenizer mixer into main kettle. Slowly add combined Sequences 2 and 3 under homo mixing to Sequence 1. Maintain temperature at 78C for 10 minutes after oil phase addition is complete.
4. Remove homo mixer. Begin side-wiping agitation and start cooling batch. At 40C add premixed Sequence 4 and thoroughly disperse. Cool to 25C.

CLEAR ANHYDROUS SUNSCREEN

RAW MATERIALS	% By Weight
ABIL B 8839	56.0
ABIL OSW-12	20.0
Diisopropyl Adipate	10.0
C12-15 Alcohols Benzoate	10.0
Octyl Dimethyl PABA	4.0

Procedure:

Mix ingredients in order.

This formula is anhydrous, oil-free and clear. It is quick spreading and hydrophobic on the skin.

COLD MIX - W/O EMULSION SUNSCREEN

RAW MATERIALS	% By Weight
A. ABIL WE-09	5.0
Octyl Methoxycinnamate	4.0
ABIL B8839	5.0
ABIL Wax 9800	1.0
Mineral Oil	4.0
Caprylic/Capric Triglyceride	3.0
B. Water	75.8
Benzophenone-4	1.5
Sodium Chloride	0.4
Sodium Phosphite	0.3
Sodium Hydroxide	to pH 7.5

Procedure:

1. Blend Phase A.
2. Mix Phase B.
3. With slow lightening mix - slowly stream B into A. A milky dispersion will form.
4. Homogenize.

CLEAR SUNSCREEN OIL

RAW MATERIALS	% By Weight
ABIL B8839	16.0
Isopropyl Myristate	13.0
Mineral Oil	68.0
Octyl Dimethyl PABA	3.0
Perfume	QS

Procedure:

Mix together all ingredients until uniformly blended; add color desired.

Comments:

The addition of Cyclomethicone to a traditional mineral oil-based formulation results in improved aesthetics; the product is perceived as being less oily when applied to the skin. The effect becomes more apparent as the ration of Cyclomethicone to Mineral Oil is increased.

CLEAR LIQUID SUNBLOCK SPF 15

INGREDIENTS	% By Weight
VELSAN D8P-3	10.0
Spectrasorb UV 9	3.0
SD Alcohol 40	25.0
Neobee M-20	5.0
Escalol 507	7.0
Dow 344 Fluid	50.0
SPF 15	
CL 9-145-02	

CLEAR LIQUID SUNBLOCK SPF 20-25

RAW MATERIALS	% By Weight
Velsan D8P-3	10.0
Spectrasorb UV 9	6.0
SD Alcohol 40	24.1
Neobee M-20	4.6
Escalol 507	7.0
Dow 344 Fluid	48.3
SPF 20-25	
CL 9-145-03	

Procedure:

Dissolve Benzophenone-3 into the Velsan D8P-3. Add rest of the ingredients in any convenient order and mix to homogeneity.

Hard-to-dissolve Benzophenone-3 instantly solubilizes in Velsan D8P-3 to produce these cold mix sunblocks similar to the popular pre sun product. Velsan D8P-3 imparts an excellent non-greasy afterfeel to the formula.

OIL FREE WATERPROOF TANNING CREAM SPF 8

RAW MATERIAL	Sequence	% By Weight
Octyl Methoxycinnamate	1	5.00
Benzophenone-3	1	1.00
Lipolan	1	1.00
Silicone 200 fluid (350 cts)	1	0.50
Lipo GMS-470	1	3.00
Stearic Acid	1	3.00
Liposorb SQO	1	2.00
Bentone Gel IPM	1	4.50
Propylparaben	1	0.10
Water	2	66.70
Lipo Polyol NC	2	2.50
Carbopol 934 (2% disp'n)	2	9.00
Methylparaben	2	0.30
Butylparaben	2	0.05
Unicide U-13	2	0.30
Trisodium EDTA	2	0.05
Triethanolamine, 99%	3	0.70
Benzyl Alcohol	4	0.10
Fragrance TC 337	4	0.20

Manufacturing Procedure:

- Heat Sequence 1 ingredients to 85C under Lightnin' mixing. Disperse Bentone gel completely with Lightnin' mixing.
- Heat Sequence 2 ingredients to 78C under Lightnin' mixing, until Carbopol is dispersed. Add Sequence 3 ingredients.
- Add Sequence 1 to combined Sequences 2 and 3 under Homomixing and mix at temperature for 15 minutes.
- Switch to sweep stirring and add Sequence 4 ingredients at 40C. Cool to 25C.

"PABA FREE" WATERPROOF SUNSCREEN (APPROX. SPF 15)

INGREDIENTS	% By Weight
Phase A:	
Escalol 557	7.50
Escalol 567	3.00
Estol EHP 1543	3.00
Cetyl Alcohol	1.00
Emersol 132	2.00
Myrj 52S	1.50
Abil B8852	1.00
Armeen DM18D	2.00
DERMACRYL-79	2.00
Phase B:	
Deionized Water	74.90
Carbopol 941	0.20
Triethanolamine 99%	0.70
Phase C:	
Germaben II E	1.00
Phase D:	
Fragrance	0.20

Substantivity (In Vitro Waterproof Test) - 93.0%

Procedure:

Disperse Carbopol 941 into water and heat to 80C, add triethanolamine slowly to prepare Phase B. Combine Phase A ingredients except DERMACRYL-79 and heat to 80C. Sift DERMACRYL-79 in the oil phase with constant stirring until dissolved. Add Phase A to Phase B at 80C and mix for 15 minutes. Cool to 40C and add Phase C and Phase D to it. Cool to room temperature and package.

Description:

This product features excellent emollient properties that help to keep skin soft and smooth, while at the same time, providing excellent waterproof sun protection.

Octyl Methoxy Cinnamate	2.0
Benzophenone-3	3.0
C. Triethanolamine	0.8
D. SOLLAGEN	1.0
DERMATEIN GSL	5.0
E. Dimethicone	2.0
Diazolidinyl Urea	0.3
Aloe Vera	0.5
Fragrance	0.1

Procedure:

Begin heating water to 80C; sift Carbomer into water with constant agitation. Add rest of Part A. Mix until clear. Add Part B ingredients in order. Mix until homogeneous. Add TEA; mix until smooth. Cool to room temperature. Slowly add SOLLAGEN and DERMATEIN GSL; mix until uniform. Add Part E ingredients. Mix until homogeneous.

Description:

Sun damages skin--it dries out! SOLLAGEN, Soluble Collagen, provides skin with the moisture it needs. DERMATEIN GSL, Glycosphingolipids, replaces the lipid lost from the skin and increases the skin's ability to bind moisture! This formula demonstrates a total sun block--SPF 15.

B2 Glycerin	3.00
B3 Triethanolamine	0.20
C- Germaben II	1.00
D- Aloe Vera Extract	0.50
E- Fragrance	0.20

Procedure:

Phase B:

In the main beaker, disperse B1 together at 75-85C.

Add Glycerin.

Add Triethanolamine to neutralize the Carbopol gel.

Mix until a smooth gel is obtained.

Phase A:

Blend Phase A1 at 85C.

Once completely clear add A2.

Blend Phase A together until a homogeneous oil phase is obtained.

Add Phase A to Phase B with continuous mixing at 80-85C for fifteen minutes.

Cool batch to 60C with continuous mixing then add Phase C.

Continue to cool batch to 30C then add Phase D and Phase E in sequence.

Continue to cool batch with mixing to 25-28C.

SUN PROTECTION LOTION

INGREDIENT	% By Weight
A VEEGUM	1.00
RHODIGEL	0.20
Glycerin	5.50
Deionized Water	68.80
B A-C 617G Polyethylene	2.00
Glyceryl Monostearate, SE (Kessco Glycerol Mono- stearate S.E.)	3.00
Dioctyl Malate (Ceraphyl 45)	2.00
Cetyl Alcohol	0.50
Mineral Oil	4.00
Steareth-2 (Brij 72)	0.30
Steareth-20 (Brij 78)	2.70
Benzophenone-3 (Escalol 567)	3.00
Octyl Dimethyl PABA (Escalol 507)	7.00
C Preservative, Fragrance	q.s.

Preparation:

Dry blend VEEGUM and RHODIGEL. Add VEEGUM/RHODIGEL blend to water preheated to 85-90C. Hydrate using maximum available shear until smooth, uniform and free of undispersed particles. Add glycerin and maintain temperature at 85-90C. In a separate container, add all B ingredients and heat to 85-90C until all components are in a liquid state. Stir gently as necessary. Slowly add B to A and homogenize for 5 minutes. Cool emulsion quickly to room temperature with gentle stirring. Add C and mix until uniform.

Consistency: Flowable liquid: Viscosity after 30 days: 1500-1900 cps

Suggested Packaging: Plastic bottles or tubes.

Features:

This medium viscosity lotion utilizes a synergistic VEEGUM/RHODIGEL blend to help stabilize the emulsion and modify the viscosity. In addition, this formula incorporates A-C 617G polyethylene to provide a luxurious after feel and improve the water resistance of the sun protection film. This product is designed to have an SPF (Sun Protection Factor) of about 15.

W/O SUNSCREEN CREAM

RAW MATERIALS	% By Weight
A. SOFTISAN GEL	20.0
SOFTISAN 649	5.0
IMWITOR 780K	3.0
Neo Heliopan E1000	4.0
B. Paraffin	3.0
C. Magnesium Sulfate	2.0
Preservative	q.s.
Water	up to 100.0
D. Perfume	q.s.

Preparation:

(A) is mixed together. (B) is then added and (A & B) are heated up to 75-80C. (C) is brought to the same temperature and emulsified into (A & B). (D) is added at about 30C.

Soft w/o emulsion with excellent spreadability, which penetrates quickly into the skin.

Formula 4.1.1A

SUNSCREEN I

RAW MATERIALS	% By Weight
SOFTIGEN 767	35.0
Simethicone-Emulsion	0.1
Cremophor RH 40	5.0
Neo-Heliopan E 1000	2.0
Escalol 507	2.0
Preservative	q.s.
Water	up to 100.0

Preparation:

SOFTIGEN, Cremophor and the Simethicone-Emulsion are mixed together at ca. 40C. The other components are added and mixed together with the homogenizer.

Formula 4.3B

SUNSCREEN II

RAW MATERIALS	% By Weight
SOFTIGEN 767	30.0
Simethicone-Emulsion	0.1
Tween 80	5.0
Neo-Heliopan E 1000	2.0
Preservative	q.s.
Water	up to 100.0

Preparation:

SOFTIGEN, Tween 80, and the Simethicone-Emulsion are mixed together at ca. 40C. The other components are added and mixed together with the homogenizer.

Formula 4.3C

SUNSCREEN III

RAW MATERIALS	% By Weight
SOFTIGEN 767	30.0
Simethicone-Emulsion	0.3
Tween 80	10.0
Neo-Heliopan E 1000	2.0
Escalol 507	2.0
Preservative	q.s.
Water	up to 100.0

Preparation:

SOFTIGEN, Tween 80, and the Simethicone-Emulsion are mixed together at ca. 40C. The other components are added and mixed together with the homogenizer.

Formula 4.3D

SUNSCREEN CREAM

RAW MATERIALS	% By Weight
Phase A:	
NEO HELIOPAN AV	7.50
NEO HELIOPAN MA	5.00
Dow Corning 344 Fluid	2.00
Trivent OC-16	4.00
Ganex V-220	3.00
AC Polyethylene	2.00
Lanette Wax O	0.50
Myrj 52S	0.50
Pemulen TR-1	0.25
Vitamin E Acetate	0.10
Phase B:	
Water, Deionized	59.75
Carbopol 980 2% Aq. Sol.	10.00
Propylene Glycol	3.00
Aloe Vera Gel	1.00
Phase C:	
Triethanolamine 99%	0.40
Phase D:	
Germaben IIE	1.00

Procedure:

In a suitable vessel weigh Phase A, heat to 75C and completely disperse Pemulen TR-1. In another vessel able to contain the entire batch, weigh Phase B and heat to 75C with agitation. Slowly add Phase A to Phase B, mix for 10 minutes and add Phase C. Mix until uniform and start cooling with continuous agitation. Cool to 40C and add Phase D. Continue cooling with agitation to 28-25C, pass through a mill and package.

pH: 6.4

Viscosity: 100,000 cps @ 20C

This formulation provides UVA/UVB protection with the use of NEO HELIOPAN AV and NEO HELIOPAN MA. This totally eliminates the need for PABA and Benzophenone-3 to obtain such protection. This formulation has been tested and produced a SPF value of 8. With the use of resins, film formers and minimum emulsifier levels, it is anticipated that this formulation will be water-proof.

SUNSCREEN CREAM

INGREDIENT	% By Weight
A VEEGUM PRO	1.5
Water	67.7
Propylene glycol	3.0
Triethanolamine	0.6
B Benzophenone-3 (Uvinol M-40)	5.0
C12-15 Alcohols Benzoate (Finsolv TN)	7.5
Octyl Methoxycinnamate (Parsol MCX)	7.5
Mineral Oil (and) Lanolin Alcohol (Ritachol)	4.0
Stearic acid XXX	2.0
C18-36 Acid (Synchrowax AW1-C)	0.2
Glycol Stearate SE (Cerasynt MN)	0.5
Cetyl alcohol	0.5
C Preservative, Dye, Fragrance	q.s.

Procedure:

Heat the water to 75 to 80C, then slowly add the VEEGUM PRO while agitating at maximum available shear. Mix until smooth. Add remaining ingredients in order shown with careful mixing until smooth, maintain at 75 to 80C. Heat B to 75 to 80C. Add B to A and mix until cool. Add C.

Features:

Sunscreen Cream No. 421 illustrates the use of VEEGUM PRO as a suspending agent and viscosity modifier. VEEGUM PRO effectively thickens and stabilizes the emulsion even at elevated temperatures. This lotion has an estimated SPF of 12 and has a light feel with quick, greaseless rub-in. Benzophenone-3 is a UV-A absorber for protection against tanning radiation. Octyl Methoxycinnamate is a UV-B absorber for protection against burning radiation.
